SECTION 2

INFORMATION BEFORE DRIVING YOUR TOYOTA

Information before driving your Toyota

Break−in period 275
Fuel 275
Operation in foreign countries 277
Three−way catalytic converters 277
Engine exhaust cautions 278
Facts about engine oil consumption 279
Iridium−tipped spark plugs 280
Brake system 281
Electric power steering system 282
Brake pad wear limit indicators 282
Your Toyota’s identification 283
Theft prevention labels 284
Suspension and chassis 284
Tire information 285
Vehicle load limits 295
Cargo and luggage 295
Types of tires 298

Break−in period

Drive gently and avoid high speeds.

Your vehicle does not need an elaborate break−in. But following a few simple tips for the first 1600 km (1000 miles) can add to the future economy and long life of your vehicle:

- Avoid full throttle acceleration when starting and driving.
- Avoid racing the hybrid system.
- Try to avoid hard stops during the first 300 km (200 miles).
- Do not drive for a long time at any single speed, either fast or slow.
- Do not tow a trailer during the first 800 km (500 miles).

Fuel

FUEL TYPE

Your new vehicle must use only unleaded gasoline.

To help prevent gas station mix−ups, your Toyota has a smaller fuel tank opening. The special nozzle on pumps with unleaded fuel will fit it, but the larger standard nozzle on pumps with leaded gas will not.

At a minimum, the gasoline you use should meet the specifications of ASTM D4814 in the U.S.A. and CGSB 3.5−M93 in Canada.

NOTICE

Do not use leaded gasoline. Use of leaded gasoline will cause the three−way catalytic converter to lose its effectiveness and the emission control system to function improperly. Also, this can increase maintenance costs.

OCTANE RATING

Select Octane Rating 87 (Research Octane Number 91) or higher.

Use of unleaded gasoline with an octane rating lower than 87 may result in engine knocking. Persistent knocking can lead to engine damage.

If your engine knocks...

If you detect heavy knocking even when using the recommended fuel, or if you hear steady knocking while holding a steady speed on level roads, consult your Toyota dealer.

However, occasionally, you may notice light knocking for a short time while accelerating or driving up hills. This is normal and there is no need for concern.

GASOLINE CONTAINING DETERGENT ADDITIVES

Toyota recommends the use of gasoline that contains detergent additives to avoid build−up of engine deposits.

However, all gasoline sold in the U.S. contains detergent additives to keep clean and/or clean intake systems.

QUALITY GASOLINE

Automotive manufacturers in the U.S., Europe and Japan have developed a specification for quality fuel named World−Wide Fuel Charter (WWFC) that is expected to be applied world wide. The WWFC consists of four categories that depend on required emisvels. In the U.S., category 4 has been adopted. The WWFC improves air quality by providing for better emissions in vehicle fleets, and customer satisfaction through better vehicle performance.

CLEANER BURNING GASOLINE

Cleaner burning gasoline, including reformulated gasoline that contains oxygenates such as ethanol or MTBE is available in many areas.

Toyota recommends the use of cleaner burning gasoline and appropriately blended reformulated gasoline. These types of gasoline provide excellent vehicle performance, reduce vehicle emissions, and improve air quality.

OXYGENATES IN GASOLINE

Toyota allows the use of oxygenate blended gasoline where the oxygenate content is up to 10% ethanol or 15% MTBE. If you use gasohol in your Toyota, be sure that it has an octane rating no lower than 87.

Toyota does not recommend the use of gasoline containing methanol.

GASOLINE CONTAINING MMT

Some gasoline contain an octane enhancing additive called MMT (Methylcyclopentadienyl Manganese Tricarbonyl).

Toyota does not recommend the use of gasoline that contains MMT. If fuel containing MMT is used, your emission control system may be adversely affected. The Malfunction Indicator Lamp on the instrument cluster may come on. If this happens, contact your Toyota dealer for service.

GASOLINE QUALITY

In a very few cases, you may experience driveability problems caused by the particular gasoline that you are using. If you continue to have unacceptable driveability, try changing gasoline brands. If this does not rectify your problem, then consult your Toyota dealer.

NOTICE

- ***Do not use gasohol other than stated above. It will cause fuel system damage or vehicle performance problems.***
- ***If driveability problems are encountered (poor hot starting, vaporizing, engine knock, etc.), discontinue the use.***
- ***Take care not to spill gasohol during refueling. Gasohol may cause paint damage.***

FUEL TANK CAPACITY

65 L (17.2 gal., 14.3 Imp. gal.)

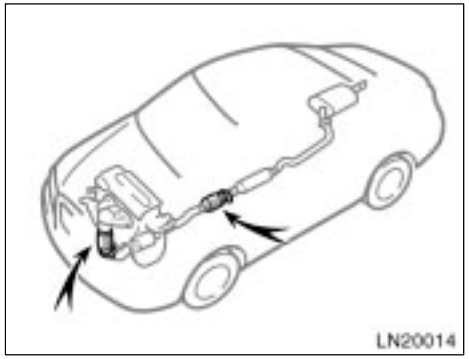
Operation in foreign countries

If you plan to drive your Toyota in another country...

First, comply with the vehicle registration laws.

Second, confirm the availability of the correct fuel (unleaded and minimum octane number).

Three−way catalytic converters



The three−way catalytic converter is an emission control device installed in the exhaust system.

The purpose is to reduce pollutants in the exhaust gas.

⚠ CAUTION

- **Keep people and combustible materials away from the exhaust pipe while the engine is running. The exhaust gas is very hot.**
- **Do not drive, idle or park your vehicle over anything that may burn easily such as grass, leaves, paper or rags.**

NOTICE

A large amount of unburned gases flowing into the three−way catalytic converter may cause it to overheat and create a fire hazard. To prevent this and other damage, observe the following precautions:

- *Use only unleaded gasoline.*
- *Do not drive with an extremely low fuel level; running out of fuel could cause the engine to misfire, creating an excessive load on the three−way catalytic converter.*
- *Do not turn the "POWER" switch off while the vehicle is moving.*
- *Keep your engine in good running order. Malfunctions in the engine electrical system, electronic ignition system/distributor ignition system or fuel system could cause an extremely high three−way catalytic converter temperature.*
- *If the engine becomes difficult to start or stalls frequently, take your vehicle in for a check−up as soon as possible. Remember, your Toyota dealer knows your vehicle and its three−way catalytic converter system best.*
- *To ensure that the three−way catalytic converter and the entire emission control system operate properly, your vehicle must receive the periodic inspections required by the Toyota Maintenance Schedule. For scheduled maintenance information, refer to the "Scheduled Maintenance Guide" or "Owner's Manual Supplement".*
- *Do not apply a coating agent such as an anti−rust under−coating to the exhaust pipe.*

Engine exhaust cautions

⚠ CAUTION

- **Avoid inhaling the engine exhaust. It contains carbon monoxide, which is a colorless and odorless gas. It can cause unconsciousness or even death.**
- **Make sure the exhaust system has no holes or loose connections. The system should be checked from time to time. If you hit something, or notice a change in the sound of the exhaust, have the system checked immediately.**
- **Do not run the hybrid system in a garage or enclosed area except for the time needed to drive the vehicle in or out. The exhaust gases cannot escape, making this a particularly dangerous situation.**
- **Do not remain for a long time in a parked vehicle with the hybrid system operating. If it is unavoidable, however, do so only in an unconfined area and adjust the heating or cooling system to force outside air into the vehicle.**

- **Keep the trunk lid closed while driving. An open or unsealed trunk lid may cause exhaust gases to be drawn into the vehicle.**
- **To allow proper operation of your vehicle’s ventilation system, keep the inlet grilles in front of the windshield clear of snow, leaves, or other obstructions.**
- **If you smell exhaust fumes in the vehicle, open the windows and close the trunk lid to ensure plenty of fresh air enters the vehicle. If you can smell exhaust fumes even though there are no other vehicles in the surrounding area, have your vehicle checked by your Toyota dealer. Continued inhalation of exhaust fumes can lead to death by gas poisoning.**

Facts about engine oil consumption

FUNCTIONS OF ENGINE OIL

Engine oil has the primary functions of lubricating and cooling the inside of the engine, and plays a major role in maintaining the engine in proper working order.

ENGINE OIL CONSUMPTION

It is normal that an engine should consume some engine oil during normal engine operation. The causes of oil consumption in a normal engine are as follows.

- Oil is used to lubricate pistons, piston rings and cylinders. A thin film of oil is left on the cylinder wall when a piston moves downwards in the cylinder. High negative pressure generated when the vehicle is decelerating sucks some of this oil into the combustion chamber. This oil as well as some part of the oil film left on the cylinder wall is burned by the high temperature combustion gases during the combustion process.
- Oil is also used to lubricate the stems of the intake valves. Some of this oil is sucked into the combustion chamber together with the intake air and is burned along with the fuel. High temperature exhaust gases also burn the oil used to lubricate the exhaust valve stems.

The amount of engine oil consumed depends on the viscosity of the oil, the quality of the oil and the conditions the vehicle is driven under.

More oil is consumed by high−speed driving and frequent acceleration and deceleration.

A new engine consumes more oil, since its pistons, piston rings and cylinder walls have not become conditioned.

Oil consumption: Max. 1.0 L per 1000 km (1.1 qt./600 miles, 0.9 Imp. qt./600 miles)

When judging the amount of oil consumption, note that the oil may become diluted and make it difficult to judge the true level accurately.

As an example, if a vehicle is used for repeated short trips, and consumes a normal amount of oil, the dipstick may not show any drop in the oil level at all, even after 1000 km (600 miles) or more. This is because the oil is gradually becoming diluted with fuel or moisture, making it appear that the oil level has not changed.

The diluting ingredients evaporate out when the vehicle is then driven at high speeds, as on an express way, making it appear that oil is excessively consumed after driving at high speeds.

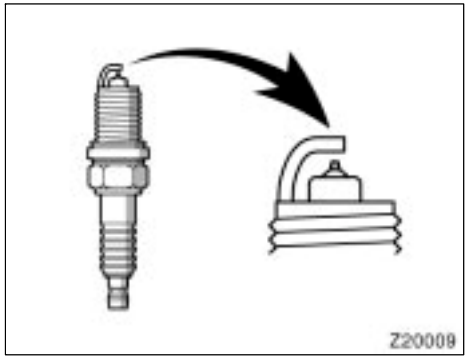
IMPORTANCE OF ENGINE OIL LEVEL CHECK

One of the most important points in proper vehicle maintenance is to keep the engine oil at the optimum level so that oil function will not be impaired. Therefore, it is essential that the oil level be checked regularly. Toyota recommends that the oil level be checked every time you refuel the vehicle.

NOTICE
Failure to check the oil level regularly could lead to serious engine trouble due to insufficient oil.

For detailed information on oil level check, see “Checking the engine oil level” on page 355 in Section 7−2.

Iridium−tipped spark plugs



Your engine is fitted with iridium−tipped spark plugs.

NOTICE
Use only iridium−tipped spark plugs. Do not adjust gaps for engine performance or smooth driveability.

Brake system

REGENERATIVE BRAKE

When the brake is applied, the motor generator converts kinetic energy into electric energy.

When applying brakes, you may hear a sound coming from the motor generator. However, this does not indicate any trouble.

The regenerative brake works in the following operations.

1. When the accelerator pedal is released, the reduced speed equal to engine braking in a gasoline−fueled vehicle is obtained in accordance with the running mode position of the selector lever.
2. When the brake pedal is depressed with the selector lever in “D” or “B”, the regenerative brake works.

HYDRAULIC BRAKE

This brake system has 3 independent hydraulic circuits. If any circuit should fail, the other will still work. However, the pedal will be harder to press, and your stopping distance will increase. Also, the brake system warning light may come on.

⚠ CAUTION

Do not drive your vehicle if any hydraulic circuit has failed. Have your brakes fixed immediately.

BRAKE ACTUATOR

The brake actuator uses brake fluid pressurized by the pump to power−assist the brakes. If the brake actuator fails during driving, the brake system warning light comes on and the buzzer sounds continuously. In this case, the brakes may not work properly. If they do not work well, depress the brake pedal firmly. If the brake system warning light comes on, immediately stop your vehicle and contact your Toyota dealer.

The red and yellow brake system warning lights may stay on for about 60 seconds after the hybrid system is turned on. It is normal if the light turns off after a while.

Depressing the brake pedal repeatedly may turn on the red warning light and buzzer. It is normal if the light turns off after a few seconds.

In the following conditions, you may hear a sound in the engine compartment. This is not a malfunction.

- The driver’s door is opened with the hybrid system turned off.
- The brake pedal is depressed with the hybrid system turned off.
- After the hybrid system is turned on.
- The brake pedal is depressed repeatedly with the hybrid system turned on.
- After the hybrid system is turned off.

The brake pedal may be hard to depress or the brake pedal stroke may be short before turning the hybrid system on. This is not a malfunction.

CAUTION

- **Do not pump the brake pedal if the hybrid system is not operating. Each push on the pedal uses up your reserved brake fluid pressure.**
- **Even if the power assist is completely lost, the brakes will still work. But you will have to push the pedal hard, much harder than normal. And your braking distance will increase.**

DRUM−IN−DISC TYPE PARKING BRAKE SYSTEM

Your vehicle has a drum−in−disc type parking brake system. This type of brake system needs bedding−down of the brake shoes periodically or whenever the parking brake shoes and/or drums are replaced.

Have your Toyota dealer perform the bedding−down.

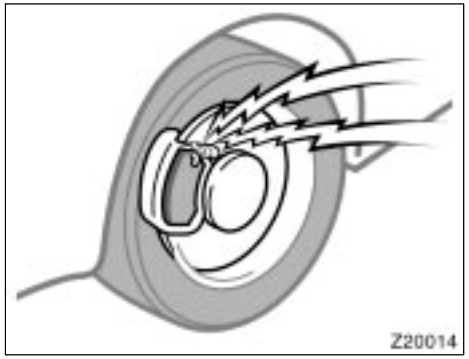
Electric power steering system

Driving conditions where the steering wheel must be turned frequently may cause an overload to the electric power steering system. The system will reduce assistance for sometime to prevent the power steering from overheating. In this case, you may feel some resistance when turning the steering wheel though it is not a malfunction.

CAUTION

If the “P/S” warning light comes on, take your vehicle to the Toyota dealer as soon as possible. In this case, you may feel the heavy steering wheel maneuvering. Drive your vehicle while gripping the steering wheel firmly.

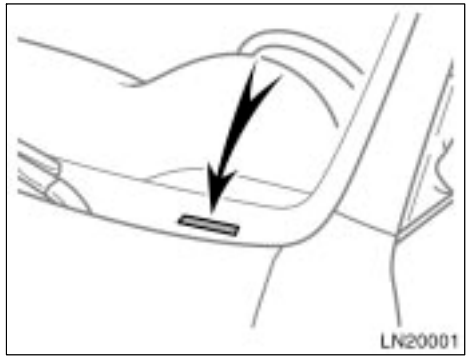
Brake pad wear limit indicators



The brake pad wear limit indicators on your disc brakes give a warning noise when the brake pads are worn to where replacement is required.

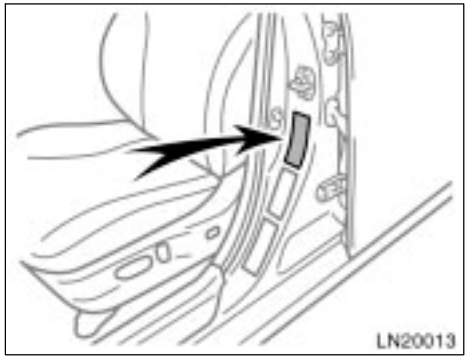
If you hear a squealing or scraping noise while driving, have the brake pads checked and replaced by your Toyota dealer as soon as possible. Expensive rotor damage can result if the pads are not replaced when necessary.

Your Toyota’s identification— —Vehicle identification number



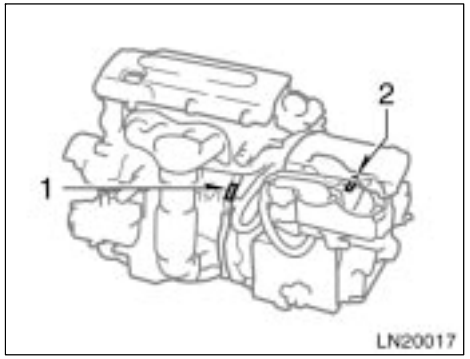
The vehicle identification number (VIN) is the legal identifier for your vehicle. This number is on the left top of the instrument panel, and can be seen through the windshield from outside.

This is the primary identification number for your Toyota. It is used in registering the ownership of your vehicle.



The vehicle identification number (VIN) is also on the Certification Label.

—Engine and traction motor numbers



1. Engine number
2. Traction motor number

The engine and traction motor numbers are stamped as shown.

Theft prevention labels

Your new vehicle carries theft prevention labels which are approximately 47 mm (1.85 in.) by 12 mm (0.47 in.).

The purpose of these labels is to reduce the incidence of vehicle thefts by facilitating the tracing and recovery of parts from stolen vehicles. The label is designed so that once it is applied to a surface, any attempt to remove it will result in destroying the integrity of the label. Transferring these labels intact from one part to another, will be impossible.

NOTICE

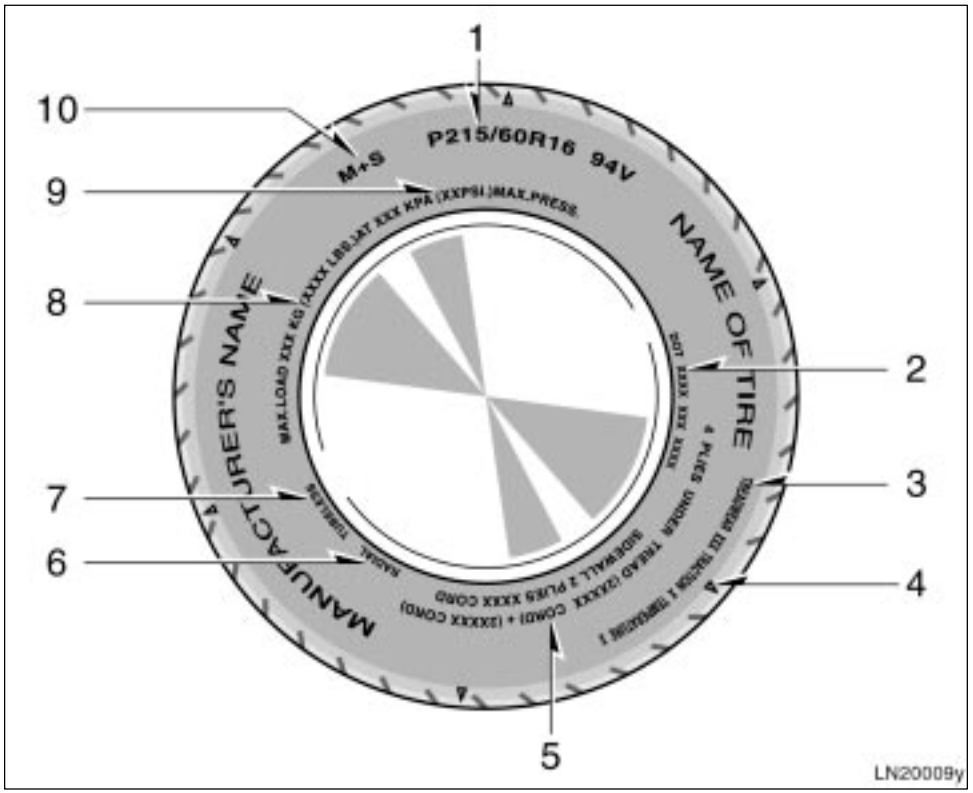
You should not attempt to remove the theft prevention labels as it may violate certain state or federal laws.

Suspension and chassis

⚠ CAUTION

Do not modify the suspension/chassis with lift kits, spacers, springs, etc. It can cause dangerous vehicle handling characteristics, resulting in loss of control.

Tire information—
—Tire symbols (standard tire)

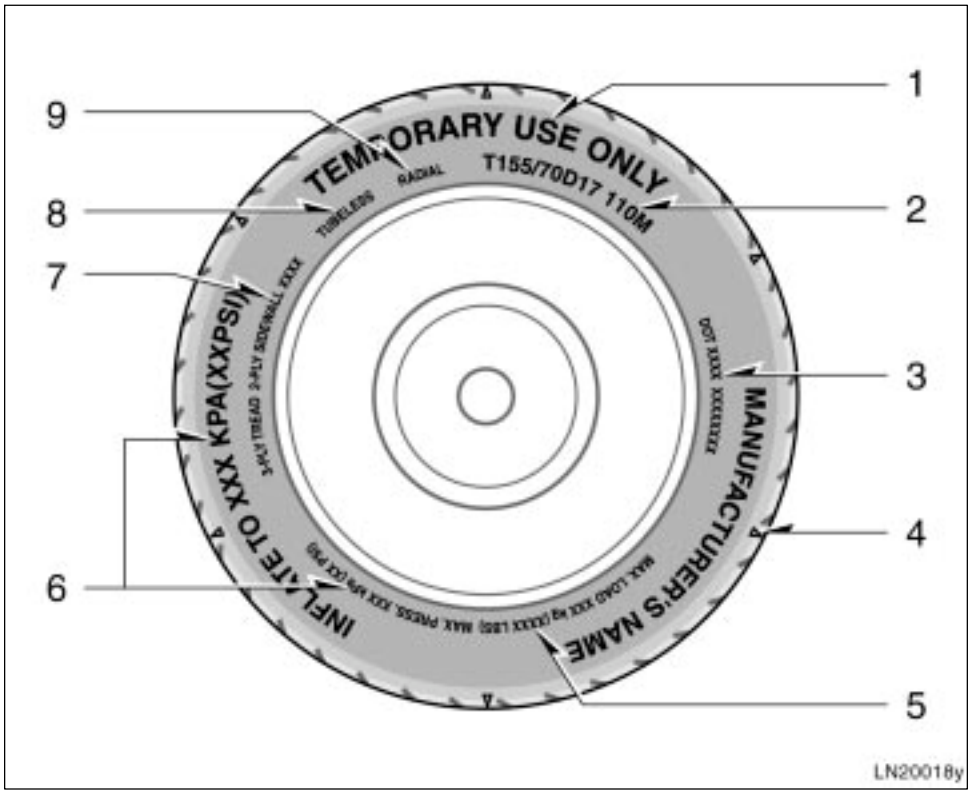


This illustration indicates typical tire symbols.

1. **Tire size—**For details, see “—Tire size” on page 289.
2. **DOT and Tire Identification Number (TIN)—**For details, see “—DOT and Tire Identification Number (TIN)” on page 288.
3. **Uniform tire quality grading—**For details, see “Uniform Tire Quality Grading” that follows.
4. **The location of the tread wear indicators—**For details, see “Checking and replacing tires” on page 362.
5. **Tire ply composition and materials—**Plies mean a layer of rubber−coated parallel cords. Cords mean the strands forming the plies in the tire.
6. **Radial tires or bias−ply tires—**A radial tire has “RADIAL” on the sidewall. A tire not marked with “RADIAL” is a bias−ply tire.

7. **“TUBELESS” or “TUBE TYPE”—**A tubeless tire does not have a tube inside the tire and air is directly filled in the tire. A tube type tire has a tube inside the tire and the tube maintains the air pressure.
8. **Load limit at maximum cold tire inflation pressure—**For details, see “Checking and replacing tires” on page 362.
9. **Maximum cold tire inflation pressure—**This means the pressure to which a tire may be inflated. For details about recommended cold tire inflation pressure, see “Tires” on page 385.
10. **Summer tire or all season tire—**An all season tire has “M+S” on the sidewall. The tire not marked with “M+S” is a summer tire. For details, see “Types of tires” on page 298.

—Tire symbols (compact spare tire)

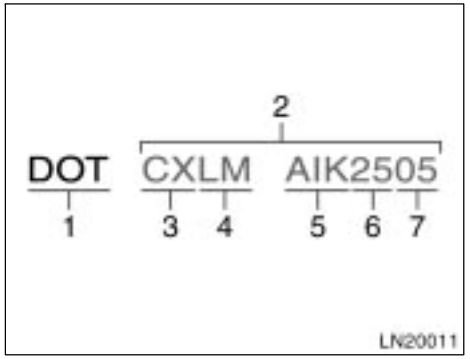


This illustration indicates typical tire symbols.

1. **“TEMPORARY USE ONLY”—**A compact spare tire is identified by the phrase “TEMPORARY USE ONLY” molded into its sidewall. This tire is designed for temporary emergency use only. For details, see “Compact spare tire” on page 319.
2. **Tire size—**For details, see “—Tire size” on page 289.
3. **DOT and Tire Identification Number (TIN)—**For details, see “—DOT and Tire Identification Number (TIN)” on page 288.
4. **The location of the tread wear indicators—**For details, see “Checking and replacing tires” on page 362.
5. **Load limit at maximum cold tire inflation pressure—**For details, see “Checking and replacing tires” on page 362.

6. **Maximum cold tire inflation pressure—**This means the pressure to which a tire may be inflated. For details about recommended cold tire inflation pressure, see “Tires” on page 385.
7. **Tire ply composition and materials—**Plies mean a layer of rubber−coated parallel cords. Cords mean the strands forming the plies in the tire.
8. **“TUBELESS” or “TUBE TYPE”—**A tubeless tire does not have a tube inside the tire and air is directly filled in the tire. A tube type tire has a tube inside the tire and the tube maintains the air pressure.
9. **Radial tires or bias−ply tires—**A radial tire has “RADIAL” on the sidewall. A tire not marked with “RADIAL” is a bias−ply tire.

—DOT and Tire Identification Number (TIN)

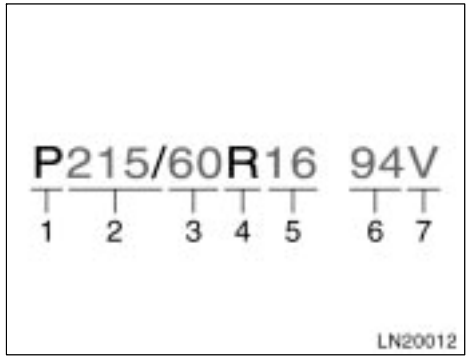


This illustration indicates typical DOT and Tire Identification Number (TIN).

1. “DOT” symbol
2. Tire Identification Number (TIN)
3. Tire manufacturer’s identification mark
4. Tire size code
5. Manufacturer’s optional tire type code (3 or 4 letters)
6. Manufacturing week
7. Manufacturing year

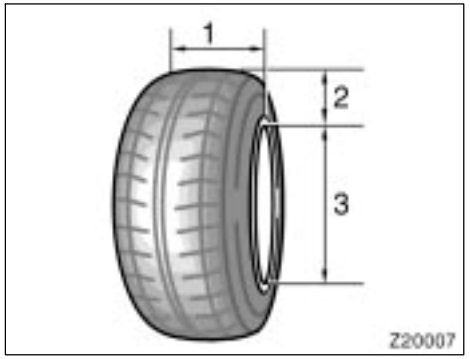
The “DOT” symbol certifies that the tire conforms to applicable Federal Motor Vehicle Safety Standards.

—Tire size



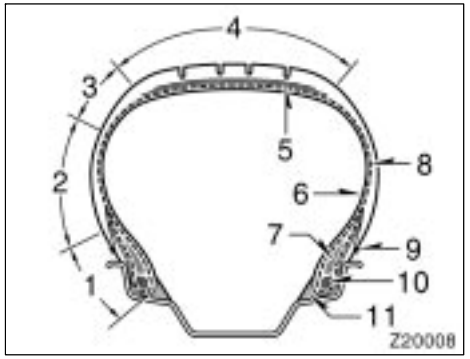
This illustration indicates typical tire size.

1. Tire use (P=Passenger car, T=Temporary use)
2. Section width (in millimeters)
3. Aspect ratio (tire height to section width)
4. Tire construction code (R=Radial, D=Diagonal)
5. Wheel diameter (in inches)
6. Load index (2 digits or 3 digits)
7. Speed symbol (alphabet with one letter)



1. Section width
2. Tire height
3. Wheel diameter

—Name of each section of tire



1. Bead
2. Sidewall
3. Shoulder
4. Tread
5. Belt
6. Inner liner
7. Reinforcing rubber
8. Carcass
9. Rim lines
10. Bead wires
11. Chafer

—Uniform Tire Quality Grading

This information has been prepared in accordance with regulations issued by the National Highway Traffic Safety Administration of the U.S. Department of Transportation. It provides the purchasers and/or prospective purchasers of Toyota vehicles with information on uniform tire quality grading.

Your Toyota dealer will help answer any questions you may have as you read this information.

DOT quality grades—All passenger vehicle tires must conform to Federal Safety Requirements in addition to these grades. Quality grades can be found where applicable on the tire sidewall between tread shoulder and maximum section width. For example: Treadwear 200 Traction AA Temperature A

Treadwear—The treadwear grade is a comparative rating based on the wear rate of the tire when tested under controlled conditions on a specified government test course. For example, a tire graded 150 would wear one and a half (1−1/2) times as well on the government course as a tire graded 100. The relative performance of tires depends upon the actual conditions of their use, however, and may depart significantly from the norm due to variations in driving habits, service practices and differences in road characteristics and climate.

Traction AA, A, B, C—The traction grades, from highest to lowest, are AA, A, B, and C, and they represent the tire's ability to stop on wet pavement as measured under controlled conditions on specified government test surfaces of asphalt and concrete. A tire marked C may have poor traction performance.

Warning: The traction grade assigned to this tire is based on braking (straight ahead) traction tests and does not include cornering (turning) traction.

Temperature A, B, C—The temperature grades are A (the highest), B, and C, representing the tire’s resistance to the generation of heat and its ability to dissipate heat when tested under controlled conditions on a specified indoor laboratory test wheel. Sustained high temperature can cause the material of the tire to degenerate and reduce tire life, and excessive temperature can lead to sudden tire failure. The grade C corresponds to a level of performance which all passenger car tires must meet under the Federal Motor Vehicle Safety Standard No.109. Grades B and A represent higher levels of performance on the laboratory test wheel than the minimum required by law.

Warning: The temperature grades for this tire are established for a tire that is properly inflated and not overloaded. Excessive speed, underinflation, or excessive loading, either separately or in combination, can cause heat buildup and possible tire failure.

—Glossary of tire terminology

Tire related term	Meaning
Accessory weight	the combined weight (in excess of those standard items which may be replaced) of transaxle, power steering, power brakes, power windows, power seats, radio, and heater, to the extent that these items are available as factory−installed equipment (whether installed or not)
Cold tire inflation pressure	tire inflation pressure when the vehicle has been parked for at least 3 hours or more, or it has not been driven more than 1.5 km or 1 mile under that condition
Curb weight	the weight of a motor vehicle with standard equipment including the maximum capacity of fuel, oil, and coolant, and, if so equipped, air conditioning and additional weight optional engine
Intended outboard sidewall	(A) the sidewall that contains a whitewall, bears white lettering or bears manufacturer, brand, and/or model name molding that is higher or deeper than the same molding on the other sidewall of the tire, or (B) the outward facing sidewall of an asymmetrical tire that has a particular side that must always face outward when mounted on a vehicle
Maximum inflation pressure	the maximum cold inflation pressure to which a tire may be inflated and it is shown on the sidewall of the tire
Maximum loaded vehicle weight	the sum of— (a) curb weight; (b) accessory weight; (c) vehicle capacity weight; and (d) production options weight

Tire related term	Meaning
Normal occupant weight	68 kg (150 lb.) times the number of occupants specified in the second column of Table 1 that follows
Occupant distribution	distribution of occupants in a vehicle as specified in the third column of Table 1 that follows
Production options weight	the combined weight of those installed regular production options weighing over 2.3 kg (5 lb.) in excess of those standard items which they replace, not previously considered in curb weight or accessory weight, including heavy duty brakes, ride levelers, roof rack, heavy duty battery, and special trim
Recommended inflation pressure	cold tire inflation pressure recommended by a manufacturer
Rim	a metal support for a tire or a tire and tube assembly upon which the tire beads are seated
Rim diameter (Wheel diameter)	nominal diameter of the bead seat
Rim size designation	rim diameter and width
Rim type designation	the industry of manufacturer’s designation for a rim by style or code
Rim width	nominal distance between rim flanges
Vehicle capacity weight (Total load capacity)	the rated cargo and luggage load plus 68 kg (150 lb.) times the vehicle’s designated seating capacity
Vehicle maximum load on the tire	the load on an individual tire that is determined by distributing to each axle its share of the maximum loaded vehicle weight and dividing by two

Tire related term	Meaning
Vehicle normal load on the tire	the load on an individual tire that is determined by distributing to each axle its share of the curb weight, accessory weight, and normal occupant weight (distributed in accordance with Table 1 that follows) and dividing by two
Weather side	the surface area of the rim not covered by the inflated tire

Table 1—Occupant loading and distribution for vehicle normal load for various designated seating capacities

Designated seating capacity, number of occupants	Vehicle normal load, number of occupants	Occupant distribution in a normally loaded vehicle
2 through 4	2	2 in front
5 through 10	3	2 in front, 1 in second seat

Vehicle load limits

Vehicle load limits include total load capacity, seating capacity, towing capacity and cargo capacity. Follow the load limits shown below. Total load capacity and seating capacity are also described on the tire and loading information label. For location of the tire and loading information label, see "Checking tire inflation pressure" on page 359.

Total load capacity:
410 kg (900 lb.)
Total load capacity means combined weight of occupants, cargo and luggage. Tongue load is included when trailer towing.

Seating capacity:
Total 5 (Front 2, Rear 3)
Seating capacity means the maximum number of occupants whose estimated average weight is 68 kg (150 lb.) per person. Depending on the weight of each person, the seating capacity given may exceed the total load capacity.

NOTICE

Even if the number of occupants are within the seating capacity, do not exceed the total load capacity.

Towing capacity:
Toyota does not recommend towing a trailer with your vehicle. It is not designed for trailer towing.

Cargo capacity

Cargo capacity may increase or decrease depending on the size (weight) and the number of occupants. For details, see "Capacity and distribution" that follows.

⚠ CAUTION

Do not apply the load more than each load limit. That may cause not only damage to the tires, but also deterioration to the steering ability and braking ability, which may cause an accident.

Cargo and luggage— —Stowage precautions

When stowing cargo and luggage in the vehicle, observe the following:

- Put cargo and luggage in the trunk when at all possible. Be sure all items are secured in place.
- Be careful to keep the vehicle balanced. Locating the weight as far forward as possible helps maintain balance.
- For better fuel economy, do not carry unneeded weight.

⚠ CAUTION

- **To prevent cargo and luggage from sliding forward during braking, do not stack anything in the enlarged trunk. Keep cargo and luggage low, as close to the floor as possible.**
- **Never allow anyone to ride in the enlarged trunk. It is not designed for passengers. They should ride in their seats with their seat belts properly fastened. Otherwise, they are much more likely to suffer serious bodily injury, in the event of sudden braking or a collision.**
- **Do not place anything on the package tray behind the rear seatback. Such items may be thrown about and possibly injure people in the vehicle during sudden braking or an accident.**

- **Do not drive with objects left on top of the instrument panel. They may interfere with the driver’s field of view. Or they may move during sharp vehicle acceleration or turning, and impair the driver’s control of the vehicle. In an accident they may injure the vehicle occupants.**

—Capacity and distribution

Cargo capacity depends on the total weight of the occupants.

(Cargo capacity) = (Total load capacity) – (Total weight of occupants)

Steps for Determining Correct Load Limit—

(1) Locate the statement “The combined weight of occupants and cargo should never exceed XXX kg or XXX lbs.” on your vehicle’s placard.

(2) Determine the combined weight of the driver and passengers that will be riding in your vehicle.

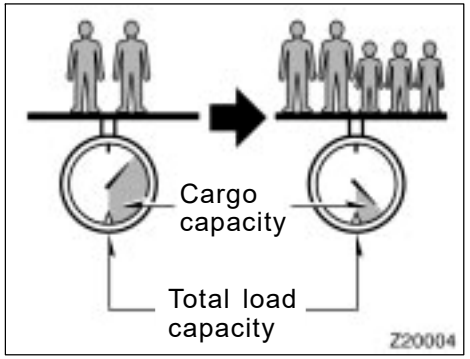
(3) Subtract the combined weight of the driver and passengers from XXX kg or XXX lbs.

(4) The resulting figure equals the available amount of cargo and luggage load capacity. For example, if the “XXX” amount equals 1400 lbs. and there will be five 150 lb passengers in your vehicle, the amount of available cargo and luggage load capacity is 650 lbs. (1400–750 (5x150)=650 lbs.)

(5) Determine the combined weight of luggage and cargo being loaded on the vehicle. That weight may not safely exceed the available cargo and luggage load capacity calculated in Step 4.

(6) If your vehicle will be towing a trailer, load from your trailer will be transferred to your vehicle. Consult this manual to determine how this reduces the available cargo and luggage load capacity of your vehicle.

For details about trailer towing, see page 310.



Example on Your Vehicle

In case that 2 people with the combined weight of 166 kg (366 lb.) are riding in your vehicle with the total load capacity of 410 kg (900 lb.), the available amount of cargo and luggage load capacity will be as follows:

410 kg – 166 kg = 244 kg.
(900 lb. – 366 lb. = 534 lb.)

From this condition, if 3 more passengers with the combined weight of 176 kg (388 lb.) get on, the available cargo and luggage load will be reduced as follows:

244 kg – 176 kg = 68 kg.
(534 lb. – 388 lb. = 146 lb.)

As shown in the above example, if the number of occupants increases, the cargo and luggage load equaling the combined weight of occupants who got on later must be reduced. In other words, if the increase in the number of occupants causes the excess of the total load capacity (combined weight of occupants plus cargo and luggage load), you have to reduce the cargo and luggage on your vehicle.

For details about total load capacity, see “Vehicle load limits” on page 295.

⚠ CAUTION

Even if the total load of occupant's weight and the cargo load is less than the total load capacity, do not apply the load unevenly. That may cause not only damage to the tire but also deterioration to the steering ability due to unbalance of the vehicle, causing an accident.

Types of tires

Determine what kind of tires your vehicle is originally equipped with.

1. Summer tires

Summer tires are high−speed capability tires best suited to highway driving under dry conditions.

Since summer tires do not have the same traction performance as snow tires, summer tires are inadequate for driving on snow−covered or icy roads. For driving on snow−covered or icy roads, we recommend using snow tires. If installing snow tires, be sure to replace all four tires.

2. All season tires

All season tires are designed to provide better traction in snow and to be adequate for driving in most winter conditions, as well as for use all year round.

All season tires, however, do not have adequate traction performance compared with snow tires in heavy or loose snow. Also, all season tires fall short in acceleration and handling performance compared with summer tires in highway driving.

The details about how to distinguish summer tires from all season tires are described on page 285.

⚠ CAUTION

- **Do not mix summer and all season tires on your vehicle as this can cause dangerous handling characteristics, resulting in loss of control.**
- **Do not use tires other than the manufacturer's designated tires, and never mix tires or wheels of the sizes different from the originally equipped tires and wheels.**

SECTION 3

STARTING AND DRIVING

Starting and driving

Preparing to start the hybrid system 301
How to start the hybrid system 301
Driving and parking using smart key system 304
Tips for driving in various conditions 307
Winter driving tips 309
Dinghy towing 310
Trailer towing 310
How to save fuel and make your vehicle last longer 311

Preparing to start the hybrid system

1. Check the area around the vehicle before getting in.
2. Adjust seat position, seatback angle, seat cushion angle, seat height, head restraint height and steering wheel angle.
3. Adjust the inside and outside rear view mirrors.
4. Lock all side doors and back door.
5. Fasten seat belts.

When you get in the vehicle, check whether the “READY” light is on or not.

⚠ CAUTION

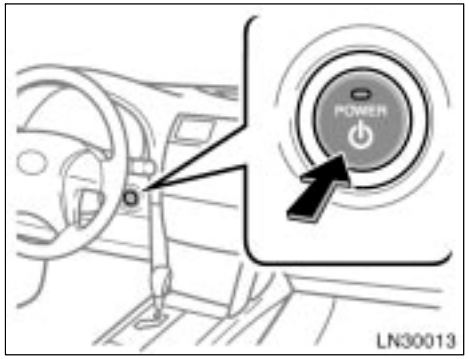
Your vehicle does not produce any noise or vibration when the vehicle is ready to be driven with the “READY” indicator light on. Move your foot carefully from the brake pedal to the acceleration pedal when driving.

How to start the hybrid system—
(a) Before starting

1. Apply the parking brake firmly.
2. Turn off unnecessary lights and accessories.
3. Put the selector lever in “P”.
4. Depress the brake pedal and hold it to the floor until driving off.

As the hybrid system can be started only with the transmission in the “P” position, put the selector lever in “P” whenever starting the system.

(b) Starting the hybrid system



PUSH BUTTON START FUNCTION

The hybrid system can be started by pressing the “POWER” switch.

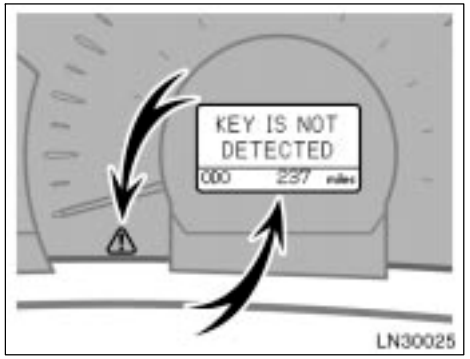
Before starting the hybrid system, be sure to follow the instructions in “(a) Before starting”.

Starting procedure

With your foot off the accelerator pedal, press the “POWER” switch briefly and firmly. The “READY” light starts flashing and then it stays on with sounding a beep. If the ambient temperature is low, such as during winter driving conditions, it may take longer than the usual amount of time until the “READY” light stays on.

The engine may not start even with the “READY” light on.

If there is a problem somewhere in the hybrid system, the message “CHECK HYBRID SYSTEM” will appear on the multi−information display. Have your vehicle checked by your Toyota dealer as soon as possible.



If the hybrid system will not start...

In the following cases, the hybrid system will not start.

- If a buzzer sounds from the vehicle, and the message “KEY IS NOT DETECTED” appears on the multi−information display and the master warning light comes on when pressing the “POWER” switch, this indicates that the key is not in the vehicle.
- If the key is placed in the trunk, the hybrid system cannot be started.
- There are instances in which the hybrid system will not start, even if the key is in the vehicle (e.g. on the floor, in the cup holder or glove box).

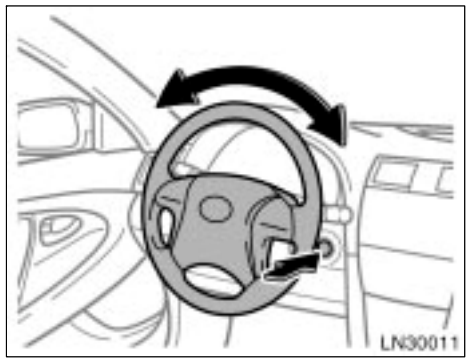
When the push button start function does not operate properly, the following may be causes:

- The key battery may be discharged if the electronic key does not work.

  You can start the hybrid system by touching the Toyota logo side of the electronic key to the “POWER” switch. For details, see “Smart key system” on page 32 in Section 1−2.

  Replace the key battery as soon as possible. (See “—Replacing battery” on page 30 in Section 1−2.)
- The hybrid system was repeatedly turned on and off over a short period.

  Wait 10 seconds and then start the hybrid system.



- If the green indicator light on the “POWER” switch flashes, and the message “S/T IS NOT UNLOCKED” appears on the multi−information display and the master warning light comes on, the steering wheel is locked.

  To free the steering lock, turn the steering wheel slightly while pressing the “POWER” switch.

- If the amber indicator light on the “POWER” switch flashes, and the message “CHECK S/T LOCK” appears on the multi−information display and the master warning light comes on, there is a problem in the steering lock function.

  Contact your Toyota dealer, and have your vehicle and all keys inspected.

- If the amber indicator light on the “POWER” switch flashes, and no message appears on the multi−information display, there is a problem in the push button start function.

  Contact your Toyota dealer, and have your vehicle and all keys inspected.

- In addition to the above, there are instances in which the smart key system does not operate properly because of the circumstances of use. For details, see “Smart key system” on page 32 in Section 1−2.

In cases other than those described above, it is possible that a problem has occurred in an area other than the start system. See “If your vehicle will not start” on page 313 in Section 4.

If the 12 volt battery is disconnected or run down...

The “READY” light will not come on and the hybrid system will not start after you reconnect, replace or recharge the battery. In this case, perform the following procedure to restart the hybrid system:

1. Turn the hybrid system off.
2. Open and close the driver’s door.
3. Press the “POWER” switch briefly and firmly.

If the hybrid system still will not start, contact your Toyota dealer.

⚠ CAUTION

Never start the hybrid system from outside the vehicle, or an accident may occur. Be sure to sit in the driver seat, then start the system.

NOTICE

- ***If any message appears on the multi−information display or service reminder indicator light comes on (see page 140 and page 150 in Section 1−6 for details) or the 12 volt battery is disconnected, the hybrid system may not be started. In that case, push the “POWER” switch again. If the “READY” light does not come on, contact your Toyota dealer.***
- ***When you start the hybrid system at a lower outside temperature, it may take longer before the blinking “READY” light changes to constant on.***

Driving and parking using smart key system

TIPS FOR USING SMART KEY SYSTEM

When using the smart key system, it is possible to start or stop the hybrid system as long as the key is on your person.

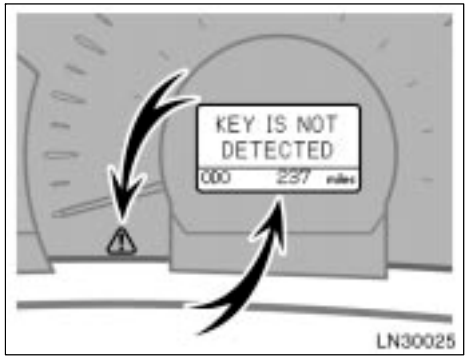
For this reason, it is possible that a passenger may remove the key from the vehicle without the driver being aware of the fact. In such a case, it is not possible to restart the hybrid system after having turned it off. In addition, it is possible that one may get out of the vehicle without being aware that the “POWER” switch has not been turned off completely.

When driving or getting in or out of the vehicle, drivers should make sure that they are carrying the key.

⚠ CAUTION

Do not touch the “POWER” switch while driving.

If you have to make an emergency stop, press and hold the “POWER” switch for more than 3 seconds.



Master warning light and multi−information display

SYSTEM FUNCTION REMINDERS

Follow the instructions described below if any of the following warnings occur:

(A) A warning buzzer sounds once from the instrument cluster when the “POWER” switch is pushed.

This indicates that the driver has gotten into the vehicle without the key. The message “KEY IS NOT DETECTED” will also appear on the multi−information display and the master warning light will come on.

Operate the “POWER” switch only after taking care that the key is in the vehicle.

If the warning light is still lit when the key is in the vehicle, the key battery is discharged. Check that the indicator light on the key comes on by pushing the lock button on the key. When the indicator light does not come on, change the key battery so that smart key system works properly.

(B) A warning buzzer sounds once from the instrument cluster, accompanied by three warning sounds from the vehicle when the driver gets out of the vehicle and closes the door.

This indicates that the driver is attempting to leave the vehicle carrying the key with “POWER” switch turned off although the transmission selector lever has been set in the “P” position. The message “KEY IS NOT DETECTED” will also appear on the multi−information display and the master warning light will come on.

Get out of the vehicle only after turning off the hybrid system by pressing the “POWER” switch and checking that the indicator light on the “POWER” switch has gone off. If the driver returns to the vehicle without carrying the key and begins driving, a warning buzzer will sound once more.

(C) A warning buzzer sounds from the vehicle for two seconds after locking the door with the door handle switch.

This indicates that the driver is attempting to lock the doors while carrying the key, neglecting to follow the instructions for case (B) above.

Lock the doors only after turning off the hybrid system by pressing the “POWER” switch and checking that the indicator light on the “POWER” switch has gone off.

A warning buzzer that sounds even though the engine has been turned off indicates that driver is attempting to lock the vehicle with the keys still in the vehicle.

Leave the vehicle only after making sure that you are carrying the key.

(D) A warning buzzer sounds continuously from the instrument cluster when opening the driver’s door.

This indicates that the transmission selector lever is in a position other than “P” and that the “POWER” switch is not turned off. The message “SHIFT TO P RANGE” will also appear on the multi−information display.

Get out of the vehicle only after setting the transmission selector lever in the “P” position, turning off the hybrid system by pressing the “POWER” switch and checking that the indicator light on the “POWER” switch has gone off.

(E) A warning buzzer sounds continuously from the instrument cluster and from the vehicle when closing the door after getting out of the vehicle.

This indicates that the driver is attempting to leave the vehicle carrying the key, neglecting to follow the instructions for case (D) above. The messages, “SHIFT TO P RANGE” and “KEY IS NOT DETECTED”, will also appear alternately on the multi−information display and the master warning light will come on.

Get out of the vehicle only after setting the transmission selector lever in the “P” position, turning off the hybrid system by pressing the “POWER” switch and checking that the indicator light on the “POWER” switch has gone off.

(F) A warning buzzer sounds once from the instrument cluster and three times from the vehicle when a passenger is getting out of the vehicle.

This indicates that the passenger is attempting to leave the vehicle carrying the key, without turning the hybrid system off. The message “KEY IS NOT DETECTED” will also appear on the multi−information display and the master warning light will come on.

When passengers get out of the vehicle, care should be taken to leave the key with the driver. If the driver begins driving after a passenger gets out of the vehicle carrying the key, a warning buzzer will sound once more.

(G) A warning buzzer sounds from the vehicle for two seconds when locking the vehicle from the outside with the door handle switch.

This indicates that the driver is attempting to lock the door with the key still in the vehicle.

Leave the vehicle only after making sure that you are carrying the key.

(H) A warning buzzer sounds once from the instrument cluster when the “POWER” switch is turned off.

This indicates that the key battery is low. (This warning buzzer sounds only when the hybrid system has been on or the “POWER” switch has been set at ON for 20 minutes or more.) The message “LOW KEY BATTERY” will also appear on the multi−information display.

Change the key battery ahead of time in order to ensure that the smart key system works properly.

(I) A warning buzzer sounds repeatedly from the instrument cluster when opening the driver’s door with the “POWER” switch turned off.

This indicates that the steering wheel is not locked. Turn the engine off and then open the door in order to lock the steering wheel.

(J) The “POWER” switch flashes green once every second.

This indicates that the steering lock is stuck. The message “S/T IS NOT UNLOCKED” will also appear on the multi−information display.

To free it, rotate the steering wheel slightly while pressing the “POWER” switch.

(K) The “POWER” switch flashes amber once every 2 seconds.

When the message “CHECK S/T LOCK” appears on the multi−information display—
This indicates a problem with the steering lock function. Have your vehicle checked at your Toyota dealer.

When no message appears on the multi−information display—
This indicates a problem with the push button start function. Have your vehicle checked at your Toyota dealer.

THEFT PREVENTION FUNCTION

- When the hybrid system is turned off, the engine immobilizer system is automatically set. (See “Engine immobilizer system” on page 24 in Section 1−2.)
- When the driver’s door is opened after turning off the hybrid system, the steering wheel will lock.

  When the 12 volt battery is discharged, the steering lock function may not operate properly.

Tips for driving in various conditions

- Always slow down in gusty crosswinds. This will allow you much better control.
- Drive slowly onto curbs and, if possible, at a right angle. Avoid driving onto high, sharp−edged objects and other road hazards. Failure to do so can lead to severe tire damage such as a tire burst.

  Drive slowly when passing over bumps or travelling on a bumpy road. Otherwise, the impact could cause severe damage to the tires and/or wheels.
- When parking on a hill, turn the front wheels until they touch the curb so that the vehicle will not roll. Apply the parking brake, and place the transmission in “P”. If necessary, block the wheels.

- Washing your vehicle or driving through deep water may get the brakes wet. To see whether they are wet, check that there is no traffic near you, and then press the pedal lightly. If you do not feel a normal braking force, the brakes are probably wet. To dry them, drive the vehicle cautiously while lightly pressing the brake pedal with the parking brake applied. If they still do not work safely, pull to the side of the road and call a Toyota dealer for assistance.

⚠ CAUTION

- **Before driving off, make sure that the parking brake is fully released and the parking brake reminder light is off.**
- **Do not leave your vehicle unattended while the hybrid system is operating.**
- **Do not rest your foot on the brake pedal while driving. It can cause dangerous overheating, needless wear, and poor fuel economy.**

- **To drive down a long or steep hill, reduce your speed and use engine brake. Remember, if you ride the brakes excessively, they may overheat and not work properly.**
- **Be careful when accelerating, engine braking or braking on a slippery surface. Sudden acceleration or engine braking could cause the vehicle to skid or spin.**
- **Do not drive in excess of the speed limit. Even if the legal speed limit permits it, do not drive over 140 km/h (85 mph) unless your vehicle has high−speed capability tires. Driving over 140 km/h (85 mph) may result in tire failure, loss of control and possible injury. Be sure to consult a tire dealer to determine whether the tires on your vehicle are high−speed capability tires or not before driving at such speeds.**

- **Do not continue normal driving when the brakes are wet. If they are wet, your vehicle will require a longer stopping distance, and it may pull to one side when the brakes are applied. Also, the parking brake will not hold the vehicle securely.**

Winter driving tips

Make sure your coolant is properly protected against freezing.

Only use “Toyota Super Long Life Coolant” or similar high quality ethylene glycol based non−silicate, non−amine, non−nitrite, and non−borate coolant with long−life hybrid organic acid technology. (Coolant with long−life hybrid organic acid technology is a combination of low phosphates and organic acids.)

See “Checking the coolant level” on page 357 in Section 7−2 for details of coolant type selection.

For the U.S.A.—“Toyota Super Long Life Coolant” is a mixture of 50% coolant and 50% deionized water. This coolant provides protection down to about −35°C (−31°F).

For Canada—“Toyota Super Long Life Coolant” is a mixture of 55% coolant and 45% deionized water. This coolant provides protection down to about −42°C (−44°F).

NOTICE
Do not use plain water alone.

Check the condition of the 12 volt battery and cables.

Cold temperatures lower the performance of the 12 volt battery, so it must be in top shape to provide enough power for winter starting. Section 7−3 tells you how to visually inspect the 12 volt battery. Your Toyota dealer and most service stations will be pleased to check the level of charge.

Make sure the engine oil viscosity is suitable for the cold weather.

See page 356 in Section 7−2 for recommended viscosity. Leaving a heavy summer oil in your vehicle during winter months may cause harder starting. If you are not sure about which oil to use, call your Toyota dealer—they will be pleased to help.

Keep the door locks from freezing.

Squirt lock de−icer or glycerine into the locks to keep them from freezing.

Use a washer fluid containing an antifreeze solution.

This product is available at your Toyota dealer and most auto parts stores. Follow the manufacturer’s directions for how much to mix with water.

NOTICE
Do not use engine antifreeze or any other substitute because it may damage your vehicle’s paint.

Do not use your parking brake when there is a possibility it could freeze.

When parking, put the transmission into “P” and block the rear wheels. Do not use the parking brake, or snow or water accumulated in and around the parking brake mechanism may freeze, making it hard to release.

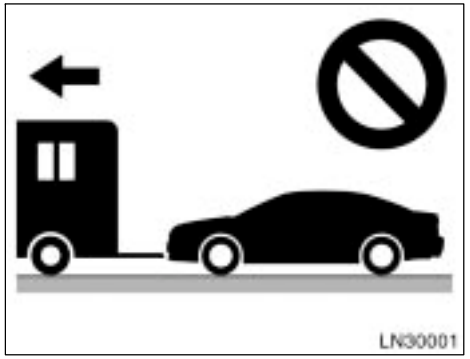
Keep ice and snow from accumulating under the fenders.

Ice and snow built up under your fenders can make steering difficult. During bad winter driving, stop and check under the fenders occasionally.

Depending on where you are driving, we recommend you carry some emergency equipment.

Some of the things you might put in the vehicle are tire chains, window scraper, bag of sand or salt, flares, small shovel, jumper cables, etc.

Dinghy towing



Your vehicle is not designed to be dinghy towed (with four wheels on the ground) behind a motorhome.

NOTICE

Do not tow your vehicle with four wheels on the ground. This may cause serious damage to your vehicle.

Trailer towing

Toyota does not recommend towing a trailer with your Toyota. Toyota also does not recommend the installation of a tow hitch or the use of a tow hitch carrier for a wheelchair, scooter, bicycle, etc. Your Toyota is not designed for trailer towing or for the use of tow hitch mounted carriers.

How to save fuel and make your vehicle last longer

Improving fuel economy is easy—just take it easy. It will help make your vehicle last longer, too. Here are some specific tips on how to save money on both fuel and repairs:

- **Keep your tires inflated at the correct pressure.** Underinflation causes tire wear and wastes fuel. See page 359 in Section 7−2 for instructions.
- **Do not carry unneeded weight in your vehicle.** Excess weight puts a heavier load on the hybrid system, causing greater fuel consumption.
- **Accelerate slowly and smoothly.** Avoid jackrabbit starts. Get into high gear as quickly as possible.
- **Avoid continuous speeding up and slowing down.** Stop−and−go driving wastes fuel.
- **Avoid unnecessary stopping and braking.** Maintain a steady pace. Try to time the traffic signals so you only need to stop as little as possible or take advantage of through streets to avoid traffic lights. Keep a proper distance from other vehicles to avoid sudden braking. This will also reduce wear on your brakes.
- **When parking, be sure to put the transmission into the “P” position.** In the “N” position, the engine operates but electricity cannot be generated. The hybrid battery will be discharged requiring unnecessary engine power to recharge.
- **Avoid heavy traffic or traffic jams whenever possible.**
- **Do not rest your foot on the brake pedal.** This causes premature wear, overheating and poor fuel economy.
- **Maintain a moderate speed on highways.** The faster you drive, the greater the fuel consumption. By reducing your speed, you will cut down on fuel consumption.
- **Keep the front wheels in proper alignment.** Avoid hitting the curb and slow down on rough roads. Improper alignment not only causes faster tire wear but also puts an extra load on the hybrid system, which, in turn, wastes fuel.
- **Keep the bottom of your vehicle free from mud, etc.** This not only lessens weight but also helps prevent corrosion.
- **Keep your vehicle tuned−up and in top shape.** A dirty air cleaner, improper valve clearance, dirty plugs, dirty oil and grease, brakes not adjusted, etc. all lower engine performance and contribute to poor fuel economy. For longer life of all parts and lower operating costs, keep all maintenance work on schedule, and if you often drive under severe conditions, see that your vehicle receives more frequent maintenance. (For scheduled maintenance information, please refer to the “Scheduled Maintenance Guide” or “Owner’s Manual Supplement”.)

⚠ CAUTION

Never turn off the hybrid system to coast down hills. Your power steering and brake booster do not function when the hybrid system is off. In addition, the emission control system operates properly only when the hybrid system is operating.

SECTION 4

IN CASE OF AN EMERGENCY

In case of an emergency

If your vehicle will not start 313
If your hybrid system stalls while driving 317
If your vehicle overheats 317
If you have a flat tire 318
If your vehicle becomes stuck 327
If your vehicle needs to be towed 327
If you cannot shift transmission selector lever 329
If you lose your keys 330

If your vehicle will not start—
(a) Simple checks

Before making these checks, make sure you have sufficient fuel and that you have followed the correct starting procedure given in “How to start the hybrid system” on page 301 in Section 3. If your vehicle is equipped with the engine immobilizer system, also check whether the other keys will start the hybrid system. If they work, your key may be broken. Have the key checked at your Toyota dealer. If none of your keys work, there may be a malfunction in the immobilizer system. Call your Toyota dealer. (See “Keys” on page 22 in Section 1−2.)

If the instrument cluster displays with normal brightness levels with the “POWER” switch set at ON...

You may try emergency start. See “(b) Emergency start” for further instructions.

If the instrument cluster dims or the instrument cluster display turns off with the “POWER” switch set at ON...

1. Check that the 12 volt battery terminals are tight and clean.
2. If the 12 volt battery terminals are O.K., the 12 volt battery is discharged. You may try jump starting. See “(c) Jump starting” that follows for further instructions.

NOTICE

Hybrid vehicles cannot be push−started.

(b) Emergency start

When the hybrid system cannot be started, the following procedure can be used if the hybrid system and “POWER” switch function normally.

1. Put the transmission in “P”.
2. Set the mode to ACC by pushing the “POWER” switch once.
3. Push and hold the “POWER” switch for about 15 seconds while depressing the brake pedal firmly.

Even if the hybrid system can be started using the above procedure, the system may be malfunctioning. Have the vehicle checked by your Toyota dealer.

If the hybrid system cannot be started using the above procedure, immediately contact your Toyota dealer.

⚠ CAUTION

Do not place any objects close to the “POWER” switch. If the object pushes on the switch, the hybrid system may be started unexpectedly.

(c) Jump starting

If the 12 volt battery is discharged, the hybrid system can be started by jump starting. Depending on the vehicle condition, however, the hybrid system may not start.

To avoid serious injury and damage to your vehicle which might result from an explosion of the battery, acid burns, electrical burns, or damaged electronic components, follow instructions carefully.

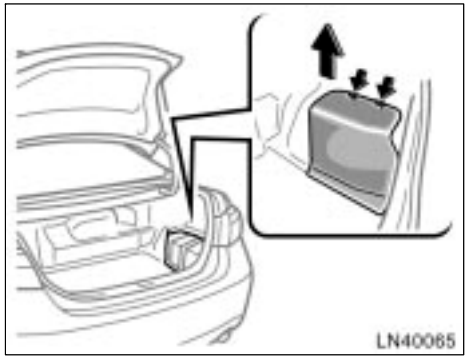
If you are unsure about how to follow this procedure, we strongly recommend that you seek the help of a competent mechanic or towing service.

⚠ CAUTION

- **Batteries contain sulfuric acid which is poisonous and corrosive. Wear protective safety glasses when jump starting, and avoid spilling acid on your skin, clothing, or vehicle.**
- **If you should accidentally get acid on yourself or in your eyes, remove any contaminated clothing and flush the affected area with water immediately. Then get immediate medical attention. If possible, continue to apply water with a sponge or cloth while en route to the medical office.**
- **The gas normally produced by a battery will explode if a flame or spark is brought near. Use only standardized jumper cables and do not smoke or light a match while jump starting.**

NOTICE

The battery used for boosting must be 12 V. Do not jump start unless you are sure that the booster battery is correct.



12 VOLT BATTERY LOCATION

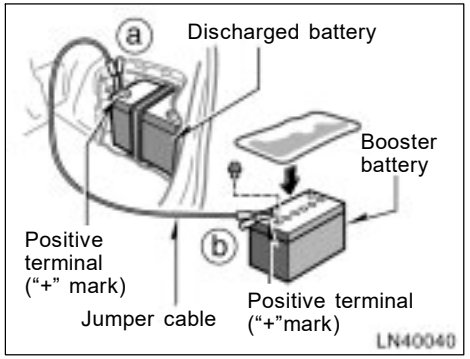
The 12 volt battery is located in the right−hand side of the trunk. Remove the cover to access the battery.

JUMP STARTING PROCEDURE

1. If the booster battery is installed in another vehicle, make sure the vehicles are not touching. Turn off all unnecessary lights and accessories.

   When boosting, use the battery of matching or higher quality. Any other battery may be difficult to jump start with.

   If jump starting is difficult, charge the battery for several minutes.
2. If required, remove all the vent plugs from the booster battery. Lay a cloth over the open vents on the battery. (This helps reduce the explosion hazard, personal injuries and burns.)
3. If the engine in the vehicle with the booster battery is not running, start it and let it run for a few minutes. During jump starting, run the engine at about 2000 rpm with the accelerator pedal lightly depressed.



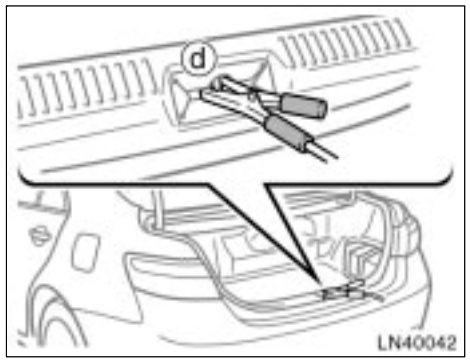
4. Make the cable connections in the order a, b, c, d.

   a. Connect the clamp of the positive (red) jumper cable to the positive (+) terminal of the discharged 12 volt battery.

   b. Connect the clamp at the other end of the positive (red) jumper cable to the positive (+) terminal of the booster battery.

   c. Connect the clamp of the negative (black) jumper cable to the negative (−) terminal on the booster battery.

   d. Connect the clamp at the other end of the negative (black) jumper cable to a solid, stationary, unpainted, metallic point of the vehicle with the discharged battery.



The recommended connecting point is ⓓ in the above illustration.

⚠ CAUTION

When making the connections, to avoid serious injury, do not lean over the battery or accidentally let the jumper cables or clamps touch anything except the correct battery terminals or the ground.

5. Start the hybrid system. Make sure the “READY” light is on.

   If the ”READY” light will not come on and the hybrid system will not start after you recharge the battery, perform the following procedure. Turn the hybrid system off. Open and close the driver’s door. Then push the ”POWER” switch briefly and firmly.

   If the the message “LOW T. BATTERY STOP THE VEHICLE SHIFT TO P” appears on the multi−information display, the hybrid battery is also discharged. In this condition, the hybrid system may not start. Contact your Toyota dealer.
6. Carefully disconnect the cables in the exact reverse order: the negative cable and then the positive cable.
7. Carefully dispose of the battery cover cloths—they may now contain sulfuric acid.
8. If removed, replace all the battery vent plugs.

If the cause of the 12 volt battery discharging is not apparent (for example, lights left on), have the battery checked by your Toyota dealer.

If the first start attempt is not successful...

Check that the clamp on the jumper cables are tight. Recharge the discharged battery with the jumper cables connected for several minutes and restart the hybrid system in the normal way.

If the another attempt is not successful, the battery may be depleted. Have it checked at your Toyota dealer.

If your hybrid system stalls while driving

If your hybrid system stalls while driving...

1. Reduce your speed gradually, keeping a straight line. Move cautiously off the road to a safe place.
2. Turn on your emergency flashers.
3. Set the “POWER” switch at ACC or off, and try starting the hybrid system again.

If the hybrid system will not start, see “If your vehicle will not start” on page 313 in this Section.

⚠ CAUTION

- **If the hybrid system is not operating, the power assist for the brakes and steering will not work so steering and braking will be much harder than usual.**
- **If the hybrid system stalls while driving, do not open the driver’s door until the vehicle comes to a complete stop. Opening the driver’s door locks the steering wheel, resulting in loss of steering control.**

If your vehicle overheats

Any of the following may indicate that the hybrid system has overheated:

- **The engine coolant temperature gauge indicates overheating.**
- **The message “WATER TEMP” or “HYBRID SYSTEM OVER HEAT” appears on the multi−information display.**
- **A loss of power is experienced.**
- **A loud knocking or pinging noise is heard.**

If the hybrid system overheats, follow the procedures below:

1. Pull safely off the road, stop the vehicle and turn on your emergency flashers. Put the transmission in “P” and apply the parking brake. Turn off the air conditioning if it is being used.
2. If coolant or steam is boiling out of the radiator or reservoir, stop the hybrid system. Wait until the steam subsides before opening the hood. If there is no coolant boiling over or steam, leave the hybrid system turned on and make sure the electric cooling fan is operating. If it is not, turn the hybrid system off.

⚠ CAUTION

To help avoid personal injury, keep the hood closed until there is no steam. Escaping steam or coolant is a sign of very high pressure.

3. Look for obvious coolant leaks from the radiator, hoses, and under the vehicle. However, note that water draining from the air conditioning is normal if it has been used.

⚠ CAUTION

When the hybrid system is on, keep hands and clothing away from the moving fan.

4. If the coolant is leaking, stop the hybrid system immediately. Call a Toyota dealer for assistance.
5. If there are no obvious leaks, check the coolant reservoir. If it is dry, add coolant to the reservoir while the hybrid system is on. Fill it about half full. For the coolant type, see “Coolant type selection” on page 357 in Section 7−2.

⚠ CAUTION

Do not attempt to remove the radiator cap when the hybrid system and radiator are hot. Serious injury could result from scalding hot fluid and steam blown out under pressure.

6. After the coolant temperature has cooled to normal, again check the coolant level in the reservoir. If necessary, bring it up to half full again. Serious coolant loss indicates a leak in the system. You should have it checked as soon as possible at your Toyota dealer.

If you have a flat tire—

1. Reduce your speed gradually, keeping a straight line. Move cautiously off the road to a safe place well away from the traffic. Avoid stopping on the center divider of a highway. Park on a level spot with firm ground.
2. Stop the hybrid system and turn on your emergency flashers.
3. Firmly set the parking brake and put the transmission in “P”.
4. Have everyone get out of the vehicle on the side away from traffic.
5. Read the following instructions thoroughly.

⚠ CAUTION

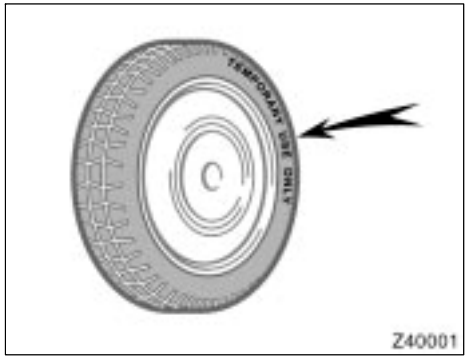
When jacking, be sure to observe the following to reduce the possibility of death or serious injury:

- **Follow jacking instructions.**
- **Do not put any part of your body under the vehicle supported by the jack. Otherwise, personal injury may occur.**
- **Do not start the hybrid system while your vehicle is supported by the jack.**
- **Stop the vehicle on a level firm ground, firmly set the parking brake and put the transmission in “P”. Block the wheel diagonally opposite to the one being changed if necessary.**

- **Make sure to set the jack properly in the jack point. Raising the vehicle with jack improperly positioned will damage the vehicle or may allow the vehicle to fall off the jack and cause personal injury.**
- **Never get under the vehicle when the vehicle is supported by the jack alone.**
- **Use the jack only for lifting your vehicle during wheel changing.**
- **Do not raise the vehicle with someone in the vehicle.**
- **When raising the vehicle, do not place any objects on top of or underneath the jack.**
- **Raise the vehicle only high enough to remove and change the tire.**

NOTICE

Do not continue driving with a deflated tire. Driving even a short distance can damage a tire and wheel beyond repair.



Compact spare tire

The compact spare tire is designed for temporary emergency use only.

The compact spare tire is identified by the distinctive wording “TEMPORARY USE ONLY” molded into the side wall of the tire.

The compact spare tire saves space in your luggage compartment, and its lighter weight helps to improve fuel economy and permits easier installation in case of a flat tire.

The compact spare tire can be used many times, if necessary. It has tread life of up to 4800 km (3000 miles) depending on road conditions and your driving habits. When tread wear indicators appear on the tire, replace the tire.

See also the tire information on page 362 in Section 7−2 for details on the tread wear indicators and other service information.

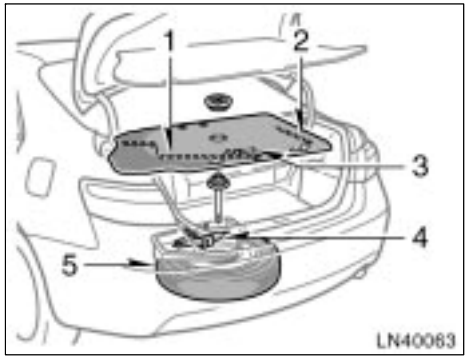
⚠ CAUTION

- **The compact spare tire was designed especially for your Toyota. Do not use it on any other vehicle.**
- **Do not use more than one compact spare tire at the same time.**
- **The pressure for the compact spare tire must be 420 kPa (4.2 kgf/cm^2 or bar, 60 psi).**
- **Do not exceed 80 km/h (50 mph) when driving with the compact spare tire.**
- **Replace the compact spare tire with the standard tire as soon as possible.**
- **Avoid sudden acceleration, sudden deceleration and sharp turns with the compact spare tire.**

NOTICE

Your ground clearance is reduced when the compact spare tire is installed so avoid driving over obstacles and drive slowly on rough, unpaved roads and speed bumps. Also, do not attempt to go through an automatic car wash as the vehicle may get caught, resulting in damage.

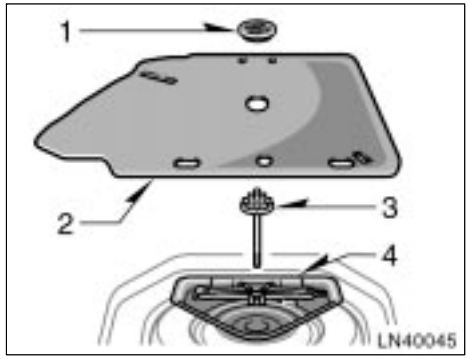
—Required tools and spare tire



1. Get the required tools and spare tire.

1. Jack handle
2. Wheel nut wrench
3. Transport eyelet (on some models)
4. Jack
5. Spare tire

To prepare yourself for an emergency, you should familiarize yourself with the use of the jack, each of the tools and their storage locations.

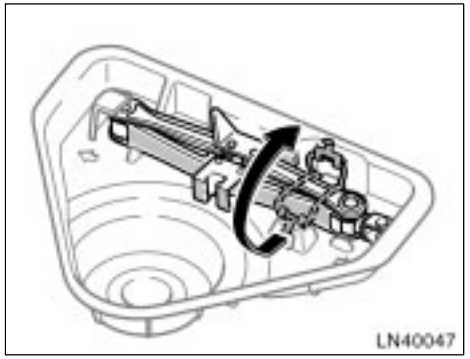


To remove the spare tire:

1. Loosen the nut and remove it.
2. Remove the spare tire cover.
3. Loosen the bolt and remove it.
4. Remove the jack tray.

Then take the spare tire out of the vehicle.

When storing the spare tire, put it in place with the outer side of the wheel facing up. Then secure the tire by repeating the above removal steps in reverse order to prevent it from flying forward during a collision or sudden braking.

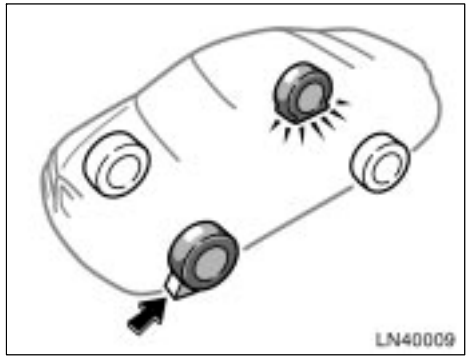


Before removing the jack, unhook the tightening strap.

After storing the jack, make sure it is securely held by the tightening strap.

This prevents the jack from flying forward during a collision or sudden stop.

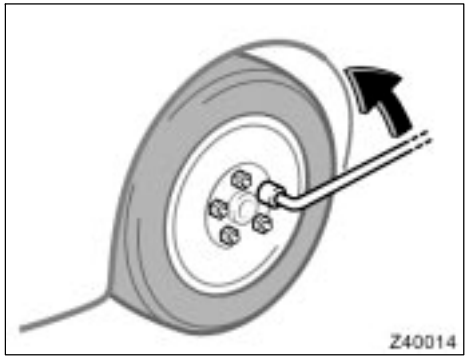
—Blocking the wheel



2. Block the wheel diagonally opposite the flat tire to keep the vehicle from rolling when it is jacked up.

When blocking the wheel, place a wheel block or equivalent in front of one of the front wheels or behind one of the rear wheels.

—Loosening wheel nuts



3. Loosen all the wheel nuts.

Always loosen the wheel nuts before raising the vehicle.

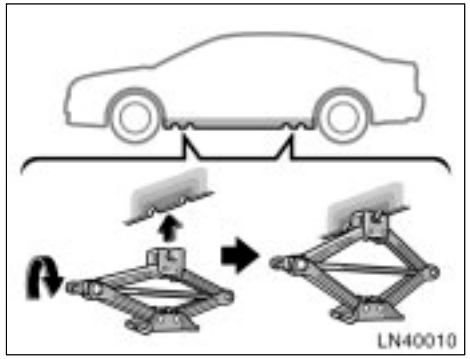
Turn the wheel nuts counterclockwise to loosen. To get maximum leverage, fit the wrench to the nut so that the handle is on the right side, as shown above. Grab the wrench near the end of the handle and pull up on the handle. Be careful that the wrench does not slip off the nut.

Do not remove the nuts yet—just unscrew them about one−half turn.

⚠ CAUTION

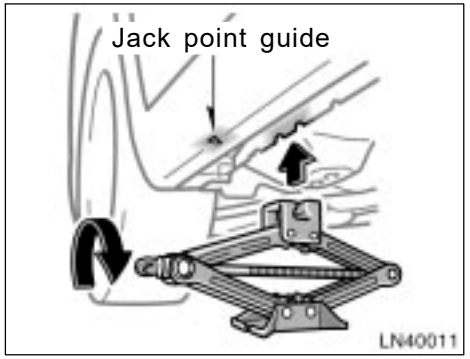
Never use oil or grease on the bolts or nuts. The nuts may become loose and the wheels may fall off, which could cause a serious accident.

—Positioning the jack



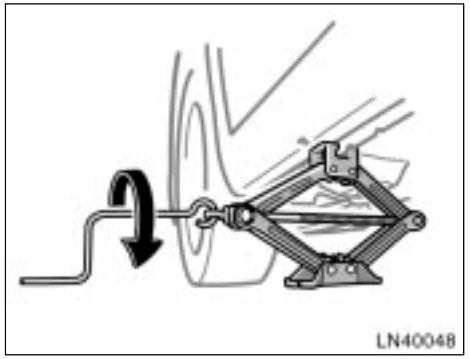
4. Position the jack at the correct jack point as shown.

Make sure the jack is positioned on a level and solid place.



The jack point guides are located under the rocker panel. They indicate the jack point positions.

—Raising your vehicle



5. After making sure that no one is in the vehicle, raise it high enough so that the spare tire can be installed.

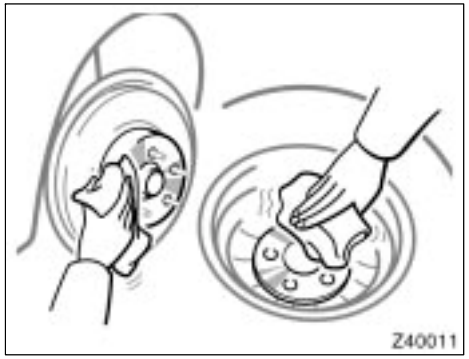
Remember you will need more ground clearance when putting on the spare tire than when removing the flat tire.

To raise the vehicle, insert the jack handle into the jack (it is a loose fit) and turn it clockwise. As the jack touches the vehicle and begins to lift, double−check that it is properly positioned.

—Changing wheels

⚠ CAUTION

Never get under the vehicle when the vehicle is supported by the jack alone.



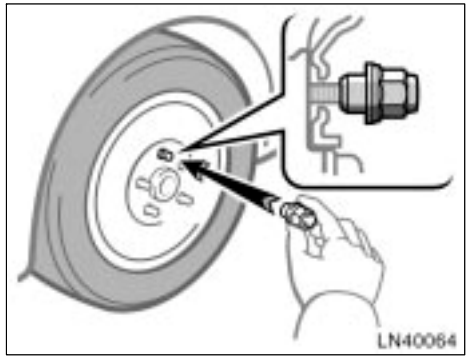
6. Remove the wheel nuts and change tires.

Lift the flat tire straight off and put it aside.

Roll the spare wheel into position and align the holes in the wheel with the bolts. Then lift up the wheel and get at least the top bolt started through its hole. Wiggle the tire and press it back over the other bolts.

Before putting on wheels, remove any corrosion on the mounting surfaces with a wire brush or such. Installation of wheels without good metal−to−metal contact at the mounting surface can cause wheel nuts to loosen and eventually cause a wheel to come off while driving.

—Reinstalling wheel nuts



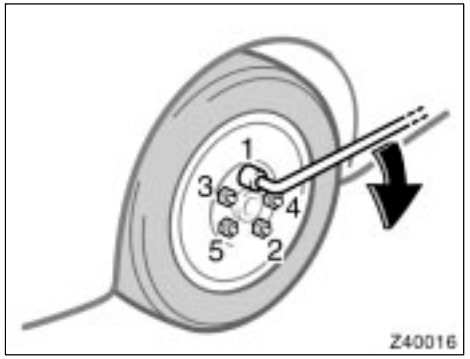
7. Reinstall all the wheel nuts finger tight.

Reinstall the wheel nuts (tapered end inward) and tighten them as much as you can by hand. Press back on the tire and see if you can tighten them more.

⚠ CAUTION

Never use oil or grease on the bolts or nuts. Doing so may lead to overtightening the nuts and damaging the bolts. The nuts may loose and the wheels may fall off, which could cause a serious accident. If there is oil or grease on any bolt or nut, clean it.

—Lowering your vehicle



8. Lower the vehicle completely and tighten the wheel nuts.

Turn the jack handle counterclockwise to lower the vehicle.

Use only the wheel nut wrench to tighten the nuts. Do not use other tools or any additional leverage other than your hands, such as a hammer, pipe or your foot. Make sure the wrench is securely engaged over the nut.

Tighten each nut a little at a time in the order shown. Repeat the process until all the nuts are tight.

⚠ CAUTION

- **When lowering the vehicle, make sure all portions of your body and all other persons around will not be injured as the vehicle is lowered to the ground.**
- **Have the wheel nuts tightened with torque wrench to 103 N·m (10.5 kgf·m, 76 ft·lbf), as soon as possible after changing wheels. Otherwise, the nuts may loosen and the wheels may fall off, which could cause a serious accident.**
- **Do not attach a heavily damaged plastic wheel ornament. It may fly off the wheel and cause accidents while the vehicle is moving.**

—After changing wheels

9. Check the air pressure of the replaced tire.

Adjust the air pressure to the specification designed on page 385 in Section 8. If the pressure is lower, drive slowly to the nearest service station and fill to the correct pressure.

Do not forget to reinstall the tire inflation valve cap as dirt and moisture could get into the valve core and possibly cause air leakage. If the cap is missing, have a new one put on as soon as possible.

10. Restow all the tools, jack and flat tire securely.

As soon after changing wheels as possible, tighten the wheel nuts to the torque specified on page 385 in Section 8 with a torque wrench. Have a technician repair the flat tire and replace the spare tire with it.

Initial adjustment of the tire pressure warning system is necessary after you have replaced your tires or wheels. See “Tire pressure warning system” on page 168 in Section 1−7.

⚠ CAUTION

Before driving, make sure all the tools, jack and flat tire are securely in place in their storage location to reduce the possibility of personal injury during a collision or sudden braking.

If your vehicle becomes stuck

If your vehicle becomes stuck in snow, mud, sand, etc., then you may attempt to rock the vehicle free by moving it forward and backward.

⚠ CAUTION

Do not attempt to rock the vehicle free by moving it forward and backward if people or objects are anywhere near the vehicle. During the rocking operation the vehicle may suddenly move forward or backward as it becomes unstuck, causing injury or damage to nearby people or objects.

NOTICE

If you rock your vehicle, observe the following precautions to prevent damage to the transmission and other parts.

- ***Do not depress the accelerator pedal while shifting the selector lever or before the transmission is completely shifted to forward or reverse gear.***
- ***Avoid spinning the wheels.***
- ***If your vehicle remains stuck after rocking the vehicle several times, consider other ways such as towing.***

If your vehicle needs to be towed—

(a) Towing with wheel lift type truck—

—From front

—From rear

(b) Using flat bed truck

LN40013

If towing is necessary, we recommend you to have it done by your Toyota dealer or a commercial tow truck service. In consultation with them, have your vehicle towed using either (a) or (b).

Proper equipment will help ensure that your vehicle is not damaged while being towed. Commercial operators are generally aware of the state/provincial and local laws pertaining to towing.

Your vehicle can be damaged if it is towed incorrectly. Although most operators know the correct procedure, it is possible to make a mistake. To avoid damage to your vehicle, make sure the following precautions are observed. If necessary, show this page to the tow truck driver.

⚠ CAUTION

If your vehicle needs to be towed, do it with the front wheels raised. If the wheels with the motor generator are on the ground when towing, the motor may continue to generate electricity. This may cause the electricity leakage. Depending on the severity of the damage, electricity leakage may cause fire.

TOWING PRECAUTIONS:

Use a safety chain system for all towing, and abide by the state/provincial and local laws. The wheels and axle on the ground must be in good condition. If they are damaged, use a towing dolly.

(a) Towing with wheel lift type truck

NOTICE

When lifting wheels, take care to ensure adequate ground clearance for towing at the opposite end of the raised vehicle. Otherwise, the bumper and/or underbody of the towed vehicle will be damaged during towing.

From front—Release the parking brake.

From rear—

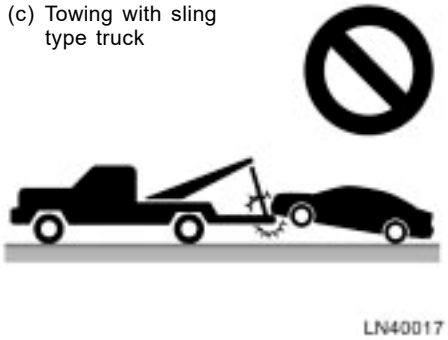
Use a towing dolly under the front wheels.

NOTICE

Never tow a vehicle from the rear with the front wheels on the ground, as this may cause serious damage to the transmission.

(b) Using flat bed truck

(c) Towing with sling type truck

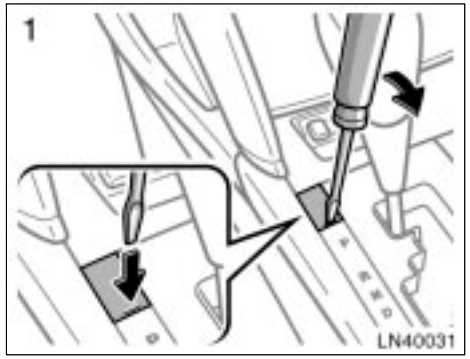


(c) Towing with sling type truck

NOTICE

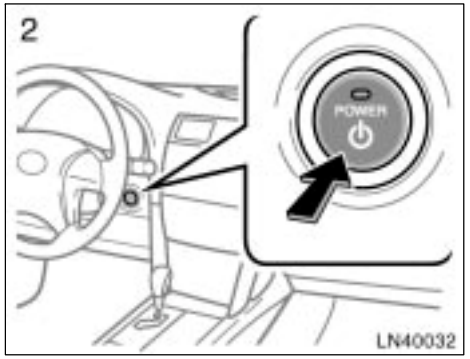
Do not tow with sling type truck, either from the front or rear. This may cause body damage.

If you cannot shift transmission selector lever

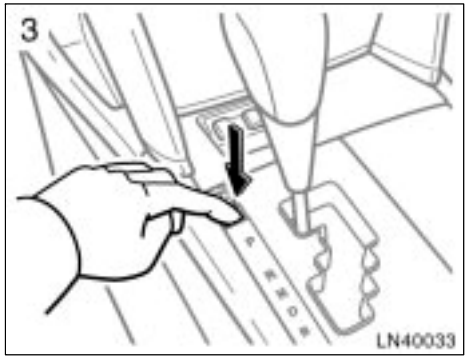


If you cannot shift the selector lever out of “P” position to other positions even though the brake pedal is depressed, use the shift lock override button as follows:

1. **Make sure the hybrid system is turned off and the parking brake is on. Insert the flathead screwdriver or equivalent to the slot of the cover and pry it up.**



2. **Press the “POWER” switch and start the hybrid system. For your safety, keep the brake pedal depressed.**



3. **With pushing down the shift lock override button, shift out of the “P” position while depressing the brake pedal.**

As the hybrid system starts only with the transmission in the “P” position, put the selector lever in “P” whenever starting the system.

Be sure to have the system checked by your Toyota dealer as soon as possible.

If you lose your keys

You can purchase a new electronic key at your Toyota dealer if you can give them the key number and master key.

If you lose any of your keys, contact your Toyota dealer to have new keys made. Lost keys increase the danger of vehicle theft. Bring all of the remaining vehicle keys when you visit your Toyota dealer.

See the suggestion given in “Keys” on page 22 in Section 1−2.

You can use the wireless remote control function and smart entry and start function by new key. Contact your Toyota dealer for detailed information.

If your keys are locked in the vehicle and you cannot get a duplicate, many Toyota dealers can still open the door for you, using their special tools. If you must break a window to get in, we suggest breaking the smallest side window because it is the least expensive to replace. Be extremely cautious to avoid cuts from the glass.

SECTION 5

CORROSION PREVENTION AND APPEARANCE CARE

Corrosion prevention and appearance care

Protecting your Toyota from corrosion 333
Washing and waxing your Toyota 334
Cleaning the interior 336

Protecting your Toyota from corrosion

Toyota, through the diligent research, design and use of the most advanced technology available, helps prevent corrosion and provides you with the finest quality vehicle construction. Now, it is up to you. Proper care of your Toyota can help ensure long−term corrosion prevention.

The most common causes of corrosion to your vehicle are:

- The accumulation of road salt, dirt and moisture in hard−to−reach areas under the vehicle.
- Chipping of paint, or undercoating caused by minor accidents or by stones and gravel.

Care is especially important if you live in particular areas or operate your vehicle under certain environmental conditions:

- Road salt or dust control chemicals will accelerate corrosion, as will the presence of salt in the air near the sea−coast or in areas of industrial pollution.
- High humidity accelerates corrosion especially when temperatures range just above the freezing point.
- Wetness or dampness to certain parts of your vehicle for an extended period of time, may cause corrosion even though other parts of the vehicle may be dry.
- High ambient temperatures can cause corrosion to those components of the vehicle which do not dry quickly due to lack of proper ventilation.

The above signifies the necessity to keep your vehicle, particularly the underside, as clean as possible and to repair any damage to paint or protective coatings as soon as possible.

To help prevent corrosion on your Toyota, follow these guidelines:

Wash your vehicle frequently. It is, of course, necessary to keep your vehicle clean by regular washing, but to prevent corrosion, the following points should be observed:

- If you drive on salted roads in the winter or if you live near the ocean, you should hose off the undercarriage at least once a month to minimize corrosion.
- High pressure water or steam is effective for cleaning the vehicle’s underside and wheel housings. Pay particular attention to these areas as it is difficult to see all the mud and dirt. It will do more harm than good to simply wet the mud and debris without removing. The lower edge of doors, rocker panels and frame members have drain holes which should not be allowed to clog with dirt as trapped water in these areas can cause corrosion.
- Wash the underside of the vehicle thoroughly when winter is over.

See “Washing and waxing your Toyota” on page 334 for more tips.

Check the condition of your vehicle’s paint and trim. If you find any chips or scratches in the paint, touch them up immediately to prevent corrosion from starting. If the chips or scratches have gone through the bare metal, have a qualified body shop make the repair.

Check the interior of your vehicle. Water and dirt can accumulate under the floor mats and could cause corrosion. Occasionally check under the mats to make sure the area is dry. Be particularly careful when transporting chemicals, cleansers, fertilizers, salt, etc.; these should be transported in proper containers. If a spill or leak should occur, immediately clean and dry the area.

Use mud shields on your wheels. If you drive on salted or gravel roads, mud shields help protect your vehicle. Full−size shields, which come as near to the ground as possible, are the best. We recommend that the fittings and the area where the shields are installed be treated to resist corrosion. Your Toyota dealer will be happy to assist in supplying and installing the shields if they are recommended for your area.

Keep your vehicle in a well ventilated garage or a roofed place. Do not park your vehicle in a damp, poorly ventilated garage. If you wash your vehicle in the garage, or if you drive it covered with water or snow, your garage may be so damp as to cause corrosion. Even if your garage is heated, a wet vehicle can corrode if the ventilation is poor.

Washing and waxing your Toyota

Your Toyota is a hybrid vehicle. Pay particular attention when washing your Toyota.

NOTICE

Before washing your Toyota, be sure to observe the following in order to avoid the risk of damage to your vehicle.

Do not splash water on the electric components in the engine compartment. This may cause malfunction of the electric components.

Washing your Toyota

Keep your vehicle clean by regular washing.

The following cases may cause weakness to the paint or corrosion to the body and parts. Wash your vehicle as soon as possible.

- When driving in a coastal area
- When driving on a road sprinkled with antifreeze
- When exposed to coal tar, tree sap, bird droppings and carcass of an insect
- When driving in areas where there is a lot of smoke, soot, dust, iron dust or chemical substances
- When the vehicle becomes remarkably dirty with dust and mud

Hand−washing your Toyota

Work in the shade and wait until the vehicle body is not warm to the touch.

⚠ CAUTION

- **When cleaning under floor or chassis, be careful not to injure your hands.**
- **Exhaust gases cause the exhaust pipe to become quite hot. When washing the vehicle, be careful not to touch the pipe until it has cooled sufficiently, as touching a hot exhaust pipe can cause burns.**

1. Rinse off loose dirt with a hose. Remove any mud or road salt from the underside of the vehicle or the wheel wells.

2. Wash with a mild car−wash soap, mixed according to the manufacturer’s instructions. Use a soft cotton mitt and keep it wet by dipping it frequently into the wash water. Do not rub hard—let the soap and water remove the dirt.

Fuel filler door: Do not apply water (high−pressure car wash, for example) at or near the fuel tank inlet with the fuel filler door opened. If the water enters the air vent, you may experience trouble with refueling or rough engine idling.

Plastic wheel ornaments: The plastic wheel ornaments are damaged easily by organic substances. If any organic substances splash an ornament, be sure to wash them off with water and check if the ornament is damaged.

Aluminum wheels: Use only a mild soap or neutral detergent.

Plastic bumpers: Wash carefully. Do not scrub with abrasive cleaners. The bumper faces are soft.

Exterior lights: Wash carefully. Do not use organic substances or scrub them with a hard brush. This may damage the surfaces of the lights.

Road tar: Remove with turpentine or cleaners that are marked safe for painted surfaces.

3. Rinse thoroughly—dried soap can cause streaking. In hot weather you may need to rinse each section right after you wash it.
4. To prevent water spots, dry the vehicle using a clean soft cotton towel. Do not rub or press hard—you might scratch the paint.

NOTICE

- ***Do not use organic substances (gasoline, kerosene, benzine or strong solvents), which may be toxic or cause damage.***
- ***Do not scrub any part of the vehicle with a hard brush, which may cause damage.***

Automatic car wash

Your vehicle may be washed in an automatic car wash, but remember that the paint can be scratched by some types of brushes, unfiltered washing water, or the washing process itself. Scratching reduces paint durability and gloss, especially on darker colors. The manager of the car wash should be able to advise you whether the process is safe for the paint on your vehicle.

Waxing your Toyota

Polishing and waxing is recommended to maintain the original beauty of your Toyota’s finish.

Apply wax once a month or if the vehicle surface does not repel water well.

1. Always wash and dry the vehicle before you begin waxing, even if you are using a combined cleaner and wax.
2. Use a good quality polish and wax. If the finish has become extremely weathered, use a car−cleaning polish, followed by a separate wax. Carefully follow the manufacturer’s instructions and precautions. Be sure to polish and wax the chrome trim as well as the paint.

Windshield washer nozzles: Make sure that the nozzles do not become blocked when waxing. If a nozzle becomes blocked, contact your Toyota dealer to have the vehicle serviced.

NOTICE

If a nozzle becomes blocked, do not try to clear it with a pin or other object. The nozzle will be damaged.

Exterior lights: Do not apply wax on the surfaces of the lights. Wax may cause damage to the lenses. If you accidentally put wax on the light surfaces, wipe or wash it off.

3. Wax the vehicle again when water does not bead but remains on the surface in large patches.

Cleaning the interior

⚠ CAUTION

- **Be careful not to splash water or spill liquid on the floor. This may prevent the side airbags from activating correctly, resulting in serious injury.**
- **Do not wash the vehicle interior or trunk with water. The hybrid battery is located behind the rear seat and allowing water to come into contact with the battery can cause electric shock that may result in death or serious injury.**

Vinyl interior

The vinyl upholstery may be easily cleaned with a mild soap or detergent and water.

First vacuum over the upholstery to remove loose dirt. Then, using a sponge or soft cloth, apply the soap solution to the vinyl. After allowing it to soak in for a few minutes to loosen the dirt, remove the dirt and wipe off the soap with a clean damp cloth. If all the dirt do not come off, repeat the procedure. Commercial foaming−type vinyl cleaners are also available which work well. Follow the manufacturer’s instructions.

NOTICE

Do not use solvent, thinner, gasoline or window cleaner on the interior.

Carpets

Use a good foam−type shampoo to clean the carpets.

Begin by vacuuming thoroughly to remove as much dirt as possible. Several types of foam cleaners are available; some are in aerosol cans and others are powders or liquids which you mix with water to produce a foam. To shampoo the carpets, use a sponge or brush to apply the foam. Rub in overlapping circles.

Do not apply water—the best results are obtained by keeping the carpet as dry as possible. Read the shampoo instructions and follow them closely.

Seat belts

The seat belts may be cleaned with mild soap and water or with lukewarm water.

Use a cloth or sponge. As you are cleaning, check the belts for excessive wear, fraying, or cuts.

NOTICE

- ***Do not use dye or bleach on the belts—it may weaken them.***
- ***Do not use the belts until they become dry.***

Windows

The windows may be cleaned with any household window cleaner.

NOTICE

When cleaning the inside of the rear window, be careful not to scratch or damage the heater wires or connectors.

Air conditioning control panel, audio panel, instrument panel, console panel and switches.

Use a soft damp cloth for cleaning.

Soak a clean soft cloth in water or lukewarm water then lightly wipe off dirt.

NOTICE

- ***Do not use organic substances (solvents, kerosene, alcohol, gasoline, etc.) or alkaline or acidic solutions. These chemicals can cause discoloring, staining or peeling of the surface.***
- ***If you use cleaners or polishing agents, make sure their ingredients do not include the substances mentioned above.***
- ***If you use a liquid car freshener, do not spill the liquid onto the vehicle’s interior surfaces. It may contain the ingredients mentioned above. Immediately clean any spill using the method mentioned above.***

Leather interior

The leather upholstery may be cleaned with neutral detergent for wool.

Remove dirt using a soft cloth dampened with 5% solution of neutral detergent for wool. Then thoroughly wipe off all traces of detergent with a clean damp cloth.

After cleaning or whenever any part of the leather gets wet, dry with a soft clean cloth. Allow the leather to dry in a ventilated shaded area.

NOTICE

- ***If a stain should fail to come out with a neutral detergent, apply a cleaner that does not contain an organic solvent.***
- ***Never use organic substances such as benzine, alcohol or gasoline, or alkaline or acid solutions for cleaning the leather as these could cause discoloring.***
- ***Use of a nylon brush or synthetic fiber cloth, etc. may scratch the fine grained surface of the leather.***
- ***Mildew may develop on soiled leather upholstery. Be especially careful to avoid oil spots. Try to keep your upholstery always clean.***
- ***Long exposure to direct sunlight may cause the leather surface to harden and shrink. Keep your vehicle in a shaded area, especially in the summer.***
- ***The interior of your vehicle is apt to heat up on hot summer days, so avoid placing on the upholstery items made of vinyl or plastic or containing wax as these tend to stick to leather when warm.***
- ***Improper cleaning of the leather upholstery could result in discoloration or staining.***

If you have any questions about the cleaning of your Toyota, your local Toyota dealer will be pleased to answer them.

SECTION 6

VEHICLE MAINTENANCE AND CARE

Vehicle maintenance and care

Maintenance requirements 341
General maintenance 342
Does your vehicle need repairing? 344
Emissions Inspection and Maintenance (I/M) programs 345

For scheduled maintenance information, please refer to the “Scheduled Maintenance Guide” or “Owner’s Manual Supplement”.

Maintenance requirements

Your Toyota vehicle has been designed for fewer maintenance requirements with longer service intervals to save both your time and money. However, each regular maintenance, as well as day−to−day care, is more important than ever before to ensure smooth, trouble−free, safe, and economical drivings.

It is the owner’s responsibility to make sure the specified maintenance, including general maintenance service, is performed. Note that both the new vehicle and emission control system warranties specify that proper maintenance and care must be performed. See “Owner’s Warranty Information Booklet” or “Owner’s Manual Supplement” for complete warranty information.

General maintenance

General maintenance items are those day−to−day care practices that are important to your vehicle for proper operation. It is the owner’s responsibility to insure that the general maintenance items are performed regularly.

These checks or inspections can be done either by yourself or a qualified technician, or if you prefer, your Toyota dealer will be pleased to do them at a nominal cost.

Scheduled maintenance

The scheduled maintenance items listed in the “Scheduled Maintenance Guide” or “Owner’s Manual Supplement” are those required to be serviced at regular intervals.

For details of your maintenance schedule, read the “Scheduled Maintenance Guide” or “Owner’s Manual Supplement”.

It is recommended that any replacement parts used for maintenance or for the repair of the emission control system be Toyota supplied.

The owner may elect to use non−Toyota supplied parts for replacement purposes without invalidating the emission control system warranty. However, use of replacement parts which are not of equivalent quality may impair the effectiveness of the emission control systems.

You may also elect to have maintenance, replacement, or repair of the emission control devices and system performed by any automotive repair establishment or individual without invalidating this warranty. See “Owner’s Warranty Information Booklet” or “Owner’s Manual Supplement” for complete warranty information.

Where to go for service?

Toyota technicians are well−trained specialists and are kept up to date with the latest service information through technical bulletins, service tips, and in−dealership training programs. They learn to work on Toyotas before they work on your vehicle, rather than while they are working on it.

You can be confident that your Toyota dealer’s service department performs the best job to meet the maintenance requirements on your vehicle—reliably and economically.

Your copy of the repair order is proof that all required maintenance has been performed for warranty coverage. If any problems should arise with your vehicle while under warranty, your Toyota dealer will promptly take care of it. Again, be sure to keep a copy of the repair order for any service performed on your Toyota.

What about do−it−yourself maintenance?

Many of the maintenance items are easy to do yourself if you have a little mechanical ability and a few basic automotive tools. Simple instructions for how to perform them are presented on page 346 in Section 7.

If you are a skilled do−it−yourself mechanic, the Toyota service manuals are recommended. Please be aware that do−it−yourself maintenance can affect your warranty coverage. See “Owner’s Warranty Information Booklet” or “Owner’s Manual Supplement” for the details.

General maintenance

Listed below are the general maintenance items that should be performed as frequently as specified. In addition to checking the items listed, if you notice any unusual noise, smell or vibration, you should investigate the cause or take your vehicle to your Toyota dealer or a qualified service shop immediately. It is recommended that any problem you notice be brought to the attention of your dealer or the qualified service shop for their advice.

⚠ CAUTION

Make these checks only with adequate ventilation if the hybrid system is operating.

IN THE ENGINE COMPARTMENT

Items listed below should be checked from time to time, e.g. each time when refueling.

Washer fluid
Make sure there is sufficient fluid in the tank. See page 373 in Section 7−3 for additional information.

Coolant level
Make sure the coolant level is between the full and low lines on the see−through reservoir when the hybrid system is cold. See page 357 in Section 7−2 for additional information.

Radiator, condenser and hoses
Check that the front of the radiator and condenser are clean and not blocked with leaves, dirt or insects. See page 358 in Section 7−2 for additional information.

Brake fluid level
Make sure the brake fluid level is correct. See page 359 in Section 7−2 for additional information.

Engine oil level
Check the level on the dipstick with the engine turned off and the vehicle parked on a level spot. See page 355 in Section 7−2 for additional information.

Exhaust system
If you notice any change in the sound of the exhaust or smell exhaust fumes, have the cause located and corrected immediately. See “Engine exhaust cautions” on page 278 in Section 2.

IN THE TRUNK

12 volt battery condition
See page 369 in Section 7−3 for additional information.

INSIDE THE VEHICLE

Items listed below should be checked regularly, e.g. while performing periodic services, cleaning the vehicle, etc.

Lights
Make sure the headlights, stop lights, tail lights, turn signal lights, and other lights are all working. Check headlight aim.

Service reminder indicators and warning buzzers
Check that all service reminder indicators and warning buzzers function properly.

Steering wheel
Be alert for changes in steering condition, such as hard steering or strange noise.

Seats
Check that all front seat controls such as seat adjusters, seatback recliner, etc. operate smoothly and that all latches lock securely in any position. Check that the head restraints move up and down smoothly and that the locks hold securely in any latched position. For folding−down rear seatbacks, check that the latches lock securely.

Seat belts
Check that the seat belt system such as buckles, retractors and anchors operate properly and smoothly. Make sure that the belt webbings not cut, frayed, worn or damaged.

Accelerator pedal
Check the pedal for smooth operation and uneven pedal effort or catching.

Brake pedal
Check the pedal for smooth operation and that the pedal has the proper clearance. Check the brake booster function.

Brakes
In a safe place, check that the brakes do not pull to one side when applied.

Parking brake
Check that the pedal has the proper travel and that, on a safe incline, your vehicle is held securely with only the parking brake applied.

Transmission “Park” mechanism
Check the lock release button of the selector lever for proper and smooth operation. On a safe incline, check that your vehicle is held securely with the selector lever in “P” position and all brakes released.

OUTSIDE THE VEHICLE

Items listed below should be performed from time to time, unless otherwise specified.

Fluid leaks
Check underneath for leaking fuel, oil, water or other fluid after the vehicle has been parked for a while. If you smell fuel fumes or notice any leak, have the cause found and corrected immediately.

Doors and engine hood
Check that all doors including trunk lid operate smoothly and all latches lock securely. Make sure the engine hood secondary latch secures the hood from opening when the primary latch is released.

Tire inflation pressure
Check the pressure with a gauge every two weeks, or at least once a month. See page 359 in Section 7−2 for additional information.

Tire surface and wheel nuts
Check the tires carefully for cuts, damage or excessive wear. See page 362 in Section 7−2 for additional information. When checking the tires, make sure no nuts are missing, and check the nuts for looseness. Tighten them if necessary.

Tire rotation
Rotate the tires according to the maintenance schedule. (For scheduled maintenance information, please refer to the “Scheduled Maintenance Guide” or “Owner’s Manual Supplement”.) See page 364 in Section 7−2 for additional information.

Does your vehicle need repairing?

Be on the alert for changes in performance, sounds, and visual tip−offs that indicate service is needed. Some important clues are as follows:

- Engine missing, stumbling, or pinging
- Appreciable loss of power
- Strange engine noises
- A leak under the vehicle (however, water dripping from the air conditioning after use is normal.)
- Change in exhaust sound (This may indicate a dangerous carbon monoxide leak. Drive with the windows open and have the exhaust system checked immediately.)
- Flat−looking tire; excessive tire squeal when cornering; uneven tire wear
- Vehicle pulls to one side when driving straight on a level road
- Strange noises related to suspension movement
- Loss of brake effectiveness; spongy feeling brake pedal; pedal almost touches floor; vehicle pulls to one side when braking
- Coolant temperature continuously higher than normal

If you notice any of these clues, take your vehicle to your Toyota dealer as soon as possible. It probably needs adjustment or repair.

⚠ CAUTION

Do not continue driving with the vehicle unchecked. It could result in serious vehicle damage and possibly personal injury.

Emissions Inspection and Maintenance (I/M) programs

Some states have vehicle emission inspection programs which include OBD (On−Board Diagnostics) checks.

The OBD system monitors the operation of the emission control system. When the OBD system determines that a problem exists somewhere in the emission control system, the malfunction indicator lamp comes on. In this case, your vehicle may not pass the I/M test and need to be repaired. Contact your Toyota dealer to service the vehicle.

Even if the malfunction indicator lamp does not come on, your vehicle may not pass the I/M test as readiness codes have not been set in the OBD system.

Readiness codes are automatically set during ordinary driving. However, when the 12 volt battery is disconnected or run down, the codes are erased. Also, depending on your driving habits, the codes may not be completely set.

Also, if the malfunction indicator lamp had come on recently due to temporary malfunction such as a loose fuel tank cap, your vehicle may not pass the I/M test.

The malfunction indicator lamp will go off after taking several driving trips, but the error code in the OBD system will not be cleared unless about 40 trips or more are taken.

If your vehicle does not pass the I/M test even the malfunction indicator lamp does not come on, contact your Toyota dealer to prepare the vehicle for re−testing.

SECTION 8

SPECIFICATIONS

Specifications

ENGINE

Valve clearance (engine cold), mm (in.):

Intake	0.19—0.29 (0.007—0.011)
Exhaust	0.38—0.48 (0.015—0.019)

Spark plug type:

DENSO	SK20R11
NGK	IFR6A11

Spark plug gap, mm(in.):
1.1 (0.043)

NOTICE

Use only above spark plugs. Do not adjust gaps for engine performance or smooth driveability.

ENGINE LUBRICATION

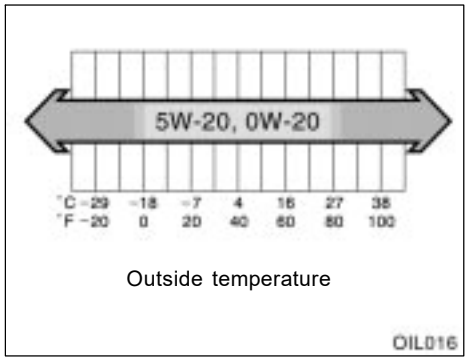
Oil capacity (drain and refill), L (qt., Imp. qt.):

With filter	4.3 (4.5, 3.8)
Without filter	4.1 (4.3, 3.6)

“Toyota Genuine Motor Oil” is used in your Toyota vehicle. Use Toyota approved “Toyota Genuine Motor Oil” or equivalent to satisfy the following grade and viscosity.

Oil grade:
ILSAC multigrade engine oil

Recommended oil viscosity:
SAE 5W−20 or 0W−20



Outside temperature

Please contact your Toyota dealer for further details.

COOLING SYSTEM

Total capacity, L (qt., Imp. qt.):

Engine
6.2 (6.6, 5.5)

Inverter, traction motor and motor generator
2.9 (3.1, 2.6)

Coolant type:

“Toyota Super Long Life Coolant” is used in your Toyota vehicle at factory fill. In order to avoid technical problems, only use “Toyota Super Long Life Coolant” or similar high quality ethylene glycol based non−silicate, non−amine, non−nitrite, and non−borate coolant with long−life hybrid organic acid technology. (Coolant with long−life hybrid organic acid technology is a combination of low phosphates and organic acids.)

Do not use plain water alone.

Please contact your Toyota dealer for further details.

12 VOLT BATTERY

Open voltage* at 20°C (68°F):

12.6—12.8 V	Fully charged
12.2—12.4 V	Half charged
11.8—12.0 V	Discharged

*: Voltage that is checked 20 minutes after the key is removed with all the lights turned off

Charging rates:

5 A max.

⚠ CAUTION

When replacing the battery, only install a battery designated for your hybrid vehicle. Using a conventional battery may cause hydrogen gas to build up in the vehicle.

TRANSAXLE

Fluid capacity (drain and refill), L (qt., Imp. qt.):

3.8 (4.0, 3.3)

Fluid type:

Toyota Genuine ATF WS

Change the transmission fluid only as necessary.

Generally, it is necessary to change transmission fluid only if your vehicle is driven under one of the Special Operating Conditions listed in your “Scheduled Maintenance Guide” or “Owner’s Manual Supplement”. When changing the transmission fluid, use only “Toyota Genuine ATF WS” (ATF JWS3324 or NWS9638) to aid in assuring optimum transaxle performance.

Notice: Using transmission fluid other than “Toyota Genuine ATF WS” may cause deterioration in shift quality, locking up of your transmission accompanied by vibration, and ultimately damage the transmission of your vehicle.

Please contact your Toyota dealer for further details.

BRAKES

Minimum pedal clearance when depressed with the force of 490 N (50 kgf, 110 lbf) with the hybrid system operating, mm (in.):
80 (3.1)

Pedal free play, mm (in.):
1—2 (0.04—0.08)

Pad wear limit, mm (in.):
1.0 (0.04)

Parking brake

Parking brake adjustment when depressed with the force of 300 N (31 kgf, 67 lbf):
7—10 clicks

Fluid type:
SAE J1703 or FMVSS No.116 DOT 3

STEERING

Wheel free play:
Less than 30 mm (1.2 in.)

Tires

Tire size and cold tire inflation pressure:

Front and rear kPa (kgf/cm^2 or bar, psi)

Tire size	Front	Rear	Wheel size
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)	16 × 6 1/2 J

When driving under the above vehicle conditions at sustained high speeds above 160 km/h (100 mph), in countries where such speeds are permitted by−law, inflate the front and rear tires to 240 kPa (2.4 kgf/cm^2 or bar, 35 psi) provided that it does not exceed the maximum cold tire inflation pressure molded on the tire sidewall.

Spare kPa (kgf/cm^2 or bar, psi)

Tire size	Front	Rear	Wheel size
T155/70D17 110M	420 (4.2, 60)	420 (4.2, 60)	17 × 4T

Wheel nut torque, N·m (kgf·m, ft·lbf):
103 (10.5, 76)

NOTE: For a complete information on tires (e.g. replacing tires or replacing wheels), see “Checking tire inflation pressure” through “Aluminum wheel precautions”, pages 359 through 367, in Section 7−2.

SECTION 9

REPORTING SAFETY DEFECTS FOR U.S. OWNERS

Reporting safety defects for U.S. owners

Reporting safety defects for U.S. owners 390

Reporting safety defects for U.S. owners

If you believe that your vehicle has a defect which could cause a crash or could cause injury or death, you should immediately inform the National Highway Traffic Safety Administration (NHTSA) in addition to notifying Toyota Motor Sales, U.S.A., Inc.
(Toll−free: 1−800−331−4331).

If NHTSA receives similar complaints, it may open an investigation, and if it finds that a safety defect exists in a group of vehicles, it may order a recall and remedy campaign. However, NHTSA cannot become involved in individual problems between you, your dealer, or Toyota Motor Sales, U.S.A., Inc.

To contact NHTSA, you may either call the Auto Safety Hotline toll−free at 1−888−327−4236 (or 366−0123 in Washington, DC area) or write to: NHTSA, U.S. Department of Transportation, Washington, DC 20590. You can also obtain other information about motor vehicle safety from the Hotline.

VEHICLE LIFT AND SUPPORT LOCATIONS

1. NOTICE ABOUT VEHICLE CONDITION WHEN JACKING UP

(a) As a rule, the vehicle must be unloaded when jacking up. Never jack up or lift up the vehicle loaded with things of heavy weight.

(b) When removing any parts of heavy weight like the engine and transaxle, the center of gravity of the vehicle moves. Place a balance weight so as to keep it from rolling, or hold the jacking support location using the mission jack.

2. NOTICE FOR USING 4 POST LIFT

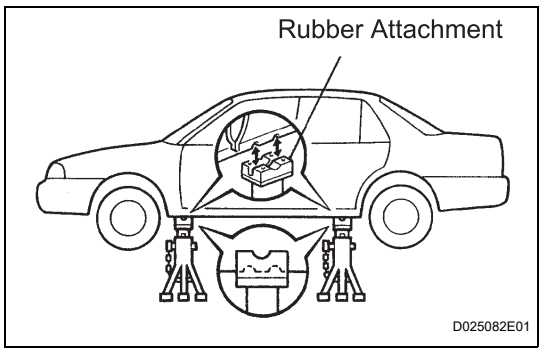
(a) Follow the instruction manual for a safety operation.

(b) Do not damage tires or wheels with a free wheel beam.

(c) Using a wheel stopper, fix the vehicle.

3. NOTICE FOR USING JACK AND SAFETY STAND

(a) Work in the flat place using a wheel stopper at all times.



(b) Use a safety stand with a rubber attachment, as shown in the illustration.

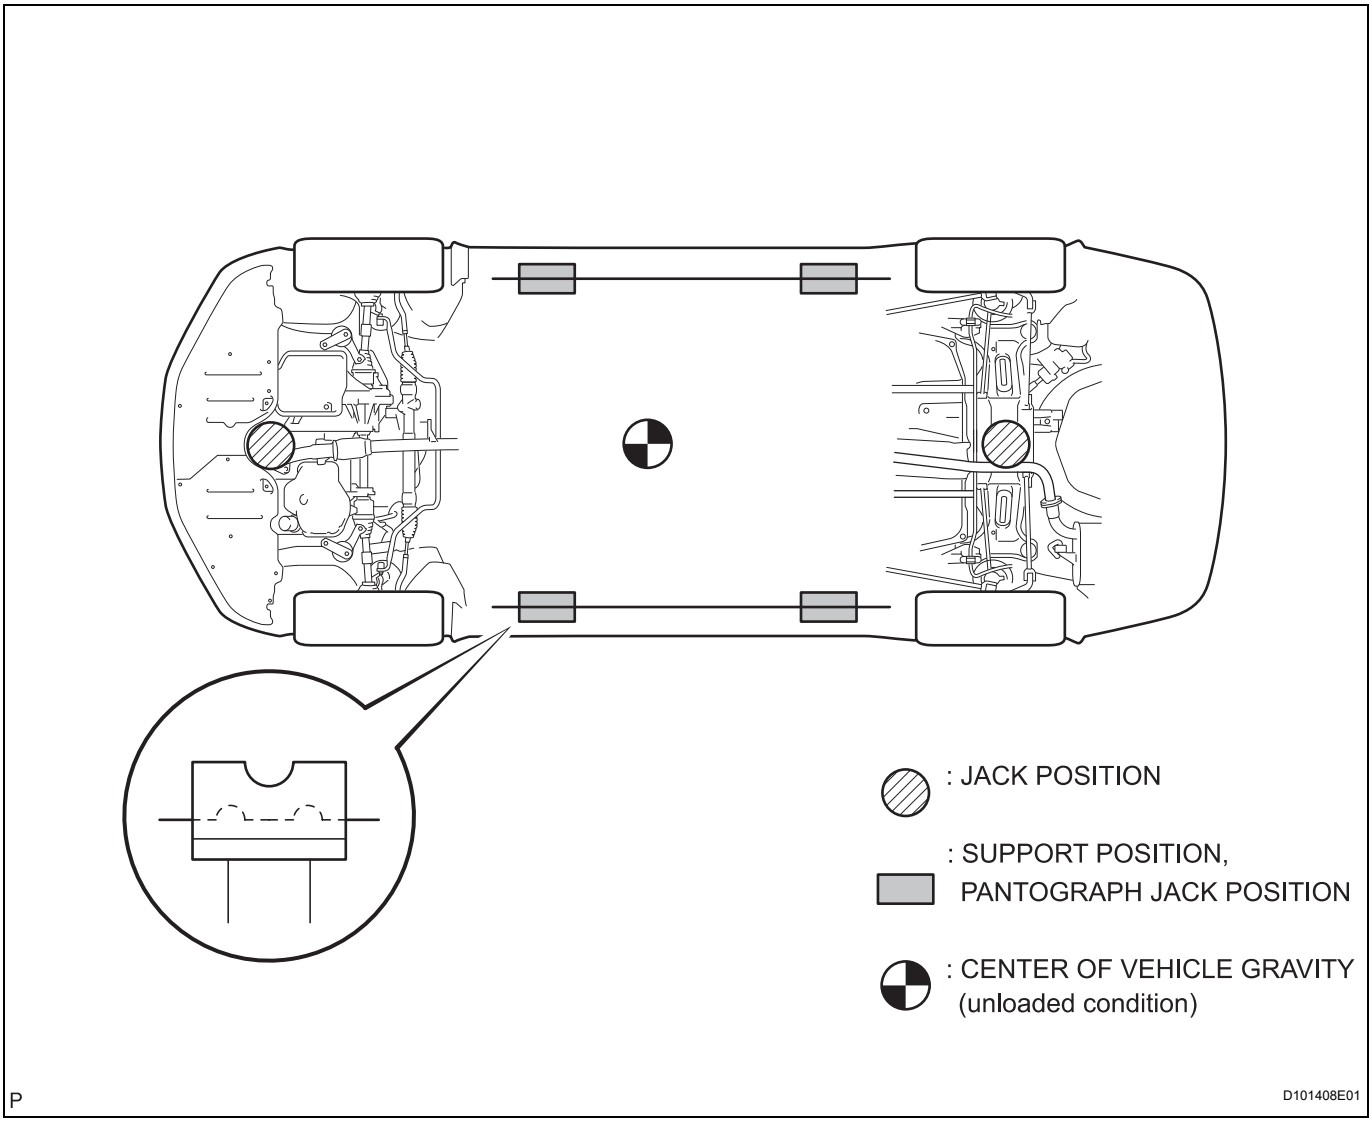
(c) Support the specified location with a jack and safety stand accurately.

(d) When jacking up the front wheels, release the parking brake and place wheel stoppers only behind the rear wheels. When jacking up the rear wheels, place wheel stoppers only in front of the front wheels.

(e) Do not work or leave the vehicle supported only by a jack. Be sure to support the vehicle with a safety stand.

(f) When jacking up only the front wheels or only the rear wheels, place wheel stoppers to both sides of the wheels that contact ground.

(g) When jacking down the vehicle with its front wheels jacked up, release the parking brake and place wheel stoppers only in front of the rear wheels. When jacking down the vehicle with its rear wheels jacked up, place wheel stoppers only behind the front wheels.



4. NOTICE FOR USING SWING ARM TYPE LIFT

(a) Follow the instruction manual of the lift for a safety operation.
(b) Use a cradle with a rubber attachment, as shown in the illustration.
(c) Set in the vehicle so as to make its center of gravity as close as possible to the center of the lift.
(d) Place the vehicle horizontally by adjusting the height of the cradle, and match the groove of the cradle and the safety stand support location accurately.
(e) Be sure to lock the swing arm during the operation.
(f) Lift the vehicle up until the tires float, and shake the vehicle to make sure that the vehicle is stable.

5. NOTICE FOR USING PLATE TYPE LIFT

(a) Follow the instruction manual of the lift for a safety operation.

(b) Use a plate lift attachment.

(c) Be sure to set the vehicle to the specified position.

Right and left set position	• Place the vehicle over the center of the lift.
Front and rear set position	• Align the cushion gum ends of the plate with the attachment lower ends (A and C). • Align the attachment upper end (B) with the rocker flange front side notch.

(d) Lift the vehicle up until the tires float a bit, and shake the vehicle to make sure that the vehicle is stable.

Toyota hybrid system

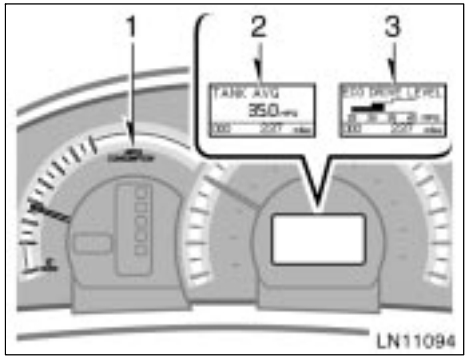
Toyota hybrid system combines the power of an engine and a traction motor to minimize fuel consumption and emissions.

Depending on driving conditions, the vehicle runs optimally on a combination of the engine and traction motor.

Since the engine charges the hybrid battery as needed, the battery does not have to be charged from an outside source like an electric vehicle.

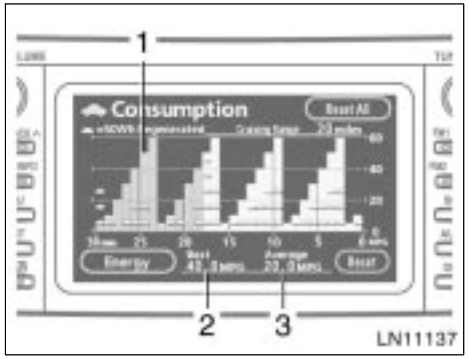
Fuel consumption indicators

In your hybrid vehicle, there are several indicators that show different aspects of fuel consumption:



Instrument cluster indicators

1. Current fuel consumption (fuel economy meter):
   See “Fuel economy meter” in Section 1−6 on page 133.
2. Average fuel consumption after refueling (“TANK AVG”):
   See “—Outside temperature and cruise information” in Section 1−6 on page 135.
3. Average fuel consumption after the hybrid system is turned on (“ECO DRIVE LEVEL”):
   See “—Outside temperature and cruise information” in Section 1−6 on page 135.



Navigation system indicators (models with navigation system only)

1. Transition of fuel consumption in the past 30 minutes (“Consumption”): See “Trip information (with navigation system)” in Section 1−10 on page 255.
2. Best fuel economy (lowest fuel consumption) among average (“Best”): See “Trip information (with navigation system)” in Section 1−10 on page 255.
3. Average fuel consumption (“Average”): See “Trip information (with navigation system)” in Section 1−10 on page 255.

Energy monitor—

Toyota hybrid system performs various controls depending on the operating condition. The condition appears on the multi−information display and/or navigation system screen (with navigation system) when the display and/or screen is in “Energy Monitor” mode. See “—Outside temperature and cruise information” on page 135 in Section 1−6 and “Trip information” on page 255 in Section 1−10 for the operation of the display and screen.

These are representative examples of energy monitor displays. Depending on the condition, the energy monitor displays the graphics different from those shown below. Depending on conditions, the graphic does not reflect the actual motion of the vehicle.

Level 4		
Level 3		
Level 2		
Level 1		
Level 0		

Starting your hybrid vehicle

Your vehicle is equipped with a push start system. Follow the procedure below to start the hybrid system:

1. Make sure that you are carrying the electronic key.
2. Make sure that the transmission is in the “P” position.
3. Press the “POWER” switch briefly and firmly with the brake pedal depressed.

The “READY” light starts flashing and then it stays on with sounding a beep. If the ambient temperature is low, such as during winter driving conditions, it may take longer than the usual amount of time until the “READY” light stays on.

The hybrid system cannot be started without the brake pedal depressed.

For details, see “How to start the hybrid system” on page 301 in Section 3.

The engine may not start even with the “READY” light on.

Efficient use of your hybrid vehicle

Drive your vehicle with smooth acceleration and deceleration.

- While driving, energy is recovered through the regenerative brake as the vehicle decelerates. However, for efficient use, do not accelerate or decelerate your vehicle more than necessary.
- Avoid abrupt acceleration and deceleration.
- The power of the hybrid battery can be checked on the multi−information display or the navigation system screen (with navigation system). See “—Hybrid battery status” on page 5 for details. Gradual or non−abrupt acceleration and deceleration will make more effectively use of the traction motor without having to use engine power.

When parking, be sure to put the transmission into the “P” position. While driving, put the transmission into the “D” position.

- In the “N” position, the engine operates but electricity cannot be generated. The hybrid battery will be discharged requiring unnecessary engine power to recharge.
- The hybrid system automatically recharges the hybrid battery when the remaining battery power is reduced. However, the hybrid battery cannot be recharged if the transmission is in the “N” position.

For detailed information, see “How to save fuel and make your vehicle last longer” on page 311 in Section 3.

INFORMATION

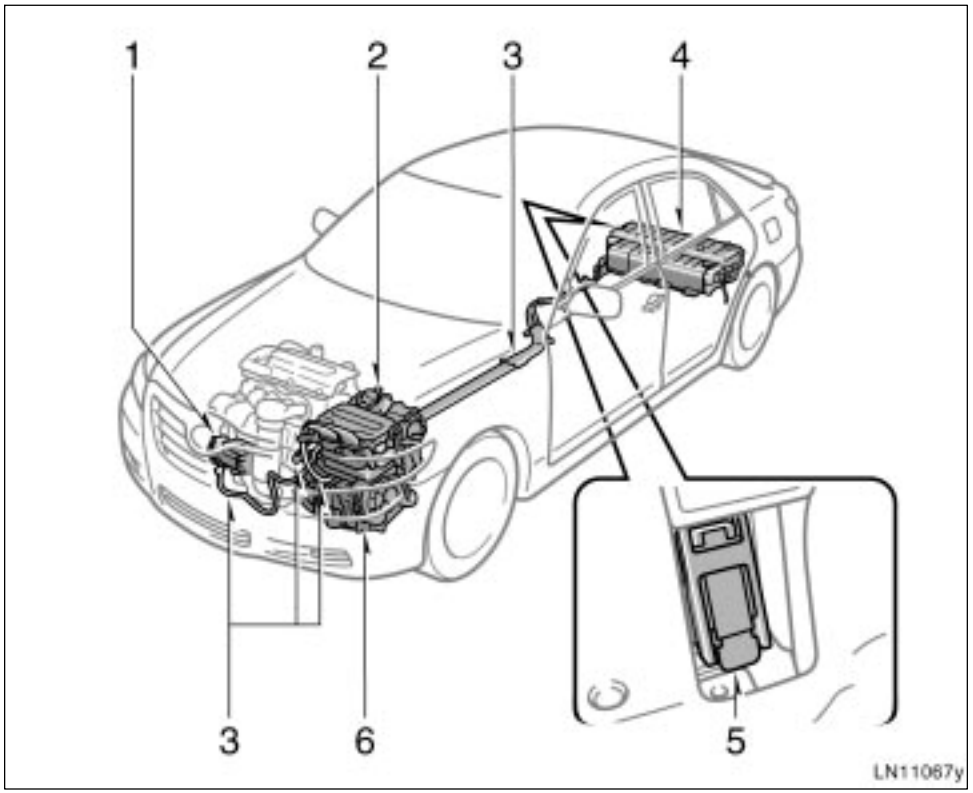
The engine starts and stops automatically. (It stops during a low load driving, deceleration or when the vehicle is stopped.)

As long as the “READY” light remains on, you can start your vehicle using the traction motor even with the engine stopped.

The engine may not stop automatically in the following conditions:

- ***During engine warm−up***
- ***During hybrid battery charging***
- ***During low or high hybrid battery temperature***

Precautions for the use of hybrid vehicle— —High voltage components



1. Air conditioning compressor
2. Inverter unit
3. High voltage cables
4. Hybrid battery and DC/DC converter
5. Service plug
6. Traction motor, transaxle and motor generator

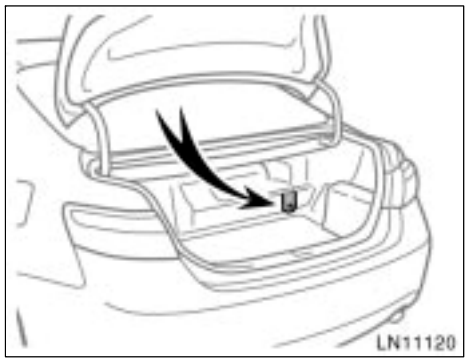
The hybrid system uses high voltage up to 650 V. High voltage components are indicated in the illustration above. High voltage cables are orange. The system can be hot while and after starting. Be careful of both the high voltage and the high temperature.

Caution label

⚠ CAUTION

The vehicle has high voltage DC and AC systems as well as a 12−volt system. DC and AC high voltage is very dangerous and can cause severe burns and electric shock that may result in death or serious injury.

- **Never touch, disassemble, remove or replace the high voltage parts, cables and their connectors. High voltage parts and cables are indicated in the illustration above. Touching, disassembling, removing or replacing those parts and cables can cause severe burns or electric shock that may result in death or serious injury.**
- **The hybrid system uses high voltage and the system can be hot while and after starting. Be careful of both the high voltage and the high temperature. Obey the caution labels attached to the vehicle.**



- **Never try to open the service plug access hole located in the trunk. The service plug is used only when the vehicle is serviced and is subject to high voltage. Touching the service plug can cause severe burns or electric shock that may result in death or serious injury.**

—The characteristics of the hybrid vehicle

Be sure to put the transmission in the “P” position when parking.

In the “N” position, the hybrid battery does not recharge, even if the engine is operating. Leaving the transmission in the “N” position for an extended period of time may discharge the hybrid battery. The vehicle cannot run if the hybrid battery is discharged.

When you leave your vehicle, apply the parking brake, put the transmission in the “P” position, be sure to carry the key with you and lock all the doors.

If you leave the “POWER” switch at “ACC” or “ON”, the 12 volt battery will be discharged and the hybrid system may not start.

- Because the vehicle is powered by both the engine and the traction motor, you may hear a motor sound coming from the engine compartment. However, this does not indicate any trouble.
- When the hybrid system is started or stopped, you may hear a sound coming from the hybrid battery behind the rear seats. However, this does not indicate any trouble.
- When the hybrid system is started or stopped, or while the vehicle is idling, you may hear a sound coming from the transmission. However, this does not indicate any trouble.
- When accelerating rapidly, the engine noise may rise. However, this does not indicate any trouble.
- Repeated acceleration consumes hybrid battery power, resulting in poor acceleration. Battery power can be restored by driving with the accelerator pedal slightly released.
- When applying brakes, you may hear a sound coming from the motor generator. However, this does not indicate any trouble.
- You may hear a sound in the engine compartment when the driver’s door is opened or the brake pedal is depressed with the hybrid system turned off. However, this does not indicate any trouble.
- You may hear a sound in the engine compartment after the hybrid system is turned on or off. However, this does not indicate any trouble.
- You may hear a sound in the engine compartment when the brake pedal is depressed repeatedly with the hybrid system turned on. However, this does not indicate any trouble.
- When the engine is started or stopped with the hybrid system turned on, you may feel a vibration. However, this does not indicate any trouble.
- If the “READY” light is on, you can start even when the engine is off.
- When you put the transmission in the “B” position and take your foot off the accelerator pedal, engine braking will be applied. However, during high speed driving you may feel that engine braking is less effective than that of conventional vehicle.

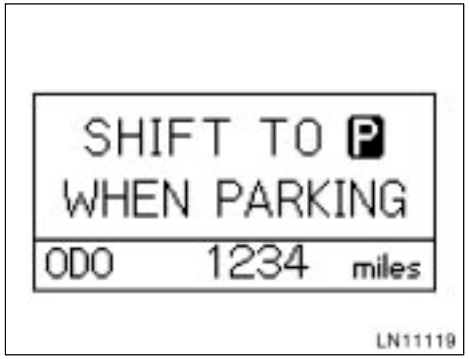
- High voltage parts and cables on the hybrid vehicles emit approximately the same amount of electromagnetic waves as the conventional gasoline powered vehicles or home electronic appliances despite of their electromagnetic shieldings.

  Unwanted noise may occur in the reception of the mobile two−way radio.

- If the vehicle is parked for a long time, the hybrid battery will discharge gradually. To keep the hybrid battery in good condition, drive the vehicle at least once every several months for at least 30 minutes or 10 miles. If the hybrid battery becomes fully discharged and the vehicle will not start even with a jump start to the 12 volt battery, contact your Toyota dealership.

⚠ CAUTION

- The driver should pay special attention to pedestrians when the vehicle is powered only by the traction motor. Because there is no engine noise, the pedestrians may misjudge the vehicle’s movement.
- When you leave your vehicle, be sure to turn off the hybrid system.
- Be sure to put the transmission in the “P” position because the vehicle can move when the “READY” light is on even if the engine is stopped. When the “READY” light is on, do not leave your vehicle in a shift position other than the “P” and “N” positions. The vehicle will creep and start abruptly if the accelerator pedal is depressed by mistake. This may cause death or serious injury.

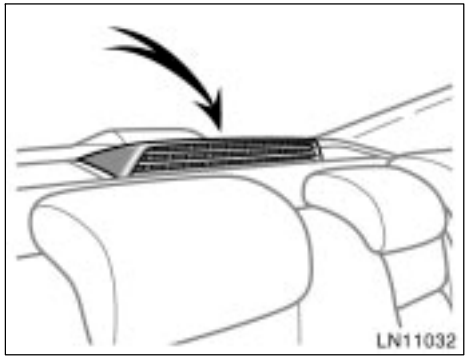


Multi−information display

Navigation system screen

If you open the door with the hybrid system turned on and the transmission is not in the “P” position, a message appears on the multi−information display and navigation system screen (for vehicles with navigation system).

- When you leave your vehicle, or stop or park for a while, put the transmission in the “P” position.
- Charging the hybrid battery while driving is important. In the “N” position, the hybrid battery will not be charged. Do not leave the transmission in the “N” position. The motor generator operates in the “P”, “R”, “D” and “B” positions. When you drive, put the transmission in the “D” or “B” position and depress the accelerator pedal. When driving in a traffic jam, operate the vehicle in the “D” position to prevent the hybrid battery from being discharged.



Hybrid battery air vent

An air vent is located behind the rear seats to cool the hybrid battery. If the vent is covered, the battery will overheat resulting in reduced performance of the hybrid system.

You may hear a noise from the air vent.

For vehicle repairs or maintenance, be sure to consult your Toyota dealer.

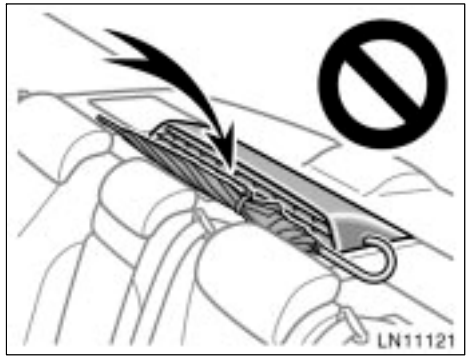
If your vehicle is beyond repair, contact your Toyota dealer for assistance. Do not attempt to dispose of your vehicle by yourself.

⚠ CAUTION

- **Do not wash the vehicle interior or trunk. Because the hybrid battery is located behind the rear seat, pouring the water over the battery can cause electric shock that may result in death or serious injury.**
- **Your vehicle contains a sealed Nickel−Metal hydride battery. If disposed of improperly, it is hazardous to the environment and there is a risk of severe burns and electrical shock that may result in death or serious injury.**

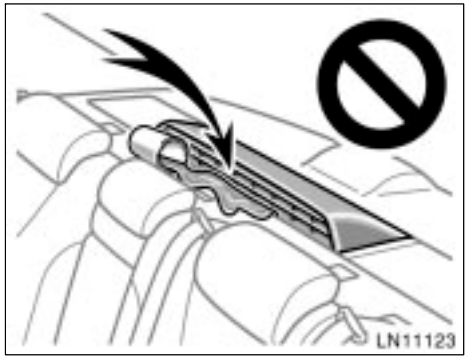
NOTICE

- ***Clean the air vent regularly to prevent the hybrid battery from overheating.***



◆ *Do not put foreign objects over the air vent. The hybrid battery may be overheated and damaged.*

◆ *Do not load a large amount of water such as an aquarium into the vehicle. If water spills over the hybrid battery, the battery may be damaged.*



◆ *Do not spill water over the air vent. This may adversely affect or damage the hybrid battery.*

Road accident cautions—

⚠ CAUTION

- Pull your vehicle off the road, put the transmission in the “P” position, apply the parking brake, turn the hybrid system off and carry the key.
- In order to avoid death or serious injury, do not touch high voltage wiring, connectors or high voltage parts (inverter unit, hybrid battery and etc.). High voltage parts and cables are indicated in the illustration on page 7.
- If exposed electric wires are protruding inside or outside of your vehicle, an electric shock may occur. Never touch the electric wires.
- If fluid leaks or gets into some parts of the vehicle, never touch it because it may be strong alkaline electrolyte from the hybrid battery. If it contacts your skin or eyes, wash it off immediately with a large amount of water or if possible, boric acid solution. Get immediate medical attention in order to help avoid serious injury.

- If a fire occurs in the hybrid vehicle, leave the vehicle as soon as possible. Never use a fire extinguisher that is not meant for electric fires. Using a small amount of water may be also dangerous.
- If your vehicle needs to be towed, do it with the front wheels raised. If the wheels with the motor generator are on the ground when towing, the motor may continue to generate electricity. This may cause the electricity leakage. Depending on the severity of the damage, electricity leakage may cause fire. See “If your vehicle needs to be towed” on page 327 in Section 4.

—Emergency shut off system

The emergency shut off system blocks off the high voltage current and stops the fuel pump to minimize the risk of the electric leakage and the fuel leakage when a certain level of impact is detected by the impact sensor. If the system activates, your vehicle will not restart. To restart the hybrid system, contact a Toyota dealer.

⚠ CAUTION

- Check to see if there are exposed high voltage parts and cables. Never touch the parts and cables. See “—High voltage components” on page 7 in this Section for the locations of the high voltage parts and cables.
- Inspect the ground under the vehicle. If you find that liquid has leaked onto the ground, the fuel system may have been damaged. Leave the vehicle as soon as possible.

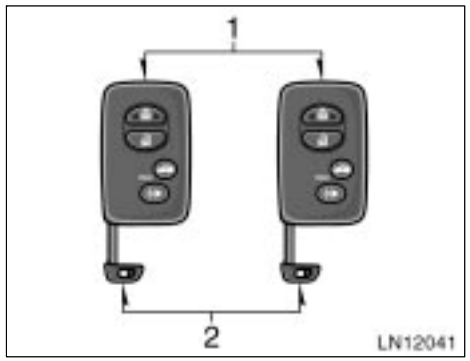
Keys



The key consists of an electronic key and a mechanical key. The mechanical key is for emergency use. If the electronic key does not operate, you can open the driver’s door using the mechanical key.

1. Electronic keys—These keys can lock or unlock all the doors and can open the trunk by using the wireless remote control function or entry function of the smart key system.
2. Mechanical keys—These keys can lock or unlock the driver’s door and the glove box.

Spare keys should not be left in the cabin. In the event that a spare key is left in the cabin, the smart key system will remain actuated even after the doors have been locked. Under these circumstances, the trunk can be opened even after the driver has exited and locked the vehicle, increasing the danger of theft. (Refer to “—Opening trunk lid with smart key system” on page 47 in this Section.)

To protect items locked in the trunk or the glove box when using valet parking, leave the electronic key with the attendant. Keep the mechanical key with you. For details about locking the trunk opener switch, see “—Luggage security system” on page 49 in this Section.

A transponder chip for engine immobilizer system has been placed in the electronic keys. These chips are needed to enable the system to function correctly, so be careful not to lose these keys.

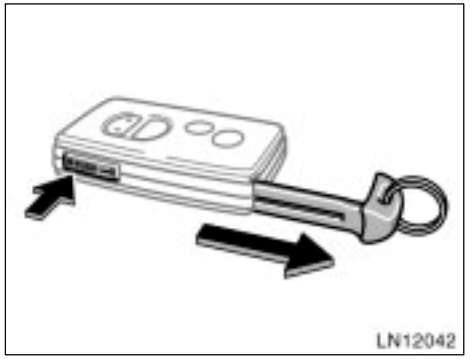
⚠ CAUTION

- **People with implanted pacemakers or cardiac defibrillators should maintain a reasonable distance between themselves and the smart key system antennas, because the radio waves may affect the operation of such devices. For the antenna locations see “ANTENNA LOCATION” on page 34 in this Section.**
- **Users of any electrical medical device other than implanted pacemakers and implanted cardiac defibrillators should consult the manufacturer of the device for information about its operation under the influence of radio waves. Radio waves could have unexpected effects on the operation of such medical devices.**
- **If necessary, the entry function can be disabled. See “DISABLING THE SMART KEY SYSTEM” on page 38 in this Section.**

NOTICE

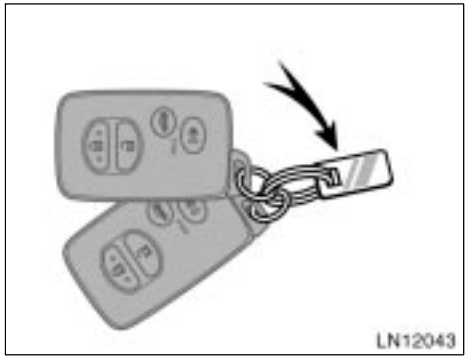
When using a electronic key containing a transponder chip, observe the following precautions:

- ***Do not affix any material that cuts off electromagnetic waves (such as a metal seal) on the electronic key.***
- ***Do not knock the electronic key hard against other objects.***
- ***Do not leave the electronic key exposed to high temperatures for a long period, such as on the dashboard or hood under direct sunlight.***
- ***Do not put the electronic key in water or wash it in an ultrasonic washer.***
- ***Do not keep the electronic key together with the products emitting electromagnetic waves such as a cellular phone.***



USING A MECHANICAL KEY

When you use the mechanical key, push the release button and take out the mechanical key as shown. Be sure to put the mechanical key back when not in use.



KEY NUMBER PLATE

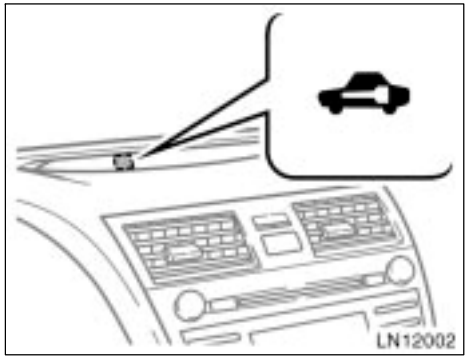
Your key number is shown on the plate. Keep the plate in a safe place such as your wallet, not in the vehicle.

If you should lose your keys or if you need additional keys, duplicates can be made by Toyota dealer using the key number.

We recommend writing down the key number and storing it in a safe place.

Engine immobilizer system

The engine immobilizer system is a theft prevention system. The transponder chip in the key transmits an electronic code to the vehicle. The hybrid system will start only when the electronic code in the chip corresponds to the registered ID code for the vehicle.



The engine immobilizer system is automatically set when the “POWER” switch is turned off.

The indicator light will start flashing to show that the system is set.

If any of the following indicator conditions occur, contact your Toyota dealer.

- The indicator light remains on.
- The indicator light does not start flashing when the “POWER” switch is turned off.
- The indicator light flashes inconsistently.

The engine immobilizer system is automatically canceled when you enter the vehicle carrying an electronic key and press the “POWER” switch.

Even if the key battery is discharged, the hybrid system can be turned on. See “Smart key system” on page 32 in this Section.

When the system is canceled, the indicator light will go off.

For your Toyota dealer to make you a new key with built−in transponder chip, your dealer will need your key number and electronic key. However, there is a limit to the number of additional keys your Toyota dealer can make for you.

NOTICE

Do not modify, remove or disassemble the engine immobilizer system. If any unauthorized changes or modifications are made, proper operation of the system cannot be guaranteed.

For vehicles sold in U.S.A.

FCC ID: NI4TMIMB−1

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

⚠ CAUTION

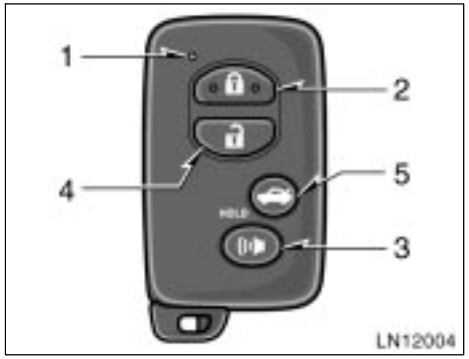
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For vehicles sold in Canada

This device complies with RSS−210 of Industry Canada. Operation is subject to the following two conditions:

(1) This device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

Wireless remote control—



1. Indicator light
2. Lock switch
3. Alarm switch
4. Unlock switch
5. Trunk opener switch

The wireless remote control function is designed to lock or unlock all the doors, open the trunk lid, or activate the alarm from a distance within approximately 1 m (3 ft.) of the vehicle.

When you operate any switch, push it slowly and securely.

When the switch is operated, the indicator light flashes once. If not, the battery may be discharged. Replace the battery at the earliest opportunity.

Observe the following precautions to prevent damage the key.

- Do not leave the electronic key in places where the temperature becomes high such as on the dashboard.
- Do not disassemble it.
- Avoid knocking it hard against other objects or dropping it.
- Avoid putting it in water.

If the wireless remote control function does not actuate the doors, or does not operate from a normal distance, or if the indicator on the key is dimmed or does not come on:

- Check for closeness to a radio transmitter such as a radio station or an airport which can interfere with normal operation of the key.
- The battery may have been consumed. Check the battery in the key. To replace the battery, see “—Replacing battery” on page 30 in this Section.

If you lose your key, contact your Toyota dealer as soon as possible to avoid the possibility of theft, or an accident. (See “If you lose your keys” on page 330 in Section 4.)

It is possible to disable the wireless remote control system. For details, contact your Toyota dealer.

For vehicles sold in U.S.A.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTICE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

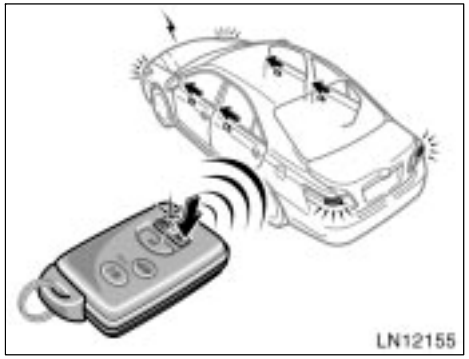
FCC WARNING:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For vehicles sold in Canada

Operation is subject to the following two conditions:

(1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

—Locking and unlocking doors



Locking operation

Unlocking operation

To lock or unlock all the doors, push the switches slowly and securely.

To lock: Push the lock switch. All the doors are locked simultaneously. At this time one beep will sound and turn signal lights flash once.

Check to see that the doors are securely locked.

If any of the doors is not securely closed, or if the key is left in the vehicle, locking cannot be performed by the lock switch and a beep will sound continuously for 10 seconds.

To stop the beep, take out the key from the vehicle or push the unlock switch.

The answerback function (the turn signal flash and the beep) can be disabled. For details, contact your Toyota dealer.

To unlock: Push the unlock switch once to unlock the driver’s door alone. Pushing the switch twice within 3 seconds unlocks all the doors simultaneously. Each time the unlock switch is pushed, two beeps will sound and turn signal lights flash twice.

This double switch operation to unlock all doors can be changed to a single switch operation. For details, contact your Toyota dealer.

If the “POWER” switch is set at ACC or ON, the vehicle cannot be unlocked via the unlock switch.

You have 60 seconds to open a door after using the wireless remote unlock feature. If a door is not opened by then, all the doors will be automatically locked again.

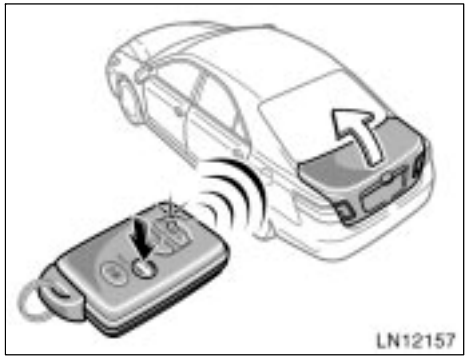
If the wireless remote control is used to lock the doors near the window or door handle, there is a possibility that the door may not unlocked by entry function of smart key system. Under these circumstances, use the wireless remote control function to unlock the doors.

The automatic locking time can also be set to 30 seconds. For details, contact your Toyota dealer.

If the lock or unlock switch is kept pressed in, the locking or unlocking operation is not repeated. Release the switch and then push again.

When you unlock doors using the wireless remote control, the illuminated entry function will be activated. (For further information, see “Illuminated entry system” on page 127 in Section 1−5.)

—Opening trunk lid



To open the trunk lid, push the trunk opener switch of the electronic key for 1 second. A long beep will sound.

If the “POWER” switch is set at ACC or ON, the trunk lid cannot be opened by the trunk opener switch.

Opening of the trunk lid with the wireless remote control can be changed as follows. Contact your Toyota dealer for details.

- Trunk lid opens by pushing the trunk opener switch twice in succession.
- Trunk lid opens by pushing the trunk opener switch once regardless of how long the switch is being pressed.
- Opening of the trunk lid with the wireless remote control function is disabled.

—Activating alarm

Pushing the switch blows the horn intermittently and flashes the exterior lights and interior light.

When pushing the switch, the indicator light flashes.

The alarm switch is used to deter vehicle theft when you witness anyone attempting to break into or damage your vehicle.

The alarm will last for one minute. To stop the alarm midway, push the switch once again, unlock a door with the wireless remote control function, or set the “POWER” switch at ON.

If the “POWER” switch is set at ACC or ON, the alarm does not work.

This alarm function can be disabled. For details, contact your Toyota dealer.

—Replacing battery

The electronic key can easily be damaged when replacing the battery. We recommend having the battery replaced by your Toyota dealer. If you have to do it yourself, use a CR1632 lithium battery or equivalent and a flathead screwdriver.

⚠ CAUTION

Special care should be taken to prevent small children from swallowing the removed battery or components.

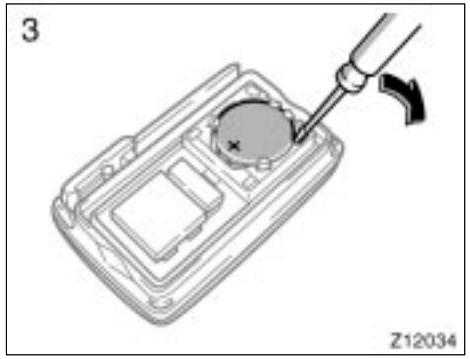
NOTICE

- ***Be careful not to touch the circuit, as this may generate static electricity that can damage the key.***
- ***When replacing the battery, be careful not to lose the components.***
- ***Replace only with the same or equivalent type recommended by a Toyota dealer.***
- ***Dispose of used batteries according to the local laws.***

Replace the battery by following these procedures:

1. Push the release button and take out the mechanical key.

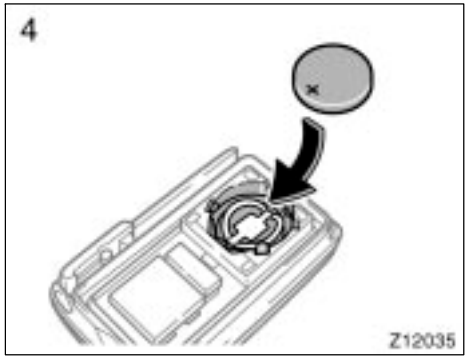
2. Using a flathead screwdriver or equivalent, open the key case.



3. Remove the discharged battery by flat-head screwdriver or equivalent. Insert the guide groove and lift as shown in the above illustration.

NOTICE

Do not modify the battery case. It may cause a trouble.



4. Put in a new battery with the positive (+) side up. Close the case securely and insert the mechanical key.

NOTICE

- ***Make sure the positive side and negative side of the battery are faced correctly.***
- ***Do not replace the battery with wet hands. Water may cause unexpected rust.***
- ***Do not touch or move any components inside the key, or it may interfere with proper operation.***
- ***Be careful not to bend the electrode when inserting the battery and that dust or oils do not adhere to the case.***
- ***Close the case securely.***

After replacing the battery, check that the key operates properly. If the electronic key still does not operate properly, contact your Toyota dealer.

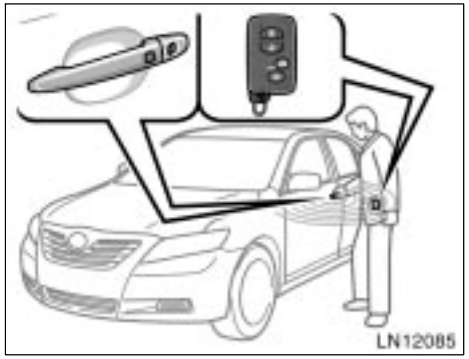
Smart key system

The smart key system consists mainly of the following functions.

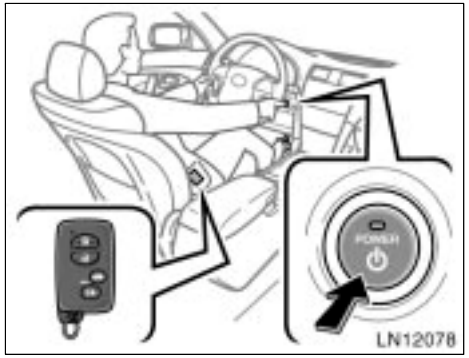
- Engine immobilizer function (For details, see “Engine immobilizer system” on page 24 in this Section.)
- Wireless remote control function (For details, see “Wireless remote control” on page 25 in this Section.)
- Push button start function (For details, see “How to start the hybrid system” on page 301 in Section 3.)
- Entry function and start function (See “ENTRY FUNCTION AND START FUNCTION” described below.)
- Steering lock function (See “STEERING LOCK FUNCTION” described below.)

⚠ CAUTION

- **People with implanted pacemakers or cardiac defibrillators should maintain a reasonable distance between themselves and the smart key system antennas, because the radio waves may affect the operation of such devices. For the antenna locations see “ANTENNA LOCATION” on page 34 in this Section.**
- **Users of any electrical medical device other than implanted pacemakers and implanted cardiac defibrillators should consult the manufacturer of the device for information about its operation under the influence of radio waves. Radio waves could have unexpected effects on the operation of such medical devices.**
- **If necessary, the entry function can be disabled. See “DISABLING THE SMART KEY SYSTEM” on page 38 in this Section.**



Entry function



Start function

ENTRY FUNCTION AND START FUNCTION

Simply by carrying the key, you can lock and unlock the doors and start the hybrid system.

Entry function—You can lock and unlock the doors and open the trunk without inserting the key in the keyholes. For further information, see “Side doors” on page 38 and “Trunk lid” on page 47 in this Section.

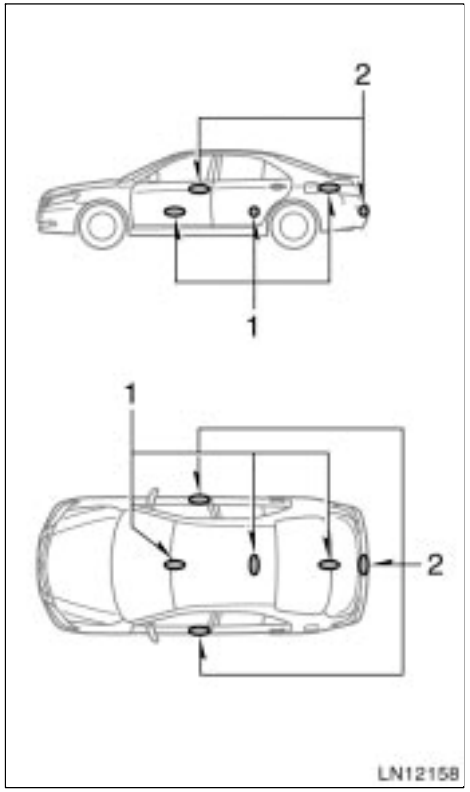
Start function—You can shift the power supply mode and start the hybrid system when the electronic key is in the vehicle. For further information, see “‘POWER’ switch” on page 160 in Section 1−7 and “How to start the hybrid system” on page 301 in Section 3.

If the smart key system does not operate properly because of a system malfunction, consult your Toyota dealer. Make sure to bring all of the keys. They may be necessary to repair the system.

STEERING LOCK FUNCTION

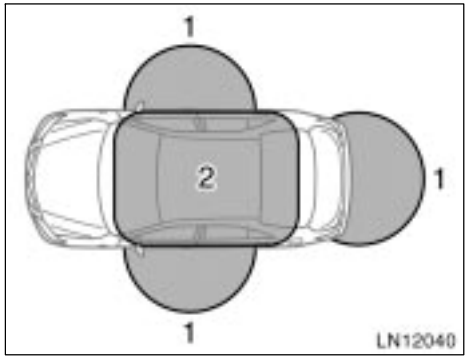
When the driver’s door is opened after turning off the hybrid system, the steering wheel will lock.

The steering lock is automatically unlocked when the “POWER” switch is pressed. If the indicator light on the “POWER” switch flashes green, this indicates that the steering wheel remains locked. If the amber indicator light flashes, this indicates that the steering lock is malfunctioning. For details, see “How to start the hybrid system” on page 301 in Section 3.



ANTENNA LOCATION

1. Antenna inside cabin and trunk
2. Antenna outside cabin and trunk



ACTUATION AREA

The entry function and start function are available to use when a registered key is in the actuation area.

1. **Entry function actuation area—**About 1 m (3 ft.) from each outside front door handle and the trunk opener switch

   Only the door handle of the actuation area that the key holder is in can be operated.

   If the key is close to the door handle, windows or the center of the rear bumper, on the ground or above the roof, the entry function may not be activated.

2. **Start function actuation area—**Inside of the cabin

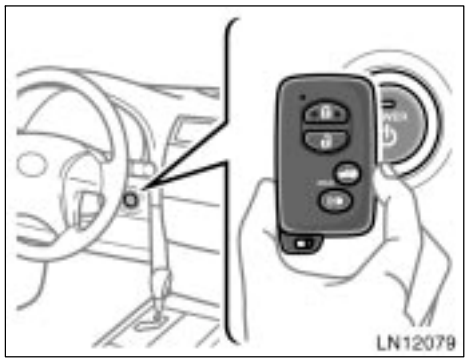
   The start function may not be activated, if the key is in the auxiliary box of the driver’s side instrument panel and glove box, on the instrument panel, on the package tray, on the floor, etc.

In the following cases, the smart key system may not operate properly.

- When facilities issuing strong electromagnetic waves such as TV towers, electric power stations, broad casting stations are nearby.
- In places where automated payment facilities are installed (such as gas stations).
- When you are carrying a electronic key together with a mobile communications system such as a two−way radio or cellular phone.
- When the electronic key is in contact with or covered by a metallic object.
- When another person is operating a wireless remote control function on another vehicle near your vehicle.
- When the battery is discharged. To replace the battery, see “—Replacing battery” on page 30 in this Section.

- When the electronic key is near a high−voltage or noise−emitting device.
- When you are carrying an electronic key together with a key for another smart key system equipped vehicle or another instrument emitting radio waves.
- Depending on the position of the key or vehicle body shape, the key may not work well even within the actuation area.
- When the key surface is covered by a sticker, etc. that may cut off electromagnetic wave.

Even if the smart key system does not operate properly, you can still enter and start the hybrid system. For further information, see “Side doors” on page 38 and “Trunk lid” on page 47 in this Section, and see “How to start the hybrid system” on page 301 in Section 3.



STARTING THE HYBRID SYSTEM WHEN THE ELECTRONIC KEY BATTERY IS DISCHARGED

If the key indicator does not flash and the hybrid system cannot be started by using the start function, the battery may be discharged. Replace the key battery as soon as possible. (See “—Replacing battery” on page 30 in this Section.)

However the hybrid system can be turned on in the following procedures.

1. While the brake pedal is depressed, touch the Toyota logo side of the electronic key to the “POWER” switch.
2. Start the hybrid system within 5 seconds after the green indicator light on the “POWER” switch comes on and a buzzer sounds.

BATTERY POWER SAVING

Both the vehicle and key transmitters are always sending signals to each other. To prevent battery drain, the smart key system is automatically deactivated in the following conditions:

- If the electronic key is left outside of the vehicle and within the effective range of the entry function actuation area for more than 10 minutes.
- If the door lock or unlock operation is not performed more than 2 weeks.

The key and the vehicle are communicating even while the vehicle is not being driven. Do not leave the key near the vehicle (within 2 m [7 ft.]).

The vehicle battery may drain if the vehicle is not used for a long period of time. To prevent battery drain, disconnect the battery negative (−) terminal or disable the smart key system. (For details about disable the smart key system, see “DISABLING THE SMART KEY SYSTEM” in this Section.)

To reactivate the smart key system, perform any of the following:

(a) Press the lock button on the front outside door handle or trunk open button while carrying the electronic key.

(b) Perform a wireless remote control operation.

(c) Insert and turn the mechanical key in the keyhole of the driver’s door.

If the electronic key receives strong electromagnetic waves over a period of time, the battery can be drastically run down. You should always keep the following electrical appliances at least 1 m (3 ft.) away from the electronic key.

- TV
- Personal computer
- Cellular phone or cordless phone recharger unit
- Electric light stand
- Fluorescent desk light

For vehicles sold in U.S.A.

FCC ID: NI4TMLF−2

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

CAUTION

Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For vehicles sold in Canada

This device complies with RSS−210 of Industry Canada. Operation is subject to the following two conditions:

(1) This device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

For vehicles sold in U.S.A.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTICE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

FCC WARNING:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For vehicles sold in Canada

Operation is subject to the following two conditions:

(1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

DISABLING THE SMART KEY SYSTEM

The following functions can be disabled:

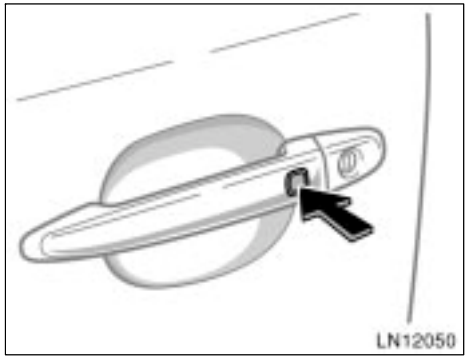
- A function that allows you to lock/unlock the doors and open the trunk by simply carrying a key
- A function that causes the vehicle to beep if keys are forgotten inside the vehicle or trunk and a door is closed
- A function that recalls the position of the driver’s seat and side rear view mirror
- A function that shifts the power supply mode and starts the hybrid system when the electronic key is in the vehicle.
- Warning lights and buzzers

For details, contact your Toyota dealer.

If the smart key system does not operate properly because of a system malfunction, consult your Toyota dealer. Make sure to bring all of the keys. They may be necessary to repair the system.

Side doors— —Locking and unlocking with smart key system

When you carry the registered key with smart key system into the actuation area, you can lock and unlock the side doors without using the key. For further information of actuation area, see “Smart key system” on page 32 in this Section.



Locking operation

Push the lock button on the front outside door handle slowly and firmly. All the doors lock simultaneously. At this time one beep will be heard and turn signal lights flash once.

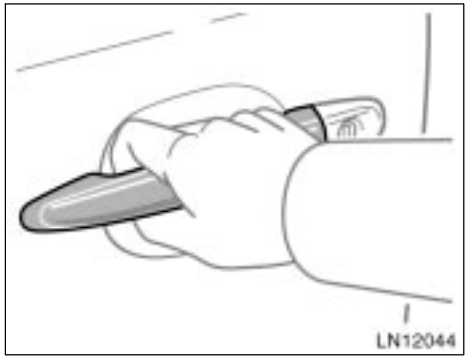
For three seconds after the doors have been locked, the doors cannot be unlocked via the smart key system. This feature allows the operator to confirm that the doors are locked.

In the following cases, the doors cannot be locked by pushing the lock button and a beep will sound as an indicator.

- When any of the doors are not securely closed. A beep will sound continuously for 10 seconds.
- When the lock button is pressed while opening or closing the door. A beep will sound continuously for 10 seconds.
- When the hybrid system is not turned off. A beep will sound continuously for 2 seconds.
- When the key is left in the vehicle. A beep will sound continuously for 2 seconds.
- When attempting to lock the doors with the key near a window or a door handle. A beep will sound continuously for 2 seconds.

The beep may not sound if the key is on the instrument panel, on the package tray, in the glove box or on the floor, etc.

The answerback function (the turn signal flash and the beep) can be disabled. For details, contact your Toyota dealer.



Unlocking operation

Grasp the front outside door handle (sensors are located on the underside of the door handles). Only the driver’s door unlocks when the driver’s door handle is grasped. All the doors unlock when the front passenger’s door handle is grasped. At this time two beeps will be heard and the turn signal lights flash twice.

The doors may not unlock if the handle is grasped too quickly. Be sure to confirm that the doors are unlocked before pulling the door handle. If the doors do not open when the handle is pulled, return the handle to its original position.

Wearing gloves may slow response time. For three seconds after the doors have been locked, the doors cannot be re−unlocked via the smart key system.

The answerback function (the turn signal flash and the beep) can be disabled. For details, contact your Toyota dealer.

When you enter the entry function actuation area, the interior and exterior lights come on for about 15 seconds. After the light comes on, all the side doors can be unlocked by grasping the outside door handle.

You have 60 seconds to open a door after using the unlocking function. If a door is not opened by then, all the doors will be automatically locked again.

The automatic locking time can also be set to 30 seconds. For details, contact your Toyota dealer.

The doors may unlock if the key is within the entry function actuation area and a large amount of water splashes on the door handle (for example, in the rain or in a car wash).

When you enter the entry function actuation area, the illuminated entry system will be activated. (For further information, see “Illuminated entry system” on page 127 in Section 1−5.)

SELECTING DOORS TO BE UNLOCKED WITH ENTRY FUNCTION

The unlocking operation has 2 modes. To change the mode, within 1 m (3 ft.) of the vehicle press the lock switch and the alarm, trunk opener or unlock switch simultaneously for five seconds.

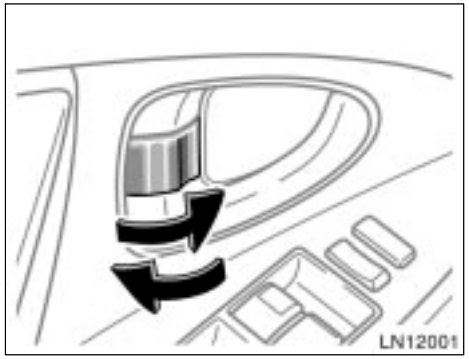
The “POWER” switch must be turned off.

When the mode is changed, the buzzer will sound and an indicator is displayed on the multi−information display as follows:

Mode	Door to be unlocked	Wireless remote control buzzer	Indicator and meter buzzer
1	All doors	2 beeps	1 beep
2	Driver’s door only (from driver’s door switch) All doors (from front passenger’s door switches)	3 beeps	1 beep

Repeating the above process allows you to toggle between 1 and 2.

—Locking and unlocking with inside lock knob



Move the lock knob.

To lock: Push the knob forward.
To unlock: Pull the knob backward.

The front doors can be opened by pulling the inside handle even if the lock knobs are in the locked position.

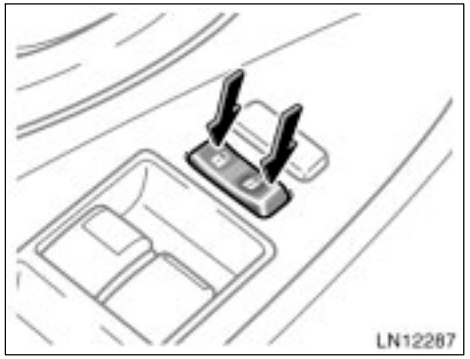
⚠ CAUTION

Do not pull the inside handle of the front doors while driving. The doors will open and an accident may occur. Toyota strongly recommends that all children be placed in the rear seat of the vehicle.

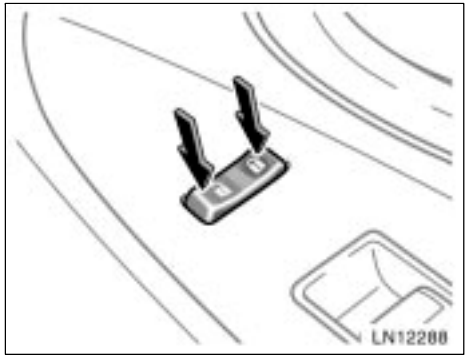
Closing the door with the lock knob in the lock position will also lock the door. Be careful not to lock your keys in the vehicle.

Doors cannot be locked when either front door is open and the key is left in the vehicle.

—Locking and unlocking with power door lock switch



Driver’s side



Passenger’s side

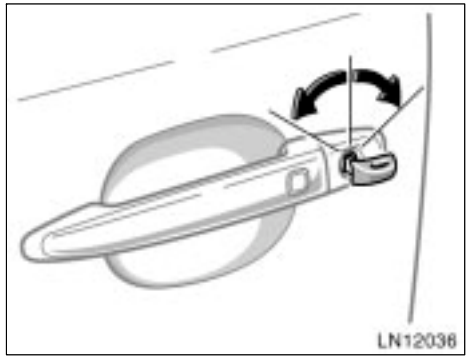
Push the switch.

To lock: Push the switch down on the right side.
To unlock: Push the switch down on the left side.

All the doors lock or unlock simultaneously.

When the front doors are locked from the outside or locked with the wireless remote control function, the power door lock switch will not work until either front door is unlocked with the key, lock knob, or wireless remote control function.

—Locking and unlocking door with mechanical key



Insert the mechanical key into the keyhole and turn it.

To lock: Turn the key forward.

All the doors lock simultaneously with the driver’s door.

For three seconds after the doors have been locked, the doors cannot be unlocked via the smart key system. This feature allows the operator to confirm that the doors are locked.

To unlock: Turn the key backward.

Turning the key once will unlock the driver’s door and twice in succession will unlock all the doors simultaneously.

This double key turning operation to unlock all the doors can be changed to a single key turning operation. For details, contact your Toyota dealer.

When you unlock the doors, the illuminated entry system will be activated. (For further information, see “Illuminated entry system” on page 127 in Section 1−5.)

—Automatic door locking and unlocking functions

AUTOMATIC DOOR LOCKING

You can select the following functions:

- **Locking linked with the shift position**

  All doors are automatically locked when the selector lever is moved out of “P” position.

- **Locking linked with vehicle speed**

  All doors are automatically locked when the vehicle speed goes above about 20 km/h (12 mph).

You can set or cancel the automatic door locking functions:

Be sure to apply the parking brake when performing the following operations.

To select the locking linked with the shift position:

1. Close all doors and set the “POWER” switch at ON.
2. Shift the selector lever to the “P” position.
3. Within 10 seconds of turning the “POWER” switch on, press and hold the driver’s side power door lock switch in the lock position for 5 seconds and then release.

   The doors will be locked and unlocked to indicate that the function is set.

To cancel the function, do the above operation again.

To select the locking linked with the vehicle speed:

1. Close all doors and set the “POWER” switch at ON.
2. Shift the selector lever from “P” to the “N” position.
3. Within 10 seconds of turning the “POWER” switch on, press and hold the driver’s side power door lock switch in the lock position for 5 seconds and then release.

   The doors will be locked and unlocked to indicate that the function is set.

To cancel the function, do the above operation again.

AUTOMATIC DOOR UNLOCKING

You can select the following functions:

- **Unlocking linked with the shift position**

  All doors are automatically unlocked when the selector lever is moved to “P” position.

- **Unlocking linked with the “POWER” switch**

  All doors are automatically unlocked when the driver’s door is opened within 10 seconds after the “POWER” switch is set from ON to ACC or OFF.

You can set or cancel the automatic door unlocking functions:

Be sure to apply the parking brake when performing the following operations.

To select the unlocking linked with the shift position:

1. Close all doors and set the “POWER” switch at ON.
2. Shift the selector lever to the “P” position.
3. Within 10 seconds of turning the “POWER” switch on, press and hold the driver’s side power door lock switch in the unlock position for 5 seconds and then release.

   The doors will be locked and unlocked to indicate that the function is set.

To cancel the function, do the above operation again.

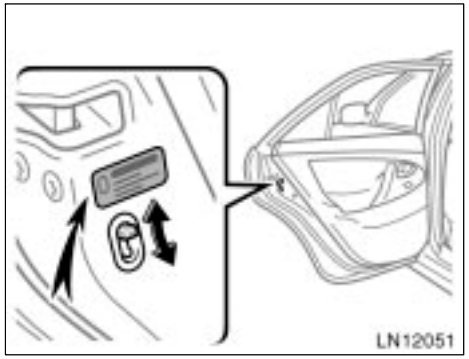
To select the unlocking linked with the “POWER” switch:

1. Close all doors and turn the “POWER” switch at ON.
2. Shift the selector lever from “P” to the “N” position.
3. Within 10 seconds of turning the “POWER” switch on, press and hold the driver’s side power door lock switch in the unlock position for 5 seconds and then release.

   The doors will be locked and unlocked to indicate that the function is set.

To cancel the function, do the above operation again.

—Rear door child−protectors



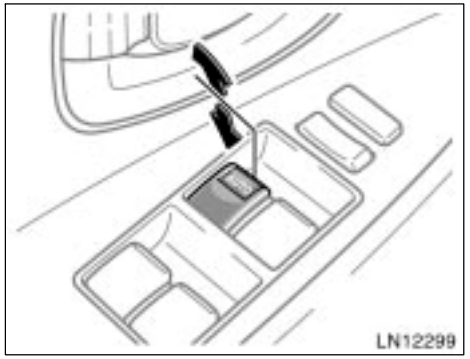
Move the lock lever to the “LOCK” position as shown on the label.

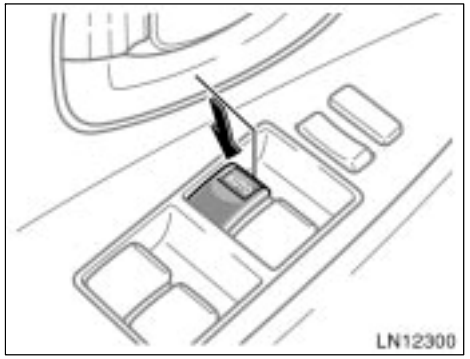
When the child−protector is locked, you cannot open the rear door by the inside door handle. We recommend using this feature whenever small children are in the vehicle.

⚠ CAUTION

Before driving, be sure that the doors are closed and locked, especially when small children are in the vehicle. Along with the proper use of seat belts, locking the doors helps prevent the driver and passengers from being thrown out from the vehicle in an accident. It also helps prevent the doors from being opened unintentionally.

Power windows





The windows can be operated with the switch on each door.

The power windows work when the “POWER” switch is set at ON.

Key off operation: All windows work for about 45 seconds even after the “POWER” switch is turned off. They stop working when either front door is opened.

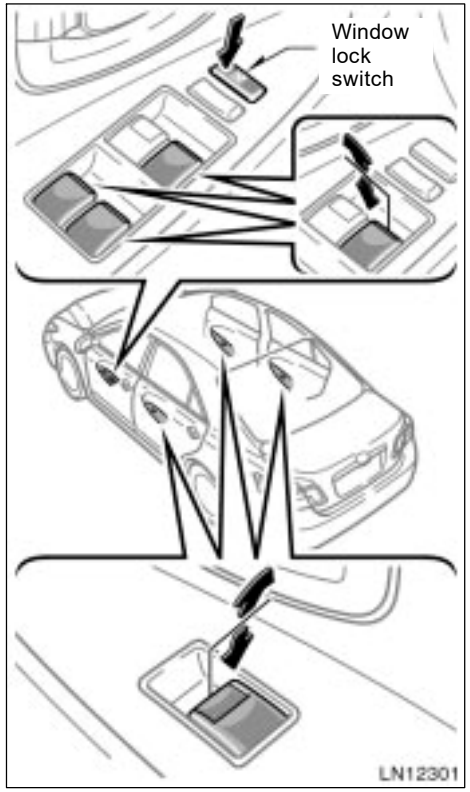
OPERATING THE DRIVER’S WINDOW

Use the switch on the driver’s door.

Normal operation: The window moves as long as you hold the switch.

To open: Lightly push down the switch.
To close: Pull up the switch.

Automatic operation: Push the switch completely down and then release it. The window will fully open. To stop the window partway, pull the switch up and then release it.



OPERATING THE PASSENGERS’ WINDOWS

Use the switches on the passengers’ doors. The driver’s door also has switches that control the passengers’ windows.

The window moves as long as you hold the switch.

To open: Push down the switch.
To close: Pull up the switch.

If you push in the window lock switch on the driver’s door, the passengers’ windows cannot be operated.

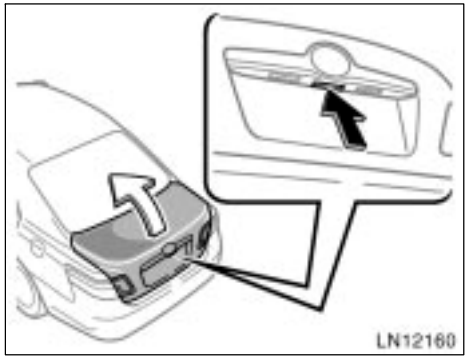
⚠ CAUTION

To avoid death or serious personal injury, you must do the following.

- **Before you close the power windows, always make sure there is nobody around the power windows. You must also make sure the heads, hands and other parts of the bodies of all occupants are kept completely inside the vehicle. If someone’s neck, head or hands get caught in a closing window, it could result in death or serious injury. When anyone closes the power windows, make sure he or she operates the windows safely.**
- **When small children are in the vehicle, never let them use the power window switches without supervision. Use the window lock switch to prevent them from making unexpected use of the switches.**

- **Never leave anyone (particularly a small child) alone in your vehicle, especially with the “POWER” switch set at ON. Otherwise, he/she could use the power window switches and get trapped in a window. Unattended person (particularly a small child) can be involved in a serious accident.**

Trunk lid—
—Opening trunk lid with smart key system



When you carry the registered key into the actuation area, the trunk can be opened. For further information of actuation area, see “Smart key system” on page 32 in this Section.

See “—Stowage precautions” on page 295 in Section 2 for precautions when loading luggage.

To close the trunk lid, lower it and press down on it. After closing the trunk lid, try pulling it up to make sure it is securely closed.

The trunk lid can be opened with the wireless remote control function, see “—Opening trunk lid” on page 28 in this Section.

⚠ CAUTION

Keep the trunk lid closed while driving. This not only keeps the luggage from being thrown out but also prevents exhaust gases from entering the vehicle.

A warning buzzer may sound when:

- The key is brought into the cabin after the trunk is opened, and the trunk is then closed.
- The key is near the trunk when the trunk is closed.

The buzzer may sound even when the key is not in the trunk. This does not indicate a problem. However, under these circumstances, the trunk cannot be opened using the smart key system. Open the trunk using other methods.

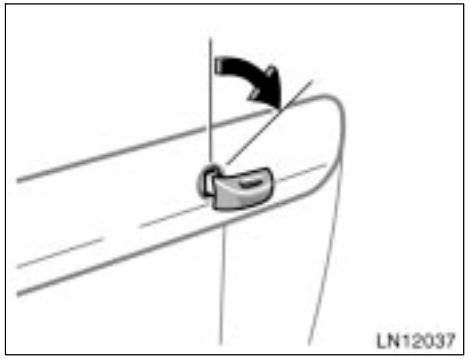
If the trunk is closed with the key left in the trunk when all side doors are locked, a beep will sound continuously for 2 seconds. You can open the trunk pushing the trunk opener switch without carrying another key. However, in some instances, the beep may not sound when the trunk is closed depending on the location of the key in the trunk. In addition, when the doors are open or unlocked, the beep may not sound when the trunk is closed. When closing the trunk, make sure that the key is not left in it.

—Opening trunk lid by lock release lever

To open the trunk lid from the driver’s seat, pull up on the lock release lever.

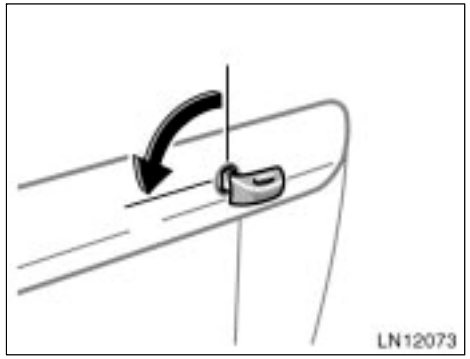
To deactivate this lock release lever from opening the trunk lid, see “—Luggage security system” described below.

—Opening trunk lid with mechanical key



To open the trunk lid manually from the outside, insert the mechanical key and turn it clockwise.

—Luggage security system



This system helps protect things locked in the trunk by safeguarding the trunk lid lock release lever from unwanted access.

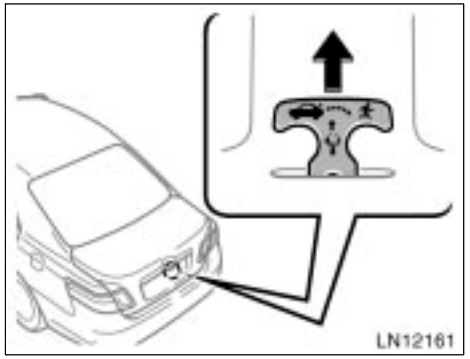
Close the trunk lid. Insert the mechanical key and turn it counterclockwise to deactivate the trunk lid lock release lever.

After the operation, try pulling up on the trunk lid lock release lever to make sure it is locked.

NOTICE

Implement the above steps to maximize security of the luggage in the trunk whenever the vehicle is unattended.

—Internal trunk release strap



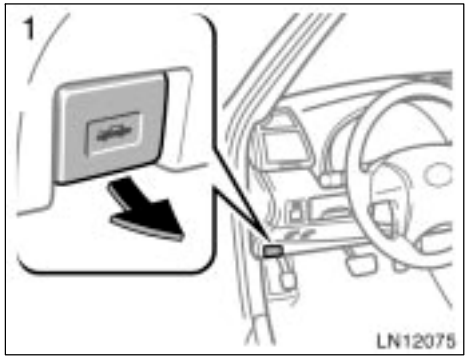
If a person is locked in the trunk, he/she can pull up the phosphorescent strap on the inside of trunk lid to open the trunk lid.

The phosphorescent (glow−in−the−dark) strap will continue to glow for a time after the trunk lid is closed. Exposing the handle to stronger light will cause it to glow longer.

⚠ CAUTION

- **Always lock the trunk lid and all doors, and keep away the vehicle keys out of children’s reach.**
- **Never leave children unattended in the vehicle. Unsupervised children may lock themselves in the vehicle or trunk and suffer serious injuries or death.**

Hood

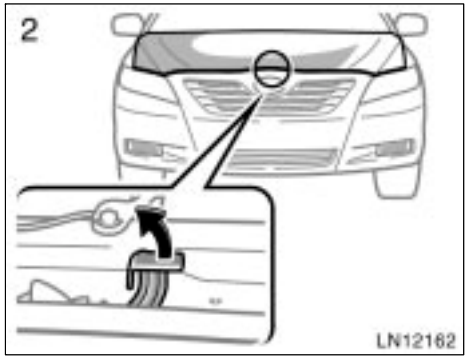


To open the hood:

1. Pull the hood lock release lever. The hood will spring up slightly.

⚠ CAUTION

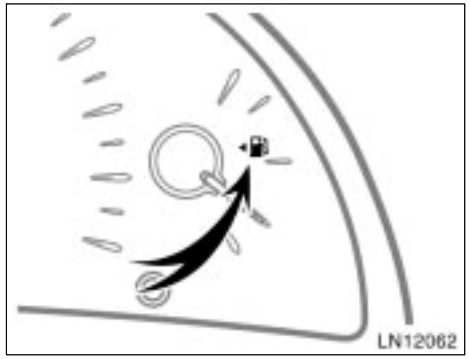
Before driving, be sure that the hood is closed and securely locked. Otherwise, the hood may open unexpectedly while driving and an accident may occur.



2. In front of the vehicle, pull up the auxiliary catch lever and lift the hood.

Before closing the hood, check to see that you have not forgotten any tools, rags, etc. Then lower the hood and make sure it locks into place. If necessary, press down gently on the front edge to lock it.

Fuel tank cap—

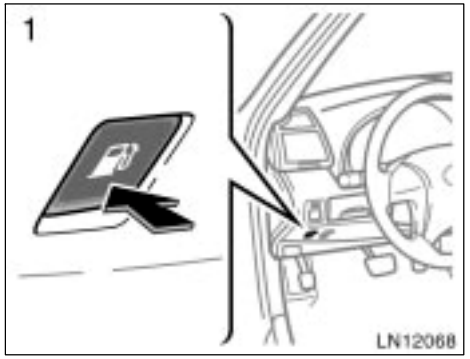


This indicates that the fuel filler door is on the left side of your vehicle.

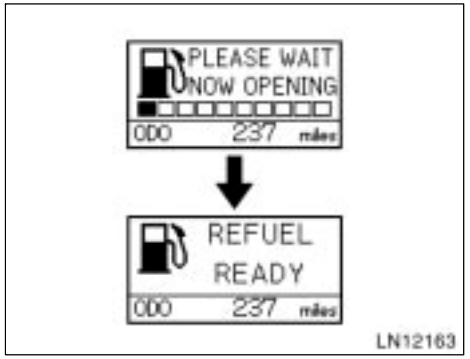
To refuel your vehicle, turn the hybrid system off.

⚠ CAUTION

Do not smoke, cause sparks or allow open flames in the area when refueling. The fumes are flammable.



1. To open the fuel filler door, push the switch.



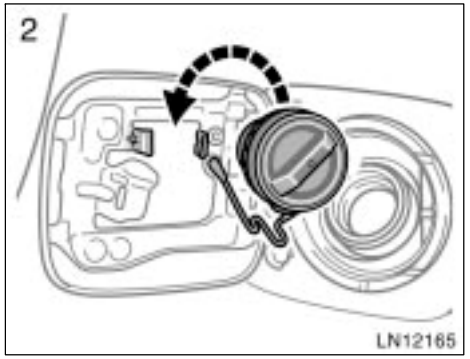
If the pressure in the fuel tank is high, a message “PLEASE WAIT NOW OPENING” will appear on the multi−information display. It may take up to 10 seconds if the internal pressure is high. The segments in the display increase to indicate the time left. The segments in the display decrease to indicate the time left.

When the pressure lowers, a message “REFUEL READY” will appear and the fuel filler door will open.

If the fuel filler door does not open, the opener may have a malfunction. For details, see “—If the fuel filler door opener is not actuated” on page 53 in this Section.

⚠ CAUTION

When opening the cap, do not remove the cap quickly. In hot weather, fuel under pressure could cause injury by spraying out of the filler neck if the cap is suddenly removed.



2. **Turn the cap slowly counterclockwise and remove it.**

   The removed cap can be stored on the backside of the fuel filler door.

When reinstalling, turn the cap clockwise until you hear a click.

If the cap is not tightened securely, the malfunction indicator lamp will come on. Make sure the cap is tightened securely. The indicator lamp will go off after driving the vehicle several times. If the indicator lamp does not go off, contact your Toyota dealer as soon as possible.

If you leave the fuel filler door open and start the hybrid system, a message “CLOSE FUEL LID” will appear on the multi−information display. Make sure the fuel filler door is closed.

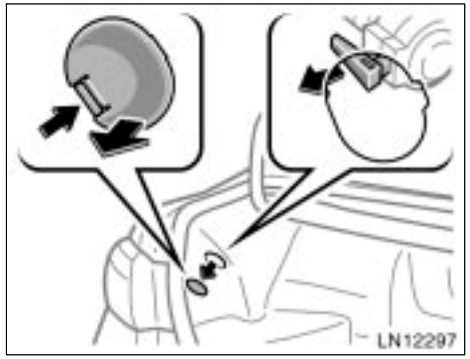
⚠ CAUTION

- **Make sure the cap is installed securely to prevent fuel spillage in the event of an accident.**
- **Use only a genuine Toyota fuel tank cap for replacement. It is designed to regulate fuel tank pressure.**

NOTICE

Finish refueling within 30 minutes. If more than 30 minutes passes, the internal valve closes. In this condition, fuel may spill out if you continue to refuel the vehicle. About 5 minutes after the valve is closed, a message “CLOSE FUEL LID” will appear on the multi−information display. To refuel the vehicle again, tighten the fuel tank cap and close the fuel filler door, and then push the fuel filler door opener switch again.

—If the fuel filler door opener is not actuated



If the opener is not actuated, contact your Toyota dealer to service the vehicle. If you must refuel your vehicle, you can open the fuel filler door manually as instructed below.

The system to lower internal pressure in the fuel tank may not be functioning so you must turn the cap slowly with releasing the pressure. In addition, fuel may spill out during refueling. Fill the fuel tank carefully and slowly.

1. **Open the trunk and remove the cover located in the left−hand side of the trunk.**
2. **Pull the manual lock release lever.**

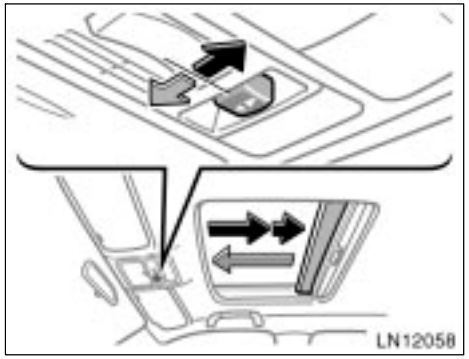
   The fuel filler door will open.
3. **Turn the cap slowly counterclockwise.**

   You may hear a slight swoosh when you remove the cap.

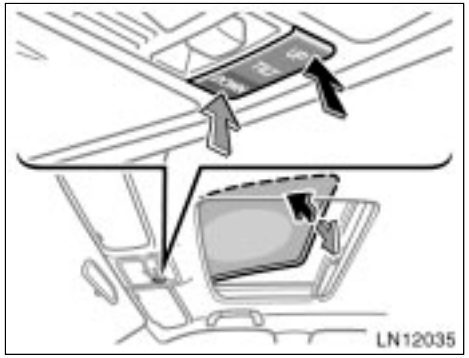
⚠ CAUTION

When opening the cap, do not remove it quickly. The fuel may spray out of the filler opening if the cap is suddenly removed.

Electric moon roof



Sliding operation



Tilting operation

To operate the moon roof, use the switches on the overhead console.

The moon roof works when the "POWER" switch is set at ON.

The sun shade can be opened or closed by hand.

Sliding operation—

To open: Push and hold the switch for 1 second toward the vehicle's rear.

The roof will open and stop partway 90 mm (3.6 in.) from the fully opened position. When you push the switch again, the moon roof will open fully. To stop the roof partway, push one of the moon roof switches briefly.

As driving with the moon roof opened fully will cause wind throbs, we recommend you to drive with the moon roof partway 90 mm (3.6 in.) from the fully opened position.

The sun shade will be opened together with the roof.

To close: Push and hold the switch for 1 second toward the vehicle's front.

The roof will fully close automatically. To stop the roof partway, push one of the moon roof switches briefly.

Tilting operation—

To tilt up: Push and hold the "TILT" switch for 1 second on the "UP" side.

The roof will fully tilt up automatically. To stop the roof partway, push one of the moon roof switches briefly.

To tilt down: Push and hold the "TILT" switch for 1 second on the "DOWN" side.

The roof will fully tilt down automatically. To stop the roof partway, push one of the moon roof switches briefly.

Open moon roof reminder: If the moon roof is left open when you set the "POWER" switch at ACC or off and open the driver's door, a message "MOONROOF OPEN" appears on the multi−information display and a warning tone sounds.

Key off operation: If both front doors are closed, the moon roof works for about 45 seconds even after the "POWER" switch is turned off. It stops working when either door is opened.

Jam protection function: If something gets caught between the moon roof and frame during closing operation, the moon roof stops and opens.

If the moon roof receives a strong impact, this function may work even if nothing is caught.

⚠ CAUTION

To avoid death or serious personal injury, you must do the following.

- **While the vehicle is moving, always keep the heads, hands and other parts of the bodies of all occupants away from the roof opening. Otherwise, they could be killed or seriously injured if the vehicle stops suddenly or if the vehicle is involved in an accident.**

- **Before you close the moon roof, always make sure there is nobody around the moon roof. You must also make sure nobody places his or her head, hands and other parts of the body in the roof opening. If someone’s neck, head or hands get caught in the closing roof, it could result in death or serious injury. When anyone closes the moon roof, first make sure it is safe to do so.**
- **Never leave anyone (particularly a small child) alone in your vehicle, especially with the “POWER” switch set at ON. Otherwise, he/she could use the moon roof switch and get trapped in the roof opening. Unattended person (particularly a small child) can be involved in a serious accident.**
- **Never sit on top of the vehicle around the roof opening.**
- **Never try jamming any part of your body to activate the jam protection function intentionally, as it could result in a death or serious injury.**

- **The jam protection function may not work if something gets caught just before the moon roof is fully closed.**

SECTION 1-3

OPERATION OF INSTRUMENTS AND CONTROLS

Occupant restraint systems

Seats 58
Front seats 58
Rear seats 63
Seat heaters 64
Head restraints 65
Armrest 65
Seat belts 66
SRS airbags 77
Child restraint 96

Seats

While the vehicle is being driven, all vehicle occupants should have the seatback upright, sit well back in the seat and properly wear the seat belts provided.

CAUTION

- **Do not drive the vehicle unless the occupants are properly seated. Do not allow any passengers to sit on top of a folded−down seatback, or in the luggage compartment or cargo area. Persons not properly seated and/or not properly restrained by seat belts can be killed or severely injured in the event of emergency braking or a collision.**
- **During driving, do not allow any passengers to stand up or move around between seats. Otherwise, death or severe injuries can occur in the event of emergency braking or a collision.**

Front seats— —Front seat precautions

Driver seat

CAUTION

The SRS driver airbag deploys with considerable force, and can cause death or serious injury especially if the driver is very close to the airbag. The National Highway Traffic Safety Administration (“NHTSA”) advises:

Since the risk zone for driver airbag is the first 50—75 mm (2—3 in.) of inflation, placing yourself 250 mm (10 in.) from your driver airbag provides you with a clear margin of safety. This distance is measured from the center of the steering wheel to your breastbone. If you sit less than 250 mm (10 in.) away now, you can change your driving position in several ways:

- **Move your seat to the rear as far as you can while still reaching the pedals comfortably.**
- **Slightly recline the back of the seat. Although vehicle designs vary, many drivers can achieve the 250 mm (10 in.) distance, even with the driver seat all the way forward, simply by reclining the back of the seat somewhat. If reclining the back of your seat makes it hard to see the road, raise yourself by using a firm, non−slippery cushion, or raise the seat if your vehicle has that feature.**
- **If your steering wheel is adjustable, tilt it downward. This points the airbag toward your chest instead of your head and neck.**

The seat should be adjusted as recommended by NHTSA above, while still maintaining control of the foot pedals, steering wheel, and your view of the instrument panel controls.

Front passenger seat

CAUTION

The SRS front passenger airbag also deploys with considerable force, and can cause death or serious injury especially if the front passenger is very close to the airbag. The front passenger seat should be as far from the airbag as possible with the seatback adjusted, so the front passenger sits upright.

Front seats

CAUTION

The SRS side airbags are installed in the driver and front passenger seats. Observe the following precautions.

- Do not lean against the front door when the vehicle is in use, since the side airbag inflates with considerable speed and force. Otherwise, you may be killed or seriously injured.
- Do not use seat accessories which cover the area where the side airbags inflate. Such accessories may prevent the side airbags from activating correctly, causing death or serious injury.
- Do not modify or replace the seats or upholstery of the seats. Such change may prevent the side airbag system from activating correctly, disable the system, or cause the side airbags to inflate accidentally, resulting in death or serious injury.

—Seat adjustment precautions

CAUTION

- Do not adjust the seat while the vehicle is moving as the seat may unexpectedly move and cause the driver to lose control of the vehicle.
- Be careful that the seat does not hit a passenger or luggage.
- After adjusting the seat position, release the lever and try sliding the seat forward and backward to make sure it is locked in position.
- After adjusting the seatback, push your body back against the seat to make sure the seat is locked in position.
- Do not put objects under the seats. Otherwise, the objects may interfere with the seat−lock mechanism or unexpectedly push up the seat position adjusting lever and the seat may suddenly move, causing the driver to lose control of the vehicle.

—Adjusting driver’s seat

● While adjusting the seat, do not put your hands under the seat or near the moving parts. Otherwise, your hands or fingers may be caught and injured.

1. SEAT POSITION AND SEAT HEIGHT ADJUSTING SWITCH

Move the control switch in the desired direction.

Releasing the switch will stop the seat at that position.

Do not place anything under the seat, as this might interfere with the seat movement.

2. SEATBACK ANGLE ADJUSTING SWITCH

Move the control switch in the desired direction.

Releasing the switch will stop the seatback at that position.

CAUTION

Avoid reclining the seatback any more than needed. The seat belts provide maximum protection in a frontal or rear collision when the driver and the front passenger are sitting up straight and well back in the seats. If you are reclined, the lap belt may slide past your hips and apply restraint forces directly to the abdomen or your neck may contact the shoulder belt. In the event of a frontal collision, the more the seat is reclined, the greater the risk of death or serious injury.

3. SEAT LUMBAR SUPPORT ADJUSTING SWITCH

Push the control switch in the desired direction.

The amount of lumbar support will change while the switch is pushed.

—Adjusting front passenger's seat (manual seat)

1. SEATBACK ANGLE ADJUSTING LEVER

Lean forward and pull the lever up. Then lean back to the desired angle and release the lever.

2. SEAT POSITION ADJUSTING LEVER

Hold the center of the lever and pull it up. Then slide the seat to the desired position with slight body pressure and release the lever.

⚠ CAUTION

Avoid reclining the seatback any more than needed. The seat belts provide maximum protection in a frontal or rear collision when the driver and the front passenger are sitting up straight and well back in the seats. If you are reclined, the lap belt may slide past your hips and apply restraint forces directly to the abdomen or your neck may contact the shoulder belt. In the event of a frontal collision, the more the seat is reclined, the greater the risk of death or serious injury.

—Adjusting front passenger’s seats (power seat)

1. SEATBACK ANGLE ADJUSTING SWITCH

Move the control switch in the desired direction.

Releasing the switch will stop the seatback at that position.

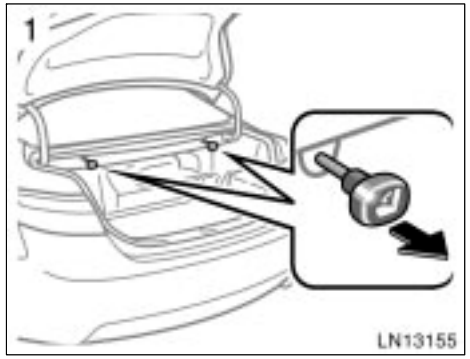
2. SEAT POSITION ADJUSTING SWITCH

Move the control switch in the desired direction.

Releasing the switch will stop the seat at that position.

Do not place anything under the seat, as this might interfere with the seat movement.

Rear seats—
—Fold−down rear seat



FOLDING DOWN REAR SEAT

1. To unlock the seatback, pull the lever in the trunk.

2. Fold down the seatback.

Each seatback can be folded separately.

This will enlarge the trunk as far as the seatbacks. See “—Stowage precautions” on page 295 in Section 2 for precautions when loading luggage.

NOTICE

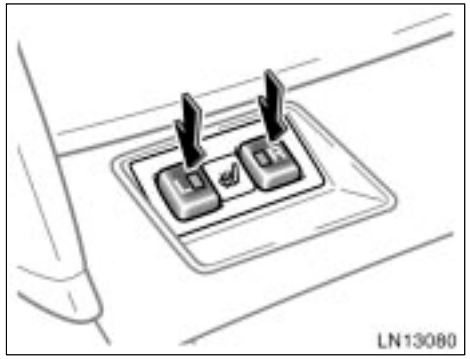
Make sure the luggage loaded in the enlarged trunk will not damage the webbing of the rear center seat belt when the left seatback is folded down.

⚠ CAUTION

When returning the seatback to the upright position, observe the following precautions in order to prevent death or serious injury in a collision or sudden stop:

- **Make sure the seatback is securely locked by pushing forward and rearward on the top of the seatback. Failure to do so will prevent the seat belt from operating properly.**
- **Make sure the seat belts are not twisted or caught in the seatback and are arranged in the proper position and are ready to use.**

Seat heaters



To turn on the seat heater, push the switch. At this time, the indicator light will illuminate to indicate the seat heater is operating.

To turn off the seat heater, push the switch once again.

The “POWER” switch must be set at ON to operate seat heaters.

⚠ CAUTION

Occupants must use caution when operating the seat heater because it may make them feel too hot or cause burns at low temperatures (erythema, varicella). Use extra caution for the following:

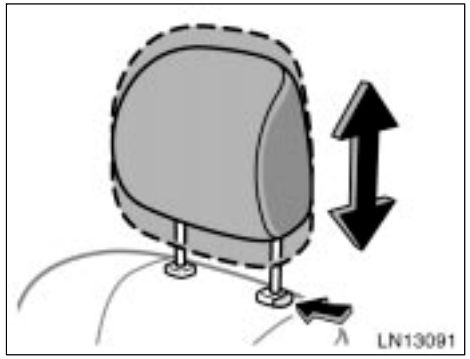
- **Babies, small children, elderly persons, sick persons or persons with physical disabilities**
- **Persons who have sensitive skin**
- **Persons who are exhausted**
- **Persons who have taken alcohol or drugs which induce sleep (sleeping drug, cold remedy, etc.)**

To prevent the seat overheating, do not use the seat heater with a blanket, cushion, or other insulating objects which cover the seat.

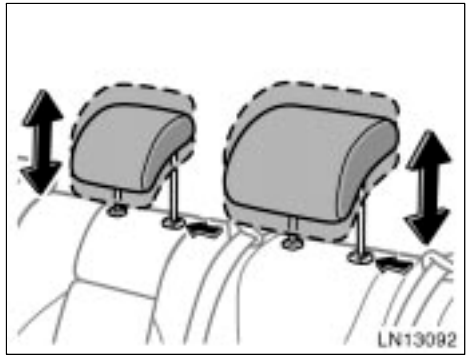
NOTICE

- ***Do not put unevenly weighed objects on the seat and do not stick sharp objects (needles, nails, etc.) into the seat.***
- ***When cleaning the seats, do not use organic substances (paint thinner, benzine, alcohol, gasoline, etc.). They may damage the heater and seat surface.***
- ***To prevent the 12 volt battery from being discharged, turn the switch off when the hybrid system is turned off.***

Head restraints



Front



Rear

For your safety and comfort, adjust the head restraint before driving.

To raise: Pull it up.
To lower: Push it down while pressing the lock release button.

Rear center head restraint—When an occupant sits on the rear center seat, always pull up the rear center head restraint to the lock position.

The head restraint is most effective when it is close to your head. Therefore, using a cushion on the seatback is not recommended.

⚠ CAUTION

- **Adjust the center of the head restraint so that it is closest to the top of your ears.**
- **After adjusting the head restraint, make sure it is locked in position.**
- **Do not drive with the head restraints removed.**

Armrest

To use the armrest, pull it out as shown above.

Seat belts—
—Seat belt precautions

Toyota strongly urges that the driver and passengers in the vehicle be properly restrained at all times with the seat belts provided. Failure to do so could increase the chance of injury and/or the severity of injury in accidents.

The seat belts provided for your vehicle are designed for people of adult size, large enough to properly wear them.

Child. Use a child restraint system appropriate for the child until the child becomes large enough to properly wear the vehicle’s seat belts. See “Child restraint” on page 96 in this Section for details.

If a child is too large for a child restraint system, the child should sit in the rear seat and must be restrained using the vehicle’s seat belt. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

If a child must sit in the front seat, the seat belts should be worn properly. If an accident occurs and the seat belts are not worn properly, the force of the rapid inflation of the airbag may cause death or serious injury to the child.

Do not allow any children to stand up or kneel on either rear or front seats. An unrestrained child could suffer serious injury or death during emergency braking or a collision. Also, do not let the child sit on your lap. Holding a child in your arms does not provide sufficient restraint.

Pregnant woman. Toyota recommends the use of a seat belt. Ask your doctor for specific recommendations. The lap belt should be worn securely and as low as possible over the hips and not on the waist.

Injured person. Toyota recommends the use of a seat belt. Depending on the injury, first check with your doctor for specific recommendations.

⚠ CAUTION

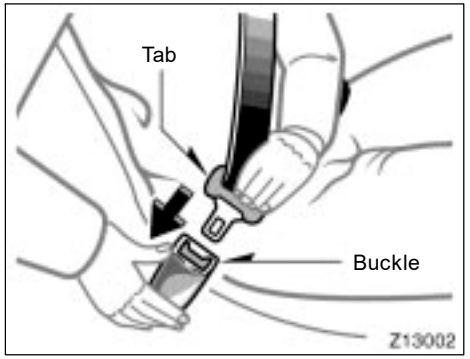
Persons should ride in their seats properly wearing their seat belts whenever the vehicle is moving. Otherwise, they are much more likely to suffer serious bodily injury or death in the event of sudden braking or a collision.

When using the seat belts, observe the following:

- **Use the belt for only one person at a time. Do not use a single belt for two or more people—even children.**
- **Avoid reclining the seatback any more than needed. The seat belts provide maximum protection in a frontal or rear collision when the driver and the front passenger are sitting up straight and well back in the seats. If you are reclined, the lap belt may slide past your hips and apply restraint forces directly to the abdomen or your neck may contact the shoulder belt. In the event of a frontal collision, the more the seat is reclined, the greater the risk of death or serious injury.**

- **Be careful not to damage the belt webbing or hardware. Take care that they do not get caught or pinched in the seat or doors.**
- **Inspect the belt system periodically. Check for cuts, fraying, and loose parts. Damaged parts should be replaced. Do not disassemble or modify the system.**
- **Keep the belts clean and dry. If they need cleaning, use a mild soap solution or lukewarm water. Never use bleach, dye, or abrasive cleaners, or allow them to come into contact with the belts—they may severely weaken the belts. (See “Cleaning the interior” on page 336 in Section 5.)**
- **Replace the belt assembly (including bolts) if it has been used in a severe impact. The entire assembly should be replaced even if damage is not obvious.**

—Fastening front and rear seat belts



Adjust the seat as needed and sit up straight and well back in the seat. To fasten your belt, pull it out of the retractor and insert the tab into the buckle.

You will hear a click when the tab locks into the buckle.

The seat belt length automatically adjusts to your size and the seat position.

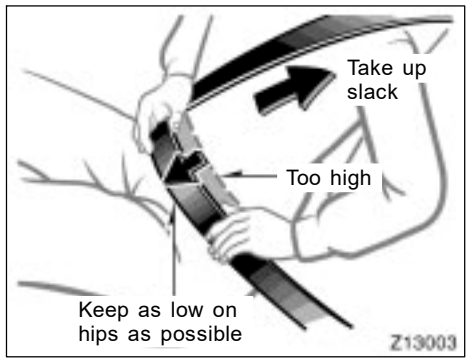
The retractor will lock the belt during a sudden stop or on impact. It also may lock if you lean forward too quickly. A slow, easy motion will allow the belt to extend, and you can move around freely.

When a passenger’s shoulder belt is completely extended and is then retracted even slightly, the belt is locked in that position and cannot be extended. This feature is used to hold the child restraint system securely. (For details, see “Child restraint” on page 96 in this Section.) To free the belt again, fully retract the belt and then pull the belt out once more.

If the seat belt cannot be pulled out of the retractor, firmly pull the belt and release it. You will then be able to smoothly pull the belt out of the retractor.

⚠ CAUTION

- **After inserting the tab, make sure the tab and buckle are locked and that the belt is not twisted.**
- **Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tab and buckle.**
- **If the seat belt does not function normally, immediately contact your Toyota dealer. Do not use the seat until the seat belt is fixed, because it cannot protect an adult occupant or your child from death or serious injury.**

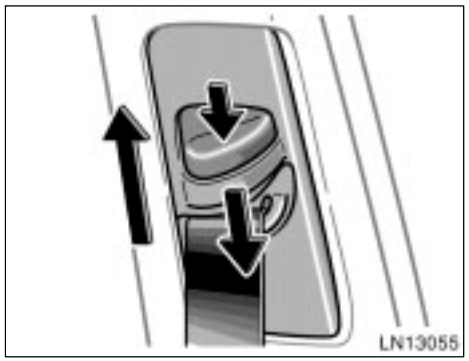


Adjust the position of the lap and shoulder belts.

Position the lap belt as low as possible on your hips—not on your waist, then adjust it to a snug fit by pulling the shoulder portion upward through the latch plate.

⚠ CAUTION

- **Both high−positioned lap belts and loose−fitting belts could cause serious injuries due to sliding under the lap belt during a collision or other unintended event. Keep the lap belt positioned as low on hips as possible.**
- **Do not place the shoulder belt under your arm.**



Seat belts with an adjustable shoulder anchor—

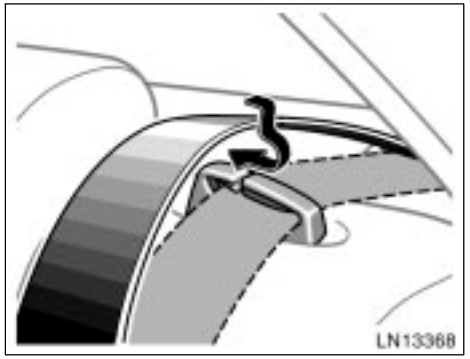
Adjust the shoulder anchor position to your size.

To raise: Slide the anchor up.
To lower: Push in the lock release button and slide the anchor down.

After adjustment make sure the anchor is locked in position.

⚠ CAUTION

Always make sure the shoulder belt is positioned across the center of your shoulder. The belt should be kept away from your neck, but not falling off your shoulder. Failure to do so could reduce the amount of protection in an accident and cause death or serious injures in a collision.



Rear seat belts—

Use the seat belt after passing it through the guide if the seat belt comes free from the guide.

⚠ CAUTION

- **Always make sure the shoulder belt passes through the guide when using the seat belt. Failure to properly position the belt may reduce the amount of protection in an accident and could lead to serious injures in a collision or sudden stop.**
- **Always make sure that the seat belt is not twisted, does not get caught in the guide or the seatback and is arranged in the proper position.**

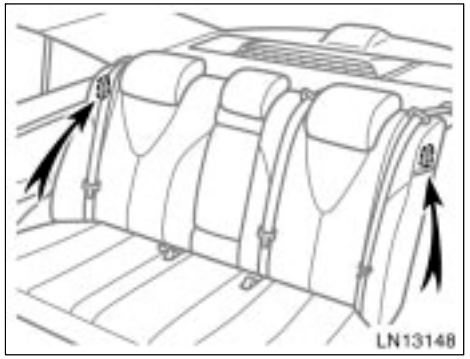
—Seat belt comfort guides

To release the belt, press the buckle release button and allow the belt to retract.

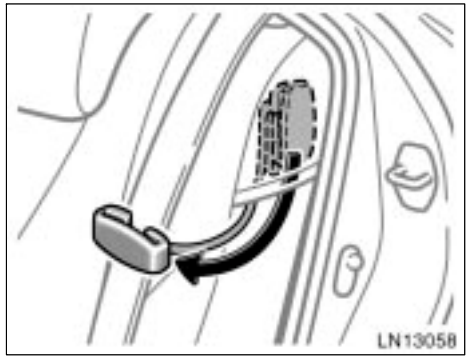
If the belt does not retract smoothly, pull it out and check for kinks or twists. Then make sure it remains untwisted as it retracts.

The outside shoulder belt comfort guides for the rear seat outside positions will provide added seat belt comfort for children who have outgrown child restraints and for small adults. When the outside shoulder belt is inserted through the guide, the comfort guide pulls the belt away from the neck and head of an occupant.

To use the comfort guide, do as follows.

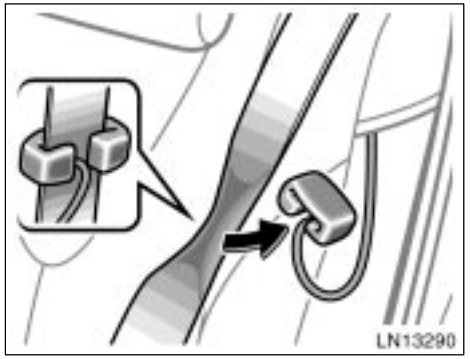


Seat belt comfort guides are stored in the both pockets on the sides of the rear seatback.



INSTALLING THE COMFORT GUIDE

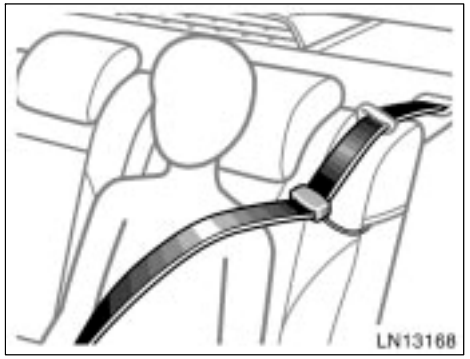
1. Pull out the comfort guide from the pocket.



2. Pinch the two edges of the shoulder belt for the rear seat outside position with your fingers and slide the belt past the slot of the guide as shown above. At this time, the elastic cord must be behind the seat belt.

⚠ CAUTION

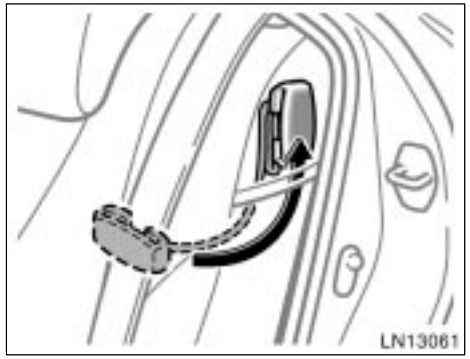
Make sure the belt is not twisted and that it lies flat. The elastic cord must be behind the belt and the guide must be on the front.



3. Buckle, position and release the seat belt. (For wearing the seat belt, see “—Fastening front and rear seat belts” on page 67 in this Section.)

⚠ CAUTION

Always make sure the shoulder belt is positioned across the center of the shoulder. The belt should be kept away from the neck, and should not fall off the shoulder. Failure to observe these precautions could reduce the effectiveness of the seat belt in an accident, causing death or serious injury.



REMOVING AND STORING THE COMFORT GUIDE

Pinch the two edges of the seat belt together so that you can slide them out of the guide. Store the guide with the elastic cord into the pocket.

⚠ CAUTION

To reduce the chance of injury in case of an accident or a sudden stop while driving, remove and store the comfort guide in its pocket when it is not in use.

—Seat belt extender

If your seat belts cannot be fastened securely because they are not long enough, a personalized seat belt extender is available from your Toyota dealer free of charge.

Please contact your local Toyota dealer to order the proper required length for the extender. Bring the heaviest coat you expect to wear for proper measurement and selection of length. Additional ordering information is available at your Toyota dealer.

⚠ CAUTION

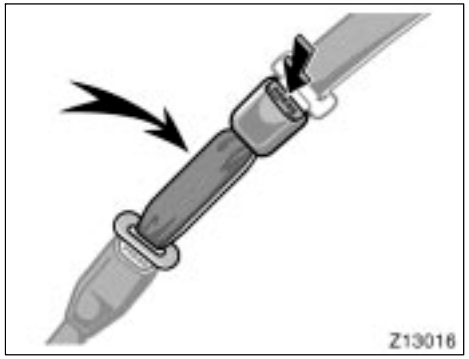
When using the seat belt extender, observe the following precautions. Failure to follow these instructions could reduce the effectiveness of the seat belt restraint system in case of an accident, increasing the chance of death or serious injury.

- **Remember that the extender provided for you may not be safe when used on a different vehicle, for another person, or at a different seating position than the one originally intended.**

- **If the seat belt extender has been connected to the driver’s seat belt buckle without wearing the seat belt when using the extender in the driver’s seat, the SRS driver’s airbag system will judge that the driver wears the seat belt even if not wearing it. In this case, the driver’s airbag may not activate correctly, causing death or serious injury in the event of collision. Be sure to wear the seat belt with the seat belt extender.**

- **Make sure the “AIRBAG ON” indicator light is illuminated when using the seat belt extender for the front passenger seat. If the “AIRBAG OFF” indicator light is illuminated, disconnect the extender tongue from the seat belt buckle, then reconnect the seat belt. Reconnect the seat belt extender after making sure the “AIRBAG ON” indicator light is illuminated. If you use the seat belt extender while the “AIRBAG OFF” indicator light is illuminated, the front passenger airbag and side airbag on the front passenger side may not activate correctly, causing death or serious injury in the event of collision.**
- **Be sure to wear the seat belt without the seat belt extender if you can fasten the seat belt without the extender.**

- **Do not use the seat belt extender when installing a child restraint system on the front or rear passenger seat. If installing a child restraint system with the seat belt extender connected to the seat belt, the seat belt will not securely hold the child restraint system, which could cause death or serious injury to the child or other passengers in the event of collision.**



To connect the extender to the seat belt, insert the tab into the seat belt buckle so that the “PRESS” signs on the buckle release buttons of the extender and the seat belt are both facing outward as shown.

You will hear a click when the tab locks into the buckle.

When releasing the seat belt, press on the buckle release button on the extender, not on the seat belt. This helps prevent damage to the vehicle interior and extender itself.

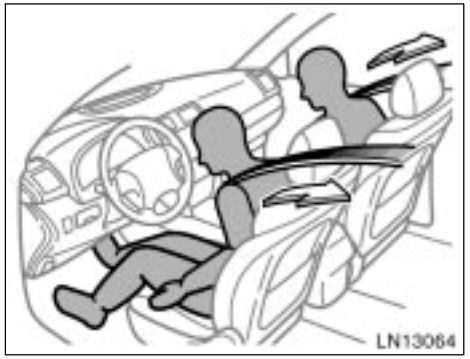
As far as the seat belt extender on the front passenger side is concerned, do not fail to disconnect the extender from the seat belt after the above operation in order to activate the front passenger airbag correctly when getting into the vehicle next time.

When not in use, remove the extender and store in the vehicle for future use.

⚠ CAUTION

- **After inserting the tab, make sure the tab and buckle are locked and that the lap and shoulder portions of the belt and the seat belt extender are not twisted.**
- **Do not insert coins, clips, etc. in the buckle as this may prevent you from properly latching the tab and buckle.**
- **If the seat belt does not function normally, immediately contact your Toyota dealer. Do not use the seat until the seat belt is fixed, because it cannot protect an adult occupant or your child from death or serious injury.**

—Seat belt pretensioners

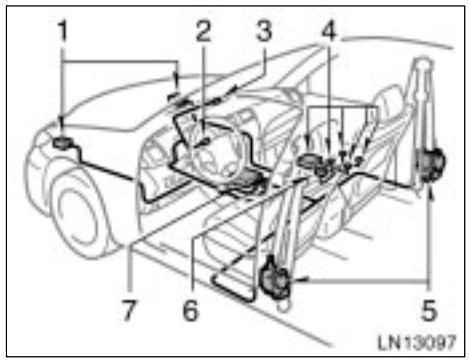


The driver and front passenger seat belt pretensioners are designed to be activated in response to a severe frontal impact.

When the sensor detects a severe frontal impact, the front seat belts are quickly drawn back by the retractors so that the belts snugly restrain the occupants.

The front passenger’s seat belt pretensioner will not activate if no passenger is detected in the front passenger seat by the front passenger occupant classification system. However, the front passenger’s seat belt pretensioner may activate if luggage is put on the seat, or the seat belt is buckled up regardless of the presence of an occupant in the seat. (As for the front passenger occupant classification system, see “—Front passenger occupant classification system” on page 92 in this Section.)

The seat belt pretensioners and SRS airbags may not operate together in all collisions.



The seat belt pretensioner system consists mainly of the following components and their locations are shown in the illustration.

1. Front airbag sensors
2. SRS warning light
3. “AIRBAG ON” and “AIRBAG OFF” indicator lights (for front passenger airbag and side airbag on the front passenger seat)
4. Front passenger occupant classification system (ECU and sensors)
5. Seat belt pretensioner assemblies
6. Front passenger’s seat belt buckle switch
7. Airbag sensor assembly

The seat belt pretensioners are controlled by the airbag sensor assembly. The airbag sensor assembly consists of a safing sensor and airbag sensor.

When the seat belt pretensioners are activated, an operating noise may be heard and a small amount of non−toxic gas may be released. This does not indicate that a fire is occurring. This gas is normally harmless.

Once the seat belt pretensioners have been activated, the seat belt retractors remain locked.

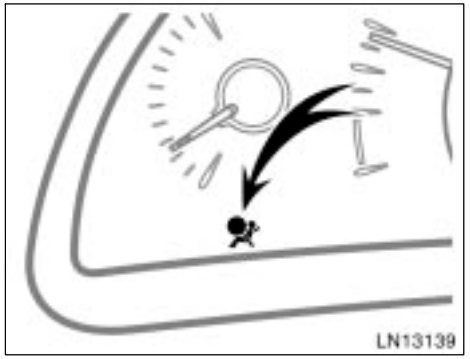
⚠ CAUTION

Do not modify, remove, strike or open the seat belt pretensioner assemblies, airbag sensor or surrounding area or wiring. Failure to follow these instructions may prevent the seat belt pretensioners from activating correctly, cause sudden operation of the system or disable the system, which could result in death or serious injury. Consult your Toyota dealer about any repair and modification.

NOTICE

Do not perform any of the following changes without consulting your Toyota dealer. Such changes can interfere with proper operation of the seat belt pretensioners in some cases.

- ***Installation of electronic devices such as a mobile two−way radio, cassette tape player or compact disc player***
- ***Repairs on or near the front seat belt retractor assemblies***
- ***Modification of the suspension system***
- ***Modification of the front end structure***
- ***Attachment of a grille guard (bull bar, kangaroo bar, etc.), snowplow, winches or any other equipment to the front end***
- ***Repairs made on or near the front fenders, front end structure or console***

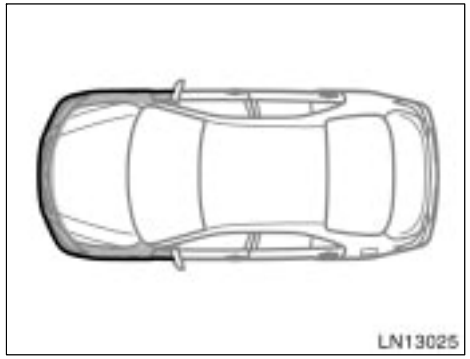


This indicator comes on when the “POWER” switch is set at ON. It goes off after about 6 seconds. This means the seat belt pretensioners are operating properly.

This warning light system monitors the airbag sensor assembly, front airbag sensors, side and curtain shield airbag sensors, curtain shield airbag sensors, driver’s seat position sensor, driver’s seat belt buckle switch, front passenger occupant classification system, “AIRBAG ON” indicator light, “AIRBAG OFF” indicator light, front passenger’s seat belt buckle switch, seat belt pretensioner assemblies, inflators, interconnecting wiring and power sources. (For details, see “Service reminder indicators and warning buzzers” on page 150 in Section 1−6.)

If any of the following conditions occurs, this indicates a malfunction of the airbags or seat belt pretensioners. Contact your Toyota dealer as soon as possible.

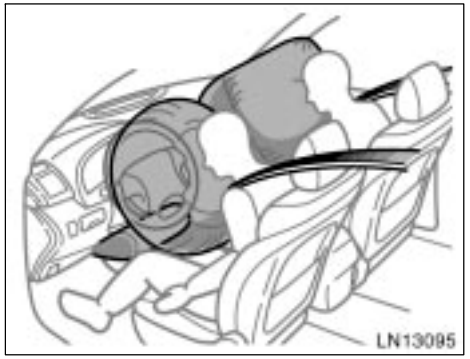
- The light does not come on when the “POWER” switch is set at ON or remains on for more than about 6 seconds.
- The light comes on or starts flashing while driving.
- If any seat belt does not retract or cannot be pulled out due to a malfunction or activation of the relevant seat belt pretensioner.
- The seat belt pretensioner assembly or surrounding area has been damaged.



In the following cases, contact your Toyota dealer as soon as possible:

- The front of the vehicle (shaded in the illustration) was involved in an accident that was not severe enough to cause the seat belt pretensioners to operate.
- Either seat belt pretensioner assembly or surrounding area is scratched, cracked, or otherwise damaged.

SRS airbags—
—SRS driver airbag, driver knee airbag and front passenger airbag



The SRS (Supplemental Restraint System) front airbags are designed to provide further protection for the driver and front passenger in addition to the primary safety protection provided by the seat belts.

Your vehicle is equipped with “ADVANCED AIRBAGS” designed based on US motor vehicle safety standards (FMVSS208). The airbag system controls airbag deployment power for the driver and front passenger. The driver airbag system consists of the driver seat’s position sensor etc. The front passenger’s airbag system consists of the front passenger occupant classification sensor etc.

In response to a severe frontal impact, the SRS front airbags work with the seat belts to help reduce injury by inflating. The SRS front airbags help reduce injuries mainly to the driver’s or front passenger’s head, chest or knee caused by hitting the vehicle interior.

The SRS front passenger airbag will not activate if there is no passenger sitting in the front passenger seat. However, the front passenger airbag may deploy if luggage is put in the seat, or the seat belt is buckled up, regardless of the presence of an occupant in the seat. (As for the front passenger occupant classification system, see “—Front passenger occupant classification system” on page 92 in this Section.)

Always wear your seat belt properly.

⚠ CAUTION

- **The SRS front airbag system is designed only as a supplement to the primary protection of the driver and front passenger seat belt systems. The driver and front passenger can be killed or seriously injured by the inflating airbags if they do not wear the available seat belts properly. During sudden braking just before a collision, an unrestrained driver or front passenger can move forward into direct contact with or close proximity to the airbag which may then deploy during the collision. To ensure maximum protection in an accident, the driver and all passengers in the vehicle must wear their seat belts properly. Wearing a seat belt properly during an accident reduces the chances of death or serious injury or being thrown out of the vehicle. For instructions and precautions concerning the seat belt system, see “Seat belts” on page 66 in this Section.**

- **Improperly seated and/or restrained infants and children can be killed or seriously injured by the deploying airbags. An infant or child who is too small to use a seat belt should be properly secured using a child restraint system. Toyota strongly recommends that all infants and children be placed in the rear seat of the vehicle and properly restrained. The rear seat is the safest for infants and children. For instructions concerning the installation of a child restraint system, see “Child restraint” on page 96 in this Section.**

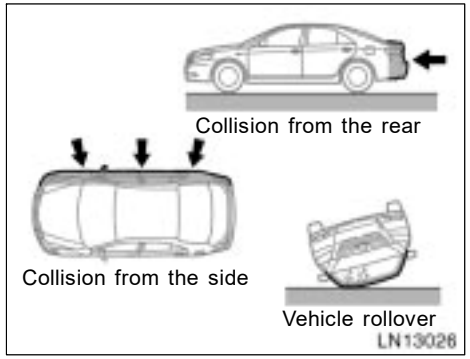
The SRS front airbags are designed to deploy in severe (usually frontal) collisions where the magnitude and duration of the forward deceleration of the vehicle exceeds the designed threshold level.

The SRS front airbags will deploy if the severity of the impact is above the designed threshold level, comparable to an approximate 25 km/h (15 mph) collision when the vehicle has the impact straight into a fixed barrier that does not move or deform.

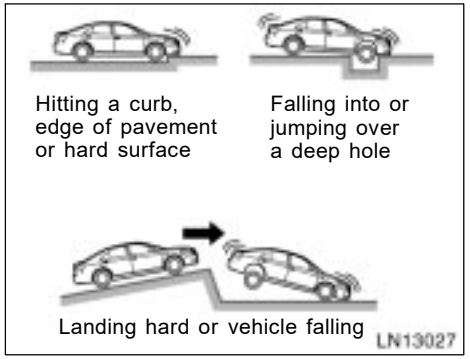
However, this threshold velocity will be considerably higher if the vehicle strikes an object, such as a parked vehicle or sign pole, which can move or deform on impact, or if the vehicle is involved in an underride collision (e.g. a collision in which the front of the vehicle “underrides”, or goes under, the bed of a truck, etc.).

It is possible that in some collisions where the forward deceleration of the vehicle is very close to the designed threshold level, the SRS front airbags and the seat belt pretensioners may not activate together.

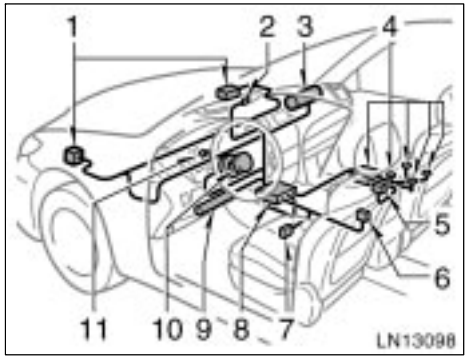
Always wear your seat belts properly.



The SRS front airbags are not generally designed to inflate if the vehicle is involved in a side or rear collision, if it rolls over, or if it is involved in a low−speed frontal collision. But, whenever a collision of any type causes sufficient forward deceleration of the vehicle, deployment of the SRS front airbags may occur.



The SRS front airbags may also deploy if a serious impact occurs to the underside of your vehicle. Some examples are shown in the illustration.



The SRS front airbag system consists mainly of the following components, and their locations are shown in the illustration.

1. Front airbag sensors
2. “AIRBAG ON” and “AIRBAG OFF” indicator lights (for front passenger airbag and side airbag on the front passenger seat)
3. Airbag module for front passenger (airbag and inflator)
4. Front passenger occupant classification system (ECU and sensors)
5. Front passenger’s seat belt buckle switch
6. Driver’s seat belt buckle switch

7. Driver’s seat position sensor
8. Airbag sensor assembly
9. Knee airbag module for driver (airbag and inflator)
10. Airbag module for driver (airbag and inflator)
11. SRS warning light

The airbag sensor assembly consists of a safing sensor and airbag sensor.

The front airbag sensors constantly monitor the forward deceleration of the vehicle. If an impact results in a forward deceleration beyond the designed threshold level, the system triggers the airbag inflators. At this time a chemical reaction in the inflators very quickly fills the airbags with non−toxic gas to help restrain the forward motion of the occupants. The front airbags then quickly deflate, so that there is no obstruction of the driver’s vision should it be necessary to continue driving.

When the airbags inflate, they produce a loud noise and release some smoke and residue along with non−toxic gas. This does not indicate a fire. This smoke may remain inside the vehicle for some time, and may cause some minor irritation to the eyes, skin or breathing. Be sure to wash off any residue as soon as possible to prevent any potential skin irritation with soap and water. If you can safely exit from the vehicle, you should do so immediately.

Deployment of the airbags happens in a fraction of a second, so the airbags must inflate with considerable force. While the system is designed to reduce serious injuries, primarily to the head and chest, it may also cause other, less severe injuries to the face, chest, arms and hands. These are usually in the nature of minor burns or abrasions and swelling, but the force of a deploying airbag can cause more serious injuries, especially if an occupant’s hands, arms, chest or head is in close proximity to the airbag module at the time of deployment. This is why it is important for the occupant to; avoid placing any object or part of the body between the occupant and the airbag module; sit straight and well back into the seat; wear the available seat belt properly; and sit as far as possible from the airbag module, while still maintaining control of the vehicle.

Parts of the airbag module (steering wheel hub, lower portion of driver’s side instrument panel, airbag cover and inflator) may be hot for several minutes after deployment, so do not touch! The airbags inflate only once. The windshield may be damaged by absorbing some of the force of the inflating airbag.

⚠ CAUTION

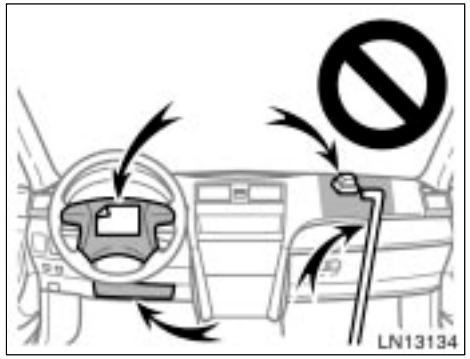
The driver or front passenger who is too close to the steering wheel, lower portion of driver’s side instrument panel or dashboard during airbag deployment can be killed or seriously injured. Toyota strongly recommends that:

- **The driver sit as far back as possible from the steering wheel while still maintaining control of the vehicle.**
- **The front passenger sit as far back as possible from the dashboard.**
- **All vehicle occupants be properly restrained using the available seat belts.**

For instructions and precautions concerning the seating position, see “—Front seat precautions” on page 58 in this Section.

- **Do not sit on the edge of the seat or lean against the dashboard when the vehicle is in use, since the front passenger airbag could inflate with considerable speed and force. Anyone who is up against, or very close to, an airbag when it inflates, can be killed or seriously injured. Sit up straight and well back in the seat, and always use your seat belt properly.**

- **Toyota strongly recommends that all infants and children be placed in the rear seat of the vehicle and be properly restrained.**
- **Do not hold a child on your lap or in your arms. Use a child restraint system in the rear seat. For instructions concerning the installation of a child restraint system, see “Child restraint” on page 96 in this Section.**



- **Do not put anything or any part of your body on or in front of the dashboard, lower portion of driver’s side instrument panel or steering wheel pad that houses the front airbag system. They might restrict inflation or cause death or serious injury as they are projected rearward by the force of the deploying airbags. Likewise, the driver and front passenger should not hold objects in their arms or on their knees.**

- **Do not modify or remove any wiring. Do not modify, remove, strike or open any components such as the steering wheel pad, steering wheel, column cover, dashboard near the front passenger airbag, front passenger airbag cover, front passenger airbag, driver knee airbag or airbag sensor assembly. Doing so may prevent the front airbag system from activating correctly, cause sudden activation of the system or disable the system, which could result in death or serious injury.**

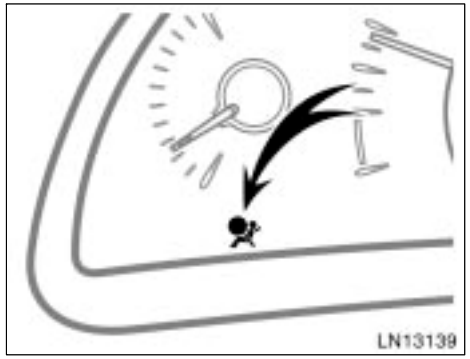
Failure to follow these instructions can result in death or serious injury. Consult your Toyota dealer about any repair and modification.

If you wish to modify your vehicle for a person with a physical disability, consult your Toyota dealer. It may dangerously interfere with the SRS front airbags operation.

NOTICE

Do not perform any of the following changes without consulting your Toyota dealer. Such changes can interfere with proper operation of the SRS front airbag system in some cases.

- ***Installation of electronic devices such as a mobile two−way radio, cassette tape player or compact disc player***
- ***Modification of the suspension system***
- ***Modification of the front end structure***
- ***Attachment of a grille guard (bull bar, kangaroo bar, etc.), snowplow, winches or any other equipment to the front end***
- ***Repairs made on or near the front fenders, front end structure, console, steering column, steering wheel or dashboard near the front passenger airbag***



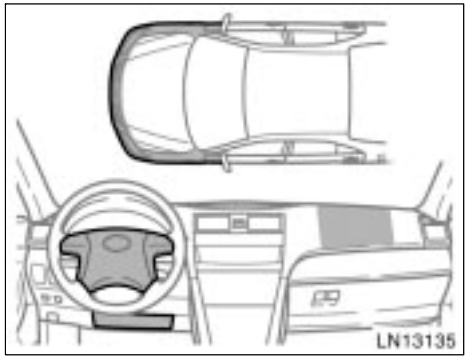
The indicator comes on when the “POWER” switch is set at ON. It goes off after about 6 seconds. This means the SRS front airbags are operating properly.

This warning light system monitors the airbag sensor assembly, front airbag sensors, side and curtain shield airbag sensors, curtain shield airbag sensors, driver’s seat position sensor, driver’s seat belt buckle switch, front passenger occupant classification system, “AIRBAG ON” indicator light, “AIRBAG OFF” indicator light, front passenger’s seat belt buckle switch, seat belt pretensioner assemblies, inflators, interconnecting wiring and power sources. (For details, see “Service reminder indicators and warning buzzers” on page 150 in Section 1−6.)

If any of the following conditions occurs, this indicates a malfunction of the airbags or seat belt pretensioners. Contact your Toyota dealer as soon as possible.

- The light does not come on when the “POWER” switch is set at ON or remains on for more than about 6 seconds.
- The light comes on or starts flashing while driving.

The SRS warning light and “AIRBAG OFF” indicator light will come on if there is a malfunction in the front passenger occupant classification system.



In the following cases, contact your Toyota dealer as soon as possible:

- The SRS front airbags have been inflated.
- The front of the vehicle (shaded in the illustration) was involved in an accident that was not severe enough to cause the SRS front airbags to inflate.
- The pad section of the steering wheel or front passenger airbag cover (shaded in the illustration) is scratched, cracked, or otherwise damaged.

NOTICE

Do not disconnect the 12 volt battery cables before contacting your Toyota dealer.

—SRS side airbags and curtain shield airbags

The SRS (Supplemental Restraint System) side airbags and curtain shield airbags are designed to provide further protection for the driver, front passenger and rear outside passengers in addition to the primary safety protection provided by the seat belts.

In response to a severe side impact, the SRS side airbags and curtain shield airbags work with the seat belts to help reduce injury by inflating. The SRS side airbags help reduce injuries mainly to the driver’s or front passenger’s chest, and the SRS curtain shield airbags help reduce injuries mainly to the driver’s, front passenger’s or rear outside passenger’s head.

The SRS side airbag on the passenger seat will not activate if there is no passenger sitting in the front passenger seat. However, the side airbag on the passenger seat may deploy if luggage is put in the seat, or the seat belt is buckled up regardless of the presence of the occupant in the seat. (As for the front passenger occupant classification system, see “—Front passenger occupant classification system” on page 92 in this Section.)

The SRS curtain shield airbag on the passenger side are activated even with no passenger in the front seat or rear outside seat.

The SRS curtain shield airbags may activate even when the side airbags are not activated.

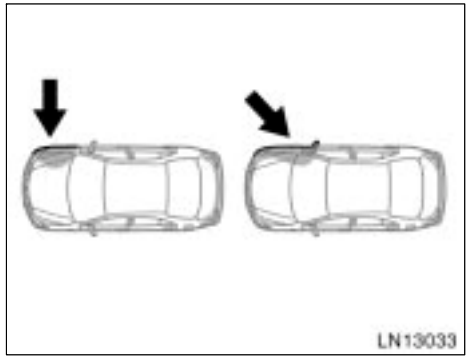
Always wear your seat belt properly.

⚠ CAUTION

- **The SRS side airbag and curtain shield airbag system is designed only as a supplement to the primary protection of the driver, front passenger and rear outside passenger seat belt systems. To ensure maximum protection in an accident, the driver and all passengers in the vehicle must wear their seat belts properly. Wearing a seat belt properly during an accident reduces the chances of death or serious injury or being thrown out of the vehicle. For instructions and precautions concerning the seat belt system, see “Seat belts” on page 66 in this Section.**

- **Do not allow anyone to lean his/her head or any part of his/her body against the door or the area of the seat, front pillar, rear pillar or roof side rail from which the SRS side airbag and curtain shield airbag deploy even if he/she is a child seated in the child restraint system. It is dangerous if the SRS side airbag and curtain shield airbag inflate, and the impact of the deploying airbag could cause death or serious injury to the occupant.**

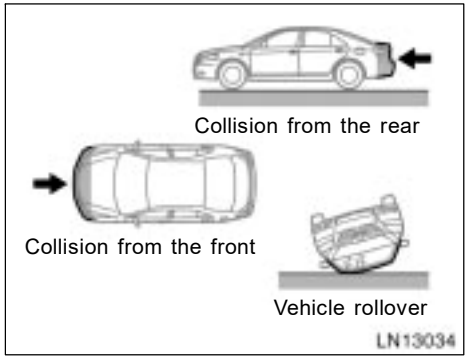
- **Improperly seated and/or restrained infants and children can be killed or seriously injured by the deploying airbags. An infant or child who is too small to use a seat belt should be properly secured using a child restraint system. Toyota strongly recommends that all infants and children be placed in the rear seats of the vehicle and properly restrained. The rear seats are the safest for infants and children. For instructions concerning the installation of a child restraint system, see “Child restraint” on page 96 in this Section.**



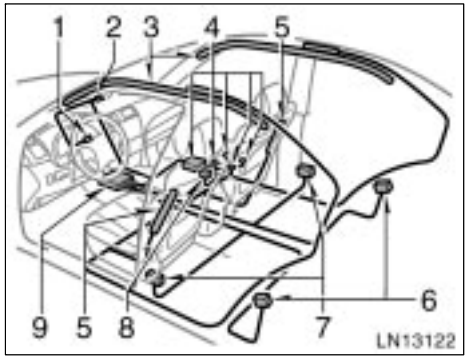
The SRS side airbag and curtain shield airbag system may not activate if the vehicle is subjected to a collision from the side at certain angles, or a collision to the side of the vehicle body other than the passenger compartment as shown in the illustration.

The SRS side airbags and curtain shield airbags are designed to inflate when the passenger compartment area suffers a severe impact from the side.

Always wear your seat belts properly.



The SRS side airbags and curtain shield airbags are not generally designed to inflate if the vehicle is involved in a front or rear collision, if it rolls over, or if it is involved in a low−speed side collision.



The SRS side airbag and curtain shield airbag system consists mainly of the following components, and their locations are shown in the illustration.

1. SRS warning light
2. “AIRBAG ON” and “AIRBAG OFF” indicator lights (for front passenger airbag and side airbag on the front passenger seat)
3. Curtain shield airbag modules (airbag and inflator)
4. Front passenger occupant classification system (ECU and sensors)
5. Side airbag modules (airbag and inflator)
6. Curtain shield airbag sensors

7. Side and curtain shield airbag sensors
8. Front passenger’s seat belt buckle switch
9. Airbag sensor assembly

The SRS side airbag and curtain shield airbag system is controlled by the airbag sensor assembly. The airbag sensor assembly consists of a safing sensor and airbag sensor.

In a severe side impact, the side and curtain shield airbag sensor and/or the curtain shield airbag sensor trigger(s) the side airbag inflators and/or the curtain shield airbag inflators. At this time a chemical reaction in the inflators quickly fills the airbags with non−toxic gas to help restrain the lateral motion of the occupants.

When the airbags inflate, they produce a fairly loud noise and release some smoke and residue along with non−toxic gas. This does not indicate a fire. This smoke may remain inside the vehicle for some time, and may cause some minor irritation to the eyes, skin or breathing. Be sure to wash off any residue as soon as possible to prevent any potential skin irritation with soap and water. If you can safely exit from the vehicle, you should do so immediately.

Deployment of the airbags happens in a fraction of a second, so the airbags must inflate with considerable force. While the system is designed to reduce serious injuries, it may also cause minor burns or abrasions and swelling.

Front seats as well as parts of the front and rear pillars, and roof side rail may be hot for several minutes, but the airbags themselves will not be hot. The airbags are designed to inflate only once.

⚠ CAUTION

SRS side airbags and curtain shield airbags inflate with considerable force. To reduce the possibility of death or serious injury when they inflate, the driver, front passenger and rear outside passengers must:

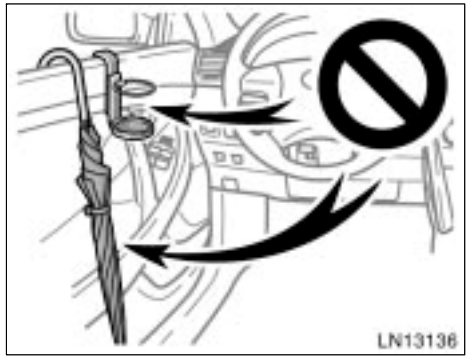
- **Wear their seat belts properly.**
- **Remain properly seated with their backs upright and against the seats at all times.**

- **Do not allow anyone to lean against the door when the vehicle is in use, since the side airbag and curtain shield airbag could inflate with considerable speed and force. Otherwise, he/she may be killed or seriously injured. Special care should be taken especially when you have a small child in the vehicle.**
- **Sit up straight and well back in the seat, distributing your weight evenly in the seat. Do not apply excessive weight to the outer side of the seats with a side airbag and to the front pillar, rear pillar and roof side rail with a curtain shield airbag.**

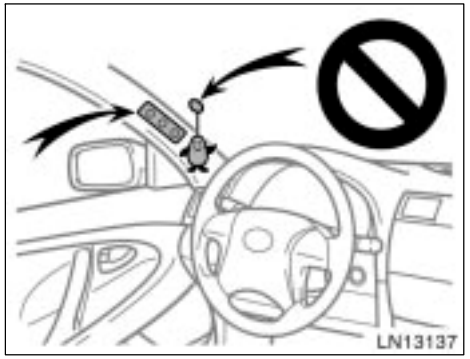
- Do not allow anyone to get his/her head close to the area where the side airbag and curtain shield airbag inflate, since these airbags could inflate with considerable speed and force. Otherwise, he/she may be killed or seriously injured. Special care should be taken especially when you have a small child in the vehicle.

- Do not allow anyone to kneel on the passenger seat, facing the passenger’s side door, since the side airbag and curtain shield airbag could inflate with considerable speed and force. Otherwise, he/she may be killed or seriously injured. Special care should be taken especially when you have a small child in the vehicle.

- Do not allow anyone to get his/her head or hands out of windows, since the curtain shield airbags could inflate with considerable speed and force. Otherwise, he/she may be killed or seriously injured. Special care should be taken especially when you have a small child in the vehicle.



- Do not attach a cup holder or any other device or object on or around the door. When the side airbag inflates, the cup holder or any other device or object will be thrown with great force, or the side airbag may not activate correctly, resulting in death or serious injury. Likewise, the driver and front passenger should not hold objects in their arms or on their knees.



- Do not attach a microphone or any other device or object around the area where the curtain shield airbag activates such as on the windshield glass, side door glass, front and rear pillars, roof side rail and assist grips. When the curtain shield airbag inflates, the microphone or other device or object will be thrown away with great force or the curtain shield airbag may not activate correctly, resulting in death or serious injury.

- Do not hook a hanger, heavy or sharp pointed objects on the coat hook. If the curtain shield airbag inflates, those items will be thrown away with great force or the curtain shield airbag may not activate correctly, resulting in death or serious injury. When you hang clothes, hang them on the coat hook directly.
- Do not use seat accessories which cover the parts where the side airbags inflate. Such accessories may prevent the side airbags from activating correctly, causing death or serious injury.
- Do not modify or replace the seats or upholstery of the seats. Such changes may prevent the side airbag system from activating correctly, disable the system or cause the side airbags to inflate accidentally, resulting in death or serious injury.

- **Do not disassemble or repair the front and rear pillars and roof side rails containing the curtain shield airbags. Such changes may disable the system or cause the curtain shield airbags to inflate accidentally, resulting in death or serious injury.**

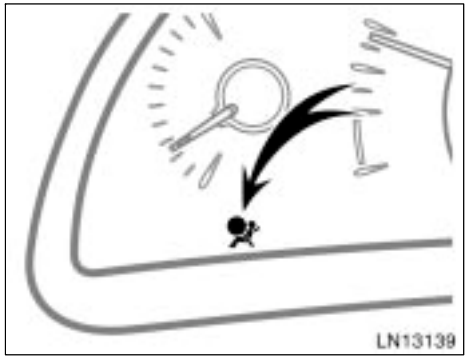
Failure to follow these instructions can result in death or serious injury. Consult your Toyota dealer about any repair and modification.

If you wish to modify your vehicle for a person with a physical disability, consult your Toyota dealer. It may dangerously interfere with the SRS side airbags and curtain shield airbags operation.

NOTICE

Do not perform any of the following changes without consulting your Toyota dealer. Such changes can interfere with proper operation of the SRS side airbag and curtain shield airbag system in some cases.

- ***Installation of electronic devices such as a mobile two-way radio, cassette tape player or compact disc player***
- ***Modification of the suspension system***
- ***Modification of the side structure of the passenger compartment***
- ***Repairs made on or near the console or front seat***



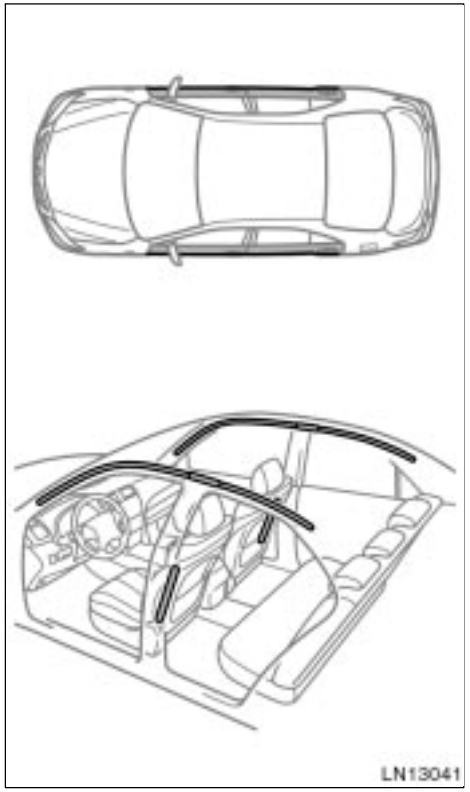
This indicator comes on when the “POWER” switch is set at ON. It goes off after about 6 seconds. This means the SRS side airbags and curtain shield airbags are operating properly.

This warning light system monitors the airbag sensor assembly, front airbag sensors, side and curtain shield airbag sensors, curtain shield airbag sensors, driver’s seat position sensor, driver’s seat belt buckle switch, front passenger occupant classification system, “AIRBAG ON” indicator light, “AIRBAG OFF” indicator light, front passenger’s seat belt buckle switch, seat belt pretensioner assemblies, inflators, interconnecting wiring and power sources. (For details, see “Service reminder indicators and warning buzzers” on page 150 in Section 1−6.)

If any of the following conditions occurs, this indicates a malfunction of the airbags or seat belt pretensioners. Contact your Toyota dealer as soon as possible.

- The light does not come on when the “POWER” switch is set at ON or remains on for more than about 6 seconds.
- The light comes on or starts flashing while driving.

The SRS warning light and “AIRBAG OFF” indicator light will come on if there is a malfunction in the front passenger occupant classification system.



In the following cases, contact your Toyota dealer as soon as possible:

- Any of the SRS side airbags and curtain shield airbags have been inflated.
- The portion of the doors (shaded in the illustration) was involved in an accident that was not severe enough to cause the SRS side airbags and curtain shield airbags to inflate.
- The surface of the seats with the side airbag (shaded in the illustration) is scratched, cracked, or otherwise damaged.
- The portion of the front pillars, rear pillars or roof side rail garnishes (padding) containing the curtain shield airbags inside (shaded in the illustration) is scratched, cracked, or otherwise damaged.

NOTICE

Do not disconnect the 12 volt battery cables before contacting your Toyota dealer.

—Front passenger occupant classification system

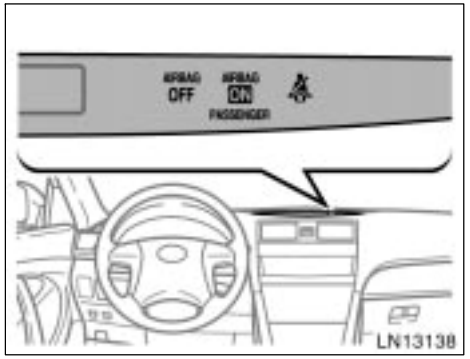
Your vehicle is equipped with a front passenger occupant classification system. This system detects the conditions 1—4 in the table on page 94 and based on these conditions activates or deactivates the following systems;

- Front passenger airbag
- Side airbag on the front passenger seat
- Front passenger’s seat belt pretensioner

The system monitors the weight and load on the front passenger seat, and the seat belt buckle switch to determine conditions 1—4.

In order for the system to detect the conditions correctly, do not do any of the following:

- Apply a heavy load to the front passenger seat or equipment (e.g. seatback pocket).
- Attach a commercial seatback table, etc. to the front passenger seat seatback.
- Put weight on the front passenger seat by putting your hands or feet on the seatback from the rear passenger seat.



The “AIRBAG ON” and “AIRBAG OFF” indicator lights indicate the actuation of the front passenger airbag, side airbag on the front passenger seat and front passenger’s seat belt pretensioner.

The “AIRBAG OFF” indicator light will be illuminated when the “POWER” switch is set at ON with the condition 2 in the table shown below.

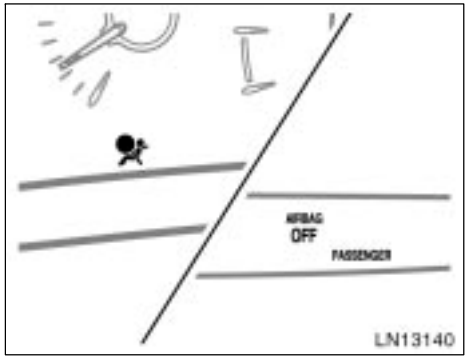
If the front passenger occupant classification system determines that a person of adult size sits in the front passenger seat but the “AIRBAG OFF” indicator light is illuminated, one of the following is likely to have occurred:

- A rear passenger lifts the front passenger seat cushion with their legs.
- Objects are placed under the front passenger seat.
- The front passenger seatback is in contact with the rear seat.

To ensure the system correctly detects an adult sitting in the front passenger seat, make sure the above do not occur.

Make sure that the “AIRBAG ON” indicator light is illuminated when an adult is seated in the front passenger seat. If the “AIRBAG OFF” indicator light is illuminated, ask the passenger to sit up straight, well back in the seat, and with the seat belt worn correctly. If the “AIRBAG OFF” indicator light still remains illuminated, either ask the passenger to move to the rear seat, or if that is not possible, move the front passenger seat fully rearward.

The “AIRBAG ON” and “AIRBAG OFF” indicator lights will be illuminated initially when the “POWER” switch is set at ON. After about four seconds, they will go off. After that, the front passenger occupant classification system operates and judges which indicator light be illuminated.



The SRS warning light and “AIRBAG OFF” indicator light will come on if there is a malfunction in the front passenger occupant classification system.

Condition and operation in the front passenger occupant classification system

<table>
<tr><th rowspan="2">Condition detected by the front passenger occupant classification system</th><th colspan="3">Indicator/warning light</th><th colspan="4">Devices</th></tr>
<tr><th>“AIRBAG ON” and “AIRBAG OFF” indicator lights</th><th>SRS warning light</th><th>Front passenger’s seat belt reminder light</th><th>Front passenger airbag</th><th>Side airbag on the front passenger seat</th><th>Curtain shield airbag in the front passenger side</th><th>Front passenger’s seat belt pretensioner</th></tr>
<tr><td>1. Adult*1</td><td>“AIRBAG ON”</td><td>Off</td><td>Flashing*4</td><td colspan="4">Activated</td></tr>
<tr><td>2. Child*2 or child restraint system*3</td><td>“AIRBAG OFF”</td><td>Off</td><td>Flashing*4</td><td colspan="2">Deactivated</td><td rowspan="3">Activated</td><td>Activated</td></tr>
<tr><td>3. Unoccupied</td><td>Not illuminated</td><td>Off</td><td>Off</td><td colspan="2">Deactivated</td><td>Deactivated</td></tr>
<tr><td>4. There is a malfunction in the system</td><td>“AIRBAG OFF”</td><td>On</td><td>Off</td><td colspan="2">Deactivated</td><td>Activated</td></tr>
</table>

*1: The system judges a person of adult size as an adult. When a smaller adult sits in the front passenger seat, the system may recognize him/her as a child depending on his/her physique and posture.

*2: When a larger child who has outgrown a child restraint system sits in the front passenger seat, the system may recognize him/her as an adult depending on his/her physique or posture.

*3: Never install a rear−facing child restraint system on the front passenger seat. A forward−facing child restraint system should only be installed on the front passenger seat when it is unavoidable. (See “Child restraint” on page 96 in this Section as for installing the child restraint system.)

*4: In the event that the front passenger does not wear a seat belt.

⚠ CAUTION

To avoid potential death or serious injury when the front passenger occupant classification system does not detect the conditions correctly, observe the following.

- **Do not recline the front passenger seat seatback so that it interferes with a rear seat as it may cause the “AIRBAG OFF” indicator light be illuminated. If the seatback interferes with the rear seat, return the seatback to a position where it does not interfere with the rear seat.**

  Keep the front passenger seatback as upright as possible when the vehicle is moving. Reclining the seatback excessively may lessen the effectiveness of the seat belt system.

- **Make sure the “AIRBAG ON” indicator light is illuminated when using the seat belt extender for the front passenger seat. If the “AIRBAG OFF” indicator light is illuminated, disconnect the extender tongue from the seat belt buckle, then reconnect the seat belt. Reconnect the seat belt extender after making sure the “AIRBAG ON” indicator light is illuminated. If you use the seat belt extender while the “AIRBAG OFF” indicator light is illuminated, the front passenger airbag and side airbag on the front passenger side may not activate correctly, which could cause death or serious injury in the event of collision.**

- **If an adult sits in the front passenger seat, the “AIRBAG ON” indicator light should be illuminated. If the “AIRBAG OFF” indicator light is illuminated, ask the passenger to sit up straight, well back in the seat, feet on the floor, and with the seat belt worn correctly. If the “AIRBAG OFF” indicator light still remains illuminated, either ask the passenger to move to the rear seat, or if that is not possible, move the front passenger seat fully rearward.**
- **Wear the seat belt properly.**
- **Make sure the front passenger’s seat belt tab has not been left inserted into the buckle before someone sits in the front passenger seat.**
- **Do not apply a heavy load to the front passenger seat or equipment (e.g. seatback pocket).**

- **Do not put weight on the front passenger seat by putting your hands or feet on the front passenger seat seatback from the rear passenger seat.**
- **Do not let a rear passenger lift the front passenger seat with their feet or press on the seatback with their legs.**
- **Do not put objects under the front passenger seat.**
- **Child restraint systems installed on the rear seat should not contact the front seatbacks.**
- **When it is unavoidable to install the forward−facing child restraint system on the front passenger seat, install the child restraint system on the front passenger seat in the proper order. (As for the installation order, see “—Child restraint system” on page 98 in this Section.)**

- **Do not remove the seat.**
- **Do not kick the front passenger seat or subject it to severe impact. Otherwise, the SRS warning light may come on to indicate a malfunction of the detection system. In this case, contact your Toyota dealer immediately.**

The “AIRBAG ON” indicator light may be illuminated (the front passenger airbag and side airbag on the front passenger seat may deploy) even if observing the above cautions, when a child sits in, or a forward−facing child restraint system is installed on the front passenger seat. Refer to all the cautions in “SRS airbags” on page 77 and “Child restraint” on page 96 in this Section.

Child restraint— —Child restraint precautions

Toyota strongly urges the use of appropriate child restraint systems for children.

The laws of all 50 states in the U.S.A. and Canada now require the use of a child restraint system.

Your vehicle conforms to SAEJ1819.

If a child is too large for a child restraint system, the child should sit in the rear seat and must be restrained using the vehicle’s seat belt. See “Seat belts” on page 66 in this Section for details.

⚠ CAUTION

- **For effective protection in automobile accidents and sudden stops, a child must be properly restrained, using a seat belt or child restraint system depending on age and size of the child. Holding a child in your arms is not a substitute for a child restraint system. In an accident, the child can be crushed against the windshield, or between you and the vehicle’s interior.**

- Toyota strongly urges use of a proper child restraint system which conforms to the size of the child, installed on the rear seat. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.
- Never install a rear−facing child restraint system on the front passenger seat even if the “AIRBAG OFF” indicator light is illuminated. In the event of an accident, the force of the rapid inflation of the front passenger airbag can cause death or serious injury to the child if the rear−facing child restraint system is installed on the front passenger seat.

- A forward−facing child restraint system should be allowed to be installed on the front passenger seat only when it is unavoidable. Always move the seat as far back as possible even if the “AIRBAG OFF” indicator light is illuminated, because the front passenger airbag could inflate with considerable speed and force. Otherwise, the child may be killed or seriously injured.
- Do not allow the child to lean his/her head or any part of his/her body against the door or the area of the seat, front or rear pillar or roof side rail from which the side airbags or curtain shield airbags deploy even if the child is seated in the child restraint system. It is dangerous if the side airbags and/or curtain shield airbags inflate, and the impact could cause death or serious injury to the child.

- Do not use the seat belt extender when installing a child restraint system on the front or rear passenger seat. If installing a child restraint system with the seat belt extender connected to the seat belt, the seat belt will not securely hold the child restraint system, which could cause death or serious injury to the child or other passengers in the event of collision.
- Make sure you have complied with all installation instructions provided by the child restraint manufacturer and that the system is properly secured. If it is not secured properly, it may cause death or serious injury to the child in the event of a sudden stop or accident.

—Child restraint system

A child restraint system for a small child or baby must itself be properly restrained on the seat with the lap portion of the lap/shoulder belt. You must carefully consult the manufacturer’s instructions which accompany the child restraint system.

To provide proper restraint, use a child restraint system following the manufacturer’s instructions about the appropriate age and size of the child for the child restraint system.

Install the child restraint system correctly following the instructions provided by its manufacturer. General directions are also provided under the following illustrations.

The child restraint system should be installed on the rear seat. According to accident statistics, the child is safer when properly restrained in the rear seat than in the front seat.

When not using the child restraint system, keep it secured with the seat belt or place it in the trunk or somewhere other than the passenger compartment. This will prevent it from injuring passengers in the event of a sudden stop or accident.

—Types of child restraint system

Child restraint systems are classified into the following 3 types depending on the child’s age and size.

(A) Infant seat
(B) Convertible seat
(C) Booster seat

Install the child restraint system following the instructions provided by its manufacturer.

Your vehicle has anchor brackets for securing the top strap of a child restraint system.

For instructions about how to use the anchor bracket, see “—Using a top strap” on page 109 in this Section.

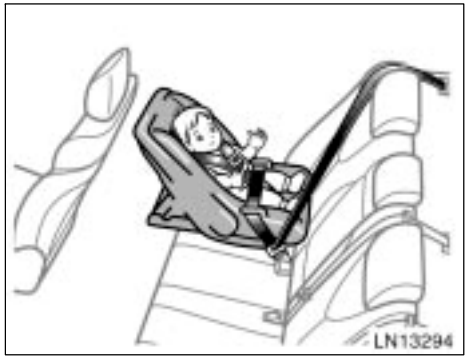
The child restraint lower anchorages approved for your vehicle may also be used. See “—Installation with child restraint lower anchorages” on page 111 in this Section.

(A) Infant seat

(B) Convertible seat

—Installation with seat belt

(C) Booster seat



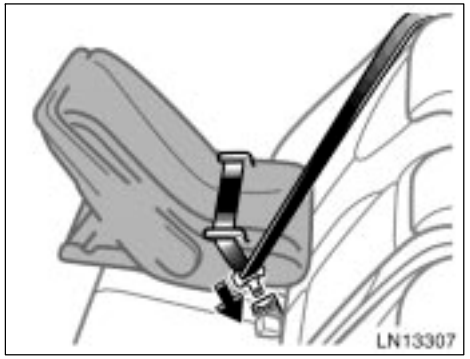
(A) INFANT SEAT INSTALLATION

An infant seat must be used in rear−facing position only.

⚠ CAUTION

- **Never install a rear−facing child restraint system on the front passenger seat even if the “AIRBAG OFF” indicator light is illuminated. In the event of an accident, the impact of the rapid inflation of the front passenger airbag could cause death or serious injury to the child if the rear−facing child restraint system is installed on the front passenger seat.**

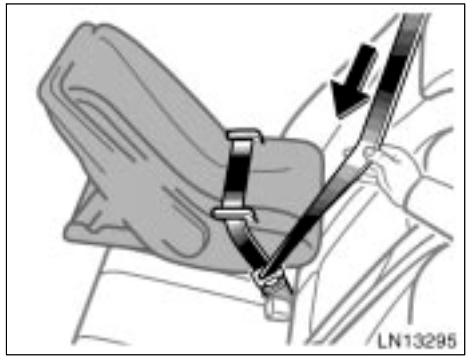
- **Do not install a child restraint system on the rear seat if it interferes with the lock mechanism of the front seats. Otherwise, the child or front seat occupant(s) may be killed or seriously injured in case of sudden braking or a collision.**
- **If the driver’s seat position does not allow sufficient space for safe installation, install the child restraint system on the rear right seat.**



1. Run the lap and shoulder belt through or around the infant seat following the instructions provided by its manufacturer and insert the tab into the buckle taking care not to twist the belt. Keep the lap portion of the belt tight.

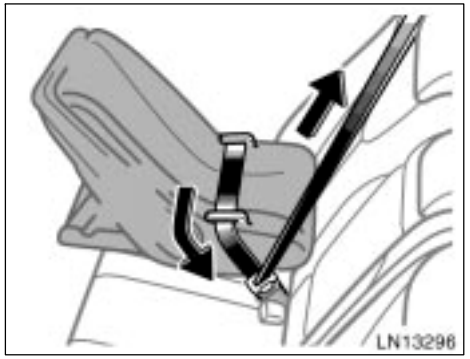
⚠ CAUTION

- **After inserting the tab, make sure the tab and buckle are locked and that the lap and shoulder portions of the belt are not twisted.**
- **Do not insert coins, clips, etc. in the buckle as this may prevent your child from properly latching the tab and buckle.**
- **If the seat belt does not function normally, it cannot protect your child from death or serious injury. Contact your Toyota dealer immediately. Do not install the child restraint system on the seat until the seat belt is fixed.**

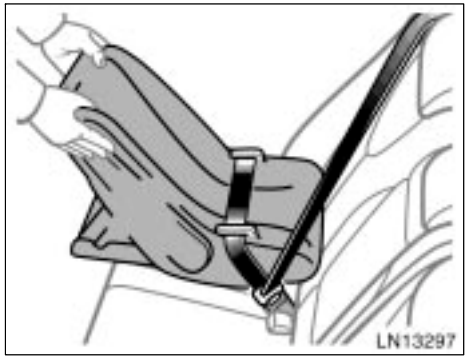


2. Fully extend the shoulder belt to put it in the lock mode. When the belt is then retracted even slightly, it cannot be extended.

To hold the infant seat securely, make sure the belt is in the lock mode before letting the belt retract.

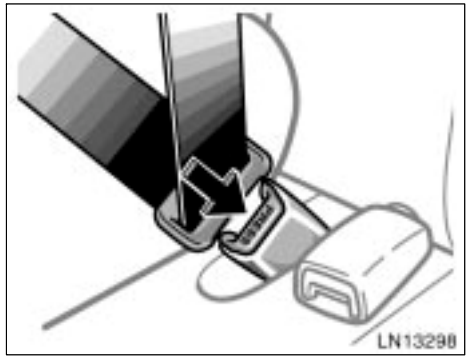


3. While pressing the infant seat firmly against the seat cushion and seatback, let the shoulder belt retract as far as it will go to hold the infant seat securely.

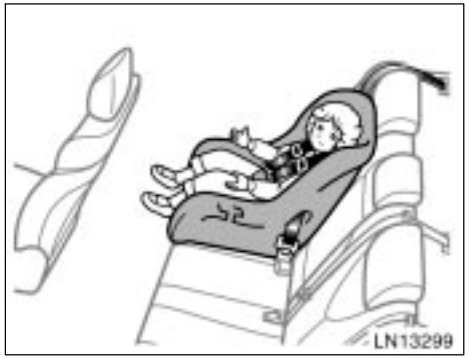


⚠ CAUTION

Push and pull the child restraint system in different directions to be sure it is secure. Follow all the installation instructions provided by its manufacturer.



4. To remove the infant seat, press the buckle release button and allow the belt to retract completely. The belt will move freely again and be ready to work for an adult or older child passenger.



(B) CONVERTIBLE SEAT INSTALLATION

A convertible seat must be used in forward−facing or rear−facing position depending on the age and size of the child. When installing, follow the manufacturer’s instructions about the appropriate age and size of the child as well as directions for installing the child restraint system.

Install the child restraint system on the front passenger seat only when it is unavoidable. Your vehicle is equipped with a front passenger occupant classification system. In order to activate the occupant classification system correctly, install the forward−facing child restraint system on the front passenger seat in the following order:

1. Press the “POWER” switch and set it at ON.
2. Move the front passenger seat to the rearward position.
3. Put the child restraint system on the front passenger seat without putting your weight on the front passenger seat.
4. Insert the seat belt tab into the seat belt buckle.
5. Fully extend the shoulder belt to put it in the lock mode. When the belt is then retracted even slightly, it cannot be extended. To hold the seat securely, make sure the belt is in the lock mode before letting the belt retract.
6. While pressing the convertible seat firmly against the seat cushion and seatback, let the shoulder belt retract as far as it will go to hold the convertible seat securely.

⚠ CAUTION

Push and pull the child restraint system in different directions to be sure it is secure. Follow all the installation instructions provided by its manufacturer.

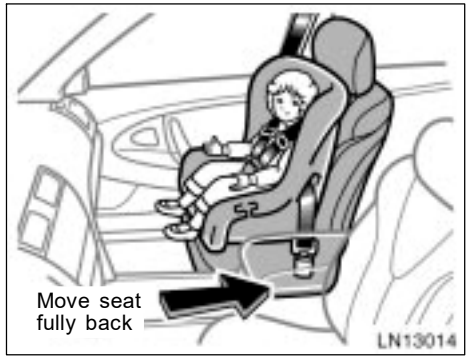
7. Put a child on the child restraint system and secure the child, complying with the instructions provided by the child restraint system manufacturer.

The “AIRBAG OFF” indicator light should be illuminated when the “POWER” switch is set at ON and the child is in the child restraint system after following these procedures. The “AIRBAG OFF” indicator light indicates the SRS front passenger airbag and side airbag on the passenger side will not deploy. If the “AIRBAG ON” indicator light is illuminated, remove the child restraint system and reinstall it with the hybrid system turned off. If the “AIRBAG ON” indicator light is illuminated when the “POWER” switch is set at ON, then the SRS front passenger airbag and side airbag on the passenger side may deploy in an accident. Do not drive the vehicle in this condition. Remove the child restraint system and contact your Toyota dealer.

⚠ CAUTION

- **Never install a rear−facing child restraint system on the front passenger seat. A forward−facing child restraint system should only be installed on the front passenger seat when unavoidable. If you must install the child restraint system on the front passenger seat, put the seat in its most rearward position, and install the forward−facing child restraint system in the proper order. Otherwise, the front passenger occupant classification system can not detect the presence of the child restraint system and the front passenger airbag and side airbag on the front passenger seat could deploy, and the impact could cause death or serious injury to the child.**

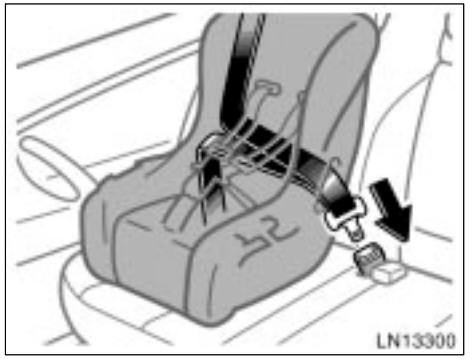
- **Never install a rear−facing child restraint system on the front passenger seat even if the “AIRBAG OFF” indicator light is illuminated. In the event of an accident, the impact of the rapid inflation of the front passenger airbag could cause death or serious injury to the child if the rear−facing child restraint system is installed on the front passenger seat.**



- A forward−facing child restraint system should be allowed to be installed on the front passenger seat only when it is unavoidable. Always move the seat as far back as possible even if the “AIRBAG OFF” indicator light is illuminated, because the front passenger airbag could inflate with considerable speed and force. Otherwise, the child may be killed or seriously injured.

- Do not allow the child to lean his/her head or any part of his/her body against the door or the area of the seat, front or rear pillar or roof side rail from which the side airbags or curtain shield airbags deploy even if the child is seated in the child restraint system. It is dangerous if the side airbag and/or curtain shield airbag inflate, and the impact could cause death or serious injury to the child.

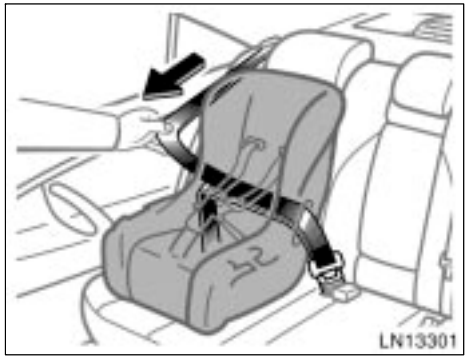
- Do not install a child restraint system on the rear seat if it interferes with the lock mechanism of the front seats. Otherwise, the child or front seat occupant(s) may be killed or seriously injured in case of sudden braking or a collision.
- If the driver’s seat position does not allow sufficient space for safe installation, install the child restraint system on the rear right seat.



1. Run the lap and shoulder belt through or around the convertible seat following the instructions provided by its manufacturer and insert the tab into the buckle taking care not to twist the belt. Keep the lap portion of the belt tight.

⚠ CAUTION

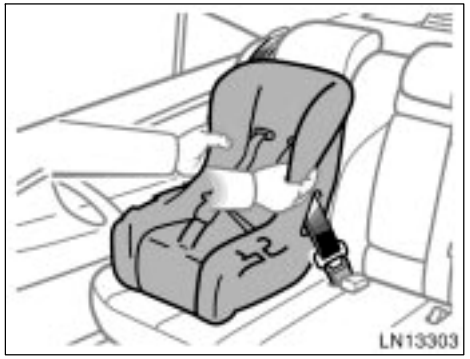
- **After inserting the tab, make sure the tab and buckle are locked and that the lap and shoulder portions of the belt are not twisted.**
- **Do not insert coins, clips, etc. in the buckle as this may prevent your child from properly latching the tab and buckle.**
- **If the seat belt does not function normally, it cannot protect your child from death or serious injury. Contact your Toyota dealer immediately. Do not install the child restraint system on the seat until the seat belt is fixed.**



2. Fully extend the shoulder belt to put it in the lock mode. When the belt is then retracted even slightly, it cannot be extended.

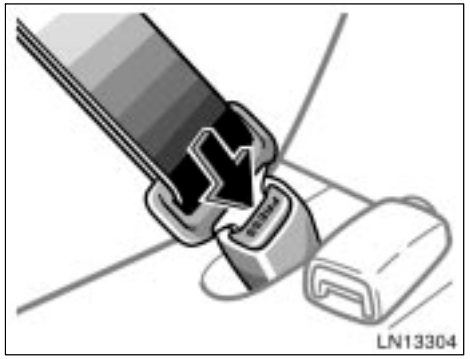
To hold the convertible seat securely, make sure the belt is in the lock mode before letting the belt retract.

3. While pressing the convertible seat firmly against the seat cushion and seatback, let the shoulder belt retract as far as it will go to hold the convertible seat securely.



⚠ CAUTION

Push and pull the child restraint system in different directions to be sure it is secure. Follow all the installation instructions provided by its manufacturer.



4. To remove the convertible seat, press the buckle release button and allow the belt to retract completely. The belt will move freely again and be ready to work for an adult or older child passenger.

(C) BOOSTER SEAT INSTALLATION

A booster seat must be used in forward−facing position only.

CAUTION

- **A forward−facing child restraint system should be allowed to be installed on the front passenger seat only when it is unavoidable. Always move the seat as far back as possible even if the “AIRBAG OFF” indicator light is illuminated, because the front passenger airbag could inflate with considerable speed and force. Otherwise, the child may be killed or seriously injured.**

- **Do not allow the child to lean his/her head or any part of his/her body against the door or the area of the seat, front or rear pillar or roof side rail from which the side airbags or curtain shield airbags deploy even if the child is seated in a child restraint system. It is dangerous if the side airbag and/or curtain shield airbag inflate, and the impact could cause death or serious injury to the child.**

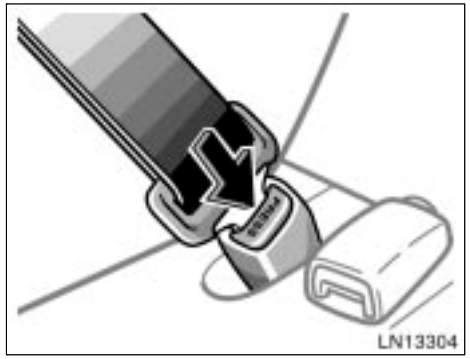
1. Sit the child on a booster seat. Run the lap and shoulder belt through or around the booster seat and across the child following the instructions provided by its manufacturer and insert the tab into the buckle taking care not to twist the belt.

Make sure the shoulder belt is correctly across the child’s shoulder and that the lap belt is positioned as low as possible on the child’s hips. See “Seat belts” on page 66 in this Section for details.

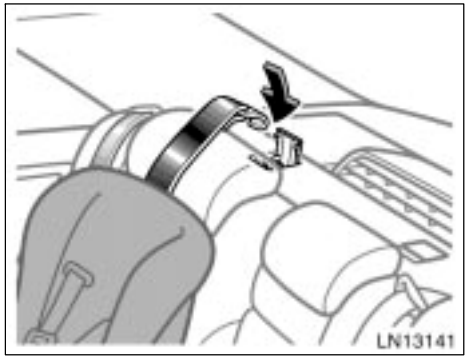
⚠ CAUTION

- **Always make sure the shoulder belt is positioned across the center of child’s shoulder. The belt should be kept away from child’s neck, but not falling off child’s shoulder. Otherwise, the child may be killed or seriously injured in case of sudden braking or a collision.**
- **Both high−positioned lap belts and loose−fitting belts could cause death or serious injuries due to sliding under the lap belt during a collision or other unintended event. Keep the lap belt positioned as low on a child’s hips as possible.**
- **For child’s safety, do not place the shoulder belt under child’s arm.**
- **After inserting the tab, make sure the tab and buckle are locked and that the lap and shoulder portions of the belt are not twisted.**
- **Do not insert coins, clips, etc. in the buckle as this may prevent your child from properly latching the tab and buckle.**
- **If the seat belt does not function normally, it cannot protect your child from death or serious injury. Contact your Toyota dealer immediately. Do not install the child restraint system on the seat until the seat belt is fixed.**

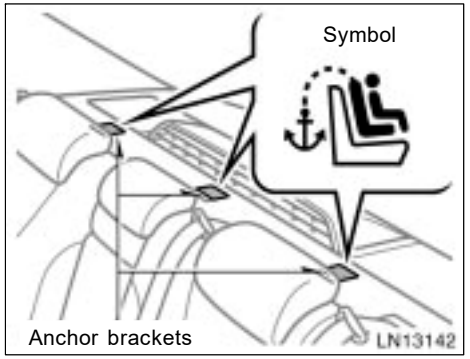
—Using a top strap



2. To remove the booster seat, press the buckle release button and allow the belt to retract.



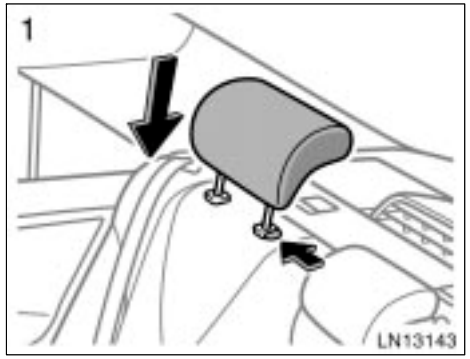
Follow the procedure below for a child restraint system that requires the use of a top strap.



Use the anchor bracket on the package tray behind the rear seat to attach the top strap.

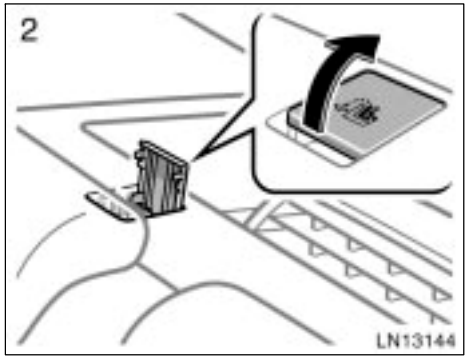
Anchor brackets are installed for each rear seating position.

This symbol indicates the locations of the anchor brackets.

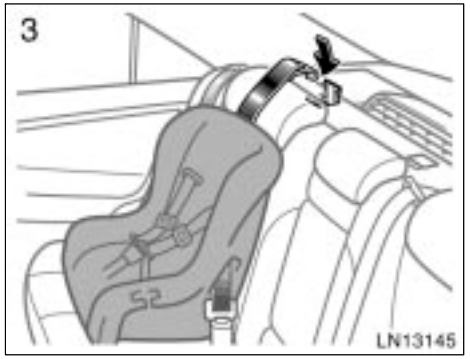


TO USE THE ANCHOR BRACKET:

1. **Lower the head restraint to the lowest position.**



2. **Open the lid of the anchor bracket.**



3. **Fix the child restraint system with the seat belt.**

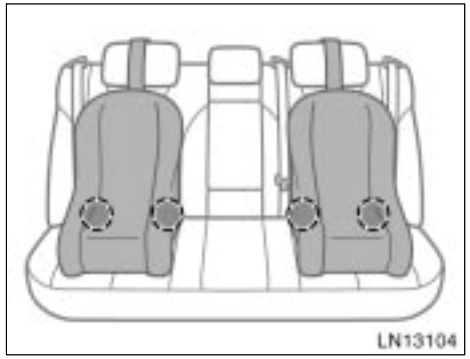
   Latch the hook onto the anchor bracket and tighten the top strap.

For instructions to install the child restraint system, see “Child restraint” on page 96 in this Section.

⚠ CAUTION

Make sure the top strap is securely latched, and check that the child restraint system is secure by pushing and pulling it in different directions. Follow all the installation instructions provided by its manufacturer.

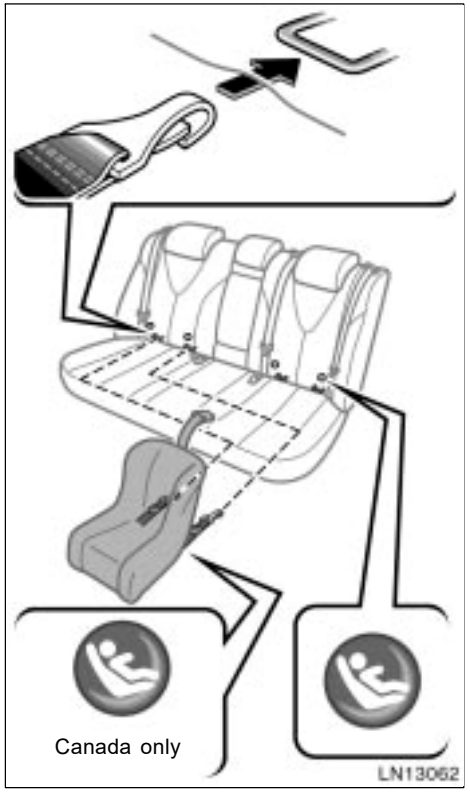
—Installation with child restraint lower anchorages



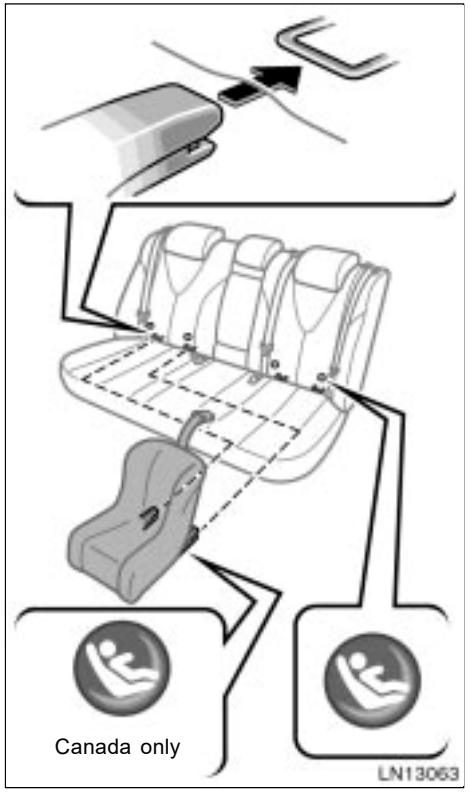
Lower anchorages for the child restraint systems interfaced with the FMVSS225 or CMVSS210.2 specifications are installed in the rear seat.

The anchorages are installed in the clearance between the seat cushion and seatback of both outside rear seats.

Child restraint systems interfaced with the FMVSS213 or CMVSS213 specification can be fixed with these anchorages. In this case, it is not necessary to fix the child restraint system with a seat belt on the vehicle.



Type A



Type B

CHILD RESTRAINT SYSTEM INSTALLATION

1. **Widen the gap between the seat cushion and seatback slightly and confirm the position of the lower anchorages near the button on the seatback.**
2. **Type A—Latch the hooks of lower straps onto the anchorages and tighten the lower straps.**

   Type B—Latch the buckles onto the anchorages.

For owners in Canada—The symbol on a child restraint system indicates the presence of a lower connector system.

If your child restraint system has a top strap, it should be anchored. (For the installation of the top strap, see “—Using a top strap” on page 109 in this Section.)

For installation details, refer to the instruction manual equipped with each product.

⚠ CAUTION

- **When using the lower anchorages for the child restraint system, be sure that there are no irregular objects around the anchorages or that the seat belt is not caught.**
- **Push and pull the child restraint system in different directions to be sure it is secure. Follow all the installation instructions provided by its manufacturer.**
- **Do not install a child restraint system on the rear seat if it interferes with the lock mechanism of the front seats. Otherwise, the child or front seat occupant(s) may be killed or seriously injured in case of sudden braking or a collision.**

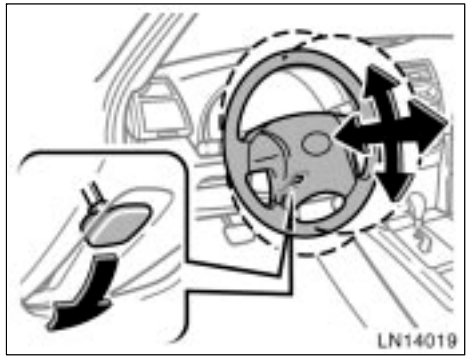
SECTION 1-4

OPERATION OF INSTRUMENTS AND CONTROLS

Steering wheel and Mirrors

Tilt and telescopic steering wheel 114
Outside rear view mirrors 114
Anti−glare inside rear view mirror 116
Auto anti−glare inside rear view mirror 116
Vanity mirrors 117

Tilt and telescopic steering wheel



To adjust the steering wheel position, hold the steering wheel, push down the lock release lever. Then tilt the steering wheel to the desired angle, push or pull it to the desired steering column length and return the lever to its original position.

⚠ CAUTION

- **Do not adjust the steering wheel while the vehicle is moving. Doing so may cause the driver to mishandle the vehicle and an accident may occur resulting in death or serious injuries.**
- **After adjusting the steering wheel, try moving it up and down or forward and rearward to make sure it is locked in position.**

Outside rear view mirrors—

Adjust the mirror so that you can just see the side of your vehicle in the mirror.

Be careful when judging the size or distance of any object seen in the outside rear view mirror on the passenger’s side because it is a convex mirror. Any object seen in a convex mirror will look smaller and farther away than when seen in a flat mirror.

On some models, when you push the rear window defogger switch, the heater panels in the outside rear view mirrors will quickly clear the mirror surface. (See “Rear window and outside rear view mirror defoggers” on page 129 in Section 1−5.)

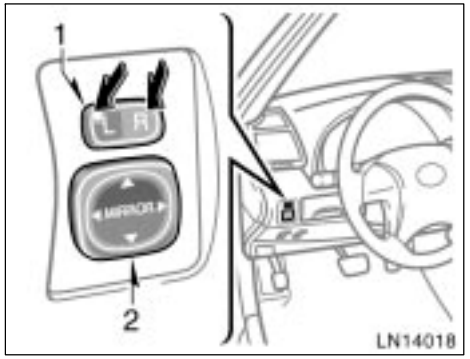
⚠ CAUTION

- **Do not adjust the mirror while the vehicle is moving. Doing so may cause the driver to mishandle the vehicle and an accident may occur resulting in death or serious injuries.**
- **Since the mirror surfaces can get hot, do not touch them when the defogger switch is on.**

NOTICE

The outside rear view mirrors are fixed in place. Do not try to fold the mirrors. It may damage the mirrors.

—Power rear view mirror control



To adjust a mirror, use the switches.

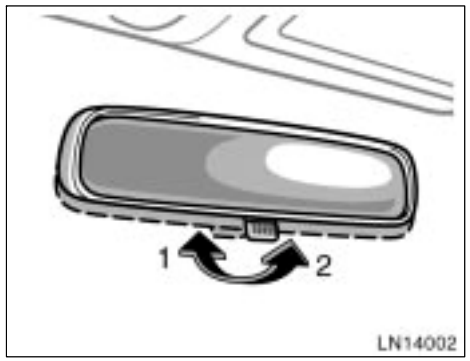
1. Master switch—To select the mirror to be adjusted
   Push the switch to “L” (left) or “R” (right).
2. Control switch—To move the mirror
   Push the switch in the desired direction.

Mirrors can be adjusted when the “POWER” switch is set at ACC or ON.

NOTICE

If ice should jam the mirror, do not operate the control or scrape the mirror face. Use a spray de−icer to free the mirror.

Anti−glare inside rear view mirror



Adjust the mirror so that you can just see the rear of your vehicle in the mirror.

To reduce glare from the headlights of the vehicle behind you during night driving, operate the lever on the lower edge of the mirror.

Daylight driving—Lever at position 1

The reflection in the mirror has greater clarity at this position.

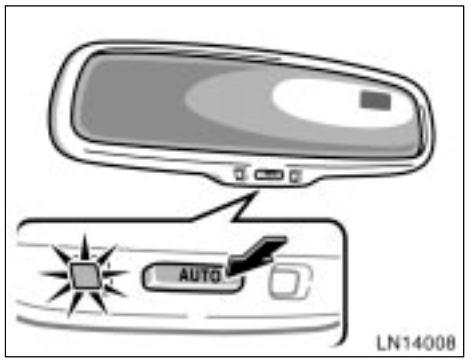
Night driving—Lever at position 2

Remember that by reducing glare you also lose some rear view clarity.

⚠ CAUTION

Do not adjust the mirror while the vehicle is moving. Doing so may cause the driver to mishandle the vehicle and an accident may occur resulting in death or serious injuries.

Auto anti−glare inside rear view mirror



Adjust the mirror so that you can just see the rear of your vehicle in the mirror.

This mirror is equipped with auto anti−glare function. The function is designed to reduce glare from the headlights of the vehicle behind you during night driving.

When the “POWER” switch is set at ON, the inside rear view mirror always turns on in the automatic function mode.

The indicator illuminates to show you that the function is on.

In automatic function mode, if the mirror detects light from the headlights of the vehicle behind you, the mirror surface darkens slightly to reduce the reflected light.

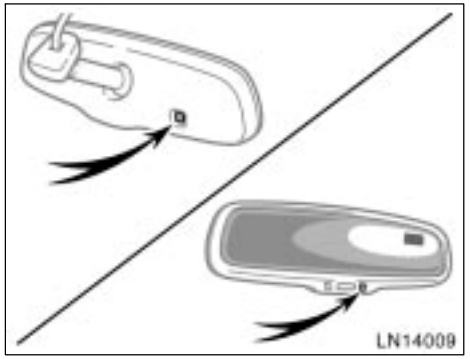
To turn off and on the automatic function, push the “AUTO” switch.

Adjust it before driving so that the rear view is in the best condition.

When the inside air temperature is low, it may take a little longer for the mirror to darken in response to the detection of headlights.

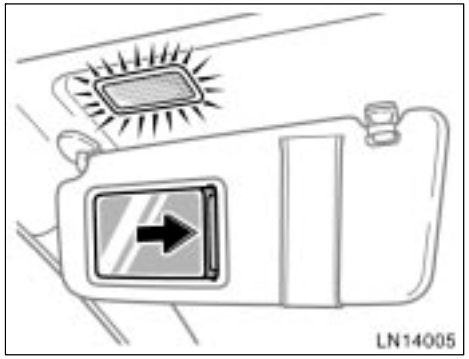
⚠ CAUTION

Do not adjust the mirror while the vehicle is moving. Doing so may cause the driver to mishandle the vehicle and an accident may occur resulting in death or serious injuries.



To ensure correct functioning of anti−glare mirror sensors located on both sides of the mirror, do not touch or cover the sensors with your finger or a piece of cloth, etc.

Vanity mirrors



To use the vanity mirror, swing down the sun visor and slide the cover.

On some models—The lights come on when you slide the cover.

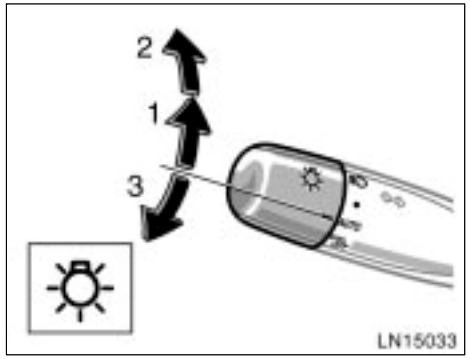
SECTION 1-5

OPERATION OF INSTRUMENTS AND CONTROLS

Lights, Wipers and Defogger

Headlights and turn signals 120
Emergency flashers 125
Instrument panel light control 126
Interior light 126
Personal lights 127
Illuminated entry system 127
Windshield wipers and washer 128
Rear window and outside rear view mirror defoggers 129

Headlights and turn signals (for the U.S.A.)



HEADLIGHTS

Manual operation—

To turn on the following lights: Twist the headlight/turn signal lever knob.

Position 1—Parking, tail, license plate, side marker and instrument panel lights

Position 2—Headlights and all of the above

The headlight indicator lights up in the instrument cluster.

When the tail lights/headlights are turned on, the brightness of the instrument cluster will be reduced slightly unless the instrument panel light control knob is turned fully clockwise.

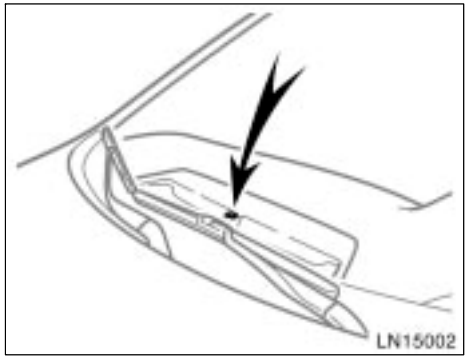
However, the brightness of the instrument cluster will not be reduced in daytime even when the tail lights/headlights are turned on.

Automatic operation—

To turn on or off the lights automatically, twist the headlight/turn signal lever knob to the “AUTO” position when the “POWER” switch is set at ON.

The headlights and/or all of the lights in position 1 automatically turn on or off depending on the darkness of the surroundings.

Manually twist the knob to the position 2 to turn on the headlights if they are needed immediately when entering a dark tunnel, parking structure, etc.



The automatic light control sensor is on the top of the instrument panel.

Do not place anything on the instrument panel, and/or do not affix anything on the windshield to block this sensor.

If you feel that the automatic light control comes into operation too early or too late, have the sensor adjusted by your Toyota dealer.

Automatic light cut off system

Position 1 or “AUTO” position with the tail lights on—

The lights automatically turn off when the driver’s door is opened after the “POWER” switch is turned off.

Position 2 or “AUTO” position with the headlights on—

The lights automatically turn off after 30 seconds when any of the doors or trunk lid is opened and closed after the “POWER” switch is turned off.

The lights can be turned off immediately by pushing the lock switch on the electronic key with all the doors locked and the trunk lid closed.

The time period before the lights turn off can be changed. For details, ask your Toyota dealer.

If any of the doors or trunk lid is left open, the lights automatically turn off after 20 minutes.

To turn on the lights again, set the “POWER” switch at ON or actuate the headlight switch. If you are going to park for over one week, make sure the knob is in the “DRL OFF” position.

NOTICE

To prevent the 12 volt battery from being discharged, do not leave the lights on for a long period when the hybrid system is turned off.

Daytime Running Light (DRL) system

The Daytime Running Light (DRL) system can make it easier for others to see the front of your vehicle during the day. The DRL system can be helpful in many different driving conditions, but they can be especially helpful in the short periods after dawn and before sunset.

The DRL system will make your headlights come on at a reduced brightness when:

- The “POWER” switch is set at ON with the hybrid system turned on.
- The light switch is in the “AUTO” position with the headlights off or position 1.
- The parking brake is released.

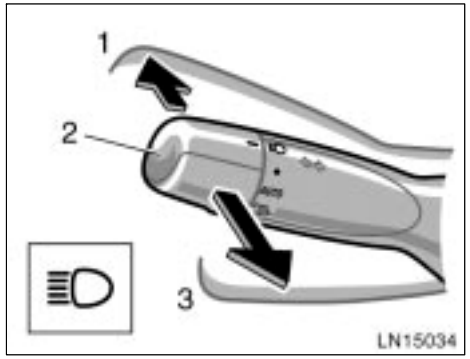
To turn on the other exterior lights and instrument panel lights, twist the knob to position 1.

Twist the knob to position 2 to turn the headlights to full intensity for night driving.

To turn off the DRL system, twist the knob to the position 3 (“DRL OFF”) or turn the “POWER” switch off.

The daytime running light system can be disabled. For details, contact your Toyota dealer.

Headlights and turn signals (for Canada)

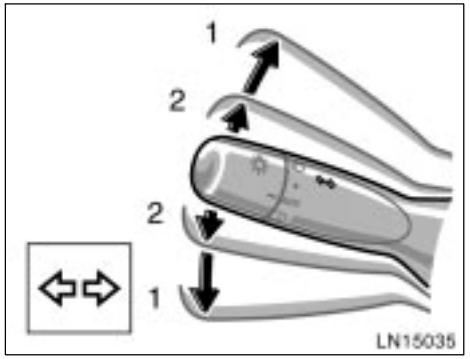


High−Low beams—For high beams, turn the headlights on and push the lever away from you (position 1). Pull the lever toward you (position 2) for low beams.

The headlight high beam indicator light (blue light) on the instrument panel will tell you that the high beams are on.

Flashing the high beam headlights (position 3)—Pull the lever all the way back. The high beam headlights turn off when you release the lever.

You can flash the high beam headlights even when the headlights are off.



TURN SIGNALS

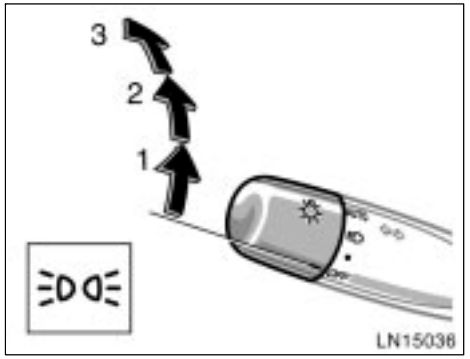
To signal a turn, push the headlight/turn signal lever up or down to position 1.

The “POWER” switch must be set at ON.

The lever automatically returns after you make a turn, but you may have to return it by hand after you change lanes.

To signal a lane change, move the lever up or down to the pressure point (position 2) and hold it.

If the turn signal indicator lights (green lights) on the instrument panel flash faster than normal, a front or rear turn signal bulb is burned out. See “Replacing light bulbs” on page 373 in Section 7−3.



HEADLIGHTS

To turn on the following lights: Twist the headlight/turn signal lever knob.

Position 1—Parking, tail, license plate, side marker and instrument panel lights

The tail light indicator (green light) on the instrument panel will tell you that the tail lights are on.

Position 2—Headlights and all of the above

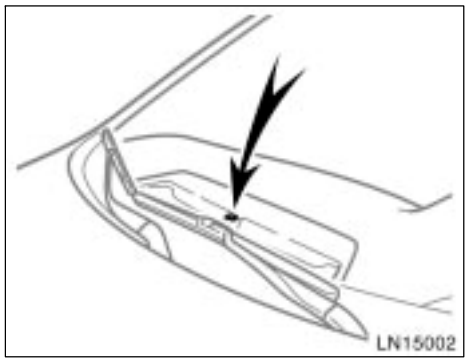
Position 3 (“AUTO”)—Headlights and all of the lights in the position 1

They automatically turn on or off depending on the darkness of the surroundings.

Manually twist the knob to the position 2 to turn on the headlights if they are needed immediately when entering a dark tunnel, parking structure, etc.

When the tail lights/headlights are turned on, the brightness of the instrument cluster will be reduced slightly unless the instrument panel light control knob is turned fully clockwise.

However, the brightness of the instrument cluster will not be reduced in daytime even when the tail lights/headlights are turned on.



The automatic light control sensor is on the top of the instrument panel.

Do not place anything on the instrument panel, and/or do not affix anything on the windshield to block this sensor.

If you feel that the automatic light control comes into operation too early or too late, have the sensor adjusted by your Toyota dealer.

Automatic light cut off system

Position 1 or position 3 with the tail lights on—

The lights automatically turn off when the driver’s door is opened after the “POWER” switch is turned off.

Position 2 or position 3 with the headlights on—

The lights automatically turn off after 30 seconds when any of the doors or trunk lid is opened and closed after the “POWER” switch is turned off.

The lights can be turned off immediately by pushing the lock switch on the electronic key with all the doors locked and the trunk lid closed.

The time period before the lights turn off can be changed. For details, ask your Toyota dealer.

If any of the doors or trunk lid is left open, the lights automatically turn off after 20 minutes.

To turn on the lights again, set the “POWER” switch at ON or actuate the headlight switch. If you are going to park for over one week, make sure the knob is in the “OFF” position.

NOTICE

To prevent the 12 volt battery from being discharged, do not leave the lights on for a long period when the hybrid system is turned off.

Daytime Running Light (DRL) system

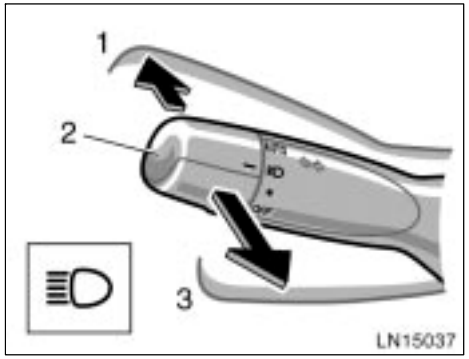
The Daytime Running Light (DRL) system can make it easier for others to see the front of your vehicle during the day. The DRL system can be helpful in many different driving conditions, but they can be especially helpful in the short periods after dawn and before sunset.

The DRL system will make your headlights come on at a reduced brightness when:

- The “POWER” switch is set at ON with the hybrid system turned on.
- The knob is in the “OFF” position, position 1 or position 3 with the headlights off.
- The parking brake is released.

To turn on the other exterior lights and instrument panel lights, twist the knob to position 1.

Twist the knob to position 2 to turn the headlights to full intensity for night driving.

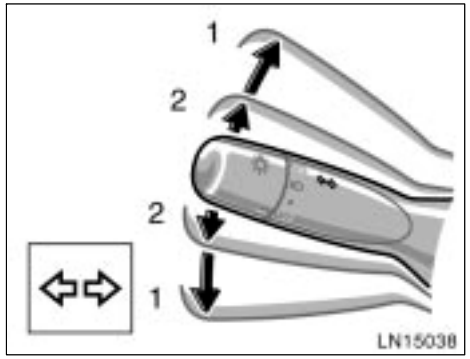


High−Low beams—For high beams, turn the headlights on and push the lever away from you (position 1). Pull the lever toward you (position 2) for low beams.

The headlight high beam indicator light (blue light) on the instrument panel will tell you that the high beams are on.

Flashing the high beam headlights (position 3)—Pull the lever all the way back. The high beam headlights turn off when you release the lever.

You can flash the high beam headlights with the knob turned to “OFF”.



TURN SIGNALS

To signal a turn, push the headlight/ turn signal lever up or down to position 1.

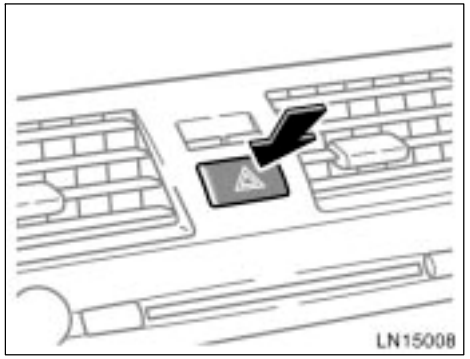
The “POWER” switch must be set at ON.

The lever automatically returns after you make a turn, but you may have to return it by hand after you change lanes.

To signal a lane change, move the lever up or down to the pressure point (position 2) and hold it.

If the turn signal indicator lights (green lights) on the instrument panel flash faster than normal, a front or rear turn signal bulb is burned out. See “Replacing light bulbs” on page 373 in Section 7−3.

Emergency flashers



To turn on the emergency flashers, push the switch.

All the turn signal lights will flash. To turn them off, push the switch once again.

Turn on the emergency flashers to warn other drivers if your vehicle must be stopped where it might be a traffic hazard.

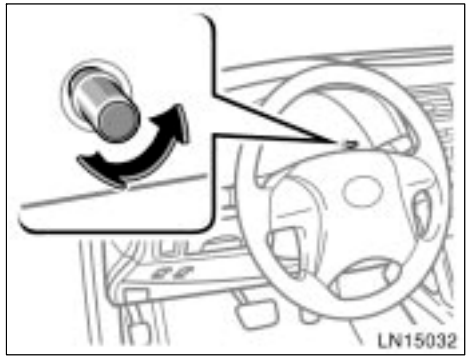
Always pull as far off the road as possible.

The turn signal light switch will not work when the emergency flashers are operating.

NOTICE

To prevent the 12 volt battery from being discharged, do not leave the switch on longer than necessary when the hybrid system is turned off.

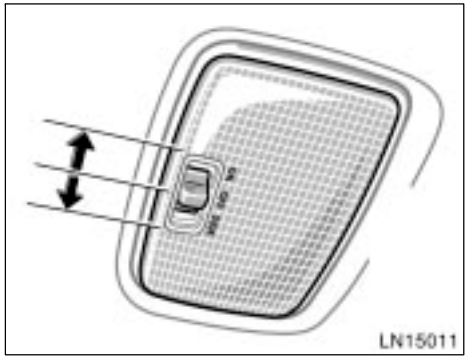
Instrument panel light control



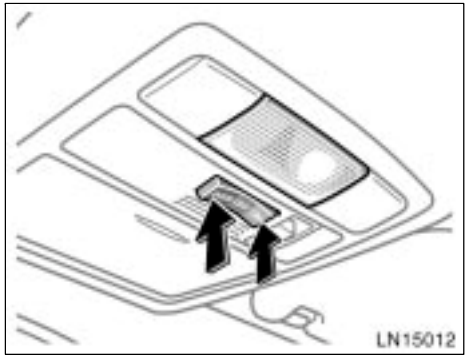
To adjust the brightness of the instrument panel lights, turn the knob.

With the knob turned fully clockwise, the intensity of the instrument cluster lights will not be reduced even when the tail lights/headlights are turned on.

Interior light



Without moon roof



With moon roof

To turn on the interior light, slide the switch.

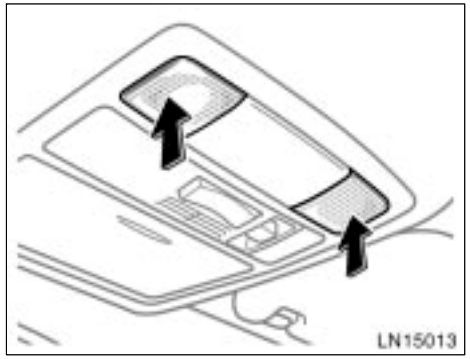
The interior light switch has the following positions:

“ON”—Keeps the light on all the time.

“OFF”—Turns the light off.

“DOOR”—Turns the light on when the illuminated entry system acts. For details, see “Illuminated entry system” on page 127 in this Section.

Personal lights



FRONT PERSONAL LIGHTS

To turn on the front personal light, push the lens. To turn it off, push the lens once again.

REAR PERSONAL LIGHTS (vehicles with moon roof)

To turn on the rear personal light, push the switch. To turn it off, push the switch once again.

By gently adjusting the shade of the rear personal light, you can change the direction of the light to suit your preference.

When either of the rear side doors is opened, the light on that side turns on automatically. Closing the rear side doors will turn the lights off.

Illuminated entry system

The interior light and the “POWER” switch light come on and remain on for about 15 seconds when you carry the registered key into the entry function actuation area. For further information of entry function actuation area, see “Smart key system” on page 32 in Section 1−2.

If all the doors are closed and the “POWER” switch is set at ACC or ON, the lights will fade out.

If all the doors are locked, the lights will fade out.

To prevent the 12 volt battery being discharged, all of the lights will automatically turn off when the “POWER” switch is turned off, and the door is left opened for about 20 minutes.

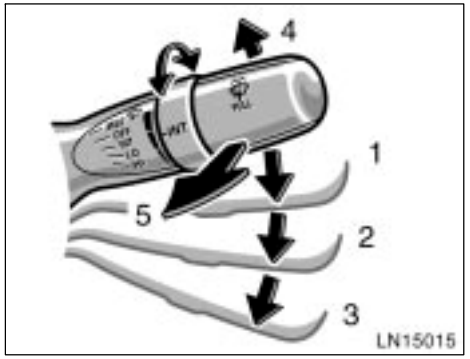
When any of the doors are unlocked with wireless remote control function or mechanical key, the lights will come on and remain on for about 15 seconds before fading out.

When any of the doors are opened, the lights will come on and remain on for about 15 seconds before fading out.

If all the doors are closed, when the “POWER” switch is turned off, the lights will come on and remain on for about 15 seconds.

This feature can be disabled and the duration of the lighting can be changed. For details, ask your Toyota dealer.

Windshield wipers and washer



To turn on the windshield wipers, move the lever to the desired setting.

The “POWER” switch must be set at ON.

Lever position	Operation
Position 1	Intermittent operation
Position 2	Low speed operation
Position 3	High speed operation
Position 4	Single sweep operation
Position 5	Washer on

Rotating the band on the lever lets you adjust the wiper time interval when the wiper lever is in the intermittent position (position 1). Twist the band upward to increase the time between sweeps, and downward to decrease it.

To spray washer fluid, pull the lever toward you.

If the windshield wipers are off, they will operate a couple of times after the washer sprays.

For instructions on adding washer fluid, see “Adding washer fluid” on page 373 in Section 7−3.

In freezing weather, warm the windshield with the defroster before using the washer. This will help prevent the washer fluid from freezing on your windshield, which can block your vision.

NOTICE

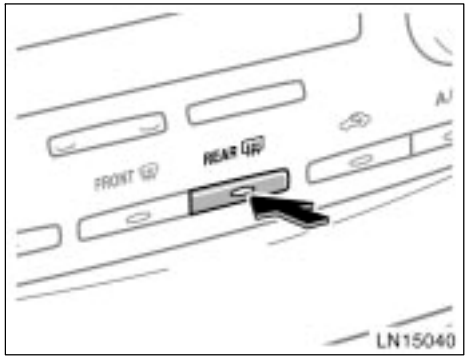
Do not operate the wipers if the windshield is dry. It may scratch the glass.

When waxing your vehicle, make sure that the washer nozzles do not become blocked. If a nozzle becomes blocked, contact your Toyota dealer to have the vehicle serviced.

NOTICE

If a nozzle becomes blocked, do not try to clear it with a pin or other object. The nozzle will be damaged.

Rear window and outside rear view mirror defoggers



To defog or defrost the rear window, push the switch.

The “POWER” switch must be set at ON.

The thin heater wires on the inside of the rear window will quickly clear the surfaces. An indicator light will illuminate to indicate the defogger is operating.

Heater panels in the outside rear view mirrors will also quickly clear the surfaces.

Push the switch once again to turn the defogger off.

The system will automatically shut off when the operation time has been completed. The operation time is between 15 minutes and 1 hour depending on the ambient temperature and vehicle speed.

⚠ CAUTION

Since the mirror surfaces can get hot do not touch them when the defogger switch is on.

Make sure you turn the defoggers off when the surfaces are clear. Leaving the defoggers on for a long time could cause the 12 volt battery to discharge, especially during stop−and−go driving. The defoggers are not designed for drying rain water or for melting snow.

If the outside rear view mirrors are heavily coated with ice, use a spray de−icer before operating the switch.

NOTICE

When cleaning the inside of the rear window, be careful not to scratch or damage the heater wires or connectors.

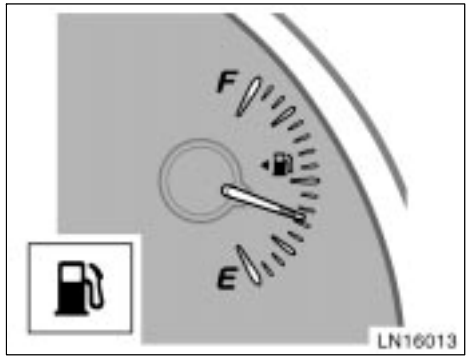
SECTION 1-6

OPERATION OF INSTRUMENTS AND CONTROLS

Gauges, Meters and Service reminder indicators

Fuel gauge 132
Engine coolant temperature gauge 132
Fuel economy meter 133
Multi−information display 134
Service reminder indicators and warning buzzers 150

Fuel gauge



The gauge indicates the approximate quantity of fuel remaining in the tank when the “POWER” switch is set at ON.

Nearly full—Needle at “F”
Nearly empty—Needle at “E”

It is a good idea to keep the tank over 1/4 full.

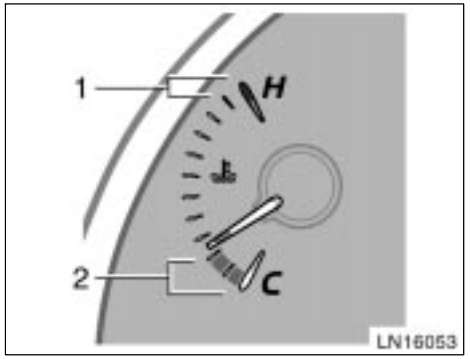
If the fuel level approaches “E” or the low fuel level warning light comes on, fill the fuel tank as soon as possible.

On inclines or curves, due to the movement of fuel in the tank, the fuel gauge needle may fluctuate or the low fuel level warning light may come on earlier than usual.

If the fuel tank is completely empty, the malfunction indicator lamp comes on. Fill the fuel tank immediately.

The indicator lamp goes off after driving several times. If the indicator lamp does not go off, contact your Toyota dealer as soon as possible.

Engine coolant temperature gauge



The gauge indicates the engine coolant temperature when the “POWER” switch is set at ON. The engine operating temperature will vary with changes in weather and engine load.

1. Red zone
2. Blue zone

If the needle moves into the red zone, your engine is too hot. If your vehicle overheats, stop your vehicle and allow the engine to cool.

When the needle is in the blue zone, the coolant temperature is cold. Because the heated coolant temperature is used by the air conditioning system to warm the interior air, warm air will not flow during the blue zone pointed.

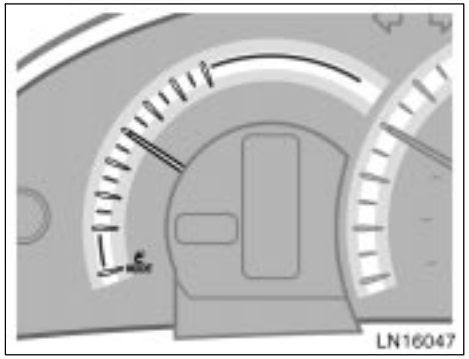
Your vehicle may overheat during severe operating conditions, such as:

- Driving up a long hill on a hot day.
- Reducing speed or stopping after high speed driving.
- Idling for a long period with the air conditioning on in stop−and−go traffic.

NOTICE

- ***Do not remove the thermostat in the engine cooling system as this may cause the engine to overheat. The thermostat is designed to control the flow of coolant to keep the temperature of the engine within the specified operating range.***
- ***Do not continue driving with an overheated engine. See “If your vehicle overheats” on page 317 in Section 4.***

Fuel economy meter



The fuel economy meter indicates the current fuel consumption in analog form when the engine is running. When only the traction motor powers the vehicle, the needle indicates “E MODE”.

- The needle may indicate the best rate on the meter when the engine is running but the fuel is not consumed.
- The needle may indicate the best rate on the meter when fuel consumption is less than the indicated value.
- The needle may indicate the worst rate on the meter when fuel consumption is more than the indicated value.

Multi−information display—

The following information is displayed on the multi−information display when the “POWER” switch is set at ON.

- **Outside temperature and cruise information**
- **Odometer and two trip meters**
- **Messages**

During ordinary driving, the information is displayed. However, in case the vehicle has a system malfunction or if there is some information that the driver should be informed of, a message appears on the display. See “—Messages” on page 140 for details.

If the electrical power source has been disconnected from the cruise information display, the display will automatically be set to the initial mode.

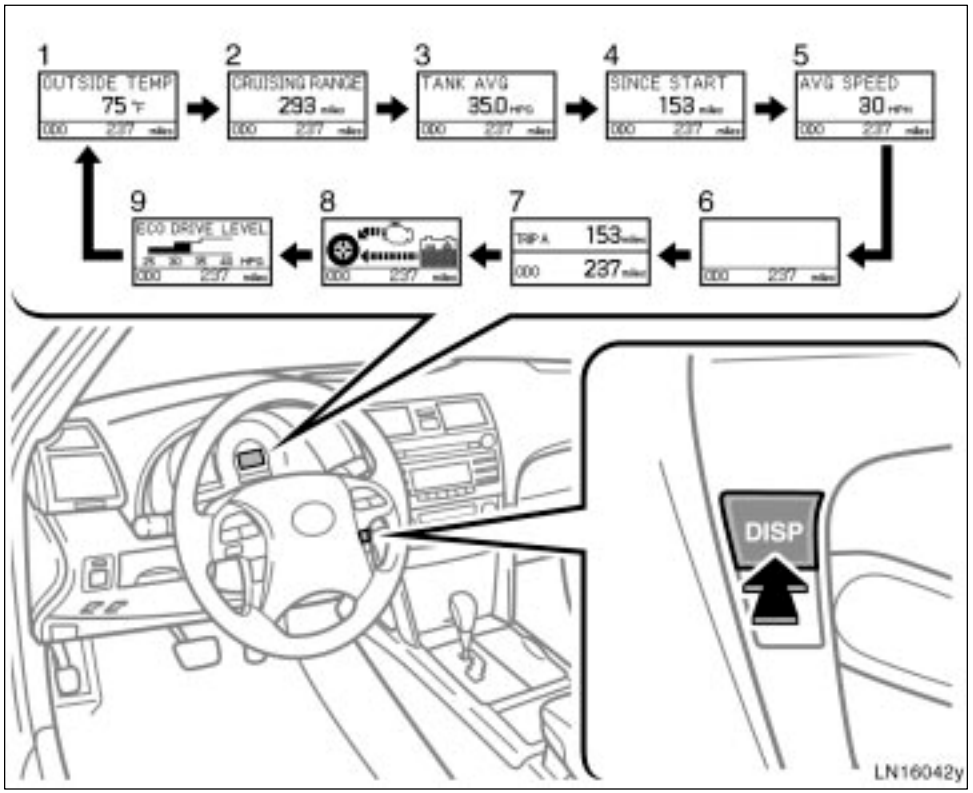
When the instrument panel lights are turned on, the brightness of the display will be reduced.

At extremely low temperatures, the multi−information display may respond slowly.

⚠ CAUTION

Do not adjust the display while the vehicle is moving. Be sure to adjust the display only when the vehicle is stopped.

—Outside temperature and cruise information



Each time you push the “DISP” button, the display toggles through the following information.

1. Outside temperature
2. Cruising range
3. Average fuel consumption after refueling
4. Driving distance
5. Average vehicle speed
6. Cruise information off
7. Zoom display of odometer and trip meter
8. Energy monitor
9. Eco drive level

The display will return to the outside temperature display with pushing and holding the “DISP” button for 1 second.

The displayed values in the cruise information display indicate general driving conditions. Accuracy varies with driving habits and road conditions.

When the “POWER” switch is set at ON, the last previously used mode displayed just before the “POWER” switch is turned off will appear.

1. Outside temperature (“OUTSIDE TEMP”)

The outside temperature display indicates the outside air temperature.

The displayed temperature ranges from −40°C (−40°F) up to 50°C (122°F).

If an abnormality exists in the connection of the outside air temperature sensor, “––” or “E” will appear on the display. If “––” or “E” appears on the display, contact your Toyota dealer.

There may be a case that “––” appears momentarily when the “POWER” switch is quickly set to ON. It is normal if it goes out soon.

2. Driving range (“CRUISING RANGE”)

The distance the vehicle can travel with the remaining fuel is calculated and displayed based on the quantity of remaining fuel and past fuel consumption.

The driving range display indicates the approximate distance that you can drive until the fuel gauge reaches “E”. It is different from the actual distance traveled.

If the fuel gauge malfunctions, the mileage figure will not appear.

When the vehicle is refueled, the driving range is recalculated.

The actual driving range varies with driving habits and road conditions. If fuel consumption is good, the driving range will be longer than indicated. If fuel consumption is poor, the driving range will be shorter than indicated.

If the low fuel level warning light comes on, refuel the vehicle even if the display indicates that the vehicle can be driven further.

3. Average fuel consumption after refueling (“TANK AVG”)

Average fuel consumption after refueling is calculated and displayed based on total driving distance and total fuel consumption.

Every time you refuel the vehicle, the displayed value is reset.

4. Driving distance (“SINCE START”)

The driving distance after the hybrid system started is displayed.

Every time you turn on the hybrid system, the driving distance display is reset.

5. Average vehicle speed (“AVG SPEED”)

Average vehicle speed is calculated and displayed based on total driving distance and total driving time.

6. Cruise information off

The display indicates only odometer and two trip meters.

7. Zoom display of odometer and trip meter

The odometer and one of the trip meters are displayed simultaneously. See “—Odometer and two trip meters” described below.

8. Energy monitor

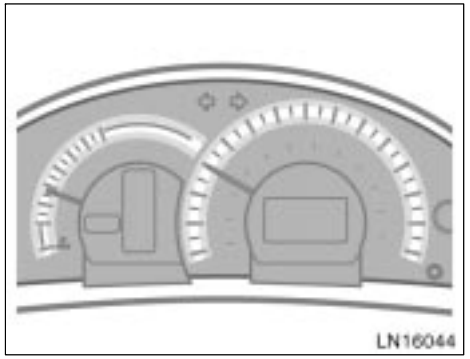
The operating condition of the hybrid system appears on the display.

See “Energy monitor” on page 3 for details.

9. Eco drive level

The eco drive level is visually displayed on the multi−information display, and it indicates the average fuel consumption after the hybrid system is turned on. In accordance with the average fuel consumption, the levels are displayed as follows:

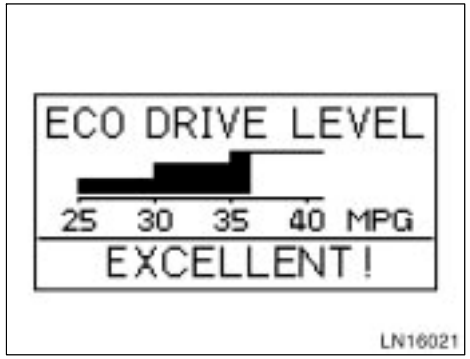
Level 0—25 MPG or less or 9.0 L/100 km or more
Level 1—26 to 30 MPG or 8.8 to 8.0 L/100 km
Level 2—31 to 35 MPG or 7.8 to 7.0 L/100 km
Level 3—36 MPG or more or 6.8 L/100 km or less



The brightness of the arcs around the fuel economy meter and speedometer change according to the eco drive level. The higher the fuel economy, the brighter the light becomes.

Level 0—Does not illuminate
Level 1—Illuminates weakly
Level 2—Illuminates brightly
Level 3—Illuminates most brightly

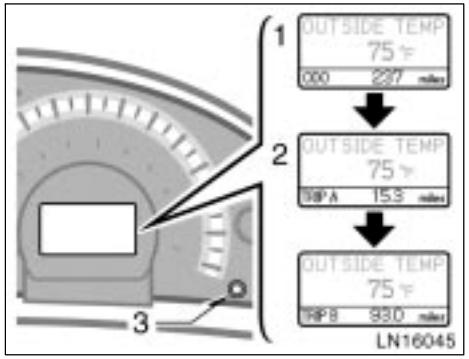
This function works even if a display other than the eco drive level is shown on the multi−information display.



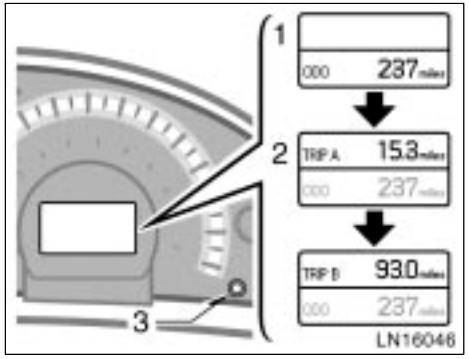
When the hybrid system is turned off, the eco drive level is displayed for a few seconds to show the average fuel consumption for the most recent trip.

If the average fuel consumption is in level 3, “EXCELLENT!” is simultaneously displayed under the eco drive level.

—Odometer and two trip meters



Normal display



Zoom display

This meter displays the odometer and two trip meters.

Selecting the zoom display of the odometer and trip meter when the cruise information is displayed causes the odometer and one of the trip meters to be displayed simultaneously.

1. Odometer—Shows the total distance the vehicle has been driven.
2. Two trip meters—Show two different distances independently driven since the last time each trip meter was set to zero.

   You can use one trip meter to calculate the fuel economy and the other to measure the distance on each trip. All trip meter data is cancelled if the electrical power source is disconnected.

3. Trip meter reset knob—Resets the two trip meters to zero, and also change the meter display.

   To change the meter display, quickly push and release the knob. The meter display changes in the order from the odometer to trip meter A to trip meter B, then back to the odometer each time you push.

   To reset the trip meter A to zero, display the meter A reading, then push and hold the knob until the meter is set to zero. The same process can be applied for resetting the trip meter B.

—Messages

	Message	Status	Action
a	PARK BRAKE	Parking brake is not released.	Release parking brake.
b	LOW ENGINE OIL PRESSURE	Engine oil pressure is low.	Stop and check.
c	CHECK HYBRID SYSTEM	Hybrid system malfunction is detected.	Stop your vehicle and call a Toyota dealer.
d	WATER TEMP	Coolant temperature is high.	Stop your vehicle immediately.
e	HYBRID SYSTEM OVER HEAT	The temperature for the inverter, traction motor or motor generator is high.	Stop your vehicle immediately.

Message		Status	Action
f		Any of doors are opened.	Close doors completely.
g		Hood is opened.	Close hood completely.
h		Trunk is opened.	Close trunk completely.
i		Malfunction of VSC function is detected.	Take vehicle to your Toyota dealer.
j		Transmission is out of the “P” position when starting the hybrid system.	Shift the transmission to the “P” position when starting the hybrid system.

	Message	Status	Action
k	LOW T. BATT STOP THE VEHICLE SHIFT TO P	Hybrid battery is discharged or its voltage is low.	Stop and check.
l	SHIFT TO P WHEN PARKING	Transmission selector lever is not set “P” position.	Shift the transmission selector lever to “P” position.
m	WHEN STARTING DEPRESS THE BRAKE PEDAL	Brake pedal is not depressed when starting the hybrid system.	Depress brake pedal firmly.
n	SHIFT TO P RANGE	Transmission selector lever is not set “P” position.	Shift the transmission selector lever to “P” position.
o	KEY IS NOT DETECTED	● “POWER” switch is not turned off when getting out vehicle carrying the electronic key. ● Electronic key is not detected in the vehicle when “POWER” switch is set at ON.	● Turn hybrid system off. ● Confirm that the key is in the vehicle.
p	LOW KEY BATTERY	Electronic key battery is low.	Replace key battery.
q	CHECK S/T LOCK	Steering lock system malfunction is detected.	Contact your Toyota dealer.

Message		Status	Action
r	S/T IS NOT UNLOCKED	Steering lock is stuck.	Turn steering wheel slightly.
s	MAINT REQD SOON	Oil change is nearly due.	Check engine oil.
t	MAINT REQD	Oil change is due.	Change engine oil.
u	LOW WASHER FLUID	Washer fluid level is low.	Add washer fluid.
v	MOONROOF OPEN	Moon roof is opened with “POWER” switch turned off.	Close moon roof.
w	CLOSE FUEL LID	Fuel door is left open.	Close the fuel door.

(a) 
This message is to warn the driver that the parking brake is not completely released at the vehicle speed of 5 km/h (3 mph) or more.

Stop the vehicle and release the parking brake fully.

The message appears with the master warning light and a warning tone sounds.

(b) 
This message is to warn the driver that the engine oil pressure is too low.

Turn the engine off as soon as possible and contact your Toyota dealer.

The message appears with the master warning light and a warning tone sounds.

(c)

This message is to warn the driver that the hybrid system is malfunctioning.

If a malfunction of the hybrid system is detected, the message appears with the master warning light and warning tone when the “POWER” switch is on.

If the message appears, stop the vehicle as soon as possible and contact a Toyota dealer.

(d)

This message is to warn the driver that the engine coolant temperature is too high.

Stop the vehicle and allow the engine to cool. See “If your vehicle overheats” on page 317 in Section 4.

The message appears with the master warning light and a warning tone sounds.

NOTICE
Do not continue driving with an overheated engine.

(e) 
This message is to warn the driver that the temperature for the inverter, traction motor or motor generator is too high.

Stop the vehicle and allow the the inverter, traction motor and motor generator to cool. See “If your vehicle overheats” on page 317 in Section 4.

The message appears with the master warning light and a warning tone sounds.

NOTICE
Do not continue driving with the message displayed.

(f)

This message is to remind the driver that any of the doors are opened.

Close the door securely.

The message appears with the master warning light and a warning tone sounds when the vehicle speed rises above 5 km/h (3 mph).

(g)

This message is to remind the driver that the hood is opened.

Close the hood securely.

The message appears with the master warning light and a warning tone sounds when the vehicle speed rises above 5 km/h (3 mph).

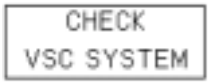
(h)

This message is to remind the driver that the trunk is opened.

Close the trunk securely.

The message appears with the master warning light a warning tone sounds when the vehicle speed rises above 5 km/h (3 mph).

(i)



This message is to warn the driver that the vehicle stability control (VSC) function of the vehicle dynamics integrated management (VDIM) is malfunctioning.

If the message appears, the functions of VDIM listed below may not work properly. Have the vehicle checked by a Toyota dealer as soon as possible. However, as conventional braking operates when applied, there is no problem to continue your driving.

- **Traction control function**
- **Vehicle stability control function**

The message appears with the master warning light and a warning tone sounds.

If the message appears together with the red brake system warning light, stop the vehicle immediately. For details, see “Service reminder indicators and warning buzzers” on page 150.

(j)

This message is to remind the driver that the transmission is not in the “P” position when starting the vehicle.

If the message appears, put the transmission in the “P” position and push the “POWER” switch again. For the hybrid system starting procedure, see “How to start the hybrid system” on page 301 in Section 3.

The message appears with the master warning light and a warning tone sounds.

(k) 
This message is to warn of the hybrid battery condition.

The message appears in the following conditions.:

- The hybrid battery voltage drops because the transmission is left in the “N” position.

  If you put the transmission in the “P” position and the message disappears, the system is working properly.

- The hybrid battery is discharged.

  If the hybrid battery is discharged and the message appears along with the “READY” light turned on, stop your vehicle in a safe place and contact your Toyota dealer.

The message appears with the master warning light and a warning tone sounds.

(l)

This message is to warn the driver that the transmission is not in the “P” position when the driver’s door is opened.

Put the transmission in the “P” position.

The message appears with the master warning light and a warning tone sounds.

(m)

This message is to remind the driver that the brake pedal is not depressed when starting the hybrid system.

Depress the brake pedal firmly and press the “POWER” switch. For the starting procedure, see “How to start the hybrid system” on page 301 in Section 3.

If the brake pedal is not depressed, the message appears and a warning tone sounds when the hybrid system is started.

(n)

This message is to warn the driver that the transmission is not in the “P” position when leaving the vehicle.

Put the transmission in the “P” position.

The message appears with the master warning light and a warning tone sounds.

(o)

When this message appears in the following cases, a warning tone sounds.

- The key is not detected in the vehicle because someone has taken the key outside of the vehicle without turning the hybrid system off. At this time, a warning tone sounds. The above message turns off if the “POWER” switch is turned off or the key is in the vehicle.
- The key is not detected in the vehicle when the “POWER” switch is pushed. In this case, the above message appears for 8 seconds.

(p) 
This message is to warn the driver that the electronic key battery is low.

Change the key battery as soon as possible to ensure that the smart key system operates properly.

The message appears with the master warning light and a warning tone sounds.

(q) 
This message warns the driver that the steering lock function malfunctions. At this time, the amber indicator light on the “POWER” switch flashes.

The hybrid system will not be turned on in this case. Contact your Toyota dealer as soon as possible.

The message appears with the master warning light and a warning tone sounds.

(r)

This message appears when the steering lock is stuck. The message appears for 15 seconds. At this time, the green indicator light on the “POWER” switch flashes.

To free the steering lock, rotate the steering wheel slightly left or right while pressing the “POWER” switch.

The message appears with the master warning light and a warning tone sounds.

(s)

This message is to remind the driver to change the engine oil. The message is a prior notice.

Toyota recommends that the engine oil be changed as soon as possible.

If the driving range after the previous oil change reaches 7200 km (4500 miles), the message appears for about 15 seconds with the master warning light and a warning tone sounds.

The engine oil maintenance data must be reset after the engine oil change. See following “Resetting the engine oil maintenance data”.

(t) 
This message is to remind the driver to change the engine oil.

Change the engine oil as soon as possible.

If the driving range after the previous oil change reaches 8000 km (5000 miles), the message appears with the master warning light and a warning tone sounds. The message stays on with the “POWER” switch set at ON.

The engine oil maintenance data must be reset after the engine oil change. See “Resetting the engine oil maintenance data” below for the procedure to reset the system.

Resetting the engine oil maintenance data

The engine oil maintenance data must be reset after replacement of the engine oil. Reset the data by the following procedure:

1. Turn off the hybrid system with the trip meter A reading shown.

For details, see “—Odometer and two trip meters” on page 138 in this Section.

2. The “POWER” switch must be set at ON while holding down the trip meter reset knob. A message “OIL MILEAGE RESET MODE” will appear on the display.
3. Hold down the knob at least 5 seconds. A message “COMPLETE” will appear and the message “OIL MILEAGE RESET MODE” goes off.

(u) 
This message appears when the washer fluid level becomes very low.

Fill the tank as soon as possible.

The message appears with the master warning light a warning tone sounds.

(v)

This message appears when the driver’s door is opened with the “POWER” switch turned off and the moon roof opened.

When you leave your vehicle, be sure to close the moon roof.

The message appears with the master warning light and a warning tone sounds.

(w) 
This message is to remind the driver that the fuel filler door is open.

The message appears in the following cases.

1. When you start the vehicle with the fuel door left open after refueling.
2. When you leave the fuel door open for more than 30 minutes during refueling.

In case 1, stop the vehicle and close the fuel lid. In case 2, the internal valve in the fuel tank is closed. You must remove the fuel nozzle, tighten the fuel tank cap and close the fuel door. If refueling is not completed you must start refueling from the beginning.

