
4. SRS WARNING LIGHT CHECK

(a) Turn the power switch on (IG), and check that the SRS warning light comes on for approximately 6 seconds (primary check).

(b) Check that the SRS warning light goes off approximately 6 seconds after the power switch is turned on (IG) (constant check).

HINT:
When any of the following symptoms occur, refer to "Problem Symptoms Table" (See page RS-30).

- The SRS warning light comes on occasionally, after the primary check period has elapsed.
- The SRS warning light comes on, but a DTC is not output.
- The power switch is turned from off to on (IG), but the SRS warning light does not come on.

5. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check

(1) Turn the power switch on (IG).

(2) The passenger airbag ON/OFF indicator comes on for approximately 4 seconds, then goes off for approximately 2 seconds.

(3) Approximately 6 seconds after the power switch is turned on (IG), the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.

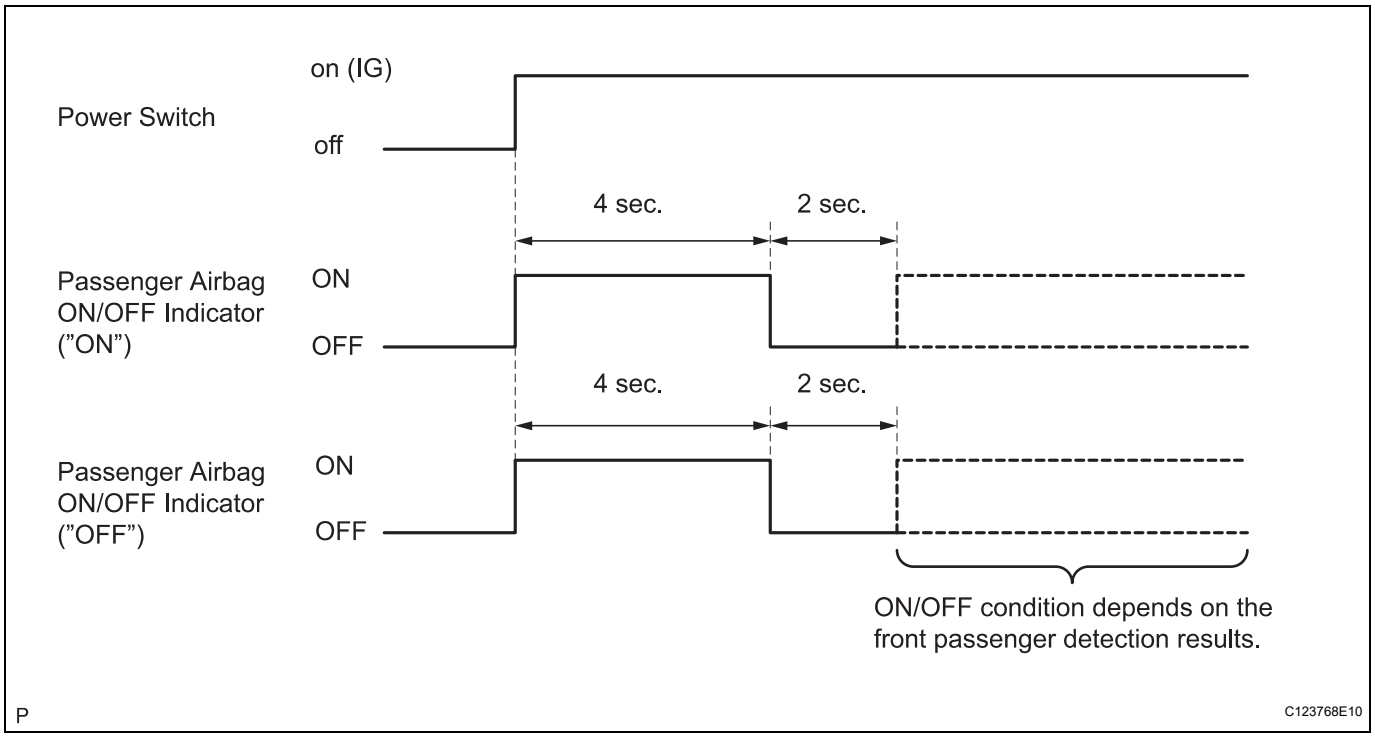
Condition	"ON" indicator	"OFF" indicator
Vacant	OFF	OFF
Adult is seated. (Above 36 kg (79.37 lb))	ON	OFF
Child is seated. (Less than 36 kg (79.37 lb))	OFF	ON
Child restraint system is set. (*)	OFF	ON
Front passenger occupant classification failure	OFF	ON

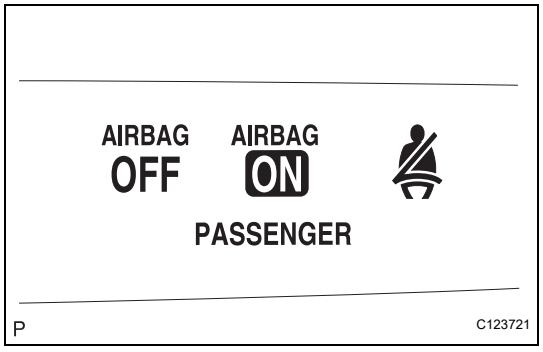
*: Child restraint system (less than 7 kg (15.43 lb)) and passenger side buckle switch is ON, then 7 to 36 kg (15.43 to 79.37 lb) is set.

HINT:

- The passenger airbag ON/OFF indicator is based on the timing chart below in order to check the indicator light circuit.

- When the front passenger occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in "AIRBAG SYSTEM" first. Then troubleshoot the occupant classification system if DTC B1650/32 is detected, and troubleshoot the passenger airbag ON/OFF indicator if DTC B1660/43 is detected.





6. PASSENGER AIRBAG ON/OFF INDICATOR CHECK

(a) Turn the power switch on (IG).

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
HINT:
Refer to the table in the previous step regarding the passenger airbag ON/OFF indicator when the power switch is turned on (IG) and approximately 6 seconds pass.

7. ACTIVATION PREVENTION MECHANISM

(a) FUNCTION OF ACTIVATION PREVENTION MECHANISM

(1) An activation prevention mechanism is built into the connector (on the center airbag sensor assembly side) of the airbag system squib circuit to prevent accidental airbag activation.

(2) This mechanism closes the circuit when the connector is disconnected by bringing the short spring into contact with the terminals and shutting off external electricity to prevent accidental airbag activation.

(b) RELEASE METHOD OF ACTIVATION PREVENTION MECHANISM

(1) To release the activation prevention mechanism, insert a piece of paper with the same thickness as the male terminal (approximately 0.5 mm (0.020 in.)) between the terminals and the short spring to break the connection.

(2) Refer to the following illustrations concerning connectors utilizing the activation prevention mechanism and its release method.

CAUTION:

Never release the activation prevention mechanism on the squib connector even when inspecting with the squib disconnected.

NOTICE:

- **Do not release the activation prevention mechanism unless specially directed by the troubleshooting procedure.**
- **To prevent the terminal and the short spring from being damaged, always use a piece of paper with the same thickness as the male terminal.**

DTC CHECK / CLEAR

1. DTC CHECK (USING SST CHECK WIRE)

(a) Check the DTCs (Present trouble code).

(1) Turn the power switch on (IG), and wait for approximately 60 seconds.

(2) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(b) Check the DTCs (Past trouble code).

(1) Using SST, connect terminals TC and CG of the DLC3.

SST 09843-18040

NOTICE:

Connect the terminals to the correct positions to avoid a malfunction.

(2) Turn the power switch on (IG), and wait for approximately 60 seconds.

(c) Read the DTCs.

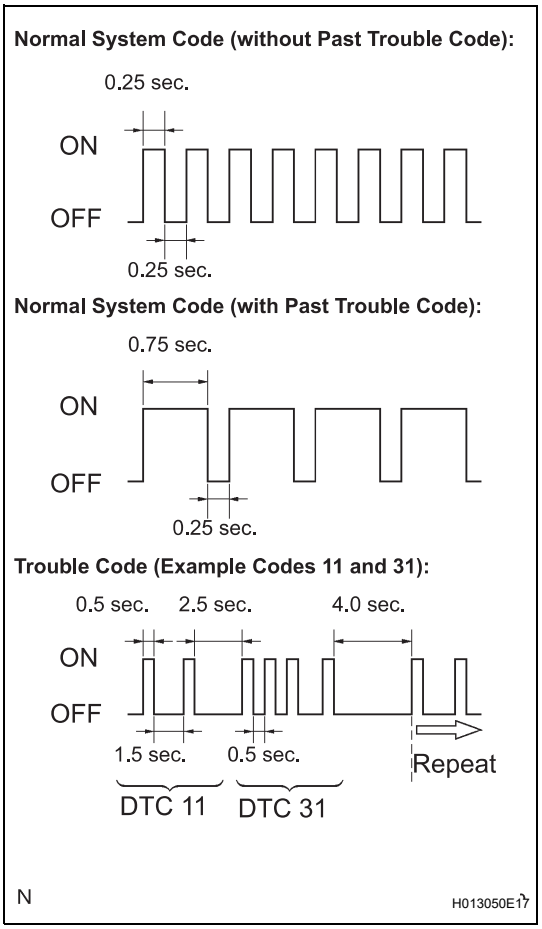
(1) Read the blinking patterns of the DTCs. As examples, the blinking patterns for the normal system code and trouble codes 11 and 31 are shown in the illustration.

- Normal system code indication (without past trouble code)
  The light blinks twice per second.
- Normal system code indication (with past trouble code)
  When the past trouble code is stored in the center airbag sensor assembly, the light blinks only once per second.
- Trouble code indication
  The first blinks indicates the first DTC. The second blinks occurs after a 1.5-second pause.

If there are more than 1 code, there will be a 2.5-second pause between each code. After all codes are shown, there will be a 4.0-second pause, and then they will all be repeated.

HINT:

- If 2 or more malfunctions are found, the indication begins with the smaller numbered code.
- If DTCs are indicated without connecting the terminals, proceed to "Diagnosis Circuit" (See page RS-230).



2. DTC CLEAR (USING SST CHECK WIRE)

(a) Clear the DTCs.

(1) When the power switch is turned off, the DTCs are cleared.
HINT:
Depending on the DTC, the code may not be cleared by turning off the power switch. In this case, proceed to the next procedure.

(2) Using SST, connect terminals TC and CG of the DLC3, and then turn the power switch on (IG).
SST 09843-18040

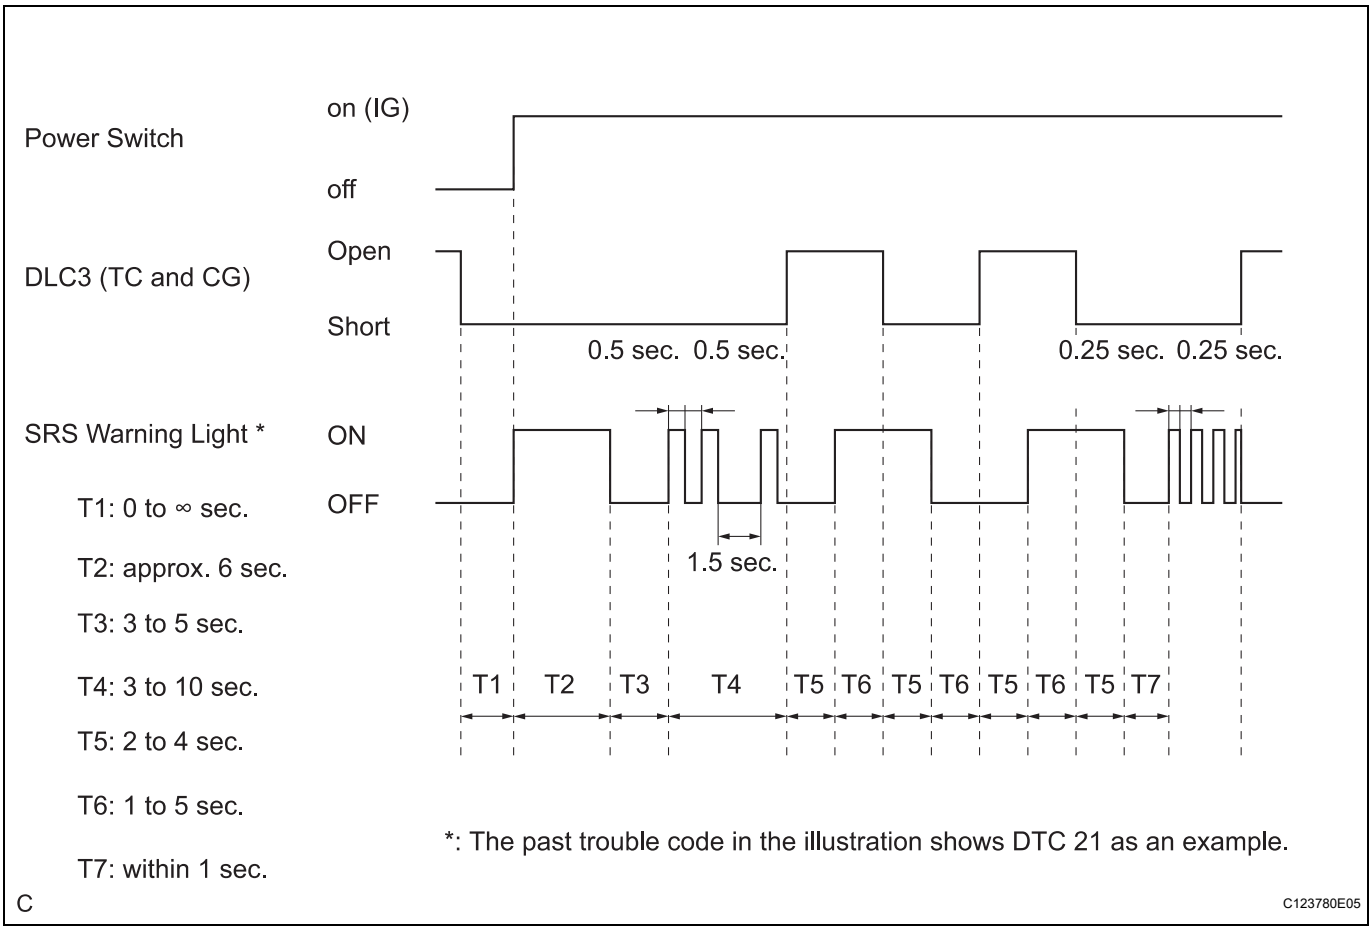
(3) Disconnect terminal TC of the DLC3 within 3 to 10 seconds after the DTCs are output, and check if the SRS warning light comes on after 3 seconds.

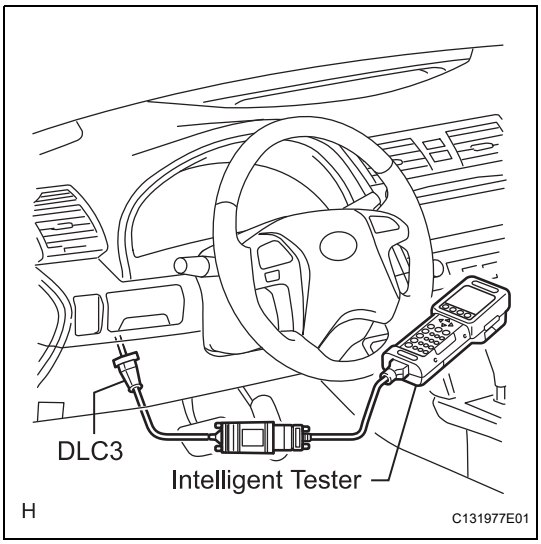
(4) Within 2 to 4 seconds after the SRS warning light comes on, connect terminals TC and CG of the DLC3.

(5) The SRS warning light should go off within 2 to 4 seconds after connecting terminals TC and CG of the DLC3. Then, disconnect terminal TC within 2 to 4 seconds after the SRS warning light goes off.

(6) The SRS warning light comes on again within 2 to 4 seconds after disconnecting terminal TC. Then, reconnect terminals TC and CG within 2 to 4 seconds after the SRS warning light comes on.

(7) Check if the SRS warning light goes off within 2 to 4 seconds after connecting terminals TC and CG of the DLC3. Also check if the normal system code is output within 1 second after the SRS warning light goes off.
If DTCs are not cleared, repeat this procedure until the codes are cleared.

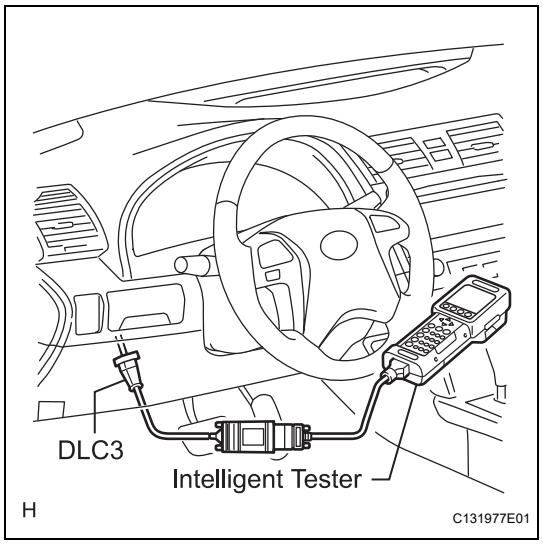




3. DTC CHECK

(a) Check the DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the power switch on (IG).
(3) Check the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

(b) Clear the DTCs.
(1) Connect the intelligent tester to the DLC3.
(2) Turn the power switch on (IG).
(3) Clear the DTCs by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.



CHECK MODE PROCEDURE

1. CHECK MODE (SIGNAL CHECK): DTC CHECK

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG).

(c) Select "SIGNAL CHECK", and proceed with checking using the intelligent tester.

NOTICE:

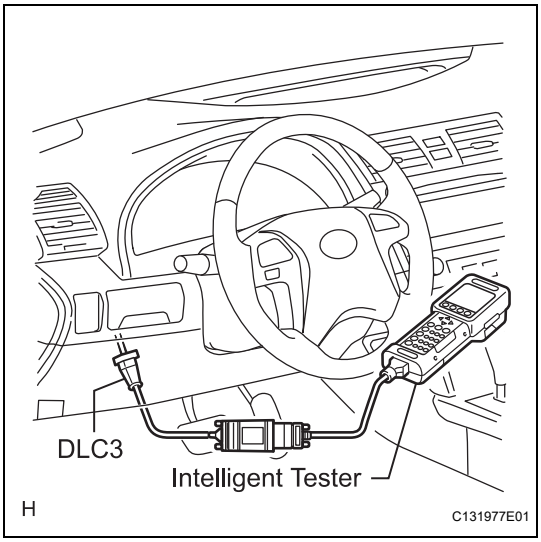
Select "SIGNAL CHECK" from the "DTC CHECK" screen displayed on the intelligent tester to clear the output DTCs (both present and past).

HINT:

- DTCs can be detected more sensitively in check mode than in normal diagnosis mode.
- Perform check mode inspection when a malfunction in each squib circuit is suspected even after the normal system code is output through normal diagnosis mode inspection.

DATA LIST / ACTIVE TEST

HINT:
By accessing the DATA LIST displayed on the intelligent tester, you can perform such functions as reading the values of switches and sensors without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method to save labor time.



1. DATA LIST FOR CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / SRS AIRBAG / DATA LIST.
(e) Check the values by referring to the table below.

DATA LIST:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D SEAT POSITION	Driver Seat Position/ FORWARD: Seat position is forward BKWARD: Seat position is backward FAIL: Failure detected	FORWARD/BKWARD	-
PASSENGER CLASS	Passenger Classification/ NG: Data is not determined OFF: Vacant CHILD: Child (less than 36 kg (79.37 lb)) is seated AF05: Adult (36 to 54 kg (79.37 to 119.05 lb) is seated AM50: Adult (more than 54 kg (119.05 lb)) is seated FAIL: A failure is detected	OFF/CHILD/AF05/AM50	-
D BUCKLE SW	Driver Buckle SW/ UNSET: The seat belt is not fastened SET: The seat belt is fastened NG: Data is not determined	UNSET/SET	-
P BUCKLE SW	Passenger Buckle SW/ UNSET: The seat belt is not fastened SET: The seat belt is fastened NG: Data is not determined	UNSET/SET	-
PAST CODES	Number of Past DTC/ Min.: 0, Max.: 255	0	-

TYPE INFO:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
DISPLAY TYPE	Display Type Information/ LR: The display is indicated by LH/RH DP: The display is indicated by Driver/Passenger	DP	-

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the circuit listed for the code in the table below (refer to the appropriate page).

HINT:

- When the SRS warning light remains on and the DTC output is the normal system code, a voltage source drop is likely to occur. This malfunction is not stored in the memory by the center airbag sensor assembly. If the power source voltage returns to normal, the SRS warning light will automatically go off.
- When 2 or more codes are indicated, the code with the lower number appears first.
- If a code is not listed on the display chart, the center airbag sensor assembly may have failed.
- In the case of any malfunction concerning an open circuit, short to ground, or short to B+ due to a squib, other trouble codes may not be detected. In this case, repair the malfunction currently indicated and then perform malfunction diagnosis again.
- Mark in the check mode column:
  *1: DTC is not corresponding to the check mode.
  *2: DTC is corresponding to the check mode.

DTC	B1000/31	Center Airbag Sensor Assembly Malfunction

DESCRIPTION

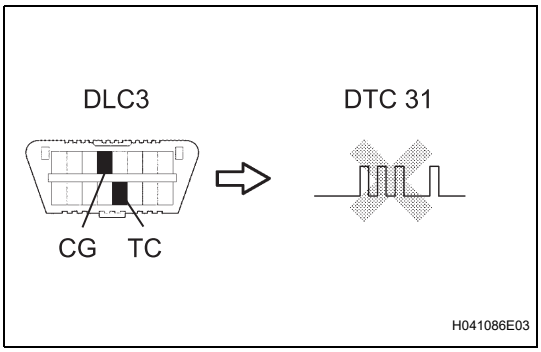
The center airbag sensor assembly consists of the deceleration sensor, the safing sensor, the drive circuit, the diagnosis circuit, the ignition control, etc.
If the center airbag sensor assembly receives signals from the deceleration sensor, it determines whether the SRS should be activated.
DTC B1000/31 is recorded when a malfunction is detected in the center airbag sensor assembly.

DTC No.	DTC Detecting Condition	Trouble Area
B1000/31	Center airbag sensor assembly malfunction	Center airbag sensor assembly

HINT:
When a trouble code is displayed simultaneously with B1000/31, repair the malfunction indicated by this code (except B1000/31) first.

INSPECTION PROCEDURE

1 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-41).
OK:
DTC B1000/31 is not output.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1603/83	Front Satellite Sensor Bus RH Initialization Incomplete

DTC	B1612/83	Lost Communication with Front Airbag Sensor RH

DTC	B1613/83	Front Airbag Sensor RH Initialization Incomplete

DESCRIPTION

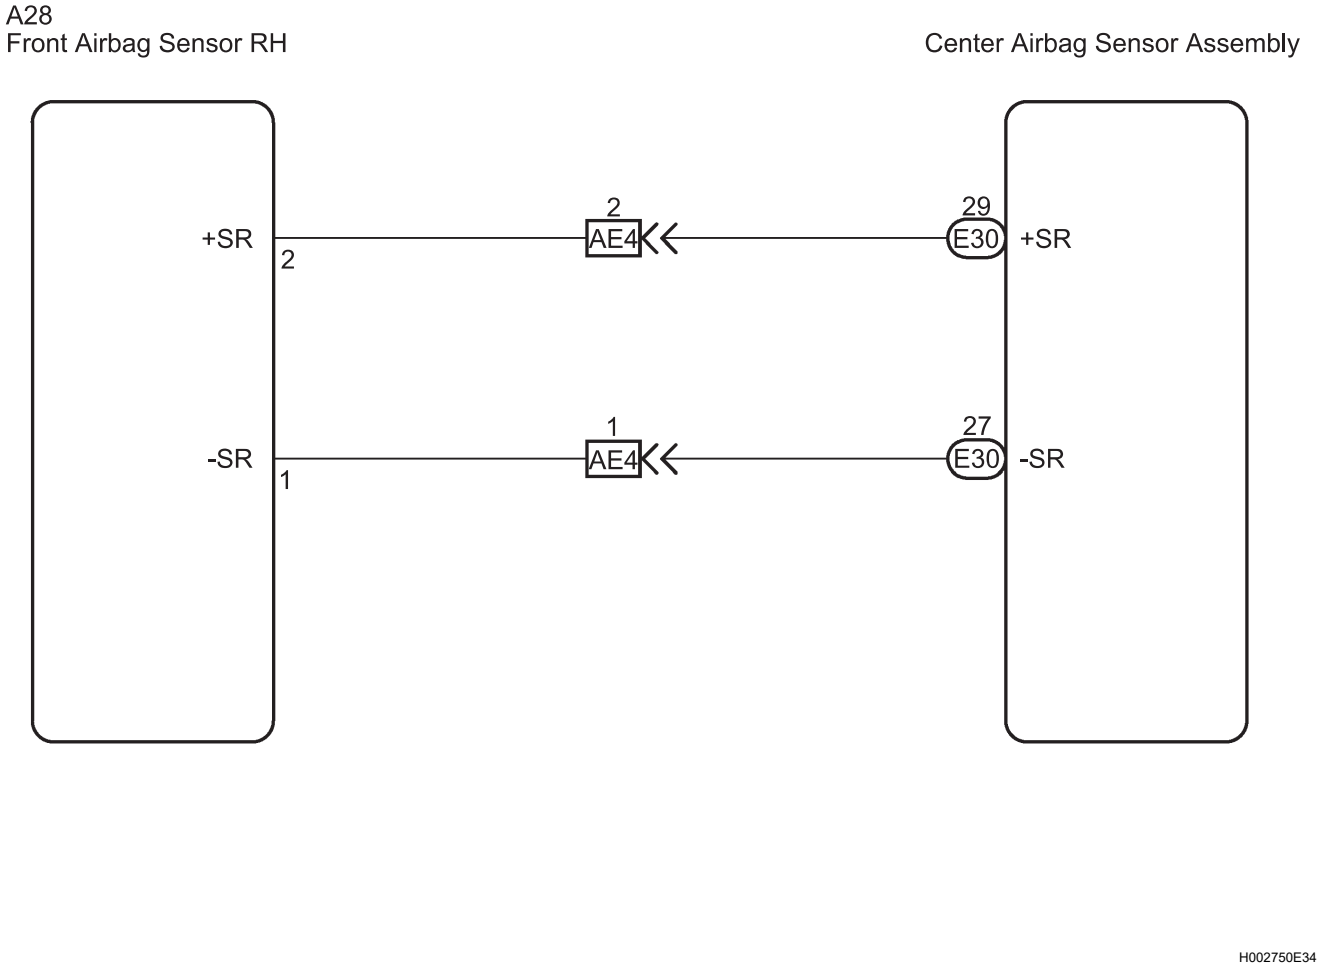
The front airbag sensor RH circuit consists of the center airbag sensor assembly and front airbag sensor RH.

The front airbag sensor RH detect impacts to the vehicle and send signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1603/83, B1612/83, or B1613/83 is recorded when a malfunction is detected in the front airbag sensor RH circuit.

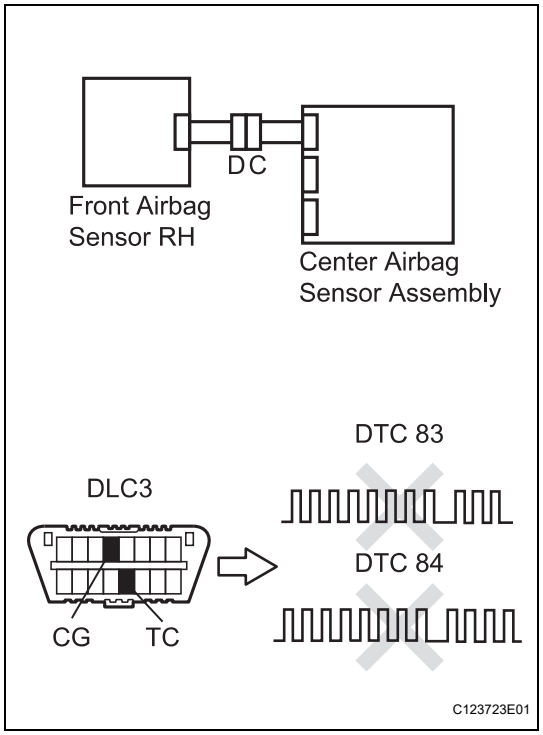
DTC No.	DTC Detecting Condition	Trouble Area
B1603/83 B1612/83 B1613/83	• The airbag sensor assembly center receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor RH circuit for 2 seconds. • Front airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Turn the power switch off.
HINT:
If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. To identify the malfunctioning area, turn the power switch off and then on (IG) again.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Check the DTCs (See page RS-41).
Result

Result	Proceed to
DTC B1603, B1613, or 83 is output.	A
DTC B1618/84 is output.	B
DTC B1603, B1613, or 83 and B1618/84 are not output.	C

HINT:
- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the power switch off and then on (IG) again.
- Codes other than DTC B1603, B1613, or 83 and B1618/84 may be output at this time, but they are not related to this check.

B → **GO TO DTC B1618/84 (See page RS-62)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

A

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

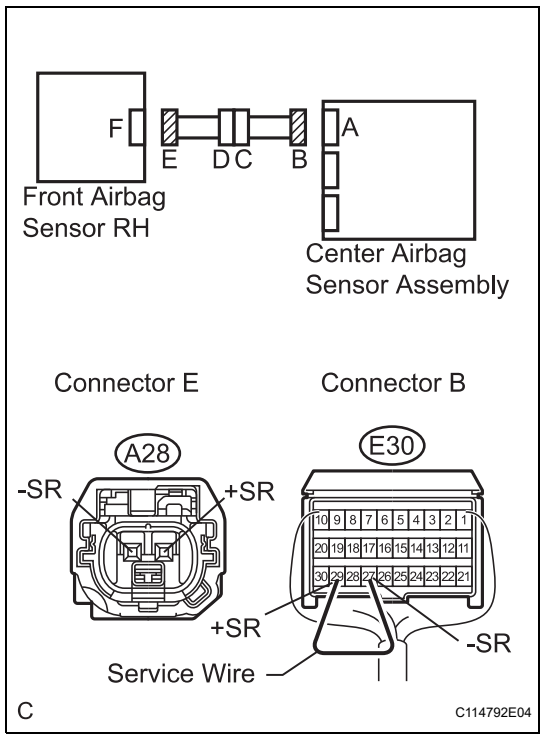
3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and front airbag sensor RH.
(b) Check that the connectors (on the center airbag sensor assembly side and front airbag sensor RH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	CHECK FRONT AIRBAG SENSOR RH CIRCUIT (OPEN)



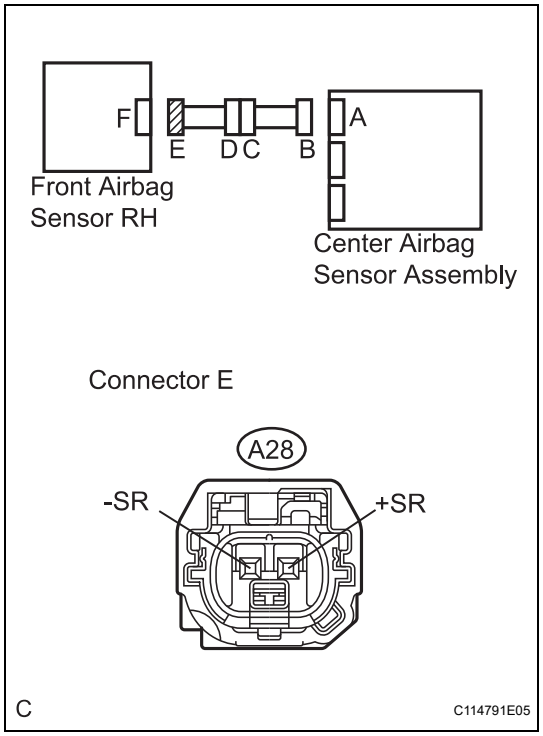
(a) Using a service wire, connect terminals 29 (+SR) and 27 (-SR) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
A28-2 (+SR) - A28-1 (-SR)	Always	Below 1 Ω

NG → **Go to step 9**

OK

5 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

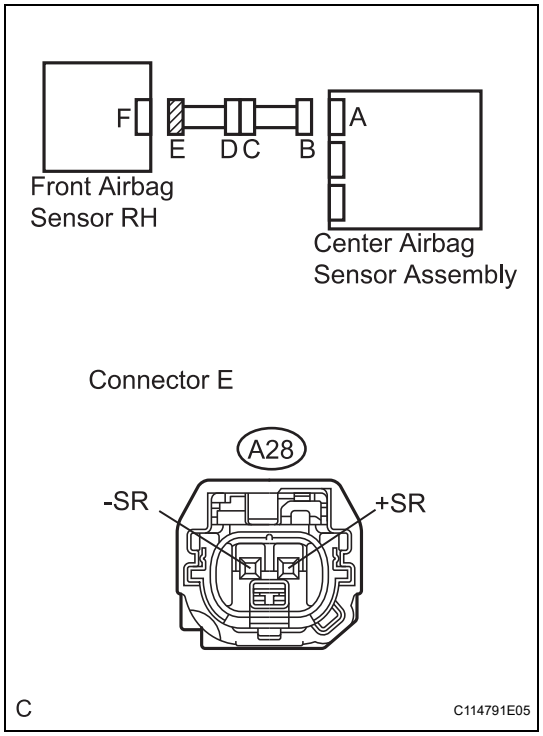
Standard resistance

Tester Connection	Condition	Specified Condition
A28-2 (+SR) - A28-1 (-SR)	Always	1 MΩ or higher

NG → **Go to step 10**

OK

6 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

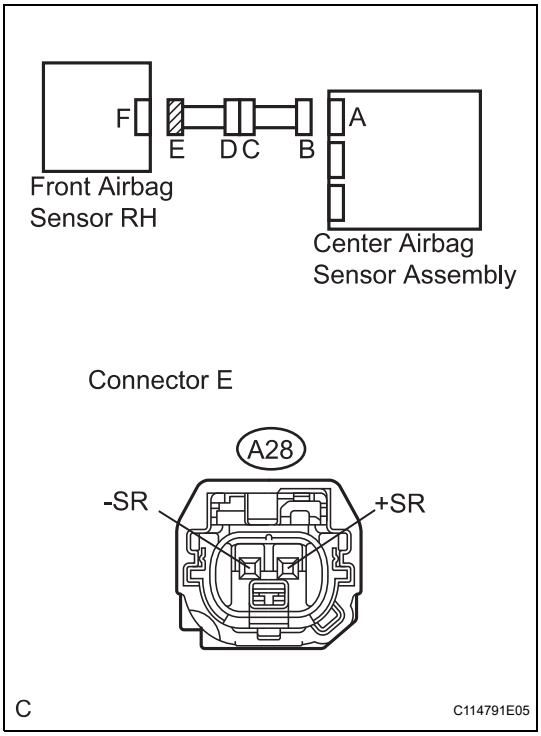
Standard voltage

Tester Connection	Condition	Specified Condition
A28-2 (+SR) - Body ground	Power switch on (IG)	Below 1 V
A28-1 (-SR) - Body ground	Power switch on (IG)	Below 1 V

NG → **Go to step 11**

OK

7 CHECK FRONT AIRBAG SENSOR RH CIRCUIT (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

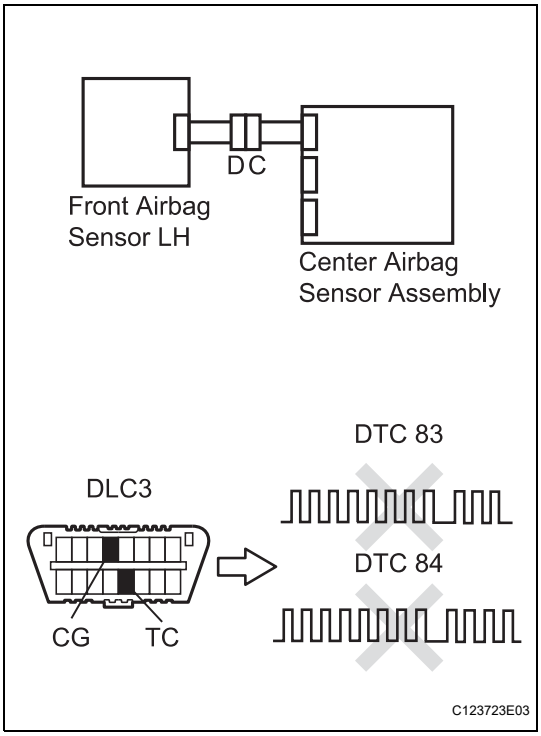
Standard resistance

Tester Connection	Condition	Specified Condition
A28-2 (+SR) - Body ground	Always	1 MΩ or higher
A28-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → **Go to step 12**

OK

8 CHECK FRONT AIRBAG SENSOR RH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the front airbag sensor LH with RH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1603, B1612, B1613, or 83 is output.	A
DTC B1608, B1617, B1618, or 84 is output.	B
DTC B1603, B1612, B1613, or 83 and B1608, B1617, B1618, or 84 are not output.	C

HINT:
Codes other than DTC B1603, B1612, B1613, or 83 and B1608, B1617, B1618, or 84 may be output at this time, but they are not related to this check.

RS

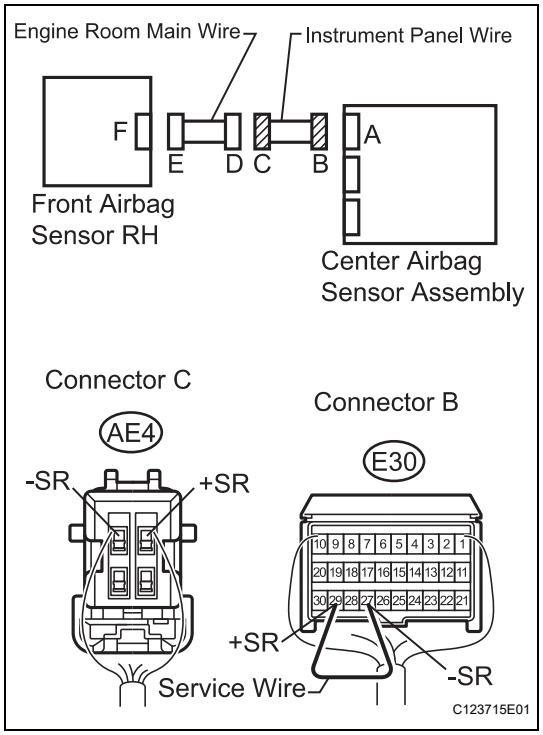
A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

B → REPLACE FRONT AIRBAG SENSOR RH (See page RS-428)

C

USE SIMULATION METHOD TO CHECK (See page RS-33)

9 CHECK INSTRUMENT PANEL WIRE (OPEN)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
HINT:
The service wire has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

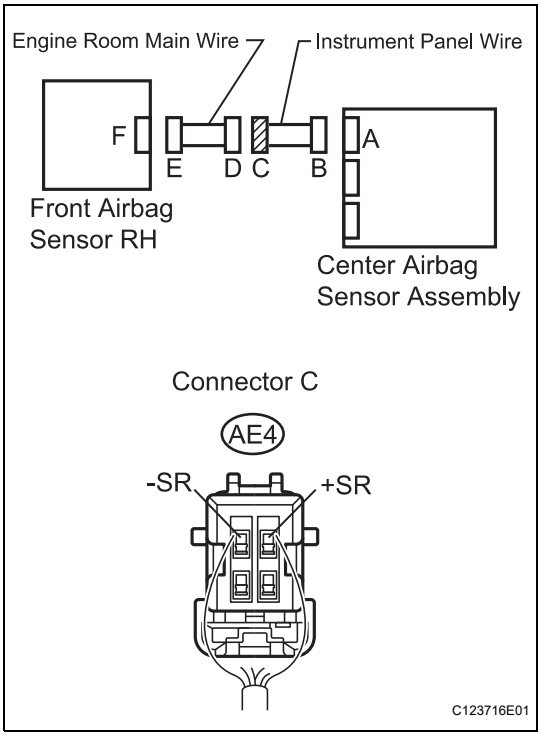
Tester Connection	Condition	Specified Condition
AE4-2 (+SR) - AE4-1 (-SR)	Always	Below 1 Ω

NG → REPAIR OR REPLACE INSTRUMENT PANEL WIRE

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

10	CHECK INSTRUMENT PANEL WIRE (SHORT)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

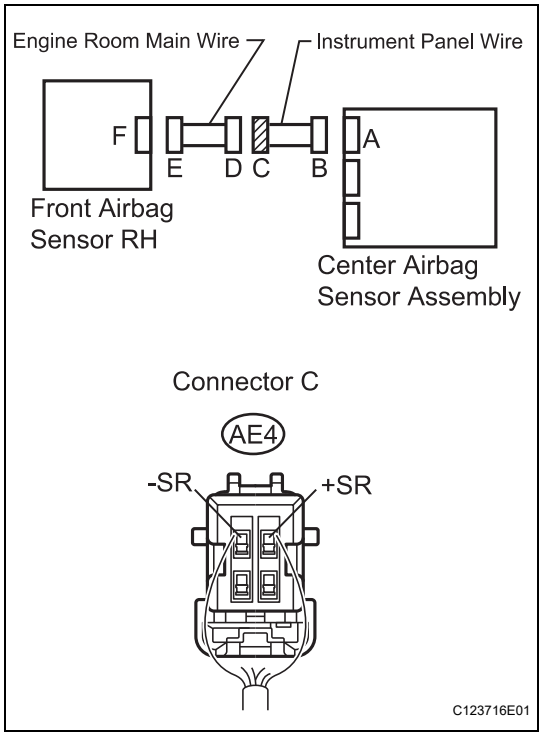
Tester Connection	Condition	Specified Condition
AE4-2 (+SR) - AE4-1 (-SR)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

11	CHECK INSTRUMENT PANEL WIRE (SHORT TO B+)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the instrument panel wire connector from the engine room main wire.
(d) Connect the negative (-) terminal cable to battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

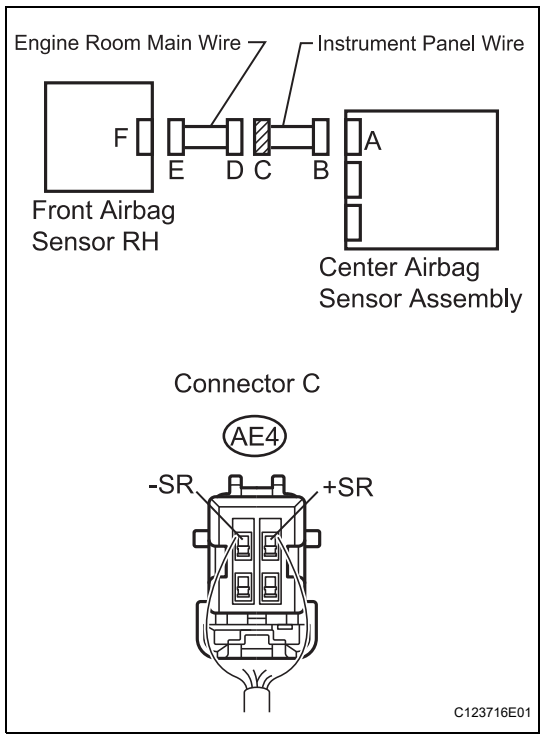
Tester Connection	Condition	Specified Condition
AE4-2 (+SR) - Body ground	Power switch on (IG)	Below 1 V
AE4-1 (-SR) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

12	CHECK INSTRUMENT PANEL WIRE (SHORT TO GROUND)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
AE4-2 (+SR) - Body ground	Always	1 MΩ or higher
AE4-1 (-SR) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

DTC	B1608/84	Front Satellite Sensor Bus LH Initialization Incomplete

DTC	B1617/84	Lost Communication with Front Airbag Sensor LH

DTC	B1618/84	Front Airbag Sensor LH Initialization Incomplete

DESCRIPTION

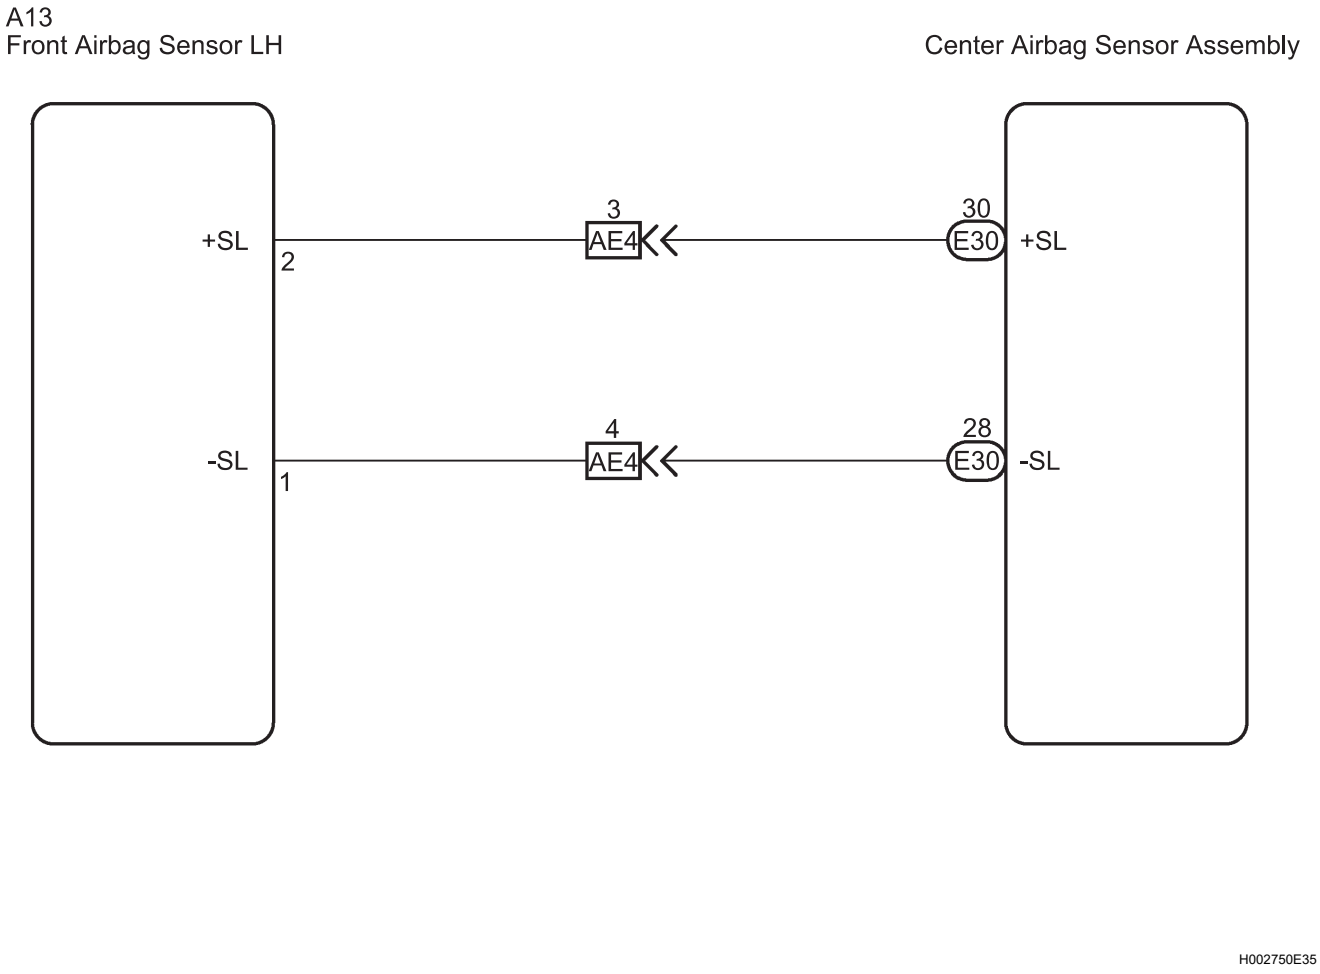
The front airbag sensor LH circuit consists of the center airbag sensor assembly and front airbag sensor LH.

The front airbag sensor LH detects impacts to the vehicle and sends signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1608/84, B1617/84, or B1618/84 is recorded when a malfunction is detected in the front airbag sensor LH circuit.

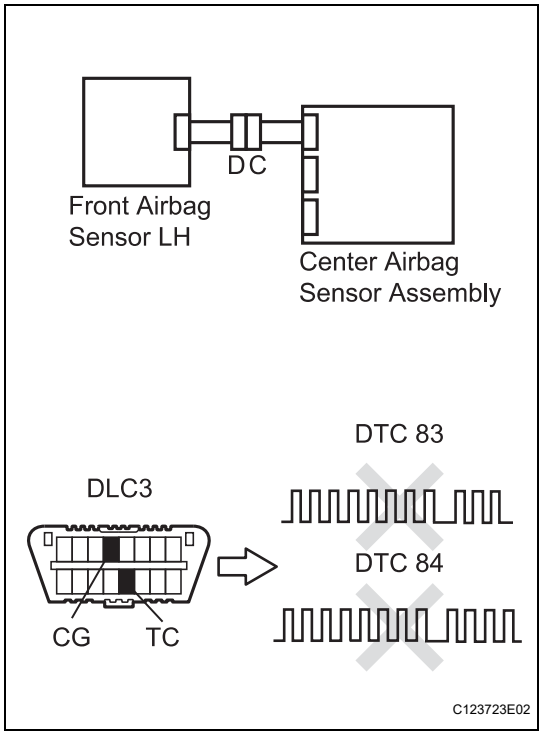
DTC No.	DTC Detecting Condition	Trouble Area
B1608/84 B1617/84 B1618/84	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front airbag sensor LH circuit for 2 seconds. • Front airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Engine room main wire • Front airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1 CHECK DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Turn the power switch off.
HINT:
If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. To identify the malfunctioning area, turn the power switch off and then on (IG) again.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Check the DTCs (See page RS-41).
Result

Result	Proceed to
DTC B1608, B1618, or 84 is output.	A
DTC B1613/83 is output.	B
DTC B1608, B1618, or 84 and B1613/83 are not output.	C

HINT:
- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the power switch off and then on (IG) again.
- Codes other than DTC B1608, B1618, or 84 and B1613/83 may be output at this time, but they are not related to this check.

B → **GO TO DTC B1613/83 (See page RS-52)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

A

2 CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the front airbag sensor LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

RS

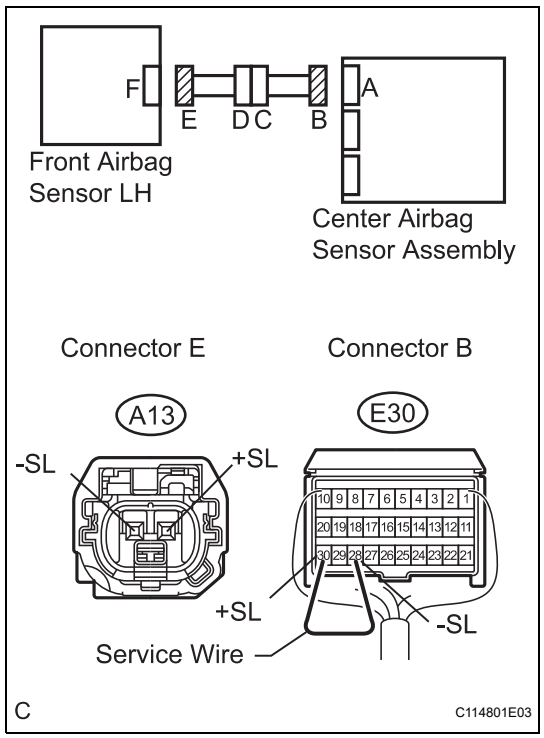
3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and front airbag sensor LH.
(b) Check that the connectors (on the center airbag sensor assembly side and front airbag sensor LH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	CHECK FRONT AIRBAG SENSOR LH (OPEN)



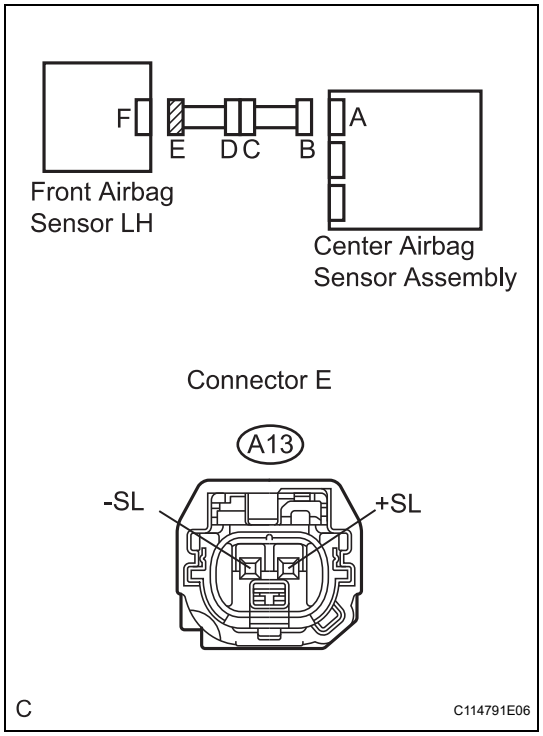
(a) Using a service wire, connect terminals 30 (+SL) and 28 (-SL) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
A13-2 (+SL) - A13-1 (-SL)	Always	Below 1 Ω

NG → **Go to step 9**

OK

5 CHECK FRONT AIRBAG SENSOR LH (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

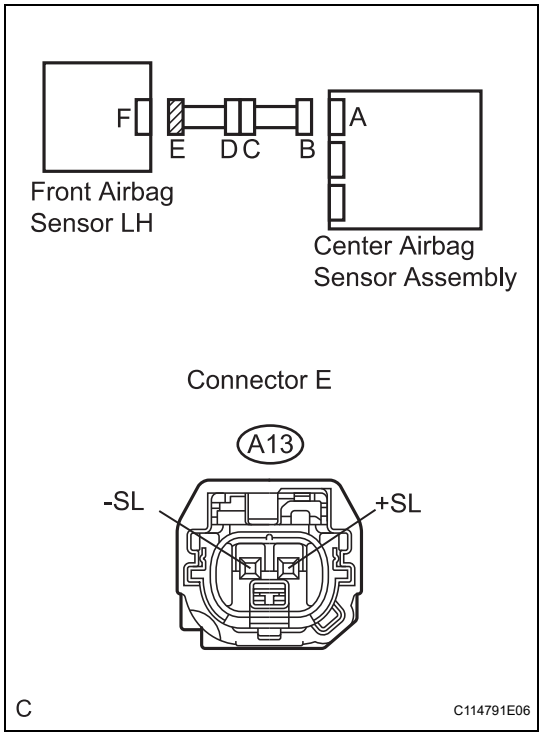
Standard resistance

Tester Connection	Condition	Specified Condition
A13-2 (+SL) - A13-1 (-SL)	Always	1 MΩ or higher

NG → **Go to step 10**

OK

6 CHECK FRONT AIRBAG SENSOR LH (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

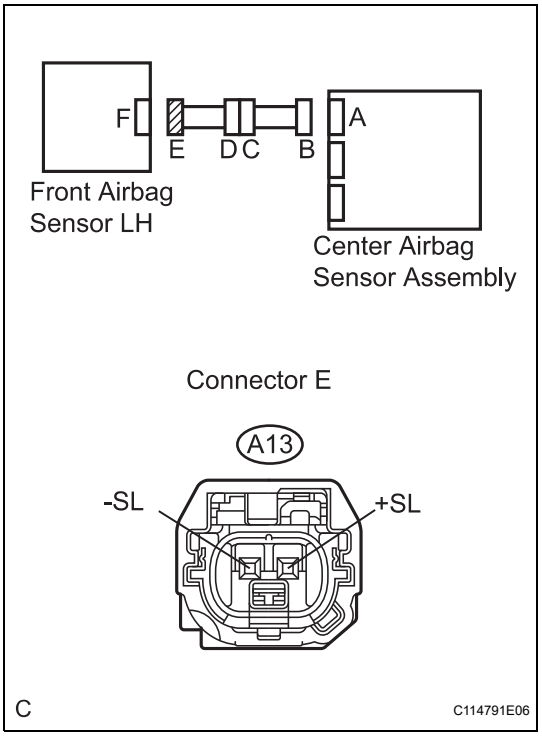
Standard voltage

Tester Connection	Condition	Specified Condition
A13-2 (+SL) - Body ground	Power switch on (IG)	Below 1 V
A13-1 (-SL) - Body ground	Power switch on (IG)	Below 1 V

NG → **Go to step 11**

OK

7 CHECK FRONT AIRBAG SENSOR LH (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

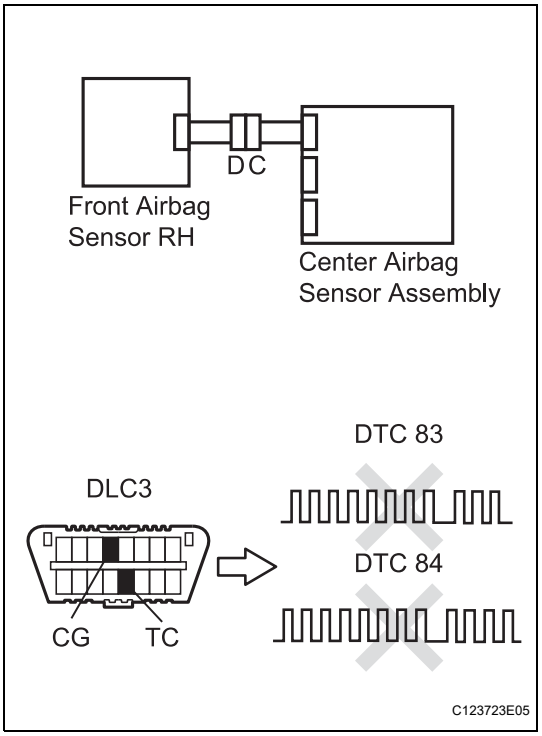
Standard resistance

Tester Connection	Condition	Specified Condition
A13-2 (+SL) - Body ground	Always	1 MΩ or higher
A13-1 (-SL) - Body ground	Always	1 MΩ or higher

NG → **Go to step 12**

OK

8 CHECK FRONT AIRBAG SENSOR LH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the front airbag sensor RH with LH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1608, B1617, B1618, or 84 is output.	A
DTC B1603, B1612, B1613, or 83 is output.	B
DTC B1603, B1612, B1613, or 83 and B1608, B1617, B1618, or 84 are not output.	C

HINT:
Codes other than DTC B1608, B1617, B1618, or 84 and B1603, B1612, B1613, or 83 may be output at this time, but they are not related to this check.

RS

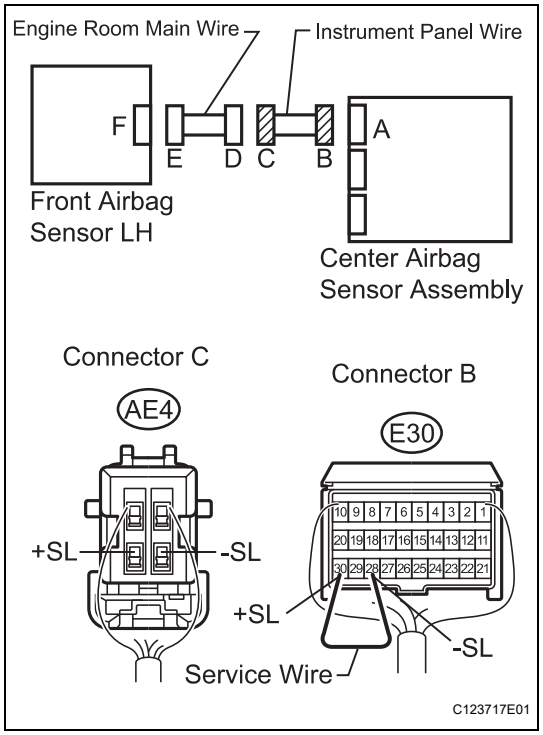
A → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

B → REPLACE FRONT AIRBAG SENSOR LH (See page RS-428)

C

USE SIMULATION METHOD TO CHECK (See page RS-33)

9 CHECK INSTRUMENT PANEL WIRE (OPEN)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
HINT:
The service wire has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

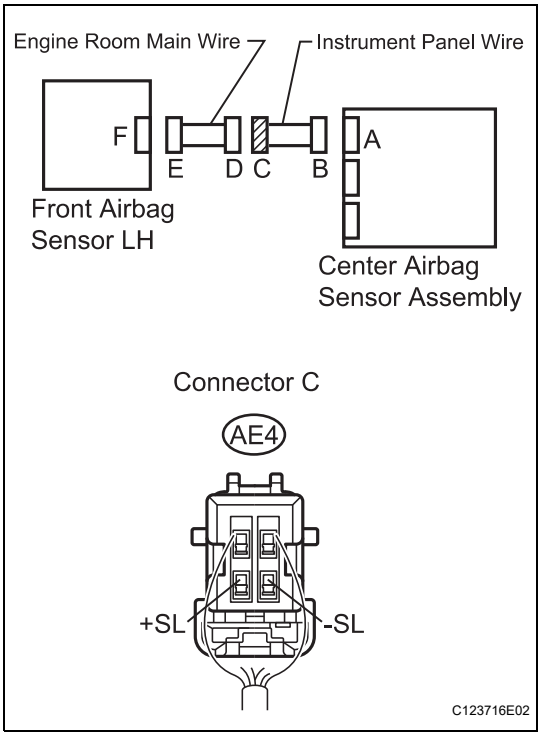
Tester Connection	Condition	Specified Condition
AE4-3 (+SL) - AE4-4 (-SL)	Always	Below 1 Ω

NG → REPAIR OR REPLACE INSTRUMENT PANEL WIRE

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

10	CHECK INSTRUMENT PANEL WIRE (SHORT)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

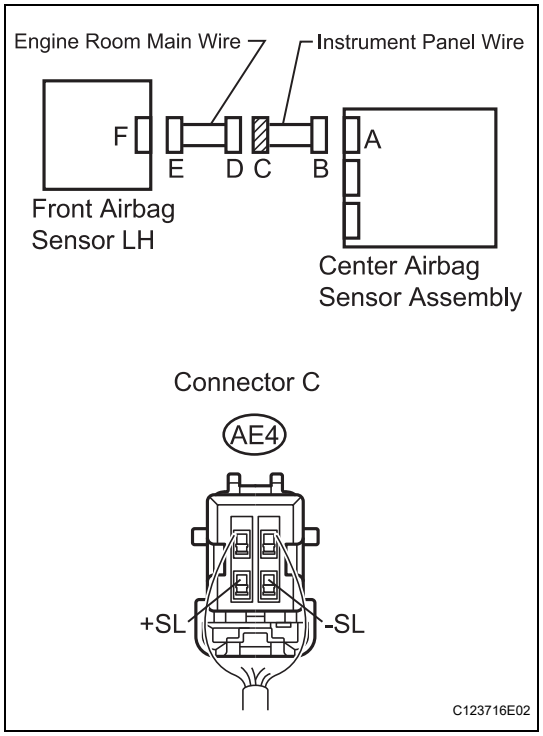
Tester Connection	Condition	Specified Condition
AE4-3 (+SL) - AE4-4 (-SL)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

11	CHECK INSTRUMENT PANEL WIRE (SHORT TO B+)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the instrument panel wire connector from the engine room main wire.
(d) Connect the negative (-) terminal cable to battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

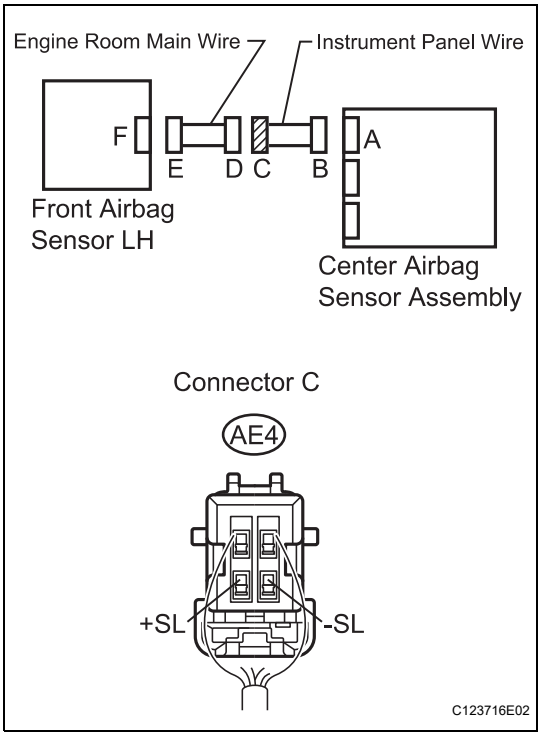
Tester Connection	Condition	Specified Condition
AE4-3 (+SL) - Body ground	Power switch on (IG)	Below 1 V
AE4-4 (-SL) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

12	CHECK INSTRUMENT PANEL WIRE (SHORT TO GROUND)



(a) Disconnect the instrument panel wire connector from the engine room main wire.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
AE4-3 (+SL) - Body ground	Always	1 MΩ or higher
AE4-4 (-SL) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

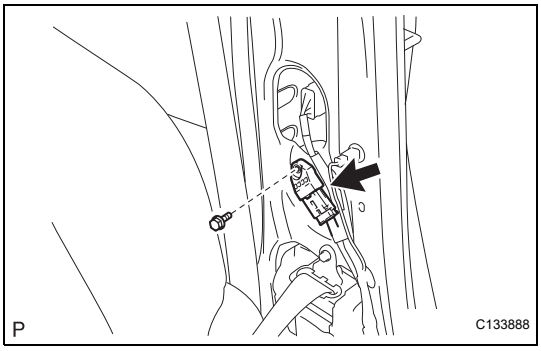
OK

REPAIR OR REPLACE ENGINE ROOM MAIN WIRE

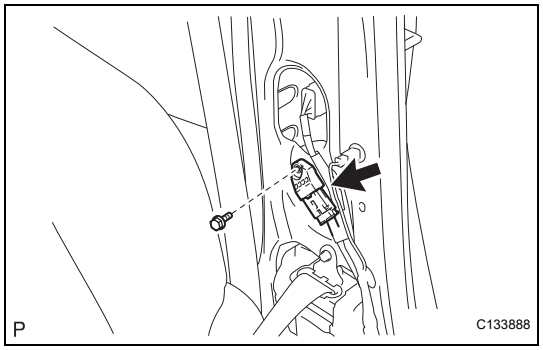
REMOVAL

HINT:
- Use the same procedure for the RH side and the LH side.
- The procedure listed below are for the LH side.

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT DOOR SCUFF PLATE (See page IR-13)**
4. **REMOVE REAR DOOR SCUFF PLATE (See page IR-13)**
5. **REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP**
6. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
7. **REMOVE LOWER CENTER PILLAR GARNISH (See page IR-14)**
8. **REMOVE SIDE AIRBAG SENSOR**
   (a) Remove the bolt and side airbag sensor from the body.
   (b) Disconnect the connector from the side airbag sensor.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.



INSTALLATION



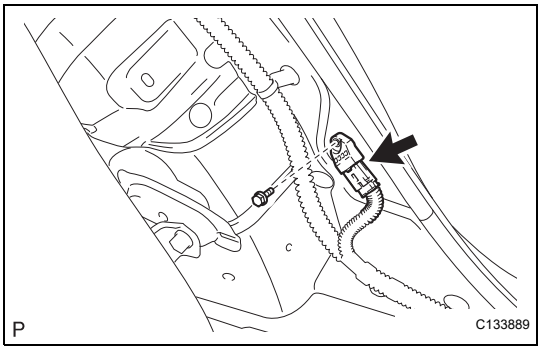
1. **INSTALL SIDE AIRBAG SENSOR**
   (a) Check that the power switch is turned off.
   (b) Check that the battery negative (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
   (c) Install the side airbag sensor with the bolt.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   NOTICE:
   - **If the side airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the side airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**
   (d) Check that there is no looseness in the installation parts of the side airbag sensor.
   (e) Connect the connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.
2. **INSTALL LOWER CENTER PILLAR GARNISH (See page IR-40)**
3. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP**
4. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP**
5. **INSTALL REAR DOOR SCUFF PLATE (See page IR-43)**
6. **INSTALL FRONT DOOR SCUFF PLATE (See page IR-41)**
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
8. **PERFORM INITIALIZATION**
   (a) Perform initialization (See page IN-43).
   NOTICE:
   Some systems need initialization after reconnecting the cable to the negative battery terminal.
9. **INSPECT SRS WARNING LIGHT**
   (a) Inspect the SRS warning light (See page RS-33).

REMOVAL

HINT:

- Use the same procedure for the RH side and the LH side.
- The procedure listed below are for the LH side.

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
4. **REMOVE REAR DOOR SCUFF PLATE (See page IR-13)**
5. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP**
6. **REMOVE ROOF SIDE INNER GARNISH (See page IR-15)**
7. **REMOVE REAR SIDE SEATBACK ASSEMBLY (See page SE-45)**
8. **REMOVE REAR AIRBAG SENSOR**
   (a) Disconnect the connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.
   (b) Remove the bolt and rear airbag sensor.



INSTALLATION

1. **INSTALL REAR AIRBAG SENSOR**
   (a) Check that the power switch is turned off.
   (b) Check that the battery negative (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

   (c) Install the rear airbag sensor with the bolt.
   Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
   NOTICE:
   - **If the rear airbag sensor has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the rear airbag sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

   (d) Check that there is no looseness in the installation parts of the rear airbag sensor.
   (e) Connect the connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.

2. **INSTALL REAR SIDE SEATBACK ASSEMBLY (See page SE-54)**

3. **INSTALL ROOF SIDE INNER GARNISH (See page IR-39)**

4. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP**

5. **INSTALL REAR DOOR SCUFF PLATE (See page IR-43)**

6. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**

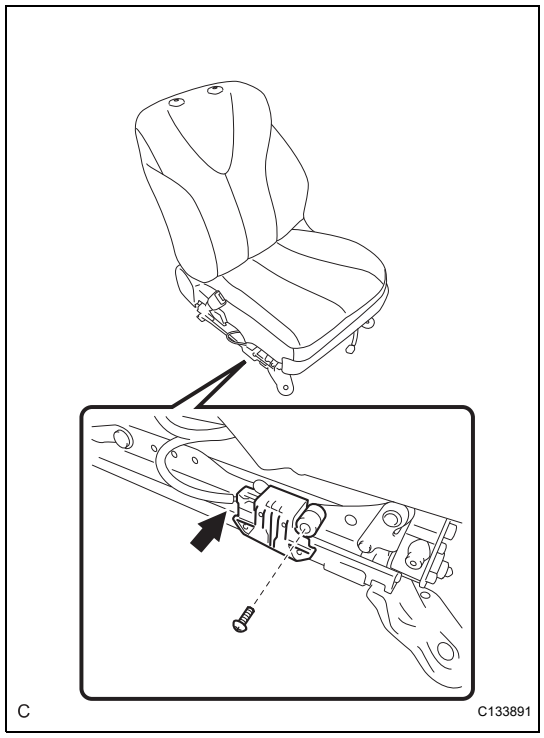
7. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

8. **PERFORM INITIALIZATION**
   (a) Perform initialization (See page IN-43).
   NOTICE:
   Some systems need initialization after reconnecting the cable to the negative battery terminal.

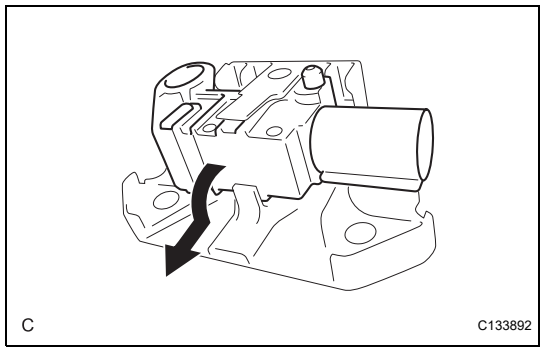
9. **INSPECT SRS WARNING LIGHT**
   (a) Inspect the SRS warning light (See page RS-33).

REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
3. **REMOVE SEAT TRACK COVER LH (See page SE-29)**
4. **REMOVE INNER SEAT TRACK BRACKET COVER LH (See page SE-29)**
5. **REMOVE FRONT SEAT ASSEMBLY LH (See page SE-29)**
6. **REMOVE SEAT POSITION SENSOR**
   (a) Disconnect the connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.
   (b) Using a "TORX" socket (T30), remove the "TORX" screw and seat position sensor with the seat slide position sensor protector.



(c) Remove the seat position sensor from the seat slide position sensor protector as shown in the illustration.



INSTALLATION

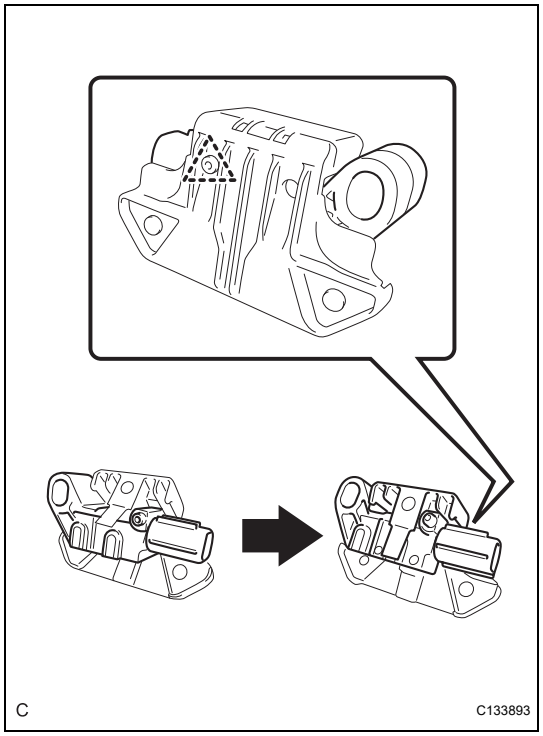
1. INSTALL SEAT POSITION SENSOR

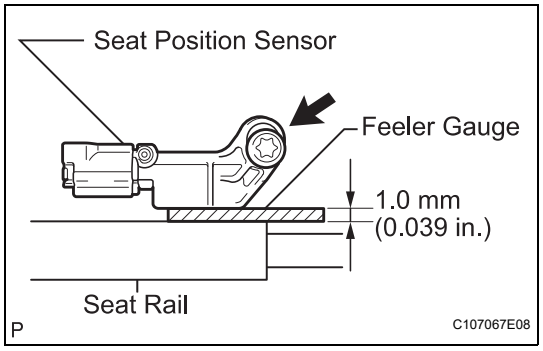
(a) Check that the power switch is turned off.

(b) Check that the negative battery (-) cable is disconnected.

CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

(c) Engage the pin and install the seat position sensor to the seat slide position sensor protector as shown in the illustration.





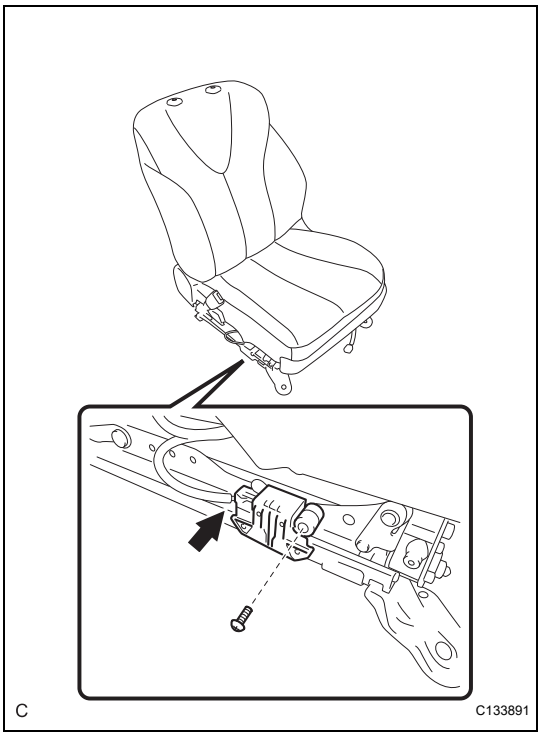
(d) Using a feeler gauge 1.0 mm (0.039 in.), temporarily install the seat position sensor.

NOTICE:

- **If the seat position sensor has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the seat position sensor with a new one.**
- **When installing the seat position sensor, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

HINT:

Be sure that a clearance between the seat position sensor and the seat rail is within 0.6 mm (0.024 in.) to 2.0 mm (0.079 in.).



(e) Using a "TORX" socket (T30), tighten the "TORX" screw to install the seat position sensor.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(f) Make sure that a clearance between the seat position sensor and the seat rail is within 0.6 mm (0.024 in.) to 2.0 mm (0.079 in.).

(g) Check that there is no looseness in the installation parts of the seat position sensor.

(h) Connect the connector.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

2. **INSTALL FRONT SEAT ASSEMBLY LH (See page SE-38)**

3. **INSTALL INNER SEAT TRACK BRACKET COVER LH (See page SE-39)**

4. **INSTALL SEAT TRACK COVER LH (See page SE-39)**

5. **INSTALL FRONT SEAT HEADREST ASSEMBLY**

6. **PERFORM INITIALIZATION**
(a) Perform initialization (See page IN-43).
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal.

7. **INSPECT FRONT SEAT ASSEMBLY (See page SE-39)**

8. **INSPECT SRS WARNING LIGHT**
(a) Inspect the SRS warning light (See page RS-33).

ON-VEHICLE INSPECTION

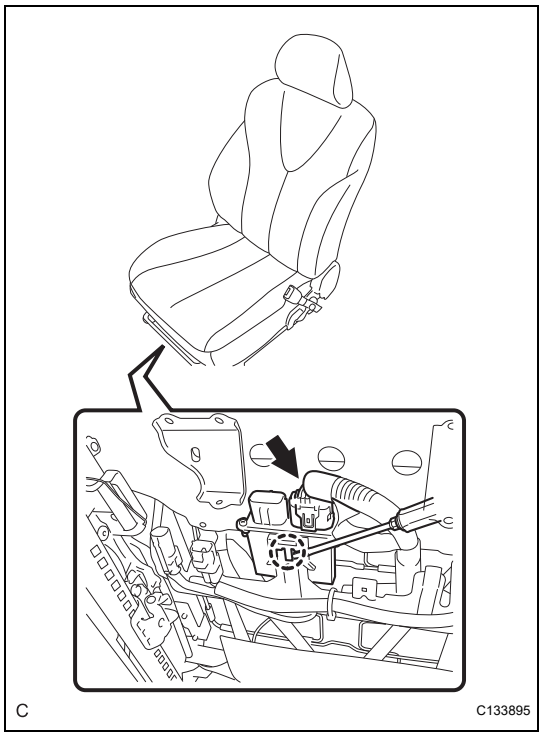
1. **INSPECT OCCUPANT CLASSIFICATION ECU (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (See page RS-245).

2. **INSPECT OCCUPANT CLASSIFICATION ECU (VEHICLE INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (See page RS-245).
   (b) Even if the airbag was not deployed, check if there is any damage to the occupant classification ECU. If there are any defects as mentioned below, replace the occupant classification ECU with a new one:
   - Cracks, dents or chips on the case.
   - Cracks or other damage to the connector.

   CAUTION:
   Be sure to follow the correct removal and installation procedures.

REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
4. **REMOVE SEAT TRACK COVER RH (for Manual Seat) (See page SE-16)**
5. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page SE-16)**
6. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page SE-16)**
7. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
8. **REMOVE SEAT TRACK COVER RH (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side (See page IR-12).
9. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side (See page IR-12).
10. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat)**
    HINT:
    Use the same procedure for the RH side and the LH side (See page IR-12).



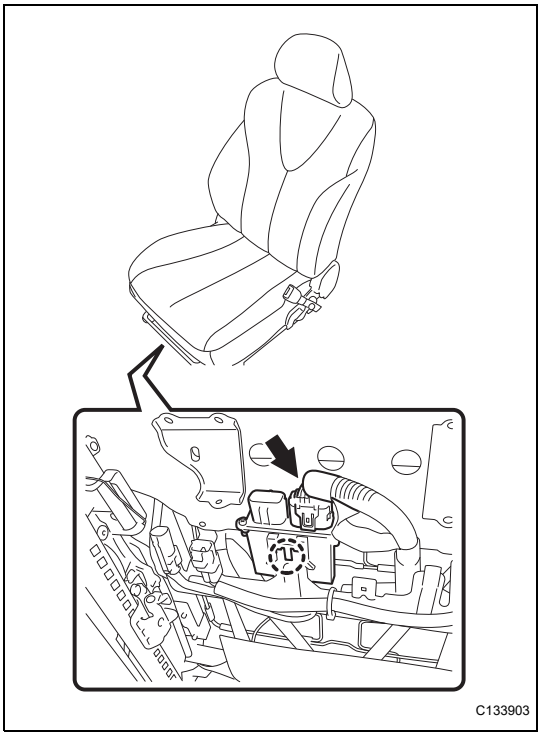
11. REMOVE OCCUPANT CLASSIFICATION ECU

(a) Disconnect the connector from the occupant classification ECU.

NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

(b) Using a screwdriver, disengage the claw and remove the occupant classification ECU.

INSTALLATION



1. **INSTALL OCCUPANT CLASSIFICATION ECU**
   (a) Check that the power switch is off.
   (b) Check that the negative battery (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
   (c) Engage the claw.
   (d) Connect the connector and install the occupant classification ECU.
   NOTICE:
   - **When handling the airbag connector, take care not to damage the airbag wire harness.**
   - **If the occupant classification ECU has been dropped, or there are any cracks, dents or other defects in the case or connector, replace the occupant classification ECU with a new one.**
   - **When installing the occupant classification ECU, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**
2. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side (See page IR-43).
3. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side (See page IR-43).
4. **INSTALL SEAT TRACK COVER RH (for Power Seat)**
   HINT:
   Use the same procedure for the RH side and the LH side (See page IR-43).
5. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
6. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page SE-23)**
7. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page SE-24)**
8. **INSTALL SEAT TRACK COVER RH (for Manual Seat) (See page SE-39)**
9. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**

11. **PERFORM INITIALIZATION**
    (a) Perform initialization (See page IN-43).
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal.

12. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**

13. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-39)**

14. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK**
    (a) Perform zero point calibration and sensitivity check (See page RS-239).

15. **INSPECT SRS WARNING LIGHT**
    (a) Inspect the SRS warning light (See page RS-33).

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the seat belt warning system.
- *: Use the intelligent tester.

SB

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3	CHECK COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM (CAN)*

(a) Use the intelligent tester to check if the CAN Communication System (CAN) is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → GO TO CAN COMMUNICATION SYSTEM

A

4	PROBLEM SYMPTOMS TABLE

HINT:
See page SB-5.

NEXT

5	OVERALL ANALYSIS AND TROUBLESHOOTING*

(a) DATA LIST / ACTIVE TEST (See page SB-8)
(b) Terminals of ECU (See page SB-6)
(c) On-vehicle Inspection (See page SB-8)

NEXT

6	**REPAIR OR REPLACE**

NEXT

SB

7	**CONFIRMATION TEST**

PROBLEM SYMPTOMS TABLE

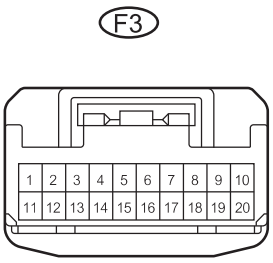
SEAT BELT WARNING SYSTEM

Symptom	Suspected Area	See page
Driver side seat belt warning light does not operate	1. Front seat inner belt LH	SB-10
	2. Center airbag sensor assembly	SB-10
	3. Combination meter assembly	SB-10
	4. Wire harness	SB-10
	5. Main body ECU	SB-10
Front passenger seat belt warning light does not operate	1. Front seat inner belt RH	SB-12
	2. Occupant detection ECU	SB-12
	3. Road sensor	SB-12
	4. Center airbag sensor assembly	SB-12
	5. Combination meter assembly	SB-12
	6. Clock assembly	SB-12
	7. Wire harness	SB-12

TERMINALS OF ECU

1. CLOCK ASSEMBLY

SB



B140734E01

Standard voltage

Terminal No. (Symbols)	Terminal Description	Condition	Specified Condition
F3-3 (IG) - Body ground	Power supply	Power switch OFF → ON (IG)	Below 1 V → 10 to 14 V

Standard resistance

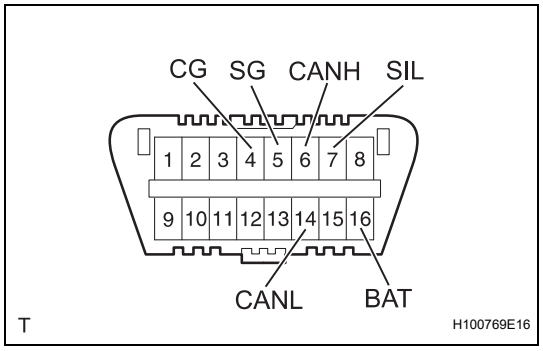
Terminal No. (Symbols)	Terminal Description	Condition	Specified Condition
F3-10 (PBEW) - Body ground	Passenger seat belt signal	The passenger seat is occupied, seat belt is fastened → unfastened	Below 1 Ω → 10 kΩ or higher
F3-19 (GND1) - Body ground	Ground	Always	Below 1 Ω

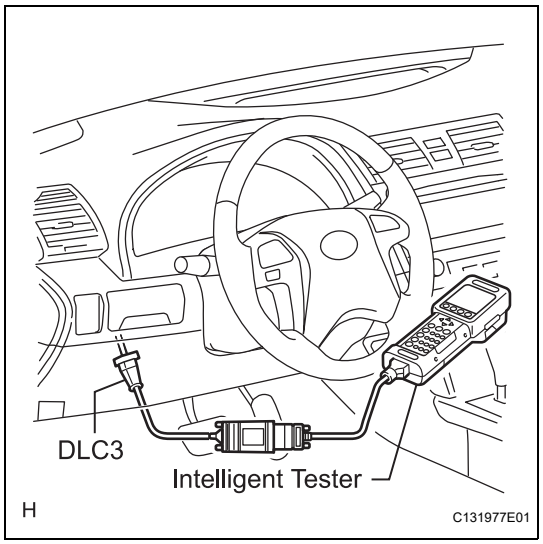
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) The seat belt warning system data can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3





(a) The ECU uses ISO 15765-4 communication. The terminal arrangement of the DLC3 complies with SAE J 1962 and matches the ISO 15765-4 format.

Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch OFF*	6 kΩ or more

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the door.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DATA LIST / ACTIVE TEST

1. ACTIVE TEST

Performing the ACTIVE TEST using the intelligent tester allows the meters, indicators and so on to operate without removing any parts. Performing the ACTIVE TEST as the first step in troubleshooting is one way to shorten labor time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) From the display on the tester, select the "ACTIVE TEST".

METER:

Tester Display	Measurement Item/Range	Normal Condition
D-BELT REMIND	D-SEAT BELT indicator light (OFF/ON)	Confirm that the vehicle is stopped with the engine idling
P-BELT REMIND	P-SEAT BELT indicator light (OFF/ON)	Confirm that the vehicle is stopped with the engine idling

SB

ON-VEHICLE INSPECTION

1. INSPECT DRIVER SIDE SEAT BELT WARNING

(a) Turn the power switch on (IG).

(b) When the driver seat belt is not fastened, check that the driver seat belt warning light on the combination meter blinks.

(c) When the driver seat belt is fastened, check that the driver seat belt warning light on the combination meter is off.

2. INSPECT PASSENGER SIDE SEAT BELT WARNING

(a) Turn the power switch on (IG).

(b) When the front passenger seat belt is not fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the clock display blinks.

(c) When the front passenger seat belt is fastened with the passenger seat occupied, check that the front passenger seat belt warning light on the clock display is off.

3. INSPECT SEAT BELT WARNING BUZZER

HINT:

- If the buzzer does not sound, the buzzer cancel setting may be set to ON.
- Only the intelligent tester can change the buzzer cancel setting to off. (See page ME-15)
- The buzzer sounds for 6 seconds if the front seat belts are not fastened even while the vehicle is stationary.

(a) Start the engine.

(b) When the vehicle is driven at approximately 20 km/h (12.5 mph) or more with the driver or front passenger seat belt not fastened, check that the buzzer in the combination meter assembly sounds at intervals of 1.2 seconds for 30 seconds.

(c) With the belt remaining unfastened, check that the buzzer changes and sounds at intervals of 0.4 seconds for 90 seconds.

(d) Check that the buzzer stops 2 minutes after the buzzer starts sounding.

(e) After the buzzer has stopped, turn the ignition switch off and then start the engine again. Drive the vehicle at approximately 20 km/h (12.5 mph) or more with the driver or front passenger seat belt not fastened, and then check that the buzzer sounds again.

(f) After the buzzer has stopped, fasten the driver and front passenger seat belts. Drive the vehicle at approximately 20 km/h (12.5 mph) or more and unfasten the driver or front passenger seat belt, and then check that the buzzer sounds again.

(g) After the buzzer has stopped, move the shift lever to the R position, and then move it to the D position. Drive the vehicle at approximately 20 km/h (12.5 mph) or more, and then check that the buzzer sounds again.

Driver Side Seat Belt Warning Light does not Operate

DESCRIPTION

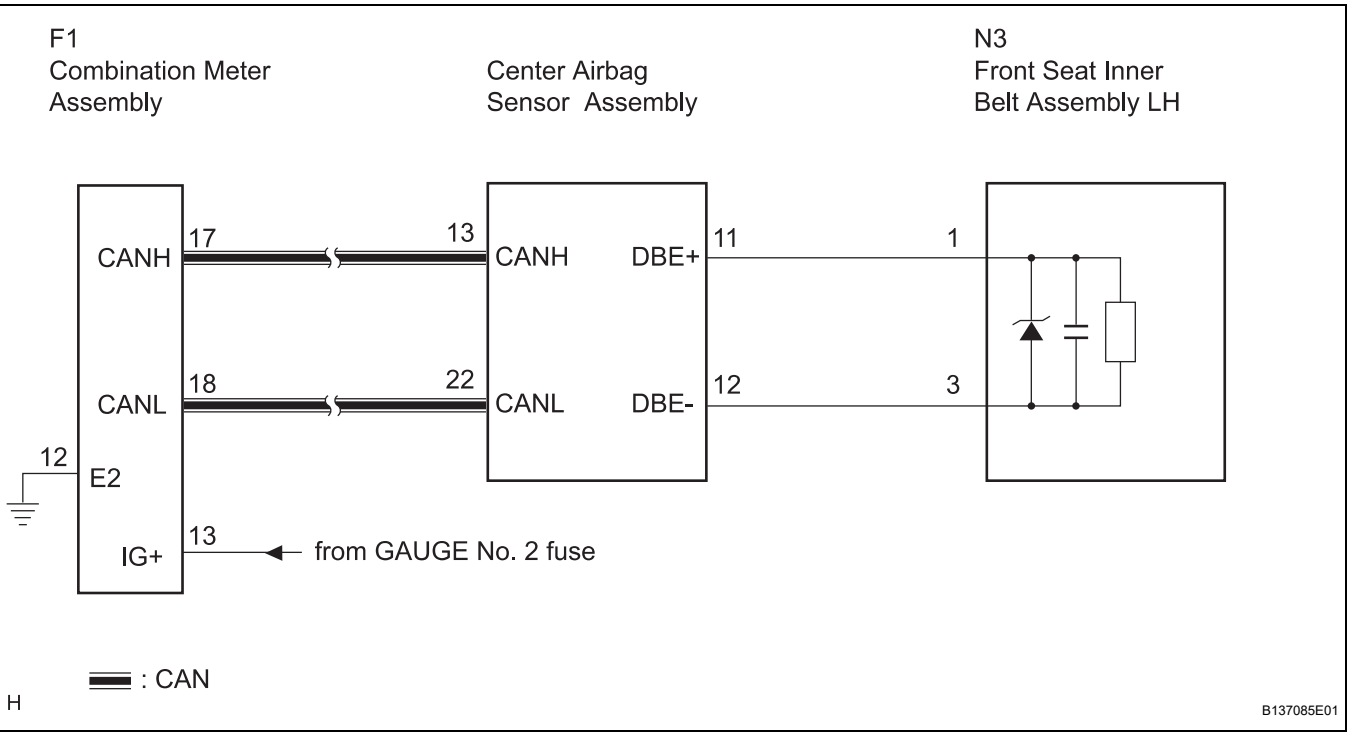
When the power switch is on (IG), the center airbag sensor assembly transmits front seat inner belt state signals to the combination meter assembly through CAN. If the driver seat belt is not fastened, the combination meter assembly blinks the driver seat belt warning light. If the seat belt is fastened, the warning light goes off.

SB

NOTICE:

The seat belt warning system uses CAN. Before troubleshooting the seat belt warning system, perform "COMMUNICATION FUNCTION CHECK" by following "HOW TO PROCEED WITH TROUBLESHOOTING" to confirm that the communication systems are normal.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK FOR DTCs

(a) Check for DTCs.

Result

Result	Proceed to
Output DTC (CAN communication)	A
Output DTC (Airbag system)	B
No output DTC	C

A	GO TO CAN COMMUNICATION SYSTEM
B	GO TO AIRBAG SYSTEM

C

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Operate the intelligent tester according to the steps on the display and select "ACTIVE TEST".

SB

METER

Item	Test Details	Diagnostic Note
D-BELT REMIND	D-SEAT BELT indicator light (OFF/ON)	Confirm that the vehicle is stopped with the engine idling

OK:
Switch condition (ON/OFF) can be switched by "ACTIVE TEST".

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

END

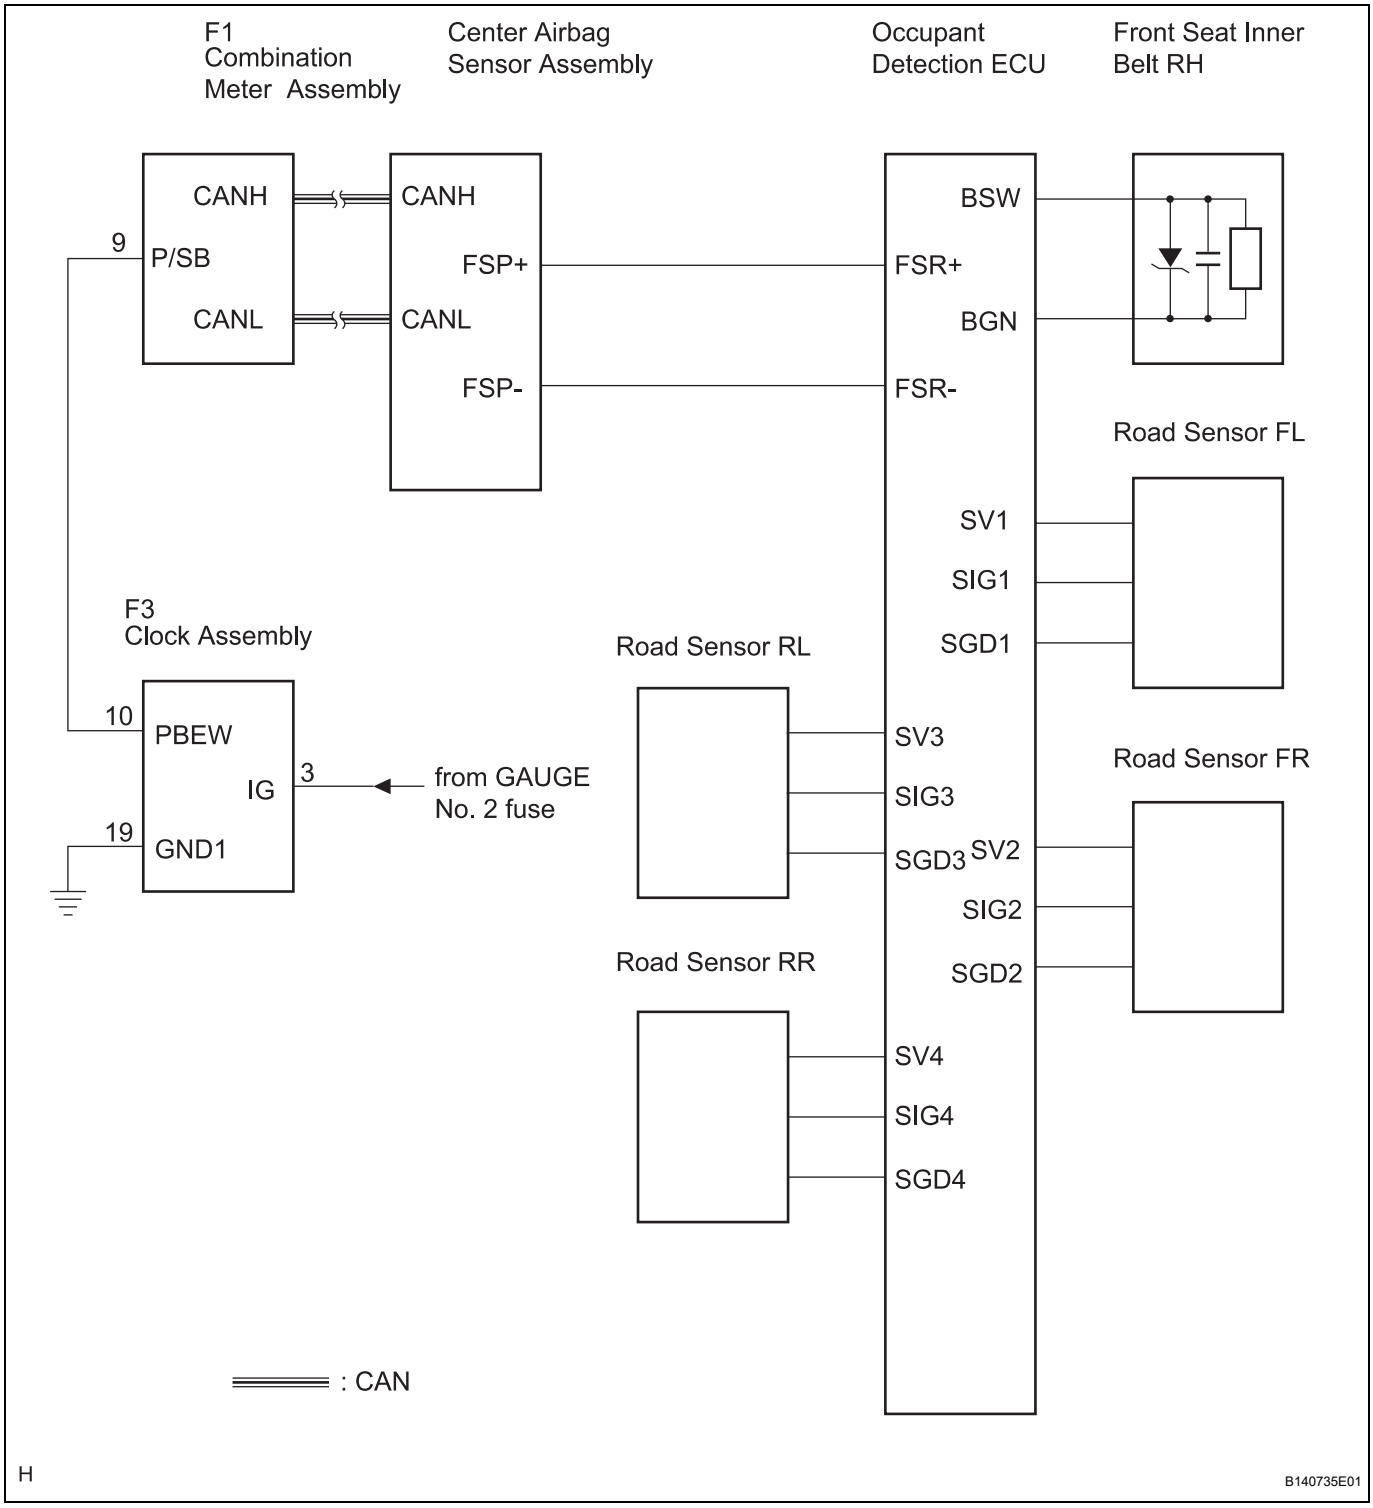
Front Passenger Side Seat Belt Warning Light Malfunction

DESCRIPTION

The occupant detection ECU detects the state of the front seat inner belt assembly RH and road sensor when the front passenger seat is occupied with the power switch on (IG). If the front passenger seat belt is not fastened, the front seat belt warning light on the clock display blinks. If the seat belt is fastened, the warning light goes off.

SB

WIRING DIAGRAM



INSPECTION PROCEDURE

1 CHECK FOR DTCs

(a) Check for DTCs.

Result

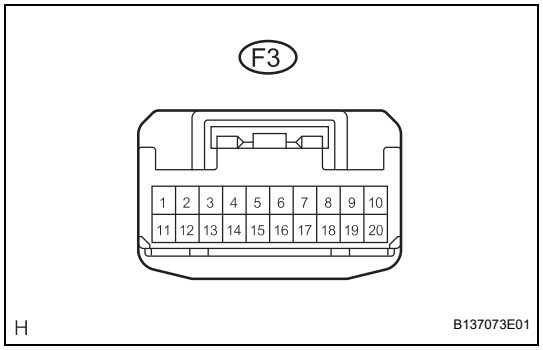
Result	Proceed to
No output DTC	A
Output DTC (CAN communication)	B
Output DTC (Occupant detection)	C

B → GO TO CAN COMMUNICATION SYSTEM

C → GO TO OCCUPANT CLASSIFICATION SYSTEM

A

2 CHECK WIRE HARNESS (BATTERY POSITIVE AND BODY GROUND)



(a) Disconnect the clock assembly connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F3-3 (IG) - Body ground	Power switch on (IG)	10 to 14 V

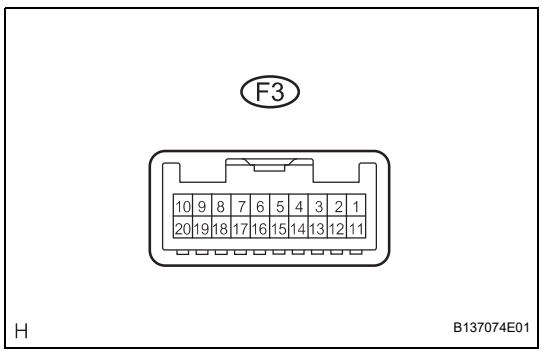
Standard resistance

Tester Connection	Condition	Specified Condition
F3-19 (GND1) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE GAUGE NO. 2 FUSE, HARNESS OR CONNECTOR

OK

3 CHECK CLOCK ASSEMBLY



(a) Disconnect the clock assembly connector.
(b) Apply battery voltage to the connector according to the table below.

Standard

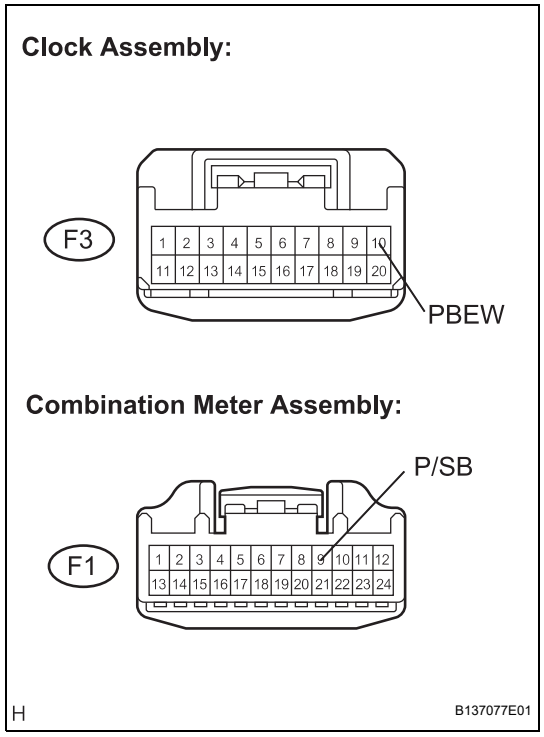
Condition	Specified Condition
Battery positive (+) → Terminal 3 (IG) Battery negative (-) → Terminal 10 (PBEW), 19 (GND1)	Lights up (Seat belt warning light)

NG → REPLACE CLOCK ASSEMBLY

OK

4	CHECK WIRE HARNESS (CLOCK ASSEMBLY - COMBINATION METER ASSEMBLY)

SB



(a) Disconnect the combination meter assembly and clock assembly connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F1-9 (P/SB) - F3-10 (PBEW)	Always	Below 1 Ω
F1-9 (P/SB) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE COMBINATION METER ASSEMBLY

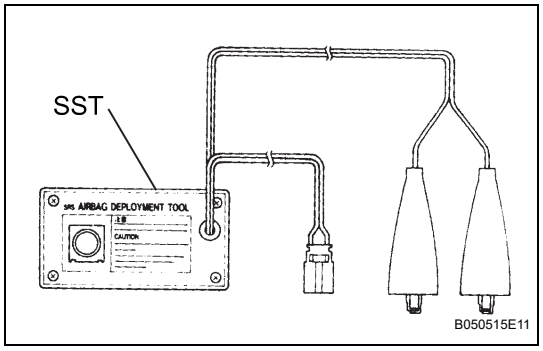
DISPOSAL

HINT:
When scrapping vehicles equipped with a seat belt pretensioner or disposing of a front seat outer belt (with a seat belt pretensioner), always deploy the seat belt pretensioner first in accordance with the procedures described below. If any abnormality occurs during deployment of the seat belt pretensioner, contact the SERVICE DEPT. of the TOYOTA MOTOR SALES, U.S.A., INC.

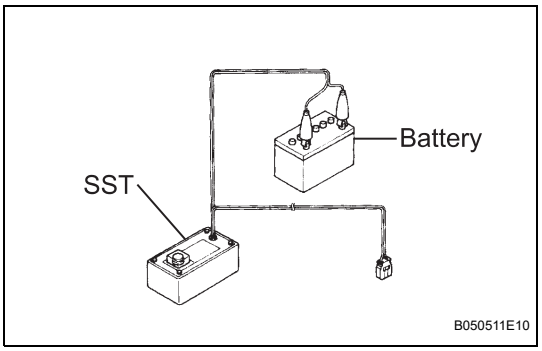
1. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (WHEN INSTALLED IN VEHICLE)
NOTICE:

- **Never dispose of a front seat outer belt assembly with a pretensioner that has not been deployed.**
- **The seat belt pretensioner produces an exploding sound when it deploys, so perform the operation outdoors where it will not disturb local residents.**
- **When deploying a front seat outer belt (with a seat belt pretensioner), perform the operation at least 10 m (33 ft) away from the front seat outer belt.**
- **Use gloves and safety glasses when handling a front seat belt with a deployed pretensioner.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a front seat outer belt with a deployed pretensioner.**
- **When deploying the seat belt pretensioner, always use the specified SST (SRS airbag deployment tool). Perform the operation in a place away from electrical interference.**
- **Be sure to follow the procedures listed below when deploying the seat belt pretensioner.**

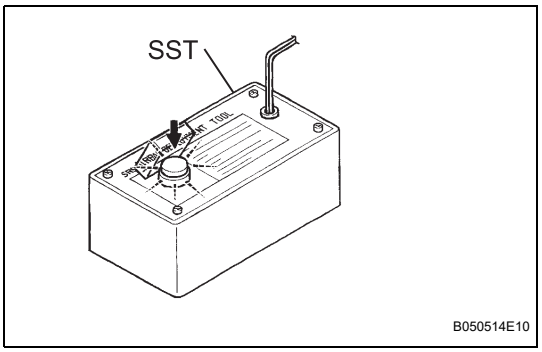
(a) Check the function of SST.
SST 09082-00700, 09082-00770
CAUTION:
When deploying the seat belt pretensioner, always use the specified SST.



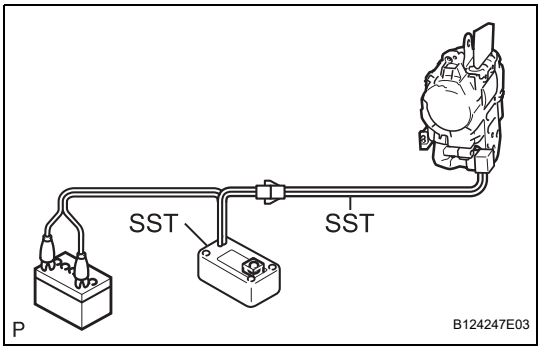
SB



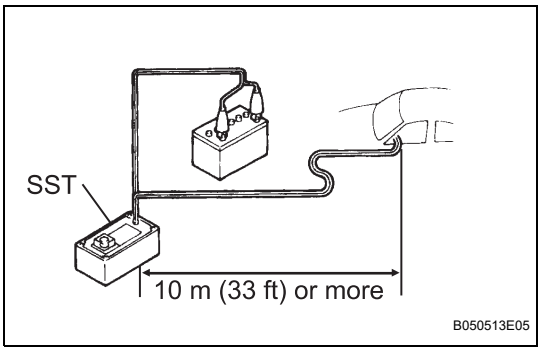
(1) Connect the red clip of the SST to the battery positive (+) terminal, and the black clip to the battery negative (-) terminal.
HINT:
At this time, do not connect the yellow connector that will later be connected to the seat belt pretensioner.



(2) Press the SST deployment switch, and check that the LED of the SST deployment switch lights up.
CAUTION:
If the LED is lit when the deployment switch is not pressed, the SST may be malfunctioning. Therefore, do not use the SST.

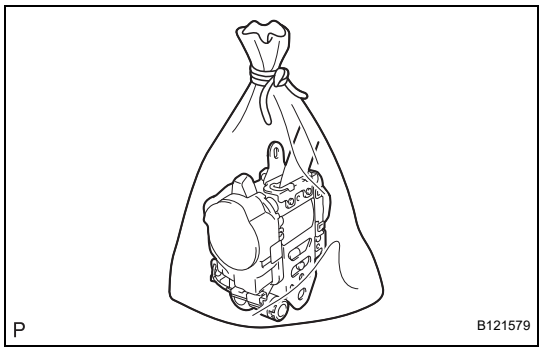


(b) Connect SST.
(1) Connect 2 SST, and then connect them to the front seat outer belt pretensioner.
SST 09082-00700, 09082-00770
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the pretensioner connector.



(2) Move the SST at least 10 m (33 ft) away from the front of the vehicle.
(3) Close all the doors and windows of the vehicle.
NOTICE:
Do not damage the SST wire harness.

(c) Deploy the front seat outer belt pretensioner.
(1) Confirm that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Connect the red clip of the SST to the battery positive (+) terminal, and the black clip to the negative (-) terminal.
(3) Press the SST deployment switch to deploy the front seat outer belt pretensioner.
HINT:
The seat belt pretensioner will deploy at the same time as the LED of the SST illuminates.



(d) Dispose of the front seat outer belt assembly.
(1) Remove the front seat outer belt assembly and SST.
(2) Place the outer belt in a plastic bag, tie the end tightly, and dispose of it in the same way as other general part disposal.

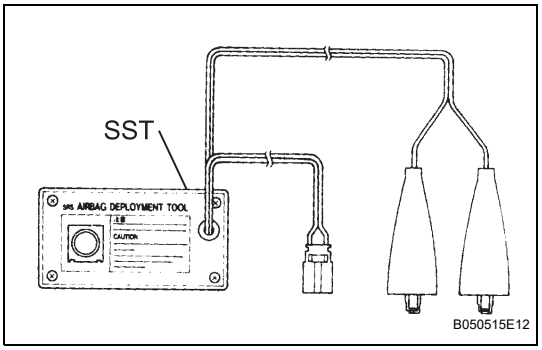
CAUTION:
- **The outer belt becomes very hot when the front seat outer belt pretensioner is deployed, so leave it untouched for at least 30 minutes after it has been deployed.**
- **Use gloves and safety glasses when handling an outer belt with a pretensioner that has been deployed.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a front seat outer belt assembly with a pretensioner that has been deployed.**

HINT:
When scrapping a vehicle, deploy the front seat outer belt pretensioners, and then scrap the vehicle with the deployed outer belt installed.

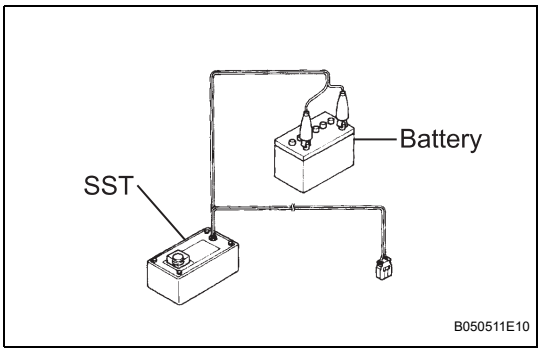
2. DISPOSE OF FRONT SEAT OUTER BELT ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:
- **Never dispose of a front seat outer belt assembly with a pretensioner that has not been deployed.**
- **The seat belt pretensioner produces an exploding sound when it deploys, so perform the operation outdoors where it will not disturb local residents.**
- **When deploying a front seat outer belt (with a seat belt pretensioner), perform the operation at least 10 m (33 ft) away from the front seat outer belt.**
- **Use gloves and safety glasses when handling a front seat belt with a deployed pretensioner.**
- **Always wash your hands with water after completing the operation.**
- **Do not apply water, etc. to a front seat outer belt with a deployed pretensioner.**
- **When disposing of a pretensioner equipped front seat outer belt, never deploy the belt in the customer's vehicle.**
- **Be sure to follow the procedures listed below when deploying the seat belt pretensioner.**

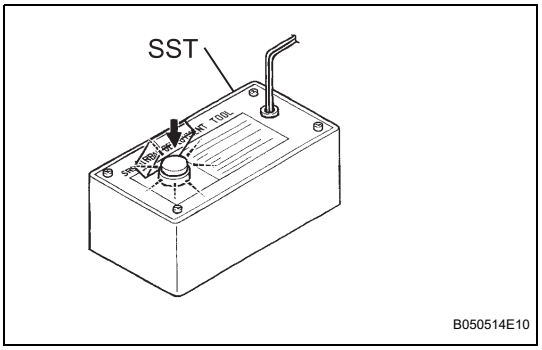
SB



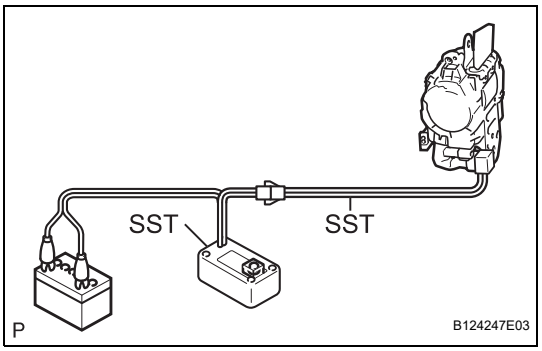
(a) Check the function of SST.
SST 09082-00700, 09082-00770
CAUTION:
When deploying the seat belt pretensioner, always use the specified SST.



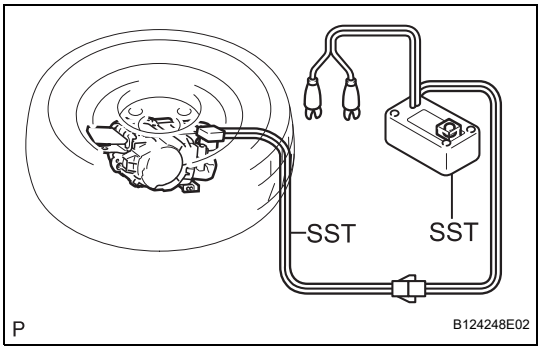
(1) Connect the red clip of the SST to the battery positive (+) terminal, and the black clip to the battery negative (-) terminal.
HINT:
At this time, do not connect the yellow connector that will later be connected to the seat belt pretensioner.



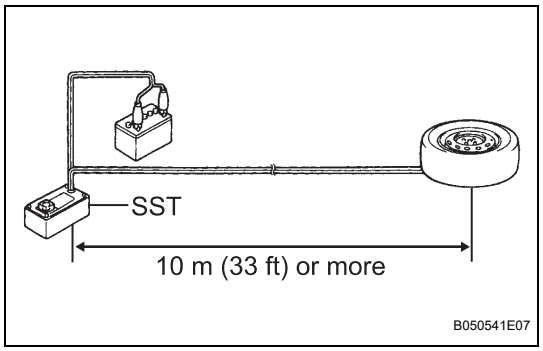
(2) Press the SST deployment switch, and check that the LED of the SST deployment switch lights up.
CAUTION:
If the LED is lit when the deployment switch is not pressed, the SST may be malfunctioning. Therefore, do not use the SST.

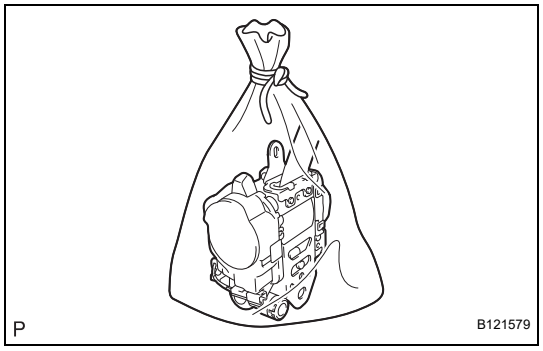


(b) Connect SST.
(1) Connect 2 SST, and then connect them to the front seat outer belt pretensioner.
SST 09082-00700, 09082-00770
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the pretensioner connector.



(2) Place the outer belt on the ground and cover it with a tire and wheel assembly.
NOTICE:
Position the front seat outer belt assembly as shown in the illustration.
(3) Position and hold the SST at least 10 m (33 ft) away from the wheel.
NOTICE:
Do not damage the SST wire harness.





(c) Deploy the front seat outer belt pretensioner.
  (1) Check that no one is within a 10 m (33 ft) radius of the wheel.
  (2) Connect the red clip of the SST to the battery positive (+) terminal, and the black clip to the battery negative (-) terminal.
  (3) Press the SST deployment switch to deploy the front seat outer belt pretensioner.
  HINT:
  The seat belt pretensioner will deploy at the same time as the LED of the SST illuminates.

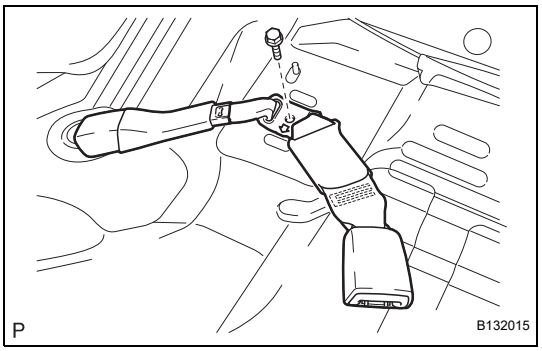
(d) Dispose of the front seat outer belt assembly.
  (1) Remove the wheel and SST.
  (2) Place the outer belt in a plastic bag, tie the end tightly, and dispose of it in the same way as other general part disposal.
  CAUTION:
  - **The outer belt becomes very hot when the front seat outer belt pretensioner is deployed, so leave it untouched for at least 30 minutes after it has been deployed.**
  - **Use gloves and safety glasses when handling an outer belt with a pretensioner that has been deployed.**
  - **Always wash your hands with water after completing the operation.**
  - **Do not apply water, etc. to a front seat outer belt assembly with a pretensioner that has been deployed.**

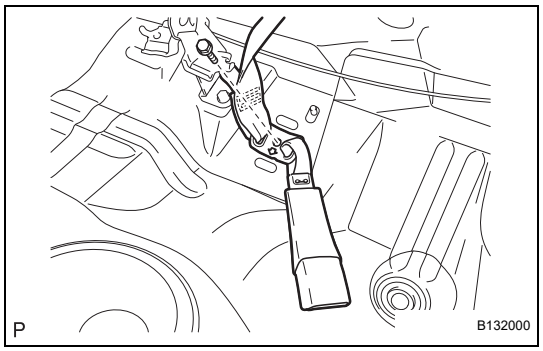
  HINT:
  When scrapping a vehicle, deploy the front seat outer belt pretensioners, and then scrap the vehicle with the deployed outer belt installed.

SB

REMOVAL

1. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
2. **REMOVE REAR SEAT HEADREST ASSEMBLY**
3. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
4. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)**
5. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)**
6. **REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)**
7. **REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)**
8. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-13)**
9. **DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH**
10. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-13)**
11. **DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH**
12. **REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-51)**
13. **REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY RH**
    HINT:
    Use the same procedure for the RH side and the LH side.
14. **REMOVE REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH**
    (a) Remove the bolt and the rear seat inner with center belt assembly RH.





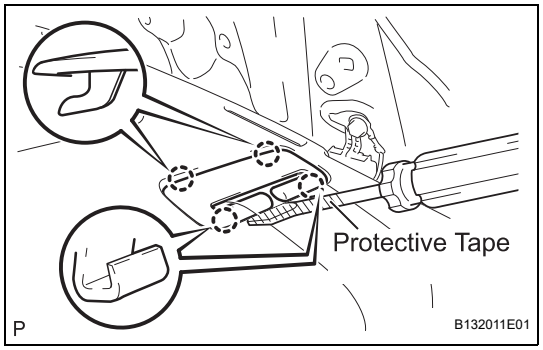
15. **DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH**
    (a) Remove the bolt and disconnect the floor end of the rear seat inner with center belt assembly LH.

16. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-15)**

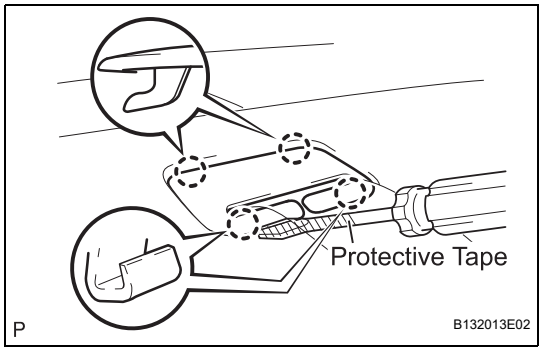
17. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-15)**

18. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-40)**

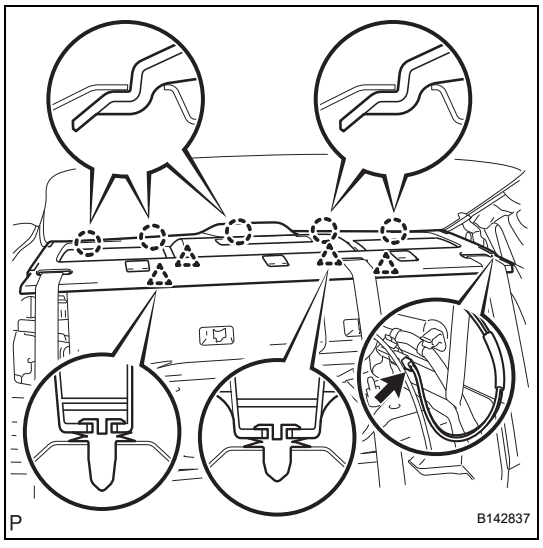
19. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-41)**



20. **REMOVE REAR SEAT SHOULDER BELT COVER**
    (a) Using a screwdriver, disengage the 4 claws and remove the rear seat shoulder belt cover.
    HINT:
    - Tape the screwdriver tip before use.
    - Use the same procedure for the RH side and LH side.



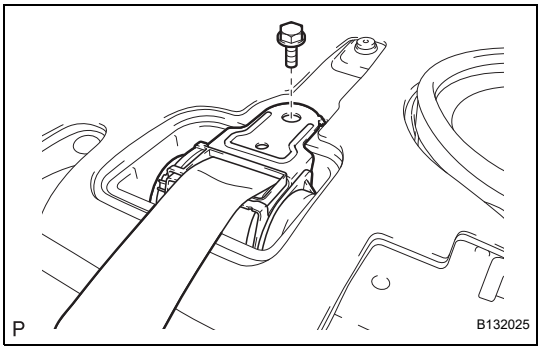
21. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER**
    (a) Using a screwdriver, disengage the 4 claws and remove the rear seat shoulder belt hole cover.
    HINT:
    Tape the screwdriver tip before use.



22. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY**
    (a) Disconnect the connector.
    (b) Disengage the 4 clips and the 5 claws.
    (c) Pass the 3 rear seat belt floor anchors through the package tray trim panel assembly, then remove the package tray trim panel assembly.

SB

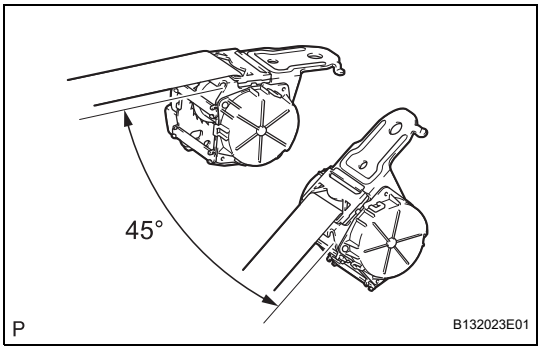
SB



23. REMOVE REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH

(a) Remove the bolt and the rear seat inner with center belt assembly LH.

INSTALLATION

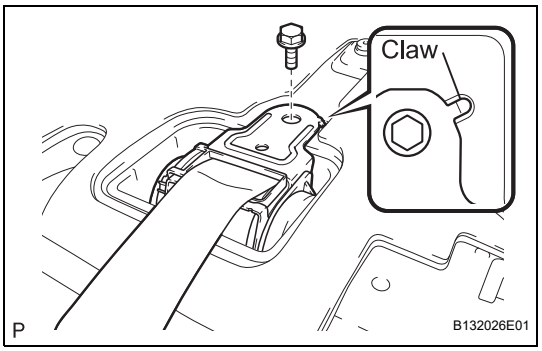


1. INSTALL REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH

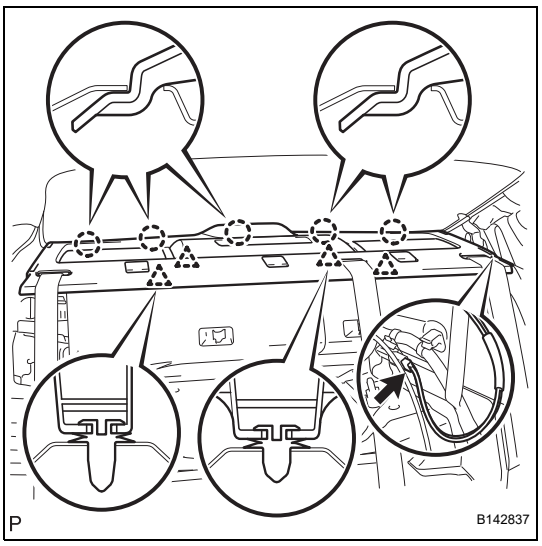
(a) Check the degree of the tilt when the ELR begins to lock.

(1) Check that the belt does not lock at less than 15 degrees of tilt in any direction but locks at over 45 degrees of tilt while gently pulling the belt.

NOTICE:
Do not disassemble the retractor.



(b) Align the claw with the seat belt positioning hole and install the rear seat inner with center belt assembly LH with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)

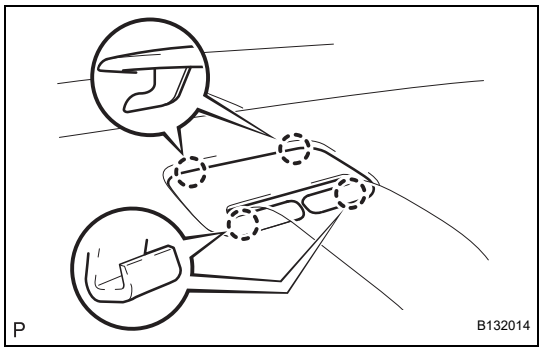


2. INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY

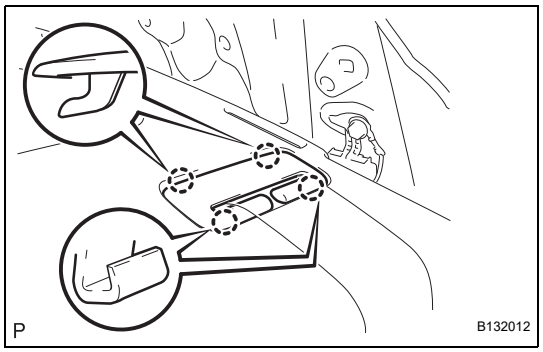
(a) Pass the 3 rear seat belt floor anchors through the package tray trim panel assembly.

(b) Engage the 4 clips and 5 claws and install the package tray trim panel assembly.

(c) Connect the connector.



3. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER**
   (a) Engage the 4 claws and install the rear seat shoulder belt hole cover.



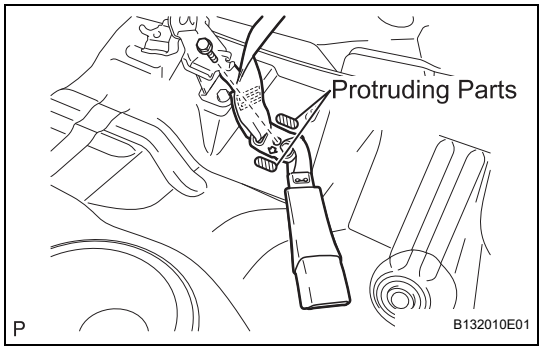
4. **INSTALL REAR SEAT SHOULDER BELT COVER**
   (a) Engage the 4 claws and install the rear seat shoulder belt cover.
   HINT:
   Use the same procedure for the RH side and LH side.

5. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-42)**

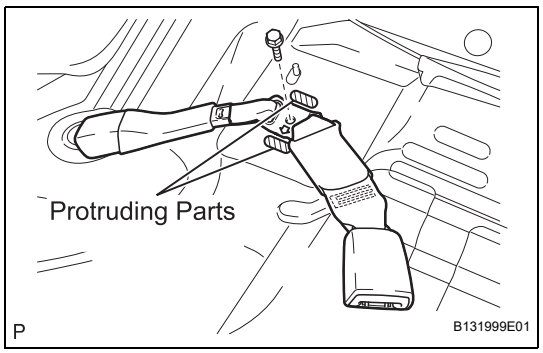
6. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-42)**

7. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-39)**

8. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-39)**



9. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH**
   (a) Connect the floor end of the rear seat inner with center belt assembly LH with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
   NOTICE:
   Do not allow the anchor part of the rear seat inner with center belt assembly LH to overlap the protruding parts of the floor panel.
   (b) Check if the ELR locks.
   NOTICE:
   The check should be performed with the outer belt assembly installed.
      (1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.



10. **INSTALL REAR SEAT INNER WITH CENTER BELT ASSEMBLY RH**
    (a) Install the rear seat inner with center belt assembly RH with the bolt.
    Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
    NOTICE:
    Do not allow the anchor part of the rear seat inner with center belt assembly RH to overlap the protruding parts of the floor panel.

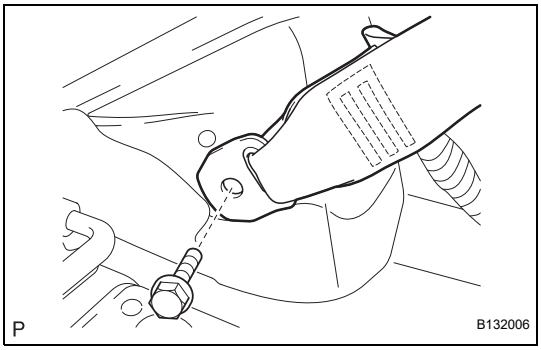
11. **INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-51)**

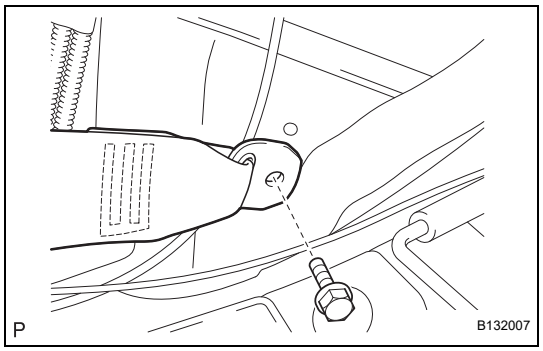
12. **INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY RH**
HINT:
Use the same procedure for the RH side and the LH side.
13. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-43)**
14. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-43)**
15. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-43)**
16. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-43)**
17. **INSTALL REAR SIDE SEATBACK ASSEMBLY LH (See page SE-54)**
18. **INSTALL REAR SIDE SEATBACK ASSEMBLY RH**
HINT:
Use the same procedure for the RH side and the LH side.
19. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**
20. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**
21. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
22. **INSTALL REAR SEAT HEADREST ASSEMBLY**
23. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**

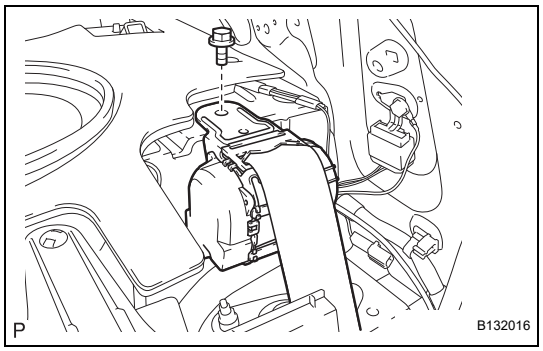
SB

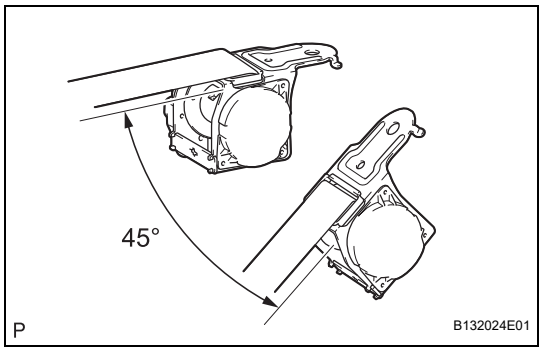
REMOVAL

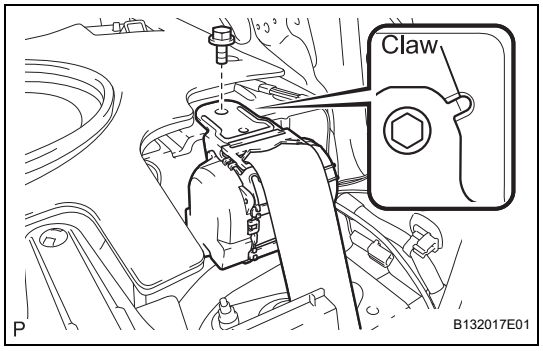
1. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)
2. REMOVE REAR SEAT HEADREST ASSEMBLY
3. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
4. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)
5. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)
6. REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)
7. REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)
8. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-13)
9. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH
10. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-13)
11. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH
12. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-51)
13. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-33)
14. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-15)
15. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-15)
16. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side)
    (a) Remove the bolt and disconnect the floor end of the rear seat outer belt assembly.









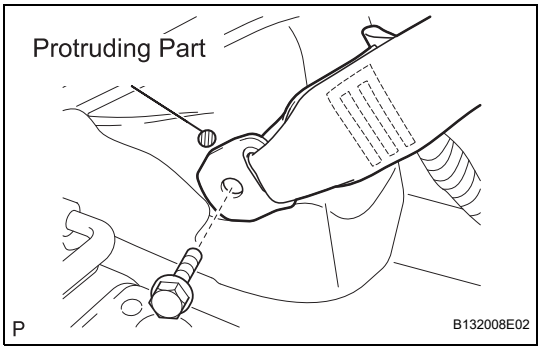


17. **DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side)**
    (a) Remove the bolt and disconnect the floor end of the rear seat outer belt assembly.
18. **REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-33)**
19. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-33)**
20. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-33)**
21. **REMOVE REAR SEAT OUTER BELT ASSEMBLY**
    (a) Remove the bolt and the rear seat outer belt assembly.

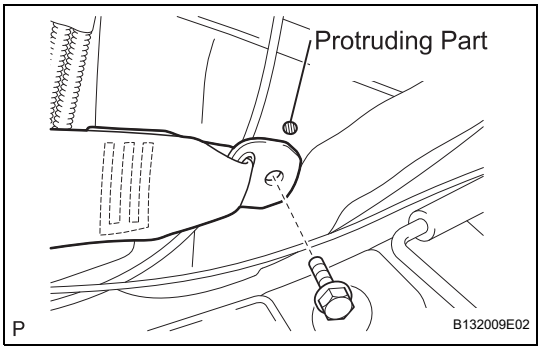
INSTALLATION

1. **INSTALL REAR SEAT OUTER BELT ASSEMBLY**
    (a) Check the degree of the tilt when the ELR begins to lock.
        (1) Check that the belt does not lock at less than 15 degrees of tilt in any direction but locks at over 45 degrees of tilt while gently pulling the belt.
        NOTICE:
        Do not disassemble the retractor.
    (b) Align the claw with the seat belt positioning hole and install the rear seat outer belt assembly with the bolt.
        Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
2. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-34)**
3. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-35)**
4. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-35)**

SB



5. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side)**
   (a) Connect the floor end of the rear seat outer belt assembly with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
   NOTICE:
   Do not allow the anchor part of the rear seat outer belt assembly to overlap the protruding part of the floor panel.
   (b) Check if the ELR locks.
   NOTICE:
   The check should be performed with the outer belt assembly installed.
      (1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.



6. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side)**
   (a) Connect the floor end of the rear seat outer belt assembly with the bolt.
   Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)
   NOTICE:
   Do not allow the anchor part of the rear seat outer belt assembly to overlap the protruding part of the floor panel.
   (b) Check if the ELR locks.
   NOTICE:
   The check should be performed with the outer belt assembly installed.
      (1) With the belt assembly installed, check that the belt locks when it is pulled out quickly.

7. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-39)**
8. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-39)**
9. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-35)**
10. **INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-51)**
11. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-43)**
12. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-43)**
13. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-43)**
14. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-43)**
15. **INSTALL REAR SIDE SEATBACK ASSEMBLY LH (See page SE-54)**

16. **INSTALL REAR SIDE SEATBACK ASSEMBLY RH**
HINT:
Use the same procedure for the RH side and the LH side.

17. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**

18. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**

19. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**

20. **INSTALL REAR SEAT HEADREST ASSEMBLY**

21. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**

SYSTEM DESCRIPTION

1. ENGINE IMMOBILISER SYSTEM DESCRIPTION

(a) The immobiliser system is a theft deterrent system that determines whether to disable starting of the hybrid control system based on a comparison of the key's ID codes and the vehicle's pre-registered code. The immobiliser system compares the vehicle certification ECU's pre-registered ID code with the ID of the key-embedded transponder chip. If the ID codes do not match, the immobiliser system activates and the hybrid control system cannot be started. The certification ECU manages communication with the ECM, main body ECU (instrument panel J/B), steering lock ECU and ID code box. When the ID codes of the transponder chip and certification ECU match, the certification ECU authorizes the hybrid control system to start.

2. FUNCTION OF MAIN COMPONENT

Component	Outline
Transponder key coil/amplifier (built into power switch)	Receives key ID code, amplifies ID code and outputs the code to the certification ECU.
Indoor electrical key oscillator	Transmits key detection signals within the detection area in the vehicle interior upon receiving a transmission request signal from the certification ECU. Certification ECU request signal is activated when the key is brought into the vehicle interior and the power switch is pushed.
Door control receiver	Receives an ID code from the key in the actuation area and transmits it to the certification ECU.
Security indicator	Illuminates or starts flashing. Illumination is controlled by the certification ECU.

3. SYSTEM FUNCTION

(a) Using entry function

(1) When the driver (or passenger) is sitting in the vehicle while carrying the key, and the power switch is pressed while the brake pedal is depressed, the main body ECU (instrument panel J/B) recognizes that the engine start operation has occurred and sends a certification request signal to the certification ECU. Upon receipt of the certification request signal, the certification ECU sends a request signal to the indoor electrical key oscillator. Upon receipt of the request signal, the indoor electrical key oscillator sends a request signal to detect if the key is inside the vehicle. When the key receives this request signal, it answers by sending an ID code containing a response code through the glass antenna to the door control receiver. Upon receipt of the ID code, the certification ECU analyzes the code. If the interior certification passes, then the main body ECU (instrument panel J/B) sends a certification pass response signal. When the main body ECU (instrument panel J/B) receives this signal, the ACC relay is

switched on and the IG1 and IG2 relays are switched on in sequence. At this time, the power switch indicator illuminates in green. Then the certification ECU checks that the power source mode has been changed and sends a steering lock command signal to the main body ECU (instrument panel J/B). After receiving this signal, the main body ECU (instrument panel J/B) supplies power to the steering lock actuator. Then (via the ID code box) the steering lock ECU confirms that the certification ECU is certified and drives the steering actuator motor until the steering lock is unlocked. After unlocking the steering lock, an unlock completed signal is sent to the certification ECU. Upon receipt of this signal, the certification ECU sends an unset command signal to the ID code box. Once this signal is received, the ID code box confirms that the certification ECU is certified, sends an immobiliser unset command signal to the ECM and sends a security indicator light off signal to the certification ECU.

(b) Not using the entry function (when key battery is depleted)

(1) When the driver is sitting in the vehicle while carrying the key and the brake pedal is depressed, the main body ECU (instrument panel J/B) recognizes that the stop light switch is on and sends a key confirmation request signal to the certification ECU. Upon receipt of this signal, the certification ECU drives the immobiliser amplifier built in the power switch. At this time, the power switch sends an RF wave communication signal to the immobiliser. If the driver holds the key up to the power switch at this time, the power switch receives the immobiliser RF wave signal and responds by sending a radio wave signal. When the power switch receives the radio wave signal from the key, it duplicates the signal and sends an ID code to the certification ECU. Upon receipt of the ID code, the code is analyzed. If the certification passes, a key certification pass response signal is sent to the main body ECU (instrument panel J/B) while simultaneously sending a sound buzzer request signal to the meter ECU. When the main body ECU (instrument panel J/B) receives this signal, the ACC relay is switched on and the IG1 and IG2 relays are switched on in sequence. At this time, the power switch indicator illuminates in green. Then the certification ECU checks that the power source mode has been changed and sends a steering lock command signal to the

main body ECU (instrument panel J/B). After receiving this signal, the main body ECU (instrument panel J/B) supplies power to the steering lock actuator. Then (via the ID code box) the steering lock ECU confirms that the certification ECU is certified and drives the steering actuator motor until the steering lock is unlocked. After unlocking the steering lock, an unlock completed signal is sent to the certification ECU. Upon receipt of this signal, the certification ECU sends an unset command signal to the ID code box. Once this signal is received, the ID code box confirms that the certification ECU is certified, sends an immobiliser unset command signal to the hybrid control system and sends a security indicator light off signal to the certification ECU.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the engine immobiliser system.
- The intelligent tester should be used in steps 3, 4 and 6.

EI

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	INSPECT BATTERY VOLTAGE

(a) Inspect the battery voltage.
Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3	INSPECT COMMUNICATION FUNCTION OF MULTIPLEX COMMUNICATION SYSTEM (CAN)

(a) Using the intelligent tester, check if the CAN communication system is functioning normally.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B (See page CA-7)

B → GO TO CAN COMMUNICATION SYSTEM

A

4	CHECK FOR DTCS

(a) Check for DTCs and note any codes that are output (see page EI-25).
(b) Delete the DTCs.
(c) Recheck for DTCs. Based on the DTCs output above, try to duplicate the hybrid control system DTC or engine immobiliser system DTC by simulating the symptoms indicated by the DTCs.

Result

Result	Proceed to
DTC output does not reoccur	A
Hybrid control system DTC output reoccurs	B (See page HV-46)

Result	Proceed to
Engine immobiliser system DTC output reoccurs	C (See page EI-27)

B → GO TO HYBRID CONTROL SYSTEM

C → GO TO DTC CHART

A

5 PROBLEM SYMPTOMS TABLE

(a) If the fault is not listed in the problem symptoms table, proceed to A.
(b) If the fault is listed in the problem symptoms table, proceed to B.

B → GO TO STEP 7

A

6 OVERALL ANALYSIS AND TROUBLESHOOTING

(a) DATA LIST/ACTIVE TEST (See page EI-25)
(b) TERMINALS OF ECU (See page EI-16)

NEXT

7 ADJUST, REPAIR OR REPLACE

NEXT

8 CONFIRMATION TEST

NEXT

END

REGISTRATION

1. DESCRIPTION OF CODE REGISTRATION

HINT:

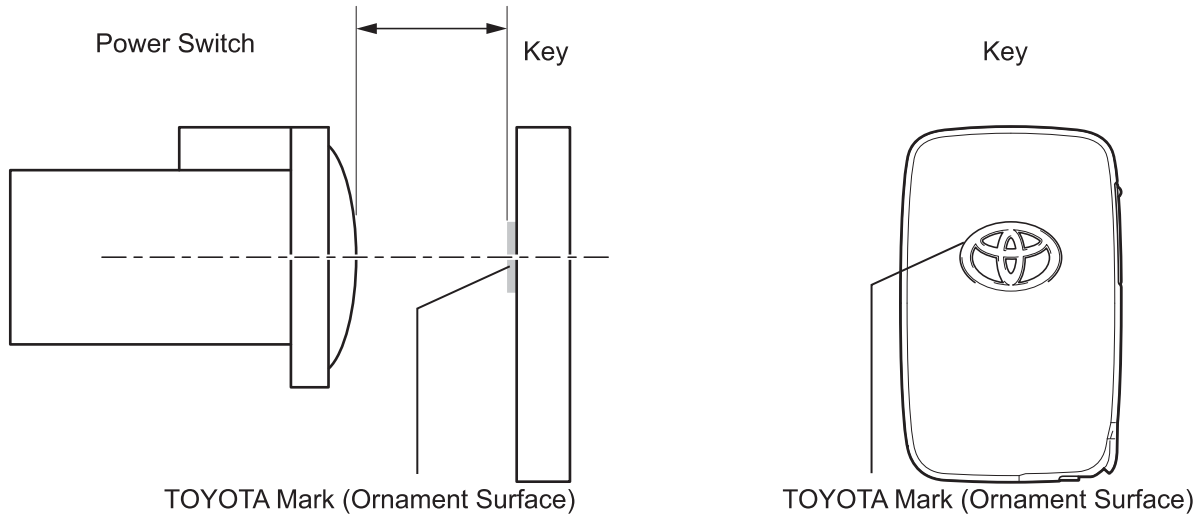
- ID codes are the same as recognition codes for the wireless transmitter and the engine immobiliser function. Registering an ID code enables the smart key system, the wireless door lock control function and the engine immobiliser function to be operated.
- Code registration is needed when the certification ECU, ID code box, steering lock ECU or key is replaced with a new one.

(a) PROCEDURE "1"

The vehicle with the smart key system does not have a key slot. Therefore, hold the key close to the power switch to register the key, as shown in the illustration below.

Hold the key with its ornament surface within a range of 10 mm (0.39 in.) or less from the power switch.

Communication distance: 10 mm (0.39 in.) or less from the power switch.



P

B139204E02

2. PART REPLACEMENT KEY REGISTRATION

(a) The following table shows ECU replacement and key registration procedures in case the malfunctioning ECU has been identified after troubleshooting the smart key system.
HINT:
- The following procedures indicated in the table below require the use of the intelligent tester:
  New key ID registration
  Additional key ID registration
  Key ID erasure
  ECU code registration
- If all of the registered keys are not available, replacement of the ID code box is also required.
- A maximum of 7 keys can be registered.

Part to be replaced	Condition		Procedure	Reference
Certification ECU	Customer has brought all keys		1. Replace certification ECU	-
			2. Reregister all keys (new key ID registration)	PROCEDURE "B"
	Some keys are lost	Key ID codes can be registered and erased	1. Erase key codes (key ID erasure)	PROCEDURE "D"
			2. Perform additional key registration procedure (additional key ID registration)	PROCEDURE "C"
			3. Replace certification ECU	-
			4. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later.	PROCEDURE "B"
		Key ID codes cannot be either registered or erased	1. Replace certification ECU	-
			2. Replace ID code box	-
			3. Reregister all keys (new key ID registration) HINT: If key codes cannot be erased or additional keys cannot be registered due to a malfunction in certification ECU, replace ID code box and certification ECU. If some keys are not registered during above steps, they will be disabled because they cannot be registered later.	PROCEDURE "A"
			4. ECU communication ID registration	PROCEDURE "F"
ID code box	At least 1 key is available		1. Replace ID code box	-
			2. Register recognition codes in ECUs (ECU code registration)	PROCEDURE "E"
			3. ECU communication ID registration	PROCEDURE "F"
	All keys are lost		1. Replace ID code box	-
			2. Replace certification ECU	-
			3. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later.	PROCEDURE "A"
			4. ECU communication ID registration	PROCEDURE "F"

Part to be replaced	Condition	Procedure	Reference
Steering lock ECU	Customer has brought at least 1 key	1. Replace steering lock ECU	-
		2. Register recognition codes in ECUs (ECU code registration)	PROCEDURE "E"
	All keys are lost	1. Replace steering lock ECU	-
		2. Replace certification ECU	-
		3. Replace ID code box	-
		4. Reregister all keys (new key ID registration) HINT: If some keys are not registered during above steps, they will be disabled because they cannot be registered later.	PROCEDURE "A"
		5. ECU communication ID registration	PROCEDURE "F"
Main body ECU (Instrument panel J/B)	No condition required	Replace main body ECU (Instrument panel J/B)	-
Hybrid vehicle control ECU	No condition required	1. Replace hybrid vehicle control ECU	-
		2. ECU communication ID registration	PROCEDURE "F"
Key	Customer has brought at least 1 key	1. Using remaining key, erase lost key code (key ID erasure)	PROCEDURE "D"
		2. Register additional keys as necessary (additional key ID registration)	PROCEDURE "E"
	All keys are lost	1. Replace certification ECU	-
		2. Replace ID code box	-
		3. Register all keys (new key ID registration) HINT: If customer brings lost keys at later date, they can be registered using additional key ID registration function.	PROCEDURE "A"
		4. ECU communication ID registration	PROCEDURE "F"

3. KEY REGISTRATION

(a) PROCEDURE "A"

New key ID registration (when replacing certification ECU and ID code box, or certification ECU, ID code box and steering lock ECU)

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / SMART CODE REG" from tester menu HINT: The power switch cannot be turned on (IG) more than 10 times. After connecting tester, turn tester on while turning driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.
2. Confirmation of ECU code	Perform operation according to prompts on tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode.
3. Verification of unregistered key *1	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger's side seat.
	Confirm that wireless door lock buzzer sounds
4. Registration of ID code	Perform operation according to prompts on tester screen
5. End of registration	Finish new key ID code registration

*1: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from process 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(b) PROCEDURE "B"
New key ID registration (when replacing certification ECU)

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / SMART CODE REG" from tester menu HINT: The power switch cannot be turned on (IG) more than 10 times. After connecting tester, turn tester on while turning driver's side door courtesy light switch on and off repeatedly at 1.5-second intervals or less to continue key registration procedure.
2. Confirmation of ECU code	Perform operation according to prompts on tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode.
3. Confirmation of all registered keys *1	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds
4. Confirmation of ECU code	Perform operation according to prompts on tester screen
5. Verification of unregistered key *2	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger side seat.
	Confirm that wireless door lock buzzer sounds
5. Registration of ID code	Perform operation according to prompts on tester screen
6. End of registration	Finish new key ID code registration

*1: Repeat this process for each key registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from process 1 again. If performing the key confirmation procedure for a key, the security indicator comes on and remains on until all the keys are confirmed.
*2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(c) PROCEDURE "C"
Additional key ID registration

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / SMART CODE REG" from tester menu
2. Confirmation of registered key *1	Perform operation according to prompts on intelligent tester screen HINT: The mode is automatically selected by tester, new registration mode or add mode.
	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Confirmation of ECU code	Perform operation according to prompts on tester screen
4. Verification of unregistered key *2	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds. Place unregistered key on front passenger's side seat.
	Confirm that wireless door lock buzzer sounds
5. Registration of ID code	Perform operation according to prompts on tester screen
6. End of registration	Finish key ID code registration

*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform registration procedures from process 1 again.
*2: Repeat this process for each key which is to be registered for the vehicle. Finish the procedure for each key within 30 seconds. If the procedure for any of the keys has not been finished within the specified time, perform registration procedures from 1 again. Make sure that only 1 key is in the cabin during registration procedures. If 2 or more keys are in the cabin simultaneously, electric waves will interfere with each other, preventing normal registration.

(d) PROCEDURE "D"
Key ID erasure
HINT:
Erase all registered key codes except one.

Process	Procedure
1. Start of erasure	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / SMART CODE ERS" from tester menu
2. Confirmation of registered key *1	Perform operation according to prompts on intelligent tester screen
	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Confirmation of ECU code	Perform operation according to prompts on tester screen
4. Erasure of ID code	Perform operation according to prompts on tester screen
5. End of erasure	Finish key ID code erasure

*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform erasure procedures from process 1 again.

(e) PROCEDURE "E"
ECU code registration

Process	Procedure
1. Start of registration	1. Connect intelligent tester (with CAN VIM) to DLC3 2. Turn power switch on (IG) 3. Select "SMART KEY / ID UTILITY / ECU COMM ID REG / ID Code Box and Steering Lock" from tester menu
2. Confirmation of registered key *1	Hold unregistered key close to power switch (For details, refer to PROCEDURE "1")
	Confirm that wireless door lock buzzer sounds once
3. Registration of ECU code	Perform operation according to prompts on tester screen
4. End of registration	Finish ECU code registration

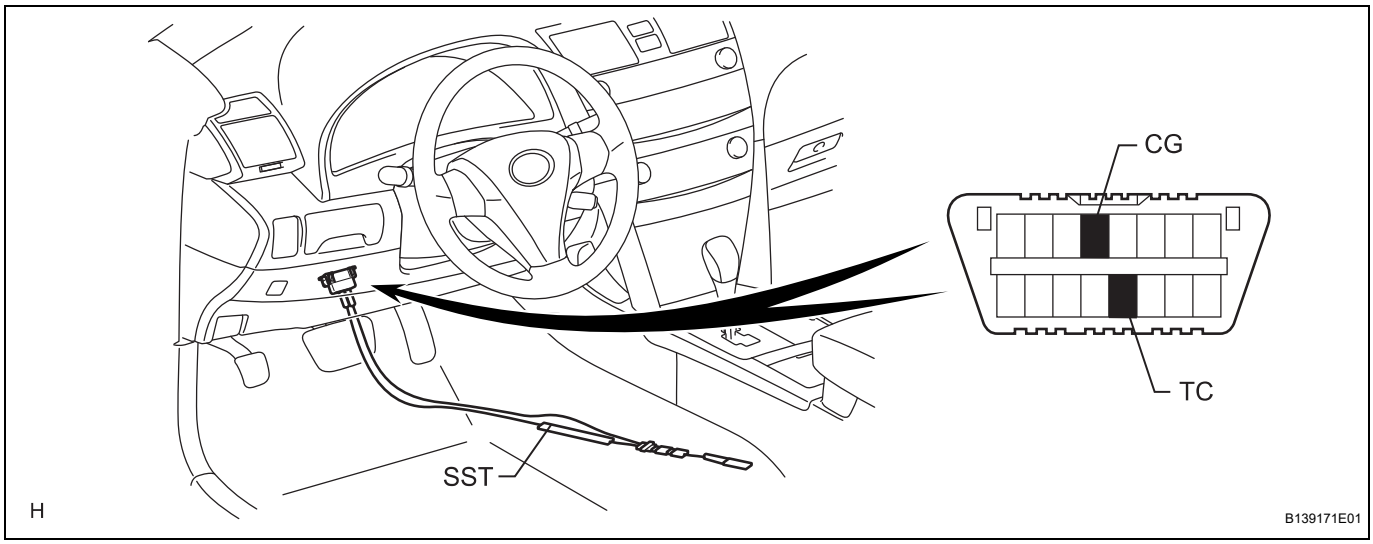
*1: Perform this process for one of the keys registered for the vehicle. Finish the procedure within 30 seconds. If the procedure has not been finished within the specified time, perform erasure procedures from process 1 again.

(f) PROCEDURE "F"
ECU communication ID registration

NOTICE:

- **The ECU communication ID should be registered when the ID code box and/or the hybrid vehicle control ECU is replaced in order to match these ECU communication ID.**
- **The engine cannot be started unless the ECU communication ID matches.**
- **After the registration, pressing the power switch may not start the hybrid control system on the first try. If so, press the power switch again.**
- **After the hybrid control system is started, erase DTC B2799-542, 790 (code for hybrid vehicle control ECU's immobiliser communication error).**

Register the ECU communication ID.



(1) Using SST, connect terminals TC and CG of the DLC3.
SST 09843-18040

(2) Turn the power switch on (IG) and leave it for 30 minutes.
HINT:
Do not start the engine.

(3) Turn the power switch off and disconnect terminals TC and CG.

(4) Check that the hybrid control system.
OK:
Hybrid control system starts and stays on for more than 3 seconds.
HINT:
Using an already registered key, turn the power switch on (IG) with the brake pedal depressed.

PROBLEM SYMPTOMS TABLE

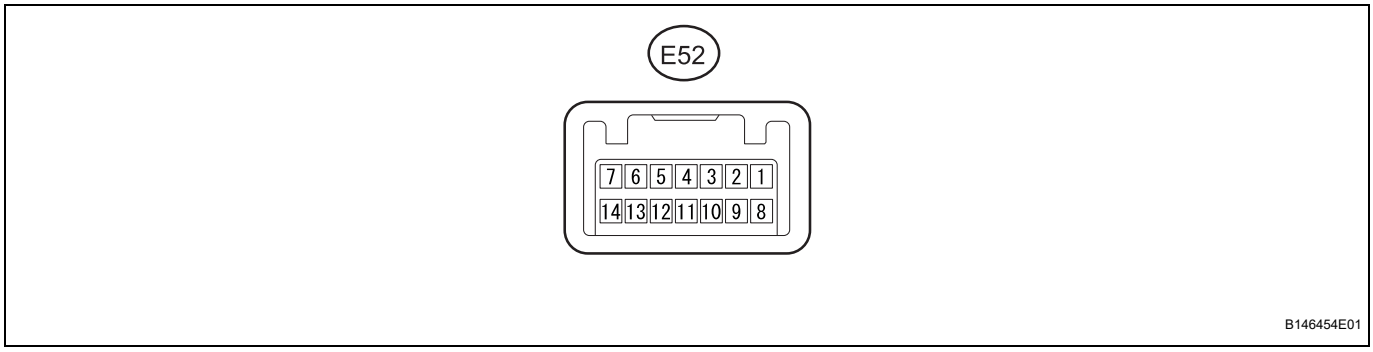
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected area in the order they are listed. Replace parts as necessary.

ENGINE IMMOBILISER SYSTEM:

Symptom	Suspected Area	See page
Engine does not start	1. Key	EI-25
	2. ID code box power source circuit	EI-50
	3. Certification ECU power source circuit	EI-52
	4. Steering lock ECU power source circuit	SR-30
	5. Smart key system	ST-10
	6. Hybrid control system	HV-15

TERMINALS OF ECU

1. CHECK POWER SWITCH



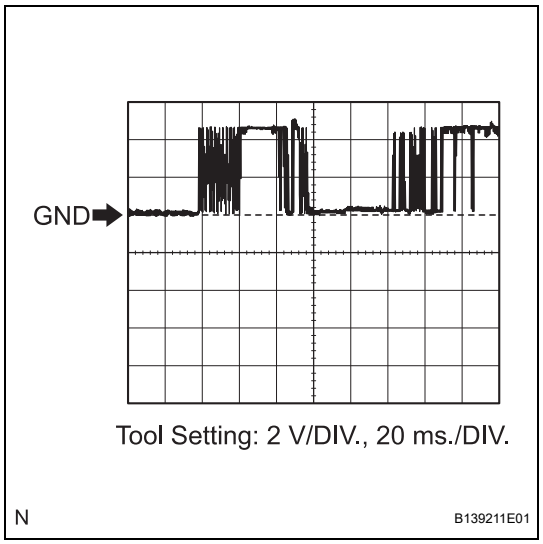
(a) Disconnect the E52 switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E52-8) - Body ground	G - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E52 switch connector.
(d) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E52-8) - Body ground	G - Body ground	Ground	Always	Below 1 Ω
VC5 (E52-14) - AGND (E52-8)	R - G	Power supply	Key is not in cabin	Below 1 V
			Press power switch	4.6 to 5.4 V
CODE (E52-10) - AGND (E52-8)	W - G	Demodulated signal of key code data	Key is not in cabin	Below 1 V
			Press power switch and hold key close to power switch*	Pulse generation (see waveform 1)
TXCT (E52-9) - AGND (E52-8)	GR - G	Key code output signal	Key is not in cabin	Below 1 V
			Press power switch and hold key close to power switch*	Pulse generation (see waveform 2)

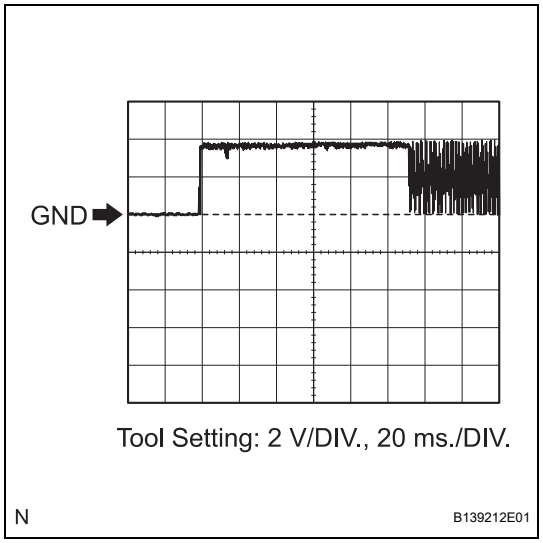
HINT:
*: Remove the key battery before performing this inspection.
If the result is not as specified, the switch may have a malfunction.



(e) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)

Item	Content
Symbols (Terminal No.)	CODE (E52-10) - AGND (E52-8)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Press power switch and hold key close to power switch*

HINT:
*: Remove the key battery before performing this inspection.

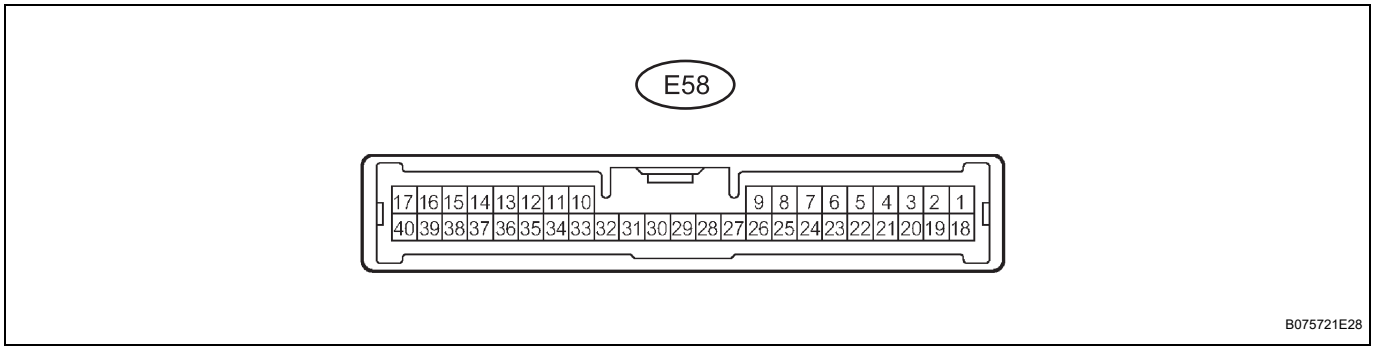


(2) Waveform 2 (Reference)

Item	Content
Symbols (Terminal No.)	TXCT (E52-9) - AGND (E52-8)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Press power switch and hold key close to power switch*

HINT:
*: Remove the key battery before performing this inspection.

2. CHECK CERTIFICATION ECU



(a) Disconnect the E58 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (E58-1) - E (E58-17)	W - W-B	+B power supply	Always	10 to 14 V
IG (E58-18) - E (E58-17)	LG - W-B	Ignition power supply	Power switch off	Below 1 V

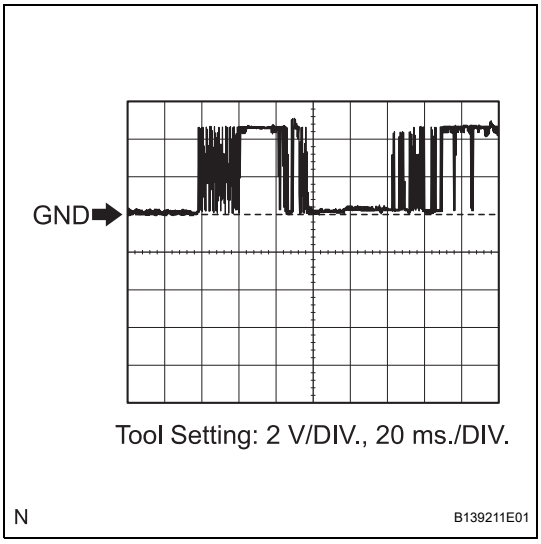
If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E58 ECU connector.

(d) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
AGND (E58-40) - Body ground	G - Body ground	Power switch ground	Always	Below 1 Ω
VC5 (E58-30) - AGND (E58-40)	R - G	Power switch power supply	Key is not in cabin	Below 1 V
			Press power switch*	4.6 to 5.4 V
CODE (E58-9) - AGND (E58-40)	W - G	Power switch CODE input	Key is not in cabin	Below 1 V
			Press power switch and hold key close to power switch*	Pulse generation (see waveform 1)
TXCT (E58-8) - AGND (E58-40)	GR - G	Power switch TXCT output	Key is not in cabin	Below 1 V
			Press power switch and hold key close to power switch*	Pulse generation (see waveform 2)

HINT:
*: Remove the key battery before performing this inspection.
If the result is not as specified, the ECU may have a malfunction.

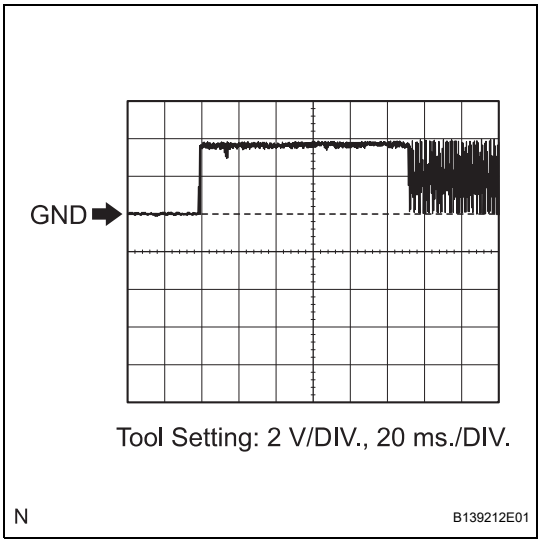
(e) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)



Item	Content
Symbols (Terminal No.)	CODE (E58-9) - AGND (E58-40)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Press power switch and hold key close to power switch*

HINT:
*: Remove the key battery before performing this inspection.

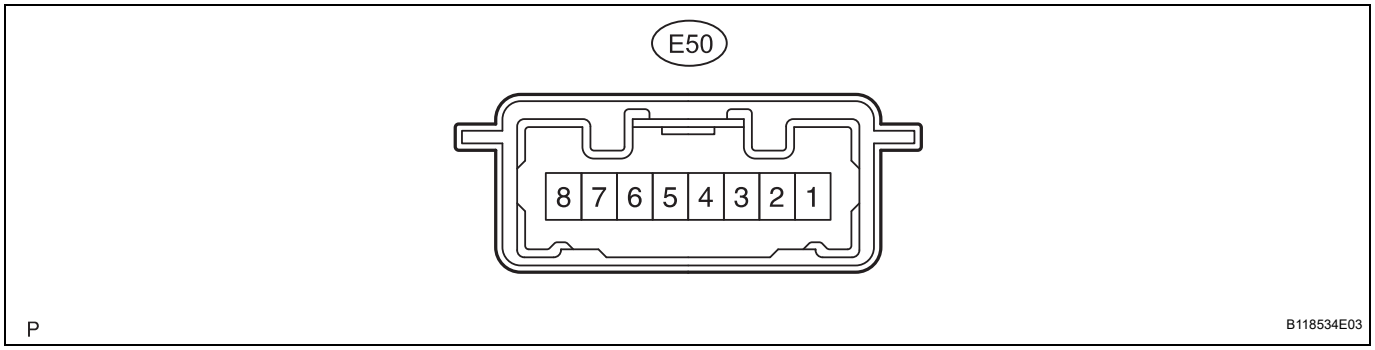
(2) Waveform 2 (Reference)



Item	Content
Symbols (Terminal No.)	TXCT (E58-8) - AGND (E58-40)
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	Press power switch and hold key close to power switch*

HINT:
*: Remove the key battery before performing this inspection.

3. CHECK ID CODE BOX



(a) Disconnect the E50 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

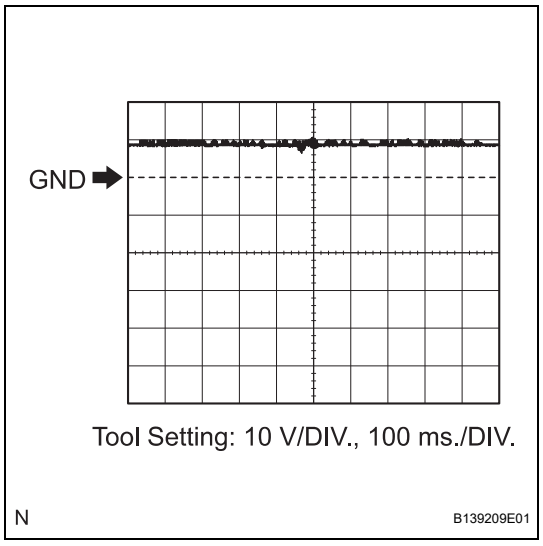
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND (E50-8) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
+B (E50-1) - GND (E50-8)	W - W-B	+B power supply	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the E50 ECU connector.
(d) Measure the voltage according to the value(s) in the table below.

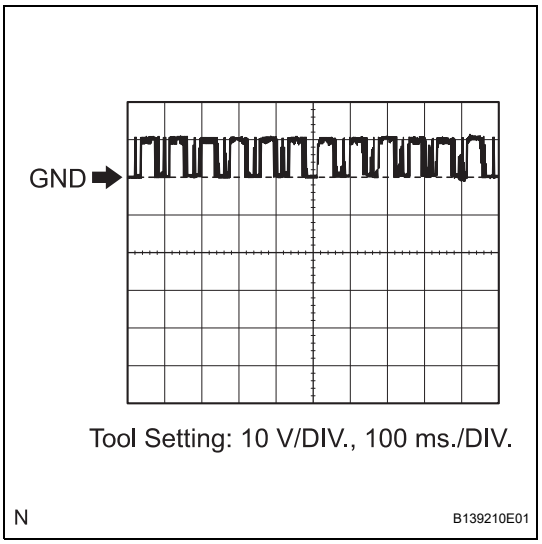
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
EFII (E50-5) - GND (E50-8)	G - W-B	Hybrid vehicle control ECU input signal	Power switch off	Below 1 V
			Power switch on (IG)	Pulse generation (see waveform 1)
EFIO (E50-6) - GND (E50-8)	L - W-B	Hybrid vehicle control ECU output signal	Power switch off	Below 1 V
			Power switch on (IG)	Pulse generation (see waveform 2)

If the result is not as specified, the ECU may have a malfunction.

(e) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)



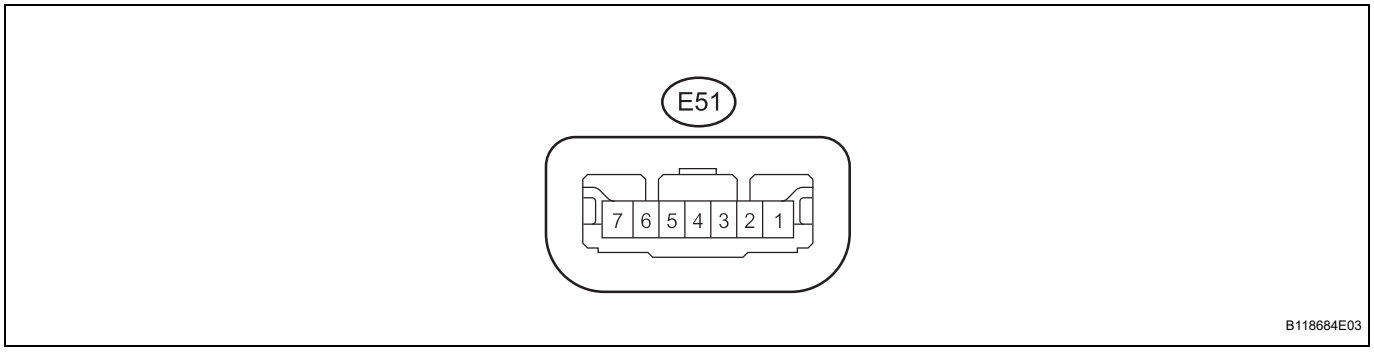
Item	Content
Symbols (Terminal No.)	EFII (E50-5) - GND (E50-8)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Power switch on (IG)



(2) Waveform 2 (Reference)

Item	Content
Symbols (Terminal No.)	EFIO (E50-6) - GND (E50-8)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Power switch on (IG)

4. CHECK STEERING CONTROL ECU

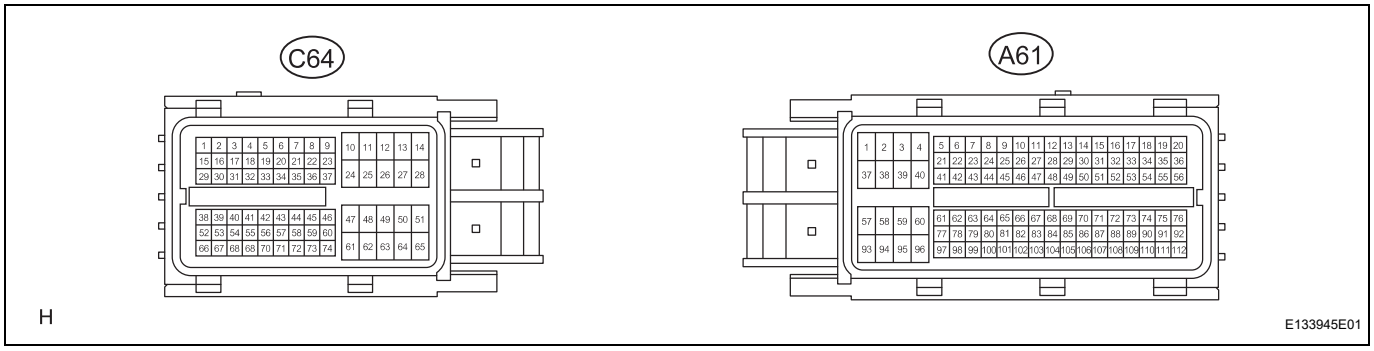


(a) Disconnect the E51 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SGND (E51-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND (E51-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
B (E51-7) - Body ground	P - Body ground	+B power supply	Always	10 to 14 V
IG2 (E51-6) - Body ground	B - Body ground	Ignition power supply	Power switch off	0 V
			Power switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.

5. CHECK HYBRID VEHICLE CONTROL ECU

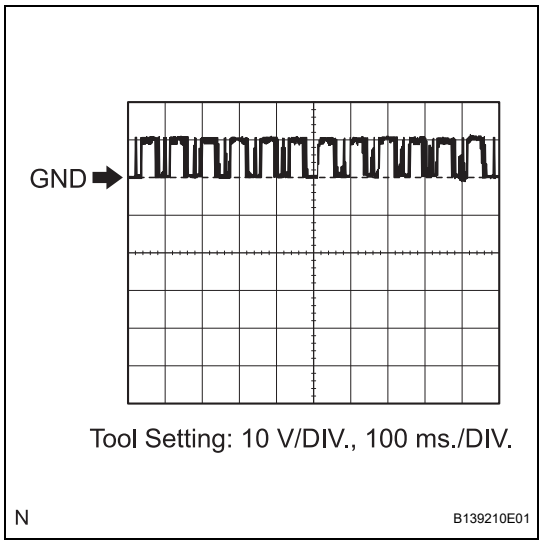


(a) Measure the resistance and voltage according to the value(s) in the table below.

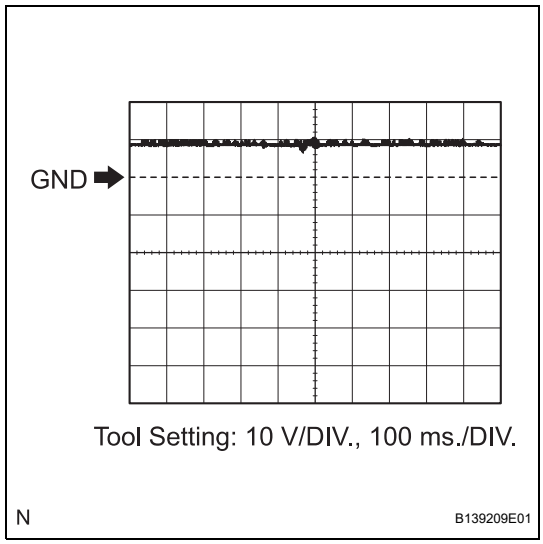
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E1 (C64-14) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E01 (C64-51) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
E02 (C64-65) - Body ground	B-W - Body ground	Ground	Always	Below 1 Ω
E03 (C64-25) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
E04 (C64-48) - Body ground	W - Body ground	Ground	Always	Below 1 Ω
ME01 (C64-13) - Body ground	B - Body ground	Ground	Always	Below 1 Ω
BATT (A61-4) - E1 (C64-14)	W - W-B	Battery (for measuring battery voltage and for hybrid vehicle control ECU memory)	Always	10 to 14 V
+B1 (A61-2) - E1 (C64-14)	Y - W-B	Power source of hybrid vehicle control ECU	Power switch off	Below 1 V
			Power switch on (IG)	10 to 14 V
IMI (A61-42) - E1 (C64-14)	Y - W-B	Immobiliser code ECU input signal	Power switch off	Below 1 V
			Power switch on (IG)	Pulse generation (see waveform 1)
IMO (A61-41) - E1 (C64-14)	G - W-B	Immobiliser code ECU output signal	Power switch off	Below 1 V
			Power switch on (IG)	Pulse generation (see waveform 2)

If the result is not as specified, the hybrid vehicle control ECU may have a malfunction.

(b) Inspect using an oscilloscope.
(1) Waveform 1 (Reference)



Item	Content
Symbols (Terminal No.)	IMI (A61-42) - E1 (C64-14)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Power switch on (IG)



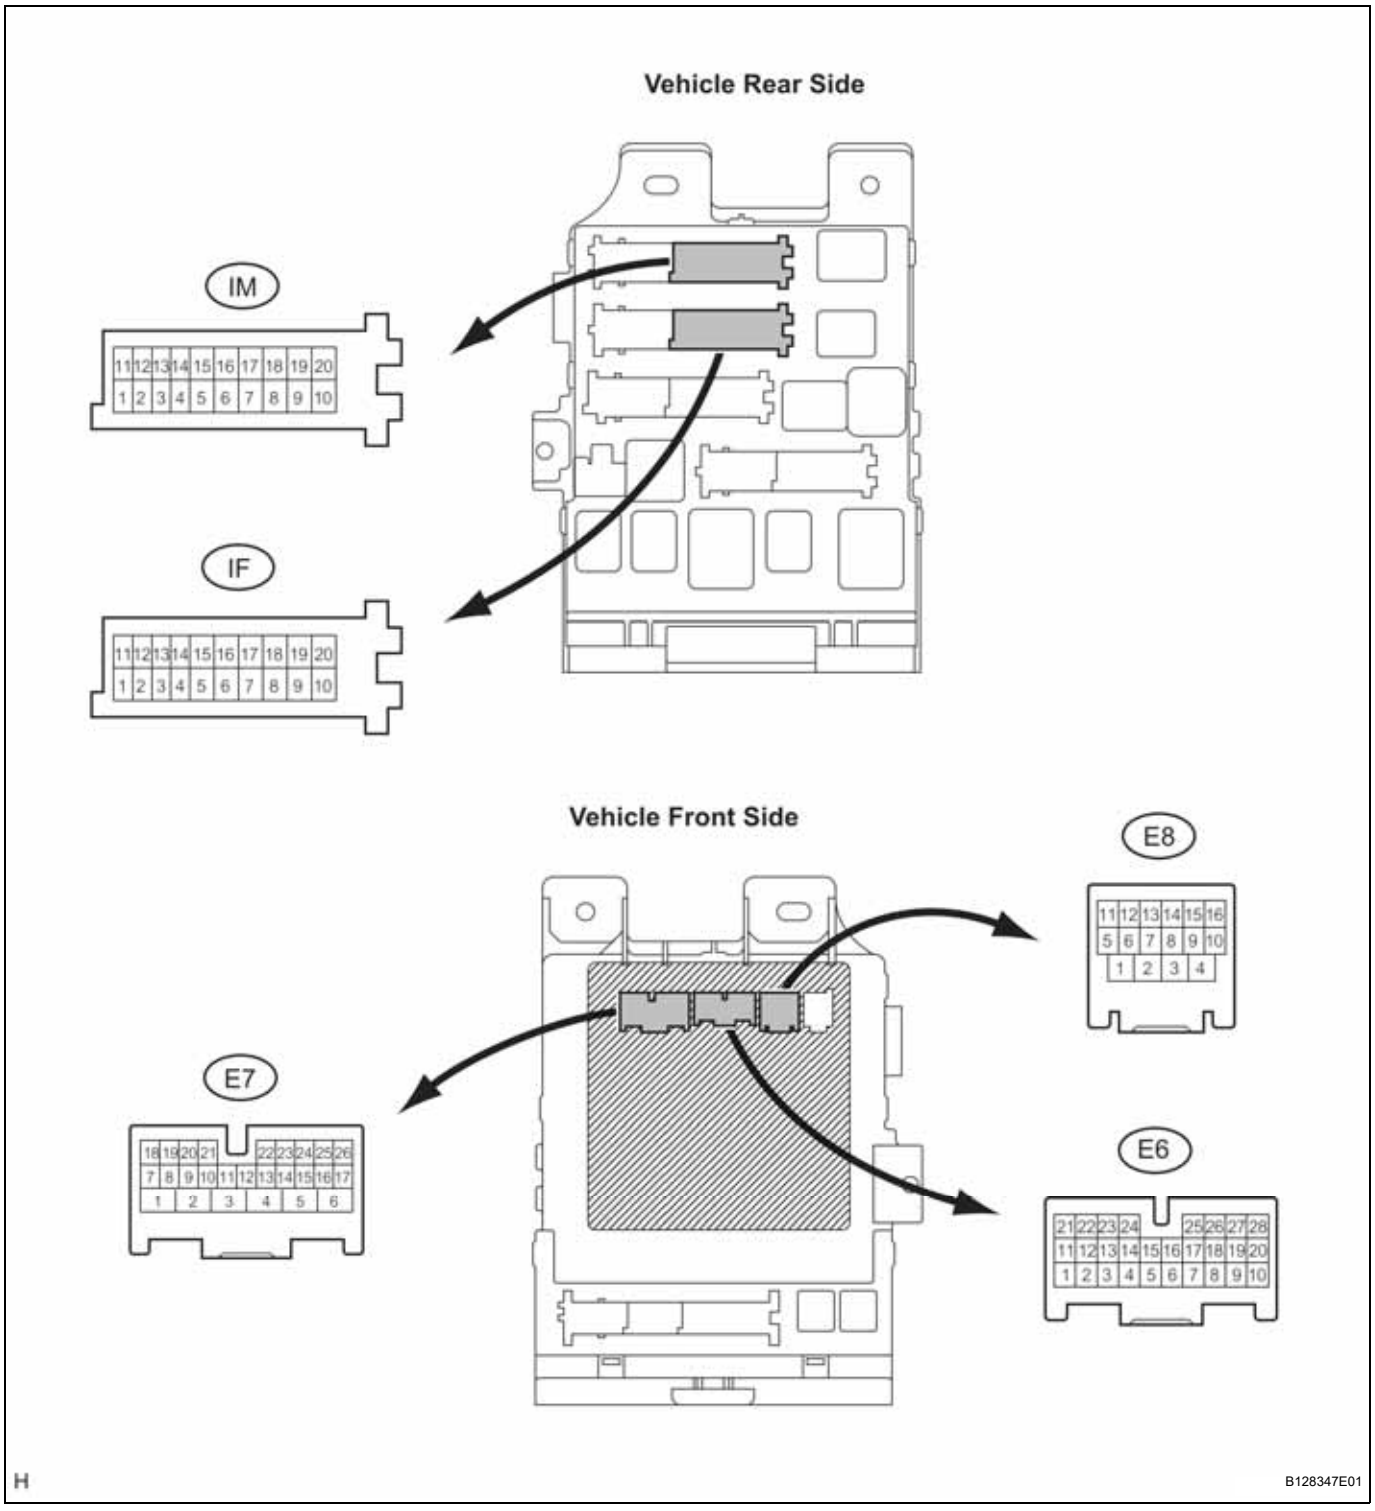
(2) Waveform 2 (Reference)

Item	Content
Symbols (Terminal No.)	IMO (A61-41) - E1 (C64-14)
Tool Setting	10 V/DIV., 100 ms./DIV.
Condition	Power switch on (IG)

6. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Disconnect the IF and IM junction block connectors.

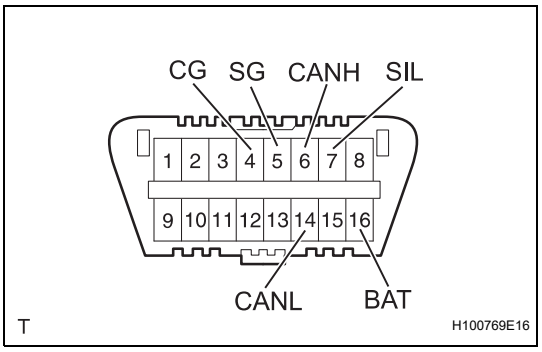
(b) Disconnect the E8, E7 and E6 main body ECU (Instrument panel J/B) connectors.



(c) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND3 (E8-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
AM1 (E7-6) - Body ground	L - Body ground	+B power supply	Always	10 to 14 V
AM2 (E6-1) - Body ground	L - Body ground	+B power supply	Always	10 to 14 V

If the result is not as specified, there may be a malfunction on the wire harness side.



DIAGNOSIS SYSTEM

1. CHECK DLC3

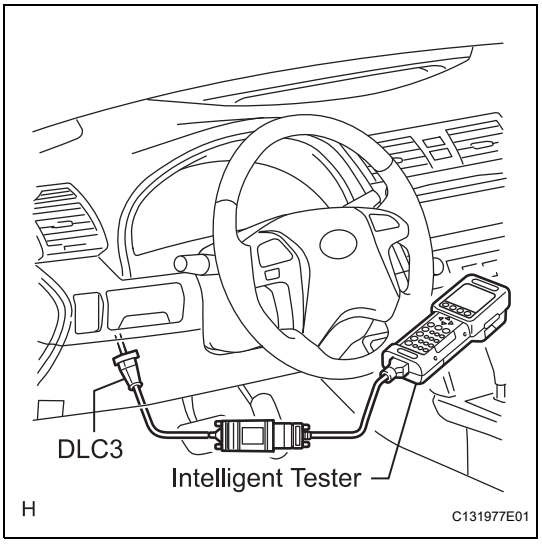
(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**

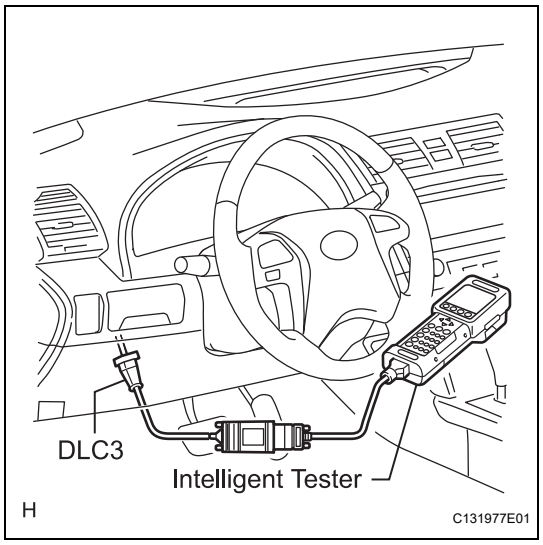
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the power switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle side or tester side.

HINT:

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.



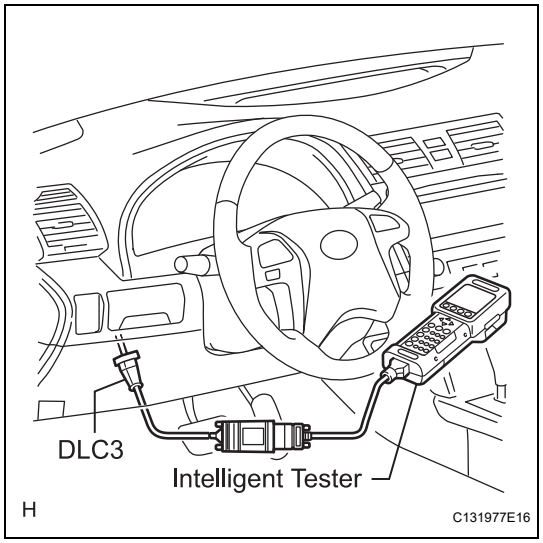
DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the DLC3.

(b) Turn the power switch on (IG).

(c) Read the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.



2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.

(b) Turn the power switch on (IG).

(c) Erase the DTCs by following the directions on the tester's screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

EI

EI

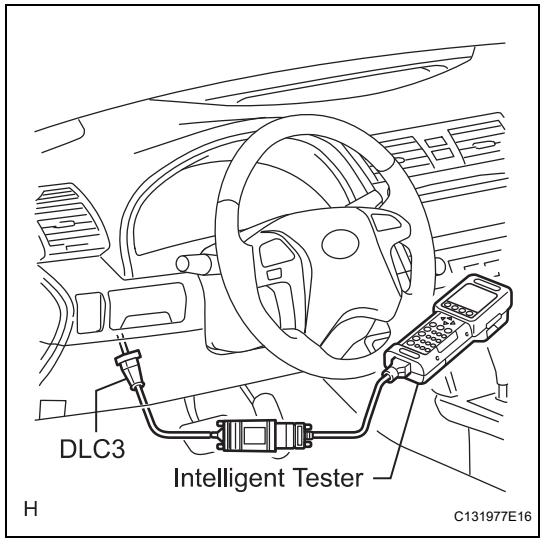
DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester to read the DATA LIST allows the values or states of switches, sensors, actuators and other items to be read without removing any parts. This non-intrusive inspection can be very useful as intermittent conditions or signals may be discovered before parts or wiring is disturbed. Reading the DATA LIST information early in troubleshooting is one way to save diagnostic time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG).
(c) Read the DATA LIST.



SMART KEY:

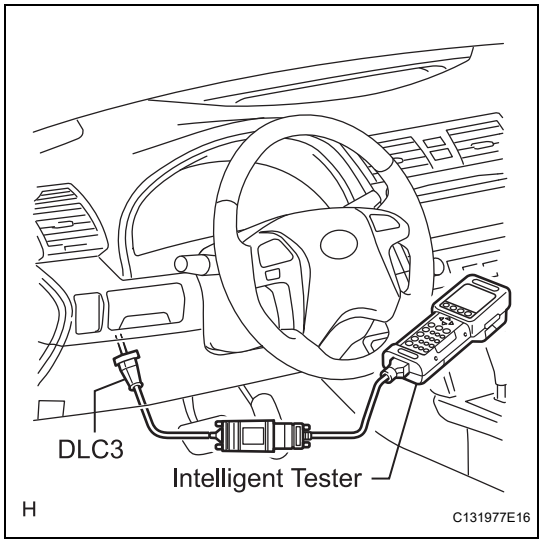
Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG SW	Power switch on (IG) signal / ON or OFF	ON: Power switch on (ACC, IG) or start OFF: Power switch off	-
ACC SW	Power switch on (ACC) signal / ON or OFF	ON: Power switch on (ACC, IG) or start OFF: Power switch off	-
IMMOBILISER	Immobiliser system status / SET or UNSET	SET: Key is not in cabin UNSET: Key is in cabin	-
MASTER KEY	Master key code signal / MATCH or NO MATCH	MATCH: Master key code is sent NO MATCH: Unmatched master key code is sent	-
SUB KEY	Sub-key (Master key) code signal / MATCH or NO MATCH	MATCH: Sub-key (master key) code is sent NO MATCH: Unmatched sub-key (master key) code is sent	-
ENCRYPT CODE	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
SERIAL NUMBER	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
FRAME	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
RESPONSE	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
BCC	Transponder chip signal / OK or NG	OK: Correct data sent NG: Incorrect data sent	-
STATUS	Transponder chip data / OK or NG	OK: Data OK NG: Data error	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG).
(c) Perform the ACTIVE TEST by following the directions on the tester screen.



MAIN BODY:

Tester Display	Test Part	Control Range	Diagnostic Note

DIAGNOSTIC TROUBLE CODE CHART

1. CERTIFICATION ECU DIAGNOSTIC TROUBLE CODE CHART

CERTIFICATION ECU

DTC Code	Detection Item	Trouble Area	See page
B2784	Antenna Coil Open / Short	1. Wire harness 2. Power switch 3. Certification ECU	EI-28
B2785	Communication Malfunction between ECUs Connected by LIN	1. Wire harness 2. Certification ECU 3. Main body ECU (Instrument panel J/B) 4. Steering lock ECU 5. ID code box	EI-30
B2786	No Response from Steering Lock ECU	1. Wire harness 2. Certification ECU 3. Steering lock ECU	EI-34
B2789	No Response from ID BOX	1. Wire harness 2. Certification ECU 3. ID code box	EI-37
B278A	Short to GND in Immobiliser System Power Source Circuit	1. Wire harness 2. Power switch 3. Certification ECU	EI-40
B2790	ID BOX EEPROM Malfunction	ID code box	EI-43
B2791	Communication Condition Failure between ECM	-	EI-44

2. HYBRID VEHICLE CONTROL ECU DIAGNOSTIC TROUBLE CODE CHART

HINT:

The DTCs for the engine immobiliser system are specified above. If other codes are output, check the DTC chart for the hybrid control system.

HYBRID VEHICLE CONTROL ECU

DTC Code	Detection Item	Trouble Area	See page
B2799-542	Engine Immobiliser System Malfunction	1. Wire harness 2. Hybrid vehicle control ECU 3. ID code box	EI-46
B2799-790	Engine Immobiliser System Malfunction	1. Wire harness 2. Hybrid vehicle control ECU 3. ID code box	EI-46

DTC	B2784	Antenna Coil Open / Short

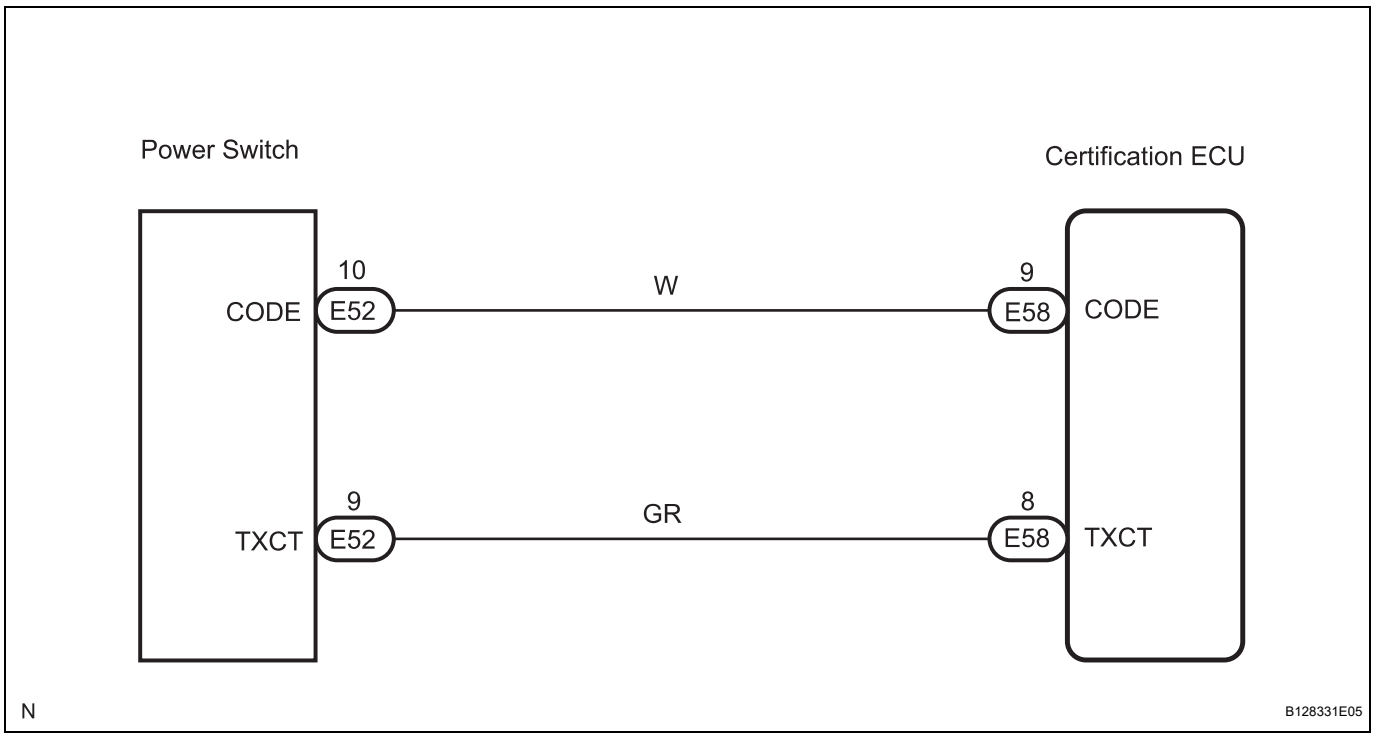
DESCRIPTION

This DTC is output when there is an open or short in the key coil (built into power switch).

DTC No.	DTC Detection Condition	Trouble Area
B2784	Antenna coil is open/shorted	• Wire harness • Power switch • Certification ECU

EI

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

If the certification ECU is replaced, register the key and ECU communication ID (See page EI-9).

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-25).

(b) Recheck for DTCs (See page EI-25).

Result

Result	Proceed to
B2784 output recurs	A
B2784 output does not recur	B

B → USE SIMULATION METHOD TO CHECK

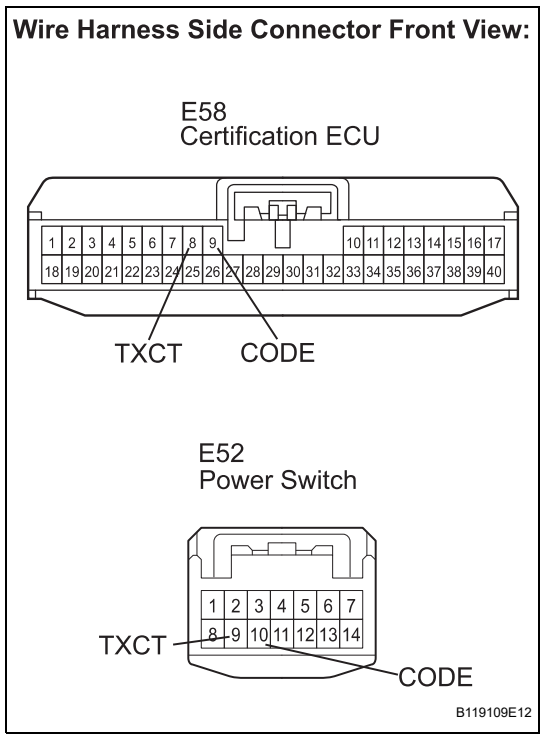
2 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - POWER SWITCH)



(a) Disconnect the E58 ECU and E52 switch connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E58-9 (CODE) - E52-10 (CODE)	Below 1 Ω
E58-8 (TXCT) - E52-9 (TXCT)	
E58-9 (CODE) - Body ground	10 kΩ or higher
E58-8 (TXCT) - Body ground	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 REPLACE POWER SWITCH

(a) Replace the power switch (See page ST-126).

NEXT

4 CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-25).
(b) Recheck for DTCs (See page EI-25).

Result

Result	Proceed to
B2784 output does not recurs	A
B2784 output recur	B

B → **REPLACE CERTIFICATION ECU**

A

END

DTC	B2785	Communication Malfunction between ECUs Connected by LIN

DESCRIPTION

This DTC is output when LIN communication from the certification ECU stops for a certain amount of time.
HINT:
If this DTC B2785 is detected simultaneously with DTC B2786 , B2789 or B2287, troubleshoot DTC B2786, B2789 or B2287 first.

EI

REPLACE ID CODE BOX

PROBLEM SYMPTOMS TABLE

HINT:
Be sure to perform the SYMPTOM SIMULATION procedures before replacing the hybrid vehicle control ECU. If these symptoms are no longer present, the cause of the problem may be poor intermittent electrical contact (open or short) of a wire harness or connector.

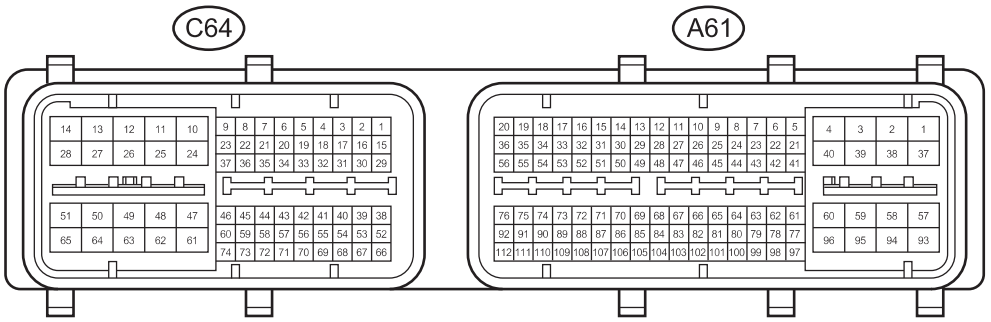
Cruise control system:

Symptom	Suspected Area	See page
Vehicle speed cannot be set. (The CRUISE main indicator light comes on.)	1. Cruise control switch circuit	CC-28
	2. Combination meter	ME-14
	3. Vehicle speed sensor circuit	CC-20
	4. Stop light switch	CC-24
	5. Park/Neutral position switch circuit	HV-90
	6. If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the hybrid vehicle control ECU.	HV-570
Pushing the ON-OFF button does not turn the cruise control system on. (Vehicle speed cannot be set.)	1. Stop light switch circuit	CC-24
	2. Vehicle speed sensor circuit	CC-20
	3. Cruise control switch circuit	CC-28
	4. Park/Neutral position switch circuit	HV-90
	5. If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the hybrid vehicle control ECU.	HV-570
Cruise control is canceled while it is operating.	1. Stop light switch circuit	CC-24
	2. Park/Neutral position switch circuit	HV-90
	3. Cruise control switch circuit	CC-28
	4. Vehicle speed sensor circuit	CC-20
	5. Combination meter	ME-14
	6. If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the hybrid vehicle control ECU.	HV-570
Pulling back on the control main switch does not cancel cruise control. (The CRUISE main indicator light remains on.)	1. Cruise control switch circuit	CC-28
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the hybrid vehicle control ECU.	HV-570
Pulling back on the control main switch does not cancel cruise control. (The CRUISE main indicator light goes off.)	Replace the hybrid vehicle control ECU	HV-570
Cruise control is not canceled when vehicle speed drops below the low speed limit. (The CRUISE main indicator light remains on.)	1. Vehicle speed sensor circuit	CC-20
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the hybrid vehicle control ECU.	HV-570
Cruise control is not canceled when vehicle speed drops below the low speed limit. (The CRUISE main indicator light goes off.)	Replace the hybrid vehicle control ECU	HV-570
Depressing the brake pedal does not cancel cruise control. (The CRUISE main indicator light remains on.)	1. Stop light switch circuit	CC-24
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the hybrid vehicle control ECU.	HV-570
Depressing the brake pedal does not cancel cruise control. (The CRUISE main indicator light goes off.)	Replace the hybrid vehicle control ECU	HV-570
Moving the shift liver does not cancel cruise control.	1. Park/Neutral position switch circuit	HV-90
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the hybrid vehicle control ECU.	HV-570

Symptom	Suspected Area	See page
Hunting (Speed is not constant.)	1. Vehicle speed sensor circuit	CC-20
	2. Combination meter	ME-14
	3. If the symptoms still occur after the above areas have been inspected and have proven to be normal, replace the hybrid vehicle control ECU. (2AZ-FXE)	HV-15
The CRUISE main indicator light remains blinking.	1. TC and CG terminal circuit	CC-35
	2. If the symptoms still occur after the above area has been inspected and has proven to be normal, replace the hybrid vehicle control ECU.	HV-570

TERMINALS OF ECU

1. CHECK HYBRID VEHICLE CONTROL ECU



H

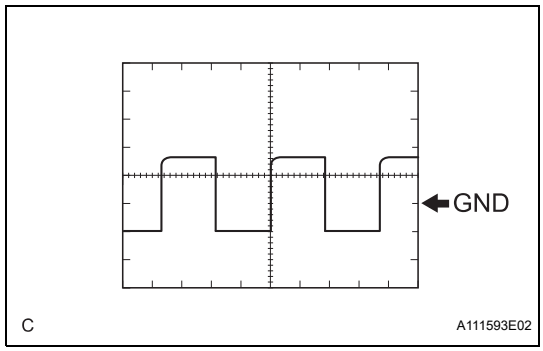
E128782E03

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
A61-33 (TC) - C64-14 (E1)	P - W-B	Ground	Power switch on (IG)	10 to 14 V
A61-33 (TC) - C64-14 (E1)	P - W-B	Ground	Terminals TC and CG of DLC3 connected	Below 1 V
A61-56 (STP) - C64-14 (E1)	W - W-B	Stop light signal	Power switch on (IG), brake pedal depressed	10 to 14 V
A61-56 (STP) - C64-14 (E1)	W - W-B	Stop light signal	Power switch on (IG), brake pedal released	Below 1 V
A61-74 (CCS) - C64-14 (E1)	W - W-B	Cruise control main switch circuit	Power switch on (IG)	10 to 14 V
A61-74 (CCS) - C64-14 (E1)	W - W-B	Cruise control main switch circuit	CANCEL switch ON	6.6 to 10.1 V
A61-74 (CCS) - C64-14 (E1)	W - W-B	Cruise control main switch circuit	SET/COAST switch ON	4.5 to 7.1 V
A61-74 (CCS) - C64-14 (E1)	W - W-B	Cruise control main switch circuit	RES/ACC switch ON	2.3 to 4.0 V
A61-74 (CCS) - C64-14 (E1)	W - W-B	Cruise control main switch circuit	MAIN switch ON	Below 1 V
A61-55 (ST1-) - C64-14 (E1)	GR - W-B	Stop light signal	Power switch on (IG), brake pedal depressed	Below 1 V
A61-55 (ST1-) - C64-14 (E1)	GR - W-B	Stop light signal	Power switch on (IG), brake pedal released	10 to 14 V
A61-21 (SPDI) - C64-14 (E1)	L - W-B	Vehicle speed signal	Approximately 20 km/h (12 mph)	Pulse generation (Waveform 1)

2. Oscilloscope waveforms

HINT:

Oscilloscope waveform samples are provided here for information purposes. Noise and fluttering waveforms have been omitted.



(a) Waveform 1 (vehicle speed signal)

Item	Contents
Terminal	SPDI - E1
Equipment Setting	5 V/DIV., 20 ms./DIV.
Condition	Driving at approximately 20 km/h (12 mph) with power switch on (READY)

HINT:
The higher the vehicle speed, the shorter the cycle.

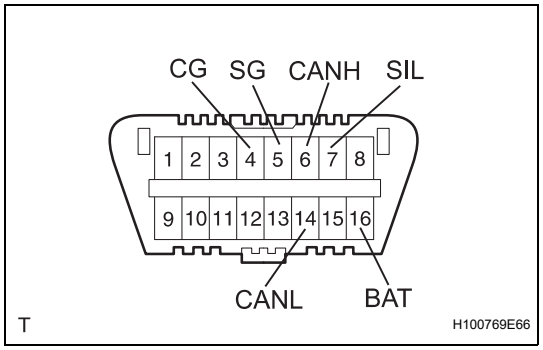
CC

DIAGNOSIS SYSTEM

1. DESCRIPTION

The ECU controls the cruise control system of the vehicle. The data and DTCs relating to the cruise control system can be read from the DLC3 of the vehicle. If either DTC or CRUISE OK is not displayed on the multi-information display on the combination meter when checking for DTCs, there may be a problem with either the combination meter or the CAN communication and multiplex communication systems. Use the intelligent tester to check and solve the problem.

2. CHECK DLC3



(a) The ECU uses the ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962, and matches the ISO 15765-4 format.

Terminal No. (Symbols)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

NOTICE:

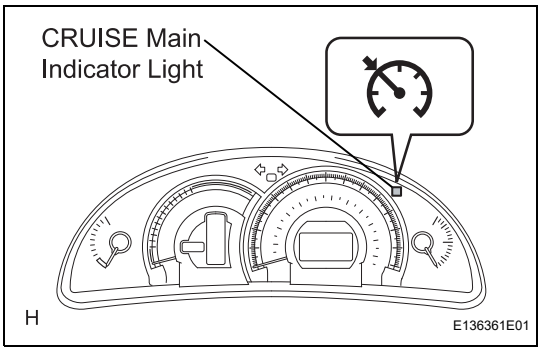
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

(b) Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG), and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem with either the vehicle or the tester.

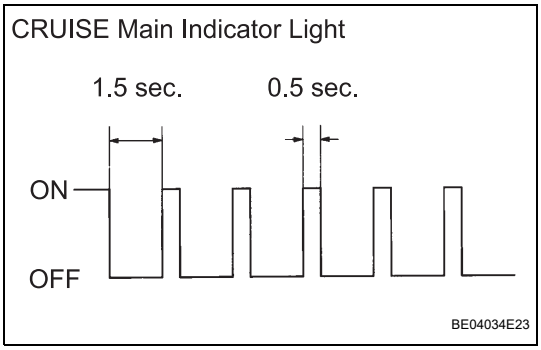
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.

- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. CHECK INDICATOR

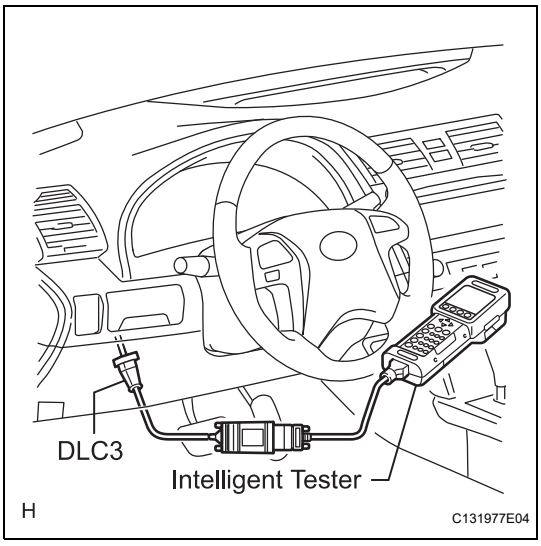
(a) Turn the power switch on (IG).



(b) Check that the CRUISE main indicator light illuminates when the cruise control main switch is turned on, and that the indicator light turns off when the main switch is turned off. If the results are not as specified, inspect the CRUISE main indicator light circuit (See page CC-34).

HINT:

While driving using cruise control, the hybrid vehicle control ECU activates AUTO CANCEL of the cruise control system when a malfunction occurs in one of the following: vehicle speed sensors, stop light switch, or any other related part. When AUTO CANCEL is activated, the CRUISE main indicator light outputs the blinking pattern shown to the left. At the same time, data related to the malfunction is stored as a DTC.



DTC CHECK / CLEAR

1. DTC CHECK

(a) Connect the intelligent tester to the DLC3.

(1) Connect the intelligent tester to the Controller Area Network Vehicle Interface Module (CAN VIM). Then connect the CAN VIM to the Data Link Connector 3 (DLC3).

(b) Turn the power switch on (IG).

(c) Read the DTCs by following the prompts on the tester screen.

HINT:

Refer to the intelligent tester operator's manual for further details.

2. DTC CLEAR

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG).

(c) Operate the intelligent tester to erase the codes.

HINT:

Refer to the intelligent tester operator's manual for further details.

FAIL-SAFE CHART

HINT:
If the following conditions are detected while the cruise control is in operation, the system clears the stored vehicle speed in the hybrid vehicle control ECU and cancels the cruise control operation.

Vehicle Condition	Auto Cancel Condition	Re-operation Condition
CRUISE main indicator light blinks	• There is open or short in stop light switch circuit • There is problem with vehicle speed signal • There is problem with throttle position sensor and motor	Turn cruise control main switch on again
CRUISE main indicator light blinks	• There is problem with input circuit of stop light switch circuit • There is problem with cancel circuit	• Turn cruise control main switch on again • Turn power switch off then on again
CRUISE main indicator light remains on (Cruise control is canceled)	• Vehicle speed is lower than low speed limit (approx. 40 km/h (25 mph)) while running with cruise control on • VSC operates • Electrically controlled brake operates	Push cruise control main switch to + (ACCEL)/RES (RESUME)
	• Vehicle speed is lower than stored speed by approx. 16 km/h (10 mph) or more	Push cruise control main switch to - (COAST)/ SET

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's DATA LIST allows switch, sensor, actuator, and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save diagnostic time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Read the DATA LIST according to the display on the tester.

CC

Hybrid vehicle control ECU (Cruise control):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
VEHICLE SPD	Vehicle speed / min.: 0 km/h (0 mph), max.: 255 km/h (158 mph)	Actual vehicle speed	-
MEMORY SPD	Cruise control memorized speed / min.: 0 km/h (0 mph), max.: 200 km/h (125 mph)	Actual stored vehicle speed	-
THROTTLE	Throttle opening angle / min.: 0°, max.: 125°	Actual demanded throttle angle	-
CRUISE CONTROL	Cruise control system active condition / ON or OFF	ON: Cruise control system activated OFF: Cruise control system deactivated	-
MAIN SW (MAIN)	Main switch signal (Main CPU) / ON or OFF	ON: Cruise control main switch on OFF: Cruise control main switch off	"3"
CCS READY M	Cruise control system standby condition (Main CPU) / ON or OFF	ON ←→ OFF: Switching each time ON-OFF button is pushed	"1"
CCS INDICATOR M	Cruise indicator signal (Main CPU) / ON or OFF	ON: "CRUISE" on OFF: "CRUISE" off	"2"
CANCEL SW	CANCEL switch signal / ON or OFF	ON: CANCEL switch on OFF: CANCEL switch off	-
SET/COAST SW	SET / COAST switch signal / ON or OFF	ON: - (COAST) / SET switch on OFF: - (COAST) / SET switch off	-
RES/ACC SW	RES / ACC switch signal / ON or OFF	ON: + (ACCEL) / RES (RESUME) switch on OFF: + (ACCEL) / RES (RESUME) switch off	-
STP LIGHT SW1 M	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW1-S	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW2-S	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
CCS OPER STATUS	Cruise control condition / ON or OFF	ON: Cruise control operating OFF: Cruise control not operating	-
VEHICLE SPD CHG	Vehicle speed sudden change / ON or OFF	ON: Sudden change in vehicle speed OFF: No change in vehicle speed	-
SHIFT D POS	Shift D position / ON or OFF	ON: Shift lever in D OFF: Shift lever is except in D	-

HINT:
- "3" is OK but "1" is NG → Hybrid vehicle control ECU failure

- "1" is OK but "2" is NG → DTC output or hybrid vehicle control ECU failure
- "3" is OK but the CRUISE main indicator light does not turn on → CRUISE main indicator light, wire harness, or hybrid vehicle control ECU failure

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSVs, actuators, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save diagnostic time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG).

(c) Perform the ACTIVE TEST according to the display on the tester.

HINT:

The power switch must be turned on (IG) to proceed to the ACTIVE TEST using the intelligent tester.

Combination meter:

Tester Display	Test Part	Control Range	Diagnostic Note
CRUISE INDIC	CRUISE main indicator light	ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

If a trouble code is displayed during the DTC check, check the trouble areas listed for that code in the table below and proceed to the appropriate page.

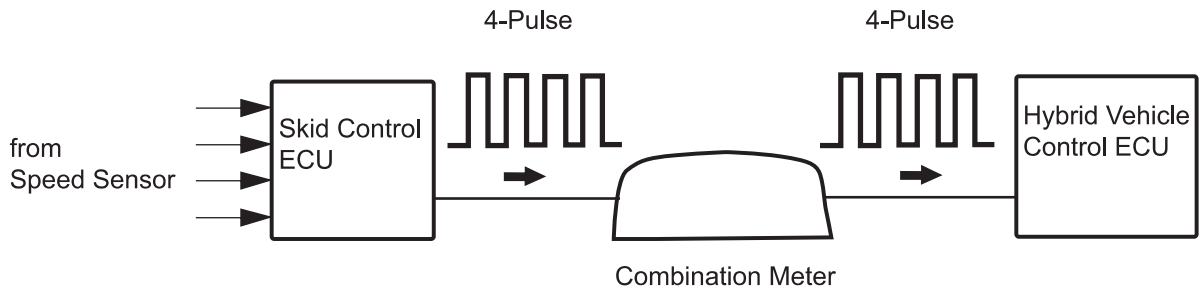
Cruise control system:

DTC Code	Detection Item	Trouble Area	See page
P0500	Vehicle Speed Sensor Malfunction	1. Vehicle speed sensor 2. Vehicle speed sensor signal circuit 3. Combination meter 4. Wire harness and connector 5. Hybrid vehicle control ECU	CC-20
P0571	Brake Switch "A" Circuit	1. Stop light switch 2. Stop light switch circuit 3. Hybrid vehicle control ECU	CC-24
P0607	Control Module Performance	Hybrid vehicle control ECU	CC-27

DTC	P0500	Vehicle Speed Sensor Malfunction

DESCRIPTION

The speed sensor for the skid control ECU detects wheel speed and sends appropriate signals to the skid control ECU. The skid control ECU converts these wheel speed signals into 4-pulse signals and outputs them to the hybrid vehicle control ECU via the combination meter. The hybrid vehicle control ECU determines vehicle speed based on the frequency of these pulse signals.