⚠ CAUTION

Do not continue to refuel in case 2. Fuel may spray out of the fuel opening if you refuel the vehicle.

The message appears with the master warning light and a warning tone sounds.

Service reminder indicators and warning buzzers

If the indicator or buzzer comes on...		Do this.
(a)	**BRAKE** or (red indicator and buzzer)	If parking brake is off, stop immediately and contact Toyota dealer.
	(yellow indicator)	Take vehicle to Toyota dealer. If red brake system warning light is also on, stop immediately and contact Toyota dealer.
(b)	(indicator and buzzer)	Fasten driver’s seat belt.
(c)	PASSENGER (indicator and buzzer)	Fasten front passenger’s seat belt.
(d)		Stop immediately and contact Toyota dealer.
(e)	CHECK or	Take vehicle to Toyota dealer.
(f)		Fill up tank.

If the indicator or buzzer comes on...		Do this.
(g)	ABS or	Take vehicle to Toyota dealer. If red brake system warning light is also on, stop immediately and contact Toyota dealer.
(h)	P/S	Take vehicle to Toyota dealer.
(i)	 (indicator and buzzer)	Close all doors and trunk lid.
(j)		Take vehicle to Toyota dealer immediately.
(k)		Adjust tire inflation pressure (including spare tire). If the light comes on after blinking for 1 minute, contact Toyota dealer.
(l)		Read a message on multi−information display.
(m)	Parking brake reminder buzzer	Release parking brake.

(a) Brake System Warning Lights

These lights come on in the following cases when the hybrid system is turned on.

RED WARNING LIGHT

- **When the parking brake is applied...**

When the vehicle speed exceeds 5 km/h (3 mph), a message “PARK BRAKE” appears on the multi−information display, the master warning light flashes and a warning tone sounds.

- **When the brake fluid level is low...**

⚠ CAUTION

It is dangerous to continue driving normally when the brake fluid level is low.

YELLOW WARNING LIGHT

- **When the regenerative brake system or electronically controlled brake system fails...**

When the yellow warning light comes on, the regenerative brake system and/or electronically controlled brake system is malfunctioning. Take your vehicle to your Toyota dealer.

RED AND YELLOW WARNING LIGHT

- **When the hydraulic brake system fails...**

If the red and yellow warning lights come on, it indicates a serious problem and you can continue driving no longer.

Have your vehicle checked at your Toyota dealer in the following cases:

- The red warning light does not come on even if the parking brake is applied when the hybrid system is on.
- The lights do not come on when the hybrid system is turned on with the parking brake released.

A red or yellow warning light turning on briefly during operation does not indicate a problem.

⚠ CAUTION

If any of the following conditions occurs, immediately stop your vehicle at a safe place and contact your Toyota dealer.

- **The red warning light does not turn off even after the parking brake is released with the hybrid system turned on.**
- **The red warning light stays on with the hybrid system turned on.**

In either case, this can indicate that the brakes may not work properly and your stopping distance will become longer. Depress the brake pedal firmly and bring the vehicle to an immediate stop.

- **The red brake system warning light remains on together with the “ABS” warning light and “CHECK VSC SYSTEM” warning message.**

In this case, not only the anti−lock brake system and vehicle stability control system will fail but also the vehicle will become extremely unstable during braking.

In the following case, drive directly to the nearest Toyota dealer.

- **The yellow warning light comes on while driving.**

Any of the following conditions may occur, but do not indicate the malfunction:

- The red and yellow warning lights may stay on for about 60 seconds after the hybrid system is started. It is normal if it turns off after a while.
- Depressing the brake pedal repeatedly may turn on the red and yellow warning lights. It is normal if the light turns off after a few seconds.
- The brake pedal stroke may be short when the brake pedal is depressed with the hybrid system off.

(b) Driver’s Seat Belt Reminder Light and Buzzer

The light and buzzer act as a reminder to buckle up the driver’s seat belt.

Once the “POWER” switch is set at ON or engine start, the reminder light flashes and buzzer sounds if the driver’s seat belt is not fastened. Unless the driver fastens the belt, the light continues flashing and the buzzer sounds for about 6 seconds.

If the vehicle speed rises above 20 km/h (12 mph) with the seat belt unfastened, the buzzer will sound for about 10 seconds. Then, if the seat belt is still unfastened, the buzzer will sound in a different tone for 20 seconds. Even if the vehicle speed drops below 20 km/h (12 mph), the buzzer will continue to sound. To stop the buzzer, fasten the seat belt. If the buzzer still sounds, make sure the front passenger’s seat belt is fastened.

The vehicle speed linked seat belt reminder buzzer can be disabled. For details, contact your Toyota dealer.

However, Toyota recommends that the seat belt reminder buzzer be operational to alert the driver and front passenger that the seat belts are not fastened.

(c) Front Passenger’s Seat Belt Reminder Light and Buzzer

The light and buzzer act as a reminder to have the front passenger buckle up the seat belt.

Once the “POWER” switch is set at ON, the reminder light flashes if a passenger sits in the front passenger seat and does not fasten the seat belt. Unless the front passenger fastens the belt, the light continue flashing.

If the vehicle speed rises above 20 km/h (12 mph) with the seat belt unfastened, the buzzer will sound for about 10 seconds. Then, if the seat belt is still unfastened, the buzzer will sound in a different tone for 20 seconds. Even if the vehicle speed drops below 20 km/h (12 mph), the buzzer will continue to sound. To stop the buzzer, fasten the seat belt. If the buzzer still sounds, make sure the driver’s seat belt is fastened.

If luggage or other load is placed on the front passenger seat, depending on its weight, the reminder light to flash and buzzer to sound.

The vehicle speed linked seat belt reminder buzzer can be disabled. For details, contact your Toyota dealer.

However, Toyota recommends that the seat belt reminder buzzer be operational to alert the driver and front passenger that the seat belts are not fastened.

(d) Charging System Warning Light

When there are problems in the charging system while the hybrid system is running, the warning light comes on.

NOTICE
When the charging system warning light comes on while the hybrid system is running, malfunctions may have occurred. If the warning light comes on, immediately stop the vehicle in a safe place and contact your Toyota dealer.

(e) Malfunction Indicator Lamp

This lamp comes on when the “POWER” switch is set at ON and goes off when the “READY” light comes on. This means that the warning light system is operating properly.

If the lamp remains on, or the lamp comes on while driving, first check the followings.

- Empty fuel tank

  If the fuel tank is empty, refuel immediately.

- Loose fuel tank cap

  If the fuel tank cap is loose, securely tighten it.

These cases are temporary malfunctions. The malfunction indicator lamp will go off after taking several driving trips.

If the lamp does not go off even after several trips, contact your Toyota dealer as soon as possible.

If the fuel tank is not empty or the fuel tank cap is not loose...

There is a problem somewhere in the hybrid system, emission control system, electronic throttle control system, transmission electrical system or warning light system itself.

Contact your Toyota dealer as soon as possible to service the vehicle.

Emissions Inspection and Maintenance (I/M) programs

Your vehicle may not pass a state emission inspection if the malfunction indicator lamp remains on. Contact your Toyota dealer to check your vehicle’s emission control system and OBD (On−Board Diagnostics) system before taking your vehicle for the inspection.

For details, see “Emissions Inspection and Maintenance (I/M) programs” on page 345 in Section 6.

(f) Low Fuel Level Warning Light

This light comes on when the fuel level in the tank becomes nearly empty. Fill up the tank as soon as possible.

On inclines or curves, due to the movement of fuel in the tank, the low fuel level warning light may come on earlier than usual.

(g) “ABS” Warning Light

This light comes on when the “POWER” switch is set at ON. If the anti−lock brake system function of the VDIM (vehicle dynamics integrated management) is working properly, the light goes off when the “READY” light comes on. Thereafter, if the function malfunctions, the light comes on again.

When the “ABS” warning light is on and the yellow brake system warning light is on, the anti−lock brake system function and the brake assist function of the VDIM may not operate so that the wheel could lock up during a sudden braking or braking on slippery road surfaces However, the brake system still operates conventionally.

If any of the following conditions occurs, this indicates a malfunction somewhere in the parts monitored by the warning light system. Contact your Toyota dealer as soon as possible to service the vehicle.

- The light does not come on when the “POWER” switch is set at ON.
- The light remains on when the “READY” light is on.
- The light comes on while you are driving.

A warning light turning on briefly during operation does not indicate a problem.

If the light comes on together with the red brake system warning light, stop the vehicle immediately. For details, see “(a) Brake system warning light”.

Either of the following conditions may occur, but does not indicate the malfunction:

- The light may stay on for about 60 seconds after the hybrid system is started. It is normal if the light goes off after a while.
- Depressing the brake pedal repeatedly may turn on the light. It is normal if the light goes off after a few seconds.

CAUTION

If the “ABS” warning light remains on together with the red brake system warning light, stop your vehicle immediately in a safe place and contact your Toyota dealer.

In this case, not only the anti−lock brake system function and brake assist function will fail but also the vehicle will become extremely unstable during braking.

(h) Electric Power Steering System Warning Light

This light comes on when the power steering control system fails.

⚠ CAUTION

If this light comes on, take your vehicle to the Toyota dealer as soon as possible. In this case, you may feel the heavy steering wheel maneuvering. Drive your vehicle while gripping the steering wheel firmly.

(i) Open Door Warning Light and Buzzer

This light remains on until all the doors and trunk lid are completely closed.

The buzzer also sounds once when any of the doors or trunk lid is not completely closed at the vehicle speed 5 km/h (3 mph) or more. Stop the vehicle and close the door and trunk lid completely.

(j) SRS Warning Light

This indicator comes on when the “POWER” switch is set at ON. It goes off after about 6 seconds. This means the SRS front airbags and seat belt pretensioners are operating properly.

This warning light system monitors the airbag sensor assembly, front airbag sensors, side and curtain shield airbag sensors, curtain shield airbag sensors, driver’s seat position sensor, driver’s seat belt buckle switch, front passenger occupant classification system, “AIRBAG ON” indicator light, “AIRBAG OFF” indicator light, front passenger’s seat belt buckle switch, seat belt pretensioner assemblies, inflators, interconnecting wiring and power sources.

If any of the following conditions occurs, this indicates a malfunction of the airbags or seat belt pretensioners. Contact your Toyota dealer as soon as possible to.

- The light does not come on when the “POWER” switch is set at ON or remains on for more than 6 seconds.
- The light comes on or starts flashing while driving.

The SRS warning light and “AIRBAG OFF” indicator light will come on if there is a malfunction in the front passenger occupant classification system.

(k) Low Tire Pressure Warning Light

This light warns that the tire pressure of one or more of your tires (including the spare tire) is low. The light comes on when the “POWER” switch is set at ON. It goes off when the “READY” light comes on. This indicates that the tire pressure warning system is functioning properly.

If the warning light comes on, stop your vehicle in a safe place as soon as possible and check that the inflation pressure of all tires (including the spare tire) is as specified on the tire and loading information label. (See “Checking tire inflation pressure” on page 359 in Section 7−2.) The light should go off a few minutes after the tire pressure is adjusted.

If the warning light blinks (comes on after blinking for 1 minute), the tire pressure warning system may be malfunctioning. Contact your Toyota dealer.

For details, see “Tire pressure warning system” on page 168 in Section 1−7.

(l) Master Warning Light

If the master warning light comes on, a message appears on the multi−information display. Depending on the conditions a warning tone may sound.

(m) Parking Brake Reminder Buzzer

The buzzer acts once when the parking brake is not completely released at the vehicle speed of 5 km/h (3 mph) or more. Stop the vehicle and release the parking brake fully.

CHECKING SERVICE REMINDER INDICATORS (except the low fuel level warning light)

1. Apply the parking brake.
2. Open one of the doors.
   The open door warning light should come on.
3. Close the door.
   The open door warning light should go off.
4. With your foot off the brake pedal, press the “POWER” switch and set it at ON.
   All the service reminder indicators except the open door warning light should come on. The electric power steering warning light goes off after a few seconds. The SRS warning light goes off after about 6 seconds.
5. With depressing the brake pedal, press the “POWER” switch.

All of the service reminder indicators except the red brake system warning light and driver’s seat belt reminder light go off when the “READY” light comes on.

The driver’s seat belt reminder light goes off when the driver’s seat belt is fastened. The red brake system warning light goes off when the parking brake is released.

There may be the case that the red and yellow brake system warning lights and “ABS” warning light stay on for about 60 seconds. It is normal if they go out after a while.

If any service reminder indicator or warning buzzer does not function as described above, have it checked by your Toyota dealer as soon as possible.

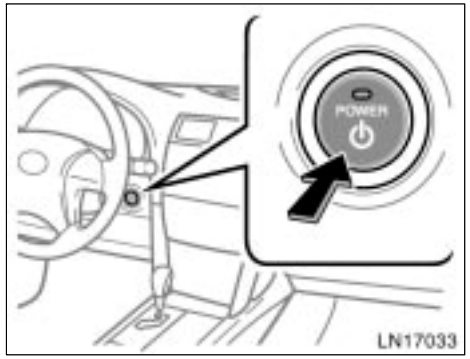
SECTION 1–7

OPERATION OF INSTRUMENTS AND CONTROLS

“POWER” switch, Transmission and Parking brake

“POWER” switch 160
Transmission 162
Vehicle dynamics integrated management 164
Tire pressure warning system 168
Parking brake 175
Cruise control 176

“POWER” switch



When the key is in the vehicle, pressing the “POWER” switch (hybrid system start−up switch) allows you to start and stop the hybrid system or choose at the ACC, ON, or “POWER” switch off.

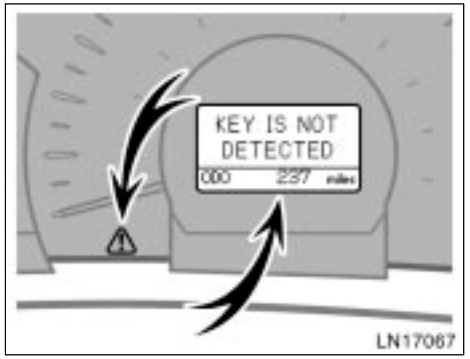
When the brake pedal is not depressed, pressing the “POWER” switch changes the mode as follows. Press the switch slowly and firmly.

First time—ACC (accessory) mode (illuminates amber)
Accessories such as the radio operate.

Second time—ON mode (illuminates amber)
All accessories on.

Third time—Power off (indicator light off)

Pressing the “POWER” switch again returns the mode switch to ACC.



If a buzzer sounds and the master warning light comes on for 5 seconds when pressing the “POWER” switch, this indicates that the key is not in the vehicle. The message “KEY IS NOT DETECTED” will also appear on the multi−information display.

If the brake pedal is depressed, the indicator light will turn green, regardless of which mode is selected. When the indicator light is green, pressing the “POWER” switch once turns the hybrid system on. (For starting tips, see “How to start the hybrid system” on page 301 in Section 3.)

When the “POWER” switch is changed from ON (with the hybrid system turned off) to off and then changed to ACC, “DEPRESS THE BRAKE PEDAL” will appear on the multi−information display.

If the amber indicator light on the “POWER” switch blinks, this indicates a malfunction of the push start system. Turn off the hybrid system immediately and contact your Toyota dealer.

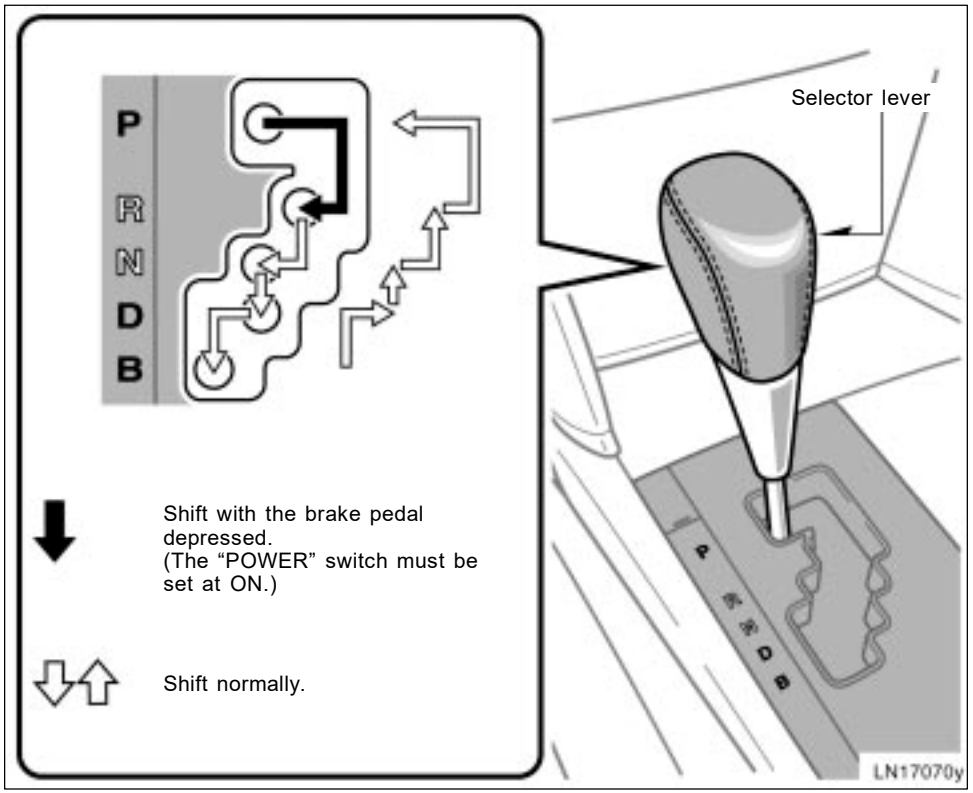
Approximately five hours after the hybrid system is turned off, you may hear sound coming from underneath the trunk for several minutes. This is normal operation and does not indicate a malfunction. (See “Leak detection pump” on page ix.)

It is not a malfunction if the needle on all meters and gauges move slightly when the “POWER” switch is set at ACC, ON or when the hybrid system is turned on.

NOTICE
Do not leave the “POWER” switch at ACC or ON with the hybrid system turned off. The 12 volt battery will discharge.

When the 12 volt battery is disconnected or run down, the push button start function memorizes the current mode. After you reconnect, replace, or recharge the battery, the memorized mode is selected automatically. In any of these cases, turn off the hybrid system if the hybrid system is turned on.

Transmission



Your transmission has a shift lock system to minimize the possibility of incorrect operation. This means you can only shift out of “P” position when the brake pedal is depressed (with the “POWER” switch set at ON).

(a) Selector lever

The shift position is also displayed on the instrument cluster.

P: Parking, hybrid system starting

R: Reverse

N: Neutral

D: Normal driving

B: Engine braking

(b) Normal driving

1. Start the hybrid system as instructed in “How to start the hybrid system” on page 301 in Section 3. The transmission must be in “P”.
2. With your foot holding down the brake pedal, shift the selector lever to “D”.

⚠ CAUTION

Never put your foot on the accelerator pedal while shifting.

3. Release the parking brake and brake pedal. Depress the accelerator pedal slowly for smooth starting.

⚠ CAUTION

Always keep your foot on the brake pedal while stopped with the hybrid system on. This prevents the vehicle from creeping.

NOTICE

Always use the brake pedal or the parking brake to hold the vehicle on an upgrade. Do not attempt to hold the vehicle using the accelerator pedal, as this can cause the transmission to overheat.

(c) Using engine braking

To use engine braking intentionally, shift the selector lever to the “B” position and take your foot off the accelerator pedal.

During high speed driving you may feel that engine braking is less effective than that of conventional vehicle.

Do not continue normal driving with the transmission in “B” for a long time. This may cause decreased fuel economy.

⚠ CAUTION

Be careful when using engine braking on a slippery surface. Abrupt shifting could cause the vehicle to spin or skid.

(d) Backing up

1. Bring the vehicle to a complete stop.
2. With the brake pedal held down with your foot, shift the selector lever to the “R” position.

NOTICE

Never shift into reverse while the vehicle is moving.

(e) Parking

1. Bring the vehicle to a complete stop.
2. With the brake pedal pressed down, fully depress the parking brake pedal to apply the parking brake securely.
3. With the brake pedal pressed down, shift the selector lever to the “P” position.

When turning the hybrid system off, put the transmission in the “P” position.

⚠ CAUTION

Never attempt to move the selector lever into “P” position under any circumstances while the vehicle is moving. Serious mechanical damage and loss of vehicle control may result.

(f) If you cannot shift the selector lever out of “P” position

If you cannot shift the selector lever from the “P” position even though the brake pedal is depressed, use the shift lock override button. For instructions, see “If you cannot shift transmission selector lever” on page 329 in Section 4.

Vehicle dynamics integrated management

Vehicle dynamics integrated management (VDIM) is designed to control vehicle motion continuously using all possible functions to stabilize the motion.

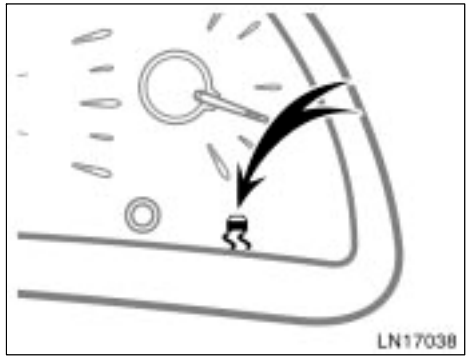
It is important to keep the tires in good condition for the system to properly control vehicle motion. Refer to the information for tires on pages 359 through 367 in Section 7−2.

The system has the functions listed below. Each function becomes operational when the vehicle speed exceeds the speeds as shown below.

- Brake assist function
  7 km/h (4 mph)
- Anti−lock brake system function
  7 km/h (4 mph)
- Traction control function
  0 km/h (0 mph)
- Vehicle stability control function
  15 km/h (9 mph)

⚠ CAUTION

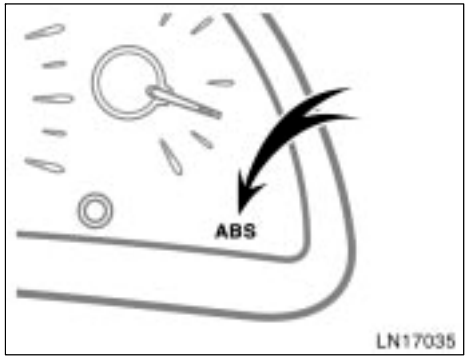
- **Do not rely excessively on the VDIM. Even if the system is operating, you must always drive carefully and attentively. Reckless driving will result in an unexpected accident. If the slip indicator flashes, special care should be taken.**
- **Only use tires of specified size. The size, manufacturer, brand and tread pattern for all 4 tires should be the same. If you use any tires other than specified, or different types or sizes, the VDIM may not function correctly. When replacing the tires or wheels, contact your Toyota dealer.**
- **Do not modify the suspensions. If you modify the suspensions, the VDIM may not function correctly.**
- **In situations where the road surface is covered with ice or snow, snow tires or tire chains should be used.**



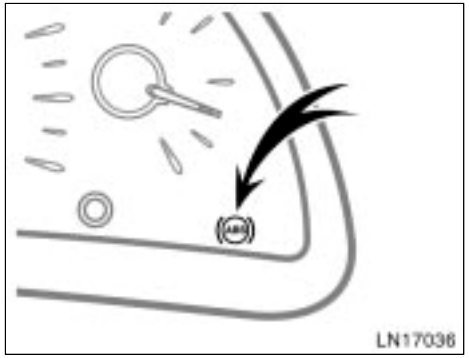
Slip indicator light

When the “POWER” switch is set at ON is turned on, the slip indicator light comes on. It will go off when the “READY” light comes on. If the slip indicator light does not come on when the “POWER” switch is set at ON, contact your Toyota dealer.

While the VDIM is using its various functions to stabilize vehicle motion, the slip indicator in the instrument cluster flashes and the buzzer sounds. Drive carefully when you are in situations where the indicator flashes. You may feel some vibrations from the underbody and you may feel some resistance when turning the steering wheel when the VDIM is using its various functions.



“ABS” warning light (U.S.A.)

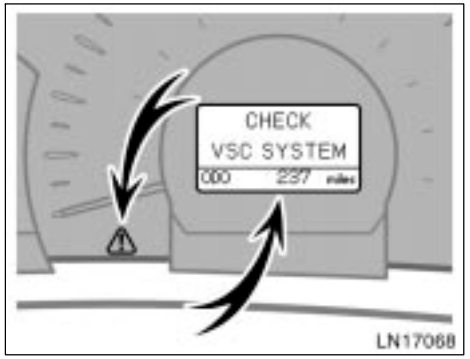


“ABS” warning light (Canada)

“ABS” warning light

When the “POWER” switch is set at ON, the “ABS” warning light comes on. It will go off when the “READY” light comes on. If the “ABS” warning light does not come on when the “POWER” switch is set at ON, contact your Toyota dealer.

If the “ABS” warning light remains on after the “POWER” switch is set at ON or if it comes on while driving, the anti−lock brake system function may not operate properly. Although the brake system operates without the function, drive carefully and have your vehicle checked by a Toyota dealer as soon as possible. For details, see “Service reminder indicators and warning buzzers” on page 150 in Section 1−6.



Message “CHECK VSC SYSTEM”

If “CHECK VSC SYSTEM” appears on the multi−information display, the traction control and vehicle stability control functions may not operate properly. Although the brake system operates normally without these functions, drive carefully and have your vehicle checked by a Toyota dealer as soon as possible. For details, see “—Messages” on page 140 in Section 1−6.

BRAKE ASSIST FUNCTION

The brake assist function is designed to assist with emergency braking. When the driver suddenly depresses the brake pedal, the device treats it as emergency braking and adds braking force.

If you slam the brakes on or apply the brakes more firmly, more powerful braking will be applied.

⚠ CAUTION

The brake assist function is not designed to shorten braking distance. Always drive at a moderate speed and maintain a safe distance from the vehicle in front of you. Depending on road conditions, braking distance may be longer than that of a vehicle without the brake assist device. If tire chains are used, braking distance may become longer.

ANTI−LOCK BRAKE SYSTEM FUNCTION

The anti−lock brake system function is designed to help prevent lock−up of the wheels during sudden braking or when braking on slippery road conditions. This assists in providing directional stability and steering performance of the vehicle under these circumstances.

Effective way to press the ABS brake pedal: When the brake pedal is depressed and the anti−lock brake system function is in action, the slip indicator flashes. In this situation, to let the anti−lock brake system work for you, just hold the brake pedal down more firmly. Do not pump the brake in a panic stop. This will result in reduced braking performance.

Depressing the brake pedal on slippery road surfaces such as on a manhole cover, a steel plate at a construction site, joints in a bridge, etc. on a rainy day tends to activate the anti−lock brake system function.

When the anti−lock brake system function is activated, you may hear the anti−lock brake system function operating sound and the vibrations of the vehicle body and steering wheel. You may also hear the motor sound in the engine compartment even after the vehicle is stopped. However, it does not indicate any trouble.

⚠ CAUTION

The anti−lock brake system function is not designed to shorten braking distance. Always drive at a moderate speed and maintain a safe distance from the vehicle in front of you. Depending on road conditions, braking distance may be longer than that of a vehicle without the anti−lock brake system. If tire chains are used, braking distance may become longer.

Compared with vehicles without an anti−lock brake device, your vehicle may require a longer stopping distance in the following cases:

- **Driving on rough, gravel or snow−covered roads.**
- **Driving with tire chains installed.**
- **Driving over the steps such as the joints on the road.**
- **Driving on roads where the road surface is pitted or has other differences in surface height.**

If tire grip performance exceeds its capability, or if hydroplaning occurs during high speed driving in the rain, the anti−lock brake system does not provide vehicle control.

TRACTION CONTROL FUNCTION

The traction control function is designed to help prevent skid of the drive wheels during sudden acceleration on slippery road surfaces.

You may feel vibration or noise in your vehicle, caused by operation of the brakes.

⚠ CAUTION

Under certain slippery road conditions, full traction of the vehicle and power against drive wheels cannot be maintained, even though the traction control system is in operation. Do not drive the vehicle under any speed or maneuvering conditions which may cause the vehicle to lose traction control. In situations where the road surface is covered with ice or snow, your vehicle should be fitted with snow tires or tire chains. Always drive at a moderate speed.

VEHICLE STABILITY CONTROL FUNCTION

The vehicle stability control function is designed to help prevent skid of the wheels while cornering on slippery road surfaces or when turning the steering wheel abruptly.

The system controls the driving and braking forces on each tire and also controls the power steering assistance to help the driver to recover vehicle stability.

⚠ CAUTION

Depending on the road conditions, the vehicle stability control function may not be able to stabilize your vehicle. Always drive at a moderate speed.

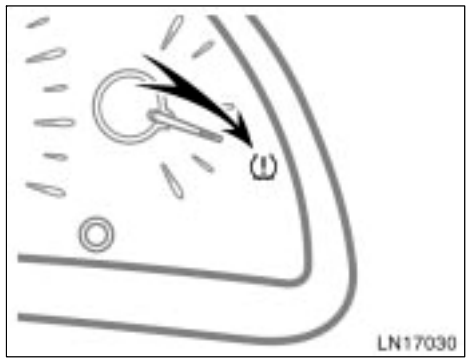
Tire pressure warning system

The tire pressure warning system warns you that the tire inflation pressure is low.

The tire pressure warning system is not a substitute for checking normal tire inflation pressure. Check the tire inflation pressure with a tire pressure gauge regularly.

⚠ CAUTION

The warning system may not activate immediately if bursts or sudden air leakage should occur.



The tire pressure warning light comes on when the “POWER” switch is set at ON and goes off after a few seconds. This means the tire pressure warning light is operating properly. If the tire inflation pressure becomes low, the light comes on again. In this case, adjusting the tire inflation pressure will turn off the light after a few minutes. If the light comes on after blinking for 1 minute, the tire pressure warning system is not working properly.

Indicator status	Meanings	Do this
ON	Tire inflation pressure is low	Adjust the tire inflation pressure
ON after blinking for 1 minute	Tire pressure warning system malfunction	Have the system checked at your Toyota dealer

⚠ CAUTION

If the tire pressure warning light comes on, be sure to observe the following precautions. Failure to do so could cause loss of vehicle control and result in death or serious injury.

- **Stop your vehicle in a safe place as soon as possible. Adjust the tire inflation pressure immediately.**
- **If the tire pressure warning light comes on even after tire inflation pressure adjustment, it is probable that you have a flat tire. Check the tires. If the tire is flat, change to the spare tire and have the flat tire repaired by the nearest Toyota dealer.**
- **Avoid abrupt maneuvering and braking. If the vehicle tires deteriorate, you could lose control of the steering wheel or the brakes.**

The tire pressure warning light may turn on due to natural causes such as natural air leaks or tire inflation pressure changes caused by temperature. In this case, adjusting the tire inflation pressure will turn off the light after a few minutes.

Pushing the tire pressure warning reset switch does not turn off the tire pressure warning light. Adjusting the tire inflation pressure will turn off the light.

The compact spare tire is not equipped with the tire pressure warning valve and transmitter. If a tire goes flat, the warning light will not turn off even though the flat tire is replaced with the spare tire. Replace the spare tire with the repaired tire and adjust the proper tire inflation pressure. The tire pressure warning light will turn off after a few minutes.

⚠ CAUTION

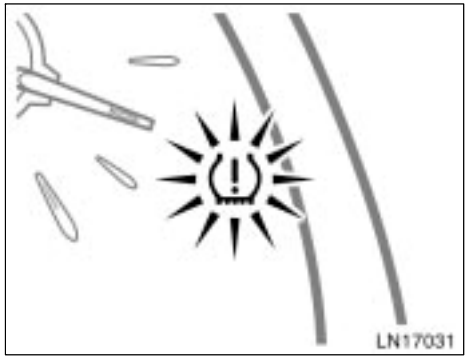
Each tire, including the spare (if provided), should be checked monthly when cold and inflated to the inflation pressure recommended by the vehicle manufacturer on the vehicle placard or tire inflation pressure label (tire and load information label). (If your vehicle has tires of a different size than the size indicated on the vehicle placard or tire inflation pressure label (tire and load information label), you should determine the proper tire inflation pressure for those tires.)

As an added safety feature, your vehicle has been equipped with a tire pressure monitoring system (TPMS–tire pressure warning system) that illuminates a low tire pressure telltale (tire pressure warning light) when one or more of your tires is significantly under−inflated. Accordingly, when the low tire pressure telltale (tire pressure warning light) illuminates, you should stop and check your tires as soon as possible, and inflate them to the proper pressure. Driving on a significantly under−inflated tire causes the tire to overheat and can lead to tire failure. Under−inflation also reduces fuel efficiency and tire tread life, and may affect the vehicle’s handling and stopping ability.

Please note that the TPMS (tire pressure warning system) is not a substitute for proper tire maintenance, and it is the driver’s responsibility to maintain correct tire pressure, even if under−inflation has not reached the level to trigger illumination of the TPMS low tire pressure telltale (tire pressure warning light).

NOTICE

- ***Do not use liquid sealants for a flat tire as tire pressure warning valve and transmitter will be damaged.***
- ***When the tires must be repaired or replaced, have them repaired or replaced by the nearest Toyota dealer or authorized tire dealer. The tire pressure warning valves and transmitters will be affected by the installation or removal of tires.***



IF THE TIRE PRESSURE WARNING LIGHT BLINKS (comes on after blinking for 1 minute)...

If the tire pressure warning light blinks (comes on after blinking for 1 minute) when the “POWER” switch is set at ON, the tire pressure warning system is not working properly.

The system will be disabled in the following conditions:
(When the condition becomes normal, the system will work properly.)

- If tires not equipped with tire pressure warning valves and transmitters are used.

- If the ID code on the tire pressure warning valves and transmitters is not registered on the tire pressure warning ECU.
- If electronic devices or facilities using similar radio wave frequencies are nearby.
- If a radio set at similar frequencies is in use in the vehicle.
- If a window tint that affects the radio wave signals is installed.
- If there is a lot of snow or ice on the vehicle, in particular around the wheels or wheel housings.
- If non−genuine Toyota wheels are used.
- If tire chains are used.
- If the tire inflation pressure is more than 500 kPa (5.1 kgf/cm^2 or bar, 73 psi).

If the tire pressure warning light comes on after blinking for 1 minute frequently when the “POWER” switch is set at ON, have it checked by your Toyota dealer.

Even if you use genuine wheels, the tire pressure warning system may not work properly with some types of tires.

Pushing the tire pressure warning reset switch should not turn off the tire pressure warning light.

For vehicles sold in U.S.A.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

NOTICE:
This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

−Reorient or relocate the receiving antenna.

−Increase the separation between the equipment and receiver.

−Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

−Consult the dealer or an experienced radio/TV technician for help.

FCC WARNING:
Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

For vehicles sold in Canada

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

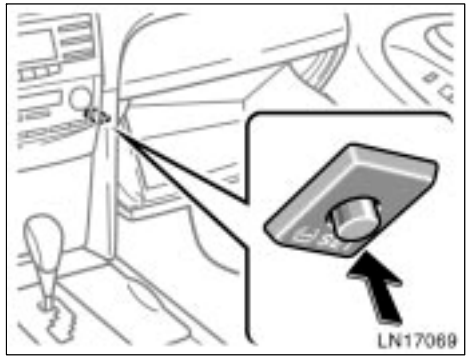
REPLACING TIRES AND WHEELS

When replacing the tires and wheels, be sure to install tire pressure warning valves and transmitters. ID codes on the tire pressure warning valves and transmitters are registered on the tire pressure warning ECU. When replacing a tire pressure warning valve and transmitter, it is necessary to register the ID code of tire pressure warning valve and transmitter. Have the ID code registered by your Toyota dealer.

If the ID code is not registered the system will not work properly, After about 1 hour, the tire pressure warning light come on after blinking for 1 minute to indicate a system malfunction.

NOTICE

When the tires or tire pressure warning valves and transmitters must be replaced, have them replaced by your Toyota dealer. The tire pressure warning valves and transmitters will be affected by the installation or removal of tires.



TIRE PRESSURE WARNING RESET SWITCH

When initializing the system, the present tire inflation pressure is stored as standard. The tire pressure warning system determines decreased air pressure by comparing the present and the standard tire inflation pressures. When you change the set tire inflation pressure, it is necessary to initialize the tire pressure warning system.

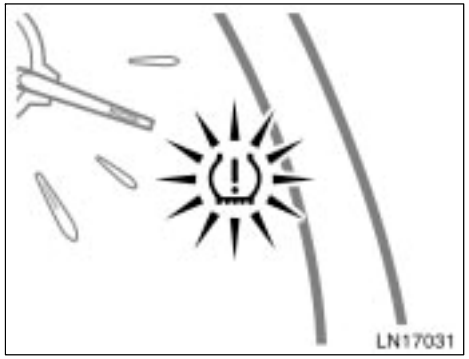
- When rotating the tires on vehicles differing with front and rear tire inflation pressures.
- When changing the tire size.

To initialize the system, perform the following:

1. Park the vehicle in a safe place and turn the “POWER” switch off.
2. Adjust the pressure of all the installed tires to the specified cold tire inflation pressure level. (See “Tires” on page 385 in Section 8.)
3. Press the “POWER” switch and set it at ON.
4. Open the glove box, and push and hold the tire pressure warning reset switch until the tire pressure warning light blinks slowly three times.
5. Leave the system for a few minutes with the “POWER” switch set at ON and then turn the “POWER” switch off.

If you push the tire pressure reset switch while vehicle is moving, initialization is not performed.

If you push the tire pressure reset switch accidentally and initialization is performed, adjust the tire inflation pressure to the specified level and initialize the system again.

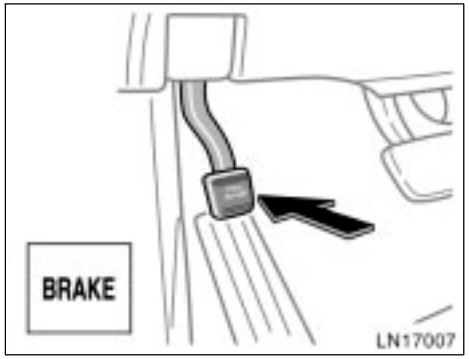


If the tire pressure warning light does not blink slowly three times when you push and hold the reset switch, initialization has failed and the tire pressure warning system may not work properly. In this case, initialize the system again. If initialization cannot be performed, have the system checked at your Toyota dealer.

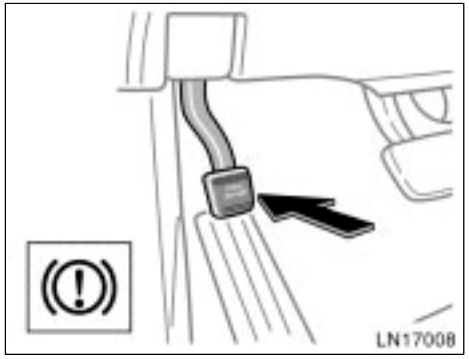
⚠ CAUTION

Do not push the reset switch without adjusting the tire inflation pressure to the specified level. Otherwise, the tire pressure warning light may not come on even if the tire inflation pressure is low, or it may come on when the tire inflation pressure is actually normal.

Parking brake



Type A



Type B

When parking, firmly apply the parking brake to avoid inadvertent creeping.

To set: Fully depress the parking brake pedal. For better holding power, first depress the brake pedal and hold it while setting the parking brake.
To release: Depress the parking brake pedal while depressing the brake pedal.

To remind you that the parking brake is set, the parking brake reminder light in the instrument panel remains on until you release the parking brake.

A warning message “PARK BRAKE” appears on the multi−information display and a warning tone sounds to remind you to release the parking brake when the vehicle speed rises above 5 km/h (3 mph) with the parking brake is applied.

⚠ CAUTION

Before driving, be sure the parking brake is fully released and the parking brake reminder light is off.

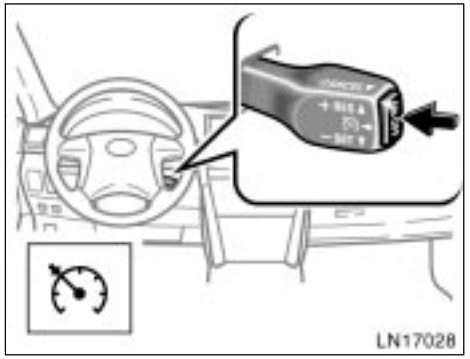
Cruise control

The cruise control is designed to maintain a set cruising speed without requiring the driver to operate the accelerator. Cruising speed can be set to any speed above 40 km/h (25 mph).

Within the limits of the vehicle capabilities, cruising speed can be maintained up or down grades. However, changes in vehicle speed may occur on steeper grades.

⚠ CAUTION

- **To help maintain maximum control of your vehicle, do not use the cruise control when driving in heavy or varying traffic, or on slippery (rainy, icy or snow−covered) or winding roads.**
- **Avoid vehicle speed increases when driving downhill. If the vehicle speed is too fast in relation to the cruise control set speed, cancel the cruise control then downshift the transmission to use engine braking to slow down.**



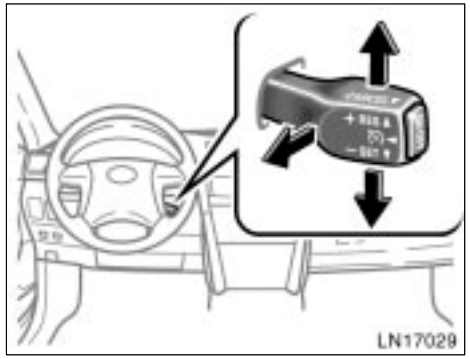
TURNING THE SYSTEM ON AND OFF

To turn the cruise control on, press the “ON−OFF” button. The cruise control indicator light on the instrument panel will come on to indicate that the cruise control is operational. Pressing the “ON−OFF” button again turns the system off.

When the system is turned off, cruising speed must be reset when the cruise control is turned on again.

⚠ CAUTION

To avoid accidentally engaging the cruise control, turn the system off when it is not in use. Make sure the cruise control indicator light is off.



SETTING THE CRUISING SPEED

The transmission must be in “D” before you set the cruising speed.

Bring your vehicle to the desired speed, push the lever down in the “− SET” direction and release it. This sets the vehicle at that speed. If the speed is not satisfactory, tap the lever up for a faster speed, or tap it down for a slower speed. Each tap changes the set speed by 1.6 km/h (1.0 mph). You can now take your foot off the accelerator pedal.

If you need acceleration—for example, when passing—depress the accelerator pedal enough for the vehicle to exceed the set speed. When you release it, the vehicle will return to the speed set prior to the acceleration.

CANCELLING THE CRUISE CONTROL

The cruise control may be temporarily cancelled by the driver or by the system itself under certain circumstances. Temporary cancellation allows the set cruising speed to remain in memory.

The cruise control can be temporarily cancelled by doing the following:

- Pulling the lever in the “CANCEL” direction and releasing it
- Depressing the brake pedal

Under certain circumstances, the cruise control is temporarily cancelled:

- When vehicle speed falls below 40 km/h (25 mph)
- When vehicle stability control is activated

When vehicle speed drops 16 km/h (10 mph) below the set speed, the cruise control is cancelled and the set speed is erased from memory.

The cruise control indicator light remains on to indicate that the system is still in operation.

To turn the cruise control off, press the “ON−OFF” button. Make sure the cruise control indicator light is off.

If the cruise control automatically cancels out other than for the above cases, have your vehicle checked by your Toyota dealer at the earliest opportunity.

RESUMING THE CRUISE CONTROL

If the cruise control is temporarily cancelled, the cruising speed can be resumed by pushing the lever up in the “+ RES” direction.

Vehicle speed must be above 40 km/h (25 mph).

RESETTING TO A FASTER SPEED

Push the lever up in the “+ RES” direction and hold it. Release the lever when the desired speed is attained. While the lever is held up, the vehicle will gradually gain speed.

However, a faster way to reset is to accelerate the vehicle and then push the lever down in the “− SET” direction.

RESETTING TO A SLOWER SPEED

Push the lever down in the “− SET” direction and hold it. Release the lever when the desired speed is attained. While the lever is held down, the vehicle speed will gradually decrease.

However, a faster way to reset is to depress the brake pedal and then push the lever down in the “− SET” direction.

CRUISE CONTROL FAILURE WARNING

If the cruise control indicator light flashes when using the cruise control, press the “ON−OFF” button to turn the system off and then press it again to turn it on.

If any of the following conditions then occurs, there is some trouble in the cruise control system.

- The indicator light does not come on.
- The indicator light flashes again.
- The indicator light goes out after it comes on.

If this is the case, contact your Toyota dealer and have your vehicle inspected.

SECTION 1-8

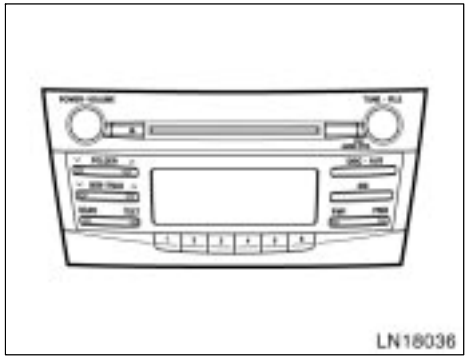
OPERATION OF INSTRUMENTS AND CONTROLS

Audio and hands−free phone systems

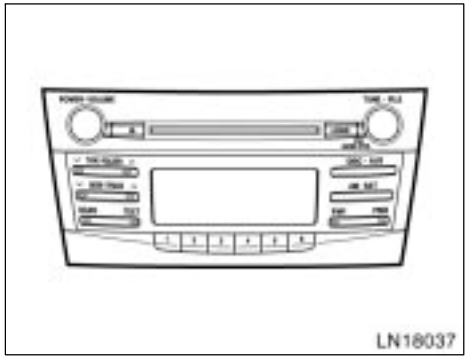
Reference 181
Using your audio system 181
Audio remote controls 201
AUX adapter 202
Audio system operating hints 203
Hands−free phone system 210

For vehicle equipped with Navigation system, please refer to the separate “Navigation System Owner’s Manual”.

Reference



Type 1: AM·FM radio/compact disc player (with compact disc changer controller)



Type 2: AM·FM radio/compact disc player with changer (with XM satellite radio* controller)

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

Using your audio system— —Some basics

This section describes some of the basic features on Toyota audio systems. Some information may not pertain to your system.

Your audio system works when the ignition switch is set at ACC or ON.

⚠ CAUTION

For vehicles sold in U.S.A. and Canada:

- **Part 15 of the FCC Rules**

FCC Warning:
Any unauthorized changes or modifications to this equipment will void the user’s authority to operate this device.

- **Laser products**
  - **Do not take this unit apart or attempt to make any changes yourself. This is an intricate unit that uses a laser pickup to retrieve information from the surface of compact discs. The laser is carefully shielded so that its rays remain inside the cabinet. Therefore, never try to disassemble the player or alter any of its parts since you may be exposed to laser rays and dangerous voltages.**
  - **This product utilizes a laser. Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.**

TURNING THE SYSTEM ON AND OFF

Push “POWER·VOLUME” to turn the audio system on and off.

Push “AM”, “FM1”, “FM2”, “AM·SAT”* or “DISC·AUX” to turn on that function without pushing “POWER·VOLUME”.

You can turn on the compact disc player by inserting a compact disc.

You can turn off the compact disc player by ejecting the compact disc. If the audio system was previously off, then the entire audio system will be turned off when you eject the compact disc. If the radio was previously on, it will come on again.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

SWITCHING BETWEEN FUNCTIONS

Push “AM”, “FM1”, “FM2”, “AM·SAT”* or “DISC·AUX” if the system is already on but you want to switch from one function to other.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

LISTENING TO THE XM SATELLITE RADIO BROADCAST* (type 2)

To listen to a satellite radio broadcast in your vehicle, an additional genuine Toyota satellite receiver and antenna (or equivalents) must be purchased and installed. A subscription to the XM satellite radio service is also necessary.

How to subscribe to an XM satellite radio

An XM satellite radio is a tuner designed exclusively to receive broadcasts provided under a separate subscription. Availability is limited to the 48 contiguous states.

How to subscribe:
You must enter into a separate service agreement with the XM radio in order to receive satellite broadcast programming in the vehicle. Additional activation and service subscription fees apply that are not included in the purchase price of the vehicle and optional digital satellite tuner. For complete information on subscription rates and terms, or to subscribe to the XM radio, visit XM on the web at www.xmradio.com or call an XM’s Listener Care at (800) 967−2346. The XM radio is solely responsible for the quality, availability and content of the satellite radio services provided, which are subject to the terms and conditions of the XM radio customer service agreement.

Customers should have their radio ID ready; the radio ID can be found by tuning to “channel 000” on the radio. For details, see “Displaying the radio ID” below.

All fees and programming are the responsibility of the XM satellite radio and are subject to change.

Satellite tuner technology notice:
Toyota’s satellite radio tuners are awarded Type Approval Certificates from XM Satellite Radio Inc. as proof of compatibility with the services offered by the XM satellite radio.

Displaying the radio ID

Each XM tuner is identified with a unique radio ID. You will need the radio ID when activating XM service or when reporting a problem.

If you select the “CH 000” using the “TUNE·FILE” knob, the ID code of 8 alphanumeric characters appears. If you select another channel, display of the ID code is canceled. The channel (000) alternates the display between the radio ID and the specific radio ID code.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

TONE AND BALANCE

For details about your system’s tone and balance controls, see the description of your own system.

SRS ® (type 1 only)

The audio systems utilize SRS FOCUS® and SRS TruBass® audio enhancement technologies, under license from SRS Labs, Inc., in all mode except AM radio mode.

FOCUS, TruBass, SRS and symbol are trademarks of SRS Labs, Inc.
FOCUS and TruBass technologies are incorporated under license from SRS Labs, Inc.

Tone

How good an audio program sounds to you is largely determined by the mix of the treble, midrange (type 2 only), and bass levels. In fact, different kinds of music and vocal programs usually sound better with different mixes of treble, midrange and bass.

You can adjust sound characteristics. Different sound characteristics can be recorded for each audio source.

Balance

A good balance of the left and right stereo channels and of the front and rear sound levels is also important.

Keep in mind that if you are listening to a stereo recording or broadcast, changing the right/left balance will increase the volume of one group of sounds while decreasing the volume of other.

YOUR RADIO ANTENNA

Your vehicle has an antenna printed on the inside of the rear window.

NOTICE

Putting a film (especially a conductive or metallic film) on the rear window will noticeably reduce the sensitivity of the radio.

YOUR COMPACT DISC PLAYER (type 1)

When you insert a disc, gently push it in with the label side up. The compact disc player will play from track 1 through to the end of the disc. Then it will play from track 1 again.

NOTICE

Never try to disassemble or oil any part of the compact disc player. Do not insert anything other than compact discs into the slot.

8 cm (3 in.) compact disc singles

Your compact disc player does not need an adaptor to play compact disc singles. Compact disc singles are about 8 cm (3 in.) in diameter−smaller than standard discs.

NOTICE

Do not use an adaptor for compact disc singles—it could cause tracking errors or interfere with the ejection of compact discs.

YOUR COMPACT DISC PLAYER WITH CHANGER (type 2)

When you insert a disc, push the “LOAD” button and gently push the disc in with the label side up. This compact disc player can store up to six discs. The player will play from track 1 through to the end of the disc. Then it will play from track 1 of the next disc.

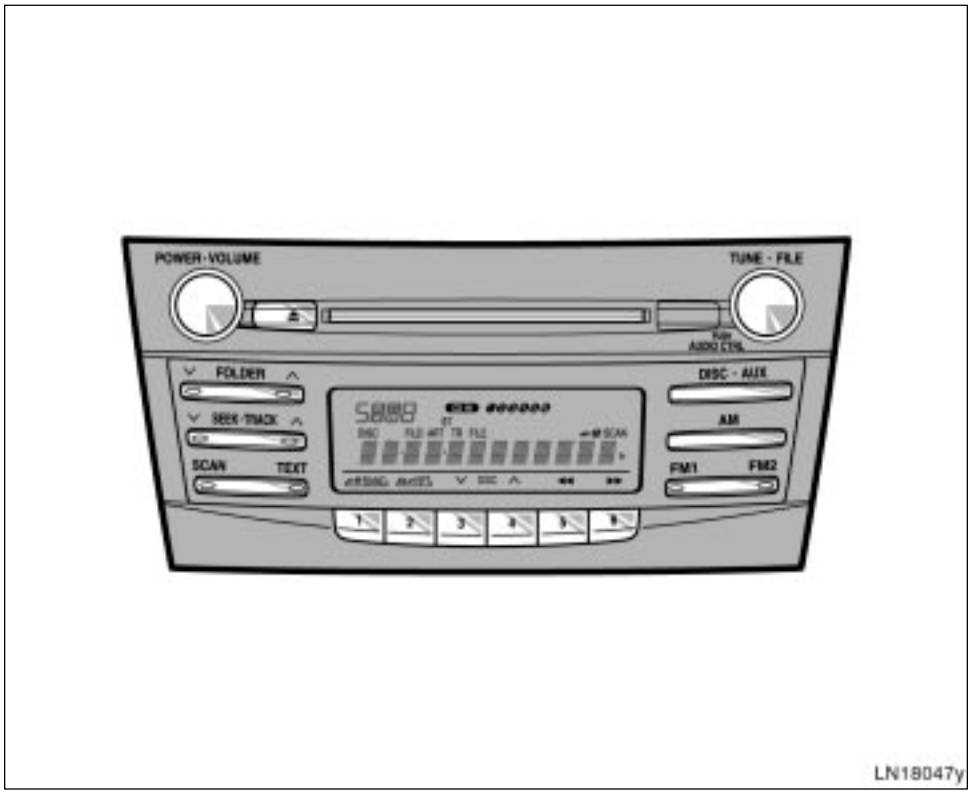
The player is intended for use with 12 cm (4.7 in.) discs only.

NOTICE

- ***Do not stack up two discs for insertion, or it will cause damage to the compact disc player. Insert only one compact disc into slot at a time.***
- ***Never try to disassemble or oil any part of the compact disc player. Do not insert anything other than compact discs into the slot.***

—Controls and features

▶Type 1



Details of specific buttons, controls and features are described in the alphabetical list that follows.

1 2 3 4 5 6 (Preset buttons)

These buttons are used to preset and tune in radio stations.

To preset a station to a button: Tune in the desired station. (See “TUNE·FILE” or “SEEK·TRACK”.) Push and hold down the button until you hear a beep—this will set the station to the button. The preset button number will appear on the display.

To recall a preset station: Push the button for the station you want. The preset button number and station frequency will appear on the display.

These systems can store one AM and two FM stations for each button. (The display will show “AM”, “FM1” or “FM2” when you push “AM”, “FM1” or “FM2” button.)

⏏ (Eject button)

Push the compact disc eject button to eject a compact disc.

◀◀/▶▶ (Reverse/Fast forward button)

Push and hold “▶▶” (preset button 6) or “◀◀” (preset button 5) to fast forward or reverse within a compact disc. When you release the button, the player will resume playing.

AM

Push the “AM” button to turn on the radio and select the AM band. “AM” will appear on the display.

AUDIO CTRL (Tone and sound balance controls)

Each time you push the “AUDIO CTRL” knob, the mode changes. To adjust the tone and balance, turn the knob.

BAS: Adjusts low−pitched tones. The display ranges from −5 to 5.

TRE: Adjusts high−pitched tones. The display ranges from −5 to 5.

FAD: Adjusts the sound balance between the front and rear speakers. The display ranges from F7 to R7.

BAL: Adjusts the sound balance between the right and left speakers. The display ranges from L7 to R7.

Switching over the Speed Automatic Sound Levelizer (ASL) level

ASL: The Automatic Sound Levelizer can be turned on by turning the knob. In addition, turning the knob allows you to select from LOW, MID, and HIGH volume and tone settings. The ASL system automatically adjusts volume and tone in accordance with the driving speed.

DISC·AUX (Compact disc)

Push the “DISC·AUX” button to play a compact disc.

When the audio system is set to compact disc operation, the display shows the track number currently being played.

To switch between CD and AUX (external device) modes, press the “DISC·AUX” button. The AUX mode is only available when AUX adapter is connected to the system. When the AUX adapter is in use, “AUX” will appear on the display.

Error messages

If the player malfunctions, your audio system will display following error messages.

“WAIT”: The compact disc player unit may be too hot. Allow the player to cool down.

“ERROR 1”: The disc may be dirty, damaged or inserted incorrectly (up−side down). Clean the disc and re−insert it.

“NO DISC”: The compact disc changer of the separate unit is empty. Insert a disc.

“ERROR 3”: There is a problem inside the system.

“ERROR 4”: Over−current. Ask your Toyota dealer to inspect.

“CD OPEN”: The compact disc changer lid of the separate unit is open. Close the compact disc changer lid.

If “NO MUSIC” appears on the display, it indicates that a disc with no MP3/WMA data has been inserted. Remove the disc from the player and insert an MP3/WMA data disc.

If the malfunction still exists, take your vehicle to your Toyota dealer.

∨ DISC ∧

With compact disc changer only—

Use these buttons to select a disc you want to listen to.

Push “∨” (preset button 3) or “∧” (preset button 4) until the number of the disc you want to listen appears on the display.

FM1 FM2

Push the “FM1” or “FM2” button to turn on the radio and select the FM band. “FM1” or “FM2” will appear on the display. This system allows you to set twelve FM stations, two for each of the preset button.

FOLDER (Folder up/down)

To skip up or down to a different folder:
Push “∧” or “∨” side of the “FOLDER” several times until the number of the folder you want to listen to appears on the display.

To jump to the first file in the first folder:
Push and hold the “∨” side of the button until you hear a beep.

When playing a disc featuring both audio data (CD−DA) and MP3/WMA files, audio data (CD−DA) is played.

POWER·VOLUME (Power and Volume)

Push “POWER·VOLUME” to turn the audio system on and off. Turn “POWER·VOLUME” to adjust the volume.

RAND (Random)

Compact disc player

There are two random features—you can either listen to the tracks on one compact disc in random order, or listen to the tracks on all the compact discs in the magazine in random order.

To play the tracks on one disc in random order:
Quickly push and release “RAND” (preset button 1). “RAND” will appear on the display and the player will perform the tracks on the disc you are listening to in random order. To turn off the random feature, push this button again.

With compact disc changer only—

To play all the tracks in the magazine in random order:
Push and hold “RAND” (preset button 1) until you hear a beep. “RAND” will appear on the display and the player will perform all the tracks on all the discs in the magazine in random order. To turn off the random feature, push this button again.

MP3/WMA player

There are two random playback features—you can either listen to all of the files on the compact discs in random order. You can also listen to the files in a single folder in random order.

To randomly play the files in a folder:
Quickly push and release “RAND” (preset button 1). “RAND” will appear on the display.

To randomly play all of the files on the compact disc:
Push and hold “RAND” (preset button 1) until you hear a beep. “RAND” will appear on the display and the player will play all of the files on the disc in random order. To turn off the random playback feature, push this button again.

RPT (Repeat)

Compact disc player

There are two repeat features—you can either replay a disc track or a whole compact disc.

Repeating a track:
Quickly push and release “RPT” (preset button 2) while the track is playing. “RPT” will appear on the display. When the track ends, it will automatically replay. To turn off the repeat feature, push this button again.

With compact disc changer only—

Repeating a disc:
Push and hold “RPT” (preset button 2) until you hear a beep. “RPT” will appear on the display. The player will repeat all the tracks on the disc you are listening to. When the disc ends, the player will automatically go back to the first track on the disc and replay. To turn off the repeat feature, push this button again.

MP3/WMA player

There are two repeat features—you can repeat a signal file or an entire folder.

Repeating a file:
Quickly push and release “RPT” (preset button 2) while the file is playing. “RPT” will appear on the display. When the file ends, it will repeat automatically. This process will be continued until you push the button again to turn off the repeat feature.

Repeating a folder:
Push and hold “RPT” (preset button 2) until you hear a beep. “RPT” will appear on the display. The player will repeat all of the files in the folder. When the last file in the folder ends, the folder will repeat from the beginning. To turn off the repeat feature, push this button again.

SCAN

Radio

You can either scan all the frequencies on a band or scan only the preset stations for that band.

To scan the preset stations:
Push and hold the “SCAN” button until you hear a beep. The radio will tune in the next preset station up the band, stay there for 5 seconds, and then move to the next preset station. To stop scanning, push this button again.

To scan all the frequencies:
Quickly push and release the “SCAN” button. The radio will find the next station up the station band, stay there for 5 seconds, and then scan again to the next station. To stop scanning, push this button again.

Compact disc player

There are two scan features—you can either scan the tracks on a specific disc or scan the first tracks of all the discs in the magazine.

Scanning the tracks on a disc:
Quickly push and release the “SCAN” button. “SCAN” will appear on the display and the player will scan all the tracks on the disc you are listening to. To stop scanning, push this button again. If the player scanned all the tracks on the disc, it will stop scanning.

With compact disc changer only—

Scanning the first tracks of all the discs in the magazine:
Push the “SCAN” button until you hear a beep. “SCAN” will appear on the display and the player will scan the first track on the next disc. To stop scanning, push this button again. If the player has scanned all the discs, it will stop scanning.

MP3/WMA player

There are two scan features—you can either scan the files in a folder on a specific disc or scan the first file of all the folder.

Scanning the files on a folder:
Quickly push and release “SCAN”. “SCAN” will appear on the display and the player will scan all the files in the folder you are listening to. To select a file, push the “SCAN” again. After all the tracks on the disc have been scanned in one pass, normal play resumes.

Scanning the first file of all the folders:
Push “SCAN” until you hear a beep. “SCAN” will appear on the display and the player will scan the first file of the next folder. To select a folder, push the “SCAN” again. After all the folders have been scanned in one pass, normal play resumes.

SEEK·TRACK (Seeking/Tracking up/down)

Radio

In the seek mode, the radio finds and plays the next station up or down the station band.

To seek the next station, quickly push and release “∧” or “∨” side of the “SEEK·TRACK” button. Do this again to find the station after that.

Compact disc player

Use this button to skip up or down to a different track.

Push “∧” or “∨” side of the “SEEK·TRACK” button until the number of the track you want to listen to appears on the display. If you want to return to the beginning of the current track, quickly push the “∨” side of the button one time.

MP3/WMA player

Use this button to file up or down to a different file.

Push “∧” or “∨” side of the “SEEK·TRACK” several times until the file you want to listen to appears on the display. If you want to return to the beginning of the current file, push the “∨” side of the button one time.

ST (Stereo reception) display

Your radio automatically changes to stereo reception when a stereo broadcast is received. “ST” appears on the display. If the signal becomes weak, the radio reduces the amount of channel separation to prevent the weak signal from creating noise. If the signal becomes extremely weak, the radio switches from stereo to mono reception.

TEXT

Compact disc player

This button is used to change the display for the compact disc that contains text data.

To change the display, quickly push and release the “TEXT” button while the compact disc is playing. The display changes in the order from the elapsed time to disc title to track title, then back to the elapsed time.

If this button is pushed while a compact disc that does not contain text data is playing, “NO TITLE” will appear on the display.

If the entire disc or track title does not appear on the display, push and hold the button until you hear a beep. The rest of the title will appear.

MP3/WMA player

This button is used to change the display for the MP3/WMA file that contains text data.

To change the display, quickly push and release the “TEXT” button while the MP3/WMA file is playing. The display changes in the order from the elapsed time to folder name to file name to album title to track title to artist name, then back to the elapsed time.

If this button is pushed while an MP3/WMA file that does not contain text data is playing, “NO TITLE” will appear on the display.

If the entire text data is not displayed, push and hold it until you hear a beep. The rest of the text data will appear.

TUNE·FILE (Tuning and File up/down)

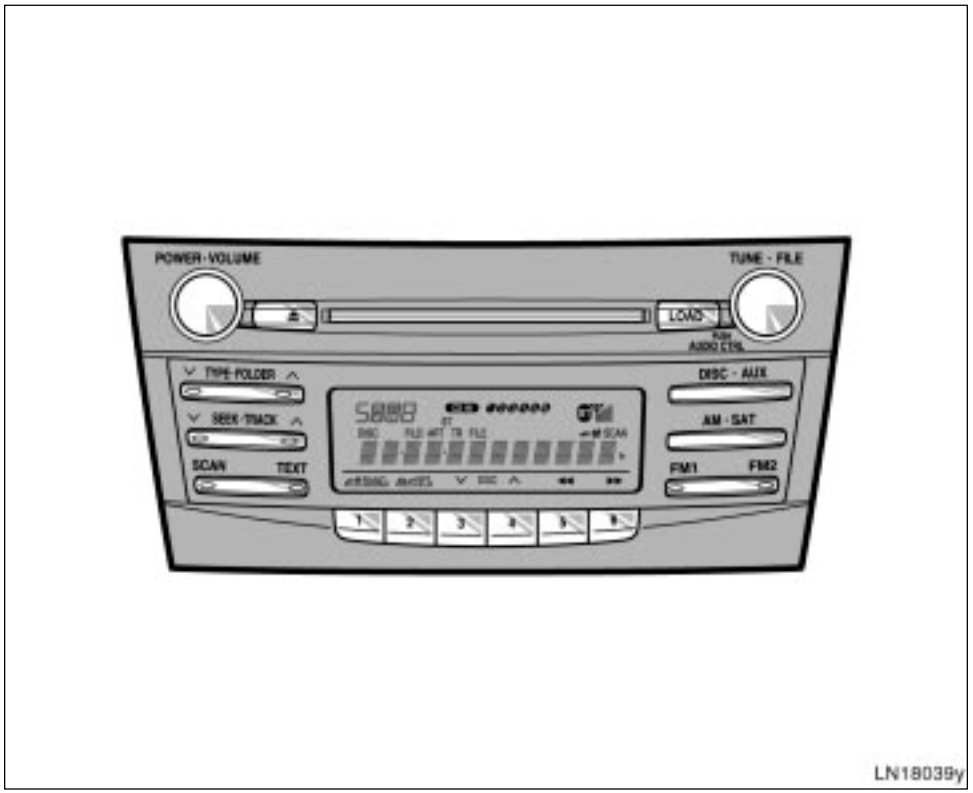
Radio

Turn the “TUNE·FILE” knob clockwise to step up the frequency. Turn the knob counterclockwise to step down the frequency.

MP3/WMA player

Turn the “TUNE·FILE” knob clockwise to file up. Turn the knob counterclockwise to file down.

▶**Type 2**



Details of specific buttons, controls and features are described in the alphabetical list that follows.

1 2 3 4 5 6 (Preset buttons)

These buttons are used to preset and tune in radio stations.

To preset a station to a button: Tune in the desired station. (See “TUNE·FILE” or “SEEK·TRACK”.) Push and hold down the button until you hear a beep—this will set the station to the button. The preset button number will appear on the display.

To recall a preset station: Push the button for the station you want. The preset button number and station frequency will appear on the display.

These systems can store one AM and two FM stations for each button. (The display will show “AM”, “FM1” or “FM2” when you push “AM·SAT”, “FM1” or “FM2” button.)

XM satellite radio*—

These buttons are used to preset and tune in radio channels.

To preset a channel to a button: Tune in the desired channel. (See “TUNE·FILE” or “SEEK·TRACK”.) Push and hold down the button until you hear a beep—this will set the channel to the button. The preset button number will appear on the display.

To recall a preset channel: Push the button for the channel you want. The preset button number and channel number will appear on the display.

This radio can store three XM channels for each button. (The display will show “SAT1”, “SAT2” or “SAT3” when you push “AM·SAT” button.)

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

⏏ (Eject button)

This button is used to eject one or all compact discs.

To eject the current compact disc, push and release the compact disc eject button.

To eject a specific disc, push “∨” (preset button 3) or “∧” (preset button 4) until the number of the disc you want to eject is displayed. Push and release the eject button.

To eject all discs at a time, press and hold the eject button until you hear a beep. The last compact disc played before pushing the button will be ejected first. If the ejected disc is not removed for a long time, the eject function will be cancelled.

◀◀/▶▶ (Reverse/Fast forward button)

Push and hold “▶▶” (preset button 6) or “◀◀” (preset button 5) to fast forward or reverse within a compact disc. When you release the button, the player will resume playing.

AM·SAT (AM band and XM satellite radio*)

Push the “AM·SAT” button to turn on the radio and select the AM or XM band. “AM”, “SAT1”, “SAT2” or “SAT3” will appear on the display.

Error messages

If the satellite radio tuner malfunctions, your audio system will display following error messages.

“ANTENNA”:

- The XM antenna is not connected. Check whether the XM antenna cable is attached securely.
- A short−circuit occurs in the antenna or the surrounding antenna cable. See a Toyota certified dealer.

“UPDATING”:

- You have not subscribed to the XM satellite radio. The radio is being updated with the latest encryption code. Contact the XM satellite radio for subscription information. When a contact is canceled, you can choose the “CH000” and all free−to−air channels.
- The premium channel you selected is not authorized. Wait for about 2 seconds until the radio returns to the previous channel or “CH001”. If it does not change automatically, select another channel. If you want to listen to the premium channel, contact the XM satellite radio.

“NO SIGNAL”: The XM signal is too weak at the current location. Wait until your vehicle reaches a location with a stronger signal.

“LOADING”: The unit is acquiring audio or program information. Wait until the unit has received the information.

“OFF AIR”: The channel you selected is not broadcasting any programming. Select another channel.

“− − −”: The channel you selected is no longer available. Wait for about 2 seconds until the radio returns to the previous channel or “CH001”. If it does not change automatically, select another channel.

The XM Listener Care Center is also available on the phone, please call (800) 967−2346 during the following hours:
Monday—Saturday: 7 a.m.—1 a.m.
Sunday: 12 p.m.—12 a.m.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

AUDIO CTRL (Tone and sound balance controls)

Each time you push the “AUDIO CTRL” knob, the mode changes. To adjust the tone and balance, turn the knob.

BAS: Adjusts low−pitched tones. The display ranges from −5 to 5.

MID: Adjusts mid−pitched tones. The display ranges from −5 to 5.

TRE: Adjusts high−pitched tones. The display ranges from −5 to 5.

FAD: Adjusts the sound balance between the front and rear speakers. The display ranges from F7 to R7.

BAL: Adjusts the sound balance between the right and left speakers. The display ranges from L7 to R7.

Switching over the Speed Automatic Sound Levelizer (ASL) level

ASL: The ASL system automatically adjusts volume and tone in accordance with the driving speed.

The ASL system can be turned on or off. Pushing and holding the “TUNE·FILE” knob shows the current status of the ASL system on the display. Turn the “TUNE·FILE” knob to turn on or off the system.

DISC·AUX (Compact disc)

Push the “DISC·AUX” button to play a compact disc.

When the audio system is set to compact disc operation, the display shows the track, or track and disc number currently being played.

To switch between CD and AUX (external device) modes, press the “DISC·AUX” button. The AUX mode is only available when AUX adapter is connected to the system. When the AUX adapter is in use, “AUX” will appear on the display.

Error messages

If the player malfunctions, your audio system will display following error messages.

“WAIT”: The compact disc player unit may be too hot. Allow the player to cool down.

“ERROR 1”: The disc may be dirty, damaged or inserted incorrectly (up−side down). Clean the disc and re−insert it.

“NO DISC”: Eject the disc or magazine. Set the disc or magazine again.

“ERROR 3”: There is a problem inside the system.

“ERROR 4”: Over−current. Ask your Toyota dealer to inspect.

If “NO MUSIC” appears on the display, it indicates that a disc with no MP3/WMA data has been inserted. Remove the disc from the player and insert an MP3/WMA data disc.

If the malfunction still exists, take your vehicle to your Toyota dealer.

∨ DISC ∧

Use these buttons to select a disc you want to listen to.

Push “∨” (preset button 3) or “∧” (preset button 4) until the number of the disc you want to listen appears on the display.

FM1 FM2

Push the “FM1” or “FM2” button to turn on the radio and select the FM band. “FM1” or “FM2” will appear on the display. This system allows you to set twelve FM stations, two for each of the preset button.

LOAD

This button is used to load the compact discs in the compact disc player. This player can store up to six discs.

To load one compact disc only, quickly push and release the button. When the indicators on both sides of the slot turn green, insert a compact disc. After the disc is loaded, the shutter of the slot will close.

If no compact disc is inserted, the shutter will close after 15 seconds.

To load multiple compact discs, push and hold the button (until you hear a beep when the audio system is on). When the indicators on both sides of the slot turn green, insert the first compact disc. After the disc is loaded, the shutter of the slot will close. After a few seconds, the shutter will automatically open again and the indicators will turn green so the next disc can be inserted. The same process can be applied for loading the rest of the discs. If the player is full of discs, “DISC FULL” will appear on the display.

If no compact disc is inserted, the shutter will close after 15 seconds.

POWER·VOLUME (Power and Volume)

Push “POWER·VOLUME” to turn the audio system on and off. Turn “POWER·VOLUME” to adjust the volume.

RAND (Random)

Compact disc player

There are two random features—you can either listen to the tracks on one compact disc in random order, or listen to the tracks on all the compact discs in the magazine in random order.

To play the tracks on one disc in random order:
Quickly push and release “RAND” (preset button 1). “RAND” will appear on the display and the player will perform the tracks on the disc you are listening to in random order. To turn off the random feature, push this button again.

To play all the tracks in the magazine in random order:
Push and hold “RAND” (preset button 1) until you hear a beep. “RAND” will appear on the display and the player will perform all the tracks on all the discs in the magazine in random order. To turn off the random feature, push this button again.

MP3/WMA player

There are two random playback features—you can either listen to all of the files on the compact discs in random order. You can also listen to the files in a single folder in random order.

To randomly play the files in a folder:
Quickly push and release “RAND” (preset button 1). “RAND” will appear on the display.

To randomly play all of the files on the compact disc:
Push and hold “RAND” (preset button 1) until you hear a beep. “RAND” will appear on the display and the player will play all of the files on the disc in random order. To turn off the random playback feature, push this button again.

RPT (Repeat)

Compact disc player

There are two repeat features—you can either replay a disc track or a whole compact disc.

Repeating a track:
Quickly push and release “RPT” (preset button 2) while the track is playing. “RPT” will appear on the display. When the track ends, it will automatically replay. To turn off the repeat feature, push this button again.

Repeating a disc:
Push and hold “RPT” (preset button 2) until you hear a beep. “RPT” will appear on the display. The player will repeat all the tracks on the disc you are listening to. When the disc ends, the player will automatically go back to the first track on the disc and replay. To turn off the repeat feature, push this button again.

MP3/WMA player

There are two repeat features—you can repeat a signal file or an entire folder.

Repeating a file:
Quickly push and release “RPT” (preset button 2) while the file is playing. “RPT” will appear on the display. When the file ends, it will repeat automatically. This process will be continued until you push the button again to turn off the repeat feature.

Repeating a folder:
Push and hold “RPT” (preset button 2) until you hear a beep. “RPT” will appear on the display. The player will repeat all of the files in the folder. When the last file in the folder ends, the folder will repeat from the beginning. To turn off the repeat feature, push this button again.

SCAN

Radio

You can either scan all the frequencies on a band or scan only the preset stations for that band.

To scan the preset stations:
Push and hold the “SCAN” button until you hear a beep. The radio will tune in the next preset station up the band, stay there for 5 seconds, and then move to the next preset station. To stop scanning, push this button again.

To scan all the frequencies:
Quickly push and release the “SCAN” button. The radio will find the next station up the station band, stay there for 5 seconds, and then scan again to the next station. To stop scanning, push this button again.

XM satellite radio*—

You can either scan the currently selected channel category or scan only the preset channels for that band.

To scan the preset channels:
Push and hold the “SCAN” button until you hear a beep. “SCAN” appears on the display. The radio will tune in the next preset channel up the band, stay there for 5 seconds, and then move to the next preset channel. To stop scanning, push this button again.

To scan the currently selected channel category:
Quickly push and release the “SCAN” button. “SCAN” appears on the display. The radio will find the next channel in the same channel category up the band, stay there for 5 seconds, and then scan again. To stop scanning, push this button again.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

Compact disc player

There are two scan features—you can either scan the tracks on a specific disc or scan the first tracks of all the discs in the magazine.

Scanning the tracks on a disc:
Quickly push and release the “SCAN” button. “SCAN” will appear on the display and the player will scan all the tracks on the disc you are listening to. To stop scanning, push this button again. If the player scanned all the tracks on the disc, it will stop scanning.

Scanning the first tracks of all the discs in the magazine:
Push the “SCAN” button until you hear a beep. “SCAN” will appear on the display and the player will scan the first track on the next disc. To stop scanning, push this button again. If the player has scanned all the discs, it will stop scanning.

MP3/WMA player

There are two scan features—you can either scan the files in a folder on a specific disc or scan the first file of all the folder.

Scanning the files on a folder:
Quickly push and release “SCAN”. “SCAN” will appear on the display and the player will scan all the files in the folder you are listening to. To select a file, push the “SCAN” again. After all the tracks on the disc have been scanned in one pass, normal play resumes.

Scanning the first file of all the folders:
Push “SCAN” until you hear a beep. “SCAN” will appear on the display and the player will scan the first file of the next folder. To select a folder, push the “SCAN” again. After all the folders have been scanned in one pass, normal play resumes.

SEEK·TRACK (Seeking/Tracking up/down)

Radio

In the seek mode, the radio finds and plays the next station up or down the station band.

To seek the next station, quickly push and release “∧” or “∨” side of the “SEEK·TRACK” button. Do this again to find the station after that.

XM satellite radio*—

To select the next channel within the current channel category, push the “∧” or “∨” side of the “SEEK·TRACK” button. Repeat until a desired channel is found.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

Compact disc player

Use this button to skip up or down to a different track.

Push “∧” or “∨” side of the “SEEK·TRACK” button until the number of the track you want to listen to appears on the display. If you want to return to the beginning of the current track, quickly push the “∨” side of the button one time.

MP3/WMA player

Use this button to file up or down to a different file.

Push “∧” or “∨” side of the “SEEK·TRACK” several times until the file you want to listen to appears on the display. If you want to return to the beginning of the current file, push the “∨” side of the button one time.

ST (Stereo reception) display

Your radio automatically changes to stereo reception when a stereo broadcast is received. “ST” appears on the display. If the signal becomes weak, the radio reduces the amount of channel separation to prevent the weak signal from creating noise. If the signal becomes extremely weak, the radio switches from stereo to mono reception.

TEXT

XM satellite radio*1—

When you push the “TEXT” button, the display changes as follows:
CH NAME → TITLE (SONG/PROGRAM TITLE) → NAME (ARTIST NAME/FEATURE) → CH NUMBER → CH NAME

Up to 10 alphanumeric characters can be displayed. (Some information will not be fully displayed.)

The message display will be canceled if any button that affects the display is pushed.

If there is no song/program title or artist name/feature associated with the channel at that time, “– – – – –” will appear on the display.

This XM tuner supports “Audio Services” (Music and Talk) of only XM satellite radio and “Text Information”*2 linked to the respective audio services.

*1: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

*2: Text Information includes, Channel Name, (Artist) Name, (Song) Title and Category Name.

Compact disc player

This button is used to change the display for the compact disc that contains text data.

To change the display, quickly push and release the “TEXT” button while the compact disc is playing. The display changes in the order from the elapsed time to disc title to track title, then back to the elapsed time.

If this button is pushed while a compact disc that does not contain text data is playing, “NO TITLE” will appear on the display.

If the entire disc or track title does not appear on the display, push and hold the button until you hear a beep. The rest of the title will appear.

MP3/WMA player

This button is used to change the display for the MP3/WMA file that contains text data.

To change the display, quickly push and release the “TEXT” button while the MP3/WMA file is playing. The display changes in the order from the elapsed time to folder name to file name to album title to track title to artist name, then back to the elapsed time.

If this button is pushed while an MP3/WMA file that does not contain text data is playing, “NO TITLE” will appear on the display.

If the entire text data is not displayed, push and hold it until you hear a beep. The rest of the text data will appear.

TUNE·FILE (Tuning and File up/down)

Radio

Turn the “TUNE·FILE” knob clockwise to step up the frequency. Turn the knob counterclockwise to step down the frequency.

XM satellite radio*—

Turn the “TUNE·FILE” knob clockwise to step up the channel. Turn the knob counterclockwise to step down the channel.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

MP3/WMA player

Turn the “TUNE·FILE” knob clockwise to file up. Turn the knob counterclockwise to file down.

TYPE·FOLDER (Type/Folder up/down)

Radio

XM satellite radio*—

When you push the “∨” or “∧” side of the “TYPE·FOLDER” button while receiving a XM channel, the current channel category appears on the display.

When the channel category appears, push either “∨” or “∧” side of the “TYPE·FOLDER” button to switch to the next or previous category.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

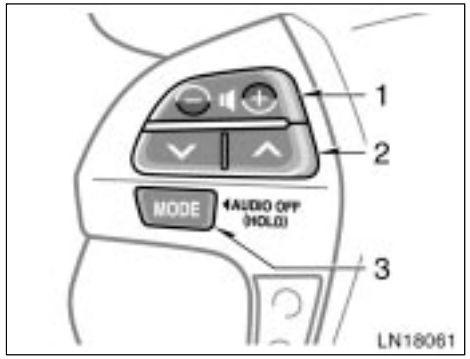
MP3/WMA player

To skip up or down to a different folder: Push “∧” or “∨” side of the “TYPE·FOLDER” several times until the number of the folder you want to listen to appears on the display.

To jump to the first file in the first folder: Push and hold the “∨” side of the button until you hear a beep.

When playing a disc featuring both audio data (CD−DA) and MP3/WMA files, audio data (CD−DA) is played.

Audio remote controls (steering switches)



Some parts of the audio system can be adjusted using the switches on the steering wheel.

Details of the specific switches, controls, and features are described below.

1. Volume control switch
2. “∧ ∨” switch
3. “MODE” switch

1. Volume control switch

Push the “+” side to increase the volume. The volume continues to increase while the switch is being pushed.

Push the “−” side to decrease the volume. The volume continues to decrease while the switch is being pushed.

2. “∧ ∨” switch

Radio

This switch has the following features—

To select a preset station:
Quickly push and release the “∧” or “∨” side of the switch. Do this again to select the next preset station.

To seek a station:
Push and hold the “∧” or “∨” side of the switch until you hear a beep. Do this again to find the next station. If you push the switch on either side during the seek mode, seeking will be cancelled.

To step up or down the frequency, push and hold the switch even after you hear a beep. When you release the switch, the radio will begin seeking up or down for a station. Do this again to find the next station.

XM satellite radio*—

To select a preset channel, push the “∧” or “∨” side of the switch. Repeat until a desired channel is found.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

Compact disc player

Use this switch to skip up or down to a different track in either direction.

Quickly push and release the “∧” or “∨” side of the switch until the track you want to listen to is set. If you want to return to the beginning of the current track, push the “∨” side of the switch once, quickly.

Push and hold the “∧” or “∨” side of the switch until the disc you want to listen to is set.

MP3/WMA player

To select a desired file:
Quickly push and release the “∧” or “∨” side of the switch until the file you want to listen to is set. If you want to return to the beginning of the current file, push the “∨” side of the switch once, quickly.

To select a desired folder:
Push and hold the “∧” or “∨” side of the switch until you hear a beep. Repeat this until the folder you want to listen to is set.

To select a desired disc:
Push and hold the “∧” or “∨” side of the switch until you hear a beep. Repeat this until the disc you want to listen to is set.

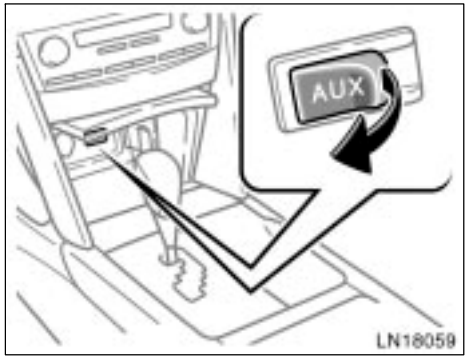
3. “MODE” switch

Push the “MODE” switch to select an audio mode. Each push changes the mode sequentially if the desired mode is ready to use.

To turn the audio system on, push the “MODE” switch.

To turn the audio system off, push and hold the “MODE” switch until the system turns off.

AUX adapter



An AUX adapter is installed inside the auxiliary box.

By inserting a mini plug into the AUX adapter, you can listen to music from a portable audio device through the vehicle’s speaker system.

To use the AUX adapter, switch to the AUX mode (external device mode) by pressing the “DISC·AUX” button. When the AUX adapter is in use, “AUX” will appear on the display. To adjust the volume, turn the “POWER·VOLUME” knob.

When using a portable audio device connected to the power outlet, noise may occur during playback. If this happens, use the power source of the portable audio device.

If you install an audio system other than a genuine audio system, you will not be able to use the AUX adapter.

Connected cables can be passed through the hold to the front passenger side of the auxiliary box. For details, see “Auxiliary boxes” on page 268 in Section 1−10.

Audio system operating hints

NOTICE

To ensure correct audio system operations:

- ***Be careful not to spill beverages over the audio system.***
- ***Do not put anything other than a compact disc into the slot.***
- ***The use of a cellular phone inside or near the vehicle may cause a noise from the speakers of the audio system which you are listening to. However, this does not indicate a malfunction.***

RADIO RECEPTION

Usually, a problem with radio reception does not mean there is a problem with your radio—it is just the normal result of conditions outside the vehicle.

For example, nearby buildings and terrain can interfere with FM reception. Power lines or telephone wires can interfere with AM signals. And of course, radio signals have a limited range. The farther you are from a station, the weaker its signal will be. In addition, reception conditions change constantly as your vehicle moves.

Here are some common reception problems that probably do not indicate a problem with your radio:

FM

Fading and drifting stations—Generally, the effective range of FM is about 40 km (25 miles). Once outside this range, you may notice fading and drifting, which increase with the distance from the radio transmitter. They are often accompanied by distortion.

Multi−path—FM signals are reflective, making it possible for two signals to reach your antenna at the same time. If this happens, the signals will cancel each other out, causing a momentary flutter or loss of reception.

Static and fluttering—These occur when signals are blocked by buildings, trees, or other large objects. Increasing the bass level may reduce static and fluttering.

Station swapping—If the FM signal you are listening to is interrupted or weakened, and there is another strong station nearby on the FM band, your radio may tune in the second station until the original signal can be picked up again.

AM

Fading—AM broadcasts are reflected by the upper atmosphere—especially at night. These reflected signals can interfere with those received directly from the radio station, causing the radio station to sound alternately strong and weak.

Station interference—When a reflected signal and a signal received directly from a radio station are very nearly the same frequency, they can interfere with each other, making it difficult to hear the broadcast.

Static—AM is easily affected by external sources of electrical noise, such as high tension power lines, lightening, or electrical motors. This results in static.

XM*

Alternation or modifications carried out without appropriate authorization may invalidate the user’s right to operate the equipment.

*: Use of satellite radio requires XM tuner and service. Contact your Toyota dealer for details.

NOTICE

This equipment has been tested and found to comply with the limits for a class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

—Reorient or relocate the receiving antenna.

—Increase the separation between the equipment and receiver.

—Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

—Consult the dealer or an experienced radio/TV technician for help.

CARING FOR YOUR COMPACT DISC PLAYER AND DISCS

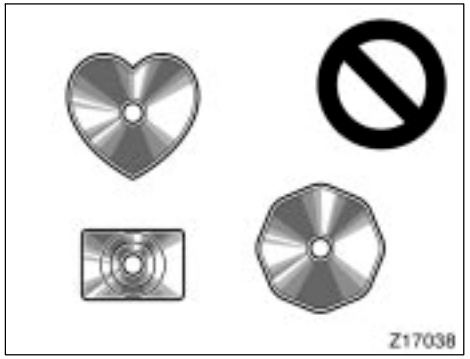
- Your compact disc player is intended for use with 12 cm (4.7 in.) discs only.
- Extremely high temperatures can keep your compact disc player from working. On hot days, use the air conditioning to cool the vehicle interior before you listen to a disc.
- Bumpy roads or other vibrations may make your compact disc player skip.
- If moisture gets into your compact disc player, you may not hear any sound even though your compact disc player appears to be working. Remove the disc from the player and wait until it dries.

⚠ CAUTION

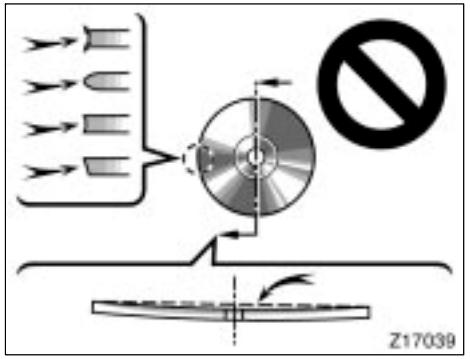
Compact disc players use an invisible laser beam which could cause hazardous radiation exposure if directed outside the unit. Be sure to operate the player correctly.

- Use only compact discs marked as shown above. The following products may not be playable on your compact disc player.

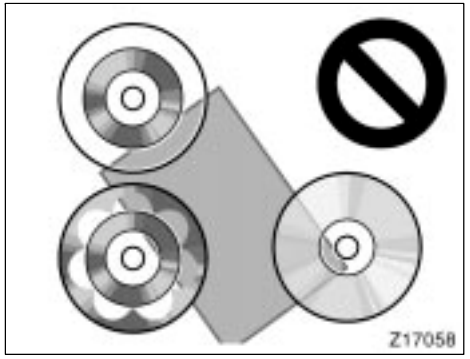
  Copy−protected CD
  CD−R (CD−Recordable)
  CD−RW (CD−Re−writable)
  CD−ROM



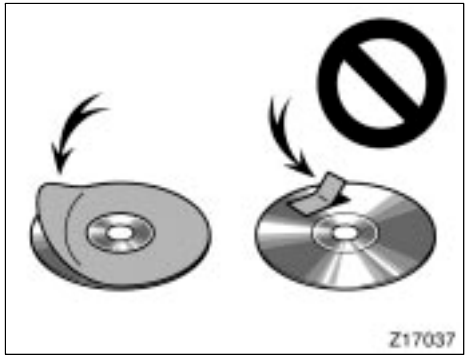
Special shaped discs



Low quality discs



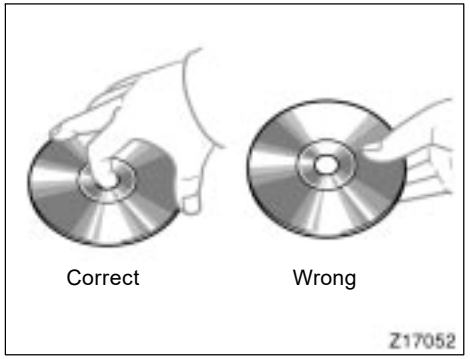
Transparent/translucent discs



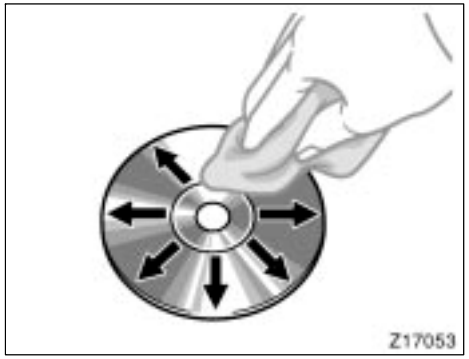
Labeled discs

NOTICE

Do not use special shaped, transparent/translucent, low quality or labeled discs such as those shown in the illustrations. The use of such discs may damage the player, or it may be impossible to eject the disc.



- Handle compact discs carefully, especially when you are inserting them. Hold them on the edge and do not bend them. Avoid getting fingerprints on them, particularly on the shiny side.
- Dirt, scratches, warping, pin holes, or other disc damage could cause the player to skip or to repeat a section of a track. (To see a pin hole, hold the disc up to the light.)
- Remove discs from the compact disc player when you are not listening to them. Store them in their plastic cases away from moisture, heat, and direct sunlight.



To clean a compact disc: Wipe it with a soft, lint−free cloth that has been dampened with water. Wipe in a straight line from the center to the edge of the disc (not in circles). Dry it with another soft, lint−free cloth. Do not use a conventional record cleaner or anti−static device.

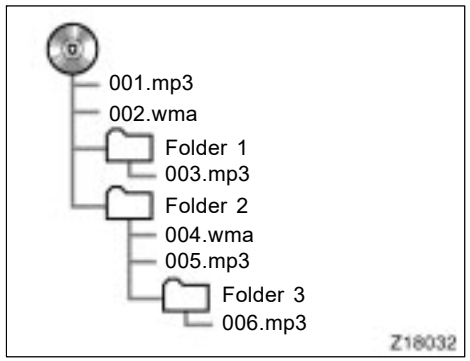
MP3/WMA FILES

- MP3 (MPEG Audio Layer 3) and WMA (Windows Media Audio) are audio compression standards.
- The MP3/WMA player can play MP3 and WMA files on CD−ROM, CD−R and CD−RW discs.

  The unit can play disc recordings compatible with ISO 9660 level 1 and level 2 and with the Romeo and Joliet file system.
- When naming an MP3 or WMA file, add the appropriate file extension (.mp3 or .wma).
- The MP3/WMA player plays back files with .mp3 or .wma file extensions as MP3 or WMA files. To prevent noise and playback errors, use the appropriate file extensions.
- Multi−session compatible CDs can also be played.
- MP3 files are compatible with the ID3 Tag Ver. 1.0, Ver. 1.1, Ver. 2.2, and Ver. 2.3 formats. The unit cannot display disc title, track title and artist name in other formats.
- WMA files can contain a WMA tag that is used in the same way as an ID3 tag. WMA tags carry information such as track title, artist name.
- The emphasis function is available only when playing MP3/WMA files recorded at 32, 44.1 and 48 kHz. (The system can play MP3 files with sampling frequencies of 16, 22.05, and 24 kHz. However, the emphasis function is not available for files recorded at these frequencies.)
- The sound quality of MP3/WMA files generally improves with higher bit rates. In order to achieve a reasonable level of sound quality, discs recorded with a bit rate of at least 128 kbps are recommended.

Playable bit rates
MP3 files:
MPEG1 LAYER3—64 to 320 kbps
MPEG2 LSF LAYER3—64 to 160 kbps
WMA files:
Ver. 7, 8 CBR—48 to 192 kbps
Ver. 9 CBR—48 to 320 kbps

- The MP3/WMA player does not play back MP3/WMA files from discs recorder using packet write data transfer (UDF format). Discs should be recorded using “pre−mastering” software rather than packet−write software.
- M3u playlists are not compatible with the audio player.
- MP3i (MP3 interactive) and MP3PRO formats are not compatible with the audio player.
- The MP3 player is compatible with VBR (Variable Bit Rate).
- When playing back files recorded as VBR (Variable Bit Rate) files, the play time will not be correctly displayed if fast forward or reverse operations are used.
- It is not possible to check folders that do not include MP3/WMA files.
- MP3/WMA files in folders up to 8 levels deep can be played. However, the start of playback may be delayed when using discs containing numerous levels of folders. For this reason, we recommend creating discs with no more than two levels of folders.
- It is possible to play up to 192 folders or 255 files on one disc.



- The play order of the compact disc with the structure shown on the left is as follows:

CD−R and CD−RW discs

- CD−R/CD−RW discs that have not been subject to the “finalizing process” (a process that allows discs to be played on a conventional CD player) cannot be played.
- It may not be possible to play CD−R/CD−RW discs recorded on a music CD recorder or a personal computer because of disc characteristics, scratches or dirt on the disc, or dirt, condensation, etc. on the lens of the unit.
- It may not be possible to play discs recorded on a personal computer depending on the application settings and the environment. Record with the correct format. (For details, contact the appropriate application manufacturers of the applications.)
- CD−R/CD−RW discs may be damaged by direct exposure to sunlight, high temperatures or other storage conditions. The unit may be unable to play some damaged discs.
- If you insert a CD−RW disc into the MP3/WMA player, playback will begin more slowly than with a conventional CD or CD−R disc.
- Recordings on CD−R/CD−RW cannot be played using the DDCD (Double Density CD) system.

TERMS

Packet write—

This is a general term that describes the process of writing data on−demand to CD−R, etc., in the same way that data is written to floppy or hard discs.

ID3 Tag—

This is a method of embedding track−related information in an MP3 file. This embedded information can include the track title, the artist’s name, the album title, the music genre, the year of production, comments and other data. The contents can be freely edited using software with ID3 tag editing functions. Although the tags are restricted to the number of characters, the information can be viewed when the track is played back.

WMA Tag—

WMA files can contain a WMA tag that is used in the same way as an ID3 tag. WMA tags carry information such as track title, artist name.

ISO 9660 format—

This is the international standard for the formatting of CD−ROM folders and files. For the ISO 9660 format, there are two levels of regulations.

Level 1:

The file name is in 8.3 format (8 character file names, with a 3 character file extension. File names must be composed of one−byte capital letters and numbers. The “_” symbol may also be included.)

Level 2:

The file name can have up to 31 characters (including the separation mark “.” and file extension). Each folder must contain fewer than 8 hierarchies.

m3u—

Playlists created using “WINAMP” software have a playlist file extension (.m3u).

MP3—

MP3 is an audio compression standard determined by a working group (MPEG) of the ISO (International Standard Organization). MP3 compresses audio data to about 1/10 the size of that on conventional discs.

WMA—

WMA (Windows Media Audio) is an audio compression format developed by Microsoft. It compresses files into a size smaller than that of MP3 files. The decoding formats for WMA files are Ver. 7, 8, and 9.

Hands−free phone system——Reference

Phone Setup (see page 216)

- **Pair phone**

  To use the hands−free system, you need to register your phone in the system.

- **Change name**

  The registered phone names can be changed.

- **Delete**

  The registered phones can be deleted.

- **List phones**

  The registered phone names can be checked.

- **Select phone**

  The registered phones can be selected.

- **Set passkey**

  The passkey can be changed.

Security (see page 221)

- **Set PIN**

  The PIN can be set or changed.

- **Phone book lock**

  The phone book can be locked.

- **Phone book unlock**

  The locked phone book can be unlocked.

System Setup (see page 225)

- **Adjust Guidance Volume**

  Guidance volume can be adjusted.

- **Initialize**

Phone Book (see page 225)

- **Add Entry**

  Phone numbers and voice tags can be registered.

- **Change Name**

  The registered names can be changed.

- **Delete Entry**

  The registered names can be deleted.

- **Delete Speed Dial**

  The registered speed dial can be deleted.

- **List names**

  The registered names can be checked.

- **Set Speed Dial**

  Speed dials can be set

Redial (see page 233)

Callback (see page 234)

Making a phone call (see page 235)

Receiving a phone call (see page 238)

Talking on the phone (see page 239)

—Some basics

This system supports Bluetooth®, a wireless system that allows you to make or receive calls without taking your hands from the steering wheel and without using cables to connect the phone and system.

The phone must be paired to the system before using the hands−free feature. If your cellular phone does not support Bluetooth®, this system will not function.

⚠ CAUTION

While you are driving, do not use a cellular phone or connect the Bluetooth® phone.

NOTICE

Do not leave your cellular phone in the car. The temperature indoor may be high and damage the phone.

The system may not function in the following conditions and places:

- The cellular phone is turned off.
- The current position is outside the communication area.
- The cellular phone is not connected.
- The cellular phone has a low battery.
- The cellular phone is hiding behind the seat or in the glove box and console box.
- The cellular phone touches or is covered with metal materials.

This system supports the following service.

- HFP (Hands Free Profile) Ver. 1.0
- OPP (Object Push Profile) Ver. 1.1

If your cellular phone does not support HFP, you cannot enter the Bluetooth® phone, and take OPP service individually.

Bluetooth®

BLUETOOTH is a trademark owned by Bluetooth SIG. Inc.

When transferring ownership of the vehicle:

A lot of personal data is registered when you use the hands−free system. When transferring ownership of the vehicle, initialize the system.

If you initialize it, the former state will never come back again. Pay much attention when initializing the data.

You can initialize the following data in the system.

- Phone book data
- Dialed numbers and received calls
- Speed dial
- Bluetooth® phone data
- Security code

FCC Information

Caution: Any changes or modifications in construction of this device which are not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

FCC Label Information

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, Including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

−Reorient or relocate the receiving antenna.

−Increase the separation between the equipment and receiver.

−Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

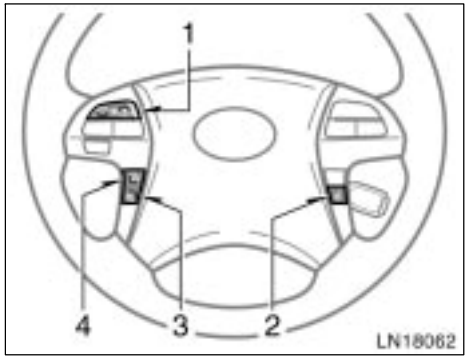
−Consult the dealer or an experienced radio/TV technician for help.

CAUTION: Radio Frequency Radiation Exposure
This equipment complies with FCC radiation exposure limits set forth for uncontrolled equipment and meets the FCC radio frequency (RF) Exposure Guidelines in Supplement C to OET65. This equipment has very low levels of RF energy that it deemed to comply without maximum permissive exposure evaluation (MPE). But it is desirable that it should be installed and operated with at least 20 cm and more between the radiator and person’s body (excluding extremities: hands, wrists, feet and legs).

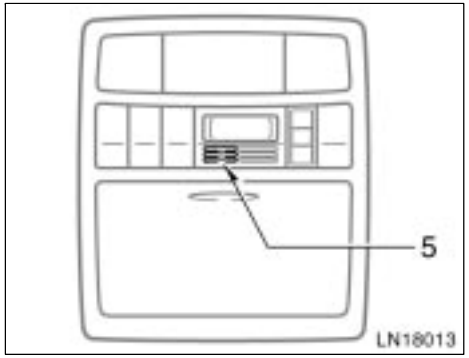
Co−location: This transmitter must not be co−located or operated in conjunction with any other antenna or transmitter.

—Control and features

▶Steering switches and microphone



Steering switches



Overhead console

1. Volume control switch

To increase the volume: Push “+”.
To decrease the volume: Push “−”.

When driving at 80 km/h (50 mph) or more, the volume automatically increases without switch adjustment. When your speed falls below 70 km/h (43 mph), the volume automatically returns to its original level.

Voice guidance volume can be changed by pushing the volume control switch on the steering wheel.

2. Talk switch

Pushing the talk switch turns the hands−free system on and initiates the speech command system.

Pushing and holding the talk switch ends the speech command system.

3. Off−hook switch

Pushing the off−hook switch turns the hands−free system on.

When receiving a call, pushing the off−hook switch allows you to talk on the phone.

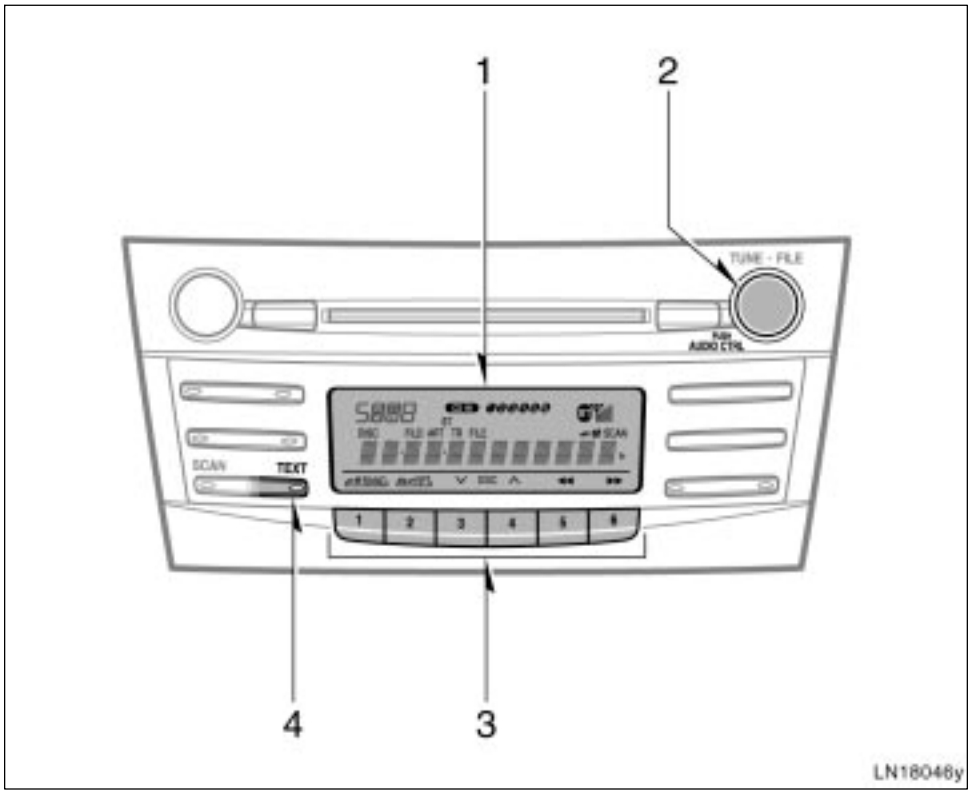
4. On−hook switch

When the hands−free system is on, pushing the on−hook switch turns the hands−free system off.

5. Microphone

The microphone is used when talking on the phone or using the speech command system.

▶**Audio unit**



1. Display

Displays such items as the reception level, a party’s name and phone number. See “DISPLAY” described on the following page for further details about the display.

2. “AUDIO CTRL” knob

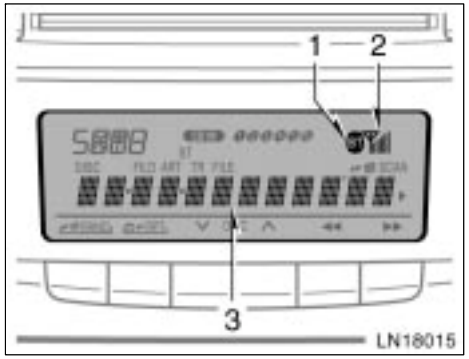
Turning the “AUDIO CTRL” knob displays the menu items, names, numbers, etc. to be selected. To select an item, push the “AUDIO CTRL” knob. Due to safety concerns, the “AUDIO CTRL” knob does not function while the vehicle is in motion.

3. Preset buttons

Pushing the preset button displays the registered speed dial numbers.

4. “TEXT” button

When the party’s name or phone number is too long to be displayed, pushing and holding the “TEXT” button displays the remaining characters.



DISPLAY

1. Bluetooth® display

Displays when a Bluetooth® connection is made. If there is no display, the Bluetooth® connection has not been made and communication between the phone and system is not possible. When using the hands−free system, make sure that “BT” is displayed. The display is updated in real time.

2. Reception level display

Displays the reception level of the radio wave signals. This may not match the display on the cellular phone. The reception level of some cellular phones may not be displayed.

The number of bars is greater when the signal received is stronger.

3. Message display

Displays phone numbers, names, comments, menu items, etc.

—Phone Setup

The phone setup menu includes the following:

- Pair Phone

To use the hands−free system, you need to register your phone in the system. Once you have registered it, you can make a hands−free call. Up to 6 phones can be registered.

- Select Phone

When the system connects to Bluetooth®, the phone previously used is automatically selected. Select a different phone if necessary. Only the selected phone can be used with the hands−free system.

- Change Name

The registered phone names can be changed.

- List Phones

The registered phone names can be checked.

The following can be performed during the name playback:

- **Select phone**
- **Change name**
- **Delete**

- Set PassKey

The passkey can be changed. A 4 to 8 digit code can be input as a passkey.

- Delete

The registered phones can be deleted.

To enter the phone setup menu

1. Push the off−hook switch to turn the hands−free system on.
2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Setup” is displayed and push the knob.

“Setup. Please push the talk switch and say security, or phone setup.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Phone Setup” is displayed and push the knob.

“Phone setup. Push the talk switch and say pair phone, select phone, change name, list phones, set passkey or delete.” is heard.

“XXX (phone name) already selected.” is heard and “XXX (phone name)” is displayed.

If no phone has been registered, the system may not function properly.

To pair phones

1. Push the talk switch and say “Pair phone”, or turn the “AUDIO CTRL” knob until “Pair Phone” is displayed and push the knob.

“Pair. Push the talk switch and say a name for the phone.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Record Name” is displayed, push the knob and say “XXX (desired phone name)”.

“Push the talk switch and say confirm. Otherwise, say go back.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“XXX Ready for phone pairing. Please use the phone to connect it to the hands−free system. The passkey for the phone is....” is heard.

After “HANDS FREE” is displayed, a passkey* is displayed and “Searching.” is heard.

4. Input the displayed passkey into the phone.

“The phone is paired and ready for use. Returning to the main menu.” is heard and “Paired” is displayed.

The system may not function in the following cases:

- If 6 phones have already been registered.
- If the vehicle is moving.
- If the system cannot communicate with the phone.

*: Passkey is a password required to register a phone to the system.

INFORMATION

- ***To use the hands−free system, you need to register your phone in the system. Once you have registered it, you can make a hands−free call. Up to 6 phones can be registered.***
- ***For the operation of the phone, see the manual that comes with your cellular phone.***
- ***The passkey can be changed. See page 220 for changing the passkey.***

To select a phone

1. Push the talk switch and say “Select phone”, or turn the “AUDIO CTRL” knob until “Select Phone” is displayed and push the knob.

“Select phone. Push the talk switch and say the phone name or say list phones.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until the desired phone name is displayed and push the knob.

When the phone is selected by a voice command:

“XXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXX” is displayed.

Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“XXX selected. Returning to the phone setup.” is heard.

When the phone is selected by using the knob:

“XXX selected. Returning to the phone setup.” is heard.

The system may not function in the following cases:

- If the phone is not found.
- If the system does not recognize the voice command.

To change a name

1. Push the talk switch and say “Change name”, or turn the “AUDIO CTRL” knob until “Change Name” is displayed and push the knob.

“Change name. Push the talk switch and say the phone name to change.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until the phone name that you want to change is displayed and push the knob.

When the phone is selected by a voice command:

“XXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXX” is displayed.

1. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Push the talk switch and say a new name.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Record Name” is displayed, push the knob and say “XXX (desired phone name)”.

“XXX Push the talk switch and say confirm. Otherwise, say go back.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Name changed. Returning to the phone setup.” is heard and “Changed” is displayed.

When the phone is selected by using the knob:

“XXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXX” is displayed.

1. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Push the talk switch and say a new name.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Record Name” is displayed, push the knob and say “XXX (desired phone name)”.

“XXX Push the talk switch and say confirm. Otherwise, say go back.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Name changed. Returning to the phone setup.” is heard and “Changed” is displayed.

The system may not function in the following cases:

- If no phone has been registered.
- If the system does not recognize the voice command.

To list phones

1. Push the talk switch and say “List phones”, or turn the “AUDIO CTRL” knob until “List Phones” is displayed and push the knob.

“List phones. To select a name, push the talk switch during the name playback.” is heard.

2. Follow voice guidance instructions.

“Push the talk switch and say select phone, change name, or delete.” is heard.

Select one of the following:

Select phone

Push the talk switch and say “Select phone”, or turn the “AUDIO CTRL” knob until “Select Phone” is displayed and push the knob.

For further details on selecting a phone, see page 218.

Change name

Push the talk switch and say “Change name”, or turn the “AUDIO CTRL” knob until “Change Name” is displayed and push the knob.

For further details on changing a name, see page 218.

Delete

Push the talk switch and say “Delete”, or turn the “AUDIO CTRL” knob until “Delete” is displayed and push the knob.

For further details on deleting a phone, see page 221.

If no phone has been registered, the system may not function properly.

To set a passkey

1. Push the talk switch and say “Set passkey”, or turn the “AUDIO CTRL” knob until “Set PassKey” is displayed and push the knob.

“Set Passkey. The passkey is required for the phone pairing process. Push the talk switch and say a new passkey.” is heard and passkey is displayed.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob to select a number.

When using a voice command:

“XXXX (new passkey) Push the talk switch and say confirm. Otherwise, continue adding numbers, or say go back or delete.” is heard and “XXXX (new passkey)” is displayed.

Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Passkey changed. Returning to the phone setup.” is heard.

When using the knob:

1. Turn the “AUDIO CTRL” knob to select a number. Push the “AUDIO CTRL” knob to set.
2. When the passkey is set, push the “AUDIO CTRL” knob.

“Passkey changed. Returning to the phone setup.” is heard.

The system may not function in the following cases:

- If the passkey has less than 4 digits.
- If the passkey has more than 8 digits.

To delete a phone

1. Push the talk switch and say “Delete”, or turn the “AUDIO CTRL” knob until “Delete” is displayed and push the knob.

“Delete. Push the talk switch and say the phone name to delete.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until the phone name you want to delete is displayed and push the knob.

When using a voice command:

“XXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXX” is displayed.

Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Deleted. Returning to the phone setup.” is heard and “Deleted” is displayed.

When using the knob:

“Deleted. Returning to the phone setup.” is heard and “Deleted” is displayed.

The system may not function in the following cases:

- If no phone has been registered.
- If the system does not recognize the voice command.

—Security

The security menu includes the following:

- **Set PIN (Personal Identification Number)**

The PIN can be set or changed.

- **Phone book lock**

The phone book can be locked.

When the phone book is locked, the following functions cannot be used:

- Dial by name
- Redial
- Callback
- Speed Dial
- PhoneBook
- **Phone book unlock**

The locked phone book can be unlocked.

To enter the security menu

1. Push the off−hook switch to turn the hands−free system on.
2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Setup” is displayed and push the knob.

“Setup. Please push the talk switch and say security, or phone setup.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Security” is displayed and push the knob.

“Security. Push the talk switch and say set PIN, phone book lock, or phone book unlock.” is heard.

To set a PIN

Push the talk switch and say “Set PIN”, or turn the “AUDIO CTRL” knob until “Set PIN” is displayed and push the knob.

“There is no PIN number set. Please register a PIN number. Please push the talk switch and say a four−digit PIN number.” is heard.

When using a voice command:

1. Push the talk switch and say “XXX (new PIN number)”.
2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“The PIN number has been set. Returning to the security.” is heard and “Completed” is displayed.

When using the knob:

1. Turn the “AUDIO CTRL” knob to select a number. Push the “AUDIO CTRL” knob to set.
2. Repeat the above procedure until the entire four−digit number is set.
3. When the PIN is set, push the “AUDIO CTRL” knob.
4. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“The PIN number has been set. Returning to the security.” is heard and “Completed” is displayed.

If the PIN is to be changed:

“There is a PIN number in place. Push the talk switch and say the correct PIN number.” is heard and “Current PIN?” is displayed.

1. Follow voice guidance instructions, or use the “AUDIO CTRL” knob to input the current PIN number.

“Please push the talk switch and say a four−digit PIN number.” is heard.

2. Push the talk switch and say “XXXX (new PIN number)”.

“The PIN number has been set. Returning to the security.” is heard and “Completed” is displayed.

If the current number is not correct, the system does not function properly.

To lock the phone book

1. Push the talk switch and say “Phone book lock”, or turn the “AUDIO CTRL” knob until “Phbk Lock” is displayed and push the knob.

“There is a PIN number in place. Push the talk switch and say the correct PIN number.” is heard and “Current PIN?” is displayed.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob to select a number.

When using a voice command:

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXXX” is displayed.

Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“PIN number accepted. The phone book is now locked. Returning to the main menu.” is heard and “Locked” is displayed.

When using the knob:

1. Turn the “AUDIO CTRL” knob to select a number. Push the “AUDIO CTRL” knob to set.
2. When the PIN number is set, push the “AUDIO CTRL” knob.

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXXX” is displayed.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“PIN number accepted. The phone book is now locked. Returning to the main menu.” is heard and “Locked” is displayed.

The system may not function in the following cases:

- If the current number is not correct.
- If the phone book has already been locked.
- If the PIN number does not exist.

To unlock the phone book

1. Push the talk switch and say “Phone book unlock”, or turn the “AUDIO CTRL” knob until “Phbk Unlock” is displayed and push the knob.

“Phonebook unlock. There is a PIN number in place. Push the talk switch and say the correct PIN number.” is heard and “Current PIN?” is displayed.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob to select a number.

When using a voice command:

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXXX” is displayed.

Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“PIN number accepted. The phone book is now unlocked. Returning to the main menu.” is heard and “Unlocked” is displayed.

When using the knob:

1. Turn the “AUDIO CTRL” knob to select a number. Push the “AUDIO CTRL” knob to set.
2. When the PIN number is set, push the “AUDIO CTRL” knob.

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXXX” is displayed.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“PIN number accepted. The phone book is now unlocked. Returning to the main menu.” is heard and “Unlocked” is displayed.

The system may not function in the following cases:

- If the current number is not correct.
- If the phone book has already been unlocked.

INFORMATION

A shortcut to each of the following functions is available. Enter the phone book menu, push the off−hook switch, and say either of the following:

- ***Phone book lock***
- ***Phone book unlock***

—System Setup

The system setup menu includes the following:

- Adjust Guidance Volume
- Initialize

To enter the system setup menu

1. Push the off−hook switch to turn the hands−free system on.
2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Setup” is displayed and push the knob.
3. Turn the “AUDIO CTRL” knob until “System Setup” is displayed and push the knob.

“System setup. Please select guidance volume or initialize.” is heard.

To adjust the guidance volume

1. Turn the “AUDIO CTRL” knob until “Guidance Vol” is displayed and push the knob.

“Guidance will be at this volume” is heard and the present volume level is displayed.

2. Turn the “AUDIO CTRL” knob to adjust the volume and push the knob.

To initialize

1. Turn the “AUDIO CTRL” knob until “Initialize” is displayed and push the knob.

“System initialization. This will erase all user information in the hands free system; including paired phones, phone book entries, and call history. Select confirm to initialize. Otherwise, select go back.” is heard.

2. Turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“System initialization. This will erase all user information in the hands free system; including paired phones, phone book entries, and call history. Select confirm to initialize. Otherwise, select go back.” is heard.

3. Turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Initialized. Returning to the main menu.” is heard.

—Phone Book

The phone book menu includes the following:

- Add Entry

Phone numbers and voice tags can be registered.

- Change Name

The registered names can be changed.

- Delete Entry

The registered names can be deleted.

- Delete Speed Dial

The registered speed dial can be deleted.

- List Names

The registered names can be checked.

- Set Speed Dial

Speed dials can be set.

To enter the phone book menu

1. Push the off−hook switch to turn the hands−free system on.
2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Phonebook” is displayed and push the knob.

“Phone book. Please push the talk switch and say add entry, change name, delete entry, list names, set speed dial or delete speed dial.” is heard.

If the phone book is locked, the system may not function properly.

To add entry

The add entry includes the following:

(a) By Voice

(b) By Phone

(c) Call History

(d) Manual Input

Push the talk switch and say “Add entry”, or turn the “AUDIO CTRL” knob until “Add Entry” is displayed and push the knob.

“Add Entry. How will the number be entered. Push the talk switch and say by voice, by phone, or call history.” is heard.

(a) By voice

1. Push the talk switch and say “By voice”, or turn the “AUDIO CTRL” knob until “By Voice” is displayed and push the knob.

“Voice entry. Push the talk switch and say the number.” is heard.

2. Push the talk switch and say the dial number that you want to register.

“To store, push the talk switch and say confirm. Otherwise, continue adding numbers, or say go back, or delete.” is heard and number is displayed.

3. Follow voice guidance instructions.

If “Confirm” is said, then input a voice tag.

“Push the talk switch and say a name.” is heard.

1. Push the talk switch and say the name of the dial number that you want to register.

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Stored. To register this as a speed dial entry, push the talk switch and say set speed dial. Otherwise, say confirm.” is heard and “Stored” is displayed.

3. Select one of the following:

- **Confirm**
- **Speed Dial**

Confirm

Push the talk switch and say “Confirm”, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Returning to the phone book.” is heard.

Speed Dial

1. Push the talk switch and say “Set speed dial”, or turn the “AUDIO CTRL” knob until “Speed Dial” is displayed and push the knob.

“Set speed dial. Push the preset button to assign to XXXX” is heard.

2. Push and hold the desired preset button.

“preset... is now assigned. Returning to the phone book.” is heard.

The system may not function in the following cases:

- If the phone book is full.
- If the dial number has more than 24 digits.

(b) By Phone

1. Push the talk switch and say “By phone”, or turn the “AUDIO CTRL” knob until “By Phone” is displayed and push the knob.

“Phone entry. Prepare to send the information from the phone. When ready, push the talk switch and say confirm.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Send the information at this time.” is heard.

After the system has received the name and phone number, “Push the talk switch and say confirm. To select an alternate number, say next or previous. Otherwise, say go back.” is heard and “XXX (name)” and “XXX (number)” is displayed.

3. Follow voice guidance instructions, push the talk switch and say “Confirm”, or turn the “AUDIO CTRL” knob until the dial number that you want to register is displayed and push the knob.

Next, input a voice tag.

For further details, see page 226.

(c) Call History

1. Push the talk switch and say “Call history”, or turn the “AUDIO CTRL” knob until “Call history” is displayed and push the knob.

“Call history. Push the talk switch and say incoming or outgoing.” is heard and “Call History” is displayed.

2. Select one of the following:

- **Incoming**
- **Outgoing**

Incoming

1. Push the talk switch and say “Incoming”, or turn the “AUDIO CTRL” knob until “Incoming” is displayed and push the knob.

“Most recent incoming call was XXXX” is heard and the incoming number is displayed.

“Push the talk switch and say confirm. Otherwise, say previous, or go back.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until the dial number that you want to register is displayed and push the knob.

Next, input a voice tag.

For further details, see page 226.

Outgoing

1. Push the talk switch and say “Outgoing”, or turn the “AUDIO CTRL” knob until “Outgoing” is displayed and push the knob.

“Most recent outgoing call was XXXX” is heard and the outgoing number is displayed.

“Push the talk switch and say confirm. Otherwise, say previous, or go back.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until the dial number that you want to register is displayed and push the knob.

Next, input a voice tag.

For further details, see page 226.

(d) Manual Input

1. Turn the “AUDIO CTRL” knob until “Manual Input” is displayed and push the knob.
2. Turn the “AUDIO CTRL” knob to select a number. Push the “AUDIO CTRL” knob to set.
3. When the number is set, push the “AUDIO CTRL” knob.

Next, input a voice tag.

For further details, see page 226.

INFORMATION

- ***The system can recognize single digits from zero to nine, # (pound), * (star) and + (plus). Numbers that are ten or greater are not recognized.***
- ***To speed up input, it is a good idea to group all digits into a continuous string. However, you can enter each digit individually or group digits together in preferred string lengths.***

The display corresponding to each operation appears on the screen as follows:

Input operation—

You say: “Nine, nine, five”

Voice output: “995 to store push the talk switch and say confirm. Otherwise, continue adding numbers, or say go back, or delete.”

Display: “995”

You say: “Seven, three, four”

Voice output: “734 to store push the talk switch and say confirm. Otherwise, continue adding numbers, or say go back, or delete.”

Display: “995734”

Repeat the above procedure until the entire number that you want to register is input.

Go back operation—

You say: “Go back”

Voice output: “Go back. The last numbers said have been removed. Push the talk switch and say the number.”

Display: “995”

Repeating the above operation deletes the last digits in reverse order of input.

Delete operation—

You say: “Delete”

Voice output: “Deleted. Push the talk switch and say the number.”

Display: “Delete”

The display will return to the initial screen that allows a number to be input.

To list names

The voice tags can be edited during the name playback.

1. Push the talk switch and say “List names”, or turn the “AUDIO CTRL” knob until “List Names” is displayed and push the knob.

“List names. To select a name, push the talk switch during the name playback.” is heard.

2. Follow voice guidance instructions.

“XXXX selected.” is heard and “Selected” is displayed.

If you push the off−hook switch during the name playback, you can dial the number of the selected name.

Editing the voice tags

The following can be performed:

- **Dial**
- **Change Name**
- **Delete Entry**
- **Speed Dial**

“Push the talk switch and say dial, change name, delete entry, or set speed dial.” is heard and “Selected” is displayed.

Dial

Push the talk switch and say “Dial”, or turn the “AUDIO CTRL” knob until “Dial” is displayed and push the knob.

Change Name

Push the talk switch and say “Change name”, or turn the “AUDIO CTRL” knob until “Change Name” is displayed and push the knob.

For further details, see page 231.

Delete Entry

Push the talk switch and say “Delete entry”, or turn the “AUDIO CTRL” knob until “Delete Entry” is displayed and push the knob.

For further details, see page 230.

Speed dial

Push the talk switch and say “Set speed dial”, or turn the “AUDIO CTRL” knob until “Speed Dial” is displayed and push the knob.

For further details, see page 232.

To delete entry

1. Push the talk switch and say “Delete entry”, or turn the “AUDIO CTRL” knob until “Delete Entry” is displayed and push the knob.

“Delete entry. Push the talk switch and say the name to delete.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until the name that you want to delete is displayed and push the knob.

When using a voice command:

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXXX” is displayed.

Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Deleted. Returning to the phone book.” is heard and “Deleted” is displayed.

When using the knob:

“Deleted. Returning to the phone book.” is heard and “Deleted” is displayed.

The system may not function in the following cases:

- If no name has been registered.
- If the system does not recognize the voice command.

To delete speed dial

1. Push the talk switch and say “Delete speed dial”, or turn the “AUDIO CTRL” knob until “Del Spd Dial” is displayed and push the knob.

“Delete speed dial. Push the preset button to delete from speed dial.” is heard.

2. Select the preset button that you want to delete.

“To delete preset... push the talk switch and say confirm. Otherwise, say go back.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Deleted.” is heard and “Deleted” is displayed.

“Returning to the phone book.” is heard.

The system may not function in the following cases:

- If no speed dial has been registered.
- If the preset button has not been assigned.

To change name

1. Push the talk switch and say “Change name”, or turn the “AUDIO CTRL” knob until “Change Name” is displayed and push the knob.

“Change name. Push the talk switch and say the name to change.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until the dial number that you want to change is displayed and push the knob.

When using a voice command:

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard and “XXXX” is displayed.

1. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Push the talk switch and say a new name.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Record Name” is displayed, push the knob and say “XXX (new name)”.

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Name changed. Returning to the phone book.” is heard and “Changed” is displayed.

When using the knob:

“Push the talk switch and say a new name.” is heard.

1. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Record Name” is displayed, push the knob and say “XXX (new name)”.

“XXXX Push the talk switch and say confirm. Otherwise, say go back.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Name changed. Returning to the phone book.” is heard and “Changed” is displayed.

The system may not function in the following cases:

- If no name has been registered.
- If the system does not recognize the voice command.

To set speed dial

1. Push the talk switch and say “Set Speed dial”, or turn the “AUDIO CTRL” knob until “Speed Dial” is displayed and push the knob.

“Set speed dial. Push the talk switch and say a name.” is heard.

2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until the dial number that you want to register is displayed and push the knob.

When using a voice command:

“XXXX To register this as a speed dial entry, push the talk switch and say confirm. Otherwise, push the talk switch and say go back.” is heard and “XXXX” is displayed.

1. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Push the preset button to assign to XXXX” is heard.

2. Push and hold the desired preset button.

“preset... is now assigned. Returning to the phone book.” is heard.

When using the knob:

“Push the preset button to assign to XXXX” is heard.

Push and hold the desired preset button.

“preset... is now assigned. Returning to the phone book.” is heard.

The system may not function in the following cases:

- If no name has been registered.
- If the system does not recognize the voice command.

INFORMATION
A shortcut to each of the following functions is available. Push the off−hook switch and talk switch, and say one of the following:
• Phone book add entry
• Phone book change name
• Phone book delete entry
• Phone book delete speed dial
• Phone book list names
• Phone book set speed dial

—Redial

The following can be performed:

- Dial
- Delete
- Store

To enter the redial

1. Push the off−hook switch to turn the hands−free system on.
2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Redial” is displayed and push the knob.

“Redial. Most recent outgoing call was XXXX” is heard and outgoing history is displayed.

“Please push the off−hook switch to dial. Otherwise, push the talk switch and say dial, previous, go back, store, or delete.” is heard.

Dial

Turn the “AUDIO CTRL” knob until the number that you want to dial is displayed and push the knob. After that, do the one of the following:

- Push the off−hook switch.
- Push the talk switch and say “dial”.
- Turn the “AUDIO CTRL” knob until “Dial” is displayed and push the knob.

Delete

1. Turn the “AUDIO CTRL” knob until the dial number that you want to delete is displayed and push the knob.
2. Push the talk switch and say “Delete”, or turn the “AUDIO CTRL” knob until “Delete” is displayed and push the knob.

“Delete. Push the talk switch and say confirm. Otherwise, say go back” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Deleted.” is heard.

Store

1. Turn the “AUDIO CTRL” knob until the dial number that you want to register is displayed and push the knob.
2. Push the talk switch and say “Store”, or turn the “AUDIO CTRL” knob until “Store” is displayed and push the knob.

“Store. Push the talk switch and say confirm. Otherwise, say go back.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

Next, input a voice tag.

For further details, see page 226.

The system may not function in the following cases:

- If there is no outgoing history.
- If the phone book is locked.

INFORMATION

- ***Up to five outgoing calls can be stored in the system.***
- ***When five outgoing calls are stored in memory, the oldest outgoing call is deleted to make room in memory for new calls.***
- ***Only the latest outgoing call is stored when the same telephone number is dialed.***
- ***A shortcut to “Redial” is available. Push the off−hook switch twice.***

—Callback

The following can be performed:

- Dial
- Delete
- Store

To enter the callback

1. Push the off−hook switch to turn the hands−free system on.
2. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Callback” is displayed and push the knob.

“Callback. Most recent incoming call was XXXX” is heard and incoming history is displayed.

“Please push the off−hook switch to dial. Otherwise, push the talk switch and say dial, previous, go back, store, or delete.” is heard.

Dial

Turn the “AUDIO CTRL” knob until the number that you want to dial is displayed and push the knob. After that, do the one of the following:

- Push the off−hook switch.
- Push the talk switch and say “Dial”.
- Turn the “AUDIO CTRL” knob until “Dial” is displayed and push the knob.

Delete

1. Turn the “AUDIO CTRL” knob until the dial number that you want to delete is displayed and push the knob.
2. Push the talk switch and say “Delete”, or turn the “AUDIO CTRL” knob until “Delete” is displayed and push the knob.

“Delete. Push the talk switch and say confirm. Otherwise, say go back” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

“Deleted.” is heard.

Store

1. Turn the “AUDIO CTRL” knob until the dial number that you want to register is displayed and push the knob.
2. Push the talk switch and say “Store”, or turn the “AUDIO CTRL” knob until “Store” is displayed and push the knob.

“Store. Push the talk switch and say confirm. Otherwise, say go back.” is heard.

3. Follow voice guidance instructions, or turn the “AUDIO CTRL” knob until “Confirm” is displayed and push the knob.

Next, input a voice tag.

For further details, see page 226.

The system may not function in the following cases:

- If there is no incoming history.
- If the phone book is locked.

INFORMATION

- ***Up to five incoming calls can be stored in the system.***
- ***When five incoming calls are stored in memory, the oldest incoming call is deleted to make room in memory for new calls.***

—Making a phone call

If the cellular phone is not registered, this system cannot be used. See page 216 for registering a cellular phone. Make sure that “BT” is displayed and get the cellular phone ready to use.

There are 3 ways to make a phone call with this system.

- **Speed dial**

A phone call can be made with a preset button in which a phone number is registered. See page 232 for setting the preset buttons.

- **Dial by Name**

The system dials the numbers corresponding to the spoken names registered in the system.

- **Dial by Number**

The system dials to the spoken numbers.

To make a phone call

Push the off−hook switch to turn the hands−free system on.

To speed dial

1. Push the preset button where the desired number is set. The name or telephone number is displayed.
2. Push the off−hook switch to dial.

To dial by Name

1. Push the talk switch and say “Dial by name”.

“Dial by name. Please push the talk switch and say the stored name, or say list names.” is heard and “Dial by Name” is displayed.

2. Push the talk switch and say “XXXX”, or turn the “AUDIO CTRL” knob until the phone name that you want to dial is displayed and push the knob.

When using a voice command:

“XXXX Push the off−hook switch to dial. Otherwise, push the talk switch and say dial, or go back.” is heard. After that, do the one of the following:

- Push the off−hook switch.
- Push the talk switch and say “Dial”.
- Turn the “AUDIO CTRL” knob until “Dial” is displayed and push the knob.

When using the knob:

It calls the number.

The system may not function in the following cases:

- If there is no number registered in the preset button.
- If the system does not recognize the voice command.

INFORMATION

- ***The phone numbers registered in the phone book can be retrieved.***
- ***The system does not recognize that the voice tag is not registered in the registered cellular phone. For details about voice tags, see “To add entry” on page 226.***
- ***A shortcut to “Dial by name” is available. Push the talk switch and say “Dial XXX (name you want to dial)”.***

To dial by Number

1. Push the talk switch and say “Dial by Number”.

“Dial by number. Please push the talk switch and say the number.” is heard and “Dial by Num” is displayed.

2. Push talk switch and say “XXXX”.

“Push the off−hook switch to dial. Otherwise, push the talk switch and say dial, go back, or delete.” is heard.

To dial the number, do the one of the following:

- Push the off−hook switch.
- Push the talk switch and say “Dial”.
- Turn the “AUDIO CTRL” knob until “Dial” is displayed and push the knob.

If the number exceeds 24 digits, the system may not function properly.

INFORMATION

- ***The system can recognize single digits from zero to nine, # (pound), * (star) and + (plus). Numbers that are ten or greater are not recognized.***
- ***To speed up input, it is a good idea to group all digits into a continuous string. However, you can enter each digit individually or group digits together in preferred string lengths.***

The display corresponding to each operation appears on the screen as follows:

Input operation—

You say: “Nine, nine, five”

Voice output: “995 push the off−hook switch to dial. Otherwise, push the talk switch and say dial, go back, or delete.”

Display: “995”

You say: “Seven, three, four”

Voice output: “734 push the off−hook switch to dial. Otherwise, push the talk switch and say dial, go back, or delete.”

Display: “995734”

Repeat the above procedure until the entire number that you want to dial is input.

Go back operation—

You say: “Go back”

Voice output: “Go back, the last numbers entered have been removed. Push the talk switch and continue adding numbers otherwise say dial, go back, or delete.”

Display: “995”

Repeating the above operation deletes the last digits in reverse order of input.

Delete operation—

You say: “Delete”

Voice output: “Deleted. The entire number to dial has been deleted. Please push the talk switch and say the number.”

Display: “Dial by Num”

The display will return to the initial screen that allows a number to be input.

Cancel operation—

Do either one of the following:

- ***Push the on−hook switch at anytime during the operation.***
- ***Push the talk switch and say “Cancel” after the beep at anytime during the operation except while a call is connected.***

—Receiving a phone call

When receiving a phone call, a ring tone is audible and the system changes into the telephone mode.

When receiving a phone call, the display is as follows. The display differs depending on whether or not the vehicle is in motion.

When the vehicle is stopped:
Number, name or “Incoming” is displayed.

When the vehicle is in motion:
“Incoming” is displayed.

Do either one of the following:

- Pushing the off−hook switch allows you to talk on the phone.
- Pushing the on−hook switch refuses the call.

To adjust the ring volume, push “+” or “−” on the steering volume controls. Volume adjustment cannot be done using the audio system.

Repeatedly pushing “−” on the steering volume controls mutes the ring.

When receiving an international phone call, the name of the party may not be displayed correctly depending on the cellular phone.

To transfer a call to the phone:

The received call can be transferred from the hands−free system to the cellular phone that is connected to Bluetooth®. For details, refer to the user’s guide for the cellular phone.

—Talking on the phone

While talking on the phone, the display is as follows. The display differs depending on whether or not the vehicle is in motion.

When the vehicle is stopped:
Number is displayed.

When the vehicle is in motion:
“Talking” is displayed.

When the call is finished, push the on−hook switch.

In the following situations, your voice may not reach the party.

- Talk alternately with the other party on the phone. If you talk at the same time, the voice may not reach each other. (It is not a malfunction.)
- Keep the volume of receiving voice down. Otherwise, echo is coming up. When you talk on the phone, speak clearly towards the microphone.
- When driving on a rough road.
- When driving at high speeds.
- When the window is open.
- When the air conditioning vents face the microphone.
- When the sound of the air conditioning fan is loud.

To transfer a call from the phone:

Pushing the off−hook switch while talking on the cellular phone that is connected to Bluetooth® allows you to talk hands−free.

To transfer a call to the phone:

The call can be transferred from the hands−free system to the phone that is connected to Bluetooth®. For details, refer to the user’s guide for the cellular phone.

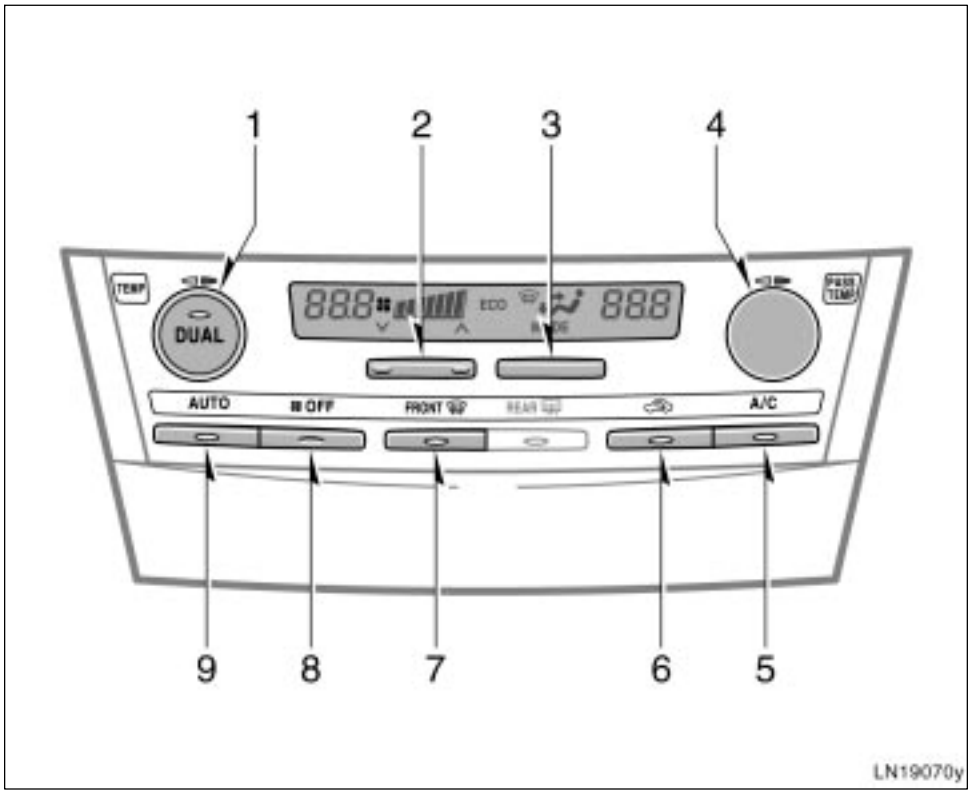
SECTION 1-9

OPERATION OF INSTRUMENTS AND CONTROLS

Air conditioning system

Automatic air conditioning system
Controls 241
Air flow selector settings 246
Operating tips 246
Climate remote controls 249
Side and rear vents 250
Air conditioning filter 251

Automatic air conditioning system—
—Controls



1. Temperature selector (“TEMP”)
   (with “DUAL” button indicator on—individual setting on driver side only)
   (with “DUAL” button indicator off—simultaneous setting on driver and front passenger)
2. Fan speed selector
3. Air flow selector button
4. Temperature selector (“PASS TEMP”)
   (individual setting on front passenger side only)
5. “A/C” button
6. Air intake selector
7. Windshield air flow button
8. “OFF” button
9. “AUTO” button

“AUTO” button

For automatic operation of the air conditioning, press the “AUTO” button. The “AUTO” button will turn on, indicating that the automatic operation mode has been selected.

In the automatic operation mode, the air conditioning selects the most suitable fan speed, air flow, air intake and on−off of the air conditioning according to the temperature.

When you press the “AUTO” button with the air intake mode at FRESH, internal circulation may be applied for maximum cooling.

You may use manual controls if you want to select your own settings.

Fan speed selector

Push the “∧” (increase) or “∨” (decrease) side of the button to adjust the fan speed.

In automatic operation, you do not have to adjust the fan speed unless you desire another fan speed mode.

“DUAL” button

Push the button to change the mode of the temperature setting.

With the indicator on—Individual temperature setting for driver and front passenger

With the indicator off—Simultaneous temperature setting for driver and front passenger

Temperature selectors

Turn the knob to adjust the temperature—to the right to warm, to the left to cool.

“LO” appears when you adjust to maximum cooling, and “HI” appears when you adjust to maximum warming.

—“TEMP” knob

With the “DUAL” button indicator on—This knob changes the temperature on the driver side only.

With the “DUAL” button indicator off—This knob changes the temperature on the driver side and front passenger side simultaneously. This function will be cancelled when the “PASS TEMP” knob is turned.

—“PASS TEMP” knob

This knob changes the temperature on the front passenger side only.

“OFF” button

Push the button to turn off the air conditioning system.

Air flow selector button

Push the button to select the vents used for air flow.

In automatic operation, you do not have to select the air flow unless you desire another air flow mode.

1. **Panel—**Air flows mainly from the instrument panel vents and the rear vents.
2. **Bi−level—**Air flows from both the floor vents, the instrument panel vents and the rear vents.
3. **Floor—**Air flows mainly from the floor vents.
4. **Floor/Windshield—**Air flows mainly from the floor vents and windshield vents.

   This position allows the air intake to select FRESH automatically. This is to clean up the front view more quickly.

   If you want to return the setting to RECIRCULATE mode, press the air intake selector button once again.

   Press the “A/C” button for dehumidified heating or cooling. This setting clears the front view more quickly.

Windshield air flow button

When this button is pressed, air flows mainly from the windshield vents and turns on the defogging function with the purpose of clearing the front view.

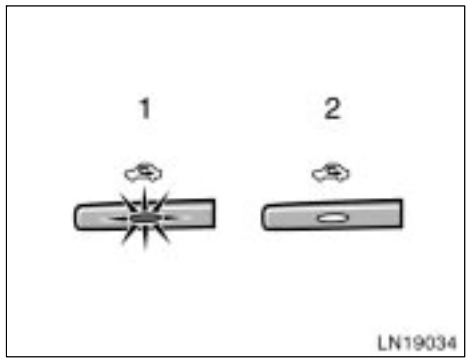
Pressing this button once again returns the air flow mode to the last one used.

This button allows the air intake to select FRESH automatically. This is to clean up the front view more quickly. It is not possible to return to RECIRCULATE in this mode.

Press the “A/C” button for dehumidified heating or cooling. This setting clears the front view more quickly.

For details about air flow selector settings, see “—Air flow selector settings” described below.

When the “POWER” switch is set at ON after the 12 volt battery is reconnected, the indicator light on the button may flash and a motor sound may be heard. This does not indicate a malfunction.



Air intake selector

Press the button to select the air source.

1. **RECIRCULATE** (indicator light is on)—Recirculates the air inside the vehicle.
2. **FRESH** (indicator light is off)—Draws outside air into the system.

To prevent fogging up of the windshield, the air intake mode may change automatically to FRESH depending on the condition of the air conditioning system.

“A/C” button

To turn on the air conditioning, press the “A/C” button. The “A/C” button indicator will come on. To turn the air conditioning off, press the button again.

If the “A/C” button indicator flashes, there is a problem in the air conditioning system and the air conditioning automatically shuts off. If this happens, take your vehicle to a Toyota dealer for service.

Plasmacluster™*

The Plasmacluster™* helps to keep good air quality in the cabin by emiting positive and negative ions into the cabin.

Operating the air conditioning system allows positive and negative ions to come out from the driver’s side vent.

A low noise may be heard during operation. This is not a malfunction.

Static electricity may be discharged near the driver’s side vent because high voltage is used to operate the system.

To clean the driver’s side vent, wipe the vent using a soft cloth after turning the system off.

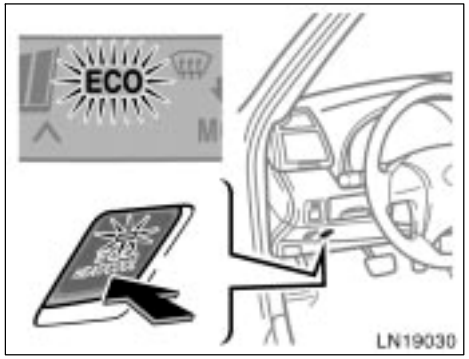
⚠ CAUTION

Do not disassemble or repair the system because it contains high voltage parts. Call your Toyota dealer if the system needs repair.

NOTICE

Do not insert anything into the driver’s side vent, attach anything to it, or use sprays around the driver’s side vent. These things may cause the system not to work properly.

*: This system adopts the plasmacluster technology, manufactured under license from SHARP Corporation. “Plasmacluster™” is a trademark of SHARP Corporation.



“ECO HEAT/COOL” switch

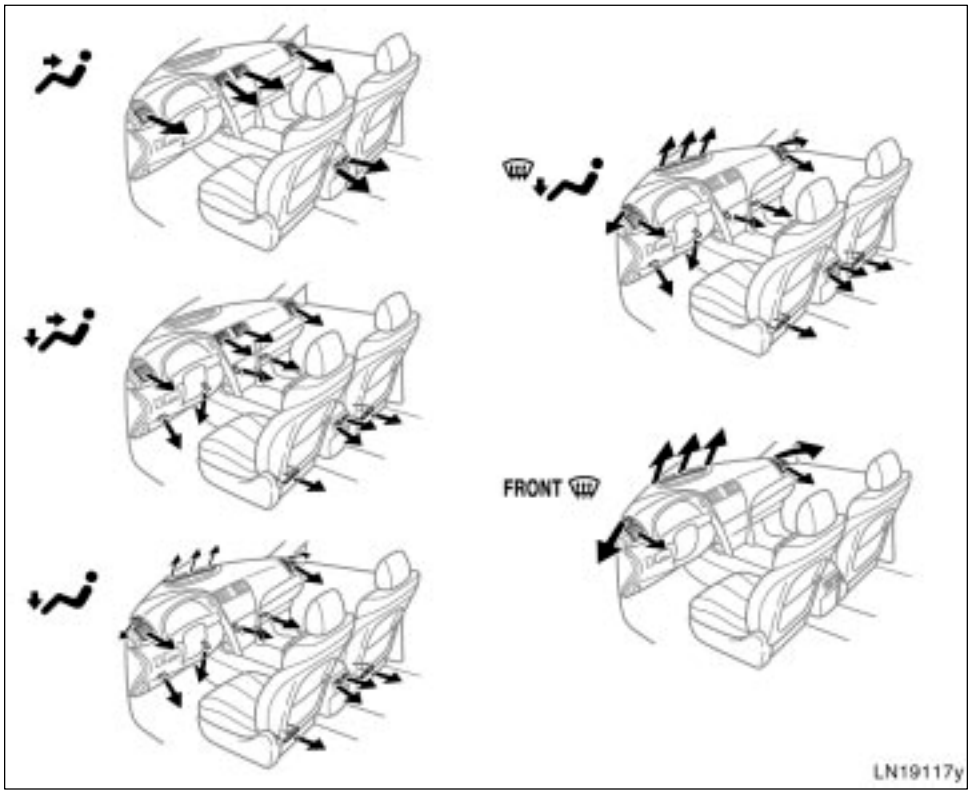
Push the “ECO HEAT/COOL” switch to select the “ECO HEAT/COOL” (economical) mode of the air conditioning. The indicator on the switch comes on and “ECO” appears on the air conditioning display to indicate that the mode is on.

The efficiency of the air conditioning is limited because the consumption of electricity is reduced, achieving a reduction of fuel consumption. As a result, it may take longer than the usual amount of time for the inside air temperature to reach the set temperature.

The “ECO HEAT/COOL” mode is canceled in the following cases:

- The temperature control is set at “LO” (the lowest temperature) or “HI” (the highest temperature).
- The air flow is set in the floor/windshield mode or windshield mode.
- “ECO HEAT/COOL” switch is pushed again.

—Air flow selector settings



—Operating tips

- To cool off your Toyota after it has been parked in the hot sun, drive with the windows open for a few minutes. This vents the hot air, allowing the air conditioning to cool the interior more quickly.
- Make sure the air intake grilles in front of the windshield are not blocked (by leaves or snow, for example).
- On humid days, do not blow cold air on the windshield. The windshield could fog up because of the difference in air temperature on the inside and outside of the windshield.
- Keep the area under the front seats clear to allow air to circulate throughout the vehicle.
- On cold days, set the fan speed to high for a minute to help clear the intake ducts of snow or moisture. This can reduce the amount of fogging on the windows.
- When driving on dusty roads, close all windows. If dust thrown up by the vehicle is still drawn into the vehicle after closing the windows, it is recommended that the air intake selector be set to FRESH and the fan speed selector to any setting except “OFF”.

- If following another vehicle on a dusty road, or driving in windy and dusty conditions, it is recommended that the air intake selector be temporarily set to RECIRCULATE, which will close off the outside passage and prevent outside air and dust from entering the vehicle interior.

Heating

For best results, set controls as follows:

For automatic operation—

Press in the “AUTO” button.
Temperature—To the desired temperature
Air intake—FRESH (outside air)
Air conditioning—OFF

For manual operation—

Fan speed—To the desired fan speed
Temperature—Towards **WARM**
Air intake—FRESH (outside air)
Air flow—FLOOR
Air conditioning—OFF

- For quick heating, select recirculated air for a few minutes. To keep the windows from fogging, select fresh after the vehicle interior has been warmed.
- Press the “A/C” button on for dehumidified heating.
- Choose floor/windshield air flow to heat the vehicle interior while defrosting or defogging the windshield.

Air conditioning

For best results, set controls as follows:

For automatic operation—

Press in the “AUTO” button.
Temperature—To the desired temperature
Air intake—FRESH (outside air)
Air conditioning—ON

For manual operation—

Fan speed—To the desired fan speed
Temperature—Towards **COLD**
Air intake—FRESH (outside air)
Air flow—PANEL
Air conditioning—ON

- For quick cooling, select recirculated air for a few minutes.

Ventilation

For best results, set controls as follows:

For automatic operation—

Press in the “AUTO” button.
Temperature—Towards low temperature
Air intake—FRESH (outside air)
Air conditioning—OFF

For manual operation—

Fan speed—To the desired fan speed
Temperature—Towards **COLD**
Air intake—FRESH (outside air)
Air flow—PANEL
Air conditioning—OFF

Defogging and defrosting

—The inside of the windshield

For best results, set controls as follows:

—For automatic operation

Temperature—Towards high temperature to heat; low temperature to cool
Air intake—FRESH (outside air)
Air flow—WINDSHIELD

—For manual operation

Fan speed—To the desired fan speed
Temperature—Towards high temperature to heat; low temperature to cool
Air intake—FRESH (outside air)
Air flow—WINDSHIELD

Pressing the windshield air flow button turns on the defogging function with the purpose of clearing the front view.

When pressing the windshield air flow button, the air intake selects FRESH automatically. This is to clean up the front view more quickly. It is not possible to return to RECIRCULATE in this mode.

Press the “A/C” button for dehumidified heating or cooling. This setting clears the front view more quickly.

- On humid days, do not blow cold air on the windshield—the difference between the outside and inside temperatures could make the fogging worse.

—The outside of the windshield

For best results, set controls as follows:

—For automatic operation

Temperature—Towards high temperature
Air intake—FRESH (outside air)
Air flow—WINDSHIELD

—For manual operation

Fan speed—To the desired fan speed
Temperature—Towards high temperature
Air intake—FRESH (outside air)
Air flow—WINDSHIELD

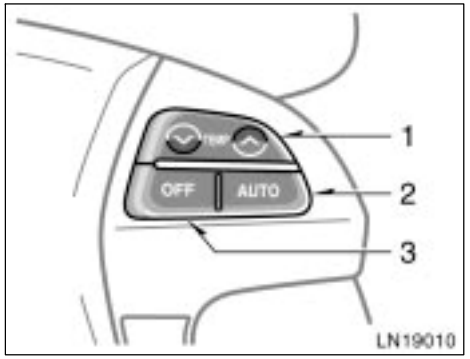
Pressing the windshield air flow button turns on the defrosting function with the purpose of clearing the front view.

When pressing the windshield air flow button, the air intake selects FRESH automatically. This is to clean up the front view more quickly. It is not possible to return to RECIRCULATE in this mode.

Press the “A/C” button for dehumidified heating or cooling. This setting clears the front view more quickly.

- To heat the vehicle interior while defrosting the windshield, choose floor/windshield air flow.

Climate remote controls (steering switches)



Some parts of the air conditioning system can be adjusted using the switches on the steering wheel.

Details of the specific switches, controls, and features are described below.

1. Temperature selector (“TEMP”)
   (with “DUAL” button indicator on—individual setting on driver side only)
   (with “DUAL” button indicator off—simultaneous setting on driver and front passenger)
2. “AUTO” button
3. “OFF” button

“AUTO” button

For automatic operation of the air conditioning, press the “AUTO” button. The “AUTO” button will turn on, indicating that the automatic operation mode has been selected.

In the automatic operation mode, the air conditioning selects the most suitable fan speed, air flow, air intake and on−off of the air conditioning according to the temperature.

When you press the “AUTO” button with the air intake mode at FRESH, internal circulation may be applied for maximum cooling.

You may use manual controls if you want to select your own settings.

Temperature selector

To increase the temperature, press the “∧” side. To decrease it, press the “∨” side.

“LO” appears when you adjust to maximum cooling, and “HI” appears when you adjust to maximum warming.

With the “DUAL” button indicator on—This button changes the temperature on the driver side only.

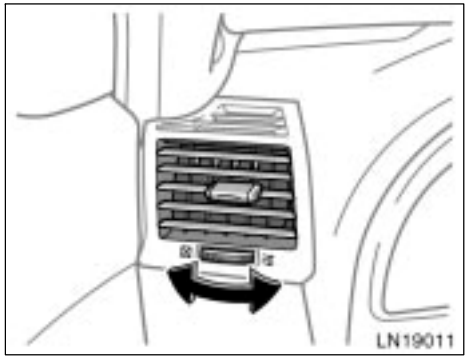
With the “DUAL” button indicator off—This button changes the temperature on the driver side and front passenger side simultaneously.

This function will be cancelled when the “PASS TEMP” knob on the instrument panel is turned.

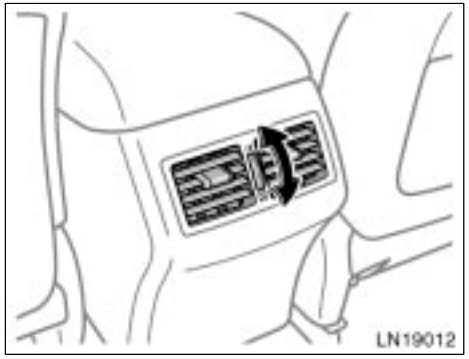
“OFF” button

Push the “OFF” button to turn off the air conditioning system.

Side and rear vents



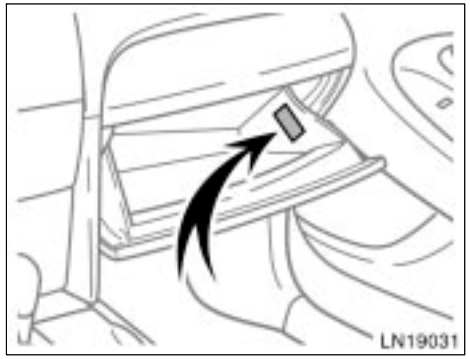
Side vents



Rear vents

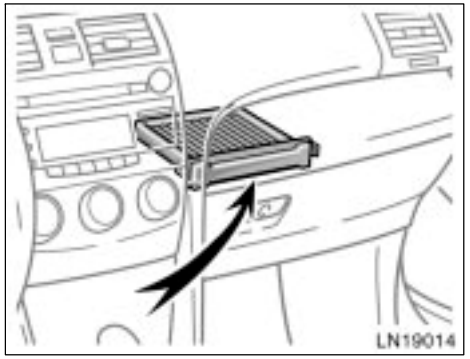
If air flow control is not satisfactory, check the side and rear vents. The side and rear vents may be opened or closed as shown.

Air conditioning filter—



The air conditioning filter information label is placed inside of the glove box as shown and indicates that a filter has been installed.

The air conditioning filter prevents dust from entering the vehicle through the air conditioning vent.

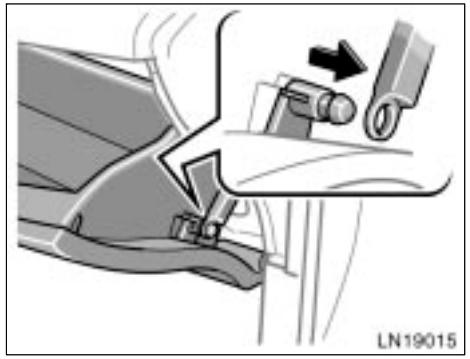


The air conditioning filter is behind the glove box.

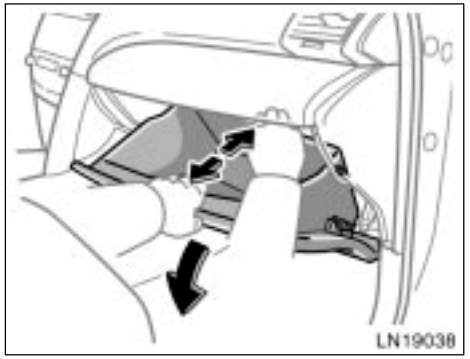
—Checking, cleaning and replacing the air conditioning filter

The air conditioning filter may clog after long use. The filter may need to be cleaned or replaced if the air flow of the air conditioning and heater experiences extreme reductions in operating efficiency, or if the windows begin to fog up easily in FRESH mode.

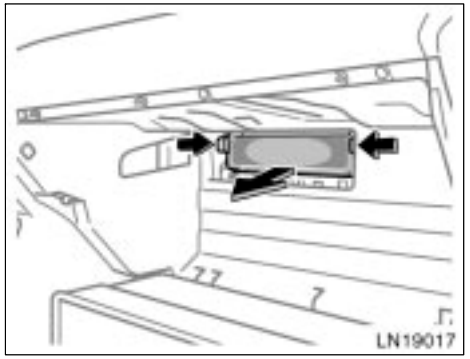
To maintain the air conditioning efficiency, inspect, clean and replace the air conditioning filter according to the maintenance schedule. In dusty areas or areas with heavy traffic flow, such as inner city or desert areas, early replacement may be required. (For scheduled maintenance information, please refer to the “Scheduled Maintenance Guide” or “Owner’s Manual Supplement”.)



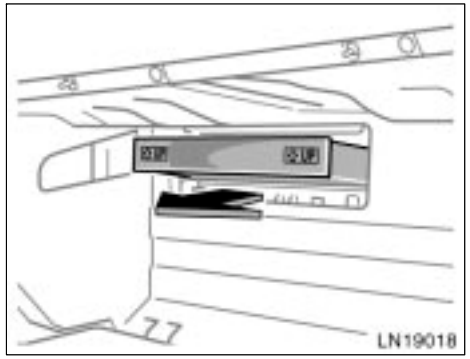
1. Open the glove box, and slide off the damper as shown.



2. Apply pressure to the glove box as shown to disengage the claws.



3. Remove the filter cover while pushing in both ends of the cover.



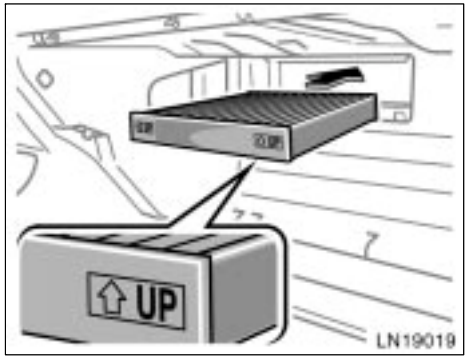
4. Pull the filter out of the filter outlet. Inspect the filter on the surface.

If it is dirty, it should be cleaned or replaced.

To clean the filter, blow compressed air through it from the bottom.

Hold the air gun 50 mm (2 in.) from the filter and blow for approximately 2 minutes at 500 kPa (5.0 kgf/cm^2 or bar, 72 psi).

If it is not available, have the filter cleaned by your Toyota dealer.



When inserting the filter in the filter outlet, keep the arrow pointing up.

NOTICE

To prevent damage to the air conditioning system, do the following.

- ***When using the air conditioning system, make sure that a filter is always installed.***
- ***When cleaning the filter, do not clean the filter with water.***

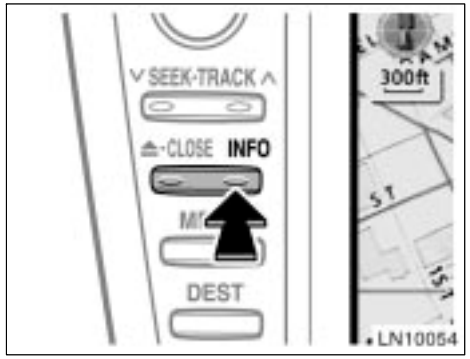
SECTION 1-10

OPERATION OF INSTRUMENTS AND CONTROLS

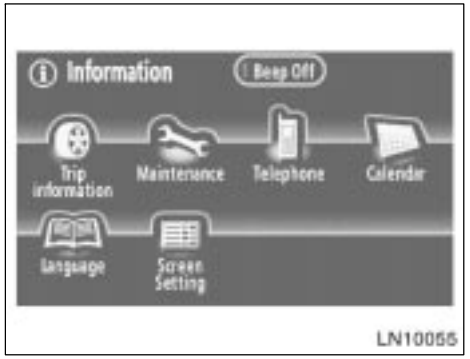
Other equipment

Trip information 255
Clock 257
Compass 258
Power outlets 262
Garage door opener 263
Portable ashtray 266
Glove box 267
Auxiliary boxes 268
Rear console box 270
Front cup holder 270
Rear cup holder 271
Grocery bag hooks 271
Cargo net 272
Floor mat 272

Trip information (with navigation system)



1. **Push the “INFO” button to display the “Information” screen.**



2. **Touch the “Trip information” on the screen.**

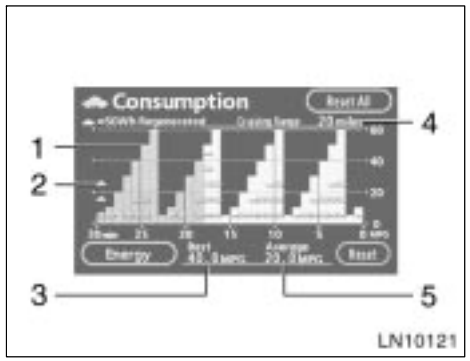
Trip information appears on the screen.

When the instrument panel lights are turned on, the brightness of the screen will be reduced.

You can adjust the brightness of the screen. To adjust the brightness, see the “Navigation System Owner’s Manual” for the procedure.

CAUTION

Do not operate the screen while the vehicle is moving. Be sure to operate the screen only when the vehicle is stopped.



Consumption screen

1. Transition of fuel consumption in the past 30 minutes
2. Regenerated energy in the past 30 minutes
3. Best fuel economy among average
4. Cruising range
5. Average fuel consumption

The information listed above is displayed when you touch the “Consumption” switch on the “Energy Monitor” screen.

The displayed values on the screen indicate general driving conditions. Accuracy varies with driving habits and road conditions.

When the “POWER” switch is set at ON, the last previously used mode displayed just before the “POWER” switch is turned off will appear.

If “Reset All” is touched, all of the graphics and values except the cruising range will be reset.

If the electrical power source is disconnected from the navigation system screen, the screen will automatically be set to the initial mode.

1. Fuel consumption in the past 30 minutes (“Consumption”)

The transition of fuel consumption in the past 30 minutes is displayed in the graph.

2. Regenerated energy in the past 30 minutes

The regenerated energy in the past 30 minutes is indicated with symbols.

One symbol indicates 50 Wh. Up to 4 symbols will be shown. The energy of 50 Wh illuminates a 50 W bulb for an hour.

3. Best fuel economy (lowest fuel consumption) among average (“Best”)

Best fuel economy among average is displayed.

If the average fuel consumption is reset by touching the “Reset” and the average fuel consumption is the lowest, the value is overwritten.

4. Cruising range (“Cruising Range”)

The distance the vehicle can travel with the remaining fuel is calculated and displayed based on the quantity of remaining fuel and past fuel consumption.

The cruising range display indicates the approximate distance that you can drive until the fuel gauge reaches “E”. It is different from the actual distance traveled.

If the fuel gauge malfunctions, the mileage figure will not appear.

When the vehicle is refueled, the driving range is recalculated.

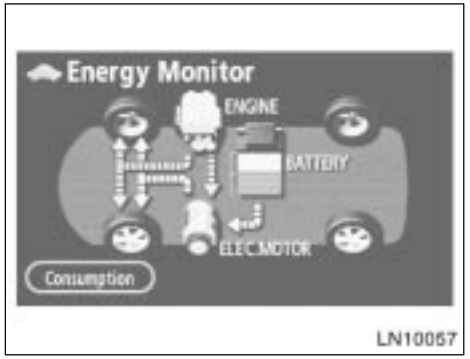
The actual driving range varies with driving habits and road conditions. If fuel consumption is good, the driving range will be longer than indicated. If fuel consumption is poor, the driving range will be shorter than indicated.

If the low fuel level warning light comes on, refuel the vehicle even if the display indicates that the vehicle can be driven further.

5. Average fuel consumption (“Average”)

Average fuel consumption is displayed based on total driving distance and total fuel consumption.

The calculation is reset by touching the “Reset”. If the average fuel consumption is the lowest, the value of the best fuel economy among average is overwritten.



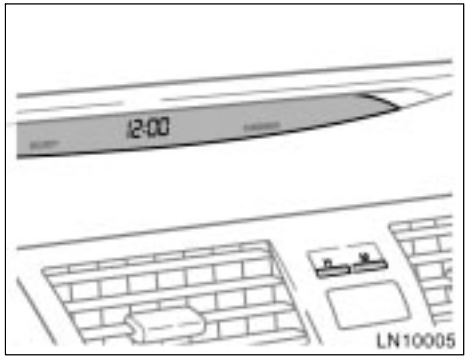
Energy Monitor screen

Touching the “Energy” switch turns on the “Energy Monitor” that displays the hybrid system operating condition.

The arrow on the screen indicates the movement of the energy. See “Energy monitor” on page 3 for the representative screen.

The segments of the battery on the screen indicate the status of the hybrid battery. See “—Hybrid battery status” on page 5 for details.

Clock



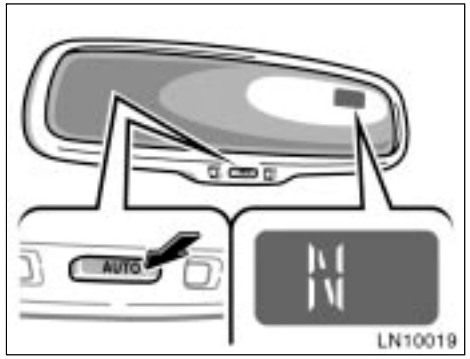
To reset the hour: Push the “H” button.
To reset the minutes: Push the “M” button.

The “POWER” switch must be set at ACC or ON.

If the electrical power source has been disconnected from the clock, the time display will automatically be set to 1:00 (one o’clock).

When the instrument panel lights are turned on, the brightness of the time indicator will be reduced.

Compass



The direction is indicated on the inside rear view mirror.

If the “POWER” switch was turned off with the system on, the system will automatically turn back on when the “POWER” switch is turned on.

Push the “AUTO” switch for longer than 3 seconds to turn the compass system on and off.

The compass indicates the direction that the vehicle is heading. In the above case, it shows that the vehicle is heading north.

Displays	Directions
N	North
NE	Northeast
E	East
SE	Southeast
S	South
SW	Southwest
W	West
NW	Northwest

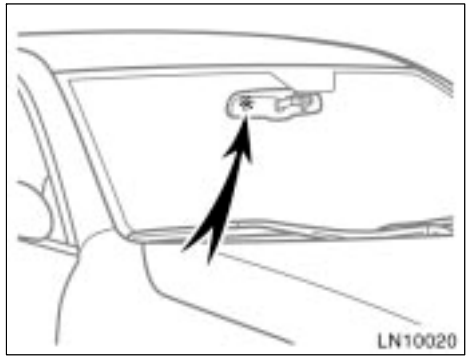
The compass may not show the correct direction in the following conditions:

- The vehicle is stopped immediately after turning.
- The compass does not adjust while the vehicle is stopped.
- The “POWER” switch is turned off immediately after turning.
- The vehicle is on an inclined surface.
- The vehicle is in a place where the earth’s magnetic field is subject to interference by artificial magnetic fields (underground parking, under a steel tower, between buildings, roof parking, near a crossing, near a large vehicle, etc.).
- The vehicle is magnetized. (There is a magnet or a metal object on or near the inside rear view mirror.)
- The 12 volt battery has been disconnected.

If your vehicle is out of the set zone, refer to “CALIBRATING THE COMPASS” below to set the zone number.

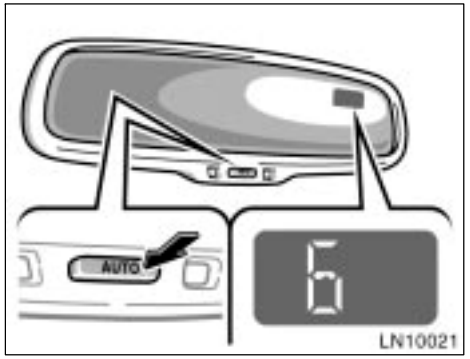
If the deviation is small, the compass works to calibrate the direction automatically while the vehicle is in motion.

For additional precision or for complete calibrating, see “CALIBRATING THE COMPASS” below.



The compass sensor is in the inside rear view mirror.

NOTICE
Do not put magnets or a metal object on or near the inside rear view mirror of the vehicle. Doing this may cause malfunction of the compass sensor.

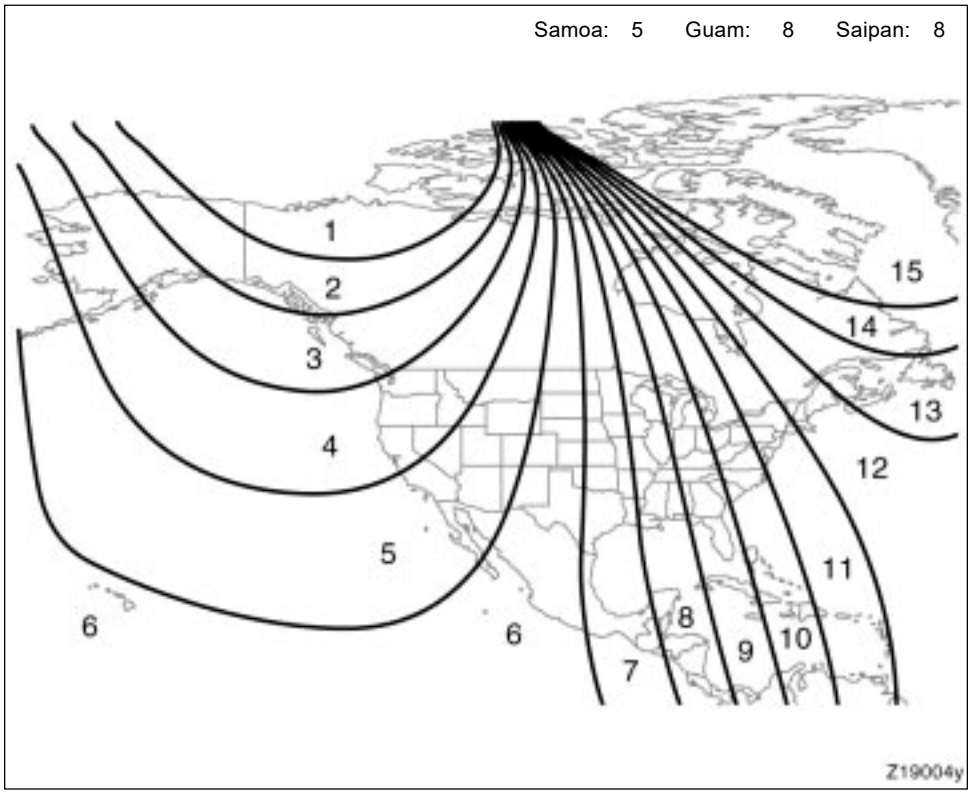


CALIBRATING THE COMPASS (deviation calibration)

The direction display on the compass deviates from the true direction determined by the earth’s magnetic field. The angle of deviation varies according to the geographic position of the vehicle.

To adjust this deviation, stop the vehicle, then push and hold the switch until the zone number appears on the display.

Then push the switch, referring to the following map to select the number of the zone where the vehicle is.

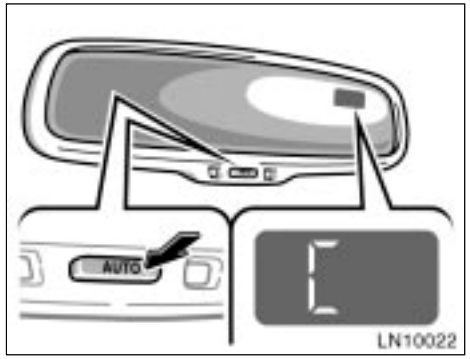


Zone numbers

After calibration, leaving the system for several seconds returns it to the compass mode.

⚠ CAUTION

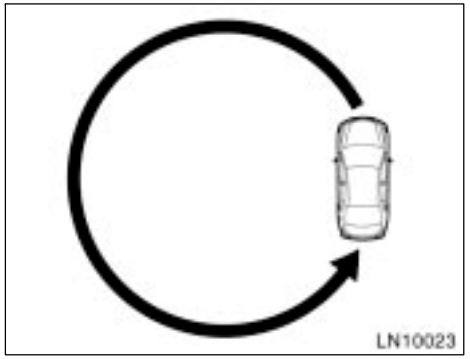
Do not adjust the display while the vehicle is moving. Be sure to adjust the display only when the vehicle is stopped.



CALIBRATING THE COMPASS (circling calibration)

Sometimes the direction display on the compass may not change after a turn. To rectify this, stop the vehicle and push and hold the switch until “C” appears on the display.

If “C” appears on the display because of a drastic change in the magnetic field, perform circling calibration.



Drive the vehicle in a circle at 8 km/h (5 mph) or less. If there is not enough space to drive in a circle, drive around the block.

After driving 1 to 3 circles in the above method, calibration is completed when the direction is shown on the display.

If calibration cannot be performed because of the magnetized vehicle etc., take your vehicle to Toyota dealer.

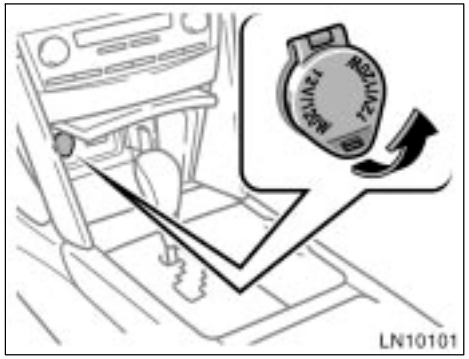
Perform circling calibration just after you have purchased your Toyota. And then always perform circling calibration after the 12 volt battery has been removed, replaced or disconnected.

- Do not perform circling calibration of the compass in a place where the earth’s magnetic field is subject to interference by artificial magnetic fields (underground parking, under a steel tower, between buildings, roof parking, near a crossing, near a large vehicle, etc.).
- During calibration, do not operate electric systems (moon roof, power windows, etc.) as they may interfere with the calibration.

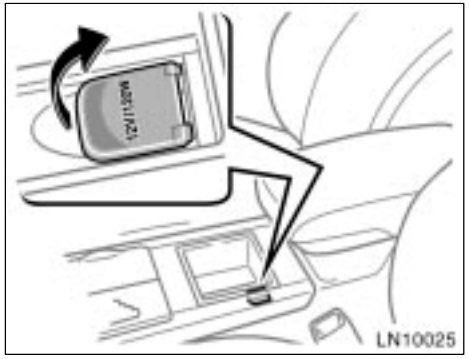
⚠ CAUTION

- **When doing the circling calibration, be sure to secure a wide space, and watch out for people and vehicles in the neighborhood. Do not violate any local traffic rules while performing circling calibration.**
- **Do not adjust the display while the vehicle is moving. Be sure to adjust the display only when the vehicle is stopped.**

Power outlets



Front console



Center console

The power outlets are designed for power supply for car accessories.

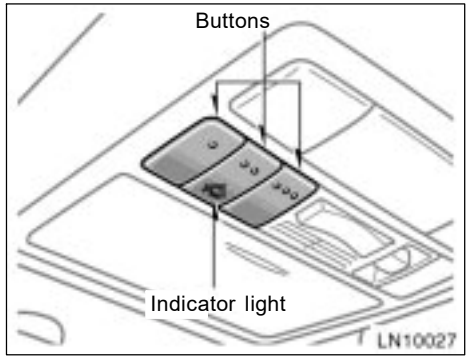
The “POWER” switch must be set at ACC or ON for the power outlet to be used.

Front console power outlet—Connected cables can be passed through the hole to the front passenger side of the auxiliary box. For details, see “Auxiliary boxes” on page 268 in this Section.

NOTICE

- ***To prevent the fuse from being blown, do not use the electricity over the total vehicle capacity of 12V/120W.***
- ***To prevent the 12 volt battery from being discharged, do not use the power outlets longer than necessary when the hybrid system is turned off.***
- ***Close the power outlet lids when the power outlets are not in use. Inserting anything other than an appropriate plug that fits the outlet, or allowing any liquid to get into the outlet may cause electrical failure or short circuits.***

Garage door opener



The garage door opener (HomeLink® Universal Transceiver) is manufactured under license from HomeLink® and can be programmed to operate garage doors, gates, entry doors, door locks, home lighting systems, and security systems, etc.

(a) Programming the HomeLink®

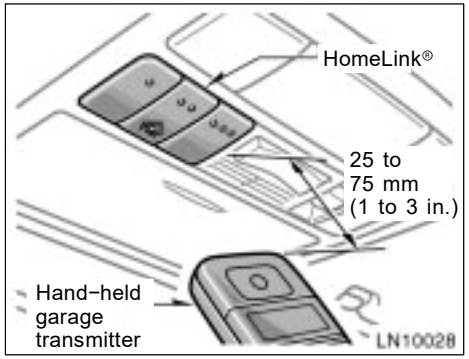
The HomeLink® in your vehicle has 3 buttons and you can store one program for each button.

To ensure correct programming into the HomeLink®, install a new battery in the hand−held transmitter prior to programming.

The battery side of the hand−held transmitter must be pointed away from the HomeLink® during the programming process.

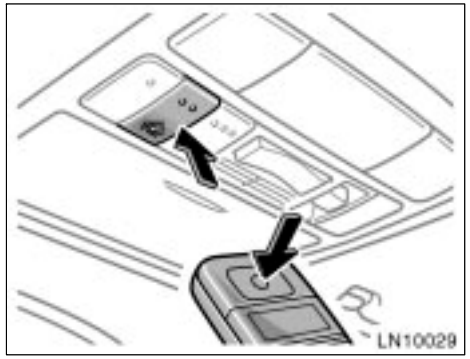
For Canadian users, follow the procedure in “Programming an entrance gate/programming all devices in the Canadian market”.

1. Decide which of 3 HomeLink® buttons you want to program.



2. Place your hand−held garage transmitter 25 to 75 mm (1 to 3 in.) away from the surface of the HomeLink®.

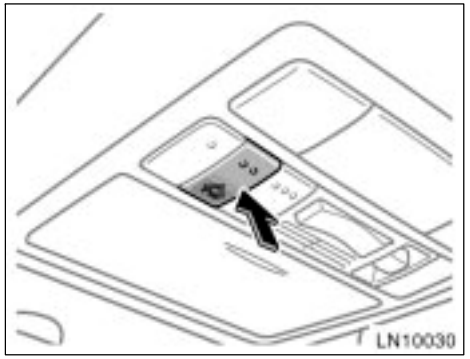
Keep the indicator light on the HomeLink® in view while programming.



3. Simultaneously press and hold the hand−held garage transmitter button along with the selected HomeLink® button.

Do not release the buttons until step 4 has been completed.

4. When the indicator light on the HomeLink® changes from a slow to a rapid flash after 20 seconds, you can release both buttons.



5. Test the operation of the HomeLink® by pressing the newly programmed button. If programming a garage door opener, check to see if the garage door opens and closes.

If the garage door does not operate, identify if your garage transmitter is of the “Rolling Code” type. Press and hold the programmed HomeLink® button. The garage door has the rolling code feature if the indicator light (on the HomeLink®) flashes rapidly and then remains lit after 2 seconds. If your garage transmitter is the “Rolling Code” type, proceed to the heading “Programming a rolling code system”.

6. Repeat steps 2 through 5 for each remaining HomeLink® button to program another device.

Programming a rolling code system

If your device is “Rolling Code” equipped, it is necessary to follow steps 1 through 4 under the heading “Programming the HomeLink®” before proceeding with the steps listed below.

1. Locate the “training” button on the ceiling mounted garage door opener motor. The exact location and color of the button may vary by brand of garage door opener. Refer to the owner’s guide supplied by the garage door opener manufacturer for the location of this “training” button.
2. Press the “training” button on the ceiling mounted garage door opener motor.

Following this step, you have 30 seconds in which to initiate step 3 below.

3. Press and release the vehicle’s programmed HomeLink® button twice. The garage door may open. If the door does open, the programming process is complete. If the door does not open, press and release the button a third time. This third press and release will complete the programming process by opening the garage door.

The ceiling mounted garage door opener motor should now recognize the HomeLink® unit and be able activate the garage door up/down.

4. Repeat steps 1 through 3 for each remaining HomeLink® button to program another rolling code system.

Programming an entrance gate/programming all devices in the Canadian market

1. Decide which of the 3 HomeLink® buttons you want to program.
2. Place your hand−held gate/device transmitter 25 to 75 mm (1 to 3 in.) away from the surface of the HomeLink®.

Keep the indicator light on the HomeLink® in view while programming.

3. Press and hold the selected HomeLink® button.
4. Continuously press and release (cycle) the hand−held gate/device transmitter button every two seconds until step 5 is complete.
5. When the indicator light on the HomeLink® changes from a slow to a rapid flash after 20 seconds, you can release both buttons.
6. Test the operation of the HomeLink® by pressing the newly programmed button. Check to see if the gate/device operates correctly.
7. Repeat steps 1 through 6 for each remaining HomeLink® button to program another device.

Programming other devices

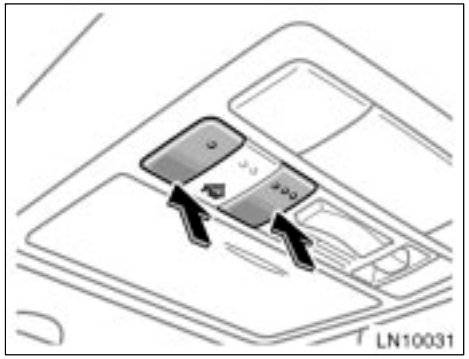
To program other devices such as home security systems, home door locks or lighting, contact your authorized Toyota dealer for assistance.

Reprogramming a button

Individual HomeLink® buttons cannot be erased, however, to reprogram a single button, follow the procedure “Programming the HomeLink®”.

(b) Operating the HomeLink®

To operate the HomeLink®, press the appropriate HomeLink® button to activate the programmed device. The HomeLink® indicator light should come on. The HomeLink® continues to send the signal for up to 20 seconds as long as the button is pressed.



(c) Erasing the entire HomeLink® memory (all three programs)

To erase all previously programmed codes at one time, press and hold down the 2 outside buttons for 20 seconds until the indicator light flashes.

If you sell your vehicle, be sure to erase the programs stored in the HomeLink® memory.

For additional programming assistance with your HomeLink® Universal Transceiver call the:

- Toyota Customer Experience Center at 1−800−331−4331 (U.S.A.)
- Toyota Canada Customer Interaction Centre at 1−888−869−6828 (Canada)

Refer to HomeLink® on the internet at: WWW.HOMELINK.COM

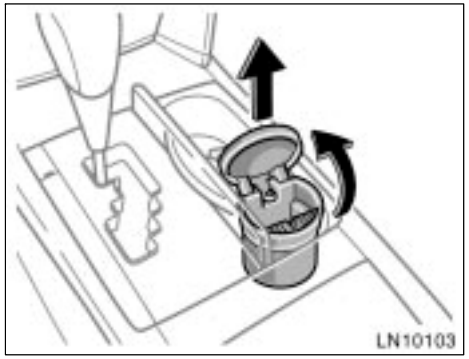
⚠ CAUTION

- **When programming the HomeLink® Universal Transceiver, you may be operating a garage door or other device. Make sure people and objects are out of the way of the garage door or other device to prevent potential harm or damage.**
- **Do not use this HomeLink® Universal Transceiver with any garage door opener that lacks the safety stop and reverse feature as required by federal safety standards. (This includes any garage door opener model manufactured before April 1, 1982.) A garage door opener which cannot detect an object (signaling the door to stop and reverse), does not meet current federal safety standards. Using a garage door opener without these features increases risk of serious injury or death.**

This device complies with Part 15 of the FCC Rules and with RSS−210 of the IC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

WARNING: This transmitter has been tested and complies with FCC and IC rules. Changes or modifications not expressly approved by the party responsible for compliance could void the user’s authority to operate the device.

Portable ashtray



The ashtray can be removed and used outside the vehicle. To use the ashtray, raise the lid.

When finished with your cigarette, thoroughly extinguish it in the ashtray to prevent other cigarette butts from catching fire. After using the ashtray, close the lid completely.

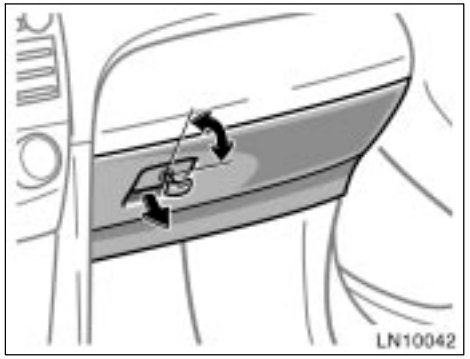
The cup holder lid cannot be closed while the ashtray is installed.

To detach the ashtray, pull it out.

⚠ CAUTION

To reduce the chance of injury in case of an accident or sudden stop while driving, always completely close the ashtray after use.

Glove box



To use the glove box:

Open by pulling the lever.

Lock by inserting the mechanical key and turning it clockwise.

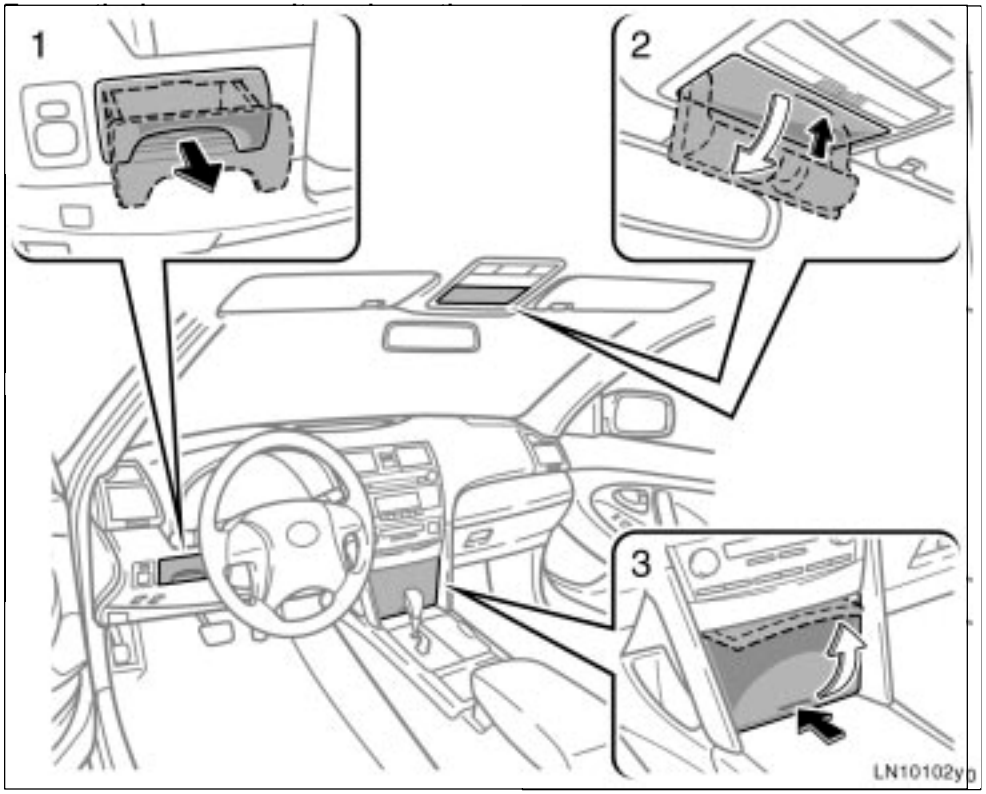
Unlock by inserting the mechanical key and turning it counterclockwise.

With the instrument panel lights on, the glove box light will come on when the glove box is open.

⚠ CAUTION

To reduce the chance of injury in case of an accident or a sudden stop, always keep the glove box door closed while driving.

Auxiliary boxes



CABLE PASS−THROUGH

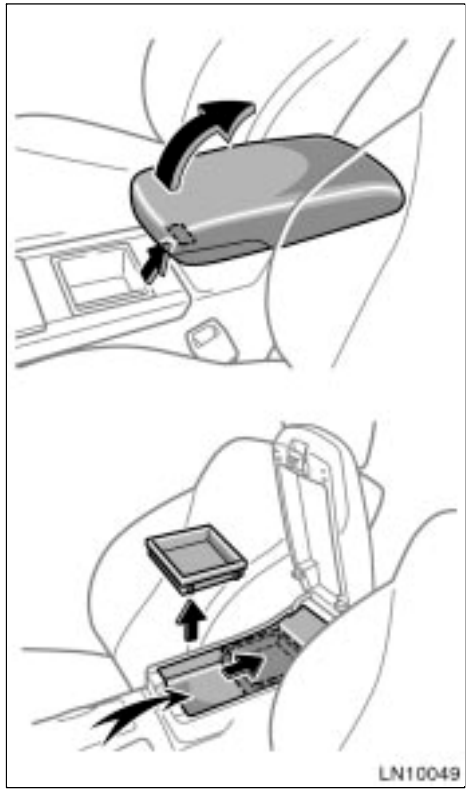
The auxiliary box of the front console is provided with a hole that allows cables to be passed into the cabin from the inside power outlet and AUX adapter.

To open the hole, perform the following procedure:

1. Remove the lid on the inside of the auxiliary box.
2. From the inside of the auxiliary box, push out and remove the outer lid.

Be careful not to lose the removed lids.

Rear console box



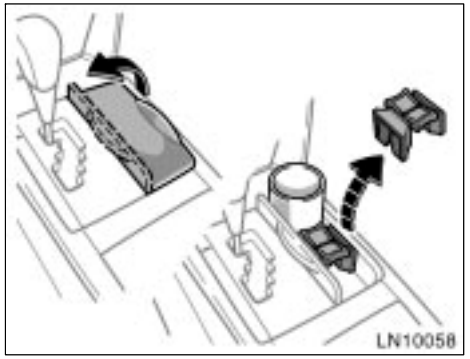
To open the console box, push the lock release button and raise the console box lid.

The upper tray slides forward/backward and can be removed.

⚠ CAUTION

To reduce the chance of injury in case of an accident or a sudden stop, always keep the console box closed while driving.

Front cup holder



The cup holder is designed for holding cups or drink−cans securely. To use them, open it as shown in the illustration.

The adapter for front cup holder is detachable. Replace it in its original position when using the front cup holder. Otherwise the drinks will not be held securely.

⚠ CAUTION

- Do not place anything else other than cups or drink−cans in the cup holder, as such items may be thrown about in the compartment and possibly injure people in the vehicle during sudden braking or in an accident.
- To reduce the chance of injury in case of an accident or sudden stop while driving, keep the cup holder closed when it is not in use.

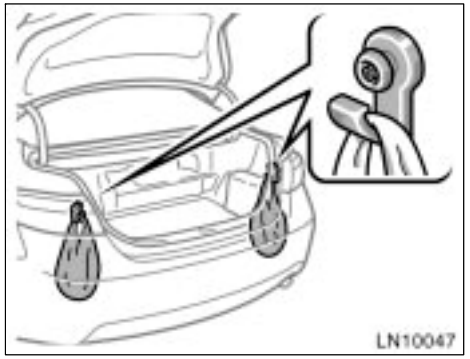
Rear cup holder

The cup holder is designed for holding cups or drink−cans securely. To use it, pull down the armrest.

⚠ CAUTION

- Do not place anything else other than cups or drink−cans in the cup holder, as such items may be thrown about in the compartment and possibly injure people in the vehicle during sudden braking or in an accident.
- Do not lift the armrest upright when the cup holder is in use.

Grocery bag hooks

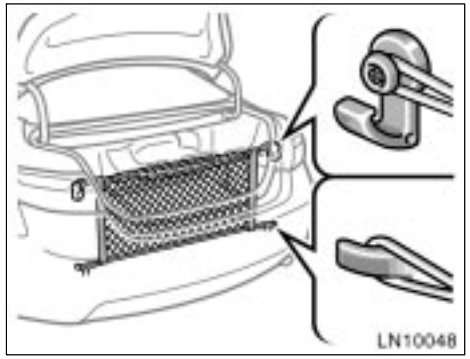


This hook is designed to hang things like grocery bags.

NOTICE

To prevent damage to the hook, avoid hanging heavy loads on it.

Cargo net

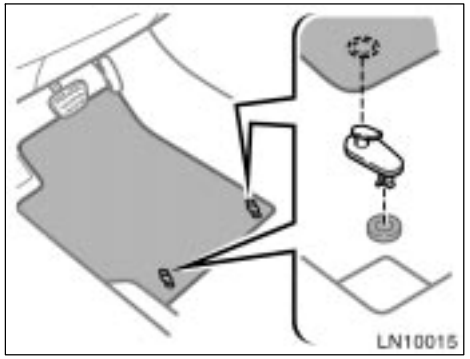


To secure belongings, hang the cargo net on the hooks.

NOTICE

- ***Do not use the net to secure sharp or heavy objects. The net will tear off.***
- ***Be sure not to twist the net when hooking.***

Floor mat



Use a floor mat of the correct size.

If the vehicle carpet and floor mat have two holes, then they are designed for use with locking clips. Attach the floor mat to the vehicle carpet using the clips. Lock the clips into the holes in the vehicle carpet.

⚠ CAUTION

Make sure the floor mat is properly placed on the vehicle carpet. If the floor mat slips and interferes with the movement of the pedals during driving, it may cause an accident.

Yaw rate and acceleration sensor	13	133	10
Skid control ECU x Body	5	51	44 in.*lbf
Wiring harness clamp bracket x Body	8	82	71 in.*lbf
Brake control power supply assembly x Bracket	5	51	44 in.*lbf
Brake control power supply with bracket x Body	5	51	44 in.*lbf
Brake pedal stroke sensor x Brake pedal support assembly	8.5	87	75 in.*lbf

DEFINITION OF TERMS

Terms	Definition
Monitor Description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	A group of diagnostic trouble codes that are output by ECM based on same malfunction detection logic.
Typical Enabling Condition	Preconditions that allow ECM to detect malfunctions. With all preconditions satisfied, ECM sets DTC when monitored value(s) exceeds malfunction threshold(s).
Sequence of Operation	Order of monitor priority, applied if multiple sensors and components involved in single malfunction detection process. Each sensor and component is monitored in turn and not monitored until previous detection operation is completed.
Required Sensor/Components	Sensors and components used by ECM to detect each malfunction.
Frequency of Operation	Number of times ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means ECM only performs checks for that malfunction once during single driving cycle. "Continuous" means ECM performs checks for that malfunction whenever enabling conditions are met.
Duration	Minimum time for which ECM must detect continuous deviation in monitored value(s) in order to set DTC. Timing begins when Typical Enabling Conditions are met.
Malfunction Thresholds	Value, beyond which, ECM determines malfunctions exist and sets DTCs.
MIL Operation	Timing of MIL illumination after a malfunction is detected. "Immediate" means ECM illuminates MIL as soon as malfunction is detected. "2 driving cycle" means ECM illuminates MIL if same malfunction is detected second time during next sequential driving cycle.

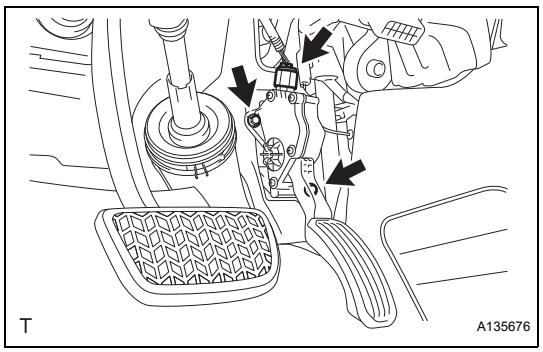
INSTALLATION

1. INSTALL ACCELERATOR PEDAL ROD

NOTICE:

- **Avoid physical shock to the accelerator pedal assembly.**
- **Do not disassemble the accelerator pedal assembly.**

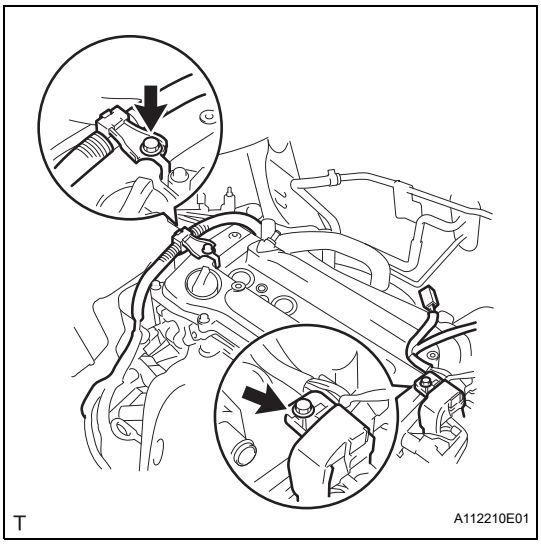


(a) Install the accelerator pedal rod with the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

(b) Connect the accelerator pedal position sensor connector.

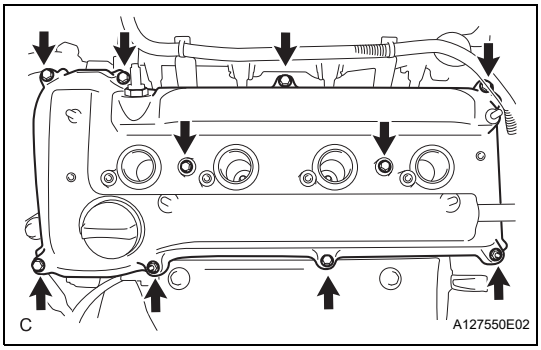
REMOVAL

1. **REMOVE LUGGAGE TRIM SERVICE HOLE COVER**
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (See page HV-560)**
3. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-90)**
4. **REMOVE FRONT WHEEL RH**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE ENGINE UNDER COVER RH**
7. **REMOVE FRONT FENDER APRON SEAL RH**
8. **DRAIN ENGINE OIL (See page LU-4)**
9. **REMOVE FRONT EXHAUST PIPE ASSEMBLY**
   HINT:
   See page EX-2.
10. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-91)**
11. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-91)**
12. **REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-91)**
13. **REMOVE V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-6)**
14. **REMOVE V-RIBBED BELT (See page EM-6)**
15. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-100)**
16. **REMOVE IDLER PULLEY BRACKET (See page EM-100)**
17. **REMOVE IGNITION COIL ASSEMBLY (See page EM-100)**
18. **DISCONNECT VENTILATION HOSE**
19. **DISCONNECT NO. 2 VENTILATION HOSE**



20. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY

(a) Remove the 2 bolts and disconnect the 2 engine wires.

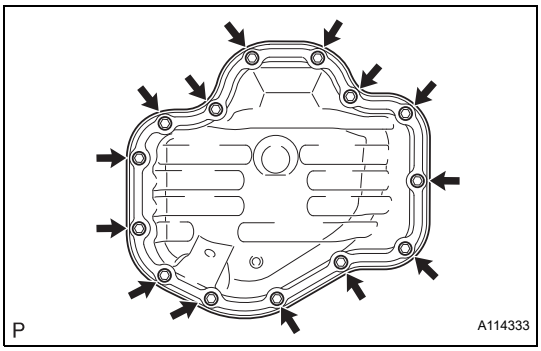


(b) Remove the 8 bolts, 2 nuts, and the cylinder head cover.

21. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page EM-8)

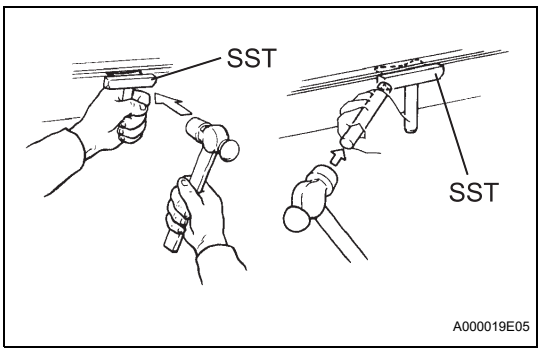
22. REMOVE CRANKSHAFT PULLEY (See page EM-74)

23. REMOVE CRANK POSITION SENSOR (See page ES-388)



24. REMOVE OIL PAN SUB-ASSEMBLY

(a) Remove the 12 bolts and 2 nuts.

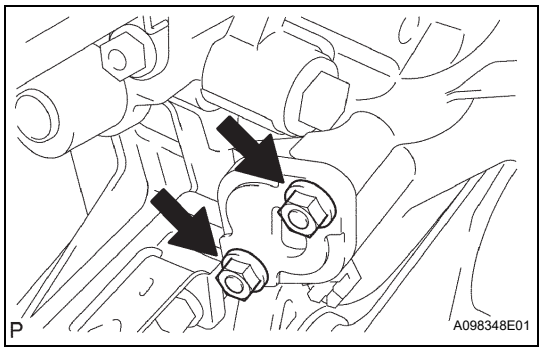


(b) Insert the blade of SST between the crankcase and oil pan. Cut through the sealer and remove the oil pan.

SST 09032-00100

NOTICE:

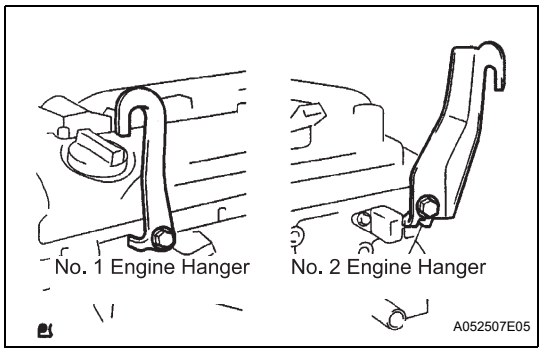
Be careful not to damage the contact surfaces of the crankcase, chain cover and oil pan.



25. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY

(a) Remove the 2 nuts, tensioner and gasket.

NOTICE:
Do not turn the crankshaft without the chain tensioner.



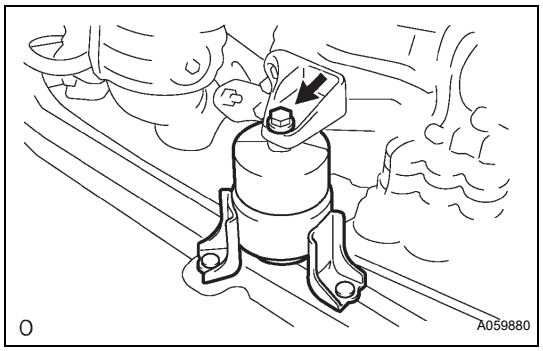
26. INSTALL ENGINE HANGERS

(a) Install the No. 1 engine hanger and No. 2 engine hanger with the bolts as shown in the illustration.
Parts No.:

No. 1 engine hanger	12281-28010
No. 2 engine hanger	12282-28010
Bolt	91512-61020

Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)

(b) Attach the sling device to the engine hangers and chain block.

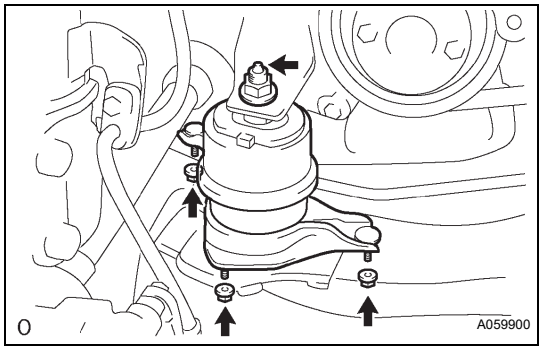


27. REMOVE ENGINE MOUNTING INSULATOR

(a) Attach the engine chain hoist to the engine hangers.

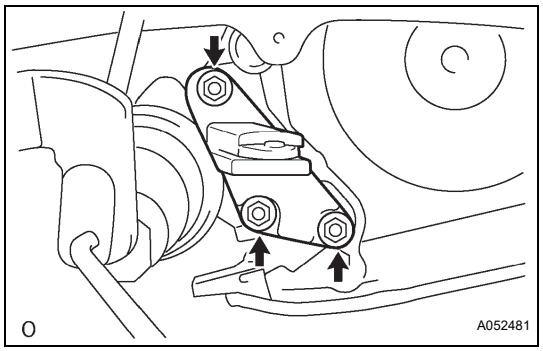
CAUTION:
Do not attempt to hang the engine by hooking the chain to any other part.

(b) Remove the bolt and disconnect the engine mounting insulator FR.



(c) Remove the 4 nuts from the engine mounting insulator RH.

(d) Raise the engine and remove the engine mounting insulator RH.

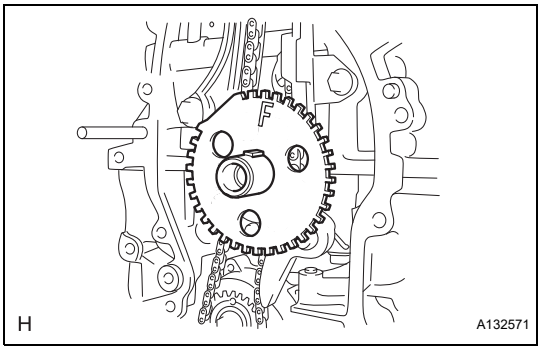


28. REMOVE ENGINE MOUNTING BRACKET RH

(a) Remove the 3 bolts and engine mounting bracket RH.

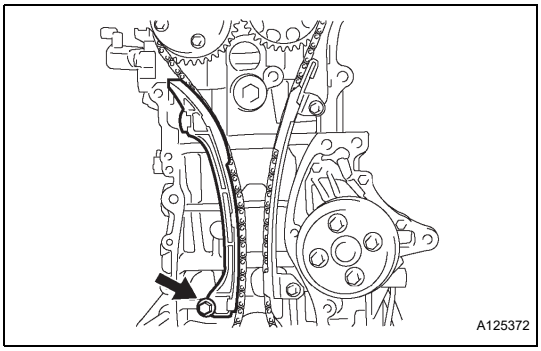
29. REMOVE TIMING CHAIN COVER SUB-ASSEMBLY (See page LU-11)

30. REMOVE TIMING CHAIN CASE OIL SEAL (See page LU-12)



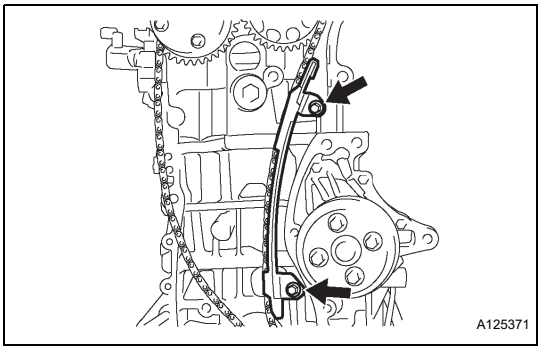
31. REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE

(a) Remove the crankshaft position sensor plate.



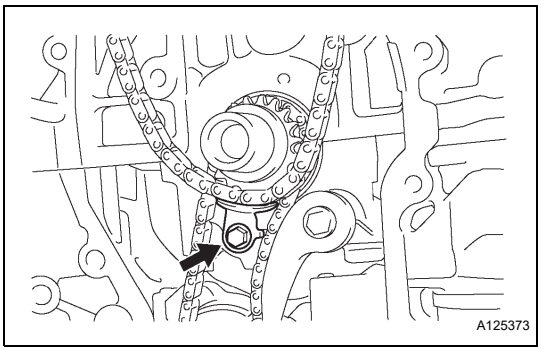
32. REMOVE CHAIN TENSIONER SLIPPER

(a) Remove the bolt and chain tensioner slipper.



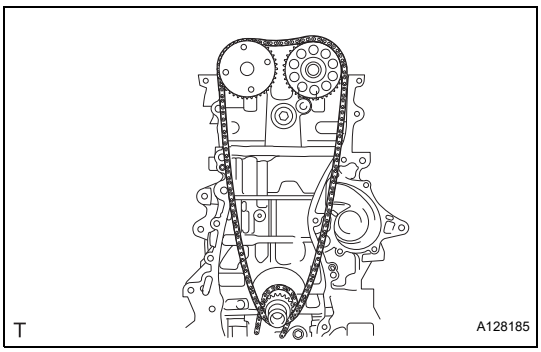
33. REMOVE NO. 1 CHAIN VIBRATION DAMPER

(a) Remove the 2 bolts and chain vibration damper.



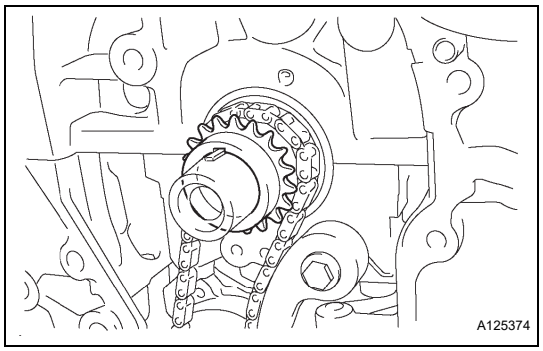
34. REMOVE TIMING CHAIN GUIDE

(a) Remove the bolt and timing chain guide.



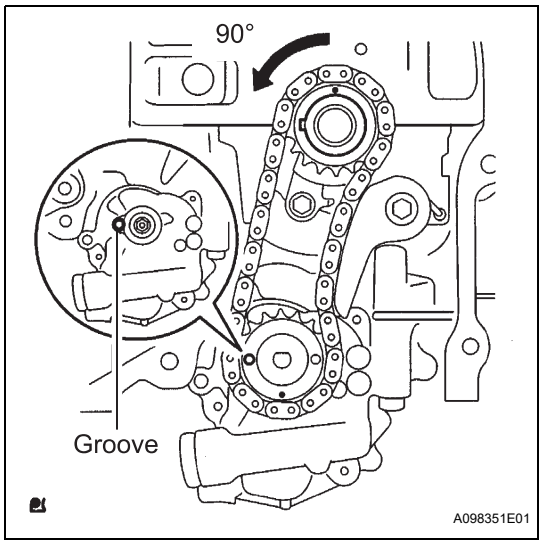
35. REMOVE CHAIN SUB-ASSEMBLY

(a) Remove the chain sub-assembly.



36. REMOVE CRANKSHAFT TIMING SPROCKET

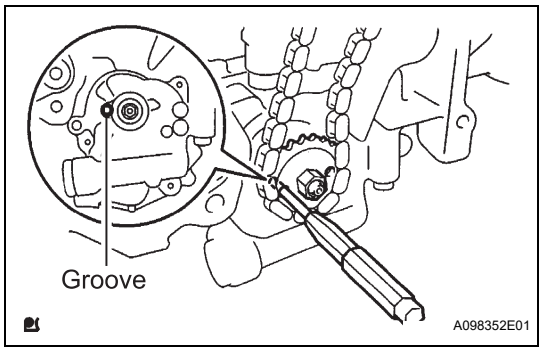
(a) Remove the crankshaft timing sprocket.



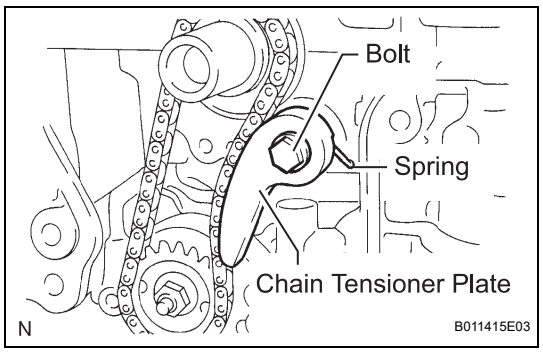
37. REMOVE NO. 2 CHAIN SUB-ASSEMBLY

(a) Turn the crankshaft 90° counterclockwise to align the adjusting hole of the oil pump drive shaft gear with the groove of the oil pump.

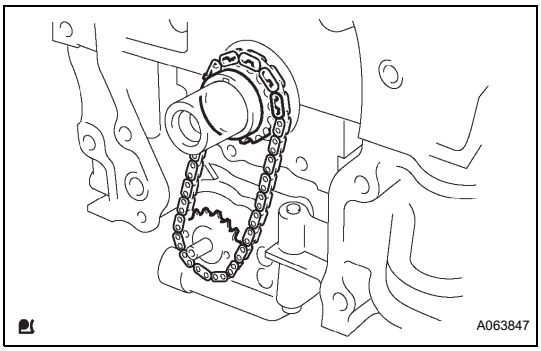
EM



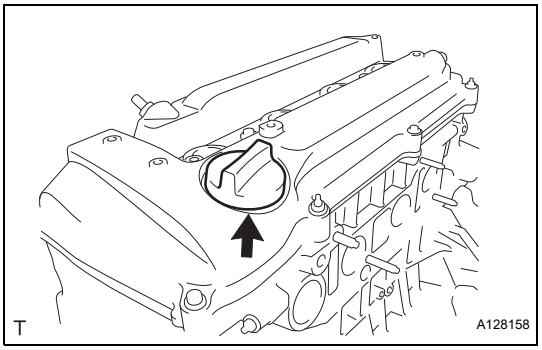
(b) Insert a 4 mm diameter bar into the adjusting hole of the oil pump drive shaft gear to lock the gear in position, and then remove the nut.



(c) Remove the bolt, chain tensioner plate and spring.



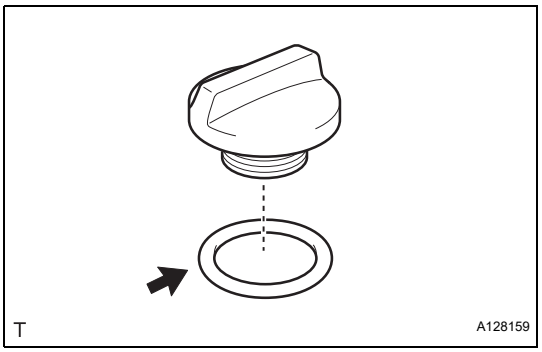
(d) Remove the chain tensioner, oil pump drive gear and chain.



DISASSEMBLY

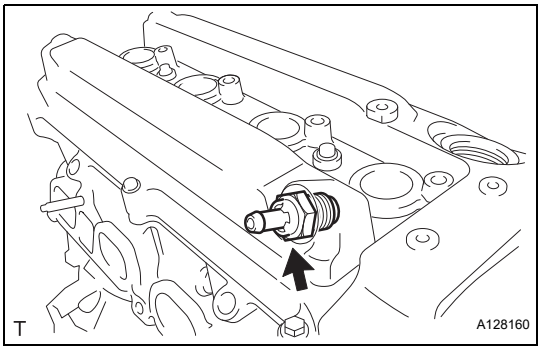
1. REMOVE OIL FILLER CAP SUB-ASSEMBLY

(a) Remove the oil filler cap.



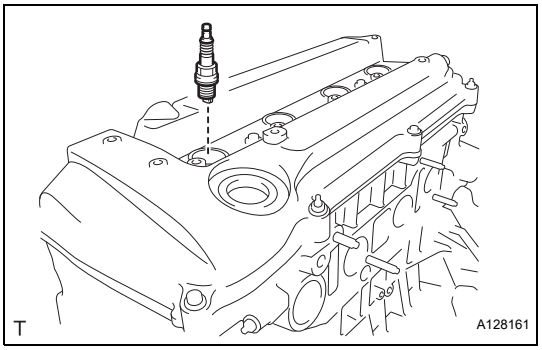
2. REMOVE OIL FILLER CAP GASKET

(a) Remove the oil filler cap gasket.



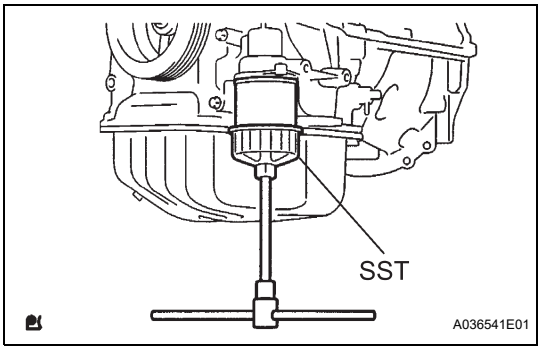
3. REMOVE VENTILATION VALVE SUB-ASSEMBLY

(a) Remove the ventilation valve.



4. REMOVE SPARK PLUG

(a) Remove the spark plugs.



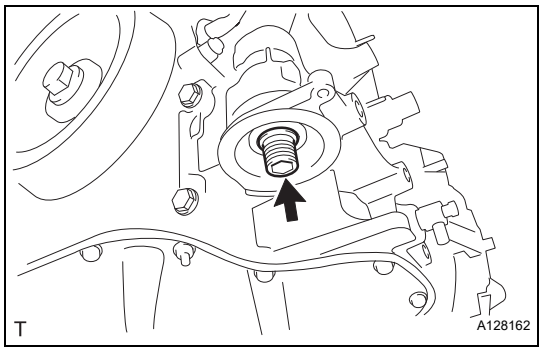
5. REMOVE OIL FILTER SUB-ASSEMBLY

(a) Using SST, remove the oil filter.

SST 09228-06501

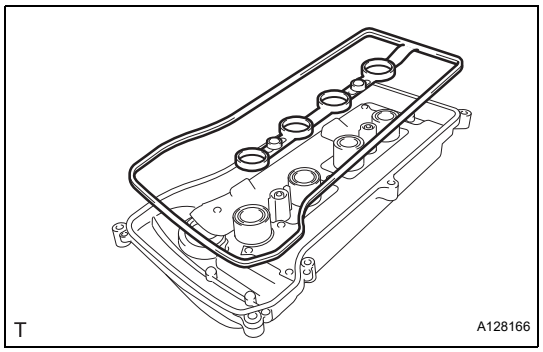
HINT:

Place a container for oil to be drained before removing the oil filter.

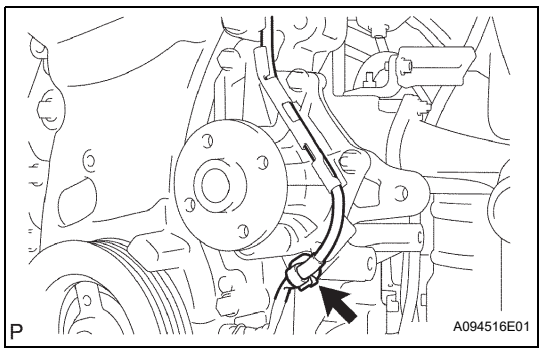


6. **REMOVE OIL FILTER UNION**
   (a) Using a 12 mm hexagon wrench, remove the union.

7. **REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-22)**

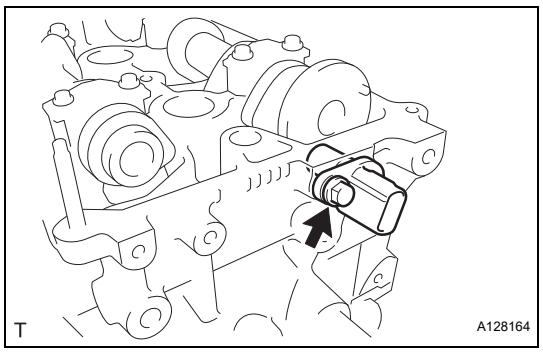


8. **REMOVE CYLINDER HEAD COVER GASKET**
   (a) Remove the cylinder head cover gasket.



9. **REMOVE CRANKSHAFT POSITION SENSOR**
   (a) Remove the wire harness clamp.
   (b) Separate the wire harness from the wire harness clamp bracket.

   (c) Remove the 2 bolts and sensor.



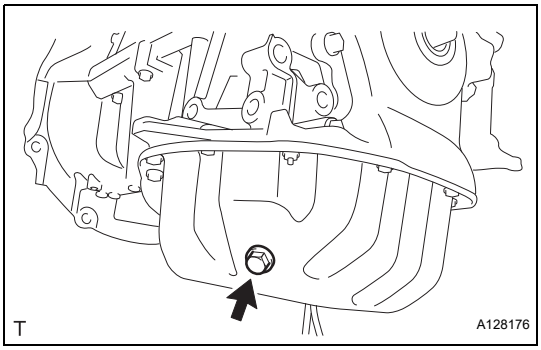
10. **REMOVE CAMSHAFT POSITION SENSOR**
    (a) Remove the bolt and sensor.

11. **REMOVE CRANKSHAFT PULLEY (See page EM-74)**

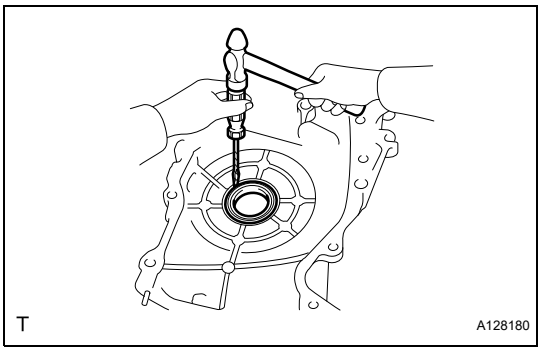
12. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-381)**

13. **REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-23)**

14. **REMOVE WATER PUMP PULLEY (See page CO-9)**

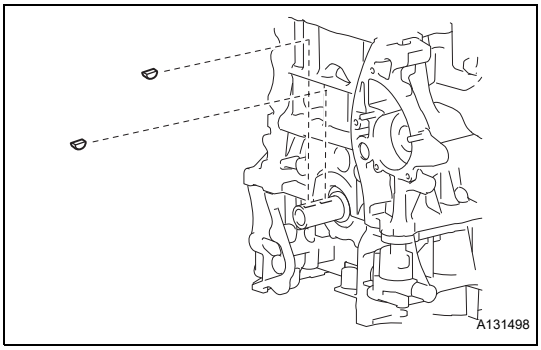


15. **REMOVE WATER PUMP ASSEMBLY (See page CO-9)**
16. **REMOVE OIL PAN DRAIN PLUG**
    (a) Remove the oil pan drain plug and gasket.
17. **REMOVE OIL PAN SUB-ASSEMBLY (See page EM-22)**
18. **REMOVE TIMING CHAIN COVER SUB-ASSEMBLY (See page LU-11)**

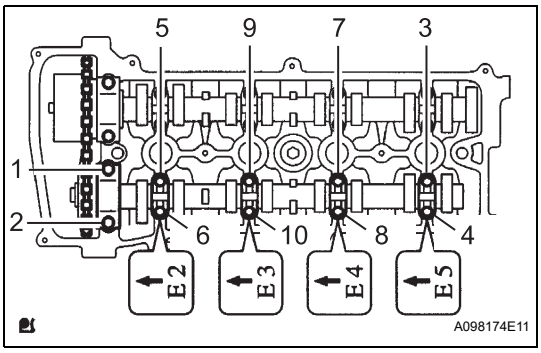


EM

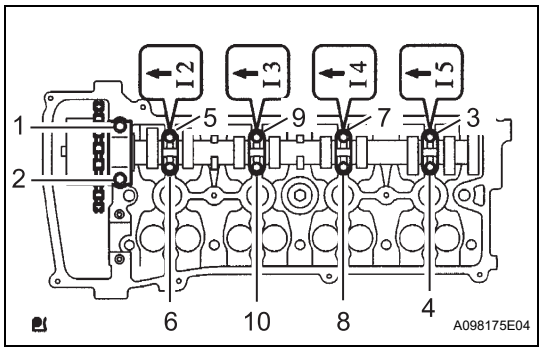
19. **REMOVE TIMING CHAIN CASE OIL SEAL**
    (a) Using a screwdriver and hammer, remove the oil seal.
20. **REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE (See page EM-24)**
21. **REMOVE TIMING CHAIN GUIDE (See page EM-24)**
22. **REMOVE CHAIN TENSIONER SLIPPER (See page EM-24)**
23. **REMOVE NO. 1 CHAIN VIBRATION DAMPER (See page EM-24)**
24. **REMOVE CHAIN SUB-ASSEMBLY (See page EM-24)**
25. **REMOVE CRANKSHAFT TIMING SPROCKET (See page EM-25)**
26. **REMOVE NO. 2 CHAIN SUB-ASSEMBLY (See page EM-25)**



27. **REMOVE KEYS**
    (a) Remove the 2 pulley set keys from the crankshaft.



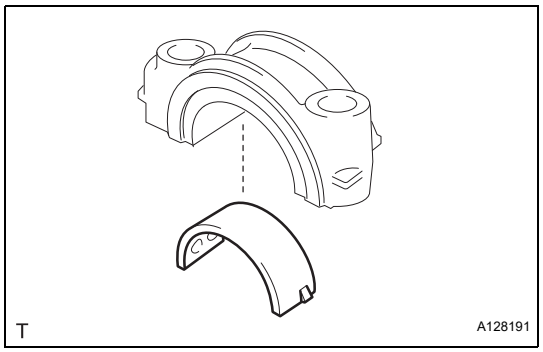
28. **REMOVE NO. 2 CAMSHAFT**
    (a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.
    (b) Remove the 5 bearing caps.



29. REMOVE CAMSHAFT

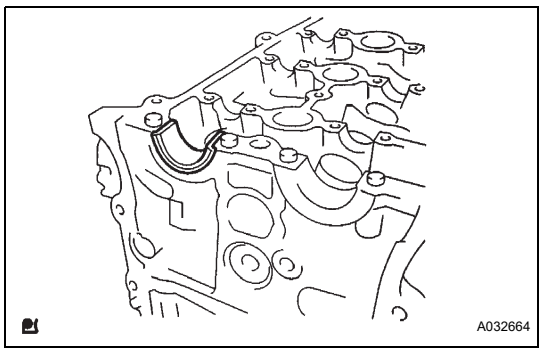
(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.

(b) Remove the 5 bearing caps.



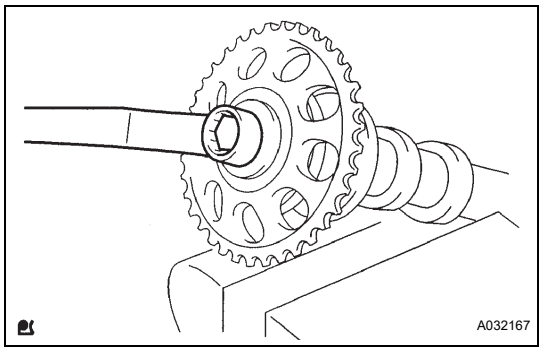
30. REMOVE NO. 1 CAMSHAFT BEARING

Remove the No. 1 camshaft bearing.



31. REMOVE NO. 2 CAMSHAFT BEARING

(a) Remove the No. 2 camshaft bearing.



32. REMOVE CAMSHAFT TIMING SPROCKET

(a) Clamp the camshaft in a vise.

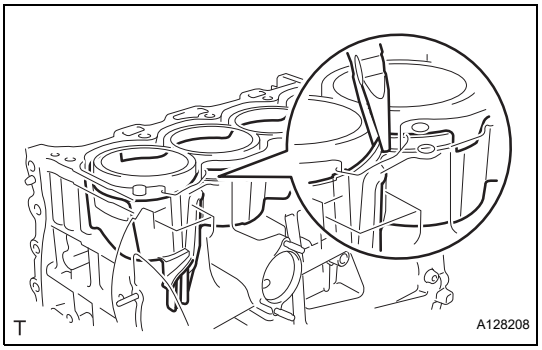
(b) Remove the flange bolt of the camshaft timing sprocket.

33. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY (See page EM-38)

34. REMOVE CYLINDER HEAD SUB-ASSEMBLY (See page EM-54)

35. REMOVE CYLINDER HEAD GASKET (See page EM-54)

EM

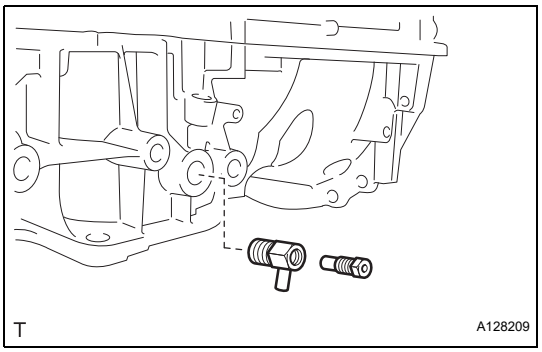


36. REMOVE CYLINDER BLOCK WATER JACKET SPACER

(a) Using needle-nose pliers, remove the cylinder block water jacket spacer.

NOTICE:

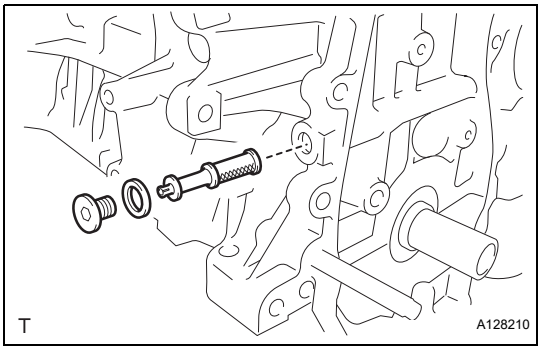
Be sure to remove the water jacket spacer if the cylinder block is to be turned upside down.



37. REMOVE CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

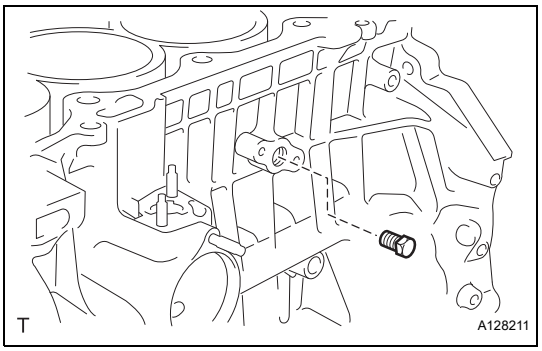
(a) Remove the water drain cock from the stiffening crankcase.

(b) Remove the water drain cock plug from the water drain cocks.



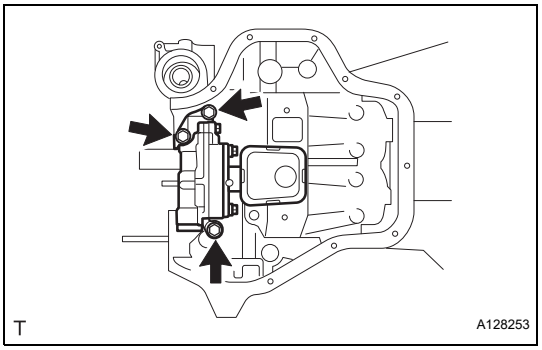
38. REMOVE OIL CONTROL VALVE FILTER

(a) Using an 8 mm socket hexagon wrench, remove the plug and filter.



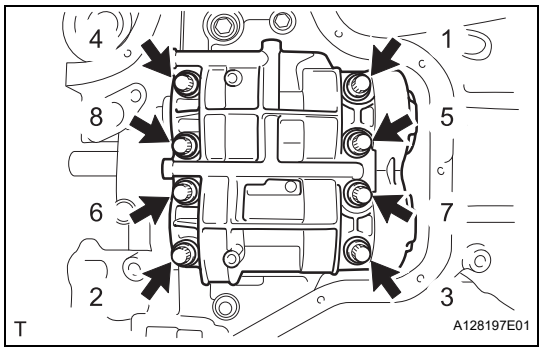
39. REMOVE NO. 1 TAPER SCREW PLUG

(a) Remove the No. 1 taper screw plug.



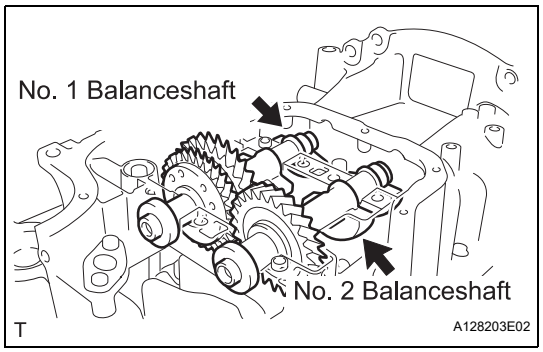
40. REMOVE OIL PUMP ASSEMBLY

(a) Remove the 3 bolts, oil pump and gasket.



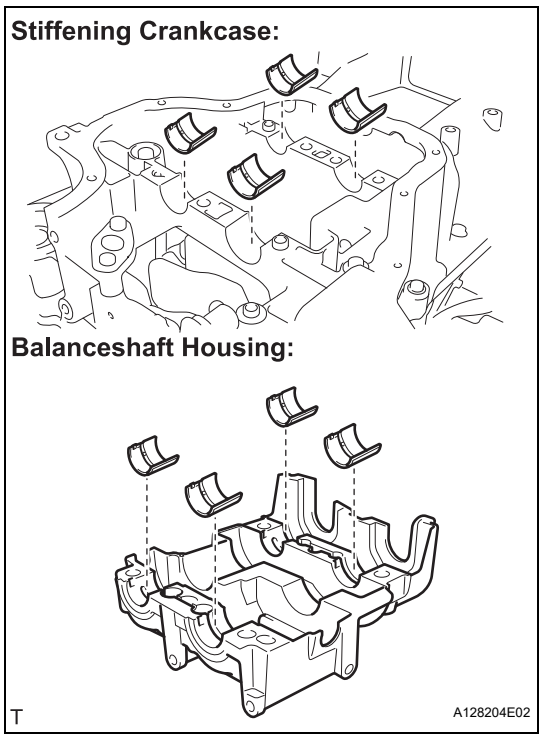
41. REMOVE NO. 1 AND NO. 2 BALANCESHAFT SUB-ASSEMBLY

(a) Uniformly loosen and remove the 8 bolts in the sequence shown in the illustration.



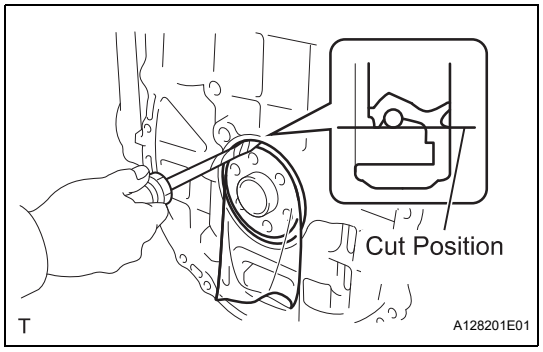
(b) Remove the No. 1 and No. 2 balanceshafts.

EM



42. REMOVE NO. 1 BALANCESHAFT BEARING

(a) Remove the No. 1 balanceshaft bearings.



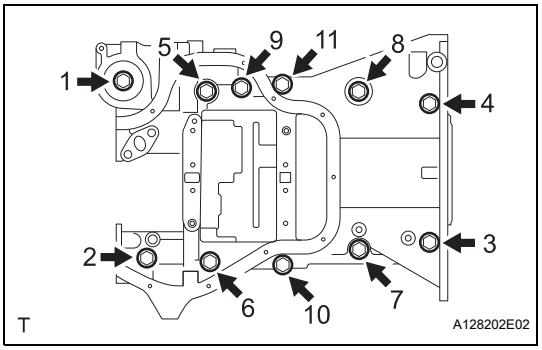
43. REMOVE ENGINE REAR OIL SEAL

(a) Using a knife, cut off the oil seal lip.

(b) Using a screwdriver with its tip taped, pry out the oil seal.

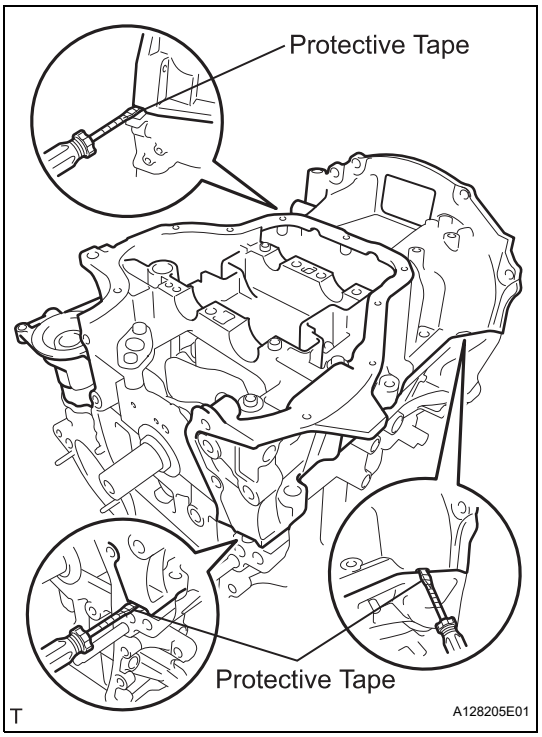
NOTICE:

After removing the oil seal, check the crankshaft for damage. If it is damaged, smooth the surface with 400-grit sandpaper.

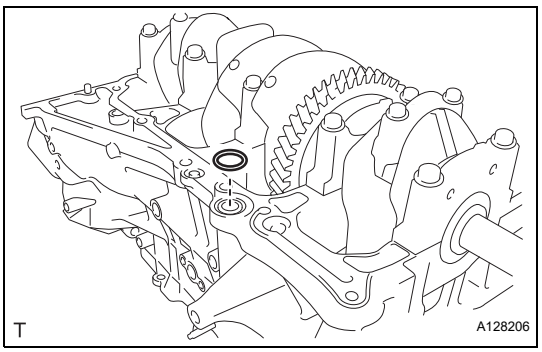


44. REMOVE STIFFENING CRANKCASE ASSEMBLY

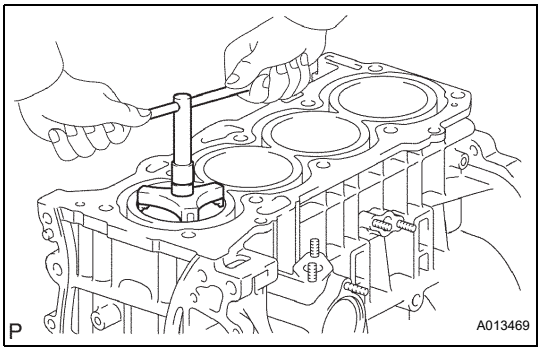
(a) Uniformly loosen and remove the 11 bolts in the sequence shown in the illustration.



(b) Using a screwdriver, remove the crankcase by prying between the crankcase and cylinder block.
NOTICE:
Be careful not to damage the contact surfaces of the crankcase and cylinder block.

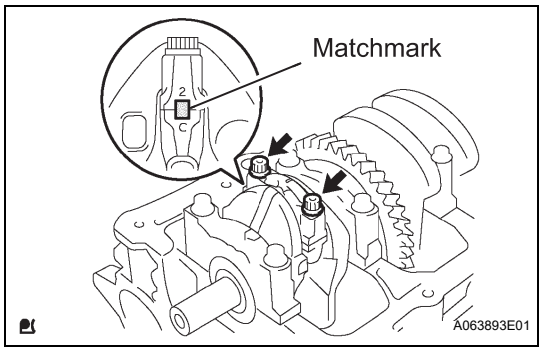


(c) Remove the O-ring from the cylinder block.

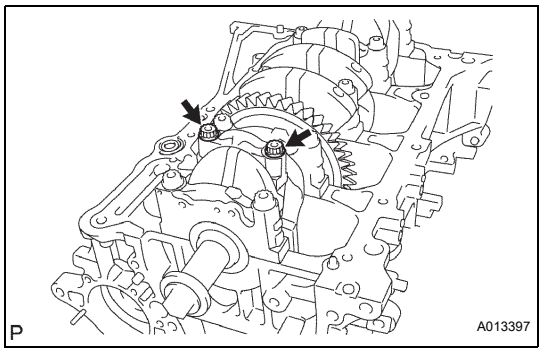


45. REMOVE PISTON SUB-ASSEMBLY WITH CONNECTING ROD

(a) Using a ridge reamer, remove all the carbon from the top of the cylinder.



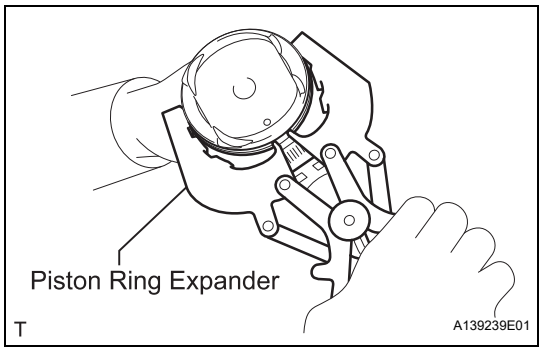
(b) Check that the matchmarks on the connecting rod and cap are aligned to ensure correct reassembly.
HINT:
The matchmarks on the connecting rods and caps are provided to ensure correct reassembly.



(c) Using a 12 mm socket wrench, uniformly loosen the 2 bolts.
(d) Using the 2 removed connecting rod cap bolts, remove the connecting rod cap and lower bearing by wiggling the connecting rod cap right and left.
HINT:
Keep the lower bearing inserted in the connecting rod cap.
(e) Push the piston, connecting rod assembly and upper bearing through the top of the cylinder block.
HINT:
- Keep the bearing, connecting rod and cap together.
- Arrange the piston and connecting rod assemblies in the correct order.

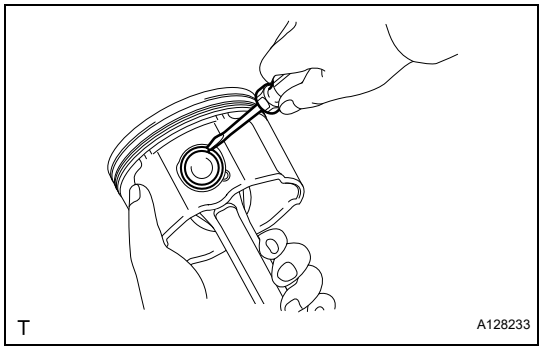
46. REMOVE CONNECTING ROD BEARING

(a) Remove the connecting rod bearings.
HINT:
Arrange the removed parts in the correct order.



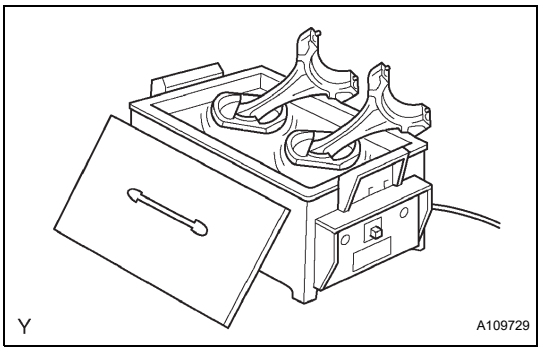
47. REMOVE PISTON RING SET

(a) Using a piston ring expander, remove the 2 compression rings.
(b) Remove the oil ring rail and oil ring expander by hand.
HINT:
Arrange the removed parts in the correct order.



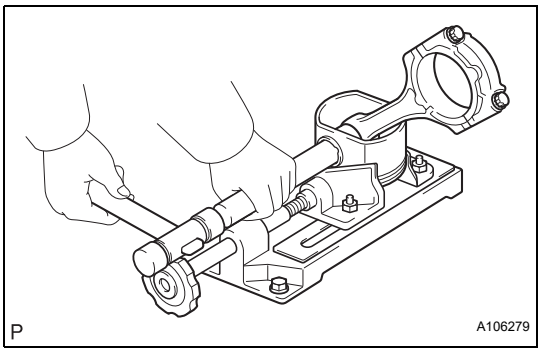
48. REMOVE PISTON PIN HOLE SNAP RING

(a) Using a screwdriver, pry out the 2 snap rings.

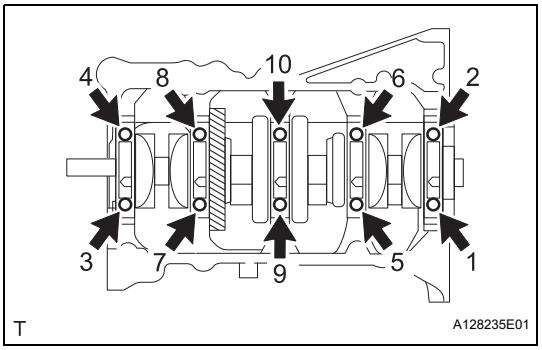


49. REMOVE PISTON

(a) Gradually heat each piston to approximately 80 to 90°C (176 to 194°F).

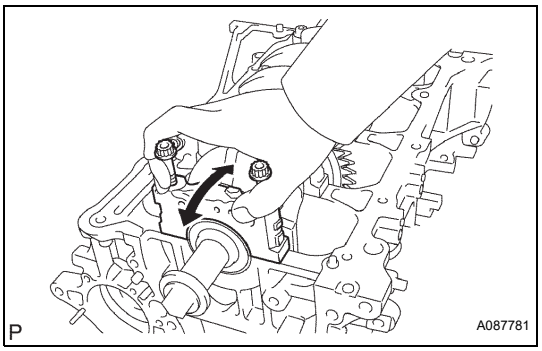


(b) Using a plastic hammer and brass bar, lightly tap out the piston pin and remove the connecting rod.
HINT:
- The piston and pin are a matched set.
- Arrange the pistons, pins, rings, connecting rods and bearings in the correct order.



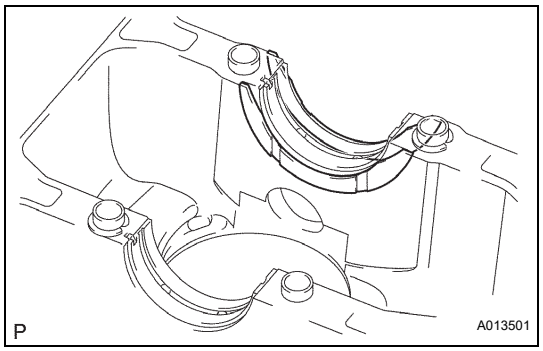
50. REMOVE CRANKSHAFT

(a) Uniformly loosen and remove the 10 main bearing cap bolts in the sequence shown in the illustration.



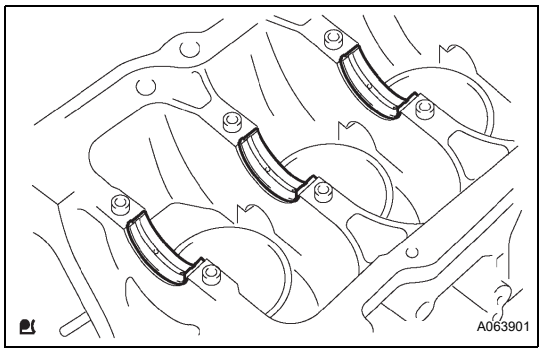
(b) Use 2 removed main bearing cap bolts to remove the 5 main bearing caps and 5 lower bearings.
NOTICE:
Insert the bolts into the caps in turn. Ease the cap out by gently pulling up and applying force toward the front and back sides of the cylinder block, as shown in the illustration. Take care not to damage the contact surfaces of the cap and cylinder block.
HINT:
- Keep the lower bearing and main bearing cap together.
- Arrange the main bearing caps in the correct order.

(c) Lift out the crankshaft.



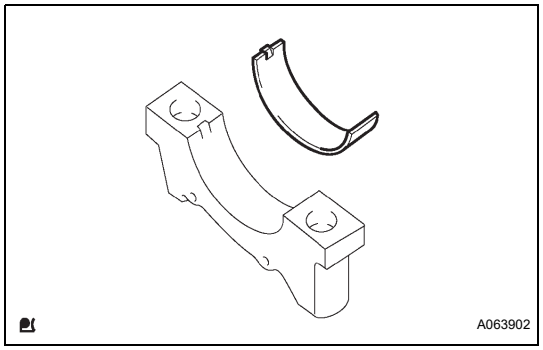
51. REMOVE UPPER CRANKSHAFT THRUST WASHER

(a) Remove the upper crankshaft thrust washers from the cylinder block.



52. REMOVE CRANKSHAFT BEARING

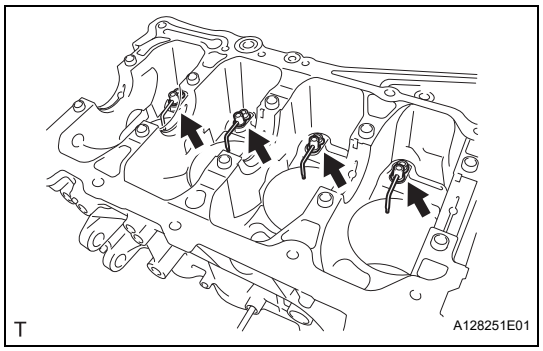
(a) Remove the 5 upper main bearings from the cylinder block.
HINT:
Arrange the bearings in the correct order.



53. REMOVE NO. 2 CRANKSHAFT BEARING

(a) Remove the 5 lower main bearings from the 5 main bearing caps.
HINT:
Arrange the bearings in the correct order.

54. REMOVE STUD BOLT



55. REMOVE NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, remove the bolts and oil nozzles.

56. CLEAN CYLINDER BLOCK

NOTICE:

If the cylinder is washed at high temperatures, the cylinder liner will stick out beyond the cylinder block. Always wash the cylinder block at a temperature of 45°C (113°F) or less.

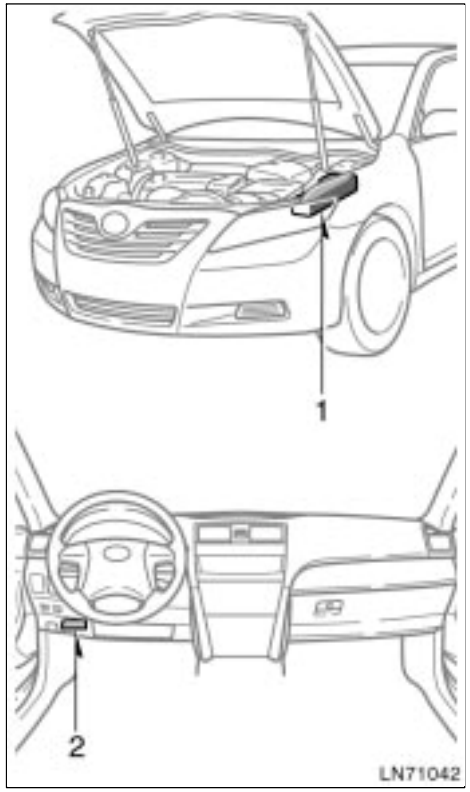
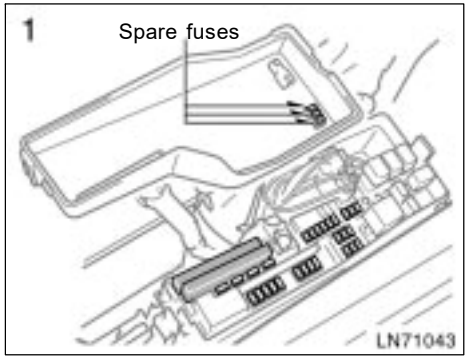
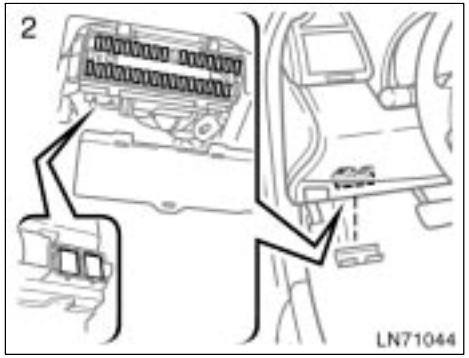
4. Coolant reservoir (for inverter, traction motor and motor generator)
5. Radiator (for engine)
6. Fuse block
7. Condenser
8. Electric cooling fans
9. Radiator (for inverter, traction motor and motor generator)
10. Windshield washer fluid tank
11. Coolant reservoir (for engine)

Fuse locations







Do−it−yourself service precautions

If you perform maintenance by yourself, be sure to follow the correct procedure given in this Section.

You should be aware that improper or incomplete servicing may result in operating problems.

Performing do−it−yourself maintenance during the warranty period may affect your warranty coverage. Read the separate Toyota Warranty statement for details and suggestions.

This Section gives instructions only for those items that are relatively easy for an owner to perform. As explained in Section 6, there are still a number of items that must be done by a qualified technician with special tools.

For information on tools and parts for do−it−yourself maintenance, see “Parts and tools” on page 351 in this Section.

Utmost care should be taken when working on your vehicle to prevent accidental injury. Here are a few precautions that you should be especially careful to observe:

⚠ CAUTION

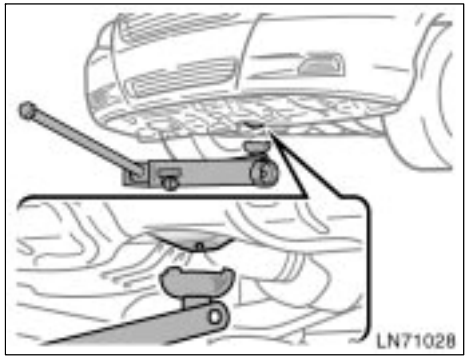
- Never touch, remove or disassemble high voltage parts and cables. Touching, removing or disassembling those parts and cables can cause severe burns or electric shock that may result in death or serious injury. For the locations of high voltage parts and cables, see “—High voltage components” on page 7 in Section 1−1.
- When the hybrid system is on, keep hands, clothing, and tools away from the moving fan. (Removing rings, watches, and ties is advisable.)
- Right after driving, the engine compartment—the engine, radiator, exhaust manifold and spark plug boots, etc.—will be hot. So be careful not to touch them. Oil, fluids and spark plugs may also be hot.
- If the radiator is hot, do not remove the radiator cap or loosen the drain plugs to prevent burning yourself.
- Do not leave anything that may burn easily, such as paper or rags, in the engine compartment.
- When the hybrid system is operating with the “READY” light on, the engine may suddenly start in some cases. When you inspect the engine compartment, be sure to turn off the hybrid system.
- Do not get under your vehicle with just the body jack supporting it. Always use automotive jack stands or other solid supports.
- Be sure that the POWER” switch is off if you work near the electric cooling fans or radiator grille. With the “POWER” switch on, the electric cooling fans will automatically start to run if the engine coolant temperature is high and/or the air conditioning is on.
- Use eye protection whenever you work on or under your vehicle where you may be exposed to flying or falling material, fluid spray, etc.
- Brake fluid can harm your hands or eyes and damage painted surfaces. If fluid gets on your hands or in your eyes, flush the affected area with clean water immediately. If you still feel uncomfortable with your hands or eyes, go to the doctor.
- Used engine oil contains potentially harmful contaminants which may cause skin disorders such as inflammation or skin cancer, so care should be taken to avoid prolonged and repeated contact with it. To remove used engine oil from your skin, wash thoroughly with soap and water.
- Do not leave used oil within the reach of children.
- Dispose of used oil and filter only in a safe and acceptable manner. Do not dispose of used oil and filter in household trash, in sewers or onto the ground. Call your dealer or a service station for information concerning recycling or disposal.
- Be extremely cautious when working on the 12 volt battery. It contains poisonous and corrosive sulfuric acid.

NOTICE

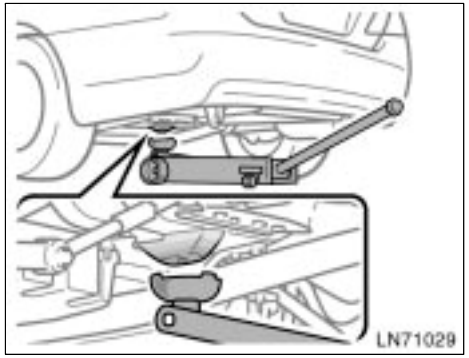
- *Remember that the 12 volt battery and ignition cables carry high currents or voltages. Be careful of accidentally causing a short circuit.*
- *Add only “Toyota Super Long Life Coolant” or similar high quality ethylene glycol based non−silicate, non−amine, non−nitrite, and non−borate coolant with long−life hybrid organic acid technology to fill the radiator. “Toyota Super Long Life Coolant” is a mixture of 50% coolant and 50% deionized water (for the U.S.A.) or 55% coolant and 45% deionized water (for Canada).*
- *If you spill some of the coolant, be sure to wash it off with water to prevent it from damaging the parts or paint.*
- *Do not allow dirt or anything else to fall through the spark plug holes.*
- *Use only spark plugs of the specified type. Using other types will cause engine damage, loss of performance or radio noise.*

- *Do not reuse iridium−tipped spark plugs by cleaning or regapping.*
- *Do not drive with the air cleaner filter removed, or excessive engine wear could result. Also backfiring could cause a fire in the engine compartment.*
- *Be careful not to scratch the glass surface with the wiper frame.*
- *When closing the engine hood, check to see that you have not forgotten any tools, rags, etc.*

Positioning the jack



Front



Rear

When jacking up your vehicle with the jack, position the jack correctly as shown in the illustrations.

⚠ CAUTION

When jacking, be sure to observe the following to reduce the possibility of death or serious injury:

- **Follow jacking instructions.**
- **Do not put any part of your body under the vehicle supported by the jack. Personal injury may occur.**
- **Do not start the hybrid system while your vehicle is supported by the jack.**
- **Stop the vehicle on a level firm ground, firmly set the parking brake and put the transmission in “P”. Block the wheels on the opposite side of the jack up point if necessary.**
- **Make sure to set the jack properly in the jack point. Raising the vehicle with jack improperly positioned will damage the vehicle or may allow the vehicle to fall off the jack and cause personal injury.**
- **Never get under the vehicle when the vehicle is supported by the jack alone; use vehicle support stands.**
- **Do not raise the vehicle with someone in the vehicle.**
- **When raising the vehicle, do not place any objects on top of or underneath the jack.**

NOTICE

Make sure to place the jack correctly, or your vehicle may be damaged.

Parts and tools

Here is a list of parts and tools you will need to perform do−it−yourself maintenance. Remember all Toyota parts are designed in metric sizes, so your tools must be metric.

CHECKING THE ENGINE OIL LEVEL

Parts (if level is low):

- “Toyota Genuine Motor Oil” or equivalent

  See page 356 in Section 7−2 for details about engine oil selection.

Tools:

- Rag or paper towel
- Funnel (only for adding oil)

CHECKING THE COOLANT LEVEL

Parts (if level is low):

- “Toyota Super Long Life Coolant” or similar high quality ethylene glycol based non−silicate, non−amine, non−nitrite, and non−borate coolant with long−life hybrid organic acid technology.

  “Toyota Super Long Life Coolant” is a mixture of 50% coolant and 50% deionized water (for the U.S.A.) or 55% coolant and 45% deionized water (for Canada).

Tools:

- Funnel (only for adding coolant)

CHECKING 12 VOLT BATTERY CONDITION

Tools:

- Warm water
- Baking soda
- Grease
- Conventional wrench (for terminal clamp bolts)

CHECKING AND REPLACING FUSES

Parts (if replacement is necessary):

- Genuine Toyota fuse or equivalent with same amperage rating as original

ADDING WASHER FLUID

Parts:

- Water
- Washer fluid containing antifreeze (for winter use)

Tools:

- Funnel

REPLACING LIGHT BULBS

Parts:

- Bulb with same number and wattage rating as original (See charts in “Replacing light bulbs” on page 373 in Section 7−3.)

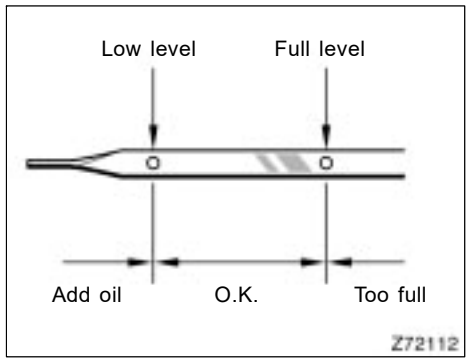
SECTION 7-2

DO-IT-YOURSELF MAINTENANCE

Engine and Chassis

Checking the engine oil level 355
Checking the coolant level 357
Checking the radiator and condenser 358
Checking brake fluid 359
Checking tire inflation pressure 359
Checking and replacing tires 362
Rotating tires 364
Installing snow tires and chains 365
Replacing wheels 367
Aluminum wheel precautions 367

Checking the engine oil level



With the hybrid system at operating temperature and turned off, check the oil level on the dipstick.

1. To get a correct reading, the vehicle should be on level ground. After turning off the hybrid system, wait a few minutes for the oil to drain back into the bottom of the engine.
2. Pull the dipstick out, hold a rag under the end and wipe it clean.
3. Reinsert the dipstick—push it in as far as it will go, or the reading will not be correct.
4. Pull the dipstick out and look at the oil level while holding a rag under the end.

⚠ CAUTION

Be careful not to touch the hot exhaust manifold.

NOTICE

Be careful not to drop engine oil on the vehicle components.

If the oil level is below or only slightly above the low level line, add engine oil of the same type as already in the engine.

Remove the oil filler cap and add engine oil in small quantities at a time, checking the dipstick. We recommend that you use a funnel when adding oil.

The approximate quantity of oil needed to raise the level between low and full on the dipstick is indicated as follows:
1.1 L (1.2 qt., 1.0 Imp. qt.)

For the engine oil capacity, see “Service specifications” on page 382 in Section 8.

When the level reaches within the correct range, install the filler cap hand−tight.

NOTICE

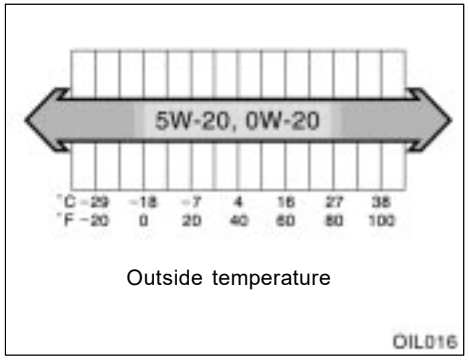
- ***Be careful not to spill engine oil on the vehicle components.***
- ***Avoid overfilling, or the engine could be damaged.***
- ***Check the oil level on the dipstick once again after adding the oil.***

ENGINE OIL SELECTION

“Toyota Genuine Motor Oil” is used in your Toyota vehicle. Use Toyota approved “Toyota Genuine Motor Oil” or equivalent to satisfy the following grade and viscosity.

Oil grade:
ILSAC multigrade engine oil

Recommended viscosity:
SAE 5W−20 or 0W−20



SAE 5W−20 or 0W−20 engine oil may be used. However, SAE 0W−20 is the best choice for good fuel economy and good starting in cold weather.

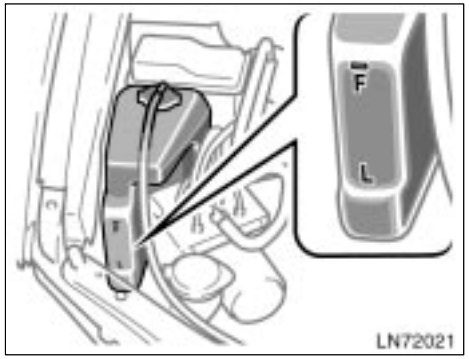
Oil identification mark

The ILSAC (International Lubricant Standardization and Approval Committee) Certification Mark is added to some oil containers to help you select the oil you should use.

To ensure excellent lubrication performance for your engine, “Toyota Genuine Motor Oil” is available, which has been specifically tested and approved for all Toyota engines.

Please contact your Toyota dealer for further details about “Toyota Genuine Motor Oil”.

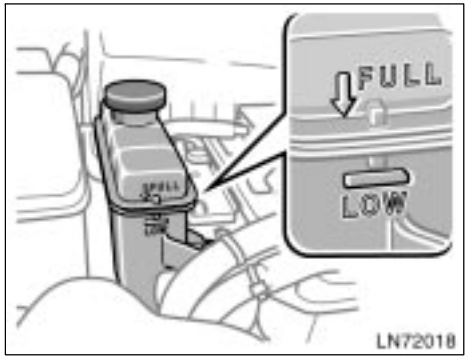
Checking the coolant level



Coolant reservoir for engine

Look at the see−through coolant reservoir when the hybrid system is cold. The coolant level is satisfactory if it is between the “F” and “L” lines on the reservoir. If the level is low, add the coolant. (For the coolant type, see “Coolant type selection” described below.)

The coolant level in the reservoir will vary with the hybrid system temperature. However, if the level is on or below the “L” line, add coolant. Bring the level up to the “F” line.



Coolant reservoir for inverter, traction motor and motor generator

Look at the see−through coolant reservoir when the hybrid system is cold. The coolant level is satisfactory if it is between the “FULL” and “LOW” lines on the reservoir. If the level is low, add the coolant. (For the coolant type, see “Coolant type selection” described below.)

The coolant level in the reservoir will vary with the hybrid system temperature. However, if the level is on or below the “LOW” line, add coolant. Bring the level up to the “FULL” line.

If the coolant level drops within a short time after replenishing, there may be a leak in the system. Visually check the radiator, hoses, coolant filler cap, radiator cap and drain cock and water pump.

If you can find no leak, have your Toyota dealer test the cap pressure and check for leaks in the cooling system.

⚠ CAUTION

To prevent burning yourself, do not remove the radiator cap when the hybrid system is hot.

Coolant type selection

Use of improper coolants may damage your cooling system.

Only use “Toyota Super Long Life Coolant” or similar high quality ethylene glycol based non−silicate, non−amine, non−nitrite, and non−borate coolant with long−life hybrid organic acid technology. (Coolant with long−life hybrid organic acid technology is a combination of low phosphates and organic acids.)

For the U.S.A.—“Toyota Super Long Life Coolant” is a mixture of 50% coolant and 50% deionized water. This coolant provides protection down to about −35°C (−31°F).

For Canada—“Toyota Super Long Life Coolant” is a mixture of 55% coolant and 45% deionized water. This coolant provides protection down to about −42°C (−44°F).

NOTICE
Do not use plain water alone.

Toyota recommends “Toyota Super Long Life Coolant”, which has been tested to ensure that it will not cause corrosion nor result in malfunction of your coolant system with proper usage. “Toyota Super Long Life Coolant” is formulated with long−life hybrid organic acid technology and has been specifically designed to avoid cooling system malfunction on Toyota vehicles.

Please contact your Toyota dealer for further details.

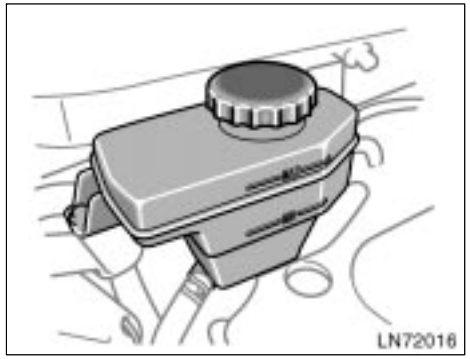
Checking the radiator and condenser

If any of the above parts are extremely dirty or you are not sure of their condition, take your vehicle to a Toyota dealer.

⚠ CAUTION
To prevent burning yourself, be careful not to touch the radiator or condenser when they may be hot after driving.

NOTICE
To prevent damage to the radiator and condenser, do not perform the work by yourself.

Checking brake fluid



To check the fluid level, simply look at the see−through reservoir. The level should be between the “MAX” and “MIN” lines on the reservoir.

It is normal for the brake fluid level to go down slightly as the brake pads wear or when the fluid level in the accumulator is high.

If the level is low, take your vehicle to a Toyota dealer as soon as possible. Do not drive your vehicle if the red brake system warning light is on. Call a Toyota dealer for assistance.

If the fluid level goes down soon after your vehicle is serviced, it may indicate a serious mechanical problem. Have your vehicle checked by a Toyota dealer.

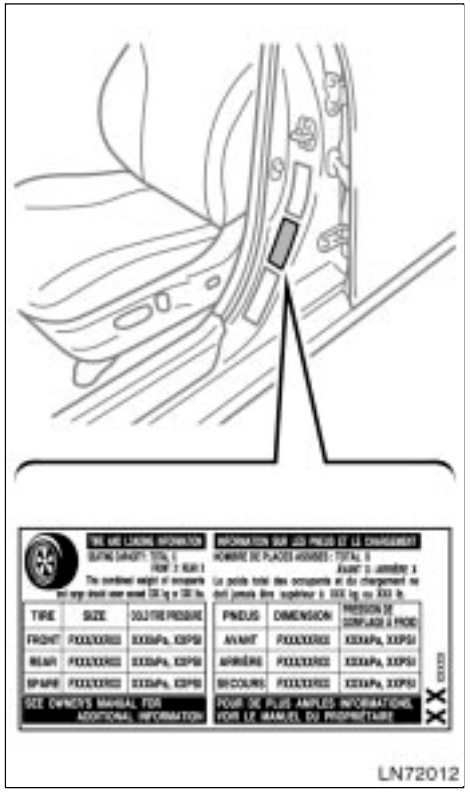
⚠ CAUTION

Brake fluid can harm your hands or eyes. If fluid gets on your hands or in your eyes, flush the affected area with clean water immediately. If you still feel uncomfortable with your hands or eyes, go to the doctor.

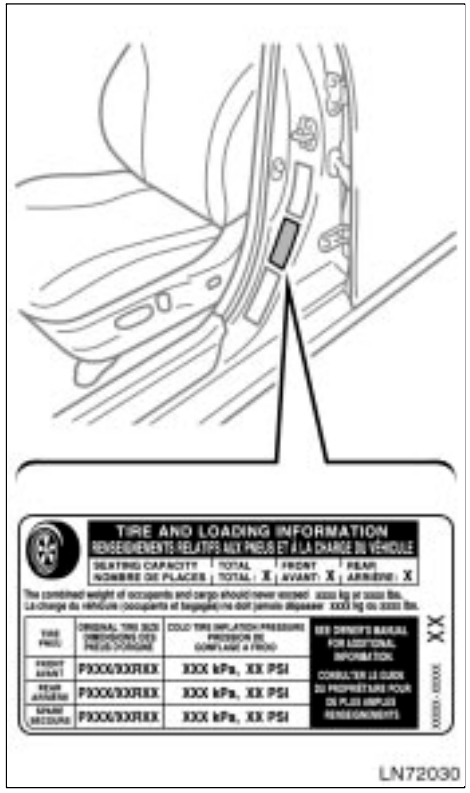
NOTICE

If brake fluid is spilled on the vehicle, be sure to wipe it off to prevent damage to parts or paint.

Checking tire inflation pressure



Type A



Type B

Keep your tire inflation pressures at the proper level.

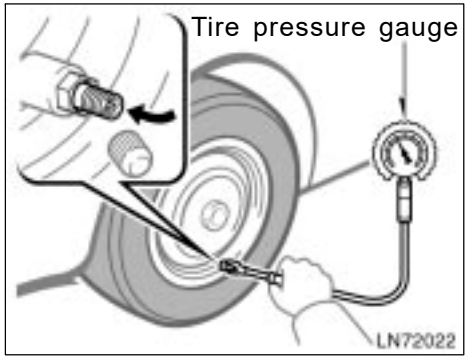
The recommended cold tire inflation pressures, tire sizes and the combined weight of occupants and cargo (vehicle capacity weight) are described on page 385 and 380. They are also on the tire and loading information label.

You should check the tire inflation pressure every two weeks, or at least once a month. And do not forget the spare!

The following instructions for checking tire inflation pressure should be observed:

- **The pressure should be checked only when the tires are cold.** If your vehicle has been parked for at least 3 hours and has not been driven for more than 1.5 km or 1 mile since, you will get an accurate cold tire inflation pressure reading.
- **Always use a tire pressure gauge.** The appearance of a tire can be misleading. Besides, tire inflation pressures that are even just a few pounds off can degrade ride and handling.
- **Take special care when adding air to the compact spare tire.** The smaller tire size can gain pressure very quickly. Add compressed air in small quantities and check the pressure often until it reaches the specified pressure.

- **Do not bleed or reduce tire inflation pressure after driving.** It is normal for the tire inflation pressure to be higher after driving.
- **Never exceed the vehicle capacity weight.** Passenger and luggage weight should be located so that the vehicle is balanced.



INSPECTION AND ADJUSTMENT PROCEDURE

1. Remove the tire valve cap.
2. Press the tip of the tire pressure gauge to the tire valve.
3. Read the pressure using the graduations of the gauge.
4. In case the tire inflation pressure is not within the prescribed range, insert the compressed air from the valve. In case of applying too much air, press the center of the valve and release the air to adjust.
5. After completing the tire inflation pressure measurement and adjustment, apply soapy water to the valve and check for leakage.
6. Install the tire valve cap.

If a gauge and air pump are not available, have your vehicle checked by your Toyota dealer.

⚠ CAUTION

Be sure to reinstall the tire valve caps. Without the valve caps, dirt or moisture could get into the valve core and cause air leakage. If the caps have been lost, have new ones put on as soon as possible.

Incorrect tire inflation pressure may waste fuel, reduce the comfort of driving, reduce tire life and make your vehicle less safe to drive.

If a tire frequently needs refilling, have it checked by your Toyota dealer.

⚠ CAUTION

Keep your tires properly inflated. Otherwise, the following conditions may occur and cause an accident resulting in death or serious injuries.

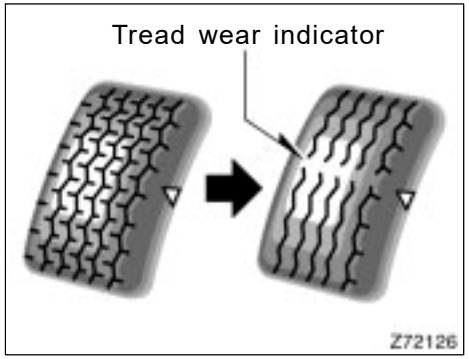
Low tire pressure (underinflation)—

- **Excessive wear**
- **Uneven wear**
- **Poor handling**
- **Possibility of blowouts from a overheated tire**
- **Poor sealing of the tire bead**
- **Wheel deformation and/or tire separation**
- **A greater possibility of tire damage from road hazards**

High tire pressure (overinflation)—

- **Poor handling**
- **Excessive wear**
- **Uneven wear**
- **A greater possibility of tire damage from road hazards**

Checking and replacing tires



CHECKING YOUR TIRES

Check the tire’s tread for tread wear indicators. If the indicators show, replace the tires. The location of tread wear indicators is shown by the “TWI” or “∆” marks, etc., molded on the sidewall of each tire.

The tires on your Toyota have built−in tread wear indicators to help you know when the tires need replacement. When the tread depth wears to 1.6 mm (0.06 in.) or less, the indicators will appear. If you can see the indicators in two or more adjacent grooves, the tire should be replaced. The lower the tread, the higher the risk of skidding.

The effectiveness of snow tires is lost if the tread wears down below 4 mm (0.16 in.).

If you have tire damage such as cuts, splits, cracks deep enough to expose the fabric, or bulges indicating internal damage, the tire should be replaced.

If a tire often goes flat or cannot be properly repaired due to the size or location of a cut or other damage, it should be replaced. If you are not sure, consult with your Toyota dealer.

If air loss occurs while driving, do not continue driving. Driving even a short distance can damage a tire beyond repair.

Any tires which are over 6 years old must be checked by a qualified technician even if damage is not obvious.

Tires deteriorate with age even if they have never or seldom been used.

This applies also to the spare tire and tires stored for future use.

REPLACING YOUR TIRES

When replacing a tire, use a tire of the same size and construction, and the same or greater maximum load as the originally installed tires.

Using any other size or type of tire may seriously affect handling, ride, speedometer/odometer calibration, ground clearance, and clearance between the body and tires or snow chains.

Check that the maximum load of the replaced tire is greater than 1/2 of the Gross Axle Weight Ratings (GAWR) of either the front axle or the rear axle, whichever is greater. As for the maximum load of the tire, see the load limit at maximum cold tire inflation pressure mentioned on the sidewall of the tire, and as for the Gross Axle Weight Ratings (GAWR), see the Certification Label.

For details about the side wall of the tire and the Certification Label, see pages 285 and 283.

⚠ CAUTION

Observe the following instructions. Otherwise, an accident may occur resulting in death or serious injuries.

- **Do not mix radial, bias belted, or bias−ply tires on your vehicle, as this may cause dangerous handling characteristics resulting in loss of control.**
- **Do not use tires other than the manufacturer’s recommended size, as this may cause dangerous handling characteristics resulting in loss of control.**

Toyota recommends all four tires, or at least both of the front or rear tires be replaced at a time as a set.

See “If you have a flat tire” on page 318 in Section 4 for tire change procedure.

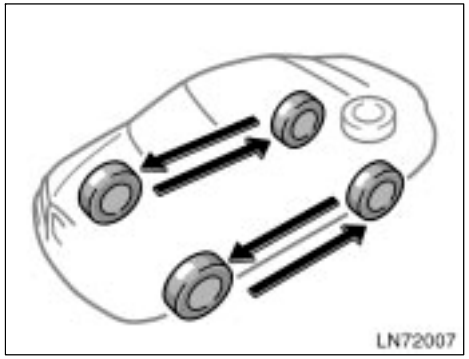
When a tire is replaced, the wheel should always be balanced.

An unbalanced wheel may affect vehicle handling and tire life. Wheels can get out of balance with regular use and should therefore be balanced occasionally.

When replacing a tubeless tire, the air valve should also be replaced with a new one.

Initial adjustment of the tire pressure warning system is necessary after you have replaced your tires. See “Tire pressure warning system” on page 168 in Section 1−7.

Rotating tires



To equalize the wear and help extend tire life, Toyota recommends that you rotate your tires according to the maintenance schedule. (For scheduled maintenance information, please refer to the “Scheduled Maintenance Guide” or “Owner’s Manual Supplement”.) However, the most appropriate timing for tire rotation may vary according to your driving habits and road surface conditions.

See “If you have a flat tire” on page 318 in Section 4 for tire change procedure.

When rotating tires, check for uneven wear and damage. Abnormal wear is usually caused by incorrect tire pressure, improper wheel alignment, out−of−balance wheels, or severe braking.

Initial adjustment of the tire pressure warning system is necessary after you have rotated your tires. See “Tire pressure warning system” on page 168 in Section 1−7.

⚠ CAUTION

Do not include a compact spare tire when rotating the tires. It is designed for temporary use only.

Installing snow tires and chains

WHEN TO USE SNOW TIRES OR CHAINS

Snow tires or chains are recommended when driving on snow or ice.

On wet or dry roads, conventional tires provide better traction than snow tires.

SNOW TIRE SELECTION

If you need snow tires, select tires of the same size, construction and load capacity as the originally installed tires.

Do not use tires other than those mentioned above. Do not install studded tires without first checking local regulations for possible restrictions.

⚠ CAUTION

Do not use snow tires other than the manufacturer’s recommended size, as this may cause dangerous handling characteristics resulting in loss of control. Otherwise, an accident may occur resulting in death or serious injuries.

SNOW TIRE INSTALLATION

Snow tires should be installed on all wheels.

Installing snow tires on the front wheels only can lead to an excessive difference in road grip capability between the front and rear tires which could cause loss of vehicle control.

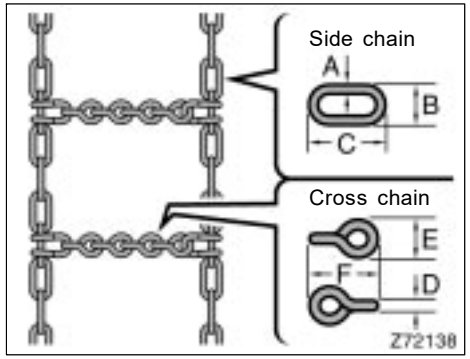
When storing removed tires you should store them in a cool dry place. Mark the direction of rotation and be sure to install them in the same direction when replacing.

⚠ CAUTION

- **Do not drive with the snow tires incorrectly inflated.**
- **Never drive over 120 km/h (75 mph) with any type of snow tires.**

TIRE CHAIN SELECTION

Use the tire chains of correct size.



Use the following type chains.

		mm (in.)
A	Diameter of side chain	3 (0.12)
B	Width of side chain	10 (0.39)
C	Length of side chain	30 (1.18)
D	Diameter of cross chain	4 (0.16)
E	Width of cross chain	14 (0.55)
F	Length of cross chain	25 (0.98)

Regulations regarding the use of tire chains vary according to location or type of road, so always check local regulations before installing chains.

NOTICE

If the wrong combination of tire and chain is used, the chains could damage the vehicle body.

CHAIN INSTALLATION

Install the chains on the front tires as tightly as possible. Do not use tire chains on the rear tires. Retighten chains after driving 0.5—1.0 km (1/4—1/2 mile).

When installing chains on your tires, carefully follow the instructions of the chain manufacturer.

If wheel covers are used, they will be scratched by the chain band, so remove the covers before putting on the chains.

⚠ CAUTION

- **Do not exceed 50 km/h (30 mph) or the chain manufacturer’s recommended speed limit, whichever is lower.**
- **Drive carefully avoiding bumps, holes, and sharp turns, which may cause the vehicle to bounce.**
- **Avoid sharp turns or locked−wheel braking, as use of chains may adversely affect vehicle handling.**
- **When driving with chains installed, be sure to drive carefully. Slow down before entering curves to avoid losing control of the vehicle. Otherwise an accident may occur.**

NOTICE

Do not attempt to use a tire chain on the compact spare tire, as it may result in damage to the vehicle as well as the tire.

Replacing wheels

WHEN TO REPLACE YOUR WHEELS

If you have wheel damage such as bending, cracks or heavy corrosion, the wheel should be replaced.

If you fail to replace a damaged wheel, the tire may slip off the wheel or cause loss of handling control.

WHEEL SELECTION

When replacing wheels, care should be taken to ensure that the wheels are replaced by ones with the same load capacity, diameter, rim width, and offset.

Correct replacement wheels are available at your Toyota dealer.

A wheel of a different size or type may adversely affect handling, wheel and bearing life, brake cooling, speedometer/odometer calibration, stopping ability, headlight aim, bumper height, vehicle ground clearance, and tire or snow chain clearance to the body and chassis.

Replacement with used wheels is not recommended as they may have been subjected to rough treatment or high mileage and could fail without warning. Also, bent wheels which have been straightened may have structural damage and therefore should not be used. Never use an inner tube in a leaking wheel which is designed for a tubeless tire.

⚠ CAUTION

Do not use wheels other than the manufacturer’s recommended size, as this may cause dangerous handling characteristics resulting in loss of control. Otherwise, an accident may occur resulting in death or serious injuries.

Initial adjustment of the tire pressure warning system is necessary after you have replaced your wheels. See “Tire pressure warning system” on page 168 in Section 1−7.

Aluminum wheel precautions

- When installing aluminum wheels, check that the wheel nuts are tight after driving your vehicle the first 1600 km (1000 miles).
- If you have rotated, repaired, or changed your tires, check that the wheel nuts are still tight after driving 1600 km (1000 miles).
- When using tire chains, be careful not to damage the aluminum wheels.
- Use only Toyota wheel nuts and wrench designed for your aluminum wheels.
- When balancing your wheels, use only Toyota balance weights or equivalent and a plastic or rubber hammer.
- As with any wheel, periodically check your aluminum wheels for damage. If damaged, replace immediately.

SECTION 7–3

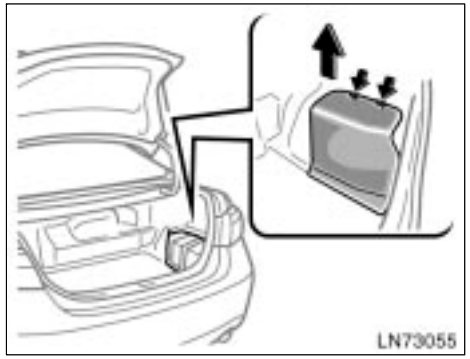
DO–IT–YOURSELF MAINTENANCE

Electrical components

Checking 12 volt battery condition 369
12 volt battery recharging precautions 370
Checking and replacing fuses 371
Checking the fusible link 372
Adding washer fluid 373
Replacing light bulbs 373

Checking 12 volt battery condition—

—12 volt battery location



A 12 volt battery is located in the right−hand side of the trunk. Remove the cover to access the battery.

The battery with a flammable hydrogen gas exhaust valve is specially designated for your vehicle. When replacing the battery, contact your Toyota dealer.

—Precautions

⚠ CAUTION

BATTERY PRECAUTIONS

The battery produces flammable and explosive hydrogen gas.

- Do not cause a spark from the battery with tools.
- Do not smoke or light a match near the battery.
- When replacing the battery, only install a battery designated for your hybrid vehicle. Using a conventional battery may cause hydrogen gas to build up in the vehicle.

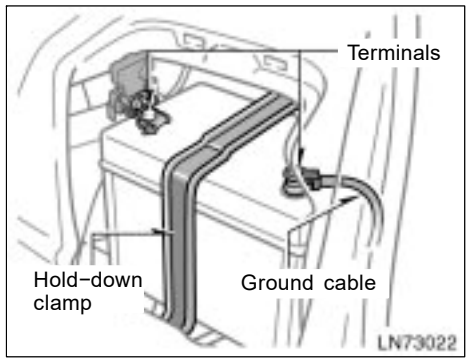
The electrolyte contains poisonous and corrosive sulfuric acid.

- Avoid contact with eyes, skin or clothes.
- Never ingest electrolyte.
- Wear protective safety glasses when working near the battery.
- Keep children away from the battery.

EMERGENCY MEASURES

- If electrolyte gets in your eyes, flush your eyes with clean water immediately and get immediate medical attention. If possible, continue to apply water with a sponge or cloth while en route to the medical office.
- If electrolyte gets on your skin, thoroughly wash the contact area. If you feel pain or burning, get medical attention immediately.
- If electrolyte gets on your clothes, there is a possibility of its soaking through to your skin, so immediately take off the exposed clothing and follow the procedure above, if necessary.
- If you accidentally swallow electrolyte, drink a large quantity of water or milk. Follow with milk of magnesia, beaten raw egg or vegetable oil. Then go immediately for emergency help.

—Checking the 12 volt battery exterior



Check the battery for corroded or loose terminal connections, cracks, or loose hold−down clamp.

a. If the battery is corroded, wash it off with a solution of warm water and baking soda. Coat the outside of the terminals with grease to prevent further corrosion.

b. If the terminal connections are loose, tighten their clamp nuts—but do not overtighten.

c. Tighten the hold−down clamp only enough to keep the battery firmly in place. Overtightening may damage the battery case.

NOTICE

- ***Be sure the hybrid system and all accessories are off before performing maintenance.***
- ***When checking the battery, remove the ground cable from the negative terminal ("−" mark) first and reinstall it last.***
- ***Be careful not to cause a short circuit with tools.***
- ***Take care no solution gets into the battery when washing it.***

12 volt battery recharging precautions

During recharging, the battery is producing hydrogen gas.

Therefore, before recharging:

1. If recharging with the battery installed on the vehicle, be sure to disconnect the ground cable.
2. Be sure the power switch on the recharger is off when connecting the charger cables to the battery and when disconnecting them.

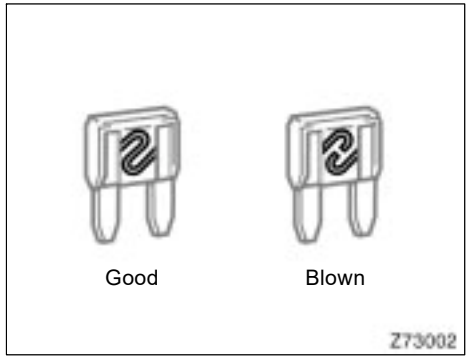
⚠ CAUTION

- **Always charge the battery in an unconfined area. Do not charge the battery in a garage or closed room where there is not sufficient ventilation.**
- **Only do a slow charge (5 A or less). Charging at a quicker rate is dangerous. The battery may explode, causing personal injuries.**

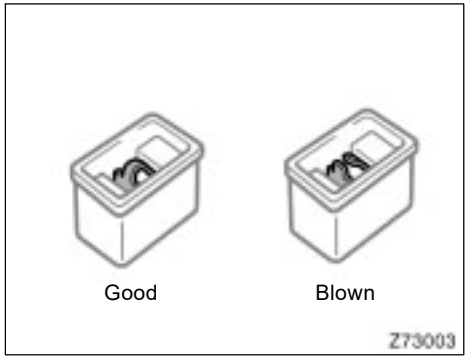
NOTICE

Never recharge the battery while the hybrid system is operating. Also, be sure all accessories are turned off.

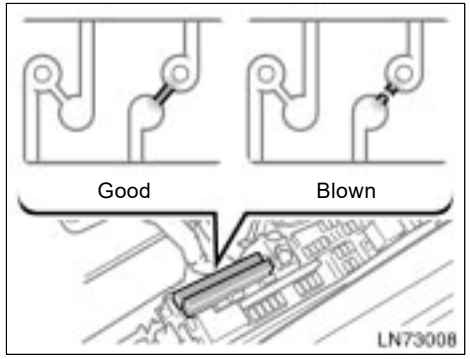
Checking and replacing fuses



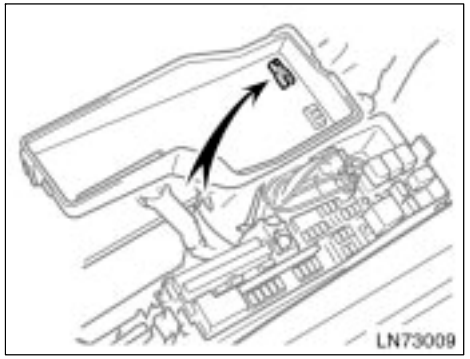
Type A



Type C



Type B



If the headlights or other electrical components do not work, check the fuses. If any of the fuses are blown, they must be replaced.

See “Fuse locations” on page 348 in Section 7−1 for locations of the fuses.

Turn the hybrid system and inoperative component off. Pull the suspected fuse straight out and check it.

Determine which fuse may be causing the problem. The lid of the fuse box shows the name of the circuit for each fuse. See page 386 in Section 8 for the functions controlled by each circuit.

Type B fuses—When any of the fuses are blown, contact your Toyota dealer.

Type A fuses can be pulled out by the pull−out tool. The location of the pull−out tool is shown in the illustration.

If you are not sure whether the fuse has blown, try replacing the suspected fuse with one that you know is good.

If the fuse has blown, push a new fuse into the clip.

Only install a fuse with the amperage rating designated on the fuse box lid.

If you do not have a spare fuse, in an emergency you can pull out the “RADIO NO.1” or “PWR OUTLET” fuse, which may be dispensable for normal driving, and use it if its amperage rating is the same.

If you cannot use one of the same amperage, use one that is lower, but as close to the rating as possible. If the amperage is lower than that specified, the fuse might blow out again but this does not indicate anything wrong. Be sure to get the correct fuse as soon as possible and return the substitute to its original clip.

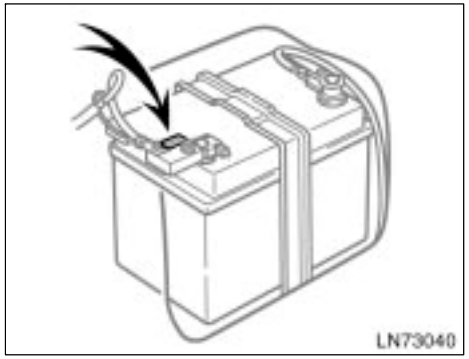
It is a good idea to purchase a set of spare fuses and keep them in your vehicle for emergencies.

If the new fuse immediately blows out, there is a problem with the electrical system. Have your Toyota dealer correct it as soon as possible.

⚠ CAUTION

Never use a fuse with a higher amperage rating, or any other object, in place of a fuse. This may cause extensive damage and possibly a fire.

Checking the fusible link



If the headlights or other electrical components do not work and the fuses are O.K., check the fusible link fitted on the “+” terminal of the 12 volt battery. If the link is melted, it must be replaced.

If there is an overload in the circuits, the fusible links are designed to melt before the entire wiring harness is damaged.

The battery is located in the right−hand side of the trunk. See “—12 volt battery location” on page 369 in this Section.

Adding washer fluid

If the washer does not work or the message “LOW WASHER FLUID” appears on the multi−information display, the washer tank may be empty. Add washer fluid.

You may use plain water as washer fluid. However, in cold areas where temperatures range below the freezing point, use washer fluid containing antifreeze. This product is available at your Toyota dealer and most auto parts stores. Follow the manufacturer’s directions for how much to mix with water.

NOTICE

Do not use engine antifreeze or any other substitute because it may damage your vehicle’s paint.

Replacing light bulbs—

The following illustrations show how to gain access to the bulbs. When replacing a bulb, make sure the hybrid system and light switch are off. Use bulbs with the wattage ratings given in the table.

The stop/tail lights and high mounted stoplight consist of a number of LEDs. If any of the LEDs burn out, take your vehicle to your Toyota dealer to have the light replaced.

If two or more LEDs in a stop light burn out, your vehicle may not conform to local laws (SAE).

⚠ CAUTION

- **To prevent burning yourself, do not replace the light bulbs while they are hot.**
- **Halogen bulbs have pressurized gas inside and require special handling. They can burst or shatter if scratched or dropped. Hold a bulb only by its plastic or metal case. Do not touch the glass part of a bulb with bare hands.**

NOTICE

Only use a bulb of the listed type.

The inside of the lens of exterior lights such as headlights may temporarily fog up when the lens becomes wet in the rain or in a car wash. This is not a problem because the fogging is caused by the temperature difference between the outside and inside of the lens, just like the windshield fogs up in the rain. However, if there is a large drop of water on the inside of the lens, or if there is water pooled inside the light, contact your Toyota dealer.

Light bulbs	Bulb No.	W	Type
Headlights (high)	9005	60	A
Headlights (low)	—	55	B
Front side marker lights	—	5	C
Front turn signal/parking lights	3457NAK	30/8	D
Rear turn signal lights	—	21	D
License plate lights	—	5	C
Back−up lights	921	16	C
Personal lights	—	5	C
Interior light	—	8	E
Door courtesy lights	168	5	C
Vanity lights	—	8	C
Glove box light	—	1.2	C
Trunk light	—	3.8	C

A: HB3 halogen bulbs
B: H11 halogen bulbs
C: Wedge base bulbs (clear)
D: Wedge base bulbs (amber)
E: Double end bulbs

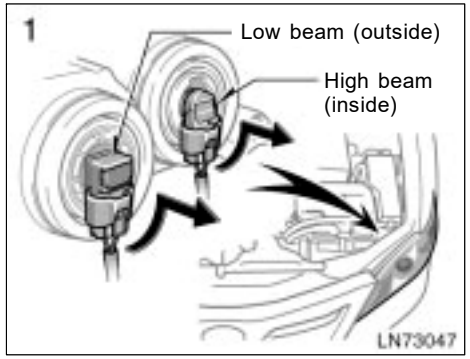
—Front turn signal/parking, side marker, tail and back−up lights, and high mounted stoplight

If the front turn signal/parking, side marker, tail or back−up lights, or high mounted stoplight burns out, contact your Toyota dealer.

NOTICE

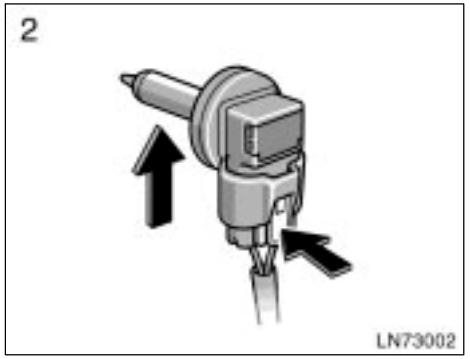
Do not try to replace the front turn signal/parking, side marker, tail, back−up light and high mounted stoplight bulbs by yourself. You may damage the vehicle.

—Headlights



1. Open the hood. Turn the bulb base counterclockwise to the front of the vehicle as shown.

The above illustration shows the left−hand headlight.



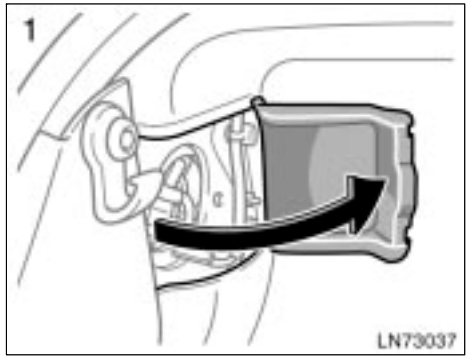
2. Unplug the connector while depressing the lock release.

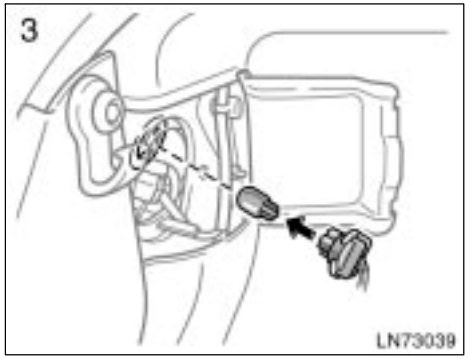
If the connector is tight, wiggle it.

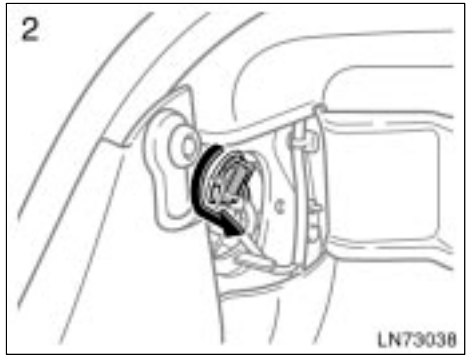
3. Plug in a new bulb into the connector and install it into the mounting hole.

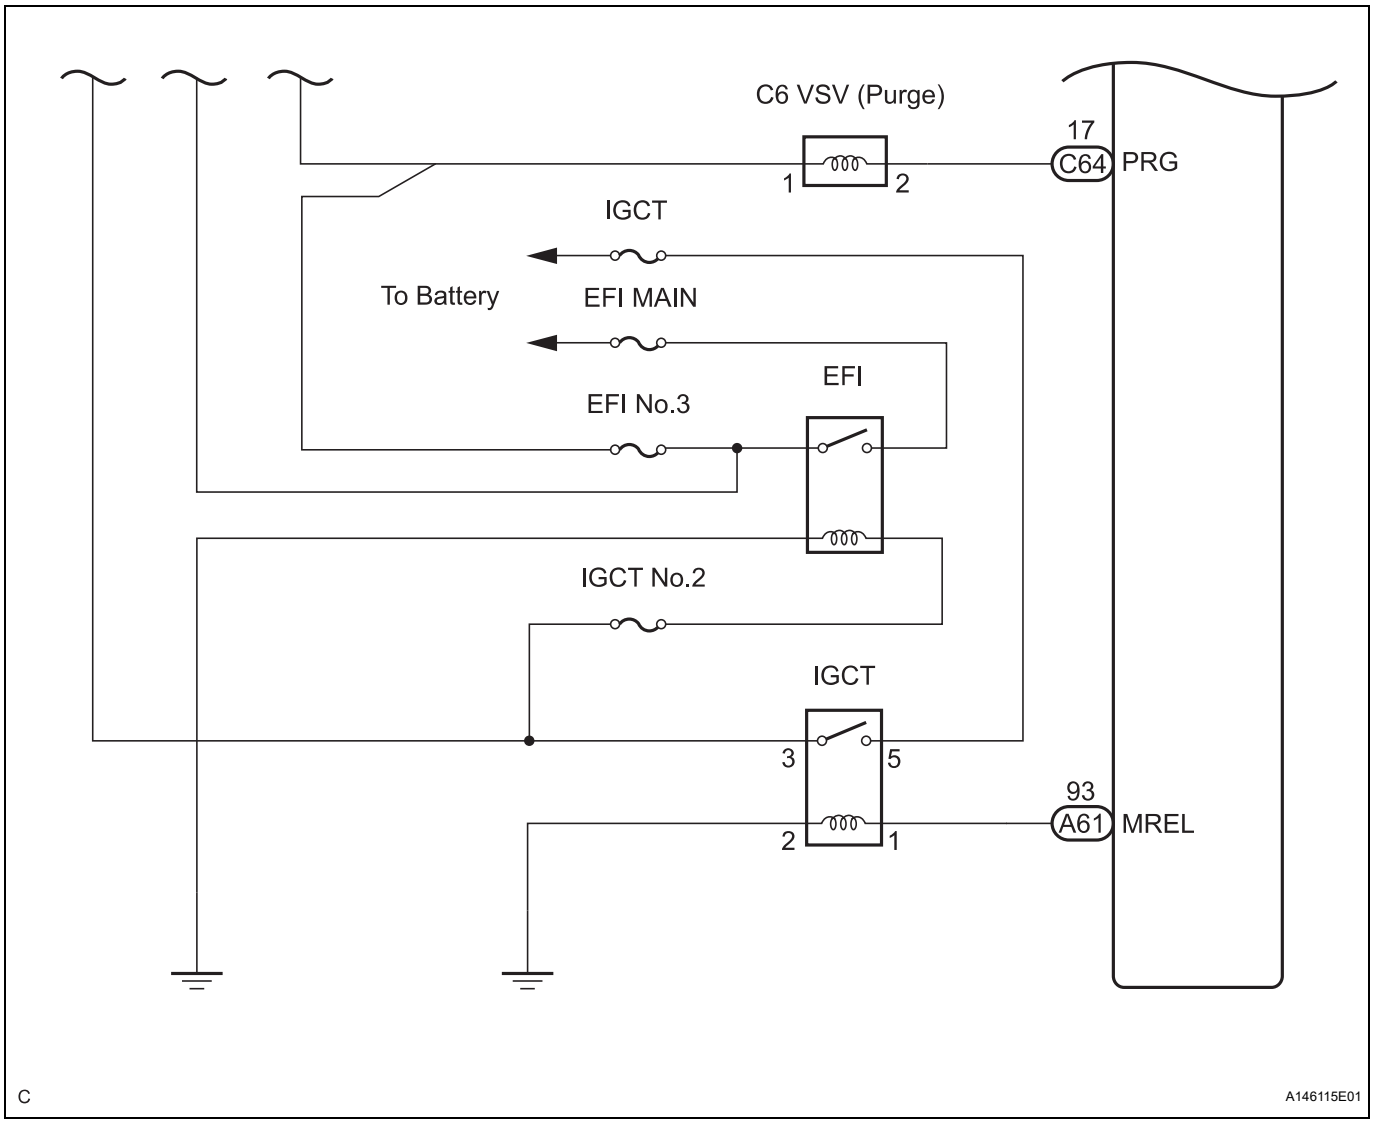
Aiming is not necessary after replacing the bulb. When aiming adjustment is necessary, contact your Toyota dealer.

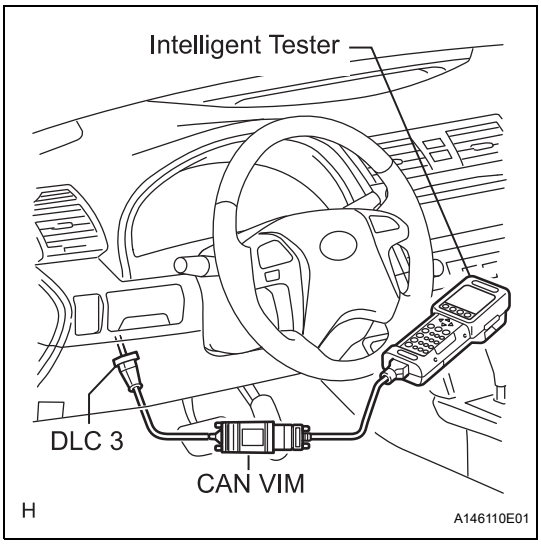
—Rear turn signal lights











ON-VEHICLE INSPECTION

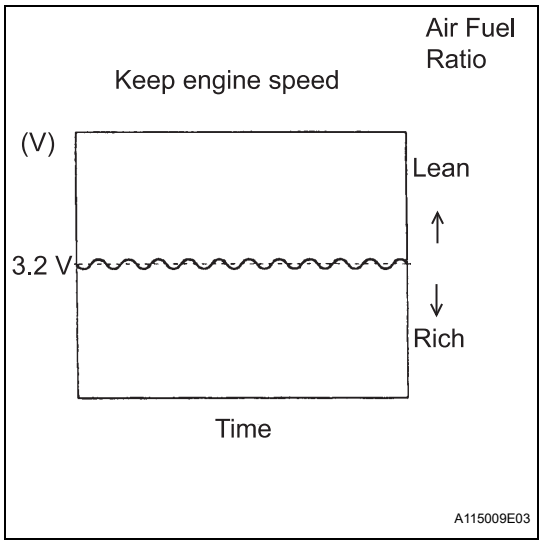
1. INSPECT AIR FUEL RATIO COMPENSATION SYSTEM

(a) Connect an intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Date Link Connector 3 (DLC3).

(b) Select "DATA LIST". Then select "AFS B1 S1", "AFS B2 S1", "O2S B1 S2" and "O2S B2 S2" to display the monitors.

(c) Set the vehicle to inspection mode. (See page ES-35)

(d) Warm up the air fuel ratio sensor with the engine speed at 2,500 rpm for approximately 2 minutes.



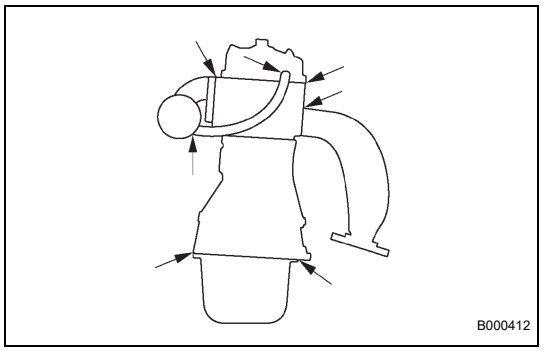
(e) Maintain the engine speed at 2,500 rpm and confirm that the displays of "AFS B1 S1" and "AFS B2 S1" are as shown in the illustration.
HINT:
- The illustration may differ slightly from the display on the intelligent tester.
- Only the intelligent tester displays the waveform of the air fuel ratio sensor.

(f) Confirm that the displays of "O2S B1 S2" and "O2S B2 S2" change between 0 and 1 V with the engine speed at 2,500 rpm.

2. INSPECT FUEL CUT OFF / RESTART RPM

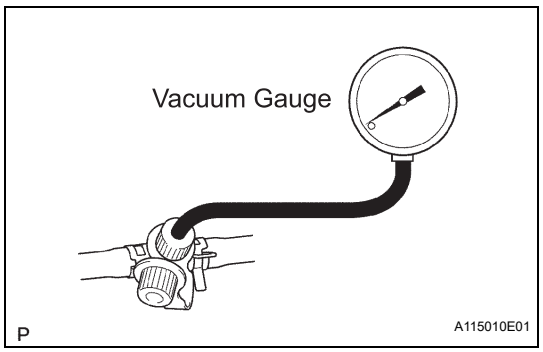
(a) Increase the engine speed to at least 2,500 rpm.
(b) Use a sound scope to check for injector operating sounds.
(c) Check that when the throttle lever is released, injector operation sound stops momentarily (at 2,500 rpm) and then resumes (at 1,200 rpm).
Standard

Item	Specified Condition
Fuel cut off rpm	1,800 rpm
Fuel injector restart rpm	1,500 rpm



3. VISUALLY INSPECT HOSE, CONNECTIONS AND GASKETS

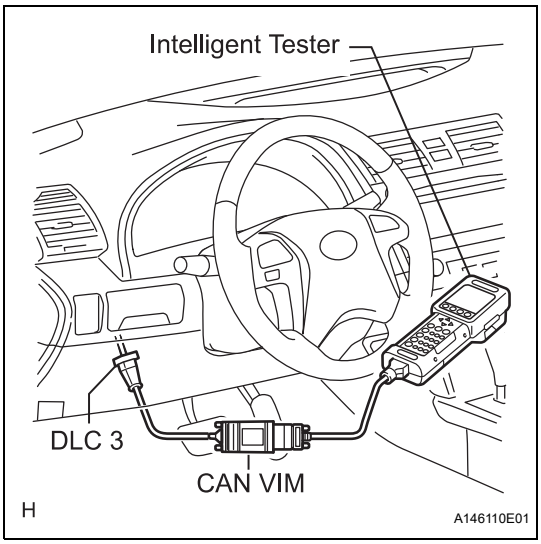
(a) Check for cracks, leaks or damage.
HINT:
Separation of the engine oil dipstick, oil filler cap, PCV hose, etc. may cause the engine to run improperly. Disconnection, looseness or cracks in the parts of the air induction system between the throttle body and cylinder head will allow air suction and cause the engine to run improperly.



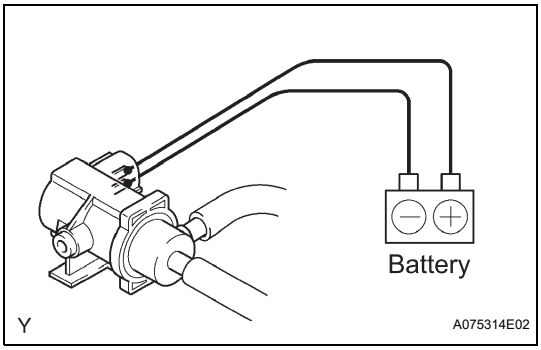
4. INSPECT EVAP SYSTEM LINE

(a) Warm up the engine to normal operating temperature and stop the engine.
(b) Install a vacuum gauge (EVAP control system test equipment vacuum gauge) into the EVAP service port on the purge line.

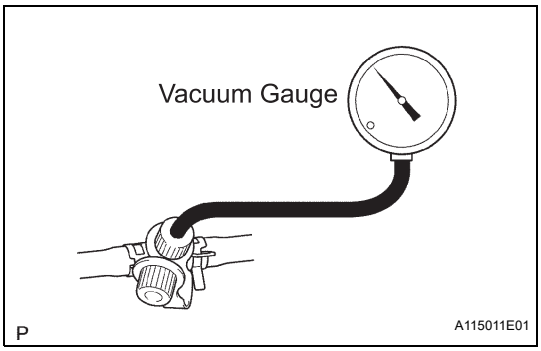
EC



(c) When using an intelligent tester: Force the VSV for EVAP to operate.
  (1) Connect an intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Date Link Connector 3 (DLC3).
  (2) Start the engine.
  (3) Turn the intelligent tester main switch on.
  (4) Use the ACTIVE TEST mode on the intelligent tester to operate the VSV for the EVAP.



(d) When not using an intelligent tester: Force the VSV for EVAP to operate.
  (1) Disconnect the VSV for EVAP connector.
  (2) Connect the positive (+) and negative (-) leads from the battery to the VSV for EVAP terminals.
  (3) Start the engine.



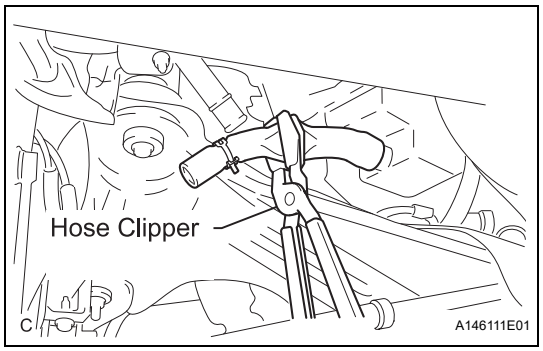
(e) Check the vacuum.
  (1) Set the vehicle to inspection mode. (See page ES-35)
  Vacuum:
  Maintain between 0.368 and 19.713 in.Hg (5 to 268 in.Ag) for over 5 seconds.
  HINT:
  If the vacuum does not change, the hose connecting the VSV and the service port is loose or blocked, or the VSV is malfunctioning.

(f) When using an intelligent tester: Conclude operation of the VSV for EVAP.
  (1) Stop the engine.
  (2) Disconnect the intelligent tester from the DLC3.

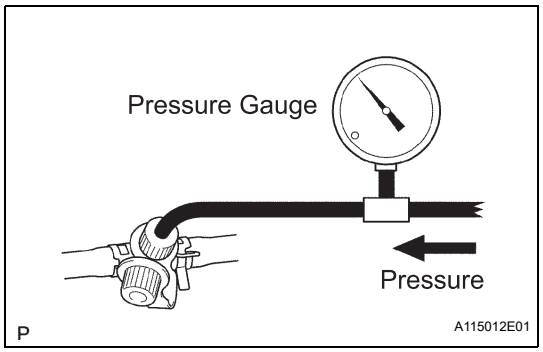
(g) When not using an intelligent tester: Conclude operation of the VSV for EVAP.
  (1) Stop the engine.
  (2) Disconnect the positive (+) and negative (-) leads of the battery from the VSV for EVAP terminals.
  (3) Connect the VSV for EVAP connector.

(h) Disconnect the vacuum gauge from the EVAP service port on the purge line.

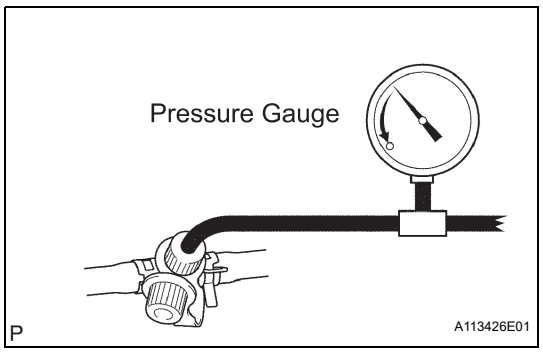
(i) Connect a pressure gauge to the EVAP service port on the purge line.



(j) Check the pressure.
(1) Disconnect the charcoal canister hose.
(2) Pinch the charcoal canister hose with the hose clipper to prevent air from entering into the canister passage.



(3) Apply pressure (13.5 to 15.5 in.Aq, 0.99 to 1.14 in.Hg) from the EVAP service port.
Pressure:
The gauge should still read over 7.7 in.Aq (0.57 in.Hg) for 2 minutes after the pressure is applied.
HINT:
If you cannot apply pressure, the hose connecting the VSV, charcoal canister and fuel tank has slipped off or the VSV is open.

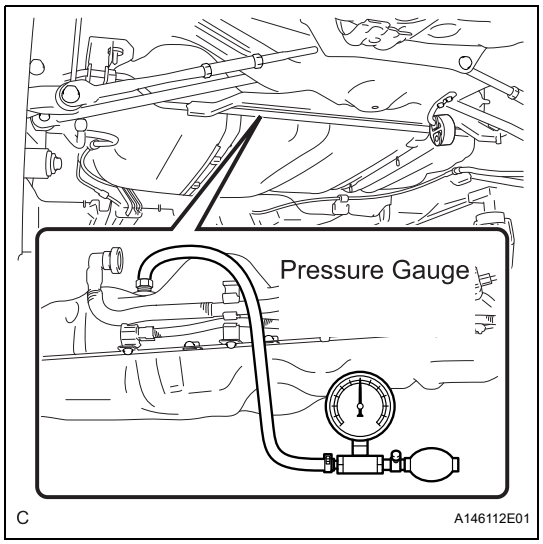


(4) Check if the pressure decreases when releasing the hose clipper while applying pressure.
HINT:
If the pressure does not decrease when the filler cap is removed, the hose connecting the service port and the fuel tank may be blocked.

(k) Disconnect the pressure gauge from the EVAP service port on the purge line.

5. CHECK AIR TIGHTNESS IN FUEL TANK AND FILLER PIPE

(a) Press the lid switch to release the pressure in the fuel tank.
(b) Check that the lid is opened.



(c) Disconnect the vent line hose from the fuel tank.
(d) Connect the pressure gauge to the fuel tank.
(e) Apply pressure to the fuel tank to create an internal pressure of 4 kPa (41 gf/cm^2, 0.58 psi).
(f) Check that the internal pressure of the fuel tank is maintained for 1 minute.
(g) Check the connected portions of each hose and pipe.
(h) Check the installed parts on the fuel tank.
If any malfunctions, damage or other problems are found, replace the fuel tank and filler pipe.
(i) Reconnect the vent line hose to the fuel tank.

6. INSPECT FUEL CUT OFF VALVE AND FILL CHECK VALVE

(a) Press the lid switch to release the pressure in the fuel tank.
(b) Check that the lid is opened.

EC

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

1. AIR CONDITIONING SYSTEM

AIR CONDITIONER:

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
SET TEMP SHIFT (Set Temperature Shift)	NORMAL	To shift the temperature against the displayed temperature	+2 C / +1 C / NORMAL / -1 C / -2 C
AIR INLET MODE (Air Inlet Mode)	AUTO	In case of turning the A/C ON when you desire to make the compartment cool down quickly, this is the function to change the mode automatically to RECIRCULATION mode	MANUAL / AUTO
COMPRESSOR MODE (Compressor Mode)	AUTO	Function to turn the A/C ON automatically by pressing the AUTO button when the blower is ON and the A/C is OFF	MANUAL / AUTO
COMPRS / DEF OPER (Compressor / Air Inlet DEF Operation)	LINK	Function to turn the A/C ON automatically linked with the FRONT DEF button when the A/C is OFF	NORMAL / LINK
EVAP CTRL (Evaporator Control)	AUTO	Function to set the evaporator control to the AUTOMATIC position (AUTO) to save power, or to the coldest position (MANUAL) to dehumidify the air and to prevent the windows from fogging up	MANUAL / AUTO
FOOT / DEF MODE (Foot / DEF Auto Mode)	ON	Function to turn the airflow from FOOT/DEF ON automatically when AUTO MODE is ON	OFF / ON
AUTO BLOW UP (Foot / DEF Automatic Blower Up Function)	ON	Function to change the blower level automatically when the defroster is ON	OFF / ON
AMBIENT TMP SFT (Ambient Temperature Shift)	NORMAL	Function to shift the ambient temperature against the displayed ambient temperature	+3 C / +2 C / +1 C / NORMAL / -1 C / -2 C / -3 C

2. LIGHTING SYSTEM

ILLUMINATED ENTRY:

Display	Default	Contents	Setting
LIGHTING TIME	15 s	Changes the lighting time of the interior light and power switch illumination.	7.5 s / 15 s / 30 s
I/L ON / UNLOCK	ON	Lights up the interior light and power switch illumination when a door is unlocked.	ON / OFF
I/L ON / ACC OFF	ON	Lights up the interior light and power switch illumination when the power switch is turned from on (ACC) to off	ON / OFF

LIGHT CONTROL:

Display	Default	Contents	Setting
LIGHT OFF DELAY	30 s	Keeps the headlights on for a certain period of time after turning the power switch off and closing all the doors with the headlights on.	OFF / 30 s / 60 s / 90 s

Display	Default	Contents	Setting
SENSITIVITY	NORMAL	Adjusts the sensitivity of the automatic light control system. *1	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2
DISP EX ON SEN	NORMAL	Changes the ambient brightness level required to dim the lights such as the indicator lights of the combination meter, A/C indicator light, and clock. *1	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2
DISP EX OFF SEN	NORMAL	Changes the ambient brightness level required to cancel the dimming of the lights such as the indicator lights of the combination meter, A/C indicator light, and clock.	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2

HINT:
Sensitivity adjustment can hardly be confirmed. Check by driving the customer's vehicle.

Illustration *1

Ambient Brightness Level	Dark ◄——————————► Bright				
Setting	DARK2	DARK1	NORMAL	LIGHT1	LIGHT2

3. POWER DOOR LOCK CONTROL SYSTEM

DOOR LOCK:

Display (Item)	Default	Contents	Setting
UNLOCK/PARK (Unlock, power switch on (IG), shift P, speed 0 km/h (0 mph))	ON	Function that unlocks doors when the shift lever is moved to the P position from any other position while the power switch is on (IG)	ON/OFF
ALL UNLK/OPN-CL (All unlock, D door open-close)	OFF	Function that unlocks all other doors when opening driver side door within 10 seconds after turning the power switch off from on (IG)	ON/OFF
UNLK/KEY TWICE (Unlock, 2 times D key operation)	ON	• Function that unlocks only the driver side door when the driver side door key cylinder is turned to unlock once and unlocks all the doors when it is turned to unlock twice • In the OFF setting, turning it once unlocks all doors	ON/OFF
AUTO LOCK/SHIFT (Auto lock/shift not P)	ON	Function that locks doors when the shift lever is moved from the P position to any other position	ON/OFF
AUTO LOCK	OFF	Function that locks doors when vehicle reaches a vehicle speed 20 km/h (13 mph)	ON/OFF

WIRELESS D LOCK

Display (Item)	Default	Contents	Setting
AUTO LOCK DELAY	60s	Function that selects AUTO LOCK time (30 sec. or 60 sec.)	30s/60s

4. WIRELESS DOOR LOCK CONTROL SYSTEM

WIRELESS DOOR LOCK CONTROL SYSTEM

Display (item)	Default	Function	Setting
TRUNK LID OPER (Wireless trunk opener function setting)	0.8 s PR ON	This function changes operation method of transmitter to open luggage compartment door. • 1 TIME: Push once • 2 TIMES: Push twice • 0.8 s PR: Push and hold for 0.8 seconds • OFF: Does not operate	1 TIME/2 TIMES/0.8 s PR/ OFF
WIRELESS OPER (Wireless door lock control function)	ON	Function that turns wireless door lock function ON/OFF	ON/OFF
HAZARD ANS BACK (Hazard answer-back for wireless door lock control)	ON	• When the doors are locked by wireless operation, the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON/OFF
OPEN DOOR WARN (Door ajar warning)	ON	The buzzer sounds when LOCK is pressed when any of the doors are ajar.	ON/OFF
AUTO LOCK DELAY (Auto lock time)	60 s	This function regulates the interval between unlocking and automatic relocking of doors.	30 s/60 s
UNLOCK /2OPER (Wireless unlock operated twice)	ON	This function unlocks the driver's door when the UNLOCK switch is pressed once, and unlocks all doors when pressed twice within 3 seconds. If set to OFF, pressing UNLOCK once unlocks all doors.	ON/OFF
ALARM FUNCTION (Panic function)	ON	This function operates the theft deterrent system when PANIC is pressed and held for 0.8 seconds.	ON/OFF
WIRLS BUZZ RESP (Wireless buzzer answer-back)	ON	Wireless door lock buzzer response/ON or OFF	ON/OFF

5. SMART KEY SYSTEM (DOOR LOCK)

SMART:

Display (Item)	Default	Contents	Setting
PARK WAIT TIME (Wait time to permit opening door after locking)	2.5s	Function that sets waiting time to permit opening door after door is locked with entry lock function.	0.5s / 1.5s / 2.5s / 5.0s
SMART UNLOCK	D_DOOR	Function that switches the entry unlock detection area.	ALL / D_DOOR
IGNITION AREA (SMART ignition available area)	ALL	Function to choose the available area for electrical key to start HV control system and cancel the steering lock.	FRONT / ALL
SMART TRUNK (Luggage compartment opening operation)	ON	Function to open a luggage compartment when the driver has the electrical key and presses the luggage open button.	ON / OFF

WIRELESS DOOR LOCK:

Display (Item)	Default	Contents	Setting
ALARM FUNCTION (Panic function)	ON	Function to operate the theft deterrent system by keeping pressing the lock button of the transmitter for 2.5 seconds. If there is a panic button, press the panic button instead of the lock button.	ON / OFF

WARNING:

Display (Item)	Default	Contents	Setting
KEY LOW-BATT WRN	ON	Function to set a warning function for the time when a key battery becomes weak.	ON / OFF

6. METER / GAUGE SYSTEM

METER:

Display (Item)	Default	Contents	Setting
KEY REMND VOLUM	LARGE	Function to change the volume of the key reminder warning buzzer	LARGE, MEDIUM, SMALL
KEY REMND SOUND	NORMAL	Function to change the cycle of the key reminder warning buzzer	FAST, NORMAL, SLOW
SEAT-BELT WARN	D/P ON	Function to change the setting of the seat belt buzzer	D/P ON, D ON, P ON, D/P OFF

HINT:
This setting is only valid for the buzzer which sounds at 5 km/h (3 mph) or more.

7. SLIDING ROOF SYSTEM

Sliding roof ECU

Display (Item)	Default	Contents	Setting
OPEN/DOOR KEY	ON	Function to manually open sliding roof linked with power window if holding driver's side and passenger's side door key for 1.5 seconds or more to unlock position when power switch is off	ON/OFF
CLOSE/DOOR KEY	ON	Function to manually close sliding roof linked with power window if holding driver's side and passenger's side door key for 1.5 seconds or more to lock position when power switch is off	ON/OFF
OPEN/WIRELESS	ON	Function to manually open sliding roof linked with power window if pressing transmitter UNLOCK switch for 2.4 seconds or more when power switch is off	ON/OFF
CLOSE/WIRELESS	ON	Function to manually open sliding roof linked with power window if pressing transmitter LOCK switch for 2.4 seconds or more when power switch is off	ON/OFF
DOOR KEY OPER	SLIDE	Function to select tilt up or slide open of manual sliding roof operation linked with power window Activated by holding driver's side door key for 1.5 seconds or more to unlock position when power switch is off	TILT/SLIDE
WIRELESS OPER	SLIDE	Function to select tilt up or slide open of manual sliding roof operation linked with power window Activated by pressing transmitter UNLOCK switch for 2.4 seconds or more when power switch is off	TILT/SLIDE

ON-VEHICLE INSPECTION

1. INSPECT COOLING FAN OPERATION AT LOW TEMPERATURES (Below 83°C (181°F))

(a) Set the vehicle to inspection mode. (See page IN-5)
(b) Start the engine.
(c) Check that the cooling fan stops.
If not, check the cooling fan relay and engine coolant temperature sensor, and check whether there is disconnection or an open circuit between them.
(d) Disconnect the engine coolant temperature sensor connector.
(e) Check that the cooling fan rotates.
If not, check the fuses, cooling fan relay, ECM and cooling fan, and check for a short circuit between the cooing fan relay and engine coolant temperature sensor.
(f) Reconnect the engine coolant temperature sensor connector.

2. INSPECT COOLING FAN OPERATION AT HIGH TEMPERATURES (Above 93°C (199°F))

(a) Set the vehicle to 2WD inspection mode. (See page IN-5)
(b) Start the engine, and raise the engine coolant temperature to above 93°C (199°F).
HINT:
Engine coolant temperature is detected by the engine coolant temperature sensor on the water outlet.
(c) Check that the cooling fan rotates.
If not, replace the engine coolant temperature sensor.

INITIALIZATION

Procedures necessary when battery terminal is disconnected / reconnected

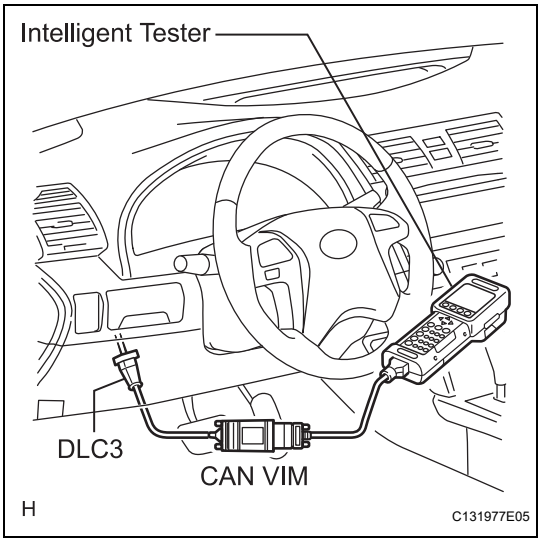
Necessary Procedures	Procedure Details	Effects / Inoperative Functions When Necessary Procedures are not Performed	Notes
Idle speed control learning	Perform the initialization using the intelligent tester.	-	-

Procedures necessary when ECU or other parts are replaced

Replacement Part	Necessary Procedures	Effects / Inoperative Functions When Necessary Procedures are not Performed	Notes
Tire pressure warning ECU	1. Register transmitter IDs to "MAIN" setting of switch 2. Register transmitter IDs to "2nd" setting of switch (if necessary) 3. Initialize tire pressure warning system	• Tire pressure warning light blinks • Tire pressure monitoring function (even if tire is punctured or pressure decreases, it is not detected)	-
Tire pressure warning valve and transmitter	1. Register transmitter IDs to "MAIN" setting of switch 2. Register transmitter IDs to "2nd" setting of switch (if necessary) 3. Initialize tire pressure warning system	• Tire pressure warning light blinks • Tire pressure monitoring function of replaced wheel (even if tire is punctured or pressure decreases, it is not detected)	-
Skid control ECU	1. Clear stored value of linear solenoid valve and calibration data 2. Initialize linear solenoid valve and perform calibration 3. Clear zero point calibration data 4. Perform yaw rate and acceleration sensor zero point calibration	• Brake control warning light come on • Brake warning light come on • ABS warning light come on • VSC warning display of multi-information display • Master warning light come on	-
Brake actuator	1. Clear stored value of linear solenoid valve and calibration data 2. Initialize linear solenoid valve and perform calibration	• Brake control warning light come on • Brake warning light come on • ABS warning light come on • VSC warning display of multi-information display • Master warning light come on	-
Brake pedal stroke sensor	1. Clear stored value of linear solenoid valve and calibration data 2. Initialize linear solenoid valve and perform calibration	-	-
Brake pedal	1. Inspect and adjust brake pedal height 2. Clear stored value of linear solenoid valve and calibration data 3. Initialize linear solenoid valve and perform calibration	Brake does not operate properly	-
Yaw rate and acceleration sensor	1. Clear zero point calibration data 2. Perform yaw rate and acceleration sensor zero point calibration	-	-

IN

Replacement Part	Necessary Procedures	Effects / Inoperative Functions When Necessary Procedures are not Performed	Notes
• Power steering ECU • Power steering link	Perform rotation angle sensor initialization and torque sensor zero point calibration	• EPS control • Steering effort is different between turning steering wheel to left and right • Steering effort varies • Rotation angle sensor or torque sensor malfunction DTC is stored	-
• Front sear assembly • Occupant classification ECU • Accessories (seatback tray and seat cover, etc.)	1. Zero point calibration 2. Sensitivity check	Occupant classification system does not operate properly	-
• ID code box • Certification ECU • Steering lock ECU • Key	1. Perform identification code registration (key code, ECU code) 2. Refer to immobiliser section "REGISTRATION" procedures	• Smart access system with push-button start • Wireless door lock control function • Engine start	When hybrid vehicle control ECU is replaced, registration of ECU communication ID is necessary
• Sliding roof drive gear (Sliding roof control ECU) • Sliding roof housing	Initialize sliding roof system	• Auto operation • Sliding roof operation after power switch is turned OFF • Jam protection function • Key-linked operation function (Driver's door only)	-



1. PERFORM INITIALIZATION (SFI SYSTEM)

(a) Apply the parking brake and chock the vehicle.

(b) Connect the intelligent tester to the DLC3.

(c) Put the engine in the inspection mode (See page ES-34).

(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.

(e) Warm up the engine with the A/C switch off until the coolant temperature becomes 83°C (181°F) or more.

(f) Select the following menu items: DIAGNOSIS / OBD/MOBD / HV ECU / DATA LIST / SOC.

(g) Move the shift lever to the N position, set the A/C switch to MAX cool or turn on the front defroster, and leave the vehicle until the SOC value becomes below 40%.
HINT:
If the SOC is substantially below 40%, the auxiliary battery may go dead. Therefore, do not allow the SOC to reach substantially below 40%.

(h) Move the shift lever to the P position and turn the power switch off.

(i) Disconnect the negative terminal from the auxiliary battery and leave it for 1 minute or more.

(j) Reconnect the negative terminal to the auxiliary battery and turn the power switch on (IG).

(k) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.

(l) Check that the engine coolant temperature is 83°C (181°F) or more.
HINT:
If the engine coolant temperature is below 83°C (181°F), start the engine by depressing the accelerator pedal with the shift lever in the P position to increase the coolant temperature.

(m) Select the following menu items: DIAGNOSIS / ENHANCED OBDII / DATA LIST / PRIMARY / CALCLOAD.

(n) Move the shift lever to the D position while depressing the brake pedal with your left foot.

(o) Depress the accelerator pedal with your right foot while firmly depressing the brake pedal with your left foot, and maintain an engine load value of 45% or more (60 to 70% of full acceleration) for approximately 30 seconds.
NOTICE:
Do not perform this step for 40 seconds or more.

(p) Shift the shift lever to the P position. Turn the power switch off and then wait for 5 seconds before putting the vehicle into the READY-on state again.

(q) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / ISC LEARNING.

(r) Check that the air conditioner is off. Lightly depress the accelerator pedal and release it when the engine starts.

(s) Check that "COMPLETE" is displayed on the intelligent tester screen.
HINT:
- If "ISC LEARNING" is not completed within 1 minute, repeat steps (o) through (r).
- The engine will usually stop when "ISC LEARNING" is completed. However, the engine will not stop even when "ISC LEARNING" is completed in such cases when the charge level of the auxiliary battery is decreased.

2. DESCRIPTION OF INITIALIZATION (TIRE PRESSURE WARNING SYSTEM)

(a) Perform initialization in the following cases:
- Before delivery of a new vehicle.
- After replacement of the tire pressure warning ECU*.
- After replacement of the tire pressure warning valve and transmitter.
- Specified tire pressure changes depending on the size or type of the tire.

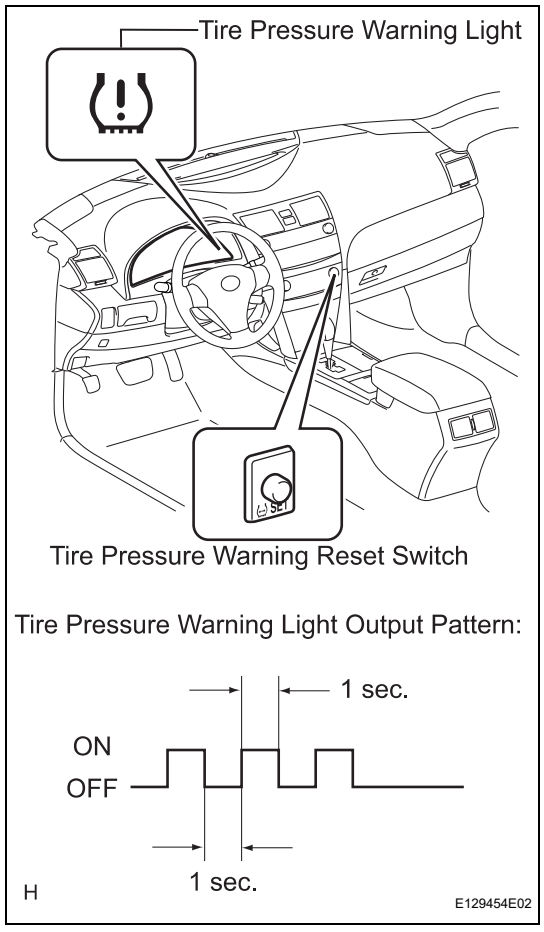
*: Perform initialization after the transmitter ID registration is completed (See page TW-14).

(b) Before initialization
(1) Set the air pressure of all wheels to the specified value.

Cold tire inflation pressure

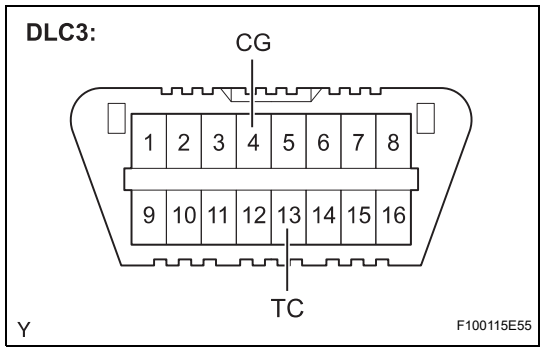
Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)

NOTICE:
Perform the tire pressure adjustment after the vehicle has sufficiently cooled down. If the vehicle is not sufficiently cooled down, increase the air pressure by 20 to 30 kPa (0.2 to 0.3 kgf/cm^2, 2.9 to 4.3 psi) above the specified value.



3. INITIALIZATION PROCEDURE (TIRE PRESSURE WARNING SYSTEM)

(a) Keep the tire pressure warning reset switch pressed for 3 seconds or more with the power switch on (IG).
(b) Check that the tire pressure warning light blinks 3 times (1 second ON, 1 second OFF).
HINT:
Initialization will be completed if signals are received from all wheels.



(c) Wait for 2 or 3 minutes with the power switch on (IG).
NOTICE:
- **The initialization is normally completed within 2 to 3 minutes.**
- **If the initialization has not been completed successfully, DTC C2177/77 is set approximately 20 minutes.**
- **The initialization can be terminated by making a short circuit between terminals TC and CG of the DLC3 connector.**

(d) Confirm that the initialization has been completed using the intelligent tester.

(1) Change the mode to test mode using the intelligent tester and check that the tire pressure warning light tire pressure warning light blinks at 0.125 second intervals.

HINT:

The tire pressure warning light will not blink until the system initialization is complete.