DTC No.	DTC Detection Condition	Trouble Area
P0500	The vehicle speed signal from the vehicle speed sensor is cut for 0.14 sec. or more while cruise control is in operation.	• Vehicle speed sensor • Vehicle speed sensor signal circuit • Combination meter • Wire harness or connector • Hybrid vehicle control ECU

WIRING DIAGRAM

INSPECTION PROCEDURE

1	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the function of the speedometer in the combination meter is normal.

OK:

The actual vehicle speed and the speed indicated on the speedometer are the same.

HINT:

The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.

NG → **GO TO SPEEDOMETER CIRCUIT (See page ME-42)**

OK

2	READ VALUE ON INTELLIGENT TESTER (VEHICLE SPEED SIGNAL)

(a) Check the DATA LIST for proper functioning of the vehicle speed signal.

Hybrid vehicle control ECU

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
VEHICLE SPD	Cruise control vehicle speed/min.: 0 km/h (0 mph), max.: 255 km/h (158 mph)	Actual vehicle speed is displayed	-

OK:

The speed displayed on the tester screen is almost the same as the speed indicated on the combination meter.

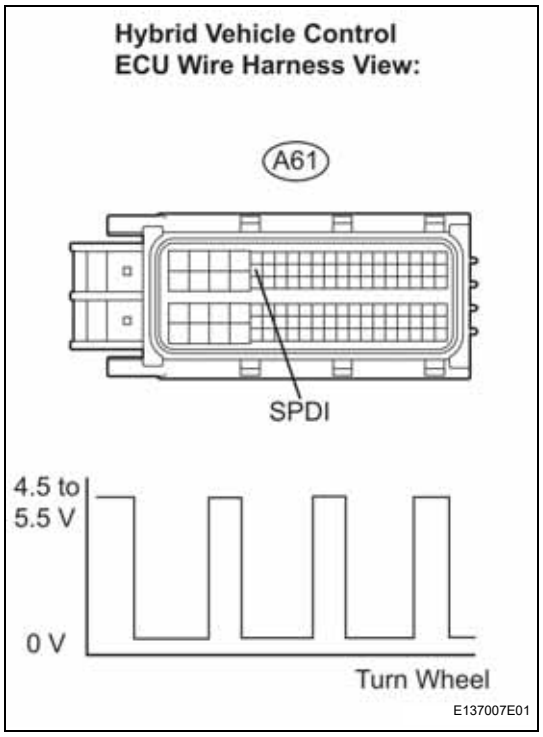
NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page CC-12)

3	INSPECT HYBRID VEHICLE CONTROL ECU (SPD VOLTAGE)

(a) Turn the power switch on (IG).
(b) Move the shift lever to neutral.
(c) Jack up the vehicle.



(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
A61-21 (SPDI) - Body ground	Waveform appears

HINT:
The output voltage fluctuates up and down, in a pattern similar to the diagram on the left, when the wheel is turned slowly.

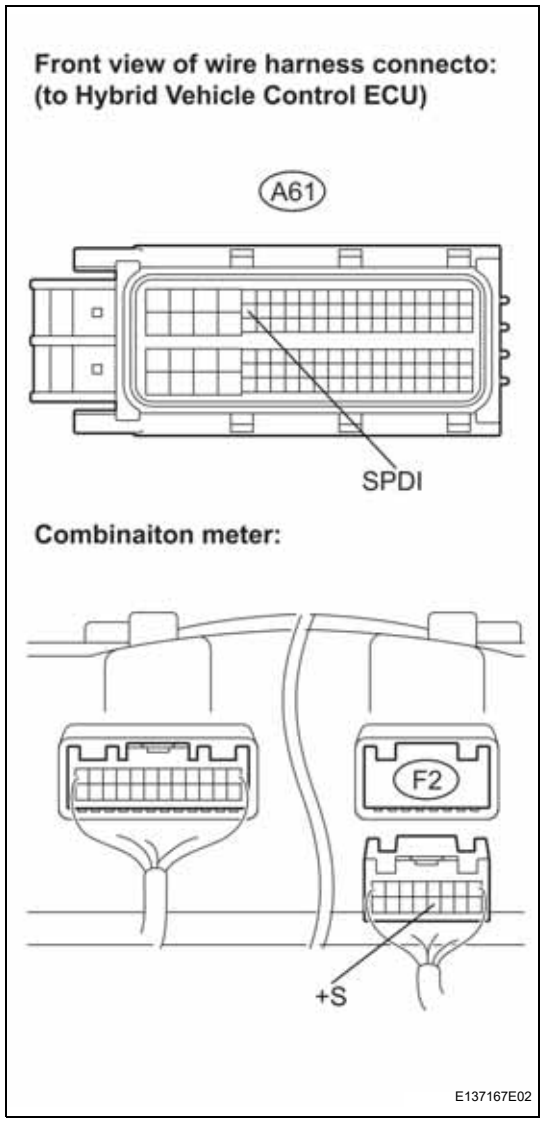
NG → **Go to step 4**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-570)

CC

4	CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - COMBINATION METER)



(a) Disconnect the A61 ECU connector.
(b) Disconnect the F1 combination meter connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
A61-21 (SPDI) - F2-12 (+S)	Below 1Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-570)

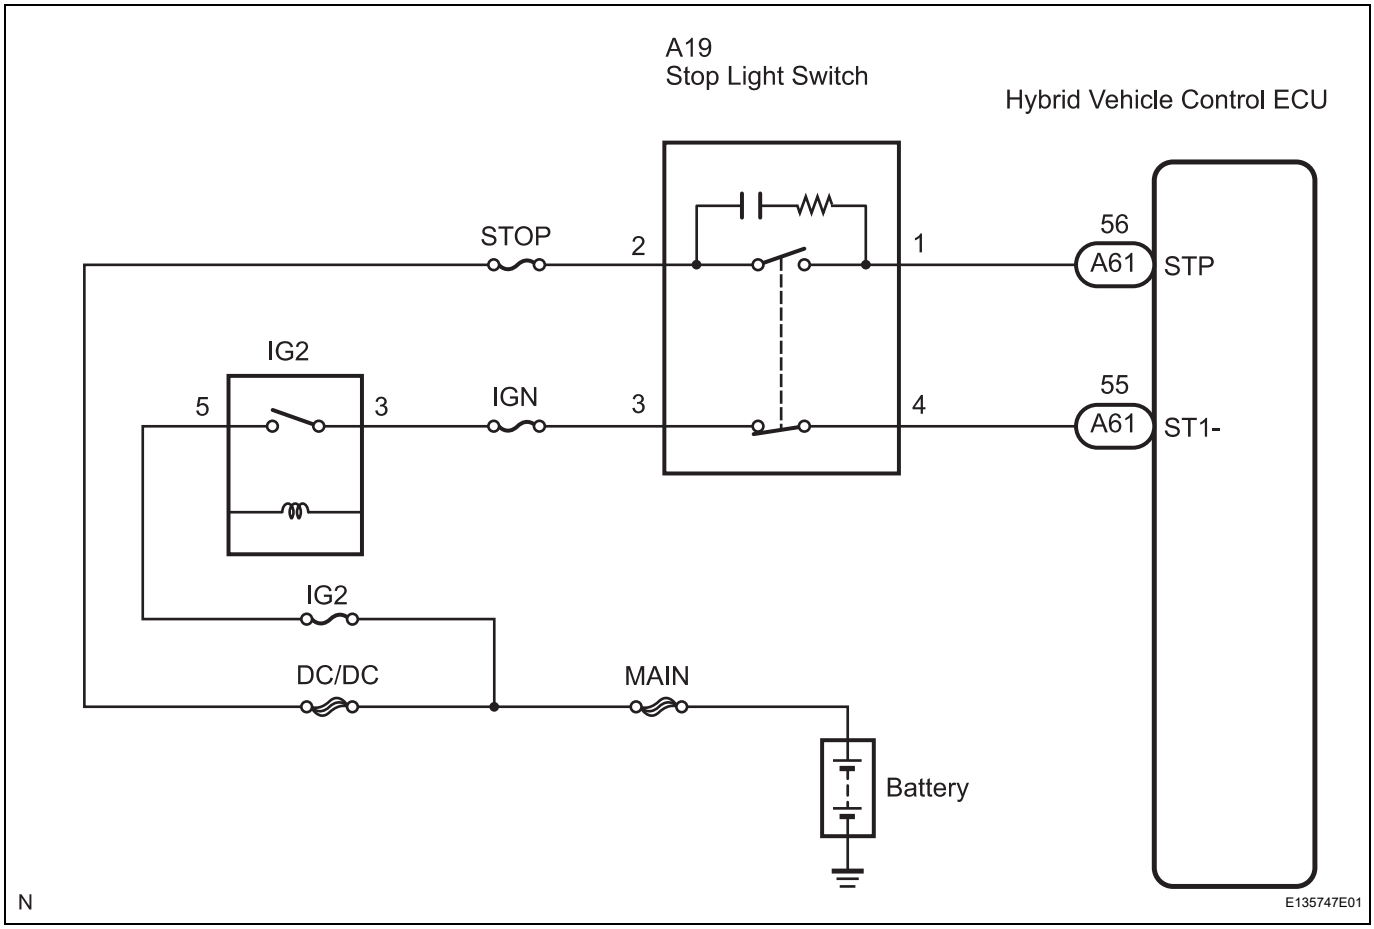
DTC	P0571	Brake Switch "A" Circuit

DESCRIPTION

When the brake pedal is depressed, the stop light switch sends a signal to the hybrid vehicle control ECU. When the hybrid vehicle control ECU receives this signal, it cancels the cruise control. The fail-safe function operates to enable normal driving even if there is a malfunction in the stop light signal circuit. The cancellation condition occurs when voltage is applied to terminal STP. When the brake is applied, voltage is normally applied to terminal STP of the hybrid vehicle control ECU through the STOP SW fuse and the stop light switch, and the hybrid vehicle control ECU turns the cruise control off.

DTC No.	DTC Detection Condition	Trouble Area
P0571	When voltage of STP terminal and that of ST1- terminal of hybrid vehicle control ECU are less than 1 V for 0.5 sec. or more	• Stop light switch • Stop light switch circuit • Hybrid vehicle control ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE ON INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG), and turn the intelligent tester main switch on.

(c) Check the DATA LIST for proper functioning of the stop light switch.

Hybrid vehicle control ECU (Cruise control):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
STP LIGHT SW1 M	Stop light switch signal (Main CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW1-S	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
STP LIGHT SW2-S	Stop light switch signal (Sub CPU) / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

CC

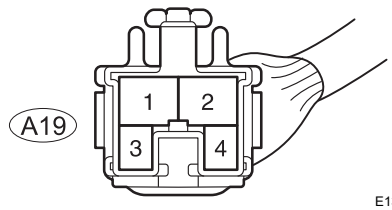
OK:
When the brake pedal is operated, the display changes as shown above.

OK → **REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-570)**

NG

2 CHECK HARNESS AND CONNECTOR (STOP LIGHT SWITCH - BATTERY)

Stop Light Switch Wire Harness Side Connector Front View:



(a) Disconnect the A19 connector from the stop light switch.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

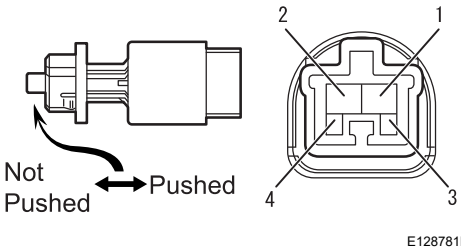
Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V
A19-3 - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT STOP LIGHT SWITCH

Stop Light Switch:



(a) Remove the stop light switch. (See page BR-73)
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

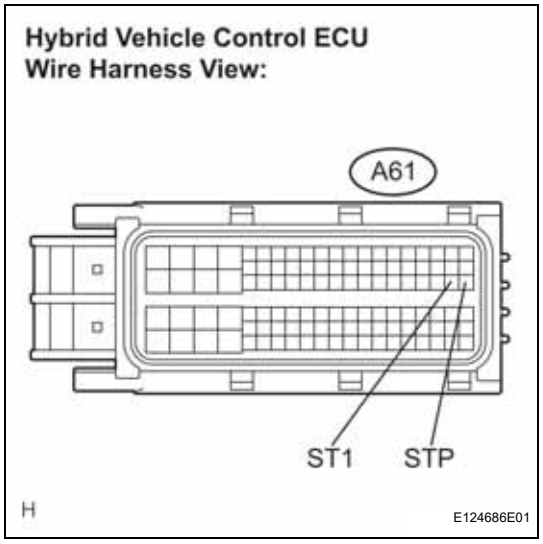
Tester Connection	Switch Condition	Specified Condition
1 - 2	Switch pin not pushed	Below 1 Ω
3 - 4	Switch pin not pushed	10 kΩ or higher
1 - 2	Switch pin pushed	10 kΩ or higher
3 - 4	Switch pin pushed	Below 1 Ω

(c) Install the stop light switch.

NG → **REPLACE STOP LIGHT SWITCH (See page BR-73)**

OK

4	CHECK HYBRID VEHICLE CONTROL ECU



(a) Reconnect the stop light switch connector.
(b) Disconnect the A61 connector from the hybrid vehicle control ECU.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Brake Pedal Condition	Specified Condition
A61-56 (STP) - Body ground	Depressed	10 to 14 V
A61-56 (STP) - Body ground	Released	Below 1 V
A61-55 (ST1-) - Body ground	Depressed	Below 1 V
A61-55 (ST1-) - Body ground	Released	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STOP LIGHT SWITCH - HYBRID VEHICLE CONTROL ECU)**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-570)

CC

DTC	P0607	Control Module Performance

DESCRIPTION

This DTC indicates internal abnormalities in the hybrid vehicle control ECU.

DTC No.	DTC Detection Condition	Trouble Area
P0607	When both of the following conditions are met: • The STP signals input to the supervisory CPU and control ECU in the hybrid vehicle control ECU are different for 0.15 sec. or more • 0.4 sec. have passed after a cruise cancel input signal (STP input) is input to the hybrid vehicle control ECU	Hybrid vehicle control ECU

HINT:
The hybrid vehicle control ECU receives signals from each sensor to control all functions of the cruise control system. When a trouble code is detected, the fail-safe function remains on until the power switch is turned off.

INSPECTION PROCEDURE

1	REPLACE HYBRID VEHICLE CONTROL ECU

(a) (See page HV-570)

NEXT

END

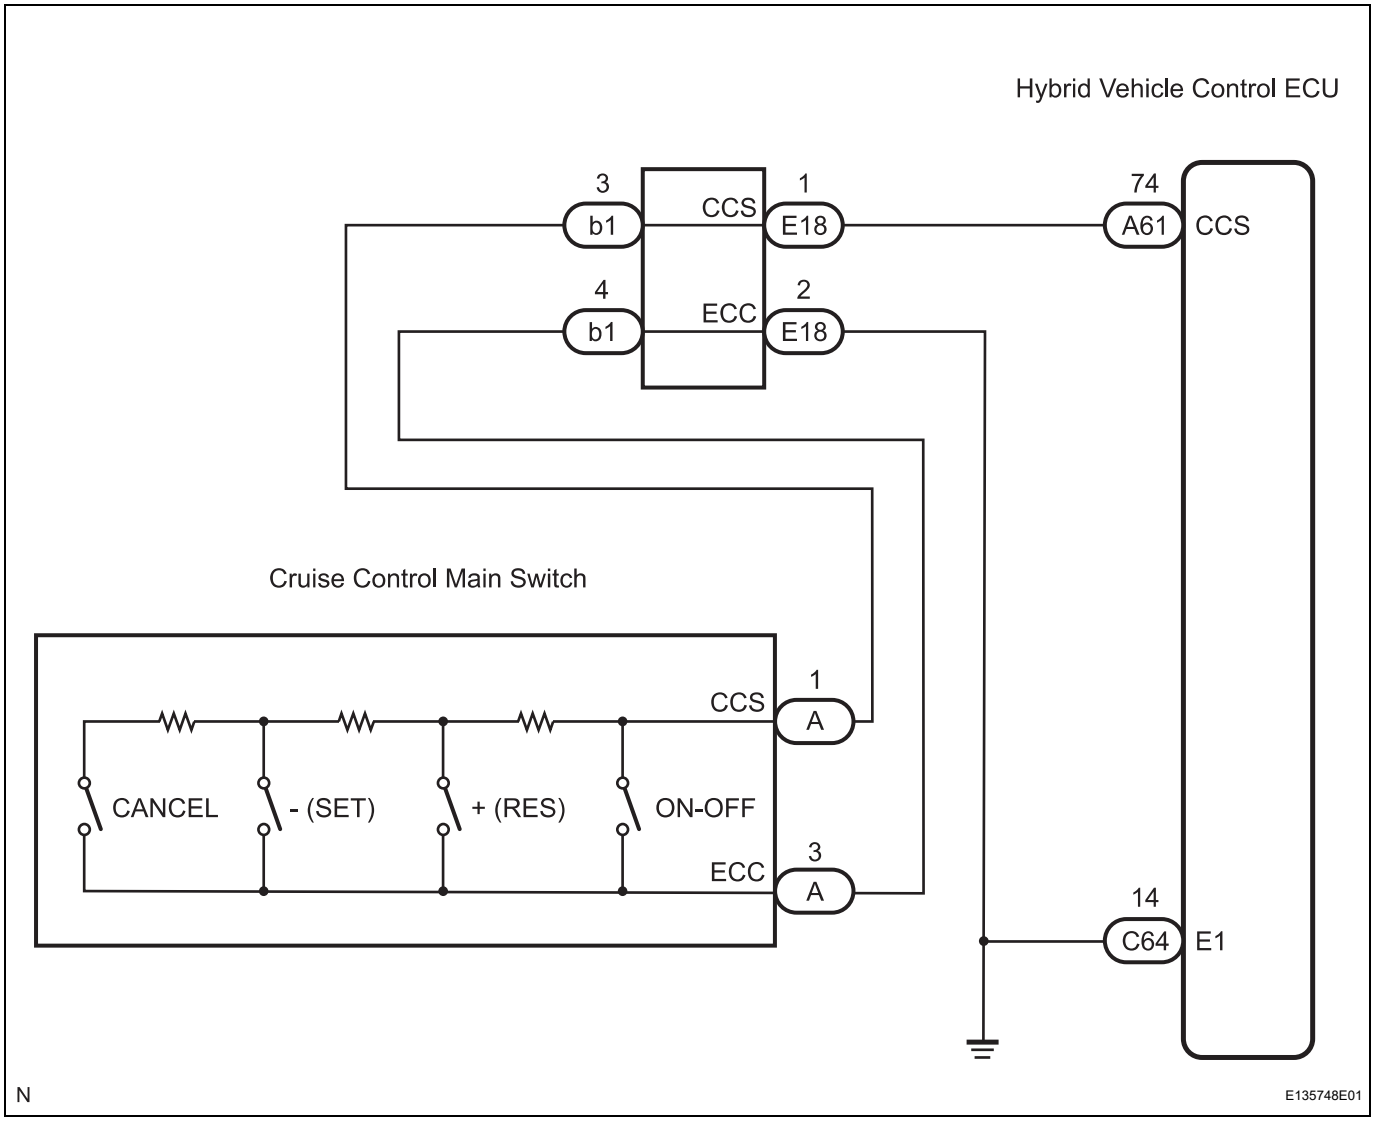
Cruise Control Switch Circuit

DESCRIPTION

The cruise control main switch operates 7 functions: SET, - (COAST), TAP-DOWN, RES (RESUME), + (ACCEL), TAP-UP, and CANCEL. The SET, TAP-DOWN, and - (COAST) functions, and the RES (RESUME), TAP-UP, and + (ACCEL) functions are operated with the same switch. The cruise control main switch is an automatic return type switch which turns on only while operating it in the direction of each arrow and turns off after releasing it. The internal contact point of the cruise control main switch is turned on with the switch operation. The hybrid vehicle control ECU then reads the voltage value that has been changed by the switch operation to control SET, - (COAST), RES (RESUME), + (ACCEL), and CANCEL.

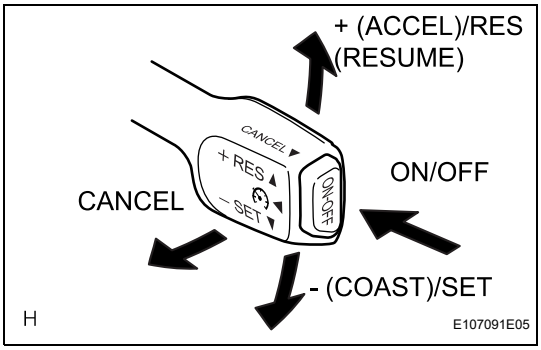
CC

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE ON INTELLIGENT TESTER



(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Check the DATA LIST for proper functioning of the cruise control main switch.

Hybrid vehicle control ECU (Cruise control):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
MAIN SW (MAIN)	Main switch signal (Main CPU)/ ON or OFF	ON: Cruise control main switch on OFF: Cruise control main switch off	-
CANCEL SW	CANCEL switch signal/ON or OFF	ON: CANCEL switch on OFF: CANCEL switch off	-
SET / COAST SW	SET / COAST switch signal/ON or OFF	ON: - (COAST)/SET switch on OFF: - (COAST)/SET switch off	-
RES / ACC SW	RES / ACC switch signal/ON or OFF	ON: + (ACCEL)/RES (RESUME) switch on OFF: + (ACCEL)/RES (RESUME) switch off	-

OK:
When the cruise control main switch is operated, the display changes as shown above.

Result

Result	Proceed to
OK	A
NG (All items are defective)	B
NG (1 to 4 items are defective)	C

A → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page CC-12)**

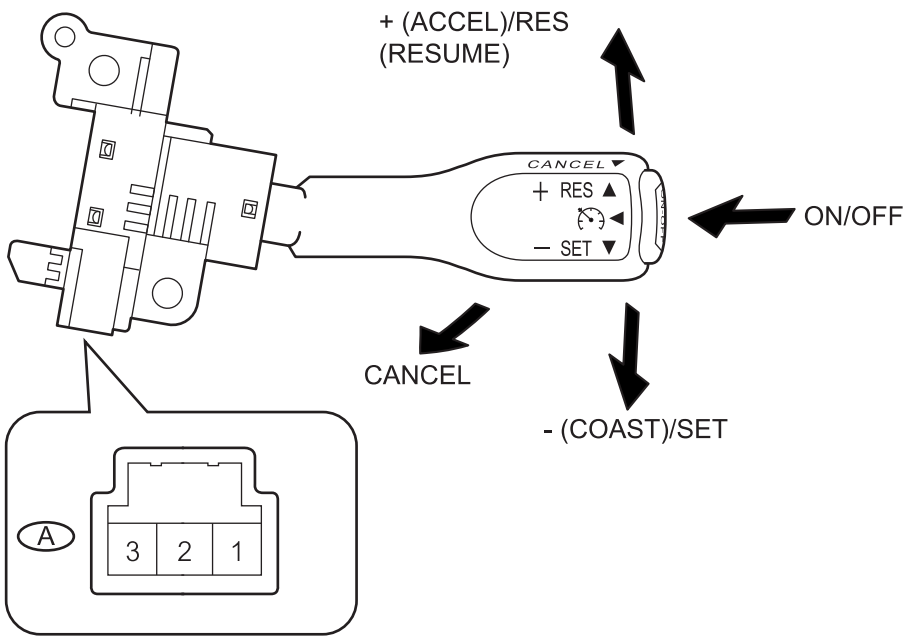
C → **REPLACE CRUISE CONTROL MAIN SWITCH (See page CC-38)**

B

2	INSPECT CRUISE CONTROL MAIN SWITCH

(a) Remove the cruise control main switch (See page CC-38).
(b) Measure the resistance according to the value(s) in the table below.

Cruise Control Main Switch:



H

E106137E06

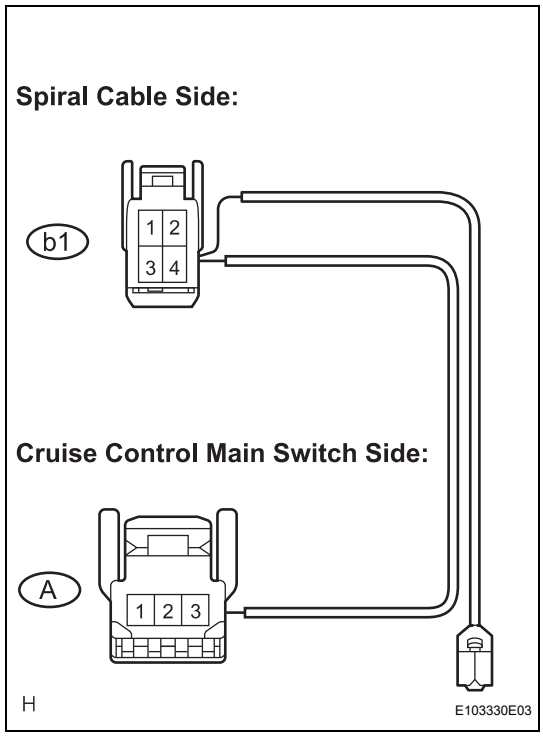
Standard resistance

Tester Connection	Switch Condition	Specified Condition
A-1 (CCS) - A-3 (ECC)	Neutral	10 kΩ or higher
	+ (ACCEL)/RES (RESUME)	216 to 264 Ω
	- (COAST)/SET	567 to 693 Ω
	CANCEL	1,386 to 1,694 Ω
	Main switch on	Below 1 Ω

NG → **REPLACE CRUISE CONTROL MAIN SWITCH (See page CC-38)**

OK

3	**CHECK HARNESS AND CONNECTOR (CRUISE CONTROL MAIN SWITCH - SPIRAL CABLE)**



(a) Disconnect the b1 connector from the spiral cable.
(b) Measure the resistance according to the value(s) in the table below.

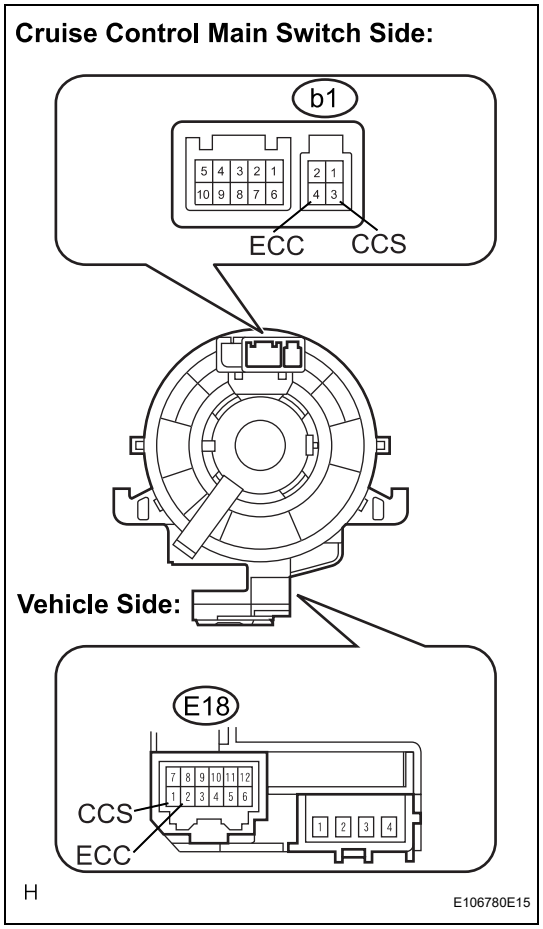
Standard resistance

Tester Connection	Specified Condition
A-1 - b1-3	Below 1 Ω
A-3 - b1-4	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK SPIRAL CABLE



NOTICE:
The spiral cable is an important part of the SRS airbag system. Incorrect removal or installation of the spiral cable may prevent the airbag from deploying. Be sure to read the pages shown in the brackets.
HINT:
- Removal (See page RS-357)
- Installation (See page RS-359)

(a) Remove the spiral cable.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

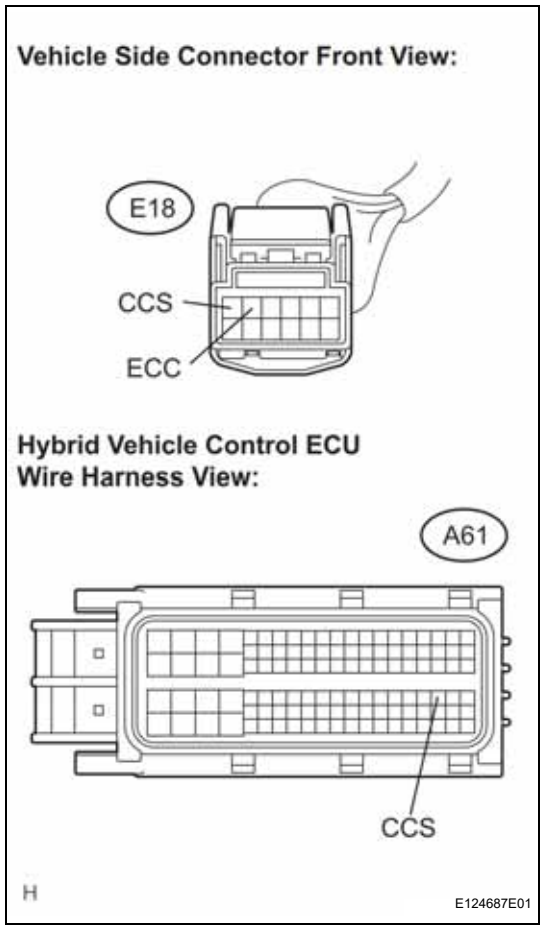
Tester Connection	Spiral Cable Position	Specified Condition
b1-3 - E18-1 (CCS)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
b1-4 - E18-2 (ECC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

HINT:
The spiral cable can make a maximum of approximately 5 rotations.

NG → **REPLACE SPIRAL CABLE (See page RS-357)**

OK

5	CHECK WIRE HARNESS (SPIRAL CABLE - HYBRID VEHICLE CONTROL ECU AND BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E18-1 (CCS) - A61-74 (CCS)	Always	Below 1 Ω
A61-74 (CCS) - Body ground	Always	10 kΩ or higher
E18-2 (ECC) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-570)

Cruise Main Indicator Light Circuit

DESCRIPTION

- The hybrid vehicle control ECU detects a cruise control main switch signal and sends it to the combination meter through CAN. The CRUISE main indicator light then comes on.
- The CRUISE main indicator light circuit uses CAN for communication. If there is a malfunction in this circuit, check for DTCs in the CAN communication system before troubleshooting the circuit.

INSPECTION PROCEDURE

CC

1 **PERFORM ACTIVE TEST USING INTELLIGENT TESTER**

(a) Connect the intelligent tester to the DLC3.
(b) Check the CRUISE main indicator light by performing the ACTIVE TEST.

Combination meter:

Tester Display	Test Part	Control Range	Diagnostic Note
CRUISE INDIC	CRUISE main indicator light	ON / OFF	-

OK:
Indicator light comes on/goes off.

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-64)**

OK

2 **READ VALUE ON INTELLIGENT TESTER**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Check the DATA LIST for proper functioning of the CRUISE main indicator light.

Hybrid vehicle control ECU (Cruise control):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
CCS INDICATOR M	Cruise indicator signal (Main CPU) / ON or OFF	ON: "CRUISE" on OFF: "CRUISE" off	-

OK:
When the cruise control main switch is operated, the display changes as shown above.

NG → **REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-570)**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page CC-12)

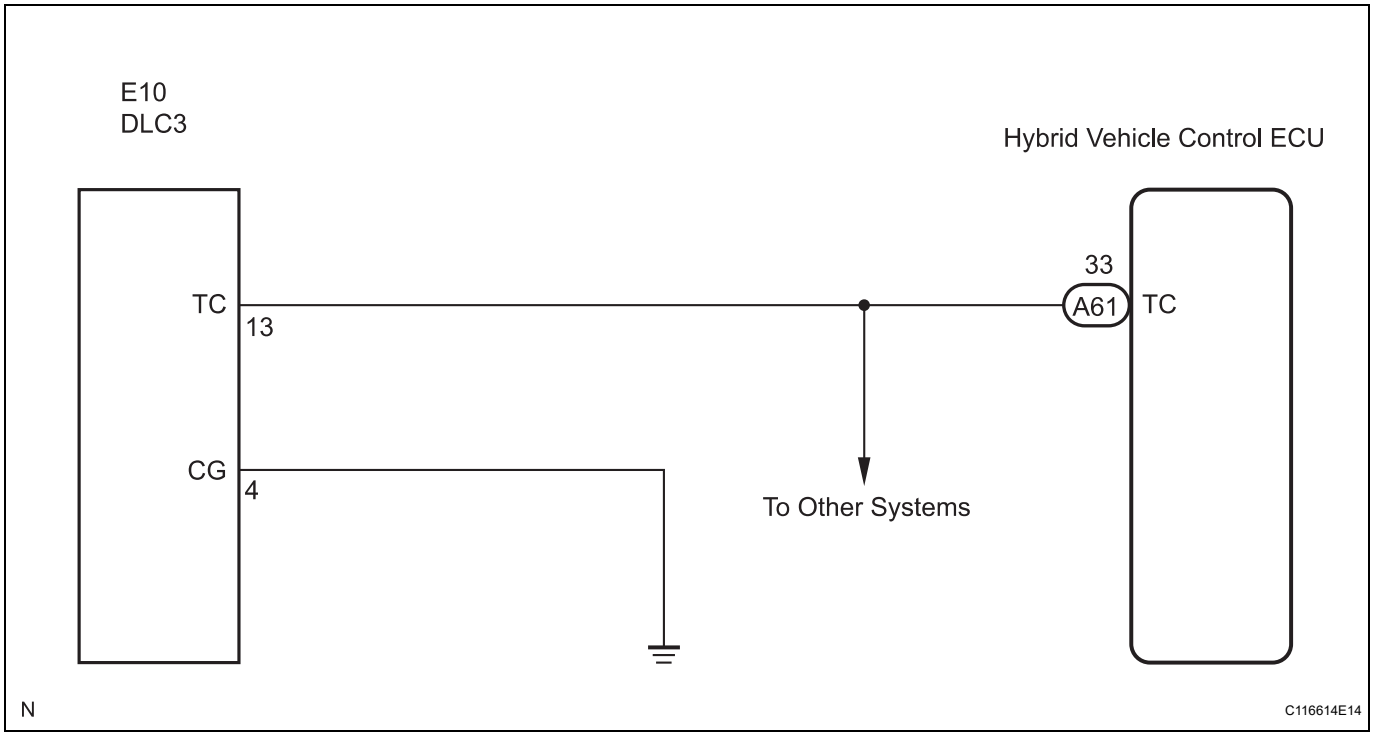
TC and CG Terminal Circuit

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the system to enter self-diagnostic mode. If a malfunction is present, DTCs will be output.
HINT:
When a particular warning light remains blinking, either a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in the relevant ECU is possibly the cause.

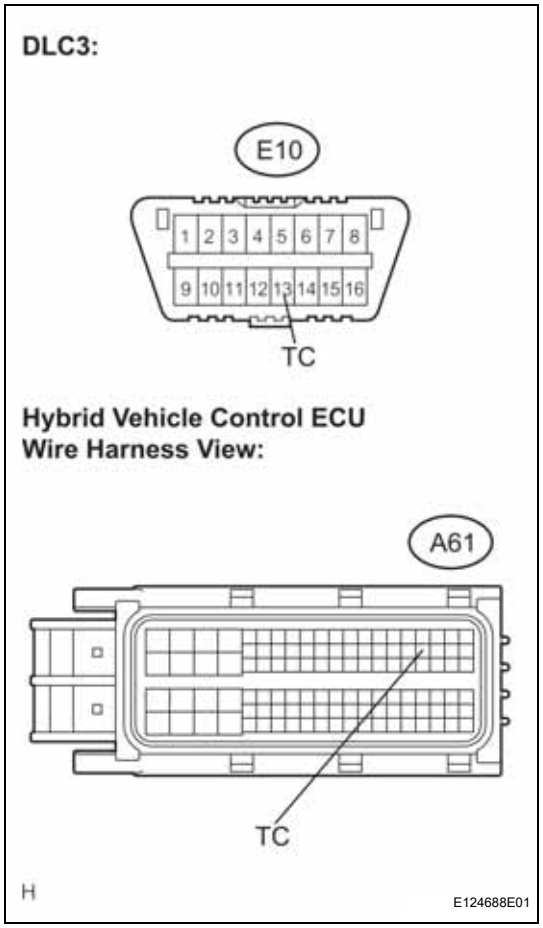
CC

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK WIRE HARNESS (TERMINAL TC of DLC3 - HYBRID VEHICLE CONTROL ECU)



(a) Disconnect the A61 connector from the hybrid vehicle control ECU.

(b) Measure the resistance according to the value(s) in the table below.

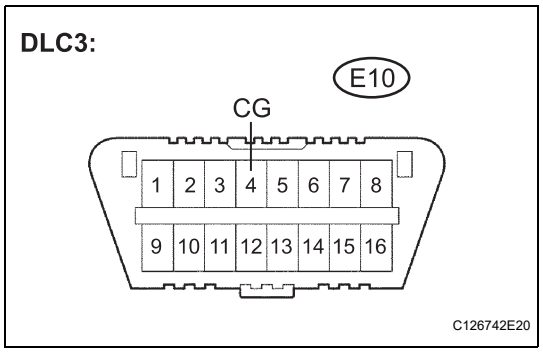
Standard resistance

Tester Connection	Condition	Specified Condition
A61-33 (TC) - E10-13 (TC)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 - HYBRID VEHICLE CONTROL ECU)**

OK

2	CHECK WIRE HARNESS (TERMINAL CG of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

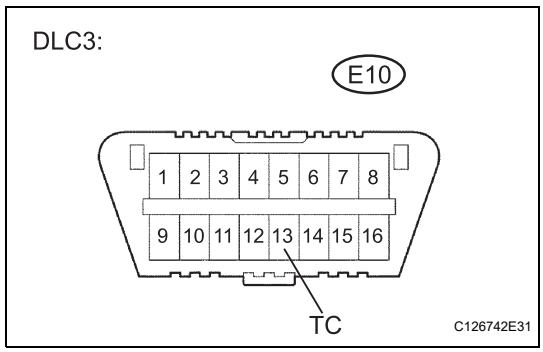
Tester connection	Condition	Specified condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (DLC3 - BODY GROUND)**

OK

CC

3	CHECK WIRE HARNESS (TERMINAL TC of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-13 (TC) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR OR EACH ECU**

OK

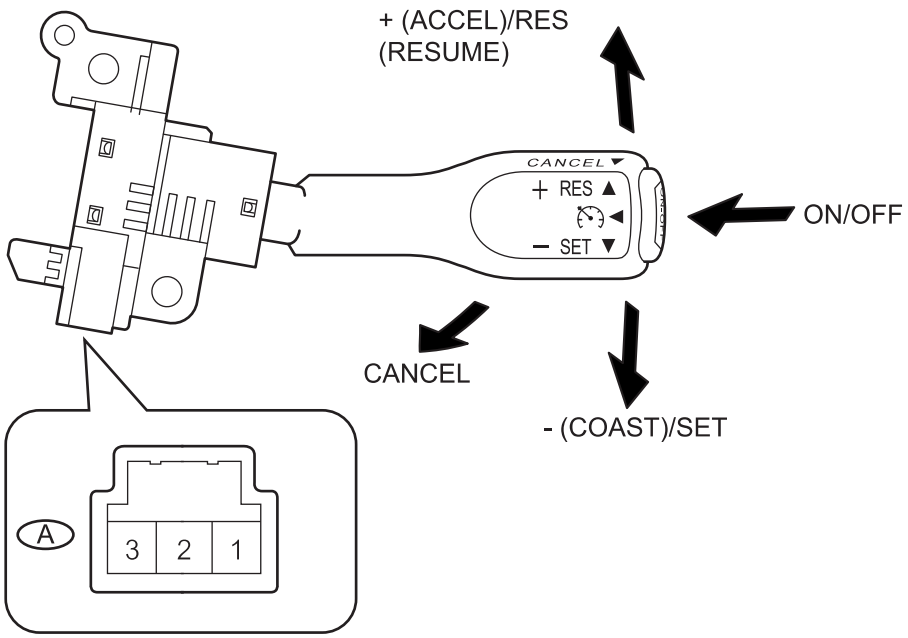
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page CC-12)

INSPECTION

1. INSPECT CRUISE CONTROL MAIN SWITCH

(a) Remove the cruise control main switch

Cruise Control Main Switch:



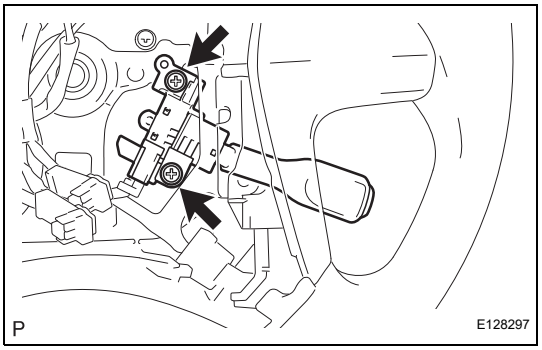
H E106137E11

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Condition	Specified Condition
A-1 (CCS) - A-3 (ECC)	Neutral	10 kΩ or higher
	+ (ACCEL)/RES (RESUME)	216 to 264Ω
	- (COAST)/SET	567 to 693Ω
	CANCEL	1,386 to 1,694Ω
	Main Switch on	Below 1Ω

If the result is not as specified, replace the cruise control main switch



P E128297

INSTALLATION

1. INSTALL CRUISE CONTROL MAIN SWITCH

(a) Install the cruise control main switch with the 2 screws.

Torque: 2.4 N*m (24 kgf*cm, 21 in.*lbf)

(b) Connect the connector.

2. INSTALL STEERING PAD (See page RS-346)

3. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-347)

4. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-347)

5. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

6. **INSPECT SRS WARNING LIGHT**
(See page RS-33)

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the lighting system.
- *: Use the intelligent tester.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

NEXT

4	INSPECT CAN COMMUNICATION SYSTEM*

(a) Use the intelligent tester to check if the CAN communication system is functioning normally.

Result

Result	Proceed to
CAN communication system DTC is not output	A
CAN communication system DTC is output	B

B → **Go to step 8**

A

5	CHECK FOR DTC*

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **Go to step 8**

CUSTOMIZE PARAMETERS

HINT:
The followings are the possible items to be customized.
NOTICE:

- **Before attempting to customize vehicle settings, confirm whether it is possible to make the change that the customer has requested.**
- **Be sure to record the current value before customizing.**
- **In case of performing the troubleshooting, pay attention because there is a possibility that the function has been disabled by customizing. (Example: In case of the symptom in which "The wireless operation does not function", check that the wireless operation has not been disabled by customizing, then perform the troubleshooting.)**

ILLUMINATED ENTRY:

Display	Default	Contents	Setting
LIGHTING TIME	15 s	Changes the lighting time of the interior light and power switch illumination.	7.5 s / 15 s / 30 s
I/L ON / UNLOCK	ON	Lights up the interior light and power switch illumination when a door is unlocked.	ON / OFF
I/L ON / ACC OFF	ON	Lights up the interior light and power switch illumination when the power switch is turned from on (ACC) to off	ON / OFF

LIGHT CONTROL:

Display	Default	Contents	Setting
LIGHT OFF DELAY	30 s	Keeps the headlights on for a certain period of time after turning the power switch off and closing all the doors with the headlights on.	OFF / 30 s / 60 s / 90 s
SENSITIVITY	NORMAL	Adjusts the sensitivity of the automatic light control system. *1	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2
DRL FUNCTION	ON	ON / OFF of the DRL function (for U.S.A package models)	ON / OFF
DISP EX ON SEN	NORMAL	Changes the ambient brightness level required to dim the lights such as the indicator lights of the combination meter, A/C indicator light, and clock. *1	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2
DISP EX OFF SEN	NORMAL	Changes the ambient brightness level required to cancel the dimming of the lights such as the indicator lights of the combination meter, A/C indicator light, and clock.	LIGHT 2 / LIGHT 1 / NORMAL / DARK 1 / DARK 2

HINT:
Sensitivity adjustment can hardly be confirmed. Check by driving the customer's vehicle.

Illustration *1

Ambient Brightness Level	Dark ◄——————————► Bright

Setting	DARK2	DARK1	NORMAL	LIGHT1	LIGHT2

PROBLEM SYMPTOMS TABLE

1. Headlight system:

Symptom	Suspected Area	See page
One side LO-beam headlight does not illuminate	1. H-LP RL fuse or H-LP LL fuse	-
	2. Bulb	-
	3. Harness or connector	-
	4. Power distributor (Engine room J/B)	-
Both left and right LO-beam headlights do not illuminate	1. H-LP RL fuse and H-LP LL fuse	-
	2. Bulb	-
	3. Light control switch circuit	LI-38
	4. Headlight relay circuit	LI-26
	5. Main body ECU (Instrument panel J/B)	-
One side HI-beam headlight does not illuminate	1. H-LP RH fuse or H-LP LH fuse	-
	2. Bulb	-
	3. Harness or connector	-
	4. Power distributor (Engine room J/B)	-
Both left and right HI-beam headlights do not illuminate	1. H-LP RH fuse and H-LP LH fuse	-
	2. Bulb	-
	3. Light control switch circuit	LI-38
	4. Headlight (HI-BEAM) circuit	LI-30
	5. Main body ECU (Instrument panel J/B)	-
"Flash" headlights do not illuminate	1. Light control switch circuit	LI-38
	2. Main body ECU (Instrument panel J/B)	-
LO-beam headlights or HI-beam headlights do not go off	1. Headlight dimmer switch assembly	LI-96
	2. Power distributor (Engine room J/B)	-
	3. Harness or connector	-
	4. Main body ECU (Instrument panel J/B)	-

2. Daytime running light system:

Symptom	Suspected Area	See page
Day time running light system does not operate	1. Light control switch circuit	LI-38
	2. Parking brake switch circuit	LI-52
	3. Power distributor (Engine room J/B)	-
	4. Main body ECU (Instrument panel J/B)	-
	5. ECM	-

3. Taillight system:

Symptom	Suspected Area	See page
Front parking light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Rear taillight does not illuminate	1. Rear combination light assembly	-
	2. Harness or connector	-
License plate light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Front side marker light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Taillight system does not operate (Taillights, front side marker lights, parking lights, and license plate lights do not illuminate)	1. TAIL fuse	-
	2. Taillight relay	LI-116
	3. Light control switch circuit	LI-38
	4. Taillight relay circuit	LI-54
	5. Main body ECU (Instrument panel J/B)	-

4. Stop light system:

Symptom	Suspected Area	See page
Stop light system does not operate	1. Stop fuse	-
	2. Stop light switch	LI-102
	3. Harness or connector	-
One side stop light does not illuminate	1. Rear combination light assembly	-
	2. Harness or connector	-
Hi-mounted stop light does not illuminate	1. High mounted stop light assembly	-
	2. Harness or connector	-

5. Turn signal and hazard warning system:

Symptom	Suspected Area	See page
Hazard warning lights do not operate (Turn signal lights are normal)	1. HAZ fuse	-
	2. Hazard warning signal switch	LI-100
	3. Clock assembly	OT-4
	4. Turn signal flasher assembly	LI-113
	5. Harness or connector	-
Turn signal lights do not operate (Hazard warning lights are normal)	1. GAUGE No. 1 fuse	-
	2. Headlight dimmer switch assembly (Turn signal switch)	LI-96
	3. Turn signal flasher assembly	LI-113
	4. Harness or connector	-
"Hazard" and "Turn" do not operate	1. HAZ fuse and GAUGE No. 1 fuse	-
	2. Bulb	-
	3. Turn signal flasher assembly	LI-113
	4. Hazard warning signal switch	LI-100
	5. Headlight dimmer switch assembly (Turn signal switch)	LI-96
	6. Clock assembly	OT-4
	7. Harness or connector	-
Turn signal lights do not operate in one direction	1. Headlight dimmer switch assembly (Turn signal switch)	LI-96
	2. Turn signal flasher assembly	LI-113
	3. Harness or connector	-
Only one bulb does not operate	1. Bulb	-
	2. Harness or connector	-

6. Buck-up light system:

Symptom	Suspected Area	See page
One side back-up light does not illuminate	1. Bulb	-
	2. Harness or connector	-
Both left and right back-up lights do not illuminate	1. Bulb	-
	2. GAUGE No. 1 fuse	-
	3. Buck-up light relay	LI-117
	4. Back-up light circuit	LI-35
	5. Park/Neutral position switch	HX-5
	6. Harness or connector	-
	7. Hybrid vehicle control ECU	-

7. Illuminated entry system:

Symptom	Suspected Area	See page
Only interior light installed in personal light assembly does not illuminate	1. Bulb	-
	2. Personal light assembly	LI-84
	3. Harness or connector	-

Symptom	Suspected Area	See page
Only interior light installed in rear room light assembly does not illuminate	1. Bulb	-
	2. Rear room light assembly	LI-87
	3. Harness or connector	-
Only power switch illumination does not comes on	1. Power switch illumination circuit	LI-50
	2. Harness or connector	-
Interior light and power switch illumination do not operate normally	1. DOME fuse	-
	2. Personal light assembly	LI-84
	3. Rear room light assembly	LI-87
	4. Power switch	ST-127
	5. Door courtesy switch circuit	LI-41
	6. Door lock position switch circuit	LI-44
	7. Interior light circuit	LI-46
	8. Power switch illumination circuit	LI-50
	9. Main body ECU (Instrument panel J/B)	-

8. Vanity light system:

Symptom	Suspected Area	See page
Vanity light does not illuminate	1. Bulb	-
	2. Vanity light assembly	LI-93
	3. Visor assembly (Vanity light switch)	-
	4. Harness or connector	-

9. Luggage compartment light system:

Symptom	Suspected Area	See page
Luggage compartment light does not illuminate	1. Luggage compartment light	LI-90
	2. Luggage compartment door lock assembly (Door courtesy switch)	LI-109
	3. Harness or connector	-

10. Glove box light system:

Symptom	Suspected Area	See page
Glove box light does not illuminate	1. Bulb	-
	2. Glove box light assembly	LI-92
	3. Harness or connector	-

11. Door courtesy light system:

Symptom	Suspected Area	See page
Door courtesy light does not illuminate	1. Door courtesy light	LI-88
	2. Door courtesy switch	LI-105
	3. Harness or connector	-

13. Automatic light control system:

Symptom	Suspected Area	See page
Automatic light control system does not operate normally	1. Light control switch circuit	LI-38
	2. Automatic light control sensor circuit	LI-23
	3. Main body ECU (Instrument panel J/B)	-

14. Light auto turn off system:

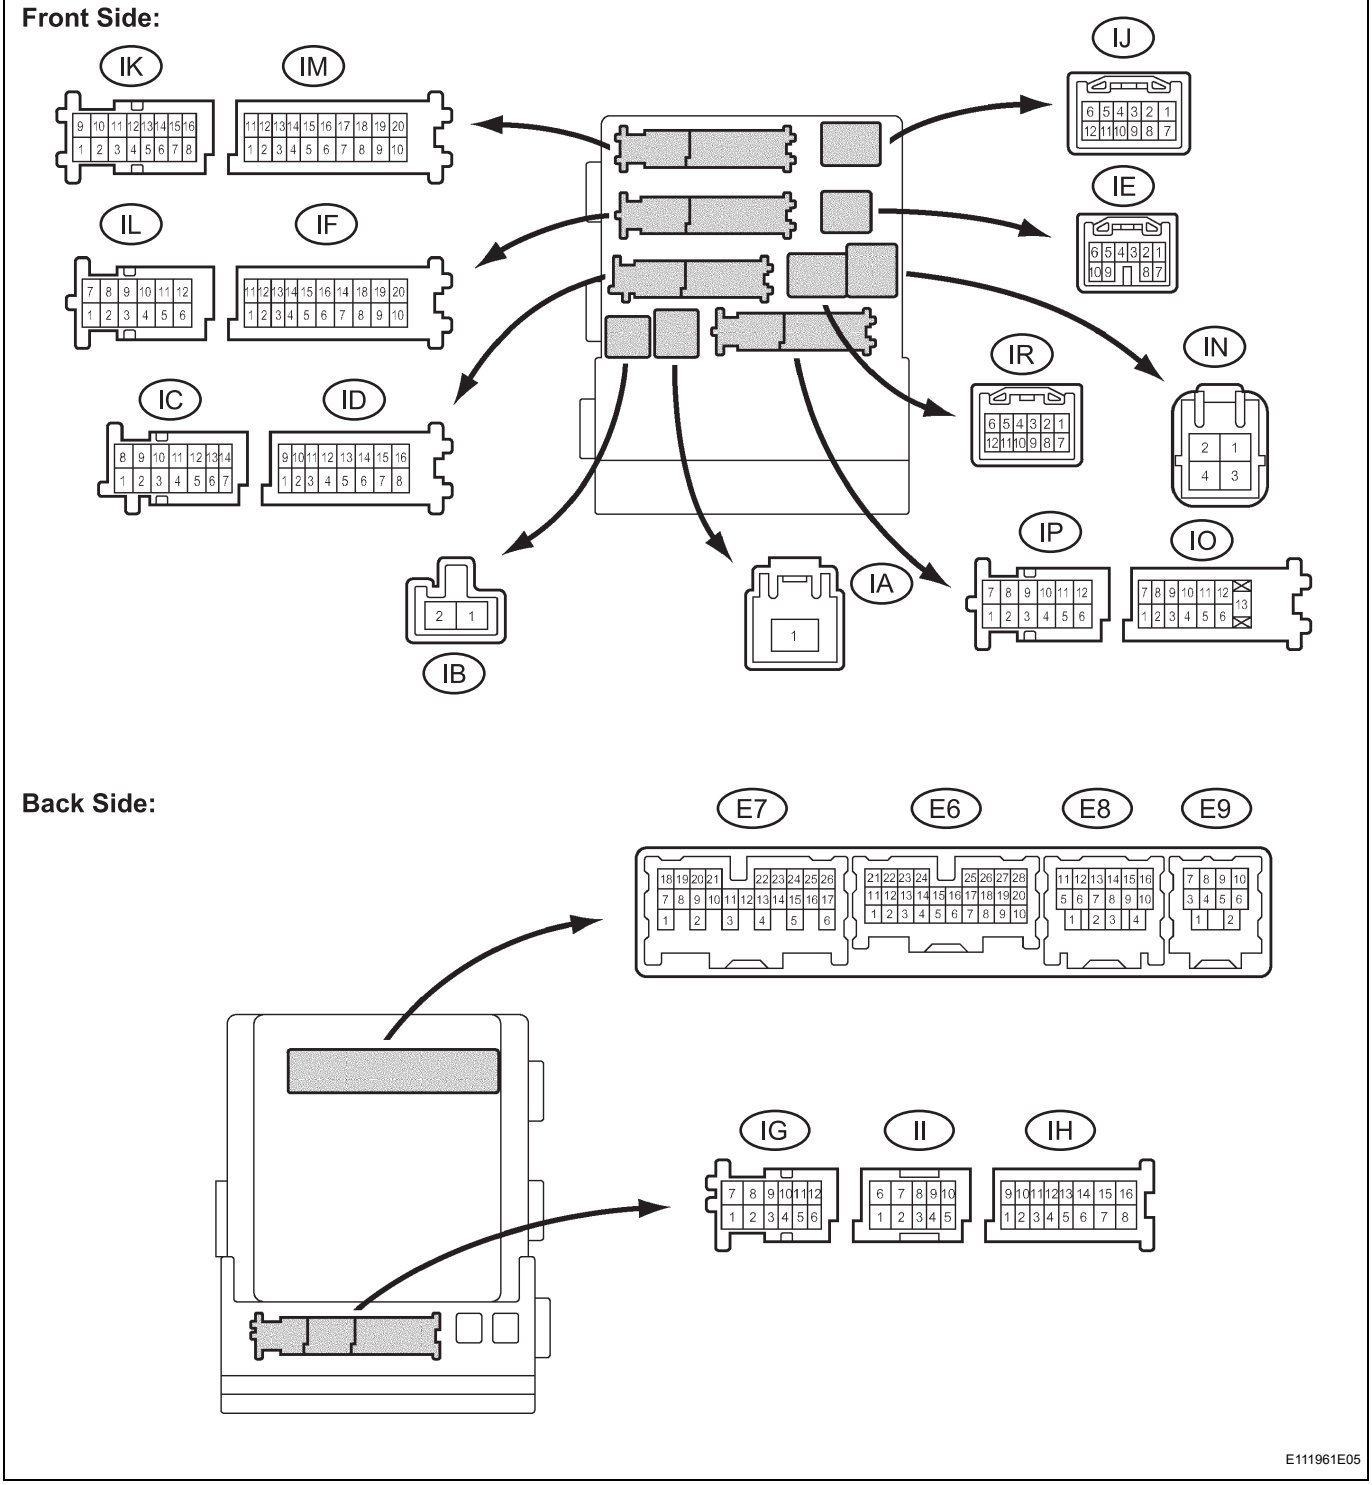
Symptom	Suspected Area	See page
Light auto turn off system does not operate normally	1. Light control switch circuit	LI-38
	2. Door courtesy switch circuit	LI-41
	3. Main body ECU (Instrument panel J/B)	-

15. Battery saving system:

Symptom	Suspected Area	See page
Battery saving function does not operate	1. Door courtesy switch circuit	LI-41
	2. Main body ECU (Instrument panel J/B)	-

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)



(a) Disconnect the IA, ID, IF and IM J/B connectors.
(b) Measure the voltage and resistance between the specified terminals of the wire harness side connectors and body ground.

Standard voltage

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
IA-1 - Body ground	B - Body ground	Battery power supply	Always	10 to 14 V

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
ALTB (ID-16) - Body ground	W - Body ground	Power supply	Always	10 to 14 V

Standard resistance

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the IA, ID, IF, and IM J/B connectors.

(d) Measure the resistance and voltage between the specified terminals of the J/B connectors and body ground.

Standard resistance

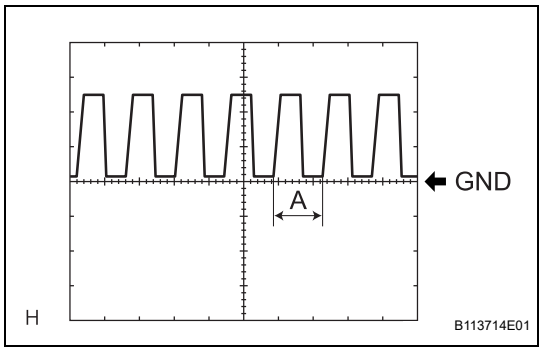
Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
CLTE (E6-18) - Body ground	BR - Body ground	Automatic light control sensor ground	Always	Below 1 Ω

Standard voltage

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
PKB (IC-14) - Body ground	L - Body ground	Parking brake switch input	Parking brake switch ON	Below 1 V
			Parking brake switch OFF	10 to 14 V
HRLY (ID-3) - Body ground	P - Body ground	Headlight relay drive output	Light control switch in HEAD	Below 1 V
			Light control switch not in HEAD	10 to 14 V
DRL (ID-9) - Body ground	V - Body ground	High beam headlights drive output	Dimmer switch in HIGH or HIGH FLASH	Below 1 V
			Dimmer switch in LOW	10 to 14 V
HU (IG-5) - Body ground	LG - Body ground	Dimmer switch HIGH input	Dimmer switch in HIGH or HIGH FLASH	10 to 14 V
			Dimmer switch in LOW	Below 1 V
ILE (IR-5) - Body ground	BR - Body ground	Interior light drive output	Interior light ON	Below 1 V
			Interior light OFF	10 to 14 V
LCTY (IO-7) - Body ground	LG - Body ground	Rear left door courtesy switch input	Rear left door open	Below 1 V
			Rear left door closed	10 to 14 V
LSWL (IP-5) - Body ground	GR - Body ground	Rear left door lock position switch input	Rear left door locked	10 to 14 V
			Rear left door unlocked	Below 1 V
HEAD (E6-17) - Body ground	P - Body ground	Light control switch HEAD input	Light control switch in HEAD	Below 1 V
			Light control switch not in HEAD	10 to 14 V
CLTS (E6-19) - Body ground	G - Body ground	Automatic light control sensor signal input	Power switch off	Below 1 V
			Automatic light control system operates	Pulse generation (See waveform 1)
CLTB (E6-20) - Body ground	B - Body ground	Automatic light control sensor power supply output	Power switch off	Below 1 V
			Power switch on (IG) and light control switch in AUTO	10 to 14 V

Symbols	Wiring Color	Terminal Description	Condition	Specified Condition
PCTY (E6-21) - Body ground	Y - Body ground	Passenger side door courtesy switch input	Passenger side door open	Below 1 V
			Passenger side door closed	10 to 14 V
LGCY (E6-25) - Body ground	W - Body ground	Luggage courtesy switch input	Luggage compartment door open	Below 1 V
			Luggage compartment door closed	10 to 14 V
LSWP (E6-27) - Body ground	LG - Body ground	Passenger side door lock position switch input	Passenger side door locked	10 to 14 V
			Passenger side door unlocked	Below 1 V
LSWR (E6-5) - Body ground	V - Body ground	Rear right door lock position switch input	Rear right door locked	10 to 14 V
			Rear right door unlocked	Below 1 V
RCTY (E6-7) - Body ground	GR - Body ground	Rear right door courtesy switch input	Rear right door open	Below 1 V
			Rear right door closed	10 to 14 V
HF (E7-13) - Body ground	R - Body ground	Dimmer switch HIGH FLASH signal input	Dimmer switch in HIGH FLASH position	Below 1 V
			Dimmer switch not in HIGH FLASH position	10 to 14 V
SSW2 (E7-16) - Body ground	V - Body ground	Power switch input	Power switch not pushed	10 to 14 V
			Power switch pushed	Below 1 V
SSW1 (E7-17) - Body ground	L - Body ground	Power switch input	Power switch not pushed	10 to 14 V
			Power switch pushed	Below 1 V
A (E7-21) - Body ground	G - Body ground	Light control switch AUTO signal input	Light control switch in AUTO	Below 1 V
			Light control switch not in AUTO	10 to 14 V
ACCD (E7-22) - Body ground	W - Body ground	Accessory relay drive output	Power switch on (ACC)	Below 1 V
			Power switch off	10 to 14 V
TAIL (E7-23) - Body ground	B - Body ground	Light control switch TAIL signal input	Light control switch in TAIL or HEAD	Below 1 V
			Light control switch in neither TAIL nor HEAD	10 to 14 V
DCTY (E7-24) - Body ground	L - Body ground	Driver side door courtesy switch input	Driver side door open	Below 1 V
			Driver side door closed	10 to 14 V
IG1D (E7-3) - Body ground	P - Body ground	Ignition 1 relay drive output	Power switch on (IG)	Below 1 V
			Power switch off	10 to 14 V
LSWD (E7-9) - Body ground	L - Body ground	Driver side door lock position switch input	Driver side door locked	10 to 14 V
			Driver side door unlocked	Below 1 V
CANH (E8-5) - Body ground	B - Body ground	Control system CAN communication	Power switch on (IG)	Pulse generation
			Power switch off	Below 1 V
CANL (E8-6) - Body ground	W - Body ground	Control system CAN communication	Power switch on (IG)	Pulse generation
			Power switch off	Below 1 V

If the result is not as specified, the main body ECU (Instrument panel J/B) may have a malfunction.



(1) Waveform 1

Item	Contents
Tool setting	5 V/DIV., 5 ms./DIV.

HINT:
If the ambient light becomes brighter, width A becomes narrower.

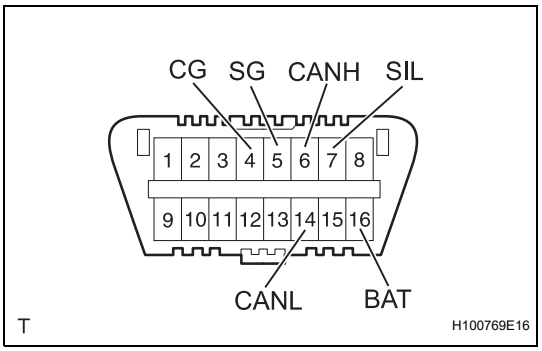
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Lighting system data and the Diagnostic Trouble Codes (DTCs) can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

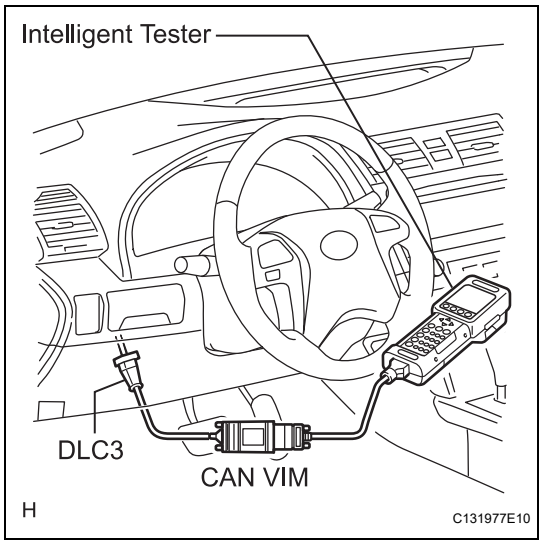


Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

NOTICE:

***Before measuring the resistance, leave the vehicle as is for at least 1minute and do not operate the ignition switch, any other switches, or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



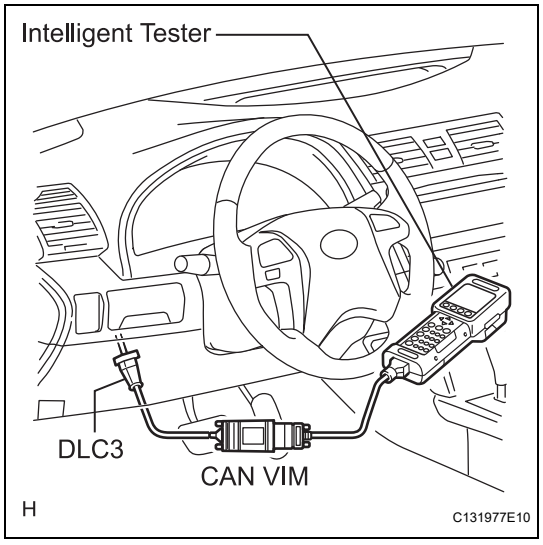
(b) Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.
HINT:
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.

3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Read the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Erase the DTCs by following the directions on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

LI

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester DATA LIST allows switch, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Read the DATA LIST according to the display on the tester.

MAIN BODY (MAIN BODY ECU):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ACC SW	Power switch ACC signal / ON or OFF	ON: Power switch on (ACC or IG) OFF: Power switch off	-
IG SW	Power switch IG signal / ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
D DOR CTY SW	Driver side door courtesy switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
P DOR CTY SW	Passenger side door courtesy switch signal / ON or OFF	ON: Front passenger side door is open OFF: Front passenger side door is closed	-
RR DOR CTY SW	Rear right door courtesy switch signal / ON or OFF	ON: Rear right door is open OFF: Rear right door is closed	-
RL DOR CTY SW	Rear left door courtesy switch signal / ON or OFF	ON: Rear left door is open OFF: Rear left door is closed	-
D LOCK POS SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
P LOCK POS SW	Passenger side door lock position switch signal / ON or OFF	ON: Front passenger side door is unlocked OFF: Front passenger side door is locked	-
RR LOCK POS SW	Rear right door lock position switch signal / ON or OFF	ON: Rear right door is unlocked OFF: Rear right door is locked	-
RL. LOCK POS SW	Rear left door lock position switch signal / ON or OFF	ON: Rear left door is unlocked OFF: Rear left door is locked	-
DIMMER SW	Dimmer switch HIGH signal / ON or OFF	ON: Dimmer switch in HIGH or HIGH FLASH OFF: Dimmer switch in LOW	-
HIGH FLASHER SW	Dimmer switch HIGH FLASH signal / ON or OFF	ON: Dimmer switch in HIGH FLASH OFF: Dimmer switch not in HIGH FLASH	-
AUTO LIGHT SW	Light control switch AUTO signal / ON or OFF	ON: Light control switch in AUTO OFF: Light control switch not in AUTO	-
HEAD LIGHT SW	Light control switch HEAD signal / ON or OFF	ON: Light control switch in HEAD OFF: Light control switch not in HEAD	-
TAIL LIGHT SW	Light control switch TAIL signal / ON or OFF	ON: Light control switch in TAIL or HEAD OFF: Light control switch not in TAIL or HEAD	-
ILLUMINATE RATE	Illumination rate information / 0 ms to 99.99 ms	0.8 ms to 22.0 ms (Value is output according to ambient illuminance)	-
PARKING BRAKE SW	Parking brake switch signal / ON or OFF	ON: Parking brake switch is ON OFF: Parking brake switch is OFF	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows a relay, VSV, actuator, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY (MAIN BODY ECU):

Tester Display	Test Part	Control Range	Diagnostic Note
HEAD LIGHT	Headlight relay	ON / OFF	-
HEAD LIGHT (HI)	High beam headlights	ON / OFF	-
TAIL LIGHT	Taillight	ON / OFF	-
DIMMER SIG	Dimmer signal	ON / OFF	-
ILLUMI OUTPUT	Interior light (Interior light switch in DOOR position and all doors are closed)	ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

LIGHTING SYSTEM:

DTC Code	Detection Item	Suspected Area	See page
B1244	Light Sensor Circuit Malfunction	1. Automatic light control sensor 2. Harness or connector 3. Main body ECU (Instrument panel J/B)	LI-23

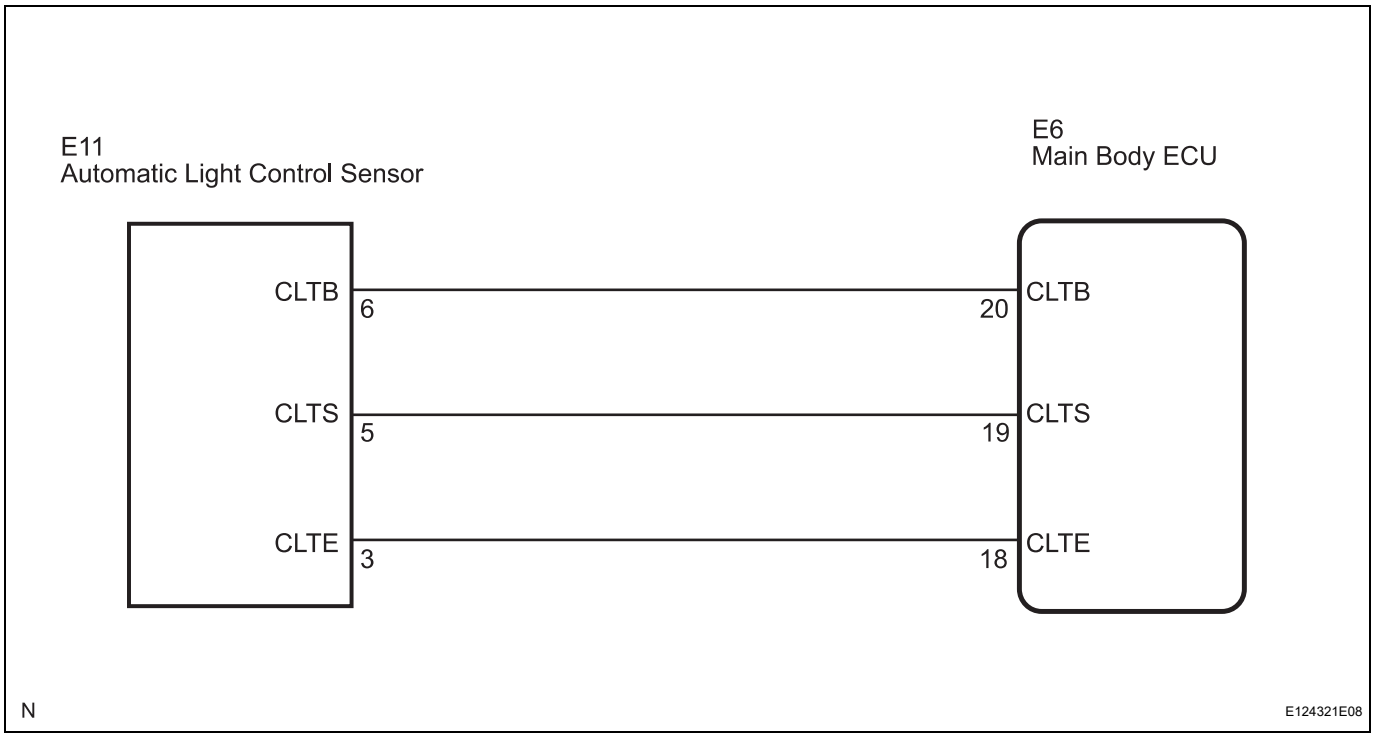
DTC	B1244	Light Sensor Circuit Malfunction

DESCRIPTION

The automatic light control sensor detects ambient light, converts it into an electrical signal, and outputs it to the main body ECU. The main body ECU turns on or off the headlights and taillights according to the signal.

DTC No.	DTC Detecting Condition	Trouble Area
B1244	• Malfunction in automatic light control sensor • Open or short in automatic light control sensor circuit	• Automatic light control sensor • Harness or connector • Main body ECU (Instrument panel J/B)

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

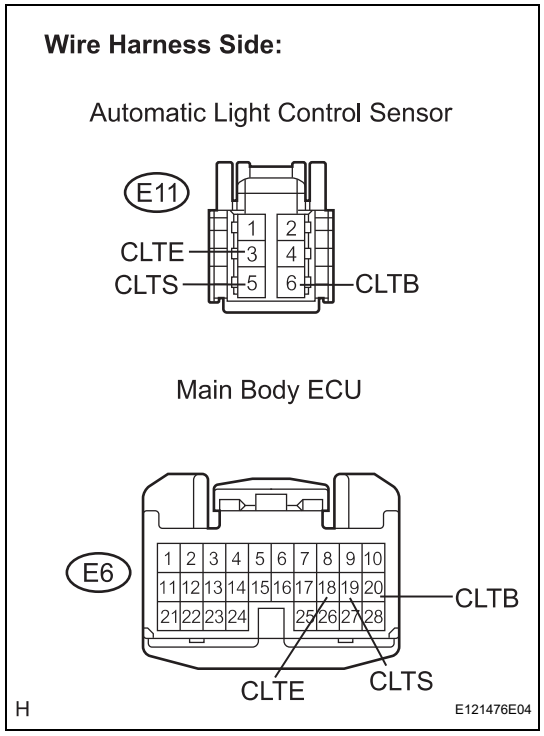
Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ILLUMINATE RATE	Illumination rate information / 0 ms to 99.99 ms	0.8 ms to 22.0 ms (Value is output according to ambient illuminance)	-

OK:
Normal condition listed above is displayed.

OK → REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

NG

2 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - AUTOMATIC LIGHT CONTROL SENSOR)



(a) Disconnect the E11 automatic light control sensor connector.
(b) Disconnect the E6 main body ECU connector.

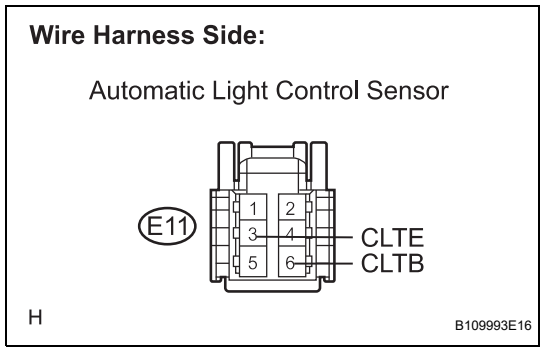
Standard resistance

Tester Connection	Condition	Specified Condition
E6-18 (CLTE) - E11-3 (CLTE)	Always	Below 1 Ω
E6-19 (CLTS) - E11-5 (CLTS)	Always	Below 1 Ω
E6-20 (CLTB) - E11-6 (CLTB)	Always	Below 1 Ω
E6-18 (CLTE) - Body ground	Always	10 kΩ or higher
E6-19 (CLTS) - Body ground	Always	10 kΩ or higher
E6-20 (CLTB) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 INSPECT MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)



(a) Reconnect the main body ECU connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E11-6 (CLTB) - E11-3 (CLTE)	Power switch off	Below 1 V
E11-6 (CLTB) - E11-3 (CLTE)	Power switch on (IG)	10 to 14 V

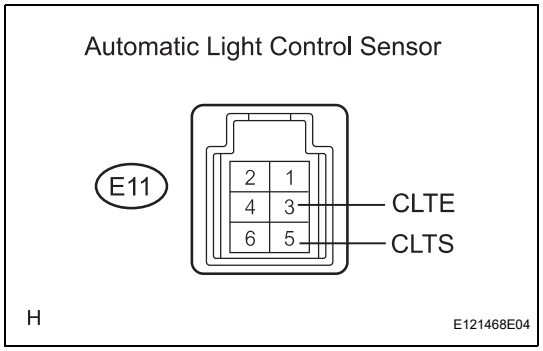
Standard resistance

Tester Connection	Condition	Specified Condition
E11-3 (CLTE) - Body ground	Always	Below 1 Ω

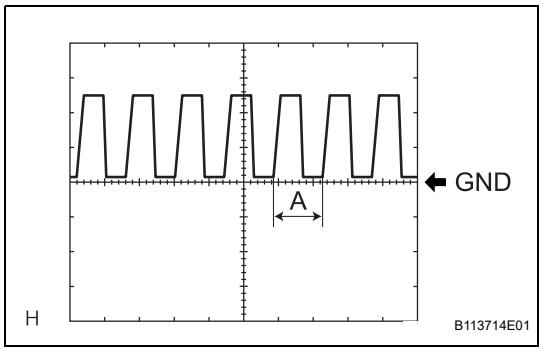
NG → REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

OK

4	INSPECT AUTOMATIC LIGHT CONTROL SENSOR



(a) Reconnect the automatic light control sensor connector.
(b) Connect an oscilloscope to the automatic light control sensor connector.



(c) Check the waveform.
OK

Tester Connection	Tool Setting	Condition	Specified Condition
E11-3 (CLTE) - E11-5 (CLTS)	5 V/DIV., 5 ms./ DIV.	Power switch on (IG), light control switch in AUTO	Correct waveform is as shown

HINT:
If the ambient light becomes brighter, width A becomes narrower.

NG → **REPLACE AUTOMATIC LIGHT CONTROL SENSOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

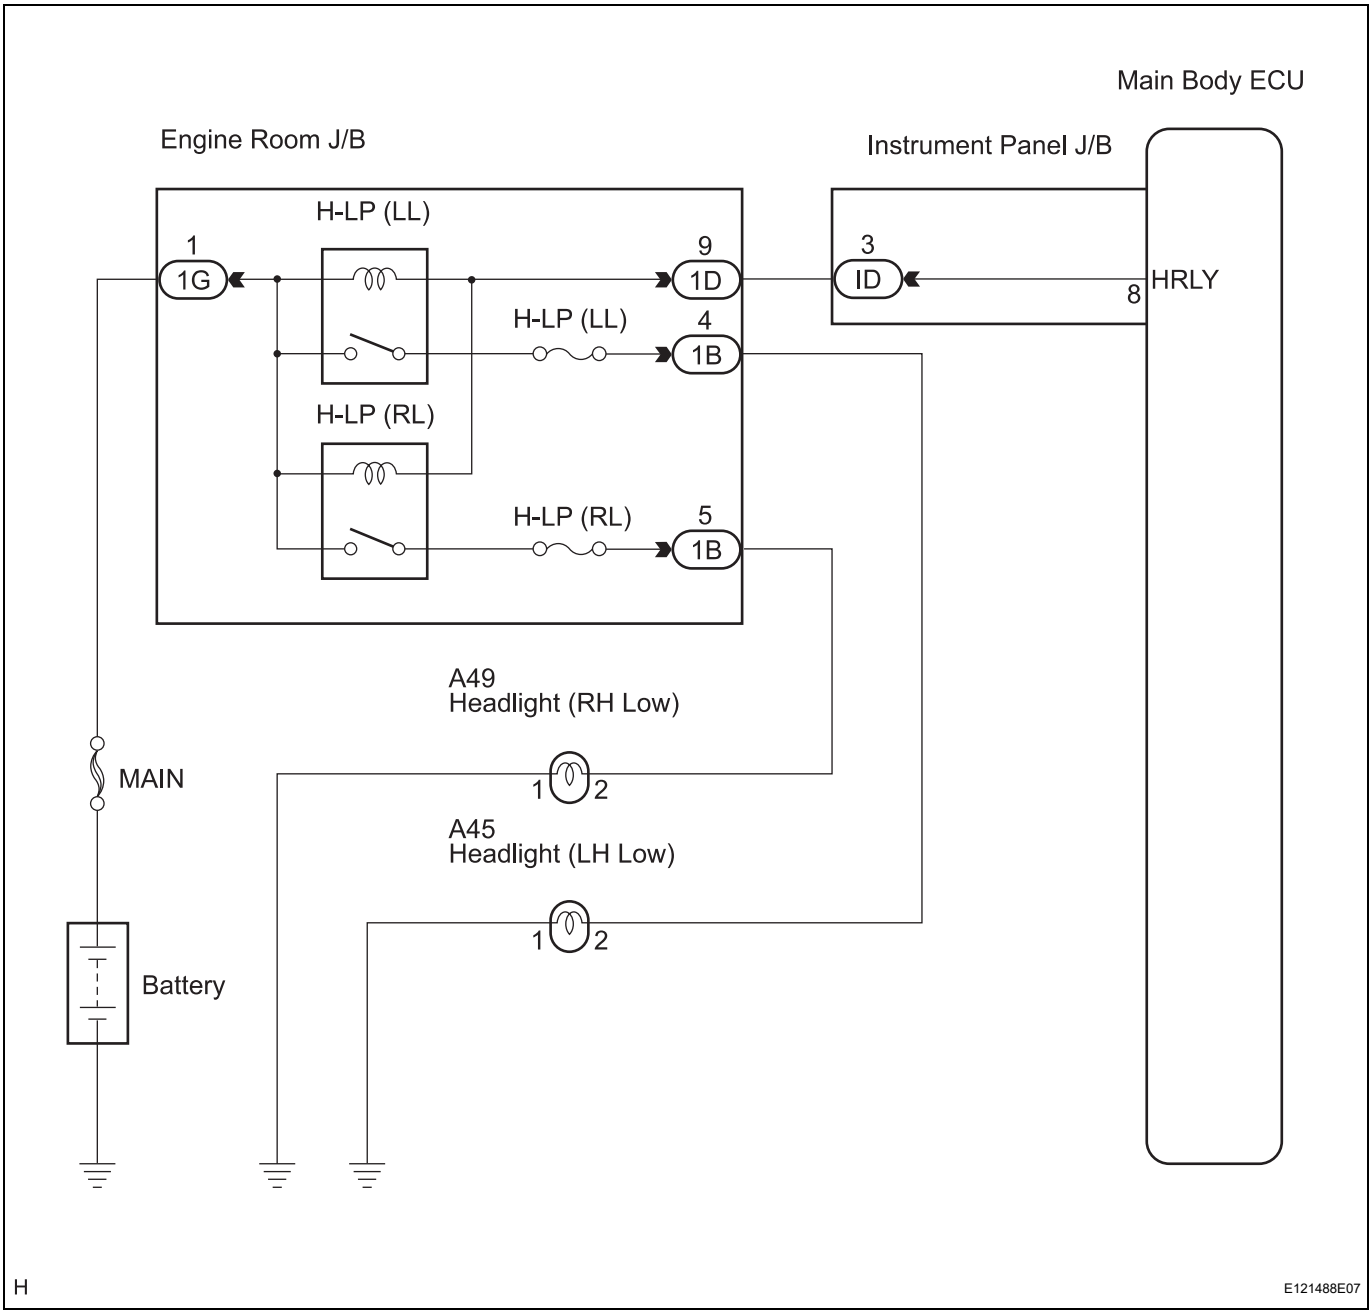
LI

Headlight Relay Circuit

DESCRIPTION

The main body ECU receives a light control switch HEAD signal from the headlight dimmer switch assembly, and turns the low beam headlights on. The headlight relay is installed in the power distributor (engine room J/B assembly).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the relay operates.

MAIN BODY (MAIN BODY ECU):

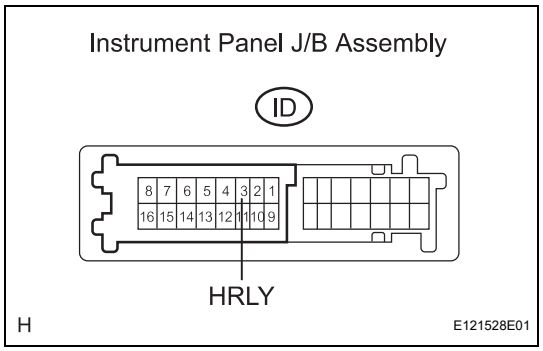
Tester Display	Test Part	Control Range	Diagnostic Note
HEAD RELAY	Headlight Relay	ON / OFF	-

OK:
The headlight relay operates. (Low beam headlights illuminate.)

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY



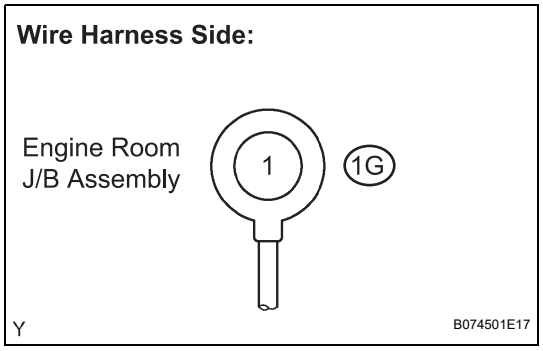
(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
ID-3 (HRLY) - Body ground	Light control switch OFF → HEAD	10 to 14 V → Below 1 V

OK → **Go to step 6**

NG

3 CHECK HARNESS AND CONNECTOR (BATTERY - ENGINE ROOM J/B ASSEMBLY)



(a) Disconnect the 1G engine room J/B assembly connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

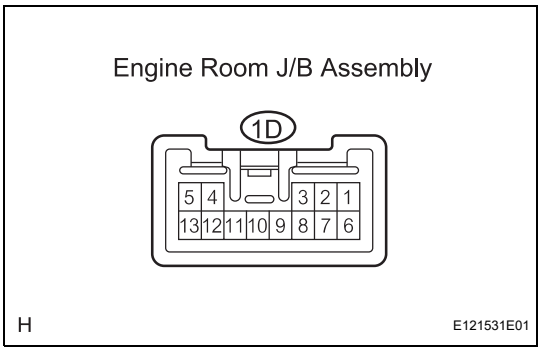
Tester Connector	Condition	Specified Condition
1G - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT ENGINE ROOM J/B BLOCK ASSEMBLY

(a) Reconnect the 1G engine room J/B assembly connector.



(b) Disconnect the 1D engine room J/B assembly connector.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

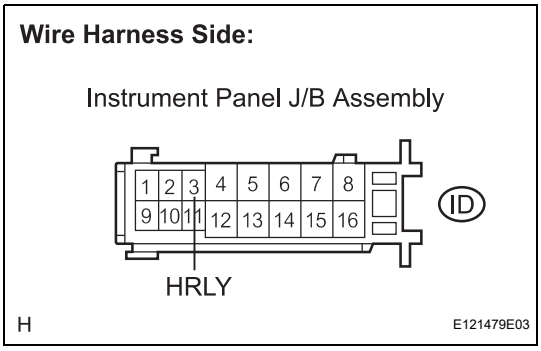
Tester Connection	Condition	Specified Condition
1D-9 - Body ground	Always	10 to 14 V

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK ASSEMBLY (POWER DISTRIBUTOR)**

LI

OK

5	CHECK HARNESS AND CONNECTOR (ENGINE ROOM J/B ASSEMBLY - INSTRUMENT PANEL J/B ASSEMBLY)



(a) Reconnect the 1D engine room J/B assembly connector.
(b) Disconnect the ID instrument panel J/B assembly connector.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

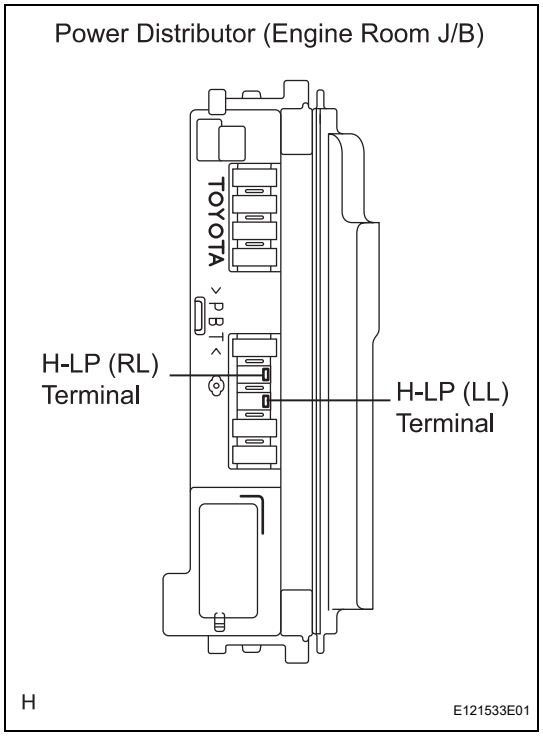
Tester Connection	Condition	Specified Condition
ID-3 (HRLY) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

6	INSPECT ENGINE ROOM JUNCTION BLOCK ASSEMBLY



(a) Remove the H-LP (RL) fuse and H-LP (LL) fuse from the engine room J/B assembly.
(b) Measure the voltage between the loading slot of each fuse and body ground.

Standard voltage

Tester Connection	Condition	Specified Condition
H-LP (RL) Terminal - Body ground	Light control switch in HEAD	10 to 14 V
H-LP (LL) Terminal - Body ground	Light control switch in HEAD	10 to 14 V

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK ASSEMBLY (POWER DISTRIBUTOR)**

OK

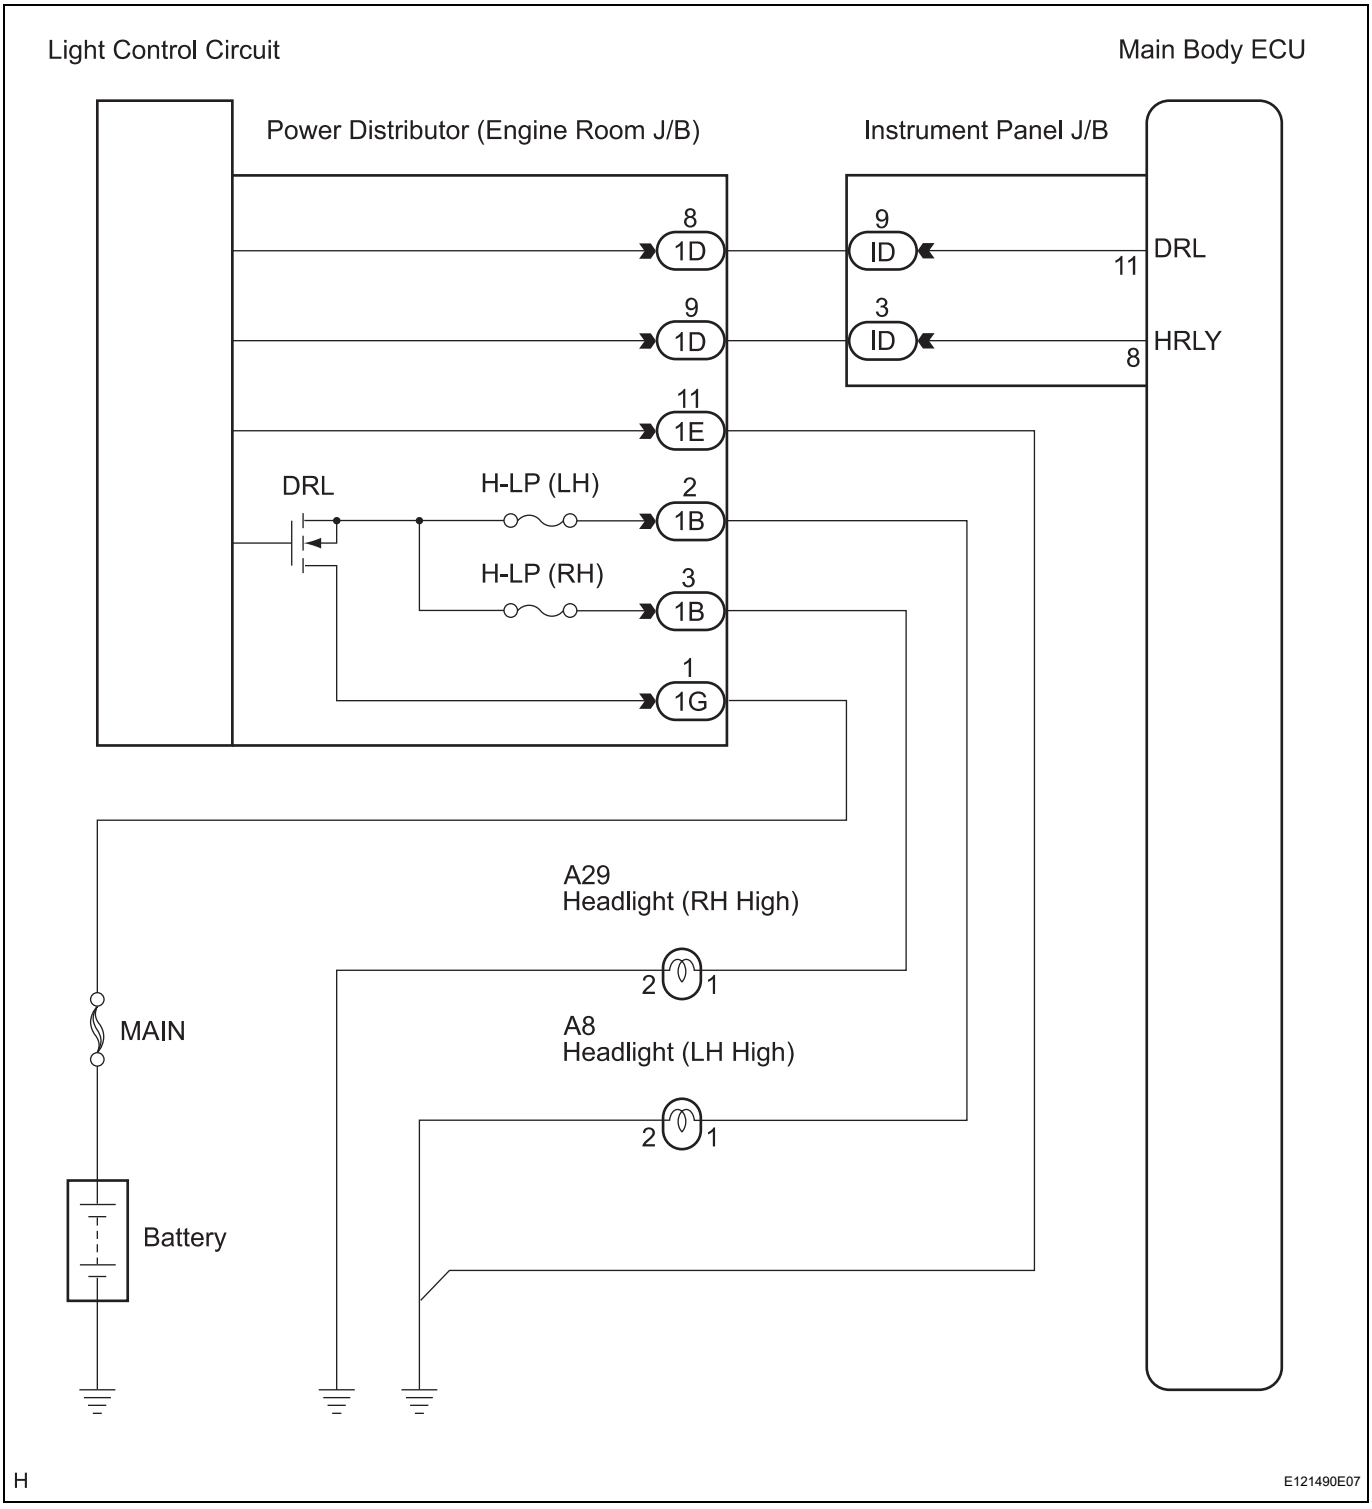
REPAIR OR REPLACE HARNESS OR CONNECTOR (FUSE - BODY GROUND)

Headlight (HI-BEAM) Circuit

DESCRIPTION

The main body ECU receives dimmer switch HIGH signal and light control switch HEAD signal from the headlight dimmer switch assembly, and turns the high beam headlights on.
HINT:
When a short circuit occurs between the power distributor (engine room J/B assembly) and high beam headlight, the power distributor stops the DRL relay operation (Fail-safe function).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the relay operates.

MAIN BODY (MAIN BODY ECU):

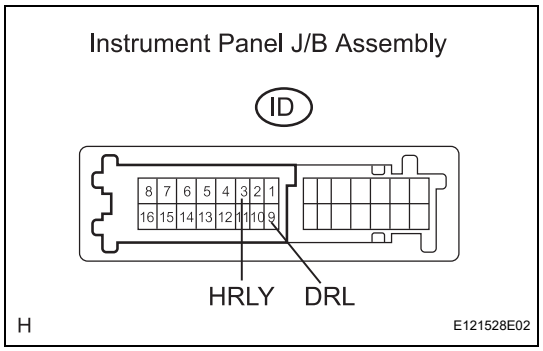
Tester Display	Test Part	Control Range	Diagnostic Note
HEAD LIGHT (HI)	High beam headlights	ON / OFF	-

OK:
The relay operates. (High beam headlights illuminate.)

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2	INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY



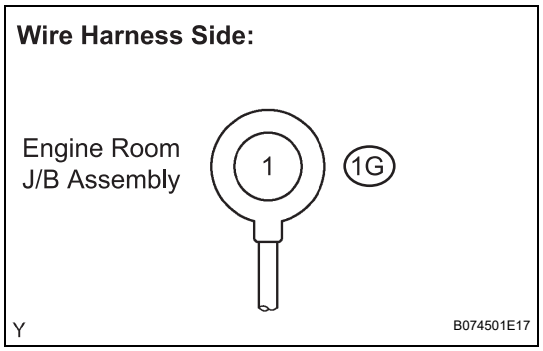
(a) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
ID-3 (HRLY) - Body ground	Light control switch OFF → HEAD	10 to 14 V → Below 1 V
ID-9 (DRL) - Body ground	Light control switch in HEAD, dimmer switch LOW → HIGH	10 to 14 V → Below 1 V

OK → **Go to step 6**

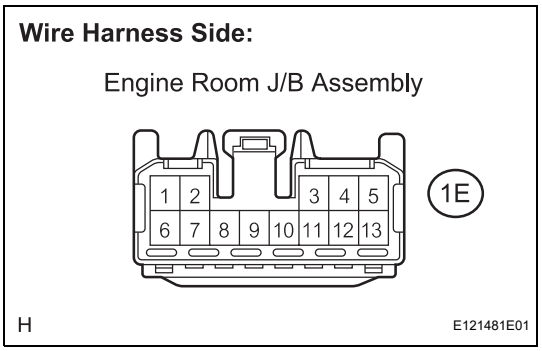
NG

3	CHECK HARNESS AND CONNECTOR (ENGINE ROOM J/B ASSEMBLY - BATTERY AND BODY GROUND)



(a) Disconnect the 1G engine room J/B assembly connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
1G-1 - Body ground	Always	10 to 14 V



(c) Disconnect the 1E engine room J/B assembly connector.
(d) Measure the resistance according to the value(s) in the table below.

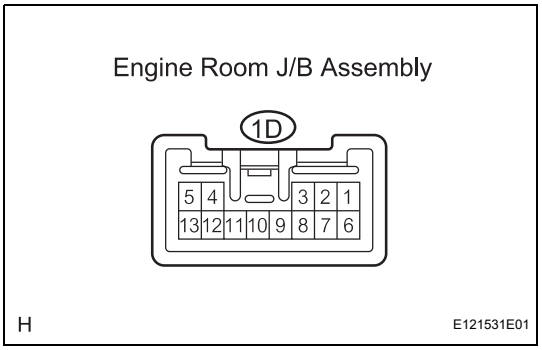
Standard resistance

Tester Connection	Condition	Specified Condition
1E-11 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT ENGINE ROOM JUNCTION BLOCK ASSEMBLY



(a) Reconnect the 1G and 1E engine room J/B assembly connectors.
(b) Disconnect the 1D engine room J/B assembly connector.
(c) Measure the voltage according to the value(s) in the table below.

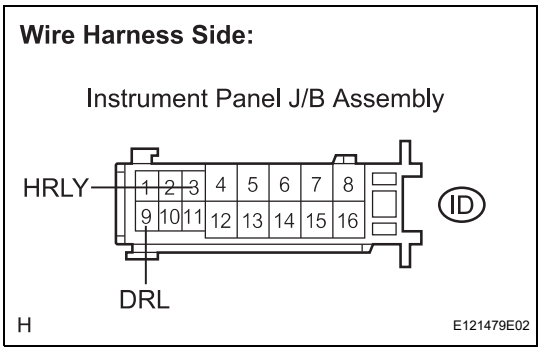
Standard voltage

Tester Connection	Condition	Specified Condition
1D-8 - Body ground	Always	10 to 14 V
1D-9 - Body ground	Always	10 to 14 V

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK ASSEMBLY (POWER DISTRIBUTOR)**

OK

5 CHECK HARNESS AND CONNECTOR (ENGINE ROOM J/B ASSEMBLY - INSTRUMENT PANEL J/B ASSEMBLY)



(a) Reconnect the 1D engine room J/B assembly connector.
(b) Disconnect the ID instrument panel J/B connector.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

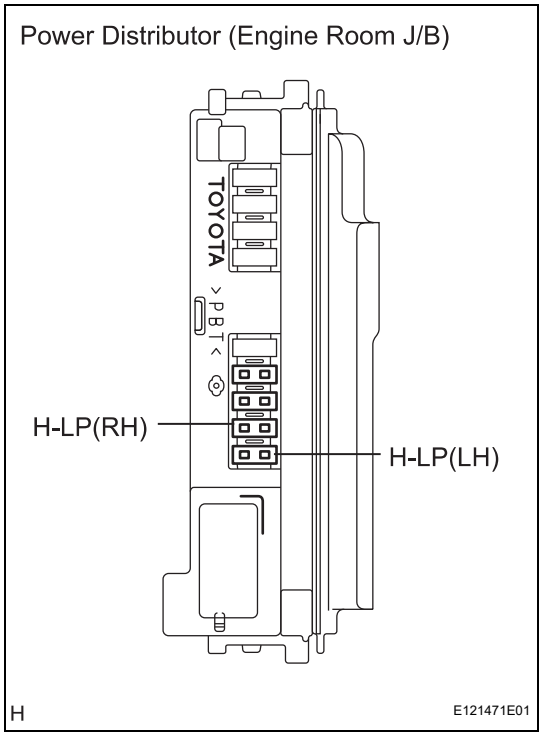
Tester Connection	Condition	Specified Condition
ID-3 (HRLY) - Body ground	Always	10 to 14 V
ID-9 (DRL) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

6 CHECK HARNESS AND CONNECTOR (SHORT IN RELAY-DRIVEN CIRCUIT)



(a) Remove the H-LP (RH) fuse from the engine room J/B assembly.
(b) Turn the light control switch to the HEAD position and turn the dimmer switch to the HIGH position.
(c) Check if the high beam headlight LH illuminates.
(d) Turn the dimmer switch to the LOW position.
(e) Install the H-LP (RH) fuse and remove the H-LP (LH) fuse.
(f) Turn the dimmer switch to the HIGH position.
(g) Check if the high beam headlight RH illuminates.

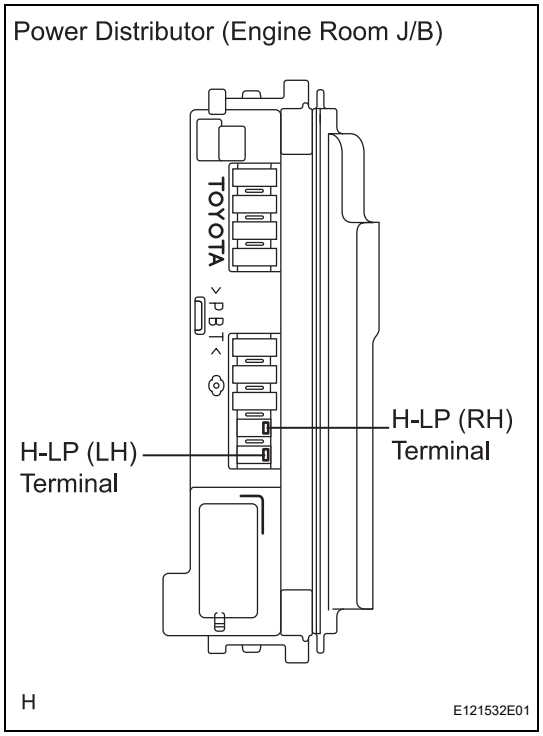
OK:

Either high beam headlight LH or RH illuminates.

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR (SHORT CIRCUIT BETWEEN FUSE AND BULB)**

NG

7 INSPECT ENGINE ROOM JUNCTION BLOCK ASSEMBLY



(a) Remove the H-LP (RH) fuse and H-LP (LH) fuse from the engine room J/B assembly.
(b) Measure the voltage between the loading slot of each fuse and body ground.