NOTICE:

The following operations can be used instead of above procedure:

1. **Turn the power switch from off to on (IG).**
2. **Monitor the tire pressure values of all the wheels using the intelligent tester.**
3. **If the tire pressure values cannot be displayed on the intelligent tester screen, the initialization has failed.**
4. **It takes 2 to 3 minutes to display the tire pressure data.**

HINT:

- In winter, as the tire pressure may decrease depending on the ambient temperature, increase the tire pressure by 20 to 30 kPa (0.2 to 0.3 kgf/cm^2, 2.9 to 4.3 psi) above the specified value after confirmation that the initialization has been completed.

4. DESCRIPTION (ELECTRONICALLY CONTROLLED BRAKE SYSTEM)

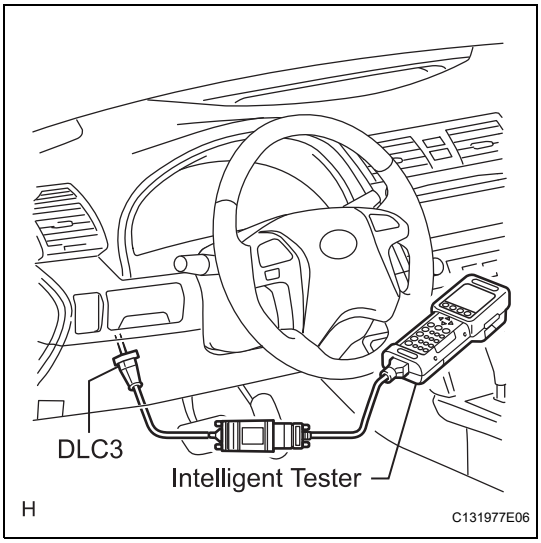
(a) Perform initialization of linear solenoid valve and calibration when the skid control ECU, brake actuator or brake pedal stroke sensor is replaced. Follow the procedure to perform initialization.

HINT:

- If there is a problem with the auxiliary battery (12 V) voltage, initialization of linear solenoid valve and calibration cannot be completed normally. Make sure to check the auxiliary battery voltage before performing initialization of linear solenoid valve and calibration.
- If the actuator's temperature is high, initialization of linear solenoid valve and calibration may not be completed normally. In such a case, wait until the temperature decreases and then perform initialization of linear solenoid valve and calibration.
- If the power switch is turned off, the brake pedal is operated or vehicle speed is input while the linear solenoid valve offset learning is being performed, the learning will be cancelled.

Replacement Parts	Necessary Operation
Skid control ECU	Initialization of linear solenoid valve and calibration

Replacement Parts	Necessary Operation
Brake actuator assembly	1. Bleed air 2. Clearing stored value of linear solenoid valve and calibration data 3. Initialization of linear solenoid valve and calibration
• Brake pedal stroke sensor • Brake pedal	1. Inspection and adjustment of brake pedal height 2. Clearing stored value of linear solenoid valve and calibration data 3. Initialization of linear solenoid valve and calibration

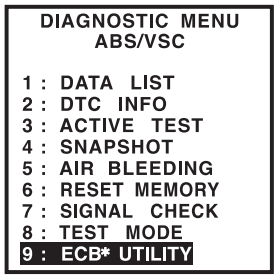


5. PERFORM INITIALIZATION OF LINEAR SOLENOID VALVE AND CALIBRATION (INTELLIGENT TESTER) (ELECTRONICALLY CONTROLLED BRAKE SYSTEM)

(a) Clear the stored value of linear solenoid valve and calibration data.
  (1) Turn the power switch off.
  (2) Connect the intelligent tester to the DLC3.
  (3) Move the shift lever to the P position.
  (4) Turn the power switch on (IG) with the brake pedal released.
  (5) Clear the stored value of initialization of linear solenoid valve and calibration following the screen.
  HINT:
  Refer to the intelligent tester operator's manual for further details.
  (6) Using the intelligent tester, perform initialization of linear solenoid valve and calibration.

(b) Perform the initialization of linear solenoid valve and calibration.
  (1) Turn the power switch off.
  (2) Connect the intelligent tester to the DLC3.
  (3) Move the shift lever to the P position.
  (4) Turn the power switch on (IG) with the brake pedal released.
  NOTICE:
  - **If the linear solenoid valve offset learning is performed without turning the power switch on (IG), the learning process may not be completed properly because of insufficient auxiliary battery voltage.**
  - **When the linear solenoid valve offset learning is interrupted, or the learning process is performed with the shift lever not in the P position, DTC C1345/66 will be stored (See page BC-190).**

Tester Display:



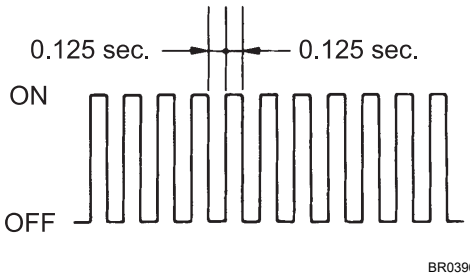
*: Electronically Controlled Brake

N C145966E01

(5) Set the intelligent tester to Test Mode (select "ECB* UTILITY").
*: Electronically Controlled Brake
HINT:
Refer to the intelligent tester operator's manual for further details.

(6) Leave the vehicle stationary without depressing the brake pedal for 1 or 2 minutes.

Blinking Pattern in TEST MODE:



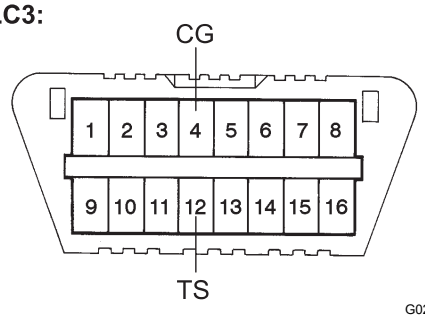
BR03904E15

(7) Check that the interval between blinks of the brake control warning light changes from 1 second to 0.25 seconds.
HINT:
- The time needed to complete initialization of linear solenoid valve and calibration varies depending on auxiliary battery voltage.
- The brake control warning light blinks at 1 second intervals during initialization of linear solenoid valve and calibration and changes to the Test Mode display.
- The brake control warning light blinks at 0.25 seconds intervals if the Test Mode is normal.

(8) Check that DTC C1345/66 which indicates trouble with stroke sensor zero point learning is not output when the brake control warning light changes to the Test Mode display upon initialization of linear solenoid valve and calibration completion.

(9) Enter the normal mode from the Test Mode following the intelligent tester prompts.
HINT:
Refer to the intelligent tester operator's manual for further details.

DLC3:



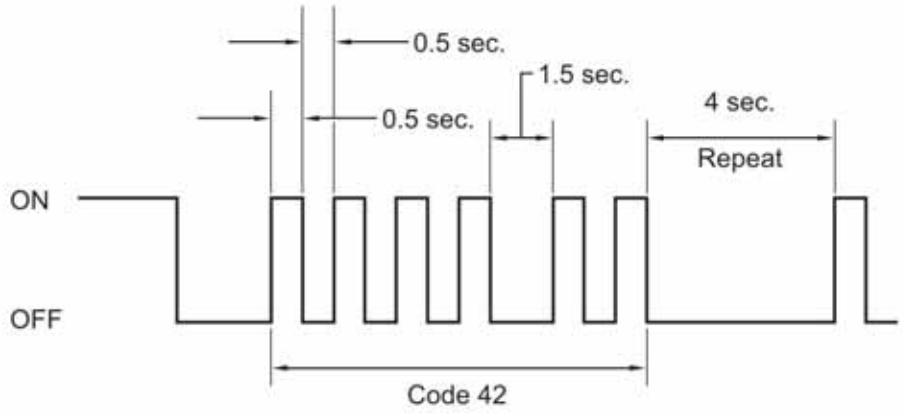
G022987E07

6. PERFORM INITIALIZATION OF LINEAR SOLENOID VALVE AND CALIBRATION (SST CHECK WIRE) (ELECTRONICALLY CONTROLLED BRAKE SYSTEM)

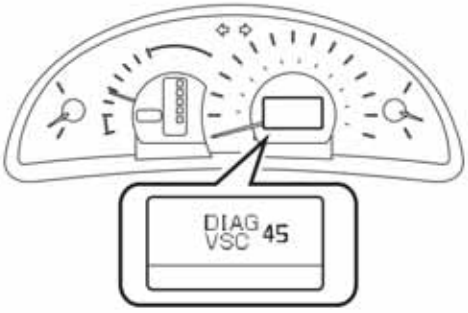
(a) Clear the stored value of linear solenoid valve and calibration data.
(1) Turn the power switch off.
(2) Move the shift lever to the P position.
(3) Turn the power switch on (IG) with the brake pedal released.
(4) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.
SST 09843-18040

(5) Check that no codes other than ABS code 42, VSC code 45 and Electronically Controlled Brake code 48, 66, or 95 are stored in the diagnostic system.

Blinking Pattern of ABS and Electronically Controlled Brake Code (Example Code 42):



Display of VSC Code:



N

C135830E02

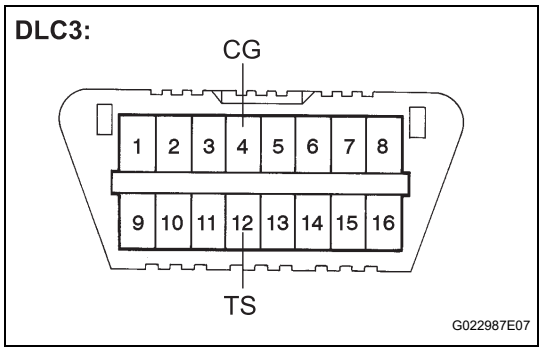
HINT:
The ABS warning, brake control warning lights and multi information display do not indicate the normal system code.

(6) Remove the SST from the terminals of the DLC3.

(7) Using the check wire, perform initialization of linear solenoid valve and calibration.

(b) Perform initialization of linear solenoid valve and calibration.

(1) Turn the power switch off.

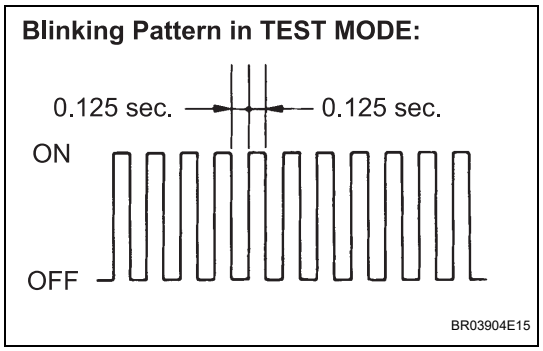


(2) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040

(3) Move the shift lever to the P position.

(4) Turn the power switch on (IG) with the brake pedal released.
NOTICE:
- **If the linear solenoid valve offset learning is performed without turning the power switch on (IG), the learning process may not be completed properly because of insufficient auxiliary battery voltage.**
- **When the linear solenoid valve offset learning is interrupted, or the learning process is performed with the shift lever not in the P position, DTC C1345/66 will be stored (See page BC-190).**

(5) Leave the vehicle stationary without depressing the brake pedal for 1 or 2 minutes.



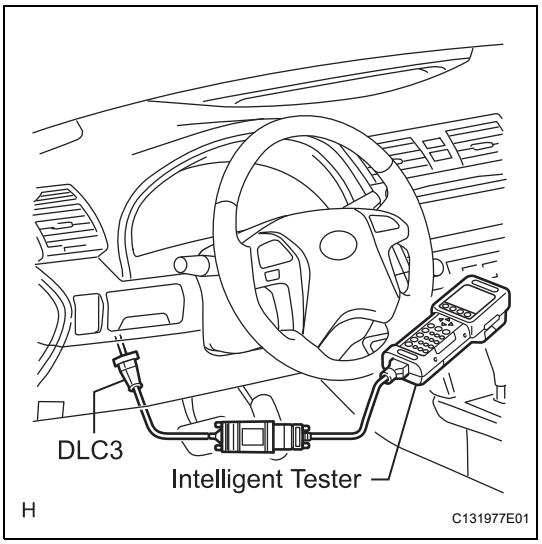
(6) Check that the interval between blinks of the brake control warning light changes from 1 second to 0.25 seconds.
HINT:
- The time needed to complete initialization of linear solenoid valve and calibration varies depending on the auxiliary battery voltage.
- The brake control warning light blinks at 1 second intervals during initialization of linear solenoid valve and calibration and changes to the Test Mode display.
- The brake control warning light blinks at 0.25 seconds intervals if the Test Mode is normal.

(7) Check that DTC C1345/66 which indicates trouble with stroke sensor zero point learning is not output when the brake control warning light changes to the Test Mode display upon initialization of linear solenoid valve and calibration completion.

(8) Turn the power switch off and disconnect the SST from the DLC3.

7. ROTATION ANGLE SENSOR VALUE INITIALIZATION AND TORQUE SENSOR ZERO POINT CALIBRATION (ELECTRONIC POWER STEERING SYSTEM)
NOTICE:
Clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point if any of the following has occurred:
- **The power steering ECU assembly has been replaced.**
- **The power steering link assembly has been replaced.**
- **Steering effort differs between left and right.**

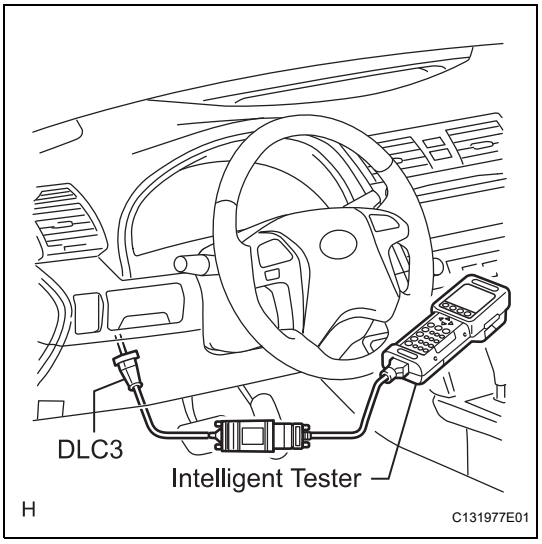
IN



(a) Inspection before calibration
(1) Connect the intelligent tester (with CAN VIM) to the DLC3.
(2) Turn the power switch on (IG).
(3) Turn the intelligent tester on.
(4) Select "IG SUPPLY" from the data list.
(5) Check the IG power supply voltage on the tester screen.

Tester Display	Measurement Item/Range	Inspection Condition	Reference Value
IG SUPPLY	ECU power source voltage/ Min.: 0 V, Max.: 25.5 V	Power switch on (IG)	10 to 14 V

Standard voltage:
10 to 14 V
NOTICE:
If the IG power supply voltage is 10 V or less, calibration cannot be performed. In this case, charge or replace the battery, and then perform calibration.



(b) Rotation angle sensor calibration value clear, rotation angle sensor value initialization, and torque sensor zero point calibration.
NOTICE:
- **If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.**
- **If DTC C1526 (Rotation Angle Sensor Initialization Incomplete) is stored, the rotation angle sensor value cannot be initialized. Clear the DTC before starting initialization.**

(1) Connect the intelligent tester (with CAN VIM) to the DLC3.
(2) Turn the power switch on (IG).
(3) Turn the intelligent tester on.
(4) Select "TRQ SENSOR ADJ".

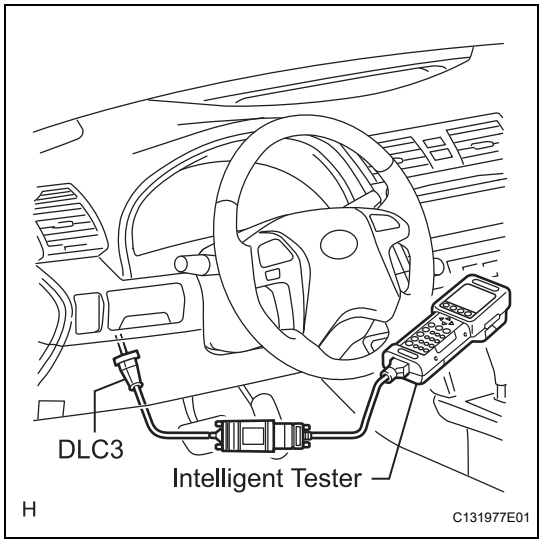
(5) Follow the procedures on the tester display to clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point.
NOTICE:
- **When initializing the rotation angle sensor value, observe the following to stabilize sensor voltage:**
  After turning the power switch on (IG), wait for at least 2.5 seconds before turning the steering wheel. Do not turn the steering wheel quickly.
- **The steering wheel will vibrate during torque sensor zero point calibration. Do not touch the steering wheel while it is vibrating or for 2 seconds after it stops.**

8. ZERO POINT CALIBRATION (OCCUPANT CLASSIFICATION SYSTEM)
NOTICE:
Make sure that the front passenger seat is not occupied before performing the operation:
HINT:
Perform zero point calibration and sensitivity check if any of the following conditions occur.
- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator ("OFF") comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

(a) Zero point calibration and sensitivity check procedures.
HINT:
Make sure that zero point calibration has finished normally, and then perform the sensitivity check.
(1) Adjust the seat position according to the table below.

Adjustment Component	Position
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position

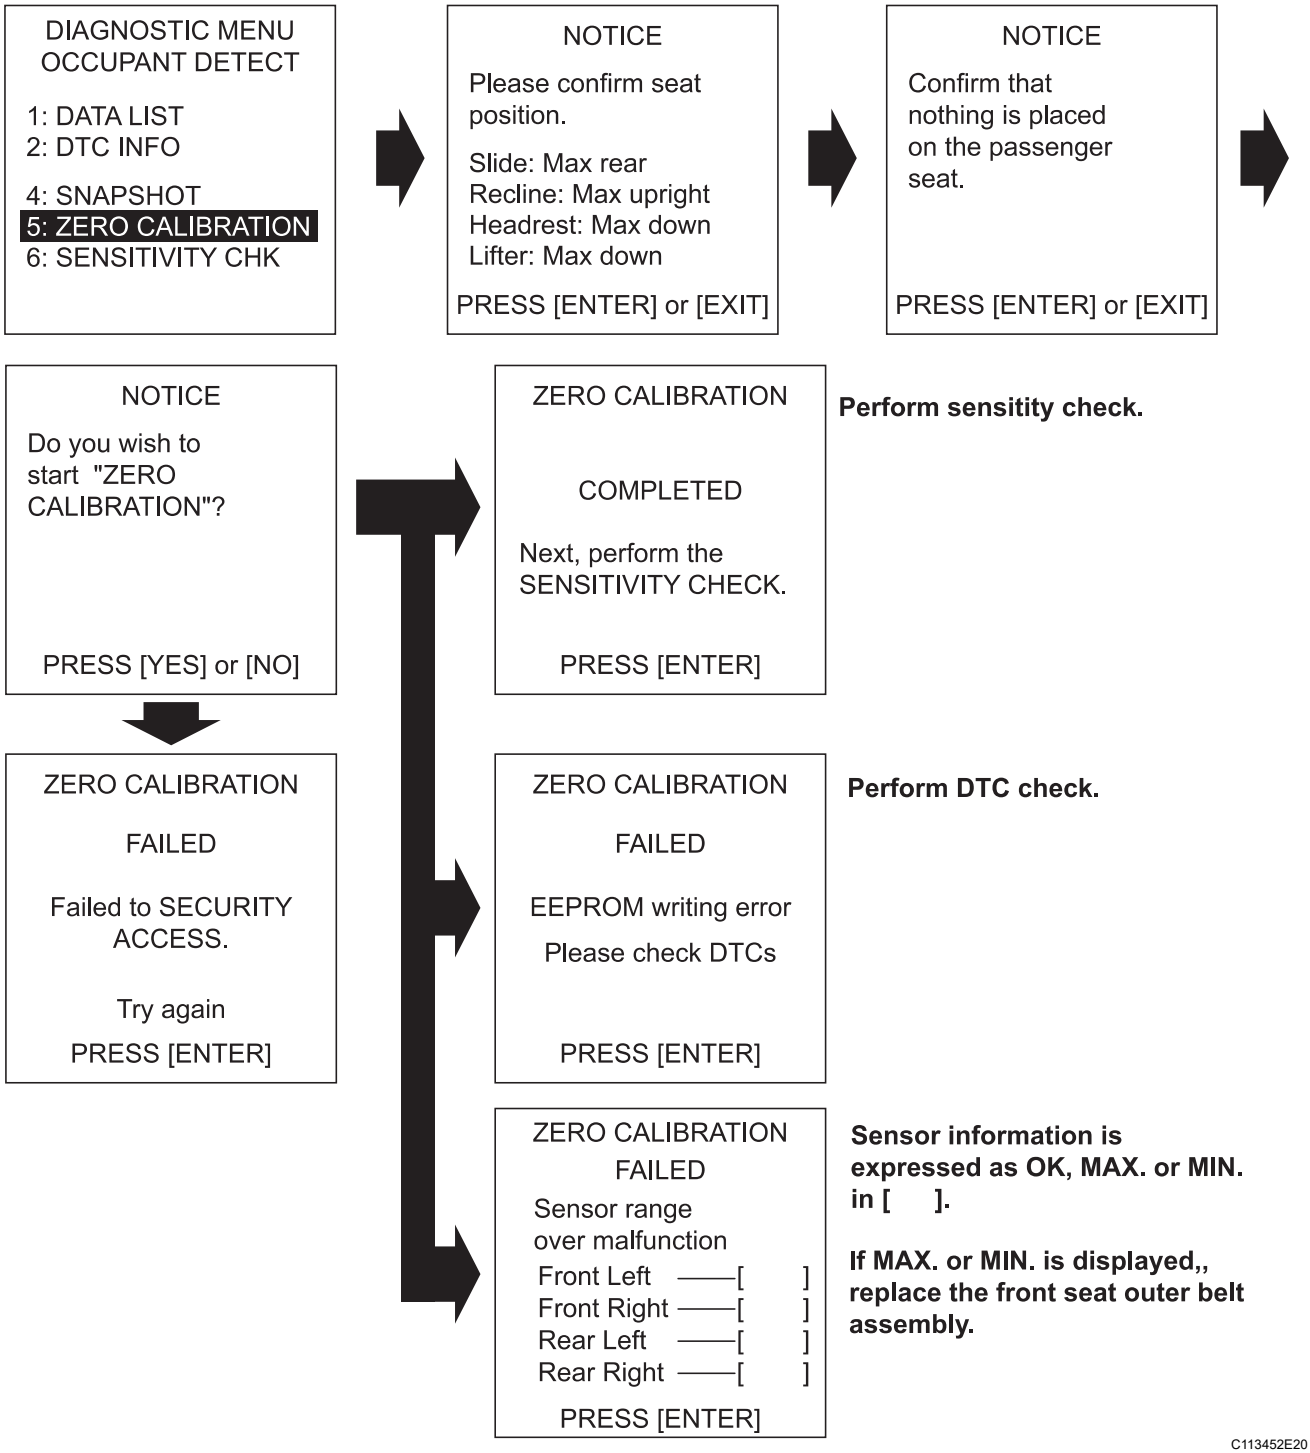
(2) Connect the intelligent tester to the DLC3.
(3) Turn the power switch on (IG).



(4) Perform the zero point calibration by following the prompts on the tester screen.

ZERO POINT CALIBRATION PROCEDURE

"1: DIAGNOSIS" - "1: OBD/MOBD" - "MODEL YEAR" - "MODEL SELECTION" - "CAMRY" - Select the option parts" - "9: OCCUPANT DETECT"
Refer to the following screen flow.



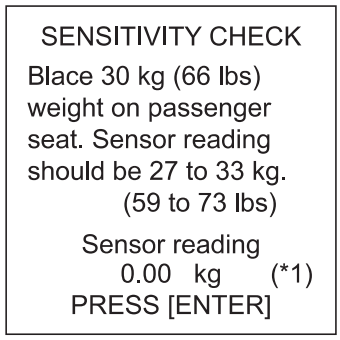
HINT:
Refer to the intelligent tester operator's manual for further details.

OK:
"COMPLETE" is displayed.

(5) Perform the sensitivity check by following the prompts on the tester screen.
(6) Confirm that the beginning sensor reading within standard value.
Standard value:
-3.2 to 3.2 kg (-7 to 7 lb)
(7) Place a 30 kg (66.14 lb) weight (eg. a 30 kg (66.14 lb) of lead mass) onto the front passenger seat.
(8) Confirm that the sensitivity is within the standard value.

SENSITIVITY CHECK PROCEDURE

"1: DIAGNOSIS" - "1: OBD/MOBD" - "MODEL YEAR" - "MODEL SELECTION = CAMRY" - Select the option parts - "9: OCCUPANT DETECT" - Refer to the following screen flow.



*1: kg = lb

Unit can be changed based on unit conversion setting.

[System Selection Screen]

"1: DIAGNOSIS" - "9: SETUP" - "4: UNIT CONVERSION" - "WEIGHT" (kg = lbs)

C

C113453E18

Standard value:
27 to 33 kg (59.52 to 72.75 lb)

HINT:

- When performing the sensitivity check, use a solid metal weight (the check result may not appear properly if the weight made from liquid is used).

- When the sensitivity deviates from the standard value, retighten the bolts of the front passenger seat without deforming the seat rail. After performing this procedure, if the sensitivity is not within the standard value, replace the front seat assembly RH.
- When zero point calibration has not finished normally, replace the front seat assembly RH.

9. DESCRIPTION OF CODE REGISTRATION (ENGINE IMMOBILIZER SYSTEM)

HINT:

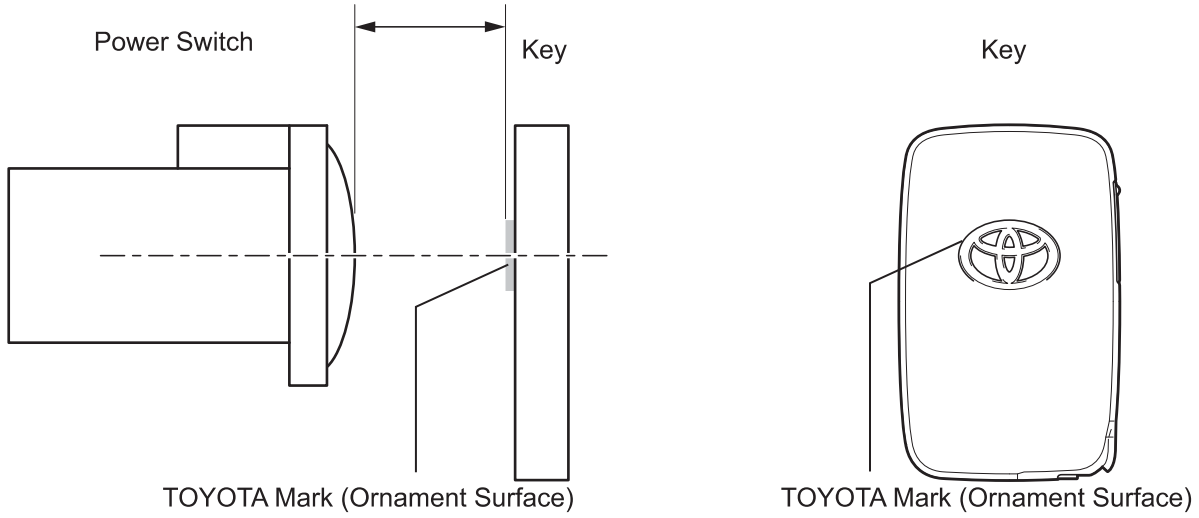
- ID codes are the same as recognition codes for the wireless transmitter and the engine immobiliser function. Registering an ID code enables the smart key system, the wireless door lock control function and the engine immobiliser function to be operated.
- Code registration is needed when the certification ECU, ID code box, steering lock ECU or key is replaced with a new one.

(a) PROCEDURE "1"
The vehicle with the smart key system does not have a key slot. Therefore, hold the key close to the power switch to register the key, as shown in the illustration below.

IN

Hold the key with its ornament surface within a range of 10 mm (0.39 in.) or less from the power switch.

Communication distance: 10 mm (0.39 in.) or less from the power switch.



P B139204E02

10. PART REPLACEMENT KEY REGISTRATION (ENGINE IMMOBILIZER SYSTEM)

The following table shows ECU replacement and key registration procedures in case the malfunctioning ECU has been identified after troubleshooting the smart key system.

HINT:

- The following procedures indicated in the table below require the use of the intelligent tester:
  - New key ID registration
  - Additional key ID registration
  - Key ID erasure
  - ECU code registration
- If all of the registered keys are not available, replacement of the ID code box is also required.
- A maximum of 7 keys can be registered.

IN

Part to be replaced	Condition		Procedure	Reference
Certification ECU	Customer has brought all keys		1. Replace certification ECU	-
			2. Reregister all keys (new key ID registration)	PROCEDURE "B"
	Some keys are lost	Key ID codes can be registered and erased	1. Erase key codes (key ID erasure)	PROCEDURE "D"
			2. Perform additional key registration procedure (additional key ID registration)	PROCEDURE "C"
			3. Replace certification ECU	-
			4. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later.	PROCEDURE "B"
		Key ID codes cannot be either registered or erased	1. Replace certification ECU	-
			2. Replace ID code box	-
			3. Reregister all keys (new key ID registration) HINT: If key codes cannot be erased or additional keys cannot be registered due to a malfunction in certification ECU, replace ID code box and certification ECU. If some keys are not registered during above steps, they will be disabled because they cannot be registered later.	PROCEDURE "A"
			4. ECU communication ID registration	PROCEDURE "F"
ID code box	At least 1 key is available		1. Replace ID code box	-
			2. Register recognition codes in ECUs (ECU code registration)	PROCEDURE "E"
			3. ECU communication ID registration	PROCEDURE "F"
	All keys are lost		1. Replace ID code box	-
			2. Replace certification ECU	-
			3. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later.	PROCEDURE "A"
			4. ECU communication ID registration	PROCEDURE "F"
Steering lock ECU	Customer has brought at least 1 key		1. Replace steering lock ECU	-
			2. Register recognition codes in ECUs (ECU code registration)	PROCEDURE "E"
	All keys are lost		1. Replace steering lock ECU	-
			2. Replace certification ECU	-
			3. Replace ID code box	-
			4. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later.	PROCEDURE "A"
			5. ECU communication ID registration	PROCEDURE "F"
Main body ECU (Instrument panel J/B)	No condition required		Replace main body ECU (Instrument panel J/B)	-
Hybrid vehicle control ECU	No condition required		1. Replace hybrid vehicle control ECU	-
			2. ECU communication ID registration	PROCEDURE "F"

Part to be replaced	Condition	Procedure	Reference
Key	Customer has brought at least 1 key	1. Using remaining key, erase lost key code (key ID erasure)	PROCEDURE "D"
		2. Register additional keys as necessary (additional key ID registration)	PROCEDURE "E"
	All keys are lost	1. Replace certification ECU	-
		2. Replace ID code box	-
		3. Register all keys (new key ID registration) HINT: If customer brings lost keys at later date, they can be registered using additional key ID registration function.	PROCEDURE "A"
		4. ECU communication ID registration	PROCEDURE "F"

11. KEY REGISTRATION (ENGINE IMMOBILIZER SYSTEM)

(a) PROCEDURE "A"
New key ID registration (when replacing certification ECU and ID code box, or certification ECU, ID code box and steering lock ECU)

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / SMART CODE REG" from tester menu HINT: The power switch cannot be turned on (IG) more than 10 times. After connecting tester, turn tester on while turning driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.
2. Confirmation of ECU code	Perform operation according to prompts on tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode.
3. Verification of unregistered key *1	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger's side seat.
	Confirm that wireless door lock buzzer sounds
4. Registration of ID code	Perform operation according to prompts on tester screen
5. End of registration	Finish new key ID code registration

*1: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from process 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(b) PROCEDURE "B"
New key ID registration (when replacing certification ECU)

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / SMART CODE REG" from tester menu HINT: The power switch cannot be turned on (IG) more than 10 times. After connecting tester, turn tester on while turning driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.
2. Confirmation of ECU code	Perform operation according to prompts on tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode.
3. Confirmation of all registered keys *1	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds
4. Confirmation of ECU code	Perform operation according to prompts on tester screen
5. Verification of unregistered key *2	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger side seat.
	Confirm that wireless door lock buzzer sounds
5. Registration of ID code	Perform operation according to prompts on tester screen
6. End of registration	Finish new key ID code registration

*1: Repeat this process for each key registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from process 1 again. If performing the key confirmation procedure for a key, the security indicator comes on and remains on until all the keys are confirmed.
*2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(c) PROCEDURE "C"
Additional key ID registration

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / SMART CODE REG" from tester menu

Process	Procedure
2. Confirmation of registered key *1	Perform operation according to prompts on intelligent tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode.
	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Confirmation of ECU code	Perform operation according to prompts on tester screen
4. Verification of unregistered key *2	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger's side seat.
	Confirm that wireless door lock buzzer sounds
5. Registration of ID code	Perform operation according to prompts on tester screen
6. End of registration	Finish key ID code registration

*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform registration procedures from process 1 again.
*2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(d) PROCEDURE "D"
Key ID erasure
HINT:
Erase all registered key codes except one.

Process	Procedure
1. Start of erasure	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / SMART CODE ERS" from tester menu
2. Confirmation of registered key *1	Perform operation according to prompts on intelligent tester screen
	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Confirmation of ECU code	Perform operation according to prompts on tester screen
4. Erasure of ID code	Perform operation according to prompts on tester screen
5. End of erasure	Finish key ID code erasure

*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform erasure procedures from process 1 again.

(e) PROCEDURE "E"
ECU code registration

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / ECU COMM ID REG / ID Code Box and Steering Lock" from tester menu
2. Confirmation of registered key *1	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Registration of ECU code	Perform operation according to prompts on tester screen
4. End of registration	Finish ECU code registration

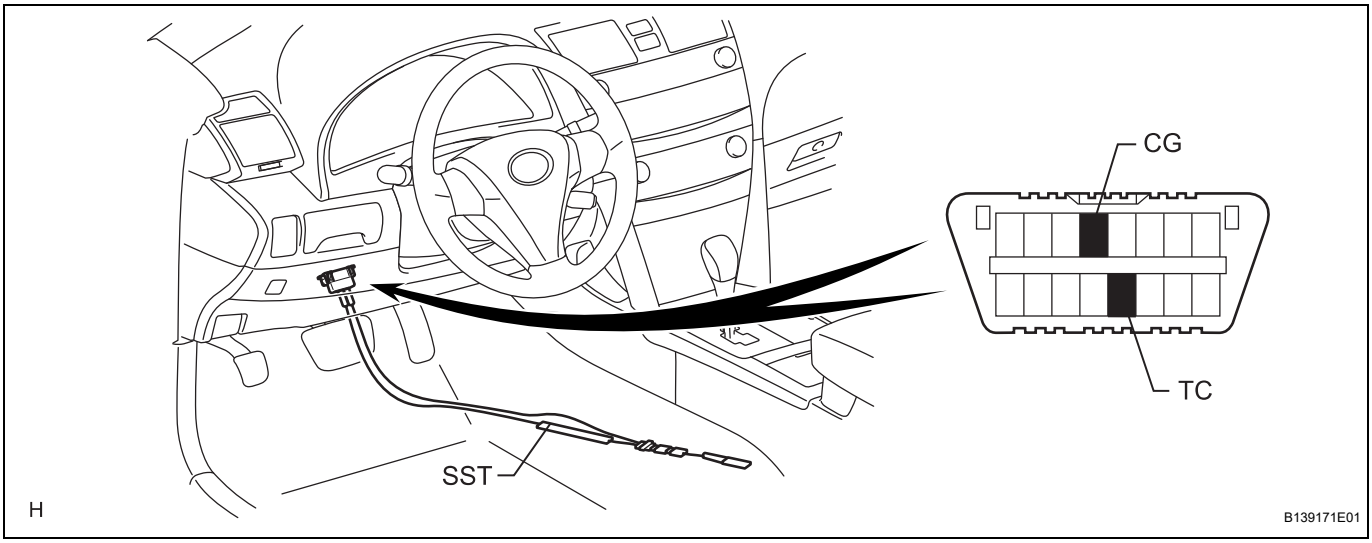
*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform erasure procedures from process 1 again.

(f) PROCEDURE "F"
ECU communication ID registration

NOTICE:

- **The ECU communication ID should be registered when the ID code box and/or the hybrid vehicle control ECU is replaced in order to match these ECU communication ID.**
- **The engine cannot be started unless the ECU communication ID matches.**
- **After the registration, pressing the power switch may not start the hybrid control system on the first try. If so, press the power switch again.**
- **After the hybrid control system is started, erase DTC B2799-542, 790 (code for hybrid vehicle control ECU's immobiliser communication error).**

Register the ECU communication ID.



(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(2) Turn the power switch on (IG) and leave it for 30 minutes.
HINT:
Do not start the engine.
(3) Turn the power switch off and disconnect terminals TC and CG.
(4) Check that the hybrid control system.
OK:
Hybrid control system starts and stays on for more than 3 seconds.
HINT:
Using an already registered key, turn the power switch on (IG) with the brake pedal depressed.

12. INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF SYSTEM)
NOTICE:
When replacing the sliding roof drive gear, the sliding roof drive gear requires initialization. If a reset is not executed, the following functions do not operate: auto operation and key off operation.
(a) Turn the power switch on (IG).
(b) Make sure that the sliding roof is fully closed.
(c) Push and hold the CLOSE switch or the UP switch until the following movement finishes: Tilt up → approximately 1 second → tilt down → slide open → slide closed.
(d) Check that the sliding roof stops at the fully closed position.
(e) Finish the initialization.
(f) Check that the AUTO operation works normally.
NOTICE:
If the following conditions occur during initialization procedure, initialization will fail:
- **Power switch is turned off.**
- **Sliding roof control switch is released while sliding roof is operating.**
- **Vehicle speed is 5 km/h (3 mph) or more.**
- **Communication is cut off.**
- **Another switch is turned on during initialization.**
- **The vehicle experiences a strong vibration during initialization, such as the slamming of a door.**

HINT:
- If the sliding roof cannot be fully closed or its position has become misaligned, perform initialization again.
- If the roof glass stops moving or starts moving in the opposite direction while the CLOSE or UP switch is held down, continue to hold the switch for another 10 seconds or more to return the sliding roof control ECU to an uninitialized condition. Then perform the initialization procedure again.

- If the AUTO operation function and jam protection function do not operate after the drive gear has been reset, replace the sliding roof drive gear (sliding roof ECU).

INSPECTION MODE PROCEDURE

1. INSPECTION MODE

(a) Activating inspection mode (Not using the intelligent tester)

HINT:

Perform procedures "A" to "D" within 60 seconds.

(1) Turn the power switch on (IG) (Procedure "A").

(2) Fully depress the accelerator pedal twice with the shift P position (Procedure "B").

(3) Fully depress the accelerator pedal twice with the shift N position (Procedure "C").

(4) Fully depress the accelerator pedal twice with the shift P position (Procedure "D").

(5) Check that the HV system warning light blinked on the multi-information display (Procedure "E").

(6) Start the engine by turning the power switch while depressing the brake pedal (Procedure "F").

(b) Activating inspection mode (Using the intelligent tester)

(1) Connect the intelligent tester to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the intelligent tester on.

(4) Select following menu items: DIAGNOSIS / OBD/MOBD / HV ECU / ACTIVE TEST / INSPECTION MOD1 / ON.

(5) Check that the HV system warning light blinks on the multi-information display and the master warning light are illuminated in the combination meter.

(6) Start the engine by turning the power switch while depressing the brake pedal.

(c) Deactivating inspection mode

(1) Turn the power switch off. The HV main system turns off simultaneously.

CAUTION:

- **The idling speed in inspection mode is approximately 900 rpm. The engine speed increases to 1,500 rpm if the accelerator pedal is depressed by less than 60 %. If the accelerator pedal is depressed by more than 60%, the engine speed increases to 2,500 rpm.**
- **If a DTC is set during inspection mode, the master warning light and the warning massage illuminate on the multi-information display.**
- **When the master warning light illuminates during the inspection mode, deactivate the inspection mode, and check DTC(s).**
- **Driving the vehicle without deactivating the inspection mode may damage the transaxle.**

HOW TO PROCEED WITH TROUBLESHOOTING

1. OPERATION FLOW

HINT:
Perform troubleshooting in accordance with the procedures below. The following is an outline of basic troubleshooting procedures. Confirm the troubleshooting procedures for the circuit you are working on before beginning troubleshooting.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS

(a) Ask the customer about the conditions and environment when the problem occurred.

NEXT

3 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4 SYMPTOM CONFIRMATION AND DTC (AND FREEZE FRAME DATA) CHECK

(a) Visually check the wire harnesses, connectors and fuses for open and short circuits.
(b) Warm up the engine to the normal operating temperature.
(c) Confirm the problem symptoms and conditions, and check for DTCs.

Result

Result	Proceed to
DTC is output	A
DTC is not output	B

B → **Go to step 6**

A

5	DTC CHART

(a) Check the results obtained in step 4. Then find the output DTC in the DTC chart. Look at the "Trouble Area" column for a list of potentially malfunctioning circuits and/or parts.

NEXT → Go to step 7

6	PROBLEM SYMPTOMS CHART

(a) Check the results obtained in step 4. Then find the problem symptoms in the problem symptoms table. Look at the "Suspected Area" column for a list of potentially malfunctioning circuits and/or parts.

NEXT

7	CIRCUIT INSPECTION OR PARTS INSPECTION

(a) Identify the malfunctioning circuit or part.

NEXT

8	ADJUST, REPAIR OR REPLACE

(a) Adjust, repair or replace the malfunctioning circuit or parts.

NEXT

9	CONFIRMATION TEST

(a) After the adjustment, repairs or replacement, confirm that the malfunction no longer exists. If the malfunction does not reoccur, perform a confirmation test under the same conditions and in the same environment as when the malfunction occurred the first time.

NEXT

END

2. CUSTOMER PROBLEM ANALYSIS

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

3. SYMPTOM CONFIRMATION AND DIAGNOSTIC TROUBLE CODE

HINT:

The diagnostic system in the CAMRY HV has various functions.

- The first function is the Diagnostic Trouble Code (DTC) check. A DTC is a code stored in the ECU memory whenever a malfunction in the signal circuits to the ECU occurs. In a DTC check, a previous malfunction's DTC can be checked by a technician during troubleshooting.
- Another function is the Input Signal Check, which checks if the signals from various switches are sent to the ECU correctly.

  By using these functions, the problem areas can be narrowed down and troubleshooting is more effective. Diagnostic functions are incorporated in the following system in the CAMRY HV.

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Sensor Check/Test Mode (Input Signal Check)	Data List	Active Test
SFI System	○	○		○	○
Smart Key System (Starting)	○			○	○
Hybrid Control System	○			○	○
Hybrid Battery System	○	○		○	○
Tire Pressure Warning System	○		○	○	○
Electronically Controlled Brake System	○		○	○	○
Electric Steering Lock	○			○	○
Electronic Power Steering System	○			○	

System	DTC Check (Normal Mode)	DTC Check (Check Mode)	Sensor Check/Test Mode (Input Signal Check)	Data List	Active Test
Air Conditioning System	○			○	○
Airbag System	○	○		○	
Occupant Classification System	○			○	
Seat Belt Warning System					○
Engine Immobilizer System	○			○	○
Cruise Control System	○			○	
Lighting System	○			○	○
Power Door Lock Control System	○			○	○
Wireless Door Lock Control System	○			○	○
Smart Key System (Door Lock)	○			○	○
Meter/Gauge System	○			○	○
Audio and Visual System	○				
Navigation System	○				
Window Defogger System					○
Fuel Lid Opener System				○	○
Sliding Roof System	○			○	○

- In the DTC check, it is very important to determine whether the problem indicated by the DTC either: 1) still occurs, or 2) occurred in the past but has returned to normal. In addition, the DTC should be compared to the problem symptom to see if they are related. For this reason, DTCs should be checked before and after confirmation of symptoms (i.e., whether or not problem symptoms exist) to determine current system conditions, as shown in the flowchart below.
- Never skip the DTC check. Failing to check DTCs may, depending on the case, result in unnecessary troubleshooting for systems operating normally or lead to repairs not related to the problem. Follow the procedures listed in the flowchart in the correct order.
- The following flowchart shows how to proceed with troubleshooting using the DTC check. Directions from the flowchart will indicate how to proceed either to DTC troubleshooting or to the troubleshooting of each problem symptom.

1	DTC CHECK

NEXT

2	MAKE A NOTE OF DTCS DISPLAYED AND THEN CLEAR MEMORY

NEXT

3	SYMPTOM CONFIRMATION

Result

Result	Proceed to
No symptoms exist	A
Symptoms exist	B

B → Go to step 5

A

4	SIMULATION TEST USING SYMPTOM SIMULATION METHODS

NEXT

5	DTC CHECK

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → TROUBLESHOOTING OF PROBLEM INDICATED BY DTC

A

6	SYMPTOM CONFIRMATION

Result

Result	Proceed to
No symptoms exist	A
Symptoms exist	B

If a DTC was displayed in the initial DTC check, the problem may have occurred in a wire harness or connector in that circuit in the past. Check the wire harness and connectors.

B → SYSTEM NORMAL

A

TROUBLESHOOTING OF EACH PROBLEM SYMPTOM

IN

The problem still occurs in a place other than the diagnostic circuit (the DTC displayed first is either for a past problem or a secondary problem).

4. SYMPTOM SIMULATION

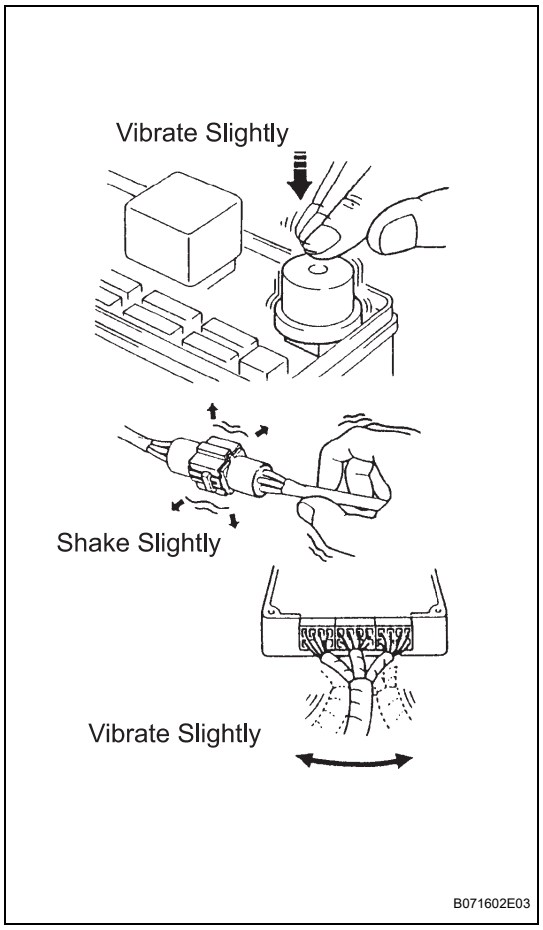
HINT:

The most difficult case in troubleshooting is when no problem symptoms occur. In such a case, a thorough problem analysis must be carried out. A simulation of the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be carried out. No matter how much skill or experience a technician has, troubleshooting without confirming the problem symptoms will lead to important repairs being overlooked and mistakes or delays.

For example:

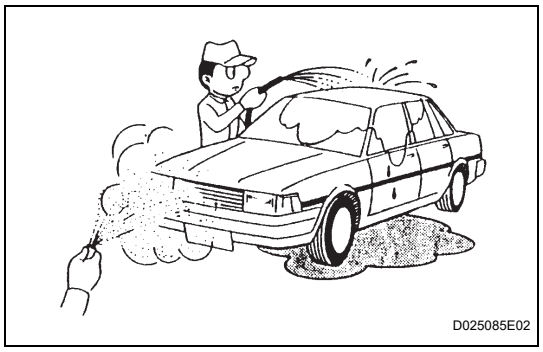
With a problem that only occurs when the engine is cold or as a result of vibration caused by the road during driving, the problem can never be determined if the symptoms are being checked on a stationary vehicle or a vehicle with a warmed-up engine. Vibration, heat or water penetration (moisture) are difficult to reproduce. The symptom simulation tests below are effective substitutes for the conditions and can be applied to a stationary vehicle. Important points in the symptom simulation test:

In the symptom simulation test, the problem symptoms as well as the problem area or parts must be confirmed. First, narrow down the possible problem circuits according to the symptoms. Then, connect the tester and carry out the symptom simulation test, judging whether the circuit being tested is defective or normal. Also, confirm the problem symptoms at the same time. Refer to the problem symptoms table for each system to narrow down the possible causes.

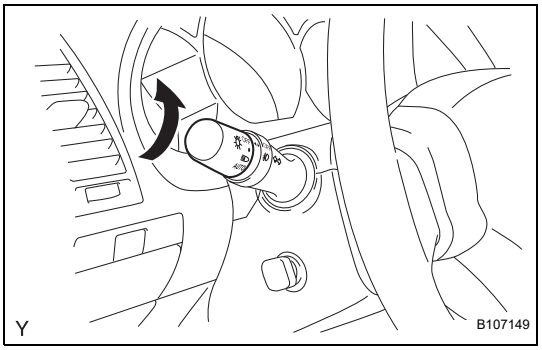


(a) VIBRATION METHOD: When a malfunction seems to occur as a result of vibration.
  (1) PART AND SENSOR
    Apply slight vibration with a finger to the part of the sensor suspected to be the cause of the problem, and check whether the malfunction occurs.
    NOTICE:
    Applying strong vibration to relays may open relays.
  (2) CONNECTORS
    Slightly shake the connector vertically and horizontally.
  (3) WIRE HARNESS
    Slightly shake the wire harness vertically and horizontally.
    HINT:
    The connector joint and fulcrum of the vibration are the major areas that should be checked thoroughly.

(b) HEAT METHOD: When a malfunction seems to occur when the area in question is heated.
  (1) Heat the component that is the possible cause of the malfunction with a hair dryer or similar device. Check if the malfunction occurs.
    NOTICE:
    - **Do not heat to more than 60°C (140°F). Exceeding this temperature may damage the components.**
    - **Do not apply heat directly to the parts in the ECU.**



(c) WATER SPRINKLING METHOD: When a malfunction seems to occur on a rainy day or in high-humidity.
  (1) Sprinkle water onto the vehicle and check if the malfunction occurs.
    NOTICE:
    - **Never sprinkle water directly into the engine compartment. Indirectly change the temperature and humidity by spraying water onto the front of the radiator.**
    - **Never apply water directly onto the electronic components.**
    HINT:
    If the vehicle has or had a water leakage problem, the leakage may have damaged the ECU or connections. Look for evidence of corrosion or short circuits. Proceed with caution during water tests.



(d) HIGH ELECTRICAL LOAD METHOD: When a malfunction seems to occur when an electrical load is excessive.
(1) Turn on the heater blower, headlight, rear window defogger and all other electrical loads. Check if the malfunction reoccurs.

5. DIAGNOSTIC TROUBLE CODE CHART

Look for output Diagnostic Trouble Codes (DTCs) (from the DTC checks) in the appropriate section's Diagnostic Trouble Code Chart. Use the chart to determine the trouble area and the proper inspection procedure. A description of each of the chart's columns is shown in the table below.

Item	Description
DTC No.	Indicates the diagnostic trouble code
Detection Item	Indicates the system or details of the problem
Trouble Area	Indicates the suspected areas of the problem
See Page	Indicates the page where the inspection procedures for each circuit is to be found, or gives instruction for checking and repairs.

6. PROBLEM SYMPTOMS TABLE

When a "Normal" code is output during a DTC check but the problem still occurs, use the Problem Symptoms Table. The suspected areas (circuits or parts) for each problem symptoms are in the table. The suspected areas are listed in order of probability. A description of each of the chart's columns is shown in the table below.

HINT:

In some cases, the problem is not detected by the diagnostic system even though a problem symptom occurs. It is possible that the problem occurs outside the detection range of the diagnostic system, or that the problem occurs in a completely different system.

Item	Description
Problem Symptom	-
Circuit Inspection, Inspection Order	Indicates the order in which the circuits need to be checked
Circuit or Part Name	Indicates the circuit or part which needs to be checked
See Page	Indicates the page where the flowchart for each circuit is located

7. CIRCUIT INSPECTION

A description of the main areas of each circuit inspection is shown in the table below.

Item	Description
Circuit Description	The major role, operation of the circuit and its component parts are explained.
Diagnostic Trouble Code No. and Detection Item	Indicates the diagnostic trouble codes, diagnostic trouble code settings and suspected areas for a problem
Wiring Diagram	This shows a wiring diagram of the circuit. Use this diagram together with ELECTRICAL WIRING DIAGRAM to thoroughly understand the circuit. Wire colors are indicated by an alphabetical code. B = Black, L = Blue, R = Red, BR = Brown, LG = Light Green, V = Violet, G = Green, O = Orange, W = White, GR = Gray, P = Pink, Y = Yellow, SB = Sky Blue The first letter indicates the basic wire color and the second letter indicates the color of the stripe.

Item	Description
Inspection Procedures	Use the inspection procedures to determine if the circuit is normal or abnormal. If abnormal, use the inspection procedures to determine whether the problem is located in the sensors, actuators, wire harnesses or ECU.
Indicates the condition of the connector of the ECU during the check	Connector being checked is connected. Connections of tester are indicated by (+) or (-) after the terminal name. Connector being checked is disconnected. The inspections between a connector and body ground, information about the body ground is not shown in the illustration.

GLOSSARY OF SAE AND TOYOTA TERMS

This glossary lists all SAE-J1930 terms and abbreviations used in this manual in compliance with SAE recommendations, as well as their TOYOTA equivalents.

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
A/C	Air Conditioning	Air Conditioner
ACL	Air Cleaner	Air Cleaner, A/CL
AIR	Secondary Air Injection	Air Injection (AI)
AP	Accelerator Pedal	-
B+	Battery Positive Voltage	+B, Battery Voltage
BARO	Barometric Pressure	HAC
CAC	Charge Air Cooler	Intercooler
CARB	Carburetor	Carburetor
CFI	Continuous Fuel Injection	-
CKP	Crankshaft Position	Crank Angle
CL	Closed Loop	Closed Loop
CMP	Camshaft Position	Cam Angle
CPP	Clutch Pedal Position	-
CTOX	Continuous Trap Oxidizer	-
CTP	Closed Throttle Position	LL ON, Idle ON
DFI	Direct Fuel Injection	Direct Injection (DI./INJ)
DI	Distributor Ignition	-
DLC3	Data Link Connector 3	OBD II Diagnostic Connector
DTC	Diagnostic Trouble Code	Diagnostic Trouble Code
DTM	Diagnostic Test Mode	-
ECL	Engine Coolant Level	-
ECM	Engine Control Module	Engine Electronic Control Unit (ECU)
ECT	Engine Coolant Temperature	Coolant Temperature, Water Temperature (THW)
EEPROM	Electrically Erasable Programmable Read Only Memory	Electrically Erasable Programmable Read Only Memory (EEPROM), Erasable Programmable Read Only Memory (EPROM)
EFE	Early Fuel Evaporation	Cold Mixture Heater (CMH), Heat Control Valve (HCV)
EGR	Exhaust Gas Recirculation	Exhaust Gas Recirculation (EGR)
EI	Electronic Ignition	Distributorless Ignition (DLI)
EM	Engine Modification	Engine Modification (EM)
EPROM	Erasable Programmable Read Only Memory	Programmable Read Only Memory (PROM)
EVAP	Evaporative Emission	Evaporative Emission Control (EVAP)
FC	Fan Control	-
FEEPROM	Flash Electrically Erasable Programmable Read Only Memory	-
FEPROM	Flash Erasable Programmable Read Only Memory	-
FF	Flexible Fuel	-
FP	Fuel Pump	Fuel Pump
GEN	Generator	Alternator
GND	Ground	Ground (GND)
HO2S	Heated Oxygen Sensor	Heated Oxygen Sensor (HO_2S)
IAC	Idle Air Control	Idle Speed Control (ISC)
IAT	Intake Air Temperature	Intake or Inlet Air Temperature
ICM	Ignition Control Module	-

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
IFI	Indirect Fuel Injection	Indirect Injection (IDL)
IFS	Inertia Fuel-Shutoff	-
ISC	Idle Speed Control	-
KS	Knock Sensor	Knock Sensor
MAF	Mass Airflow	Air Flow Meter
MAP	Manifold Absolute Pressure	Manifold Pressure Intake Vacuum
MC	Mixture Control	Electric Bleed Air Control Valve (EBCV) Mixture Control Valve (MCV) Electric Air Control Valve (EACV)
MDP	Manifold Differential Pressure	-
MFI	Multiport Fuel Injection	Electronic Fuel Injection (EFI)
MIL	Malfunction Indicator Light	Check Engine Light
MST	Manifold Surface Temperature	-
MVZ	Manifold Vacuum Zone	-
NVRAM	Non-Volatile Random Access Memory	-
O2S	Oxygen Sensor	Oxygen Sensor, O_2 Sensor (O_2S)
OBD	On-Board Diagnostic	On-Board Diagnostic System (OBD)
OC	Oxidation Catalytic Converter	Oxidation Catalytic Convert (OC), CCo
OL	Open Loop	Open Loop
PAIR	Pulsed Secondary Air Injection	Air Suction (AS)
PCM	Powertrain Control Module	-
PNP	Park/Neutral Position	-
PROM	Programmable Read Only Memory	-
PSP	Power Steering Pressure	-
PTOX	Periodic Trap Oxidizer	Diesel Particulate Filter (DPF) Diesel Particulate Trap (DPT)
RAM	Random Access Memory	Random Access Memory (RAM)
RM	Relay Module	-
ROM	Read Only Memory	Read Only Memory (ROM)
RPM	Engine Speed	Engine Speed
SC	Supercharger	Supercharger
SCB	Supercharger Bypass	E-ABV
SFI	Sequential Multiport Fuel Injection	Electronic Fuel Injection (EFI), Sequential Injection
SPL	Smoke Puff Limiter	-
SRI	Service Reminder Indicator	-
SRT	System Readiness Test	-
ST	Scan Tool	-
TB	Throttle Body	Throttle Body
TBI	Throttle Body Fuel Injection	Single Point Injection Central Fuel Injection (Ci)
TC	Turbocharger	Turbocharger
TCC	Torque Converter Clutch	Torque Converter
TCM	Transmission Control Module	Transmission ECU, ECT ECU
TP	Throttle Position	Throttle Position
TR	Transmission Range	-
TVV	Thermal Vacuum Valve	Bimetallic Vacuum Switching Valve (BVSV) Thermostatic Vacuum Switching Valve (TVSV)
TWC	Three-Way Catalytic Converter	Three-Way Catalytic (TWC) Manifold Converter CC_{RO}

SAE ABBREVIATIONS	SAE TERMS	TOYOTA TERMS ( )-ABBREVIATIONS
TWC+OC	Three-Way + Oxidation Catalytic Converter	CC_R + CCo
VAF	Volume Airflow	Air Flow Meter
VR	Voltage Regulator	Voltage Regulator
VSS	Vehicle Speed Sensor	Vehicle Speed Sensor
WOT	Wide Open Throttle	Full Throttle
WU-OC	Warm Up Oxidation Catalytic Converter	-
WU-TWC	Warm Up Three-Way Catalytic Converter	-
3GR	Third Gear	-
4GR	Fourth Gear	-

REMOVAL

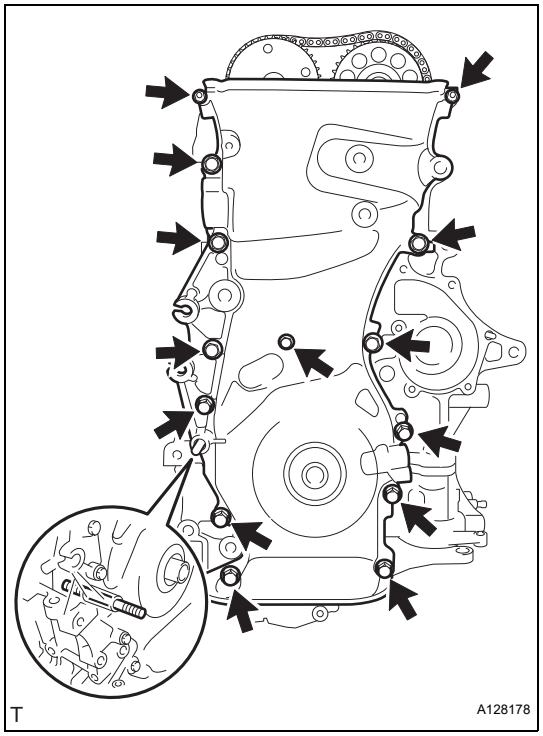
1. REMOVE LUGGAGE TRIM SERVICE HOLE COVER (See page HB-86)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (See page HV-560)
3. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-90)
4. REMOVE FRONT WHEEL RH
5. REMOVE ENGINE UNDER COVER LH
6. REMOVE ENGINE UNDER COVER RH
7. REMOVE FRONT FENDER APRON SEAL RH
8. DRAIN ENGINE OIL (See page LU-4)
9. REMOVE FRONT EXHAUST PIPE ASSEMBLY (See page EX-2)
10. REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-91)
11. REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-91)
12. REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-91)
13. REMOVE V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-6)
14. REMOVE V-RIBBED BELT (See page EM-6)
15. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-100)
16. REMOVE IDLER PULLEY BRACKET (See page EM-100)
17. REMOVE IGNITION COIL ASSEMBLY (See page EM-100)
18. DISCONNECT VENTILATION HOSE
19. DISCONNECT NO. 2 VENTILATION HOSE
20. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-22)
21. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page EM-8)
22. REMOVE CRANKSHAFT PULLEY (See page EM-74)
23. REMOVE CRANK POSITION SENSOR (See page ES-388)
24. REMOVE OIL PAN SUB-ASSEMBLY (See page EM-22)
25. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-23)

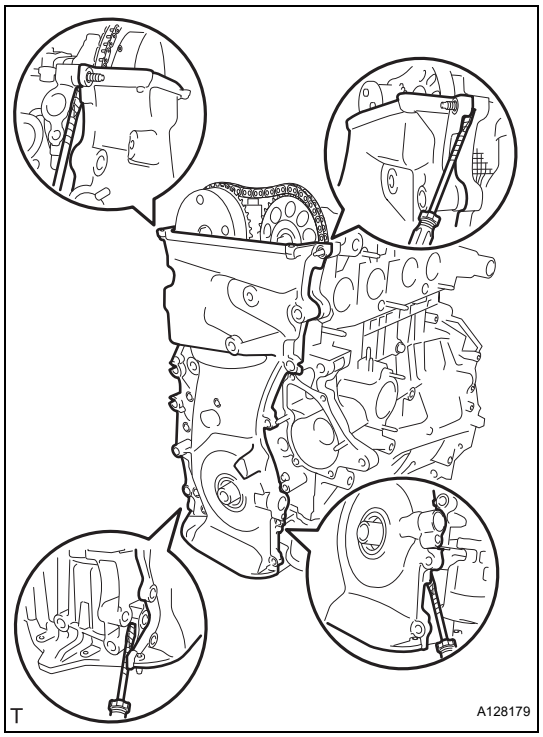
26. **INSTALL ENGINE HANGERS (See page EM-23)**

27. **REMOVE ENGINE MOUNTING INSULATOR (See page EM-23)**

28. **REMOVE ENGINE MOUNTING BRACKET RH (See page EM-23)**

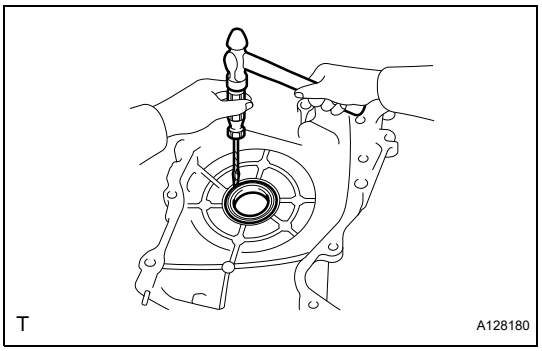
29. **REMOVE TIMING CHAIN COVER SUB-ASSEMBLY**
    (a) Using an E10 "TORX" socket, remove the stud bolt for the drive belt tensioner from the cylinder block.
    (b) Remove the 12 bolts and 2 nuts.



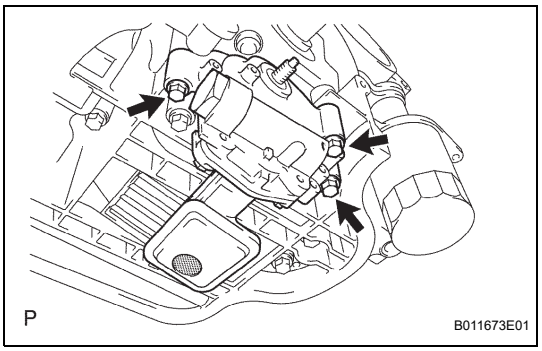


(c) Remove the timing chain cover by prying between the timing chain cover and cylinder head or cylinder block with a screwdriver.
NOTICE:
Be careful not to damage the contact surfaces of the timing chain cover, cylinder block and cylinder head.
HINT:
Tape the screwdriver tip before use.

LU



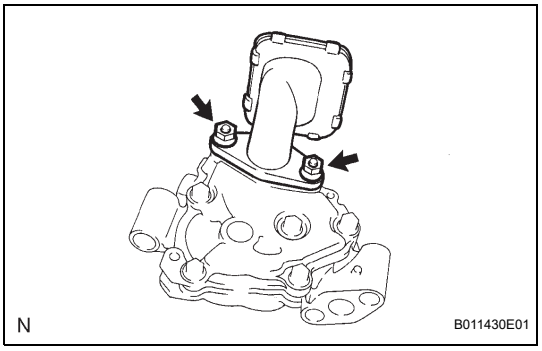
30. **REMOVE TIMING CHAIN CASE OIL SEAL**
    (a) Using a screwdriver and a hammer, tap out the oil seal.
    HINT:
    Tape the screwdriver tip before use.
31. **REMOVE NO. 1 CRANKSHAFT POSITION SENSOR PLATE (See page EM-24)**
32. **REMOVE CHAIN TENSIONER SLIPPER (See page EM-24)**
33. **REMOVE NO. 1 CHAIN VIBRATION DAMPER (See page EM-24)**
34. **REMOVE TIMING CHAIN GUIDE (See page EM-24)**
35. **REMOVE CHAIN SUB-ASSEMBLY (See page EM-24)**
36. **REMOVE CRANKSHAFT TIMING SPROCKET (See page EM-25)**
37. **REMOVE NO. 2 CHAIN SUB-ASSEMBLY (See page EM-25)**
38. **REMOVE OIL PUMP ASSEMBLY**
    (a) Remove the 3 bolts, oil pump and gasket.



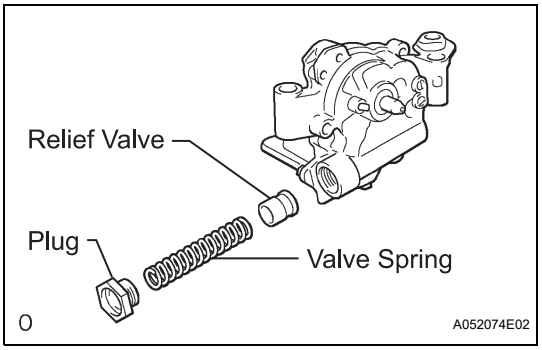
LU

DISASSEMBLY

1. **REMOVE OIL PUMP STRAINER**
    (a) Remove the 2 nuts, oil pump strainer and gasket.



2. **REMOVE OIL PUMP RELIEF VALVE**
    (a) Using a 27 mm socket wrench, remove the plug.
    (b) Remove the valve spring and relief valve.



ON-VEHICLE INSPECTION

1. **CHECK IGNITION COIL ASSEMBLY AND PERFORM SPARK TEST**

NOTICE:

In this section, the terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately -10 to 50°C (14 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).

(a) Check for DTCs.

NOTICE:

If any DTC is present, perform troubleshooting in accordance with the procedure for that DTC.

(b) Check that sparks occur.

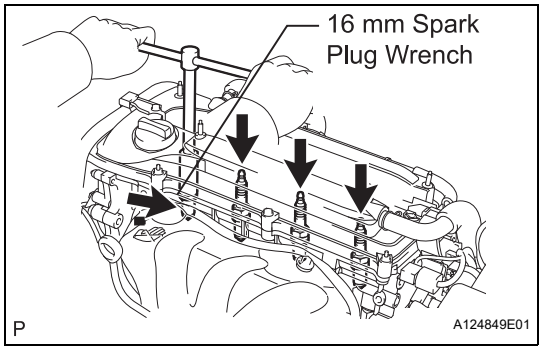
(1) Set the vehicle to inspection mode (See page IN-65).

(2) Remove the No. 1 engine cover.

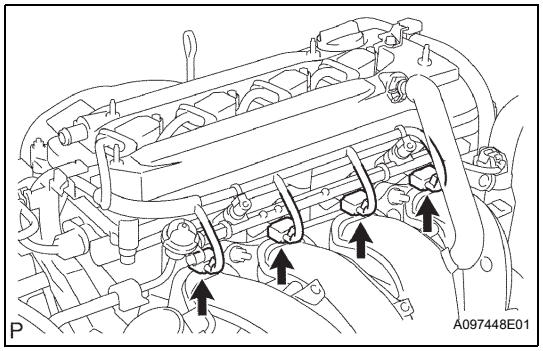
(3) Disconnect the 4 ignition coil connectors and remove the 4 bolts and ignition coils.

NOTICE:

If the ignition coil assembly connector is disconnected because a DTC is detected in inspection, always reconnect it.



(4) Using a 16 mm (0.63 in.) spark plug wrench, remove the 4 spark plugs.



(5) Disconnect the 4 fuel injector connectors.

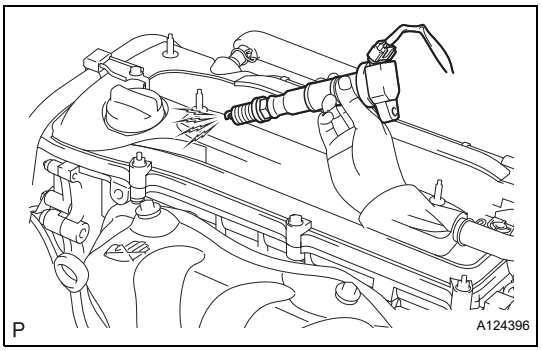
(6) Install the spark plug to each ignition coil, and connect the ignition coil connectors.

(7) Connect the intelligent tester to the DLC3.

NOTICE:

Check the HV battery voltage in the data list to ensure that the battery is fully charged.

IG



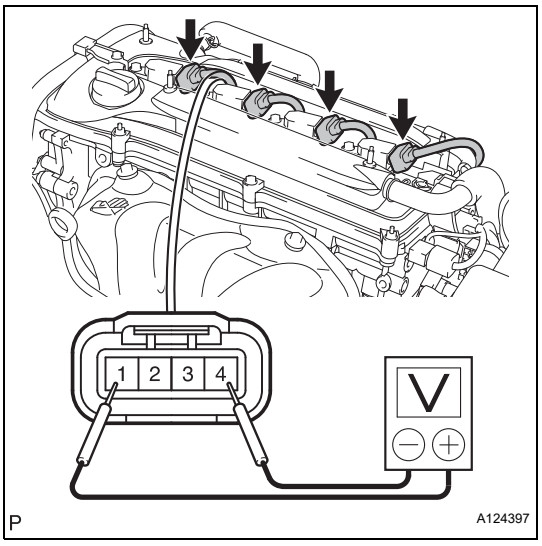
(8) Ground the spark plug.
(9) Enter Active Test on the intelligent tester.
(10) Check if a spark occurs at each spark plug while the engine is being cranked.
NOTICE:
- **Be sure to ground the spark plugs when checking.**
- **Replace the ignition coil if it receives an impact.**
- **Do not crank the engine for more than 2 seconds.**

(c) Perform the spark test according to the flowchart below.
(1) Check that the ignition coil connector is securely connected.
Result

Result	Procedure
NG	Connect connector securely
OK	Go to next step

(2) Perform the spark test on each ignition coil.
1. Replace the ignition coil with a normal one.
2. Perform the spark test again.
Result

Result	Procedure
OK	Replace ignition coil
NG	Go to next step



(3) Check the power supply to the ignition coil.
1. Turn the power switch on (READY).
2. Measure the voltage between the terminals of the wire harness side connector.
Standard voltage

Tester Connection	Specified Condition
1 (+B) - 4 (GND)	9 to 14 V

Result

Result	Procedure
NG	Check wire harness and connector
OK	Go to next step

(4) Measure the resistance of the camshaft position sensor.
Standard resistance

Temperature	Specified Condition
Cold	835 to 1,400 Ω
Hot	1,060 to 1,645 Ω

Result

Result	Procedure
NG	Replace camshaft position sensor
OK	Go to next step

IG

(5) Measure the resistance of the crankshaft position sensor.
Standard resistance

Temperature	Specified Condition
Cold	985 to 1,600 Ω
Hot	1,265 to 1,890 Ω

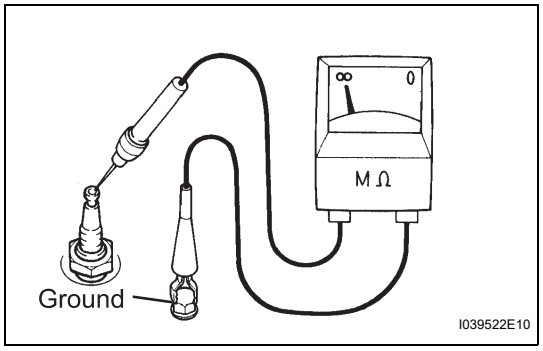
Result

Result	Procedure
NG	Replace crankshaft position sensor
OK	Go to next step

(6) Check the IGT signal from the ECM.
Result

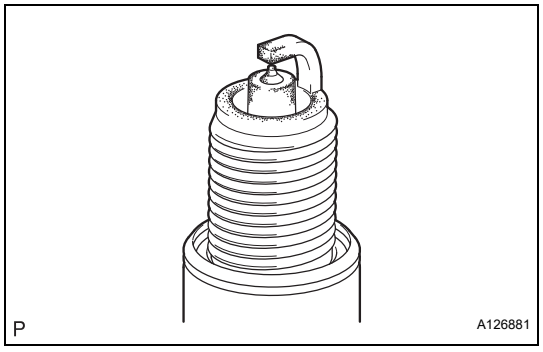
Result	Procedure
NG	Check ECM (see page ES-173)
OK	Repair wiring between ignition coil and ECM

(7) Using a 16 mm (0.63 in.) plug wrench, install the spark plug.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
(8) Install the 4 ignition coils with the 4 bolts and connect the 4 ignition coil connectors.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
(9) Connect the 4 fuel injector connectors.
(10) Install the No. 1 engine cover.



2. CHECK SPARK PLUG

(a) Check the electrode.
(1) Using a megohmmeter, measure the insulation resistance.
Standard insulation resistance:
10 MΩ or more
HINT:
- If a megohmmeter is not available, perform the following simple inspection instead.
- If the result is 10 MΩ or less, clean the plug and measure the resistance again.

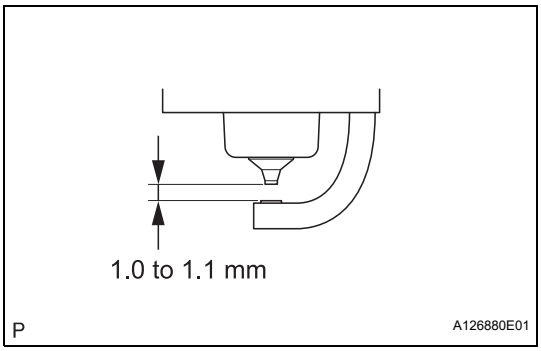


(b) Alternative inspection method:
(1) Set the vehicle to inspection mode (See page IN-65).
(2) Quickly accelerate the engine to 2,500 rpm 5 times.
(3) Remove the spark plug.
(4) Visually check the spark plug.
If the electrode is dry, the spark plug is functioning properly. If the electrode is damp, proceed to the next step.
(c) Check the spark plug for any damage to its threads and insulator.
If there is any damage, replace the spark plug.

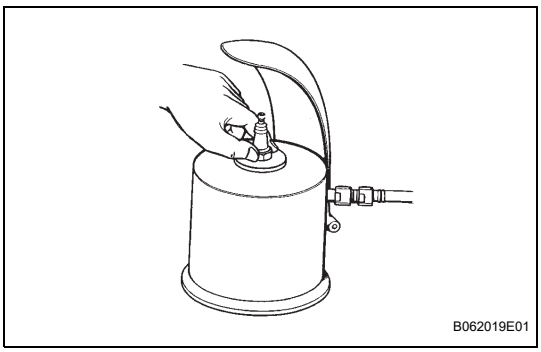
IG

Recommended spark plug

Manufacturer	Spark plug type
DENSO	SK20R11
NGK	IFR6A11



(d) Check the spark plug electrode gap.
Maximum electrode gap for a used spark plug:
1.3 mm (0.051 in.)
If the gap is greater than the maximum, replace the spark plug.
Electrode gap for a new spark plug:
1.0 to 1.1 mm (0.039 to 0.043 in.)



(e) Clean the spark plugs.
If the electrode has traces of wet carbon, clean the electrode with a spark plug cleaner and then dry it.
Standard air pressure:
588 kPa (6 kgf*cm^2, 85 psi)
Standard duration:
20 seconds or less
HINT:
Only use the spark plug cleaner when the electrode is free of oil. If the electrode has traces of oil, use gasoline to clean off the oil before using the spark plug cleaner.

ST

DEFINITION OF TERMS

Terms	Definitions
Monitor description	Description of what the ECM monitors and how it detects malfunctions (monitoring purpose and its details).
Related DTCs	A group of diagnostic trouble codes that are output by the ECM based on the same malfunction detection logic.
Typical enabling condition	Preconditions that allow the ECM to detect malfunctions. With all preconditions satisfied, the ECM sets DTCs when the monitored value(s) exceeds malfunction threshold(s).
Sequence of operation	Order of monitor priority, applied if multiple sensors and components are involved in a single malfunction detection process. Each sensor and component are monitored in turn and subsequent items are not monitored until the previous detection operation completes.
Required sensors/components	Sensors and components used by the ECM to detect each malfunction.
Frequency of operation	Number of times the ECM checks for each malfunction during each driving cycle. "Once per driving cycle" means the ECM only performs checks for that malfunction once during single driving cycle. "Continuous" means that the ECM performs checks for that malfunction whenever enabling conditions are met.
Duration	Minimum time for which the ECM must detect continuous deviation in monitored value(s) in order to set a DTC. Timing begins when Typical Enabling Conditions are met.
Malfunction thresholds	Value beyond which the ECM determines malfunctions exist and sets DTCs.
MIL operation	Timing of MIL illumination after a malfunction is detected. "Immediate" means that the ECM illuminates the MIL as soon as the malfunction is detected. "2 driving cycle" means that the ECM illuminates the MIL if the same malfunction is detected again during the next driving cycle.

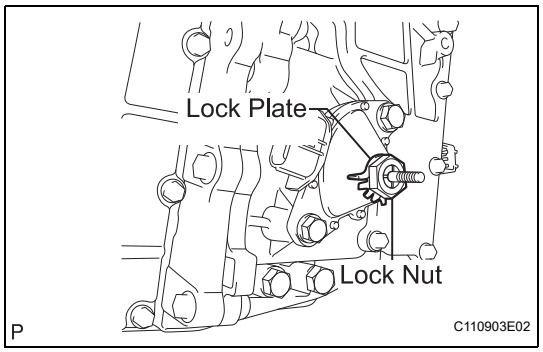
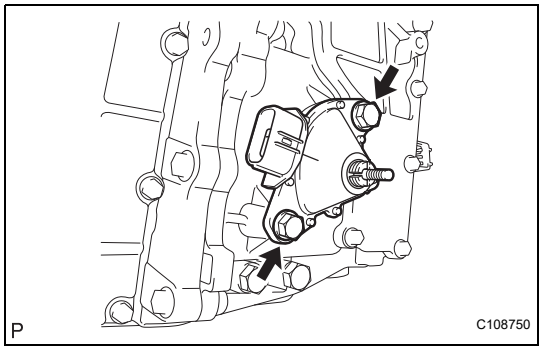
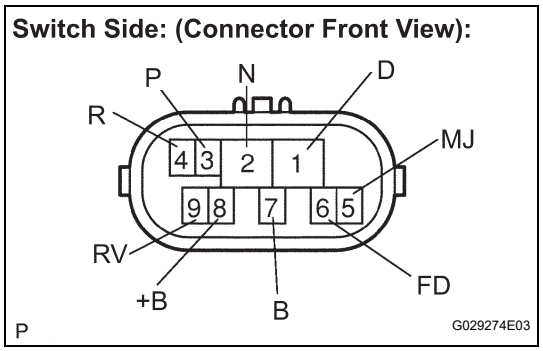
(c) Using a screwdriver, pry the tabs of the lock plate.



(d) Remove the lock nut and lock plate.



(e) Remove the 2 bolts and pull out the shift lever position sensor.



INSPECTION

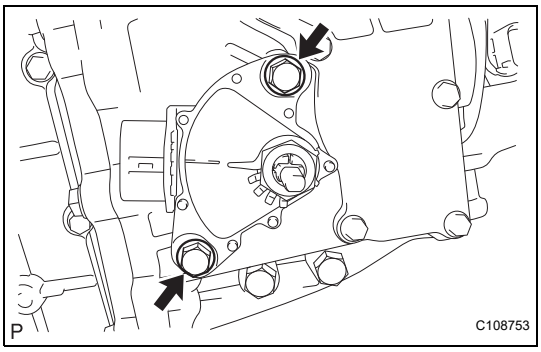
1. INSPECT SHIFT LEVER POSITION SENSOR

(a) Measure the resistance according to the value(s) in the table below when the shift lever is moved to each position.

Standard resistance

	8 (+B) - 1 (D)	8 (+B) - 2 (N)	8 (+B) - 3 (P)	8 (+B) - 4 (R)	8 (+B) - 5 (MJ)	8 (+B) - 6 (FD)	8 (+B) - 7 (B)	8 (+B) - 9 (RV)
P position	**10 kΩ or higher**	**4.2 to 5.1 kΩ**	**Below 1 Ω**	**10 kΩ or higher**	**Below 1 Ω**	**10 kΩ or higher**	**10 kΩ or higher**	**10 kΩ or higher**
R position	**10 kΩ or higher**	**4.2 to 5.1 kΩ**	**10 kΩ or higher**	**Below 1 Ω**	**Below 1 Ω**	**10 kΩ or higher**	**10 kΩ or higher**	**Below 1 Ω**
N position	**10 kΩ or higher**	**Below 1 Ω**	**10 kΩ or higher**	**10 kΩ or higher**	**Below 1 Ω**	**10 kΩ or higher**	**10 kΩ or higher**	**10 kΩ or higher**
D position	**Below 1 Ω**	**4.2 to 5.1 kΩ**	**10 kΩ or higher**	**10 kΩ or higher**	**Below 1 Ω**	**Below 1 Ω**	**10 kΩ or higher**	**10 kΩ or higher**
B position	**10 kΩ or higher**	**4.2 to 5.1 kΩ**	**10 kΩ or higher**	**10 kΩ or higher**	**Below 1 Ω**	**Below 1 Ω**	**Below 1 Ω**	**10 kΩ or higher**

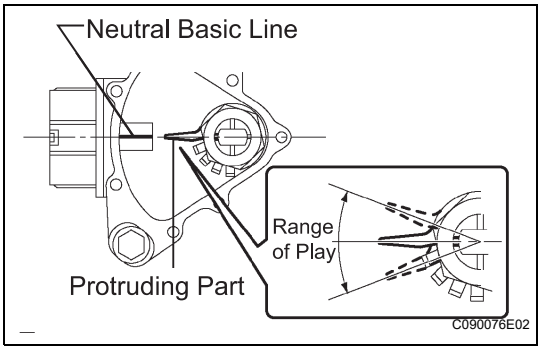
If operation cannot be done as specified, replace the shift lever position sensor.



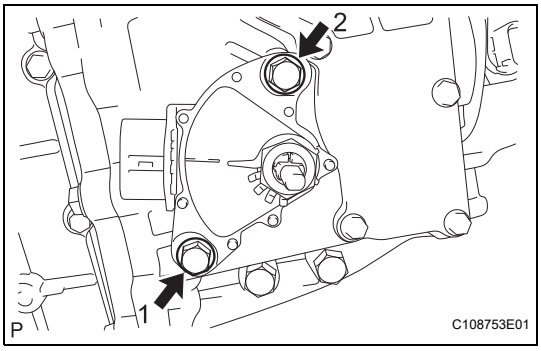
ADJUSTMENT

1. ADJUST SHIFT LEVER POSITION SENSOR

(a) Loosen the 2 bolts of the shift lever position sensor and set the shift lever to the N position.



(b) Align the protruding part with the neutral basic line.
NOTICE:
There is play on the nut stopper side (protruding part). Align the center point of the range of the play with the neutral basic line.



(c) Tighten the 2 bolts in the order shown in the illustration.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

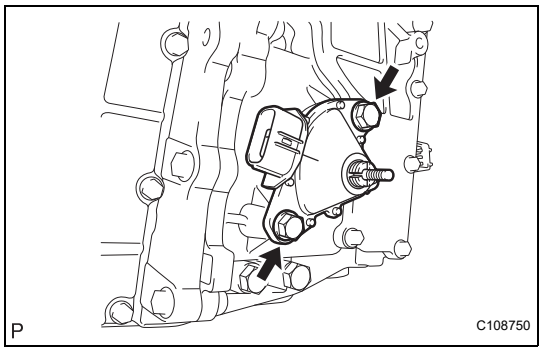
2. INSPECT SHIFT LEVER POSITION SENSOR (See page HX-5)

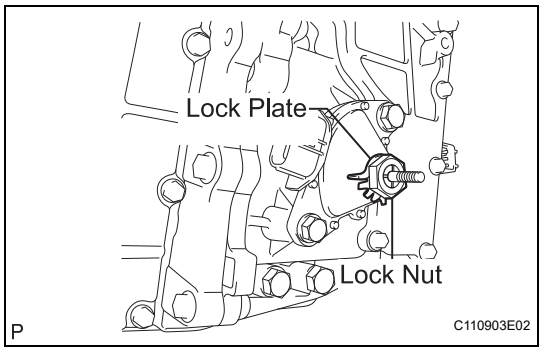
INSTALLATION

1. INSTALL SHIFT LEVER POSITION SENSOR

(a) Install the shift lever position sensor to the manual valve shaft.

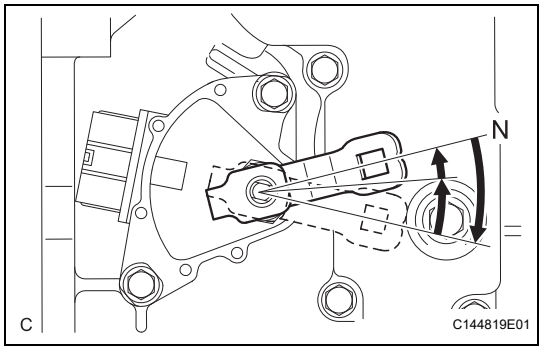
(b) Temporarily install the 2 bolts.





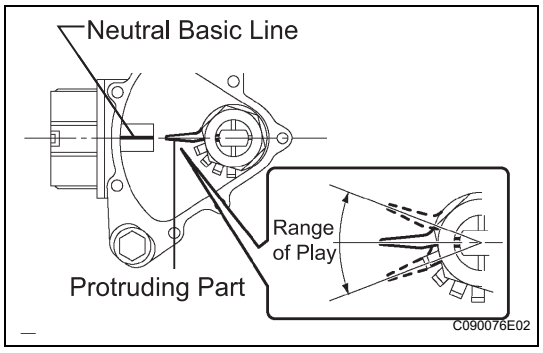
(c) Install a new lock plate and tighten the nut.
Torque: 6.9 N*m (70 kgf*cm, 61 in.*lbf)

(d) Temporarily install the control shaft lever.



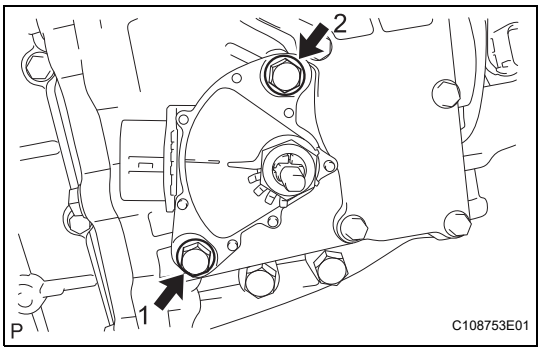
(e) Turn the lever clockwise until it stops, then turn it counterclockwise 2 notches.

(f) Remove the control shaft lever.

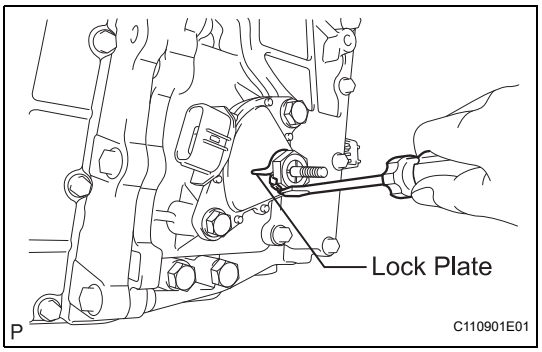


(g) Align the protruding part with the neutral basic line.
NOTICE:
There is play on the nut stopper side (protruding part). Align the center point of the range of the play with the neutral basic line.

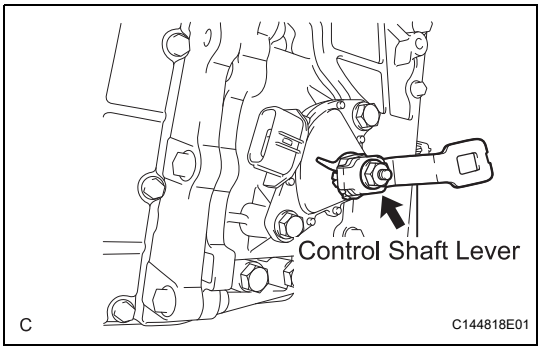
HX



(h) Tighten the 2 bolts in the order shown in the illustration.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



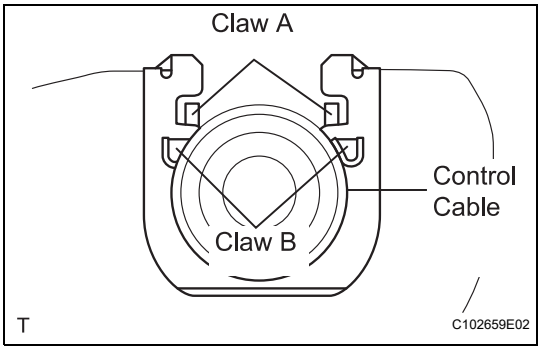
(i) Using a screwdriver, secure the nut with the lock plate.



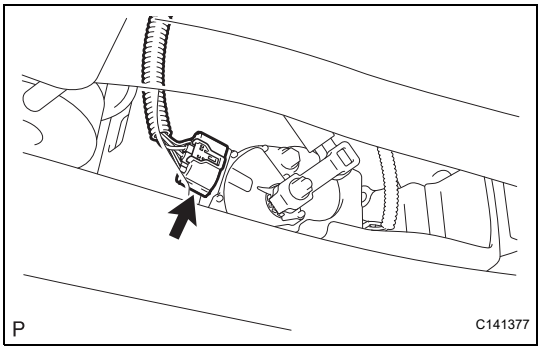
(j) Install the control shaft lever, washer, and nut.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

2. CONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Move the shift lever to the N position.
(b) Install a new clip to the control bracket.

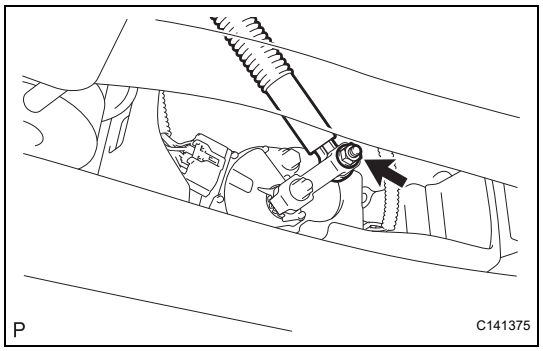


(c) Install the transmission control cable assembly to the control bracket.
NOTICE:
- **Make sure that the A claws on the clip are securely fit into the bracket holes.**
- **Make sure that the cable is securely installed inside the B claws of the clip.**



(d) Connect the shift lever position sensor connector.
(e) Move the control shaft lever to the N position.

HX



(f) Connect the transmission control cable assembly to the control shaft lever with the nut.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)

3. **INSPECT SHIFT LEVER POSITION (See page HX-24)**
4. **ADJUST SHIFT LEVER POSITION (See page HX-26)**
5. **ADJUST TRANSMISSION CONTROL CABLE ASSEMBLY (See page HX-42)**
6. **INSPECT SHIFT LEVER OPERATION (See page HX-28)**
7. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
8. **INSTALL ENGINE UNDER COVER LH**
9. **INSTALL ENGINE UNDER COVER RH**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
11. **PERFORM INITIALIZATION**
(a) Perform initialization (See page IN-43).
NOTICE:
Certain systems need to be initialized after reconnecting the cable to the negative (-) battery terminal.

REMOVAL

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

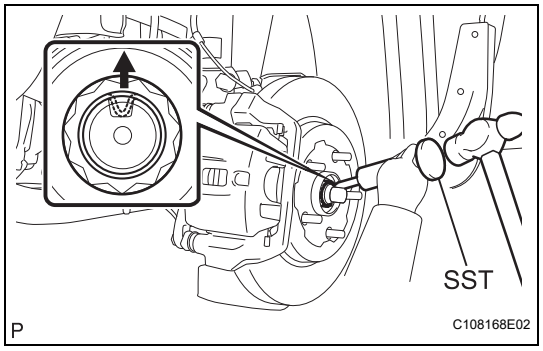
1. DRAIN HYBRID TRANSAXLE FLUID

HINT:
See page HX-2.

2. REMOVE FRONT WHEEL

3. REMOVE FRONT AXLE HUB NUT

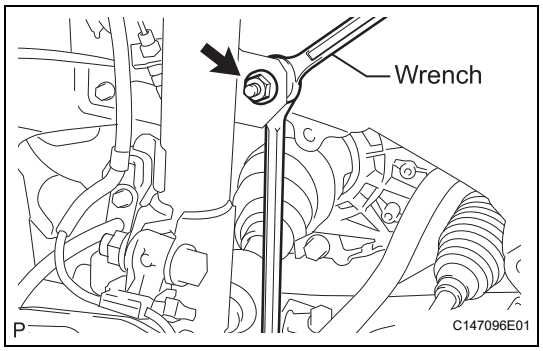
(a) Using SST and a hammer, release the staked part of the front axle hub nut.
SST 09930-00010
NOTICE:
Loosen the staked part of the nut completely, otherwise the thread of the drive shaft may be damaged.



(b) While applying the brakes, remove the front axle hub nut.

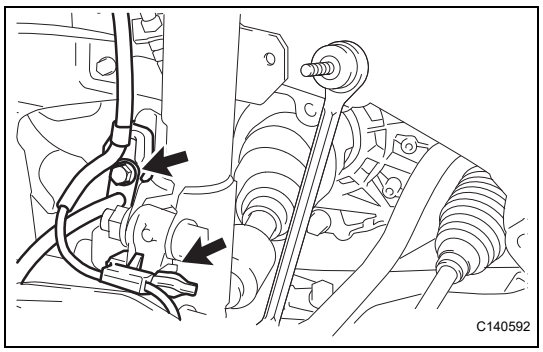
4. SEPARATE FRONT STABILIZER LINK ASSEMBLY

(a) Remove the nut and separate the front stabilizer link assembly.
HINT:
If the ball joint turns together with the nut, use a wrench (19 mm) to hold the stud.

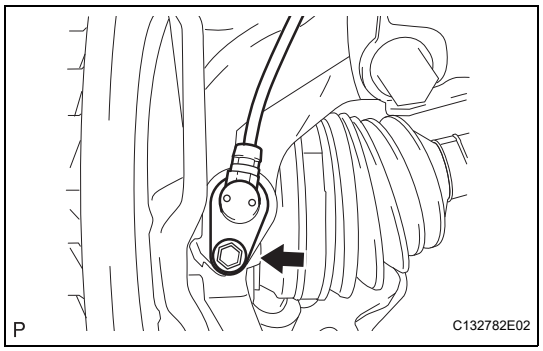


5. SEPARATE FRONT SPEED SENSOR

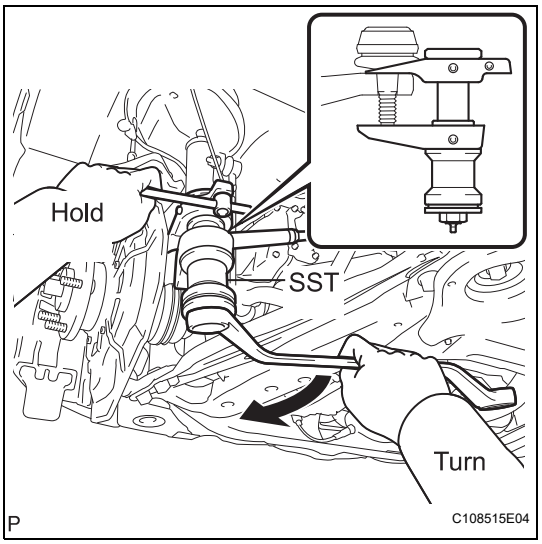
(a) Remove the bolt and clip, and separate the speed sensor wire and flexible hose from the shock absorber.



(b) Remove the bolt and separate the speed sensor from the steering knuckle.
NOTICE:
- **Prevent foreign matter from adhering to the speed sensor.**
- **Be careful not to damage the speed sensor.**



DS



6. SEPARATE TIE ROD END SUB-ASSEMBLY

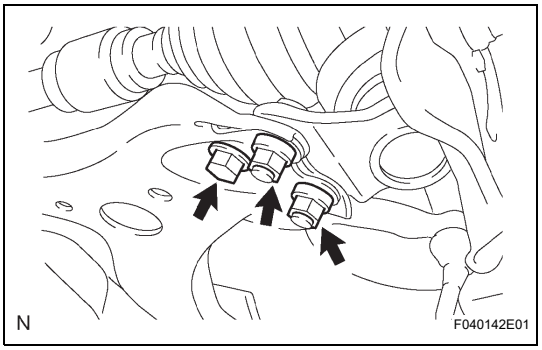
(a) Remove the cotter pin and nut.

(b) Using SST, separate the tie rod end sub-assembly from the steering knuckle.

SST 09628-00011

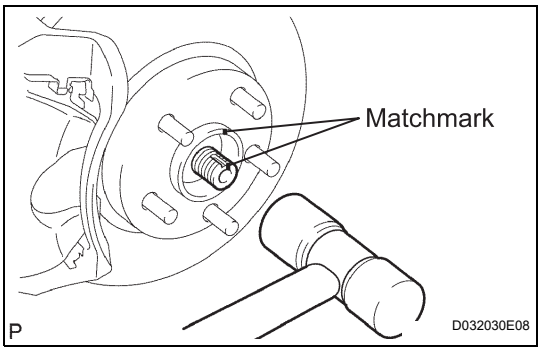
NOTICE:

- **Make sure that the string of the SST is securely tied to the vehicle.**
- **Be careful not to damage the ball joint dust cover.**
- **Be careful not to damage the steering knuckle.**
- **Be careful not to damage the front disc brake dust cover.**



7. SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM

(a) Remove the bolt and 2 nuts, and separate the front suspension lower No. 1 arm from the lower ball joint.



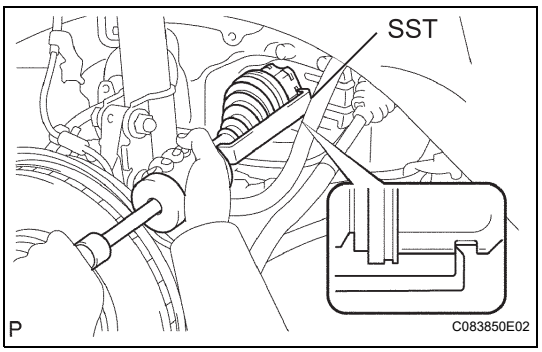
8. SEPARATE FRONT AXLE ASSEMBLY

(a) Put matchmarks on the front drive shaft assembly and the axle hub.

(b) Using a plastic hammer, separate the front drive shaft assembly from the front axle assembly.

NOTICE:

Be careful not to damage the drive shaft boot or speed sensor rotor.



9. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH

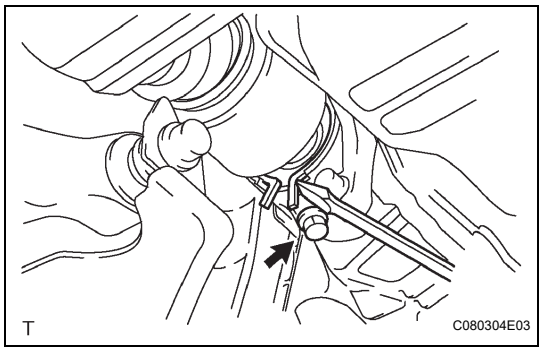
(a) Using SST, remove the front drive shaft assembly LH.

SST 09520-01010, 09520-24010 (09520-32040)

NOTICE:

- **Be careful not to damage the drive shaft dust cover, boot, or oil seal.**
- **Be careful not to drop the drive shaft assembly.**

DS



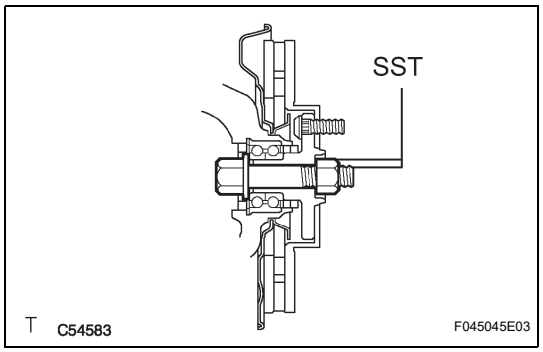
10. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH

(a) Using a screwdriver, remove the bearing bracket hole snap ring.

(b) Remove the bolt and front drive shaft assembly RH from the drive shaft bearing bracket.

NOTICE:

Do not damage the boot or oil seal.



11. SECURE FRONT AXLE HUB SUB-ASSEMBLY

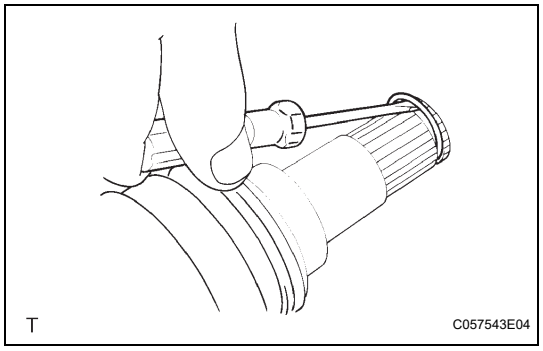
(a) Secure the front axle hub bearing.

SST 09608-16042 (09608-02021, 09608-02041)

NOTICE:

The hub bearing may be damaged if it is subjected to the vehicle's full weight, such as moving the vehicle with the drive shaft removed. If it is necessary to place the vehicle's weight on the hub bearing, first support it with SST.

12. INSPECT FRONT DRIVE SHAFT ASSEMBLY (See page DS-10)

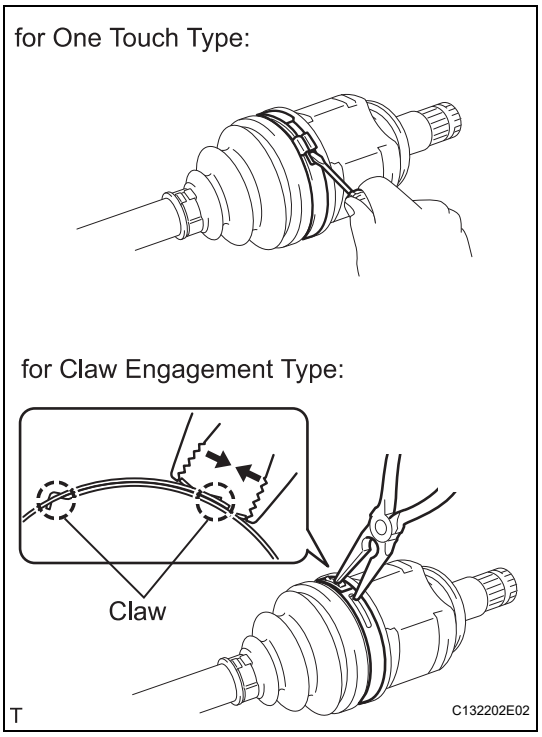


DISASSEMBLY

1. REMOVE FRONT DRIVE SHAFT LH HOLE SNAP RING

(a) Using a screwdriver, remove the front drive shaft LH hole snap ring.

DS



2. REMOVE NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) for One touch type:
  (1) Using a screwdriver, remove the No. 2 front axle inboard joint boot clamp as shown in the illustration.

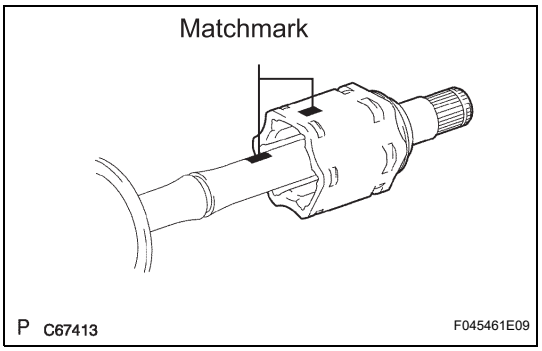
(b) for Claw engagement type:
  (1) Using needle nose pliers, remove the No. 2 front axle inboard joint boot clamp as shown in the illustration.

3. REMOVE FRONT AXLE INBOARD JOINT BOOT CLAMP

(a) Remove the front axle inboard joint boot clamp.
HINT:
Perform the same procedures as for the No. 2 front axle inboard joint boot clamp.

4. SEPARATE FRONT AXLE INBOARD JOINT BOOT

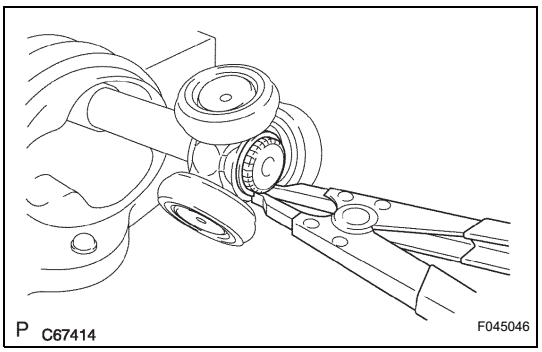
(a) Separate the front axle inboard joint boot from the inboard joint assembly.



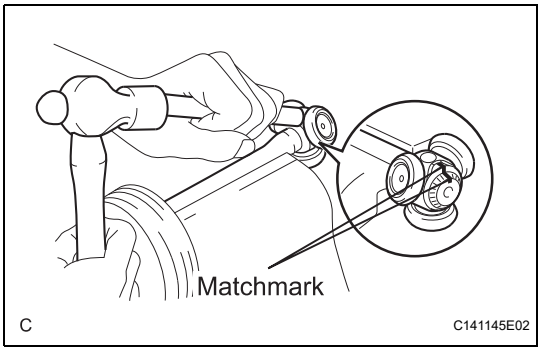
5. REMOVE FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Put matchmarks on the inboard joint assembly and outboard joint shaft.
NOTICE:
Do not use a punch for the marks.

(b) Remove the inboard joint assembly from the outboard joint shaft.



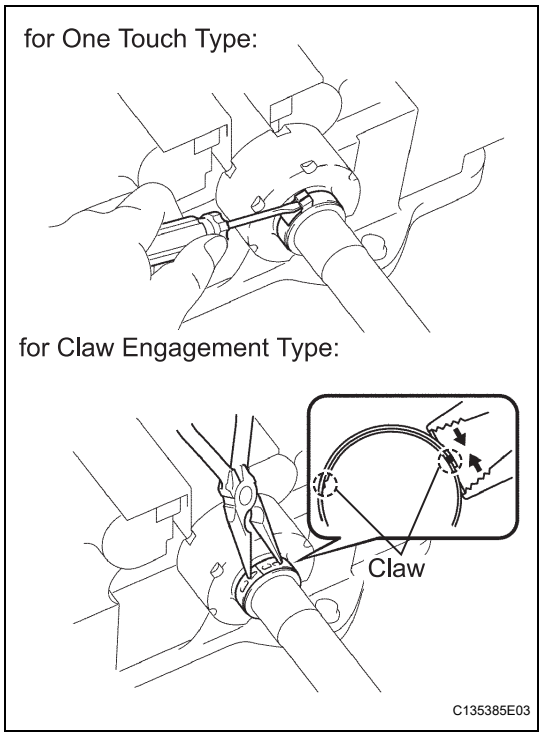
(c) Using a snap ring expander, remove the shaft snap ring.



(d) Put matchmarks on the outboard joint shaft and tripod joint.
NOTICE:
Do not use a punch for the marks.

(e) Using a brass bar and a hammer, remove the tripod joint from the outboard joint shaft.
NOTICE:
Do not tap the roller.

DS



6. REMOVE FRONT DRIVE SHAFT DAMPER LH

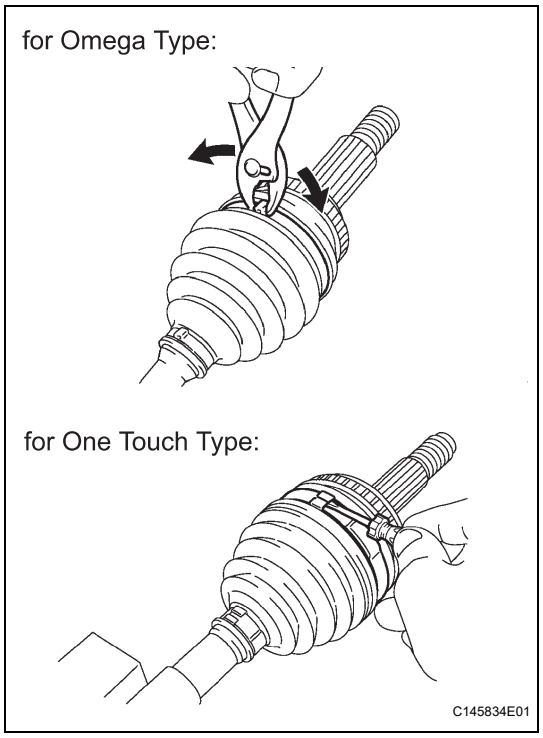
(a) for One touch type:
  (1) Using a screwdriver, remove the drive shaft damper clamp as shown in the illustration.

(b) for Claw engagement type:
  (1) Using needle nose pliers, remove the drive shaft damper clamp as shown in the illustration.

(c) Remove the drive shaft damper.

7. REMOVE FRONT DRIVE SHAFT DAMPER RH

(a) Remove the front drive shaft damper RH.
HINT:
Perform the same procedures as for the front drive shaft damper LH.



8. REMOVE NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) for Omega type:
  (1) Using pliers, remove the No. 2 front axle outboard joint boot clamp as shown in the illustration.

(b) for One touch type:
  (1) Using a screwdriver, remove the No. 2 front axle outboard joint boot clamp as shown in the illustration.

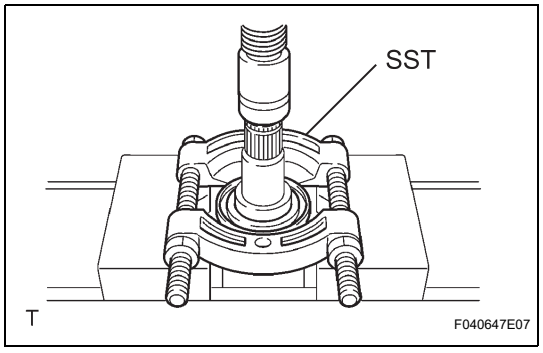
9. REMOVE FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) Remove the front axle outboard joint boot clamp.
HINT:
Perform the same procedures as for the No. 2 front axle outboard joint boot clamp.

10. REMOVE FRONT AXLE OUTBOARD JOINT BOOT

(a) Remove the outboard joint boot from the outboard joint shaft.

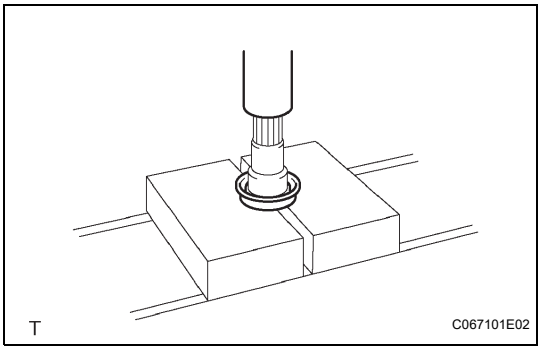
(b) Remove the grease from the outboard joint.



11. REMOVE FRONT DRIVE SHAFT DUST COVER LH

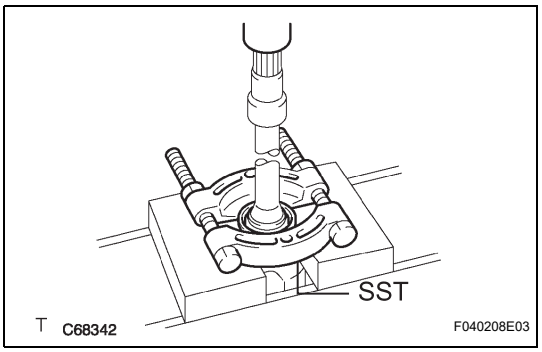
(a) Using SST and a press, remove the drive shaft dust cover LH.
SST 09950-00020
NOTICE:
Be careful not to drop the inboard joint assembly.

DS



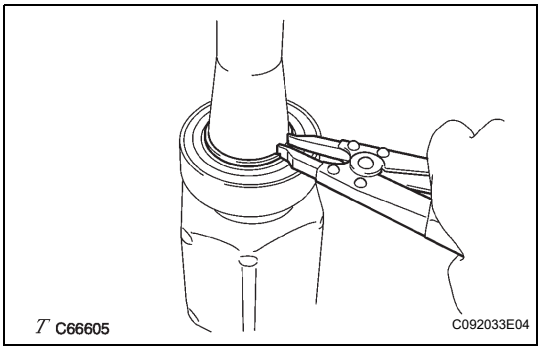
12. REMOVE FRONT DRIVE SHAFT DUST COVER RH

(a) Using a press, remove the drive shaft dust cover RH.



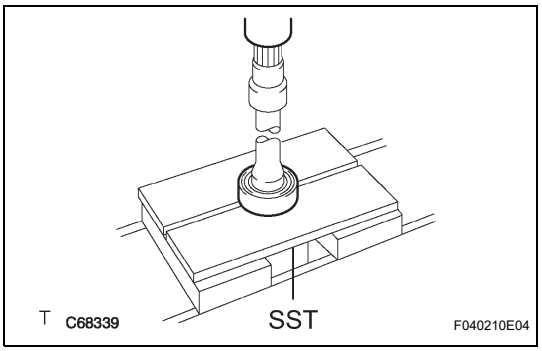
13. REMOVE FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, remove the drive shaft dust cover.
SST 09950-00020



14. REMOVE FRONT DRIVE SHAFT BEARING

(a) Using a snap ring expander, remove the drive shaft hole snap ring.

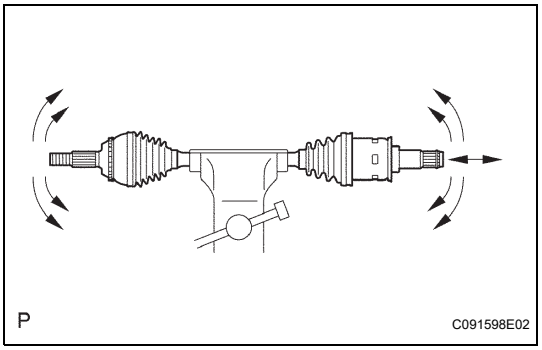


(b) Using SST and a press, remove the bearing.
SST 09527-10011

(c) Remove the bearing bracket hole snap ring.
NOTICE:
Be careful not to drop the inboard joint assembly.

DS

INSPECTION



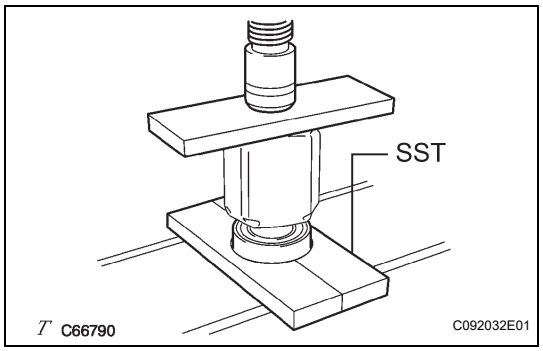
1. INSPECT FRONT DRIVE SHAFT ASSEMBLY

(a) Check that there is no excessive play in the outboard joint.

(b) Check that the inboard joint slides smoothly in the thrust direction.

(c) Check that there is no excessive play in the radial directions of the inboard joint.

(d) Check the boots for damage.



REASSEMBLY

1. INSTALL FRONT DRIVE SHAFT BEARING

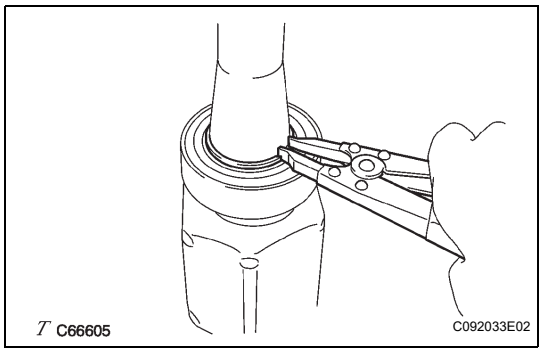
(a) Install a new bearing bracket hole snap ring to the front drive shaft assembly RH.

(b) Using SST and a steel plate, install a new front drive shaft bearing.

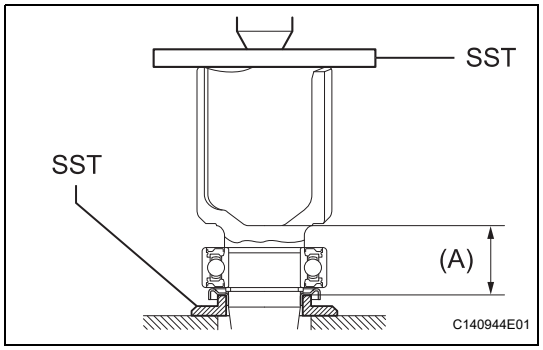
SST 09527-30010, 09527-10011

NOTICE:

The bearing should be completely installed.



(c) Using a snap ring expander, install a new drive shaft hole snap ring.



2. INSTALL FRONT DRIVE SHAFT DUST COVER

(a) Using SST and a press, install a new drive shaft dust cover.

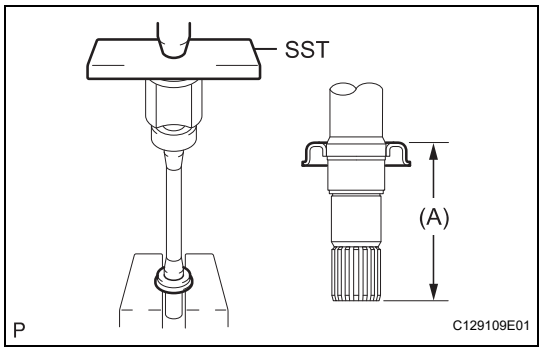
SST 09726-40010, 09527-10011

Distance (A):

41.6 to 42.6mm (1.6378 to 1.6772in.)

NOTICE:

- **The dust cover should be completely installed.**
- **Be careful not to damage the dust deflector.**



3. INSTALL FRONT DRIVE SHAFT DUST COVER RH

(a) Using SST and a press, install a new drive shaft dust cover RH until distance (A) from the tip of the center drive shaft to the drive shaft dust cover RH meets the specification.

SST 09527-10011

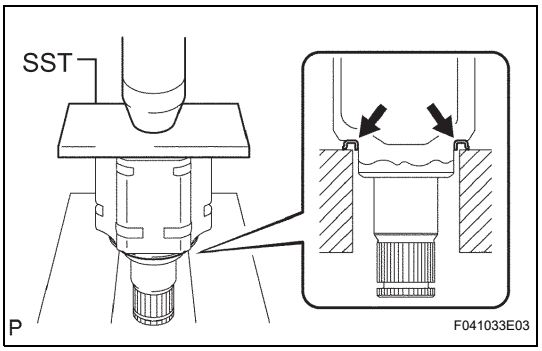
Distance (A):

110.0 to 111.0 mm (4.3307 to 4.3701 in.)

NOTICE:

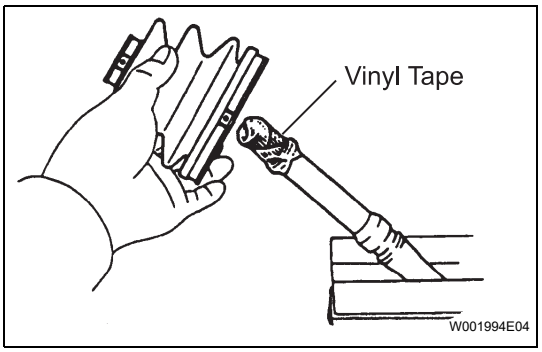
- **The dust cover should be completely installed.**
- **Be careful not to damage the dust deflector.**

DS



4. INSTALL FRONT DRIVE SHAFT DUST COVER LH

(a) Using SST and a press, install a new drive shaft dust cover LH.
SST 09527-10011
NOTICE:
- **The dust cover should be completely installed.**
- **Be careful not to damage the dust deflector.**

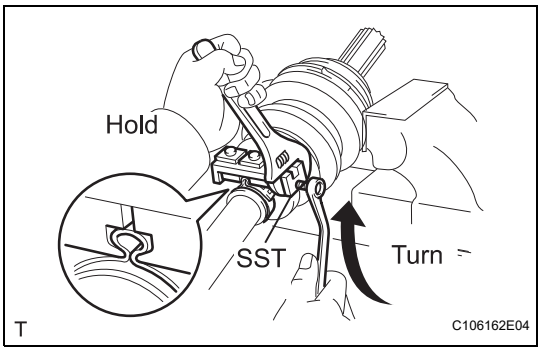


5. INSTALL FRONT AXLE OUTBOARD JOINT BOOT

(a) Hold the drive shaft lightly in a vise between aluminium plates.
HINT:
Before installing the boots, wrap the spline of the drive shaft with vinyl tape to prevent the boots from being damaged.

(b) Temporarily install a new outboard joint boot to the drive shaft with the 2 clamps.

(c) Pack the outboard joint shaft and boot with grease.
Grease capacity:
190 to 200 g (6.7 to 7.1 oz.)



6. INSTALL FRONT AXLE OUTBOARD JOINT BOOT CLAMP

(a) for Omega type:

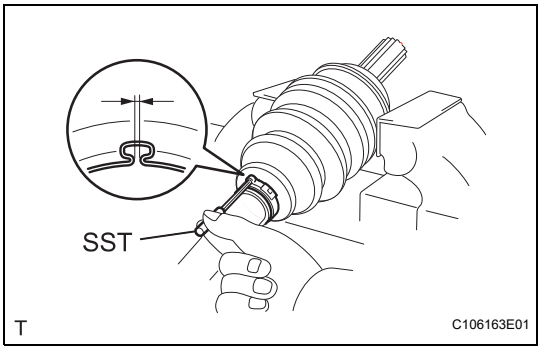
(1) Hold the drive shaft lightly in a vise between aluminum plates.
NOTICE:
Do not overtighten the vise.

(2) Install the 2 outboard joint boot clamps onto the boot.

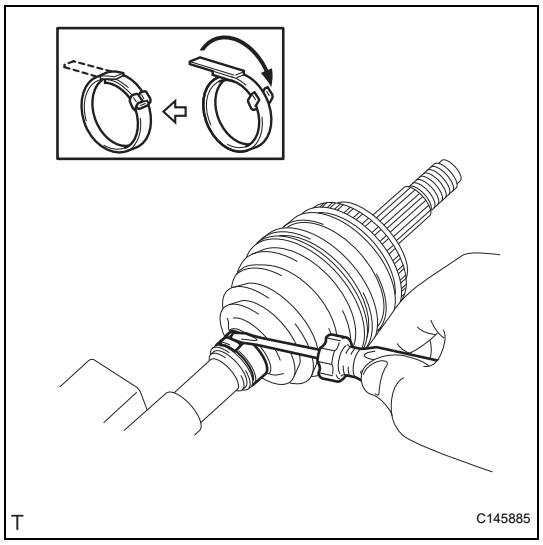
(3) Place SST onto the outboard joint boot clamp.
SST 09521-24010

(4) Tighten the SST so that the outboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.

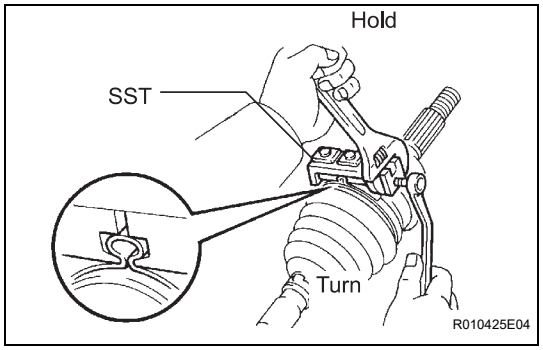
(5) Using SST, measure the clearance of the outboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.



DS

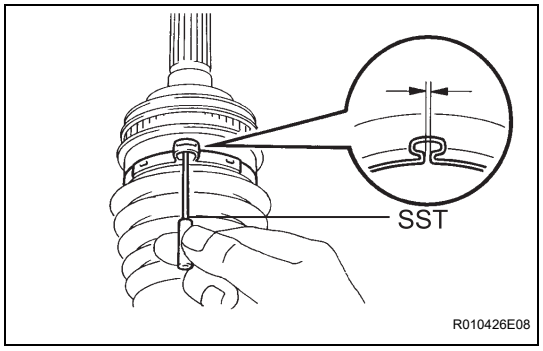


(b) for One touch type:
(1) Using a screwdriver, install the outboard joint boot clamp as shown in the illustration.

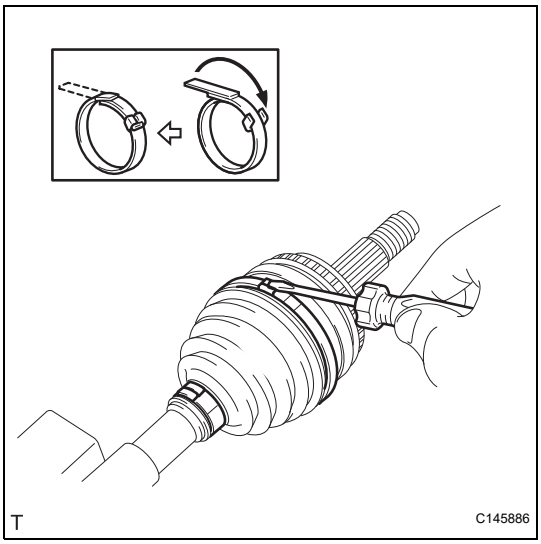


7. INSTALL NO. 2 FRONT AXLE OUTBOARD JOINT BOOT CLAMP

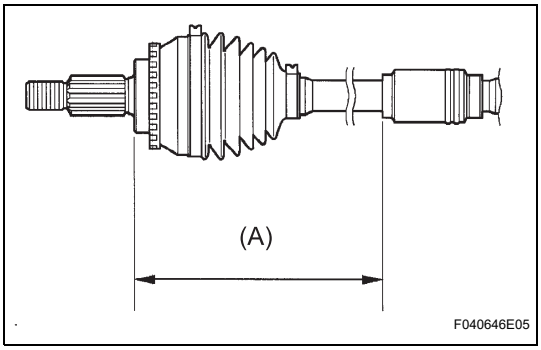
(a) for Omega type:
(1) Install the No. 2 outboard joint boot clamp onto the boot.
(2) Place SST onto the No. 2 outboard joint boot clamp.
SST 09521-24010
(3) Tighten the SST so that the No. 2 outboard joint boot clamp is pinched.
NOTICE:
Do not overtighten the SST.



(4) Using SST, measure the clearance of the No. 2 outboard joint boot clamp.
SST 09240-00020
Clearance:
0.5 to 1.5 mm (0.0197 to 0.0591 in.)
NOTICE:
If the measured value is greater than the specified value, retighten the clamp.



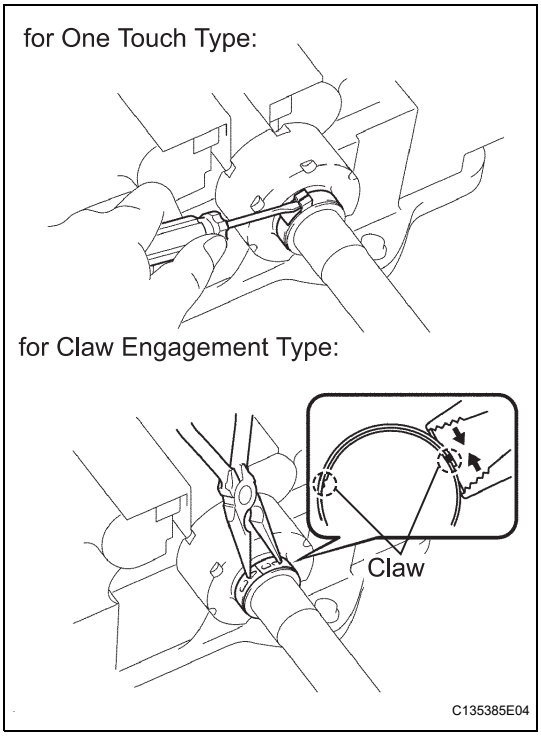
(b) for One touch type:
(1) Using a screwdriver, install the No. 2 outboard joint boot clamp as shown in the illustration.



8. INSTALL FRONT DRIVE SHAFT DAMPER

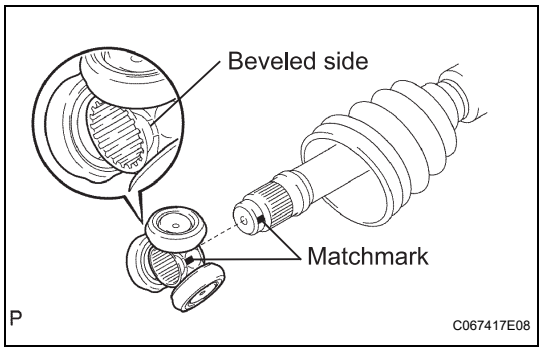
(a) Install the drive shaft damper to the drive shaft.
(b) Make sure that the damper is on the shaft groove.
(c) Set the distance as specified below.
Distance (A)

Item	Specified Condition
Front drive shaft LH	213.0 to 217.0 mm (8.386 to 8.543 in.)
Front drive shaft RH	223.4 to 227.4 mm (8.795 to 8.953 in.)



(d) for One touch type:
(1) Using a screwdriver, install a new drive shaft damper clamp as shown in the illustration.
(e) for Claw engagement type:
(1) Using needle nose pliers, install a new drive shaft damper clamp as shown in the illustration.

DS



9. INSTALL FRONT DRIVE INBOARD JOINT ASSEMBLY

(a) Temporarily install a new inboard joint boot to the drive shaft with the 2 clamps.

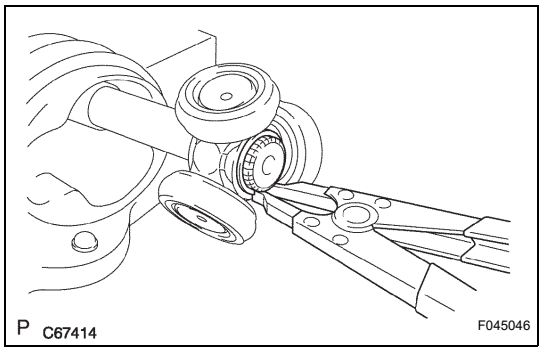
(b) Place the beveled side of the tripod joint axial spline toward the outboard joint shaft.

(c) Align the matchmarks.

(d) Using a brass bar and hammer, tap in the tripod joint to the outboard joint shaft.

NOTICE:

- **Do not tap the roller.**
- **Be sure to install the tripod joint assembly in the correct direction.**

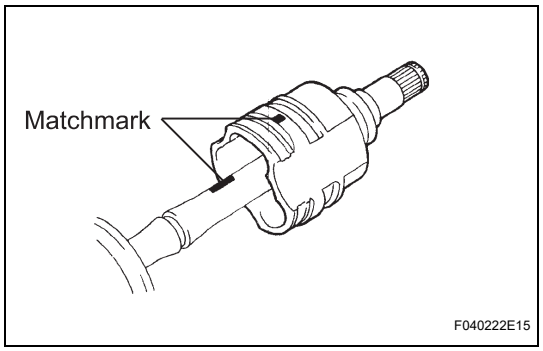


(e) Using a snap ring expander, install a new shaft snap ring.

(f) Coat the outboard joint shaft and boot with grease.

Grease capacity:

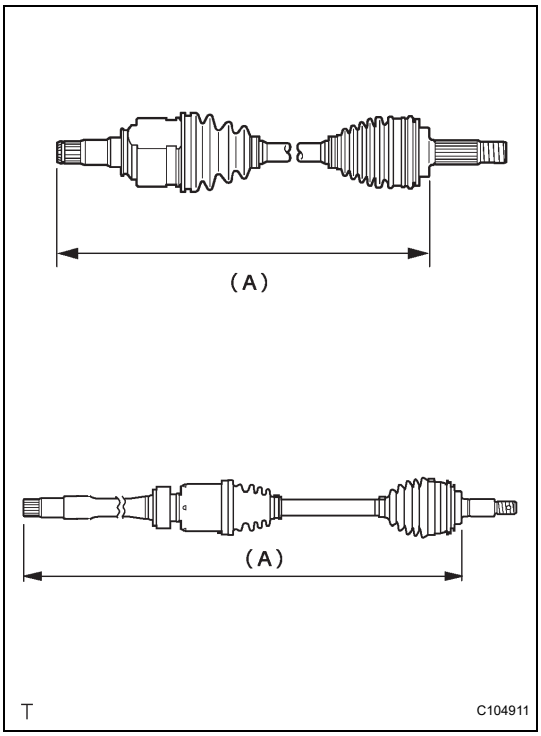
175 to 185 g (6.2 to 6.5 oz.)



(g) Align the matchmarks and install the inboard joint assembly to the outboard joint shaft assembly.

10. INSTALL FRONT AXLE INBOARD JOINT BOOT

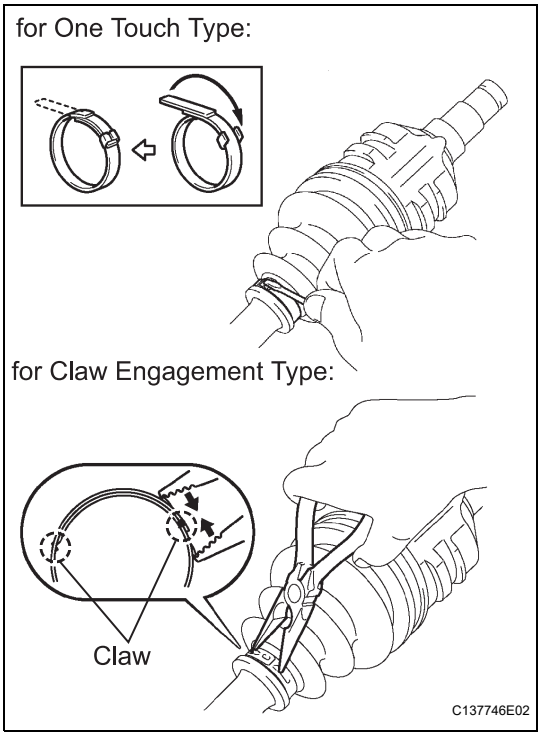
(a) Install the inboard joint boot to the inboard joint assembly.



(b) Check whether the drive shaft dimensions are within the following specifications.
HINT:
The following table shows distance (A) of the drive shaft.

Distance (A)

Item	Specified Condition
Front drive shaft LH	**579.5 to 589.5 mm (22.82 to 23.21 in.)**
Front drive shaft RH	**905.0 to 915.0 mm (35.63 to 36.02 in.)**

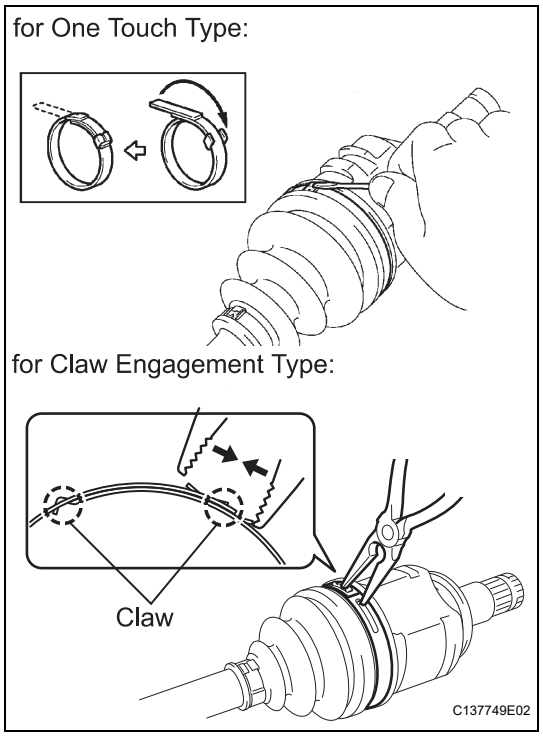


11. INSTALL FRONT AXLE INBOARD JOINT BOOT CLAMP

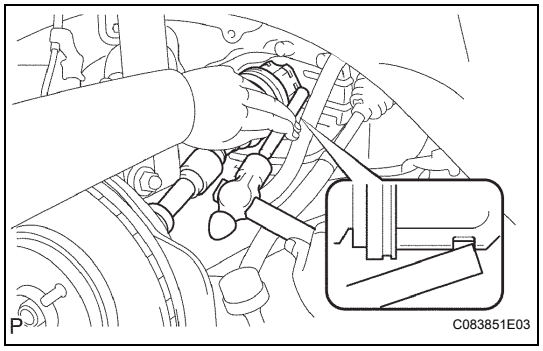
(a) for One touch type:
  (1) Using a screwdriver, install the inboard joint boot clamp as shown in the illustration.

(b) for Claw engagement type:
  (1) Using needle nose pliers, install the inboard joint boot clamp as shown in the illustration.

DS

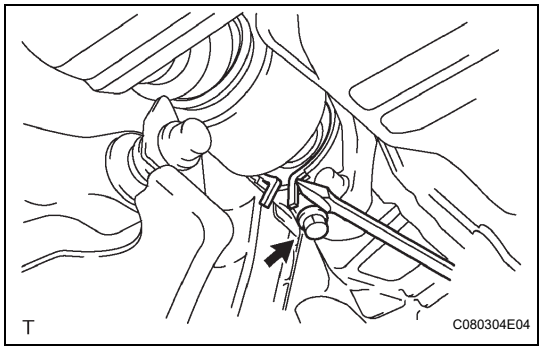


12. **INSTALL NO. 2 FRONT AXLE INBOARD JOINT BOOT CLAMP**
    (a) for One touch type:
        (1) Using a screwdriver, install the No. 2 front axle inboard joint boot clamp as shown in the illustration.
    (b) for Claw engagement type:
        (1) Using needle nose pliers, install the No. 2 front axle inboard joint boot clamp as shown in the illustration.
13. **INSTALL FRONT DRIVE SHAFT LH HOLE SNAP RING**
    (a) Install a new hole snap ring.
14. **INSPECT FRONT DRIVE SHAFT ASSEMBLY (See page DS-10)**



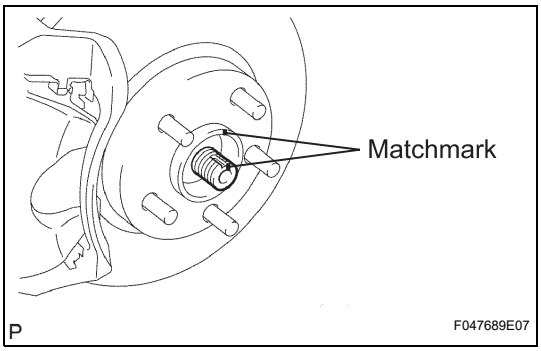
INSTALLATION

1. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH**
    (a) Coat the spline of the inboard joint shaft assembly with ATF.
    (b) Align the shaft splines and install the drive shaft assembly LH with a brass bar and hammer.
    NOTICE:
    - **Set the shaft snap ring with the opening side facing down.**
    - **Be careful not to damage the drive shaft dust cover, boot, or oil seal.**
    - **Move the drive shaft assembly while keeping it level.**



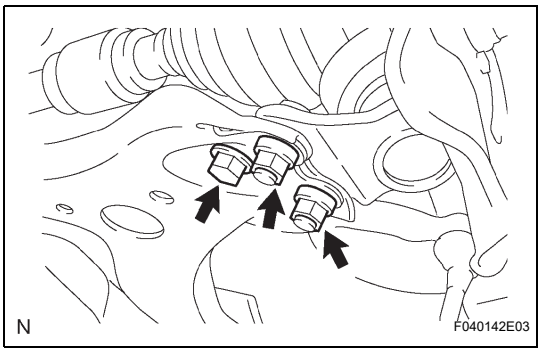
2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH**
    (a) Coat the spline of the inboard joint shaft assembly with ATF.
    (b) Install the front drive shaft assembly RH.
    (c) Using a screwdriver, install a new bearing bracket hole snap ring.
    NOTICE:
    - **Do not damage the boot or oil seal.**
    - **Move the drive shaft assembly while keeping it level.**
    (d) Install a new bolt.
    Torque: 32 N*m (330 kgf*cm, 24 ft.*lbf)

DS



3. INSTALL FRONT AXLE ASSEMBLY

(a) Align the matchmarks and install the front drive shaft assembly to the front axle hub sub-assembly.
NOTICE:
Be careful not to damage the drive shaft boot or speed sensor rotor.



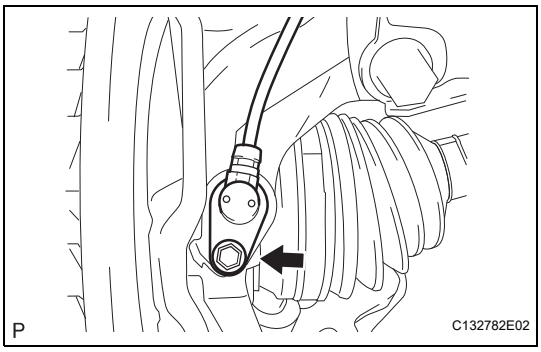
4. INSTALL FRONT SUSPENSION LOWER NO. 1 ARM

(a) Install the lower ball joint to the front suspension lower No. 1 arm with the bolt and 2 nuts.
Torque: 75 N*m (765 kgf*cm, 55 ft.*lbf)

5. INSTALL TIE ROD END SUB-ASSEMBLY

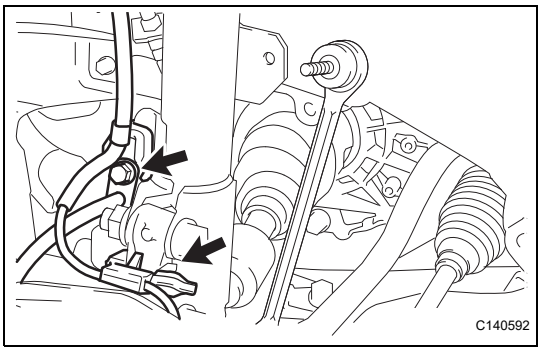
(a) Install the tie rod end sub-assembly to the steering knuckle with the nut.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

(b) Install a new cotter pin.
NOTICE:
If the holes for the cotter pin are not aligned, tighten the nut up to 60° further.



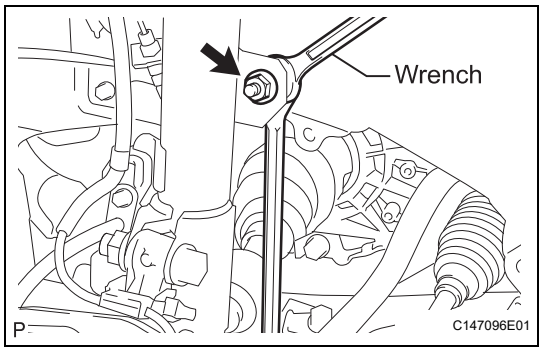
6. INSTALL FRONT SPEED SENSOR

(a) Install the front speed sensor to the steering knuckle with the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
NOTICE:
- **Prevent foreign matter from adhering to the speed sensor.**
- **Be careful not to damage the speed sensor.**

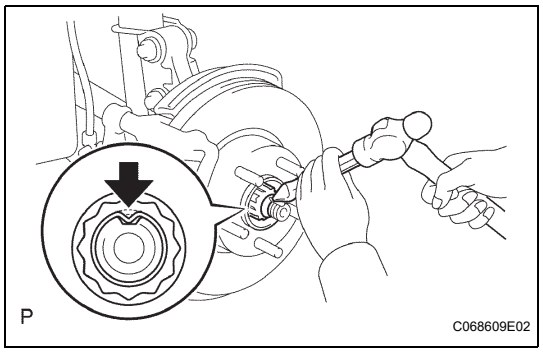


(b) Install the flexible hose and the speed sensor to the shock absorber with the bolt and set the sensor clip on the knuckle.
Torque: 19 N*m (192 kgf*cm, 14 ft.*lbf)
NOTICE:
- **Be careful not to damage the speed sensor.**
- **Prevent foreign matter from adhering to the speed sensor.**
- **Do not twist the sensor wire when installing the speed sensor.**

DS



7. **INSTALL FRONT STABILIZER LINK ASSEMBLY**
   (a) Install the stabilizer link assembly with the nut.
   Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
   HINT:
   If the ball joint turns together with the nut, use a wrench (19 mm) to hold the stud.



8. **INSTALL FRONT AXLE HUB NUT**
   (a) Using a socket wrench (30 mm), install a new axle hub nut.
   Torque: 294 N*m (3,000 kgf*cm, 217 ft.*lbf)
   (b) Using a chisel and hammer, stake the front axle hub nut.

9. **ADD HYBRID TRANSAXLE FLUID**
   HINT:
   See page HX-2.

10. **INSPECT HYBRID TRANSAXLE FLUID**
    HINT:
    See page HX-2.

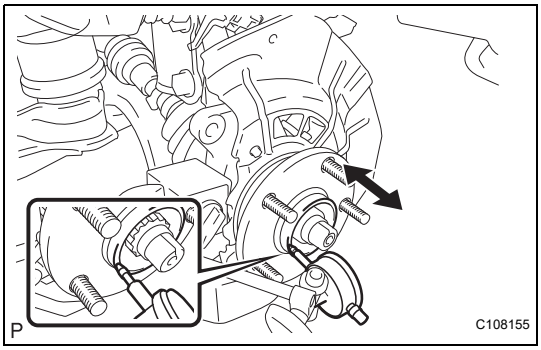
11. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

12. **ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    See page SP-4.

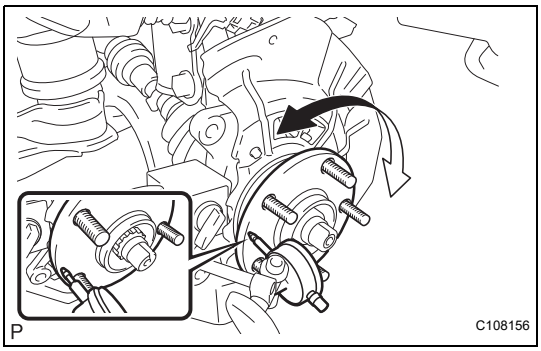
13. **CHECK ABS SPEED SENSOR SIGNAL**
    HINT:
    See page BC-35.

ON-VEHICLE INSPECTION

1. **REMOVE FRONT WHEEL**
2. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-6)**
3. **REMOVE FRONT DISC (See page BR-50)**
4. **INSPECT FRONT AXLE HUB BEARING LOOSENESS**
   (a) Using a dial indicator, check for looseness near the center of the axle hub.
   Maximum:
   0.05 mm (0.0020 in.)
   NOTICE:
   Ensure that the dial indicator is set perpendicular to the measurement surface.
   HINT:
   If looseness exceeds the maximum, replace the bearing.



5. **INSPECT FRONT AXLE HUB RUNOUT**
   (a) Using a dial indicator, check for runout on the surface of the axle hub outside the hub bolt.
   Maximum:
   0.05 mm (0.0020 in.)
   NOTICE:
   Ensure that the dial indicator is set perpendicular to the measurement surface.
   HINT:
   If runout exceeds the maximum, replace the axle hub.

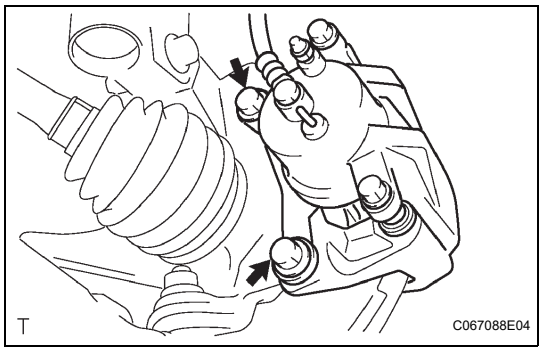


6. **INSTALL FRONT DISC (See page BR-51)**
7. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-10)**
8. **INSTALL FRONT WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REMOVAL

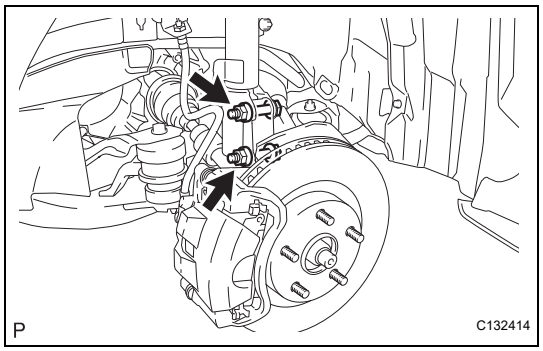
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT AXLE HUB NUT (See page DS-5)**
3. **SEPARATE FRONT SPEED SENSOR (See page DS-5)**
4. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY**
   (a) Remove the 2 bolts and separate the front disc brake caliper assembly from the steering knuckle.
   NOTICE:
   Use wire or an equivalent tool to keep the brake caliper from hanging down by the flexible hose.

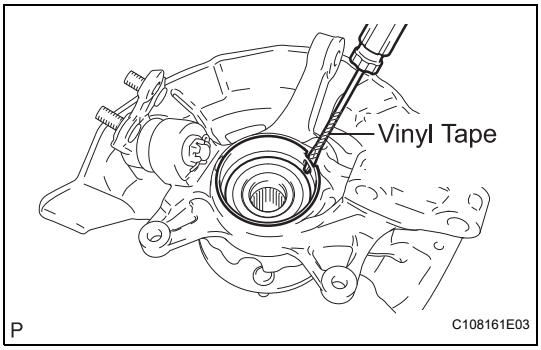


5. **REMOVE FRONT DISC (See page BR-50)**
6. **SEPARATE TIE ROD END SUB-ASSEMBLY (See page DS-6)**
7. **SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-6)**
8. **REMOVE FRONT AXLE ASSEMBLY**
   (a) Put matchmarks on the front drive shaft assembly and the front axle hub sub-assembly.
   (b) Using a plastic hammer, separate the front drive shaft assembly from the front axle assembly.
   NOTICE:
   Be careful not to damage the drive shaft boot or speed sensor rotor.

   (c) Remove the 2 bolts, 2 nuts, and front axle assembly.



AH

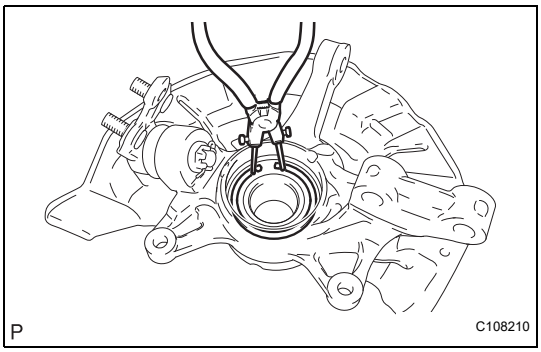


9. REMOVE NO. 1 FRONT WHEEL BEARING DUST DEFLECTOR

(a) Using a screwdriver with its tip wrapped with vinyl tape, remove the No. 1 front wheel bearing dust deflector.

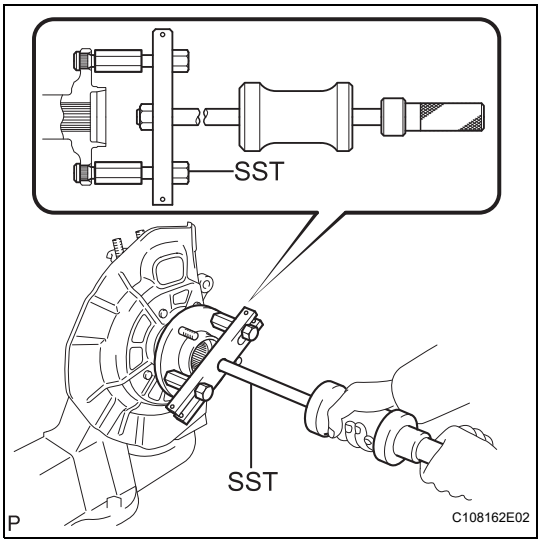
NOTICE:

Be careful not to damage the steering knuckle.



10. REMOVE FRONT AXLE HUB HOLE SNAP RING

(a) Using snap ring pliers, remove the front axle hub hole snap ring.



11. REMOVE FRONT AXLE HUB SUB-ASSEMBLY

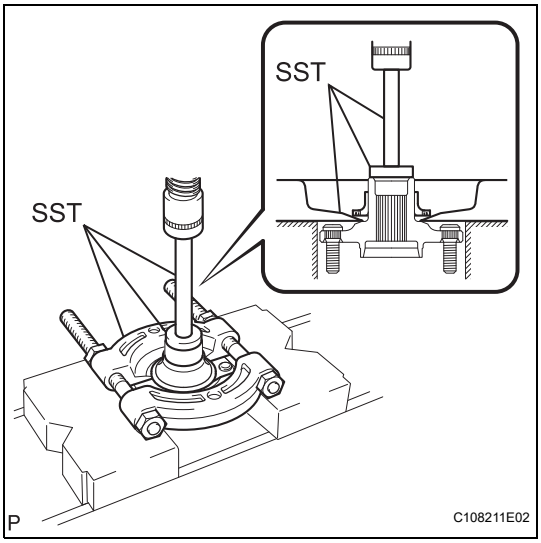
(a) Hold the front axle assembly between aluminium plates in a vise.

NOTICE:

Do not overtighten the vise.

(b) Using SST, remove the front axle hub sub-assembly.

SST 09520-00031



(c) Using SST and a press, remove the bearing inner race (outside) from the front axle hub sub-assembly.

SST 09555-55010, 09950-60010 (09951-00430), 09950-70010 (09951-07100)

NOTICE:

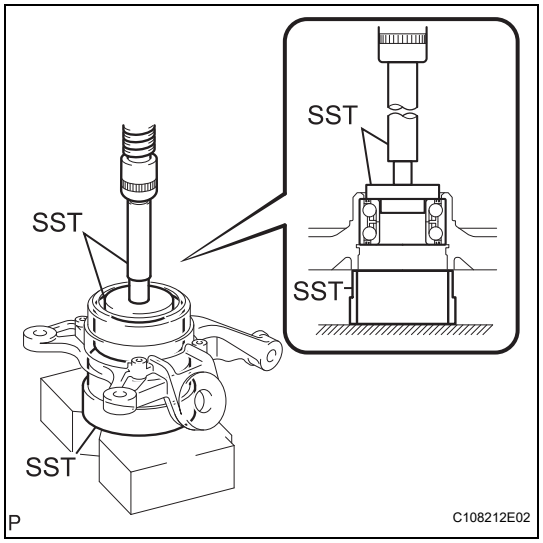
Be careful not to drop the front axle hub sub-assembly.

12. REMOVE FRONT DISC BRAKE DUST COVER

(a) Remove the 4 bolts and disc brake dust cover from the steering knuckle.

13. REMOVE FRONT LOWER BALL JOINT ASSEMBLY (See page SP-24)

AH

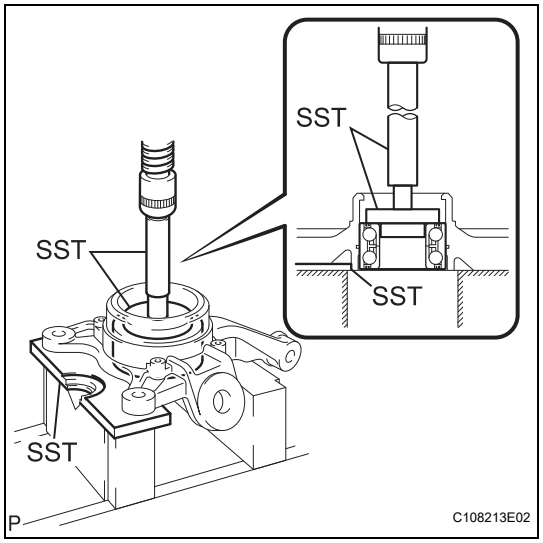


14. REMOVE FRONT AXLE HUB BEARING

(a) Place the bearing inner race (outside) on the front axle hub bearing.

(b) Using SST and a press, press the front axle hub bearing until it contacts the SST.

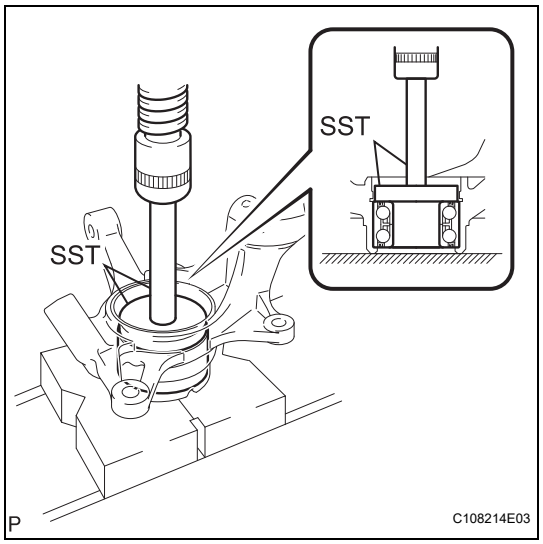
SST 09527-17011, 09950-60010 (09951-00600, 09951-00400, 09952-06010), 09950-70010 (09951-07100)



(c) Using SST to make the steering knuckle horizontal, fix it to the V-block as shown in the illustration.

SST 09527-20011, 09950-60010 (09951-00600, 09951-00400, 09952-06010), 09950-70010 (09951-07100)

(d) Using SST and a press, remove the front axle hub bearing from the steering knuckle.



INSTALLATION

1. INSTALL FRONT AXLE HUB BEARING

(a) Using SST and a press, install a new front axle hub bearing to the steering knuckle.

SST 09950-60020 (09951-00810), 09950-70010 (09951-07100)

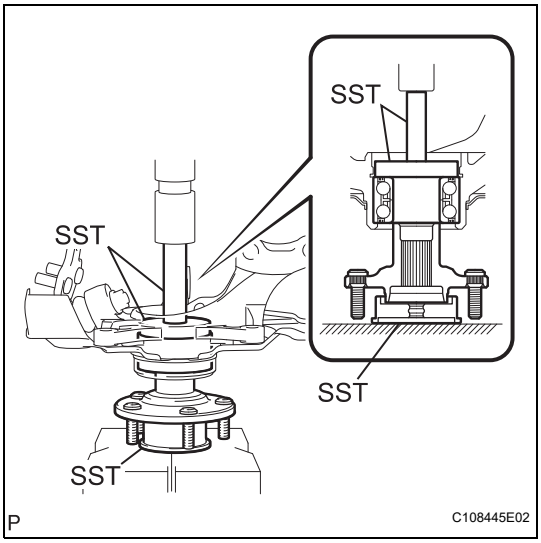
2. INSTALL FRONT LOWER BALL JOINT ASSEMBLY (See page SP-25)

3. INSTALL FRONT DISC BRAKE DUST COVER

(a) Install the disc brake dust cover to the steering knuckle with the 4 bolts.

Torque: 8.3 N*m (85 kgf*cm, 73 in.*lbf)

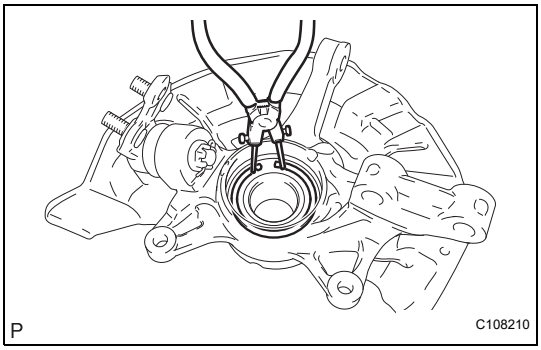
AH



4. INSTALL FRONT AXLE HUB SUB-ASSEMBLY

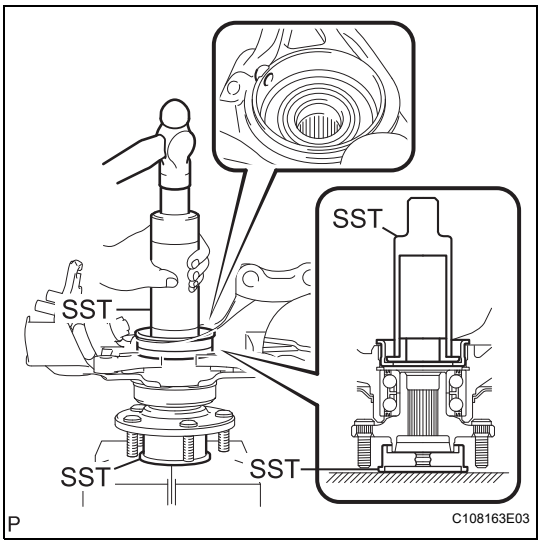
(a) Using SST and a press, install the front axle hub sub-assembly.

SST 09608-32010, 09950-60020 (09951-00810), 09950-70010 (09951-07100)



5. INSTALL FRONT AXLE HUB HOLE SNAP RING

(a) Using snap ring pliers, install a new front axle hub hole snap ring.



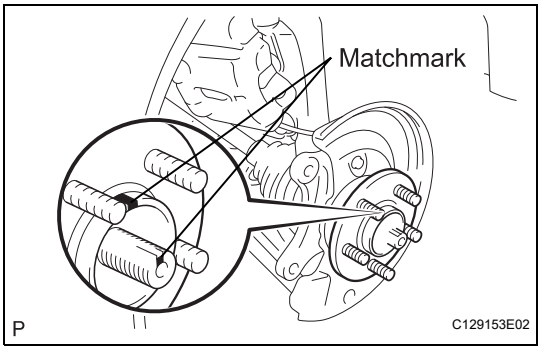
6. INSTALL NO. 1 FRONT WHEEL BEARING DUST DEFLECTOR

(a) Using SST and a hammer, install a new No. 1 front wheel bearing dust deflector.

SST 09316-60011 (09316-00011, 09316-00031), 09608-32010

HINT:

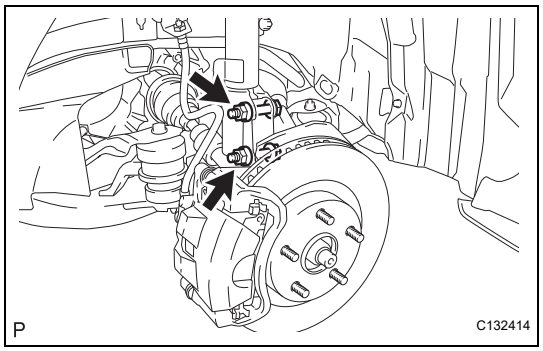
Align the hole for the speed sensor in the No. 1 front wheel bearing dust deflector with the steering knuckle.



7. INSTALL FRONT AXLE ASSEMBLY

(a) Align the matchmarks and install the front drive shaft assembly to the front axle hub sub-assembly.

AH

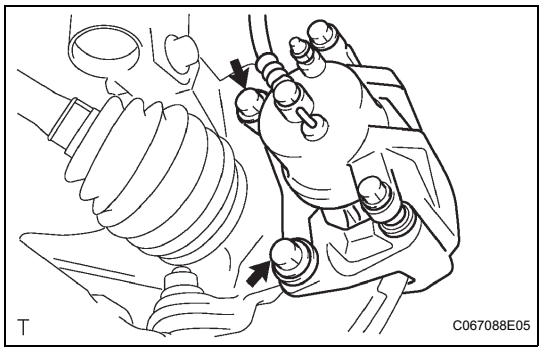


(b) Install the steering knuckle with the front axle assembly to the front shock absorber with the 2 bolts and 2 nuts.
Torque: 210 N*m (2,140 kgf*cm, 155 ft.*lbf)
NOTICE:
- **Only when reusing the bolts and nuts, apply a small amount of engine oil to the threads of the nuts.**
- **Be careful not to damage the drive shaft boot or speed sensor rotor.**

8. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-18)**

9. **INSTALL TIE ROD END SUB-ASSEMBLY (See page DS-18)**

10. **INSTALL FRONT DISC (See page BR-51)**



11. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY**
(a) Install the front disc brake caliper assembly to the steering knuckle with the 2 bolts.
Torque: 107 N*m (1,090 kgf*cm, 79 ft.*lbf)
NOTICE:
Do not twist the brake hose when installing the front disc brake caliper assembly.

12. **INSTALL FRONT AXLE HUB NUT**
(a) Using a socket wrench (30 mm), install a new axle hub nut.
Torque: 294 N*m (3,000 kgf*cm, 217 ft.*lbf)
HINT:
Stake the nut after inspecting for looseness and runout in the following steps.

13. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY**
(a) Remove the 2 bolts and separate the front disc brake caliper assembly from the steering knuckle.
NOTICE:
Use wire or an equivalent tool to keep the brake caliper from hanging down by the flexible hose.

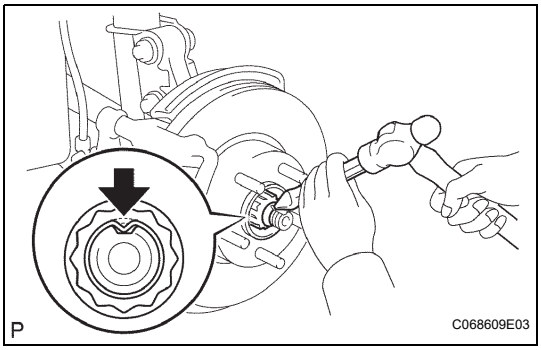
14. **REMOVE FRONT DISC (See page BR-50)**

15. **INSPECT FRONT AXLE HUB BEARING LOOSENESS (See page AH-5)**

16. **INSPECT FRONT AXLE HUB RUNOUT (See page AH-6)**

17. **INSTALL FRONT DISC (See page BR-51)**

18. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY**
(a) Install the front disc brake caliper assembly to the steering knuckle with the 2 bolts.
Torque: 107 N*m (1,090 kgf*cm, 79 ft.*lbf)
NOTICE:
Do not twist the brake hose when installing the front disc brake caliper assembly.



19. **INSTALL FRONT SPEED SENSOR (See page DS-18)**

20. **INSTALL FRONT AXLE HUB NUT**
    (a) Using a chisel and hammer, stake the axle hub nut.

21. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

22. **ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    See page SP-4.

23. **CHECK ABS SPEED SENSOR SIGNAL**
    HINT:
    See page BC-35.

PROBLEM SYMPTOMS TABLE

Use the table below to help find the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts

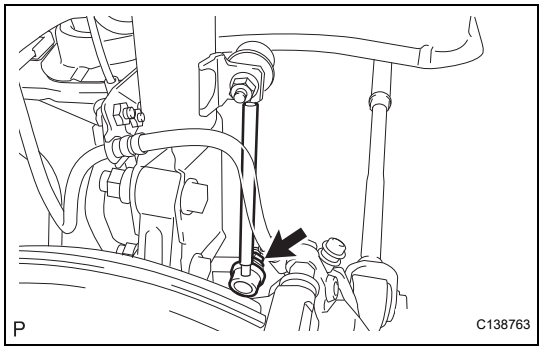
SUSPENSION SYSTEM

Symptom	Suspected Area	See page
Bottoming	1. Vehicle (Overloaded)	-
	2. Spring (Weak)	SP-15
	3. Shock absorber (Worn)	SP-15
Sways/pitches	1. Tire (Worn or improperly inflated)	TW-3
	2. Stabilizer bar (Bent or broken)	SP-28
	3. Shock absorber (Worn)	SP-15
Front wheel shimmy	1. Tire (Worn or improperly inflated)	TW-3
	2. Wheel (Out of balance)	TW-3
	3. Shock absorber (Worn)	SP-15
	4. Wheel alignment (Incorrect)	SP-4
	5. Lower ball joint (Worn)	SP-23
	6. Hub bearing (Worn)	AH-5
	7. Steering gear (Out of adjustment or broken)	PS-61
Rear wheel shimmy	1. Tire (Worn or improperly inflated)	TW-3
	2. Wheel (Out of balance)	TW-3
	3. Shock absorber (Worn)	SP-35
	4. Wheel alignment (Incorrect)	SP-11
	5. Hub bearing (Worn)	AH-5
Abnormal tire wear	1. Tire (Worn or improperly inflated)	TW-3
	2. Wheel alignment (Incorrect)	TW-3
	3. Shock absorber (Worn)	SP-15
	4. Suspension parts (Worn)	-

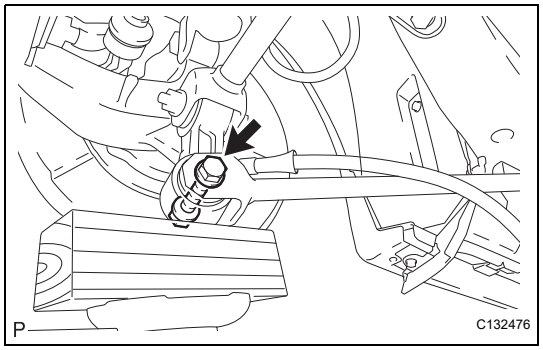
REMOVAL

NOTICE:
Check if an old gasket still remains on the pipe. If so, remove it. Also, check if any bolts or nuts are rusted. If so, replace them.

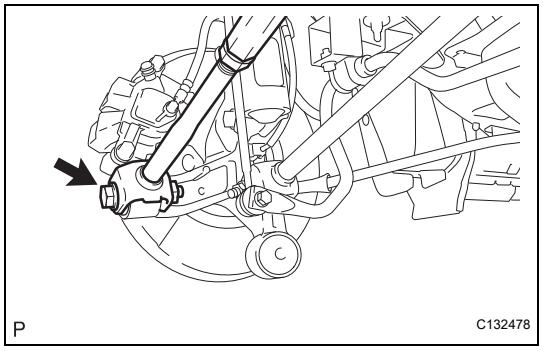
1. **REMOVE REAR WHEEL**
2. **REMOVE FLOOR NO. 1 UNDER COVER (See page SP-41)**
3. **REMOVE FLOOR NO. 2 UNDER COVER (See page SP-42)**
4. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (See page EX-2)**
5. **SEPARATE REAR STABILIZER LINK ASSEMBLY LH**
   (a) Remove the nut and separate the rear stabilizer link assembly LH (lower side) from the rear stabilizer bar.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



6. **SEPARATE REAR STABILIZER LINK ASSEMBLY RH**
   HINT:
   Separate the RH side using the same procedures as for the LH side.
7. **REMOVE REAR STABILIZER BAR NO. 1 BRACKET (See page SP-67)**
8. **REMOVE REAR STABILIZER BAR**
9. **REMOVE REAR STABILIZER BUSHING (See page SP-67)**
10. **SEPARATE REAR STRUT ROD**
    (a) Remove the bolt, nut and separate the rear strut rod from the rear axle carrier.
    NOTICE:
    When removing the bolt, keep the nut from rotating.



11. **SEPARATE REAR NO. 2 SUSPENSION ARM LH**
    (a) Remove the bolt, nut and separate the rear No. 2 suspension arm (outer side) from the rear axle carrier.
    NOTICE:
    When removing the bolt, keep the nut from rotating.

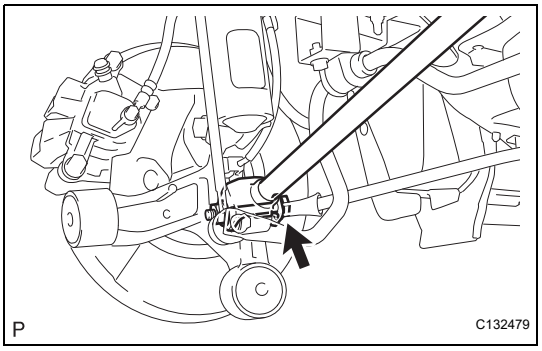


SP

12. SEPARATE REAR NO. 2 SUSPENSION ARM RH

HINT:

Separate the RH side using the same procedures as for the LH side.



13. SEPARATE REAR NO. 1 SUSPENSION ARM LH

(a) Remove the bolt, nut and the rear No. 1 suspension arm (outer side) from the rear axle carrier.

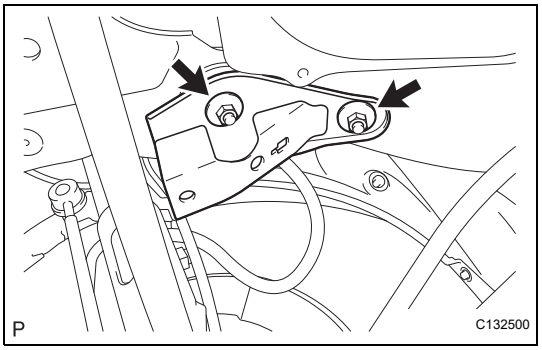
NOTICE:

When removing the bolt, keep the nut from rotating.

14. SEPARATE REAR NO. 1 SUSPENSION ARM RH

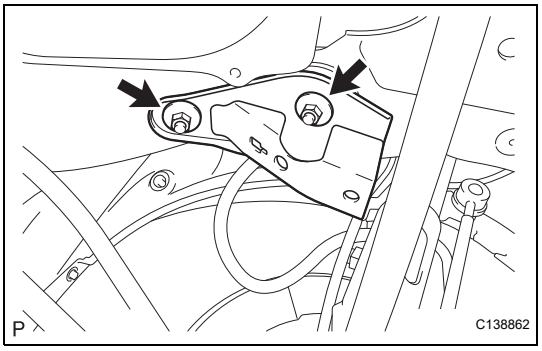
HINT:

Separate the RH side using the same procedures as for the LH side.



15. REMOVE REAR SUSPENSION MEMBER LOWER STOPPER LH

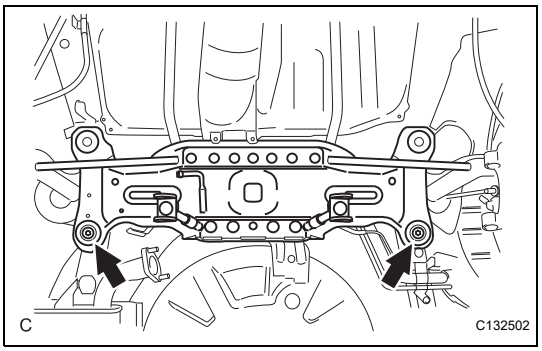
(a) Remove the 2 nuts and the rear suspension member lower stopper LH.



16. REMOVE REAR SUSPENSION MEMBER LOWER STOPPER RH

(a) Remove the 2 nuts and the rear suspension member lower stopper RH.

SP



17. REMOVE REAR SUSPENSION MEMBER SUB-ASSEMBLY

(a) Support the rear suspension member with a jack.

(b) Remove the 2 bolts and the rear suspension member sub-assembly.

SSM

Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Toyota Genuine Seal Packing 1282B, Three Bond 1282B or equivalent
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

INSPECTION

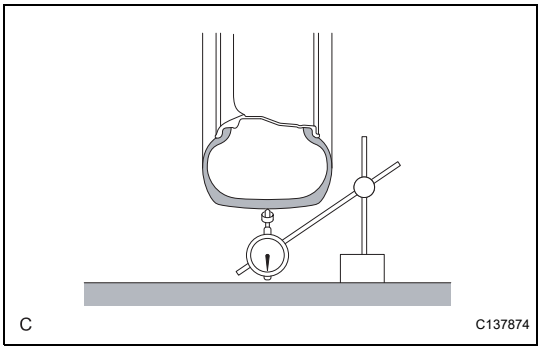
1. INSPECT TIRE

(a) Check the tires for wear and proper inflation pressure.

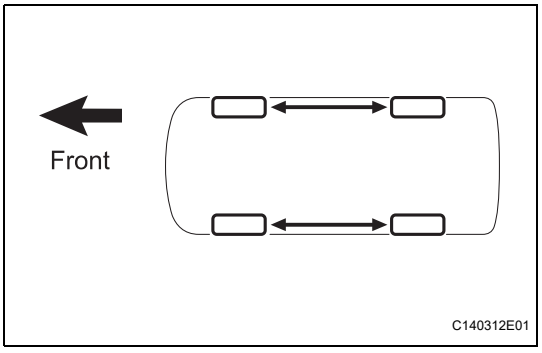
Cold tire inflation pressure

Tire size	Front kPa (kgf*cm^2, psi)	Rear kPa (kgf*cm^2, psi)
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)

When driving under the above vehicle conditions at sustained high speeds above 160 km/h (100 mph), in countries where such speeds are permitted by law, inflate the front and rear tires to 240 kPa (2.4 kgf*cm^2, 35 psi) provided that it does not exceed the maximum cold tire inflation pressure molded on the tire sidewall.

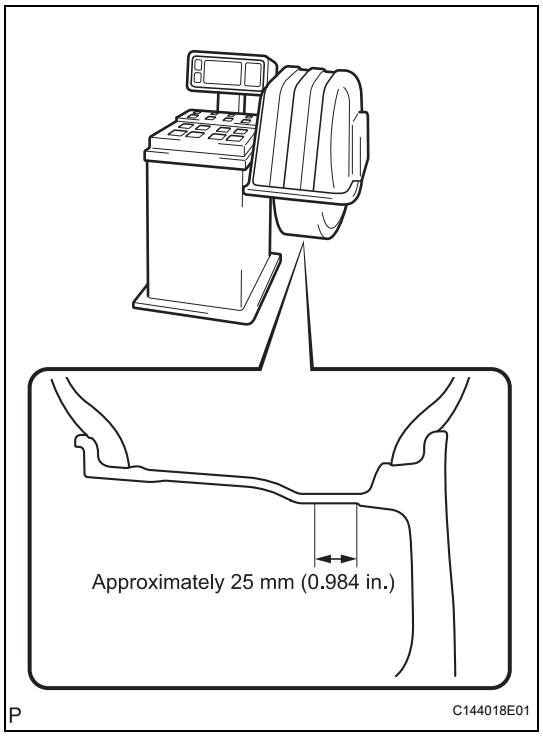


(b) Using a dial indicator, check the runout of the tires.
Tire runout:
1.4 mm (0.055 in.) or less



2. ROTATE TIRES

HINT:
Rotate the tires as shown in illustration.



3. **INSPECT WHEEL BALANCE**

(a) Check and adjust the off-the-car balance.

Imbalance after adjustment:
8.0 g (0.018 lb.) or less.

NOTICE:

- **Remove dirt, oil, and water from the surface where the balance weight is to be adhered with a cleaning detergent.**
- **Do not touch the sticking surface of the tape.**
- **Adhere the sticking type balance weight to the flat position shown in the illustration.**
- **Push the balance weight securely with a finger to adhere it to the indicated position.**
- **Do not reuse balance weights.**

HINT:

- The inner side balance weight should be installed by clipping it to the rim.
- If necessary, check and adjust the on-the-car balance.

4. **INSPECT FRONT AXLE HUB BEARING LOOSENESS**

HINT:

(See page AH-5)

5. **INSPECT REAR AXLE HUB BEARING LOOSENESS**

HINT:

(See page AH-14)

6. **INSPECT FRONT AXLE HUB RUNOUT**

HINT:

(See page AH-5)

7. **INSPECT REAR AXLE HUB RUNOUT**

HINT:

(See page AH-14)

RECOMMENDED TOOLS

	09082-00040	TOYOTA Electrical Tester	

EQUIPMENT

Measuring Flask	
Ohmmeter	
Service Wire Harness	
Stopwatch	
Torque Wrench	
Vernier Calipers	

SSM

	08850-00065	Butyl Tape Set

OPTIONS

OPTIONS FOR CE

Vehicle Stability Control (VSC)[13] with Traction Control (TRAC)

OPTIONS FOR LE

Moonroof Package – includes power tilt/slide moonroof with sliding sunshade, dual illuminated visor vanity mirrors with dimmer control and rear personal reading lights

Auto-dimming rearview mirror with compass[14]

Vehicle Stability Control (VSC)[13] with Traction Control (TRAC)

16-in. 7-spoke aluminum alloy wheels with P215/60R16 tires

JBL® AM/FM 6-disc in-dash CD changer with satellite radio capability[7] MP3/WMA playback capability, auxiliary audio jack, hands-free phone capability via Bluetooth®[8] wireless technology, eight speakers in six locations and FM diversity reception

OPTIONS FOR SE

Sport Leather Package – includes heated front seats, leather-trimmed seats and door trim with integrated armrests and dual front and rear map pockets, and dual color-keyed, heated power outside mirrors [6]

Sport Convenience Package – includes HomeLink®[10] universal transceiver and auto-dimming rearview mirror with compass[6]

Moonroof Package – includes power tilt/slide moonroof with sliding sunshade, dual illuminated visor vanity mirrors with dimmer control and rear personal reading lights

Sport Leather-trimmed seats and door trim with integrated armrests and dual front and rear map pockets
Power tilt/slide moonroof with sliding sunshade

Color-keyed rear lip spoiler

JBL® AM/FM 6-disc in-dash CD changer with satellite radio capability [7] MP3/WMA playback capability, auxiliary audio jack, hands-free phone capability via Bluetooth® [8] wireless technology, eight speakers in six locations and FM diversity reception

Vehicle Stability Control (VSC)[13] with Traction Control (TRAC)

Voice-activated DVD navigation system [15] with JBL® AM/FM 4-disc in-dash CD changer with satellite radio capability[7], MP3/WMA playback capability, auxiliary audio jack, hands-free phone capability via Bluetooth®[8] wireless technology, eight speakers in six locations and FM diversity reception

Auto-dimming rearview mirror with compass[14]

Heated outside mirrors[6]

Warranties

Basic: 36 months/36,000 miles (all components other than normal wear and maintenance items).

Powertrain: 60 months/60,000 miles (engine, transmission/transaxle, front-wheel drive, rear-wheel drive, seatbelts and airbags).

Rust-Through: 60 months/unlimited miles (corrosion perforation of sheet metal).

Federal Emission Coverage: Components under the federal emission defect warranty are covered for 36 months/36,000 miles and specified major emission control components are covered for 8 years/80,000 miles. Specified major emission control components under emission performance warranty are also covered for 8 years/80,000 miles. In addition, emission performance warranty is applicable for 24 months/24,000 miles in states and local jurisdictions that require a periodic EPA-approved inspection and maintenance program.

California Emission Control Coverage:
Non-Hybrid/Non-PZEV: In California and any other state that adopts California emission warranty provisions, performance warranty and defect warranty coverage is applicable for 36 months/50,000 miles, and specific control devices are covered for 7 years/70,000 miles.
Hybrid: In California and any other state that adopts California emission warranty provisions, performance warranty and defect warranty coverage is applicable for 15 years/150,000 miles. The Hybrid Vehicle Battery is warranted for 10 years/150,000 miles.
PZEV: In California and any other state that adopts California emission warranty provisions, performance warranty and defect warranty coverage is applicable for 15 years/150,000 miles.

Accessories: Warranty coverage is for 12 months, regardless of mileage. If the part or accessory is installed during the New Vehicle Limited Warranty period, coverage is for 12 months or the remainder of the applicable warranty coverage, whichever is greater, with the exception of car covers, which are covered for 12 months only.

You may be eligible for transportation assistance if it's necessary that your vehicle be kept overnight for repairs covered under warranty. Please see your authorized Toyota dealership for further details.

For complete details about Toyota's warranties, please visit www.toyota.com, refer to the applicable Owner's Warranty Information booklet or see your Toyota dealer.

In addition, there may be times when we will establish a special policy adjustment that will further defray repair costs. For details about the new vehicle limited warranty, see your Toyota dealer. And for complete details of Toyota's warranties, please refer to your Owner's Warranty.

Disclaimers

[1] Brake Assist is designed to help the driver take full advantage of the benefits of ABS. It is not a substitute for safe driving practices. Braking effectiveness also depends on proper brake-system maintenance and tire and road conditions.
[2] The Toyota driver, front passenger, front seat-mounted side airbags, driver's knee airbag and side curtain airbags are Supplemental Restraint Systems (SRS). The driver and front passenger airbags and driver's knee airbag are designed to deploy in severe (usually frontal) collisions where the magnitude and duration of the forward deceleration of the vehicle exceed the design threshold level. The side airbags and side curtain airbags are designed to inflate in certain types of severe side-impact collisions. In all other accidents, the airbags will not inflate. To decrease the risk of injury from a deploying airbag, always wear seatbelts, sit upright in the middle of the seat as far back as possible from the airbag modules and do not lean against the door. Do not put objects in front of an airbag or around the seatback. Do not use rearward-facing child seats in any front passenger seat. The force of a deploying SRS airbag may cause serious injury or death. Please see your Owner's Manual for further instructions. Vehicle complies with "advanced airbag" requirements of FMVSS 208.
[3] Toyota's Direct Tire Pressure Monitor System alerts the driver when tire pressure is critically low. For optimal tire wear and performance, tire pressure should be checked regularly with a gauge; do not rely solely on the Monitor. See your Owner's Manual for details.
[4] SE available with All-Season tires as a no-cost option.
[5] Performance tires are expected to experience greater tire wear than conventional tires. Tire life may be less than 24,000 miles, depending upon driving conditions.
[6] Automatic transmission only.
[7] Satellite radio requires XM or Sirius compatibility, receiver and monthly service fee. See your Toyota dealer for further details. Reception of the satellite signal may vary depending on location. All fees and programming subject to change. Subscriptions subject to terms and conditions available at www.xmradio.com or www.sirius.com. Available only in the 48 contiguous United States.
[8] The phones on this site have been tested for Bluetooth compatibility with Toyota vehicles. Performance will vary based on phone software version, coverage, and your wireless carrier. Phones are warranted by their manufacturer, not Toyota.
[9] Plasmacluster is a trademark of Sharp Electronics, Inc.
[10] HomeLink® is a registered trademark of Johnson Controls, Inc.
[11] Fraichir is a trademark of Seiren Co., Ltd.

© '06 Toyota Motor Sales, U.S.A., Inc.

[12] The Smart Key system may interfere with some pacemakers or cardiac defibrillators. If you have one of these medical devices, please talk to your doctor to see if you should deactivate this system.
[13] Vehicle Stability Control (VSC) is an electronic system designed to help the driver maintain vehicle control under adverse conditions. It is not a substitute for safe driving practices. Factors including speed, road conditions and driver steering input can all affect whether VSC will be effective in preventing a loss of control. Please see your Owner's Manual for further details.
[14] Manual transmission only.
[15] The Toyota DVD navigation system is designed to assist in locating an address or point of interest. Discrepancies may be encountered between the system and your actual location. Changes in street names, road closures, traffic flow or other road system changes may affect the accuracy of the mapping software. Rely upon your common sense to decide whether to follow a specified route. Detailed coverage not available in every city. Optional periodic geographical updates available at an additional cost. See your Navigation System Owner's Manual and your Toyota dealer for further details.
[16] Standard on V6, available on 4-cylinder.
[17] V6 only.
[18] In certain areas, 4-cylinder automatic models are equipped as Partial Zero Emission Vehicles (PZEV). Equipment causes nominal reduction in horsepower (from 158 hp to 155 hp) and torque (from 161 lb.-ft. to 158 lb.-ft.).
[19] 2007 EPA mileage estimates. Actual mileage may vary.

INSPECTION

1. INSPECT BRAKE PEDAL STROKE SENSOR

(a) Inspect the brake pedal stroke sensor. If any of the following occurs, replace the brake pedal stroke sensor with a new one:

- The surface of the brake pedal stroke sensor is cracked, dented, or chipped off.
- The connector is scratched, cracked, or damaged.
- The brake pedal stroke sensor has been dropped.

INSTALLATION

1. INSTALL BRAKE PEDAL STROKE SENSOR

(a) New brake pedal stroke sensor.

(1) Install a new brake pedal stroke sensor with the 2 bolts.

Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)

NOTICE:

- **Engage the brake pedal stroke sensor lever with the brake pedal hole.**
- **Check that there is no foreign matter attached to the contact surface of the brake pedal stroke sensor.**

(2) Strongly depress the brake pedal to break the brake pedal stroke sensor lever set pin.

(3) Remove the broken lever set pin.

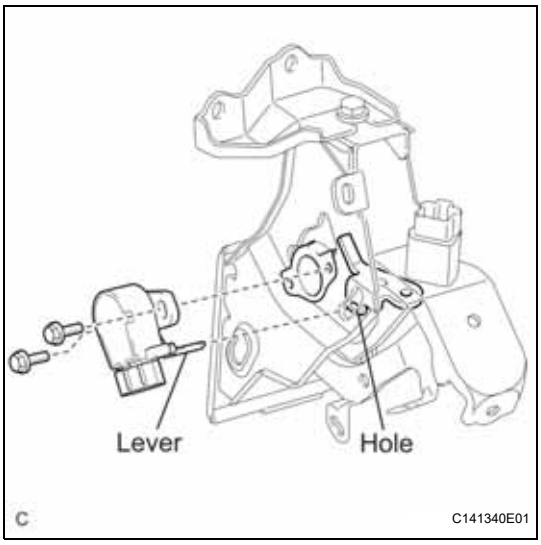
(4) Connect the brake pedal stroke sensor connector.

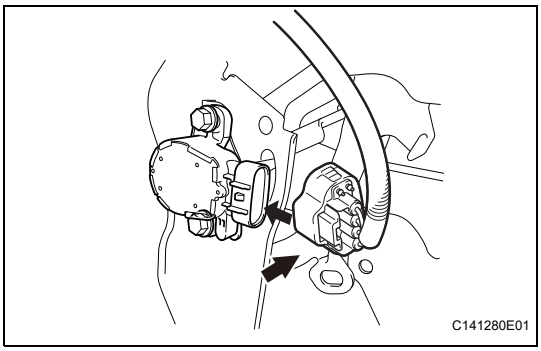
(b) Reuse of the brake pedal stroke sensor.

(1) Temporarily install the brake pedal stroke sensor with the 2 bolts.

NOTICE:

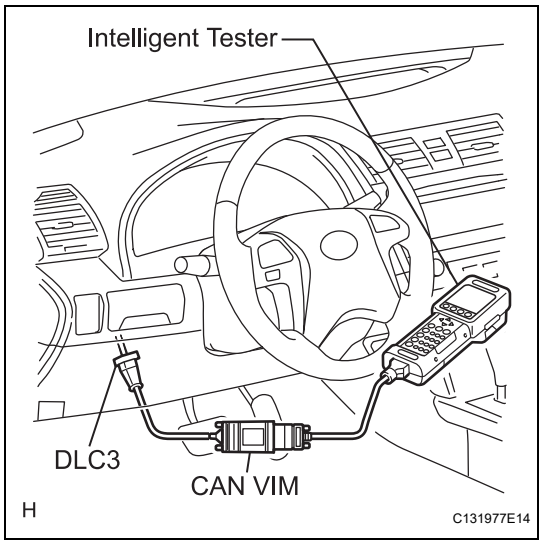
- **Engage the brake pedal stroke sensor lever with the brake pedal hole.**
- **Check that there is no foreign matter attached to the contact surface of the brake pedal stroke sensor.**



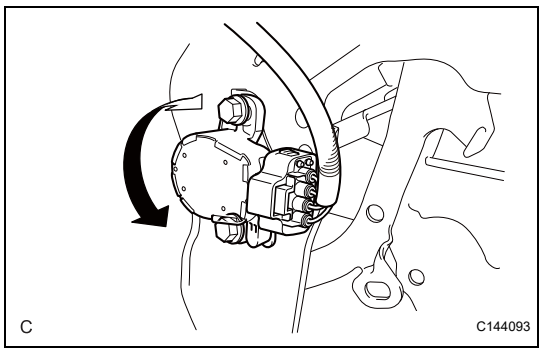


(2) Connect the connector to the brake pedal stroke sensor.

(3) Connect the cable to the negative battery terminal.



(4) Connect the intelligent tester to the DLC3 with the power switch off as shown in the illustration.
(5) Turn the power switch on (IG).
(6) Turn on the intelligent tester.



(7) Reading the stroke sensor 1 value shown in the data list, slowly turn the brake pedal stroke sensor to the right and left to adjust the value to the standard voltage.
Standard voltage:
0.8 to 1.2 V
(8) Fully tighten the 2 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
Do not depress the brake pedal after turning the power switch on (IG).
(9) Turn off the intelligent tester and turn the power switch off.
(10) Disconnect the intelligent tester from the DLC3.

2. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**

3. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**

4. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**

5. **PREFORM LINEAR VALVE OFFSET LEARNING**
HINT:
Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-25)

6. **CHECK AND CLEAR DTC**
HINT:
Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-57)

7. **PERFORM INITIALIZATION**
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)

PROBLEM SYMPTOMS TABLE

Use the table below to determine the cause of the problem. The numbers indicate the priority of the likely cause of the problem. Check each part in order. If necessary, replace these parts.

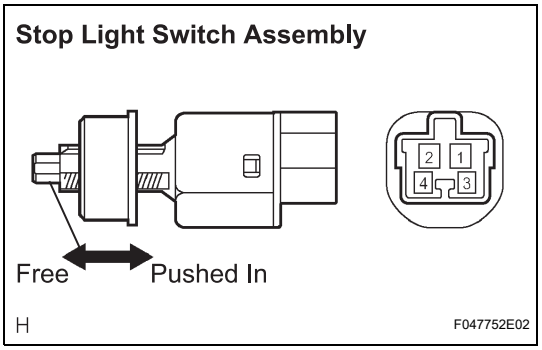
BRAKE SYSTEM

Symptom	Suspected Area	See page
Low pedal or spongy pedal	1. Fluid leakage in brake system	BR-5
	2. Air in brake system	BR-5
	3. Front piston seal (Worn or damaged)	BR-47
	4. Rear piston seal (Worn or damaged)	BR-61
	5. Push rod (Out of adjustment)	BR-18
	6. Brake master cylinder (Faulty)	BR-26
Brake drag	1. Brake pedal free play (Minimum)	BR-18
	2. Parking brake pedal travel (Out of adjustment)	PB-1
	3. Parking brake cable (Sticking)	PB-24
	4. Parking brake shoe clearance (Out of adjustment)	PB-1
	5. Front pad (Cracked or distorted)	BR-50
	6. Rear pad (Cracked or distorted)	BR-63
	7. Front disc brake piston (Stuck)	BR-47
	8. Rear disc brake piston (Stuck)	BR-61
	9. Front disc brake piston (Frozen)	BR-47
	10. Rear disc brake piston (Frozen)	BR-61
	11. Push rod (Out of adjustment)	BR-18
	12. Brake master cylinder (Faulty)	BR-26
Brake pull	1. Front disc brake piston (Stuck)	BR-47
	2. Rear disc brake piston (Stuck)	BR-61
	3. Front pad (Oily)	BR-47
	4. Rear pad (Oily)	BR-61
	5. Front disc brake piston (Frozen)	BR-47
	6. Rear disc brake piston (Frozen)	BR-61
	7. Front disc (Scored)	BR-50
	8. Rear disc (Scored)	BR-63
	9. Front pad (Cracked or distorted)	BR-50
	10. Rear pad (Cracked or distorted)	BR-63
Firm pedal but braking inefficient	1. Fluid leakage in brake system	BR-5
	2. Air in brake system	BR-5
	3. Front disc brake piston (Stuck)	BR-47
	4. Rear disc brake piston (Stuck)	BR-61
	5. Front pad (Cracked or distorted)	BR-50
	6. Rear pad (Cracked or distorted)	BR-63
	7. Front pad (Oily)	BR-47
	8. Rear pad (Oily)	BR-61
	9. Front pad (Glazed)	BR-47
	10. Rear pad (Glazed)	BR-61
	11. Front disc (Scored)	BR-50
	12. Rear disc (Scored)	BR-63
	13. Push rod (Out of adjustment)	BR-18

REMOVAL

1. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
2. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
3. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**
4. **REMOVE INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-12)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)**
6. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-13)**
7. **REMOVE COMBINATION METER ASSEMBLY (See page IP-13)**
8. **REMOVE STOP LIGHT SWITCH ASSEMBLY**
   (a) Disconnect the stop light switch assembly connector from the stop light switch assembly.

   (b) Turn the stop light switch assembly counterclockwise and remove the stop light switch assembly.



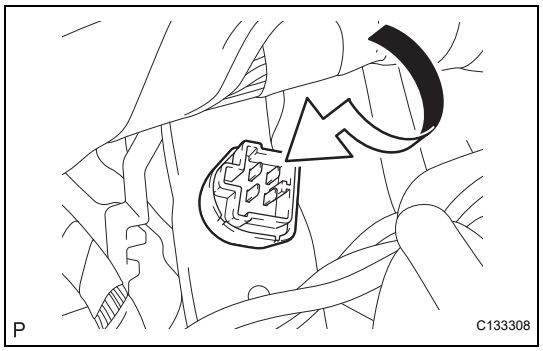
INSPECTION

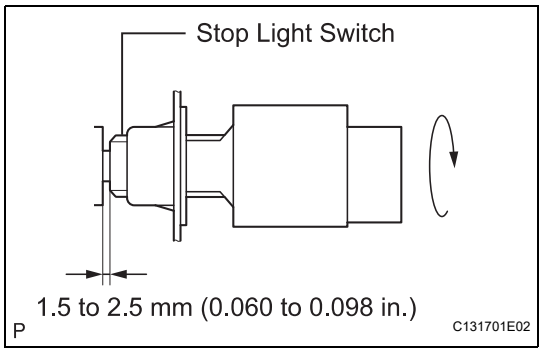
1. **INSPECT STOP LIGHT SWITCH**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

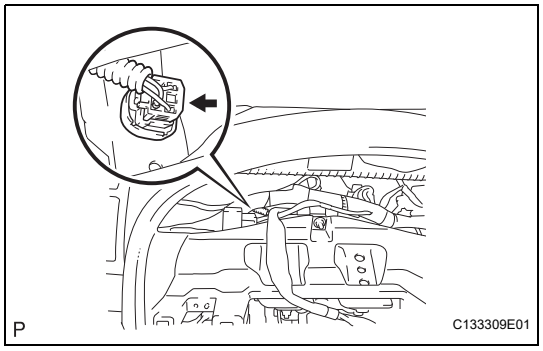
Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

   If the measurement result is not normal, replace the stop light switch assembly.

BR







INSTALLATION

1. **INSTALL STOP LIGHT SWITCH ASSEMBLY**
   (a) Insert the stop light switch assembly until the body hits the cushion.
   NOTICE:
   When inserting the stop light switch assembly, support the pedal from behind so that the pedal is not pushed in.

   (b) Make a quarter turn clockwise to install the stop light switch assembly.
   Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf) or less
   NOTICE:
   When inserting the stop light switch assembly, support the pedal from behind so that the pedal is not pushed in.

   (c) Connect the stop light switch connector to the stop light switch assembly.
   (d) Check the protrusion of the rod (See page BR-73).
2. **INSTALL COMBINATION METER ASSEMBLY (See page IP-33)**
3. **INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-34)**
4. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-34)**
5. **INSTALL INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-34)**
6. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**
7. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
8. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**

REMOVAL

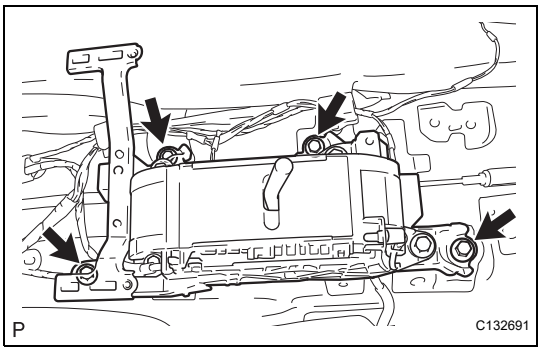
1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent the airbag working.
2. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)
3. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)
4. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)
5. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)
6. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)
7. REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-363)
8. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-13)
9. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)
10. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)
11. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
12. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
13. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)
14. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)
15. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)
16. REMOVE CONSOLE BOX POCKET (See page IP-17)
17. REMOVE CONSOLE BOX CARPET (See page IP-17)
18. REMOVE CONSOLE BOX ASSEMBLY (See page IP-17)
19. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-18)
20. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (See page IP-18)
21. REMOVE NO. 1 CONSOLE BOX DUCT (See page AC-188)

22. **REMOVE FLOOR CARPET BRACKET LH (See page AC-188)**

23. **REMOVE FLOOR CARPET BRACKET RH (See page AC-189)**

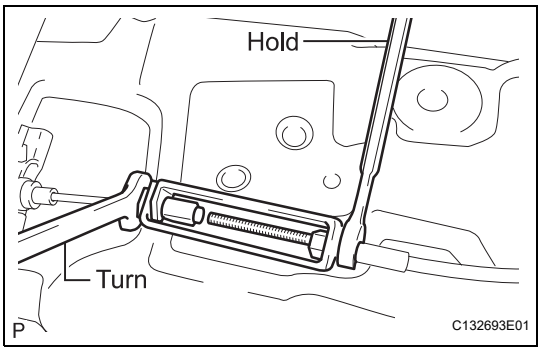
24. **REMOVE YAW RATE AND ACCELERATION SENSOR (See page BC-283)**

25. **REMOVE FLOOR SHIFT LEVER ASSEMBLY**
    (a) Remove the 4 bolts and the floor shift lever assembly.

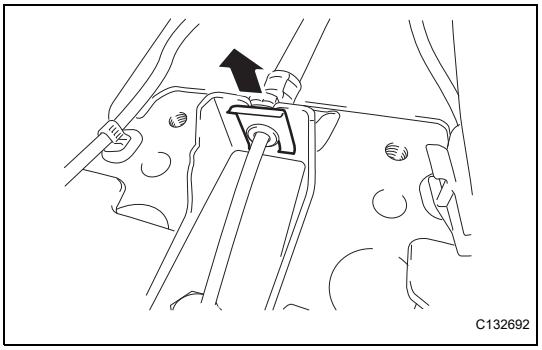


26. **REMOVE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-424)**

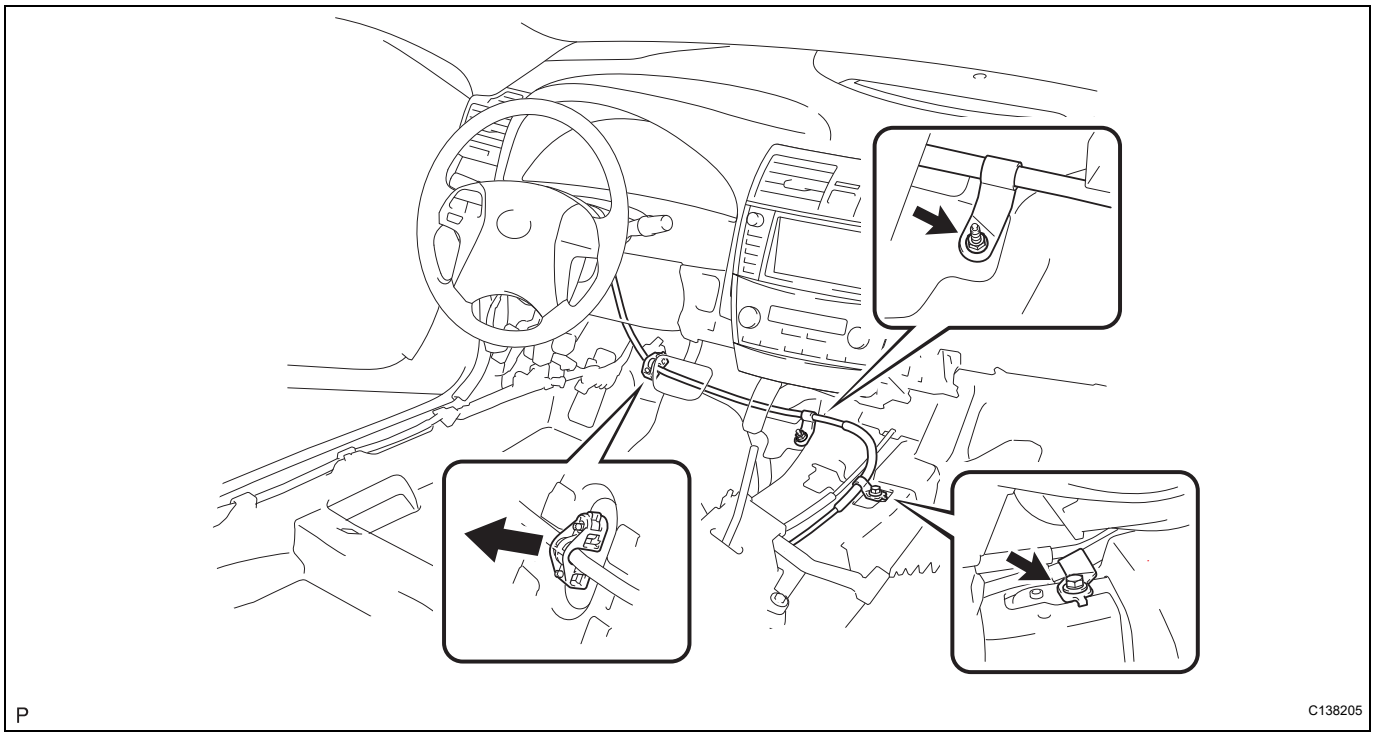
27. **DISCONNECT NO. 4 PARKING BRAKE CABLE ASSEMBLY**
    (a) Using a wrench, hold the lock nut and loosen the turnbuckle.
    (b) Disconnect the No. 4 parking brake cable assembly from the No. 1 parking brake cable assembly.



28. **REMOVE PARKING BRAKE PEDAL ASSEMBLY**
    (a) Using needle-nose pliers, remove the clip from the No. 1 parking brake cable assembly.



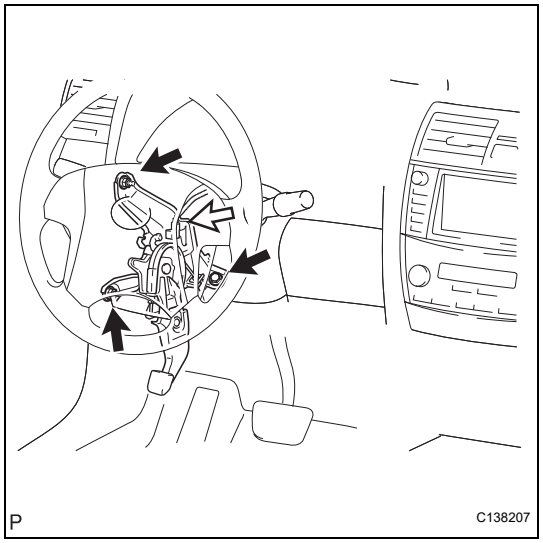
(b) Remove the bolt, nut, and the No. 1 parking brake cable clamp.

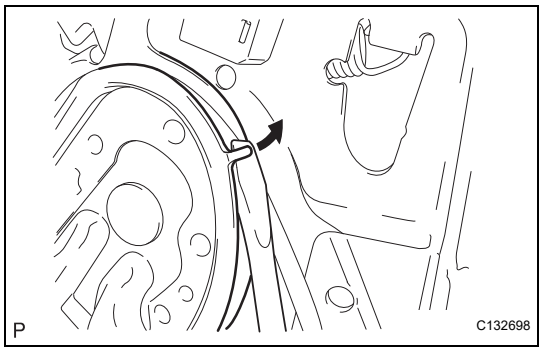


(c) Separate the No. 1 parking brake cable assembly from the body.

(d) Disconnect the parking brake switch connector.

(e) Remove the bolt, 2 nuts, and the parking brake pedal assembly with the No. 1 parking brake cable assembly from the body.



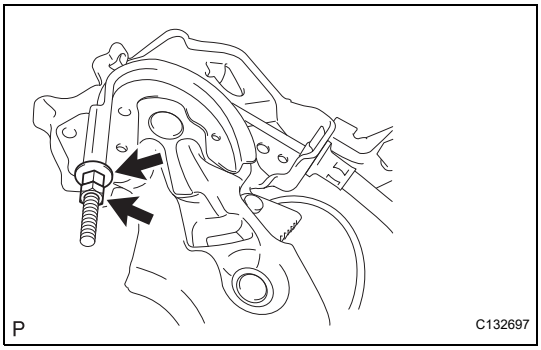


DISASSEMBLY

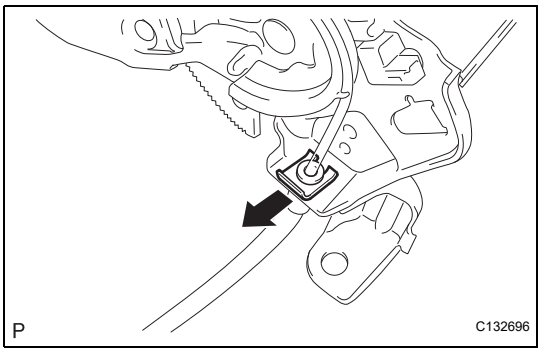
1. REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Using a screwdriver, pull up the parking brake pedal claw.

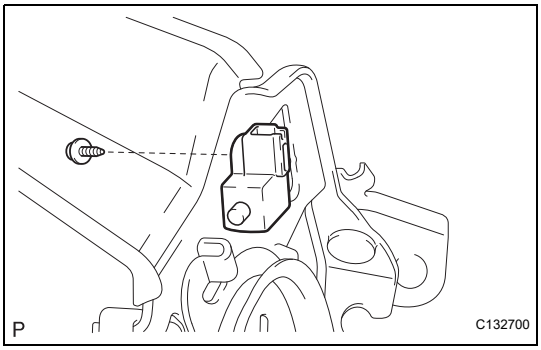
PB



(b) Remove the lock nut and the No. 1 wire adjusting nut.



(c) Using needle-nose pliers, remove the clip and the No. 1 parking brake cable from the parking brake pedal assembly.



2. REMOVE PARKING BRAKE SWITCH ASSEMBLY

(a) Remove the screw and the parking brake switch assembly.

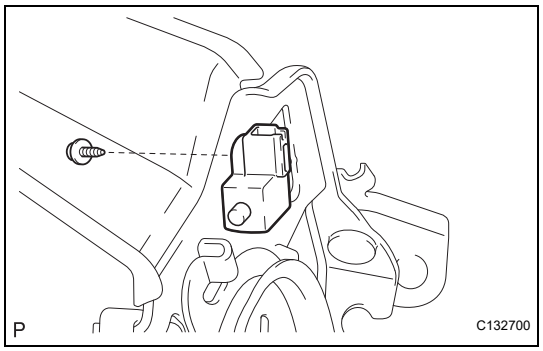
3. REMOVE PARKING PEDAL PAD

(a) Remove the parking pedal pad.

REASSEMBLY

1. INSTALL PARKING PEDAL PAD

(a) Install the parking pedal pad to the parking brake pedal assembly.

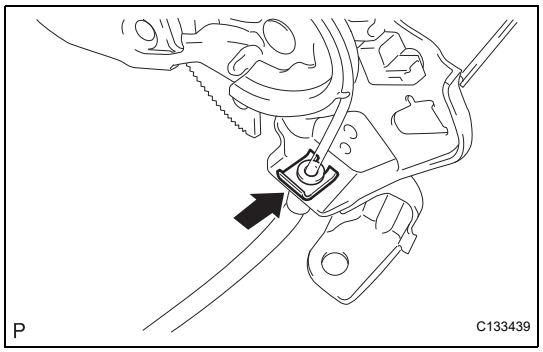


2. INSTALL PARKING BRAKE SWITCH ASSEMBLY

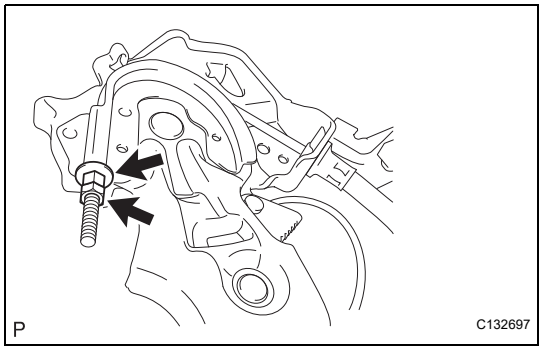
(a) Install the parking brake switch assembly with the screw.

3. INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY

(a) Pass the No. 1 parking brake cable assembly through the pedal guide.

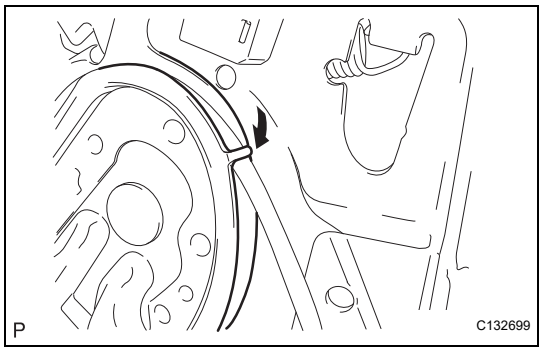


(b) Using a brass bar and a hammer, install the clip to the No. 1 parking brake cable assembly.

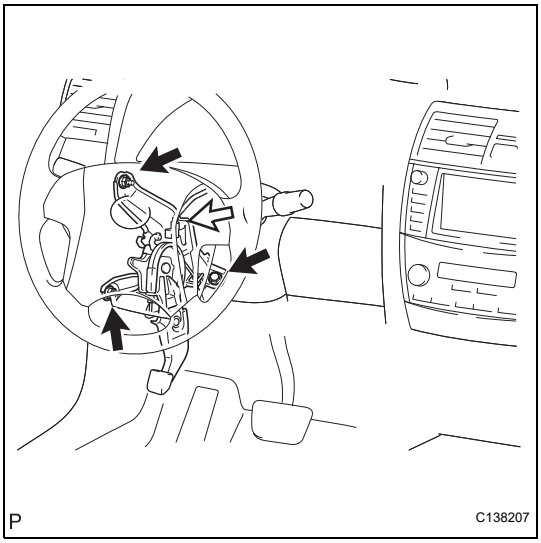


(c) Temporarily tighten the the lock nut and No. 1 wire adjusting nut.

NOTICE:
Fully tighten the lock nut and the No. 1 wire adjusting nut when adjusting the parking brake pedal travel.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



(d) Bend the parking brake pedal claw.



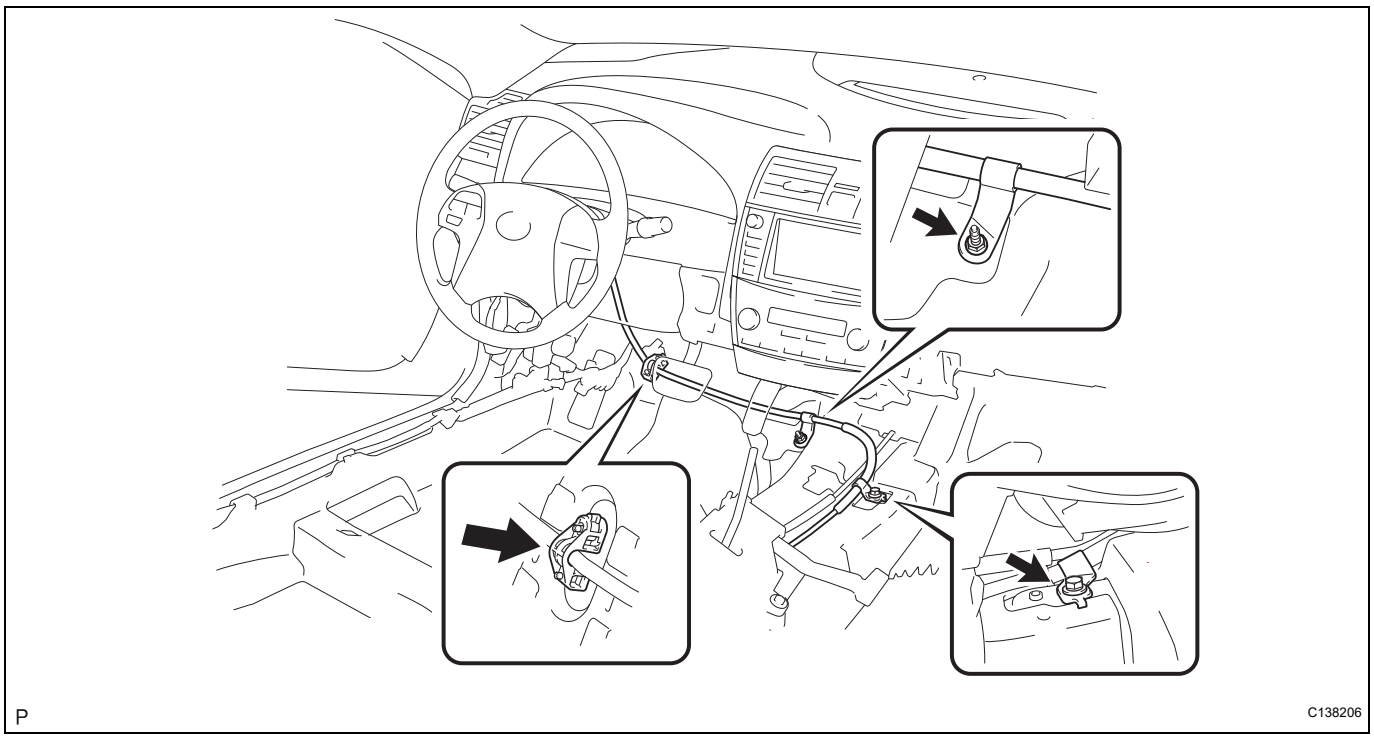
INSTALLATION

1. INSTALL PARKING BRAKE PEDAL ASSEMBLY

(a) Install the parking brake pedal assembly with the bolt and 2 nuts.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

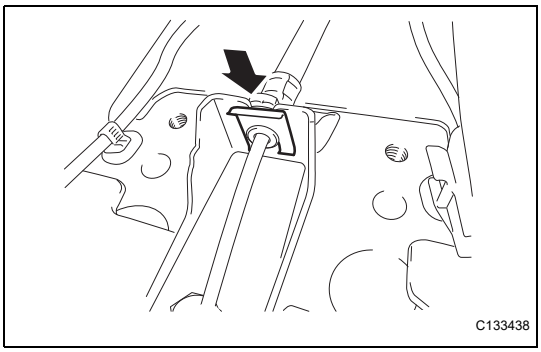
(b) Connect the parking brake switch connector.

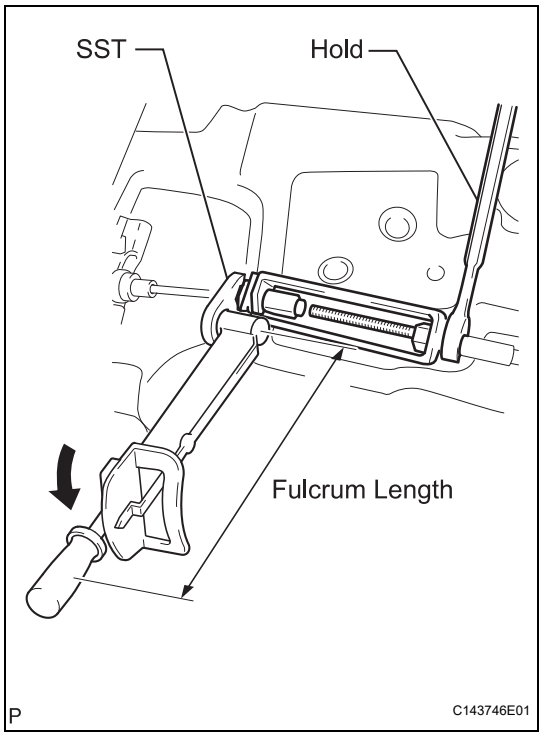
(c) Install the No. 1 parking brake cable assembly to the body with the bolt, the nut, and a new No. 1 parking brake cable clamp.



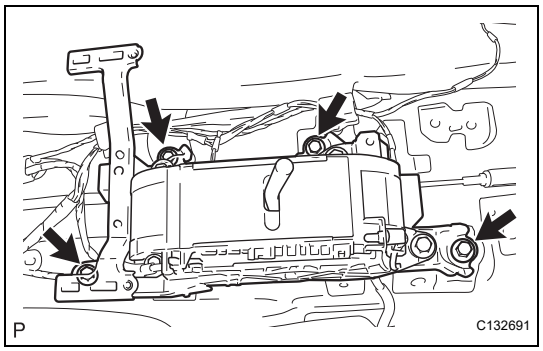
Torque: Bolt
15 N*m (153 kgf*cm, 11 ft.*lbf)
Nut
5.4 N*m (55 kgf*cm, 48 in.*lbf)

(d) Using a brass bar and a hammer, install the clip to the No. 1 parking brake cable assembly.





2. **CONNECT NO. 4 PARKING BRAKE CABLE ASSEMBLY**
   (a) Connect the No. 4 parking brake cable assembly to the No. 1 parking brake cable assembly.
   (b) Using SST and a wrench, hold the lock nut of the No. 1 parking brake cable and tighten the turnbuckle of the No. 4 parking brake cable.
   SST 09023-00101
   Torque: without SST
   5.4 N*m (55 kgf*cm, 48 in.*lbf)
   with SST
   5.0 N*m (51 kgf*cm, 44 in.*lbf)
   NOTICE:
   - **Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).**
   - **This torque is effective when SST is parallel to a torque wrench.**
3. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY (See page RS-424)**



4. **INSTALL FLOOR SHIFT LEVER ASSEMBLY**
   (a) Install the floor shift lever assembly with the 4 bolts.
   Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)
5. **INSTALL YAW RATE AND ACCELERATION SENSOR (See page BC-283)**
6. **INSTALL FLOOR CARPET BRACKET LH**
7. **INSTALL FLOOR CARPET BRACKET RH**
8. **INSTALL NO. 1 CONSOLE BOX DUCT (See page AC-204)**
9. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-30)**
10. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (See page IP-29)**
11. **INSTALL CONSOLE BOX ASSEMBLY (See page IP-30)**
12. **INSTALL CONSOLE BOX CARPET (See page IP-30)**
13. **INSTALL CONSOLE BOX POCKET (See page IP-30)**
14. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)**
15. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)**
16. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)**
17. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**

18. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
19. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)
20. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-33)
21. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-33)
22. INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-363)
23. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)
24. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)
25. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)
26. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)
27. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-42)
28. INSPECT PARKING BRAKE PEDAL TRAVEL (See page PB-1)
29. ADJUST PARKING BRAKE PEDAL TRAVEL (See page PB-1)
30. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
31. PERFORM INITIALIZATION
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)
32. INSPECT SRS WARNING LIGHT (See page RS-433)
33. INSPECT SENSOR SIGNAL (See page BC-284)

ON-VEHICLE INSPECTION

1. INSPECT STEERING WHEEL FREE PLAY

(a) Stop the vehicle and align the tires facing straight ahead.

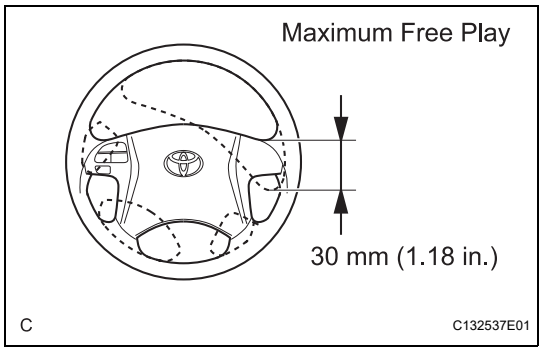
(b) Gently turn the steering wheel right and left by hand, and check the steering wheel free play.

Maximum free play:

30 mm (1.18 in.)

HINT:

If the free play exceeds the maximum, check the steering column, steering intermediate shaft, steering sliding yoke, or steering gear.



ADJUSTMENT

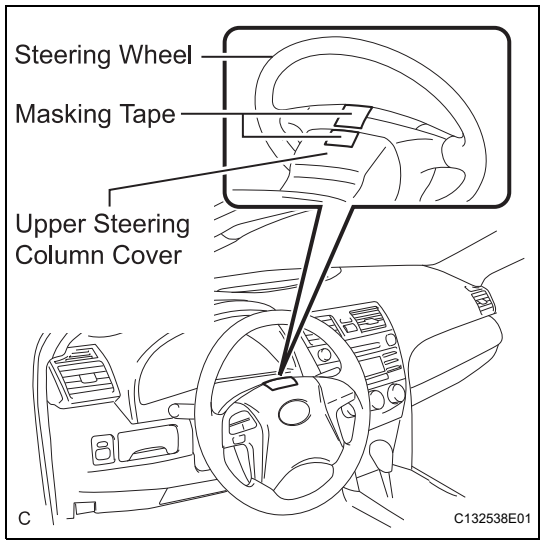
1. STEERING OFF CENTER ADJUSTMENT PROCEDURE

HINT:
This is the adjustment procedure for steering off center.

(a) Inspect steering wheel off center.

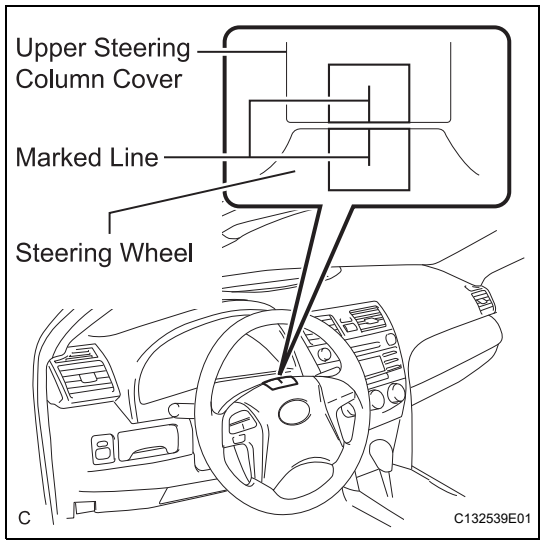
(1) Apply masking tape on the top center of the steering wheel and steering column upper cover.

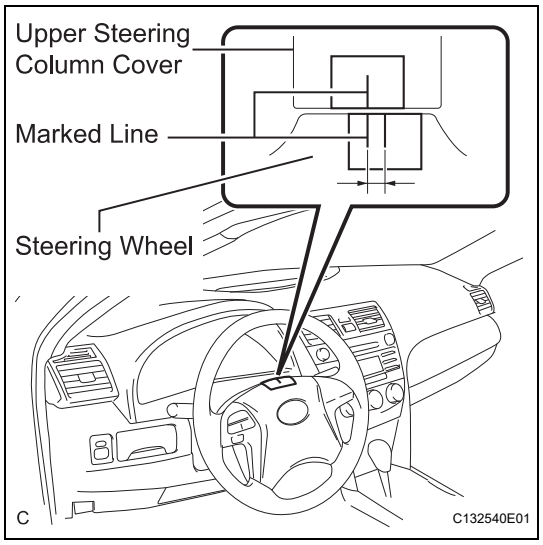
(2) Drive the vehicle in a straight line for 100 meters at a constant speed of 35 mph (56 km/h), and hold the steering wheel to maintain the course.



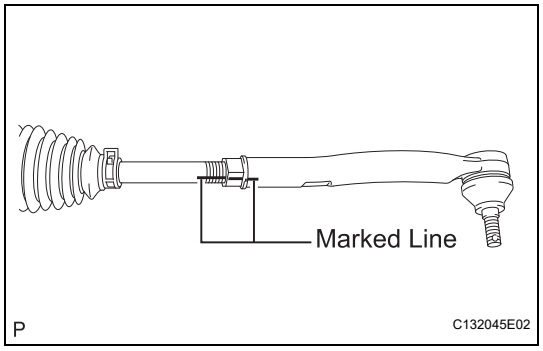
(3) Draw a line on the masking tape as shown in the illustration.

(4) Turn the steering wheel to the center position.
HINT:
Look at the upper surface of the steering wheel, steering spoke, and SRS airbag line to find the center position.

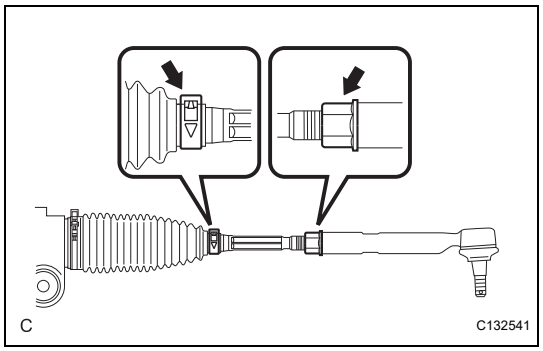




(5) Draw a new line on the masking tape on the steering wheel as shown in the illustration.
(6) Measure the distance between the 2 lines on the masking tape on the steering wheel.
(7) Convert the measured distance to steering angle.
HINT:
- Measured distance 1 mm (0.04 in.) = Steering angle of approximately 1 degree.
- Make a note of the steering angle.



(b) Adjust steering angle.
(1) Draw a line on the RH and LH tie rod ends and rack ends respectively where it can be easily seen.
(2) Using a paper gauge, measure the distance from the RH and LH tie rod ends to the rack end screws.
HINT:
- Measure both the RH and LH sides.
- Make a note of the measured values.



(3) Remove the RH and LH boot clips from the rack boots.
(4) Loosen the RH and LH lock nuts.
(5) Turn the RH and LH rack ends by the same amount (but in different directions) according to the steering angle.
HINT:
One 360 degree turn of the rack end (1.5 mm (0.059 in.) horizontal movement) equals to 12 degrees of steering angle.
(6) Tighten the RH and LH lock nuts to the specified torque.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
NOTICE:
Make sure that the difference in length between the RH and LH tie rod ends and rack end screws is 1.5 mm (0.059 in.) or less.
(7) Install the RH and LH boot clips.

ON-VEHICLE INSPECTION

1. **CHECK STEERING EFFORT (TORQUE)**

NOTICE:

Some service operations affect the SRS airbags. Be sure to read the precautionary notice for the SRS airbags before servicing (See page RS-1).

(a) Stop the vehicle on a level, paved surface and align the wheels straight ahead.

(b) Disconnect the cable from the negative (-) battery terminal.

CAUTION:

Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.

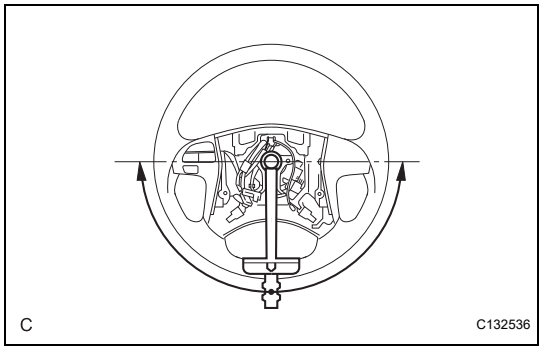
(c) Remove the steering pad (See page RS-344).

(d) Connect the cable to the negative (-) battery terminal.

(e) Using a torque wrench, check if the steering wheel set nut is properly tightened.

Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)

(f) Turn the power switch on (READY) so that the power steering is available.



(g) Turn the steering wheel 90 degrees to the right and check steering effort (torque) while turning. Check in the opposite direction using the same manner.

Steering effort (Reference):

6.0 N*m (60 kgf*cm, 53 in.*lbf) or less

Inspect the power steering system if the value is not within the specified range (See page PS-1).

(h) Align the front wheels straight ahead.

(i) Disconnect the cable from the negative (-) battery terminal.

(j) Install the steering pad (See page RS-346).

(k) Connect the cable to the negative (-) battery terminal.

(l) Clear the DTCs (See page RS-41).

(m) Perform initialization.

NOTICE:

Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43).

(n) Inspect the airbag warning light (See Page RS-33).

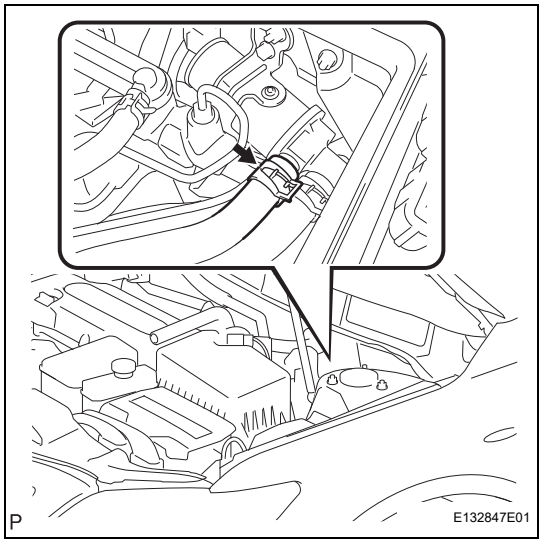
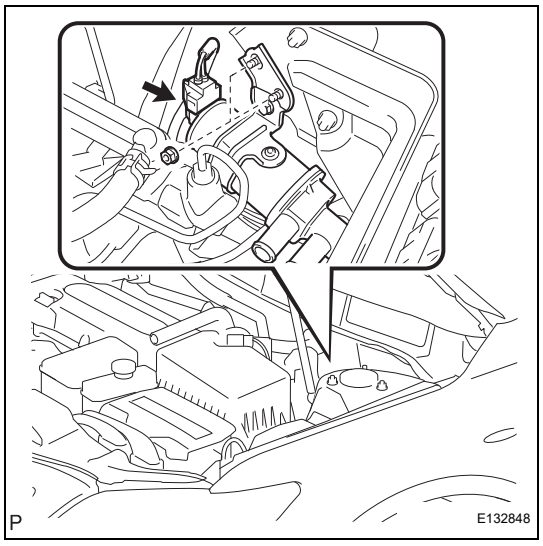
REMOVAL

1. **SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-27)**
2. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
3. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
4. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
5. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
6. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
7. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
8. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-403)**
9. **REMOVE HEATER WATER OUTLET HOSE**
   (a) Using pliers, grip the claws of the clip and slide the clip to disconnect the heater water outlet hose.

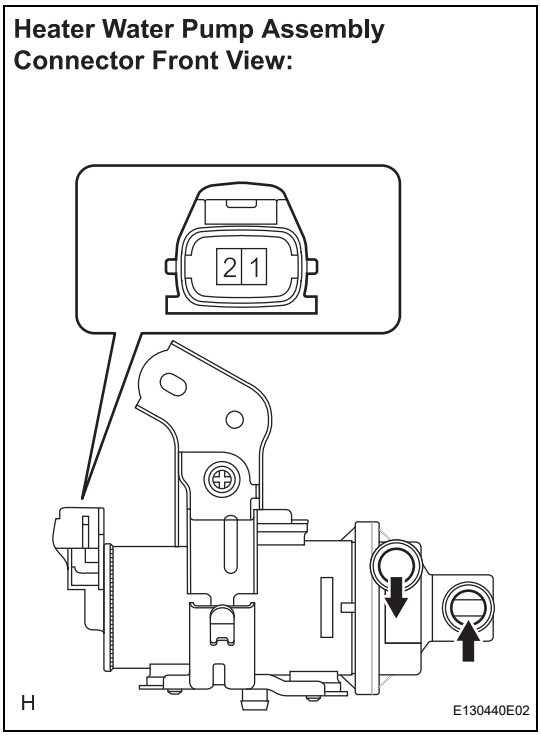


10. **REMOVE HEATER WATER INLET HOSE**
    HINT:
    Disconnection procedure for the heater water inlet hose is the same as that for the heater water outlet hose.
11. **REMOVE HEATER WATER PUMP**
    (a) Disconnect the connector.
    (b) Remove the 2 nuts and heater water pump.



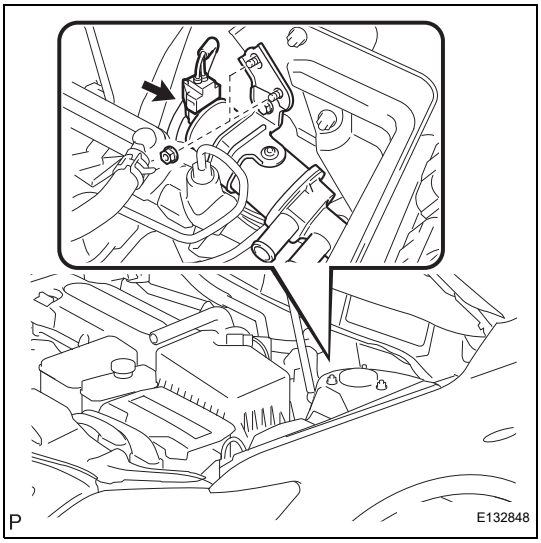
AC

Heater Water Pump Assembly Connector Front View:



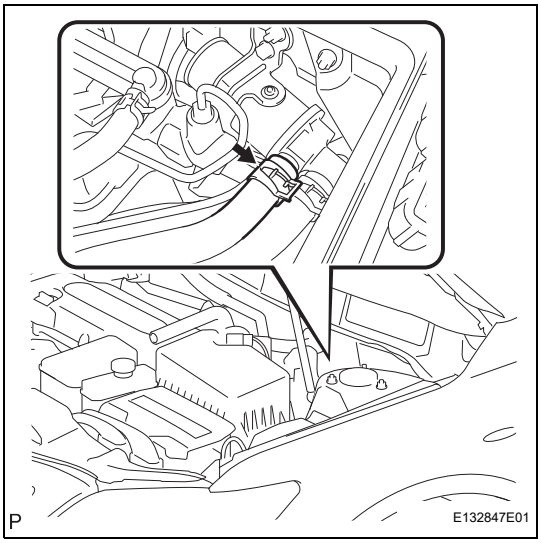
INSPECTION

1. **INSPECT HEATER WATER PUMP ASSEMBLY**
   (a) Connect the positive (+) lead terminal 1 of the heater water pump assembly connector and the negative (-) lead to terminal 2.
   OK:
   Heater water pump operates smoothly.
   NOTICE:
   Complete operation within 10 seconds if there is no water in the heater water pump assembly.
   If the result is not as specified, replace the heater water pump assembly.



INSTALLATION

1. **INSTALL HEATER WATER PUMP**
   (a) Install the heater water pump with the 2 nuts.
   Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
   (b) Connect the connector.
2. **INSTALL HEATER WATER INLET HOSE**
   (a) Install the water hose and attach the clip.



3. **INSTALL HEATER WATER OUTLET HOSE**
   (a) Install the water hose and attach the clip.
4. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-405)**
5. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-13)**
6. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)**
7. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)**
8. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)**
9. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)**

10. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)**
11. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-33)**

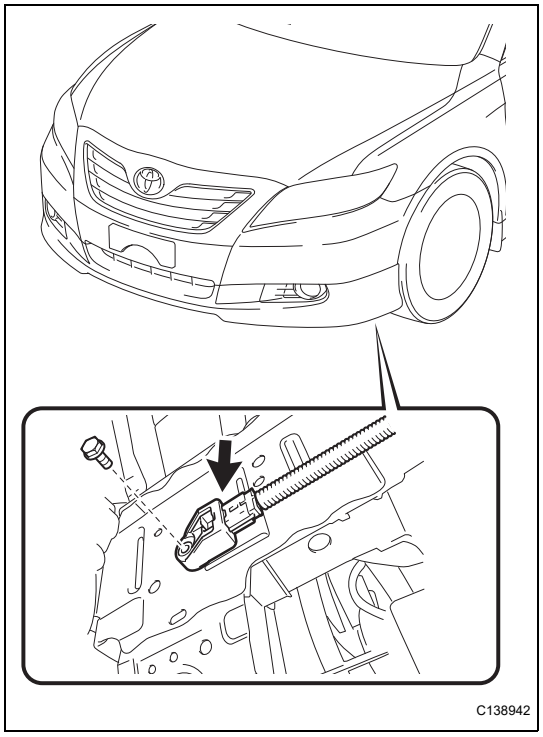
REMOVAL

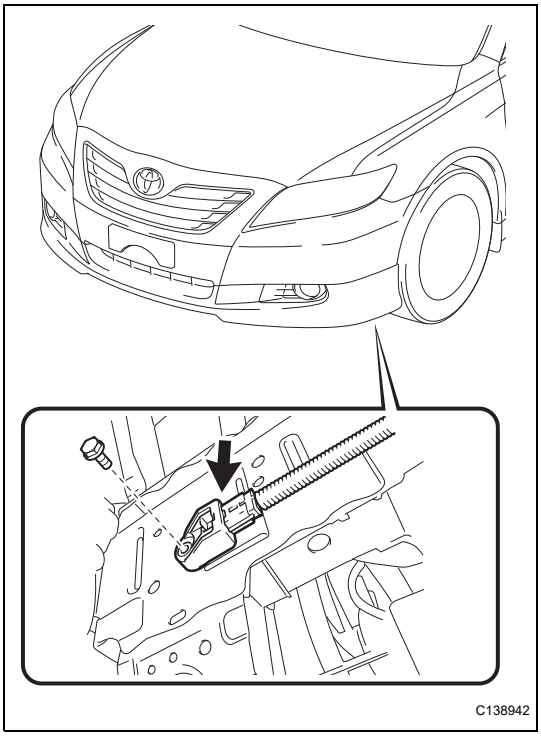
HINT:
- Use the same procedure for the RH side and the LH side.
- The procedure listed below are for the LH side.

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE ENGINE UNDER COVER LH**
5. **REMOVE FRONT AIRBAG SENSOR**
   (a) Remove the bolt and front airbag sensor from the body.
   (b) Disconnect the connector from the front airbag sensor.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.



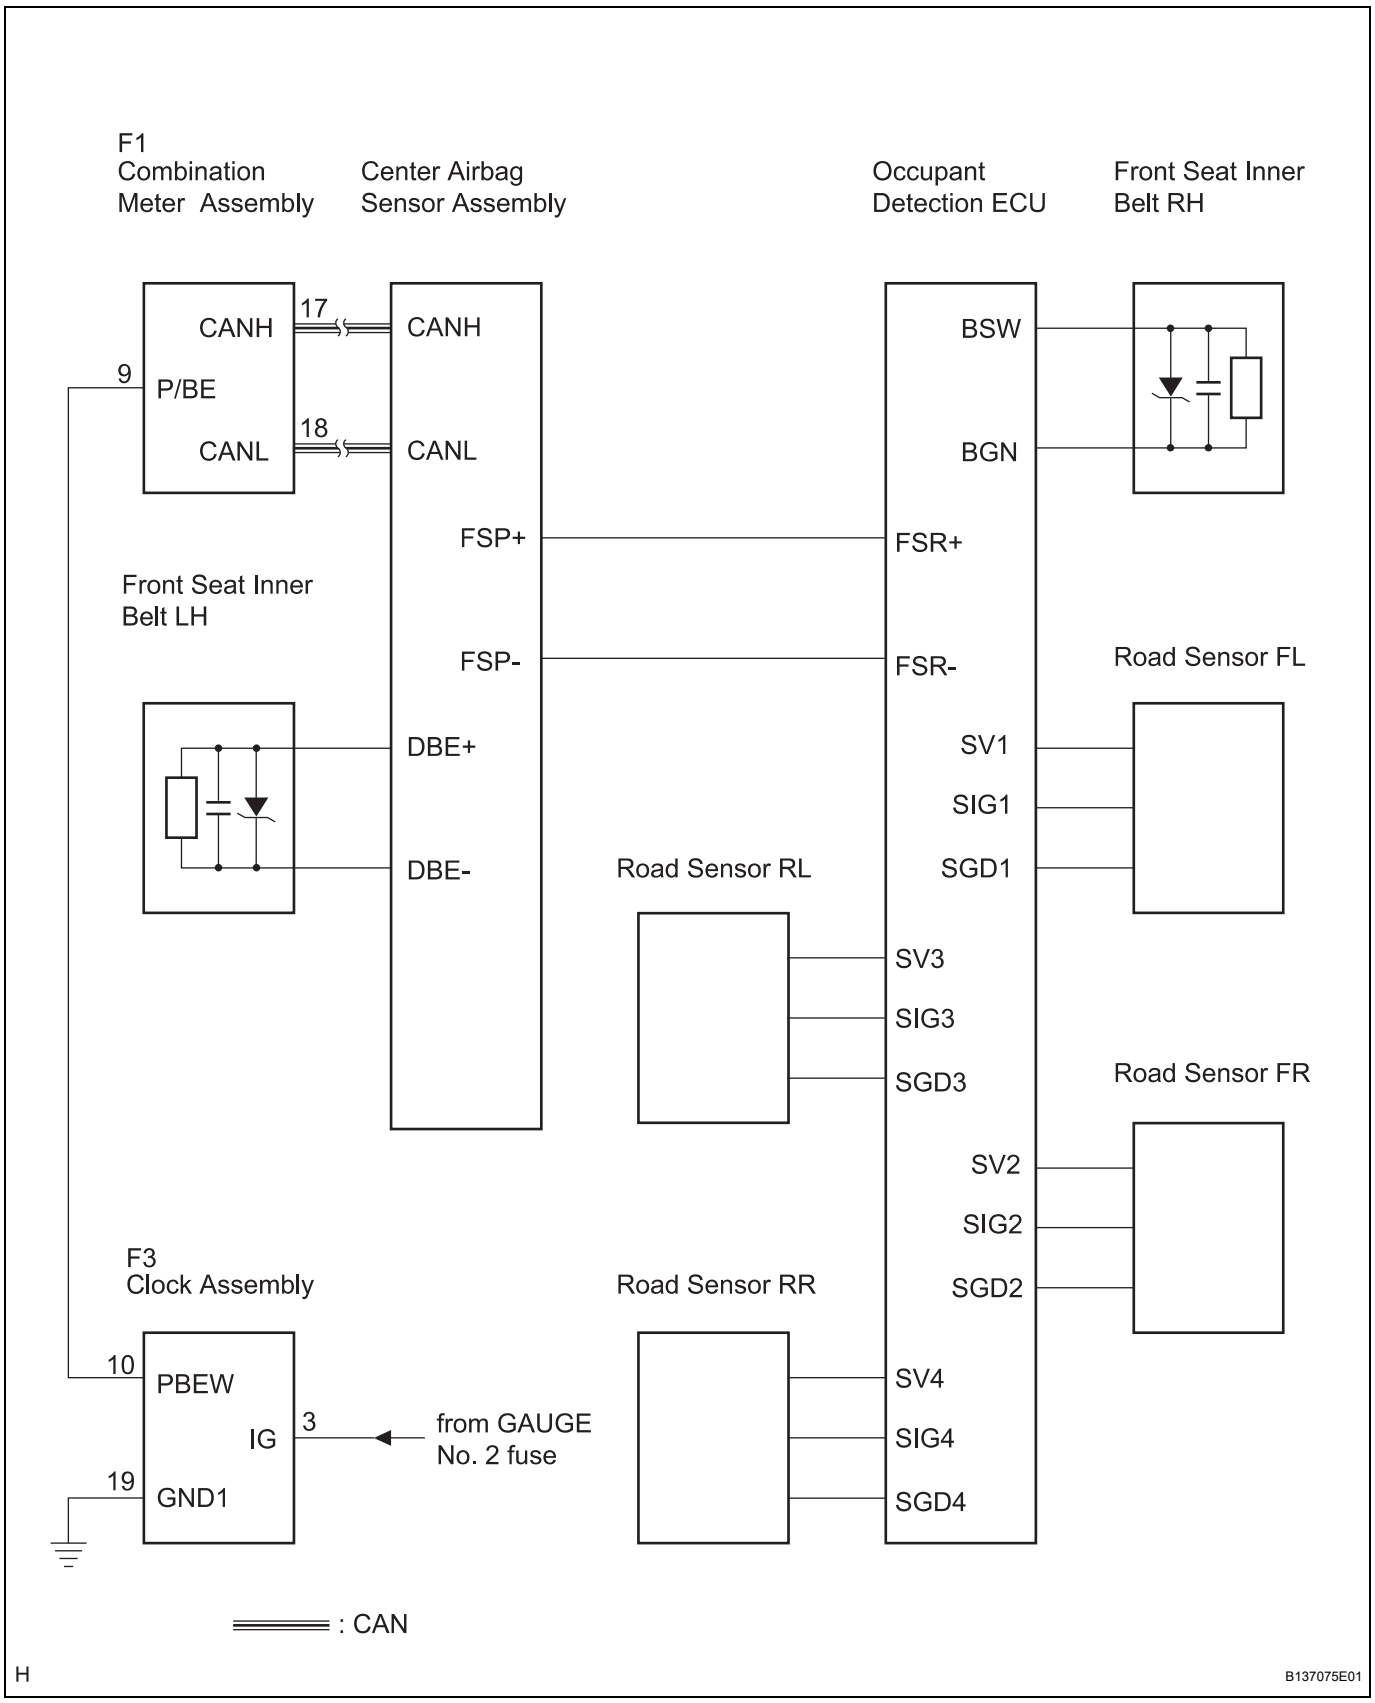
C138942

INSTALLATION



1. **INSTALL FRONT AIRBAG SENSOR**
   (a) Check that the power switch is turned off.
   (b) Check that the battery negative (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
   (c) Connect the connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.
   (d) Install the front airbag sensor with the bolt.
   Torque: 17.5 N*m (179 kgf*cm, 13 ft.*lbf)
   NOTICE:
   - **If the front airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the front airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**
   (e) Check that there is no looseness in the installation parts of the front airbag sensor.
2. **INSTALL ENGINE UNDER COVER LH**
3. **INSTALL ENGINE UNDER COVER RH**
4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
5. **PERFORM INITIALIZATION**
   (a) Perform initialization (See page IN-43).
   NOTICE:
   Some systems need initialization after reconnecting the cable to the negative battery terminal.
6. **INSPECT SRS WARNING LIGHT**
   (a) Inspect the SRS warning light (See page RS-33).

SYSTEM DIAGRAM



SB

SYSTEM DESCRIPTION

1. Driver seat belt warning light

(a) When the driver seat belt is not fastened with the power switch in the ON position, the driver seat belt warning light on the combination meter assembly comes on to inform the driver. The center airbag assembly detects the driver seat belt condition and sends signals to the body ECU and the meter assembly via CAN communication.

2. Passenger seat belt warning

(a) When the passenger seat belt is not fastened with the ignition switch in the ON position and the passenger seat occupied, check that the passenger seat belt warning light on the clock display blinks. The occupant detection sensor detects if the passenger seat is occupied and sends signals to the meter assembly. The inner belt detects the passenger seat belt condition and sends signals to the meter assembly. After receiving the signals from the occupant detection sensor and inner belt, the meter assembly sends signals to the clock assembly to request the passenger seat belt warning light to blink or go off.

SYSTEM DIAGRAM

Communication Table:

Sender	Receiver	Signal	Line
Hybrid Vehicle Control ECU	Combination Meter ECU	CRUISE main indicator operation signal	CAN

SYSTEM DESCRIPTION

1. CRUISE CONTROL SYSTEM

The cruise control system maintains constant vehicle speed. It enables the driver to adjust the vehicle speed by operating the cruise control main switch without using the accelerator pedal.

The hybrid vehicle control ECU receivers signals from each switch and sensor, and maintains constant vehicle speed by optimizing the use of the engine and motor driving force.

- The hybrid vehicle control ECU receives signals such as ON-OFF, - (COAST)/SET, + (ACCEL)/RES (RESUME), and CANCEL from the cruise control main switch and executes the appropriate command.
- The hybrid vehicle control ECU illuminates the combination meter's CRUISE main indicator light when it receives a cruise control main switch ON signal.
- The hybrid vehicle control ECU cancels the cruise control system when the brake pedal is depressed and the hybrid vehicle control ECU receives a stop light switch signal.
- The hybrid vehicle control ECU receives a park/ neutral position switch signal and cancels the cruise control system when the shift lever is moved from the D to the N or B position.

2. LIMIT CONTROL

(a) Low speed limit

The lowest possible limit of the speed setting range is approximately 40 km/h (25 mph). The cruise control system cannot be set when the driving vehicle speed is below the low speed limit. Cruise control operation will be automatically canceled but the stored vehicle speed will be retained when the vehicle speed drops below the low speed limit 40 km/h (25 mph) while the cruise control is in operation.

(b) High speed limit

The highest possible limit of the speed setting range is approximately 200 km/h (125 mph). The cruise control system cannot be set when the driving vehicle speed exceeds the high speed limit. Also, + (ACCEL)/RES (RESUME) cannot be used to increase speed beyond the high speed limit.

3. OPERATION OF CRUISE CONTROL

The cruise control main switch operates 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in the direction of each arrow and turns off after releasing it.

(a) SET CONTROL

The vehicle speed is stored and constant speed control is maintained when pushing the cruise control main switch to - (COAST)/SET while driving with the main switch on (the CRUISE main indicator light is on), and the vehicle speed is within the set speed range (between the low and high speed limits).

(b) - (COAST) CONTROL

The hybrid vehicle control ECU decreases the cruise control demand speed and controls the engine and motor driving force to decelerate the vehicle when -/SET on the cruise control main switch is pressed and held while the cruise control system is in operation. When the cruise control main switch is released from -/SET, vehicle speed is stored and constant speed control is maintained.

(c) TAP-DOWN CONTROL

When tapping down the cruise control main switch to - (COAST)/SET (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed decreases by approximately 1.6 km/h (1.0 mph) at each tap. When the cruise control main switch is released from - (COAST)/SET and the difference between the driving and stored vehicle speed is more than 5 km/h (approximately 3 mph), the driving vehicle speed is stored and constant speed control is maintained.

(d) ACCELERATION CONTROL

The hybrid vehicle control ECU increases the cruise control demand speed and controls the engine and motor driving force to accelerate the vehicle when +/RES on the cruise control main switch is pressed and held while the cruise control system is in operation.

When the cruise control main switch is released from +/RES, vehicle speed is stored and constant speed control is maintained.

(e) TAP-UP CONTROL
When tapping up the cruise control main switch to + (ACCEL)/RES (RESUME) (for approximately 0.6 seconds) while the cruise control system is in operation, the stored vehicle speed increases by approximately 1.6 km/h (1.0 mph) at each tap. However, when the difference between the driving and the stored vehicle speed is more than 5 km/h (approximately 3 mph), the stored vehicle speed will not be changed.

(f) RESUME CONTROL
If cruise control operation was canceled under any of the manual cancel conditions (other than turning the cruise control main switch off), and if the driving speed is above the low speed limit, pushing the cruise control main switch to + (ACCEL)/RES (RESUME) restores the vehicle speed memorized at the time of cancellation, and maintains constant speed control.

(g) MANUAL CANCEL CONTROL
Performing any of the following will cancel the cruise control system while in operation (the stored vehicle speed in the hybrid vehicle control ECU will be maintained).

- Pulling the cruise control main switch to CANCEL
- Depressing the brake pedal
- Moving the shift lever from the D to the N or B position.
- Turning the cruise control main switch off (the stored vehicle speed in the hybrid vehicle control ECU will not be maintained).

4. AUTO CANCEL (FAIL-SAFE)
This system has an automatic cancellation function (fail-safe) (See page CC-17).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the cruise control system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 PROBLEM SYMPTOM CONFIRMATION

NEXT

3 CHECK CAN COMMUNICATION SYSTEM*

Refer to PRECAUTION (See page CA-1).

(a) Check for output DTCs.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

HINT:

The hybrid vehicle control ECU of this system is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

B → **PROCEED TO "CAN COMMUNICATION SYSTEM"**

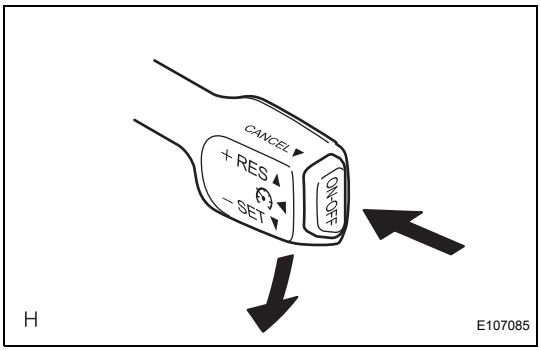
ROAD TEST

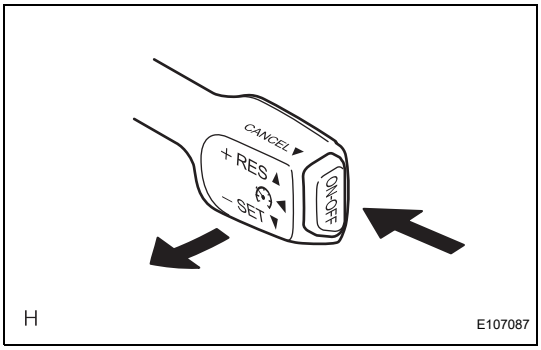
1. PROBLEM SYMPTOM CONFIRMATION

(a) Inspect the SET function.
  (1) Turn the cruise control main switch on.
  (2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).
  (3) Push the cruise control main switch to - (COAST)/SET.
  (4) After releasing the switch, check that the vehicle cruises at the set speed.

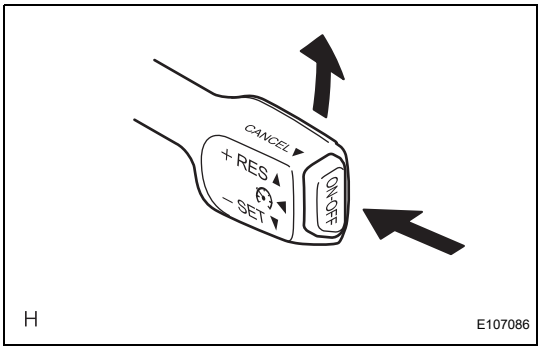
(b) Inspect the + (ACCEL) function.
  (1) Turn the cruise control main switch on.
  (2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).
  (3) Push the cruise control main switch to - (COAST)/SET.
  (4) Check that vehicle speed increases while the cruise control main switch is pushed to + (ACCEL)/RES (RESUME), and that the vehicle cruises at the newly set speed when the switch is released.
  (5) Push the cruise control main switch to + (ACCEL)/RES (RESUME) and then release it immediately. Check that vehicle speed increases by approximately 1.6 km/h (1.0 mph) (tap-up control).



(c) Inspect the - (COAST) function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) Check that vehicle speed decreases while the cruise control main switch is pushed to - (COAST)/SET, and the vehicle cruises at the newly set speed when the switch is released.
(5) Push the cruise control main switch to - (COAST)/SET, and then release it immediately. Check that vehicle speed decreases by approximately 1.6 km/h (1.0 mph) (tap-down control).



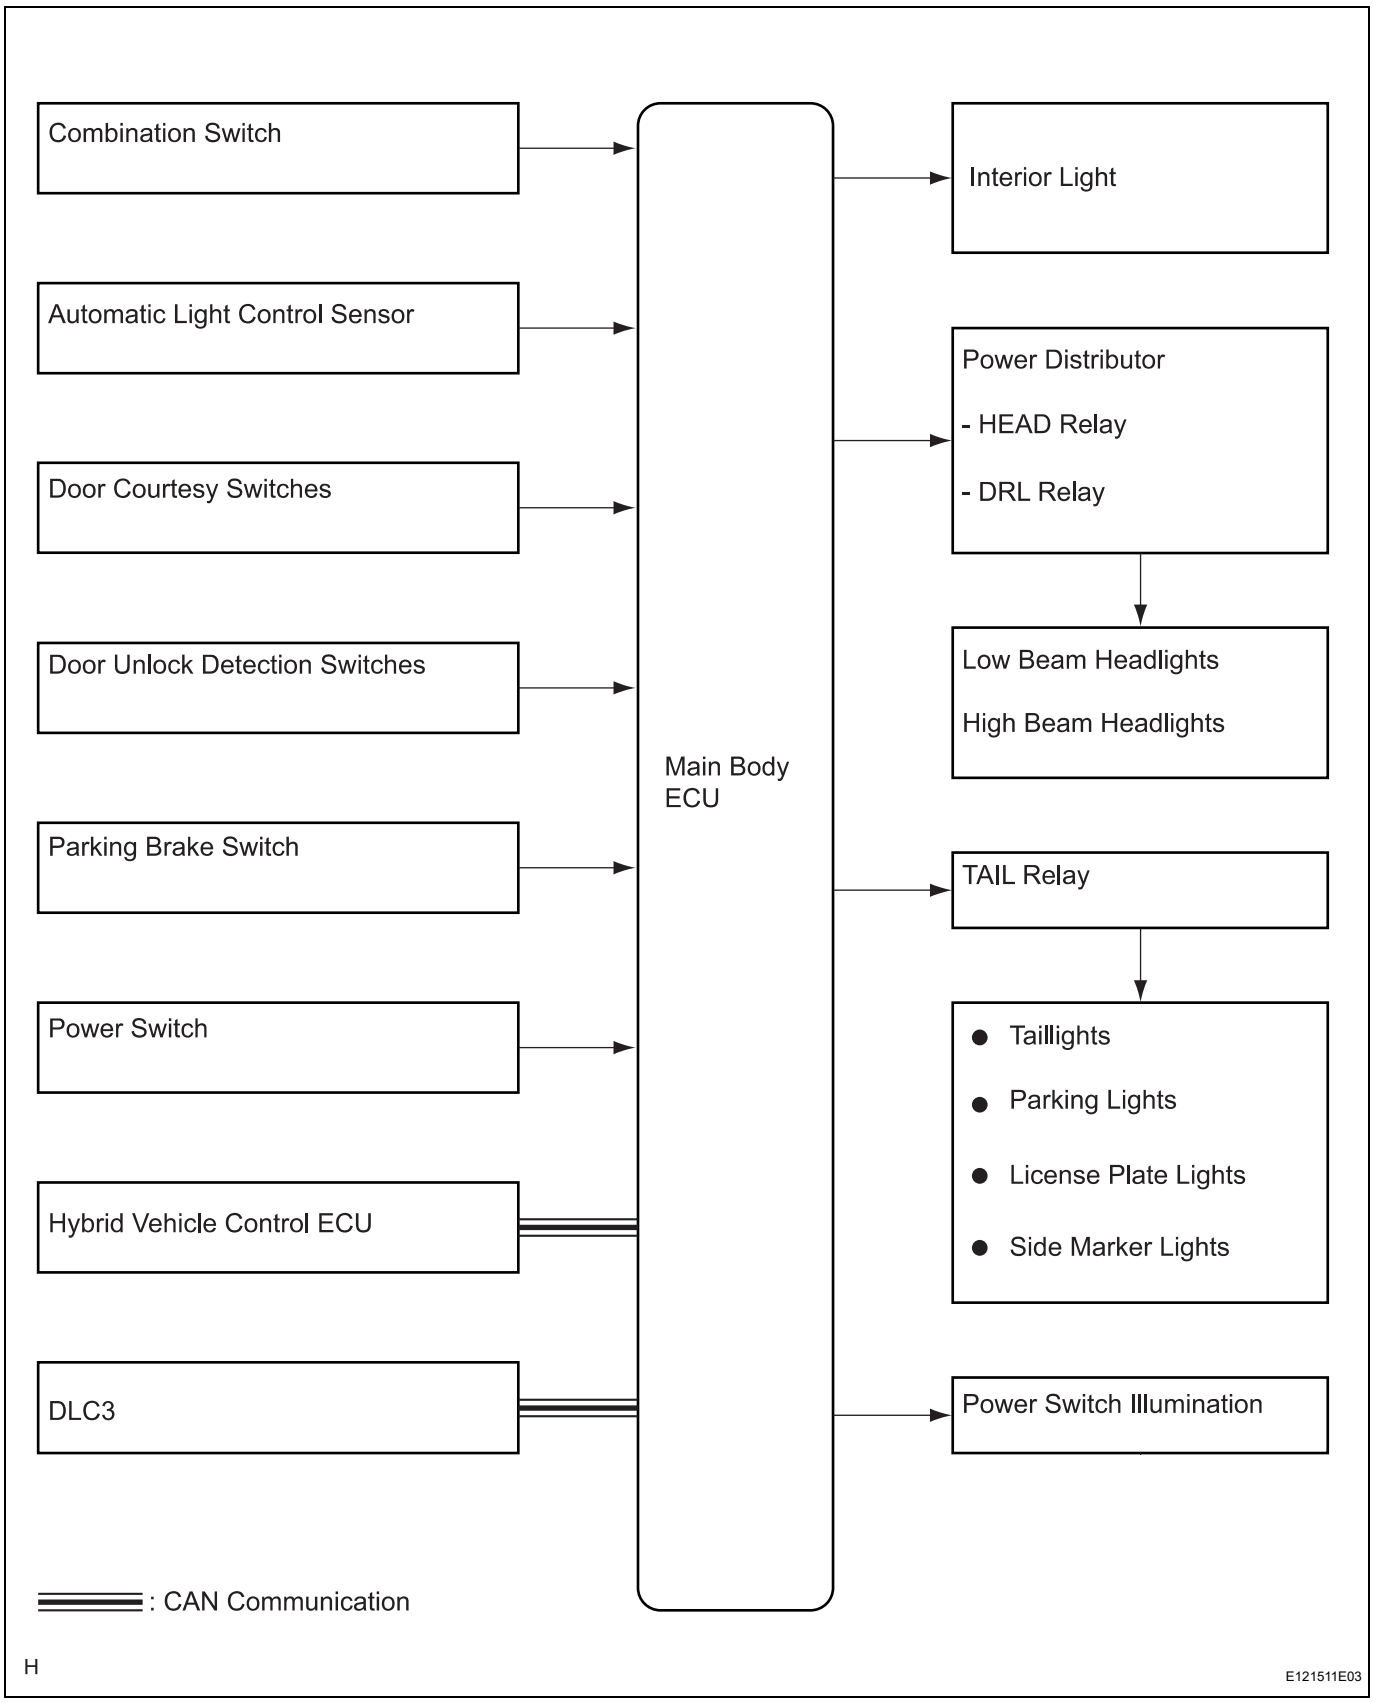
(d) Inspect the CANCEL function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) When performing any one of the following, check that the cruise control system is canceled and that the normal driving mode is reset.
- Pulling the cruise control main switch to CANCEL
- Depressing the brake pedal
- The shift lever is moved from the D to the N or B position.
- Turning the cruise control main switch off



(e) Inspect the RES (RESUME) function.
(1) Turn the cruise control main switch on.
(2) Drive at the required speed between 40 km/h (25 mph) and 200 km/h (125 mph).
(3) Push the cruise control main switch to - (COAST)/SET.
(4) Cancel the cruise control system by performing any of the above operations (other than turning the main switch off).
(5) After pushing the cruise control main switch to + (ACCEL)/RES (RESUME) at a driving speed of more than 40 km/h (25 mph), check that the vehicle resumes the speed set prior to the cancellation.

CC

SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. MANUAL LIGHT CONTROL SYSTEM

This system functions if the lights such as the headlights and taillights come on by manual operation of the light control switch.

(a) The main body ECU controls this system based on the signals listed below.

Input	Output	Lights that illuminate
Light control switch TAIL signal	Taillight relay drive signal	• Taillights • License plate lights • Side marker lights • Parking lights
Light control switch HEAD signal	Headlight relay drive signal	Low beam headlights

2. AUTOMATIC LIGHT CONTROL SYSTEM

When the light control switch is in the AUTO position, the automatic light control sensor detects ambient light, converts it into an electrical signal, and outputs it to the main body ECU. The main body ECU automatically turns the headlights and taillights on or off according to the signal.

(a) The main body ECU controls this system based on the signals listed below.

Input	Output	Lights that illuminate
• Light control switch AUTO signal • Automatic light control sensor signal	• Headlight relay drive signal • Taillight relay drive signal	• Low beam headlights • Taillights • License plate lights • Side marker lights • Parking lights

3. LIGHT AUTO TURN OFF SYSTEM

When the headlights and taillights are on through the operation of the automatic light control system or through the light control switch, if the power switch is turned off and all doors are closed, this system continues to illuminate the headlights and taillights for approximately 30 seconds, and then turns off the headlights and taillights.

However, if the power switch is turned off and all doors are locked, this system turns off the headlights and taillights immediately.

(a) The main body ECU controls this system based on the signals listed below.

Input	Output	Lights that operate
• Door courtesy switch signal • Power switch signal	• Headlight relay OFF demand • Taillight relay OFF demand • DRL relay OFF demand	• Low beam headlights • Taillights, license plate lights, parking lights, and side marker lights • High beam headlights

4. DAYTIME RUNNING LIGHT SYSTEM

This function is designed to automatically illuminate the headlights (dimmed HI beams), during the daytime to make the car more visible to other vehicles.

- The main body ECU and power distributor control this system. The main body ECU transmits a turn ON signal to the power distributor and the power distributor illuminates the HI beams using a duty control.
- This system is enabled when the conditions given below are met:
  - Power switch is on (IG).
  - READY condition signal is received.
  - Light control switch is in OFF*, TAIL or AUTO position (if headlight-on control is not being performed by the automatic light control).
    HINT:
    *: only for Canadian package models.
  - Parking brake switch is OFF.

5. ILLUMINATED ENTRY SYSTEM

When a door is unlocked through a key or transmitter operation, or if a door is opened, the illuminated entry system turns on the interior light and the power switch illumination.

(a) The main body ECU controls this system. The operation and condition of the illuminated entry system are described below.

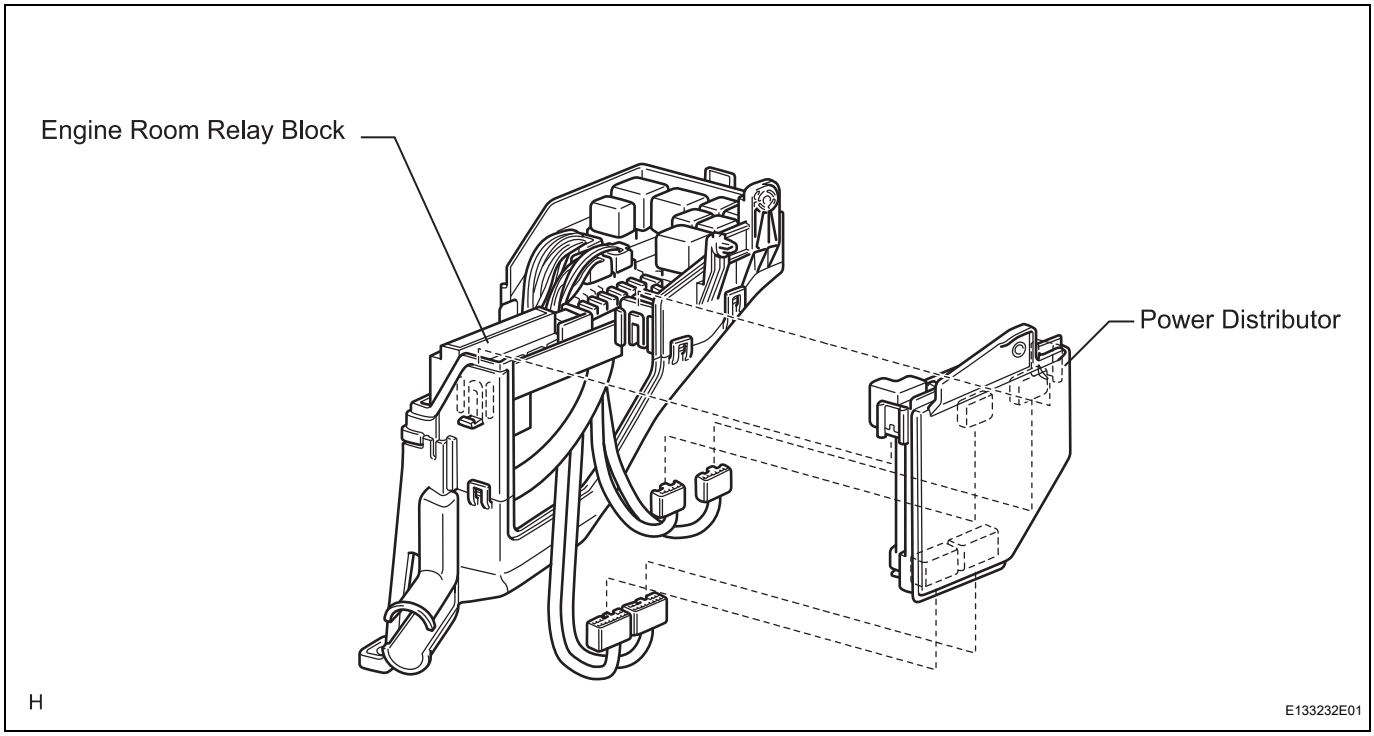
Operation	Condition
Fade in	When any of the following conditions is met, the interior light and power switch illumination fade in. • Any door is opened. • Any door is unlocked when the power switch is off and all doors are closed. • Power switch is turned from on (ACC) to off when all doors are closed.
Fade out immediately	When either of the following conditions is met, the interior light and ignition key cylinder light fade out immediately. • Power switch is turned from off to on (ACC or IG) when all doors are closed. • All doors are locked when the power switch is off.
Illuminate for approximately 15 seconds, and then fade out	All doors are closed when the power switch is off.
Fade out (Battery saving)	When the following conditions are met, the interior light and power switch illumination fade out. • A key is not in the actuation area (with smart key system). • There are no changes in the condition of the doors for 20 minutes.

6. POWER DISTRIBUTOR

(a) General

- The power distributor is built into the engine room relay block, and uses a small mechanical relay and semiconductor relay for a compact and lightweight design.
- The power distributor has a headlight control function. This function dims the high beam headlights in accordance with operation signals from the main body ECU while the daytime running light system is operating.
- The power distributor dims the high beam headlights using a duty control.

- When a short circuit occurs between the power distributor and high beam headlight bulb, a fail-safe function operates to stop the DRL relay operation.



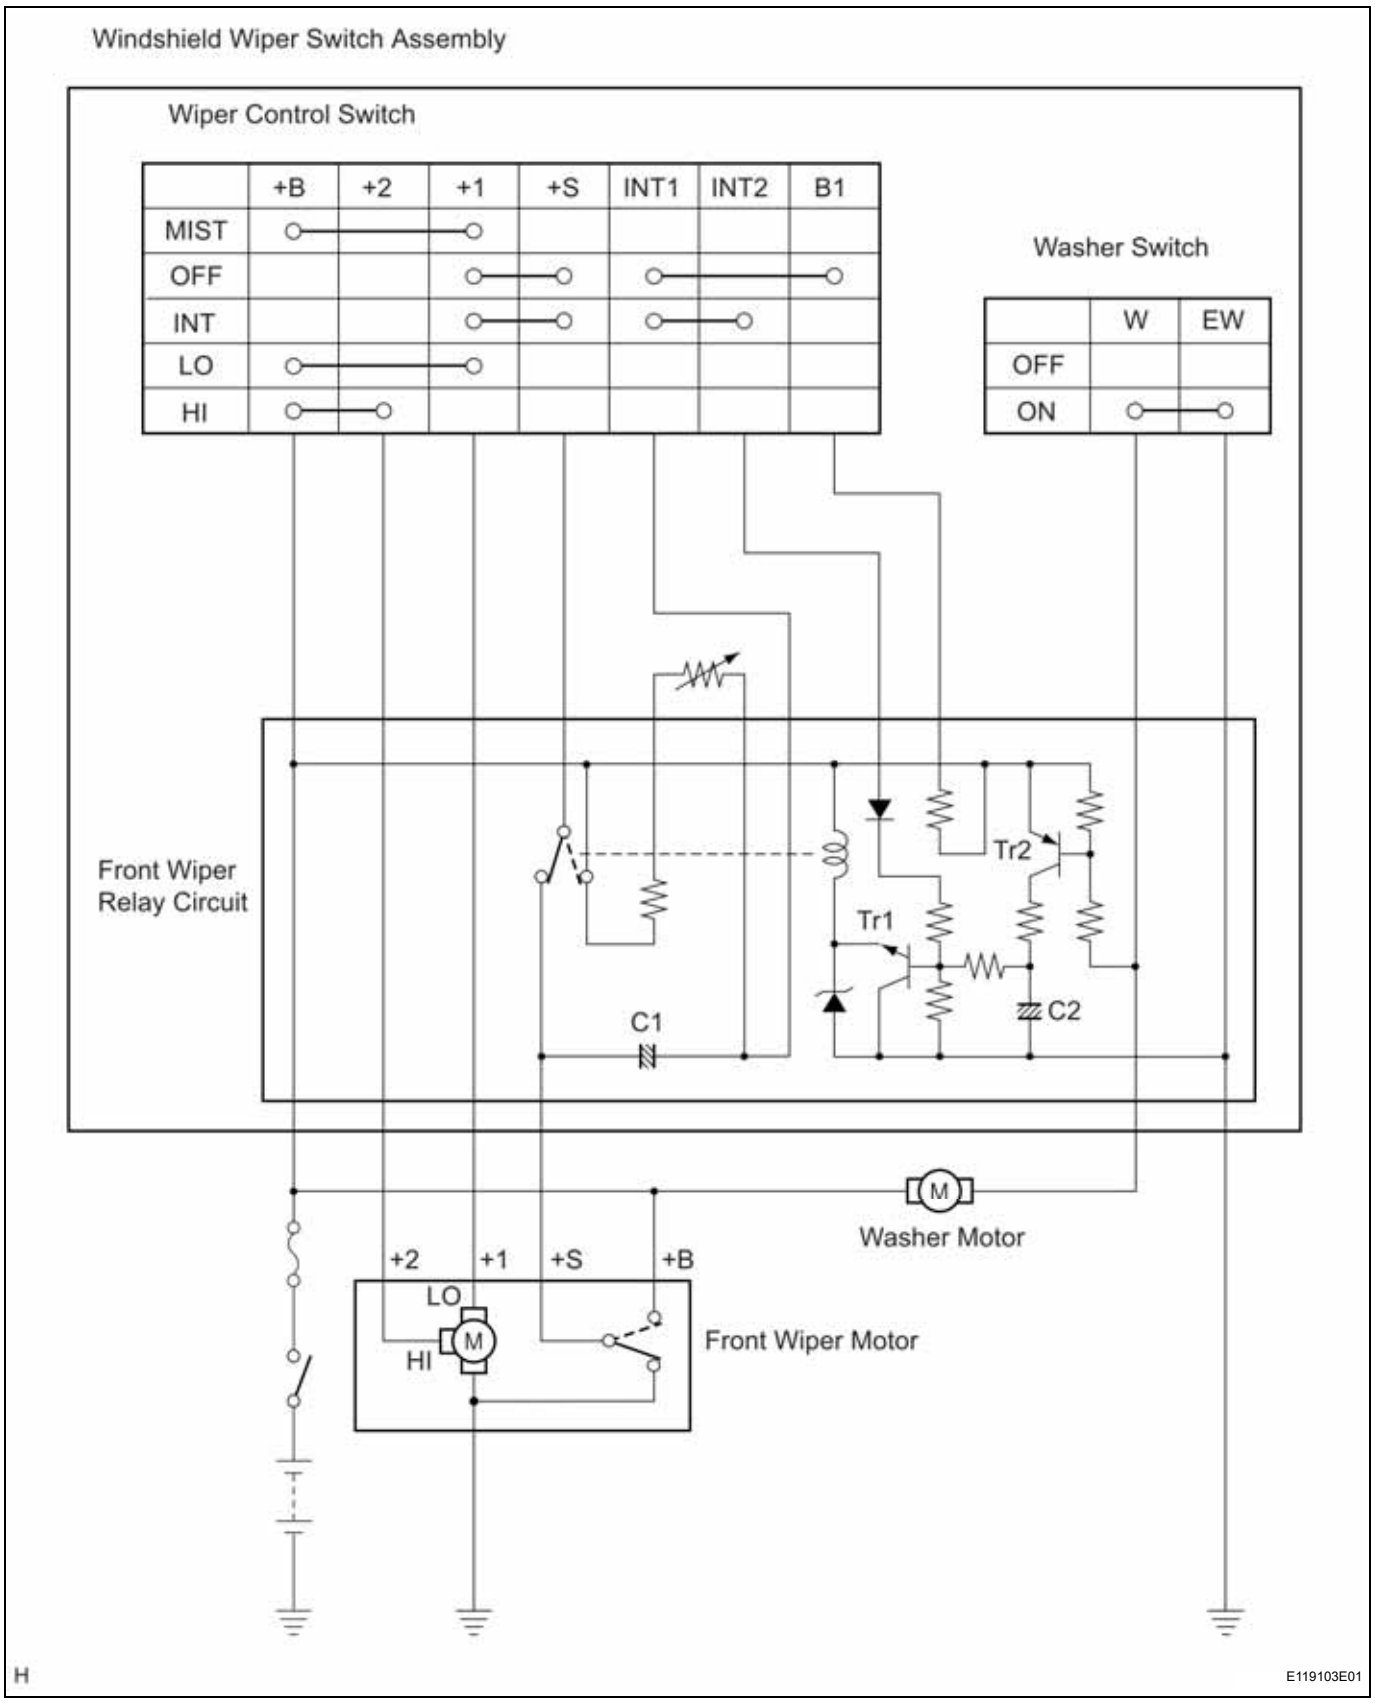
(b) The components of the power distributor are shown below.

Component	Relay
Mechanical Relay	• Horn Relay • A/F Relay • Security Horn Relay • EFI Relay • Circuit Opening Relay • Headlight Relay RH • Headlight Relay LH
Semiconductor Relay	• Daytime Running Light Relay

INSTALLATION

1. **INSTALL VANITY LIGHT ASSEMBLY (See page IR-29)**

SYSTEM DIAGRAM



SYSTEM DESCRIPTION

1. WASHER LINKED OPERATION

(a) This system operates the front wipers at a low speed immediately after a jet of washer fluid when the front washer switch is turned on for approximately 0.3 seconds or more. If the switch is turned off within approximately 1.5 seconds, the system stops the wipers when the switch is turned off. If the switch is turned on for approximately 1.5 seconds or more, the system stops the wipers approximately 2.2 seconds after the switch is turned off.

2. INTERMITTENT OPERATION

(a) The system operates the front wipers once in approximately 1.6 to 10.7 seconds when the front wiper switch is turned to the INT position. The intermittent time can be adjusted between 1.6 and 10.7 seconds.

(b) If the wiper control switch is turned to the INT position, current flows from the already charged capacitor C1 to Tr1 (transistor) through terminals INT1 and INT2 of the wiper control switch. When Tr1 turns on, current flows from terminal +S of the wiper control switch to terminal +1 of the wiper control switch, to terminal +1 of the wiper motor, to the wiper motor and finally to the ground, causing the wiper motor to operate. At the same time, current flows from capacitor C1 to terminal INT1 of the wiper control switch and then INT2. When the current flow from capacitor C1 ends, Tr1 turns off to stop the relay contact point and halt the wiper motor. When the relay contact point turns off, capacitor C1 begins to charge again and Tr1 remains off until charging has been completed. This period corresponds to the intermittent time. When capacitor C1 is fully charged, Tr1 turns on and then the relay contact point activates, causing the motor to operate. This cycle is the intermittent operation. The intermittent time can be adjusted by using the intermittent time adjust dial (variable resistor) to change the charge time of capacitor C1.

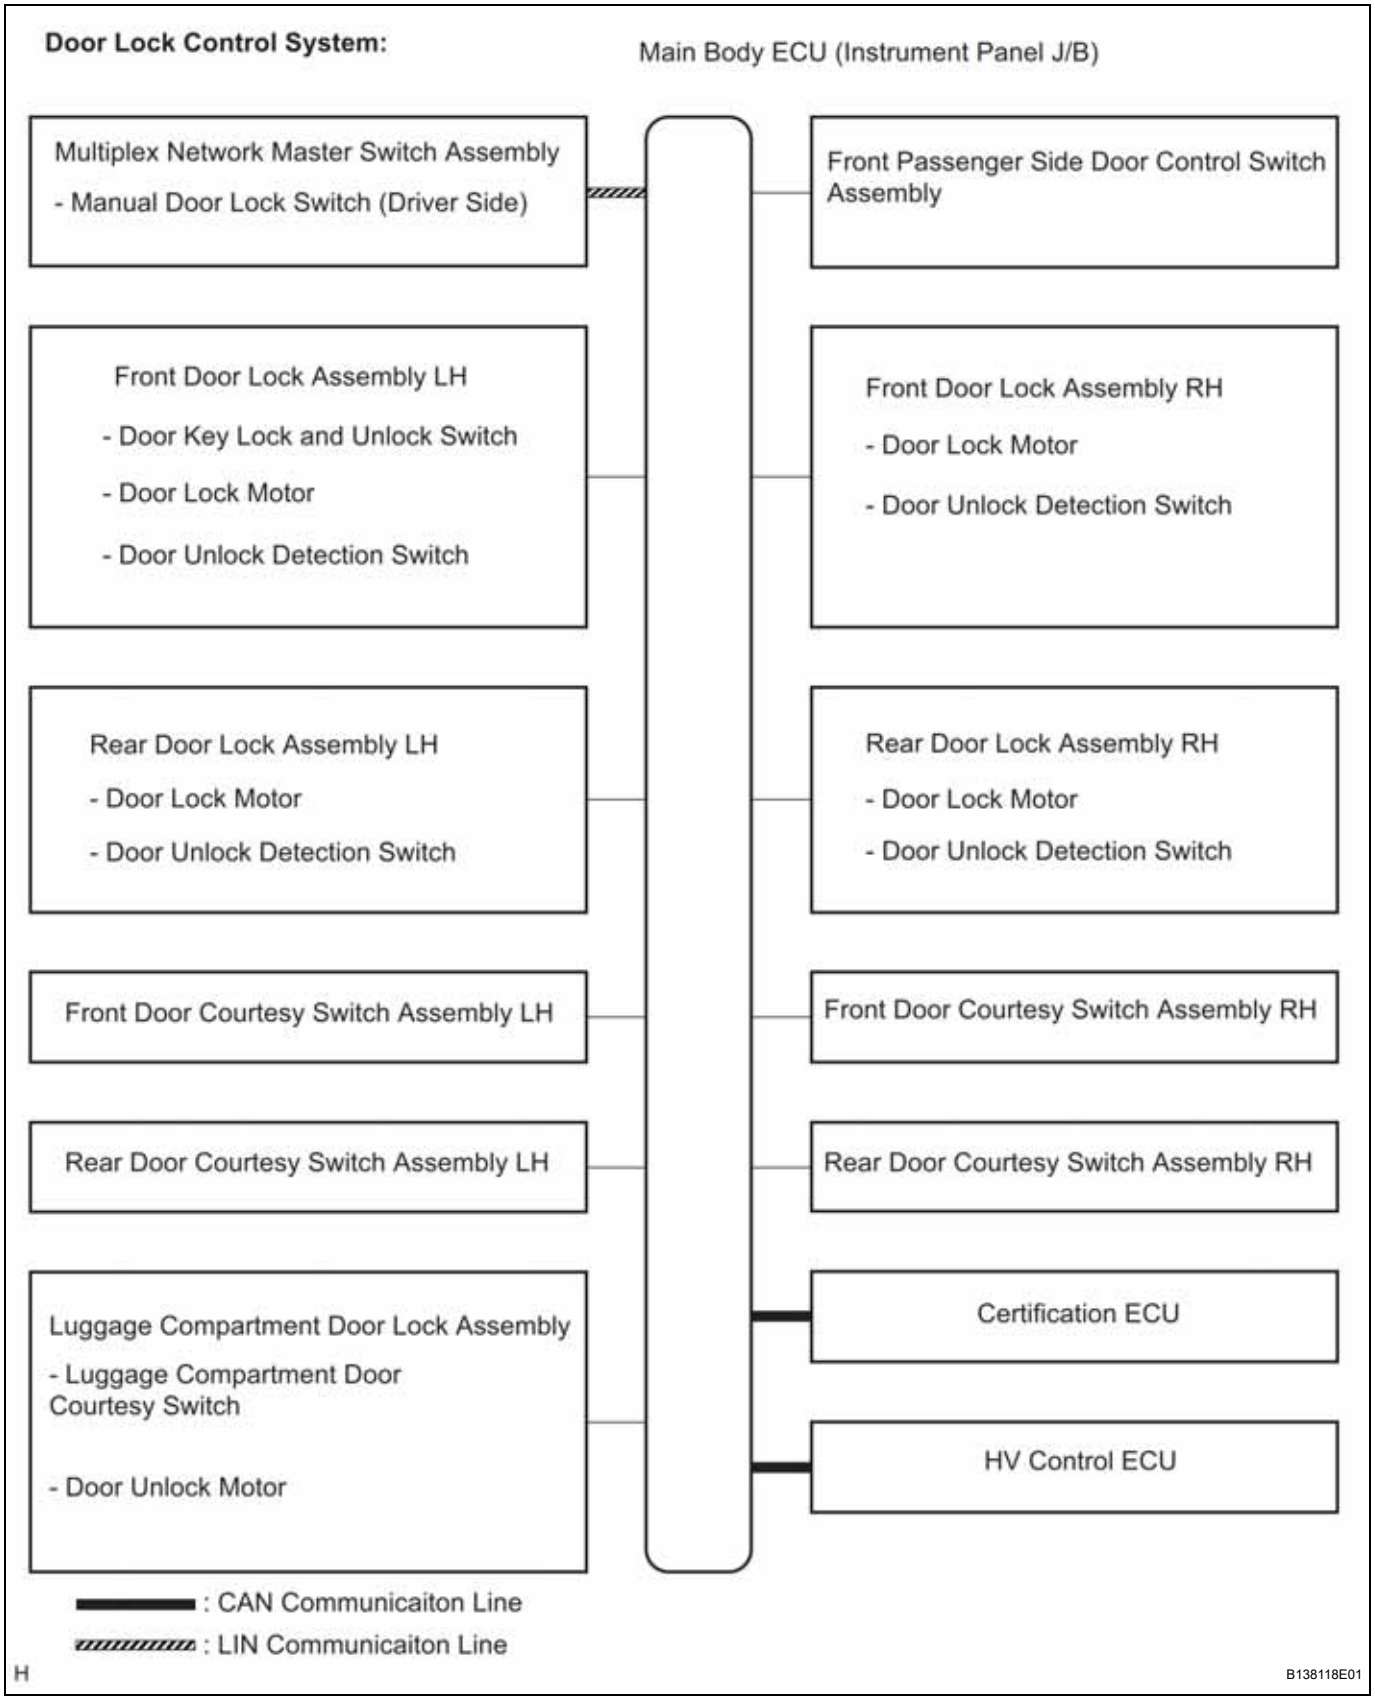
3. WASHER FLUID LEVEL WARNING

(a) When the volume of washer fluid decreases to below a certain level (when the washer fluid level warning switch is turned ON), the combination meter assembly warns the driver through the master warning light illumination, the buzzer and the warning message on the multi-information display.

SYSTEM DIAGRAM



Transmitting ECU (Transmitter)	Receiving ECU (Receiver)	Signals	Communication method
HV control ECU	Main Body ECU	Shift Position Switch Signal	CAN
Certification ECU	Main Body ECU	Door lock/unlock request signal	LIN

SYSTEM DESCRIPTION

1. POWER DOOR LOCK CONTROL SYSTEM DESCRIPTION

(a) The power door lock system locks/unlocks all the doors.

The master switch and the door control switch on the passenger door send "lock/unlock" request signals to the main body ECU. Then, the main body ECU sends these request signals to the lock motors in each door to lock/unlock all the doors at once in response to the inputs.

Operating the driver's door lock using a mechanical key sends request signals to lock/unlock the doors to the main body ECU. "2-step unlock function" is optional for unlocking procedures of the key-linked lock for the driver side door.

2. FUNCTION OF MAIN COMPONENT

Components	Function
Multiplex network master switch assembly (Manual door lock switch)	Door control switch on master switch assembly locks/unlocks all doors.
Door control switch	Door control switch on passenger side door locks/unlocks all doors.
Door courtesy switch	Placed on each door. Detects door status (open or closed) and outputs data to main body ECU. Turns on when door is open and turns off when door is closed.
Driver side door lock	• Built-in motor locks/unlocks door. • Built-in door control switch (key-linked) detects door key operation's door status (locked or unlocked) and outputs data to main body ECU. • Built-in position switch detects door status (locked or unlocked) and outputs data to main body ECU. This switch turns off when door is locked and turns on when door is unlocked.
Front passenger side door lock, luggage compartment door lock, rear LH and RH door locks	• Built-in motor locks/unlocks door. • Built-in position switch detects door status (locked or unlocked) and outputs data to main body ECU. This switch turns off when door is locked and turns on when door is unlocked.

3. SYSTEM FUNCTION

HINT:

The following functions' default settings are ON. Some of these functions can be customized (See page DL-10).

(a) This system is controlled by the main body ECU. The main body ECU outputs signals to each door lock motor. The door lock control system of the CAMRY HV has the following functions:

Function	Outline
Manual lock and unlock function	This function can lock or unlock all doors by the door lock control switch operation.
Key-linked lock and unlock function	This function, which is linked with the key cylinder, can lock or unlock all the doors when a lock or unlock operation is effected.
Manual unlock prohibition function	Performing the door lock operation with an electrical key or a mechanical key will prohibit the unlock operation by the door lock control switch.
Key lock-in prevention function	If a each door lock operation is performed when the electrical key or mechanical key is in the cabin, all the doors will be unlocked.

Function	Outline
Shift-linked automatic door lock function	When the conditions listed below are met consecutively, this function causes all the doors to be automatically locked. • The power switch is on (IG). • All doors are closed. • The shift lever is moved out of the P position. • Any of the doors are unlocked.
Shift-linked automatic door unlock function	When the power switch is on (IG), if moving the shift lever to the P position from any other position, all the doors will be automatically unlocked.
One-motion open	When the door is locked, this function enables the door to be unlocked by pulling the inside handle of the door.
2-step unlock function	This function is provided to unlock the driver's door by turning the key cylinder once and to unlock the remaining doors by turning it the second time.

AV

SYSTEM DESCRIPTION

1. DISC PLAYER OUTLINE

(a) A CD player uses a laser pickup to read digital signals recorded on CDs. By converting the digital signals to analog, music and other content can be played.

CAUTION:

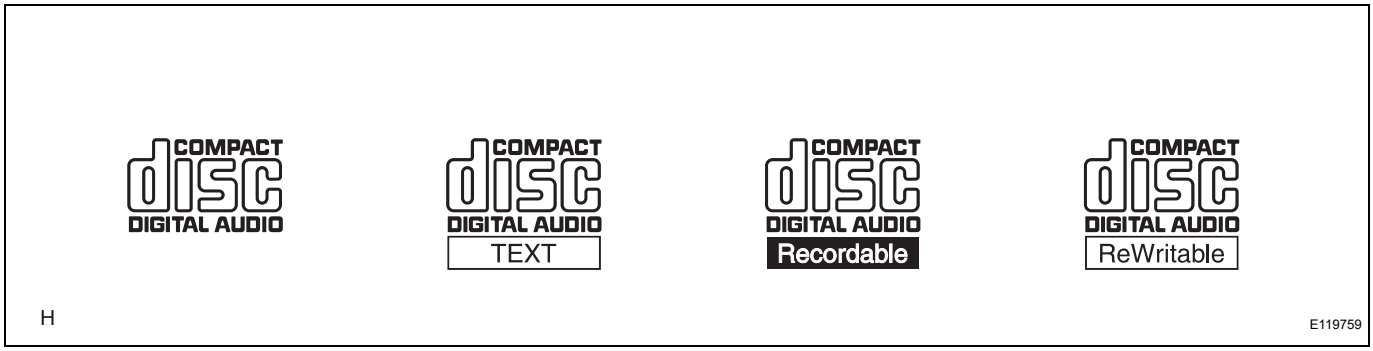
Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to operate the player only as instructed.

NOTICE:

- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

(b) Usable discs

(1) The CD player can only play audio CDs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) that have any of the following marks:



(c) Precautions for use of discs

NOTICE:

- **Copy-protected CDs cannot be played.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt, or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**
- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CDR labels, or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.**

- **Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected, or played normally.**

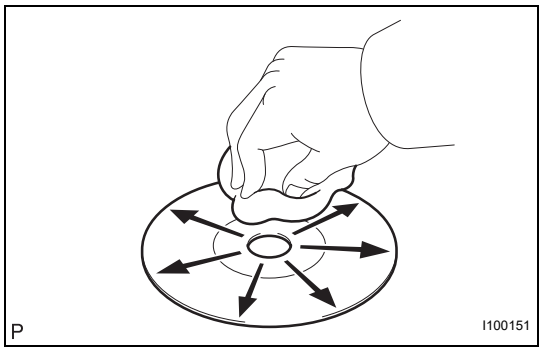
HINT:

- When it is cold or it is raining, if the windows mist up, mist and also dew may form in the player. In such a case, the CD may skip or the CD may stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD may skip if the player experiences strong vibrations when the vehicle is driven on rough road or similar uneven surface(s).

(d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.



(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

NOTICE:

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner, or a chemical cloth may cause damage to the disc, making the disc unusable.**

2. MP3/WMA OUTLINE

(a) Playable MP3 file standards

Compatible standard	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER 3)
Compatible sampling frequency	• MPEG1 LAYER3: 32, 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	• MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

Compatible standard	WMA Ver. 7, 8, and 9
Compatible sampling frequency	32, 44.1, 48 (kHz)
Compatible bit rate	• Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) • Compatible with playback of channel 2 only

AV

(c) ID3 tag and WMA tag
(1) Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.
HINT:
This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)
(2) Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media
(1) Only CD-ROMs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.
NOTICE:
- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs may not be played.**
- **If there are fingerprints or scratches on the disc, the disc may not be played or the CD may skip.**
- **Some CD-Rs and CD-RWs deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in a storage case that is impenetrable to light.**

(e) Usable media format
(1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form1
File format	ISO9660 Level 1 and Level 2 (Joliet, Romeo)

HINT:
- As for MP3/WMA files written in any format other than those above, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

(2) Standard and restrictions

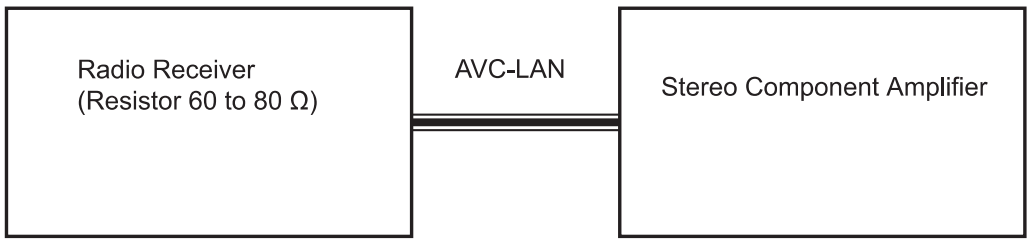
Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders, route folders, and folders that do not contain MP3/WMA files)
Maximum number of files in a disc	255 (Including non-MP3/WMA files)

(f) File names
(1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.
(2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".
NOTICE:
If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speaker may result.

3. AVC-LAN DESCRIPTION

(a) What is AVC-LAN?

Example:



T I100319E09

AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united standard developed by the manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

(b) Purpose:
Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multi-media interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:
(1) To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.
(2) To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.
HINT:
- If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.

AV

- If the audio system has a navigation system installed, the multi-display unit acts as the master unit. If the navigation system is not installed, the audio head unit acts as the master unit instead. If the radio and navigation assembly is installed, it is the master unit.
- The radio receiver contains a resistor that is necessary to enable communication on the different AVC-LAN circuits.
- The car audio system with an AVC-LAN circuit has a diagnostic function.
- Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.

4. COMMUNICATION SYSTEM OUTLINE

(a) Components of the audio system communicate with each other via the AVC-LAN.

(b) The master component of the AVC-LAN is a radio receiver with a 60 to 80 Ω resistor. This is essential for communication.

(c) If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.

5. DIAGNOSTIC FUNCTION OUTLINE

(a) The audio system has a diagnostic function (the result is indicated on the master unit).

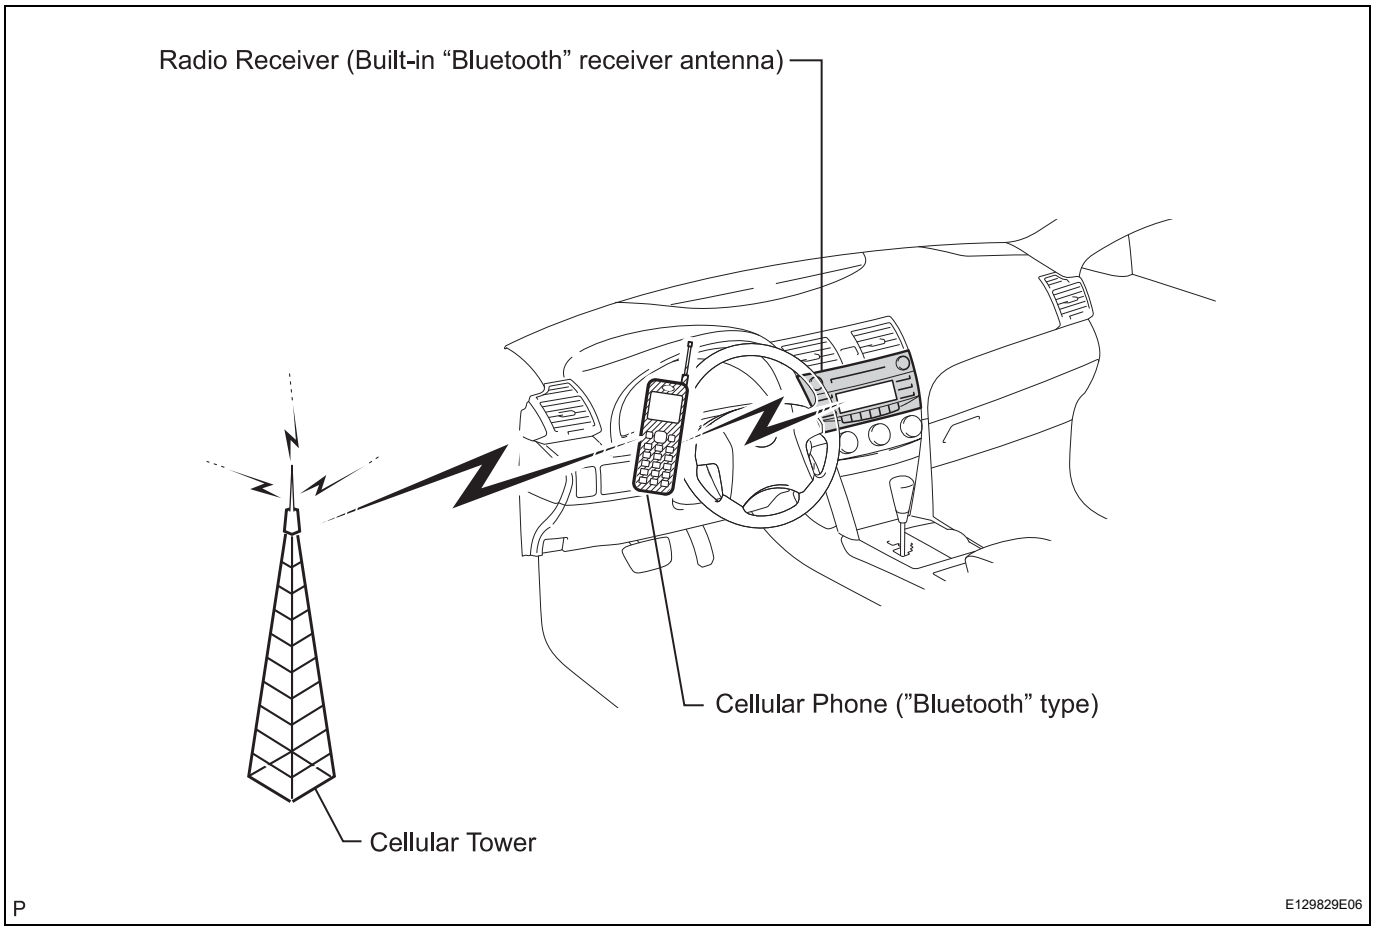
(b) A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.

6. "BLUETOOTH" OUTLINE

(a) "Bluetooth" is a trademark owned by Bluetooth SIG. Inc.

(b) "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" compatible phone *1) to the radio receiver (the "Bluetooth" system is built-in), and use the handsfree function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector attached directly to the cellular phone.

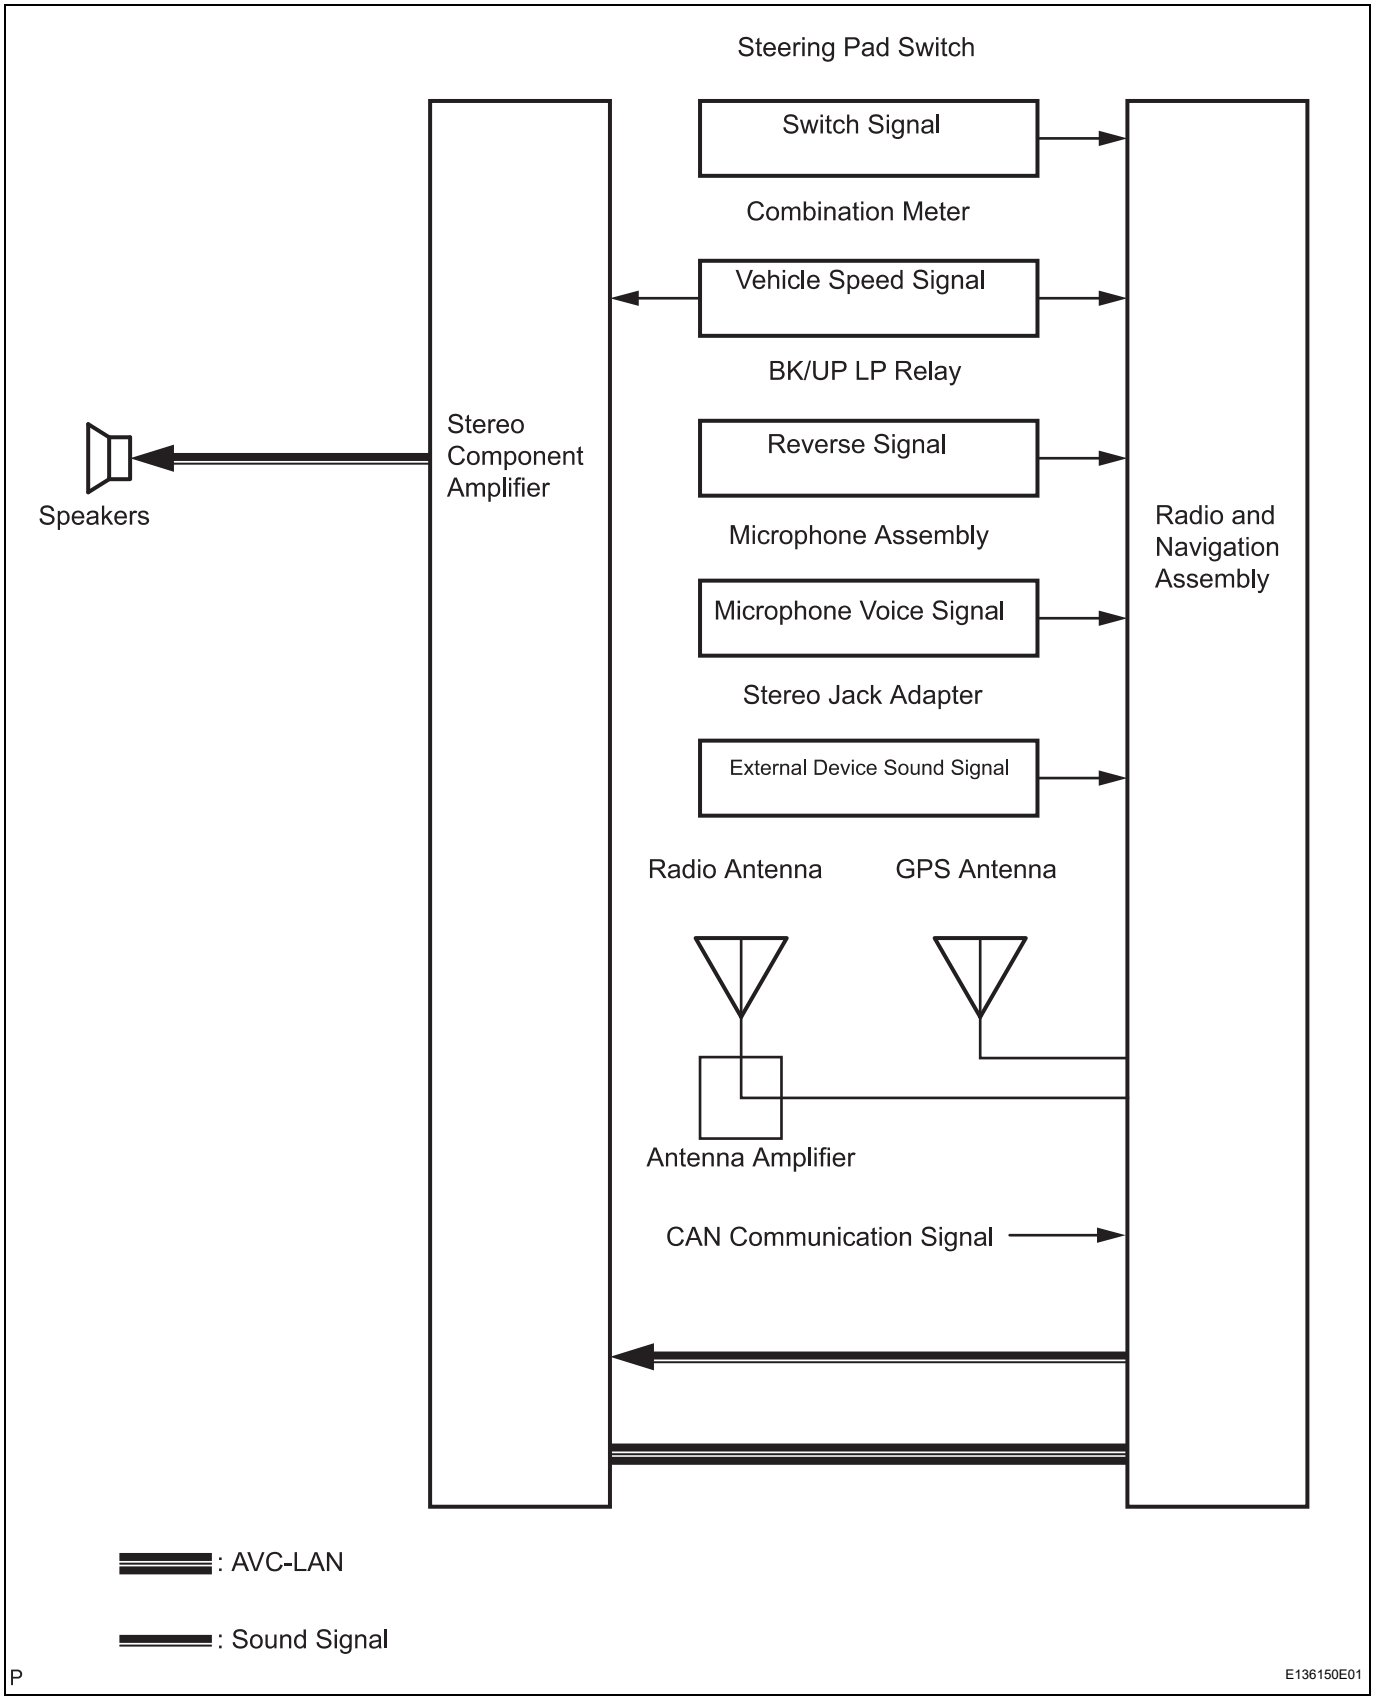
*1: Some versions of "Bluetooth" compatible cellular phones may not function.



HINT:

The communication performance of "Bluetooth" may vary depending on obstructions or radio wave conditions between communication devices, electromagnetic radiation, communication device sensitivity, or antenna capacity.

SYSTEM DIAGRAM

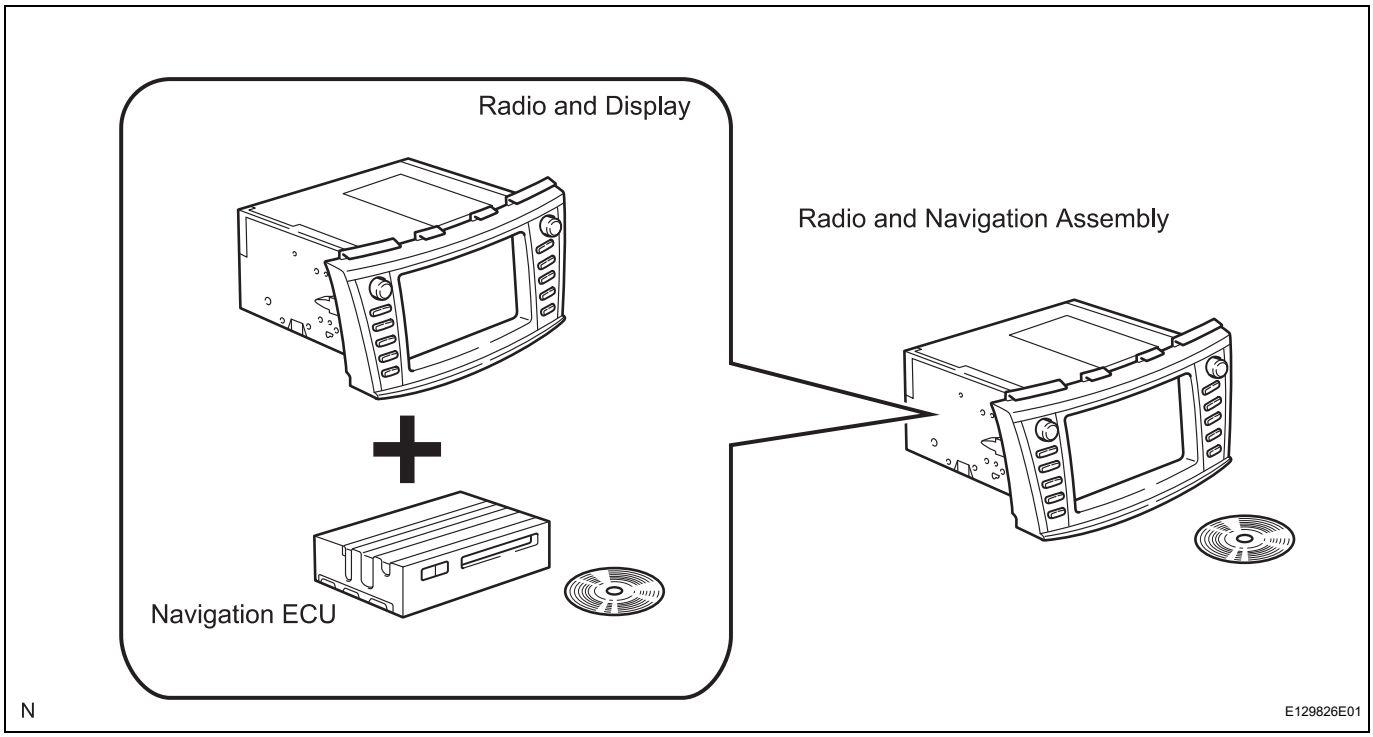


NS

SYSTEM DESCRIPTION

1. Radio and navigation assembly outline

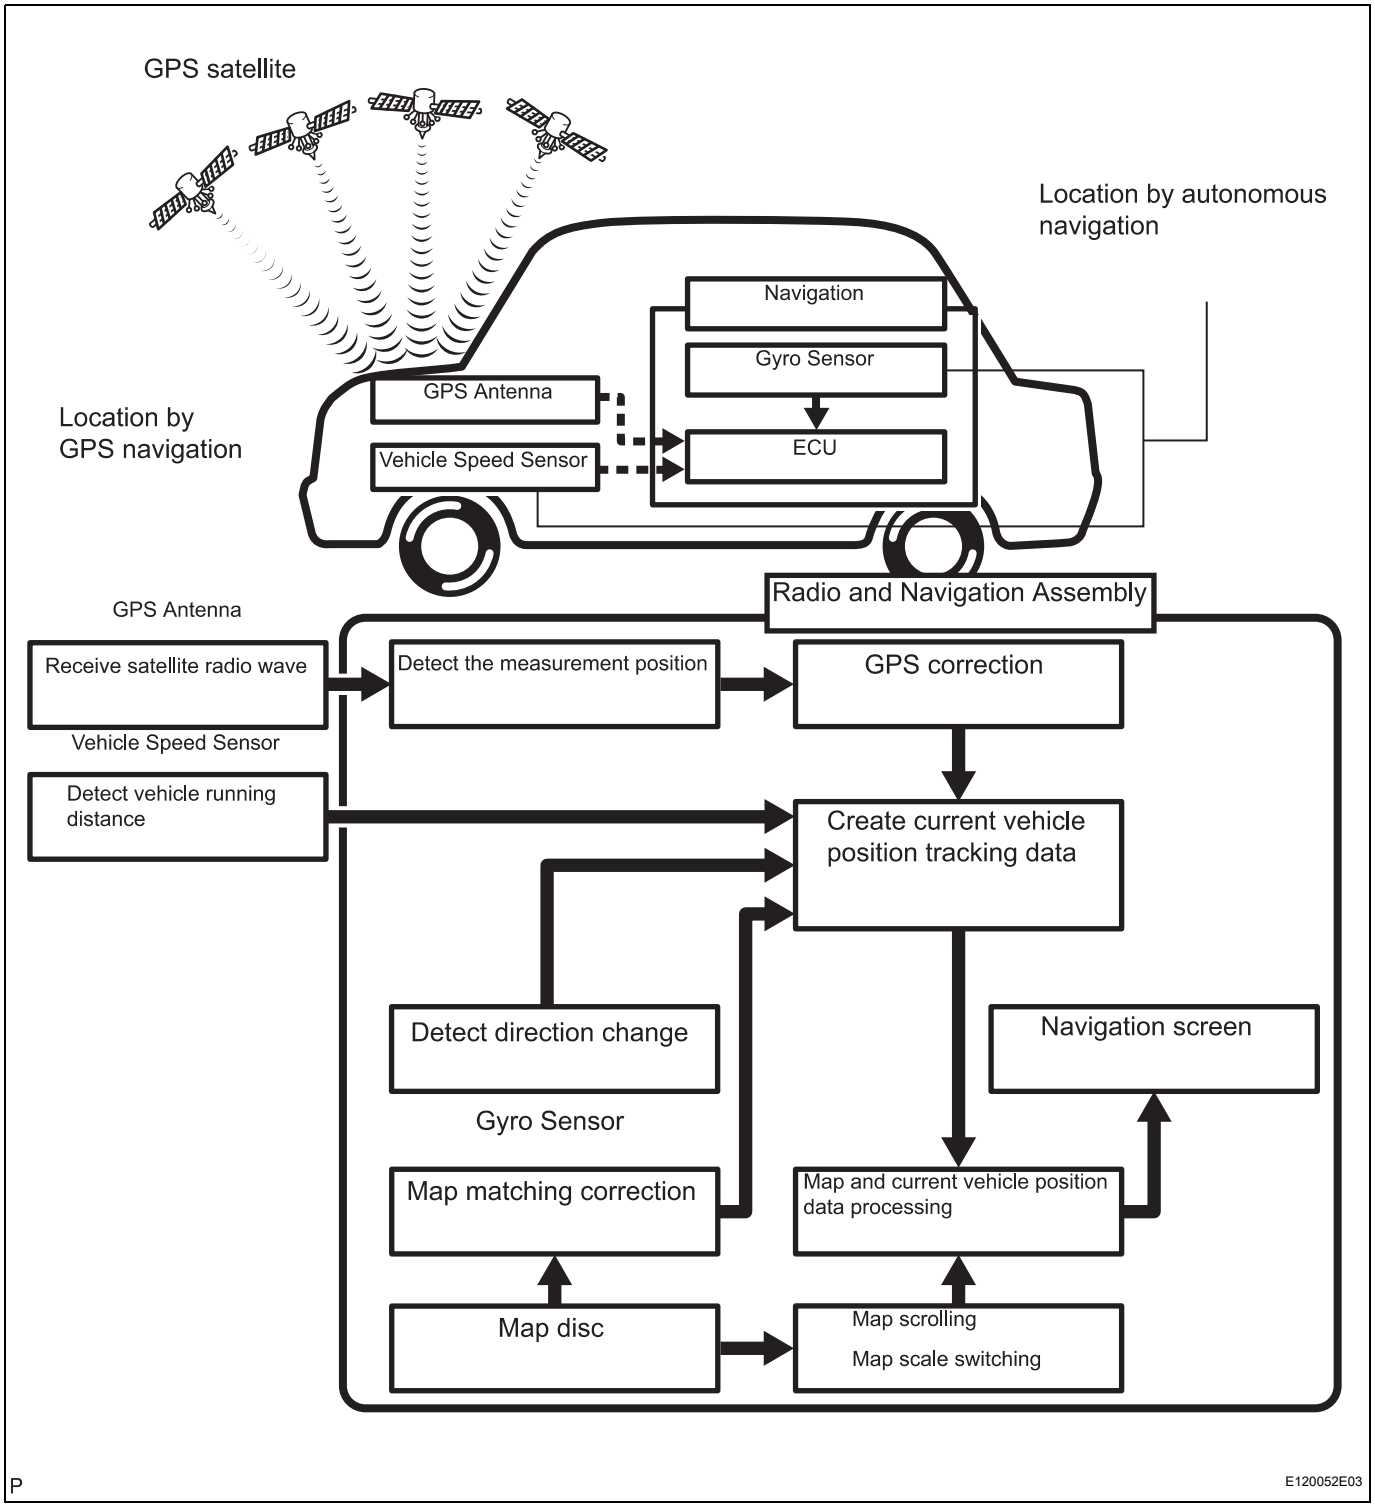
(a) Conventionally, 2 separate devices, a "radio and display" and a "navigation ECU" are used. This model has adopted a new type, combining these devices into a single unit.



2. Navigation system outline

(a) Vehicle position tracking methods

It is essential that the navigation system correctly tracks the current vehicle position and displays it on the map. There are 2 methods to track the current vehicle position: autonomous (dead reckoning) and GPS* (satellite) navigation. Both navigation methods are used in conjunction with each other.
*GPS (Global Positioning System)



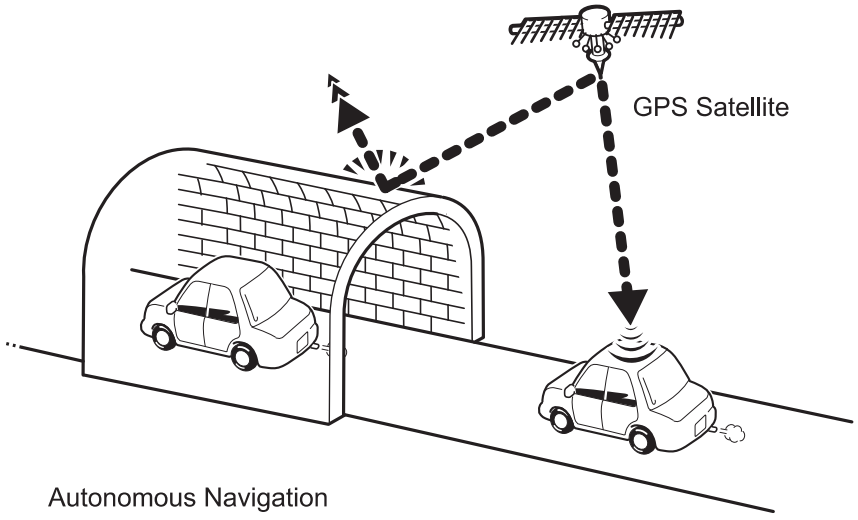
NS

Operation	Description
Vehicle Position Calculation	The radio and navigation assembly calculates the current vehicle position (direction and current position) using the direction deviation signal from the gyro sensor and the running distance signal from the vehicle speed sensor and creates the driving route.
Map Display Processing	The radio and navigation assembly displays the vehicle track on the map by processing the vehicle position data, vehicle running track, and map data from the map disc.
Map Matching	The map data from the map disc is compared to the vehicle position and running track data. Then, the vehicle position is matched with the nearest road.
GPS Correction	The vehicle position is matched to the position measured by GPS. Then, the measurement position data from the GPS unit is compared with the vehicle position and running track data. If the position is widely different, the GPS measurement position is used.
Distance Correction	The running distance signal from the vehicle speed sensor includes the error caused by tire wear and slippage between the tires and road surface. Distance correction is performed to account for this. The radio and navigation assembly automatically offsets the running distance signal to make up for the difference between it and the distance data of the map. The offset is automatically updated.

NS

Navigation is performed even where the GPS radio wave does not reach.

- In a tunnel
- In an indoor parking lot
- Between tall buildings
- Under an overpass
- On a forest or tree-lined path



Autonomous Navigation

Autonomous Navigation and GPS Wave Navigation

P

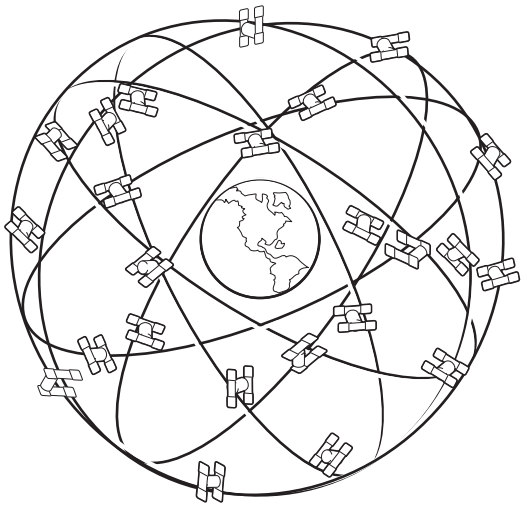
I100028E07

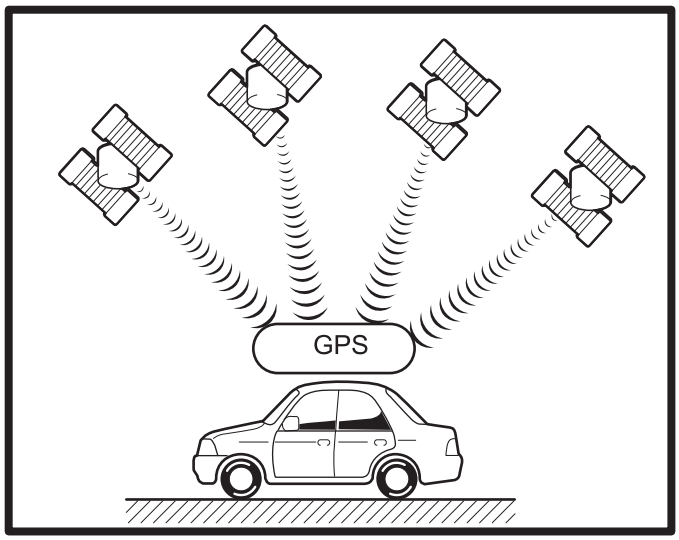
HINT:
The combination of autonomous and GPS navigation makes it possible to display the vehicle position even when the vehicle is in places where the GPS radio wave cannot receive a signal. When only autonomous navigation is used, however, the mapping accuracy may slightly decline.

(b) Autonomous navigation
This method determines the relative vehicle position based on the running track determined by the gyro and vehicle speed sensors located in the radio and navigation assembly.
(1) Gyro sensor
Calculates the direction by detecting angular velocity. It is located in the radio and navigation assembly.
(2) Vehicle speed sensor
Used to calculate the vehicle running distance.

(c) GPS navigation (Satellite navigation)
This method detects the absolute vehicle position using radio waves from GPS satellites.
* GPS satellites were launched by the U.S. Department of Defence for military purposes.

Current longitude/latitude/altitude is determined using the radio wave arrival time from four satellites.



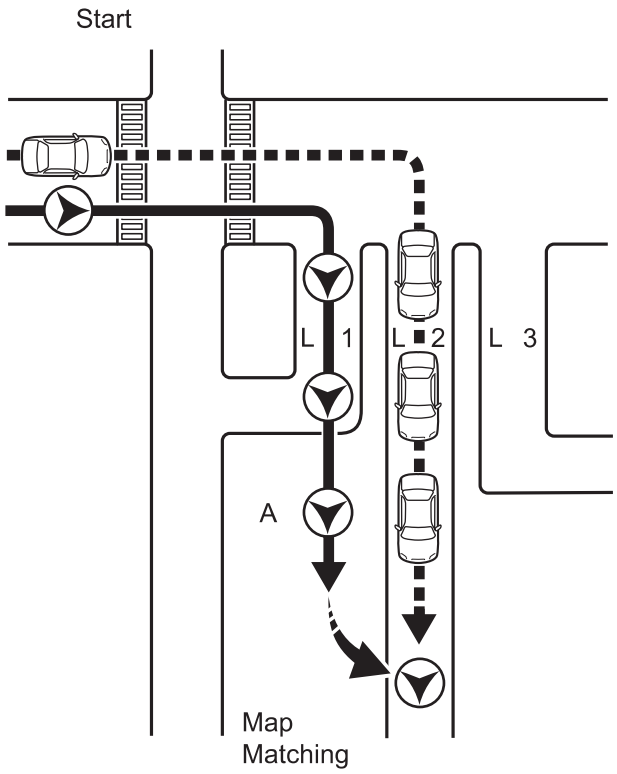


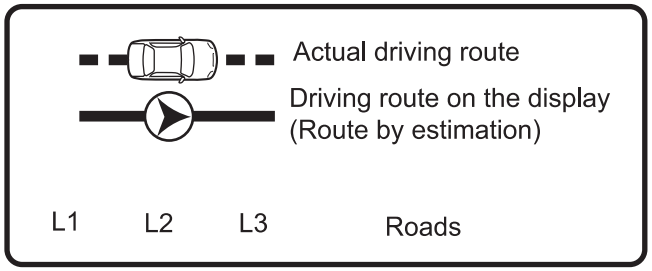
P

I100029E03

Number of satellites	Measurement	Description
2 or less	Measurement impossible	Vehicle position cannot be obtained because the number of satellites is not enough.
3	2-dimensional measurement is possible	Vehicle position is obtained based on the current longitude and latitude. (This is less precise than 3-dimensional measurement.)
4	3-dimensional measurement is possible	Vehicle position is obtained based on the current longitude, latitude and altitude.

(d) Map matching
The current driving route is calculated by autonomous navigation (according to the gyro sensor and vehicle speed sensor) and GPS navigation. This information is then compared with possible road shapes from the map data in the map disc and the vehicle position is set onto the most appropriate road.





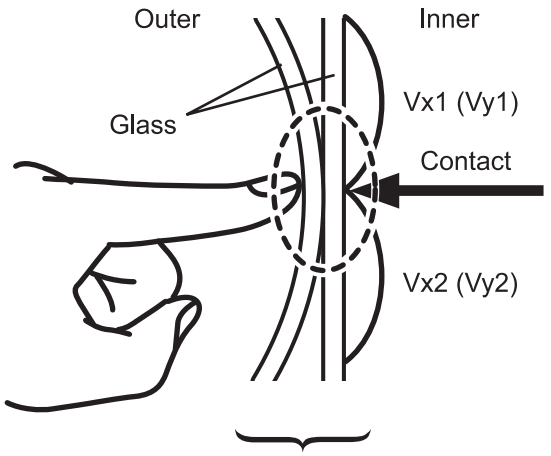
The system compares the shape of the roads L1, L2 and L3 to the estimated running track after the vehicle makes a right turn. At point A, the vehicle position differs enough from the shape of L1 that the display switches to the road L2.

P

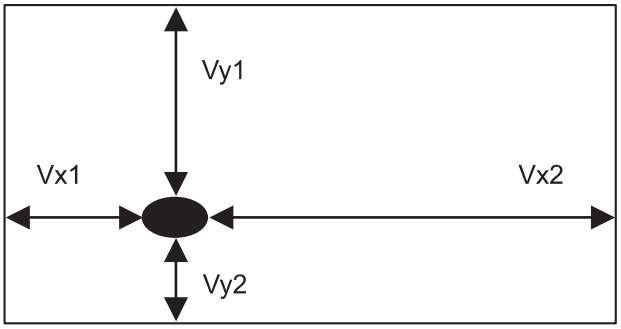
I100030E07

NS

(e) Touch switch
Touch switches are touch-sensitive (interactive) switches operated by touching the screen. When a switch is pressed, the outer glass bends in to contact the inner glass at the pressed position. By doing this, the voltage ratio is measured and the pressed position is detected.



Touch-sensitive switch position



The touch switch detects the voltage ratio and calculates the position on the screen.

P

E106414E03

3. DVD (Digital Versatile Disc) player outline (for navigation map)

(a) The radio and navigation assembly (built-in navigation ECU) uses a laser pickup to read the digital signals recorded on a DVD.
HINT:
- Do not disassemble any part of the radio and navigation assembly (built-in navigation ECU).
- Do not apply oil to the radio and navigation assembly (built-in navigation ECU).
- Do not insert anything but a DVD into the radio and navigation assembly (built-in navigation ECU).

CAUTION:
Do not look directly at the laser pickup because the radio and navigation assembly (built-in navigation ECU) uses an invisible laser beam. Be sure to only operate the navigation system as instructed.

4. CD (Compact Disc) player outline

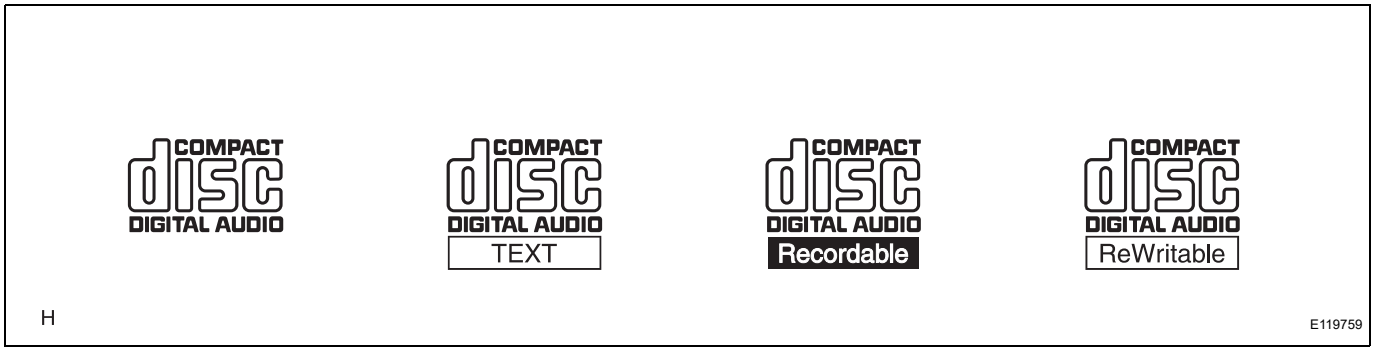
(a) A compact disc player uses a laser pickup to read digital signals recorded on a compact disc (CD). By converting the digital signals to analog, it can play music and other content.

NOTICE:
- **Do not disassemble any part of the CD player.**
- **Do not apply oil to the CD player.**
- **Do not insert anything but a CD into the CD player.**

CAUTION:
Do not look directly at the laser pickup because the CD player uses an invisible laser beam. Be sure to only operate the player as instructed.

(b) Usable discs

(1) This player can only play audio CDs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) that have any of the following marks:



(c) Precautions for use of discs

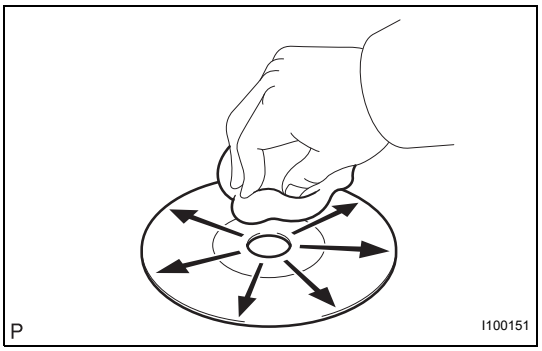
NOTICE:
- **Copy-protected CDs cannot be played.**
- **CD-Rs and CD-RWs may not be played depending on the recording conditions or characteristics of the discs, or due to damage, dirt, or deterioration caused by leaving the discs in the cabin for a long time.**
- **Unfinalized CD-Rs and CD-RWs cannot be played.**
- **DualDiscs that mate DVD recorded material on one side with CD digital audio material on the other cannot be played.**
- **Keep the discs away from dirt. Be careful not to damage the discs or leave your fingerprints on them.**
- **Hold discs by the outer edge and center hole with the label side up.**

NS

- **Leaving the disc exposed halfway out of the slot for a long time after pressing the disc eject button may cause deformation of the disc, making the disc unusable.**
- **If discs have adhesive tape, stickers, CDR labels, or any traces of such labels attached, the discs may not be ejected or player malfunctions may result.**
- **Keep the discs away from direct sunlight. (Exposure to direct sunlight may cause deformation of the disc, making the disc unusable.)**
- **Do not use odd-shaped CDs because these may cause player malfunctions.**
- **Do not use discs whose recording portion is transparent or translucent because they may not be inserted, ejected, or played normally.**

HINT:

- When it is cold or it is raining, if the windows mist up, mist and also dew may form in the player. In such a case, the CD may skip or the CD may stop in the middle of play. Ventilate or dehumidify the cabin for a while before using the player.
- The CD may skip if the player experiences strong vibrations when the vehicle is driven on rough road or similar uneven surface(s).