Standard voltage

Tester Connection	Condition	Specified Condition
H-LP (RH) Terminal - Body ground	Light control switch in HEAD and dimmer switch in HIGH	10 to 14 V
H-LP (LH) Terminal - Body ground	Light control switch in HEAD and dimmer switch in HIGH	10 to 14 V

NG → **REPLACE ENGINE ROOM JUNCTION BLOCK ASSEMBLY (POWER DISTRIBUTOR)**

OK

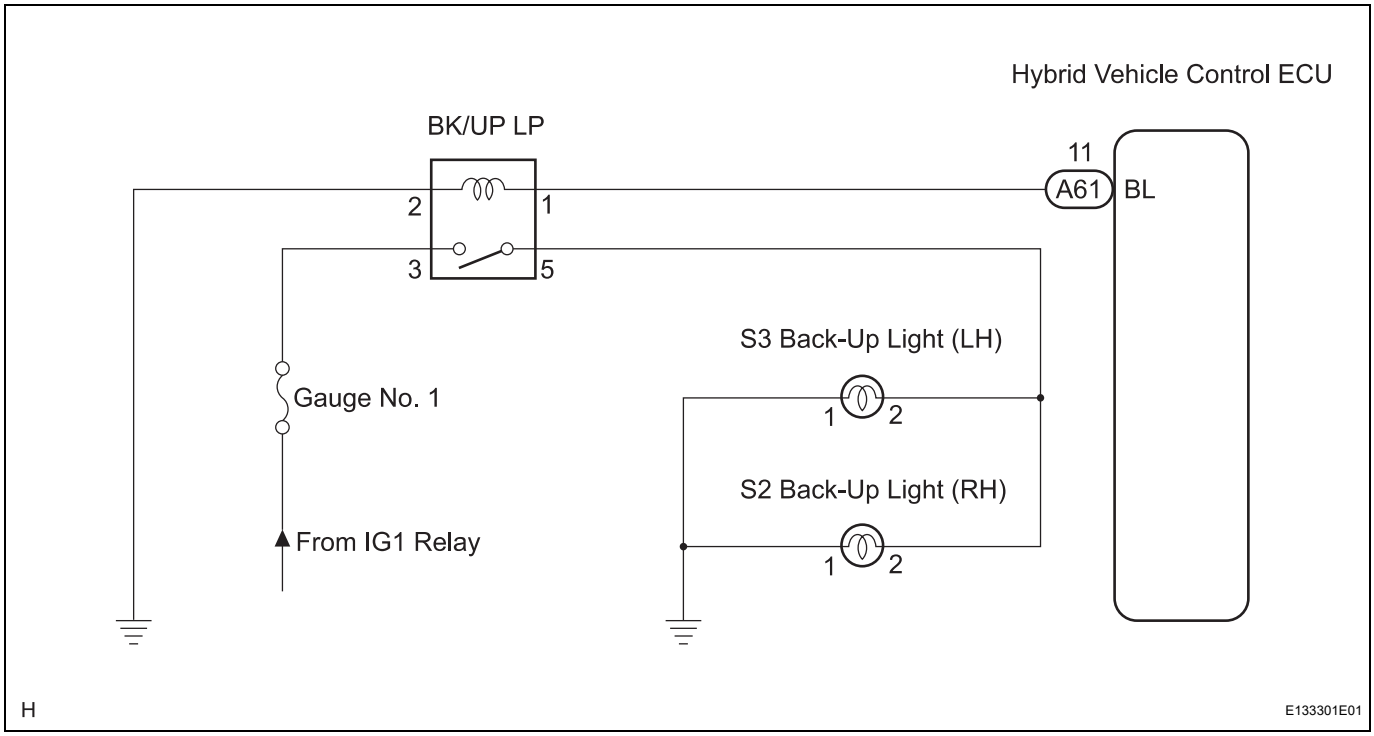
REPAIR OR REPLACE HARNESS OR CONNECTOR (OPEN CIRCUIT BETWEEN FUSE AND BODY GROUND)

Back-up Light Circuit

DESCRIPTION

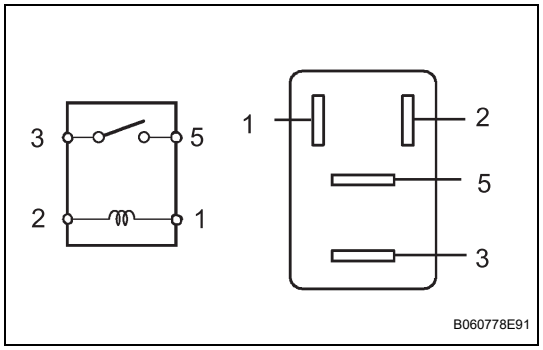
The HV control ECU receives shift position R signal and controls the back-up light relay.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT BACK-UP LIGHT RELAY



(a) Remove the back-up light relay from the engine room relay block.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

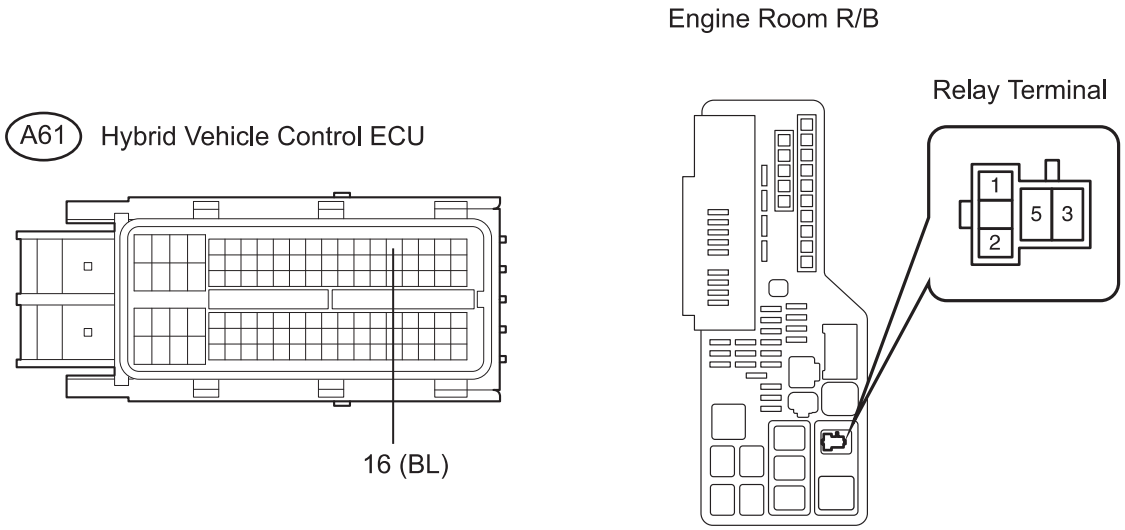
NG → REPLACE BACK-UP LIGHT RELAY

OK

2	CHECK HARNESS AND CONNECTOR (RELAY - HYBRID VEHICLE CONTROL ECU AND BODY GROUND)

(a) Disconnect the A61 hybrid vehicle ECU connector.

Wire Harness Side:



E133308E02

(b) Remove the back-up relay from the engine room relay block.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

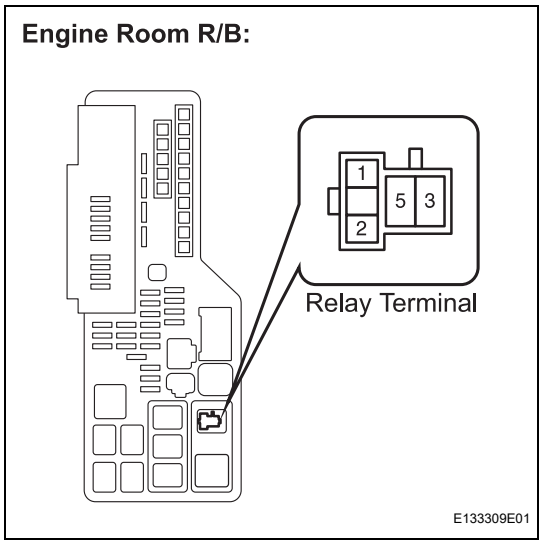
Tester connection	Condition	Specified value
A61-16 - Relay terminal 1	Always	Below 1 Ω
Relay terminal 2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	INSPECT HYBRID VEHICLE CONTROL ECU

(a) Reconnect the hybrid vehicle control ECU connector.



(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

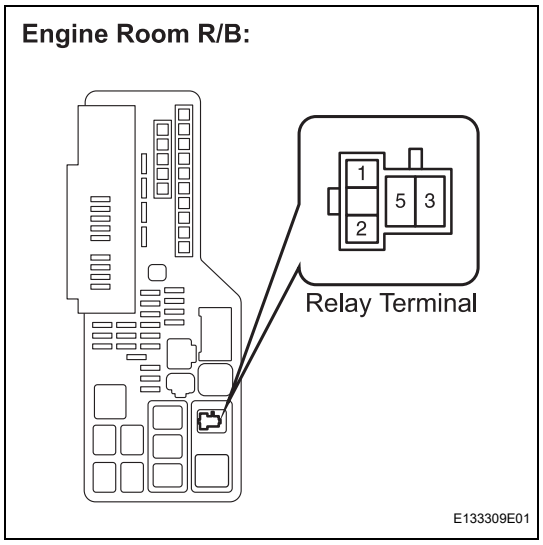
Tester connection	Condition	Specified value
Relay terminal 1 - Body ground	Shift lever in R position	10 to 14 V
Relay terminal 1 - Body ground	Shift lever not in R position	Below 1 V

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

LI

OK

4 CHECK HARNESS AND CONNECTOR (BATTERY - RELAY)



(a) Measure the voltage according to the value(s) in the table below.

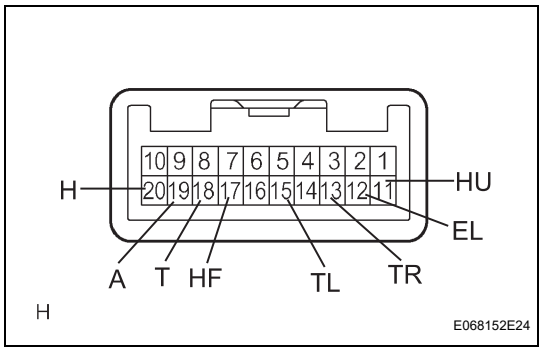
Standard voltage

Tester connection	Condition	Specified value
Relay terminal 3 - Body ground	Power switch on (IG)	10 to 14 V
Relay terminal 3 - Body ground	Power switch off	Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY - RELAY)**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (BULB - RELAY AND BODY GROUND)



INSPECTION

1. INSPECT HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Light control switch

Tester Connection	Switch Condition	Specified Condition
12 (EL) - 20 (H) - 18 (T) - 19 (A)	OFF	10 kΩ or higher
12 (EL) - 18 (T)	TAIL	Below 1 Ω
12 (EL) - 20 (H) - 18 (T)	HEAD	Below 1 Ω
12 (EL) - 19 (A)	AUTO	Below 1 Ω

Dimmer switch

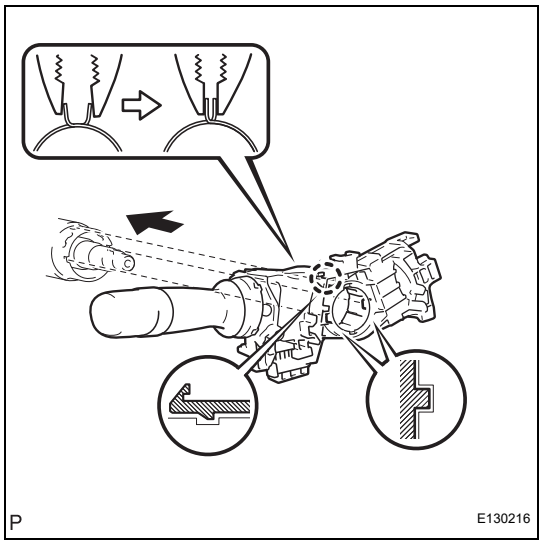
Tester Connection	Switch Condition	Specified Condition
17 (HF) - 12 (EL)	FLASH	Below 1 Ω
11 (HU) - 12 (EL)	HIGH	Below 1 Ω

Turn signal switch

Tester Connection	Switch Condition	Specified Condition
13 (TR) - 12 (EL) - 15 (TL)	OFF	10 kΩ or higher
13 (TR) - 12 (EL)	RH	Below 1 Ω
15 (TL) - 12 (EL)	LH	Below 1 Ω

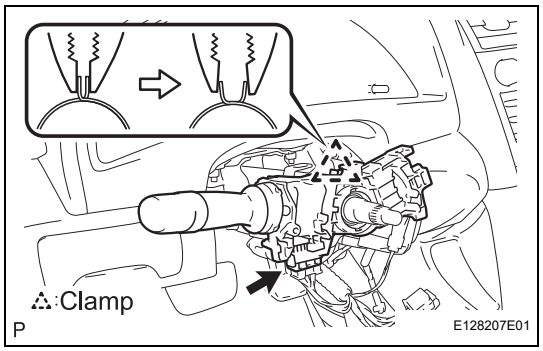
If the result is not as specified, replace the headlight dimmer switch assembly.

INSTALLATION



1. INSTALL HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Engage the claw while loosening the clamp as shown in the illustration.



(b) Install the headlight dimmer switch assembly with the clamp.

(c) Connect the connector.

2. INSTALL WINDSHIELD WIPER SWITCH ASSEMBLY (See page WW-22)

3. INSTALL SPIRAL CABLE WITH STEERING ANGLE SENSOR (See page RS-359)

4. INSTALL STEERING COLUMN COVER (See page SR-41)

5. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-42)**
6. **INSPECT STEERING WHEEL CENTER POINT**
7. **INSTALL STEERING PAD (See page RS-346)**
8. **INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-347)**
9. **INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-347)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
11. **INSPECT STEERING PAD (See page RS-347)**
12. **INSPECT SRS WARNING LIGHT**
    (See page RS-33)
13. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43).

INSTALLATION

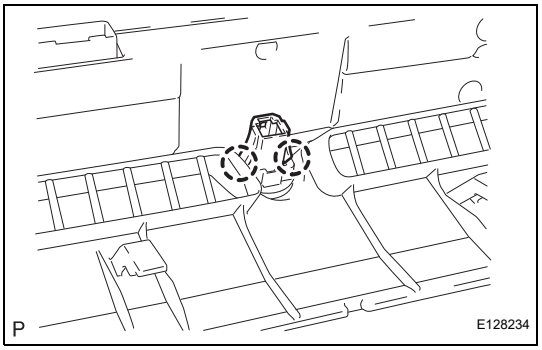
1. INSTALL STOP LIGHT SWITCH ASSEMBLY (See page BR-74)
2. INSTALL COMBINATION METER ASSEMBLY (See page ME-67)
3. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-69)
4. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page ME-69)
5. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-34)
6. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page ME-69)
7. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)
8. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)

INSTALLATION

1. **INSTALL LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (See page ED-89)**
2. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-53)**

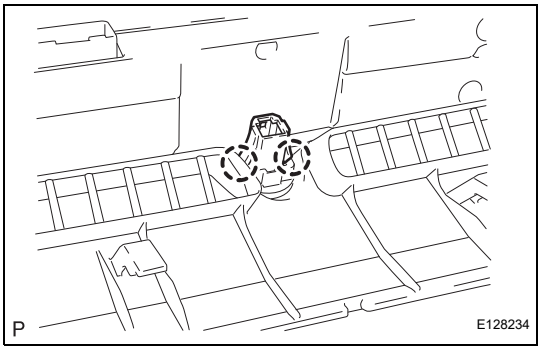
REMOVAL

1. **REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-20)**



2. **REMOVE AUTOMATIC LIGHT CONTROL SENSOR**
   (a) Disengage the 2 claws and remove the automatic light control sensor.

INSTALLATION

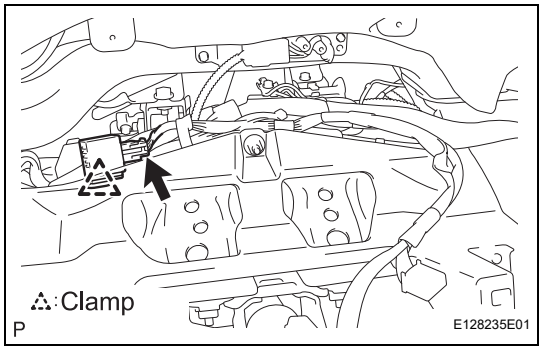


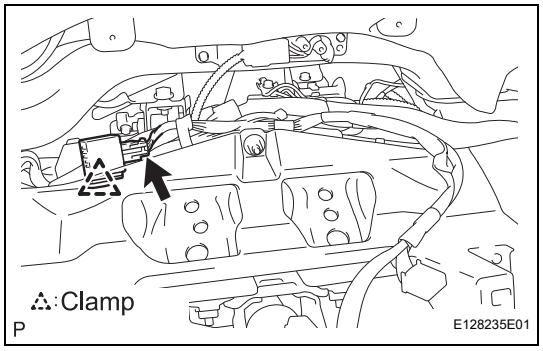
1. **INSTALL AUTOMATIC LIGHT CONTROL SENSOR**
   (a) Engage the 2 claws and install the automatic light control sensor.

2. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-28)**

REMOVAL

1. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)
2. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)
3. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page ME-64)
4. REMOVE STEERING COLUMN COVER (See page ME-64)
5. REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-12)
6. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)
7. REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page ME-66)
8. REMOVE COMBINATION METER ASSEMBLY (See page ME-66)
9. REMOVE TURN SIGNAL FLASHER ASSEMBLY
   (a) Disconnect the connector.
   (b) Remove the clamp and the turn signal flasher assembly.





INSTALLATION

1. INSTALL TURN SIGNAL FLASHER ASSEMBLY
   (a) Install the clamp and the turn signal flasher assembly.
   (b) Connect the connector.
2. INSTALL COMBINATION METER ASSEMBLY (See page ME-67)
3. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page ME-69)
4. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-34)
5. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-34)
6. INSTALL STEERING COLUMN COVER (See page ME-69)
7. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page ME-69)
8. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)

9. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**

PROBLEM SYMPTOMS TABLE

HINT:

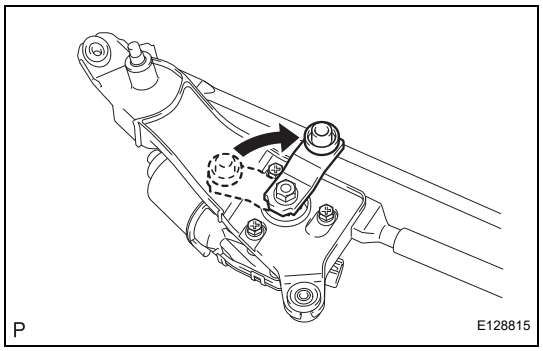
- Use the table below to help determine the cause of the problem symptom. The potential cases of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to the system before inspecting the suspected areas below.

FRONT WIPER AND WASHER SYSTEM:

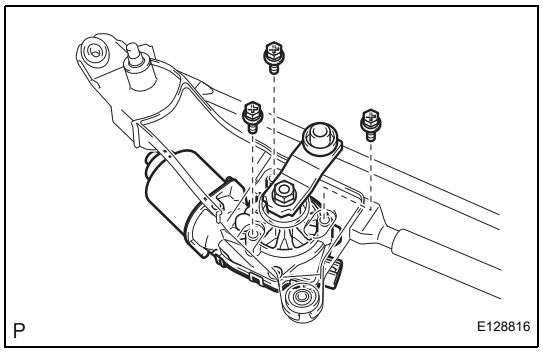
Symptom	Suspected Area	See page
Front wiper system does not operate.	1. IG1 relay	-
	2. WIP fuse	-
	3. Windshield wiper switch assembly	WW-21
	4. Windshield wiper motor assembly	WW-11
	5. Wire harness or connector	-
Front wipers do not operate in LO or HI.	1. Windshield wiper switch assembly	WW-21
	2. Windshield wiper motor assembly	WW-11
	3. Wire harness or connector	-
Front wipers do not operate in INT.	1. Windshield wiper switch assembly	WW-21
	2. Windshield wiper motor assembly	WW-11
	3. Wire harness or connector	-
Front washer motor does not operate.	1. WASH fuse	-
	2. Windshield wiper switch assembly	WW-21
	3. Windshield washer motor assembly	WW-24
	4. Wire harness or connector	-
Front wipers do not operate when the front washer switch is ON.	1. Windshield wiper switch assembly	WW-21
	2. Windshield wiper motor assembly	WW-11
	3. Wire harness or connector	-
Washer fluid does not operate.	Washer hose and nozzle	WW-26
When the front wiper switch is in the HI position, the wiper blade is in contact with the body.	1. Front wiper arm installation position	WW-12
	2. Windshield wiper motor assembly	WW-11
When the front wiper switch is OFF, the wiper blade does not retract or retracts in a wrong position.	1. Front wiper arm installation position	WW-12
	2. Windshield wiper motor assembly	WW-11

Others:

Symptom	Suspected Area	See page
Washer fluid level warning system does not operate.	1. Washer fluid level warning switch	WW-24
	2. Combination meter assembly	-



(b) Move the crank arm in the direction indicated by the arrow.



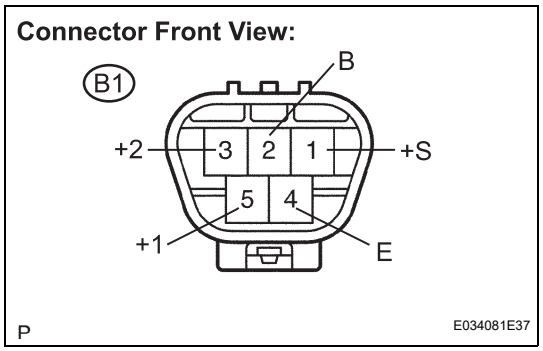
(c) Remove the 3 bolts and the windshield wiper motor assembly from the windshield wiper link assembly.

INSPECTION

1. INSPECT WINDSHIELD WIPER MOTOR ASSEMBLY

(a) LO Operation Check

(1) Connect a positive (+) battery lead to terminal B1-5 (+1) of the connector, and a negative (-) battery lead to terminal B1-4 (E), and check that the motor operates at low speed (LO).

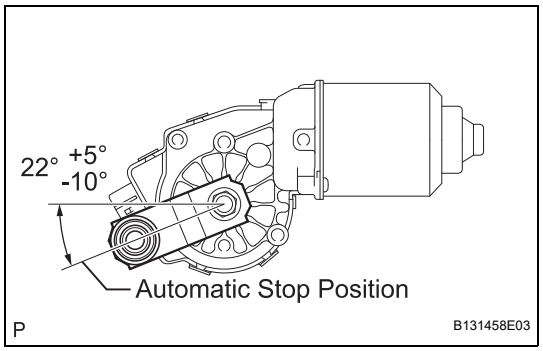


(b) HI Operation Check

(1) Connect a positive (+) lead to terminal B1-3 (+2) of the connector, and a negative (-) battery lead to terminal B1-4 (E), and check that the motor operates at high speed (HI).

(c) Automatic Stop Operation Check

(1) Put matchmarks on the windshield wiper motor assembly. The matchmarks will be used to confirm the return of the motor shaft to the park position.

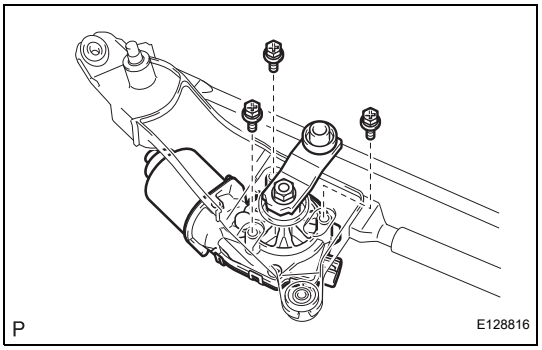


(2) Connect a positive (+) battery lead to terminal B1-5 (+1) of the connector on the wiper motor and connect a negative battery lead to terminal B1-4 (E) of the wiper motor. With the motor operating at low speed (LO), disconnect terminal B1-5 (+1) to stop the wiper motor at a position where the matchmarks do not line up.
HINT:
In the following step, connections will be made at the wiper motor to allow verification of the operation of the park contacts that are operated by the cam in the wiper motor. After the connections have been made, when the motor is not in the park position, current will flow from terminal B1-2 (B) through the park contacts in the wiper motor, to terminal B1-1 (+S). The current will then flow through the jumper wire to terminal B1-5 (+1) through the motor to ground (causing it to operate). When the motor reaches the park position, the park contacts should open, stopping the operation of the wiper motor in the correct location. Terminals B1-2 (B) and B1-1 (+S) are connected by the internal cam in the wiper motor when the wiper motor is not in the park position. Terminals B1-1 (+S) and B1-4 (E) are connected by the internal cam in the wiper motor when the wiper motor is in the park position.

(3) With the ground wire still attached from the previous step, connect a jumper lead between terminal B1-1 (+S) and terminal B1-5 (+1). Next, connect a positive (+) battery lead to terminal B1-2 (B) to cause the wiper motor to operate at low speed. If the wiper motor is operating correctly, the wiper will operate until it reaches the park position. When it reaches the park position, it will automatically stop.

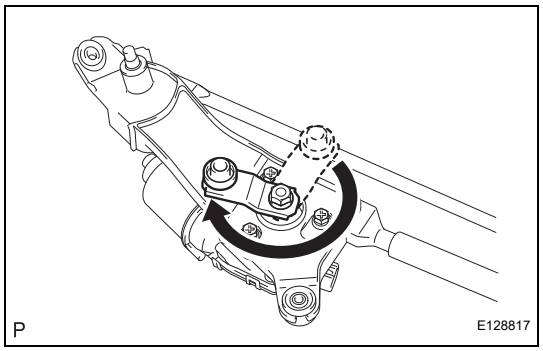
(4) Verify that the matchmarks on the windshield wiper motor assembly are lined up.

INSTALLATION

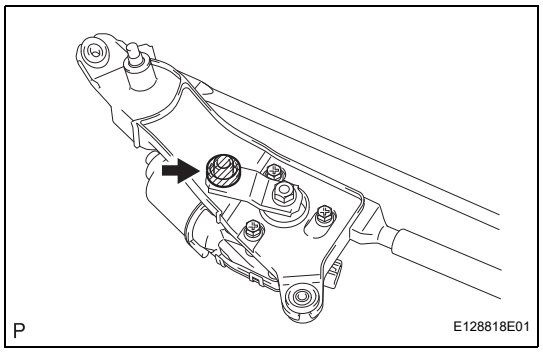


1. INSTALL WINDSHIELD WIPER MOTOR ASSEMBLY

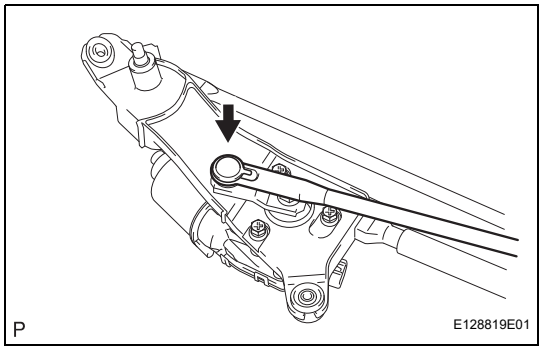
(a) Install the windshield wiper motor assembly with the 3 bolts.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



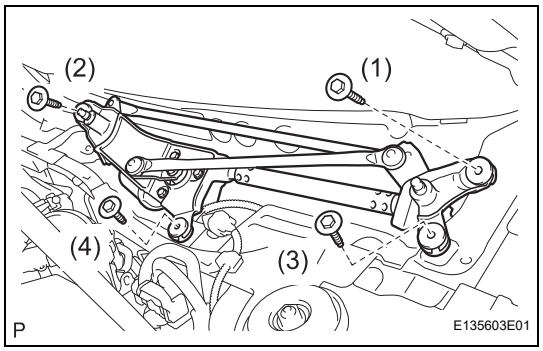
(b) Move the crank arm in the direction indicated by the arrow.



(c) Apply MP grease to the crank arm pivot of the windshield wiper motor assembly.

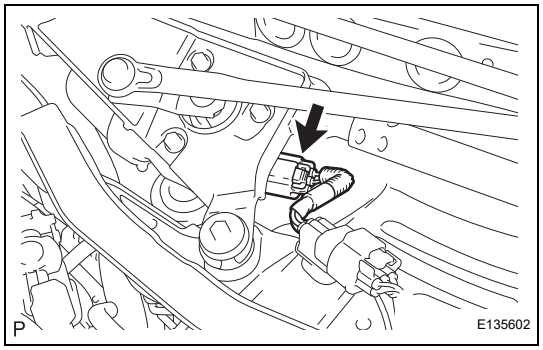


(d) Install the No. 2 windshield wiper link rod to the pivot of the windshield wiper motor assembly.

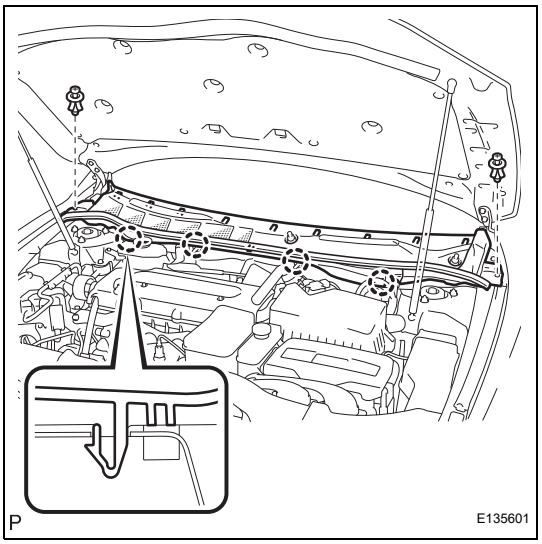


2. INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY

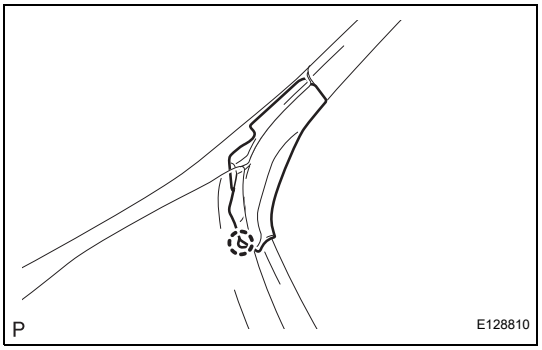
(a) Install the windshield wiper motor and link assembly with the 4 bolts.
Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)
NOTICE:
Tighten the bolts in the order shown in the illustration.



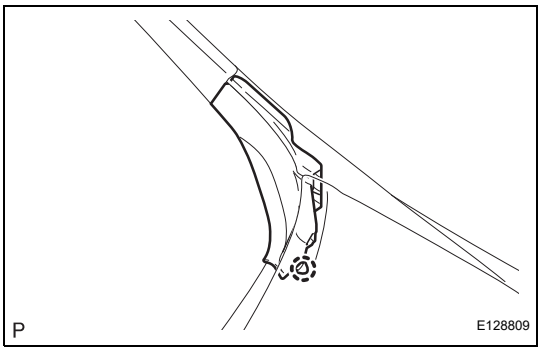
(b) Connect the connector.



3. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY**
   (a) Engage the 4 claws and install the cowl top ventilator louver sub-assembly.
   (b) Install the 2 clips.

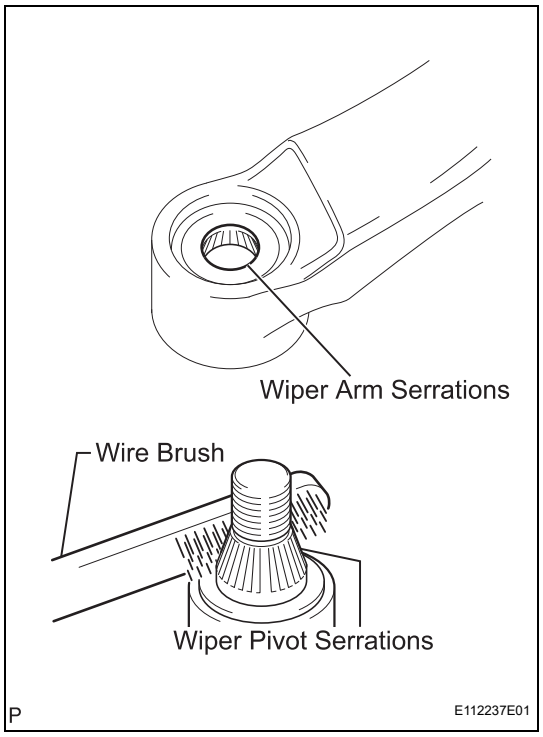


4. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH**
   (a) Engage the claw and install the front fender to cowl side seal RH.

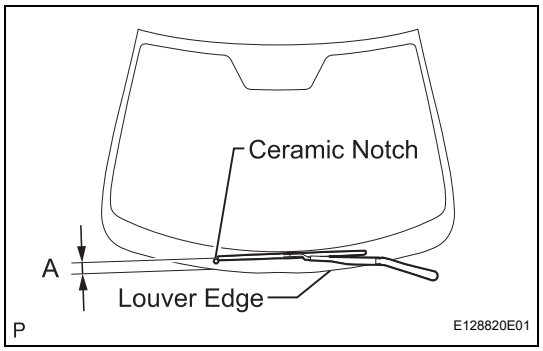


5. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH**
   (a) Engage the claw and install the front fender to cowl side seal LH.

6. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH**
   (a) Operate the wiper and stop the windshield wiper motor at the automatic stop position.



(b) Clean the wiper arm serrations.
(c) When reinstalling:
(1) Clean the wiper pivot serrations with a wire brush.

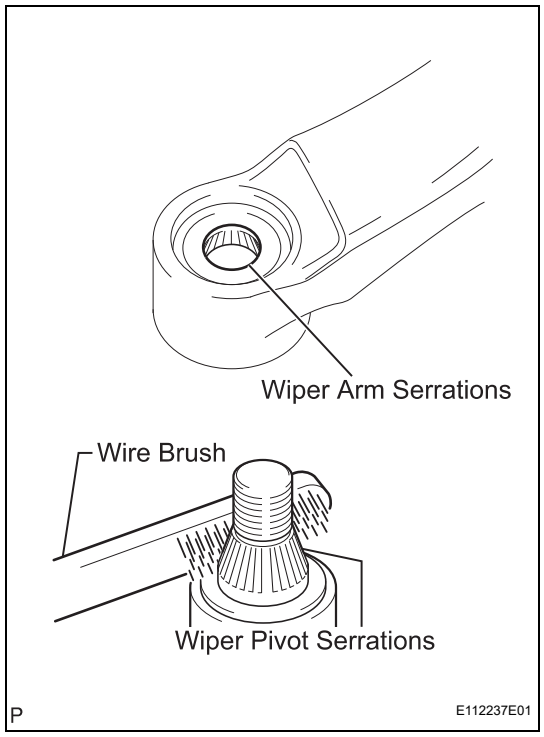


(d) Install the front wiper arm and blade assembly LH with the nut to the position shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
HINT:
Hold the arm hinge by hand to fasten the nut.

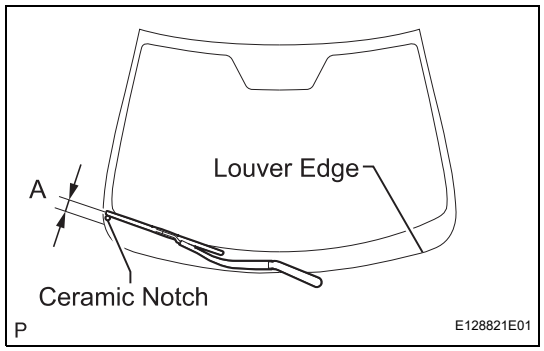
Area	Measurement
A	37 to 52 mm (1.46 to 2.05 in.)

7. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH

(a) Operate the wiper and stop the windshield wiper motor at the automatic stop position.



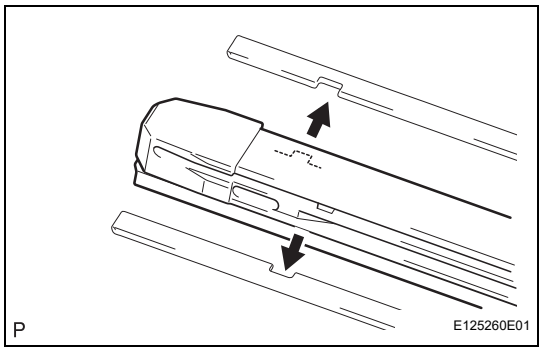
(b) Clean the wiper arm serrations.
(c) When reinstalling:
  (1) Clean the wiper pivot serrations with a wire brush.



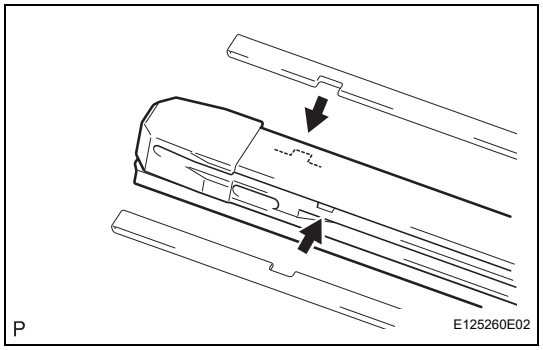
(d) Install the front wiper arm and blade assembly RH with the nut to the position shown in the illustration.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
HINT:
Hold the arm hinge by hand to fasten the nut.

Area	Measurement
A	23 to 38 mm (0.90 to 1.49 in.)

(e) Operate the front wipers while spraying washer fluid on the windshield glass. Make sure that the front wipers function properly and the wipers do not come into contact with the vehicle body.



(b) Remove the 2 wiper rubber backing plates from the wiper rubber.



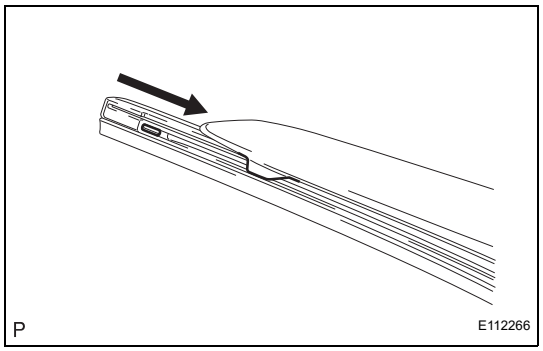
INSTALLATION

1. INSTALL WIPER RUBBER

(a) Install the 2 wiper rubber backing plates to the wiper rubber.

NOTICE:

- **Align the protrusions on the wiper rubber with the notches in the backing plates.**
- **Align the curves of the backing plates with the curve of the glass.**



(b) Install the wiper rubber to the front wiper blade with the tip of the rubber (curved end) facing the axis of the wiper arm.

NOTICE:

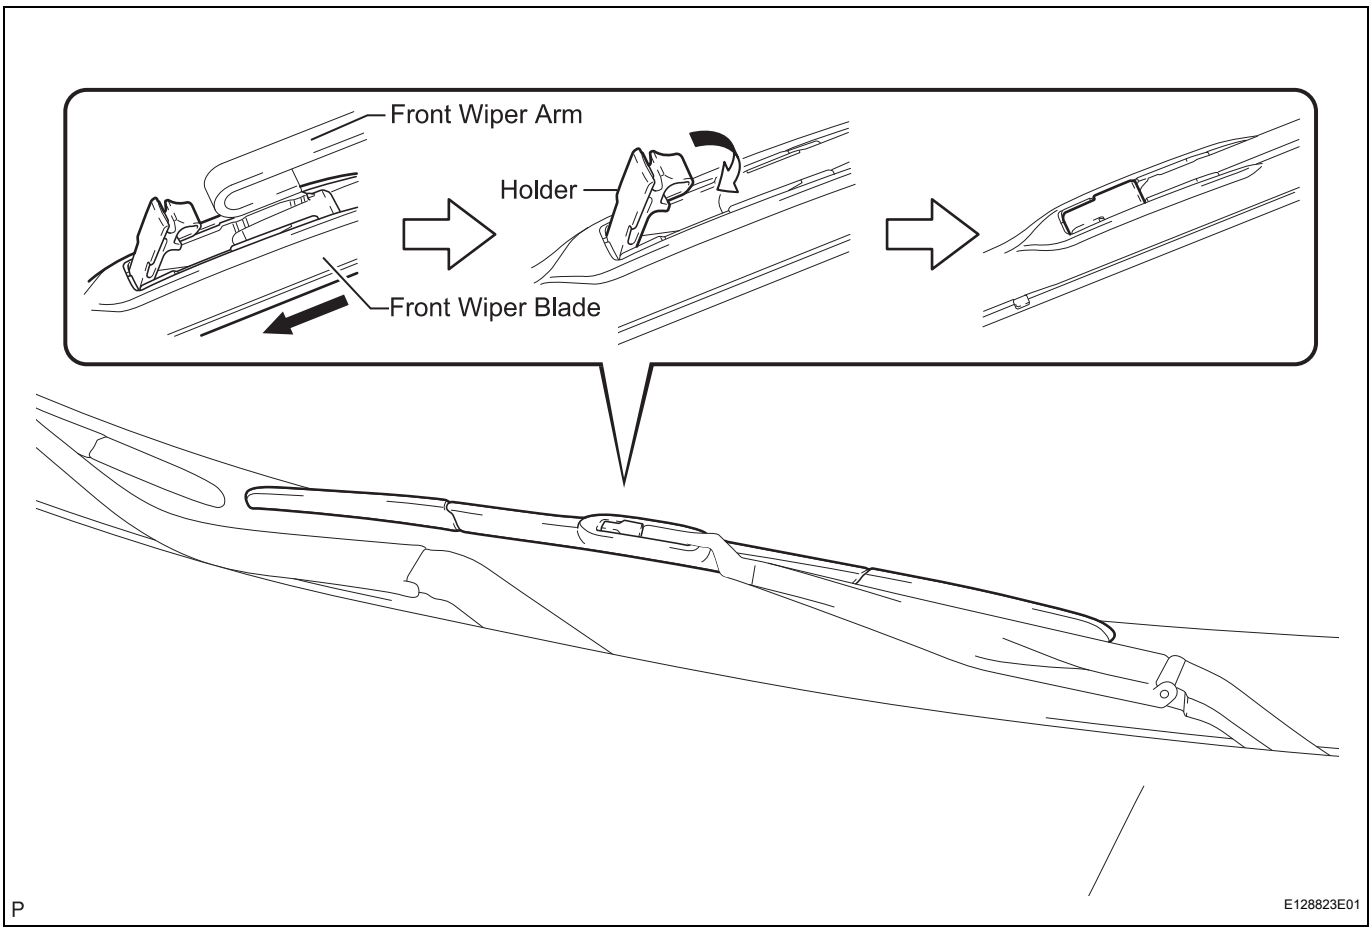
Firmly push the wiper rubber into the wiper blade to securely engage them.

2. INSTALL FRONT WIPER BLADE

(a) Install the front wiper blade as shown in the illustration.

WW

(b) Engage the holder of the front wiper blade.

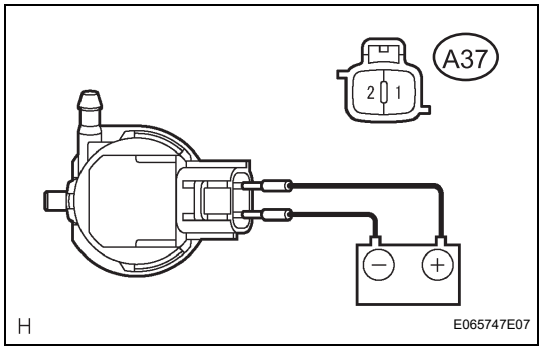


INSPECTION

1. INSPECT WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY

HINT:

This check should be performed with the front washer motor and pump installed to the washer jar.



(a) Fill the washer jar with washer fluid.

(b) Connect the positive (+) battery lead to terminal A37-1 of the washer motor and pump, and the negative (-) lead to terminal A37-2.

(c) Check if washer fluid is pumped from the washer jar.

OK:

Washer fluid is pumped from the washer jar.

2. INSPECT WASHER FLUID LEVEL SENSOR

HINT:

The following check should be performed with the windshield washer motor and pump installed to the washer jar.

(a) Fill the washer jar with washer fluid.

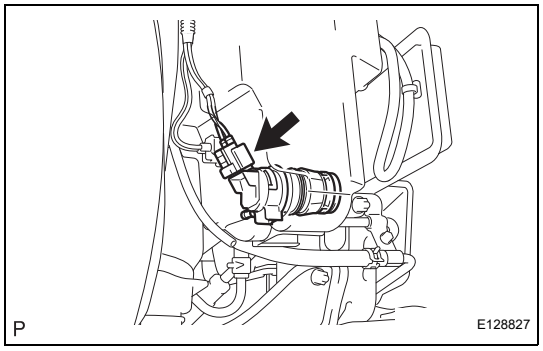
(b) Disconnect the connector from the washer fluid level sensor.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Fluid Volume	Specified Condition
More than 700 to 900 ml	10 kΩ or higher
Less than 700 to 900 ml	Below 1 Ω

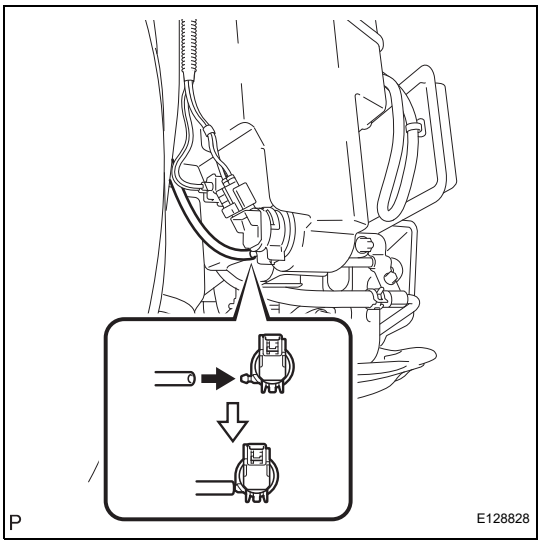
INSTALLATION



1. INSTALL WINDSHIELD WASHER MOTOR AND PUMP ASSEMBLY

(a) Install the windshield washer motor and pump assembly.

(b) Connect the connector.



2. **FILL WASHER JAR WITH WASHER FLUID**
   (a) Connect the washer hose to the windshield washer motor and pump assembly and fill the washer jar with washer fluid.

3. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-9)**

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the power door lock control system.
- The intelligent tester should be used in steps 5 and 7.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

DL

2	CUSTOMER PROBLEM ANALYSIS CHECK

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V
If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

4	PROBLEM SYMPTOMS TABLE

Result

Result	Proceed to
Fault is not listed in problem symptoms table	**A**

OPERATION CHECK

1. CHECK ELECTRICAL DOOR LOCK OPERATION

NOTICE:

The initial condition that the customizing function using the intelligent tester is not chosen is shown.

(a) Check the basic function.

(1) Check that all doors lock when the door control switch (for manual operation) is turned to LOCK and all doors unlock when turned to UNLOCK.

(2) Check that all doors lock when the driver side door lock key cylinder is turned to LOCK using the mechanical key.

(b) Check the electrical key lock-in prevention function.

NOTICE:

In order to prevent the electrical key from being actually locked-in, the following inspection should be performed with the driver side door window open.

(1) Place the electrical key in the cabin.

(2) With the driver side door open, check that all doors unlock immediately after the door lock knob for the driver side door is turned to LOCK.

(3) With the driver side door open, check that all doors unlock immediately after the door control switch (for manual operation) is turned to LOCK.

(4) With the driver side door open, turn the driver side door lock knob to LOCK, and then close the driver side door. Then check that all doors unlock.

(c) Check the security function.

(1) Close all doors with the driver side door window open so that the door control switch can be operated from outside the vehicle.

(2) Pull out the electrical key, open the driver side door and then close and lock the door using the electrical key. Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

(3) Pull out the electrical key, and close and lock the driver side door by mechanical key operation. Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

(4) Pull out the electrical key, close the driver side door, and lock the door by wireless door lock operation. Under this condition, check that all doors do not unlock when the door control switch (for manual operation) is turned to UNLOCK from outside the vehicle.

HINT:

Check that the security function is canceled under the following conditions:

- The power switch is turned on (IG).
- The driver side door is unlocked using the mechanical key or the electrical key.
- The door control switch (for manual operation) is turned to UNLOCK after the door control knob is turned to UNLOCK manually.

(d) Check the illumination function.
(1) Set the room light switch to the DOOR position.
(2) With all doors locked, check that driver's door unlock when the driver side door lock cylinder is turned to UNLOCK using the key. At the same time, the room light comes on.
(3) Check that the room light goes off in approximately 15 seconds if the doors have not been opened.

(e) Check the AUTO lock function.
(1) Lock all doors.
(2) Unlock driver's door using the electrical key.
(3) Allow 30 seconds to elapse while all doors remain closed and the electrical key switch and the entry unlock switch remain untouched. Then, check that all doors will lock automatically.

(f) Check the automatic locking function interlocked with the shift lever.
(1) When any door is unlocked with all doors closed and the engine started, check that all doors automatically lock when the shift lever is moved into any position from the P position.
(2) When any door is unlocked after all doors automatically lock, check that all doors attempt to automatically lock once again (retry function). The retry function is canceled when any of the following conditions is fulfilled:
- All doors are locked.
- Any door is opened.
- The shift lever is moved into the P position.
- The doors are locked or unlocked by the user.
- The power switch is turned off.

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:

The following items can be customized.

NOTICE:

- **Before attempting to customize vehicle settings, confirm whether it is possible to make the change that the customer has requested.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting, make sure that the item in question has not been disabled using the customizing function.**

DOOR LOCK:

Display (Item)	Default	Contents	Setting
UNLOCK/PARK (Unlock, power switch on (IG), shift P, speed 0 km/h (0 mph))	ON	Function that unlocks doors when the shift lever is moved to the P position from any other position while the power switch is on (IG)	ON/OFF
ALL UNLK/OPN-CL (All unlock, D door open-close)	OFF	Function that unlocks all other doors when opening driver side door within 10 seconds after turning the power switch off from on (IG)	ON/OFF
UNLK/KEY TWICE (Unlock, 2 times D key operation)	ON	• Function that unlocks only the driver side door when the driver side door key cylinder is turned to unlock once and unlocks all the doors when it is turned to unlock twice • In the OFF setting, turning it once unlocks all doors	ON/OFF
AUTO LOCK/SHIFT (Auto lock/shift not P)	ON	Function that locks doors when the shift lever is moved from the P position to any other position	ON/OFF
AUTO LOCK	OFF	Function that locks doors when vehicle reaches a vehicle speed 20 km/h (13 mph)	ON/OFF

WIRELESS D LOCK

Display (Item)	Default	Contents	Setting
AUTO LOCK DELAY	60s	Function that selects AUTO LOCK time (30 sec. or 60 sec.)	30s/60s

PROBLEM SYMPTOMS TABLE

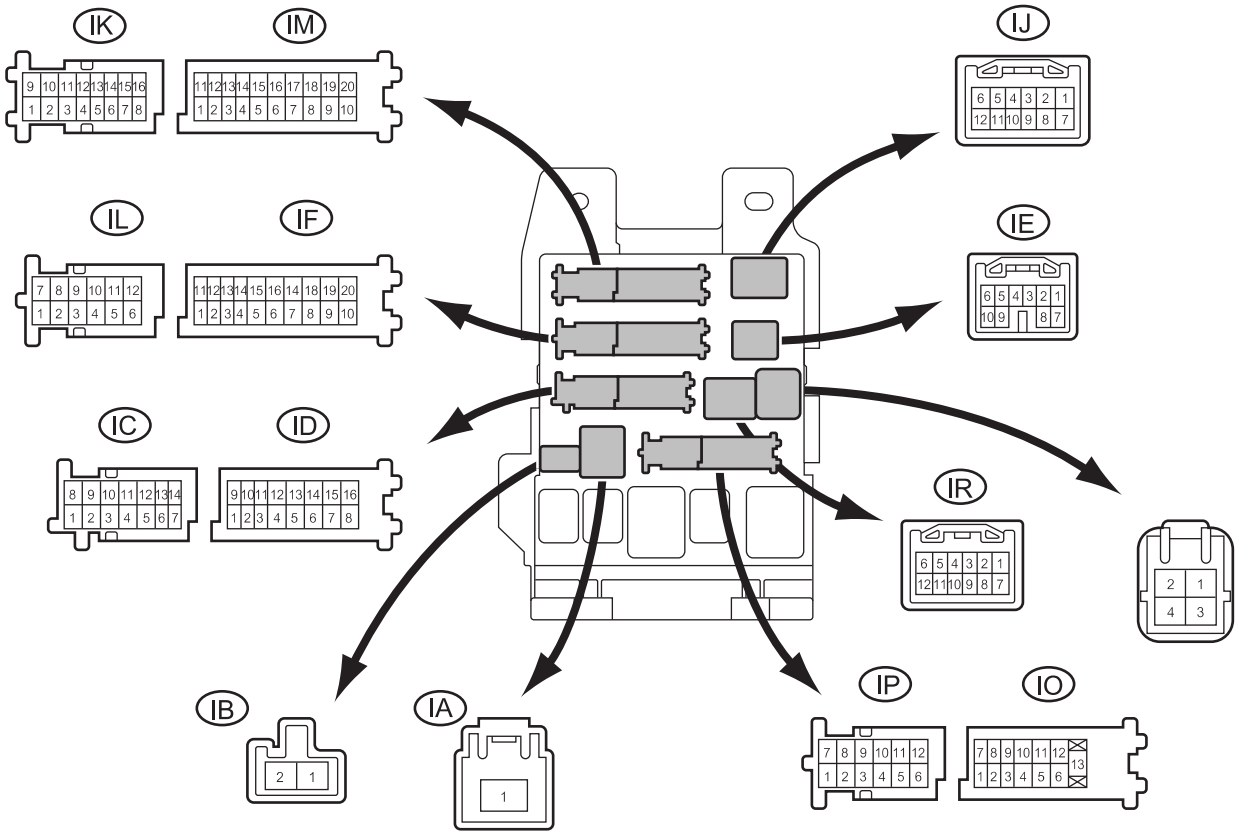
POWER DOOR LOCK CONTROL SYSTEM:

Symptom	Suspected Area	See page
All doors cannot be locked/unlocked simultaneously by neither door control switch nor door key cylinder	1. Power source circuit (Main body ECU)	DL-13
	2. Replace main body ECU (Instrument panel J/B)	-
All doors cannot be locked/unlocked simultaneously by driver side door control switch	1. Door control switch circuit (Driver side)	DL-56
	2. Replace main body ECU (Instrument panel J/B)	-
All doors cannot be locked/unlocked simultaneously by front passenger side door control switch	1. Door control switch circuit (Front passenger side door)	DL-56
	2. Replace main body ECU (Instrument panel J/B)	-
All doors cannot be locked/unlocked simultaneously by door key cylinder	1. Driver side door key lock and unlock switch circuit	DL-52
	2. Multiplex network master switch assembly	DL-13
	3. Replace main body ECU (Instrument panel J/B)	-
Driver side door lock does not operate	1. Driver side door lock motor circuit	DL-31
	2. Replace main body ECU (Instrument panel J/B)	-
Passenger side door lock does not operate	1. Front passenger side door lock motor circuit	DL-34
	2. Replace main body ECU (Instrument panel J/B)	-
Rear LH side door lock does not operate	1. Rear door lock motor LH circuit	DL-37
	2. Replace main body ECU (Instrument panel J/B)	-
Rear RH side door lock does not operate	1. Rear door lock motor RH circuit	DL-40
	2. Replace main body ECU (Instrument panel J/B)	-
Luggage compartment door unlock does not operate	1. Luggage compartment door lock circuit	DL-46
	2. Luggage compartment door courtesy switch circuit	DL-43
	3. Luggage compartment door key cylinder switch circuit	DL-49
	4. Replace main body ECU (Instrument panel J/B)	-
Key lock-in prevention function does not work properly (manual operation and key-linked lock are active)	1. Door courtesy switch circuit (Driver side)	LI-41
	2. Smart key system (Entry)	DL-121
	3. Replace main body ECU (Instrument panel J/B)	-
Shift-linked automatic door lock does not operate	1. CAN communication system	CA-7
	2. Replace main body ECU (Instrument panel J/B)	-
One or more doors cannot be locked/unlocked simultaneously (Wireless key operation)	1. Wireless door lock system	DL-71
	2. Driver side door unlock detection switch circuit	DL-19
	3. Front passenger door unlock detection switch circuit	DL-22
	4. Rear door unlock detection switch LH circuit	DL-25
	5. Rear door unlock detection switch RH circuit	DL-28
	6. Replace main body ECU (Instrument panel J/B)	-

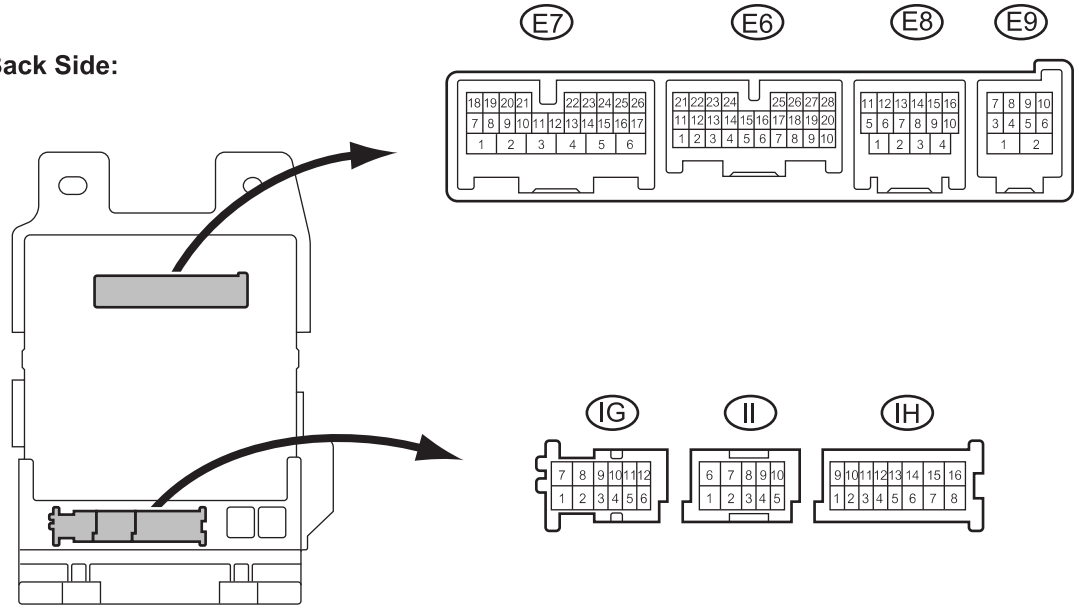
TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

Front Side:



Back Side:



H

B112605E09

(a) Disconnect the E6, E7, IO, IK, IM, ID, IJ, and E9 J/B and ECU connectors.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
DCTY (E7-24) - Body ground	L - Body ground	Driver door courtesy switch	Driver door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
RCTY (E6-7) - Body ground	GR - Body ground	Rear right door courtesy switch input	Rear right door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
PCTY (E6-21) - Body ground	Y - Body ground	Passenger door courtesy switch input	Passenger door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
LCTY (IO-7) - Body ground	LG - Body ground	Rear left door courtesy switch input	Rear left door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
L1 (IJ-3) - Body ground	L - Body ground	Passenger door control switch LOCK input	Passenger door control switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
UL1 (IJ-4) - Body ground	G - Body ground	Passenger door control switch UNLOCK input	Passenger door control switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
L1 (IK-15) - Body ground	V - Body ground	Driver door control switch LOCK input	Driver door control switch OFF → LOCK	10 kΩ or higher → Below 1 Ω
UL1 (IK-12) - Body ground	G - Body ground	Driver door control switch UNLOCK input	Driver door control switch OFF → UNLOCK	10 kΩ or higher → Below 1 Ω
LGCY (E6-25) - Body ground	W - Body ground	Luggage compartment door courtesy switch input	Luggage compartment door CLOSED → OPEN	10 kΩ or higher → Below 1 Ω
TCAN (E8-2) - Body ground	O - Body ground	Luggage compartment door key-linked door unlock input	Using mechanical key, operate luggage compartment door lock cylinder to CENTER → CANCEL	10 kΩ or higher → Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the J/B and ECU connectors.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
IG (IF-11) - Body ground	B - Body ground	Engine power supply	Power switch on (IG) → off	10 to 14 V → Below 1 V
ACC (IF-2) - Body ground	L - Body ground	ACC power supply	Power switch on (ACC) → off	10 to 14 V → Below 1 V
LSWL (IP-5) - Body ground	GR - Body ground	Rear left door lock position switch input	Rear left door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
LSWD (E7-9) - Body ground	L - Body ground	Driver door lock position switch input	Driver door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
UL3 (E7-10) - Body ground	GR - Body ground	Driver door key-linked door unlock input	Using mechanical key, operate driver door lock cylinder to LOCK → UNLOCK	10 to 14 V (or pulse generation) → Below 1 V
L2 (IK-16) - Body ground	BR - Body ground	Driver door key-linked door lock input	Using mechanical key, operate driver door lock cylinder to UNLOCK → LOCK	10 to 14 V (or pulse generation) → Below 1 V

DL

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
ACT+ (IJ-1) - Body ground	L - Body ground	Door lock motor LOCK drive output (Front passenger door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT+ (IP-11) - Body ground	W - Body ground	Door lock motor LOCK drive output (Rear door LH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT+ (IF-5) - Body ground	L - Body ground	Door lock motor LOCK drive output (Rear door RH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT- (IP-6) - Body ground	G - Body ground	Door lock motor UNLOCK drive output (Rear door LH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT- (IF-18) - Body ground	B - Body ground	Door lock motor UNLOCK drive output (Rear door RH)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
TR+ (E7-1) - Body ground	B - Body ground	Door lock motor UNLOCK drive output (Luggage compartment door)	Luggage compartment open switch (Transmitter) or luggage compartment door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACTD (E7-5) - Body ground	GR - Body ground	Door lock motor UNLOCK drive output (Driver door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT+ (IK-2) - Body ground	W - Body ground	Door lock motor LOCK drive output (Driver door)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → LOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
ACT- (IJ-2) - Body ground	LG - Body ground	Door lock motor UNLOCK drive output (Front passenger)	Door control switch (Master switch or passenger side switch) or driver side door key cylinder OFF → UNLOCK → OFF	Below 1 V → 10 to 14 V → Below 1 V
LSWR (E6-5) - Body ground	V - Body ground	Rear right door lock position switch input	Rear right door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)
LSWP (E6-27) - Body ground	LG - Body ground	Passenger door lock position switch input	Passenger door UNLOCK → LOCK	Below 1 V → 10 to 14 V (or pulse generation)

If the result is not as specified, the main body ECU (instrument panel J/B) may have a malfunction.

DIAGNOSIS SYSTEM

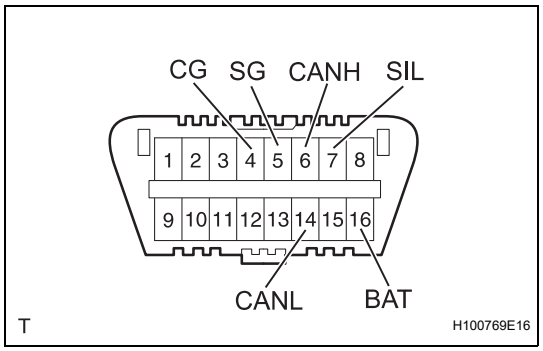
1. DESCRIPTION

(a) Power door lock control system data and Diagnostic Trouble Codes (DTCs) can be read through the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

HINT:

The vehicle uses the ISO 15765-4 communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power Switch OFF*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power Switch OFF*	200 Ω or more
CANL (14) - CG (4)	LOW-level CAN bus line	Power Switch OFF*	200 Ω or more
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power Switch OFF*	6 kΩ or more
CANL (14) - BAT (16)	LOW-level CAN bus line	Power Switch OFF*	6 kΩ or more

NOTICE:

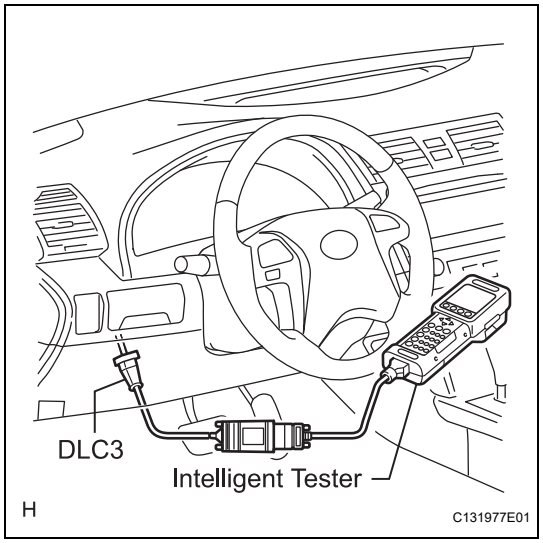
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator, and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / DATA LIST.
(d) Read the DATA LIST according to the display on the tester.

MAIN BODY:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy light switch signal/ON or OFF	ON: Driver side door is OPEN OFF: Driver side door is CLOSED	-
P DOR CTY SW	Passenger side door courtesy light switch signal/ON or OFF	ON: Passenger side door is OPEN OFF: Passenger side door is CLOSED	-
RR DOR CTY SW	Rear right door courtesy light switch signal/ON or OFF	ON: Rear right door is OPEN OFF: Rear right door is CLOSED	-
RL DOR CTY SW	Rear left door courtesy light switch signal/ON or OFF	ON: Rear left door is OPEN OFF: Rear left door is CLOSED	-
D LOCK POS SW	Driver side door lock position switch signal/ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
P LOCK POS SW	Front passenger side door lock position switch signal/ON or OFF	ON: Front passenger side door is unlocked OFF: Front passenger side door is locked	-
RR LOCK POS SW	Rear right door lock position switch signal/ON or OFF	ON: Rear right door is unlocked OFF: Rear right door is locked	-
RL LOCK POS SW	Rear left door lock position switch signal/ON or OFF	ON: Rear left door is unlocked OFF: Rear left door is locked	-
LUGG COURTSY SW	Luggage compartment door courtesy light switch signal/ON or OFF	ON: Luggage compartment door is OPEN OFF: Luggage compartment door is CLOSED	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TRUNK KEY UNLK	Luggage compartment door key cylinder switch/ON or OFF	ON: Mechanical key is inserted and turned to CANCEL position OFF: Mechanical key is inserted and turned to except CANCEL position	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relays, VSVs, actuators, and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / ACTIVE TEST.
(d) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY:

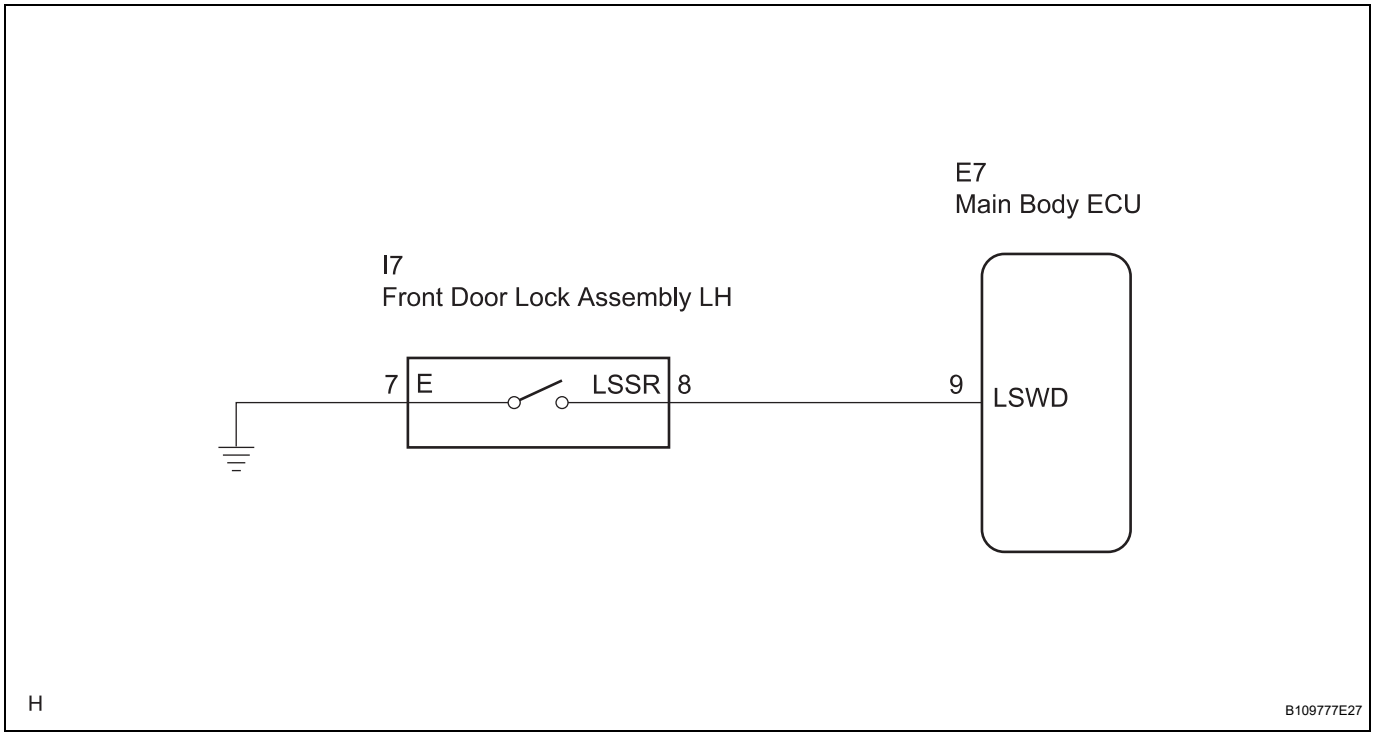
Tester Display	Test Part	Control Range	Diagnostic Note
DOOR LOCK	Operate door lock motor	LOCK/UNLOCK	-
D DOOR UNLOCK	Operate driver door lock motor	UNLOCK	-
TRUNK/BDOR OPEN	Operate luggage compartment door unlock motor	UNLOCK	-

Driver Side Door UNLOCK Detection Switch Circuit

DESCRIPTION

The driver's door unlock detection switch is built into the driver's door lock assembly. The switch turns on when the driver's door is locked and turns off when the door is unlocked.
The main body ECU is connected to the driver's door lock assembly via terminal LSWD and driver's door lock/unlock state signals are input to the main body ECU.
The main body ECU applies voltage to the door unlock detection switch via terminal LSWD. When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the main body ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (DOOR UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D LOCK POS SW	Driver side door unlock detection switch signal /ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-

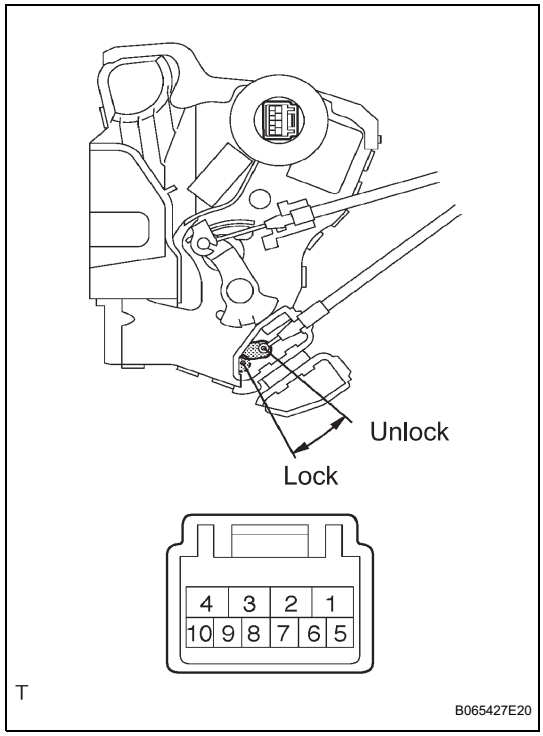
OK:
The display is as specified in the normal condition column.

NG	Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR UNLOCK DETECTION SWITCH)



(a) Remove the front door lock assembly LH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Measurement Condition	Door Lock Condition	Specified Condition
7 - 8	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock	10 kΩ or higher
7 - 8	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock	Below 1 Ω

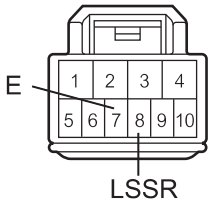
NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

OK

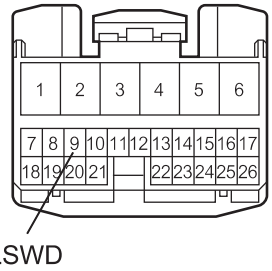
3	CHECK WIRE HARNESS (FRONT DOOR LOCK ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

I7
Front Door Lock Assembly LH



E7
Main Body ECU



H

B112606E01

(a) Disconnect the front door lock assembly LH connector.
(b) Disconnect the main body ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
I7-8 (LSSR) - E7-9 (LSWD)	Always	Below 1 Ω
I7-8 (LSSR) - Body ground	Always	10 kΩ or higher
I7-7 (E) - Body ground	Always	Below 1 Ω

DL

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

Front Passenger Side Door UNLOCK Detection Switch Circuit

DESCRIPTION

The front passenger door unlock detection switch is built into the front passenger door lock assembly. The switch turns on when the front passenger door is locked and turns off when the door is unlocked.
The main body ECU is connected to the front passenger door lock assembly via terminal LSWP and front passenger door lock/unlock state signals are input to the ECU.
The main body ECU applies voltage to the door unlock detection switch via terminal LSWP. When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM

INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (DOOR UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
P LOCK POS SW	Passenger side door lock position switch signal /ON or OFF	ON: Passenger side door lock is in UNLOCK position OFF: Passenger side door lock is in LOCK position	-

OK:

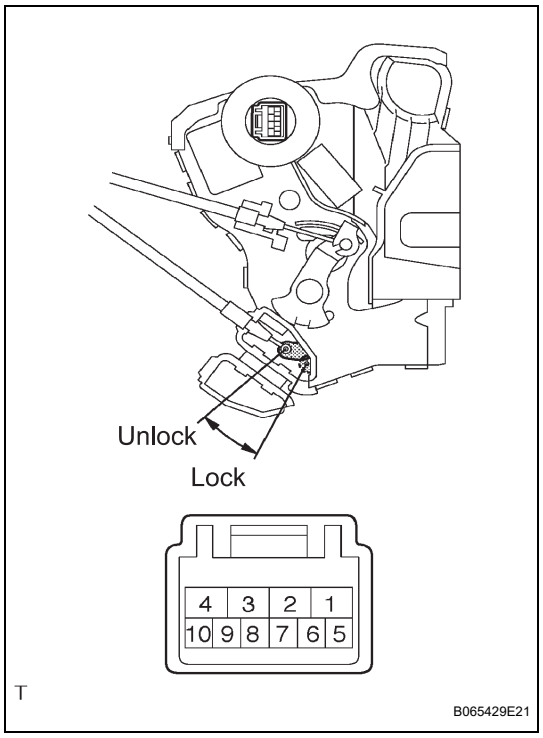
The display is as specified in the normal condition column.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR UNLOCK DETECTION SWITCH)



(a) Remove the front door lock assembly RH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Measurement Condition	Door Lock Condition	Specified Condition
7 - 8	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	LOCK	10 kΩ or higher
7 - 8	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	UNLOCK	Below 1 Ω

NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

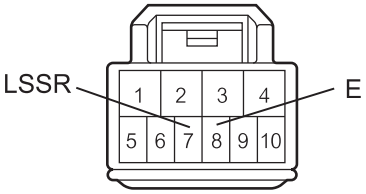
OK

DL

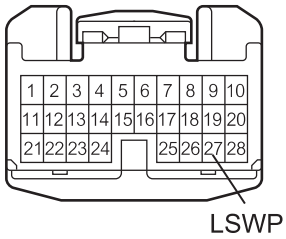
3	CHECK WIRE HARNESS (FRONT DOOR LOCK ASSEMBLY - MAIN BODY ECU)

Wire Harness Side:

H8
Front Door Lock Assembly RH



E6
Main Body ECU



H

B111708E17

(a) Disconnect the front door lock assembly RH connector.
(b) Disconnect the ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
H8-7 (LSSR) - E6-27 (LSWP)	Always	Below 1 Ω
H8-7 (LSSR) - Body ground	Always	10 kΩ or higher
H8-8 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

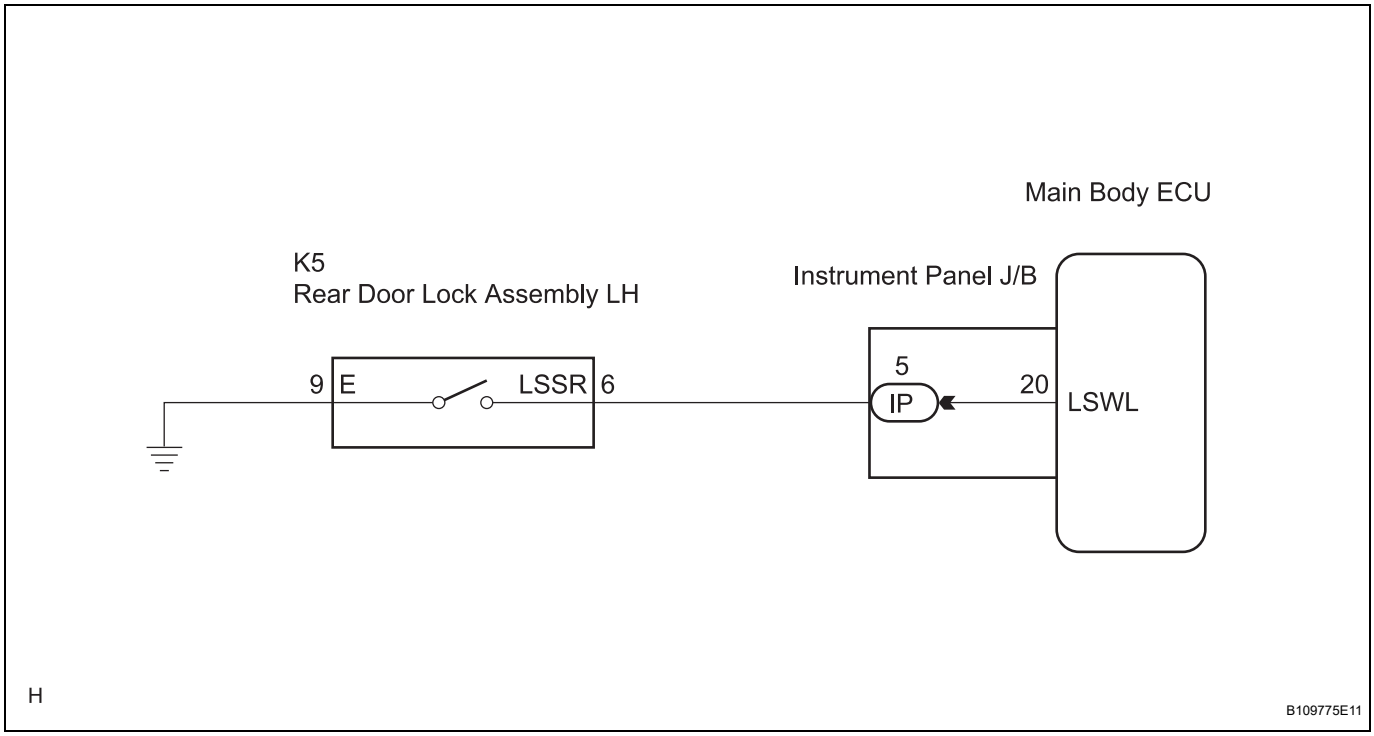
REPLACE MAIN BODY ECU

Rear Door UNLOCK Detection Switch LH Circuit

DESCRIPTION

The rear left door unlock detection switch is built into the rear left door lock assembly. The switch turns on when the rear left door is locked and turns off when the door is unlocked.
The main body ECU is connected to the rear left door lock assembly via terminal LSWL and rear left side door lock/unlock state signals are input to the ECU.
The main body ECU applies voltage to the door unlock detection switch via terminal LSWL. When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
RL LOCK POS SW	Rear left door lock position switch signal / ON or OFF	ON: Rear left door lock is in UNLOCK position OFF: Rear left door lock is in LOCK position	-

OK:

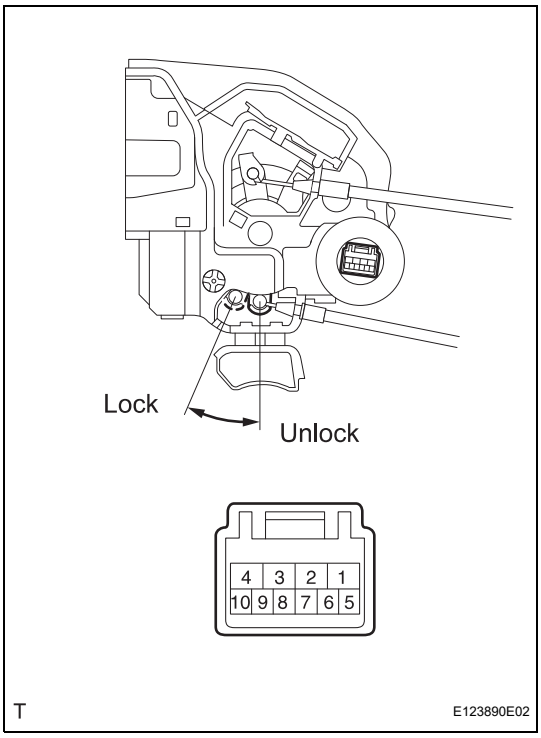
The display is as specified in the normal condition column.

NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT REAR DOOR LOCK ASSEMBLY (UNLOCK DETECTION SWITCH)



(a) Remove the rear door lock assembly LH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Measurement Condition	Door Lock Condition	Specified Condition
6 - 9	Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock	10 kΩ or higher
6 - 9	Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock	Below 1 Ω

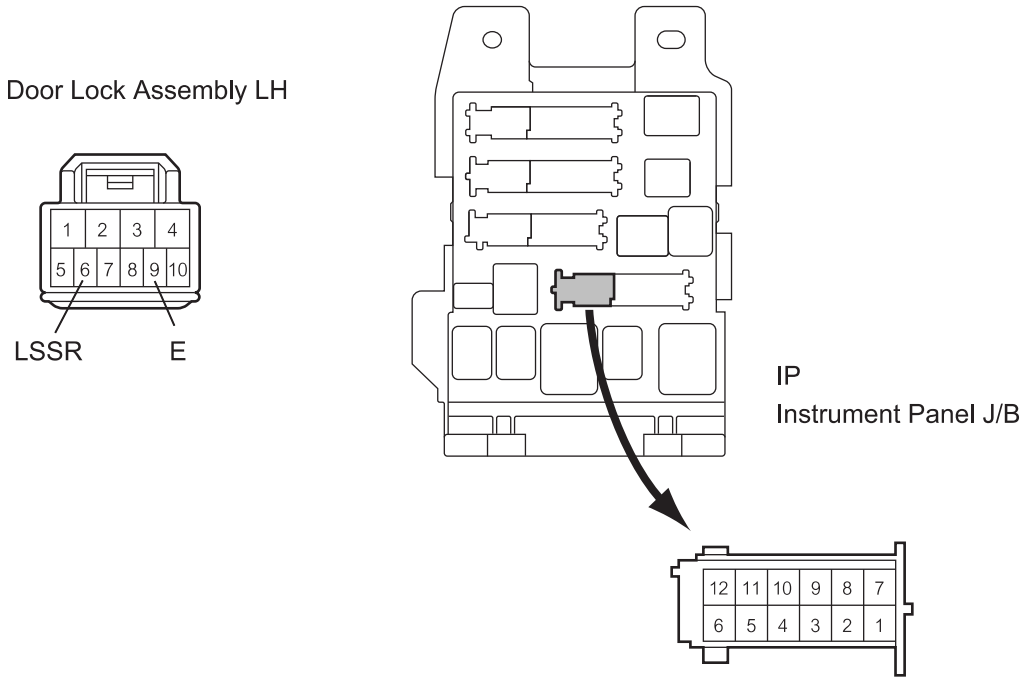
NG → REPLACE REAR DOOR LOCK ASSEMBLY

OK

3 CHECK WIRE HARNESS (REAR DOOR LOCK ASSEMBLY - MAIN BODY ECU)

(a) Disconnect the rear door lock assembly LH connector.

Wire Harness Side:



(b) Disconnect the ECU (instrument panel J/B) connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
K5-6 (LSSR) - IP-5	Always	Below 1 Ω
K5-6 (LSSR) - Body ground	Always	10 kΩ or higher
K5-9 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

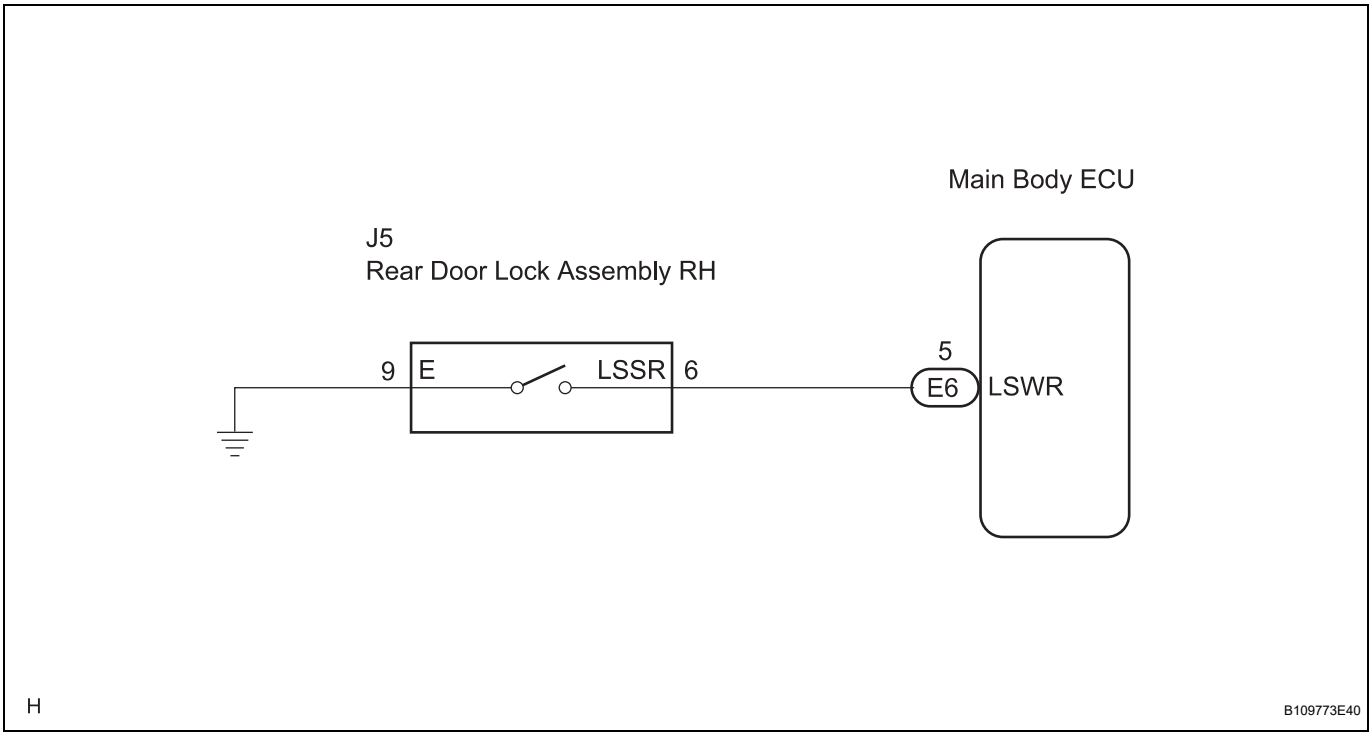
REPLACE MAIN BODY ECU (INSTRUMENT PANEL J/B)

Rear Door UNLOCK Detection Switch RH Circuit

DESCRIPTION

The rear right door unlock detection switch is built into the rear right door lock assembly. The switch turns on when the rear right door is locked and turns off when the door is unlocked.
The main body ECU is connected to the rear right door lock assembly via terminal LSWR and rear right side door lock/unlock state signals are input to the ECU.
The main body ECU applies voltage to the door unlock detection switch via terminal LSWR. When the door unlock detection switch is on (there is continuity between the switch terminals), a lock state signal is input to the ECU. When the switch is off (there is no continuity between the switch terminals), an unlock state signal is input.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (UNLOCK DETECTION SWITCH)

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

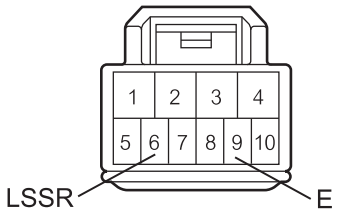
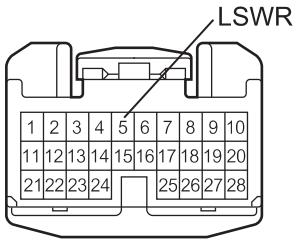
J5
Rear Door Lock Assembly RH



E6
Main Body ECU



H

B111708E16

(a) Disconnect the rear door lock assembly RH connector.
(b) Disconnect the ECU (instrument panel J/B) connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
J5-6 (LSSR) - E6-5 (LSWR)	Always	Below 1 Ω
J5-6 (LSSR) - Body ground	Always	10 kΩ or higher
J5-9 (E) - Body ground	Always	Below 1 Ω

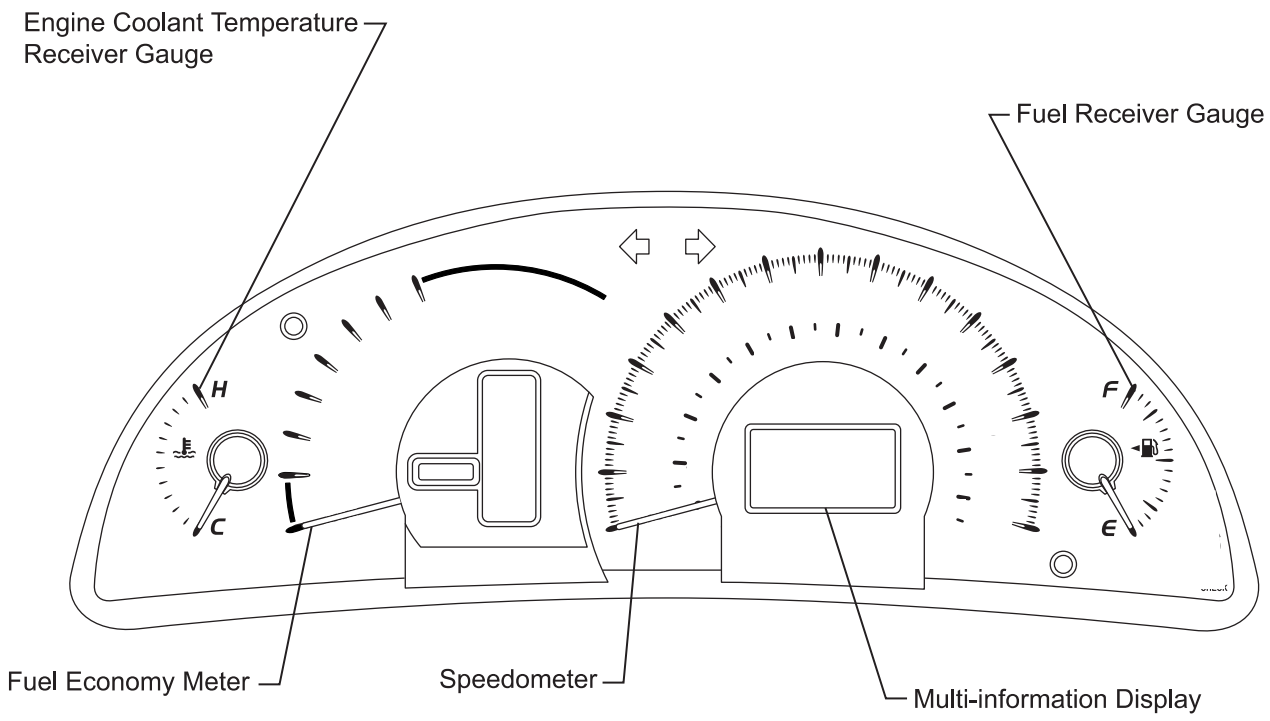
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU (INSTRUMENT PANEL J/B)

SYSTEM DESCRIPTION

1. METER GAUGE



H

E123357E02

METER GAUGE:

Item	Detail
Speedometer	Indicates the vehicle speed receiving a signal from the skid control ECU. (CAN (CAN No. 1 Bus))
Fuel Economy Meter	Indicates the fuel consumption based on a signal received from the skid control ECU and hybrid vehicle control ECU. (CAN (CAN No. 1 Bus))
Engine Coolant Temperature Receiver Gauge	Indicates the engine coolant temperature based on a signal received from the hybrid vehicle control ECU. (CAN (CAN No. 1 Bus))
Fuel Receiver Gauge	Indicates the fuel level based on a signal received from the fuel sender gauge. (Direct Line)

WARNING/INDICATOR:

Item	Detail
TURN SIGNAL	Receives a turn signal from the turn signal flasher. (Direct Line)
BEAM	Receives a beam signal from the main body ECU. (CAN (CAN No. 1 Bus))
CHARGE	Receives a charge light signal from the hybrid vehicle control ECU. (CAN (Can No. 1 Bus))
CHECK E/G	Receives a check engine light signal from the hybrid vehicle control ECU. (Direct Line)
READY	Receives a ready warning light signal from hybrid vehicle control ECU. (CAN (CAN No. 1 Bus))
DOOR	The open door indicator light comes on receiving a door condition signal from the main body ECU. (CAN (CAN MS Bus))
D-BELT	Receives a driver side seat belt signal from the center airbag sensor assembly. (CAN (CAN No. 1 Bus))
P-BELT	Receives a passenger side seat belt signal from the center airbag sensor assembly via the main body ECU (CAN (CAN No. 1 Bus)) and transmits a passenger side seat belt condition signal to the clock assembly. (Direct Line)
HEAD (*1)	Receives a HEAD indicator light signal from the main body ECU. (CAN (CAN No. 1 Bus))
TAIL (*2)	Receives a TAIL indicator light signal from the main body ECU. (CAN (CAN No. 1 Bus))

Item	Detail
A/T SHIFT	Receives an A/T shift condition signal from the park/neutral position switch and the hybrid vehicle control ECU. (CAN (CAN No. 1 Bus))
FUEL	Receives a fuel signal from the fuel sender gauge. (Direct Line)
ABS	Receives an ABS signal from the skid control ECU. (CAN (CAN No. 1 Bus))
SLIP	Receives a SLIP signal from the skid control ECU. (CAN (CAN No. 1 Bus))
BRAKE	Receives a brake signal from skid control ECU. (CAN (CAN No. 1 Bus))
ECB	Receives an electrically controlled brake warning light signal from the skid control ECU. (CAN (CAN No. 1 Bus))
CRUISE	Receives a cruise signal from the hybrid vehicle control ECU. (CAN (CAN No. 1 Bus))
AIRBAG	Receives an airbag signal from the center airbag sensor assembly. (CAN (CAN No. 1 Bus))
Tire pressure (*3)	Receives a tire pressure signal from the tire pressure warning ECU. (Direct Line)
Oil replacement reminder (*1)	The oil replacement reminder light comes on/blinks to remind the driver to change the engine oil depending on the vehicle driving distance.
Master caution indicator light	The master caution indicator light comes on to indicate that an oil maintenance resetting procedure has finished.
P/S	Receives a electronic power steering warning light signal from the electronic power steering ECU. (CAN (CAN No. 1 Bus))

ME

HINT:

- The multi-information display has been located in the center of the speedometer.
- The display shows a message or animation for each of the functions described in the table below.

MULTI-INFORMATION DISPLAY:

Item		Detail
Cruise Information	• Outside Temperature • Driving Range • Average Fuel Consumption since refueling • Distance driven since engine start • Average speed since engine start	Five types of information (outside temperature, driving range, average fuel consumption after refueling, distance driven since engine start and average speed) can be displayed.
Warning	• Door Warning • Oil Replacement Reminder (*1)	Interrupts the multi-information display immediately when a warning occurs.
Energy Monitor Display (Average Fuel Consumption Since Starting)		• Indicates the energy transmission direction for checking the current drive method (engine, motor or both), the power generation status of the engine and the status of regenerative energy use. • The SOC (state of charge) of the battery can be checked on the meter using an 9-stage display, which is provided in the battery illustration. • The data is updated every 0.3 second.
Eco Drive Level Display		• The actual fuel consumption conditions are indicated in 4 levels. • The display can be changed by using the DISP switch.
Warning		Interrupts the multi-information display immediately when a warning occurs.
Diagnosis		DTC (Diagnostic Trouble Code) for the VDIM system can be displayed.

3. DIAGNOSIS SYSTEM

C

E134540

HINT:

- Diagnosis information can be displayed on the multi-information display after connecting a jumper wire between terminals TC and CG of the DLC3 connector.

- The multi-information display shows "DIAG VSC" before the meter CPU receives a diagnosis information signal from the skid control ECU.
- The multi-information display shows "DIAG VSC 23" when the meter CPU receives a diagnosis information signal from the skid control ECU.

4. MAINTENANCE MODE

HINT:

For more information about maintenance mode, go to the hybrid system (See page ES-35).

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS

NEXT

3	CHECK CAN COMMUNICATION SYSTEM

(a) Check for DTC output.
HINT:
See page CA-22.

→	CAN DTC OUTPUT (PROCEED TO "CAN COMMUNICATION SYSTEM")
→	NO CAN DTC (GO TO STEP 4)

CUSTOMIZE PARAMETERS

1. COMBINATION METER ASSEMBLY

NOTICE:

Be sure to record the current value before customizing.

HINT:

The following items can be customized using the intelligent tester.

METER:

Tester Display	Default	Contents	Setting
SEAT-BELT WARN	D/P ON	Function to change the setting of the seat belt buzzer	D/P ON, D ON, P ON, D/P OFF

HINT:

This setting is only valid for the buzzer which sounds at 5 km/h (3 mph) or more.

INITIALIZATION

1. OIL MAINTENANCE INFORMATION MODE RESET OPERATION

HINT:

- The trip meter reset knob is located on the right side of the combination meter assembly.
- This reset operation is required only for U.S.A..

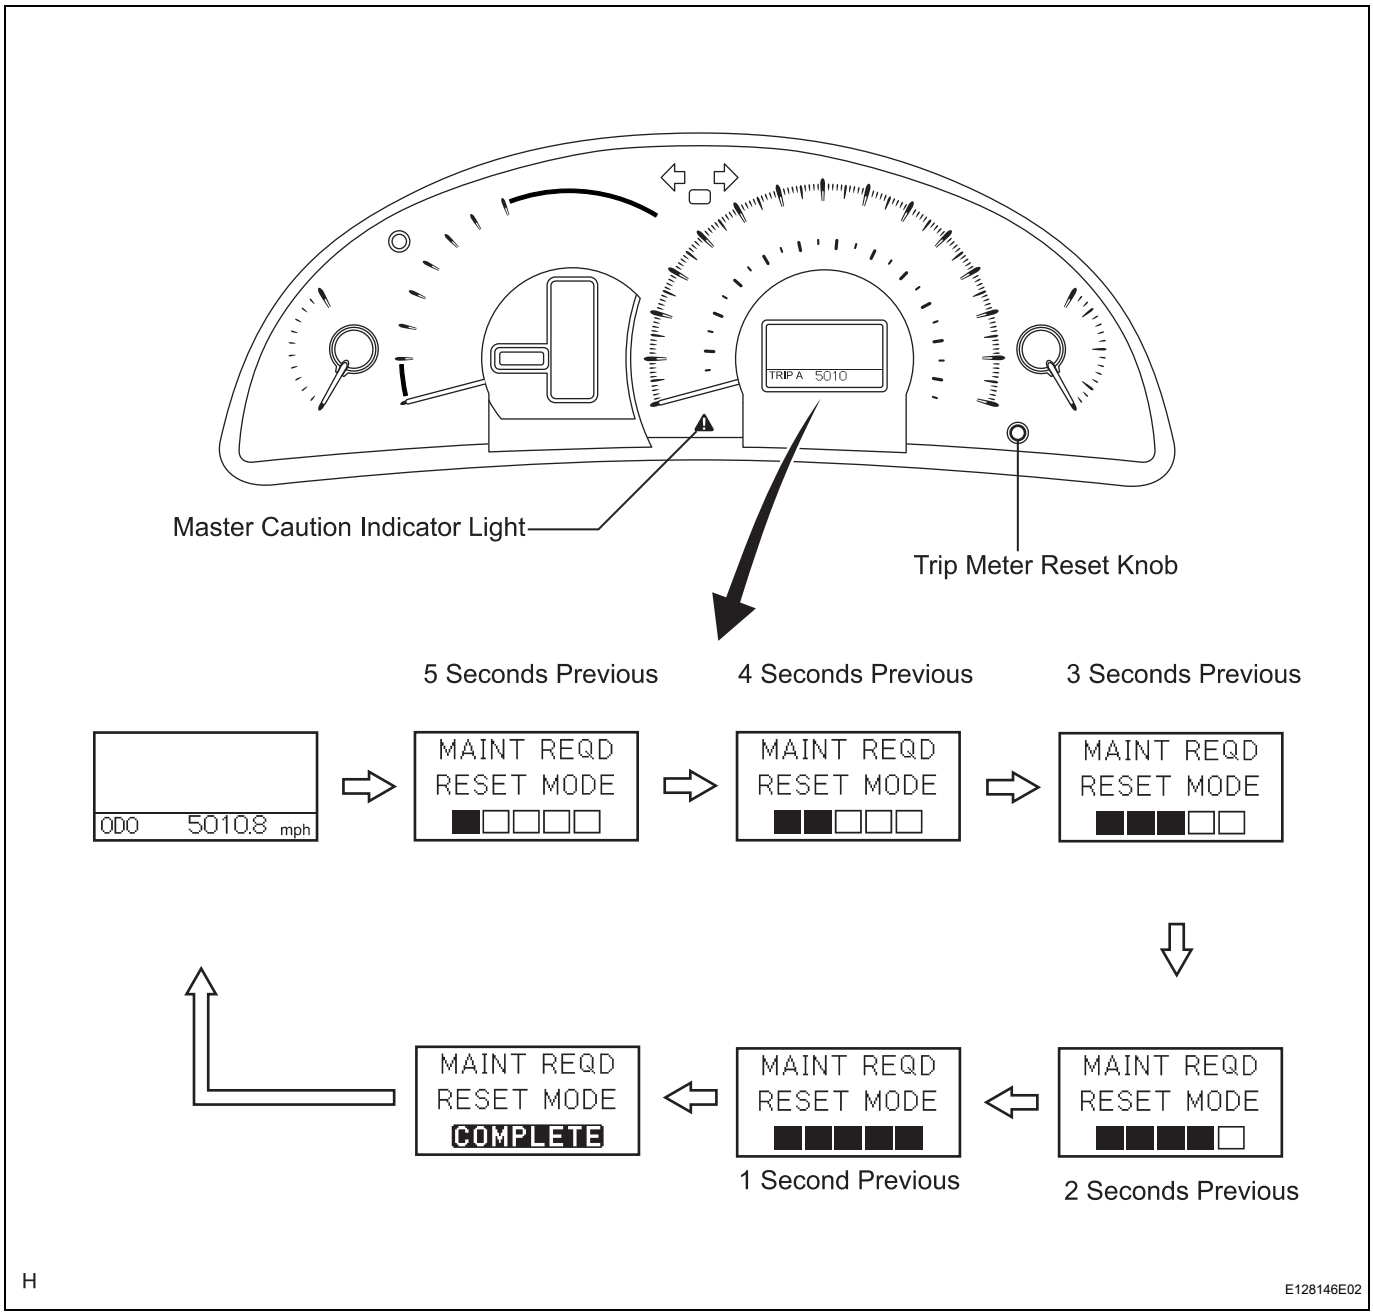
(a) Turn the power switch on (IG).

(b) Press the ODO/TRIP switch until the trip meter A appears.

(c) Turn the power switch off.

(d) Turn the power switch on (IG) while pressing and holding the trip meter reset knob. Hold the trip meter reset knob until the following conditions are met and 5 seconds have passed.

ME



H

E128146E02

- The multi-information display shows "MAINT REQD RESET MODE".
- The master caution indicator light illuminates.
- When the oil replacement reminder light turns off, the reset is complete.

(e) When "MAINT REQD RESET MODE COMPLETE" disappears and the master caution indicator light turns off, the reset is complete.

PROBLEM SYMPTOMS TABLE

MALFUNCTION SYSTEM:

Symptom	Suspected Area	See page
Entire combination meter does not operate.	Power Source Circuit	ME-40

DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU the ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 67 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

NOTICE:

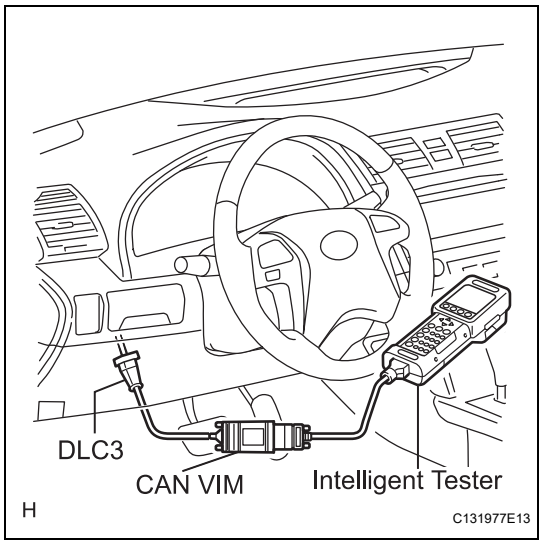
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the ignition switch, any other switches or doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

If the display shows an error message after having connected the cable of the intelligent tester to the DLC3, turned the power switch on (IG), and operated the tester, there is a problem on either the vehicle side or the tool side.

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Enter the following menus: DIAGNOSTICS / OBD/ MOBD / METER / DTC INFO / CURRENT CODES.
(d) Check for DTCs.

2. CLEAR DTC

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Enter the following menus: DIAGNOSTICS / OBD/ MOBD / METER / DTC INFO / CURRENT CODES.
(d) Erase DTCs by pressing the YES button on the tester.

FAIL-SAFE CHART

ENGINE COOLANT TEMPERATURE GAUGE:

Condition	Response	Recovery
Engine coolant temperature data is interrupted for 3 seconds.	The gauge needle indicates between / and C	Engine coolant temperature data is received.

SHIFT INDICATOR:

Condition	Response	Recovery
Shift position data is interrupted for 3 seconds.	All indicator lights go off.	Normal data is received.

ABS & BRAKE:

Condition	Response	Recovery
ABS & brake data is interrupted for 1 second.	The warning light comes on.	Normal data is received.

DOOR:

Condition	Response	Recovery
Each door condition data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

DRIVER SIDE SEAT BELT:

Condition	Response	Recovery
Driver side front seat inner belt assembly data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

TIRE PRESSURE (*1):

Condition	Response	Recovery
Tire pressure data is interrupted for 10 seconds.	The tire pressure indicator light blinks for 60 to 64 seconds, then comes on.	Normal data is received.

HEAD (*2)/TAIL (*3):

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

BEAM:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

AIRBAG:

Condition	Response	Recovery
Airbag data is interrupted for 10 seconds. Turn the power switch on (IG), then the combination meter (meter CPU) cannot detect the voltage of 9 V or more for 60 seconds.	The warning light comes on.	Normal data is received.

FRONT PASSENGER SIDE SEAT BELT:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

CRUISE:

Condition	Response	Recovery
Regular data is interrupted for 10 seconds.	The data received most recently remains indicated.	Normal data is received.

CHARGE:

Condition	Response	Recovery
Regular data is interrupted for 3 seconds.	The data received most recently remains indicated.	Normal data is received.

MULTI-INFORMATION DISPLAY:

Condition	Response	Recovery
Cruise information data is interrupted.	The display becomes blank (only measurement units are displayed).	Normal data is received.
Energy monitor data is interrupted for 3 seconds.	The energy transmission direction is not indicated.	Normal data is received.

DATA LIST / ACTIVE TEST

1. DATA LIST

According to the DATA LIST displayed by the intelligent tester, you can read the values of the switches, sensors, actuators and so on without parts removal. Reading the DATA LIST as the first step of troubleshooting is one method to shorten work time.

(a) Warm up the engine.
(b) Turn the power switch off.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the power switch on (IG).
(e) Turn the tester on.
(f) Enter following menus: DIAGNOSIS / OBD/MOBD / METER / DATA LIST.
(g) Check values by referring to the table below.

METER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TAIL CANCEL SW	TAIL CANCEL switch is ON/OFF	ON: Rheostat knob is turned fully clockwise	-
		OFF: Rheostat knob is turned fully counterclockwise	-
ODO/TRIP SW	ODO/TRIP switch is ON/OFF	ON: Switch is pushed	-
		OFF: Switch is released	-
P-BELT BUCKL SW	Front passenger buckle switch is ON/OFF	ON: Seat belt is fastened	-
		OFF: Seat belt is unfastened	-
SPEED METER	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost same as actual vehicle speed (When driving)	-
COOLANT TEMP	Engine coolant temperature/Min.: 0°C (32°F), Max.: 127.5°C (261.5°F)	After warming up: 60 to 105°C (140 to 221°F)	-
WASHER SW	Washer level switch is ON/OFF	ON: Washer level is more than low	-
		OFF: Washer level is less than low	-
MULTI DISP SW	MODE switch in the steering pad is ON/OFF	ON: Mode switch is ON	-
		OFF: Mode switch is OFF	-
+B VOLTAGE VAL	Battery voltage/Min.: 0 V, Max.: 25.5 V	10 to 14 V	-
FUEL GAUGE	Fuel input signal/Min.: 0, Max. 127.5 (L)	Fuel gauge indicates (F): 62.9 (L)	-
		Fuel gauge indicates (1/2): 35 (L)	-
		Fuel gauge indicates (E): 7 (L)	-
AMBIENT TEMP	Outside temperature/Min.: -40°C (-40°F), Max.: 87.5°C (189.5°F)	Current temperature is displayed	-
RHEOSTAT	Light Control Rheostat/Min.: 0, Max.: 100	Light control rheostat switch is Dark (0) → Bright (100)	-
OUTSIDE LIGHT	Light Control Rheostat/Min.: 0, Max.: 255	Light control rheostat switch is Dark (0) → Bright (100)	-
SEAT-BELT WARN	The volume of the seat belt warning buzzer is D/P ON, D ON, P ON, D/P OFF	The customized setting of the volume of the seat belt warning buzzer is displayed.	-
ECM/PCM DTC 1 to 3	The communication error history REC/UNREC	UNREC: No error has occurred	-
		REC: Error has occurred	-
ECM/PCM ODO 1 to 3	Value when DTC is output/Min.: 0, Max.: 999999	-	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ABS/VSC DTC 1 to 3	Value when DTC is output/Min.: 0, Max.: 999999	UNREC: No error has occurred	-
		REC: Error has occurred	-
ABS/VSC ODO 1 to 3	Value when DTC is output/Min.: 0, Max.:999999	-	-

ABS/VSC/TRAC:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR/FL/RR/RL WHEEL SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual vehicle speed (When driving)	-
VEHICLE SPD	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 326 km/h (202 mph)	Almost same as actual vehicle speed (When driving)	-

HYBRID VEHICLE CONTROL ECU:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ENGINE SPD	Vehicle speed/Min.: 0 rpm, Max.: 16,383.75 rpm	Almost same as actual vehicle speed (When driving)	-
HV COOLANT TEMP	Coolant temperature/Min.: -40°C (-40°F), Max.: 140°C (284°F)	After warming up: 80 to 100°C (176 to 212°F)	• If -40°C (-40°F): sensor circuit open • If 140°C (284°F) or more: sensor circuit shorted

ME

2. ACTIVE TEST

Performing the ACTIVE TEST using the intelligent tester allows the meters, indicators and so on to operate without parts removal. Performing the ACTIVE TEST as the first step of troubleshooting is one way to shorten labor time.