(d) Cleaning

NOTICE:

Do not use a lens cleaner because it may cause a malfunction in the pickup portion of the player.

(1) If dirt is on the disc surface, wipe it clean with a soft dry cloth such as an eyeglass cleaner for plastic lenses from the inside to the outside in a radial direction.

NOTICE:

- **Pressing on the disc by hand or rubbing the disc with a hard cloth may scratch the disc surface.**
- **Use of solvent such as a record spray, antistatic agent, alcohol, benzine, and thinner, or a chemical cloth may cause damage to the disc, making the disc unusable.**

5. MP3/WMA OUTLINE

(a) Playable MP3 file standards

Compatible standard	MP3 (MPEG1 LAYER3, MPEG2 LSF LAYER 3)
Compatible sampling frequency	• MPEG1 LAYER3: 32, 44.1, 48 (kHz) • MPEG2 LSF LAYER3: 16, 22.05, 24 (kHz)
Compatible bit rate	• MPEG1 LAYER3: 64, 80, 96, 112, 128, 160, 192, 224, 256, 320 (kbps) • MPEG2 LSF LAYER3: 64, 80, 96, 112, 128, 144, 160 (kbps) • Compatible with VBR
Compatible channel mode	Stereo, joint stereo, dual channel, monaural

(b) Playable WMA file standards

Compatible standard	WMA Ver. 7, 8, and 9
Compatible sampling frequency	32, 44.1, 48 (kHz)
Compatible bit rate	• Ver. 7, 8: CBR48, 64, 80, 96, 128, 160, 192 (kbps) • Ver. 9: CBR48, 64, 80, 96, 128, 160, 192, 256, 320 (kbps) • Compatible with playback of channel 2 only

(c) ID3 tag and WMA tag

(1) Additional textual information called ID3 tag can be input to MP3 files. Information such as song titles and artist names can be stored.

HINT:

This player is compatible with the ID3 tags of ID3 Ver. 1.0 and 1.1, and ID3 Ver. 2.2 and 2.3. (Number of characters complies with ID3 Ver. 1.0 and 1.1.)

(2) Additional textual information called WMA tag can be input to WMA files. Information such as song titles and artist names can be stored.

(d) Usable media

(1) Only CD-ROMs, CD-Rs (CD-Recordable), and CD-RWs (CD-ReWritable) can be used to play MP3/WMA files.

NOTICE:

- **CD-Rs and CD-RWs are more easily affected by a hot and humid environment than discs used for normal audio CDs. For this reason, some CD-Rs and CD-RWs may not be played.**
- **If there are fingerprints or scratches on the disc, the disc may not be played or the CD may skip.**
- **Some CD-Rs and CD-RWs deteriorate if they are left in the cabin for a long time.**
- **Keep CD-Rs and CD-RWs in a storage case that is impenetrable to light.**

(e) Usable media format

(1) Usable media format

Disc format	CD-ROM Mode 1, CD-ROM XA Mode 2 Form 1
File format	ISO9660 Level 1 and Level 2 (Joliet, Romeo)

HINT:

- As for MP3/WMA files written in any format other than those above, the contents of the files may not be played normally or the file names or folder names may not be displayed correctly.
- This player is compatible with multi-session discs and can play CD-Rs and CD-RWs on which MP3/WMA files are added. However, only the first session can be played.
- Discs whose first session includes both music data and MP3 or WMA format data cannot be played.

NS

(2) Standard and restrictions

Maximum directory levels	8 levels
Maximum number of characters for a folder name/file name	32 characters
Maximum number of folders	192 (Including empty folders, route folders, and folders that do not contain MP3/WMA files)
Maximum number of files in a disc	255 (Including non-MP3/WMA files)

(f) File names

(1) Only files with an extension of ".mp3" or ".wma" can be recognized and played as MP3 or WMA files.

(2) Save MP3 or WMA files with an extension of ".mp3" or ".wma".

NOTICE:

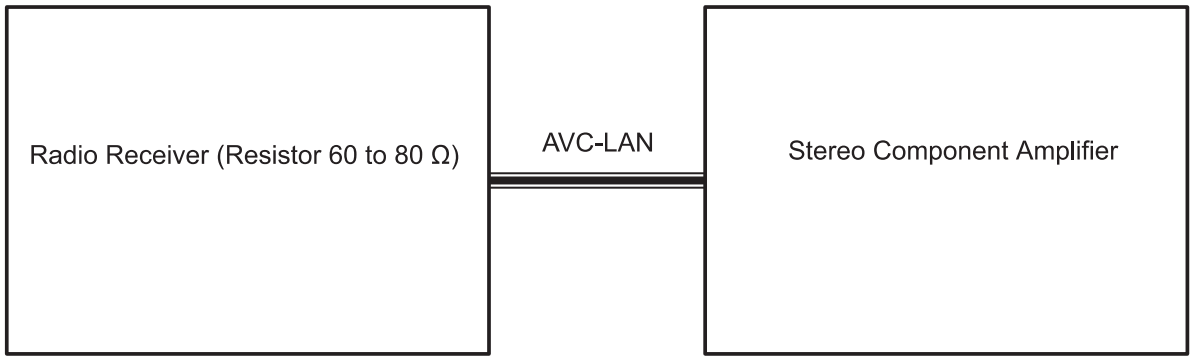
If saving non-MP3 or non-WMA files with an extension of ".mp3" or ".wma", those files are wrongly recognized as MP3 or WMA files and played. A loud noise may occur and damage to the speaker may result.

6. AVC-LAN Description

(a) What is AVC-LAN?

AVC-LAN, an abbreviation for "Audio Visual Communication Local Area Network", is a united standard developed by the manufacturers in affiliation with Toyota Motor Corporation. This standard pertains to audio and visual signals as well as switch and communication signals.

Example:



P

I100032E09

(b) Purpose:
Recently, car audio systems have rapidly developed and the functions have vastly changed. The conventional car audio system is being integrated with multi-media interfaces similar to those in navigation systems. At the same time, customers are demanding higher quality from their audio systems. This is merely an overview of the standardization background. The specific purposes are as follows:
(1) To solve sound problems, etc. caused by using components of different manufacturers through signal standardization.
(2) To allow each manufacturer to concentrate on developing products they do best. From this, reasonably priced products can be produced.
HINT:
- If a short to +B or short to ground is detected in the AVC-LAN circuit, communication is interrupted and the audio system will stop functioning.
- If the audio system has a navigation system installed, the multi-display unit acts as the master unit.
If the navigation system is not installed, the audio head unit acts as the master unit instead. If the radio and navigation assembly is installed, it is the master unit.
- The radio and navigation assembly contains a resistor that is necessary to enable communication on the different AVC-LAN circuits.
- The car audio system with an AVC-LAN circuit has a diagnostic function.
- Each component has a specified number (3-digit) called a physical address. Each function has a number (2-digit) called a logical address.

7. Communication system outline
(a) Components of the navigation system communicate with each other via the AVC-LAN.
(b) The radio and navigation assembly has enough resistance (60 to 80 Ω) necessary for communication.
(c) If a short circuit or open circuit occurs in the AVC-LAN circuit, communication is interrupted and the navigation system will stop functioning.

8. Diagnostic function outline
(a) The audio system has a diagnostic function (the result is indicated on the master unit).
(b) A 3-digit hexadecimal component code (physical address) is allocated to each component on the AVC-LAN. Using this code, the component in the diagnostic function can be displayed.

9. "Bluetooth" outline

(a) "Bluethooth" is a trademark owned by Bluetooth SIG. Inc.

(b) "Bluetooth" is a new wireless connection technology that uses the 2.4 GHz frequency band. This makes it possible to connect a cellular phone ("Bluetooth" compatible phone *1) to the radio and navigation assembly (the "Bluetooth" system is built-in), and use the handsfree function of the cellular phone, even if it is in a pocket or bag. As a result, it is not necessary to use a connector attached directly to the cellular phone.
*1: Some versions of "Bluetooth" compatible cellular phones may not function.

SYSTEM DESCRIPTION

1. POWER WINDOW CONTROL SYSTEM DESCRIPTION

(a) The power window control system controls the power window operation using the power window regulator motors. The main controls of this system are the power window regulator master switch, which is mounted on the driver side door, and the power window regulator switches, which are mounted on the passenger side door and rear doors. Operating a window switch results in electrical power being transmitted to the corresponding power window regulator motor.

(b) The power window control system has the following functions:

Function	Outline
Manual up-and-down function	Function that causes window to go up while power window switch is being pulled halfway up and to go down while pushed halfway down. Window stops as soon as the switch is released.
Remote control function	Function that allows power window master switch to control MANUAL up-and-down operations of front passenger door window and rear door windows.
Key-off operation function	Function that makes it possible to operate power window for approx. 43 seconds after power switch is on (ACC) or off, if either front door is not opened.

PROBLEM SYMPTOMS TABLE

SYSTEM DIAGRAM

SYSTEM DESCRIPTION

1. FUEL LID OPENER COMPONENT

Fuel Lid Opener Switch	Detects fuel lid opener switch operation and sends fuel lid open request signal to hybrid vehicle control ECU.
Fuel Lid Courtesy Switch	The fuel lid courtesy switch detects the fuel lid open/close condition signal to hybrid vehicle control ECU.
Fuel Lid Opener Motor Assembly	Actuates to open fuel lid according to signal from hybrid vehicle control ECU.
Hybrid Vehicle Control ECU	When the hybrid vehicle control ECU receives signal from the fuel lid opener switch, it actuates the fuel lid opener motor. • Inputs signal from fuel tank pressure sensor. • When difference between atmospheric pressure and fuel tank internal pressure exceeds specification, hybrid vehicle control ECU operates fuel vapor containment valve. • Detects status of fuel lid courtesy switch.
Combination Meter (Multi-information Display)	The operating state of fuel lid opener system is displayed on the multi-information display.

2. FUEL LID OPENER SYSTEM FUNCTION

(a) When pressing the fuel lid opener switch, a fuel lid open request signal is sent to the hybrid control ECU, and the fuel lid opener motor actuates to open the fuel lid.

HINT:

When the difference between atmospheric pressure and fuel tank internal pressure exceeds the specification, fuel vapor containment valve is used to adjust the pressure. During the adjustment, "PLEASE WAIT NOW OPENING" is displayed on the multi-information display.

NOTICE:

- **If the fuel tank pressure sensor or fuel vapor containment valve is malfunctioning, the fuel lid does not open.**
- **If the fuel lid courtesy switch is malfunctioning, "CLOSE FUEL LID" is displayed on the multi-information display even if the fuel lid is closed.**

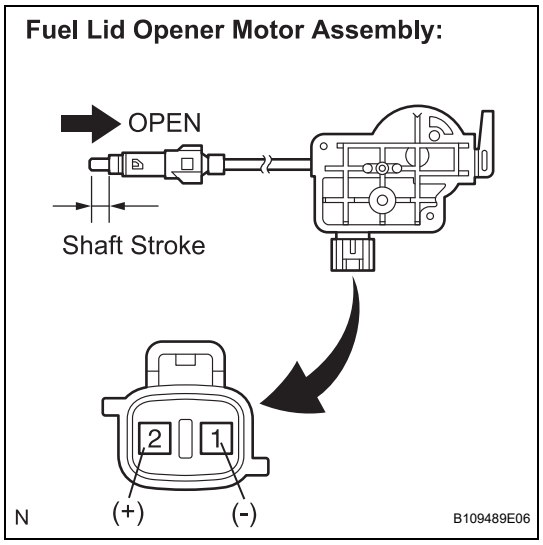
3. COMBINATION METER DISPLAY AND OBJECTIVES

(a) Multi-information display :

Display	Details	Condition	Condition to switch to next display	Next display
PLEASE WAIT NOW OPENING	• Wait time until the fuel tank pressure drops to the specified value • Wait time until the fuel lid is opened	• Fuel lid opener switch ON • Fuel vapor containment valve open • Fuel tank pressure 4 kPa or more (Initial value)	Fuel tank pressure less than 1.76 kPa	REFUEL READY
REFUEL READY	Ready for refueling	Until any of the conditions listed on the right are met.	When 5 seconds or more elapse after fuel lid CLOSE (Fuel lid courtesy switch ON)	OFF
			• The fuel vapor containment valve remains ON for 30 min. • The vehicle is driven for 1 km or more at 50 km/h or more	CLOSE FUEL LID
CLOSE FUEL LID	Fuel lid open	Fuel lid open: • While the power switch is on • For 5 min. after the power switch is turned off	Fuel lid CLOSE (Door control switch ON)	OFF

ED



INSPECTION

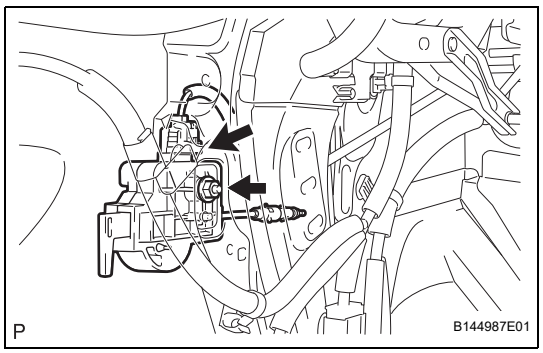
1. **INSPECT FUEL LID MOTOR ASSEMBLY**
   (a) Apply battery voltage to the lock control and check the motor operates in the open direction.
   Standard

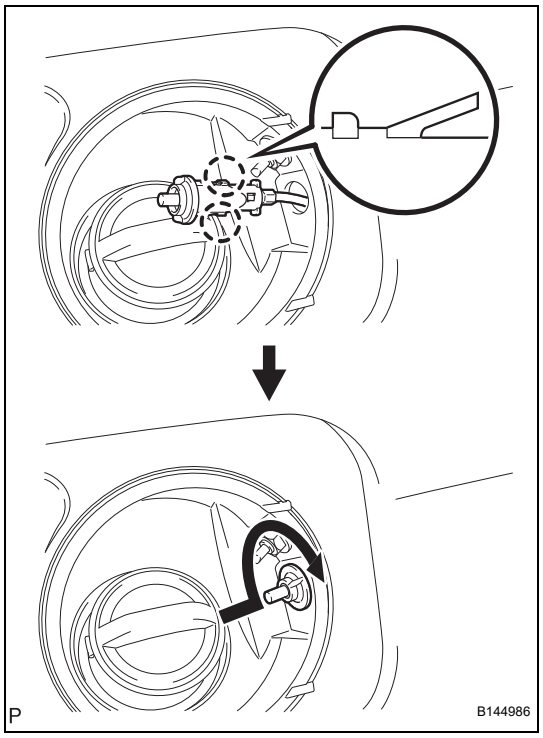
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor operates and shaft moves in open direction

   If the result is not as specified, replace the fuel lid opener motor assembly.
   (b) Check the shaft stroke.
   Standard:
   10.3 mm (0.406 in.) or more
   If the result is not as specified, replace the fuel lid opener motor assembly.

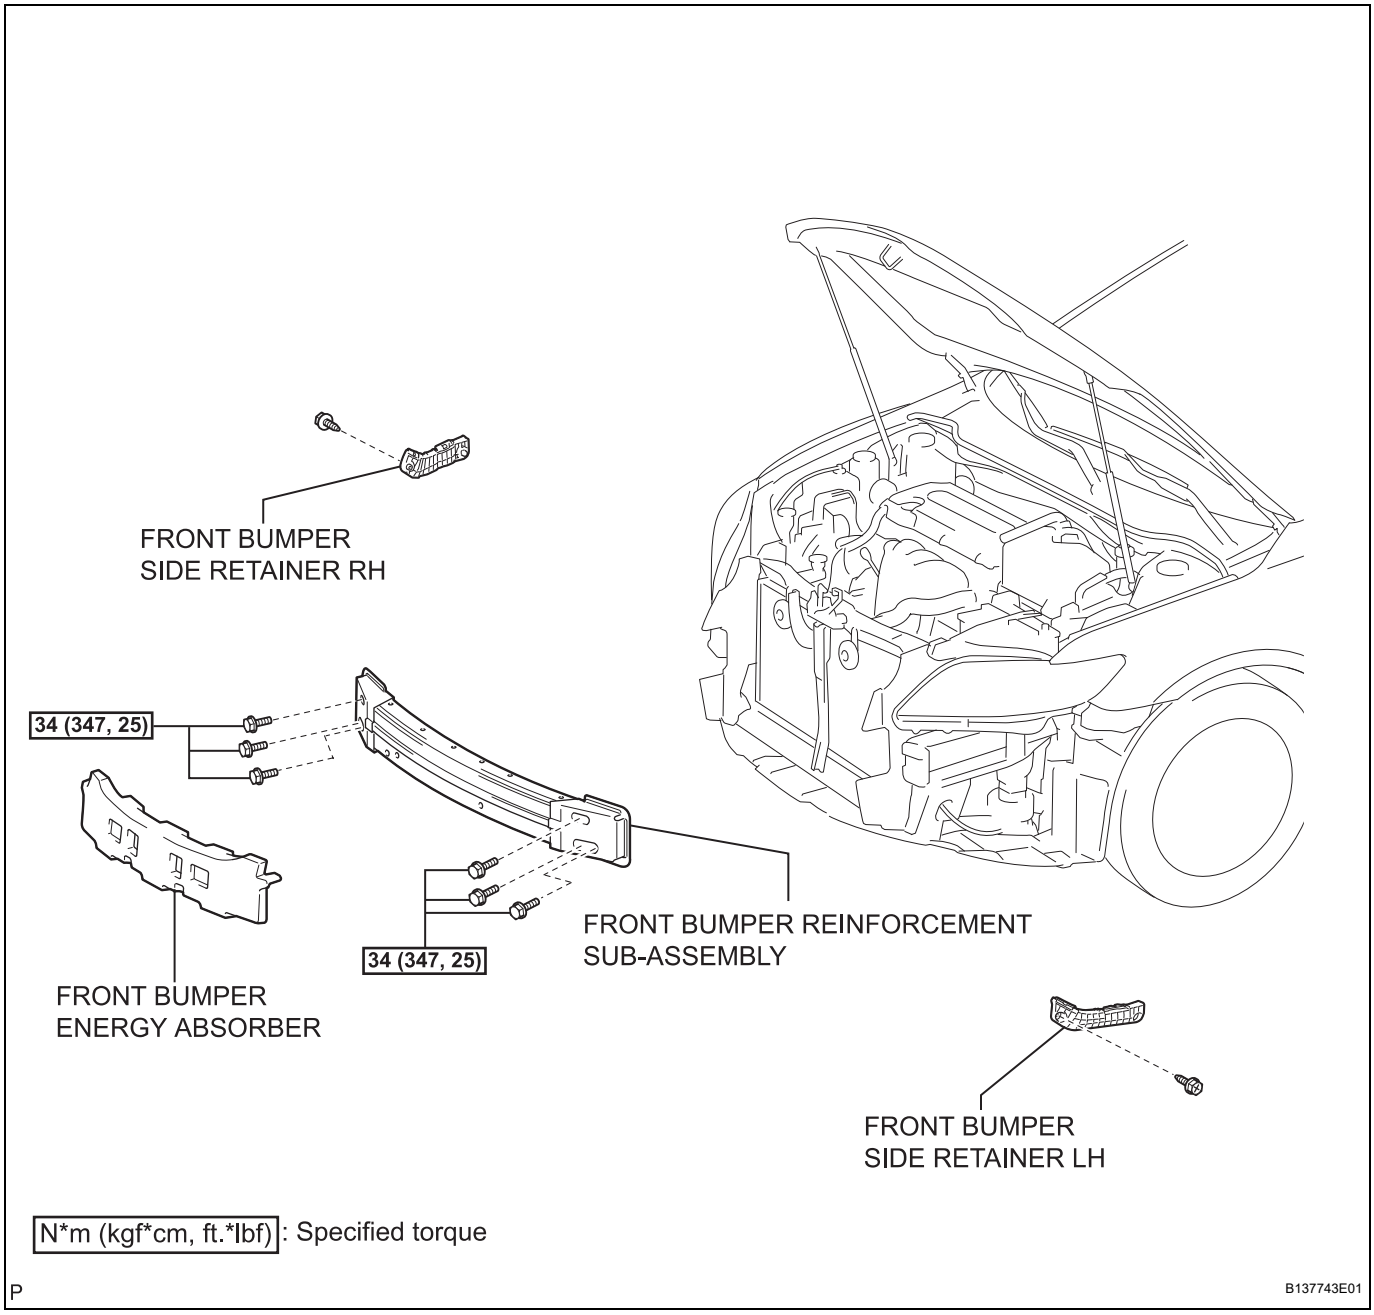
INSTALLATION

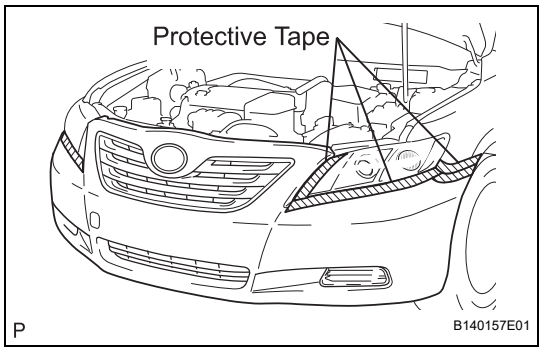
1. **INSTALL FUEL LID OPENER MOTOR ASSEMBLY**
   (a) Connect the connector.
   (b) Install the fuel lid opener motor assembly with the nut.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)





2. **INSTALL FUEL FILLER OPENING LID LOCK RETAINER**
   (a) Engage the 2 claws.
   (b) Install the fuel filler opening lid lock retainer as shown in the illustration.
3. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-102)**
4. **INSTALL LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-102)**
5. **INSTALL REAR FLOOR FINISH PLATE (See page ED-103)**
6. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-103)**
7. **INSTALL SPARE WHEEL COVER ASSEMBLY**
8. **INSTALL SPARE WHEEL COVER CLAMP**
9. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT**



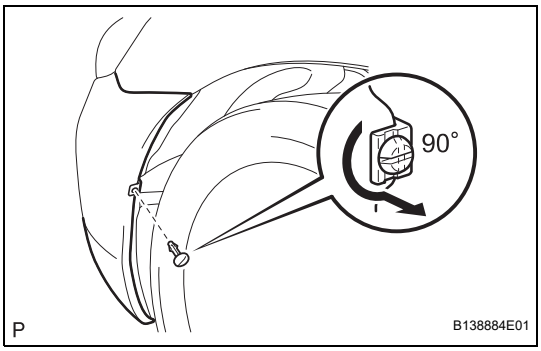


REMOVAL

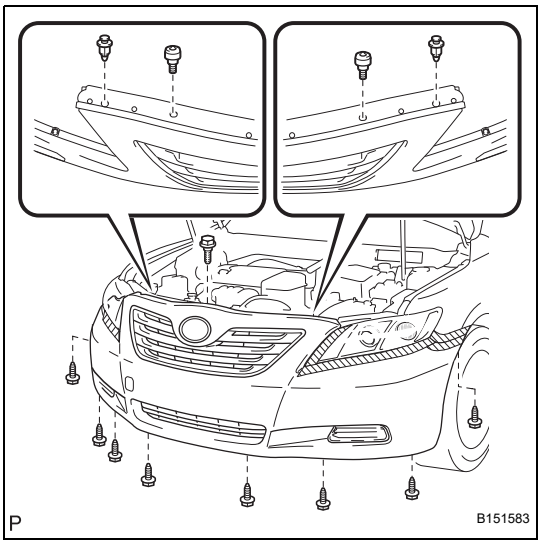
1. REMOVE FRONT BUMPER ASSEMBLY

(a) Put protective tape around the front bumper assembly.

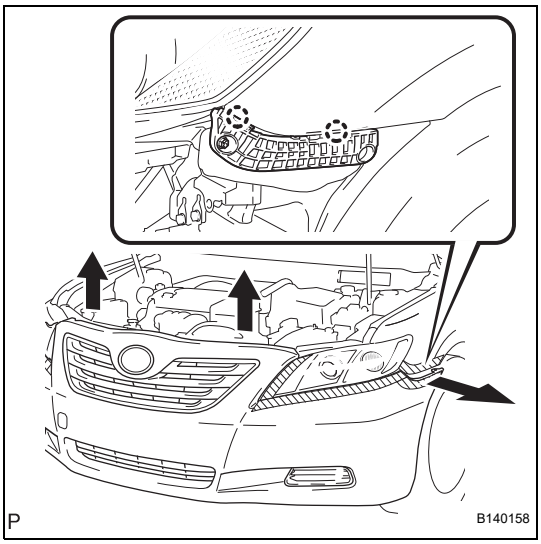
ET



(b) Using a screwdriver, turn the pin 90 degrees and remove the pin hold clip.
HINT:
Use the same procedures for the RH side and LH side.



(c) Remove the 8 screws, 2 clips, 2 radiator grille protectors and bolt.



(d) Disengage the 2 claws and disconnect the front bumper assembly as shown in the illustration.
HINT:
Use the same procedures for the RH side and LH side.
(e) Remove the front bumper assembly.

ET

INSTALLATION

1. INSTALL SYMBOL EMBLEM

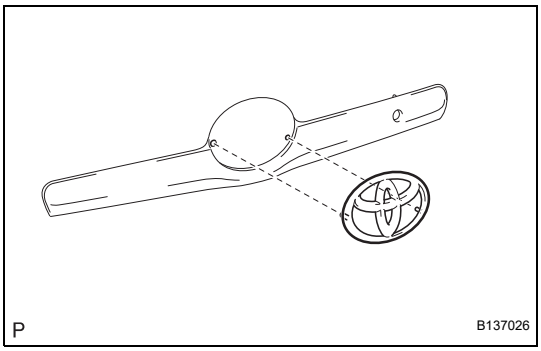
HINT:
When installing the symbol emblem, heat the luggage compartment door outside garnish and symbol emblem using a heat light.

Heating temperature

Item	Temperature
Luggage Compartment Door Outside Garnish	40 to 60°C (104 to 140°F)
Symbol Emblem	20 to 30°C (68 to 86°F)

NOTICE:
Do not heat the luggage compartment door outside garnish and symbol emblem excessively.

(a) Clean the luggage compartment door outside garnish surface.
  (1) Using a heat light, heat the luggage compartment door outside garnish surface.
  (2) Remove the double-sided tape from the luggage compartment door outside garnish.
  (3) Wipe off any tape adhesive residue with cleaner.

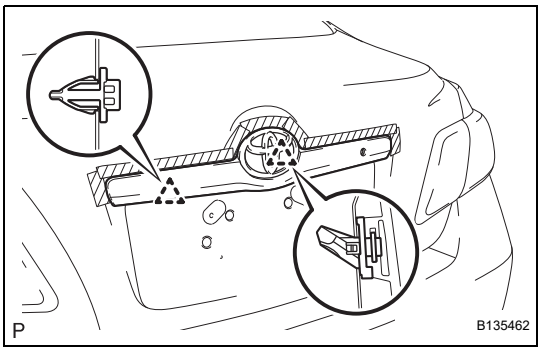


(b) Clean the symbol emblem. (If reusing the symbol emblem)
  (1) Using a heat light, heat the symbol emblem.
  (2) Remove the double-sided tape from the symbol emblem.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the symbol emblem.

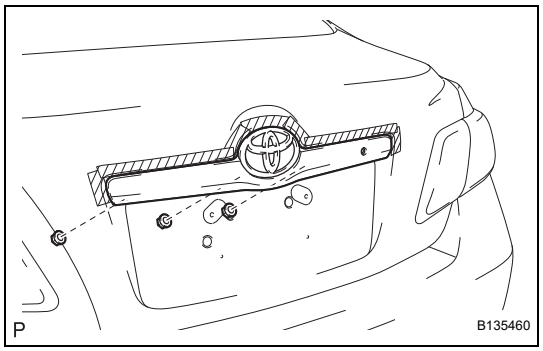
(c) Install the symbol emblem.
  (1) Using a heat light, heat the luggage compartment door outside garnish and symbol emblem.
  (2) Remove the release paper from the symbol emblem.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Install the symbol emblem.

2. INSTALL LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH

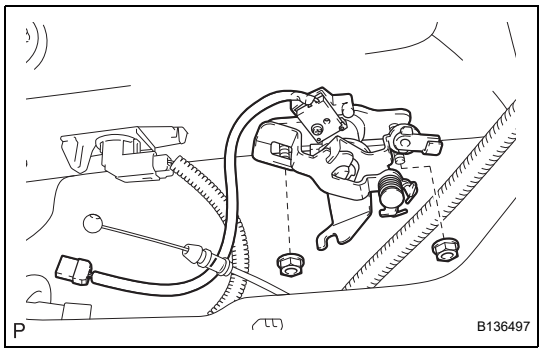
(a) Engage the 2 clips and install the luggage compartment door outside garnish.



ET

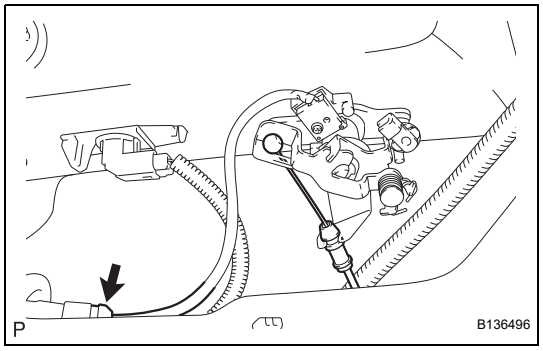


(b) Install the 3 nuts.

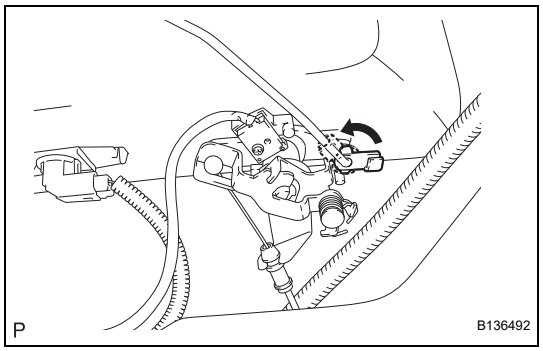


3. INSTALL LUGGAGE COMPARTMENT DOOR LOCK CYLINDER ASSEMBLY

(a) Install the luggage compartment door lock cylinder with the 2 nuts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

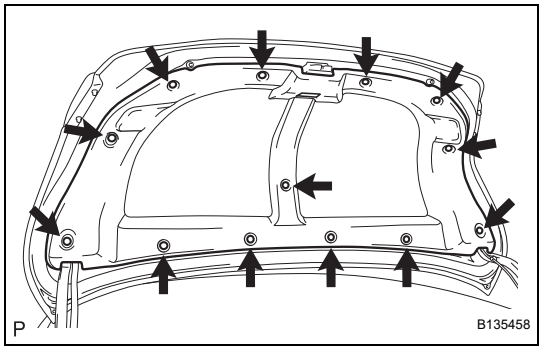


(b) Connect the cable and connector.



(c) Connect the rod.

4. INSTALL LUGGAGE DOOR OPENING SWITCH ASSEMBLY (See page DL-193)



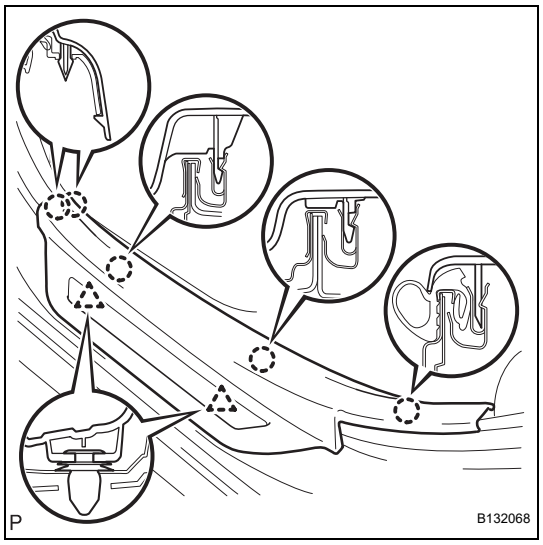
5. INSTALL LUGGAGE COMPARTMENT DOOR COVER

(a) Install the luggage compartment door cover with the 13 clips.

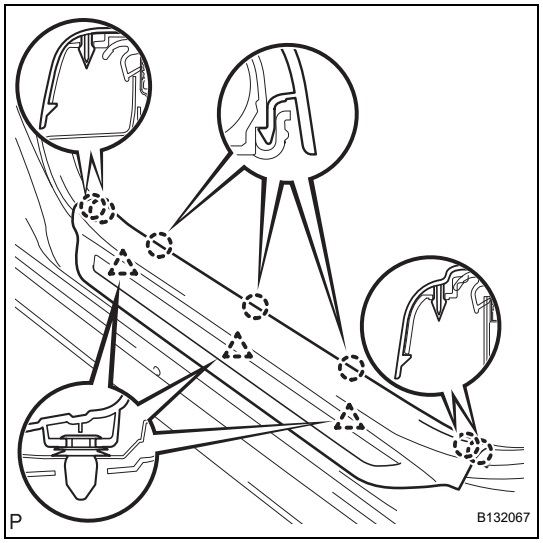
ET

REMOVAL

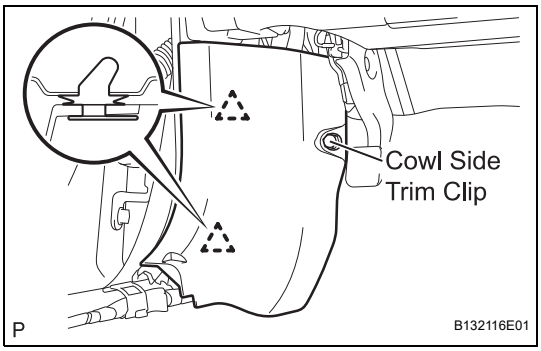
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
3. **REMOVE SEAT TRACK COVER LH (for Power Seat) (See page SE-29)**
4. **REMOVE INNER SEAT TRACK BRACKET COVER LH (for Power Seat) (See page SE-29)**
5. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-29)**
6. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side.
7. **REMOVE SEAT TRACK COVER RH (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side.
8. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side.
9. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side.
10. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
11. **REMOVE SEAT TRACK COVER RH (for Manual Seat) (See page SE-16)**
12. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page SE-16)**
13. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page SE-16)**



14. **REMOVE REAR DOOR SCUFF PLATE LH**
    (a) Disengage the 5 claws and 2 clips, and remove the rear door scuff plate LH.
15. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
16. **REMOVE REAR DOOR SCUFF PLATE RH**
    HINT:
    Use the same procedure for the RH side and the LH side.
17. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**
18. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
19. **REMOVE REAR SEAT HEADREST ASSEMBLY**
20. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
21. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)**
22. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)**
23. **REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)**
24. **REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)**
25. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-64)**
26. **REMOVE DOOR ASSIST GRIP COVER LH (See page ED-64)**
27. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-65)**
28. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-66)**



29. **REMOVE FRONT DOOR SCUFF PLATE LH**
    (a) Disengage the 7 claws and 3 clips, and remove the front door scuff plate LH.

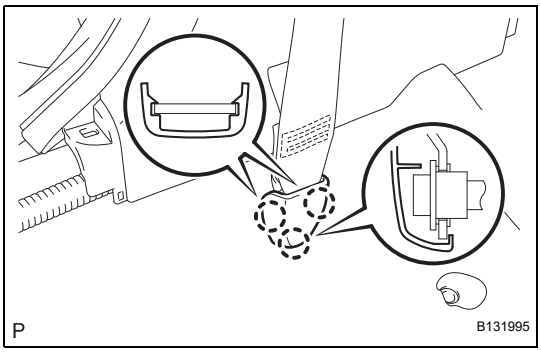


30. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH

(a) Remove the cowl side trim clip.

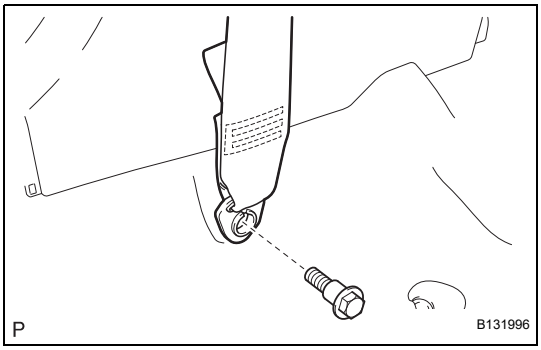
(b) Disengage the 2 clips and remove the cowl side trim sub-assembly LH.

31. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH



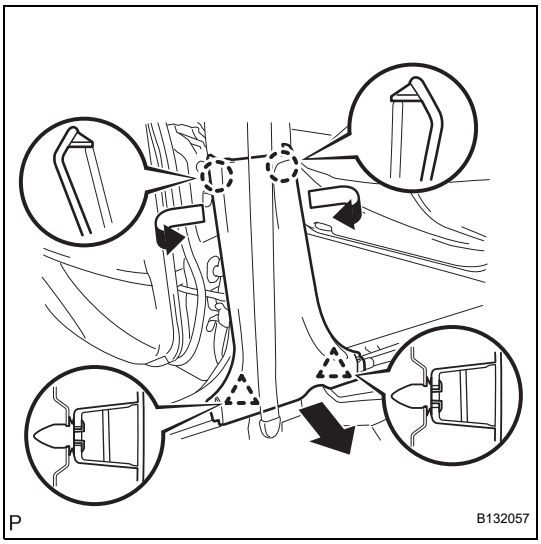
32. REMOVE LAP BELT OUTER ANCHOR COVER (for LH Side)

(a) Disengage the 3 claws and remove the lap belt outer anchor cover.



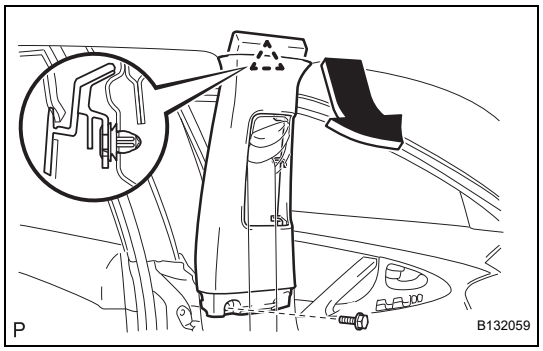
33. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH

(a) Remove the bolt and disconnect the floor end of the front seat outer belt assembly LH.



34. REMOVE LOWER CENTER PILLAR GARNISH LH

(a) Disengage the 2 claws and 2 clips, and remove the lower center pillar garnish LH.



35. REMOVE UPPER CENTER PILLAR GARNISH LH

(a) Remove the bolt.

(b) Disengage the clip and remove the upper center pillar garnish LH.

36. REMOVE FRONT DOOR SCUFF PLATE RH

HINT:

Use the same procedure for the RH side and the LH side.

37. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH

HINT:

Use the same procedure for the RH side and the LH side.

38. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH

39. REMOVE LAP BELT OUTER ANCHOR COVER (for RH Side)

HINT:

Use the same procedure for the RH side and the LH side.

40. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH

HINT:

Use the same procedure for the RH side and the LH side.

41. REMOVE LOWER CENTER PILLAR GARNISH RH

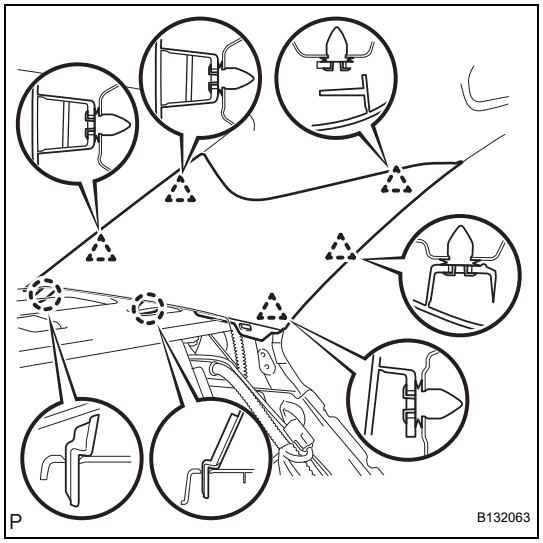
HINT:

Use the same procedure for the RH side and the LH side.

42. REMOVE UPPER CENTER PILLAR GARNISH RH

HINT:

Use the same procedure for the RH side and the LH side.



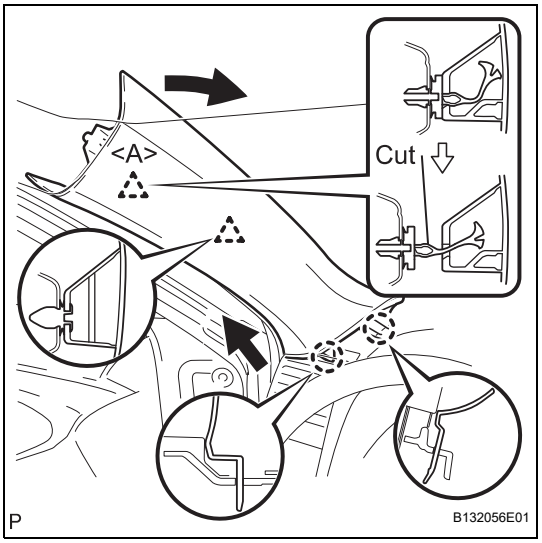
43. REMOVE ROOF SIDE INNER GARNISH LH

(a) Disengage the 5 clips and 2 claws, and remove the roof side inner garnish LH.

44. REMOVE ROOF SIDE INNER GARNISH RH

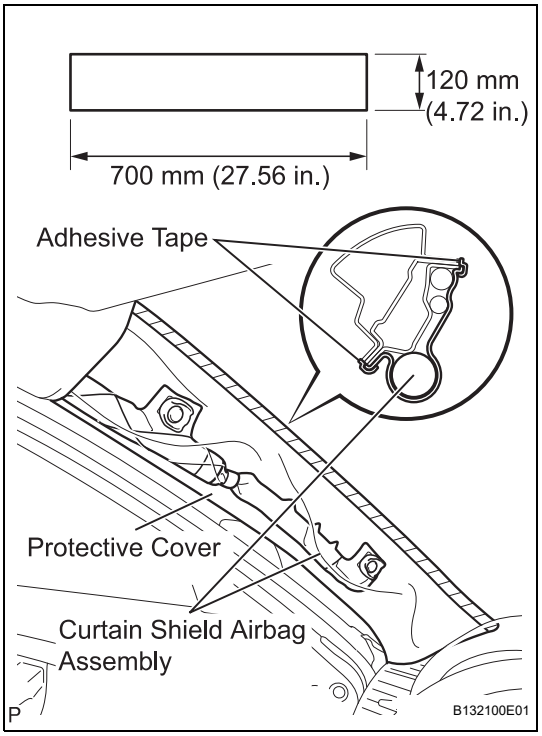
HINT:

Use the same procedure for the RH side and the LH side.

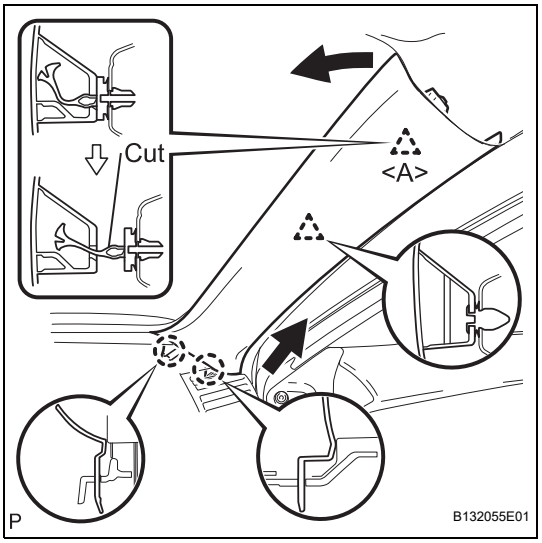


45. REMOVE FRONT PILLAR GARNISH LH

(a) Pull the upper part of the garnish toward the inside of the cabin and disengage the 2 clips.
(b) Cut off the clip <A>.
(c) Disengage the 2 claws and remove the front pillar garnish LH.
(d) Remove the clip <A> from the vehicle body.

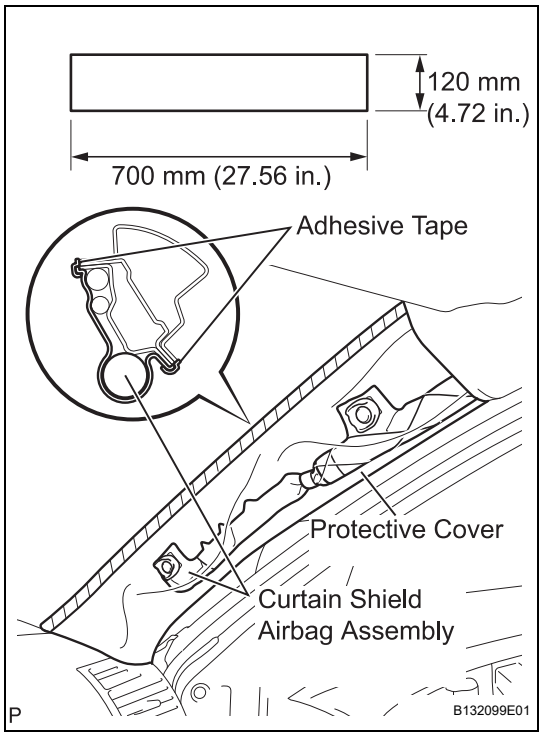


(e) Protect the curtain shield airbag assembly.
(1) Cover the airbag with a piece of nylon cloth of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover with tape, as shown in the illustration.
NOTICE:
Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.

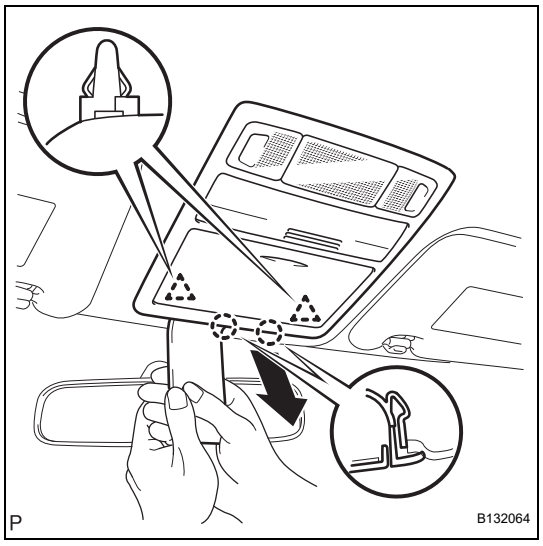


46. REMOVE FRONT PILLAR GARNISH RH

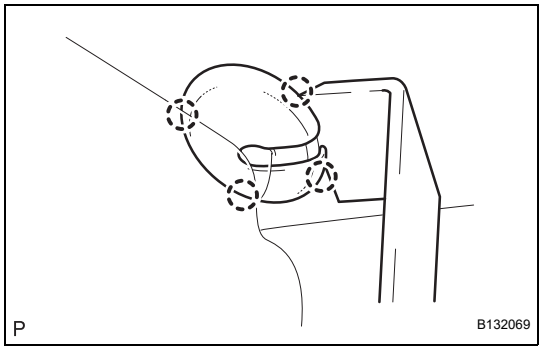
(a) Pull the upper of the garnish towards the inside of the cabin and disengage the 2 clips.
(b) Cut off the clip <A>.
(c) Disengage the 2 claws and remove the front pillar garnish RH.
(d) Remove the clip <A> from the vehicle body.



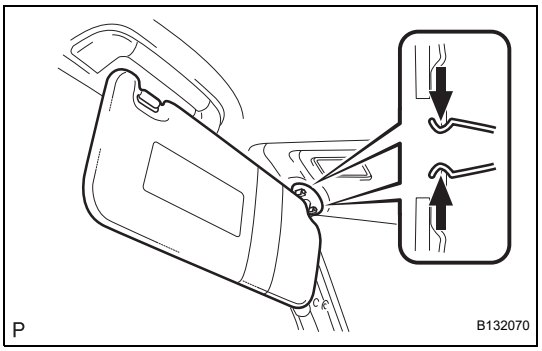
(e) Protect the curtain shield airbag assembly.
(1) Cover the airbag with a piece of nylon cloth of 700 mm (27.56 in.) x 120 mm (4.72 in.) and fix the ends of the cover with tape, as shown in the illustration.
NOTICE:
Cover the curtain shield airbag with a protective cover as soon as the front pillar garnish is removed.



47. REMOVE ROOF CONSOLE BOX ASSEMBLY
(a) Using a moulding remover, disengage the 2 clips and 2 claws.
(b) Disconnect the connectors and remove the roof console box assembly.



48. REMOVE VISOR ASSEMBLY LH
(a) Using a moulding remover, disengage the 4 claws and remove the visor bracket cover.



(b) Disengage the 2 clips and remove the visor assembly LH.

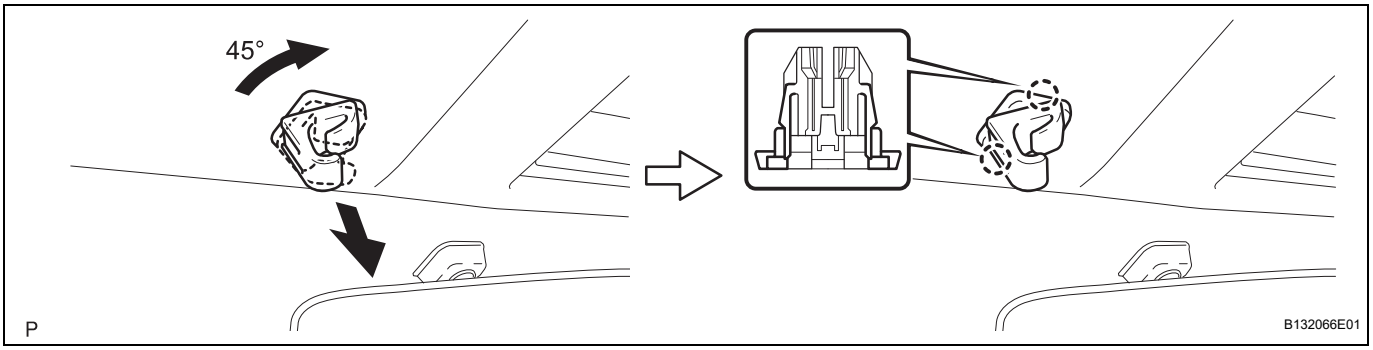
49. REMOVE VISOR ASSEMBLY RH

HINT:
Use the same procedure for the RH side and the LH side.

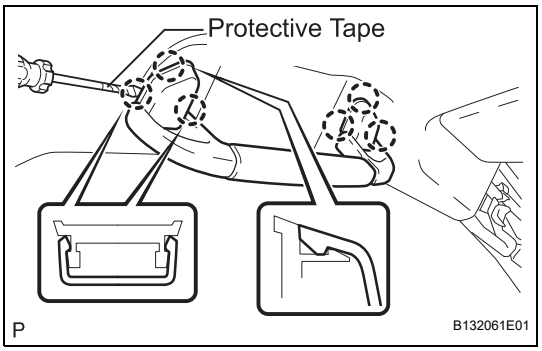
50. REMOVE VISOR HOLDER

(a) Turn the visor holder approximately 45° and pull it out as shown in the illustration.

(b) Disengage the 2 claws and remove the visor holder.

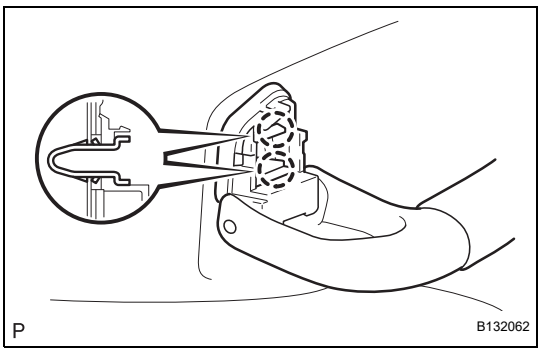


HINT:
Use the same procedure for the RH side and the LH side.



51. REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY

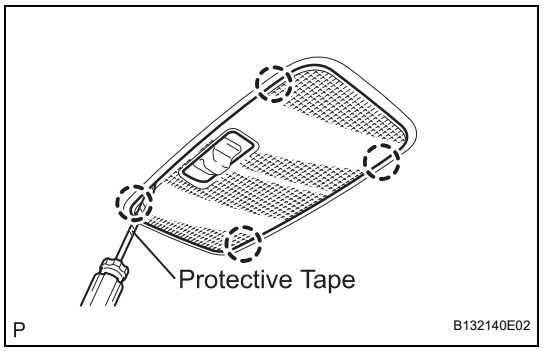
(a) Using a screwdriver, disengage the 6 claws and remove the 2 assist grip covers.
HINT:
Tape the screwdriver tip before use.



(b) Disengage the 2 clips and remove the front assist grip sub-assembly.
HINT:
Use the same procedure for the RH side and the LH side.

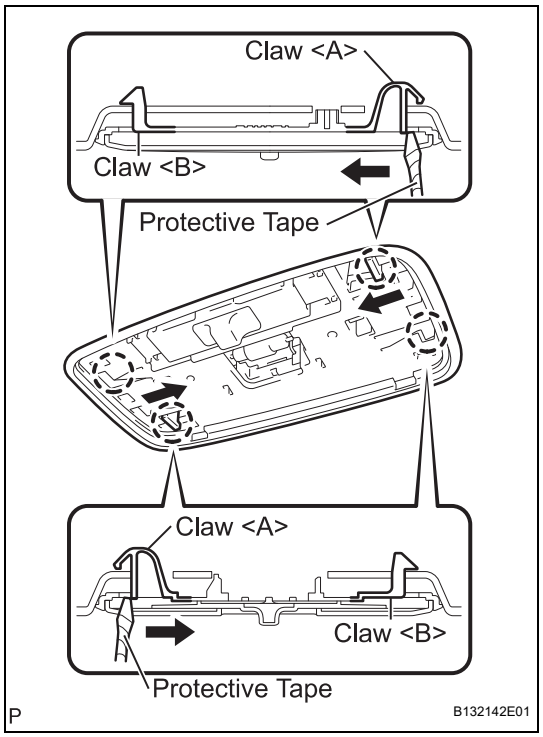
52. REMOVE REAR ASSIST GRIP SUB-ASSEMBLY

HINT:
Use the same procedure for the rear side and the front side.

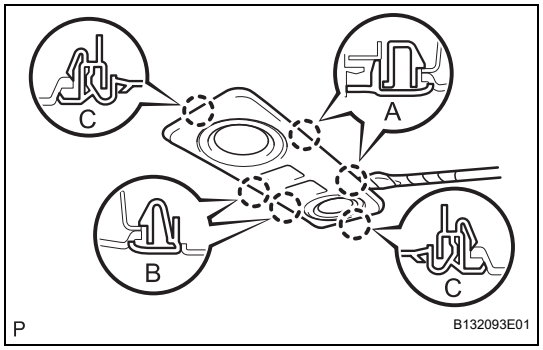


53. REMOVE NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof)

(a) Using a screwdriver, disengage the 4 claws and remove the lens cover.
HINT:
Tape the screwdriver tip before use.

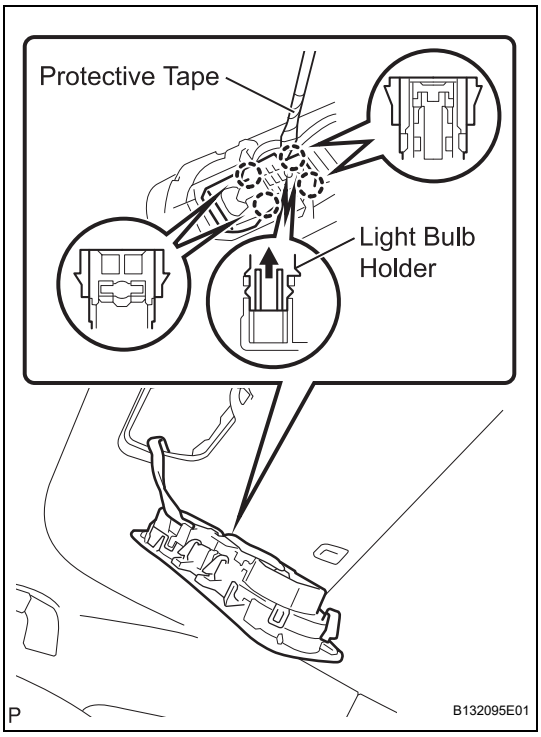


(b) Using a screwdriver, disengage the 2 claws <A> as shown in the illustration.
HINT:
Tape the screwdriver tip before use.
(c) Disengage the 2 claws <B> and remove the No. 1 room light assembly.
(d) Disconnect the room light connector.



54. REMOVE SPOT LIGHT ASSEMBLY (w/ Sliding Roof)

(a) Using a screwdriver, disengage the 2 claws labeled A and 2 claws labeled B from the vehicle body.
HINT:
Tape the screwdriver tip before use.
(b) Using a screwdriver, disengage the 2 claws labeled C and remove the spot light assembly from the headlining.
HINT:
Tape the screwdriver tip before use.



(c) Using a screwdriver, disengage the 4 claws.
HINT:
Tape the screwdriver tip before use.
(d) Pull the light bulb holder in the direction indicated by the arrow in the illustration to detach the claw. Then remove the spot light assembly from the light bulb holder.

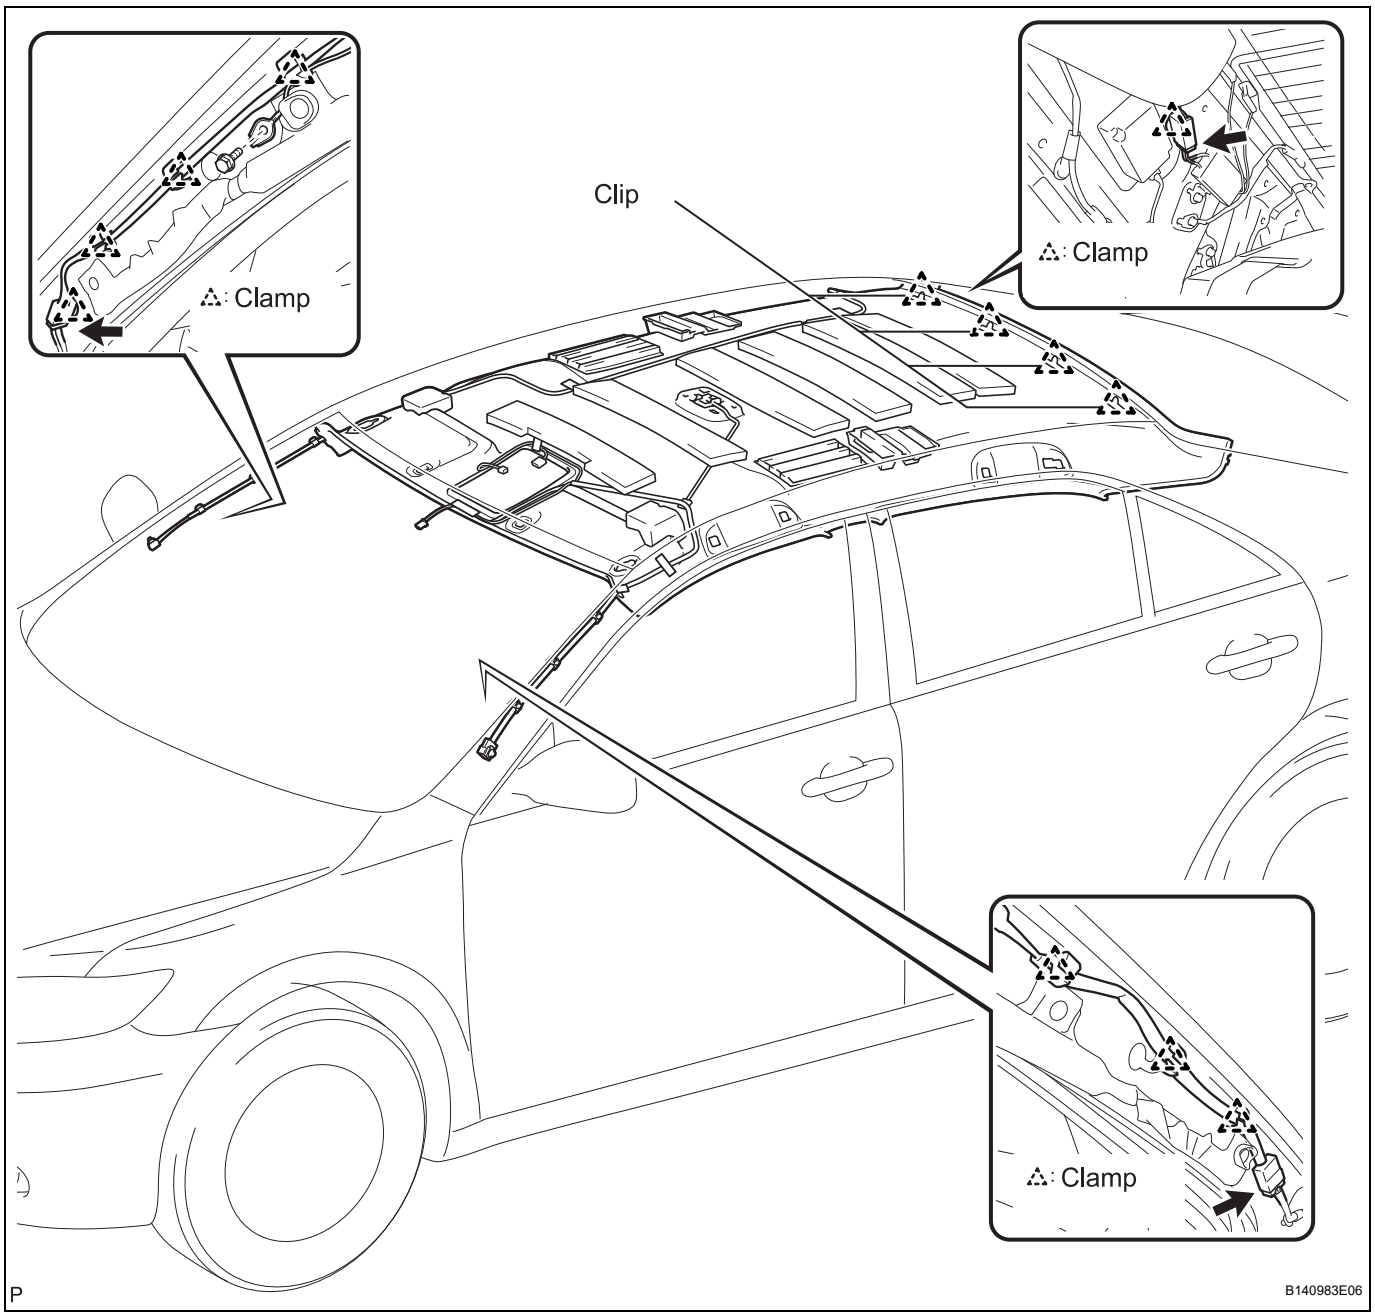
55. REMOVE SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof)

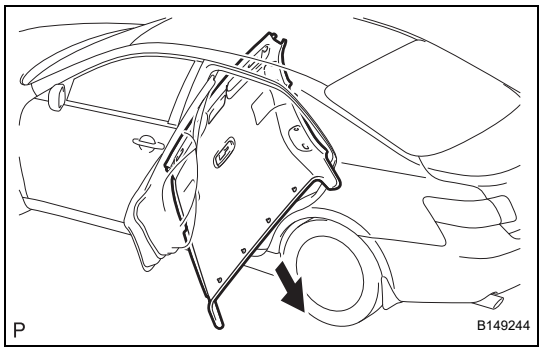
(a) Remove the sun roof opening trim moulding.

56. REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

(a) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.
(b) Remove the bolt and disconnect the radio setting condenser from the front pillar RH.
(c) Disconnect the antenna cord sub-assembly connector and disengage each clamp from the front pillar RH.
(d) Disconnect the antenna cord sub-assembly connector and disengage the clamp from the rear pillar RH.

(e) Disengage the 4 clips.



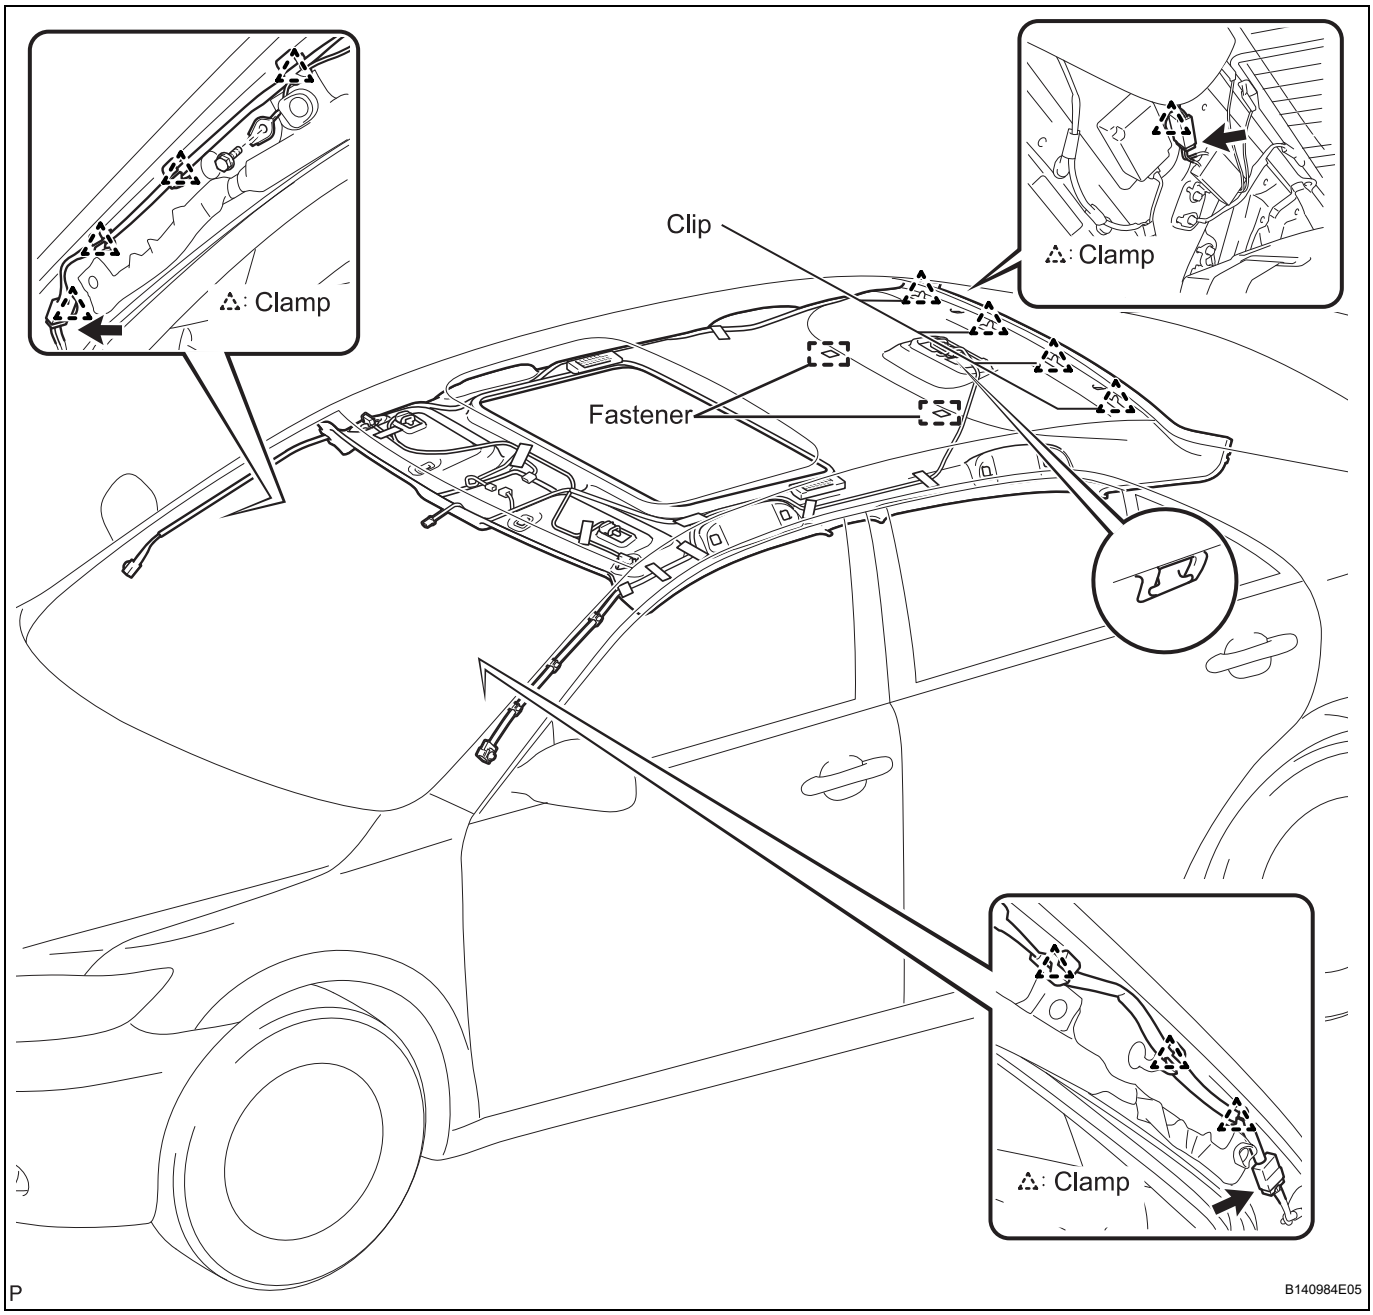


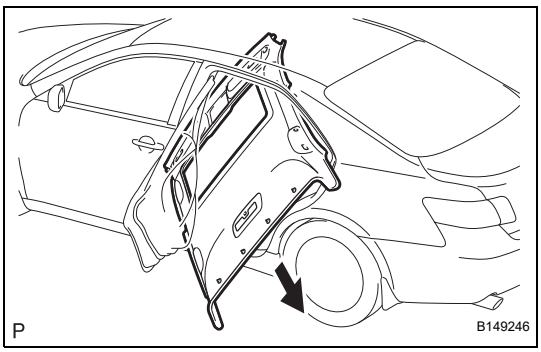
(f) Remove the roof headlining assembly from the vehicle through the rear left door.

57. REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

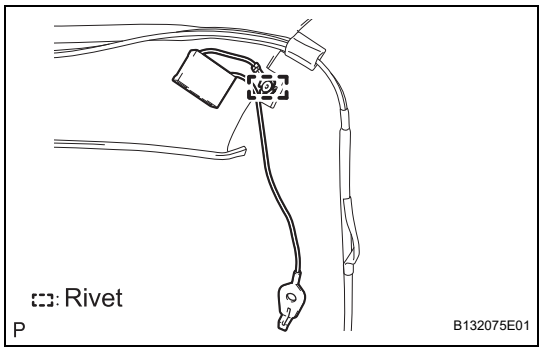
(a) Disconnect the No. 1 roof wire connector and disengage each clamp from the front pillar LH.
(b) Remove the bolt and disconnect the radio setting condenser from the front pillar RH.
(c) Disconnect the antenna cord sub-assembly connector and disengage each clamp from the front pillar RH.
(d) Disconnect the antenna cord sub-assembly connector and disengage the clamp from the rear pillar RH.

(e) Disconnect the sliding roof drive gear connector.
(f) Disengage the hook, 4 clips, and 2 fasteners.



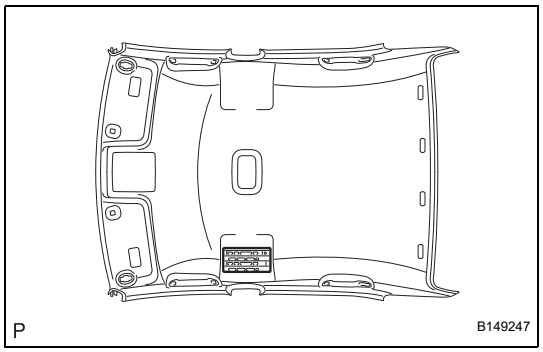


(g) Remove the roof headlining assembly from the vehicle through the rear left door.



58. REMOVE RADIO SETTING CONDENSER

(a) Remove the rivet and radio setting condenser.



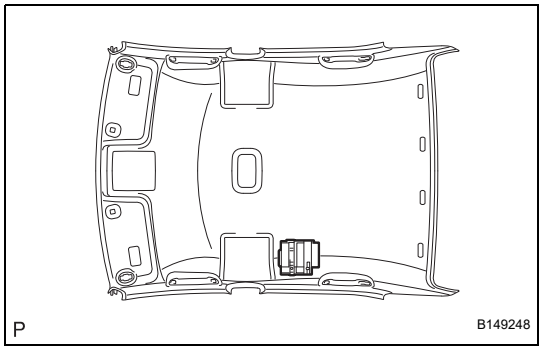
59. REMOVE NO. 2 REAR SIDE RAIL SPACER LH (w/o Sliding Roof)

(a) Remove the No. 2 rear side rail spacer LH.

60. REMOVE NO. 2 REAR SIDE RAIL SPACER RH (w/o Sliding Roof)

HINT:

Use the same procedure for the RH side and the LH side.



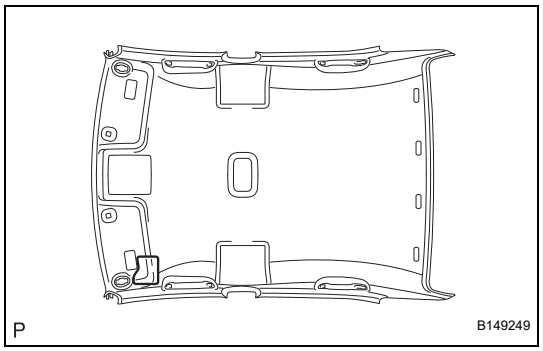
61. REMOVE NO. 3 REAR SIDE RAIL SPACER LH (w/o Sliding Roof)

(a) Remove the No. 3 rear side rail spacer LH.

62. REMOVE NO. 3 REAR SIDE RAIL SPACER RH (w/o Sliding Roof)

HINT:

Use the same procedure for the RH side and the LH side.



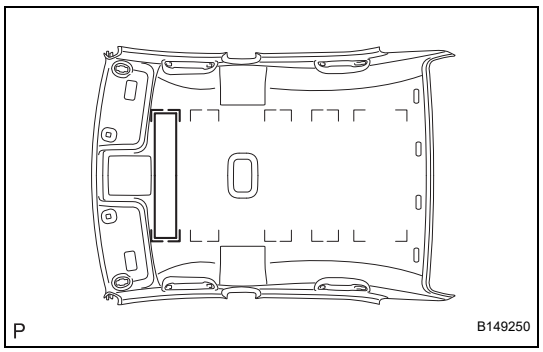
63. REMOVE ROOF SIDE RAIL SILENCER PAD LH (w/o Sliding Roof)

(a) Remove the roof side rail silencer pad LH.

64. REMOVE ROOF SIDE RAIL SILENCER PAD RH (w/o Sliding Roof)

HINT:

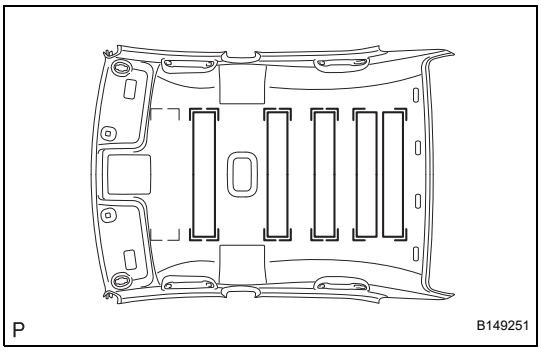
Use the same procedure for the RH side and the LH side.



65. REMOVE NO. 2 ROOF SILENCER PAD (w/o Sliding Roof)

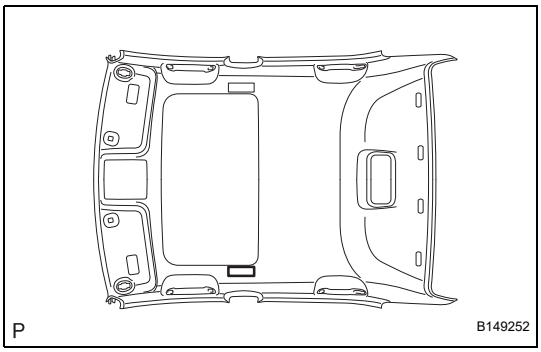
(a) Remove the No. 2 roof silencer pad.

IR



66. REMOVE NO. 4 ROOF SILENCER PAD (w/o Sliding Roof)

(a) Remove the No. 4 roof silencer pads.

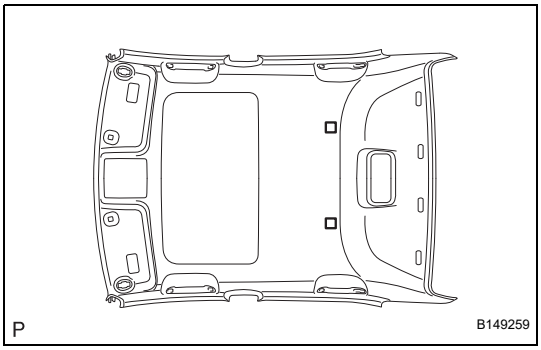


67. REMOVE NO. 2 REAR SIDE RAIL SPACER LH (w/ Sliding Roof)

(a) Remove the No. 2 rear side rail spacer LH.

68. REMOVE NO. 2 REAR SIDE RAIL SPACER RH (w/ Sliding Roof)

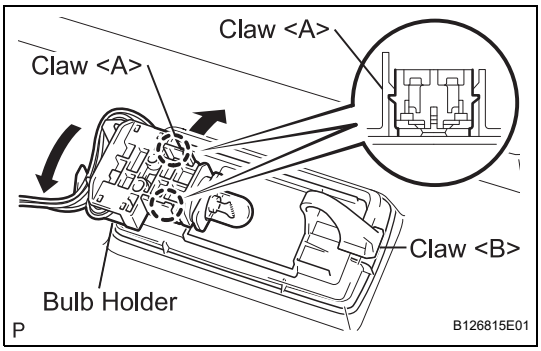
HINT:
Use the same procedure for the RH side and the LH side.



69. REMOVE FASTENER HOOK (w/ Sliding Roof)

(a) Remove the fastener hook.

70. REMOVE ANTENNA CORD SUB-ASSEMBLY (See page AV-176)



71. REMOVE VANITY LIGHT ASSEMBLY (w/ Sliding Roof)

(a) Disengage the 2 claws <A> and separate the bulb holder from the vanity light assembly as shown in the illustration.

(b) Disengage the claw <B> and remove the vanity light assembly.
HINT:
Use the same procedure to remove the light on the other side.

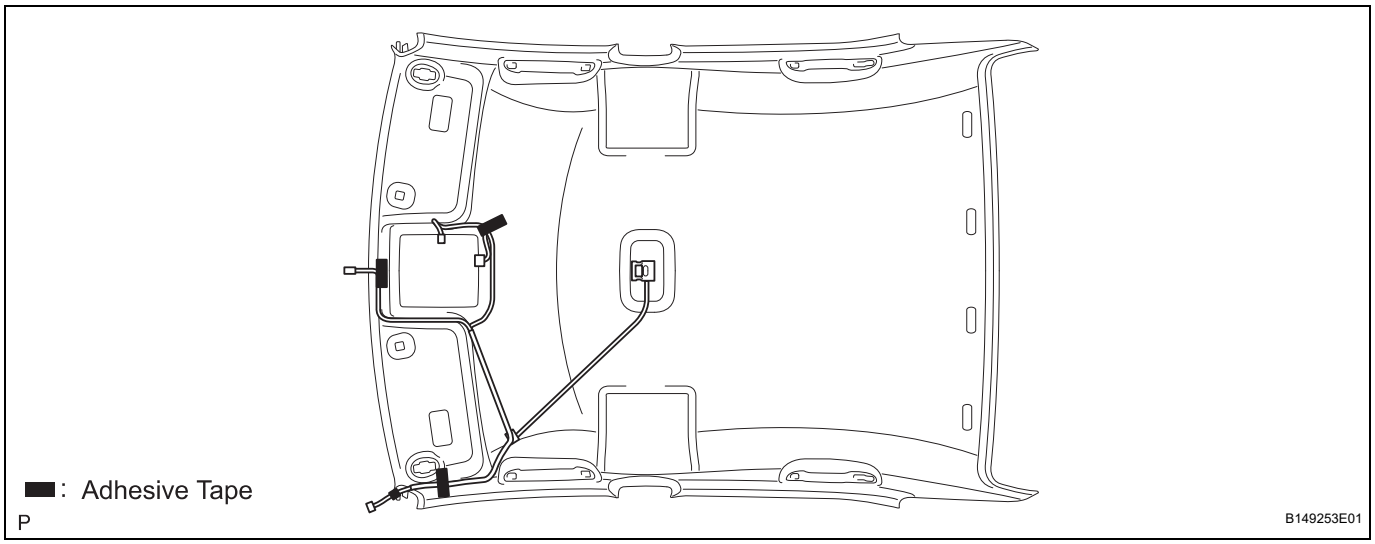
72. REMOVE NO. 1 ROOF WIRE (w/o Sliding Roof)

(a) Remove the adhesive tape from the roof headlining assembly.

(b) Remove the No. 1 roof wire from the roof headlining assembly.

IR

(c) Remove the double-sided tape from the roof headlining assembly.



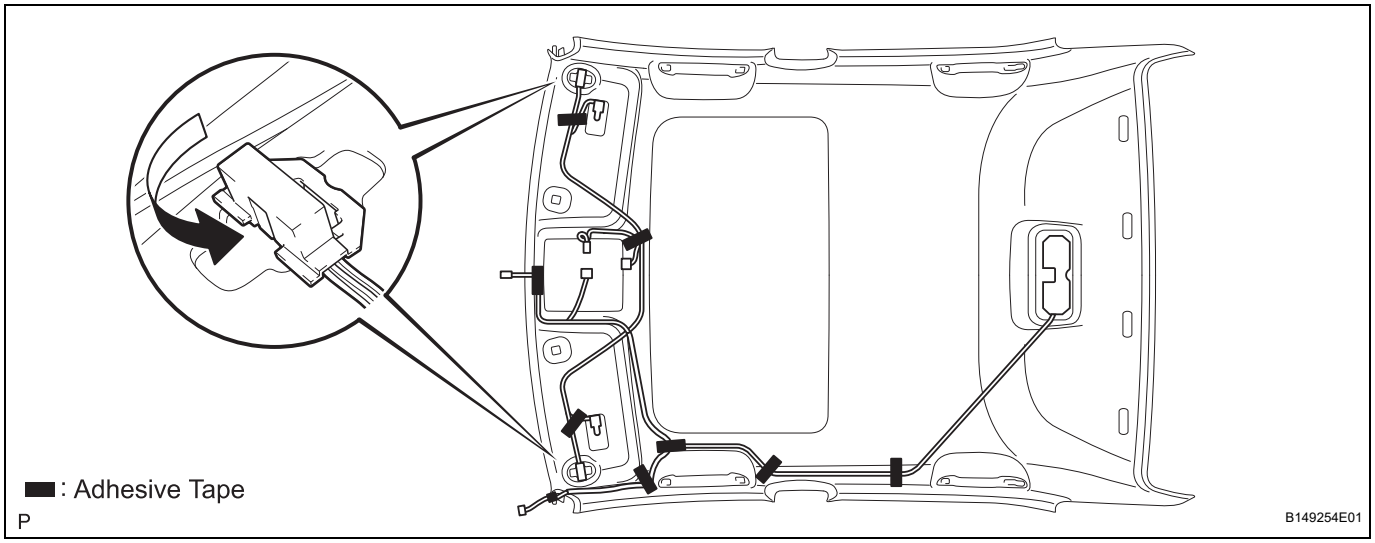
73. REMOVE NO. 1 ROOF WIRE (w/ Sliding Roof)

(a) Turn the visor connectors counterclockwise approximately 90° and separate the connectors from the roof headlining assembly.

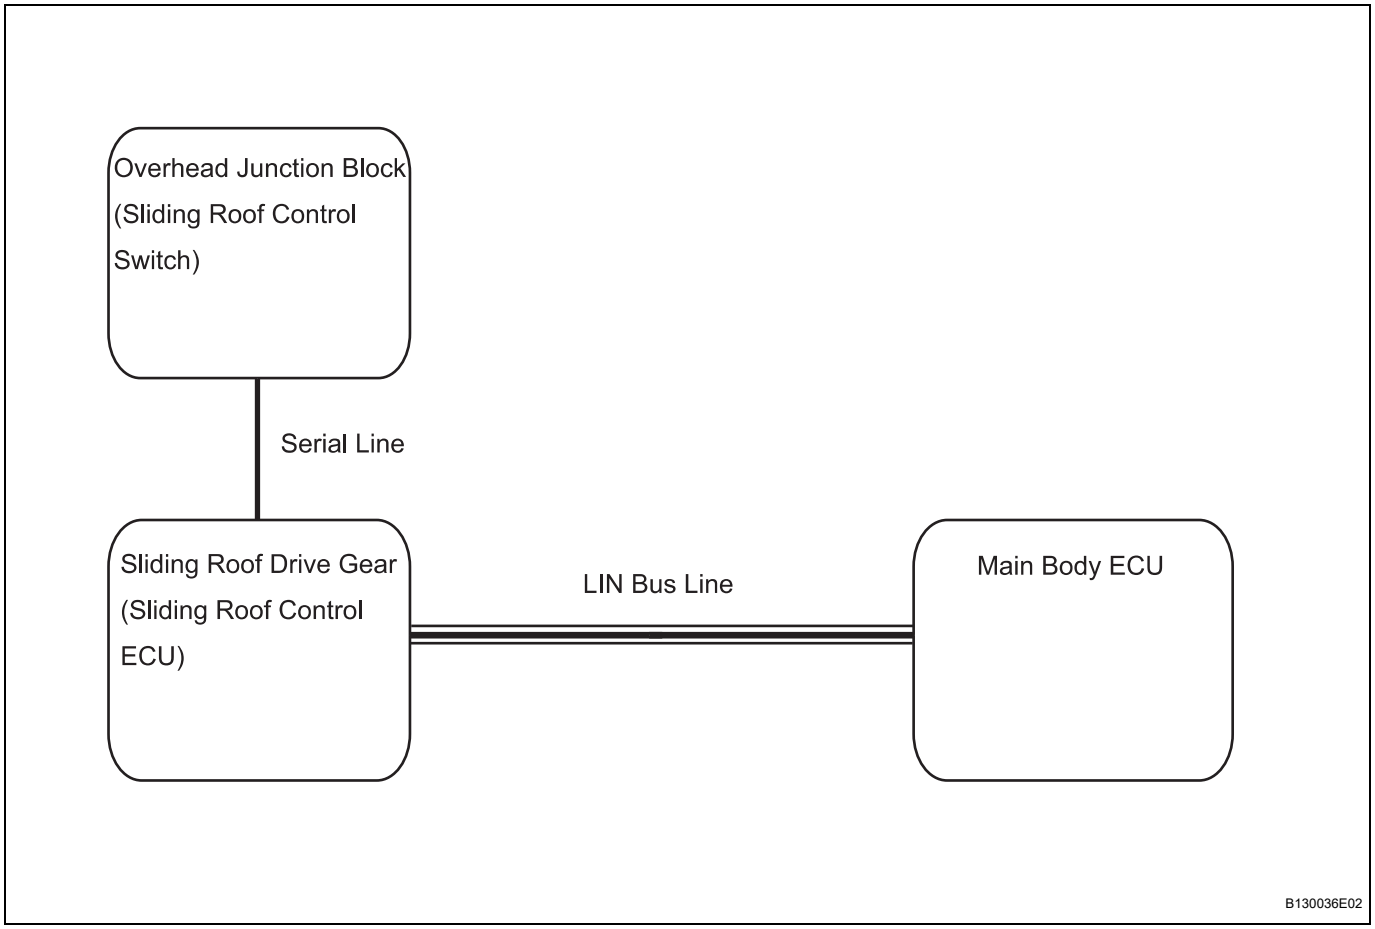
(b) Remove the adhesive tape from the roof headlining assembly.

(c) Remove the No. 1 roof wire from the roof headlining assembly.

(d) Remove the double-sided tape from the roof headlining assembly.



SYSTEM DIAGRAM



Communication table

Sender	Receiver	Signal	Line
Main Body ECU	Sliding Roof Control ECU	Key-off sliding roof operation signal	LIN

SYSTEM DESCRIPTION

1. GENERAL

This system has the following functions: manual slide open and close; auto slide open and close; manual tilt up and down; auto tilt up and down, jam protection; and key off operation.

2. FUNCTION OF MAIN COMPONENT

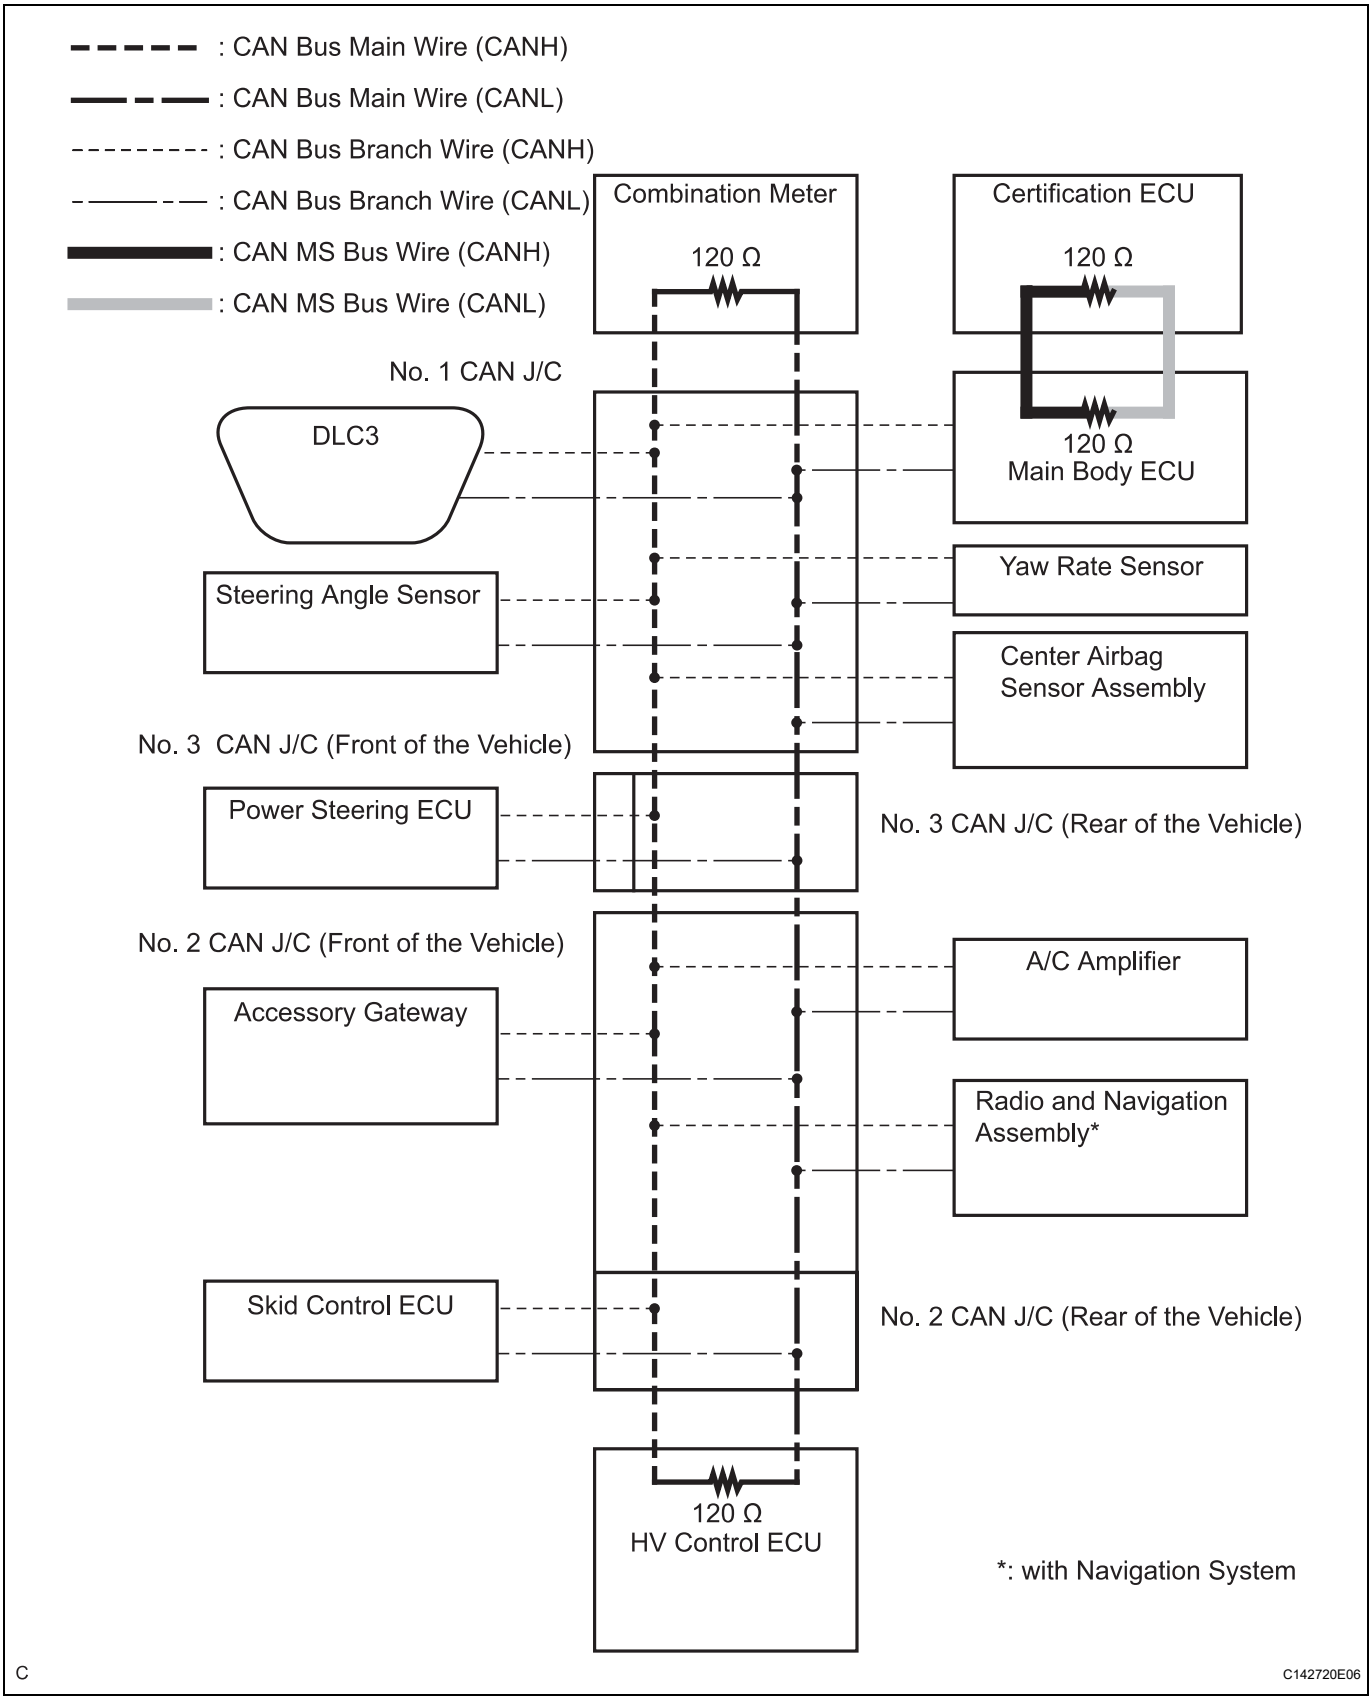
Component	Outline
Sliding Roof Drive Gear Sub-assembly (Sliding roof control ECU)	Sliding roof control ECU controls sliding roof motor to rotate forward and backward, which tilts or slides sliding roof glass.
Overhead Junction Block	Output of operation signals from built-in sliding roof switch to sliding roof control ECU is handled by overhead junction block.

3. SYSTEM OPERATION

The sliding roof has the following features:

Function	Outline
Manual slide open and close	This function causes sliding roof to open (or close) when OPEN/CLOSE switch is pressed for a maximum of 0.3 seconds. Sliding roof stops as soon as the switch is released.
Auto slide open and close	This function causes sliding roof to fully open (or close) when OPEN/CLOSE switch is pressed for a minimum of 0.3 seconds.
Manual tilt up and down	This function causes sliding roof to tilt up (or tilt down) when UP/DOWN switch is pressed for a maximum of 0.3 seconds.
Auto tilt up and down	This function enables sliding roof to tilt up (or down) when UP/DOWN switch is pressed for a minimum of 0.3 seconds.
Jam protection	The jam protection function automatically stops sliding roof, or stops sliding roof and makes it open halfway (or fully tilted up) if a foreign object gets jammed in sliding roof during auto close operation (or auto tilt down operation).
Key off operation	Key off operation function makes it possible to operate sliding roof for approximately 43 seconds after power switch is turned off, if front doors are not opened.

SYSTEM DIAGRAM



CA

HINT:

- The skid control ECU detects and stores steering angle sensor and yaw rate sensor DTCs and allows DTC communication by receiving information from the steering angle sensor and yaw rate sensor.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
The intelligent tester should be used in steps 3, 4, 5, 7 and 10.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CONNECT INTELLIGENT TESTER TO THE DLC3

HINT:
If the display indicates a communication fault in the tester, inspect the DLC3.

NEXT

4	CHECK DTC AND FREEZE FRAME DATA

HINT:
Record or print DTCs and freeze frame data, if necessary.

NEXT

5	CLEAR DTC AND FREEZE FRAME DATA

NEXT

6	CONDUCT VISUAL INSPECTION

NEXT

7	SET CHECK MODE DIAGNOSIS

NEXT

8	CONFIRM PROBLEM SYMPTOMS

HINT:
If the engine does not start, perform steps 10 and 12 first.

Result

Result	Proceed to
Malfunction does not occur	A
Malfunction occurs	B

B → GO TO STEP 10

A

9	SIMULATE SYMPTOMS

ES

NEXT

10	CHECK FOR DTC

Result

Result	Proceed to

NEXT

20	CONDUCT CONFIRMATION TEST

NEXT

END

CHECK FOR INTERMITTENT PROBLEMS

HINT:
Inspect the vehicle's ECM using check mode. Intermittent problems are easier to detect with an intelligent tester when the ECM is in check mode. In check mode, the ECM uses 1-trip detection logic, which is more sensitive to malfunctions than normal mode (default), which uses 2-trip detection logic.

1. Clear the DTCs (See page ES-31).
2. Switch the ECM from normal mode to check mode using an intelligent tester (See page ES-34).
3. Perform a simulation test (See page IN-67).
4. Check and wiggle the harness(es), connector(s) and terminal(s).

BASIC INSPECTION

When the malfunction is not confirmed by the DTC check, troubleshooting should be carried out in all circuits considered to be possible causes of the problem. In many cases, by carrying out the basic engine check shown in the following flowchart, the location of the problem can be found quickly and efficiently. Therefore, using this check is essential when engine troubleshooting.

ES

1 CHECK BATTERY VOLTAGE

NOTICE:
Carry out this check with the engine stopped and power switch off.
Result

Result	Proceed to
11 V or more	OK
Below 11 V	NG

NG → **CHARGE OR REPLACE BATTERY**

OK

2 CHECK WHETHER ENGINE CRANKS

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE**

OK

3 CHECK WHETHER ENGINE STARTS

NG → **GO TO STEP 6**

OK

4 CHECK AIR FILTER

(a) Visually check that the air filter is not excessively contaminated with dirt or oil.

NG → **REPLACE AIR FILTER**

OK

5 CHECK IDLING SPEED

NG → **PROCEED TO PROBLEM SYMPTOMS TABLE**

OK

6	CHECK FUEL PRESSURE

NG → PROCEED TO PAGE AND CONTINUE TO TROUBLESHOOT

OK

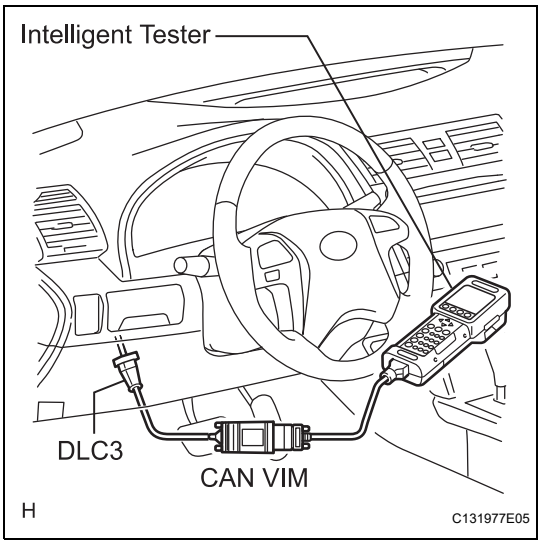
7	CHECK FOR SPARKS

NG → PROCEED TO PAGE AND CONTINUE TO TROUBLESHOOT

OK

PROCEED TO PROBLEM SYMPTOMS TABLE

INITIALIZATION



1. PERFORM INITIALIZATION

(a) Apply the parking brake and chock the vehicle.

(b) Connect the intelligent tester to the DLC3.

(c) Put the engine in the inspection mode (See page ES-35).

(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.

(e) Warm up the engine with the A/C switch off until the coolant temperature becomes 83°C (181°F) or more.

(f) Select the following menu items: DIAGNOSIS / OBD/MOBD /HV ECU / DATA LIST / SOC.

(g) Move the shift lever to the N position, set the A/C switch to MAX cool or turn on the front defroster, and leave the vehicle until the SOC value becomes below 40%.
HINT:
If the SOC is substantially below 40%, the auxiliary battery may go dead. Therefore, do not allow the SOC to reach substantially below 40%.

(h) Move the shift lever to the P position and turn the power switch off.

(i) Disconnect the negative terminal from the auxiliary battery and leave it for 1 minute or more.

(j) Reconnect the negative terminal to the auxiliary battery and turn the power switch on (IG).

(k) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.

(l) Check that the engine coolant temperature is 83°C (181°F) or more.
HINT:
If the engine coolant temperature is below 83°C (181°F), start the engine by depressing the accelerator pedal with the shift lever in the P position to increase the coolant temperature.

(m) Select the following menu items: DIAGNOSIS / ENHANCED OBDII / DATA LIST / PRIMARY / CALCLOAD.

(n) Move the shift lever to the D position while depressing the brake pedal with your left foot.

(o) Depress the accelerator pedal with your right foot while firmly depressing the brake pedal with your left foot, and maintain an engine load value of 45% or more (60 to 70% of full acceleration) for approximately 30 seconds.
NOTICE:
Do not perform this step for 40 seconds or more.

(p) Shift the shift lever to the P position. Turn the power switch off and then wait for 5 seconds before putting the vehicle into the READY-on state again.
(q) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / ISC LEARNING.
(r) Check that the air conditioner is off. Lightly depress the accelerator pedal and release it when the engine starts.
(s) Check that "COMPLETE" is displayed on the intelligent tester screen.
HINT:
- If "ISC LEARNING" is not completed within 1 minute, repeat steps (o) through (r).
- The engine will usually stop when "ISC LEARNING" is completed. However, the engine will not stop even when "ISC LEARNING" is completed in such cases when the charge level of the auxiliary battery is decreased.

ES

CHECKING MONITOR STATUS

The purpose of the monitor result (mode 06) is to allow access to the results for on-board diagnostic monitoring tests of specific components/systems that are not continuously monitored. Examples are catalyst, evaporative emission (EVAP) and thermostat.

The monitor result allows the OBD II scan tool to display the monitor status, test value, minimum test limit and maximum test limit. These data are displayed after the vehicle has been driven to run the monitor.

When the test value is not between the minimum test limit and maximum test limit, the ECM (included in hybrid vehicle control ECU) interprets this as a malfunction. When the component is not malfunctioning, if the difference of the test value and test limit is very small, the component will malfunction in the near future.

Perform the following instructions to view the monitor status. Although this instruction refers to the Lexus/Toyota diagnostic tester, it can be checked using a generic OBD II scan tool. Refer to your scan tool operator's manual for specific procedures.

1. PERFORM MONITOR DRIVE PATTERN

The monitor results and test values can be checked with the OBD II scan tool or the intelligent tester. The engine control module (ECM) (included in hybrid vehicle control ECU) monitors the emissions-related components such as the thermostat, catalyst converter and evaporative emissions (EVAP), and determines whether they are functioning normally or not. When monitoring is finished, the ECM stores the monitor results and the test values. The monitor result indicates whether the component is functioning normally or not. The test value is the value that was used to determine the monitor result. If the test value is outside of the test limit (malfunction criterion), the ECM determines the component is malfunctioning. Some emissions-related components have multiple test values to determine the monitor result. If one of these test values is outside of the test limit, the ECM determines that the component is malfunctioning.

(a) Connect the intelligent tester to the DLC3.

(b) Put the engine in inspection mode (See page ES-35).

(c) Turn the tester ON.

(d) Clear the DTCs.

(e) Run the vehicle in accordance with the applicable drive pattern described in READINESS MONITOR DRIVE PATTERN (See page ES-17). Do not turn the power switch off.

NOTICE:

The test results will be lost if the power switch is turned off.

2. ACCESS MONITOR RESULT

(a) Select the following intelligent tester menus: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO and MONITOR RESULT. The monitor status appears after the component name.
- INCMPL: The component has not been monitored yet.
- PASS: The component is functioning normally.
- FAIL: The component is malfunctioning.

(b) Confirm that the component is either PASS or FAIL.

(c) Select the component and press ENTER. The accuracy test value appears if the monitor status is either PASS or FAIL.

HINT:

The monitor result might on rare occasions be PASS even if the Malfunction Indicator Lamp (MIL) is illuminated. This indicates that the system was malfunctioning in the previous driving cycle. This might be caused by an intermittent problem.

3. CHECK COMPONENT STATUS

(a) Compare the test value with the minimum test limit (MIN LIMIT) and maximum test limit (MAX LIMIT).

(b) If the test value is between the minimum test limit and maximum test limit, the component is functioning normally. If not, the component is malfunctioning. The test value is usually significantly higher or lower than the test limit. If the test value is on the borderline of the test limit, the component will malfunction in the near future.

HINT:

The monitor result may on rare occasions be PASS even if the Malfunction Indicator Lamp (MIL) is illuminated. This indicates that the system was malfunctioning in the previous driving cycle. This might be caused by an intermittent problem.

4. MONITOR RESULT INFORMATION

If you use a generic scan tool, multiply the test value by the scaling value listed below.

A/F Sensor Bank 1 Sensor 1:

Monitor ID	Test ID	Scaling	Unit	Description
$01	$8E	Multiply by 0.001	V	A/F sensor deterioration level
$01	$91	Multiply by 0.004	mA	A/F sensor current

HO2S Bank 1 Sensor 2:

Monitor ID	Test ID	Scaling	Unit	Description
$02	$07	Multiply by 0.001	V	Minimum sensor voltage
$02	$08	Multiply by 0.001	V	Maximum sensor voltage
$02	$8F	Multiply by 0.0003	g	Maximum oxygen storage capacity

Catalyst-Bank 1:

Monitor ID	Test ID	Scaling	Unit	Description
$21	$A9	Multiply by 0.0003	No dimension	Oxygen storage capacity of catalyst bank 1

EVAP:

Monitor ID	Test ID	Scaling	Unit	Description
$3D	$CB	Multiply by 0.001	kPa	Test value for leak detection pump OFF stuck (P2401)
$3D	$CD	Multiply by 0.001	kPa	Test value for leak detection pump ON stuck (P2402)
$3D	$CE	Multiply by 0.001	kPa	Test value for vent valve OFF stuck (P2420)
$3D	$CF	Multiply by 0.001	kPa	Test value for vent valve ON stuck (P2419)
$3D	$D0	Multiply by 0.001	kPa	Test value for reference orifice low flow (P043E)
$3D	$D1	Multiply by 0.001	kPa	Test value for reference orifice high flow (P043F)
$3D	$D4	Multiply by 0.001	kPa	Test value for purge VSV close stuck (P0441)
$3D	$D5	Multiply by 0.001	kPa	Test value for purge VSV open stuck (P0441)
$3D	$D7	Multiply by 0.001	kPa	Test value for purge flow insufficient (P0441)
$3D	$D8	Multiply by 0.001	kPa	Test value for canister small leak (P1420)
$3D	$D9	Multiply by 0.001	kPa	Test value for canister gross leak (P1421)
$3D	$DA	Multiply by 0.001	kPa	Test value for fuel tank small leak (P1422)
$3D	$DB	Multiply by 0.001	kPa	Test value for fuel tank gross leak (P1423)
$3D	$DC	Multiply by 0.001	kPa	Test value for fuel vapor-containment valve close stuck (P2451)
$3D	$DD	Multiply by 0.001	kPa	Test value for fuel vapor-containment valve open stuck (P2450)

Misfire:

Monitor ID	Test ID	Scaling	Unit	Description
$A1	$0B	Multiply by 1	Time	Exponential Weighted Moving Average (EWMA) misfire for all cylinders: Misfire counts for last 10 driving cycles-Total
$A1	$0C	Multiply by 1	Time	Misfire rate for all cylinders: Misfire counts for last/current driving cycles-Total
$A2	$0B	Multiply by 1	Time	EWMA misfire for cylinder 1: Misfire counts for last 10 driving cycles-Total
$A2	$0C	Multiply by 1	Time	Misfire rate for cylinder 1: Misfire counts for last/current driving cycle-Total
$A3	$0B	Multiply by 1	Time	EWMA misfire for cylinder 2: Misfire counts for last 10 driving cycles-Total
$A3	$0C	Multiply by 1	Time	Misfire rate for cylinder 2: Misfire counts for last/current driving cycle-Total
$A4	$0B	Multiply by 1	Time	EWMA misfire for cylinder 3: Misfire counts for last 10 driving cycles-Total
$A4	$0C	Multiply by 1	Time	Misfire rate for cylinder 3: Misfire counts for last/current driving cycle-Total
$A5	$0B	Multiply by 1	Time	EWMA misfire for cylinder 4: Misfire counts for last 10 driving cycles-Total
$A5	$0C	Multiply by 1	Time	Misfire rate for cylinder 4: Misfire counts for last/current driving cycle-Total
$A6	$0B	Multiply by 1	Time	EWMA misfire for cylinder 5: Misfire counts for last 10 driving cycles-Total
$A6	$0C	Multiply by 1	Time	Misfire rate for cylinder 5: Misfire counts for last/current driving cycle-Total
$A7	$0B	Multiply by 1	Time	EWMA misfire for cylinder 6: Misfire counts for last 10 driving cycles-Total
$A7	$0C	Multiply by 1	Time	Misfire rate for cylinder 6: Misfire counts for last/current driving cycle-Total

READINESS MONITOR DRIVE PATTERN

1. PURPOSE OF READINESS TESTS

- The On-Board Diagnostic (OBD II) system is designed to monitor the performance of emission related components, and indicate any detected abnormalities with DTC (Diagnostic Trouble Codes). Since various components need to be monitored during different driving conditions, the OBD II system is designed to run separate monitoring programs called Readiness Monitors.
- The intelligent tester's software must be version 9.0 or newer to view the Readiness Monitor Status. To view the status, enter the following menus: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
- When the Readiness Monitor status reads COMPL (complete), the necessary conditions have been met for running the performance tests for that Readiness Monitor.
- A generic OBD II scan tool can also be used to view the Readiness Monitor status.

HINT:

Many state Inspection and Maintenance (I/M) programs require a vehicle's Readiness Monitor status to show COMPL before beginning emission tests.

The Readiness Monitor will be reset to INCMPL (incomplete) if:

- The ECM (included in hybrid vehicle control ECU) has lost battery power or blown a fuse.
- DTCs have been cleared.
- The conditions for running the Readiness Monitor have not been met.

If the Readiness Monitor status shows INCMPL, follow the appropriate Readiness Monitor Drive Pattern to change the status to COMPL.

CAUTION:

Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.

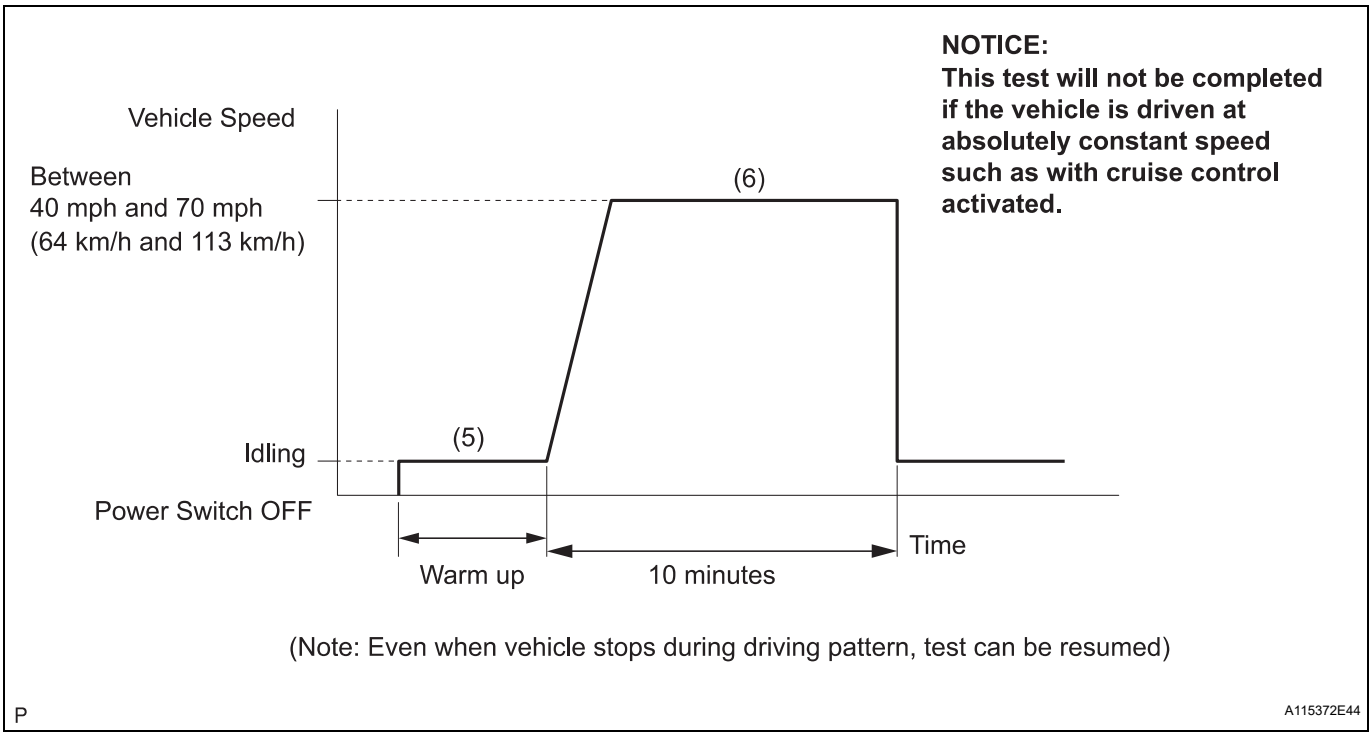
NOTICE:

These drive patterns represent the fastest method of satisfying all conditions necessary to achieve complete status for each specific Readiness Monitor.

In the event of a drive pattern being interrupted (possibly due to factors such as traffic conditions), the drive pattern can be resumed. In most cases, the Readiness Monitor will still achieve complete status upon completion of the drive pattern.

To ensure completion of the Readiness Monitors, avoid sudden changes in vehicle load and speed (driving up and down hills and/or sudden acceleration).

2. CATALYST MONITOR (ACTIVE AIR-FUEL RATIO CONTROL TYPE)



(a) Preconditions
The monitor will not run unless:
- The MIL is OFF.

(b) Drive Pattern
(1) Connect an intelligent tester to the DLC3.
(2) Turn the power switch on (IG).
(3) Turn the tester on.
(4) Clear the DTCs (if set) (See page ES-31).
(5) Put the engine in inspection mode (See page ES-35), and warm it up.
(6) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.

(c) Monitor Status
Check the Readiness Monitor status displayed on the tester.
If the status does not switch to COMPL (complete), extend the driving time.

3. EVAP SYSTEM MONITOR (KEY OFF TYPE)

(a) Preconditions
The monitor will not run unless:
– The fuel tank is less than 90% full.
– The altitude is less than 8,000 ft (2,450 m).
– The vehicle is stationary.
– The engine coolant temperature is between 4.4°C and 35°C (40°F and 95°F).
– The intake air temperature is between 4.4°C and 35°C (40°F and 95°F).
– Vehicle was driven in the city area (or on free-way) for 10 minutes or more.

(b) Monitor Conditions
(1) Turn the power switch off and wait for 6 hours.
HINT:
Do not start the engine until checking Readiness Monitor status. If the engine is started, the step described above must be repeated.

(c) Monitor Status
(1) Connect an intelligent tester to the DLC3.
(2) Turn the power switch on (IG).
(3) Turn the tester on.
(4) Check the Readiness Monitor status displayed on the tester.

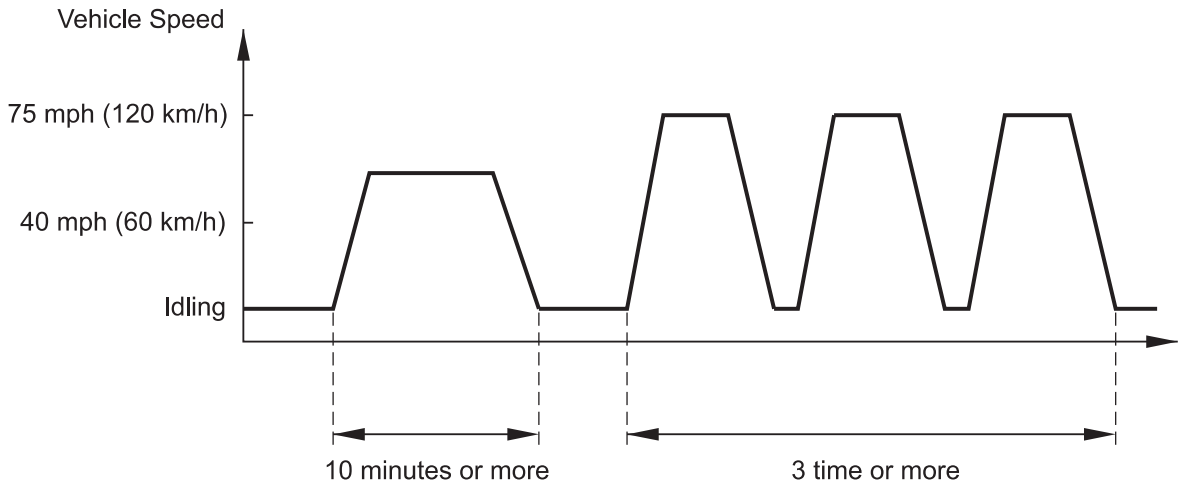
If the status does not switch to COMPL (complete), restart the engine, make sure that the preconditions have been met, and then perform the Monitor Conditions again.

ES

4. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR MONITORS (ACTIVE AIR-FUEL RATIO CONTROL TYPE)

Monitor Driving Pattern

Engine Coolant Temperature: 75°C (167°F) or more

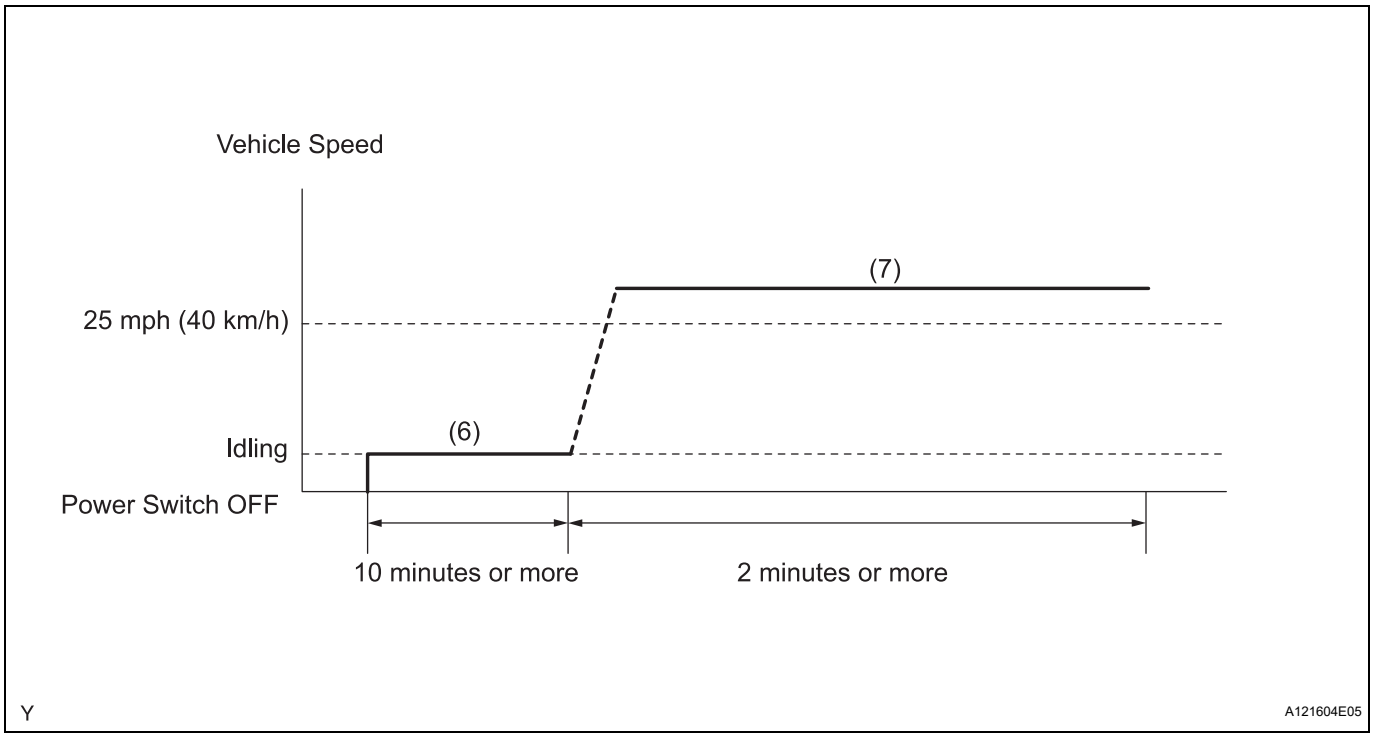


A142099E01

(a) Drive Pattern for front A/F sensor and HO2 sensor
(1) Connect an intelligent tester to the DLC3.
(2) Turn the power switch on (READY).
(3) Turn the tester on.
(4) Clear the DTCs (See page ES-31).
(5) Warm up the engine until the engine coolant temperature reaches 75°C (167°F) or higher.
(6) Drive the vehicle at between 40 mph (60 km/h) and 75 mph (120 km/h) for 10 minutes or more.
(7) Repeat the following drive pattern 3 times or more:
- Drive the vehicle at 75 mph (120 km/h).
- Release the accelerator pedal and stop the vehicle.

(b) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
(2) If the status does not switch to COMPL (complete), perform the Drive Pattern above.

5. AIR-FUEL RATIO (A/F) AND HEATED OXYGEN (HO2) SENSOR HEATER MONITORS (FRONT A/F AND REAR HO2 SENSOR TYPE)



(a) Preconditions
The monitor will not run unless:
– The MIL is OFF.
(b) Drive Pattern
(1) Connect an intelligent tester to the DLC3.
(2) Turn the power switch on (IG).
(3) Turn the tester on.
(4) Clear the DTCs (if set) (See page ES-31).
(5) Put the engine in inspection mode (See page ES-35).
(6) Allow the engine to idle for 10 minutes or more.
(7) Drive the vehicle at 25 mph (40 km/h) or more for at least 2 minutes.
(c) Monitor Status
(1) Check the Readiness Monitor status displayed on the tester.
If the status does not switch to COMPL (complete), make sure that the preconditions have been met, and repeat steps through (5) to (7) described in the Drive Pattern above.

PROBLEM SYMPTOMS TABLE

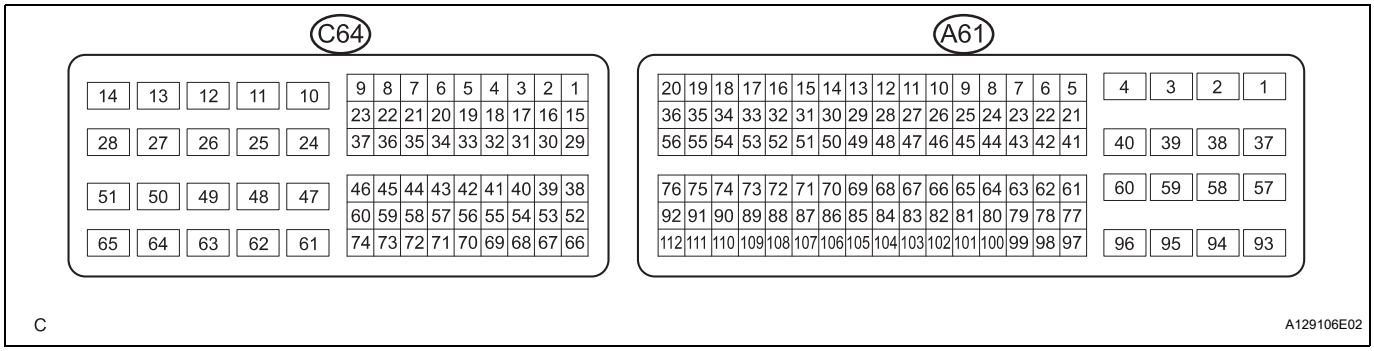
When the malfunction is not confirmed in the diagnostic trouble code check and the problem still cannot be confirmed in the basic inspection, use this table and troubleshoot according to the priority order given below.

SFI SYSTEM:

Symptom	Suspected Area	See page
Engine does not crank (Does not start)	1. Immobilizer system	EI-7
	2. Generator	HV-157
	3. Hybrid system	HV-15
	4. Park/neutral position switch	HV-90
No initial combustion (Does not start)	1. ECM (Included in HV Control ECU) power source circuit	ES-356
	2. Fuel pump control circuit	ES-368
	3. ECM (Included in HV Control ECU)	-
Engine cranks normally but difficult to start	1. Fuel pump control circuit	ES-368
	2. Compression	EM-3
Difficult to start with cold engine	1. Ignition system	IG-3
	2. Spark plug	IG-5
	3. Fuel pump control circuit	ES-368
	4. Injector	FU-14
Difficult to start with warm engine	1. Injector	FU-14
	2. Ignition system	IG-3
	3. Spark plug	IG-5
	4. Fuel pump control circuit	ES-368
High engine idle speed (Poor idling)	1. ECM (Included in HV Control ECU) power source circuit	ES-356
	2. Electronic throttle control system	ES-395
	3. Air induction system	-
	4. PCV hose	EC-4
Low engine idle speed (Poor idling)	1. Fuel pump control circuit	ES-368
	2. Electronic throttle control system	ES-395
	3. Air induction system	-
	4. PCV hose	EC-4
Rough idling (Poor idling)	1. Compression	EM-3
	2. Fuel pump control circuit	ES-368
	3. Electronic throttle control system	ES-395
	4. Air induction system	-
	5. PCV hose	EC-4
Hunting (Poor idling)	1. ECM (Included in HV Control ECU) power source circuit	ES-356
	2. Fuel pump control circuit	ES-368
	3. Spark plug	IG-5
	4. Ignition system	IG-3
	5. Injector	FU-14
	6. Electronic throttle control system	ES-395
	7. Air induction system	-
	8. PCV hose	EC-4
Hesitation/ Poor acceleration (Poor driveability)	1. Fuel pump control circuit	ES-368
	2. Spark plug	IG-5
	3. Ignition system	IG-3
	4. Injector	FU-14

Symptom	Suspected Area	See page
Surging (Poor driveability)	1. Spark plug	IG-5
	2. Fuel pump control circuit	ES-368
	3. Ignition system	IG-3
	4. Injector	FU-14
Engine stalls soon after starting	1. Fuel pump control circuit	ES-368
	2. Spark plug	IG-5
	3. Ignition system	IG-3
	4. Injector	FU-14
Unable/difficult to refuel	Refueling valve (canister)	EC-10

TERMINALS OF ECM



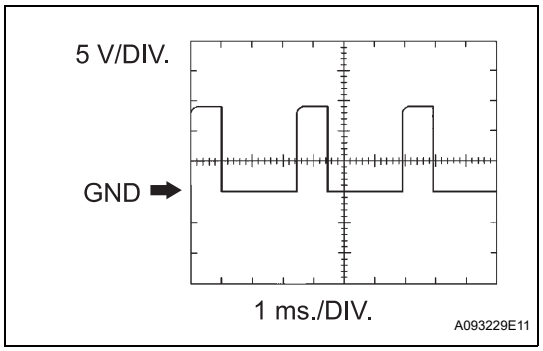
HINT:
The standard normal voltage between each pair of the ECM (included in hybrid vehicle control ECU) terminals is shown in the table below. The appropriate conditions for checking each pair of the terminals are also indicated. The result of checks should be compared with the standard normal voltage for that pair of the terminals, displayed in the "Specified Condition" column. The illustration above can be used as a reference to identify the ECM terminal locations.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BATT (A61-4) - E1 (C64-14)	W - W-B	Battery (for measuring battery voltage and for ECM memory)	Always	9 to 14 V
+BM (A61-3) - E1 (C64-14)	LG - W-B	Power source of throttle motor	Always	9 to 14 V
IGSW (A61-57) - E1 (C64-14)	Y - W-B	Power switch	Power switch ON (IG)	9 to 14 V
+B (A61-2) - E1 (C64-14)	Y - W-B	Power source of ECM	Power switch ON (IG)	9 to 14 V
+B2 (A61-1) - E1 (C64-14)	Y - W-B	Power source of ECM	Power switch ON (IG)	9 to 14 V
OC1+ (C64-16) - OC1- (C64-15)	W - R	Camshaft timing oil control valve (OCV) (Intake side (bank 1))	Power switch ON (IG)	Pulse generation (See waveform 1)
MREL (A61-93) - E1 (C64-14)	B - W-B	EFI MAIN relay	Power switch ON (IG)	9 to 14 V
VCTA (C64-71) - ETA (C64-72)	B - P	Power source for sensors (specific voltage)	Power switch ON (IG)	4.5 to 5.0 V
VCPT (A61-75) - EPTK (A61-81)	LG - BR	Power source for sensors (specific voltage)	Power switch ON (IG)	4.5 to 5.0 V
VCPP (A61-64) - EPPM (C64-76)	Y - BR	Power source for sensors (specific voltage)	Power switch ON (IG)	4.5 to 5.0 V
VG (C64-74) - EVG (C64-73)	SB - W	Mass air flow meter	Idling, Shift lever position P or N, A/C switch OFF	0.5 to 3.0 V
THA (C64-59) - ETHA (C64-45)	P - B	Intake air temperature sensor	Idling, Intake air temperature 20°C (68°F)	0.5 to 3.4 V
THW (C64-60) - ETHW (C64-46)	B - P	Engine coolant temperature sensor	Idling, Engine coolant temperature 80°C (176°F)	0.2 to 1.0 V
VTA1 (C64-58) - ETA (C64-72)	Y - P	Throttle position sensor (for engine control)	Power switch ON (IG), Throttle valve fully closed	0.5 to 1.2 V
VTA1 (C64-58) - ETA (C64-72)	Y - P	Throttle position sensor (for engine control)	Power switch ON (IG), Throttle valve fully open	3.2 to 4.8 V
VTA2 (C64-57) - ETA (C64-72)	W - P	Throttle position sensor (for sensor malfunction detection)	Power switch ON (IG), Accelerator pedal released	2.1 to 3.1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
VTA2 (C64-57) - ETA (C64-72)	W - P	Throttle position sensor (for sensor malfunction detection)	Power switch ON (IG), Accelerator pedal depressed	4.5 to 5.0 V
VPA (A61-106) - EP1 (A61-88)	R - G	Accelerator pedal position sensor (for engine control)	Power switch ON (IG), Accelerator pedal released	0.5 to 1.1 V
VPA (A61-106) - EP1 (A61-88)	R - G	Accelerator pedal position sensor (for engine control)	Power switch ON (IG), Accelerator pedal depressed	2.6 to 4.5 V
VPA2 (A61-105) - EP2 (A61-87)	L - Y	Accelerator pedal position sensor (for sensor malfunctioning detection)	Power switch ON (IG), Accelerator pedal released	1.2 to 2.0 V
VPA2 (A61-105) - EP2 (A61-87)	L - Y	Accelerator pedal position sensor (for sensor malfunctioning detection)	Power switch ON (IG), Accelerator pedal depressed	3.4 to 5.0 V
VCP1 (A61-108) - EP2 (A61-87)	BR - Y	Power source of accelerator pedal position sensor (for VPA)	Power switch ON (IG)	4.5 to 5.0 V
VCP2 (A61-107) - EP2 (A61-87)	W - Y	Power source of accelerator pedal position sensor (for VPA2)	Power switch ON (IG)	4.5 to 5.0 V
HA1A (C64-62) - E04 (C64-48)	G - W	A/F sensor heater	Idling	Below 3.0 V
HA1A (C64-62) - E04 (C64-48)	G - W	A/F sensor heater	Power switch ON (IG)	9 to 14 V
A1A+ (C64-39) - E1 (C64-14)	L - W-B	A/F sensor	Power switch ON (IG)	3.3 V*
A1A- (C64-38) - E1 (C64-14)	P - W-B	A/F sensor	Power switch ON (IG)	3.0 V*
HT1B (C64-37) - E1 (C64-14)	LG - W-B	Heated oxygen sensor heater	Idling	Below 3.0 V
HT1B (C64-37) - E1 (C64-14)	LG - W-B	Heated oxygen sensor heater	Power switch ON (IG)	9 to 14 V
OX1B (C64-53) - O1B- (C64-52)	W - BR	Heated oxygen sensor	Maintain engine speed at 2,500 rpm for 2 minutes after warming up sensor	Pulse generation (See waveform 2)
#10 (C64-50) - E1 (C64-14) #20 (C64-54) - E1 (C64-14) #30 (C64-49) - E1 (C64-14) #40 (C64-63) - E1 (C64-14)	R - W-B R - W-B Y - W-B L - W-B	Injector	Power switch ON (IG)	0 to 5 V
#10 (C64-50) - E1 (C64-14) #20 (C64-54) - E1 (C64-14) #30 (C64-49) - E1 (C64-14) #40 (C64-63) - E1 (C64-14)	R - W-B R - W-B Y - W-B L - W-B	Injector	Idling	Pulse generation (See waveform 3)
KNK1 (C64-67) - EKNK (C64-66)	G - R	Knock sensor	Maintain engine speed at 4,000 after warming up	Pulse generation (See waveform 4)
G2+ (C64-55) - G2 (C64-54)	Y - BR	Variable valve timing (VVT) sensor (Intake side (bank 1))	Idling	Pulse generation (See waveform 5)
NE+ (C64-69) - NE- (C64-68)	G - R	Crankshaft position sensor	Idling	Pulse generation (See waveform 5)
IGT1 (C64-5) - E1 (C64-14) IGT2 (C64-4) - E1 (C64-14) IGT3 (C64-3) - E1 (C64-14) IGT4 (C64-2) - E1 (C64-14)	W - W-B L - W-B G - W-B LG - W-B	Ignition coil (ignition signal)	Idling	Pulse generation (See waveform 6)
IGF (C64-1) - E1 (C64-14)	BR - W-B	Ignition coil (ignition confirmation signal)	Power switch ON (IG)	4.5 to 5.0 V
IGF (C64-1) - E1 (C64-14)	BR - W-B	Ignition coil (ignition confirmation signal)	Idling	Pulse generation (See waveform 6)
PRG (C64-17) - E1 (C64-14)	O - W-B	Purge VSV	Power switch ON (IG)	9 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
PRG (C64-17) - E1 (C64-14)	O - W-B	Purge VSV	Idling	Pulse generation (See waveform 7)
SPDI (A61-21) - E1 (C64-14)	L - W-B	Speed signal from combination meter	Power switch ON (IG), Rotate driving wheel slowly	Pulse generation (See waveform 8)
ST2 (A61-57) - E1 (C64-14)	R - W-B	Starter signal	Power switch on (READY)	9 to 14 V
STP (A61-56) - E1 (C64-14)	W - W-B	Stop light switch	Brake pedal depressed	7.5 to 14 V
STP (A61-56) - E1 (C64-14)	W - W-B	Stop light switch	Brake pedal released	Below 1.5 V
ST1- (A61-55) - E1 (C64-14)	GR - W-B	Stop light switch (opposite to STP terminal)	Power switch ON (IG), Brake pedal depressed	Below 1.5 V
ST1- (A61-55) - E1 (C64-14)	GR - W-B	Stop light switch (opposite and STP terminal)	Power switch ON (IG), Brake pedal released	7.5 to 14 V
M+ (C64-10) - ME01 (C64-13)	G - B	Throttle actuator	Idling with warm engine	Pulse generation (See waveform 9)
M- (C64-11) - ME01 (C64-13)	R - B	Throttle actuator	Idling with warm engine	Pulse generation (See waveform 10)
FC (A61-94) - E1 (C64-14)	Y - W-B	Fuel pump control	Power switch ON (IG)	9 to 14 V
FC (A61-94) - E1 (C64-14)	Y - W-B	Fuel pump control	Idling	0 to 3 V
W (A61-22) - E1 (C64-14)	BR - W-B	MIL	Power switch ON (IG)	Below 3.0 V
W (A61-22) - E1 (C64-14)	BR - W-B	MIL	Idling	0 to 3 V
TC (A61-3) - E1 (C64-14)	P - W-B	Terminal TC of DLC 3	Power switch ON (IG)	9 to 14 V
VPMP (A61-42) - E1 (C64-14)	W - W-B	Vent valve (built into pump module)	Power switch ON (IG)	9 to 14 V
MPMP (A61-45) - E1 (C64-14)	G - W-B	Vacuum pump (built into pump module)	Vacuum pump OFF	0 to 3 V
MPMP (A61-45) - E1 (C64-14)	G - W-B	Vacuum pump (built into pump module)	Vacuum pump ON	9 to 14 V
PPMP (A61-66) - EPPM (C64-76)	B - BR	Pressure sensor (built into pump module)	Power switch ON (IG)	3 to 3.6 V
CANH (A61-20) - E1 (C64-14)	B - W-B	CAN communication line	Power switch ON (IG)	Pulse generation (See waveform 11)
CANL (A61-19) - E1 (C64-14)	W - W-B	CAN communication line	Power switch ON (IG)	Pulse generation (See waveform 12)
PTNK (A61-35) - EPTK (A61-81)	GR - BR	Fuel tank pressure sensor	Power switch ON (IG)	0.5 to 4.5 V
CCV2 (A61-45) - E1 (C64-14)	V - W-B	Fuel vapor-containment valve	Close valve ON (Open)	Below 1.0 V
			Close valve OFF (Close)	10 to 14 V

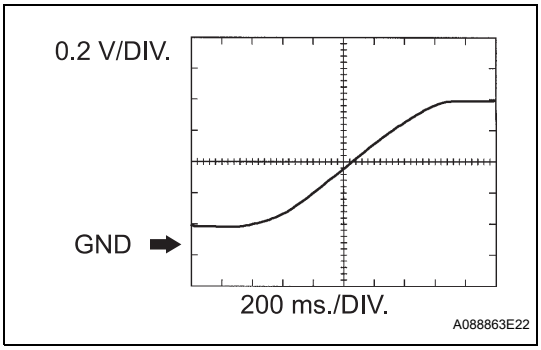
HINT:
*: The ECM terminal voltage is constant regardless of the output voltage from the sensor.



1. WAVEFORM 1
Camshaft timing oil control valve (OCV):

ECM Terminal Name	Between OC1+ and OC1-
Tester Range	5 V/DIV., 1 ms./DIV.
Condition	Idling

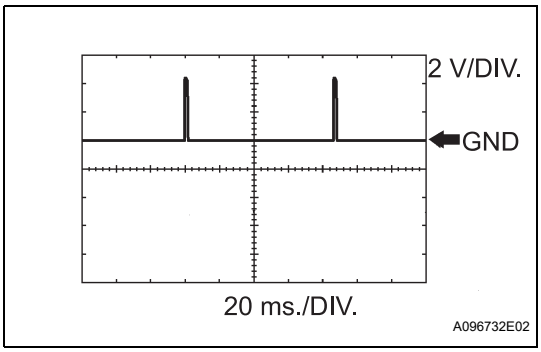
HINT:
The wavelength becomes shorter as the engine rpm increases.



2. WAVEFORM 2
Heated oxygen sensor:

ECM Terminal Name	Between OX1B and O1B-
Tester Range	0.2 V/DIV., 200 ms./DIV.
Condition	Engine speed maintained at 2,500 rpm for 2 minutes after warming up engine

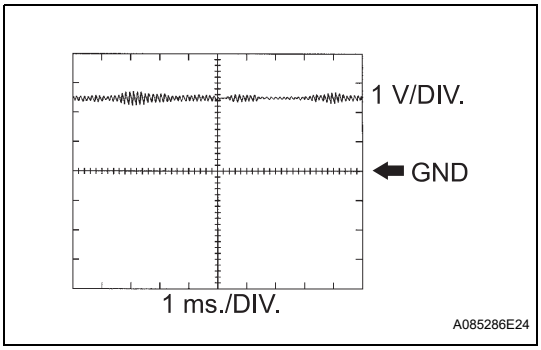
HINT:
In DATA LIST, item O2S B1 S2 shows the values input to the ECM from the heated oxygen sensor.



3. WAVEFORM 3
Injector No. 1 (to No. 6) injection signal:

ECM Terminal Name	Between #10 (to #40) and E1
Tester Range	2 V/DIV., 20 ms./DIV.
Condition	Idling

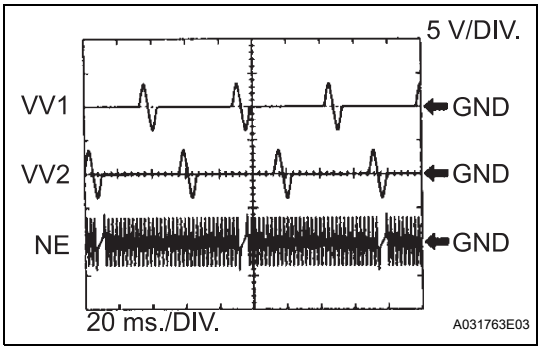
HINT:
The wavelength becomes shorter as the engine rpm increases.



4. WAVEFORM 4
Knock sensor:

ECM Terminal Name	Between KNK1 and EKNK
Tester Range	0.01 to 10 V/DIV., 0.01 to 10 ms./DIV.
Condition	Engine speed maintained a 4,000 rpm after warming up engine

HINT:
- The wavelength becomes shorter as the engine rpm increases.
- The waveforms and amplitudes displayed differ slightly depending on the vehicle.

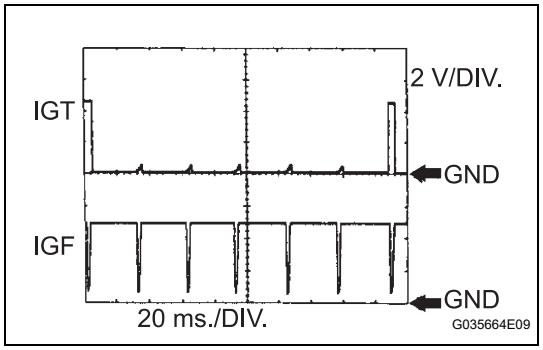


5. WAVEFORM 5
Crankshaft position sensor and VVT:

ECM Terminal Name	Between G2+ and G2- Between NE+ and NE-
Tester Range	5 V/DIV., 20 ms./DIV.
Condition	Idling

HINT:
The wavelength becomes shorter as the engine rpm increases.

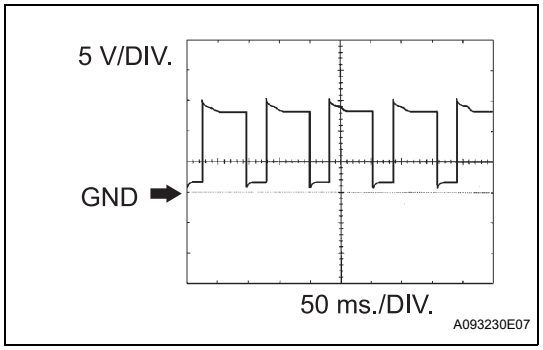
ES



6. WAVEFORM 6
Igniter IGT signal (from ECM to igniter) and Igniter IGF signal (from igniter to ECM):

ECM Terminal Name	Between IGT (1 to 4) and E1 Between IGF and E1
Tester Range	2 V/DIV., 20 ms./DIV.
Condition	Idling

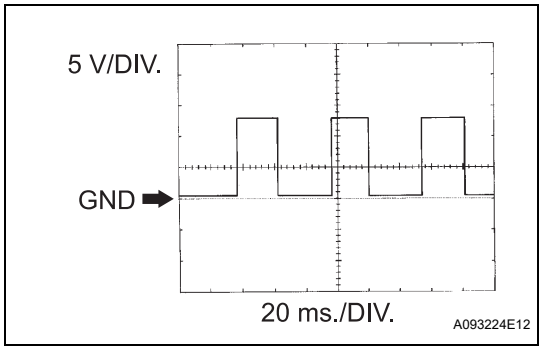
HINT:
The wavelength becomes shorter as the engine rpm increases.



7. WAVEFORM 7
Purge VSV:

ECM Terminal Name	Between PRG and E1
Tester Range	5 V/DIV., 50 ms./DIV.
Condition	Idling

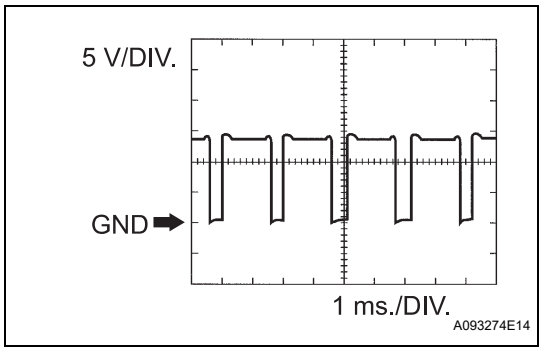
HINT:
If the waveform is not similar to the illustration, check the waveform again after idling for 10 minutes or more.



8. WAVEFORM 8
Vehicle speed signal:

ECM Terminal Name	Between SPDI and E1
Tester Range	2 V/DIV., 20 ms./DIV.
Condition	Driving at 12 mph (20 km/h)

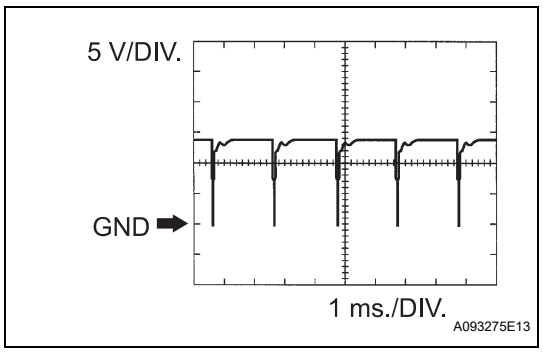
HINT:
The wavelength becomes shorter as the vehicle speed increases.



9. WAVEFORM 9
Throttle actuator positive terminal:

ECM Terminal Name	Between M+ and ME01
Tester Range	5 V/DIV., 1 ms./DIV.
Condition	Idling with warm engine

HINT:
The duty ratio varies depending on the throttle actuator operation.

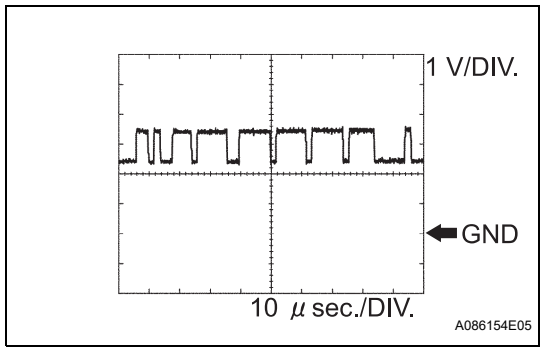


10. WAVEFORM 10
Throttle actuator negative terminal:

ECM Terminal Name	Between M- and ME01
Tester Range	5 V/DIV., 1 ms./DIV.
Condition	Idling with warm engine

HINT:
The duty ratio varies depending on the throttle actuator operation.

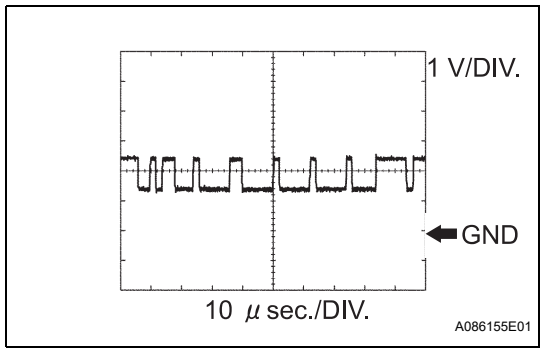
ES



11. WAVEFORM 11
CAN communication signal:

ECM Terminal Name	Between CANH and E1
Tester Range	1 V/DIV., 10 μs/DIV.
Condition	Stop engine and Power switch ON (IG)

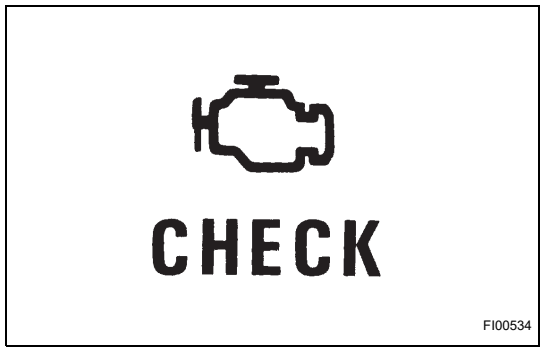
HINT:
The waveform varies depending on the CAN communication signal.



12. WAVEFORM 12
CAN communication signal:

ECM Terminal Name	Between CANL and E1
Tester Range	1 V/DIV., 10 μs/DIV.
Condition	Stop engine and Power switch ON (IG)

HINT:
The waveform varies depending on the CAN communication signal.



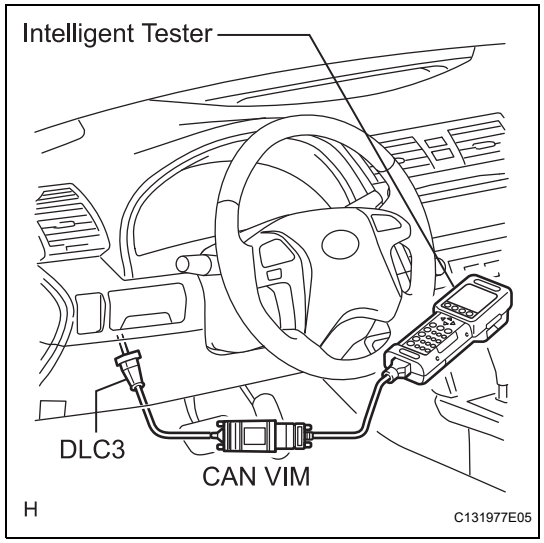
DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting OBD II (On-Board Diagnostics) vehicles, the intelligent tester (complying with SAE J1987) must be connected to the DLC3 (Data Link Connector 3) of the vehicle. Various data in the vehicle's ECM (Included in Hybrid Vehicle Control ECU) can be then read.

OBD II regulations require that the vehicle's on-board computer illuminates the MIL (Malfunction Indicator Lamp) on the instrument panel when the computer detects a malfunction in:

(a) The emission control systems components.
(b) The power train control components (which affect vehicle emissions).



(c) The computer itself.
In addition, the applicable DTCs (Diagnostic Trouble Codes) prescribed by SAE J2012 are recorded on 3 consecutive trips, the MIL turns off automatically but the DTCs remain recorded in the ECM (Included in Hybrid Vehicle Control ECU) memory.
To check for DTCs, connect the intelligent tester to the DLC3. The tester displays DTCs, freeze frame data, and a variety of the engine data. The DTCs and freeze frame data can be erased with the tester.
In order to enhance OBD function on vehicles and develop the Off-Board diagnosis system, CAN communication is introduced in this system (CAN: Controller Area Network). It minimizes a gap between technician skills and vehicle technology. CAN is a network, which uses a pair of data transmission lines, spanning multiple computers

and sensors. It allows a high speed communication between the systems and simplification of the wire harness connection. Since this system is equipped with the CAN communication, connecting the CAN VIM (VIM: Vehicle Interface Module) with the intelligent tester is necessary to display any information from the ECM (Included in Hybrid Vehicle Control ECU). (Also the communication between the intelligent tester and the ECM (Included in Hybrid Vehicle Control ECU) uses CAN communication signal). When confirming the DTCs and any data of the ECM (Included in Hybrid Vehicle Control ECU), connect the CAN VIM between the DLC3 and the intelligent tester.

2. NORMAL MODE AND CHECK MODE

The diagnosis system operates in normal mode during normal vehicle use. In normal mode, 2-trip detection logic is used to ensure accurate detection of malfunctions. Check mode is also available as an option for technicians. In check mode, 1-trip detection logic is used for simulating malfunction symptoms and increasing the system's ability to detect malfunctions, including intermittent problems (intelligent tester only).

3. 2-TRIP DETECTION LOGIC

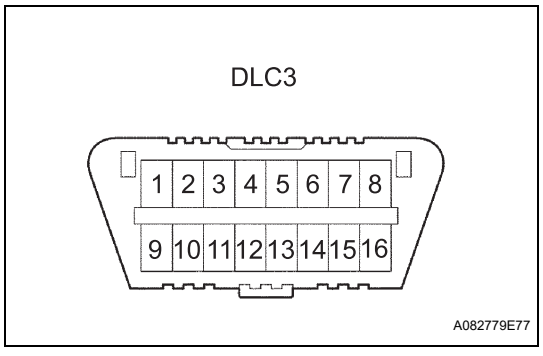
When a malfunction is first detected, the malfunction is temporarily stored in the ECM (Included in Hybrid Vehicle Control ECU) memory (1st trip). If the same malfunction is detected during the next subsequent drive cycle, the MIL is illuminates (2nd trip).

4. FREEZE FRAME DATA

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freezer frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air-fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

5. DLC3 (Data link Connector 3)

The vehicle's ECM uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols	Terminal No.	Names	Reference Terminal	Results	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	During transmission
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BAT	16	Battery ground	Body ground	9 to 14 V	Always

Symbols	Terminal No.	Names	Reference Terminal	Results	Condition
CANH	6	CAN "High" line	CANL	54 to 69 Ω	Power switch OFF
CANH	6	CAN "High" line	Battery positive	1 MΩ or higher	Power switch OFF
CANH	6	CAN "High" line	CG	1 kΩ or higher	Power switch OFF
CANL	14	CAN "Low" line	Battery positive	1 MΩ or higher	Power switch OFF
CANL	14	CAN "Low" line	CG	1 kΩ or higher	Power switch OFF

HINT:
The DLC3 is the interface prepared for reading various data from the vehicle's ECM (included in Hybrid Vehicle Control ECU). After connecting the cable of an intelligent tester, turn the power switch on (IG) and turn the tester on. If a communication failure message is displayed on the tester screen (on the tester: UNABLE TO CONNECT TO VEHICLE), a problem exists in either the vehicle or tester. In order to identify the location of the problem, connect the tester to another vehicle.

- If communication is normal: Inspect the DLC3 on the original vehicle.
- If communication is still not possible: The problem is probably in the tester itself. Consult the Service Department listed in the instruction manual.

6. BATTERY VOLTAGE

Battery voltage:
11 to 14 V

If the voltage is below 11 V, replace or recharge the battery before proceeding to the next step.

7. MIL (Malfunction Indicator Lamp)

(a) The MIL is illuminated when the power switch is first turned on (the engine is not running).

(b) The MIL should turn OFF when the engine is started. If the MIL remains illuminated, the diagnosis system has detected malfunctions or abnormalities in the system.
HINT:
If the MIL is not illuminated when the power switch is first turned on, check the MIL circuit (See page ES-373).

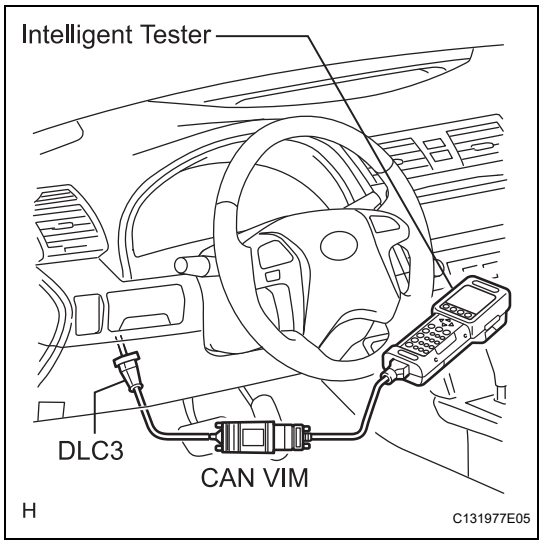
DTC CHECK / CLEAR

NOTICE:

When the diagnosis system is changed from the normal mode to check mode or vice versa, all DTCs and freeze frame data recorded in normal mode are erased. Before changing modes, always check and make a note of DTCs and freeze frame data.

HINT:

- DTCs which are stored in the ECM (Included in Hybrid Vehicle Control ECU) can be displayed on an intelligent tester. An intelligent tester can display current and pending DTCs.
- The same DTCs are not set if the ECM (Included in Hybrid Vehicle Control ECU) dose not detect the same malfunction again during a second consecutive driving cycle. However, such malfunctions, detected on only one occasion, are stored as pending DTCs.



1. **CHECK DTC (Using an intelligent tester)**
   (a) Connect an intelligent tester to the DLC3.
   (b) Turn the power switch on (IG).
   (c) Turn the tester on.
   (d) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
   (e) Check for DTC(s) and freeze frame data, and then write them down.
   (f) Check the details of the DTC(s) (See page ES-45).
2. **CLEAR DTC**
   (a) Connect an intelligent tester to the DLC3.
   (b) Turn the power switch on (IG).
   (c) Turn the tester on.
   (d) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
   (e) Press the YES button.

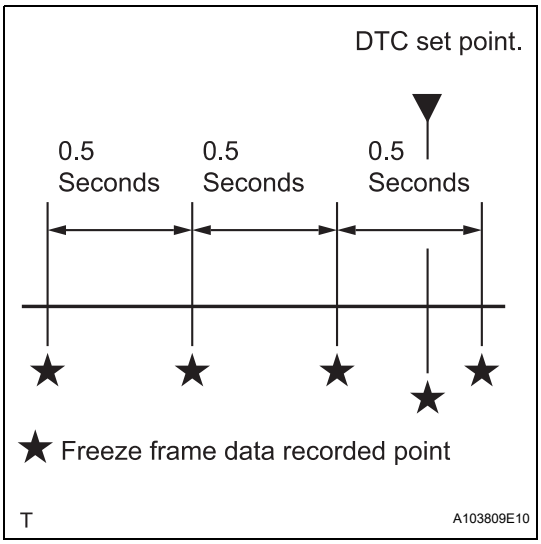
FREEZE FRAME DATA

1. DESCRIPTION

The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can be helpful in determining whether the vehicle was running or stopped, whether the engine was warmed up or not, whether the air/fuel ratio was lean or rich, as well as other data recorded at the time of a malfunction.

The intelligent tester displays freeze frame data recorded at five different points: 1) 3 times before the DTC is set, 2) once when the DTC is set, and 3) once after the DTC is set. The data can be used to simulate the vehicle's condition around the time of the malfunction. The data may be helpful in determining the cause of a malfunction. It may also be helpful in determining whether a DTC is being caused by a temporary malfunction.

The ECM records engine conditions in the form of freeze frame data every 0.5 seconds. Using the intelligent tester, five separate sets of freeze frame data, including the data values at the time when the DTC was set, can be checked.



2. LIST OF FREEZE FRAME DATA

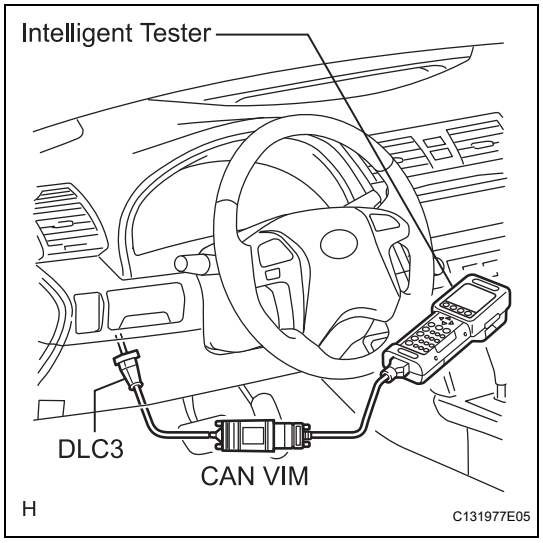
Tester Display	Measurement Item/Range	Diagnostic Note
IGN ADVANCE	Ignition advance	-
CALC LOAD	Calculate load	Calculated load by ECM (Included in HV control ECU)
VEHICLE LOAD	Vehicle load	-
MAF	Mass air flow volume	If value approximately 0.0 g/s: • Mass air flow meter power source circuit open or short • VG circuit open or short If value 160.0 g/s or more: • E2G circuit open
ENGINE SPD	Engine speed	-
VEHICLE SPD	Vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature	If value -40°C, sensor circuit open If value 140°C, sensor circuit shorted
INTAKE AIR	Intake air temperature	If value -40°C, sensor circuit open If value 140°C, sensor circuit shorted
AIR-FUEL PATIO	Air-fuel ratio	-
AMBIENT TEMP	Ambient temperature	-
PURGE DENSITY	Learning value of purge density	-
PURGE FLOW	Purge flow	-
EVAP PURGE VSV	EVAP purge VSV duty ratio	-
KNOCK CRRT VAL	Correction learning value of knocking	-
KNOCK FB VAL	Feedback value of knocking	-
THROTTLE POS	Throttle position	Read value with power switch ON (IG) (Do not start engine)
THROTTLE POS	Throttle sensor positioning	Read value with power switch ON (IG) (Do not start engine)
THROTTLE POS #2	Throttle sensor positioning #2	-

Tester Display	Measurement Item/Range	Diagnostic Note
THROTTLE MOT	Throttle motor	-
O2S B1 S2	Heated oxygen sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
AFS B1 S1	A/F sensor output	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check output voltage of sensor
TOTAL FT #1	Total fuel trim	-
SHORT FT #1	Short-term fuel trim	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim	Overall fuel compensation carried out in long-term to compensate for a continual deviation of short-term fuel trim from central value
FUEL SYS #1	Fuel system status (Bank 1)	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but heated oxygen sensor, which used for fuel control, malfunctioning
O2FT B1 S2	Fuel trim at heated oxygen sensor	Same as SHORT FT #1
AF FT B1 S1	Fuel trim at A/F sensor	-
CAT TEMP B1 S1	Catalyst temperature	-
CAT TEMP B1 S2	Catalyst temperature	-
INI COOL TEMP	Initial engine coolant temperature	-
INI INTAKE TEMP	Initial intake air temperature	-
INJ VOL	Injection volume	-
INJECTOR	Injection period of No.1 cylinder	-
CTP SW	Closed throttle position switch	-
STOP LIGHT SW	Stop light switch	-
ENG OIL PRES SW	Engine oil pressure switch signal	Always ON while engine is running
BATTERY VOLTAGE	Battery voltage	-
ATM PRESSURE	Atmospheric pressure	-
EVAP (Purge) VSV	EVAP Purge VSV	-
FUEL PUMP/SPD	Fuel pump/speed status	-
VVT CTRL B1	VVT control status (bank 1)	-
TANK BYPASS VSV	Tank bypass VSV	-
TC/TE1	TC and TE1 terminals of DLC3	-
VVTL AIM ANGL#1	VVT aim angle (bank1)	-
VVT CHNG ANGL#1	VVT change angle (bank 1)	-
VVT OCV D B1	VVT OCV operation duty (bank 1)	-
FC IDL	Idle fuel cut	ON: when throttle valve fully closed and engine speed over 1,500 rpm
FC TAU	FC TAU	Fuel cut being performed under very light load to prevent incomplete engine combustion
IGNITION	Ignition	-
CYL #1	Cylinder #1 misfire rate	Displayed only during idling
CYL #3	Cylinder #3 misfire rate	Displayed only during idling
CYL #4	Cylinder #4 misfire rate	Displayed only during idling
CYL ALL	All cylinder misfire rate	Displayed only during idling

Tester Display	Measurement Item/Range	Diagnostic Note
MISFIRE RPM	Misfire RPM	-
MISFIRE RPM	Misfire RPM	-
MISFIRE LOAD	Misfired load	-
MISFIRE MARGIN	Misfire monitoring	-
ENG RUN TIME	Accumulated engine running time	-
TIME DTC CLEAR	Cumulative time after DTC cleared	-
DIST DTC CLEAR	Accumulated distance from DTC cleared	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared	-
VACUUM PUMP	Vacuum pump	ON: Operate
EVAP VENT VAL	EVAP system vent valve	ON: Close
FAN MOTOR	Electric fan motor	ON: Operate
FUEL FILLER OPN	Fuel filler opener	ON: Open
FVCV	Fuel vapor-containment valve	ON: Open
REQ ENG TRQ	Requested engine torque	-
HV TRGT ENG SPD	HV target engine speed	-
ACT ENGINE TRQ	Actual engine torque	-
EST ENGINE TRQ	Estimated engine torque	-
ENG RUN TIME	Engine run time	-
ENGINE RUN TIME	Request engine run time	-
IGNITION TIME	Judge time engine ignition	-
OUTPUT TIME	Judge time engine output	-
FUEL. LEVEL	Fuel level	-
ISC LEARNING	ISC learning	-
FUEL CUT	Fuel cut for engine stop request	-
INDPNDNT OPR	Engine Independent operation	-
RACING	Racing operation	-
WARM UP	Request warm-up	-
INDPNDNT CNTRL	Engine independent control	-
ISC LEARN VAL	ISC learning control	-
FUEL LID	Fuel lid	-
FUEL LID SW	Fuel lid switch	ON: Open
MODEL CODE	Identifying the model code	AUH40L
ENGINE TYPE	Identifying the engine type	2AZFXE
CYLINDER NUMBER	Identifying the cylinder number	4
DESTINATION	Identifying the destination	A (America)
MODEL YEAR	Identifying the model year	200#
SYSTEM	Identifying the engine system	HV

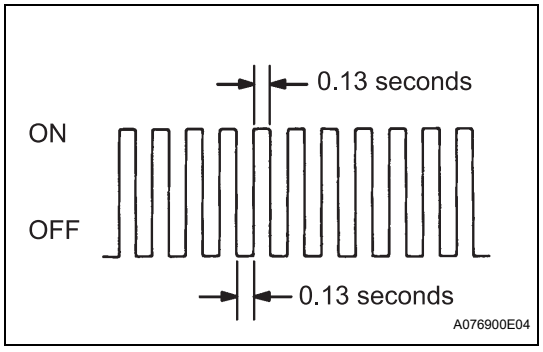
CHECK MODE PROCEDURE

HINT:
Intelligent tester only:
Compared to the normal mode, check mode is more sensitive to malfunctions. Therefore, check mode can detect the malfunctions that cannot be detected in normal mode.
NOTICE:
All the stored DTCs and freeze frame data are erased if: 1) the ECM is changed from normal mode to check mode or vice versa; or 2) the power switch is turned from on (ON) to on (ACC) or off while in check mode. Before changing modes, always check and make a note of any DTCs and freeze frame data.



1. CHECK MODE PROCEDURE (Using an intelligent tester)

(a) Check and ensure the following conditions:
(1) Battery positive voltage 11 V or more.
(2) Throttle valve fully closed.
(3) Transmission in the P or N positions.
(4) A/C switched OFF.
(b) Turn the power switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the power switch on (IG).
(e) Turn the tester on.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / CHECK MODE.
(g) Switch the ECM (Included in Hybrid Vehicle Control ECU) from normal mode to check mode.



(h) Make sure that the MIL flashes as shown in the illustration.
(i) Start the engine.
(j) Make sure that the MIL turns OFF.
(k) Simulate the conditions of the malfunction described by the customer.
(l) Check for DTCs and freeze frame data using the tester.

INSPECTION MODE PROCEDURE

HINT:
Before performing the DATA LIST and ACTIVE TEST of the engine with the intelligent tester, be sure to put the system into the inspection mode using the following procedures.

1. ACTIVATING INSPECTION MODE

(a) Perform the following steps (1) through (4) in 60 seconds.
  (1) Turn the power switch on (IG).
  (2) Fully depress the accelerator pedal twice with the transmission in the P position.
  (3) Fully depress the accelerator pedal twice with the transmission in the N position.
  (4) Fully depress the accelerator pedal twice with the transmission in the P position.
  (5) Check that "FWD MAINTENANCE MODE" on the multi-information display and master warning light is illuminated in the combination meter.
  (6) Start the engine.

INSPECTION

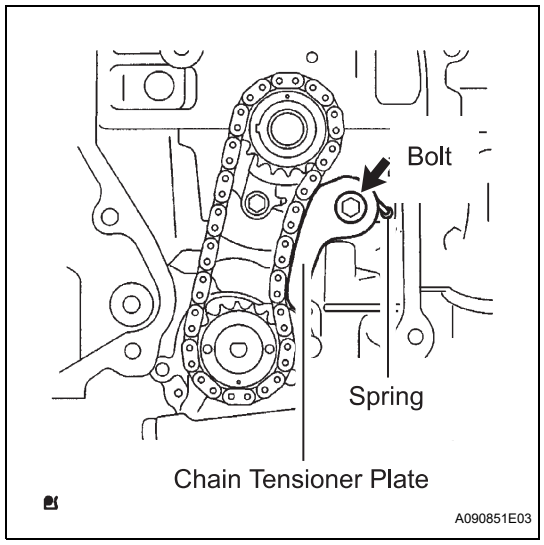
1. **INSPECT CHAIN SUB-ASSEMBLY (See page EM-131)**
2. **INSPECT NO. 2 CHAIN SUB-ASSEMBLY (See page EM-131)**
3. **INSPECT OIL PUMP DRIVE GEAR (See page EM-131)**
4. **INSPECT OIL PUMP DRIVE SHAFT GEAR (See page EM-132)**
5. **INSPECT CHAIN TENSIONER SLIPPER (See page EM-133)**
6. **INSPECT NO. 1 CHAIN VIBRATION DAMPER (See page EM-133)**
7. **INSPECT CHAIN TENSIONER PLATE (See page EM-133)**
8. **INSPECT NO. 1 CHAIN TENSIONER (See page EM-133)**

EM

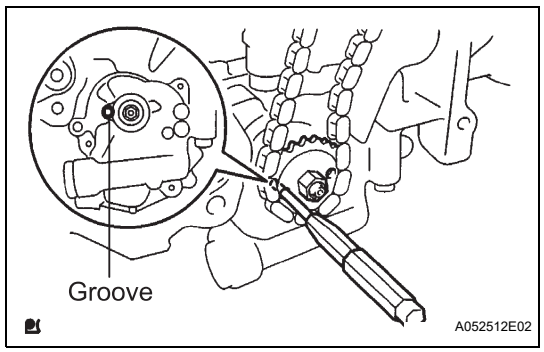
INSTALLATION

1. **INSTALL NO. 2 CHAIN SUB-ASSEMBLY**
   (a) Set the crankshaft key into the left horizontal position.
   (b) Turn the drive shaft so that the cutout faces upward.

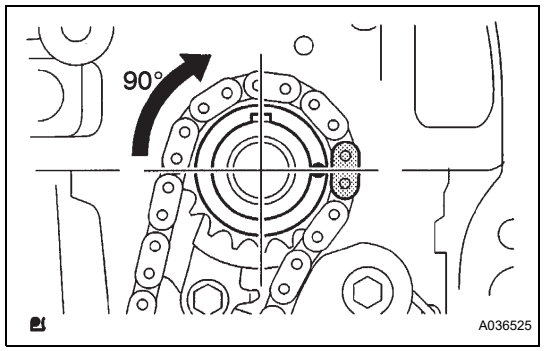
   (c) Align the yellow mark links with the timing marks of each gear as shown in the illustration.
   (d) Install the sprockets onto the crankshaft and oil pump shaft with the chain on the gears.
   (e) Temporarily tighten the oil pump drive shaft gear with the nut.



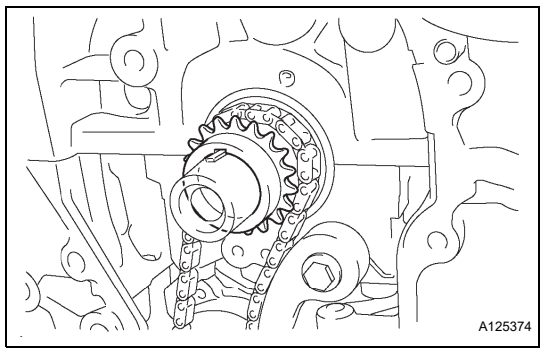
(f) Insert the damper spring into the adjusting hole, and then install the chain tensioner plate with the bolt.
Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)



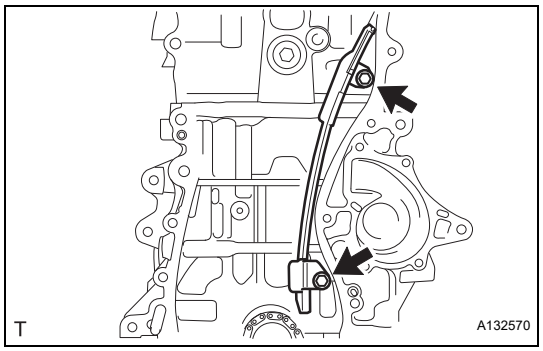
(g) Align the adjusting hole of the oil pump drive shaft gear with the groove of the oil pump.
(h) Insert a 4 mm diameter bar into the adjusting hole of the oil pump drive shaft gear to lock the gear in position, and then tighten the nut.
Torque: 30 N*m (301 kgf*cm, 22 ft.*lbf)



(i) Rotate the crankshaft clockwise 90°, and position the crankshaft key to face up as shown in the illustration.

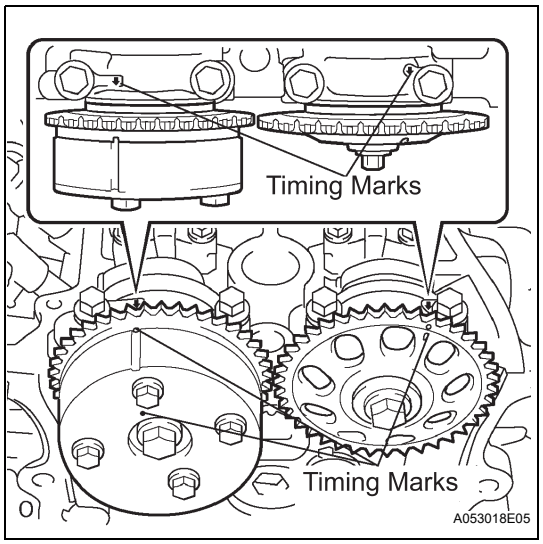


2. INSTALL CRANKSHAFT TIMING SPROCKET
(a) Install the crankshaft timing sprocket.



3. INSTALL NO. 1 CHAIN VIBRATION DAMPER

(a) Install the chain vibration damper with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

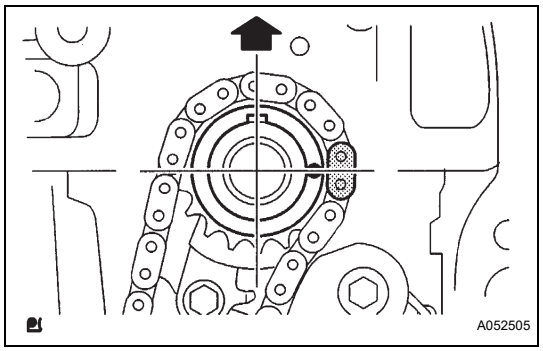


4. INSTALL CHAIN SUB-ASSEMBLY

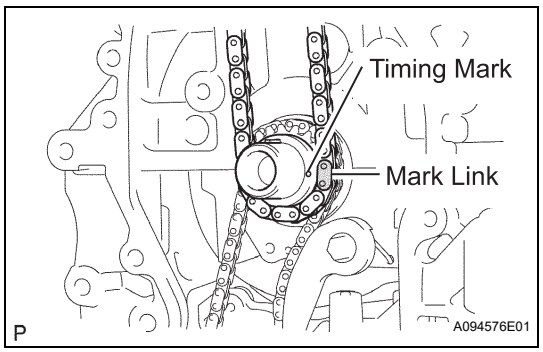
(a) Set the No. 1 cylinder to TDC/compression.

(1) Turn the camshafts with a wrench (using the hexagonal lobe) to align the timing marks of the camshaft timing gear with each timing mark located on the No. 1 and No. 2 bearing caps as shown in the illustration.

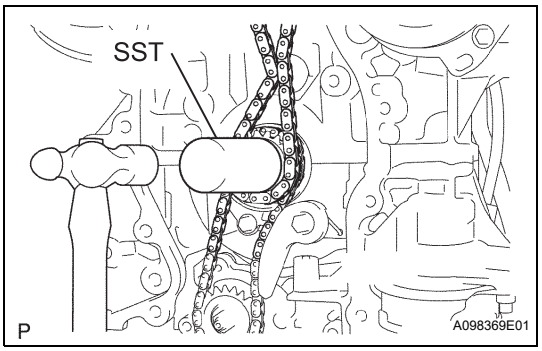
EM



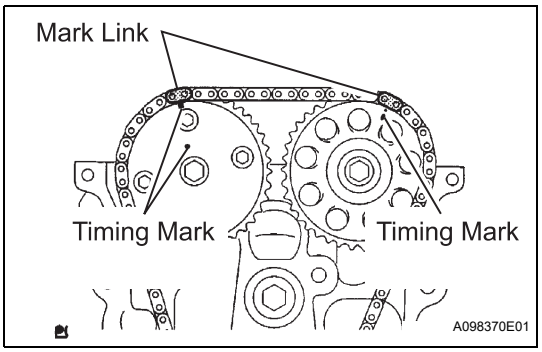
(2) Using the crankshaft pulley bolt, turn the crankshaft to position the crankshaft key to face up as shown in the illustration.



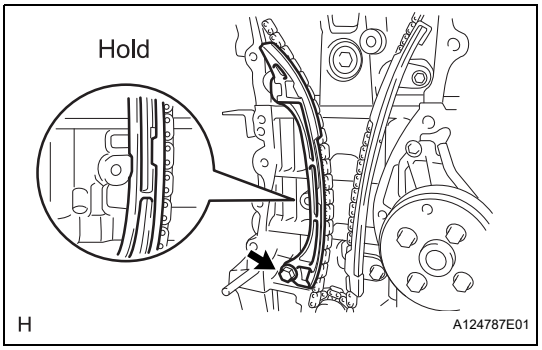
(b) Install the chain onto the crankshaft timing sprocket with the gold or pink mark link aligned with the timing mark on the crankshaft.



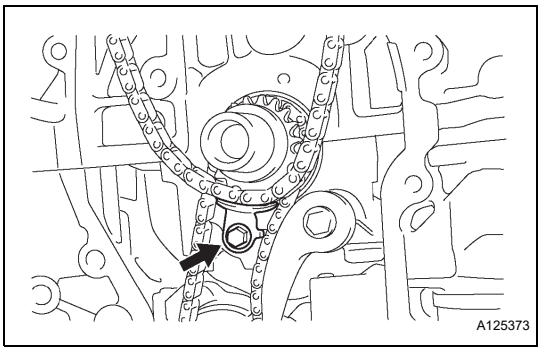
(c) Using SST and a hammer, tap in the crankshaft timing sprocket.
SST 09309-37010



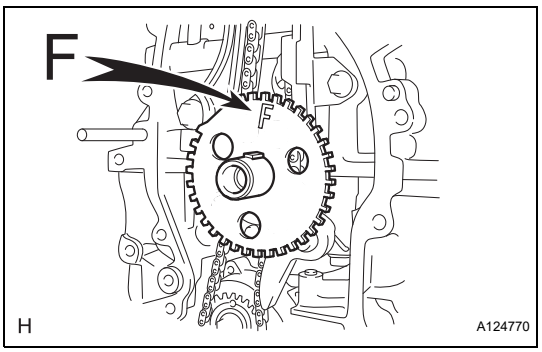
(d) Align the gold or yellow mark link with each timing mark located on the camshaft timing gear and sprocket, then install the chain.



5. INSTALL CHAIN TENSIONER SLIPPER
(a) Install the chain tensioner slipper with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



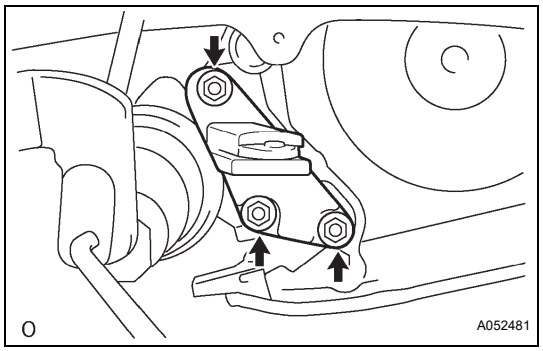
6. INSTALL TIMING CHAIN GUIDE
(a) Install the timing chain guide with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



7. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE
(a) Install the sensor plate with the "F" mark facing forward.

8. INSTALL TIMING CHAIN CASE OIL SEAL (See page LU-15)

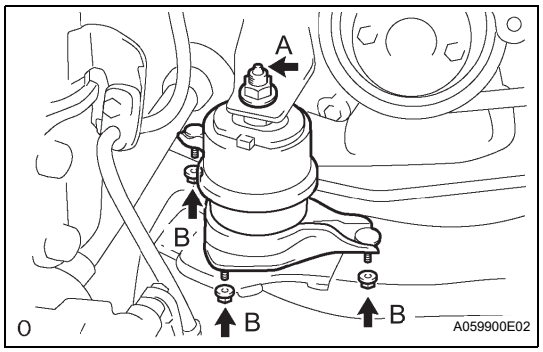
9. INSTALL TIMING CHAIN COVER SUB-ASSEMBLY (See page LU-15)



10. INSTALL ENGINE MOUNTING BRACKET RH

(a) Install the engine mounting bracket RH with the 3 bolts.

Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)

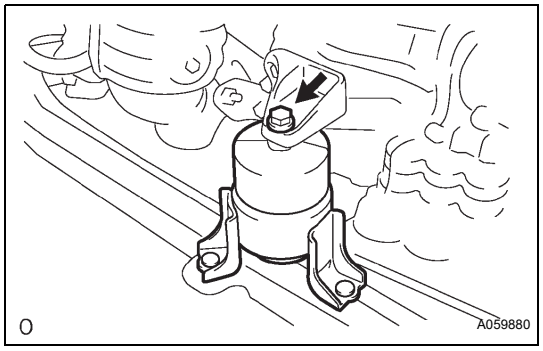


11. INSTALL ENGINE MOUNTING INSULATOR

(a) Raise the engine and install the engine mounting insulator RH.

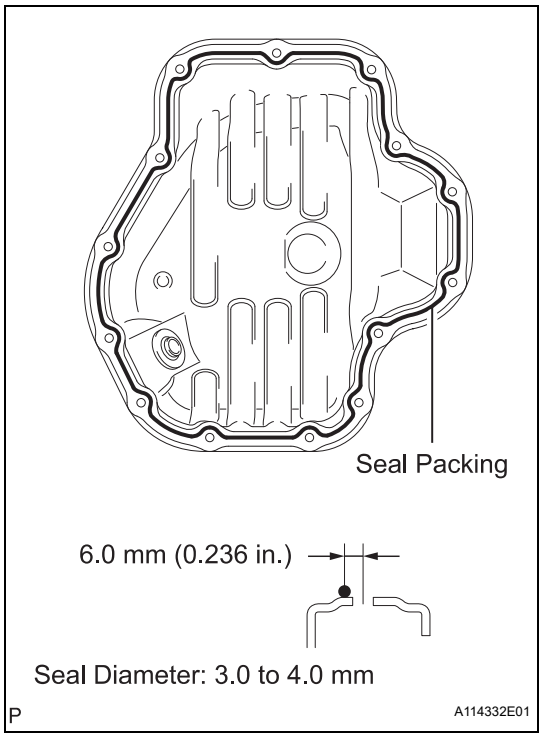
(b) Install the engine mounting insulator RH with the 4 nuts.

Torque: Nut A
95 N*m (969 kgf*cm, 70 ft.*lbf)
Nut B
87 N*m (888 kgf*cm, 64 ft.*lbf)



(c) Install the engine mounting insulator FR with the bolt.

Torque: 87 N*m (888 kgf*cm, 64 ft.*lbf)



12. INSTALL OIL PAN SUB-ASSEMBLY

(a) Remove any old packing material and be careful not to drop any oil on the contact surfaces of the cylinder block and oil pan.

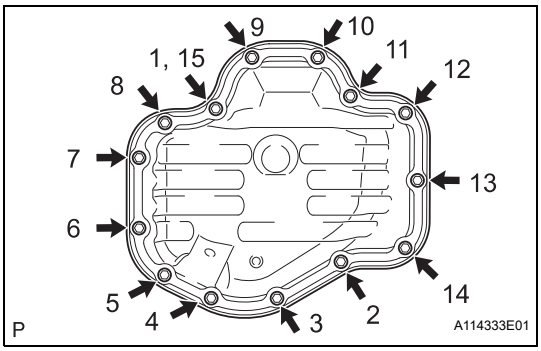
(b) Apply a continuous bead of seal packing (Diameter 3.0 to 4.0 mm (0.118 to 0.157 in.)) as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surfaces.**
- **Install the oil pan within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing the oil pan.**

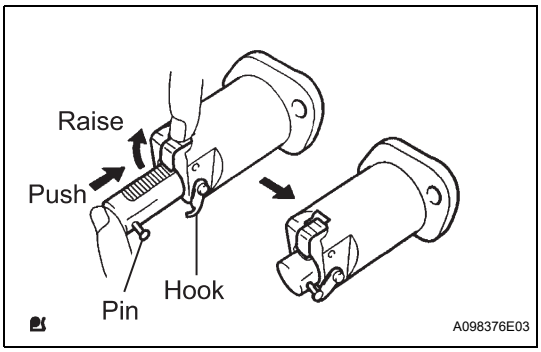
(c) Install the oil pan to the cylinder block.



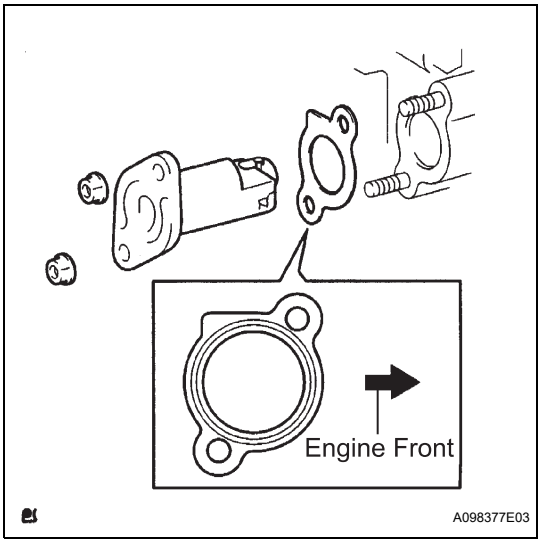
(d) Uniformly tighten the 12 bolts and 2 nuts in the sequence shown in the illustration.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

13. **INSTALL CRANK POSITION SENSOR (See page ES-389)**

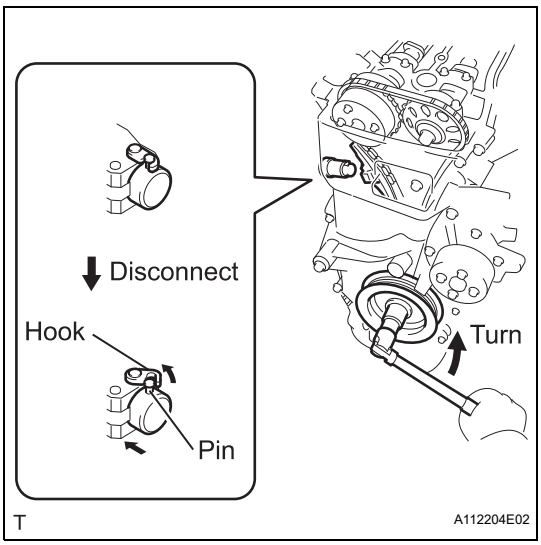
14. **INSTALL CRANKSHAFT PULLEY (See page EM-75)**



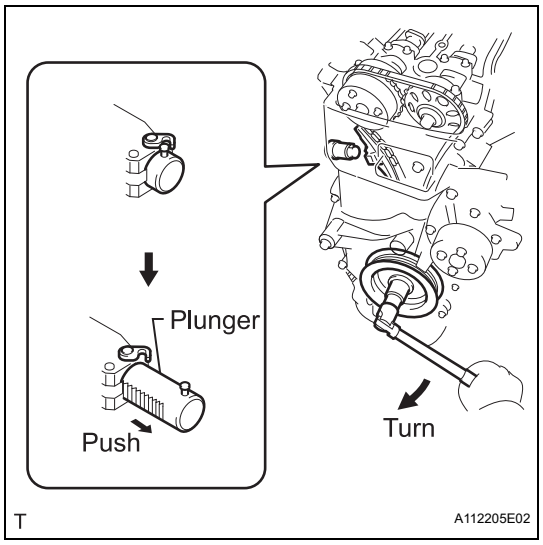
15. **INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY**
(a) Release the ratchet pawl, then fully push in the plunger and hook the hook to the pin so that the plunger is in the position shown in the illustration.



(b) Install a new gasket and the chain tensioner with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
NOTICE:
If the hook releases the plunger while the chain tensioner is being installed, set the hook again.



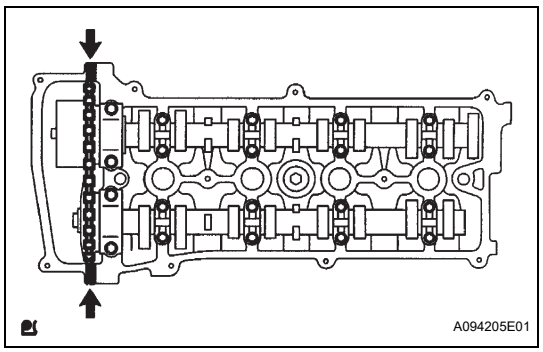
(c) Turn the crankshaft counterclockwise, then disconnect the plunger knock pin from the hook.



(d) Turn the crankshaft clockwise, then check that the plunger is extended.

16. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY

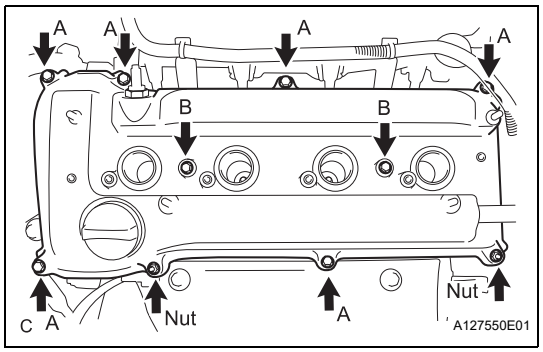
(a) Remove any old packing material from the contact surface.



(b) Apply seal packing to the 2 locations shown in the illustration.

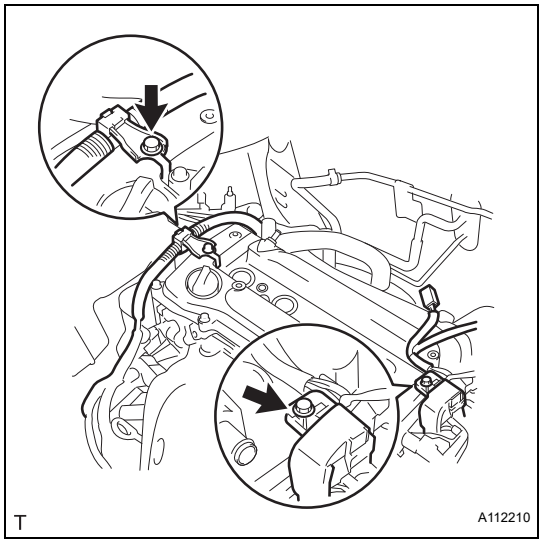
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent

NOTICE:
- **Remove any oil from the contact surface.**
- **Install the cylinder head cover within 3 minutes of applying seal packing.**
- **Do not add engine oil for at least 2 hours after installing the cylinder head cover.**



(c) Install the cylinder head cover with the 8 bolts and 2 nuts.

Torque: Bolt A
11 N*m (112 kgf*cm, 8 ft.*lbf)
Bolt B
14 N*m (143 kgf*cm, 10 ft.*lbf)
Nut
11 N*m (112 kgf*cm, 8 ft.*lbf)



(d) Install the 2 engine wires with the 2 bolts.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)

17. INSTALL NO. 2 VENTILATION HOSE

18. INSTALL VENTILATION HOSE

19. INSTALL IGNITION COIL ASSEMBLY

(a) Install the 4 ignition coils with the 4 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

20. INSTALL IDLER PULLEY BRACKET (See page EM-103)

21. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-103)

22. INSTALL V-RIBBED BELT (See page EM-6)

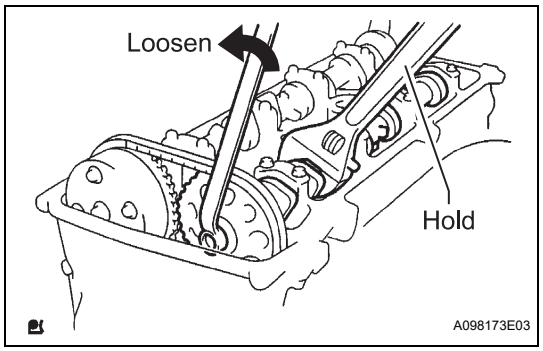
EM

23. **INSTALL V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-7)**
24. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-112)**
25. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-112)**
26. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-112)**
27. **INSTALL FRONT EXHAUST PIPE ASSEMBLY**
    HINT:
    See page EX-3.
28. **ADD ENGINE OIL**
29. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-113)**
30. **INSTALL LUGGAGE TRIM SERVICE HOLE COVER**
31. **CHECK FOR ENGINE OIL LEAKS**
32. **CHECK FOR EXHAUST GAS LEAKS**
33. **CHECK IGNITION TIMING (See page EM-1)**
34. **INSTALL FRONT FENDER APRON SEAL RH**
35. **INSTALL ENGINE UNDER COVER LH**
36. **INSTALL ENGINE UNDER COVER RH**
37. **INSTALL FRONT WHEEL RH**
38. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**
39. **PERFORM INITIALIZATION**
    (a) Perform initialization procedure (See page IN-43).
    HINT:
    Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

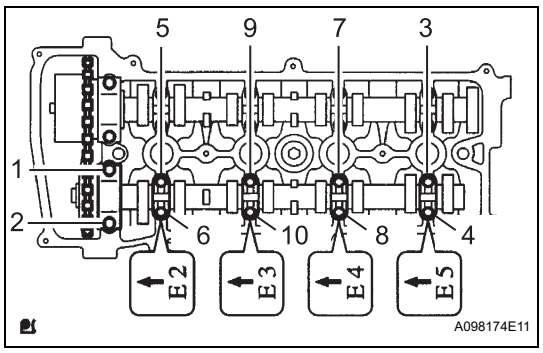
EM

REMOVAL

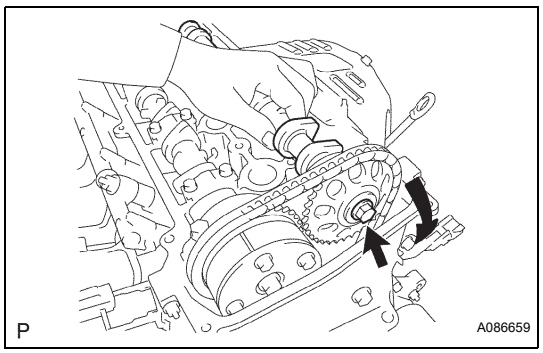
1. REMOVE FRONT WHEEL RH
2. REMOVE ENGINE UNDER COVER LH
3. REMOVE ENGINE UNDER COVER RH
4. REMOVE FRONT FENDER APRON SEAL RH
5. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-90)
6. REMOVE IGNITION COIL ASSEMBLY (See page EM-100)
7. REMOVE CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-22)
8. SET NO. 1 CYLINDER TO TDC/COMPRESSION (See page EM-8)
9. REMOVE NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-23)
10. REMOVE NO. 2 CAMSHAFT



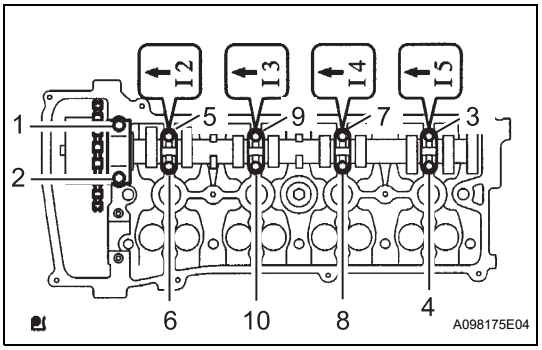
(a) While holding the camshaft with a wrench, loosen the camshaft timing set bolt.



(b) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.
(c) Remove the 5 bearing caps.

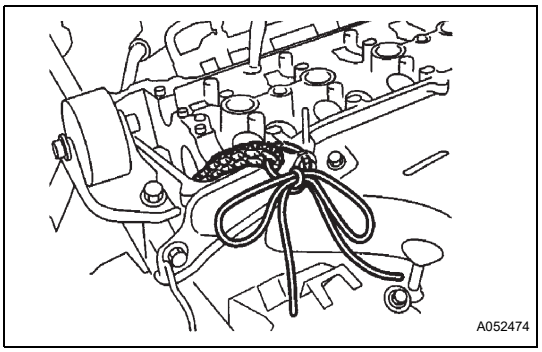


(d) While holding the No. 2 camshaft by hand, remove the camshaft timing sprocket set bolt.
(e) Remove the camshaft timing sprocket from the No. 2 camshaft with the timing chain on the sprocket.
(f) Remove the camshaft timing sprocket from the timing chain.

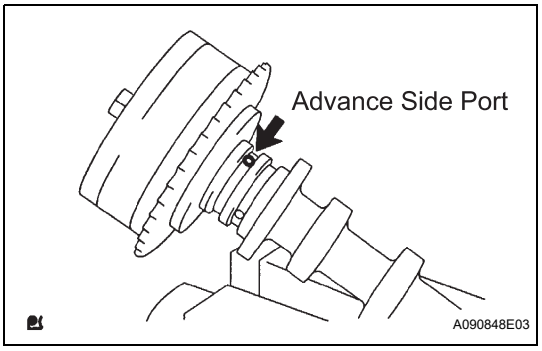


11. REMOVE CAMSHAFT

(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.
(b) Remove the 5 bearing caps.
(c) Remove the camshaft and camshaft timing gear while holding the timing chain by hand.

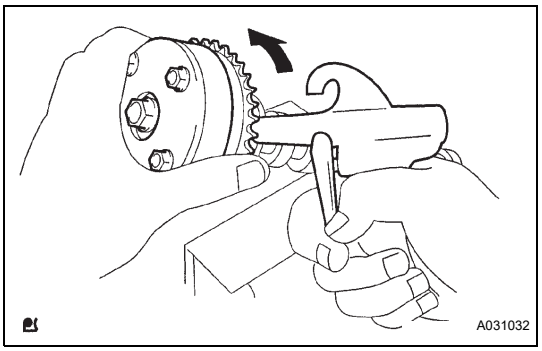


(d) Tie the timing chain with a string as shown in the illustration.
NOTICE:
Be careful not to drop anything inside the timing chain cover.

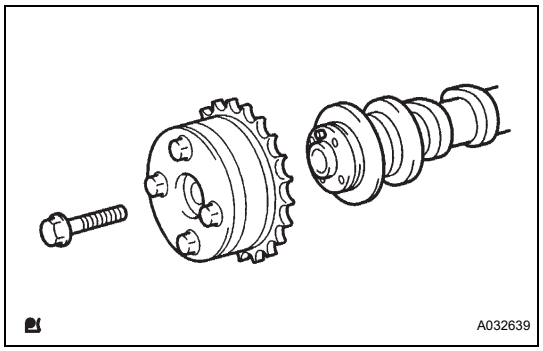


12. REMOVE CAMSHAFT TIMING GEAR ASSEMBLY

(a) Clamp the camshaft in a vise, and make sure that the camshaft timing gear does not rotate.
(b) Cover all the oil ports except the advance side port shown in the illustration with electrical tape.



(c) Apply air pressure of 100 kPa (1.0 kgf/cm^2, 14 psi) to the oil path, then turn the camshaft timing gear in the advance direction (counterclockwise) by hand.
CAUTION:
Cover the paths with a shop rag or piece of cloth to keep oil from splashing.
HINT:
Depending on the air pressure, the camshaft timing gear will turn to the advance angle side without applying force by hand. Also, if the pressure is difficult to apply because of air leakage from the port, the lock may be difficult to release.



(d) Remove the flange bolt of the camshaft timing gear.
NOTICE:
- **Be sure not to remove the other 4 bolts.**
- **If planning to reuse the gear, be sure to release the straight pin lock before installing the gear.**

INSPECTION

1. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

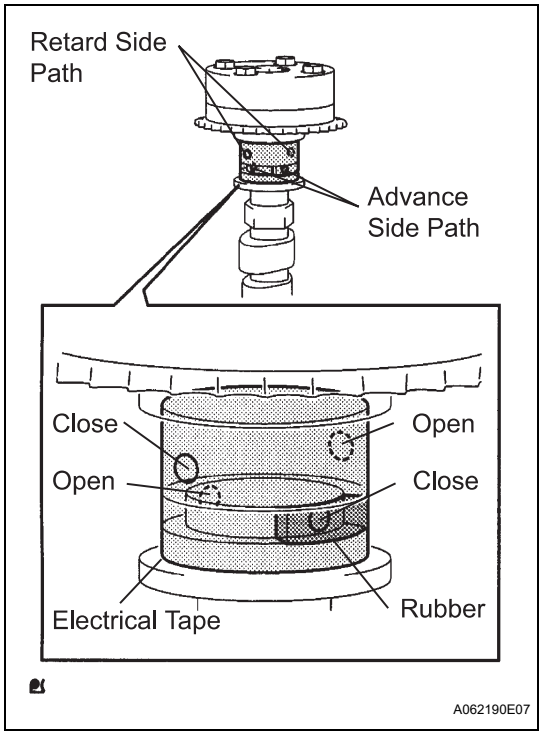
(a) Check the lock of the camshaft timing gear.

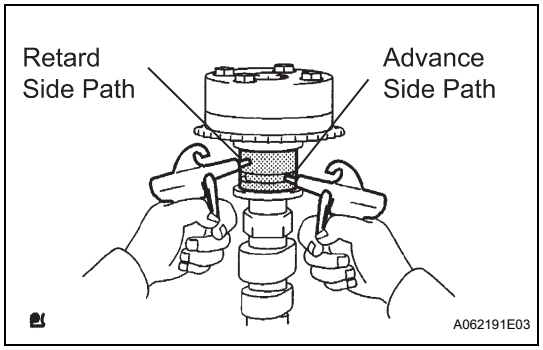
(1) Clamp the camshaft in a vise, and confirm that the camshaft timing gear is locked.
NOTICE:
Be careful not to damage the camshaft.

(b) Release the lock pin.

(1) Cover the 4 oil paths of the cam journal with electrical tape as shown in the illustration.
HINT:
The 2 advance side paths are provided in the groove of the camshaft. Plug one of the paths with a rubber piece.

(2) Prick a hole in the tape placed on the advance side, prick a hole in the tape placed on the retard side path, on the opposite side to that of the advance side path, as shown in the illustration.





(3) Apply approximately 200 kPa (2.0 kgf/cm^2, 28 psi) of air pressure to the two broken paths.
CAUTION:
Cover the paths with a piece of cloth when applying pressure to keep oil from splashing.

(4) Check that the camshaft timing gear revolves in the advance direction when reducing the air pressure of the retard side path.
OK:
Gear rotates in the advance direction.
HINT:
This operation releases the lock pin for the most retarded position.

(5) When the camshaft timing gear reaches the most advanced position, remove the air gun from the retard side path and advance side path, in that order.

NOTICE:

Do not remove the air gun from the advance side path first. The gear may abruptly shift in the retard direction and break the lock pin.

(c) Check for smooth rotation.

(1) Rotate the camshaft timing gear within its movable range several times, but do not turn it to the most retarded position. Check that the gear rotates smoothly.

OK:

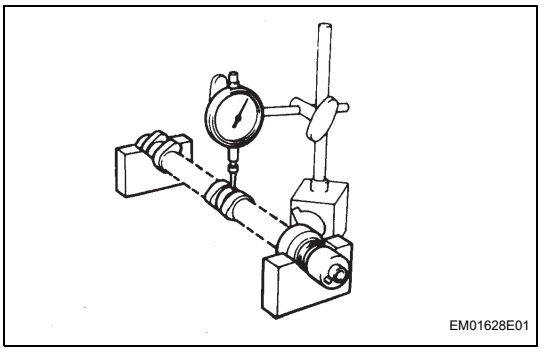
Gear rotates smoothly.

NOTICE:

Do not use an air gun to check for smooth operation.

(d) Check the lock in the most retarded position.

(1) Confirm that the camshaft timing gear is locked at the most retarded position.



2. INSPECT CAMSHAFT

(a) Inspect the camshaft for runout.

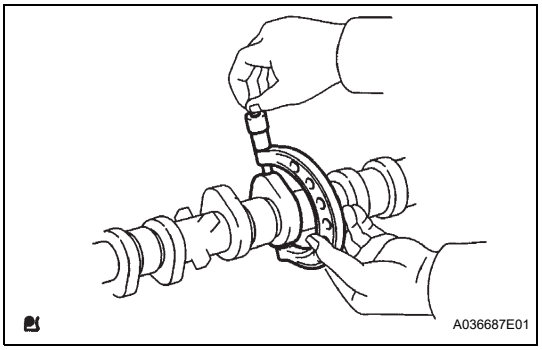
(1) Place the camshaft on V-blocks.

(2) Using a dial indicator, measure the circle runout at the center journal.

Maximum circle runout:

0.03 mm (0.0012 in.)

If the circle runout is greater than the maximum, replace the camshaft.



(b) Inspect the cam lobes.

(1) Using a micrometer, measure the cam lobe height.

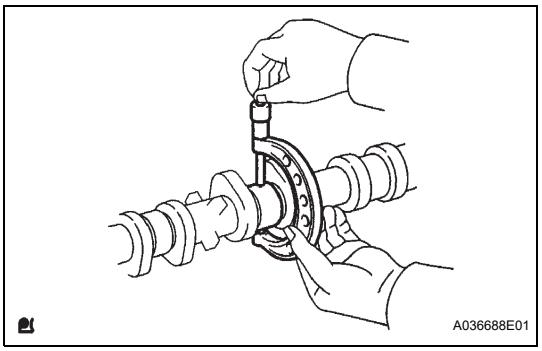
Standard cam lobe height:

44.516 to 44.616 mm (1.7526 to 1.7565 in.)

Minimum cam lobe height:

44.406 mm (1.7483 in.)

If the cam lobe height is less than the minimum, replace the camshaft.



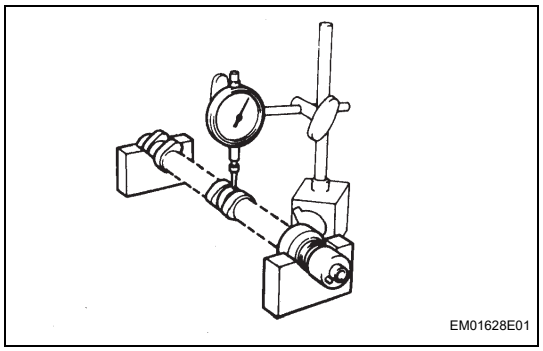
(c) Inspect the camshaft journals.

(1) Using a micrometer, measure the journal diameter.

Standard journal diameter

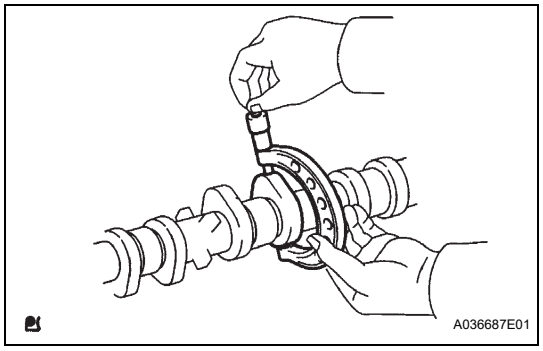
Journal Position	Specified Condition
No. 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Other	22.959 to 22.975 mm (0.9039 to 0.9045 in.)

If the journal diameter is not as specified, check the oil clearance.

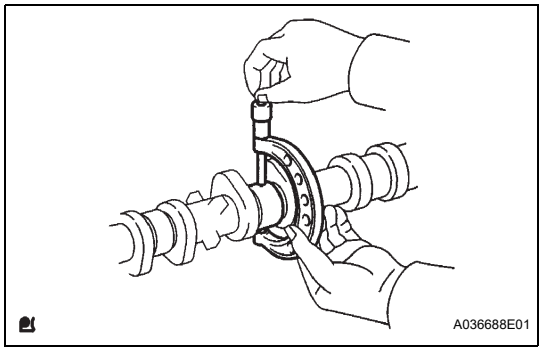


3. INSPECT NO. 2 CAMSHAFT

(a) Inspect the camshaft for runout.
(1) Place the camshaft on V-blocks.
(2) Using a dial indicator, measure the circle runout at the center journal.
Maximum circle runout:
0.03 mm (0.0012 in.)
If the circle runout is greater than the maximum, replace the No. 2 camshaft.



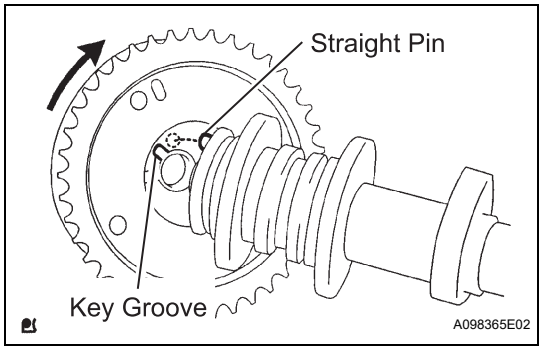
(b) Inspect the cam lobes.
(1) Using a micrometer, measure the cam lobe height.
Standard cam lobe height:
45.983 to 46.083 mm (1.8104 to 1.8143 in.)
Minimum cam lobe height:
45.873 mm (1.8060 in.)
If the cam lobe height is less than the minimum, replace the No. 2 camshaft.



(c) Inspect the camshaft journals.
(1) Using a micrometer, measure the journal diameter.
Standard journal diameter

Journal Position	Specified Condition
No. 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Other	22.959 to 22.975 mm (0.9039 to 0.9045 in.)

If the journal diameter is not as specified, check the oil clearance.



INSTALLATION

1. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY

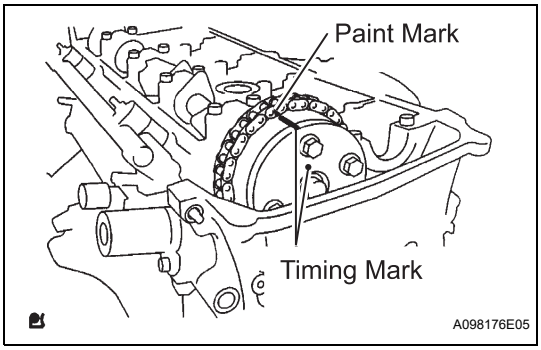
(a) Put the camshaft timing gear and camshaft together with the straight pin and key groove misaligned, as shown in the illustration.
(b) Turn the camshaft timing gear as shown in the illustration while pushing it gently against the camshaft. Push further at the position where the pin fits into the groove.
NOTICE:
Be sure not to turn the camshaft timing gear to the retard angle side (the right angle).
(c) Check that there is no clearance between the gear and camshaft.
(d) Tighten the flange bolt with the camshaft timing gear fixed in place.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)

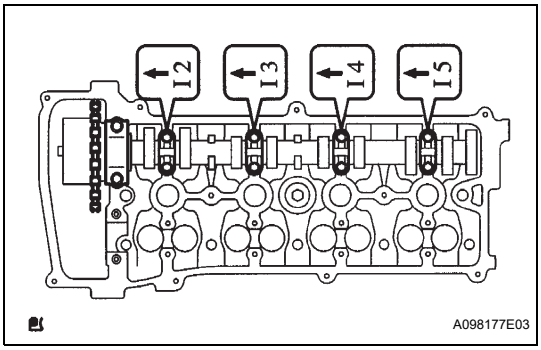
(e) Check that the camshaft timing gear can move to the retard angle side (the right direction) and is locked in the most retarded position.

2. INSTALL CAMSHAFT

(a) Apply a light coat of engine oil to the journal portion of the camshaft.

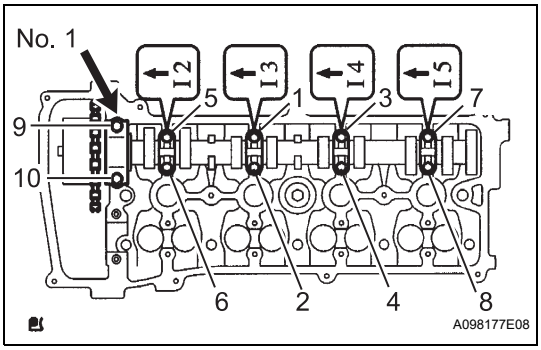
(b) Install the timing chain onto the camshaft timing gear with the paint mark aligned with the timing mark in the camshaft timing gear as shown in the illustration.





(c) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps into the cylinder head.

(d) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



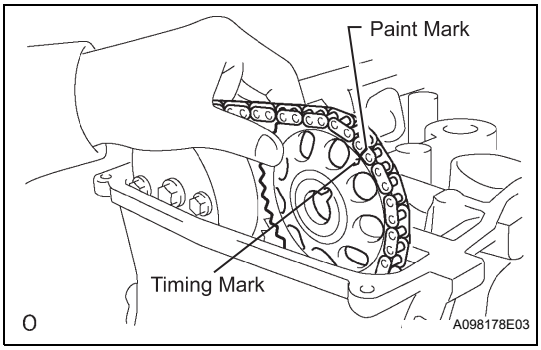
(e) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

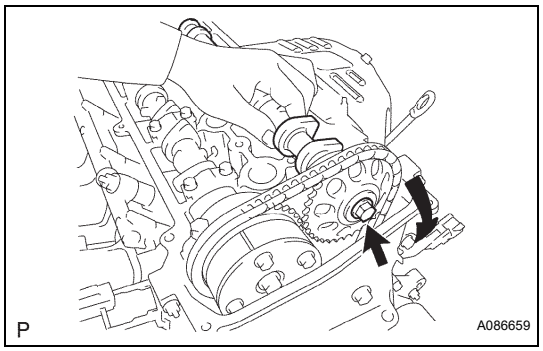
Torque: No. 1 bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)

3. INSTALL NO. 2 CAMSHAFT

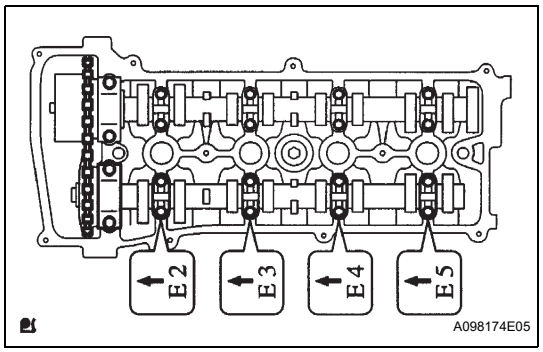
(a) Apply a light coat of engine oil to the journal portion of the No. 2 camshaft.

(b) Put the No. 2 camshaft on the cylinder head with the paint mark of the chain aligned with the timing mark on the camshaft timing sprocket.





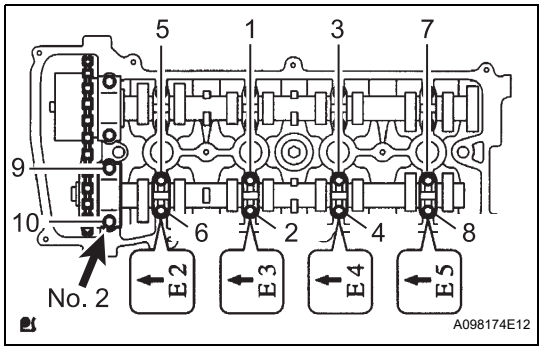
(c) While holding the No. 2 camshaft by hand, temporarily tighten the camshaft timing sprocket set bolt.



(d) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.

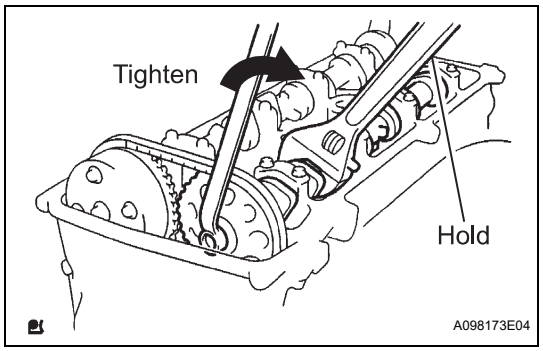
(e) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.

EM



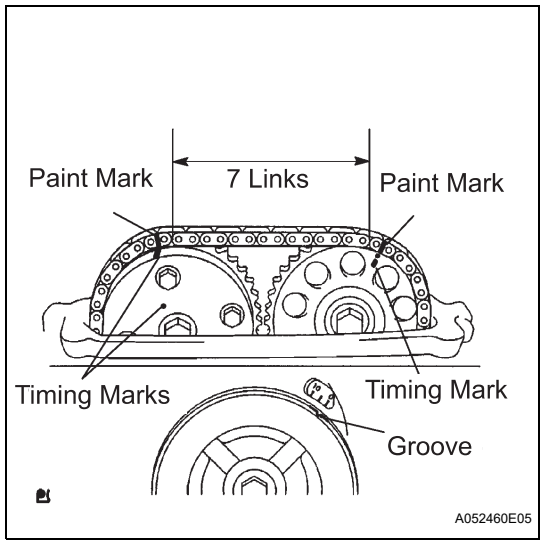
(f) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

Torque: No. 2 bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)



(g) While holding the camshaft with a wrench, tighten the camshaft timing sprocket set bolt.

Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)



(h) Check that the paint marks on the chain are aligned with the timing marks on the camshaft timing gear and camshaft timing sprocket. Also, check that the crankshaft pulley groove is aligned with the timing mark "0" of the timing chain cover.

4. **INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-31)**
5. **CHECK VALVE CLEARANCE (See page EM-8)**
6. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-32)**
7. **INSTALL IGNITION COIL ASSEMBLY (See page EM-32)**
8. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**
9. **INSTALL FRONT FENDER APRON SEAL RH**
10. **INSTALL ENGINE UNDER COVER LH**
11. **INSTALL ENGINE UNDER COVER RH**
12. **INSTALL FRONT WHEEL RH**
13. **CHECK FOR ENGINE OIL LEAKS**

REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **REMOVE LUGGAGE TRIM SERVICE HOLE COVER**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (See page HV-560)**
4. **REMOVE ENGINE UNDER COVER LH**
5. **REMOVE ENGINE UNDER COVER RH**
6. **REMOVE FRONT FENDER APRON SEAL RH**
7. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-90)**
8. **DRAIN ENGINE COOLANT (See page CO-5)**
9. **DRAIN ENGINE OIL (See page LU-4)**
10. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
11. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
12. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
13. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
14. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
15. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
16. **SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
17. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-403)**
18. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-90)**
19. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-395)**
20. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-90)**
21. **REMOVE THROTTLE BODY ASSEMBLY (See page ES-396)**
22. **DISCONNECT FUEL TUBE SUB-ASSEMBLY (See page EM-94)**
23. **REMOVE FUEL DELIVERY PIPE WITH INJECTOR (See page FU-13)**
24. **REMOVE INTAKE MANIFOLD (See page ES-403)**

25. **REMOVE NO. 1 INTAKE MANIFOLD INSULATOR (See page EM-98)**

26. **REMOVE FRONT EXHAUST PIPE ASSEMBLY**
HINT:
See page EX-2.

27. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-91)**

28. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-91)**

29. **REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-91)**

30. **REMOVE V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-6)**

31. **REMOVE V-RIBBED BELT (See page EM-6)**

32. **REMOVE OIL LEVEL GAUGE SUB-ASSEMBLY**

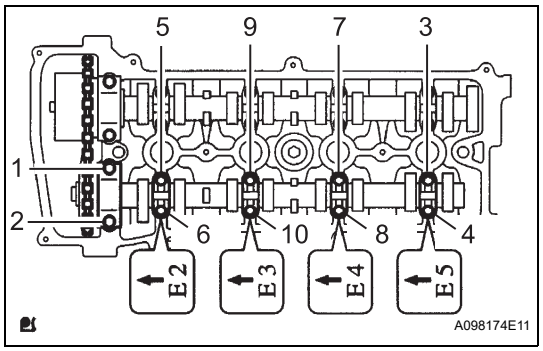
33. **REMOVE OIL LEVEL GAUGE GUIDE (See page EM-99)**

34. **REMOVE MANIFOLD STAY (See page EM-99)**

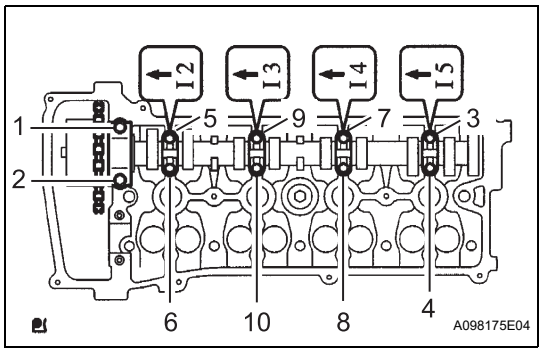
35. **REMOVE NO. 2 MANIFOLD STAY (See page EM-99)**

36. **REMOVE EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY (See page EM-99)**

37. **REMOVE CHAIN SUB-ASSEMBLY**
HINT:
See page EM-21.



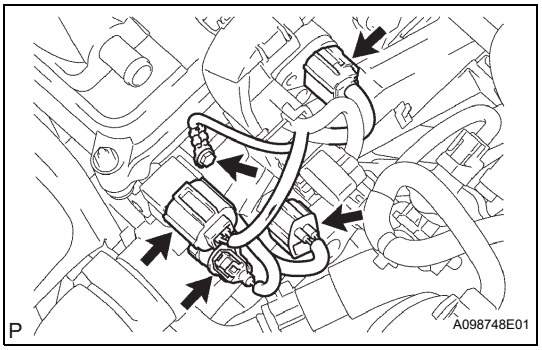
38. **REMOVE NO. 2 CAMSHAFT**
(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.
(b) Remove the 5 bearing caps and No. 2 camshaft.



39. **REMOVE CAMSHAFT**
(a) Using several steps, uniformly loosen and remove the 10 bearing cap bolts in the sequence shown in the illustration.
(b) Remove the 5 bearing caps and camshaft.

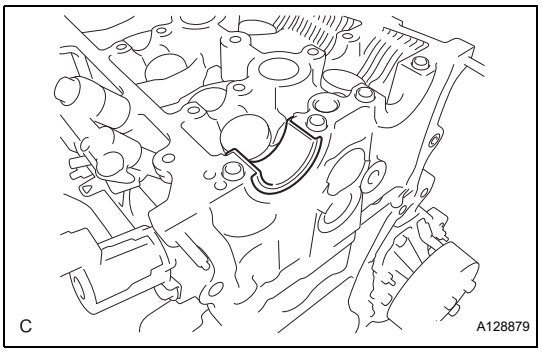
40. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-381)**

41. **DISCONNECT RADIATOR HOSE INLET (See page EM-91)**



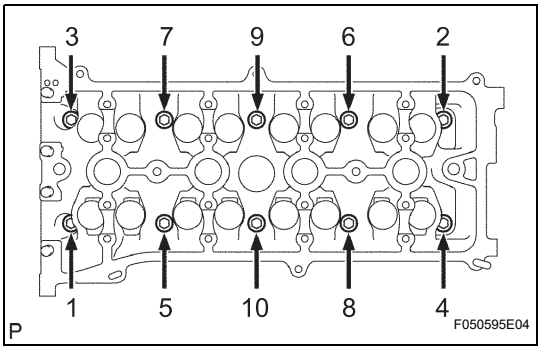
42. DISCONNECT ENGINE WIRE

(a) Disconnect the radio setting condenser connector.
(b) Disconnect the engine oil pressure switch connector.
(c) Disconnect the engine coolant temperature sensor connector.
(d) Disconnect the camshaft position sensor connector.
(e) Remove the bolt and ground cable.



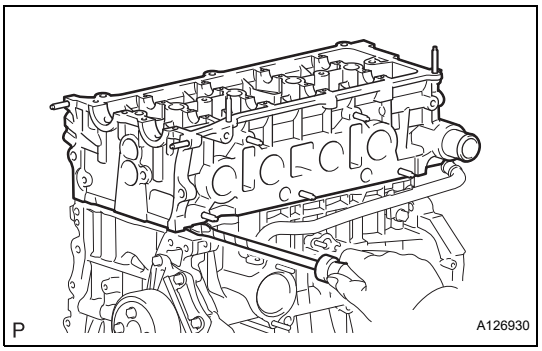
43. REMOVE NO. 2 CAMSHAFT BEARING

(a) Remove the No. 2 camshaft bearing.

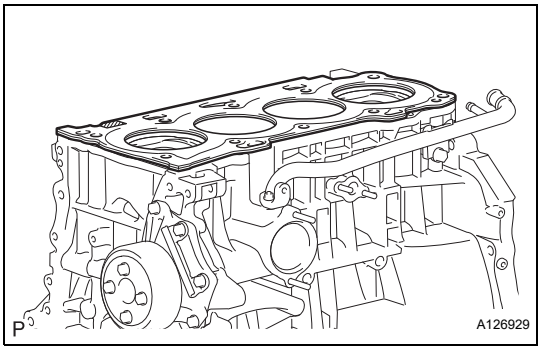


44. REMOVE CYLINDER HEAD SUB-ASSEMBLY

(a) Using several steps, uniformly loosen and remove the 10 cylinder head bolts and 10 plate washers with a 10 mm bi-hexagon wrench in the sequence shown in the illustration.
NOTICE:
Head warpage or cracking could result from removing the bolts in the wrong order.

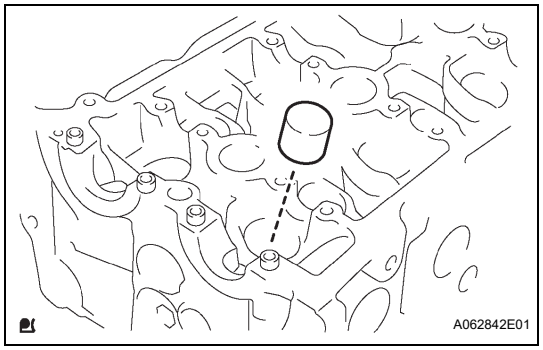


(b) Using a screwdriver with its tip wrapped with tape, pry between the cylinder head and cylinder block, and remove the cylinder head.
NOTICE:
Be careful not to damage the contact surfaces of the cylinder head and cylinder block.



45. REMOVE CYLINDER HEAD GASKET

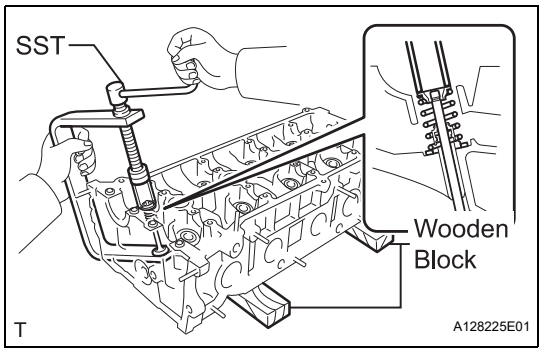
(a) Remove the cylinder head gasket.



DISASSEMBLY

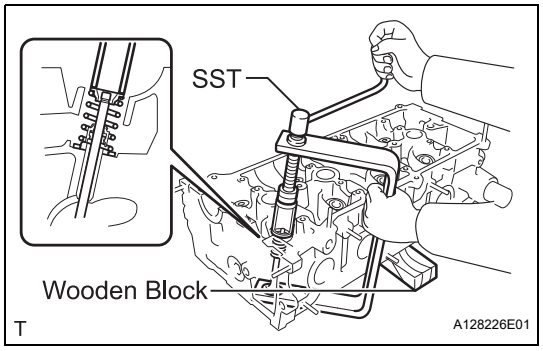
1. REMOVE VALVE LIFTER

(a) Remove the valve lifters.
HINT:
Arrange the valve lifters in the correct order.



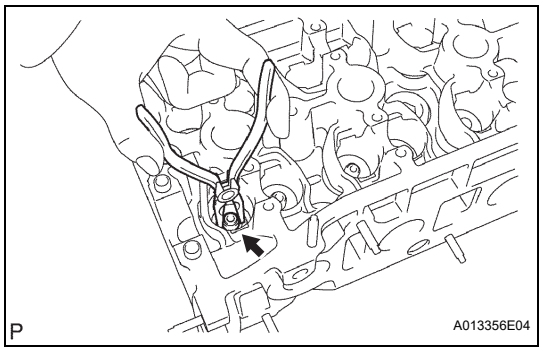
2. REMOVE INTAKE VALVE

(a) Using SST and wooden blocks, compress and remove the valve retainer locks.
SST 09202-70020 (09202-00010)
(b) Remove the retainer, valve spring and valve.
HINT:
Arrange the removed parts in the correct order.



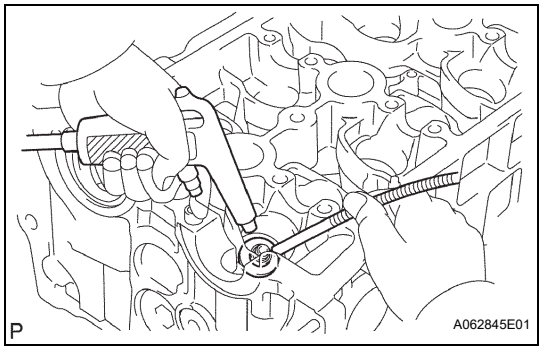
3. REMOVE EXHAUST VALVE

(a) Using SST and wooden blocks, compress and remove the valve retainer locks.
SST 09202-70020 (09202-00010)
(b) Remove the retainer, valve spring and valve.
HINT:
Arrange the removed parts in the correct order.



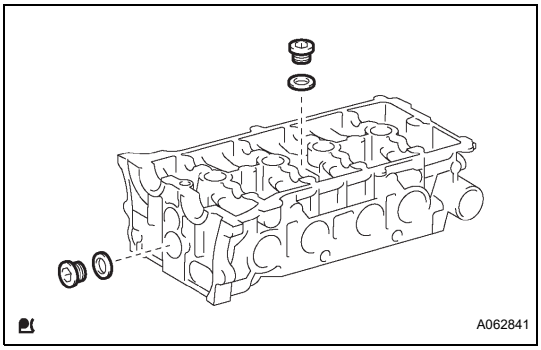
4. REMOVE VALVE STEM OIL SEAL

(a) Using needle-nose pliers, remove the oil seals.



5. REMOVE VALVE SPRING SEAT

(a) Using compressed air and a magnetic finger, remove the valve spring seats by blowing air onto them.



6. REMOVE NO. 1 STRAIGHT SCREW PLUG

(a) Using a 14 mm straight hexagon wrench, remove the 2 screw plugs and 2 gaskets.

NOTICE:
If water leaks from the straight screw plug or the plug corrodes, replace it.

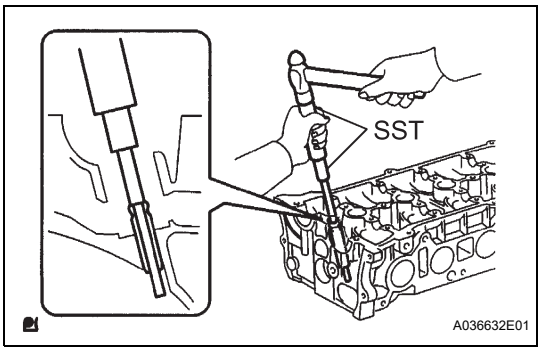
7. REMOVE STUD BOLT

8. REMOVE RING PIN

9. REMOVE INTAKE VALVE GUIDE BUSH

(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.



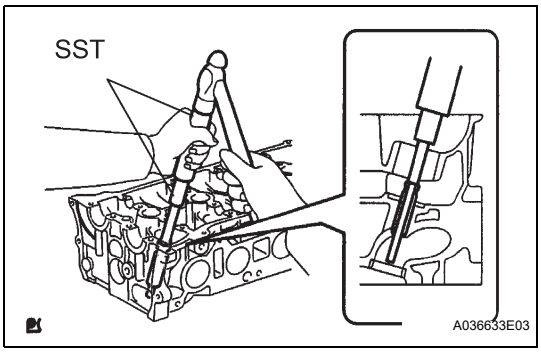
(c) Using SST and a hammer, tap out the guide bush.

SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)

10. REMOVE EXHAUST VALVE GUIDE BUSH

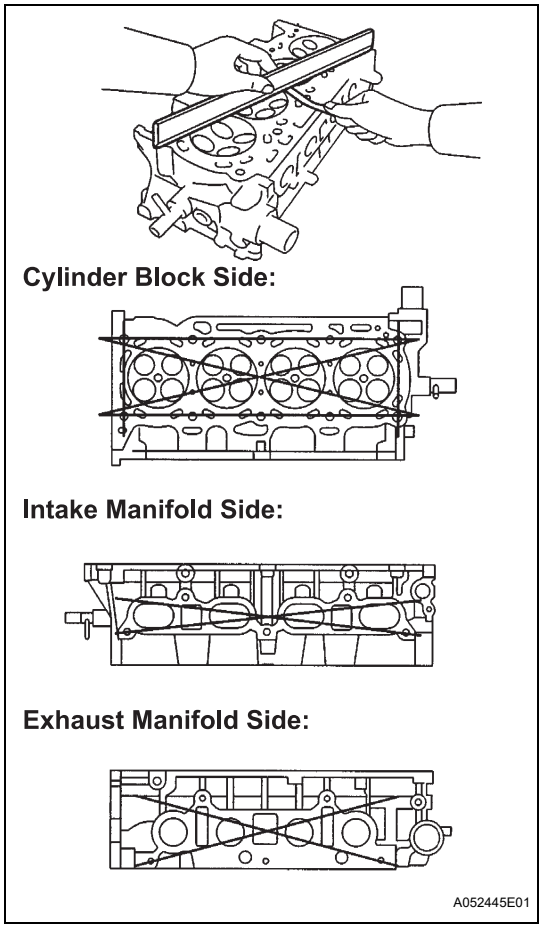
(a) Heat the cylinder head to 80 to 100°C (176 to 212°F).

(b) Place the cylinder head on wooden blocks.



(c) Using SST and a hammer, tap out the guide bush.

SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)



INSPECTION

1. INSPECT CYLINDER HEAD FOR FLATNESS

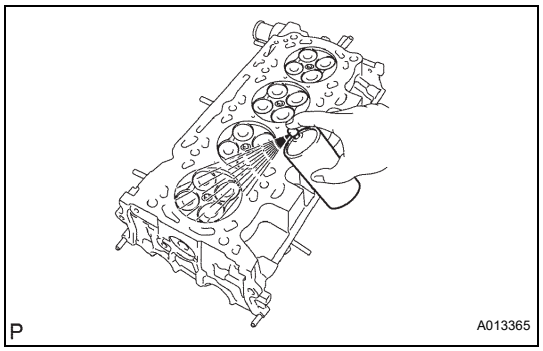
(a) Using a precision straight edge and a feeler gauge, measure the surface contacting the cylinder block and the manifolds for warpage.

Maximum warpage

Item	Specified Condition
Cylinder block side	0.05 mm (0.0020 in.)
Intake manifold side	0.08 mm (0.0031 in.)
Exhaust manifold side	0.08 mm (0.0031 in.)

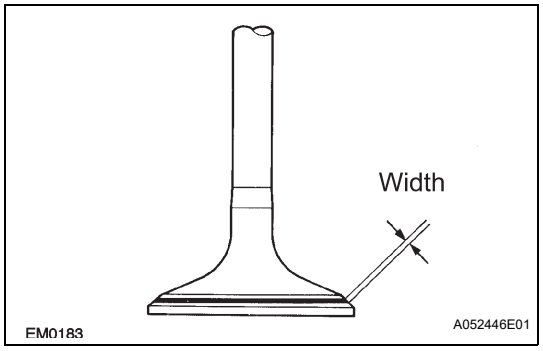
If the warpage is greater than the maximum, replace the cylinder head.

EM



2. INSPECT CYLINDER HEAD FOR CRACKS

(a) Using a dye penetrant, check the intake ports, exhaust ports and cylinder surface for cracks.
If cracked, replace the cylinder head.



3. INSPECT VALVE SEATS

(a) Apply a light coat of Prussian blue to the valve face.
(b) Lightly press the valve face against the valve seat.
(c) Check the valve face and valve seat according to the following procedure:
  (1) If prussian blue appears 360° around the valve face, the valve face is concentric. If not, replace the valve.
  (2) If prussian blue appears 360° around the valve seat, the guide and valve face are concentric. If not, resurface the valve seat.
  (3) Check that the valve seat contact is in the middle of the valve face with the valve seat width between 1.0 and 1.4 mm (Intake side (0.039 to 0.055 in.)).

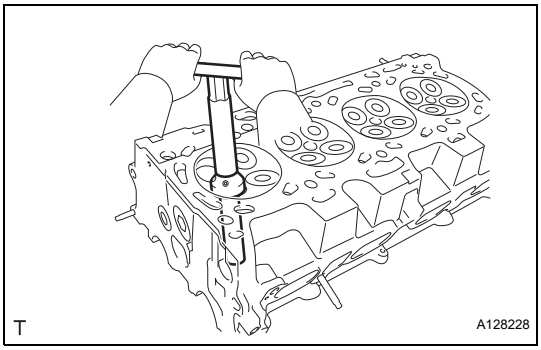
(4) Check that the valve seat contact is in the middle of the valve face with the valve seat width between 1.2 and 1.6 mm (Exhaust side (0.047 to 0.063 in.)).

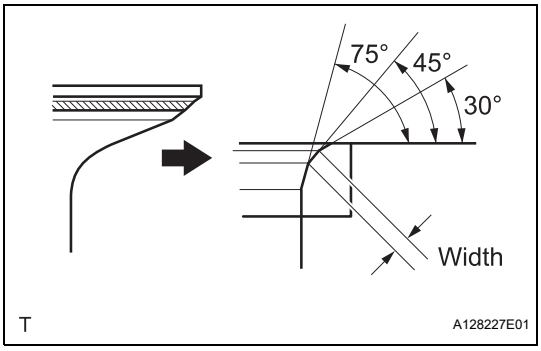
4. REPAIR VALVE SEATS

NOTICE:

- **Repair the seat while checking the seating position.**
- **Keep the lip free from foreign matter.**

(a) Using a 45° cutter, resurface the valve seat so that the valve seat width is more than the specification.





(b) Using 30° and 75° cutters, correct the valve seat so that the valve contacts the entire circumference of the seat. The contact should be in the center of the valve seat, and the valve seat width should be maintained within the specified range around the entire circumference of the seat.

Valve seat width

Item	Specified Condition
Intake Side	1.0 to 1.4 mm (0.039 to 0.055 in.)
Exhaust Side	1.2 to 1.6 mm (0.047 to 0.063 in.)

(c) Handrub the valve and valve seat with an abrasive compound.

(d) Check the valve seating position.

5. INSPECT CAMSHAFT THRUST CLEARANCE

(a) Install the camshafts (See page EM-69).

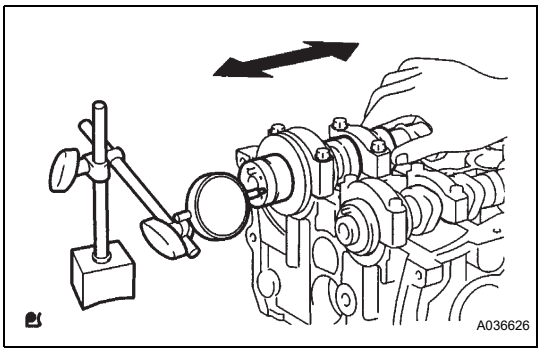
(b) Using a dial indicator, measure the thrust clearance while moving the camshaft back and forth.

Standard thrust clearance

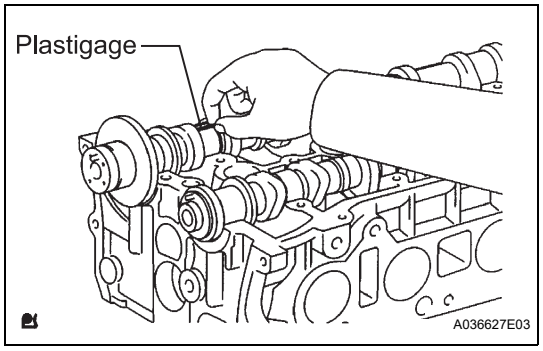
Item	Specified Condition
Intake	0.040 to 0.095 mm (0.0016 to 0.0037 in.)
Exhaust	0.080 to 0.135 mm (0.0032 to 0.0053 in.)

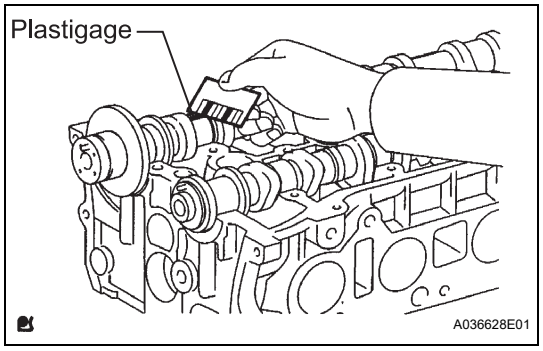
Maximum thrust clearance

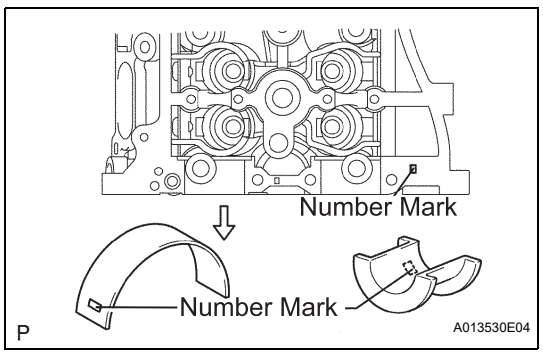
Item	Specified Condition
Intake	0.110 mm (0.0043 in.)
Exhaust	0.150 mm (0.0059 in.)



If the thrust clearance is greater than the maximum, replace the cylinder head. If the thrust surface is damaged, replace the camshaft.







6. INSPECT CAMSHAFT OIL CLEARANCE

(a) Clean the bearing caps and camshaft journals.

(b) Place the camshafts on the cylinder head.

(c) Lay a strip of Plastigage across each of the camshaft journals.

(d) Install the bearing caps (See page EM-69).

NOTICE:
Do not turn the camshaft.

(e) Remove the bearing caps (See page EM-52).

(f) Measure the Plastigage at its widest point.

Standard oil clearance

Item	Specified Condition
Camshaft No. 1 journal bearing mark 1	0.007 to 0.038 mm (0.0003 to 0.0015 in.)
Camshaft No. 1 journal bearing mark 2	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
Camshaft No. 1 journal bearing mark 3	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
Camshaft other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
No. 2 camshaft No. 1 journal	0.015 to 0.054 mm (0.0006 to 0.0021 in.)
No. 2 camshaft other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)

Maximum oil clearance

Item	Specified Condition
Intake	0.070 mm (0.0028 in.)
Exhaust	0.100 mm (0.0039 in.)

NOTICE:
Completely remove the Plastigage after the inspection.

- If the oil clearance is greater than the maximum, replace the camshaft. If necessary, replace the cylinder head.
- If the oil clearance on the camshaft No. 1 journal is greater than the maximum, choose a new bearing and install it.

(1) Check the number mark shown in the illustration.

Cylinder head journal bore diameter

Mark 1	Mark 2	Mark 3
40.000 to 40.008 mm (1.5748 to 1.5752 in.)	40.009 to 40.017 mm (1.5752 to 1.5755 in.)	40.018 to 40.025 mm (1.5755 to 1.5758 in.)

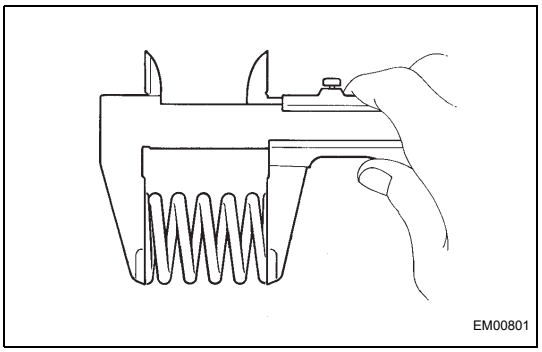
Standard bearing center wall thickness

Mark 1	Mark 2	Mark 3
2.000 to 2.004 mm (0.0787 to 0.0789 in.)	2.005 to 2.008 mm (0.0789 to 0.0791 in.)	2.009 to 2.012 mm (0.0791 to 0.0792 in.)

EM

Camshaft journal diameter

Mark 1	Mark 2	Mark 3
35.971 to 35.985 mm (1.4162 to 1.4167 in.)	35.971 to 35.985 mm (1.4162 to 1.4167 in.)	35.971 to 35.985 mm (1.4162 to 1.4167 in.)



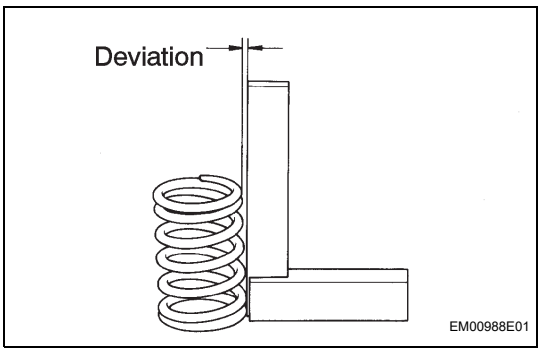
7. INSPECT INNER COMPRESSION SPRING

(a) Using vernier calipers, measure the free length of the valve spring.

Free length:

47.43 mm (1.867 in.)

If the free length is not as specified, replace the valve spring.

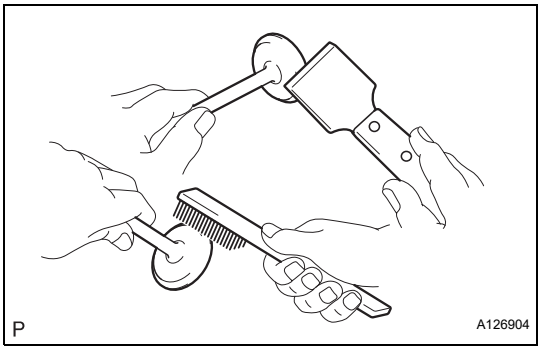


(b) Using steel squares, measure the deviation of the valve spring.

Maximum deviation:

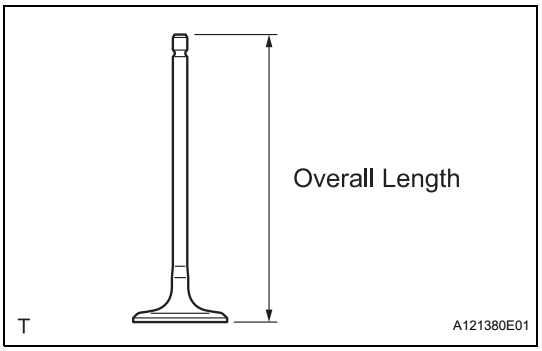
1.6 mm (0.063 in.)

If the deviation is greater than the maximum, replace the valve spring.



8. INSPECT INTAKE VALVE

(a) Using a gasket scraper, scrape off any carbon on the valve head.



(b) Using vernier calipers, measure the overall length of the valve.

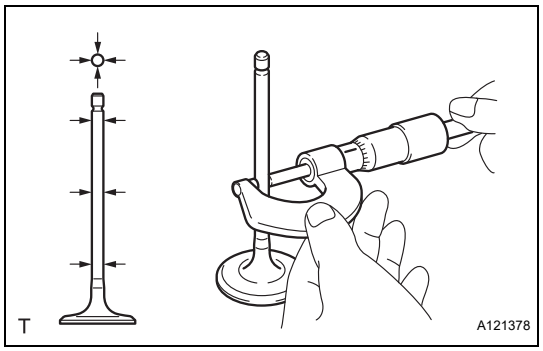
Standard overall length:

101.71 mm (4.0043 in.)

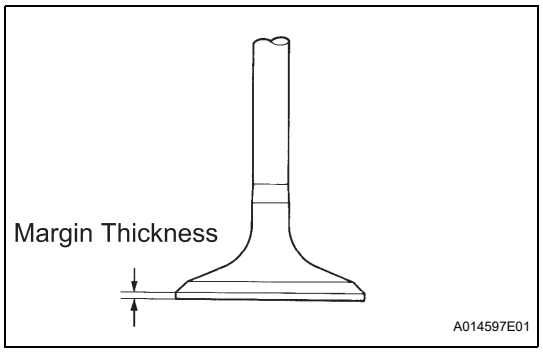
Minimum overall length:

101.21 mm (3.9846 in.)

If the overall length is less than the minimum, replace the valve.

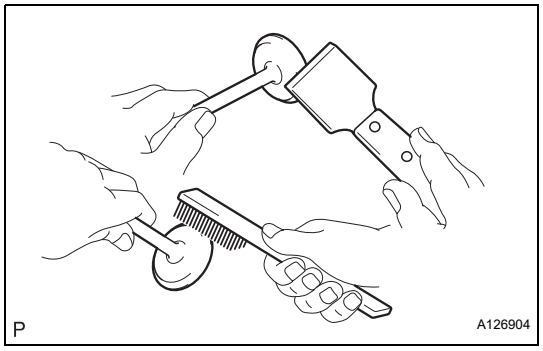


(c) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.470 to 5.485 mm (0.2154 to 0.2159 in.)
If the valve stem diameter is not as specified, check the oil clearance.



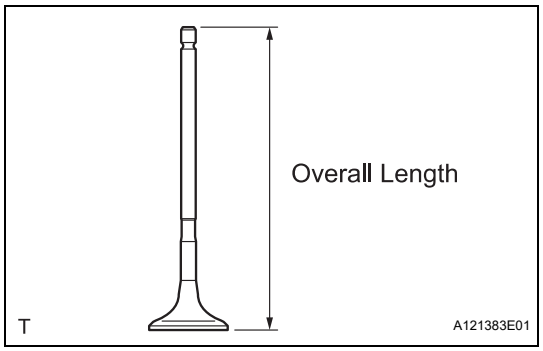
(d) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.05 to 1.45 mm (0.0413 to 0.0571 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the valve.

EM

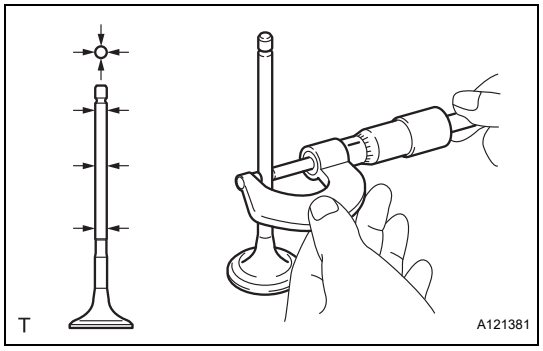


9. INSPECT EXHAUST VALVE

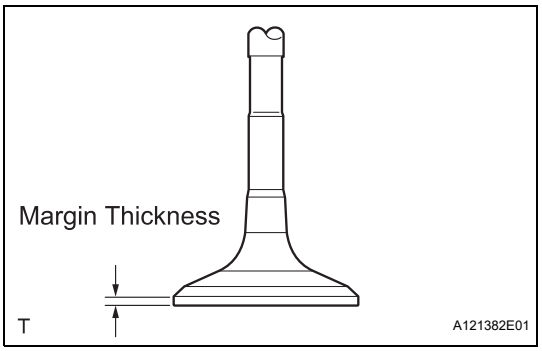
(a) Using a gasket scraper, scrape off any carbon on the valve head.



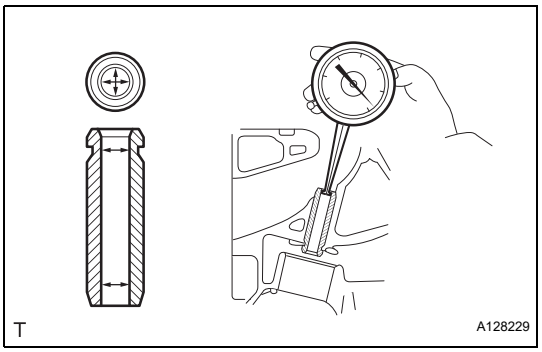
(b) Using vernier calipers, measure the overall length of the valve.
Standard overall length:
101.15 mm (3.9823 in.)
Minimum overall length:
100.70 mm (3.9646 in.)
If the overall length is less than the minimum, replace the valve.



(c) Using a micrometer, measure the diameter of the valve stem.
Valve stem diameter:
5.465 to 5.480 mm (0.2152 to 0.2157 in.)
If the valve stem diameter is not as specified, check the oil clearance.



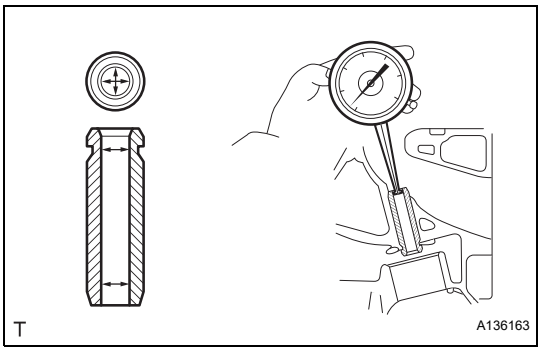
(d) Using vernier calipers, measure the valve head margin thickness.
Standard margin thickness:
1.20 to 1.60 mm (0.0472 to 0.0630 in.)
Minimum margin thickness:
0.50 mm (0.0197 in.)
If the margin thickness is less than the minimum, replace the valve.



10. INSPECT INTAKE VALVE GUIDE BUSH

(a) Using a caliper gauge, measure the inside diameter of the guide bush.
Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

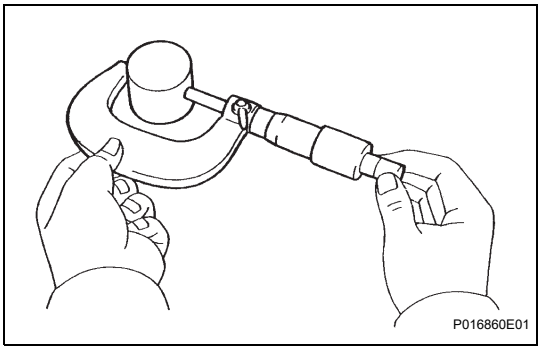
(b) Subtract the valve stem diameter measurement from the guide bush inside diameter measurement.
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Maximum oil clearance:
0.080 mm (0.0031 in.)
If the clearance is greater than the maximum, replace the valve and guide bush.



11. INSPECT EXHAUST VALVE GUIDE BUSH

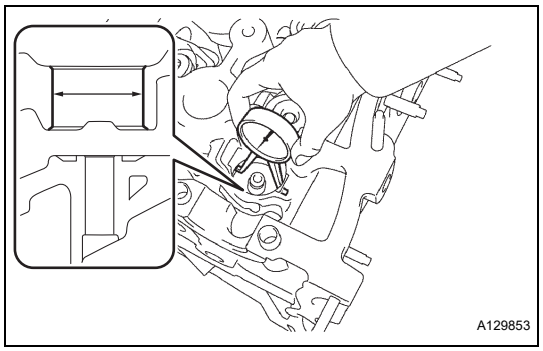
(a) Using a caliper gauge, measure the inside diameter of the guide bush.
Bushing inside diameter:
5.510 to 5.530 mm (0.2169 to 0.2177 in.)

(b) Subtract the valve stem diameter measurement from the guide bushing inside diameter measurement.
Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)
Maximum oil clearance:
0.100 mm (0.0039 in.)
If the clearance is greater than the maximum, replace the valve and guide bush.



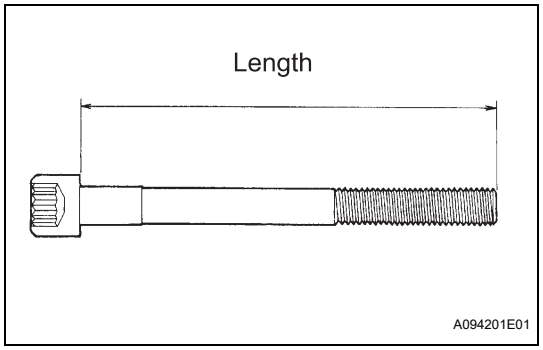
12. INSPECT VALVE LIFTER

(a) Using a micrometer, measure the lifter diameter.
Lifter diameter:
30.966 to 30.976 mm (1.2191 to 1.2195 in.)



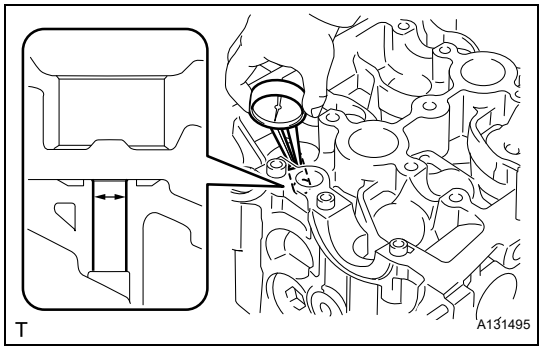
(b) Using a caliper gauge, measure the lifter bore diameter of the cylinder head.
Standard lifter bore diameter:
31.009 to 31.025 mm (1.2208 to 1.2215 in.)

(c) Subtract the lifter diameter measurement from the lifter bore diameter measurement.
Standard oil clearance:
0.033 to 0.059 mm (0.0013 to 0.0023 in.)
Maximum oil clearance:
0.070 mm (0.0028 in.)
If the oil clearance is greater than the maximum, replace the lifter. If necessary, replace the cylinder head.



13. INSPECT CYLINDER HEAD SET BOLT

(a) Using vernier calipers, measure the length of the cylinder head set bolt from the seat to the end.
Standard bolt length:
141.3 to 142.7 mm (5.563 to 5.618 in.)
Maximum bolt length:
144.2 mm (5.677 in.)
If the bolt length is greater than the maximum, replace the cylinder head set bolt.



REASSEMBLY

1. INSTALL INTAKE VALVE GUIDE BUSH

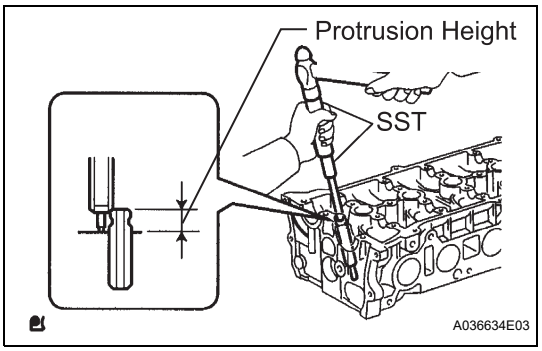
(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.
Cylinder bore diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Select a new guide bush (STD or O/S 0.05).

Bush size	Bush bore diameter
STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

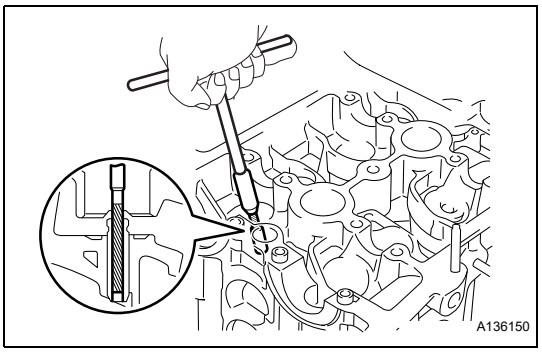
If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install an O/S 0.05 valve guide bush. If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).

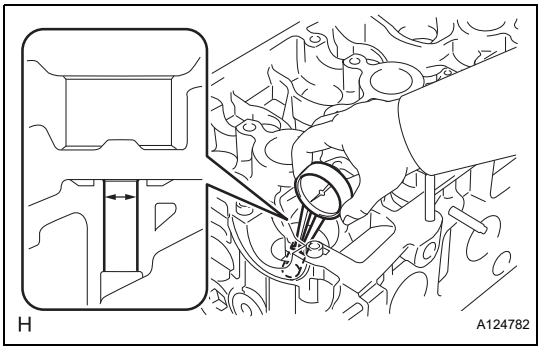
(c) Place the cylinder head on wooden blocks.



(d) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.6 to 10.0 mm (0.3779 to 0.3937 in.)



(e) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.
Standard oil clearance:
0.025 to 0.060 mm (0.0010 to 0.0024 in.)



2. INSTALL EXHAUST VALVE GUIDE BUSH

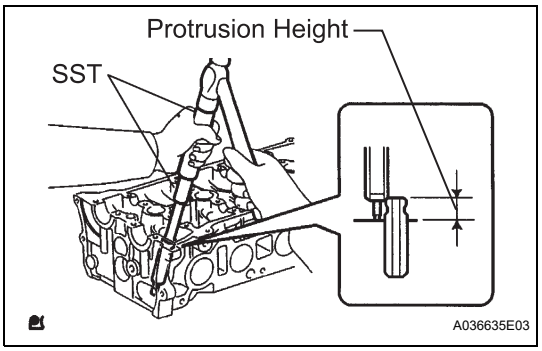
(a) Using a caliper gauge, measure the bush bore diameter of the cylinder head.
Diameter:
10.285 to 10.306 mm (0.4049 to 0.4057 in.)
Select a new guide bush (STD or O/S 0.05).

Bush size	Bush bore diameter
STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)

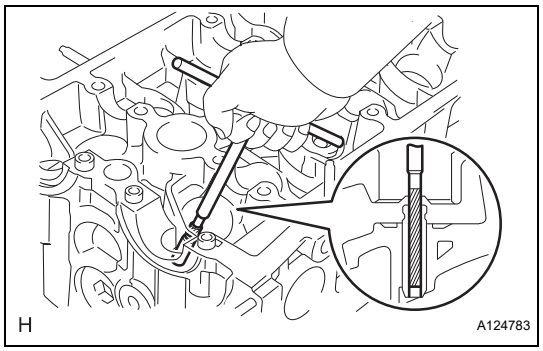
If the bush bore diameter of the cylinder head is greater than 10.306 mm (0.4057 in.), machine the bush bore to the dimension of 10.335 to 10.356 mm (0.4069 to 0.4077 in.) to install an O/S 0.05 valve guide bush. If the bush bore diameter of the cylinder head is greater than 10.356 mm (0.4077 in.), replace the cylinder head.

(b) Heat the cylinder head to 80 to 100°C (176 to 212°F).

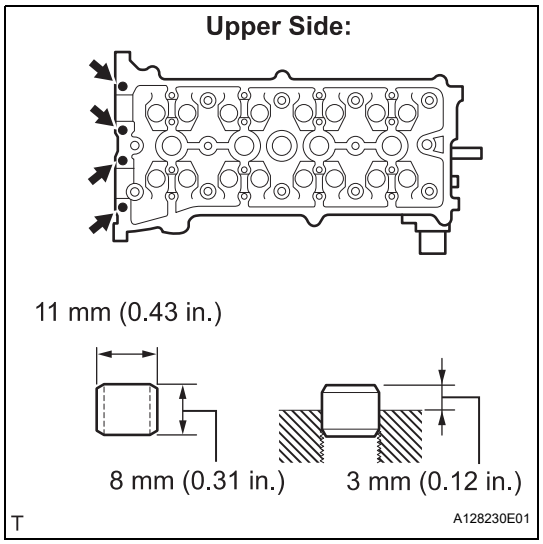
(c) Place the cylinder head on wooden blocks.



(d) Using SST and a hammer, tap in a new guide bush to the specified protrusion height.
SST 09201-10000 (09201-01050), 09950-70010 (09951-07100)
Protrusion height:
9.6 to 10.0 mm (0.3779 to 0.3937 in.)



(e) Using a sharp 5.5 mm reamer, ream the guide bush to obtain the standard specified clearance between the guide bush and valve stem.
Standard oil clearance:
0.030 to 0.065 mm (0.0012 to 0.0026 in.)



3. INSTALL RING W/HEAD PIN

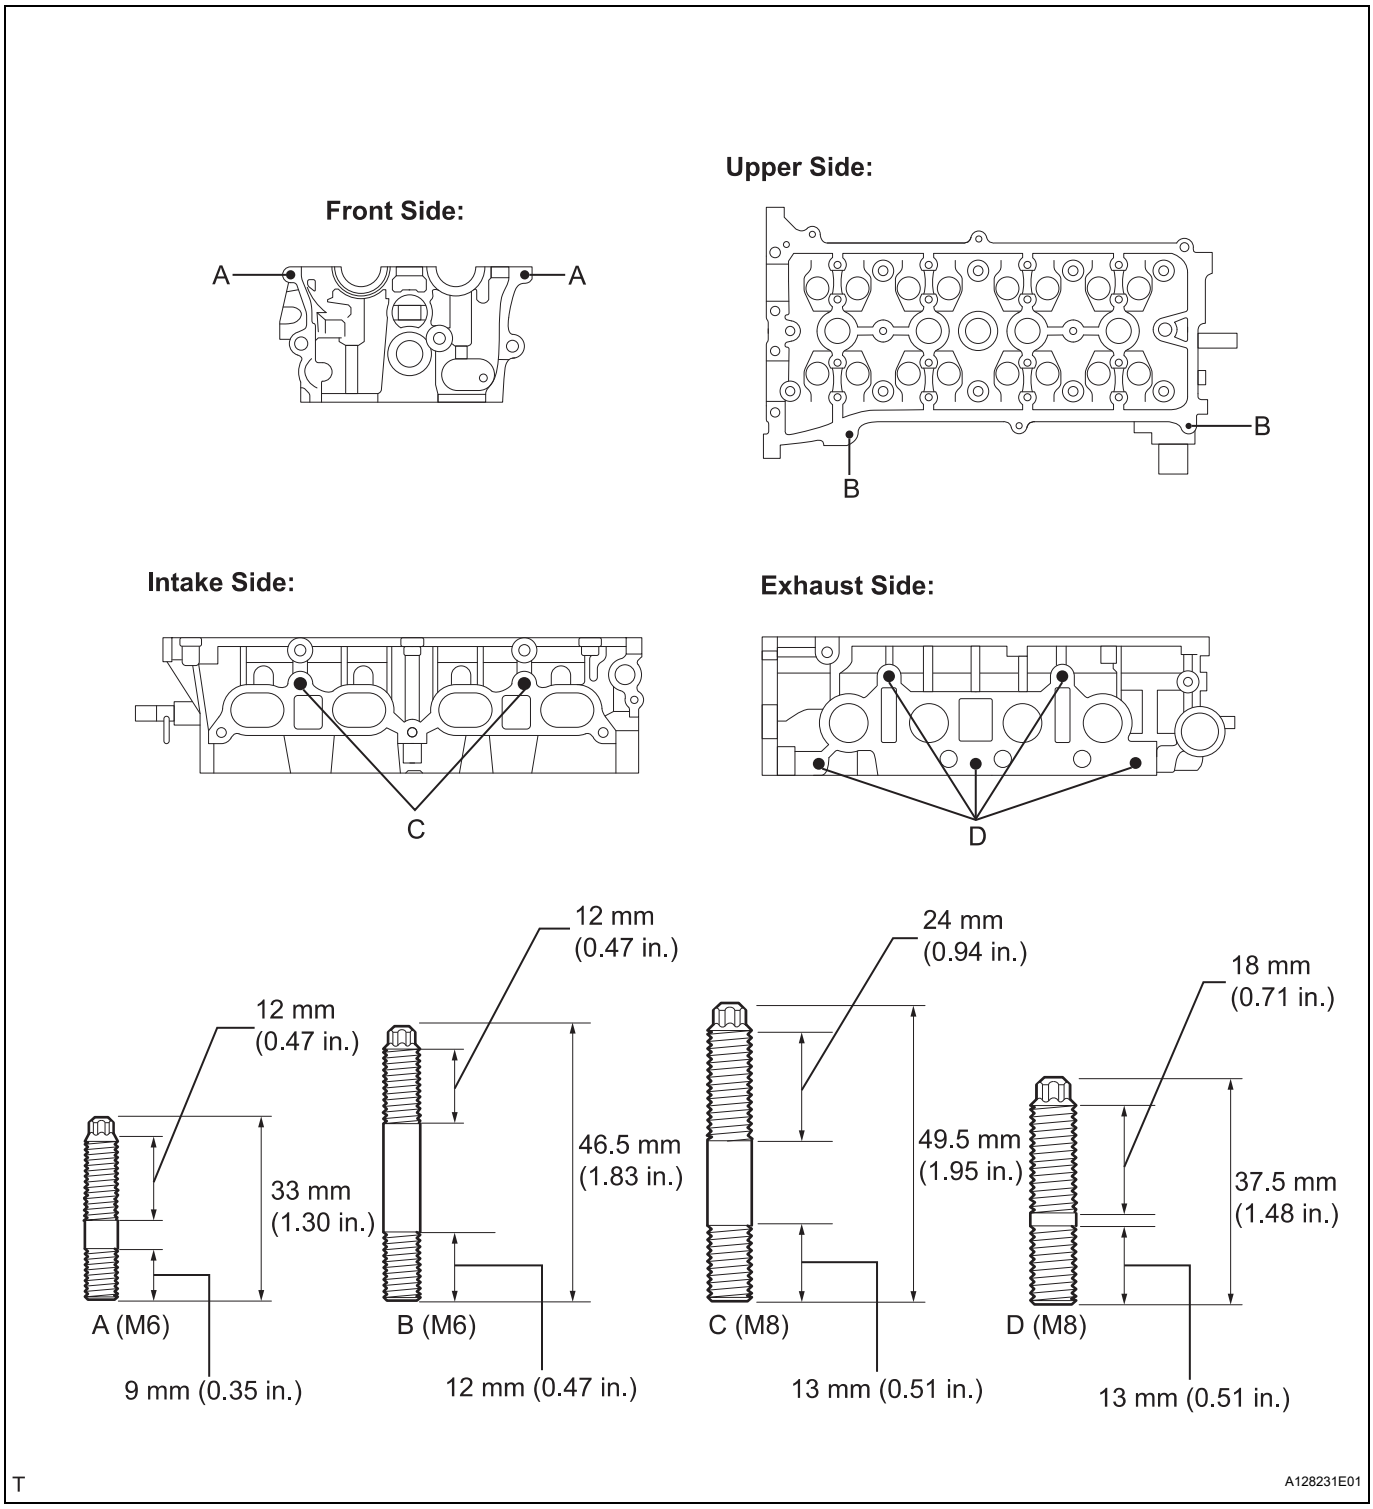
(a) Using a plastic-faced hammer, tap in a new ring pin to the specified protrusion height.
Protrusion height:
3 mm (0.12 in.)

4. INSTALL STUD BOLT

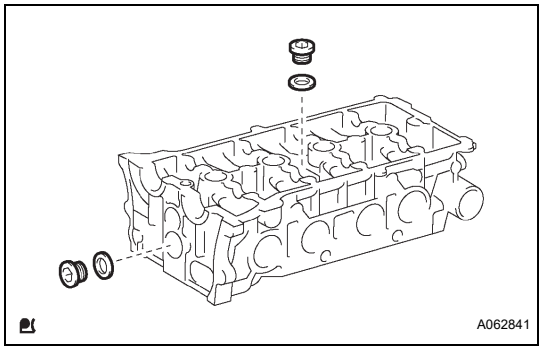
NOTICE:
If the stud bolt is deformed or the threads are damaged, replace it.

EM

(a) Using E5 and E7 "TORX" sockets, install the stud bolts.

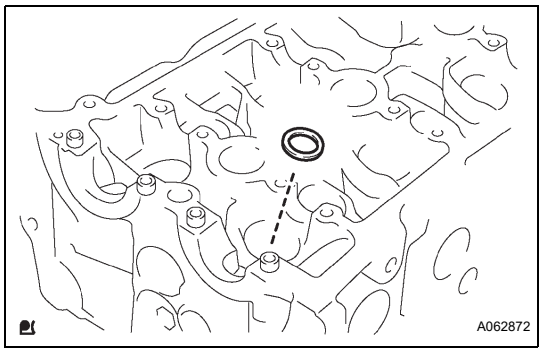


Torque: Bolt A
5.0 N*m (51 kgf*cm, 44 in.*lbf)
Bolt B
5.0 N*m (51 kgf*cm, 44 in.*lbf)
Bolt C
9.5 N*m (97 kgf*cm, 84 in.*lbf)
Bolt D
9.5 N*m (97 kgf*cm, 84 in.*lbf)



5. INSTALL NO. 1 STRAIGHT SCREW PLUG

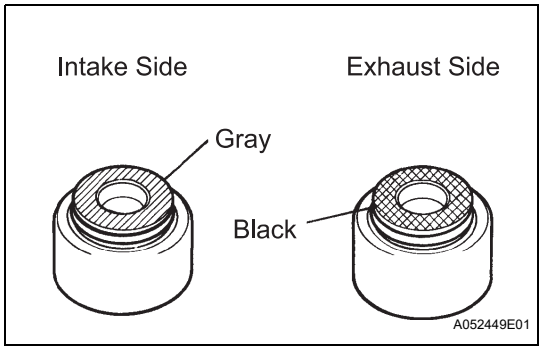
(a) Using a 14 mm straight hexagon wrench, install 2 new gaskets and the 2 straight screw plugs.



6. INSTALL VALVE SPRING SEAT

(a) Install the valve spring seats to the cylinder head.

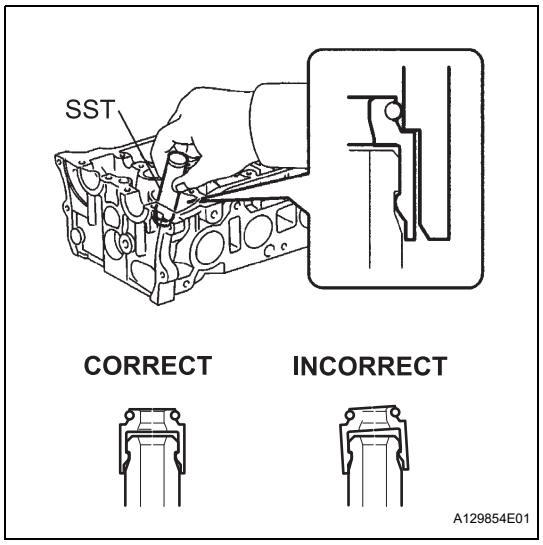
EM

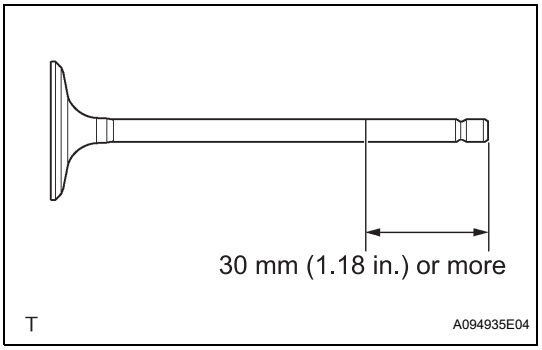


7. INSTALL VALVE STEM OIL SEAL

(a) Apply a light coat of engine oil to a new oil seal.
NOTICE:
Pay close attention when installing the intake and exhaust oil seals. For example, installing the intake oil seal into the exhaust side or installing the exhaust oil seal to the intake side can cause installation problems later.
HINT:
The intake valve oil seal is gray and the exhaust valve oil seal is black.

(b) Using SST, push in the oil seal.
SST 09201-41020
NOTICE:
Failure to use SST will cause the seal to be damaged or improperly seated.



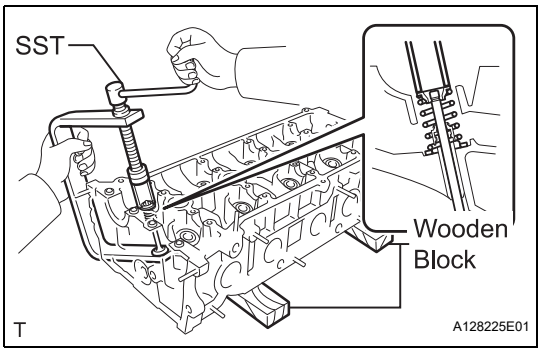


8. INSTALL INTAKE VALVE

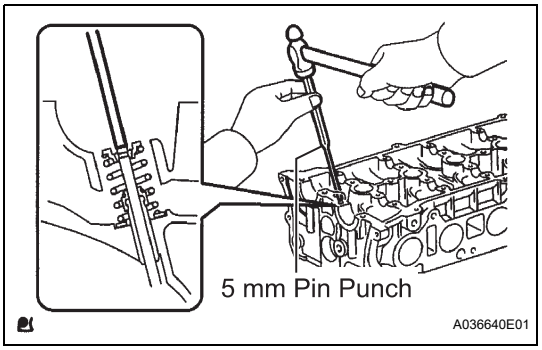
(a) Sufficiently apply engine oil to the tip area of the intake valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.

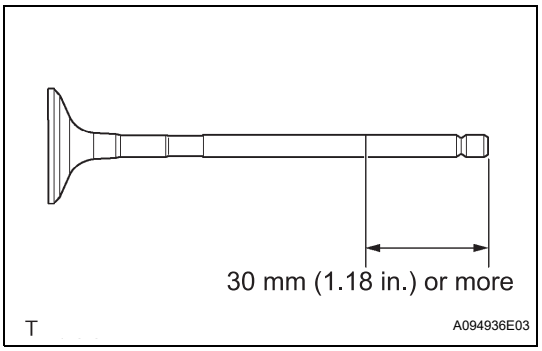
NOTICE:
Install the same parts in the same combination to the original locations.



(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.
SST 09202-70020 (09202-00010)



(d) Using a 5 mm pin punch and plastic hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
Be careful not to damage the valve stem tip.

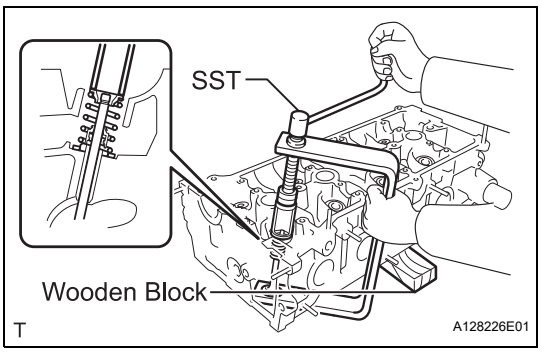


9. INSTALL EXHAUST VALVE

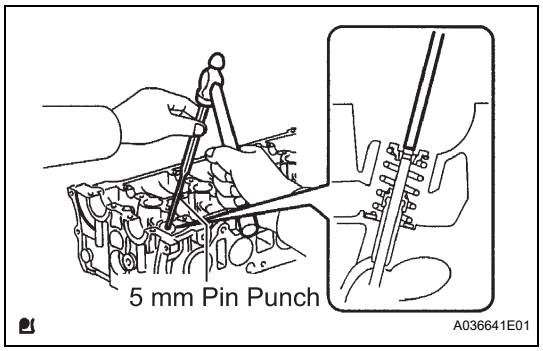
(a) Sufficient apply engine oil to the tip area of the exhaust valve shown in the illustration.

(b) Install the valve, compression spring and spring retainer to the cylinder head.

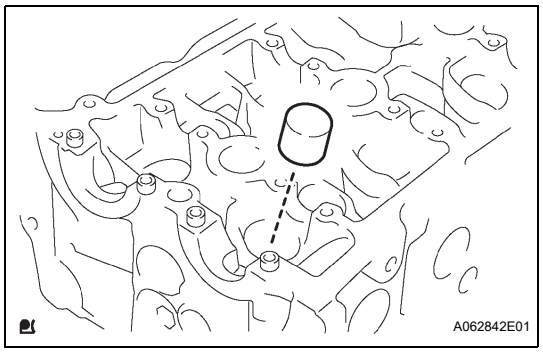
NOTICE:
Install the same parts in the same combination to the original locations.



(c) Using SST and wooden blocks, compress the spring and install the 2 retainer locks.
SST 09202-70020 (09202-00010)



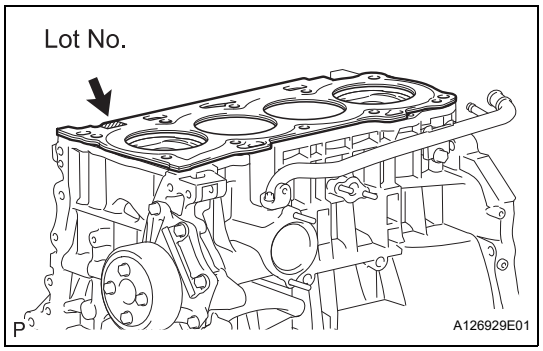
(d) Using a 5 mm pin punch and plastic hammer, lightly tap the valve stem tip to ensure a proper fit.
NOTICE:
Be careful not to damage the valve stem tip.



10. INSTALL VALVE LIFTER

(a) Apply a light coat of engine oil to the tip of each valve stem.

(b) Install the valve lifters.
NOTICE:
Install the valve lifters in their original places.



INSTALLATION

1. INSTALL CYLINDER HEAD GASKET

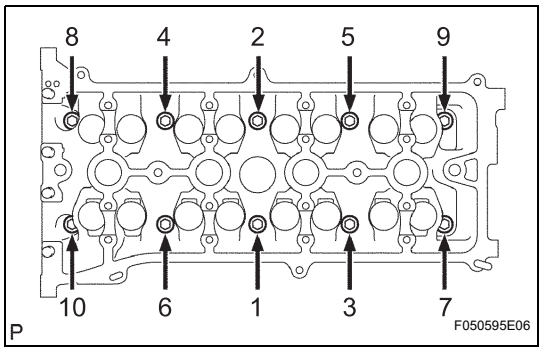
(a) Place a new gasket on the cylinder block surface with the Lot No. stamp facing upward.
NOTICE:
- **Remove any oil from the contact surface.**
- **Make sure that the gasket is installed in the correct direction.**

2. INSTALL CYLINDER HEAD SUB-ASSEMBLY

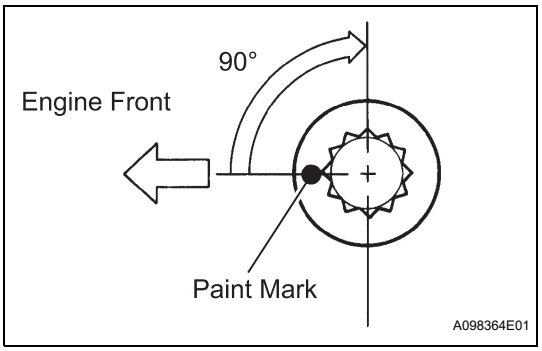
HINT:
The cylinder head bolts are tightened in 2 progressive steps.

(a) Apply a light coat of engine oil to the bolt threads and the area beneath the bolt heads that come in contact with the washers.

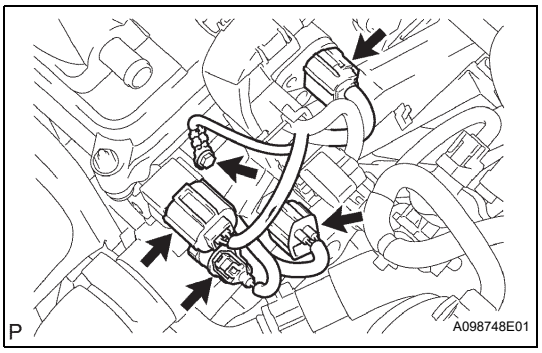
(b) Install the bolts and plate washers to the cylinder head.
NOTICE:
Do not drop the washers into the cylinder head.



(c) Using several steps, uniformly install and tighten the 10 cylinder head set bolts and plate washers with a 10 mm bi-hexagon wrench in the order shown in the illustration.
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)

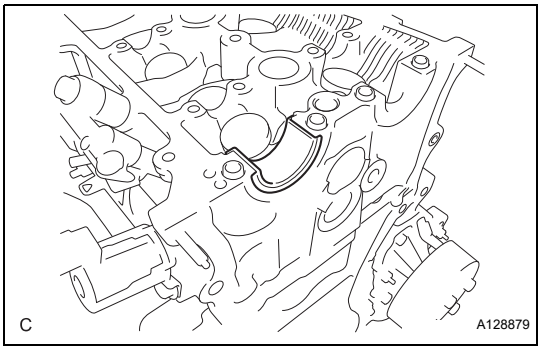


(d) Mark the front side of the cylinder head bolt with paint.
(e) Retighten the cylinder head bolts 90° in the sequence shown in the illustration.
(f) Check that the paint mark is now at a 90° angle to the front.



3. CONNECT ENGINE WIRE
(a) Connect the ground cable with the bolt.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)
(b) Connect the camshaft position sensor connector.
(c) Connect the engine coolant temperature sensor connector.
(d) Connect the engine oil pressure switch connector.
(e) Connect the radio setting condenser connector.

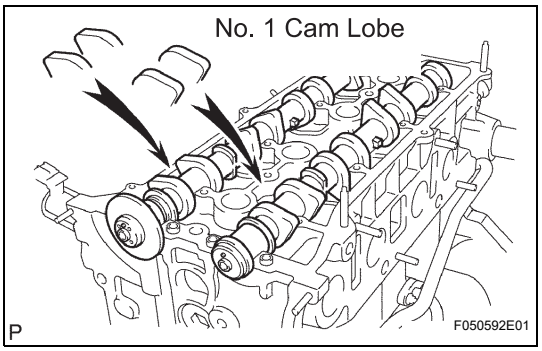
4. CONNECT RADIATOR HOSE INLET (See page EM-111)



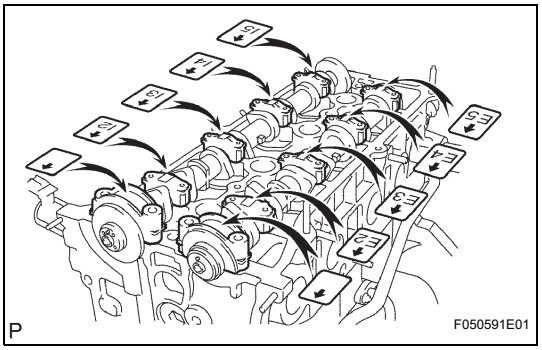
5. INSTALL NO. 2 CAMSHAFT BEARING
(a) Install the No. 2 camshaft bearing.

6. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-382)

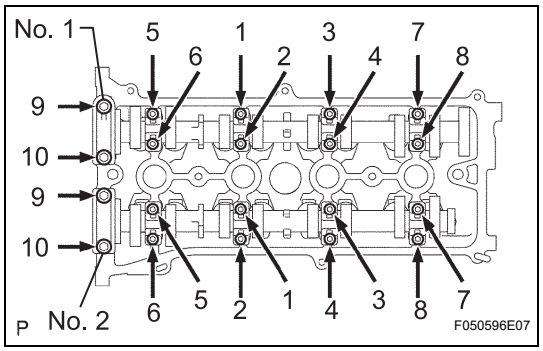
7. INSTALL CAMSHAFTS
(a) Apply a light coat of engine oil to the journal portion of the camshaft.



(b) Place the 2 camshafts on the cylinder head with the No. 1 cam lobes facing the directions shown in the illustration.



(c) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.
(d) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(e) Using several steps, uniformly tighten the 20 bearing cap bolts in the sequence shown in the illustration.
Torque: No. 1 and No. 2 bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)

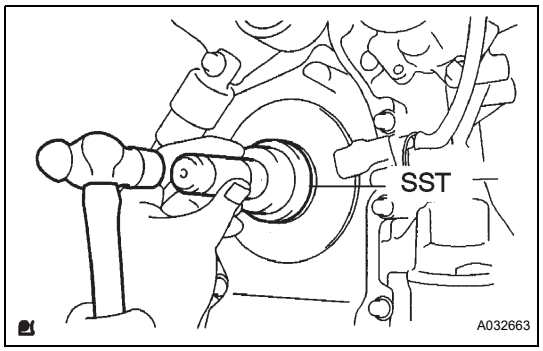
8. **INSTALL CHAIN SUB-ASSEMBLY**
HINT:
See page EM-26.
9. **INSTALL EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY (See page EM-103)**
10. **INSTALL NO. 2 MANIFOLD STAY (See page EM-104)**
11. **INSTALL MANIFOLD STAY (See page EM-104)**
12. **INSTALL OIL LEVEL GAUGE GUIDE (See page EM-105)**
13. **INSTALL OIL LEVEL GAUGE SUB-ASSEMBLY**
14. **INSTALL V-RIBBED BELT (See page EM-6)**
15. **INSTALL V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-7)**
16. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-112)**
17. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-112)**
18. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-112)**
19. **INSTALL FRONT EXHAUST PIPE ASSEMBLY**
HINT:
See page EX-3.
20. **INSTALL NO. 1 INTAKE MANIFOLD INSULATOR (See page EM-105)**
21. **INSTALL INTAKE MANIFOLD (See page ES-405)**
22. **INSTALL FUEL DELIVERY PIPE WITH INJECTOR (See page FU-15)**
23. **CONNECT FUEL TUBE SUB-ASSEMBLY (See page EM-109)**
24. **INSTALL THROTTLE BODY ASSEMBLY (See page ES-397)**
25. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-113)**
26. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**
27. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**

28. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-405)**
29. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
30. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-13)**
31. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)**
32. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)**
33. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)**
34. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)**
35. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)**
36. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-113)**
37. **INSTALL LUGGAGE TRIM SERVICE HOLE COVER**
38. **ADD ENGINE OIL**
39. **CHECK FOR FUEL LEAKS (See page FU-9)**
40. **ADD COOLANT (See page CO-5)**
41. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
42. **CHECK FOR ENGINE OIL LEAKS**
43. **CHECK FOR EXHAUST GAS LEAKS**
44. **INSPECT IGNITION TIMING (See page EM-1)**
45. **INSPECT IDLE SPEED (See page EM-2)**
46. **INSPECT COMPRESSION (See page EM-3)**
47. **INSPECT CO/HC (See page EM-4)**
48. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**
49. **INSTALL FRONT FENDER APRON SEAL RH**
50. **INSTALL ENGINE UNDER COVER LH**
51. **INSTALL ENGINE UNDER COVER RH**
52. **INSTALL FRONT WHEEL RH (See page EM-113)**
53. **PERFORM INITIALIZATION**
    (a) Perform initialization procedure (See page IN-43).
    HINT:
    Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

INSTALLATION

1. INSTALL TIMING CHAIN CASE OIL SEAL

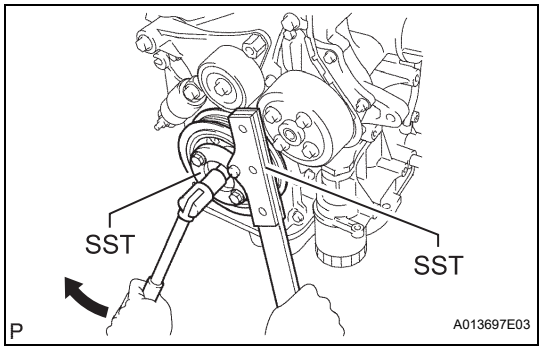
(a) Apply MP grease to a new oil seal lip.
NOTICE:
Keep the lip free from foreign matter.



(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the front oil seal retainer edge.
SST 09223-22010
NOTICE:
Wipe off extra grease from the crankshaft.

2. INSTALL CRANKSHAFT PULLEY

(a) Align the pulley set key with the key groove of the pulley.



(b) Using SST, hold the pulley in place and tighten the bolt.
SST 09213-54015 (91651-60855), 09330-00021
Torque: 170 N*m (1,734 kgf*cm, 125 ft.*lbf)

3. INSTALL V-RIBBED BELT (See page EM-6)

4. INSTALL V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-7)

5. INSTALL ENGINE UNDER COVER LH

6. INSTALL ENGINE UNDER COVER RH

7. INSTALL FRONT FENDER APRON SEAL RH

8. INSTALL FRONT WHEEL RH

9. CHECK FOR ENGINE OIL LEAKS

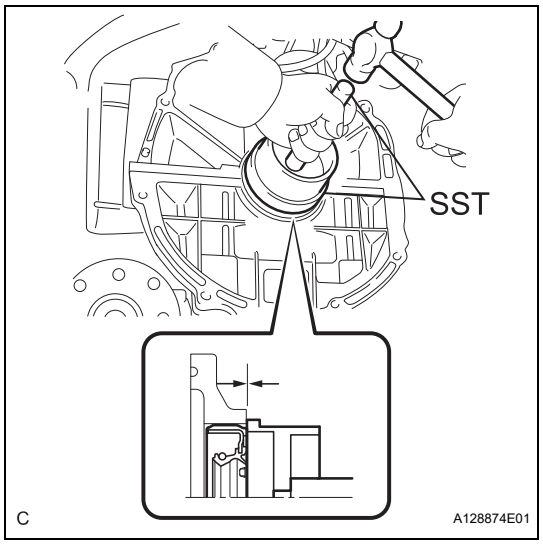
EM

INSTALLATION

1. INSTALL ENGINE REAR OIL SEAL

(a) Apply MP grease to a new oil seal lip.
NOTICE:
Keep the lip free from foreign matter.

(b) Using SST and a hammer, tap in the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223-15030, 09950-70010 (09951-07100)
NOTICE:
Wipe off extra grease from the crankshaft.

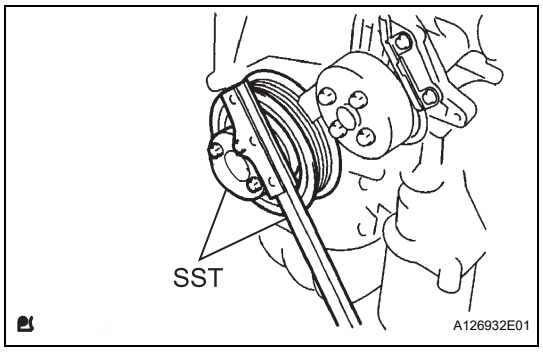


2. INSTALL FLYWHEEL SUB-ASSEMBLY

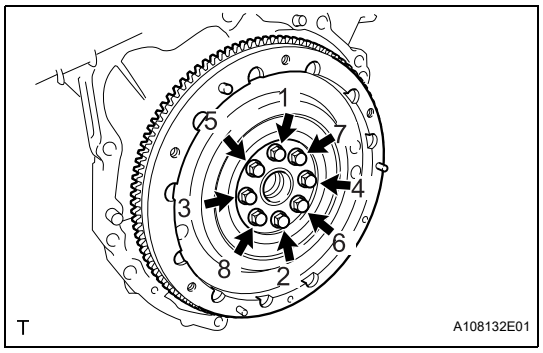
(a) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021

(b) Clean the bolt and the bolt hole.

(c) Apply adhesive to 2 or 3 threads of the bolt end.
Adhesive:
Part No. 08833-00070, Three Bond or equivalent



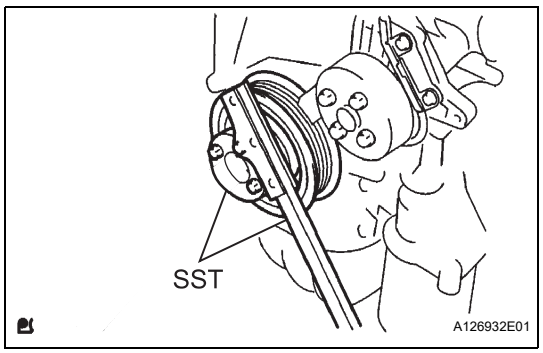
(d) Install the flywheel with the 8 bolts. Uniformly tighten the 8 bolts in the sequence shown in the illustration.
Torque: 130 N*m (1,330 kgf*cm, 96 ft.*lbf)

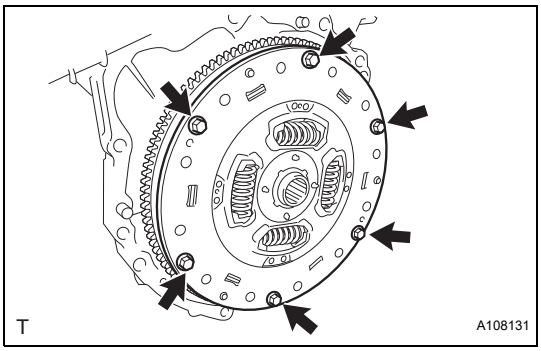


3. INSTALL TRANSMISSION INPUT DAMPER ASSEMBLY

(a) Using SST, hold the crankshaft.
SST 09213-54015 (91651-60855), 09330-00021

(b) Clean the bolt hole.



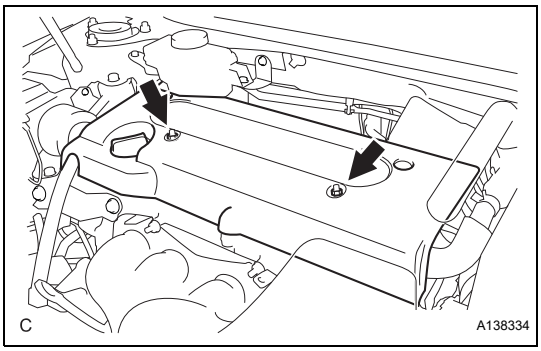


(c) Install new 6 bolts and transmission input damper.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
HINT:
Take care not to insert the transmission input damper in the wrong direction.

4. INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY
HINT:
See page HX-15.

REMOVAL

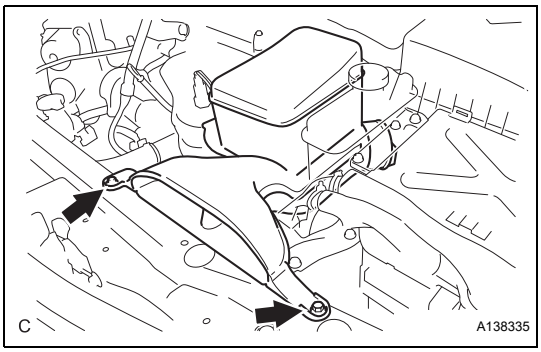
1. **PRECAUTION**
   HINT:
   See page HV-1.
2. **REMOVE LUGGAGE TRIM SERVICE HOLE COVER**
3. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
4. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (See page HV-560)**
5. **REMOVE SERVICE PLUG GRIP (See page HB-86)**
6. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
7. **REMOVE FRONT WHEELS**
8. **REMOVE ENGINE UNDER COVER LH**
9. **REMOVE ENGINE UNDER COVER RH**
10. **REMOVE FRONT FENDER APRON SEAL RH**
11. **DRAIN ENGINE OIL (See page LU-4)**
12. **DRAIN ENGINE COOLANT (See page CO-5)**
13. **REMOVE COOLANT (for Inverter) (See page HV-556)**
14. **DRAIN HYBRID TRANSAXLE FLUID (See page HX-2)**
15. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
16. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
17. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
18. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
19. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
20. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
21. **SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
22. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-403)**



23. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY**
    (a) Remove the 2 nuts and cover.

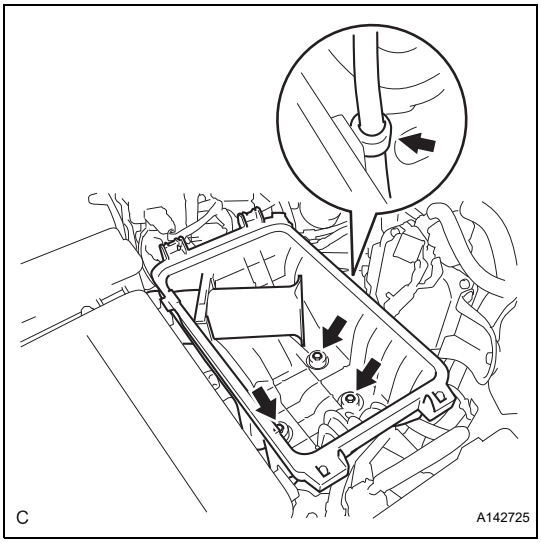
24. **REMOVE V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-6)**

25. **REMOVE V-RIBBED BELT (See page EM-6)**



26. **REMOVE AIR CLEANER INLET ASSEMBLY**
    (a) Remove the 2 bolts, clamp and air cleaner inlet.

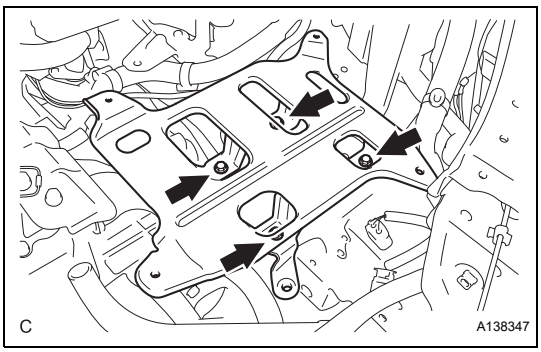
27. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-395)**



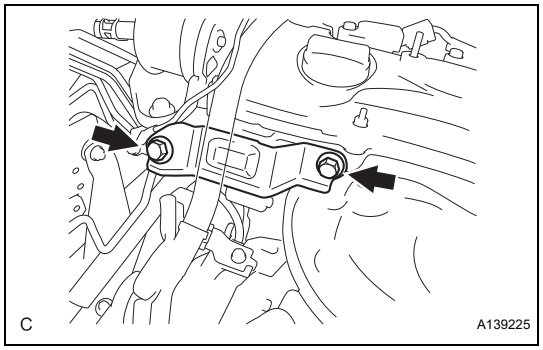
28. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY**
    (a) Disconnect the hose clamp.
    (b) Remove the 3 bolts and air cleaner case.

29. **REMOVE INVERTER WITH CONVERTER ASSEMBLY**
    HINT:
    See page HV-559.

30. **SEPARATE WATER WITH MOTOR AND BRACKET PUMP ASSEMBLY (See page HV-575)**

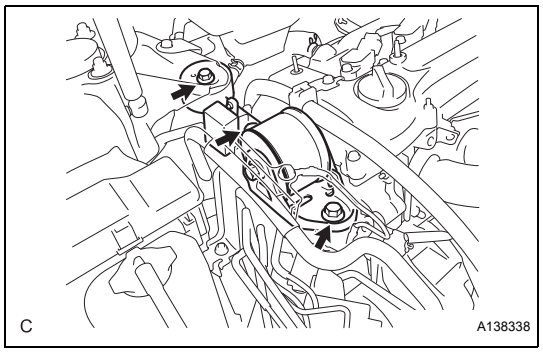


31. **REMOVE INVERTER TRAY BRACKET**
    (a) Remove the 4 bolts and inverter tray bracket.



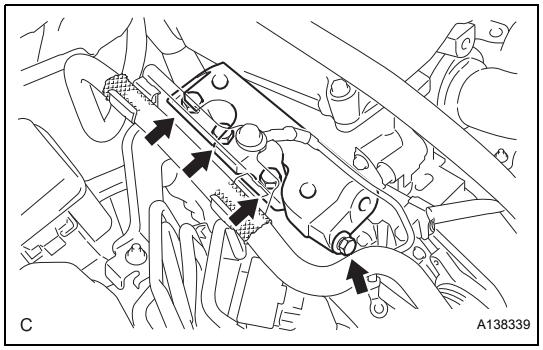
32. REMOVE NO. 2 ENGINE MOUNTING STAY RH

(a) Remove the 2 bolts and No. 2 engine mounting stay RH.



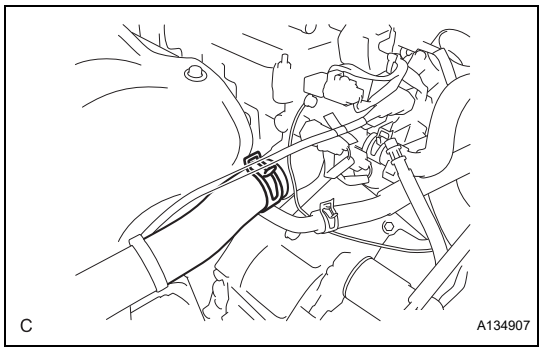
33. REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY

(a) Remove the 3 bolts and the engine moving control rod with bracket.



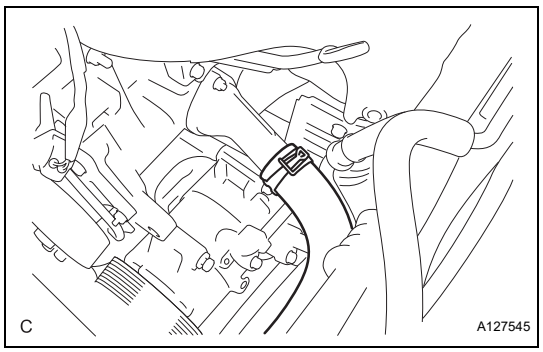
34. REMOVE NO. 2 ENGINE MOUNTING BRACKET RH

(a) Remove the bolt and disconnect the ground cable.
(b) Remove the 3 bolts and No. 2 engine mounting bracket RH.



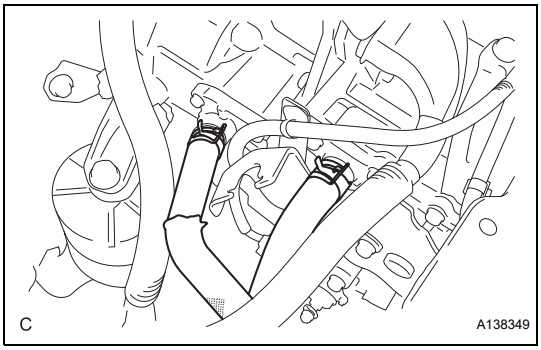
35. DISCONNECT RADIATOR HOSE INLET

(a) Remove the clamp and disconnect the radiator hose inlet.



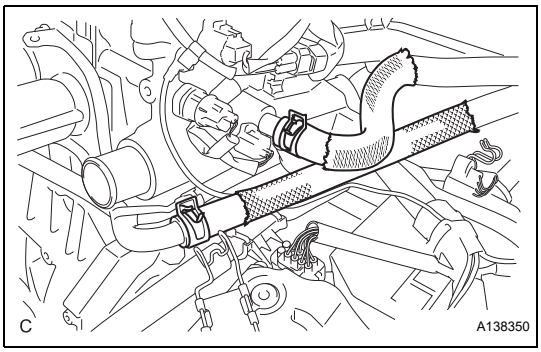
36. DISCONNECT RADIATOR HOSE OUTLET

(a) Remove the clamp and disconnect the radiator hose outlet.



37. DISCONNECT WATER HOSE

(a) Remove the 2 clamps and disconnect the 2 water hoses.



38. DISCONNECT HEATER INLET WATER HOSE

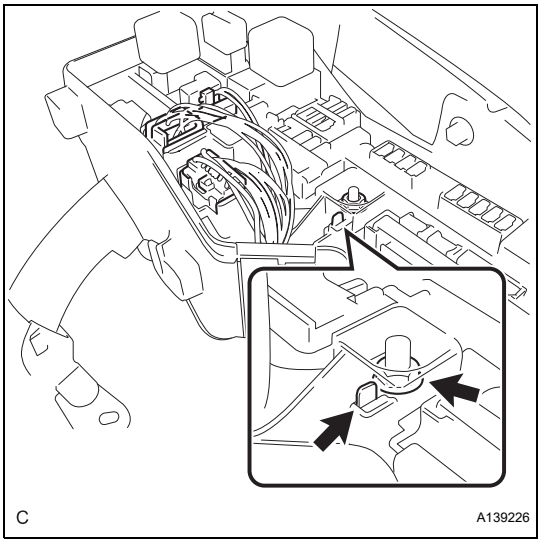
(a) Disconnect the heater inlet water hose.

39. DISCONNECT HEATER OUTLET WATER HOSE

(a) Disconnect the heater outlet water hose.

40. REMOVE HYBRID VEHICLE CONTROL ECU (See page HV-570)

41. REMOVE POWER STEERING ECU ASSEMBLY (See page PS-69)

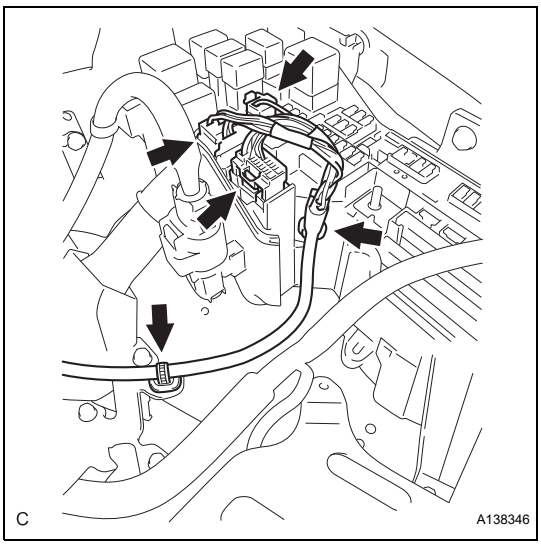


42. DISCONNECT ENGINE WIRE

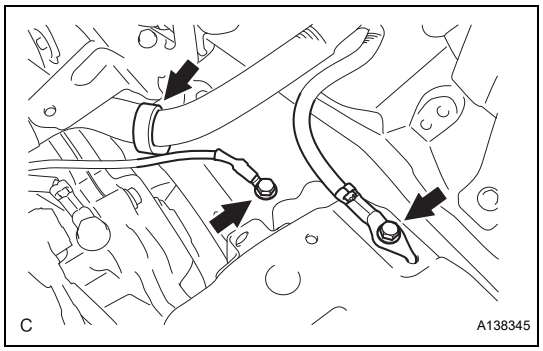
(a) Disconnect the engine wire from the engine room relay block.

(1) Remove the nut and separate the wire harness.

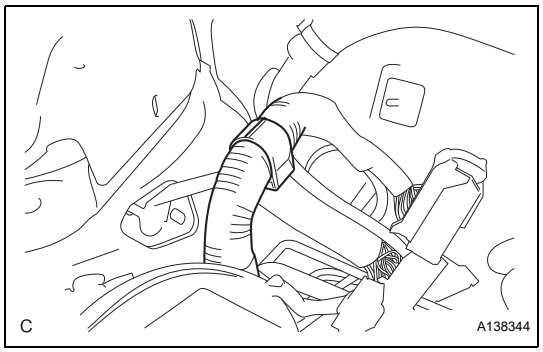
(2) Using a screwdriver, unlock the engine room R/B. Pull the engine room R/B upward.



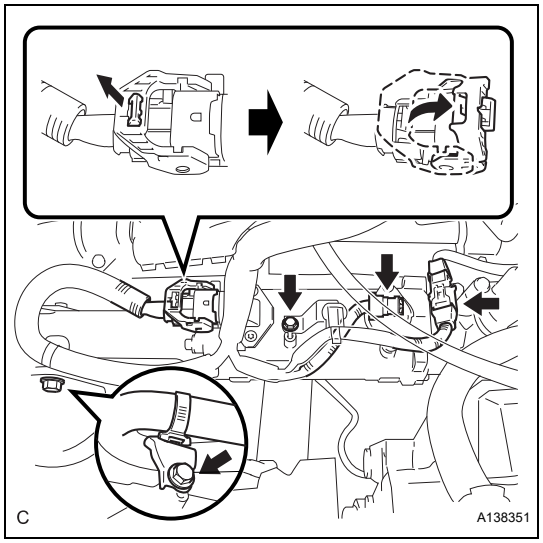
(3) Disconnect the clamps and engine wire connectors.



(b) Remove the 2 bolts and clamp from the body.

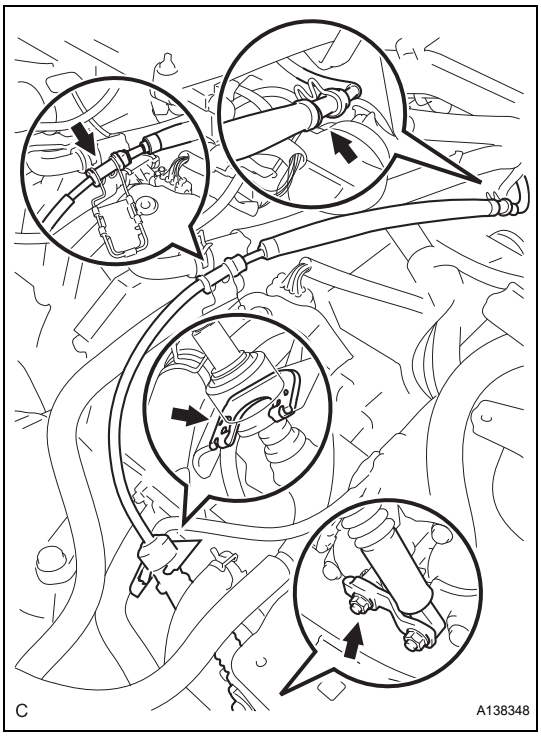


(c) Remove the clamp from the bracket.



(d) Release the lock lever of the connector as shown in the illustration.
(e) Disconnect the 3 connectors from the power steering link assembly.
(f) Remove the 2 bolts and power steering wire from the power steering link assembly.

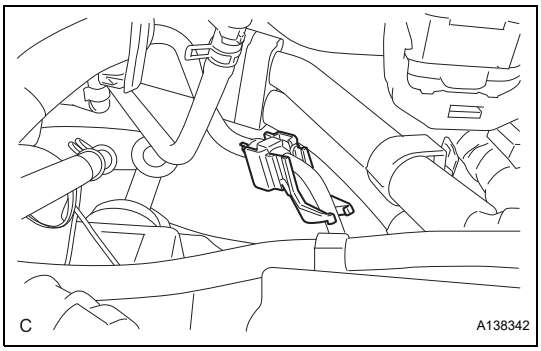
EM



43. DISCONNECT TRANSMISSION CONTROL CABLE ASSEMBLY

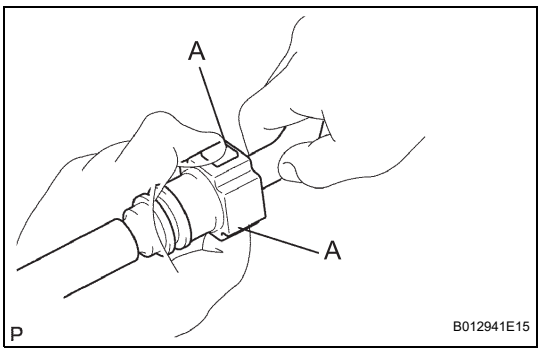
(a) Remove the clip and nut, and separate the control lever.

(b) Disconnect the cable from the clamp.



44. DISCONNECT FUEL TUBE SUB-ASSEMBLY

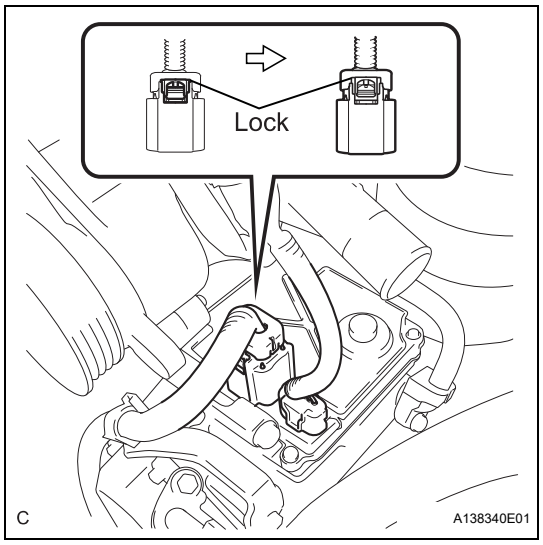
(a) Remove the No. 1 fuel pipe clamp.



(b) Disconnect the connector from the tube while pinching part A with your fingers as shown in the illustration.

NOTICE:

- **Check for contamination in the pipe and around the connector. Clean if necessary and then disconnect the connector.**
- **Disconnect the connector by hand.**
- **Do not bend, fold or rotate the nylon tube.**
- **If the pipe and connector are stuck together, push and pull the connector until it becomes free.**
- **Put the pipe and connector ends in vinyl bags to prevent damage and contamination.**



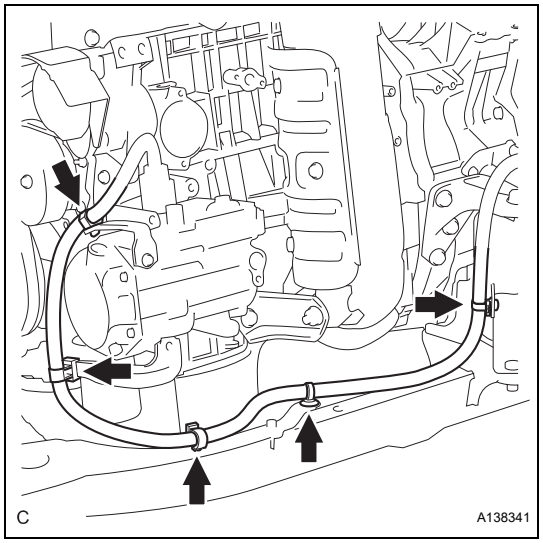
45. SEPARATE ELECTRIC INVERTER COMPRESSOR

(a) Release the green-colored lock.

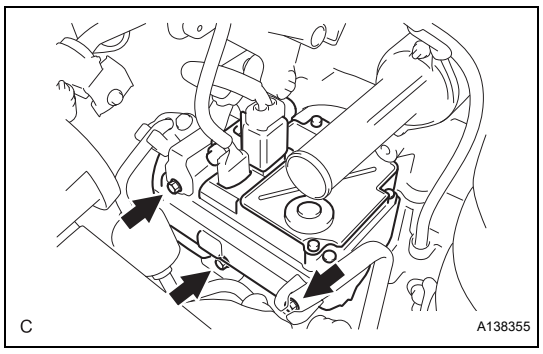
CAUTION:
Wear insulated gloves when performing the procedures.

(b) Disconnect the 2 connectors.

NOTICE:
Insulate the connector by sealing it with tape.



(c) Disconnect the No.4 engine wire clamps.



(d) Remove the 3 bolts and separate the compressor.
HINT:
Hang up the hoses instead of detaching them.

46. REMOVE FRONT EXHAUST PIPE ASSEMBLY
HINT:
See page EX-2.

47. REMOVE FRONT AXLE HUB NUT LH (See page DS-5)

48. REMOVE FRONT AXLE HUB NUT RH
HINT:
Use the same procedures described for the LH side.

49. REMOVE FRONT STABILIZER LINK ASSEMBLY LH (See page DS-5)

50. REMOVE FRONT STABILIZER LINK ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

51. REMOVE FRONT SPEED SENSOR LH (See page DS-5)

EM

52. REMOVE FRONT SPEED SENSOR RH
HINT:
Use the same procedures described for the LH side.

53. DISCONNECT TIE ROD ASSEMBLY LH (See page DS-6)

54. DISCONNECT TIE ROD ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

55. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-6)

56. DISCONNECT FRONT SUSPENSION LOWER NO. 1 ARM RH
HINT:
Use the same procedures described for the LH side.

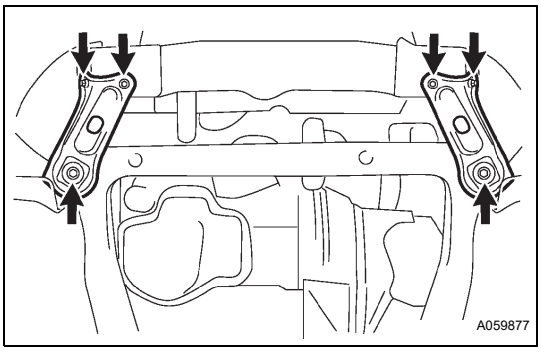
57. SEPARATE FRONT AXLE ASSEMBLY LH (See page DS-6)

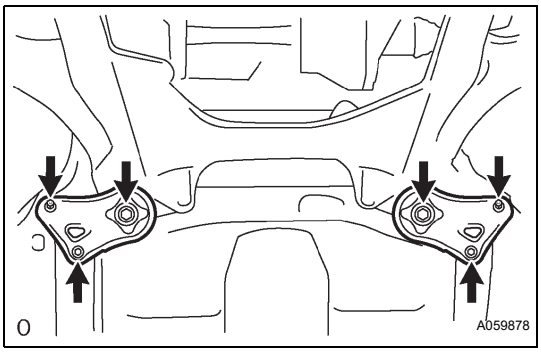
58. SEPARATE FRONT AXLE ASSEMBLY RH
HINT:
Use the same procedures described for the LH side.

59. REMOVE NO. 1 EXHAUST PIPE SUPPORT BRACKET
(a) Remove the 2 bolts and No. 1 exhaust pipe support bracket.

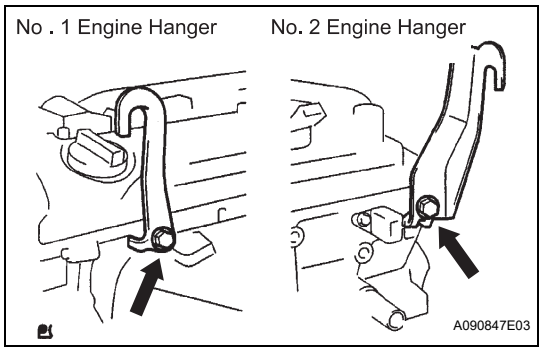
60. SEPARATE STEERING INTERMEDIATE SHAFT ASSEMBLY (See page PS-58)

61. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE
(a) Set the engine lifter.
(b) Remove the 4 bolts, 2 nuts and frame side rail plate RH and LH.





(c) Remove the 4 bolts, 2 nuts and front suspension member brace rear RH and LH.
(d) Carefully remove the engine assembly from the vehicle.

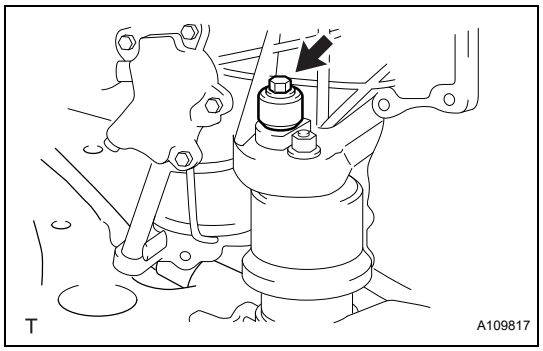


(e) Install the 2 engine hangers as shown in the illustration.
Parts No.:

Parts	Parts No.
No. 1 engine hanger	12281-28010
No. 2 engine hanger	12282-28010
Bolt	91512-61020

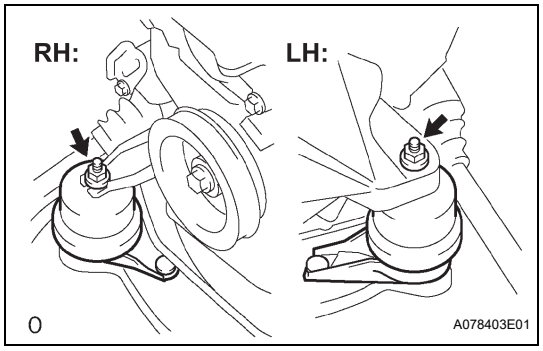
Torque: 38 N*m (387 kgf*cm, 28 ft.*lbf)

(f) Using a chain block and an engine sling device, hang the engine assembly.



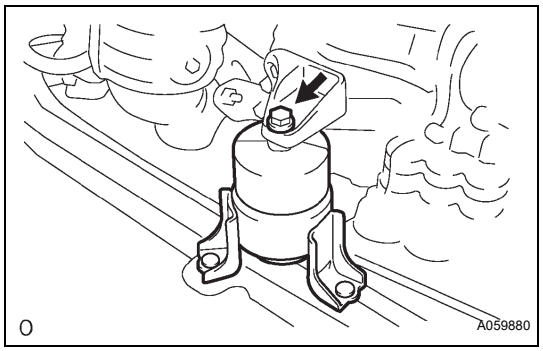
62. REMOVE HV TRANSAXLE MASS DAMPER

(a) Remove the bolt and transaxle mass damper.



63. REMOVE FRONT FRAME ASSEMBLY

(a) Remove the 2 nuts and separate the engine mounting insulators RH and LH.



(b) Remove the bolt from the engine mounting insulator FR.

(c) Raise the engine assembly and separate the front frame.

64. REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-6)

65. REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-7)

66. REMOVE ENGINE WIRE

67. SEPARATE HYBRID VEHICLE TRANSAXLE ASSEMBLY

HINT:
See page HX-12.

68. REMOVE TRANSMISSION INPUT DAMPER ASSEMBLY (See page EM-77)

69. REMOVE FLYWHEEL SUB-ASSEMBLY (See page EM-77)

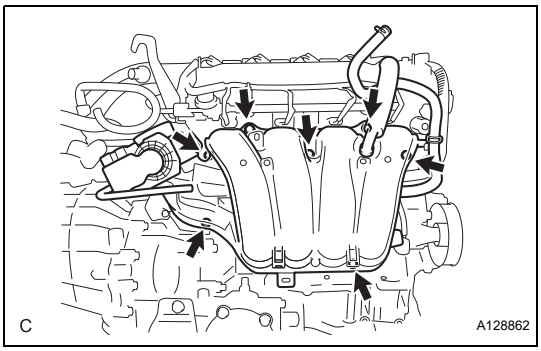
EM

70. INSTALL ENGINE STAND

(a) Fix the engine onto an engine stand with the bolts.

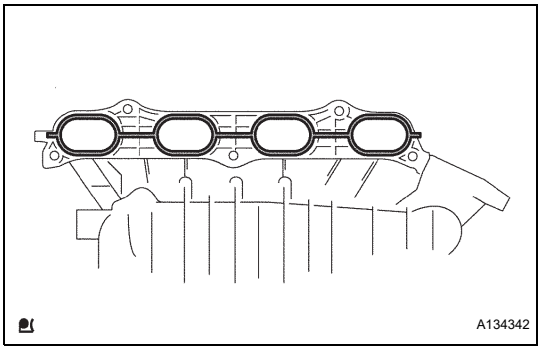
71. REMOVE FUEL DELIVERY PIPE WITH INJECTOR (See page FU-13)

72. REMOVE INTAKE MANIFOLD

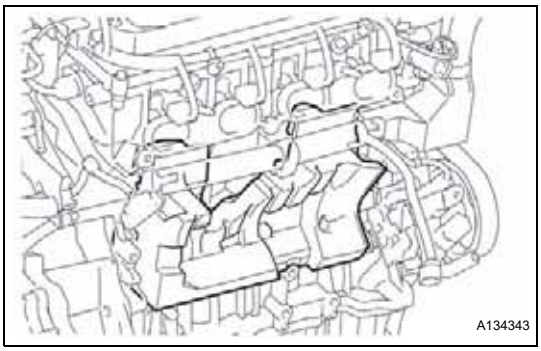


(a) Remove the 5 bolts, 2 nuts, and intake manifold.

(b) Remove the gasket from the intake manifold.

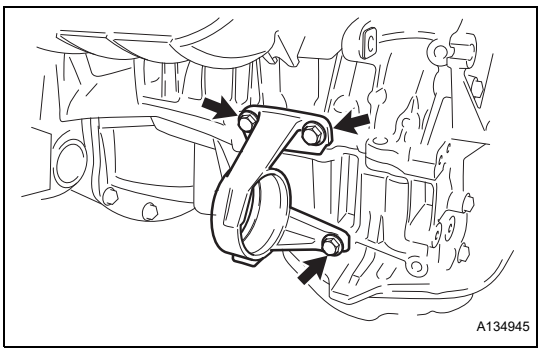


73. REMOVE NO. 2 VENTILATION HOSE



74. REMOVE NO. 1 INTAKE MANIFOLD INSULATOR

(a) Remove the No. 1 intake manifold insulator from the cylinder block.

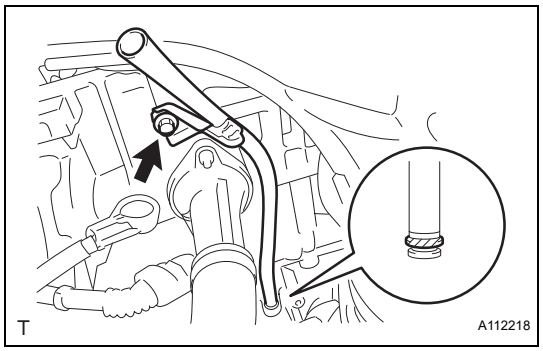


75. REMOVE DRIVE SHAFT BEARING BRACKET

(a) Remove the 3 bolts and drive shaft bearing bracket.

76. REMOVE OIL LEVEL GAUGE SUB-ASSEMBLY

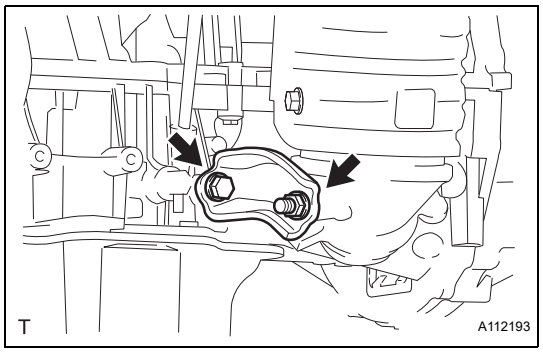
EM



77. REMOVE OIL LEVEL GAUGE GUIDE

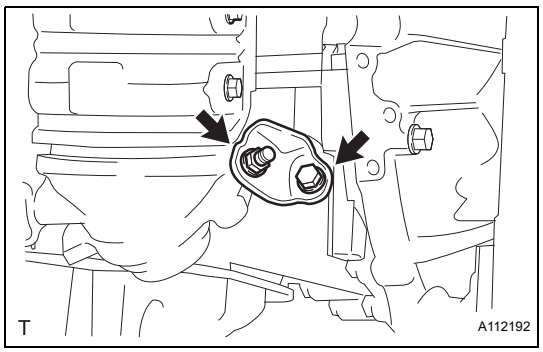
(a) Remove the bolt and oil level gauge guide.

(b) Remove the O-ring from the oil level gauge guide.



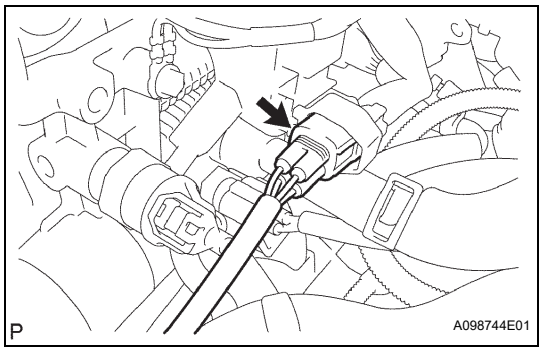
78. REMOVE MANIFOLD STAY

(a) Remove the bolt, nut and stay.



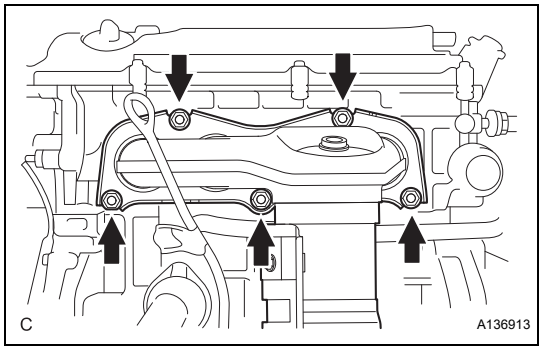
79. REMOVE NO. 2 MANIFOLD STAY

(a) Remove the bolt, nut and stay.



80. REMOVE EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY

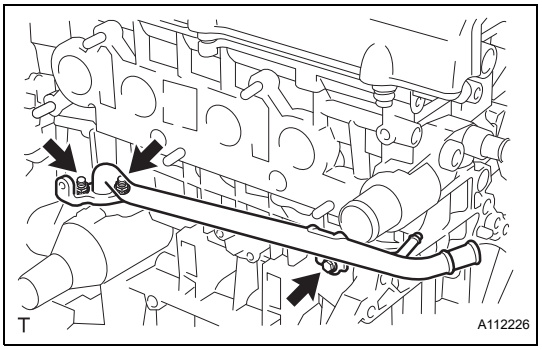
(a) Disconnect the air-fuel ratio sensor connector.



(b) Remove the 5 nuts, manifold converter and gasket.

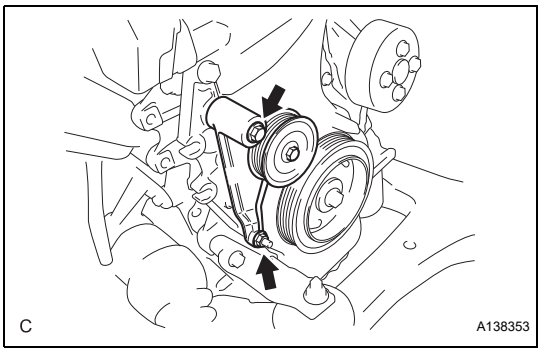
81. REMOVE WATER INLET (See page CO-13)

82. REMOVE THERMOSTAT (See page CO-13)



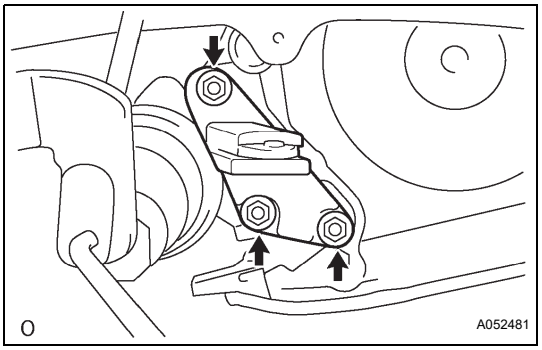
83. REMOVE NO. 1 WATER BY-PASS PIPE

(a) Remove the bolt, 2 nuts and No. 1 water by-pass pipe with the gasket.



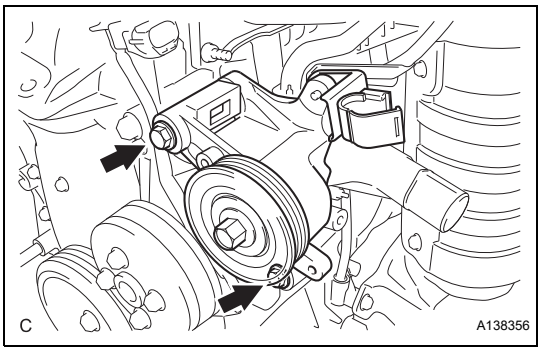
84. REMOVE IDLER PULLEY BRACKET

(a) Loosen the 2 bolts and remove the idler pulley bracket from the engine.



85. REMOVE ENGINE MOUNTING BRACKET RH

(a) Remove the 3 bolts and engine mounting bracket RH.



86. REMOVE V-RIBBED BELT TENSIONER ASSEMBLY

(a) Remove the 2 bolts and belt tensioner.

87. REMOVE IGNITION COIL ASSEMBLY

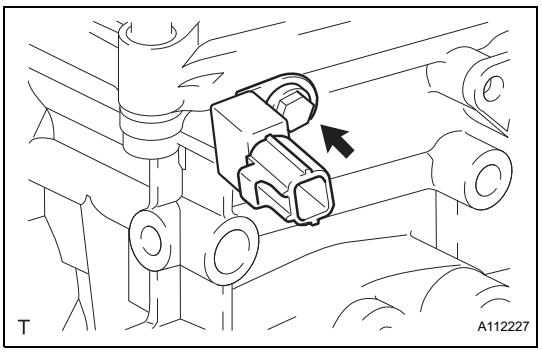
(a) Remove the 4 bolts and 4 ignition coils.

88. REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-381)

89. REMOVE KNOCK SENSOR

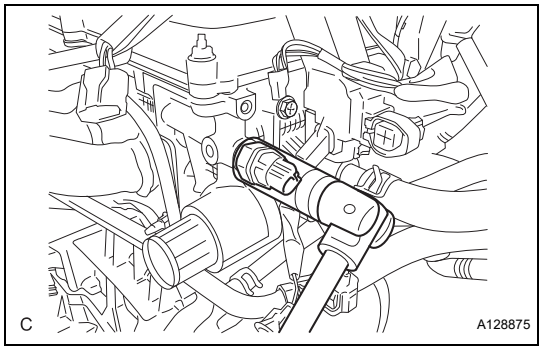
(a) Disconnect the sensor connector.

(b) Remove the nut and sensor.



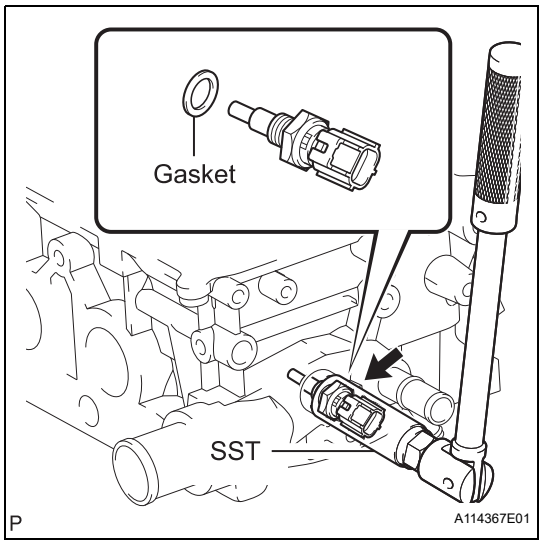
90. REMOVE RADIO SETTING CONDENSER

(a) Remove the bolt and radio setting condenser.



91. REMOVE ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Using a 24 mm deep socket wrench, remove the engine oil pressure switch assembly.

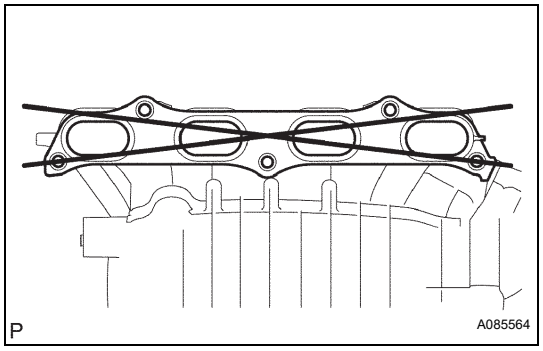


92. REMOVE ENGINE COOLANT TEMPERATURE SENSOR

(a) Using SST, remove the sensor and gasket.
SST 09817-33190

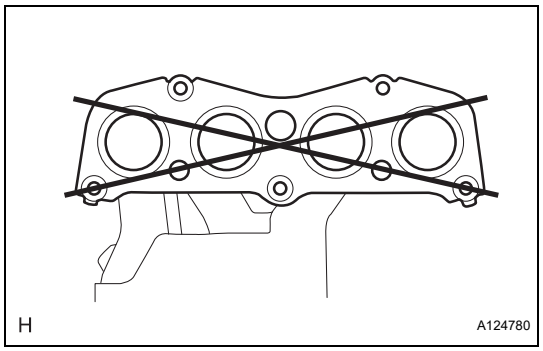
EM

INSPECTION



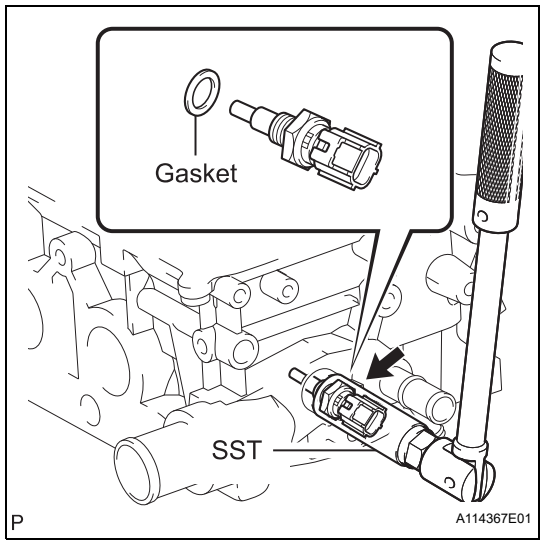
1. INSPECT INTAKE MANIFOLD

(a) Using a precision straight edge and feeler gauge, measure the surface contacting the cylinder head for warpage.
Maximum warpage:
0.20 mm (0.0079 in.)
If the warpage is greater than the maximum, replace the manifold.



2. INSPECT EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY

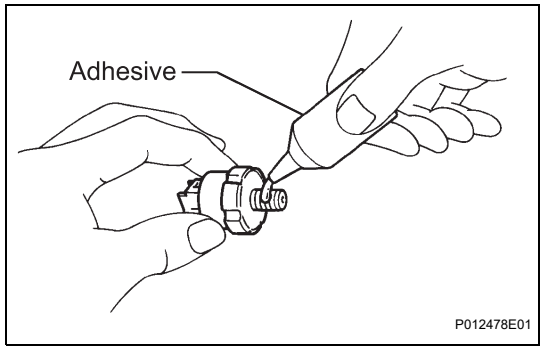
(a) Using a precision straight edge and feeler gauge, measure the surface contacting the cylinder head for warpage.
Maximum warpage:
0.70 mm (0.0276 in.)
If the warpage is greater than the maximum, replace the manifold.



INSTALLATION

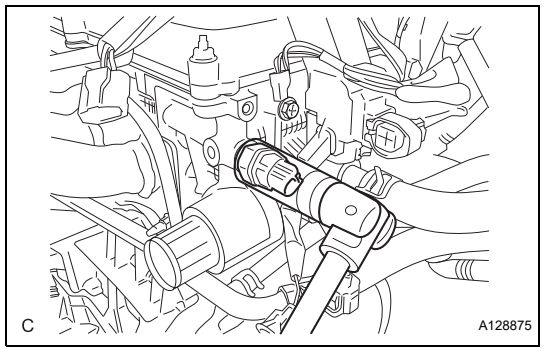
1. INSTALL ENGINE COOLANT TEMPERATURE SENSOR

(a) Using SST, install a new gasket and the ECT sensor.
SST 09817-33190
Torque: 20 N*m (208 kgf*cm, 15 ft.*lbf)

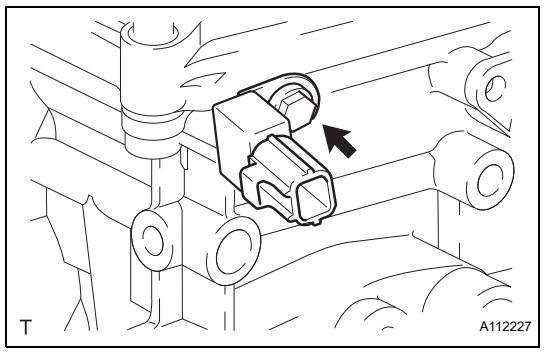


2. INSTALL ENGINE OIL PRESSURE SWITCH ASSEMBLY

(a) Clean the threads of the oil pressure switch. Apply adhesive to 2 or 3 threads of the oil pressure switch.
Adhesive:
Part No. 08833-00080 THREE BOND 1344 or equivalent



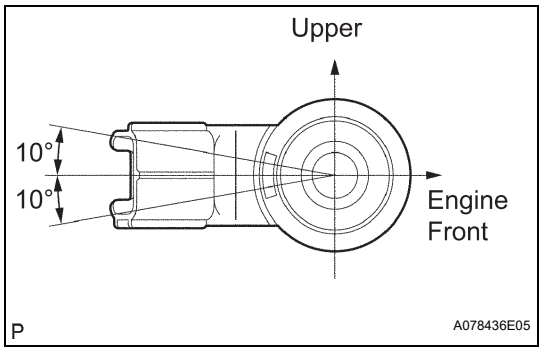
(b) Using a 24 mm deep socket wrench, install the oil pressure switch.
Torque: 15 N*m (153 kgf*cm, 11 ft.*lbf)



3. INSTALL RADIO SETTING CONDENSER

(a) Install the condenser with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)

EM



4. INSTALL KNOCK SENSOR

(a) Install the sensor with the nut as shown in the illustration.

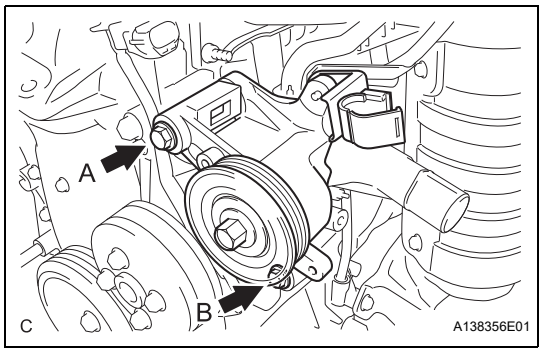
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

5. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (See page ES-382)

6. INSTALL IGNITION COIL ASSEMBLY

(a) Install the 4 ignition coils with the 4 bolts.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

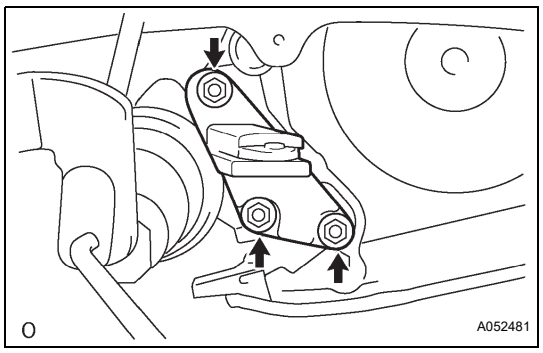


7. INSTALL V-RIBBED BELT TENSIONER ASSEMBLY

(a) Install the V-ribbed belt tensioner with the 2 bolts.

Torque: Bolt A
52 N*m (530 kgf*cm, 38 ft.*lbf)
Bolt B
21 N*m (214 kgf*cm, 16 ft.*lbf)

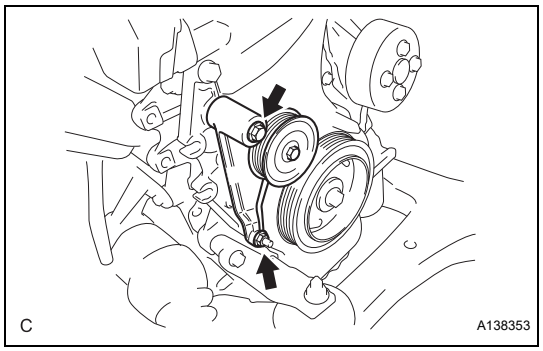
EM



8. INSTALL ENGINE MOUNTING BRACKET RH

(a) Install the engine mounting bracket RH with the 3 bolts.

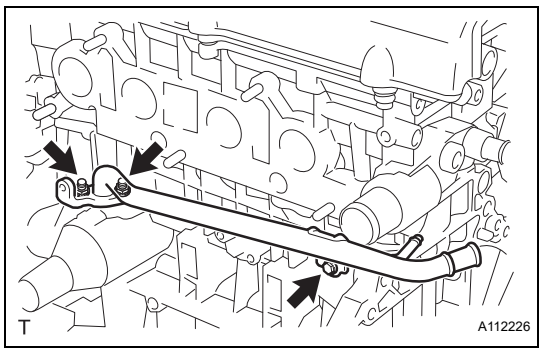
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)



9. INSTALL IDLER PULLEY BRACKET

(a) Install the idler pulley bracket to the engine with the 2 bolts.

Torque: 60 N*m (607 kgf*cm, 44 ft.*lbf)



10. INSTALL NO. 1 WATER BY-PASS PIPE

(a) Install a new gasket and the pipe with the bolt and 2 nuts.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

11. INSTALL THERMOSTAT (See page CO-13)

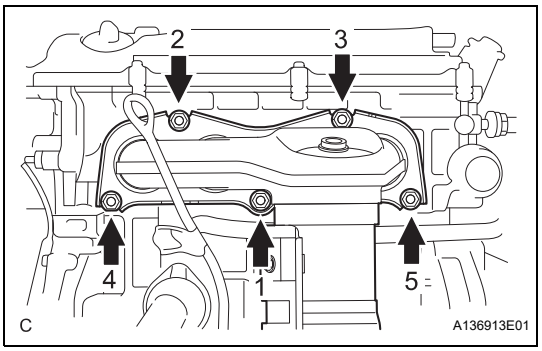
12. INSTALL WATER INLET (See page CO-14)

13. INSTALL EXHAUST MANIFOLD CONVERTER SUB-ASSEMBLY

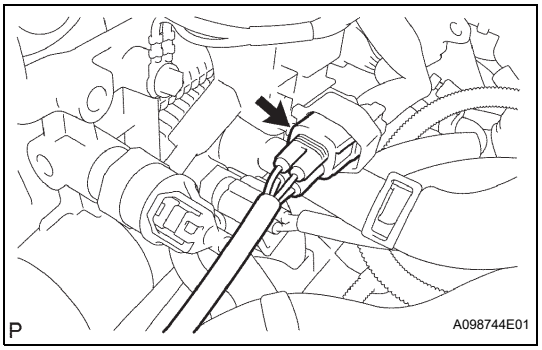
(a) Install a new gasket onto the cylinder head.

(b) Temporarily tighten the exhaust manifold converter with the 5 nuts.

(c) Tighten the 5 nuts in the sequence shown in the illustration.
Torque: 37 N*m (378 kgf*cm, 27 ft.*lbf)

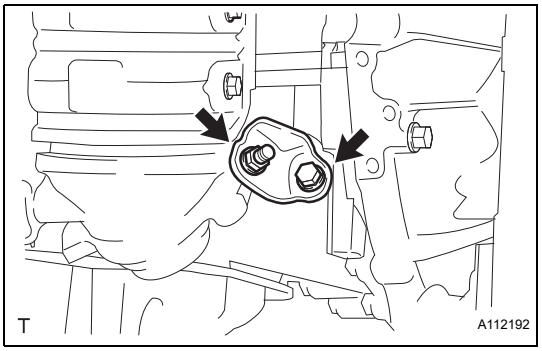


(d) Connect the air-fuel ratio sensor connector.



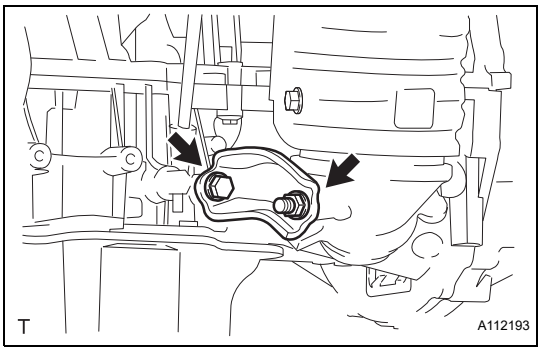
14. INSTALL NO. 2 MANIFOLD STAY

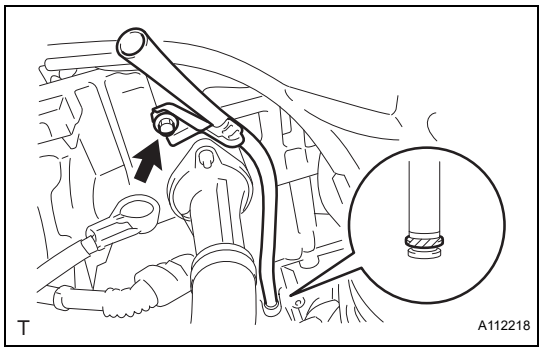
(a) Install the stay with the bolt and nut.
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)



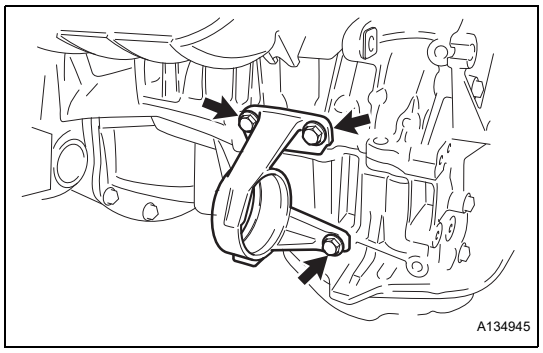
15. INSTALL MANIFOLD STAY

(a) Install the stay with the bolt and nut.
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)

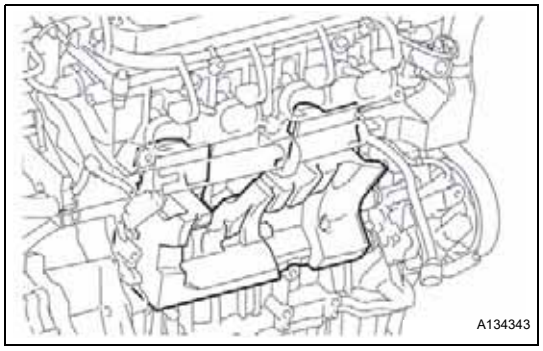




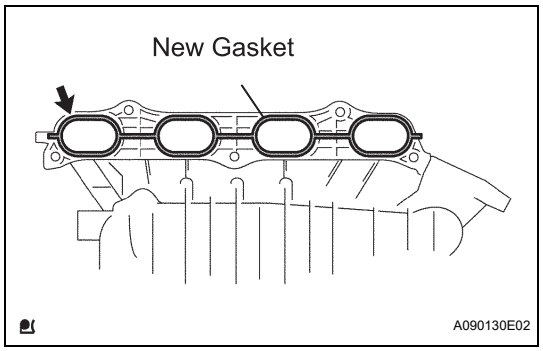
16. **INSTALL OIL LEVEL GAUGE GUIDE**
    (a) Apply a light coat of engine oil to a new O-ring and install it to the guide.
    (b) Install the oil level gauge guide with the bolt.
    Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
17. **INSTALL OIL LEVEL GAUGE SUB-ASSEMBLY**



18. **INSTALL DRIVE SHAFT BEARING BRACKET**
    (a) Install the bracket with the 3 bolts.
    Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)



19. **INSTALL NO. 1 INTAKE MANIFOLD INSULATOR**
    (a) Install the No. 1 intake manifold insulator onto the cylinder block.
20. **INSTALL NO. 2 VENTILATION HOSE**



21. **INSTALL INTAKE MANIFOLD**
    (a) Install a new gasket into the intake manifold.

    (b) Install the intake manifold with the 5 bolts and 2 nuts.
    Torque: 30 N*m (305 kgf*cm, 22 ft.*lbf)
22. **INSTALL FUEL DELIVERY PIPE WITH INJECTOR (See page FU-15)**
23. **REMOVE ENGINE STAND**
24. **INSTALL FLYWHEEL SUB-ASSEMBLY (See page EM-78)**

25. INSTALL TRANSMISSION INPUT DAMPER ASSEMBLY (See page EM-78)

26. INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY
HINT:
See page HX-15.

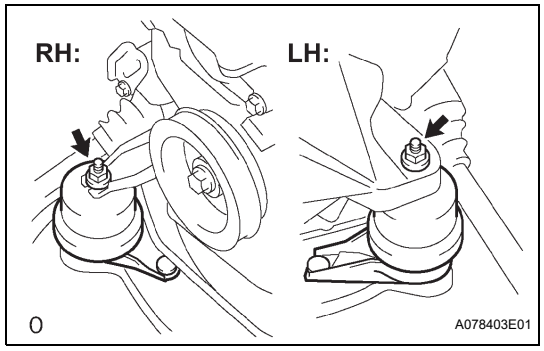
27. INSTALL ENGINE WIRE

28. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-17)

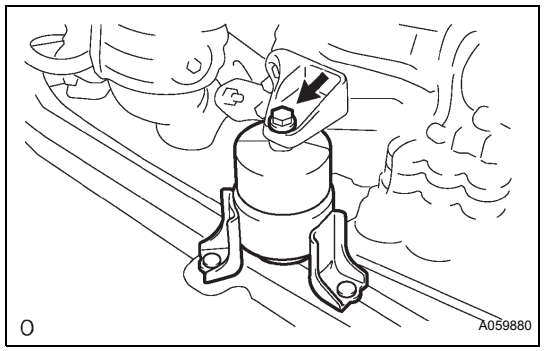
29. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-17)

30. INSTALL FRONT FRAME ASSEMBLY

(a) Install the engine mounting insulators RH and LH with the 2 nuts.
Torque: 95 N*m (969 kgf*cm, 70 ft.*lbf)

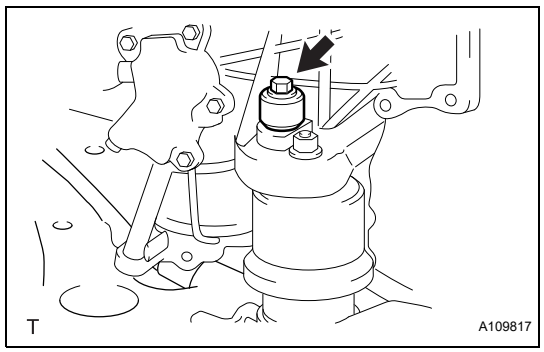


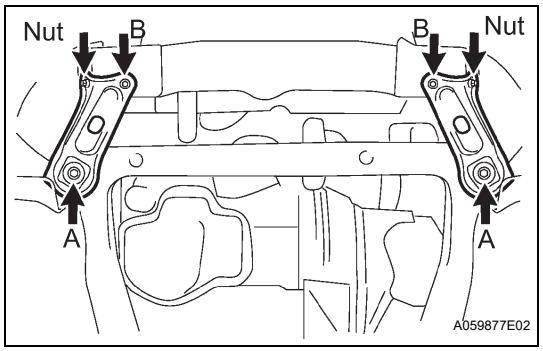
(b) Install the engine mounting insulator FR with the bolt.
Torque: 87 N*m (888 kgf*cm, 64 ft.*lbf)

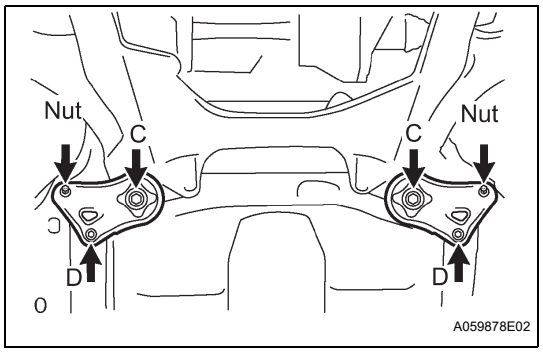


31. INSTALL HV TRANSAXLE MASS DAMPER

(a) Install the bolt and transaxle mass damper.
Torque: 14 N*m (140 kgf*cm, 10 ft.*lbf)







32. **INSTALL ENGINE ASSEMBLY WITH TRANSAXLE**
    (a) Set the engine assembly with transaxle on the engine lifter.
    (b) Install the engine assembly to the vehicle.
    (c) Install the frame side plate LH and RH with the 4 bolts and 2 nuts.
    Torque: Bolt A
    85 N*m (867 kgf*cm, 63 ft.*lbf)
    Bolt B and nut
    32 N*m (326 kgf*cm, 24 ft.*lbf)

    (d) Install the front suspension member brace rear RH and LH with the 4 bolts and 2 nuts.
    Torque: Bolt C
    85 N*m (867 kgf*cm, 63 ft.*lbf)
    Bolt D and nut
    32 N*m (326 kgf*cm, 24 ft.*lbf)

33. **INSTALL STEERING INTERMEDIATE SHAFT ASSEMBLY (See page PS-66)**

34. **INSTALL NO. 1 EXHAUST PIPE SUPPORT BRACKET**
    (a) Install the No. 1 exhaust pipe support bracket with the 2 bolts.
    Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

35. **INSTALL FRONT AXLE ASSEMBLY LH (See page DS-18)**

36. **INSTALL FRONT AXLE ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.

37. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM LH (See page DS-18)**

38. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM RH**
    HINT:
    Use the same procedures described for the LH side.

39. **INSTALL TIE ROD ASSEMBLY LH (See page DS-18)**

40. **INSTALL TIE ROD ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.

41. **INSTALL FRONT SPEED SENSOR LH (See page DS-18)**

42. **INSTALL FRONT SPEED SENSOR RH**
    Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

43. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH (See page DS-19)**

44. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
    HINT:
    Use the same procedures described for the LH side.

45. **INSTALL FRONT AXLE HUB NUT LH (See page DS-19)**

46. INSTALL FRONT AXLE HUB NUT RH

HINT:

Use the same procedures described for the LH side.

47. INSTALL FRONT EXHAUST PIPE ASSEMBLY

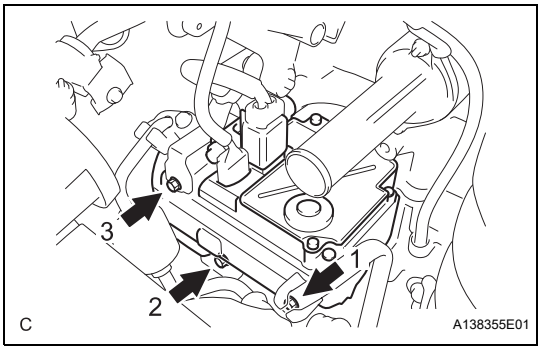
HINT:

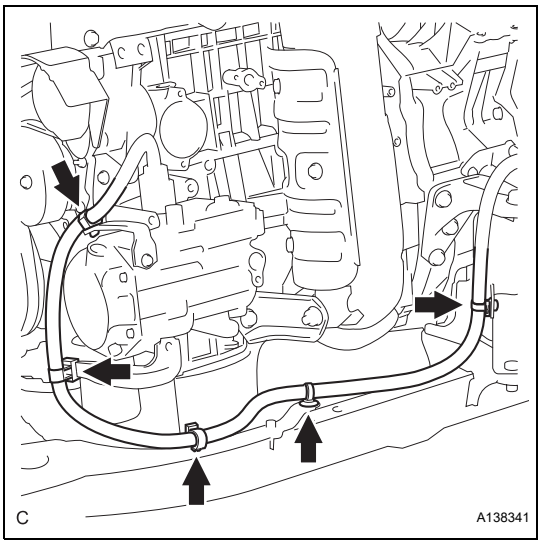
See page EX-3.

48. INSTALL COMPRESSOR AND MAGNETIC CLUTCH

(a) Temporarily install the compressor with the 3 bolts.

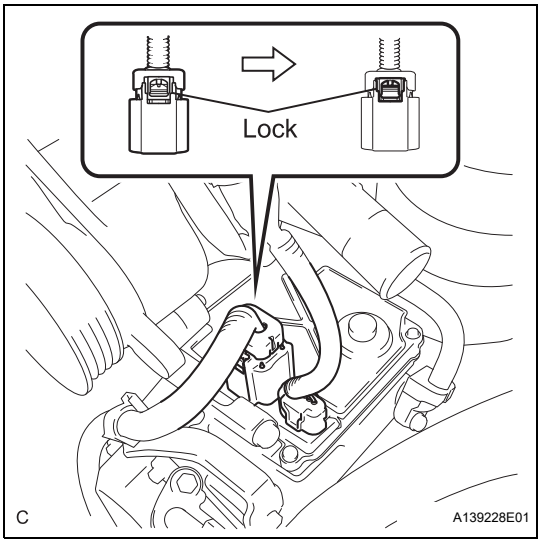
(b) Install the compressor with the 3 bolts by tightening the bolts in the order shown in the illustration.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)
NOTICE:
Tighten the bolts in the order shown in the illustration to install the compressor.



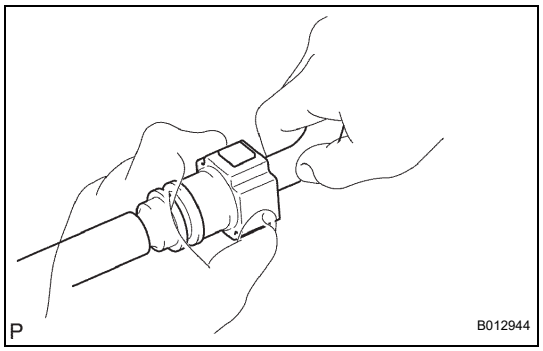


(c) Connect the No. 4 engine wire clamps.
CAUTION:
Wear insulated gloves when performing the procedures.

(d) Connect the 2 connectors.



(e) Lock the green-colored lock.

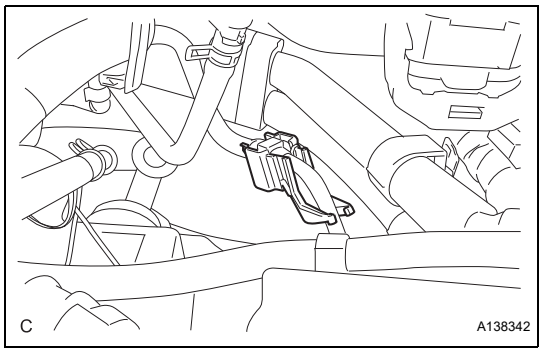


49. CONNECT FUEL TUBE SUB-ASSEMBLY

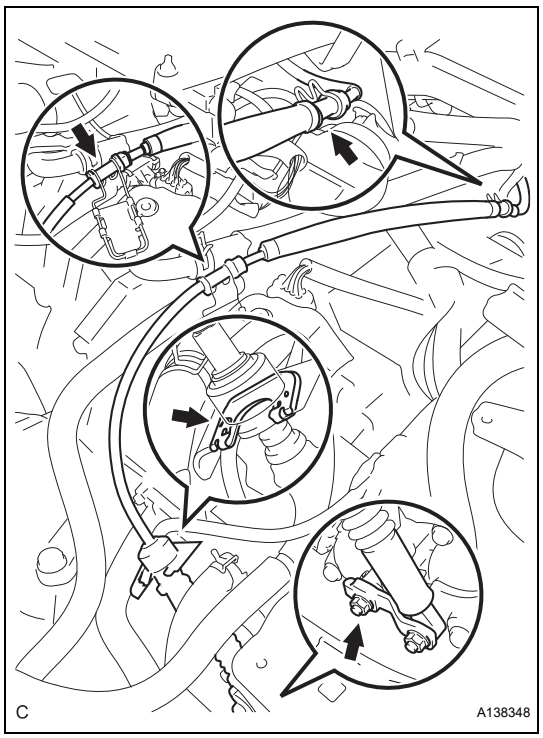
(a) Push in the fuel tube connector to the fuel pipe until the connector makes a "click" sound.

NOTICE:

- **Check for damage or contamination on the connected part of the pipe.**
- **Check if the pipe and the connector are securely connected by trying to pull them apart.**



(b) Install the No. 1 fuel pipe clamp.



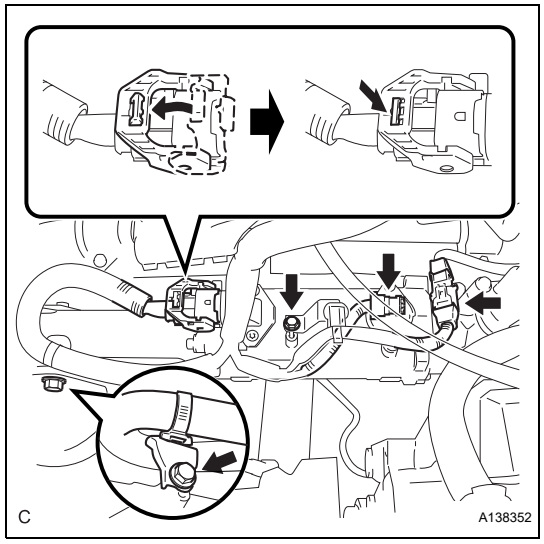
50. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install a new clip and nut, and connect the control lever.

Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

(b) Connect the cable to the 2 clamps.

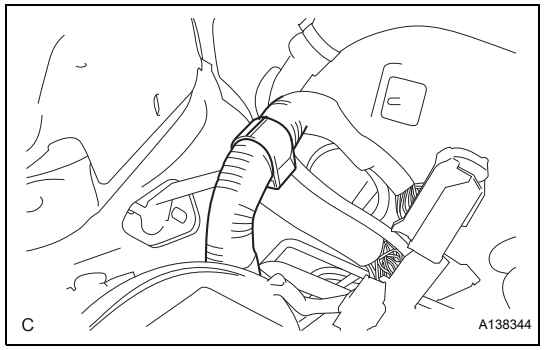
EM



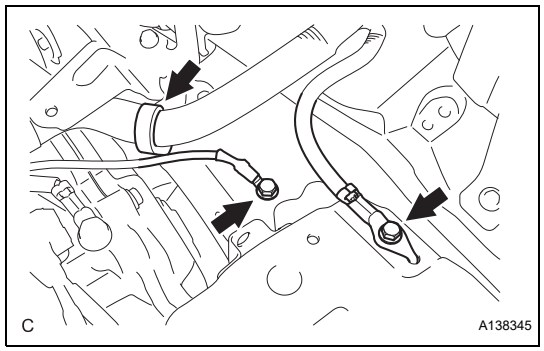
51. CONNECT ENGINE WIRE

(a) Install the 2 bolts and power steering wire to the power steering link assembly.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

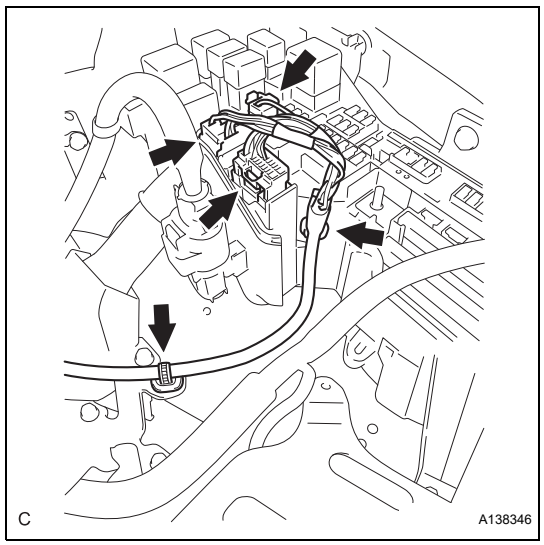
(b) Connect the 3 wire harness connectors to the power steering link assembly and securely lock the connector.



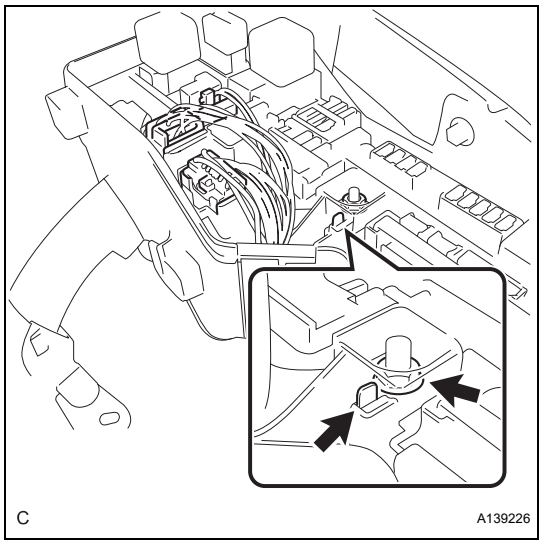
(c) Connect the clamp to the bracket.



(d) Install the 2 bolts and clamp to the body.
Torque: 8.4 N*m (85 kgf*cm, 74 in.*lbf)



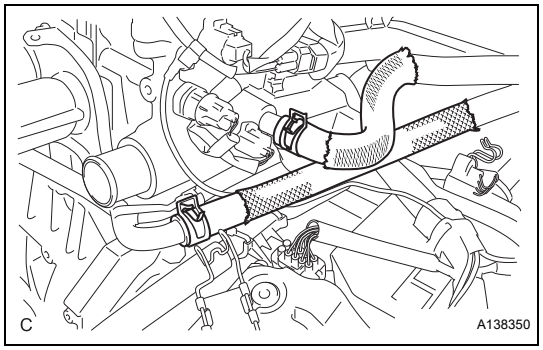
(e) Connect the 3 connectors and 2 clamps to the engine room junction block.



(f) Connect the wire to the engine room junction block. Then, install it with the nut and 3 connectors.
Torque: 8.4 N*m (85 kgf*cm, 74 in.*lbf)

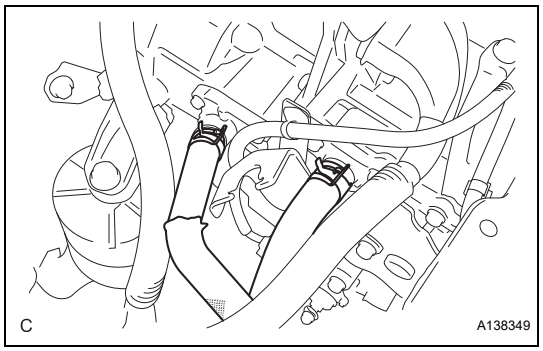
52. INSTALL POWER STEERING ECU ASSEMBLY (See page PS-71)

53. INSTALL HYBRID VEHICLE CONTROL ECU (See page HV-571)

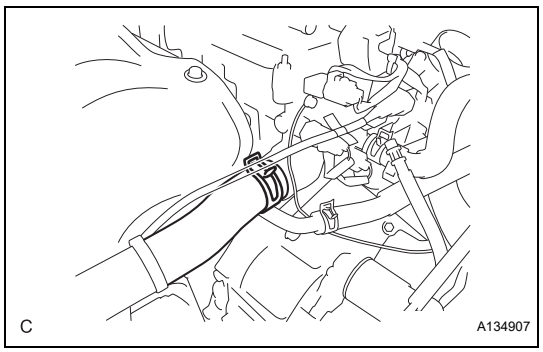


54. CONNECT HEATER INLET WATER HOSE
(a) Connect the heater inlet water hose.

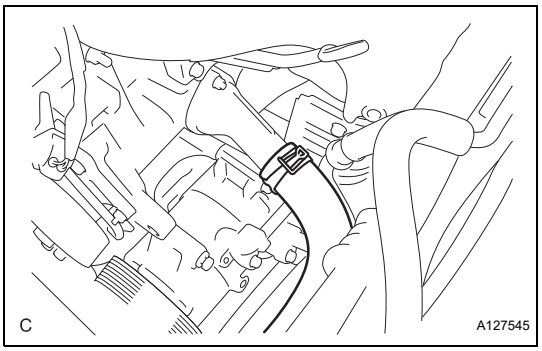
55. CONNECT HEATER OUTLET WATER HOSE
(a) Connect the heater outlet water hose.



56. CONNECT WATER HOSE
(a) Install the 2 clamps and connect the 2 water hoses.

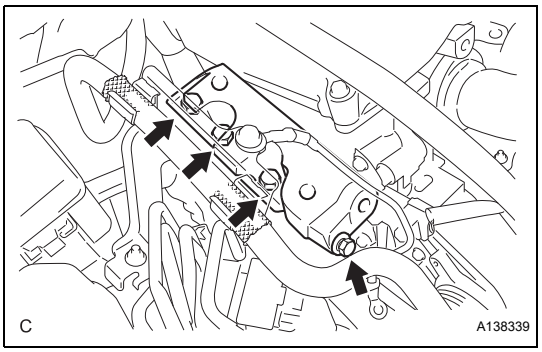


57. CONNECT RADIATOR HOSE INLET
(a) Install the clamp and connect the radiator hose inlet.



58. CONNECT RADIATOR HOSE OUTLET

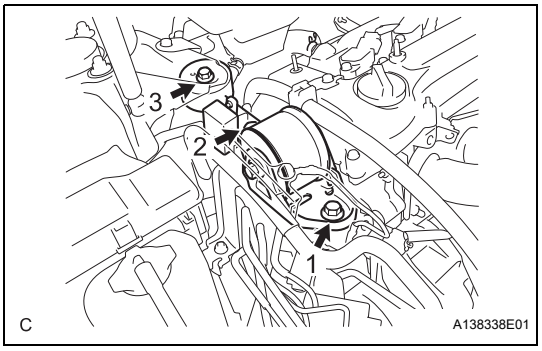
(a) Install the clamp and connect the radiator hose outlet.



59. INSTALL NO. 2 ENGINE MOUNTING BRACKET RH

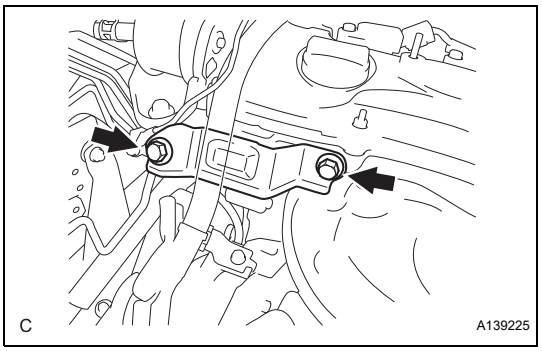
(a) Install the 3 bolts and No. 2 engine mounting bracket RH.
Torque: 52 N*m (531 kgf*cm, 38 ft.*lbf)

(b) Install the ground cable with the bolt.
Torque: 8.4 N*m (85 kgf*cm, 74 in.*lbf)



60. INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY

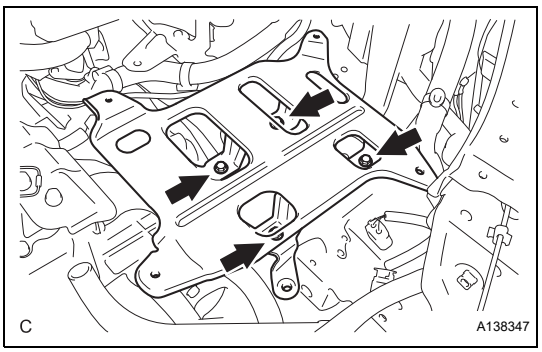
(a) Install the engine moving control rod by tightening the 3 bolts in the order shown in the illustration.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)



61. INSTALL NO. 2 ENGINE MOUNTING STAY RH

(a) Install the No. 2 engine mounting stay RH with the 2 bolts.
Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)

62. INSTALL WATER WITH MOTOR AND BRACKET PUMP ASSEMBLY (See page HV-575)

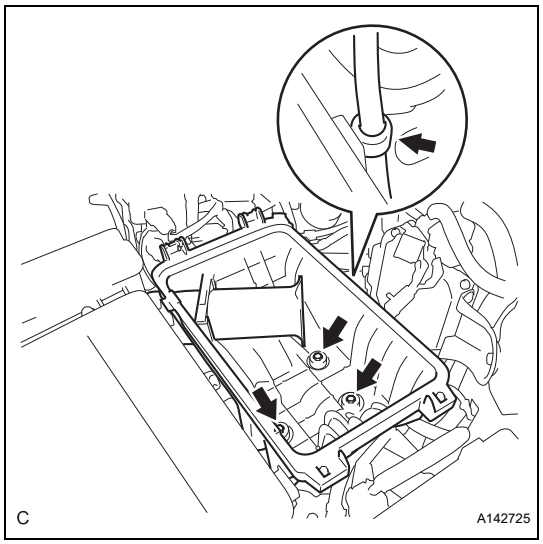


63. INSTALL INVERTER TRAY BRACKET

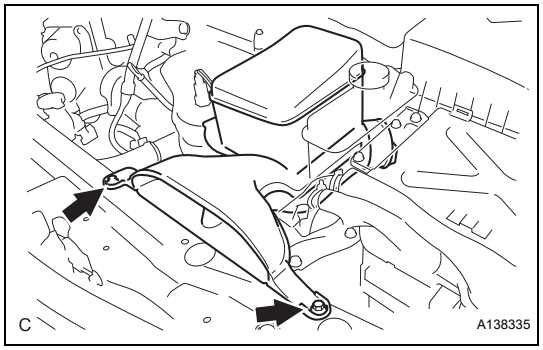
(a) Install the inverter tray bracket with the 4 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

64. INSTALL INVERTER WITH CONVERTER ASSEMBLY

HINT:
See page HV-564.

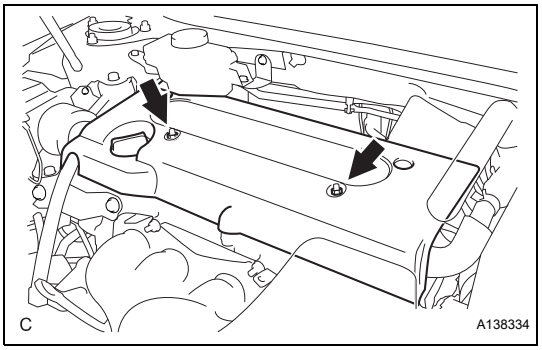


65. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY**
    (a) Install the air cleaner case with the 3 bolts.
    Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
    (b) Connect the hose clamp.
66. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**



67. **INSTALL AIR CLEANER INLET ASSEMBLY**
    (a) Install the air cleaner inlet with the 2 bolts.
    Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
68. **INSTALL V-RIBBED BELT (See page EM-6)**
69. **INSTALL V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-7)**
70. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-405)**
71. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
72. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-13)**
73. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)**
74. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)**
75. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)**
76. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)**
77. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)**
78. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
79. **ADD ENGINE OIL**
80. **INSTALL SERVICE PLUG GRIP (See page HB-97)**
81. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
82. **INSTALL LUGGAGE TRIM SERVICE HOLE COVER**
83. **ADD ENGINE COOLANT (See page CO-5)**

84. **ADD COOLANT (for Inverter) (See page HV-556)**
85. **ADD AND INSPECT HYBRID TRANSAXLE FLUID (See page HX-2)**
86. **CHECK FOR FUEL LEAKS (See page FU-9)**
87. **CHECK FOR ENGINE OIL LEAKS**
88. **CHECK FOR ENGINE COOLANT LEAKS (See page CO-1)**
89. **CHECK FOR COOLANT LEAKS (for Inverter) (See page HV-555)**
90. **CHECK FOR EXHAUST GAS LEAKS**
91. **CHECK SHIFT LEVER POSITION (See page HX-24)**
92. **ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    See page SP-4.
93. **CHECK IGNITION TIMING (See page EM-1)**
94. **CHECK ENGINE IDLE SPEED (See page EM-2)**
95. **INSPECT CO/HC (See page EM-4)**
96. **INSTALL FRONT FENDER APRON SEAL RH**
97. **INSTALL ENGINE UNDER COVER LH**
98. **INSTALL ENGINE UNDER COVER RH**
99. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY**
    (a) Install the No. 1 engine cover with the 2 nuts.
    Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

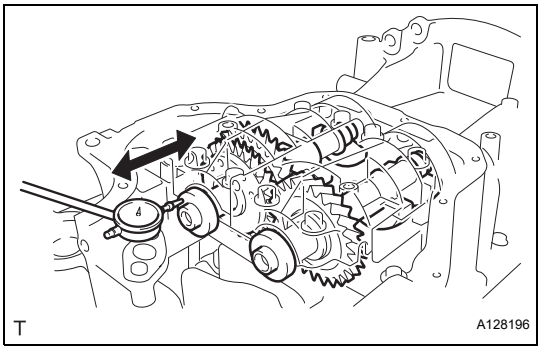


100. **CHECK ABS SPEED SENSOR SIGNAL**
    HINT:
    See page BC-35.
101. **PERFORM INITIALIZATION**
    (a) Perform initialization procedure (See page IN-43).
    HINT:
    Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

INSPECTION

1. INSPECT BALANCESHAFT THRUST CLEARANCE

(a) Install the balanceshafts (See page EM-142).



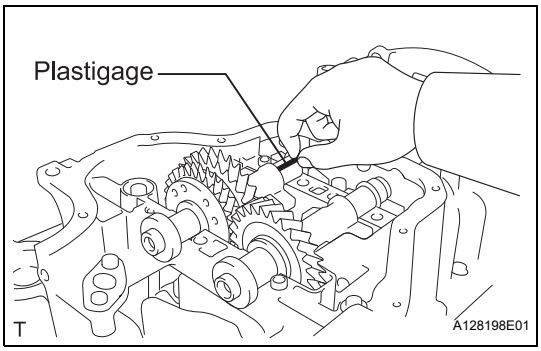
(b) Using a dial indicator, measure the thrust clearance while moving the balanceshaft back and forth.
Standard thrust clearance:
0.05 to 0.09 mm (0.0020 to 0.0035 in.)
Maximum thrust clearance:
0.09 mm (0.0035 in.)
If the thrust clearance is greater than the maximum, replace the balanceshaft housing and bearings. If necessary, replace the balanceshaft.

2. INSPECT BALANCESHAFT OIL CLEARANCE

(a) Clean each bearing and journal.

(b) Check each bearing and journal for pitting and scratches.
If a bearing or journal is damaged, replace the bearings. If necessary, replace the balanceshaft.

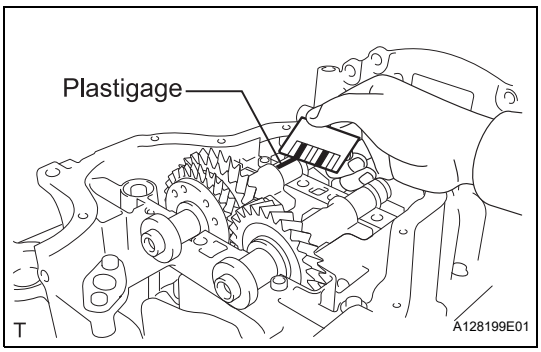
(c) Place the No. 1 and No. 2 balanceshafts onto the crankcase.



(d) Lay a strip of Plastigage across each journal.

(e) Install the balanceshaft housing (See page EM-142).
NOTICE:
Do not turn the balanceshafts.

(f) Remove the balanceshafts (See page EM-120).



(g) Measure the Plastigage at its widest point.
Standard oil clearance:
0.004 to 0.049 mm (0.0002 to 0.0019 in.)
Maximum oil clearance:
0.049 mm (0.0019 in.)
NOTICE:
Remove the Plastigage completely after the measurement.
If the oil clearance is greater than the maximum, replace the bearing. If necessary, replace the balanceshaft.

(h) If replacing a bearing, select a new one with the same number.
Standard balanceshaft housing journal bore diameter

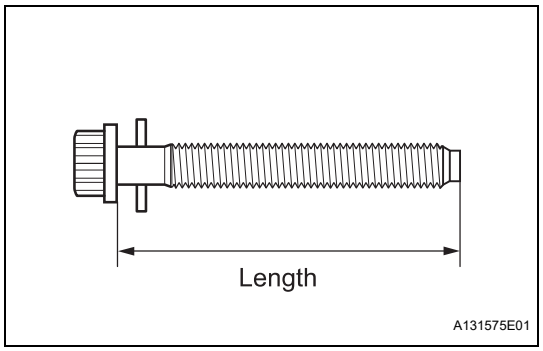
Item	Specified Condition
Mark 1	26.000 to 26.006 mm (1.0236 to 1.0239 in.)
Mark 2	26.007 to 26.012 mm (1.0239 to 1.0241 in.)
Mark 3	26.013 to 26.018 mm (1.0241 to 1.0243 in.)

Standard bearing center wall thickness

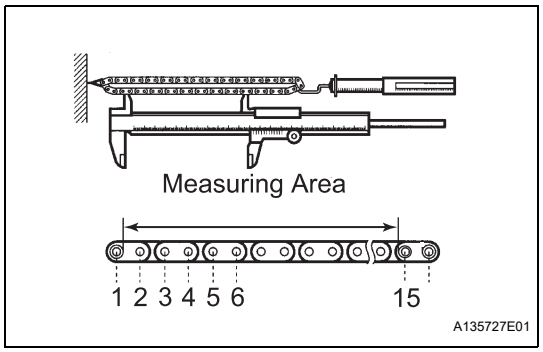
Item	Specified Condition
Mark 1	1.486 to 1.489 mm (0.05850 to 0.05862 in.)
Mark 2	1.490 to 1.492 mm (0.05866 to 0.05874 in.)
Mark 3	1.493 to 1.495 mm (0.0588 to 0.0589 in.)

Standard balanceshaft journal diameter

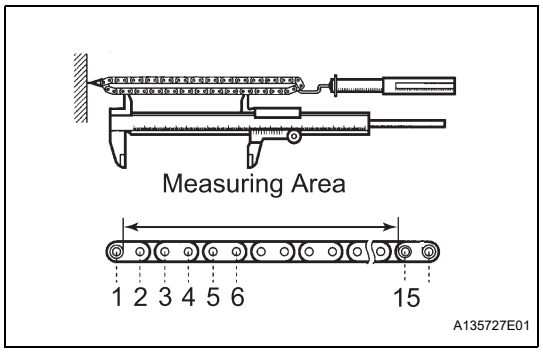
Item	Specified Condition
Mark 1	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
Mark 2	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
Mark 3	22.985 to 23.000 mm (0.9049 to 0.9055 in.)



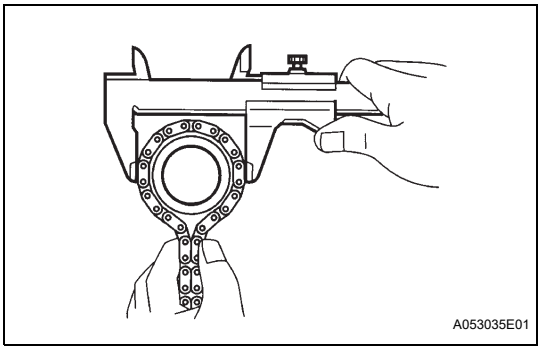
(i) Inspect the balanceshaft housing bolts.
(1) Using vernier calipers, measure the length of the bolts from the seat to the end.
Standard bolt length:
58.3 to 59.7 mm (2.295 to 2.350 in.)
Maximum bolt length:
60.3 mm (2.374 in.)
If the bolt length is greater than the maximum, replace the balanceshaft housing bolt.



3. INSPECT CHAIN SUB-ASSEMBLY
(a) Pull the chain with a force of 140 N (14.3 kgf, 31.5 lbf) as shown in the illustration.
(b) Using vernier calipers, measure the length of 15 links.
Maximum chain elongation:
114.5 mm (4.508 in.)
NOTICE:
Perform the measurement at 3 random places.
Use the average of the measurements.
If the average elongation is greater than the maximum, replace the chain.



4. INSPECT NO. 2 CHAIN SUB-ASSEMBLY
(a) Pull the chain with a force of 140 N (14.3 kgf, 31.5 lbf) as shown in the illustration.
(b) Using vernier calipers, measure the length of 15 links.
Maximum chain elongation:
102.2 mm (4.024 in.)
NOTICE:
Perform the measurement at 3 random places.
Use the average of the measurements.
If the average elongation is greater than the maximum, replace the No. 2 chain.



5. INSPECT OIL PUMP DRIVE GEAR

(a) place the chain around the gear.

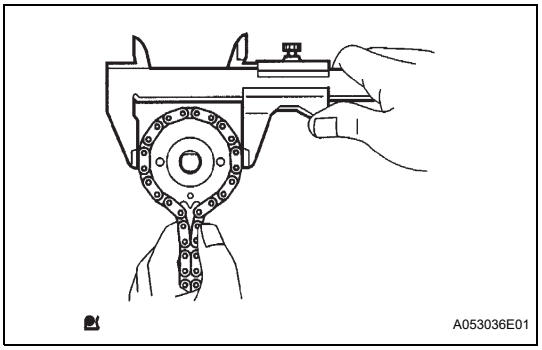
(b) Using vernier calipers, measure the diameter of the gear and chain.

Minimum gear diameter (with chain):
48.2 mm (1.898 in.)

NOTICE:

The vernier calipers must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and gear.



6. INSPECT OIL PUMP DRIVE SHAFT GEAR

(a) Place the chain around the gear.

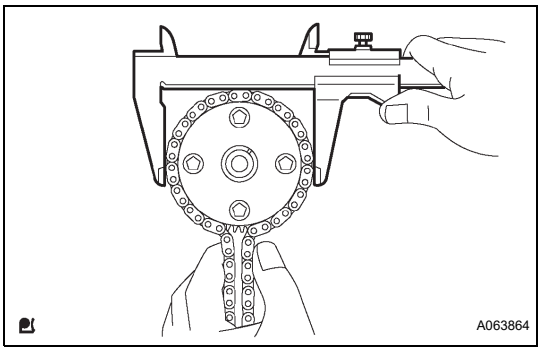
(b) Using vernier calipers, measure the diameter of the gear and chain.

Minimum gear diameter (with chain):
48.2 mm (1.898 in.)

NOTICE:

The vernier calipers must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and gear.



7. INSPECT CAMSHAFT TIMING GEAR ASSEMBLY

(a) Place the chain around the timing gear.

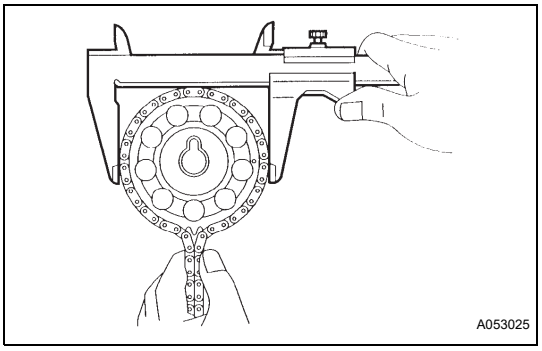
(b) Using vernier calipers, measure the diameter the timing gear and chain.

Minimum gear diameter (with chain):
97.3 mm (3.831 in.)

NOTICE:

The vernier calipers must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and gear.



8. INSPECT CAMSHAFT TIMING SPROCKET

(a) Place the chain around the sprocket.

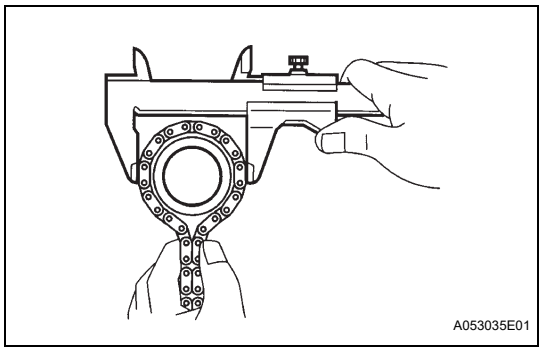
(b) Using vernier calipers, measure the diameter of the sprocket and chain.

Minimum sprocket diameter (with chain):
97.3 mm (3.831 in.)

NOTICE:

The vernier calipers must be in contact with the chain rollers when measuring.

If the diameter is less than the minimum, replace the chain and sprocket.



9. INSPECT CRANKSHAFT TIMING GEAR

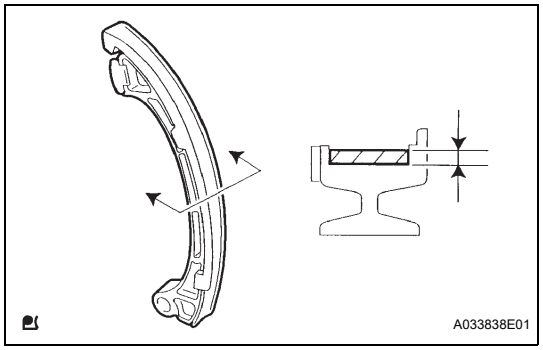
(a) Place the chain around the timing gear.

(b) Using vernier calipers, measure the diameter of the timing gear and chain.

Minimum gear diameter (with chain):
51.6 mm (2.031 in.)

NOTICE:
The vernier calipers must be in contact with the chain rollers when measuring.

If the gear diameter is less than the minimum, replace the chain sub-assembly and crankshaft timing gear.

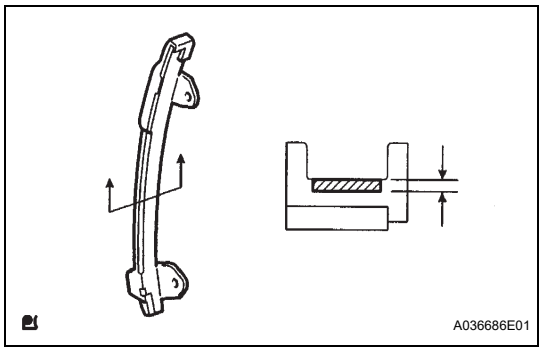


10. INSPECT CHAIN TENSIONER SLIPPER

(a) Using vernier calipers, measure the tensioner slipper wear.

Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the chain tensioner slipper.

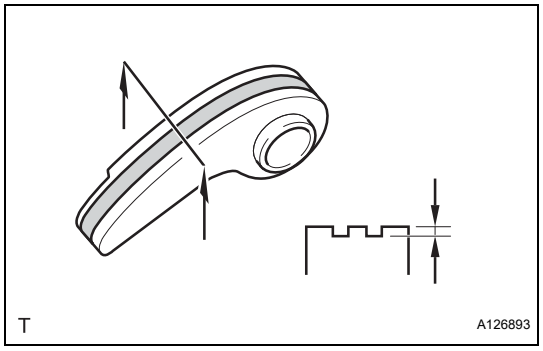


11. INSPECT NO. 1 CHAIN VIBRATION DAMPER

(a) Using vernier calipers, measure the vibration damper wear.

Maximum wear:
1.0 mm (0.039 in.)

If the wear is greater than the maximum, replace the No. 1 chain vibration damper.

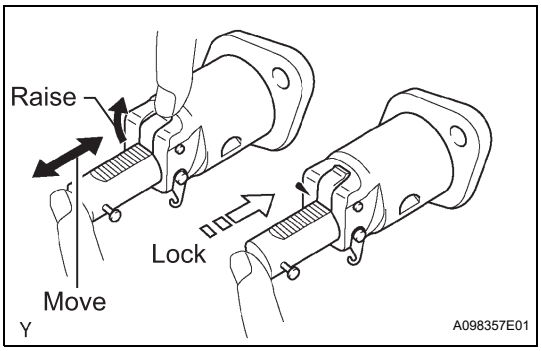


12. INSPECT CHAIN TENSIONER PLATE

(a) Using vernier calipers, measure the vibration damper wear.

Maximum wear:
0.5 mm (0.020 in.)

If the wear is greater than the maximum, replace the chain tensioner plate.



13. **INSPECT NO. 1 CHAIN TENSIONER**
   (a) Check that the plunger moves smoothly when the ratchet pawl is raised with your finger.
   (b) Release the ratchet pawl, then check that the plunger is locked in place by the ratchet pawl and does not move when pushed with your finger.

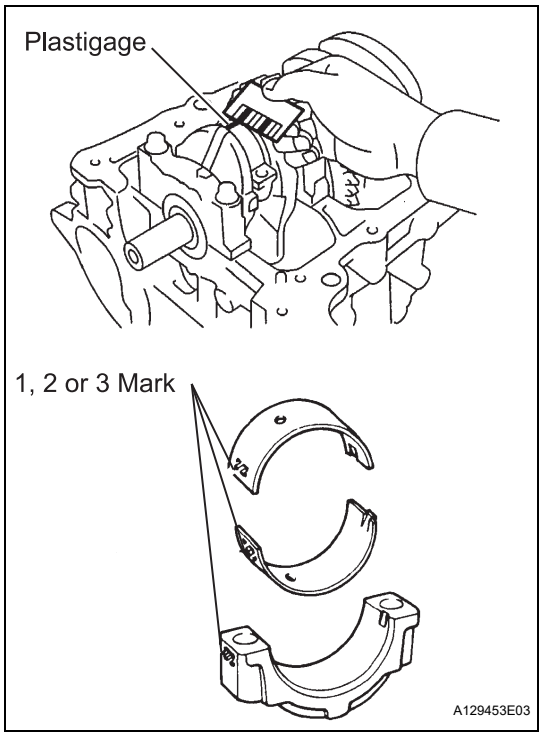
14. **INSPECT CONNECTING ROD THRUST CLEARANCE**
   (a) Install the connecting rod cap (See page EM-142).

   (b) Using a dial indicator, measure the thrust clearance while moving the connecting rod back and forth.
   Standard thrust clearance:
   0.160 to 0.362 mm (0.0063 to 0.0143 in.)
   Maximum thrust clearance:
   0.362 mm (0.0143 in.)
   If the thrust clearance is greater than the maximum, replace the connecting rod assemblies as necessary. If necessary, replace the crankshaft.

15. **INSPECT CONNECTING ROD OIL CLEARANCE**
   (a) Clean the crank pin and bearing.
   (b) Check the crank pin and bearing for pitting and scratches.

   (c) Lay a strip of Plastigage on the crank pin.

   (d) Check that the front mark of the connecting rod cap is facing forward.
   (e) Install the connecting rod cap (See page EM-142).
   NOTICE:
   Do not turn the crankshaft.
   (f) Remove the 2 bolts and connecting rod cap (See page EM-120).



(g) Measure the Plastigage at its widest point.

Standard oil clearance:

0.032 to 0.063 mm (0.0013 to 0.0025 in.)

Maximum oil clearance:

0.063 mm (0.0025 in.)

If the oil clearance is greater than the maximum, replace the connecting rod bearings. If necessary, inspect the crankshaft.

NOTICE:

Completely remove the Plastigage after the measurement.

HINT:

If replacing a bearing, replace it with one that has the same number as its respective connecting rod cap. Each bearing's standard thickness is indicated by a 1, 2, or 3 mark on its surface.

Standard connecting rod large end bore diameter

Mark	Specified Condition
Mark 1	51.000 to 51.007 mm (2.0079 to 2.0082 in.)
Mark 2	51.008 to 51.013 mm (2.0082 to 2.0084 in.)
Mark 3	51.014 to 51.020 mm (2.0084 to 2.0087 in.)

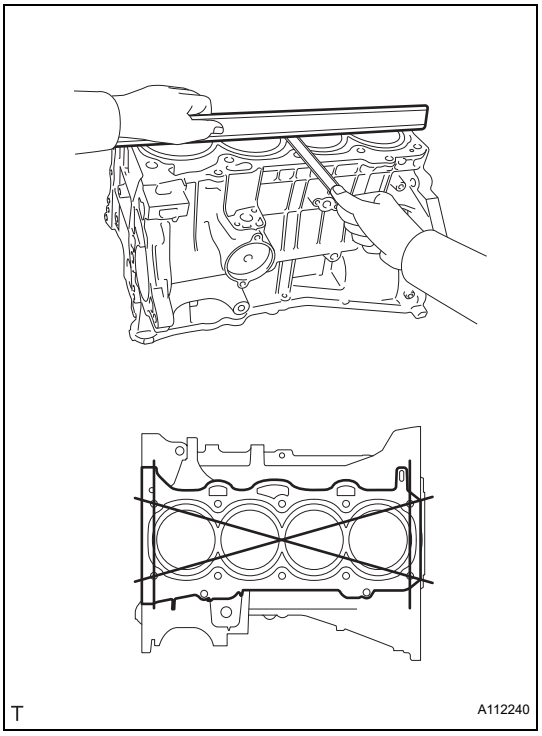
Standard connecting rod bearing thickness

Mark	Specified Condition
Mark 1	1.485 to 1.488 mm (0.0585 to 0.0586 in.)
Mark 2	1.489 to 1.491 mm (0.0586 to 0.0587 in.)
Mark 3	1.492 to 1.494 mm (0.0587 to 0.0588 in.)

Standard crankshaft pin diameter

Mark	Specified Condition
Mark 1	47.990 to 48.000 (1.8894 to 1.8898 in.)
Mark 2	47.990 to 48.000 (1.8894 to 1.8898 in.)
Mark 3	47.990 to 48.000 (1.8894 to 1.8898 in.)

EM



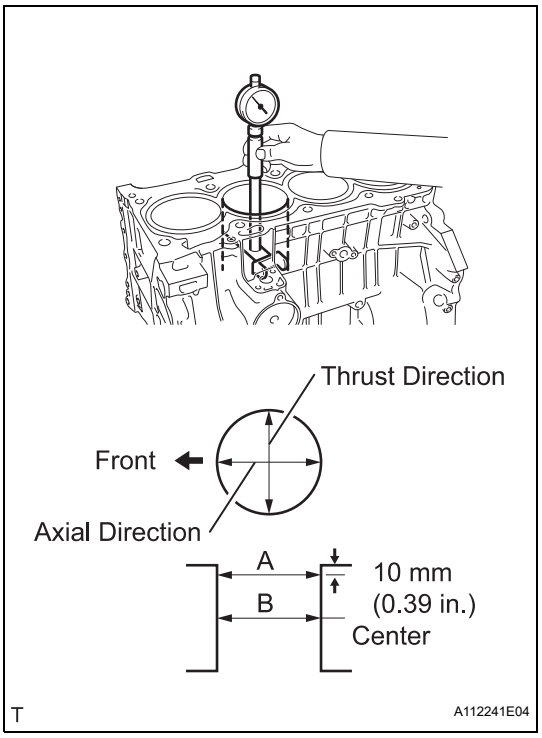
16. INSPECT CYLINDER BLOCK FOR WARPAGE

(a) Using a precision straightedge and feeler gauge, measure the warpage of the surface that is in contact with the cylinder head gasket.

Maximum warpage:

0.05 mm (0.0020 in.)

If the warpage is greater than the maximum, replace the cylinder block.



17. INSPECT CYLINDER BORE

(a) Using a cylinder gauge, measure the cylinder bore diameter at positions A and B in both thrust and axial directions.

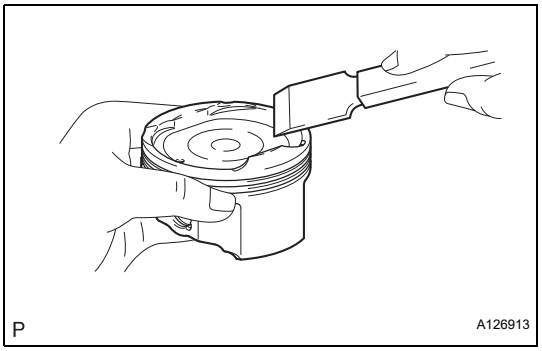
Standard diameter:

88.500 to 88.513 mm (3.4843 to 3.4847 in.)

Maximum diameter:

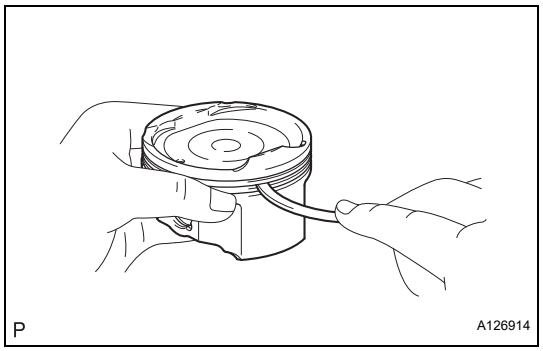
88.633 mm (3.4894 in.)

If the average diameter of the 4 positions is greater than the maximum, replace the cylinder block.

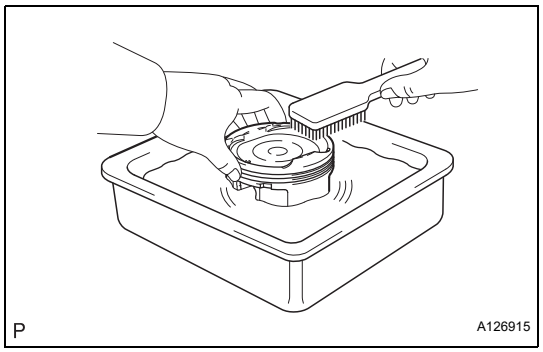


18. INSPECT PISTON

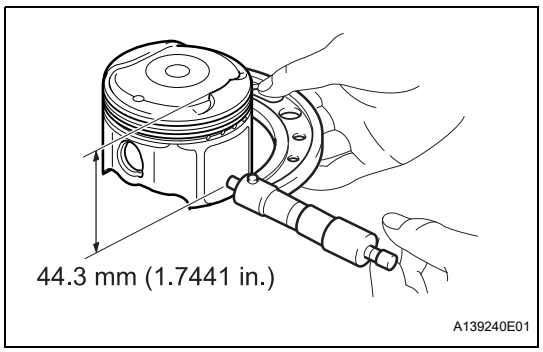
(a) Using a gasket scraper, remove the carbon from the piston top.



(b) Using a groove cleaning tool or broken ring, clean the piston ring grooves.



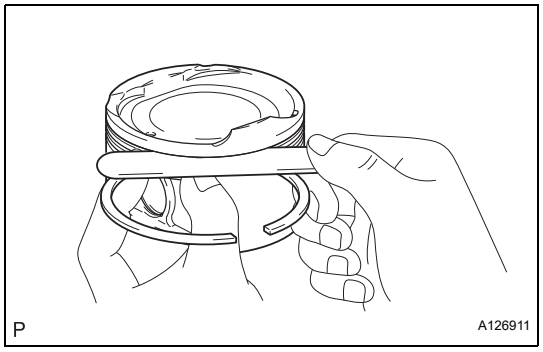
(c) Using a brush and solvent, thoroughly clean the piston.
NOTICE:
Do not use a wire brush.



(d) Using a micrometer, measure the piston diameter at right angles to the piston pin hole, and at a point 44.3 mm (1.7441 in.) from the piston head.
Standard piston diameter:
88.469 to 88.479 mm (3.4830 to 3.4834 in.)
If the diameter is not as specified, replace the piston.

19. INSPECT PISTON OIL CLEARANCE

(a) Subtract the piston diameter measurement from the cylinder bore diameter measurement.
Standard oil clearance:
0.021 to 0.044 mm (0.0008 to 0.0017 in.)
Maximum oil clearance:
0.10 mm (0.0039 in.)
If the oil clearance is greater than the maximum, replace all the pistons. If necessary, replace the cylinder block.

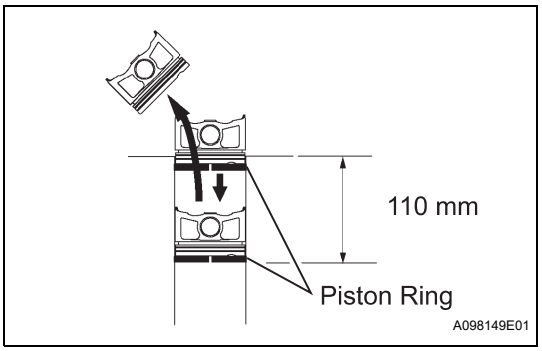


20. INSPECT RING GROOVE CLEARANCE

(a) Using a feeler gauge, measure the clearance between a new piston ring and the wall of the ring groove.
Standard ring groove clearance

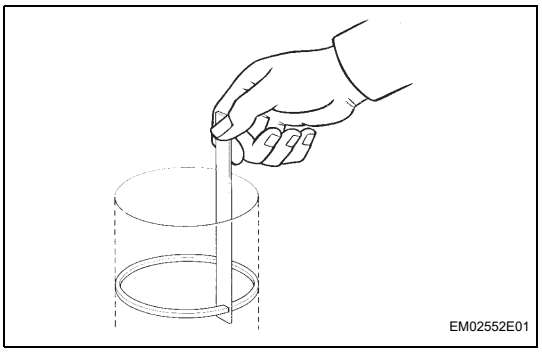
Item	Specified Condition
No. 1 Ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
No. 2 Ring	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
Oil Ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)

If the groove clearance is not as specified, replace the piston.



21. INSPECT PISTON RING END GAP

(a) Using a piston, push the piston ring a little beyond the bottom of the ring travel, 110 mm (4.33 in.) from the top of the cylinder block.



(b) Using a feeler gauge, measure the end gap.

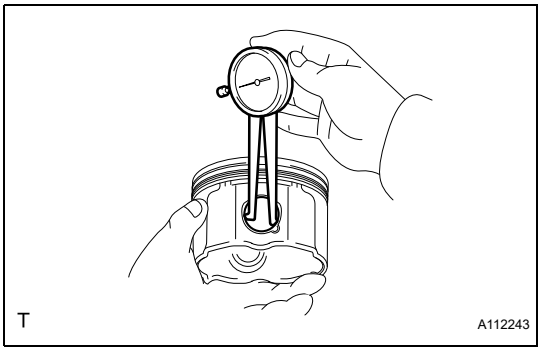
Standard end gap

Item	Specified Condition
No. 1 Ring	0.24 to 0.31 mm (0.0094 to 0.0122 in.)
No. 2 Ring	0.33 to 0.43 mm (0.0130 to 0.0169 in.)
Oil Ring	0.10 to 0.30 mm (0.0040 to 0.0119 in.)

Maximum end gap

Item	Specified Condition
No. 1 Ring	0.89 mm (0.0350 in.)
No. 2 Ring	1.37 mm (0.0539 in.)
Oil Ring	0.73 mm (0.0287 in.)

If the end gap is greater than the maximum, replace the piston ring. If the end gap is greater than the maximum, even with a new piston ring, replace the cylinder block.



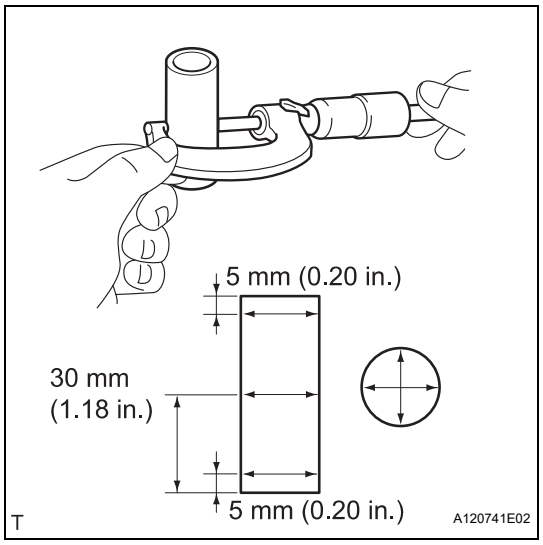
22. INSPECT PISTON PIN OIL CLEARANCE

(a) Using a caliper gauge, measure the piston pin bore diameter.

Standard piston pin bore diameter:
22.001 to 22.010 mm (0.8662 to 0.8665 in.)

Item	Specified Condition
A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
B	22.005 to 22.007 mm (0.8663 to 0.8664 in.)
C	22.008 to 22.010 mm (0.8665 to 0.8665 in.)

If the diameter is not as specified, replace the piston.



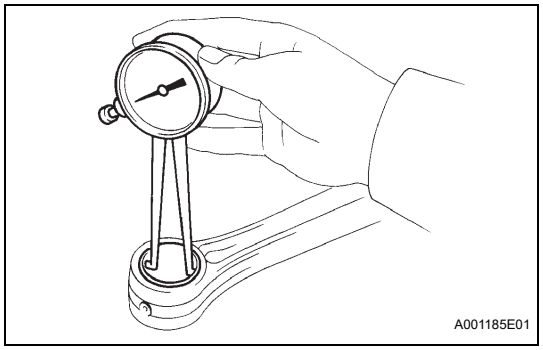
(b) Using a micrometer, measure the piston pin diameter.

Standard piston pin diameter:
21.997 to 22.006 mm (0.8660 to 0.8664 in.)

Item	Specified Condition
A	21.997 to 22.000 mm (0.8660 to 0.8661 in.)
B	22.001 to 22.003 mm (0.8662 to 0.8663 in.)
C	22.004 to 22.006 mm (0.8663 to 0.8664 in.)

If the diameter is not as specified, replace the piston pin.

EM

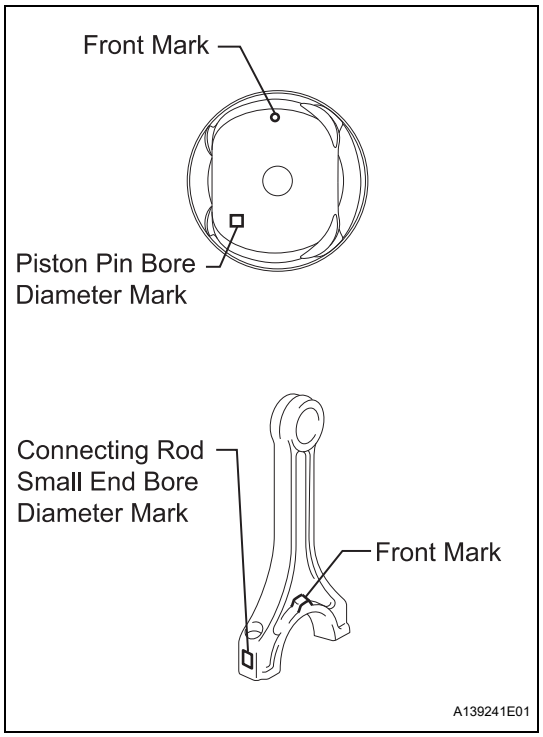


(c) Using a caliper gauge, measure the connecting rod small end bore diameter.

Standard connecting rod small end bore diameter:
22.005 to 22.014 mm (0.8663 to 0.8667 in.)

Item	Specified Condition
A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)

If the diameter is not as specified, replace the connecting rod.



(d) Subtract the piston pin diameter measurement from the piston pin bore diameter measurement.

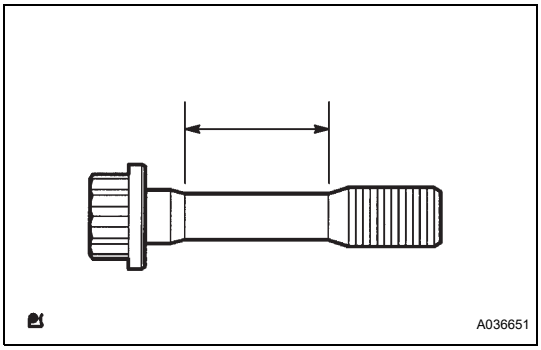
Standard oil clearance:
0.001 to 0.007 mm (0.00004 to 0.0003 in.)
Maximum oil clearance:
0.010 mm (0.0004 in.)

If the oil clearance is greater than the maximum, replace the connecting rod. If necessary, replace the piston and piston pin as a set.

(e) Subtract the piston pin diameter measurement from the connecting rod small end bore diameter measurement.

Standard oil clearance:
0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance:
0.011 mm (0.0004 in.)

If the oil clearance is greater than the maximum, replace the connecting rod. If necessary, replace the connecting rod and piston pin as a set.

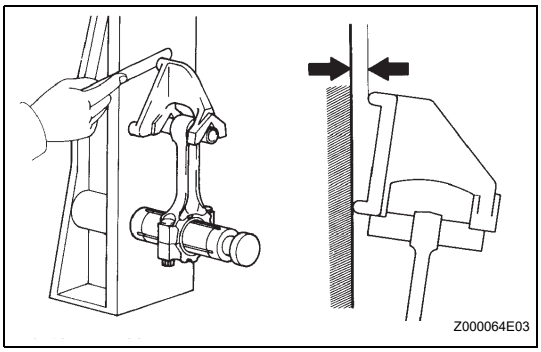


23. INSPECT CONNECTING ROD BOLT

(a) Using vernier calipers, measure the tension portion diameter of the bolt.

Standard diameter:
7.2 to 7.3 mm (0.283 to 0.287 in.)
Minimum diameter:
7.0 mm (0.276 in.)

If the diameter is less than the minimum, replace the connecting rod bolt.



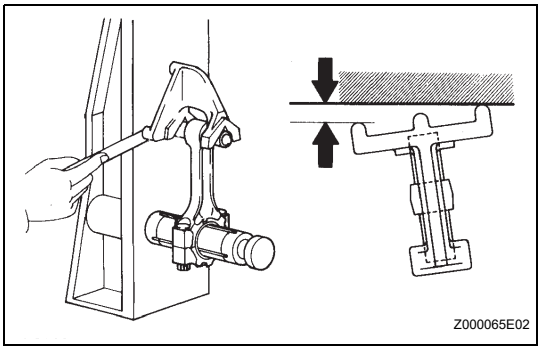
24. INSPECT CONNECTING ROD SUB-ASSEMBLY

(a) Using a connecting rod aligner and feeler gauge, check the connecting rod alignment.

(1) Check for misalignment.

Maximum misalignment:
0.05 mm (0.0020 in.) per 100 mm (3.94 in.)

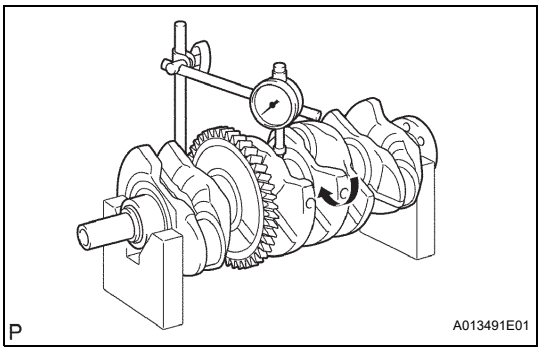
If the misalignment is greater than the maximum, replace the connecting rod.



(2) Check for twist.

Maximum twist:
0.15 mm (0.0059 in.) per 100 mm (3.94 in.)

If the twist is greater than the maximum, replace the connecting rod.

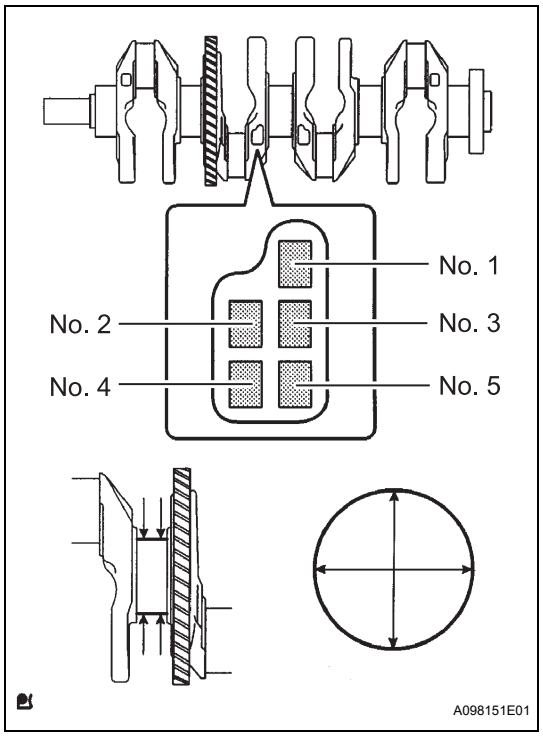


25. INSPECT CRANKSHAFT

(a) Using a dial indicator and V-blocks, measure the circle runout as shown in the illustration.

Maximum circle runout:
0.03 mm (0.0012 in.)

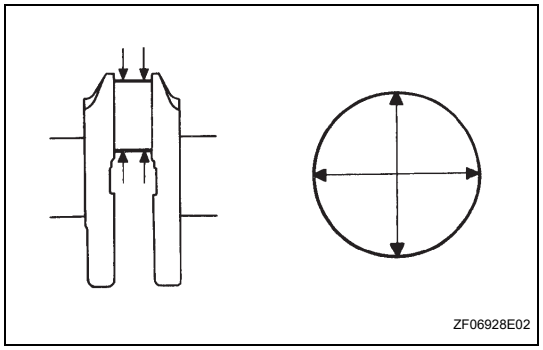
If the taper and distortion are greater than the maximum, replace the crankshaft.



(b) Using a micrometer, measure the diameter of each main journal.
Standard diameter:
54.988 to 55.000 mm (2.1649 to 2.1654 in.)
If the diameter is not as specified, check the crankshaft oil clearance.

(c) Check each main journal for taper and distortion as shown in the illustration.
Maximum taper and distortion:
0.003 mm (0.0001 in.)
If the taper and distortion are greater than the maximum, replace the crankshaft.
Standard diameter (Reference)

Mark	Specified Condition
0	54.999 to 55.000 mm (2.1653 to 2.1654 in.)
1	54.997 to 54.998 mm (2.1652 to 2.1653 in.)
2	54.995 to 54.996 mm (2.1652 to 2.1652 in.)
3	54.993 to 54.994 mm (2.1651 to 2.1651 in.)
4	54.991 to 54.992 mm (2.1650 to 2.1650 in.)
5	54.988 to 54.990 mm (2.1649 to 2.1650 in.)

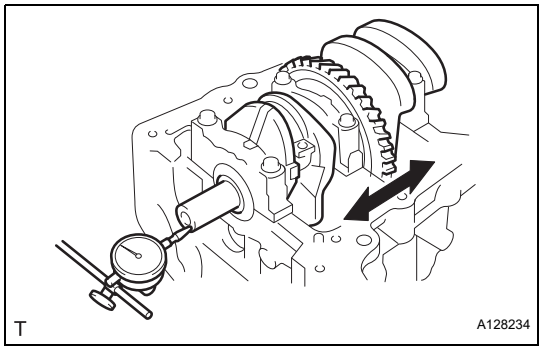


(d) Using a micrometer, measure the diameter of each crank pin.
Standard diameter:
47.990 to 48.000 mm (1.8894 to 1.8898 in.)
If the diameter is not as specified, check the connecting rod oil clearance.

(e) Inspect each crank pin for taper and distortion as shown in the illustration.
Maximum taper and distortion:
0.003 mm (0.0001 in.)
If the taper and distortion are greater than the maximum, replace the crankshaft.

26. INSPECT CRANKSHAFT THRUST CLEARANCE

(a) Install the main bearing cap (See page EM-142).



(b) Using a dial indicator, measure the thrust clearance while prying the crankshaft back and forth with a screwdriver.
Standard thrust clearance:
0.04 to 0.24 mm (0.0016 to 0.0095 in.)
Maximum thrust clearance:
0.30 mm (0.0118 in.)
If the thrust clearance is greater than the maximum, replace the thrust washers as a set.
HINT:
The thrust washer thickness is 1.93 to 1.98 mm (0.0760 to 0.0780 in.).

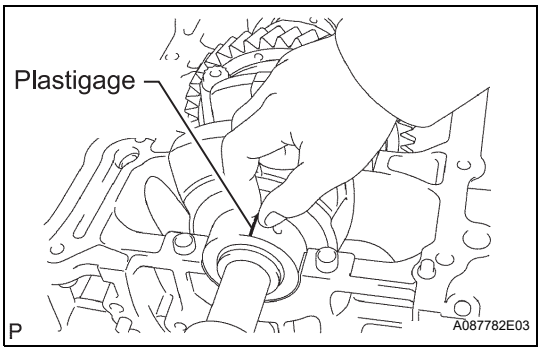
27. INSPECT CRANKSHAFT OIL CLEARANCE

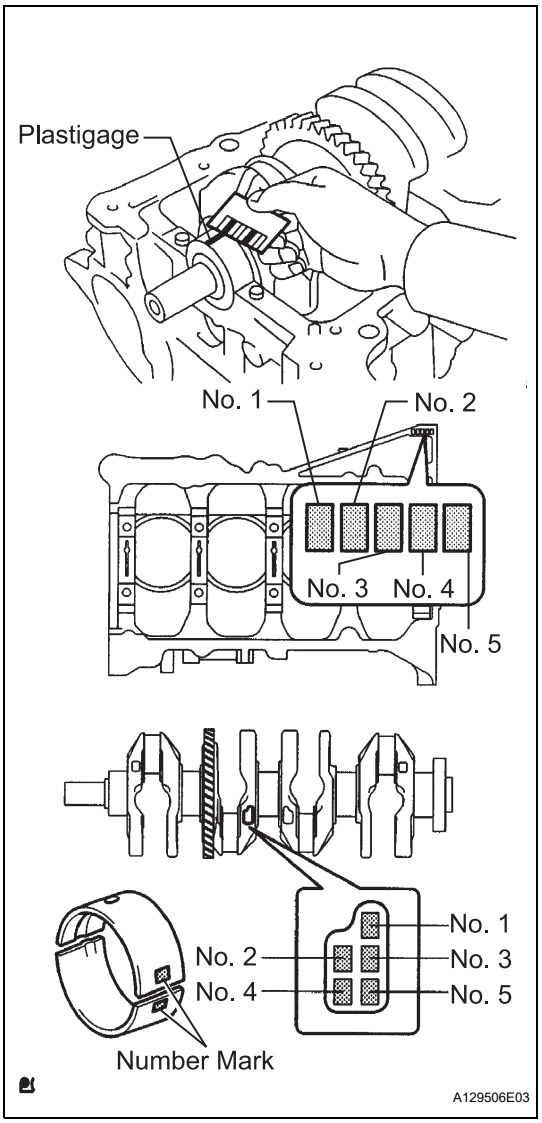
(a) Check the crank journal and bearing for pitting and scratches.

(b) Install the crankshaft bearing (See page EM-142).

(c) Place the crankshaft on the cylinder block.

EM





(d) Lay a strip of Plastigage across each journal.
(e) Examine the front marks and numbers and install the bearing caps on the cylinder block.
HINT:
A number is marked on each main bearing cap to indicate the installation position.
(f) Install the main bearing cap (See page EM-142).
NOTICE:
Do not turn the crankshaft.
(g) Remove the main bearing caps (See page EM-120).

(h) Measure the Plastigage at its widest point.
Standard oil clearance:
0.017 to 0.040 mm (0.0007 to 0.0016 in.)
Maximum oil clearance:
0.060 mm (0.0024 in.)
If the oil clearance is greater than the maximum, replace the crankshaft bearing. If necessary, replace the crankshaft.
NOTICE:
Remove the Plastigage completely after the measurement.
HINT:
- If replacing a bearing, select a new one with the same number. If the number of the bearing cannot be determined, calculate the correct bearing number by adding together the numbers imprinted on the cylinder block and crankshaft. Then select a new bearing with the calculated number according to the chart below. There are 4 sizes of standard bearings, marked "1", "2", "3" and "4" accordingly.
- EXAMPLE: Cylinder block "3" + Crankshaft "5" = Total number 8 (Use bearing "3")

Cylinder block + Crankshaft	0 to 2	3 to 5	6 to 8	9 to 11
Bearing to be used	"1"	"2"	"3"	"4"

Standard cylinder block journal bore diameter

Mark	Specified Condition
0	59.000 to 59.002 mm (2.3228 to 2.3229 in.)
1	59.003 to 59.004 mm (2.3230 to 2.3230 in.)
2	59.005 to 59.006 mm (2.3230 to 2.3231 in.)
3	59.007 to 59.009 mm (2.3231 to 2.3232 in.)
4	59.010 to 59.011 mm (2.3232 to 2.3233 in.)
5	59.012 to 59.013 mm (2.3233 to 2.3234 in.)
6	59.014 to 59.016 mm (2.3234 to 2.3235 in.)

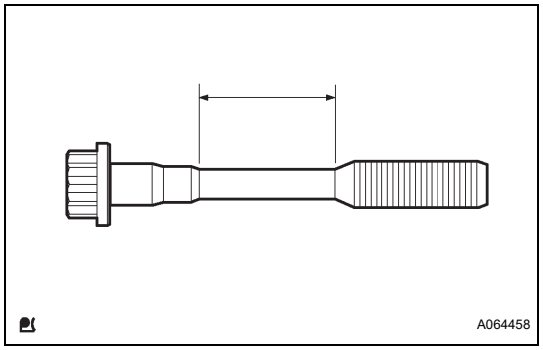
Standard crankshaft journal diameter

Mark	Specified Condition
0	54.999 to 55.000 mm (2.1653 to 2.1654 in.)
1	54.997 to 54.998 mm (2.1652 to 2.1653 in.)
2	54.995 to 54.996 mm (2.1652 to 2.1652 in.)
3	54.993 to 54.994 mm (2.1651 to 2.1651 in.)

Mark	Specified Condition
4	54.991 to 54.992 mm (2.1650 to 2.1650 in.)
5	54.988 to 54.990 mm (2.1649 to 2.1650 in.)

Standard bearing center wall thickness

Mark	Specified Condition
1	1.993 to 1.996 mm (0.0785 to 0.0786 in.)
2	1.997 to 1.999 mm (0.0786 to 0.0787 in.)
3	2.000 to 2.002 mm (0.0787 to 0.0788 in.)
4	2.003 to 2.005 mm (0.0789 to 0.0789 in.)



28. INSPECT CRANKSHAFT BEARING CAP SET BOLT

(a) Using vernier calipers, measure the tension portion diameter of the bolts.

Standard diameter:

7.3 to 7.5 mm (0.287 to 0.295 in.)

Minimum diameter:

7.2 mm (0.284 in.)

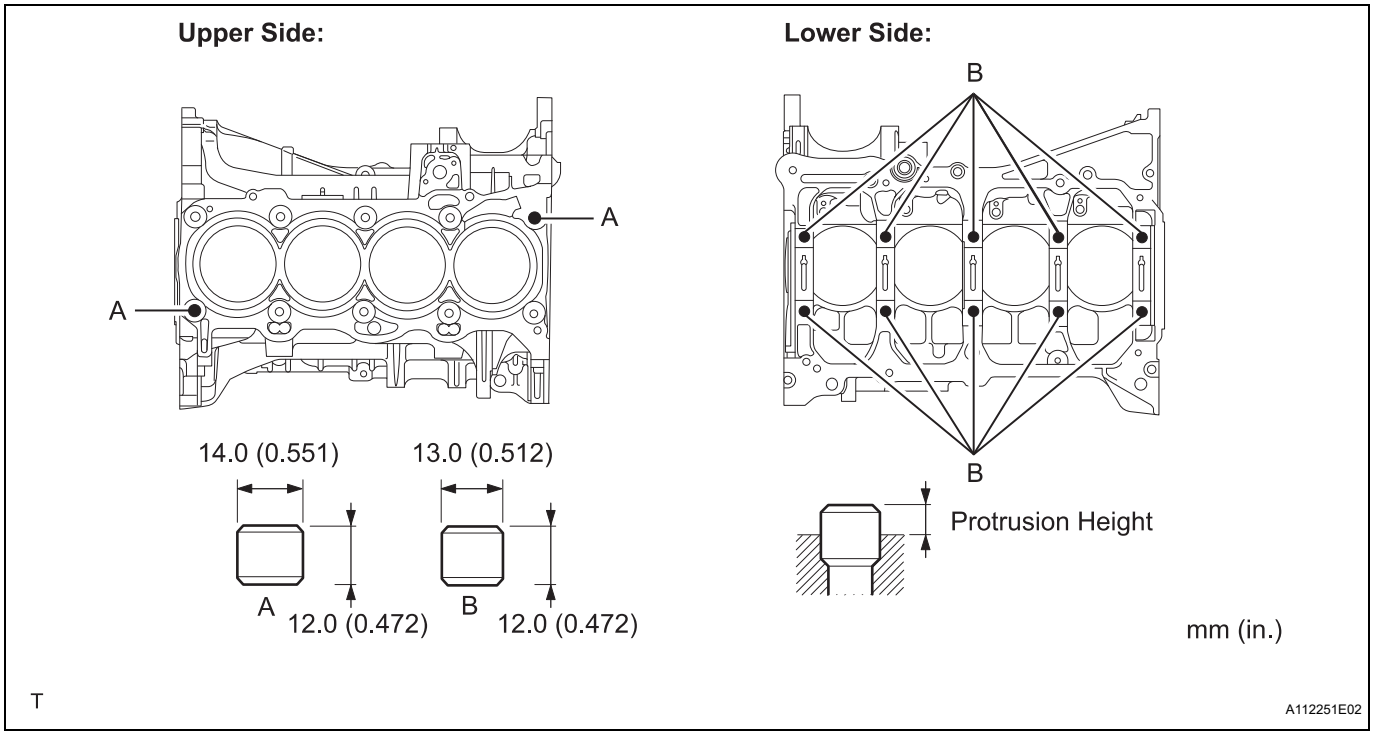
If the diameter is less than the minimum, replace the bolt.

EM

REASSEMBLY

1. INSTALL RING PIN

(a) Using a plastic hammer, tap in the ring pin.

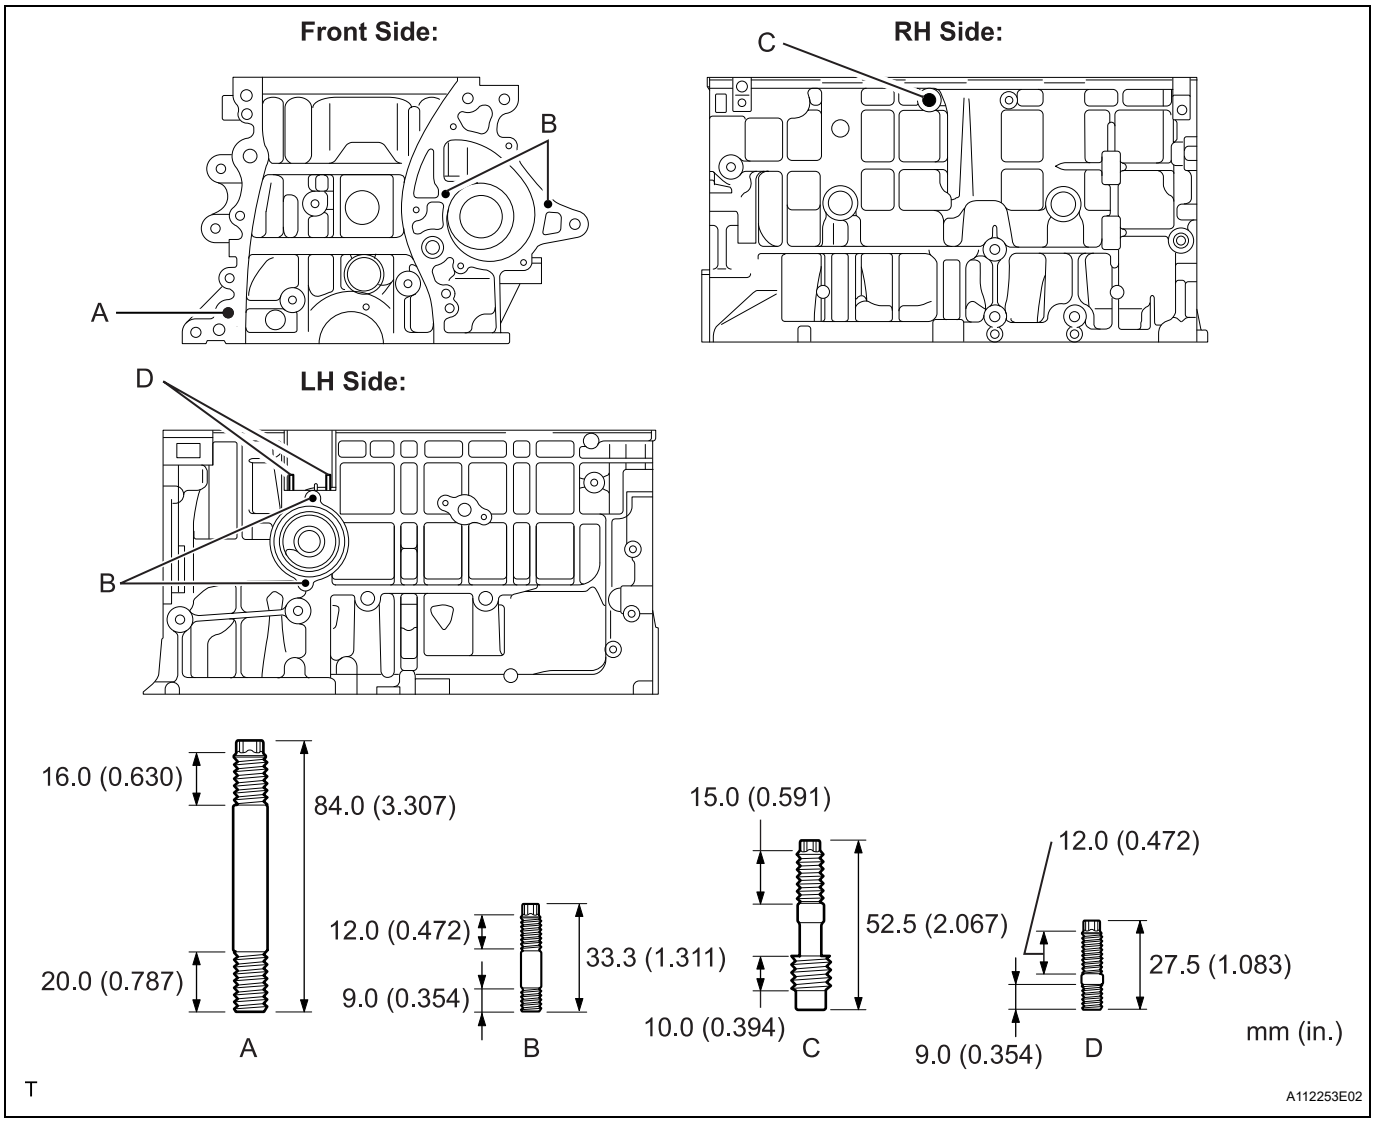


Standard protrusion

Item	Protrusion
Pin A	6 mm (0.236 in.)
Pin B	5 mm (0.197 in.)

2. INSTALL STUD BOLT

(a) Install the stud bolts as shown in the illustration.

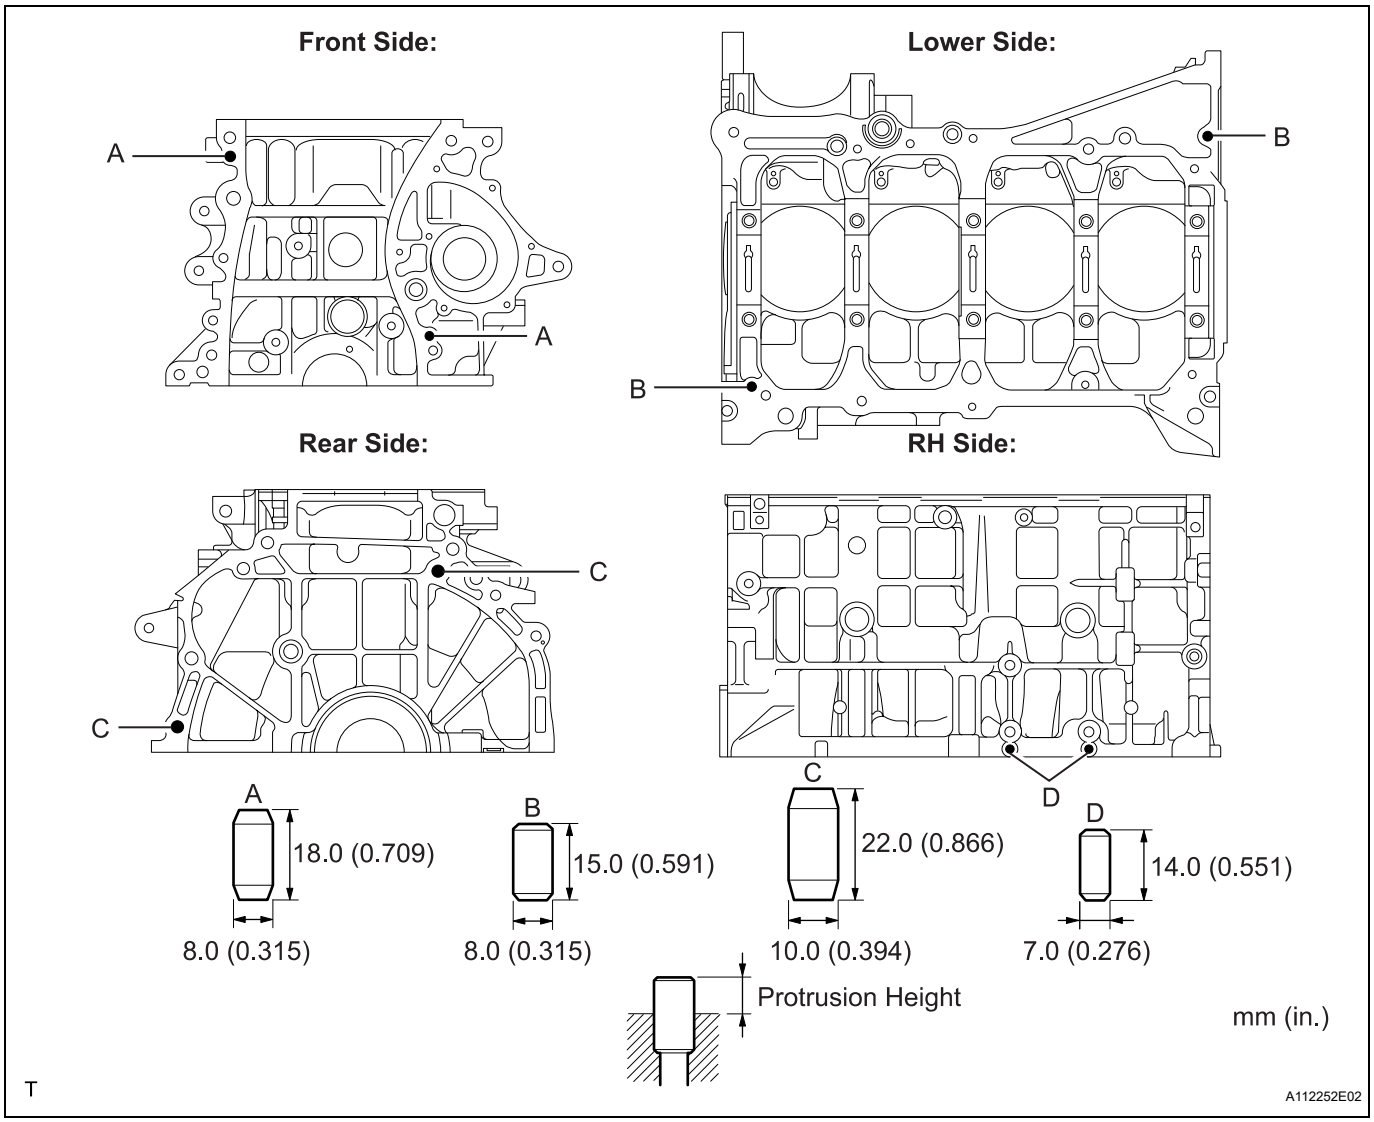


Torque: Stud Bolt A
5.0 N*m (51 kgf*cm, 44 in.*lbf)
Stud Bolt B
22 N*m (220 kgf*cm, 16 ft.*lbf)
Stud Bolt C
9.5 N*m (97 kgf*cm, 84 in.*lbf)
Stud Bolt D
5.0 N*m (51 kgf*cm, 44 in.*lbf)

EM

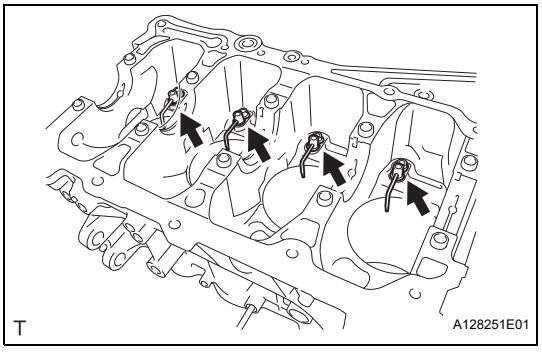
3. INSTALL STRAIGHT PIN

(a) Using a plastic hammer, tap in the straight pin.



Standard protrusion

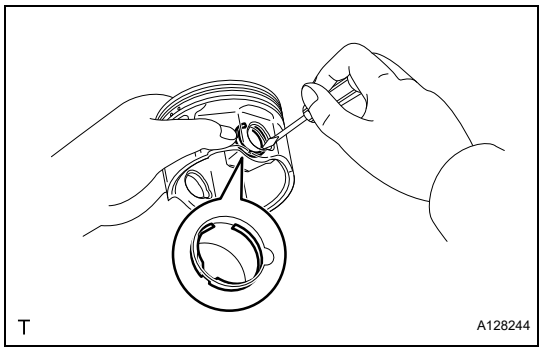
Item	Protrusion
Pin A	8 mm (0.315 in.)
Pin B	7.5 mm (0.295 in.)
Pin C	12 mm (0.472 in.)
Pin D	5 mm (0.197 in.)



4. INSTALL NO. 1 OIL NOZZLE SUB-ASSEMBLY

(a) Using a 5 mm hexagon wrench, install the oil nozzles with the bolts.

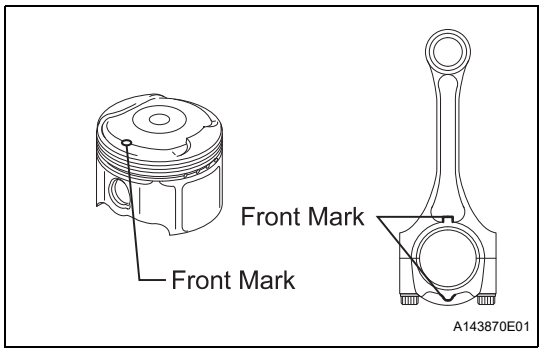
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)



5. INSTALL PISTON

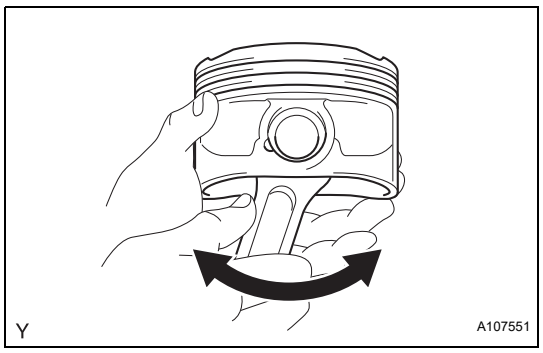
(a) Using a screwdriver, install a new snap ring at one end of the piston pin hole.
HINT:
Make sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.

(b) Gradually heat the piston to approximately 80 to 90°C (176 to 194°F).

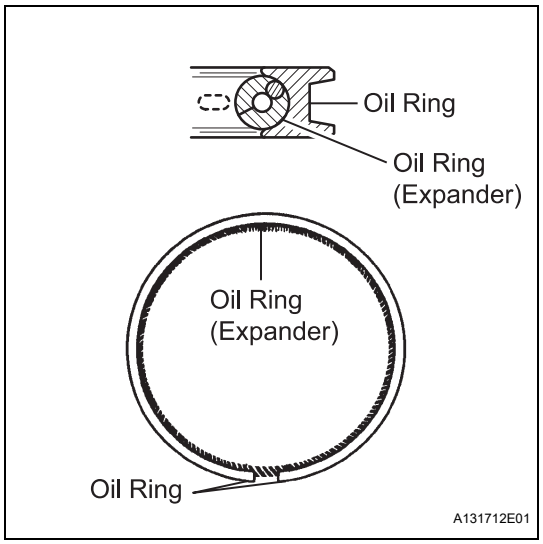


(c) Align the front marks of the piston and connecting rod, and push in the piston with your thumb.

(d) Using a screwdriver, install a new snap ring on the other end of the piston pin hole.
HINT:
Make sure that the end gap of the snap ring is not aligned with the pin hole cutout portion of the piston.



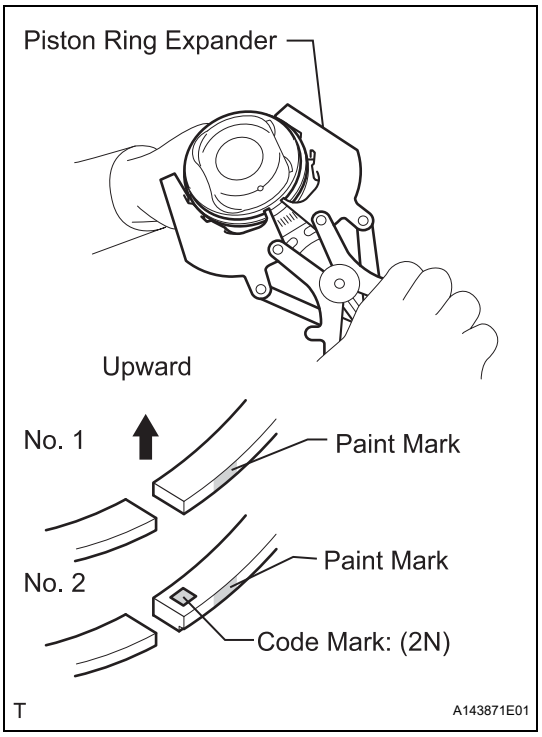
(e) Check the fitting condition between the piston and piston pin by trying to move the piston back and forth on the piston pin.



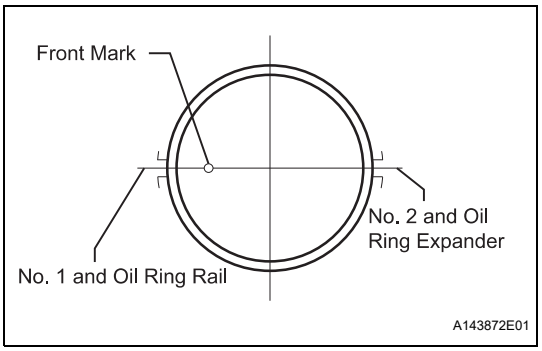
6. INSTALL PISTON RING SET

(a) Install the oil ring expander and oil ring rail by hand.
NOTICE:
- **Install the expander and oil ring so that their ring ends are at opposite sides.**
- **Securely install the expander to the inner groove of the oil ring.**

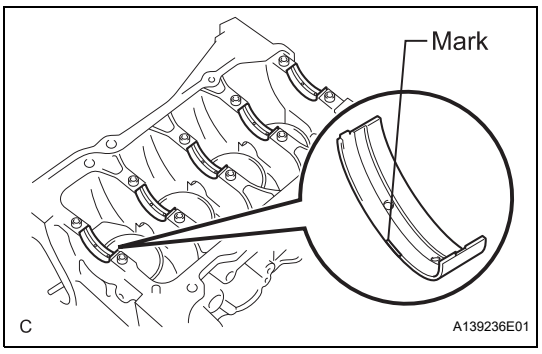
EM



(b) Using a piston ring expander, install the 2 compression rings so that the paint marks are positioned as shown in the illustration.
NOTICE:
Install the compression ring No. 2 with the code mark (2N) facing upward.

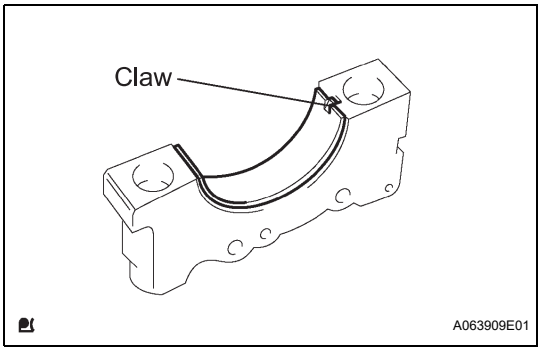


(c) Position the piston rings so that the ring ends are as shown in the illustration.



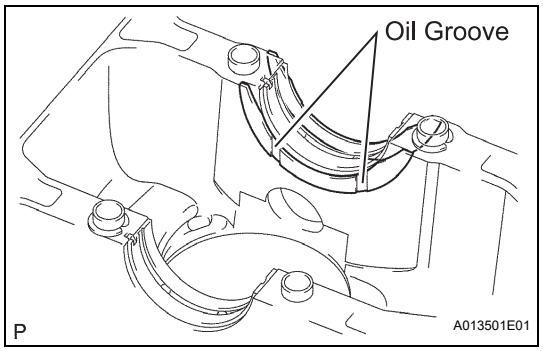
7. INSTALL CRANKSHAFT BEARING

(a) Install the upper bearing with an oil groove on the cylinder block.
NOTICE:
- **Do not apply engine oil to the bearings and the contact surfaces.**
- **There is an identification mark on the crankshaft bearing No. 1 UPR only.**



8. INSTALL NO. 2 CRANKSHAFT BEARING

(a) Install the lower bearing onto the bearing cap.
NOTICE:
Clean the backside of the bearing and the bearing surface of the connecting rod. The surface should be free of dust and oil.



9. INSTALL UPPER CRANKSHAFT THRUST WASHER

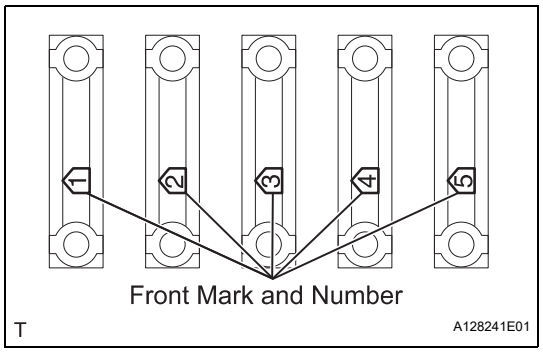
(a) Install the 2 thrust washers under the No. 3 journal of the cylinder block with the oil grooves facing outward.

(b) Apply engine oil to the crankshaft thrust washer.

10. INSTALL CRANKSHAFT

(a) Apply engine oil to the upper bearing and install the crankshaft on the cylinder block.

(b) Apply engine oil to the lower bearing.

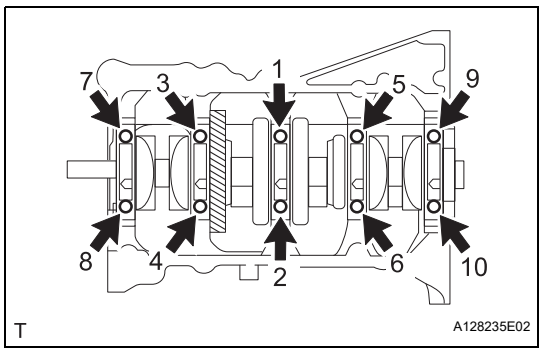


(c) Examine the front marks and install the bearing caps on the cylinder block.

(d) Apply a light coat of engine oil to the threads and under the bearing cap bolts.

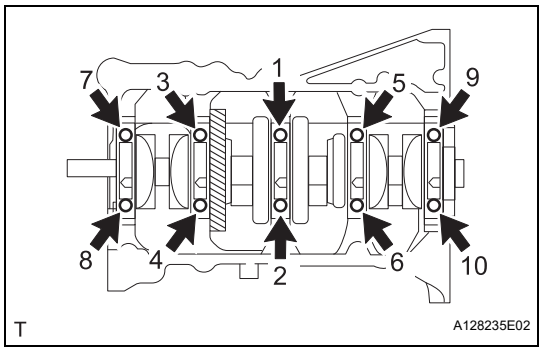
(e) Install the crankshaft bearing cap bolts.

NOTICE:
The main bearing cap bolts are tightened in 2 progressive steps.

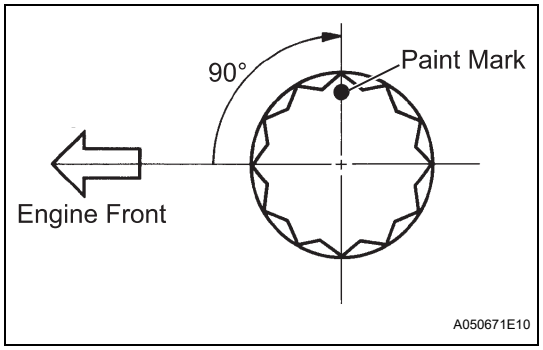


(f) Step 1

(1) Install and uniformly tighten the 10 main bearing cap bolts in the sequence shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



(2) Further tighten the 10 main bearing cap bolts in the sequence shown in the illustration.
Torque: 40 N*m (408 kgf*cm, 30 ft.*lbf)



(g) Step 2

(1) Mark the front of the bearing cap bolts with paint.

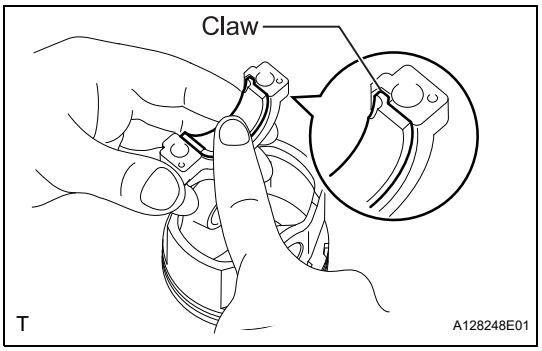
(2) Further tighten the bearing cap bolts by 90° in the numerical order shown in the previous illustration.

(h) Check that the paint mark is now at a 90° angle to the front.

(i) Check that the crankshaft turns smoothly.

(j) Check the crankshaft thrust clearance (See page EM-140).

EM



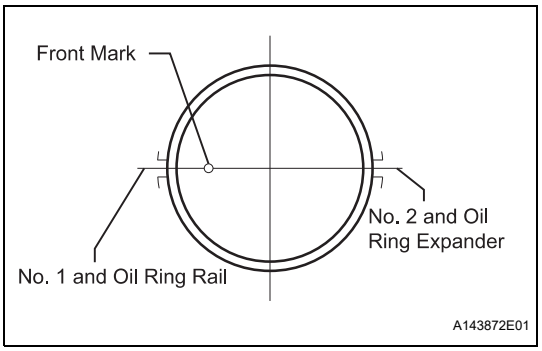
11. INSTALL CONNECTING ROD BEARING

(a) Align the bearing claw with the groove of the connecting rod or connecting cap.
NOTICE:
Do not apply engine oil to the bearings or the contact surfaces.

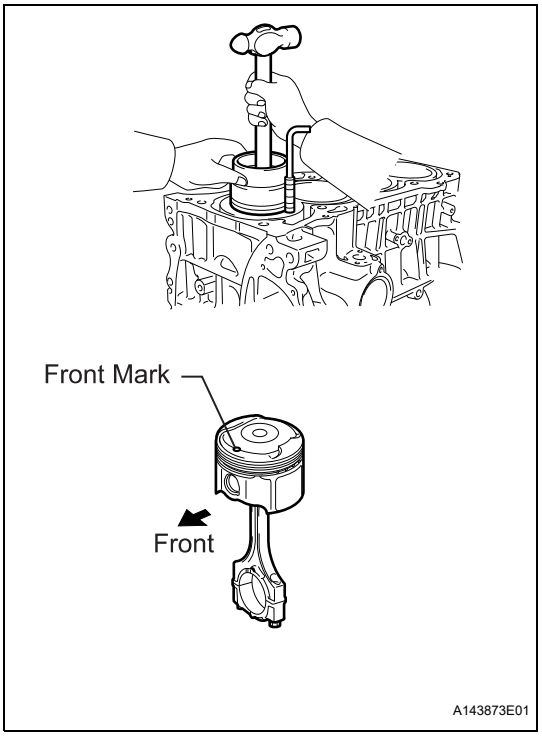
12. INSTALL PISTON SUB-ASSEMBLY WITH CONNECTING ROD
NOTICE:
The connecting rod cap bolts are tightened in 2 progressive steps.

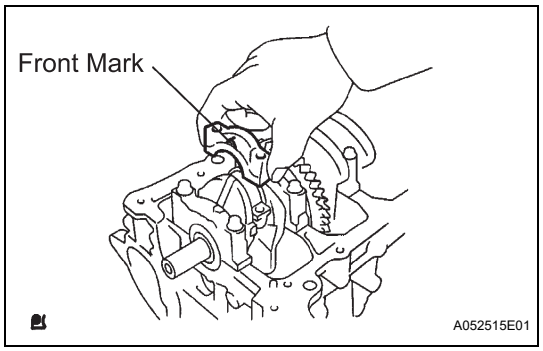
(a) Apply engine oil to the cylinder walls, the pistons, and the surfaces of connecting rod bearings.

(b) Check the position of the piston ring ends.

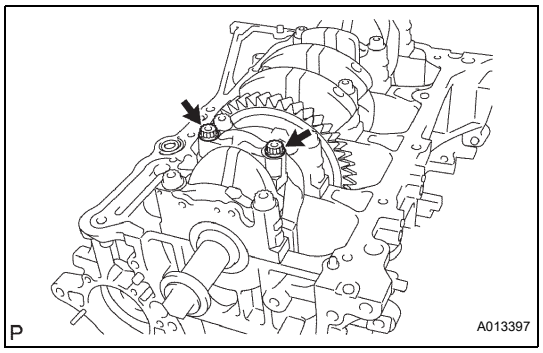


(c) Using a piston ring compressor, push the correctly numbered piston and connecting rod assemblies into each cylinder with the front mark of the piston facing forward.
NOTICE:
Match the numbered connecting rod cap with the connecting rod.

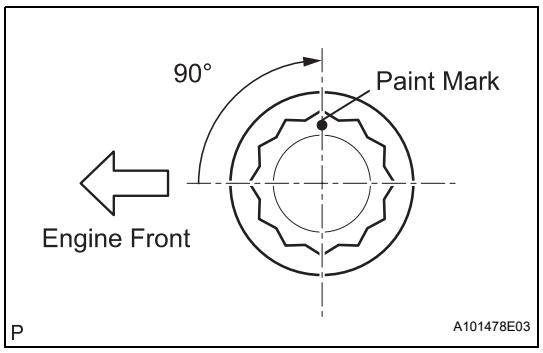




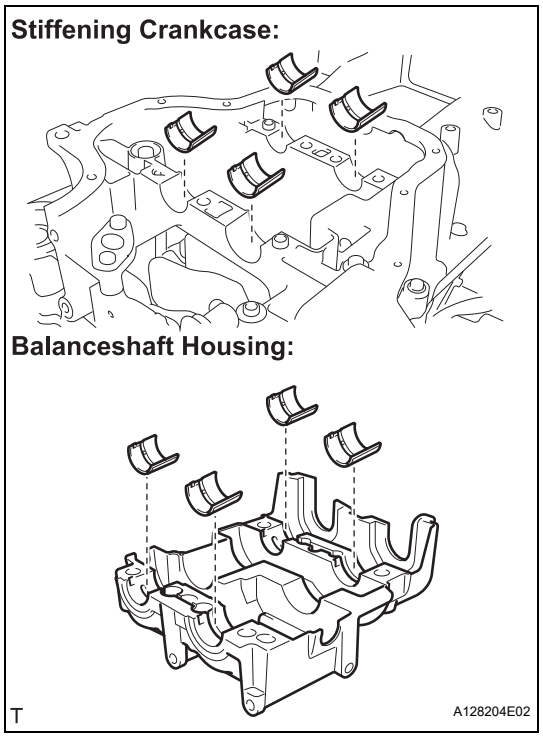
(d) Check that the protrusion of the connecting rod cap is facing in the correct direction.
(e) Apply a light coat of engine oil to the threads and under the heads of the connecting rod cap bolts.
(f) Install the connecting cap bolts.
NOTICE:
The connecting cap bolts should be tightened in 2 progressive steps.



(g) Step 1
(1) Install and alternately tighten the bolts of the connecting rod cap in several steps.
Torque: 25 N*m (250 kgf*cm, 18 ft.*lbf)

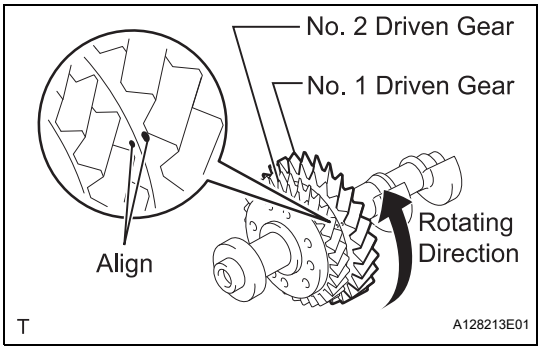


(h) Step 2
(1) Mark the front of the connecting rod cap bolts with paint.
(2) Further tighten the cap bolts by 90° as shown in the illustration.
(i) Check that the crankshaft turns smoothly.
(j) Check the connecting rod thrust clearance (See page EM-133).



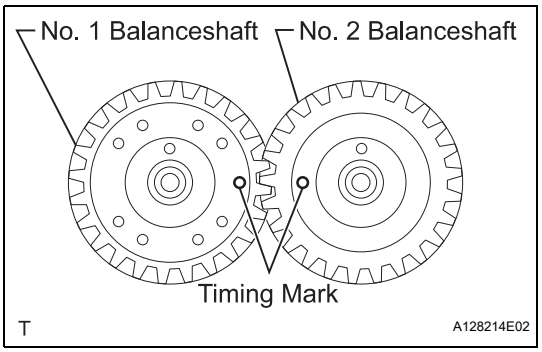
13. INSTALL NO. 1 BALANCESHAFT BEARING
(a) Install the bearings in the crankcase and balanceshaft housing.
NOTICE:
Do not apply engine oil to the bearings and the contact surfaces.
(b) Apply a light coat of engine oil to the bearings.

EM

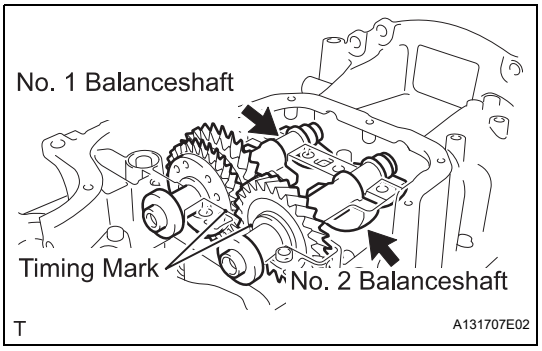


14. INSTALL NO. 1 AND NO. 2 BALANCESHAFT SUB-ASSEMBLY

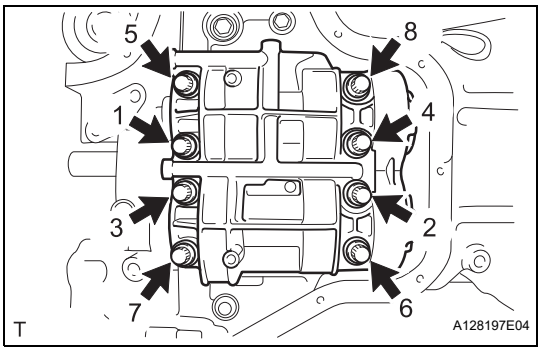
(a) Rotate the No. 1 driven gear of the No. 1 balanceshaft in the rotating direction until it hits the stopper.
NOTICE:
Confirm that the matchmarks on the No. 1 and No. 2 driven gears are matched.



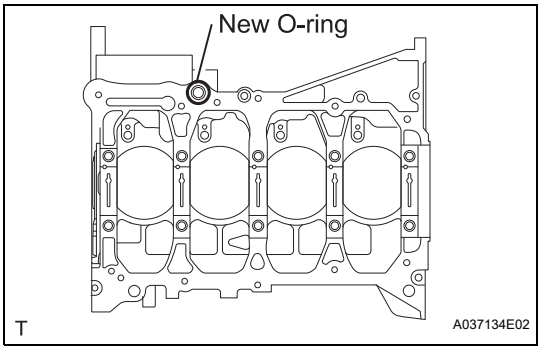
(b) Align the timing marks of the No. 1 and No. 2 balanceshafts as shown in the illustration.



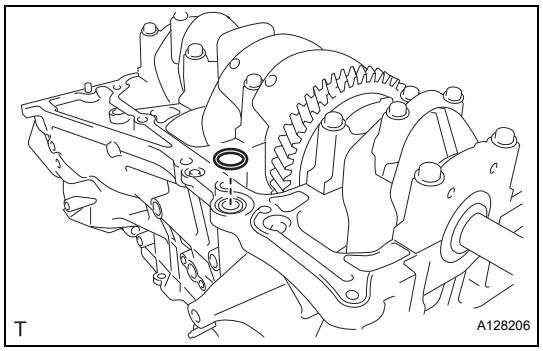
(c) Place the No. 1 and No. 2 balanceshafts on the crankcase.
(d) Apply a light coat of engine oil under the heads of the balanceshaft housing bolts.
(e) Install the balanceshaft housing bolts.
NOTICE:
The balance shaft housing bolts are tightened in 2 progressive steps.



(f) Step 1
(1) Install and uniformly tighten the 8 bolts in the sequence shown in the illustration.
Torque: 22 N*m (220 kgf*cm, 16 ft.*lbf)



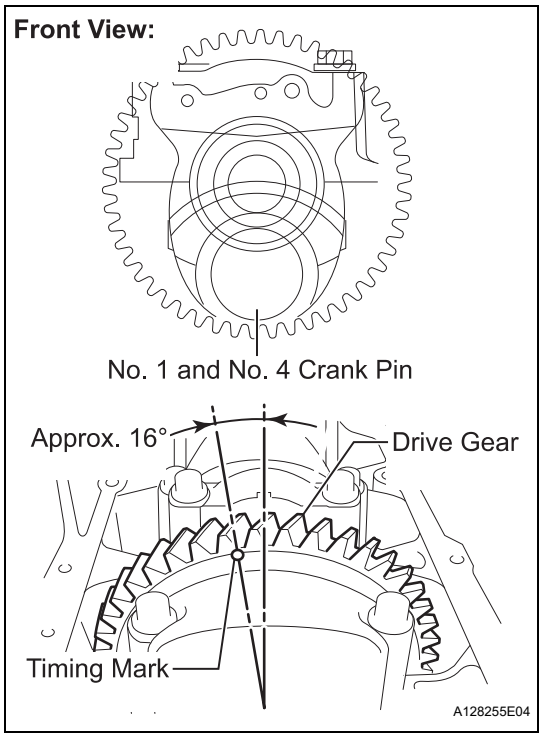
(g) Step 2
(1) Mark the front side of each balanceshaft housing bolt head with paint.
(2) Further tighten the bolts by 90° as shown in the illustration.
(3) Check that the paint marks are now at a 90° angle to the front.



15. INSTALL STIFFENING CRANKCASE ASSEMBLY

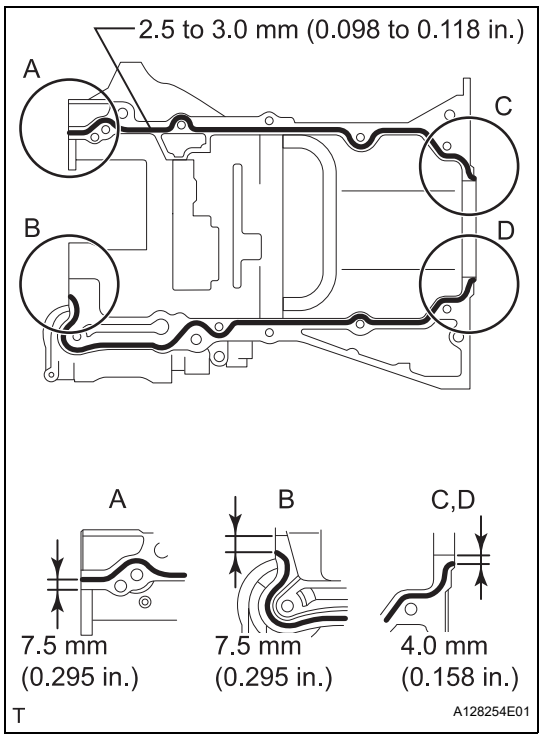
(a) Place a new O-ring on the cylinder block, as shown in the illustration.

(b) Temporarily tighten the pulley set bolt.



(c) Turn the crankshaft to set the crank pins of the No. 1 and No. 4 cylinders to the bottom.
HINT:
Make sure that the timing mark on the balanceshaft drive gear is positioned as shown in the illustration.

EM



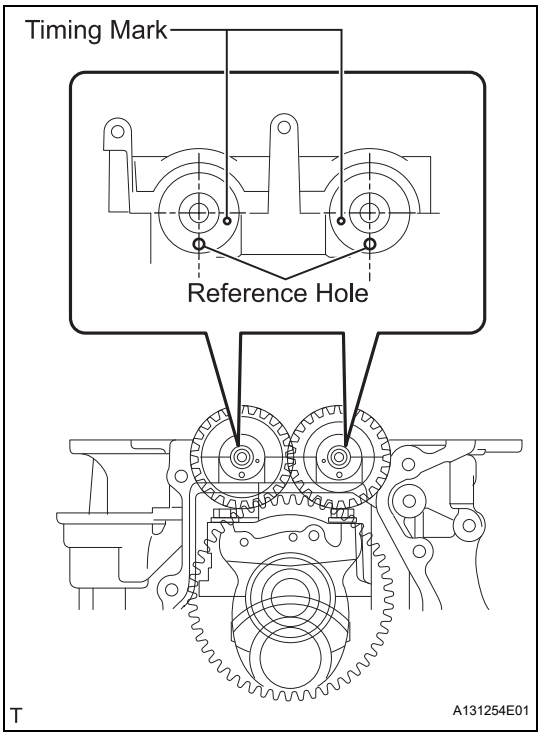
(d) Apply seal packing in a continuous bead (diameter: 2.5 to 3.0 mm (0.098 to 0.118 in.)) to the places shown in the illustration.

Seal packing:

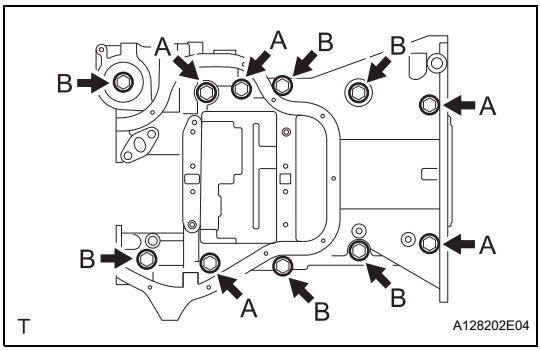
Toyota Genuine Seal Packing Black, Three bond 1207B or equivalent

NOTICE:

- **Remove any oil from the contact surface.**
- **Install the crankcase within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing the stiffening crankcase.**

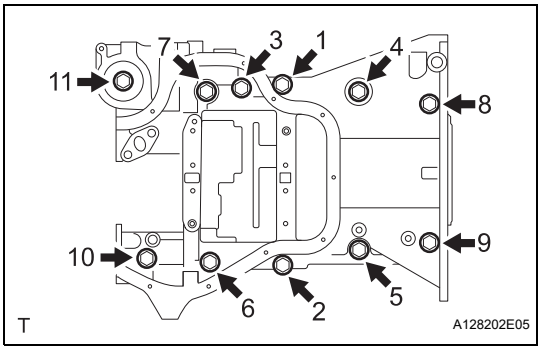


(e) Install the stiffening crankcase so that the reference holes on the balanceshafts are positioned as shown in the illustration.



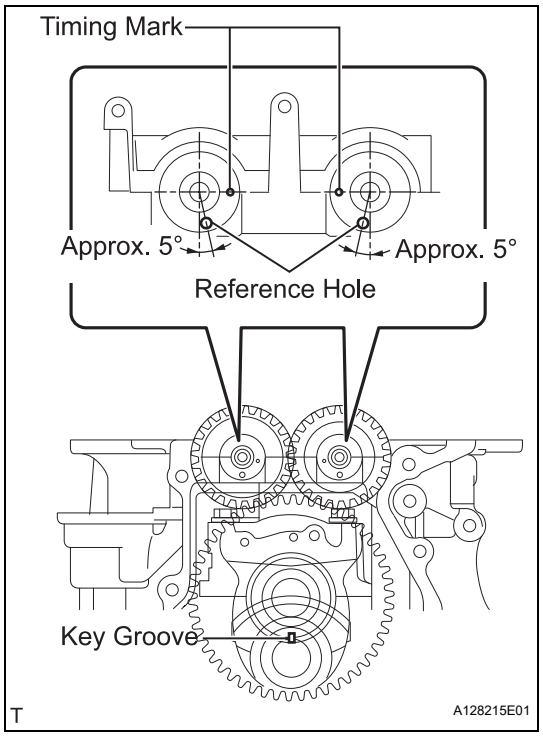
(f) Temporarily install the crankcase with the 11 bolts.
Bolt length

Item	Length
Bolt A	122 mm (4.803 in.)
Bolt B	45 mm (1.772 in.)



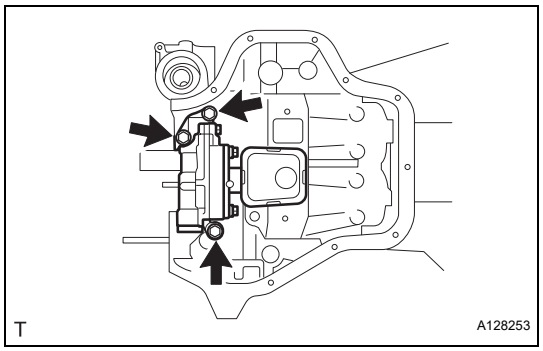
(g) Uniformly tighten the 11 bolts in the sequence shown in the illustration.
Torque: 24 N*m (245 kgf*cm, 18 ft.*lbf)

(h) Wipe off any excess seal packing with a clean piece of cloth.



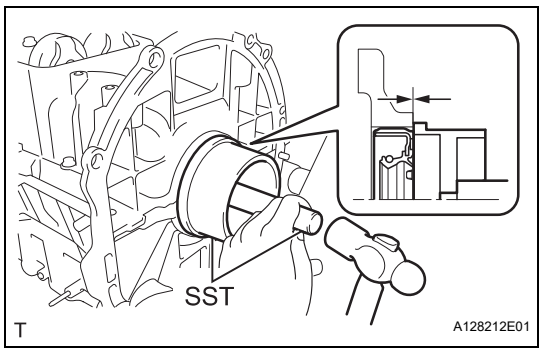
(i) Turn the crankshaft again to set the key groove to the bottom. Make sure that the timing marks are aligned as shown in the illustration.
HINT:
A 'O' is stamped as a timing mark.

(j) Remove the pulley set bolt.



16. INSTALL OIL PUMP ASSEMBLY

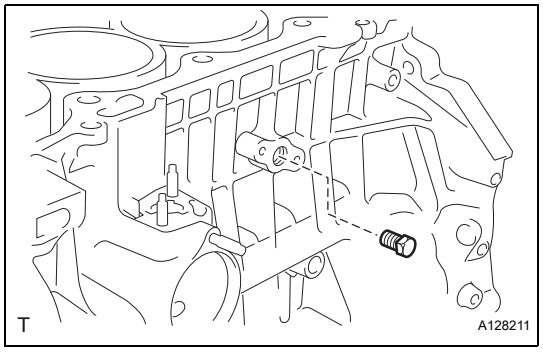
(a) Install a new gasket and oil pump with the 3 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



17. INSTALL ENGINE REAR OIL SEAL

(a) Using SST and a hammer, evenly tap the oil seal until its surface is flush with the rear oil seal retainer edge.
SST 09223-15030, 09950-70010 (09951-07100)
NOTICE:
Keep the lip free from foreign materials.

(b) Apply MP grease to a new oil seal lip.
NOTICE:
Wipe off extra grease on the crankshaft.



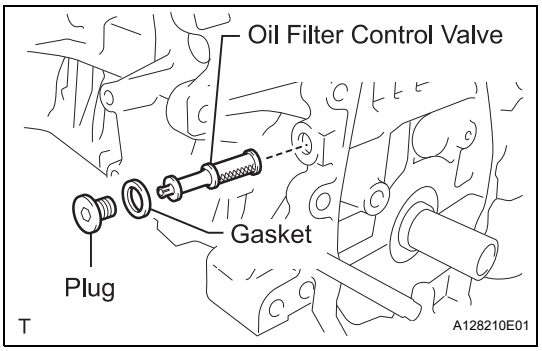
18. INSTALL NO. 1 TAPER SCREW PLUG

(a) Apply adhesive to 2 or 3 threads of the plug, and install the plug.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

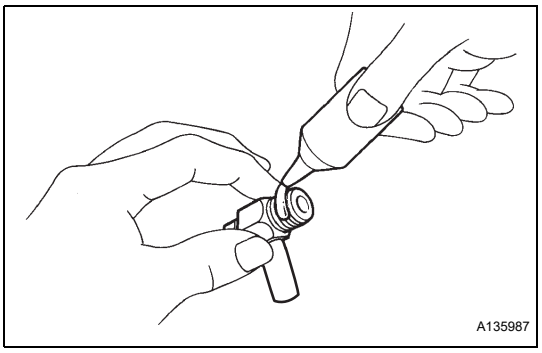
19. INSTALL OIL CONTROL VALVE FILTER

(a) Check that no foreign matter is on the mesh part of the filter.

EM

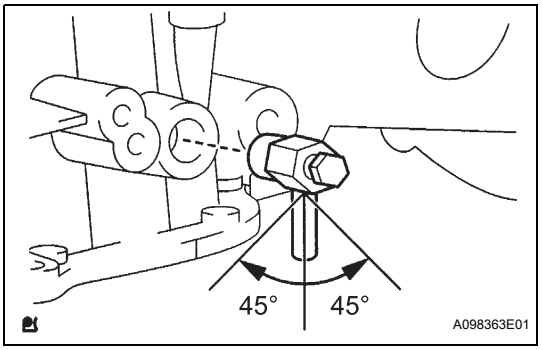


(b) Using an 8 mm socket hexagon wrench, install a new gasket and the oil control valve filter with the screw plug.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
NOTICE:
Do not touch the mesh when installing the oil control valve filter.



20. INSTALL CYLINDER BLOCK WATER DRAIN COCK SUB-ASSEMBLY

(a) Apply adhesive to the threads of the drain cock.
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

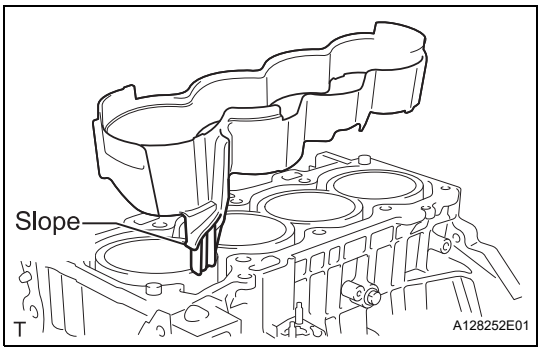


(b) Install the water drain cock within the range shown in the illustration.
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)
NOTICE:
Do not rotate the drain cock more than 1 revolution (360°) after tightening it to the specified torque.

(c) Install the water drain cock plugs to the water drain cocks.
Torque: 13 N*m (130 kgf*cm, 9 ft.*lbf)

21. INSTALL CYLINDER BLOCK WATER JACKET SPACER

(a) Install the water jacket spacer as shown in the illustration.
HINT:
Be sure to face the slope to the front of the engine.

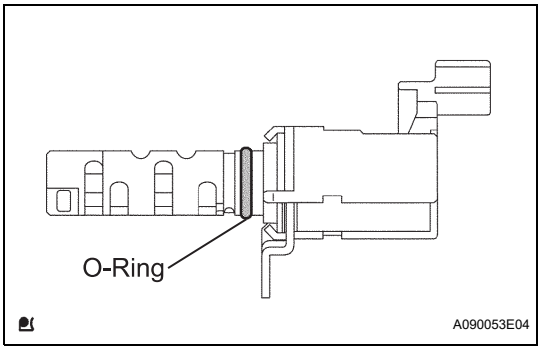


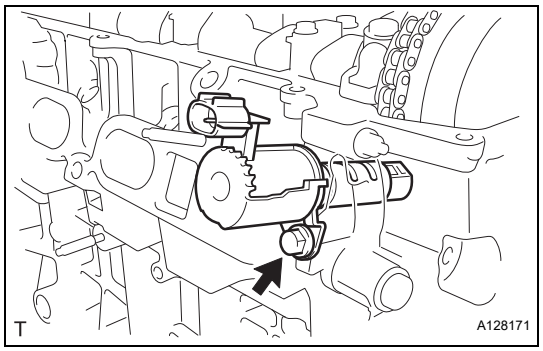
22. INSTALL CYLINDER HEAD GASKET (See page EM-69)

23. INSTALL CYLINDER HEAD SUB-ASSEMBLY (See page EM-69)

24. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

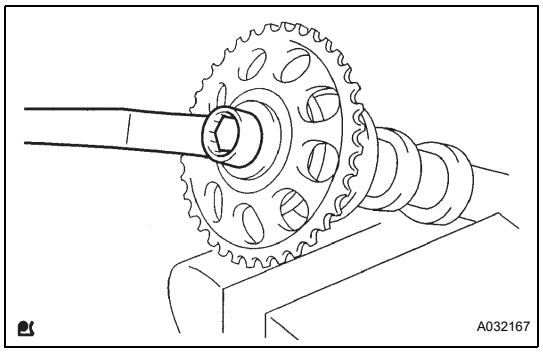
(a) Apply a light coat of engine oil to a new O-ring, then install it onto the camshaft timing oil control valve.





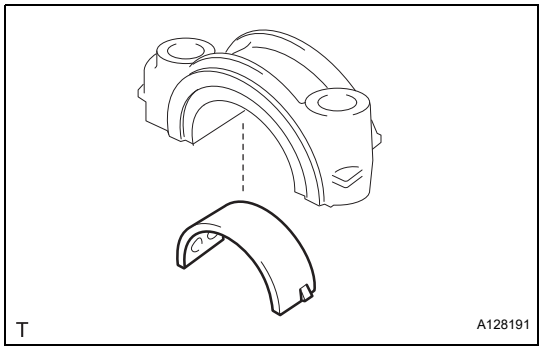
(b) Install the camshaft timing oil control valve with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

25. INSTALL CAMSHAFT TIMING GEAR ASSEMBLY (See page EM-41)



26. INSTALL CAMSHAFT TIMING SPROCKET
(a) Clamp the camshaft in a vise.
(b) Tighten the flange bolt with the camshaft timing sprocket fixed.
Torque: 54 N*m (551 kgf*cm, 40 ft.*lbf)

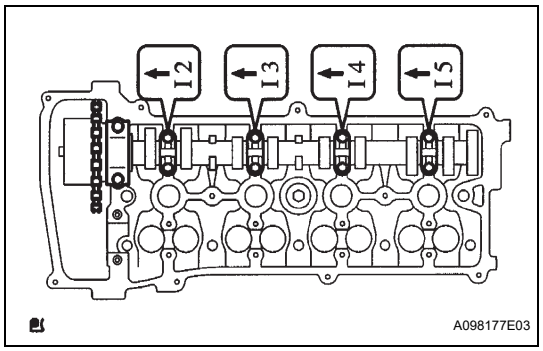
EM



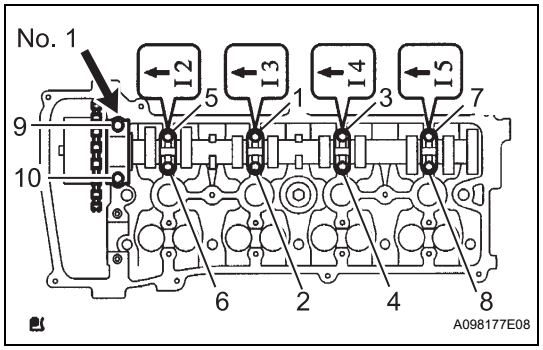
27. INSTALL NO. 1 CAMSHAFT BEARING
(a) Install the No. 1 camshaft bearing.

28. INSTALL NO. 2 CAMSHAFT BEARING (See page EM-70)

29. INSTALL CAMSHAFT
(a) Apply a light coat of engine oil to the journal portion of the camshaft.

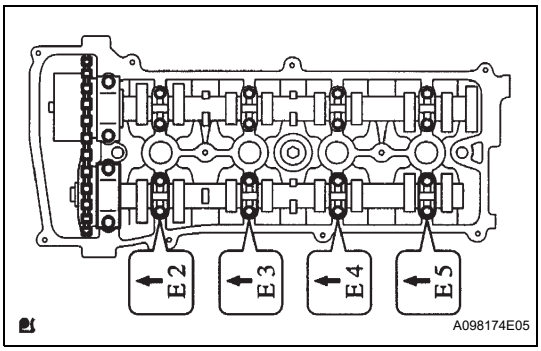


(b) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps into the cylinder head.
(c) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



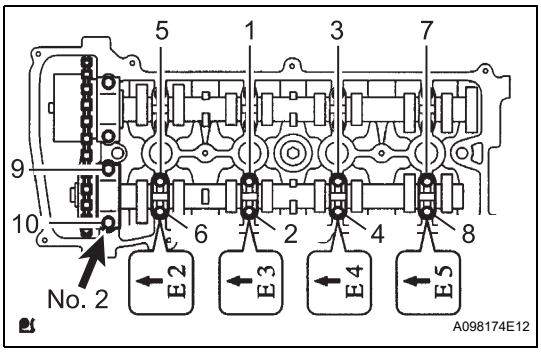
(d) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.
Torque: No. 1 bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)

30. INSTALL NO. 2 CAMSHAFT
(a) Apply a light coat of engine oil to the journal portion of the No. 2 camshaft.



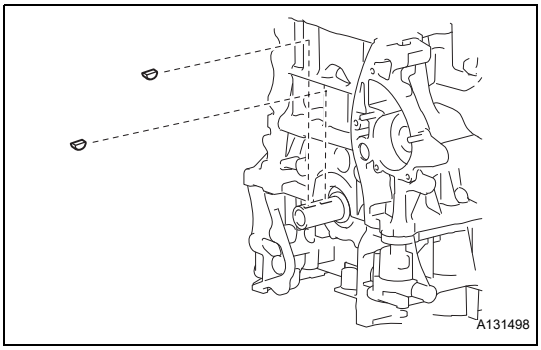
(b) Examine the front marks and numbers, and check that the order is as shown in the illustration. Then install the bearing caps onto the cylinder head.

(c) Apply a light coat of engine oil to the threads and under the heads of the bearing cap bolts.



(d) Using several steps, uniformly tighten the 10 bearing cap bolts in the sequence shown in the illustration.

Torque: No. 1 bearing cap
30 N*m (301 kgf*cm, 22 ft.*lbf)
No. 3 bearing cap
9.0 N*m (92 kgf*cm, 80 in.*lbf)



31. INSTALL KEYS

(a) Install the 2 keys.

32. INSTALL NO. 2 CHAIN SUB-ASSEMBLY (See page EM-26)

33. INSTALL CRANKSHAFT TIMING SPROCKET (See page EM-27)

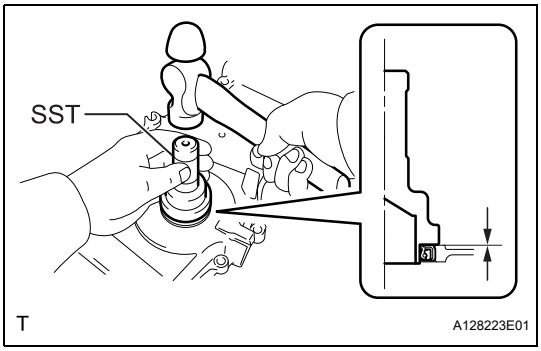
34. INSTALL NO. 1 CHAIN VIBRATION DAMPER (See page EM-28)

35. INSTALL CHAIN SUB-ASSEMBLY (See page EM-28)

36. INSTALL CHAIN TENSIONER SLIPPER (See page EM-29)

37. INSTALL TIMING CHAIN GUIDE (See page EM-29)

38. INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE (See page EM-29)



39. INSTALL TIMING CHAIN CASE OIL SEAL

(a) Using SST, tap in a new oil seal until its surface is flush with the timing chain cover edge.
SST 09223-22010

(b) Apply a light coat of MP grease to the lip of the oil seal.
NOTICE:
- **Keep the lip free from foreign matter.**
- **Do not tap on the oil seal at an angle.**
- **Make sure that the oil seal edge does not stick out of the timing chain case.**

NOTICE:
Keep the gap between the timing chain cover edge and the oil seal free of foreign matter.

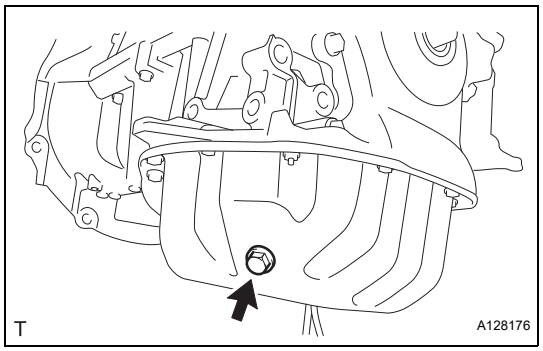
40. **INSTALL TIMING CHAIN COVER SUB-ASSEMBLY (See page LU-15)**

41. **INSTALL OIL PAN SUB-ASSEMBLY (See page EM-30)**

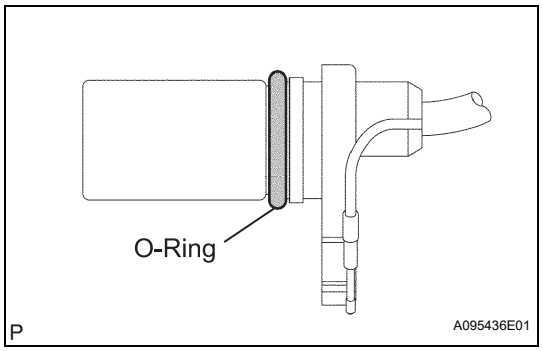
42. **INSTALL OIL PAN DRAIN PLUG**
    (a) Install a new gasket and oil pan drain plug.
    Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)

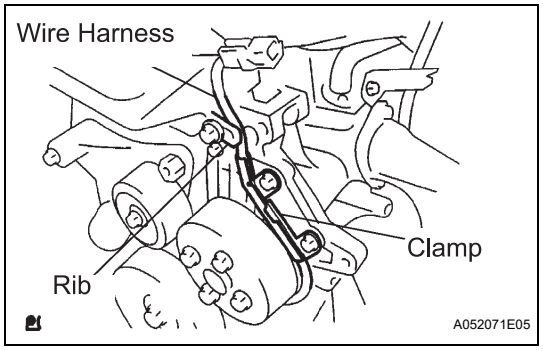
43. **INSTALL WATER PUMP ASSEMBLY (See page CO-10)**

44. **INSTALL WATER PUMP PULLEY (See page CO-11)**

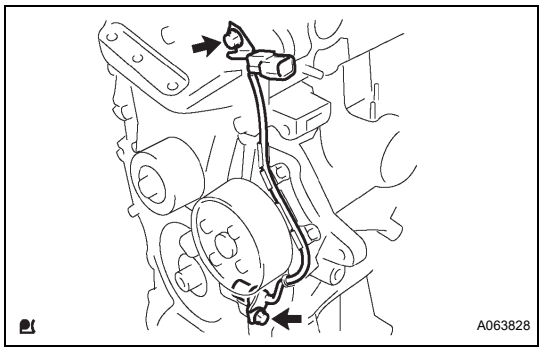


45. **INSTALL CRANKSHAFT POSITION SENSOR**
    (a) Apply a light coat of engine oil to the O-ring of the sensor.



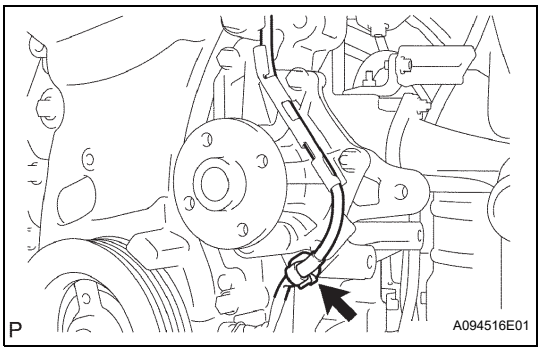


(b) Confirm that the wire harness of the sensor is placed as shown in the illustration.



(c) Install the sensor with the 2 bolts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

EM



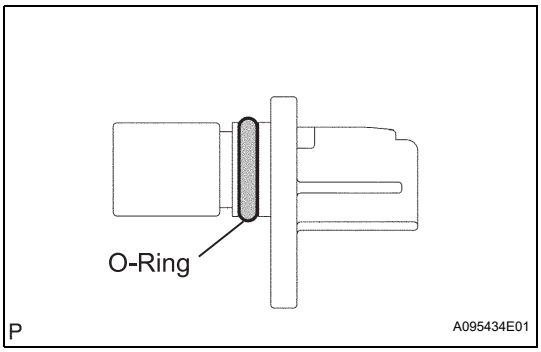
(d) Install the clamp of the crankshaft position sensor onto the water pump.

46. INSTALL CRANKSHAFT PULLEY (See page EM-75)

47. INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-31)

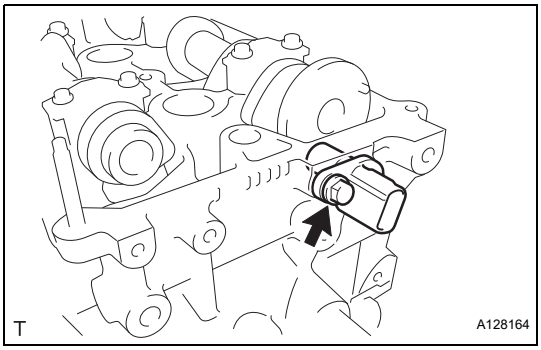
48. INSPECT VALVE CLEARANCE (See page EM-8)

49. ADJUST VALVE CLEARANCE (See page EM-9)

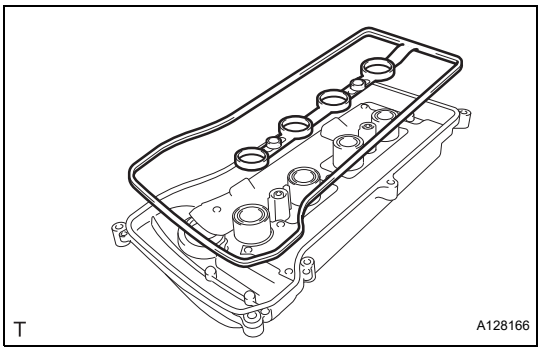


50. INSTALL CAMSHAFT POSITION SENSOR

(a) Apply a light coat of engine oil to the O-ring of the sensor.



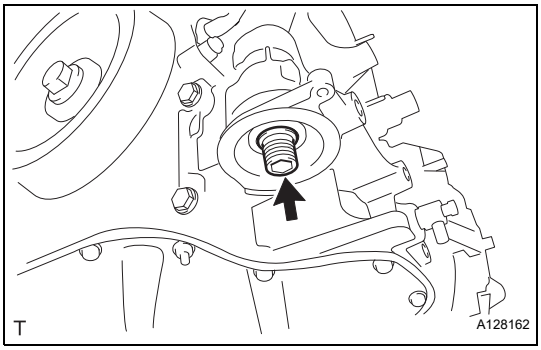
(b) Install the sensor with the bolt.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)



51. INSTALL CYLINDER HEAD COVER GASKET

(a) Install the gasket to the cylinder head cover.
NOTICE:
Remove any oil from the contact surface.

52. INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-32)

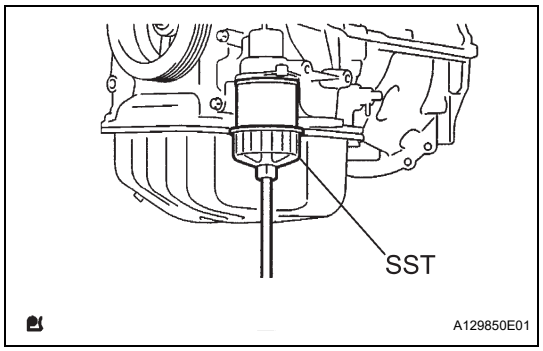


53. INSTALL OIL FILTER UNION

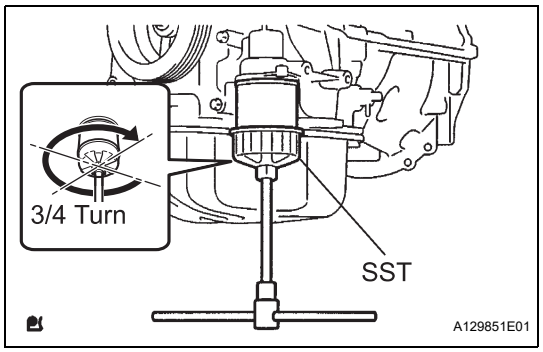
(a) Using a 12 mm hexagon wrench, install the oil filter union.
Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)

54. INSTALL OIL FILTER SUB-ASSEMBLY

(a) Check and clean the oil filter installation surface.
(b) Apply clean engine oil to the gasket of a new oil filter.
(c) Lightly screw the oil filter into place, and tighten it until the gasket contacts the seat.

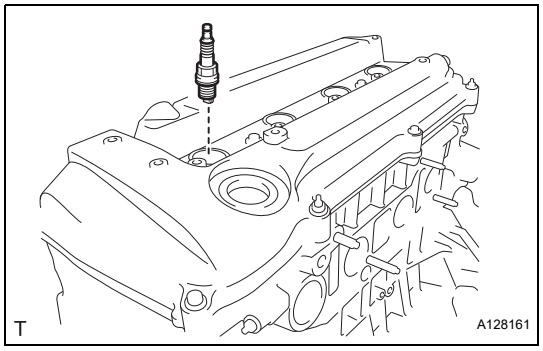


(d) When using a torque wrench:
(1) Using SST, tighten the oil filter.
SST 09228-06501
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)

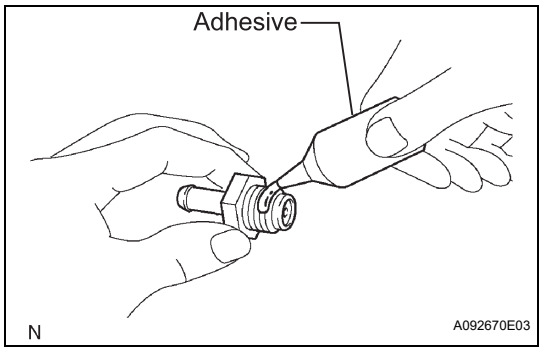


(e) When not using a torque wrench:
(1) Using SST, tighten it an additional 3/4 turn.
SST 09228-06501

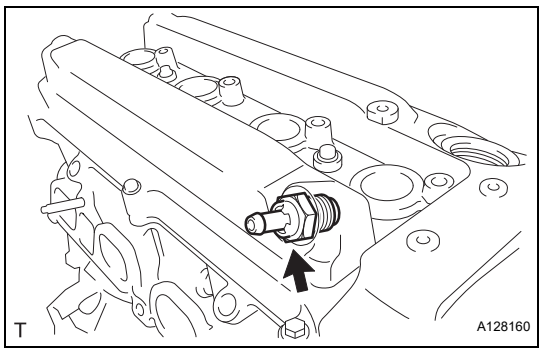
EM



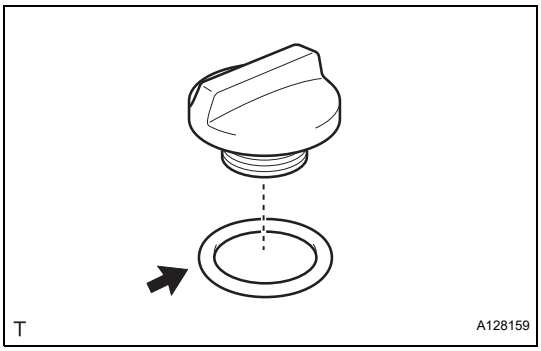
55. INSTALL SPARK PLUG
(a) Install the spark plugs.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)



56. INSTALL VENTILATION VALVE SUB-ASSEMBLY
(a) Apply adhesive to the threads of the ventilation valve.

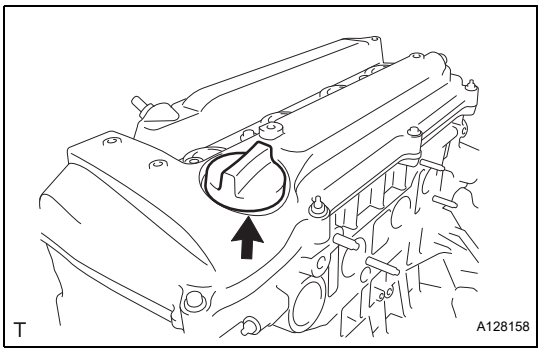


(b) Install the ventilation valve.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
Adhesive:
Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent



57. INSTALL OIL FILLER CAP GASKET

(a) Install a new gasket to the cap.



58. INSTALL OIL FILLER CAP SUB-ASSEMBLY

(a) Install the oil filler cap.

ON-VEHICLE INSPECTION

1. CHECK FUEL PUMP OPERATION AND FOR FUEL LEAKS

(a) Check fuel pump operation.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the power switch on (IG) and turn the intelligent tester main switch on.
  NOTICE:
  Do not start the engine.
  (3) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.

(b) Check the fuel pump operation.
  (1) Check for pressure in the fuel inlet tube from the fuel line. Check that sound of fuel flowing in the fuel tank can be heard. If no sound can be heard, check the integration relay, fuel pump, ECM and wiring connector.

(c) Check for fuel leaks.
  (1) Check that there are no fuel leaks from any part of the fuel system after performing maintenance. If there is a fuel leak, repair or replace the parts as necessary.

(d) Turn the power switch off.

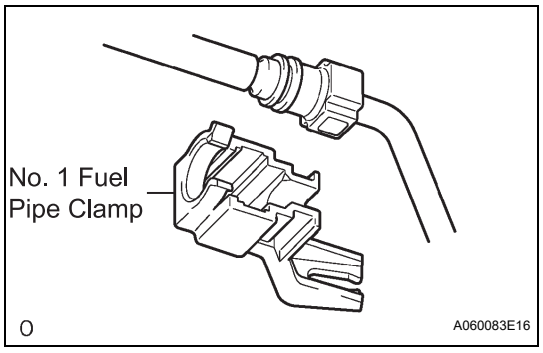
(e) Disconnect the intelligent tester from the DLC3.

2. CHECK FUEL PRESSURE

(a) Check that the battery positive voltage is above 12 V.

(b) Discharge the fuel system pressure (See page FU-1).

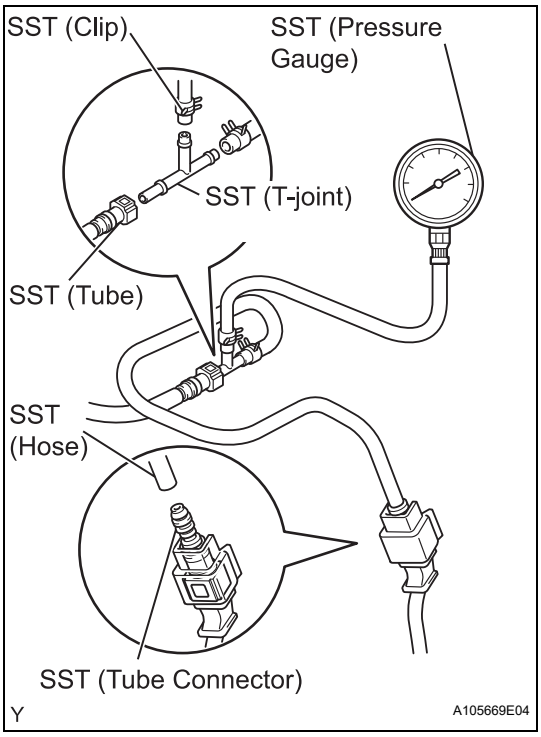
(c) Disconnect the cable from the negative (-) battery terminal.



(d) Remove the No. 1 fuel pipe clamp from the fuel tube connector.

(e) Disconnect the fuel hose from the fuel main tube.
CAUTION:
- **Always read the precautions (See page FU-1) before disconnecting the fuel tube connector (quick type).**
- **Fuel may be sprayed from the fuel pipe line as a result of retained pressure that remains in the line. Do not allow fuel to be sprayed in the engine compartment.**

FU



(f) Install SST (pressure gauge) and the fuel tube connector using SST as shown in the illustration.
SST 09268-31011 (09268-41500, 90467-13001, 95336-08070), 09268-45014 (09268-41200, 09268-41220, 09268-41250)

(g) Wipe up any gasoline.

(h) Connect the cable to the negative (-) battery terminal.

(i) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.

(j) Measure the fuel pressure.
Fuel pressure:

304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)

If the pressure is high, replace the fuel pressure regulator.
If the pressure is low, check the fuel hoses and connections, fuel pump, fuel filter and fuel pressure regulator.

(k) Disconnect the intelligent tester from the DLC3.

(l) Start the engine.

(m) Measure the fuel pressure at idle.
Fuel pressure:

304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)

(n) Stop the engine.

(o) Check that the fuel pressure remains as specified for 5 minutes after the engine has stopped.
Fuel pressure:

147 kPa (1.5 kgf/cm^2, 21 psi) or more

If the pressure is not as specified, check the fuel pump, pressure regulator and/or injectors.

(p) After checking the fuel pressure, disconnect the cable from the negative (-) battery terminal and carefully remove the SST to prevent gasoline from splashing.

(q) Reconnect the fuel main tube (fuel tube connector).
CAUTION:
Always read the precautions (See page FU-1) before connecting the fuel tube connector (quick type).

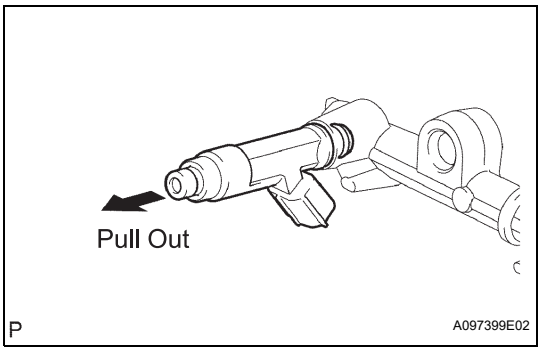
(r) Install the No. 1 fuel pipe clamp to the fuel tube connector.

(s) Check for fuel leaks (Step 1).

3. PERFORM INITIALIZATION

(a) Perform initialization procedure (See page IN-43).
HINT:
Some systems need initialization after reconnecting the cable to the negative battery terminal.

FU



8. REMOVE FUEL INJECTOR ASSEMBLY

(a) Pull out the 4 injectors from the delivery pipe.

(b) Remove the 4 O-rings from the injectors.

INSPECTION

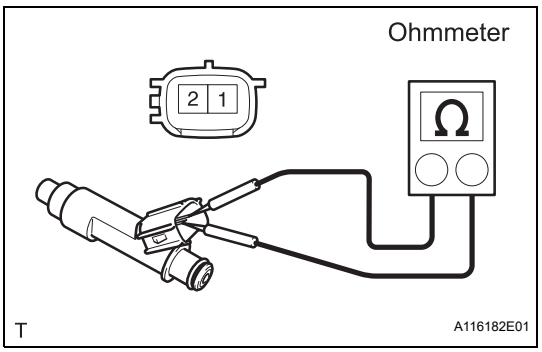
1. INSPECT FUEL INJECTOR ASSEMBLY

(a) Measure the resistance between the injector terminals.

Standard resistance:

11.6 to 12.4 Ω at 20°C (68°F)

If the result is not as specified, replace the injector.



(b) Inspect the injector injection volume.

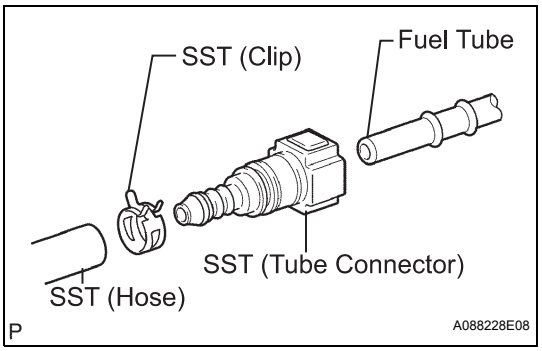
CAUTION:

Keep the injector away from sparks during this test.

(1) Connect SST (fuel tube connector) to SST (hose), then connect them to the fuel pipe (vehicle side).

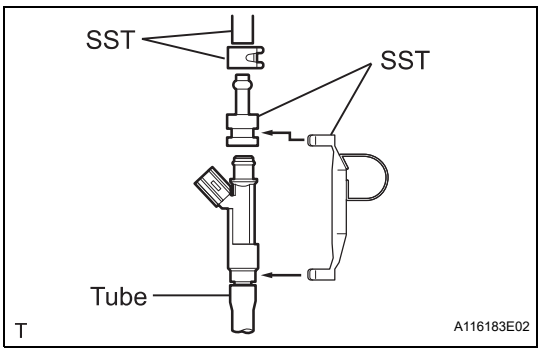
SST 09268-31011 (09268-41500, 90467-13001, 95336-08070)

(2) Install the O-ring to the fuel injector.



(3) Connect SST (adapter and hose) to the injector, and hold the injector and union with SST (clamp).

SST 09268-31011 (09268-41110, 09268-41300, 90467-13001)



(4) Put the injector into the graduated cylinder.

CAUTION:

Install a suitable vinyl tube onto the injector to contain gasoline spray.

(5) Operate the fuel pump.

(6) Connect SST (wire) to the injector and the battery for 15 seconds, and measure the injection volume with the graduated cylinder. Test each injector 2 or 3 times.

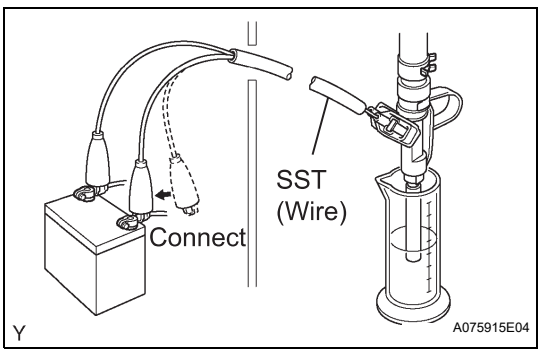
SST 09842-30080

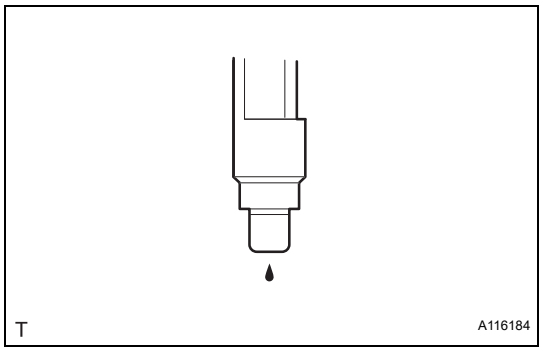
Standard injection volume:

76 to 92 cm^3 (4.6 to 5.6 cu in.) per 15 seconds

Standard difference between each injector:

16 cm^3 (0.98 cu in.) or less



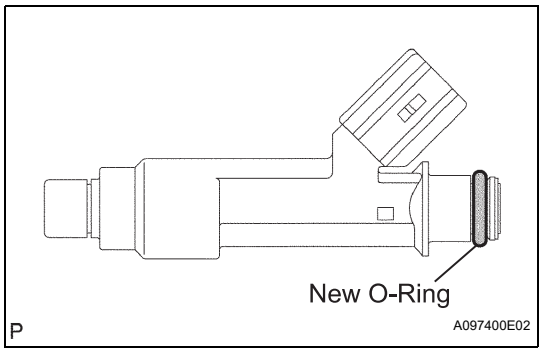


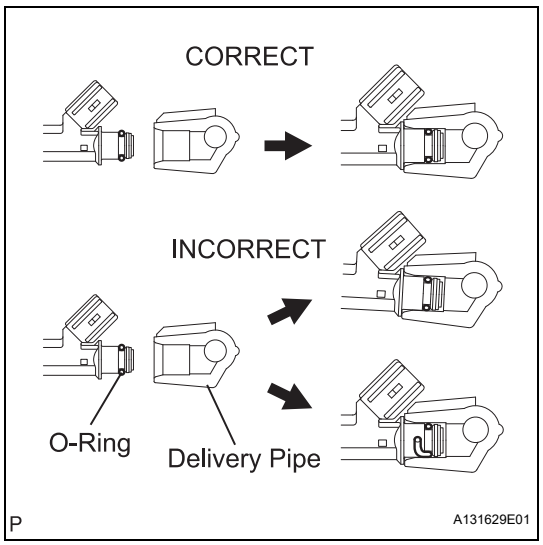
(c) Inspect the fuel leakage.
(1) Disconnect the SST (wire) tester probes from the battery and check the fuel leakage from the injector.
Standard fuel drop:
1 drop or less per 12 minutes
(2) Turn the power switch off.
(3) Disconnect the cable from the negative (-) battery terminal.
(4) Remove the SST.
(5) Disconnect the intelligent tester from the DLC3.
(6) Reconnect the fuel inlet hose (rear fuel pipe) to the fuel main tube.

INSTALLATION

1. INSTALL FUEL INJECTOR ASSEMBLY

(a) Apply a light coat of gasoline or spindle oil to new O-rings, then install them to each fuel injector.

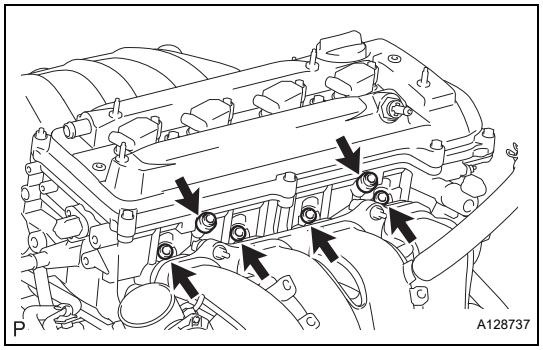


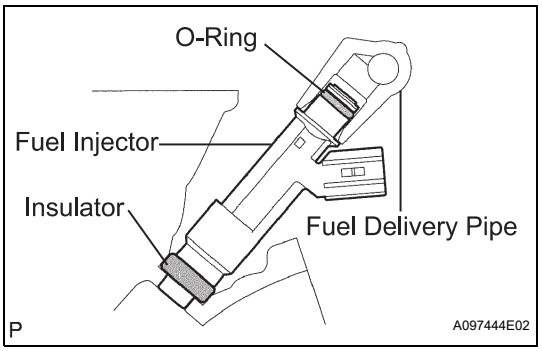


(b) Apply a light coat of gasoline or spindle oil to the part of the fuel delivery pipe which comes into contact with the O-ring of the fuel injector.
(c) Apply a light coat of gasoline or spindle oil to the O-ring again, then install the right and left fuel injectors onto the fuel delivery pipe.
NOTICE:
Make sure that the O-ring is not cracked or jammed before installing the injector.
(d) Check that the fuel injector rotates smoothly. If the fuel injector does not rotate, replace the O-ring.

2. INSTALL FUEL DELIVERY PIPE WITH INJECTOR

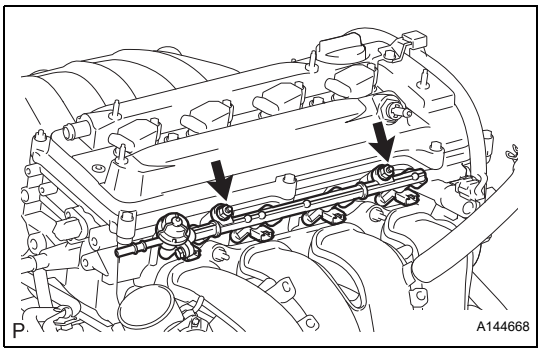
(a) Install 4 new insulators into the cylinder head.
(b) Install the 2 delivery pipe spacers onto the cylinder head.



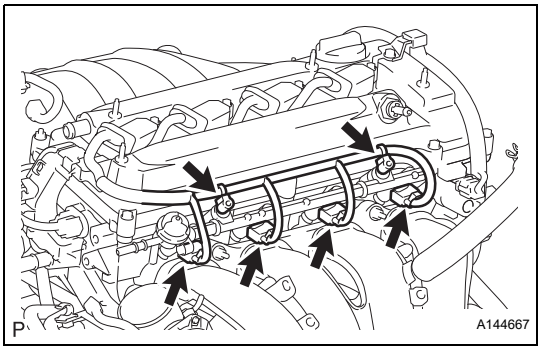


(c) Install the fuel delivery pipe together with the 4 fuel injectors, then temporarily tighten the 2 bolts.
NOTICE:
Be careful not to drop the fuel injectors when installing the fuel delivery pipe.

(d) Check that the fuel injector rotates smoothly.
If the fuel injector does not rotate smoothly, replace the O-ring.

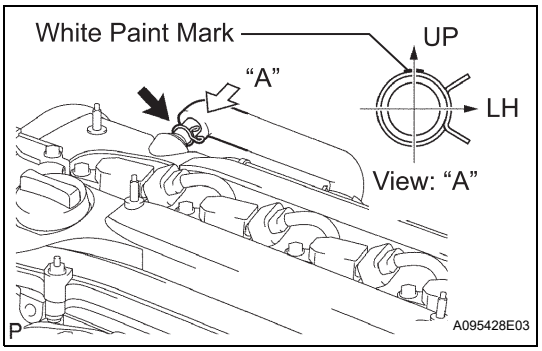


(e) Tighten the 2 bolts to the specified torque.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)



(f) Connect the 4 fuel injector connectors.

(g) Install the 2 wire harness clamps.

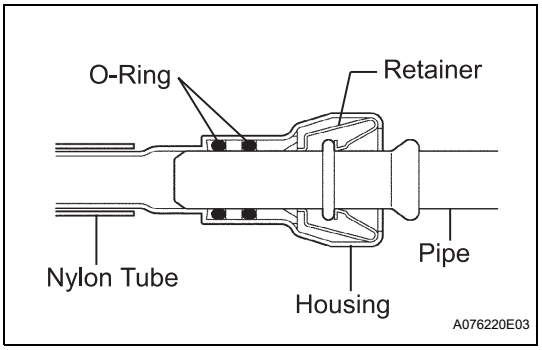


3. INSTALL NO. 2 VENTILATION HOSE

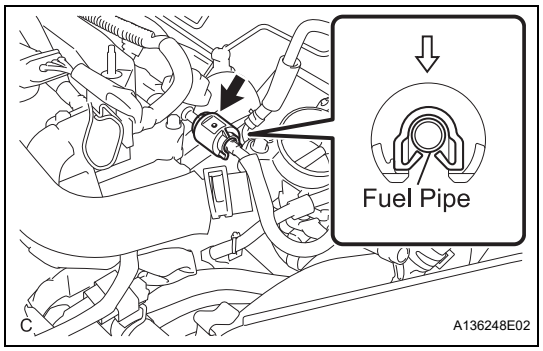
(a) Connect the ventilation hose to the ventilation valve.
NOTICE:
Make sure that the paint mark and hose clamp are positioned as shown in the illustration after connecting the hose.

4. CONNECT FUEL TUBE SUB-ASSEMBLY

(a) Connect the fuel tube.



(b) Push the fuel tube connector until it makes a "click" sound.



(c) Install the No. 2 fuel pipe clamp.
(d) Install the fuel tube to the fuel hose clamp.

5. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**

6. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

7. **INSPECT FOR FUEL LEAK**
HINT:
See page FU-9.

8. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**

9. **PERFORM INITIALIZATION**
(a) Perform initialization procedure (See page IN-43).
HINT:
Some systems need initialization after reconnecting the cable to the negative battery terminal.

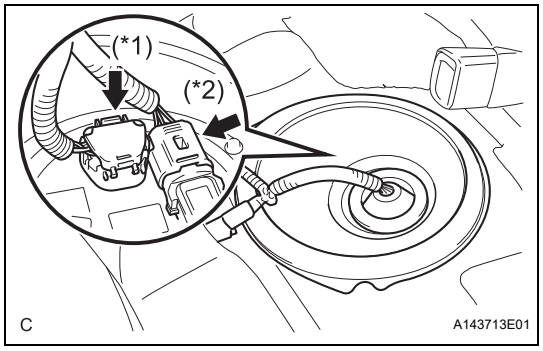
REMOVAL

1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.

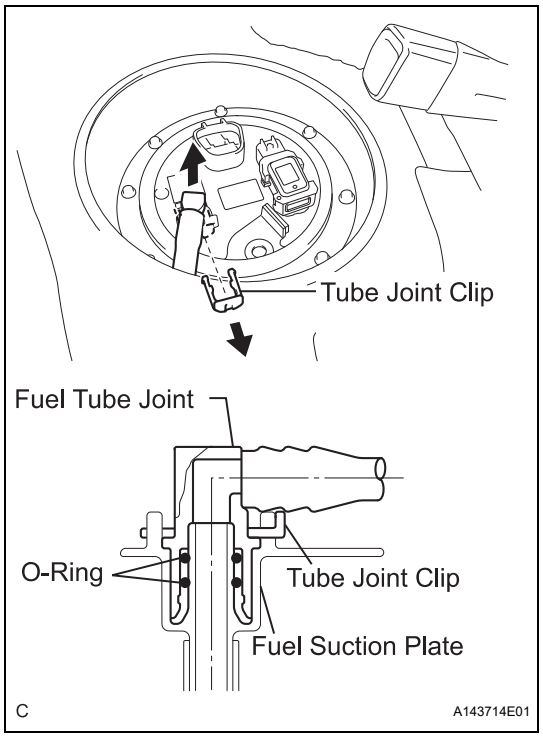
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**

3. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**

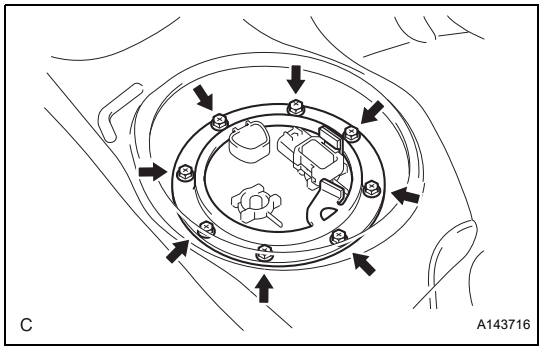
4. **REMOVE REAR FLOOR SERVICE HOLE COVER**
   (a) Remove the rear floor service hole cover.
   (b) Disconnect the fuel pump connector (*1).
   (c) Disconnect the vapor pressure sensor connector (*2).

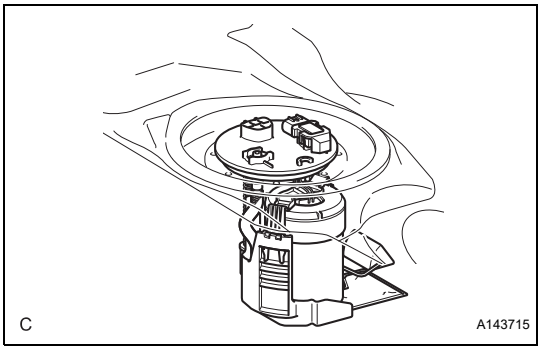


5. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY**
   (a) Remove the tube joint clip, and pull out the fuel pump tube.
   NOTICE:
   - **Check that there is no dirt around the fuel tube joint before removing it. Clean any dirt away.**
   - **It is necessary to prevent mud or dirt from entering the fuel tube joint. If mud or dirt gets in the joint, the O-rings may not seal the fuel tube connector and fuel suction plate properly.**
   - **Do not use any tools for this work.**
   - **Do not bend, kink or twist the nylon tubes.**
   - **After disconnecting, protect the fuel tube joint by connecting it with a plastic bag.**
   - **If the fuel tube joint and fuel suction plate are stuck, pinch the fuel tank tube between fingers, and turn it carefully to release it. Disconnect the fuel tank tube.**



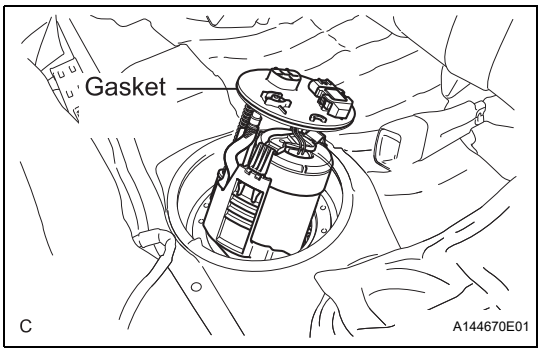
6. **REMOVE FUEL TANK VENT TUBE SET PLATE**
   (a) Remove the 8 bolts and vent tube set plate.





7. REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Pull out the fuel suction tube from the fuel tank.
NOTICE:
- **Do not damage the fuel pump filter.**
- **Be careful that the arm of the sender gauge does not bend.**



(b) Remove the gasket from the fuel suction tube.

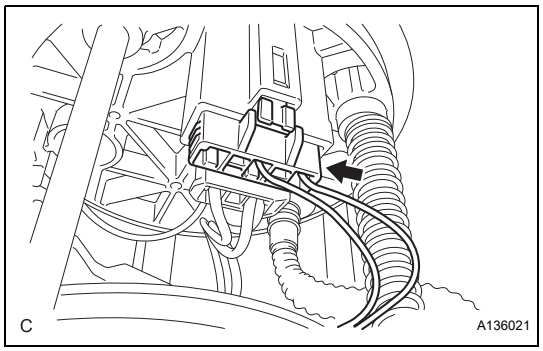
FU

DISASSEMBLY

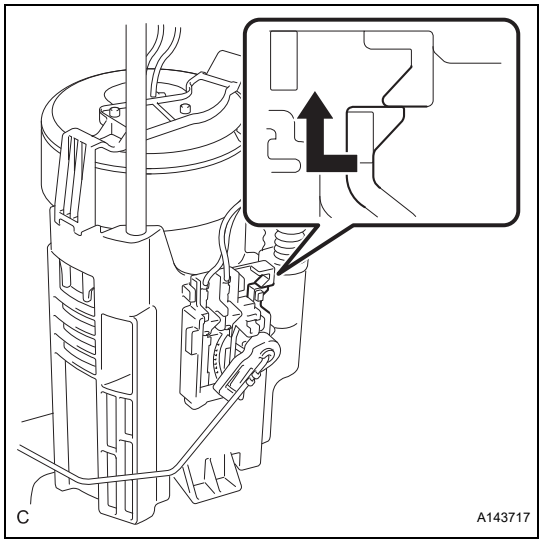
1. REMOVE VAPOR PRESSURE SENSOR ASSEMBLY

2. REMOVE FUEL SENDER GAUGE ASSEMBLY

(a) Disconnect the fuel sender gauge connector.

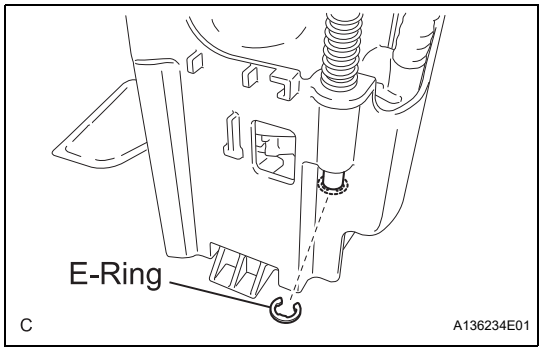


(b) Unlock the fuel sender gauge, and slide it to remove.

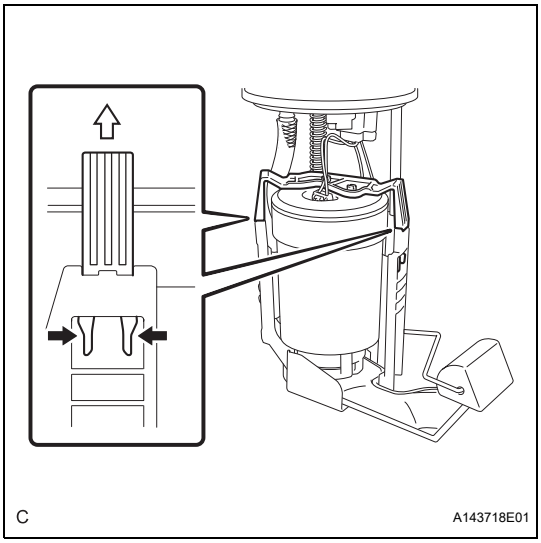


3. REMOVE FUEL NO. 1 TANK BAND BRACKET

(a) Using needle nozzle pliers, remove the E-ring.

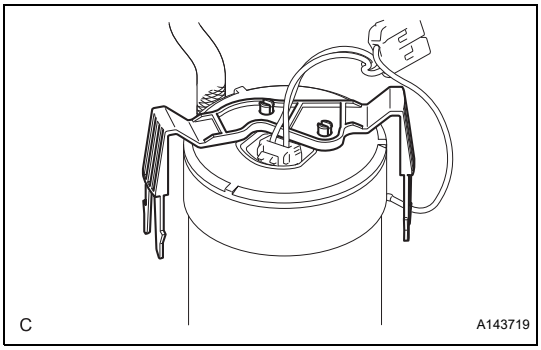


FU



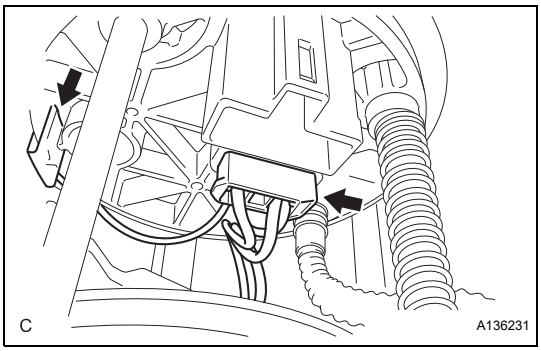
(b) Disengage the 4 claws of the fuel No. 1 suction support and remove the fuel No. 1 tank band bracket from the fuel suction plate with the fuel filter.
(c) Remove the spring from the fuel suction plate.

FU



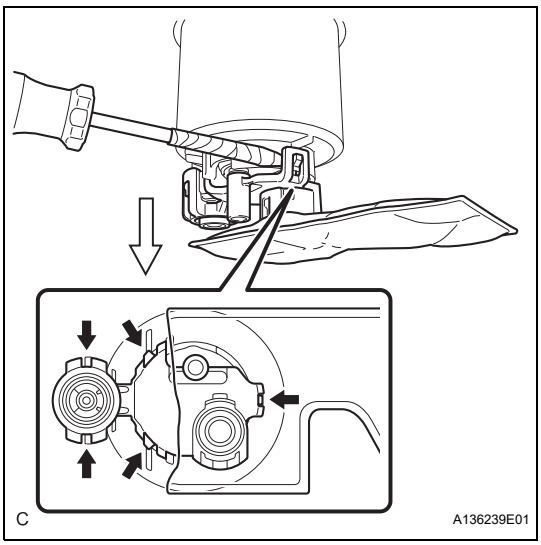
4. REMOVE FUEL NO. 1 SUCTION SUPPORT

(a) Using a screwdriver with its tip taped, disengage the claw and remove the fuel No. 1 suction support.



5. DISCONNECT FUEL PUMP HARNESS

(a) Disconnect the fuel pump harness connector from the fuel suction plate.

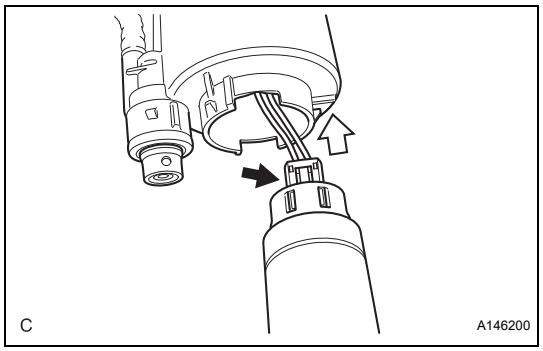


6. REMOVE FUEL PUMP

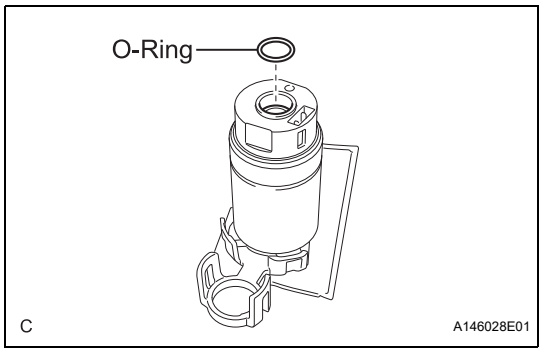
(a) Using a screwdriver with its tip taped, disengage the 5 claws and pull out the fuel pump from the fuel filter assembly.

NOTICE:

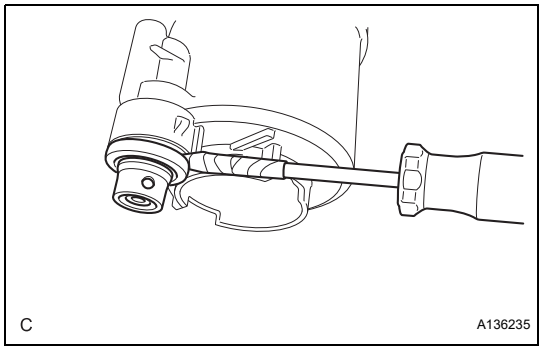
- **Do not damage the fuel pump filter.**
- **Do not remove the suction filter.**



(b) Remove the fuel pump harness connector.

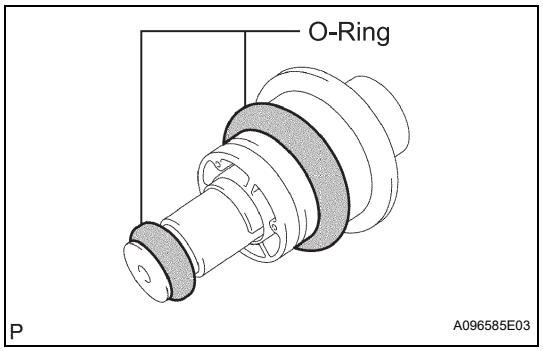


(c) Remove the O-ring from the fuel pump.

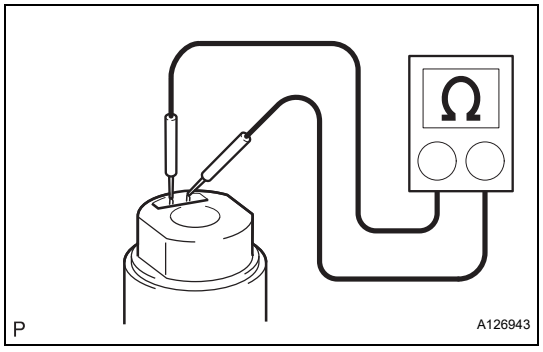


7. REMOVE FUEL PRESSURE REGULATOR ASSEMBLY

(a) Using a screwdriver with its tip taped, remove the fuel pressure regulator from the fuel filter.



(b) Remove the 2 O-rings from the fuel pressure regulator.



INSPECTION

1. INSPECT FUEL PUMP

(a) Check the fuel pump resistance.

(1) Measure the resistance between terminals 1 and 2.

Standard resistance:

0.2 to 3.0 Ω at 20°C (68°F)

If the result is not as specified, replace the fuel pump.

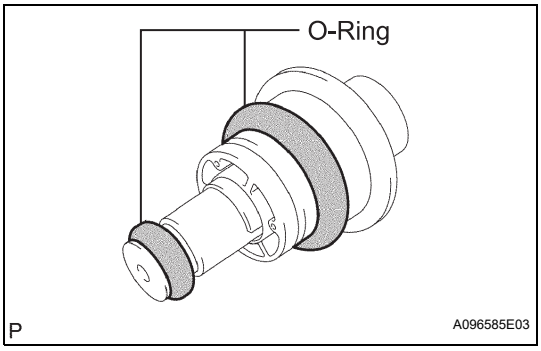
(b) Check fuel pump operation.
(1) Apply battery voltage to terminals 1 and 2. Check that the pump operates.
NOTICE:
- **These tests must be completed within 10 seconds to prevent the coil from burning out.**
- **Keep the fuel pump as far away from the battery as possible.**
- **Always switch the voltage on and off on the battery side, not on the fuel pump side.**

If the pump does not operate, replace the fuel pump.

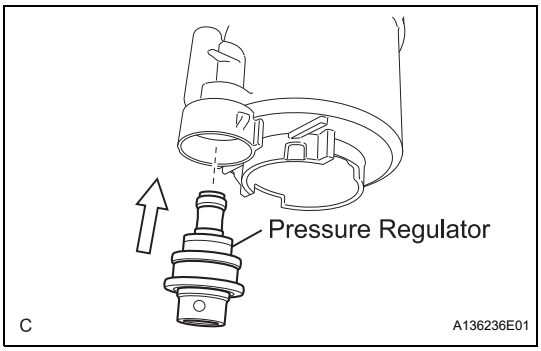
REASSEMBLY

1. INSTALL FUEL PRESSURE REGULATOR ASSEMBLY

(a) Apply a light coat of gasoline to 2 new O-rings, and install them to the fuel pressure regulator.

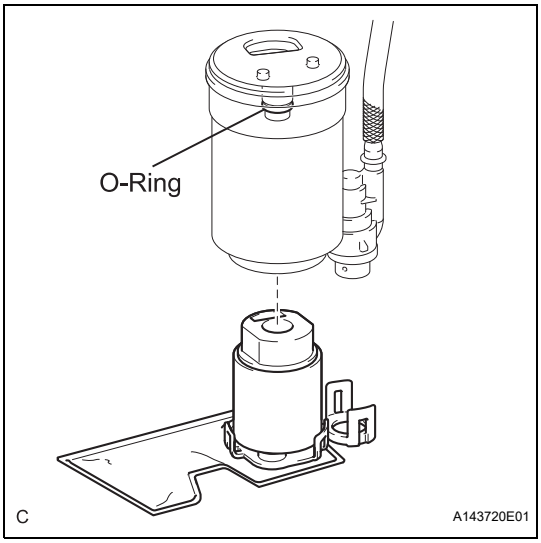


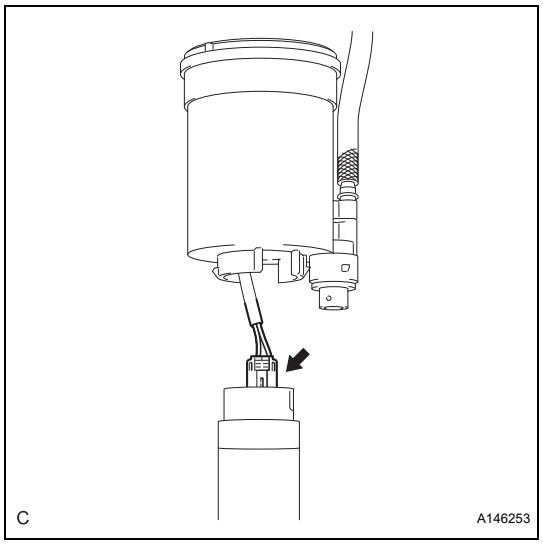
(b) Install the fuel pressure regulator to the fuel filter.



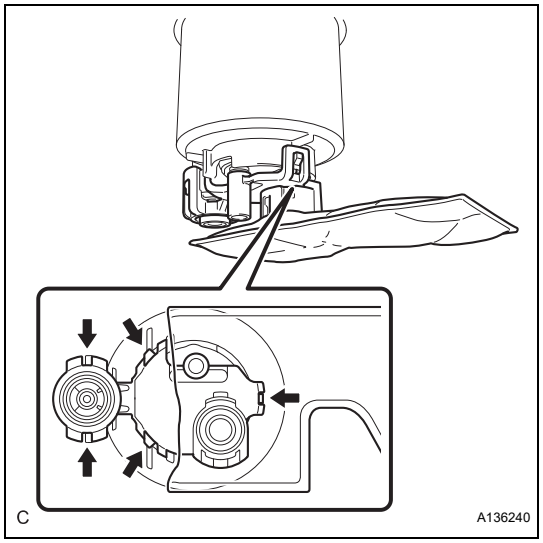
2. INSTALL FUEL PUMP

(a) Apply gasoline to a new O-ring and install it to the fuel filter.



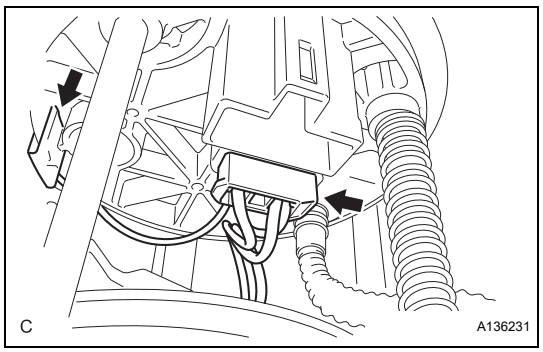


(b) Connect the fuel pump harness connector.



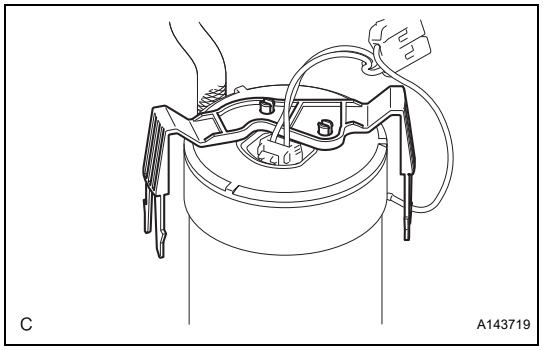
(c) Engage the 5 claws on the fuel filter and install the fuel pump with the pump filter.

FU



3. CONNECT FUEL PUMP HARNESS

(a) Connect the fuel pump harness connector to the fuel suction plate.

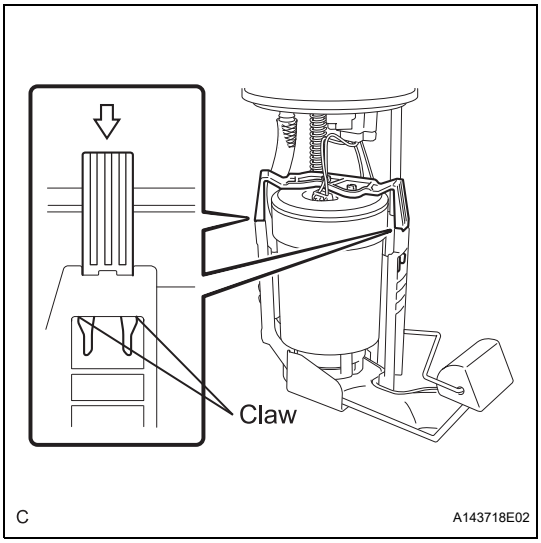


4. INSTALL FUEL NO. 1 SUCTION SUPPORT

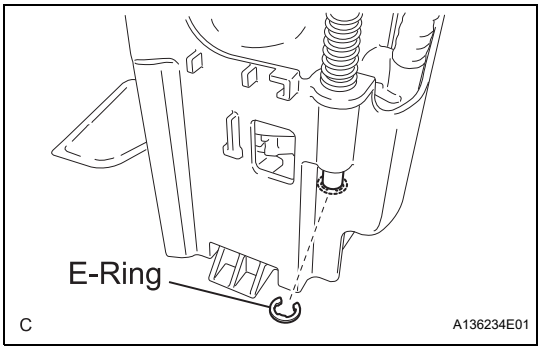
(a) Install the fuel No. 1 suction support to the fuel filter.

5. INSTALL FUEL NO. 1 TANK BAND BRACKET

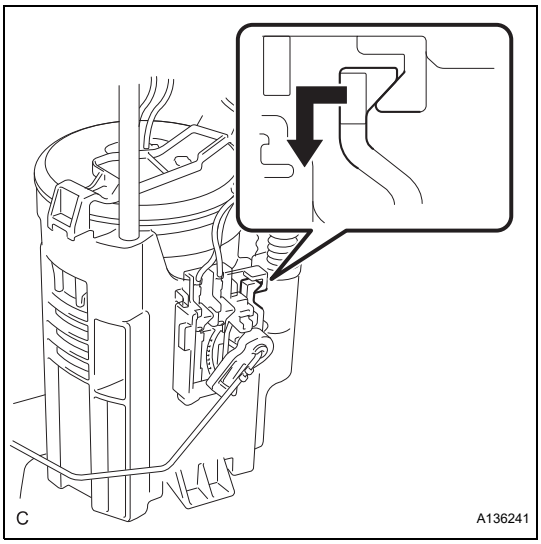
(a) Install the spring to the fuel suction plate shaft and install them to the fuel No. 1 tank band bracket.



(b) Engage the 4 claws of the fuel No. 1 suction support and install the fuel No. 1 tank band bracket to the fuel suction plate with the fuel filter.

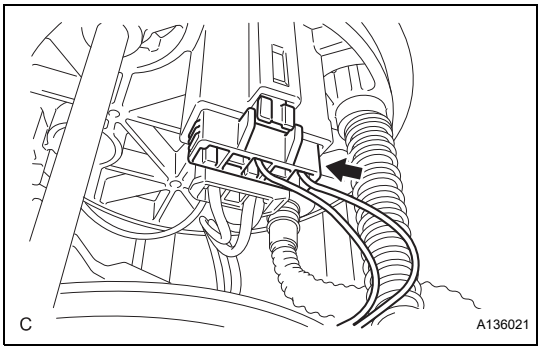


(c) Install a new E-ring.



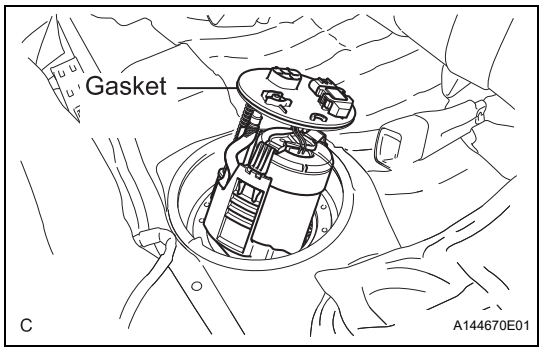
6. INSTALL FUEL SENDER GAUGE ASSEMBLY

(a) Slide the fuel sender gauge to engage the claw.



(b) Connect the fuel sender gauge connector.

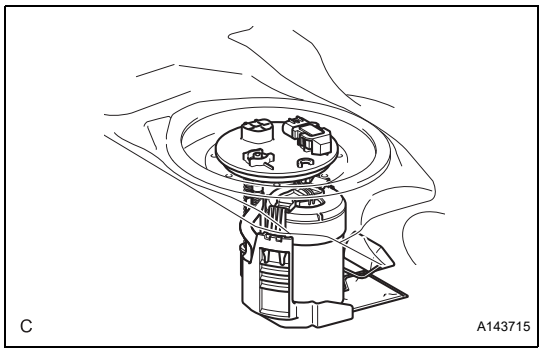
7. INSTALL VAPOR PRESSURE SENSOR ASSEMBLY



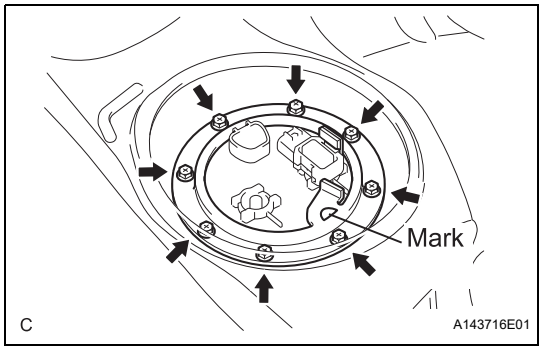
INSTALLATION

1. INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE

(a) Install a new gasket to the fuel suction tube.



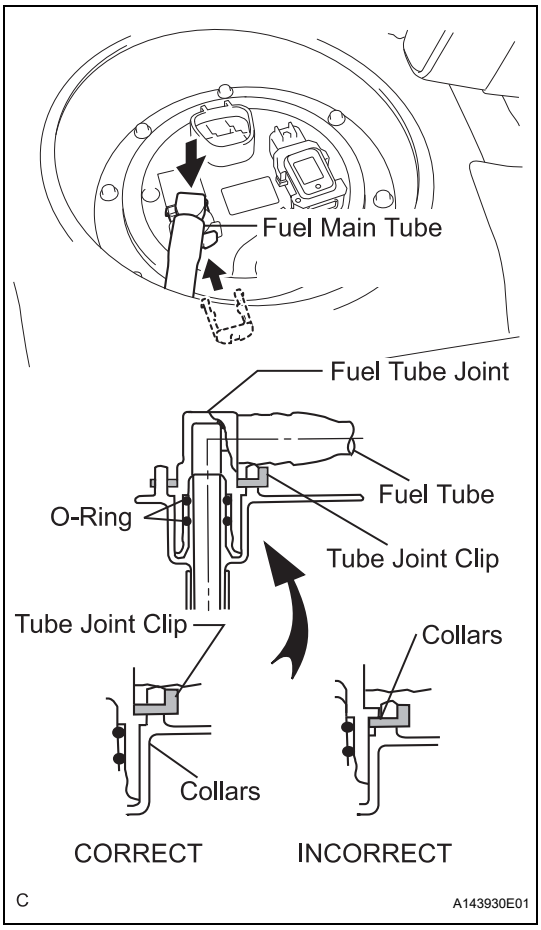
(b) Install the fuel suction tube.
NOTICE:
- **Do not damage the fuel pump filter.**
- **Be careful that the arm of the sender gauge does not bend.**



2. INSTALL FUEL TANK VENT TUBE SET PLATE

(a) Align the mark of the set plate with the fuel suction tube.

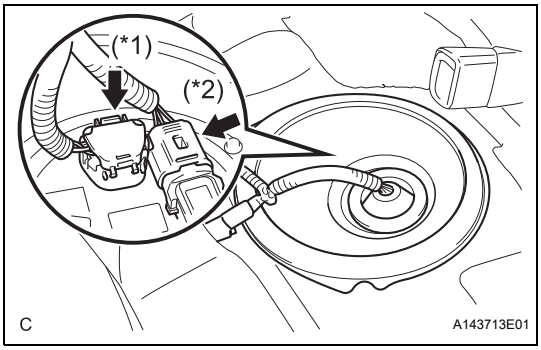
(b) Install the set plate with the 8 bolts.
Torque: 5.9 N*m (60 kgf*cm, 52 in.*lbf)



3. **CONNECT FUEL PUMP TUBE SUB-ASSEMBLY**
   (a) Install the fuel pump tube with the tube joint clip.
   NOTICE:
   - **Check that there are no scratches or foreign objects on the connecting part.**
   - **Check that the fuel tube joint is inserted securely.**
   - **Check that the tube joint clip is on the collar of the fuel tube joint.**
   - **After installing the tube joint clip, check that the fuel tube joint is pulled off.**

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

5. **INSPECT FOR FUEL LEAK (See page FU-9)**



6. **INSTALL REAR FLOOR SERVICE HOLE COVER**
   (a) Connect the vapor pressure sensor connector (*2).
   (b) Connect the fuel pump connector (*1).
   (c) Install the rear floor service hole cover with new butyl tape.

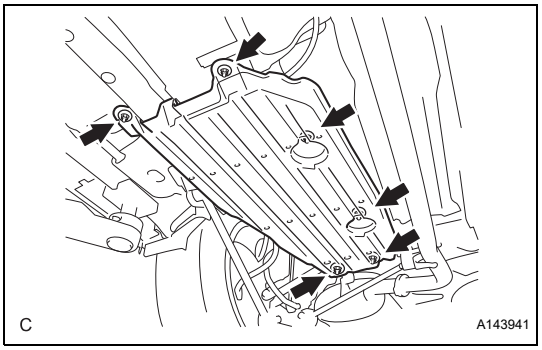
7. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**

8. **PERFORM INITIALIZATION**
   (a) Perform initialization procedure (See page IN-43).
   HINT:
   Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

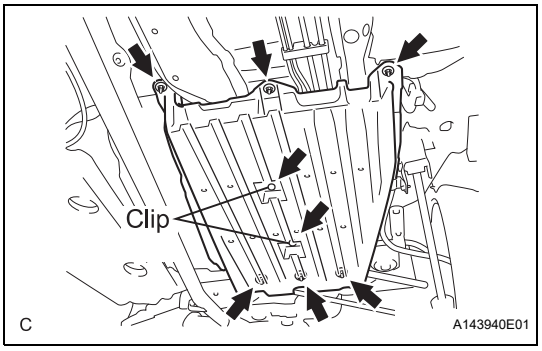
FU

REMOVAL

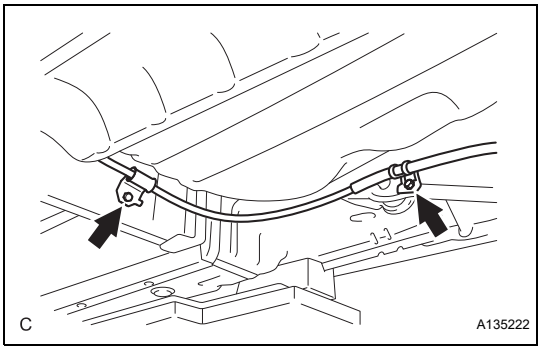
1. **DISCHARGE FUEL SYSTEM PRESSURE**
   HINT:
   See page FU-1.
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
4. **REMOVE REAR FLOOR SERVICE HOLE COVER (See page FU-23)**
5. **SEPARATE FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-23)**
6. **REMOVE FUEL TANK VENT TUBE SET PLATE (See page FU-23)**
7. **REMOVE FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-24)**
8. **DRAIN FUEL**
9. **REMOVE NO. 1 FLOOR UNDER COVER**
   (a) Loosen the 6 grommets and remove the No. 1 floor under cover.

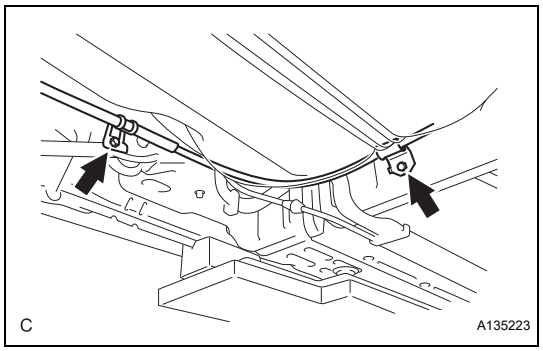


10. **REMOVE NO. 2 FLOOR UNDER COVER**
    (a) Remove the 2 clips.
    (b) Loosen the 6 grommets and remove the No. 2 floor under cover.
11. **REMOVE CENTER EXHAUST PIPE ASSEMBLY**
    HINT:
    See page EX-2.



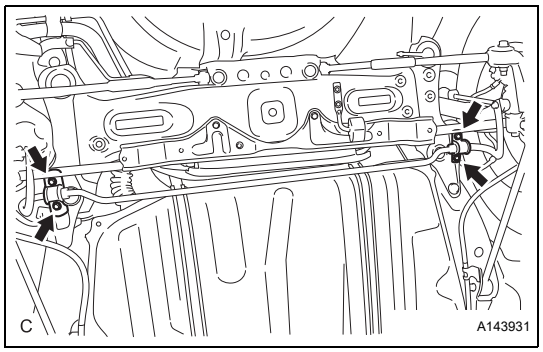
12. **DISCONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY**
    (a) Remove the set bolt and set nut of the No. 2 parking brake cable assembly.





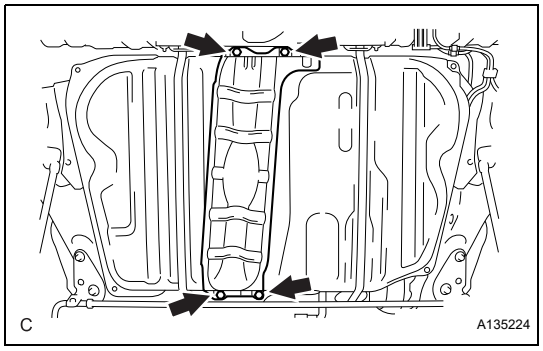
13. DISCONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Remove the set bolt and set nut of the No. 3 parking brake cable assembly.



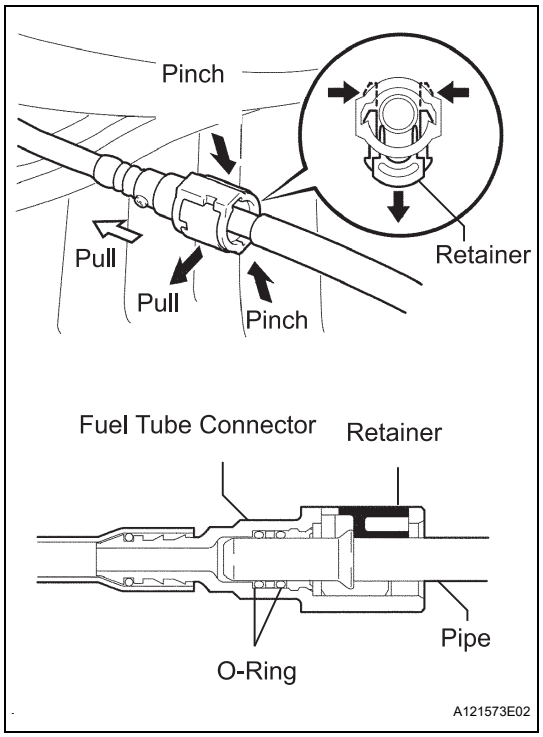
14. REMOVE REAR STABILIZER BAR NO. 1 BRACKET

(a) Remove the 4 bolts and 2 rear stabilizer bar No. 1 brackets.



15. REMOVE FUEL TANK PROTECTOR LOWER CENTER

(a) Remove the 4 bolts and fuel tank protector lower center.



16. REMOVE FUEL TANK ASSEMBLY

(a) Disconnect the fuel pump tube.

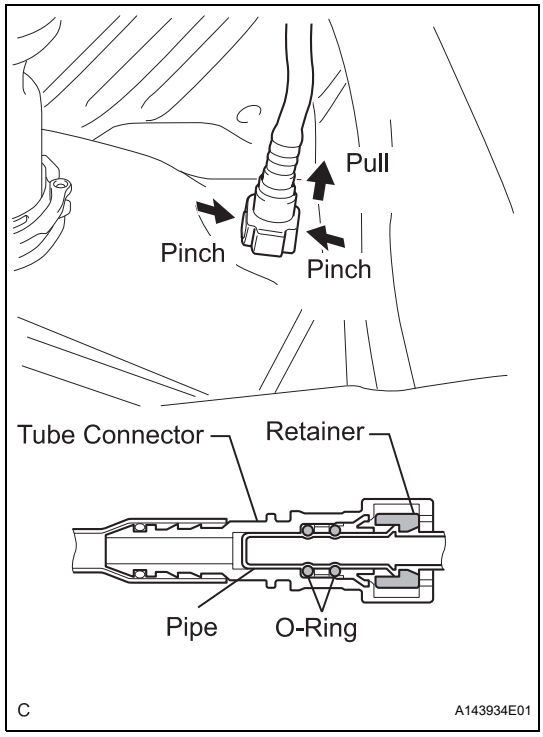
(1) Pinch the tab of the retainer to disengage the lock claws and pull it down as shown in the illustration.

(2) Pull out the fuel tank main tube.

NOTICE:

- **Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector as necessary.**
- **It is necessary to prevent mud or dirt from entering the quick connector. If mud or dirt gets in the connector, the O-rings may not seal properly.**
- **Remove the quick connector by hand.**
- **Do not bend, kink or twist the nylon tubes. Protect the connector by covering it with a plastic bag.**

- **If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.**

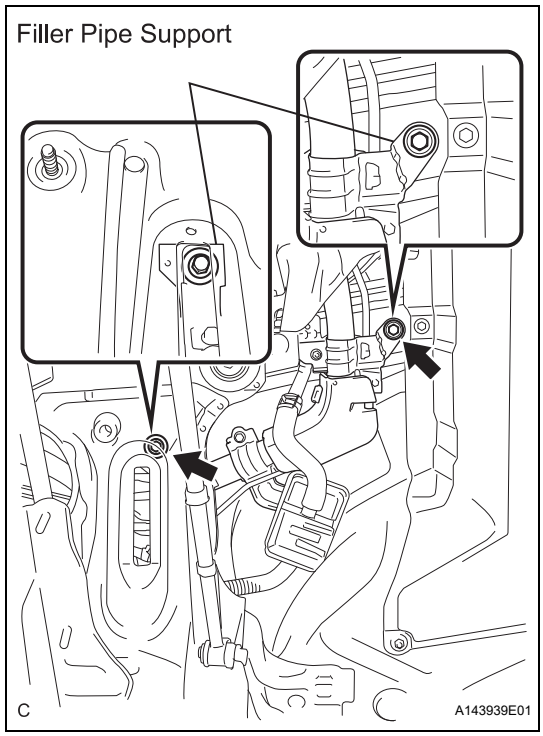


(b) Disconnect the No. 1 fuel tube.

(1) Pinch the tube connector and then pull out the No. 1 fuel tube.

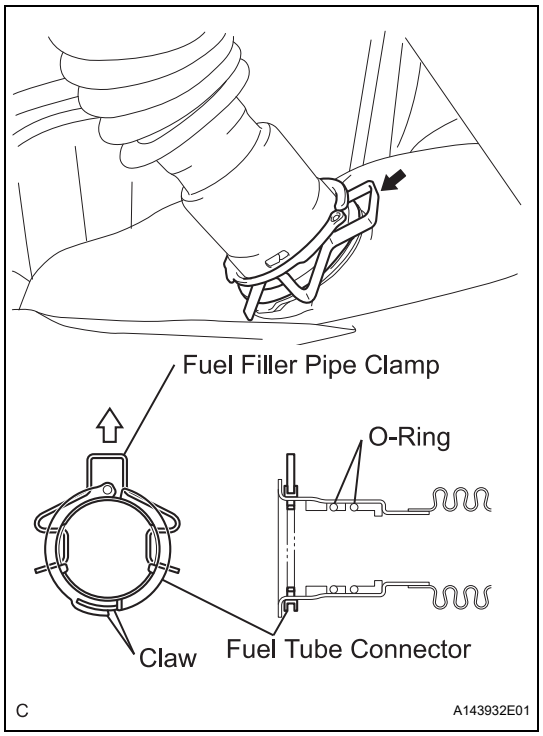
NOTICE:

- **Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector as necessary.**
- **It is necessary to prevent mud or dirt from entering the quick connector. If mud or dirt gets in the connector, the O-rings may not seal properly.**
- **Remove the quick connector by hand.**
- **Do not bend, kink or twist the nylon tubes. Protect the connector by covering it with a plastic bag.**
- **If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.**



(c) Disconnect the fuel filler pipe.

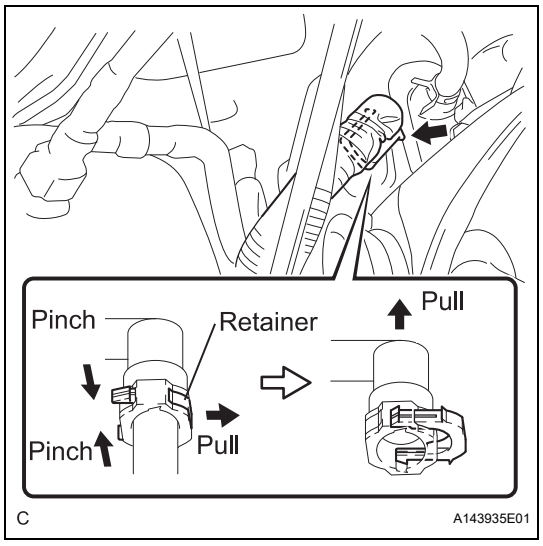
(1) Remove the 2 bolts from the fuel tank filler pipe support.



(2) Remove the fuel filler pipe clamp.

NOTICE:

- **Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector if necessary.**
- **It is necessary to prevent mud or dirt from entering the fuel filler pipe. If mud or dirt gets in the fuel filler pipe, the O-rings may not seal properly.**
- **Remove the fuel filler pipe by hand.**
- **Protect the fuel filler pipe by covering it with a plastic bag.**
- **If the fuel filler pipe and fuel tank are stuck, carefully try wiggling or pushing and pulling on the fuel filler pipe to release it. Pull the fuel filler pipe off the fuel tank carefully.**



(d) Disconnect the fuel tank vent hose from the charcoal canister.

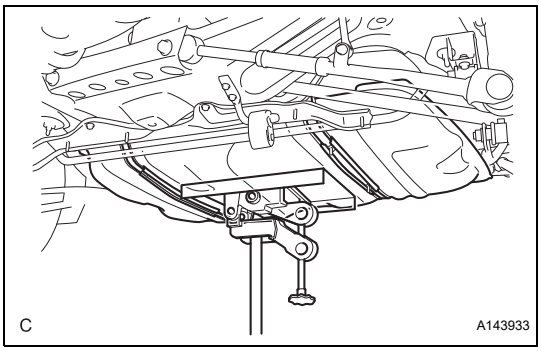
(1) Pinch the tab of the retainer to disengage the lock claws and pull it down as shown in the illustration.

(2) Pull out the fuel tank vent hose from the charcoal canister.

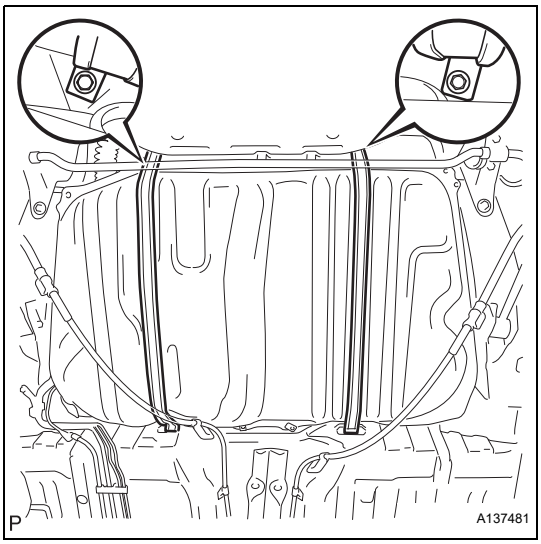
NOTICE:

- **Check that there is no dirt or other foreign objects around the connector before disconnecting it. Clean the connector as necessary.**
- **It is necessary to prevent mud or dirt from entering the quick connector. If mud or dirt gets in the connector, the O-rings may not seal properly.**
- **Remove the quick connector by hand.**
- **Do not bend, kink or twist the nylon tubes. Protect the connector by covering it with a plastic bag.**
- **If the pipe and connector are stuck, carefully try wiggling or pushing and pulling on the connector to release it. Pull the connector off the pipe carefully.**

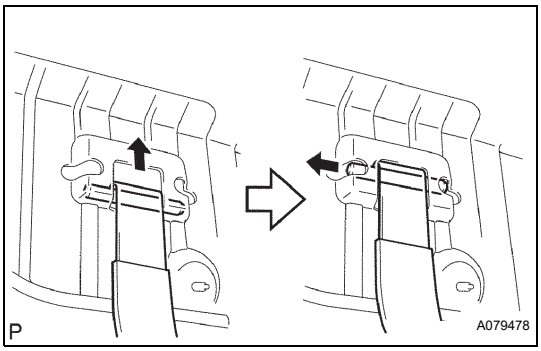
FU



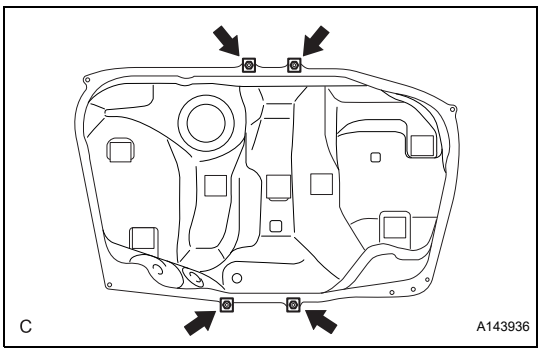
(e) Place an engine lifter under the fuel tank assembly.



(f) Remove the 2 set bolts of the fuel tank bands.
(g) Slightly lower the transmission jack.
(h) Remove the fuel tank.

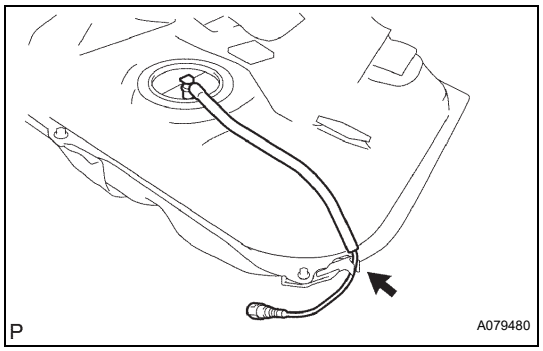


(i) Remove the 2 pins and 2 fuel tank bands as shown in the illustration.



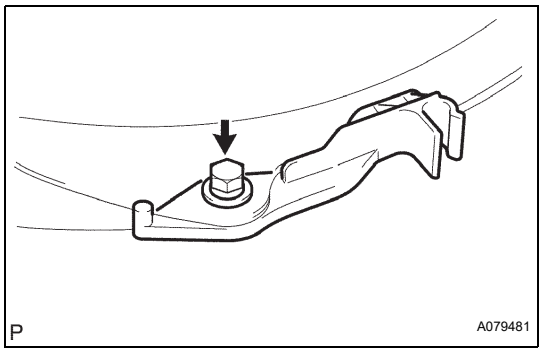
(j) Remove the 4 clip nuts.

17. **REMOVE FUEL VAPOR CONTAINMENT VALVE (See page EC-29)**
18. **REMOVE FUEL SOLENOID VALVE RETURN BRACKET (See page EC-30)**
19. **REMOVE NO. 1 FUEL TUBE CLAMP (See page EC-30)**



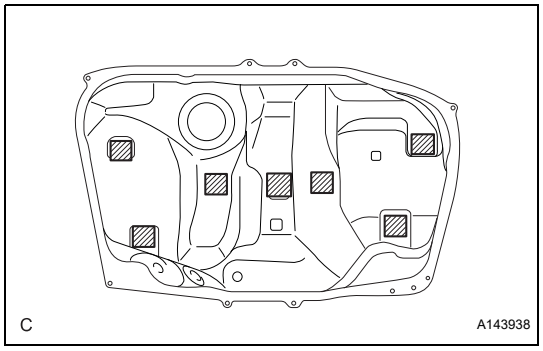
20. REMOVE FUEL PUMP TUBE SUB-ASSEMBLY

(a) Remove the fuel pump tube from the fuel main tube support.



21. REMOVE FUEL MAIN TUBE SUPPORT

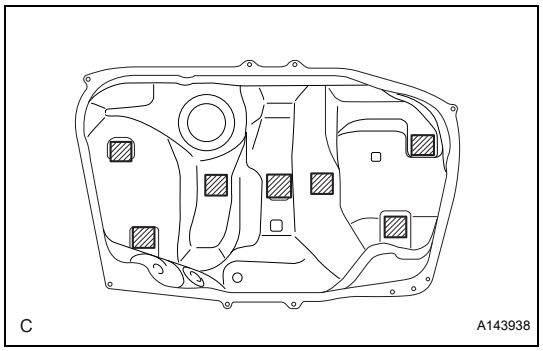
(a) Remove the bolt and tube support.



22. REMOVE NO. 2 FUEL TANK CUSHION

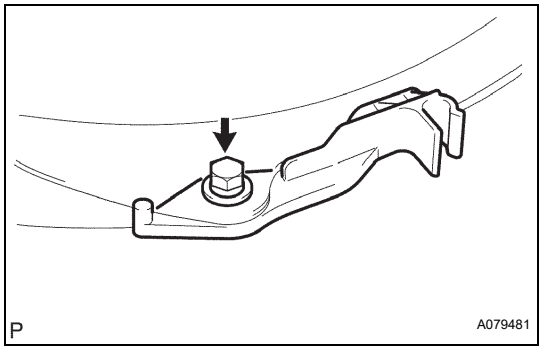
(a) Remove the 7 No. 2 fuel tank cushions.

INSTALLATION



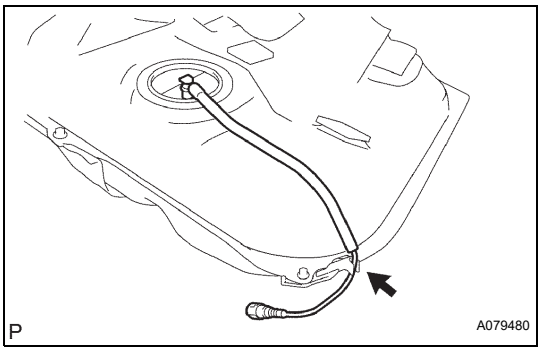
1. INSTALL NO. 2 FUEL TANK CUSHION

(a) Install 7 new No. 2 fuel tank cushions to the fuel tank.

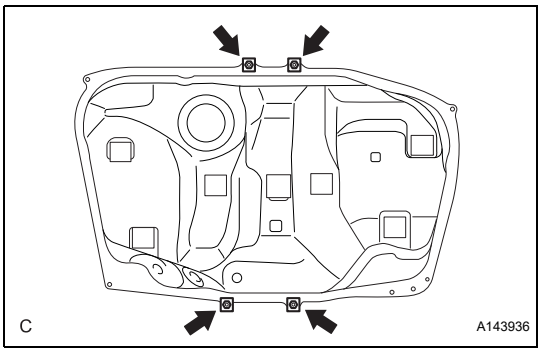


2. INSTALL FUEL MAIN TUBE SUPPORT

(a) Install the fuel main tube support with the bolt.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



3. **INSTALL FUEL PUMP TUBE SUB-ASSEMBLY**
   (a) Install the fuel pump tube to the fuel main tube support.
4. **INSTALL NO. 1 FUEL TUBE CLAMP (See page EC-30)**
5. **INSTALL FUEL SOLENOID VALVE RETURN BRACKET (See page EC-30)**
6. **INSTALL FUEL VAPOR CONTAINMENT VALVE (See page EC-31)**

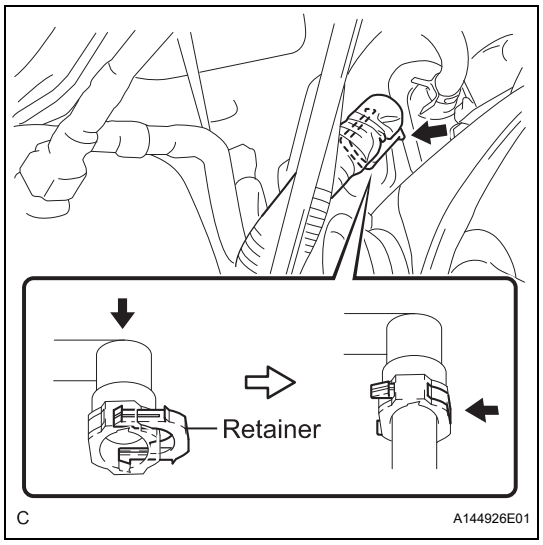


7. **INSTALL FUEL TANK ASSEMBLY**
   (a) Install the 4 clip nuts.

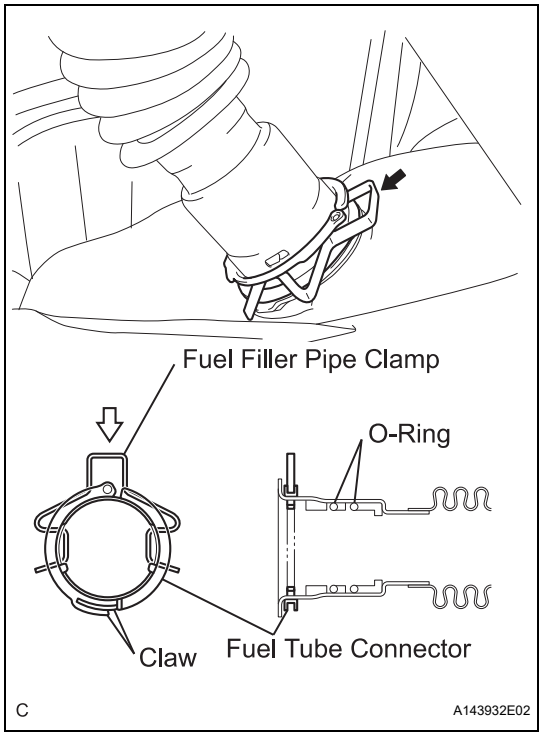
   (b) Install the 2 fuel tank bands with the 2 pins.
   (c) Set the fuel tank assembly onto the transmission jack.
   (d) Raise the transmission jack.
   NOTICE:
   Slowly raise the jack to prevent the fuel tank assembly from dropping.

   (e) Tighten the 2 set bolts of the fuel tank bands.
   Torque: 39 N*m (400 kgf*cm, 29 ft.*lbf)

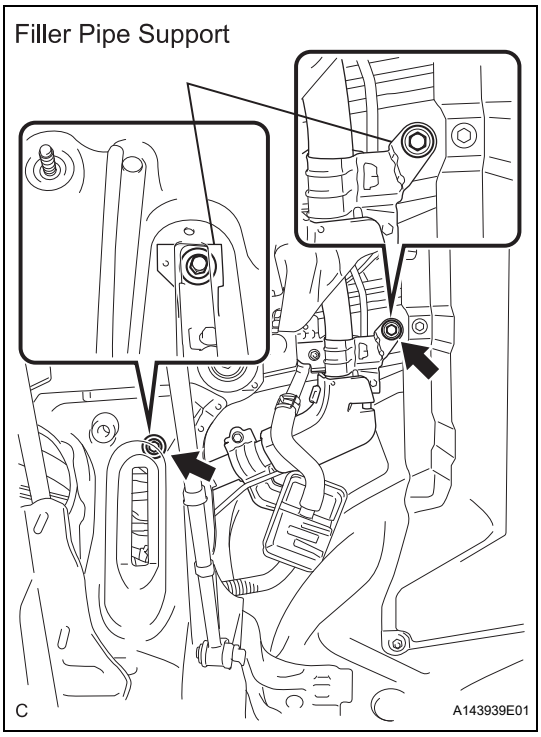
FU



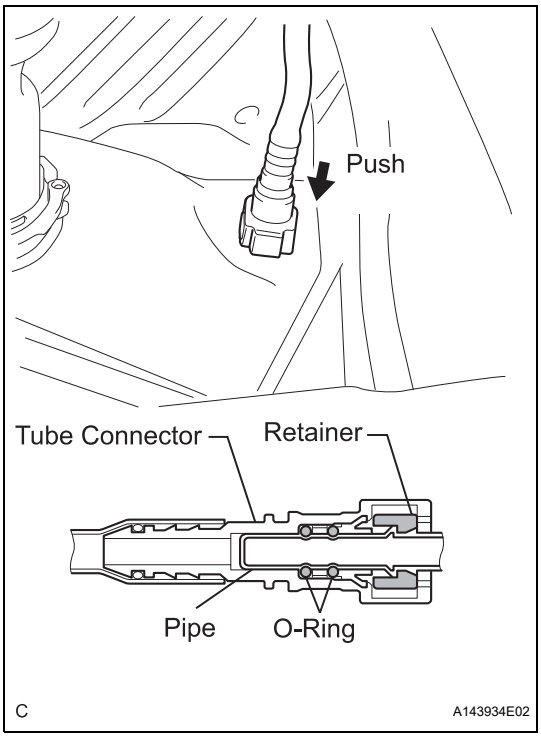
(f) Connect the fuel tank vent hose to the charcoal canister.
(1) Push the quick connector into the pipe and push up the retainer so that the claws engage.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**
- **After connecting, check if the quick connector and the charcoal canister are securely connected by pulling on them.**



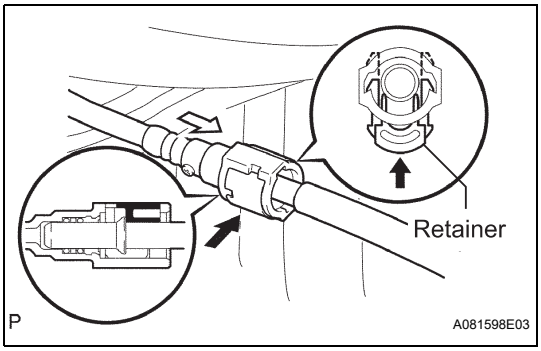
(g) Connect the fuel filler pipe.
(1) Install the fuel tube connector to the fuel filler pipe.
(2) Install the fuel filler pipe clamp.
NOTICE:
- **Before connecting the pipe, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**
- **After connecting, check if the fuel filler pipe and the fuel tank are securely connected by pulling on them.**



(3) Install the 2 bolts to the fuel tank filler pipe support.
Torque: 18 N*m (185 kgf*cm, 13 ft.*lbf)

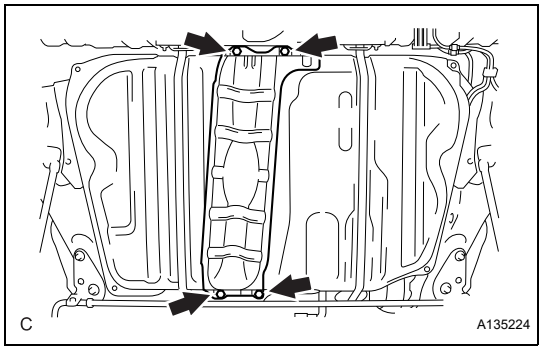


(h) Connect the No. 1 fuel tube.
(1) Push the fuel tube connector into the pipe until the fuel tube connector makes a "click" sound.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**
- **After connecting, check if the fuel tube connector and the fuel tank are securely connected by pulling on them.**



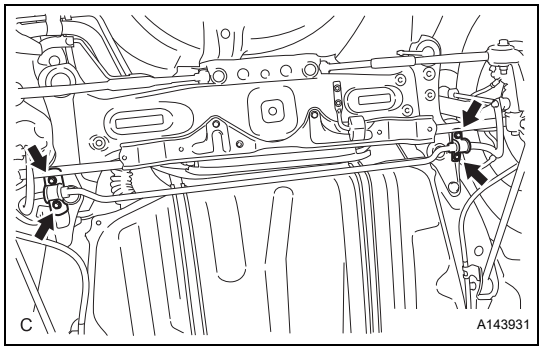
(i) Connect the fuel pump tube.
(1) Push the fuel connector into the pipe and push up the retainer so that the claws engage.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**

- **After connecting, check if the fuel tube connector and the pipe are securely connected by pulling on them.**



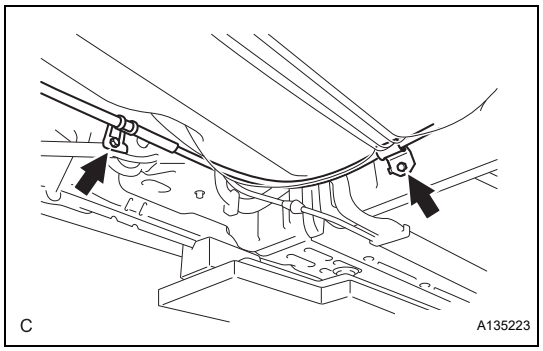
8. INSTALL FUEL TANK PROTECTOR LOWER CENTER

(a) Install the 4 bolts and fuel tank protector lower center.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



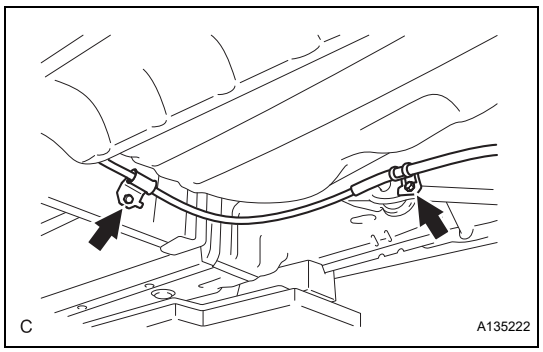
9. INSTALL REAR STABILIZER BAR NO. 1 BRACKET

(a) Install the 2 rear stabilizer bar No. 1 brackets with the 4 bolts.
Torque: 31 N*m (316 kgf*cm, 23 ft.*lbf)



10. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Install the No. 3 parking brake cable assembly with the bolt and nut.
Torque: Bolt
6.0 N*m (61 kgf*cm, 53 in.*lbf)
Nut
8.5 N*m (87 kgf*cm, 75 in.*lbf)

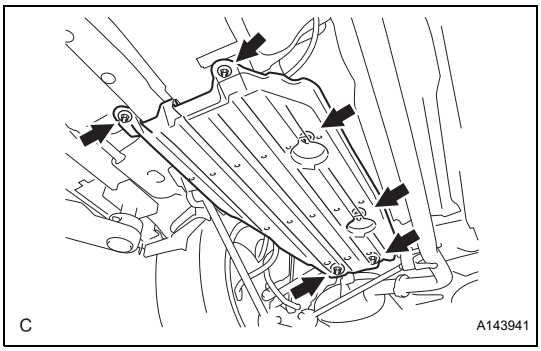


11. INSTALL NO. 2 PARKING BRAKE CABLE ASSEMBLY

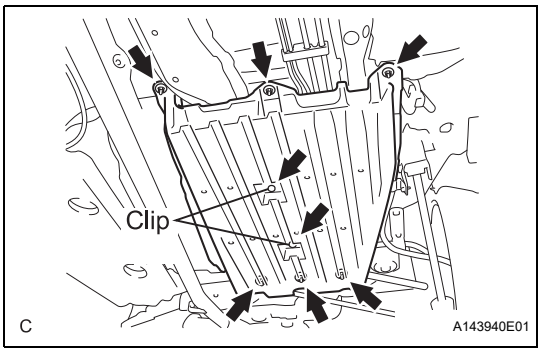
(a) Install the No. 2 parking brake cable assembly with the bolt and nut.
Torque: Bolt
6.0 N*m (61 kgf*cm, 53 in.*lbf)
Nut
8.5 N*m (87 kgf*cm, 75 in.*lbf)

12. INSTALL CENTER EXHAUST PIPE ASSEMBLY

HINT:
See page EX-4.

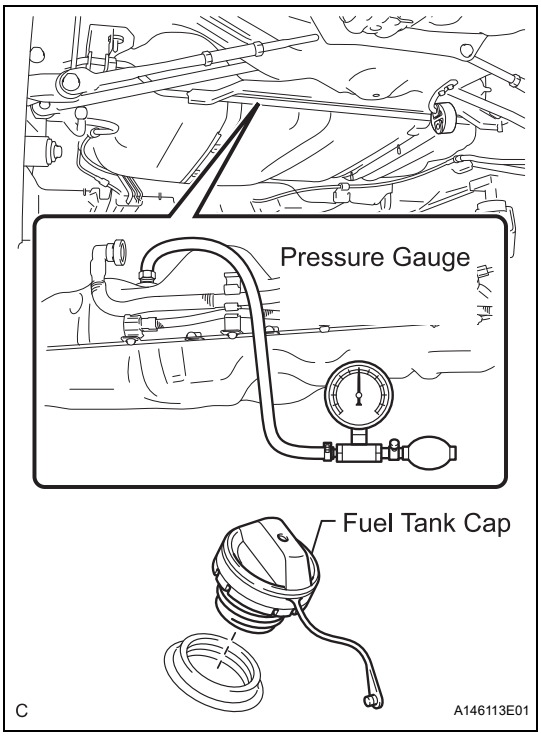


13. **INSTALL NO. 1 FLOOR UNDER COVER**
    (a) Install the No. 1 floor under cover with the 6 grommets.

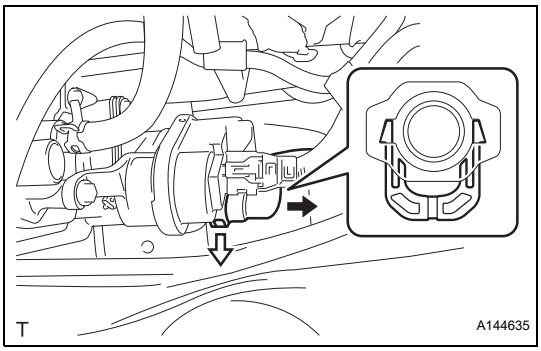


14. **INSTALL NO. 2 FLOOR UNDER COVER**
    (a) Install the No. 2 floor under cover with the 2 clips and 6 grommets.
15. **INSTALL FUEL SUCTION TUBE ASSEMBLY WITH PUMP AND GAUGE (See page FU-30)**
16. **INSTALL FUEL TANK VENT TUBE SET PLATE (See page FU-31)**
17. **CONNECT FUEL PUMP TUBE SUB-ASSEMBLY (See page FU-31)**
18. **ADD FUEL**
19. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
20. **INSPECT FOR FUEL LEAK (See page FU-9)**
21. **INSPECT FOR EXHAUST GAS LEAK**
22. **INSTALL REAR FLOOR SERVICE HOLE COVER (See page FU-32)**
23. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**
24. **PERFORM INITIALIZATION**
    (a) Perform initialization procedure (See page IN-43).
    HINT:
    Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

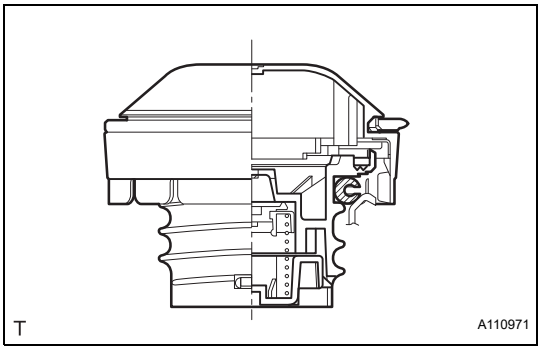
FU



(c) Disconnect the vent line hose from the fuel tank.
(d) Connect the pressure gauge to the fuel tank.
(e) Fill the fuel tank with fuel.
(f) Apply pressure of 4 kPa (41 gf/cm^2, 0.58 psi) to the vent port of the fuel tank.
HINT:
Check the amount of fuel in the fuel tank. When the fuel tank is full, the float valve of the fill check valve is closed and no air can pass through.
(g) Remove the fuel tank cap, and check that the pressure drops.
If the pressure does not drop, replace the fuel tank assembly.
(h) Reconnect the vent line hose to the fuel tank.



7. CHECK AIR INLET LINE
(a) Disconnect the air inlet line hose from the charcoal canister.
(b) Check that air can flow freely into the air inlet line.
If air cannot flow freely into the air inlet line, repair or replace it.
(c) Reconnect the air inlet line hose to the charcoal canister.



INSPECTION

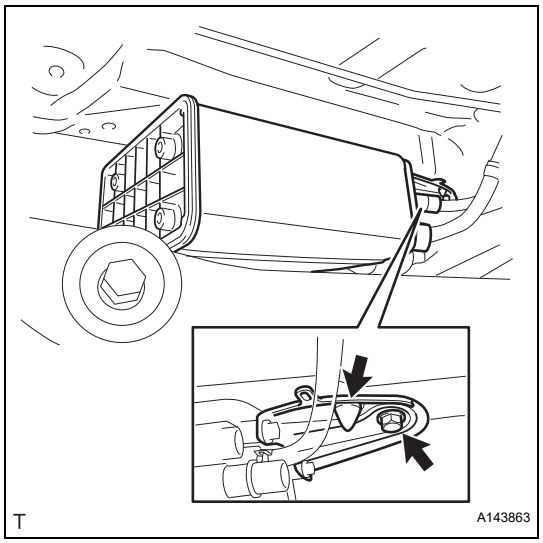
1. INSPECT FUEL TANK CAP ASSEMBLY
(a) Visually check if the cap and gasket are deformed or damaged.
If necessary, replace the cap.

INSTALLATION

1. INSTALL CHARCOAL CANISTER ASSEMBLY

(a) Install the charcoal canister bracket with the 2 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

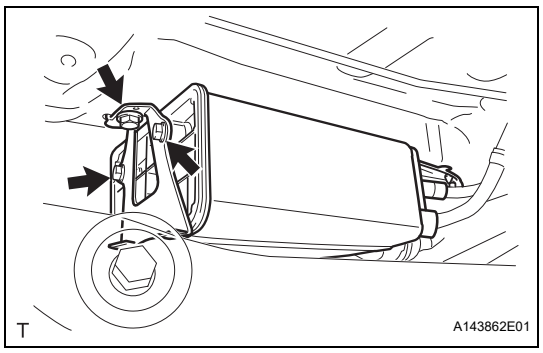
(b) Install the charcoal canister with the bolt and clip.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)



(c) Install the charcoal canister bracket with the 3 bolts.
Torque: Body side
39 N*m (398 kgf*cm, 29 ft.*lbf)
Charcoal canister side
5.4 N*m (55 kgf*cm, 48 in.*lbf)

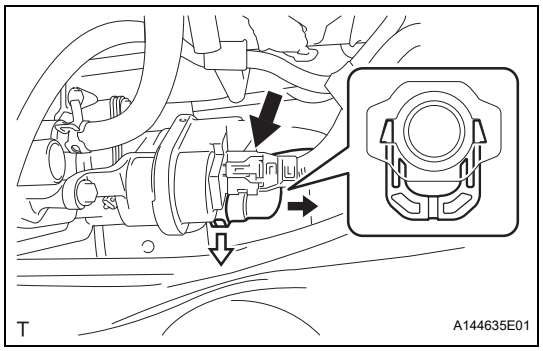
(d) Connect the purge line hose.

(e) Connect the wire harness clamp.



(f) Connect the vapor pressure sensor connector.

(g) Connect the charcoal canister filter sub-assembly.



2. INSTALL FUEL TANK ASSEMBLY

HINT:
(See page FU-41)

3. INSPECT FOR EXHAUST GAS LEAK

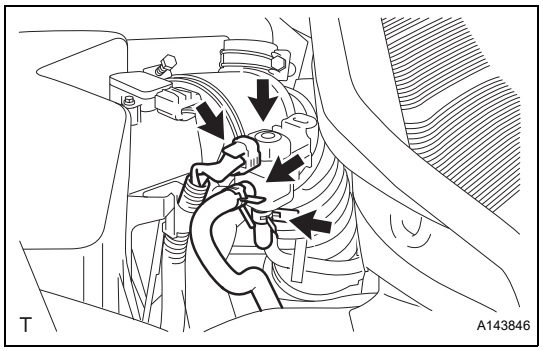
INSTALLATION

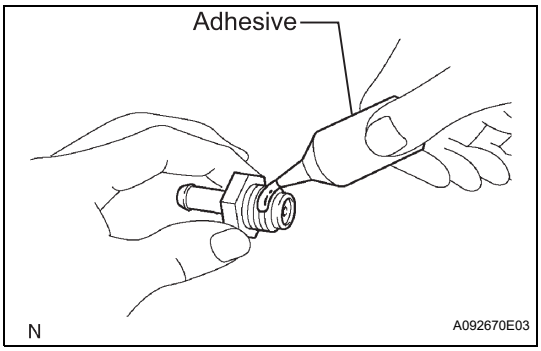
1. INSTALL VACUUM SWITCHING VALVE

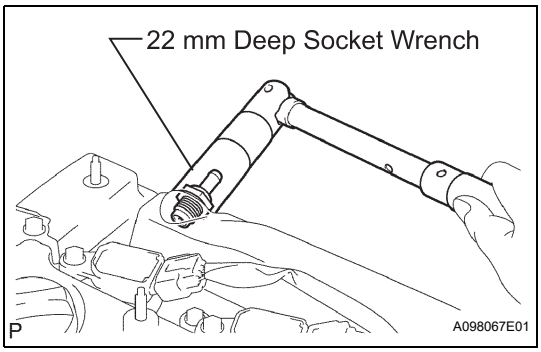
(a) Install the vacuum switching valve onto the air cleaner hose.

(b) Connect the 2 purge line hoses to the vacuum switching valve.

(c) Connect the vacuum switching valve connector.





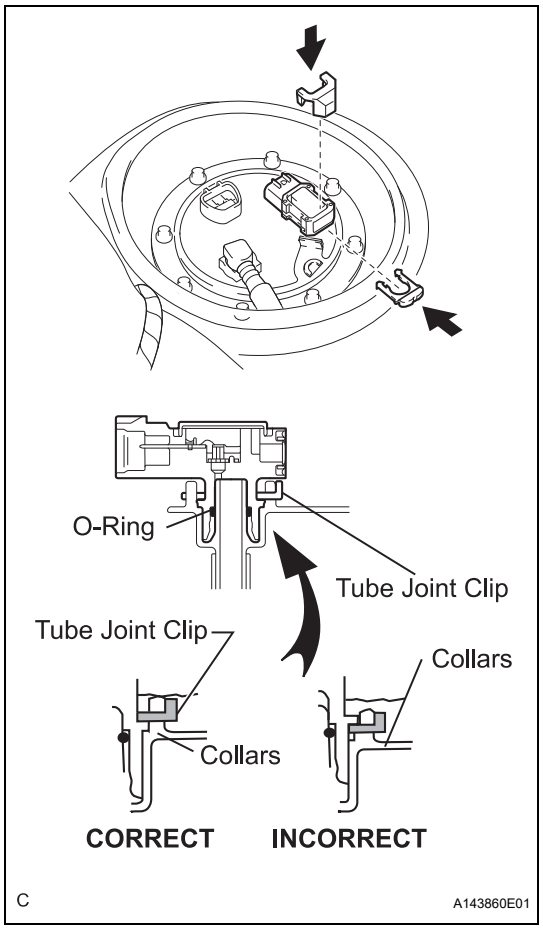


INSTALLATION

1. **INSTALL VENTILATION VALVE SUB-ASSEMBLY**
   (a) Apply adhesive to 2 or 3 threads of the ventilation valve.
   Adhesive:
   Toyota Genuine Adhesive 1324, Three Bond 1324 or equivalent

   (b) Using a 22 mm deep socket wrench, install the ventilation valve.
   Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
   NOTICE:
   Do not start the engine within 1 hour after installation.
   (c) Connect the ventilation hose.
2. **INSPECT FOR EXHAUST GAS LEAK**
3. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**
4. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page ES-383)**

EC



INSTALLATION

1. **INSTALL VAPOR PRESSURE SENSOR ASSEMBLY**
   (a) Install the vapor pressure sensor assembly with the tube joint clip and cover.
   NOTICE:
   - **Check that there are no scratches or foreign objects on the connecting part.**
   - **Check that the vapor pressure sensor assembly is inserted securely.**
   - **Check that the tube joint clip is on the collar of the vapor pressure sensor assembly.**
   - **After installing the tube joint clip, check that the fuel tube joint is pulled off.**

   (b) Connect the connector.

2. **INSTALL REAR FLOOR SERVICE HOLE COVER (See page FU-32)**
3. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**
4. **INSTALL FUEL TANK CAP ASSEMBLY**
   HINT:
   (See page FU-41)

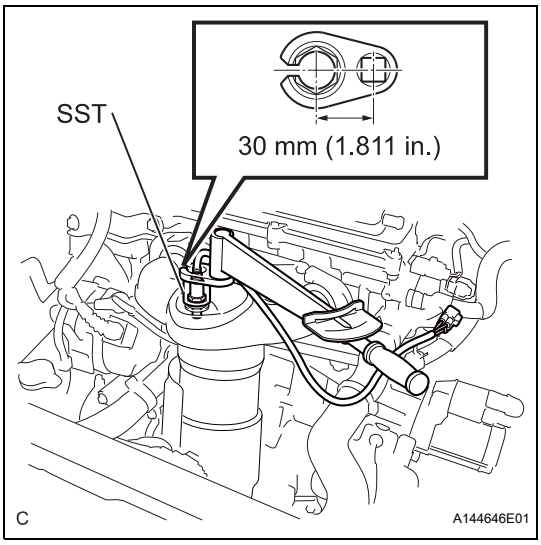
EC

INSTALLATION

1. INSTALL AIR FUEL RATIO SENSOR

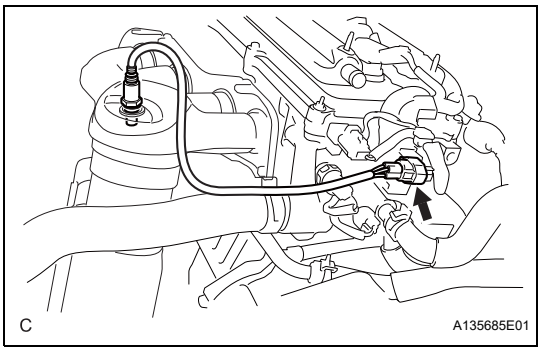
(a) Temporarily tighten the air fuel ratio sensor.

NOTICE:
Do not damage the air fuel ratio sensor.



(b) Using SST, fully tighten the air fuel ratio sensor.

SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)
NOTICE:
The torque shown above should be used for tightening without using SST. When the SST is used for tightening, the torque should be calculated based on the length of the SST (See page IN-5).



(c) Connect the air fuel ratio sensor connector.

2. INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)

3. INSPECT FOR EXHAUST GAS LEAK

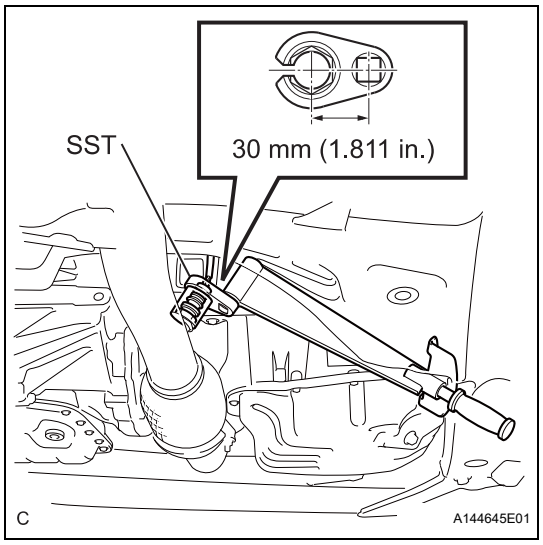
EC

INSTALLATION

1. INSTALL HEATED OXYGEN SENSOR

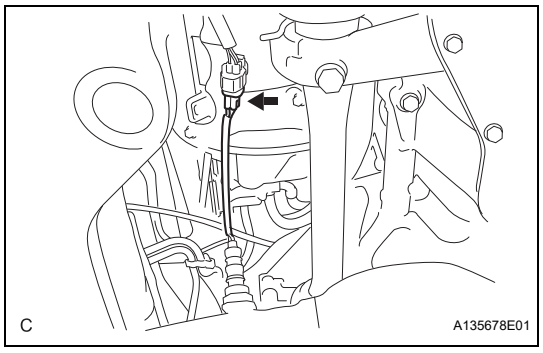
(a) Temporarily tighten the heated oxygen sensor.

NOTICE:
Do not damage the heated oxygen sensor.



(b) Using SST, fully tighten the heated oxygen sensor.

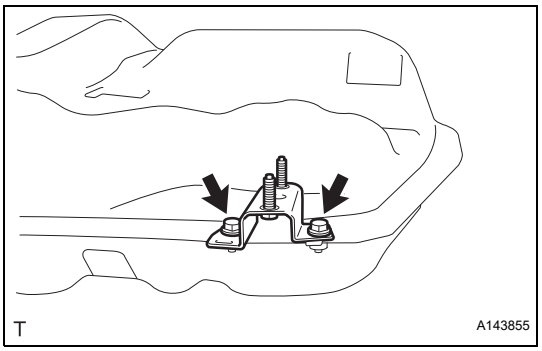
SST 09224-00010
Torque: 44 N*m (449 kgf*cm, 32 ft.*lbf)
NOTICE:
The torque shown above should be used for tightening without using SST. When the SST is used for tightening, the torque should be calculated based on the length of the SST (See page IN-5).



(c) Connect the heated oxygen sensor connector.

2. INSPECT FOR EXHAUST GAS LEAK

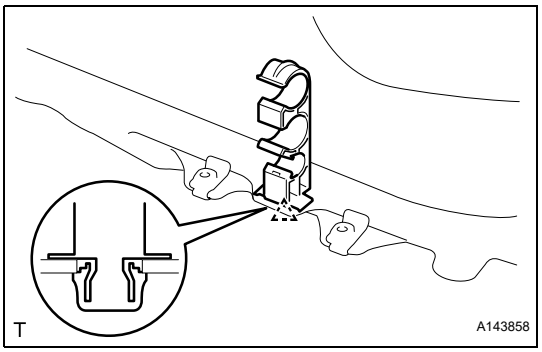
EC



3. REPLACE FUEL SOLENOID VALVE RETURN BRACKET

(a) Remove the 2 bolts and fuel solenoid valve return bracket.

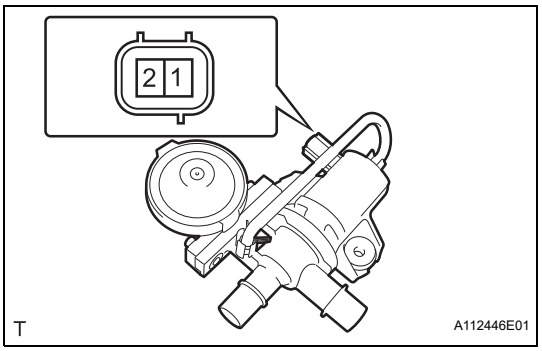
(b) Remove the 2 clip nuts.



4. REMOVE NO. 1 FUEL TUBE CLAMP

(a) Disconnect the clamp to remove the No. 1 fuel tube clamp.

EC



INSPECTION

1. INSPECT FUEL VAPOR CONTAINMENT VALVE

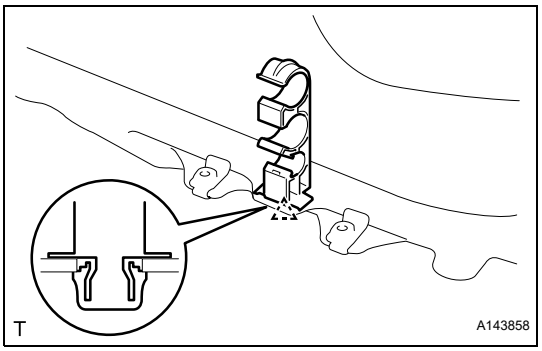
(a) Check the fuel vapor containment valve.

(1) Measure the resistance.

Standard resistance

Tester connection	Specified Condition
1 - 2	25 to 30 Ω at 20°C (68°F)

If the resistance is not as specified, replace the fuel vapor containment valve.



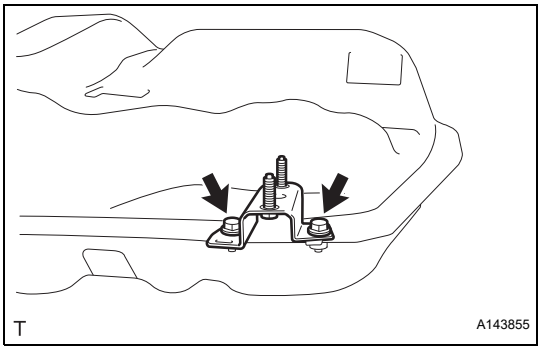
INSTALLATION

1. INSTALL NO. 1 FUEL TUBE CLAMP

(a) Connect the clamp to install the No. 1 fuel tube clamp.

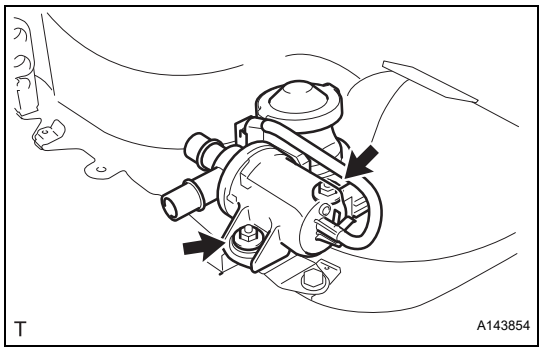
2. INSTALL FUEL SOLENOID VALVE RETURN BRACKET

(a) Install the 2 clip nuts.



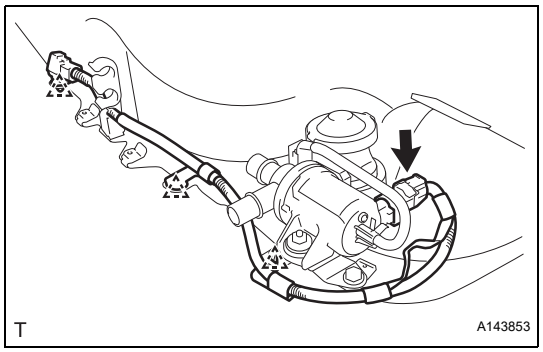
(b) Install the fuel solenoid valve return bracket with the 2 bolts.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

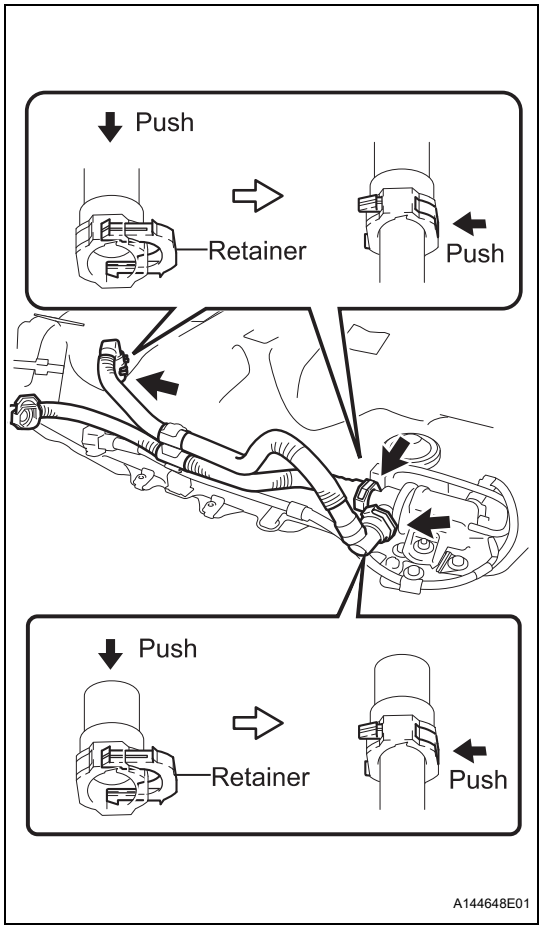


3. INSTALL FUEL VAPOR CONTAINMENT VALVE

(a) Install the fuel vapor containment valve with the 2 nuts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



(b) Connect the fuel vapor containment valve connector and 3 clips to install the wire harness.



(c) Connect the 2 fuel tank vent hoses.
(1) Push the quick connector into the pipe and push up the retainer so that the claws engage.
NOTICE:
- **Before connecting the tube, make sure that it is not damaged. Make sure that there is no dirt present on the connecting surfaces.**
- **After connecting, check if the quick connector and the charcoal canister are securely connected by pulling on them.**

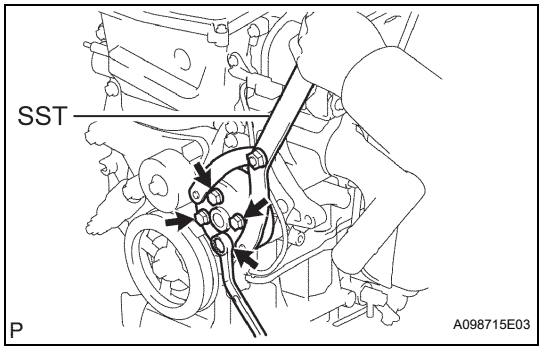
4. INSTALL FUEL TANK ASSEMBLY

HINT:
(See page FU-41)

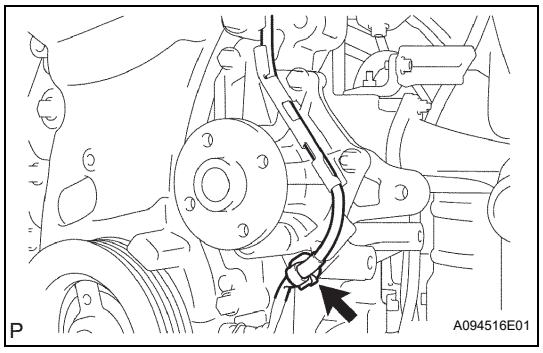
EC

REMOVAL

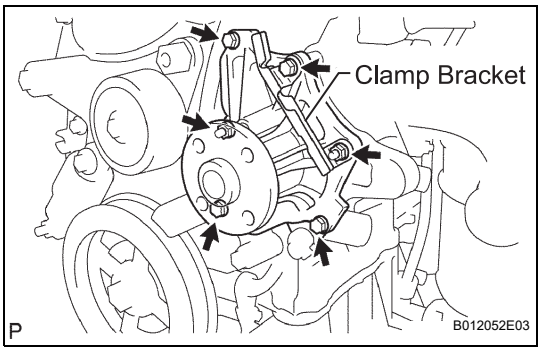
1. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
3. **REMOVE ENGINE UNDER COVER RH**
4. **REMOVE ENGINE UNDER COVER LH**
5. **DRAIN ENGINE COOLANT (See page CO-5)**
6. **REMOVE FRONT FENDER APRON SEAL RH**
7. **REMOVE NO. 2 ENGINE MOUNTING STAY RH (See page EM-91)**
8. **REMOVE ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-91)**
9. **REMOVE NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-91)**
10. **REMOVE V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-6)**
11. **REMOVE V-RIBBED BELT (See page EM-6)**
12. **REMOVE V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-100)**
13. **REMOVE WATER PUMP PULLEY**
    (a) Using SST, remove the 4 bolts and water pump pulley.
    SST 09960-10010 (09962-01000, 09963-00700)



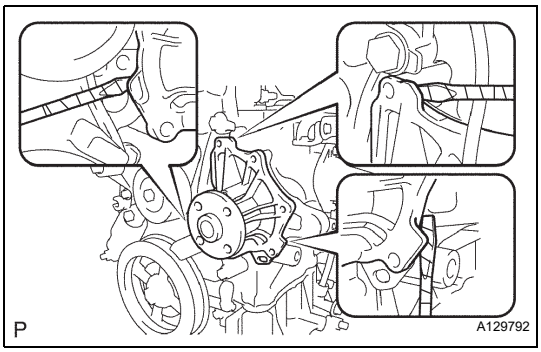
14. **REMOVE WATER PUMP ASSEMBLY**
    (a) Remove the clamp of the crankshaft position sensor from the water pump.
    (b) Disconnect the wire of the crankshaft position sensor from the clamp bracket.



CO

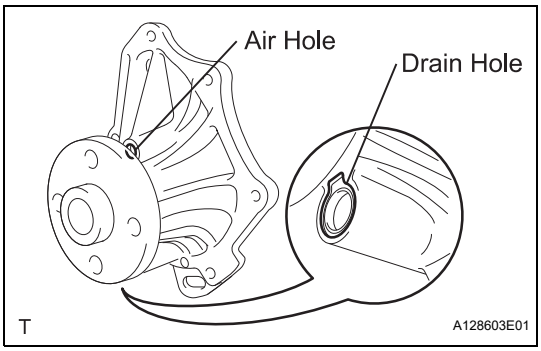


(c) Remove the 4 bolts, 2 nuts and clamp bracket.



(d) Using a screwdriver, pry between the water pump and cylinder block, and then remove the water pump.
HINT:
Tape the screwdriver tip before use.
NOTICE:
Be careful not to damage the contact surfaces of the water pump and cylinder block.

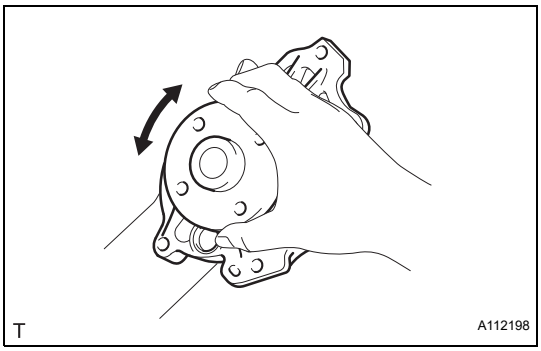
CO



INSPECTION

1. INSPECT WATER PUMP ASSEMBLY

(a) Visually check the drain hole and air hole for coolant leakage.
If leakage is found, replace the water pump assembly.



(b) Turn the pulley, and then check that the water pump bearing moves smoothly without making a "click" sound.
If it does not move smoothly, replace the water pump assembly.

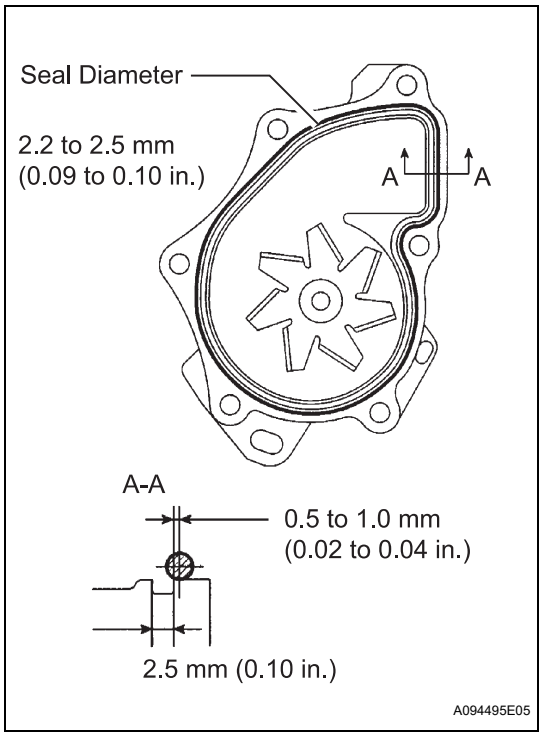
INSTALLATION

1. INSTALL WATER PUMP ASSEMBLY

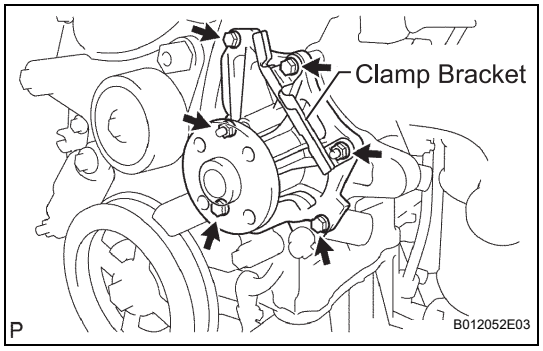
(a) Remove any old seal packing material from the contact surface.

(b) Apply a continuous line of seal packing as shown in the illustration.

Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or equivalent
Standard seal diameter:
2.2 to 2.5 mm (0.09 to 0.10 in.)
NOTICE:
- **Remove any oil from the contact surface.**
- **The parts must be set within 3 minutes after applying seal packing. Otherwise, the material must be removed and reapplied.**

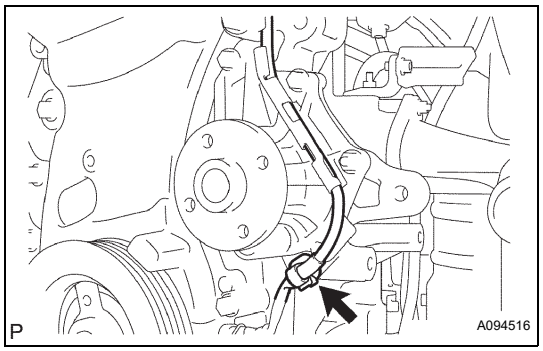


(c) Install the water pump and clamp bracket with the 4 bolts and 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

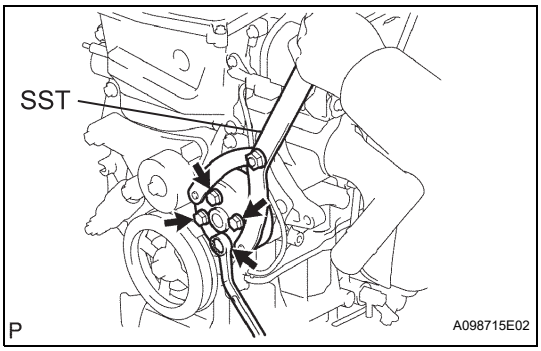


(d) Install the wire of the crankshaft position sensor onto the clamp bracket.

(e) Install the clamp of the crankshaft position sensor onto the water pump.



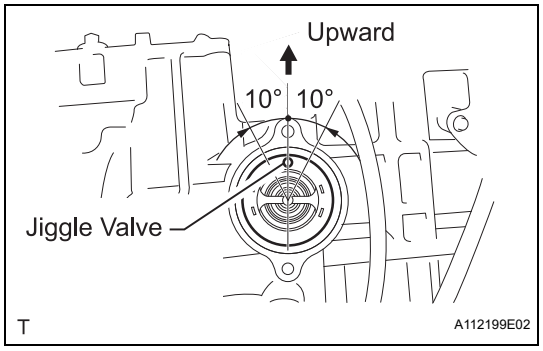
CO

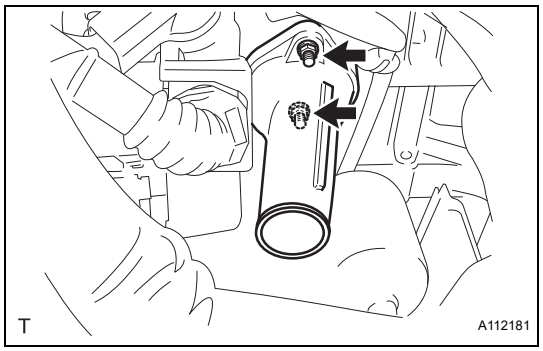


2. **INSTALL WATER PUMP PULLEY**
   (a) Using SST, install the water pump pulley with the 4 bolts.
   SST 09960-10010 (09962-01000, 09963-00700)
   Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)
3. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-103)**
4. **INSTALL V-RIBBED BELT (See page EM-6)**
5. **INSTALL V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-7)**
6. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-30)**
7. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-112)**
8. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-112)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-113)**
10. **ADD ENGINE COOLANT (See page CO-5)**
11. **INSPECT FOR ENGINE COOLANT LEAK (See page CO-1)**
12. **INSTALL ENGINE UNDER COVER LH**
13. **INSTALL ENGINE UNDER COVER RH**
14. **INSTALL FRONT WHEEL OPENING EXTENSION PAD RH**
15. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH**

INSTALLATION

1. **INSTALL THERMOSTAT**
   (a) Install a new gasket onto the thermostat.
   (b) Install the thermostat with the jiggle valve facing upward.
   HINT:
   The jiggle valve may be set to within 10° on either side of the prescribed position.

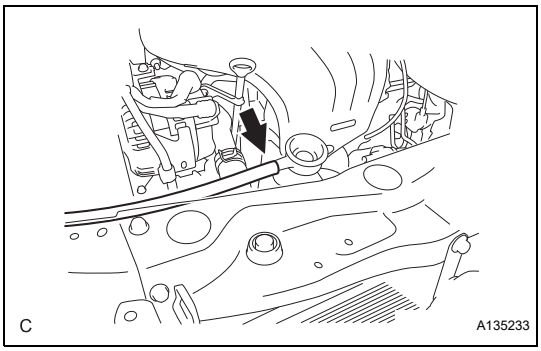


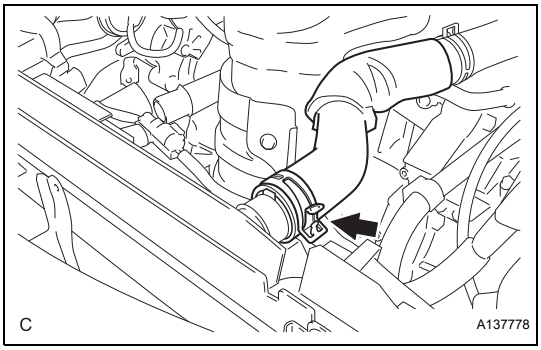


2. **INSTALL WATER INLET**
   (a) Install the water inlet with the 2 nuts.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
3. **CONNECT RADIATOR HOSE OUTLET (See page EM-112)**
4. **ADD ENGINE COOLANT (See page CO-5)**
5. **INSPECT FOR ENGINE COOLANT LEAK (See page CO-1)**
6. **INSTALL ENGINE UNDER COVER LH**
7. **INSTALL ENGINE UNDER COVER RH**
8. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH**
9. **INSTALL FRONT WHEEL OPENING EXTENSION PAD RH**

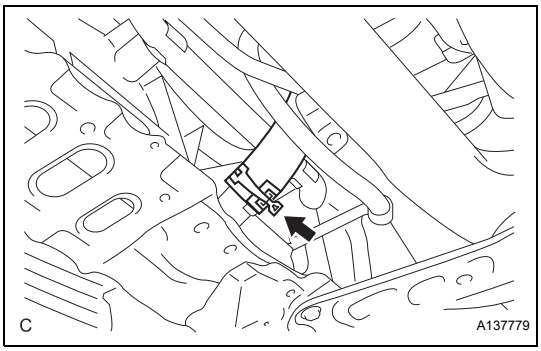
REMOVAL

1. **DRAIN ENGINE COOLANT (See page CO-5)**
2. **REMOVE FRONT WHEEL OPENING EXTENSION PAD LH**
3. **REMOVE FRONT WHEEL OPENING EXTENSION PAD RH**
4. **REMOVE ENGINE UNDER COVER RH**
5. **REMOVE ENGINE UNDER COVER LH**
6. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-90)**
7. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-3)**
8. **REMOVE FRONT BUMPER ENERGY ABSORBER (See page ET-6)**
9. **SEPARATE RADIATOR RESERVOIR TANK HOSE**
   (a) Separate the radiator reservoir tank hose from the radiator assembly.

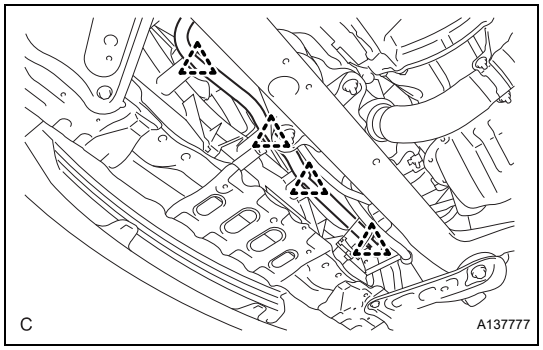




10. **DISCONNECT RADIATOR HOSE INLET**
    (a) Disconnect the radiator hose inlet from the radiator assembly.

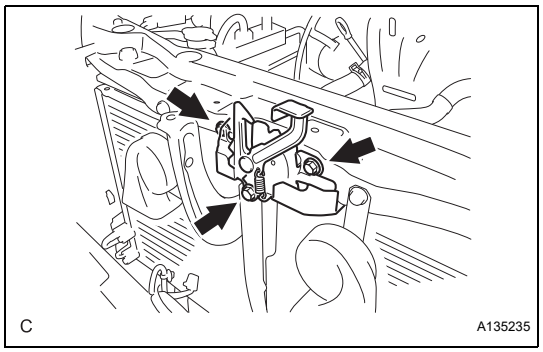


11. **DISCONNECT RADIATOR HOSE OUTLET**
    (a) Disconnect the radiator hose outlet from the radiator assembly.



12. SEPARATE WATER HOSE

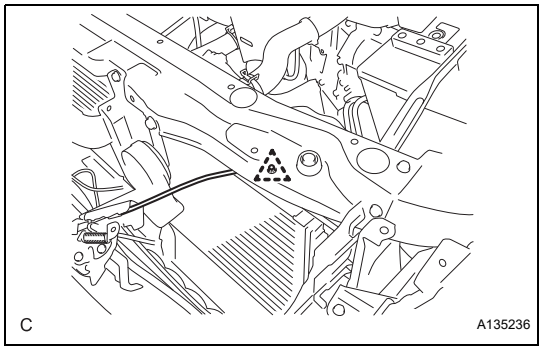
(a) Separate the 4 clamps and water hose.



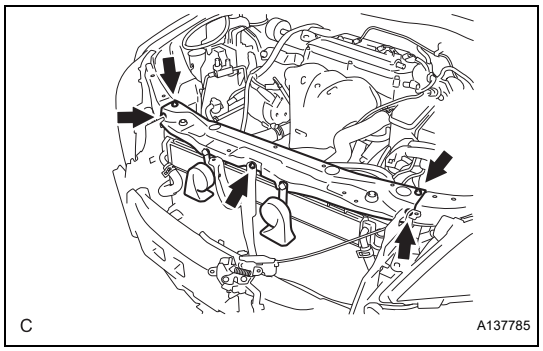
13. REMOVE RADIATOR SUPPORT UPPER

(a) Disconnect the horn connector.

(b) Remove the 3 bolts and separate the hood lock assembly from the radiator support upper.



(c) Remove the clamp and separate the hood lock control cable from the radiator support upper.

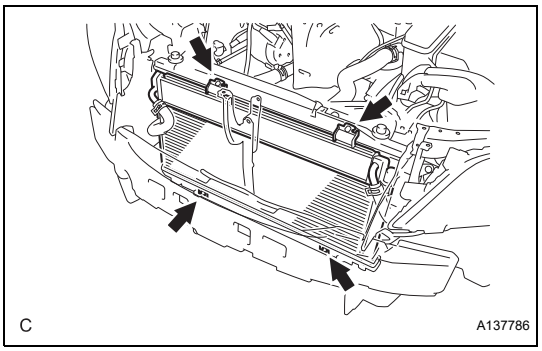


(d) Remove the 5 bolts and radiator support upper.

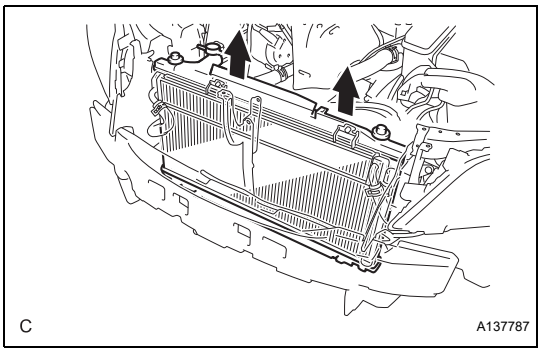
14. REMOVE RADIATOR ASSEMBLY

(a) Remove the 4 clamps and 2 connectors.

CO

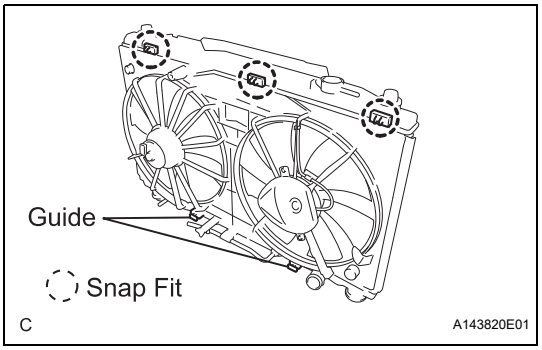


(b) Remove the 4 bolts and separate the condenser assembly from the radiator assembly.



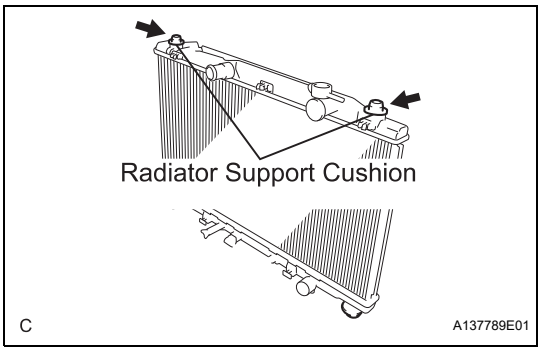
(c) Remove the radiator assembly from the body.

CO



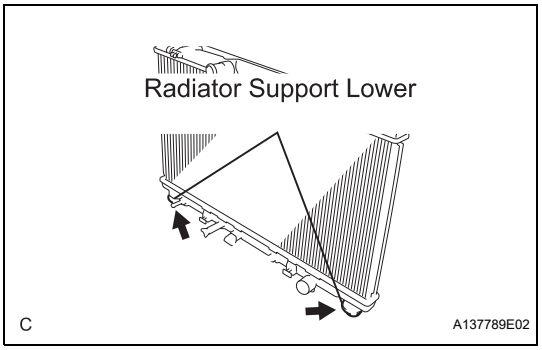
15. REMOVE FAN ASSEMBLY WITH MOTOR

(a) Release the 3 snap fits and lift the fan assembly with motor from the radiator.



16. REMOVE RADIATOR SUPPORT CUSHION

(a) Remove the 2 radiator support cushions from the radiator assembly.



17. REMOVE RADIATOR SUPPORT LOWER

(a) Remove the 2 radiator support lowers from the radiator assembly.

DISASSEMBLY

1. REMOVE DRAIN PLUG

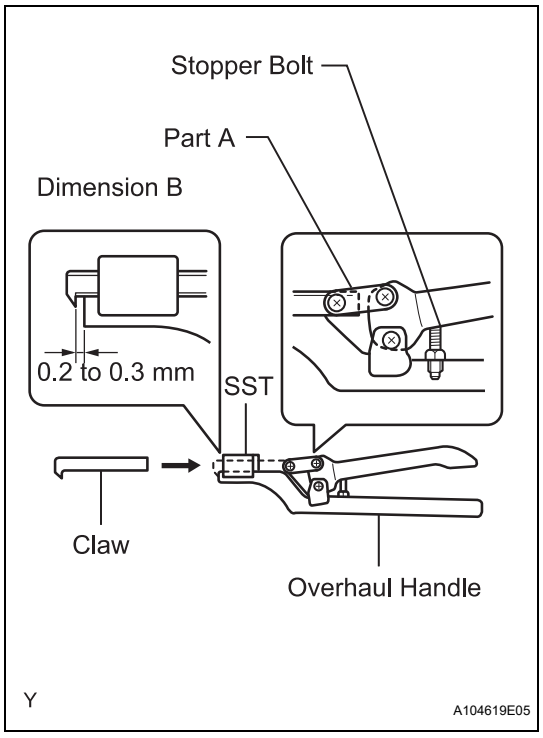
(a) Remove the drain plug.

(b) Remove the O-ring.

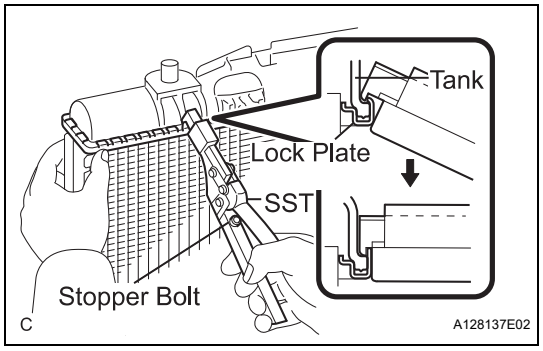
2. REMOVE RADIATOR TANK UPPER

(a) Install the claw to the overhaul handle, inserting it in the hole in part A as shown in the illustration.
SST 09230-01010 (09231-01010, 09231-01030)

(b) While gripping the handle, adjust the stopper bolt so that dimension B is as shown in the illustration.
Dimension B:
0.2 to 0.3 mm (0.008 to 0.012 in.)
NOTICE:
If the stopper bolt is not adjusted, the claw may be damaged.

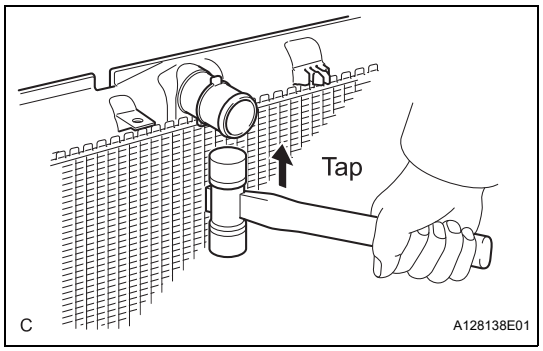


(c) Using SST to release the caulking, grip the handle until stopped by the stopper bolt.
SST 09230-01010 (09231-01010, 09231-01030)



(d) Lightly tap the bracket of the radiator (or radiator hose inlet or outlet) with a soft-faced hammer and remove the tank.

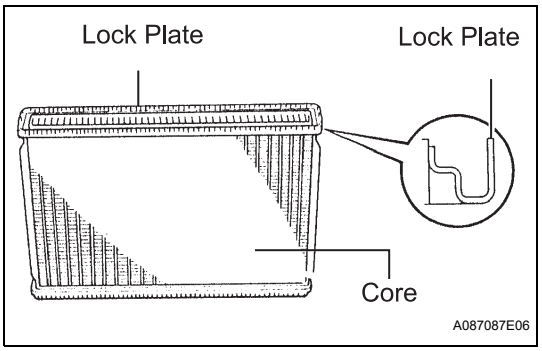
(e) Remove the O-ring.



3. REMOVE RADIATOR TANK LOWER

HINT:
Removal procedure of the radiator tank lower is the same as that of the radiator tank upper.

CO



INSPECTION

1. INSPECT LOCK PLATE

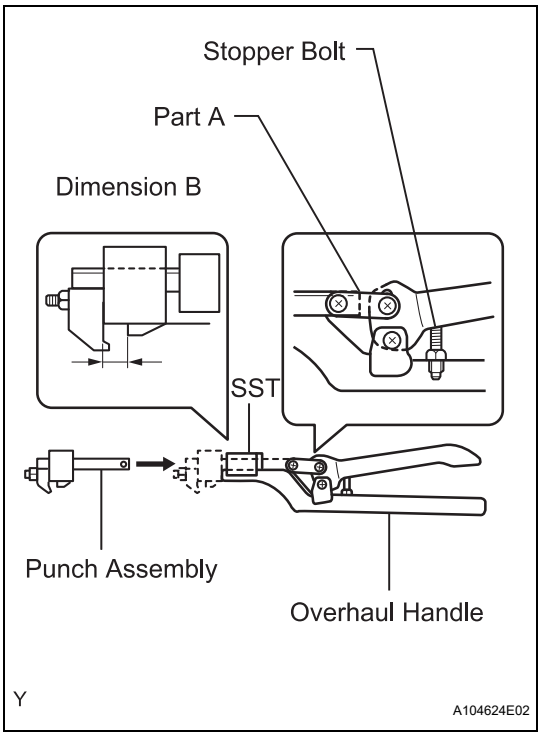
(a) Inspect the lock plate for damage.

HINT:

- If the sides of the lock plate groove are deformed, reassembly of the tank will be impossible. Therefore, first correct the shape of the lock plate groove with pliers or a similar object, if necessary.
- Water leakage will result if the bottom of the lock plate groove is damaged or dented. Repair or replace the lock plate if necessary.

NOTICE:

The radiator can only be recaulked 2 times. After recaulking 2 times. the radiator core must be replaced.



REASSEMBLY

1. INSTALL RADIATOR TANK UPPER

(a) Install the punch assembly to the overhaul handle, inserting it in the hole in part A as shown in the illustration.

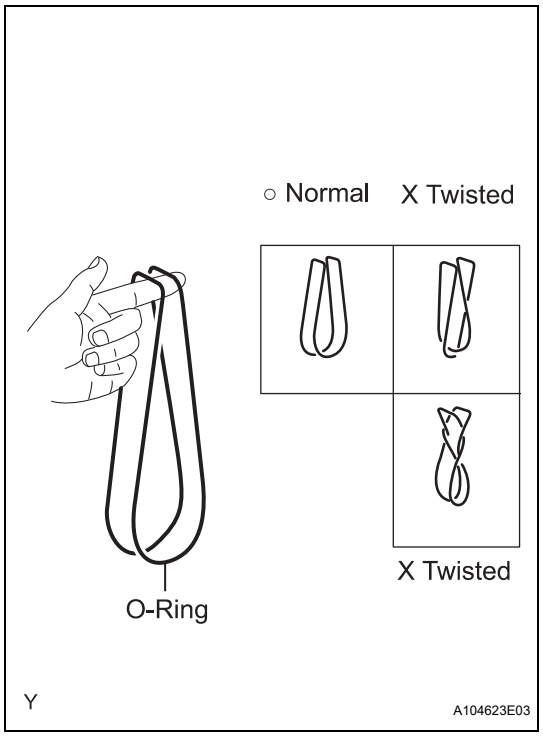
SST 09230-01010, 09231-14010

(b) While gripping the handle, adjust the stopper bolt so that dimension B is as shown in the illustration.

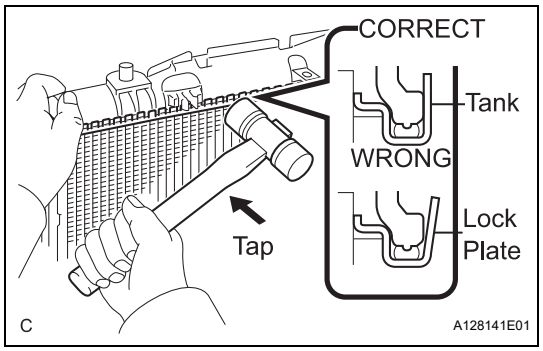
Dimension B:

8.4 mm (0.331 in.)

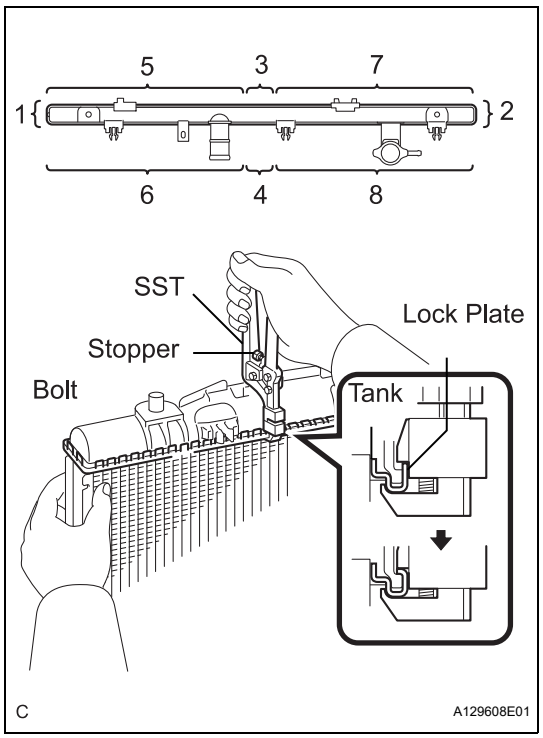
CO



(c) After checking that there are no foreign objects in the lock plate groove, install a new O-ring without twisting it.
HINT:
When cleaning the lock plate groove, lightly rub it with sandpaper without scratching it.

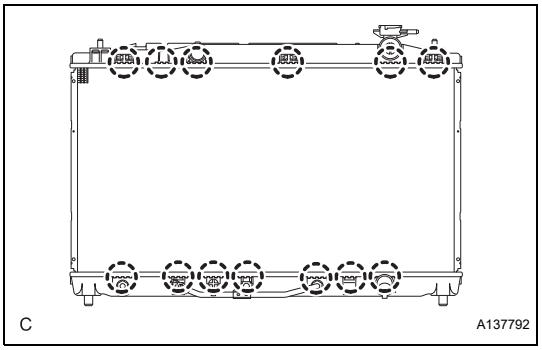


(d) Install the tank without damaging the O-ring.
(e) Tap the lock plate with a soft-faced hammer so that there is no gap between the lock plate and the tank.

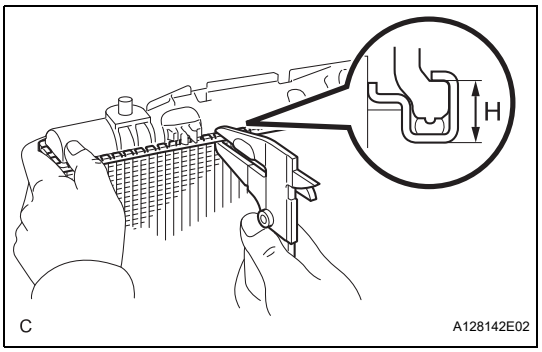


(f) Lightly press SST against the lock plate in the order shown in the illustration. After repeating this a few times, fully caulk the lock plate by gripping the handle until stopped by the stopper plate.
HINT:
For the areas where cannot be tapped with SST, use pliers or similar objects and be careful not to damage the core plates.

CO



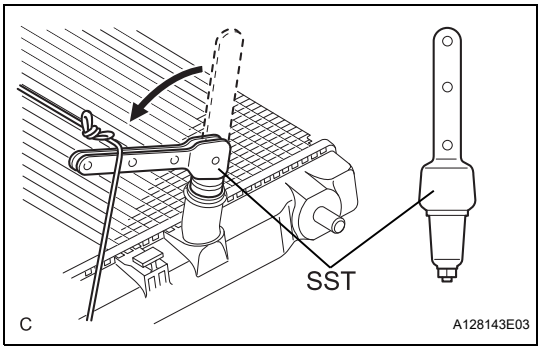
(g) Do not tap the areas indicated by dotted circles in the illustration.



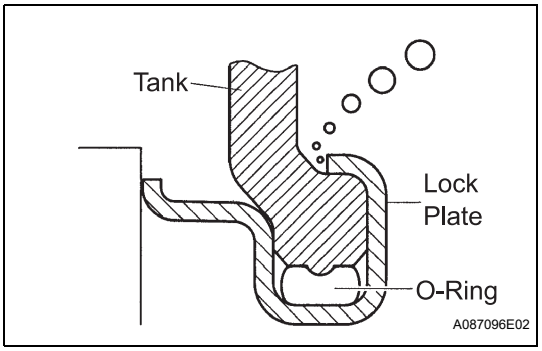
(h) Check the lock plate height (H) after completing caulking.
Plate height (H):
7.40 to 7.80 mm (0.2913 to 0.3071 in.)
If not within the specified height range, adjust the stopper bolt of the handle and caulk again.

2. INSTALL RADIATOR TANK LOWER
SST 09230-01010, 09231-14010
HINT:
Removal procedure of the radiator tank lower is the same as that of the upper radiator tank.

3. INSTALL DRAIN PLUG
(a) Install a new O-ring to the drain plug.
(b) Install the drain plug.



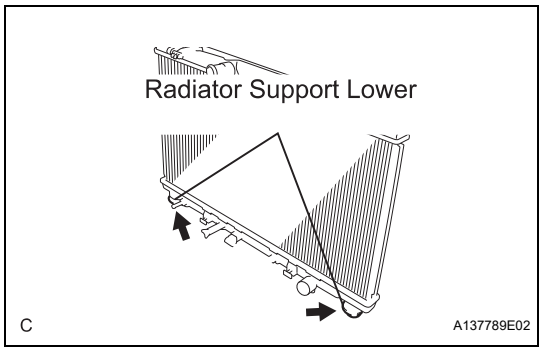
4. INSPECT FOR WATER LEAK
(a) Plug the inlet and outlet pipes of the radiator with SST.
SST 09230-01010
(b) Using the radiator cap tester, apply pressure to the radiator.
Test pressure:
177 kPa (1.8 kgf/cm^2, 26 psi)
(c) Submerge the radiator in water.



(d) Inspect for leaks.
HINT:
On radiators with resin tanks, there is clearance between the tank and lock plate where a minute amount of air will remain, giving the appearance of an air leak when the radiator is submerged in water. Therefore, before doing the water leak test, first swish the radiator around in the water until all air bubbles disappear.

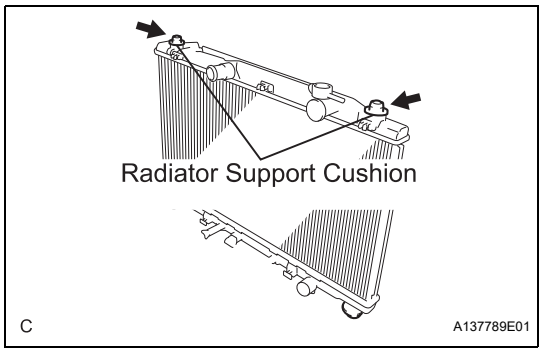
CO

INSTALLATION



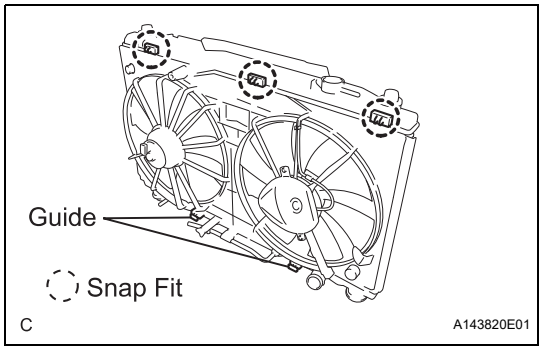
1. INSTALL RADIATOR SUPPORT LOWER

(a) Install the 2 radiator support lowers to the radiator assembly.



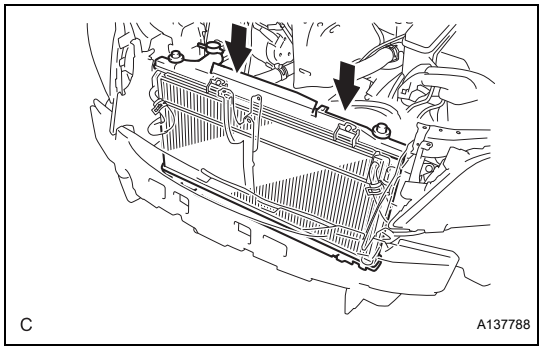
2. INSTALL RADIATOR SUPPORT CUSHION

(a) Install the 2 radiator support cushions to the radiator assembly.



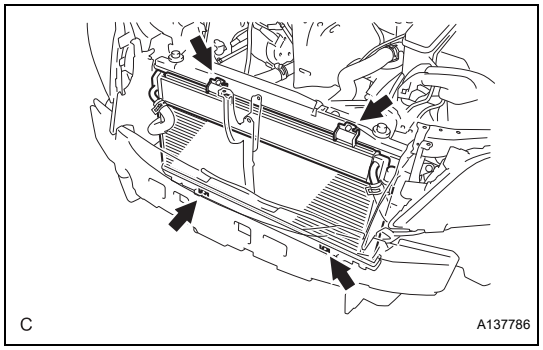
3. INSTALL FAN ASSEMBLY WITH MOTOR

(a) Install the fan assembly with motor to the radiator with the 2 guides at the bottom and 3 snap fits on the top.



4. INSTALL RADIATOR ASSEMBLY

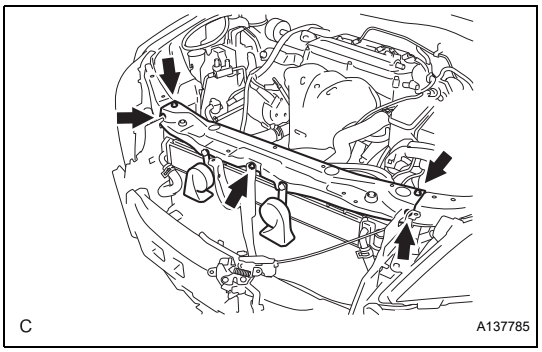
(a) Install the radiator to the body.



(b) Install the condenser assembly with the 4 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)

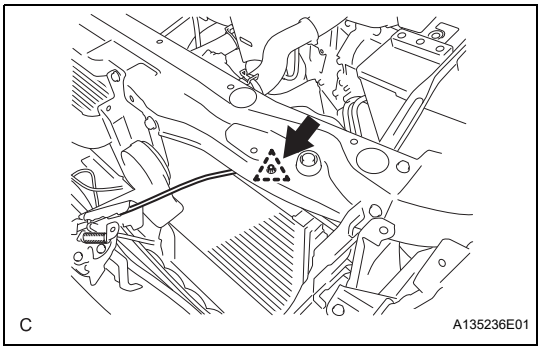
CO

(c) Connect the 2 fan motor connectors and the 4 clamps.

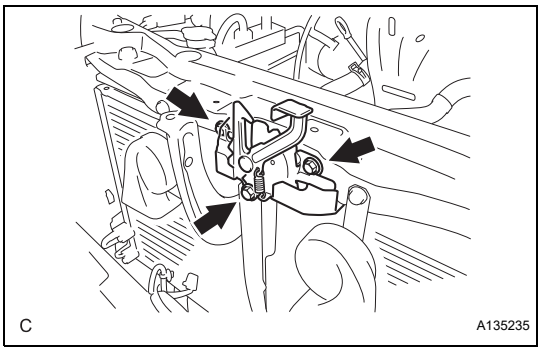


5. INSTALL RADIATOR SUPPORT UPPER

(a) Install the radiator support upper with the 5 bolts.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)

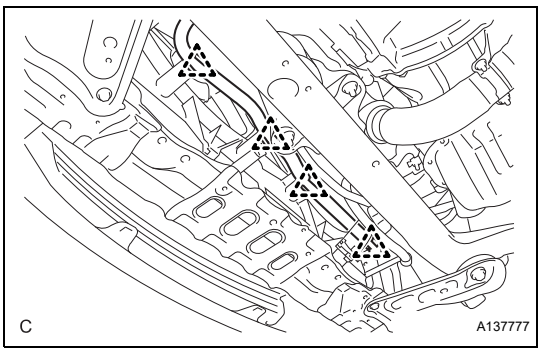


(b) Install the hood lock control cable assembly to the radiator support upper with the clamp.



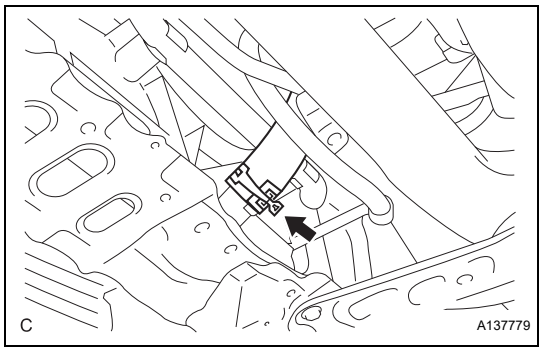
(c) Install the hood lock assembly to the radiator support upper with the 3 bolts.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)

(d) Connect the horn connector.

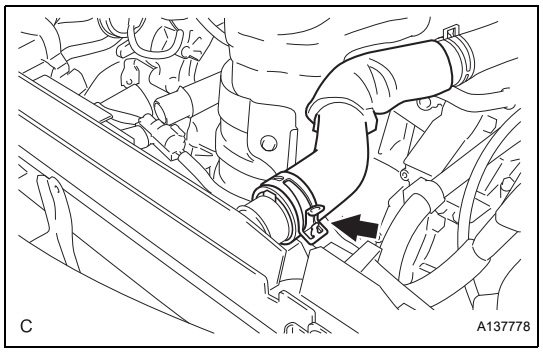


6. CONNECT WATER HOSE

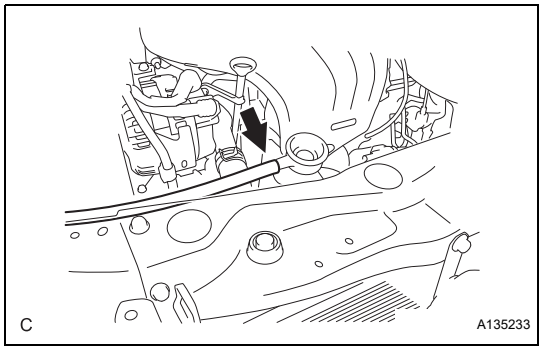
(a) Connect the water hose with the 4 clamps.



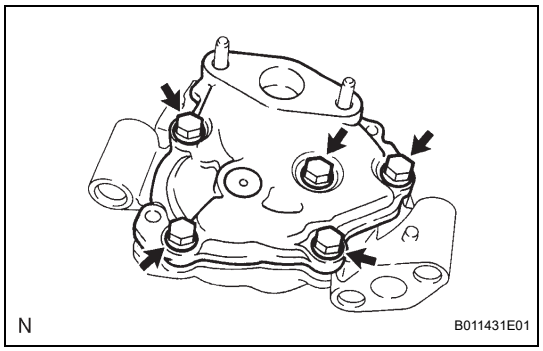
7. **CONNECT RADIATOR HOSE OUTLET**
   (a) Connect the radiator hose outlet to the radiator assembly.



8. **CONNECT RADIATOR HOSE INLET**
   (a) Connect the radiator hose inlet to the radiator assembly.



9. **CONNECT RADIATOR RESERVOIR TANK HOSE**
   (a) Connect the radiator reservoir tank hose to the radiator assembly.
10. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
11. **INSTALL FRONT BUMPER ENERGY ABSORBER (See page ET-7)**
12. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-9)**
13. **ADD ENGINE COOLANT (See page CO-5)**
14. **INSPECT FOR ENGINE COOLANT LEAK (See page CO-1)**
15. **INSTALL ENGINE UNDER COVER LH**
16. **INSTALL ENGINE UNDER COVER RH**
17. **INSTALL FRONT WHEEL OPENING EXTENSION PAD RH**
18. **INSTALL FRONT WHEEL OPENING EXTENSION PAD LH**

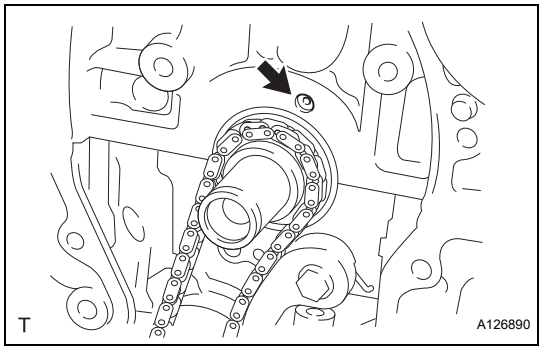


3. REMOVE OIL PUMP COVER

(a) Remove the 5 bolts and oil pump cover.

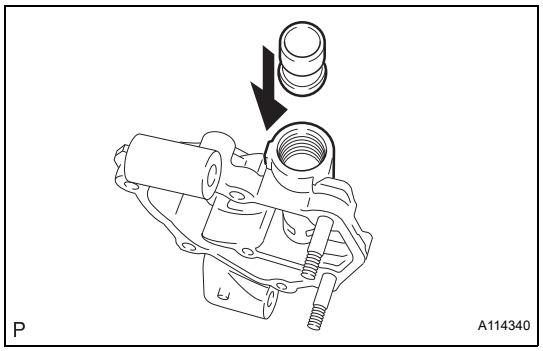
(b) Remove the oil pump rotor.

INSPECTION



1. INSPECT OIL JET

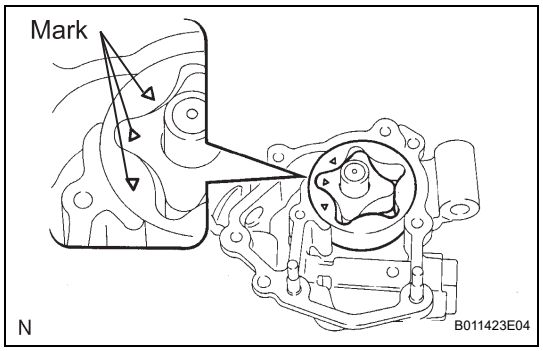
(a) Check the oil jet for damage or clogging.
If necessary, repair the cylinder block.



2. INSPECT OIL PUMP RELIEF VALVE

(a) Check the relief valve.

(1) Coat the valve with engine oil, and then check that the valve falls smoothly into the valve hole under its own weight.
If the valve does not fall smoothly, replace the relief valve. If necessary, replace the oil pump assembly.

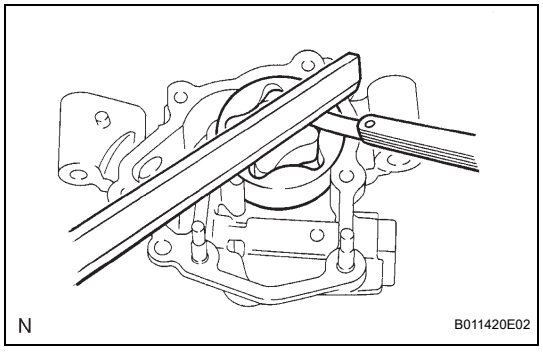


3. INSPECT OIL PUMP ROTOR

(a) Install the oil pump rotor.

(1) Coat the drive rotor and driven rotor with engine oil.

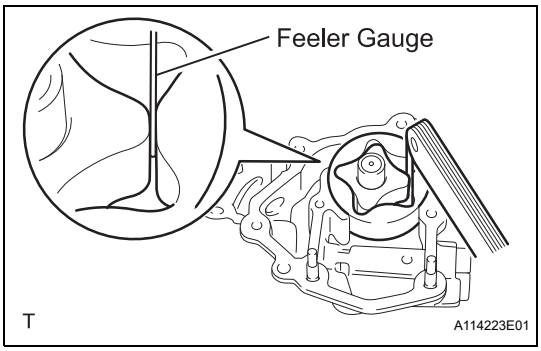
(2) Place the drive and driven rotors into the oil pump with the marks facing the pump cover side.



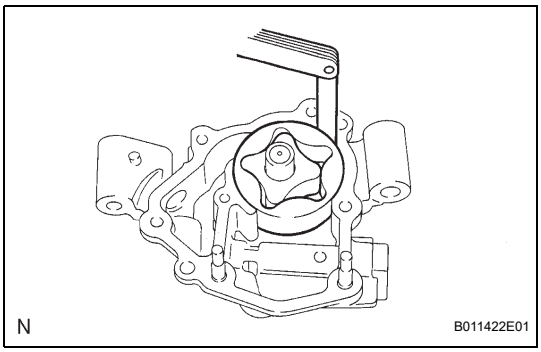
(b) Check the side clearance.

(1) Using a feeler gauge and precision straightedge, measure the clearance between the rotors and precision straightedge.
Standard clearance:
0.030 to 0.085 mm (0.0012 to 0.0033 in.)
Maximum clearance:
0.16 mm (0.0063 in.)
If the side clearance is greater than the maximum, replace the oil pump assembly.

LU



(c) Check the tip clearance.
(1) Using a feeler gauge, measure the clearance between the drive and driven rotor tips.
Standard clearance:
0.080 to 0.160 mm (0.0031 to 0.0063 in.)
Maximum clearance:
0.35 mm (0.0138 in.)
If the tip clearance is greater than the maximum, replace the oil pump assembly.



(d) Check the body clearance.
(1) Using a feeler gauge, measure the clearance between the driven rotor and pump body.
Standard clearance:
0.100 to 0.170 mm (0.0039 to 0.0067 in.)
Maximum clearance:
0.325 mm (0.0128 in.)
If the body clearance is greater than the maximum, replace the oil pump assembly.

4. **INSPECT NO. 2 CHAIN SUB-ASSEMBLY (See page EM-131)**

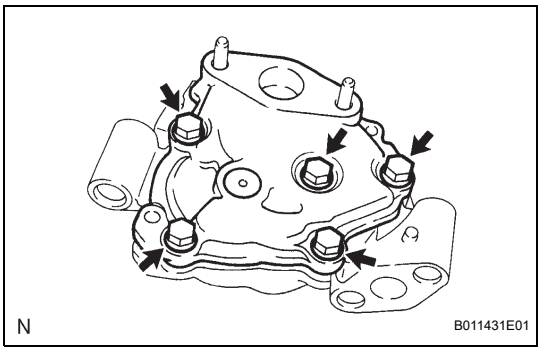
5. **INSPECT OIL PUMP DRIVE GEAR (See page EM-131)**

6. **INSPECT OIL PUMP DRIVE SHAFT GEAR (See page EM-132)**

7. **INSPECT CHAIN TENSIONER PLATE (See page EM-133)**

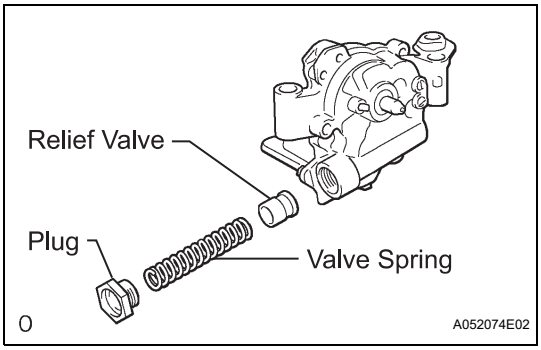
LU

REASSEMBLY

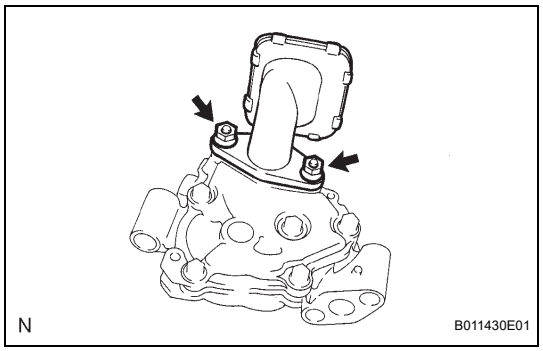


1. **INSTALL OIL PUMP COVER**
(a) Install the oil pump cover with the 5 bolts.
Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)

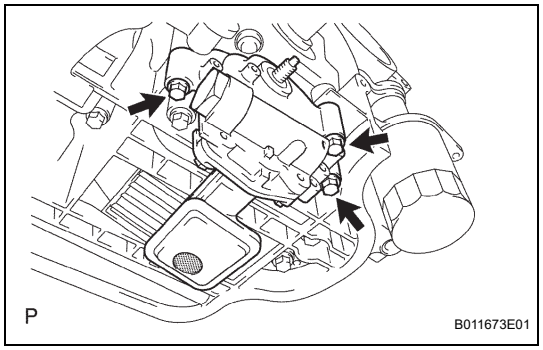
2. **INSTALL OIL PUMP RELIEF VALVE**
(a) Coat the relief valve with engine oil.