It is possible to display the DATA LIST on the intelligent tester during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Enter following menus: DIAGNOSIS / OBD/MOBD / METER / ACTIVE TEST.
(e) From the display on the tester, perform the "ACTIVE TEST".

METER:

Tester Display	Test Part	Control Range	Diagnostic Note
SPEED METER	Speedometer	0, 40, 80, 120, 160 mph	-
		0, 40, 80, 120, 160, 200, 240 km/h	-
FUEL GAUGE	Fuel receiver gauge	EMPTY, 1/2, FULL	-
COOLANT TEMP	Engine coolant temperature receiver gauge	LOW, NORMAL, HIGH	-
FC METER	Fuel economy meter	MIN, 1/4, 1/2, 3/4, MAX	-
A/T INDEC (1)	A/T shift indicator light	A/T shift indicator light P, R, N, D, 4, 3, 2, L OFF/ON	-
A/T INDEC (2)	A/T gear range indicator light	A/T gear range indicator light B OFF/ON	-
METER DISPLAY1	Multi-information display	All the dots in the multi-information display (OFF/ON)	Confirm that the vehicle is stopped, engine idling
METER DISPLAY2	Multi-information display	The segments in the combination meter assembly (OFF/ON)	Confirm that the vehicle is stopped, engine idling
SRS WARN	Airbag warning light	AIRBAG indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling
DOORS ALL OPEN	Door open warning light	All the DOOR OPEN indicator OFF/ON	Confirm that the vehicle is stopped, engine idling

Tester Display	Test Part	Control Range	Diagnostic Note
P-BELT REMIND	Front passenger seat belt warning light	P-SEAT BELT indicator OFF/ON	Confirm that the vehicle is stopped, engine idling
D-BELT REMIND	Driver seat belt warning light	D-SEAT BELT indicator OFF/ON	Confirm that the vehicle is stopped, engine idling
ABS WARN	ABS warning light	ABS warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
DISCHARGE WARN	Charge warning light	Charge warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
VSC WARN	VSC warning display	VSC warning display OFF/ON	Confirm that the vehicle is stopped, engine idling
SLIP INDIC	Slip indicator light	Slip indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling
HIGH BEAM INDIC	Beam indicator light	Beam indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling
HEADLIGHT INDIC (*1)	Head indicator light	Head indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling
TAILLIGHT INDIC (*2)	Tail indicator light	Tail indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling
D DOOR OPEN	Door open warning light	Door open warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
P DOOR OPEN	Door open warning light	Door open warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
RR DOOR OPEN	Door open warning light	Door open warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
RL DOOR OPEN	Door open warning light	Door open warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
LUGG DOOR OPEN	Door open warning light	Door open warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
LOW WASHER WARN	Low washer warning display	Low washer warning display OFF/ON	Confirm that the vehicle is stopped, engine idling
LOW FUEL WARN	Fuel warning light	Fuel warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
TIRE PRESS WARN (*3)	Tire pressure warning light	Tire pressure warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
ECB INDIC	Electrically controlled brake indicator light	Electrically controlled brake indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling
CRUISE INDIC	Cruise indicator light	Cruise indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling
BRAKE WARN	Brake warning light	Brake warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
EPS INDIC	EPS warning light	EPS warning light OFF/ON	Confirm that the vehicle is stopped, engine idling
OIL MAINTENANCE (*1)	Oil replacement reminder light	Oil replacement reminder light OFF/ON	Confirm that the vehicle is stopped, engine idling
MST WARN INDIC	Master caution indicator light	Master caution indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling
READY(HV)	Ready indicator light	Ready indicator light OFF/ON	Confirm that the vehicle is stopped, engine idling

ME

DIAGNOSTIC TROUBLE CODE CHART

METER / GAUGE SYSTEM:

DTC Code	Detection Item	Trouble Area	See page
U0100	Lost Communication with ECM/ PCM "A"	1. Hybrid vehicle control ECU 2. CAN communication system	ME-36
U0129	Lost Communication with Skid Control ECU	1. Skid control ECU 2. CAN communication system	ME-38

ON-VEHICLE INSPECTION

1. INSPECT SPEEDOMETER

(a) Check the operation.

(1) Using a speedometer tester (calibrated chassis dynamometer), check the speedometer indication according to the table below.

Reference: mph (for U.S.A.)

Chassis dynamometer indication	Acceptable range
20 mph	20.0 to 23.0 mph
40 mph	40.0 to 43.5 mph
60 mph	60.0 to 64.0 mph
80 mph	80.0 to 84.5 mph
100 mph	100.0 to 105.0 mph
120 mph	120.0 to 125.5 mph

Reference: km/h (for Canada)

Chassis dynamometer indication	Acceptable range Data in ( ) is for reference
20 km/h	(17.5 to 21.5 km/h)
40 km/h	38.0 to 42.0 km/h
60 km/h	58.0 to 63.0 km/h
80 km/h	78.0 to 84.0 km/h
100 km/h	98.5 to 104.5 km/h
120 km/h	119.0 to 125.0 km/h
140 km/h	139.0 to 146.0 km/h
160 km/h	159.0 to 167.0 km/h
180 km/h	179.0 to 188.0 km/h
200 km/h	199.0 to 209.0 km/h
220 km/h	219.0 to 230.0 km/h

NOTICE:
Tire wear as well as over or under inflation will cause errors.

(2) Check the deviation from the acceptable range of the speedometer indication.

Reference:
Less than 0.5 km/h (0.3 mph)

HINT:
If the indication is not as specified, go to the problem symptoms table (See page ME-17).

2. INSPECT FUEL ECONOMY METER

(a) Connect a tune-up tachometer, and start the engine.

(b) Compare the test results with the fuel economy meter indications.

Reference: mpg (for U.S.A.)

Input value	Acceptable range
MAX	0
3/4	15
1/2	30
1/4	45
MIN	60

HINT:
If the input value is 60 mpg or more, the needle indicates 60.

Reference: L/100 km (for Canada)

Input value	Acceptable range
MAX	30
3/4	22.5
1/2	15
1/4	7.5
MIN	0

HINT:
If the input value is 2.5 L/100 km or less, the needle indicates 2.5 L/100 km.
If the input value is 30 L/100 km or more, the needle indicates 30 L/100 km.
HINT:
If the indication is not as specified, go to the problem symptoms table (See page ME-17).

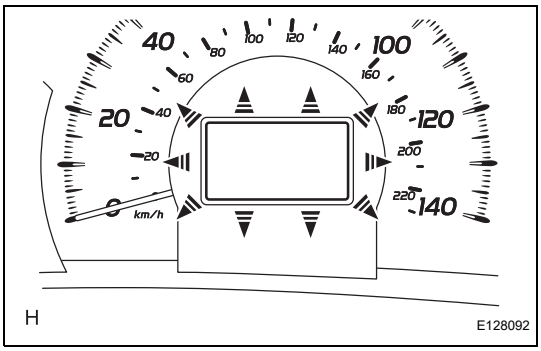
ME

3. INSPECT ENGINE OIL PRESSURE SWITCH

(a) Disconnect the connector from the engine oil pressure switch.
(b) Turn the power switch on (IG).
(c) Wait for 10 seconds or more.
(d) Ground the terminal of the wire harness side connector, then check the multi-information display.
OK:
Oil pressure warning message appears.
HINT:
If the warning message is not displayed, go to the problem symptoms table (See page ME-17).

4. INSPECT WASHER LEVEL WARNING DISPLAY

(a) Disconnect the connector from the washer level switch.
(b) Turn the power switch on (IG).
(c) Ground the terminal of the wire harness side connector.
(d) Wait for 10 seconds or more, then check the multi-information display.
OK:
Low washer fluid warning message is displayed.
HINT:
If the warning message is not displayed, go to the problem symptoms table (See page ME-17).



5. INSPECT MULTI-INFORMATION DISPLAY

(a) Turn the power switch off.

(b) Press the "DISP" button and hold it down.

(c) Turn the power switch on (IG).

OK:

All the dots in the multi-information display come on.

HINT:

This test is also available in "ACTIVE TEST" (See page ME-30).

(d) Turn the power switch off to finish this test mode.

HINT:

If the result is not as specified, replace the combination meter assembly because this part is not independently supplied.

ME

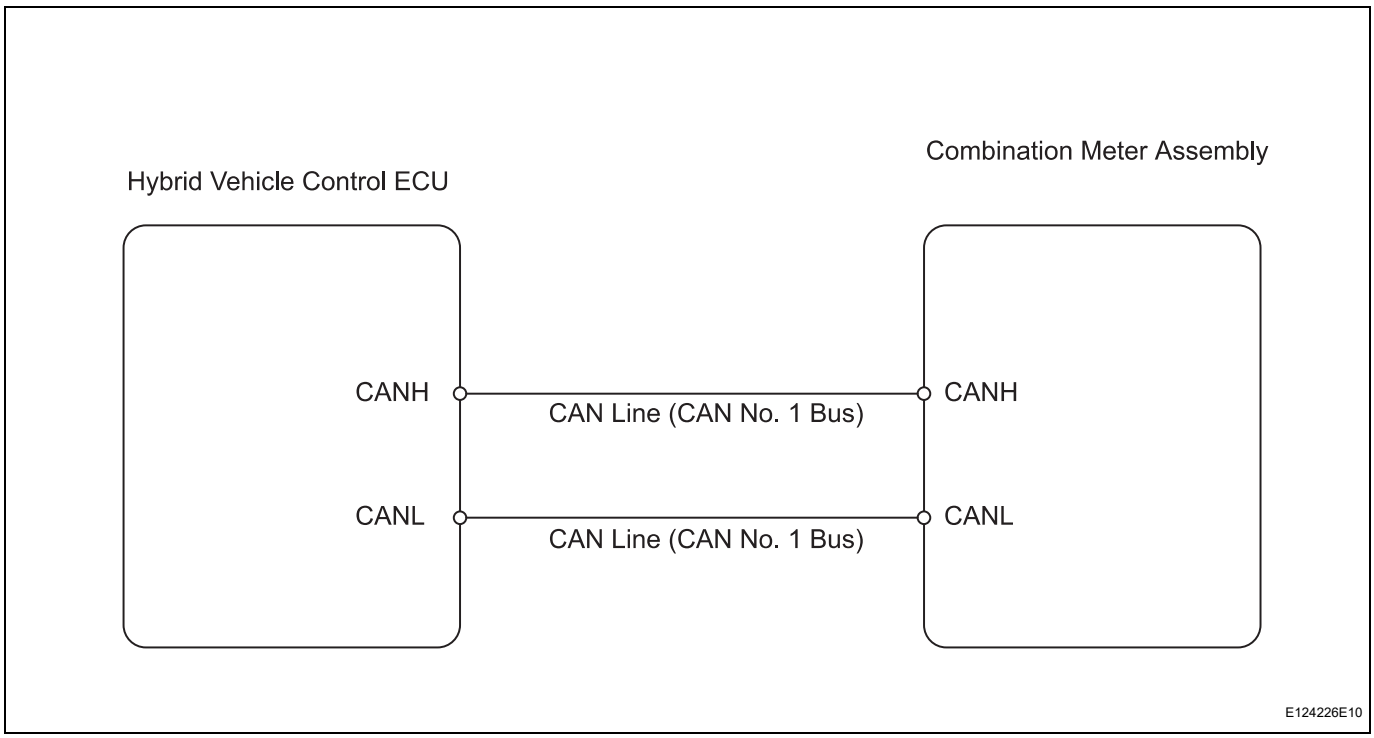
DTC	U0100	Lost Communication with ECM/PCM "A"

DESCRIPTION

The combination meter assembly communicates with the hybrid vehicle control ECU via the CAN communication lines (CAN No. 1 Bus).

DTC No.	DTC Detection Conditions	Trouble Areas
U0100	When either of following conditions detected: 1. Vehicle speed 5 km/h (3.1 mph) or more and IG voltage 10.5 V or more 2. No communication with ECM continues for 3 seconds or more (No communication to ECM or skid control ECU continues for 60 seconds or more)	• CAN communication system • Hybrid vehicle control ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CONFIRM DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (READY).
(c) Turn the tester on.
(d) Clear the stored DTCs by selecting the following menu items on the tester: DIAGNOSIS / OBD / MOBD / METER / DTC INFO / CLEAR CODES.
(e) Drive the vehicle at more than 5 km/h (3.1 mph) for at least 60 seconds.
(f) Stop the vehicle.
(g) Check for DTCs (See page CA-22).

Result

Result	Proceed to
DTC output	A (See page CA-29)
DTC not output	B

B → **USE SIMULATION METHOD TO CHECK**

A

GO TO CAN COMMUNICATION SYSTEM

DTC	U0129	Lost Communication with Skid Control ECU

DESCRIPTION

The combination meter assembly communicates with the skid control ECU via the CAN communication system (CAN No. 1 Bus).

DTC No.	DTC Detection Conditions	Trouble Areas
U0129	When either of following conditions detected: 1. 15 seconds have elapsed since engine started and IG voltage 10.5 V or more 2. No communication with the skid control ECU continues for 60 seconds or more and IG voltage is 10.5 V or more.	• Skid control ECU • CAN communication system

IDENTIFICATION OF NOISE SOURCE

1. Radio Description

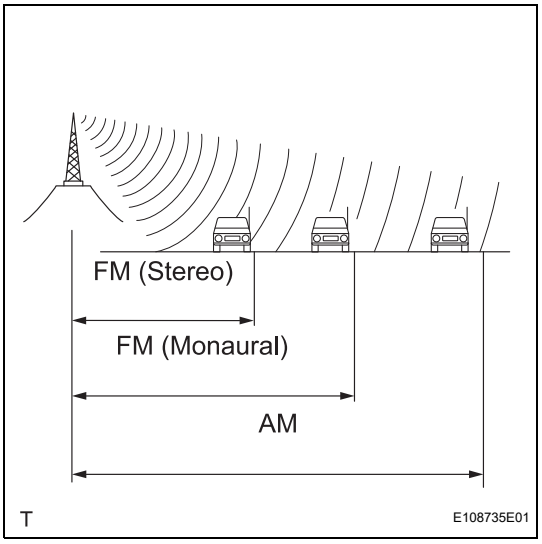
(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.

Frequency	30 kHz	300 kHz	30 MHz	30 MHz	300 MHz
Designation	LF	MF	HF	VHF	
Radio Wave		AM ⟷		FM ⟷	
Modulation	Amplitude modulation			Frequency modulation	

LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

E108734E01



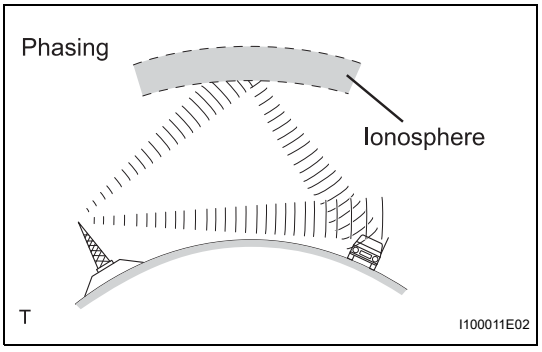
(b) Service area

(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

(c) Radio reception problems

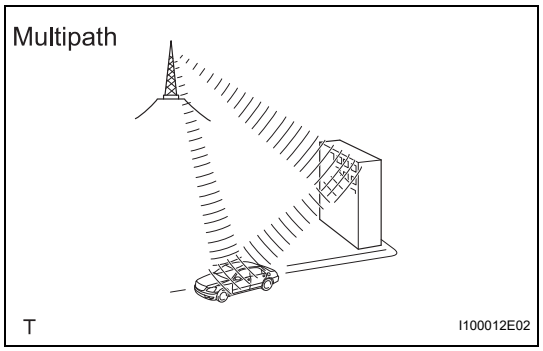
HINT:

In addition to static, other problems such as "phasing", "multipath", and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.

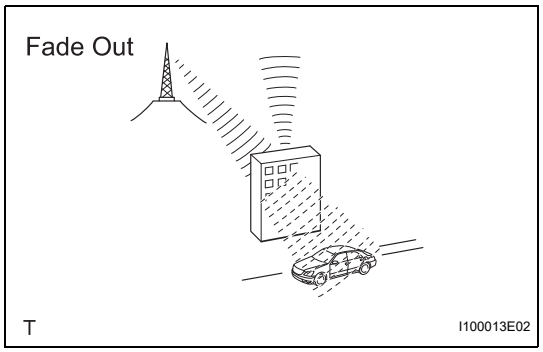


(1) Phasing

AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.



(2) Multipath
Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.



(3) Fade out
Fade out is caused by objects (buildings, mountains, and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are much more difficult to deflect.

(d) Noise problem
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

Radio Frequency	Noise Occurrence Condition	Presumable Cause
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Music beat from a distant broadcast
FM	Noise occurs while driving in a specified area	Multipath or phasing noise resulting from a change in FM frequency

HINT:
If the noise does not match the examples above, refer to the descriptions about phasing and multipath.

AV

PROBLEM SYMPTOMS TABLE

HINT:

- Before inspecting the suspected areas listed in the table below, check the fuse and relay.
- Before inspecting the suspected areas listed in the table below, check for DTCs.
- Methods used to verify the cause of the problem are listed in order of probability in the suspected area column.

Audio Function:

Symptom	Suspected Area	See page
Pressing power switch does not turn on system.	1. Proceed to "Pressing Power Switch does not Turn on System"	AV-67
	2. Radio receiver power source circuit	AV-130
	3. AVC-LAN circuit	AV-108
	4. Radio receiver	AV-135
Panel switch does not function.	1. Steering pad switch circuit	AV-85

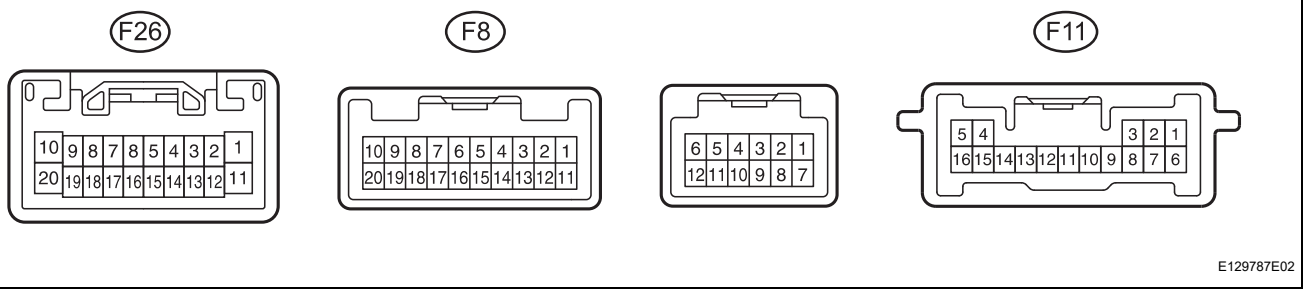
TERMINALS OF ECU

1. RADIO RECEIVER



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
B (F26-1) - GND (F26-20)	L-Y - BR	Battery	Always	10 to 14 V
ILL+ (F26-2) - GND (F26-20)	G - BR	Illumination signal	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
ATX+ (F26-5) - GND (F26-20)	R - BR	AVC-LAN communication signal	Power switch on (ACC)	2 to 3 V
MUTE (F26-7) - GND (F26-20)	O - BR	MUTE signal	Audio system is playing → Changing	Above 3.5 V → Below 1 V
R+ (F26-8) - GND (F26-20)	R - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L+ (F26-9) - GND (F26-20)	B - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
SLD (F26-10) - Body ground	Shielded - Body ground	Shield ground	Always	Below 1 V
ACC (F26-11) - GND (F26-20)	GR - BR	Accessory (ON)	Power switch on (ACC)	10 to 14 V
ILL- (F26-12) - GND (F26-20)	W-B - BR	Illumination (rheostat) signal	Light control switch OFF → TAIL	Below 1 V → Pulse generation
ANT (F26-13) - GND (F26-20)	O - BR	Power source of antenna	Radio switch ON and AM or FM	10 to 14 V
ATX- (F26-15) - GND (F26-20)	G - BR	AVC-LAN communication signal	Power switch on (ACC)	2 to 3 V
R- (F26-18) - GND (F26-20)	G - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L- (F26-19) - GND (F26-20)	W - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
GND (F26-20) - Body ground	BR - Body ground	Ground	Always	Below 1 V
SWG (F8-6) - GND (F26-20)	P - BR	Steering pad switch ground	Always	Below 1 V
SW1 (F8-7) - GND (F26-20)	O - BR	Steering pad switch signal	Steering pad switch not operated → SEEK+ switch pushed → SEEK- switch pushed → VOL+ switch pushed → VOL- switch pushed	4 V or higher → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V → Approx. 3.4 V
SW2 (F8-8) - GND (F26-20)	Y - BR	Steering pad switch signal	Steering pad switch not operated → MODE switch pushed → ON HOOK switch pushed → OFF HOOK switch pushed	4 V or higher → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V
IVO+ (F8-11) - GND (F26-20)	R - BR	Voice signal	"Bluetooth" handsfree voice signal is playing	A waveform synchronized with sounds is output
IVO- (F8-12) - GND (F26-20)	G - BR	Voice signal	"Bluetooth" handsfree voice signal is playing	A waveform synchronized with sounds is output

AV

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
SLD (F8-13) - Body ground	Shielded - Body ground	Shield ground	Always	Below 1 V
ARI (F8-15) - GND (F26-20)	G - BR	Sound signal (Right)	External device is playing (When stereo jack is used)	A waveform synchronized with sounds is output
ASGN (F8-16) - GND (F26-20)	BR - BR	Shield ground	Always	Below 1 V
ALI (F8-17) - GND (F26-20)	R - BR	Sound signal (Left)	External device is playing (When stereo jack is used)	A waveform synchronized with sounds is output
AUXI (F8-19) - GND (F26-20)	G - BR	External device connection detection signal	External device is connected	Below 1 V
MIC- (F11-1) - GND (F26-20)	R - BR	Microphone voice signal	"Bluetooth" handsfree function is ON	A waveform synchronized with sounds is output
MIC+ (F11-2) - GND (F26-20)	G - BR	Microphone voice signal	"Bluetooth" handsfree function is ON	A waveform synchronized with sounds is output
TSW- (F11-3) - GND (F26-20)	P - BR	Telephone relation switch signal	Always	Below 1 V
+B (F11-5) - GND (F26-20)	L - BR	Battery	Always	10 to 14 V
MGND (F11-6) - GND (F26-20)	P - BR	Ground	Always	Below 1 V
MCVD (F11-7) - GND (F26-20)	LG - BR	Microphone AMP power supply	Power switch off → on (IG)	Below 1 V → 5 V
GND (F11-14) - Body ground	BR - Body ground	Ground	Always	Below 1 V
ACC (F11-16) - GND (F26-20)	GR - BR	Accessory (ON)	Power switch off → on (ACC)	Below 1 V → 10 to 14 V

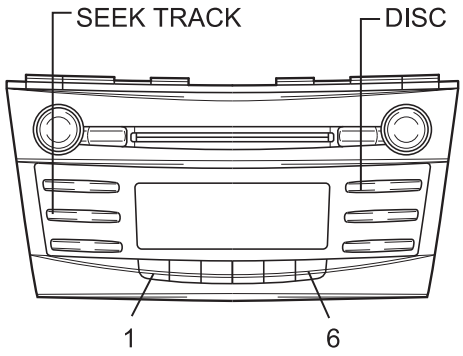
DTC CHECK / CLEAR

HINT:
If the system cannot enter the diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the problem part.
(See page AV-108)



P E129786E01

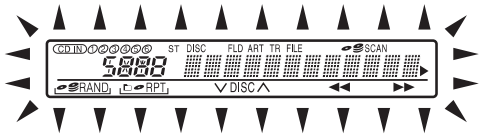
1. STARTING DIAGNOSTIC MODE

(a) READY-on state.
(b) Turn off the audio system.
(c) While pressing the preset switches "1" and "6" at the same time, press the "DISC" switch 3 times.
HINT:
A beep is emitted 3 times and the diagnostic function is activated. The system enters the all element illumination mode and the switch check mode.

2. ALL ELEMENT ILLUMINATION MODE AND SWITCH CHECK MODE

HINT:
Illumination status of all switches and operations of the panel switches can be checked.

Example:



N E119764E02

(a) Check that all elements are on.
(b) When pressing each panel switch, check that a beep is emitted.
NOTICE:
Pressing the "SEEK TRACK UP" switch transfers the screen to the stereo jack adapter connection check screen. Check the operation of this switch by confirming the transfer of the screen.

When a stereo jack adapter is connected:

AUX OK

When a stereo jack adapter is not connected:

AUX – –

N E119765E02

3. STEREO JACK ADAPTER CONNECTION CHECK MODE

(a) Press the "SEEK TRACK UP" switch.
(b) Check if the stereo jack adapter is recognized.
HINT:
Vehicles that do not have a stereo jack adapter also have this function.
NOTICE:
This function is not to check connection information on an external device, but to check recognition information on a stereo jack adapter.

4. SERVICE CHECK MODE

(a) Press the "SEEK TRACK UP" switch.
HINT:
For details of the service check mode, refer to "6. CHECK DTC" and "7. DTC CLEAR/RECHECK".

5. FINISHING DIAGNOSTIC MODE

(a) Press the "DISC" switch for 2 seconds or more, or turn the power switch off.

AV

6. CHECK DTC

HINT:

Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

(a) Reference:

In the system check mode, the system check and the diagnostic memory check are performed, and the check results are displayed in ascending order of the component codes (physical address).

Terms	Meaning
Component code (Physical address)	Three-digit code (in hexadecimal) given to each device comprising AVC-LAN. Corresponding to its function, individual symbol is provided.
Logical address	Two-digit code (in hexadecimal) given to each function and device unit in each device comprising AVC-LAN.

(b) Service check result display

Display	Previous term	Meaning	Action to be taken
good	Good (normal)	No DTCs are detected in both "System Check Mode" and "Diagnostic Memory Mode".	-
nCon	No connection	The system recognized the component when it was registered, but the component gives no response to the "Diagnostic Mode ON Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).
ECHn	Exchange	One or more DTCs for "Exchange" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
CHEC	Check	When no DTCs are detected for "Exchange", one or more DTCs for "Check" are detected in either "System Check Mode" or "Diagnostic Memory Mode".	Go to the detailed information mode to check the trouble area referring to the DTC list.
OLd	Old version	Old DTC application is identified and DTC is detected in either "System Check Mode" or "Diagnostic Memory Mode".	-
nrES	No response	The device gives no response to any one of "System Check Mode ON Request", "System Check Result Request", and "Diagnostic Memory Request".	Check the power source circuit and the communication circuit of the component indicated by the component code (physical address).

(c) Device name and physical address

Physical address No.	Name
190	Radio receiver
440	Stereo component amplifier
19D	"Bluetooth" handsfree module

(d) Service check mode

(1) Press the "SEEK TRACK" switch to see the check result of each component.

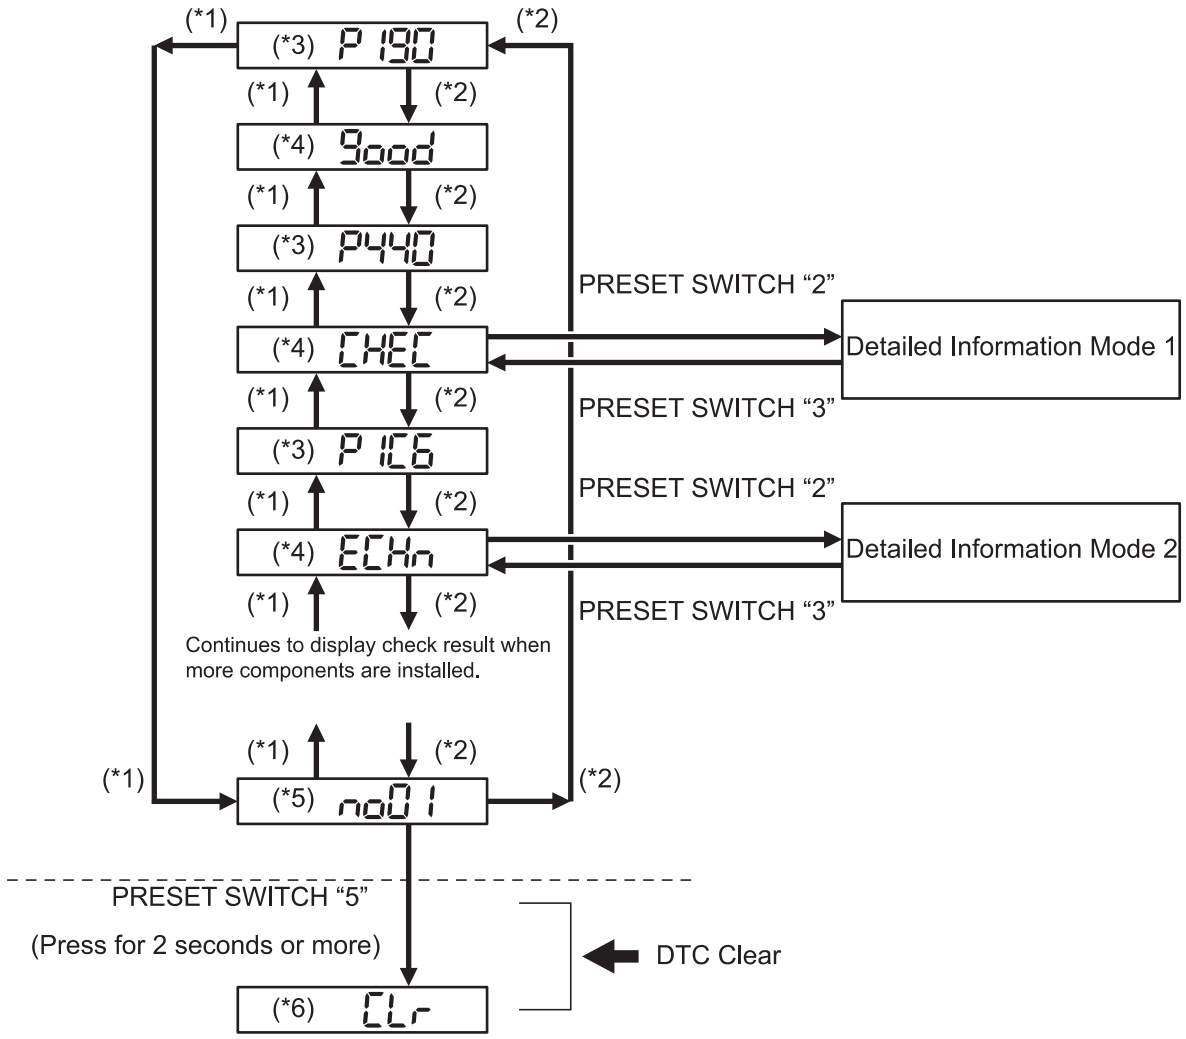
(2) The component code (physical address) is displayed first, and then the check result follows.

HINT:

- If all check results are "good", the system judges that no DTC exists.

- If the preset switch "1" is pressed in the service check mode, service check is performed again.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

Service Check Mode:



*1: SEEK TRACK DOWN

*2: SEEK TRACK UP

*3: P...Indicates physical address

190/440/1C6...Physical address

*4: Result

*5: Up-to-date connection check number

*6: Memory clear

AV

(e) Detailed information mode 1
HINT:
- "Detailed Information Mode 1" is displayed when there is no response to "System Check Result Request" and DTC is detected only in "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 1".
(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.
(3) Press the preset switch "3" to go to the "Service Check Mode".
(4) Distinguish between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 1", refer to the following:
- "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
- "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.

HINT:
- The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
- The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
- The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
- "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
- "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

(f) Detailed information mode 2
HINT:
- "Detailed Information Mode 2" is displayed when DTCs are detected in the responses to both "System Check Result Request" and "Diagnostic Memory Request".
- The component device code (physical address) is displayed first, and then the check result follows.
- This illustration is only an example and may differ in cases such as for each option part and output DTCs.

(1) Press the preset switch "2" to go to the "Detailed Information Mode 2".
(2) Press the "SEEK TRACK" switch to display the physical address and DTC of the component.
(3) Press the preset switch "3" to go to the "Service Check Mode".
(4) Distinguish between the displays of the responses to "System Check Result Request" and "Diagnostic Memory Request". In order to distinguish the information detected in "System Check Mode" and "Diagnostic Memory Mode" in "ECHn", "CHEC", and "OLd" in "Detailed Information Mode 2", refer to the following:
- "SyS" is displayed before the detailed codes detected as a result of "System Check Result Request" are displayed.
- "COdE" is displayed before the detailed codes detected as a result of "Diagnostic Memory Request" are displayed.
HINT:
- The response to "System Check Result Request" is the current information given from each ECU as a result of the system check.
- The response to "Diagnostic Memory Request" contains the information received from each ECU or stored in each ECU in the past.
- The response to "Diagnostic Memory Request" is the output DTCs as a result of the diagnostic memory check or the DTCs received from each ECU.
- "System Check Result Request (SyS)" is displayed first, and then the logical address and DTC appear in order.
- "Diagnostic Memory Request (COdE)" is displayed first, and then the logical address, DTC, sub-code, connection check number, and the number of occurrence appear in order.

7. DTC CLEAR/RECHECK

(a) Clearing All DTC Memory (when clearing all the memory of the DTCs previously detected)
  (1) When the preset switch "5" is pressed for 2 seconds or more during "Service Check Mode", the DTCs for all components are cleared. ("CLr" is displayed at this time.)
  HINT:
  - A beep sound is emitted once when the DTC memory is completely cleared.
  - When the DTC memory for all the components is cleared, only the component codes (physical address) are displayed.
  - After the DTC memory is cleared, the "Service Check Mode" is restored.

(b) Clearing Individual DTC Memory (when clearing the memory of the DTC previously detected individually)
  (1) When the preset switch "5" is pressed for 2 seconds or more during "Detailed Information Mode 1" or "Detailed Information Mode 2", the DTCs for the target component are cleared.
  HINT:
  - A beep sound is emitted once when the DTC memory is completely cleared.
  - When the DTC memory is cleared, only the component code (physical address) is displayed for the target component.
  - After the DTC memory is cleared, the "Service Check Mode" is restored.
  - To check DTCs, press the preset switch "1" and perform the system check again.

(c) Press the preset switch "1" to perform the service check again, and check that no DTCs are displayed for all the component codes (physical address).

DIAGNOSTIC TROUBLE CODE CHART

COMMUNICATION DIAGNOSIS:

DTC Code	Detection Item	Trouble Area	See page
01-21	ROM Error	Radio receiver	AV-30
01-22	RAM Error	Radio receiver	AV-30
01-D5	Absence of Registration Unit	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-31
01-D6	No Master	1. Radio receiver power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio receiver and the component which has stored this code 4. Component which has stored this code 5. Radio receiver	AV-33
01-D7	Connection Check Error	1. Radio receiver power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio receiver and the component which has stored this code 4. Component which has stored this code 5. Radio receiver	AV-33
01-D8	No Response for Connection Check	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-31
01-D9	Last Mode Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-31
01-DA	No Response Against ON / OFF Command	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-31

DTC Code	Detection Item	Trouble Area	See page
01-DB	Mode Status Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-31
01-DC	Transmission Error	If the same sub-code is recorded in other components, check harness for power supply and the communication system of all components shown by the code	AV-38
01-DD	Master Reset	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-41
01-DE	Slave Reset	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio receiver and the component shown by the sub-code 3. Component shown by the sub-code	AV-31
01-DF	Master Error	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-46
01-E0	Registration Complete Indication Error	-	AV-50
01-E1	Voice Processing Device ON Error	1. Radio receiver power source circuit 2. AVC-LAN circuit between the radio receiver and the component which has stored this code 3. Radio receiver 4. Component which has stored this code	AV-41

DTC	01-D5	Absence of Registration Unit

DTC	01-D8	No Response for Connection Check

DTC	01-D9	Last Mode Error

DTC	01-DA	No Response Against ON / OFF Command

DTC	01-DB	Mode Status Error

DTC	01-DE	Slave Reset

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D5 *1, *3	A device that the sub-code shows is (was) disconnected from the system when turning the power switch on (ACC or IG). The communication condition with the device that the code shows cannot be obtained when the engine starts.	• Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the radio receiver and the component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *3	The device indicated by the sub-code is (was) disconnected from the system after the engine starts.	
01-D9 *1, *3	The device that had functioned before the engine stopped is (was) disconnected from the system when turning the power switch on (ACC or IG).	
01-DA *3	No response is identified when changing mode. Sound and image do not change by switch operation.	
01-DB *1, *3	A dual alarm is detected.	
01-DE *3	A slave device has been disconnected after the engine starts	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.
- *3: If the device is reported as not existing during verification, check the power source circuit and AVC-LAN circuit for the device.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK "RADIO RECEIVER COMMUNICATION ERROR" IN FLOW CHART

Refer to the radio receiver communication error (See page AV-119).

NEXT

END

DTC	01-D6	No Master

DTC	01-D7	Connection Check Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D6 *1	When either of the following conditions is met: • The device that stores (stored) the code has (had) been disconnected when the power switch is turned on (ACC or IG). • The master device has (had) been disconnected when this code is stored.	• Radio receiver power source circuit • Power source circuit of the component which has stored this code • AVC-LAN circuit between the radio receiver and the component which has stored this code • Component which has stored this code • Radio receiver
01-D7 *2	When either of the following conditions is met: • The device that stored the code has (had) been disconnected after the engine starts (started). • The master device has (had) been disconnected when this code is (was) stored.	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the power switch on (ACC or IG), this code is stored.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

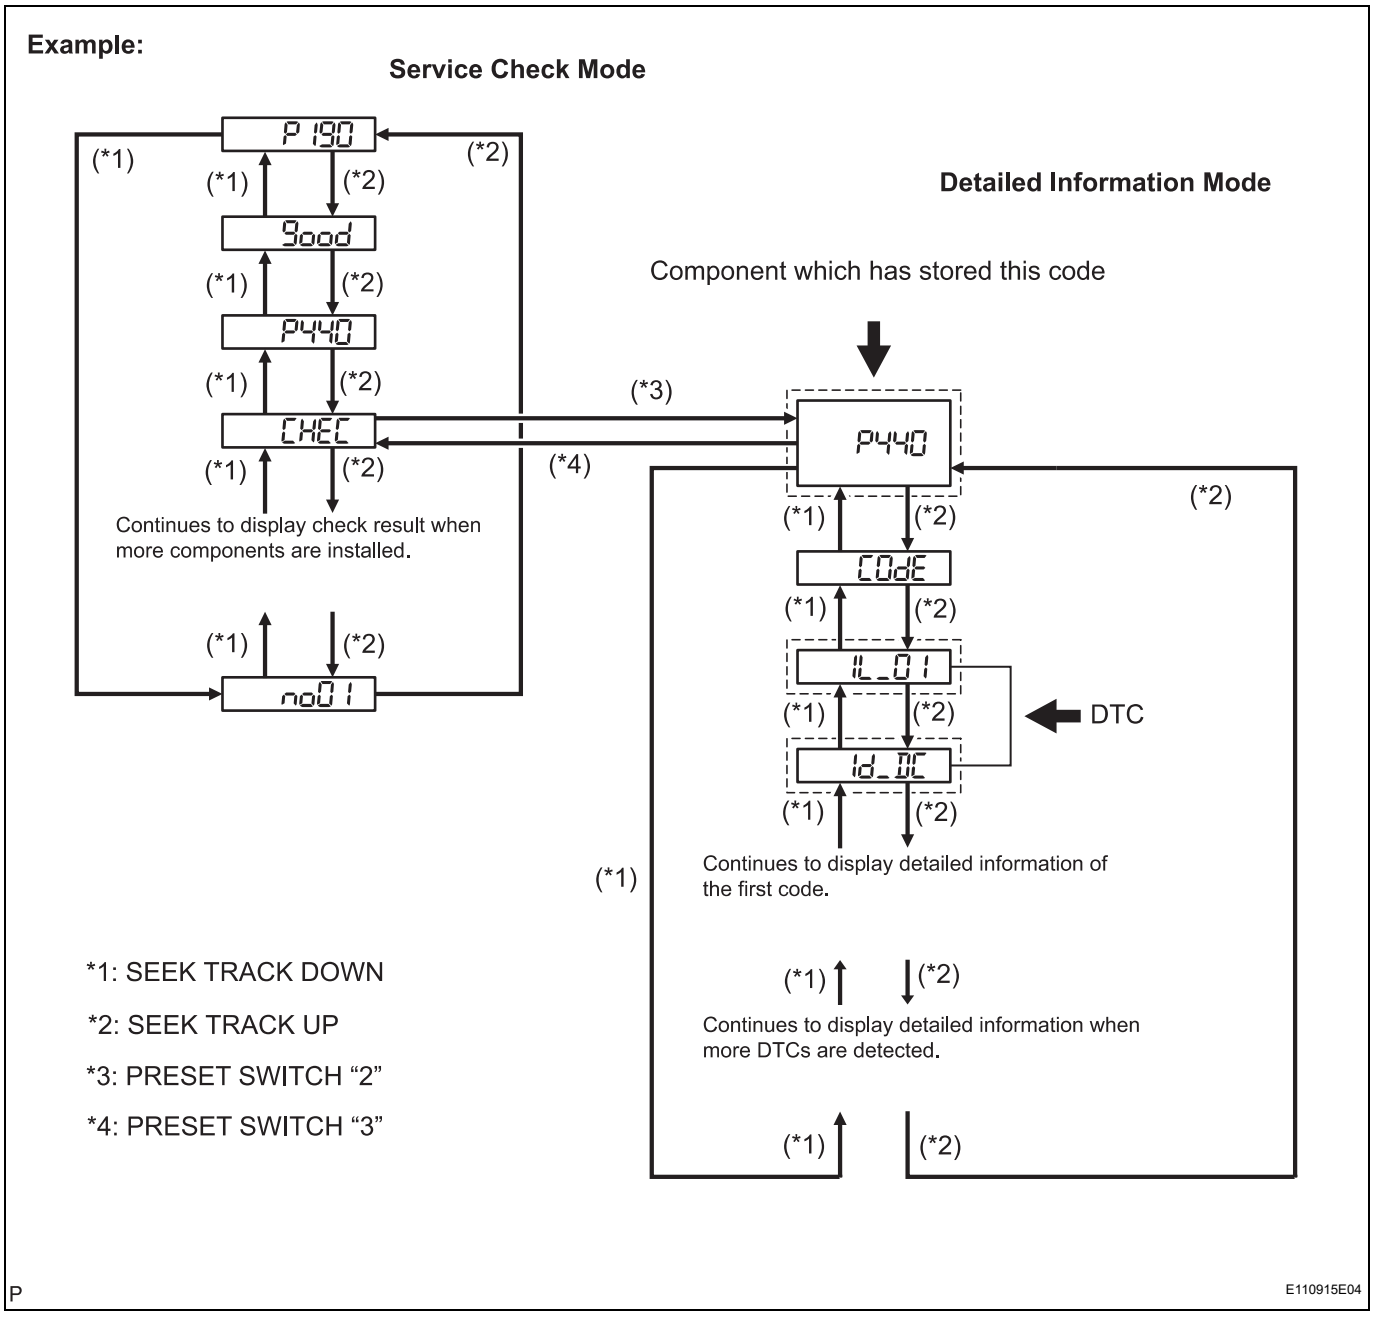
1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

Refer to the radio receiver power source circuit (See page AV-130).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2	IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.



(b) Press the preset switch "3" to change to "Detailed Information Mode".
(c) Identify the component which has stored this code.

Component Table:

Component	Physical address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D

HINT:
- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-18).

NEXT

3	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
"Bluetooth" handsfree module	A
Except "Bluetooth" handsfree module	B

A → REPLACE RADIO RECEIVER

B

4	CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

(a) Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.

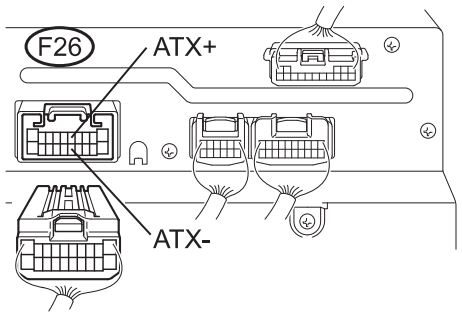
Component Table:

Component	Proceed to
Stereo component amplifier	Stereo component amplifier power source circuit (See page AV-132)

NEXT

5	INSPECT RADIO RECEIVER

Wire Harness View:



P E129798E03

(a) Disconnect the radio receiver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F26-5) - ATX- (F26-15)	Always	60 to 80 Ω

NG → REPLACE RADIO RECEIVER

AV

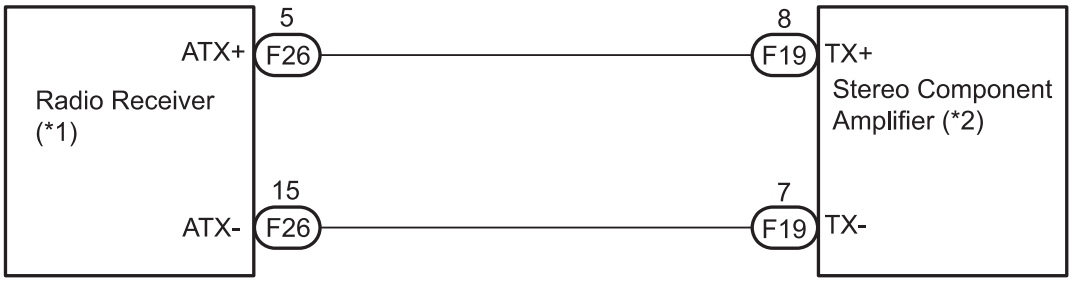
OK

6	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-15).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.
  (1) Disconnect all connectors between the radio receiver and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.
  OK:
  There is no open or short circuit.

AVC-LAN WIRING DIAGRAM



*1: Master Unit

*2: Slave Unit

P

E111831E12

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

7	REPLACE COMPONENT WHICH HAS STORED THIS CODE

(a) Replace the component which has stored this code with a normal one and check if the same problem occurs again.

OK:
Same problem does not occur.

NG → **REPLACE RADIO RECEIVER**

OK

END

DTC 01-DC Transmission Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DC	Transmission to component shown by sub-code failed (Detecting this DTC does not always mean actual failure)	If the same sub-code is recorded in other components, check harness for power supply and the communication system of all components shown by the code

NOTICE:
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

AV

1 CHECK FOR DTC OF OTHER COMPONENTS

(a) Check if the component shown by the sub-code is displayed in the check result of the other components.
  (1) Check if "01-DC" is output for the other components.
  (2) If "01-DC" is output for any other components, check if the same physical address is displayed.
  Result

Result	Proceed to
"01-DC" is output and the same physical address is displayed	**A**
"01-DC" is not output or the same physical address is not displayed	**B**

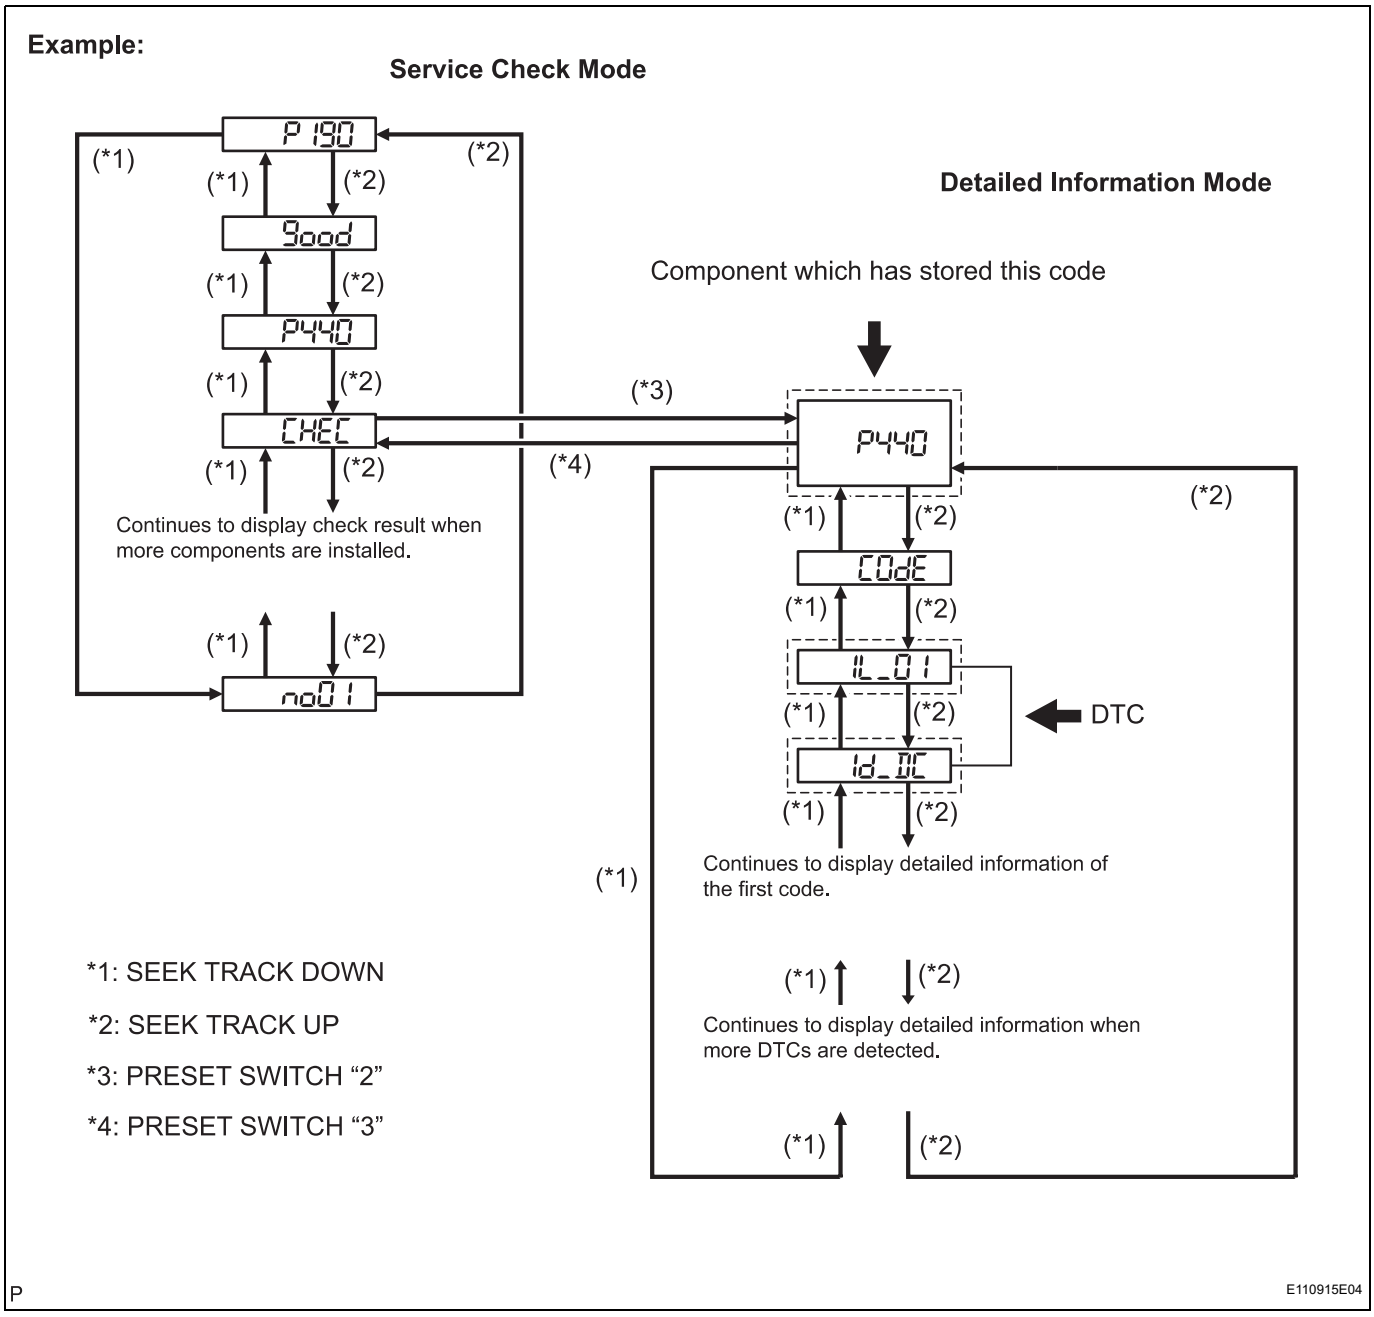
HINT:
For the list of the components shown by sub-codes, refer to the table in step 2.

B → **Go to step 4**

A

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.



(b) Press the preset switch "3" to change to "Detailed Information Mode".
(c) Identify the component which has stored this code.

Component Table:

Component	Physical address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D
Radio receiver	190

HINT:

- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-18).

NEXT

3	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.

Component Table:

Component	Proceed to
Stereo component amplifier	Stereo component amplifier communication error (See page AV-123)
"Bluetooth" handsfree module	"Bluetooth" handsfree module communication error (See page AV-126)
Radio receiver	Radio receiver communication error (See page AV-119)

NEXT

END

AV

4	CLEAR DTC

(a) Clear the DTCs (See page AV-18).
HINT:
If "01-DC" is output for only one component, this may not indicate a malfunction.

NEXT

5	RECHECK DTC

(a) Recheck for DTCs and check if the same trouble code occurs again.
OK:
Malfunction disappears.

NG → **Go to step 3**

OK

END

DTC	01-DD	Master Reset

DTC	01-E1	Voice Processing Device ON Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-DD	The device that should be the master has been disconnected after engine start.	• Radio receiver power source circuit • AVC-LAN circuit between the radio receiver and the component which has stored this code • Radio receiver • Component which has stored this code
01-E1 *1	The AMP device records that the AMP output does not function even while the source device operates.	

HINT:
*1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio receiver is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

AV

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	CHECK RADIO RECEIVER POWER SOURCE CIRCUIT

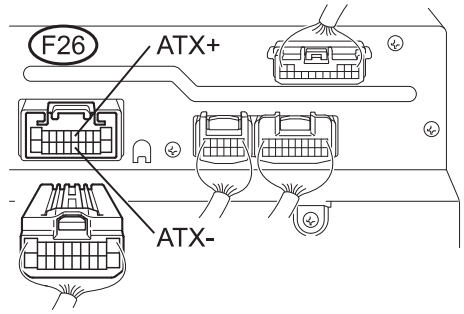
Refer to the radio receiver power source circuit (See page AV-130).

If the power source circuit is operating normally, proceed to the next step.

NEXT

2	INSPECT RADIO RECEIVER

Wire Harness View:



P E129798E03

(a) Disconnect the radio receiver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F26-5) - ATX- (F26-15)	Always	60 to 80 Ω

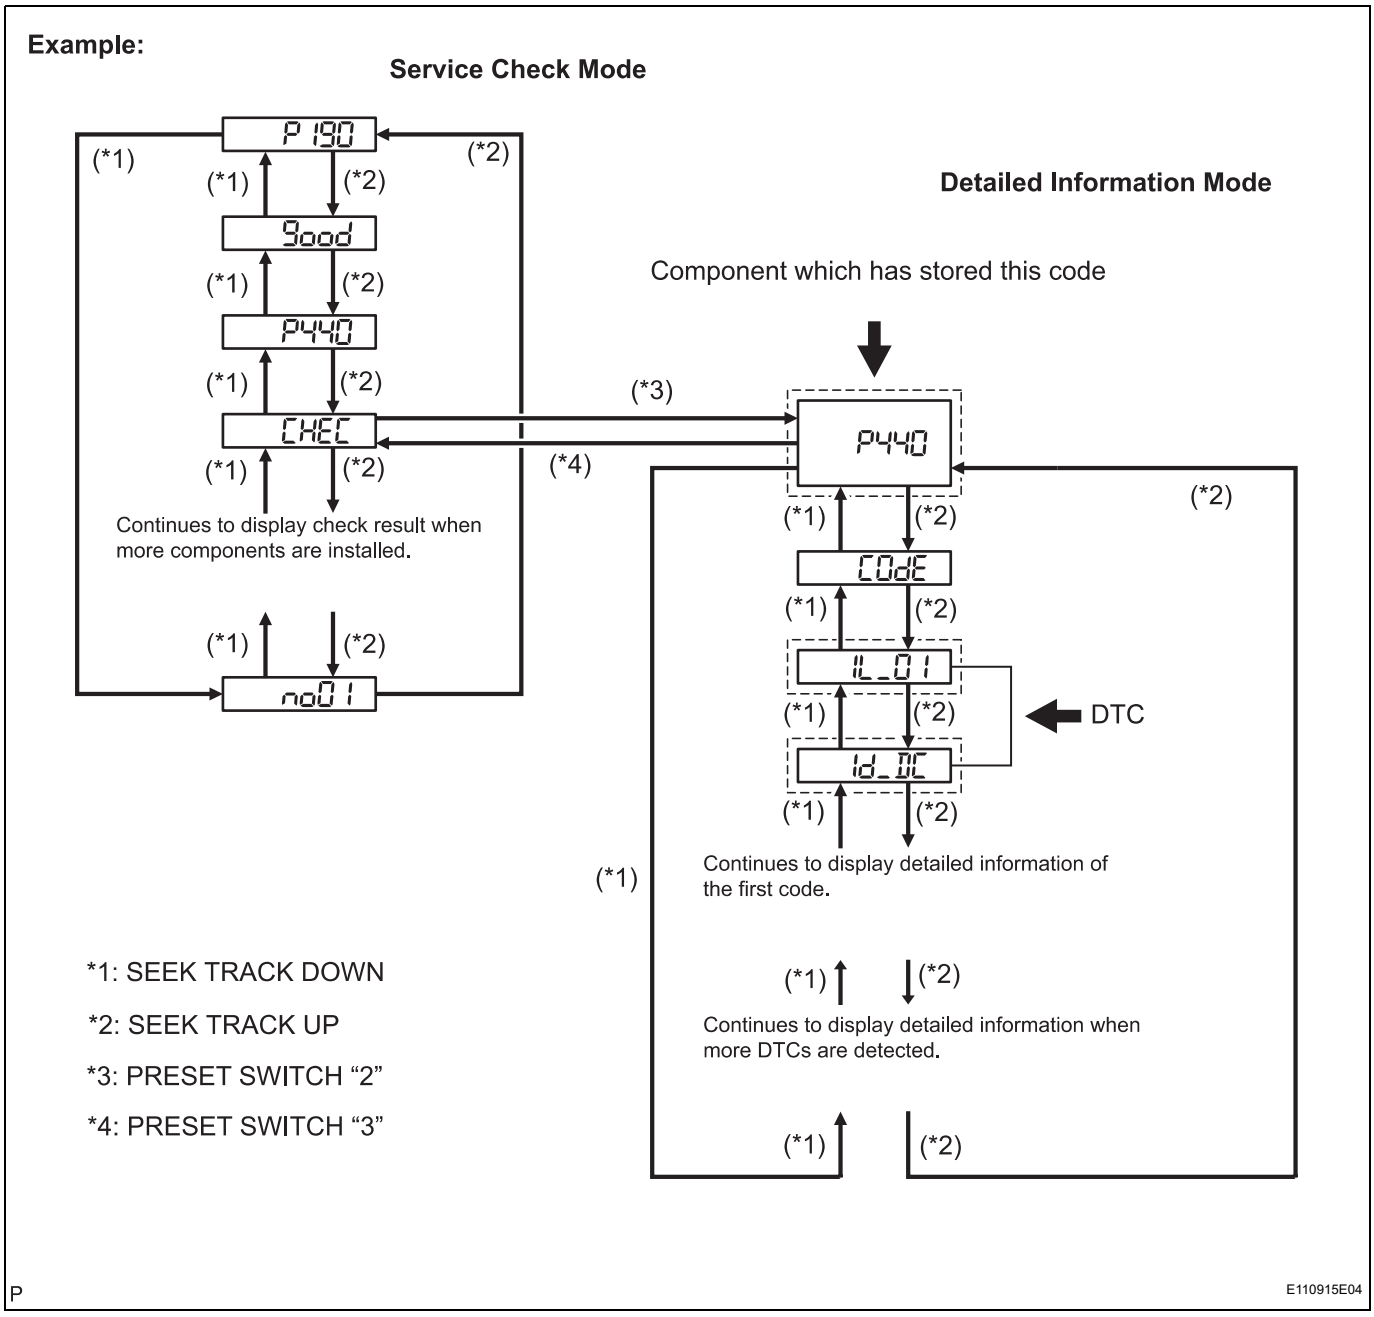
NG → **REPLACE RADIO RECEIVER**

OK

3	IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

(a) Enter the diagnostic mode.

AV



(b) Press the preset switch "3" to change to "Detailed Information Mode".
(c) Identify the component which has stored this code.

Component Table:

Component	Physical address
Stereo component amplifier	440
"Bluetooth" handsfree module	19D

HINT:
- "440 (stereo component amplifier)" is the component which has stored this code in the example shown in the illustration.
- For details of the DTC display, refer to "DTC CHECK/ CLEAR" (See page AV-18).

AV

NEXT

4	CHECK COMPONENT WHICH HAS STORED THIS CODE

(a) Select the component which has stored this code.
HINT:
The "Bluetooth" handsfree module is built into the radio receiver. If there is a problem between the "Bluetooth" handsfree module and radio receiver, replace the radio receiver.

Component Table:

Component	Proceed to
"Bluetooth" handsfree module	A
Except "Bluetooth" handsfree module	B

A → REPLACE RADIO RECEIVER

AV

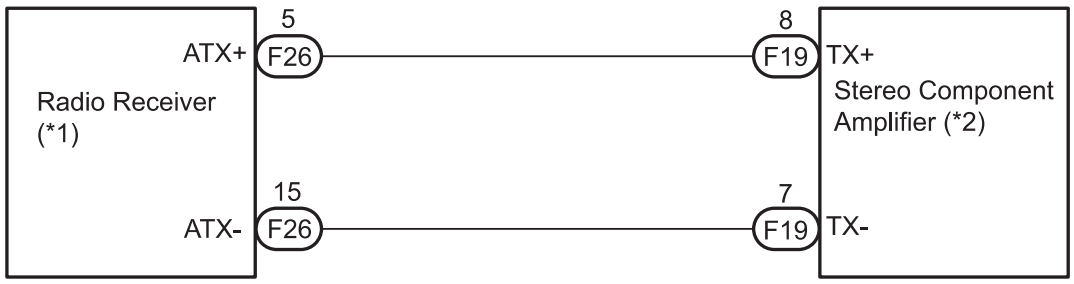
B

5	CHECK HARNESS AND CONNECTOR (RADIO RECEIVER - COMPONENT WHICH HAS STORED THIS CODE)

HINT:
For details of the connectors, refer to the "TERMINALS OF ECU" (See page AV-15).

(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio receiver and the component which has stored this code.
  (1) Disconnect all connectors between the radio receiver and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the radio receiver and the component which has stored this code.
  OK:
  There is no open or short circuit.

AVC-LAN WIRING DIAGRAM



*1: Master Unit

*2: Slave Unit

P

E111831E12

AV

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	REPLACE RADIO RECEIVER

(a) Replace the radio receiver with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE COMPONENT WHICH HAS STORED THIS CODE**

OK

END

HOW TO PROCEED WITH TROUBLESHOOTING

1	VEHICLE BROUGHT INTO A WORKSHOP

NEXT

2	DIAGNOSTIC QUESTIONING AND SYMPTOM CONFIRMATION

(a) Ask the customer about symptoms and confirm malfunctions.

- THE SCREEN DISPLAYS NOTHING (GO TO STEP 8, AND PROCEED TO "BLACK SCREEN")
- OTHER SYMPTOMS (GO TO STEP 3)

NS

3	CONFIRM THE SYSTEM NORMAL CONDITION

- APPLICABLE (THIS IS NOT A MALFUNCTION)
- NOT APPLICABLE (GO TO STEP 4)

4	CHECK DTC

HINT:
If the system cannot enter the diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits and repair or replace the problem part.

- A CODE IS OUTPUT (GO TO STEP 5)
- A CODE IS NOT OUTPUT (GO TO STEP 8)

5	DTC CLEAR

(a) Clear the DTCs and finish the diagnostic mode.
HINT:
The currently output DTCs may not indicate actual malfunctions depending on the vehicle conditions.

NEXT

6	RECHECK DTC

HINT:
- If the system cannot enter the diagnostic mode, inspect the AVC-LAN and all the components that connect to the AVC-LAN for short circuits.
- Even if the malfunction symptom is not confirmed, check for diagnostic trouble codes. This is because the system stores past diagnostic trouble codes.
- Refer to the detailed description on the diagnostic screen as necessary (See page NS-31).
- Check the diagnostic trouble code and inspect the area the code indicates.

⇨	**A CODE IS OUTPUT (GO TO STEP 7)**
⇨	**A CODE IS NOT OUTPUT (GO TO STEP 8)**

NS

7	DIAGNOSTIC TROUBLE CODE CHART

(a) Find the output code in the diagnostic trouble code chart (See page NS-53).

NEXT ⇨	**GO TO STEP 10**

8	PROBLEM SYMPTOMS TABLE

(a) Find the applicable symptom in the problem symptoms table (See page NS-42).
HINT:
If the symptom does not recur and no code is output, perform the symptom reproduction method (See page IN-67).

⇨	**THERE IS AN APPLICABLE SYMPTOM IN THE TABLE (GO TO STEP 10)**
⇨	**THERE IS NO APPLICABLE SYMPTOM IN THE TABLE (GO TO STEP 9)**

9	CHECK THE ECU TERMINAL ARRANGEMENT BASED ON THE MALFUNCTION SYMPTOM

NEXT ⇩

10	CHECK THE CIRCUIT

(a) Adjust, repair, or replace as necessary.

NEXT

11	**RECHECK THE DIAGNOSTIC TROUBLE CODE**

HINT:
After deleting the DTCs, recheck for diagnostic trouble codes.

NEXT

12	**PERFORM CONFIRMATION TEST**

NEXT

END

IDENTIFICATION OF NOISE SOURCE

1. Radio Description

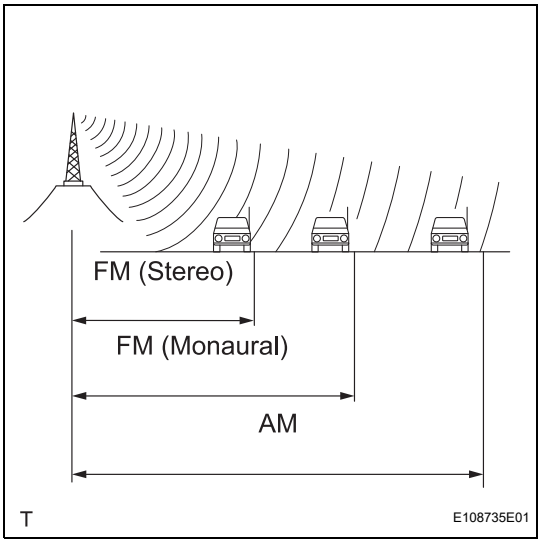
(a) Radio frequency band

(1) Radio broadcasts use the radio frequency bands shown in the table below.

Frequency	30 kHz	300 kHz	30 MHz	30 MHz	300 MHz
Designation	LF	MF	HF	VHF	
Radio Wave		AM ⟷		FM ⟷	
Modulation	Amplitude modulation			Frequency modulation	

LF: Low Frequency MF: Medium Frequency HF: High Frequency VHF: Very High Frequency

E108734E01



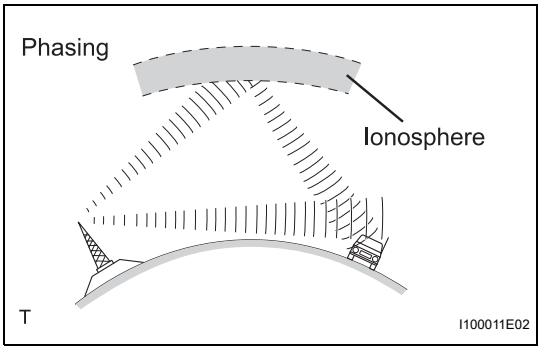
(b) Service area

(1) The service areas of AM and FM broadcasts are vastly different. Sometimes an AM broadcast can be received very clearly but an FM stereo cannot. FM stereo has the smallest service area, and is prone to pick up static and other types of interference such as noise.

(c) Radio reception problems

HINT:

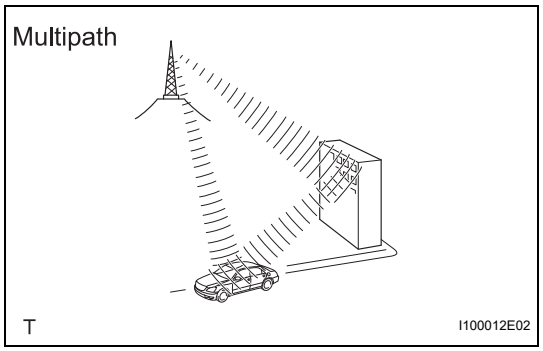
In addition to static, other problems such as "phasing", "multipath", and "fade out" exist. These problems are not caused by electrical noise, but by the radio signal propagation method itself.



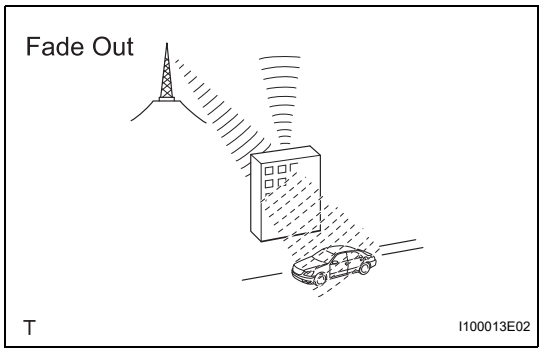
(1) Phasing

AM broadcasts are susceptible to electrical interference and another kind of interference called phasing. Occurring only at night, phasing is the interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off the ionosphere and the other signal is received directly from the transmitter.

NS



(2) Multipath
Multipath is a type of interference created when a vehicle receives 2 radio wave signals from the same transmitter. One signal is reflected off buildings or mountains and the other signal is received directly from the transmitter.



(3) Fade out
Fade out is caused by objects (buildings, mountains, and other such large obstacles) that deflect away part of a signal, resulting in a weaker signal when the object is between the transmitter and vehicle. High frequency radio waves, such as FM broadcasts, are easily deflected by obstructions. Low frequency radio waves, such as AM broadcasts, are much more difficult to deflect.

(d) Noise problem
Technicians must have a clear understanding about each customer's noise complaint. Use the following table to diagnose noise problems.

Radio Frequency	Noise Occurrence Condition	Presumable Cause
AM	Noise occurs in a specified area	Foreign noise
AM	Noise occurs when listening to an intermittent broadcast	An identical program transmitted from multiple towers can cause noise where the signals overlap
AM	Noise occurs only at night	Music beat from a distant broadcast
FM	Noise occurs while driving in a specified area	Multipath or phasing noise resulting from a change in FM frequency

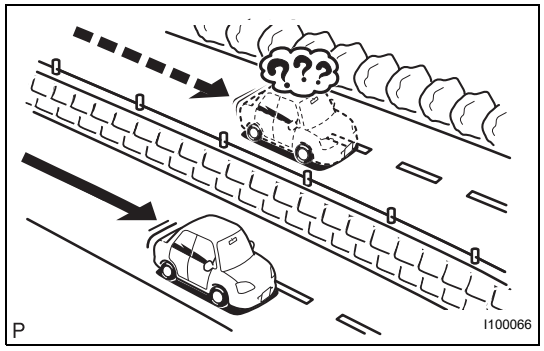
HINT:
If the noise does not match the examples above, refer to the descriptions about phasing and multipath.

SYSTEM NORMAL CONDITION CHECK

1. CHECK NORMAL CONDITION

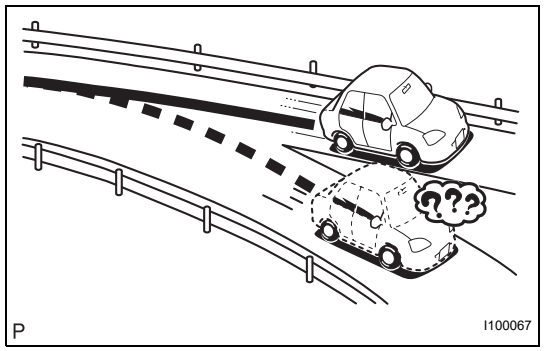
(a) If the symptom is applicable to any of the following, it is intended behavior, and not a malfunction.

Symptom	Answer
A longer route than expected is chosen.	Depending on the road conditions, the radio and navigation assembly may determine that a longer route is quicker.
Even when distance priority is high, the shortest route is not shown.	Some paths may not be advised due to safety concerns.
When the vehicle is put into motion immediately after the engine starts, the navigation system deviates from the actual position.	If the vehicle starts before the navigation system activates, the system may not react.
When running on certain types of roads, especially new roads, the vehicle position deviates from the actual position.	When the vehicle is driving on new roads not available on the map disc, the system attempts to match it to another nearby road, causing the position mark to deviate.

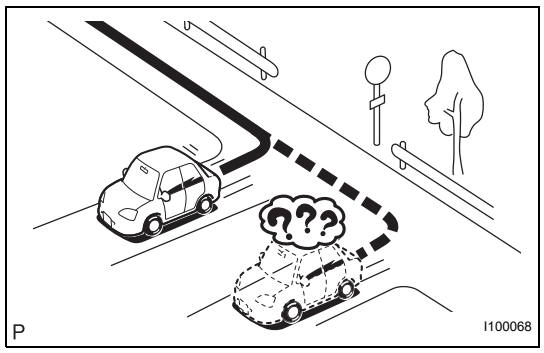


(b) The following symptoms are not a malfunction, but are caused by errors inherent in the GPS, gyro sensor, speed sensor, and radio and navigation assembly.

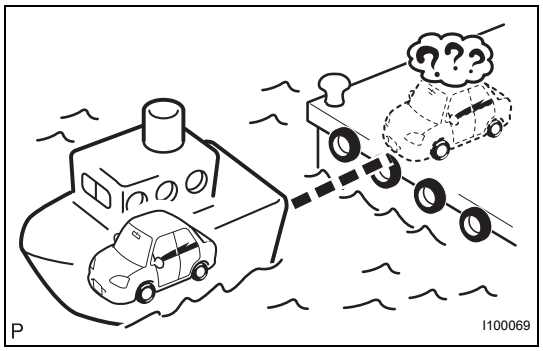
(1) The current position mark may be displayed on a nearby parallel road.



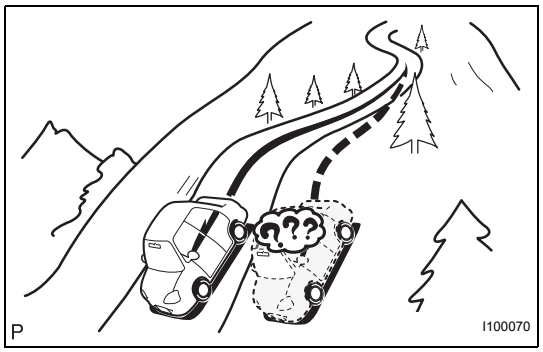
(2) Immediately after a fork in the road, the current vehicle position mark may be displayed on the wrong road.



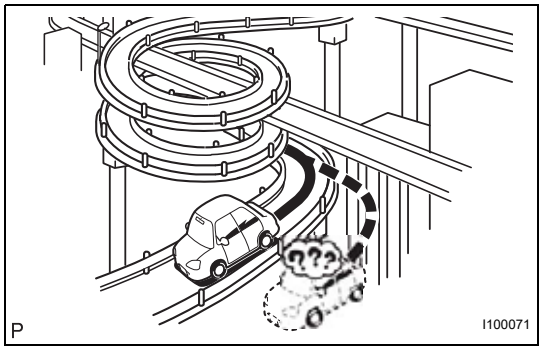
(3) When the vehicle turns right or left at an intersection, the current vehicle position mark may be displayed on a nearby parallel road.



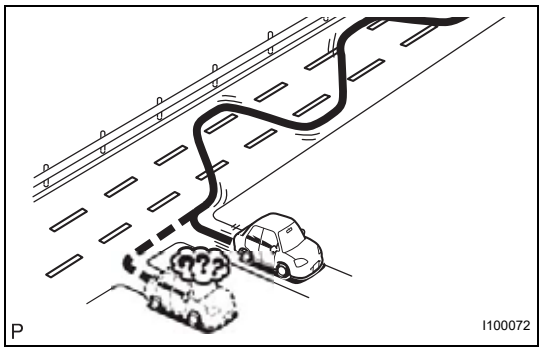
(4) When the vehicle is carried, such as on a ferry, and the vehicle itself is not running, the current vehicle position mark may be displayed in the position where the vehicle was until a measurement can be performed by GPS.



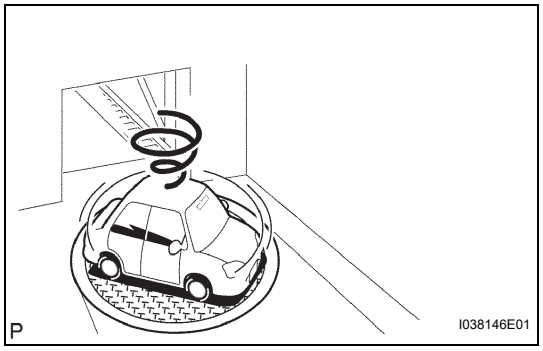
(5) When the vehicle runs on a steep hill, the current vehicle position mark may deviate from the correct position.



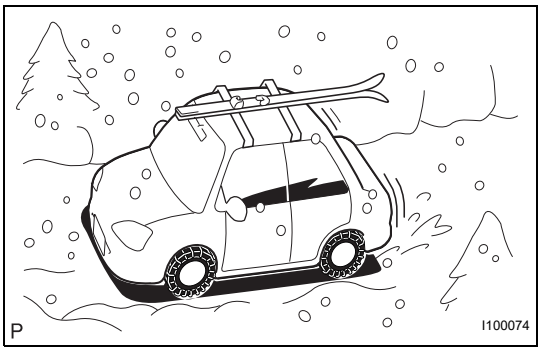
(6) When the vehicle makes a continuous turn of 360, 720, 1,080, etc. degrees, the current vehicle position mark may deviate from the correct position.



(7) When the vehicle moves erratically, such as constant lane changes, the current vehicle position mark may deviate from the correct position.



(8) When the power switch is on (ACC or IG) on a turntable before parking, the current vehicle position mark may not point in the correct direction. The same will occur when the vehicle comes out of parking.



(9) When the vehicle runs on a snowy road or a mountain path with the chains installed or using a spare tire, the current vehicle position mark may deviate from the correct position.

(10)When a tire is changed, the current vehicle position mark may deviate from the correct position.
HINT:
- Diameter of the tire may change, causing a speed sensor error.
- Performing the "tire change" in calibration mode will allow the system to correct the current vehicle position faster.

DISPLAY CHECK MODE

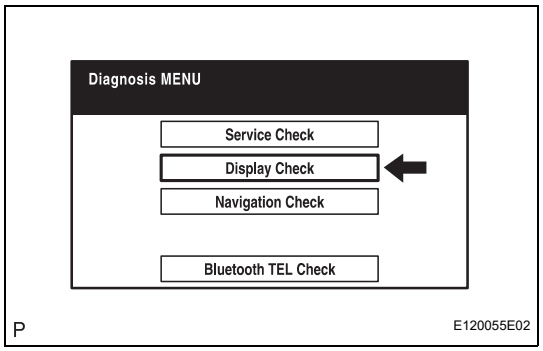
HINT:

- This mode checks the color display on the display.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-47)

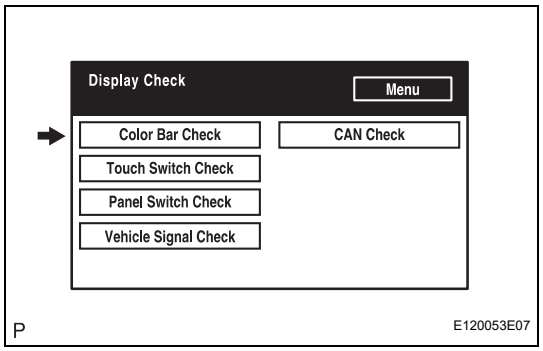
2. DISPLAY CHECK

(a) Select "Display Check" from the "Diagnosis MENU" screen.



3. COLOR BAR CHECK

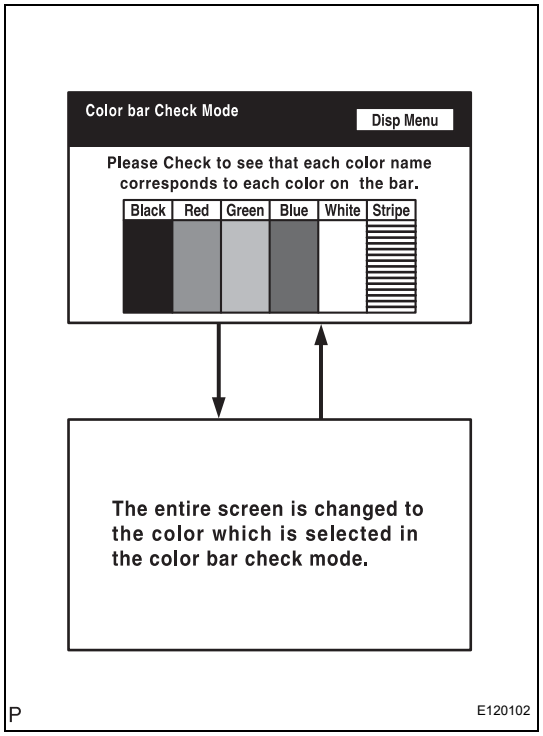
(a) Select "Color Bar Check" from the "Display Check" screen.



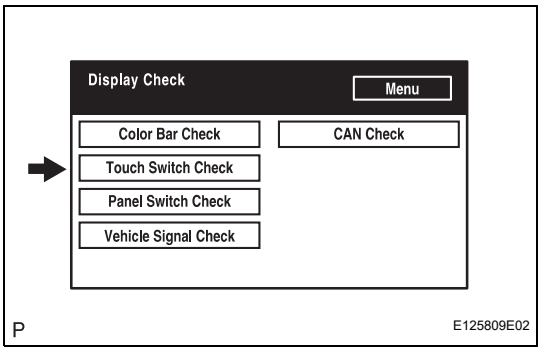
(b) Select a color bar from the "Color Bar Check Mode" screen.

(c) Check the display color.
HINT:

- The entire screen turns to the color or stripe selected.
- Touching the display will return to the "Color Bar Check" screen.

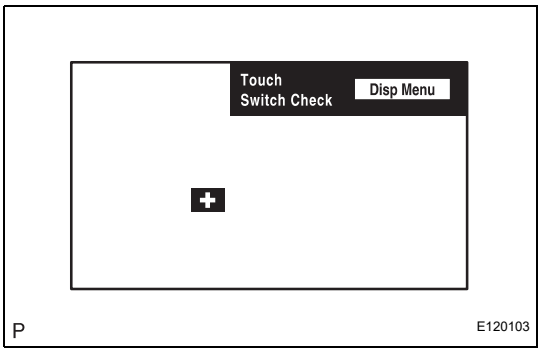


NS

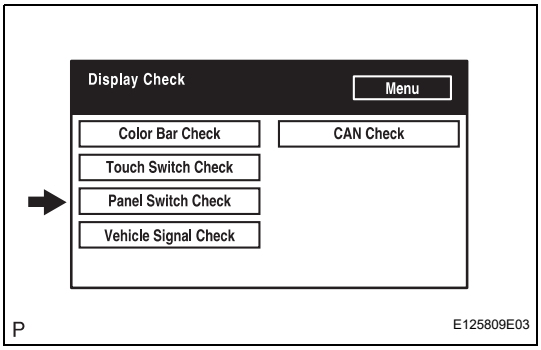


4. TOUCH SWITCH CHECK

(a) Select "Touch Switch Check" from the "Display Check" screen.

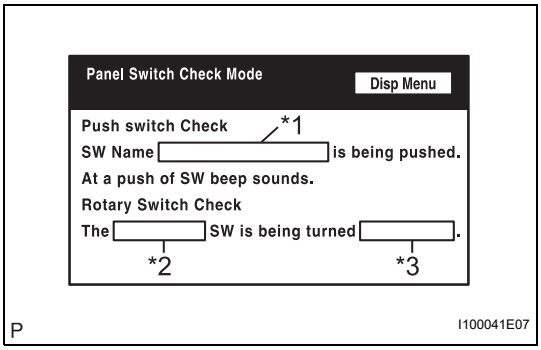


(b) Touch the display anywhere in the open area to perform the check when the "Touch Switch Check" screen is displayed.
HINT:
- A "+" mark is displayed where the display is touched.
- The "+" mark remains on the display even after the finger is removed.



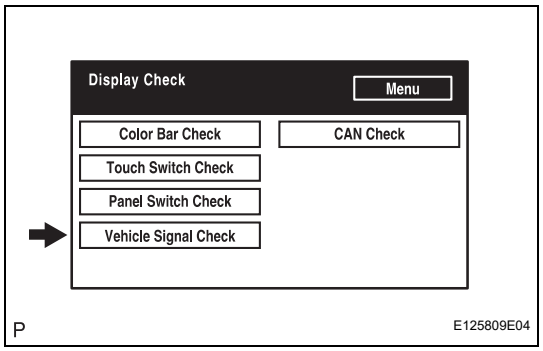
5. PANEL SWITCH CHECK

(a) Select "Panel Switch Check" from the "Display Check" screen.



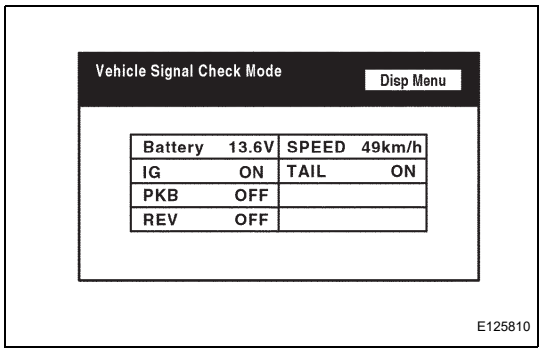
(b) Operate each switch and check that the switch names and condition are correctly displayed.

Display	Contents
Push switch name/*1	• Name of the pressed switch is displayed. • If more than one switch is pressed, "MULTIPLE" is displayed.
Rotary switch name/*2	Name of the rotary switch is displayed.
Rotary switch direction/*3	Direction of the rotary switch is displayed.



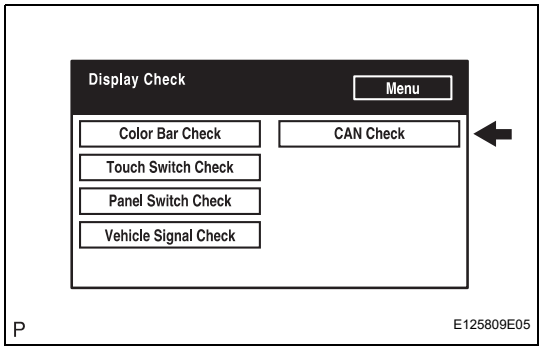
6. VEHICLE SIGNAL CHECK

(a) Select "Vehicle Signal Check" from the "Display Check" screen.



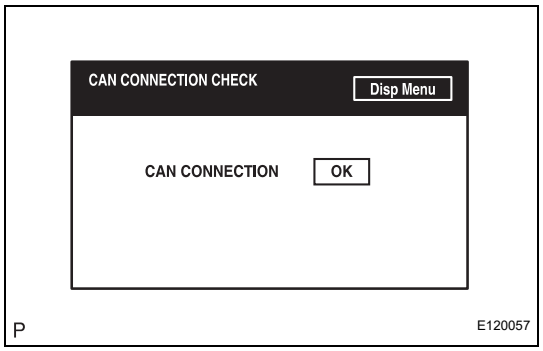
(b) When the "Vehicle Signal Check Mode" screen is displayed, check all the vehicle signal conditions.
HINT:
- Only conditions having inputs are displayed.
- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-31).

NS



7. CAN CHECK

(a) Select "CAN Check" from the "Display Check" screen.



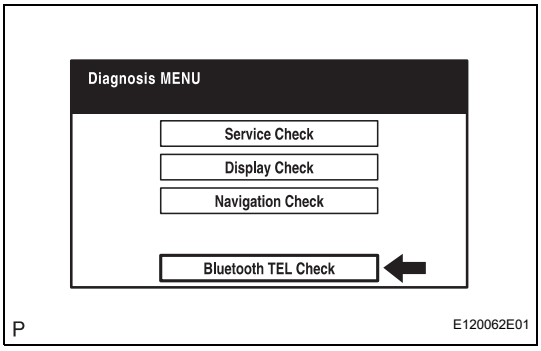
(b) Check the CAN connection check result.
HINT:
For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-31).

BLUETOOTH TEL CHECK MODE

HINT:
Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. **ENTER DIAGNOSTIC MODE (See page NS-47)**

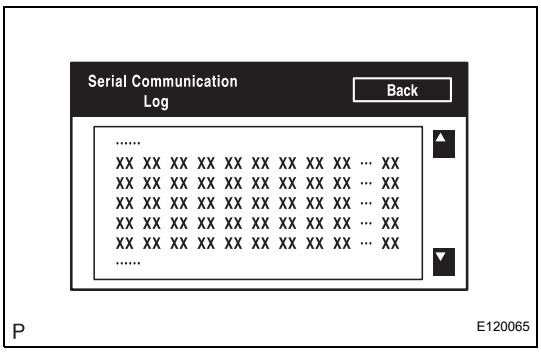
2. **"BLUETOOTH" TEL CHECK**
   (a) Select "'Bluetooth' TEL Check" from the "Diagnosis MENU" screen.

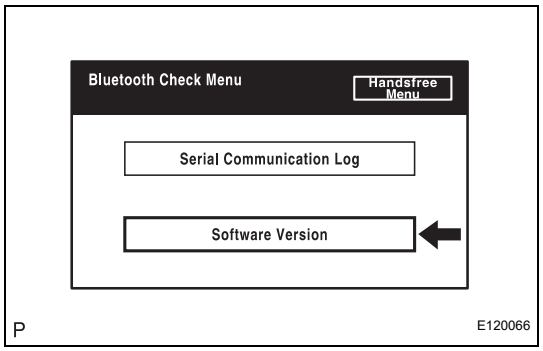


3. **"BLUETOOTH" CHECK**
   (a) Select "'Bluetooth' Check" from the "'Bluetooth' Handsfree Check Menu" screen.

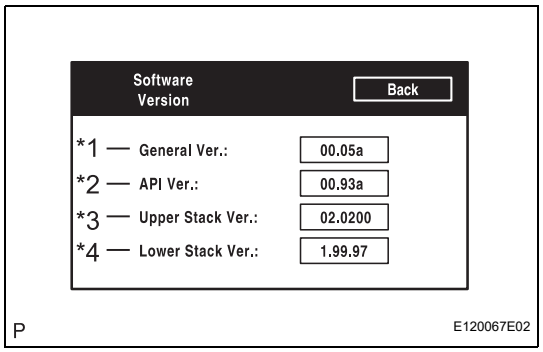
   (b) Select "Serial Communication Log" from the "'Bluetooth' Check Menu" screen.

   (1) The communication log data in the display ECU are displayed on this screen.
   HINT:
   The displayed data can be used as a reference.





(c) Select "Software Version" from the "'Bluetooth' Check Menu" screen.



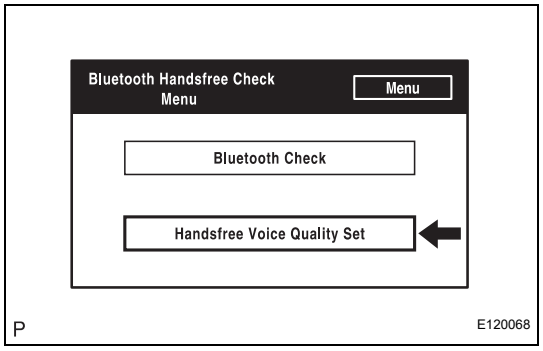
(1) Check the software version of the "Bluetooth" module.

NS

Screen Description:

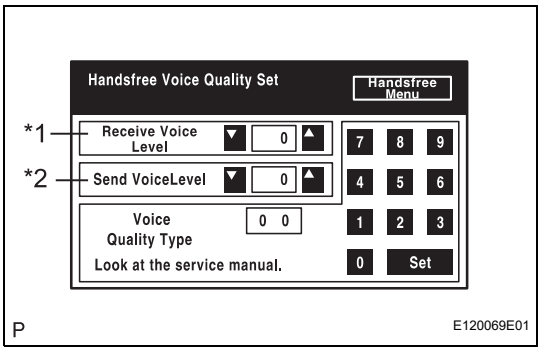
Display	Contents
General Version/*1	• General software version of "Bluetooth" module • If any of the API version, upper stack version, and lower stack version is updated, the general version is upgraded.
API Version/*2	API software version is displayed.
Upper Stack Version/*3	Upper Stack version is displayed.
Lower Stack Version/*4	Lower Stack version is displayed.

HINT:
This function is controlled by the built-in display ECU.



4. HANDSFREE VOICE QUALITY SET

(a) Select "Handsfree Voice Quality Set" from the "'Bluetooth' Handsfree Check Menu" screen.



(b) Check the handsfree voice level.

Screen Description:

Display	Contents
Received voice level adjustment/*1	Setting possible for the voice level received from "Bluetooth" compatible phones.
Sent voice level adjustment/*2	Setting possible for the voice level sent to "Bluetooth" compatible phones.

HINT:
This function is controlled by the built-in display ECU.
NOTICE:
"Voice Quality Type" should not be changed.

NAVIGATION CHECK MODE

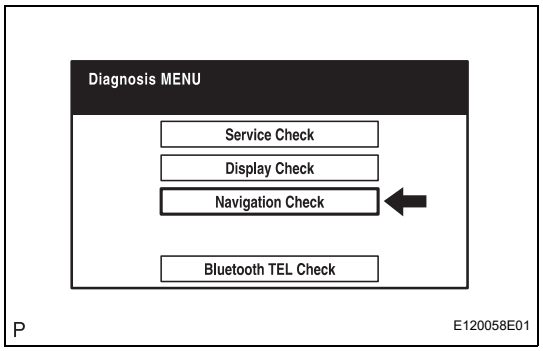
HINT:

- This mode displays GPS satellite information.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. ENTER DIAGNOSTIC MODE (See page NS-47)

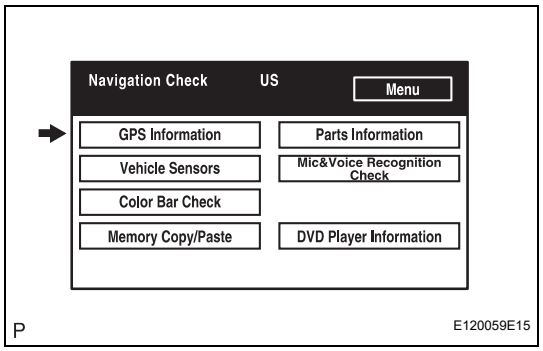
2. NAVIGATION CHECK

(a) Select "Navigation Check" from the "Diagnosis MENU" screen.



3. GPS INFORMATION

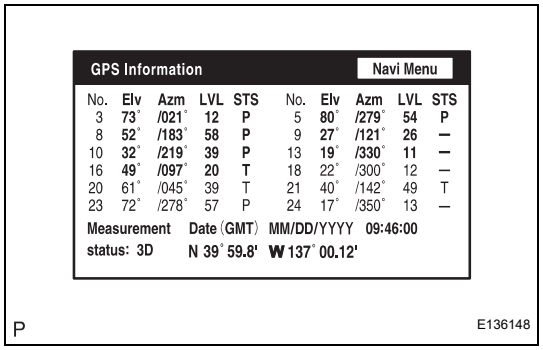
(a) Select "GPS Information" from the "Navigation Check" screen.



(b) When GPS information is displayed, check the GPS conditions.

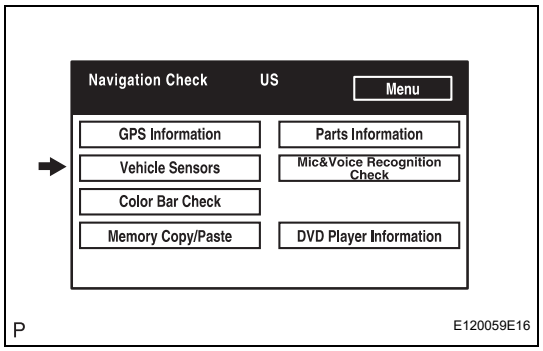
HINT:

- This screen is updated once per second when input signals to the vehicle are changed.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-31).

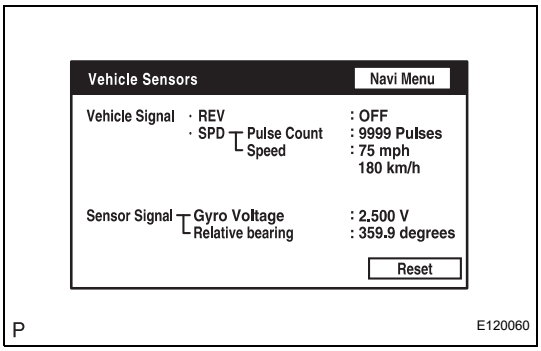


4. VEHICLE SENSORS

(a) Select "Vehicle Sensors" from the "Navigation Check" screen.



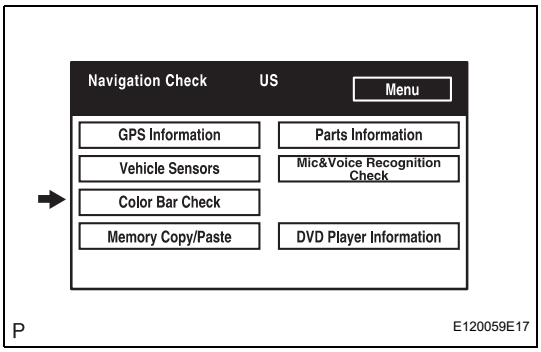
NS



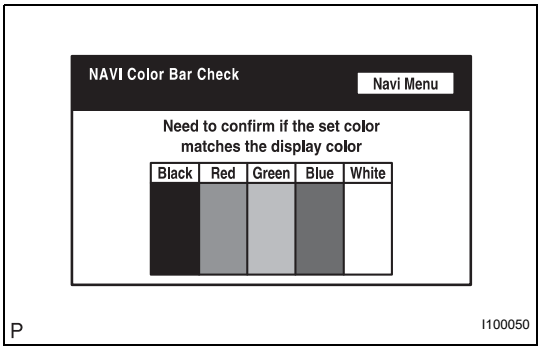
(b) Check all the signals and sensors when vehicle signal information is displayed.
HINT:
- This screen is updated once per second when input signals to the vehicle are changed.
- This screen displays vehicle signals input to the built-in navigation ECU.
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-31).

5. COLOR BAR CHECK

(a) Select "Color Bar Check" from the "Navigation Check" screen.

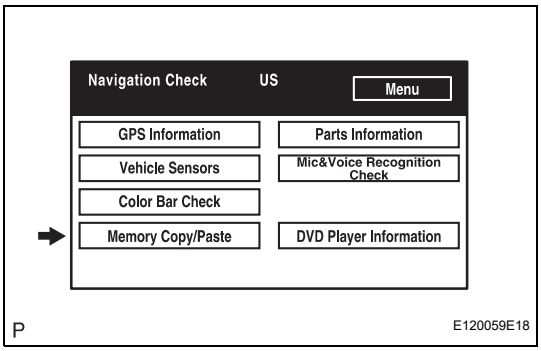


(b) Check each color of the color bar when the "NAVI Color Bar Check" screen is displayed.
HINT:
- Colors will not be displayed full-screen as in "Display Check Mode".
- This screen displays the built-in navigation ECU display color.



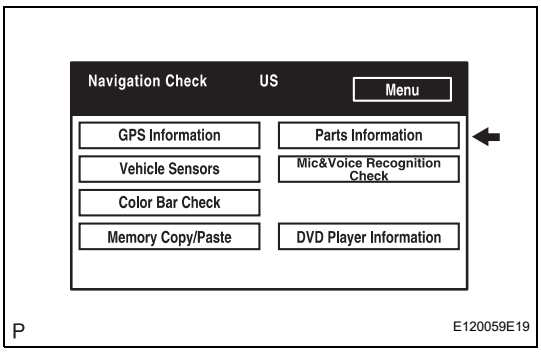
6. MEMORY COPY/PASTE CHECK

HINT:
This function cannot be used.

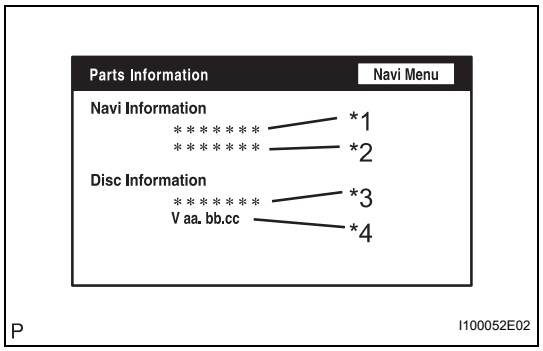


7. PARTS INFORMATION

(a) Select "Parts Information" from the "Navigation Check" screen.



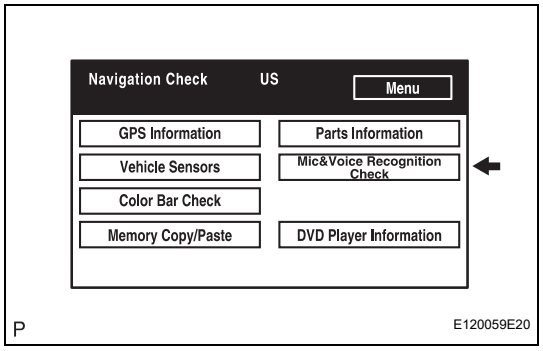
NS



(b) Check the navigation and disc information when the "Parts Information" screen is displayed.

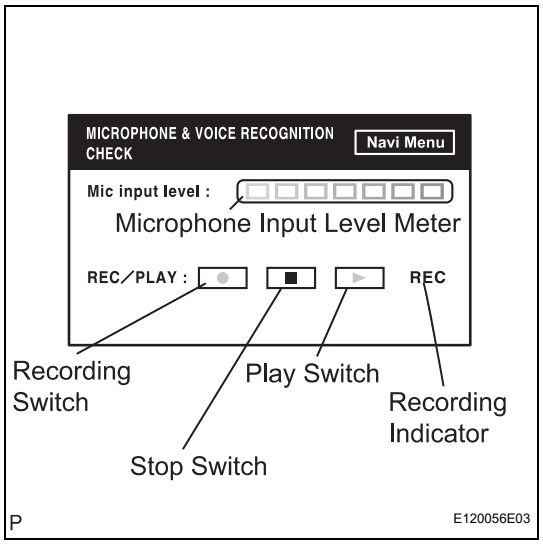
Screen Description:

Display	Contents
Navigation Manufacturer/*1	Radio and navigation assembly manufacturer is displayed.
Navigation Version/*2	Radio and navigation assembly version is displayed.
Disc Manufacturer/*3	Map disc manufacturer is displayed.
Disc Version/*4	Map disc version is displayed.



8. MIC & VOICE RECOGNITION CHECK

(a) Select "Mic & Voice Recognition Check" on the "Navigation Check" screen to display the "MICROPHONE & VOICE RECOGNITION CHECK" screen.



(b) When voice is input into the microphone, check that the microphone input level meter changes according to the input voice.

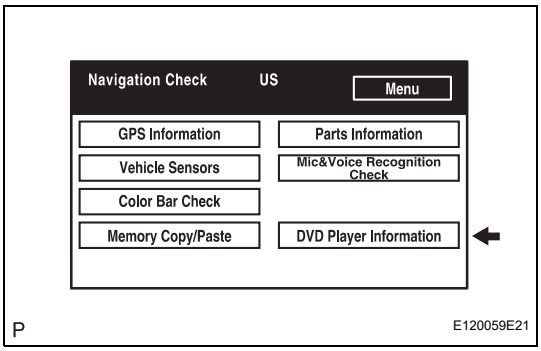
(c) Push the recording switch and perform voice recording.

(d) Check that the recording indicator remains on while recording and that the recorded voice is played normally.

HINT:

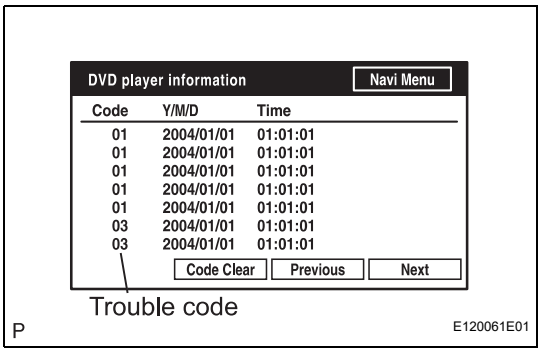
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-31).
- This function is controlled by the built-in navigation ECU.

NS



9. DVD PLAYER INFORMATION CHECK

(a) Select "DVD Player Information" from the "Navigation Check" screen.



(b) Check for DTCs.
HINT:
- This is a DVD player check function in the radio and navigation assembly (built-in navigation ECU).
- For details of this function, refer to DIAGNOSIS DISPLAY DETAILED DESCRIPTION (See page NS-31).

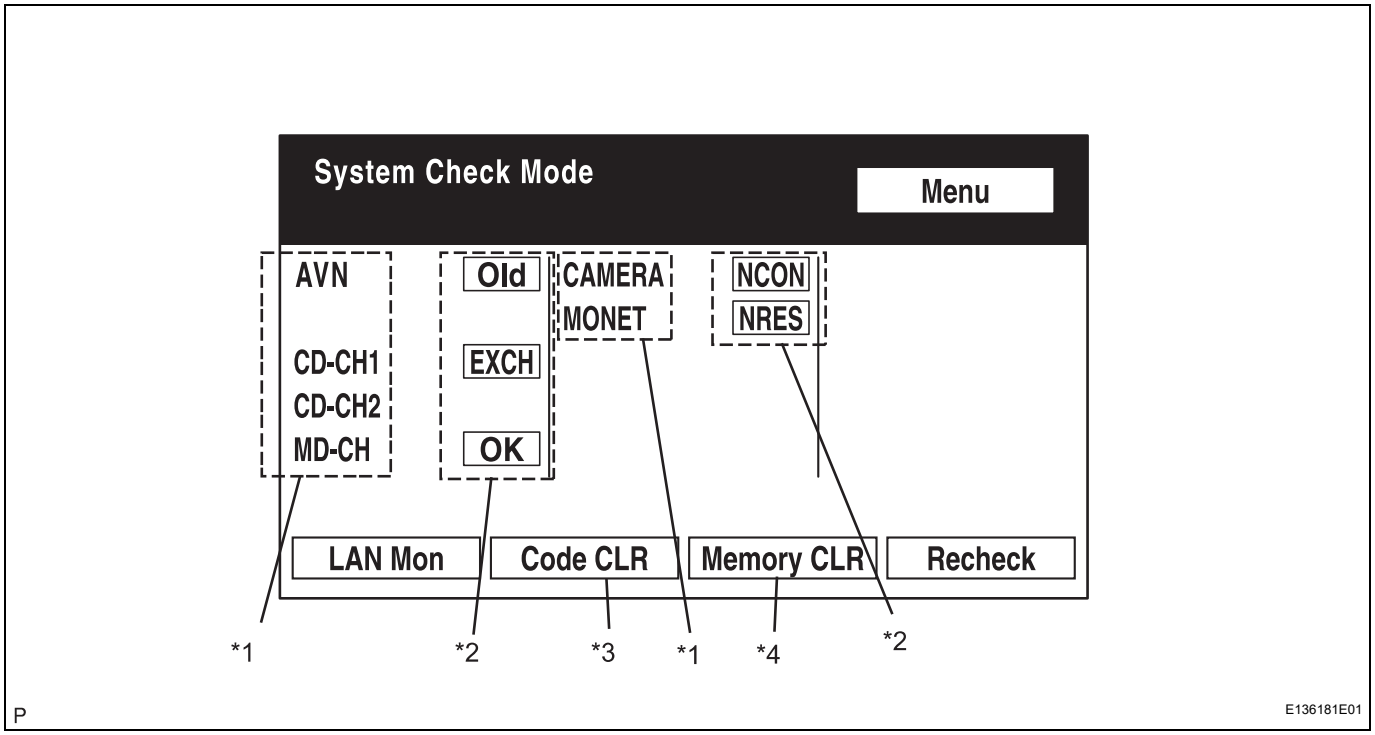
DIAGNOSIS DISPLAY DETAILED DESCRIPTION

HINT:

- This section contains a detailed description of displays within diagnostic mode.
- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.