(b) Insert the relief valve and spring into the pump body hole.
(c) Using a 27 mm socket wrench, install the plug.
Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)

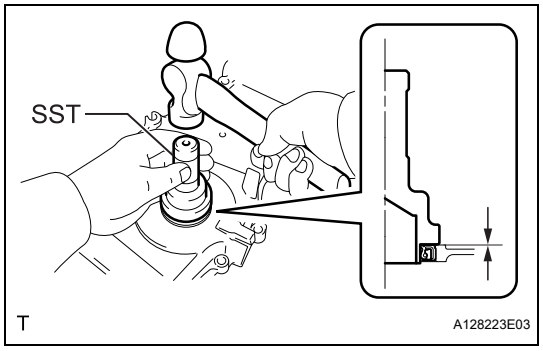


3. **INSTALL OIL PUMP STRAINER**
   (a) Install a new gasket and the oil pump strainer with the 2 nuts.
   Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)



INSTALLATION

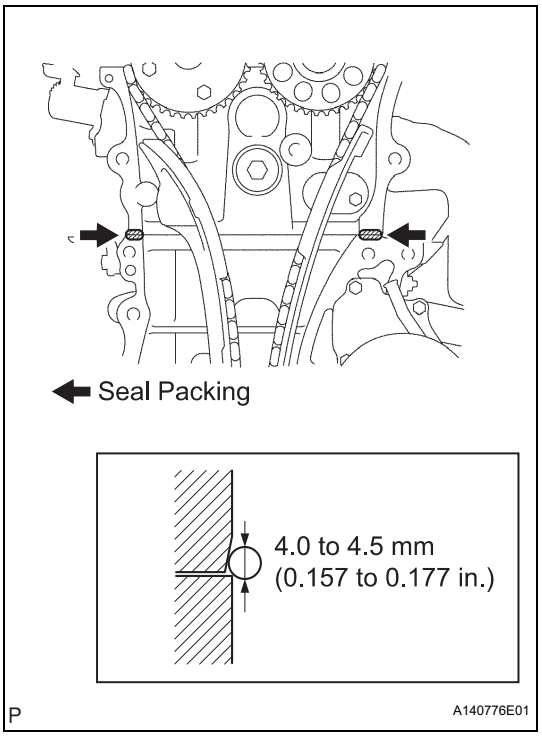
1. **INSTALL OIL PUMP ASSEMBLY**
   (a) Install a new gasket and the oil pump with the 3 bolts.
   Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
2. **INSTALL NO. 2 CHAIN SUB-ASSEMBLY (See page EM-26)**
3. **INSTALL CRANKSHAFT TIMING SPROCKET (See page EM-27)**
4. **INSTALL NO. 1 CHAIN VIBRATION DAMPER (See page EM-28)**
5. **INSTALL CHAIN SUB-ASSEMBLY (See page EM-28)**
6. **INSTALL CHAIN TENSIONER SLIPPER (See page EM-29)**
7. **INSTALL TIMING CHAIN GUIDE (See page EM-29)**
8. **INSTALL NO. 1 CRANKSHAFT POSITION SENSOR PLATE (See page EM-29)**



9. **INSTALL TIMING CHAIN CASE OIL SEAL**
   (a) Using SST, tap in a new oil seal until its surface is flush with the timing chain cover edge.
   SST 09223-22010
   (b) Apply a light coat of MP grease to the lip of the oil seal.
   NOTICE:
   - **Keep the lip free of foreign matter.**
   - **Do not tap on the oil seal at an angle.**
   - **Make sure that the oil seal does not stick out of the timing chain cover.**

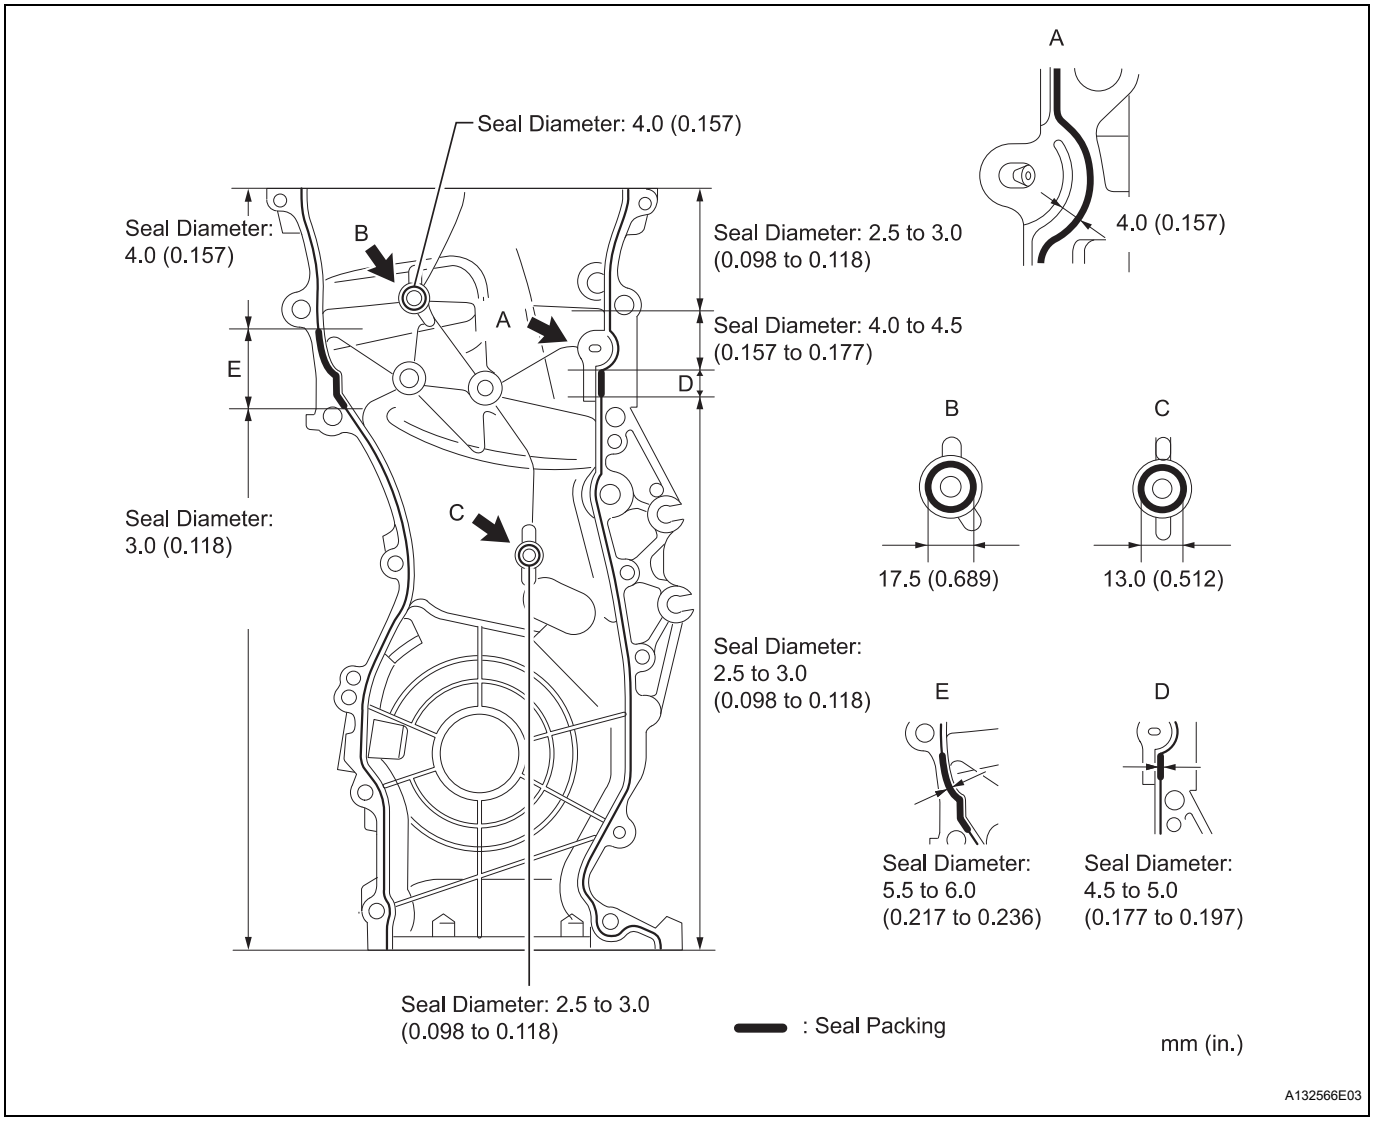
   NOTICE:
   Keep the gap between the timing chain cover edge and the oil seal free of foreign matter.
10. **INSTALL TIMING CHAIN COVER SUB-ASSEMBLY**
   (a) Remove any old packing (FIPG) material and be careful not to drop any oil on the contact surfaces of the timing chain cover, cylinder head and cylinder block.

LU

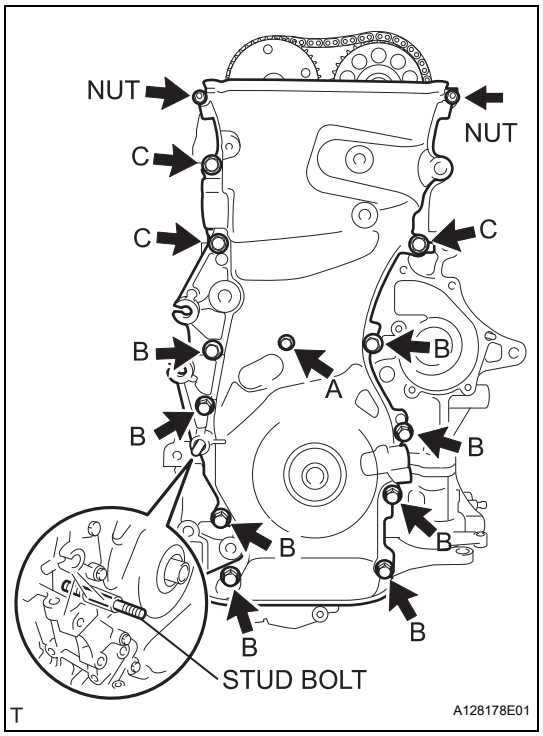


(b) Apply seal packing (diameter: 4.0 to 4.5 mm (0.157 to 0.177 in.)) as shown in the illustration.
Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent

(c) Apply seal packing in a continuous bead as shown in the illustration.



Seal packing:
Toyota Genuine Seal Packing Black, Three Bond 1207B or Equivalent
NOTICE:
- **Remove any oil from the contact surface.**
- **Install the chain cover within 3 minutes after applying seal packing.**
- **Do not start the engine for at least 2 hours after installing the timing chain cover.**



(d) Install the timing chain cover with the 12 bolts and 2 nuts.
Torque: Bolt A
9.0 N*m (92 kgf*cm, 80 in.*lbf)
Bolt B
25 N*m (255 kgf*cm, 18 ft.*lbf)
Bolt C
55 N*m (561 kgf*cm, 41 ft.*lbf)
Nut
11 N*m (112 kgf*cm, 8 ft.*lbf)
Bolt length

Item	Length
Bolt A	30 mm (1.18 in.) length for 10 mm head
Bolt B	30 mm (1.18 in.) length for 12 mm head
Bolt C	40 mm (1.57 in.) length for 14 mm head

(e) Using an E10 "TORX" socket, install the stud bolt to the drive belt tensioner.
Torque: 22 N*m (220 kgf*cm, 16 ft.*lbf)

11. **INSTALL ENGINE MOUNTING BRACKET RH (See page EM-30)**
12. **INSTALL ENGINE MOUNTING INSULATOR (See page EM-30)**
13. **INSTALL OIL PAN SUB-ASSEMBLY (See page EM-30)**
14. **INSTALL CRANK POSITION SENSOR (See page ES-389)**
15. **INSTALL CRANKSHAFT PULLEY (See page EM-75)**
16. **INSTALL NO. 1 CHAIN TENSIONER ASSEMBLY (See page EM-31)**
17. **INSTALL CYLINDER HEAD COVER SUB-ASSEMBLY (See page EM-32)**
18. **INSTALL NO. 2 VENTILATION HOSE**
19. **INSTALL VENTILATION HOSE**
20. **INSTALL IGNITION COIL ASSEMBLY (See page EM-32)**
21. **INSTALL IDLER PULLEY BRACKET (See page EM-103)**
22. **INSTALL V-RIBBED BELT TENSIONER ASSEMBLY (See page EM-103)**

23. **INSTALL V-RIBBED BELT (See page EM-6)**
24. **INSTALL V-RIBBED BELT TENSIONER COVER SUB-ASSEMBLY (See page EM-7)**
25. **INSTALL NO. 2 ENGINE MOUNTING BRACKET RH (See page EM-112)**
26. **INSTALL ENGINE MOVING CONTROL ROD SUB-ASSEMBLY (See page EM-112)**
27. **INSTALL NO. 2 ENGINE MOUNTING STAY RH (See page EM-112)**
28. **INSTALL FRONT EXHAUST PIPE ASSEMBLY** (See page EX-3)
29. **ADD ENGINE OIL (See page LU-4)**
30. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-113)**
31. **INSTALL LUGGAGE TRIM SERVICE HOLE COVER (See page HB-98)**
32. **CHECK FOR ENGINE OIL LEAKS**
33. **CHECK FOR EXHAUST GAS LEAKS**
34. **CHECK IGNITION TIMING (See page EM-1)**
35. **INSTALL FRONT FENDER APRON SEAL RH**
36. **INSTALL ENGINE UNDER COVER LH**
37. **INSTALL ENGINE UNDER COVER RH**
38. **INSTALL FRONT WHEEL RH (See page EM-113)**
39. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**
40. **PERFORM INITIALIZATION**
    (a) Perform initialization procedure (See page IN-43).
    HINT:
    Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

SYSTEM DESCRIPTION

1. PUSH-BUTTON START FUNCTION DESCRIPTION

(a) The push-button start function uses a push-type power switch, which the driver can operate by merely carrying the electrical key. This system consists primarily of the main body ECU, power switch, ID code box, steering lock ECU, electrical key, ACC relay, IG1 relay, IG2 relay and certification ECU. The main body ECU controls the function. This function operates in cooperation with the smart key system.

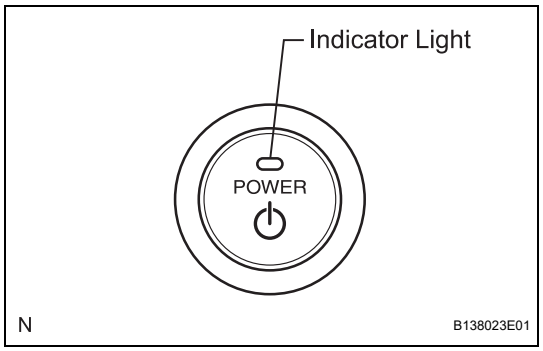
2. FUNCTION OF COMPONENT

Component	Function
Power Switch • Transponder Key Amplifier	• Transmits power switch signal to main body ECU. • Informs driver of power source mode or system abnormality with illumination of indicator light. • Receives ID code and transmits it to certification ECU when key battery is low.
Electrical Key	Receives signals from oscillators and returns ID code to door control receiver.
Electrical Key Oscillator • Console and Rear Seat	Receives request signals from certification ECU and forms detection area in vehicle interior.
Steering Lock ECU	Receives lock/unlock request signals from certification ECU and main body ECU.
Door Control Receiver	Receives ID code from electrical key and transmits it to certification ECU.
Main body ECU	• Changes power source mode in 4 stages (off, on (ACC), on (IG), on (READY)) in accordance with shift position and state of stop light switch. • Controls push-button start function in accordance with signals received from switches and certification ECU and HV control ECU.
Certification ECU	Certifies ID code received from door control receiver and transmits certification results to main body ECU.
Stop Light Switch	Outputs state of brake pedal to main body ECU.
ID Code Box	Receives steering unlock or engine immobiliser unset signals from certification ECU, certifies them, and transmits each unset signal to steering lock ECU or HV control ECU.
HV control ECU	Receives signal from ID code box and main body ECU and performs HV control system is on (READY).

3. SYSTEM FUNCTION

The electric controls of the push-button start function are described below:

Control	Outline
Power switch control	• When driver operates power switch with electrical key in driver's possession, certification ECU starts indoor electrical key oscillator, which transmits request signal to electrical key. Upon receiving this signal, the electrical key transmits ID code signal to door control receiver. • Certification ECU verifies check results received from door control receiver and sends them to main body ECU. Based on these results, main body ECU authorizes operation of power switch.
Diagnosis	When main body ECU detects malfunction, main body ECU diagnoses and memorizes failed section.



4. CONSTRUCTION AND OPERATION

(a) Power Switch

The power switch consists of a momentary type switch, 3 color (amber, green, greenish white) LEDs, and a transponder key amplifier.

- The greenish white LED is for illumination.
- The amber and green LEDs are for the indicator lights. The driver can check the present power source mode and whether the HV control system can start in accordance with the illumination state of the indicator light.
- When the main body ECU detects an abnormality in the push-button start function, it makes the amber indicator light flash. If the HV control system stopped in this state, it may not be possible to restart it.

(b) Indicator Light Condition

Power switch indicator light condition:

Power Source Mode/Condition	Indicator Light Condition	
	Brake pedal released	Brake pedal depressed, shift lever in P
off	OFF	ON (Green) (when key and vehicle IDs match)
on (ACC, IG)	ON (Amber)	ON (Green)
HV control system on (READY)	OFF	OFF
Steering lock not unlocked	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

(c) Main body ECU

The main body ECU consists of the IG1 and IG2 relay actuation circuits and CPU.

HINT:

Before removing the battery, make sure to turn the power switch off. The main body ECU constantly stores the present power source mode in its memory. Therefore, if the main body ECU is interrupted by disconnecting the battery, the main body ECU restores the power source mode after the battery is reconnected. For this reason, if the battery is disconnected when the power switch is not off, the power will be restored to the vehicle at the same time the power is restored to the main body ECU (by reconnecting the battery).

5. PUSH-BUTTON START FUNCTION OPERATION

(a) This system has different power source mode patterns depending on the brake pedal condition and shift lever position.

Brake Pedal	Shift Lever	Power Source Mode Pattern
Depressed	P position	When the power switch is pushed once. • off → HV control system on (READY) • on (ACC) → HV control system on (READY) • on (IG) → HV control system on (READY)

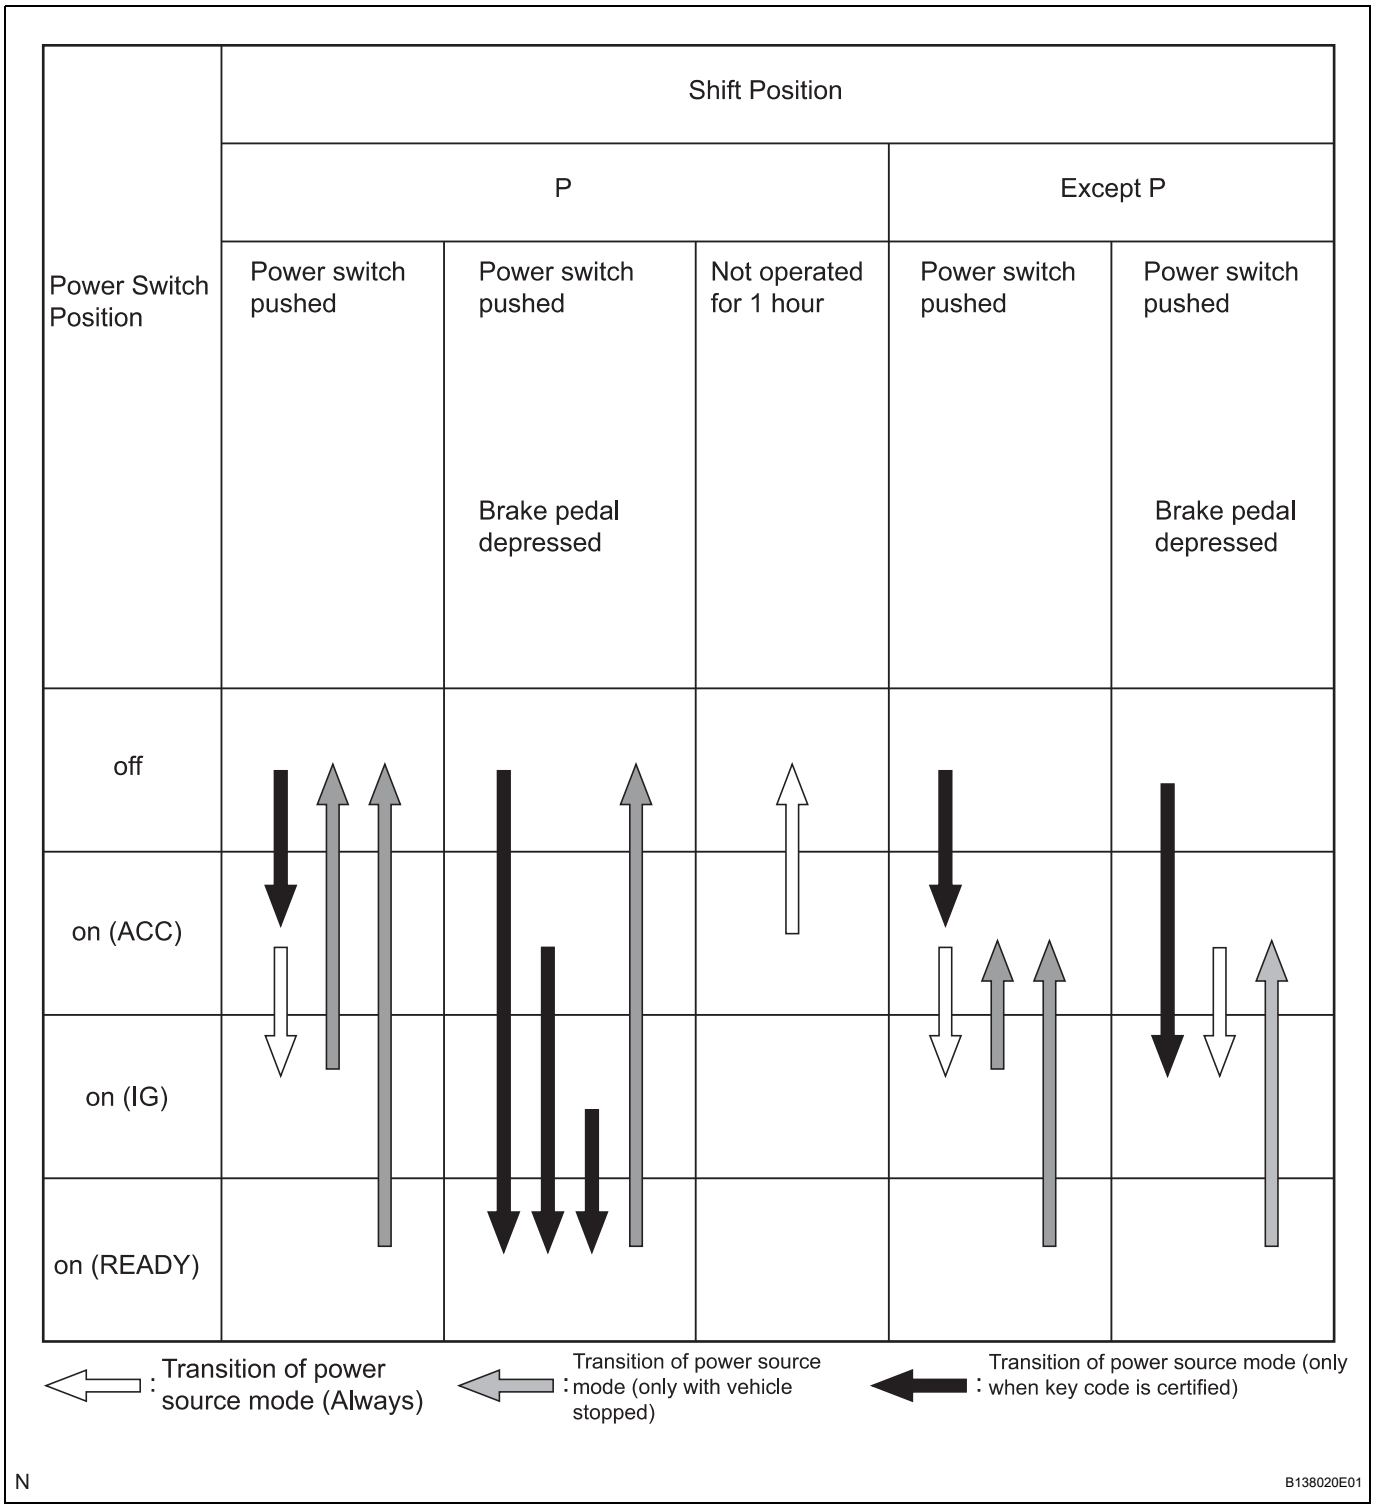
ST

Brake Pedal	Shift Lever	Power Source Mode Pattern
Not depressed	P position	Each time the power switch is pushed. • off → on (ACC) → on (IG) → off
	Except P position	Each time the power switch is pushed. • off → on (ACC) → on (IG) → on (ACC)
-	P position	When the power switch is pushed with power source mode on (READY). • HV control system on (READY) → off
-	Except P position	When the power switch is pushed with power source mode on (READY). • HV control system on (READY) → on (ACC)

When the battery of the key is low, the push-button start function can be operated by holding the key against the power switch.

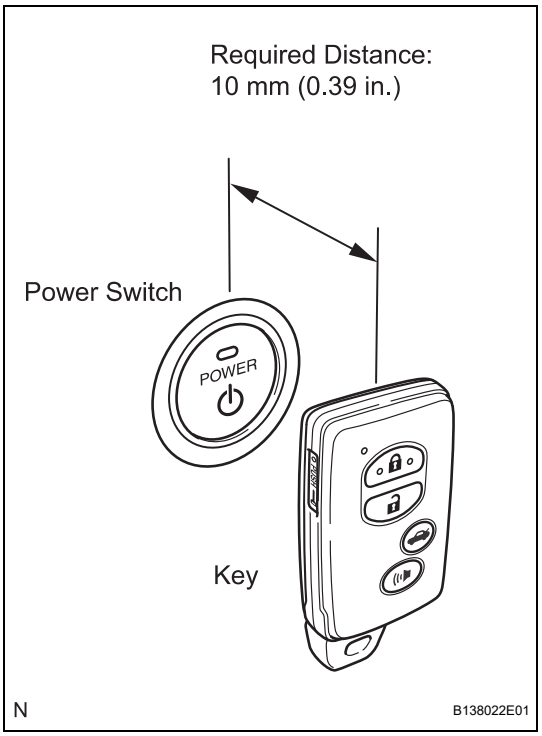
- After approximately 1 hour has passed with the power switch on (ACC) and the shift position in P, the main body ECU will automatically cut the power supply (the power source mode changes to off).

- The illustration below shows the transition of power source modes.
  Transition of power source mode:



ST

HINT:
While the vehicle is being driven normally, operation of the power switch is disabled. However, if the HV control system must be stopped in an emergency while the vehicle is being driven, pressing the power switch for 3 seconds or more stops the HV control system. Power source mode changes from on (READY) to on (ACC).



6. WHEN KEY BATTERY IS LOW

(a) To operate the push-button start function when the key battery is low, hold the key close to the power switch with the brake pedal depressed.
(b) The main body ECU transmits a key verification request signal from the stop light switch to the certification ECU.
(c) The certification ECU does not receive an ID code response from the entry door control receiver, so it actuates the transponder key amplifier built into the power switch.
(d) The transponder key amplifier outputs an engine immobiliser radio wave to the key.
(e) The key receives the radio wave, and returns a radio wave response to the transponder key amplifier.
(f) The transponder key amplifier combines the key ID codes with the radio wave response, and transmits it to the certification ECU.
(g) The certification ECU judges and verifies the ID code, and transmits a key verification OK signal to the main body ECU. The buzzer in the combination meter sounds at the same time.
(h) After the buzzer sounds, if the power switch is pressed within 5 seconds with the brake pedal not depressed, the power source mode changes to on (ACC) or on (IG), the same as in the normal condition.

7. DIAGNOSIS

The main body ECU can detect malfunctions in the push-button start function when the power source mode is on (IG). When the ECU detects a malfunction, the amber indicator light of the power switch flashes to warn the driver. At the same time, the ECU stores a 5-digit DTC (Diagnostic Trouble Code) in the memory.

- The indicator light warning continues for 15 seconds even after the power source mode is changed to off.
- The DTC can be read by connecting the intelligent tester to the DLC3.
- The push-button start function cannot be operated if a malfunction occurs.

ST

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the push-button start function.
- The intelligent tester should be used in steps 4, 5 and 8.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4	INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally (See page CA-7).

ST

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **GO TO CAN COMMUNICATION SYSTEM**

A

5 CHECK FOR DTC

(a) Check for DTCs and note any codes that are output (See page ST-21).
(b) Delete DTCs.
(c) Recheck for DTCs.

Result

Result	Proceed to
DTC does not reoccur	A
DTC reoccurs	B

B → **GO TO DIAGNOSTIC TROUBLE CODE CHART**

A

ST

6 INSPECT BASIC OPERATION

(a) Turn the power switch on (READY) and check that the HV control system starts normally. Make sure the brake pedal is depressed and the shift position is P at this time.
(b) Check that the power switch mode can be changed by pushing the power switch.
HINT:
Without depressing the brake pedal, push the power switch repeatedly. Power switch mode should turn from off to on (ACC) to on (IG) and back to off.
With the brake pedal depressed, push the power switch repeatedly. Power switch mode should turn to on (READY) from any status.
OK:
HV control system can be on (READY) normally.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:

The items in the table below can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current setting before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

SMART:

Display (Item)	Default	Contents	Setting
IGNITION AREA (SMART ignition available area)	ALL	Function to choose the available area for electrical key to start HV control system and cancel the steering lock.	FRONT / ALL

PROBLEM SYMPTOMS TABLE

PUSH-BUTTON START FUNCTION:

Symptom	Suspected Area	See page
Power mode does not change (neither ACC nor IG is possible).	1. AM2 Fuse	ST-91

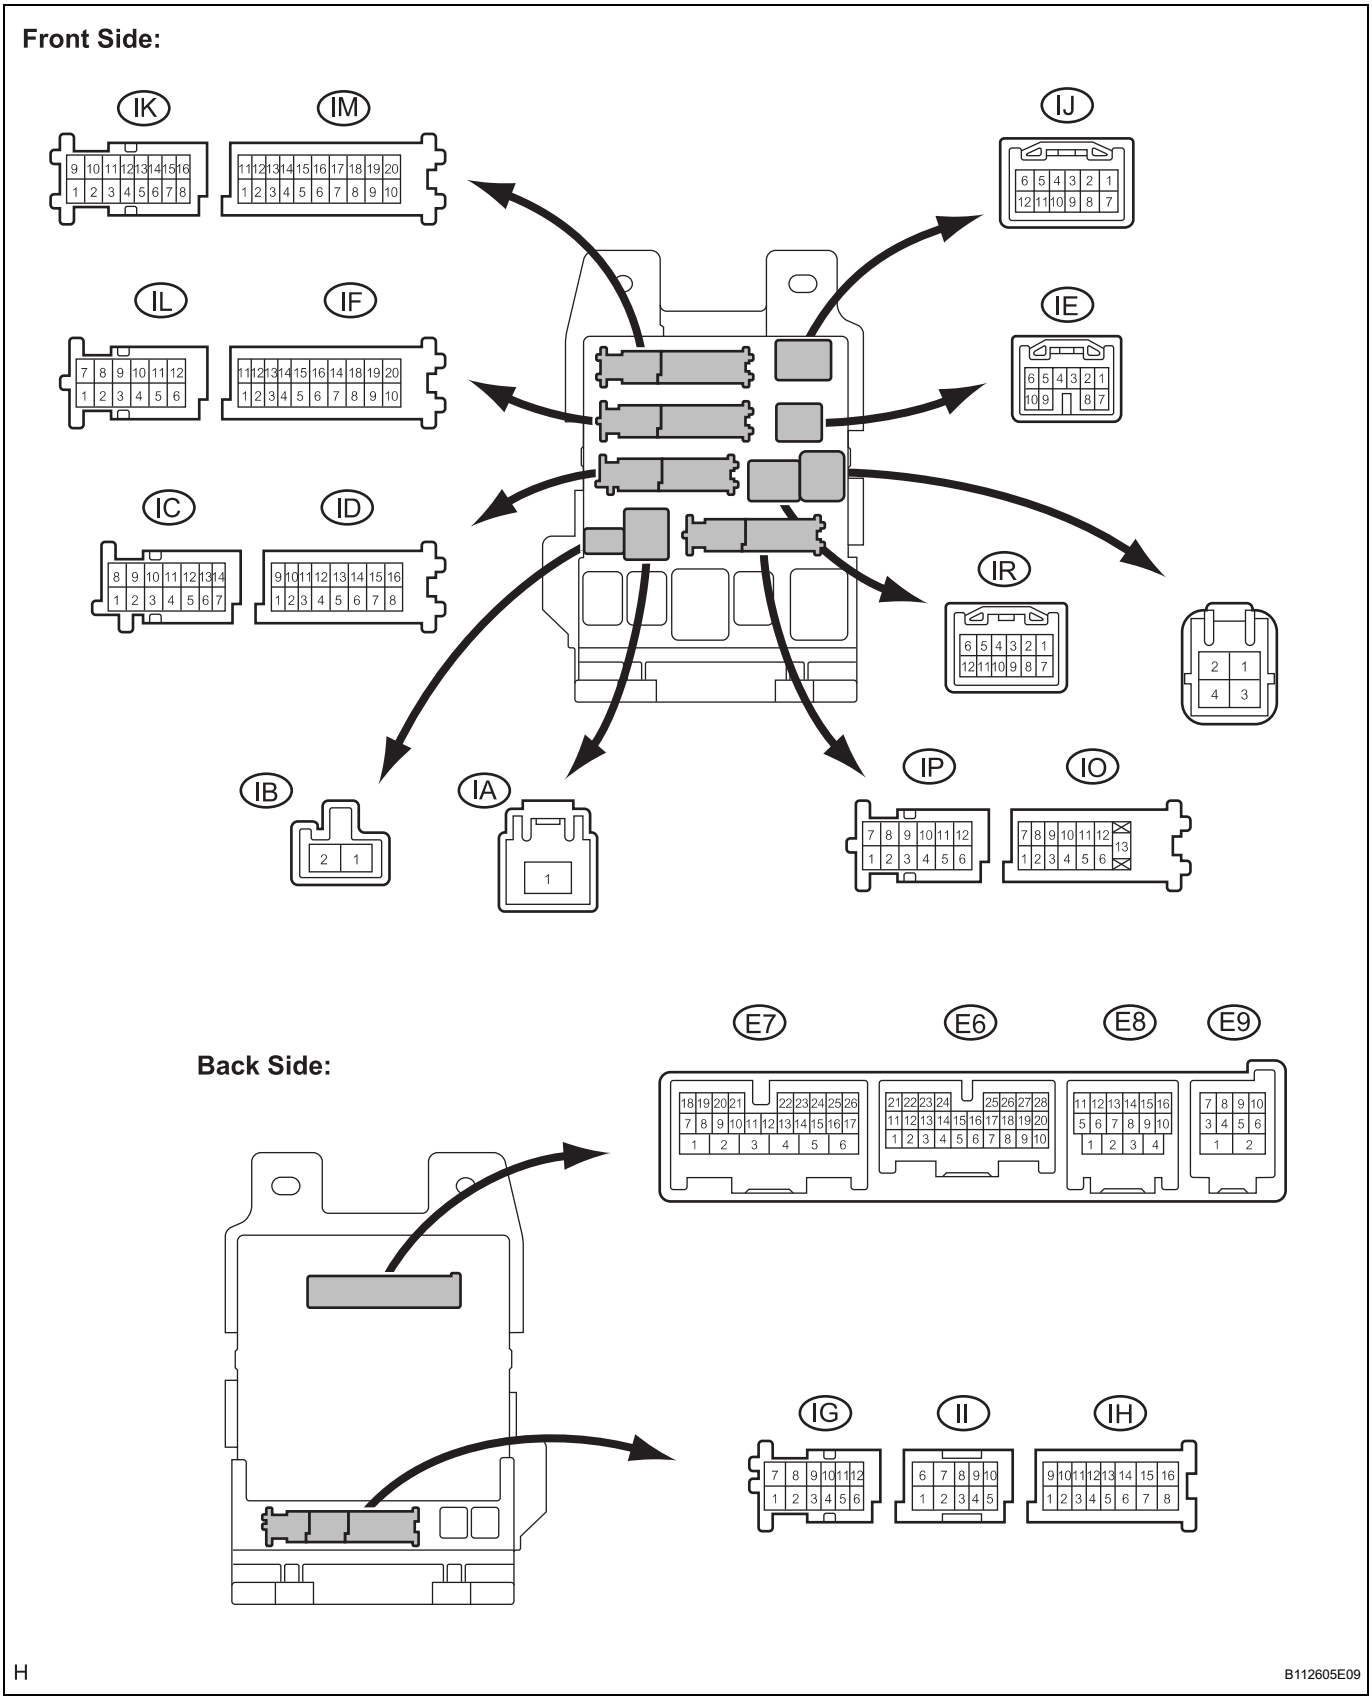
TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)



(a) Disconnect the IR, IA, IK, ID, IF, IM E6, E7 and E8 ECU connectors.

(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AM1 (E7-6) - Body ground	L - Body ground	+B power supply	Always	10 to 14 V
AM2 (E6-1) - Body ground	L - Body ground	+B power supply	Always	10 to 14 V
SSW1 (E7-17) - Body ground	L - Body ground	Power switch signal	Power switch pushed	Below 1 Ω
SSW1 (E7-17) - Body ground	L - Body ground	Power switch signal	Power switch not pushed	10 kΩ or higher
SSW2 (E7-16) - Body ground	V - Body ground	Power switch signal	Power switch pushed	Below 1 Ω
SSW2 (E7-16) - Body ground	V - Body ground	Power switch signal	Power switch not pushed	10 kΩ or higher
GND3 (E8-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
LIN1 (IR-9) - Body ground	O - Body ground	LIN line	Always	10 kΩ or higher
BATB (IA-1) - Body ground	B - Body ground	+B Power supply	Always	10 to 14 V
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
CANN (E8-15) - Body ground	W - Body ground	CAN Line	Always	10 kΩ or higher
CANP (E8-16) - Body ground	B - Body ground	CAN Line	Always	10 kΩ or higher
CANH (E8-5) - Body ground	B - Body ground	CAN Line	Always	10 kΩ or higher
CANL (E8-6) - Body ground	W - Body ground	CAN Line	Always	10 kΩ or higher

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the ECU connectors.

(d) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACC (IF-2) - Body ground	L - Body ground	ACC power supply	Power switch on (ACC)	10 to 14 V
IG (IF-11) - Body ground	B - Body ground	IG power supply	Power switch on (IG)	10 to 14 V
ACCD (E7-22) - GND3 (E8-1)	W - W-B	ACC signal	Power switch on (ACC)	Output voltage at terminal AM1 or AM2 is -2 V or more.
ACCD (E7-22) - GND3 (E8-1)	W - W-B	ACC signal	Power switch off	Below 1 V
IG1D (E7-3) - GND3 (E8-1)	P - W-B	IG1 signal	Power switch on (IG)	Output voltage at terminal AM1 or AM2 is -2 V or more.
IG1D (E7-3) - GND3 (E8-1)	P - W-B	IG1 signal	Power switch on (ACC)	Below 1 V
IG2D (E6-11) - GND3 (E8-1)	LG - W-B	IG2 signal	Power switch on (IG)	Output voltage at terminal AM1 or AM2 is -2 V or more.
IG2D (E6-11) - GND3 (E8-1)	LG - W-B	IG2 signal	Power switch on (ACC)	Below 1 V
STP (IL-7) - GND3 (E8-1)	L - W-B	Stop light signal	Brake pedal depressed	Output voltage at terminal AM1 or AM2 is -2 V or more.
STP (IL-7) - GND3 (E8-1)	L - W-B	Stop light signal	Brake pedal released	Below 1 V
SLR+ (E7-19) - GND3 (E8-1)	BR - W-B	Steering lock motor signal	Steering lock motor operating	Below 1 V
SLR+ (E7-19) - GND3 (E8-1)	BR - W-B	Steering lock motor signal	Steering lock motor does not operate	Output voltage at terminal AM1 or AM2 is -2 V or more.
SLP (E7-18) - GND3 (E8-1)	P - W-B	Steering lock actuator position signal	Steering lock is locked	Pulse generation (See waveform 3)
SLP (E7-18) - GND3 (E8-1)	P - W-B	Steering lock actuator position signal	Steering lock is released	Pulse generation (See waveform 3)
SPD (E8-9) - GND3 (E8-1)	V - W-B	Vehicle speed signal	Power switch on (IG), rotate rear wheel slowly	Pulse generation (See waveform 1)
RDY (E8-8) - GND3 (E8-1)	SB - W-B	Power switch on (READY) signal	Power switch on (READY)	Pulse generation (See waveform 2)

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
P (E9-2) - GND3 (E8-1)	G - W-B	Shift lock signal	Shift lever P position	Below 1 V
P (E9-2) - GND3 (E8-1)	G - W-B	Shift lock signal	Shift lever not P position	Output voltage at terminal AM1 or AM2 is -2 V or more.
STSW (E9-4) - GND3 (E8-1)	GR - W-B	HV control system activation request signal	Brake pedal depressed, shift lever P position, power switch is pushed once	Output voltage at terminal AM1 or AM2 is -2 V or more.
INDS (E7-15) - GND3 (E8-1)	LG - W-B	Vehicle condition signal	Brake pedal depressed, shift lever P position.	Output voltage at terminal AM1 or AM2 is -3 V or more.
INDW (E7-14) - GND3 (E8-1)	P - W-B	Warning signal	Power switch on (ACC, IG)	Output voltage at terminal AM1 or AM2 is -3 V or more.
SWIL (E7-25) - GND3 (E8-1)	O - W-B	Illumination signal	Light control switch TAIL or HEAD	Output voltage at terminal AM1 or AM2 is -2 V or more.

If the result is not as specified, the ECU may have a malfunction.

(e) Using an oscilloscope, check the signal waveform of the ECU.

(1) Waveform 1

Waveform 1 (Reference):

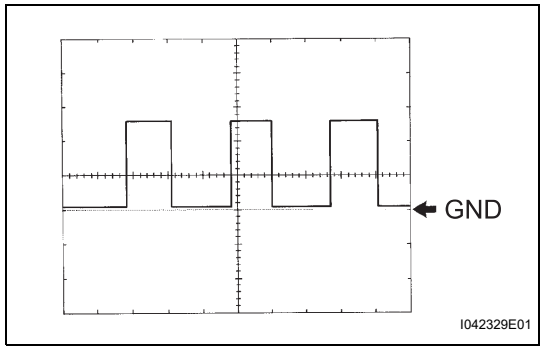
Terminal No.	SPD (E8-9) - GND3 (E8-1)
Tool Setting	5 V/DIV., 10 ms./DIV.
Vehicle Condition	Driving at approx. 20 km/h (12 mph)

HINT:
As the vehicle speed increases, the wavelength shortens.

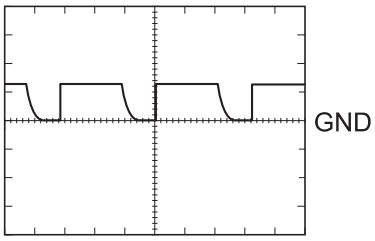
(2) Waveform 2

Waveform 2 (Reference):

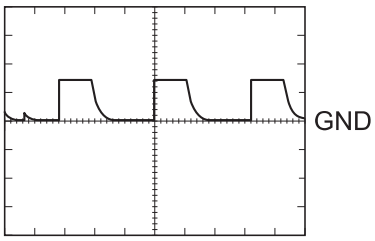
Terminal No.	RDY (E8-8) - GND3 (E8-1)
Tool Setting	10 V/DIV., 10 ms./DIV.
Vehicle Condition	Power switch on (IG) or on (READY)



Waveform:



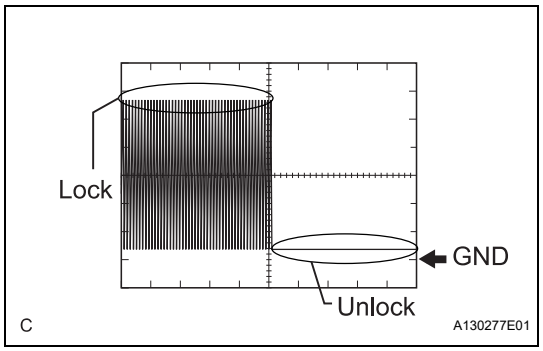
Power switch ON (IG)



Power switch ON (READY)

C A111591E05

ST

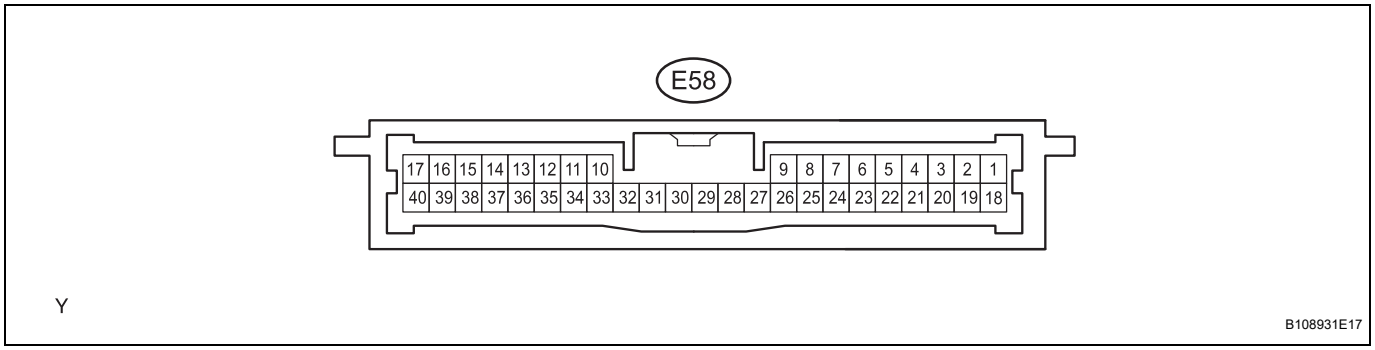


(3) Waveform 3

Waveform 3 (Reference):

Terminal No.	SLP (E7-18) - GND3 (E8-1)
Tool Setting	2 V/DIV., 100 ms./DIV.
Vehicle Condition	Steering lock/unlock

2. CHECK CERTIFICATION ECU



(a) Disconnect the E58 ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E58-1) - Body ground	W - Body ground	+B power supply	Always	10 to 14 V
LIN (E58-10) - Body ground	O - Body ground	LIN line	Always	10 kΩ or higher
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

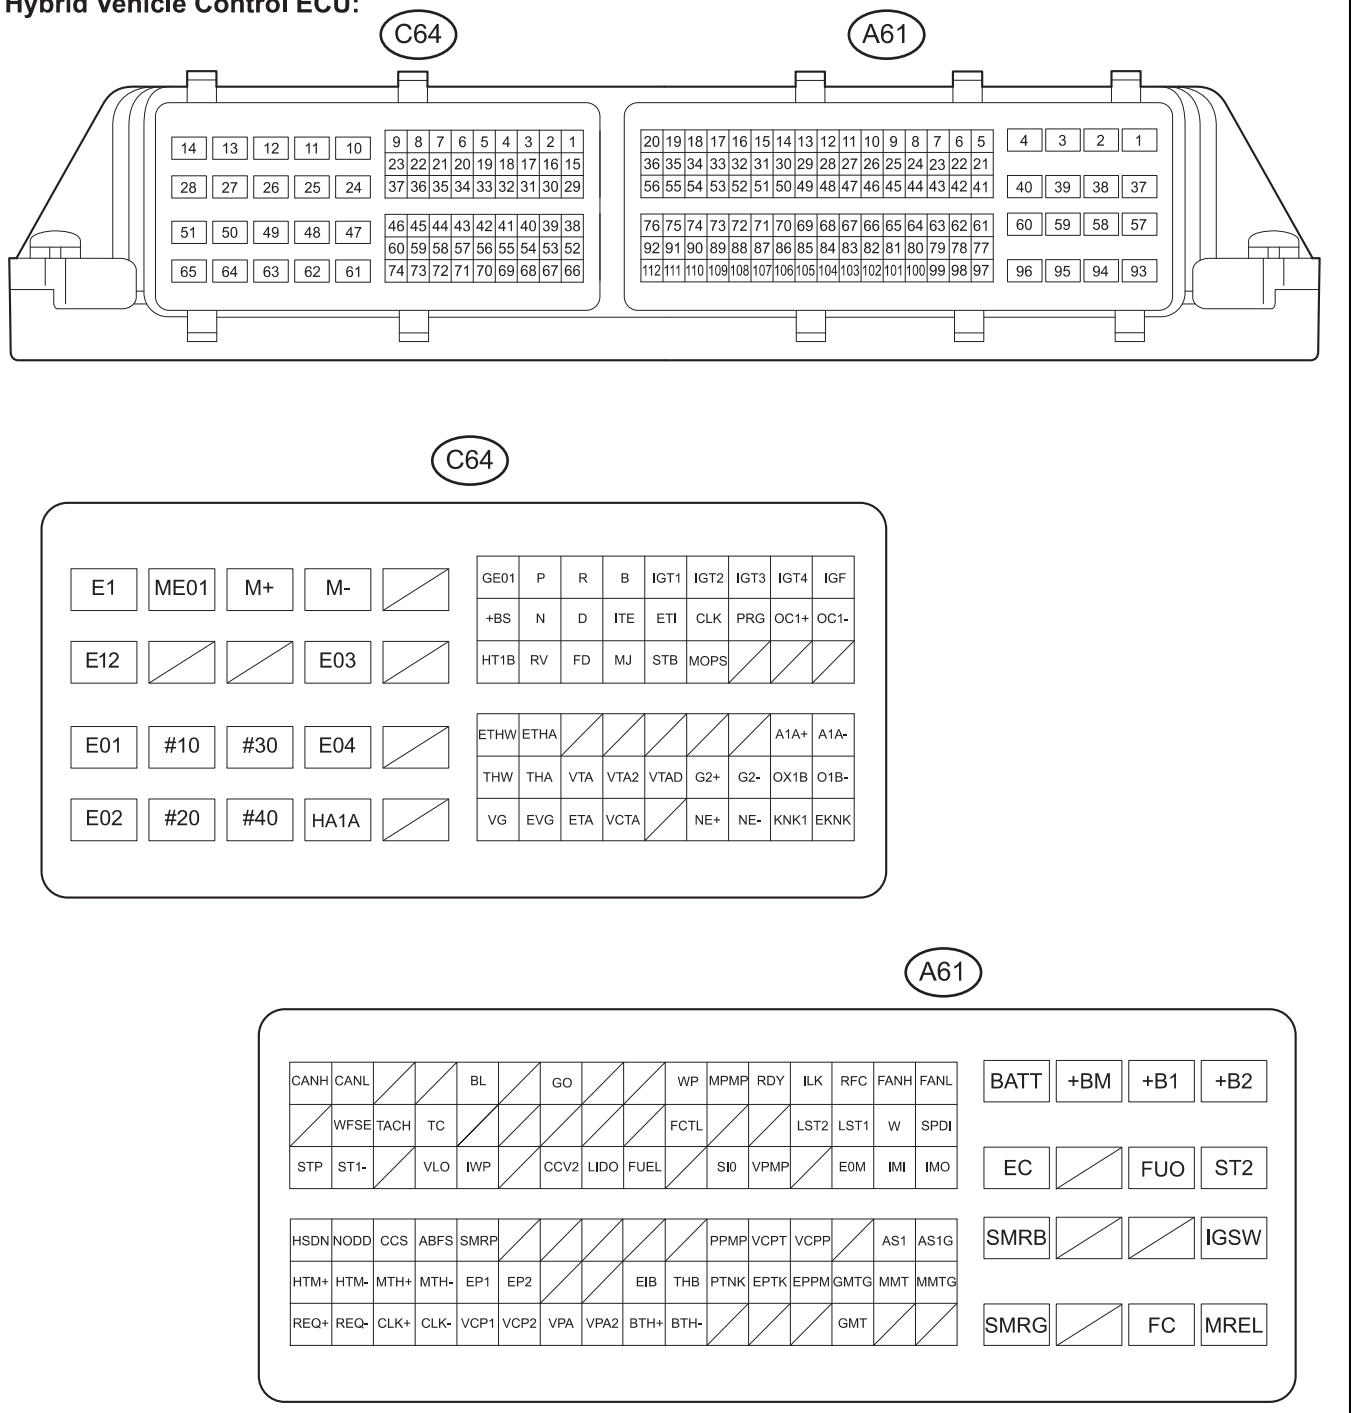
(c) Reconnect the E58 ECU connector.
(d) Measure the voltage of the connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG (E58-18) - Body ground	LG - Body ground	Ignition power supply	Power switch on (IG)	10 to 14 V
IG (E58-18) - Body ground	LG - Body ground	Ignition power supply	Power switch off	Below 1 V

If the result is not as specified, the main body ECU may have malfunction.

3. CHECK HV CONTROL ECU

Hybrid Vehicle Control ECU:



C

A142563E02

(a) Disconnect the A61 and C64 ECM connectors.
(b) Measure the voltage and resistance of the wire harness side connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B1 (A61-2) - Body ground	Y - Body ground	Power source of ECU	Power switch on (IG)	10 to 14 V
+B2 (A61-1) - Body ground	Y - Body ground	Power source of ECU	Power switch on (IG)	10 to 14 V
IGSW (A61-57) - Body ground	Y - Body ground	Ignition power supply	Power switch on (IG)	10 to 14 V
E01 (C64-51) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E02 (C64-65) - Body ground	B-W - Body ground	Ground	Always	Below 1 Ω

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E03 (C64-25) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
E04 (C64-48) - Body ground	W - Body ground	Ground	Always	Below 1 Ω
E1 (C64-14) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
ME01 (C64-13) - Body ground	B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the ECU connectors.

(d) Measure the voltage of the connectors.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RDY (A61-9) - E1 (C64-14)	V - W-B	HV control system on (READY) signal (output)	Power switch on (READY)	Pulse generation (see waveform 1)
STP (A61-56) - E1 (C64-14)	W - W-B	Stop light switch signal (input)	Brake pedal depressed	7.5 to 14 V
STP (A61-56) - E1 (C64-14)	W - W-B	Stop light switch signal (input)	Brake pedal released	Below 1.5 V
ST2 (A61-37) - E1 (C64-14)	R - W-B	HV control system activation request signal	Brake pedal depressed, shift lever P position, power switch is pushed once	Output voltage at terminal AM1 or AM2 is -2 V or more.

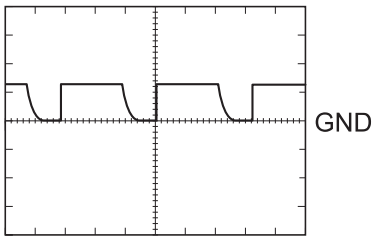
If the result is not as specified, the ECU may have a malfunction.

(e) Using an oscilloscope, check the signal waveform of the ECU.

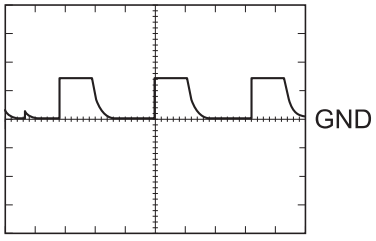
Waveform 1 (Reference):

Terminal No.	RDY (A61-9) - E1 (C64-14)
Tool Setting	10 V/DIV., 10 ms./DIV.
Vehicle Condition	Power switch on (IG) or on (READY)

Waveform:



Power switch ON (IG)

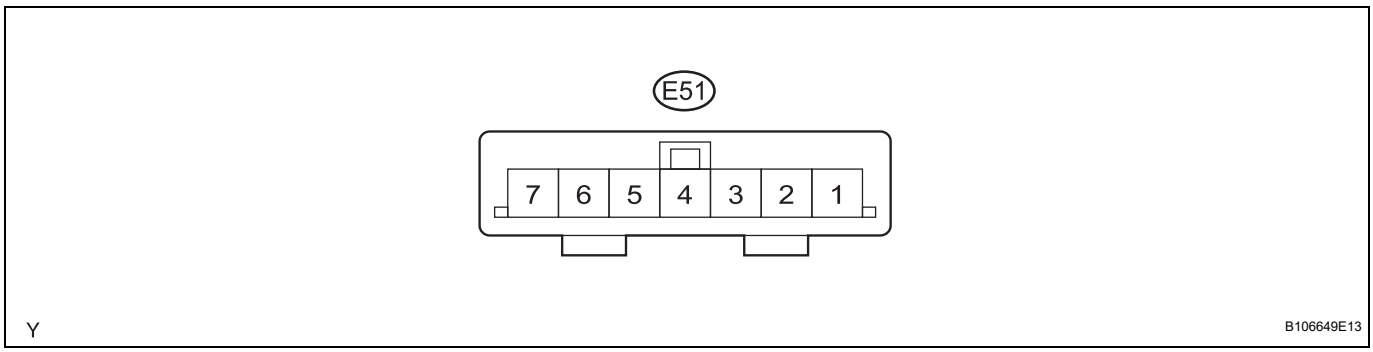


Power switch ON (READY)

C A111591E05

ST

4. CHECK STEERING LOCK ECU



(a) Disconnect the E51 ECU connector.
(b) Measure the voltage and resistance of the wire harness side connector.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (E51-7) - Body ground	P - Body ground	+B power supply	Always	10 to 14 V
IG2 (E51-6) - Body ground	B - Body ground	Ignition power supply	Power switch on (IG)	10 to 14 V
IG2 (E51-6) - Body ground	B - Body ground	Ignition power supply	Power switch off	Below 1 V
GND (E51-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
SGND (E51-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E51 ECU connector.
(d) Measure the voltage of the connector.

ST

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SLP1 (E51-4) - GND (E51-1)	P - W-B	Steering lock actuator position signal	Steering is locked	10 to 14 V
SLP1 (E51-4) - GND (E51-1)	P - W-B	Steering lock actuator position signal	Steering is released	Below 1 V

If the result is not as specified, the ECU may have a malfunction.

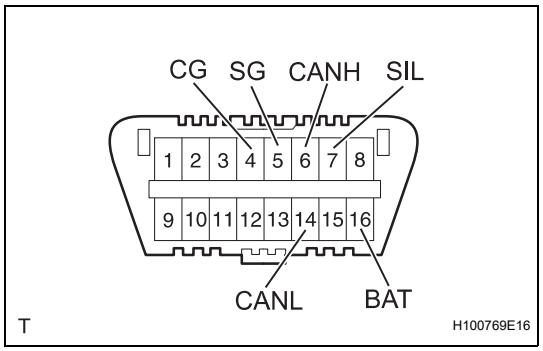
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Push-button start function data and the Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the function seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

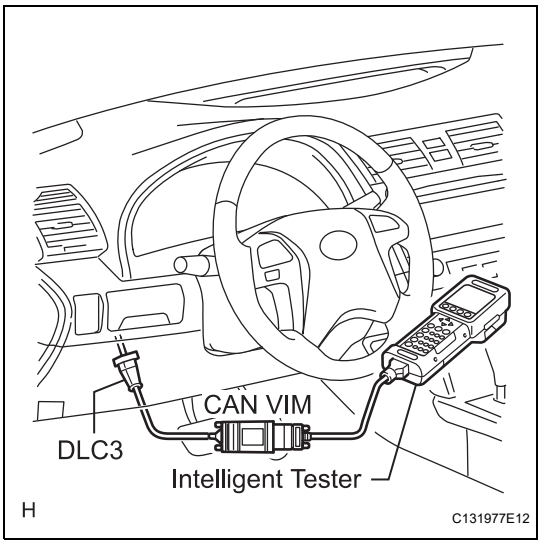
HINT:
The ECU uses ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power Switch OFF*	56 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power Switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Power Switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power Switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Power Switch OFF*	6 kΩ or more

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

ST



HINT:
Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

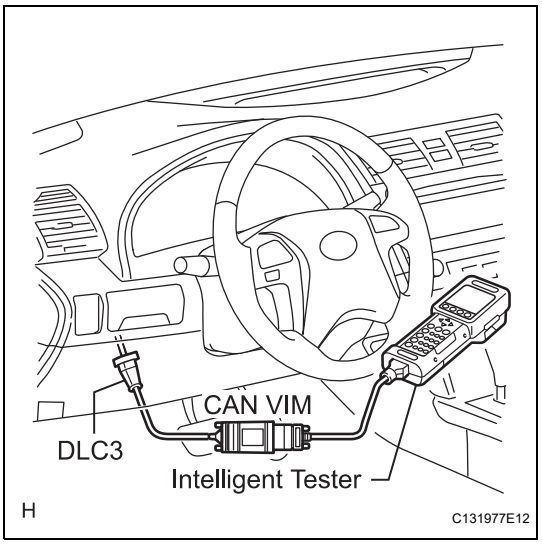
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / OBD/ MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / OBD/ MOBD / DTC INFO / CLEAR CODES.
(d) Erase the DTC by following the directions on the tester screen.

HINT:
Refer to the intelligent tester operator's manual for further details.

ST

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester to read the Data List allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful as intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the DATA LIST information early in troubleshooting is one way to save diagnostic time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 or less second intervals until communication between the tester and vehicle starts.

(b) Turn the power switch on (IG).

(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / DATA LIST.

(d) Read the DATA LIST.

MAIN BODY:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ACC SW	Power switch on (ACC) / ON or OFF	ON: Power switch on (ACC) OFF: Power switch off	-
IG SW	Power switch on (IG) / ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
SHIFT P SIG	Shift P position signal / ON or OFF	ON: Shift position is P OFF: Shift position is not P	-
STR UNLOCK SW	Steering lock condition / ON or OFF	ON: Steering is unlocked (Power switch on (ACC)) OFF: Steering is locked (Power switch off)	-
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STSW1	Start switch 1 / ON or OFF	ON: Power switch is pushed OFF: Power switch is not pushed	-
START SW2	Start switch 2 / ON or OFF	ON: Power switch is pushed OFF: Power switch is not pushed	-
RATCH CIRCUIT	Ratch circuit / ON or OFF	ON: Power switch on (IG) or on (READY) OFF: Power switch off, or on (ACC)	-
IG1 RELAY MON1	IG1 outer relay monitor / ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
IG1 RELAY MON2	IG1 inner relay monitor / ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
IG2 RELAY MON1	IG2 outer relay monitor / ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
IG2 RELAY MON2	IG2 inner relay monitor / ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
READY SIG	HV control system on (READY) request signal monitor / ON or OFF	ON: System (READY) is ON OFF: System (READY) is OFF	Power switch pressed and held with shift lever in P or N
ACC RELAY MON	ACC relay monitor / ON or OFF	ON: Power switch on (ACC) OFF: Power switch off	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
VEHICLE SPD SIG	Vehicle speed signal / STOP or RUN	STOP: Vehicle is stopped RUN: Vehicle is running	-
PWR COND	Power supply condition / ALL, ACC ON, IG1 IG2, ST ON	ALL: All relays are OFF ACC ON: ACC relay is ON IG1: IG1 relay is ON IG2: IG2 relay is ON ST ON: ST request signal is ON	-
COM ENTRY&STRT	Communication for certification ECU / OK or STOP	OK: Communication STOP: No communication	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows the relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3
(b) Turn the power switch on (IG).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / ACTIVE TEST.
(d) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY:

Tester Display	Test Part	Control Range	Diagnostic Note
LIGHTING IND	Indicator for lighting	ON / OFF	-
IND CONDITION	Power switch indicator	Green / Amber / No Sig	-
STR LOCK PWR	Power supply for steering lock ECU	ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

PUSH-BUTTON START FUNCTION:

DTC Code	Detection Item	Trouble Area	See page
B2271	Ignition Hold Monitor Malfunction	1. AM2 fuse 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-26
B2272	Ignition 1 Monitor Malfunction	1. IG1 relay 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-28
B2273	Ignition 2 Monitor Malfunction	1. IG2 relay 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-33
B2274	ACC Monitor Malfunction	1. ACC relay 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-37
B2275	STSW Monitor Malfunction	1. HV control ECU 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-42
B2277	Detecting Vehicle Submersion	Main body ECU (Instrument panel J/B)	ST-45
B2278	Power Switch Circuit Malfunction	1. Power switch 2. Main body ECU (Instrument panel J/B) 3. Wire harness or connector	ST-46
B2281	"P" Signal Malfunction	1. Main body ECU (Instrument panel J/B) 2. Shift lock control ECU 3. Wire harness or connector	ST-51
B2282	Vehicle Speed Signal Malfunction	1. CAN communication system 2. Combination meter system 3. Main body ECU (Instrument panel J/B) 4. Wire harness or connector	ST-54
B2283	Vehicle Speed Sensor Malfunction	1. DTC B2282 detection area 2. Combination meter 3. Speed sensor 4. Skid control ECU 5. Main body ECU (Instrument panel J/B) 6. Wire harness or connector	ST-60
B2284	Brake Signal Malfunction	1. Stop light switch 2. CAN communication system 3. HV control ECU 4. Main body ECU (Instrument panel J/B) 5. Wire harness or connector	ST-65
B2285	Steering Lock Position Signal Circuit Malfunction	1. Main body ECU (Instrument panel J/B) 2. Steering lock ECU 3. Wire harness or connector	ST-70
B2286	Runnable Signal Malfunction	1. CAN communication system 2. HV control ECU 3. Main body ECU (Instrument panel J/B) 4. Wire harness or connector	ST-74
B2287	LIN Communication Master Malfunction	1. Main body ECU (Instrument panel J/B) 2. Certification ECU 3. Wire harness or connector	ST-77

DTC Code	Detection Item	Trouble Area	See page
B2288	Steering Lock Signal Circuit Malfunction	1. Main body ECU (Instrument panel J/B) 2. Steering lock ECU 3. Wire harness or connector	ST-80
B2289	Key Collation Waiting Time Over	1. Main body ECU (Instrument panel J/B) 2. Engine immobiliser system 3. Wire harness or connector 4. Certification ECU	ST-83

ON-VEHICLE INSPECTION

1. CHECK POWER SOURCE MODE CHANGE FUNCTION

(a) Check the function of the power switch.

(1) Check that power source mode changes in accordance with the conditions of the shift position and brake pedal.

Brake Pedal	Shift Lever	Power Source Mode Pattern
Depressed	P Position	When the power switch is pushed once. • off → HV control system on (READY) • on (ACC) → HV control system on (READY) • on (IG) → HV control system on (READY)
Not depressed	P position	Each time the power switch is pushed. • off → on (ACC) → on (IG) → off
	Except P Position	Each time the power switch is pushed. • off → on (ACC) → on (IG) → on (ACC)
-	P Position	When the power switch is pushed with power source mode on (READY). • HV control system on (READY) → off
-	Except P Position	When the power switch is pushed with power source mode on (READY). • HV control system on (READY) → on (ACC)

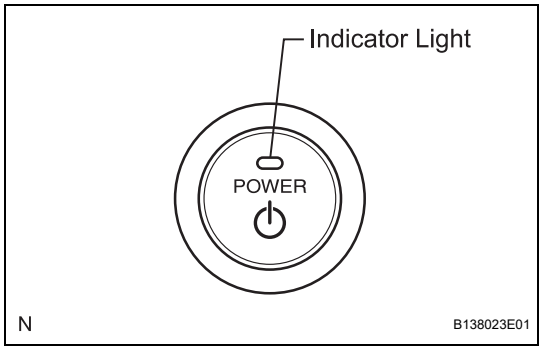
(b) Check if power source mode changes without pressing the power switch.

(1) With power source mode on (ACC) and the shift position in P, wait for at least 1 hour. Check that power source mode changes from on (ACC) to off automatically.

2. CHECK INDICATOR CONDITION

(a) Check the indicator on the power switch.

(1) Check that the power switch indicator turns on and changes color according to the table below.



Power Source Mode/Condition	Indicator Light Condition	
	Brake pedal released	Brake pedal depressed, shift lever in P
off	OFF	ON (Green) (When key and vehicle IDs match)
on (ACC, IG)	ON (Amber)	ON (Green)
HV control system on (READY)	OFF	OFF
Steering lock not unlocked	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

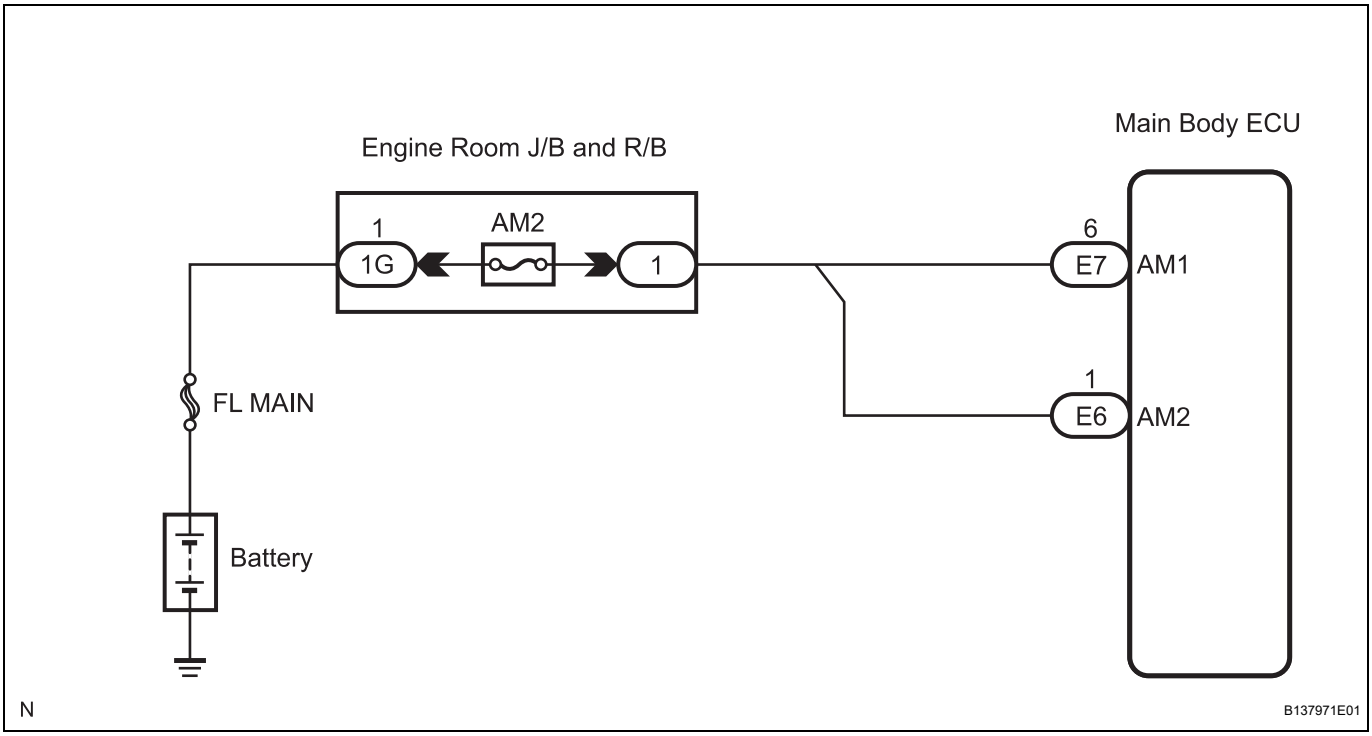
DTC	B2271	Ignition Hold Monitor Malfunction

DESCRIPTION

This DTC is output when a problem such as an open in the AM2 fuse, an open or short in the wire harness between the fuse and main body ECU, a short in the IG output circuit inside the main body ECU, a short between the main body ECU and relay, and a short in the relay is detected.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2271	Hold circuit, IG1 relay actuation circuit or IG2 relay actuation circuit inside main body ECU is open or shorted	• AM2 fuse • Main body ECU • Wire harness or connector

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page ST-21).
HINT:
After all DTCs are cleared, check if the trouble occurs again 6 seconds after the power switch is turned on (IG).
(b) Check for DTCs again.
OK:
No DTC is output.

NG → Go to step 2

OK

CHECK INTERMITTENT PROBLEMS

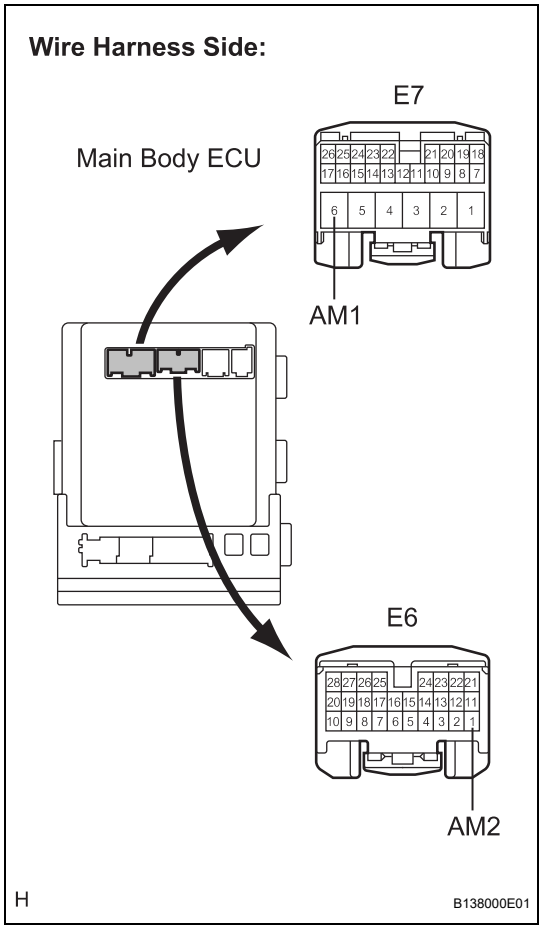
2 INSPECT FUSE (AM2)

(a) Remove the AM2 fuse from the engine room J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3 CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E6 and E7 ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Terminal No. (Symbol)	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

ST

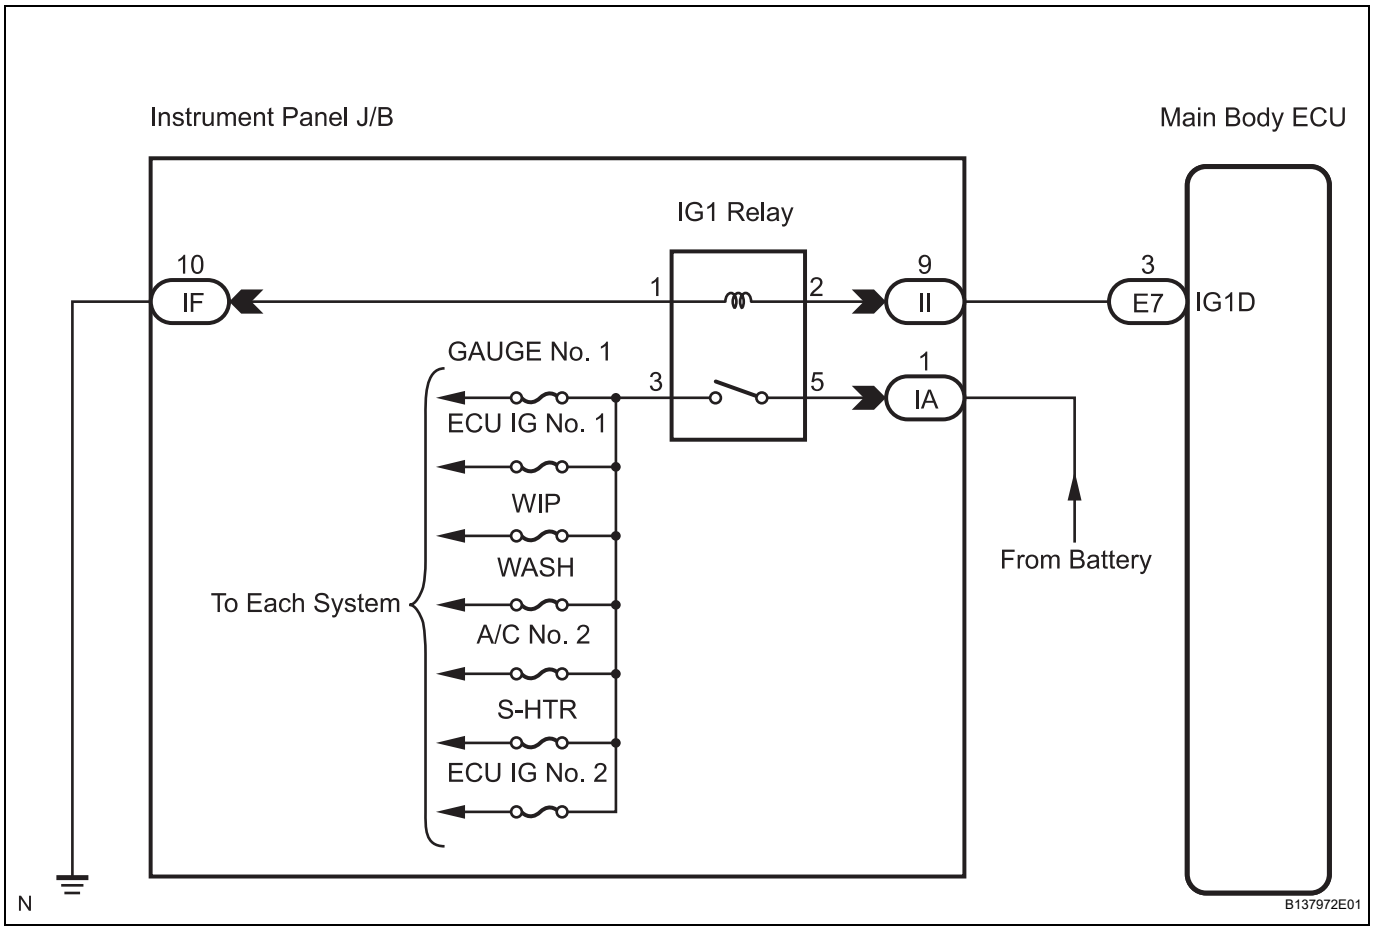
DTC	B2272	Ignition 1 Monitor Malfunction

DESCRIPTION

This DTC is output when there is a problem in the IG1D output circuit, which is from the inside of the main body ECU to the IG1 relay.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2272	IG1 relay actuation circuit inside main body ECU or other related circuit is malfunctioning	• Main body ECU • IG1 relay • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the Data List, and read the display on the tester.
HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
IG1 RELAY MON1	Status of IG1 relay monitor (outer) / ON or OFF	ON: Power switch on (IG) (IG1 relay is ON) OFF: Power switch off (IG1 relay is OFF)	-

OK:
"ON" (power switch on (IG)) appears on the screen.

NG → **Go to step 3**

OK

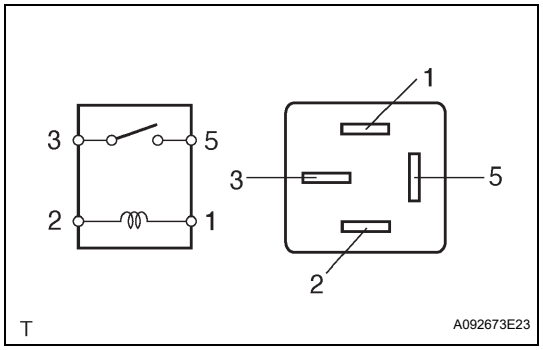
2 CHECK POWER SWITCH CONDITION

(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the power switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-91).
- If power mode does not change to ON (IG) (See page ST-99).

NG → **GO TO OTHER PROBLEM**

OK

3 INSPECT RELAY (IG1 RELAY)



(a) Remove the IG1 relay from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

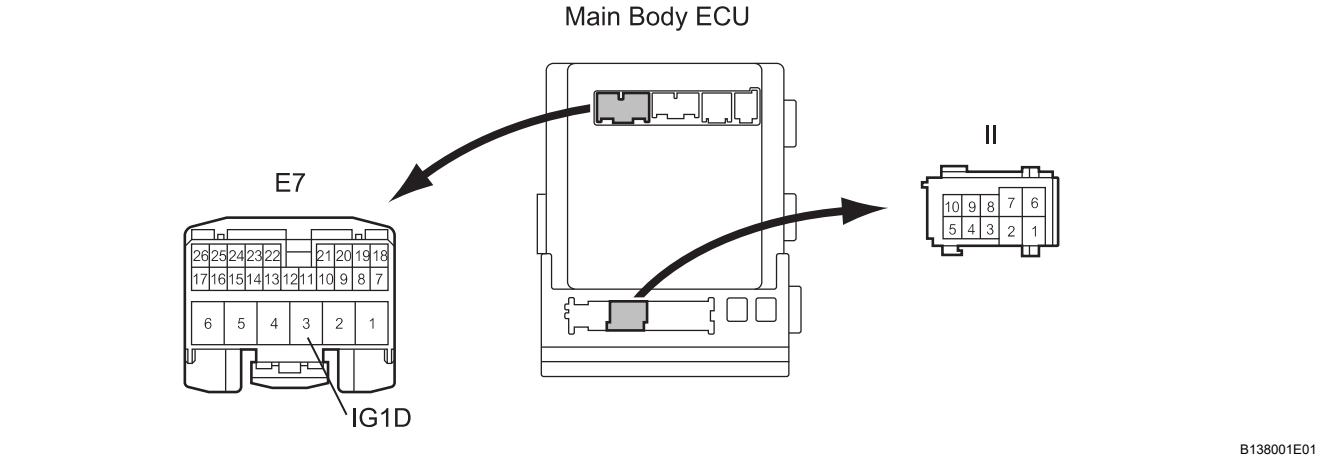
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE RELAY**

OK

4	CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - MAIN BODY ECU)

(a) Disconnect the II J/B connector.



(b) Disconnect the E7 ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

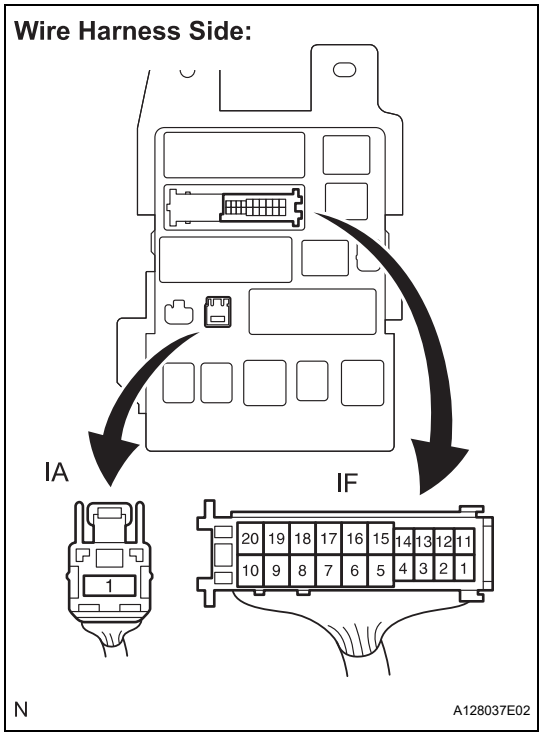
Terminal No. (Symbol)	Condition	Specified Condition
II-9 - E7-3 (IG1D)	Always	Below 1 Ω
E7-3 (IG1D) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

ST

5 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - BATTERY AND BODY GROUND)



(a) Disconnect the IF and IA J/B connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal No.	Condition	Specified value
IF-10 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

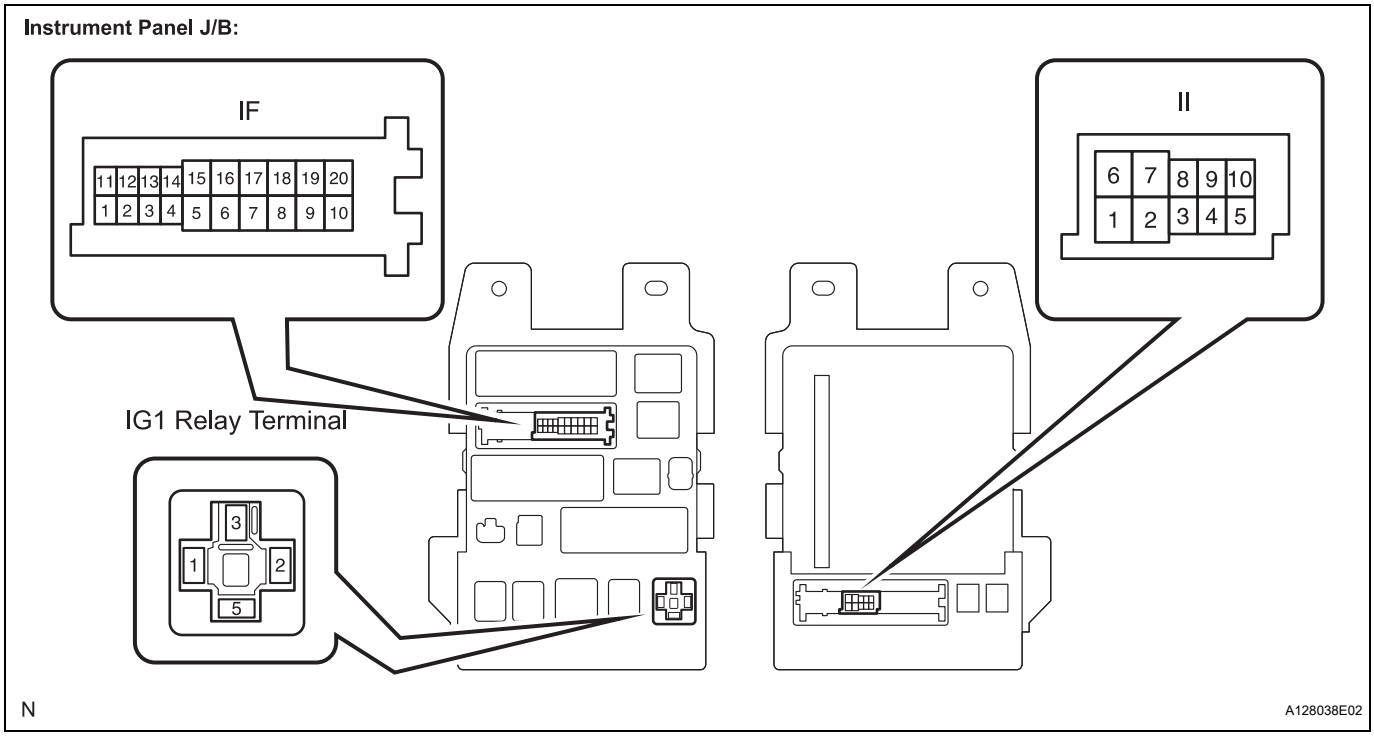
Terminal No.	Condition	Specified value
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 INSPECT INSTRUMENT PANEL J/B

(a) Measure the resistance according to the value(s) in the table below.



Standard resistance

Terminal No.	Condition	Specified Value
IF-10 - IG1 relay terminal-1	Always	Below 1 Ω
II-9 - IG1 relay terminal-2	Always	Below 1 Ω
IF-10 - Body ground	Always	10 kΩ or higher
II-9 - Body ground	Always	10 kΩ or higher

NG → **REPLACE INSTRUMENT PANEL J/B**

OK

REPLACE MAIN BODY ECU

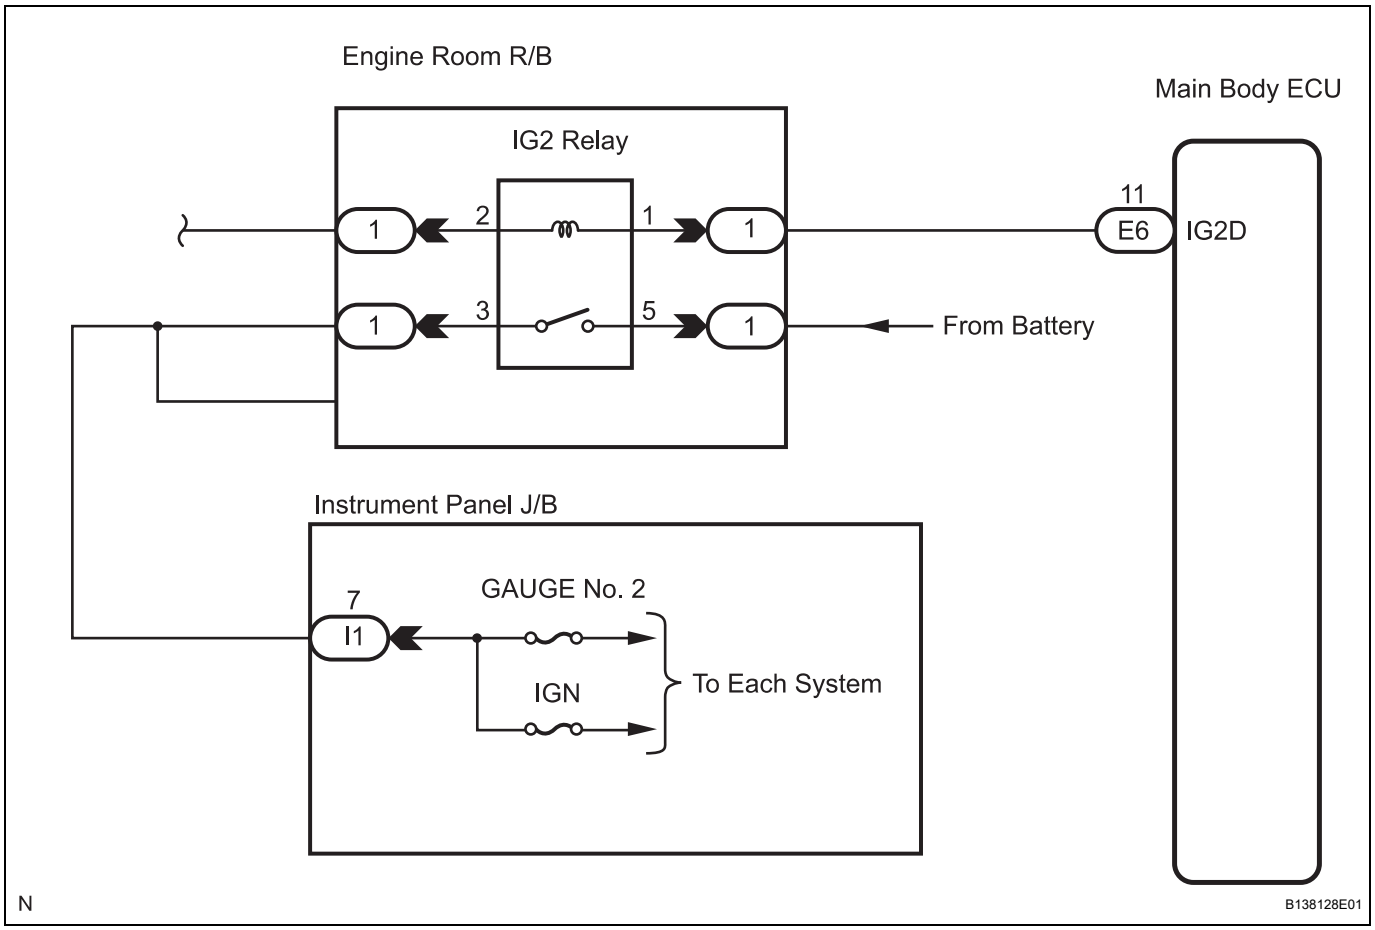
DTC	B2273	Ignition 2 Monitor Malfunction

DESCRIPTION

This DTC is output when there is a problem in the IG2D output circuit, which is from the inside of the main body ECU to the IG2 relay.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2273	IG2 relay actuation circuit inside main body ECU or other related circuit is malfunctioning	• Main body ECU • IG2 relay • Wire harness or connector

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Read the Data List according to the displays on the tester.
HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
IG2 RELAY MON1	Status of IG2 relay monitor (outer) / ON or OFF	ON: Power switch on (IG) (IG2 relay is ON) OFF: Power switch off (IG2 relay is OFF)	-

OK:
"ON" (Power switch on (IG)) appears on the screen.

NG → **Go to step 3**

OK

2 CHECK POWER SWITCH CONDITION

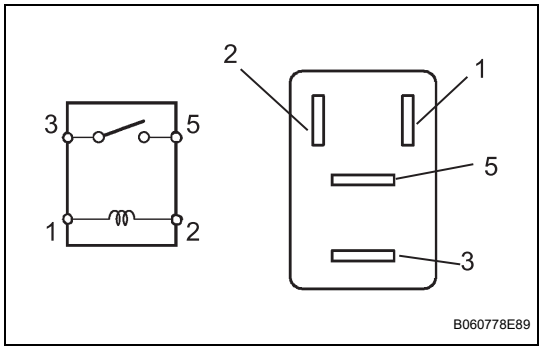
(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the power switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-91).
- If power mode does not change to ON (IG) (See page ST-99).
- If power mode does not change to ON (ACC) (See page ST-108).

NG → **GO TO OTHER PROBLEM**

OK

ST

3	INSPECT RELAY (IG2 RELAY)



(a) Remove the IG2 relay from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

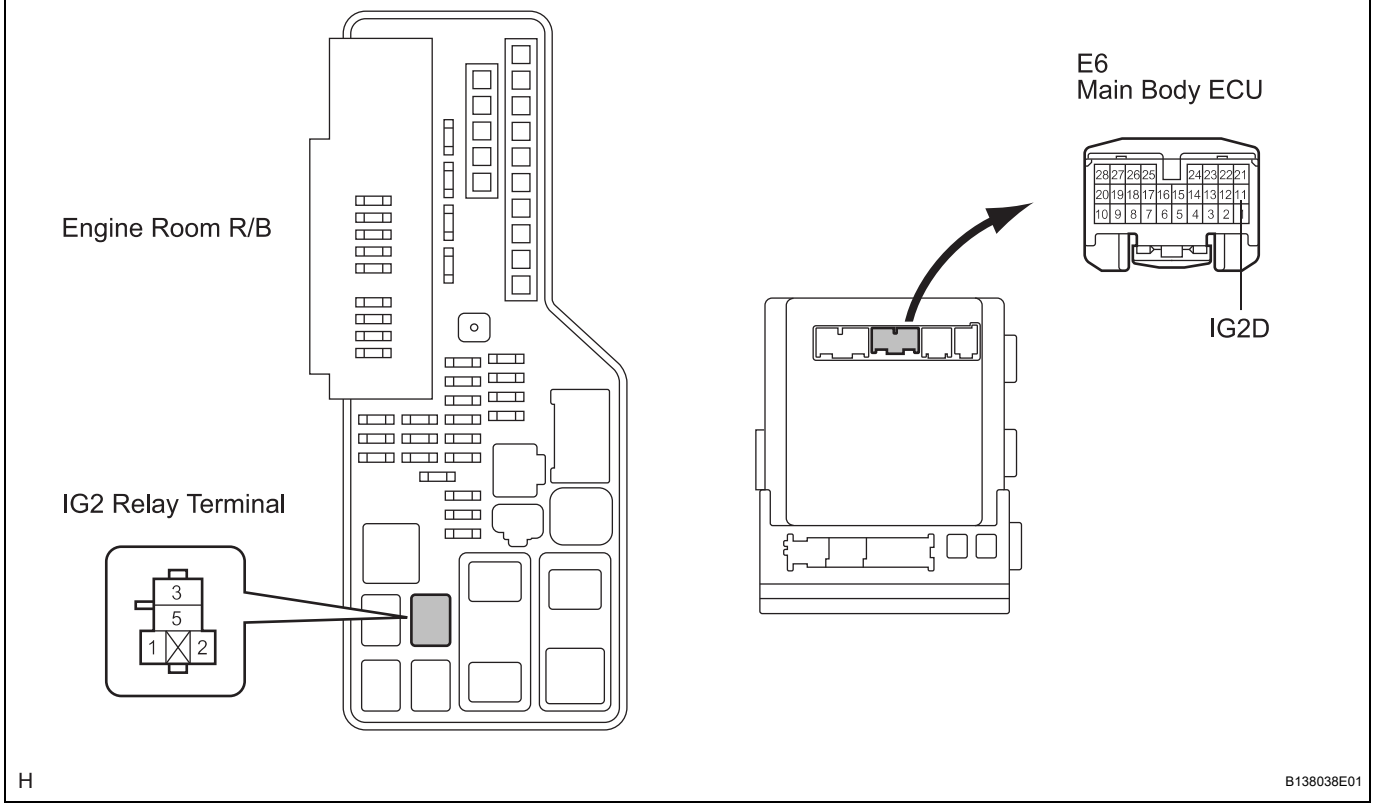
NG → REPLACE RELAY

OK

4	CHECK WIRE HARNESS (ENGINE ROOM R/B - MAIN BODY ECU AND BODY GROUND)

(a) Remove the IG2 relay from the engine room R/B.

Wire Harness Side:



(b) Disconnect the E6 ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

ST

Standard resistance

Terminal No. (Symbol)	Condition	Specified Condition
Engine Room R/B IG2 relay terminal 1 - E6-11 (IG2D)	Always	Below 1 Ω
Engine Room R/B IG2 relay terminal 2 - Body ground	Always	Below 1 Ω
E6-11 (IG2D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

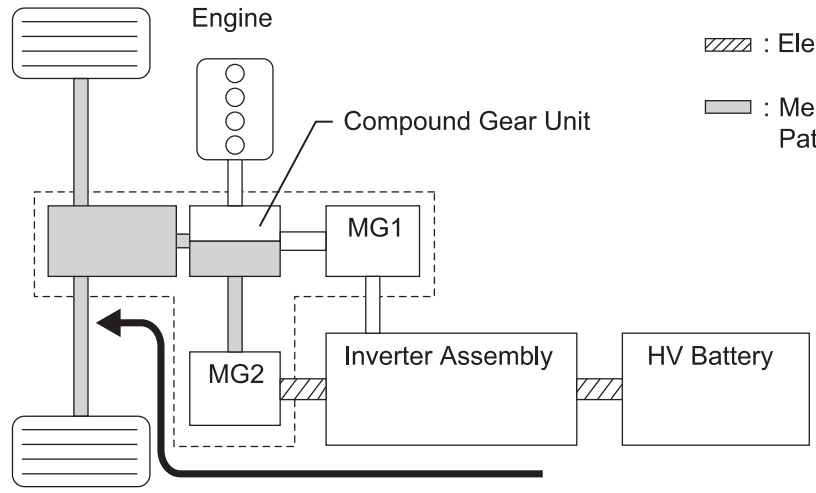
SYSTEM DESCRIPTION

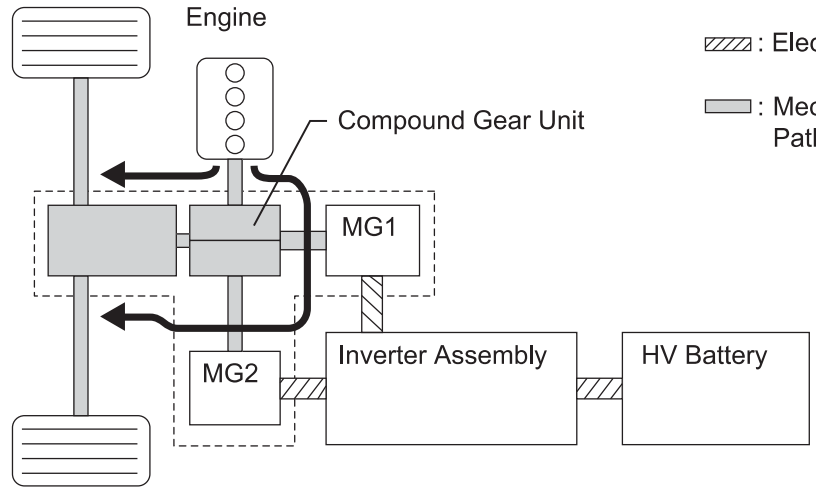
1. BASIC OPERATION

This system generates a motive force by combining the engine, MG1, and MG2 in accordance with the driving conditions. Representative examples of the various combinations are described below.

(a) Starting (Driven by MG2)
Supply of electrical power from the HV battery to MG2 provides force to drive the front wheels.

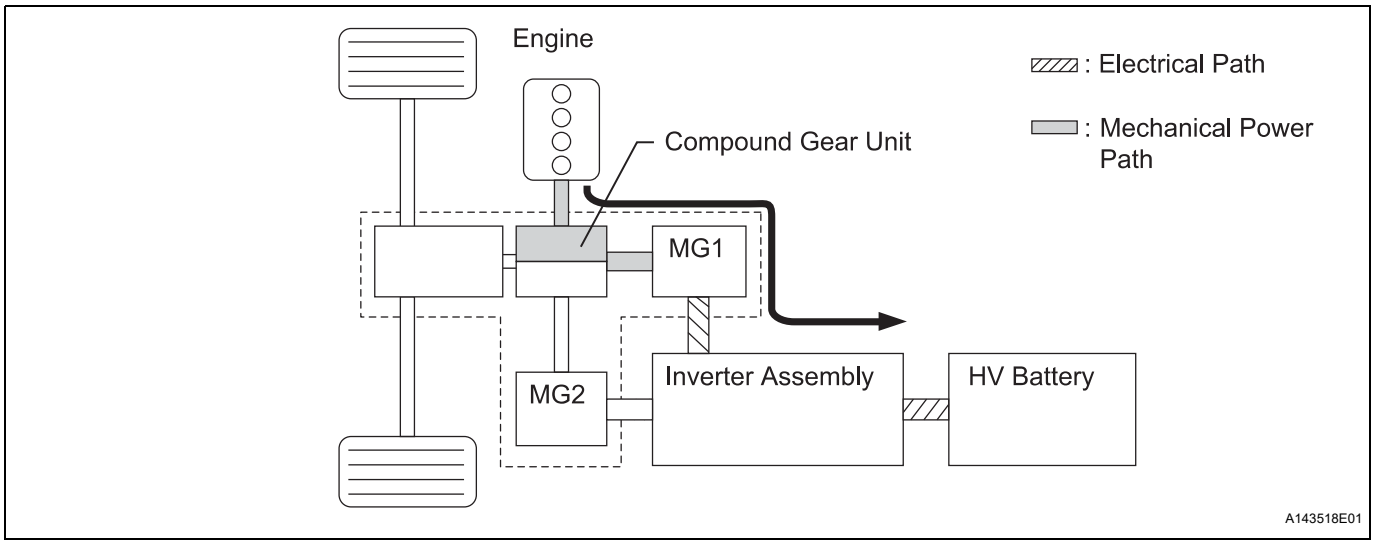


(b) During Acceleration with Engine
While the front wheels are being driven by the engine via the planetary gears, MG1 is also being driven by the engine via the planetary gears, in order to supply the electricity that MG1 generates to MG2.

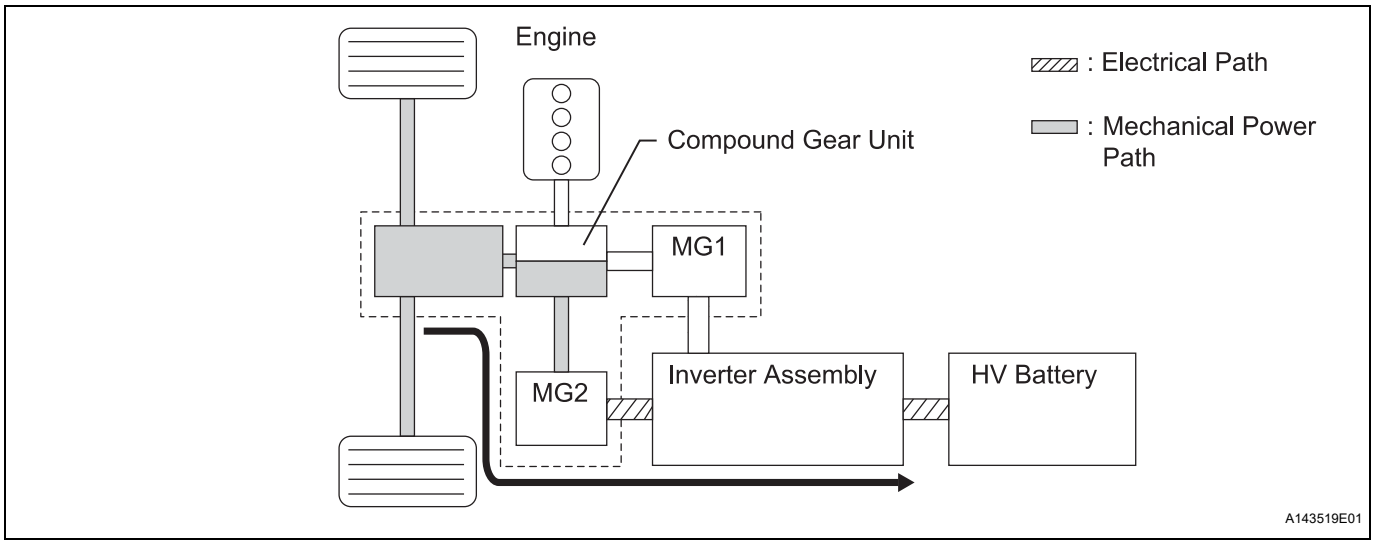


HV

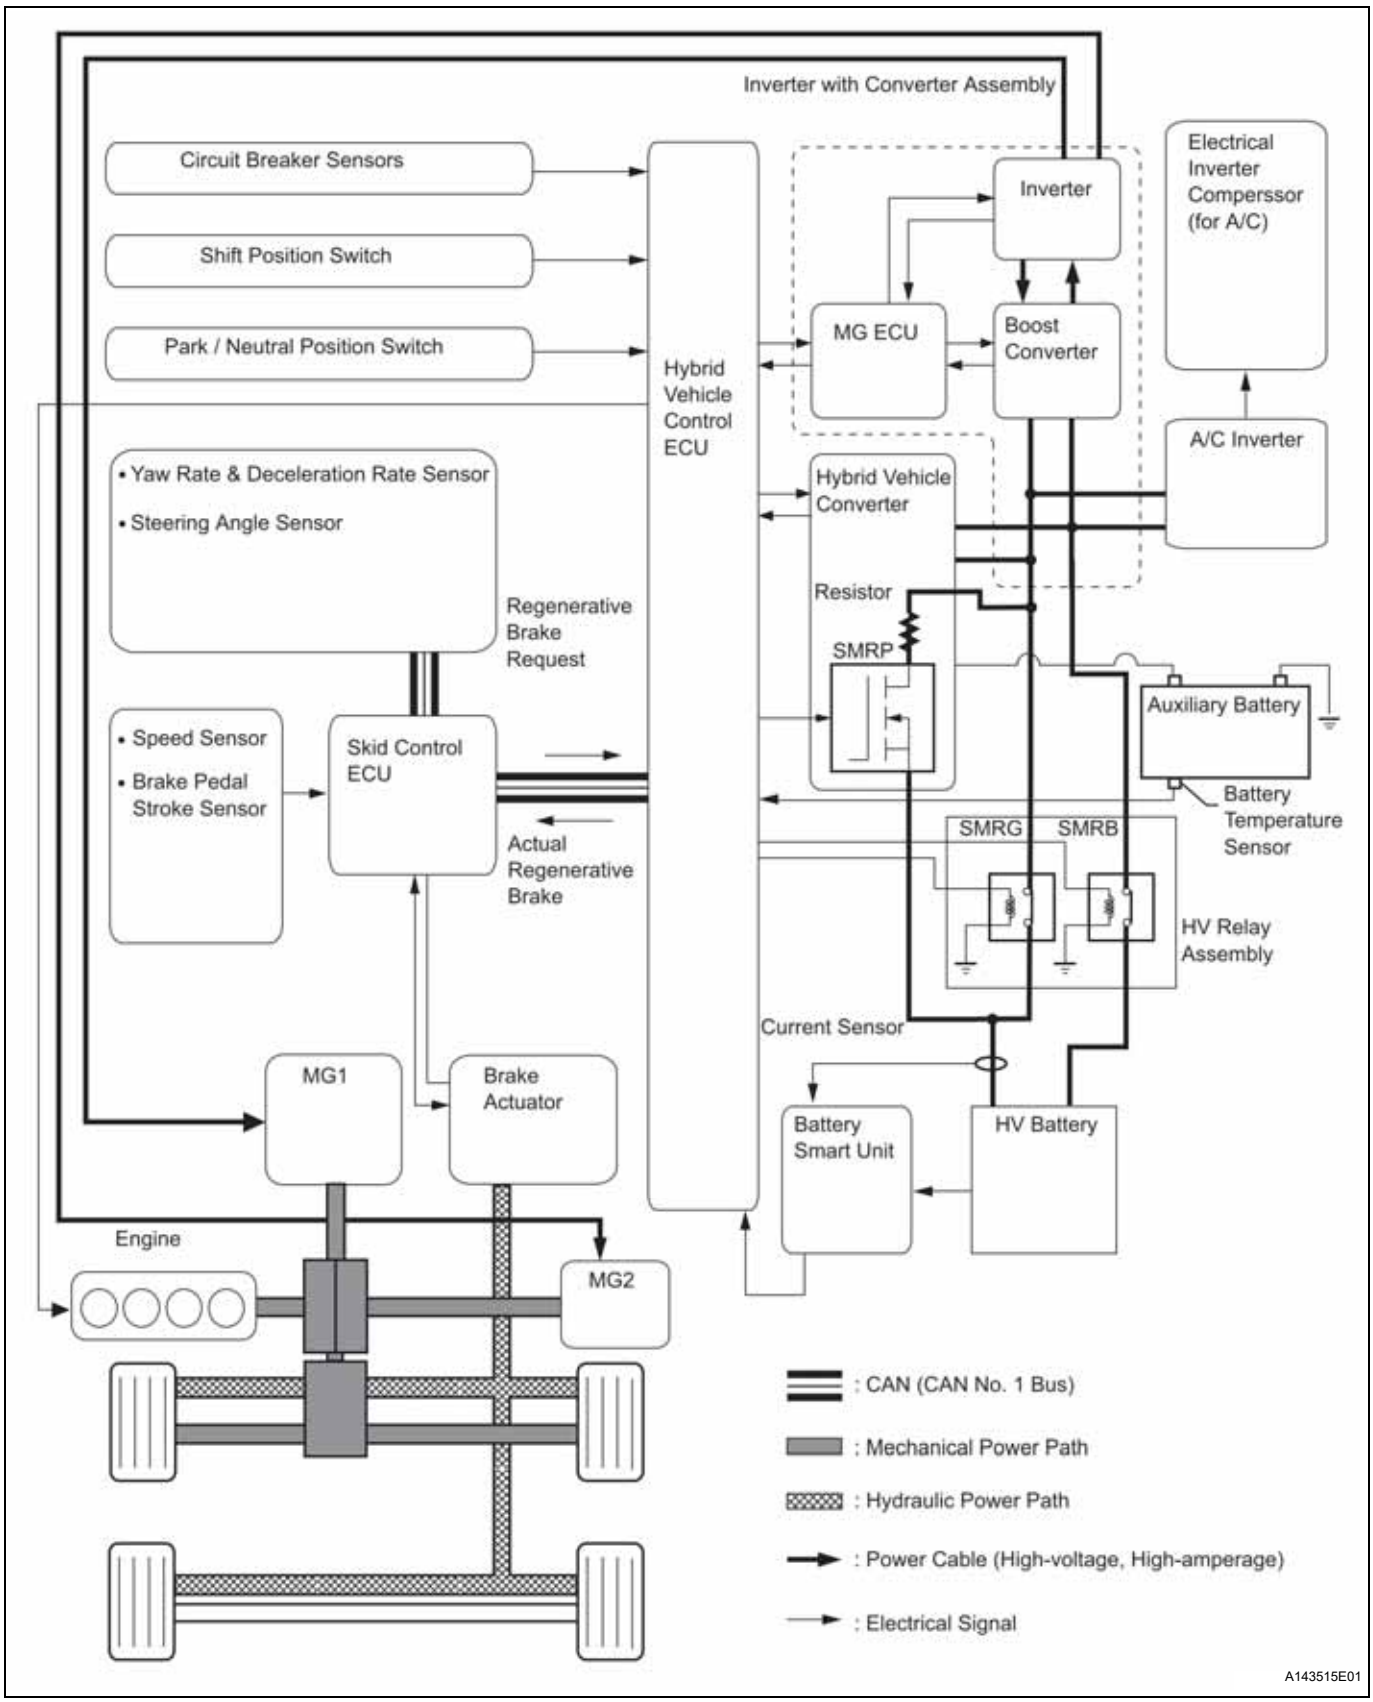
(c) Charging the HV Battery
MG1 is rotated by the engine via the planetary gears, in order to charge the HV battery.



(d) During Deceleration Driving
When the vehicle is decelerating, kinetic energy from the front wheels is recovered and converted into electrical energy by means of MG2, and used to recharge the HV battery.



2. SYSTEM DIAGRAM



HV

3. FUNCTION OF MAIN COMPONENTS

Item			Outline
Hybrid Vehicle Transaxle	MG1		• MG1, which is driven by the engine, generates high-voltage electricity in order to operate MG2 or charge the HV battery. Also, it functions as a starter to start the engine. • MG1 operates so that the gear ratio of the power split planetary gear unit will optimally suit the driving conditions of the vehicle.
	MG2		• Driven by electrical power from MG1 or the HV battery, and generates motive force for the front wheels. • During braking, or when the accelerator pedal is not depressed, it generates electricity to recharge the HV battery (Regenerative brake control).
	Compound Gear Unit	Power Split Planetary Gear	Distributes the engine's drive force as appropriate to directly drive the vehicle as well as drive MG1.
		Motor Speed Reduction Planetary Gear	Located between MG2 and the power split planetary gear, the motor speed reduction planetary gear reduces the rotational speed of MG2 in accordance with the characteristics of the planetary gear set, in order to increase torque.
HV Battery Unit	HV Battery		• Supplies electrical power to MG1 and MG2 in accordance with the driving conditions of the vehicle. • Recharged by MG1 and MG2 in accordance with the SOC and the driving conditions of the vehicle.
	Hybrid Vehicle Converter (DC/DC Converter)		Converts a voltage of DC 244.8 V into a DC voltage between 12 V and 14 V in order to supply electricity to body electrical components, as well as to recharge the auxiliary battery (DC 12 V). Contains SMRP.
	SMRP		Completes the initial connection of the high-voltage circuit through a resistor to allow a controlled precharge of the high-voltage system. SMRP is a semiconductor relay that is located in the hybrid vehicle converter (DC/DC converter.)
	Battery Smart Unit		Monitors the conditions of the HV battery and transmits this information to the hybrid vehicle control ECU.
	Service Plug Grip		Shuts off the high-voltage circuit of the HV battery when this plug grip is removed for vehicle inspection or maintenance.
Inverter with Converter Assembly	Inverter		A device that converts the high-voltage DC (HV battery) into AC (MG1 and MG2) and vice versa (converts AC into DC).
	Boost Converter		Boosts the maximum voltage of the HV battery from DC 244.8 to DC 650 V and vice versa (drops DC 650 V to DC 244.8 V).
	MG ECU		Controls the inverter and boost converter in accordance with the signals received from the hybrid vehicle control ECU, thus driving MG1 or MG2 causing them to generate electricity.
Hybrid Vehicle Control ECU			Effects comprehensive control of the THS II. • Information from each sensor as well as from the ECU (battery smart unit, skid control ECU, and EPS ECU) is received, and based on this information, the required torque and output power is calculated. The hybrid vehicle control ECU sends the calculated result to the inverter with converter assembly and skid control ECU. • Activates the ETCS-i (Electronic Throttle Control System-intelligent) in accordance with the target engine speed and required engine motive force. • Monitors the charging condition of the HV battery. • Controls the cooling fan of the HV battery. • Controls the hybrid vehicle converter.
Accelerator Pedal Position Sensor			Converts the accelerator pedal position into an electrical signal and outputs it to the hybrid vehicle control ECU.
Park / Neutral Position Switch			Converts the shift position into an electrical signal and outputs it to the hybrid vehicle control ECU.
HV Relay Assembly			Connects and disconnects the high-voltage power circuit between the HV battery and the inverter with converter assembly, through the use of a signal from the hybrid vehicle control ECU. Contains SMRB and SMRG.
Interlock Circuit (for A/C Fuse Cover and Service Plug Grip)			Verifies that the cover of both the inverter and the service plug grip have been installed.
Circuit Breaker Sensor			Detects the impact that is applied to the vehicle during a collision and transmits a signal to the hybrid vehicle control ECU. Upon receiving this signal, the hybrid vehicle control ECU operates the HV relay assembly to shut down the power supply.
Auxiliary Battery			Charged by the HV battery module power via the hybrid vehicle converter. Supplies power to the audio system, air conditioning system (except the electric inverter compressor) and the ECUs.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
*: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CONNECT INTELLIGENT TESTER TO THE DLC3*

HINT:
If the display on the tester indicates a communication fault, inspect the DLC3.

NEXT

4	CHECK DTC AND SAVE FREEZE FRAME DATA* (See page HV-36), (See page HV-65)

HINT:
Make sure to save freeze frame data because the data is necessary for a simulation test.

NEXT

5	CLEAR DTC* (See page HV-36)

NEXT

6	CONDUCT VISUAL INSPECTION

NEXT

7	CONFIRM PROBLEM SYMPTOMS

HINT:
If the engine does not start, perform steps 9 and 11 first.

CHECK FOR INTERMITTENT PROBLEMS

1. CHECK FOR INTERMITTENT PROBLEMS

(a) Perform a simulation test (See page IN-72).

(1) For the simulation test, reproduce the driving conditions that were present when the trouble occurred. These conditions should be based on the customer's comments and freeze frame data that is recorded with DTCs, such as the opening angle of the accelerator pedal, SOC, engine coolant temperature, engine rpm, and MG1/MG2 rpm and torque.

(b) Check the connector(s) and terminal(s) (See page IN-67).

(c) Wiggle the harness and connector(s) (See page IN-72).

(d) Heat or cool suspected parts (See page IN-72).

NOTICE:

Do not directly heat or cool the MG ECU with the inverter cover removed.

REGISTRATION

NOTICE:
The Vehicle Identification Number (VIN) must be input into the replacement HV control ECU.
HINT:
The VIN is a 17-digit alphanumeric vehicle identification number. The intelligent tester is required to register the VIN.

1. INPUT INSTRUCTIONS

(a) General VIN input instructions for use with the intelligent tester are as follows.
  (1) Intelligent Tester
  The arrow buttons (UP, DOWN, RIGHT, and LEFT) and number buttons (0 to 9) are used to input the VIN.
  (2) Cursor Operation
  To move the cursor around the tester screen, press the RIGHT and LEFT buttons.

(b) Input of Letters
  (1) Press the UP and DOWN buttons to select the desired letter.
  (2) After selection, the cursor should move.

(c) Input of Numbers
  (1) Press the number button that corresponds to the number that you want to input.
  (2) Select or input the correct character using the UP and DOWN buttons, or the number buttons.
  HINT:
  Numbers can be selected using the UP and DOWN buttons.

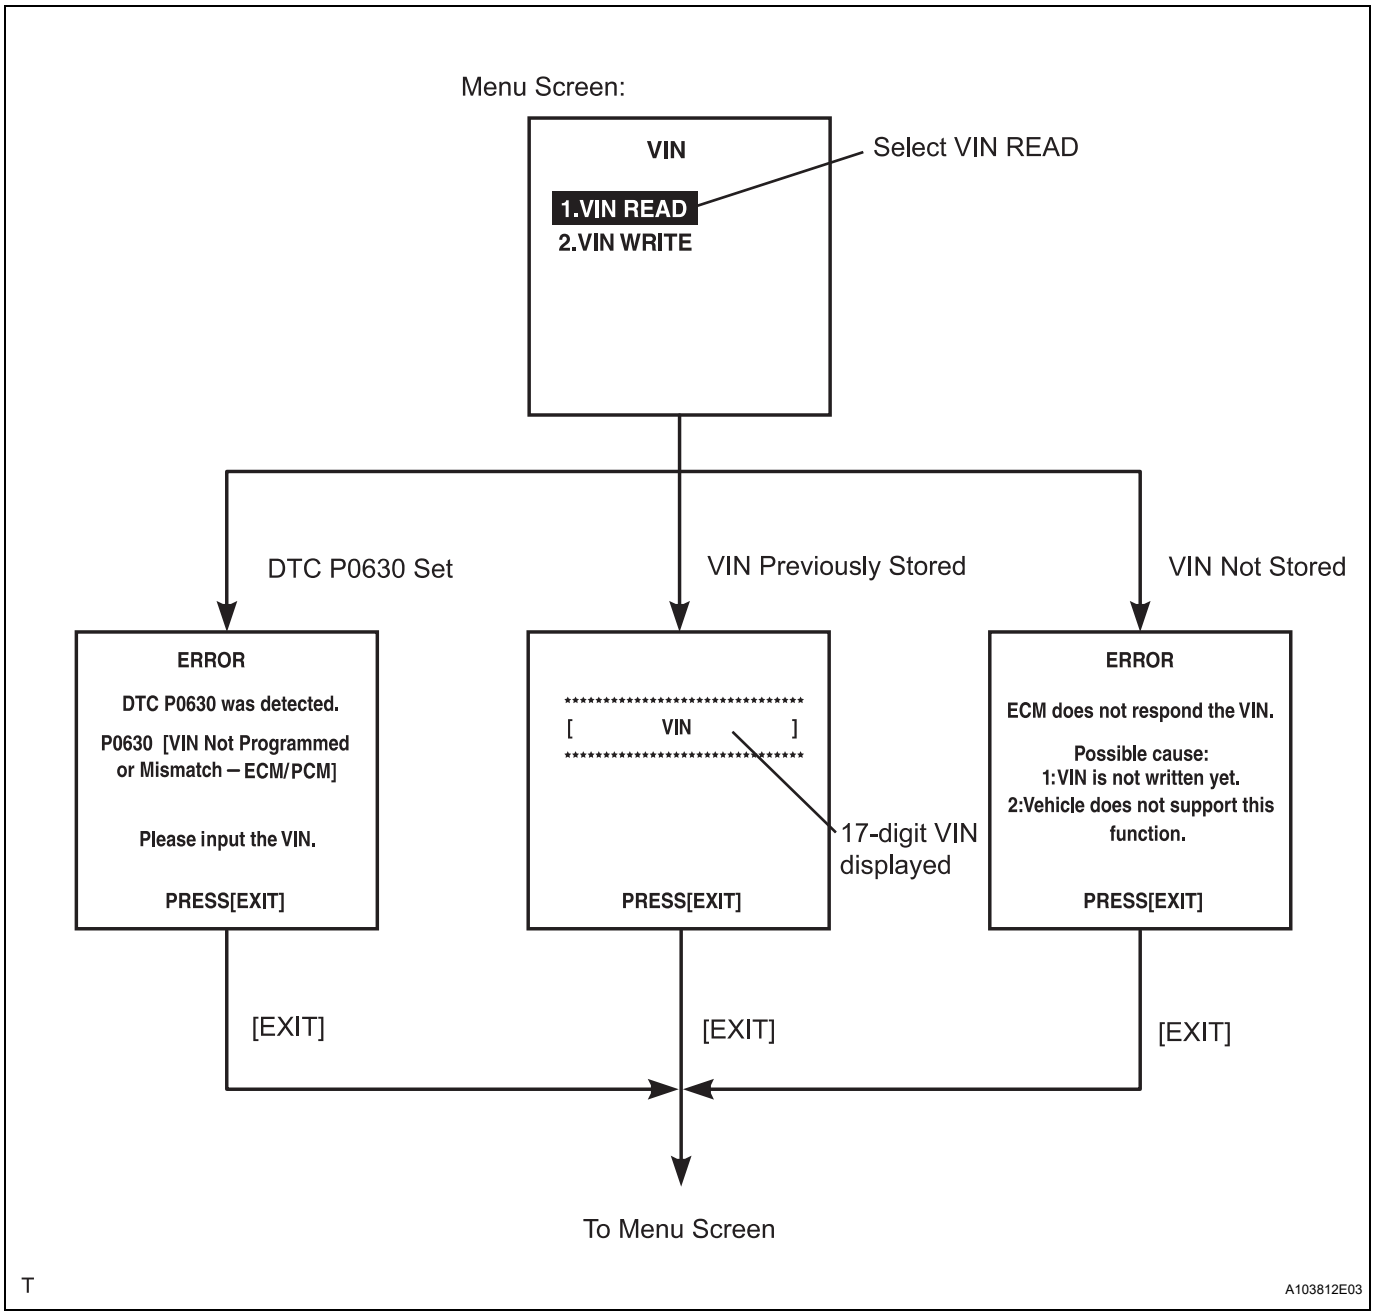
(d) Correction
  (1) After input, the cursor should move.
  (2) When correcting a character that has been input, put the cursor on the character using the RIGHT and LEFT buttons.

(e) Finishing Input Operation
  (1) Make sure that the VIN input using the tester matches the vehicle's VIN.
  (2) Press the ENTER button on the tester.

2. READ VIN (Vehicle Identification Number)

(a) The VIN reading process is explained using a flowchart as shown. Reading the VIN stored in the HV control ECU is necessary when comparing it to the VIN of the vehicle.
  (1) Read the VIN using the intelligent tester.
  (2) Check the vehicle's VIN.
  (3) Connect the intelligent tester to the DLC3.
  (4) Turn the power switch on (IG).
  (5) Turn the tester on.

(6) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / VIN.



3. WRITE VIN

(a) The VIN writing process is explained using a flowchart as shown. This process allows the VIN to be input into the HV control ECU. If the HV control ECU is changed, or the HV control ECU VIN and the vehicles's VIN do not match, the VIN can be registered, or overwritten in the HV control ECU by following this procedure.

(1) Write VIN using the intelligent tester.
(2) Connect the intelligent tester to the DLC3.
(3) Turn the power switch on (IG).
(4) Turn the tester on.

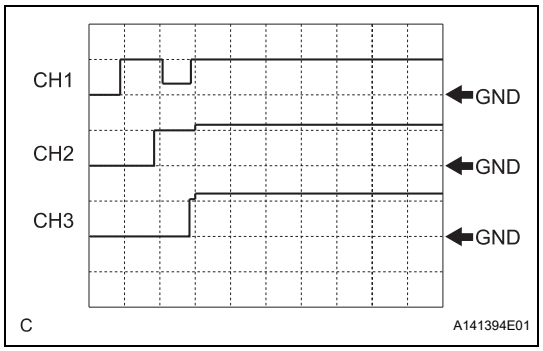
NOTICE:
Do not measure voltage or waveform directly at the sealed side of the hybrid vehicle control ECU connectors, Doing so may damage the connectors because these connectors are waterproof.

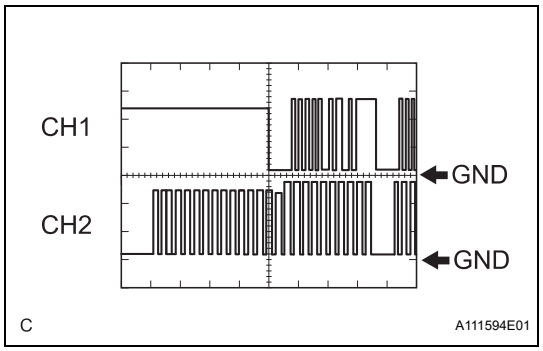
1. Oscilloscope waveforms

HINT:
Oscilloscope waveform samples are provided here for informational purposes. Noise and fluttering waveforms have been omitted.



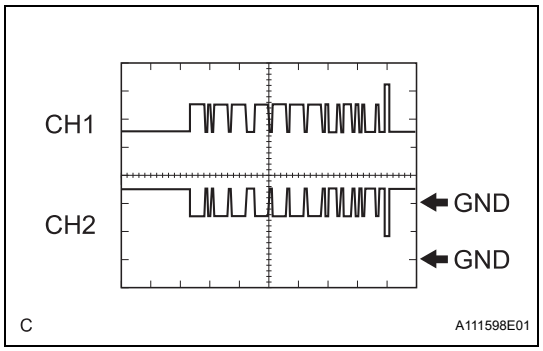
(a) Waveform 1 (System main relay operation signal)

Item	Contents
Terminal	CH1: SMRP - E1 CH2: SMRB - E1 CH3: SMRG - E1
Equipment Setting	10 V/DIV., 500 ms./DIV.
Condition	Power switch on (IG) → Power switch on (READY)



(b) Waveform 2 (Immobilizer communication signal)

Item	Contents
Terminal	CH1: IMO - E1 CH2: IMI - E1
Equipment Setting	5 V/DIV., 200 ms./DIV.
Condition	Power switch off → Power switch on (IG) → Power switch on (READY)

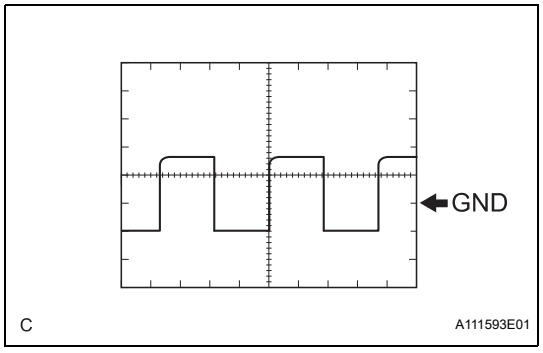


(c) Waveform 3 (CAN communication signal)

Item	Contents
Terminal	CH1: CANH - E1 CH2: CANL - E1
Equipment Setting	1 V/DIV., 20 μs./DIV.
Condition	Power switch on (IG)

HV

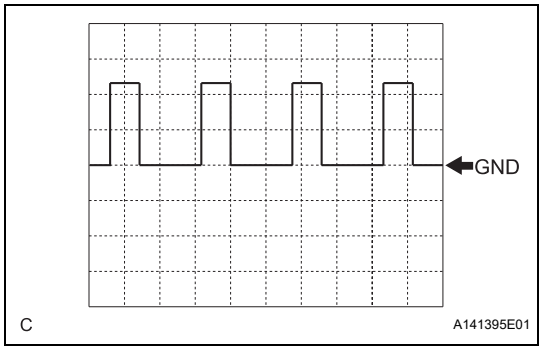
HINT:
The waveform will vary depending on the content of the digital communication (digital signal).



(d) Waveform 4 (Vehicle speed signal)

Item	Contents
Terminal	SPDI - E1
Equipment Setting	5 V/DIV., 20 ms./DIV.
Condition	Driving at approximately 20 km/h (12 mph) with power switch on (READY)

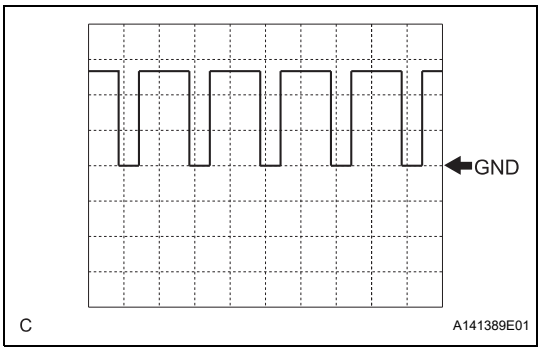
HINT:
The higher the vehicle speed, the shorter the cycle.



(e) Waveform 5 (VLO signal)

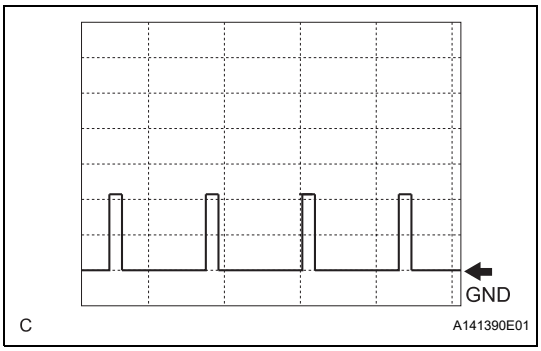
Item	Contents
Terminal	VLO - E1
Equipment Setting	5 V/DIV., 50 ms./DIV.
Condition	Power switch on (IG)

HINT:
The cycle will vary depending on the specified voltage of the hybrid vehicle converter.



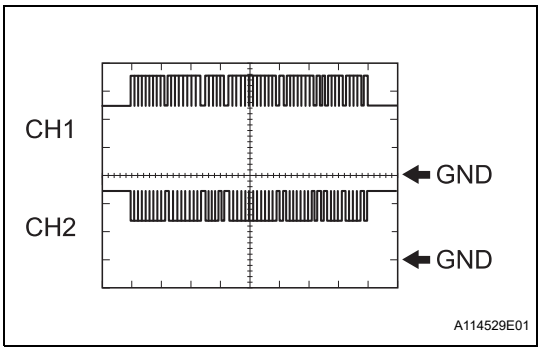
(f) Waveform 6 (HV battery blower fan operation signal)

Item	Contents
Terminal	SI0 - E1
Equipment Setting	5 V/DIV., 100 ms./DIV.
Condition	Power switch on (IG) during active test



(g) Waveform 7 (HV water pump signal)

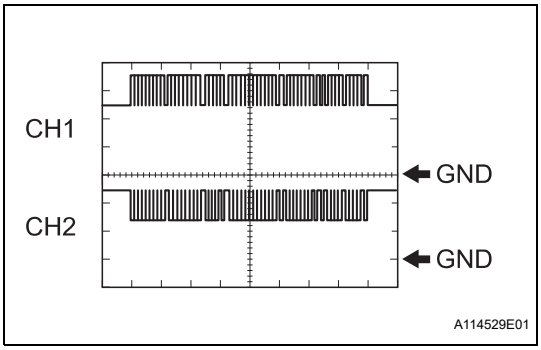
Item	Contents
Terminal	IWP - E1
Equipment Setting	5 V/DIV., 100 ms./DIV.
Condition	Power switch on (READY)



(h) Waveform 8 (Communication signal from HV control ECU to MG ECU)

Item	Contents
Terminal	CH1: HTM+ - E1 CH2: HTM- - E1
Equipment Setting	1 V/DIV., 200 μs./DIV.
Condition	Power switch on (READY)

HINT:
The waveform will vary depending on the content of the digital communication (digital signal).

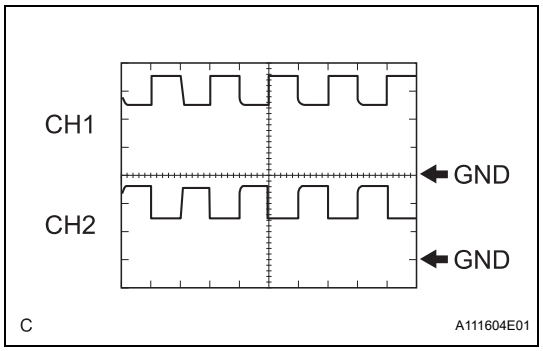


(i) Waveform 9 (Communication signal from MG ECU to HV control ECU)

Item	Contents
Terminal	CH1: HTM+ - E1 CH2: HTM- - E1
Equipment Setting	1 V/DIV., 200 μs./DIV.
Condition	Power switch on (READY)

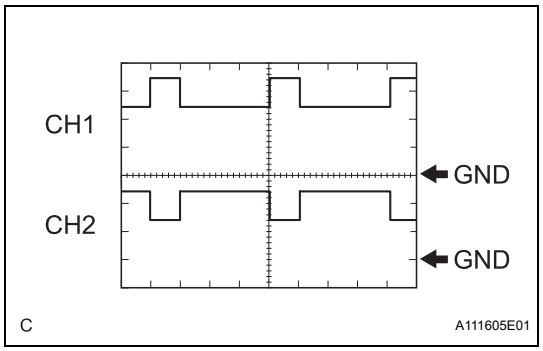
HINT:
The waveform will vary depending on the content of the digital communication.

HV



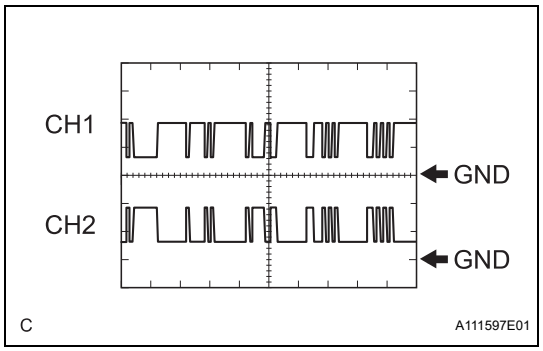
(j) Waveform 10 (MG communication clock signal)

Item	Contents
Terminal	CH1: CLK+ - E1 CH2: CLK- - E1
Equipment Setting	1 V/DIV., 1 μs./DIV.
Condition	Power switch on (READY)



(k) Waveform 11 (MG communication request signal)

Item	Contents
Terminal	CH1: REQ+ - E1 CH2: REQ- - E1
Equipment Setting	1 V/DIV., 1 ms./DIV.
Condition	Power switch on (READY)

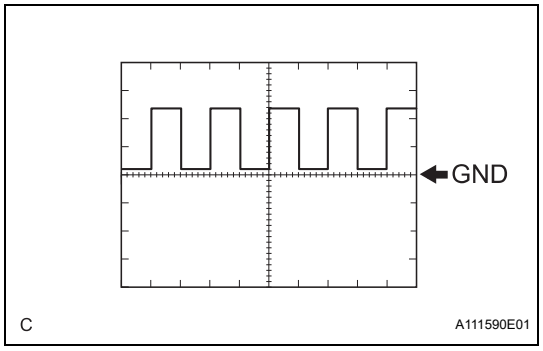


(l) Waveform 12 (Communication signal from battery smart unit to HV control ECU)

Item	Contents
Terminal	CH1: BTH+ - E1 CH2: BTH- - E1
Equipment Setting	2 V/DIV., 500 μs./DIV.
Condition	Power switch on (IG)

HV

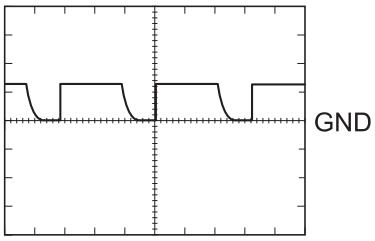
HINT:
The waveform will vary depending on the content of the digital communication (digital signal).



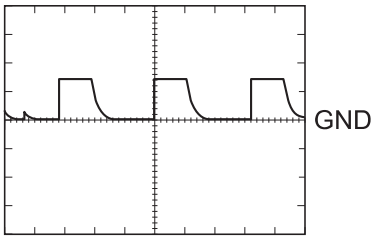
(m) Waveform 13 (Airbag deployment signal)

Item	Contents
Terminal	ABFS - E1
Equipment Setting	5 V/DIV., 500 ms./DIV.
Condition	Power switch on (READY)

Waveform:



Power switch ON (IG)

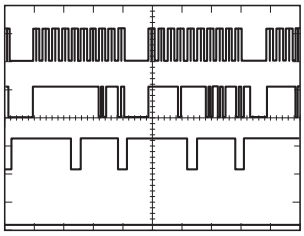


Power switch ON (READY)

C A111591E03

(n) Waveform 14 (READY signal)

Item	Contents
Terminal	RDY - E1
Equipment Setting	10 V/DIV., 10 ms./DIV.
Condition	Power switch on (IG) / Power switch on (READY)

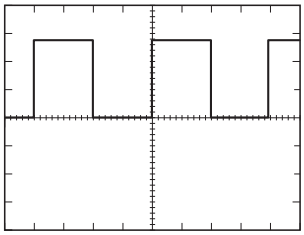


C A111607

(o) Waveform 15 (A/C communication signal)

Item	Contents
Terminal	CH1: CLK - E1 CH2: ITE - E1 CH3: ETI - E1 CH4: STB - E1
Equipment Setting	10 V/DIV., 100 ms./DIV.
Condition	Power switch on (READY) with air conditioning system stopped

HINT:
The waveform will vary depending on the content of the digital communication (digital signal).



C A111600

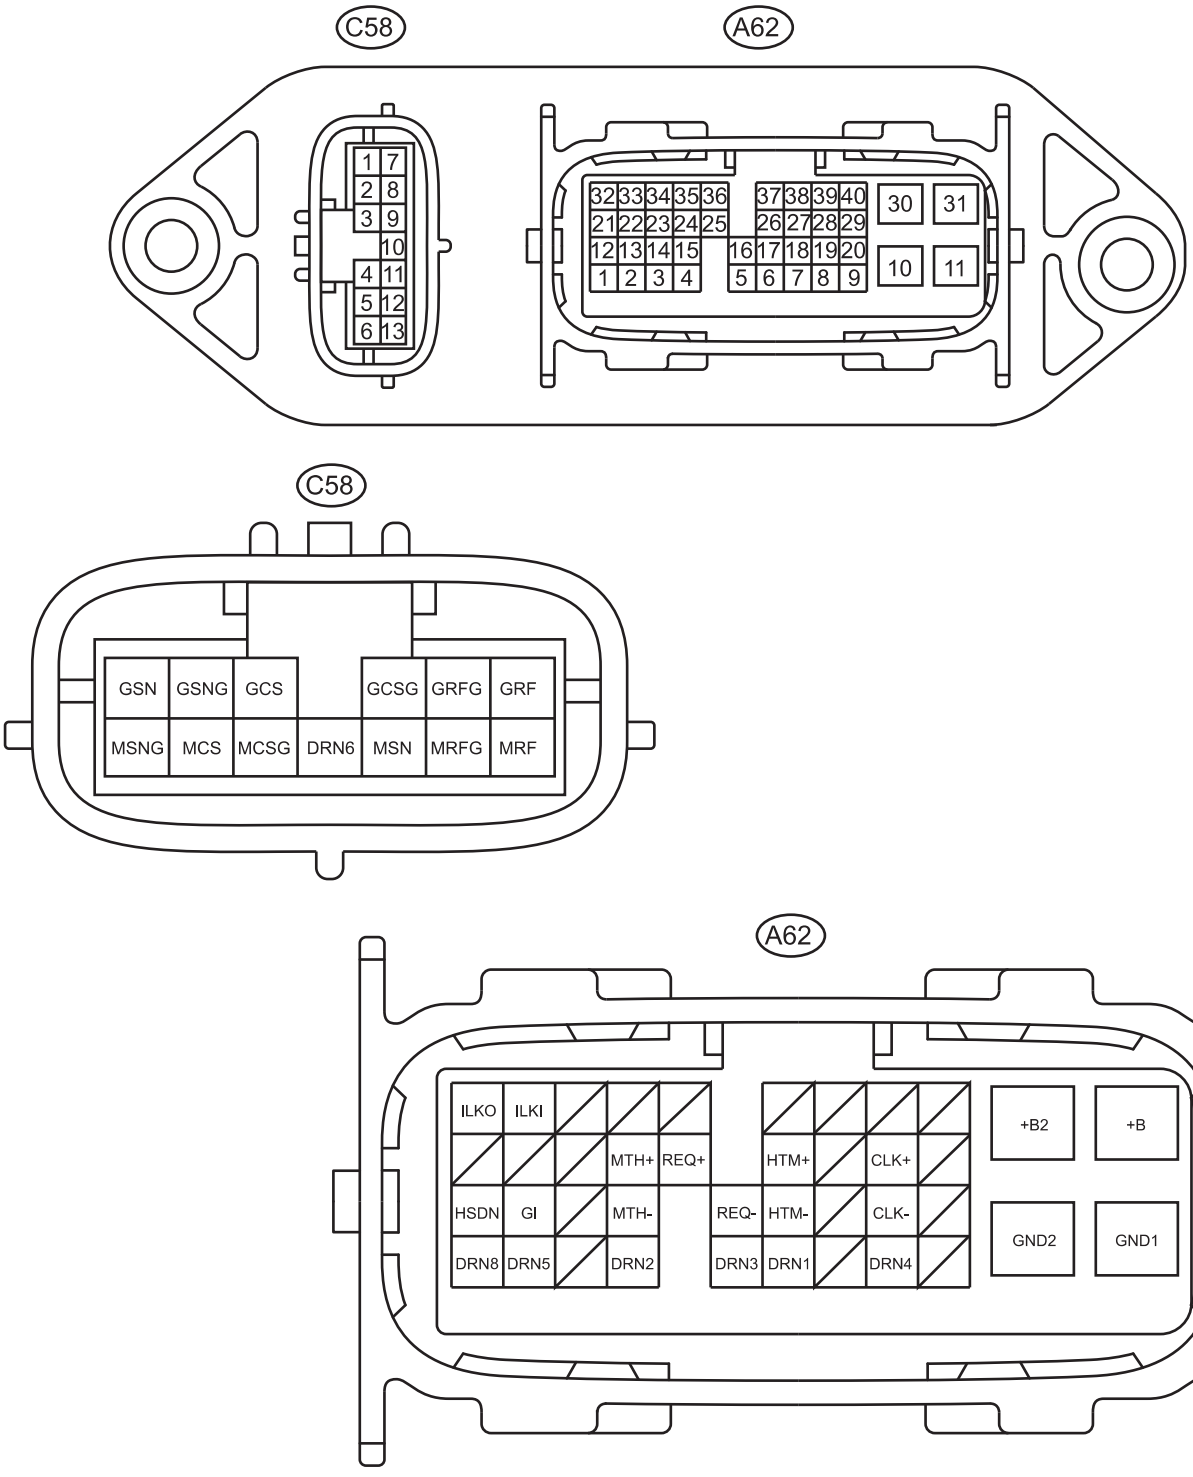
(p) Waveform 16 (GO signal)

Item	Contents
Terminal	GO - E1
Equipment Setting	5 V/DIV., 20 ms../DIV.
Condition	Power switch on (READY) with engine running

HINT:
The pulse cycle becomes shorter as the engine speed increases.

HV

Inverter with Converter Assembly (MG ECU):



A142541E01

Symbols (Terminals No.)	Wiring Color	Terminal Description	Condition	Standard Voltage (V)
+B (A62-31) - GND1 (A62-11)	Y - W	MG ECU power source	Power switch on (IG)	10 to 14
+B2 (A62-30) - GND1 (A62-11)	Y - W	MG ECU power source	Power switch on (IG)	10 to 14

HV

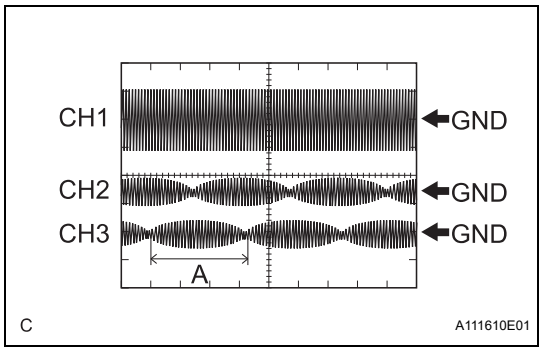
MCS (C58-8) - MCSG (C58-9)	W - Y	Motor resolver signal	Motor resolver stopped or running	Pulse generation (Waveform 1)
MSN (C58-11) - MSNG (C58-7)	L - R	Motor resolver signal	Motor resolver stopped or running	Pulse generation (Waveform 1)
GSN (C58-1) - GSNG (C58-2)	L - R	Generator resolver signal	Generator resolver stopped or running	Pulse generation (Waveform 5)
GCS (C58-3) - GCSG (C58-4)	W - Y	Generator resolver signal	Generator resolver stopped or running	Pulse generation (Waveform 5)

HV

NOTICE:
Do not measure voltage or waveform directly at the sealed side of the inverter with converter assembly connectors. Doing so may damage the connectors because these connectors are waterproof.

2. Oscilloscope waveforms

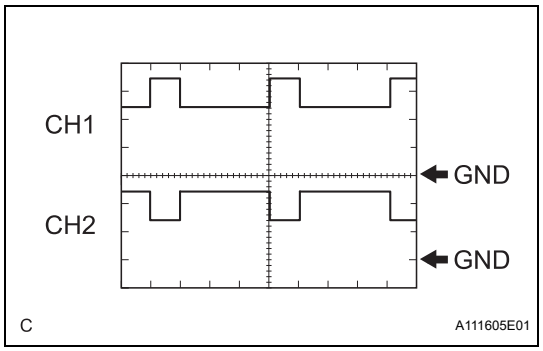
HINT:
Oscilloscope waveform samples are provided here for informational purposes. Noise and fluttering waveforms have been omitted.



(a) Waveform 1 (Motor resolver signal)

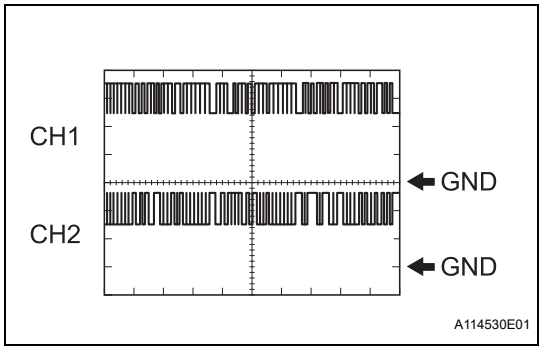
Item	Contents
Terminal	CH1: MRF - MRFG CH2: MSN - MSNG CH2: MCS - MCSG
Equipment Setting	CH1: 10 V/DIV., 1 ms./DIV. CH2, CH3: 5 V/DIV., 1 ms./DIV.
Condition	Resolver running

HINT:
Pulse cycle A becomes shorter as the rotor speed increases.



(b) Waveform 2 (MG ECU communication request signal)

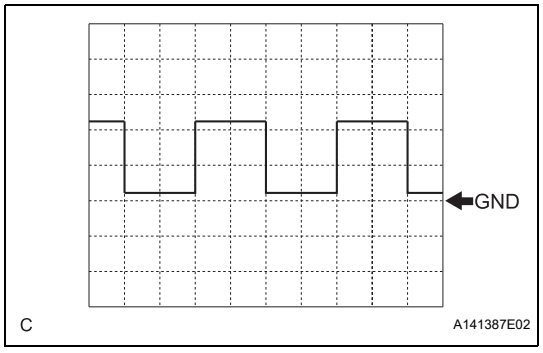
Item	Contents
Terminal	CH1: REQ+ - GND1 CH2: REQ- - GND11
Equipment Setting	1 V/DIV., 1 ms./DIV.
Condition	Power switch on (IG)



(c) Waveform 3 (Communication signal from MG ECU to HV control ECU)

Item	Contents
Terminal	CH1: MTH+ - GND1 CH2: MTH- - GND1
Equipment Setting	1 V/DIV., 200 μs./DIV.
Condition	Power switch on (IG)

HINT:
The waveform will vary depending on the content of the digital communication (digital signal).

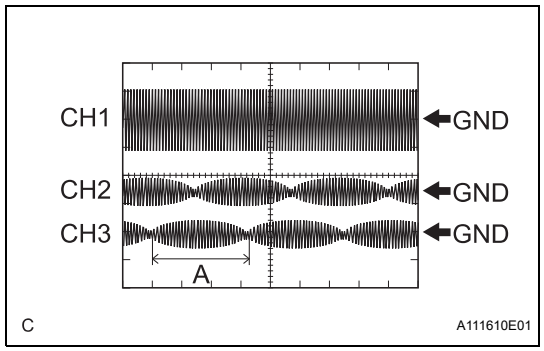


(d) Waveform 4 (GI signal)

Item	Contents
Terminal	CH1: GI - E1
Equipment Setting	5 V/DIV., 20 ms./DIV.
Condition	Power switch on (READY) with engine running

HINT:
The pulse cycle becomes shorter as the engine speed increases.

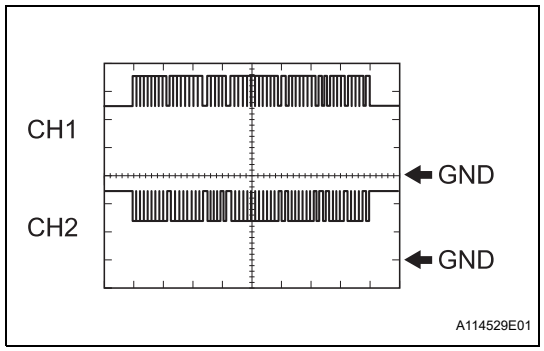
HV



(e) Waveform 5 (Generator resolver signal)

Item	Contents
Terminal	CH1: RRF - RRFG CH2: RSN - RSNG CH2: RCS - RCSG
Equipment Setting	CH1: 10 V/DIV., 1 ms./DIV. CH2, CH3: 5 V/DIV., 1 ms./DIV.
Condition	Resolver running

HINT:
Pulse cycle A becomes shorter as the rotor speed increases.



(f) Waveform 6 (Communication signal from HV control ECU to MG ECU)

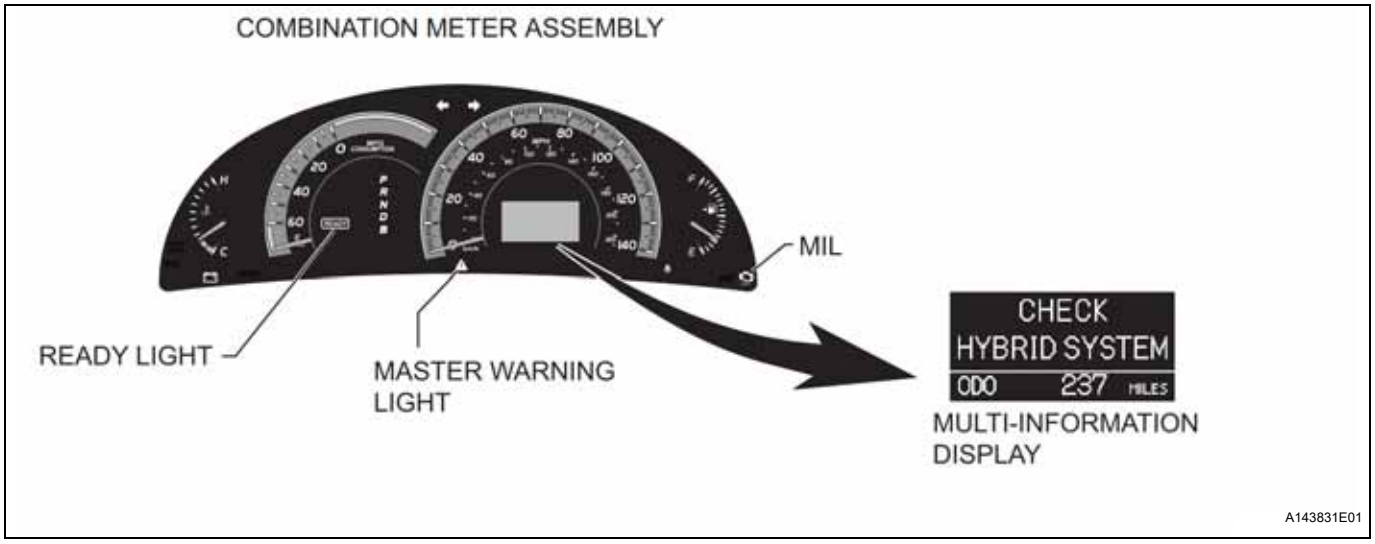
Item	Contents
Terminal	CH1: HTM+ - GND1 CH2: HTM- - GND1
Equipment Setting	1 V/DIV., 200 ms./DIV.
Condition	Power switch on (IG)

HINT:
The waveform will vary depending on the content of the digital communication (digital signal).

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The HV control ECU has a self-diagnosis system. If the computer, hybrid vehicle control system, or a component is not working properly, the ECU records the conditions that relate to the fault. The ECU also illuminates the master warning light and/or MIL in the combination meter and displays warning messages on the multi-information display.

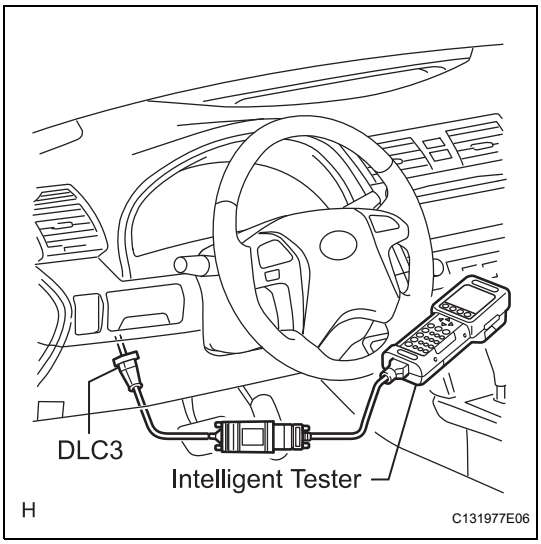


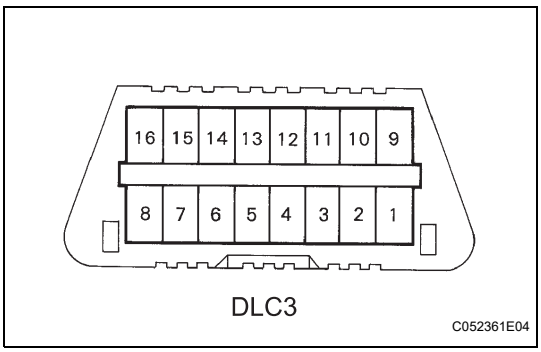
HINT:

The master warning light will illuminate when the THS II fails and the light will blink when in inspection mode.

- When troubleshooting OBD II vehicles, it is necessary to connect an OBD II scan tool that complies with SAE J1978 or connect an intelligent tester to the vehicle. Using one of these testers, it will be possible to read various data output from the vehicle's ECUs.
- OBD II regulations require that the vehicle's on-board computer illuminates the Malfunction Indicator light (MIL) in the instrument panel when the computer detects a malfunction in (1) the emission control system/ components, (2) the powertrain control components (which affect vehicle emissions), (3) the ECM and HV control ECU. In addition, applicable Diagnostic Trouble Codes (DTCs) prescribed by SAE J2012 are recorded in the HV control ECU memory (See page HV-46).

If a malfunction does not recur in 3 consecutive trips, the MIL will go off automatically. However the DTCs will remain recorded in the HV control ECU memory.





- To check for DTCs, connect the intelligent tester to the Data Link Connector 3 (DLC3) with the CAN vehicle interface module (CAN VIM). The intelligent tester also allows erasing of DTCs, viewing of freeze frame data, and viewing of various forms of THS II data (for operating instructions, refer to the tester's instruction manual). The DTCs include SAE controlled codes and manufacturer controlled codes. SAE controlled codes must be set as prescribed by the SAE, while manufacturer controlled codes can be set by the manufacturer within prescribed limits (See page HV-46).

2. CHECK DLC3

(a) The HV control ECU uses the ISO 9141-2 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 9141-2 format.

Symbol	Terminal No.	Name	Reference Terminal	Result	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	Always
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BATT	16	Battery positive	Body ground	11 to 14 V	Power switch off
CANH	6	HIGH-level CAN bus line	14 - LOW-level CAN bus line	54 to 69 Ω	Power switch off
CANH	6	HIGH-level CAN bus line	14 - Battery positive	1 MΩ or higher	Power switch off
CANH	6	HIGH-level CAN bus line	4 - Chassis ground	1 kΩ or higher	Power switch off
CANL	14	LOW-level CAN bus line	16 - Battery positive	1 MΩ or higher	Power switch off
CANL	14	LOW-level CAN bus line	4 - Chassis ground	1 kΩ or higher	Power switch off

HV

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG), and attempt to use the tester. If the display on the tester indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If the tester is able to communicate when it is connected to another vehicle, inspect the DLC3 connector of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the tester's instruction manual for information on service or repair of the tester.

3. **INSPECT AUXILIARY BATTERY**
   (a) Measure the voltage of the auxiliary battery.
   Standard Voltage:
   10 to 14 V
   (b) Inspect the auxiliary battery, fuses, fusible links, wiring harness, connectors and ground.
4. **CHECK MIL**
   (a) The MIL will illuminate when the power switch is turned on (IG), before the "READY" light comes on. If the MIL does not illuminate, troubleshoot the MIL circuit (See page ES-373).
   (b) When the "READY" light turns on, the MIL should turn off. If the MIL remains on, the diagnosis system has detected a malfunction or abnormality in the system.

DTC CHECK / CLEAR

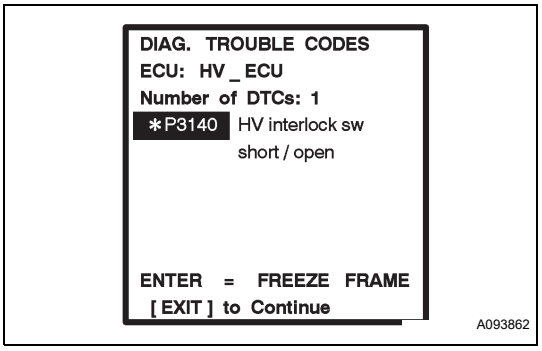
1. CHECK FOR DTCS (HV CONTROL ECU)

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester on.

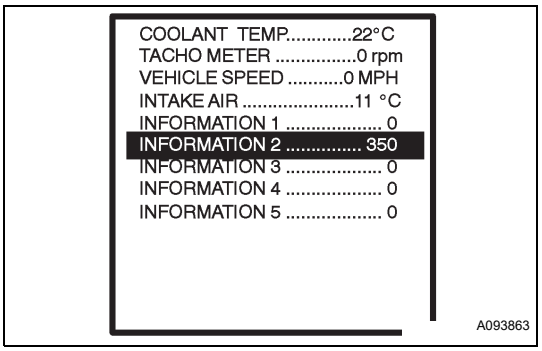
(c) Using the intelligent tester, check for DTCs and freeze frame data. If present, record or print the codes and the freeze frame data. Using the intelligent tester, enter the following menus: DIAGNOSIS / OBD/MOBD / HV ECU / DTC INFO / CURRENT CODES.

(d) Confirm the details of the DTCs. (See page HV-46)



2. CHECK FREEZE FRAME DATA AND INFORMATION

(a) If a DTC is present, select it in order to display its freeze frame data.



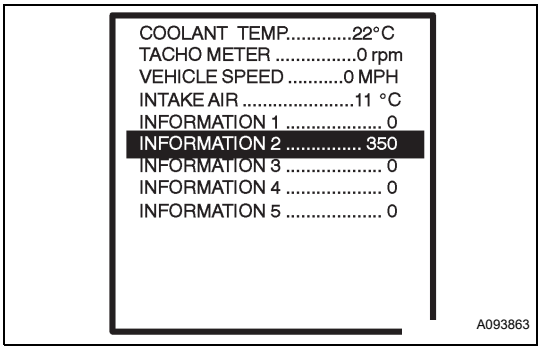
(b) Read the freeze frame data recorded when the DTC was set.

NOTICE:

An information code (INF code) will be displayed in one of the INFORMATION lines 1 to 5. Check the details by following the procedures in the following steps.

HINT:

In the case shown in the illustration, refer to troubleshooting for DTC P3140 and INF code 350.

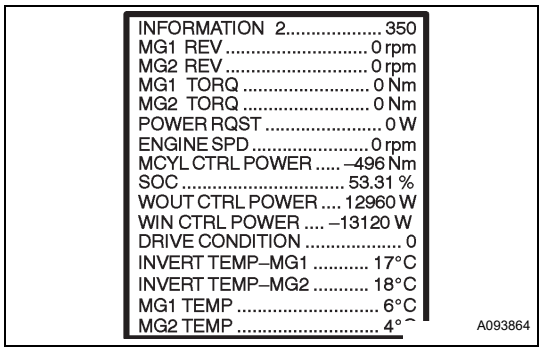


(c) Read the information.

(1) Select the item from among INFORMATION 1 to 5 that has an INF code on the freeze frame data screen.

(2) Press ENTER.

HV



(3) Additional information will be displayed as shown in the illustration.

3. CHECK FOR DTC (SYSTEMS OTHER THAN THE HV CONTROL ECU)

HINT:

The HV control ECU maintains communication with other computers, including the ECM, battery ECU, skid control ECU, and power steering ECU. Therefore, if the HV control ECU outputs a warning, it is necessary to check and record the DTCs of all the systems.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester on.

(c) On the intelligent tester, enter the following menus: DIAGNOSIS / OBD/MOBD / CODES (All).

(d) If DTCs are present, check the relevant systems.

HINT:

If DTCs for the CAN communication system are present in addition to other DTCs, first troubleshoot and repair any malfunctions in the CAN communication system.

4. CLEAR DTCS

NOTICE:

Clearing the DTCs will also clear the freeze frame data, information (see page HV-65), and operation history data (see page HV-70).

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester on.

(c) Check that the P shift position has been selected.

(d) Clear DTCs and freeze frame data using the intelligent tester.

(1) Enter the following menus: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.

(2) Press YES.

DATA LIST / ACTIVE TEST

1. DATA LIST

NOTICE:

- **Some data list values may vary significantly if there are slight differences in the environment in which the vehicle is operating when measurements are obtained. Variations may also occur due to aging of the vehicle. Due to these considerations, it is not always possible to provide definite values to be used for judgment of malfunctions. It is possible that a malfunction may be present even if measured values are within the reference range.**
- **In the event of a problem with intricate symptoms, collect sample data from another vehicle of the same model operating under identical conditions in order to reach an overall judgment by comparing all the items in the data list.**

HINT:

Using the intelligent tester to read the data list allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non intrusive inspection can be very useful because intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the data list information early in troubleshooting is one way to save diagnostic time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / HV ECU / DATA LIST.
(d) Check the results by referring to the following table.

HV

DATA LIST:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
COOLANT TEMP (Engine coolant temperature)	Engine coolant temperature / Min.: -40°C, Max.: 140°C	After warming up: 80 to 100°C (176 to 212°F)	-
ENGINE REV (Engine revolution)	Min.: 0 rpm, Max.: 16383.75 rpm	Idling: 950 to 1,050 rpm	-
VEHICLE SPD (Vehicle SPD)	Vehicle speed / Min.: 0 km/h, Max.: 255 km/h	Vehicle stopped: 0 km/h (0 mph)	-
ENG RUN TIME (Engine run time)	Elapsed time after starting engine / Min.: 0 s, Max.: 65535 s	-	-
+B (+B)	Auxiliary battery voltage / Min.: 0 V, Max.: 65.535 V	Constant: Auxiliary battery voltage +-3 V	-
ACCEL POS #1 (Accelerator pedal position #1)	Accelerator pedal position sensor No. 1 / Min.: 0%, Max.: 100%	Accelerator pedal depressed: Changes with accelerator pedal pressure	-
ACCEL POS #2 (Accelerator pedal position #2)	Accelerator pedal position sensor No. 2 / Min.: 0%, Max.: 100%	Accelerator pedal depressed: Changes with accelerator pedal pressure	-
AMBIENT TEMP (Ambient Temperature)	Ambient air temperature / Min.: -40°C, Max.: 215°C	Power switch on (IG): Same as ambient air temperature	-
INTAKE AIR TEMP (Intake air temperature)	Intake air temperature / Min.: -40°C, Max.: 140°C	Constant: Same as ambient air temperature	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
DTC CLEAR WARM (DTC Clear Warm Up times)	The number of times engine is warmed up after clearing DTCs / Min.: 0, Max.: 255	MIL OFF, engine coolant temperature increases from below 22°C (71.6°F) before starting the engine to above 70°C (158°F) after starting the engine: Increases once	-
DTC CLEAR RUN (DTC Clear Run Distance)	Drive distance after clearing DTCs / Min.: 0 km, Max.: 65535 km	-	-
DTC CLEAR MIN (DTC Clear Min)	Elapsed time after clearing DTCs / Min.: 0 min, Max.: 65535 min	-	-
MIL ON RUN DIST (MIL ON RUN Distance)	Travel distance after a malfunction occurs / Min.: 0 km, Max.: 65535 km	-	-
MIL ON ENG TIME (MIL ON Engine Run Time)	Driving time after a malfunction occurs / Min.: 0 km, Max.: 65535 km	-	-
MIL status (MIL status)	MIL status / ON or OFF	MIL ON: ON	Constant ON: Repair in accordance with detected DTCs
MODEL CODE (MODEL CODE)	Model code	-	Identifying model code: AHV40L
ENGINE CODE (ENGINE CODE)	Engine code	-	Identifying engine code: AHV40L
ECU CODE (ECU CODE)	ECU code	-	Identifying ECU code: 33###
DESTINATION (DESTINATION)	Destination	-	Identifying destination: A (America)
Calc Load (Calculate Load)	Calculate load / Min.: 0%, Max.: 100%	• Idling (INSPECTION MODE): 11 to 22% • Driving (2,500 rpm): 12.1 to 18.2%	-
THROTTLE POS (Throttle POS)	Throttle position sensor / Min.: 0%, Max.: 100%	• Throttle valve fully closed: 10 to 24% • Throttle valve fully open: 64 to 96%	-
L-TEMP ST JUDGE (Times of low temperature start-judging)	Time of low temperature start judging / Min.: 0, Max.: 65535	-	-
L-TEMP ST TIME (Low temperature-starting accumulation time)	Low temperature starting accumulation / Min.: 0, Max.: 67107840	-	-
TAR BAT VOL (DC) (Target Battery Voltage (DCDC Converter))	Target auxiliary battery voltage / Min.: 0 V, Max.: 20 V	-	-
DCDC FAN MODE (DCDC Converter cooling fan mode)	Hybrid vehicle converter cooling fan mode / Min.: 0%, Max.: 255%	-	-
INV COOLANT TMP (Inverter Coolant Water Temperature)	Inverter coolant temperature / Min.: -128°C, Max.: 127°C	Cold start → Fully warmed up: Gradually rises	-
MG2 REV (Motor (MG2) Revolution)	Motor revolution / Min.: -16383 rpm, Max.: 16383 rpm	-	-
MG2 TORQ (Motor (MG2) Torq)	Motor torque / Min.: -500 N*m, Max.: 500 N*m	-	-
MG2 TRQ EXC VAL (Motor (MG2) Torque execute value)	MG2 torque execution value / Min.: -512 N*m, Max.: 508 N*m	After full-load acceleration with READY light ON and engine stopped: Within +-20% of MG2 TORQ	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
MG1 REV (Generator (MG1) Revolution)	Generator revolution / Min.: -16383 rpm, Max.: 16383 rpm	-	-
MG1 TORQ (Generator (MG1) Torq)	Generator torque / Min.: -500 N*m, Max.: 500 N*m	-	-
MG1 TRQ EXC VAL (Generator (MG1) Torque execute value)	MG1 torque execution value / Min.: -512 N*m, Max.: 508 N*m	After full-load acceleration with READY light ON and engine stopped: Within +-20% of MG1 TORQ	-
REGEN EXEC TORQ (Regenrative Brake Torq)	Regenerative brake execution torque / Min.: 0 N*m, Max.: 186 N*m	-	-
REGEN RQST TORQ (Request Regenerative Brake Torq)	Regenerative brake request torque / Min.: 0 N*m, Max.: 186 N*m	Vehicle speed 30 km/h (19 mph) and master cylinder hydraulic pressure -200 N*m: Changes with brake pedal pressure	-
MG1 INVERT TEMP (Inverter temperature-(MG1))	Generator inverter temperature / Min.: -50°C, Max.: 205°C	• Undisturbed for 1 day at 25°C (77°F): 25°C (77°F) • Street driving: 25 to 80°C (77 to 176°F)	• If the value is -50°C (-58°F): +B short in sensor circuit • If the value is 205°C (401°F): Open or GND short in sensor circuit
MG2 INVERT TEMP (Inverter temperature-(MG2))	Motor inverter temperature / Min.: -50°C, Max.: 205°C	• Undisturbed for 1 day at 25°C (77°F): 25°C (77°F) • Street driving: 25 to 80°C (77 to 176°F)	• If the value is -50°C (-58°F): +B short in sensor circuit • If the value is 205°C (401°F): Open or GND short in sensor circuit
MOTOR2 TEMP (Motor Temperature No2)	Motor temperature / Min.: -50°C, Max.: 205°C	• Undisturbed for 1 day at 25°C (77°F): 25°C (77°F) • Street driving: 25 to 90°C (77 to 194°F)	• If the value is -50°C (-58°F): +B short in sensor circuit • If the value is 205°C (401°F): Open or GND short in sensor circuit
MOTOR1 TEMP (Motor temperature No1)	Generator temperature / Min.: -50°C, Max.: 205°C	• Undisturbed for 1 day at 25°C (77°F): 25°C (77°F) • Street driving: 25 to 100°C (77 to 212°F)	• If the value is -50°C (-58°F): +B short in sensor circuit • If the value is 205°C (401°F): Open or GND short in sensor circuit
CONVERTER TEMP (Converter Temperature)	Boost converter temperature / Min.: -50°C, Max.: 205°C	• Undisturbed for 1 day at 25°C (77°F): 25°C (77°F) • Street driving: 25 to 60°C (77 to 140°F)	• If the value is -50°C (-58°F): +B short in sensor circuit • If the value is 205°C (401°F): Open or GND short in sensor circuit
ACCEL DEG (the difference degree of an accelerator)	Accelerator pedal depressed angle / Min.: 0%, Max.: 100%	Accelerator pedal depressed: Changes with accelerator pedal pressure	-
POWER RQST (Request Power)	Request engine power / Min.: 0 W, Max.: 320000 W	-	-
TARGET ENG SPD (Target Engine Revolution)	Target engine speed / Min.: 0 rpm, Max.: 8000 rpm	-	-
ENGINE SPD (Engine SPD)	Engine speed / Min.: 0 rpm, Max.: 8000 rpm	Idling: 950 to 1,050 rpm	-
VEHICLE SPD (RSLVR) (Vehicle SPD (Resolver))	Resolver / Min.: -256 km/h, Max.: 254 km/h	Same as vehicle speed	-
MCYL CTRL POWOR (Master Cylinder Control Torq)	Braking torque that is equivalent to master cylinder hydraulic pressure / Min.: -2040 N*m, Max.: 0 N*m	Brake pedal depressed: Changes with brake pedal pressure	-
SOC (State Of Charge)	Battery state of charge / Min.: 0%, Max.: 100%	Constant: 0 to 100%	-
WOUT CTRL POWER (Wout Control Power)	Discharge control power value / Min.: 0 W, Max.: 81600 W	26,000 W or less	-
WIN CTRL POWER (Win Control Power)	Charge control power value / Min.: -40800 W, Max.: 0 W	-25,000 W or more	-

HV

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
PWR RESOURCE VB (Power Resource VB)	HV battery voltage / Min.: 0 V, Max.: 510 V	READY light ON: 200 to 340 V	-
PWR RESOURCE IB (Power Resource IB)	HV battery current / Min.: -256 A, Max.: 254 A	-	-
VL (VL-Voltage before boosting)	High voltage before boosting / Min.: 0 V, Max.: 510 V	READY ON: Practically the same as the HV battery voltage	• If the value is 0 V: Open or GND short in sensor circuit • If the value is 510 V: +B short in sensor circuit
VH (VH-Voltage past boosting)	High voltage past boosting / Min.: 0 V, Max.: 765 V	Engine revving up in P position: HV battery voltage to 650 V	• If the value is 0 V: Open or GND short in sensor circuit • If the value is 765 V: +B short in sensor circuit
BOOST RATIO (Boosting ratio)	Boost ratio / Min.: 0%, Max.: 100%	The pre-boost and the post boost voltages are equal: 0 to 10%	-
DRIVE CONDITION ID (Drive Condition ID)	Drive condition ID / Min.: 0, Max.: 6	• Engine stopped: 0 • Engine about to be stopped: 1 • Engine about to be started: 2 • Engine operated or operating: 3 • Generating or loading movement: 4 • Revving in P position: 6	-
SHIFT POSITION (Shift sensor shift position)	Shift lever position	P, R, N, D or B	-
CRANK POS (Crank position)	Crankshaft position / Min.: -90 deg, Max.: 90 deg	-	-
A/C CONSMPT PWR (Aircon consumption power)	A/C consumption power / Min.: 0 kW, Max.: 5 kW	-	-
Load Condition (Loading Condition)	Driving condition	• Generator load: MG1 • Motor load: MG2	-
DRIVING PATTEN 1 (Driving pattern 1)	Driving pattern / Min.: 0, Max.: 3	0: Driving at a low speed 1: Driving at a medium speed 2: Driving at a medium-high speed 3: Driving at a high speed	-
DRIVING PATTEN 2 (Driving pattern 2)	Driving pattern / Min.: 0, Max.: 3	0: Driving at a low speed 1: Driving at a medium speed 2: Driving at a medium-high speed 3: Driving at a high speed	-
DRIVING PATTEN 3 (Driving pattern 3)	Driving pattern / Min.: 0, Max.: 3	0: Driving at a low speed 1: Driving at a medium speed 2: Driving at a medium-high speed 3: Driving at a high speed	-
SHORT WAVE HIGH (Short circuit wave highest value)	Waveform voltage in leak detection circuit in battery ECU / Min.: 0 V, Max.: 5 V	Left for 2 minutes in READY-on state, and pre-boost and post boost voltages are equal: 4 V or more	-
MG1 CTRL MODE (MG1 control model)	MG1 control mode	-	-
MG1 CARRIR FREQ (MG1 carrier frequency)	MG1 carrier frequency / 10 kHz / 5 kHz / 2.5 kHz / 1.25 kHz	-	-
MG2 CTRL MODE (MG2 control mode)	MG2 control mode	-	-
MG2 CARRIR FREQ (MG2 carrier frequency)	MG2 carrier frequency / 5 kHz / 2.5 kHz / 1.25 kHz	-	-
ECU TYPE (Type of ECU)	ECU TYPE	-	Identifying ECU type: HV ECU

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
CURRENT DTC (The number of current code)	The number of current DTCs/ Min.: 0, Max.: 255	-	-
HISTORY DTC (The number of history DTC)	The number of history DTCs/ Min.: 0, Max.: 255	-	-
CHECK MODE (Check mode)	Check mode: ON or OFF	ON: Check mode ON	-
ENG STOP RQST (Engine Stop Request)	Engine stop request / NO or RQST	Requesting engine stop: RQST	-
IDLING REQUEST (Engine Idling Request)	Engine idling request / NO or RQST	Requesting idle: RQST	-
HV BATT CH RQST (Main Battery Charging Request)	HV battery charging request / NO or RQST	Requesting HV battery charging: RQST	-
SHIFT SW P (Shift Sensor SW-P)	Park / Neutral position switch / ON or OFF	P position: ON Except P position: OFF	-
SHIFT SW R (Shift Sensor SW-R)	Park / Neutral position switch / ON or OFF	R position: ON Except R position: OFF	-
SHIFT SW N (Shift Sensor SW-N)	Park / Neutral position switch / ON or OFF	N position: ON Except N position: OFF	-
SHIFT SW D (Shift Sensor SW-D)	Park / Neutral position switch / ON or OFF	D position: ON Except D position: OFF	-
SHIFT SW B (Shift Sensor SW-B)	Park / Neutral position switch / ON or OFF	B position: ON Except B position: OFF	-
SHIFT SW FD (Shift Sensor SW-FD)	Park / Neutral position switch / ON or OFF	D or B position: ON Except D or B position: OFF	-
SHIFT SW RV (Shift Sensor SW-RV)	Park / Neutral position switch / ON or OFF	R position: ON Except R position: OFF	-
SHIFT SW MJ (Shift Sensor SW-MJ)	Park / Neutral position switch / ON or OFF	P, R, N, D or B position: ON	-
AIRCON REQUEST (Aircon request)	Engine starting request from A/C amplifier / NO or RQST	Requesting engine start from A/C amplifier: RQST	-
ENG WARM UP RQT (Engine Warming up request)	Engine warm-up request / NO or RQST	Requesting engine warm-up: RQST	-
SMRP (System Precharge Relay Status-SMRP)	Operating condition of system precharge relay SMRP / ON or OFF	READY ON: OFF	-
SMRB (System Main Relay Status-SMRB)	Operating condition of system main relay SMRB / ON or OFF	READY ON: ON	-
SMRG (System Main Relay Status-SMRG)	Operating condition of system main relay SMRG / ON or OFF	READY ON: ON	-
MG1 GATE (MG1 gate status)	MG1 gate status / ON or OFF	Shutting down generator inverter: ON	-
MG2 GATE (MG2 gate status)	MG2 gate status / ON or OFF	Shutting down motor inverter: ON	-
CNV GATE (Converter gate status)	Boost converter gate status / ON or OFF	Shutting down boost converter: ON	-
A/C GATE (Aircon gate status)	A/C gate status / ON or OFF	While A/C inverter is being shut off: ON	-
CNV CARIER FREQ (Converter carrier frequency)	Converter signal carrier frequency / 5kHz/10kHz	5kHz/10kHz	-
COMP MON (Comprehensive Component Monitor)	Converter monitor / NOT AVL or AVAIL	-	-
CCM ENA (Comprehensive Component Monitor ENA)	Converter monitor enable / UNABLE or ENABLE	-	-

HV

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
CCM CMPL (Comprehensive Component Monitor CMPL)	Component monitor complete / COMPL or INCMPL	-	-
BATTERY SOC (Battery State of Charge)	Battery state of charge / Min.: 0%, Max.: 127.5%	-	-
DELTA SOC (Delta SOC)	Difference between maximum and minimum values of SOC / Min.: 0%, Max.: 100%	READY light ON, engine stopped and no electrical load: 0 to 60%	-
IB BATTERY (Current value of Battery Pack)	Current value of battery pack/ Min.: - 327.68 A, Max.: 327.67 A	-	-
BATT INSIDE AIR (Inhalation-of-air temperature into a battery pack)	Battery cooling fan intake air temperature / Min.: -327.68°C, Max.: 327.67°C	-	-
VMF FAN VOLT 1 (VMF fan motor voltage 1)	Battery blower motor monitoring voltage / Min.: -25.6 V, Max.: 25.4 V	Fan mode 1 with READY light ON and P position: 0.9 to 1.1 V	-
AUX. BAT V (Auxiliary battery voltage)	Auxiliary battery voltage / Min.: -25.6 V, Max.: 25.4 V	Equivalent to auxiliary battery voltage	-
WIN (Charge control value)	Charge control wattage / Min.: -64 kW, Max.: 63.5 kW	-25 kW or more	-
WOUT (Discharge control value)	Discharge control wattage / Min.: 0 kW, Max.: 63.5 kW	26 kW or less	-
COOLING FAN1 (COOLING FANMODE1)	Battery blower motor actuation mode / Min.: 0, Max.: 40	Stopped: 0 Low to high speed actuation: 1 to 40	-
ECU CTRL MODE (ECU Control mode)	ECU control mode / Min.: 0, Max.: 4	-	-
SBLW RQST (Cooling fan stop control request (Standby Blower))	Battery blower motor stop control request (standby blower) / ON or OFF	While blower motor stop control is requested: ON	-
BATT TEMP 1 to 4 (Temperature of battery TB 1 to 4)	Temperature of HV battery / Min.: -327.68°C, Max.: 327.67°C	Undisturbed for 1 day: Same as ambient air temperature	-
NUM OF BATT (The number of Battery Block)	The number of battery blocks / Min.: 0, Max.: 255	Always: 17	-
BAT BLOCK MIN V (Battery Block Minimum Voltage)	Battery block minimum voltage / Min.: -327.68 V, Max.: 327.67 V	SOC 50 to 60%: 12 V or more	-
MIN BAT BLOCK # (Minimum Battery Block No)	Battery block number with minimum voltage / Min.: 1, Max.: 255	One of numbers 1 to 17	-
BAT BLOCK MAX V (Battery Block Max Voltage)	Battery block maximum voltage / Min.: -327.68 V, Max.: 327.67 V	SOC 55 to 60%: 18 V or less	-
MAX BAT BLOCK # (Max Battery Block No)	Battery block number with maximum voltage / Min.: 1, Max.: 255	One of numbers 1 to 17	-
V1 to V17 BATT BLOCK (Battery Block Voltage V01 to 17)	Battery block voltage / Min.: -327.68 V, Max.: 327.67 V	SOC 60% : 12 to 20 V	-
1 to 17 INTNL RESIST (Internal resistance R01 to 17)	Internal resistance of each battery block / Min.: 0 Ω, Max.: 0.255 Ω	Always: 0.01 to 0.1	-
BLOW TIME (Accumulated time of Battery LOW)	Battery low time / Min.: 0, Max.: 65535	-	-
DCIH TIME (Accumulated time of DC Inhibit)	DC inhibit time / Min.: 0, Max.: 65535	-	-
BHI TIME (Accumulated time of Battery too High)	Battery too high time / Min.: 0, Max.: 65535	-	-
HTMP TIME (Accumulated time of Hot Temperature)	Hot temperature time / Min.: 0, Max.: 65535	-	-

2. ACTIVE TEST

HINT:

Using the intelligent tester to perform active tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing active tests early in troubleshooting is one way to save diagnostic time. Data list information can be displayed while performing active tests.

NOTICE:

It is necessary to use caution, because if the intelligent tester DLC3 connector becomes disconnected or if a communication error occurs during an active test, the vehicle could become inoperative (the READY light may go off).

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester on.

(c) On the system selection screen, enter the following menus: DIAGNOSIS / OBD/MOBD / HV ECU / ACTIVE TEST.

(d) According to the display on the tester, perform the appropriate active test.

ACTIVE TEST:

Tester Display	Test Part	Control Range	Test Details	Test Condition
INSPECTION MOD 1 (Inspection mode-2WD inspection)	• To check engine running operation • To release traction control while using a speedometer tester	ON or OFF	• Runs the engine continuously with the shift lever in the P position • Releases traction control that is initiated when the rotational difference between the front and rear wheels is excessive with the shift lever in any position other than P	Power switch on (IG), HV system normal, not in maintenance mode, and other active tests not being done
INSPECTION MOD 2 (Inspection mode-2WD chassis-dynamo)	To release traction control while using a speedometer tester	ON or OFF	Releases traction control that is initiated when the rotational difference between the front and rear wheels is excessive with the shift lever in any position other than P	Power switch on (IG), HV system normal, not in maintenance mode, and other active tests not being done
COMPRESS TEST (Compression Test) *1	To crank the engine continuously in order to measure the compression	ON or OFF	Allows the engine to continue cranking by activating the MG1 continuously	Power switch on (IG), HV system normal, not in cranking mode, and other active tests not being done
WATER PUMP (Activate the Water Pump)	To activate the HV water pump continuously	ON or OFF	Activates the HV water pump continuously	Power switch on (IG), HV system normal, not in maintenance mode, and other active tests not being done
COOLING FAN SPD (Driving the battery cooling fan)	To check operation of the cooling fan and if there is sufficient air flow	0 to 6	Stops the cooling fan or changes air volume mode (1 to 6)	-

Tester Display	Test Part	Control Range	Test Details	Test Condition
TC/TE1 (Connect the TC and TE1)	Batch display of warnings on combination meter	ON or OFF	TC terminal can be switched ON/OFF	Power switch on (IG), system is normal
BATTERY CHECK (Discharging battery to check weak battery cells)	-	ON or OFF	-	-

NOTICE:
For items marked with *1 in the chart, the intelligent tester will display a communication error and the vehicle's READY light will turn off when the active test is completed. If the tester will be used on the vehicle again, turn the power switch off and then on (READY) again to restart the tester.

DIAGNOSTIC TROUBLE CODE CHART

HYBRID CONTROL SYSTEM:

DTC Code	Detection Item	Trouble Area	Master Warning Light	MIL	Memory	See page
P0343-747	Camshaft Position Sensor "A" Circuit High Input	1. Wire harness or connector 2. Hybrid vehicle control ECU 3. Inverter with converter assembly	Comes on	-	DTC stored	HV-72
P0516-769	Battery Temperature Sensor Circuit Low	1. Auxiliary battery (battery temperature sensor) 2. Wire harness or connector 3. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-77
P0517-770	Battery Temperature Sensor Circuit High	1. Auxiliary battery (battery temperature sensor) 2. Wire harness or connector 3. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-77
P0560-117	System Voltage	1. Wire harness or connector 2. Hybrid vehicle control ECU	Comes on	Comes on	DTC stored	HV-80
P0617-142	Starter Relay Circuit High	1. Wire harness or connector 2. Hybrid vehicle control ECU 3. Main body ECU	Comes on	-	DTC stored	HV-84
P062F-143	EEPROM Malfunction	Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-87
P0630-804	VIN not Programmed or Mismatch-ECM / PCM	Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-88
P0705-757	Transmission Range Sensor Circuit	1. Wire harness or connector 2. Park / neutral position switch 3. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-90
P0705-758	Transmission Range Sensor Circuit	1. Wire harness or connector 2. Park / neutral position switch 3. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-90
P0851-775	Park / Neutral Switch Input Circuit Low	1. Wire harness or connector 2. Park / neutral position switch 3. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-90

DTC Code	Detection Item	Trouble Area	Master Warning Light	MIL	Memory	See page
P0A01-725	Motor Electronics Coolant Temperature Sensor Circuit Range / Performance	1. Wire harness or connector 2. Inverter cooling system 3. Cooling fan system 4. Water pump with motor & bracket assembly 5. Inverter with converter assembly 6. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-96
P0A01-726	Motor Electronics Coolant Temperature Sensor Circuit Range / Performance	1. Wire harness or connector 2. Inverter cooling system 3. Cooling fan system 4. Water pump with motor & bracket assembly 5. Inverter with converter assembly 6. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-96
P0A02-719	Motor Electronics Coolant Temperature Sensor Circuit Low	Inverter with converter assembly	Comes on	-	DTC stored	HV-99
P0A03-720	Motor Electronics Coolant Temperature Sensor Circuit High	Inverter with converter assembly	Comes on	-	DTC stored	HV-99
P0A08-101	DC / DC Converter Status Circuit	1. Duct 2. Hybrid vehicle converter (DC/DC converter) 3. Auxiliary battery	Comes on	-	DTC stored	HV-100
P0A08-264	DC / DC Converter Status Circuit	1. Wire harness or connector 2. Fusible link or fuse 3. Frame wire 4. Hybrid vehicle converter (DC/DC converter) 5. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-102
P0A09-265	DC / DC Converter Status Circuit Low Input	1. Wire harness or connector 2. Hybrid vehicle converter (DC/DC converter) 3. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-109
P0A09-591	DC / DC Converter Status Circuit Low Input	1. Hybrid vehicle converter (DC/DC converter) 2. Hybrid vehicle control ECU 3. Wire harness or connector	Comes on	-	DTC stored	HV-112
P0A0D-350	High Voltage System Inter-Lock Circuit High	1. Wire harness or connector 2. Hybrid vehicle control ECU 3. Service plug grip 4. Inverter with converter assembly 5. Air conditioning harness assembly	Comes on	-	DTC stored	HV-119

DTC Code	Detection Item	Trouble Area	Master Warning Light	MIL	Memory	See page
P0A0D-351	High Voltage System Inter-Lock Circuit High	1. Wire harness or connector 2. Hybrid vehicle control ECU 3. Service plug grip 4. Inverter with converter assembly 5. Air conditioning harness assembly	Comes on	-	DTC stored	HV-119
P0A0F-204	Engine Failed to Start	1. Hybrid vehicle control ECU 2. Engine control system	Comes on	-	DTC stored	HV-128
P0A0F-205	Engine Failed to Start	1. Hybrid vehicle control ECU 2. Engine control system	Comes on	-	DTC stored	HV-128
P0A0F-238	Engine Failed to Start	1. Engine 2. Hybrid vehicle transaxle assembly (shaft, gear) 3. Transmission input damper 4. Wire harness or connector 5. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-130
P0A0F-533	Engine Failed to Start	1. Hybrid vehicle control ECU 2. Engine control system	Comes on	-	DTC stored	HV-128
P0A0F-534	Engine Failed to Start	1. Hybrid vehicle control ECU 2. Engine control system	Comes on	-	DTC stored	HV-128
P0A10-263	DC / DC Converter Status Circuit High Input	1. Wire harness or connector 2. Hybrid vehicle converter (DC/DC converter) 3. Hybrid vehicle control ECU	Comes on	-	DTC stored	HV-136

INFORMATION / FREEZE FRAME DATA

1. FREEZE FRAME DATA

HINT:

The HV control ECU records vehicle and driving condition information as freeze frame data the moment a DTC is stored. It can be used for estimating or duplicating the vehicle conditions that were present when the malfunction occurred. To confirm the details of the hybrid control system, check the detailed information for the DTC information code in the data list (INF code).

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Select a DTC in order to display its freeze frame data.
(e) Check the freeze frame data of the DTC that has been detected.
(f) Check the freeze frame information recorded with the DTC.

FREEZE FRAME DATA:

Intelligent Tester Display	Measurement Item / Range (Display)	Suspected Vehicle Status When Malfunction Occurs
FREEZE DTC (DTC with require freeze frame data storage)	DTC corresponding to displayed freeze frame data	-
INFORMATION 1 to 5 (DETAIL INFORMATION 1 to 5)	Information code	-
COOLANT TEMP (Engine coolant temperature)	Engine coolant temperature / Min.: -40°C, Max.: 140°C	Cold or warmed-up engine
ENGINE REV (Engine revolution)	Engine speed / Min.: 0 rpm, Max.: 16,383.75 rpm	Engine speed
VEHICLE SPD (Vehicle SPD)	Vehicle speed / Min.: 0 km/h, Max.: 255 km/h	Stopped, or driving (at low, medium, or high speeds)
ENG RUN TIME (Engine run time)	Elapsed time after engine start / Min.: 0 sec., Max.: 65535 sec.	Elapsed time after engine start
+B (+B)	Auxiliary battery voltage / Min.: 0 V, Max.: 65.535 V	Auxiliary battery condition
ACCEL POS #1 (Accelerator pedal position #1)	Accelerator pedal position sensor No. 1 / Min.: 0%, Max.: 100%	Idling, accelerating, or decelerating
ACCEL POS #2 (Accelerator pedal position #2)	Accelerator pedal position sensor No. 2 / Min.: 0%, Max.: 100%	Idling, accelerating, or decelerating
AMBIENT TEMP (Ambient Temperature)	Ambient air temperature / Min.: -40°C, Max.: 215°C	Hot or cold weather
INTAKE AIR TEMP (Intake air temperature)	Intake air temperature / Min.: -40°C, Max.: 140°C	Hot or cold weather
DTC CLEAR WARM (DTC Clear Warm Up Times)	The number of times engine is warmed up after clearing DTCs / Min.: 0, Max.: 255	Frequency of malfunction recurrence after clearing DTCs
DTC CLEAR RUN (DTC Clear Run Distance)	Drive distance after clearing DTCs / Min.: 0 km, Max.: 65535 km	Frequency of malfunction recurrence after clearing DTCs
DTC CLEAR MIN (DTC Clear Min)	Elapsed time after clearing DTCs / Min.: 0 min, Max.: 65535 min	Elapsed time after clearing DTCs
CALC LOAD (Calculate Load)	Calculate load / Min.: 0%, Max.: 100%	-

Intelligent Tester Display	Measurement Item / Range (Display)	Suspected Vehicle Status When Malfunction Occurs
THROTTLE POS (Throttle POS)	Throttle position sensor / Min.: 0%, Max.: 100%	Idling, accelerating, or decelerating
ECU TYPE (Type pf ECU)	ECU type	Identifying ECU type: HV ECU
BATTERY SOC (Battery State of Charge)	Battery state of charge / Min.: 0%, Max.: 100%	State of charge of HV battery
DELTA SOC (Delta SOC)	Difference between maximum and minimum value of SOC / Min.: 0%, Max.: 100%	SOC variance
IB BATTERY (Current value of Battery Pack)	Current value of battery pack / Min.: -327.68 A, Max.: 327.67 A	HV battery charge/discharge status • Amount of current during discharge is displayed with positive values • Amount of current during charge is displayed with negative values
BATT INSIDE AIR (Inhalation-of-air temperature into a battery pack)	Battery cooling fan intake air temperature Min.: -327.68°C, Max.: 327.67°C	-
VMF FAN VOLT1 (VMF fan motor voltage1)	VMF fan voltage / Min.: -25.6 V, Max.: 25.4 V	Cooling fan operation condition
AUX. BAT V (Auxiliary battery voltage)	Auxiliary battery voltage / Min.: -25.6 V, Max.: 25.4 V	Auxiliary battery voltage
WIN (Charge control value)	Charge control power value / Min.: -64 kW, Max.: 63.5 kW	Charge amount of HV battery
WOUT (Discharge control value)	Discharge control power value / Min.: -64 kW, Max.: 63.5 kW	Discharge amount of HV battery
COOLING FAN 1 (COOLING FAN MODE1)	Cooling fan mode / Min.: 0, Max.: 40	HV battery cooling fan activation condition • Stopped: 0 • Low speed drive - high speed drive: 1-40
ECU CTRL MODE (ECU control mode)	ECU control mode / Min.: 1, Max.: 5	HV battery control status
SBLW RQST (Cooling fan stop control request (Standby Blower))	Standby blower request	-
BATT TEMP 1 to 4 (Temperature of battery TB 1 to 4)	Battery temperature / Min.: -327.68°C , Max.: 327.67 °C	HV battery temperature
V1 to V17 BATT BLOCK (Battery Block Voltage V01 to V17)	Battery block voltage / Min.: -327.68 V, Max.: 327.67 V	Each HV battery block voltage variance

HV

2. INFORMATION

HINT:

Similar to freeze frame data, the HV control ECU also records vehicle and driving condition information as INFORMATION (INF code) at the moment a DTC is stored.

(a) Select the information item which has an INF code from among INFORMATION 1 to 5.

(b) Check the information for the DTC.

INFORMATION:

Intelligent Tester Display	Measurement Item / Range (Display)	Suspected Vehicle Status When Malfunction Occurs
INFORMATION n (INFORMATION n)	Information code	Indication of system with malfunction
MG1 REV (Generator (MG1) Revolution)	Generator revolution / Min.: -16,384 rpm, Max.: 16,256 rpm	Generator speed • Forward rotation appears as "+" • Backward rotation appears as "-"

Intelligent Tester Display	Measurement Item / Range (Display)	Suspected Vehicle Status When Malfunction Occurs
MG2 REV (Motor (MG2) Revolution)	Motor revolution / Min.: -16,384 rpm, Max.: 16,256 rpm	Motor speed (proportionate to vehicle speed) • Forward rotation appears as "+" • Backward rotation appears as "-" Moving direction of vehicle • Forward rotation appears as "+" • Backward rotation appears as "-""
MG1 TORQ (Generator (MG1) Torq)	Generator torque / Min.: -512 N*m, Max.: 508 N*m	When generator rotation in "+" direction: • Torque appears as "+" while generator discharges • Torque appears as "-" while generator charges When generator rotation in "-" direction: • Torque appears as "-" while generator discharges • Torque appears as "+" while generator charges
MG2 TORQ (Motor (MG2) Torq)	Motor torque / Min.: -512 N*m, Max.: 508 N*m	When motor rotation in "+" direction: • Torque appears as "+" while motor discharges • Torque appears as "-" while motor charges When motor rotation in "-" direction: • Torque appears as "-" while motor discharges • Torque appears as "+" while motor charges
INVERT TEMP-MG1 (Inverter temperature (MG1))	Generator inverter temperature / Min.: -50°C, Max.: 205°C	Generator inverter temperature
INVERT TEMP-MG2 (Inverter temperature (MG2))	Generator inverter temperature / Min.: -50°C, Max.: 205°C	Motor inverter temperature
MG2 TEMP (No2) (Motor temperature MG2 (No2))	Generator inverter temperature / Min.: -50°C, Max.: 205°C	Generator temperature
MG2 TEMP (No1) (Motor temperature MG2 (No1)	Generator inverter temperature / Min.: -50°C, Max.: 205°C	Motor temperature
POWER RQST (Request Power)	Request engine power / Min.: 0 W, Max.: 255 W	Engine power output requested to ECM
ENGINE SPD (Engine SPD)	Engine speed / Min.: 0 rpm, Max.: 16320 rpm	Engine speed
MCYL CTRL POWER (Master Cylinder Control Torq)	Master cylinder control torque / Min.: -512 N*m, Max.: 508 N*m	Brake force requested by driver
SOC (SOC)	Battery state of charge / Min.: 0%, Max.: 100%	State of charge of HV battery
WOUT CTRL POWER (Wout Control Power)	Power value discharge control / Min.: 0 W, Max.: 81600 W	Discharge amount of HV battery
WIN CTRL POWER (Win Control Power)	Power value charge control / Min.: -40800 W, Max.: 0 W	Charge amount of HV battery
DRIVE CONDITION ID (Drive Condition ID)	Drive condition ID • Engine stopped: 0 • Engine about to be stopped: 1 • Engine about to be started: 2 • Engine operated or operating: 3 • Generating or loading movement: 4 • Revving in P position: 6	Engine operating condition
PWR RESOURCE VB (Power Resource VB)	HV battery voltage / Min.: 0 V, Max.: 510 V	HV battery voltage
PWR RESOURCE IB (Power Resource IB)	HV battery charge/discharge status / Min.: -256 A, Max.: 254 A	HV battery charge and discharge current 1. Amount of current during discharge is indicated with positive values 2. Amount of current during charge is indicated with negative values
SHIFT POSITION (Shift sensor shift position)	Shift position (P, R, N, D or B position) P: 0, R: 1, N: 2, D: 3, B: 4	Shift position

HV

Intelligent Tester Display	Measurement Item / Range (Display)	Suspected Vehicle Status When Malfunction Occurs
ACCEL SENSOR M (Accel sensor main)	Accelerator pedal position sensor main / Min.: 0%, Max.: 100%	Idling, accelerating, or decelerating
AUX. BATT V (Auxiliary Battery Voltage)	Auxiliary battery voltage / Min.: 0 V, Max.: 20 V	Auxiliary battery voltage
CONVERTER TEMP (Converter Temperature)	Boost converter temperature / Min.: -50°C, Max.: 205°C	Boost converter temperature
VL (VL-Voltage before raising pressure)	High voltage after it is boosted / Min.: 0 V, Max.: 510 V	High voltage level before it is boosted
VH (VH-Voltage after raising pressure)	High voltage after it is boosted Min.: 0 V, Max.: 765 V	High voltage level after it is boosted
IG ON TIME (The time of Ignition ON)	The time after power switch on (IG) / Min.: 0 min, Max.: 255 min	Time elapsed with power switch on (IG)
VEHICLE SPD-MAX (Vehicle Speed (Max))	Maximum vehicle speed / Min.: -256 km/h, Max.: 254 km/h	Over-discharging of HV battery
A/C COSMPT PWR (Aircon consumption power)	A/C consumption power / Min.: 0 kW, Max.: 5 kW	A/C load
ENG STOP RQST (Engine Stop Request)	Engine stop request / NO or YES	Engine stop request
IDLING REQUEST (Engine Idling Request)	Engine idling request / NO or YES	Idle stop request
ENGINE FUEL CUT (Engine Fuel Cut)	Engine fuel cut request / NO or YES	Fuel cut request
HV BATT CH RQST (Main Battery Charging Request)	HV battery charging request	HV battery charging request
ENG WARM UP RQT (Engine Warming up Request)	Engine warming up request / NO or YES	Engine warm-up request
STOP SW COND (Stop SW)	Stop light switch ON condition / NO or YES	Brake pedal depressed or released
CRUISE CONTROL (Cruise Control)	Cruise control active condition / NO or YES	Operation under cruise control ON or OFF
EXCLUSIVE INFO 1 to 7 (Exclusive Information 1 to 7)	Exclusive information (in numerical data)	Exclusive information linked to Information
OCCURRENCE ORDR (Occurrence order)	Occurrence sequence of information	Occurrence sequence of information
INVT TMP-MG1 IG (Inverter temperature (MG1) after IG-ON)	Generator inverter temperature after power switch on (IG) / Min.: -50°C, Max.: 205°C	Generator inverter temperature soon after power switch on (IG)
INVT TMP-MG2 IG (Inverter temperature (MG2) after IG-ON)	Motor inverter temperature after power switch on (IG) / Min.: -50°C, Max.: 205°C	Motor inverter temperature soon after power switch on (IG)
MG2 TEMP IG (Motor temperature (MG2) after IG-ON))	Motor temperature after power switch on (IG) / Min.: -50°C, Max.: 205°C	Motor temperature soon after power switch on (IG)
CONVRTR TEMP IG (Converter Temperature after IG-ON)	Boost converter temperature after power switch on (IG) / Min.: -50°C, Max.: 205°C	Boost converter temperature soon after power switch on (IG)
SOC IG (Status Of Charge after IG-ON))	Battery state of charge after power switch on (IG) / Min.: 0%, Max.: 100%	Battery state of charge soon after power switch on (IG)
INVT TMP-MG1MAX (Inverter temperature (MG1) MAX)	Generator inverter maximum temperature / Min.: -50°C, Max.: 205°C	Overheating state of Generator inverter
INVT TMP-MG2MAX (Inverter temperature (MG2) MAX)	Motor inverter maximum temperature / Min.: -50°C, Max.: 205°C	Overheating state of Motor inverter
MG2 TEMP MAX (Motor temperature (MG2) MAX)	Motor maximum temperature / Min.: -50°C, Max.: 205°C	Overheating state of Motor
CONVRTR TMP MAX (Converter Temperature MAX)	Boost converter maximum temperature / Min.: -50°C, Max.: 205°C	Overheating state of boost converter

Intelligent Tester Display	Measurement Item / Range (Display)	Suspected Vehicle Status When Malfunction Occurs
SOC MAX (Status Of Charge MAX)	Maximum status of charge / Min.: 0%, Max.: 100%	Over-charging of HV battery
SOC MIN (Status Of Charge MIN)	Minimum status of charge/ Min.: 0%, Max.: 100%	Over-charging of HV battery
HV COOLANT TEMP (HV Coolant Temperature)	HV coolant temperature / Min.: -40°C , Max.: 140°C	HV coolant temperature

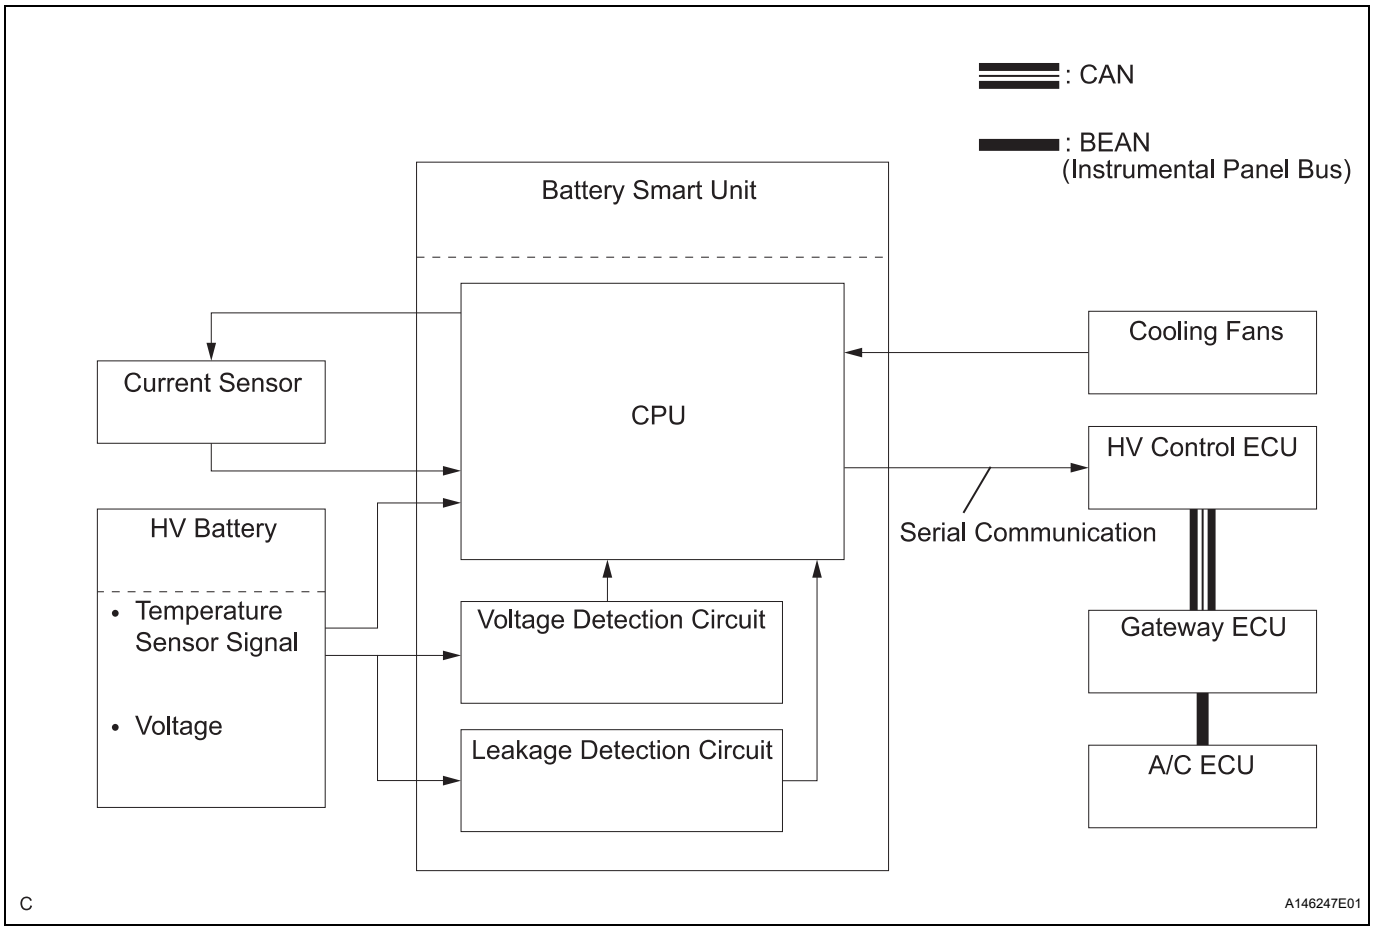
SYSTEM DESCRIPTION

1. BATTERY SMART UNIT CONTROL

- The battery smart unit monitors the HV battery condition signals (voltage, current, and temperature), which are needed to determine the charging or discharging values that are calculated by the THS ECU and transmits them to the THS ECU via serial communication.
- A leakage detection circuit is provided in the battery smart unit in order to detect any leakage from the HV battery.
- The battery smart unit monitors the voltage of the cooling fan, which is needed by the THS ECU to effect cooling fan control, and transmits it to the THS ECU via serial communication.



HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
*: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CONNECT INTELLIGENT TESTER TO THE DLC3*

HINT:
If the display on the tester indicates a communication fault, inspect the DLC3.

NEXT

4	CHECK DTC AND SAVE FREEZE FRAME DATA* (See page HB-15), (See page HB-17)

HINT:
Make sure to save freeze frame data because the data is necessary for a simulation test.

NEXT

5	CLEAR DTC* (See page HB-15)

NEXT

6	CONDUCT VISUAL INSPECTION

NEXT

7	CONFIRM PROBLEM SYMPTOMS

HINT:
If the engine does not start, perform steps 9 and 11 first.
Result

Result	Proceed to
Malfunction does not occur	A
Malfunction occurs	B

B → GO TO STEP 10

A

8	DUPLICATE CONDITIONS THAT PRODUCE SYMPTOMS

NEXT

9	CHECK FOR DTCS* (See page HB-15)

CHECK FOR INTERMITTENT PROBLEMS

1. CHECK FOR INTERMITTENT PROBLEMS

(a) Perform a simulation test (See page IN-72).

(1) For the simulation test, reproduce the driving conditions that were present when the trouble occurred. These conditions should be based on the customer's comments and freeze frame data that is recorded with DTCs, such as the opening angle of the accelerator pedal, SOC, engine coolant temperature, engine rpm, and MG1/MG2 rpm and torque.

(b) Check the connector(s) and terminal(s) (See page IN-67).

(c) Wiggle the harness and connector(s) (See page IN-72).

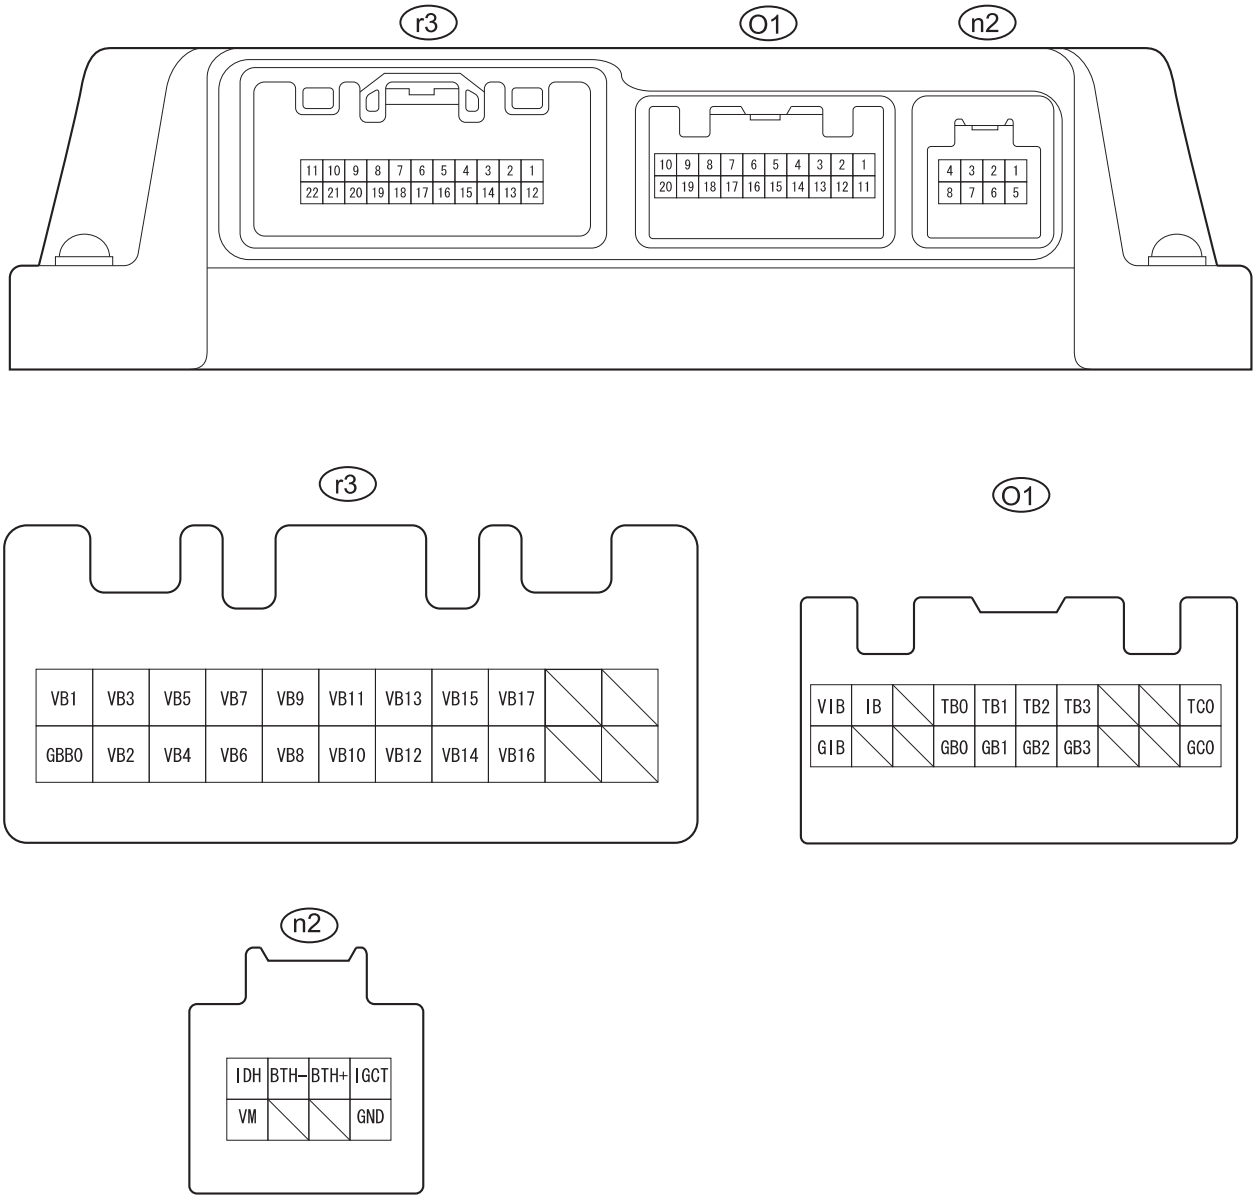
(d) Heat or cool suspected parts (See page IN-72).

NOTICE:

Do not directly heat or cool the MG ECU with the inverter cover removed.

TERMINALS OF ECU

Battery Smart Unit



C A146248E01

ECU TERMINAL CHART:

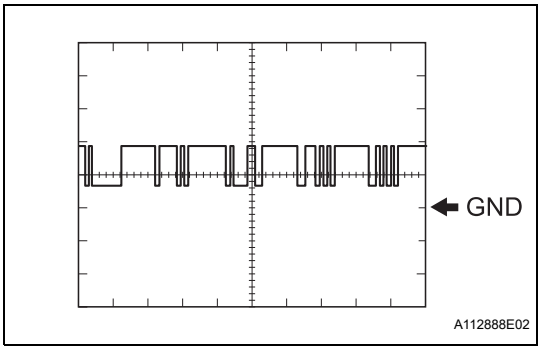
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Standard (V)
TC0 (O1-1) - GC0 (O1-11)	G - G	Intake air temperature sensor	Intake air temperature: -40 to 90°C (-40 to 194°F)	4.8 to 1.0
TB3 (O1-4) - GB3 (O1-14)	L - L	HV battery temperature sensor 3	HV battery temperature: -40 to 90°C (-40 to 194°F)	4.8 to 1.0
TB2 (O1-5) - GB2 (O1-15)	B - B	HV battery temperature sensor 2	HV battery temperature: -40 to 90°C (-40 to 194°F)	4.8 to 1.0

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Standard (V)
TB1 (O1-6) - GB1 (O1-16)	W - W	HV battery temperature sensor 1	HV battery temperature: -40 to 90°C (-40 to 194°F)	4.8 to 1.0
TB0 (O1-7) - GB0 (O1-17)	R - R	HV battery temperature sensor 0	HV battery temperature: -40 to 90°C (-40 to 194°F)	4.8 to 1.0
IB (O1-9) - GIB (O1-20)	Y - B	Battery Current	Power switch on (READY)	0.5 to 4.5
VIB (O1-10) - GIB (O1-20)	BR - B	Power source for battery current sensor	Power switch on (IG)	4.5 to 5.5
IGCT (n2-1) - GND (n2-5)	B - W-B	Control signal	Power switch on (READY)	9 to 14
BTH+ (n2-2) - GND (n2-5)	R - W-B	Serial communication	Power switch on (IG)	Pulse generation (waveform 1)
BTH- (n2-3) - GND (n2-5)	G - W-B	Serial communication	Power switch on (IG)	Pulse generation (waveform 2)
IDH (n2-4) - GND (n2-5)	P - W-B	Hybrid Vehicle Converter Cooling Fan Signal	Power switch on (IG)	Pulse generation (waveform 3)
VM (n2-8) - GND (n2-5)	G - W-B	Cooling Fan Monitor Signal	Cooling fan activated	0 to 5
GND (n2-5) - Body ground	W-B - Body ground	Ground	Always (continuity check)	Continuity (Below 6 Ω)

1. Oscilloscope waveforms

HINT:
Oscilloscope waveform samples are provided here for informational purposes. Noise and fluttering waveforms have been omitted.

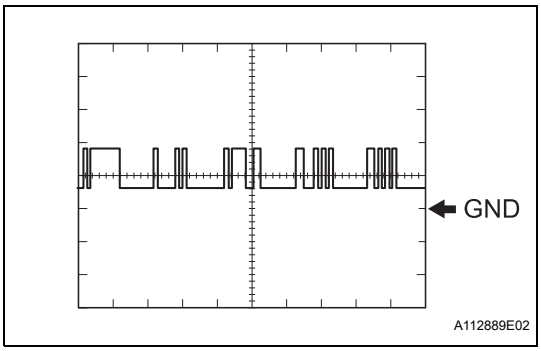
(a) Waveform 1



Item	Contents
Terminal	BTH+ (n2-2) - GND (n2-5)
Equipment Setting	2 V/DIV., 500 μs/DIV.
Condition	Power switch on (IG)

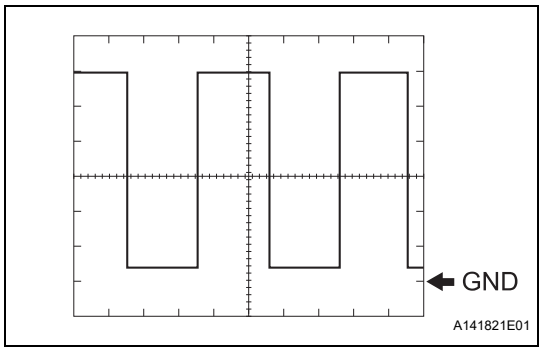
HINT:
The waveform will vary depending on the content of the digital communication (digital signal).

(b) Waveform 2



Item	Contents
Terminal	BTH- (n2-3) - GND (n2-5)
Equipment Setting	2 V/DIV., 500 μs/DIV.
Condition	Power switch on (IG)

HINT:
The waveform will vary depending on the content of the digital communication (digital signal).



(c) Waveform 3

Item	Contents
Terminal	IDH (n2-4) - GND (n2-5)
Equipment Setting	2 V/DIV., 500 2ms./DIV.
Condition	Power switch on (IG)

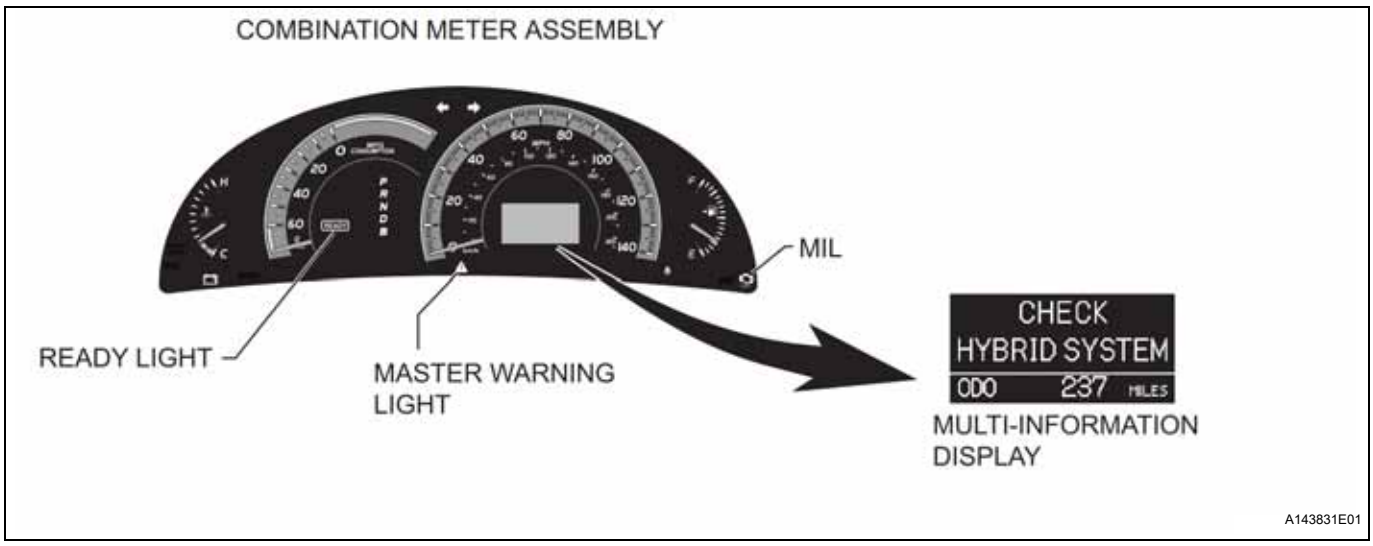
HINT:

- The frequency of the waveform differs according to operation conditions of the cooling fan of the hybrid vehicle converter.
- The frequency of the waveform differs (100 to 900 kHz, 8 to 14 V) depending on operation conditions of the cooling fan of the hybrid vehicle converter.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The HV control ECU has a self-diagnosis system. If the computer, hybrid vehicle control system, or a component is not working properly, the ECU records the conditions that relate to the fault. The ECU also illuminates the master warning light and/or MIL in the combination meter and displays warning messages on the multi-information display.

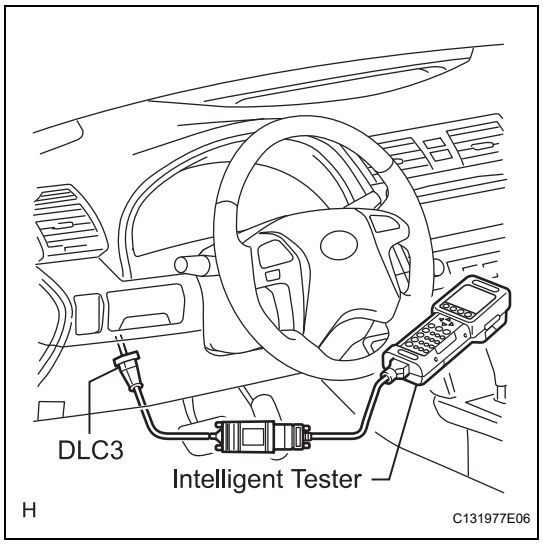


HINT:

The master warning light will illuminate when the THS II fails and the light will blink when in inspection mode.

- When troubleshooting OBD II vehicles, it is necessary to connect an OBD II scan tool that complies with SAE J1978 or connect an intelligent tester to the vehicle. Using one of these testers, it will be possible to read various data output from the vehicle's ECUs.
- OBD II regulations require that the vehicle's on-board computer illuminates the Malfunction Indicator light (MIL) in the instrument panel when the computer detects a malfunction in (1) the emission control system/ components, (2) the powertrain control components (which affect vehicle emissions), (3) the ECM and HV control ECU. In addition, applicable Diagnostic Trouble Codes (DTCs) prescribed by SAE J2012 are recorded in the HV control ECU memory (See page HB-18).

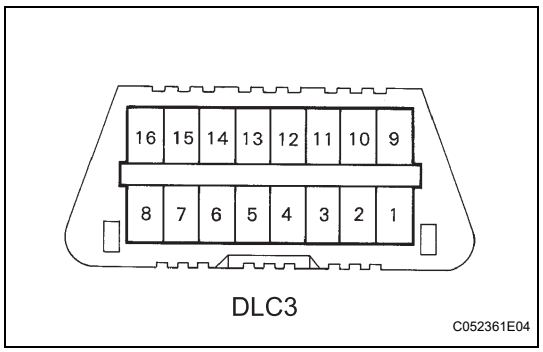
If a malfunction does not recur in 3 consecutive trips, the MIL will go off automatically. However the DTCs will remain recorded in the HV control ECU memory.



- To check for DTCs, connect the intelligent tester to the Data Link Connector 3 (DLC3) with the CAN vehicle interface module (CAN VIM). The intelligent tester also allows erasing of DTCs, viewing of freeze frame data, and viewing of various forms of THS II data (for operating instructions, refer to the tester's instruction manual). The DTCs include SAE controlled codes and manufacturer controlled codes. SAE controlled codes must be set as prescribed by the SAE, while manufacturer controlled codes can be set by the manufacturer within prescribed limits (See page HB-18).

2. CHECK DLC3

(a) The HV control ECU uses the ISO 9141-2 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 9141-2 format.



Symbol	Terminal No.	Name	Reference Terminal	Result	Condition
SIL	7	Bus "+" line	5 - Signal ground	Pulse generation	Always
CG	4	Chassis ground	Body ground	1 Ω or less	Always
SG	5	Signal ground	Body ground	1 Ω or less	Always
BATT	16	Battery positive	Body ground	11 to 14 V	Power switch off
CANH	6	HIGH-level CAN bus line	14 - LOW-level CAN bus line	54 to 69 Ω	Power switch off
CANH	6	HIGH-level CAN bus line	14 - Battery positive	1 MΩ or higher	Power switch off
CANH	6	HIGH-level CAN bus line	4 - Chassis ground	1 kΩ or higher	Power switch off
CANL	14	LOW-level CAN bus line	16 - Battery positive	1 MΩ or higher	Power switch off
CANL	14	LOW-level CAN bus line	4 - Chassis ground	1 kΩ or higher	Power switch off

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG), and attempt to use the tester. If the display on the tester indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If the tester is able to communicate when it is connected to another vehicle, inspect the DLC3 connector of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the tester's instruction manual for information on service or repair of the tester.

HB

3. **INSPECT AUXILIARY BATTERY**
   (a) Measure the voltage of the auxiliary battery.
   Standard Voltage:
   10 to 14 V
   (b) Inspect the auxiliary battery, fuses, fusible links, wiring harness, connectors and ground.
4. **CHECK MIL**
   (a) The MIL will illuminate when the power switch is turned on (IG), before the "READY" light comes on. If the MIL does not illuminate, troubleshoot the MIL circuit (See page ES-373).
   (b) When the "READY" light turns on, the MIL should turn off. If the MIL remains on, the diagnosis system has detected a malfunction or abnormality in the system.

DTC CHECK / CLEAR

DTC CHECK / CLEAR

1. CHECK FOR DTCS (HV CONTROL ECU)

(a) Connect the intelligent tester to the DLC3.

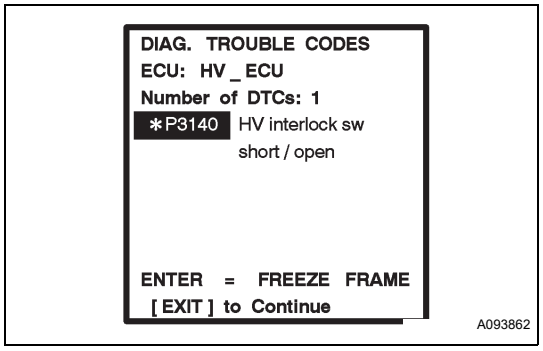
(b) Turn the power switch on (IG) and turn the intelligent tester on.

(c) Using the intelligent tester, check for DTCs and freeze frame data. If present, record or print the codes and the freeze frame data. Using the intelligent tester, enter the following menus: DIAGNOSIS / OBD/MOBD / HV ECU / DTC INFO / CURRENT CODES.

(d) Confirm the details of the DTCs. (See page HB-18)

2. CHECK FREEZE FRAME DATA AND INFORMATION

(a) If a DTC is present, select it in order to display its freeze frame data.



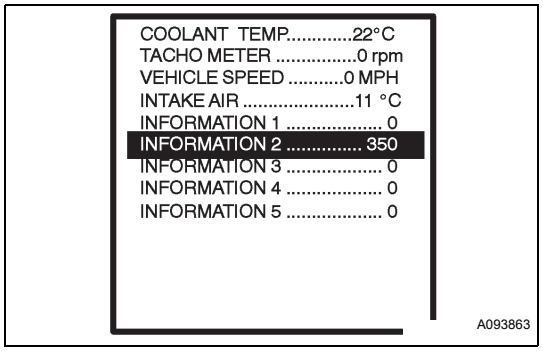
(b) Read the freeze frame data recorded when the DTC was set.

NOTICE:

An information code (INF code) will be displayed in one of the INFORMATION lines 1 to 5. Check the details by following the procedures in the following steps.

HINT:

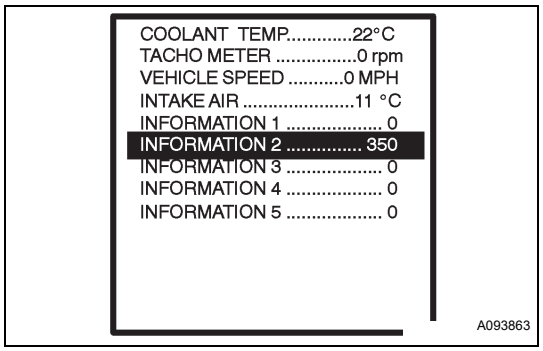
In the case shown in the illustration, refer to troubleshooting for DTC P3140 and INF code 350.



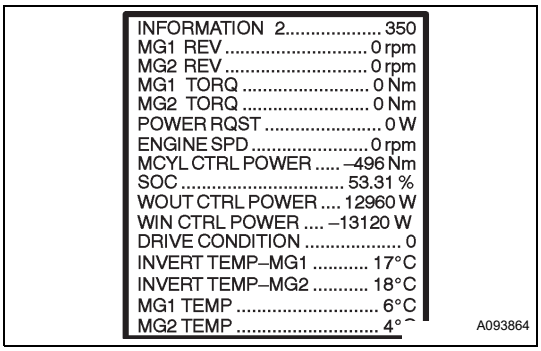
(c) Read the information.

(1) Select the item from among INFORMATION 1 to 5 that has an INF code on the freeze frame data screen.

(2) Press ENTER.



HB



(3) Additional information will be displayed as shown in the illustration.

3. CHECK FOR DTC (SYSTEMS OTHER THAN THE HV CONTROL ECU)

HINT:

The HV control ECU maintains communication with other computers, including the ECM, battery ECU, skid control ECU, and power steering ECU. Therefore, if the HV control ECU outputs a warning, it is necessary to check and record the DTCs of all the systems.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester on.

(c) On the intelligent tester, enter the following menus: DIAGNOSIS / OBD/MOBD / CODES (All).

(d) If DTCs are present, check the relevant systems.

HINT:

If DTCs for the CAN communication system are present in addition to other DTCs, first troubleshoot and repair any malfunctions in the CAN communication system.

4. CLEAR DTCS

NOTICE:

Clearing the DTCs will also clear the freeze frame data, information (see page HV-65), and operation history data (see page HV-70).

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester on.

(c) Check that the P shift position has been selected.

(d) Clear DTCs and freeze frame data using the intelligent tester.

(1) Enter the following menus: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.

(2) Press YES.

FREEZE FRAME DATA

1. FREEZE FRAME DATA

HINT:
The hybrid vehicle control ECU records vehicle and driving condition information as freeze frame data the moment a DTC is stored. That data can be used for estimating or duplicating the vehicle conditions that were present when the malfunction occurred.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Select DIAGNOSIS on the menu screen.
(d) Select the following menu items: OBD/MOBD / HV ECU / DTC INFO / CURRENT CODES.
(e) Check the freeze frame data of the output DTCs.
HINT:
For the freeze frame data chart, see page HV-65.

DATA LIST / ACTIVE TEST

1. **DATA LIST**

NOTICE:

- **Some data list values may vary significantly if there are slight differences in the environment in which the vehicle is operating when the measurements are obtained. Variations may also occur due to aging of the vehicle. Due to these considerations, it is not always possible to provide definite values to be used for judgment of malfunctions. It is possible that there may be a malfunction even if measured values are within the reference range.**
- **In the event of a problem with intricate symptoms, collect sample data from another vehicle of the same model operating under identical conditions in order to reach an overall judgment by comparing all the items in the data list.**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Select DIAGNOSIS on the menu screen.
(d) Select the following menu items: OBD/MOBD / HV ECU / DATA LIST.
HINT:
For the data list, see page HV-38.

2. **ACTIVE TEST**

HINT:
Using the intelligent tester to perform active tests allows relays, VSVs, actuators and other items to be operated without removing any parts. This non intrusive functional inspection can be very useful because intermittent operation may be discovered before parts or wiring is disturbed. Performing active tests early in troubleshooting is one way to save diagnostic time. Data list information can be displayed while performing active tests.

NOTICE:

It is necessary to use caution, because if the intelligent tester connector becomes disconnected or if a communication error occurs during an active test, the vehicle could become inoperative (the READY light may go off).

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Select "DIAGNOSIS" on the menu screen.
(d) Select the following menu items: OBD/MOBD / HV ECU / ACTIVE TEST.
HINT:
For the active test chart, see page HV-38.

DIAGNOSTIC TROUBLE CODE CHART

DTC Code	Detection Item	Trouble Area	MIL	Master Warning	Memory	See page
P0A1F-123	Battery Energy Control Module	1. Battery smart unit 2. Auxiliary battery 3. Wire harness or connector 4. IGCT No. 2 fuse	Comes on	Comes on	DTC stored	HB-21

DTC	P0A1F-123	Battery Energy Control Module

DESCRIPTION

The hybrid vehicle control ECU alerts the driver and performs fail safe control based on error signals sent from the battery smart unit.

DTC No.	DTC Detection Condition	Trouble Area
P0A1F-123	Reception of an error signal from the battery smart unit	• Battery smart unit • Auxiliary battery • Wire harness or connector • IGCT No. 2 fuse

MONITOR DESCRIPTION

If the battery smart unit detects an internal malfunction in the unit itself, the HV control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1F (INF 123): Range check / Rationality
Required sensors / components	Battery smart unit
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

HB

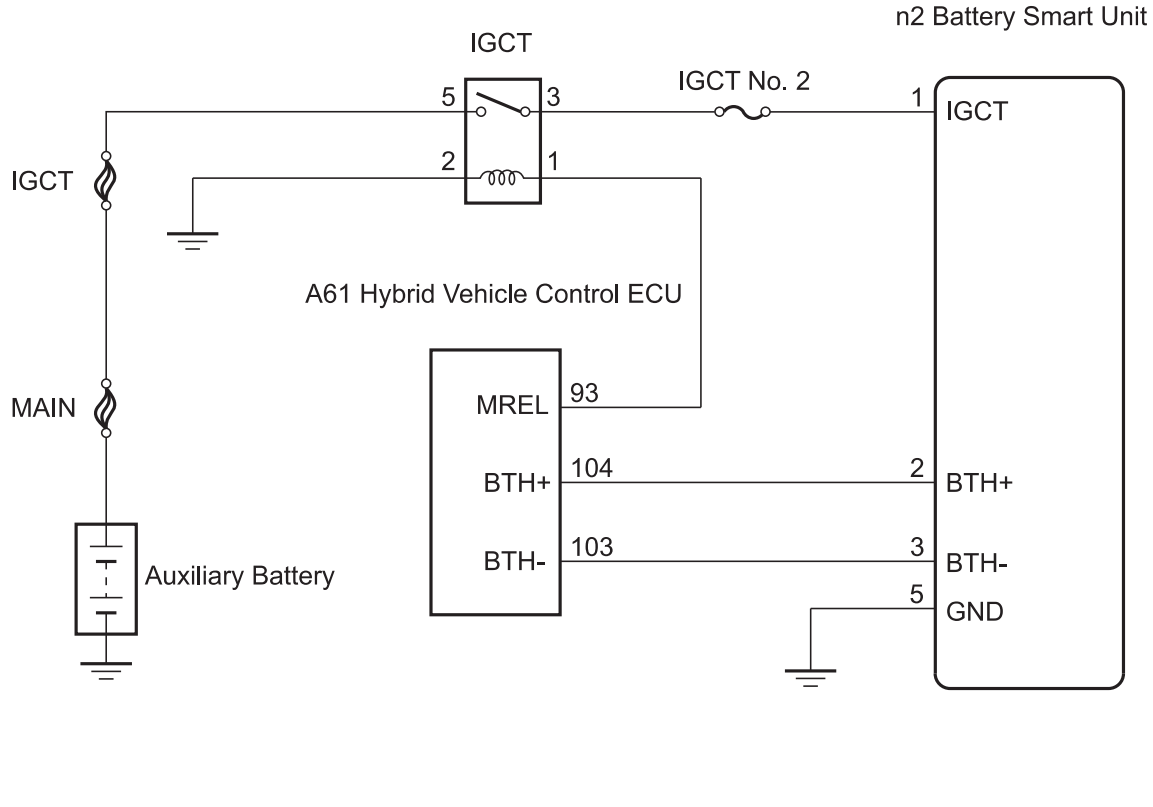
TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0A1F (INF 123) is not detected

WIRING DIAGRAM



INSPECTION PROCEDURE

HB

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

- Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.
- After completing repairs, restart the system (turn the power switch on (READY)) and recheck for DTCs. (See page HB-15)

1	CHECK AUXILIARY BATTERY

(a) Measure the voltage between the terminals of the auxiliary battery.

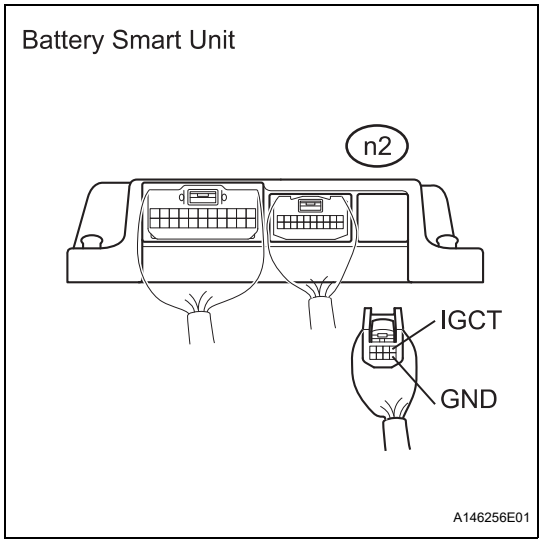
Standard voltage:

11 to 14 V

NG	CHARGE OR REPLACE AUXILIARY BATTERY

OK

2	CHECK HARNESS AND CONNECTOR (IGCT VOLTAGE)



CAUTION:
Be sure to wear insulated gloves.

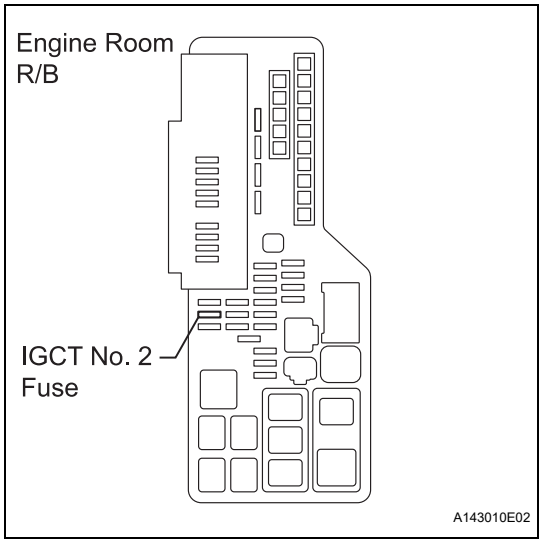
(a) Remove the service plug grip (See page HB-86).
(b) Remove the battery smart unit (See page HB-100).
HINT:
Do not disconnect the battery smart unit connectors.
(c) Disconnect connector n2 from the battery smart unit.
(d) Turn the power switch on (IG).
(e) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Specified Condition
IGCT (N2-1) - GND (N2-5)	8.6 V or higher

OK → **REPLACE BATTERY SMART UNIT (See page HB-99)**

NG

3	CHECK FUSE (IGCT NO. 2 FUSE)



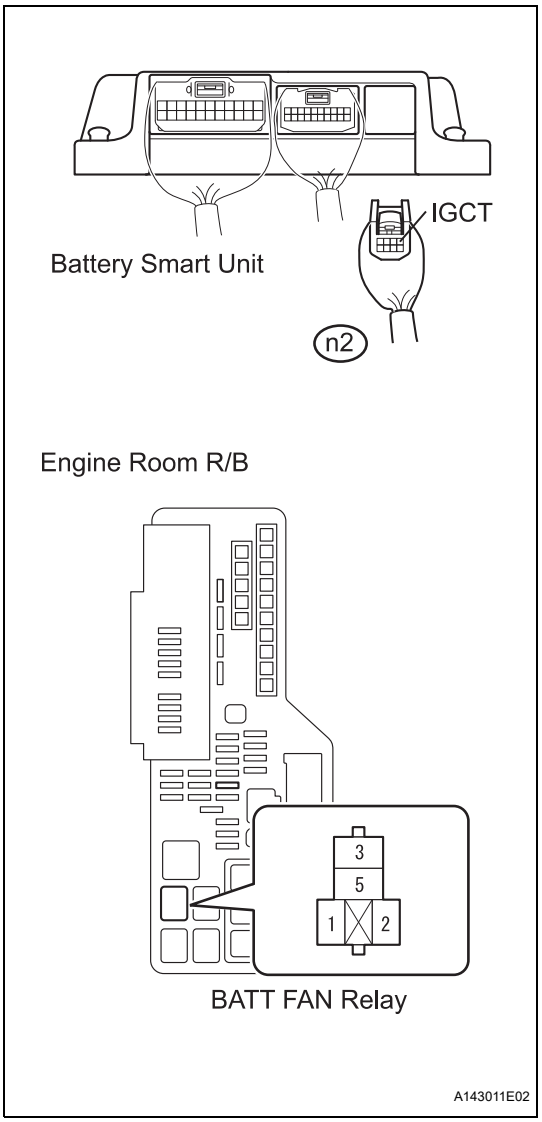
(a) Remove the IGCT No. 2 fuse from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE (IGCT NO. 2 FUSE)**

OK

HB

4	CHECK HARNESS AND CONNECTOR (BATTERY SMART UNIT - IGCT RELAY)



CAUTION:
Be sure to wear insulated gloves.

(a) Install the IGCT No. 2 fuse to the engine room R/B.
(b) Remove the IGCT relay from the engine room R/B.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
IGCT (n2-1) - 3	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

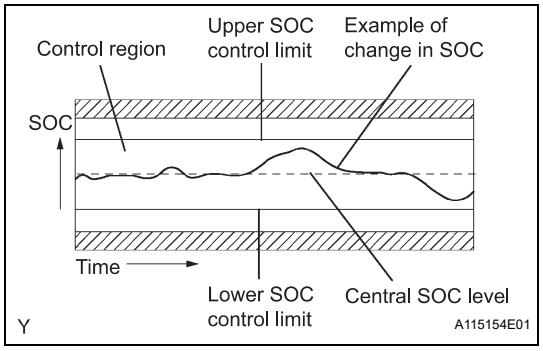
CHECK AND REPAIR POWER SOURCE CIRCUIT

HB

DTC	P0A7F-123	Hybrid Battery Pack Deterioration

DESCRIPTION

The battery smart unit and hybrid vehicle control ECU calculate the SOC (state of charge) of the HV battery based on the accumulated amperage in the HV battery. The battery smart unit sends a signal indicating the condition of the HV battery to the hybrid vehicle control ECU. The hybrid vehicle control ECU then calculates the SOC based on this information and controls HV battery charge and discharge according to the driving conditions.



DTC No.	DTC Detection Condition	Trouble Area
P0A7F-123	• Internal resistance of HV battery is higher than the standard (1 trip detection) • Difference in the capacity between battery blocks is larger than the standard (2 trip detection)	• HV battery • Battery smart unit

HINT:
P0A7F cannot be set unless the vehicle is driven for approximately 10 minutes after clearing the DTCs. (For 2 trip detection, turn the power switch off and perform a road test again after the first road test.)

HB

MONITOR DESCRIPTION

The battery smart unit calculates the resistance of the HV battery using amperage and voltage, and uses this resistance to determine the extent of deterioration of the HV battery. If the battery smart unit detects that the resistance of the HV battery has exceeded the standard, it determines that a malfunction has occurred. In addition, the battery smart unit monitors the SOC, and if the difference between the maximum and minimum SOC values exceeds the standard, it determines that a malfunction has occurred. When either of the DTC detection conditions is met, the HV control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A7F (INF 123): Rationality
Required sensors / components	Main: Battery voltage sensor inside battery smart unit, battery current sensor Sub: Battery temperature sensor
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0A7F (INF 123) is not detected

INSPECTION PROCEDURE

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	READ VALUE ON INTELLIGENT TESTER

HB

(a) Ensure the safety of the areas in front and at the back of the vehicle.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (READY).
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA LIST / V1 to V17 BATT BLOCK.
(e) Fully warm up the engine and turn the air conditioning off.
(f) Firmly depress the brake pedal with your left foot.
(g) Move the shift lever to the D position.
(h) Record each battery block voltage from the data list (V1 to V17 BATT BLOCK) while fully depressing the accelerator pedal.
(i) Compare the battery block voltages (V1 to V17 BATT BLOCK) between the even and odd number groups in each combination shown in the table below.

Even number group	Odd number group	Battery block voltages to be compared
V1 BATT BLOCK	V2 BATT BLOCK	VB0←→VB1
V3 BATT BLOCK	V4 BATT BLOCK	VB2←→VB3
V5 BATT BLOCK	V6 BATT BLOCK	VB4←→VB5
V7 BATT BLOCK	V8 BATT BLOCK	VB6←→VB7
V9 BATT BLOCK	V10 BATT BLOCK	VB8←→VB9
V11 BATT BLOCK	V12 BATT BLOCK	VB10←→VB11
V13 BATT BLOCK	V14 BATT BLOCK	VB12←→VB13

Even number group	Odd number group	Battery block voltages to be compared
V15 BATT BLOCK	V16 BATT BLOCK	VB14←→VB15
V17 BATT BLOCK	V16 BATT BLOCK	VB16←→VB15

(j) Check the voltage difference in the all 9 combinations.

OK:

The difference in voltage of all combinations is 0.3 V or more.

YES → **REPLACE BATTERY SMART UNIT (See page HB-99)**

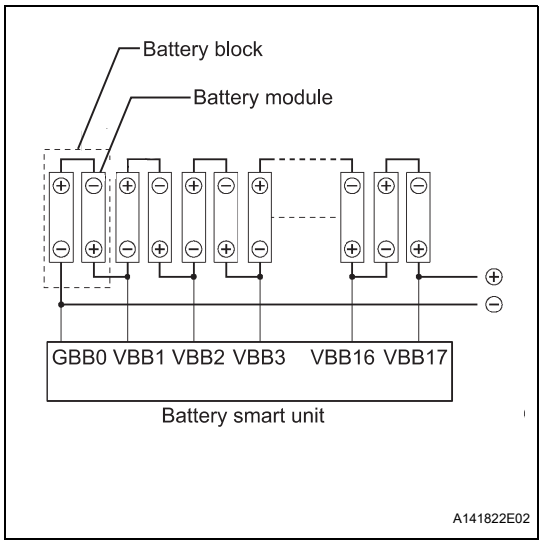
NO

REPLACE HV BATTERY (See page HB-81)

DTC	P0A80-123	Replace Hybrid Battery Pack

DESCRIPTION

The hybrid vehicle control ECU controls the SOC (state of charge) of the HV battery at a constant level while driving. The HV battery is composed of 34 modules, and each module consists of six 1.2 V cells in series. The battery smart unit monitors battery block voltage at 17 locations. Each battery block is composed of 2 modules in a set.



DTC No.	DTC Detection Condition	Trouble Area
P0A80-123	Difference in voltage between battery blocks is larger than the standard (2 trip detection)	• HV battery • Battery smart unit

HB

HINT:
P0A80-123 cannot be set unless the vehicle is driven for approximately 10 minutes after clearing the DTCs. (Turn the power switch off and perform a road test again after the first road test because this DTC is a 2 trip detection DTC.)

MONITOR DESCRIPTION

The battery smart unit, which monitors the voltage of the battery blocks, determines that a malfunction has occurred if a voltage difference between the battery blocks exceeds the standard. When the DTC detection condition is satisfied, the HV control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A80 (INF 123): Rationality
Required sensors / components	Main: Battery voltage sensor inside battery smart unit Sub: Battery current sensor, battery temperature sensor
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0A8F (INF 123) is not detected

INSPECTION PROCEDURE

1 CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2 READ VALUE ON INTELLIGENT TESTER

(a) Ensure the safety of the areas in front and at the back of the vehicle.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (READY).
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA LIST / V1 to V17 BATT BLOCK.
(e) Fully warm up the engine and turn the air conditioning off.
(f) Firmly depress the brake pedal with your left foot.
(g) Move the shift lever to the D position.
(h) Record each battery block voltage from the data list (V1 to V17 BATT BLOCK) while fully depressing the accelerator pedal.
(i) Compare the battery block voltages (V1 to V17 BATT BLOCK) between the even and odd number groups in each combination shown in the table below.

Even number group	Odd number group	Battery block voltages to be compared
V1 BATT BLOCK	V2 BATT BLOCK	VB0←→VB1
V3 BATT BLOCK	V4 BATT BLOCK	VB2←→VB3
V5 BATT BLOCK	V6 BATT BLOCK	VB4←→VB5
V7 BATT BLOCK	V8 BATT BLOCK	VB6←→VB7
V9 BATT BLOCK	V10 BATT BLOCK	VB8←→VB9
V11 BATT BLOCK	V12 BATT BLOCK	VB10←→VB11
V13 BATT BLOCK	V14 BATT BLOCK	VB12←→VB13

Even number group	Odd number group	Battery block voltages to be compared
V15 BATT BLOCK	V16 BATT BLOCK	VB14←→VB15
V17 BATT BLOCK	V16 BATT BLOCK	VB16←→VB15

(j) Check the voltage difference in the all 9 combinations.

OK:

The difference in voltage of all combinations is 0.3 V or more.

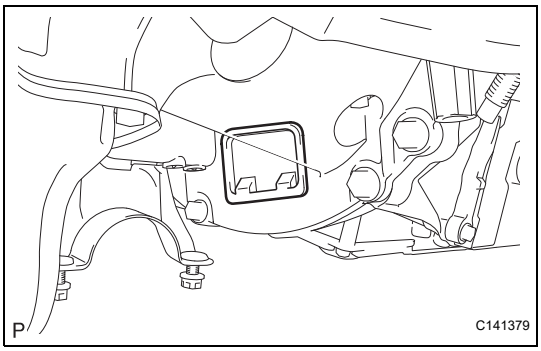
YES → **REPLACE BATTERY SMART UNIT (See page HB-99)**

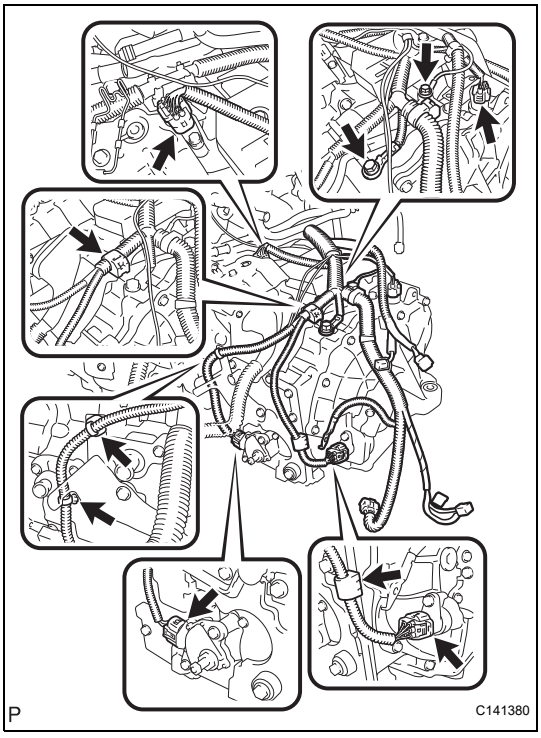
NO

REPLACE HV BATTERY (See page HB-81)

REMOVAL

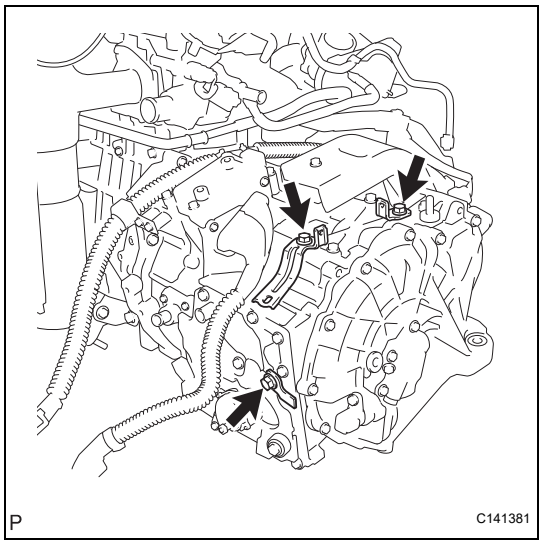
1. **REMOVE ENGINE ASSEMBLY WITH TRANSAXLE**
   HINT:
   (See page EM-89)
2. **REMOVE DYNAMIC DAMPER (See page EM-97)**
3. **REMOVE FRONT FRAME ASSEMBLY (See page EM-97)**
4. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-6)**
5. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-7)**
6. **REMOVE FLYWHEEL HOUSING UNDER COVER**
   (a) Remove the flywheel housing under cover from the hybrid vehicle transaxle assembly.
7. **SEPARATE ENGINE WIRE**
   (a) Remove the bolt and ground wire.
   (b) Disconnect the wire harnesses from the clamps.



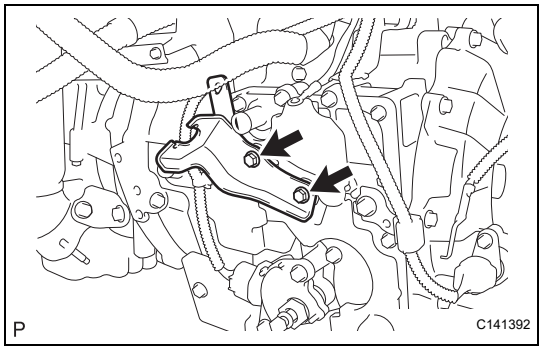


(c) Disconnect the connectors.

HX

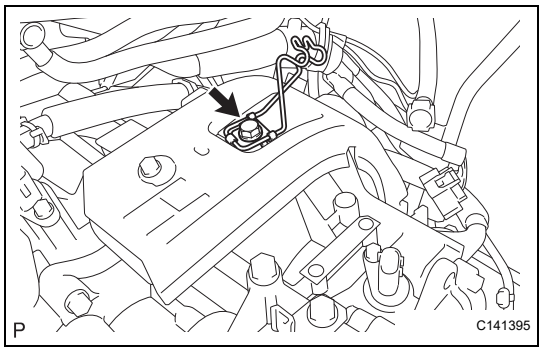


(d) Remove the 3 bolts and 3 clamps.



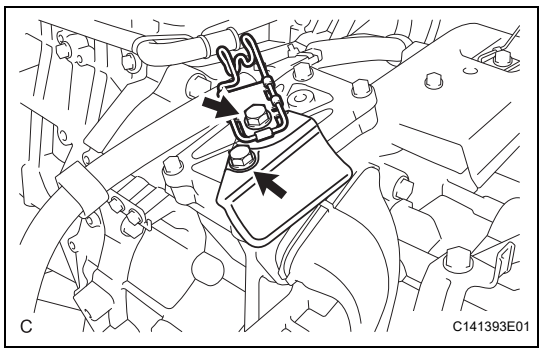
8. REMOVE NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Remove the 2 bolts and No. 1 transmission control cable bracket.



9. REMOVE NO. 2 TRANSMISSION CONTROL CABLE BRACKET

(a) Remove the bolt and No. 2 transmission control cable bracket.

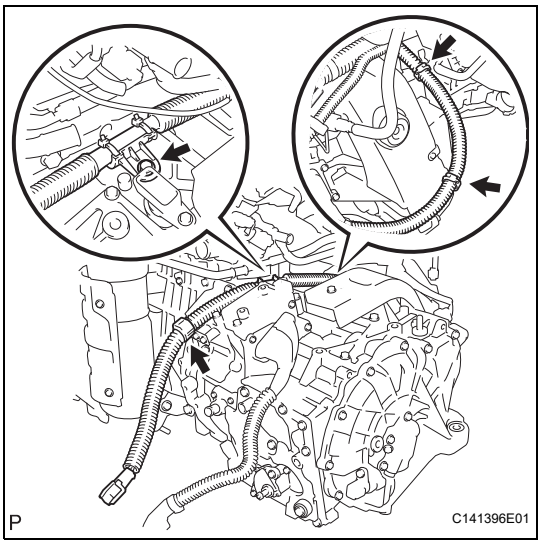


10. REMOVE NO. 3 TRANSMISSION CONTROL CABLE BRACKET

(a) Remove the bolt and No. 3 transmission control cable bracket.

(b) Remove the bolt and HV inverter protector.

HX

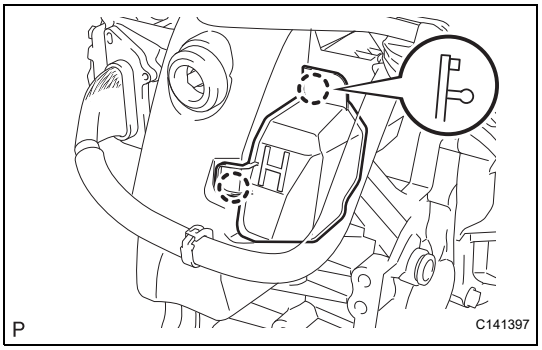


11. REMOVE AUTOMATIC TRANSMISSION CASE COVER

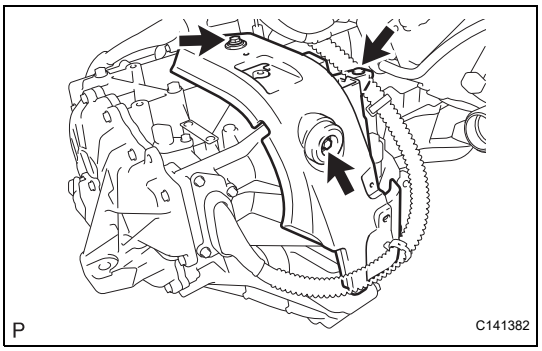
(a) Remove the bolt from the hybrid transaxle.

(b) Disconnect the 3 wire harness clamps from the automatic transmission case cover.

(c) Remove the 2 bolts, and bracket from the hybrid transaxle.



(d) Remove the transmission case cover.



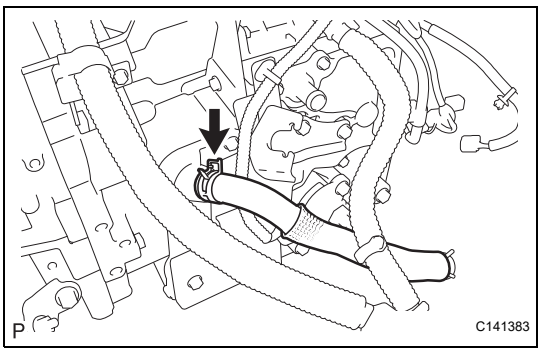
(e) Remove the 2 bolts, clip, and automatic transmission case cover from the hybrid transaxle.

12. REMOVE HV TRANSAXLE MASS DAMPER

(a) Remove the HV transaxle mass damper and gasket.

13. REMOVE TRANSMISSION OIL PUMP COVER PLUG

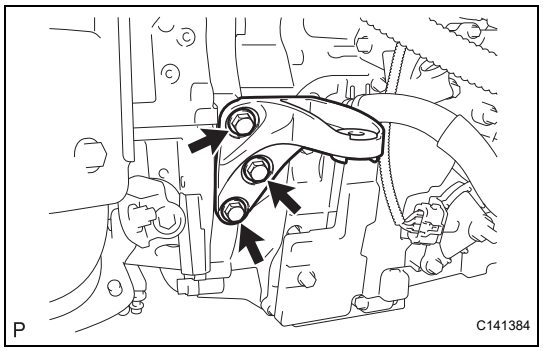
(a) Remove the 2 transmission oil pump cover plugs and 2 O-rings.



14. REMOVE WATER HOSE

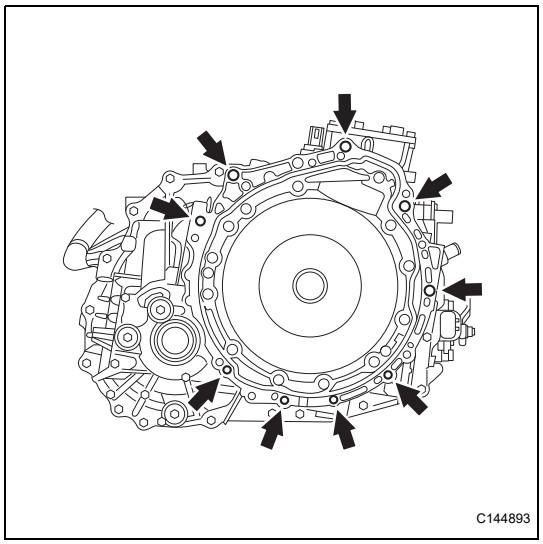
(a) Disconnect the water hose from the hybrid transaxle.

HX



15. REMOVE FRONT ENGINE MOUNTING BRACKET

(a) Remove the 3 bolts and engine mounting bracket.



16. REMOVE HYBRID VEHICLE TRANSAXLE ASSEMBLY

(a) Remove the 9 bolts.

(b) Separate and remove the hybrid vehicle transaxle.

NOTICE:

Do not pry between the transaxle assembly and engine more than necessary to prevent the knock pin from being damaged.

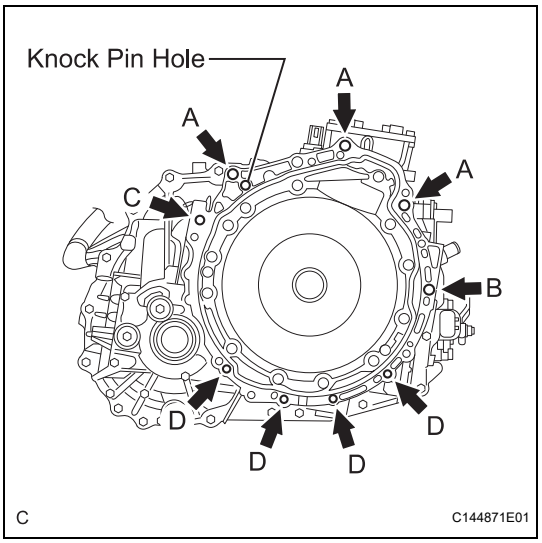
INSTALLATION

1. INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY

(a) Make sure that the knock pins are installed on the engine.

(b) Install the hybrid vehicle transaxle and the 9 bolts shown in the illustration to the engine.

Torque: Bolt A
64 N*m (653 kgf*cm, 47 ft.*lbf)
Bolt B
46 N*m (469 kgf*cm, 34 ft.*lbf)
Bolt C
28 N*m (286 kgf*cm, 21 ft.*lbf)
Bolt D
44 N*m (450 kgf*cm, 33 ft.*lbf)



NOTICE:

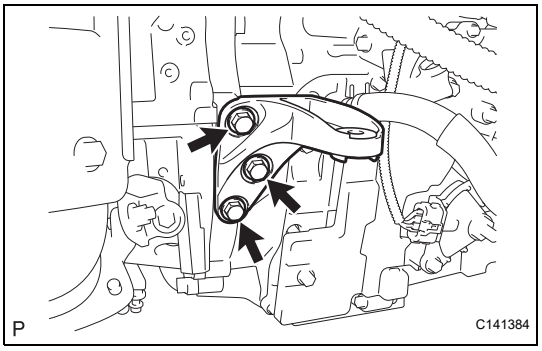
- **Do not forcibly pry on the hybrid vehicle transaxle assembly.**
- **Do not apply grease either to the spline or to the input shaft.**

Bolt	Installation direction	Diameter	Bolt length
A	From transaxle to engine	12 mm (0.47 in.)	55 mm (2.17 in.)
B	From transaxle to engine	10 mm (0.39 in.)	65 mm (2.56 in.)
C	From engine to transaxle	8 mm (0.32 in.)	38 mm (1.47 in.)
D	From engine to transaxle	10 mm (0.39 in.)	32 mm (1.26 in.)

2. INSTALL FRONT ENGINE MOUNTING BRACKET

(a) Install the front engine mounting bracket with the 3 bolts.

Torque: 64 N*m (653 kgf*cm, 47 ft.*lbf)



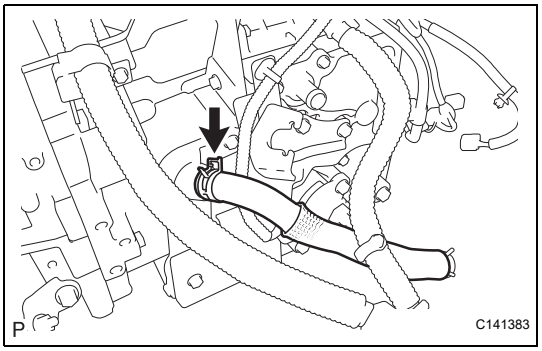
3. INSTALL WATER HOSE

(a) Install the water hose with the clamp.

4. INSTALL TRANSMISSION OIL PUMP COVER PLUG

(a) Install 2 new O-rings and the 2 transmission oil pump cover plugs.

Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

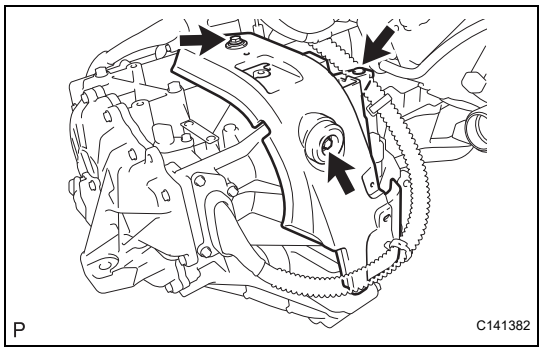


5. INSTALL HV TRANSAXLE MASS DAMPER

(a) Install a new gasket and the HV transaxle mass damper.

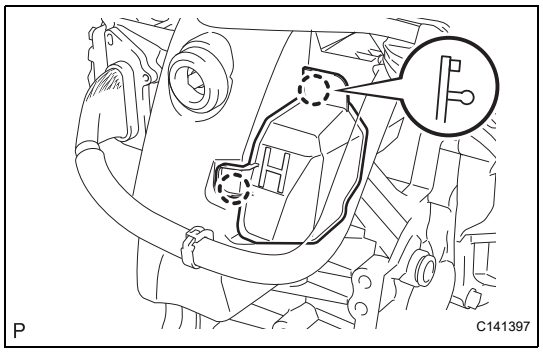
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)

HX

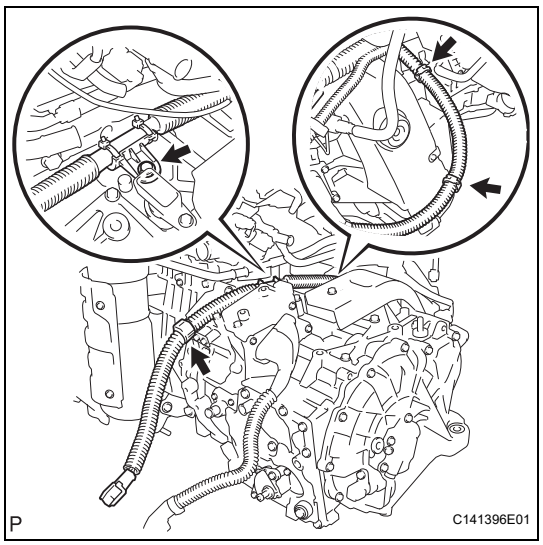


6. INSTALL AUTOMATIC TRANSMISSION CASE COVER

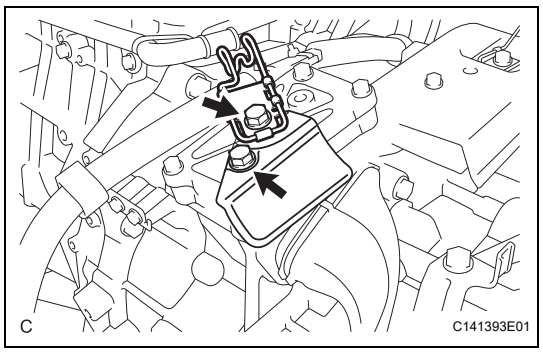
(a) Install the automatic transmission case cover with the 2 bolts and clip.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)



(b) Install the transmission case cover.
(c) Install the bracket with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

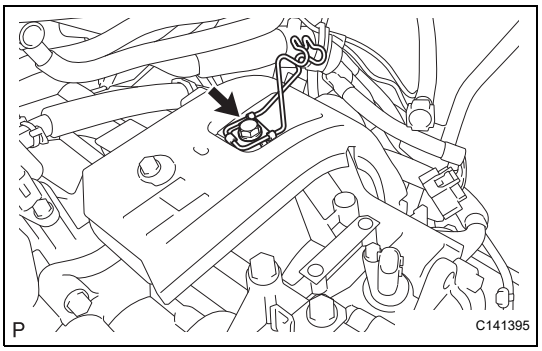


(d) Connect the wire harness with the bolt and 3 clamps.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



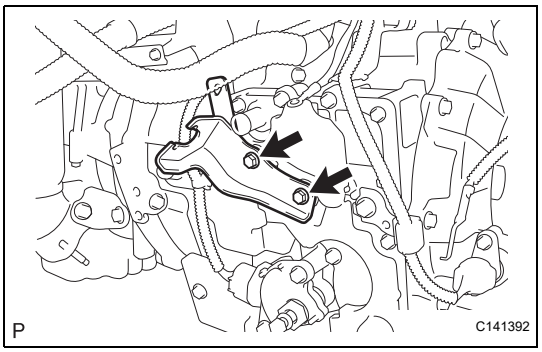
7. INSTALL NO. 3 TRANSMISSION CONTROL CABLE BRACKET

(a) Install the hybrid inverter protector with the bolt.
Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
(b) Install the No. 3 transmission control cable bracket.
Torque: 14 N*m (143 kgf*cm, 10 ft.*lbf)



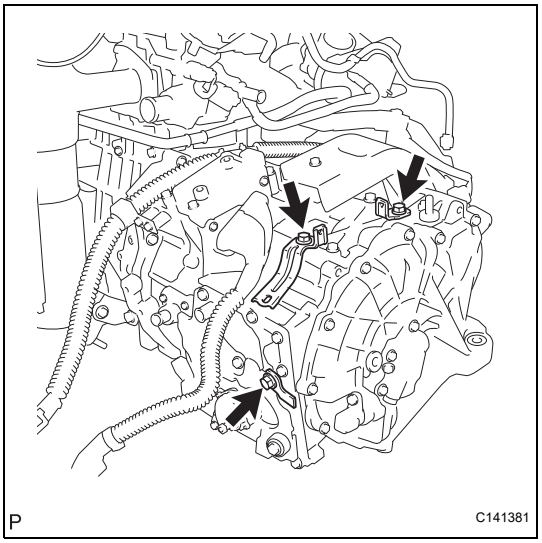
8. INSTALL NO. 2 TRANSMISSION CONTROL CABLE BRACKET

(a) Install the No. 2 transmission control cable bracket with the bolt.
Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)



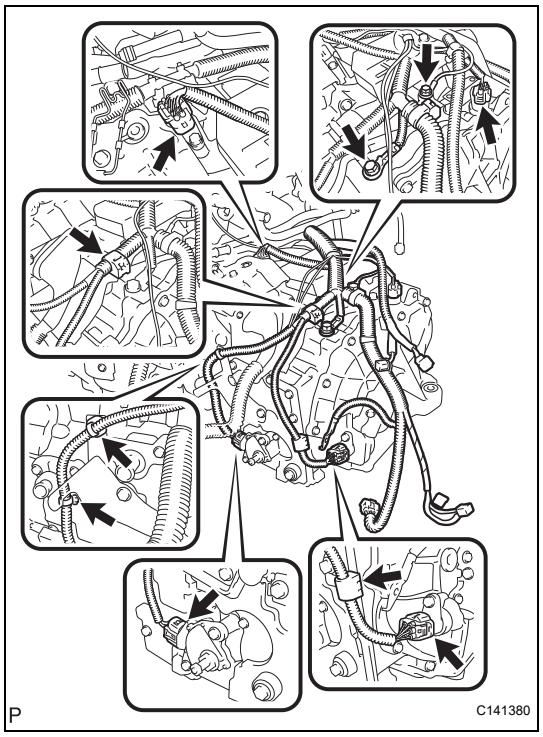
9. INSTALL NO. 1 TRANSMISSION CONTROL CABLE BRACKET

(a) Install the No. 1 transmission control cable bracket with the 2 bolts.
Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)

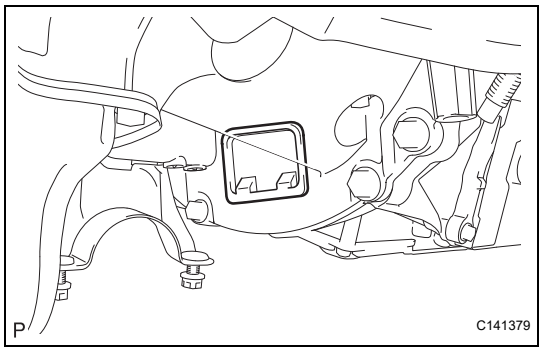


10. CONNECT ENGINE WIRE

(a) Install the 3 wire harness brackets with the 3 bolts.
Torque: 8.4 N*m (86 kgf*cm, 74 in.*lbf)



(b) Connect the connectors.
(c) Connect the wire harnesses to the wire harness clamps.
(d) Install the ground wire with the bolt.
Torque: 12 N*m (120 kgf*cm, 9 ft.*lbf)



11. INSTALL FLYWHEEL HOUSING UNDER COVER
(a) Install the flywheel housing under cover to the hybrid vehicle transaxle assembly.

12. INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-17)

13. INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-17)

14. INSTALL FRONT FRAME ASSEMBLY (See page EM-106)

15. INSTALL DYNAMIC DAMPER (See page EM-106)

16. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE
HINT:
(See page EM-107)

ON-VEHICLE INSPECTION

1. CHECK SHIFT LOCK OPERATION

(a) Move the shift lever to the P position.
(b) Turn the power switch off.
(c) Check that the shift lever cannot be adjusted to any position other than P.
(d) Turn the power switch on (READY), depress the brake pedal and check that the shift lever can be adjusted to the other positions.
(e) Check that the back-up light comes on and the reverse warning buzzer sounds when the shift lever is set in the R position, but the light and buzzer do not operate in other positions. If a failure is found, check the shift lever position sensor for continuity.

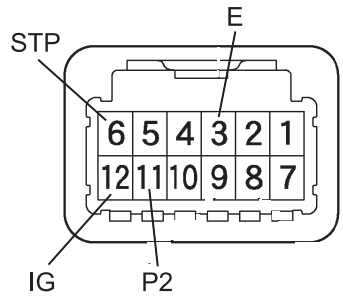
2. CHECK SHIFT LOCK RELEASE BUTTON OPERATION

(a) Using a screwdriver, remove the shift lock release cover.
(b) When operating the shift lever with the shift lock release button pressed, check that the lever can be adjusted to any position other than P.

3. INSPECT SHIFT LOCK CONTROL UNIT ASSEMBLY

(a) Measure the voltage according to the value(s) in the table below.
HINT:
Do not disconnect the shift lock control unit assembly connector.

Wire Harness Side (Connector Rear View):



C129009E09

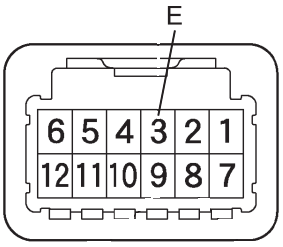
Standard voltage

Terminal	Measuring Condition	Voltage (V)
12 (IG) - 3 (E)	Power switch on (IG)	10 to 14
12 (IG) - 3 (E)	Power switch off	Below 1
6 (STP) - 3 (E)	Brake pedal depressed	10 to 14
6 (STP) - 3 (E)	Brake pedal released	Below 1
11 (P2) - 3 (E)	Shift lever in P position	10 to 14
11 (P2) - 3 (E)	Shift lever in any position except P	Below 1.5

If the result is not done as specified, replace the shift lever assembly.

HX

Wire Harness Side
(Connector Rear View):



C129009E10

(b) Measure the resistance according to the value(s) in the table below.
HINT:
Do not disconnect the shift lock control unit assembly connector.

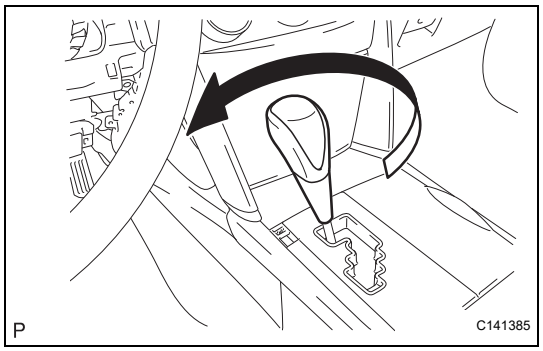
Standard resistance

Terminal	Measuring Condition	Specified Value
3 (E) - Body ground	Always	Below 1 Ω

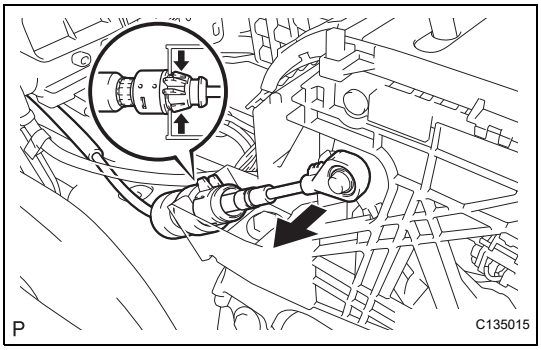
If the result is not done as specified, replace the shift lever assembly.

REMOVAL

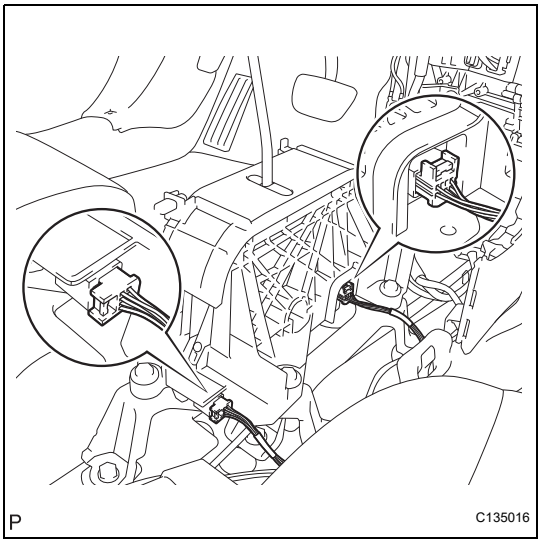
1. **REMOVE CABLE FROM NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
2. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
3. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
4. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)**
6. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY**
   (a) Turn the shift lever knob counterclockwise and remove the shift lever knob sub-assembly.



7. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)**
8. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)**
9. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)**
10. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)**
11. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)**
12. **REMOVE CONSOLE BOX POCKET (See page IP-17)**
13. **REMOVE CONSOLE BOX CARPET (See page IP-17)**
14. **REMOVE CONSOLE BOX ASSEMBLY (See page IP-17)**
15. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-18)**
16. **REMOVE FLOOR CARPET BRACKET LH (See page AC-188)**
17. **REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY**
    (a) Disconnect the end of the transmission control cable assembly from the shift lock control unit.

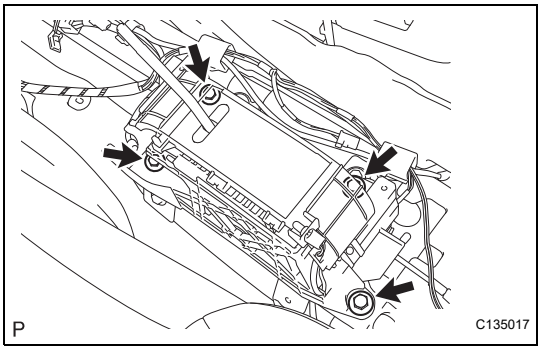


(b) Disconnect the transmission control cable assembly from the shift lock control unit.

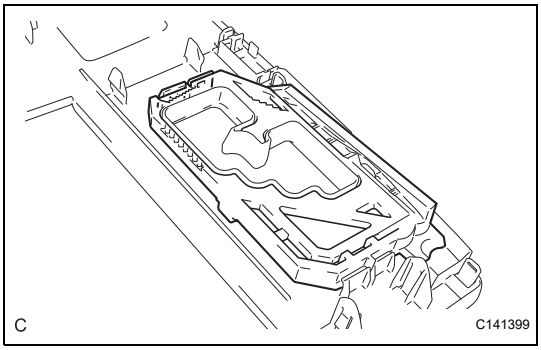


18. REMOVE SHIFT LOCK CONTROL UNIT

(a) Disconnect the shift lock control ECU connector and transmission control switch wire connector.



(b) Remove the 4 bolts and shift lever.



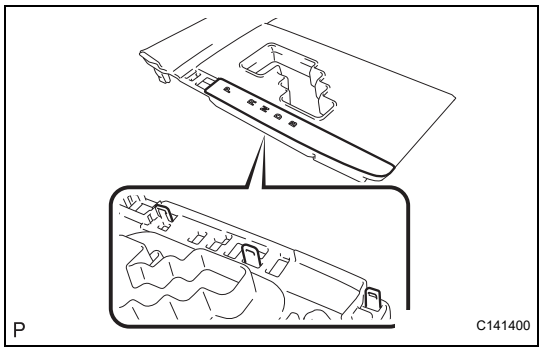
DISASSEMBLY

1. REMOVE POSITION INDICATOR LIGHT GUIDE

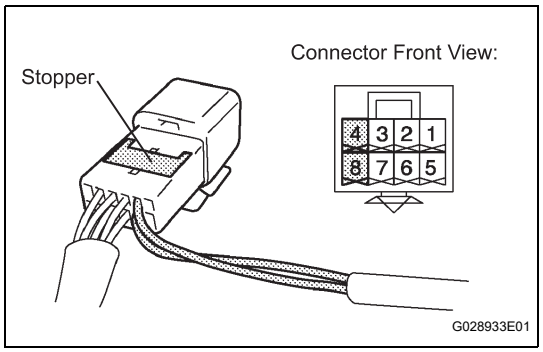
(a) Remove the position indicator light guide.

2. REMOVE CONTROL POSITION INDICATOR PLATE

(a) Remove the shift lock release button cover.

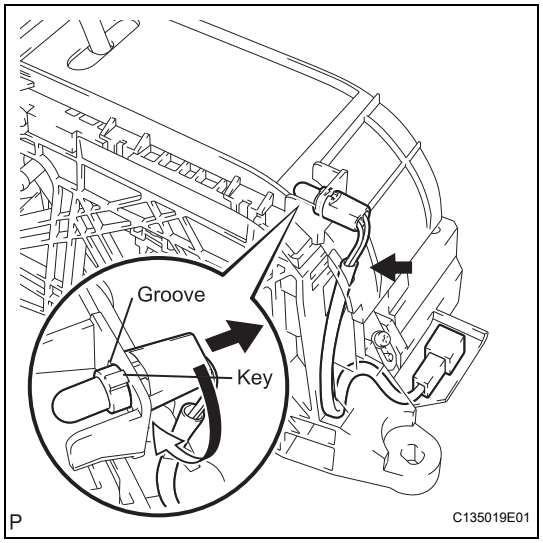


(b) Remove control position indicator plate.

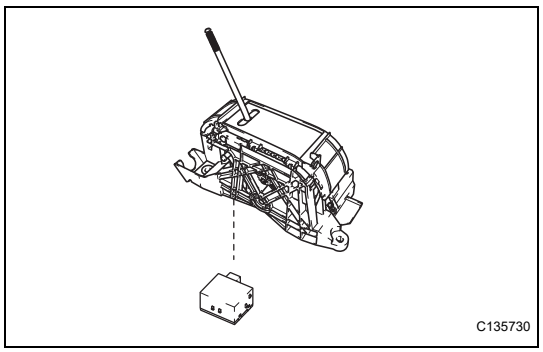


3. REMOVE INDICATOR LIGHT WIRE SUB-ASSEMBLY

(a) Using a screwdriver, release the stopper.
(b) Using a screwdriver, disengage the locking lug of terminals (4) and (8), and pull the terminals out from the rear of the connector.



(c) Release the indicator light wire from the clamp on the shift lock control unit.
(d) Turn the indicator light guide counterclockwise.
(e) Align the indicator light guide key with the groove on the shift lock control unit to remove the indicator light wire.



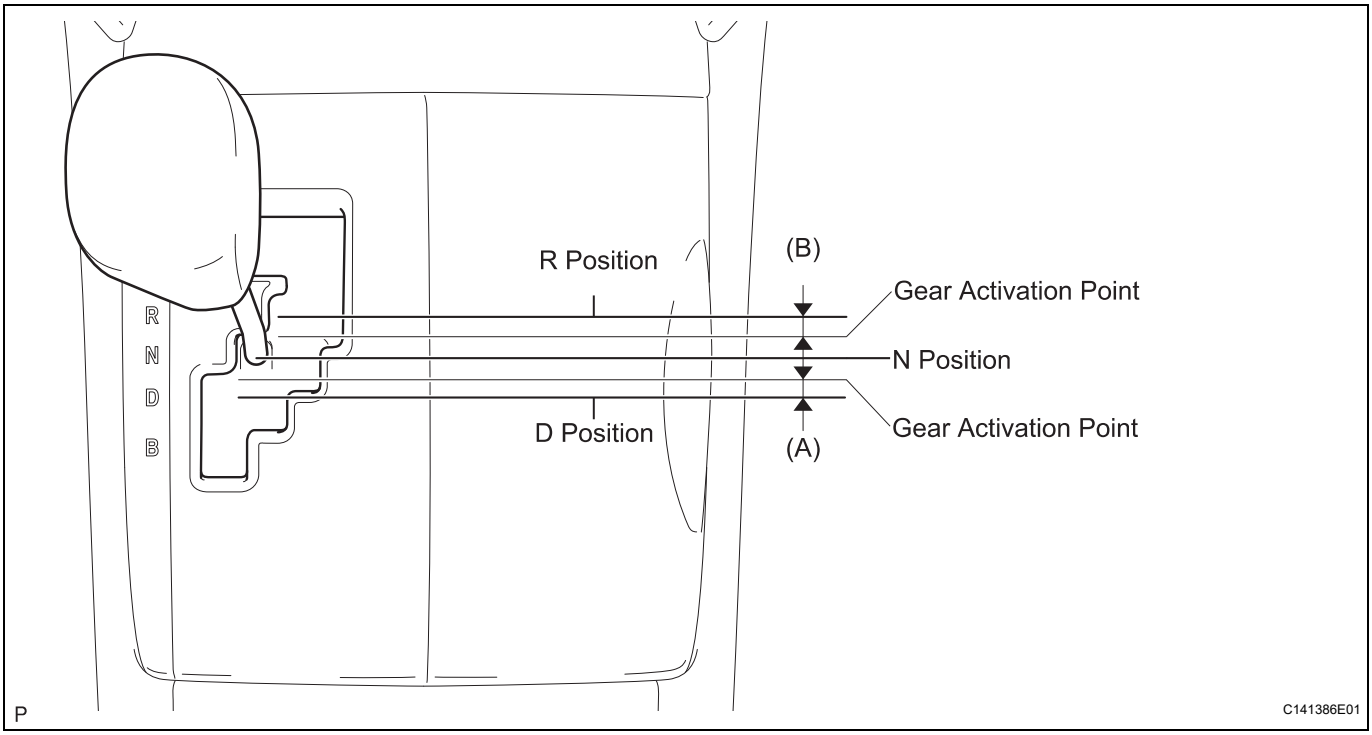
4. REMOVE SHIFT LOCK CONTROL ECU

(a) Remove the shift lock control ECU from the shift lock control unit.

ADJUSTMENT

1. INSPECT SHIFT LEVER POSITION

(a) Apply the parking brake.
(b) Lock the wheels with chocks to secure the vehicle.
(c) Put the vehicle into the READY-on state.
(d) Move the shift lever to the D position and release the brake pedal.
NOTICE:
Be sure to apply the parking brake and lock the wheels with chocks to secure the vehicle.
(e) Slowly move the shift lever to the N position and measure moving distance (A) of the shift lever from the original point to the gear activation point.
NOTICE:
Be sure to move the shift lever slowly.
(f) Move the shift lever to the R position and release the brake pedal.
NOTICE:
Be sure to apply the parking brake and lock the wheels with chocks to secure the vehicle.
(g) Slowly move the shift lever to the N position and measure moving distance (B) of the shift lever from the original point to the gear activation point.
NOTICE:
Be sure to move the shift lever slowly.
(h) Check that moving distances (A) and (B) shown in the illustration are almost the same.



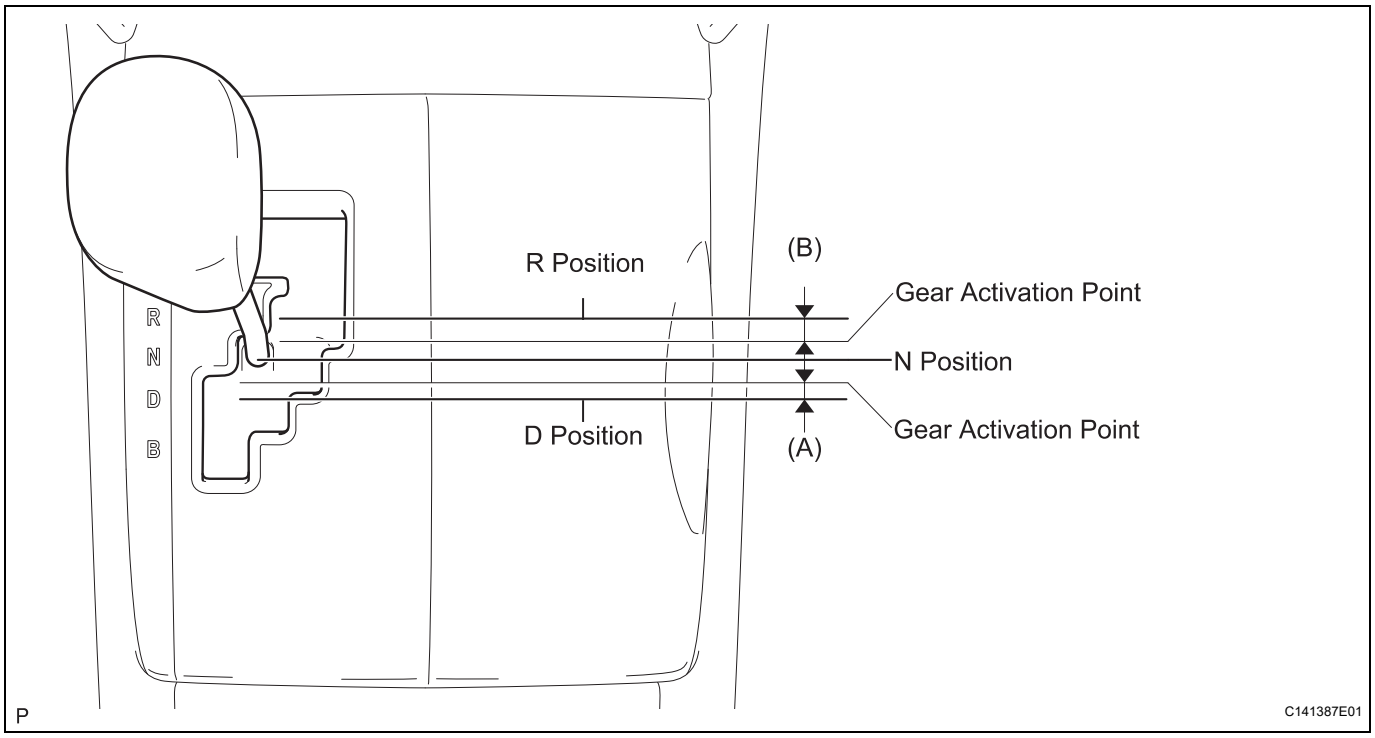
HINT:

- If moving distances (A) and (B) are almost the same, adjustment of the shift lever position is not necessary.

- If moving distance (A) is shorter than (B), perform adjustment of the shift lever position [*1].
- If moving distance (B) is shorter than (A), perform adjustment of the shift lever position [*2].

2. ADJUST SHIFT LEVER POSITION

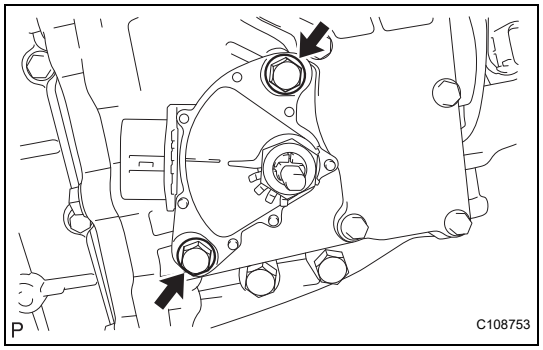
(a) If moving distance (A) is shorter than (B) [*1]:



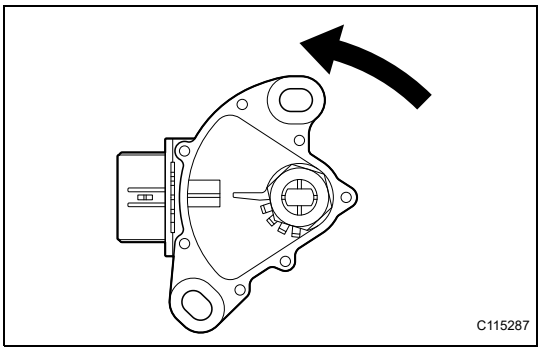
HINT:
If the shift lever is moved from the R to the N position, the moving distance of the shift lever from the original point to the gear activation point becomes longer.

(1) Move the shift lever to the N position.

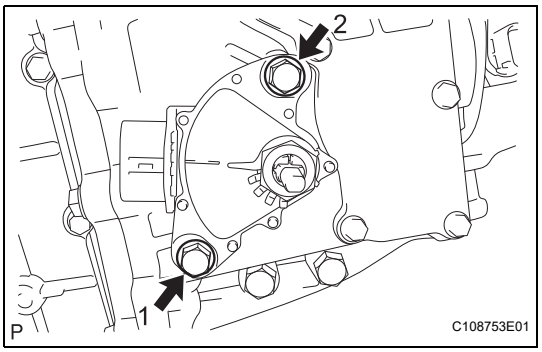
(2) Loosen the 2 bolts.



HX

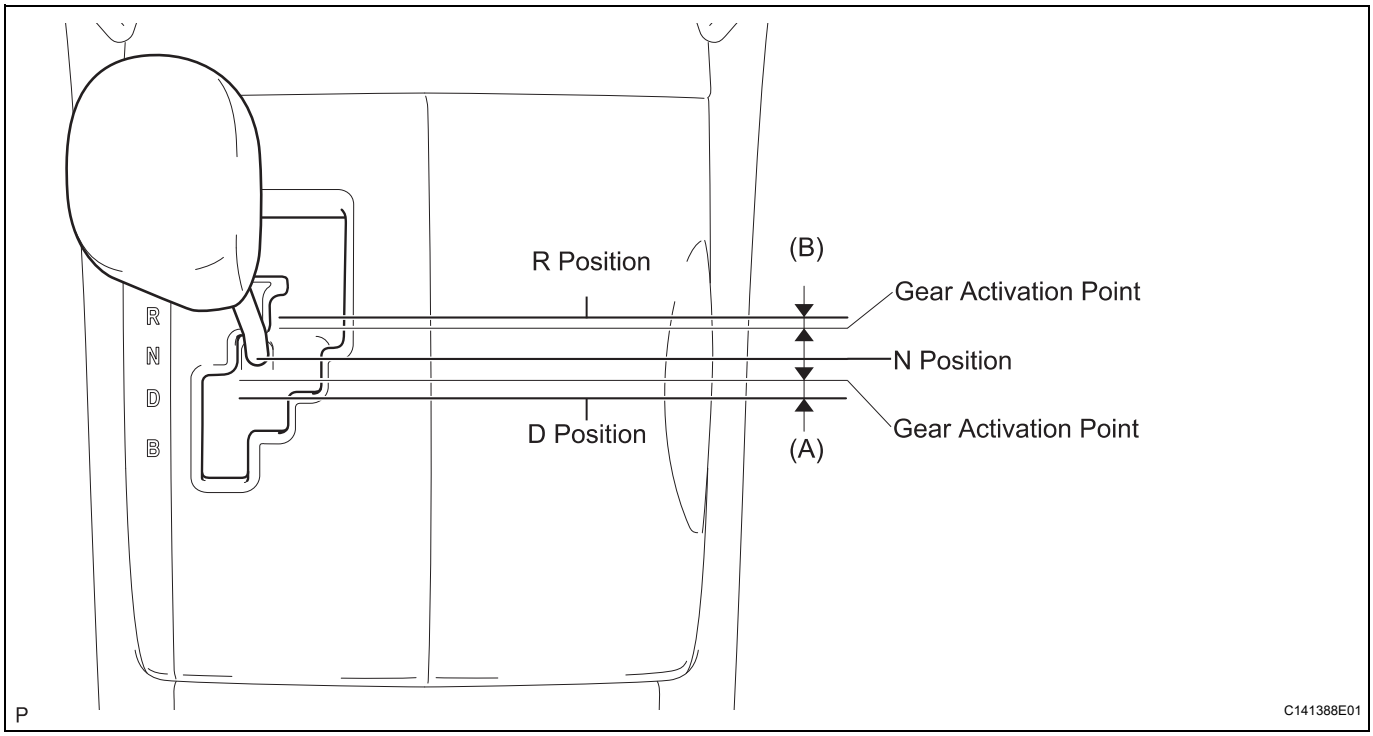


(3) Slightly turn the shift lever position switch counterclockwise.



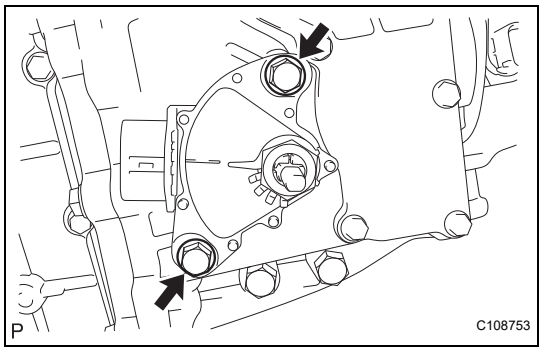
(4) Tighten the 2 bolts in the order shown in the illustration.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
(5) Recheck the shift lever position.

(b) If moving distance (B) is shorter than (A) [*2]:

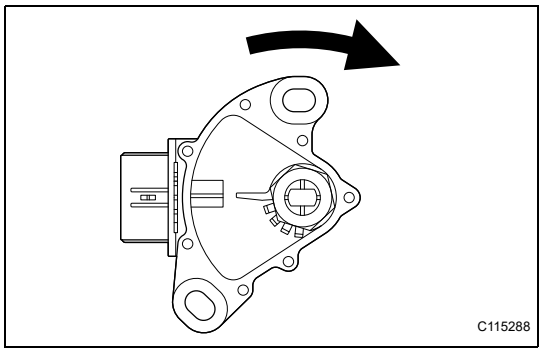


HINT:
If the shift lever is moved from the D to the N position, the moving distance of the shift lever from the original point to the gear activation point becomes longer.

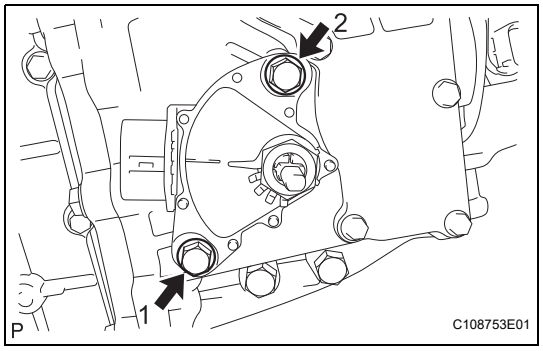
(1) Move the shift lever to the N position.



(2) Loosen the 2 bolts.



(3) Slightly turn the shift lever position switch clockwise.



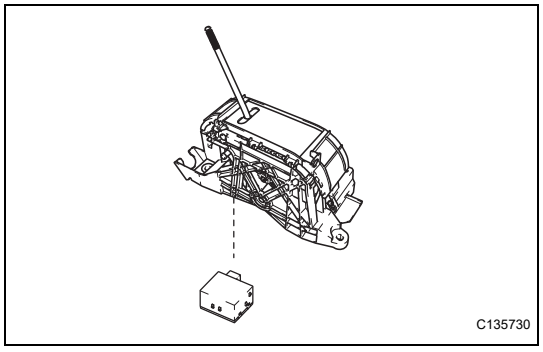
(4) Tighten the 2 bolts in the order shown in the illustration.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
(5) Recheck the shift lever position.

3. INSPECT SHIFT LEVER OPERATION

(a) While moving the shift lever from the N position to each position, check that the lever moves smoothly and that the shift position indicator comes on properly according to the shift lever position.
(b) Turn the power switch on (READY) and check the following:
(1) When the shift lever is moved to the D position, the vehicle moves forward.
(2) When the shift lever is moved to the R position, the buzzer sounds and the vehicle moves in reverse.
NOTICE:
The vehicle should not move when the shift position indicator is off.

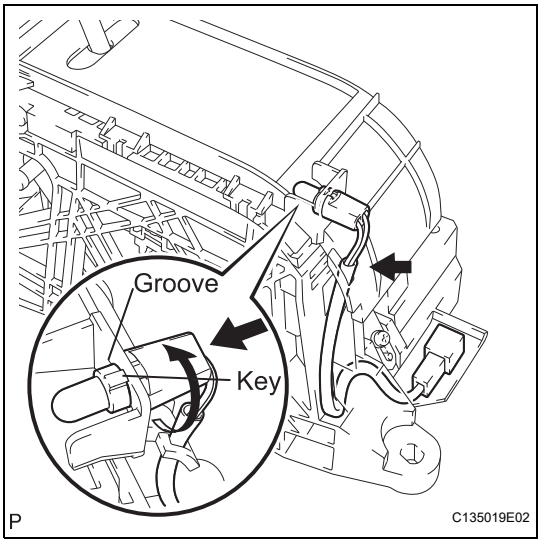
HX

REASSEMBLY



1. INSTALL SHIFT LOCK CONTROL ECU

(a) Install the shift lock control ECU to the shift lever.

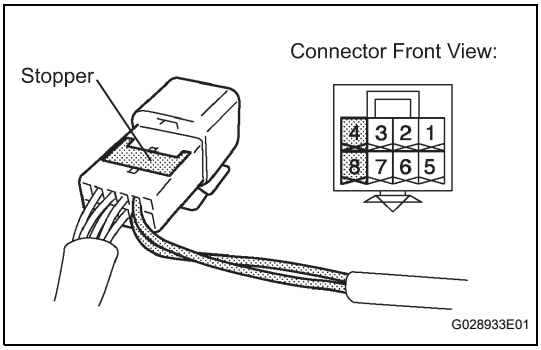


2. INSTALL INDICATOR LIGHT WIRE SUB-ASSEMBLY

(a) Insert the indicator light wire into the shift lock control unit while aligning the groove on the unit with the indicator light guide key.

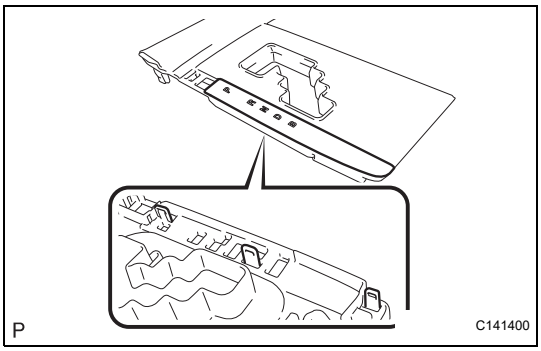
(b) Install the indicator light guide by turning it clockwise until it securely locks.

(c) Install the indicator light wire to the clamp on the shift lock control unit.



(d) Connect terminals (4) and (8) of the indicator light wire.

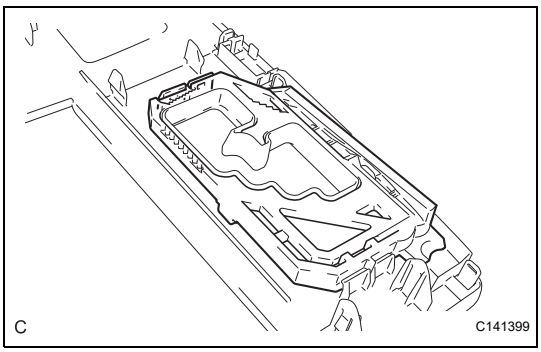
(e) Push the stopper.



3. INSTALL CONTROL POSITION INDICATOR PLATE

(a) Install the control position indicator plate.

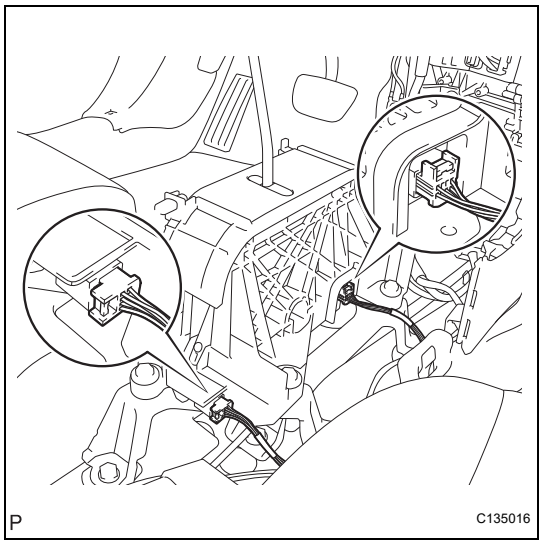
(b) Install the shift lock release button cover.



4. INSTALL POSITION INDICATOR LIGHT GUIDE

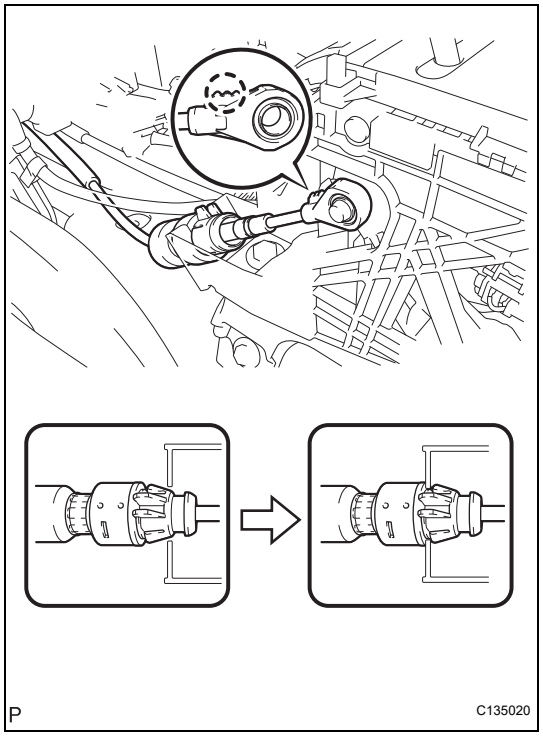
(a) Install the position indicator light guide.

HX

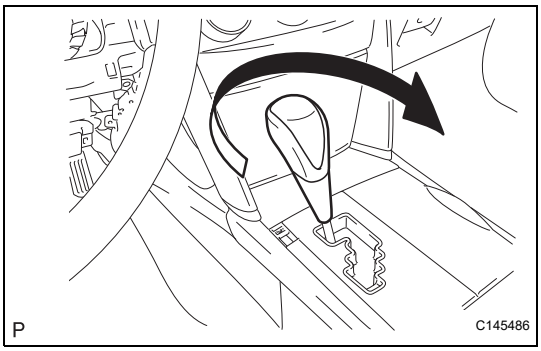


INSTALLATION

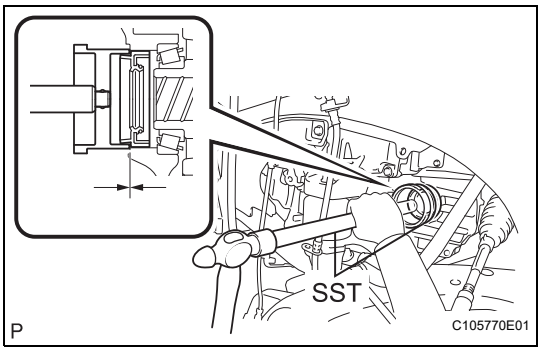
1. **INSTALL SHIFT LOCK CONTROL UNIT**
   (a) Connect the shift lock ECU connector and transmission control switch wire connector.
   (b) Install the shift lock control unit with the 4 bolts.
   Torque: 12 N*m (122 kgf*cm, 9 ft.*lbf)

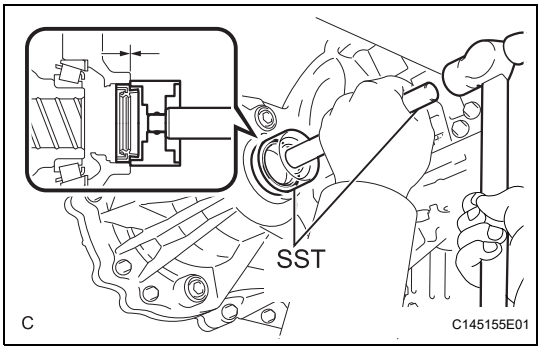


2. **INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Install the transmission control cable assembly as shown in the illustration.
   HINT:
   - Install the floor shift cable with the uneven surface facing up.
   - Securely engage the claws of the floor shift cable.
3. **INSTALL FLOOR CARPET BRACKET LH**
4. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-30)**
5. **INSTALL CONSOLE BOX ASSEMBLY (See page IP-30)**
6. **INSTALL CONSOLE BOX CARPET (See page IP-30)**
7. **INSTALL CONSOLE BOX POCKET (See page IP-30)**
8. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)**
9. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)**
10. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)**
11. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**
12. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**



13. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY**
    (a) Install the shift lever knob sub-assembly.
14. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-34)**
15. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**
16. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
17. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**
18. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
    Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
19. **INSPECT SHIFT LEVER POSITION (See page HX-24)**
20. **ADJUST SHIFT LEVER POSITION (See page HX-26)**
21. **ADJUST TRANSMISSION CONTROL CABLE ASSEMBLY (See page HX-42)**
22. **INSPECT SHIFT LEVER OPERATION (See page HX-28)**
23. **PERFORM INITIALIZATION**
    (a) Perform initialization (See page IN-43).
    NOTICE:
    Certain systems need to be initialized after reconnecting the cable to the negative (-) battery terminal.



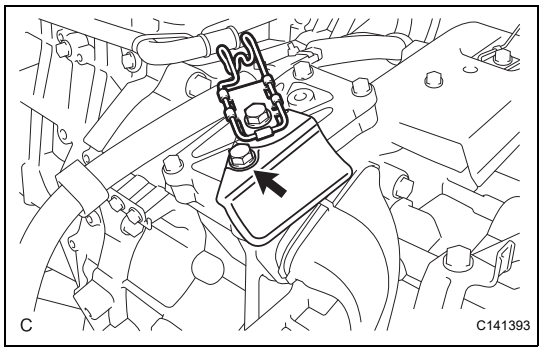


INSTALLATION

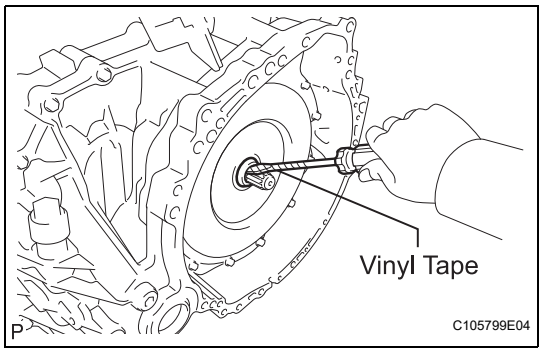
1. **REMOVE HYBRID VEHICLE TRANSAXLE OIL SEAL**
   (a) Install the oil seal LH side.
      (1) Using SST and a hammer, tap in a new oil seal until its surface is flush with the case edge.
      SST 09223-15020, 09950-70010 (09951-07150)
      Oil seal installation depth:
      -0.5 to 0.5 mm (-0.020 to 0.020 in.)
      (2) Coat the lip of the oil seal with MP grease.
   (b) Install the oil seal RH side.
      (1) Using SST and a hammer, tap in a new oil seal until its surface is flush with the case edge.
      SST 09950-70010 (09951-07150), 09710-30050
      Oil seal installation depth:
      -0.5 to 0.5 mm (-0.020 to 0.020 in.)
      (2) Coat the lip of the oil seal with MP grease.
2. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-17)**
3. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-17)**
4. **INSTALL FRONT AXLE ASSEMBLY (See page DS-18)**
5. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-18)**
6. **INSTALL TIE ROD SUB-ASSEMBLY (See page DS-18)**
7. **INSTALL FRONT SPEED SENSOR (See page DS-18)**
8. **INSTALL FRONT STABILIZER LINK ASSEMBLY (See page DS-19)**
9. **INSTALL FRONT AXLE HUB NUT (See page DS-19)**
10. **INSTALL FRONT WHEEL (See page DS-19)**
11. **ADD HYBRID TRANSAXLE FLUID (See page HX-2)**
12. **INSPECT HYBRID TRANSAXLE FLUID (See page HX-2)**
13. **ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    (See page SP-4).
14. **CHECK ABS SPEED SENSOR SIGNAL**
    HINT:
    (See page BC-35).

REMOVAL

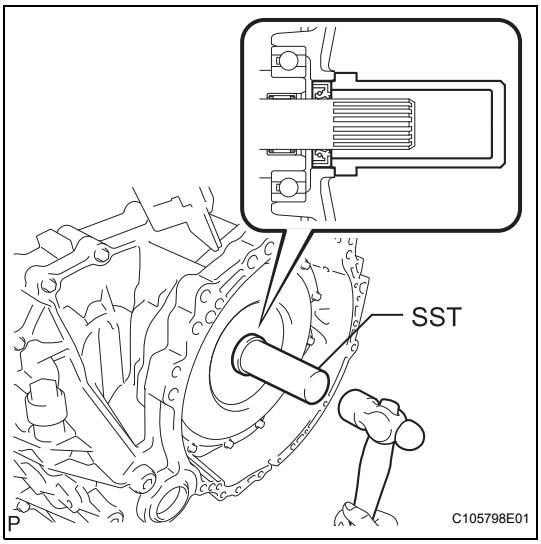
1. **REMOVE ENGINE ASSEMBLY WITH TRANSAXLE**
   HINT:
   (See page EM-89).
2. **REMOVE DYNAMIC DAMPER (See page EM-97)**
3. **REMOVE FRONT FRAME ASSEMBLY (See page EM-97)**
4. **REMOVE FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-6)**
5. **REMOVE FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-7)**
6. **REMOVE FLYWHEEL HOUSING UNDER COVER (See page HX-12)**
7. **SEPARATE ENGINE WIRE (See page HX-12)**
8. **REMOVE NO. 2 TRANSMISSION CONTROL CABLE BRACKET (See page HX-13)**
9. **REMOVE HV INVERTER PROTECTOR ASSEMBLY**
   Remove the bolt and HV inverter protector.



10. **REMOVE AUTOMATIC TRANSMISSION CASE COVER (See page HX-14)**
11. **REMOVE FRONT ENGINE MOUNTING BRACKET (See page HX-15)**
12. **REMOVE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-15)**
13. **REMOVE INPUT SHAFT OIL SEAL**
    (a) Using a screwdriver with its tip taped, remove the oil seal.

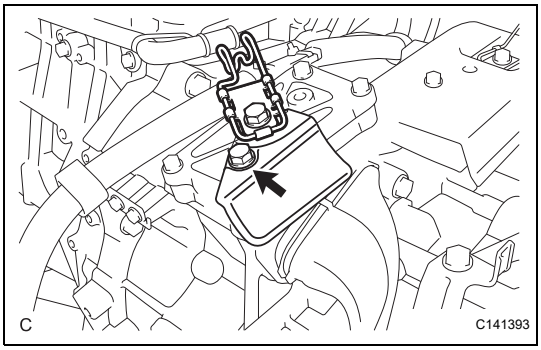


HX



INSTALLATION

1. **INSTALL INPUT SHAFT OIL SEAL**
   (a) Using SST and a hammer, drive in a new oil seal.
   SST 09388-40010
2. **INSTALL HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-15)**
3. **INSTALL FRONT ENGINE MOUNTING BRACKET (See page HX-16)**
4. **INSTALL AUTOMATIC TRANSMISSION CASE COVER (See page HX-16)**



5. **INSTALL HV INVERTER PROTECTOR ASSEMBLY**
   (a) Install the HV inverter protector with the bolt.
   Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
6. **INSTALL NO. 2 TRANSMISSION CONTROL CABLE BRACKET (See page HX-17)**
7. **CONNECT ENGINE WIRE (See page HX-18)**
8. **INSTALL FLYWHEEL HOUSING UNDER COVER (See page HX-18)**
9. **INSTALL FRONT DRIVE SHAFT ASSEMBLY LH (See page DS-17)**
10. **INSTALL FRONT DRIVE SHAFT ASSEMBLY RH (See page DS-17)**
11. **INSTALL FRONT FRAME ASSEMBLY (See page EM-106)**
12. **INSTALL DYNAMIC DAMPER (See page EM-106)**
13. **INSTALL ENGINE ASSEMBLY WITH TRANSAXLE**
    HINT:
    (See page EM-102).

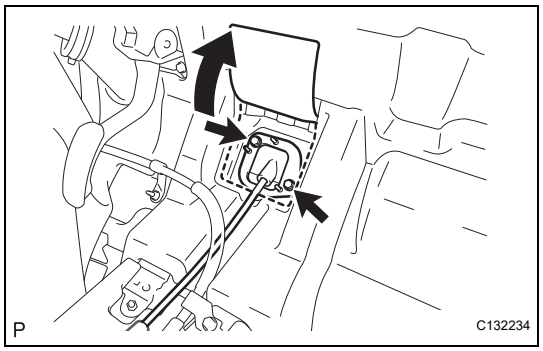
HX

REMOVAL

1. **REMOVE AIR CONDITIONING UNIT**
   HINT:
   (See page AC-185).
2. **REMOVE ENGINE UNDER COVER RH**
3. **REMOVE ENGINE UNDER COVER LH**
4. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-90)**
5. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-395)**
6. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-90)**
7. **SEPARATE TRANSMISSION CONTROL CABLE ASSEMBLY**
   (a) Remove the nut from the control shaft lever.
   (b) Disconnect the transmission control cable assembly from the control shaft lever.
   (c) Remove the clip and disconnect the transmission control cable assembly from the No. 1 control cable bracket.
   (d) Disconnect the transmission control cable assembly from the No. 2 transmission control cable bracket and No. 3 transmission control cable bracket.

   (e) Disconnect the transmission control cable assembly from the transmission floor shift assembly while pushing the 2 claws of the floor shift cable.

HX



8. REMOVE TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Turn back the carpet.
(b) Remove the 2 bolts and disconnect the shift cable grommet retainer.
(c) Remove the shift cable grommet retainer.
(d) Pull out the transmission control cable assembly from the body.

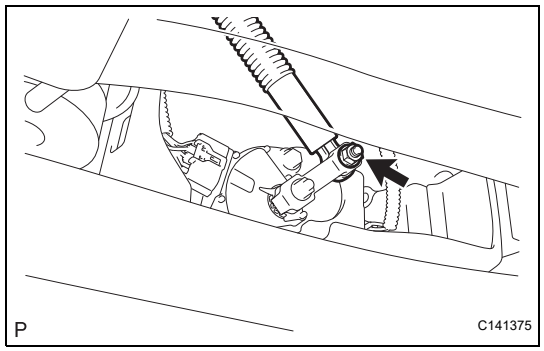
ADJUSTMENT

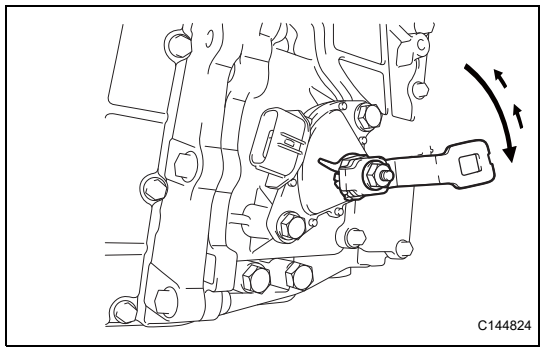
1. ADJUST TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Move the shift lever to the N position.

(b) Remove the nut from the control shaft lever.

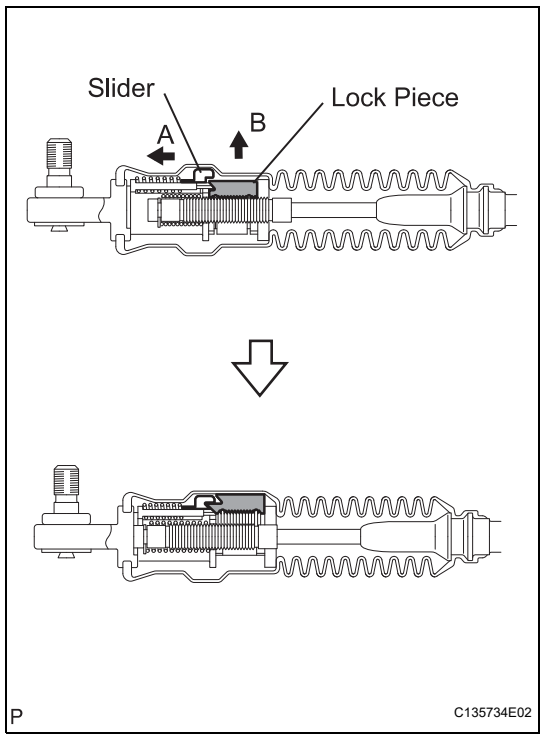
(c) Disconnect the transmission control cable assembly from the control shaft lever.





(d) Push the control shaft fully downward.

(e) Return the control shaft lever 2 notches to the N position.

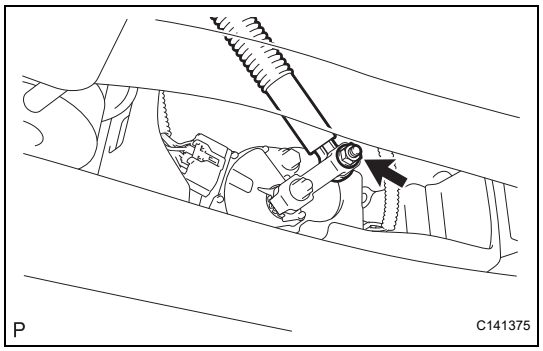


(f) Move the slider in the direction indicated by arrow A and pull up the lock piece in the direction indicated by arrow B.

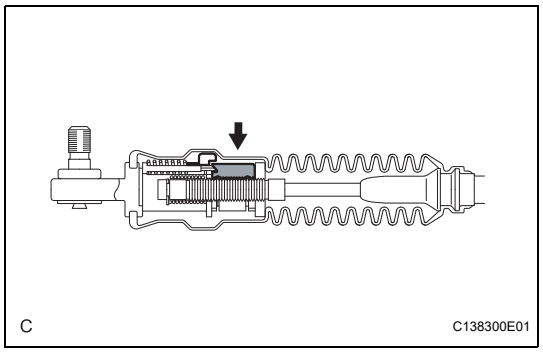
NOTICE:

Do not damage the boot.

HX



(g) Install the transmission control cable to the control shaft lever with the nut.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)
NOTICE:
- **If the control cable end is excessively pushed up, the shift lever cannot be adjusted.**
- **When tightening the nut, confirm that the control cable is properly stretched.**



(h) Push in the lock piece.
NOTICE:
- **Before pushing in the lock piece, make sure that the shift lever and control shaft lever are in the N position.**
- **Firmly push in the lock piece until the slider lock is engaged.**

(i) Start the engine and make sure that the vehicle moves forward when moving the lever from the N to the D position and moves rearward when moving it to the R position.
If it becomes hard to move the shift lever, readjust the shift lever position.

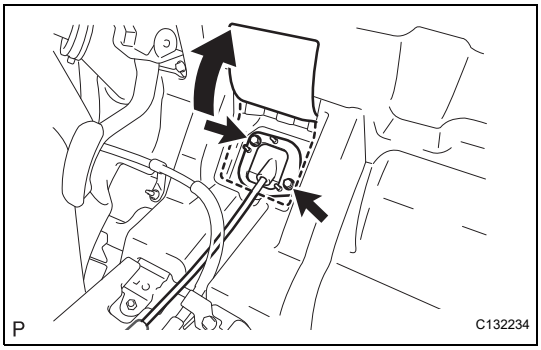
INSTALLATION

1. INSTALL NO. 2 SHIFT CABLE GROMMET RETAINER

(a) Pass the transmission control cable assembly from the cabin to the engine compartment.

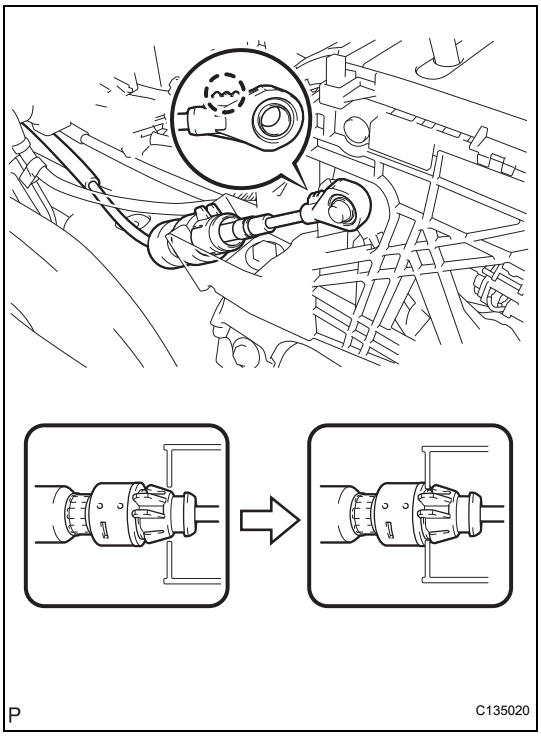
(b) Install the shift cable grommet retainer to the transmission control cable assembly.

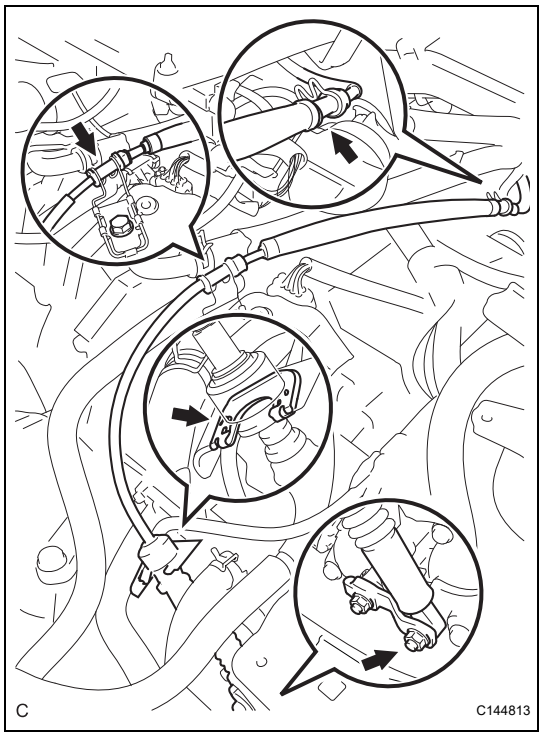
(c) Install the shift cable grommet retainer with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



2. INSTALL TRANSMISSION CONTROL CABLE ASSEMBLY

(a) Install the transmission control cable assembly as shown in the illustration.
HINT:
- Install the floor shift cable with the uneven surface facing up.
- Securely engage the claws of the floor shift cable.

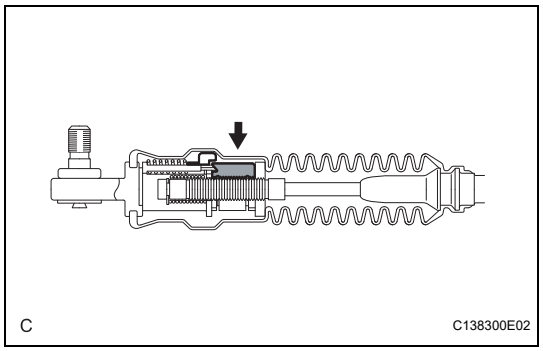




(b) Connect the transmission control cable assembly to the No. 2 transmission control cable bracket and No. 3 transmission control cable bracket.

(c) Connect the transmission control cable assembly to the transmission control cable bracket No. 1 with a new clip.

(d) Install the transmission control cable to the control shaft lever with the nut.
Torque: 15 N*m (150 kgf*cm, 11 ft.*lbf)



(e) Push in the lock piece of the transmission control cable.
NOTICE:
- **Before pushing in the lock piece, make sure that the shift lever and control shaft lever are in the N position.**
- **Firmly push in the lock piece until the slider lock is engaged.**

HINT:
After pushing in the lock piece, make sure that the boot is not deformed.

3. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-113)**
4. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**
5. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
6. **INSTALL ENGINE UNDER COVER LH**
7. **INSTALL ENGINE UNDER COVER RH**
8. **INSTALL AIR CONDITIONING UNIT**
HINT:
(See page AC-200).
9. **INSPECT SHIFT LEVER POSITION (See page HX-24)**
10. **ADJUST SHIFT LEVER POSITION (See page HX-26)**
11. **INSPECT SHIFT LEVER OPERATION (See page HX-28)**

12. REMOVE PERFORM INITIALIZATION

(a) Perform initialization (See page IN-43).

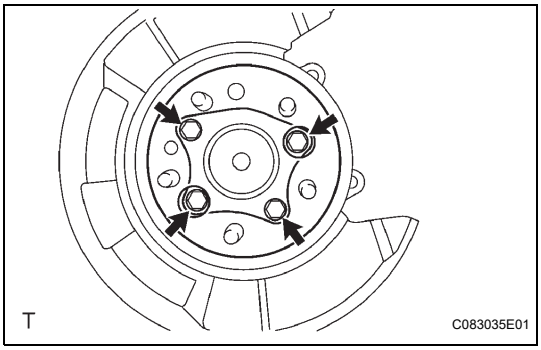
NOTICE:

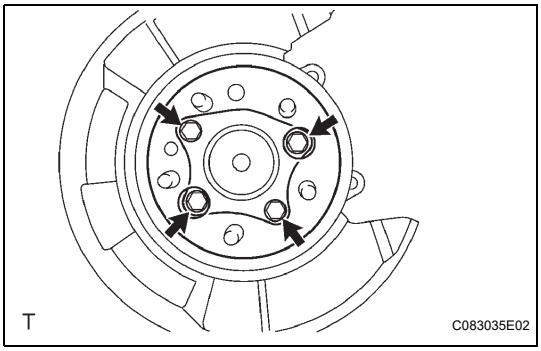
Certain systems need to be initialized after reconnecting the cable to the negative (-) battery terminal.

REMOVAL

HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. **REMOVE REAR WHEEL**
2. **SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY (See page AH-18)**
3. **REMOVE REAR DISC (See page PB-35)**
4. **DISCONNECT SKID CONTROL SENSOR CONNECTOR (See page BC-276)**
5. **REMOVE REAR AXLE HUB AND BEARING ASSEMBLY**
   (a) Disconnect the skid control sensor connector.
   (b) Remove the 4 bolts and hub and bearing assembly.





INSTALLATION

1. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY**
   (a) Install the hub and bearing assembly with the 4 bolts.
   Torque: 80 N*m (816 kgf*cm, 59 ft.*lbf)
   (b) Connect the skid control sensor connector.
   NOTICE:
   Do not twist the sensor wire when connecting it.
2. **INSPECT REAR AXLE HUB BEARING LOOSENESS (See page AH-15)**
3. **INSPECT REAR AXLE HUB RUNOUT (See page AH-15)**
4. **INSTALL REAR DISC (See page PB-40)**
5. **INSTALL REAR DISC BRAKE CALIPER ASSEMBLY (See page AH-20)**
6. **INSTALL REAR WHEEL**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
7. **CONNECT SKID CONTROL SENSOR CONNECTOR (See page BC-278)**
8. **CHECK ABS SPEED SENSOR SIGNAL**
   HINT:
   See page BC-35.

AH

REASSEMBLY

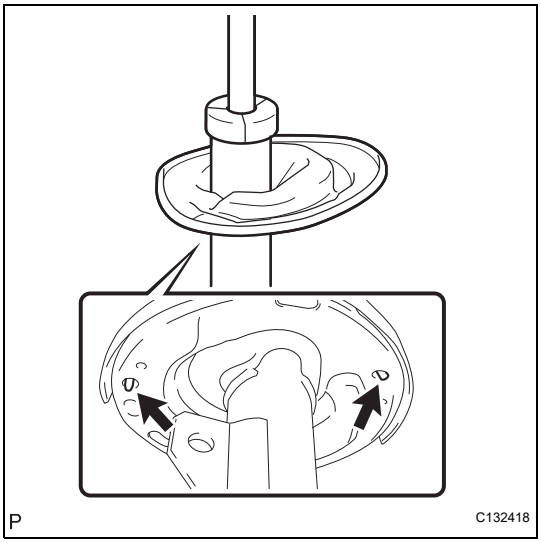
1. INSTALL FRONT SHOCK ABSORBER

(a) Install the front spring bumper to the piston rod.

(b) Install the front coil spring lower insulator onto the front shock absorber.

NOTICE:

Align the 2 protrusions of the front coil spring lower insulator and the 2 holes in the front shock absorber.



(c) Using SST, compress the front coil spring.

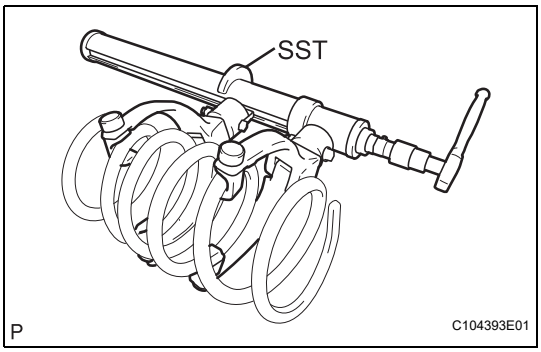
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

Do not use an impact wrench.

HINT:

If the front coil spring is compressed at an angle, using 2 SST will make the work easier.



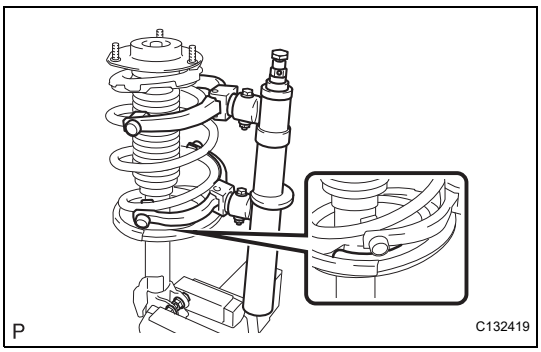
(d) Install the front coil spring to the front shock absorber.

NOTICE:

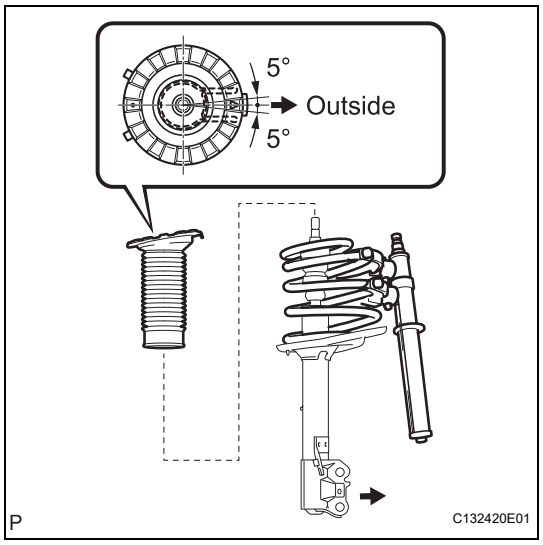
The smaller diameter end of the front coil spring must face upward.

HINT:

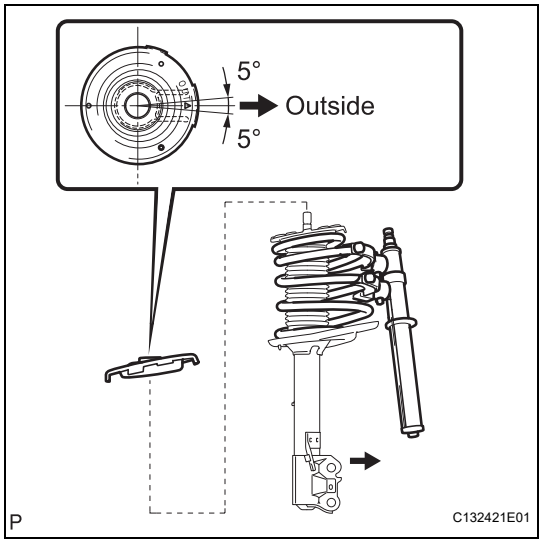
Fit the lower end of the front coil spring into the gap of the insulator.