1. SYSTEM CHECK

(a) System Check Mode Screen



(1) Device Names and Hardware Address/*1

HINT:

- Registered device names are displayed.
- If a device name is unknown to the system, its physical address is shown instead.

Address No.	Name	Address No.	Name
110	EMV	120	AVX
128	1DIN TV	140	AVN
144	G-BOOK	178	NAVI
17C	MONET	190	AUDIO H/U
1AC	CAMERA-C	1B0	Rr-TV
1C0	Rr-CONT	19D	BT-HF
1C4	PANEL	1C6	G/W
1C8	FM-M-LCD	1D8	CONT-SW
1EC	Body	118	EMVN
1F1	XM	1F2	SIRIUS
230	TV-TUNER	240	CD-CH2
250	DVD-CH	280	CAMERA
360	CD-CH1	3A0	MD-CH

Address No.	Name	Address No.	Name
17D	TEL	440	DSP-AMP
530	ETC	1F6	RSE
1A0	DVD-P	1D6	CLOCK
238	DTV	480	AMP

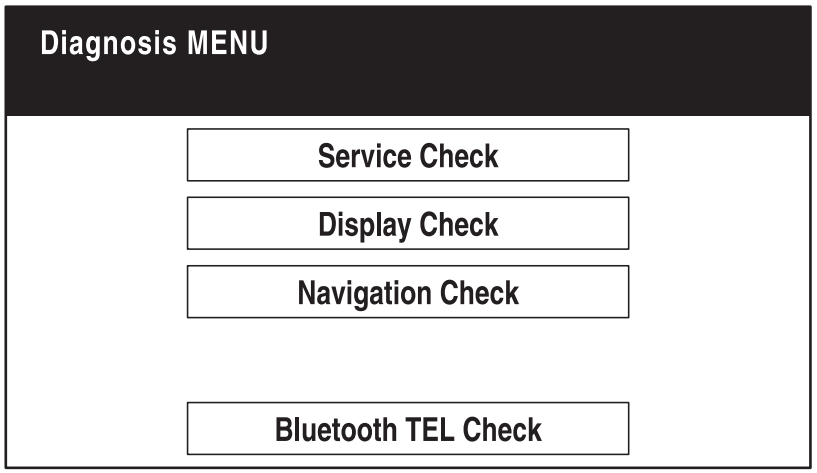
(2) Check Result/*2
HINT:
Result codes for all devices are displayed.

Result	Meaning	Action
OK	The device did not respond with a DTC (excluding communication DTCs from the AVC-LAN).	-
EXCH	The device responds with a "replace"-type DTC.	Check the DTC in "Unit Check Mode" and replace the device.
CHEK	The device responds with a "check"-type DTC.	Check the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	1. Check the power supply wire harness of the device. 2. Check the AVC-LAN of the device.
Old	The device responds with an "old"-type DTC.	Check the DTC in "Unit Check Mode".
NRES	The device responds in diagnostic mode, but gives no DTC information.	1. Check the power supply wire harness of the device. 2. Check the AVC-LAN of the device.

(3) Code Clear/*3
- Present DTCs are cleared.
- Press the "Code CLR" switch for 3 seconds.

(4) Memory Clear/*4
- Present and past DTCs and registered connected device names are cleared.
- Press the "Memory CLR" switch for 3 seconds.

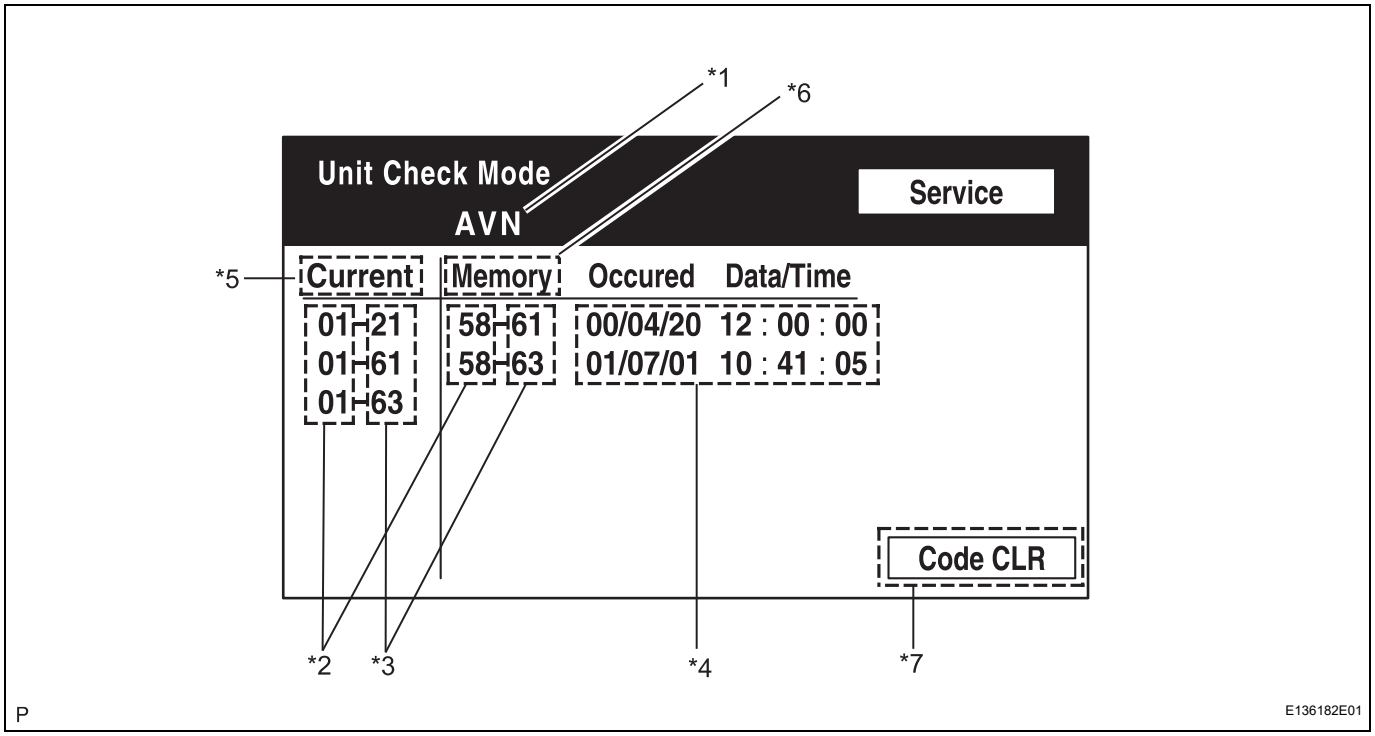
(b) Diagnosis MENU Screen



P
E120070E01

HINT:
Each item is grayed out or not displayed based on the device settings.

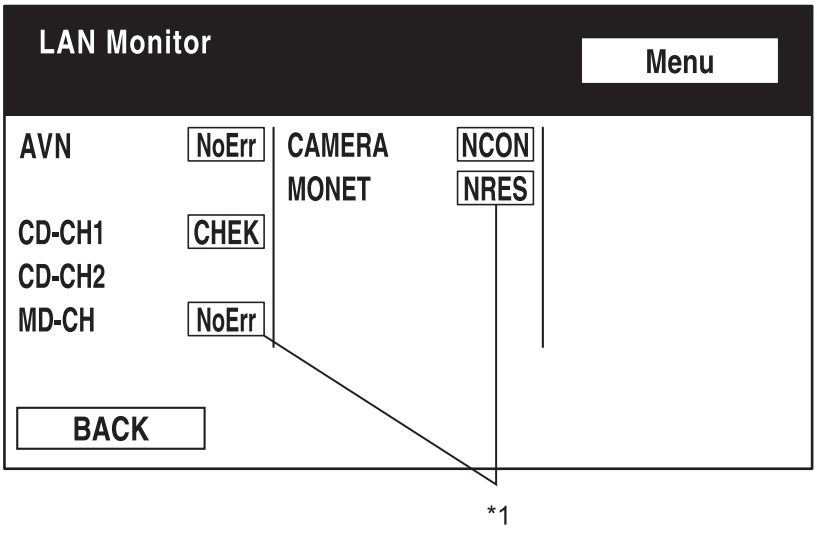
(c) Unit Check Mode Screen



Screen Description:

Display	Contents
Device name/*1	Target device
Segment/*2	Target device logical address
DTC/*3	DTC (Diagnostic Trouble Code)
Timestamp/*4	The time and date of past DTCs are displayed. (The year is displayed in 2-digit format.)
Present code/*5	DTCs output at the service check are displayed.
Past code/*6	Diagnostic memory results and recorded DTCs are displayed.
Diagnosis clear switch/*7	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

(d) LAN Monitor (Original) Screen



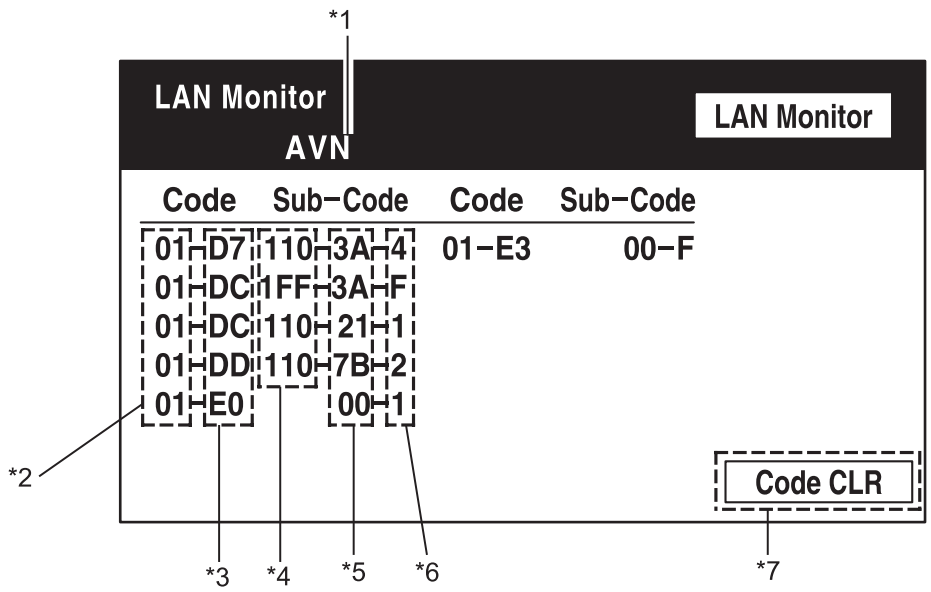
P

E136183E01

(1) Check Result/*1
HINT:
Check results of all the devices are displayed.

Result	Meaning	Action
No Err (OK)	There are no communication DTCs.	-
CHEK	The device responds with a "check"-type DTC.	Check the DTC in "Unit Check Mode".
NCON	The device was previously present, but does not respond in diagnostic mode.	1. Check the power supply wire harness of the device. 2. Check the AVC-LAN of the device.
Old	The device responds with an "old"-type DTC.	Check the DTC in "Unit Check Mode".
NRES	The device responds in diagnostic mode, but gives no DTC information.	1. Check the power supply wire harness of the device. 2. Check the AVC-LAN of the device.

(e) LAN Monitor (Individual) Screen



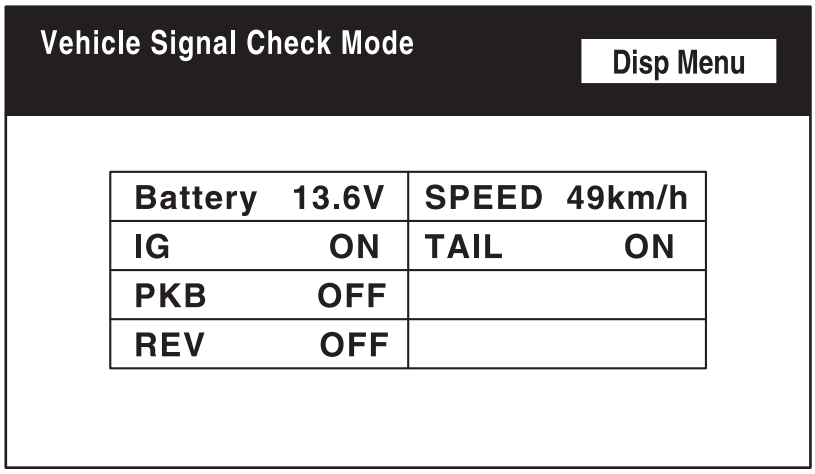
NS

Screen Description:

Display	Contents
Device name/*1	Target device
Segment/*2	Target logical address
DTC/*3	DTC (Diagnostic Trouble Code)
Sub-code (device address)/*4	Physical address stored with DTC (If there is no address, nothing is displayed.)
Connection check No./*5	Connection check number stored with DTC
DTC occurrence/*6	Number of times the same DTC has been recorded
Diagnosis clear switch/*7	Pushing this switch for 3 seconds clears the diagnostic memory data of the target device. (Both response to diagnostic system check result and the displayed data are cleared.)

2. DISPLAY CHECK

(a) Vehicle Signal Check Mode Screen



P E120073

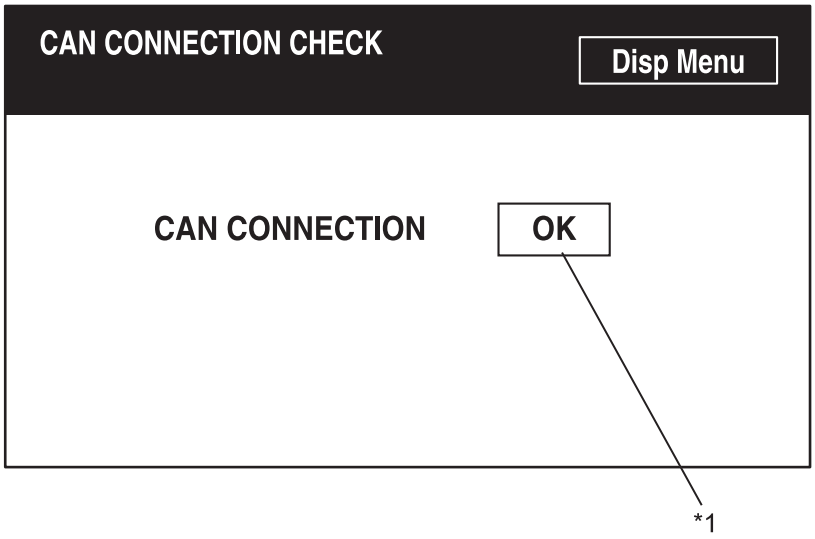
Screen Description:

Name	Contents
Battery	Battery voltage is displayed.
PKB	Parking brake ON/OFF state is displayed.
REV	Reverse signal ON/OFF state is displayed.
IG	Power switch ON/OFF state is displayed.
TAIL	TAIL signal (Light control switch) ON/OFF state is displayed.
SPEED	Vehicle speed is displayed in km/h.

HINT:

- Only items sending a vehicle signal will be displayed.
- This screen is updated once per second when input signals to the vehicle are changed.

(b) CAN Connection Check Screen



P

E120075E01

Screen Description:

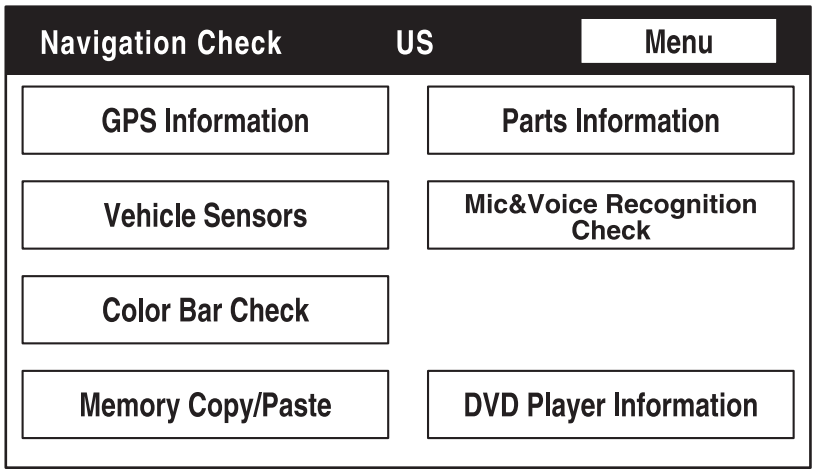
Name	Contents
CAN connection check result/*1	• For systems connected to the CAN system, the results of the CAN connection check are displayed. • "NG" - The power switch is on (ACC or IG) and the CAN communication lines are malfunctioning or the CAN bus lines are not connected. • "OK" - The power switch is on (ACC or IG) and the CAN communication lines are normal. • Blank - CAN connection check is performed with the power switch on (ACC) or off.

HINT:
When the power switch is off, the bus lines are disconnected, or a malfunction occurs in the bus lines while the CAN connection check result is being displayed, the problem will be reflected on the screen in real time.

NS

3. NAVIGATION CHECK

(a) Navigation Check Screen

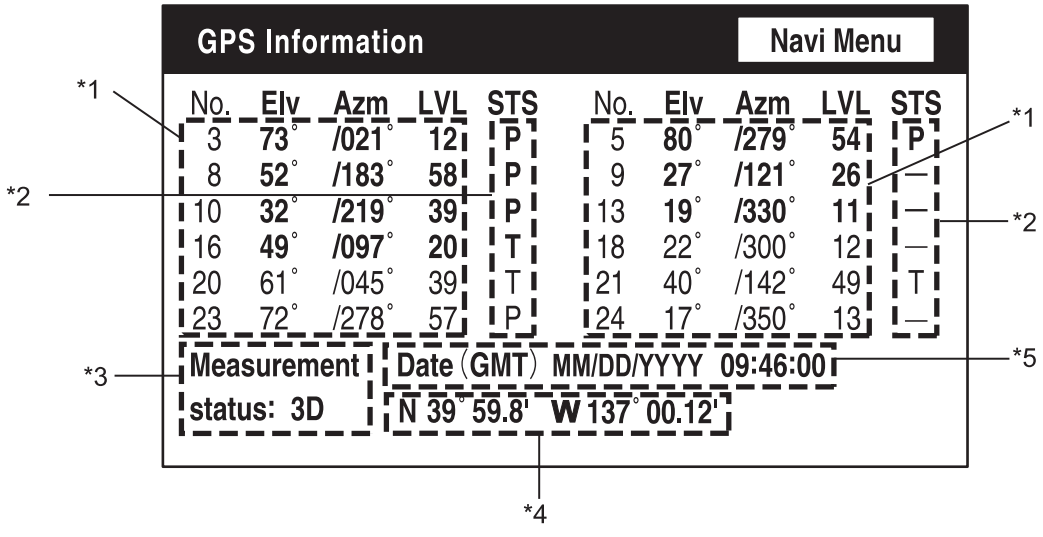


P

E120076E01

HINT:
Each item is grayed out or not displayed based on the device settings.

(b) GPS Information Screen



P

E136147E02

(1) Satellite information/*1
Information from a maximum of 12 satellites is displayed on the screen. This information includes the target GPS satellite number, elevation angle, direction, and signal level.

(2) Receiving condition/*2

(DENSO model):

Display	Contents
T	The system is receiving a GPS signal, but is not using it for location.
P	The system is using the GPS signal for location.
-	The system cannot receive a GPS signal.

(AISIN AW model):

Display	Contents
01H	The system cannot receive a GPS signal.
02H	The system is tracing a satellite.
03H	The system is receiving a GPS signal, but is not using it for location.
04H	The system is using the GPS signal for location.

Measurement information/*3:

Display	Contents
2D	2-dimensional location method is being used.
3D	3-dimensional location method is being used.
NG	Location data cannot be used.
Error	Reception error has occurred.
-	Any other state.

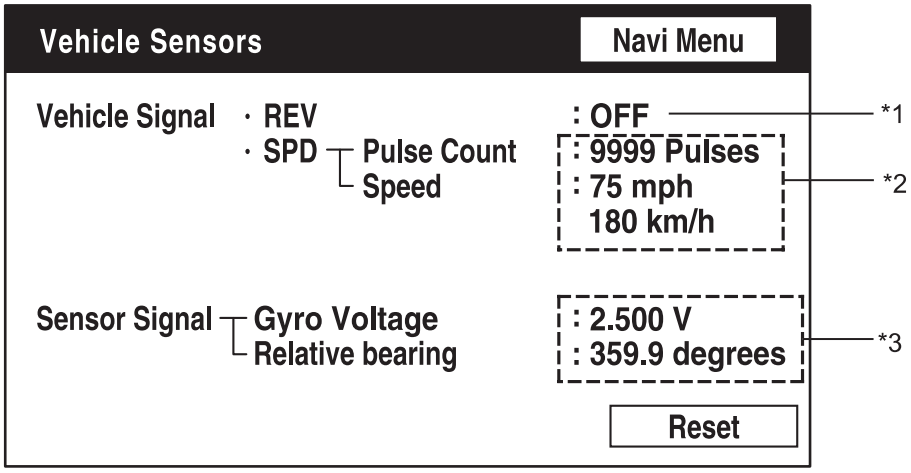
Position information/*4

Display	Contents
Position	Latitude and longitude information on the current position is displayed.

Date information/*5:

Display	Contents
Date	The date/time information obtained from GPS signal is displayed in Greenwich mean time (GMT). The last 4 digits are displayed.

(c) Vehicle Sensors Screen



P

E120077E01

NS

Vehicle signal:

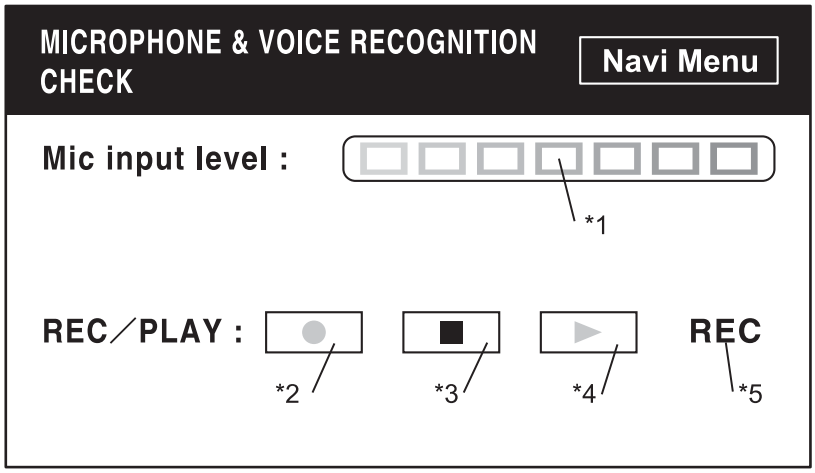
Display	Contents
REV/*1	REV signal ON/OFF state is displayed.
SPD/*2	SPD signal condition is displayed.

Sensor signal:

Display	Contents
Gyro sensor/*3	Gyro sensor output condition is displayed (when the vehicle runs straight or is stationary, the voltage is approximately 2.5 V).

HINT:
Signals are updated once per second only when vehicle sensor signals are changed.

(d) Microphone & Voice Recognition Check Screen



P

E125119E01

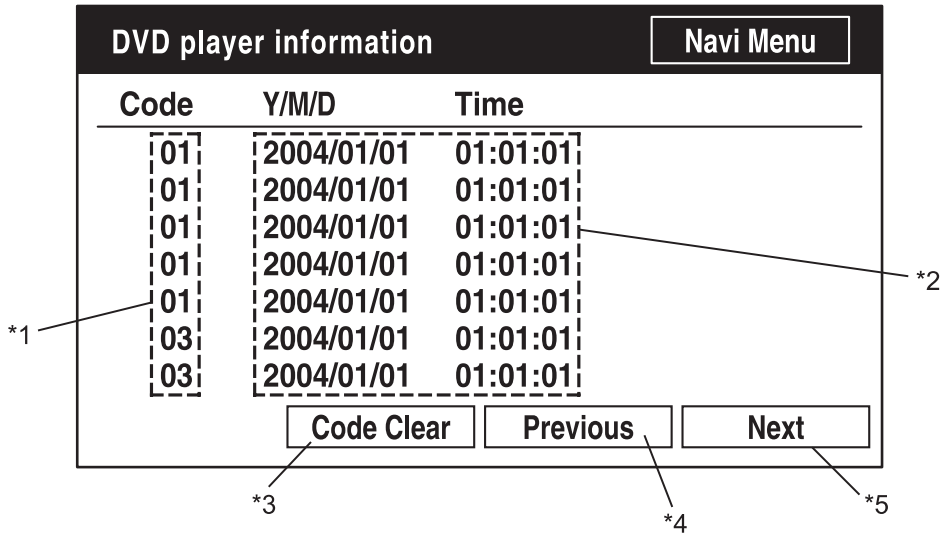
Screen Description:

Display	Contents
Microphone input level meter/*1	Monitors the microphone input level every 100 ms and displays the results in 8 different levels.
Recording switch/*2	Starts recording.
Stop switch/*3	Stops recording.
Play switch/*4	Plays the recorded voice.
Recording indicator/*5	Comes on while recording.

HINT:

- The microphone input function is on at all times when this screen is displayed.
- While recording or playing, the switches other than the stop switch cannot be pushed.
- When no voice is recorded, the play switch cannot be pushed.
- Recording will stop after 5 seconds or by pushing the stop switch.

(e) DVD Player Information Screen



P E120078E01

Screen Description:

Display	Contents
Trouble code/*1	Each code corresponding to the malfunctions is displayed. For details, refer to "Trouble Code Description".
Occurrence time/*2	• The date (year, month, day) and time (hour, minute, second) when the trouble code was detected are displayed as a time stamp. (Greenwich mean time) • The time data to be displayed are received from the GPS receiver.
Trouble code clear switch/*3	All code data being displayed are cleared by pushing this switch for 3 seconds.
Returning switch/*4	The previous page is displayed. If the current displayed page is the first page, this switch cannot be operated.
Proceeding switch/*5	The next page is displayed. If the current displayed page is the last page, this switch cannot be operated.

Trouble Code Description:

Code	Malfunction	Countermeasure
01	Cannot be recognized	Replace radio and navigation assembly.
03	Cannot be read	Follow the inspection procedure for DTC 58-42 (See page NS-83).

HINT:
This is a DVD player check function in the radio and navigation assembly (built-in navigation ECU).

NS

PROBLEM SYMPTOMS TABLE

HINT:

- Before inspecting the suspected areas listed in the table below, check the fuse and relay.
- Before inspecting the suspected areas listed in the table below, check the DTCs.
- Methods used to verify the cause of the problem are listed in order of probability in the suspected area column.

Display function:

Symptom	Suspected Area	See page
Pressing PWR switch does not turn on system.	1. Proceed to "Pressing Power Switch does not Turn on System"	NS-101
	2. Radio and navigation assembly power source circuit	NS-189
	3. AVC-LAN circuit	NS-174
	4. Radio and navigation assembly	NS-192
Black screen (No image appears on navigation/audio screen).	1. Proceed to "Black Screen"	NS-146
	2. Illumination circuit	NS-155
	3. AVC-LAN circuit	NS-174
	4. Radio and navigation assembly	NS-192
Illumination for panel switch does not come on with TAIL switch on.	1. Proceed to "Illumination for Panel Switch does not Come on with TAIL Switch ON"	NS-111
	2. Illumination circuit	NS-155
	3. Radio and navigation assembly	NS-192
Display does not dim (Night Screen) when light control switch is turned on.	1. Proceed to "Display does not DIM when Light Control Switch is Turned ON"	NS-112
	2. Illumination circuit	NS-155
	3. Radio and navigation assembly	NS-192
Power does not turn off (The screen remains on).	1. Radio and navigation assembly power source circuit	NS-189
	2. Radio and navigation assembly	NS-192
Panel switches do not function.	1. Proceed to "Panel Switches do not Function"	NS-113
	2. Steering pad switch circuit	NS-151
	3. Radio and navigation assembly power source circuit	NS-189
	4. Radio and navigation assembly	NS-192
Touch panel switch does not function.	1. Proceed to "Touch Panel Switch does not Function"	NS-114
	2. Steering pad switch circuit	NS-151
	3. Radio and navigation assembly power source circuit	NS-189
	4. Radio and navigation assembly	NS-192
Display panel does not open, tilt, or tilts improperly.	1. Proceed to "Display Panel does not Open, Tilt, or Tilts Improperly"	NS-115
	2. Radio and navigation assembly power source circuit	NS-189
	3. Radio and navigation assembly	NS-192
Screen is distorted.	1. Radio and navigation assembly power source circuit	NS-189
	2. Radio and navigation assembly	NS-192
Screen flicker or color distortion.	1. Proceed to "Screen Flicker or Color Distortion"	NS-116
	2. Radio and navigation assembly power source circuit	NS-189
	3. Radio and navigation assembly	NS-192
Navigation function switches can be operated while vehicle is running.	Proceed to "Vehicle Speed Signal Circuit between Radio and Navigation Assembly and Combination Meter"	NS-147

Audio function:

Symptom	Suspected Area	See page
No sound can be heard from speakers (audio is mute).	1. Proceed to "No Sound can be Heard from Speakers"	NS-102
	2. Stereo component amplifier power source circuit	AV-140
	3. Proceed to "Mute Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier"	NS-171
	4. Proceed to "Sound Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier"	NS-167
	5. Speaker circuit	NS-162
	6. Stereo component amplifier	AV-140
	7. Radio and navigation assembly	NS-192
Radio broadcast cannot be received or poor reception.	Proceed to "Radio Broadcast cannot be Received or Poor Reception"	NS-108
CD cannot be inserted / played or CD is ejected right after insertion.	Proceed to "CD cannot be Inserted / Played or CD is Ejected Right After Insertion"	NS-104
CD cannot be ejected.	Proceed to "CD cannot be Ejected"	NS-103
CD sound skips.	Proceed to "CD Sound Skips"	NS-106
Abnormal noise occurs.	Proceed to "Noise Occurs"	NS-99
Poor sound quality in all modes (low volume).	1. Proceed to "Poor Sound Quality in All Modes (Low Volume)"	NS-118
	2. Proceed to "Mute Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier"	NS-171
	3. Stereo component amplifier power source circuit	AV-132
	4. Radio and navigation assembly power source circuit	NS-189
	5. Stereo component amplifier	AV-140
	6. Radio and navigation assembly	NS-192
External device sound cannot be heard or sound quality is bad (Stereo jack is used).	1. Proceed to "Sound Signal Circuit between Radio and Navigation Assembly and Stereo Jack Adapter"	NS-169
	2. Stereo jack adapter	AV-192
	3. Radio and navigation assembly	NS-192
ASL does not function.	Proceed to "Vehicle Speed Signal Circuit between Stereo Component Amplifier and Combination Meter"	AV-110

Navigation function:

Symptom	Suspected Area	See page
Map disc cannot be inserted.	1. Proceed to "Map Disc cannot be Inserted"	NS-119
	2. Radio and navigation assembly power source circuit	NS-189
	3. Radio and navigation assembly	NS-192
Map disc cannot be ejected.	1. Radio and navigation assembly power source circuit	NS-189
	2. Radio and navigation assembly	NS-192
Vehicle position mark deviates.	1. Proceed to "Vehicle Position Mark Deviates Greatly"	NS-120
	2. GPS antenna	NS-201
	3. Radio and navigation assembly	NS-192
Cursor or map rotates when vehicle is stopped.	1. Proceed to "Cursor or Map Rotates When Vehicle is Stopped"	NS-122
	2. Radio and navigation assembly	NS-192
Vehicle position mark is not updated.	1. Proceed to "Vehicle Position Mark is not Updated"	NS-123
	2. Map disc	-
	3. Radio and navigation assembly	NS-192
Current position display does not appear.	1. Proceed to "Current Position Display does not Appear"	NS-124
	2. Map disc	-
	3. GPS antenna	NS-201
	4. Radio and navigation assembly	NS-192

Symptom	Suspected Area	See page
GPS mark is not displayed.	1. Proceed to "GPS Mark is not Displayed"	NS-125
	2. GPS antenna	NS-201
	3. Radio and navigation assembly	NS-192
Voice guidance does not function.	1. Proceed to "Voice Guidance does not Function"	NS-128
	2. Proceed to "Mute Signal Circuit between Radio and Navigation Assembly and Stereo Component Amplifier"	NS-171
	3. Navigation voice circuit	NS-178
	4. Speaker circuit	NS-162
	5. Map disc	-
	6. Radio and navigation assembly	NS-192
	7. Stereo component amplifier	AV-140
Map display incomplete.	1. Proceed to "Map Display Incomplete"	NS-131
	2. Map disc	-
	3. Radio and navigation assembly	NS-192
Route cannot be calculated.	1. Proceed to "Route cannot be Calculated"	NS-132
	2. Map disc	-
	3. Radio and navigation assembly	NS-192
Voice recognition difficulty.	1. Proceed to "Voice Recognition Difficulty"	NS-133
	2. Radio and navigation assembly	NS-192
Voice is not recognized.	1. Proceed to "Voice is not Recognized"	NS-135
	2. Proceed to "Microphone Circuit between Microphone and Radio and Navigation Assembly"	NS-180
	3. Steering pad switch circuit	NS-151
	4. Microphone	AV-197
	5. Radio and navigation assembly	NS-192
Speed signal does not change in the navigation check mode.	Proceed to "Vehicle Speed Signal Circuit between Radio and Navigation Assembly and Combination Meter"	NS-147
Reverse signal does not change in the navigation check mode.	Reverse signal circuit	NS-176

Steering pad switch function:

Symptom	Suspected Area	See page
The system cannot be operated by the steering pad switch.	1. Steering pad switch circuit	NS-151
	2. Radio and navigation assembly	NS-192
Illumination for steering pad switch does not come on with TAIL switch on.	1. Illumination circuit	NS-155
	2. Radio and navigation assembly	NS-192

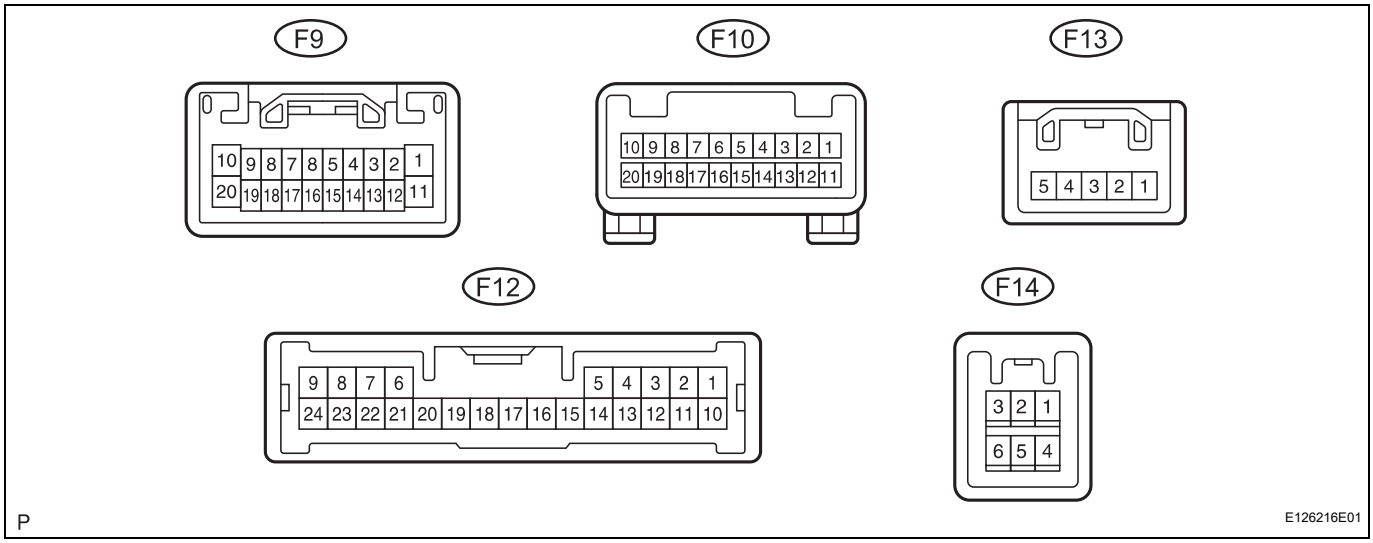
"Bluetooth" function:

Symptom	Suspected Area	See page
Cellular phone registration failure, phone directory transfer failure.	Proceed to "Cellular Phone Registration Failure, Phone Directory Transfer Failure"	NS-137
Cellular phone cannot send / receive.	1. Proceed to "Cellular Phone cannot Send / Receive"	NS-139
	2. Steering pad switch circuit	NS-151
	3. Radio and navigation assembly	NS-192
Cannot call in a certain place.	Proceed to "Cannot Call in a Certain Place"	NS-141
The other callers voice cannot be heard, is too quiet, or distorted.	1. Proceed to "The Other Callers Voice cannot be Heard, is too Quiet, or Distorted"	NS-142
	2. Navigation voice circuit	NS-178
	3. Radio and navigation assembly	NS-192
	4. Stereo component amplifier	AV-140

Symptom	Suspected Area	See page
The other caller cannot hear your voice, or your voice is too quiet or distorted.	1. Proceed to "The Other Caller cannot Hear Your Voice, or Your Voice is too Quiet or Distorted"	NS-144
	2. Proceed to "Microphone Circuit between Microphone and Radio and Navigation Assembly"	NS-180
	3. Microphone	AV-197
	4. Radio and navigation assembly	NS-192

TERMINALS OF ECU

1. RADIO AND NAVIGATION ASSEMBLY



NS

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
IG (F13-2) - GND (F9-20)	B - BR	Power switch on (IG)	Power switch off → on (IG)	Below 1 V → 10 to 14 V
SPD (F13-3) - GND (F9-20)	V - BR	Speed signal from combination meter	See "Vehicle Signal Check" (See page NS-23)	-
REV (F13-5) - GND (F9-20)	R - BR	Reverse signal	See "Vehicle Signal Check" (See page NS-23)	-
SWG (F10-6) - Body ground	P - Body ground	Steering pad switch ground	Always	Below 1 V
SW1 (F10-7) - SWG (F10-6)	O - P	Steering pad switch signal	No switch is pushed → SEEK+ switch pushed → SEEK- switch pushed → VOL+ switch pushed → VOL- switch pushed	4 V or higher → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V → Approx. 3.4 V
SW2 (F10-8) - SWG (F10-6)	Y - P	Steering pad switch signal	No switch is pushed → MODE switch pushed → ON HOOK switch pushed → OFF HOOK switch pushed → VOICE switch pushed	4 V or higher → Approx. 0.5 V → Approx. 0.9 V → Approx. 2.0 V → Approx. 3.4 V
IVO+ (F10-11) - GND (F9-20)	R - BR	Voice guidance signal	Voice guidance is playing	A waveform synchronized with sounds is output
IVO- (F10-12) - GND (F9-20)	G - BR	Voice guidance signal	Voice guidance is playing	A waveform synchronized with sounds is output
SLD1 (F10-13) - Body ground	Shielded - Body ground	Voice sound signal shielded ground	Always	Below 1 V
B (F9-1) - GND (F9-20)	L-Y - BR	Battery	Always	10 to 14 V
ILL+ (F9-2) - GND (F9-20)	G - BR	Illumination signal	Power switch on (IG), Light control switch OFF → TAIL or ON	Below 1 V → 10 to 14 V
ATX+ (F9-5) - GND (F9-20)	R - BR	AVC-LAN communication signal	Power switch on (ACC)	2 to 3 V
MUTE (F9-7) - GND (F9-20)	O - BR	Mute signal	Audio system is playing → Changing	Above 3.5 V → Below 1 V
R+ (F9-8) - GND (F9-20)	R - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specification
L+ (F9-9) - GND (F9-20)	B - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
SLD (F9-10) - Body ground	Shielded - Body ground	Shielded ground	Always	Below 1 V
ACC (F9-11) - GND (F9-20)	GR - BR	Accessory (ON)	Power switch off → on (ACC or IG)	Below 1 V → 10 to 14 V
ILL- (F9-12) - GND (F9-20)	W-B - BR	Illumination signal	Power switch on (IG), Light control switch OFF → TAIL or ON	Below 1 V →10 to 14 V
ANT (F9-13) - GND (F9-20)	O - BR	Power source of antenna	Radio switch ON and AM or FM	10 to 14 V
ATX- (F9-15) - GND (F9-20)	G - BR	AVC-LAN communication signal	Power switch on (ACC)	2 to 3 V
R- (F9-18) - GND (F9-20)	G - BR	Sound signal (Right)	Audio system is playing	A waveform synchronized with sounds is output
L- (F9-19) - GND (F9-20)	W - BR	Sound signal (Left)	Audio system is playing	A waveform synchronized with sounds is output
GND (F9-20) - Body ground	BR - Body ground	Ground	Always	Below 1 V
CANH (F12-2) - CANL (F12-3)	B - W	CAN bus line	Go to CAN communication system (See page CA-10)	-
TSW- (F12-12) - GND (F9 -20)	P - BR	Telephone relation switch signal	Always	Below 1 V
MACC (F12-17) - GND (F9-20)	LG - BR	Microphone AMP power supply	Power switch off → on (IG)	Below 1 V → 5 V
SGND (F12-18) - GND (F9-20)	P - BR	Ground	Always	Below 1 V
MIC+ (F12-19) - GND (F9-20)	G - BR	Microphone voice signal	See "Microphone Check" (See page NS-28)	-
MIC- (F12-20) - Body ground	R - Body ground	Microphone voice signal	See "Microphone Check" (See page NS-28)	-
VAR+ (F14-2) - GND (F9-20)	G - BR	Sound signal (Right)	External device is playing (When stereo jack is used)	A waveform synchronized with sounds is output
VAL+ (F14-3) - GND (F9-20)	R - BR	Sound signal (Left)	External device is playing (When stereo jack is used)	A waveform synchronized with sound is output
VA- (F14-5) - Body ground	BR - Body ground	Shielded ground	Always	Below 1 V
ADPG (F14 - 6) - GND (F9-20)	G - BR	External device connection detection signal	External device is connected	Below 1 V

NS

2. STEREO COMPONENT AMPLIFIER (See page AV-15)

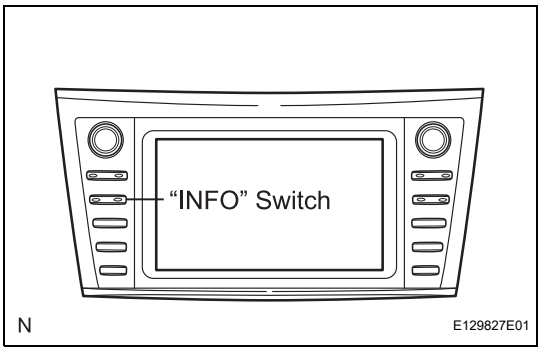
DTC CHECK / CLEAR

HINT:

- Illustrations may differ from the actual vehicle depending on the device settings and options. Therefore, some detailed areas may not be shown exactly the same as on the actual vehicle.
- If the system cannot enter the diagnostic mode, inspect all AVC-LAN communication components and repair or replace problem parts (See page NS-174).
- After the power switch is on (IG), check that the map is displayed before starting the diagnostic mode. Otherwise, some items cannot be checked.

1. START DIAGNOSTIC MODE

(a) There are 2 methods to start diagnostic mode. Start the mode by using one of them.

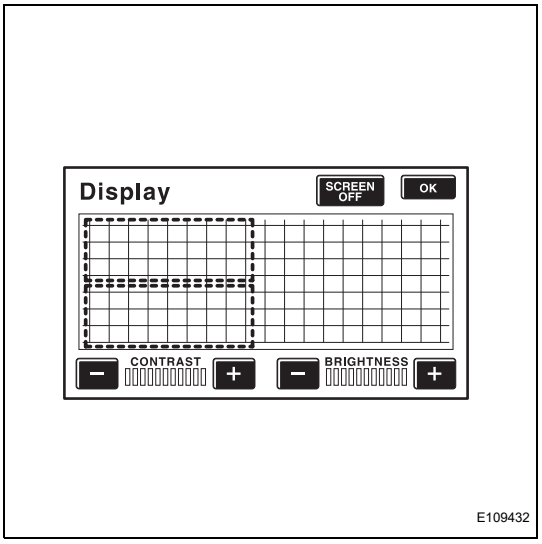


(b) Method 1

(1) READY-on state.

(2) While pressing and holding the "INFO" switch, operate the light control switch: OFF → Turn ON → Turn OFF → Turn ON → Turn OFF → Turn ON → Turn OFF.

(3) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.



(c) Method 2

(1) READY-on state.

(2) Switch to the "Display Check" screen.

(3) From the display quality adjustment screen, touch the corners of the screen in the following order: upper left → lower left → upper left → lower left → upper left → lower left.

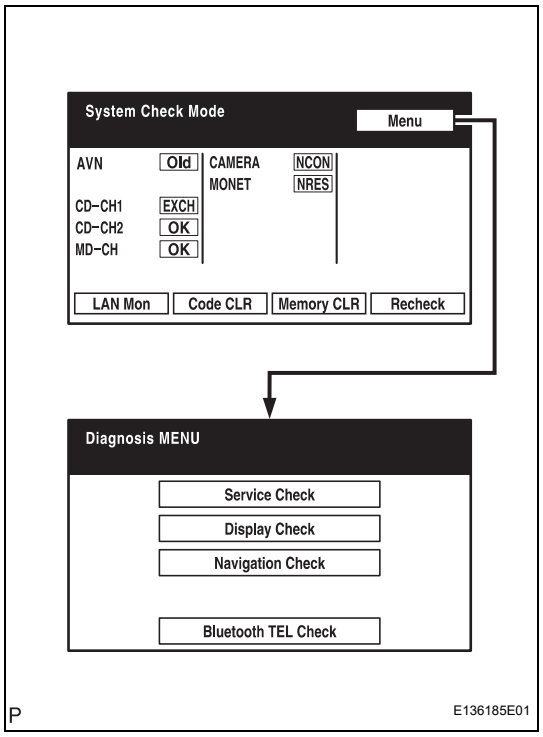
(4) The diagnostic mode starts and the "System Check Mode" screen will be displayed. Service inspection starts automatically and the result will be displayed.

2. FINISH DIAGNOSTIC MODE

(a) There are 2 methods to end diagnostic mode. Use one of them.

(1) Turn the power switch off.

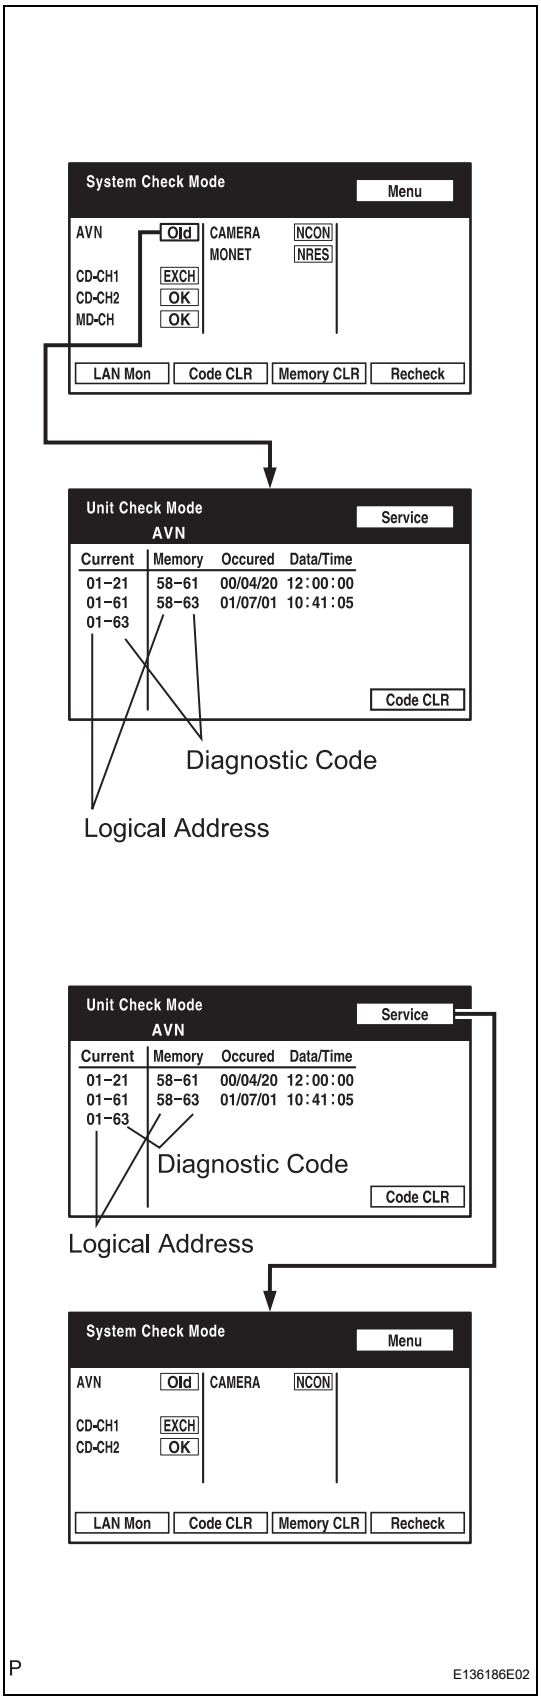
(2) Press and hold the "DISP" switch for 3 seconds.



3. DIAGNOSIS MENU

(a) The "Diagnosis MENU" screen will be displayed by pressing the "Menu" switch on the "System Check Mode" screen.

NS



4. CHECK DTC

(a) Read the system check result.

(1) If the check result is "EXCH", "CHEK" or "Old", touch the displayed check result to view the results on the "Unit Check Mode" screen and record them.

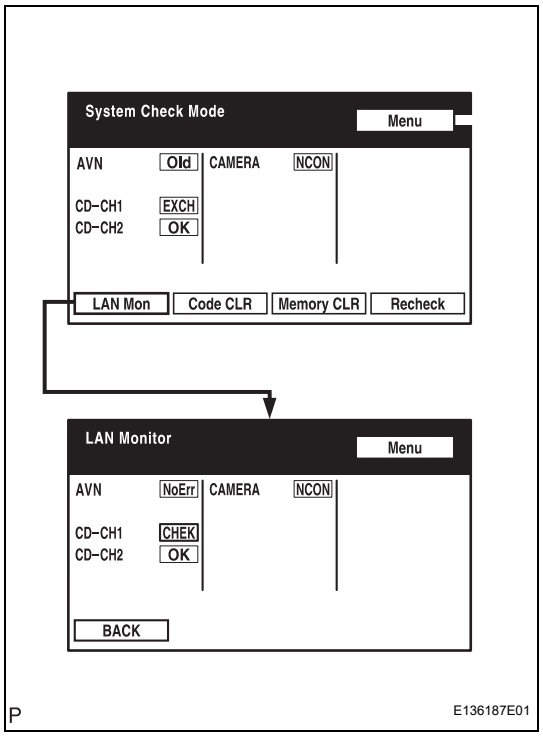
HINT:

- If all check results are "OK", go to communication DTC check.
- If a device name is not known, its physical address is displayed.

HINT:

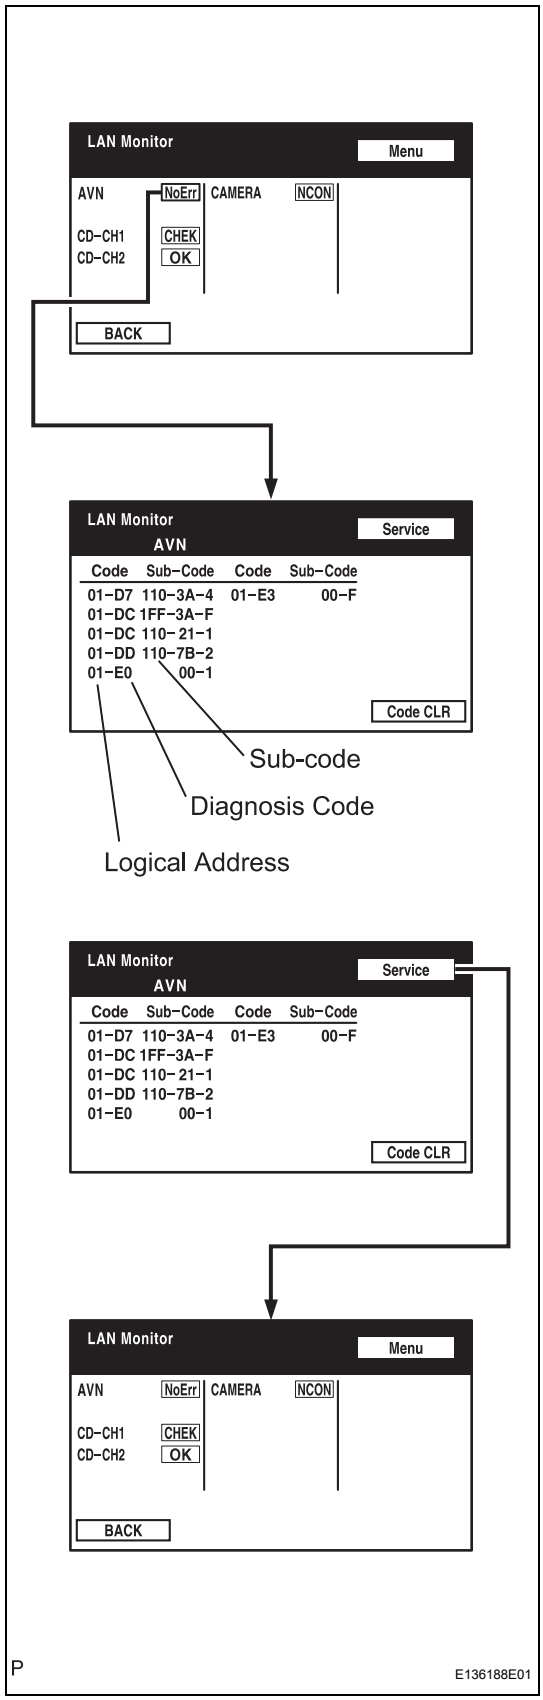
When proceeding to view the results of another device, press the "Service" switch to return to the "System Check Mode" screen. Repeat this step.

NS



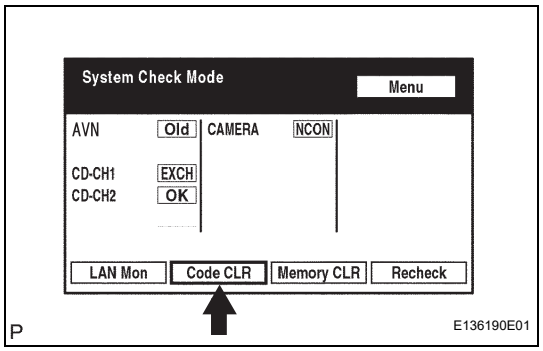
(b) Read the communication diagnostic check result.
(1) Return to the "System Check Mode" screen, and press the "LAN Mon" switch to enter the "LAN Monitor" screen.

NS



(2) If the check result is "CHEK" or "Old", touch the displayed check result to view the results on the individual communication diagnostic screen and record them.
HINT:
- If all check results are "No Err", the system judges that no DTC exists.
- The sub-code (relevant device) will be indicated by its physical address.
- When proceeding to view the results of another device, press the "Service" switch to return to the original "LAN Monitor" screen. Repeat this step.

NS

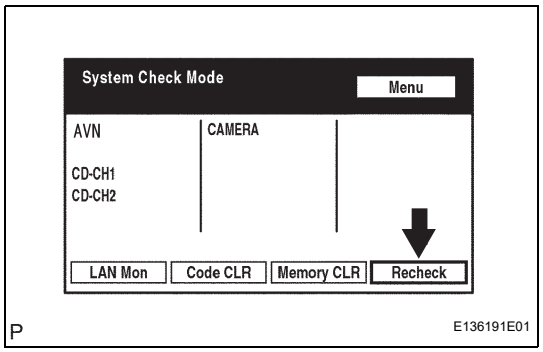


5. DTC CLEAR/RECHECK

(a) Clear DTC

(1) Press the "Code CLR" switch for 3 seconds.

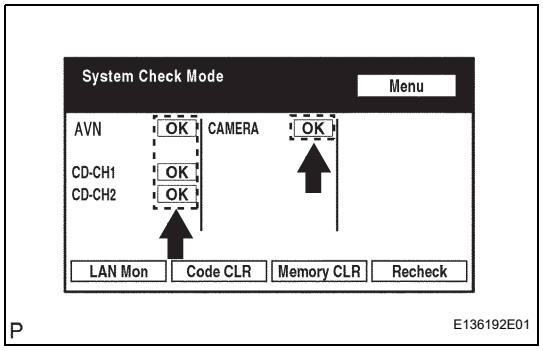
(2) The check results are cleared.



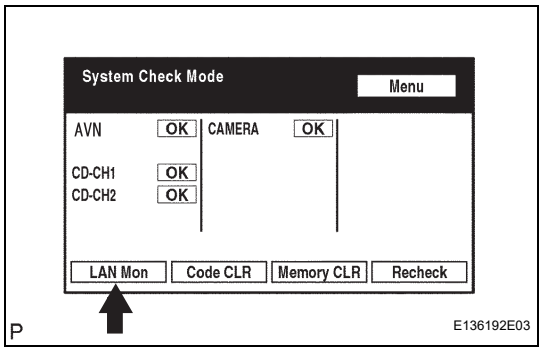
(b) Recheck

(1) Press the "Recheck" switch.

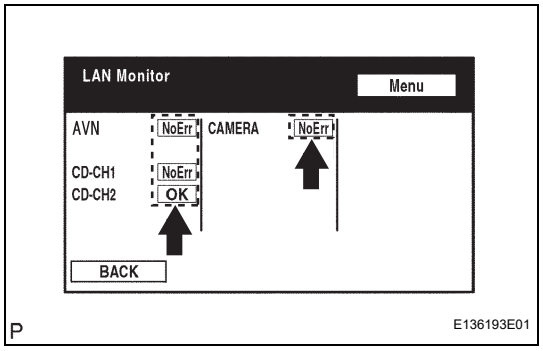
NS



(2) Confirm that all diagnostic codes are "OK" when the check results are displayed. If a code other than "OK" is displayed, troubleshoot again.



(3) Press the "LAN Mon" switch to change to the "LAN Monitor" screen.



(4) Confirm that all diagnostic codes are "No Err". If a code other than "No Err" is displayed, troubleshoot again.

DIAGNOSTIC TROUBLE CODE CHART

COMMUNICATION DIAGNOSIS:

DTC Code	Detection Item	Trouble Area	See page
01-21	ROM Error	Radio and navigation assembly	NS-57
01-22	RAM Error	Radio and navigation assembly	NS-57
01-D5	Absence of Registration Unit	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-58
01-D6	No Master	1. Radio and navigation assembly power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code 4. Component which has stored this code 5. Radio and navigation assembly	NS-60
01-D7	Connection Check Error	1. Radio and navigation assembly power source circuit 2. Power source circuit of the component which has stored this code 3. AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code 4. Component which has stored this code 5. Radio and navigation assembly	NS-60
01-D8	No Response for Connection Check	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-58
01-D9	Last Mode Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-58
01-DA	No Response Against ON / OFF Command	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-58

DTC Code	Detection Item	Trouble Area	See page
01-DB	Mode Status Error	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-58
01-DC	Transmission Error	If the same sub-code is recorded in other components, check harness for power supply and communication system of all components shown by code	NS-64
01-DD	Master Reset	1. Radio and navigation assembly power source circuit 2. AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code 3. Radio and navigation assembly 4. Component which has stored this code	NS-67
01-DE	Slave Reset	1. Power source circuit of the component shown by the sub-code 2. AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code 3. Component shown by the sub-code	NS-58
01-DF	Master Error	1. Radio and navigation assembly power source circuit 2. AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code 3. Radio and navigation assembly 4. Component which has stored this code	NS-71
01-E0	Registration Complete Indication Error	-	NS-74
01-E1	Voice Processing Device ON Error	1. Radio and navigation assembly power source circuit 2. AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code 3. Radio and navigation assembly 4. Component which has stored this code	NS-67
01-E2	ON / OFF Indication Parameter Error	Radio and navigation assembly	NS-75
01-E3	Registration Demand Transmission	-	NS-74
01-E4	Multiple Frame Incomplete	-	NS-74

DTC	01-21	ROM Error

DTC	01-22	RAM Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-21	A malfunction exists in ROM.	Radio and navigation assembly
01-22	A malfunction exists in RAM.	

INSPECTION PROCEDURE

HINT:
After the inspection is completed, clear the DTCs.

1	REPLACE RADIO AND NAVIGATION ASSEMBLY

NEXT

END

DTC	01-D5	Absence of Registration Unit

DTC	01-D8	No Response for Connection Check

DTC	01-D9	Last Mode Error

DTC	01-DA	No Response Against ON / OFF Command

DTC	01-DB	Mode Status Error

DTC	01-DE	Slave Reset

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D5 *1, *3	• A component shown by the sub-code is (was) disconnected from the system when power switch is turned on (ACC or IG). • The communication condition with the device that the code shows cannot be obtained when the engine starts.	• Power source circuit of the component shown by the sub-code • AVC-LAN circuit between the radio and navigation assembly and the component shown by the sub-code • Component shown by the sub-code
01-D8 *2, *3	A component shown by the sub-code is (was) disconnected from the system after engine start.	
01-D9 *1, *3	The device that had functioned before the engine stopped is (was) disconnected from the system when power switch is turned on (ACC or IG).	
01-DA *3	• No response is identified when changing mode. • Detected when sound and image do not change by switch operation.	
01-DB *1, *3	A dual alarm is detected.	
01-DE *3	A slave device has been disconnected after engine start.	

HINT:

- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: If the power connector is disconnected after the engine starts, this code is stored after 180 seconds.
- *3: If it is reported that the device does not exist during verification, check the power source circuit and AVC-LAN circuit for the device.

NOTICE:

- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio and navigation assembly is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:

Be sure to read DESCRIPTION before performing the following procedures.

1	**CHECK "RADIO AND NAVIGATION ASSEMBLY COMMUNICATION ERROR" IN FLOW CHART**

Refer to the radio and navigation assembly communication error (See page NS-186).

NEXT

END

DTC	01-D6	No Master

DTC	01-D7	Connection Check Error

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
01-D6 *1	When either of the following conditions is met: • The component which has stored the code has (had) been disconnected when the power switch is turned on (ACC or IG). • The master device has (had) been disconnected when this code is stored.	• Radio and navigation assembly power source circuit • Power source circuit of the component which has stored this code • AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code • Component which has stored this code • Radio and navigation assembly
01-D7 *2	When either of the following conditions is met: • The component which has stored the code has (had) been disconnected after the engine starts (started). • The master device has (had) been disconnected when this code is (was) stored.	

HINT:
- *1: Even if no fault is present, this trouble code may be stored depending on the battery condition or engine start voltage.
- *2: When 210 seconds have elapsed after disconnecting the power supply connector of the master component with the power switch on (ACC or IG), this code is stored.

NOTICE:
- **Before starting troubleshooting, be sure to clear DTCs to erase codes stored due to the reasons described in the HINT above. Then, check for DTCs and troubleshoot according to the output DTCs.**
- **The radio and navigation assembly is the master unit.**
- **Be sure to clear and recheck DTCs after the inspection is completed to confirm that no DTCs are output.**

INSPECTION PROCEDURE

NOTICE:
Be sure to read DESCRIPTION before performing the following procedures.

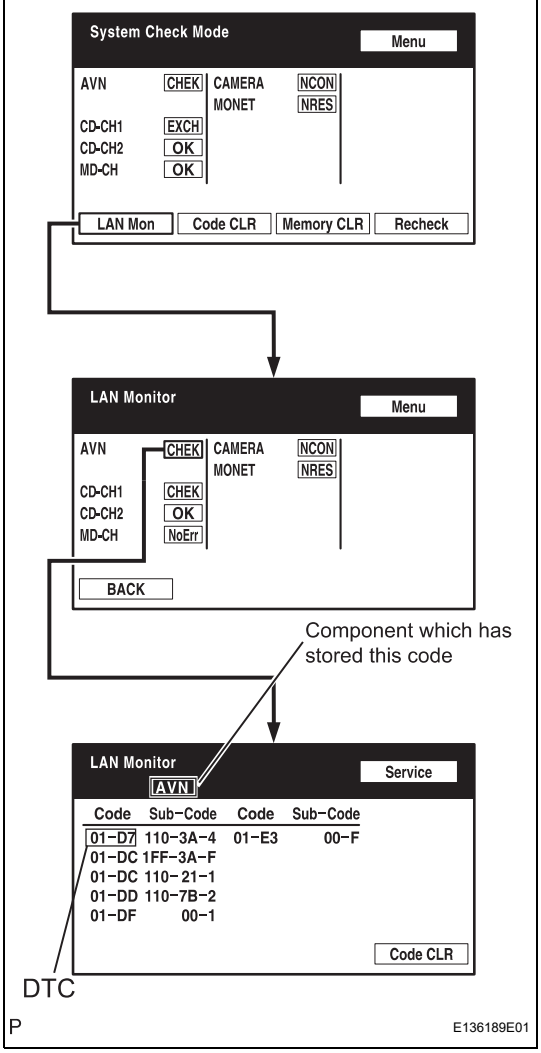
1	CHECK RADIO AND NAVIGATION ASSEMBLY POWER SOURCE CIRCUIT

Refer to the radio and navigation assembly power source circuit (See page NS-189).
If the power source circuit is operating normally, proceed to the next step.

NEXT

2 IDENTIFY THE COMPONENT WHICH HAS STORED THIS CODE

Example:



(a) Enter the diagnostic mode.
(b) Press the "LAN Mon" switch to change to "LAN Monitor" mode.
(c) Identify the component which has stored this code.

Component Table:

Display	Component
DSP-AMP	Stereo component amplifier

HINT:
"NAVI" is the component which has stored this code in the example shown in the illustration.

NEXT

3 CHECK POWER SOURCE CIRCUIT OF COMPONENT WHICH HAS STORED THIS CODE

(a) Inspect the power source circuit of the component which has stored this code.
If the power source circuit is operating normally, proceed to the next step.

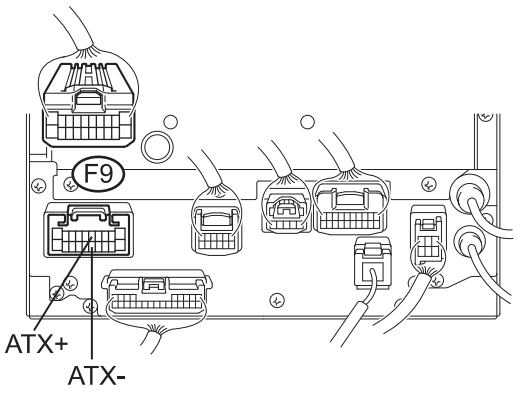
Component Table:

Component	Proceed to
Stereo component amplifier (DSP-AMP)	Stereo component amplifier power source circuit (See page AV-132)

NEXT

4	CHECK RADIO AND NAVIGATION ASSEMBLY

Wire Harness View:



(a) Disconnect the radio and navigation assembly connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
ATX+ (F9-5) - ATX- (F9-15)	Always	60 to 80 Ω

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

5	CHECK HARNESS AND CONNECTOR

HINT:
For details of the connectors, refer to "TERMINALS OF ECU" (See page NS-46).

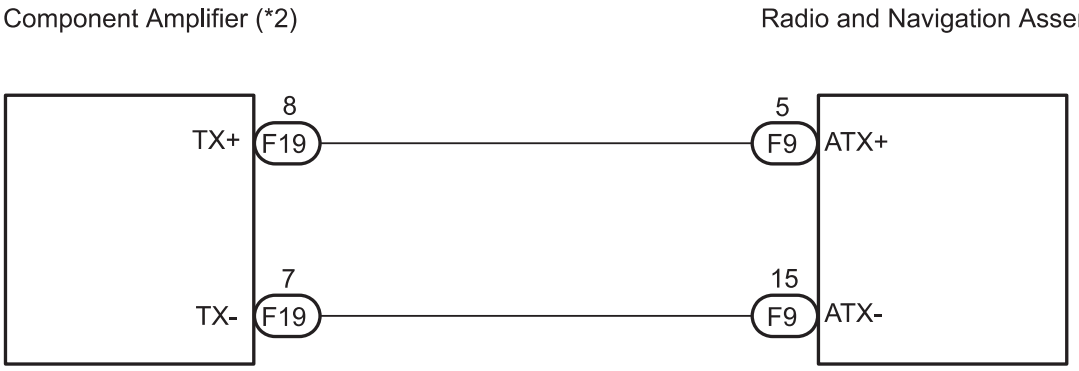
(a) Referring to the AVC-LAN wiring diagram below, check the AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code.
  (1) Disconnect all connectors between the radio and navigation assembly and the component which has stored this code.
  (2) Check for an open or short in the AVC-LAN circuit between the radio and navigation assembly and the component which has stored this code.

OK:

There is no open or short circuit.

NS

AVC-LAN WIRING DIAGRAM



*1: Master Unit

*2: Slave Unit

P

E111831E09

NS

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	REPLACE COMPONENT WHICH HAS STORED THIS CODE

(a) Replace the component which has stored this code with a normal one and check if the same problem occurs again.
OK:
Same problem does not occur.

NG → **REPLACE RADIO AND NAVIGATION ASSEMBLY**

OK

END

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedure to troubleshoot the power window control system.
- The intelligent tester should be used in step 4.

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK AND SYMPTOM CHECK

NEXT

3	PROBLEM SYMPTOMS TABLE

HINT:
See page WS-7.

NEXT

4	OVERALL ANALYSIS AND TROUBLESHOOTING

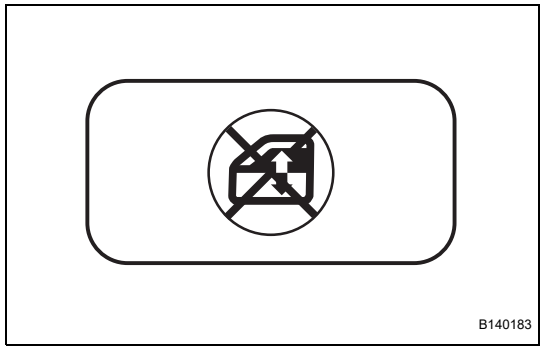
(a) Circuit inspection
(b) Terminal of ECU
HINT:
See page WS-8.

NEXT

5	ADJUST, REPAIR OR REPLACE

NEXT

END



OPERATION CHECK

1. CHECK WINDOW LOCK SWITCH

(a) Check that the front passenger side power window and rear power windows operation are disabled when the window lock switch of the power window master switch is pressed.

Standard:

Front passenger side power window and rear power windows operation are disabled.

(b) Check that the front passenger side power window and rear power windows can be operated when the window lock switch is pressed again.

Standard:

Front passenger side power window and rear power windows can be operated.

2. CHECK MANUAL UP/DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

Standard

Condition	Master Switch	Switch Operation	Power Window
Power switch on (IG)	Driver side	Pulled halfway up	UP (Closed)
		Pushed halfway down	DOWN (Open)

(b) Check that the power windows except the driver side power window operate as follows:

Standard

Condition	Switch	Switch Operation	Power Window
• Power switch on (IG) • Window lock switch OFF	Passenger side	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear LH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear RH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)

3. CHECK AUTO DOWN FUNCTION

(a) Check that the driver side power window operates as follows:

WS

Standard

Condition	Master Switch	Switch Operation	Power Window
Power switch on (IG)	Driver side	Pulled up fully	UP (Closed)
		Pushed down fully	DOWN (Open)

4. CHECK REMOTE MANUAL UP/DOWN FUNCTION

(a) Check that the power windows except the driver side power window operate as follows:

Standard

Condition	Master Switch	Switch Operation	Power Window
• Power switch on (IG) • Window lock switch OFF	Passenger side	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear LH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)
	Rear RH	Pulled up	UP (Closed)
		Pushed down	DOWN (Open)

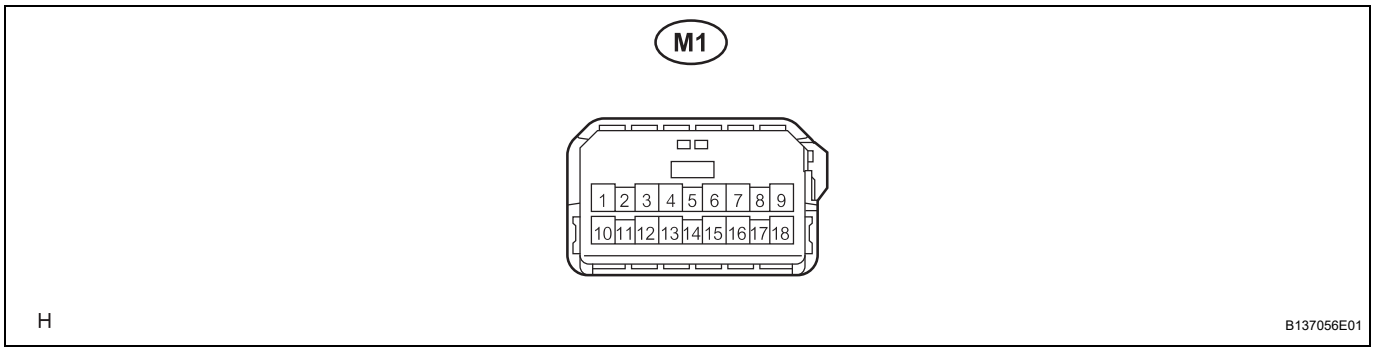
PROBLEM SYMPTOMS TABLE

POWER WINDOW CONTROL SYSTEM

Symptom	Suspected Area	See page
Power window does not operate with power window regulator master switch	1. POWER, RR DOOR LH/RH fuses	-
	2. Power window master switch circuit (power source)	WS-12
	3. Power window regulator motor circuit	WS-18
	4. Power window regulator master switch	WS-27
Front passenger side power window does not operate with power window regulator switch	1. Power window switch circuit (power source)	WS-15
	2. Power window regulator motor circuit (front passenger side)	WS-20
	3. Power window regulator switch (front passenger side)	WS-15
Rear LH side power window does not operate with power window regulator switch	1. Power window switch circuit (power source)	WS-16
	2. Power window regulator motor circuit (rear LH side)	WS-22
	3. Power window regulator switch (rear LH side)	WS-32
Rear RH side power window does not operate with power window regulator switch	1. Power window switch circuit (power source)	WS-17
	2. Power window regulator motor circuit (rear RH side)	WS-24
	3. Power window regulator switch (rear RH side)	WS-32
Remote UP/DOWN function does not operate	1. Power window regulator master switch	WS-12
	2. Wire harness	-
Power window can be operated after power switch is turned off even if operated conditions are not met	1. Front door courtesy switch	LI-105
	2. Wire harness	-

TERMINALS OF ECU

1. POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY



(a) Disconnect the M1 switch connector.
(b) Measure the voltage and resistance of each terminal according to the value(s) in the table below.

Standard resistance

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
E (M1-1) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (M1-6) - E (M1-1)	GR - W-B	Power supply	Power switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the M1 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

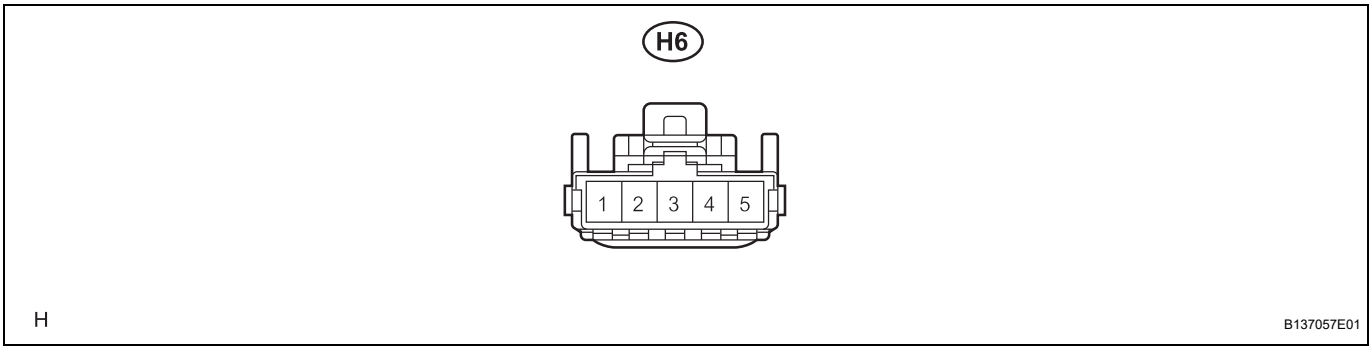
Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
DU (M1-3) - E (M1-1)	G - W-B	Power window motor UP output	Power switch on (IG), driver side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
DD (M1-4) - E (M1-1)	BR - W-B	Power window motor DOWN output	Power switch on (IG), driver side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
PU (M1-16) - E (M1-1)	W - W-B	Power window motor UP output	Power switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
PD (M1-15) - E (M1-1)	R - W-B	Power window motor DOWN output	Power switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
RLU (M1-12) - E (M1-1)	L - W-B	Power window motor UP output	Power switch on (IG), rear LH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RLD (M1-13) - E (M1-1)	B - W-B	Power window motor DOWN output	Power switch on (IG), rear LH side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V
RRU (M1-10) - E (M1-1)	Y - W-B	Power window motor UP output	Power switch on (IG), rear RH side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
RRD (M1-18) - E (M1-1)	LG - W-B	Power window motor DOWN output	Power switch on (IG), rear RH side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

2. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (FRONT RH)



(a) Disconnect the H6 switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (H6-3) - Body ground	GR - Body ground	Power supply	Power switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the H6 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

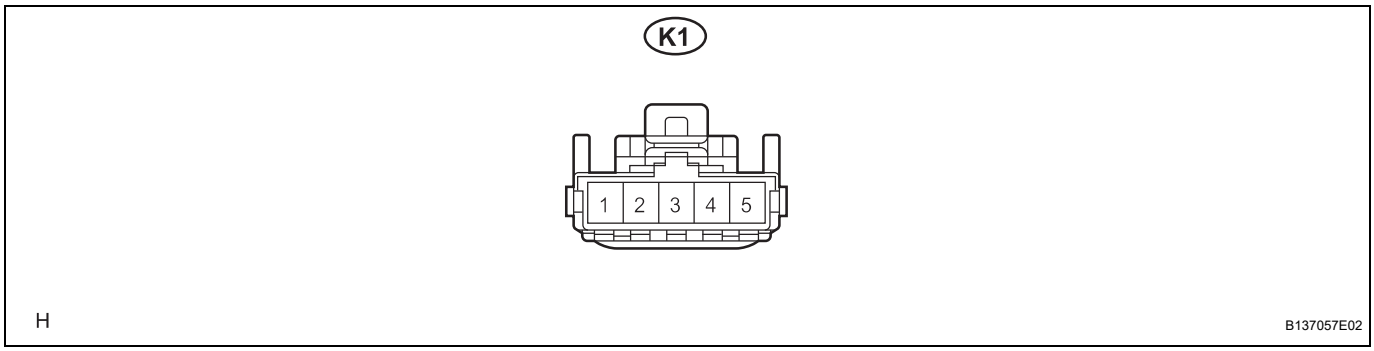
Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
U (H6-4) - Body ground	G - Body ground	Power window motor UP output	Power switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
D (H6-1) - Body ground	Y - Body ground	Power window motor DOWN output	Power switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

WS

3. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR LH)



(a) Disconnect the K1 switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (K1-3) - Body ground	R - Body ground	Power supply	Power switch on (IG)	10 to 14 V

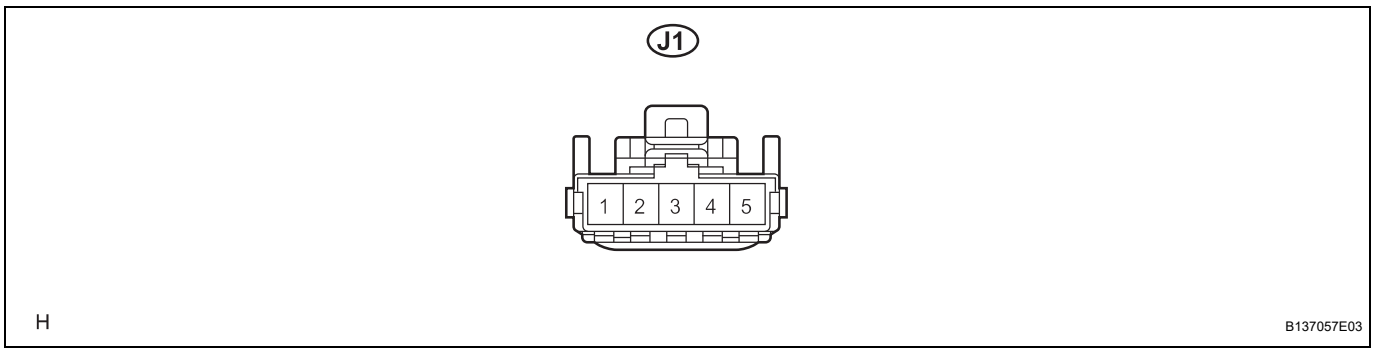
If the result is not as specified, there may be a malfunction in the wire harness.
(c) Reconnect the K1 switch connector and reset the power window motor.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
U (K1-4) - Body ground	V - Body ground	Power window motor UP output	Power switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
D (K1-1) - Body ground	R - Body ground	Power window motor DOWN output	Power switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V

If the result is not as specified, the power window regulator switch assembly may have a malfunction.

4. CHECK POWER WINDOW REGULATOR SWITCH ASSEMBLY (REAR RH)



(a) Disconnect the J1 switch connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (J1-3) - Body ground	R - Body ground	Power supply	Power switch on (IG)	10 to 14 V

If the result is not as specified, there may be a malfunction in the wire harness.

(c) Reconnect the J1 switch connector and reset the power window motor.

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
U (J1-4) - Body ground	V - Body ground	Power window motor UP output	Power switch on (IG), front passenger side power window switch OFF → UP (Manual operation)	0 V → 10 to 14 V
D (J1-1) - Body ground	R - Body ground	Power window motor DOWN output	Power switch on (IG), front passenger side power window switch OFF → DOWN (Manual operation)	0 V → 10 to 14 V

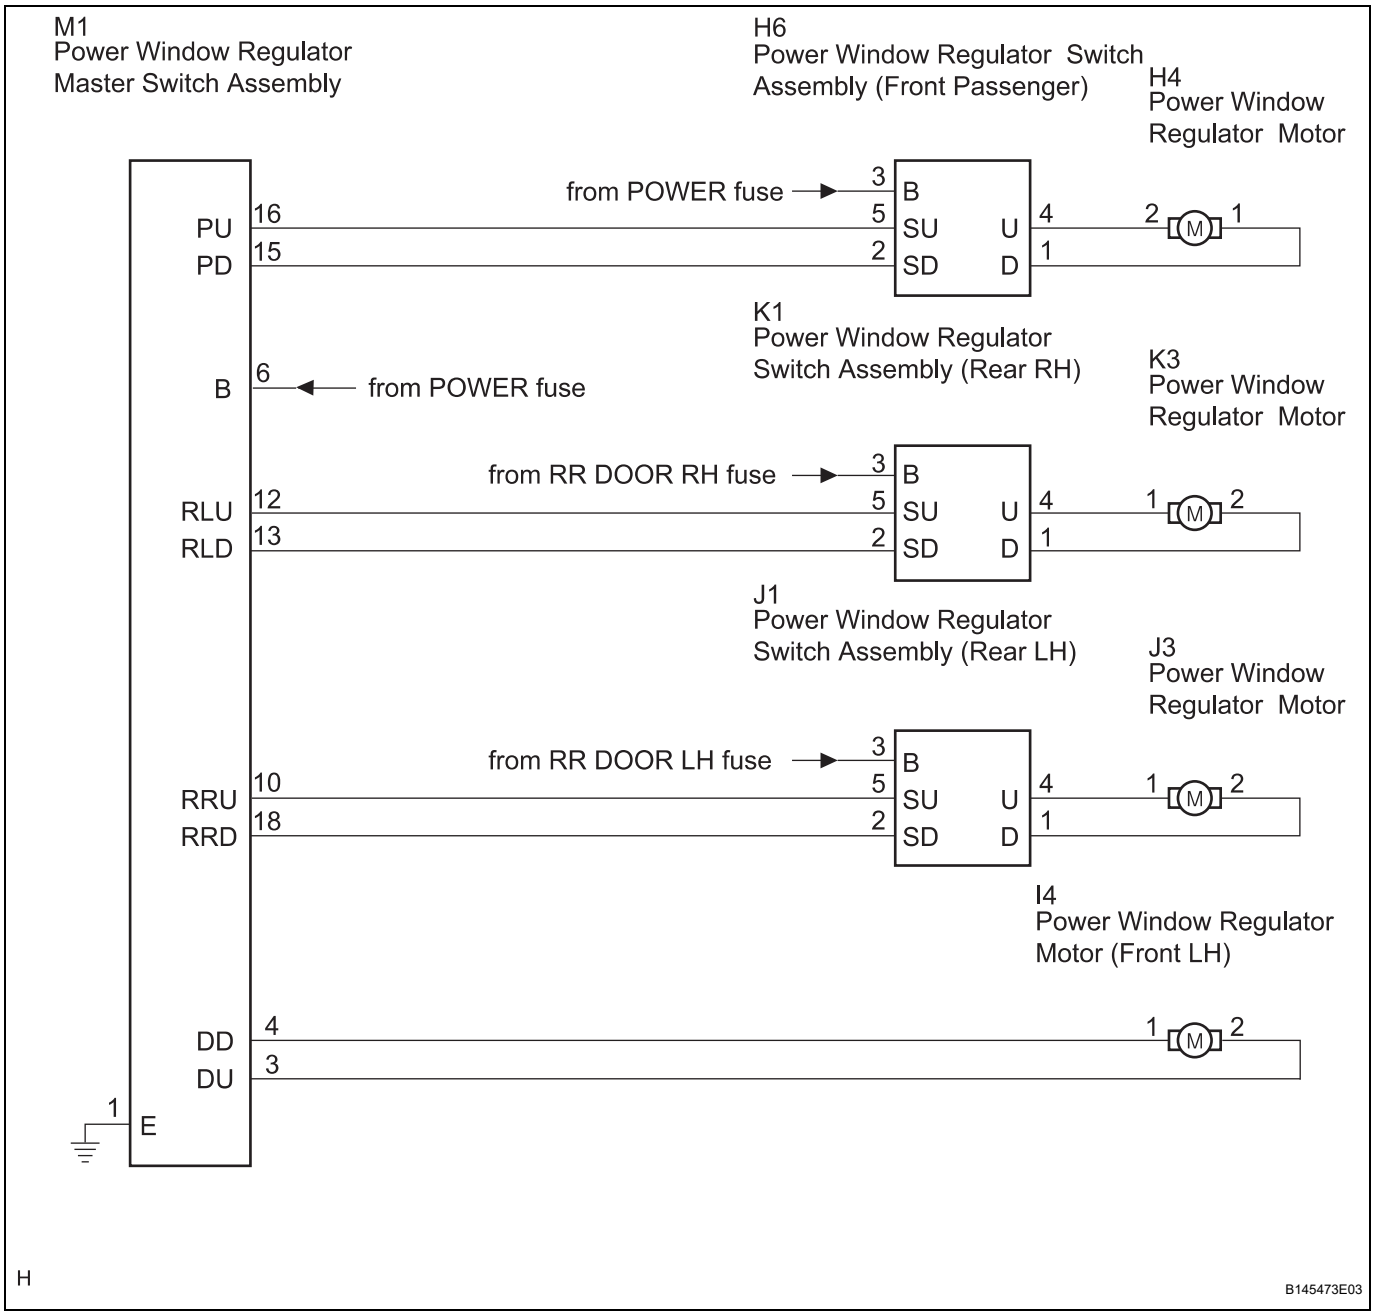
If the result is not as specified, the power window regulator switch assembly may have a malfunction.

Power Window Master Switch Circuit

DESCRIPTION

This circuit transmits signals from the power window regulator master switch assembly to the power window regulator switch.

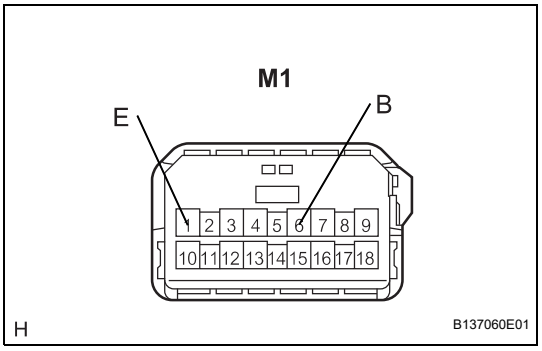
WIRING DIAGRAM



WS

INSPECTION PROCEDURE

1 **INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**



(a) Disconnect the M1 connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
6 (B) - Body ground	Power switch on (IG)	10 to 14 V

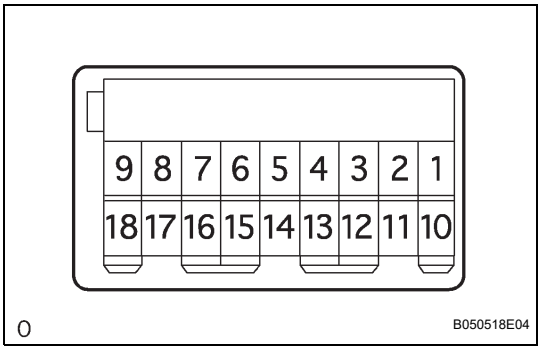
Standard resistance

Tester Connection	Condition	Specified Condition
1 (E) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 **INSPECT POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

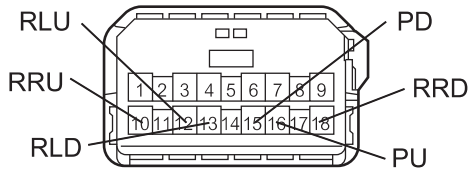
Tester Connection	Condition	Specified Condition
1 (E) - 3 (DU)	OFF	Below 1 Ω
1 (E) - 4 (DD)	OFF	Below 1 Ω
1 (E) - 10 (RRU)	Lock/Unlock switch	UNLOCK (Below 1 Ω) → LOCK (10 kΩ or higher)
1 (E) - 12 (RLU)	Lock/Unlock switch	UNLOCK (Below 1 Ω) → LOCK (10 kΩ or higher)
1 (E) - 13 (RLD)	Lock/Unlock switch	UNLOCK (Below 1 Ω) → LOCK (10 kΩ or higher)
1 (E) - 15 (PD)	Lock/Unlock switch	UNLOCK (Below 1 Ω) → LOCK (10 kΩ or higher)
1 (E) - 16 (PU)	Lock/Unlock switch	UNLOCK (Below 1 Ω) → LOCK (10 kΩ or higher)
1 (E) - 18 (RRD)	Lock/Unlock switch	UNLOCK (Below 1 Ω) → LOCK (10 kΩ or higher)

NG → **REPLACE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY**

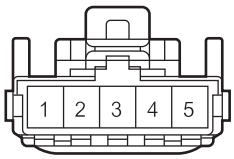
OK

3	CHECK WIRE HARNESS (POWER WINDOW MASTER SWITCH - FRONT LH, REAR LH/RH SWITCH)

M1
Power Window Regulator Master Switch Assembly:



H6 (K1, J1)
Power Window Switch (Front RH, Rear LH/RH):



H B137067E01

(a) Disconnect the M1 and H6 (K1, J1) connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

Front RH side

Tester Connection	Condition	Specified Condition
M1-16 (PU) - H6-5 (SU)	Always	Below 1 Ω
M1-15 (PD) - H6-2 (SD)	Always	Below 1 Ω
M1-16 (PU) - Body ground	Always	10 kΩ or higher
M1-15 (PD) - Body ground	Always	10 kΩ or higher

Rear LH side

Tester Connection	Condition	Specified Condition
M1-12 (RLU) - K1-5 (SU)	Always	Below 1 Ω
M1-13 (RLD) - K1-2 (SD)	Always	Below 1 Ω
M1-12 (RLU) - Body ground	Always	10 kΩ or higher
M1-13 (RLD) - Body ground	Always	10 kΩ or higher

Rear RH side

Tester Connection	Condition	Specified Condition
M1-10 (RRU) - J1-5 (SU)	Always	Below 1 Ω
M1-18 (RRD) - J1-2 (SD)	Always	Below 1 Ω
M1-10 (RRU) - Body ground	Always	10 kΩ or higher
M1-18 (RRD) - Body ground	Always	10 kΩ or higher

WS

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

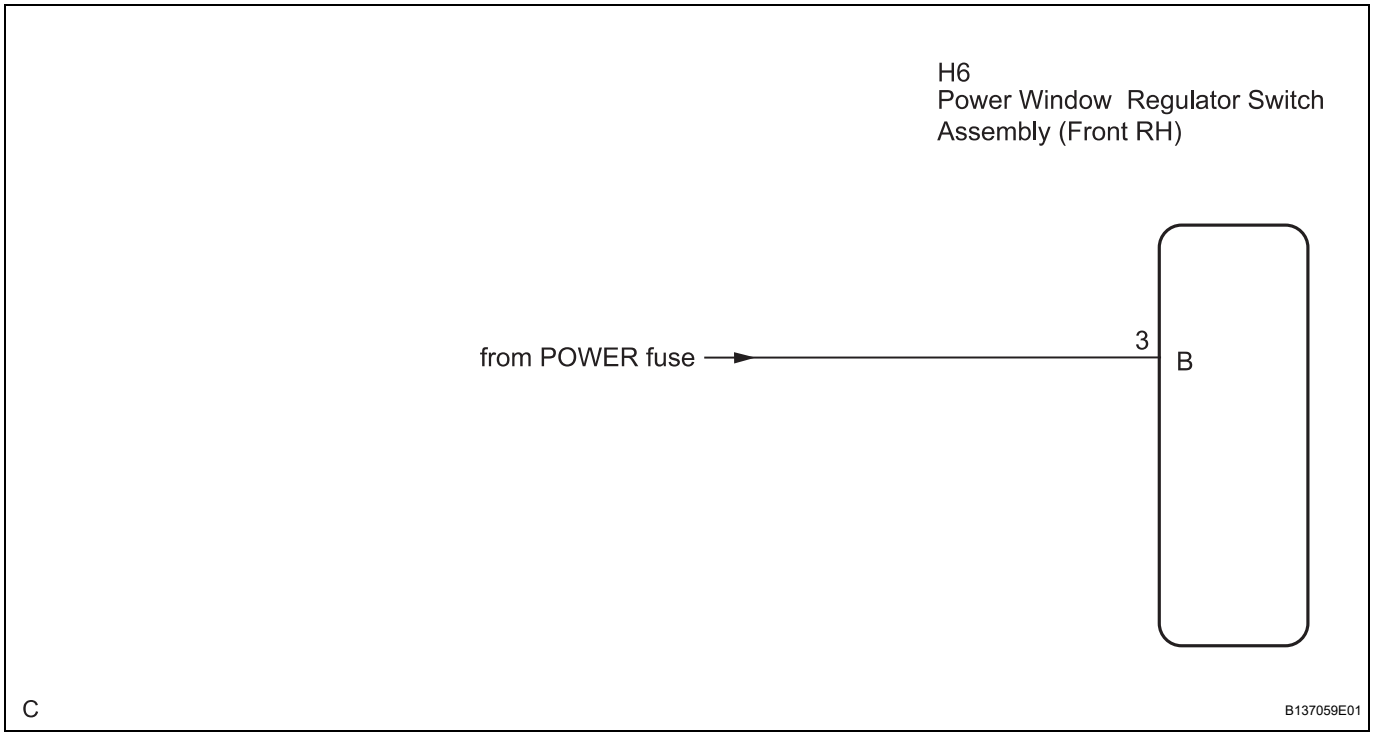
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Front Passenger Side Power Window Switch Power Source Circuit

DESCRIPTION

This circuit supplies power to operate the power window regulator switch assembly (Front RH).

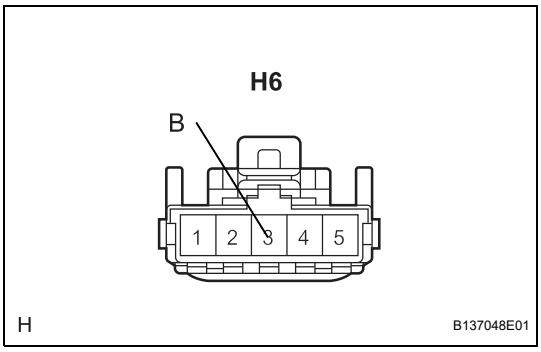
WIRING DIAGRAM



WS

INSPECTION PROCEDURE

1	CHECK WIRE HARNESS (POWER WINDOW REGULATOR SWITCH - BATTERY AND BODY GROUND)



(a) Disconnect the H6 connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
3 (B) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

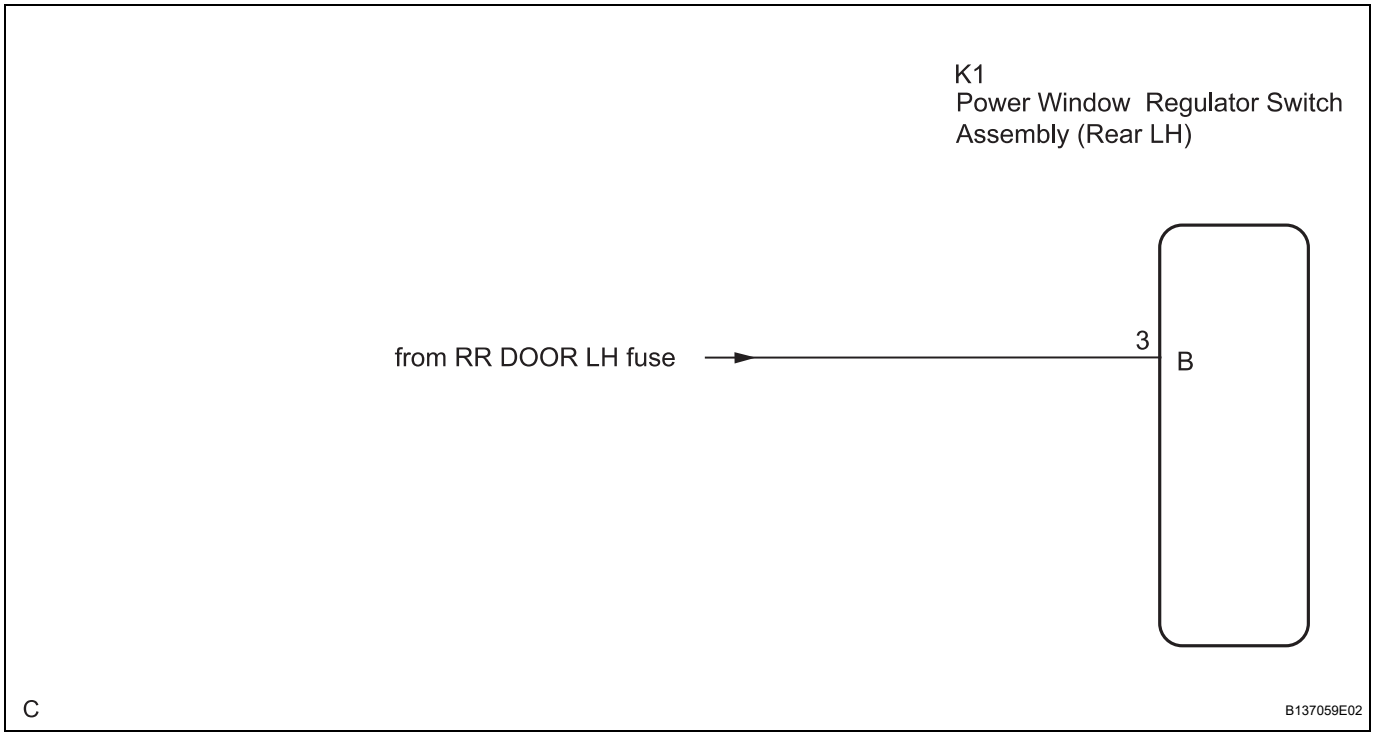
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Rear Power Window Switch LH Circuit

DESCRIPTION

This circuit supplies power to operate the power window regulator switch assembly (Rear LH).

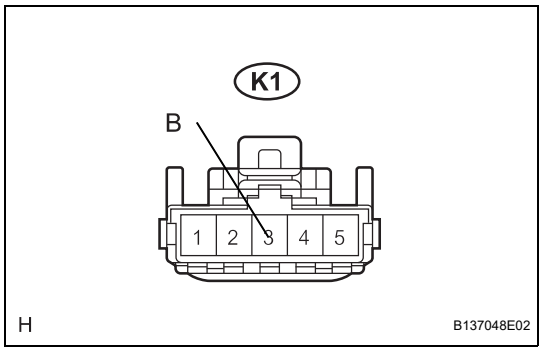
WIRING DIAGRAM



WS

INSPECTION PROCEDURE

1	CHECK WIRE HARNESS (POWER WINDOW REGULATOR SWITCH - BATTERY AND BODY GROUND)



(a) Disconnect the K1 connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
3 (B) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

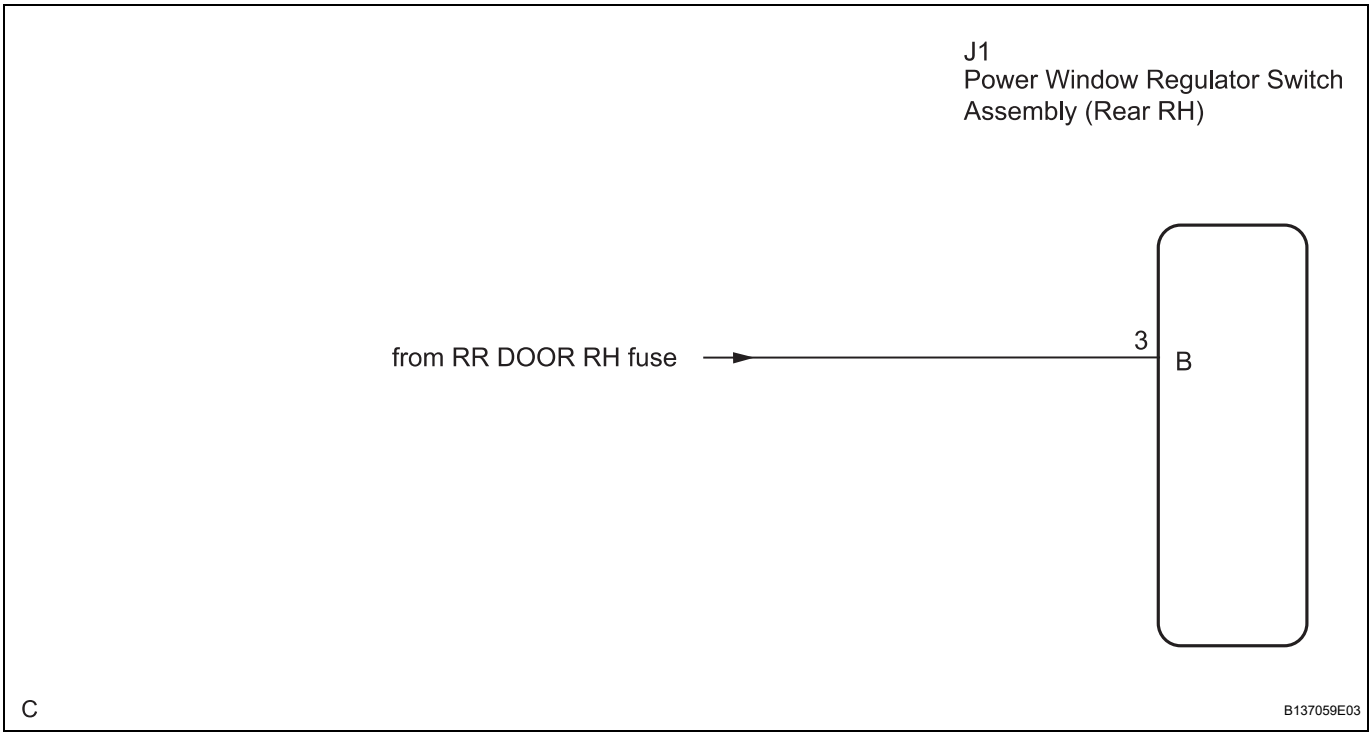
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Rear Power Window Switch RH Circuit

DESCRIPTION

This circuit supplies power to operate the power window regulator switch (Rear RH).

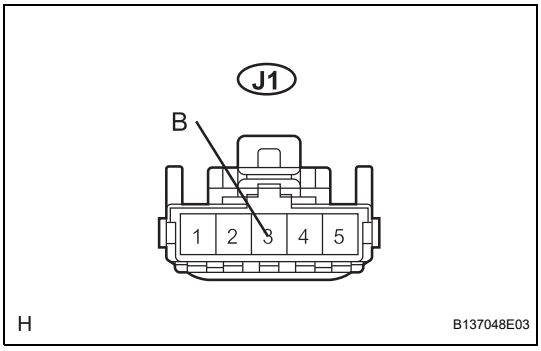
WIRING DIAGRAM



WS

INSPECTION PROCEDURE

1	CHECK WIRE HARNESS (POWER WINDOW REGULATOR SWITCH - BATTERY AND BODY GROUND)



(a) Disconnect the J1 connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
3 (B) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

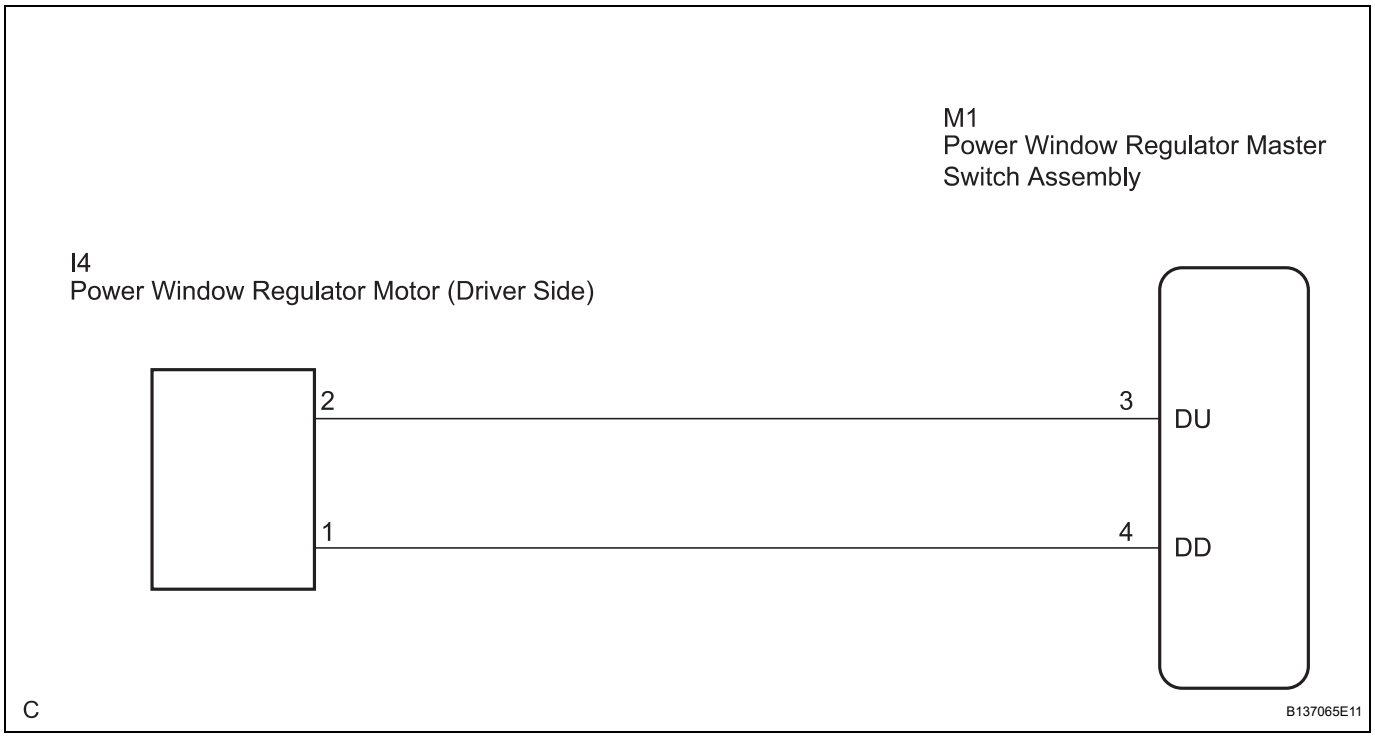
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Driver Side Power Window Motor Circuit

DESCRIPTION

This circuit transmits signals from the power window regulator master switch assembly to the power window regulator motor (Front LH).