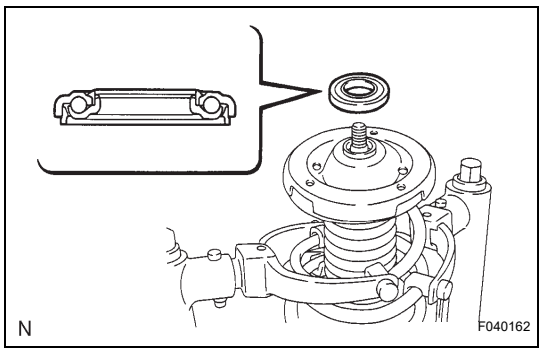
SP



(e) Install the front coil spring upper insulator as shown in the illustration.
HINT:
Any misalignment between the front shock absorber lower bracket and the matchmark must be +-5°.

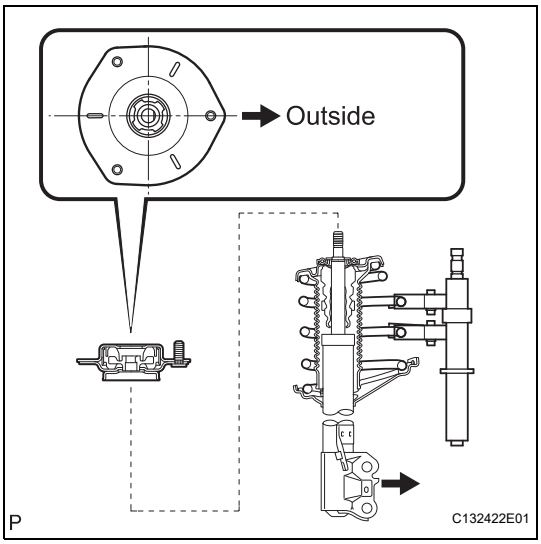


(f) Install the front coil spring upper seat with the mark facing to the outside of the vehicle.
HINT:
Any misalignment between the front shock absorber lower bracket and the matchmark must be +-5°.

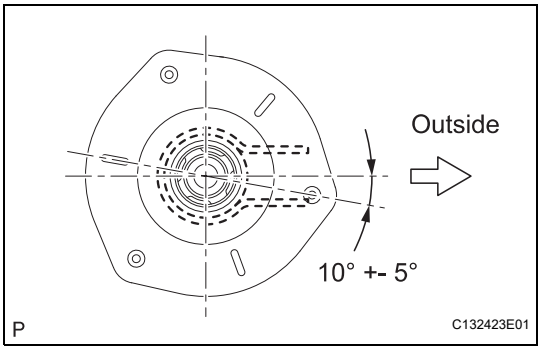


(g) Install a new front suspension support bearing as shown in the illustration.
HINT:
If there is foreign matter inside the front suspension support bearing, replace it with a new one.

SP



(h) Install the front suspension support sub-assembly. Temporarily tighten a new lock nut.
NOTICE:
Check that the flats on the piston rod and the flats on the front suspension support sub-assembly are aligned.



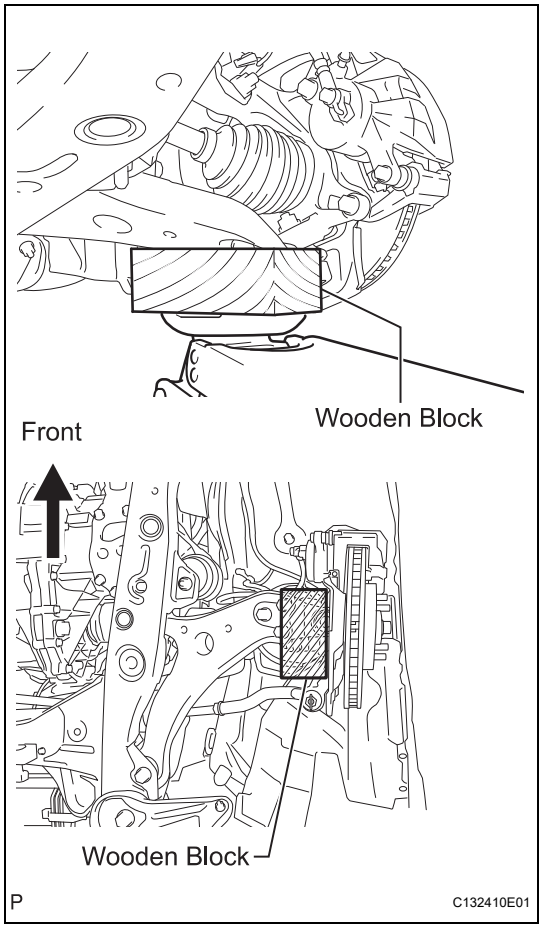
(i) Remove the SST slowly in order to release the coil spring.
NOTICE:
Do not use an impact wrench.
HINT:
Any misalignment between the front shock absorber lower bracket and the arrows must be +-5°.

INSTALLATION

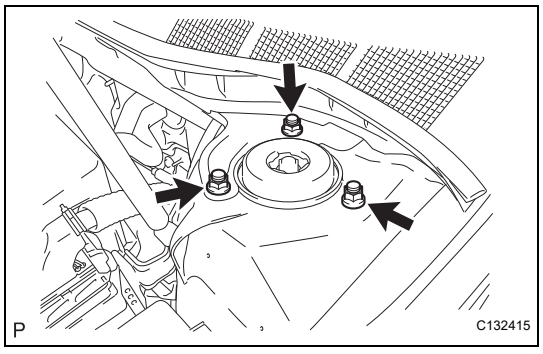
1. INSTALL FRONT SHOCK ABSORBER WITH COIL SPRING

(a) Install the front shock absorber with coil spring to the front axle assembly and insert the 2 bolts from the front side of the vehicle.

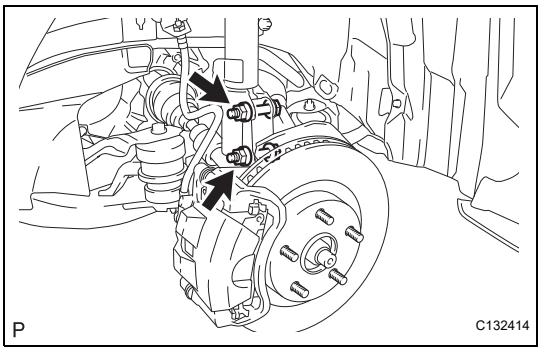
(b) Slowly jack up the vehicle using a wooden block and install the front shock absorber with coil spring (upper side) to the vehicle.



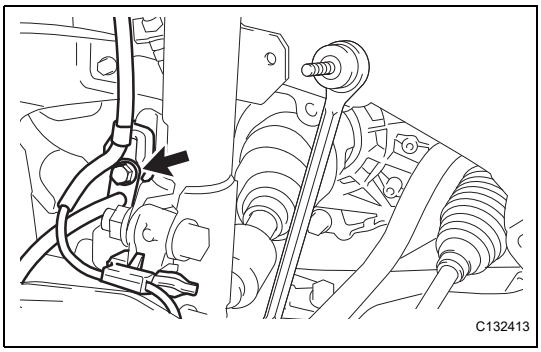
(c) Install the 3 nuts to the upper side of the front shock absorber with coil spring.
Torque: 85 N*m (867 kgf*cm, 63 ft.*lbf)



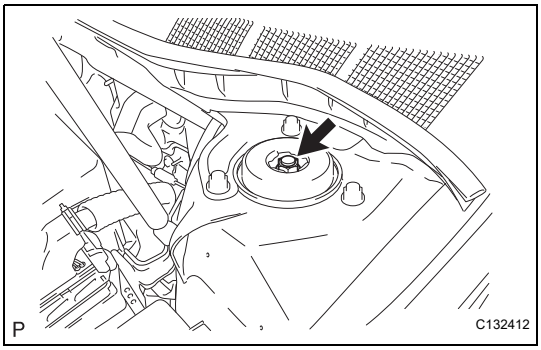
SP



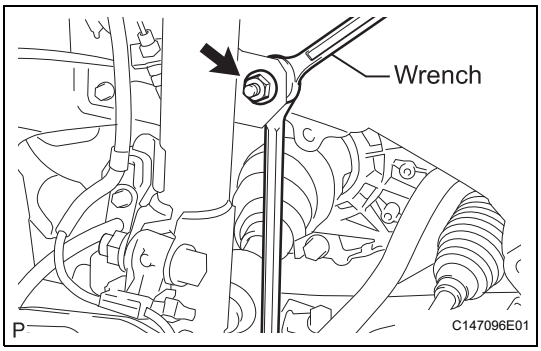
(d) Install the 2 nuts to the lower side of the front shock absorber with coil spring.
Torque: 210 N*m (2,140 kgf*cm, 155 ft.*lbf)
NOTICE:
When installing the nuts, keep the bolts from rotating.



(e) Install the front flexible hose and front speed sensor wire harness with the bolt.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a wrench (19 mm) to hold the stud.
NOTICE:
Do not twist the front speed sensor wire harness when installing it.



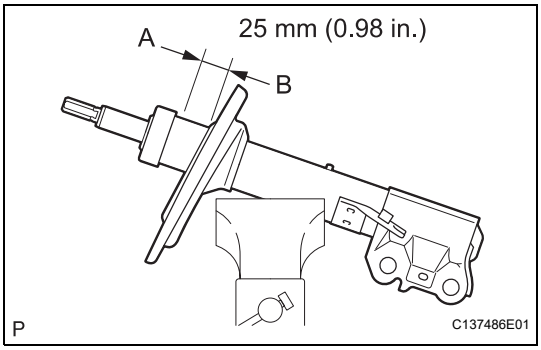
(f) Fully tighten the lock nut.
Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)



2. INSTALL FRONT STABILIZER LINK ASSEMBLY
(a) Install the front stabilizer link assembly with the nut.
Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a wrench (19 mm) to hold the stud.

3. INSTALL FRONT WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

4. INSPECT AND ADJUST FRONT WHEEL ALIGNMENT
(See page SP-4)



DISPOSAL

1. DISPOSE OF FRONT SHOCK ABSORBER
(a) Fully extend the shock absorber rod.
(b) Using a drill, make a hole in the cylinder between A and B as shown in the illustration to discharge the gas inside.
CAUTION:
- **Be careful when drilling because shards of metal may fly about. Always use the proper safety equipment.**

SP

- **The gas is colorless, odorless and non-poisonous.**

INSTALLATION

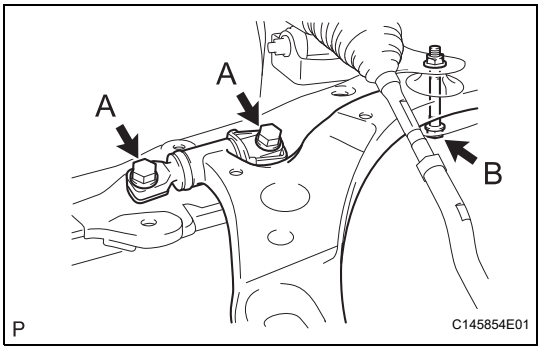
1. INSTALL FRONT SUSPENSION LOWER NO. 1 ARM

(a) Install the front lower arm bushing stopper.

(b) Install the front suspension lower No. 1 arm to the front frame assembly with the 3 bolts and the nut, but do not tighten them yet.

(c) Tighten the 3 bolts in numerical order shown in the illustration.

Torque: 200 N*m (2,040 kgf*cm, 148 ft.*lbf) (bolt A)
206 N*m (2,100 kgf*cm, 152 ft.*lbf) (bolt B)

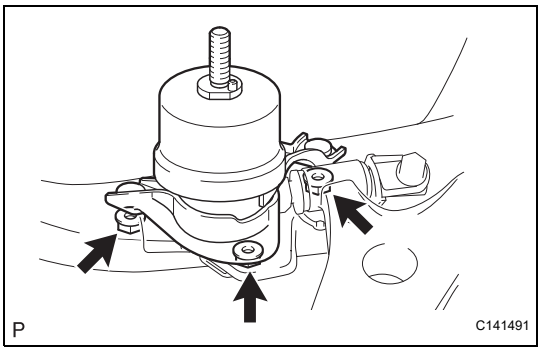


2. INSTALL ENGINE MOUNTING INSULATOR

(a) Install the engine mounting insulator with the 3 nuts.
Torque: 87 N*m (887 kgf*cm, 64 ft.*lbf)

3. INSTALL ENGINE ASSEMBLY WITH TRANSAXLE

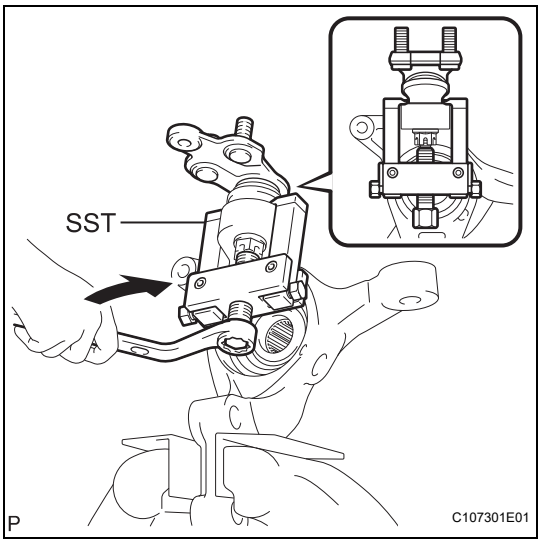
HINT:
Refer to the instructions for installation of the engine assembly (See page EM-107).



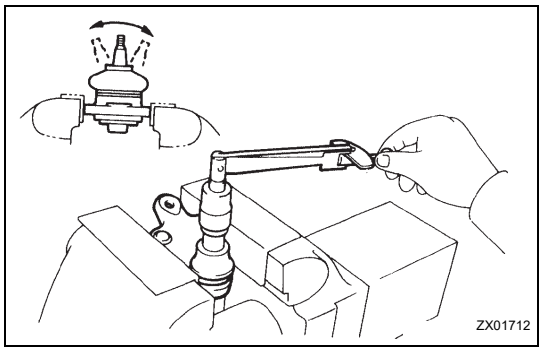
REMOVAL

HINT:
- Use the same procedures for the RH side and the LH side.
- The procedures listed below are for the LH side.

1. **REMOVE FRONT WHEEL**
2. **REMOVE FRONT AXLE HUB NUT (See page DS-5)**
3. **SEPARATE FRONT SPEED SENSOR (See page DS-5)**
4. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-6)**
5. **REMOVE FRONT DISC (See page BR-50)**
6. **SEPARATE TIE ROD END SUB-ASSEMBLY (See page DS-6)**
7. **SEPARATE FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-6)**
8. **REMOVE FRONT AXLE ASSEMBLY (See page AH-6)**
9. **REMOVE FRONT WHEEL NO. 1 BEARING DUST DEFLECTOR (See page AH-7)**
10. **REMOVE FRONT AXLE HUB HOLE SNAP RING (See page AH-7)**
11. **REMOVE FRONT AXLE HUB (See page AH-7)**
12. **REMOVE FRONT DISC BRAKE DUST COVER (See page AH-8)**
13. **REMOVE FRONT AXLE HUB BEARING (See page AH-8)**
14. **REMOVE FRONT LOWER BALL JOINT**
    (a) Secure the steering knuckle in a vise using aluminum plates.
    (b) Remove the cotter pin and nut.
    (c) Using SST, remove the front lower ball joint.
    SST 09628-62011
    NOTICE:
    - **Do not damage the dust cover of the ball joint.**
    - **Do not damage the steering knuckle.**



SP



INSPECTION

1. INSPECT FRONT LOWER BALL JOINT

(a) Inspect the turning of the ball joint.

(1) Secure the front lower ball joint assembly in a vise using aluminum plates.

(2) Install the nut to the front lower ball joint assembly stud.

(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: Turning torque

1.0 to 3.4 N*m (10 to 35 kgf*cm, 9 to 30 in.*lbf)

HINT:

If the turning torque is not within the specified range, replace the front lower ball joint assembly with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

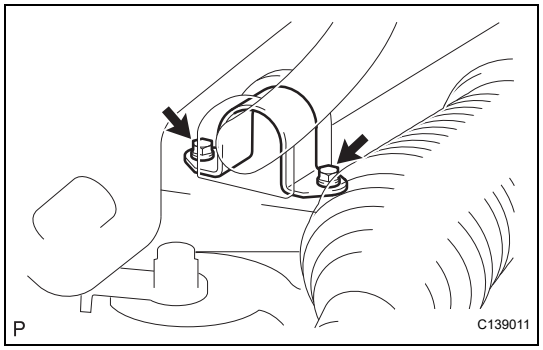
INSTALLATION

1. **INSTALL FRONT LOWER BALL JOINT**
   (a) Install the front lower ball joint to the steering knuckle with the nut.
   Torque: 123 N*m (1,250 kgf*cm, 91 ft.*lbf)
   NOTICE:
   Prevent oil from adhering to the screw and tapered parts.
   (b) Install a new cotter pin.
   NOTICE:
   If the holes for the cotter pin are not aligned, tighten the nut further up to 60°.
2. **INSTALL FRONT AXLE HUB BEARING (See page AH-9)**
3. **INSTALL FRONT DISC BRAKE DUST COVER (See page AH-9)**
4. **INSTALL FRONT AXLE HUB (See page AH-9)**
5. **INSTALL FRONT AXLE HUB HOLE SNAP RING (See page AH-9)**
6. **INSTALL FRONT WHEEL NO. 1 BEARING DUST DEFLECTOR (See page AH-10)**
7. **INSTALL FRONT AXLE ASSEMBLY (See page AH-10)**
8. **INSTALL FRONT SUSPENSION LOWER NO. 1 ARM (See page DS-18)**
9. **CONNECT TIE ROD END SUB-ASSEMBLY (See page DS-18)**
10. **INSTALL FRONT DISC (See page BR-51)**
11. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-10)**
12. **INSTALL FRONT SPEED SENSOR (See page DS-18)**
13. **INSTALL FRONT AXLE HUB NUT (See page AH-11)**
14. **SEPARATE FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-11)**
15. **REMOVE FRONT DISC (See page BR-51)**
16. **INSPECT FRONT AXLE HUB BEARING LOOSENESS (See page AH-5)**
17. **INSPECT FRONT AXLE HUB RUNOUT (See page AH-6)**
18. **INSTALL FRONT DISC (See page BR-51)**
19. **INSTALL FRONT DISC BRAKE CALIPER ASSEMBLY (See page AH-11)**
20. **INSTALL FRONT AXLE HUB NUT (See page AH-11)**
21. **CHECK ABS SPEED SENSOR SIGNAL**
    (See page BC-35)

SP

22. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

23. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    (See page SP-4)



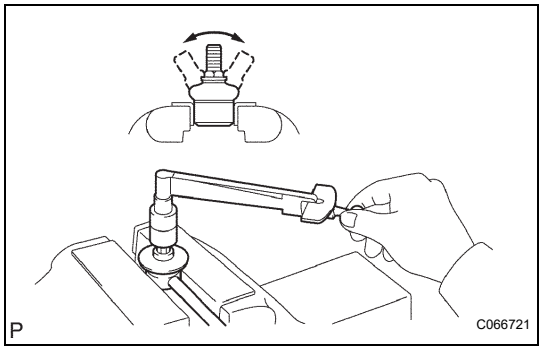
10. REMOVE FRONT NO. 1 STABILIZER BRACKET RH

(a) Remove the 2 bolts and the front No. 1 stabilizer bracket RH from the front frame assembly.

11. REMOVE FRONT NO. 1 STABILIZER BAR BUSHING

(a) Remove the 2 front No. 1 stabilizer bar bushings from the front stabilizer bar.

12. REMOVE FRONT STABILIZER BAR



INSPECTION

1. INSPECT FRONT STABILIZER LINK ASSEMBLY

(a) Inspect the turning of the ball joint.

(1) Secure the front stabilizer link assembly in a vise using aluminum plates.

(2) Install the nut to the front stabilizer link assembly stud.

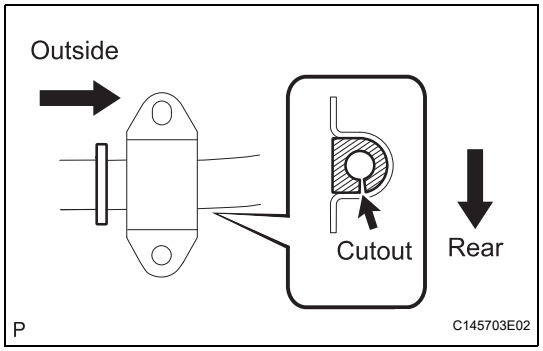
(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: Turning torque
0.05 to 2.0 N*m (0.5 to 20 kgf*cm, 0.4 to 18 in.*lbf)

HINT:
If the turning torque is not within the specified range, replace the front stabilizer link assembly with a new one.

(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.



INSTALLATION

1. INSTALL FRONT NO. 1 STABILIZER BAR BUSHING

(a) Install the 2 front No. 1 stabilizer bar bushings to the outside of the bushing stopper on the front stabilizer bar.

NOTICE:
Make sure that the cutout of the front No. 1 stabilizer bar bushing faces the rear side as shown in the illustration.

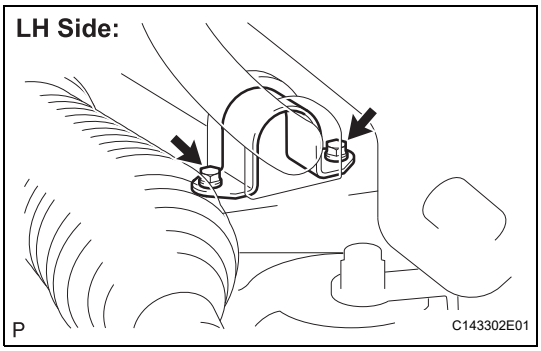
2. INSTALL FRONT NO. 1 STABILIZER BRACKET LH

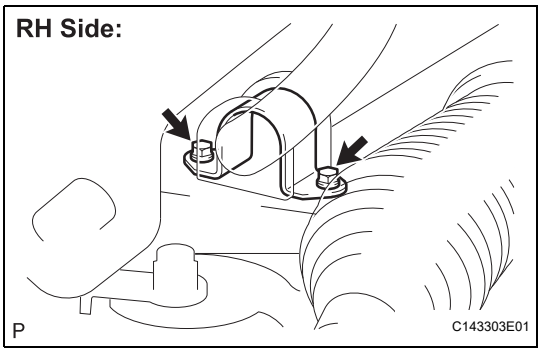
(a) Install the front No. 1 stabilizer bracket LH.

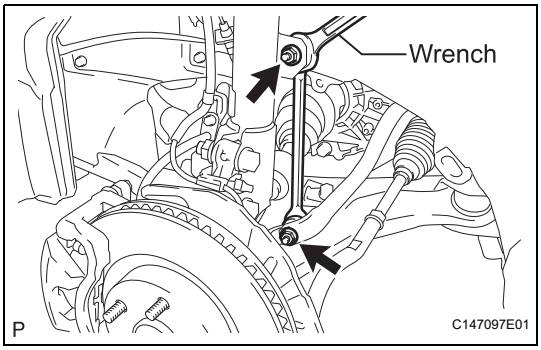
3. INSTALL FRONT NO. 1 STABILIZER BRACKET RH

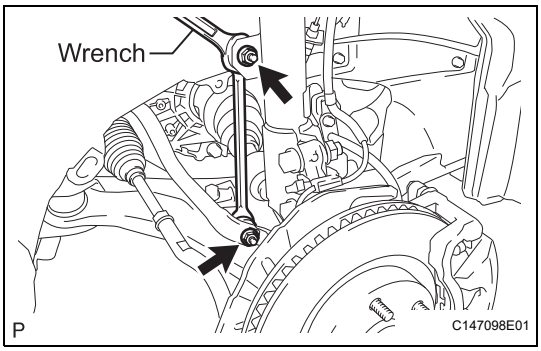
(a) Install the front No. 1 stabilizer bracket RH.

SP









4. **INSTALL FRONT STABILIZER BAR**
   (a) Install the front stabilizer bar with the 2 bolts. (LH Side)
   Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

   (b) Install the front stabilizer bar with the 2 bolts. (RH Side)
   Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)

5. **INSTALL ENGINE ASSEMBLY WITH TRANSAXLE**
   HINT:
   Refer to the instructions for installation of the engine assembly (See page EM-107).

6. **INSTALL FRONT STABILIZER LINK ASSEMBLY LH**
   (a) Install the front stabilizer link assembly LH with the 2 nuts.
   Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
   HINT:
   If the ball joint turns together with the nut, use a wrench (19 mm) to hold the stud.

7. **INSTALL FRONT STABILIZER LINK ASSEMBLY RH**
   (a) Install the front stabilizer link assembly RH with the 2 nuts.
   Torque: 74 N*m (755 kgf*cm, 55 ft.*lbf)
   HINT:
   If the ball joint turns together with the nut, use a wrench (19 mm) to hold the stud.

8. **CONNECT TIE ROD END SUB-ASSEMBLY (See page DS-18)**

9. **CONNECT STEERING INTERMEDIATE SHAFT ASSEMBLY (See page PS-66)**

10. **PLACE FRONT WHEELS FACING STRAIGHT**

11. **INSTALL FRONT WHEELS**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

12. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

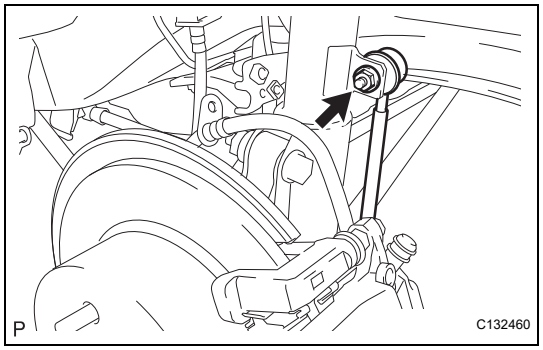
13. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT** (See page EM-107)

REMOVAL

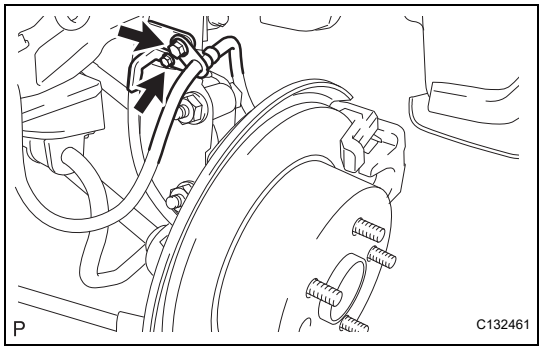
HINT:

- Use the same procedures for the RH side and the LH side.
- The procedures listed below are for the LH side.

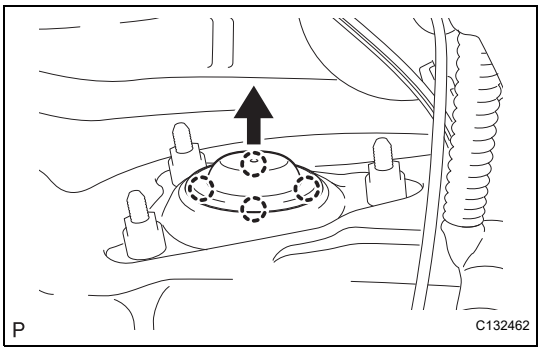
1. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
2. **REMOVE REAR SEAT HEADREST ASSEMBLY**
3. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
4. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)**
5. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)**
6. **REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)**
7. **REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)**
8. **REMOVE REAR WHEEL**
9. **SEPARATE REAR STABILIZER LINK ASSEMBLY LH**
   (a) Remove the nut and separate the rear stabilizer link assembly LH from the front shock absorber LH.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



10. **SEPARATE REAR SPEED SENSOR**
    (a) Remove the 2 bolts, and disconnect the rear brake flexible hose and rear speed sensor from the rear shock absorber with coil spring and rear axle carrier.
    NOTICE:
    Be sure to remove the rear speed sensor from the rear shock absorber with coil spring.

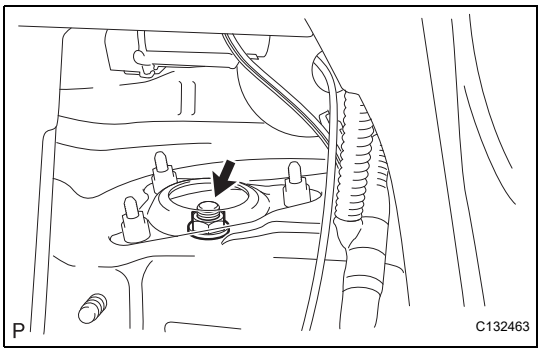


SP



11. REMOVE REAR SUSPENSION SUPPORT NO. 1 COVER

(a) Remove the 4 claws and the rear suspension support No. 1 cover.

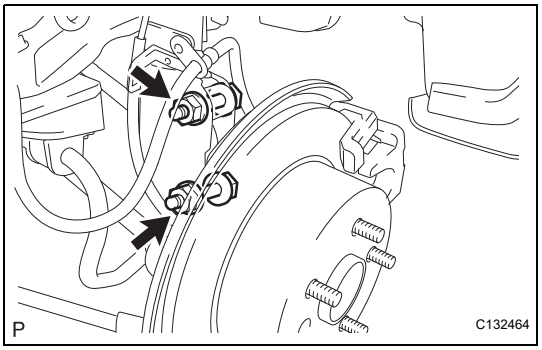


12. REMOVE REAR SHOCK ABSORBER WITH COIL SPRING

(a) Loosen the lock nut of the rear shock absorber with coil spring.

NOTICE:

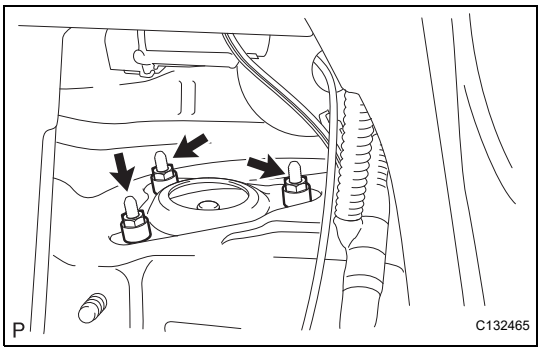
- **Do not remove the lock nut.**
- **Only loosen the nut when disassembling the rear shock absorber with coil spring.**



(b) Remove the 2 nuts and 2 bolts on the lower side of the rear shock absorber with coil spring.

NOTICE:

- **When removing the nuts, keep the bolts from rotating.**
- **Keep one bolt inserted to secure the hub and disc rotor.**



(c) Remove the 3 nuts on the upper side of the rear shock absorber with coil spring.

(d) Lower the rear axle carrier, and remove the 2 bolts on the lower side of the rear shock absorber with coil spring.

NOTICE:

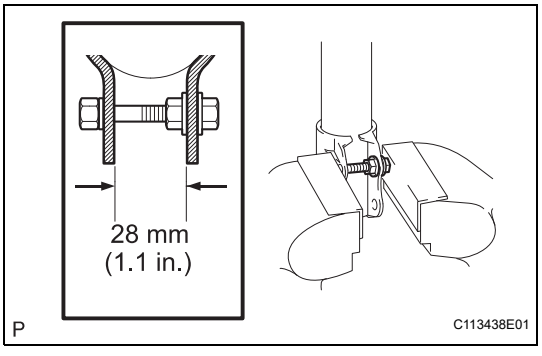
Make sure that the rear speed sensor is disconnected from the rear shock absorber with coil spring.

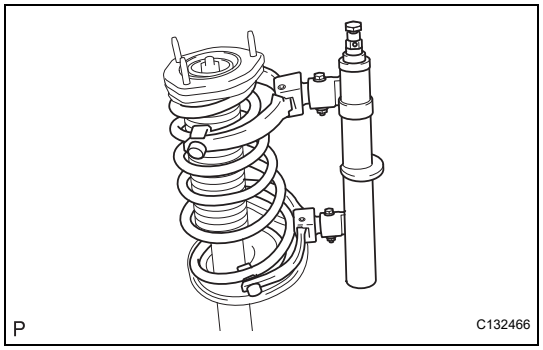
SP

DISASSEMBLY

1. FIX REAR SHOCK ABSORBER WITH COIL SPRING

(a) As shown in the illustration, secure the rear shock absorber with coil spring in a vise using aluminum plates by closing the vise onto the double nutted bolt affixed to the bracket at the bottom of the absorber.





2. REMOVE REAR SHOCK ABSORBER

(a) Using SST, compress the rear coil spring.

SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)

NOTICE:

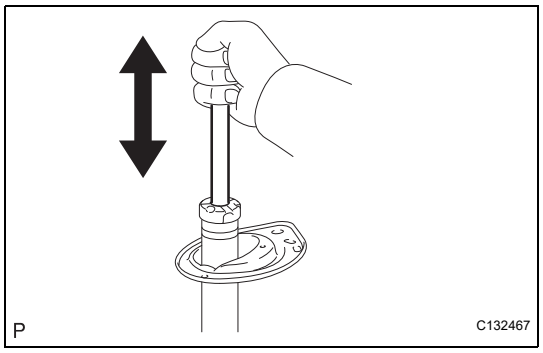
Do not use an impact wrench.

HINT:

If the front coil spring is compressed at an angle, using 2 SST will make the work easier.

(b) Remove the nut, rear shock absorber collar and rear suspension support assembly.

(c) Remove the rear coil spring, rear No. 1 spring bumper, and rear coil spring lower insulator.



INSPECTION

1. INSPECT REAR SHOCK ABSORBER

(a) Compress and extend the shock absorber rod 4 or more times.

Standard:

There is no abnormal resistance or sound and operation resistance is normal.

HINT:

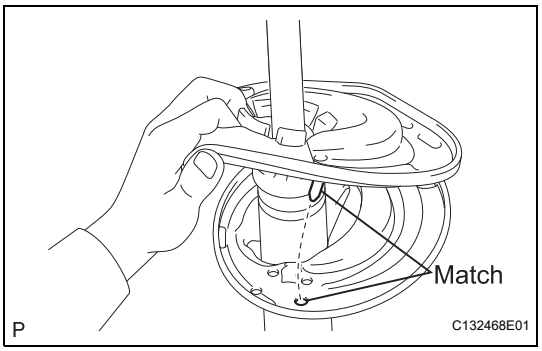
If there is any abnormality, replace the rear shock absorber with a new one.

REASSEMBLY

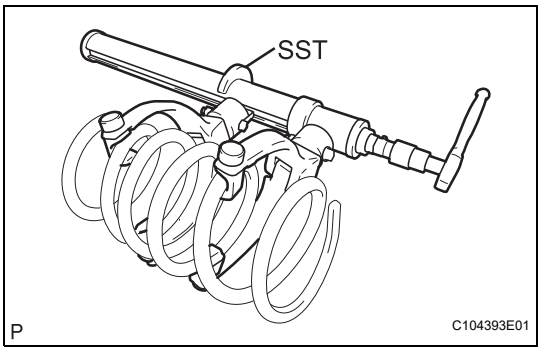
1. INSTALL REAR SHOCK ABSORBER

(a) Install the rear No. 1 spring bumper to the piston rod.

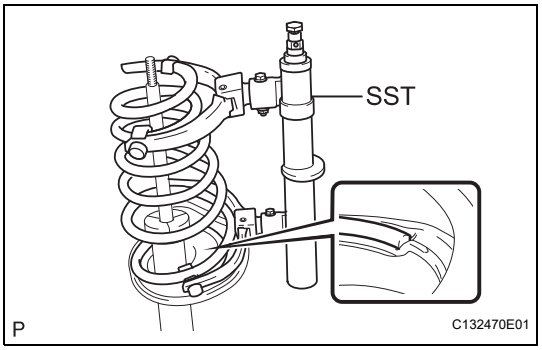
(b) Install the rear coil spring lower insulator onto the rear shock absorber.



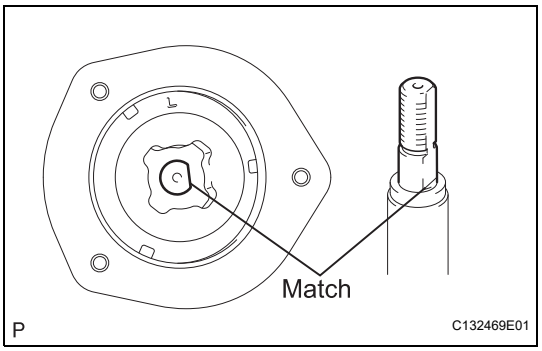
(c) Using SST, compress the rear coil spring.
SST 09727-30021 (09727-00010, 09727-00021, 09727-00031)
NOTICE:
Do not use an impact wrench.



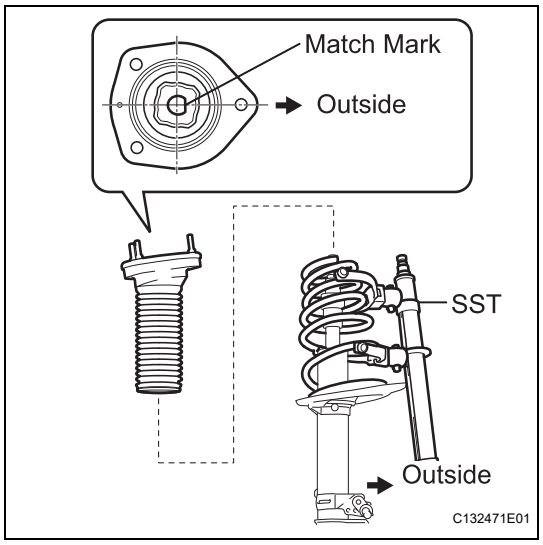
(d) Install the rear coil spring to the rear shock absorber.
NOTICE:
The smaller diameter end must face upward.
HINT:
- Fit the lower end of the rear coil spring into the gap of the lower seat.
- If the front coil spring is compressed at an angle, using 2 SST will make the work easier.



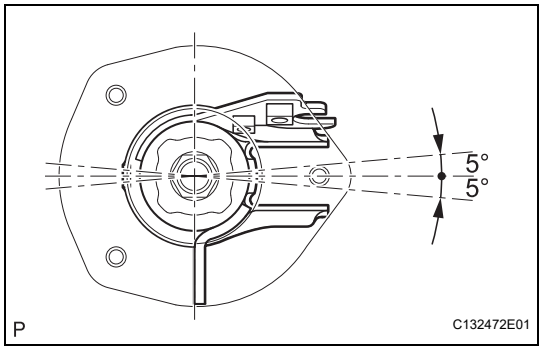
(e) Install the rear suspension support assembly.
NOTICE:
Align the notches of the piston rod and the rear suspension support assembly as shown in the illustration before installing the rear suspension support assembly.



SP



(f) Align the notches of the shock absorber with the notch of the rear suspension support assembly so that the notches face the outside of the vehicle.
(g) Install the rear shock absorber collar.
(h) Loosely tighten a new lock nut to the rear suspension piston rod.



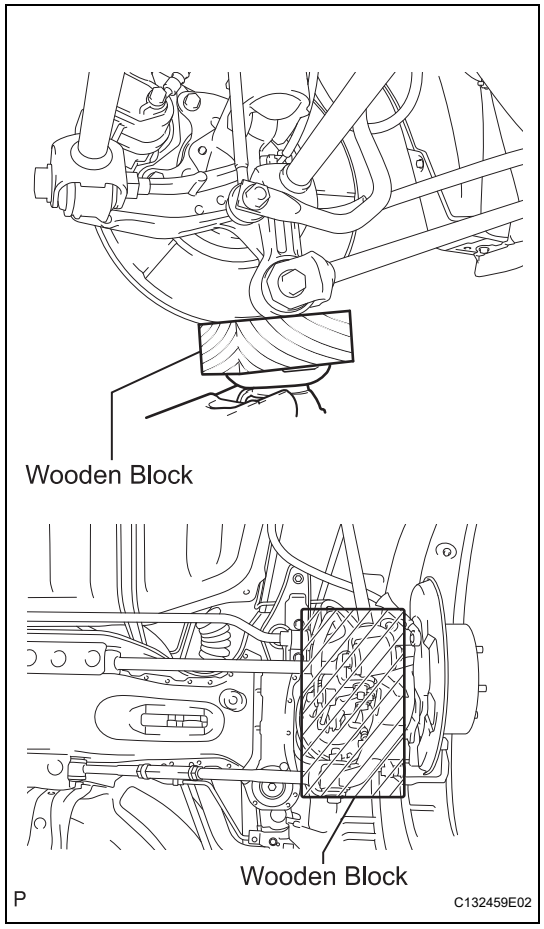
(i) Release the spring while adjusting the rear suspension support assembly to the position shown in the illustration, and remove the SST from the rear coil spring.
NOTICE:
Do not use an impact wrench.
HINT:
When lining up the rear suspension support assembly's stud bolts at the middle point between the two sides of the bracket, the maximum permissible degree of error is plus or minus 5°.

INSTALLATION

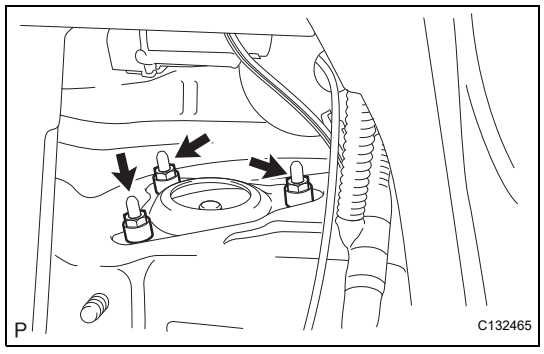
1. INSTALL REAR SHOCK ABSORBER WITH COIL SPRING

(a) Install the rear shock absorber with coil spring to the rear axle carrier assembly and insert the 2 bolts from the rear of the vehicle.

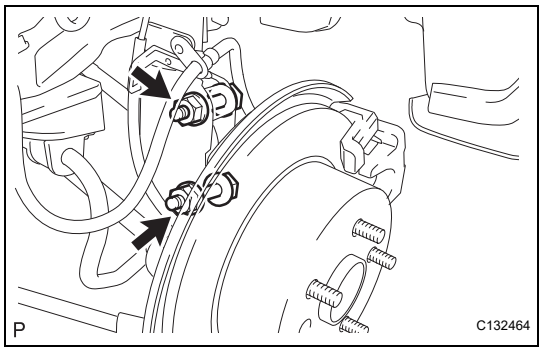
(b) Slowly jack up the vehicle using a wooden block and install the rear shock absorber with coil spring (upper side) to the vehicle.



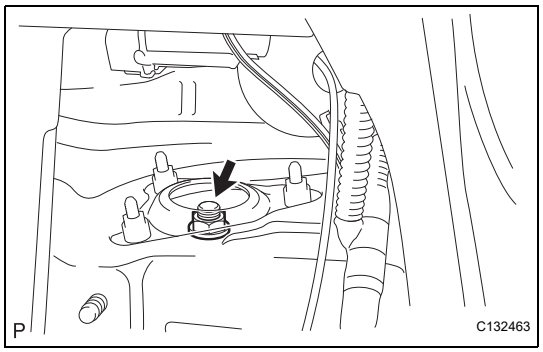
(c) Install the 3 nuts to the upper side of the rear shock absorber with coil spring.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)



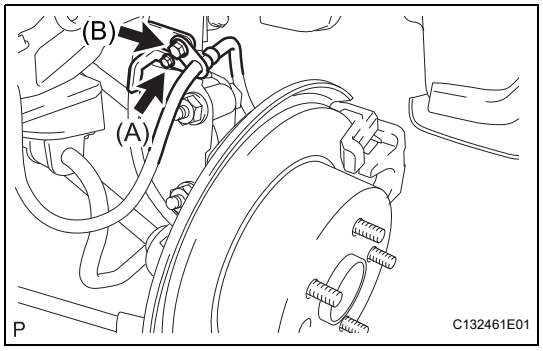
SP



(d) Install the 2 nuts and 2 bolts to the lower side of the rear shock absorber with coil spring.
Torque: 180 N*m (1,840 kgf*cm, 133 ft.*lbf)
NOTICE:
When installing the nuts, keep the bolts from rotating.

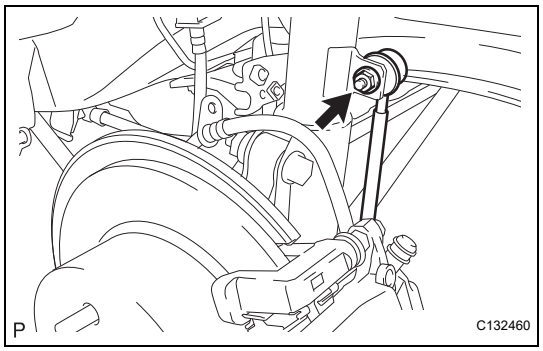


(e) Fully tighten the lock nut.
Torque: 55 N*m (561 kgf*cm, 41 ft.*lbf)



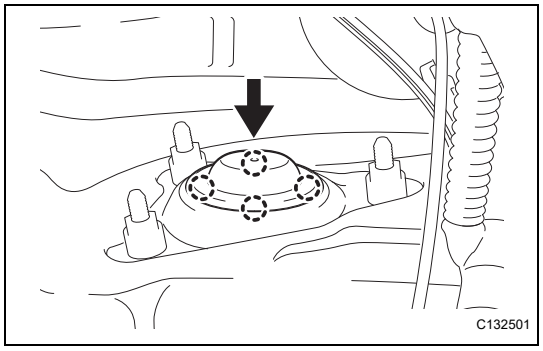
2. CONNECT REAR SPEED SENSOR

(a) Install the rear brake flexible hose and rear speed sensor wire harness with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf) (bolt A)
19 N*m (194 kgf*cm, 14 ft.*lbf) (bolt B)



3. INSTALL REAR STABILIZER LINK ASSEMBLY LH

(a) Install the rear stabilizer link assembly LH to the rear shock absorber with the nut.
Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
HINT:
If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



4. INSTALL REAR SUSPENSION SUPPORT NO. 1 COVER

(a) Engage the 4 claws and install the rear suspension support No. 1 cover.

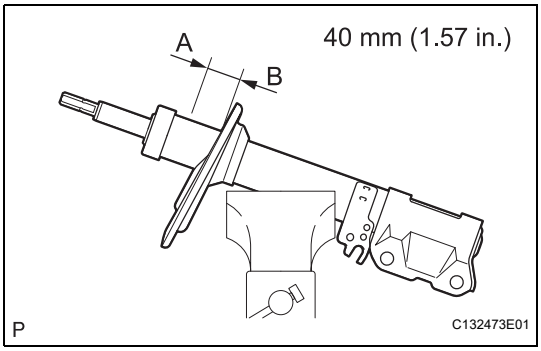
5. REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-54)

6. REMOVE REAR SIDE SEATBACK ASSEMBLY RH

7. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)

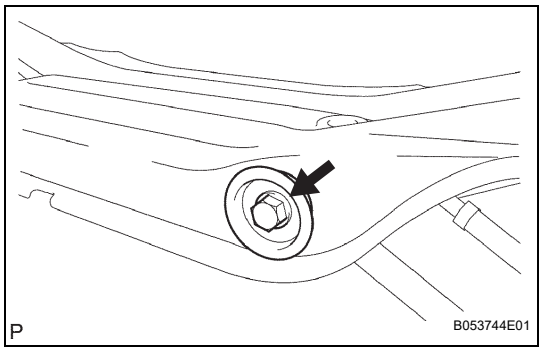
SP

8. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**
9. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
10. **REMOVE REAR SEAT HEADREST ASSEMBLY**
11. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-55)**
12. **INSTALL REAR WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
13. **CHECK ABS SPEED SENSOR SIGNAL**
    (See page BC-35)
14. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT**
    (See page SP-11)



DISPOSAL

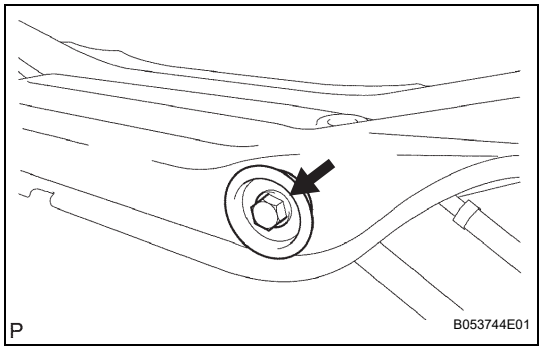
1. **DISPOSE OF REAR SHOCK ABSORBER**
   (a) Fully extend the shock absorber piston rod.
   (b) Using a drill, make a hole in the cylinder between A and B as shown in the illustration to discharge the gas inside.
   CAUTION:
   - **Be careful when drilling because shards of metal may fly about. Always use the proper safety equipment.**
   - **The gas is colorless, odorless and non-poisonous.**



18. REMOVE REAR NO. 1 SUSPENSION ARM LH

(a) Remove the bolt and rear No. 1 suspension arm assembly LH.

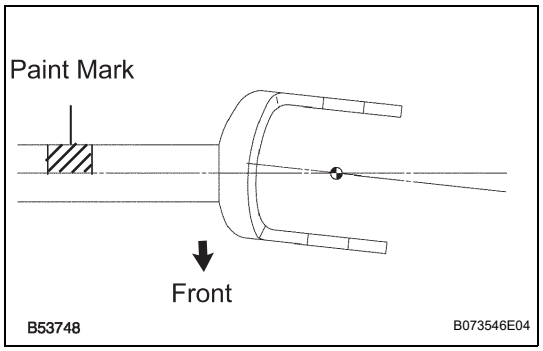
INSTALLATION



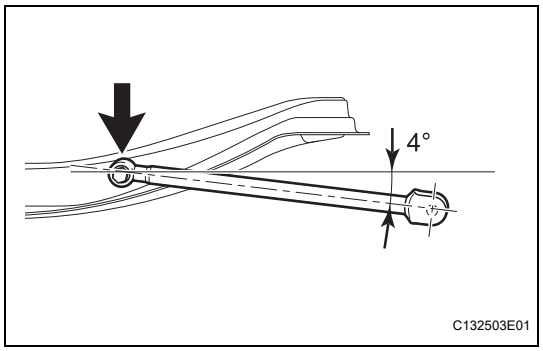
1. INSTALL REAR NO. 1 SUSPENSION ARM LH

(a) Install the rear No. 1 suspension arm (inner side) with the bolt, and temporarily tighten the bolt.

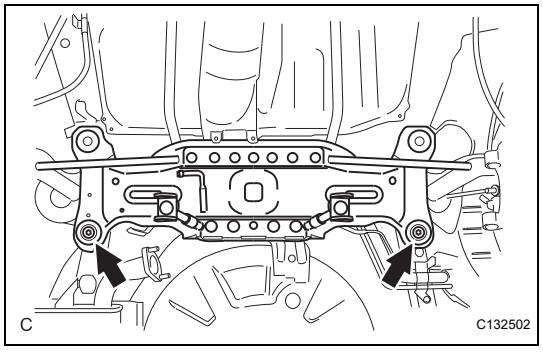
(1) Install the rear No. 1 suspension arm so that the bracket leans toward the front side of the vehicle as shown in the illustration.



(2) Ensure that the paint mark faces the rear side of the vehicle.



(b) Set the rear No.1 suspension arm in the position shown in the illustration, and fully tighten the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

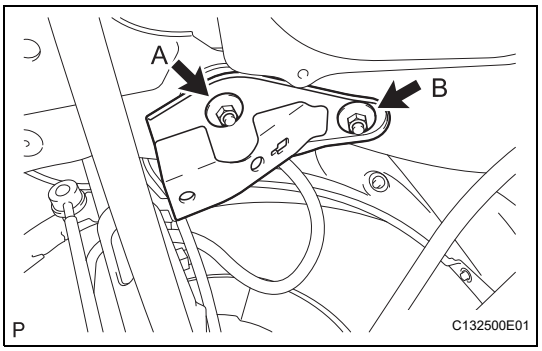


2. INSTALL REAR SUSPENSION MEMBER SUB-ASSEMBLY

(a) Raise the rear suspension member with a jack.

(b) Install the rear suspension member with the 2 bolts.
Torque: 56 N*m (571 kgf*cm, 41 ft.*lbf)

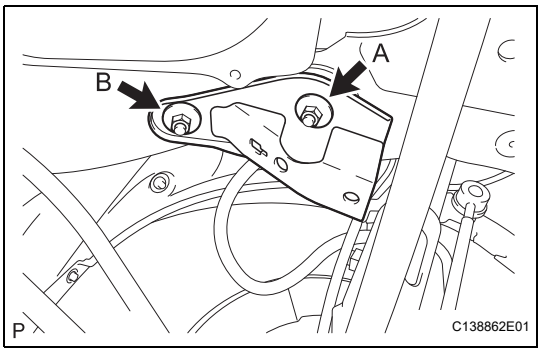
SP



3. INSTALL REAR SUSPENSION MEMBER LOWER STOPPER LH

(a) Install the rear suspension member lower stopper LH with the 2 nuts.

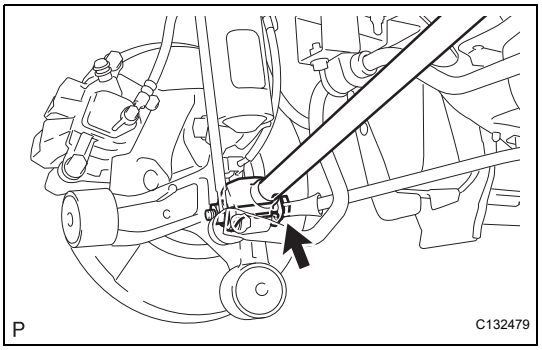
Torque: Nut A
55 N*m (561 kgf*cm, 41 ft.*lbf)
Nut B
38 N*m (388 kgf*cm, 28 ft.*lbf)



4. INSTALL REAR SUSPENSION MEMBER LOWER STOPPER RH

(a) Install the rear suspension member lower stopper RH with the 2 nuts.

Torque: Nut A
55 N*m (561 kgf*cm, 41 ft.*lbf)
Nut B
38 N*m (388 kgf*cm, 28 ft.*lbf)



5. TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM LH

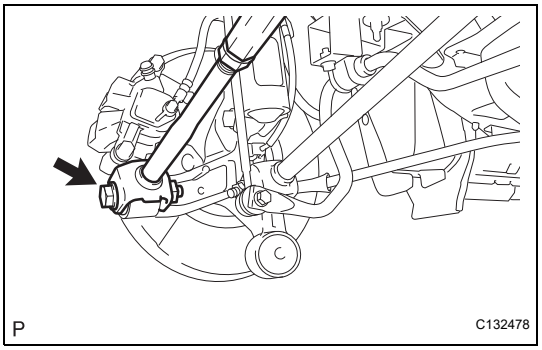
(a) Connect the rear No.1 suspension arm (outer side) to the rear axle carrier with the bolt and nut and temporarily tighten the bolt and nut.

NOTICE:
When temporarily tightening the bolt, keep the nut from rotating.

HINT:
Insert the bolt from the front of the vehicle and temporarily install the bolt.

6. TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM RH

HINT:
Temporarily tighten the RH side using the same procedures as for the LH side.



7. TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM LH

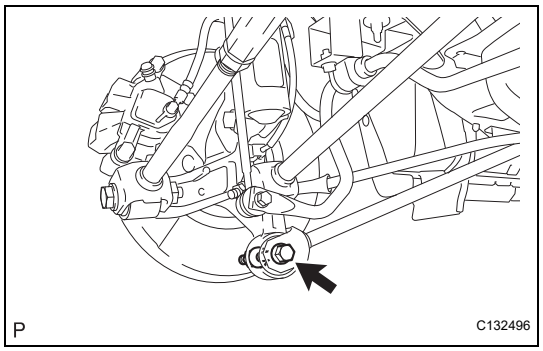
(a) Connect the rear No. 2 suspension arm (outer side) to the rear axle carrier with the bolt and nut and temporarily tighten the bolt.

NOTICE:
When temporarily tightening the bolt, keep the nut from rotating.

HINT:
Insert the bolt from the rear of the vehicle and temporarily install the bolt.

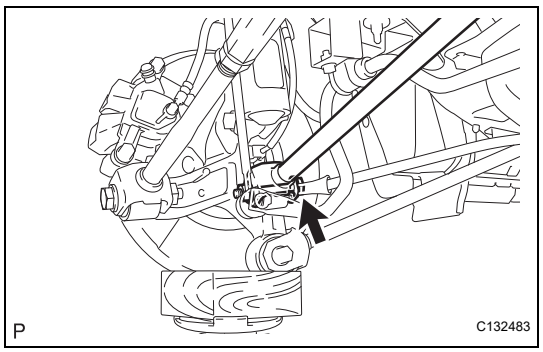
SP

8. **TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM RH**
HINT:
Temporarily tighten the RH side using the same procedures as for the LH side.



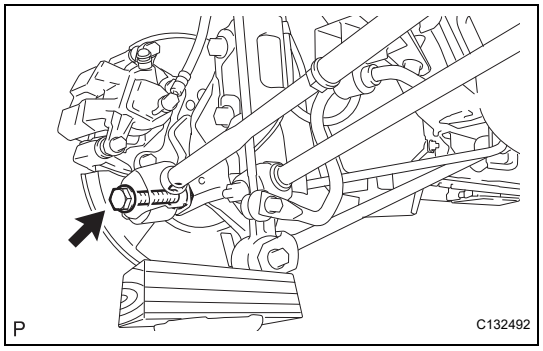
9. **TEMPORARILY TIGHTEN REAR STRUT ROD**
(a) Connect the rear strut rod assembly to the axle carrier with the bolt and nut and temporarily tighten the bolt.
NOTICE:
When temporarily tightening the bolt, keep the nut from rotating.
HINT:
Insert the bolt from the inside of the vehicle and temporarily install the bolt.

10. **STABILIZE SUSPENSION (See page SP-45)**



11. **FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM LH**
(a) Fully tighten the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

12. **FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM RH**
HINT:
Fully tighten the RH side using the same procedures as for the LH side.



13. **FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM LH**
(a) Fully tighten the bolt.
Torque: 100 N*m (1,020 kgf*cm, 74 ft.*lbf)

14. **FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM RH**
HINT:
Fully tighten the RH side using the same procedures as for the LH side.

15. **FULLY TIGHTEN REAR STRUT ROD (See page SP-45)**

16. **INSTALL REAR STABILIZER BUSHING (See page SP-68)**

17. **INSTALL REAR STABILIZER BAR NO. 1 BRACKET (See page SP-68)**

18. **INSTALL REAR STABILIZER BAR**

19. **INSTALL REAR STABILIZER LINK ASSEMBLY LH (See page SP-68)**

20. **INSTALL REAR STABILIZER LINK ASSEMBLY RH (See page SP-69)**

21. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (See page EX-4)**

22. **INSTALL FLOOR UNDER COVER NO. 1**

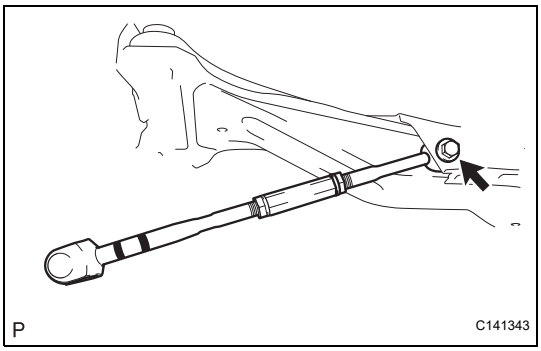
23. **INSTALL FLOOR UNDER COVER NO. 2**

24. **INSTALL REAR WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
25. **INSPECT FOR EXHAUST GAS LEAK (See page EX-5)**
26. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT**
    (See page SP-11)

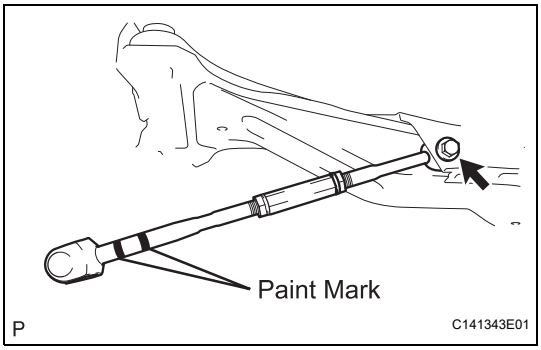
REMOVAL

NOTICE:
Check if an old gasket still remains on the pipe. If so, remove it. Also, check if any bolts or nuts are rusted. If so, replace them.

1. **REMOVE REAR WHEEL**
2. **REMOVE FLOOR NO. 1 UNDER COVER (See page SP-41)**
3. **REMOVE FLOOR NO. 2 UNDER COVER (See page SP-42)**
4. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (See page EX-2)**
5. **SEPARATE REAR STABILIZER LINK ASSEMBLY LH (See page SP-51)**
6. **SEPARATE REAR STABILIZER LINK ASSEMBLY RH (See page SP-51)**
7. **REMOVE REAR STABILIZER BAR NO. 1 BRACKET (See page SP-67)**
8. **REMOVE REAR STABILIZER BAR**
9. **REMOVE REAR STABILIZER BUSHING (See page SP-67)**
10. **SEPARATE REAR STRUT ROD (See page SP-51)**
11. **SEPARATE REAR NO. 2 SUSPENSION ARM LH (See page SP-51)**
12. **SEPARATE REAR NO. 2 SUSPENSION ARM RH (See page SP-52)**
13. **SEPARATE REAR NO. 1 SUSPENSION ARM LH (See page SP-52)**
14. **SEPARATE REAR NO. 1 SUSPENSION ARM RH (See page SP-52)**
15. **REMOVE REAR SUSPENSION MEMBER LOWER STOPPER LH (See page SP-52)**
16. **REMOVE REAR SUSPENSION MEMBER LOWER STOPPER RH (See page SP-52)**
17. **REMOVE REAR SUSPENSION MEMBER SUB-ASSEMBLY (See page SP-52)**



18. **REMOVE REAR NO. 2 SUSPENSION ARM LH**
    (a) Remove the bolt and the rear No. 2 suspension arm LH.



INSTALLATION

1. **INSTALL REAR NO. 2 SUSPENSION ARM LH**
    (a) Install the rear No. 2 suspension arm (inside) with the bolt, and temporarily tighten the bolt.
    HINT:
    Ensure that the paint mark faces to the rear of the vehicle.

    (b) Set the rear No. 2 suspension arm in the position shown in the illustration, and fully tighten the bolt.

2. **INSTALL REAR SUSPENSION MEMBER SUB-ASSEMBLY (See page SP-53)**
3. **INSTALL REAR SUSPENSION MEMBER LOWER STOPPER LH (See page SP-54)**
4. **INSTALL REAR SUSPENSION MEMBER LOWER STOPPER RH (See page SP-54)**
5. **TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM LH (See page SP-54)**
6. **TEMPORARILY TIGHTEN REAR NO. 1 SUSPENSION ARM RH (See page SP-54)**
7. **TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM LH (See page SP-54)**
8. **TEMPORARILY TIGHTEN REAR NO. 2 SUSPENSION ARM RH (See page SP-55)**
9. **TEMPORARILY TIGHTEN REAR STRUT ROD (See page SP-55)**
10. **STABILIZE SUSPENSION (See page SP-45)**
11. **FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM LH (See page SP-55)**
12. **FULLY TIGHTEN REAR NO. 1 SUSPENSION ARM RH (See page SP-55)**
13. **FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM LH (See page SP-55)**
14. **FULLY TIGHTEN REAR NO. 2 SUSPENSION ARM RH (See page SP-55)**

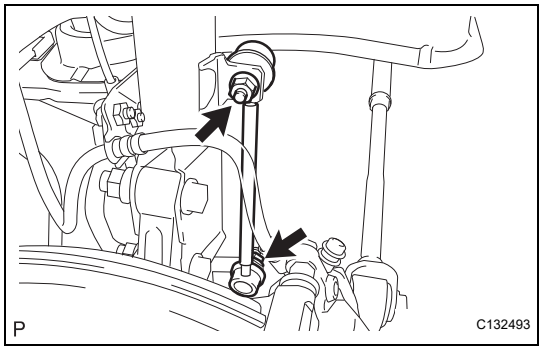
SP

15. **FULLY TIGHTEN REAR STRUT ROD (See page SP-45)**
16. **INSTALL REAR STABILIZER BUSHING (See page SP-68)**
17. **INSTALL REAR STABILIZER BAR BRACKET NO. 1 (See page SP-68)**
18. **INSTALL REAR STABILIZER BAR (See page SP-68)**
19. **INSTALL REAR STABILIZER LINK ASSEMBLY LH (See page SP-68)**
20. **INSTALL REAR STABILIZER LINK ASSEMBLY RH (See page SP-69)**
21. **INSTALL EXHAUST CENTER PIPE ASSEMBLY (See page EX-4)**
22. **INSTALL FLOOR NO. 1 UNDER COVER (See page SP-46)**
23. **INSTALL FLOOR NO. 2 UNDER COVER (See page SP-46)**
24. **INSTALL REAR WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
25. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT** (See page SP-11)
26. **INSPECT FOR EXHAUST GAS LEAK (See page EX-5)**

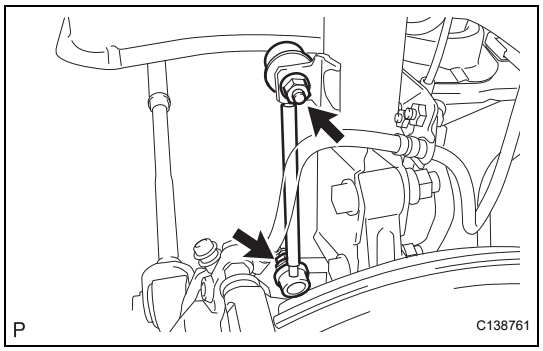
REMOVAL

NOTICE:
Check if an old gasket still remains on the pipe. If so, remove it. Also, check if any bolts or nuts are rusted. If so, replace them.

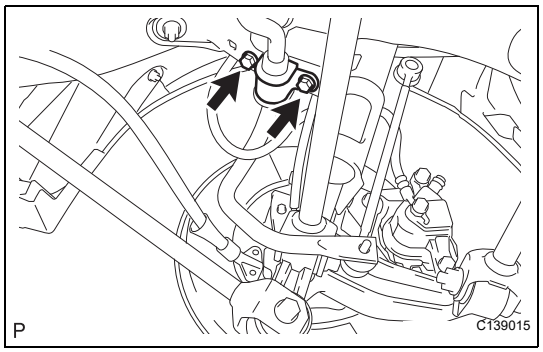
1. **REMOVE REAR WHEELS**
2. **REMOVE FLOOR NO. 1 UNDER COVER (See page SP-41)**
3. **REMOVE FLOOR NO. 2 UNDER COVER (See page SP-42)**
4. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (See page EX-2)**
5. **REMOVE REAR STABILIZER LINK ASSEMBLY LH**
   (a) Remove the 2 nuts and rear stabilizer link assembly LH.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



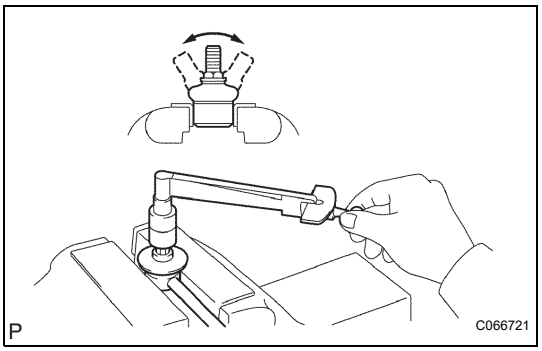
6. **REMOVE REAR STABILIZER LINK ASSEMBLY RH**
   (a) Remove the 2 nuts and rear stabilizer link assembly RH.
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



7. **REMOVE REAR STABILIZER BAR NO. 1 BRACKET**
   (a) Remove the 2 bolts and rear stabilizer bar No. 1 bracket.
8. **REMOVE REAR STABILIZER BUSHING**
   (a) Remove the 2 rear stabilizer bushings from the rear stabilizer bar.
9. **REMOVE REAR STABILIZER BAR**



SP



INSPECTION

1. INSPECT REAR STABILIZER LINK ASSEMBLY

(a) Inspect the turning of the ball joint.

(1) Secure the rear stabilizer link assembly in a vise using aluminum plates.

(2) Install the nut to the rear stabilizer link assembly stud.

(3) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: Turning torque
0.05 to 1.0 N*m (0.5 to 10 kgf*cm, 0.4 to 8.9 in.*lbf)

HINT:
If the turning torque is not within the specified range, replace the rear stabilizer link assembly with a new one.

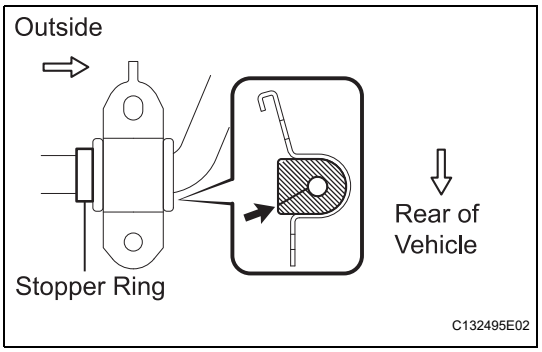
(b) Inspect the dust cover.

(1) Check that the dust cover is not cracked and that there is no grease on it.

INSTALLATION

1. INSTALL REAR STABILIZER BUSHING

(a) Install the 2 rear stabilizer bushings to the outside of the stopper ring on the stabilizer bar.



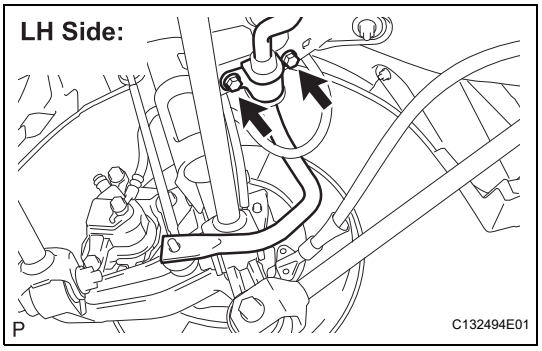
2. INSTALL REAR STABILIZER BAR NO. 1 BRACKET

(a) Install the rear stabilizer bar No. 1 bracket.

3. INSTALL REAR STABILIZER BAR

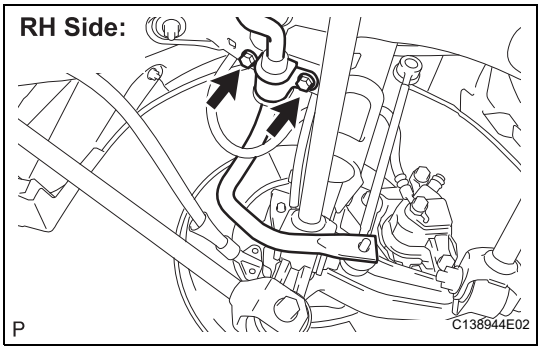
(a) Install the rear stabilizer bar with the 2 bolts. (LH Side)

Torque: 31 N*m (316 kgf*cm, 23 ft.*lbf)

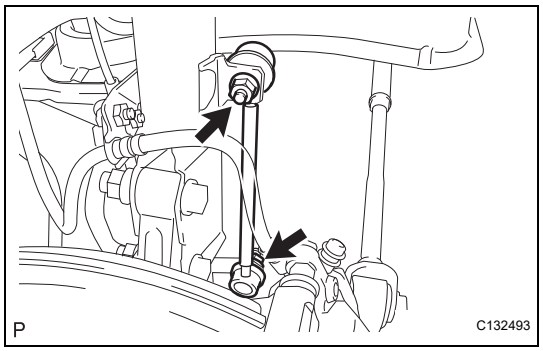


(b) Install the rear stabilizer bar with the 2 bolts. (RH Side)

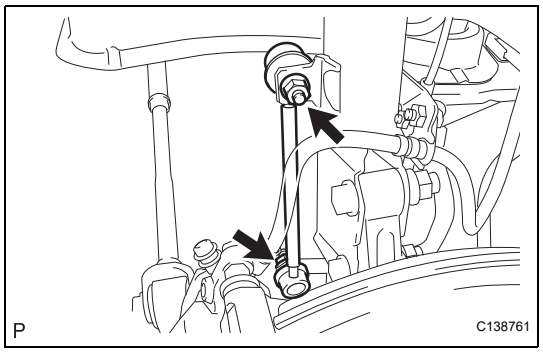
Torque: 31 N*m (316 kgf*cm, 23 ft.*lbf)



SP



4. **INSTALL REAR STABILIZER LINK ASSEMBLY LH**
   (a) Install the rear stabilizer link assembly LH with the 2 nuts.
   Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.



5. **INSTALL REAR STABILIZER LINK ASSEMBLY RH**
   (a) Install the rear stabilizer link assembly RH with the 2 nuts.
   Torque: 39 N*m (398 kgf*cm, 29 ft.*lbf)
   HINT:
   If the ball joint turns together with the nut, use a hexagon wrench (5 mm) to hold the stud.
6. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (See page EX-4)**
7. **INSTALL FLOOR NO. 1 UNDER COVER (See page SP-46)**
8. **INSTALL FLOOR NO. 2 UNDER COVER (See page SP-46)**
9. **INSTALL REAR WHEELS**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
10. **INSPECT EXHAUST GAS LEAK (See page EX-5)**

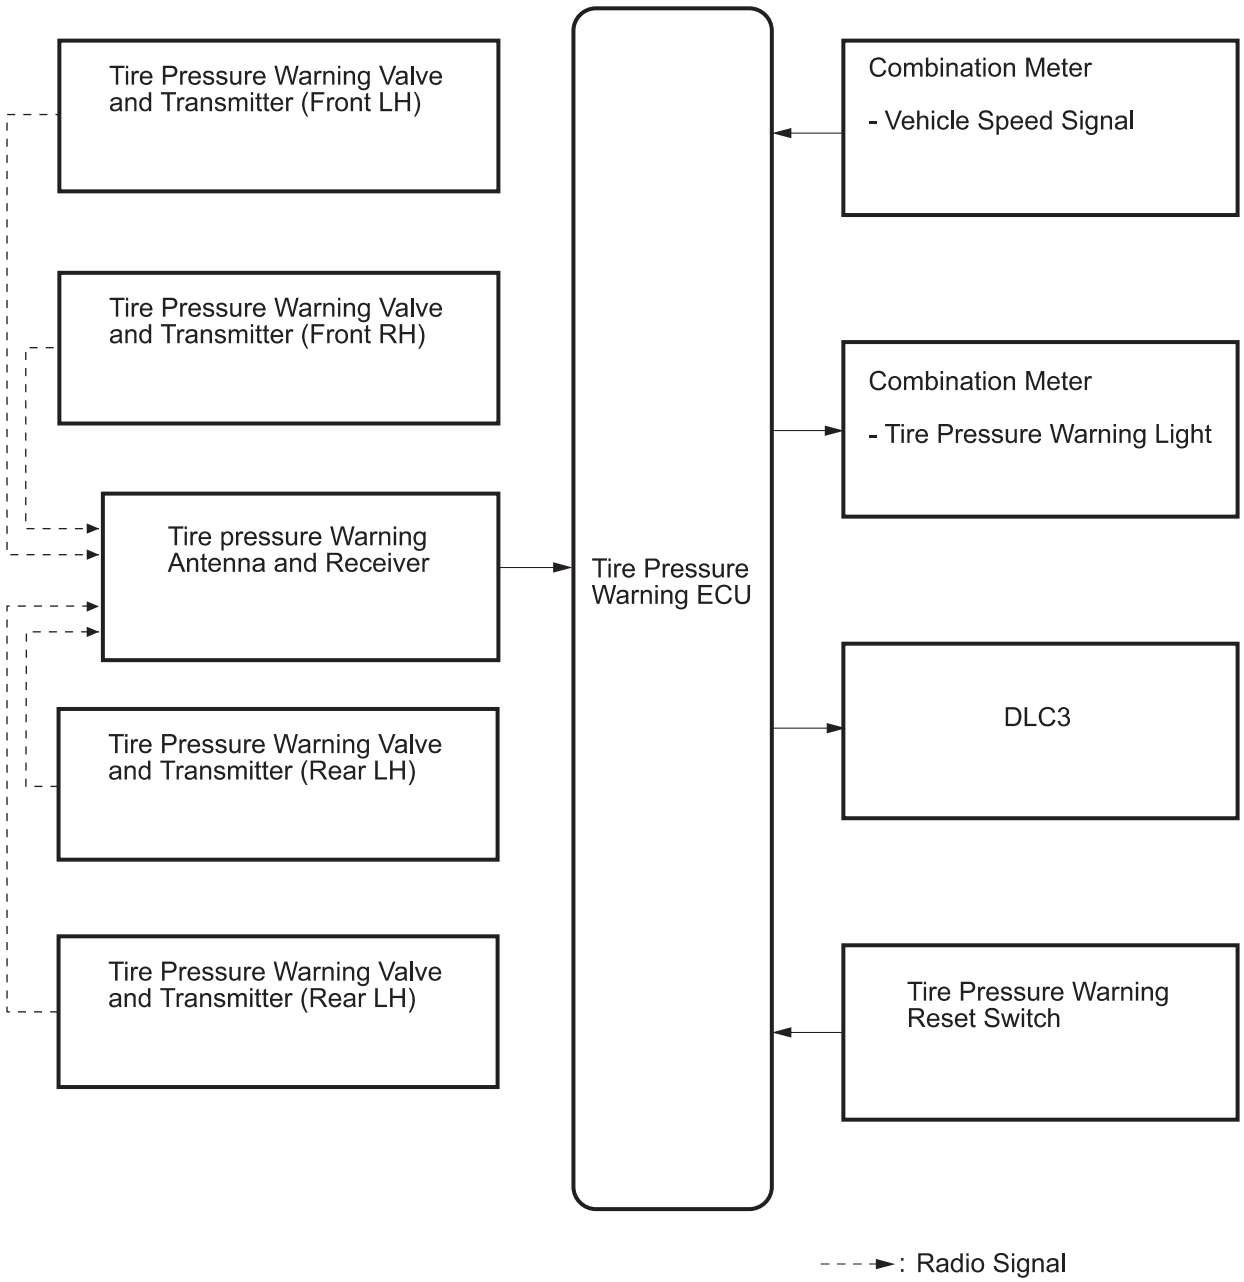
SYSTEM DIAGRAM

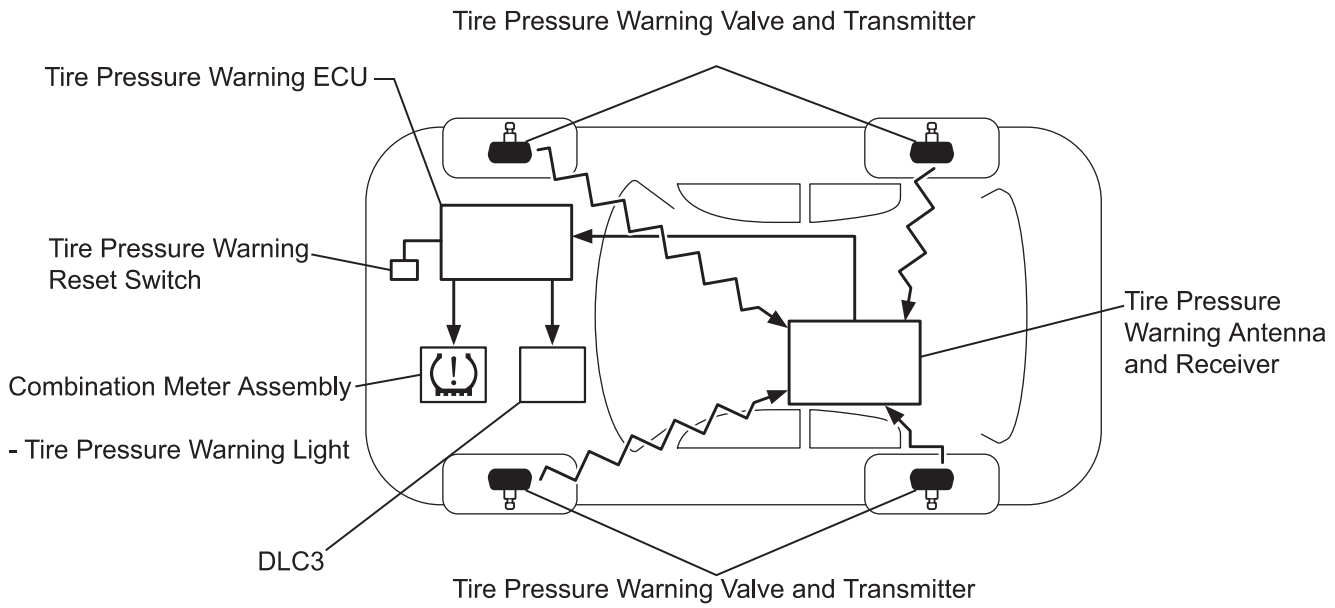


SYSTEM DESCRIPTION

1. DESCRIPTION OF SYSTEM

(a) A tire pressure warning valve and transmitter is equipped with a tire pressure sensor and a transmitter and is installed in a tire wheel assembly. The sensor measures the tire pressure. The measured value and transmitter ID are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU from the tire pressure warning antenna and receiver. If the transmitter ID has already been registered, the ECU compares the measured air pressure value with the standard value. When the value is less than the standard value registered in the tire pressure warning ECU, the warning light on the combination meter comes on.

- For the differences in the air pressure settings by the type of tires, a tire pressure warning reset switch has been adopted.



2. WHEN TIRE PRESSURE WARNING LIGHT IS LIT

(a) When the tire pressure warning light does not go off, or when it comes on during driving, check tire pressure. If the tire pressure warning light comes on within several hours after adjusting the tire pressure, the tire may have a slow air leak.

(b) Under the following conditions, the system may not function properly.

- Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

- A radio device of similar frequency is used in the vehicle.
- A large amount of snow or ice is stuck to the vehicle, especially onto the wheels and around the wheel houses.
- The battery of the sensor has been depleted.
- The tires without tire pressure warning valve and transmitter are used.
- Tire chains are used.
- If any wheels other than the specified ones are used, the system may not function properly because interference may prevent the radio waves from being correctly transmitted from the tire pressure warning valve and transmitter.
- Depending on the tire type, the system may not function properly even though the specified wheels are used.

(c) The average usage life of the grommet of the tire pressure warning valve and transmitter is approximately 5 years, at which time it must be replaced.
Re-tighten the valve nut if the valve is leaking air, although it is less than 5 years old and there is no problem with grommets.

(d) After removing and installing the ECU or a sensor, check for a diagnostic code and verify that it is a normal code.

3. FUNCTION OF COMPONENTS

Components	Function
Tire pressure warning valve and transmitter	Combined as a single unit with a disc wheel air valve, it measures tire pressure and temperature and transmits an ID number for measurement value and identification. Built-in the battery.
Tire pressure warning antenna and receiver	Receives and transmits a necessary signal from the transmitter to the tire pressure warning ECU.
Tire pressure warning ECU	Receives the signal from the receiver and identifies it as vehicle's own signal. If the measured value is equal to or lower than the specified value, it transmits a signal so that the air pressure warning light on the combination meter comes on.
Tire pressure warning light	Located in the combination meter, it informs the driver of lowered tire air pressure and system failure.
Tire pressure warning reset switch	Enters the initialization mode for tire or wheel replacement.

4. TIRE PRESSURE WARNING RESET SWITCH

- By operating the tire pressure warning reset switch, the tire pressure warning ECU can be set to issue a warning at an inflation pressure that corresponds to the type of tires.
  Therefore, the dealer must set the warning threshold to the proper value in order to comply with the local regulations.
- Operate the tire pressure warning reset switch only after the inflation pressures of all tires have been adjusted on the vehicle.

- To initialize the system, press and hold the tire pressure warning reset switch for 3 seconds or longer with the power switch on (IG). After the initialization process has started, the warning light blinks 3 times (1 second on, 1 second off).
- During initialization, the tire pressure warning valve and transmitter measures the inflation pressure of the tires, and registers the signals that are transmitted into the tire pressure warning ECU at a frequency of once per minute. The initialization process is completed when signals from the all tires have been received.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the tire pressure warning system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS

NEXT

3 CHECK TIRE PRESSURE WARNING LIGHT AND INDICATOR CONDITION

(a) Turn the power switch on (IG).
(b) Record the condition of the tire pressure warning light on the combination meter assembly.
(c) Refer to the "TIRE PRESSURE WARNING LIGHT AND INDICATOR CHART" section of DIAGNOSIS SYSTEM for checking the condition of the tire pressure warning light (See page TW-24).

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

It is necessary to register the transmitter ID in the tire pressure warning ECU when replacing the tire pressure warning valve and transmitter and/or tire pressure warning ECU.

(a) Before registration

(1) In case of tire pressure warning ECU replacement.

- Read the registered transmitter IDs that are stored in the old ECU using the intelligent tester and note them down.
- If reading stored transmitter IDs is impossible due to malfunctions of components such as the tire pressure warning antenna and receiver, remove the tires from the wheels and check the IDs located on the tire pressure warning valves and transmitters (See page TW-5).

(2) In case of tire pressure warning valve and transmitter replacement.

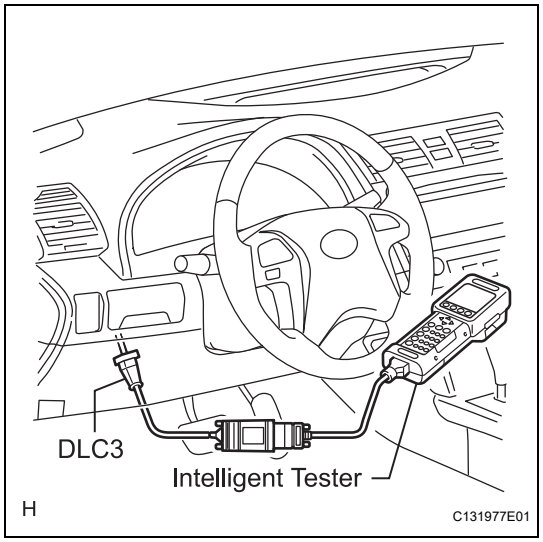
- When replacing the tire pressure warning valves and transmitters, note down the IDs written on the tire pressure warning valves and transmitters.

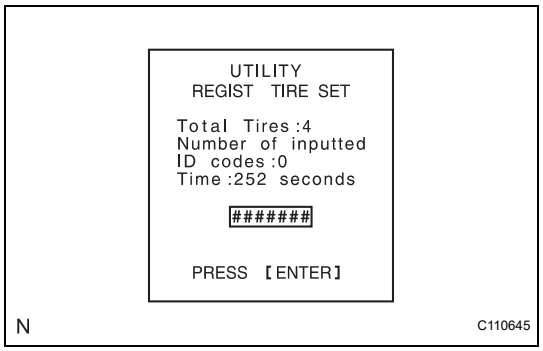
2. REGISTER TRANSMITTER ID

(a) Connect the intelligent tester to DLC3 (Procedure "A").

(b) Turn the power switch on (IG) (Procedure "B").

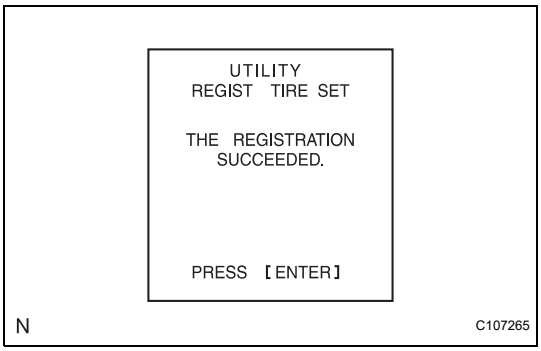
(c) Select REGIST TIRE following the intelligent tester screen (UTILITY - REGIST TIRE) (Procedure "C").





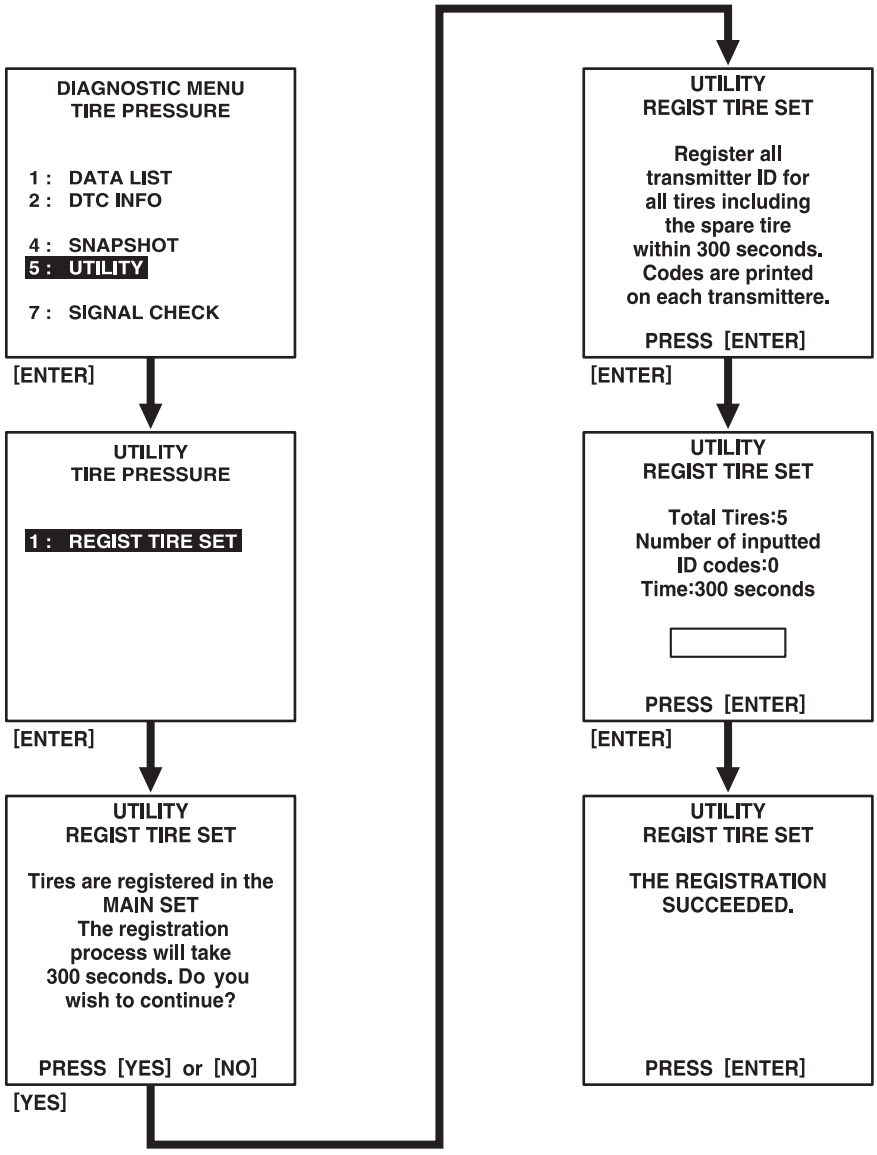
(d) Input the IDs (ID1 to ID4) using the intelligent tester and transmit them to the tire pressure warning ECU (Procedure "D").

TW



(e) Set the ID transmission condition to "ID Registration is complete" (Procedure "E").
HINT:
- The previously registered IDs will be deleted from the memory when the registration is completed.
- If the procedures "C" to "D" are not completed within 5 min. , the mode will return to the normal operation mode.
- When the system is in initialization mode after the tire pressure warning reset switch has been operated, the registration is disabled until the initialization process is canceled or completed.

Registration Procedure



P C122895E02

TW

3. CONFIRMATION OF TRANSMITTER ID REGISTRATION

(a) Connect the intelligent tester to DLC3 (power switch is off).
(b) Turn the power switch on (IG).
(c) Select "TIREPRESS" by following the prompts displayed on the intelligent tester.

(d) Confirm that the data of tire pressure of all tires are displayed on the intelligent tester screen.
NOTICE:
- **It may take up to 1 minute or more to update the tire pressure data.**
- **If the IDs have not been registered, some of DTC C2171/71 is set in the tire pressure warning ECU after 51 minutes or more.**

INITIALIZATION

1. DESCRIPTION OF INITIALIZATION

(a) Perform initialization in the following cases:
- Before delivery of a new vehicle.
- After replacement of the tire pressure warning ECU*.
- After replacement of the tire pressure warning valve and transmitter.
- Specified tire pressure changes depending on the size or type of the tire.

*: Perform initialization after the transmitter ID registration is completed (See page TW-14).

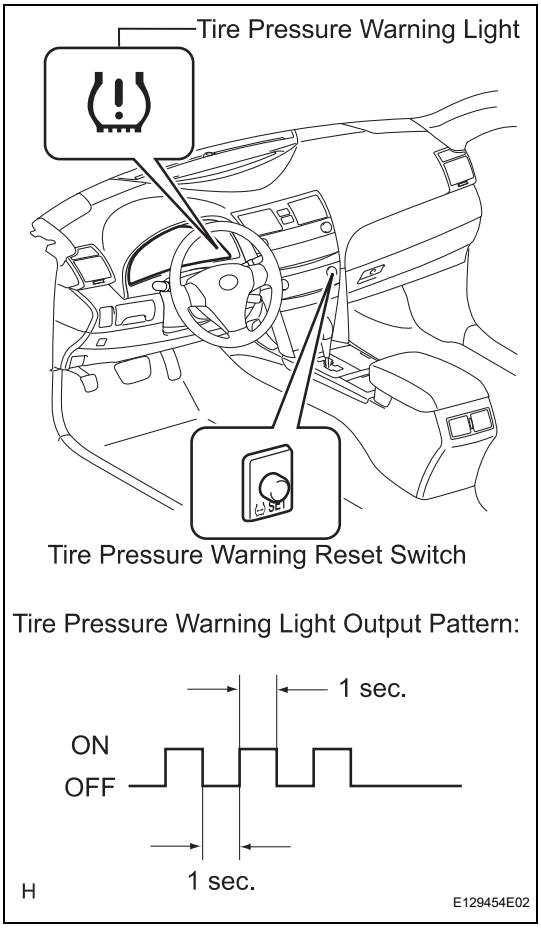
(b) Before initialization

(1) Set the air pressure of all wheels to the specified value.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)

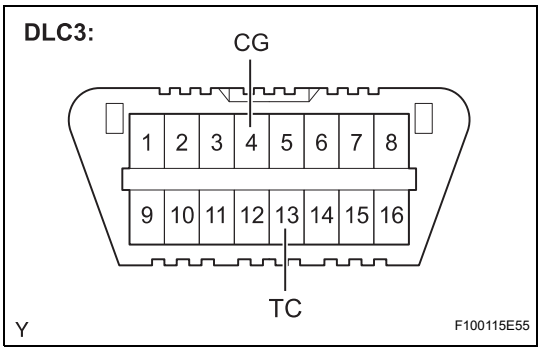
NOTICE:
Perform the tire pressure adjustment after the vehicle has sufficiently cooled down. If the vehicle is not sufficiently cooled down, increase the air pressure by 20 to 30 kPa (0.2 to 0.3 kgf/cm^2, 2.9 to 4.3 psi) above the specified value.



2. INITIALIZATION PROCEDURE

(a) Keep the tire pressure warning reset switch pressed for 3 seconds or more with the power switch on (IG).

(b) Check that the tire pressure warning light blinks 3 times (1 second ON, 1 second OFF).
HINT:
Initialization will be completed if signals are received from all wheels.



(c) Wait for 2 or 3 minutes with the power switch on (IG).
NOTICE:
- **The initialization is normally completed within 2 to 3 minutes.**
- **If the initialization has not been completed successfully, DTC C2177/77 is set approximately 20 minutes.**
- **The initialization can be terminated by making a short circuit between terminals TC and CG of the DLC3 connector.**

(d) Confirm that the initialization has been completed using the intelligent tester.
(1) Change the mode to test mode using the intelligent tester and check that the tire pressure warning light tire pressure warning light blinks at 0.125 second intervals.
HINT:
The tire pressure warning light will not blink until the system initialization is complete.
NOTICE:
The following operations can be used instead of above procedure:
1. Turn the power switch from off to on (IG).
2. Monitor the tire pressure values of all the wheels using the intelligent tester.

TW

3. If the tire pressure values cannot be displayed on the intelligent tester screen, the initialization has failed.

4. It takes 2 to 3 minutes to display the tire pressure data.

HINT:

- In winter, as the tire pressure may decrease depending on the ambient temperature, increase the tire pressure by 20 to 30 kPa (0.2 to 0.3 kgf/cm^2, 2.9 to 4.3 psi) above the specified value after confirmation that the initialization has been completed.

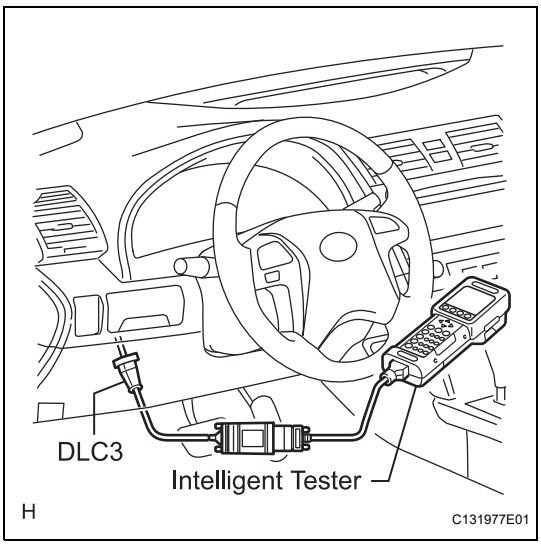
TEST MODE PROCEDURE

1. ENTER TEST MODE

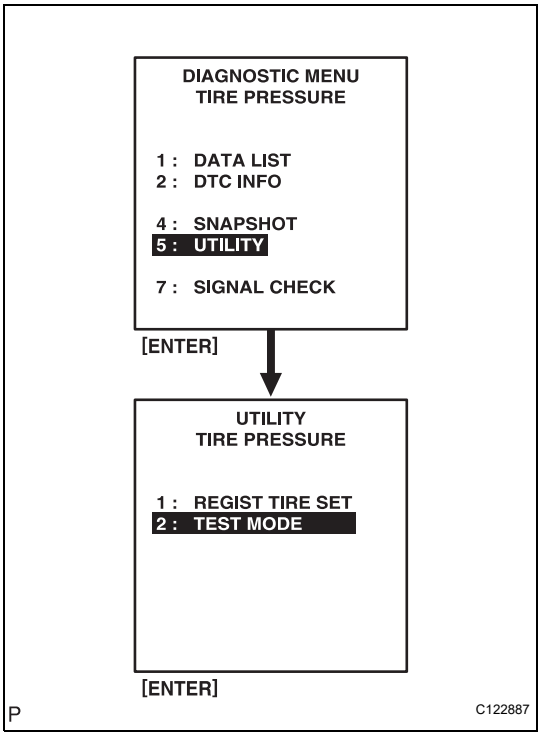
HINT:

- Operation of the tire pressure warning reset switch can be checked in TEST MODE.
- During TEST MODE, the system is not initialized by pushing the tire pressure warning reset switch. The circuit of the tire pressure warning reset switch can be inspected during this mode.

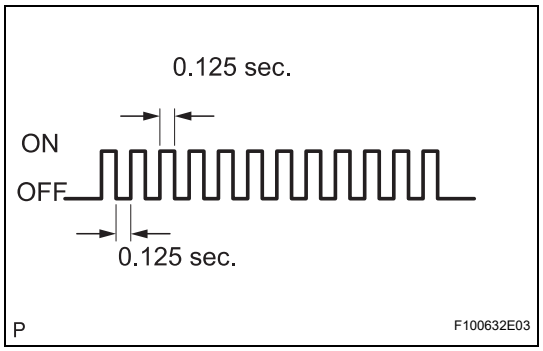
(a) Make sure that the power switch is off.
(b) Connect the intelligent tester to DLC3.
(c) Turn the power switch on (IG).
(d) Check that the tire pressure warning light comes on for 3 seconds and then goes off.



(e) Select TEST MODE on the intelligent tester.



TW



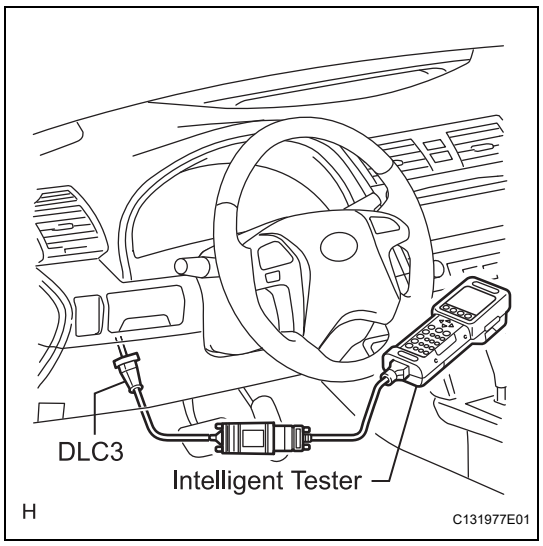
(f) Confirm that the tire pressure warning light in the combination meter blinks at 0.125 second intervals.

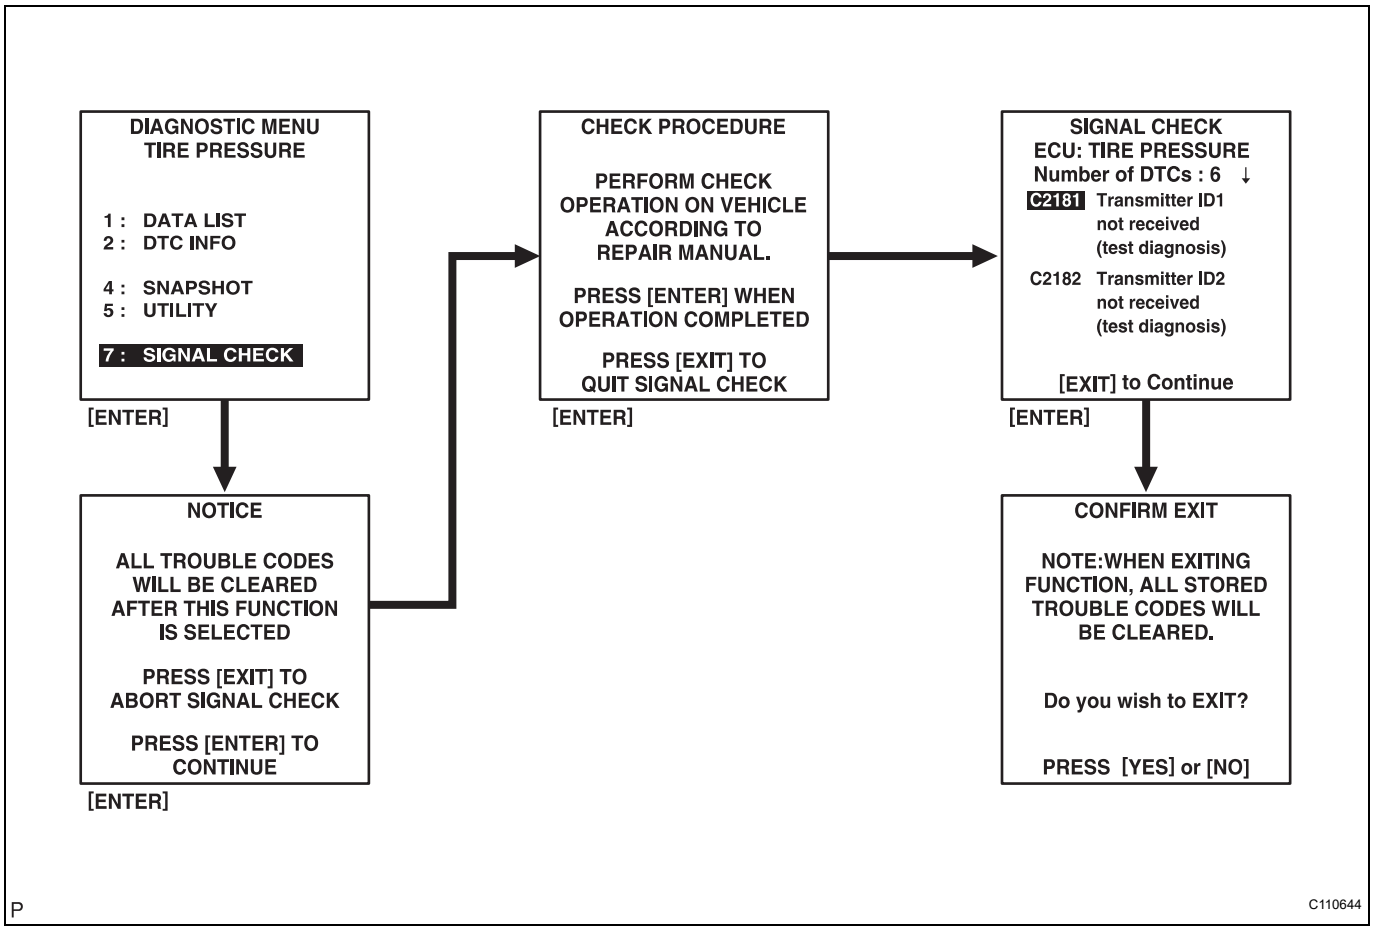
2. PERFORM SIGNAL CHECK

HINT:

- When entering signal check mode, the tire pressure warning ECU sets all the signal check DTCs first. After completing signal check for each inspection item, the DTCs for systems that are determined to be normal by the tire pressure warning ECU will be erased.
  The DTCs for other inspection items may not be erased when only a certain signal is inspected.
- When signal check returns to normal mode, all the signal check DTCs will be erased.

(a) Make sure that the power switch is off.
(b) Connect the intelligent tester to DLC3.
(c) Turn the power switch on (IG).
(d) Select SIGNAL CHECK on the intelligent tester.
HINT:
Every time the test mode DTC erasure conditions are satisfied, the tire pressure warning light comes on for 1 second. Then, the tire pressure warning light blinks at 0.125 second intervals.





(e) Drive the vehicle at 12 mph (20 km/h) or more for 10 seconds or more to check the vehicle speed signal (C2191/91).

(f) Loosen the valve core and rapidly reduce the pressure (at least 40 kPa (0.41 kg/cm^2, 5.8 psi) within 30 seconds or more) to check the transmitter data (C2181/81 to C2184/84).
HINT:
The transmitter ID can be transmitted by rapidly reducing the tire pressure.

(g) Check that the tire pressure warning system test mode DTCs are erased.

TW

SIGNAL CHECK DTC	Test Signal	Signal Check DTC Clear Condition
C2181/81 to C2184/84	Transmitter Data	Receive data from the transmitter which has a registered ID in the tire pressure warning ECU
C2191/91	Vehicle Speed Signal	Vehicle speed of 12 mph (20 km/h) or more is detected for 3 seconds or more

(h) Check the tire pressure warning reset switch.
(1) Press the tire pressure warning reset switch.
(2) Check the tire pressure warning light.

Test Signal	Normal Condition
Tire Pressure Warning Reset Switch	• Switch ON: TPWS indicator comes on • Switch OFF: TPWS indicator blinks

(i) Result
HINT:
After the signal check is completed, check for a DTC and signal check DTC to confirm the system status.

Condition	Procedure
SIGNAL CHECK DTC is output	Repair the faulty part and enter SIGNAL CHECK again
SIGNAL CHECK DTCs are cleared	No problem

(j) End of SIGNAL CHECK
After completing the test mode (SIGNAL CHECK), turn the power switch off and disconnect the intelligent tester.

DTC of SIGNAL CHECK (TEST DIAGNOSIS) function:
If a trouble code is displayed during the test mode DTC check, check the circuit listed for that code. For details of each code, refer to the relevant page listed under respective "DTC No." in the chart.

DTC No.	Detection Item	Trouble Area
C2181/81 (TW-36)	Transmitter ID1 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU
C2182/82 (TW-36)	Transmitter ID2 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU
C2183/83 (TW-36)	Transmitter ID3 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU
C2184/84 (TW-36)	Transmitter ID4 not received	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU
C2191/91 (TW-61)	Vehicle speed signal error	• Vehicle speed sensor • Combination meter assembly • Wire harness or connector • Tire pressure warning ECU

PROBLEM SYMPTOMS TABLE

HINT:

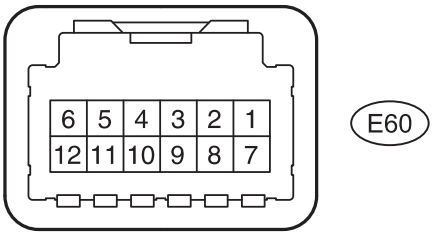
- Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

TIRE PRESSURE WARNING SYSTEM

Symptom	Suspected Area	See page
Tire pressure warning system does not operate.	1. Tire pressure warning valve and transmitter	-
	2. Tire pressure warning antenna and receiver	TW-51
	3. Power source circuit	TW-67
	4. TC and CG terminal circuit	TW-69
	5. Combination meter assembly	ME-14
	6. Tire pressure warning ECU	TW-79
DTC check cannot be done.	1. Power source circuit	TW-67
	2. TC and CG terminal circuit	TW-69
	3. Tire pressure warning ECU	TW-79
Tire pressure warning light malfunctions (Does not light up).	1. Power source circuit	TW-67
	2. Tire pressure warning light circuit	TW-65
	3. Combination meter assembly	ME-14
	4. Tire pressure warning ECU	TW-79
Tire pressure warning light malfunctions (Remains on).	1. Tire pressure check	TW-3
	2. Initialization	TW-17
	3. Tire pressure warning light circuit	TW-65
	4. Combination meter	TW-79
	5. Tire pressure warning ECU	-
Tire pressure warning light malfunctions (Blinking).	1. Check for DTC	TW-28
	2. Tire pressure warning ECU connector poorly connected	-
	3. TC and CG terminal circuit	TW-69
	4. Test mode (SIGNAL CHECK)	TW-19
	5. Tire pressure warning ECU	TW-79
Initialization cannot be done.	1. Test mode (SIGNAL CHECK)	TW-19
	2. Tire pressure reset switch	TW-63
	3. Tire pressure warning ECU	TW-79

TERMINALS OF ECU

HINT:
Inspect the connectors from the back side while the connectors are connected.



P E129452E01

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG (E60-7) - GND (E60-9)	B - W-B	IG power source	Power switch on (IG)	10 to 16 V
SPD (E60-2) - GND (E60-9)	V - W-B	Vehicle speed signal	Power switch on (IG)	Pulse generation (See waveform 1)
SIL (E60-10) - GND (E60-9)	GR - W-B	Diagnostic communication terminal	• Power switch on (IG) • Intelligent tester is connected to DLC3	Pulse generation (See waveform 2)
IND (E60-5) - GND (E60-9)	L - W-B	Tire pressure warning light signal	Power switch on (IG)	10 to 16 V
RF5V (E60-6) - GND (E60-9)	LC - W-B	Tire pressure warning antenna and receiver power source	Power switch on (IG)	4.5 to 5.5 V
CLSW (E60-1) - GND (E60-9)	O - W-B	Tire pressure warning reset switch	• Power switch on (IG) • Tire pressure warning reset switch on	8 to 15V
RDA (E60-12) - GND (E60-9)	G - W-B	Tire pressure warning antenna and receiver signal	• Power switch on (IG) • The tire pressure warning antenna and receiver is not connected	9 to 16 V
GND2 (E60-11) - GND (E60-9)	BR - W-B	Tire pressure warning antenna and receiver ground	Always	Below 1 Ω

Terminal	SIL - Body ground
Tool setting	5 V/DIV., 1 ms./DIV.
Vehicle condition	Communicating using intelligent tester

DIAGNOSIS SYSTEM

1. CHECK BATTERY VOLTAGE

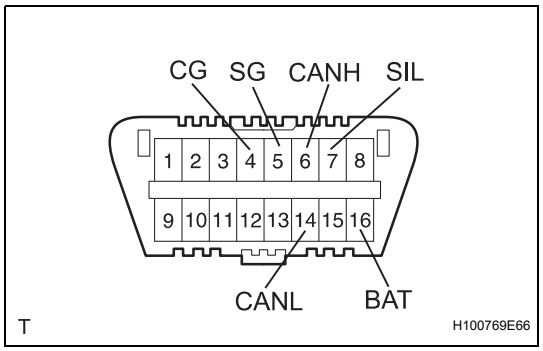
Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the battery before proceeding to the next step.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal NO.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

NOTICE:

***Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, or any other switches or the doors.**

(b) If the result is not as specified, DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

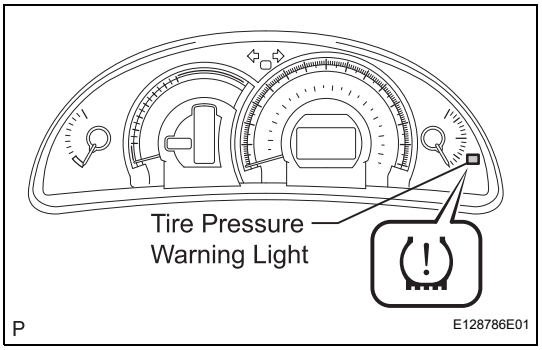
3. DIAGNOSIS SYSTEM

(a) DTCs (Normal mode)

(1) DTCs are memorized in the tire pressure warning ECU and read by the blinks of the tire pressure warning light or by using the intelligent tester (See page TW-28).

(b) Test mode

(1) By switching from normal mode into test mode (input signal check), you can inspect the tire pressure warning antenna and receiver, each tire pressure warning valve and transmitter, and vehicle speed sensor (See page TW-19).



4. CHECK WARNING LIGHT

(a) Turn the power switch on (IG).

(b) Check that the tire pressure warning light comes on for 3 seconds.

If the warning check result is not normal, proceed to the troubleshooting for the tire pressure warning light circuit.

Trouble Area	See procedure
Tire pressure warning light circuit	TW-65

5. TIRE PRESSURE WARNING LIGHT AND INDICATOR CHART

HINT:

The table below indicates the state of the tire pressure warning light and indicator after the power switch is turned on (IG).

	Immediately after turning the power switch on (IG)	Always						
		Warning light output pattern						
	Comes on for 3 sec.	Goes off	Comes on	Blinks (*1)	Blinks (*2)	Blinks (*3)	Blinks (*4)	Outputs DTC

DTC CHECK / CLEAR

1. DTC CHECK (USING SST CHECK WIRE)

(a) Check for DTCs.

(1) Using SST, connect terminals TC and CG of DLC3.
SST 09843-18040

(2) Turn the power switch on (IG).

(3) Read and record any DTCs from the tire pressure warning light on the combination meter. Refer to the illustration on the left for examples of a normal system code and codes 13 and 33.
HINT:

- If the tire pressure warning light does not indicate any DTCs or the normal system code, inspect the tire pressure warning light circuit or TC and CG terminal circuit.

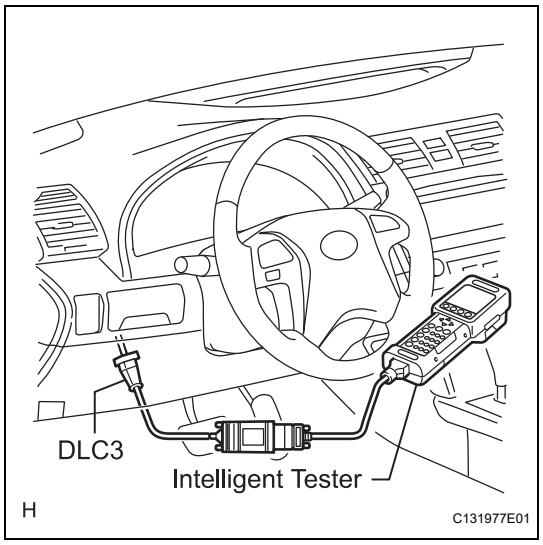
Trouble Area	See procedure
Tire pressure warning light circuit	TW-65
TC and CG terminal circuit	TW-69

- If 2 or more malfunctions are indicated at the same time, the lowest numbered DTC is displayed first.

(4) Refer to the Diagnostic Trouble Code Chart (See page TW-31) for DTC information.

(5) After completing the check, turn the power switch off and remove the SST from DLC3.
SST 09843-18040

TW



2. DTC CHECK (USING INTELLIGENT TESTER)

(a) Check for DTCs.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the power switch on (IG).
  (3) Read the DTCs following the prompts on the tester screen.
    HINT:
    Refer to the intelligent tester operator's manual for further details.

(b) Clear the DTCs.
  HINT:
  After repairing the malfunctions, clear the DTCs.
  (1) Connect the intelligent tester to DLC3.
  (2) Turn the power switch on (IG).
  (3) Clear the DTCs following the prompts on the tester screen.
    HINT:
    Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. DATA LIST

(a) Connect the intelligent tester to DLC3.
(b) Turn the power switch on (IG).
(c) Following the display on the intelligent tester, read "DATA LIST".

2. ACTIVE TEST

Performing the ACTIVE TEST using the intelligent tester allows the meters, indicators and so on to operate without parts removal. Performing the ACTIVE TEST as the first step in troubleshooting is one way to save diagnostic time. It is possible to display the DATA LIST on the intelligent tester during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / METER / ACTIVE TEST.

TW

METER:

Tester Display	Test Part	Control Range	Diagnostic Note
TIRE PRESS WARN	Tire Pressure Warning Light	Tire Pressure Warning Light is OFF / ON	Confirm that the vehicle is stopped with the engine idling

SYSTEM DESCRIPTION

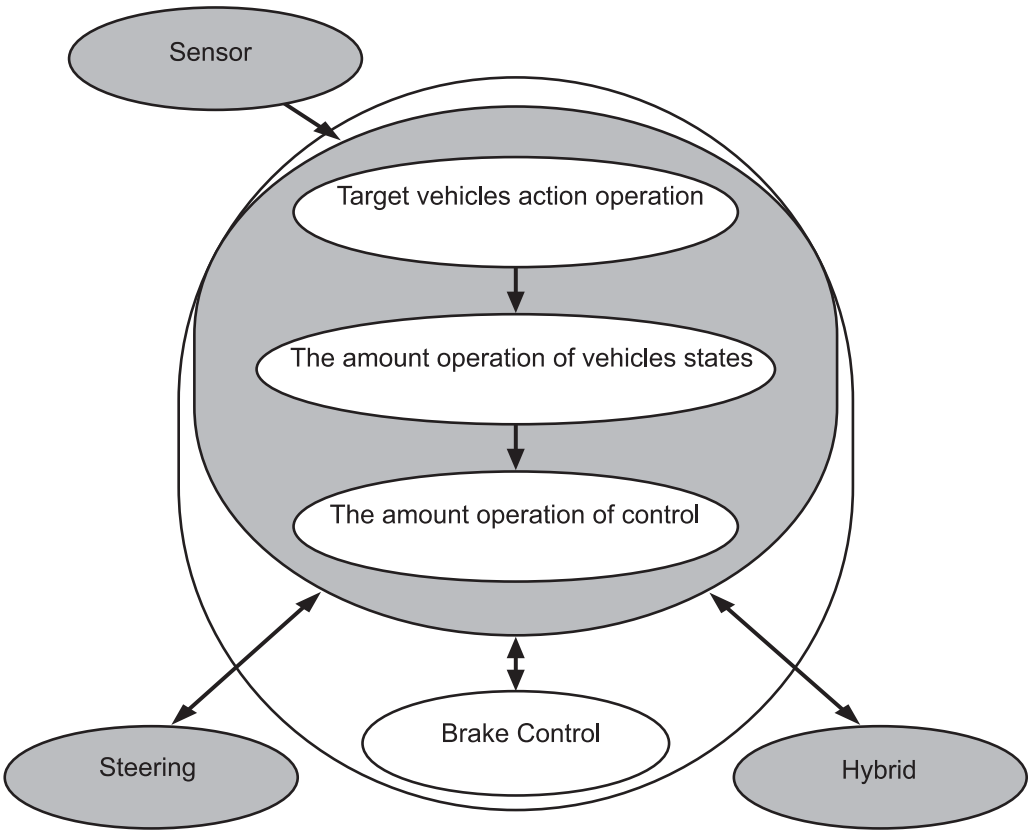
1. VDIM (Vehicle Dynamics Integrated Management) DESCRIPTION

(a) This vehicle is equipped with VDIM. It is a concept of vehicle motion control that integrates brake control, drive force control and steering control.

(b) Conventional vehicles use a combination of independent functions such as ABS, TRAC, VSC and EPS. However, VDIM integrates these systems to improve "drive, turn and stop," the motion performance of the vehicle in other words.

(c) In conventional vehicles, control starts at the limit of the vehicle. However, VDIM exercises control before the limit is reached, creating a smooth vehicle response. This expands the limits of the vehicle, and increases driving pleasure.

VDIM:



Conventional Control (without VDIM):

C106641E08

(d) The VDIM manages all functions, such as the ABS with EBD, the BA, the TRAC, and the VSC. It is operated by the Electronically Controlled Brake system, which regulates a brake fluid pressure. The regenerative brake cooperative control and steering cooperative control functions are also available. Thus the VDIM is able to perform the comprehensive management.

(e) Conventional brake control systems begin to control either the braking or motive force in order to stabilize the vehicle motion when it becomes unstable due to loss of tire traction. In contrast, in order to maintain stable vehicle control, the VDIM commences controlling the brake, hybrid and steering systems in accordance with changes in balance before the vehicle becomes unstable. As a result, smooth vehicle control is achieved.

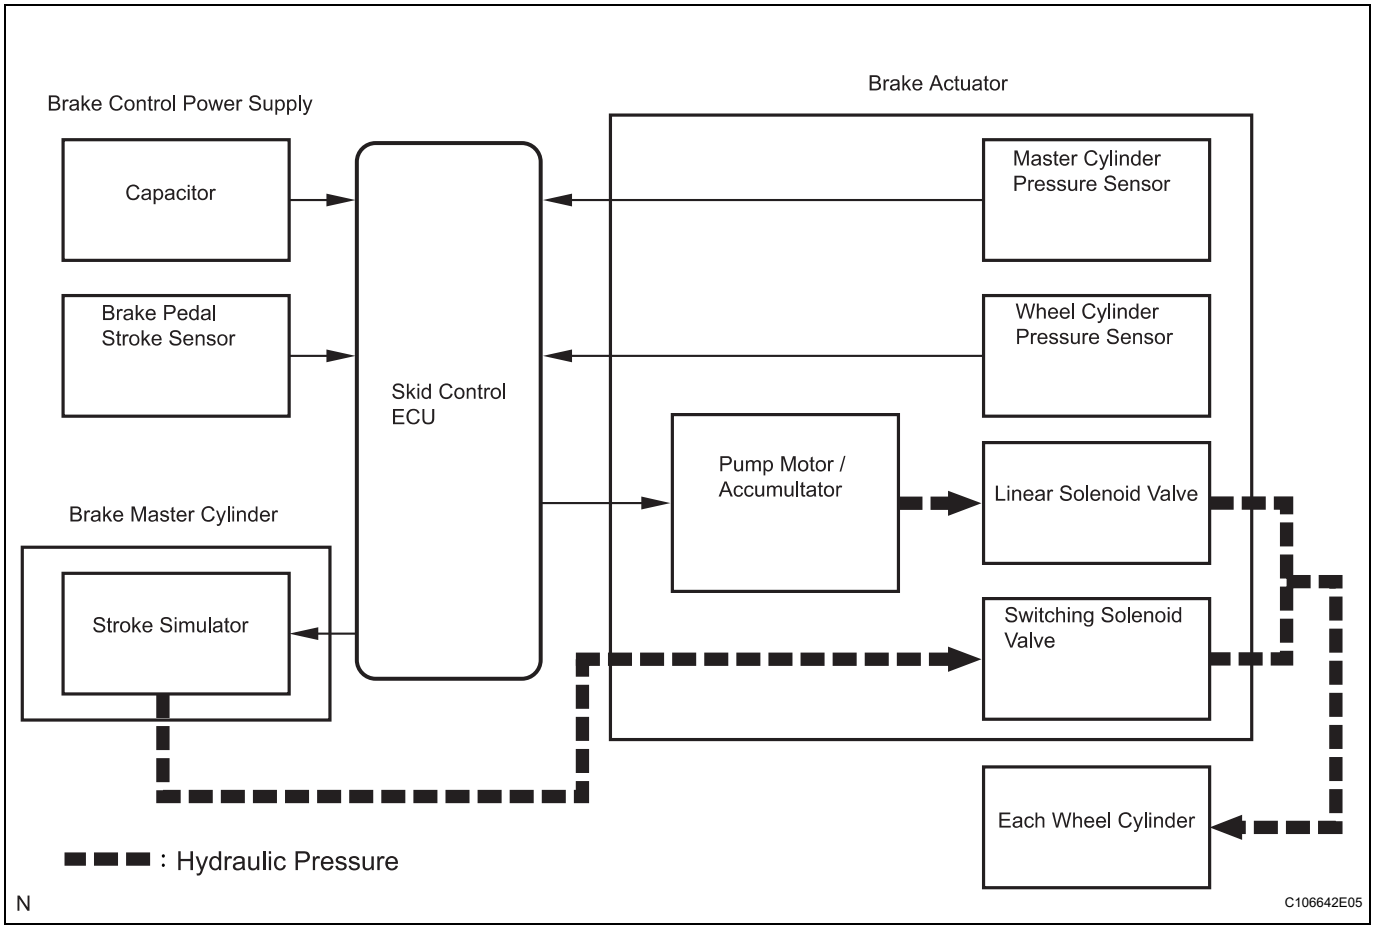
(f) Conventional brake control systems manage all related functions, such as the ABS with EBD, the BA, the TRAC and the VSC independently, according to the vehicle dynamics. In contrast, the VDIM provides smooth control by seamlessly integrating all those functions.

2. ELECTRONICALLY CONTROLLED BRAKE SYSTEM DESCRIPTION

(a) The system detects the degree of brake pedal operation with a brake pedal stroke sensor and two master cylinder pressure sensors, and calculates the optimum hydraulic brake force. The hydraulic pressure source is adjusted based on this so that the optimum hydraulic control is independently performed on all four wheels.

(b) Meanwhile, the Electronically Controlled Brake system performs control of the normal brakes, ABS, TRAC, VSC and BA in accordance with the operations of the driver.

(c) There is a hydraulic backup mechanism that applies master cylinder pressure generated by human power to the wheel cylinder when the brake control stops. In addition, as a fail safe mechanism, when the brake control is malfunctioning, the system excludes the malfunctioning sections and continues to perform brake control on the normal sections. A power backup unit (brake control power supply) is also used to ensure a stable supply of power to the system.



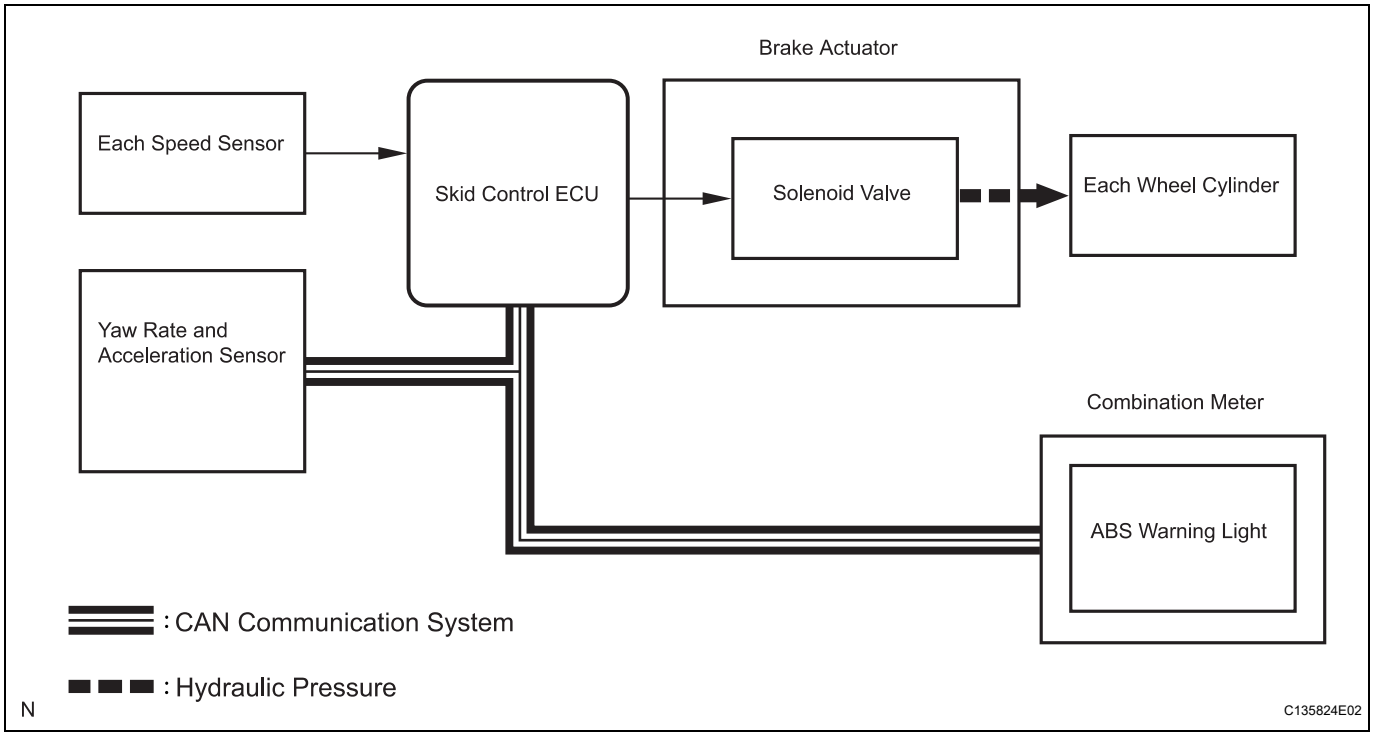
3. FUNCTION DESCRIPTION

HINT:

The yaw rate sensor and acceleration sensor are combined in a single unit. This unit communicates with the skid control ECU via CAN communication.

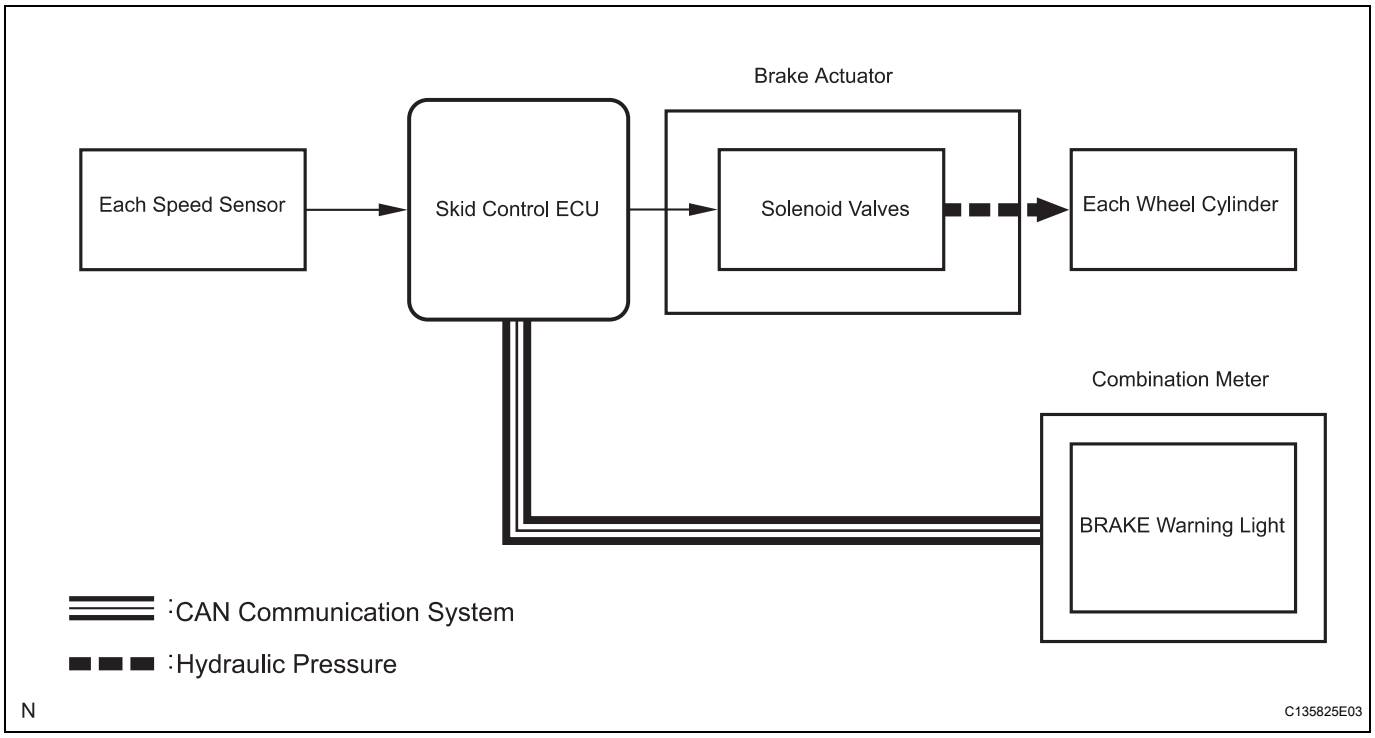
BC

(a) ABS (Anti-lock Brake System)
The ABS helps prevent the wheels from locking when the brakes are applied suddenly and firmly or applied on a slippery surface.



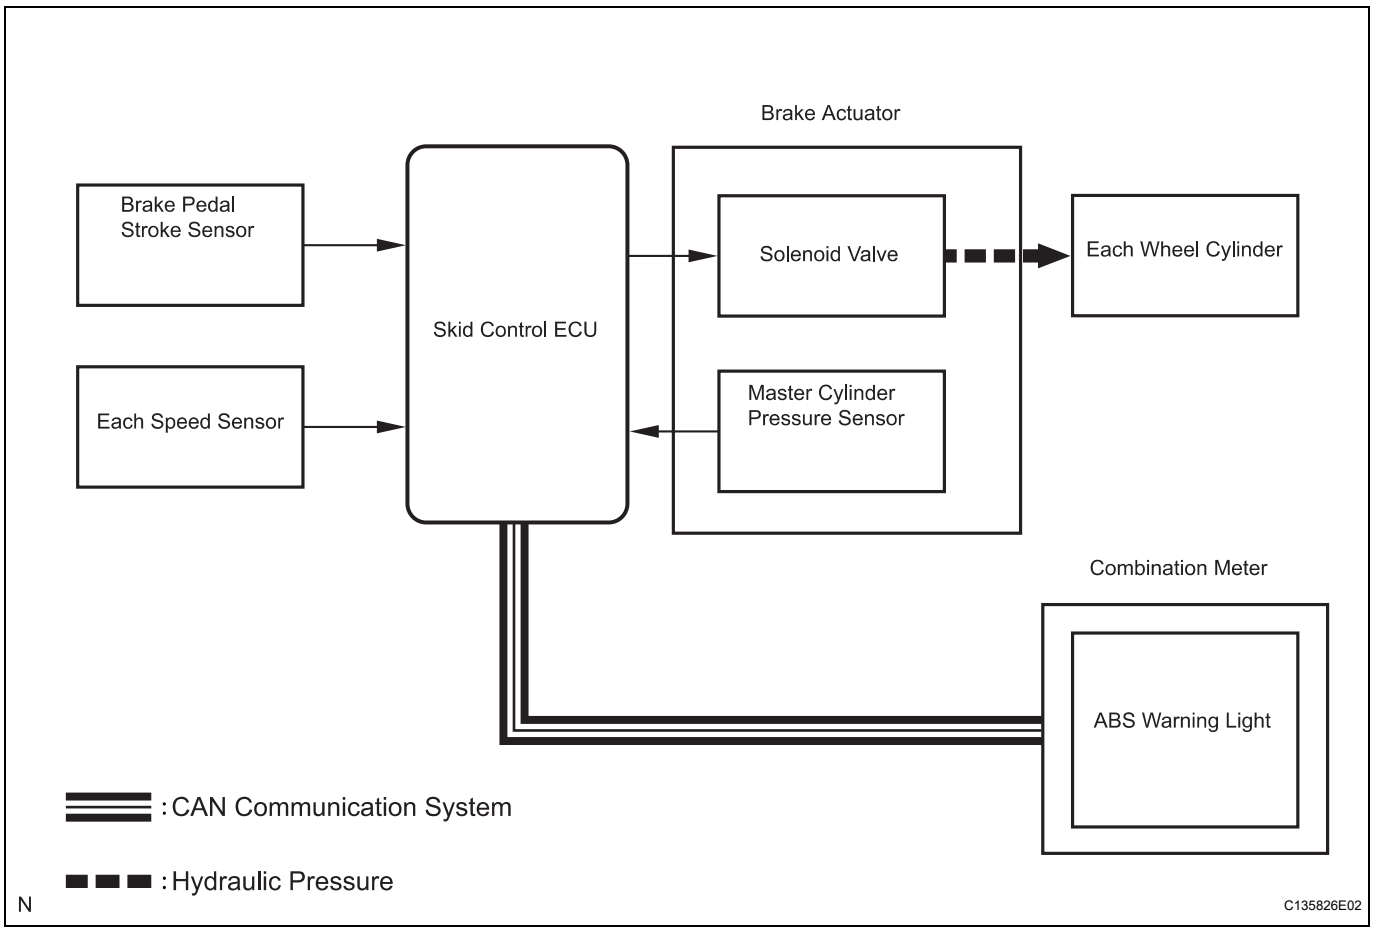
(1) Operation description
The skid control ECU detects wheel lock based on speed signals it receives from the wheel speed sensors. Based on this information, the skid control ECU controls the solenoid valves. The solenoid valves are used to prevent wheel lock by controlling the hydraulic pressure applied to the brakes at each wheel. The ABS warning light will come on when the system is malfunctioning.

(b) EBD (Electronic Brake force Distribution)
The EBD control utilizes ABS, performing proper brake force distribution between the front and rear wheels in accordance with driving conditions.
When braking while cornering, it also controls the brake forces of the right and left wheels, helping to maintain vehicle behavior.



(1) Operation description
The skid control ECU receives a speed signal from each wheel speed sensor, and uses these signals to detect locking of the wheels. The ECU uses this information in order to determine appropriate control of the solenoid valves.
The solenoid valves control the hydraulic pressure applied to the brake cylinder at each wheel. In this way, the solenoid valves are used to control the brake power split between the front and rear, and left and right wheels.
The BRAKE warning light will come on if there is a malfunction in the EBD system.

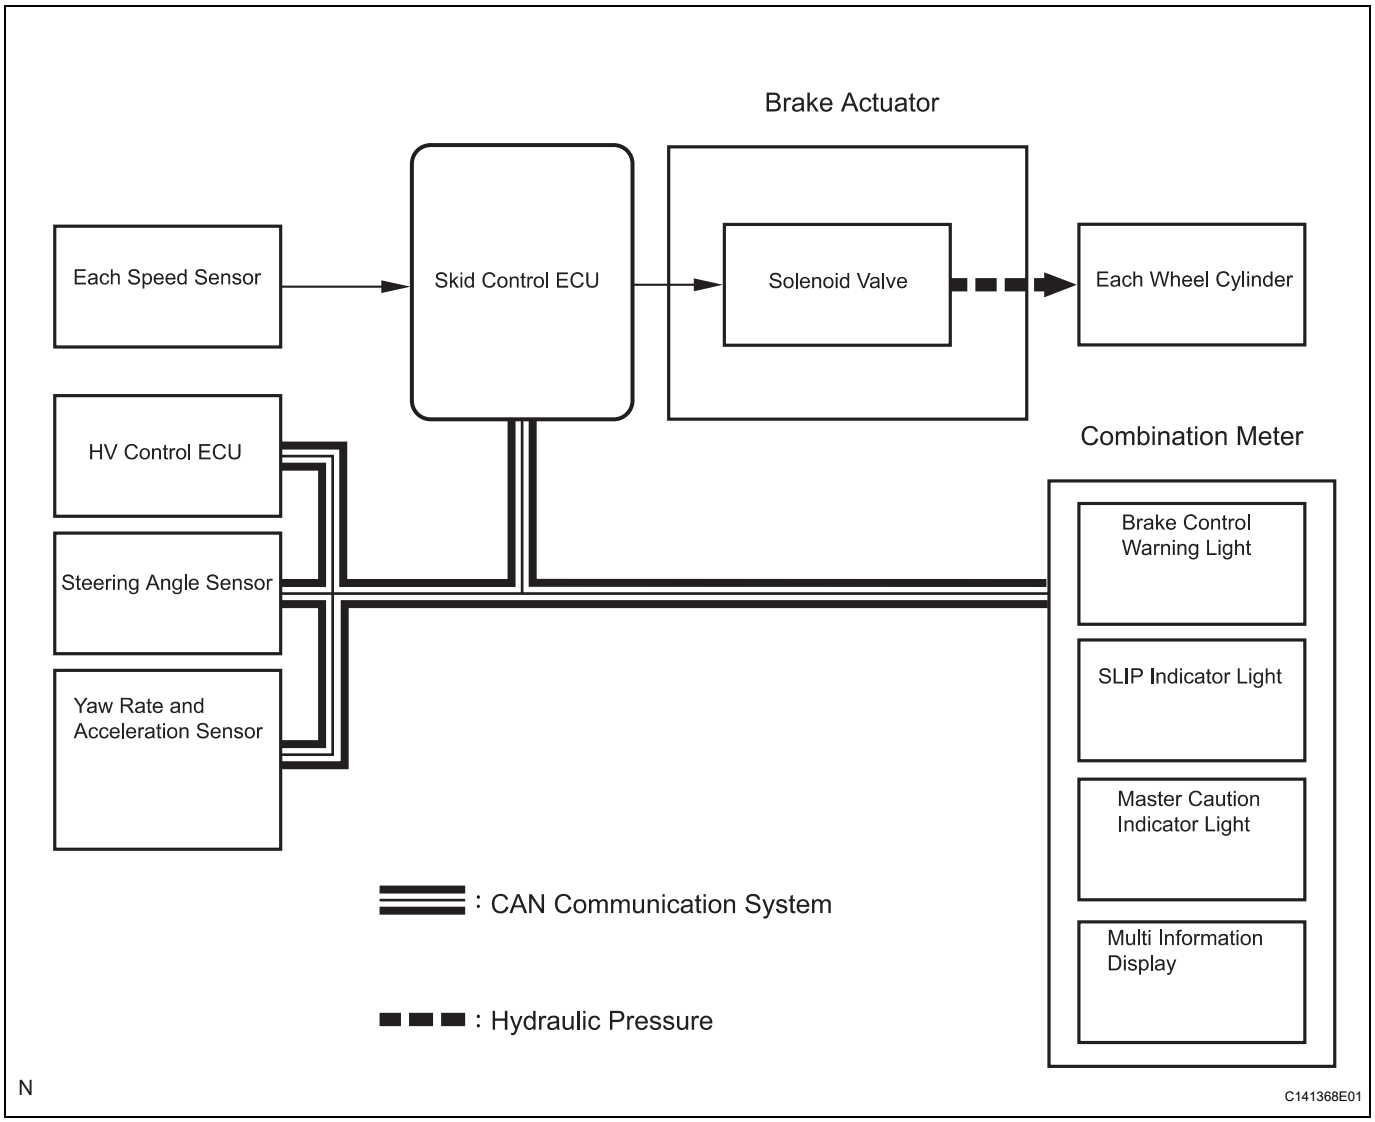
(c) BA (Brake Assist)
The primary purpose of the brake assist system is to provide auxiliary brake force to assist the driver who cannot generate a brake force large enough during emergency braking, thus helping to maximize the brake performance of the vehicle.



(1) Operation description
The skid control ECU receives the brake pedal stroke sensor signal and the oil pressure signal from the master cylinder pressure sensor to determine whether brake assist is necessary or not. If brake assist is deemed necessary, the skid control ECU will send control signals to the solenoid. The solenoid valve then controls the pressure applied to each wheel cylinder.
The ABS warning light comes on to indicate a malfunction in the BA system.

BC

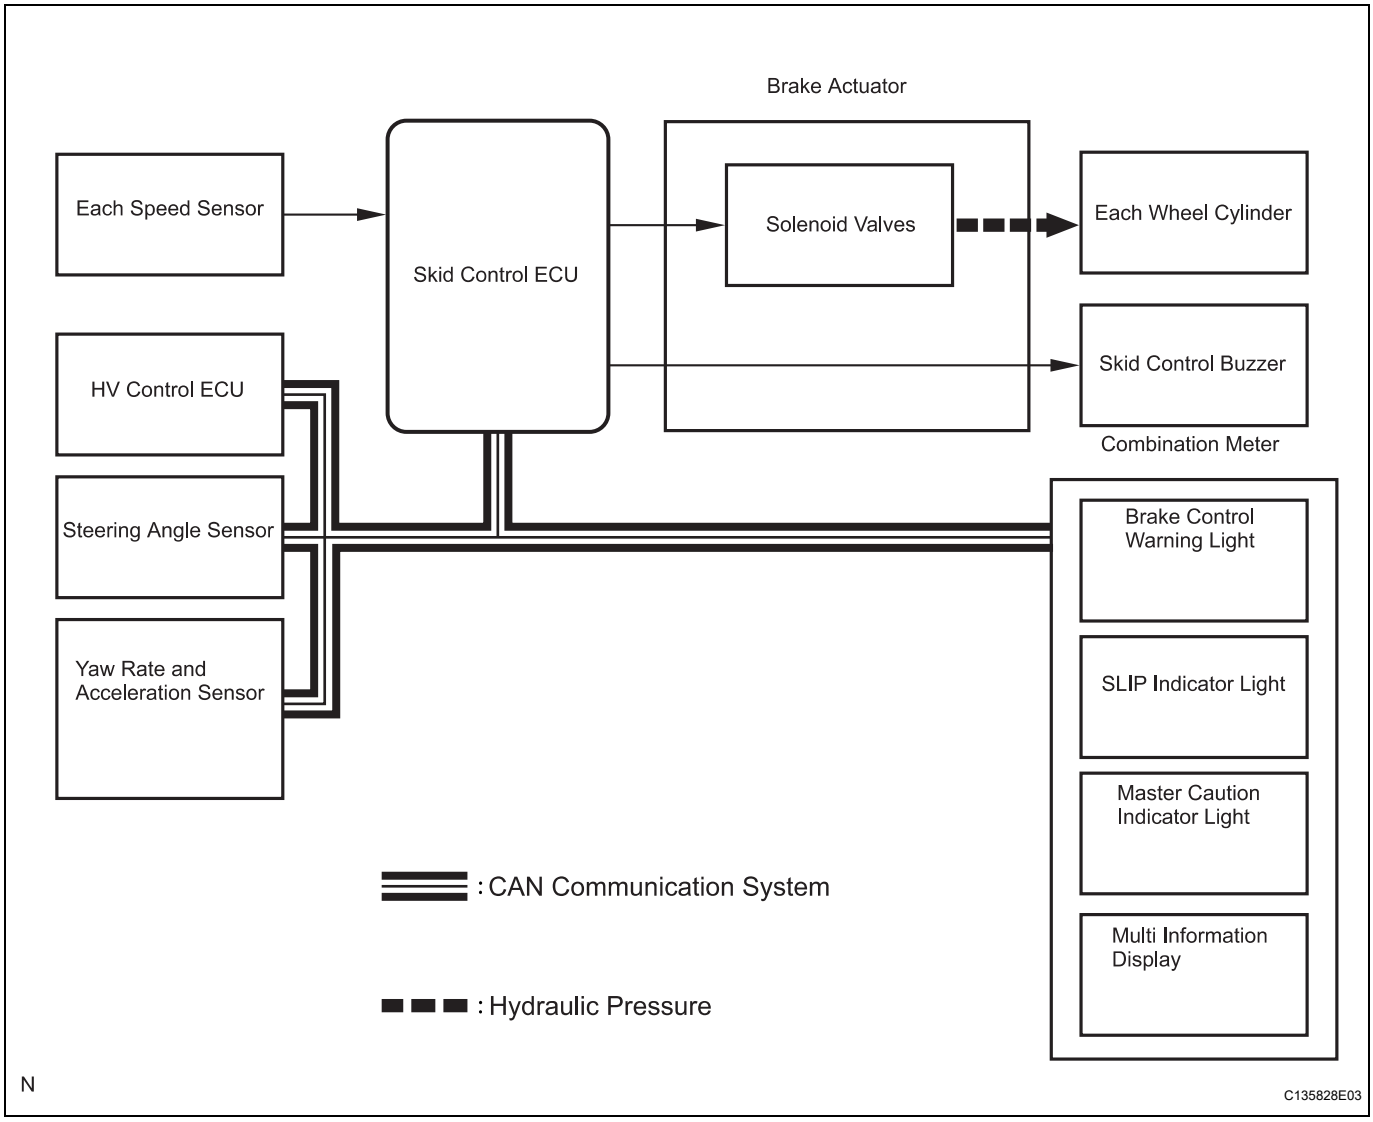
(d) TRAC (Traction Control)
The TRAC system helps prevent the drive wheels from slipping when the driver depresses the accelerator pedal excessively while starting off or accelerating on a slippery surface.



(1) Operation description
The skid control ECU detects wheelspin by receiving signals from each speed sensor and the HV control ECU via CAN communication. The skid control ECU controls engine torque with the HV control ECU via CAN communication and brake hydraulic pressure through the solenoid valve.
The SLIP indicator light blinks when the system is operating. When there is a malfunction in the TRAC system, the brake control warning, master caution indicator and SLIP indicator lights come on and DTC will appear on the multi information display.

BC

(e) VSC (Vehicle Stability Control)
The VSC system helps prevent the vehicle from slipping sideways as a result of strong front or rear wheel skid during cornering.



(1) Operation description
The skid control ECU determines the vehicle operating conditions based on signals received from the wheel speed sensors, yaw rate and acceleration sensor, and steering angle sensor. The skid control ECU sends signals via CAN communication to the HV control ECU in order to control engine torque. The skid control ECU controls brake hydraulic pressure using the solenoid valves.
The SLIP indicator light will blink, and the skid control buzzer will sound when the system is operating. If a malfunction occurs in the VSC system, both the brake control warning, master caution indicator and the SLIP indicator lights will come on. In addition, the DTC will appear on the multi information display.

4. STEERING COOPERATION CONTROL

(a) The VDIM system effects coordinated control consisting of VSC and EPS (Electronic Power Steering). By integrating these preventive safety functions, the VDIM system ensures higher driving stability and maneuverability performance.

(b) If the vehicle loses stability due to a slippage, this function effects brake control by applying hydraulic pressure to the wheels. At the same time, the EPS provides steering torque assist control to facilitate the driver's steering maneuver.

5. FAIL SAFE

(a) When a failure occurs in the ABS with BA, TRAC and VSC systems, the ABS warning, brake control warning, and SLIP indicator lights come on and the DTC will be displayed on the multi information display and ABS with BA, TRAC and VSC operations will be prohibited. In addition, when there is a failure that disables the EBD operation, the BRAKE warning light also comes on and the EBD operation is prohibited.

(b) If control is prohibited due to a malfunction during operation, control will be disabled gradually. This is to avoid sudden vehicle instability.

6. INSPECTION MODE

(a) VSC operation can be disabled by operating the intelligent tester (See page IN-5).
HINT:
Refer to the intelligent tester operator's manual for further details.

7. FUNCTION OF COMPONENTS

Components	Functions
Skid control ECU	Processes the signals from each sensor to perform brake control for ABS, TRAC, and VSC. In addition, it communicates with the HV control ECU to output a control signal.
ABS main relay (ABS NO. 1, 2 relay)	Controlled by the skid control ECU. In addition to supplying power to each solenoid, it supplies power to the skid control ECU.
ABS motor relay (ABS MTR1, 2 relay)	Controlled by the skid control ECU. Supplies power to the pump motor.
Speed sensor	Detects the wheel speed and inputs the results to the skid control ECU.
Stop light switch	Detects the brake operating conditions and inputs the results to the skid control ECU. It supplies power to the skid control ECU.
Brake pedal stroke sensor	Detects the brake pedal stroke volume and inputs the results to the skid control ECU.
Brake control power supply	Provides the system with a supplementary power supply by discharging the electric charge of the capacitor. It happens when an electric charge is accumulated in the capacitor in the unit and the vehicle power voltage (12 V) is reduced.
Skid control buzzer	• Sounds intermittently to inform the driver that the VSC is active. • Sounds continuously to warn the driver of a reduction in accumulator hydraulic pressure in the brake actuator, an abnormality in the power supply system, or a reduction in the vehicle power voltage (12 V).
HV control ECU	Controls the engine output during the operation of TRAC and VSC by communicating with the skid control ECU.
Yaw rate and acceleration sensor	Detects the yaw rate (axial rotation) and the forward, rearward and lateral acceleration, and inputs the results to the skid control ECU.

Components	Functions
Steering angle sensor	Detects the steering angle and direction, and outputs the results to the skid control ECU through CAN communication.
Master cylinder	Generates pressure in accordance with the force of the brake operation.
Brake fluid reservoir	Stores brake fluid for the master cylinder system and power supply system.
Brake fluid level warning switch	Detects a reduction in the level of the brake fluid in the reservoir.
Stroke simulator	Generates a natural pedal stroke in accordance with the pedal force of the driver during system operation (integrated with the master cylinder).
Stroke simulator cut valve (SCSS)	Sends brake fluid pressure generated in master cylinder to stroke simulator during system control.
Brake actuator	Controls the hydraulic pressure of each of the four wheel cylinders using the output signal of the skid control ECU.
Pump motor	Pumps up the brake fluid from the reservoir and supplies the accumulator with high hydraulic pressure.
Accumulator	Accumulates for the hydraulic pressure that was generated by the pump.
Accumulator pressure sensor (PACC)	Built into the brake actuator to detect the accumulator hydraulic pressure.
Relief valve	Prevents excessive high pressure in the power supply system. It relieves the system by sending brake fluid to the reservoir when the pump has operated continuously, for example, during an accumulator hydraulic pressure sensor malfunction.
Master cylinder pressure sensor (PMC1, PMC2)	Built into the brake actuator to detect the pressure of the master cylinder and input the results to the skid control ECU.
Wheel cylinder pressure sensor (PFR, PFL, PRR, PRL)	Built into the brake actuator to detect the brake hydraulic pressure of each wheel cylinder.
Switching solenoid valve (SMC1, SMC2)	Switches the brake hydraulic pressure route according to whether normal brakes are used, or VDIM (ABS, TRAC and VSC) control is used.
Linear solenoid valve (SLA##, SLR##)	Controls the wheel cylinder hydraulic pressure during normal brake operation, and VDIM (ABS, TRAC and VSC) control. SLA## are solenoids for controlling pressure increases, while SLR## are solenoids for controlling pressure decreases.
ABS warning light	• Comes on to inform the driver that a malfunction in the ABS or BA has occurred. • Blinks to output DTC.
BRAKE warning light	Comes on to inform the driver that the parking brake is on when the system is normal or the brake fluid has decreased.
Brake control warning light	Comes on to inform the driver that a malfunction in the Electronically Controlled Brake or VSC system has occurred.
SLIP indicator light	Blinks to inform the driver that TRAC and VSC are operating.
Master caution indicator light	Comes on to inform the driver that a malfunction in the Electronically Controlled Brake or VSC system has occurred.
Multi information display	• Displays to inform the driver that a malfunction in the Electronically Controlled Brake or VSC system has occurred. • Displays output DTC.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
*: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS

(a) Interview the customer and confirm the trouble (See page IN-72).

NEXT

3 CHECK DTC AND FREEZE FRAME DATA*

(a) Check and record a DTC and Freeze Frame Data.
(b) Clear the DTC and Freeze Frame Data (See page BC-57 for DTC Check/Clear, or BC-59 for Freeze Frame Data).
(c) Reconfirm the DTC.
(1) Reconfirm the DTC based on the recorded DTC and Freeze Frame Data (See page BC-57 for DTC Check/Clear, or BC-59 for Freeze Frame Data).
HINT:
If any of the DTCs U0123/62, U0124/95, U0126/63, and U0293/59 is output together with a CAN communication DTC, first check the appropriate sensor for a momentary open circuit (See page BC-23).

Result

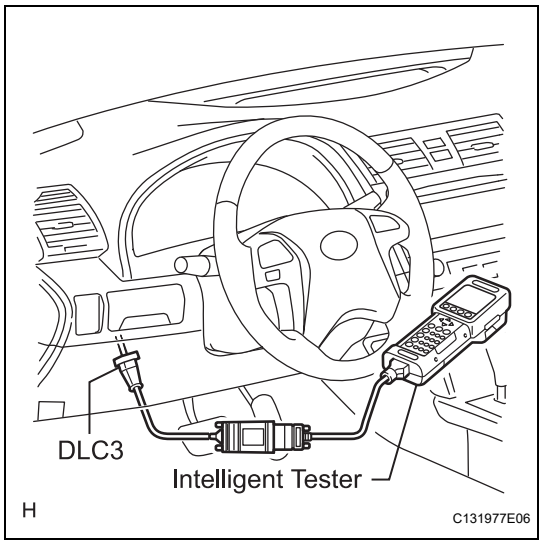
CHECK FOR INTERMITTENT PROBLEMS

1. CHECK FOR INTERMITTENT PROBLEMS

HINT:

A momentary interruption (open circuit) in the connectors and/or wire harness between the sensors and ECUs can be detected using the ECU Data List function of the intelligent tester.

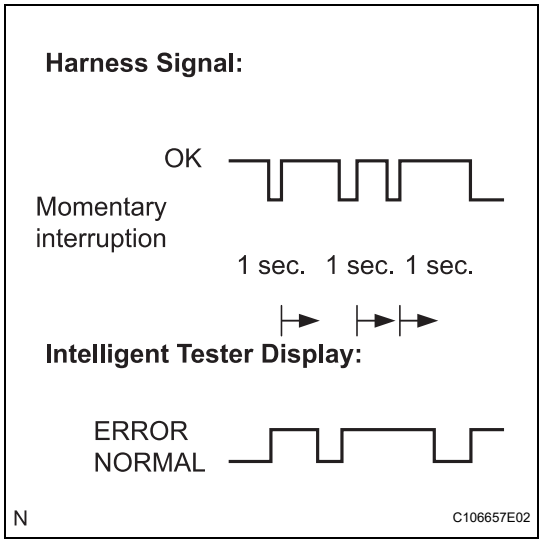
(a) Turn the power switch off and connect the intelligent tester to the DLC3.



(b) Turn the power switch on (IG). Follow the directions on the intelligent tester to display the Data List and select areas where momentary interruption should be monitored.

HINT:

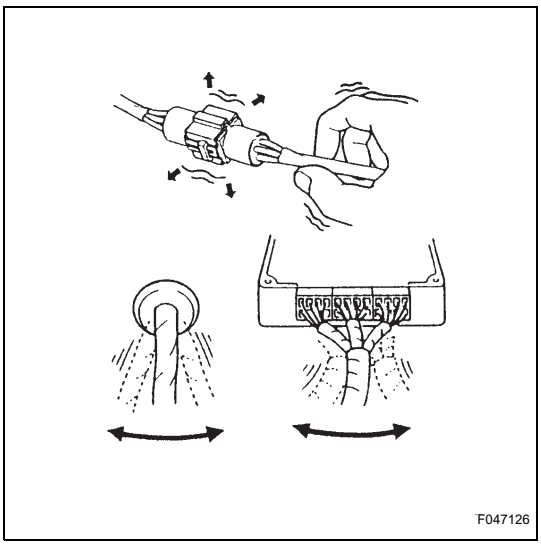
- A momentary interruption (open circuit) cannot be detected for 3 seconds after the power switch is turned on (IG) (initial check).
- If the status remains on (ERROR displayed), check the continuity between the ECU and the sensors, or between the ECUs.
- The ERROR display on the intelligent tester remains on for 1 second after the harness signal changes from momentary interruption (open circuit) to normal condition.



BC

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RR SPD OPN	RR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RL SPD OPN	RL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
HV COM OPN	HV communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
YAW RATE OPN	Yaw rate sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
DECELERAT OPN	Acceleration sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
STEERING OPN	Steering angle sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
M/C OPN	Master cylinder pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
M/C2 OPN	Master cylinder pressure sensor 2 open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
STROKE OPN	Stroke sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
STROKE OPN 2	Stroke sensor 2 open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FR W/C OPN	FR wheel cylinder pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
FL W/C OPN	FL wheel cylinder pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RR W/C OPN	RR wheel cylinder pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
RL W/C OPN	RL wheel cylinder pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-
ACC OPEN	Accumulator pressure sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal	-



(c) While observing the screen, gently jiggle the connector or wire harness between the ECU and sensors, or between the ECUs.

Result:

ERROR display does not change.

HINT:

The connector and/or wire harness will be in momentary interruption (open circuit) if the display changes. Repair or replace the connector and/or wire harness as one of them is faulty.

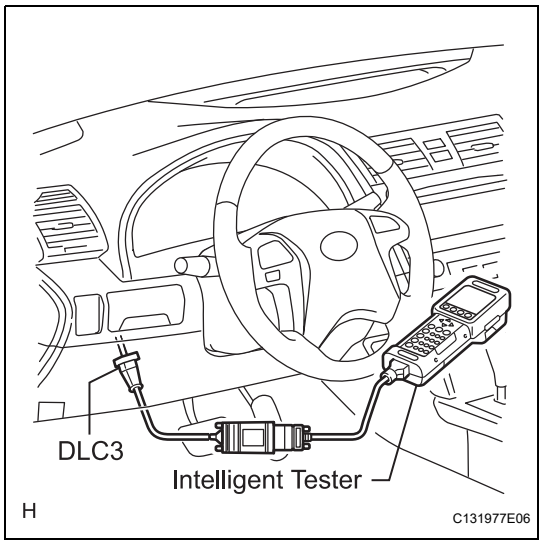
BC

INITIALIZATION

1. DESCRIPTION

(a) Perform initialization of linear solenoid valve and calibration when the skid control ECU, brake actuator or brake pedal stroke sensor is replaced. Follow the procedure to perform initialization.
HINT:
- If there is a problem with the auxiliary battery (12 V) voltage, initialization of linear solenoid valve and calibration cannot be completed normally. Make sure to check the auxiliary battery voltage before performing initialization of linear solenoid valve and calibration.
- If the actuator's temperature is high, initialization of linear solenoid valve and calibration may not be completed normally. In such a case, wait until the temperature decreases and then perform initialization of linear solenoid valve and calibration.
- If the power switch is turned off, the brake pedal is operated or vehicle speed is input while the linear solenoid valve offset learning is being performed, the learning will be cancelled.

Replacement Parts	Necessary Operation
Skid control ECU	Initialization of linear solenoid valve and calibration
Brake actuator assembly	1. Bleed air 2. Clearing stored value of linear solenoid valve and calibration data 3. Initialization of linear solenoid valve and calibration
• Brake pedal stroke sensor • Brake pedal	1. Inspection and adjustment of brake pedal height 2. Clearing stored value of linear solenoid valve and calibration data 3. Initialization of linear solenoid valve and calibration



2. PERFORM INITIALIZATION OF LINEAR SOLENOID VALVE AND CALIBRATION (INTELLIGENT TESTER)

(a) Clear the stored value of linear solenoid valve and calibration data.
(1) Turn the power switch off.
(2) Connect the intelligent tester to the DLC3.
(3) Move the shift lever to the P position.
(4) Turn the power switch on (IG) with the brake pedal released.
(5) Clear the stored value of initialization of linear solenoid valve and calibration following the screen.
HINT:
Refer to the intelligent tester operator's manual for further details.
(6) Using the intelligent tester, perform initialization of linear solenoid valve and calibration.

(b) Perform the initialization of linear solenoid valve and calibration.
(1) Turn the power switch off.
(2) Connect the intelligent tester to the DLC3.
(3) Move the shift lever to the P position.

BC

(4) Turn the power switch on (IG) with the brake pedal released.
NOTICE:
- **If the linear solenoid valve offset learning is performed without turning the power switch on (IG), the learning process may not be completed properly because of insufficient auxiliary battery voltage.**
- **When the linear solenoid valve offset learning is interrupted, or the learning process is performed with the shift lever not in the P position, DTC C1345/66 will be stored (See page BC-190).**

(5) Set the intelligent tester to Test Mode (select "ECB* UTILITY").
*: Electronically Controlled Brake
HINT:
Refer to the intelligent tester operator's manual for further details.

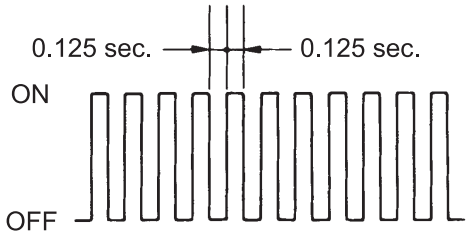
(6) Leave the vehicle stationary without depressing the brake pedal for 1 or 2 minutes.

Tester Display:

*: Electronically Controlled Brake

N C145966E01

Blinking Pattern in TEST MODE:



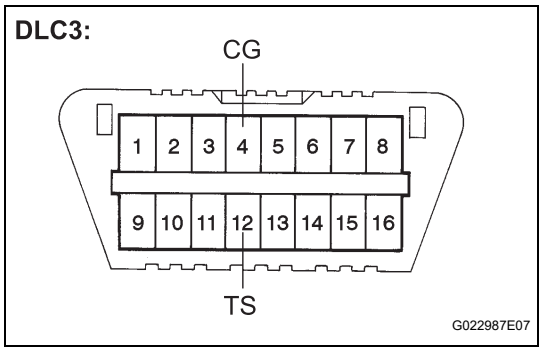
BR03904E15

(7) Check that the interval between blinks of the brake control warning light changes from 1 second to 0.25 seconds.
HINT:
- The time needed to complete initialization of linear solenoid valve and calibration varies depending on auxiliary battery voltage.
- The brake control warning light blinks at 1 second intervals during initialization of linear solenoid valve and calibration and changes to the Test Mode display.
- The brake control warning light blinks at 0.25 seconds intervals if the Test Mode is normal.

(8) Check that DTC C1345/66 which indicates trouble with stroke sensor zero point learning is not output when the brake control warning light changes to the Test Mode display upon initialization of linear solenoid valve and calibration completion.

(9) Enter the normal mode from the Test Mode following the intelligent tester prompts.
HINT:
Refer to the intelligent tester operator's manual for further details.

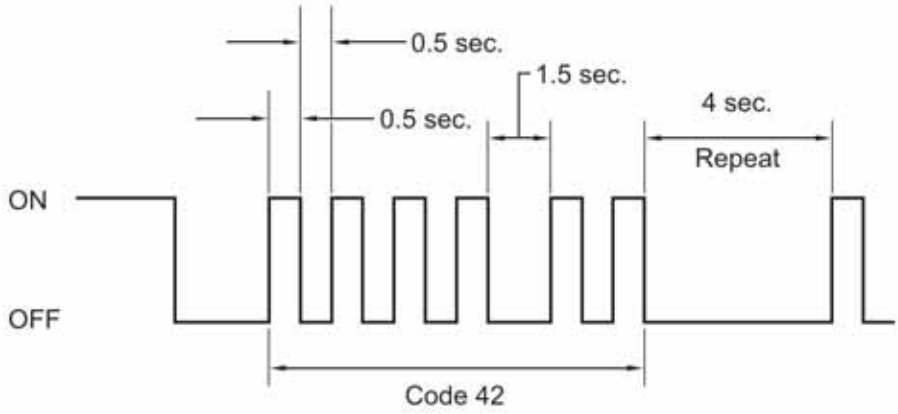
BC



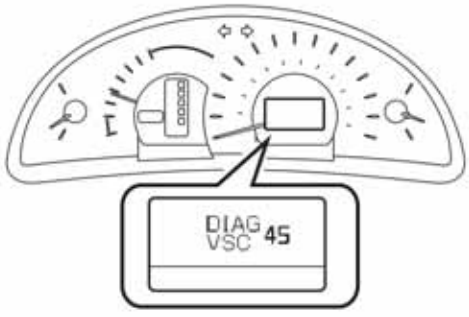
3. PERFORM INITIALIZATION OF LINEAR SOLENOID VALVE AND CALIBRATION (SST CHECK WIRE)

(a) Clear the stored value of linear solenoid valve and calibration data.
  (1) Turn the power switch off.
  (2) Move the shift lever to the P position.
  (3) Turn the power switch on (IG) with the brake pedal released.
  (4) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.
  SST 09843-18040
  (5) Check that no codes other than ABS code 42, VSC code 45 and Electronically Controlled Brake code 48, 66, or 95 are stored in the diagnostic system.

Blinking Pattern of ABS and Electronically Controlled Brake Code (Example Code 42):



Display of VSC Code:



N

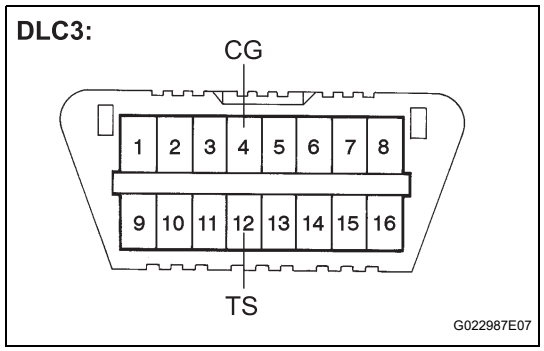
C135830E02

HINT:
The ABS warning, brake control warning lights and multi information display do not indicate the normal system code.

BC

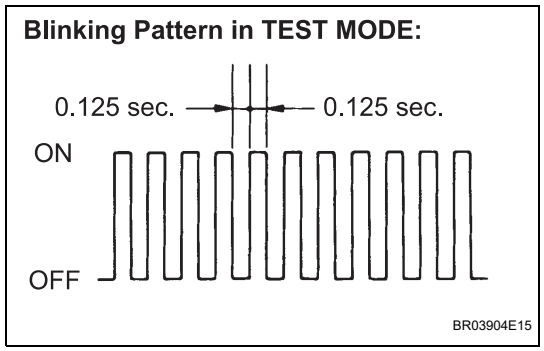
(6) Remove the SST from the terminals of the DLC3.
(7) Using the check wire, perform initialization of linear solenoid valve and calibration.

(b) Perform initialization of linear solenoid valve and calibration.
(1) Turn the power switch off.



(2) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040
(3) Move the shift lever to the P position.
(4) Turn the power switch on (IG) with the brake pedal released.
NOTICE:
- **If the linear solenoid valve offset learning is performed without turning the power switch on (IG), the learning process may not be completed properly because of insufficient auxiliary battery voltage.**
- **When the linear solenoid valve offset learning is interrupted, or the learning process is performed with the shift lever not in the P position, DTC C1345/66 will be stored (See page BC-190).**

(5) Leave the vehicle stationary without depressing the brake pedal for 1 or 2 minutes.



(6) Check that the interval between blinks of the brake control warning light changes from 1 second to 0.25 seconds.
HINT:
- The time needed to complete initialization of linear solenoid valve and calibration varies depending on the auxiliary battery voltage.
- The brake control warning light blinks at 1 second intervals during initialization of linear solenoid valve and calibration and changes to the Test Mode display.
- The brake control warning light blinks at 0.25 seconds intervals if the Test Mode is normal.

(7) Check that DTC C1345/66 which indicates trouble with stroke sensor zero point learning is not output when the brake control warning light changes to the Test Mode display upon initialization of linear solenoid valve and calibration completion.
(8) Turn the power switch off and disconnect the SST from the DLC3.

CALIBRATION

1. DESCRIPTION

- After replacing the VSC relevant components or performing "Front wheel alignment adjustment", clear and read the sensor calibration data.
- Follow the chart to perform calibration.

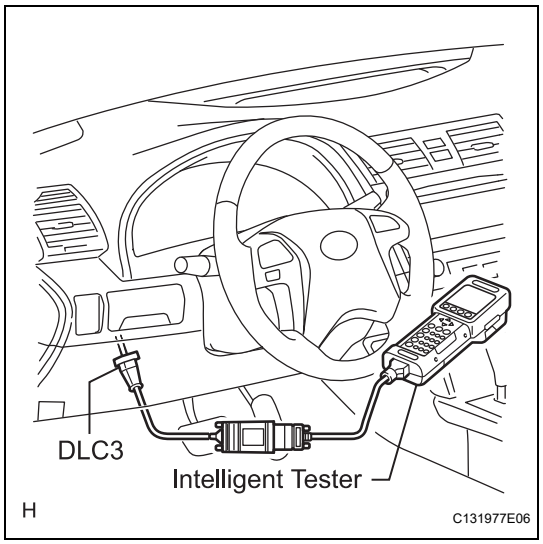
Replacing Parts / Operation	Necessary Operation
Skid control ECU	Yaw rate and acceleration sensor zero point calibration.
Yaw rate and acceleration sensor	1. Clearing zero point calibration data. 2. Yaw rate and acceleration sensor zero point calibration.
Front wheel alignment adjustment	1. Clearing zero point calibration data. 2. Yaw rate and acceleration sensor zero point calibration.

2. PERFORM ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (INTELLIGENT TESTER)

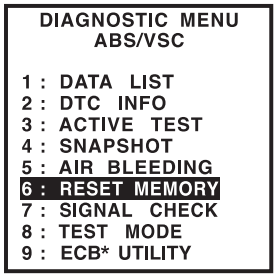
NOTICE:

- **While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not turn the power switch on (READY).)**
- **Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).**

(a) Clear the zero point calibration data.
  (1) Turn the power switch off.
  (2) Connect the intelligent tester to the DLC3.
  (3) Check that the steering wheel is centered and move the shift lever to the P position.
  (4) Turn the power switch on (IG).



Tester Display:



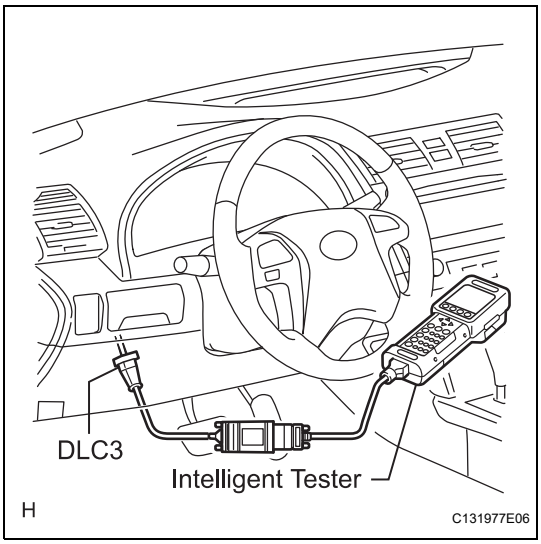
*: Electronically Controlled Brake

N C145967E01

(5) Operate the intelligent tester to erase the codes (select "RESET MEMORY").
  HINT:
  Refer to the intelligent tester operator's manual for further details.
(6) Turn the power switch off.

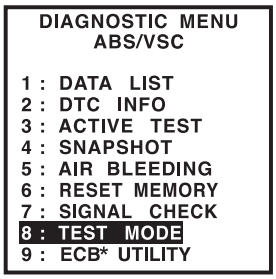
(b) Perform zero point calibration of the yaw rate and acceleration sensor.
  (1) Turn the power switch off.
  (2) Check that the steering wheel is centered and move the shift lever to the P position.
  NOTICE:
  DTCs C1210/36 and C1336/98 will be recorded if the shift lever is not in the P position (See page BC-107).

BC



(3) Connect the intelligent tester to the DLC3.
(4) Turn the power switch on (IG).

Tester Display:



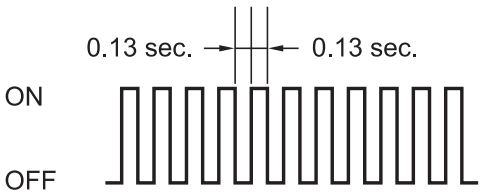
*: Electronically Controlled Brake

N C145969E01

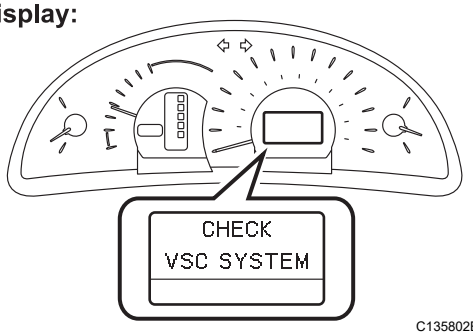
(5) Set the intelligent tester to Test Mode (select "TEST MODE").
HINT:
Refer to the intelligent tester operator's manual for further details.
(6) After the Test Mode has been entered, keep the vehicle stationary on a level surface for 2 seconds or more.

TEST MODE

Blinking Pattern:



Display:



N C135802E01

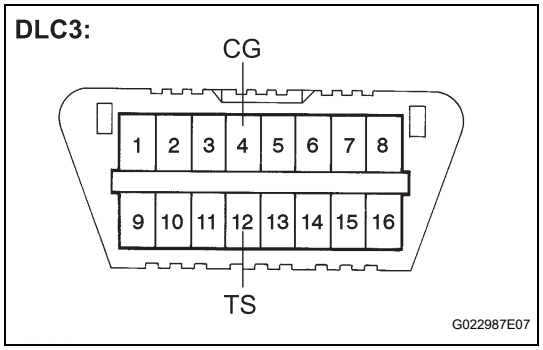
(7) Check that the ABS warning, brake control warning and master caution indicator lights blink and "CHECK VSC SYSTEM" is displayed on the multi information display (Test Mode).
HINT:
- The SLIP indicator remains on during Test Mode because TRAC is prohibited.
- If the ABS warning, brake control warning and master caution indicator lights do not blink and/or "CHECK VSC SYSTEM" is not displayed on the multi information display, perform zero point calibration again.
- The zero point calibration is performed only once after the system enters the Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(8) Turn the power switch off and disconnect the intelligent tester.

3. PERFORM ZERO POINT OF YAW RATE AND ACCELERATION SENSOR (SST CHECK WIRE)

NOTICE:

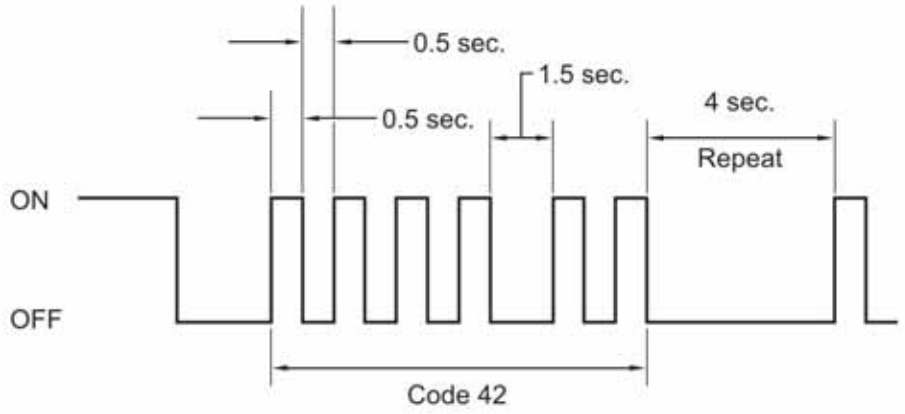
- **While obtaining the zero point, keep the vehicle stationary and do not vibrate, tilt, move, or shake it. (Do not turn the power switch on (READY).)**
- **Be sure to perform this procedure on a level surface (with an inclination of less than 1 degree).**



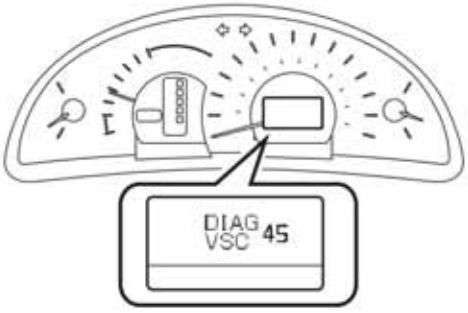
(a) Clear the zero point calibration data.
  (1) Turn the power switch off.
  (2) Check that the steering wheel is centered and move the shift lever to the P position.
  (3) Turn the power switch on (IG).
  (4) Check that the warning light and indicator light come on and remains on until the power switch is turned on (READY).
  (5) Turn the power switch on (IG).
  (6) Using SST, connect and disconnect terminals TS and CG of the DLC3 4 times or more within 8 seconds.
  SST 09843-18040

(7) Check that no codes other than ABS code 42, VSC code 45 and Electronically Controlled Brake code 48, 66, or 95 are stored in the diagnostic system.

Blinking Pattern of ABS and Electronically Controlled Brake Code (Example Code 42):



Display of VSC Code:



N

C135830E02

HINT:
The ABS warning, brake control warning lights, and multi information display do not indicate the normal system code.

(8) Remove the SST from the terminals of the DLC3.

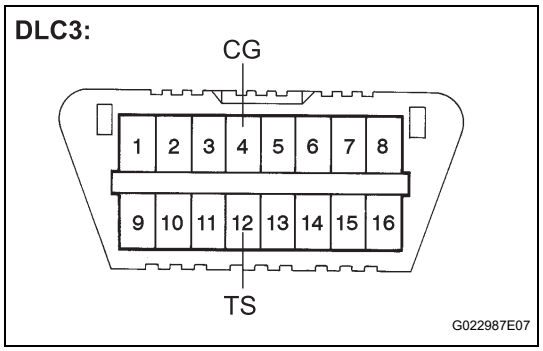
(b) Perform zero point calibration of the yaw rate and acceleration sensor.

(1) Turn the power switch off.

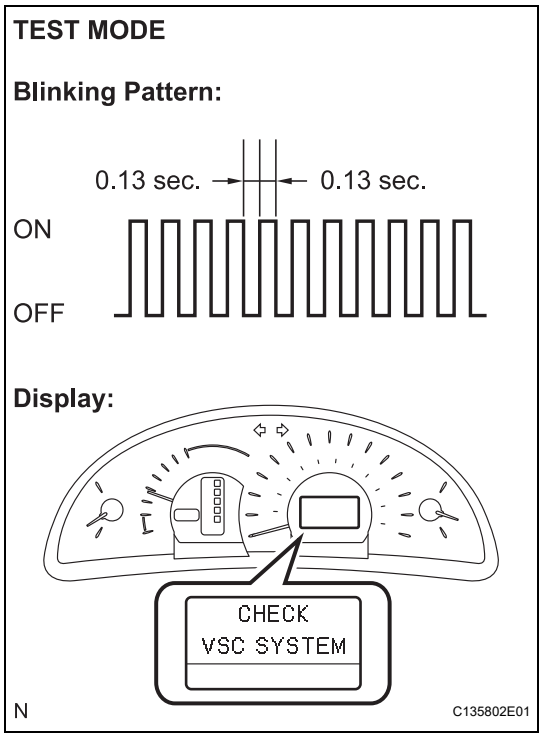
(2) Check that the steering wheel is centered and move the shift lever to the P position.

NOTICE:
DTCs C1210/36 and C1336/98 will be recorded if the shift lever is not in the P position (See page BC-107).

BC

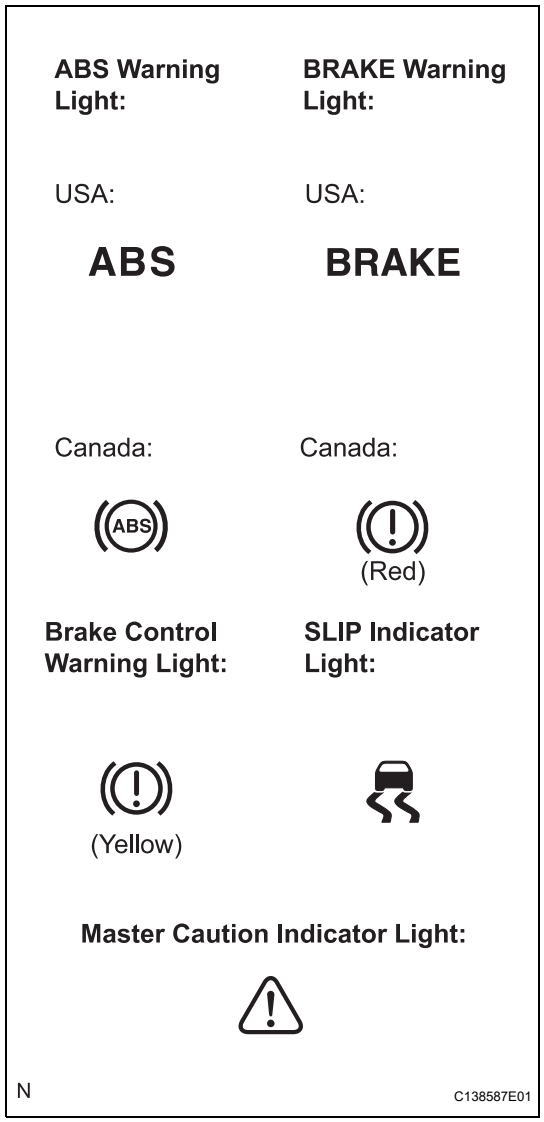


(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040
(4) Turn the power switch on (IG).
(5) Keep the vehicle stationary on a level surface for 2 seconds or more.



(6) Check that the ABS warning, brake control warning and master caution indicator lights blink and "CHECK VSC SYSTEM" is displayed on the multi information display (Test Mode).
HINT:
- The SLIP indicator remains on during Test Mode because TRAC is prohibited.
- If the ABS warning, brake control warning and master caution indicator lights do not blink and/or "CHECK VSC SYSTEM" is not displayed on the multi information display, perform zero point calibration again.
- The zero point calibration is performed only once after the system enters the Test Mode.
- Calibration cannot be performed again until the stored data is cleared.

(7) Turn the power switch off and disconnect the SST from the DLC3.



TEST MODE PROCEDURE

1. WARNING LIGHT AND INDICATOR LIGHT INITIAL CHECK

(a) Release the parking brake.

NOTICE:

Before releasing the parking brake, move the shift lever to the P position for safety.

HINT:

When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the power switch is turned on (IG), check that the ABS warning, BRAKE warning, brake control warning, master caution indicator, and SLIP indicator lights come on and remain on until the power switch is turned on (READY).

HINT:

If the ECU stores a DTC, the ABS warning, BRAKE warning, brake control warning, master caution indicator and SLIP indicator lights come on.

If the vehicle is equipped with a multi information display, and the vehicle stores a DTC, the master caution indicator light will illuminate, and the multi information display will indicate the malfunction.

In this case, the ABS warning, BRAKE warning, brake control warning, and SLIP indicator lights will also come on.

If the indicator remains on or does not come on, proceed to troubleshooting for the light circuits listed below.

Trouble Area	See procedure
ABS warning light circuit	BC-214 or BC-219
BRAKE warning light circuit	BC-227 or BC-234
Brake control warning light circuit	BC-236 or BC-240
VSC warning light (master caution indicator light and multi information display) circuit	BC-221 or BC-225
SLIP indicator light circuit	BC-242 or BC-246

2. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (INTELLIGENT TESTER)

NOTICE:

After replacement of the brake actuator assembly and/or yaw rate and acceleration sensor, perform zero point calibration of the yaw rate and acceleration sensor.

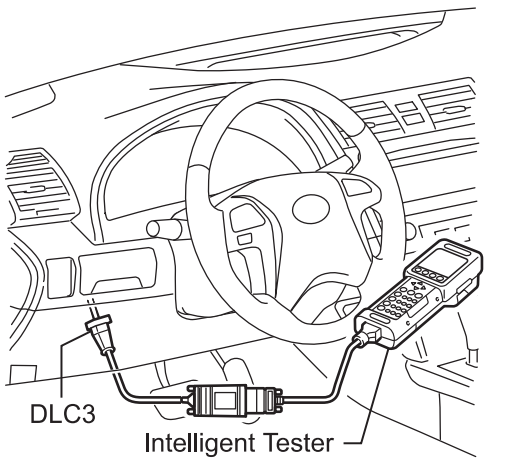
HINT:

- If the power switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs of the signal check function will be erased.

BC

- During Test Mode (signal check), the skid control ECU records all DTCs of the signal check function. By performing the Test Mode (signal check), the codes are erased if a normal condition is confirmed. The remaining codes are the codes where an abnormality was found.

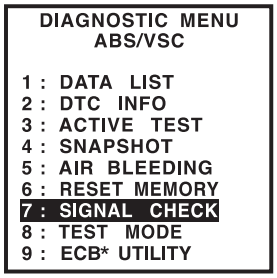
(a) Procedure to enter Test Mode.
  (1) Turn the power switch off.
  (2) Connect the intelligent tester to the DLC3.
  (3) Check that the steering wheel is centered and move the shift lever to the P position.
  (4) Turn the power switch on (IG).



H C131977E06

(5) Set the intelligent tester to Test Mode (select "SIGNAL CHECK").
  HINT:
  Refer to the intelligent tester operator's manual for further details.

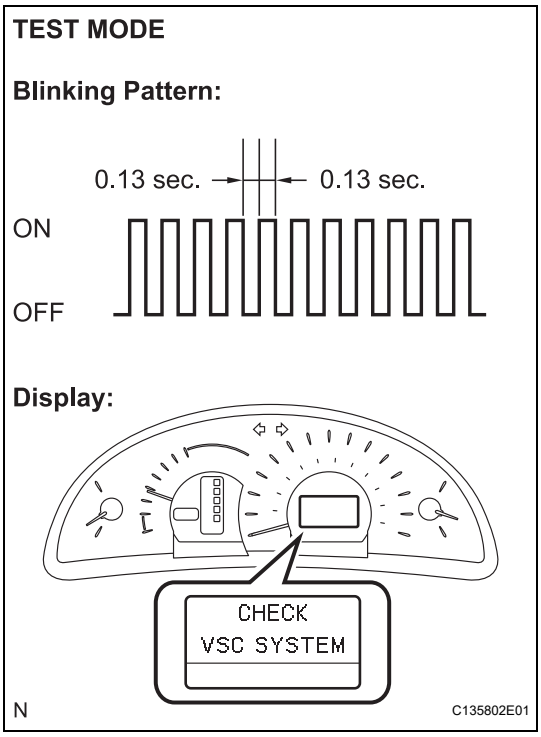
Tester Display:

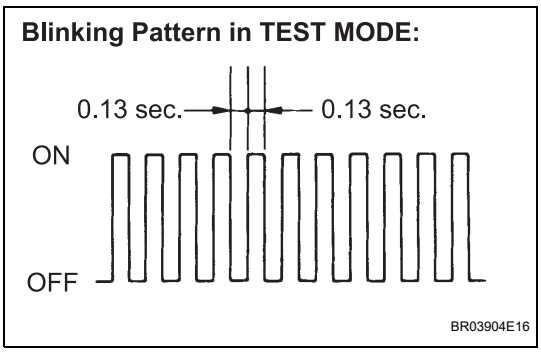


*: Electronically Controlled Brake

N C145968E01

BC





(6) Check that the ABS warning, brake control warning, and master caution indicator lights blink and "CHECK VSC SYSTEM" is displayed on the multi information display (Test Mode).
HINT:
- The SLIP indicator remains on during Test Mode because TRAC is prohibited.
- If the ABS warning, brake control warning, and VSC warning (master caution indicator light and multi information display) lights do not blink, inspect the TS and CG terminal circuit, and ABS warning, brake control warning, and VSC warning (master caution indicator light and multi information display) light circuits.

Trouble Area	See procedure
TS and CG terminal circuit	BC-255
ABS warning light circuit	BC-219
Brake control warning light circuit	BC-240
VSC warning light (master caution indicator light and multi information display) circuit	BC-225

(7) Check the ABS sensor.
HINT:
Check that the ABS warning light is blinking in Test Mode and perform the check.

3. ACCELERATION SENSOR CHECK (INTELLIGENT TESTER)

(a) Keep the vehicle stationary on a level surface for 1 second or more.
HINT:
Acceleration sensor check can be performed with the master cylinder pressure sensor check below.

4. MASTER CYLINDER PRESSURE SENSOR CHECK (INTELLIGENT TESTER)

(a) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second.

(b) Check that the ABS warning light stays on for 3 seconds.
HINT:
- Ensure that the ABS warning light comes on.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time brake pedal operation above is performed.

- If the check of the master cylinder pressure sensor is not completed, depressing the brake pedal causes further decrease in the negative pressure, making the sensor check difficult to be completed.
- If the negative pressure is insufficient, the master cylinder pressure sensor check may not be completed. In this case, run the engine at idle to obtain sufficient negative pressure.
- If the brake pedal is strongly depressed when the negative pressure is insufficient, the BRAKE warning light may come on in accordance with the booster pressure control. In this case, run the engine at idle to obtain sufficient negative pressure.

5. SPEED SENSOR CHECK (INTELLIGENT TESTER)

(a) Check the speed sensor signal.

(1) Drive the vehicle straight ahead.

Accelerate the vehicle to a speed of 45 km/h (28 mph) or more for several seconds and check that the ABS warning light goes off.

HINT:

The sensor check may not be completed if wheelspin occurs.

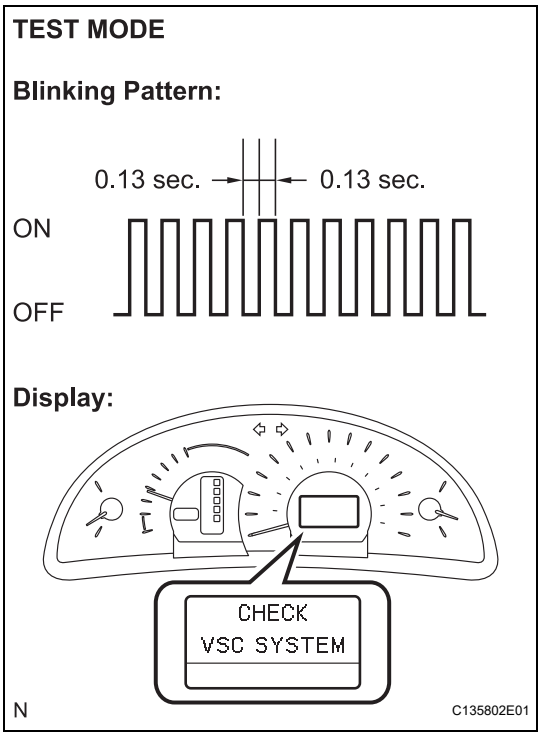
(b) Stop the vehicle.

NOTICE:

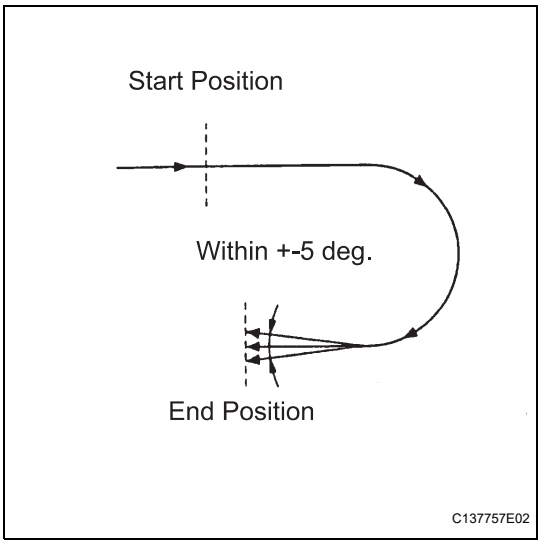
- **Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.**
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **After the ABS warning light goes off and if the vehicle speed exceeds 80 km/h (50 mph), a signal check code will be stored again. Accelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).**
- **If the signal check has not been completed, the ABS warning light blinks while driving and the ABS system does not operate.**

HINT:

When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while stationary.



(c) Check the VSC sensor.
Check that the brake control warning, and master caution indicator lights blink and "CHECK VSC SYSTEM" is displayed on the multi information display, and perform the check.



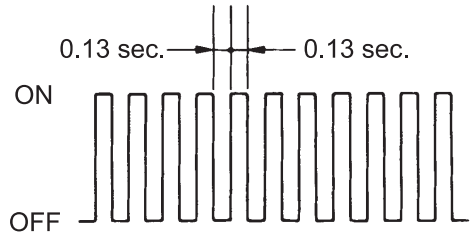
6. YAW RATE SENSOR CHECK (INTELLIGENT TESTER)

(a) Check the zero point voltage of the yaw rate sensor.
(1) Keep the vehicle in a stationary condition on a level surface for 1 second or more.

(b) Check the output of the yaw rate sensor.
(1) Move the shift lever from P to the D position and drive the vehicle at a speed of approximately 5 km/h (3 mph), and turn the steering wheel either to the left or right 90° or more until the vehicle makes a 180° turn.
(2) Stop the vehicle and move the shift lever to the P position. Check that the skid control buzzer sounds for 3 seconds.
HINT:
- If the skid control buzzer sounds, the sensor check is completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit (See page BC-248), then perform the sensor check again.
- If the skid control buzzer still does not sound, there is a malfunction in the yaw rate sensor, so check the DTC.
- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +-5° of its start position.
- Do not spin the wheels.
- Do not turn the power switch off while turning.

- Do not move the shift lever to the P position while turning, but changing in the vehicle speed, stopping, or driving in reverse is possible.
- Complete the turn within 20 seconds.

Blinking Pattern in TEST MODE:



BR03904E16

7. END OF SENSOR CHECK (INTELLIGENT TESTER)

(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

- **When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.**
- **If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS does not operate.**

8. READ DTC OF TEST MODE (SIGNAL CHECK) FUNCTION (INTELLIGENT TESTER)

(a) Read the DTC(s) by following the tester screen.

NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

See the list of DTC (See procedure "A").

9. SENSOR CHECK USING TEST MODE (SIGNAL CHECK) (SST CHECK WIRE)

NOTICE:

After replacement of the brake actuator assembly and/or yaw rate and acceleration sensor, perform zero point calibration of the yaw rate and acceleration sensor.

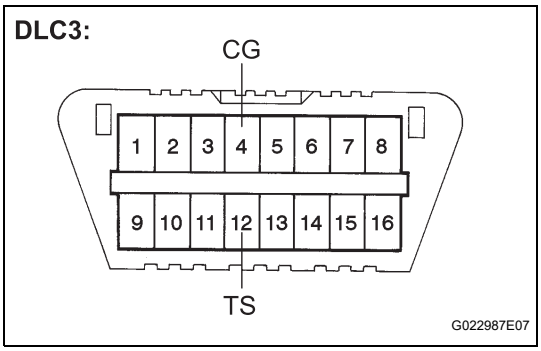
HINT:

- If the power switch is turned from on (IG) to on (ACC) or off during Test Mode (signal check), DTCs of the signal check function will be erased.
- During Test Mode (signal check), the skid control ECU records all DTCs of the signal check function. By performing the Test Mode (signal check), the codes are erased if a normal condition is confirmed. The remaining codes are the codes where an abnormality was found.

(a) Procedure to enter Test Mode.

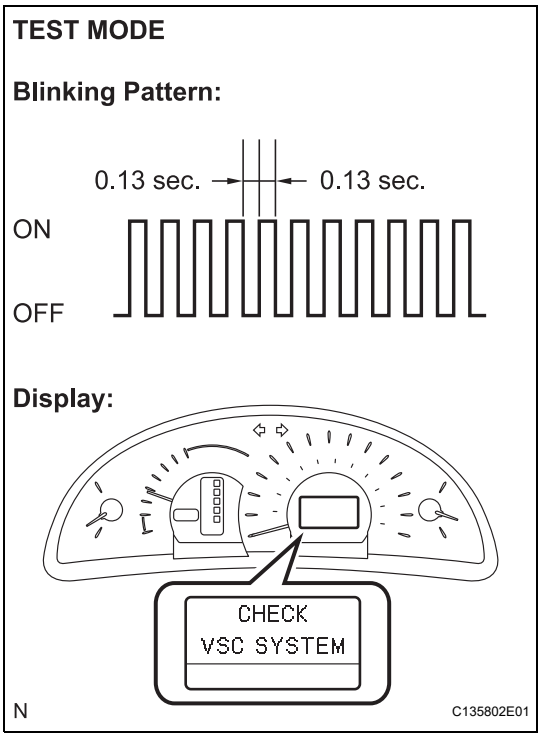
(1) Turn the power switch off.

(2) Check that the steering wheel is centered and move the shift lever to the P position.



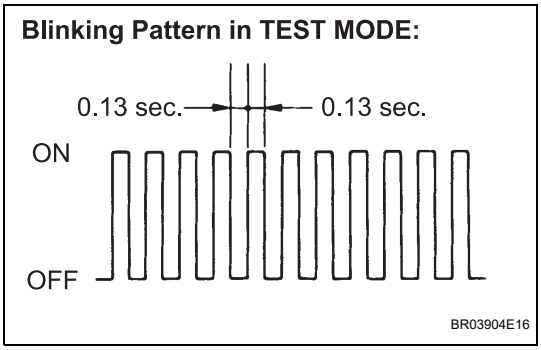
(3) Using SST, connect terminals TS and CG of the DLC3.
SST 09843-18040

(4) Turn the power switch on (IG).



(5) Check that the ABS warning, brake control warning, and master caution indicator lights blink and "CHECK VSC SYSTEM" is displayed on the multi information display (Test Mode).
HINT:
- The SLIP indicator remains on during Test Mode because TRAC is prohibited.
- If the ABS warning, brake control warning, and VSC warning (master caution indicator light and multi information display) lights do not blink, inspect the TS and CG terminal circuit, and ABS warning, brake control warning, and VSC warning (master caution indicator light and multi information display) light circuits.

Trouble Area	See procedure
TS and CG terminal circuit	BC-255
ABS warning light circuit	BC-219
Brake control warning light circuit	BC-240
VSC warning light (master caution indicator and multi information display) circuit	BC-225



(6) Check the ABS sensor.
HINT:
Check that the ABS warning light is blinking in Test Mode and perform the check.

10. ACCELERATION SENSOR CHECK (SST CHECK WIRE)

(a) Keep the vehicle stationary on a level surface for 1 second or more.
HINT:
Acceleration sensor check can be performed with the master cylinder pressure sensor check below.

11. MASTER CYLINDER PRESSURE SENSOR CHECK (SST CHECK WIRE)

(a) Leave the vehicle in a stationary condition and release the brake pedal for 1 second or more, and quickly and continuously depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more for 1 second.

BC

(b) Check that the ABS warning light stays on for 3 seconds.
HINT:
- Ensure that the ABS warning light comes on.
- While the ABS warning light stays on, continue to depress the brake pedal with a force of 98 N (10 kgf, 22 lbf) or more.
- The ABS warning light comes on for 3 seconds every time the brake pedal operation above is performed.
- If the check of the master cylinder pressure sensor is not completed, depressing the brake pedal causes further decrease in the negative pressure, making the sensor check difficult to be completed.
- If the negative pressure is insufficient, the master cylinder pressure sensor check may not be completed. In this case, run the engine at idle to obtain sufficient negative pressure.
- If the brake pedal is strongly depressed when the negative pressure is insufficient, the BRAKE warning light may come on in accordance with the booster pressure control. In this case, run the engine at idle to obtain sufficient negative pressure.

12. SPEED SENSOR CHECK (SST CHECK WIRE)

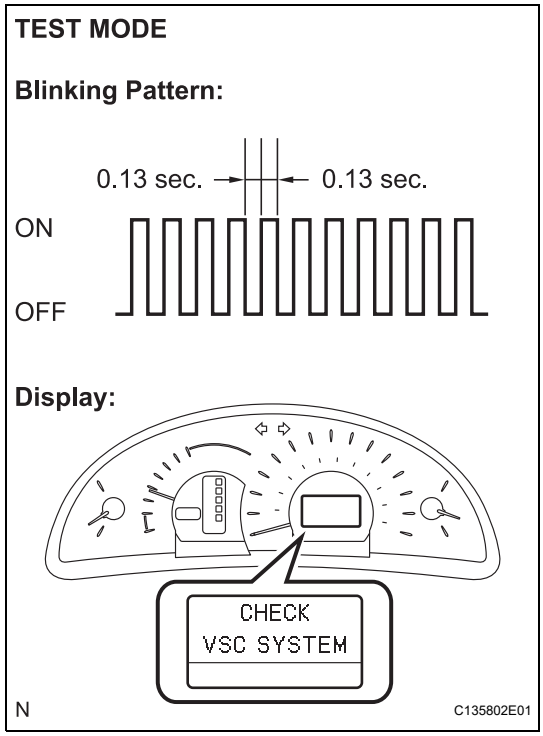
(a) Check the speed sensor signal.

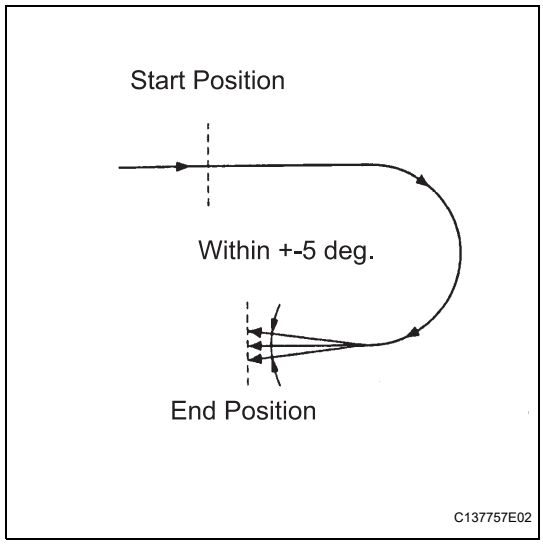
(1) Drive the vehicle straight ahead.
Accelerate the vehicle to a speed of 45 km/h (28 mph) or more for several seconds and check that the ABS warning light goes off.
HINT:
The sensor check may not be completed if wheelspin occurs.

(b) Stop the vehicle.
NOTICE:
- **Before performing the speed sensor check, complete the acceleration sensor and master cylinder pressure sensor checks.**
- **The speed sensor check may not be completed if the speed sensor check is started while turning the steering wheel or spinning the wheels.**
- **After the ABS warning light goes off, if vehicle speed exceeds 80 km/h (50 mph), a signal check code will be stored again. Accelerate or stop the vehicle before the speed reaches 80 km/h (50 mph).**
- **If the signal check has not been completed, the ABS warning light blinks while driving and the ABS system does not operate.**

HINT:
When the sensor check has been completed, the ABS warning light goes off while driving and blinks in the Test Mode pattern while stationary.

(c) Check the VSC sensor.
Check that the brake control warning, and master caution indicator lights blink and "CHECK VSC SYSTEM" is displayed on the multi information display, and perform the check.





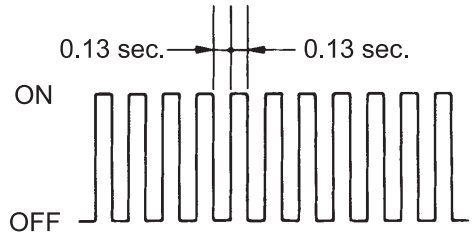
13. YAW RATE SENSOR CHECK (SST CHECK WIRE)

(a) Check the zero point voltage of the yaw rate sensor.
(1) Keep the vehicle stationary on a level surface for 1 second or more.

(b) Check the output of the yaw rate sensor.
(1) Move the shift lever from P to the D position and drive the vehicle at a vehicle speed of approximately 5 km/h (3 mph) and turn the steering wheel either to the left or right 90° or more and until the vehicle makes a 180° turn.
(2) Stop the vehicle and move the shift lever to the P position. Check that the skid control buzzer sounds for 3 seconds.
HINT:
- If the skid control buzzer sounds, the sensor check is completed normally.
- If the skid control buzzer does not sound, check the skid control buzzer circuit (See page BC-248), then perform the sensor check again.
- If the skid control buzzer still does not sound, there is a malfunction in the yaw rate sensor, so check the DTC.
- Make a 180° turn. At the end of the turn, the direction of the vehicle should be within 180° +-5° of its start position.
- Do not spin the wheels.
- Do not turn the power switch off while turning.

- Do not move the shift lever to the P position while turning, but changing in the vehicle speed, stopping, or driving in reverse is possible.
- Complete the turn within 20 seconds.

Blinking Pattern in TEST MODE:



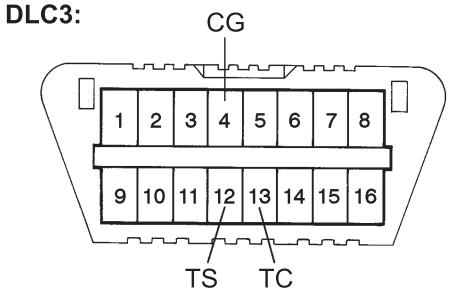
14. END OF SENSOR CHECK (SST CHECK WIRE)

(a) If the sensor check is completed, the ABS warning light blinks (Test Mode) when the vehicle stops and the ABS warning light is off while the vehicle is driving.

NOTICE:

- **When the yaw rate sensor, acceleration sensor, speed sensor, and master cylinder pressure sensor checks are completed, the sensor check is completed.**
- **If the sensor check is not completed, the ABS warning light blinks even while the vehicle is driving and the ABS does not operate.**

DLC3:

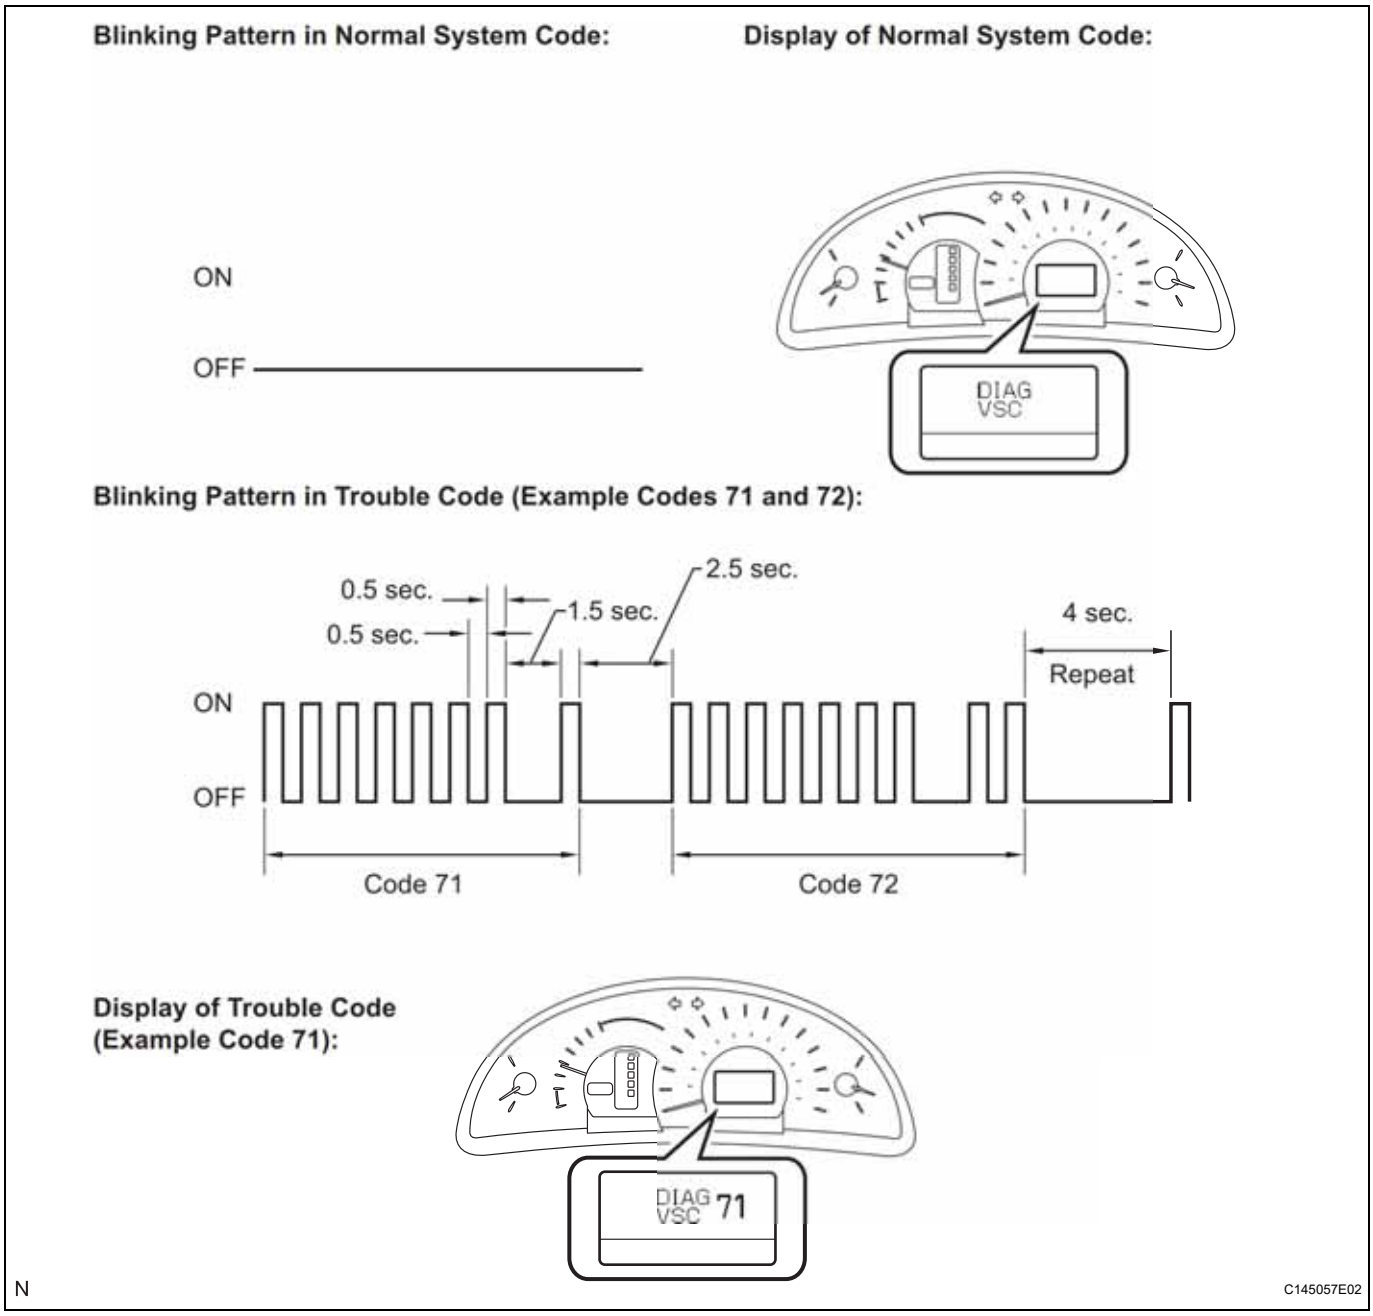


15. READ DTC OF SIGNAL CHECK FUNCTION (SST CHECK WIRE)

(a) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(b) Count the number of blinks of the ABS warning and brake control warning lights and read "DIAG VSC" on the multi information display.



NOTICE:

- **If only the DTCs are displayed, repair the malfunction area and clear the DTCs.**
- **If the DTCs or Test Mode codes (DTC of signal check function) are displayed, repair the malfunction area, clear the DTCs and perform the Test Mode inspection.**

HINT:

- If more than 1 malfunction is detected at the same time, the lowest numbered code will be displayed first.
- See the list of DTC (See procedure "A").

BC

(c) After performing the check, disconnect the SST from terminals TS and CG, and TC and CG of the DLC3 and turn the power switch off.

(d) Turn the power switch on (IG).
HINT:
- If the power switch is not turned on (IG) after the SST is removed from the DLC3, the previous Test Mode will continue.
- If the power switch is turned on (IG) with terminals TS and CG shorted, the previous Test Mode will continue.

16. DTC OF TEST MODE (SIGNAL CHECK) FUNCTION (Procedure "A")

ABS sensor:

DTC Code	Detection Item	Trouble Area
C1271/71	Low output signal of front speed sensor RH	• Front speed sensor RH • Sensor installation • Speed sensor rotor
C1272/72	Low output signal of front speed sensor LH	• Front speed sensor LH • Sensor installation • Speed sensor rotor
C1273/73	Low output signal of rear speed sensor RH	• Rear speed sensor RH • Sensor installation • Speed sensor rotor
C1274/74	Low output signal of rear speed sensor LH	• Rear speed sensor LH • Sensor installation • Speed sensor rotor
C1275/75	Abnormal change in output signal of front speed sensor RH	Speed sensor rotor
C1276/76	Abnormal change in output signal of front speed sensor LH	Speed sensor rotor
C1277/77	Abnormal change in output signal of rear speed sensor RH	Speed sensor rotor
C1278/78	Abnormal change in output signal of rear speed sensor LH	Speed sensor rotor
C1279/79	Acceleration sensor output voltage malfunction	• Yaw rate and acceleration sensor • Sensor installation
C1281/81	Master cylinder pressure sensor output malfunction	• Stop light switch • Master cylinder pressure sensor

VSC sensor:

DTC Code	Detection Item	Trouble Area
C0371/71	Yaw rate sensor	Yaw rate and acceleration sensor

Electronically Controlled Brake sensor:

DTC Code	Detection Item	Trouble Area
C1346/71	Stroke sensor zero point learning malfunction	Brake pedal stroke sensor

HINT:
The codes in this table are output only in Test Mode (signal check).

PROBLEM SYMPTOMS TABLE

If there are no DTCs output but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

NOTICE:

When replacing the skid control ECU, sensor, etc., make sure that the power switch is turned off, the stop light switch is off, and 2 minutes have elapsed since the driver's door was closed.

HINT:

- Inspect the fuse and relay before investigating the suspected areas shown in the table below.
- Inspect each malfunctioning circuit in numerical order for the corresponding symptom.
- Since the oil passage is blocked off by the master cut solenoid during Electronically Controlled Brake control, there is no kickback (vibration) to the brake pedal, creating a quiet operating sound even while the ABS is operating.

Electronically Controlled Brake System:

Symptom	Suspected Area	See page
ABS, BA and/or EBD does not operate	1. Use a chassis dynamometer, etc. to check the Electronically Controlled Brake operation.	-
	2. Check the DTC again and make sure that the normal system code is output.	BC-57
	3. IG power source circuit	BC-121
	4. Front speed sensor circuit	BC-80
	5. Rear speed sensor circuit	BC-89
	6. Check the brake actuator assembly with the intelligent tester. (Check brake actuator assembly operation using the Active Test function.) If abnormal, check the hydraulic circuit for leakage.	BC-259
	7. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the skid control ECU.	BC-289
ABS, BA and/or EBD does not operate efficiently	1. Check the DTC again and make sure that the normal system code is output.	BC-57
	2. Front speed sensor circuit	BC-80
	3. Rear speed sensor circuit	BC-89
	4. Check the brake actuator assembly with the intelligent tester. (Check brake actuator assembly operation using the Active Test function.) If abnormal, check the hydraulic circuit for leakage.	BC-259
	5. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the skid control ECU.	BC-289
ABS warning light abnormal (Remains on)	1. ABS warning light circuit	BC-214
	2. Skid control ECU	BC-289
ABS warning light abnormal (Does not come on)	1. ABS warning light circuit	BC-219
	2. Skid control ECU	BC-289
BRAKE warning light abnormal (Remains on)	1. Brake fluid level warning switch circuit	BC-102
	2. BRAKE warning light circuit	BC-227
	3. Skid control ECU	BC-289
BRAKE warning light abnormal (Does not come on)	1. BRAKE warning light circuit	BC-234
	2. Skid control ECU	BC-289

Symptom	Suspected Area	See page
VSC and/or TRAC does not operate	1. Check that traction control has not operated by carrying out diagnosis.	-
	2. Check the DTC again and make sure that the normal system code is output.	BC-57
	3. IG power source circuit	BC-121
	4. Check the hydraulic circuit for leakage.	-
	5. Front speed sensor circuit	BC-80
	6. Rear speed sensor circuit	BC-89
	7. Yaw rate and acceleration sensor circuit	BC-98
	8. Steering angle sensor circuit	BC-109
	9. If the symptoms still occur even after the above circuits in suspected areas have been inspected and proved to be normal, replace the skid control ECU.	BC-289
Brake control warning light abnormal (Remains on)	1. Brake control warning light circuit	BC-236
	2. Skid control ECU	BC-289
Brake control warning light abnormal (Does not come on)	1. Brake control warning light circuit	BC-240
	2. Skid control ECU	BC-289
VSC warning light (master caution indicator light and multi information display) abnormal (Remains on)	1. VSC warning light circuit	BC-221
	2. Skid control ECU	BC-289
VSC warning light (master caution indicator light multi information display) abnormal (Does not come on)	1. VSC warning light circuit	BC-225
	2. Skid control ECU	BC-289
SLIP indicator light abnormal (Remains on)	1. SLIP indicator light circuit	BC-242
	2. Skid control ECU	BC-289
SLIP indicator light abnormal (Does not come on)	1. SLIP indicator light circuit	BC-246
	2. Skid control ECU	BC-289
DTC check cannot be done	1. Check the DTC again and make sure that the normal system code is output.	BC-57
	2. TC and CG terminal circuit	BC-252
	3. If the symptoms still occur even after the above circuit in suspected areas has been inspected and proved to be normal, replace the skid control ECU.	BC-289
Sensor check cannot be done	1. TS and CG terminal circuit	BC-255
	2. Skid control ECU	BC-289
Skid control buzzer abnormal	1. Skid control buzzer circuit	BC-248
	2. Skid control ECU	BC-289

TERMINALS OF ECU

1. CHECK AUXILIARY BATTERY VOLTAGE

(a) Check the auxiliary battery voltage.

Standard voltage:

11 to 14 V

2. SKID CONTROL ECU INSPECTION

(a) Measure the voltage between each terminal or between each terminal and body ground.

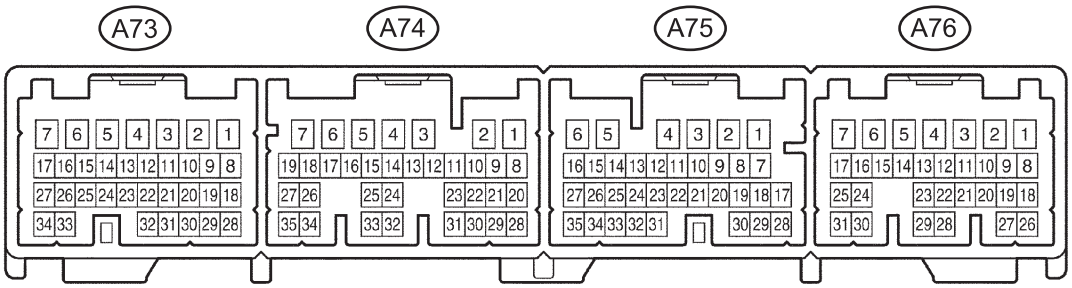
(b) Connect the intelligent tester to the DLC3, and check the communication condition with the skid control ECU.

(c) Using an oscilloscope, check that the pulse generates between each terminal or between each terminal and body ground.

NOTICE:

- **Inspection should be performed from the back of the connector with the connector connected to the skid control ECU.**
- **The voltage between the terminals of the brake actuator assembly may become 0 V due to the fail safe function when the brake control warning light comes on (malfunctioning).**

Skid Control ECU:



C138589E03

BC

HINT:

Inspect the ECU from the wire harness side while the connector is connected.

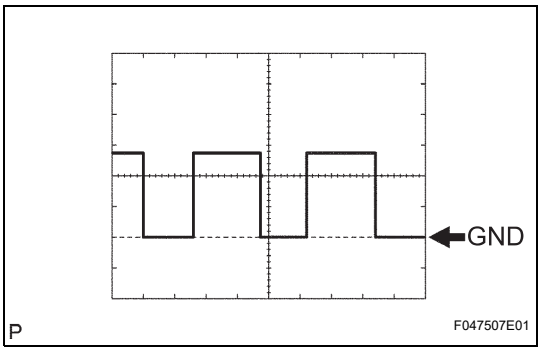
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND1 (A73-1) - Body ground	W-B - Body ground	Skid control ECU ground 1	Always	Below 1 Ω
R1+ (A73-2) - Body ground	B - Body ground	Main relay power 1	Power switch on (IG)	9.1 to 13.6 V
BS1 (A73-3) - Body ground	W - Body ground	Battery source 1	Approx. 1.5 seconds after turning power switch on (IG)	8.8 to 14 V
SMC1 (A73-4) - Body ground	W-B - Body ground	Master cut solenoid 1 output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BCTY+ (A73-5) - Body ground	LG - Body ground	Courtesy power input	Driver door open → close	Approx. 5 sec. 8 to 16 V → Below 1 V
SLAFR- (A73-6) - Body ground	R - Body ground	Front addition solenoid (-) RH output	Approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
SLAFR+ (A73-7) - Body ground	B - Body ground	Front addition solenoid (+) RH output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Pulse generation (see waveform 1)
E (A73-8) - Body ground	R - Body ground	Pressure sensor ground	Power switch off	Below 1 Ω
VCM1 (A73-9) - Body ground	G - Body ground	Pressure sensor power	Power switch on (IG)	4.75 to 5.25 V
MR1+ (A73-11) - Body ground	B - Body ground	Motor relay power 1	Approx. 1.5 seconds after turning power switch on (IG)	8.8 to 14 V
R3+ (A73-12) - Body ground	W-B - Body ground	Main relay output 1	Approx. 1.5 seconds after turning power switch on (IG)	Below 1 V
SCSS (A73-13) - Body ground	P - Body ground	Stroke simulator cut solenoid output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
SLARL+ (A73-15) - Body ground	G - Body ground	Rear addition solenoid (+) LH output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Pulse generation (see waveform 1)
SLRRL+ (A73-16) - Body ground	L - Body ground	Rear reduction solenoid (+) LH output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Pulse generation (see waveform 1)
SLRFR+ (A73-17) - Body ground	L - Body ground	Front reduction solenoid (+) RH output	Power switch on (IG), after approx. 1.5 seconds brake pedal depressed → released	Pulse generation (see waveform 2)
PRL (A73-18) - Body ground	G - Body ground	Rear pressure sensor LH input	Power switch on (IG), brake pedal released	0.3 to 0.8 V
SG1 (A73-20) - Body ground	O - Body ground	Pressure sensor shield ground 1	Power switch off	Below 1 Ω
PACC (A73-21) - Body ground	R - Body ground	Accumulator pressure sensor input	Power switch on (IG), after pump motor operates and stops by pedal operation	3.3 to 4.7 V
FR- (A73-22) - Body ground	G - Body ground	Front sensor (-) RH input	Power switch off	Below 1 Ω
PFR (A73-23) - Body ground	Y - Body ground	Front pressure sensor RH input	Power switch on (IG), brake pedal released	0.3 to 0.8 V
MR1 (A73-25) - Body ground	LG - Body ground	Motor relay output 1	Power switch on (IG), pump motor is operating	Below 1.5 V
SLRRL- (A73-26) - Body ground	B - Body ground	Rear reduction solenoid (-) LH output	Approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
SLARL- (A73-27) - Body ground	R - Body ground	Rear addition solenoid (-) LH output	Approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
MTT (A73-29) - Body ground	W - Body ground	Motor test input	Power switch on (IG), pump motor is operating	3.5 V or higher
PMC1 (A73-30) - Body ground	B - Body ground	Master pressure sensor input 1	Power switch on (IG), brake pedal released	0.3 to 0.8 V
PCK1 (A73-31) - Body ground	W - Body ground	Pressure sensor check output 1	Approx. 1.5 seconds after turning power switch on (IG)	4.75 to 5.25 V
FR+ (A73-32) - Body ground	R - Body ground	Front sensor (+) RH input	Vehicle speed input	Pulse generation (see waveform 3)
SLRFR- (A73-34) - Body ground	LG - Body ground	Front reduction solenoid (-) RH output	Approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
GND3 (A74-1) - Body ground	W-B - Body ground	Skid control ECU ground 3	Always	Below 1 Ω

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND2 (A74-2) - Body ground	W-B - Body ground	Skid control ECU ground 2	Always	Below 1 Ω
+BI1 (A74-3) - Body ground	R - Body ground	Main relay power input 1	Power switch off	10 to 14 V
+BO1 (A74-5) - Body ground	L - Body ground	Main relay power output 1	Power switch on (IG)	8.8 to 14 V
IG1 (A74-7) - Body ground	B - Body ground	IG1 power	Power switch on (IG)	10 to 14 V
BZ (A74-12) - Body ground	Y - Body ground	Skid control buzzer output	Power switch on (IG), buzzer is operating	Below 1 V
STP (A74-14) - Body ground	P - Body ground	Stop light switch signal input	Brake pedal depressed → released	8 to 14 V → Below 1.5 V
CANL (A74-18) - Body ground	W - Body ground	CAN communication (Send and receive-)	Check DTC using intelligent tester	CAN communication's DTC is not output
CANH (A74-19) - Body ground	B - Body ground	CAN communication (Send and receive+)	Check DTC using intelligent tester	CAN communication's DTC is not output
FAIL (A74-20) - Body ground	P - Body ground	Capacitor communication (Receive)	Approx. 1.5 seconds after turning power switch on (IG)	Pulse generation (see waveform 5)
SP1 (A74-22) - Body ground	L - Body ground	Speedometer output	Vehicle speed input	Pulse generation (see waveform 4)
RL- (A74-27) - Body ground	L - Body ground	Rear sensor (-) LH input	Power switch off	Below 1 Ω
ENA (A74-30) - Body ground	O - Body ground	Capacitor communication (Send)	Approx. 1.5 seconds after turning power switch on (IG)	Pulse generation (see waveform 6)
TS (A74-32) - Body ground	G - Body ground	Sensor diagnosis check input	Power switch on (IG), connect terminals TS and CG of the DLC3 → disconnect	Below 1.5 V → 9.1 to 13.6 V
VBZ (A74-33) - Body ground	B - Body ground	Skid control buzzer power	Power switch on (IG)	9.1 to 13.6 V
RL+ (A74-35) - Body ground	R - Body ground	Rear sensor (+) LH input	Vehicle speed input	Pulse generation (see waveform 3)
GND5 (A75-1) - Body ground	B - Body ground	Skid control ECU ground 5	Always	Below 1 Ω
GND4 (A75-2) - Body ground	W-B - Body ground	Skid control ECU ground 4	Always	Below 1 Ω
+BO2 (A75-4) - Body ground	R- Body ground	Main relay power output 2	Power switch on (IG)	8.8 to 14 V
+BI2 (A75-5) - Body ground	W - Body ground	Main relay power input 2	Power switch off	10 to 14 V
VCSK (A75-6) - Body ground	G - Body ground	Stroke sensor power	Power switch on (IG)	3.75 to 4.95 V
SSK (A75-7) - Body ground	BR - Body ground	Stroke sensor shield ground	Power switch off	Below 1 Ω
SKG (A75-8) - Body ground	R - Body ground	Stroke sensor ground	Power switch off	Below 1 Ω
SKS1 (A75-21) - Body ground	W - Body ground	Stroke sensor signal input 1	Power switch on (IG), brake pedal released	0.46 to 1.35 V
SKS2 (A75-22) - Body ground	B - Body ground	Stroke sensor signal input 2	Power switch on (IG), brake pedal released	2.56 to 4.35 V
RR- (A75-23) - Body ground	R - Body ground	Rear sensor (-) RH input	Power switch off	Below 1 Ω
RR+ (A75-31) - Body ground	G - Body ground	Rear sensor (+) RH input	Vehicle speed input	Pulse generation (see waveform 3)
SLAFL+ (A76-1) - Body ground	L - Body ground	Front addition solenoid (+) LH output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Pulse generation (see waveform 1)
SLAFL- (A76-2) - Body ground	B - Body ground	Front addition solenoid (-) LH output	Approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V

BC

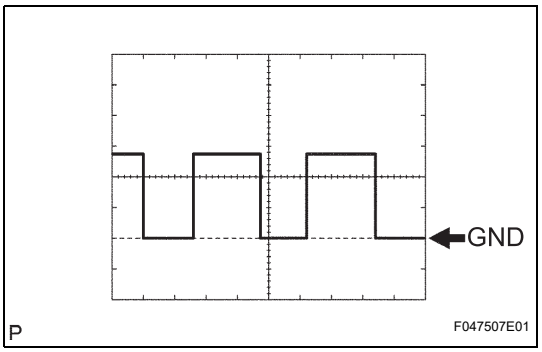
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SMC2 (A76-3) - Body ground	LG - Body ground	Master cut solenoid 2 output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
GND6 (A76-4) - Body ground	BR - Body ground	Skid control ECU ground 6	Always	Below 1 Ω
IG2 (A76-5) - Body ground	GR - Body ground	IG2 power	Power switch on (IG)	10 to 14 V
LBL (A76-6) - Body ground	LG - Body ground	Brake fluid level warning switch input	Brake fluid level warning switch OFF → ON	4 to 8 V → Below 1.5 V
BS2 (A76-7) - Body ground	G - Body ground	Battery source 2	Approx. 1.5 seconds after turning power switch on (IG)	8.8 to 14 V
SLRFL+ (A76-8) - Body ground	B - Body ground	Front reduction solenoid (+) LH output	Power switch on (IG), after approx. 1.5 seconds, brake pedal depressed → released	Pulse generation (see waveform 2)
SLARR- (A76-9) - Body ground	B - Body ground	Rear addition solenoid (-) RH output	Approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
SG2 (A76-12) - Body ground	BR - Body ground	Pressure sensor shield ground 2	Power switch off	Below 1 Ω
VCM2 (A76-14) - Body ground	BR - Body ground	Pressure sensor power 2	Power switch on (IG)	4.75 to 5.25 V
R4+ (A76-15) - Body ground	W - Body ground	Main relay output 2	Approx. 1.5 seconds after turning power switch on (IG)	Below 1 V
R2+ (A76-17) - Body ground	G - Body ground	Main relay power 2	Power switch on (IG)	9.1 to 13.6 V
SLRRR- (A76-18) - Body ground	G - Body ground	Rear reduction solenoid (-) RH output	Approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
SLARR+ (A76-19) - Body ground	Y - Body ground	Rear addition solenoid (+) RH output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Pulse generation (see waveform 1)
SLRRR+ (A76-20) - Body ground	R - Body ground	Rear reduction solenoid (+) RH output	Brake pedal depressed approx. 1.5 seconds after turning power switch on (IG)	Pulse generation (see waveform 1)
PCK2 (A76-21) - Body ground	L - Body ground	Pressure sensor check output 2	Power switch on (IG)	4.75 to 5.25 V
FL- (A76-22) - Body ground	V - Body ground	Front sensor (-) LH input	Power switch off	Below 1 Ω
PFL (A76-23) - Body ground	R - Body ground	Front pressure sensor LH input	Power switch on (IG), brake pedal released	0.3 to 0.8 V
MR2+ (A76-25) - Body ground	Y - Body ground	Motor relay power 2	Approx. 1.5 seconds after turning power switch on (IG)	8.8 to 14 V
SLRFL- (A76-26) - Body ground	R - Body ground	Front reduction solenoid (-) LH output	Approx. 1.5 seconds after turning power switch on (IG)	Below 1.5 V
PMC2 (A76-27) - Body ground	W - Body ground	Master pressure sensor input 2	Power switch on (IG), brake pedal released	0.3 to 0.8 V
FL+ (A76-28) - Body ground	LG - Body ground	Front sensor (+) LH input	Vehicle speed input	Pulse generation (see waveform 3)
E2 (A76-29) - Body ground	G - Body ground	Pressure sensor ground 2	Power switch off	Below 1 Ω
MR2 (A76-30) - Body ground	O - Body ground	Motor relay output 2	Power switch on (IG), pump motor is operating	Below 1.5 V
PRR (A76-31) - Body ground	Y - Body ground	Rear pressure sensor RH input	Power switch on (IG), brake pedal released	0.3 to 0.8 V



(d) Waveform 1 (Reference): Using an oscilloscope:

Item	Condition
Tool setting	5 V/DIV., 200 ms./DIV.
Vehicle condition	• While driving at approximately 20 km/h (12 mph) • Brake pedal depressed

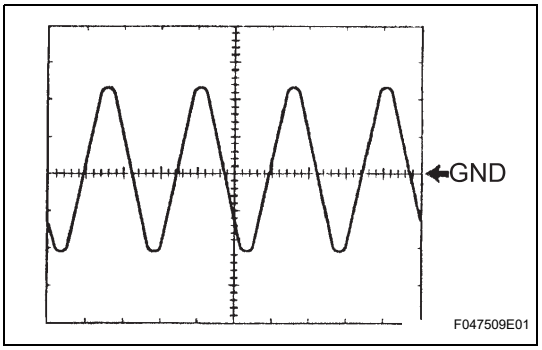
HINT:
Normal waveform is output only when BS1 and BS2 voltages are normal (10 to 14 V).



(e) Waveform 2 (Reference): Using an oscilloscope:

Item	Condition
Tool setting	5 V/DIV., 200 ms./DIV.
Vehicle condition	• While driving at approximately 20 km/h (12 mph) • Brake pedal depressed → released

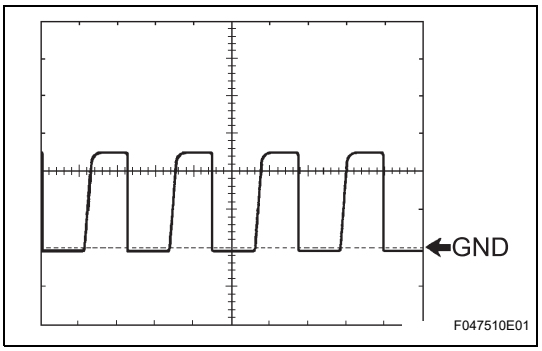
HINT:
Normal waveform is output only when BS1 and BS2 voltages are normal (10 to 14 V).



(f) Waveform 3 (Reference): Using an oscilloscope:

Item	Condition
Tool setting	1 V/DIV., 2 ms./DIV.
Vehicle condition	While driving at approximately 30 km/h (18 mph)

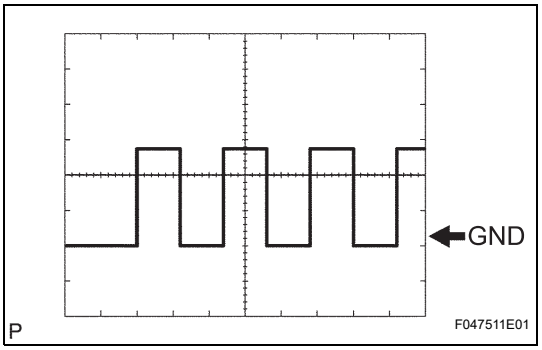
HINT:
As the vehicle speed (tire rotating speed) becomes faster, the cycle becomes shorter and the output voltage larger.



(g) Waveform 4 (Reference): Using an oscilloscope:

Item	Condition
Tool setting	5 V/DIV., 50 ms./DIV.
Vehicle condition	While driving at approximately 20 km/h (12 mph)

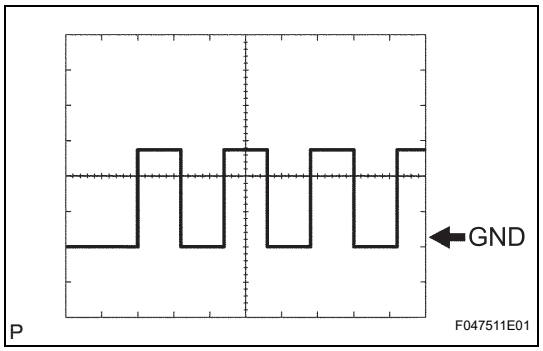
HINT:
As the vehicle speed (tire rotating speed) becomes faster, the cycle becomes shorter.



(h) Waveform 5 (Reference): Using an oscilloscope:

Item	Condition
Tool setting	5 V/DIV., 200 ms./DIV.
Vehicle condition	Turn the power switch on (IG)

BC



(i) Waveform 6 (Reference): Using an oscilloscope:

Item	Condition
Tool setting	2 V/DIV., 100 ms./DIV.
Vehicle condition	Turn the power switch on (IG)

DIAGNOSIS SYSTEM

1. DESCRIPTION

When troubleshooting a vehicle with the diagnosis system, the only difference from the usual troubleshooting procedure is connecting the intelligent tester to the vehicle and reading various data output from the vehicle's skid control ECU.

The skid control ECU records DTCs when the computer detects a malfunction in the computer itself or in its circuits.

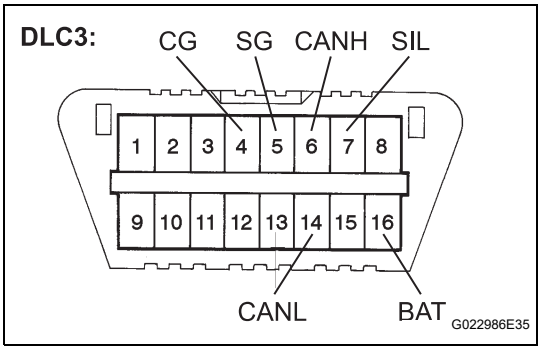
To check for DTCs, connect the intelligent tester to the DLC3 on the vehicle. The intelligent tester enables you to erase the DTCs, activate the various actuators, and check the Freeze Frame Data and Data List.

(a) Check the auxiliary battery voltage.

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge the auxiliary battery before proceeding to the next step.



(b) Check the DLC3.

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Verify the conditions listed in the table below.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

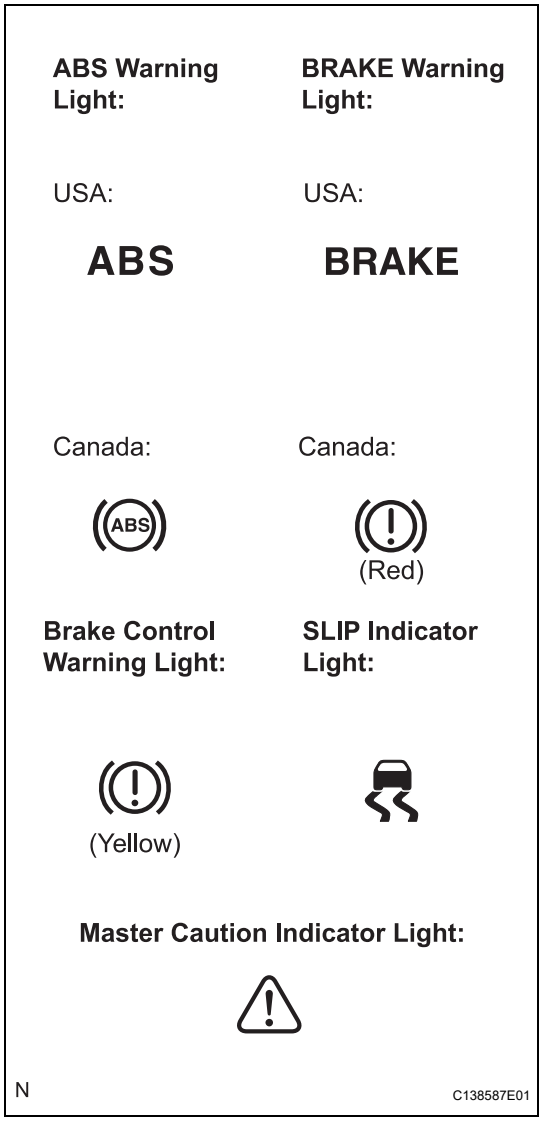
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester operator's manual.



2. DIAGNOSIS

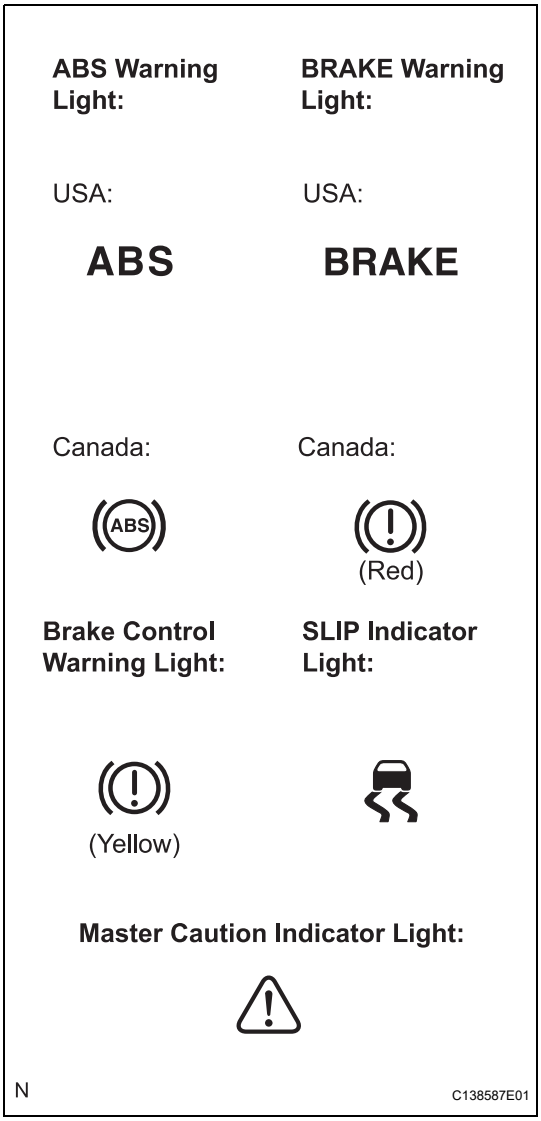
(a) If the skid control ECU detects a malfunction, the ABS warning, BRAKE warning, brake control warning, master caution indicator, and SLIP indicator lights will come on and the multi information display shows warning messages in order to warn the driver.
The table below indicates which lights will come on when there is a malfunction in a particular function.

Item / Trouble Area	ABS	EBD	BA	TRAC	VSC
ABS warning light	○	○	○	-	-
BRAKE warning light	-	○	-	-	-
Brake control warning light	○	○	○	-	-
Master caution indicator light	○	○	○	○	○
Multi information display	○	○	○	○	○
SLIP indicator light	○	○	○	○	○

BC

○: Light ON
-: Light OFF

- The DTCs are simultaneously stored in the memory. The DTCs can be read by connecting the SST between terminals TC and CG of the DLC3 and observing the blinking pattern of the ABS warning and brake control warning lights, by reading the multi information display, or by connecting the intelligent tester.
- This system has a signal check function (See page BC-35).
  The DTC can be read by connecting the intelligent tester and observing the blinking pattern of the ABS warning and brake control warning lights or by reading the multi information display.



3. WARNING LIGHT AND INDICATOR LIGHT CHECK

(a) Release the parking brake.

NOTICE:

When releasing the parking brake, move the shift lever to the P position for safety.

HINT:

When the parking brake is applied or the level of the brake fluid is low, the BRAKE warning light comes on.

(b) When the power switch is turned on (IG), check that the ABS warning, BRAKE warning, brake control warning, master caution indicator, and SLIP indicator lights come on and remain on until the power switch is turned on (READY).

HINT:

If the warning light and indicator light check result is not normal, proceed to troubleshooting for the ABS warning, BRAKE warning, brake control warning, VSC warning (master caution indicator), and SLIP indicator light circuits.

If the indicator remains on, proceed to troubleshooting for the light circuit below.

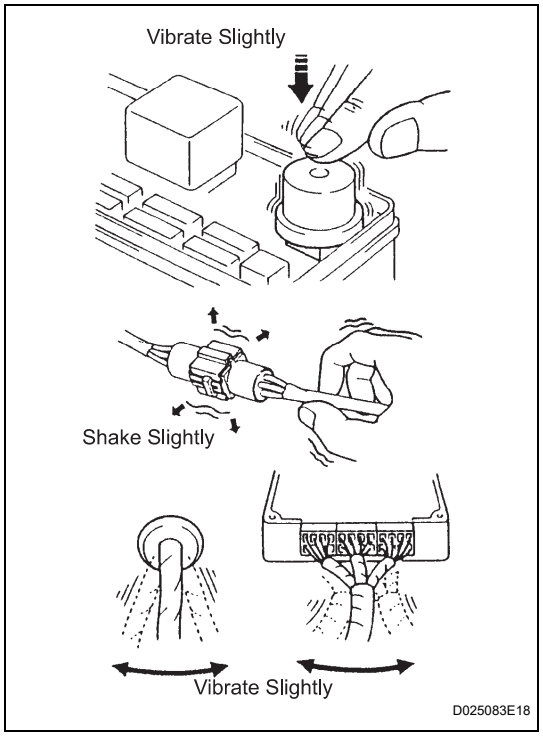
Trouble Area	See procedure
ABS warning light circuit	BC-214
BRAKE warning light circuit	BC-227
Brake control warning light circuit	BC-236
VSC warning light (master caution indicator light) circuit	BC-221
SLIP indicator light circuit	BC-242

BC

4. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation. This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the power switch is turned on (IG)).

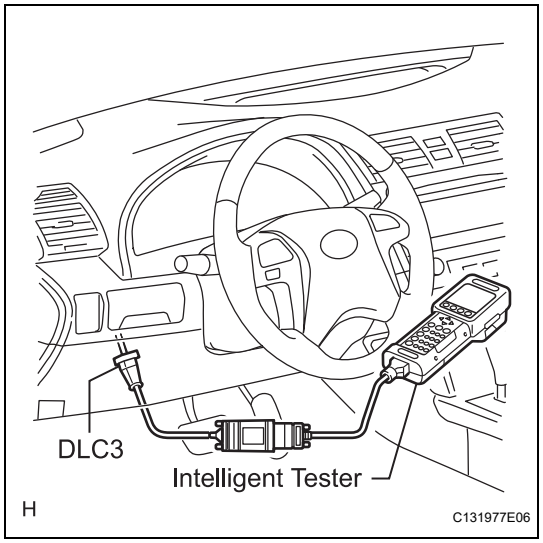
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

(2) Slightly shake the connector vertically and horizontally.

HINT:

Shaking the relays too strongly may result in open relays.

(3) Slightly shake the wire harness vertically and horizontally. The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.



DTC CHECK / CLEAR

1. DTC CHECK/CLEAR (INTELLIGENT TESTER)

(a) Check the DTC.

(1) Connect the intelligent tester to the DLC3.

(2) Turn the power switch on (IG).

(3) Read the DTCs following the prompts on the tester screen.

(b) Clear the DTC.

(1) Connect the intelligent tester to the DLC3.

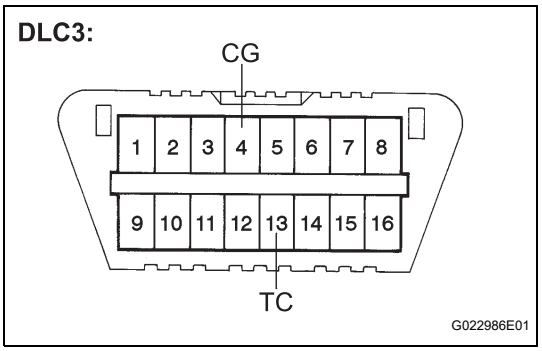
(2) Turn the power switch on (IG).

(3) Operate the intelligent tester to clear the codes.

HINT:

Refer to the intelligent tester operator's manual for further details.

BC



2. DTC CHECK/CLEAR (SST CHECK WIRE)

(a) Check the DTC.

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

(2) Turn the power switch on (IG).

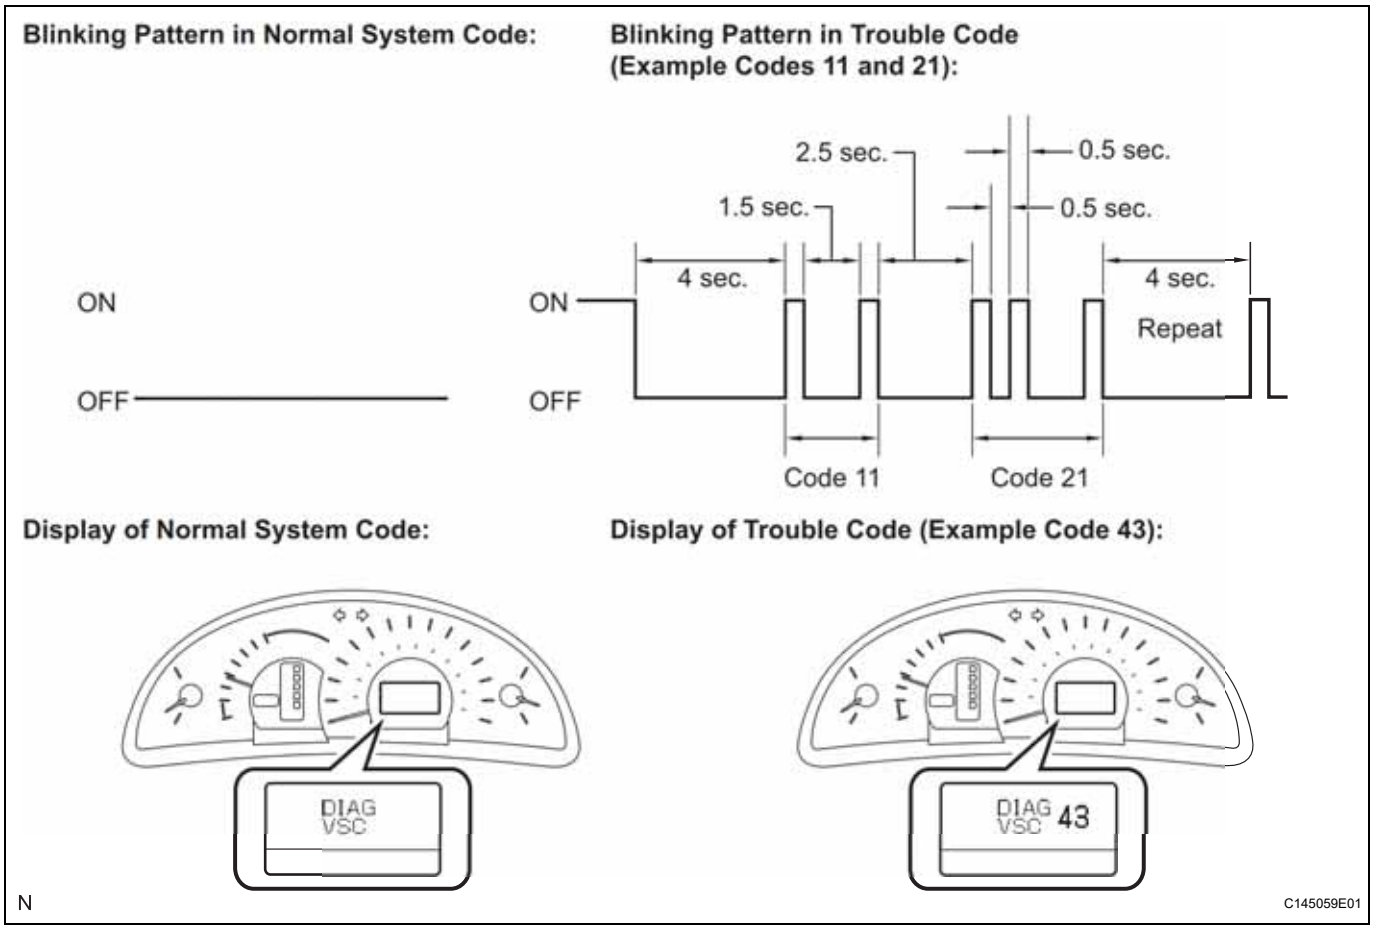
(3) Observe the blinking pattern of the ABS warning and brake control warning lights and read the multi information display in order to identify the DTC.

HINT:

If no code appears, inspect the TC and CG terminal circuit, and ABS warning and brake control warning light circuits.

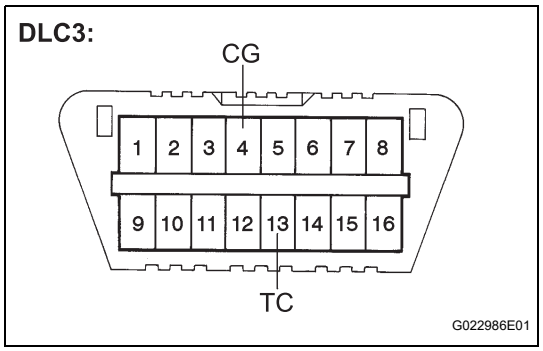
Trouble Area	See procedure
TC and CG terminal circuit	BC-252
ABS warning light circuit	BC-214 or BC-219
Brake control warning light circuit	BC-236 or BC-240
VSC warning light (multi information display) circuit	BC-221 or BC-225

(4) As an example, the illustration below shows the blinking patterns of the normal system code and trouble codes 11 and 21, and display of the normal system code and trouble code 43 on the multi information display.

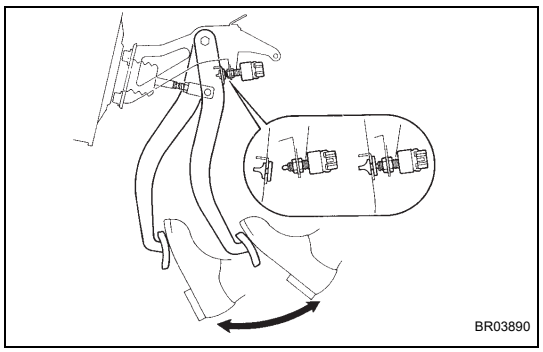


BC

(5) The codes are explained in the code table (See page BC-69).
(6) After completing the check, disconnect terminals TC and CG of the DLC3, and turn off the display. If 2 or more DTCs are detected at the same time, the DTCs will be displayed in ascending order.



(b) Clear the DTC.
(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040
(2) Turn the power switch on (IG).



(3) Clear the DTCs stored in the ECU by depressing the brake pedal 8 times or more within 5 seconds.
(4) Check that the warning light or multi information display indicates the normal system code.
(5) Remove the SST from the terminals of the DLC3.
HINT:
Clearing the DTCs cannot be performed by disconnecting the battery terminal or the ECU-IG NO. 2 fuse.

3. END OF DTC CHECK/CLEAR
(a) Turn the power switch on (IG).
(b) Check that the ABS warning light goes off when the power switch is turned on (READY).

REMOVAL

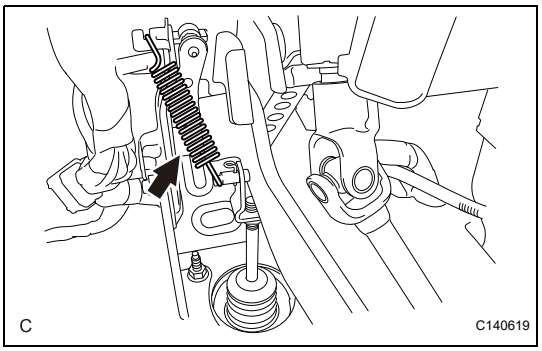
1. REMOVE INSTRUMENT PANEL REINFORCEMENT

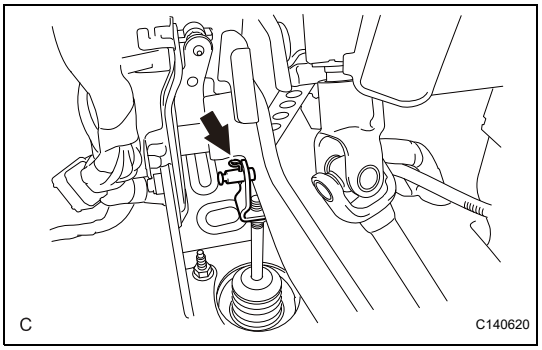
HINT:

Refer the procedures up to "REMOVE AIR CONDITIONING UNIT". (See page AC-185)

2. REMOVE BRAKE PEDAL RETURN SPRING

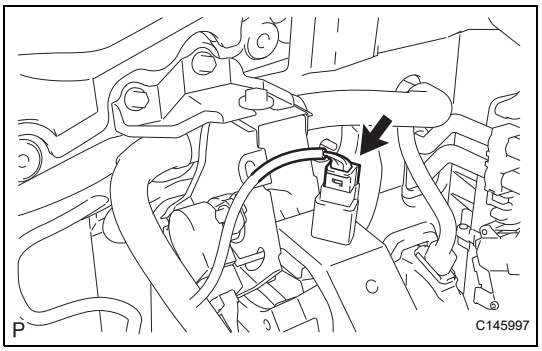
(a) Remove the brake pedal return spring.





3. DISCONNECT MASTER CYLINDER PUSH ROD CLEVIS

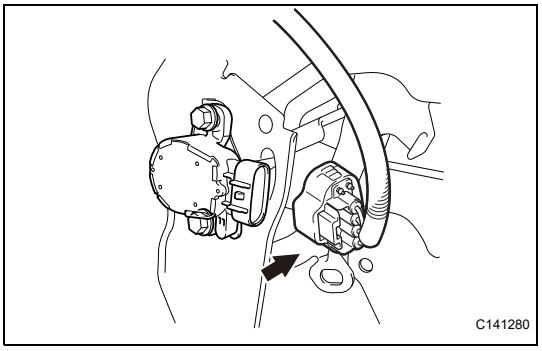
(a) Remove the clip and clevis pin and disconnect the push rod clevis from the brake pedal.

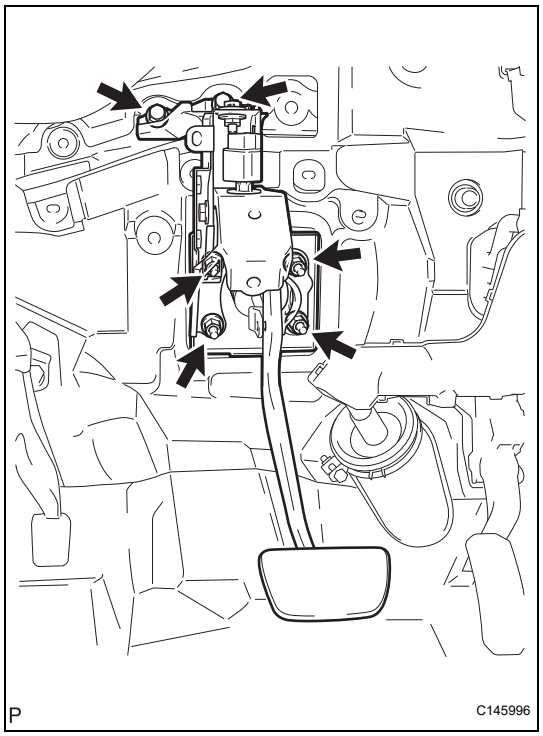


4. REMOVE BRAKE PEDAL ASSEMBLY

(a) Disconnect the connector from the stop light switch.

(b) Disconnect the connector from the pedal stroke sensor.

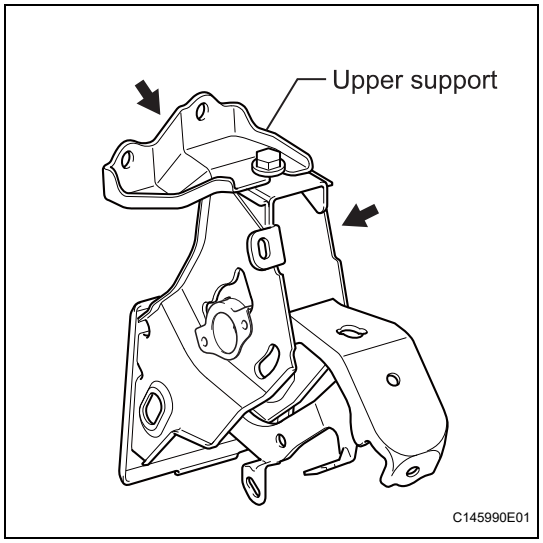




(c) Remove the 4 nuts, 2 bolts and the brake pedal assembly.

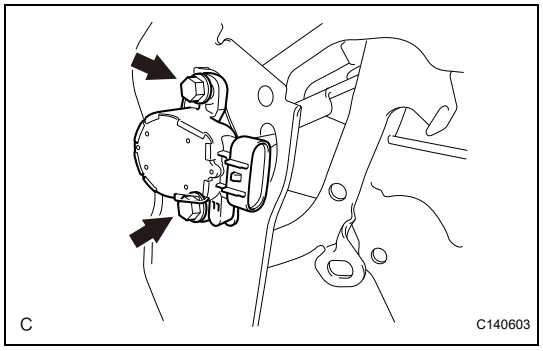
DISASSEMBLY

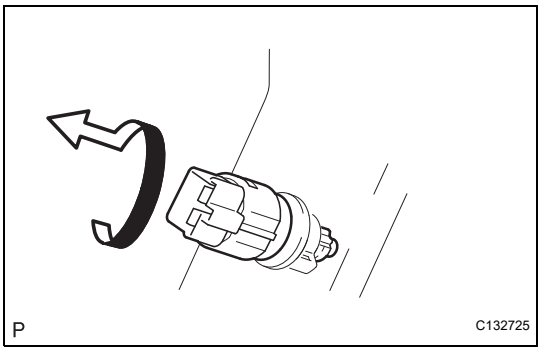
NOTICE:
Do not disassembly the upper support portion. If disassembled, be sure to replace it with new parts.



1. REMOVE BRAKE PEDAL STROKE SENSOR ASSEMBLY

(a) Remove the 2 bolts and the brake pedal stroke sensor assembly.



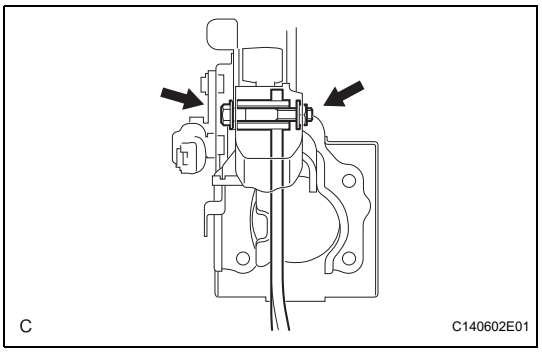


2. REMOVE STOP LIGHT SWITCH ASSEMBLY

(a) Turn the stop light switch assembly and remove it as shown in the illustration.

3. REMOVE STOP LIGHT SWITCH MOUNTING ADJUSTER

(a) Remove the stop light switch mounting adjuster.



4. REMOVE BRAKE PEDAL SUB-ASSEMBLY

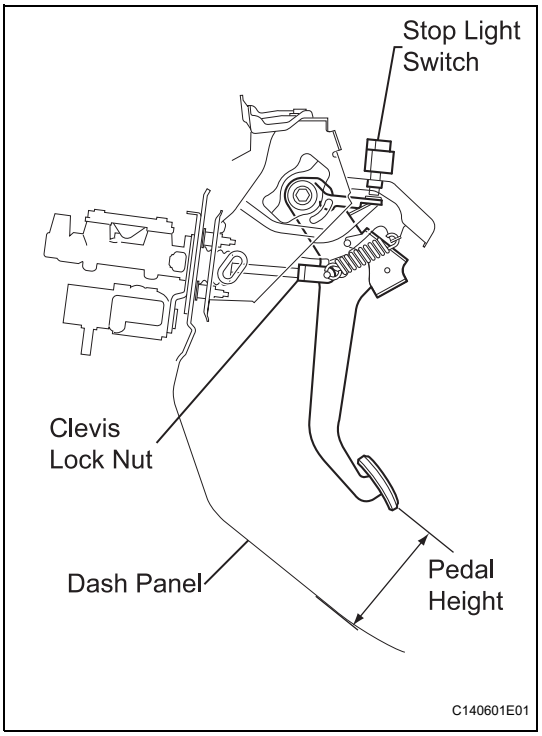
(a) Remove the bolt and the nut.

(b) Remove the 2 brake pedal bushings, brake pedal shaft collar, and the brake pedal sub-assembly.

5. REMOVE BRAKE PEDAL PAD

(a) Remove the brake pedal pad.

ADJUSTMENT



1. CHECK AND ADJUST BRAKE PEDAL HEIGHT

(a) Check the brake pedal height.

Pedal height from dash panel:
129.9 to 139.9 mm (5.114 to 5.508 in.)

(b) Adjust the brake pedal height.

(1) Disconnect the connector from the stop light switch assembly.

(2) Remove the stop light switch.

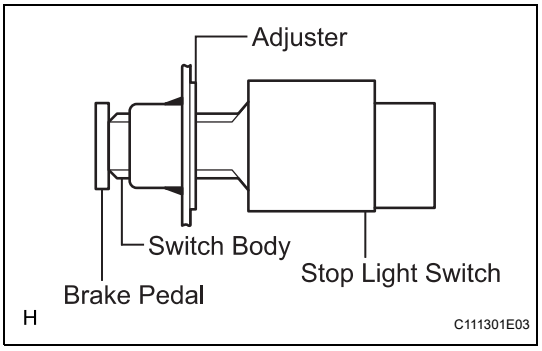
(3) Loosen the push rod clevis lock nut.

(4) Adjust the pedal height by turning the pedal push rod.

Pedal height from the dash panel:
129.9 to 139.9 mm (5.114 to 5.508 in.)

(5) Tighten the clevis lock nut.

Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

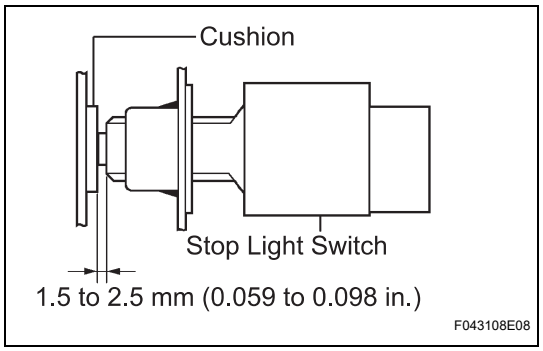


(6) Insert the switch into the adjuster until the switch body touches the pedal.

NOTICE:
Do not depress the pedal.

(7) Rotate the switch a quarter turn clockwise.

Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf)
NOTICE:
Do not depress the pedal.

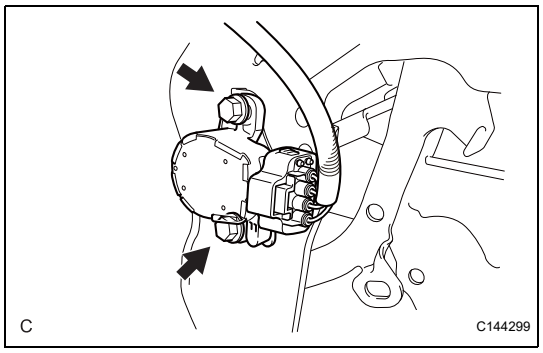


(8) Check the switch clearance.
Standard stop light switch clearance:
1.5 to 2.5 mm (0.059 to 0.098 in.)

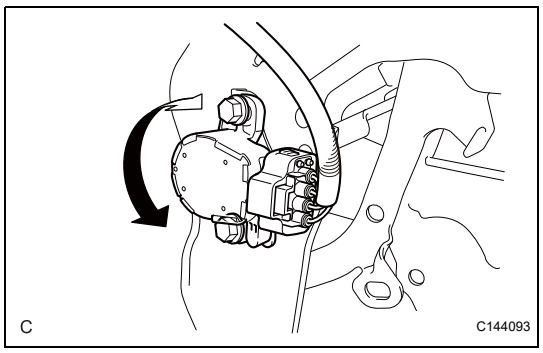
(9) Connect the connector to the stop light switch assembly.

2. ADJUST BRAKE PEDAL STROKE SENSOR ASSEMBLY

(a) Connect the intelligent tester to the DLC3 with the power switch off.



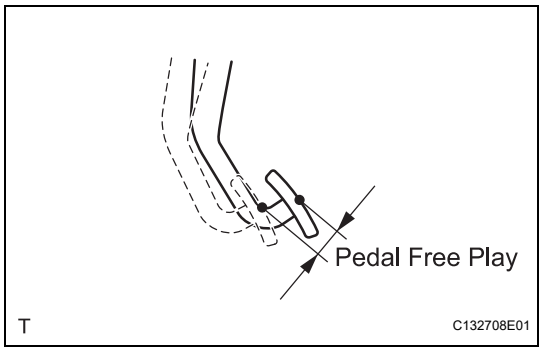
(b) Loosen the 2 bolts.
(c) Turn the power switch on (IG).
(d) Turn on the intelligent tester.



(e) Reading the stroke sensor 1 value shown on the intelligent tester screen, turn the stroke sensor slowly to the right and left to adjust it to the standard voltage.
Standard voltage:
0.8 to 1.2 V

(f) Tighten the 2 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
Do not depress the brake pedal after turning the power switch on (IG).

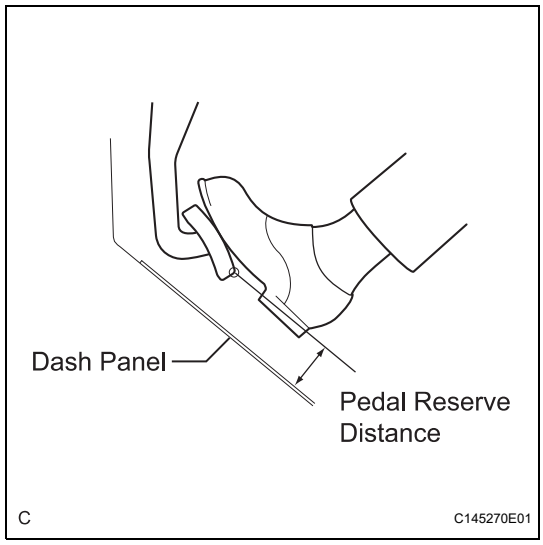
(g) Perform linear valve offset learning. (See page BC-25)



3. CHECK PEDAL FREE PLAY

(a) Depress the pedal until a slight resistance is felt. Measure the distance as shown in the illustration.
Pedal free play:
1 to 2 mm (0.039 to 0.079 in.)

(1) If the pedal free play is 1.0 mm (0.039 in.) or less, check the protrusion of the stop light switch assembly shaft.
Protrusion of the stop light switch assembly shaft:
0.5 to 2.4 mm (0.020 to 0.095 in.)
HINT:
- Adjust if the protrusion is off the specified value.
- If the protrusion is within the specified value, it is normal though brake pedal free play is 1.0 mm (0.039 in.) or less.



4. CHECK PEDAL RESERVE DISTANCE

(a) Release the parking brake pedal.

(b) With the engine running, depress the pedal and measure the pedal reserve distance as shown in the illustration.

Pedal reserve distance from the dash panel at 490 N (50 kgf, 110 lbf):

More than 80 mm (3.15 in.)

REASSEMBLY

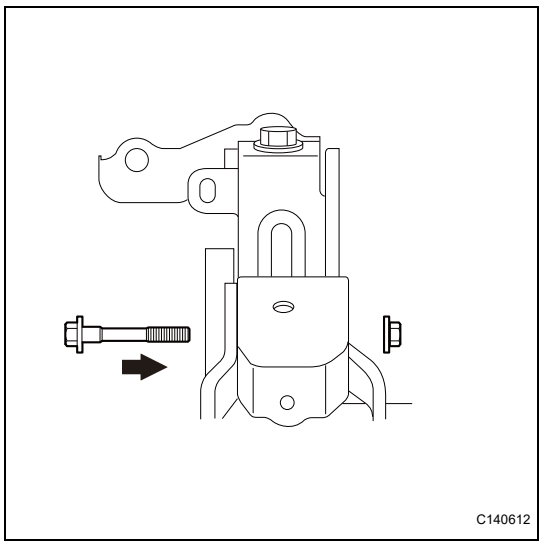
1. INSTALL BRAKE PEDAL PAD

(a) Install the brake pedal pad.

2. INSTALL BRAKE PEDAL SUB-ASSEMBLY

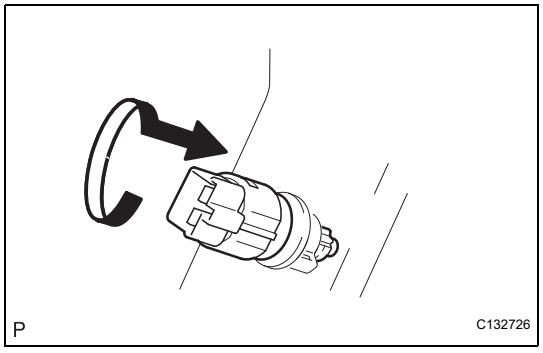
(a) Apply lithium soap base glycol grease to 2 new brake pedal bushings.

(b) Install the brake pedal sub-assembly, the 2 brake pedal bushings, and the brake pedal shaft collar to the brake pedal support assembly with the bolt and the nut as shown in the illustration.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)



3. INSTALL STOP LIGHT SWITCH MOUNTING ADJUSTER

(a) Install the stop light switch mounting adjuster.



4. TEMPORARILY TIGHTEN STOP LIGHT SWITCH ASSEMBLY

(a) Temporarily tighten the stop light switch assembly as shown in the illustration.
Torque: 1.5 N*m (15 kgf*cm, 13 in.*lbf)

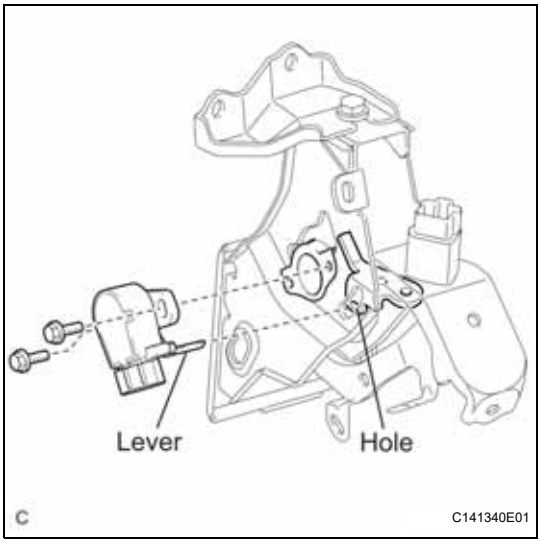
5. INSTALL BRAKE PEDAL STROKE SENSOR ASSEMBLY

(a) New brake pedal stroke sensor assembly:

(1) Install a new brake pedal stroke sensor assembly with the 2 bolts.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)
NOTICE:
- **Engage the brake pedal stroke sensor assembly lever with the brake pedal hole.**
- **Check that there is no foreign matter attached to the contact surface of the brake pedal stroke sensor.**

(2) Strongly depress the brake pedal and the brake pedal stroke sensor assembly lever set pin will break.

(3) Remove the broken lever set pin.

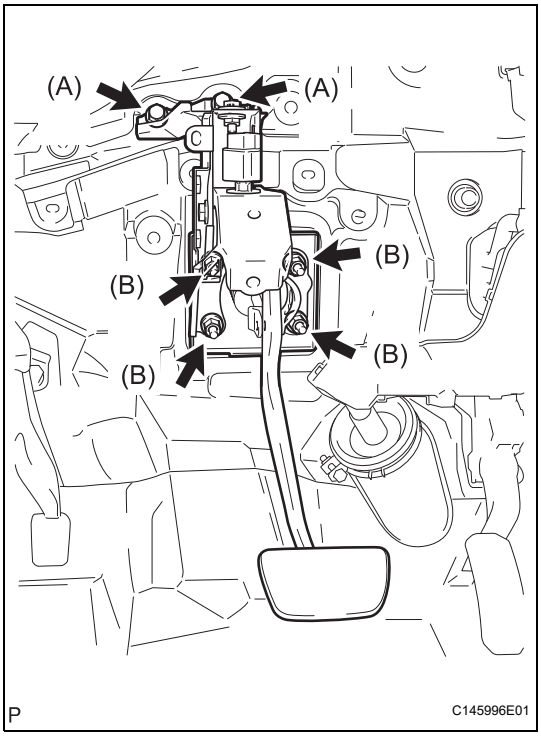


(b) Reuse of the brake pedal stroke sensor assembly:
(1) Temporarily install the brake pedal stroke sensor assembly with the 2 bolts.
NOTICE:
- **Engage the brake pedal stroke sensor assembly lever with the brake pedal hole.**
- **Check that there is no foreign matter attached to the contact surface of the brake pedal stroke sensor.**

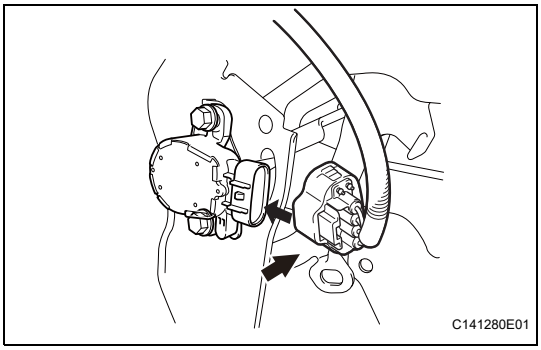
INSTALLATION

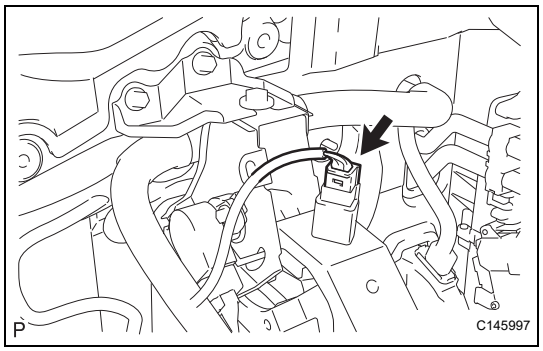
1. INSTALL BRAKE PEDAL ASSEMBLY

(a) Install the brake pedal assembly with 2 bolts (A) and 4 nuts (B).
Torque: Bolt (A)
19 N*m (194 kgf*cm, 14 ft.*lbf)
Nut (B)
13 N*m (133 kgf*cm, 10 ft.*lbf)

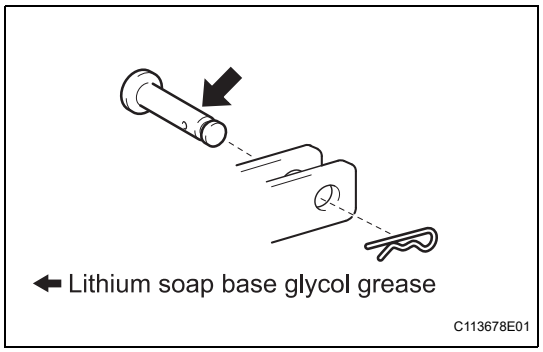


(b) Connect the brake pedal stroke sensor connector.



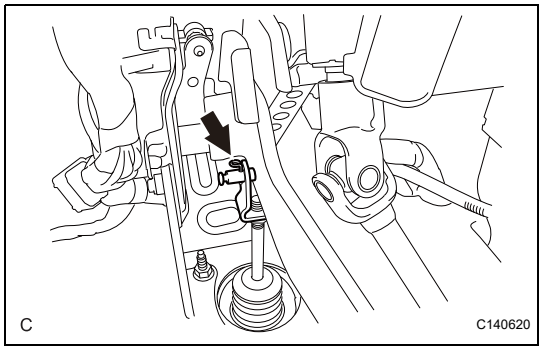


(c) Connect the stop light switch connector.

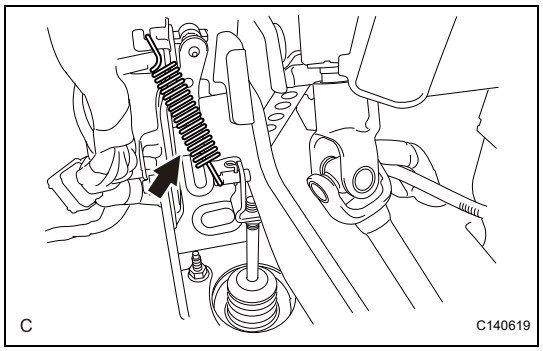


2. CONNECT MASTER CYLINDER PUSH ROD CLEVIS

(a) Apply lithium soap base glycol grease to the clevis pin.



(b) Connect the clevis pin and a new clip.



3. INSTALL BRAKE PEDAL RETURN SPRING

(a) Install the brake pedal return spring.

4. INSTALL INSTRUMENT PANEL REINFORCEMENT

HINT:
Refer to the procedures up to "INSTALL AIR CONDITIONING UNIT". (See page AC-200)

5. CLEAR DTC FOR BRAKE CONTROL SYSTEM

HINT:
Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-57)

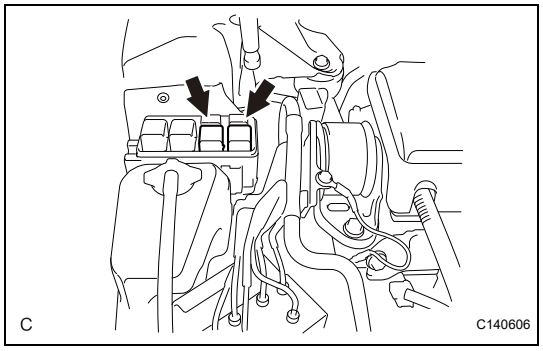
6. ADJUST BRAKE PEDAL STROKE SENSOR ASSEMBLY (See page BR-19)

7. CHECK PEDAL FREE PLAY (See page BR-19)

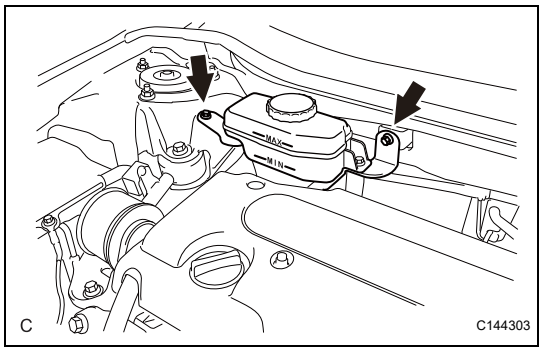
8. CHECK PEDAL RESERVE DISTANCE (See page BR-20)

REMOVAL

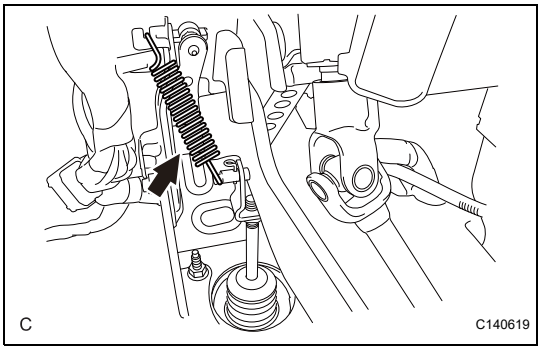
1. **DISCONNECT CABLE FROM BATTERY NEGATIVE TERMINAL**



2. **REMOVE ABS MOTOR RELAY**
   (a) In order to prohibit brake control, remove the 2 ABS motor relays with the power switch off.
   NOTICE:
   If the pump motor operates while air remains inside the brake actuator hose, the air will enter the actuator, resulting in difficulty in bleeding the brakes.
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-90)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-395)**
5. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-90)**

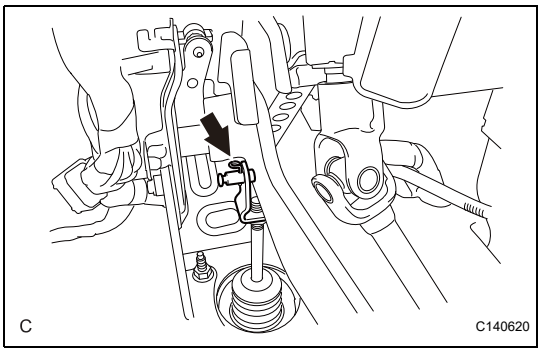


6. **SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
   (a) Remove the 2 bolts, and separate the brake master cylinder reservoir sub-assembly.
7. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
8. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
9. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
10. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
11. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
12. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
13. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-403)**
14. **REMOVE POWER STEERING ECU ASSEMBLY (See page PS-69)**
15. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
16. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
17. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**



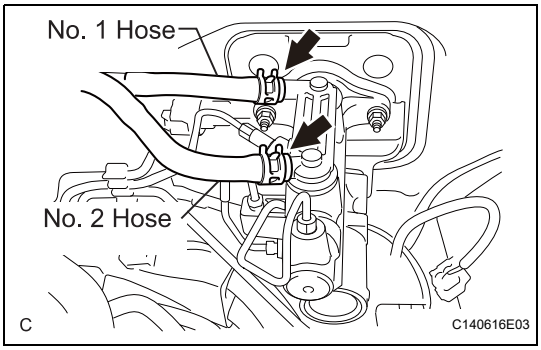
18. REMOVE BRAKE PEDAL RETURN SPRING

(a) Remove the brake pedal return spring.



19. DISCONNECT MASTER CYLINDER PUSH ROD CLEVIS

(a) Remove the clip and clevis pin and disconnect the push rod clevis from brake pedal.

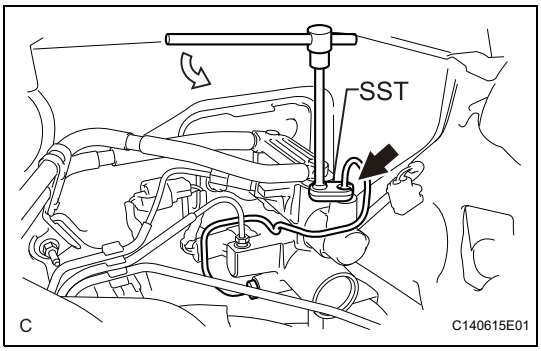


20. DISCONNECT NO. 1 RESERVOIR HOSE

(a) Move the clip, and disconnect the No. 1 reservoir hose.

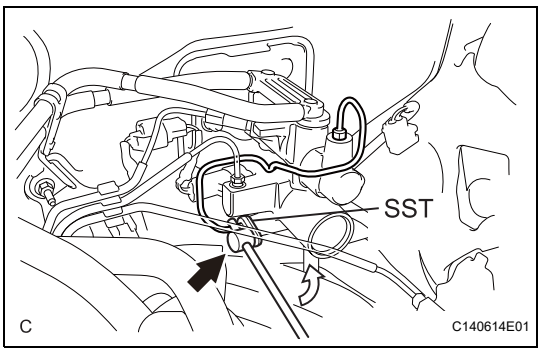
21. DISCONNECT NO. 2 RESERVOIR HOSE

(a) Move the clip, and disconnect the No. 2 reservoir hose.

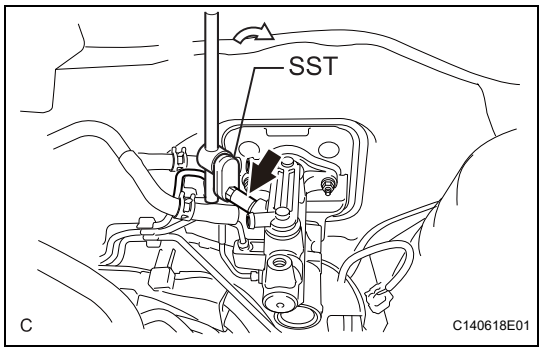


22. REMOVE BRAKE STROKE SIMULATOR LINE

(a) Using SST, disconnect the brake stroke simulator line.
SST 09023-00101

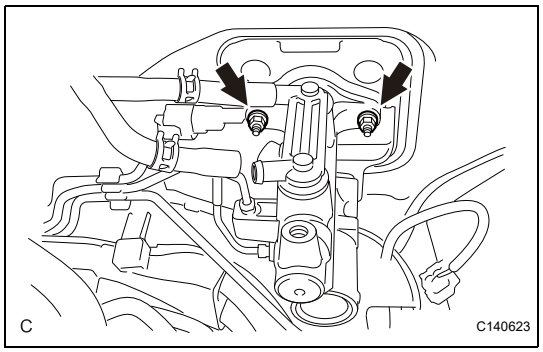


(b) Using SST, disconnect the brake stroke simulator line.
SST 09023-00101



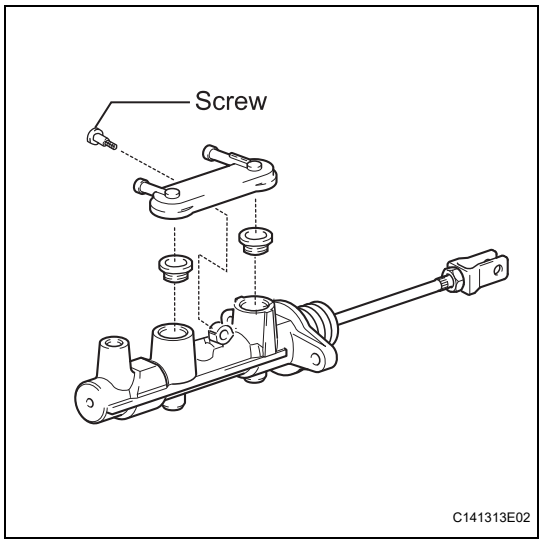
23. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY

(a) Using SST, disconnect the brake line.
SST 09023-00101



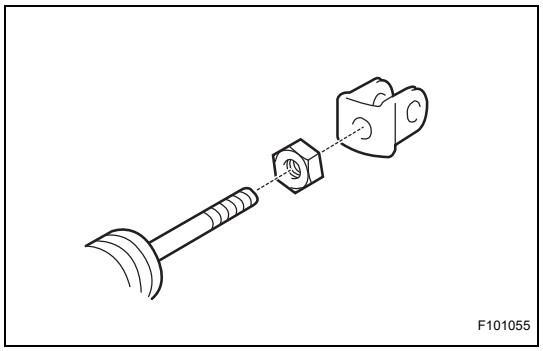
(b) Remove the 2 nuts, the 2 gaskets and the brake master cylinder sub-assembly.

DISASSEMBLY



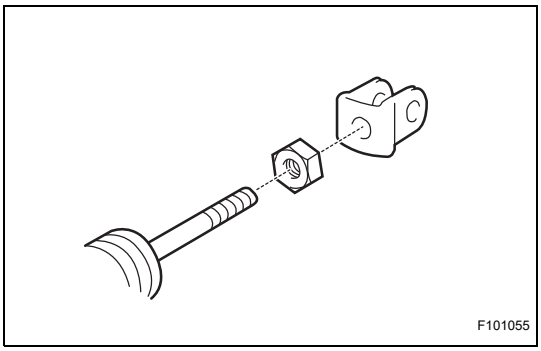
1. REMOVE MASTER CYLINDER RESERVOIR GROMMET

(a) Remove the screw, brake master cylinder union and 2 master cylinder reservoir grommets from the brake master cylinder.



2. REMOVE MASTER CYLINDER PUSH ROD CLEVIS

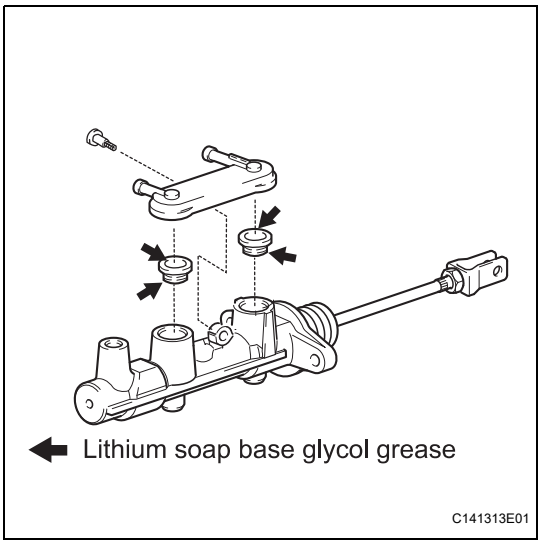
(a) Remove the push rod clevis and lock nut.
HINT:
Adjustment of brake pedal height is easier when reassembling the brake master with simulator cylinder assembly afterward, if the protrusion of the push rod from push rod clevis is measured and recorded at this stage.



REASSEMBLY

1. INSTALL MASTER CYLINDER PUSH ROD CLEVIS

(a) Temporarily install the brake master cylinder push rod clevis with the lock nut.
HINT:
After checking and adjusting the brake pedal height, tighten the lock nut firmly.



2. INSTALL MASTER CYLINDER RESERVOIR GROMMET

(a) Apply lithium soap base glycol grease to 2 new master cylinder reservoir grommets.

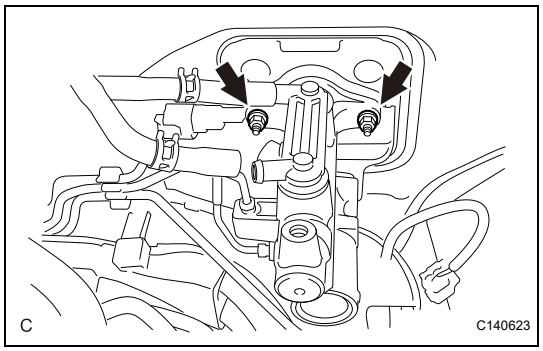
(b) Install the master cylinder union and 2 master cylinder reservoir grommets to the brake master cylinder with the screw.
Torque: 1.8 N*m (18 kgf*cm, 16 in.*lbf)

INSTALLATION

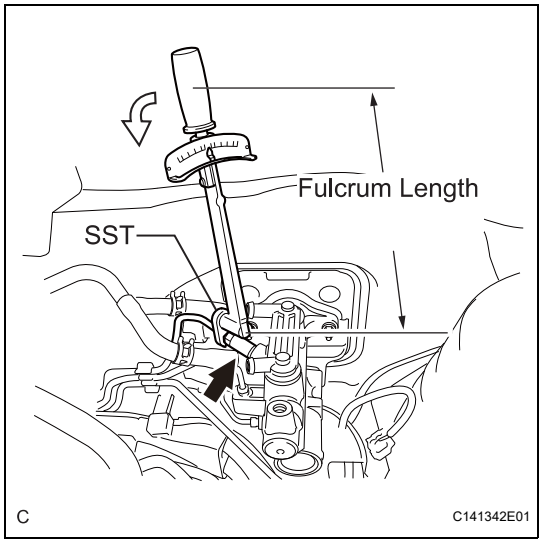
1. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY

NOTICE:

- **Do not bend or damage the brake line.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake line from the connecting points.**
- **Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



(a) Install 2 new gaskets and the brake master cylinder assembly with the 2 nuts.
Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



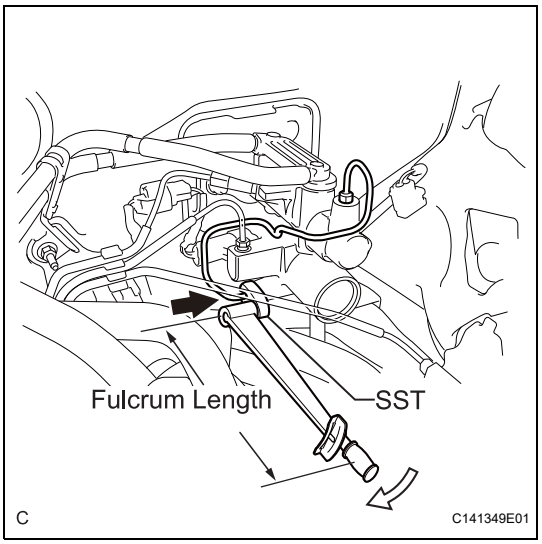
(b) Use the SST to fully tighten the brake line.
SST 09023-00101
Torque: Without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
With SST
14 N*m (143 kgf*cm, 10 ft.*lbf)

2. INSTALL BRAKE STROKE SIMULATOR LINE

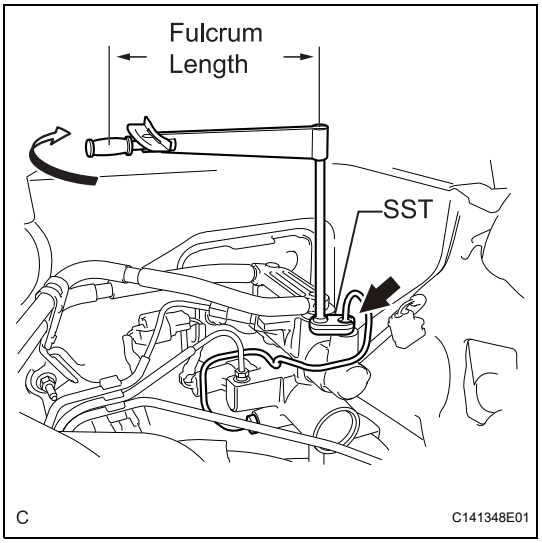
NOTICE:

- **Do not bend or damage the brake line.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake line from the connecting points.**
- **Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**

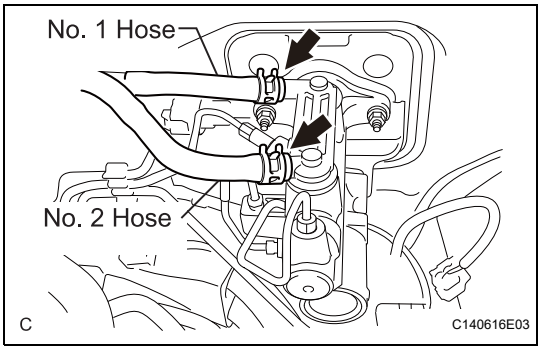
(a) Temporarily tighten the brake stroke simulator line.



(b) Use the SST to fully tighten the brake stroke simulator line.
SST 09023-00101
Torque: Without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
With SST
14 N*m (143 kgf*cm, 10 ft.*lbf)

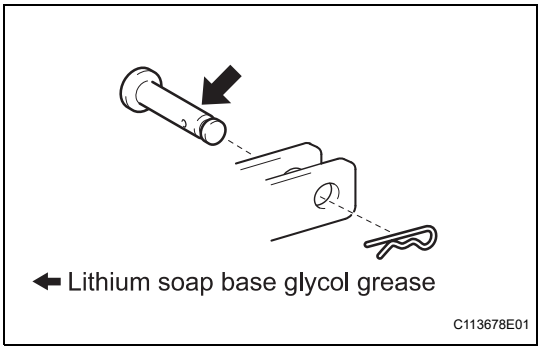


(c) Use the SST to fully tighten the brake stroke simulator line.
SST 09023-00101
Torque: Without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
With SST
14 N*m (143 kgf*cm, 10 ft.*lbf)

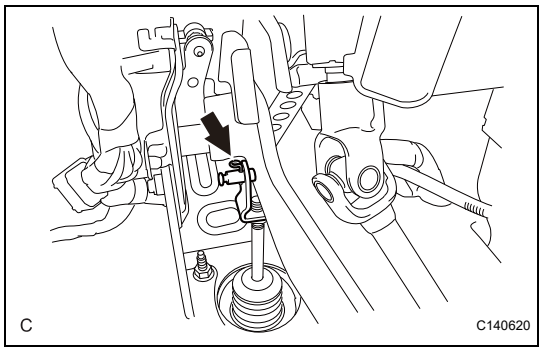


3. CONNECT NO. 1 RESERVOIR HOSE
(a) Connect the No. 1 reservoir hose to the brake master cylinder sub-assembly and move the clip.

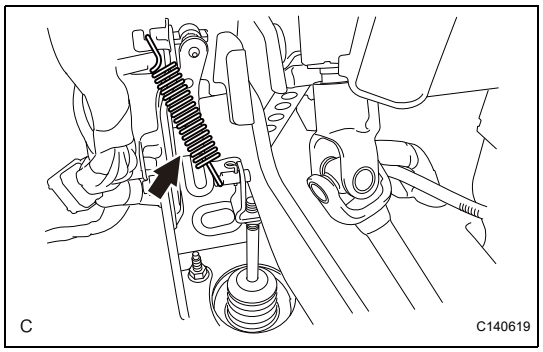
4. CONNECT NO. 2 RESERVOIR HOSE
(a) Connect the No. 2 reservoir hose to the brake master cylinder sub-assembly and move the clip.



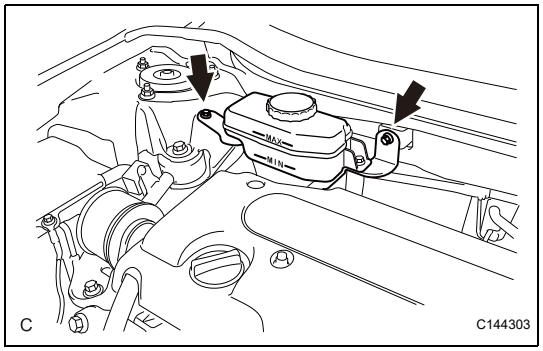
5. CONNECT MASTER CYLINDER PUSH ROD CLEVIS
(a) Apply lithium soap base glycol grease to the clevis pin.



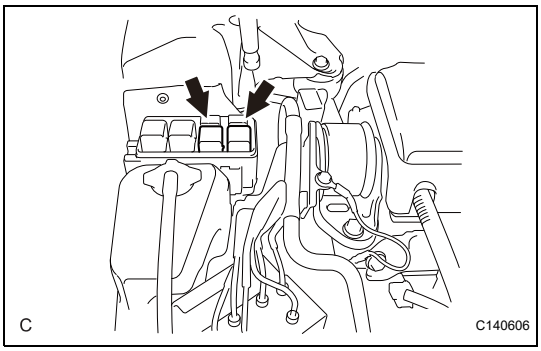
(b) Connect the clevis pin and a new clip.



6. **INSTALL BRAKE PEDAL RETURN SPRING**
   (a) Install the brake pedal return spring.
7. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**
8. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
9. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**
10. **INSTALL POWER STEERING ECU ASSEMBLY (See page PS-71)**
11. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-405)**
12. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-13)**
13. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)**
14. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)**
15. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)**
16. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)**
17. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)**

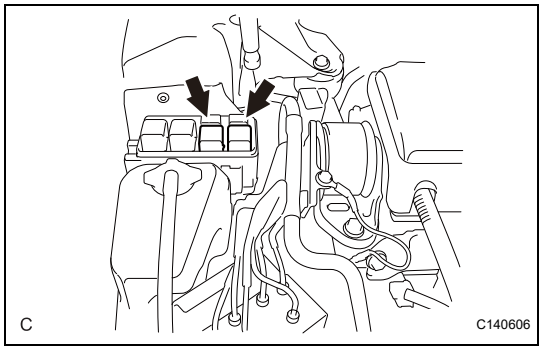


18. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
    (a) Install the brake master cylinder reservoir sub-assembly with the 2nuts.
    Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
19. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-113)**
20. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**
21. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**

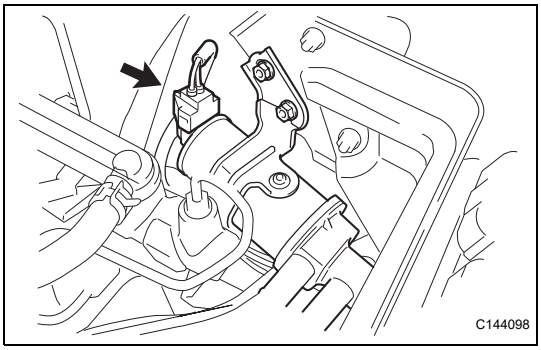


22. **CONNECT CABLE TO BATTERY NEGATIVE TERMINAL**
23. **ADD BRAKE FLUID TO RESERVOIR (See page BR-7)**
24. **BLEED BRAKE MASTER CYLINDER (See page BR-8)**
25. **BLEED BRAKE ACTUATOR HOSE (See page BR-8)**
26. **BLEED FRONT BRAKE SYSTEM (See page BR-10)**
27. **INSTALL ABS MOTOR RELAY**
    (a) Install the 2 ABS motor relays.
28. **CLEAR DTC FOR BRAKE CONTROL SYSTEM**
    HINT:
    Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-57)
29. **PERFORM ACCUMULATOR PRESSURE ZERO DOWN (See page BR-12)**
30. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-13)**
31. **CHECK FOR BRAKE FLUID LEAKAGE**
32. **CHECK AND ADJUST BRAKE PEDAL HEIGHT (See page BR-18)**
33. **ADJUST BRAKE PEDAL STROKE SENSOR ASSEMBLY (See page BR-19)**
34. **CHECK PEDAL FREE PLAY (See page BR-19)**
35. **CHECK PEDAL RESERVE DISTANCE (See page BR-20)**
36. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)

REMOVAL

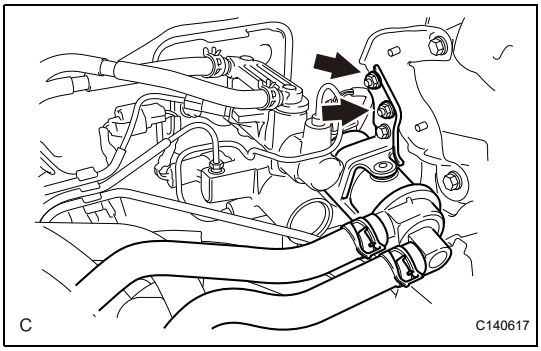


1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE ABS MOTOR RELAY**
   (a) In order to prohibit brake control, remove the 2 ABS motor relays with the power switch off.
   NOTICE:
   If the pump motor operates while air remains inside the brake actuator hose, the air will enter the actuator, resulting in difficulty in bleeding the brakes.
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-90)**
4. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-395)**
5. **REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-90)**
6. **SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-27)**
7. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
8. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
9. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
10. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
11. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
12. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
13. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-403)**
14. **REMOVE POWER STEERING ECU ASSEMBLY (See page PS-69)**
15. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
16. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
17. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**
18. **REMOVE BRAKE PEDAL RETURN SPRING (See page BR-16)**
19. **DISCONNECT MASTER CYLINDER PUSH ROD CLEVIS (See page BR-16)**



20. SEPARATE HEATER WATER PUMP ASSEMBLY

(a) Disconnect the connector.

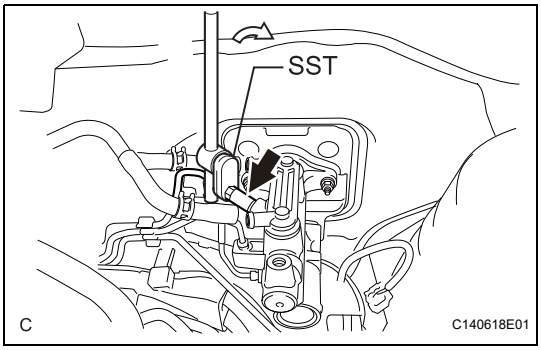


(b) Remove the 2 nuts, and separate the heater water pump assembly.

21. DISCONNECT NO. 1 RESERVOIR HOSE (See page BR-28)

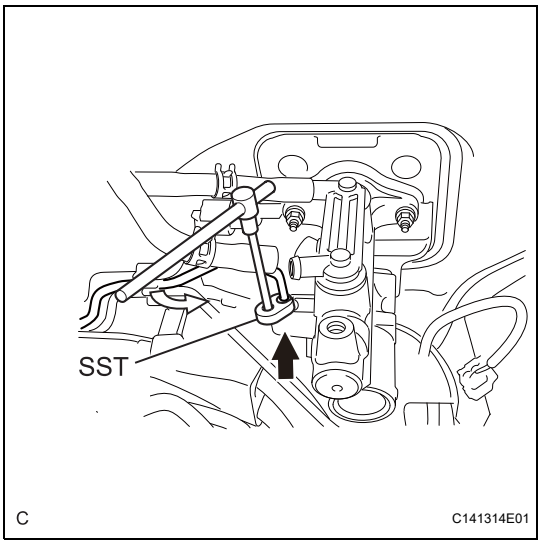
22. DISCONNECT NO. 2 RESERVOIR HOSE (See page BR-28)

23. REMOVE BRAKE STROKE SIMULATOR LINE (See page BR-28)

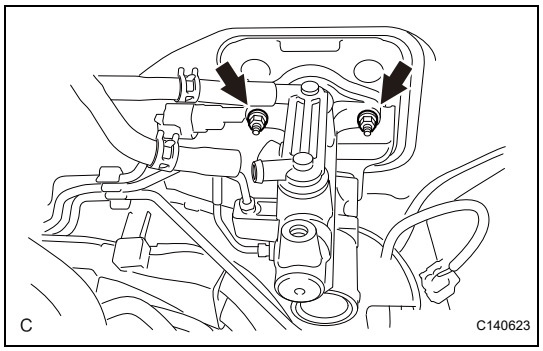


24. REMOVE BRAKE MASTER CYLINDER SUB-ASSEMBLY

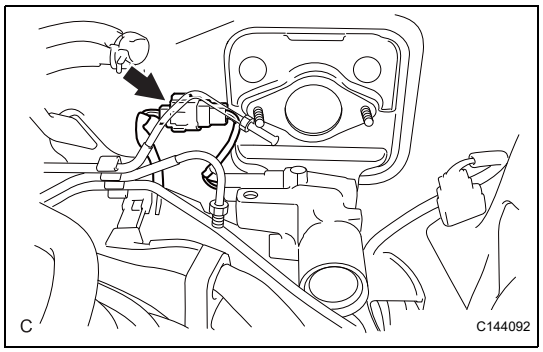
(a) Using SST, disconnect the brake line.
SST 09023-00101



(b) Using SST, disconnect the brake line.

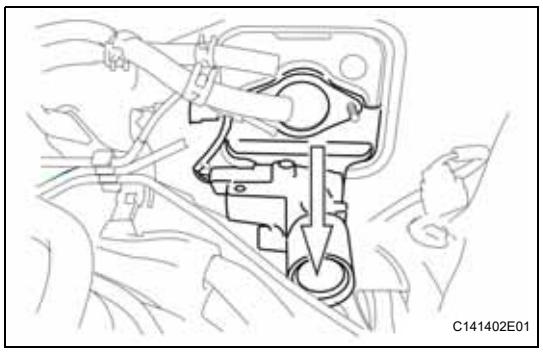


(c) Remove the 2 nuts and the brake master cylinder sub-assembly.



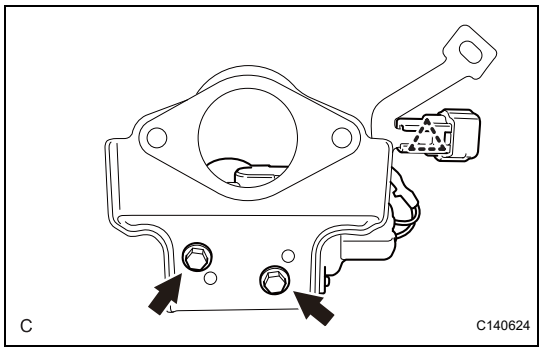
25. REMOVE BRAKE STROKE SIMULATOR CYLINDER SUB-ASSEMBLY WITH BRACKET

(a) Disconnect the connector.



(b) Remove the 2 gaskets and the brake stroke simulator cylinder sub-assembly with bracket.

DISASSEMBLY

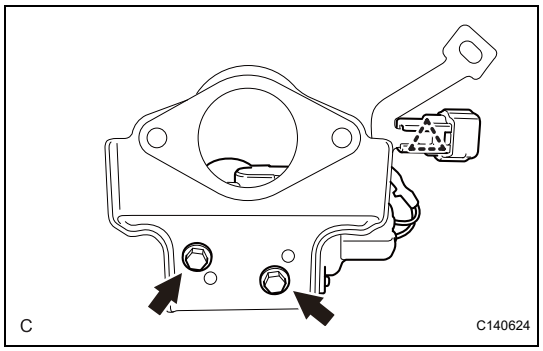


1. REMOVE BRAKE STROKE SIMULATOR CYLINDER SUB-ASSEMBLY

(a) Disconnect the connector from the brake stroke simulator bracket.

(b) Remove the 2 bolts and the brake stroke simulator cylinder sub-assembly from the brake stroke simulator bracket.

REASSEMBLY

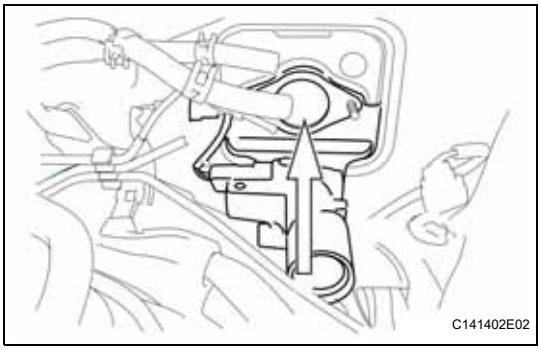


1. INSTALL BRAKE STROKE SIMULATOR CYLINDER SUB-ASSEMBLY

(a) Install the brake stroke simulator cylinder sub-assembly to the brake stroke simulator bracket with the 2 bolts.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

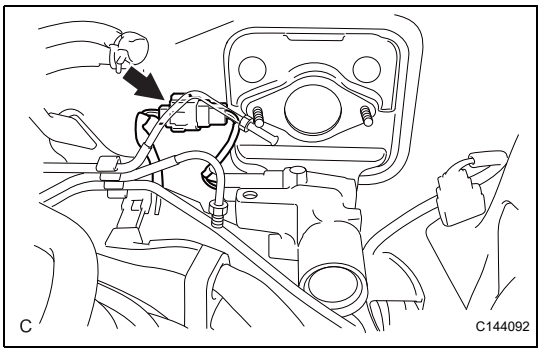
(b) Install the connector to the brake stroke simulator bracket.



INSTALLATION

1. INSTALL BRAKE STROKE SIMULATOR CYLINDER SUB-ASSEMBLY WITH BRACKET

(a) Install 2 new gaskets and brake stroke simulator cylinder sub-assembly with bracket.

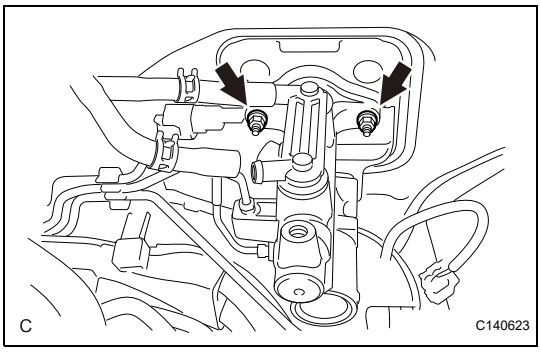


(b) Connect the connector.

2. INSTALL BRAKE MASTER CYLINDER SUB-ASSEMBLY

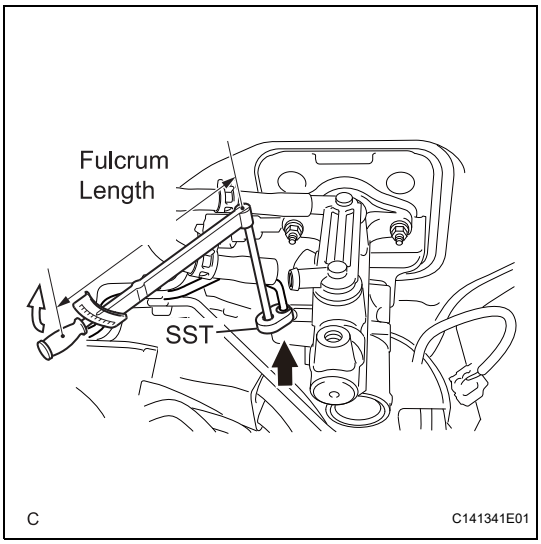
NOTICE:

- **Do not bend or damage the brake line.**
- **Do not allow any foreign matter such as dirt and dust to enter the brake line from the connecting points.**
- **Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



(a) Install the brake master cylinder sub-assembly with the 2 nuts.

Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)



(b) Use the SST to fully tighten the brake line.

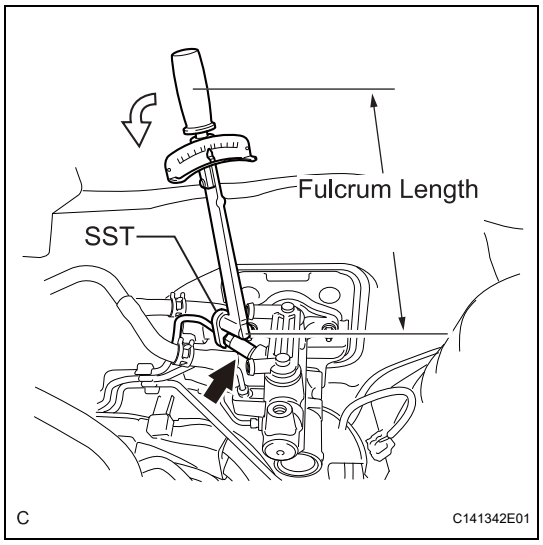
SST 09023-00101

Torque: Without SST

15 N*m (155 kgf*cm, 11 in.*lbf)

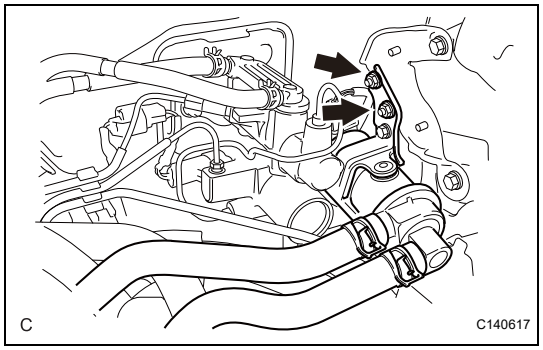
With SST

14 N*m (143 kgf*cm, 10 in.*lbf)

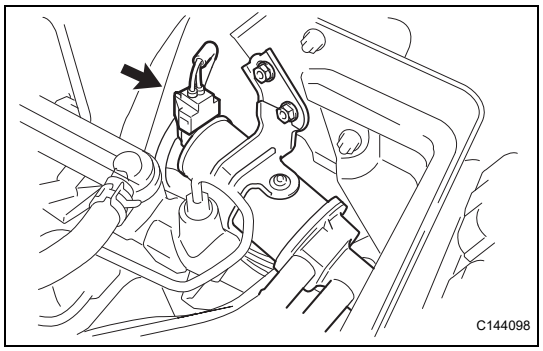


(c) Use the SST to fully tighten the brake line.
SST 09023-00101
Torque: Without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
With SST
14 N*m (143 kgf*cm, 10 ft.*lbf)

3. **INSTALL BRAKE STROKE SIMULATOR LINE (See page BR-31)**
4. **CONNECT NO. 1 RESERVOIR HOSE (See page BR-32)**
5. **CONNECT NO. 2 RESERVOIR HOSE (See page BR-32)**



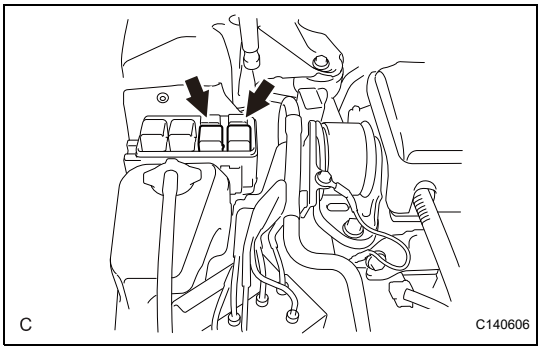
6. **INSTALL HEATER WATER PUMP ASSEMBLY**
(a) Install the heater water pump assembly with the 2 nuts.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



(b) Connect the connector.

7. **CONNECT MASTER CYLINDER PUSH ROD CLEVIS (See page BR-22)**
8. **INSTALL BRAKE PEDAL RETURN SPRING (See page BR-22)**
9. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**
10. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
11. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**
12. **INSTALL POWER STEERING ECU ASSEMBLY (See page PS-71)**
13. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-405)**
14. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-13)**
15. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)**
16. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)**

17. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)**
18. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)**
19. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)**
20. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-33)**
21. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-113)**
22. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**
23. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
24. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
25. **ADD BRAKE FLUID TO RESERVOIR (See page BR-7)**
26. **BLEED BRAKE MASTER CYLINDER (See page BR-8)**
27. **BLEED BRAKE ACTUATOR HOSE (See page BR-8)**
28. **BLEED FRONT BRAKE SYSTEM (See page BR-10)**
29. **INSTALL ABS MOTOR RELAY**
    (a) Install the 2 ABS motor relays.



30. **CLEAR DTC FOR BRAKE CONTROL SYSTEM**
    HINT:
    Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-57)
31. **PERFORM ACCUMULATOR PRESSURE ZERO DOWN (See page BR-12)**
32. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-13)**
33. **CHECK FOR BRAKE FLUID LEAKAGE**
34. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)

REMOVAL

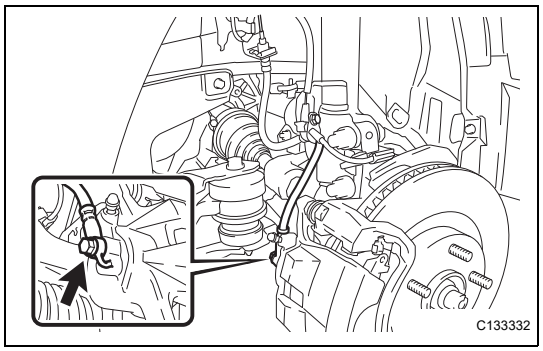
NOTICE:
When the brake caliper is removed from the brake disc, do not start the hybrid system. If the hybrid system is started, the brake fluid pressure may increase.
HINT:
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.

1. REMOVE FRONT WHEEL

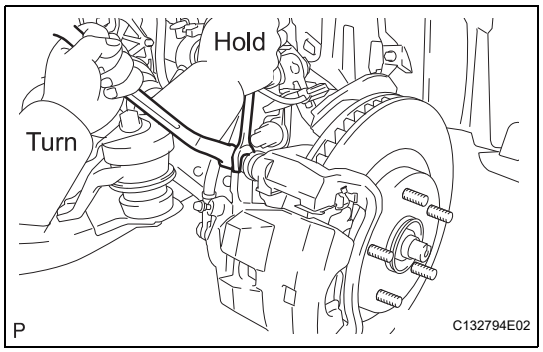
2. DRAIN BRAKE FLUID
NOTICE:
If brake fluid leaks onto any painted surface of the vehicle, wash or remove it completely.

3. REMOVE DISC BRAKE CYLINDER ASSEMBLY

(a) Remove the union bolt and gasket from the disc brake cylinder assembly, then disconnect the front brake flexible hose.

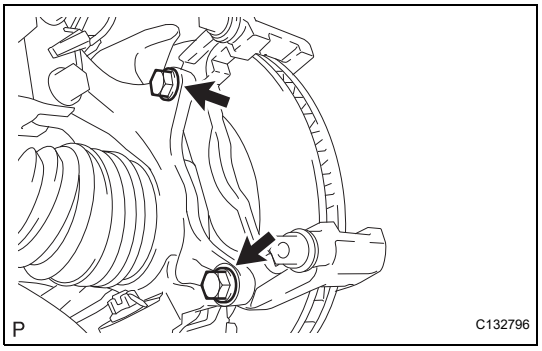


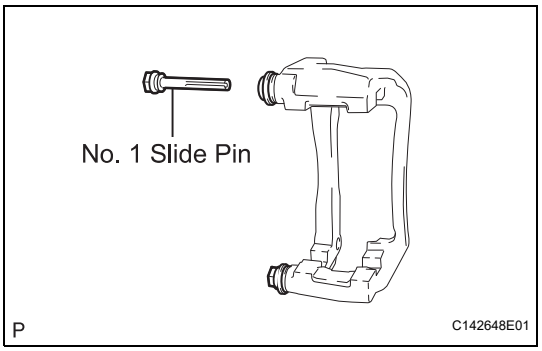
(b) Hold the front disc brake cylinder slide pin and remove the 2 bolts and disc brake cylinder assembly.



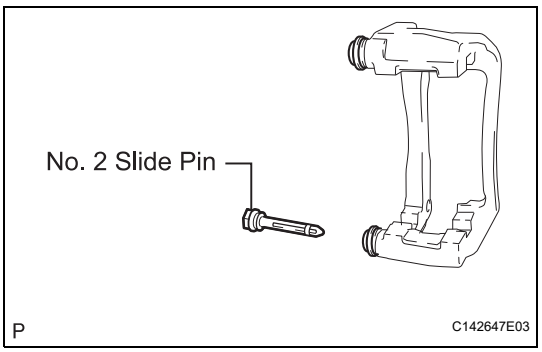
DISASSEMBLY

1. **REMOVE ANTI-SQUEAL SPRING (w/ Anti-squeal Spring)**
   (a) Remove the 2 anti-squeal springs from front brake pad.
2. **REMOVE FRONT BRAKE PAD**
   (a) Remove the 2 front brake pads from the front disc brake cylinder mounting.
3. **REMOVE FRONT ANTI-SQUEAL SHIM**
   (a) Remove the 2 front anti-squeal shims and the pad wear indicator plate from each pad.
4. **REMOVE FRONT DISC BRAKE PAD SUPPORT PLATE**
   (a) Remove the 4 front disc brake pad support plates.
5. **REMOVE FRONT DISC BRAKE CYLINDER MOUNTING**
   (a) Remove the 2 bolts and front disc brake cylinder mounting.

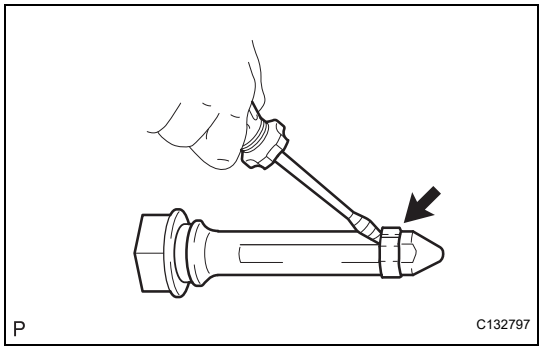




6. **REMOVE NO. 1 FRONT DISC BRAKE CYLINDER SLIDE PIN**
   (a) Remove the No. 1 front disc brake cylinder slide pin from the front disc brake cylinder mounting.



7. **REMOVE NO. 2 FRONT DISC BRAKE CYLINDER SLIDE PIN**
   (a) Remove the No. 2 front disc brake cylinder slide pin from the front disc brake cylinder mounting.



8. REMOVE FRONT DISC BRAKE CYLINDER SLIDE BUSHING

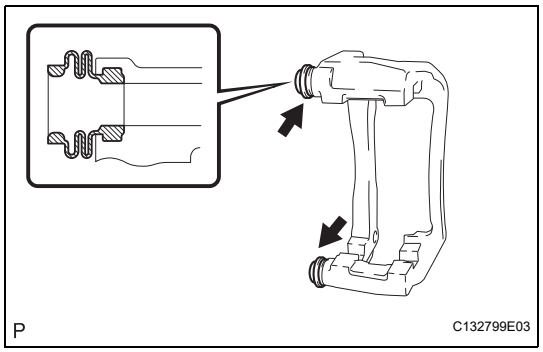
(a) Using a screwdriver, remove the front disc brake cylinder slide bushing from the No. 2 front disc brake cylinder slide pin.

NOTICE:

Do not damage the No. 2 front disc brake cylinder slide pin.

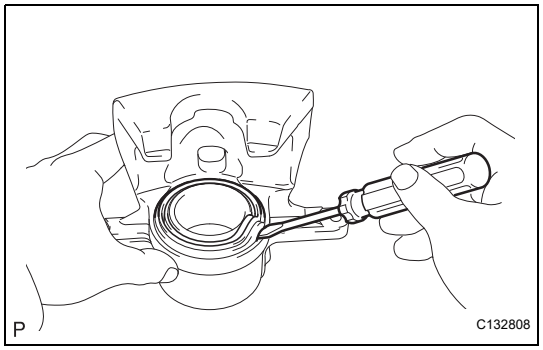
HINT:

Tape the screwdriver tip before use.



9. REMOVE FRONT DISC BRAKE BUSHING DUST BOOT

(a) Remove the 2 front disc brake bushing dust boots from the front disc brake cylinder mounting.

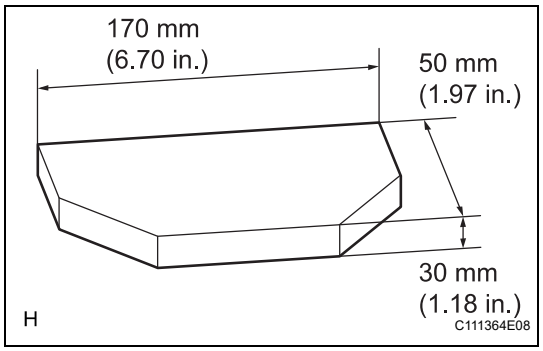


10. REMOVE CYLINDER BOOT

(a) Using a screwdriver, remove the cylinder boot set ring and the cylinder boot.

NOTICE:

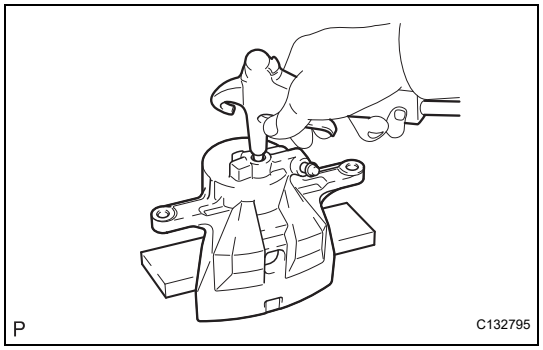
Be careful not to damage the brake piston and cylinder.



11. REMOVE FRONT DISC BRAKE PISTON

(a) Prepare a wooden plate to hold the pistons.

(b) Place the wooden plate between the front disc brake piston and the disc brake cylinder assembly.



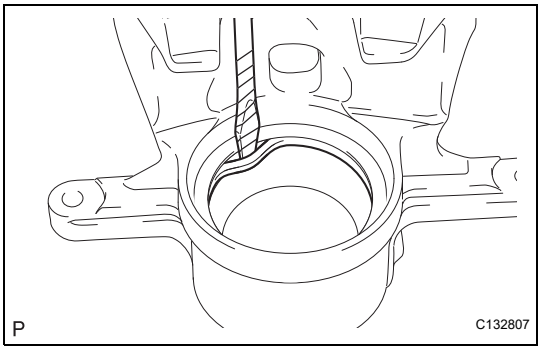
(c) Use compressed air to remove the front disc brake piston from the disc brake cylinder assembly.

CAUTION:

Do not place your fingers in front of the piston when using compressed air.

NOTICE:

Do not spatter the brake fluid.



12. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the piston seal from the disc brake cylinder assembly.

NOTICE:
Do not damage the inner cylinder or cylinder groove.

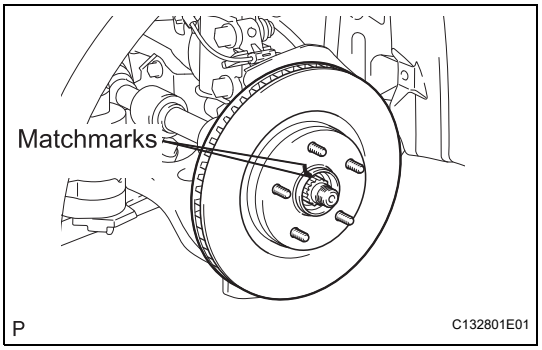
HINT:
Tape the screwdriver tip before use.

13. REMOVE FRONT DISC BRAKE BLEEDER PLUG CAP

(a) Remove the front disc brake bleeder plug cap.

14. REMOVE FRONT DISC BRAKE BLEEDER PLUG

(a) Remove the front disc brake bleeder plug.

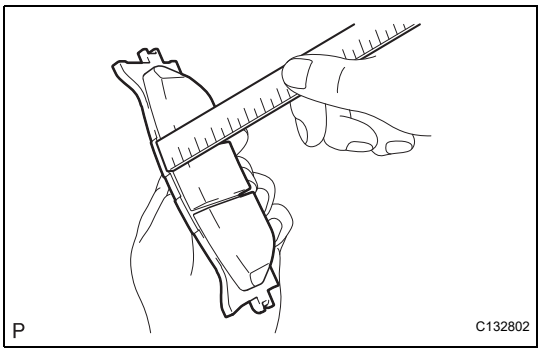


15. REMOVE FRONT DISC

(a) Remove the front disc.

HINT:
Put matchmarks on the disc and the axle hub.

INSPECTION



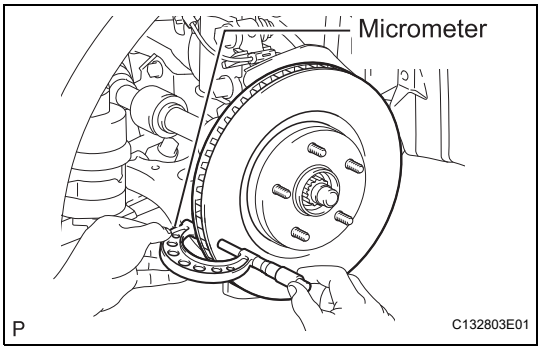
1. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.

Standard thickness:
12.0 mm(0.472 in.)
Minimum thickness:
1.0 mm (0.039 in.)

If the pad lining thickness is less than the minimum, replace the brake pads.

HINT:
Be sure to check wear of the front disc after replacing the brake pad with a new one.



2. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the disc thickness.

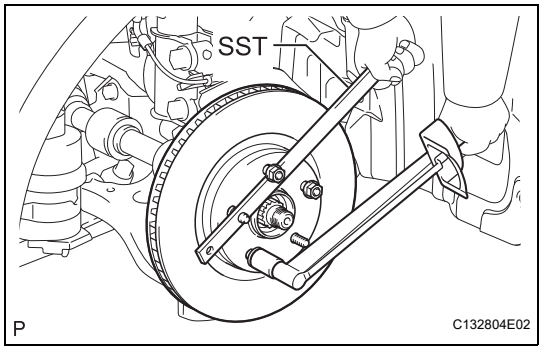
Standard thickness:
28.0 mm (1.102 in.)
Minimum thickness :
25.0 mm (0.983 in.)

If the disc thickness is less than the minimum, replace the front disc.

3. INSPECT BRAKE CYLINDER AND PISTON

(a) Check the cylinder bore and piston for rust or scoring. If necessary, replace the disc brake cylinder assembly.

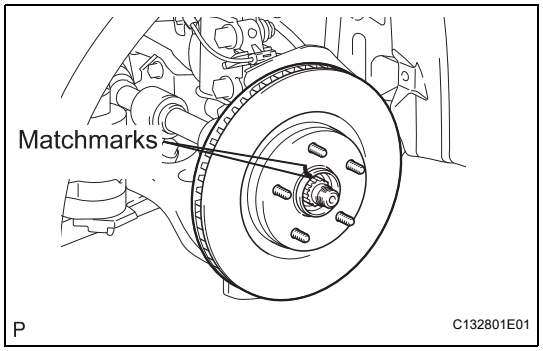
4. **INSPECT FRONT DISC BRAKE PAD SUPPORT PLATE**
   (a) Make sure that the pad support plate has sufficient rebound, has no deformation, cracks or wear, and that all rust and dirt are cleaned off. If necessary, replace the brake pad support plate.