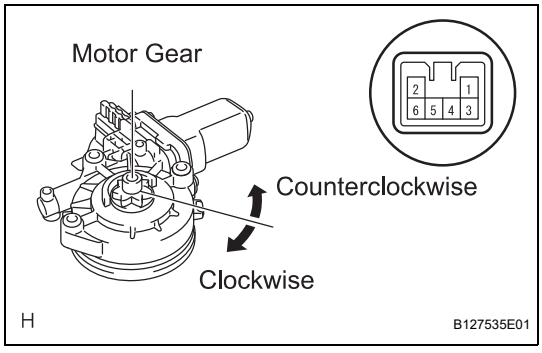
WIRING DIAGRAM



WS

INSPECTION PROCEDURE

1	INSPECT POWER WINDOW REGULATOR MOTOR



(a) Remove the power window motor.
  (1) Apply battery voltage to the motor connector according to the table below.
  NOTICE:
  Do not apply battery voltage to any terminals except terminals 1 and 2.
  Standard

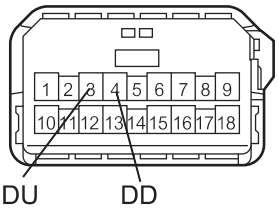
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise

NG → **REPLACE POWER WINDOW REGULATOR MOTOR**

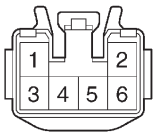
OK

2	CHECK WIRE HARNESS (WINDOW REGULATOR MOTOR - WINDOW REGULATOR MASTER SWITCH)

M1
Power Window Regulator Master Switch Assembly:



I4
Power Window Regulator Motor (Driver Side):



B137061E02

(a) Disconnect the M1 and I4 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
M1-3 (DU) - I4-2	Always	Below 1 Ω
M1-4 (DD) - I4-1	Always	Below 1 Ω
M1-3 (DU) - Body ground	Always	10 kΩ or higher
M1-4 (DD) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

WS

OK

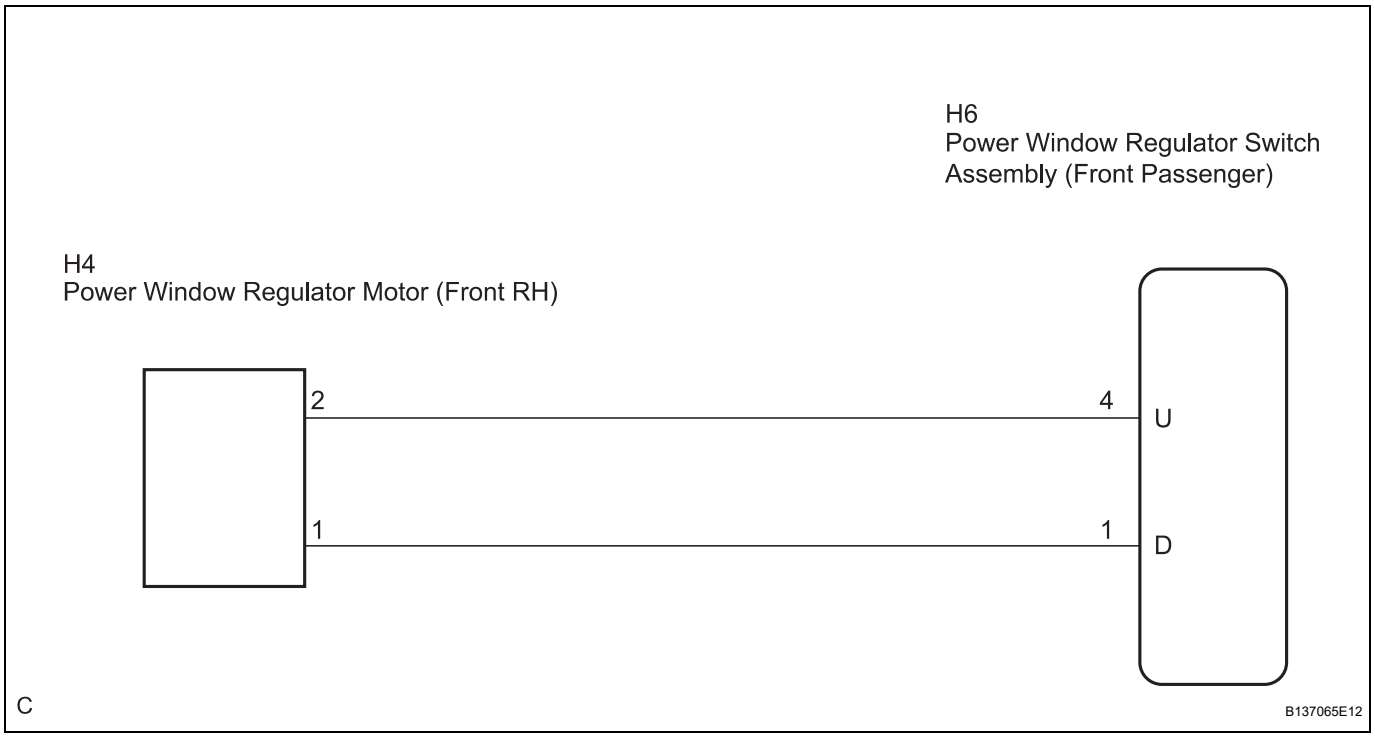
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Front Passenger Side Power Window Motor Circuit

DESCRIPTION

This circuit transmits signals from the power window regulator switch assembly (Front RH) to the power window regulator motor (Front RH).

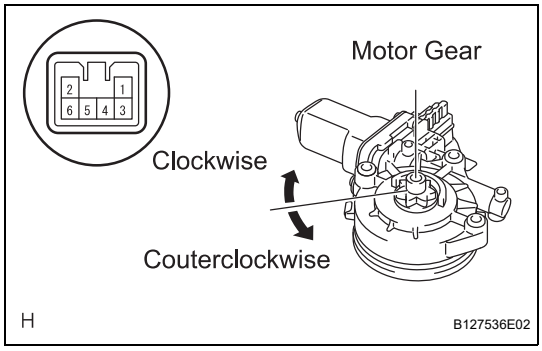
WIRING DIAGRAM



WS

INSPECTION PROCEDURE

1	INSPECT POWER WINDOW REGULATOR MOTOR



(a) Remove the power window motor.
(b) Apply battery voltage to the motor connector according to the table below.

NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.

Standard

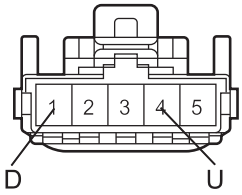
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise

NG → **REPLACE POWER WINDOW REGULATOR MOTOR**

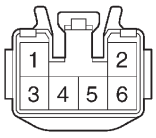
OK

2	CHECK WIRE HARNESS (WINDOW REGULATOR MOTOR - POWER WINDOW REGULATOR SWITCH)

H6
Power Window Regulator Switch Assembly (Front Passenger):



H4
Power Window Regulator Motor (Front Passenger):



B137066E06

(a) Disconnect the H6 and H4 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
H6-4 (U) - H4-2	Always	Below 1 Ω
H6-1 (D) - H4-1	Always	Below 1 Ω
H6-4 (U) - Body ground	Always	10 kΩ or higher
H6-1 (D) - Body ground	Always	10 kΩ or higher

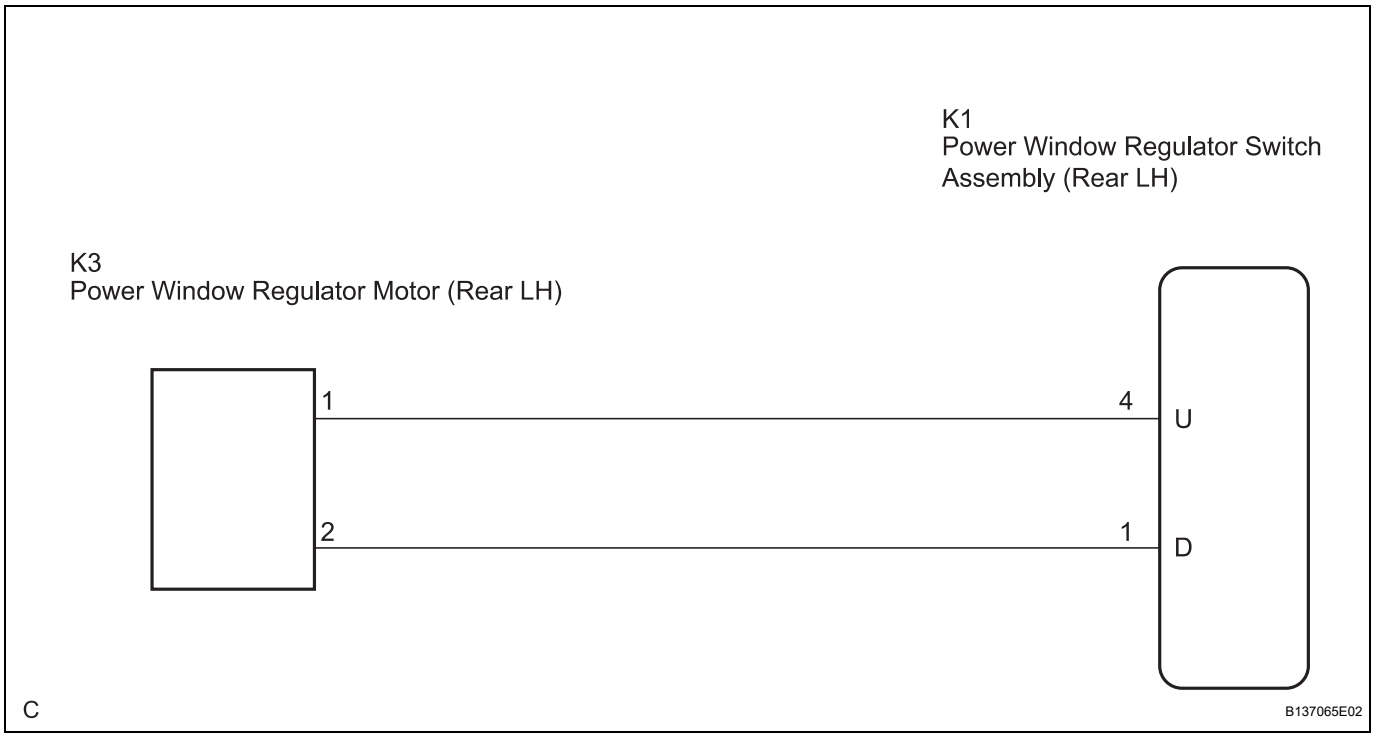
Rear Power Window Motor LH Circuit

DESCRIPTION

This circuit transmits signals from the power window regulator switch assembly (Rear LH) to the power window regulator motor (Rear LH).

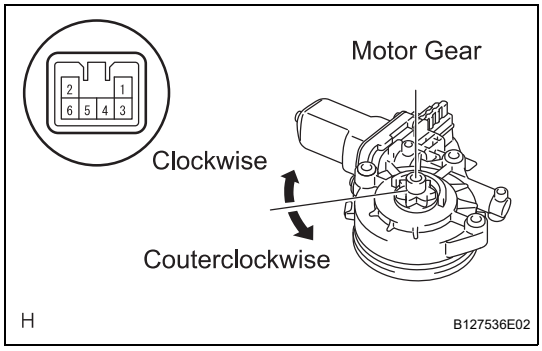
WIRING DIAGRAM



WS

INSPECTION PROCEDURE

1	INSPECT POWER WINDOW REGULATOR MOTOR



(a) Remove the power window motor.
(b) Apply battery voltage to the motor connector according to the table below.
NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.
Standard

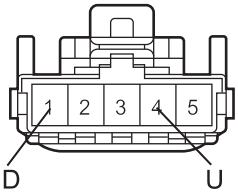
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates clockwise
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates counterclockwise

NG → **REPLACE POWER WINDOW REGULATOR MOTOR**

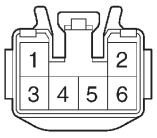
OK

2	CHECK WIRE HARNESS (WINDOW REGULATOR MOTOR - WINDOW REGULATOR SWITCH)

K1
Power Window Regulator Switch Assembly (Rear LH):



K3
Power Window Regulator Motor (Rear LH):



B137066E02

(a) Disconnect the K1 and K3 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
K1-4 (U) - K3-1	Always	Below 1 Ω
K1-1 (D) - K3-2	Always	Below 1 Ω
K1-4 (U) - Body ground	Always	10 kΩ or higher
K1-1 (D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

WS

OK

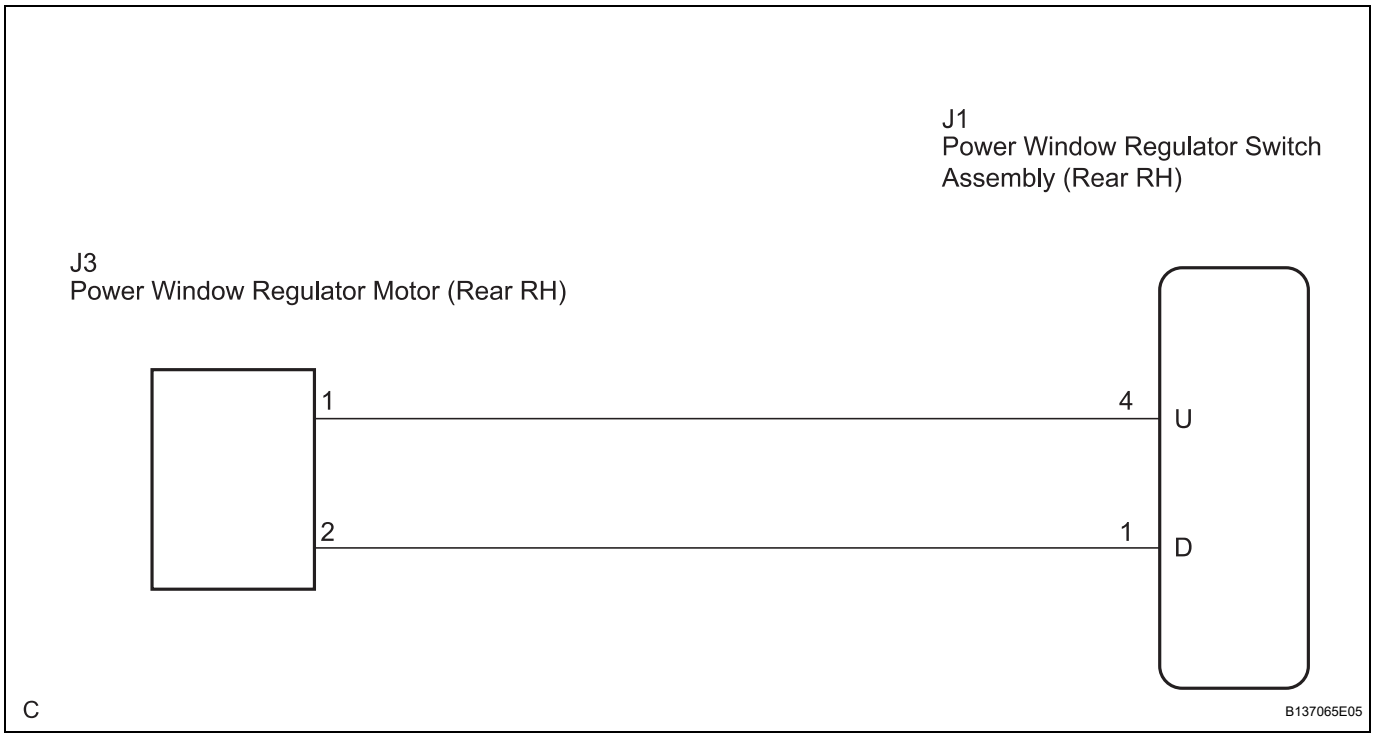
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Rear Power Window Motor RH Circuit

DESCRIPTION

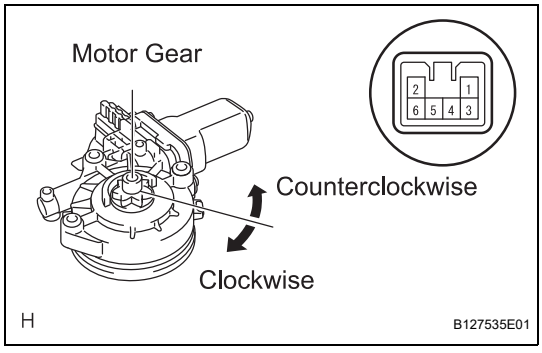
This circuit transmits signals from the power window regulator switch assembly (Rear RH) to the power window regulator motor (Rear RH).

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT POWER WINDOW REGULATOR MOTOR



(a) Remove the power window motor.
(b) Apply battery voltage to the motor connector according to the table below.

NOTICE:
Do not apply battery voltage to any terminals except terminals 1 and 2.

Standard

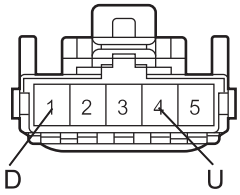
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor gear rotates clockwise
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Motor gear rotates counterclockwise

NG → **REPLACE POWER WINDOW REGULATOR MOTOR**

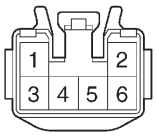
OK

2	CHECK WIRE HARNESS (WINDOW REGULATOR MOTOR - WINDOW REGULATOR SWITCH)

J1
Power Window Regulator Switch Assembly (Rear RH):



J3
Power Window Regulator Motor (Rear RH):



B137066E03

(a) Disconnect the J1 and J3 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
J1-4 (U) - J3-1	Always	Below 1 Ω
J1-1 (D) - J3-2	Always	Below 1 Ω
J1-4 (U) - Body ground	Always	10 kΩ or higher
J1-1 (D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

WS

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

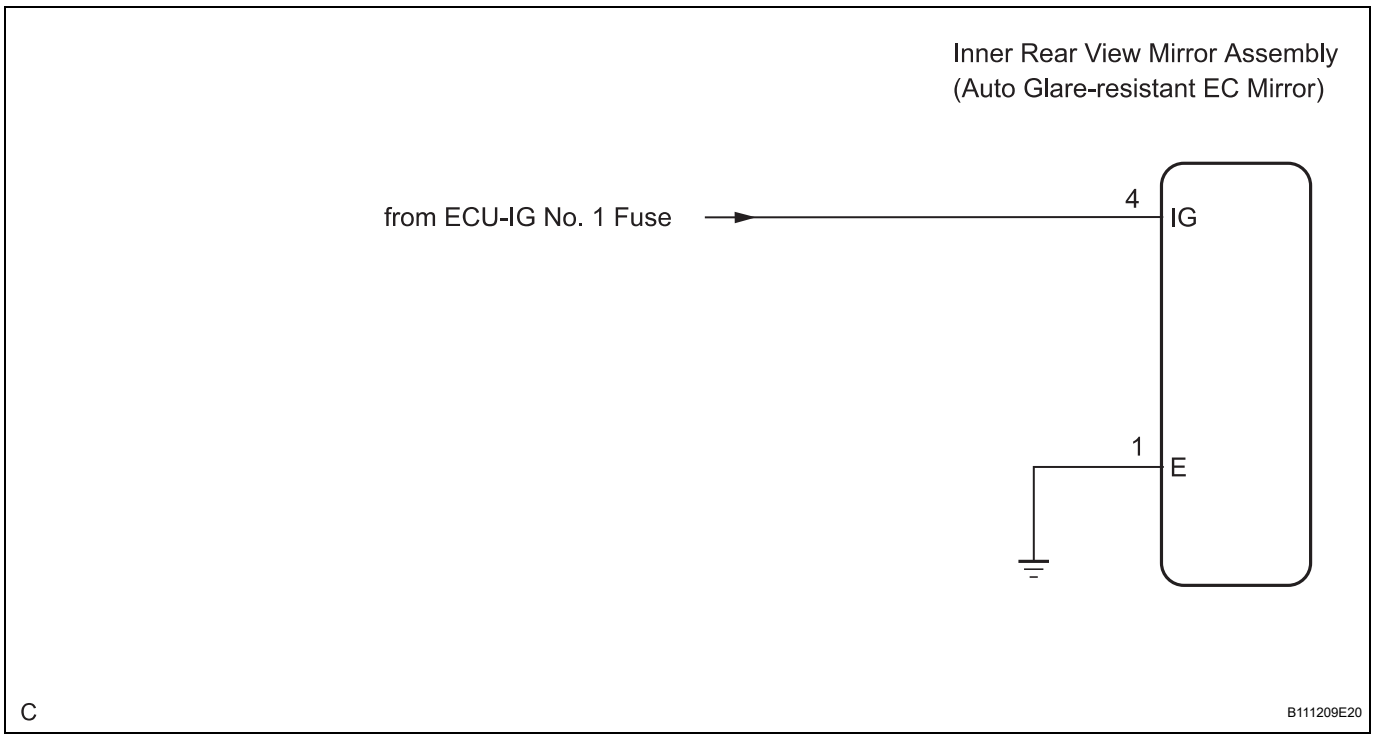
INSTALLATION

1. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY (See page ED-58)
2. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-58)
3. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-59)
4. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-59)
5. INSTALL COURTESY LIGHT ASSEMBLY (See page ED-59)
6. INSTALL ASSIST GRIP COVER (See page ED-60)
7. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-60)
8. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-60)

INSTALLATION

1. **INSTALL POWER WINDOW REGULATOR SWITCH ASSEMBLY**
   (a) Engage the 2 claws and install the power window regulator switch assembly.
2. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-58)**
3. **INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-59)**
4. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-59)**
5. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-59)**
6. **INSTALL ASSIST GRIP COVER (See page ED-60)**
7. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-60)**
8. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-60)**

SYSTEM DIAGRAM



CALIBRATION

1. SELECT COMPASS DISPLAY MODE

(a) The COMP switch allows you to select the Display or Non-display mode of the compass.

2. SET ZONE

(a) Deviation between the "magnetic north" and "actual north" differs depending on the location. Therefore, adjustment of the magnetism is required. Since the magnetic condition differs depending on the area where the vehicle is used, it is necessary for each user to set the zone (Refer to Compass Zone Map). The zone setting can be changed using the COMP switch of the inner mirror.

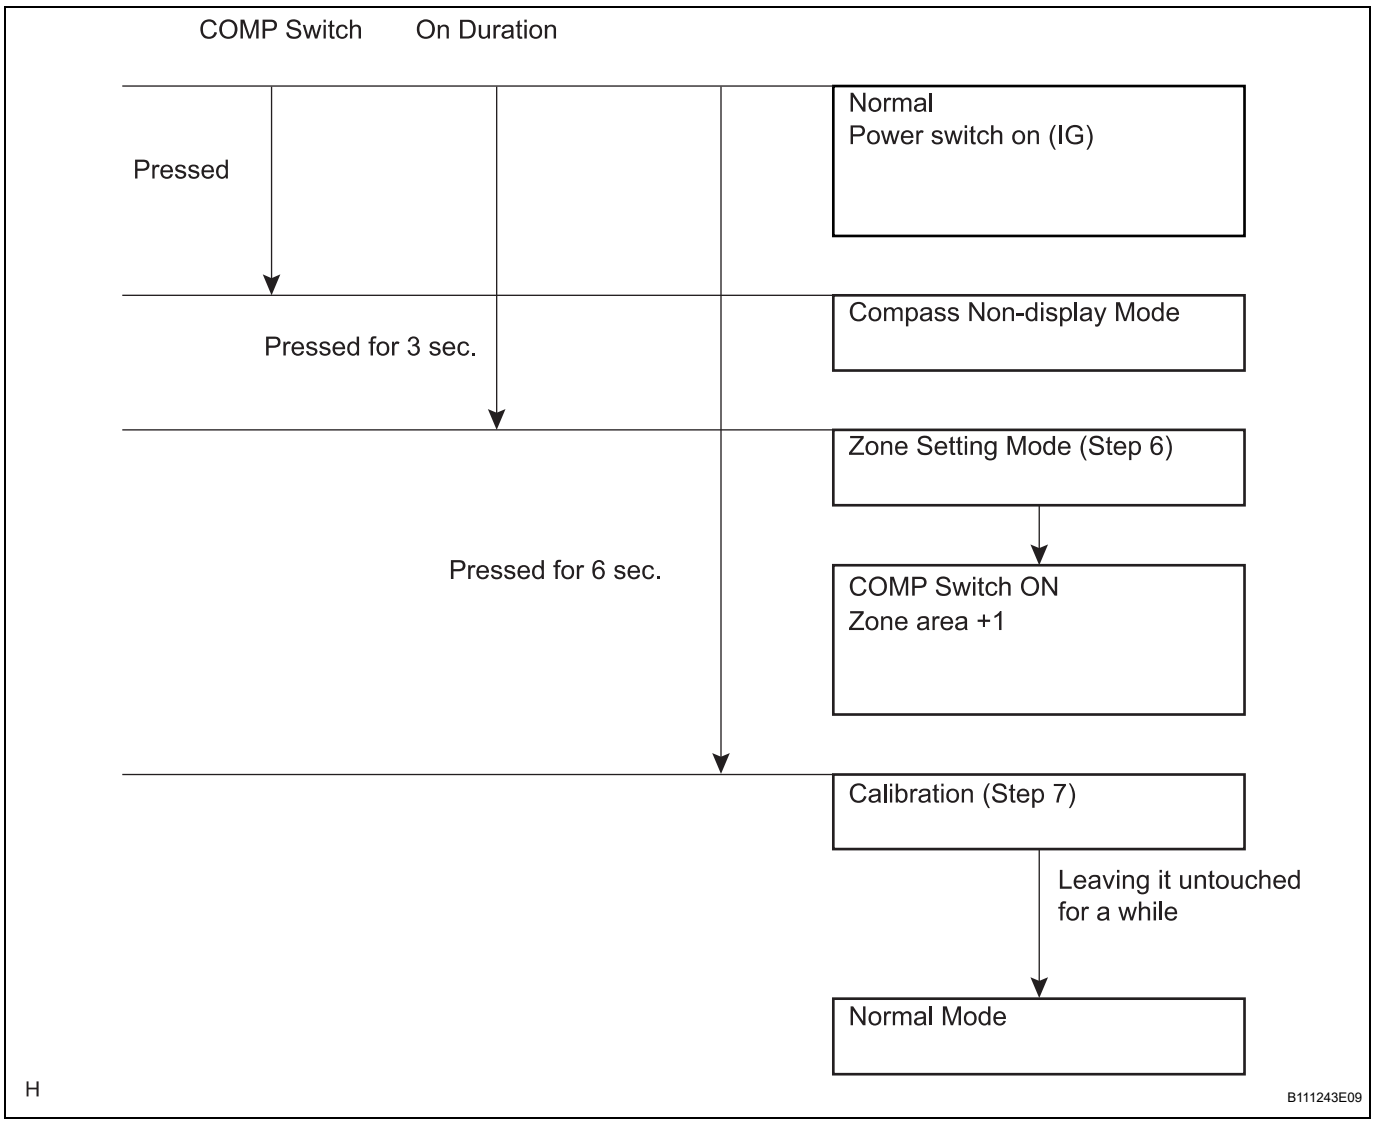
3. PERFORM CALIBRATION

(a) Because each vehicle has its own magnetic field, calibration should be performed for each vehicle. This compass function is used when storing the record of the vehicle's magnetic field.

4. WHEN COMPASS IS MAGNETIZED

(a) A compass could be magnetized during shipping by vessels or freight cars. Therefore, make sure to perform calibration and ensure that calibration is performed properly before delivery. If it cannot be done (cannot be completed in spite of driving around several times), it may be caused by magnetization. Demagnetize the vehicle using a demagnetizer and perform calibration again.

5. SET COMPASS



6. ZONE SETTING MODE

(a) Pressing the COMP switch for 3 seconds in the normal mode will activate the zone setting mode. A number (1 to 15) is displayed on the compass display.

NOTICE:

In the initial state, "8" is displayed.

(b) The displayed number increases by 1 every time the COMP switch is pressed. Referring to the map, check the number for the area where the vehicle will be used and set the zone number.

(c) Leave it untouched for several seconds after setting and check that the compass display shows an azimuthal direction (N, NE, E, SE, S, SW, W or NW) or "C".

7. CALIBRATION SETTING MODE

(a) Pressing the COMP switch for 6 seconds in the normal mode will activate the calibration setting mode.

MI

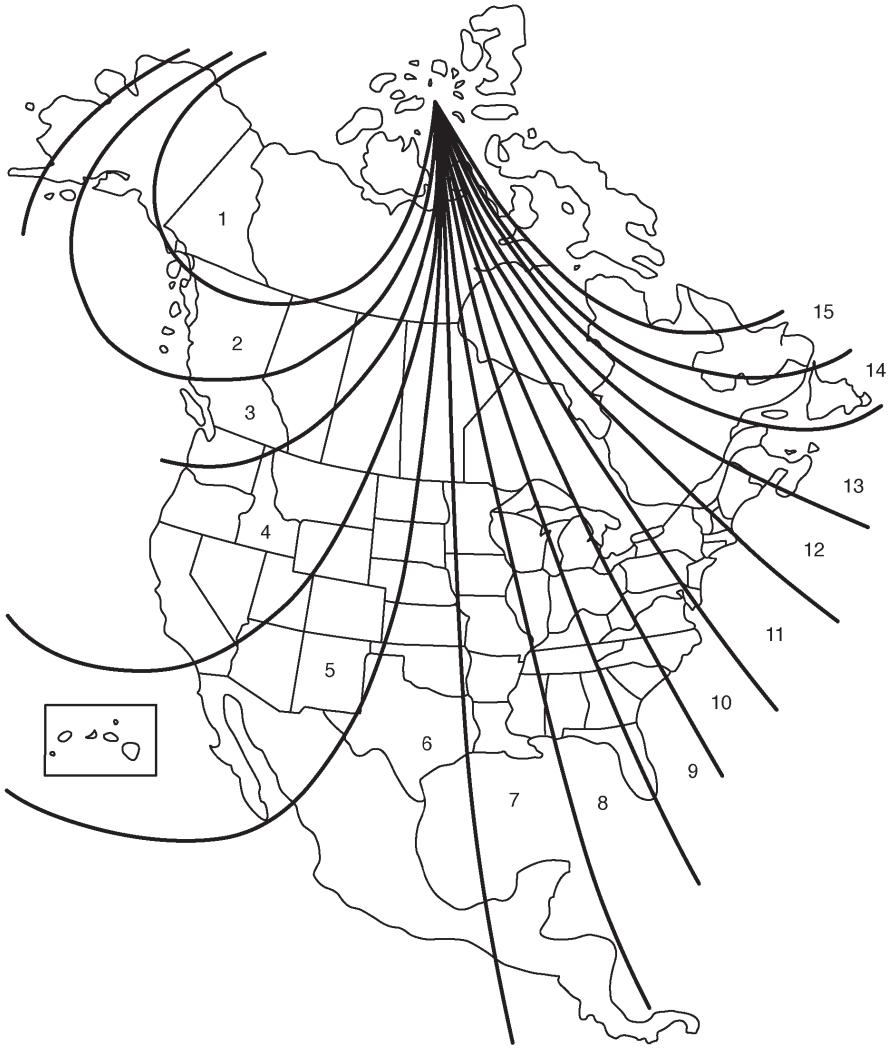
(b) Drive the vehicle at a slow speed of 8 km/h (5 mph) or less in the circular direction.

(c) Driving around the circle 1 to 3 times will display the azimuthal direction on the display, completing the calibration.

NOTICE:

After the calibration is completed, it is not necessary to perform the above procedures unless the magnetic field strength is drastically changed. If this happens, the azimuthal display will be changed to "C".

Zone Setting Map:



T

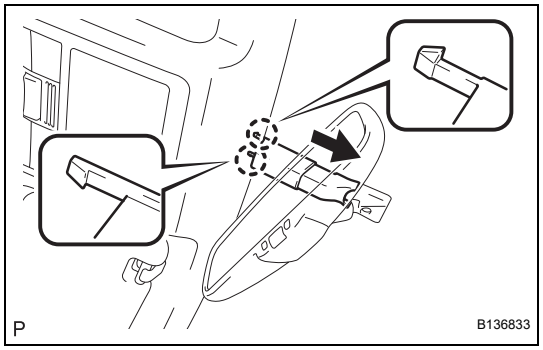
B057087E01

PROBLEM SYMPTOMS TABLE

AUTOMATIC GLARE-RESISTANT EC MIRROR

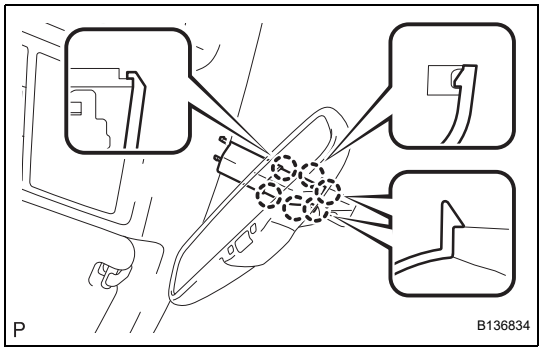
Symptom	Suspected Area	See page
Auto glare-resistant EC mirror does not operate	1. ECU-IG No. 1 fuse	-
	2. Inner rear view mirror	MI-11
	3. Wire harness	-

REMOVAL

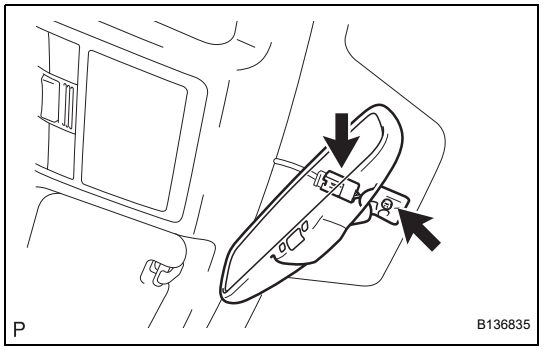


1. REMOVE INNER REAR VIEW MIRROR STAY HOLDER COVER

(a) Disengage the 2 claws and slide the inner rear view mirror stay holder cover as shown in the illustration.



(b) Disengage the 6 claws and remove the inner rear view mirror stay holder cover.

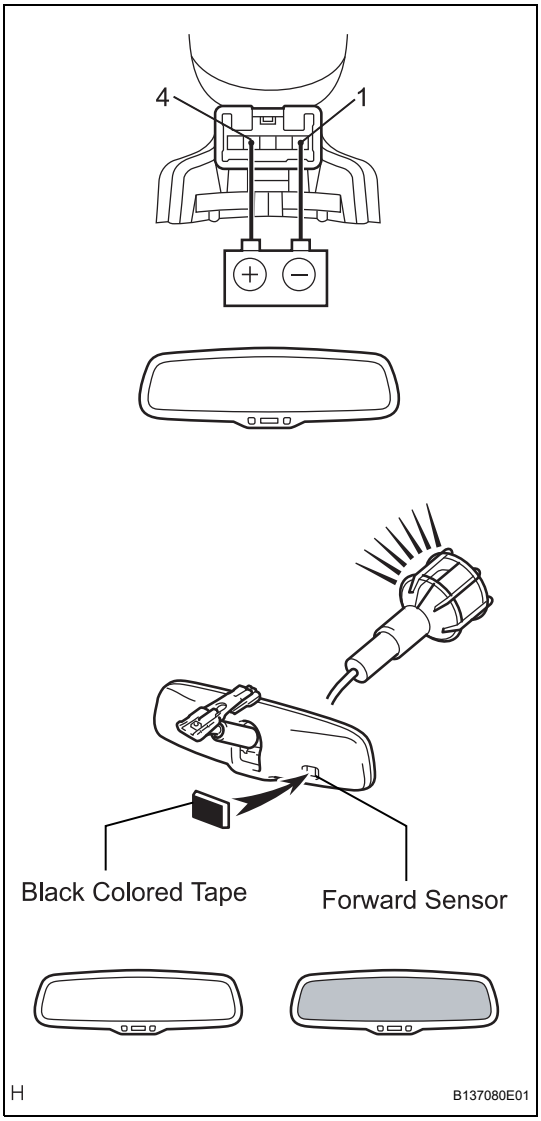


2. REMOVE INNER REAR VIEW MIRROR ASSEMBLY

(a) Disconnect the connector.

(b) Using a "TORX" socket wrench (T20), remove the screw and the inner rear view mirror.

MI



INSPECTION

1. INSPECT INNER REAR VIEW MIRROR ASSEMBLY

(a) Inspect operation of the electrochromic inner mirror.

(1) Connect the positive (+) lead from the battery to terminal 4 and the negative (-) lead to terminal 1.

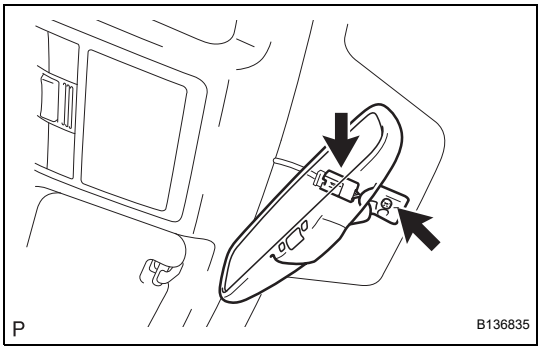
(2) Attach black colored tape to the forward sensor to prevent it from sensing.

(3) Light up the mirror with an electric light, and check that the mirror surface changes from bright to dark.

Standard:

Mirror surface changes from bright to dark.

If the result is not as specified, replace the mirror assembly.



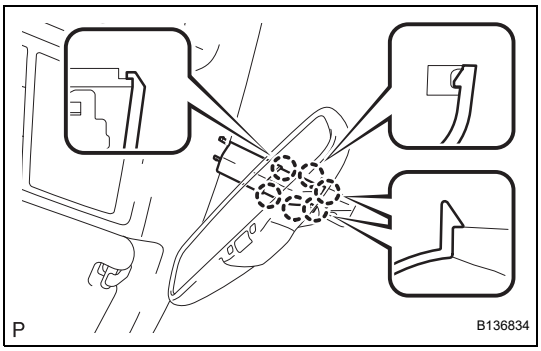
INSTALLATION

1. INSTALL INNER REAR VIEW MIRROR ASSEMBLY

(a) Using a "TORX" socket wrench (T20), install the inner rear view mirror with the screw.

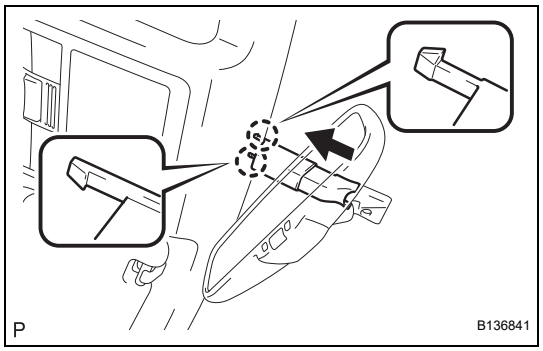
Torque: 1.8 N*m (18 kgf*cm, 16 in.*lbf)

(b) Connect the connector.



2. INSTALL INNER REAR VIEW MIRROR STAY HOLDER COVER

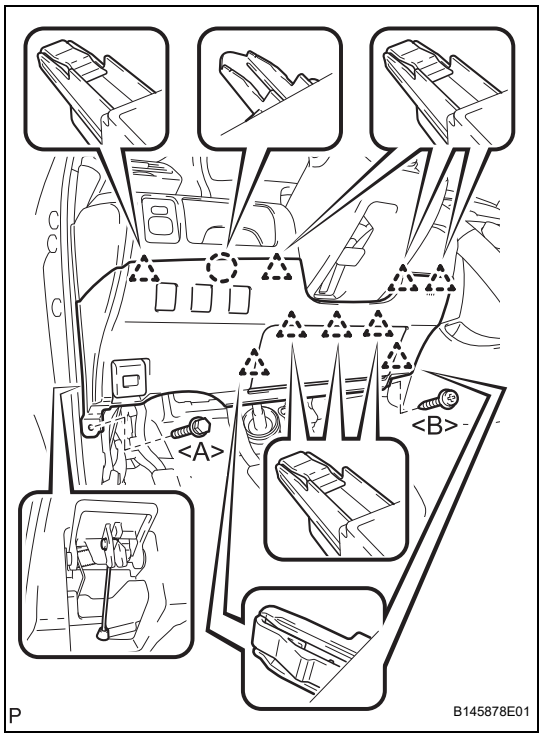
(a) Engage the 6 claws and install the inner rear view mirror stay holder cover.



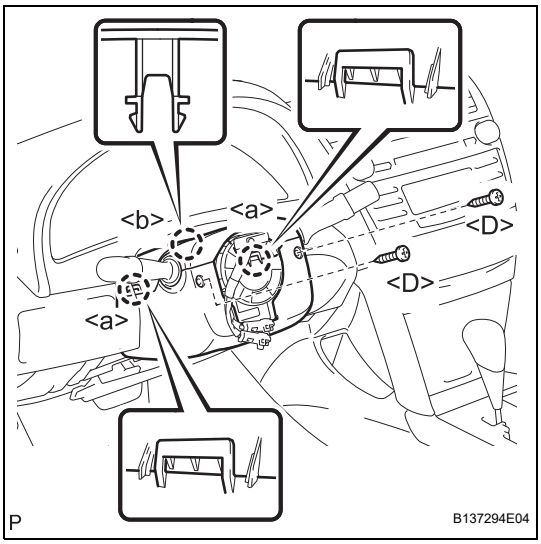
(b) Engage the 2 claws and install the inner rear view mirror stay holder cover as shown in the illustration.

REMOVAL

1. **PRECAUTION**
   (See page IP-1)
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment (See page RS-1).
4. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-345)**
5. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-345)**
6. **REMOVE STEERING PAD (See page RS-345)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-36)**
8. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
9. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
10. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH**
    (a) Remove the bolt <A> and the screw <B>.
    (b) Disconnect the hood lock control cable assembly.
    (c) Disengage the claw and the 9 clips.
    (d) Remove the air hose, disconnect each connector, and then remove the lower instrument panel finish panel LH.



IP



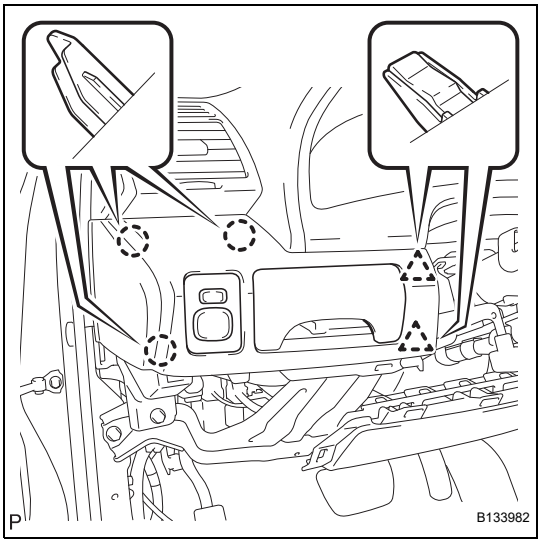
11. REMOVE STEERING COLUMN COVER

(a) Remove the 2 screws <D>.

(b) Disengage the 2 claws <a> and remove the lower steering column cover.

(c) Disengage the claw <b> and remove the upper steering column cover.

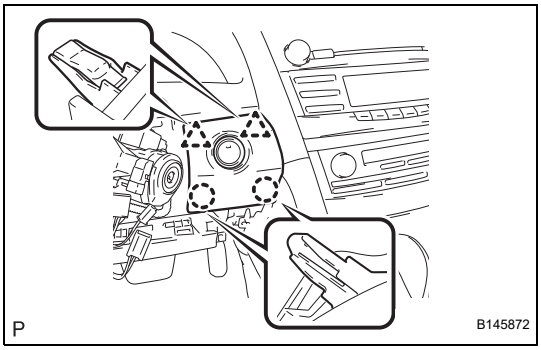
12. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-37)



13. REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY

(a) Disengage the 3 claws and the 2 clips.

(b) Disconnect the connector and remove the instrument panel sub-assembly.

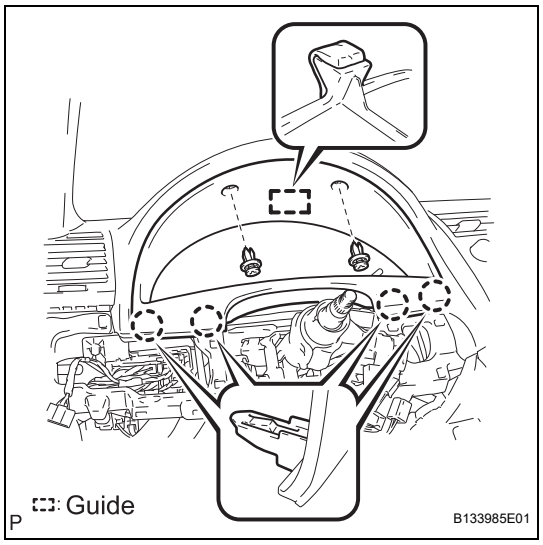


14. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL

(a) Disengage the 2 claws and 2 clips.

(b) Disconnect the connector and remove the lower instrument panel finish panel.

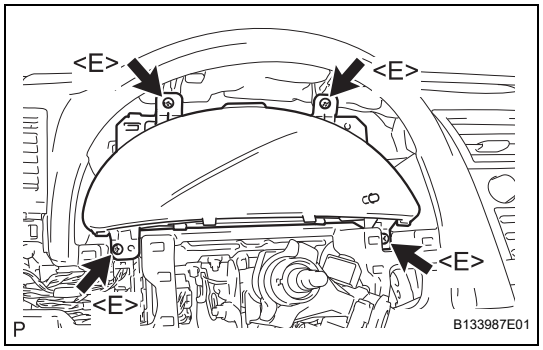
IP



15. REMOVE INSTRUMENT CLUSTER FINISH PANEL

(a) Remove the 2 clips.

(b) Disengage the guide and 4 claws, and then remove the instrument cluster finish panel.



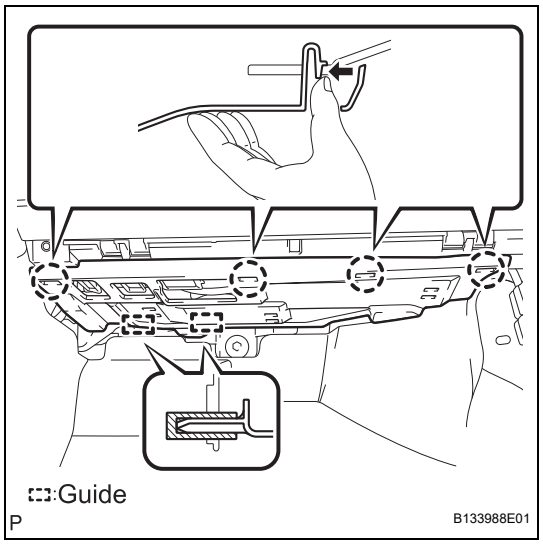
16. REMOVE COMBINATION METER ASSEMBLY

(a) Remove the 4 screws <E>.

(b) Disengage each connector and remove the combination meter assembly.

17. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)

18. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)

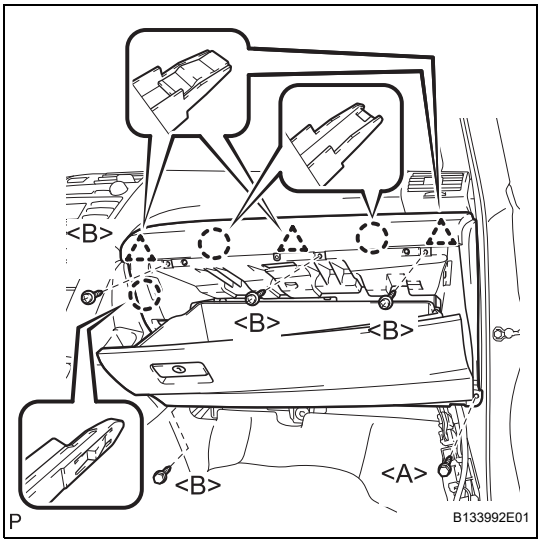


19. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY

(a) Disengage the 4 claws.

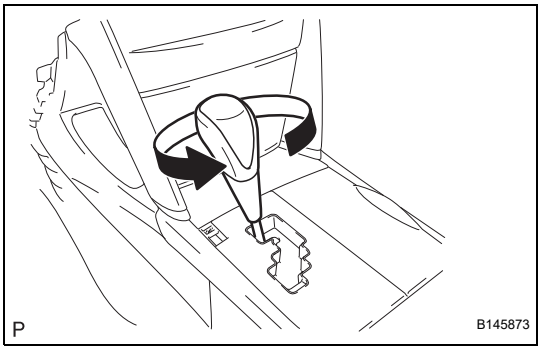
(b) Disengage the 2 guides and remove the No. 2 under cover sub-assembly.

IP



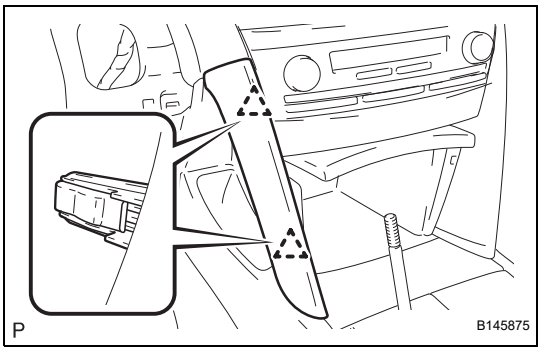
20. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Remove the bolt <A>.
(b) Remove the 4 screws <B>.
(c) Disengage the 3 claws and the 3 clips.
(d) Disconnect the connector and remove the lower instrument panel sub-assembly.



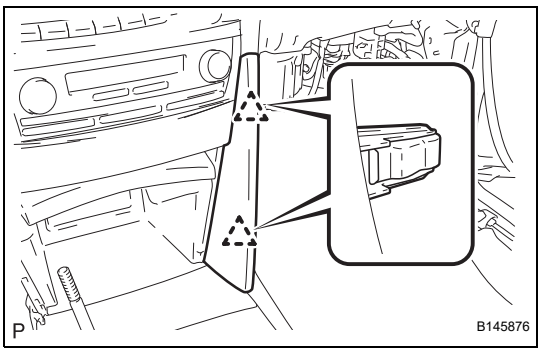
21. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY

(a) Turn the shift lever knob counterclockwise and remove the shift lever knob sub-assembly.



22. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

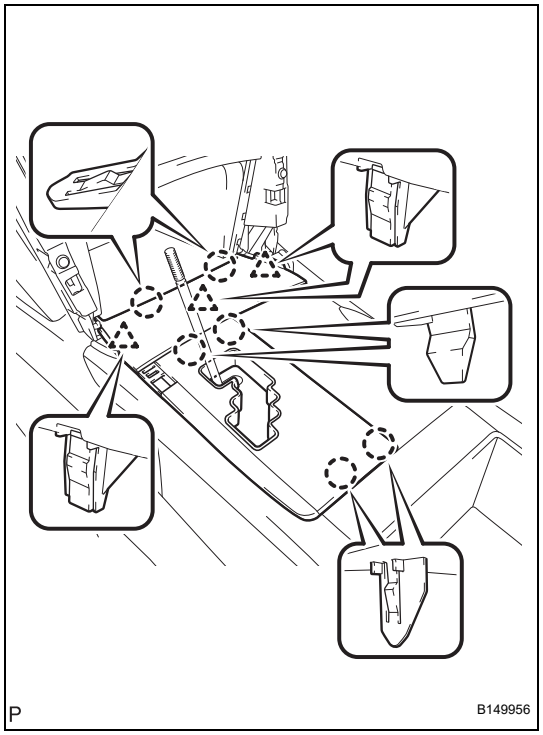
(a) Disengage the 2 clips and remove the No. 1 instrument cluster finish panel garnish.



23. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Disengage the 2 clips and remove the No. 2 instrument cluster finish panel garnish.

IP

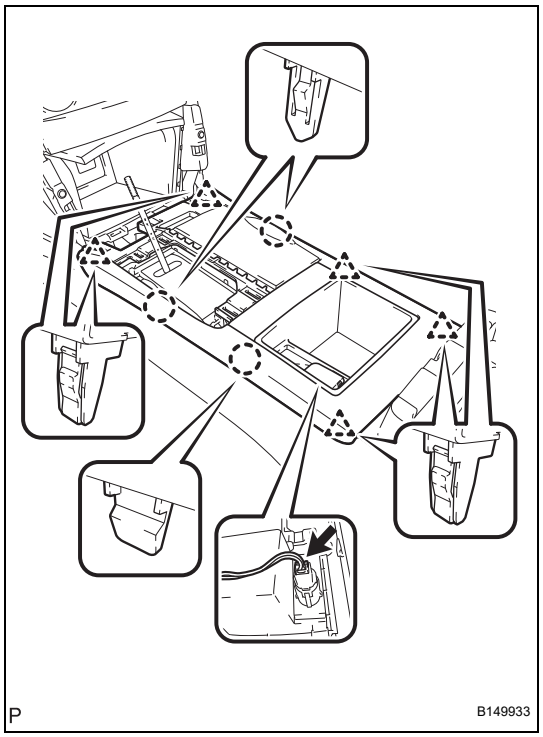


24. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY

(a) Disengage the 6 claws and the 3 clips, and then remove the floor shift position indicator housing sub-assembly.

(b) with Seat Heater System:

(1) Disconnect each connector.

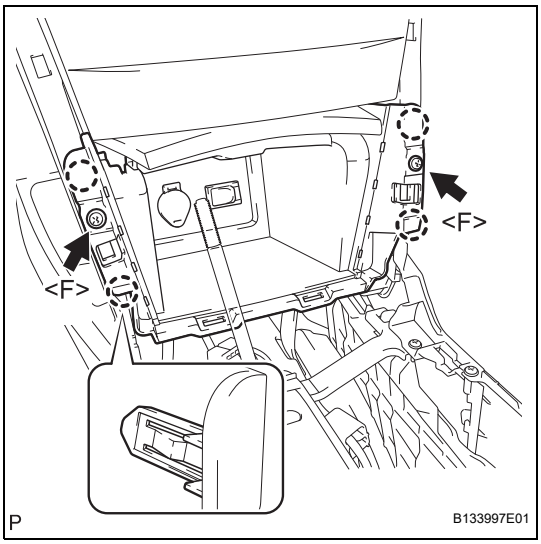


25. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY

(a) Disengage the 3 claws and the 5 clips.

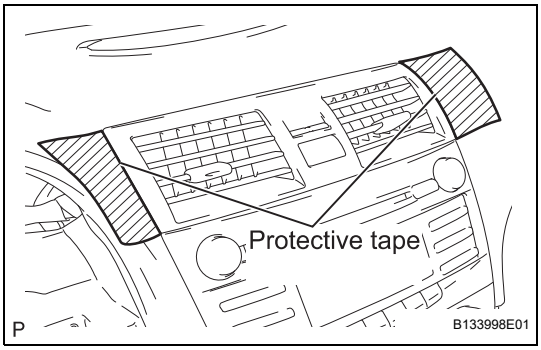
(b) Disconnect the connector and remove the upper console rear panel sub-assembly.

IP



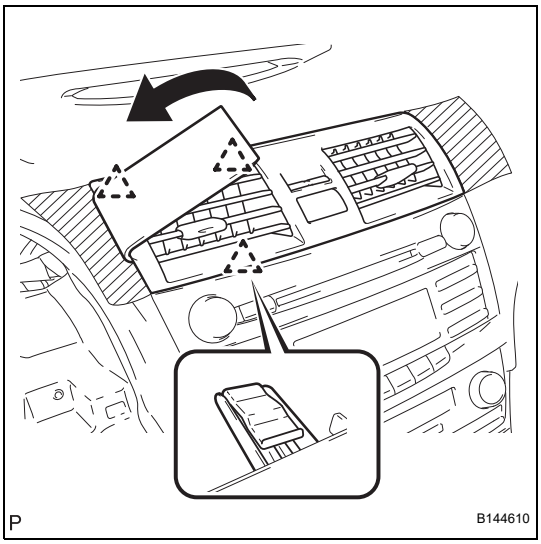
26. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY

(a) Remove the 2 screws <F>.
(b) Disengage the 4 claws.
(c) Disconnect each connector and remove the upper console panel sub-assembly.



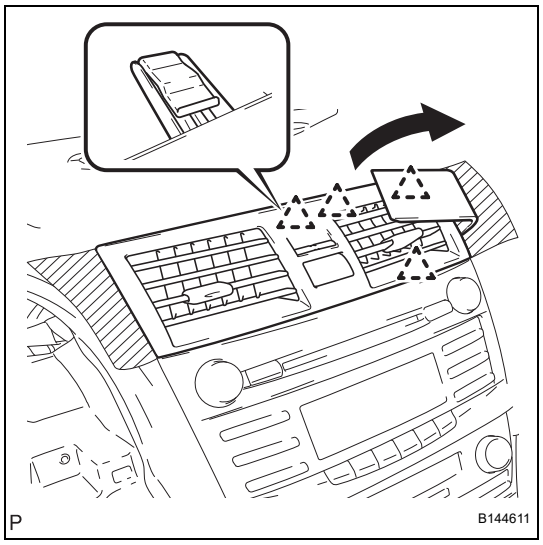
27. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY

(a) Apply protective tape to the areas shown in the illustration.



(b) Using a moulding remover, disengage the 3 clips.

IP

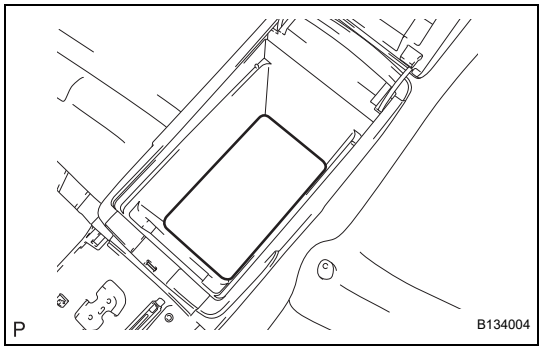


(c) Using a moulding remover, disengage the 4 clips.
(d) Disconnect the connector and remove the instrument panel No. 2 register assembly.

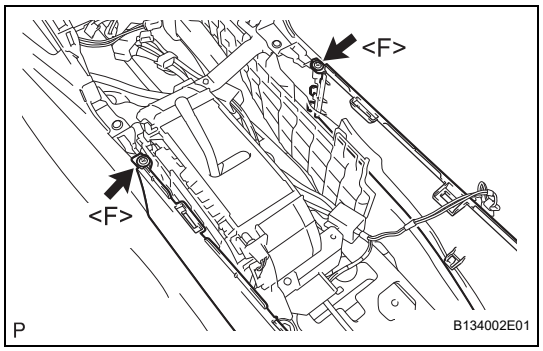
28. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-136)

29. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-193)

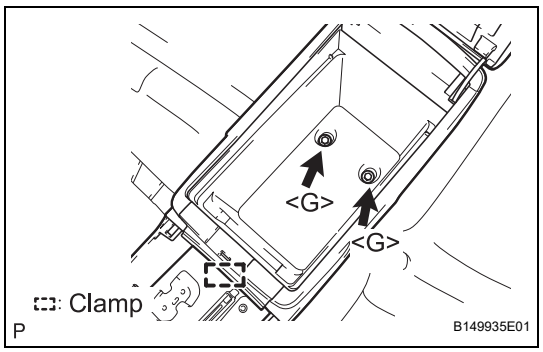
30. REMOVE CONSOLE BOX POCKET
(a) Remove the console box pocket.



31. REMOVE CONSOLE BOX CARPET
(a) Remove the console box carpet.

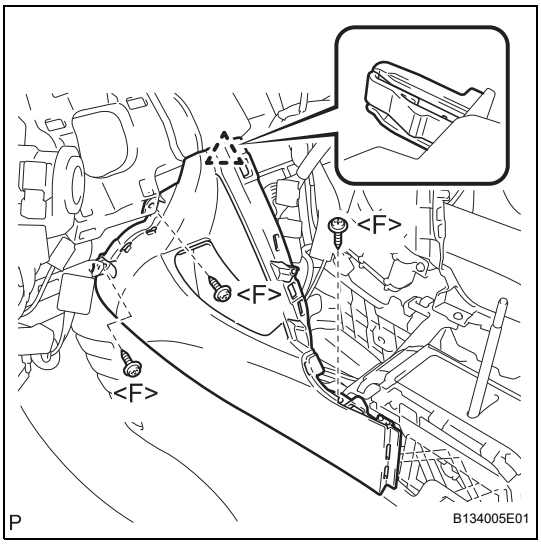


32. REMOVE CONSOLE BOX ASSEMBLY
(a) Remove the 2 screws <F>.



(b) Disengage the clamp.
(c) Remove the 2 bolts <G> and the console box assembly.

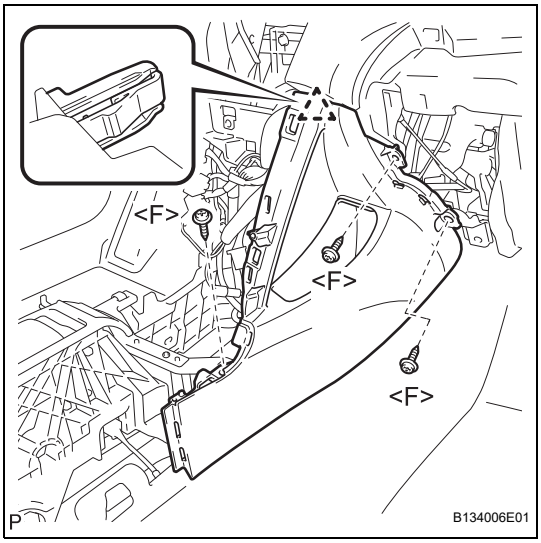
IP



33. REMOVE NO. 2 CONSOLE BOX INSERT FRONT

(a) Remove the 3 screws <F>.

(b) Disengage the clip and remove the No. 2 console box insert front.

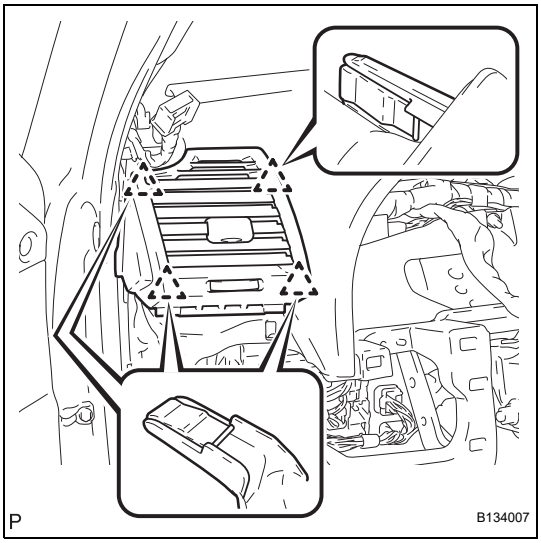


34. REMOVE NO. 1 CONSOLE BOX INSERT FRONT

(a) Remove the 3 screws <F>.

(b) Disengage the clip and remove the No. 1 console box insert front.

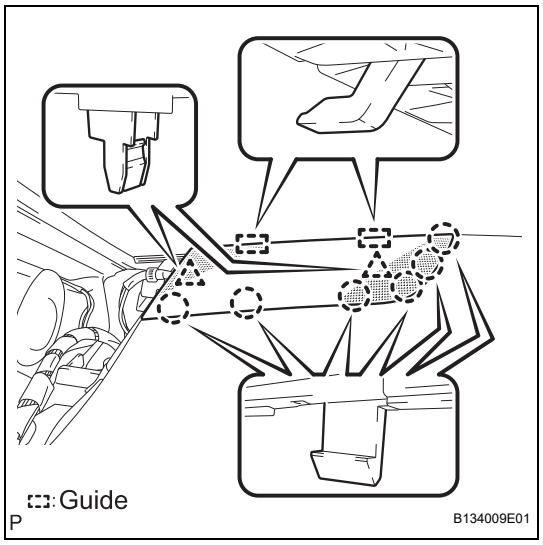
35. REMOVE FRONT PILLAR GARNISH LH (See page IR-16)



36. REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY

(a) Disengage the 4 clips and remove the instrument panel No. 1 register assembly.

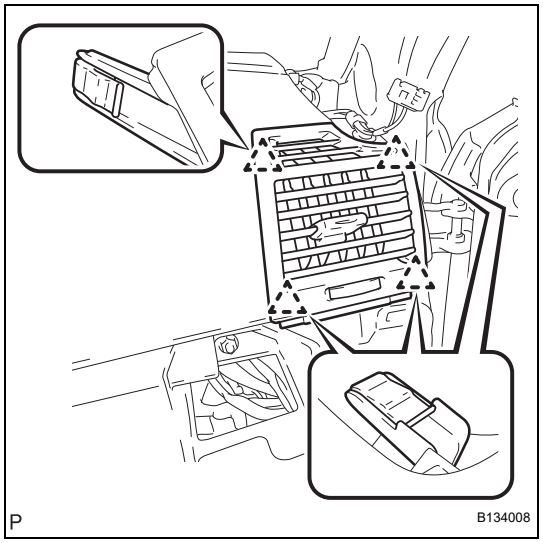
IP



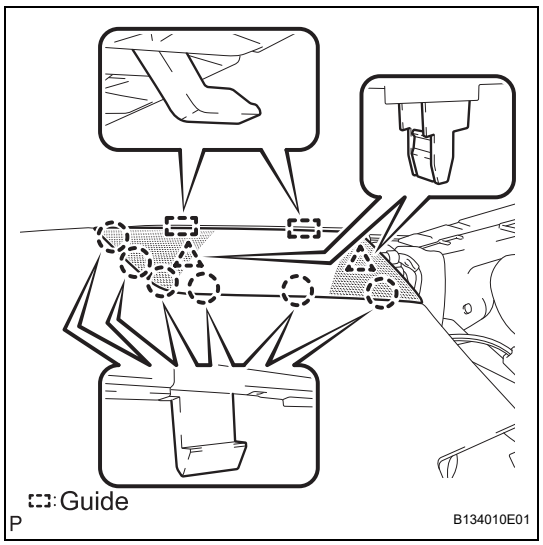
37. **REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY**
    (a) Disengage the 6 claws and the 2 clips.
    (b) Disengage the 2 guides and remove the instrument panel No. 1 speaker panel sub-assembly.

38. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)**

39. **REMOVE FRONT PILLAR GARNISH RH (See page IR-16)**



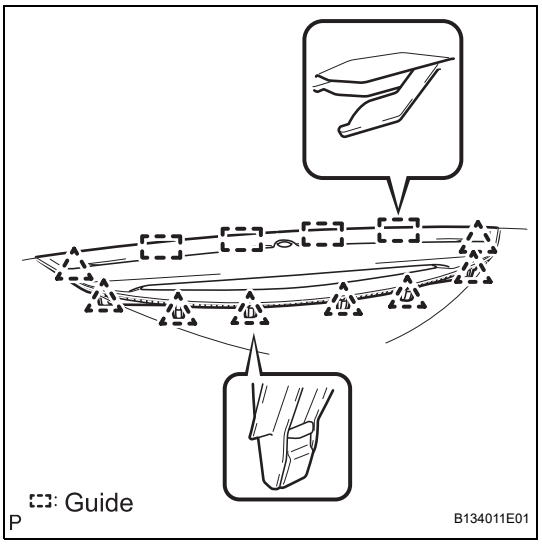
40. **REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY**
    (a) Disengage the 4 clips and remove the instrument panel No. 3 register assembly.



41. **REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY**
    (a) Disengage the 6 claws and the 2 clips.
    (b) Disengage the 2 guides and remove the instrument panel No. 2 speaker panel sub-assembly.

42. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)**
    HINT:
    Use the same procedures described for the LH side (See page AV-146).

IP



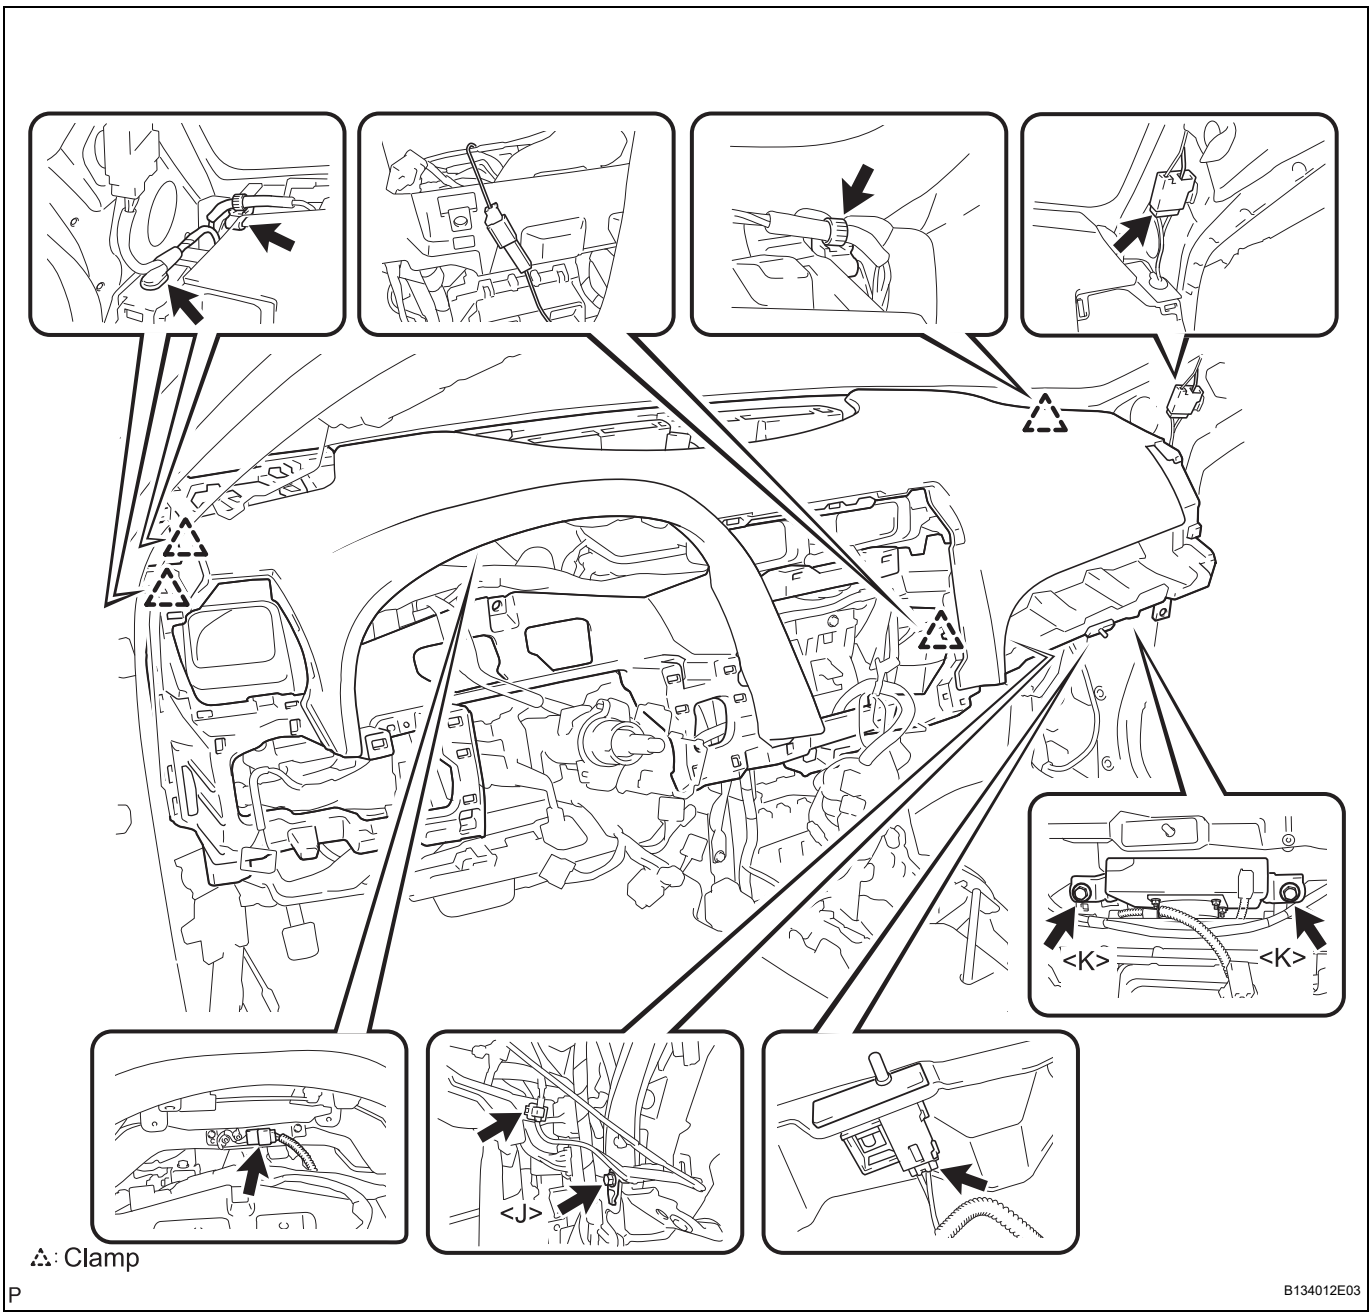
43. REMOVE NO. 1 DEFROSTER NOZZLE GARNISH

(a) Disengage the 8 clips and the 4 guides.
(b) Disconnect each connector and remove the No. 1 defroster nozzle garnish.

44. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-381)

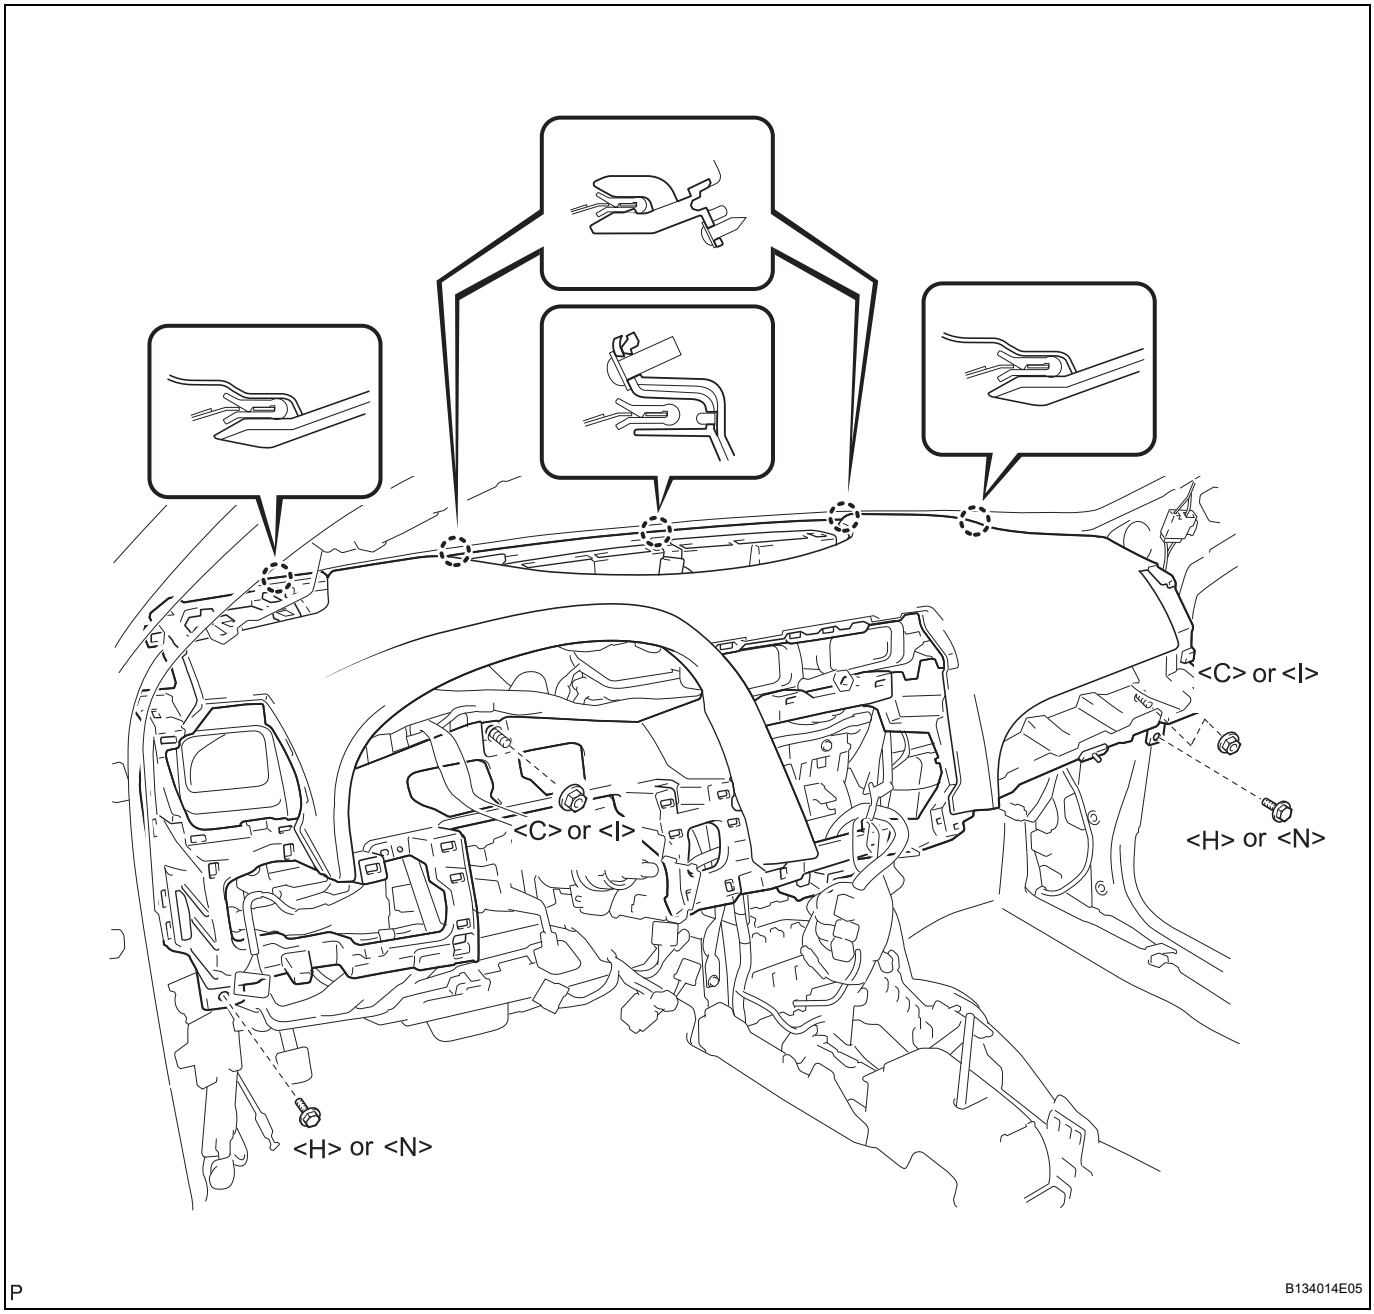
45. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY

(a) Disengage each clamp.
(b) Disconnect each connector.
(c) Remove the bolt <J>.
(d) Remove the 2 passenger airbag bolts <K>.



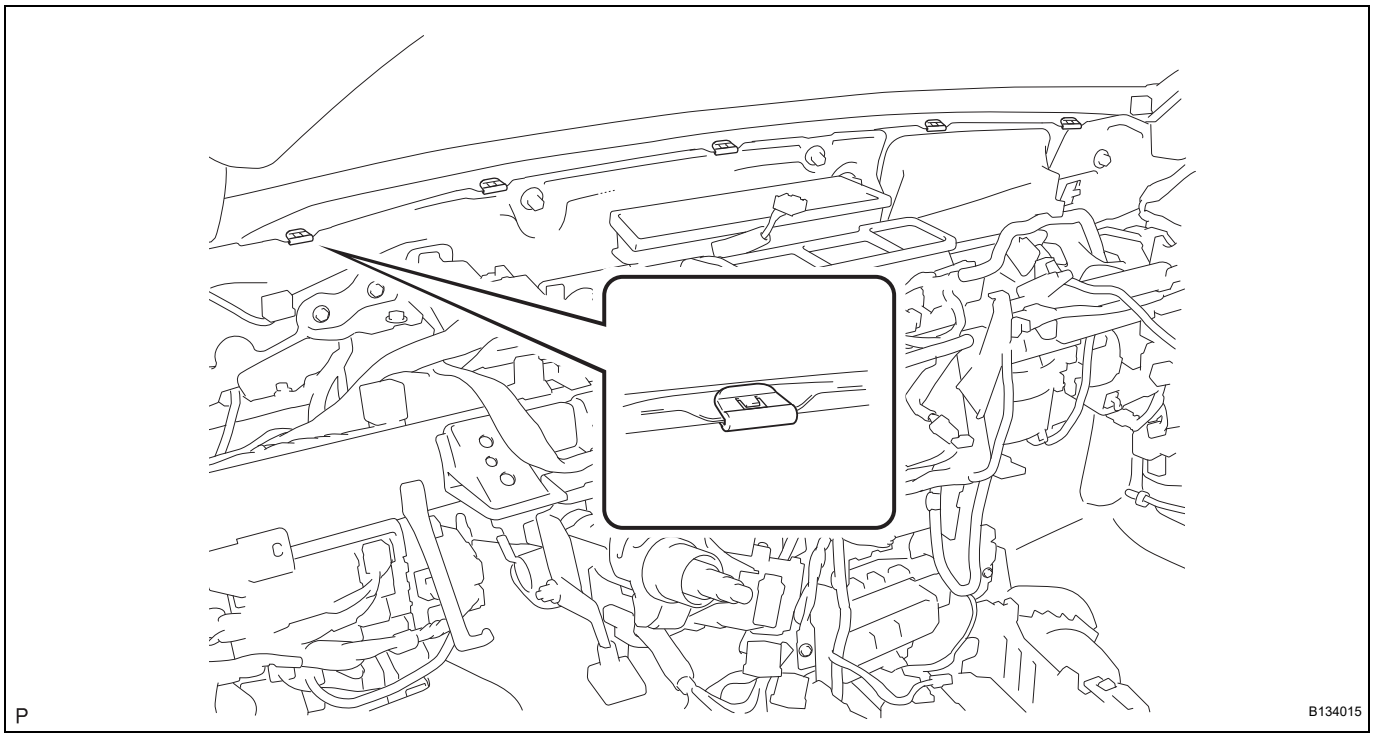
IP

(e) Remove the 2 bolts <H> or <N>.
(f) Remove the 2 nuts <C> or <I>.
(g) Disengage the 5 claws and remove the instrument panel safety pad assembly.



46. REMOVE NO. 3 INSTRUMENT PANEL STAY

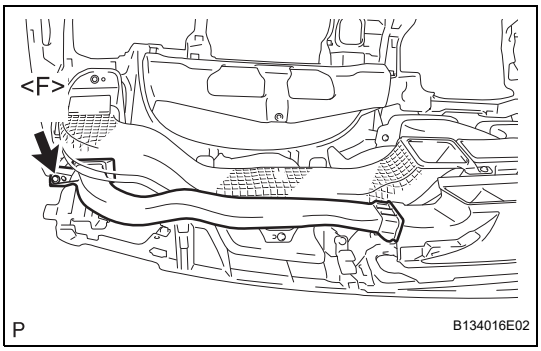
(a) Disengage the 5 claws and remove the 5 No. 3 instrument panel stays.



DISASSEMBLY

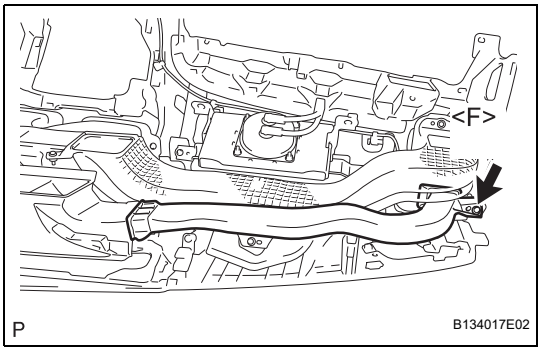
1. REMOVE SIDE NO. 1 DEFROSTER NOZZLE DUCT

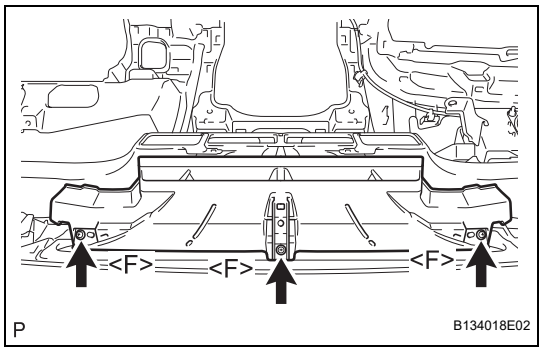
(a) Remove the screw <F> and the side No. 1 defroster nozzle duct.



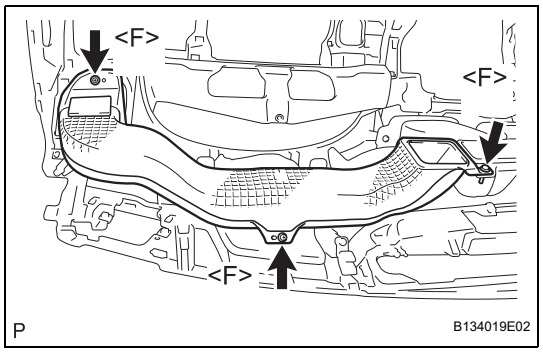
2. REMOVE SIDE NO. 2 DEFROSTER NOZZLE DUCT

(a) Remove the screw <F> and the side No. 2 defroster nozzle duct.

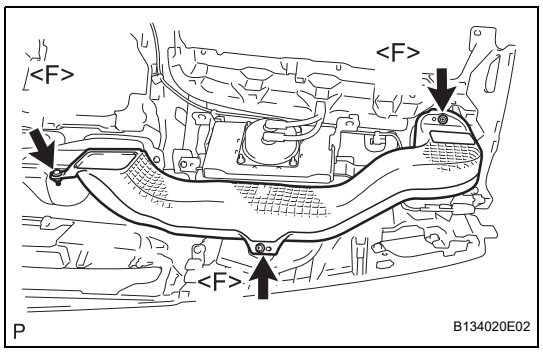




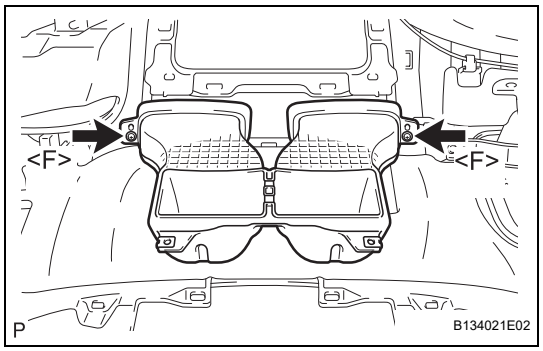
3. **REMOVE DEFROSTER NOZZLE ASSEMBLY**
   (a) Remove the 3 screws <F> and the defroster nozzle assembly.



4. **REMOVE NO. 1 HEATER TO REGISTER DUCT**
   (a) Remove the 3 screws <F> and the No. 1 heater to register duct.



5. **REMOVE NO. 3 HEATER TO REGISTER DUCT**
   (a) Remove the 3 screws <F> and the No. 3 heater to register duct.

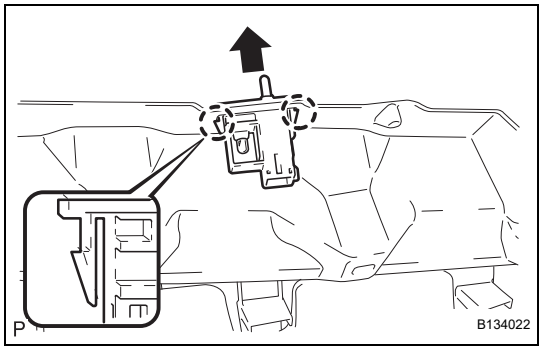


6. **REMOVE NO. 2 HEATER TO REGISTER DUCT**
   (a) Remove the 2 screws <F> and the No. 2 heater to register duct.

7. **REMOVE NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-173)**

8. **REMOVE NAVIGATION ANTENNA ASSEMBLY (See page NS-204)**

9. **REMOVE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-381)**



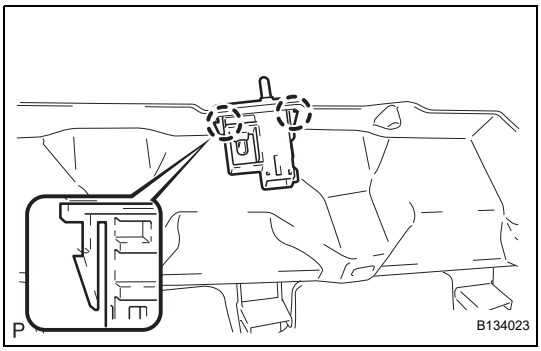
10. **REMOVE GLOVE BOX LIGHT ASSEMBLY**
    (a) Disengage the 2 claws and remove the glove box light assembly.

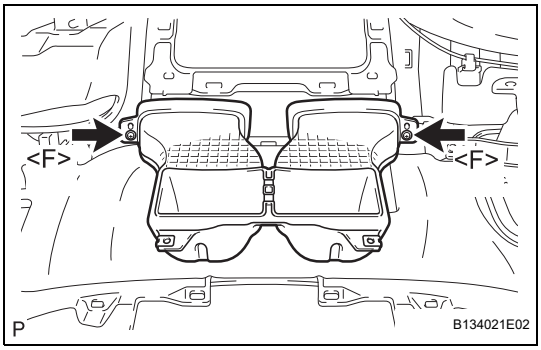
11. **REMOVE PLASMACLUSTER (See page AC-279)**

IP

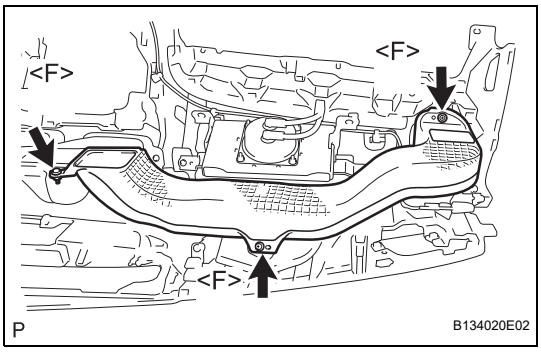
REASSEMBLY

1. **INSTALL PLASMACLUSTER (See page AC-280)**
2. **INSTALL GLOVE BOX LIGHT ASSEMBLY**
   (a) Engage the 2 claws and install the glove box light assembly.
3. **INSTALL FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-383)**
4. **INSTALL NAVIGATION ANTENNA ASSEMBLY (See page NS-204)**
5. **INSTALL NO. 2 ANTENNA CORD SUB-ASSEMBLY (See page AV-185)**
6. **INSTALL NO. 2 HEATER TO REGISTER DUCT**
   (a) Install the No. 2 heater to register duct with the 2 screws <F>.

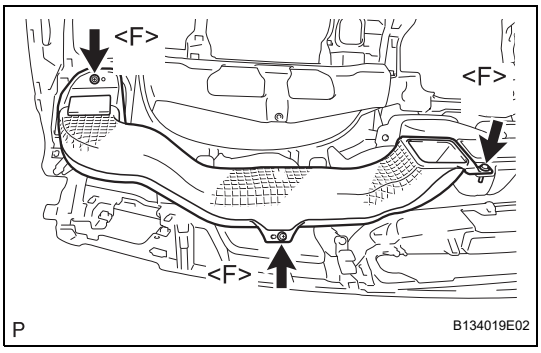




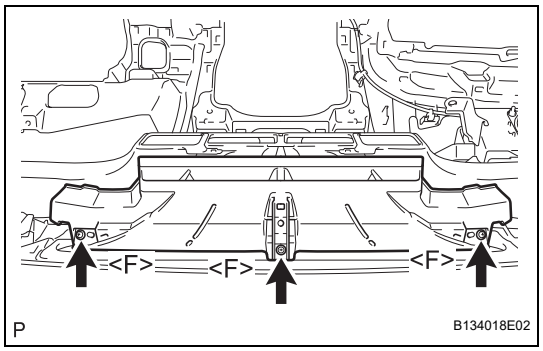
7. **INSTALL NO. 3 HEATER TO REGISTER DUCT**
   (a) Install the No. 3 heater to register duct with the 3 screws <F>.



8. **INSTALL NO. 1 HEATER TO REGISTER DUCT**
   (a) Install the No. 1 heater to register duct with the 3 screws <F>.

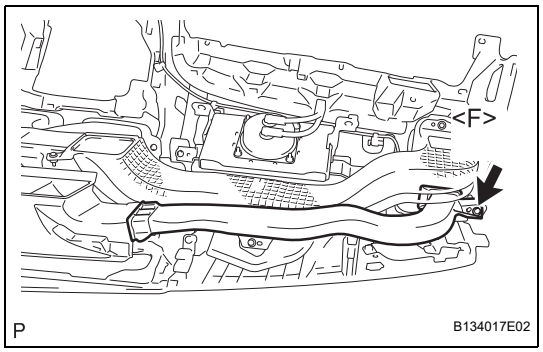


IP



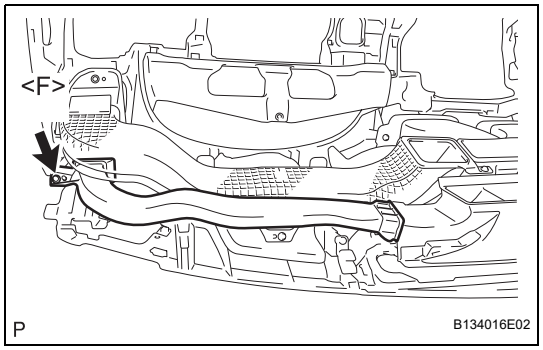
9. INSTALL DEFROSTER NOZZLE ASSEMBLY

(a) Install the defroster nozzle assembly with the 3 screws <F>.



10. INSTALL SIDE NO. 2 DEFROSTER NOZZLE DUCT

(a) Install the side No. 2 defroster nozzle duct with the screw <F>.



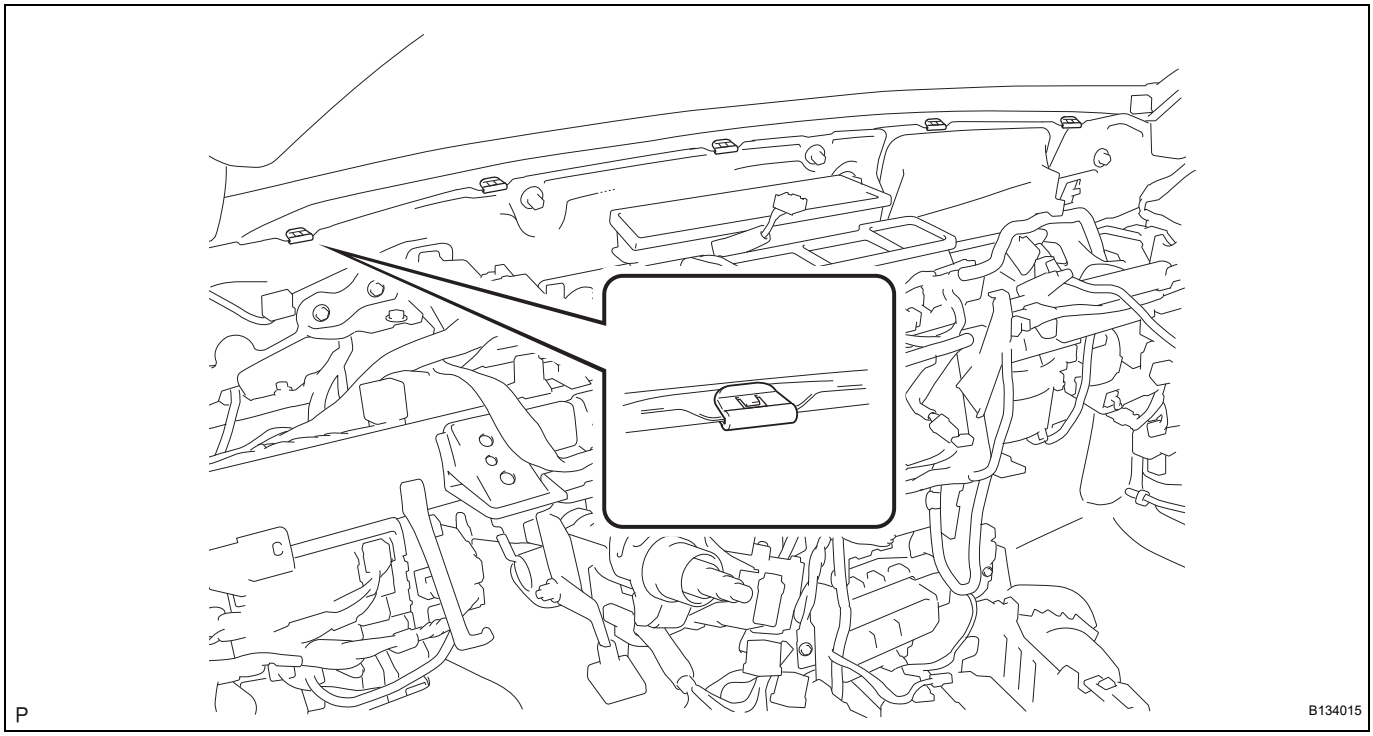
11. INSTALL SIDE NO. 1 DEFROSTER NOZZLE DUCT

(a) Install the side No. 1 defroster nozzle duct with the screw <F>.

INSTALLATION

1. INSTALL NO. 3 INSTRUMENT PANEL STAY

(a) Engage the 5 claws and install the 5 No. 3 instrument panel stays.

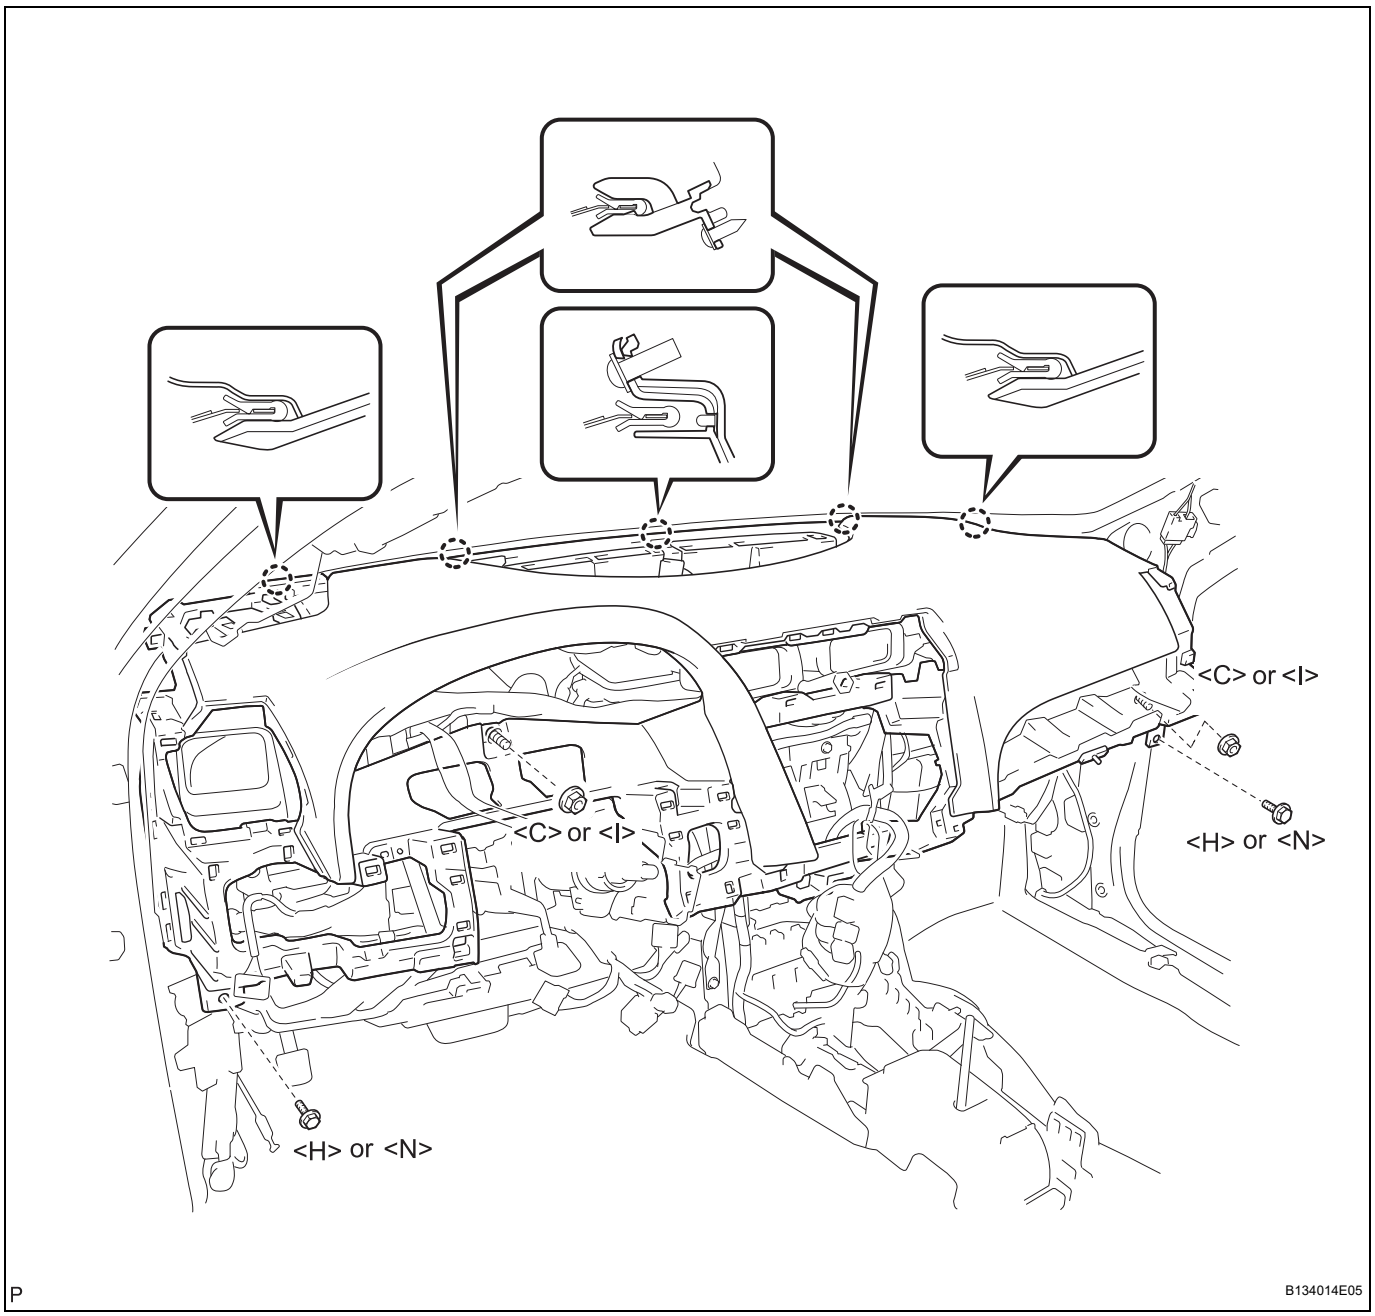


2. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY

(a) Engage the 5 claws.

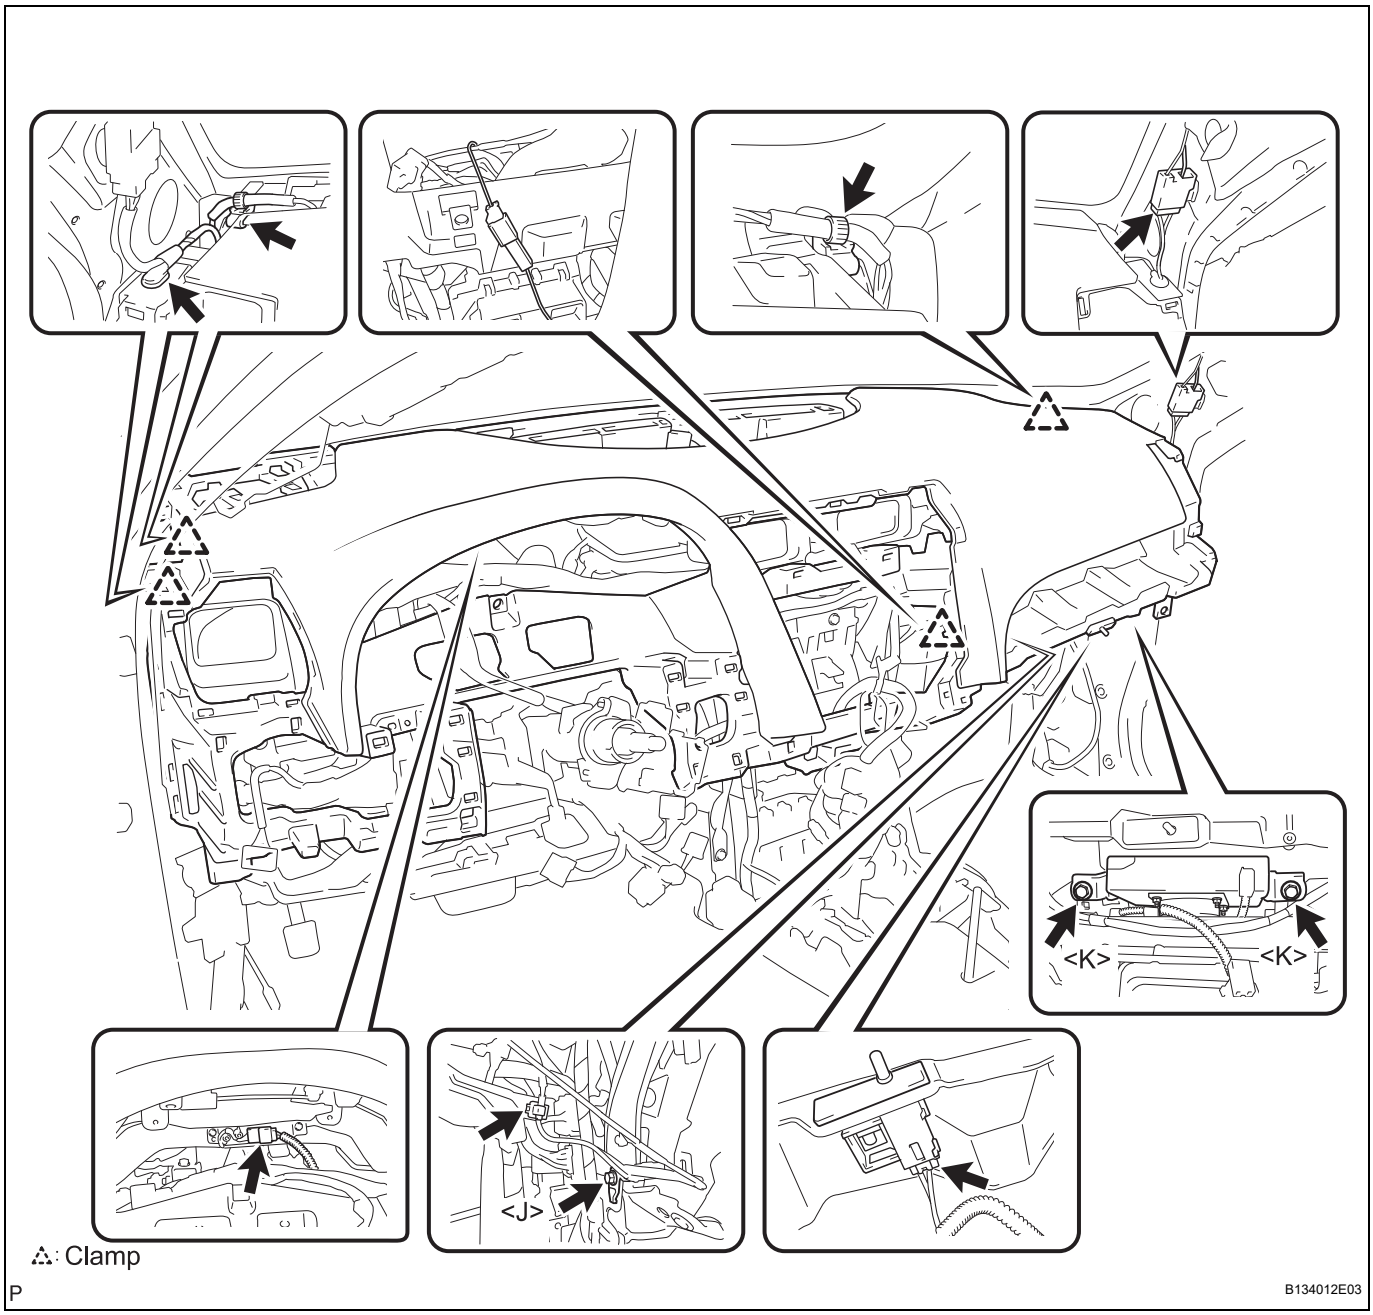
NOTICE:
Do not allow the wire harness to get caught in the claws.