5. **INSPECT DISC RUNOUT**
   (a) Using SST to hold the disc, tighten the disc with the 3 hub nuts.
   SST 09330-00021
   HINT:
   Use the SST to hold the disc while torquing the nuts.
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

   (b) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) away from the outer edge of the disc.
   Maximum disc runout:
   0.05 mm (0.0020 in.)
   NOTICE:
   - **Keep the magnet of the dial indicator away from the axle hub and speed sensor.**
   - **Install the dial indicator to the shock absorber.**
   (c) If the runout exceeds the maximum value, change the installation positions of the disc and axle so that the runout will become minimal. If the runout exceeds the maximum even after the installation positions are changed, check the bearing play in the axial direction and the axle hub runout (See page AH-11). If the bearing play and the axle hub runout are normal and if the disc thickness is not within the specified range, grind the disc. If the disc thickness is less than the minimum, replace the disc.
   (d) Remove the 3 hub nuts.
   (e) Remove the front disc.

REASSEMBLY



1. **INSTALL FRONT DISC**
   (a) Align the matchmarks and install the front disc.
   NOTICE:
   When replacing the disc with a new one, select the installation position where the front disc has the minimum runout.

2. **TEMPORARILY TIGHTEN FRONT DISC BRAKE BLEEDER PLUG**
   (a) Temporarily tighten the front disc brake bleeder plug to the disc brake cylinder assembly.

3. **INSTALL FRONT DISC BRAKE BLEEDER PLUG CAP**
   (a) Install the front disc brake bleeder plug cap to the front disc brake bleeder plug.

4. INSTALL PISTON SEAL

(a) Apply lithium soap base glycol grease to a new piston seal.

(b) Install the piston seal to the disc brake cylinder assembly.

5. INSTALL FRONT DISC BRAKE PISTON

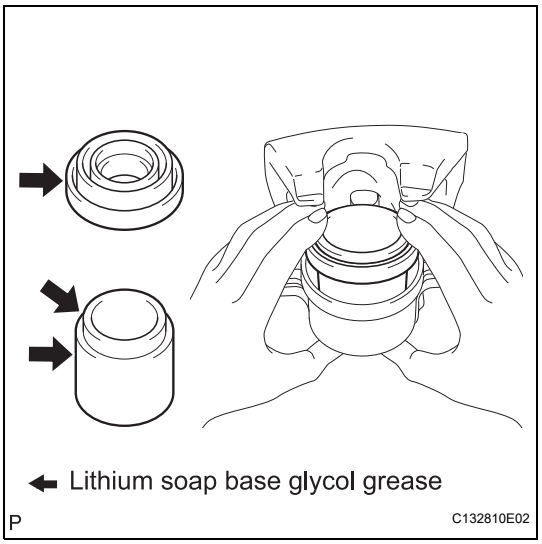
(a) Apply lithium soap base glycol grease to the front disc brake piston and a new cylinder boot.

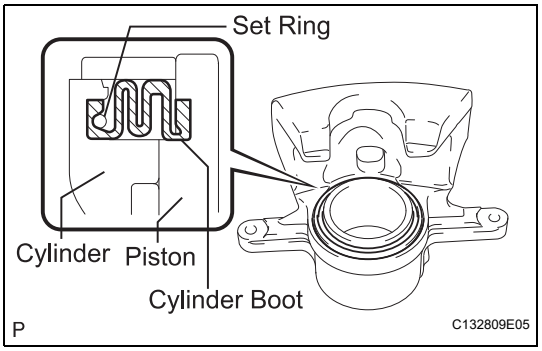
(b) Install the cylinder boot to the front disc brake piston.

(c) Install the front disc brake piston to the disc brake cylinder assembly.

NOTICE:

Do not install the piston forcibly in the cylinder assembly.





6. INSTALL CYLINDER BOOT

(a) Install the cylinder boot to the disc brake cylinder assembly.

NOTICE:

Install the boot securely to the grooves of the cylinder and piston.

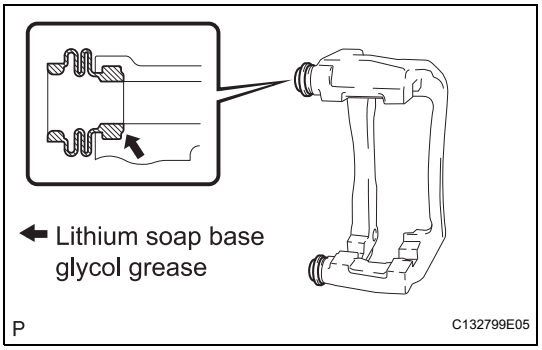
(b) Using a screwdriver, install a new cylinder boot set ring.

NOTICE:

- **Install the set ring securely to the grooves of the cylinder boot.**
- **Do not damage the cylinder boot.**

HINT:

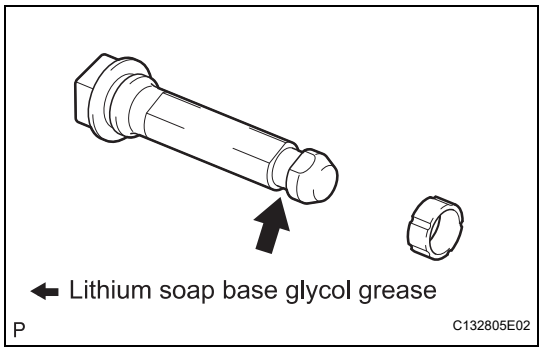
Tape the screwdriver tip before use.



7. INSTALL FRONT DISC BRAKE BUSHING DUST BOOT

(a) Apply lithium soap base glycol grease to the seal surface of 2 new front disc brake bushing dust boots.

(b) Install the 2 front disc brake bushing dust boots to the front disc brake cylinder mounting.



8. INSTALL FRONT DISC BRAKE CYLINDER SLIDE BUSHING

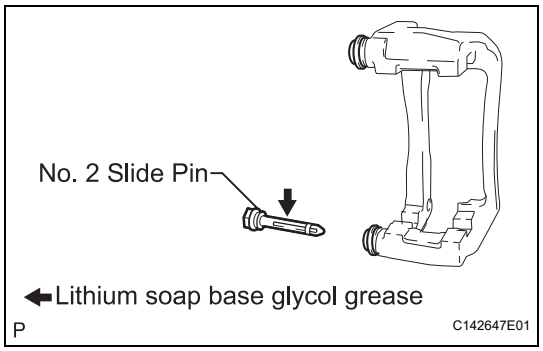
(a) Apply lithium soap base glycol grease to a new front disc brake cylinder slide bushing.

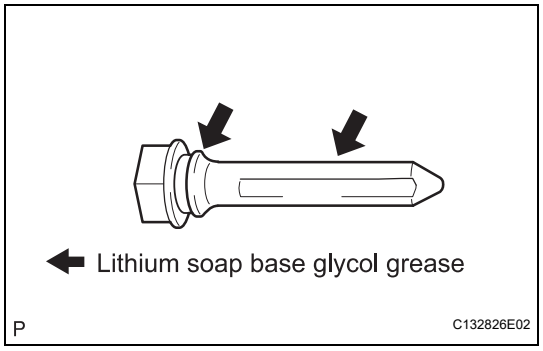
(b) Install the front disc brake cylinder slide bushing to the No. 2 front disc brake cylinder slide pin.

9. INSTALL NO. 2 FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Apply the lithium soap base glycol grease to the sliding part and the seal surface of the No. 2 front disc brake cylinder slide pin.

(b) Install the No. 2 front disc brake cylinder slide pin to the bottom side of the front disc brake cylinder mounting.

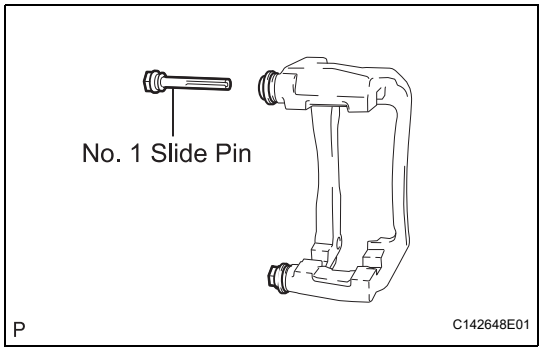


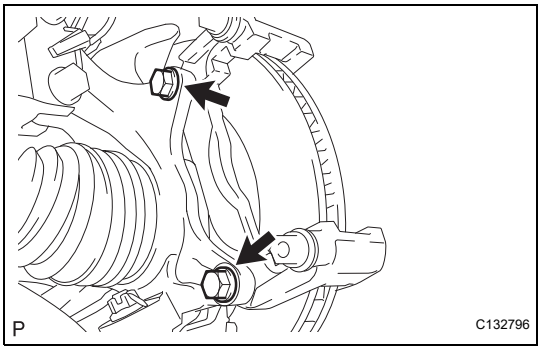


10. INSTALL NO. 1 FRONT DISC BRAKE CYLINDER SLIDE PIN

(a) Apply lithium soap base glycol grease to the sliding part and the seal surface of the No. 1 front disc brake cylinder slide pin.

(b) Install the No. 1 front disc brake cylinder slide pin.

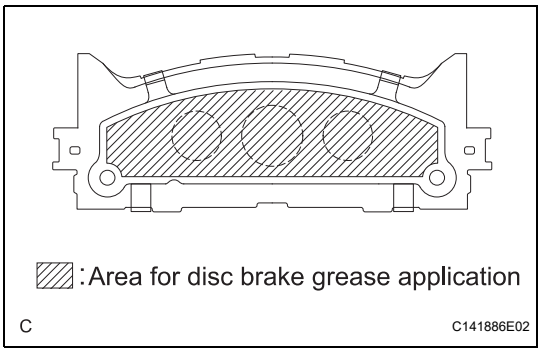




11. INSTALL FRONT DISC BRAKE CYLINDER MOUNTING

(a) Install the cylinder mounting with the 2 bolts.
Torque: 107 N*m (1,090 kgf*cm, 79 ft.*lbf)

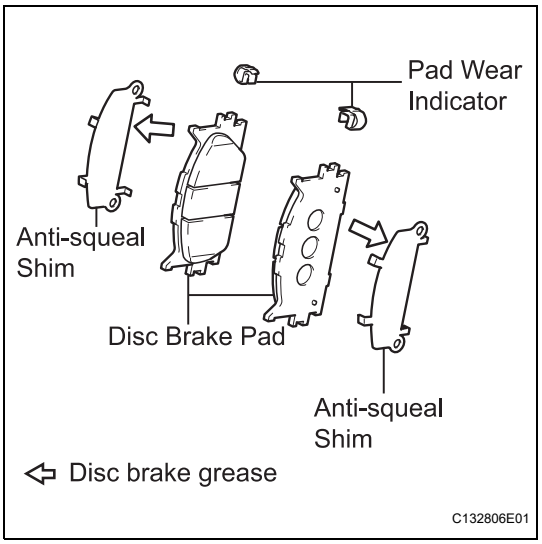
12. INSTALL FRONT DISC BRAKE PAD SUPPORT PLATE



13. INSTALL FRONT ANTI-SQUEAL SHIM

(a) Apply disc brake grease to the front anti-squeal shims and install them to each pad.
NOTICE:
- **When replacing worn pads, the anti-squeal shims must be replaced together with the pads.**
- **Install the shims in the correct positions and directions.**
- **Apply disc brake grease to the area that contacts the front anti-squeal shim.**
- **Disc brake grease can come out slightly from the area where the front anti-squeal shim is installed.**
- **Make sure that disc brake grease is not applied onto the lining surface.**

(b) Install the 2 front anti-squeal shims and the pad wear indicator to each pad.
NOTICE:
- **Install the shims in the correct positions and directions.**
- **Install the pad wear indicator in the correct positions and directions.**

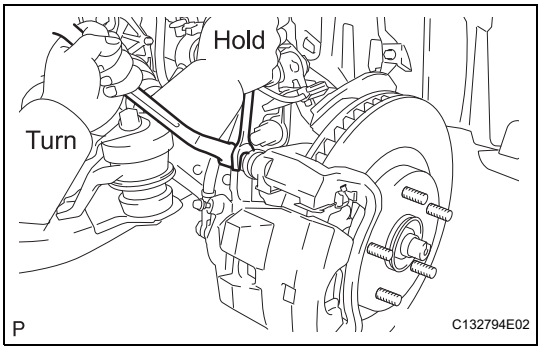


14. INSTALL FRONT BRAKE PAD

(a) Install the 2 front brake pads with front anti-squeal shims to the disc brake cylinder mounting.

15. INSTALL FRONT BRAKE PAD (w/ Anti-squeal Spring)

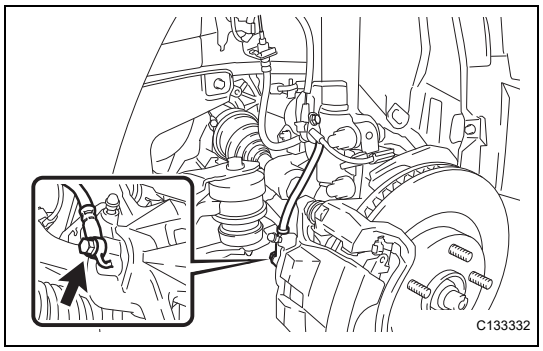
(a) Install the 2 anti-squeal springs.
NOTICE:
When replacing the front brake pads with new ones, make sure to replace the anti-squeal spring at the same time.



INSTALLATION

1. INSTALL DISC BRAKE CYLINDER ASSEMBLY

(a) Install the disc brake cylinder assembly with the 2 bolts.
Torque: 34 N*m (350 kgf*cm, 25 ft.*lbf)



(b) Connect the front flexible hose with the union bolt and a new gasket.
NOTICE:
Install the flexible hose lock securely in the lock hole in the disc brake cylinder.
Torque: 29 N*m (300 kgf*cm, 21 ft.*lbf)

2. **ADD BRAKE FLUID TO RESERVOIR (See page BR-7)**
3. **DISABLE BRAKE CONTROL (See page BR-7)**
4. **BLEED FRONT BRAKE SYSTEM (See page BR-10)**
5. **CANCEL BRAKE CONTROL DISABLE (See page BR-11)**
6. **CLEAR DTC FOR BRAKE CONTROL SYSTEM**
   HINT:
   Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See Page BC-57)
7. **PERFORM ACCUMULATOR PRESSURE ZERO DOWN (See page BR-12)**
8. **CHECK FOR BRAKE FLUID LEAKAGE**
9. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-13)**
10. **INSTALL FRONT WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REMOVAL

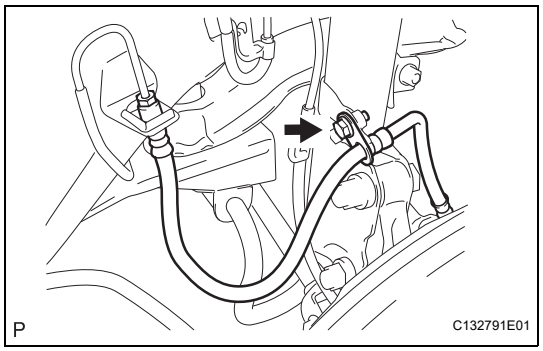
NOTICE:
When the brake caliper is removed from the brake disc, do not start the hybrid system. If the hybrid system is started, the brake fluid pressure may increase.
HINT:
- Use the same procedures for the LH side and RH side.
- The procedures listed below are for the LH side.

1. REMOVE REAR WHEEL

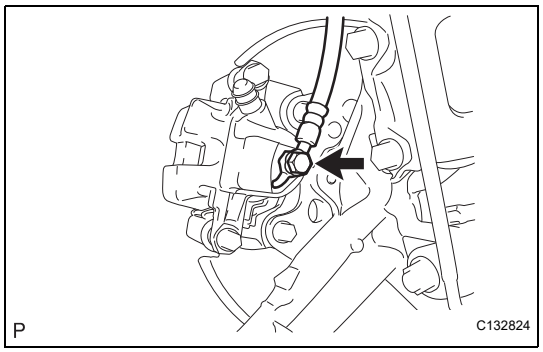
2. DRAIN BRAKE FLUID
NOTICE:
If brake fluid leaks onto any painted surface, wash or remove it completely.

3. DISCONNECT REAR BRAKE FLEXIBLE HOSE

(a) Remove the bolt and separate the rear brake flexible hose from the shock absorber.

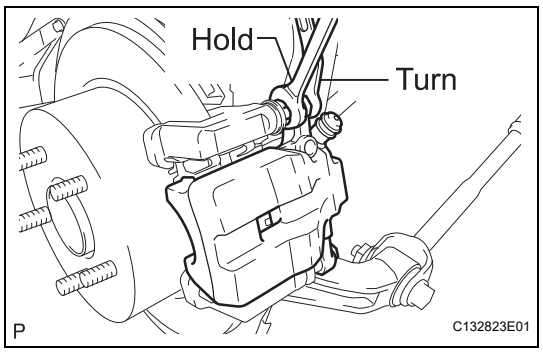


(b) Remove the union bolt and the gasket from the rear disc brake cylinder assembly, then disconnect the rear brake flexible hose.



4. REMOVE REAR DISC BRAKE CYLINDER ASSEMBLY

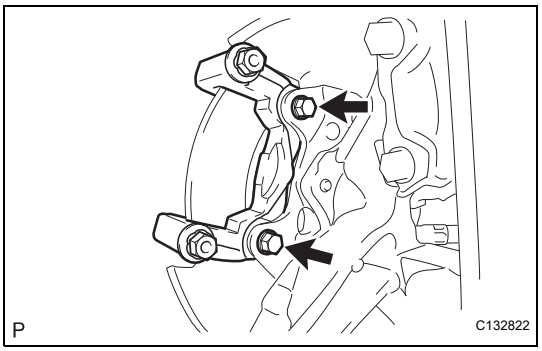
(a) Hold the 2 rear disc brake cylinder slide pins and remove the 2 bolts and rear disc brake cylinder assembly.



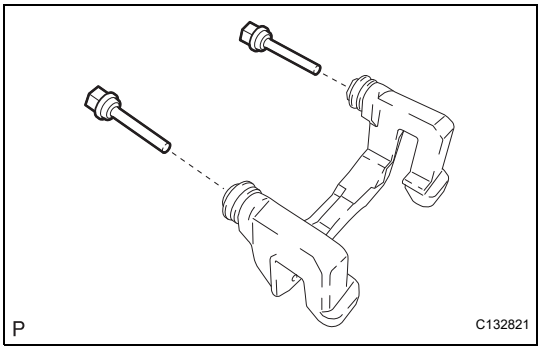
BR

DISASSEMBLY

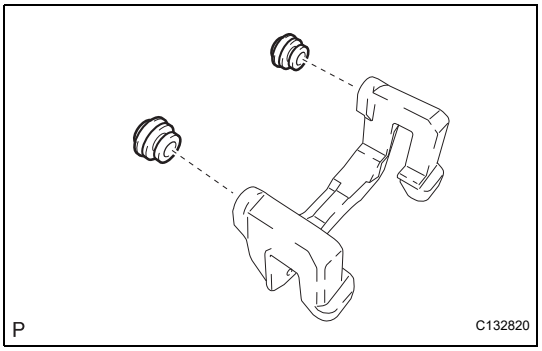
1. **REMOVE REAR DISC BRAKE PAD KIT (PAD ONLY)**
   (a) Remove the 2 rear disc brake pads with the rear anti-squeal shims.
2. **REMOVE REAR ANTI-SQUEAL SHIM**
   (a) Remove the 2 rear anti-squeal shims and the 2 pad wear indicators from each pad.
3. **REMOVE NO. 1 REAR DISC BRAKE PAD SUPPORT PLATE**
   (a) Remove the No. 1 rear disc brake pad support plate from the rear disc brake cylinder mounting.
4. **REMOVE NO. 2 REAR DISC BRAKE PAD SUPPORT PLATE**
   (a) Remove the No. 2 rear disc brake pad support plate from the rear disc brake cylinder mounting.
5. **REMOVE REAR DISC BRAKE CYLINDER MOUNTING**
   (a) Remove the 2 bolts and the rear disc brake cylinder mounting.

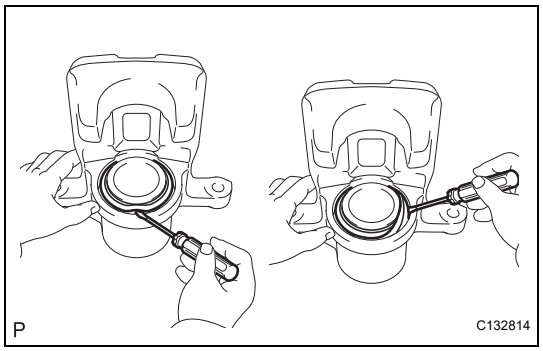


6. **REMOVE REAR DISC BRAKE CYLINDER SLIDE PIN**
   (a) Remove the 2 rear disc brake cylinder slide pins (upper and lower) from the rear brake cylinder mounting.



7. **REMOVE REAR DISC BRAKE BUSHING DUST BOOT**
   (a) Remove the 2 rear disc brake bushing dust boots from the rear disc brake cylinder mounting.





8. REMOVE CYLINDER BOOT

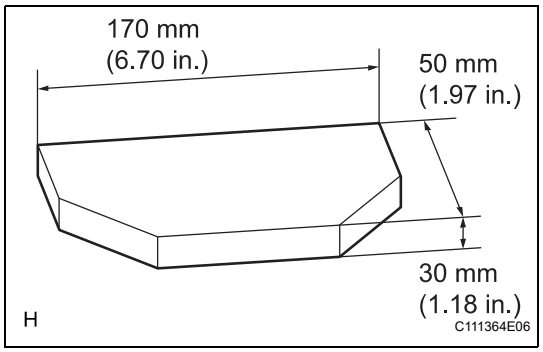
(a) Using a screwdriver, pry out the brake cylinder boot set ring or cylinder boot.

NOTICE:

Be careful not to damage the brake piston and cylinder.

HINT:

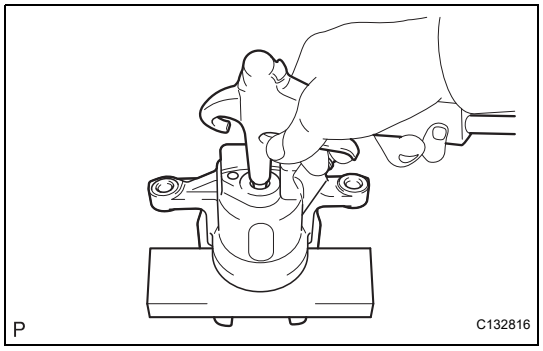
Tape the screwdriver tip before use.



9. REMOVE REAR DISC BRAKE PISTON

(a) Prepare a wooden plate to hold the rear disc brake pistons.

(b) Place the wooden plate between the rear disc brake piston and the rear disc brake cylinder assembly.



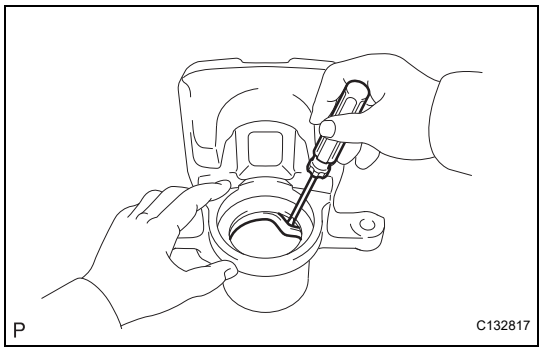
(c) Use compressed air to remove the piston from the rear disc brake cylinder assembly.

CAUTION:

Do not place your fingers in front of the brake piston when using compressed air.

NOTICE:

Do not spatter the brake fluid.



10. REMOVE PISTON SEAL

(a) Using a screwdriver, remove the piston seal from the rear disc brake cylinder assembly.

NOTICE:

Do not damage the inner cylinder or cylinder groove.

HINT:

Tape the screwdriver tip before use.

11. REMOVE REAR DISC BRAKE BLEEDER PLUG CAP

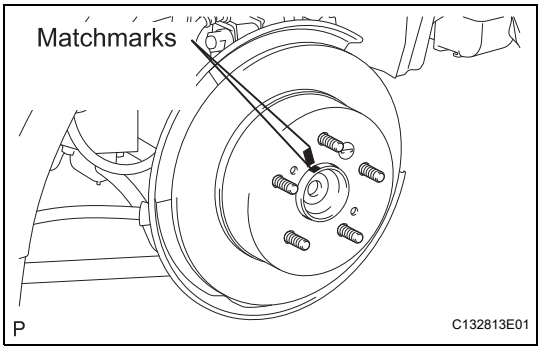
(a) Remove the bleeder plug cap from the rear disc brake bleeder plug.

12. REMOVE REAR DISC BRAKE BLEEDER PLUG

(a) Remove the rear disc brake bleeder plug from the rear disc brake cylinder assembly.

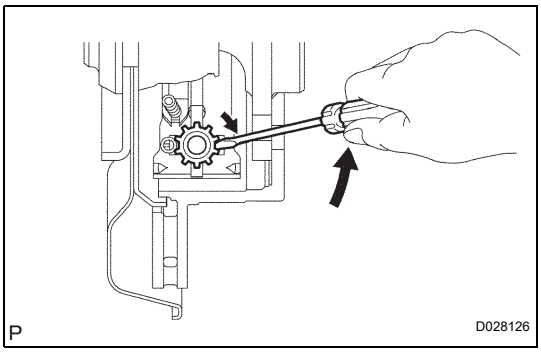
13. REMOVE PARKING BRAKE SHOE ADJUSTING HOLE PLUG

(a) Remove the parking brake shoe adjusting hole plug.



14. REMOVE REAR DISC

(a) Put matchmarks on the rear disc and the axle hub.

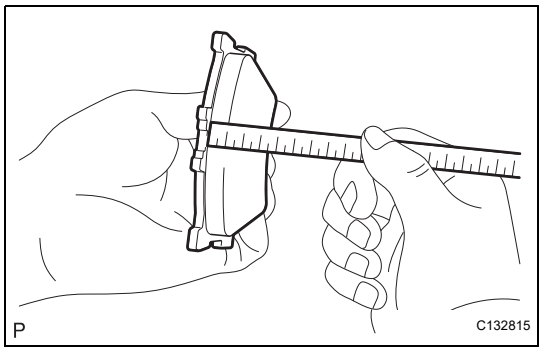


(b) Release the parking brake and remove the rear disc.
HINT:
If the disc cannot be removed easily, turn and press firmly the shoe adjuster until the wheel comes free.

INSPECTION

1. INSPECT BRAKE CYLINDER AND PISTON

(a) Inspect the cylinder bore and the piston for rust or scoring. If necessary, replace the rear disc brake cylinder assembly and piston.



2. INSPECT PAD LINING THICKNESS

(a) Using a ruler, measure the pad lining thickness.

Standard thickness:
11.0 mm (0.433 in.)
Minimum thickness:
1.0 mm (0.039 in.)

If the pad lining thickness is less than the minimum, replace the brake pads.

HINT:

Be sure to check wear of the front disc after replacing the brake pad with a new one.

3. INSPECT NO. 1 REAR DISC BRAKE PAD SUPPORT PLATE

(a) Inspect the No. 1 rear disc brake pad support plate.

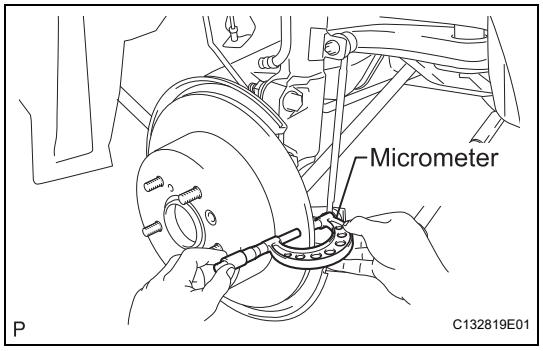
HINT:

Make sure that they have sufficient rebound, and have no deformation, cracks or wear, and all rust and dirt are cleaned off.

4. INSPECT NO. 2 REAR DISC BRAKE PAD SUPPORT PLATE

HINT:

Inspect the No. 2 rear disc brake pad support plate using the same procedure with the No. 1 rear disc brake pad support plate.



5. INSPECT DISC THICKNESS

(a) Using a micrometer, measure the disc thickness.

Standard thickness:
10.0 mm (0.390 in.)
Minimum thickness:
8.5 mm (0.334 in.)

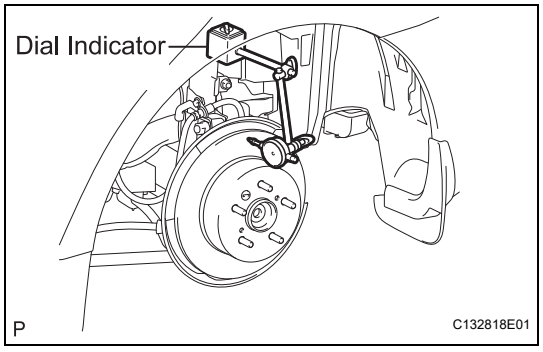
If the disc thickness is less than the minimum, replace the rear disc.

6. INSPECT DISC RUNOUT

(a) Install the rear disc.

(b) Temporarily fasten the rear disc with the 3 hub nuts.

Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

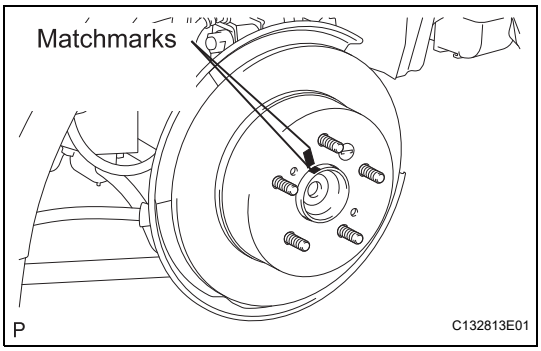


(c) Using a dial indicator, measure the disc runout 10 mm (0.39 in.) away from the outer edge of the rear disc.

Maximum disc runout:
0.15 mm (0.0059 in.)

BR

(d) If the runout exceeds the maximum value, change the installation positions of the disc and axle so that the runout will become minimal. If the runout exceeds the maximum even after the installation positions are changed, check the bearing play in the axial direction and the axle hub runout (See page AH-16). If the bearing play and the axle hub runout are normal and if the disc thickness is not within the specified range, grind the disc. If the disc thickness is less than the minimum, replace the disc.
(e) Remove the 3 hub nuts.
(f) Remove the rear disc.



REASSEMBLY

1. INSTALL REAR DISC

(a) Aligning the matchmarks, install the rear disc.
NOTICE:
When replacing the rear disc with a new one, select the installation position where the rear disc has the minimum runout.

2. ADJUST PARKING BRAKE SHOE CLEARANCE

HINT:
Hold the rear disc with hub nuts by parking brake pedal (or lever) before adjusting the parking brake shoe clearance. (See page PB-1)

3. INSTALL PARKING BRAKE SHOE ADJUSTING HOLE PLUG

(a) Install the parking brake shoe adjusting hole plug.

4. TEMPORARILY TIGHTEN REAR DISC BRAKE BLEEDER PLUG

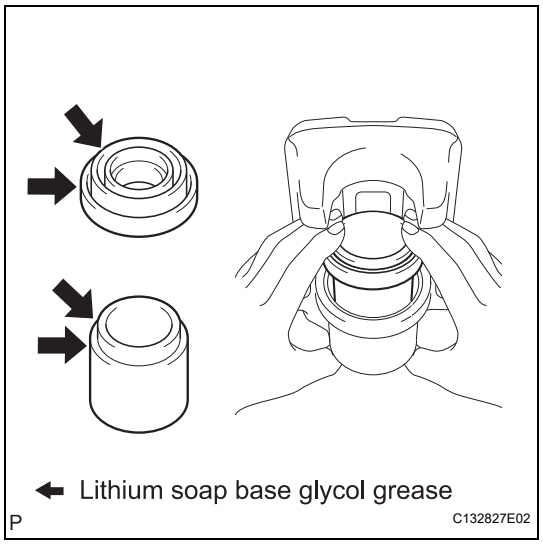
(a) Temporarily install the rear disc brake bleeder plug to the rear disc brake cylinder assembly.

5. INSTALL REAR DISC BRAKE BLEEDER PLUG CAP

(a) Install the rear disc brake bleeder plug cap to the rear disc brake bleeder plug.

6. INSTALL PISTON SEAL

(a) Apply lithium soap base glycol grease to a new piston seal.
(b) Install the piston seal to the rear disc brake cylinder assembly.



7. INSTALL REAR DISC BRAKE PISTON

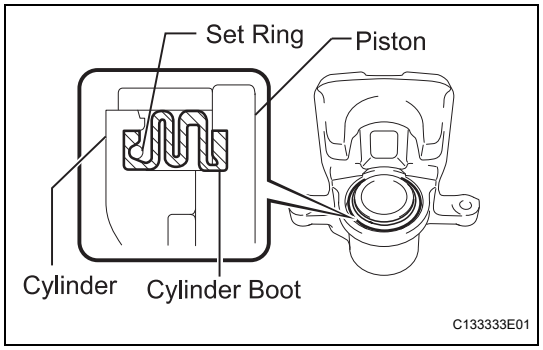
(a) Apply lithium soap base glycol grease to the rear disc brake piston and a new cylinder boot.

(b) Install the cylinder boot to the rear disc brake piston.

(c) Install the rear disc brake piston to the rear disc brake cylinder assembly.

NOTICE:

Do not install the piston forcibly in the disc brake cylinder.



8. INSTALL CYLINDER BOOT

(a) Install the cylinder boot to the rear disc brake cylinder assembly.

NOTICE:

- **Install the boot securely onto the grooves of the cylinder and the piston.**
- **Do not damage the cylinder boot.**

(b) Using a screwdriver, install the brake cylinder boot set ring.

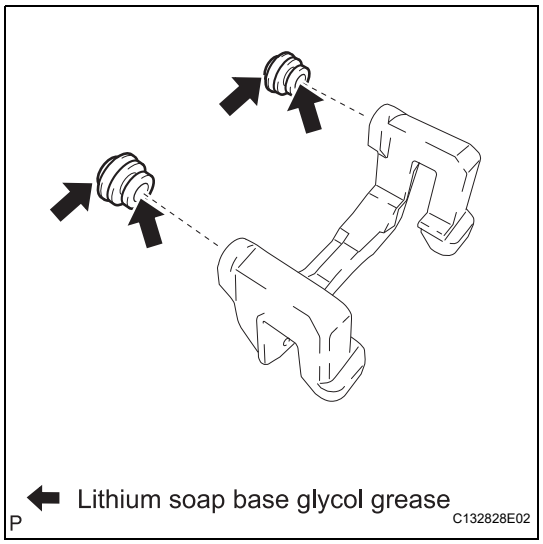
NOTICE:

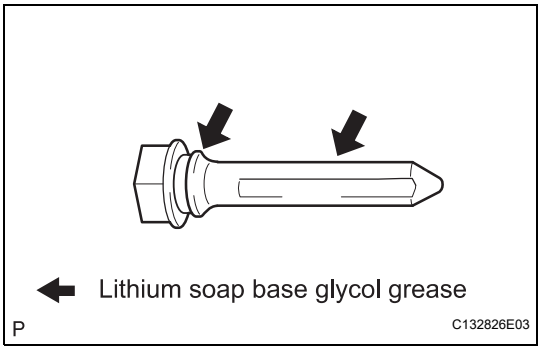
Do not damage the boot.

9. INSTALL REAR DISC BRAKE BUSHING DUST BOOT

(a) Apply lithium soap base glycol grease to the seal surface of 2 new rear disc brake bushing dust boots.

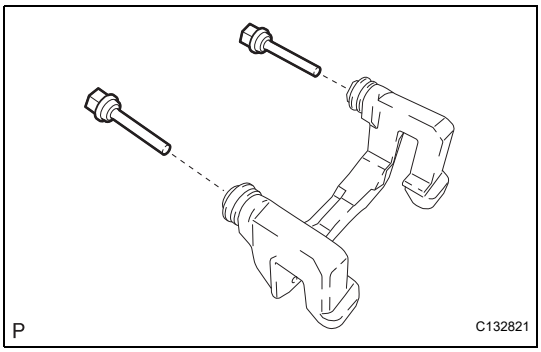
(b) Install the 2 rear disc brake bushing dust boots to the rear disc brake cylinder mounting.



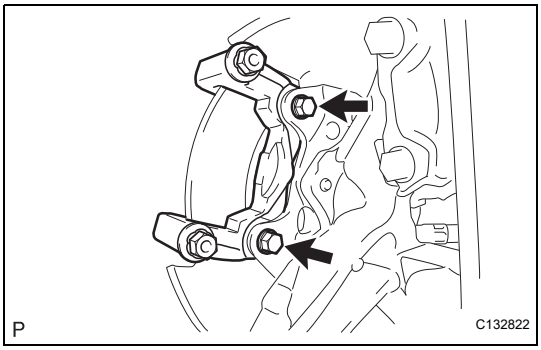


10. INSTALL REAR DISC BRAKE CYLINDER SLIDE PIN

(a) Apply lithium soap base glycol grease to the rear disc brake cylinder slide pins.



(b) Install the 2 rear disc brake cylinder slide pins (upper and lower) to the rear disc brake cylinder mounting.



11. INSTALL REAR DISC BRAKE CYLINDER MOUNTING

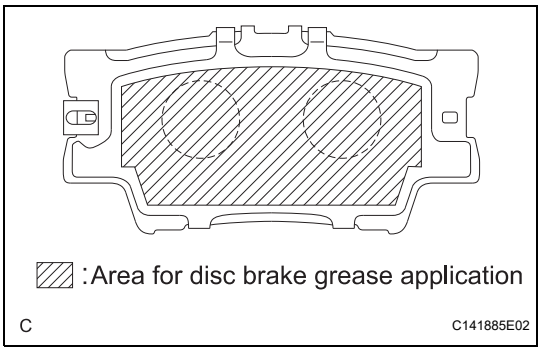
(a) Install the rear disc brake cylinder mounting with the 2 bolts.
Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)

12. INSTALL NO. 1 REAR DISC BRAKE PAD SUPPORT PLATE

(a) Install the No. 1 rear disc brake pad support plate to the rear disc brake cylinder mounting.

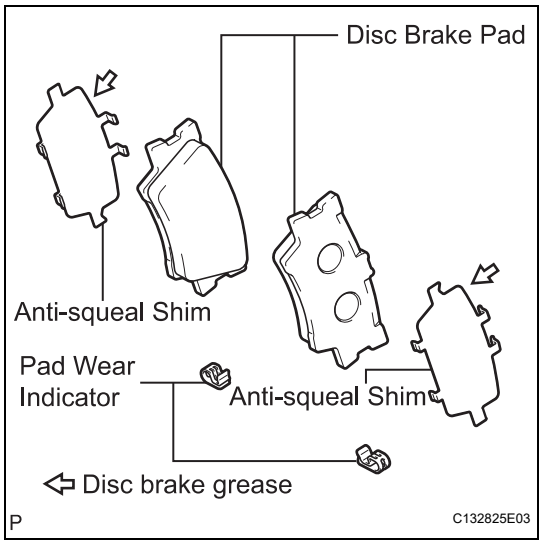
13. INSTALL NO. 2 REAR DISC BRAKE PAD SUPPORT PLATE

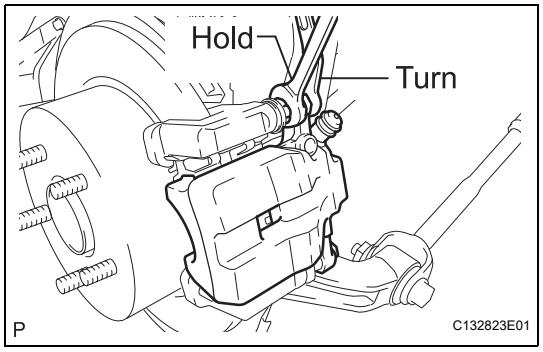
(a) Install the No. 2 rear disc brake pad support plate to the rear disc brake cylinder mounting.

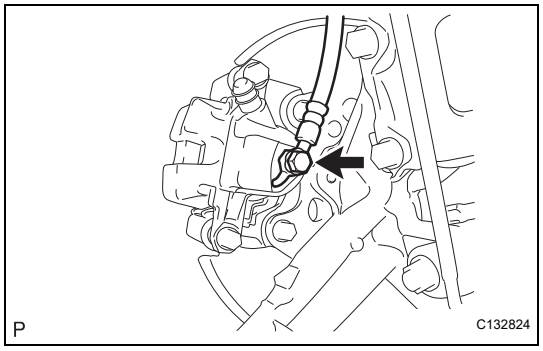


14. INSTALL REAR ANTI-SQUEAL SHIM

(a) Apply disc brake grease to the inside of the rear anti-squeal shims and install them and the pad wear indicators to each of the 2 rear disc brake pads.
NOTICE:
- **When replacing worn pads, the anti-squeal shims must be replaced together with the pads.**
- **Apply disc brake grease to the area that contacts the front anti-squeal shim.**
- **Disc brake grease can come out slightly from the area where the front anti-squeal shim is installed.**
- **Make sure that disc brake grease is not applied onto the lining surface.**







(b) Install the 2 rear anti-squeal shims and the pad wear indicator plate to each pad.
NOTICE:
Install the pad wear indicator and anti-squeal shims in the correct positions and directions.

15. INSTALL REAR BRAKE PAD

(a) Install the 2 rear brake pads with rear anti-squeal shims to the rear disc brake cylinder mounting.

INSTALLATION

1. INSTALL REAR DISC BRAKE CYLINDER ASSEMBLY

(a) Install the rear disc brake cylinder assembly with the 2 bolts.
Torque: 27 N*m (275 kgf*cm, 20 ft.*lbf)
NOTICE:
Install the rear disc brake bushing dust boot onto the groove of the rear disc brake cylinder.

(b) Connect the rear brake flexible hose with the union bolt and a new gasket.
Torque: 33 N*m (337 kgf*cm, 24 ft.*lbf)

2. ADD BRAKE FLUID TO RESERVOIR (See page BR-7)

3. BLEED REAR BRAKE SYSTEM (See page BR-11)

4. CLEAR DTC FOR BRAKE CONTROL SYSTEM
HINT:
Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-57)

5. PERFORM ACCUMULATOR PRESSURE ZERO DOWN (See page BR-12)

6. CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-13)

7. CHECK FOR BRAKE FLUID LEAKAGE

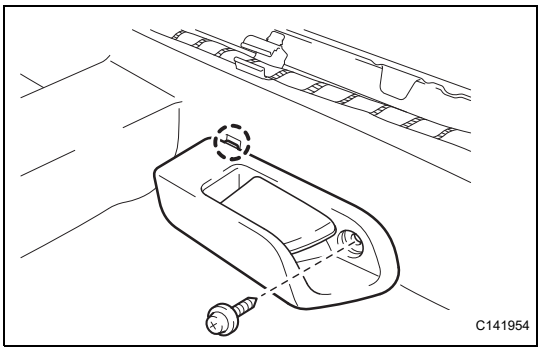
8. INSTALL REAR WHEEL
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

REMOVAL

HINT:

- There is a slight difference in shape between the No. 2 parking brake cable assembly and No. 3 parking brake cable assembly.
- Use the same procedures for the No. 2 parking brake cable assembly and No. 3 parking brake cable assembly.
- The procedures listed below are for the No. 3 parking brake cable assembly.

1. **REMOVE FRONT SEAT ASSEMBLY LH**
   HINT:
   Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-29)
2. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat)**
   HINT:
   Refer to the procedures up to "REMOVE FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-16)
3. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
   HINT:
   Use the same procedures for the RH side and the LH side.
4. **REMOVE PARKING BRAKE PEDAL ASSEMBLY**
   HINT:
   Refer to the procedures up to "REMOVE PARKING BRAKE PEDAL". (See page PB-7)
5. **REMOVE NO. 1 PARKING BRAKE CABLE ASSEMBLY (See page PB-9)**
6. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH**
7. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-13)**
8. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
9. **REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-14)**
10. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
11. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-13)**
12. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**
13. **REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-15)**



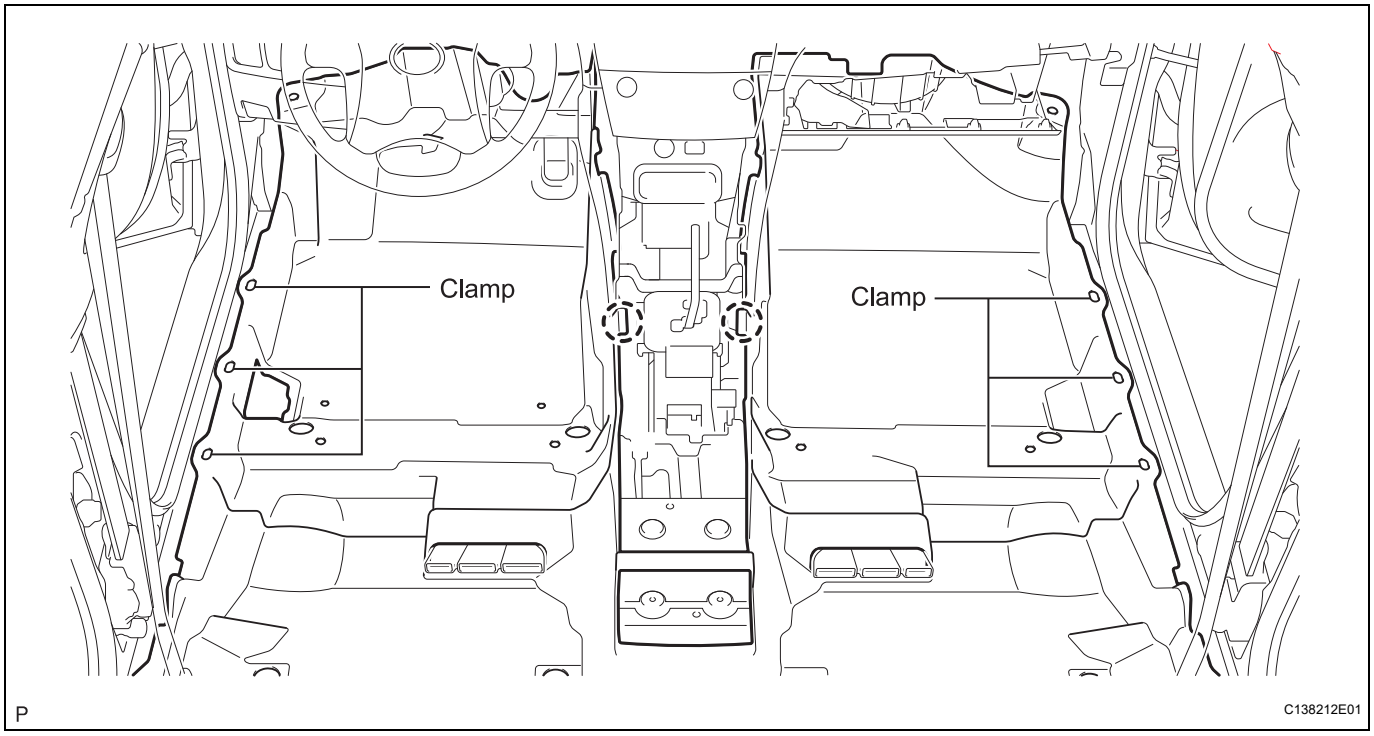
14. REMOVE LUGGAGE DOOR LOCK OPENER ASSEMBLY

(a) Remove the screw.

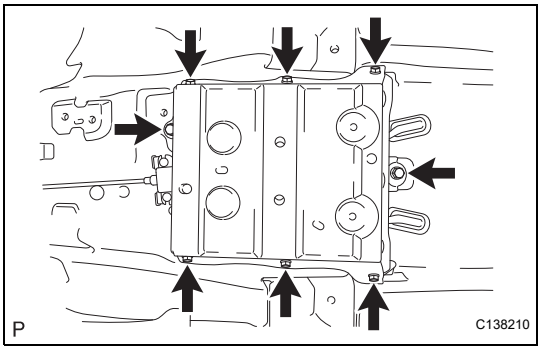
(b) Disengage the claw and remove the luggage door lock opener assembly.

15. REMOVE FRONT FLOOR CARPET ASSEMBLY

(a) Disengage the 6 clamps and the 2 claws.

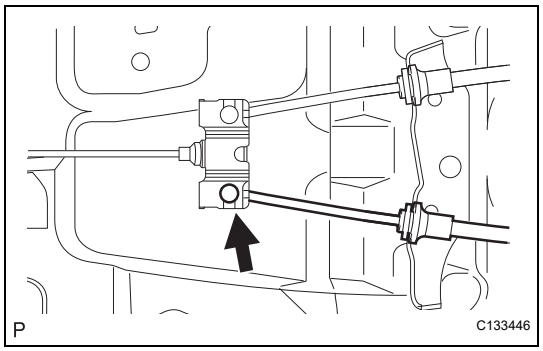


(b) Turn back the front floor carpet assembly until the bolts of the cross member No. 4 floor reinforcement sub-assembly can be seen.

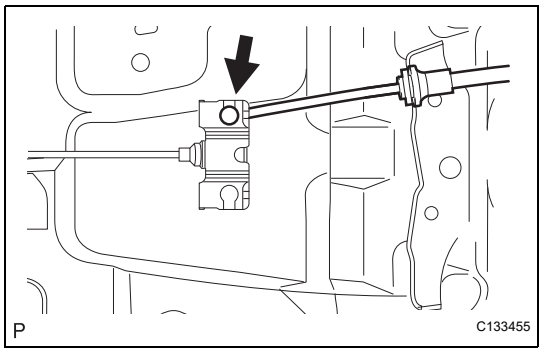


16. REMOVE CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY

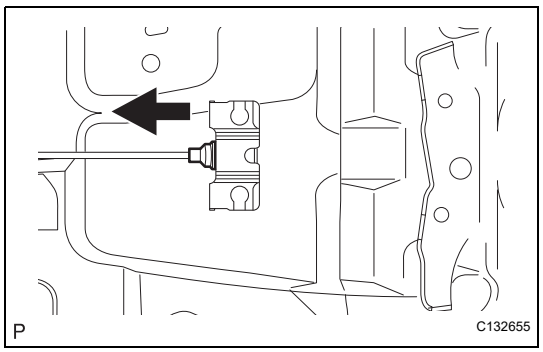
(a) Remove the 8 bolts and the cross member floor No. 4 reinforcement sub-assembly.



17. **SEPARATE NO. 3 PARKING BRAKE CABLE ASSEMBLY**
    (a) Separate the No. 3 parking brake cable assembly from the parking brake equalizer.



18. **SEPARATE NO. 2 PARKING BRAKE CABLE ASSEMBLY**
    (a) Separate the No. 2 parking brake cable assembly from the parking brake equalizer.



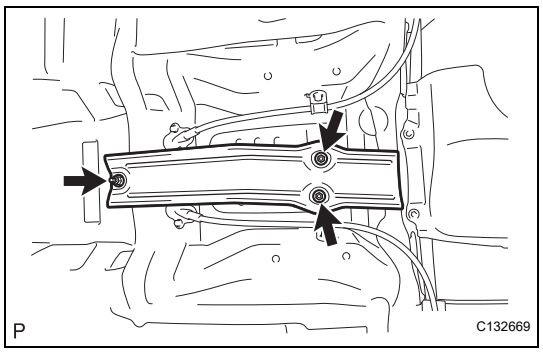
19. **REMOVE NO. 4 PARKING BRAKE CABLE ASSEMBLY**
    (a) Slide the rubber boot as shown in the illustration.

    (b) Remove the No. 4 parking brake cable assembly from the parking brake equalizer as shown in the illustration.

20. **REMOVE CENTER EXHAUST PIPE ASSEMBLY (See page EX-2)**

21. **REMOVE FLOOR NO. 1 UNDER COVER (See page SP-41)**

22. **REMOVE FLOOR NO. 2 UNDER COVER (See page SP-42)**



23. **REMOVE NO. 2 FRONT FLOOR HEAT LOWER INSULATOR**
    (a) Remove the 3 nuts and the No. 2 front floor heat lower insulator.

24. **REMOVE REAR WHEEL**

25. **SEPARATE REAR DISC BRAKE CALIPER ASSEMBLY (See page PB-35)**

26. **REMOVE REAR DISC (See page PB-35)**

27. **REMOVE PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING (See page PB-35)**

28. **REMOVE PARKING BRAKE SHOE STRUT (See page PB-35)**

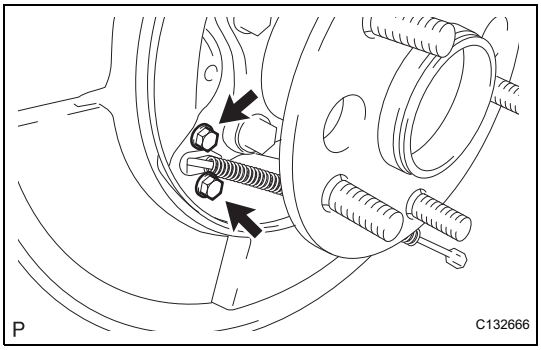
29. **REMOVE NO. 1 PARKING BRAKE SHOE ASSEMBLY (See page PB-35)**

30. **REMOVE PARKING BRAKE SHOE ADJUSTING SCREW SET (See page PB-36)**

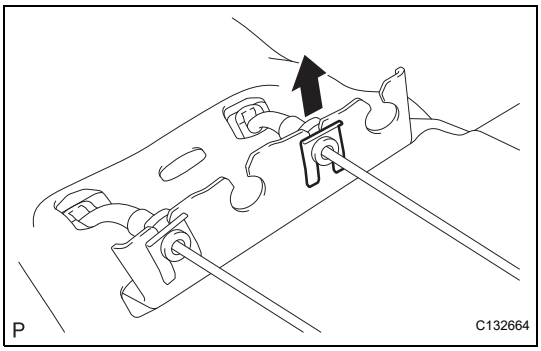
31. **REMOVE NO. 2 PARKING BRAKE SHOE ASSEMBLY (See page PB-36)**

32. **REMOVE NO. 3 PARKING BRAKE CABLE ASSEMBLY**

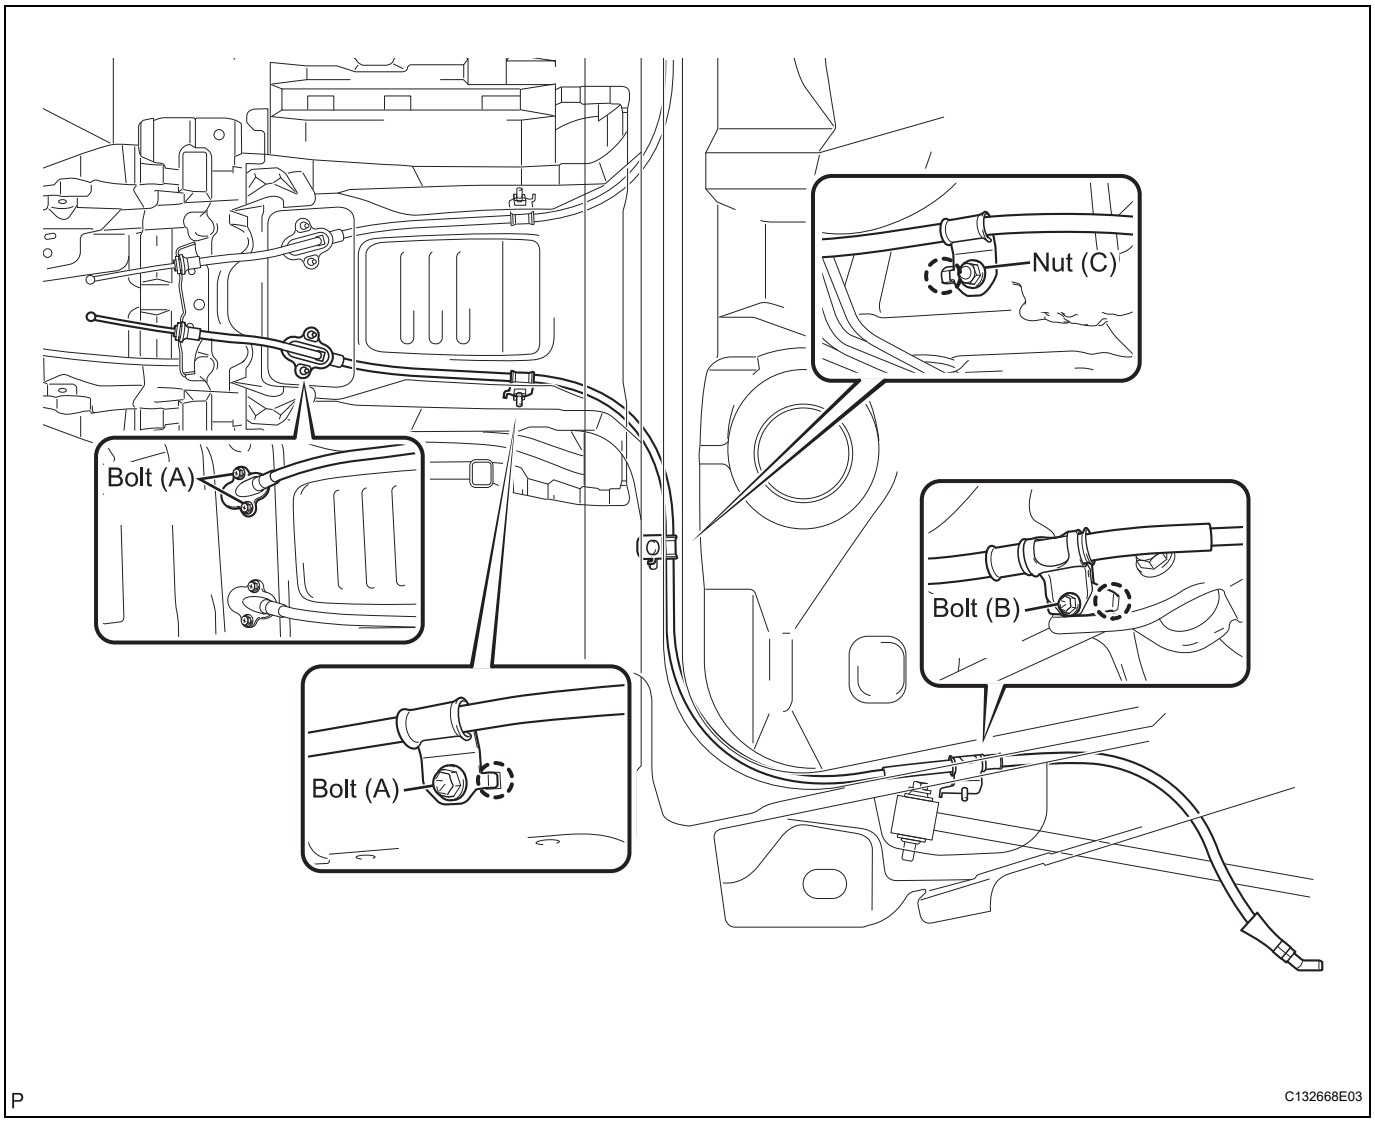
(a) Remove the 2 bolts and separate the No. 3 parking brake cable assembly from the backing plate.



(b) Using needle-nose pliers, remove the clip from the No. 3 parking brake cable assembly.

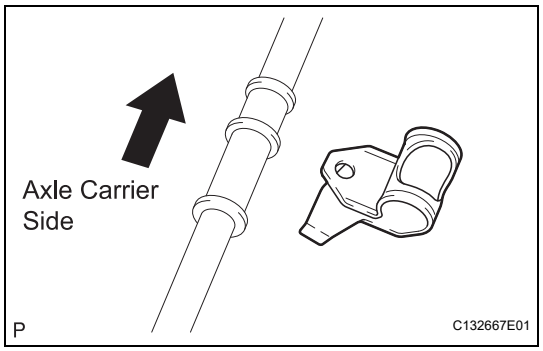


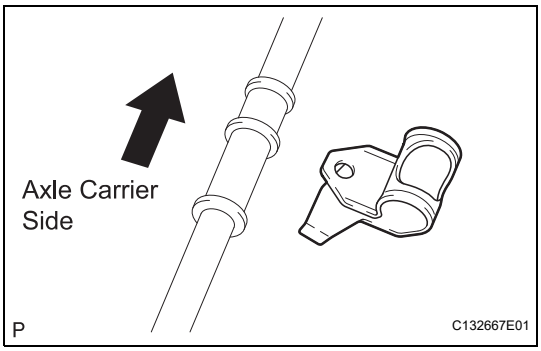
(c) Remove 3 bolts (A), bolt (B), and nut (C), and disengage each claw.



(d) Remove the No. 3 parking brake cable assembly from the body.

(e) Remove the parking brake cable clamp.





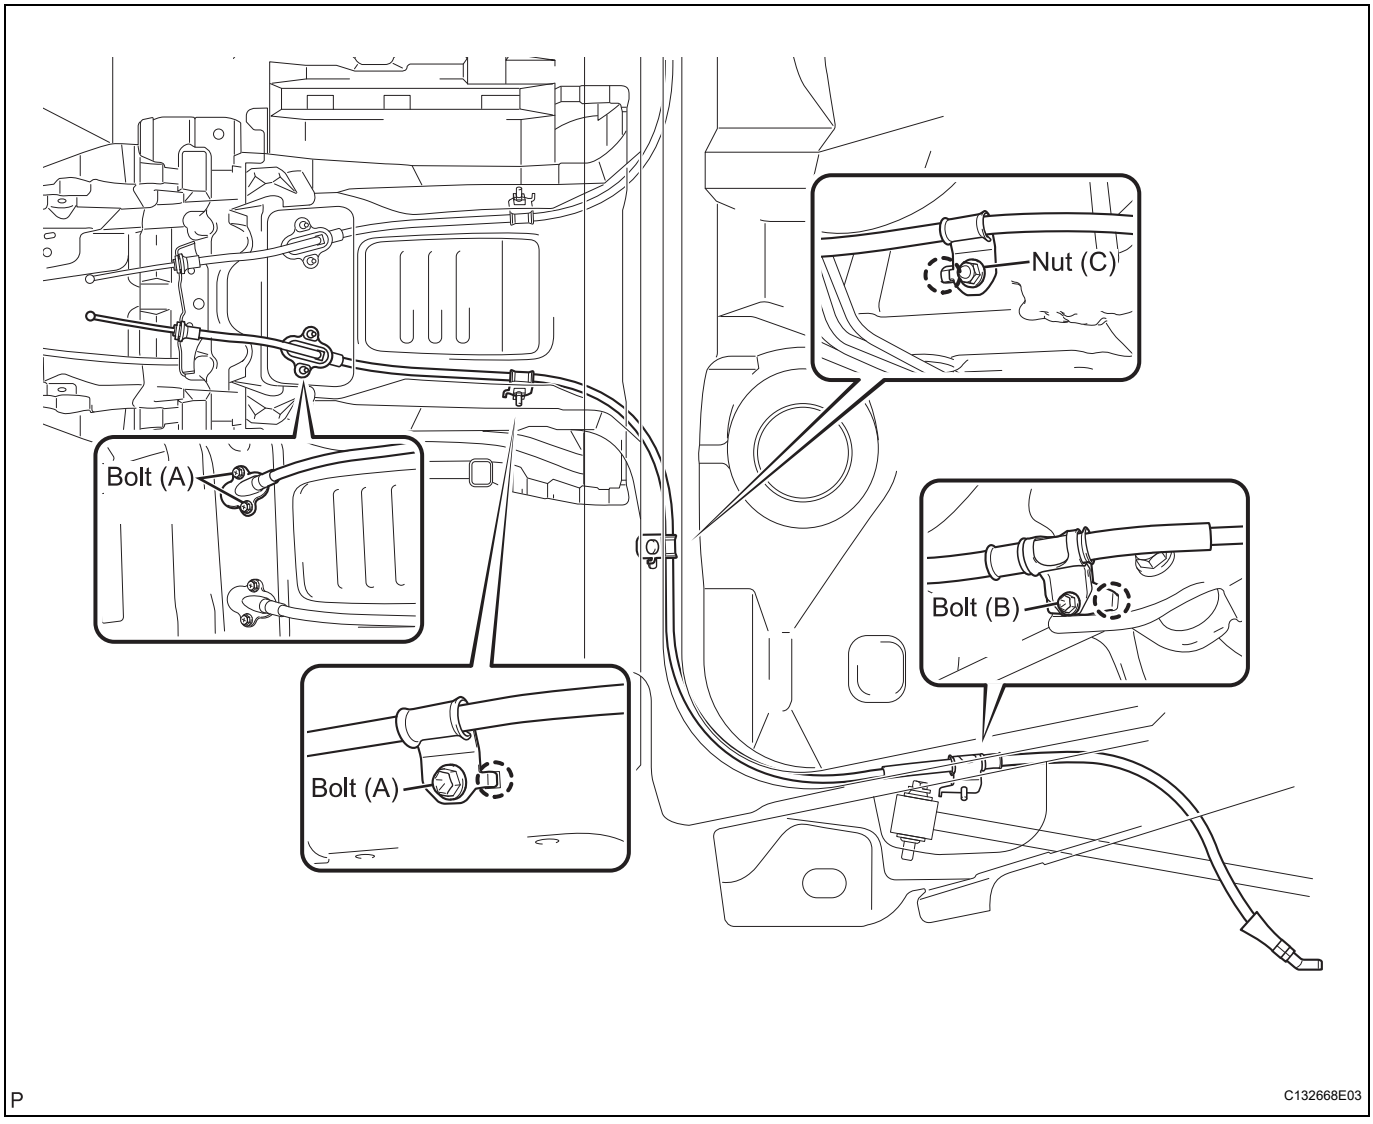
INSTALLATION

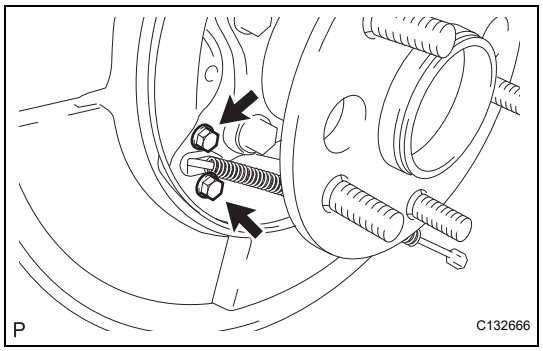
1. INSTALL NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Install the parking brake cable clamp to the No. 3 parking brake cable assembly.

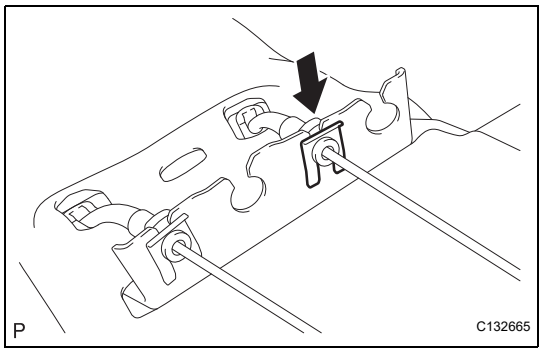
(b) Install the No. 3 parking brake cable assembly with 3 bolts (A), bolt (B) and nut (C), and engage each claw.

Torque: Bolt (A)
8.5 N*m (87 kgf*cm, 75 in.*lbf)
Bolt (B) and Nut (C)
6.0 N*m (61 kgf*cm, 53 in.*lbf)



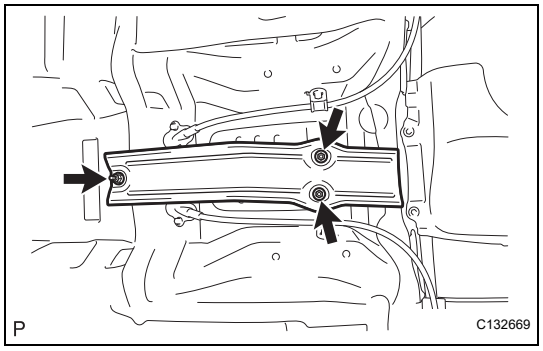


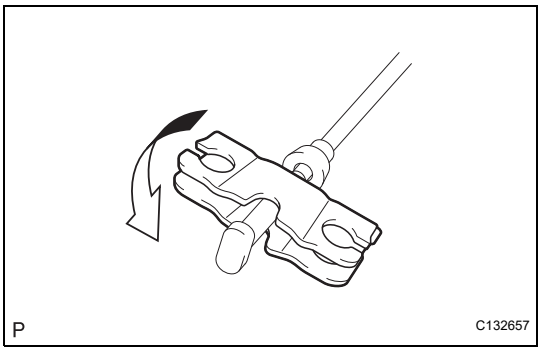
(c) Install the No. 3 parking brake cable assembly to the backing plate with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



(d) Using a brass bar and a hammer, install the clip to the No. 3 parking brake cable assembly.

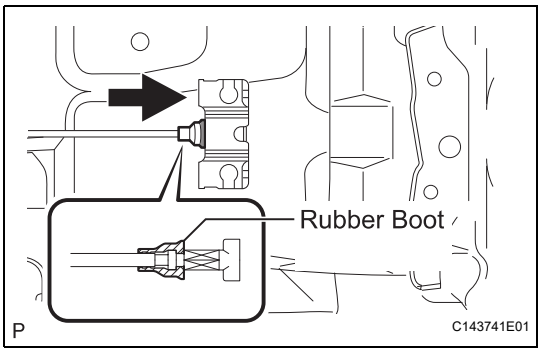
2. **INSTALL NO. 2 PARKING BRAKE SHOE ASSEMBLY (See page PB-38)**
3. **INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET (See page PB-39)**
4. **INSTALL NO. 1 PARKING BRAKE SHOE ASSEMBLY (See page PB-39)**
5. **INSTALL PARKING BRAKE SHOE STRUT (See page PB-39)**
6. **INSTALL PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING (See page PB-39)**
7. **CHECK PARKING BRAKE INSTALLATION (See page PB-40)**
8. **INSTALL REAR DISC (See page PB-40)**
9. **ADJUST PARKING BRAKE SHOE CLEARANCE (See page PB-1)**
10. **INSTALL REAR DISC BRAKE CALIPER ASSEMBLY (See page PB-40)**
11. **INSTALL REAR WHEEL**
12. **INSTALL NO. 2 FRONT FLOOR HEAT LOWER INSULATOR**
    (a) Install the No. 2 front floor heat lower insulator with the 3 nuts.
    Torque: 4.9 N*m (50 kgf*cm, 43 in.*lbf)
13. **INSTALL CENTER EXHAUST PIPE ASSEMBLY (See page EX-4)**
14. **INSTALL FLOOR NO. 1 UNDER COVER (See page SP-46)**
15. **INSTALL FLOOR NO. 2 UNDER COVER (See page SP-46)**



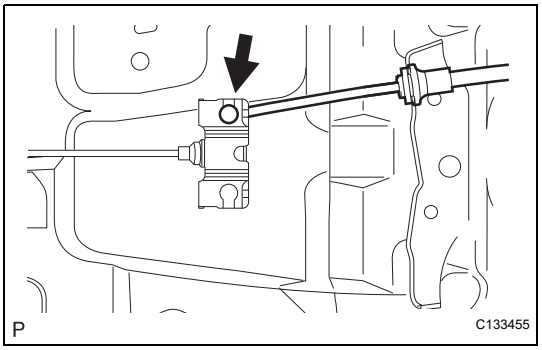


16. INSTALL NO. 4 PARKING BRAKE CABLE ASSEMBLY

(a) Install the No. 4 parking brake cable assembly to the parking brake equalizer.

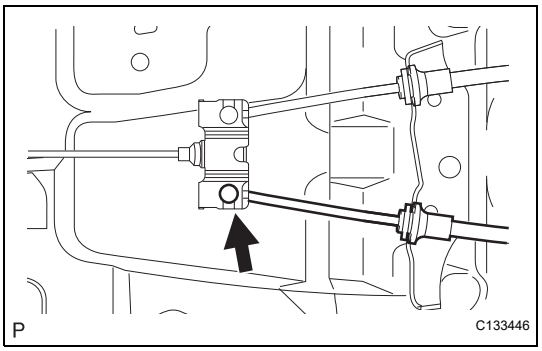


(b) Slide the rubber boot back as shown in the illustration.



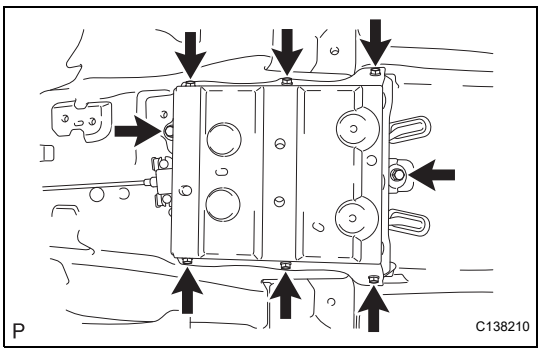
17. CONNECT NO. 2 PARKING BRAKE CABLE ASSEMBLY

(a) Connect the No. 2 parking brake cable assembly to the parking brake equalizer.



18. CONNECT NO. 3 PARKING BRAKE CABLE ASSEMBLY

(a) Connect the No. 3 parking brake cable assembly to the parking brake equalizer.

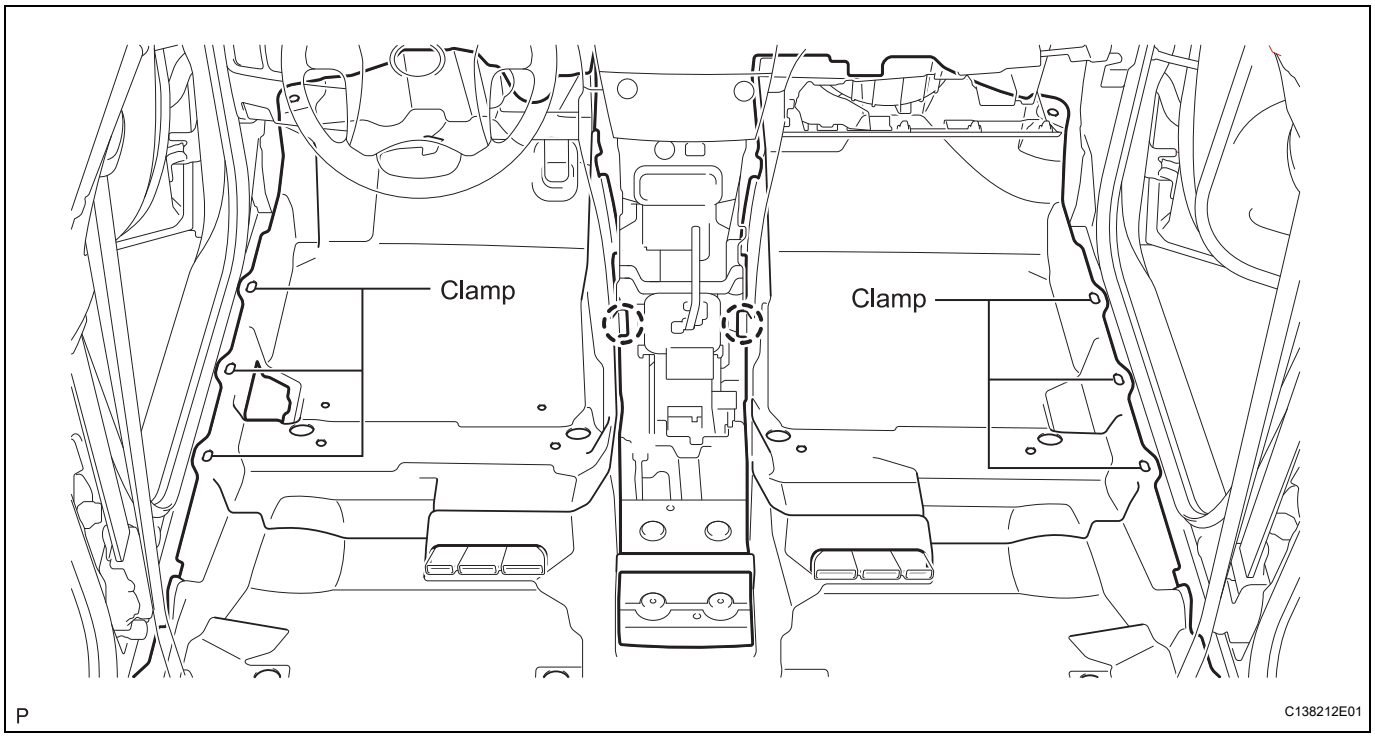


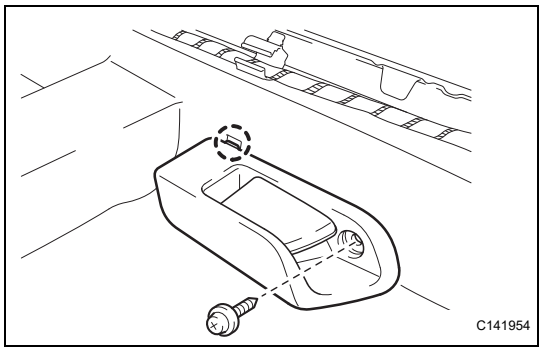
19. INSTALL CROSS MEMBER FLOOR NO. 4 REINFORCEMENT SUB-ASSEMBLY

(a) Install the cross member floor No. 4 reinforcement sub-assembly with the 8 bolts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

PB

20. **INSTALL FRONT FLOOR CARPET ASSEMBLY**
    (a) Engage the 6 clamps and 2 claws and install the front floor carpet assembly.





21. **INSTALL LUGGAGE DOOR LOCK OPENER ASSEMBLY**
    (a) Engage the claw and install the luggage door lock opener assembly with the screw.
22. **INSTALL LOWER CENTER PILLAR GARNISH LH (See page IR-40)**
23. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-43)**
24. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-43)**
25. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-41)**
26. **INSTALL LOWER CENTER PILLAR GARNISH RH (See page IR-41)**
27. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-43)**
28. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-43)**
29. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-42)**
30. **INSTALL NO. 1 PARKING BRAKE CABLE ASSEMBLY (See page PB-11)**

31. **INSTALL PARKING BRAKE PEDAL ASSEMBLY**
HINT:
Refer to the procedures up to "INSTALL PARKING BRAKE PEDAL". (See page PB-12)

32. **INSTALL FRONT SEAT ASSEMBLY LH**
HINT:
Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Power Seat)". (See page SE-38)

33. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat)**
HINT:
Refer to the procedures up to "INSTALL FRONT SEAT ASSEMBLY (for Manual Seat)". (See page SE-23)

34. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedures for the RH side and the LH side.

REASSEMBLY

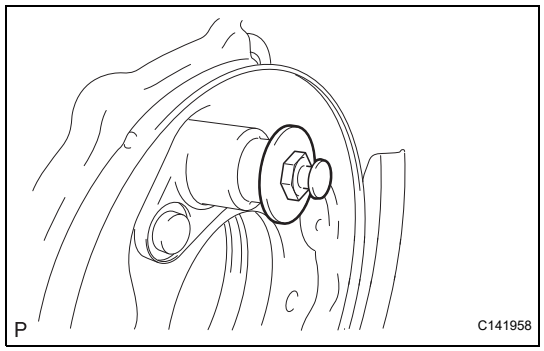
1. APPLY HIGH TEMPERATURE GREASE

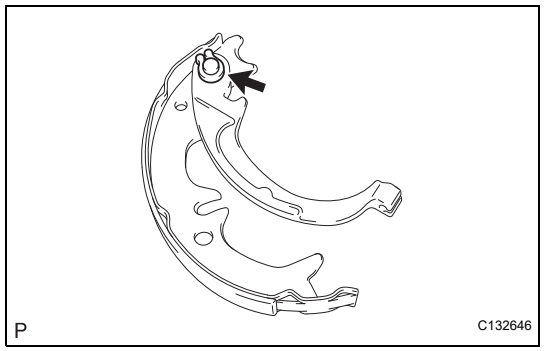
(a) Apply high temperature grease to the backing plate which makes contact with the shoe.

2. INSTALL PARKING BRAKE SHOE GUIDE PLATE

(a) Apply adhesive to the threads of the parking brake shoe guide plate set bolt.
Adhesive:
Toyota Genuine Adhesive 1344, Three Bond 1344 or equivalent

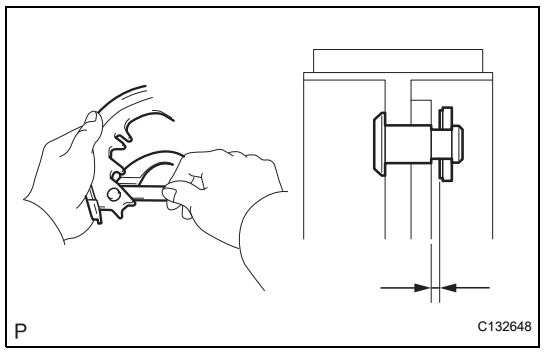
(b) Install the parking brake shoe guide plate with the parking brake shoe guide plate set bolt.
Torque: 18 N*m (184 kgf*cm, 13 ft.*lbf)





3. INSTALL PARKING BRAKE SHOE LEVER

(a) Install the parking brake shoe lever and shim to the No. 2 parking brake shoe assembly with a new C-washer.

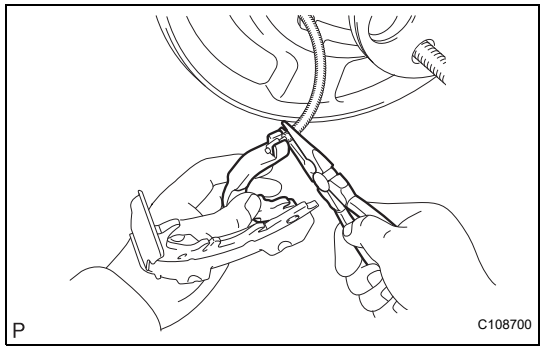


(b) Using a feeler gauge, measure the clearance between the No. 2 parking brake shoe assembly and parking brake shoe lever.
Standard clearance:
Less than 0.35 mm (0.014 in.)
If the clearance is not as specified, replace the shim with one of the correct size.

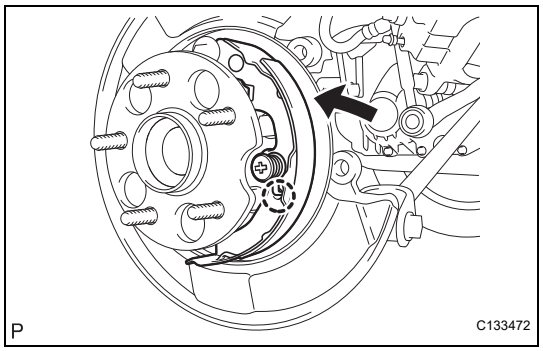
Shim Thickness	Shim Thickness
0.3 mm (0.012 in.)	0.9 mm (0.035 in.)
0.6 mm (0.024 in.)	-

4. INSTALL NO. 2 PARKING BRAKE SHOE ASSEMBLY

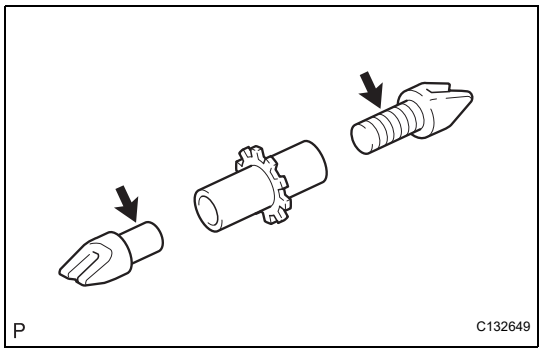
(a) Using needle-nose pliers, connect the No. 3 parking brake cable assembly to the parking brake shoe lever.



PB

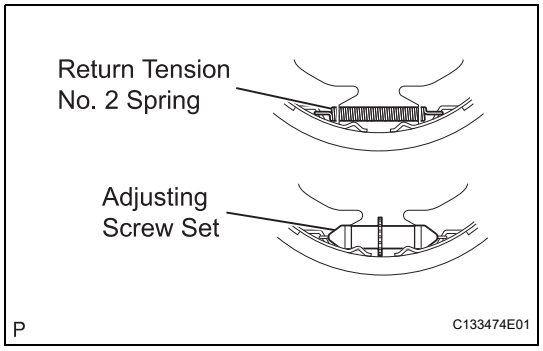


(b) Install the No. 2 parking brake shoe assembly with the parking brake shoe hold down spring No. 2 pin, the parking brake shoe hold down spring No. 2 cup, the parking brake shoe hold down spring and the parking brake shoe hold down spring No. 1 cup.
(c) Engage the claw of the parking brake shoe hold down spring No. 1 cup to the No. 2 parking brake shoe assembly.

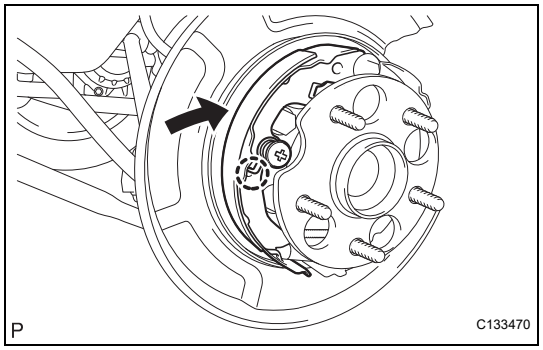


5. INSTALL PARKING BRAKE SHOE ADJUSTING SCREW SET

(a) Apply high temperature grease to the parking brake adjusting screw as shown in the illustration.



(b) Install the parking brake shoe return tension No. 2 spring to the No. 1 parking brake shoe assembly and the No. 2 parking brake shoe assembly.
(c) Install the parking brake shoe adjusting screw set to the No. 1 parking brake shoe assembly and the No. 2 parking brake shoe assembly.

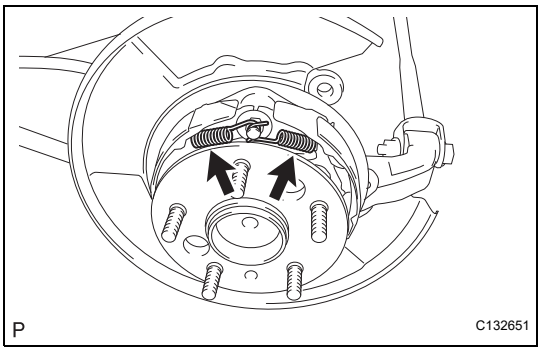


6. INSTALL NO. 1 PARKING BRAKE SHOE ASSEMBLY

(a) Install the No. 1 parking brake shoe assembly with the parking brake shoe hold down spring No. 1 pin, parking brake shoe hold down spring No. 2 cup, parking brake shoe hold down spring and parking brake shoe hold down spring No. 1 cup.
(b) Engage the claw of the parking brake shoe hold down spring No. 1 cup to the No. 1 parking brake shoe assembly.

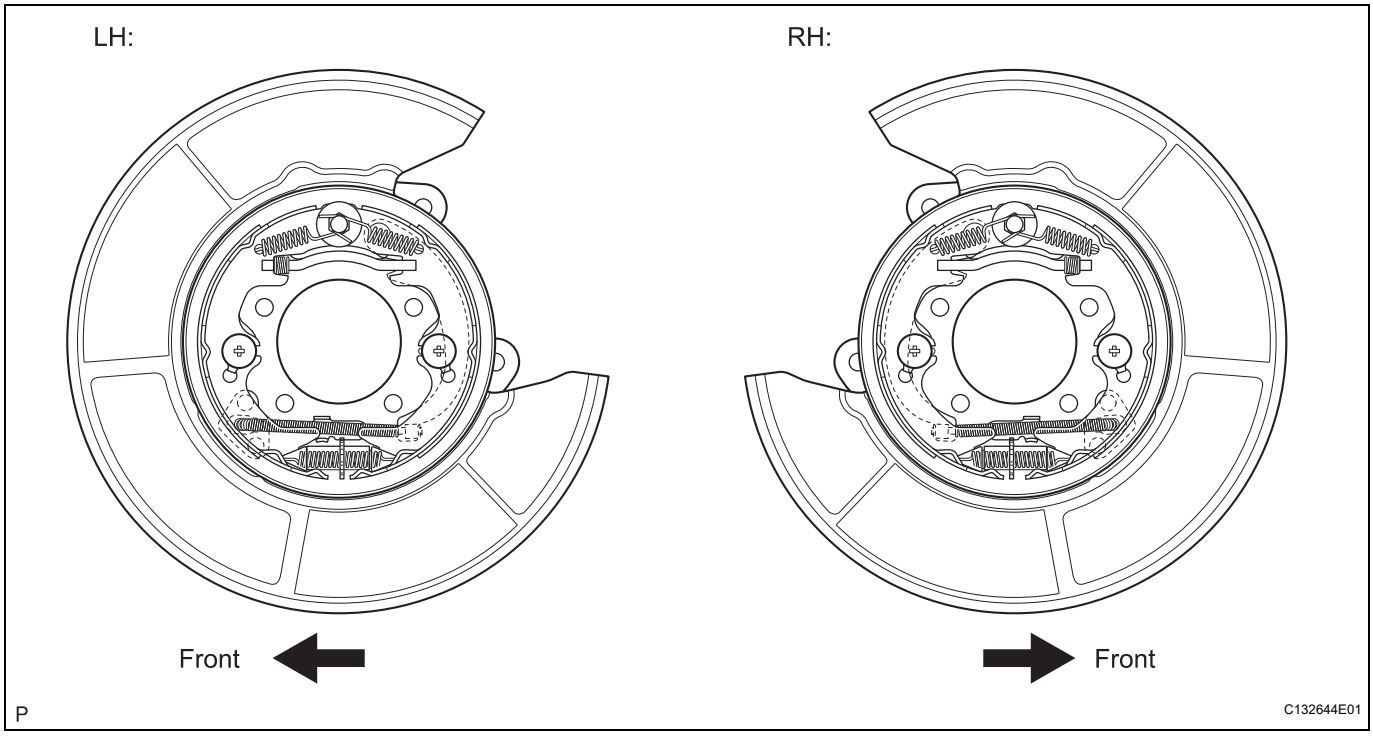
7. INSTALL PARKING BRAKE SHOE STRUT

(a) Attach the parking brake shoe strut and the parking brake shoe strut compression spring to the No. 1 parking brake shoe assembly and No. 2 parking brake shoe assembly.

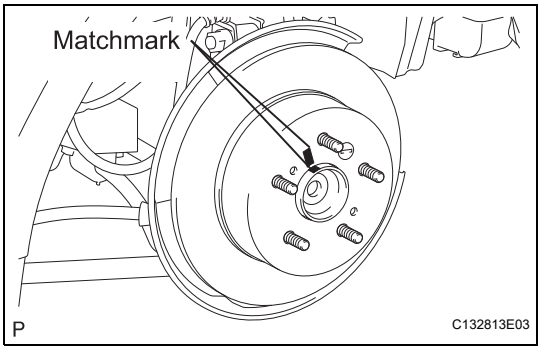


8. **INSTALL PARKING BRAKE SHOE RETURN TENSION NO. 1 SPRING**
   (a) Using needle-nose pliers, install the 2 parking brake shoe return tension No. 1 springs.
   HINT:
   First install the front side spring and then the rear side spring.

9. **CHECK PARKING BRAKE INSTALLATION**
   (a) Check that each part is installed properly.

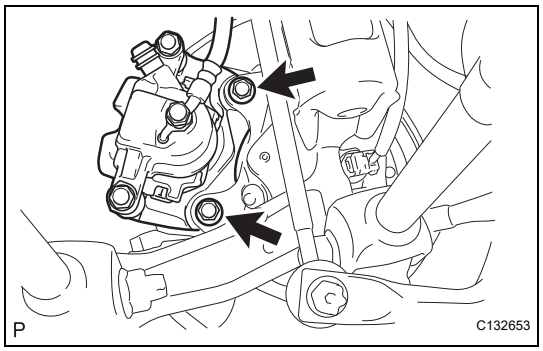


NOTICE:
There should be no oil or grease on the friction surface of the shoe lining and disc.



10. **INSTALL REAR DISC**
    (a) Align the matchmarks and install the rear disc.

11. **ADJUST PARKING BRAKE SHOE CLEARANCE (See page PB-1)**



12. **INSTALL REAR DISC BRAKE CALIPER ASSEMBLY**
    (a) Install the rear disc brake caliper assembly with the 2 bolts.
    Torque: 62 N*m (632 kgf*cm, 46 ft.*lbf)
13. **INSTALL REAR WHEEL**
    Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
14. **INSPECT PARKING BRAKE PEDAL TRAVEL (See page PB-1)**
15. **ADJUST PARKING BRAKE PEDAL TRAVEL (See page PB-1)**

SYSTEM DESCRIPTION

1. DESCRIPTION

(a) The steering lock system locks or unlocks the steering lock by activating the steering lock bar with a motor. The steering lock ECU activates the motor based on signals from the certification ECU and main body ECU.

(b) A LIN (Local Interconnect Network) is used for communication between different ECUs in this system.

2. FUNCTIONS OF COMPONENTS

(a) The steering lock ECU controls the system based on information from the following components.

Item	Function
Steering lock actuator assembly	Consists of a motor, lock bar, lock and unlock position sensors, etc. Activated by the steering lock ECU.
Steering lock ECU	Included in the steering lock actuator assembly. This ECU activates the steering lock motor based on permission signals from the main body ECU and certification ECU. Detects steering lock or unlock state and transmits this status to other ECUs.
Main body ECU	Permits the steering lock ECU to supply power to activate the motor. The main body ECU and certification ECU permit engine start after receiving an unlock signal from the steering lock ECU.
Certification ECU	Orders the steering lock ECU to lock / unlock the steering. The main body ECU and certification ECU permit engine start after receiving an unlock signal from the steering lock ECU.
IG2 relay	Controlled by the main body ECU. This ECU sends IG signals to the steering lock ECU.

HOW TO PROCEED WITH TROUBLESHOOTING

*: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CHECK AND CLEAR DTCS

NEXT

3	PROBLEM SYMPTOM CONFIRMATION

- SYMPTOM DOES NOT OCCUR (Go to step 4)
- SYMPTOM OCCURS (Go to step 5)

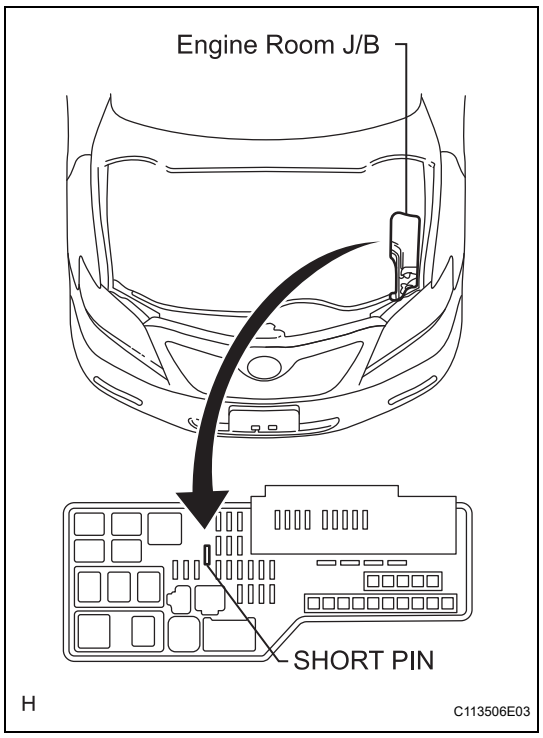
INITIALIZATION

HINT:
In vehicles equipped with the smart key system function, the starting function may not operate after recharging or while jump-starting a discharged battery. This condition is most common if the battery voltage drops below 9 V. The following procedure has been developed to address this condition.



1. INITIALIZATION PROCEDURE

(a) Confirm that the short pin is installed.
HINT:
If the short pin is not installed, install it at this time.
(b) Move the shift lever to the P position.
(c) Turn the power switch off.
(d) Open the driver's door.
HINT:
Opening the driver's door will start an initialization process between the steering lock ECU and the engine room J/B.
(e) Depress the brake pedal.
(f) Press the "START STOP" switch.

PROBLEM SYMPTOMS TABLE

Inspect the suspected areas in numerical order by referring to the corresponding pages when any of the following symptoms occurs:

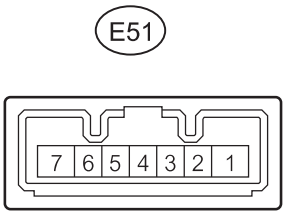
ELECTRIC STEERING LOCK FUNCTION:

Symptom	Suspected Area	See page
Steering wheel cannot be unlocked (the engine cannot be started).	1. Initialization	SR-9
	2. Check for DTCs in the smart key system.	ST-23
	3. Check for DTCs in the engine immobiliser system.	EI-25
	4. Check that the LCK/UNLCK REC item in the DATA LIST of the certification ECU displays YES within 10 seconds after starting the engine. (If it displays NO, see "No steering unlock command" in this table.)	SR-14
	5. Check the input signal from the IGE terminal of the steering lock ECU.	SR-24
	6. Steering lock ECU power source circuit.	SR-30
	7. Replace the steering lock ECU.	SR-39
Steering wheel cannot be unlocked (no steering unlock command).	1. Check that the S CODE CHK item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	2. Check that the L CODE CHK item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	3. Replace the certification ECU.	-
Steering wheel cannot be locked.	1. Check for DTCs in the smart key system.	ST-23
	2. Check for DTCs in the engine immobiliser system.	EI-25
	3. With the power switch off and the shift in the P position, open and close the drivers door. After that, check that the LCK/UNLCK REC item in the DATA LIST of the certification ECU displays YES within 10 seconds. (If it displays NO, see "No steering lock command" in this table.)	SR-14
	4. Check the input signal from the IGE terminal of the steering lock ECU.	SR-24
	5. Steering lock ECU power source circuit.	SR-30
	6. Replace the steering lock ECU.	SR-39
Steering wheel cannot be locked (no steering lock command).	1. Courtesy light switch circuit	LI-41
	2. Check that the S CODE CHK item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	3. Check that the L CODE CHK item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	4. Replace the certification ECU.	-

SMART KEY SYSTEM FUNCTION:

Symptom	Suspected Area	See page
Engine does not start.	1. Initialization	SR-9
	2. Check for DTCs in the smart key system.	ST-23
	3. Check for DTCs in the engine immobiliser system.	EI-25
	4. Check that the power switch is turned on (IG).	-
	5. Check cranking operation. (If cranking operation is possible, see "Engine does not start due to the engine immobiliser" in this table.)	-
	6. Check SHIFT P SIG in the DATA LIST of the main bofy ECU and confirm that the shift signal is normal.	-
	7. Check whether the steering wheel is locked or unlocked. (If it is locked, see "Steering wheel cannot be unlocked" in the steering lock function table.)	-
	8. Check the output from the SLP terminal of the steering lock ECU.	SR-28
	9. Check the output signal from the ST SW of the certification ECU (DTC B2275).	ST-42
	10. Replace the main body ECU.	-
Engine does not start due to the engine immobiliser.	1. Check that the L CODE CHK item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	2. Check that the START RQST item in the DATA LIST of the certification ECU displays YES. (If it displays NO, replace the certification ECU.)	-
	3. Check that the S CODE CHK item in the DATA LIST of the certification ECU displays OK. (If it displays NG, replace the ID code box.)	-
	4. Replace the ID code box.	-

TERMINALS OF ECU



H

C106482E05

1. STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
E51-1 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
E51-2 (SGND) - Body ground	W-B - Body ground	Signal ground	Always	Below 1 V
E51-3 (IGE) - E51-1 (GND)	BR - W-B	Power source for driving motor	• Motor is in operation • Motor is not in operation	• Below 1 V • 10 to 12 V
E51-4 (SLP1) - E51-2 (SGND)	P - W-B	Unlock position sensor output signal	• Steering is locked • Steering lock is released	• 10 to 14 V • Below 1 V
E51-5 (LIN) - E51-2 (SGND)	O - W-B	LIN communication bus	Power switch on (IG)	Pulse generation
E51-6 (IG2) - E51-1 (GND)	B - W-B	IG signal input	Power switch on (IG)	10 to 14 V
E51-7 (B) - E51-1 (GND)	P - W-B	Power source	Always	10 to 14 V

DIAGNOSIS SYSTEM

1. DESCRIPTION

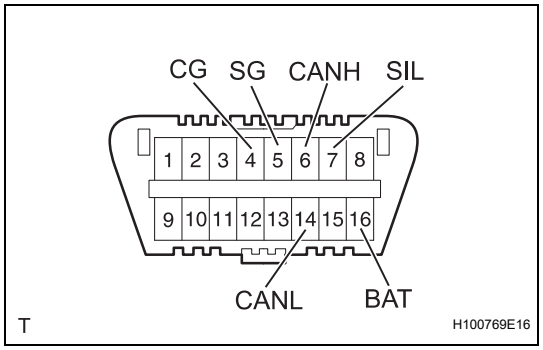
(a) DIAGNOSTIC SYSTEM

When troubleshooting a vehicle with a diagnostic system, the only difference from the usual troubleshooting procedure is connecting the intelligent tester to the vehicle and reading various data output from the vehicle's steering lock ECU. The steering lock ECU records DTCs when the computer detects a malfunction in the computer itself or in system circuits.

To check the DTCs, connect the intelligent tester to the DLC3 on the vehicle. The intelligent tester enables the DTCs to be cleared, the indicators to be activated, and the DATA LIST to be checked.

(b) The steering lock ECU diagnosis information cannot be read directly from the steering lock ECU by the tester. The diagnosis information from the steering lock ECU is transmitted to the tester via the certification ECU to the tester using the controller area network (CAN).

2. CHECK DLC3



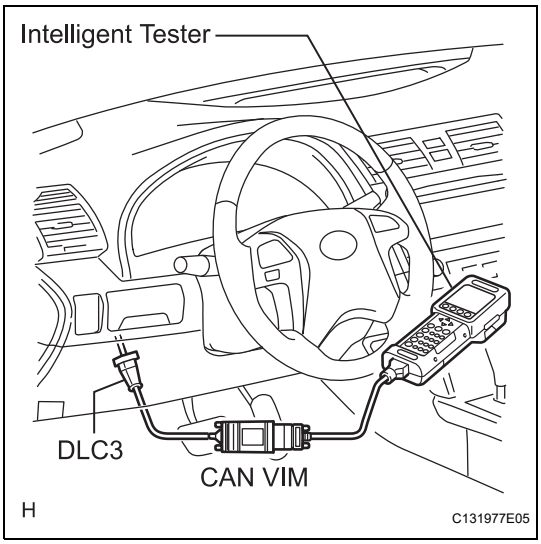
(a) The certification ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power Switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power Switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power Switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power Switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power Switch off*	6 kΩ or higher

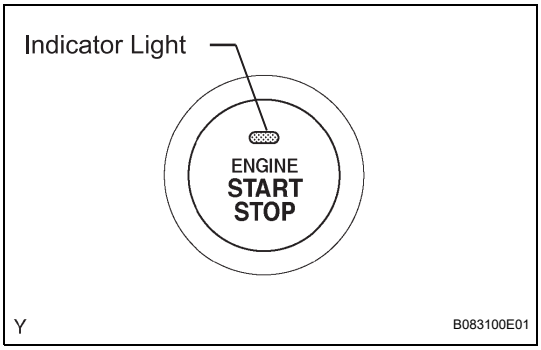
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. WARNING FUNCTION OF POWER SWITCH INDICATOR

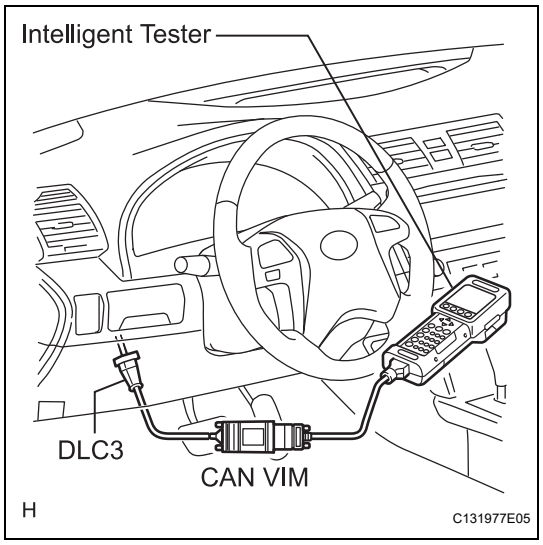
(a) The steering lock ECU blinks the LED indicator of the power switch when any of the following problems occurs in the system:

Detection Item	Indicator Light Blink Pattern	Indication Status	Countermeasure
Steering lock is still not released	• Blinks green at 1-second intervals • Goes off 15 seconds after blinking starts	The motor operates to release the steering lock, but the steering lock cannot be released (e.g. the lock bar is stuck in the steering column).	Push the power switch while turning the steering wheel left or right.
Malfunction in smart key system	• Blinks amber at 2-second intervals • Goes off 15 seconds after the power switch is turned off while blinking	• There is a short in the devices activating the motor. • There is a problem in the steering lock ECU or main body ECU.	Troubleshoot by following "HOW TO PROCEED WITH TROUBLESHOOTING" (See page SR-7).

4. WARNING FUNCTION OF COMBINATION METER

(a) The steering lock ECU displays a warning on the combination meter when any of the following problems occurs in the system.

Detection Item	Display	Indication Status	Countermeasure
Steering lock is still not released	"S/T is not Unlocked" • Goes off 15 seconds after blinking starts	The motor operates to release the steering lock, but the steering lock cannot be released (e.g. the lock bar is stuck in the steering column).	Push the power switch while turning the steering wheel left or right.
Malfunction in push start system	"Check S/T Lock" • Goes off 15 seconds after the power switch is turned off while blinking	• There is a short in the devices activating the motor. • There is a problem in the steering lock ECU or main body ECU.	Troubleshoot by following "HOW TO PROCEED WITH TROUBLESHOOTING" (See page SR-7).



DTC CHECK / CLEAR

1. CHECK FOR DTCS

(a) Prepare the intelligent tester.

(b) Connect the intelligent tester to the DLC3 at the lower part of the instrument panel.

(c) Turn the power switch on (IG) and turn the intelligent tester on.

(d) Use the intelligent tester to check for DTCs, and note or print the result (see the operator's manual for operating instructions).

(e) Confirm the details of the DTCs (See page SR-16).

2. CLEAR DTCS

(a) Operate the intelligent tester to clear the DTCs (see the operator's manual for operating instructions).

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By accessing the DATA LIST displayed on the intelligent tester, it is possible to perform such functions as reading the values of switches and sensors without removing any parts. Reading the DATA LIST is the first step in troubleshooting and is one method to save labor time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Operate the intelligent tester according to the steps on the display and select DATA LIST.

SMART:

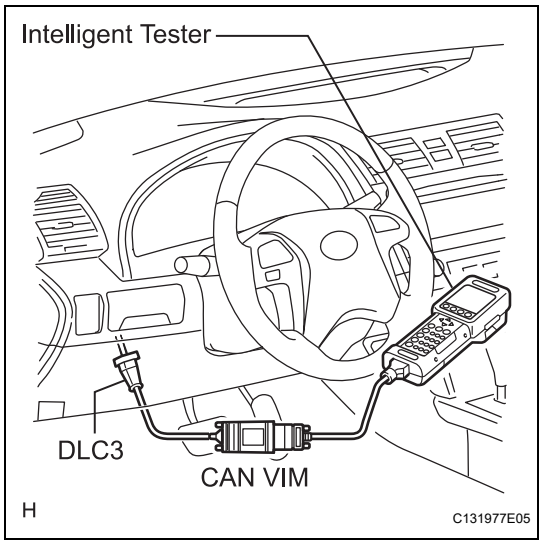
Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
SLCK SLEEP COND	Steering lock ECU sleep condition / YES or NO	YES: Steering lock ECU sleep mode can be entered NO: Steering lock ECU sleep mode cannot be entered	-
SLCK START COND	Steering lock ECU start signal / YES or NO	YES: Steering lock ECU sent a start signal NO: Steering lock ECU did not send a start signal	-
ENG START COND	Engine start condition / OK or NG	OK: Engine is allowed to start NG: Engine is not allowed to start	-
SENSOR VALUE	Sensor malfunction / NG (PAST) or OK	NG (PAST): Sensor malfunction OK: No malfunction	-
PWR SUPPLY SHRT	Short in ECU / NG (PAST) or OK	NG (PAST): Short in ECU OK: No malfunction	-
PWR SUPPLY OPEN	Open in ECU / NG (PAST) or OK	NG (PAST): Open in ECU OK: No malfunction	-
MTR DRIVER SHRT	Short in driver ECU / NG (PAST) or OK	NG (PAST): Short in driver ECU OK: No malfunction	-
MTR DRIVER OPEN	Open in driver ECU / NG (PAST) or OK	NG (PAST): Open in driver ECU OK: No malfunction	-
LCK/UNLCK REC	Steering lock command reception record / YES or NO	YES: Steering lock / unlock signal received NO: Steering lock / unlock signal no received	-
LCK BAR STUCK	Lock bar stuck malfunction / NG (PAST) or OK	NG (PAST): Lock bar stuck malfunction OK: No malfunction	-
PUSH START ERR	Push button start function malfunction / NG (PAST) or OK	NG (PAST): Malfunction in push button start OK: No malfunction	-
IG2	IG2 voltage / ON or OFF	ON: 10 to 14 V OFF: Below 1 V	-
IG (LIN)	LIN bus IG status / ON or OFF	ON: LIN bus IG ON status OFF: LIN bus IG OFF status	-
STEERING LOCK	Steering lock condition / Set or Unset	Set: Steering lock is set Unset: Steering lock is not set	This status changes depending on the state of some sensors.
STEERING UNLOCK	Steering unlock condition / Set or Unset	Set: Steering unlock is set Unset: Steering unlock is not set	This status changes depending on the state of some sensors.

2. ACTIVE TEST

HINT:

Performing the ACTIVE TEST is one of the methods to save labor time. It is possible to display the DATA LIST during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Following the display on the intelligent tester, perform the ACTIVE TEST.



SMART:

Tester Display	Test Part	Control Range	Diagnostic Note
SECURITY INDIC	Security Indicator	ON or OFF	-

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the parts listed for that code in the table below and proceed to the appropriate page.
HINT:
The steering lock ECU does not store DTCs regarding the past problems.

ELECTRIC STEERING LOCK:

DTC No.	Detection Item	Trouble Area	See page
B2781	Open / Short in Steering Lock ECU	Steering lock actuator assembly (Steering lock ECU)	SR-17
B2782	Power Source Control ECU Malfunction	1. Wire harness 2. Steering lock actuator assembly (Steering lock ECU) 3. Main body ECU	SR-18
B2788	IG2 Signal Malfunction	1. IG2 relay 2. Wire harness 3. Main body ECU 4. Steering lock actuator assembly (Steering lock ECU)	SR-21

DTC	B2781	Open / Short in Steering Lock ECU

DESCRIPTION

If the steering lock ECU determines that there is a malfunction inside the ECU, it outputs this DTC. The steering lock ECU diagnosis information cannot be read directly from the steering lock ECU by the tester. The diagnosis information from the steering lock ECU is transmitted to the tester via the certification ECU to the tester using the controller area network (CAN).

DTC No.	DTC Detecting Condition	Trouble Area
B2781	• Steering lock motor drive circuit is defective. • Both lock and unlock position sensors detect "ON".	Steering lock actuator assembly (Steering lock ECU)

INSPECTION PROCEDURE

1	REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

HINT:
The steering lock ECU and steering lock actuator assembly are supplied as a unit.

(a) Replace the steering lock actuator assembly (See page SR-39).

NEXT

END

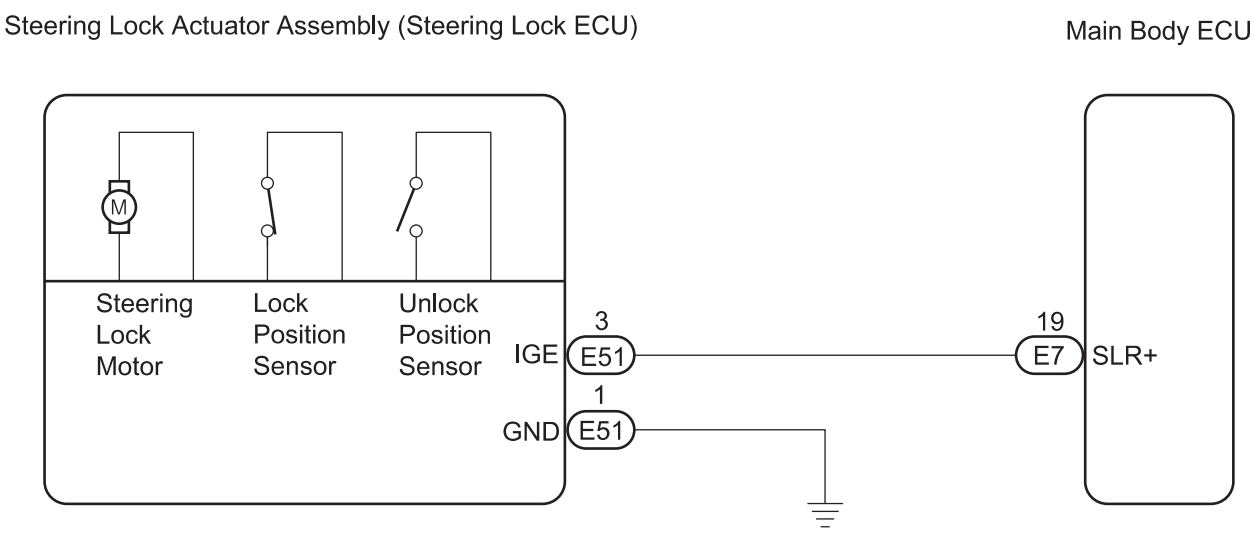
DTC	B2782	Power Source Control ECU Malfunction

DESCRIPTION

The main body ECU (*) controls the power supply to activate the steering lock motor. This prevents the steering from being locked while the vehicle is moving.
HINT:
*: The power source control ECU is not a physical part. This code refers to the power source control function performed by the main body ECU.

DTC No.	DTC Detecting Condition	Trouble Area
B2782	Steering lock motor drive control circuit is defective.	• Wire harness • Steering lock actuator assembly (Steering lock ECU) • Main body ECU

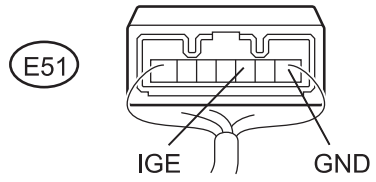
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

Steering Lock Actuator Assembly:



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E51-3 (IGE) - E51-1 (GND)	**The specified condition should be checked after performing the following:** **1. Power switch off** **2. Turn the power switch on (ACC or IG)**	• **Motor activated: Below 1 V** • **Motor not activated: 10 to 12 V**

SR

Tester Connection	Condition	Specified Condition
E51-3 (IGE) - E51-1 (GND)	The specified condition should be checked after performing the following: 1. Move the shift lever to the P position 2. Turn the power switch off 3. Open the driver's door	• Motor activated: Below 1 V • Motor not activated: 10 to 12 V

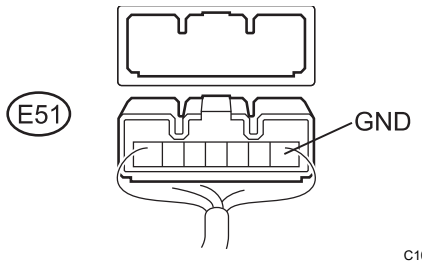
HINT:
The steering lock ECU and steering lock actuator assembly are supplied as a unit.

OK → **REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

NG

2 CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)

Steering Lock Actuator Assembly:



(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

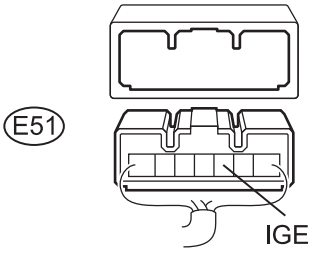
Tester Connection	Condition	Specified Condition
E51-1 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

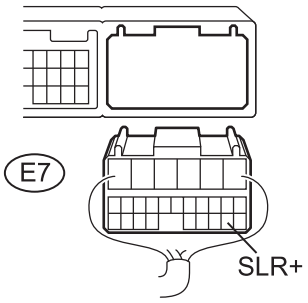
OK

3	CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)

Steering Lock Actuator Assembly:



Main Body ECU:



H C113502E01

(a) Disconnect the E7 connector from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E51-3 (IGE) - E7-19 (SLR+)	Always	Below 1 Ω
E51-3 (IGE) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

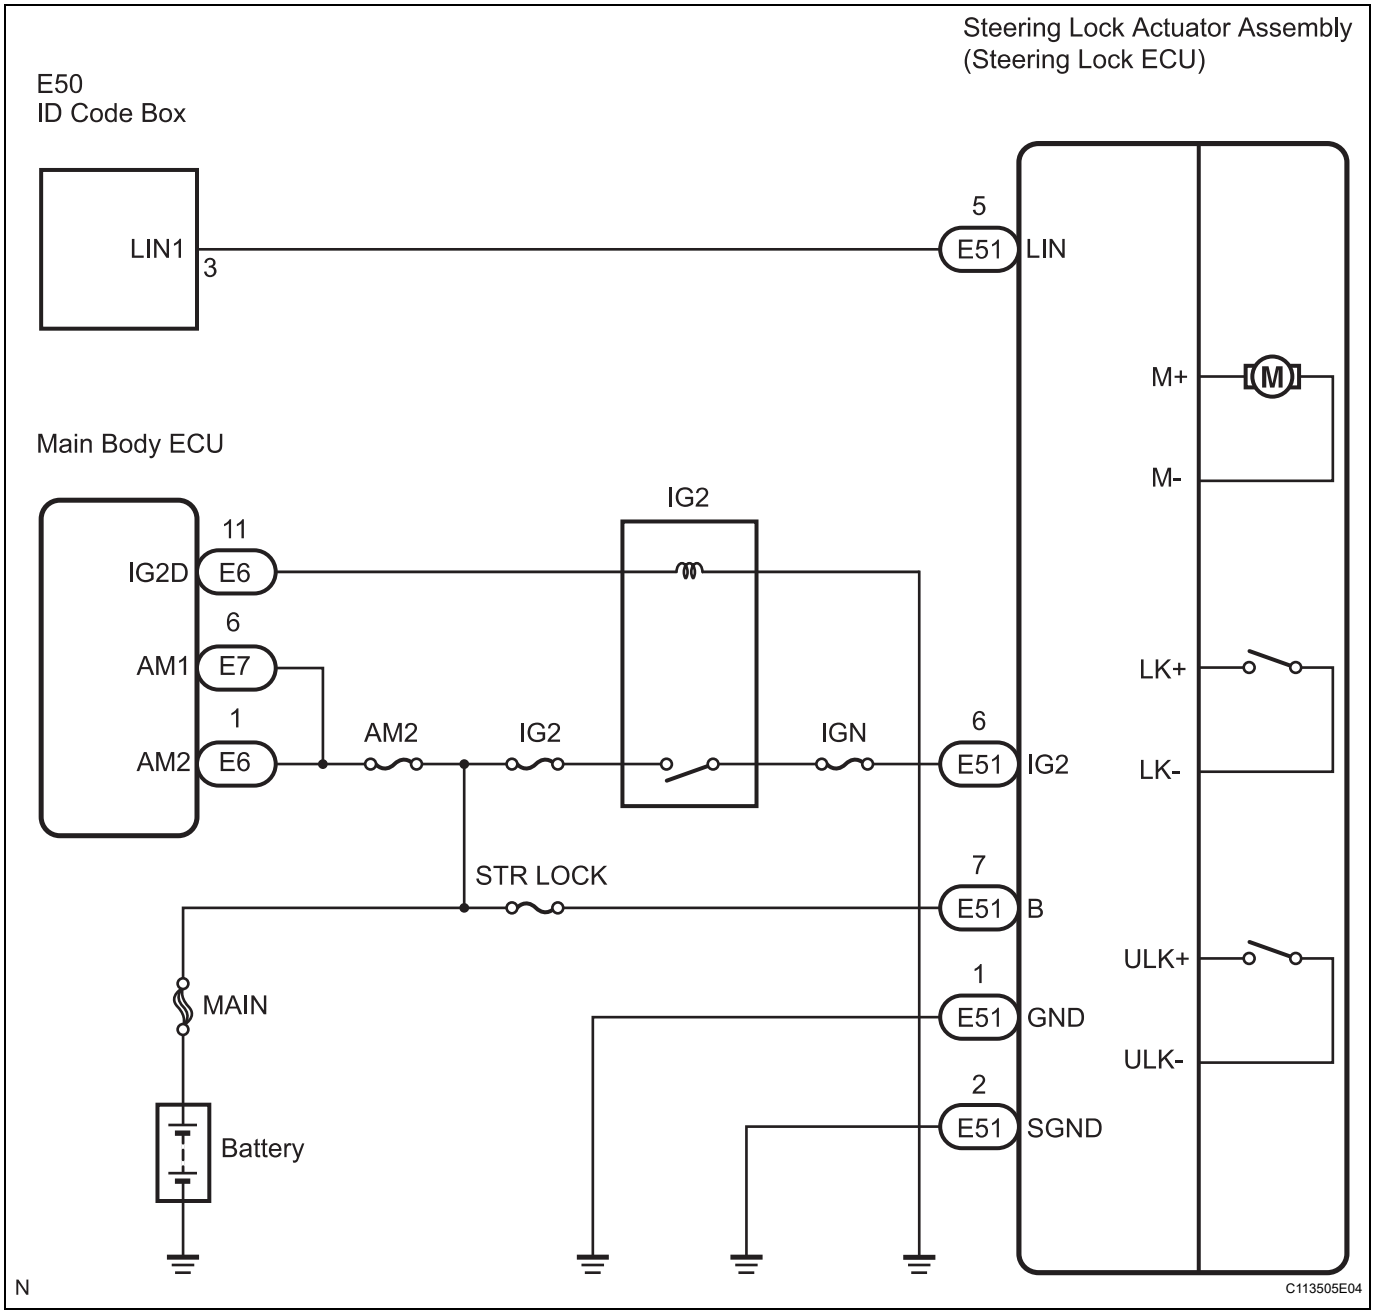
DTC	B2788	IG2 Signal Malfunction

DESCRIPTION

The steering lock ECU receives power from the IG2 relay. When the digital signal from the certification ECU and the voltage from the IG2 relay are received by the steering lock ECU, the steering will be unlocked. The steering lock ECU will not lock the steering when power from the IG2 relay is present (this prevents the steering from being locked while the vehicle is moving).

DTC No.	DTC Detecting Condition	Trouble Area
B2788	Different information is obtained from IG2 signals received directly from the IG2 circuit, and from IG2 signals sent via LIN communication for a period of 1 second.	• IG2 relay • Wire harness • Main body ECU • Steering lock actuator assembly (Steering lock ECU)

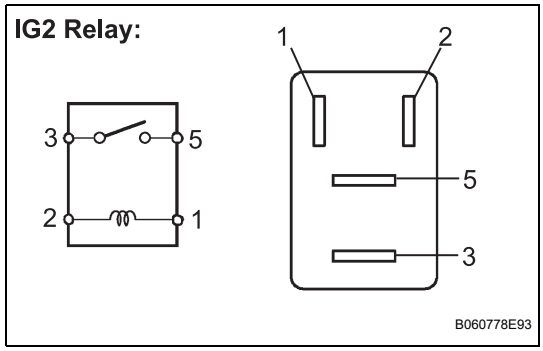
WIRING DIAGRAM



SR

INSPECTION PROCEDURE

1 INSPECT IG2 RELAY



(a) Remove the IG2 relay from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.

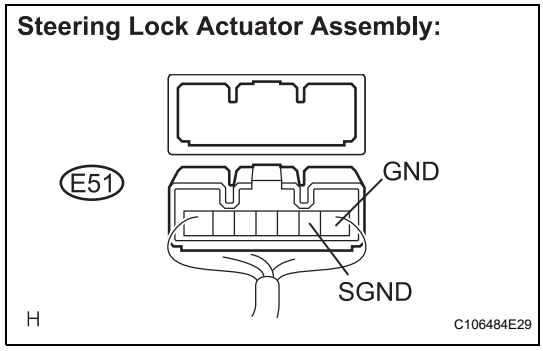
Standard resistance

Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	When battery voltage is applied to terminals 1 and 2	Below 1 Ω

NG → **REPLACE IG2 RELAY**

OK

2 CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)



(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Measure the resistance according to the value(s) in the table below.

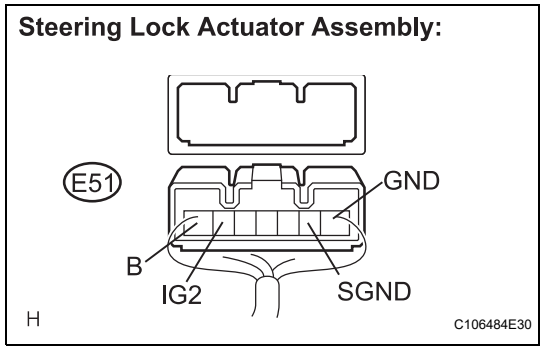
Standard resistance

Tester Connection	Condition	Specified Condition
E51-1 (GND) - Body ground	Always	Below 1 Ω
E51-2 (SGND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BATTERY)



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E51-6 (IG2) - E51-1 (GND)	Power switch on (IG)	10 to 14 V
E51-6 (IG2) - E51-2 (SGND)	Power switch on (IG)	10 to 14 V

(b) Measure the resistance according to the value(s) in the table below.

SR

Standard resistance

Tester Connection	Condition	Specified Condition
*E51-6 (IG2) - E51-7 (B)	Power switch off	10 kΩ or higher

*: This measurement is performed with the power switch off to check for a short between IG2 and battery voltage.

OK → **REPLACE STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)**

NG

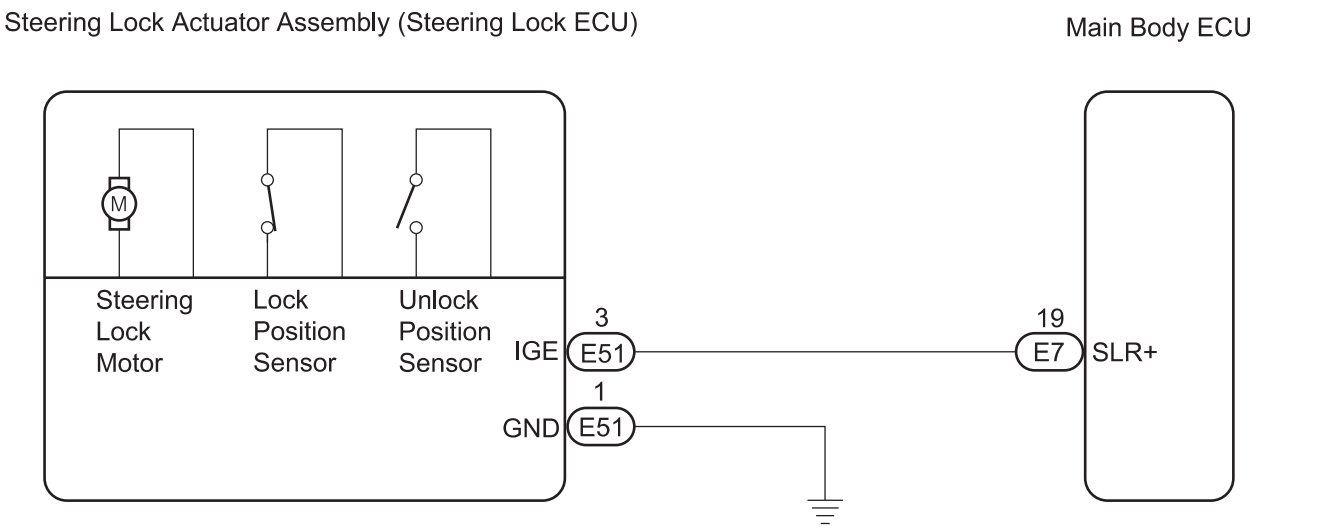
REPAIR OR REPLACE HARNESS OR CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BATTERY)

Steering Lock Motor Drive Power Circuit

DESCRIPTION

The steering lock ECU is connected to the main body ECU and certification ECU. The steering lock ECU cannot activate the motor unless it receives permission signals from both ECUs. (The main body ECU permits the steering lock ECU to supply power to activate the motor.)

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK VEHICLE CONDITION

(a) Check the problem symptom of the steering lock system.

Result

Condition	Proceed to
Steering lock cannot be released	A
Steering cannot be locked	B

B → Go to step 6

A

2	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG), and turn the intelligent tester on.

(c) Select the item below in the DATA LIST, and read its value displayed on the intelligent tester.

SMART

Item	Measurement Item/Range	Normal Condition	Diagnostic Note
LCK/UNLCK REC	Steering lock command reception record / YES or NO	YES: Steering lock / unlock signal received NO: Steering lock / unlock signal not received	-

(d) Check if steering unlock command signal has been received.

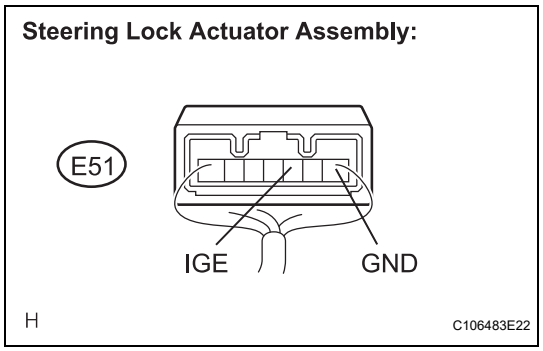
OK:

"YES" is displayed on the tester display.

NG → **CHECK SMART KEY SYSTEM**

OK

3 INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)



(a) Measure the voltage according to the value(s) in the table below.

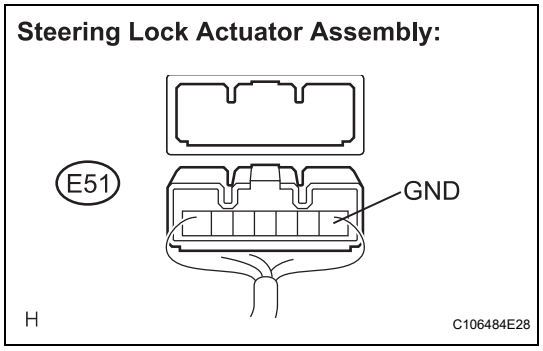
Standard voltage

Tester Connection	Condition	Specified Condition
E51-3 (IGE) - E51-1 (GND)	1. Power switch off 2. Turn the power switch on (ACC or IG)	• Motor activated: Below 1 V • Motor not activated: 10 to 12 V

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

4 CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)



(a) Disconnect the E51 connector from the steering lock actuator assembly.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

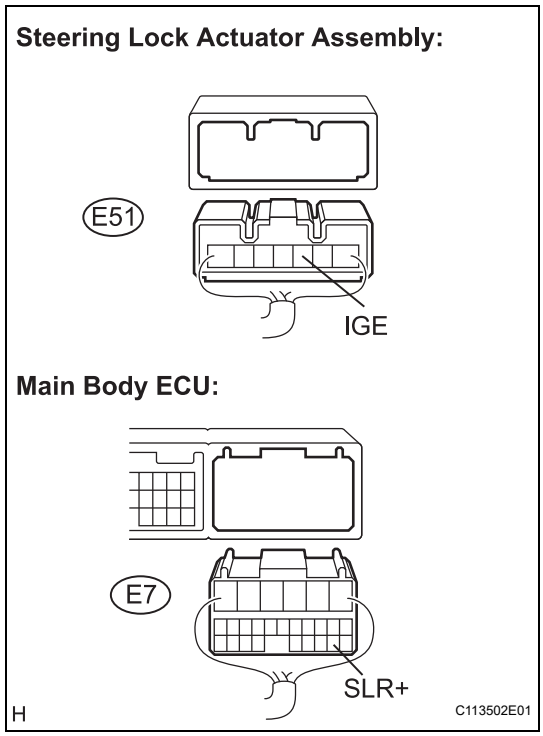
Tester Connection	Condition	Specified Condition
E51-1 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

SR

5	CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)



(a) Disconnect the E7 connector from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

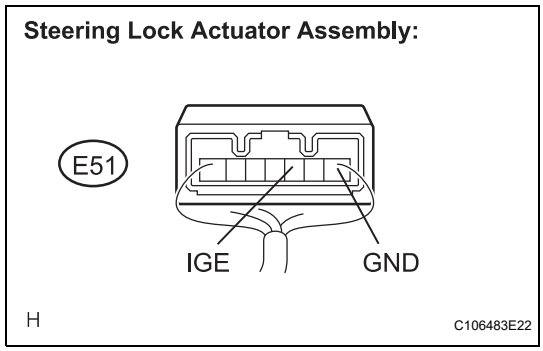
Tester Connection	Condition	Specified Condition
E51-3 (IGE) - E7-19 (SLR+)	Always	Below 1 Ω
E51-3 (IGE) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

6	INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E51-3 (IGE) - E51-1 (GND)	The specified condition should be checked after performing the following: 1. Move the shift lever to the P position 2. Turn the power switch off 3. Open the driver's door	• Motor activated: Below 1 V • Motor not activated: 10 to 12 V

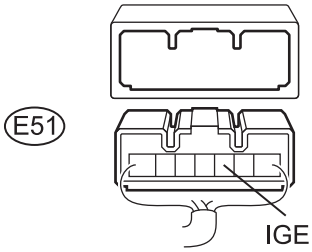
OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

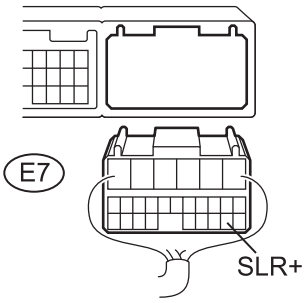
SR

7	CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)

Steering Lock Actuator Assembly:



Main Body ECU:



H C113502E01

(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Disconnect the E7 connector from the main body ECU.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E51-3 (IGE) - E7-19 (SLR+)	Always	Below 1 Ω
E51-3 (IGE) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

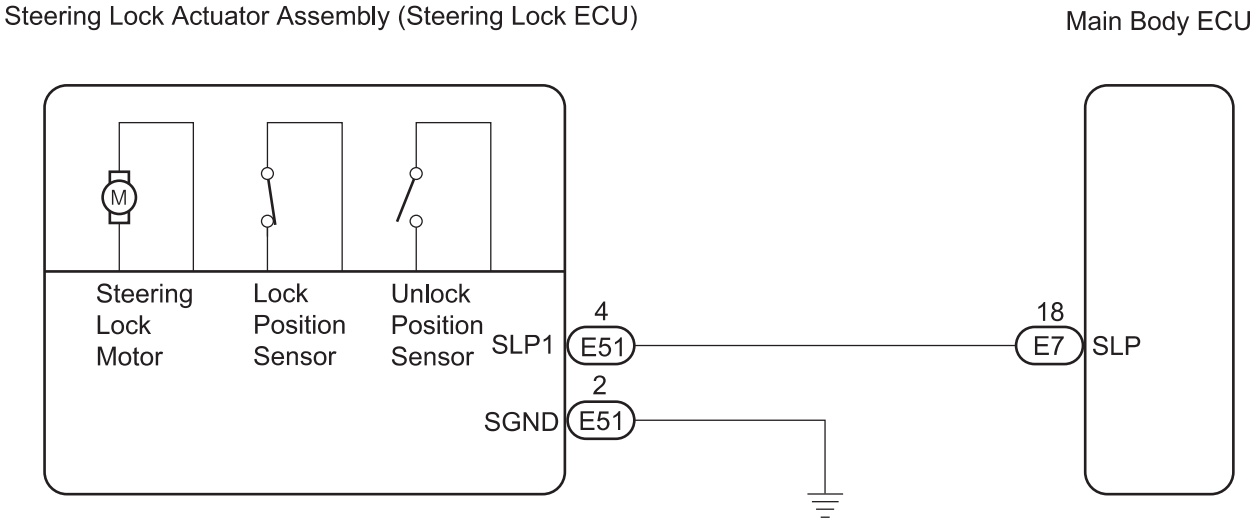
REPLACE MAIN BODY ECU

Unlock Position Sensor Signal Circuit

DESCRIPTION

The unlock position sensor is one of the components in the steering lock actuator. The sensor switch contact closes when the steering lock is released. The steering lock release signal is then sent to the main body ECU. Receiving the signal, the ECU permits engine start. (This prevents the engine from being started with the steering locked.)

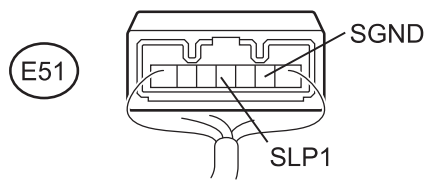
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT STEERING LOCK ACTUATOR ASSEMBLY (STEERING LOCK ECU)

Steering Lock Actuator Assembly:



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E51-4 (SLP1) - E51-2 (SGND)	1. Power switch off 2. Turn the power switch on (ACC or IG)	Below 1 V

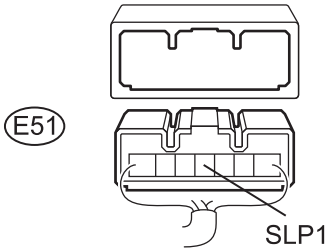
OK → CHECK SMART KEY SYSTEM

NG

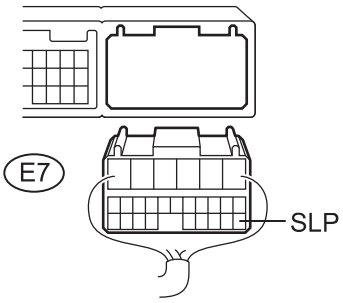
SR

2	CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - MAIN BODY ECU)

Steering Lock Actuator Assembly:



Main Body ECU:



H C113502E02

(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Disconnect the E7 connector from the main body ECU.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E51-4 (SLP1) - E7-18 (SLP)	Always	Below 1 Ω
E51-4 (SLP1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

SYSTEM DESCRIPTION

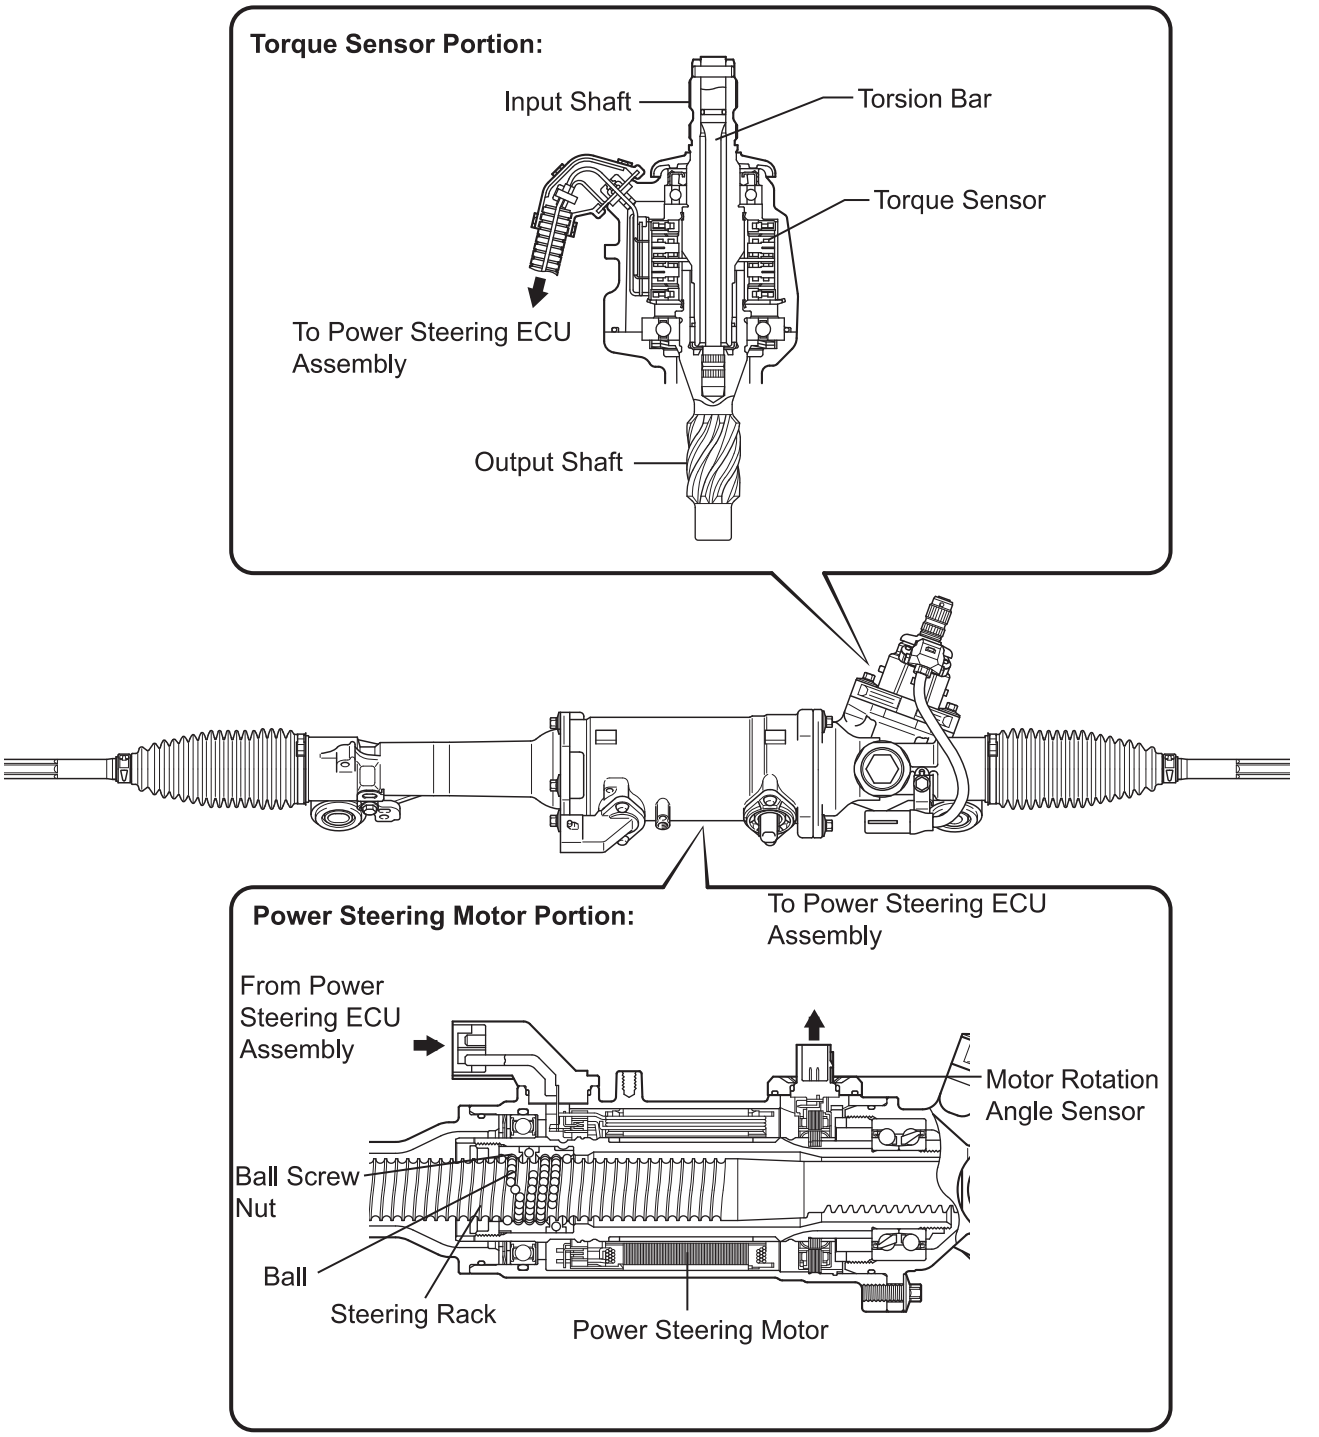
1. DESCRIPTION

(a) The EPS system generates assist torque to assist steering effort through the operation of the motor installed on the power steering link assembly.
The direction and amount of power assistance are determined by signals from the torque sensor, and controlled in accordance with vehicle speed. As a result, steering effort is controlled to be light during low speed driving and moderately high during high speed driving.

2. FUNCTIONS OF COMPONENTS

Components	Function
Power Steering ECU Assembly	Calculates degree of assistance needed based on steering torque and vehicle speed. Drives the motor based on motor electric angle obtained from the motor rotation angle sensor.
	Boosts battery voltage to generate motor drive voltage.
	Restricts power assistance to protect the system if the motor and ECU overheat.
Torque Sensor	Detects steering effort generated when the steering wheel is turned.
Power Steering Motor	Located coaxially with the rack shaft. Its rotation is converted to the rectilinear motion of the steering rack via the ball screw nut and ball.
Hybrid Vehicle Control ECU	Transmits ready signal to the power steering ECU.

3. OPERATION EXPLANATION



(a) The torque sensors is mounted on the input shaft to the main shaft and on the output shaft to the pinion shaft. The input and output shafts are joined by a torsion bar.

(b) If the steering wheel is turned, the torsion bar twists, resulting in a difference in the rotation angle detected by the torque sensor. The power steering ECU assembly calculates torque based on this difference.

(c) The power steering ECU assembly calculates proper assisting torque, according to vehicle speed, based on the torque obtained in the previous step. Then the ECU controls the motor drive circuit in order to allow it to generate assisting torque.
(d) A ball screw nut is attached to the motor shaft. It converts the rotational motion of the motor into the rectilinear motion of the steering rack via the ball.
(e) The assisting force generated in the above process will reduce the steering effort required by the driver.

HOW TO PROCEED WITH TROUBLESHOOTING

Perform troubleshooting according to the following flowchart.
HINT:
- For further details, see the page given.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CHECK DTC AND FREEZE FRAME DATA*

(a) Record the DTCs and freeze frame data.

NEXT

4	CLEAR DTC AND FREEZE FRAME DATA*

NEXT

5	PROBLEM SYMPTOM CONFIRMATION

	SYMPTOM DOES NOT OCCUR (GO TO STEP 6)
	SYMPTOM OCCURS (GO TO STEP 7)

6	SYMPTOM SIMULATION

NEXT

7	CHECK DTC*

(a) Recheck for DTCs.
HINT:
- Refer to the diagnostic trouble code chart if any DTCs are output.
- If any CAN communication system DTCs are output, perform troubleshooting on the CAN communication system first (See page CA-7).

PS

- If communication to the power steering ECU assembly is not established through the intelligent tester, inspect terminals SIL of the DLC3 and power steering ECU assembly, and inspect the IG circuit of the power steering ECU assembly.

⇨	**NORMAL SYSTEM CODE IS OUTPUT: GO TO STEP 8**

CALIBRATION

1. ROTATION ANGLE SENSOR VALUE INITIALIZATION AND TORQUE SENSOR ZERO POINT CALIBRATION

NOTICE:

Clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point if any of the following has occurred:

- **The power steering ECU assembly has been replaced.**
- **The power steering link assembly has been replaced.**
- **Steering effort differs between left and right.**

(a) Inspection before calibration

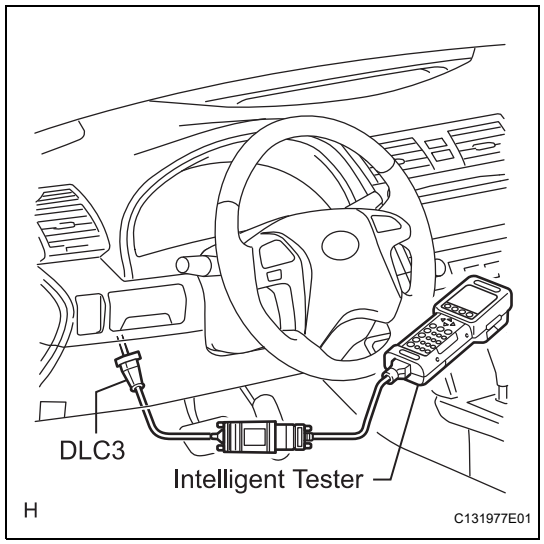
(1) Connect the intelligent tester (with CAN VIM) to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn the intelligent tester on.

(4) Select "IG SUPPLY" from the data list.

(5) Check the IG power supply voltage on the tester screen.



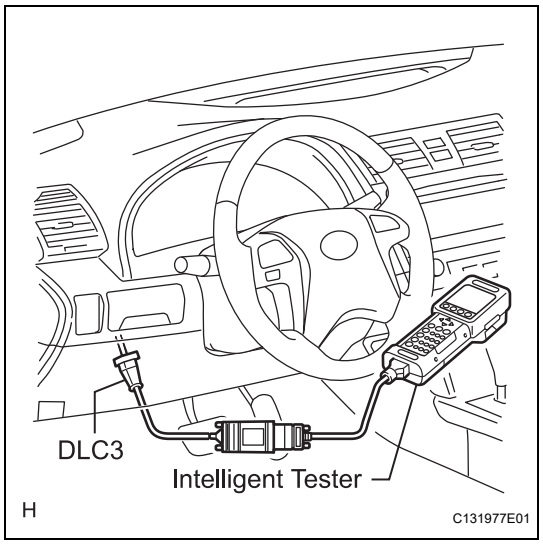
Tester Display	Measurement Item/Range	Inspection Condition	Reference Value
IG SUPPLY	ECU power source voltage/ Min.: 0 V, Max.: 25.5 V	Power switch on (IG)	10 to 14 V

Standard voltage:

10 to 14 V

NOTICE:

If the IG power supply voltage is 10 V or less, calibration cannot be performed. In this case, charge or replace the battery, and then perform calibration.



(b) Rotation angle sensor calibration value clear, rotation angle sensor value initialization, and torque sensor zero point calibration.

NOTICE:

- **If DTC C1516 (Torque Sensor Zero Point Adjustment Incomplete) is stored, the torque sensor zero point cannot be calibrated. Clear the DTC before starting calibration.**
- **If DTC C1526 (Rotation Angle Sensor Initialization Incomplete) is stored, the rotation angle sensor value cannot be initialized. Clear the DTC before starting initialization.**

(1) Connect the intelligent tester (with CAN VIM) to the DLC3.
(2) Turn the power switch on (IG).
(3) Turn the intelligent tester on.
(4) Select "TRQ SENSOR ADJ".
(5) Follow the procedures on the tester display to clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point.

NOTICE:

- **When initializing the rotation angle sensor value, observe the following to stabilize sensor voltage:**
  After turning the power switch on (IG), wait for at least 2.5 seconds before turning the steering wheel. Do not turn the steering wheel quickly.
- **The steering wheel will vibrate during torque sensor zero point calibration. Do not touch the steering wheel while it is vibrating or for 2 seconds after it stops.**

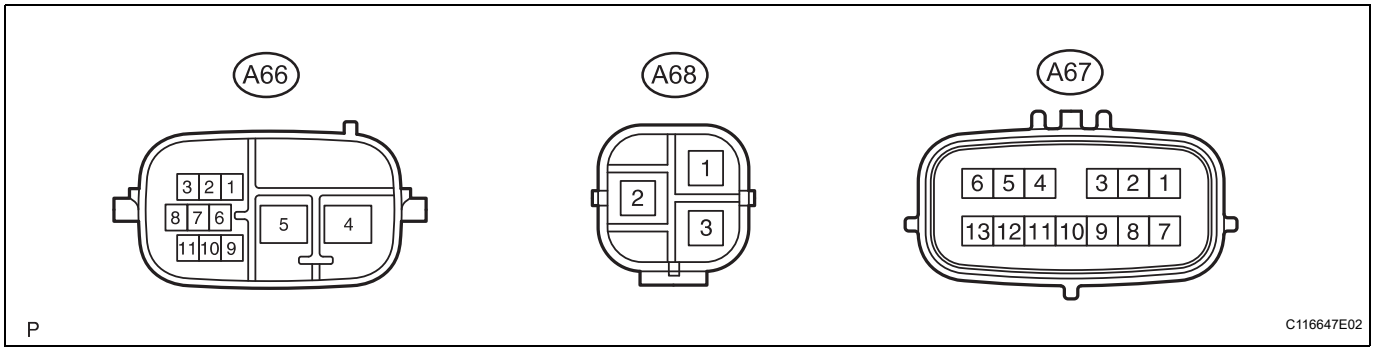
PROBLEM SYMPTOMS TABLE

ELECTRONIC POWER STEERING SYSTEM

Symptom	Suspected Area	See page
Steering is heavy.	1. Front tires (Improperly inflated, unevenly worn)	TW-3
	2. Front wheel alignment (Incorrect)	SP-4
	3. Front suspension	SP-24
	4. Power steering link assembly	PS-61
	5. Steering column assembly	SR-35
	6. Battery and power source system	-
	7. Power source voltage of power steering ECU assembly	PS-50
	8. Power steering ECU assembly	PS-68
	9. Vehicle condition (The steering wheel is turned from left to right repeatedly with the vehicles stopped or a heavy load is continuously applied to the vehicle)	-
Steering effort differs between right and left, or is uneven.	1. Power steering ECU assembly (Steering center point is not recorded correctly)	PS-13
	2. Front tires (Improperly inflated, unevenly worn)	TW-3
	3. Front wheel alignment (Incorrect)	SP-4
	4. Front suspension	SP-24
	5. Power steering link assembly	PS-61
	6. Steering column assembly	SR-35
	7. Power steering ECU assembly	PS-68
While driving, steering effort does not change in accordance with vehicle speed, or the steering wheel does not return to its centered position easily.	1. Speed sensor	BC-273
	2. Skid control ECU	BC-289
	3. Power steering link assembly	PS-61
	4. Power steering ECU assembly	PS-68
Friction sounds occur when turning the steering wheel during low speed driving.	1. Power steering link assembly	PS-61
	2. Power steering ECU assembly	PS-68
High-pitched sounds (squeaking) occur when turning the steering wheel slowly with the vehicle stopped.	Power steering link assembly	PS-61
The steering wheel vibrates and noise occurs when turning the steering wheel with the vehicle stopped.	1. Power steering link assembly	PS-61
	2. Steering column assembly	PS-68
PS warning light remains on.	PS warning light remains on	PS-50
PS warning light does not come on.	PS warning light does not come on	PS-54

TERMINALS OF ECU

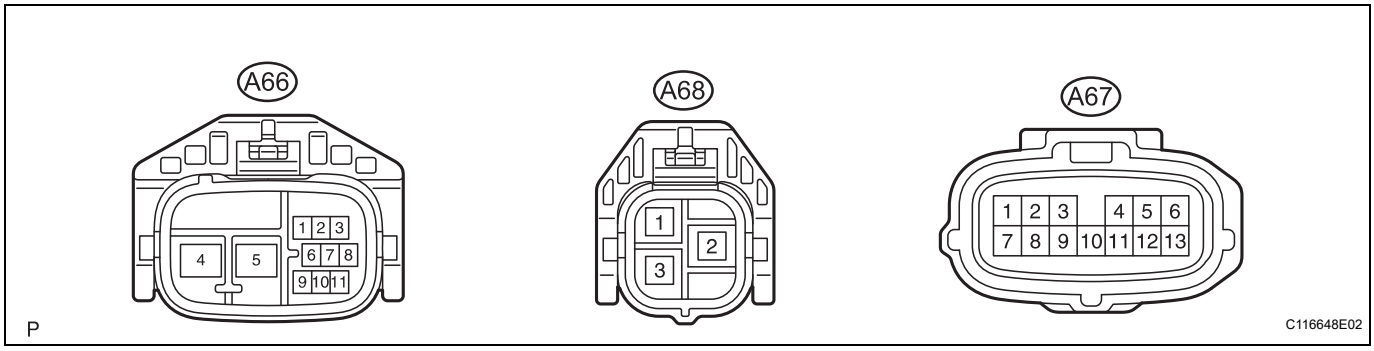
1. TERMINALS OF ECU



HINT:
The power steering ECU assembly uses waterproof connectors. Therefore, voltage or waveforms cannot be checked with the connectors connected to the vehicle.

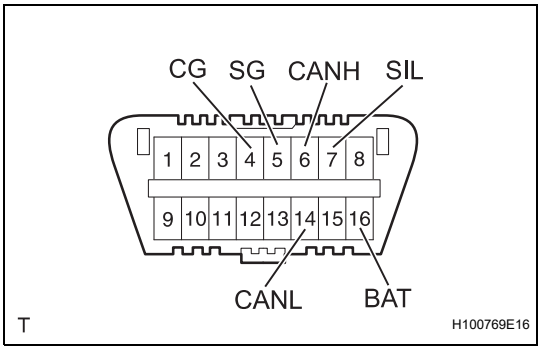
Terminal No. (Symbols)	Wiring Color	Terminal Description
A66-2 (CANH)	B	High-level CAN bus line
A66-3 (CANL)	W	Low-level CAN bus line
A66-4 (PIG)	W	Power source
A66-5 (PGND)	B	Power ground
A66-9 (IG)	O	IG power source
A67-1 (RZG)	W	Rotation angle sensor power source circuit ground
A67-2 (SRZG)	BR	Rotation angle sensor shield ground
A67-3 (RZV)	G	Rotation angle sensor power source
A67-4 (TRQV)	P	Torque sensor power source
A67-6 (TQG1)	L	Torque sensor power source circuit ground
A67-7 (RZSN)	B	SIN phase input signal (Rotation angle sensor)
A67-8 (RZCS)	R	COS phase input signal (Rotation angle sensor)
A67-9 (INSN)	B	SIN phase input signal (Torque sensor input shaft side)
A67-10 (INCS)	R	COS phase input signal (Torque sensor input shaft side)
A67-11 (OUSN)	W	SIN phase input signal (Torque sensor output shaft side)
A67-12 (OUCS)	G	COS phase input signal (Torque sensor output shaft side)
A67-13 (TQG2)	Y	Torque sensor detection circuit ground
A68-1 (V)	R	V phase motor output
A68-2 (U)	B	U phase motor output
A68-3 (W)	W	W phase motor output

2. INSPECT WIRE HARNESS SIDE CONNECTOR



PS

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
A66-4 (PIG) - A66-5 (PGND)	W - B	Power source	Always	10 to 14 V
A66-5 (PGND) - Body ground	B - Body ground	Power ground	Always	Below 1 Ω
A66-9 (IG) - A66-5 (PGND)	O - B	IG power source	Power switch on (IG)	10 to 14 V
A68-2 (U) - A68-3 (W)/A68-1 (V)	B - W/R	U phase motor output	Always	Below 1 Ω
A68-3 (W) - A68-2 (U)/A68-1 (V)	W - BR	W phase motor output	Always	Below 1 Ω
A68-1 (V) - A68-2 (U)/ A68-3 (W)	R - B/W	V phase motor output	Always	Below 1 Ω



DIAGNOSIS SYSTEM

1. CHECK DLC3

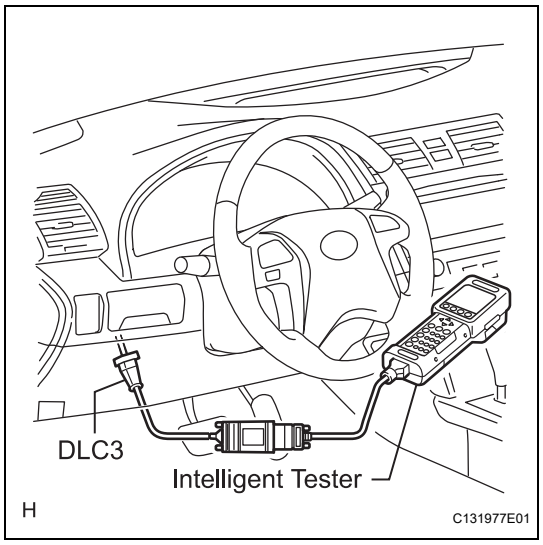
(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

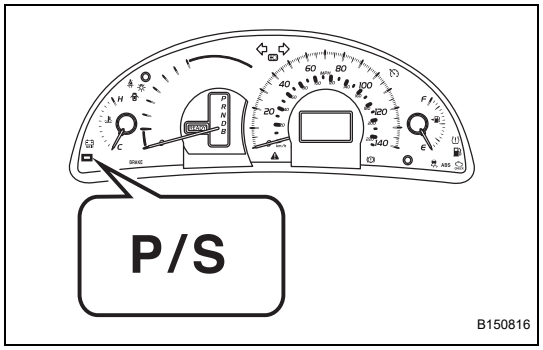
NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



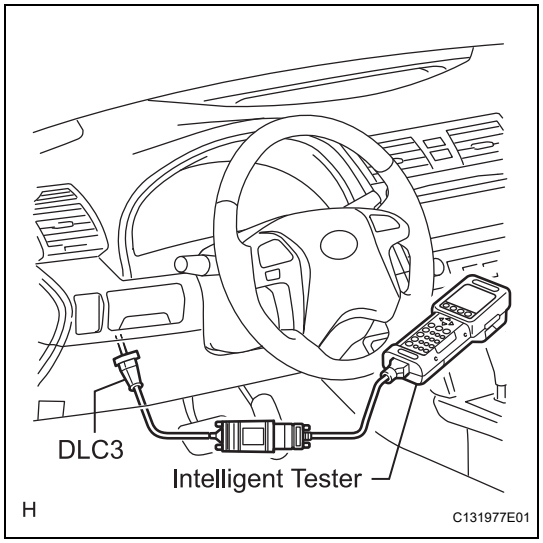
(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the power switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle side or tester side.
HINT:
- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.



2. P/S WARNING LIGHT

(a) Check that the PS warning light comes on when the power switch is turned on (IG) and goes off in approximately 3 seconds.
If the warning light does not come on or remains on, inspect the PS warning light circuit.

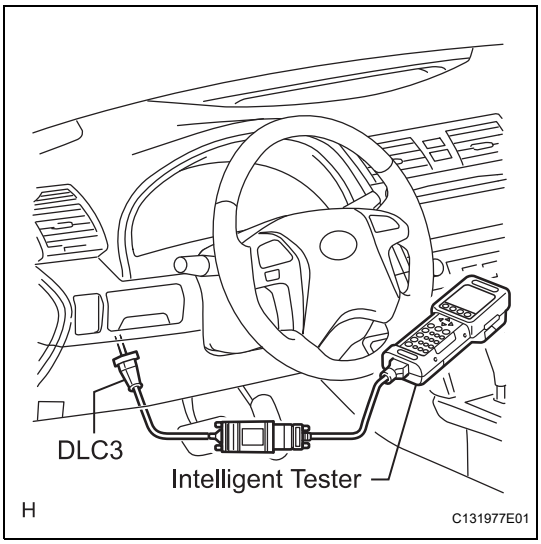
Trouble Area	See Procedure
PS warning light circuit (Remains on)	PS-50
PS warning light circuit (Does not come on)	PS-54



DTC CHECK / CLEAR

1. CHECK FOR DTCs

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the intelligent tester on.
(d) Read the DTCs by following the display on the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.



2. CLEAR DTCs

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the intelligent tester on.
(d) Clear the DTCs by following the display on the intelligent tester.
HINT:
Refer to the intelligent tester operator's manual for further details.

FREEZE FRAME DATA

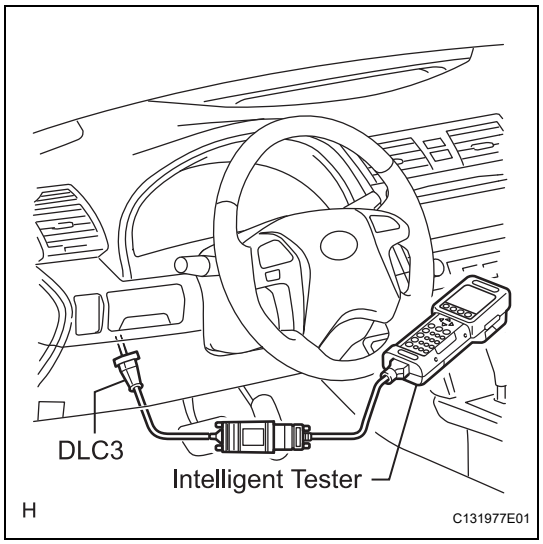
1. FREEZE FRAME DATA

NOTICE:

- **It is difficult to show the specified values (judgement values) clearly because freeze frame data values change significantly due to differences in measurement conditions, surroundings, or vehicle conditions. For this reason, there may be a problem even when the values are within specifications.**
- **Turn the power switch on (IG) and park the vehicle on level ground. Check the freeze frame data by using the intelligent tester.**

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the power switch on (IG) and check the freeze frame data by following the prompts on the intelligent tester's display screen.



Tester Display	Item Description/Range	Inspection Condition	Reference Value
SPD	Vehicle speed from meter/ Min.: 0 km/h (0 mph), Max.: 300 km/h (186 mph)	1. Vehicle is stopped 2. Vehicle is driven at a constant speed	1. 0 km/h (0 mph) 2. No significant fluctuation
ENGINE REV	Engine revolution/ Min.: 0 rpm, Max.: 12.800 rpm	Engine is running at a constant speed	No significant fluctuation
MOTOR ACTUAL	Amount of current to motor/ Min.: -128 A, Max.: 127 A	Power steering is in operation	Value changes in proportion to steering effort
COMMAND VALUE	Demanded amount of current to motor/ Min.: -128 A, Max.: 127 A	Power steering is in operation	Value changes in proportion to steering effort
STR ANGL VEL	Steering angle speed/ Min.: -4.096 deg/sec, Max.: 4.064 deg/sec	Steering wheel is turned	Value changes in proportion to steering speed

C1532		
C1555	Motor Relay Welding Failure	
C1533	ECU Malfunction	System overheat prevention control continues without using the substrate temperature sensor.
C1534	ECU Malfunction	Torque sensor zero point and rotation angle sensor calibration value are set to the default values.
C1541	Vehicle Speed Signal Malfunction	Amount of power assistance is fixed for a speed of 100 km/h (62 mph).
U0129	Lost Communication With Skid Control ECU	

HINT:

The amount of power assistance may be decreased to prevent the motor and ECUs from overheating if the steering wheel is continuously turned when the vehicle is either stopped or driven at a low speed, or if the steering wheel is kept at either full lock position for a long time. In that case, the amount of power assistance will return to normal if the steering wheel is not turned for approximately 10 minutes with the engine idling.

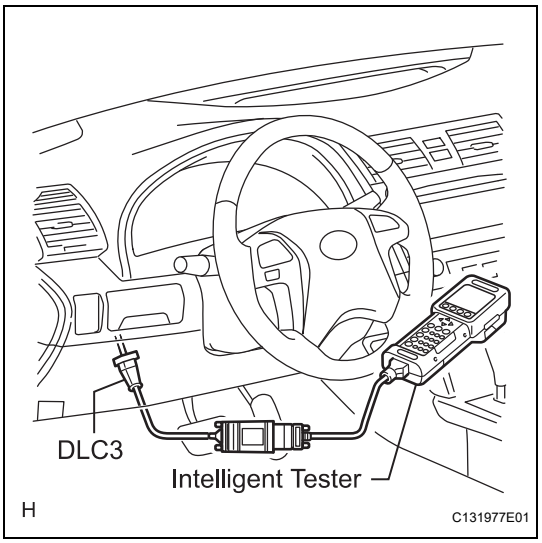
DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By accessing the data list displayed on the intelligent tester, values of switches, sensors and other related parts can be checked without removing any parts. Reading the data list is the first step in troubleshooting and is one method to shorten labor time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG).
(c) Operate the intelligent tester according to the steps on the display and select the data list.



Tester Display	Measurement Item/Range	Normal Condition	Reference Value
SPD	Vehicle speed from meter/ Min.: 0 km/h (0 mph), Max.: 300 km/h (186 mph)	1. Vehicle is stopped 2. Vehicle is driven at a constant speed	1. 0 km/h (0 mph) 2. No significant fluctuation
ENGINE REV	Engine revolution/ Min.: 0 rpm, Max.: 12.800 rpm	Engine is running at a constant speed	No significant fluctuation
MOTOR ACTUAL	Amount of current to motor/ Min.: -128 A, Max.: 127 A	Power steering is in operation	Value changes in proportion to steering effort
COMMAND VALUE	Demanded amount of current to motor/ Min.: -128 A, Max.: 127 A	Power steering is in operation	Value changes in proportion to steering effort
STR ANGL VEL	Steering angle speed/ Min.: -4.096 deg/sec, Max.: 4.064 deg/sec	Steering wheel is turned	Value changes in proportion to steering speed
THERMISTOR TEMP	ECU substrate temperature/ Min.: -50°C, Max.: 205°C	Power switch on (IG)	-
PIG SUPPLY	Power source voltage to activate motor/ Min.: 0 V, Max.: 25.5 V	Power steering is in operation	10 to 14 V
IG SUPPLY	ECU power source voltage/ Min.: 0 V, Max.: 25.5 V	Power switch on (IG)	10 to 14 V
STR SENS SIG	Steering angle sensor signal status/ OK or NG	-	-
TRQ1	Torque sensor 1 rotation angle/ Min.: 0 deg, Max.: 360 deg	Steering wheel is turned	Value changes from 0 to 360° every 22.5° of steering angle
TRQ2	Torque sensor 2 rotation angle/ Min.: 0 deg, Max.: 360 deg	Steering wheel is turned	Value changes from 0 to 360° every 22.5° of steering angle
TRQ1 ZERO VAL	Zero point value of torque sensor 1/ Min.: 0 deg, Max.: 360 deg	Steering wheel is not turned (without load)	Values differ depending on vehicle

Tester Display	Measurement Item/Range	Normal Condition	Reference Value
TRQ2 ZERO VAL	Zero point value of torque sensor 2/ Min.: 0 deg, Max.: 360 deg	Steering wheel is not turned (without load)	Values differ depending on vehicle
STEERING TORQU	Steering torque/ Min.: -7.0 N*m, Max.: 7.0 N*m	Steering wheel is turned	Value changes in proportion to steering effort
MOTOR ROTATE	Motor rotation angle/ Min.: 0 deg, Max.: 360 deg	Steering wheel is turned	Value changes from 0 to 360° every 5° of steering angle
COMMAND VALUE 2	Demanded amount of current to motor 2/ Min.: -128 A, Max.: 127 A	-	-
PIG2 VOLTAGE	Motor drive voltage/ Min.: 0 V, Max.: 64 V	Power steering is in operation	27 to 34 V
MOTOR VOLTAGE	Motor power source voltage/ Min.: 0 V, Max.: 64 V	Power steering is in operation	27 to 34 V
MTR TERMINAL (U)	Motor terminal voltage (U phase)/ Min.: 0 V, Max.: 64 V	Power steering is in operation	0 to 34 V
MTR TERMINAL (V)	Motor terminal voltage (V phase)/ Min.: 0 V, Max.: 64V	Power steering is in operation	0 to 34 V
MTR TERMINAL (W)	Motor terminal voltage (W phase)/ Min.: 0 V, Max.: 64 V	Power steering is in operation	0 to 34 V
IG ON/OFF TIMES	Number of times IG switch is turned on after DTC detection/ Min.: 0 time, Max.: 255 times	-	-
MTR OVERHEAT	Continuous overheat prevention control record/ REC or UNREC	-	-
MTR LOW POWER	PIG power source voltage drop record/ REC or UNREC	-	-
ENG REV INTER	Record of power revolution signal interruption/ REC or UNREC	-	-
STR ANGL INTER	Record of steering angle sensor signal interruption/ REC or UNREC	-	-
SPD SIG INVALID	Record of vehicle speed signal invalid/ REC or UNREC	-	-
BATTERY VOLTAGE	Battery voltage/ Min.: 0 V, Max.: 25.5 V	-	10 to 14 V
PS ASSIST SIG	Power steering assist signal/ ON or OFF	Power switch on (IG)	-
# CODES	Number of detected DTCs when freeze frame data is stored/ Min.: 0, Max.: 255	-	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, turn to the page for the respective DTC code in the DTC chart

DTC	C1511	Torque Sensor Circuit Malfunction

DTC	C1512	Torque Sensor Circuit Malfunction

DTC	C1513	Torque Sensor Circuit Malfunction

DESCRIPTION

The torque sensor converts rotation torque input to the steering wheel into an electrical signal and sends it to the ECU. Based on this signal, the ECU detects steering effort.

DTC No.	Detection Item	Trouble Area
C1511	Torque sensor (TRQ1) signal error or stop	• Wire harness • Torque sensor (built into power steering link assembly) • Power steering ECU assembly
C1512	Torque sensor (TRQ2) signal error or stop	• Wire harness • Torque sensor (built into power steering link assembly) • Power steering ECU assembly
C1513	Deviation between torque sensors	• Wire harness • Torque sensor (built into power steering link assembly) • Power steering ECU assembly

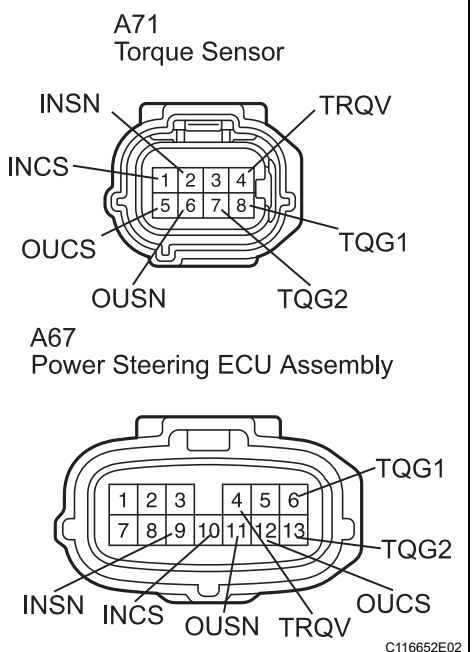
INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - TORQUE SENSOR)

Wire Harness Side Connector Front View:



(a) Disconnect the A67 connector from the power steering ECU assembly.
(b) Disconnect the A71 connector from the torque sensor.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

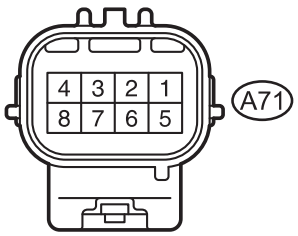
Tester connection (Symbols)	Condition	Specified condition
A71-1 (INCS) - A67-10 (INCS)	Always	Below 1 Ω
A71-2 (INSN) - A67-9 (INSN)	Always	Below 1 Ω
A71-4 (TRQV) - A67-4 (TRQV)	Always	Below 1 Ω
A71-5 (OUCS) - A67-12 (OUCS)	Always	Below 1 Ω
A71-6 (OUSN) - A67-11 (OUSN)	Always	Below 1 Ω
A71-7 (TQG2) - A67-13 (TQG2)	Always	Below 1 Ω
A71-8 (TQG1) - A67-6 (TQG1)	Always	Below 1 Ω
A71-1 (INCS) - Body ground	Always	10 kΩ or higher
A71-2 (INSN) - Body ground	Always	10 kΩ or higher
A71-4 (TRQV) - Body ground	Always	10 kΩ or higher
A71-5 (OUCS) - Body ground	Always	10 kΩ or higher
A71-6 (OUSN) - Body ground	Always	10 kΩ or higher
A71-7 (TQG2) - Body ground	Always	10 kΩ or higher
A71-8 (TQG1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT POWER STEERING LINK ASSEMBLY (TORQUE SENSOR)

Torque Sensor:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
A71-1 (INCS) - A71-7 (TQG2)	Always	90 to 170 Ω
A71-2 (INSN) - A71-7 (TQG2)	Always	300 to 430 Ω
A71-4 (TRQV) - A71-8 (TQG1)	Always	4 to 14 Ω
A71-5 (OUCS) - A71-7 (TQG2)	Always	90 to 170 Ω
A71-6 (OUSN) - A71-7 (TQG2)	Always	300 to 430 Ω

PS

NOTICE:
If replacing the power steering link assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point (See page PS-13).

NG → **REPLACE POWER STEERING LINK ASSEMBLY (See page PS-58)**

OK

3	REPLACE POWER STEERING ECU ASSEMBLY

(a) Replace the power steering ECU assembly (See page PS-68).

NEXT

4	INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NEXT

5	RECONFIRM DTC

(a) Check for DTCs (See page PS-17).
Result

DTC Condition	Proceed to
DTC is not output	A
DTC C1511, C1512, or C1513 is output	B

NOTICE:
If replacing the power steering link assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point (See page PS-13).

B → **REPLACE POWER STEERING LINK ASSEMBLY (See page PS-58)**

A

SYSTEM DESCRIPTION

1. GENERAL

(a) The air conditioning system has the following controls:

Control	Outline
Neural Network Control	This control is capable of effecting complex control by artificially simulating the information processing method of the nervous system of living organisms in order to establish a complex input / output relationship that is similar to a human brain.
Outlet Air Temp. Control	Based on the temperature set at the temperature control switch, the neural network control calculates the outlet air temperature based on the input signals from various sensors.
	The temperature setting for the driver and front passenger are controlled independently in order to provide a separate vehicle interior temperatures for the right and left side of the cabin. Thus, air conditioning that accommodates the occupants' preferences has been realized.
Blower Control	Controls the blower motor in accordance with the airflow volume that has been calculated by the neural network control based on the input signals from various sensors.
Air Outlet Control	Automatically switches the air outlets in accordance with the outlet mode that has been calculated by the neural network control based on the input signals from various sensors.
	In accordance with the engine coolant temperature, outside air temperature, amount of sunlight, required blower volume, outlet temperature, and vehicle speed conditions, this control automatically switches the blower outlet to the FOOT / DEF mode to prevent the windows from becoming fogged when the outside air temperature is low.
Air Inlet Control	Automatically controls the air inlet control damper to achieve the calculated required outlet air temperature.
Electric Inverter Compressor Control	The A/C amplifier calculates the target speed of the compressor based on the target evaporator temperature (which is calculated by the room temperature sensor, outside temp. sensor, and the solar sensor) and the actual evaporator temperature that is detected by the evaporator temperature sensor in order to control the compressor speed.
	The A/C amplifier calculates the target evaporator temperature, which includes corrections based on the room temperature sensor, outside temp. sensor, the solar sensor, and evaporator temperature sensor. Accordingly, the A/C amplifier controls the compressor speed to an extent that would not inhibit the proper cooling performance or defogging performance.
PTC Heater Control	When the THS II system is operating (READY), and the blower motor is turned ON, the A/C amplifier turns ON the PTC heater if the conditions listed below are met. • Engine coolant temperature is below specified temperature. • Outside temperature is below specified temperature (DEF mode). • Tentative air mix damper opening angle is above the specified value (MAX HOT).
Electric Water Pump Control	When the blower motor is ON and the engine has been stopped by the THS II system control, the A/C amplifier turns ON the electric water pump in accordance with the judgment of the air mix damper opening.
ECO Mode Control	When the ECO switch is turned ON, the A/C amplifier limits the air conditioning system performance.
Rear Window Defogger Control	Operates the rear defogger and outside rear view mirror heaters on for 15 minutes to 60 minutes when the rear defogger button is pressed. Switches them off if the button is pressed again while they are operating.
Outside Temperature Indication Control	Calculates the outside temperature using signals transmitted by the outside temperature sensor. Calculated values are corrected by the A/C amplifier and then indicated on the multi-information display.
Self-Diagnosis	A DTC (Diagnostic Trouble Code) is stored in the memory when the A/C amplifier detects a problem with the air conditioning system.

2. NEURAL NETWORK CONTROL

(a) In previous automatic air conditioning systems, the A/C amplifier determined the required outlet air temperature and blower air volume in accordance with the calculation formula that has been obtained based on information received from the sensors. However, because the senses of a person are rather complex, a given temperature is sensed differently, depending on the environment in which the person is situated. For example, a given amount of solar radiation can feel comfortably warm in a cold climate, or extremely uncomfortable in a hot climate. Therefore, as a technique for effecting a higher level of control, a neural network has been adopted in the automatic air conditioning system. With this technique, the data that has been collected under varying environmental conditions is stored in the A/C amplifier. The A/C amplifier can then effect control to provide enhanced air conditioning comfort.

(b) The neural network control consists of neurons in the input layer, intermediate layer, and output layer. The input layer neurons process the input data of the outside temperature, the amount of sunlight, and the room temperature based on the outputs of the switches and sensors, and output them to the intermediate layer neurons. Based on this data, the intermediate layer neurons adjust the strength of the links among the neurons. The sum of these is then calculated by the output layer neurons in the form of the required outlet temperature, solar correction, target airflow volume, and outlet mode control volume. Accordingly, the A/C amplifier controls the servo motors and blower motor in accordance with the control volumes that have been calculated by the neural network control.

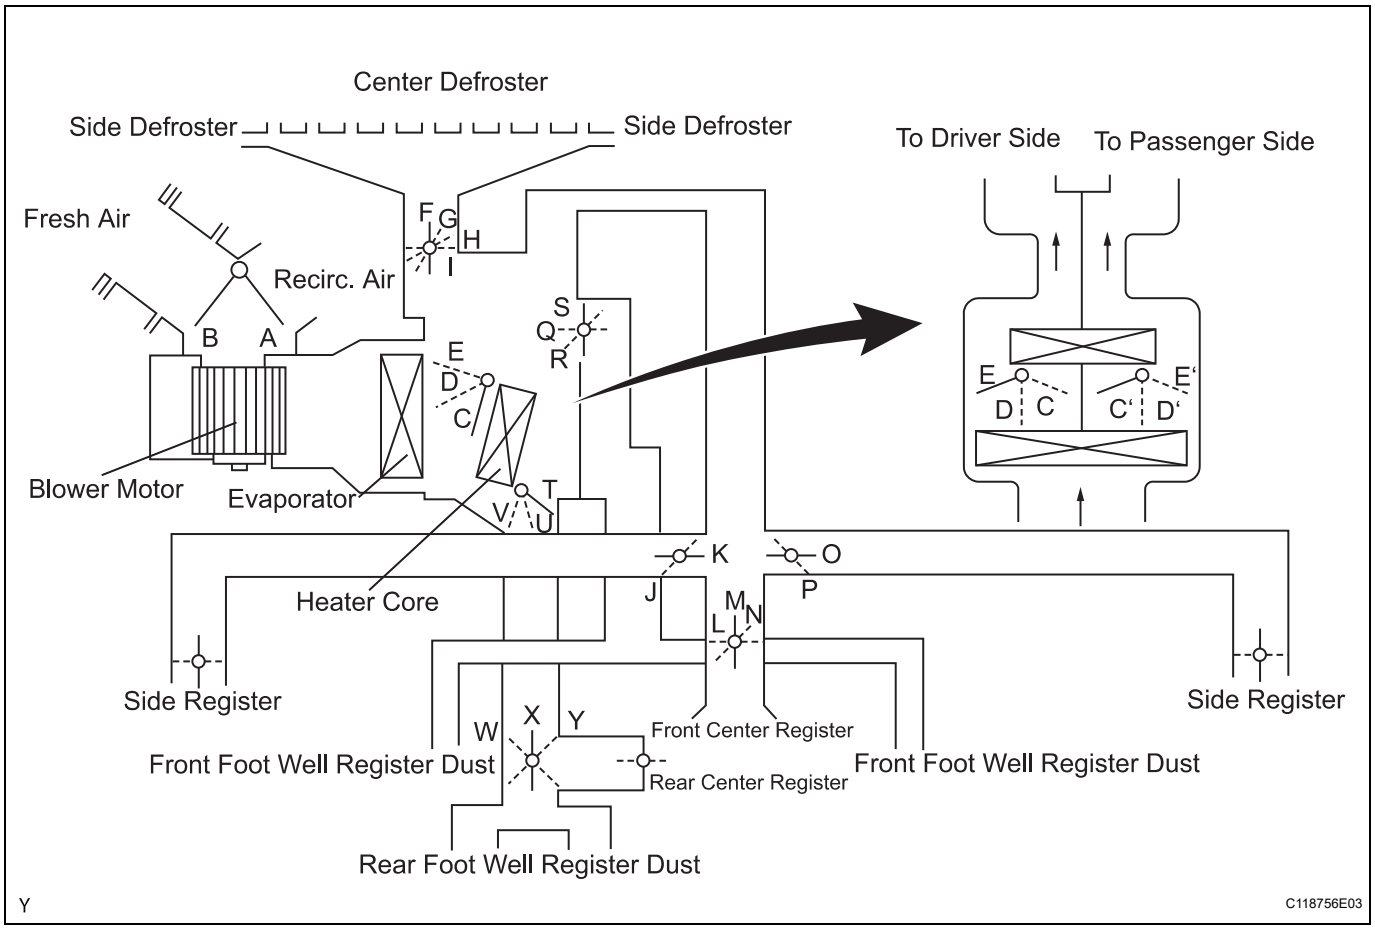
3. MODE POSITION AND DAMPER OPERATION

(a) Mode Position and Damper Operation



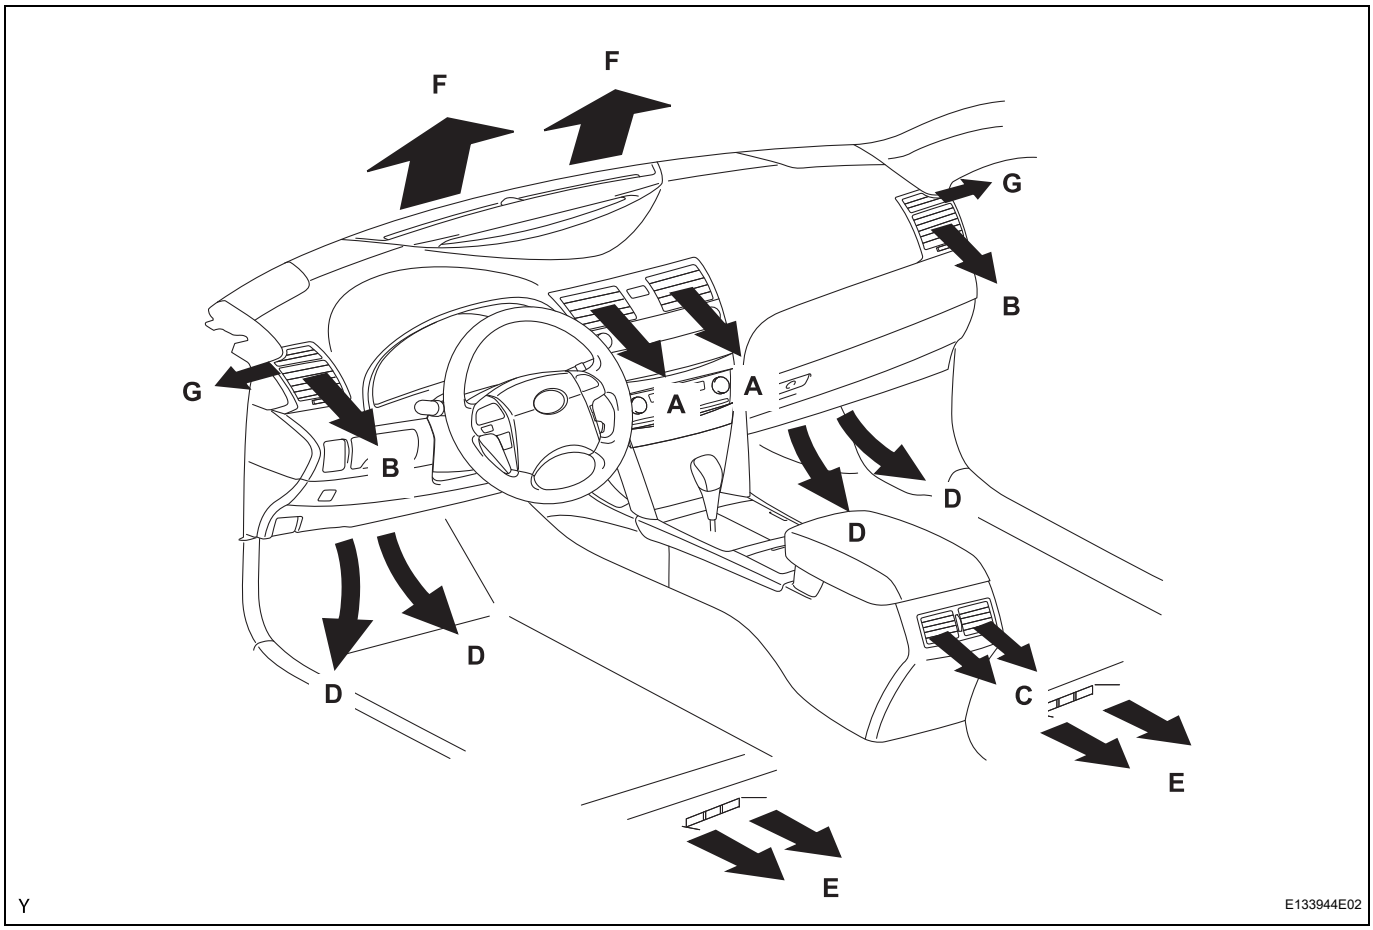
Functions of Main Dampers:

Control Damper	Operation Position	Damper Position	Operation
Air Inlet Control Damper	FRESH	A	Brings in fresh air.
	RECIRC	B	Recirculates internal air.
Air Mix Control Damper	MAX COLD to MAX HOT Temperature Setting	C - D - E (C' - D' - E') T - U - V	Varies the mixture ratio of the fresh air and the recirculation air in order to regulate the temperature continuously from HOT to COLD.

Control Damper	Operation Position	Damper Position	Operation
Air Outlet Control Damper	DEF	F, J, L, P, S, Y	Defrosts the windshield through the center defroster, side defroster, and side register.
	FOOT / DEF	G, J, L, P, Q, X	Defrosts the windshield through the center defroster, side defroster, side register, and rear center register, while air is also blown out from the front and rear foot well register ducts.
	FOOT	H, J, L, P, Q, X	Air blows out of the foot well register dust, and side register. In addition, air blows out slightly from the center defroster and side defroster.
	BI-LEVEL	I, K, N, O, R, X	Air blows out of the front and rear center registers, side register and front and rear foot well register ducts.
	FACE	I, K, M, O, S, W	Air blows out of the front and rear center registers, and side register.

4. AIR OUTLETS AND AIRFLOW VOLUME

(a) Air Outlets and Airflow Volume



INDICATION (MODE)	SELECTION (Auto / Manual)	FACE			FOOT		DEF

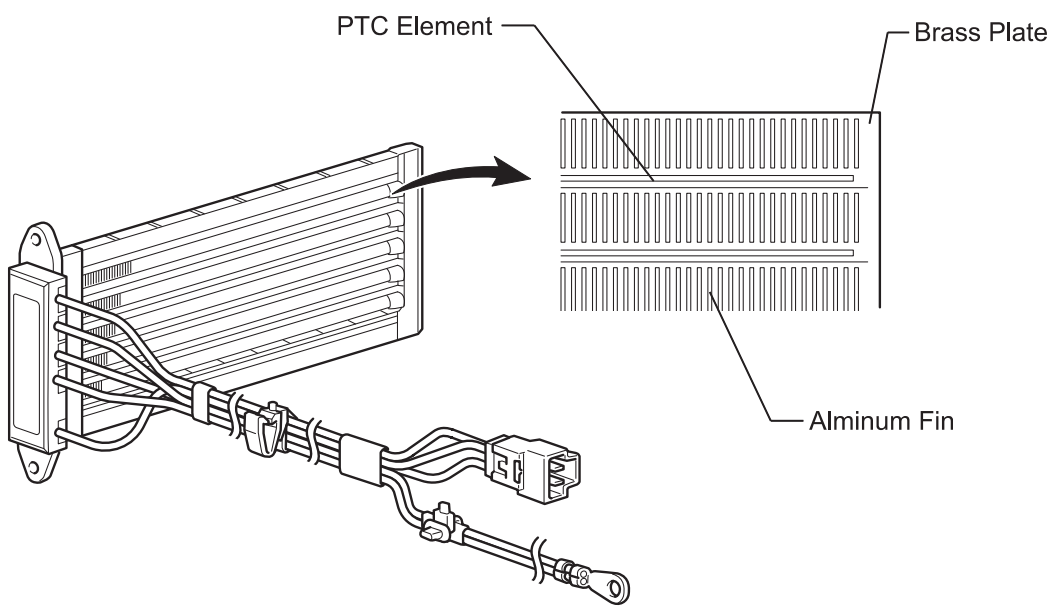
The size of the circle ○ indicates the proportion of airflow volume.
*1: Greater airflow volume at the upper area
*2: Greater airflow volume at the lower area
*3: Greater airflow volume at the front
*4: Greater airflow volume at the rear
*5: Greater airflow volume at the defroster

5. PTC HEATER

(a) The PTC heater is located above the heater core in the air conditioning unit.

(b) The PTC heater consists of a PTC element, aluminum fin, and brass plate. When current is applied to the PTC element, it generates that to warm the air that passes through the unit.

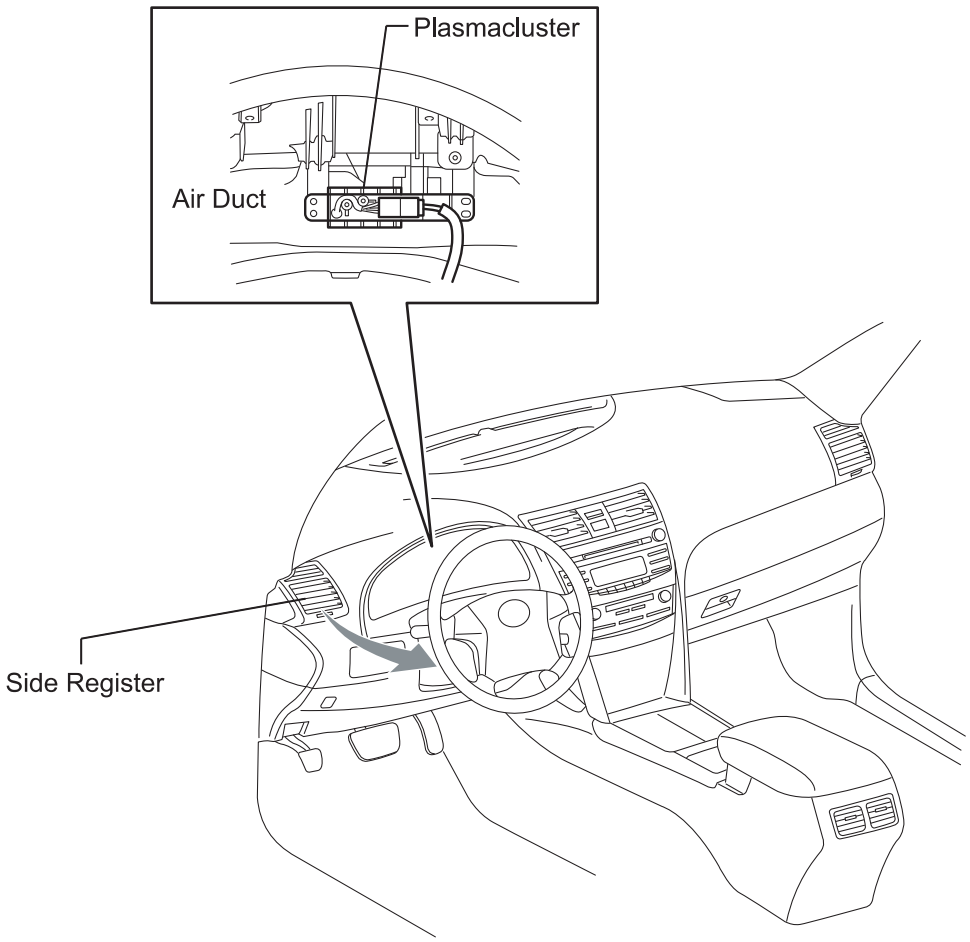


H

E135315E01

6. PLASMACLUSTER ION GENERATOR CONTROL

(a) General:



(1) A Plasmacluster ion generator is provided inside the air duct of the side register on the driver seat side to improve the air quality and comfort in the cabin.

(2) This generator is controlled by the A/C amplifier and operates in conjunction with the blower motor.

NOTICE:

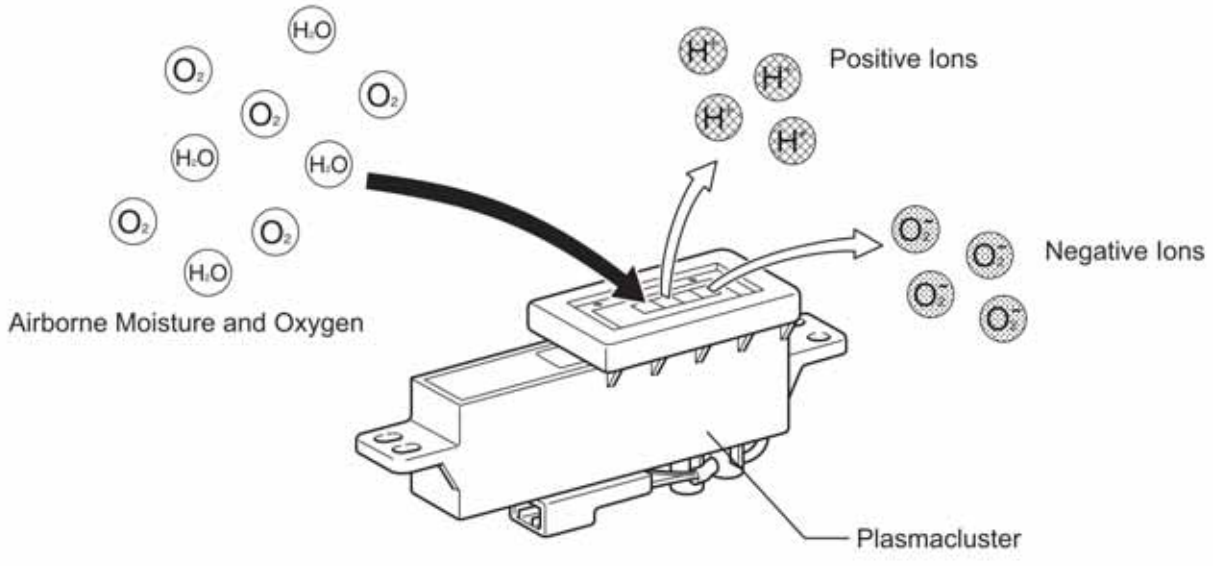
- **The Plasmacluster ion generator uses a high voltage, which is hazardous. Therefore, if the Plasmacluster ion generator requires repairs, be sure to have them done at a TOYOTA dealer.**

- **Do not apply any type of spray (such as a cleaning solvent or hair spray) or stick any foreign matter into the Plasmacluster ion outlet, as this could cause improper operation or a malfunction.**
- **After use, dust may accumulate around the side register on the driver seat side. If this occurs, press the OFF switch on the heater control panel to stop the blower motor before cleaning the area.**
- **It is normal for the Plasmacluster ion generator to emit a slight sound during operation. This sound is created when electrons collide with the electrode while Plasmacluster ions are being generated.**

HINT:

Plasmacluster™, plasmacluster, and plasmacluster ions are a trademark of the SHARP Corporation.

(b) Operation:



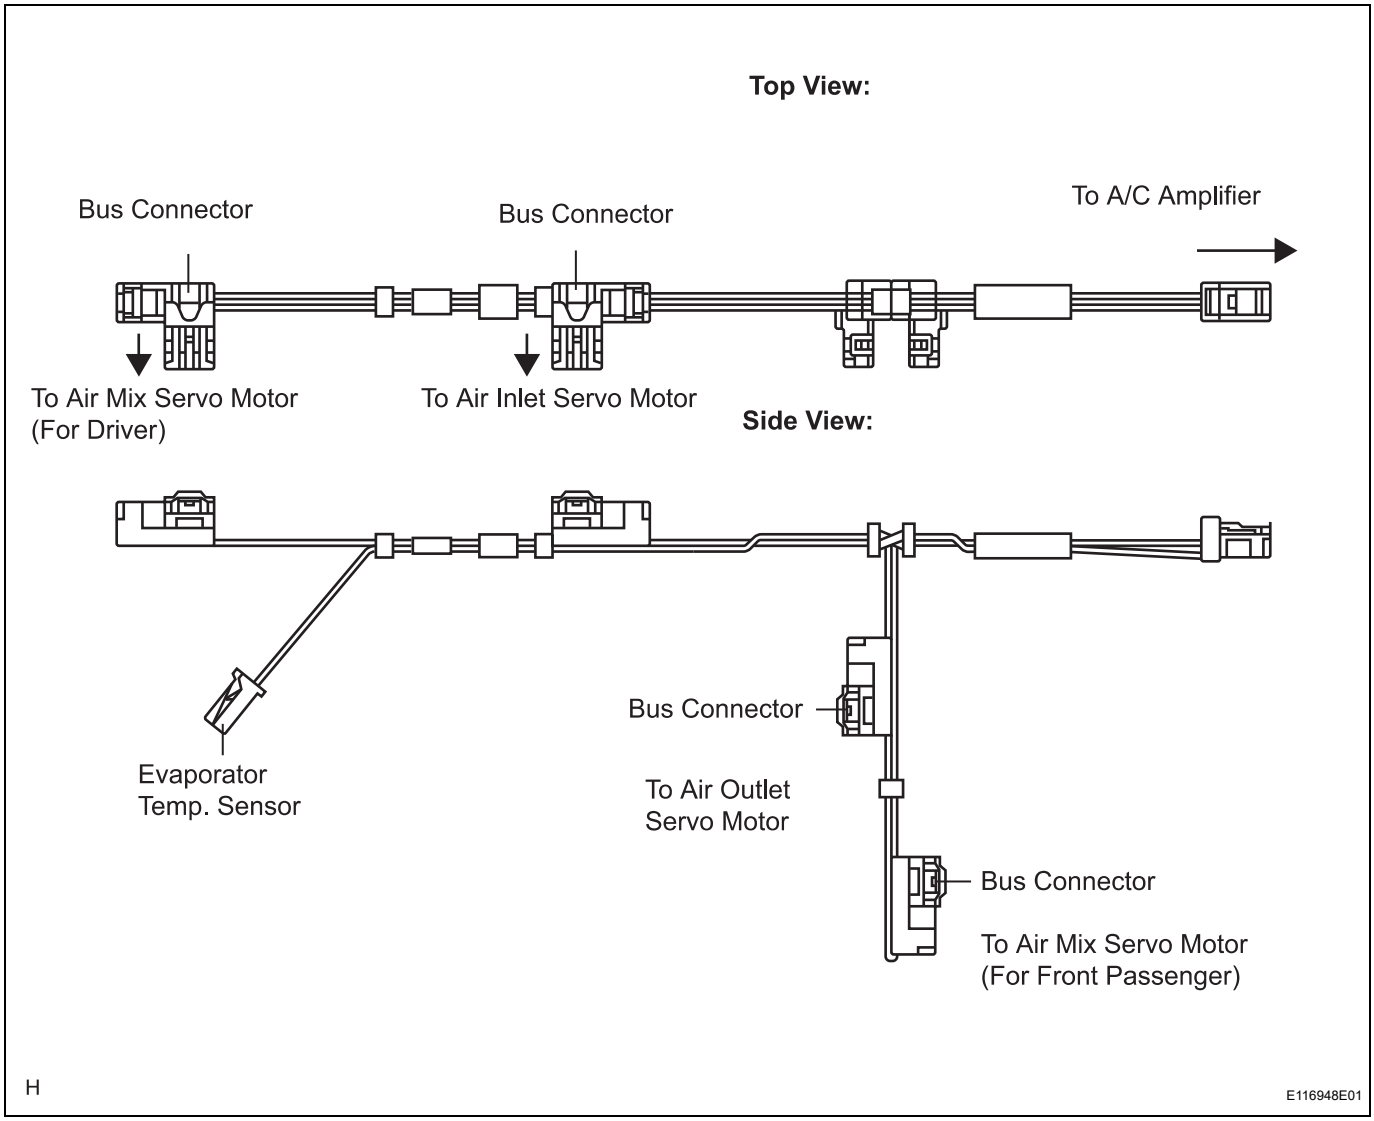
(1) The Plasmacluster ion generator produces positive and negative ions from the water molecules (H2O) and oxygen molecules (O2) in the air, and emits them into the air. These ions reduce airborne germs.

7. BLOWER MOTOR

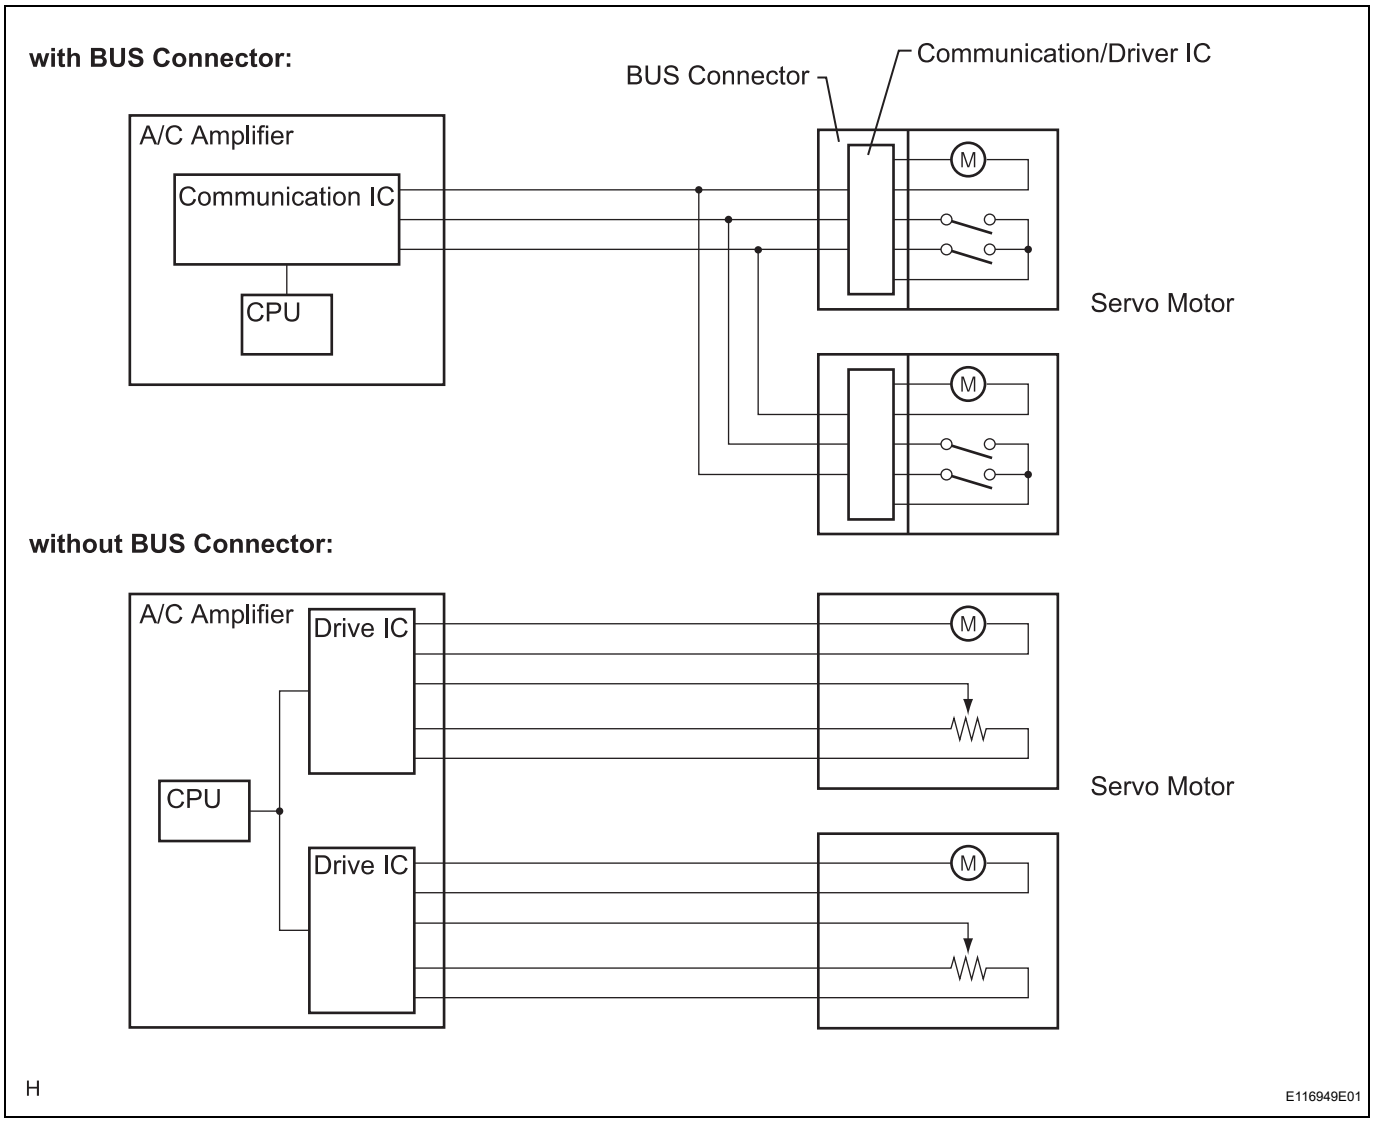
(a) The blower motor has a built-in blower controller, and is controlled with duty control from the A/C amplifier.

8. BUS CONNECTOR

(a) A BUS connector is used in the wire harness connection that connects the servo motor from the A/C amplifier.

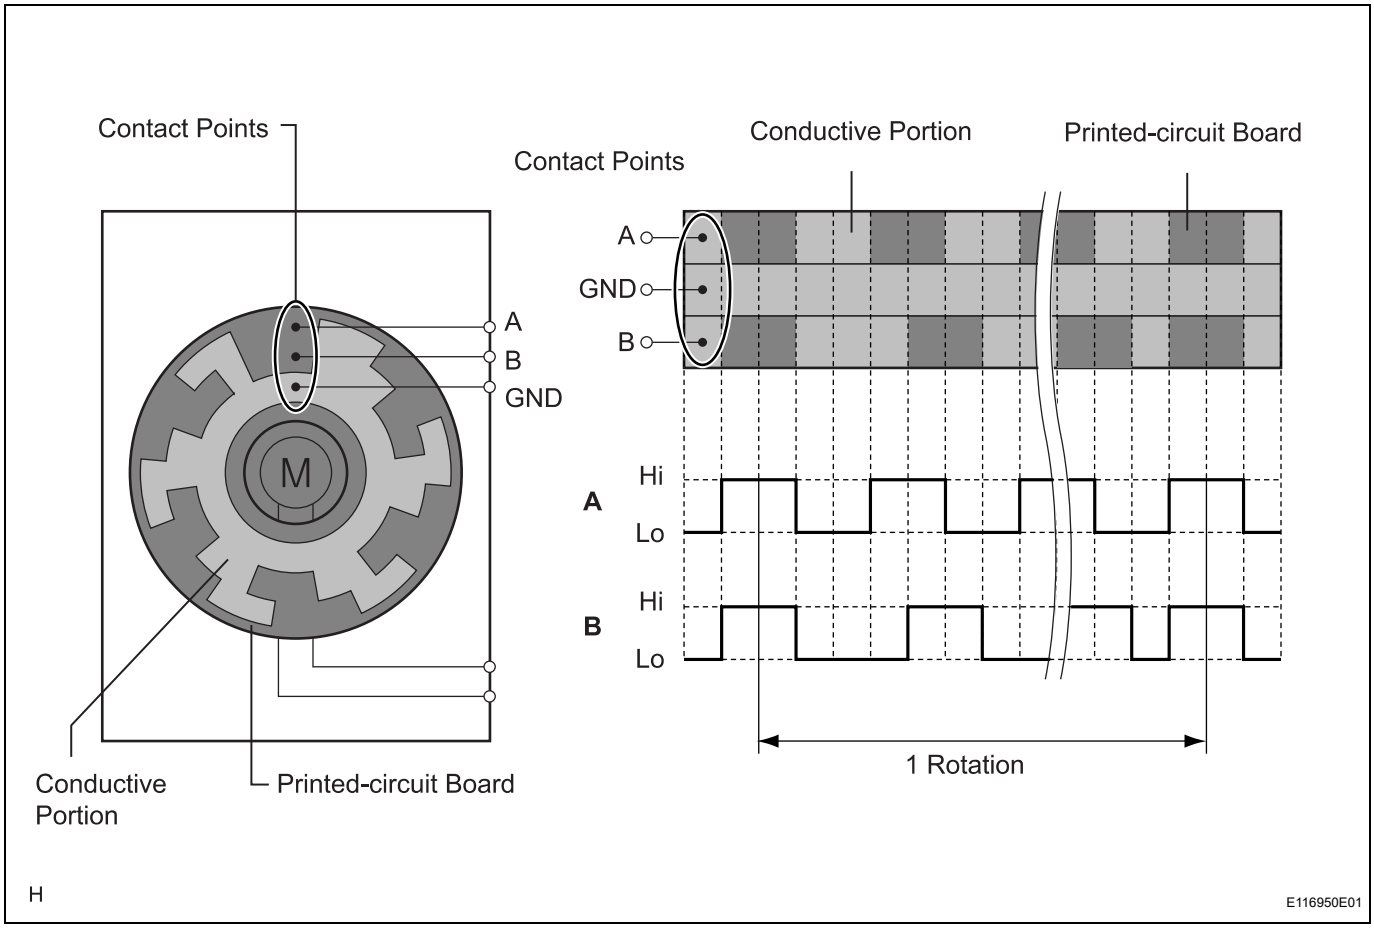


(b) The BUS connector has a built-in communication/ driver IC which communicates with each servo motor connector, actuates the servo motor, and has a position detection function. This enables bus communication for the servo motor wire harness, for a more lightweight construction and a reduced number of wires.



9. SERVO MOTOR

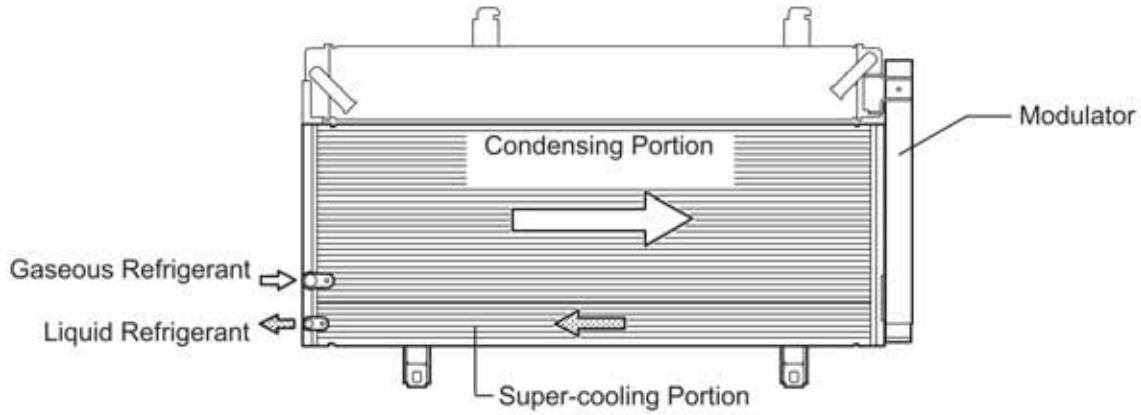
(a) The pulse pattern type servo motor consists of a printed circuit board and servo motor. The printed circuit board has three contact points, and transmits to the A/C amplifier two ON-OFF signals for the difference of the pulse phase. The BUS connector detects the damper position and movement direction with this signal.



10. CONDENSER

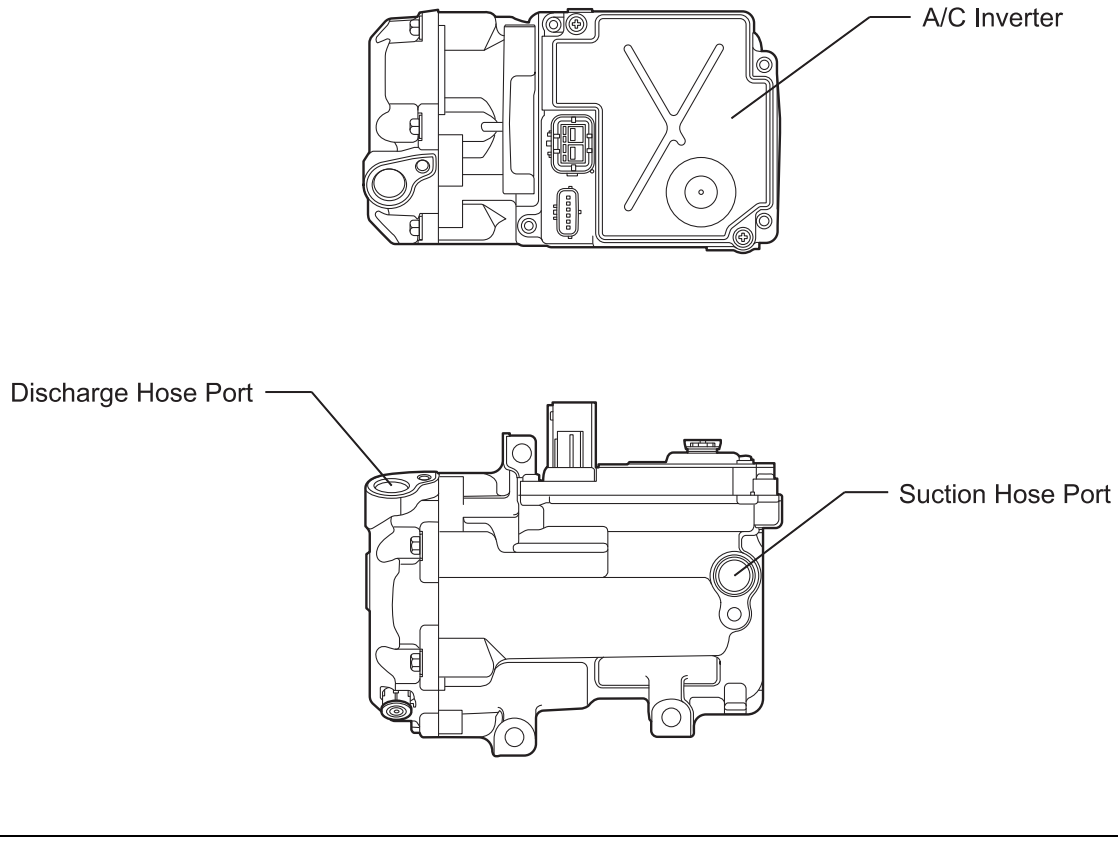
(a) A MF (Multi-Flow) type condenser is used. The condenser consists of two cooling portions: a condensing portion and a super-cooling portion, and gas-liquid separator (modulator) are integrated together. This condenser uses a sub-cool cycle that offers excellent heat-exchange performance.

(b) In the sub-cool cycle, after the refrigerant passes through the condensing portion of the condenser, both the liquid refrigerant and the gaseous refrigerant that could not be liquefied are cooled again in the super-cooling portion. Thus, the refrigerant is sent to the evaporator in an almost completely liquefied state.



11. A/C COMPRESSOR

(a) General



HINT:
In order ensure the proper insulation of the internal high-voltage portion of the compressor and the compressor housing, this vehicle has adopted a compressor oil (ND11) with a high level of insulation performance. Therefore, never use a compressor oil other than the ND11 type compressor oil or its equivalent.

(1) Along with the installation of the hybrid unit on this vehicle, an ES27 electric inverter compressor that is driven by a motor is used. The basic construction and operation of this compressor are the same as the ordinary scroll compressor, except that it is driven by an electric motor.
(2) The Air Conditioning (A/C) inverter is integrated with the compressor.
(3) The electric motor is actuated by 3-phase alternating current (244.8 V) supplied by the A/C inverter. As a result, the air conditioning control system on this vehicle is actuated without depending on the operation of the engine, thus realizing a comfortable air conditioning system and low fuel consumption.
(4) Due to the use of an electric inverter compressor, the compressor speed can be controlled at the required speed calculated by the A/C amplifier. Thus, the cooling and dehumidification performance and power consumption have been optimized.
(5) Low-moisture permeation hoses are used for the suction and discharge hoses at the compressor in order to minimize the entry of moisture into the refrigeration cycle.
(6) The compressor uses high-voltage alternating current. If a short or open circuit occurs in the compressor wiring harness, the hybrid vehicle control ECU will cut off the A/C inverter circuit in order to stop the power supply to the compressor.

(b) Compressor Speed Control

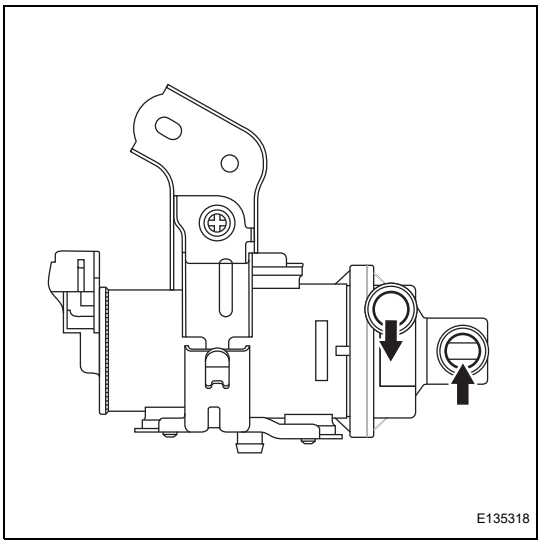
(1) The A/C amplifier calculates the target compressor speed based on the target evaporator temperature (calculated from the room temperature sensor, outside temp. sensor, and solar sensor) and the actual evaporator temperature detected by the evaporator temperature sensor. Then, the A/C amplifier transmits the target speed to the hybrid vehicle control ECU. The hybrid vehicle control ECU controls the A/C inverter based on the target speed data in order to control the compressor to a speed that suits the operating condition of the air conditioning system.

(2) The A/C amplifier calculates the target evaporator temperature, which includes corrections based on the room temperature sensor, outside temp. sensor, solar sensor, and evaporator temperature sensor. Accordingly, the A/C amplifier controls the compressor speed to an extent that does not inhibit the proper cooling performance or defogging performance. As a result, comfort and low fuel consumption can be realized.

12. ELECTRIC WATER PUMP

(a) This vehicle uses an electric water pump for air conditioning. This provides a stable heater performance even if the engine is stopped because of a function of the THS-II system.

(b) This vehicle uses a new type of electrical water pump in which the water flow resistance has been reduced.



E135318

13. ROOM TEMPERATURE SENSOR

(a) The room temp. sensor detects the room temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

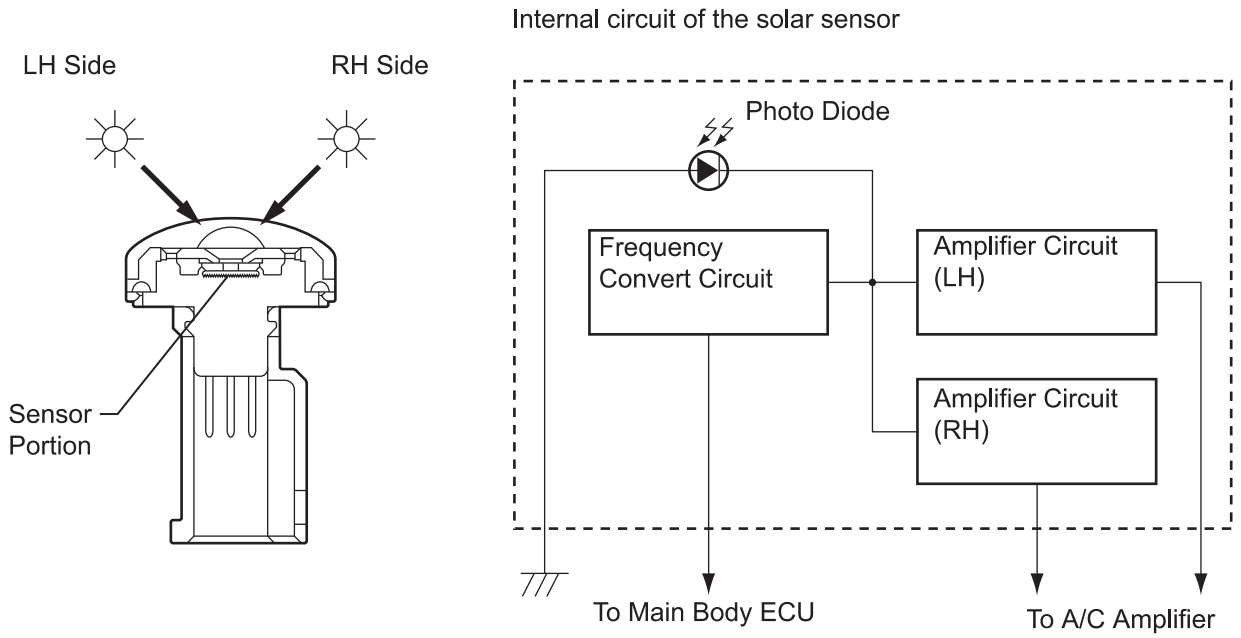
14. AMBIENT TEMPERATURE SENSOR

(a) The outside temp. sensor detects the outside temperature based on changes in the resistance of its built-in thermistor and sends a signal to the A/C amplifier.

15. SOLAR SENSOR

(a) The solar sensor consists of a photo diode, two amplifier circuits for the solar sensor, and frequency converter circuit for the light control sensor.

(b) A solar sensor detects (in the form of changes in the current that flows through the built-in photo diode) the changes in the amount of sunlight from the LH and RH sides (2 directions) and outputs these sunlight strength signals to the A/C amplifier.



16. EVAPORATOR TEMPERATURE SENSOR

(a) The evaporator temperature sensor detects the temperature of the cool air immediately past the evaporator in the form of resistance changes, and outputs it to the A/C amplifier.

17. A/C PRESSURE SENSOR

(a) The A/C pressure sensor detects the refrigerant pressure and outputs it to the A/C amplifier in the form of voltage changes.

18. ECO MODE CONTROL

NOTICE:

- **ECO mode control is performed only when the blower motor is ON. When the ECO switch is turned ON while the blower motor is OFF, the ECO switch indicator light and the heater control panel LCD display illuminate, but ECO mode control is not performed.**

- **During cooling under ECO mode control, the cabin temperature is maintained at 25°C (77°F) even if the set temperature is below 25°C (77°F). Since the power consumption of the electric inverter compressor is limited under ECO mode control, this does not indicate a malfunction. To decrease the cabin temperature to below 25°C (77°F), the MAX COLD temperature (18°C (64.4°F)) must be selected or ECO mode control must be canceled by turning the ECO switch OFF.**

(a) General

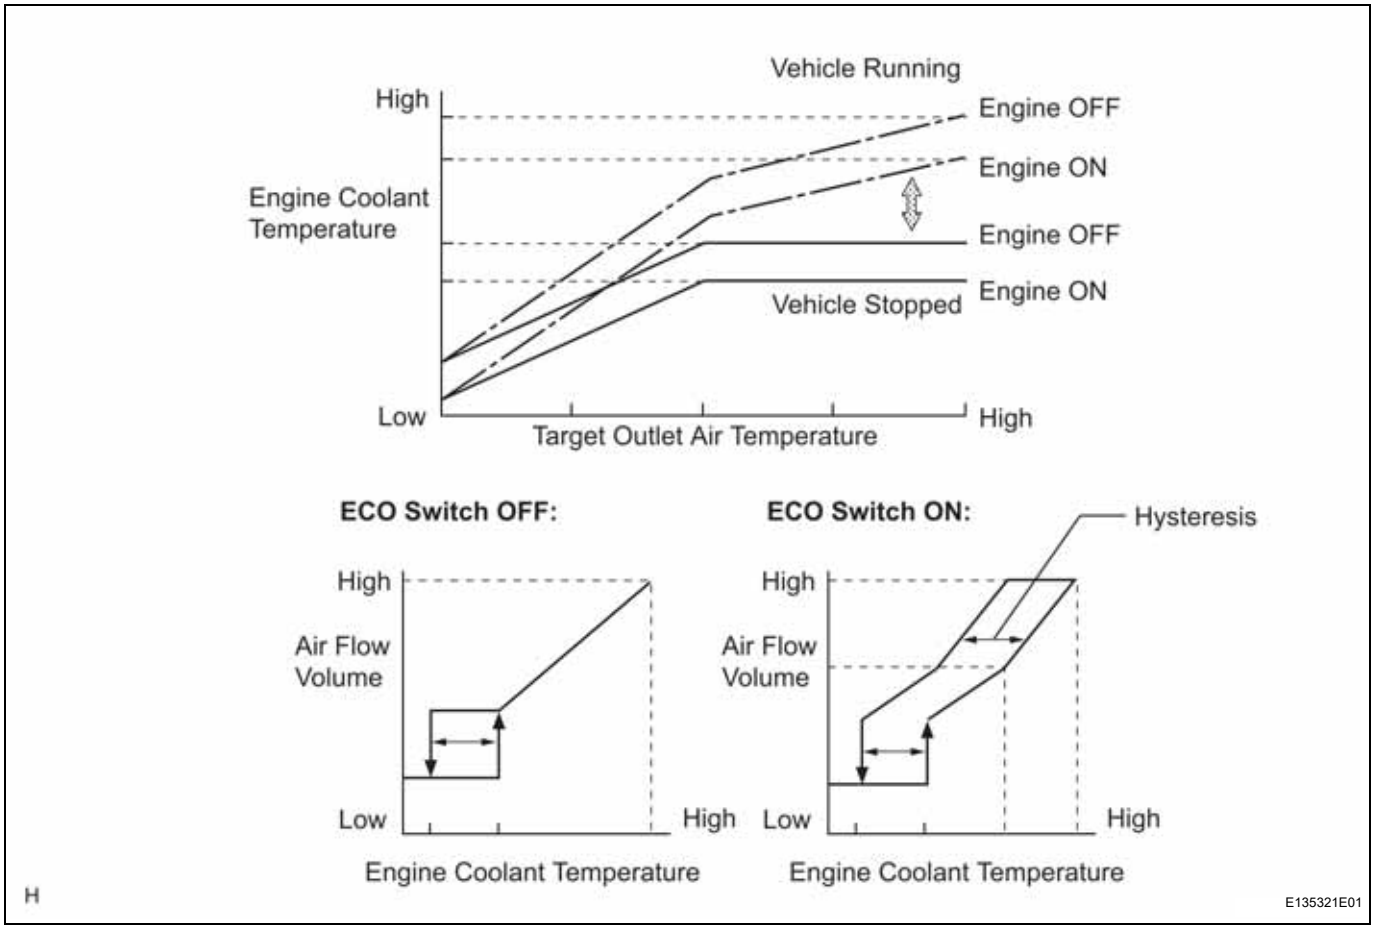
(1) Eco mode control limits the air conditioning system performance during heating and cooling and increases the amount of engine OFF time, thus improving the fuel economy.

(2) Eco mode control is activated by pressing the momentary type ECO switch on the instrument panel. "ECO" is displayed on the heater control panel LCD during this control.

(3) Eco mode control during heating and cooling, and its cancel conditions are shown in the table below.

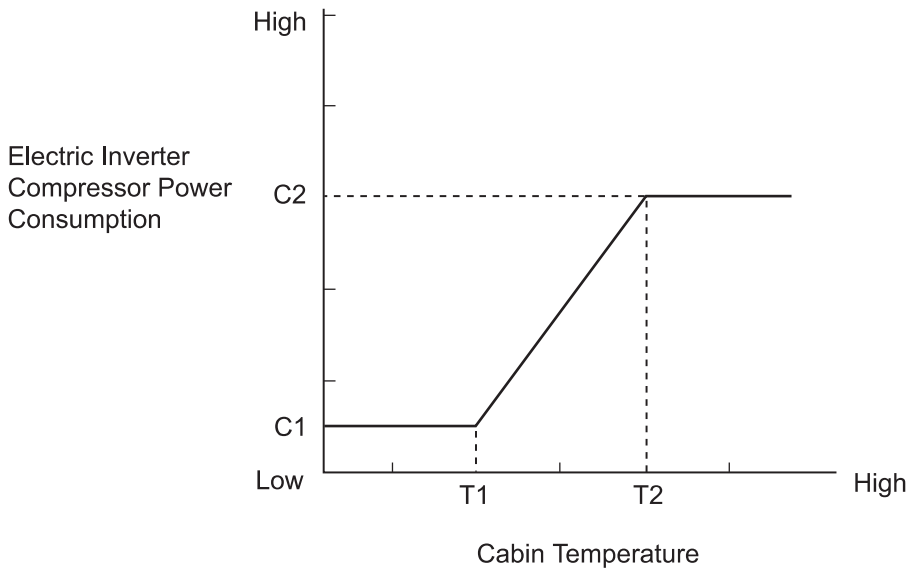
ECO Mode Control		Eco Mode Cancel Conditions
Heating Mode	• Stops PTC heater operation. • Increases the amount of engine OFF time. • Prohibits BI-LEVEL mode during AUTO operation.	• DEF or FOOT DEF mode is selected. • MAX HOT temp. setting • ECO switch OFF
Cooling Mode	Limits power consumption by the electric inverter compressor based on the cabin temperature.	• MAX COLD temp. setting • ECO switch OFF

(b) Heating Mode



(1) The required engine coolant temperature when starting the engine when the vehicle is stopped differs from that when the vehicle is running. Therefore, the fuel economy has been improved by increasing the amount of engine-off time when the vehicle is stopped.
(2) When the ECO switch is turned ON during heating, the A/C amplifier stops the PTC heater operation. Therefore, it takes a longer time to reach the set temperature than while the ECO switch is OFF.
(3) Engine coolant temperatures fluctuate greatly between when the vehicle is running and the vehicle is stopped. The blower level changes accordingly.
(4) The hysteresis, which is used while the ECO switch is ON, is provided to prevent the blower level from hunting due to fluctuations in the engine coolant temperature.

(c) Cooling Mode



(1) When the ECO switch is turned ON during cooling, the A/C amplifier limits the power consumption of the electric inverter compressor in accordance with the cabin temperature.
(2) The A/C amplifier does not limit the power consumption very much (C2 shown in the graph below), and prioritizes decreasing the cabin temperature when the cabin temperature is high (T2 or above). When the cabin temperature decreases to T1 or below, the A/C amplifier limits the power consumption of the electric inverter compressor C1 and restrains the cooling performance. This prevents the SOC (state of charge) of the HV battery from decreasing and increases the amount of engine OFF time, improving the fuel economy.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the air conditioning system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

(a) Inspect the battery voltage.
Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

3 CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → Go to CAN COMMUNICATION SYSTEM

A

4 CHECK FOR DTC*

(a) Check for DTCs and note any codes that are output.
HINT:
Refer to the DTC CHECK / CLEAR (See page AC-39).
(b) Delete the DTCs.
(c) Recheck for DTCs. Based on the DTCs output above, try to force output of the A/C system DTC by simulating the operation indicated by the DTC.
Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → Go to step 7

AC

A

5	PROBLEM SYMPTOMS TABLE

(a) Refer to the PROBLEM SYMPTOMS TABLE (See page AC-32).

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

B → Go to step 7

A

6	OVERALL ANALYSIS AND TROUBLESHOOTING*

(a) ACTUATOR CHECK (See page AC-50)
(b) DATA LIST / ACTIVE TEST (See page AC-45)
(c) TERMINALS OF ECU (See page AC-34)
(d) On-vehicle Inspection
(e) Inspection

NEXT

7	ADJUST, REPAIR OR REPLACE

NEXT

END

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

AIR CONDITIONER:

DISPLAY (ITEM)	DEFAULT	CONTENTS	SETTING
SET TEMP SHIFT (Set Temperature Shift)	NORMAL	To shift the temperature against the displayed temperature	+2 C / +1 C / NORMAL / -1 C / -2 C
AIR INLET MODE (Air Inlet Mode)	AUTO	In case of turning the A/C ON when you desire to make the compartment cool down quickly, this is the function to change the mode automatically to RECIRCULATION mode	MANUAL / AUTO
COMPRESSOR MODE (Compressor Mode)	AUTO	Function to turn the A/C ON automatically by pressing the AUTO button when the blower is ON and the A/C is OFF	MANUAL / AUTO
COMPRS / DEF OPER (Compressor / Air Inlet DEF Operation)	LINK	Function to turn the A/C ON automatically linked with the FRONT DEF button when the A/C is OFF	NORMAL / LINK
EVAP CTRL (Evaporator Control)	AUTO	Function to set the evaporator control to the AUTOMATIC position (AUTO) to save power, or to the coldest position (MANUAL) to dehumidify the air and to prevent the windows from fogging up	MANUAL / AUTO
FOOT / DEF MODE (Foot / DEF Auto Mode)	ON	Function to turn the airflow from FOOT/DEF ON automatically when AUTO MODE is ON	OFF / ON
AUTO BLOW UP (Foot / DEF Automatic Blower Up Function)	ON	Function to change the blower level automatically when the defroster is ON	OFF / ON
AMBIENT TMP SFT (Ambient Temperature Shift)	NORMAL	Function to shift the ambient temperature against the displayed ambient temperature	+3 C / +2 C / +1 C / NORMAL / -1 C / -2 C / -3 C

PROBLEM SYMPTOMS TABLE

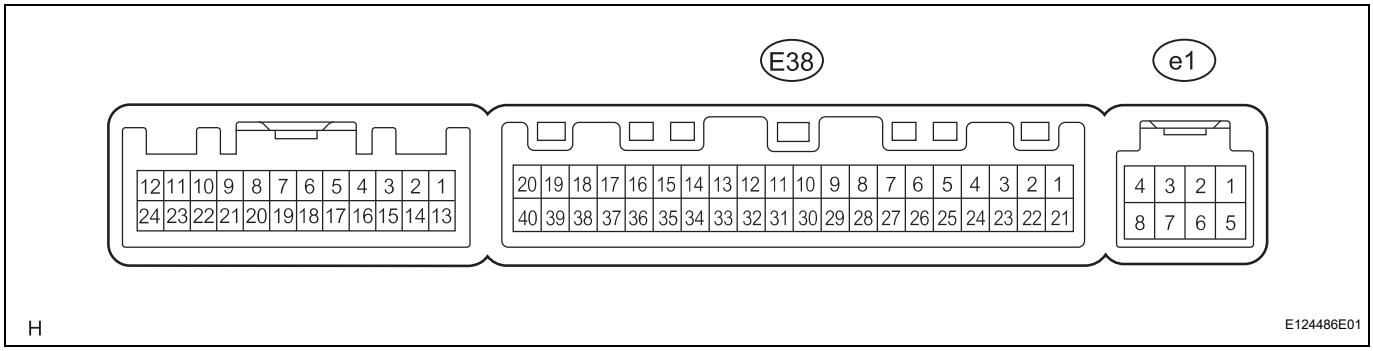
AIR CONDITIONING SYSTEM:

Symptom	Suspected Area	See page
All functions of the A/C system do not operate	1. IG power source circuit	AC-158
	2. Back-up power source circuit	AC-161
	3. Heater control panel power source circuit	AC-133
	4. LIN communication circuit	AC-163
	5. Steering pad switch circuit	AC-149
	6. A/C control assembly	AC-257
	7. A/C amplifier	AC-268
Air Flow Control: No blower operation	1. Blower motor circuit	AC-127
	2. Heater control panel power source circuit	AC-133
	3. LIN communication circuit	AC-163
	4. A/C control assembly	AC-257
	5. A/C amplifier	AC-268
Air Flow Control: No blower control	1. Blower motor circuit	AC-127
	2. Heater control panel power source circuit	AC-133
	3. LIN communication circuit	AC-163
	4. A/C control assembly	AC-257
	5. A/C amplifier	AC-268
Air Flow Control: Insufficient air flow	1. Blower motor circuit	AC-127
	2. A/C amplifier	AC-268
Temperature Control: No cool air comes out	1. Refrigerant volume	-
	2. Refrigerant pressure	AC-165
	3. Pressure switch circuit	AC-69
	4. Air mix control servo motor circuit (Driver side)	AC-86
	5. Air mix control servo motor circuit (Passenger side)	AC-78
	6. Evaporator temperature sensor circuit	AC-60
	7. Room temperature sensor circuit	AC-52
	8. Ambient temperature sensor circuit	AC-56
	9. Heater control panel power source circuit	AC-133
	10. LIN communication circuit	AC-163
	11. Expansion valve	AC-195
	12. A/C control assembly	AC-257
	13. A/C amplifier	AC-268
	14. Engine wire No. 4	HV-563
	15. Compressor with motor assembly	AC-229
	16. Inverter with converter assembly	HV-559
	17. Hybrid vehicle control ECU	HV-570
Temperature Control: No warm air comes out	1. Air mix control servo motor circuit (Driver side)	AC-86
	2. Air mix control servo motor circuit (Passenger side)	AC-78
	3. Evaporator temperature sensor circuit	AC-60
	4. Room temperature sensor circuit	AC-52
	5. Ambient temperature sensor circuit	AC-56
	6. A/C amplifier	AC-268

Symptom	Suspected Area	See page
Temperature Control: Output air is warmer or cooler than the set temperature or response is slow.	1. Refrigerant volume	-
	2. Refrigerant pressure	AC-165
	3. Solar sensor circuit (Driver side)	AC-73
	4. Solar sensor circuit (Passenger side)	AC-64
	5. Room temperature sensor circuit	AC-52
	6. Ambient temperature sensor circuit	AC-56
	7. Air mix control servo motor circuit (Driver side)	AC-86
	8. Air mix control servo motor circuit (Passenger side)	AC-78
	9. ECO switch circuit	AC-154
	10. Radiator unit sub-assembly	AC-195
	11. Expansion valve	AC-195
	12. A/C amplifier	AC-268
Temperature Control: No temperature control (only Max. cool or Max. warm)	1. Air mix control servo motor circuit (Driver side)	AC-86
	2. Air mix control servo motor circuit (Passenger side)	AC-78
	3. Room temperature sensor circuit	AC-52
	4. Ambient temperature sensor circuit	AC-56
	5. Evaporator temperature sensor circuit	AC-60
	6. Solar sensor circuit (Driver side)	AC-73
	7. Solar sensor circuit (Passenger side)	AC-64
	8. A/C control assembly	AC-257
	9. A/C amplifier	AC-268
No air inlet control	1. Air inlet control servo motor circuit	AC-81
	2. A/C amplifier	AC-268
No air flow mode control	1. Air outlet control servo motor circuit	AC-83
	2. A/C amplifier	AC-268
Unable to control A/C with the steering pad switch	1. Steering pad switch circuit	AC-149
	2. Heater control panel power source circuit	AC-133
	3. LIN communication circuit	AC-163
	4. A/C control assembly	AC-257
	5. A/C amplifier	AC-268
Heater performance is low (PTC heater does not operate)	1. PTC heater circuit	AC-140
	2. Heater water pump circuit	AC-135
	3. A/C amplifier	AC-268
Plasmacluster does not operate	1. Blower motor circuit	AC-127
	2. Plasmacluster circuit	AC-146
	3. A/C amplifier	AC-268
ECO switch indicator does not come on (ECO switch does not operate)	1. ECO switch circuit	AC-154
	2. A/C amplifier	AC-268
Diagnostic trouble codes are not recorded. Set mode is cleared when power switch is turned OFF.	1. Back-up power source circuit	AC-161
	2. A/C amplifier	AC-268

TERMINALS OF ECU

1. A/C AMPLIFIER

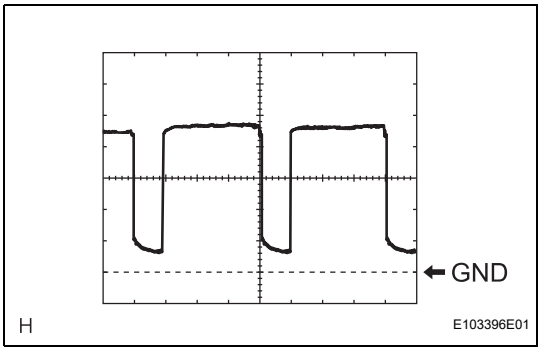


HINT:
Check from the rear of the connector while it is connected to the A/C amplifier.

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
E38-1 (IG+) - E38-14 (GND)	V - W-B	Power source (IG)	Power switch on (IG)	10 to 14 V
E38-1 (IG+) - E38-14 (GND)	V - W-B	Power source (IG)	Power switch off	Below 1 V
E38-3 (PTC1) - E38-14 (GND)	SB - W-B	PTC heater operation signal	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: OFF	10 to 14 V
E38-3 (PTC1) - E38-14 (GND)	SB - W-B	PTC heater operation signal	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: ON	Below 1 V
E38-5 (TAM) - E38-14 (GND)	P - W-B	A/C ambient temperature sensor signal	Power switch on (IG) at 25°C (77°F)	1.35 to 1.75 V
E38-5 (TAM) - E38-14 (GND)	P - W-B	A/C ambient temperature sensor signal	Power switch on (IG) at 40°C (104°F)	0.9 to 1.2 V
E38-9 (PRE) - E38-13 (SG-2)	V - L	A/C pressure sensor signal	Start HV system, Operate A/C system, Refrigerant pressure: Abnormal pressure (more than 3,140 kPa (32.0 kgf/cm^2, 455 psi))	4.74 V or higher
E38-9 (PRE) - E38-13 (SG-2)	V - L	A/C pressure sensor signal	Start HV system, Operate A/C system, Refrigerant pressure: Abnormal pressure (less than 196 kPa (2.0 kgf/cm^2, 28 psi))	Below 0.76 V
E38-9 (PRE) - E38-13 (SG-2)	V - L	A/C pressure sensor signal	Start HV system, Operate A/C system, Refrigerant pressure: Abnormal pressure (more than 3,140 kPa (32.0 kgf/cm^2, 455 psi) or less than 196 kPa (2.0 kgf/cm^2, 28 psi))	0.76 to 4.74 V
E38-10 (S5-3) - E38-13 (SG-2)	BR - L	Power supply for A/C pressure sensor	Power switch on (IG) A/C switch: ON	4.5 to 5.5 V
E38-10 (S5-3) - E38-13 (SG-2)	BR - L	Power supply for A/C pressure sensor	Power switch on (IG) A/C switch: OFF	Below 1 V
E38-11 (CANH) - E38-12 (CANL)	B - W	CAN communication system	CAN communication circuit	Pulse generation

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
E38-13 (SG-2) - Body ground	L - Body ground	Ground for A/C pressure sensor, A/C ambient temperature sensor	Always	Below 1 V
E38-14 (GND) - Body ground	W-B - Body ground	Ground for main power supply	Always	Below 1 V
E38-15 (ECOS) - E38-14 (GND)	SB - W-B	ECO switch signal	Power switch on (IG) ECO switch: OFF	Below 1 V
E38-15 (ECOS) - E38-14 (GND)	SB - W-B	ECO switch signal	Power switch on (IG) ECO switch: ON	10 to 14 V
E38-16 (ECID) - E38-14 (GND)	B - W-B	ECO switch indicator signal	Power switch on (IG) ECO switch: OFF	10 to 14 V
E38-16 (ECID) - E38-14 (GND)	B - W-B	ECO switch indicator signal	Power switch on (IG) ECO switch: ON	Below 1 V
E38-21 (B) - E38-14 (GND)	GR - W-B	Power source (Back-up)	Always	10 to 14 V
E38-22 (PTC2) - E38-14 (GND)	L - W-B	PTC heater operation signal	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: OFF	10 to 14 V
E38-22 (PTC2) - E38-14 (GND)	L - W-B	PTC heater operation signalo	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: ON	Below 1 V
E38-23 (BLW) - E38-14 (GND)	R - W-B	Blower motor speed control signal	Power switch on (IG) Blower switch: ON	Pulse generation (See waveform 1)
E38-29 (TR) - E38-34 (SG-1)	P - LG	A/C room temperature sensor signal	Power switch on (IG) Cabin temperature at 25°C (77°F)	1.8 to 2.2 V
E38-29 (TR) - E38-34 (SG-1)	P - LG	A/C room temperature sensor signal	Power switch on (IG) Cabin temperature at 40°C (104°F)	1.2 to 1.6 V
E38-32 (TSP) - E38-14 (GND)	Y - W-B	A/C solar sensor signal (for Front passenger side)	Power switch on (IG) Solar sensor is subjected to electric light.	0.8 to 4.3 V
E38-32 (TSP) - E38-14 (GND)	Y - W-B	A/C solar sensor signal (for Front passenger side)	Power switch on (IG) Solar sensor is covered with a cloth.	Below 0.8 V
E38-33 (TSD) - E38-14 (GND)	O - W-B	A/C solar sensor signal (for Driver side)	Power switch on (IG) Solar sensor is subjected to electric light.	0.8 to 4.3 V
E38-33 (TSD) - E38-14 (GND)	O - W-B	A/C solar sensor signal (for Driver side)	Power switch on (IG) Solar sensor is covered with a cloth.	Below 0.8 V
E38-34 (SG-1) - Body ground	LG - Body ground	Ground for A/C room temperature sensor	Always	Below 1 V
E38-37 (LIN1) - E38-14 (GND)	GR - W-B	LIN communication signal	Power switch on (IG)	Pulse generation
E38-38 (RDFG) - E38-14 (GND)	G - W-B	DEF relay signal	Power switch on (IG) REAR DEF switch: ON	Below 1 V
E38-38 (RDFG) - E38-14 (GND)	G - W-B	DEF relay signal	Power switch on (IG) REAR DEF switch: OFF	10 to 14 V
E38-39 (PCD1) - E38-14 (GND)	R - W-B	Plasmacluster operation signal	Power switch on (IG) Blower switch: OFF (plasmacluster not operating)	10 to 14 V
E38-39 (PCD1) - E38-14 (GND)	R - W-B	Plasmacluster operation signal	Power switch on (IG) Blower switch: ON (plasmacluster operating)	Below 1 V
e1-2 (BUS G) - Body ground	-	Ground for BUS IC	Always	Below 1 V

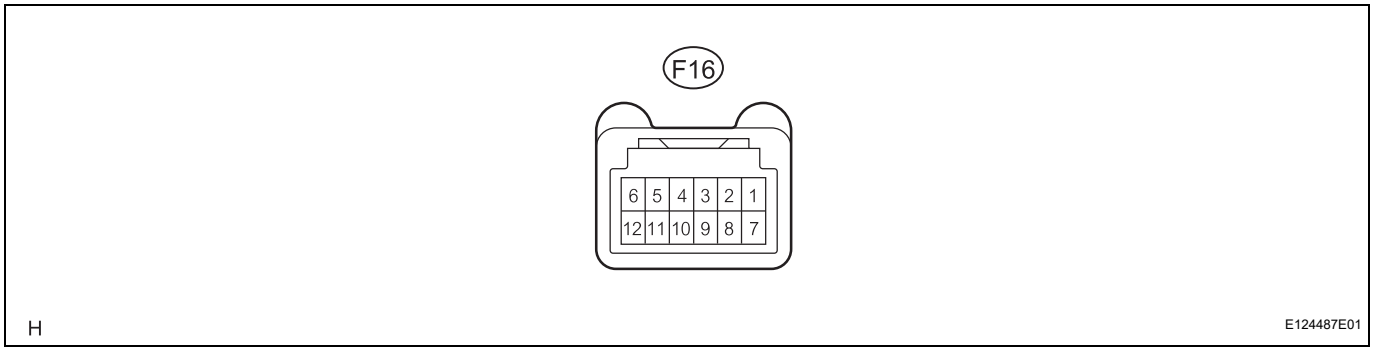
Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
e1-3 (BUS) - e1-2 (BUS G)	-	BUS IC control signal	Power switch off → on (IG)	Pulse generation
e1-4 (B BUS) - e1-2 (BUS G)	-	Power supply for BUS IC	Power switch off	Below 1 V
e1-4 (B BUS) - e1-2 (BUS G)	-	Power supply for BUS IC	Power switch on (IG)	10 to 14 V
e1-5 (SGA) - Body ground	-	Ground for evaporator temperature sensor	Always	Below 1 V
e1-6 (TEA) - e1-5 (SGA)	-	A/C evaporator temperature sensor signal	Power switch on (IG) Evaporator temperature at 0°C (32°F)	1.7 to 2.1 V
e1-6 (TEA) - e1-5 (SGA)	-	A/C evaporator temperature sensor signal	Power switch on (IG) Evaporator temperature at 15°C (59°F)	0.9 to 1.3 V



(a) Waveform 1:

Item	Contents
Terminal No. (Symbols)	E38-23 (BLW) - E38-14 (GND)
Tool Setting	1 V/DIV., 500 μs/DIV.
Vehicle Condition	Power switch on (IG) Blower switch: ON

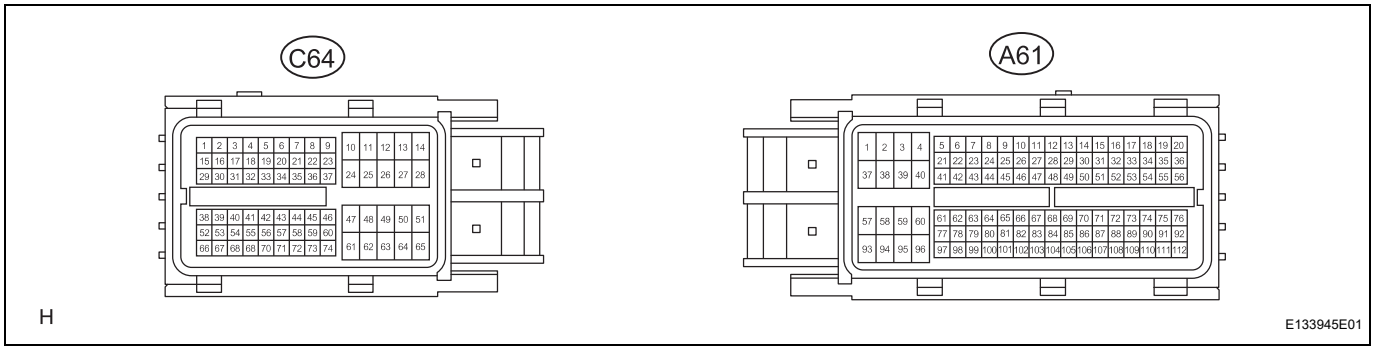
2. A/C CONTROL ASSEMBLY



HINT:
Check from the rear of the connector while it is connected to the A/C control assembly.

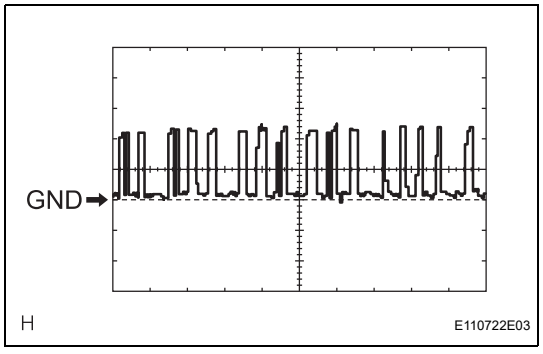
Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
F16-3 (GND) - Body ground	W-B - Body ground	Ground for A/C control assembly	Always	Below 1 V
F16-4 (TX+) - F16-3 (GND)	L - W-B	LIN communication circuit	Power switch on (IG)	Pulse generation
F16-5 (IG+) - F16-3 (GND)	V - W-B	Power source (IG)	Power switch off	Below 1 V
F16-5 (IG+) - F16-3 (GND)	V - W-B	Power source (IG)	Power switch on (IG)	10 to 14 V

3. HYBRID VEHICLE CONTROL ECU



HINT:
Check from the front of the connector while it is disconnected from the hybrid vehicle control ECU.

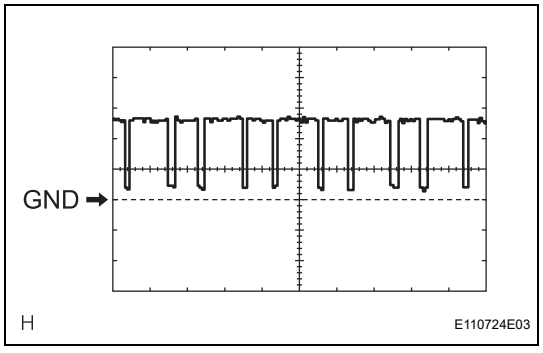
Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specified Condition
A61-11 (WP) - Body ground	O - Body ground	Heater water pump operation signal	Power switch off	Below 1 V
A61-11 (WP) - Body ground	O - Body ground	Heater water pump operation signal	Power switch on (IG)	10 to 14 V
C64-18 (CLK) - Body ground	G - Body ground	Compressor operation signal	Power switch on (IG)	Pulse generation (See waveform 1)
C64-19 (ETI) - Body ground	Y - Body ground	Compressor operation signal	Power switch on (IG)	Pulse generation (See waveform 2)
C64-20 (ITE) - Body ground	W - Body ground	Compressor operation signal	Power switch on (IG)	Pulse generation (See waveform 3)
C64-33 (STB) - Body ground	R - Body ground	Compressor operation signal	Power switch on (IG)	10 to 14 V
C64-33 (STB) - Body ground	R - Body ground	Compressor operation signal	Power switch off	Below 1 V



(a) Waveform 1:

Item	Contents
Terminal No. (Symbols)	C64-18 (CLK) - Body ground
Tool Setting	5 V/DIV., 200 ms./DIV.
Vehicle Condition	Power switch on (IG)

HINT:
Waveform cycle varies with the communication contents.

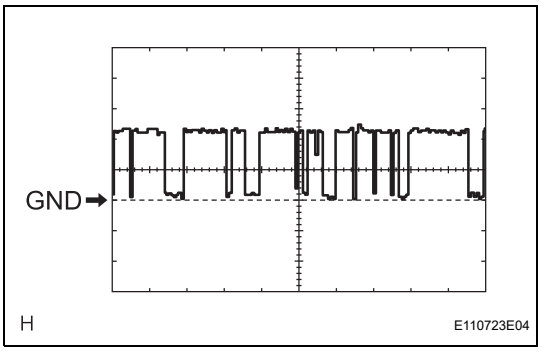


(b) Waveform 2:

Item	Contents
Terminal No. (Symbols)	C64-19 (ETI) - Body ground
Tool Setting	5 V/DIV., 200 ms./DIV.
Vehicle Condition	Power switch on (IG)

HINT:
Waveform cycle varies with the communication contents.

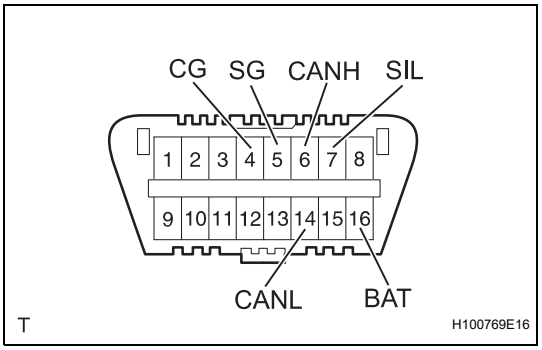
AC



(c) Waveform 3:

Item	Contents
Terminal No. (Symbols)	C64-20 (ITE) - Body ground
Tool Setting	5 V/DIV., 200 ms./DIV.
Vehicle Condition	Power switch on (IG)

HINT:
Waveform cycle varies with the communication contents.



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbol (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors.**
HINT:
Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DTC CHECK / CLEAR

1. DTC CHECK (SENSOR CHECK)

(a) Start the THS-II system.

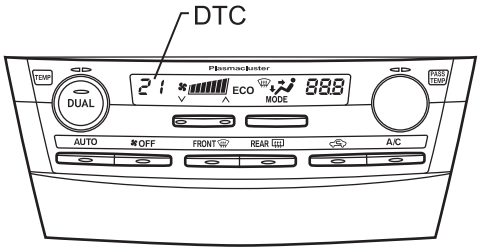
(b) Perform the indicator check (See page AC-41).
HINT:
After the indicator check is completed, the system enters the DTC check mode automatically.

(c) Read the code displayed on the panel. (Trouble codes are output on the temperature display.)
NOTICE:
- **In the sensor check mode, which is automatically transferred from the indicator check mode, troubleshooting may be partially performed. Be sure to perform the actuator check, and then the sensor check again.**
- **If the check is performed in a dark place, DTC 21 or 24 may be displayed even though the system is normal.**

HINT:
Refer to the DTC chart (Diagnostic Trouble Code chart) for details of the codes (See page AC-47).
- When there are no problems, DTC 00 is output.
- As an example, the illustration shows that DTC 21 is output.

(d) If the steps are difficult to read because they change automatically, push the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pushed.
HINT:
- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the actuator check mode.

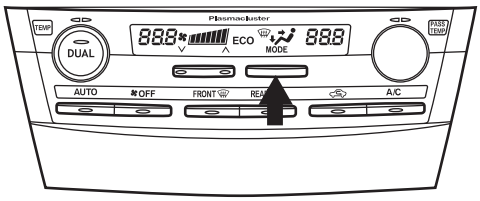
A/C Control Assembly:



H

E130398E01

A/C Control Assembly:

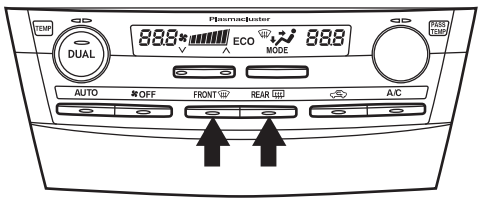


H

E130397E01

AC

A/C Control Assembly:

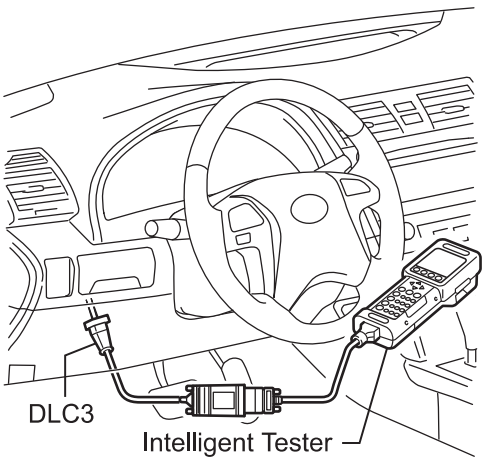


H

E130397E02

2. CLEARING DTC

(a) During the sensor check, press the "FRONT DEF" switch and "REAR DEF" switch at the same time.



H

C131977E01

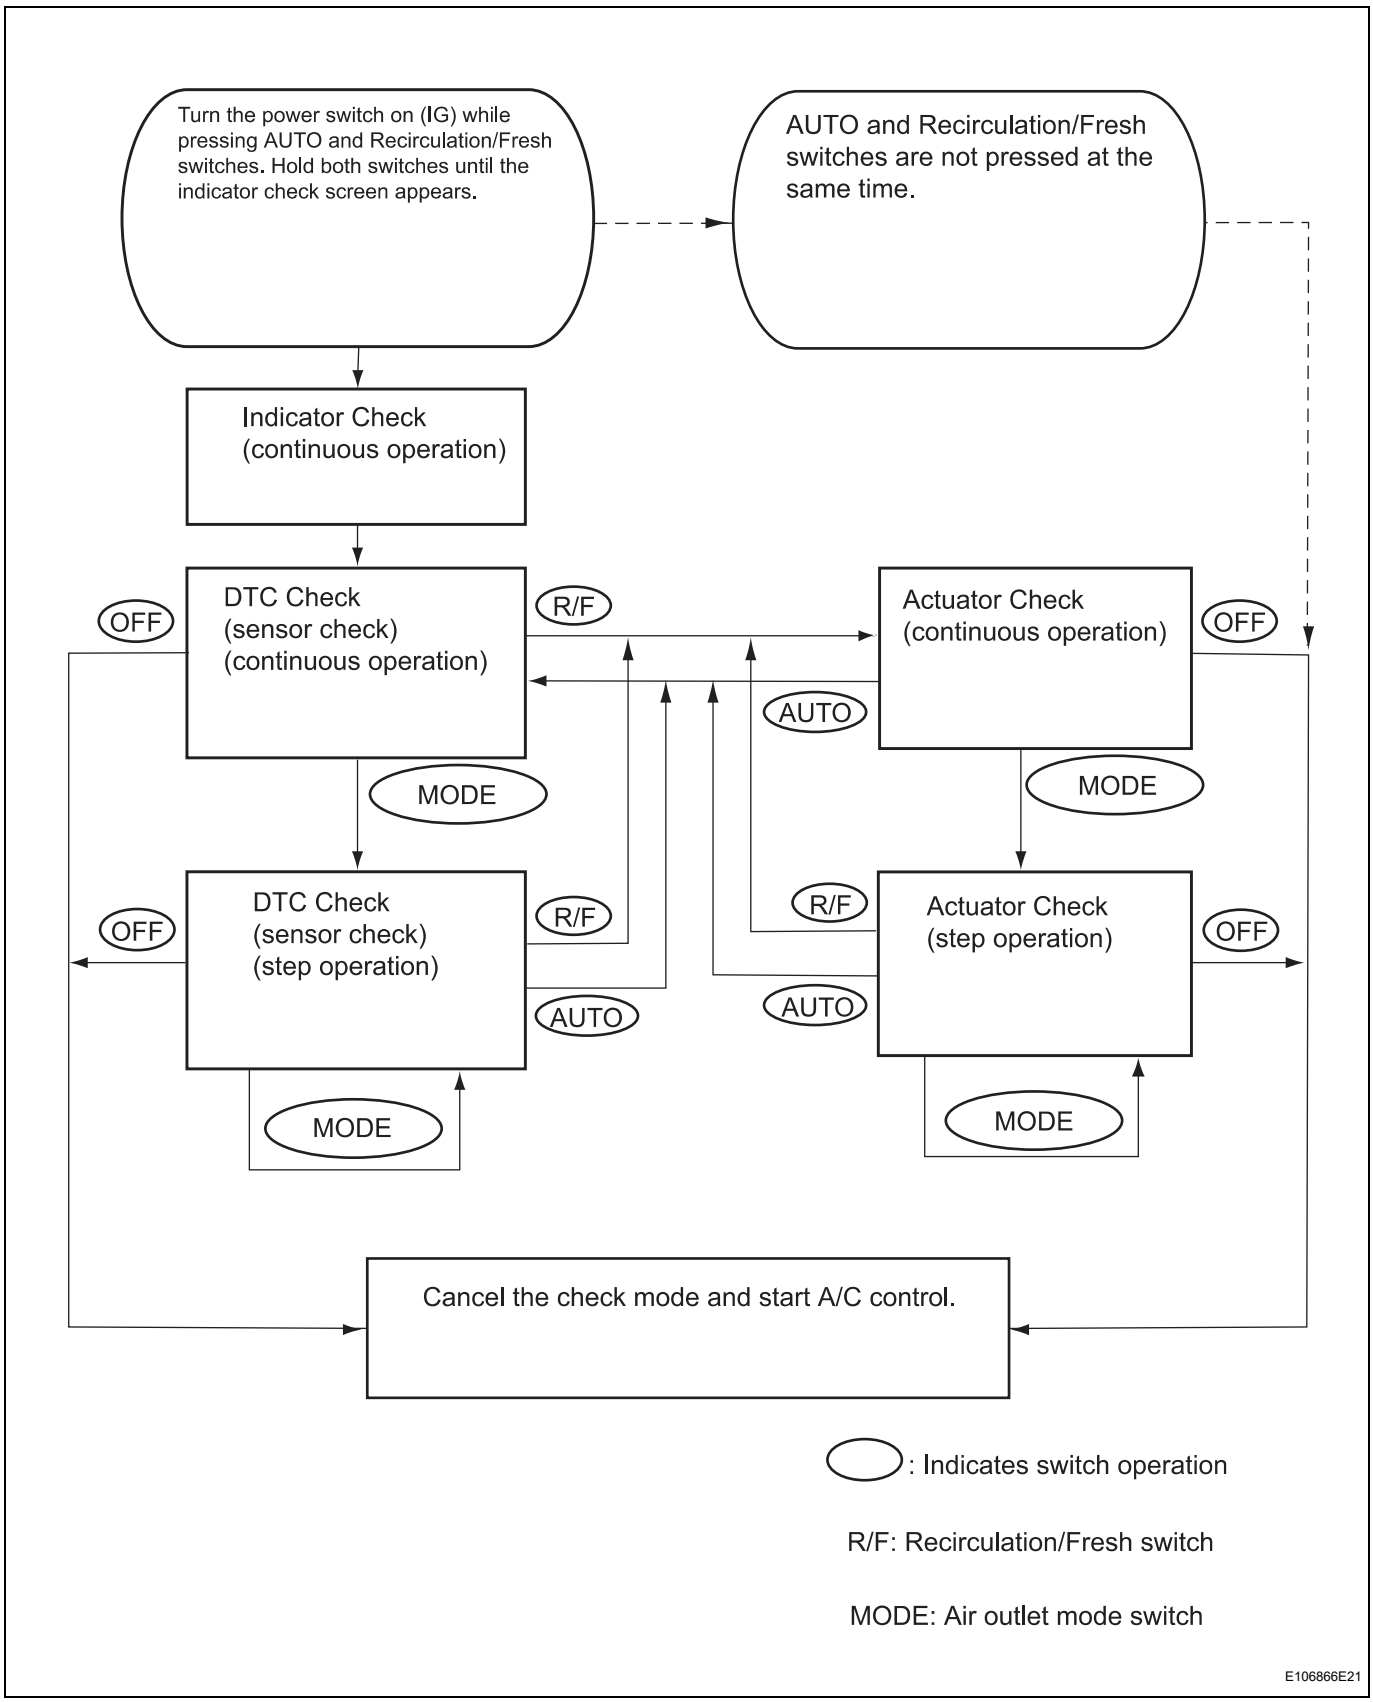
3. DTC CHECK USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menu items: DIAGNOSIS / OBD/ MOBD / DTC INFO / CURRENT CODES.
HINT:
Refer to the intelligent tester operator's manual for further details.
(e) Check the details of the DTCs.
(f) Clear the DTCs.
HINT:
After repairing the malfunctions, clear the DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the power switch on (IG).
(3) Enter the following menu items: DIAGNOSIS / OBD/MOBD / DTC INFO / CLEAR CODES.
HINT:
Refer to the intelligent tester operator's manual for further details.
(4) Press the YES button.

CHECK MODE PROCEDURE

1. LIST OF OPERATION METHODS

(a) By operating each of the A/C control switches as shown in the diagram below, it is possible to enter the diagnostic check mode.

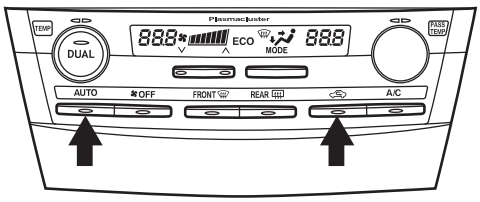


AC

2. INDICATOR CHECK

(a) Turn the power switch off.

A/C Control Assembly:

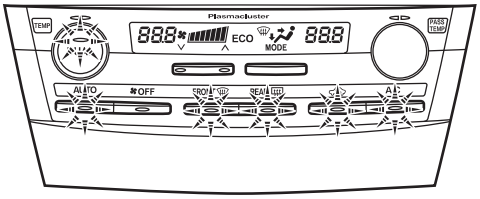


H

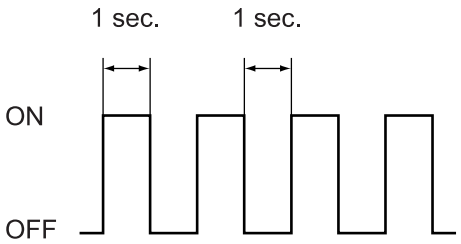
E130397E03

(b) Turn the power switch on (IG) while pressing the A/C control "AUTO" switch and "R/F" switch simultaneously. Hold both switches until the indicator check screen appears.

A/C Control Assembly:



Indicator Blinking Pattern:



H

E130399E01

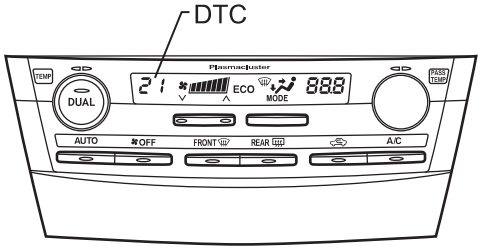
(c) The indicator check is automatically performed when panel diagnosis is activated. Check that the indicators light up and go off at 1-second intervals 4 times in succession.
HINT:
- The sensor check automatically starts when the indicator check is completed.
- Press the "OFF" switch to cancel the check mode.
- If a navigation system is installed, the indicator will blink and the buzzer will sound.

3. DTC CHECK (SENSOR CHECK)

(a) Start the THS-II system.

(b) Perform the indicator check.
HINT:
After the indicator check is completed, the system enters the DTC check mode automatically.

A/C Control Assembly:

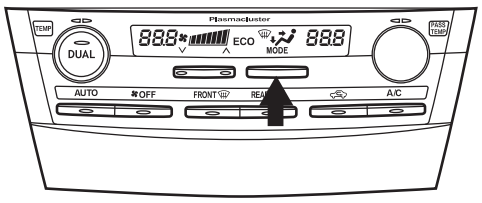


H E130398E01

(c) Read the code displayed on the panel (Trouble codes are output on the temperature display.)
NOTICE:
- **In the sensor check mode, which is automatically transferred from the indicator check mode, troubleshooting may be partially performed. Be sure to perform the actuator check, and then the sensor check again.**
- **If the check is performed in a dark place, DTC 21 or 24 may be displayed even though the system is normal.**

HINT:
Refer to the DTC chart (Diagnostic Trouble Code chart) for details of the codes (See page AC-47).
- When there are no problems, DTC 00 is output.
- As an example, the illustration shows that DTC 21 is output.

A/C Control Assembly:



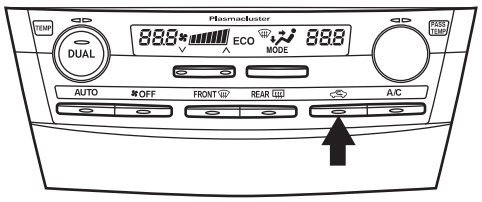
H E130397E01

(d) If the steps are difficult to read because they change automatically, push the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pushed.
HINT:
- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the actuator check mode.

4. ACTUATOR CHECK

(a) Start the THS-II system.
(b) Perform the indicator check.

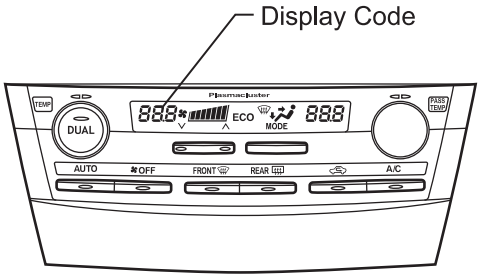
A/C Control Assembly:



H E130397E04

(c) Push the "R/F" switch to perform the actuator check.
HINT:
Be sure to perform the actuator check after starting the THS-II system.

A/C Control Assembly:



H

E130397E05

(d) As the actuator check is repeated from steps 1 to 10 at 1-second intervals, check the temperature and air flow visually and by hand.
HINT:
- The display blinks at 1-second intervals in the step operation.
- Push the "OFF" switch to finish panel diagnosis.
- Push the "AUTO" switch to enter the sensor check mode.

Step No.	Display Code	Conditions

(e) If the steps are difficult to read because they change automatically, push the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pushed.
HINT:
- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the sensor check mode.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator, and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / AIR CONDITIONER / DATA LIST.
(e) Check the value(s) by referring to the table below.

AIR CONDITIONER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ROOM TEMP (Room temperature sensor)	Room temperature sensor / Min.: -6.5°C (20.3°F), Max.: 57.25°C (135.05°F)	Actual cabin temperature is displayed	-
AMBI TEMP SENS (Ambient temperature sensor)	Ambient temperature sensor / Min.: -23.3°C (-9.94°F), Max.: 65.95°C (150.71°F)	Actual ambient temperature is displayed	-
AMBI TEMP (Adjusted ambient temperature)	Adjusted ambient temperature / Min.: -30.8°C (-23.44°F), Max.: 50.8°C (123.44°F)	-	-
EVAP FIN TEMP (Evaporator fin thermistor)	Evaporator fin thermistor / Min.: -29.7°C (-21.46°F), Max.: 59.55°C (139.19°F)	Actual evaporator temperature is displayed	-
SOLAR SENS-D (Solar sensor (D side))	Driver side solar sensor / Min.: 0, Max.: 255	Driver side solar sensor value increases as brightness increases	-
SOLAR SENS-P (Solar sensor (P side))	Passenger side solar sensor / Min.: 0, Max.: 255	Passenger side solar sensor value increases as brightness increases	-
COOLANT TEMP (Engine coolant temperature)	Engine coolant temperature / Min.: 1.3°C (34.34°F), Max.: 90.55°C (194.99°F)	Actual engine coolant temperature is displayed while engine is warmed up	-
SET TEMP-D (Set temperature (D side))	Driver side set temperature / Min.: 0°C (32°F), Max.: 30°C (54°F)	Driver side set temperature is displayed	-
SET TEMP-P (Set temperature (P side))	Passenger side set temperature / Min.: 0°C (32°F), Max.: 30°C (54°F)	Passenger side set temperature is displayed	-
ESTIMATE TEMP-D (Estimated temperature (D side))	Driver side estimated temperature / Min.: -358.4°C (-613.12°F), Max.: 358.4°C (677.12°F)	Damper is at "MAX. COOL": -358.4°C (-613.12°F) Damper is at "MAX. HOT": 358.4°C (677.12°F)	-
ESTIMATE TEMP-P (Estimated temperature (P side))	Passenger side estimated temperature / Min.: -358.4, Max.: 358.4	Damper is at "MAX. COOL": -358.4°C (-613.12°F) Damper is at "MAX. HOT": 358.4°C (677.12°F)	-
BLOWER LEVEL (Blower motor speed level)	Blower motor speed level / Min.: 0 level, Max.: 31 level	Increases in the range between 0 and 31 as the blower motor speed increases	-
REG PRESS SENS (Regulator pressure sensor)	Regulator pressure sensor / Min.: -0.5 kgf/cm^{2}G, Max.: 37.75 kgf/cm^{2}G	Actual refrigerant pressure is displayed	-
AIR MIX PULSE-D (Air mix servomotor target pulse (D side))	Driver side air mix servo motor target pulse / Min.: 0, Max.: 255	MAX. COLD: 5 (pulse) MAX. HOT: 103 (pulse)	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
AIR MIX PULSE-P (Air mix servomotor target pulse (P side))	Passenger side air mix servo motor target pulse / Min.: 0, Max.: 255	MAX. COLD: 105 (pulse) MAX. HOT: 7 (pulse)	-
AIR OUT PULSE-D (Air out pulse-D)	Driver side air outlet servo motor target pulse / Min.: 0, Max.: 255	FACE: 8 (pulse) B/L: 30 to 38 (pulse) FOOT: 50 to 74 (pulse) FOOT/DEF: 80 (pulse) DEF: 97 (pulse)	-
A/I DAMP PLS (Air inlet damper target pulse)	Air inlet damper target pulse / Min.: 0, Max.: 255	RECIRCULATION: 7 (pulse) FRESH: 28 (pulse)	-
COMPRS SPD (Compressor speed)	Compressor speed / Min.: 0, Max.: 65535 rpm	Displays actual rotation speed in the range between 0 rpm and 8,600 rpm	-
COMPRS TARG SPD (Compressor target speed)	Compressor target speed / Min.: 0, Max.: 65535 rpm	Displays actual rotation speed in the range between 0 rpm and 8,600 rpm	-
#CODES (Number of trouble codes)	Number of trouble codes / Min.: 0, Max.: 255	Number of DTCs will be displayed	-

2. ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSVs, actuators and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / AIR CONDITIONER / ACTIVE TEST.
(e) Perform the ACTIVE TEST by referring to the table below.

AIR CONDITIONER:

Tester Display	Test Part	Control Range
BLOWER MOTOR (Blower motor)	Blower motor / Min.: Level 0, Max.: Level 31	-
DEFOGER RLY-R (Defogger relay (Rear))	Defogger relay (Rear) / OFF, ON	-
COMPRS TARG SPD (Compressor target speed)	Compressor target speed / Min.: 0, Max.: 65535 (800 to 8,600 rpm)	-
WATER PUMP (Water pump)	Water pump / OFF, ON	-
ELECTRICAL FAN (Electrical fan)	Electrical fan / OFF, ON	-
HEATER1 (Electric heater1)	Electric Heater1 / OFF, ON	-
HEATER2 (Electric heater2)	Electric Heater2 / OFF, ON	-
AIR MIX PULSE-D (Air mix servomotor pulse (D side))	Driver side air mix servo motor pulse / Min.: 0, Max.: 255	-
AIR MIX PULSE-P (Air mix servomotor pulse (P side))	Passenger side air mix servo motor pulse / Min.: 0, Max.: 255	-
AIR OUT PULSE-D (Air outlet servomotor pulse (D side))	Driver side air outlet servo motor pulse / Min.: 0, Max.: 255	-

Tester Display	Test Part	Control Range
A/I DAMP PLS (Air inlet damper target pulse)	Air inlet damper target pulse / Min.: 0, Max.: 255	-

DIAGNOSTIC TROUBLE CODE CHART

AIR CONDITIONING SYSTEM:

DTC Code	Detection Item	Trouble Area	Memory *5	See page
B1411/11 *1	Room Temperature Sensor Circuit	1. A/C room temperature sensor 2. Harness or connector between A/C room temperature sensor and A/C amplifier 3. A/C amplifier	Memorized (8.5 min. or more)	AC-52
B1412/12 *2	Ambient Temperature Sensor Circuit	1. Ambient temperature sensor 2. Harness or connector between ambient temperature sensor and A/C amplifier 3. A/C amplifier	Memorized (8.5 min. or more)	AC-56
B1413/13	Evaporator Temperature Sensor Circuit	1. Evaporator temperature sensor 2. Air conditioning harness 3. A/C amplifier	Memorized (8.5 min. or more)	AC-60
B1421/21 *3	Solar Sensor Circuit (Passenger Side)	1. Solar sensor 2. Harness or connector between solar sensor and A/C amplifier 3. Harness or connector between solar sensor and main body ECU 4. A/C amplifier 5. Main body ECU	Memorized (8.5 min. or more) (only when circuit is shorted)	AC-64
B1423/23	Pressure Sensor Circuit	1. A/C pressure sensor 2. Harness or connector between A/C pressure sensor and A/C amplifier 3. Refrigerant pipe line 4. A/C amplifier	-	AC-69
B1424/24 *3	Solar Sensor Circuit (Driver Side)	1. Solar sensor 2. Harness or connector between solar sensor and A/C amplifier 3. Harness or connector between solar sensor and main body ECU 4. A/C amplifier 5. Main body ECU	Memorized (8.5 min. or more) (only when circuit is shorted)	AC-73
B1441/41	Air Mix Damper Control Servo Motor Circuit (Passenger Side)	1. A/C amplifier 2. Air conditioning harness 3. Air mix control servo motor	Memorized (30 sec.)	AC-78
B1442/42	Air Inlet Damper Control Servo Motor Circuit	1. A/C amplifier 2. Air conditioning harness 3. Air inlet control servo motor	Memorized (30 sec.)	AC-81
B1443/43	Air Outlet Damper Control Servo Motor Circuit	1. A/C amplifier 2. Air conditioning harness 3. Air outlet control servo motor	Memorized (30 sec.)	AC-83
B1446/46	Air Mix Damper Control Servo Motor Circuit (Driver Side)	1. A/C amplifier 2. Air conditioning harness 3. Air mix control servo motor	Memorized (30 sec.)	AC-86

DTC Code	Detection Item	Trouble Area	Memory *5	See page
B1471/71	A/C Inverter High Voltage Power Resource System Malfunction	1. Harness or connector between compressor with motor assembly and inverter with converter assembly 2. Compressor with motor assembly 3. Hybrid control system 4. Inverter with converter assembly 5. CAN communication system	Memorized	AC-88
B1472/72	A/C Inverter High Voltage Output System Malfunction	1. Compressor with motor assembly 2. CAN communication system	Memorized	AC-94
B1473/73	A/C Inverter Start-up Signal System Malfunction	1. Harness or connector between hybrid vehicle control ECU and compressor with motor assembly 2. Compressor with motor assembly 3. Hybrid control system 4. CAN communication system	-	AC-95
B1474/74	A/C Inverter Malfunction	1. Compressor with motor assembly 2. CAN communication system	Memorized	AC-99
B1475/75	A/C Inverter Cooling / Heating System Malfunction	1. Cooling fan system 2. Refrigerant volume 3. Compressor with motor assembly 4. CAN communication system	Memorized	AC-100
B1476/76	A/C Inverter Load System Malfunction	1. Refrigerant volume 2. Compressor with motor assembly 3. Cooling fan system 4. CAN communication system	Memorized	AC-104
B1477/77	A/C Inverter Low Voltage Power Resource System Malfunction	1. Compressor with motor assembly 2. CAN communication system	Memorized	AC-108
B1497/97	BUS IC Communication Malfunction	1. Air conditioning harness 2. A/C amplifier	Memorized (10 sec. or more)	AC-109
B1498/98 *4	Communication Malfunction (A/C Inverter Local)	1. Harness or connector between hybrid vehicle control ECU and compressor with motor assembly and body ground 2. Electric vehicle fuse 3. Hybrid vehicle control ECU 4. Compressor with motor assembly 5. Inverter with converter assembly 6. Engine wire No. 4 7. CAN communication system 8. Hybrid control system	Memorized	AC-112

DTC Code	Detection Item	Trouble Area	Memory *5	See page
B1499/99	Multiplex Communication Circuit	CAN communication system	Memorized	AC-121
P0AA6-611	Hybrid Battery Voltage System Isolation Fault	1. Compressor oil 2. Refrigerant pipe line 3. Compressor with motor assembly 4. CAN communication system	-	AC-122

HINT:

- *1: If the cabin temperature is approx. -18.6°C (-1.48°F) or lower, DTC B1411/11 may be output even though the system is normal.
- *2: If the ambient temperature is approx. -52.9°C (-63.22°F) or lower, DTC B1412/12 may be output even though the system is normal.
- *3: If the check is performed in a dark place, DTC B1421/21 or B1424/24 (solar sensor circuit abnormal) may be output even though the system is normal.
- *4: Depending on the timing of the power supply to the 12 V power supply circuit and high-voltage circuit when the power switch is turned on (READY), an abnormal information signal may be output, causing this DTC to be stored. If the output DTC is a code that was memorized in the past, check the fuses and wire harnesses. If there is no malfunction, erase the DTC.
- *5: The A/C amplifier memorizes the DTC of the respective malfunction if it has occurred for the period of time indicated in the brackets.

ACTUATOR CHECK

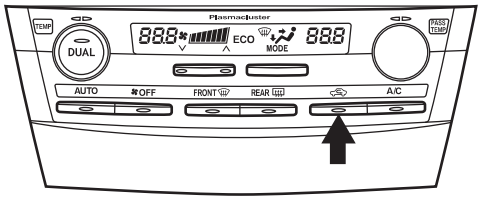
1. ACTUATOR CHECK

(a) Start the THS-II system.

(b) Perform the indicator check (See page AC-41).

(c) Push the "R/F" switch to perform the actuator check.
HINT:
Be sure to perform the actuator check after starting the THS-II system.

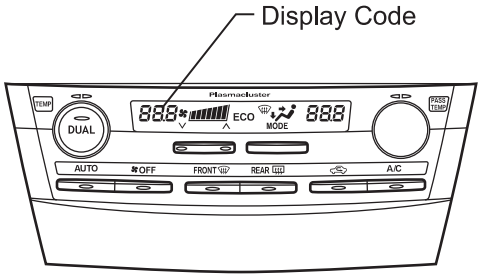
A/C Control Assembly:



H

E130397E04

A/C Control Assembly:



H

E130397E05

(d) As the actuator check is repeated from steps 1 to 10 at 1-second intervals, check the temperature and air flow visually and by hand.
HINT:
- The display blinks at 1-second intervals in the step operation.
- Push the "OFF" switch to finish panel diagnosis.
- Push the "AUTO" switch to enter the sensor check mode.

Step No.	Display Code	Conditions				
		Blower Level	Air Mix Damper	Airflow Vent	Air Inlet Damper	Compressor

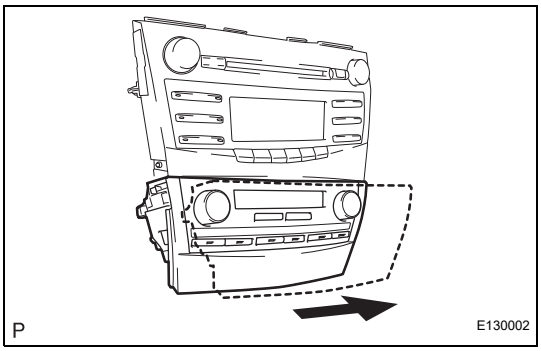
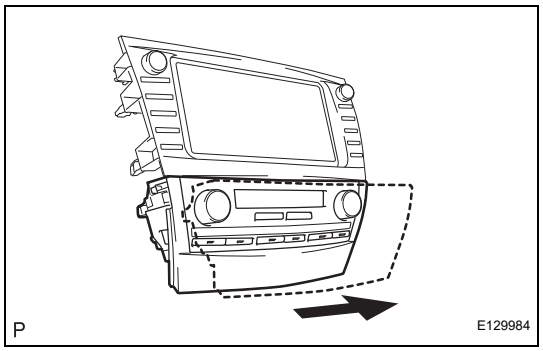
(e) If the steps are difficult to read because they change automatically, push the "MODE" switch to display the steps one at a time so that they can be read easily. The items are displayed step by step each time the "MODE" switch is pushed.
HINT:
- Push the "OFF" switch to finish panel diagnosis.
- Push the "R/F" switch to enter the sensor check mode.

REMOVAL

1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)**
2. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)**
3. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)**
4. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)**
5. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)**
6. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)**
7. **REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-16)**
8. **REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-136)**
9. **REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-193)**
10. **REMOVE RADIO NO. 1 BRACKET (w/o Navigation System) (See page AV-136)**
11. **REMOVE RADIO NO. 1 BRACKET (w/ Navigation System) (See page NS-193)**
12. **REMOVE RADIO NO. 2 BRACKET (w/o Navigation System) (See page AV-136)**
13. **REMOVE RADIO NO. 2 BRACKET (w/ Navigation System) (See page NS-193)**
14. **REMOVE AIR CONDITIONING CONTROL ASSEMBLY (w/o Navigation System)**
    (a) Remove the air conditioning control assembly as shown in the illustration.

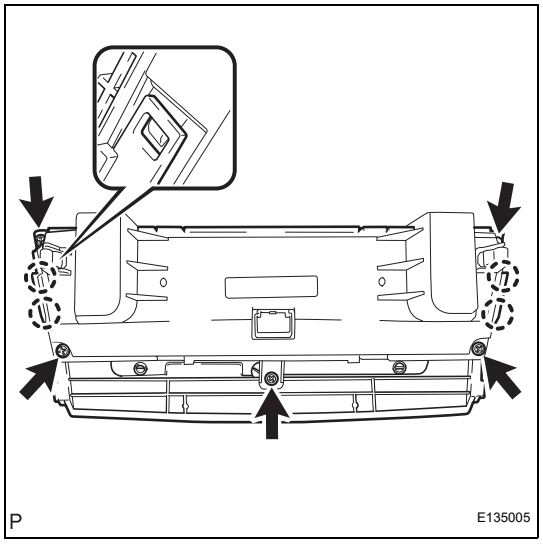




15. REMOVE AIR CONDITIONING CONTROL ASSEMBLY (w/ Navigation System)

(a) Remove the air conditioning control assembly as shown in the illustration.

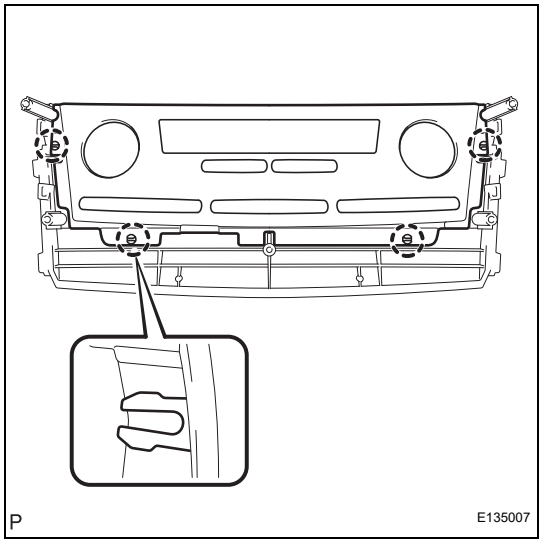
DISASSEMBLY



1. REMOVE AIR CONDITIONING PANEL SUB-ASSEMBLY

(a) Remove the 5 screws.

(b) Disengage the 4 claws and remove the air conditioning panel sub-assembly.

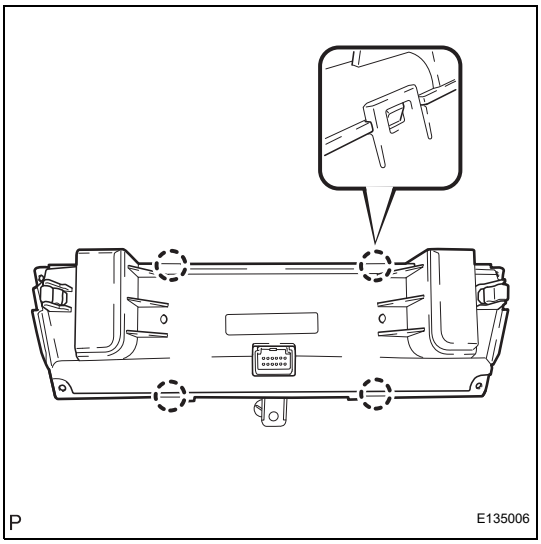


(c) Disengage the 4 claws and remove the ornament.

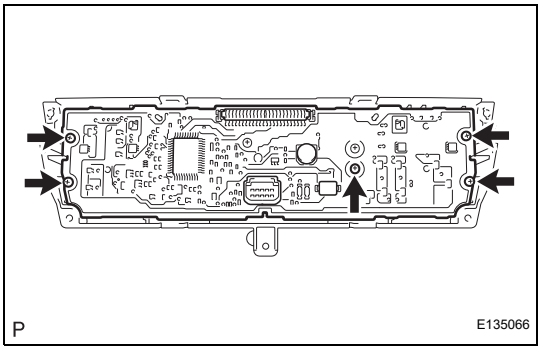
2. REMOVE CONTROL KNOB SUB-ASSEMBLY

NOTICE:

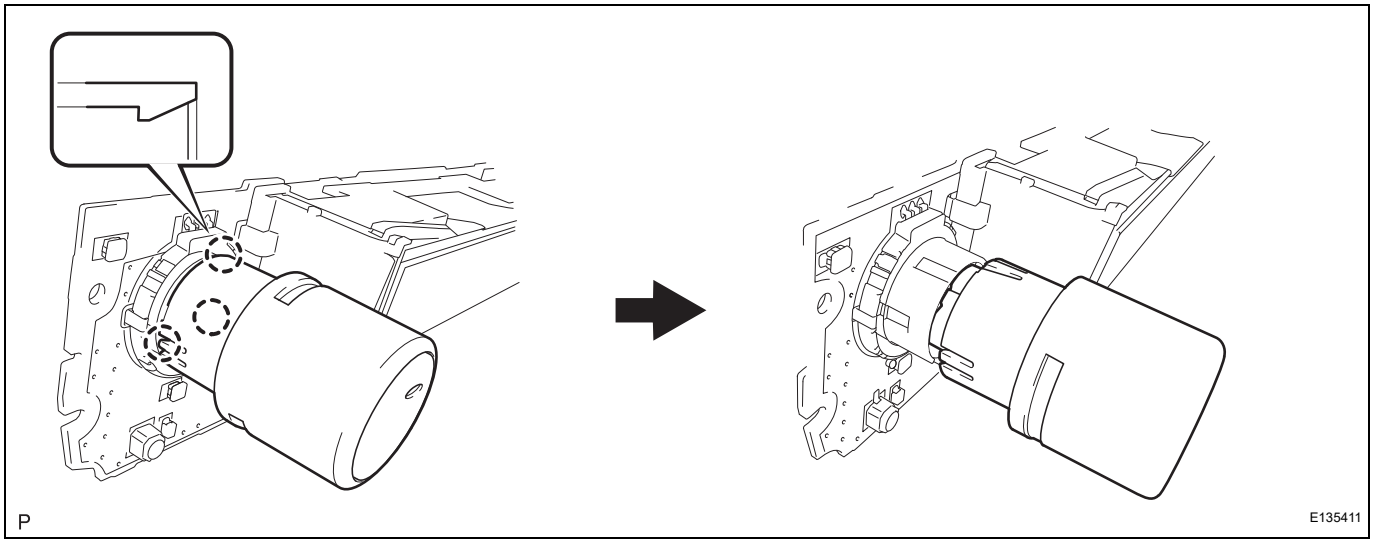
When disassembling the air conditioning control assembly, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

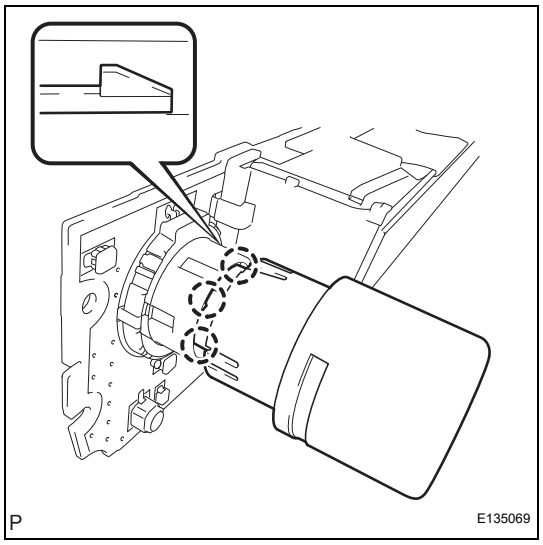


(a) Disengage the 4 claws and remove the control panel case.

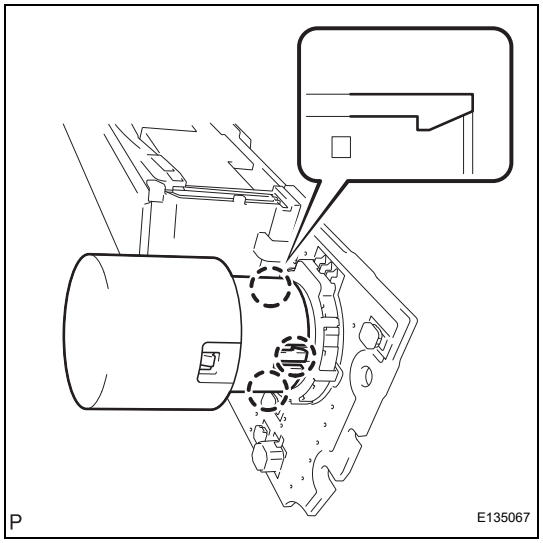


(b) Remove the 5 screws and switch control sub-assembly.
(c) Driver Side:
  (1) Disengage the 3 claws and pull the control knob sub-assembly to the position shown in the illustration.





(2) Disengage the 3 claws and remove the control knob sub-assembly.
HINT:
Remove the control knob sub-assembly and the dual push switch as a unit.



(d) Passenger Side:
(1) Disengage the 3 claws and remove the control knob sub-assembly.

REASSEMBLY

1. INSTALL CONTROL KNOB SUB-ASSEMBLY

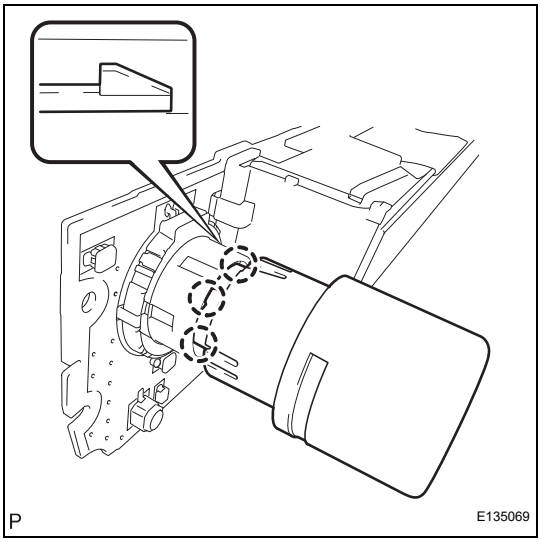
NOTICE:

When disassembling the air conditioning control assembly, eliminate static electricity by touching the vehicle body to prevent the components from being damaged.

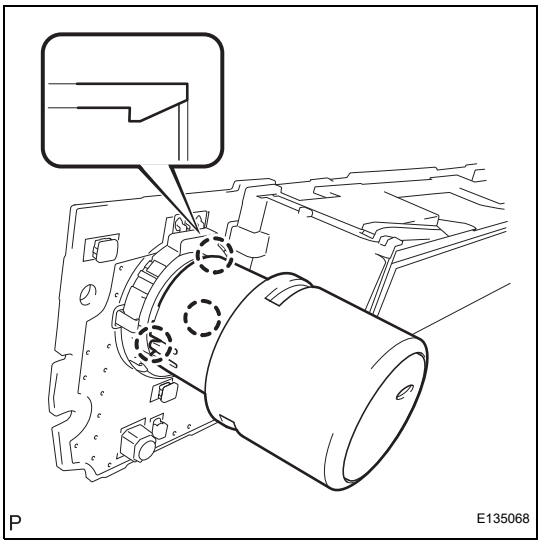
(a) Driver Side:

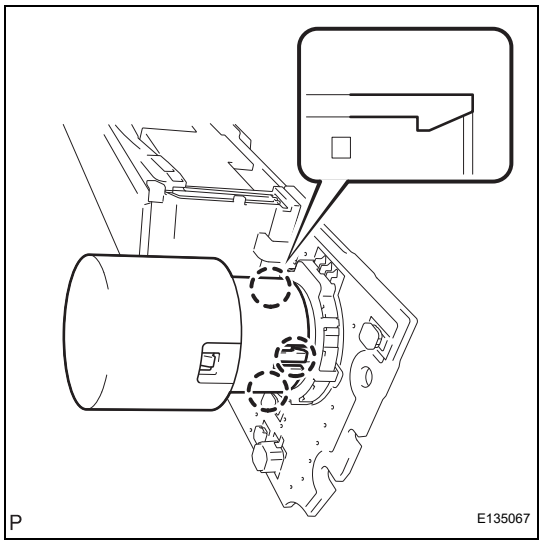
(1) Engage the dual push switch with dial on the switch control sub-assembly.

(2) Engage the 3 claws.

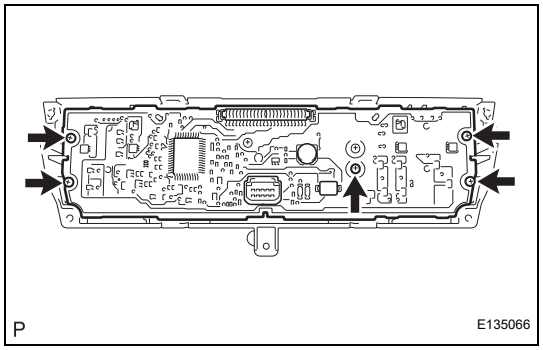


(3) Engage the 3 claws and install the control knob sub-assembly.

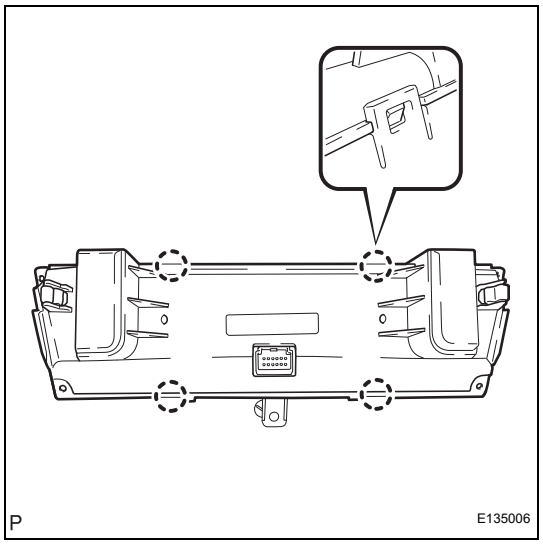




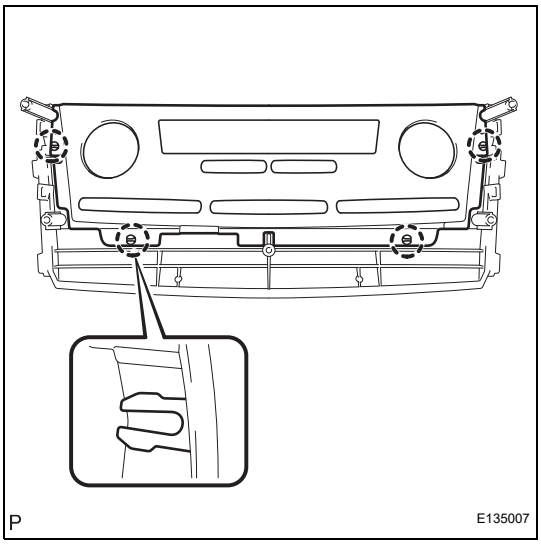
(b) Passenger Side:
(1) Engage the 3 claws and install the control knob sub-assembly.



(c) Install the switch control sub-assembly with the 5 screws.



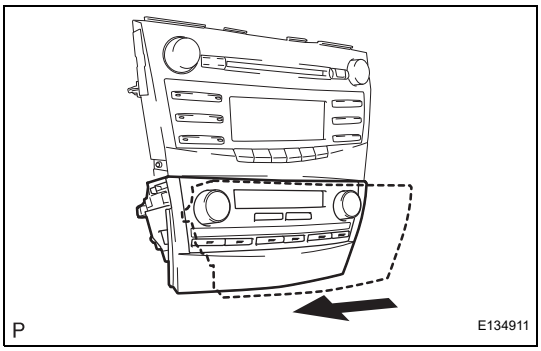
(d) Engage the 4 claws and install the control panel case.



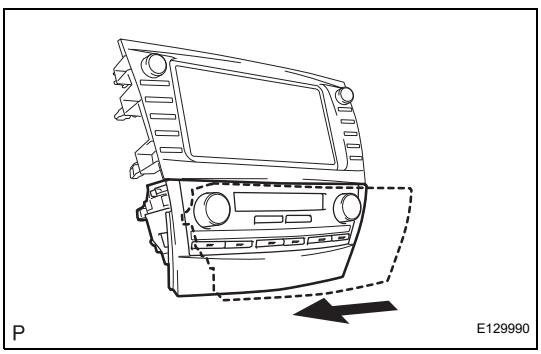
2. **INSTALL AIR CONDITIONING PANEL SUB-ASSEMBLY**
   (a) Engage the 4 claws and install the ornament.

   (b) Engage the 4 claws.
   (c) Install the air conditioning panel sub-assembly with the 5 screws.

INSTALLATION

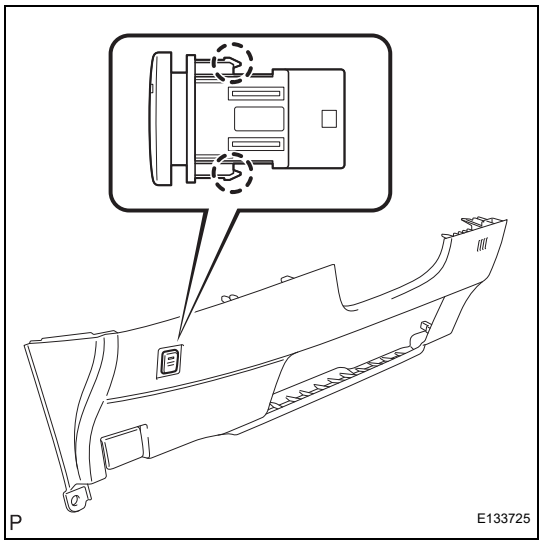


1. **INSTALL AIR CONDITIONING CONTROL ASSEMBLY (w/o Navigation System)**
   (a) Install the air conditioning control assembly as shown in the illustration.



2. **INSTALL AIR CONDITIONING CONTROL ASSEMBLY (w/ Navigation System)**
   (a) Install the air conditioning control assembly as shown in the illustration.
3. **INSTALL RADIO NO. 2 BRACKET (w/o Navigation System) (See page AV-137)**
4. **INSTALL RADIO NO. 2 BRACKET (w/ Navigation System) (See page NS-194)**
5. **INSTALL RADIO NO. 1 BRACKET (w/o Navigation System) (See page AV-137)**

6. INSTALL RADIO NO. 1 BRACKET (w/ Navigation System) (See page NS-194)
7. INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-137)
8. INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-194)
9. INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-31)
10. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)
11. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)
12. INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)
13. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
14. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
15. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)



INSTALLATION

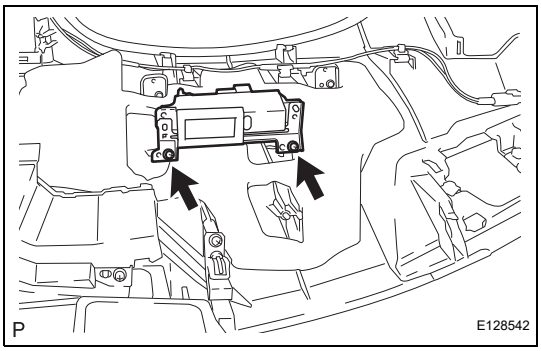
1. **INSTALL ECO SWITCH**
   (a) Engage the 2 claws to install the eco switch.
2. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**
3. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
4. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**

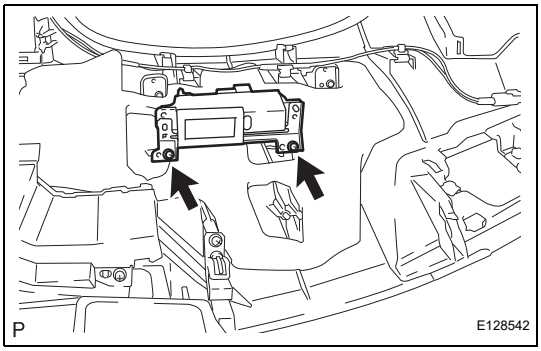
REMOVAL

1. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD
2. DISCONNECT NEGATIVE BATTERY TERMINAL
   NOTICE:
   Wait for 90 seconds after disconnecting the terminal to prevent the airbag from deploying (See page RS-1).
3. REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-345)
4. REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-345)
5. REMOVE STEERING PAD (See page RS-345)
6. REMOVE STEERING WHEEL ASSEMBLY (See page SR-36)
7. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)
8. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)
9. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)
10. REMOVE STEERING COLUMN COVER (See page IP-12)
11. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-37)
12. REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-12)
13. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)
14. REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-13)
15. REMOVE COMBINATION METER ASSEMBLY (See page IP-13)
16. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)
17. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)
18. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-13)
19. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)
20. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)
21. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)

22. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
23. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)
24. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)
25. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)
26. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-16)
27. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-136)
28. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-193)
29. REMOVE CONSOLE BOX POCKET (See page IP-17)
30. REMOVE CONSOLE BOX CARPET (See page IP-17)
31. REMOVE CONSOLE BOX ASSEMBLY (See page IP-17)
32. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-18)
33. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (See page IP-18)
34. REMOVE FRONT PILLAR GARNISH LH (See page IR-16)
35. REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-18)
36. REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-19)
37. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)
38. REMOVE FRONT PILLAR GARNISH RH (See page IR-16)
39. REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-19)
40. REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-19)
41. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-19)
42. REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-20)
43. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY

44. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (See page IP-20)**
45. **REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT (See page IP-22)**
46. **REMOVE NO. 1 HEATER TO REGISTER DUCT (See page IP-23)**
47. **REMOVE PLASMACLUSTER**
    (a) Remove the 2 screws and plasmacluster.





INSTALLATION

1. **INSTALL PLASMACLUSTER**
   (a) Install the plasmacluster with the 2 screws.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
2. **INSTALL NO. 1 HEATER TO REGISTER DUCT (See page IP-24)**
3. **INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT (See page IP-25)**
4. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (See page IP-25)**
5. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY**
6. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-28)**
7. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)**
8. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-28)**
9. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-28)**
10. **INSTALL FRONT PILLAR GARNISH LH (See page IR-38)**
11. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-28)**
12. **INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-29)**
13. **INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-29)**
14. **INSTALL FRONT PILLAR GARNISH RH (See page IR-39)**

15. INSTALL NO. 1 CONSOLE BOX INSERT FRONT (See page IP-29)
16. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-30)
17. INSTALL CONSOLE BOX ASSEMBLY (See page IP-30)
18. INSTALL CONSOLE BOX CARPET (See page IP-30)
19. INSTALL CONSOLE BOX POCKET (See page IP-30)
20. INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-137)
21. INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-194)
22. INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-31)
23. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)
24. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)
25. INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)
26. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
27. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
28. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)
29. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-33)
30. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-33)
31. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)
32. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-42)
33. INSTALL COMBINATION METER ASSEMBLY (See page IP-33)
34. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-34)
35. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-34)
36. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-34)

37. **INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY**
38. **ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-360)**
39. **INSTALL STEERING COLUMN COVER (See page IP-35)**
40. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**
41. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
42. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**
43. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-42)**
44. **INSTALL STEERING PAD (See page RS-346)**
45. **INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-347)**
46. **INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-347)**
47. **CONNECT NEGATIVE BATTERY TERMINAL**

ECM	Center Airbag Sensor Assembly	Engine speed signal	

SYSTEM DESCRIPTION

1. GENERAL

(a) In conjunction with impact absorbing structure for a front collision, the SRS (Supplemental Restraint System) driver airbag, front passenger airbag, and driver side knee airbag were designed to supplement seat belts in the event of a front collision in order to help reduce shock to the head and chest of the driver and front passenger and knee of the driver. This system is a 3-sensor type airbag system to detect the impact during a front collision using the center airbag sensor assembly and front airbag sensors. It also operates the airbag system and seat belt pretensioner.

(b) In order to detect the extent of the collision during the initial stages of the collision in further details, the front airbag sensors have been changed from mechanical type to electrical type deceleration sensors. Accordingly, the deployment of the driver airbag and front passenger airbag is controlled in two stages according to the severity of the impact.

(c) In conjunction with impact absorbing structure for a side collision, the side airbag and curtain shield airbag were designed to help reduce shock to the driver, front passenger, and rear outer passengers in the event of a side collision.

(d) The curtain shield airbag that helps reduce shock to the front and rear seat occupants with a single curtain shield airbag has been adopted. In conjunction with this system, the side airbag sensors have been installed at the bottom of the center pillars and the rear airbag sensors have been installed at the bottom of the rear pillars.

(e) In this system, a front side collision is detected by the side airbag sensor in order to simultaneously deploy the side and curtain shield airbags. A rear side collision is detected by the rear airbag sensor and the center airbag sensor assembly in order to deploy the curtain shield airbag.

(f) The center airbag sensor assembly sends the airbag deployment signal to the hybrid vehicle control ECU through CAN (Controller Area Network) to operate the fuel pump control.

(g) The center airbag sensor assembly sends the airbag deployed signal to cut the hybrid system's high voltage.

2. CONSTRUCTION AND OPERATION

(a) FRONT AIRBAG SENSOR

(1) The front airbag sensors are installed on the right and left radiator supports respectively.

(2) The front airbag sensor consists of the deceleration sensor.

(3) The deceleration sensor is built into the front airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a frontal collision. Accordingly, the extent of the initial collision can be detected in detail.

(b) SIDE AIRBAG SENSOR
(1) The side airbag sensors are installed on the bottom of the right and left center pillars respectively.
(2) The side airbag sensor consists of the deceleration sensor and ignition control circuit.
(3) The deceleration sensor is built into the side airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a front side collision. Accordingly, the extent of the initial collision can be detected in detail.

(c) REAR AIRBAG SENSOR
(1) The rear airbag sensors are installed on the right and left rear pillars respectively.
(2) The rear airbag sensor consists of the deceleration sensor and ignition control circuit.
(3) The deceleration sensor is built into the rear airbag sensor, and the distortion that is created in the sensor is converted into an electric signal based on the vehicle deceleration rate during a rear side collision. Accordingly, the extent of the initial collision can be detected in detail.

(d) CENTER AIRBAG SENSOR ASSEMBLY
(1) General
- The center airbag sensor assembly is installed on the center floor under the instrument panel.
- The center airbag sensor assembly consists of the deceleration sensor, safing sensor, electronic safing sensor, ignition control circuit, and diagnostic circuit.
- The center airbag sensor assembly receives signals from the deceleration sensor and safing sensor built into the center airbag sensor assembly and front airbag sensor. Then the center airbag sensor assembly determines whether the driver airbag, front passenger airbag, driver side knee airbag, and front seat belt pretensioners should be activated, and diagnoses system malfunctions.
- The center airbag sensor assembly causes the front seat side airbag assembly and the curtain shield airbag assembly to deploy when receiving signals from the side airbag sensor.

- The center airbag sensor assembly receives signals from the deceleration sensor and the electronic safing sensor built into the center airbag sensor assembly and the rear airbag sensor, and determines whether the curtain shield airbag should be activated, and diagnoses system malfunctions.
- The center airbag sensor assembly sends the airbag deployment signal to the ECM through CAN to operate the fuel pump control.
- The center airbag sensor assembly sends the airbag deployed signal to cut the hybrid system's high voltage.

(2) Deceleration sensor and ignition control circuit
- The deceleration sensor is built into the center airbag sensor assembly.
- The ignition control circuit performs calculations based on the signal output from the deceleration sensors of the center airbag sensor assembly and front airbag sensor. If the calculated values are greater than the specified values, it activates ignition operation.

(3) Safing sensor
- The safing sensor is built into the center airbag sensor assembly. During a front collision, the sensor turns on and outputs an ON signal to the center airbag sensor assembly if a deceleration rate sent to the safing sensor is greater than the specified value.

(4) Electronic safing sensor
- The electronic safing sensor is built into the center airbag sensor assembly. During a side collision, the sensor turns on and outputs an ON signal to the center airbag sensor assembly if a deceleration rate sent to the electronic safing sensor is greater than the specified value.

(5) Backup power source
- The backup power source consists of a power supply capacitor and a DC-DC converter. When the power system does not function during a collision, the power supply capacitor discharges and supplies electric power to the system. The DC-DC converter operates as a boosting transformer when the battery voltage falls below a predetermined level.

(6) Diagnostic circuit
- This circuit constantly diagnoses system malfunctions. When a malfunction is detected, it turns on the SRS warning light on the combination meter assembly to inform the driver.

(7) Memory circuit
- When a malfunction is detected in the diagnostic circuit, it is coded and stored in the memory circuit.

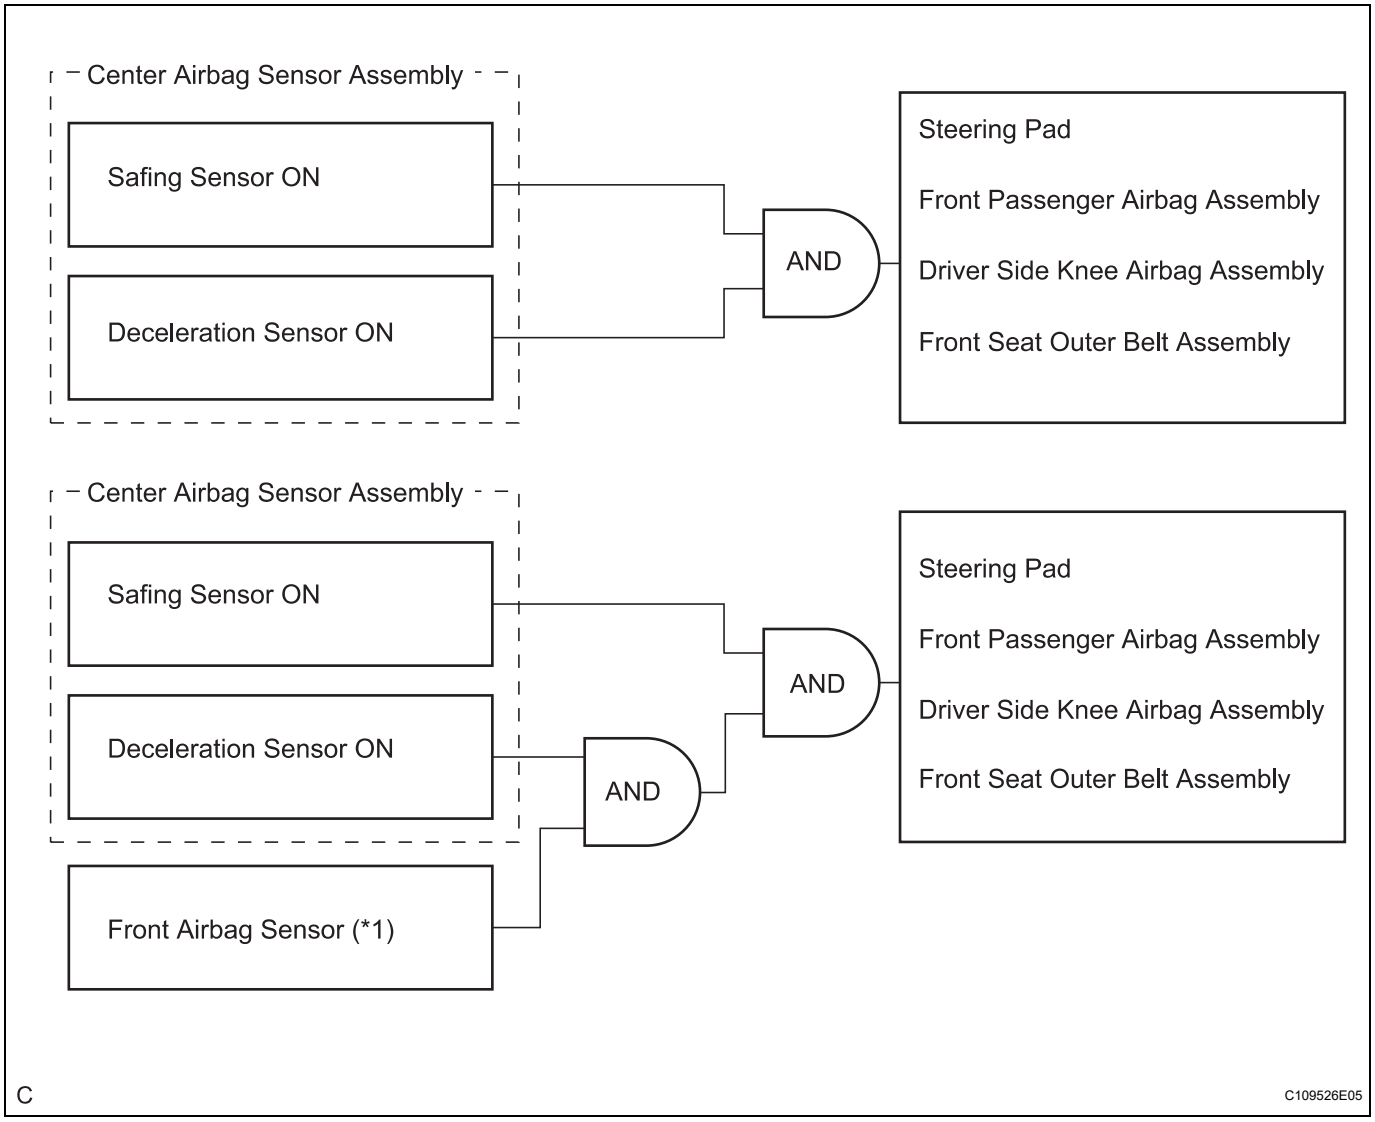
(e) SRS WARNING LIGHT

(1) The SRS warning light is located on the combination meter assembly. It comes on to inform the driver of system trouble when a malfunction is detected in self-diagnosis of the center airbag sensor assembly. Under normal operating conditions when the power switch is turned on (IG), it comes on for approximately 6 seconds and then goes off.

3. DEPLOYMENT CONDITION

When the vehicle collides and the shock is greater than the specified value, the SRS is activated automatically. The center airbag sensor assembly includes the safing sensor and deceleration sensor. The safing sensor is designed to turn on at a smaller deceleration rate than the deceleration sensor.

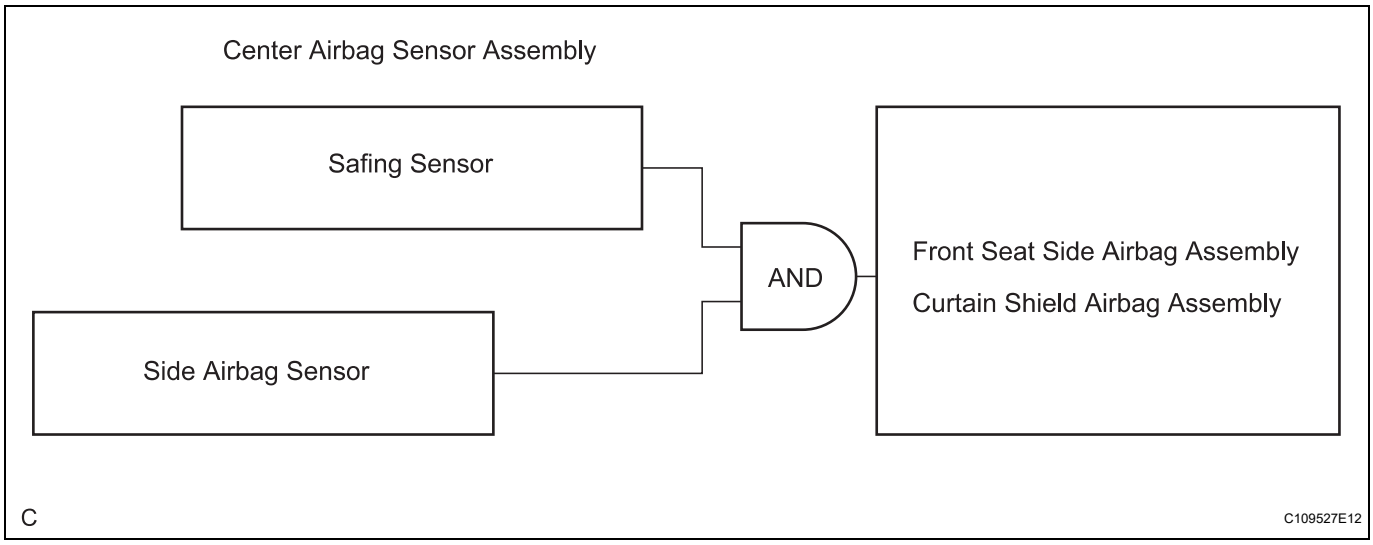
(a) The center airbag sensor assembly determines whether ignition is necessary based on signals from the deceleration sensor and the front airbag sensor (*1). If the safing sensor turns on simultaneously, current flows to the squibs to deploy the SRS as shown in the illustration below.



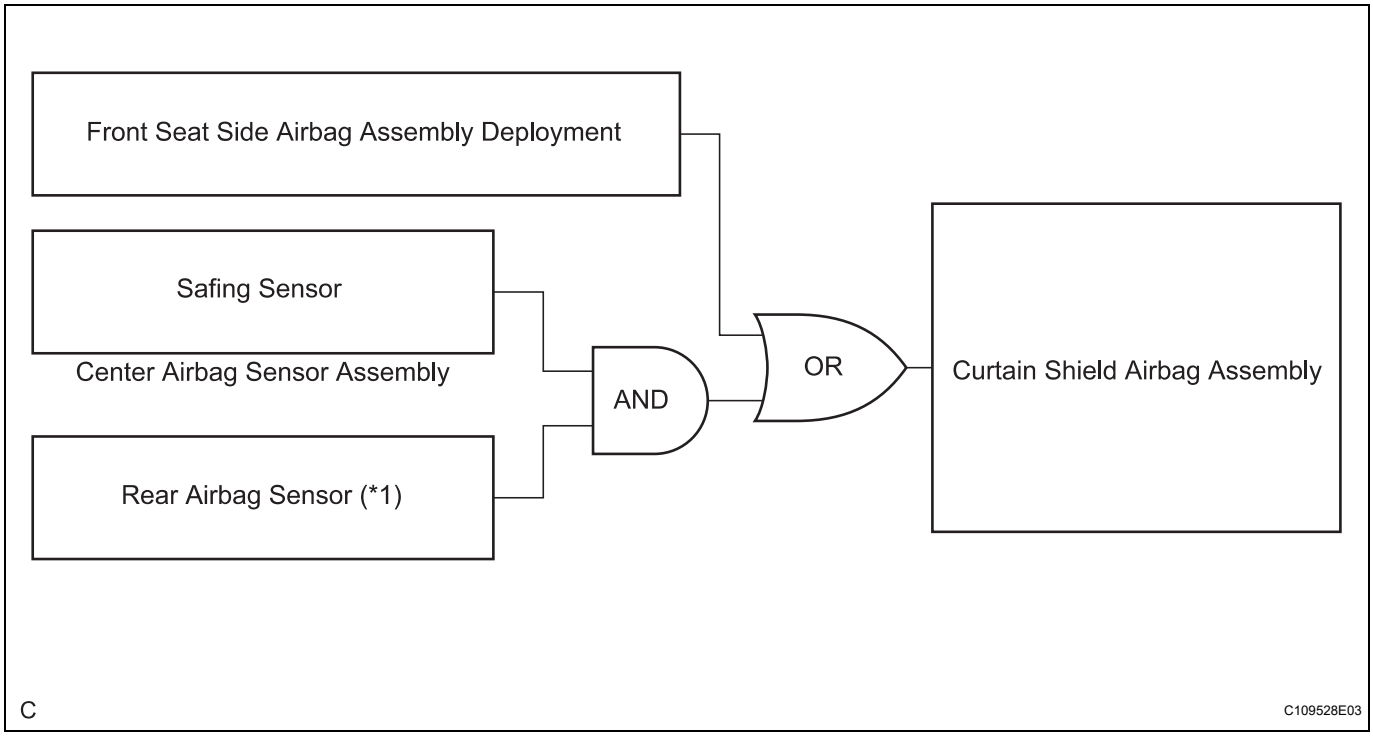
HINT:

*1: In case of front collision, the ignition signal could be output with the deceleration sensor ON signal even without a signal from the front airbag sensor.

(b) The center airbag sensor assembly determines whether ignition is necessary based on signals from the side airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below.



(c) The center airbag sensor assembly determines whether ignition is necessary based on signals from the rear airbag sensor. If the safing sensor turns on simultaneously, current flows to the squib to deploy the SRS as shown in the illustration below (*1).



HINT:
*1: If the front seat side airbag assembly deploys, the curtain shield airbag assembly will also deploy, regardless of whether the signal is output from the rear airbag sensor.

HOW TO PROCEED WITH TROUBLESHOOTING

The intelligent tester can be used in steps 3, 5, 7, 9, and 10.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 CUSTOMER PROBLEM ANALYSIS

(a) Confirm problem symptoms (See page IN-72).

NEXT

3 CHECK CAN COMMUNICATION SYSTEM

(a) Check for DTC outputs (See page CA-22).
HINT:
The center airbag sensor assembly is connected to the CAN communication system. Therefore, before starting troubleshooting, make sure to check that there is no trouble in the CAN communication system.

PROBLEM SYMPTOMS TABLE

HINT:
Proceed to the troubleshooting for each circuit in the table below.

AIRBAG SYSTEM:

Symptom	Suspected Area	See page
The SRS warning light goes off after the primary check, but comes on.	SRS Warning Light Remains ON	RS-222
With the power switch on (IG), the SRS warning light sometimes comes on after approximately 6 seconds.	SRS Warning Light Remains ON	RS-222
The SRS warning light always comes on even when DTC is not output.	SRS Warning Light Remains ON	RS-222
With the power switch on (IG), the SRS warning light does not come on.	SRS Warning Light does not Come On	RS-227
Although an SRS warning light operates normally, DTC or a normal system code is not displayed.	Diagnosis Circuit	RS-230
Although terminals TC and CG of DLC3 are not connected, DTC or a normal system code is displayed.	Diagnosis Circuit	RS-230

TERMINALS OF ECU

1. CENTER AIRBAG SENSOR ASSEMBLY

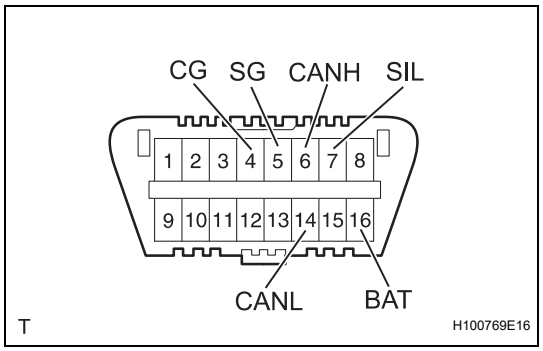
N1-7	ICD+	Curtain shield airbag assembly LH (Driver side curtain shield squib)
N1-8	BBD+	Side airbag sensor LH
N1-9	SFD+	Front seat side airbag assembly LH (Front driver side - side squib)
N1-10	SFD-	Front seat side airbag assembly LH (Front driver side - side squib)
N1-11	DBE+	Front seat inner belt assembly LH (Driver side seat belt buckle switch)
N1-12	DBE-	Front seat inner belt assembly LH (Driver side seat belt buckle switch)
N1-13	DSP-	Seat position airbag sensor
N1-14	DSP+	Seat position airbag sensor
N1-15	BBD-	Side airbag sensor LH
O1-4	PP+	Front seat outer belt assembly RH (Front passenger side pretensioner squib)
O1-5	PP-	Front seat outer belt assembly RH (Front passenger side pretensioner squib)
O1-6	SFP-	Front seat side airbag assembly RH (Front passenger side - side squib)
O1-7	SFP+	Front seat side airbag assembly RH (Front passenger side - side squib)
O1-8	BBP+	Side airbag sensor RH
O1-9	ICP+	Curtain shield airbag assembly RH (Front passenger side curtain shield squib)
O1-10	ICP-	Curtain shield airbag assembly RH (Front passenger side curtain shield squib)
O1-11	BBP-	Side airbag sensor RH
O1-12	FSP+	Occupant classification ECU
O1-13	FSP-	Occupant classification ECU



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

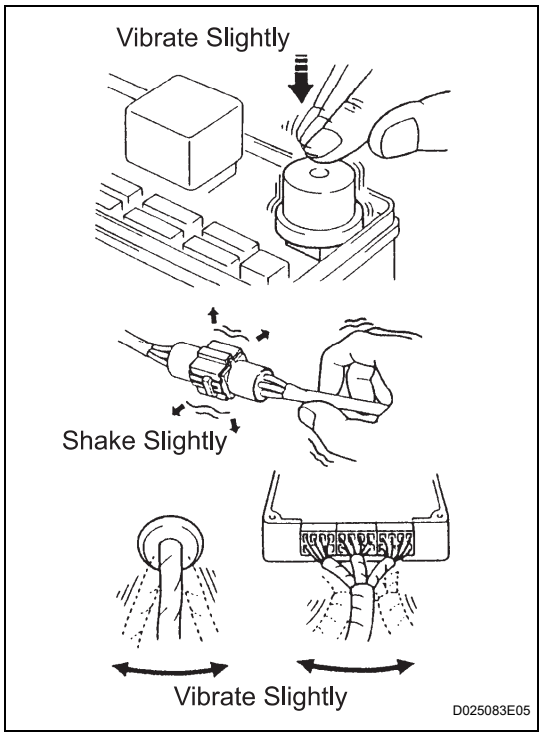
Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off (*)	54 to 69 Ω
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off (*)	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off (*)	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off (*)	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off (*)	200 Ω or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.
HINT:
If the display shows a communication error message when connecting the cable of the intelligent tester to the DLC3, turning the power switch on (IG) and operating the intelligent tester, there is a problem on the vehicle side or tester side.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

2. SYMPTOM SIMULATION

HINT:
The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be reproduced. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation.
This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.
HINT:
Perform the simulation method only during the primary check period (for approximately 6 seconds after the power switch is turned on (IG)).
(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.
HINT:
Shaking the relays too strongly may result in open relays.
(2) Slightly shake the connector vertically and horizontally.
(3) Slightly shake the wire harness vertically and horizontally.
The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

3. FUNCTION OF SRS WARNING LIGHT

(a) Primary check.
(1) Turn the power switch off. Wait for at least 2 seconds, then turn the power switch on (IG). The SRS warning light comes on for approximately 6 seconds and the diagnosis of the airbag system (including the seat belt pretensioners) is performed.
HINT:
If trouble is detected during the primary check, the SRS warning light remains on even after the primary check period (for approximately 6 seconds) has elapsed.

(b) Constant check.
(1) After the primary check, the center airbag sensor assembly constantly monitors the airbag system for trouble.
HINT:
If trouble is detected during the constant check, the center airbag sensor assembly functions as follows:
- The SRS warning light comes on.
- The SRS warning light goes off, and then comes on. This blinking pattern indicates a source voltage drop. The SRS warning light goes off 10 seconds after the source voltage returns to normal.

(c) Review.
(1) When the airbag system is normal:
The SRS warning light comes on only during the primary check period (for approximately 6 seconds after the power switch is turned on (IG)).
(2) When the airbag system has trouble:
- The SRS warning light remains on even after the primary check period has elapsed.

- The SRS warning light goes off after the primary check, but comes on again during the constant check.
- The SRS warning light does not come on when turning the power switch from off to on (IG).

HINT:
The center airbag sensor assembly keeps the SRS warning light on if the airbag has been deployed.