(b) Install the 2 bolts <H> or <N> and 2 nuts <C> or <I>.

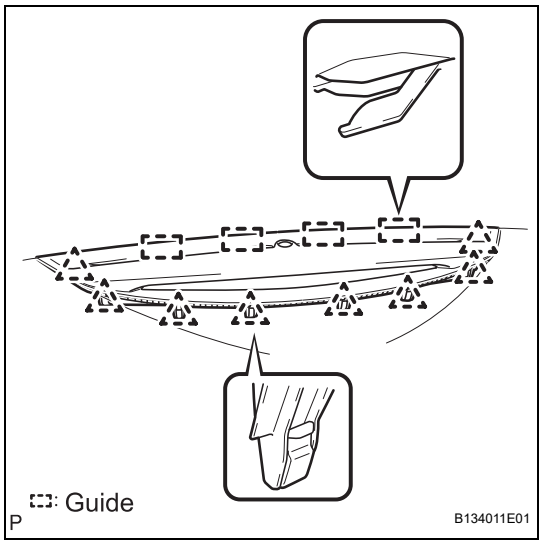


(c) Engage each clamp.
(d) Install the bolt <J>.
Torque: 7.0 N*m (71 kgf*cm, 62 in.*lbf)
(e) Install the 2 passenger airbag bolts <K>.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(f) Connect each connector and install the instrument panel safety pad assembly.

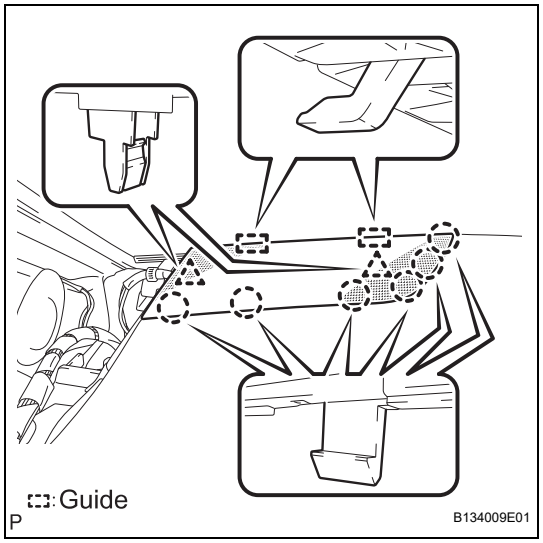


3. CONNECT INSTRUMENT PANEL WIRE ASSEMBLY (See page RS-383)

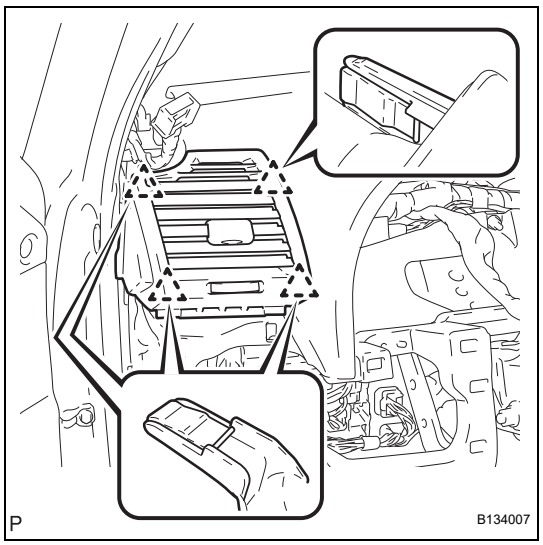


4. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH**
   (a) Connect each connector.
   (b) Engage the 4 guides.
   (c) Engage the 8 clips and install the No. 1 defroster nozzle garnish.

5. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)**



6. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY**
   (a) Engage the 2 guides.
   (b) Engage the 6 claws and the 2 clips to install the instrument panel No. 1 speaker panel sub-assembly.

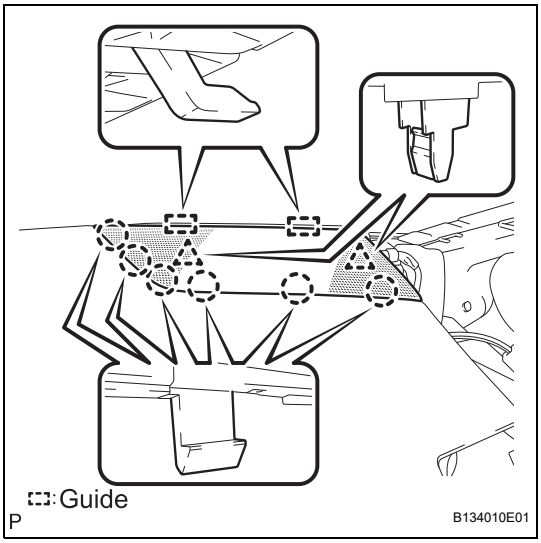


7. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY**
   (a) Engage the 4 clips and install the instrument panel No. 1 register assembly.

8. **INSTALL FRONT PILLAR GARNISH LH (See page IR-38)**

9. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side)**
   HINT:
   Use the same procedures described for the LH side (See page AV-146).

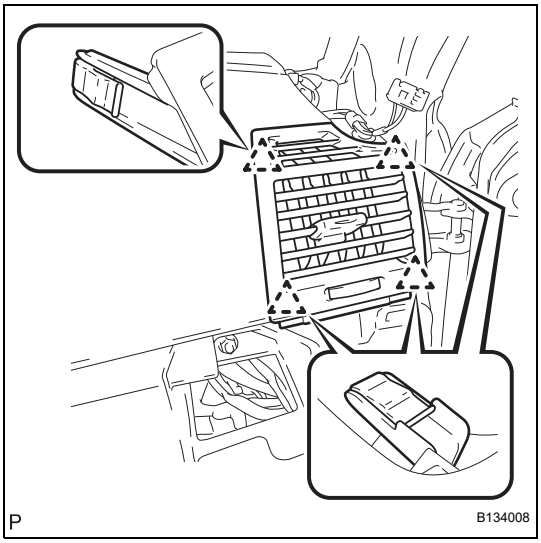
IP



10. INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY

(a) Engage the 2 guides.

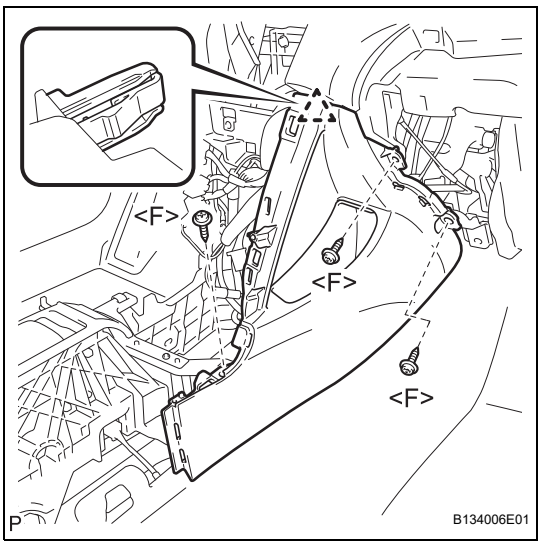
(b) Engage the 6 claws and the 2 clips to install the instrument panel No. 2 speaker panel sub-assembly.



11. INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY

(a) Engage the 4 clips and install the instrument panel No. 3 register assembly.

12. INSTALL FRONT PILLAR GARNISH RH (See page IR-39)

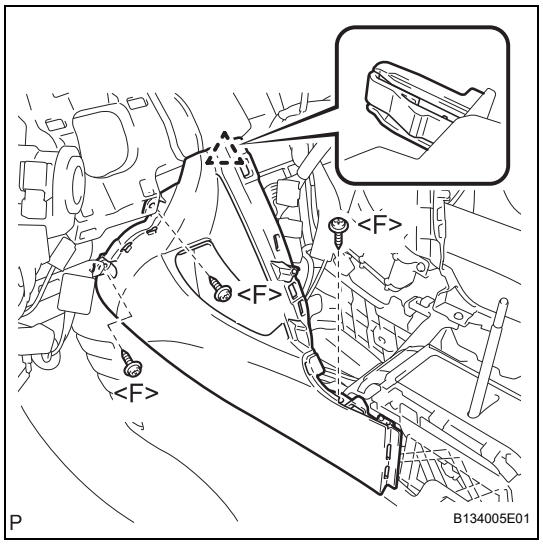


13. INSTALL NO. 1 CONSOLE BOX INSERT FRONT

(a) Engage the clip.

(b) Install the No. 1 console box insert front with the 3 screws <F>.

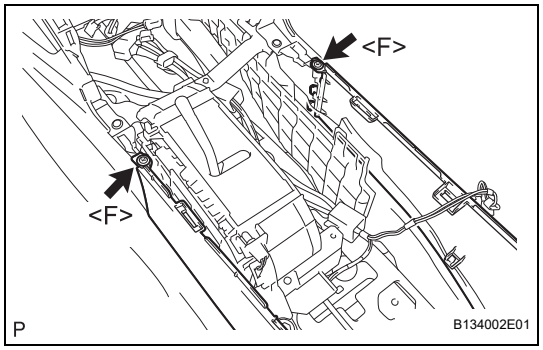
IP



14. INSTALL NO. 2 CONSOLE BOX INSERT FRONT

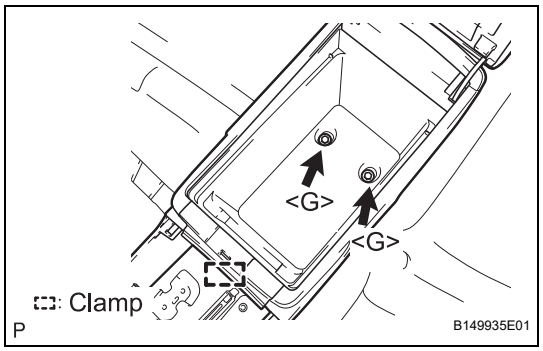
(a) Engage the clip.

(b) Install the No. 2 console box insert front with the 3 screws <F>.



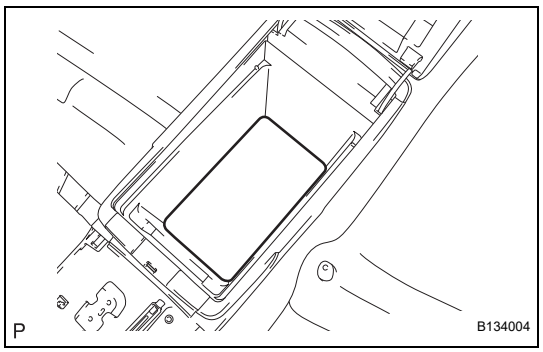
15. INSTALL CONSOLE BOX ASSEMBLY

(a) Install the 2 screws <F>.



(b) Install the console box assembly with the 2 bolts <G>.

(c) Engage the clamp.



16. INSTALL CONSOLE BOX CARPET

(a) Install the console box carpet.

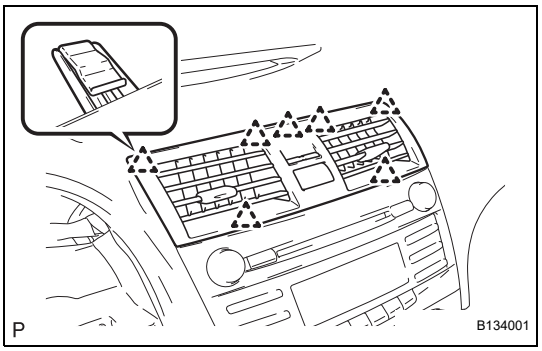
17. INSTALL CONSOLE BOX POCKET

(a) Install the console box pocket.

18. INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-137)

19. INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-194)

IP

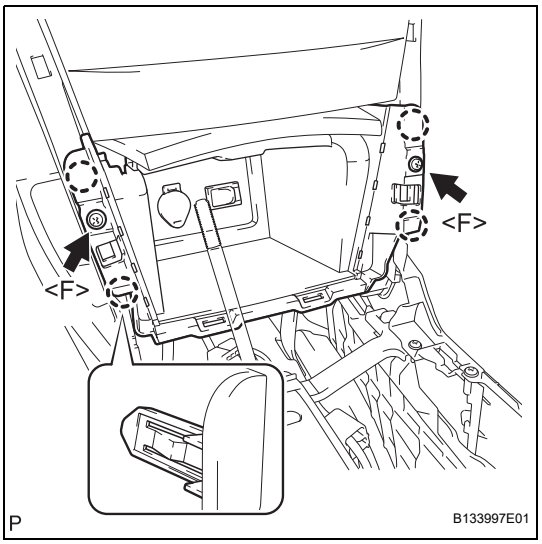


20. INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY

(a) Engage the 7 clips and install the instrument panel No. 2 register assembly.

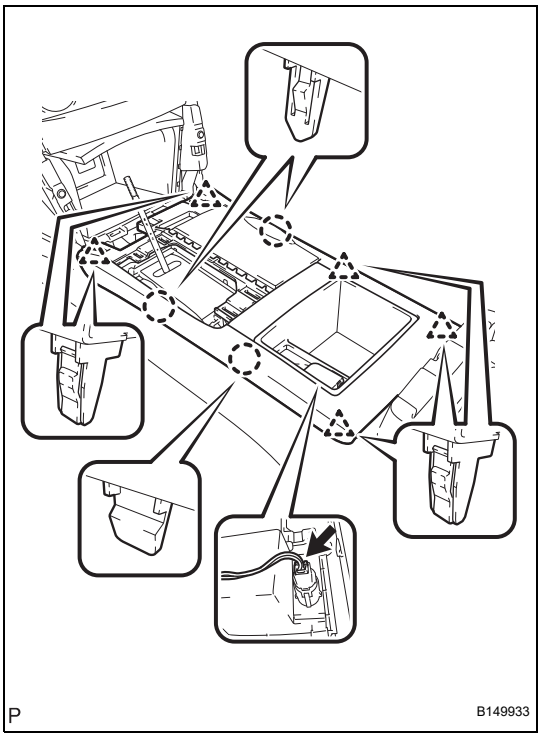
21. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY

(a) Connect each connector.



(b) Engage the 4 claws.

(c) Install the upper console panel sub-assembly with the 2 screws <F>.



22. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY

(a) Connect the connector.

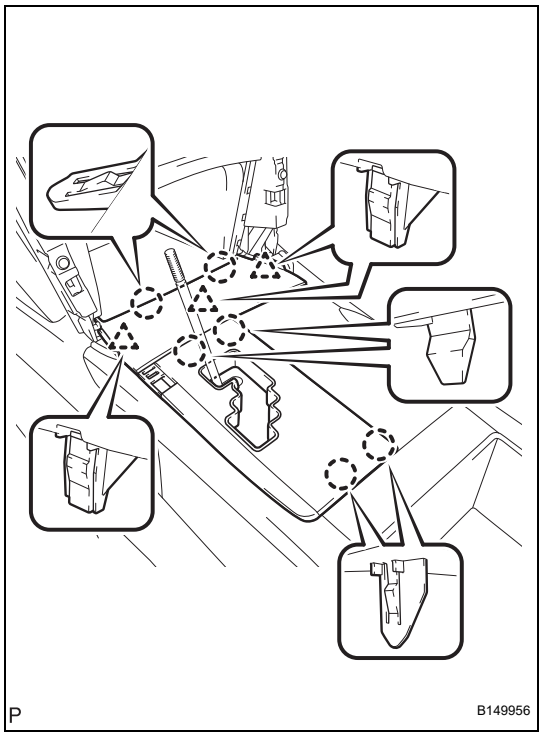
(b) Engage the 3 claws and 5 clips to install the upper console rear panel sub-assembly.

23. INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY

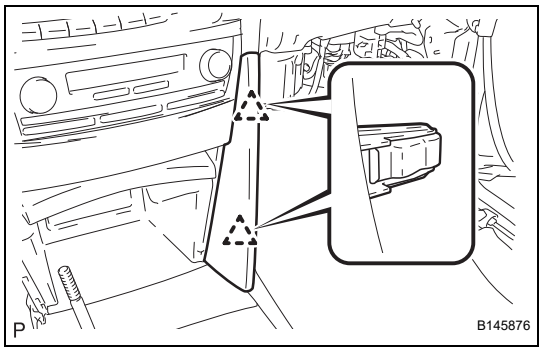
(a) with Seat Heater System:

(1) Connect each connector.

IP

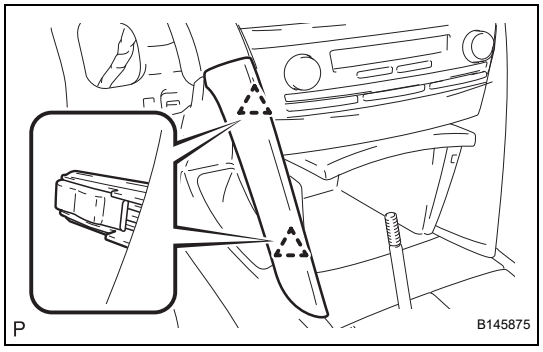


(b) Engage the 6 claws and the 3 clips to install the floor shift position indicator housing sub-assembly.



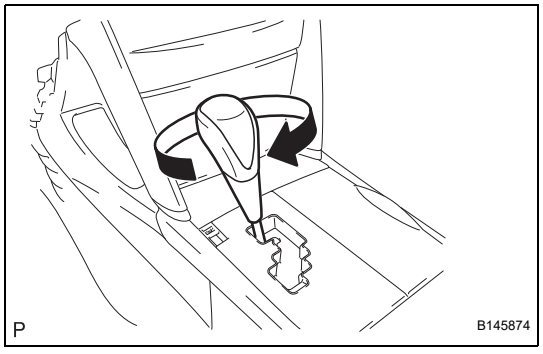
24. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Engage the 2 clips and install the No. 2 instrument cluster finish panel garnish.



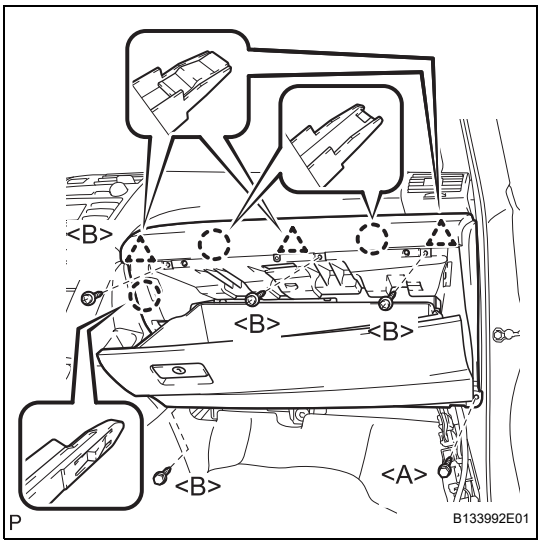
25. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH

(a) Engage the 2 clips and install the No. 1 instrument cluster finish panel garnish.



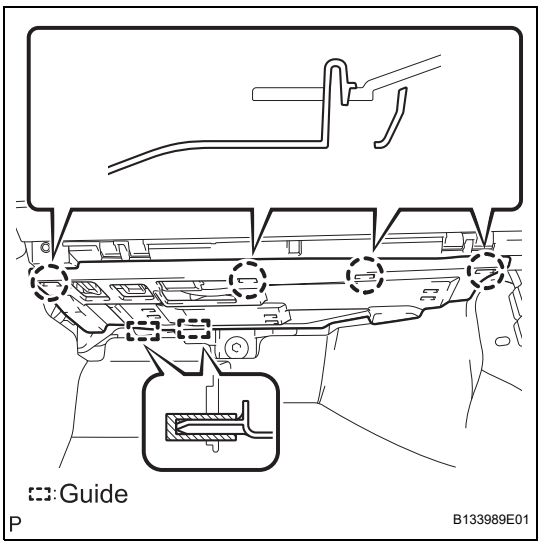
26. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY

(a) Install the shift lever knob sub-assembly.



27. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY

(a) Engage the 3 claws and 3 clips.
(b) Install the 4 screws <B>.
(c) Install the lower instrument panel sub-assembly with the bolt <A>.

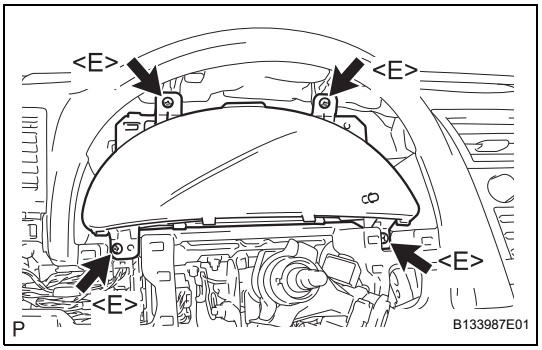


28. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY

(a) Engage the 4 claws and 2 guides and install the instrument panel No. 2 under cover.

29. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)

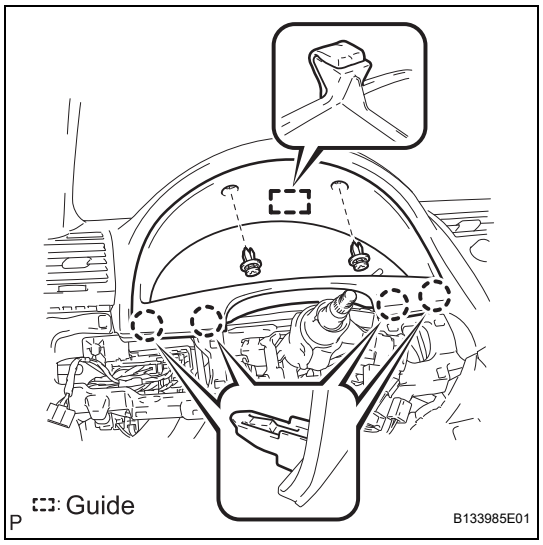
30. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-42)



31. INSTALL COMBINATION METER ASSEMBLY

(a) Connect each connector.
(b) Install the combination meter assembly with the 4 screws <E>.

IP



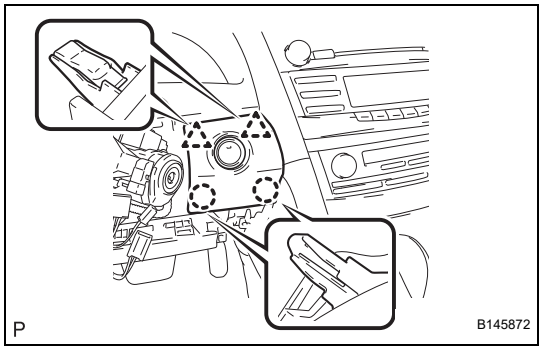
32. INSTALL INSTRUMENT CLUSTER FINISH PANEL

(a) Engage the guide and the 4 claws.

(b) Install the instrument cluster finish panel with the 2 clips.

33. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL

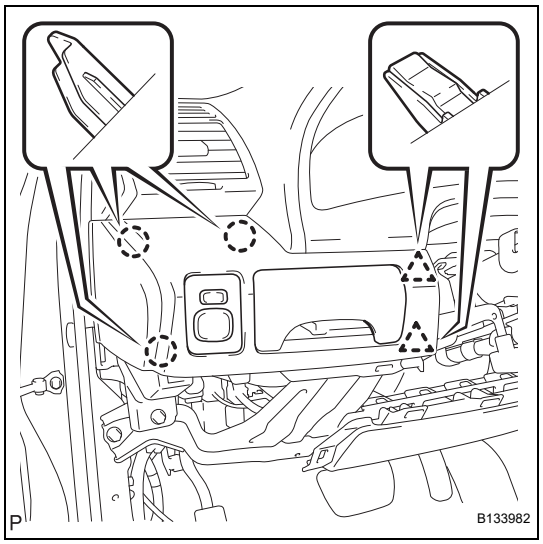
(a) Connect the connector.



(b) Engage the 2 claws and 2 clips to install the lower instrument panel finish panel.

34. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY

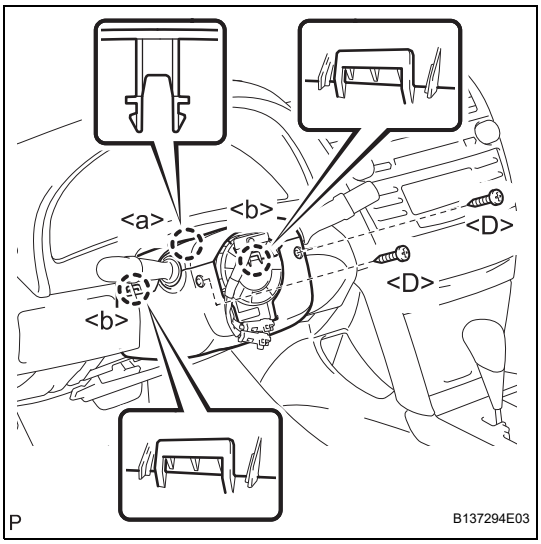
(a) Connect the connector.



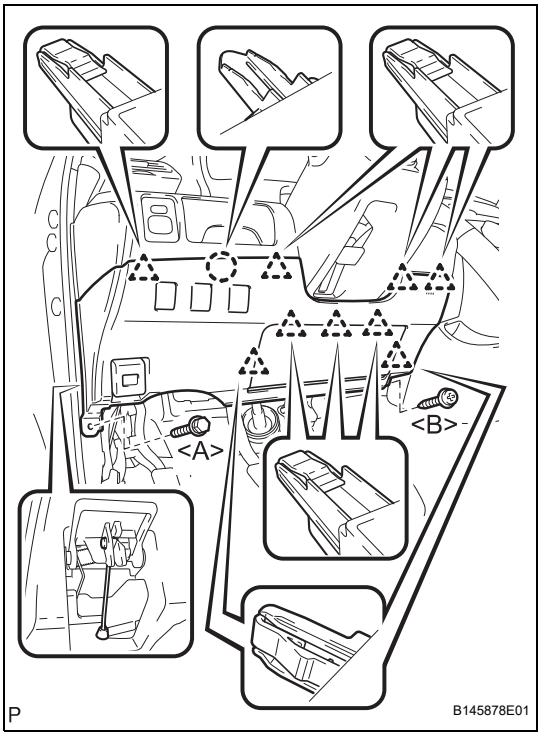
(b) Engage the 3 claws and 2 clips to install the No. 1 instrument panel sub-assembly.

35. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-41)

36. ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-360)



37. **INSTALL STEERING COLUMN COVER**
    (a) Engage the claw <a> and install the upper steering column cover.
    (b) Engage the 2 claws <b> and install the lower steering column cover.
    (c) Install the steering column cover with the 2 screws <D>.



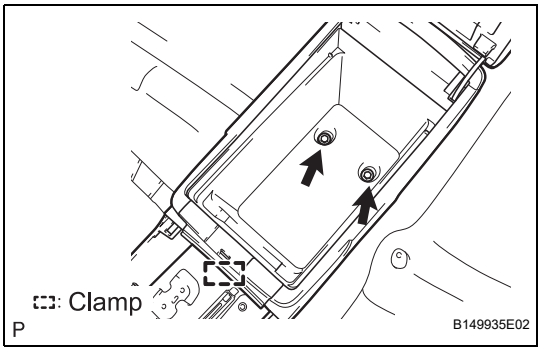
38. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH**
    (a) Install the air hose and connect each connector.
    (b) Engage the claw and the 9 clips.
    (c) Instal the instrument panel finish panel LH with the screw <B> and bolt <A>.
39. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
40. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**
41. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-42)**
42. **INSTALL STEERING PAD (See page RS-346)**
43. **INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-347)**
44. **INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-347)**
45. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
46. **INSPECT STEERING PAD (See page RS-347)**
47. **INSPECT SRS WARNING LIGHT**
    (RS-1)
48. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)

IP

REMOVAL

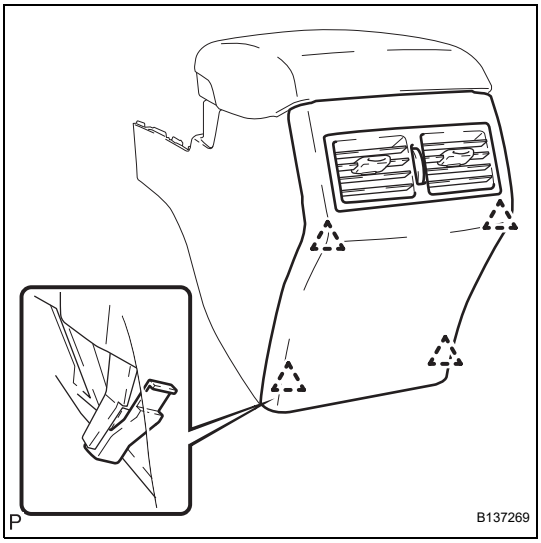
1. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)**
2. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)**
3. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)**
4. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)**
5. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)**
6. **REMOVE CONSOLE BOX POCKET (See page IP-17)**
7. **REMOVE CONSOLE BOX CARPET (See page IP-17)**
8. **REMOVE CONSOLE BOX ASSEMBLY**
   (a) Remove the 2 screws.

   (b) Disengage the clamp.
   (c) Remove the 2 bolts and the console box assembly.

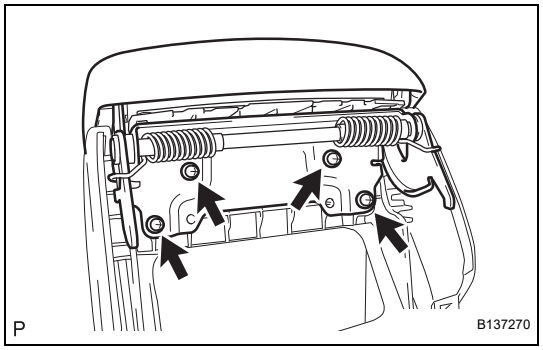


DISASSEMBLY

1. **REMOVE REAR CONSOLE END PANEL SUB-ASSEMBLY**
   (a) Disengage the 4 clips and remove the rear console end panel sub-assembly.



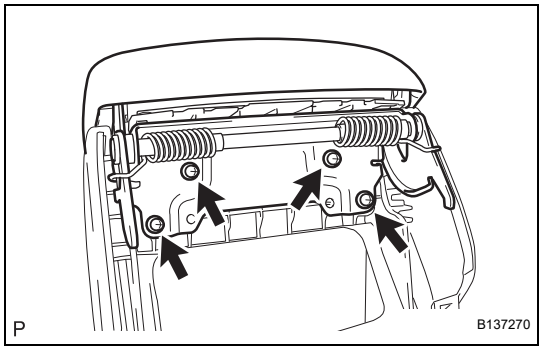
IP



2. REMOVE CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

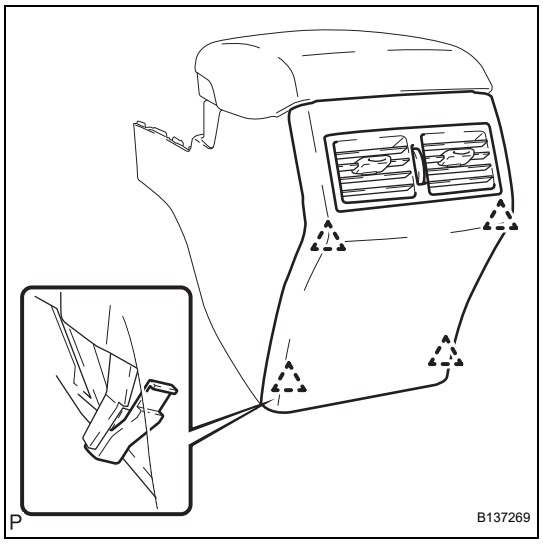
(a) Remove the 4 screws and the console compartment door sub-assembly.

REASSEMBLY



1. INSTALL CONSOLE COMPARTMENT DOOR SUB-ASSEMBLY

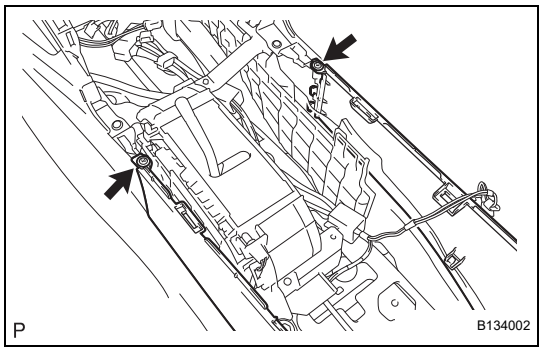
(a) Install the console compartment door sub-assembly with the 4 screws.



2. INSTALL REAR CONSOLE END PANEL SUB-ASSEMBLY

(a) Engage the 4 clips and install the rear console end panel sub-assembly.

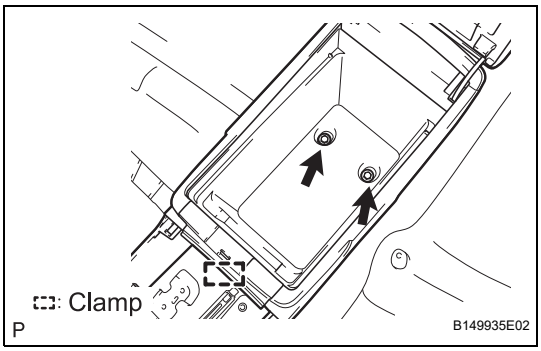
INSTALLATION



1. INSTALL CONSOLE BOX ASSEMBLY

(a) Install the 2 screws.

IP



(b) Install the console box assembly with the 2 bolts.
(c) Engage the clamp.

2. **INSTALL CONSOLE BOX CARPET (See page IP-30)**
3. **INSTALL CONSOLE BOX POCKET (See page IP-30)**
4. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)**
5. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)**
6. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**
7. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**
8. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)**

SYSTEM DESCRIPTION

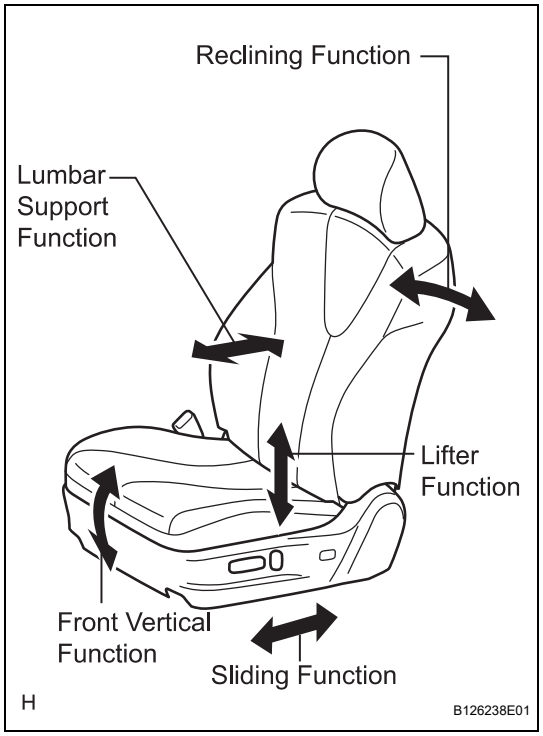
1. FRONT POWER SEAT CONTROL SYSTEM DESCRIPTION

The driver seat and front passenger seat are equipped with slide, reclining, lifter, front vertical, and lumbar support adjustment functions.

2. FUNCTION OF MAIN COMPONENTS

The following functions are available:

Components	Function
Power seat motor assembly (slide motor)	Activated based on a signal from the power seat switch, a motor is activated and slides the seat forward and rearward.
Power seat motor assembly (reclining motor)	Activated based on a signal from the power seat switch, a motor is activated and tilts and reclines the seat.
Power seat motor assembly (front vertical motor)	Activated based on a signal from the power seat switch and raises and lowers the seat cushion front vertically.
Power seat motor assembly (lifter motor)	Activated based on a signal from the power seat switch and raises and lowers the seat vertically.
Lumbar support adjuster motor	Activated based on a signal from the front power seat lumbar switch and adjusts lumbar support.
Front power seat lumbar switch	Based on switches operated, the seat is adjusted accordingly.



OPERATION CHECK

1. CHECK POWER SEAT FUNCTION

(a) Check the basic functions.

(1) Operate the power seat switches and check that the following functions work:

- Sliding
- Reclining
- Lumbar support (Driver side only)
- Front vertical (Driver side only)
- Lifter (Driver side only)

SE

PROBLEM SYMPTOMS TABLE

HINT:

- Inspect the fuses and relays before confirming the suspected areas in the table below.
- Inspect each suspected area in numerical order for the corresponding symptom.

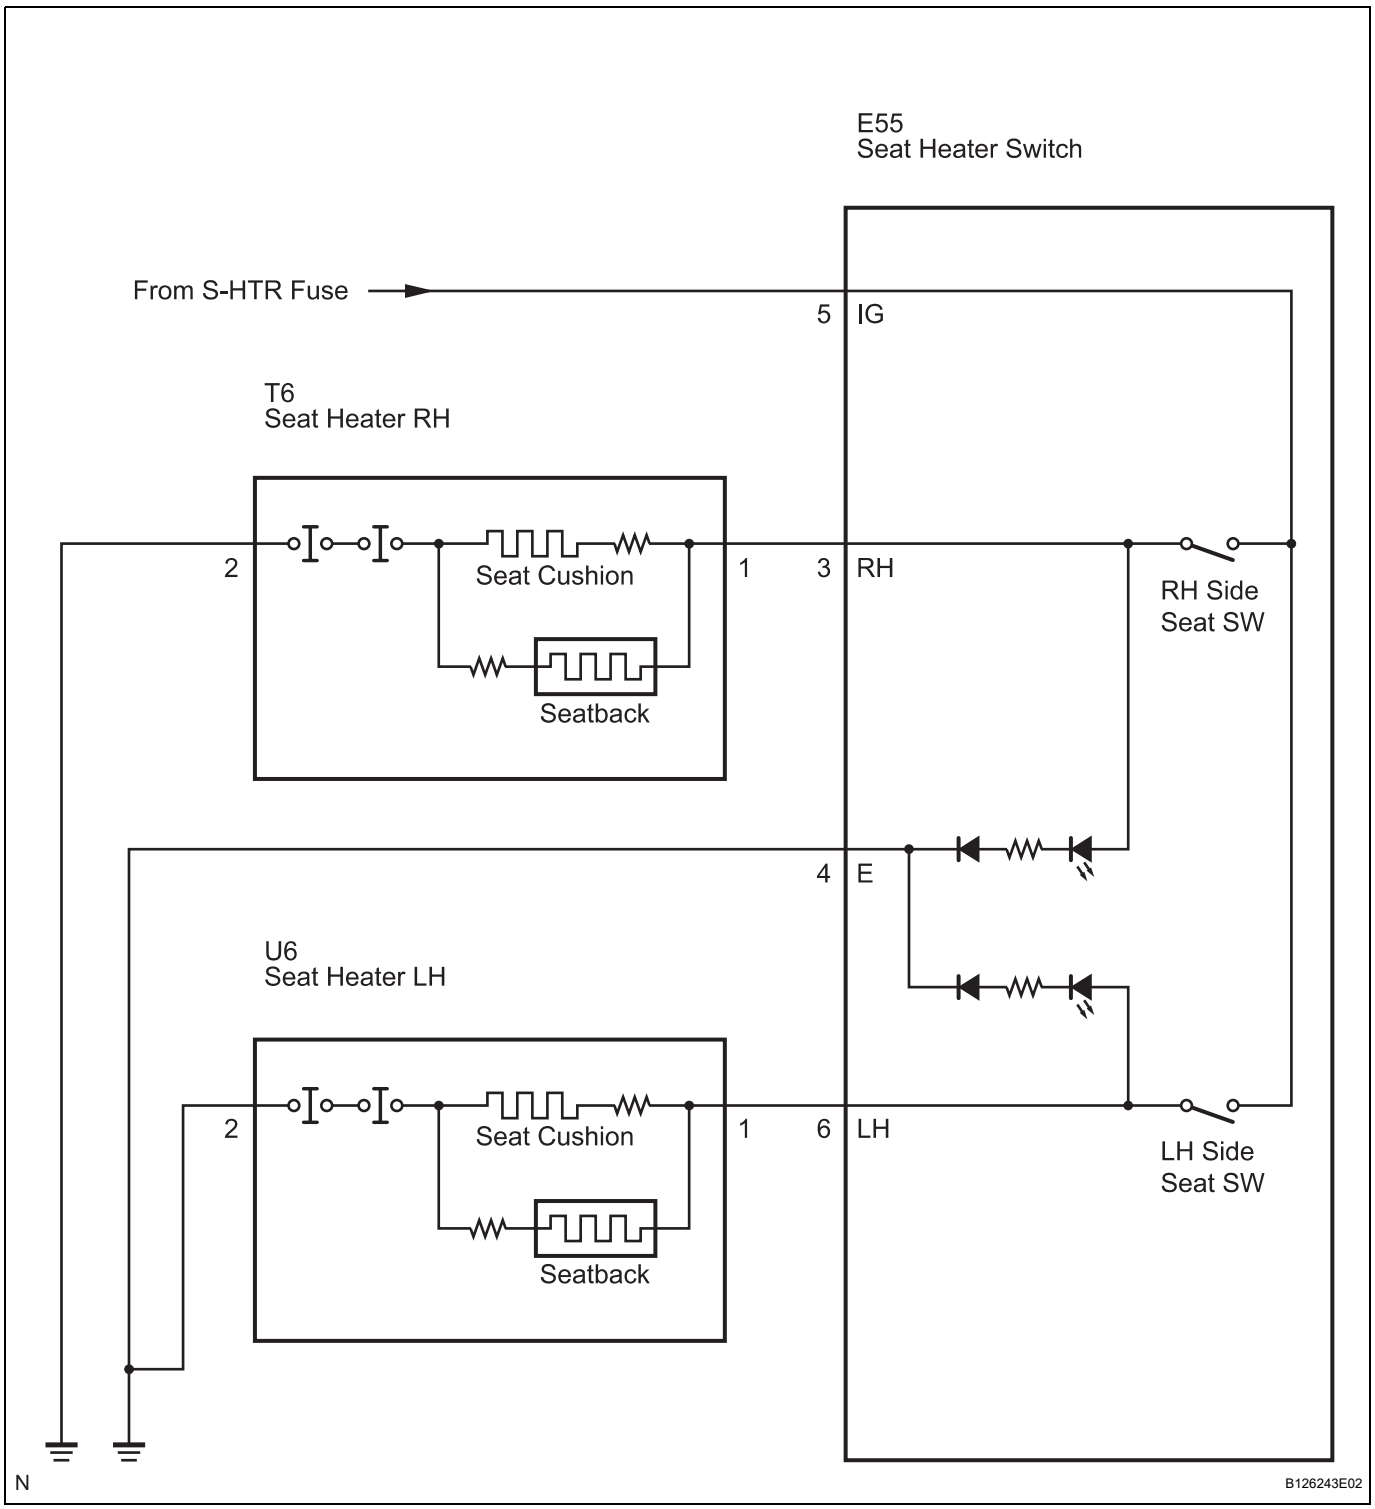
Front Power Seat Control System (Driver Side):

Symptom	Suspected area	See page
Power seat does not operate (slide, front vertical, lifter, reclining).	1. P/SEAT fuse	-
	2. Power seat switch LH	SE-58
	3. Wire harness or connector	-
Only slide operation function does not operate.	1. Power seat switch LH	SE-58
	2. Front seat frame with adjuster LH (slide motor)	SE-62
	3. Wire harness or connector	-
Only front vertical operation function does not operate.	1. Power seat switch LH	SE-58
	2. Front seat frame with adjuster LH (front vertical motor)	SE-62
	3. Wire harness or connector	-
Only lifter operation function does not operate.	1. Power seat switch LH	SE-58
	2. Front seat frame with adjuster LH (lifter motor)	SE-62
	3. Wire harness or connector	-
Only reclining operation function does not operate.	1. Power seat switch LH	SE-58
	2. Front seat frame with adjuster LH (reclining motor)	SE-62
	3. Wire harness or connector	-
Only lumbar support operation function does not operate.	1. Front power seat lumbar switch LH	SE-66
	2. Lumbar support adjuster assembly LH	SE-70
	3. Wire harness or connector	-

Front Power Seat Control System (Front Passenger Side):

Symptom	Suspected area	See page
Power seat does not operate (slide and reclining).	1. P/SEAT fuse	-
	2. Power seat switch RH	SE-60
	3. Wire harness or connector	-
Only slide operation function does not operate.	1. Power seat switch RH	SE-60
	2. Front seat frame with adjuster RH (slide motor)	SE-63
	3. Wire harness or connector	-
Only reclining operation function does not operate.	1. Power seat switch RH	SE-60
	2. Front seat frame with adjuster RH (reclining motor)	SE-63
	3. Wire harness or connector	-

SYSTEM DIAGRAM



SE

SYSTEM DESCRIPTION

1. GENERAL DESCRIPTION

(a) By operating the seat heater switch, which is located in the console box, the temperature can be controlled within the range of 30 to 40°C (86 to 104°F).

(b) The seat heater switch indicator light provides seat heater on/off status.

(c) The seat heaters of both seats are controlled by the seat heater controls, which are located under the respective seat.

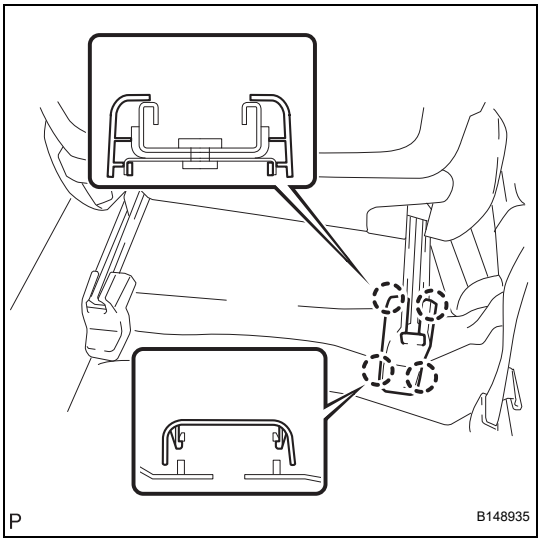
PROBLEM SYMPTOMS TABLE

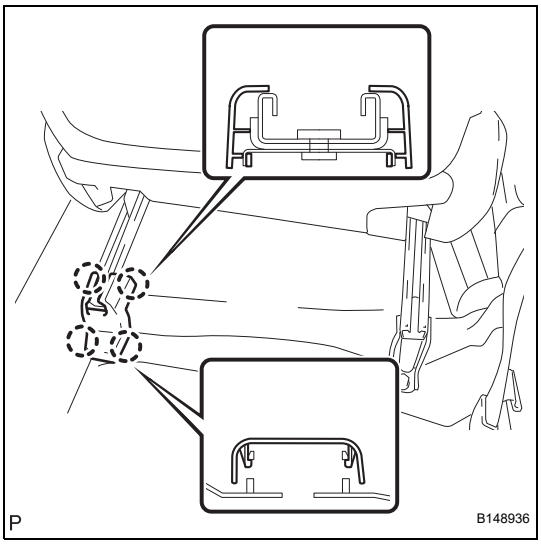
SEAT HEATER SYSTEM:

Symptom	Suspected Area	See page
Seat heater does not operate. (Front LH side)	1. S-HTR fuse	-
	2. Seat heater switch	SE-73
	3. Front seat cushion heater	SE-81
	4. Front seat back heater	SE-77
	5. Wire harness	-
Seat heater does not operate. (Front RH side)	1. S-HTR fuse	-
	2. Seat heater switch	SE-73
	3. Front seat cushion heater	SE-81
	4. Front seat back heater	SE-77
	5. Wire harness	-
Temperature of seat heater cannot be adjusted.	Seat heater switch	SE-73

REMOVAL

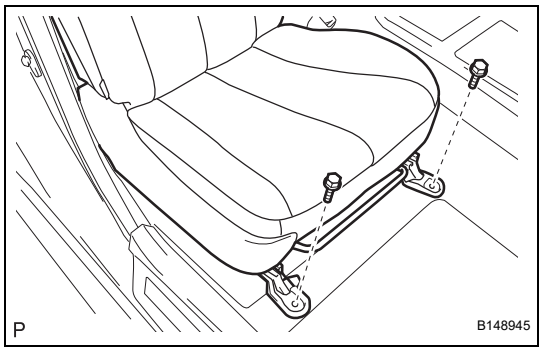
1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent the airbag from deploying (See page RS-33).
2. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
3. **REMOVE SEAT TRACK COVER**
   (a) Move the front seat assembly fully forward by operating the slide handle.
   (b) Using a screwdriver, disengage the 4 claws and remove the seat track cover.
   HINT:
   Tape the screwdriver tip before use.



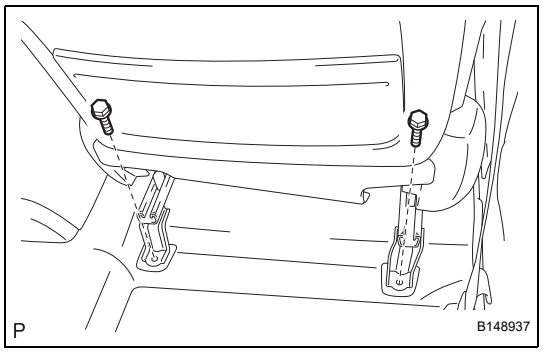


4. **REMOVE INNER SEAT TRACK BRACKET COVER**
   (a) Using a screwdriver, disengage the 4 claws and remove the inner seat track bracket cover.
   HINT:
   Tape the screwdriver tip before use.
5. **REMOVE FRONT SEAT ASSEMBLY**
   (a) Move the front seat assembly to the rearmost position by operating the slide handle.

SE



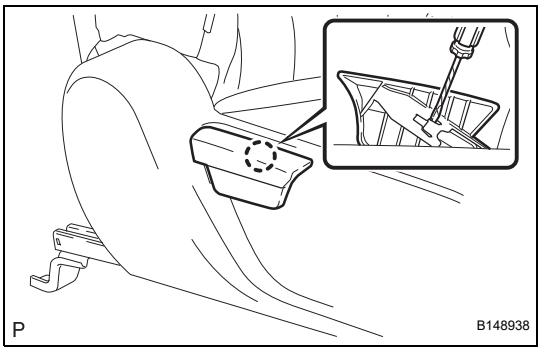
(b) Remove the 2 bolts on the front seat track bracket.
(c) Move the front seat assembly fully forward by operating the slide handle.



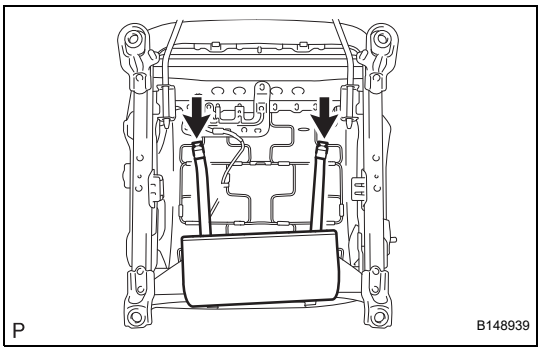
(d) Remove the 2 bolts on the rear seat track bracket.
(e) Move the front seat assembly to the center position and adjust the seatback to the vertical position by operating the slide and reclining adjuster release handle.
(f) Disconnect the connectors and clamp.
(g) Remove the front seat assembly.

DISASSEMBLY

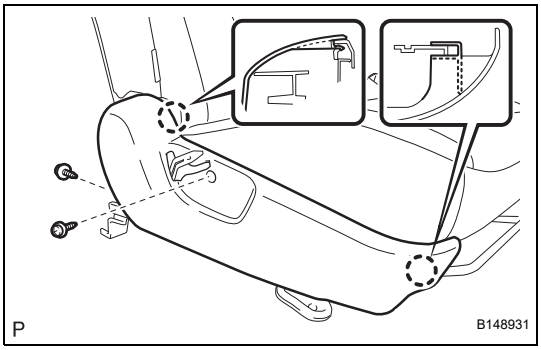
NOTICE:
Wear protective gloves. Sharp areas on the seat frame and adjuster may injure your hands.



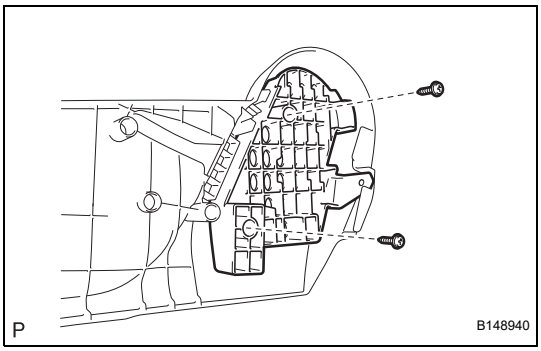
1. REMOVE RECLINING ADJUSTER RELEASE HANDLE
(a) Lift the reclining adjuster release handle.
(b) Using a screwdriver, disengage the claw and remove the reclining adjuster release handle.
HINT:
Tape the screwdriver tip before use.



2. REMOVE FRONT SEAT CUSHION SHIELD
(a) Disengage the 2 hooks.



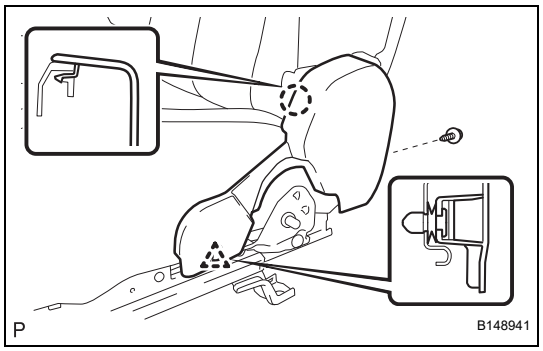
(b) Remove the 2 screws.
(c) Disengage the 2 claws and remove the front seat cushion shield.



3. REMOVE LOWER SEAT TRACK SPACER
(a) Remove the 2 screws and lower seat track spacer.

4. REMOVE FRONT SEAT INNER BELT ASSEMBLY
(See page SB-16)

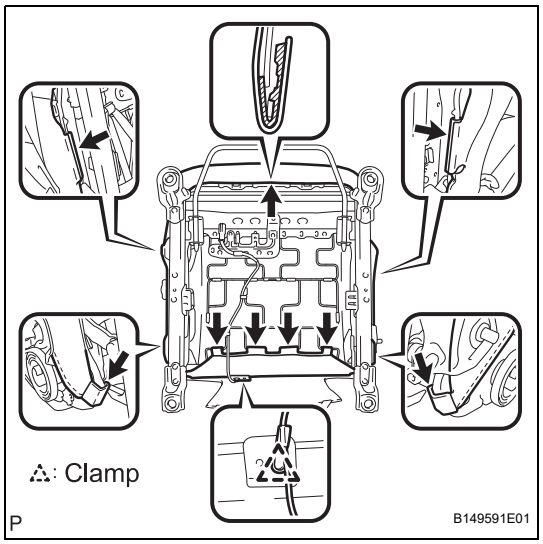
SE



5. REMOVE FRONT INNER SEAT CUSHION SHIELD

(a) Remove the screw.

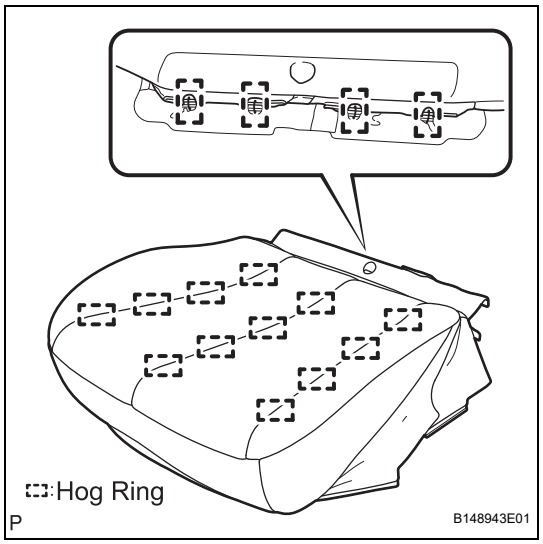
(b) Disengage the claw and clip, and then remove the front inner seat cushion shield.



6. REMOVE FRONT SEAT CUSHION COVER WITH PAD

(a) Disengage the clamp.

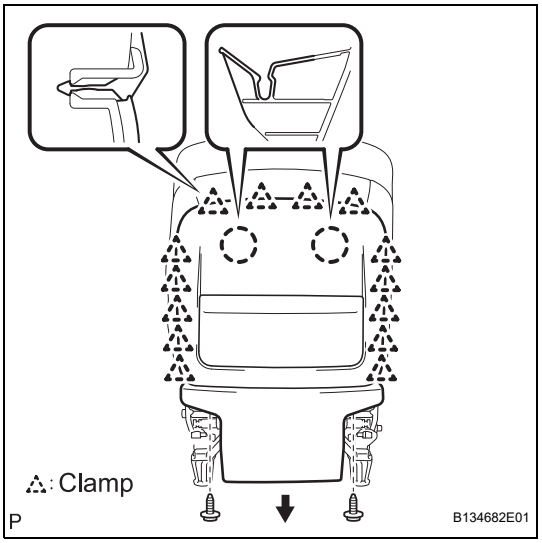
(b) Disengage the hooks and remove the front seat cushion cover with pad.



7. REMOVE SEPARATE TYPE FRONT SEAT CUSHION COVER

(a) Remove the 16 hog rings and separate type front seat cushion cover.

SE

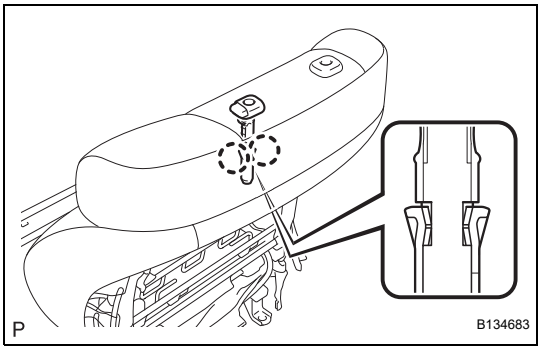


8. REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY

(a) Remove the 2 screws.

(b) Disconnect the 14 clamps and front separate type seatback cover.

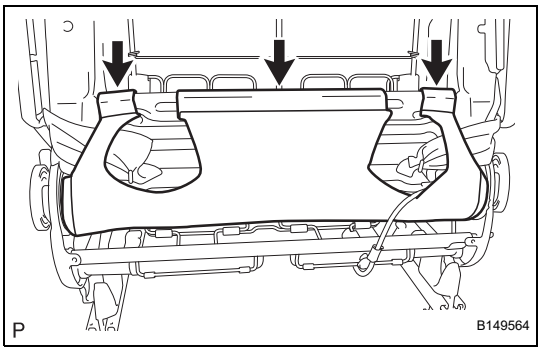
(c) Pull the seatback board in the direction indicated by the arrow in the illustration to detach the 2 claws. Then, remove the front seatback board sub-assembly.



9. REMOVE FRONT SEAT HEADREST SUPPORT

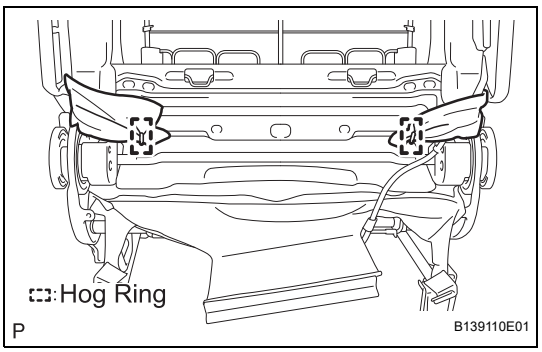
(a) Detach the 2 claws and remove the headrest support.

10. REMOVE FRONT SEAT HEADREST SUPPORT



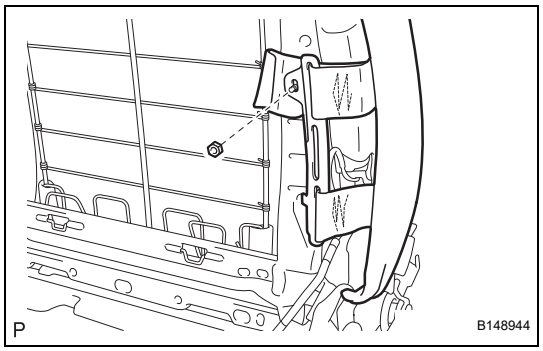
11. REMOVE FRONT SEATBACK COVER WITH PAD

(a) Disengage the 3 hooks.

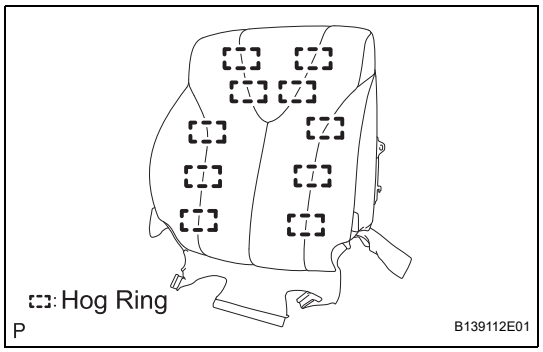


(b) Remove the 2 hog rings.

SE

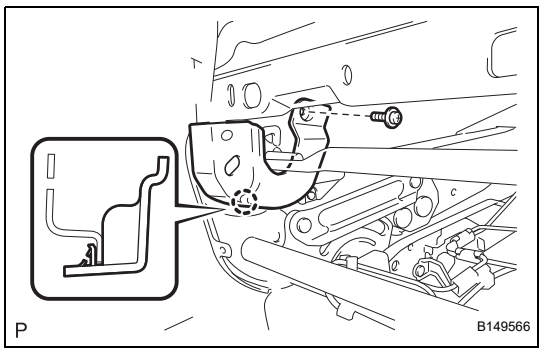


(c) Remove the nut and separate the 2 brackets.
(d) Remove the front seatback cover with pad.



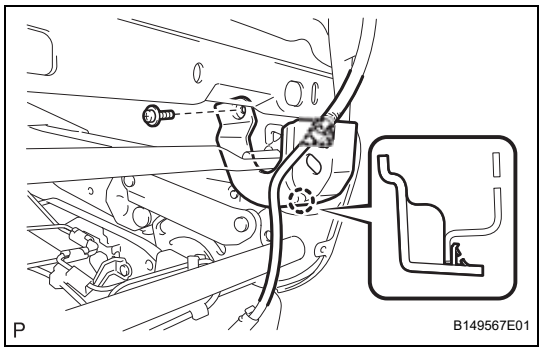
12. REMOVE SEPARATE TYPE FRONT SEATBACK COVER

(a) Remove the 10 hog rings and front separate type seatback cover.



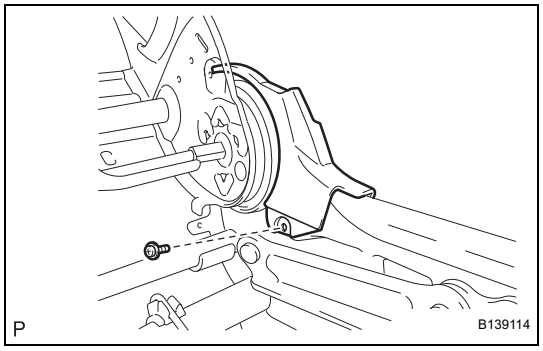
13. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) Remove the screw.
(b) Disengage the claw and remove the reclining adjuster inside cover LH.



14. REMOVE RECLINING ADJUSTER INSIDE COVER RH

(a) Disconnect the clamp.
(b) Remove the screw.
(c) Disengage the claw and remove the reclining adjuster inside cover RH.



15. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) Remove the screw and reclining adjuster inside cover LH.

16. REMOVE RECLINING ADJUSTER INSIDE COVER RH

HINT:
Use the same procedures for the RH side and LH side.

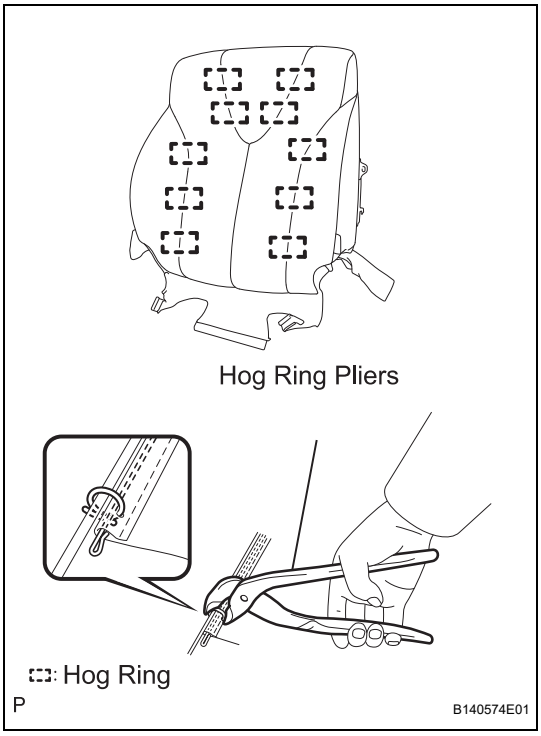
17. REMOVE OCCUPANT DETECTION ECU (See page RS-446)

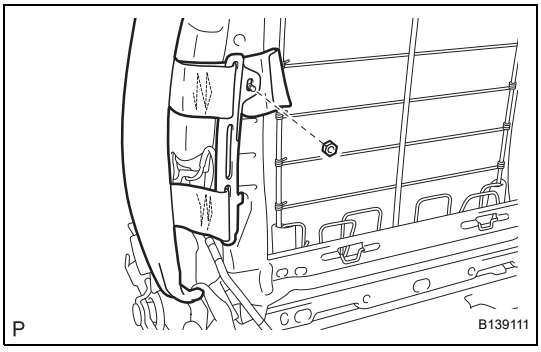
SE

REASSEMBLY

NOTICE:
Wear protective gloves. Sharp areas on the seat frame and adjuster may injure your hands.

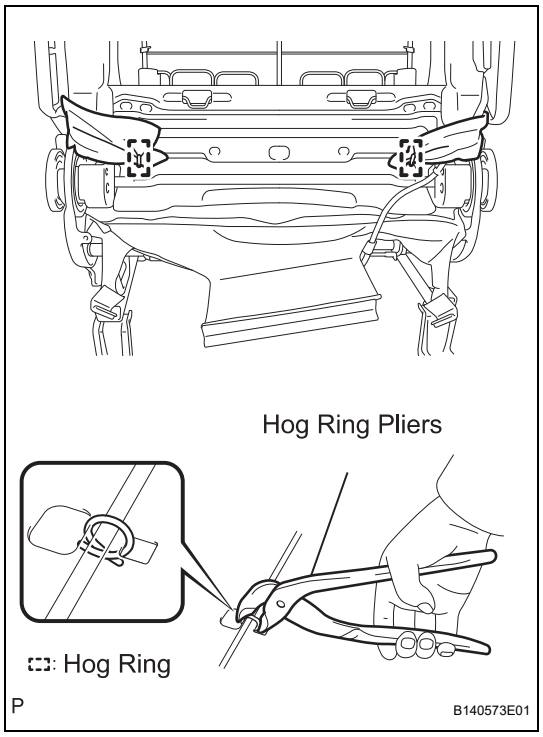
1. **INSTALL OCCUPANT DETECTION ECU (See page RS-446)**
2. **INSTALL RECLINING ADJUSTER INSIDE COVER LH**
3. **INSTALL RECLINING ADJUSTER INSIDE COVER RH**
4. **INSTALL RECLINING ADJUSTER INSIDE COVER LH**
5. **INSTALL RECLINING ADJUSTER INSIDE COVER RH**
6. **INSTALL SEPARATE TYPE FRONT SEATBACK COVER**
   (a) Using hog ring pliers, install the separate type front seatback cover to the front separate type seatback pad with 10 new hog rings.
   NOTICE:
   - **Be careful not to damage the cover.**
   - **When installing the hog rings, take care to minimize wrinkles as much as possible.**



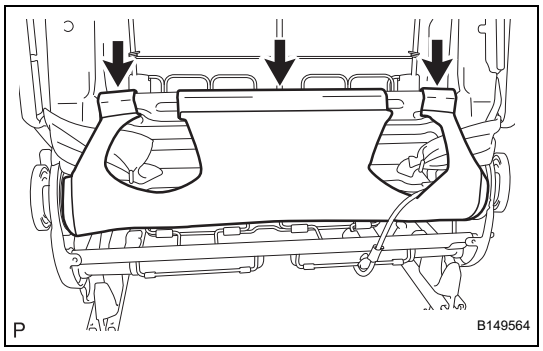


7. **INSTALL FRONT SEATBACK COVER WITH PAD**
   (a) Fully cover the airbag with the 2 seatback cover brackets and tighten the nut.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
   NOTICE:
   - **For vehicles with side airbags, the seatback cover must be securely installed. Otherwise, the side airbags may not deploy properly.**
   - **Make sure that the strap is not twisted after installing the bracket.**
   - **Install the bracket securely.**

SE

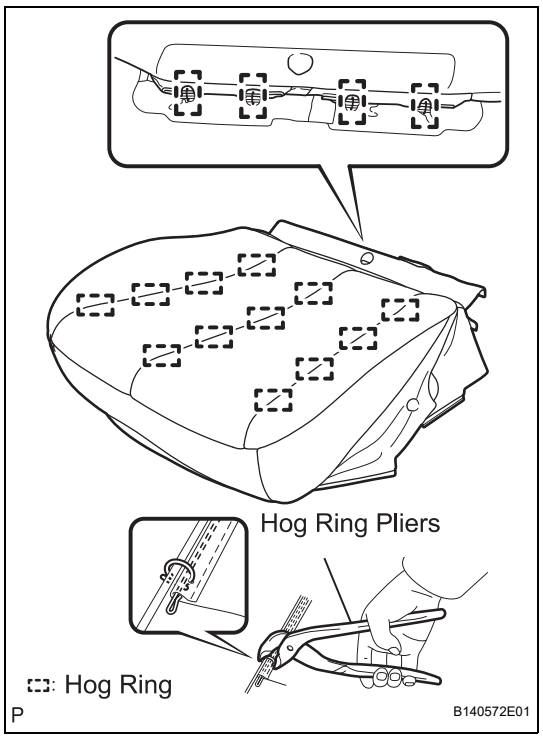


(b) Using hog ring pliers, install the front seatback cover with pad to the seat frame with 2 new hog rings, and attach the hooks.



(c) Engage the 3 hooks.

8. **INSTALL FRONT SEAT HEADREST SUPPORT**
9. **INSTALL FRONT SEAT HEADREST SUPPORT**
10. **INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY**



11. **INSTALL SEPARATE TYPE FRONT SEAT CUSHION COVER**
    (a) Using hog ring pliers, install the separate type front seat cushion cover to the seat cushion pad with 16 new hog rings.
    NOTICE:
    - **Be careful not to damage the cover.**
    - **When installing the hog rings, take care to minimize wrinkles as much as possible.**
12. **INSTALL FRONT SEAT CUSHION COVER WITH PAD**
13. **INSTALL FRONT INNER SEAT CUSHION SHIELD**
14. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-17)**
15. **INSTALL LOWER SEAT TRACK SPACER**
16. **INSTALL FRONT SEAT CUSHION SHIELD**
17. **INSTALL RECLINING ADJUSTER RELEASE HANDLE**

SE

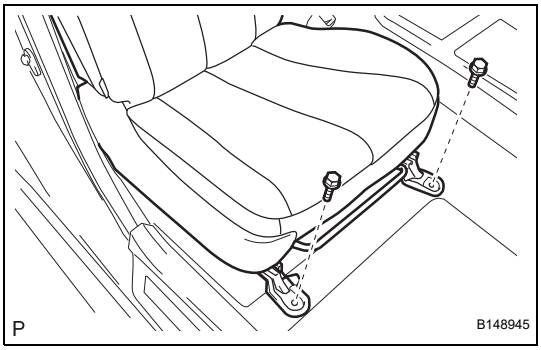
INSTALLATION

1. INSTALL FRONT SEAT ASSEMBLY

(a) Place the front seat assembly in the vehicle and align the adjuster pin with the hole on the vehicle side.

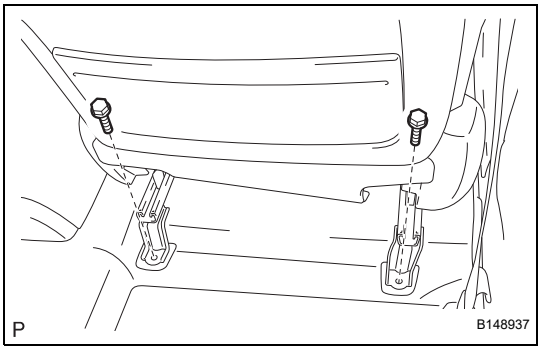
(b) Connect the connector and clamp.

(c) Move the front seat assembly to the rearmost position by operating the slide handle.
NOTICE:
Check that the seat is locked.



(d) Temporarily install the front seat track bracket with the 2 bolts.

(e) Move the front seat assembly fully forward by operating the slide handle.
NOTICE:
Check that the seat is locked.



(f) Temporarily install the rear seat track bracket with the 2 bolts.

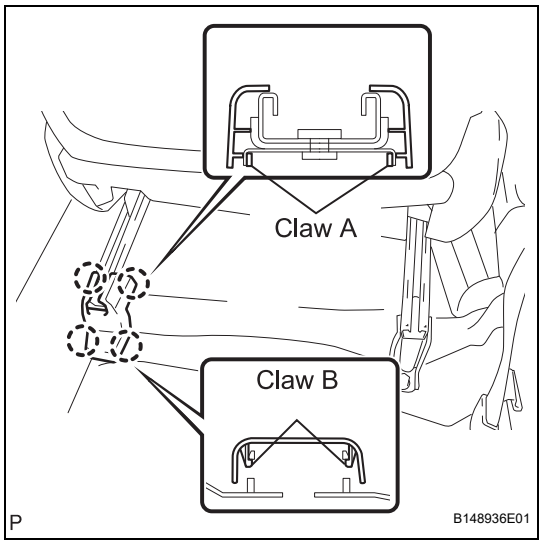
(g) Move the front seat assembly to the rearmost position by operating the slide handle.
NOTICE:
Check that the seat is locked.

(h) Fully tighten the 2 bolts on the front seat track bracket in the order of the inner side bolt and then the outer side bolt.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

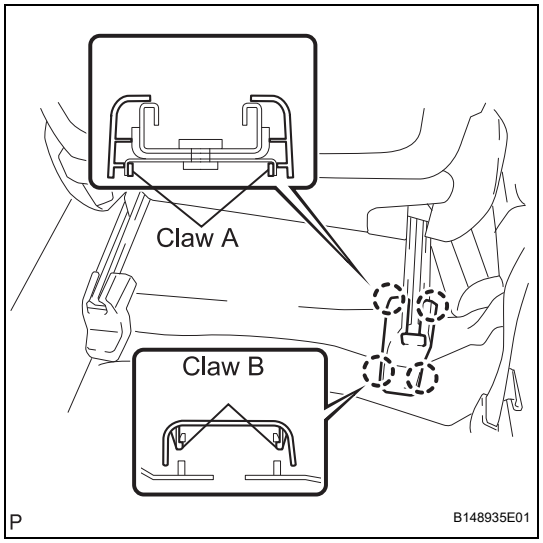
(i) Move the front seat assembly fully forward by operating the slide handle.
NOTICE:
Check that the seat is locked.

(j) Fully tighten the 2 bolts on the rear seat track bracket in the order of the inner side bolt and then the outer side bolt.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

SE



2. **INSTALL INNER SEAT TRACK BRACKET COVER**
   (a) Slide the inner seat track bracket cover along the seat rail toward the front of the vehicle. Engage claw A to the seat rail.
   (b) Push the seat track bracket cover inner to engage claw B.



3. **INSTALL SEAT TRACK COVER**
   (a) Slide the seat track cover along the seat rail toward the front of the vehicle. Engage claw A to the seat rail.
   (b) Push the seat track cover to engage claw B.
4. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
6. **INSPECT SLIDE ADJUSTER LOCK**
7. **PERFORM INITIALIZATION**
   NOTICE:
   Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43).
8. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)**
   (See page RS-239)
9. **INSPECT SRS WARNING LIGHT**
   Inspect the SRS warning light (See page RS-33).

SE

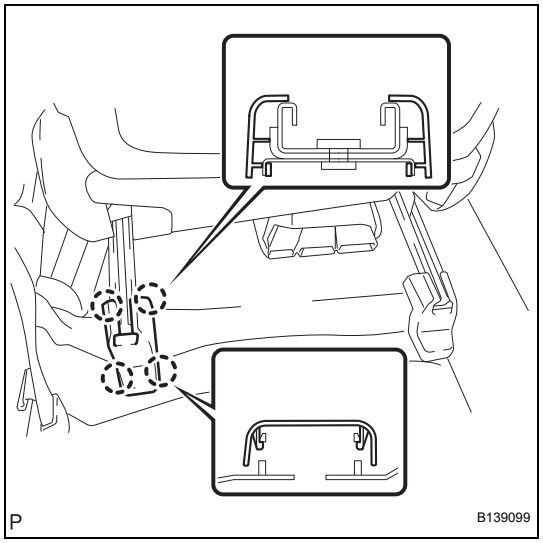
REMOVAL

1. REMOVE FRONT SEAT HEADREST ASSEMBLY

2. REMOVE SEAT TRACK COVER

(a) Operate the power seat switch knob and move the seat to the position farthest forward.

(b) Using a screwdriver, detach the 4 claws and remove the seat track cover.
HINT:
Tape the screwdriver tip before use.

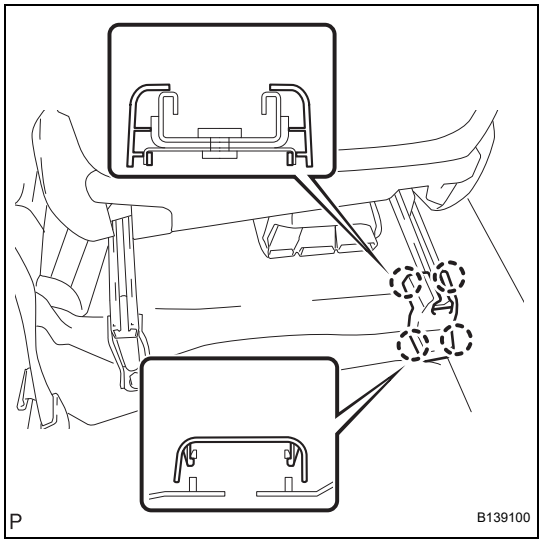


3. REMOVE INNER SEAT TRACK BRACKET COVER

(a) Using a screwdriver, detach the 4 claws and remove the inner seat track bracket cover.

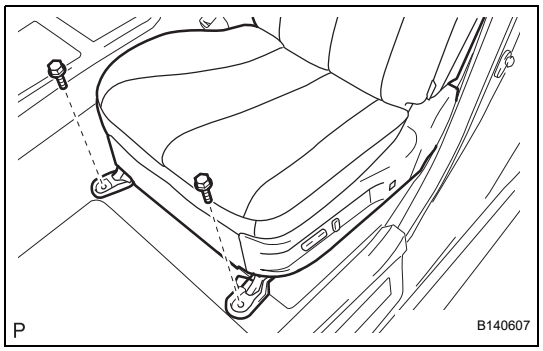
4. REMOVE FRONT SEAT ASSEMBLY

(a) Operate the power seat switch knob and move the seat to the rearmost position.

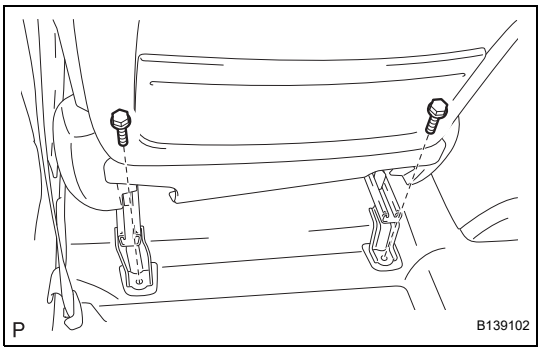


(b) Remove the 2 bolts on the front seat track bracket.

(c) Operate the power seat switch knob and move the seat to the position farthest forward.



SE



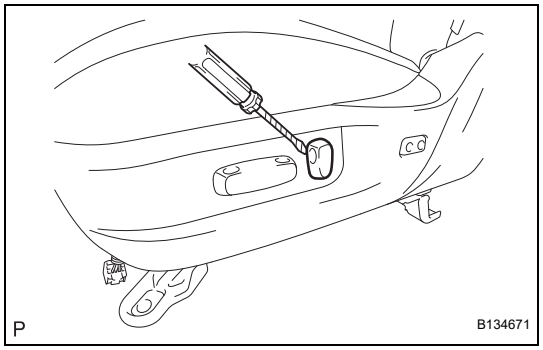
(d) Remove the 2 bolts on the rear seat track bracket.
(e) Disconnect the cable from the negative (-) battery terminal.
CAUTION:
Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent the airbag and seat belt pretensioner from deploying (See page RS-33).
(f) Disconnect the connectors under the seat. Then remove the front seat assembly.

DISASSEMBLY

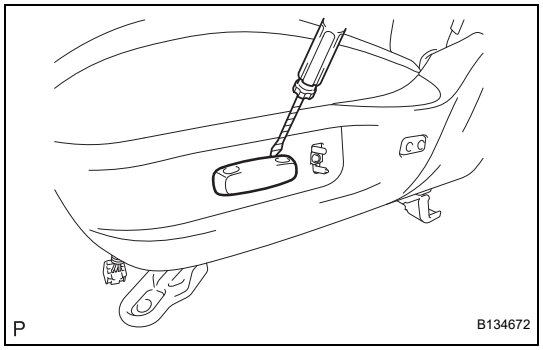
CAUTION:
Wear protective gloves. Sharp areas on the seat frame and adjuster may injure your hands.

1. **REMOVE OCCUPANT DETECTION ECU (See page RS-446)**

2. **REMOVE RECLINING POWER SEAT SWITCH KNOB**
   (a) Using a screwdriver, detach the reclining power seat switch knob.
   HINT:
   Tape the screwdriver tip before use.

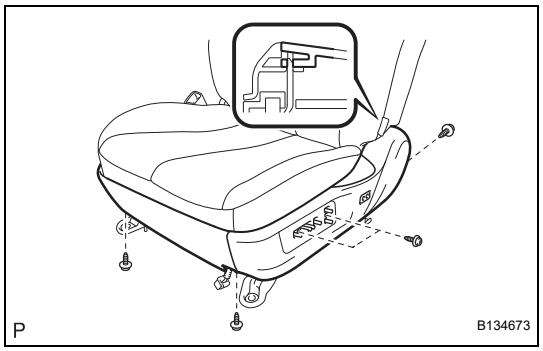


3. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB**
   (a) Using a screwdriver, detach the slide and vertical power seat switch knob.
   HINT:
   Tape the screwdriver tip before use.

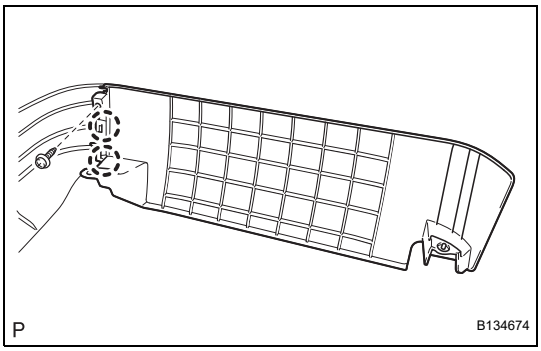


4. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY**
   (a) Disconnect the 2 hooks.

   (b) Remove the 5 screws.
   (c) Disengage the claw and separate the front seat cushion shield assembly.
   (d) Disconnect the connector from the front power seat lumbar switch.



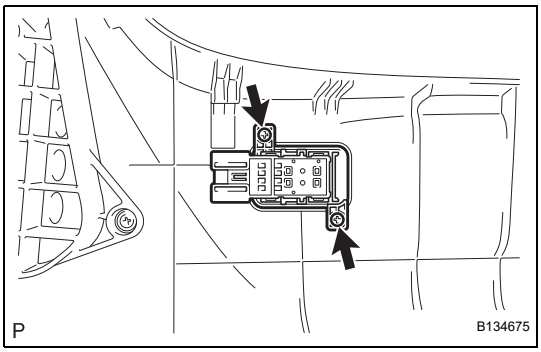
SE



5. REMOVE FRONT INNER NO. 1 SEAT CUSHION SHIELD

(a) Remove the screw.

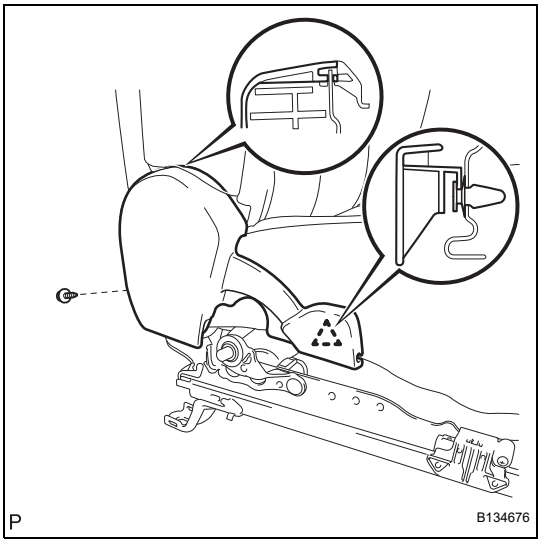
(b) Detach the 2 claws and remove the front inner No. 1 seat cushion shield.



6. REMOVE FRONT LUMBAR POWER SEAT SWITCH

(a) Remove the 2 screws and front lumbar power seat switch.

7. REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-17)



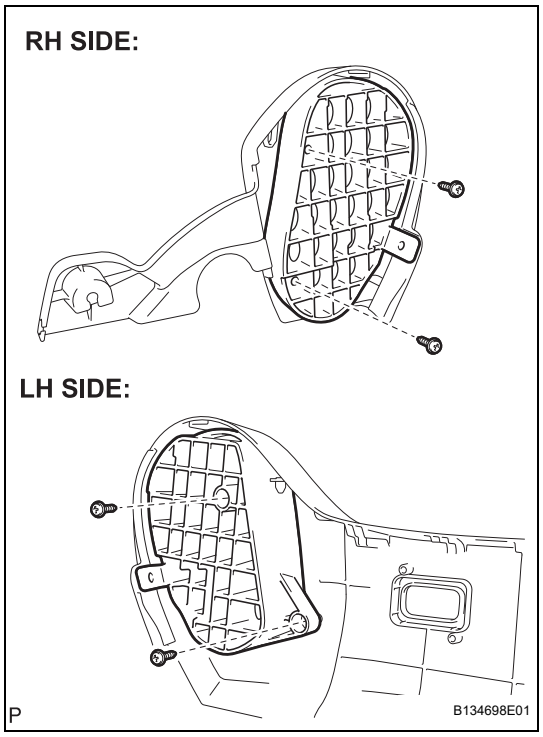
8. REMOVE FRONT INNER SEAT CUSHION SHIELD

(a) Remove the screw.

(b) Using a clip remover, detach the clip.

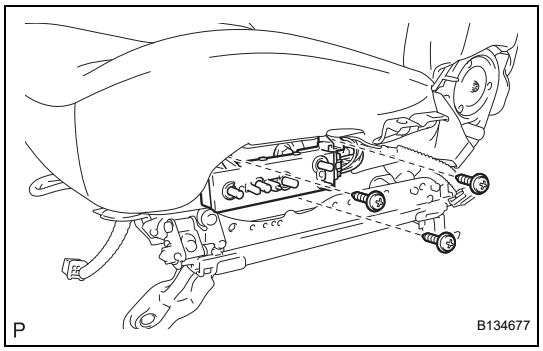
(c) Using a screwdriver, detach the claw and remove the front inner seat cushion shield.
HINT:
Tape the screwdriver tip before use.

SE



9. REMOVE LOWER SEAT TRACK SPACER

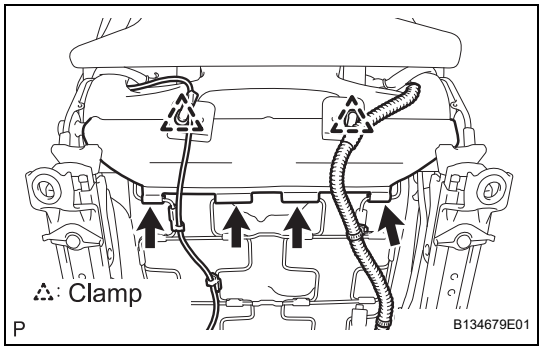
(a) Remove the 2 screws and lower seat track spacer.



10. REMOVE FRONT POWER SEAT SWITCH

(a) Remove the 3 screws.

(b) Disconnect the connector and remove the front power seat switch.

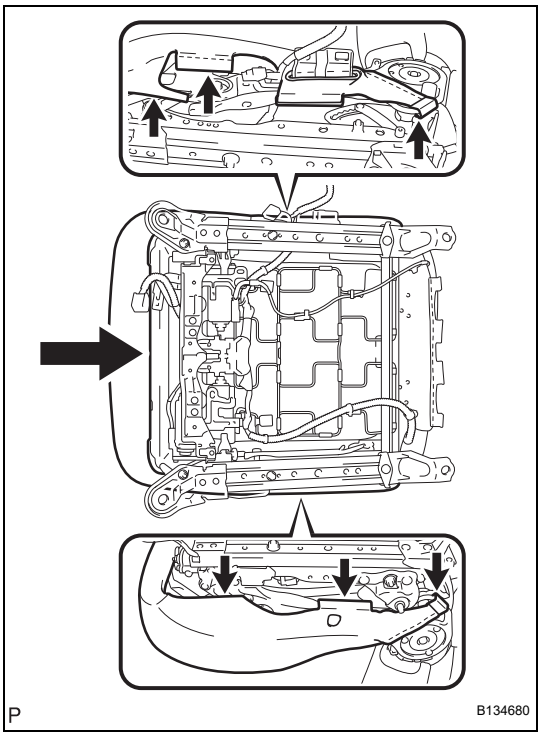


11. REMOVE FRONT SEPARATE TYPE SEAT CUSHION ASSEMBLY

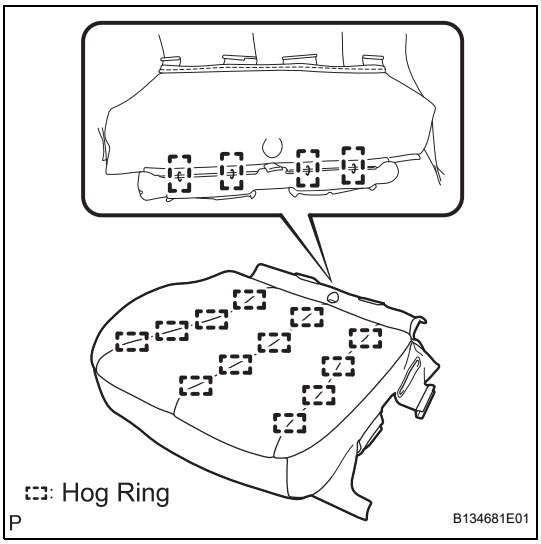
(a) Disconnect the 2 clamps.

(b) Remove the 4 hooks.

SE

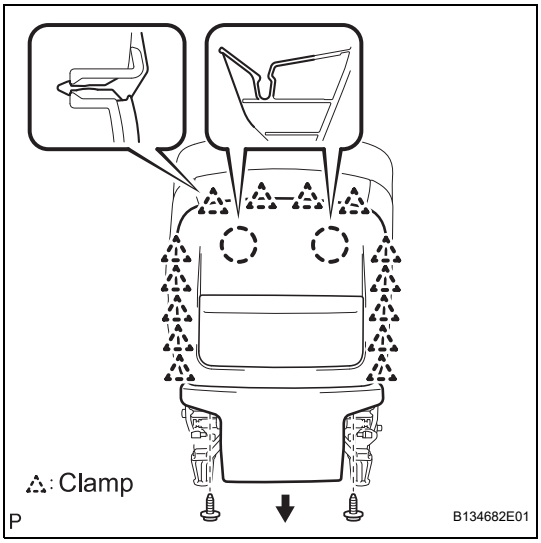


(c) Using a screwdriver, detach the hooks and remove the front separate type seat cushion assembly.



12. REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER

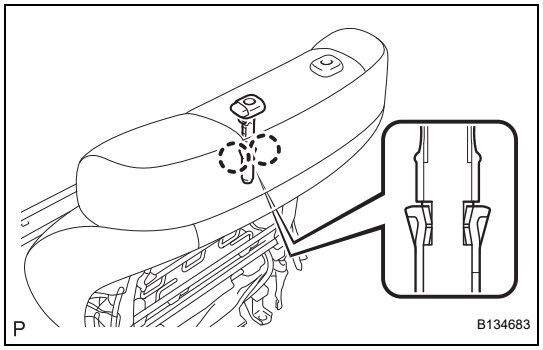
(a) Remove the 16 hog rings and front separate type seat cushion cover from the seat cushion pad.



13. REMOVE FRONT SEATBACK BOARD SUB-ASSEMBLY

(a) Remove the 2 screws.
(b) Disconnect the 14 clamps and front separate type seatback cover.
(c) Pull the seatback board in the direction indicated by the arrow in the illustration to detach the 2 claws. Then, remove the seatback board.

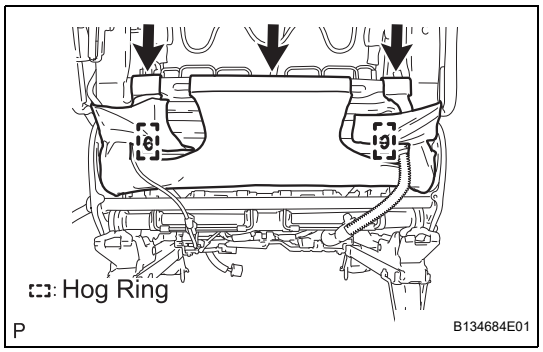
SE



14. REMOVE FRONT SEAT HEADREST SUPPORT

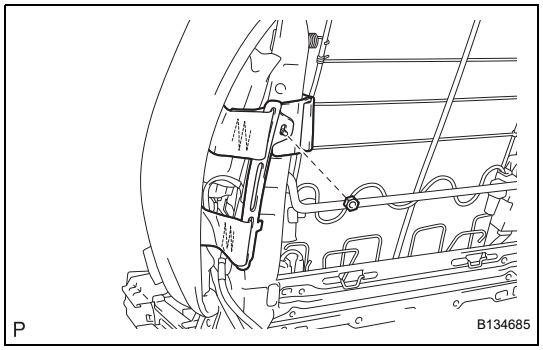
(a) Detach the 2 claws and remove the headrest support.

15. REMOVE FRONT SEAT HEADREST SUPPORT

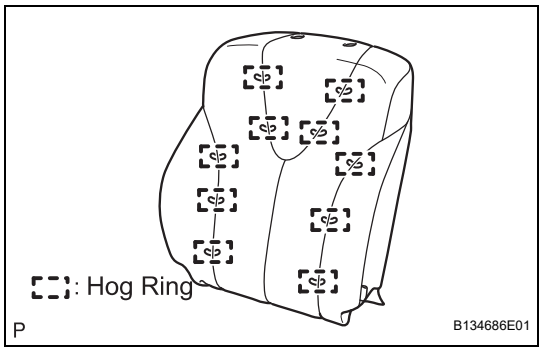


16. REMOVE FRONT SEPARATE TYPE SEATBACK ASSEMBLY

(a) Remove the 2 hog rings and 3 hooks.

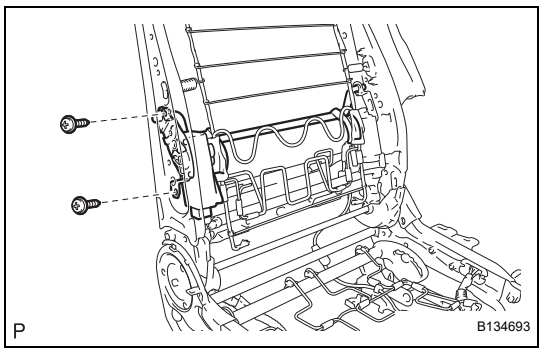


(b) Remove the nut and 2 seatback cover brackets.



17. REMOVE FRONT SEPARATE TYPE SEATBACK COVER

(a) Remove the 10 hog rings and front separate type seatback cover from the seatback pad.



18. REMOVE LUMBAR SUPPORT ADJUSTER ASSEMBLY

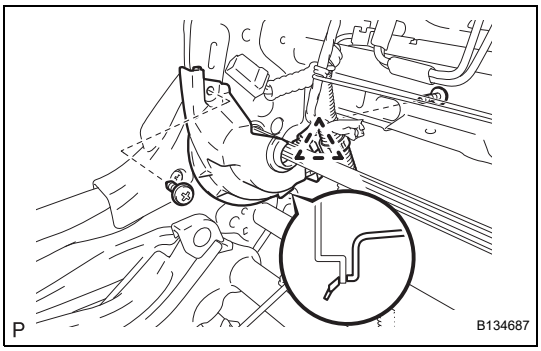
(a) Disconnect the connector.

(b) Remove the 2 screws and lumbar support adjuster assembly.

19. REMOVE RECLINING ADJUSTER INSIDE COVER RH

(a) Disconnect the harness.

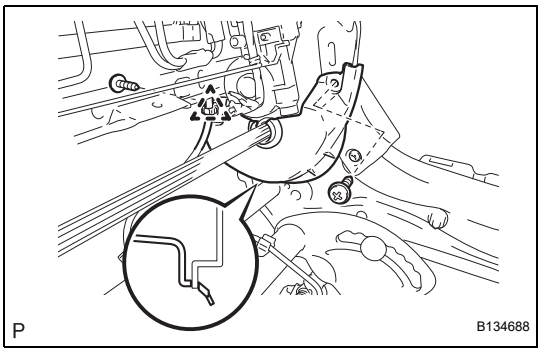
SE



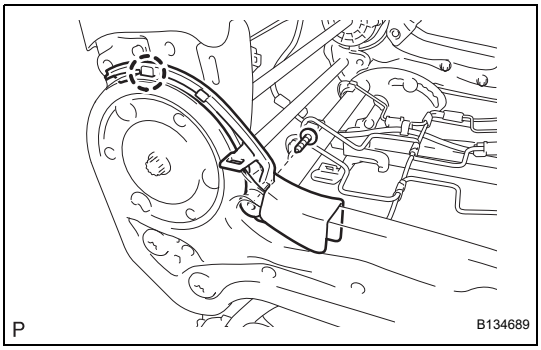
(b) Remove the 2 screws and reclining adjuster inside cover RH.

20. REMOVE RECLINING ADJUSTER INSIDE COVER LH

(a) Disconnect the harness.



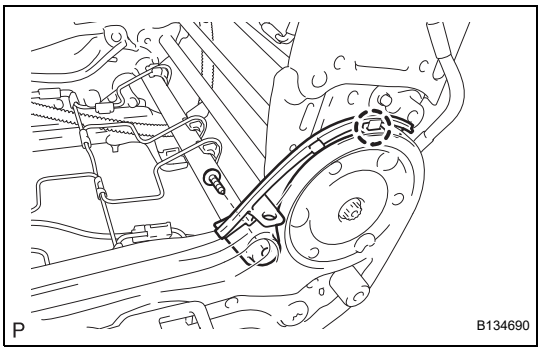
(b) Remove the 2 screws and reclining adjuster inside cover LH.



21. REMOVE SEAT RECLINING ADJUSTER INSIDE COVER RH

(a) Remove the screw.

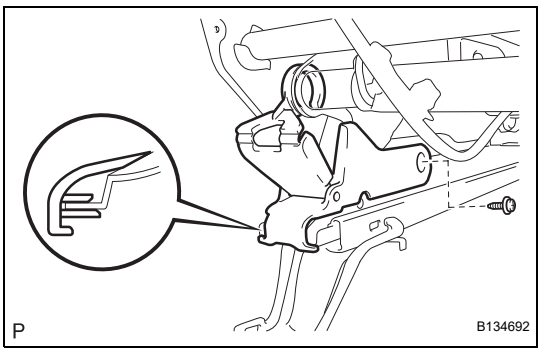
(b) Detach the claw and remove the seat reclining adjuster inside cover RH.



22. REMOVE SEAT RECLINING ADJUSTER INSIDE COVER LH

(a) Remove the screw.

(b) Detach the claw and remove the seat reclining adjuster inside cover LH.



23. REMOVE FRONT LOWER SEAT CUSHION SHIELD LH

(a) Remove the screw and detach the hook of the front lower seat cushion shield LH.

24. REMOVE FRONT LOWER SEAT CUSHION SHIELD

25. REMOVE SEAT POSITION SENSOR (for Driver Side) (See page RS-440)

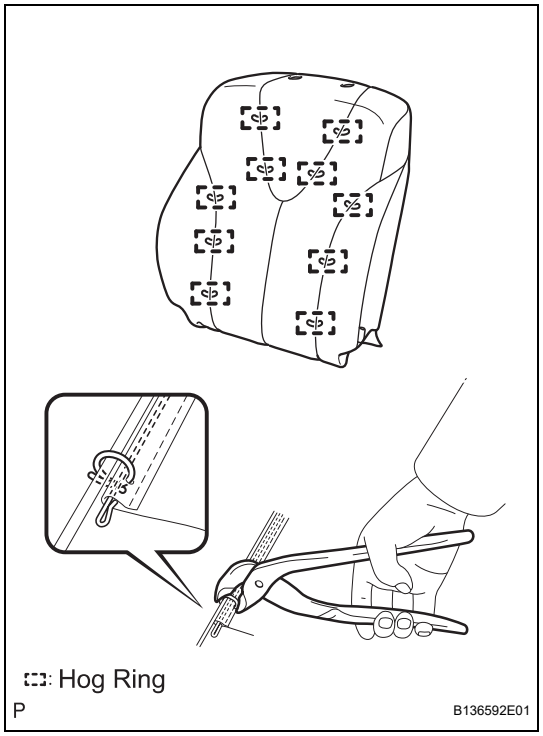
26. REMOVE FRONT SEAT WIRE

SE

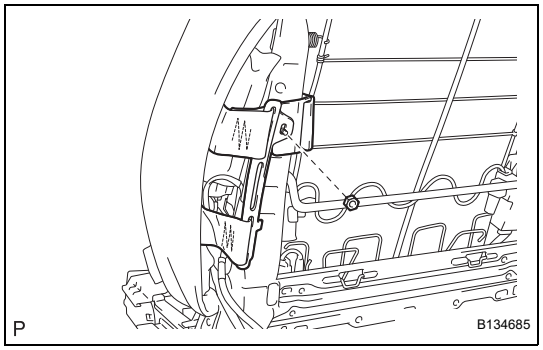
REASSEMBLY

CAUTION:
Wear protective gloves. Sharp areas on the seat adjuster may injure your hands.

1. **INSTALL FRONT SEAT WIRE**
2. **INSTALL SEAT POSITION SENSOR (for Driver Side) (See page RS-440)**
3. **INSTALL FRONT LOWER SEAT CUSHION SHIELD**
4. **INSTALL FRONT LOWER SEAT CUSHION SHIELD LH**
5. **INSTALL SEAT RECLINING ADJUSTER INSIDE COVER LH**
6. **INSTALL SEAT RECLINING ADJUSTER INSIDE COVER RH**
7. **INSTALL RECLINING ADJUSTER INSIDE COVER LH**
8. **INSTALL RECLINING ADJUSTER INSIDE COVER RH**
9. **INSTALL LUMBAR SUPPORT ADJUSTER ASSEMBLY**
10. **INSTALL FRONT SEPARATE TYPE SEATBACK COVER**
    (a) Using hog ring pliers, install the front separate type seatback cover to the front seatback pad with 16 new hog rings.
    NOTICE:
    - **Be careful not to damage the cover.**
    - **When installing the hog rings, take care to minimize wrinkles as much as possible.**



11. **INSTALL FRONT SEPARATE TYPE SEATBACK ASSEMBLY**
    (a) Fully cover the airbag with the 2 seatback cover brackets and tighten the nut.
    Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)
    NOTICE:
    - **For vehicles with side airbags, the seatback cover must be securely installed. Otherwise, the side airbags may not deploy properly.**



SE

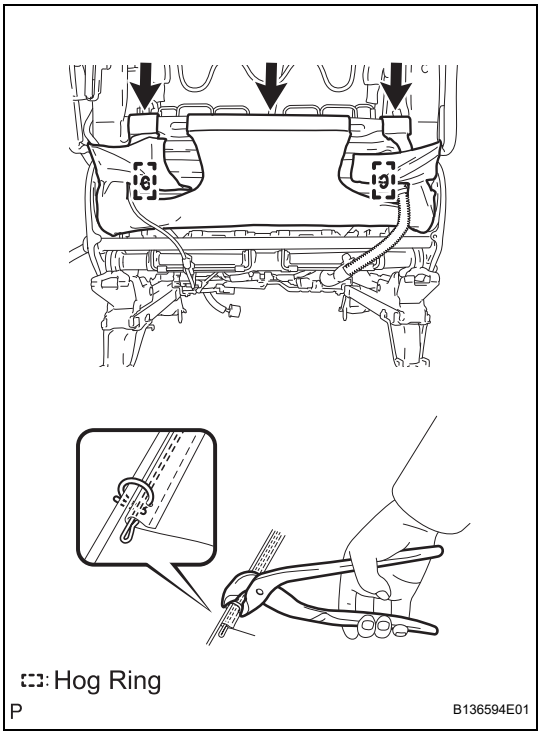
- **Make sure that the strap is not twisted after installing the bracket.**
- **Install the bracket securely.**

(b) Engage the 3 hooks.

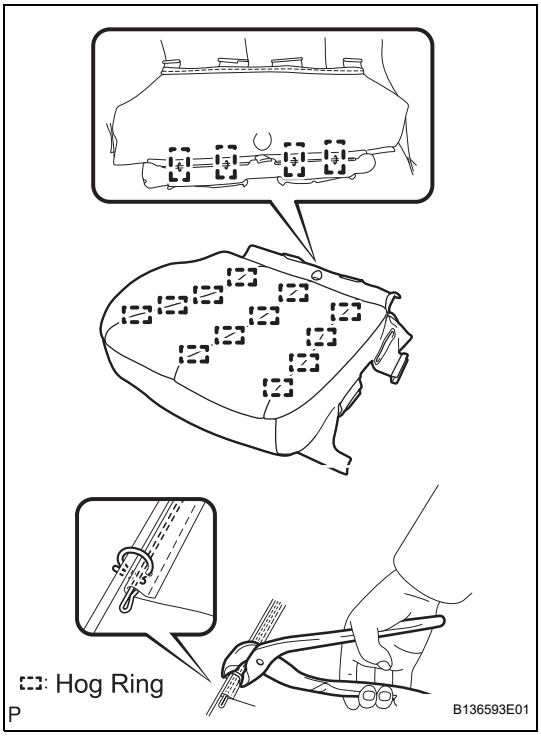
(c) Using hog ring pliers, install 2 new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**



12. **INSTALL FRONT SEAT HEADREST SUPPORT**
13. **INSTALL FRONT SEAT HEADREST SUPPORT**
14. **INSTALL FRONT SEATBACK BOARD SUB-ASSEMBLY**



15. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER**

(a) Using hog ring pliers, install the front separate type seat cushion cover to the front separate type seat pad with 16 new hog rings.

NOTICE:

- **Be careful not to damage the cover.**
- **When installing the hog rings, take care to minimize wrinkles as much as possible.**

16. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION ASSEMBLY**
17. **INSTALL FRONT POWER SEAT SWITCH**
18. **INSTALL LOWER SEAT TRACK SPACER**
19. **INSTALL FRONT INNER SEAT CUSHION SHIELD**
20. **INSTALL FRONT LUMBAR POWER SEAT SWITCH**
21. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-18)**
22. **INSTALL FRONT INNER NO. 1 SEAT CUSHION SHIELD**
23. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY**
24. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB**
25. **INSTALL RECLINING POWER SEAT SWITCH KNOB**

SE

26. **INSTALL OCCUPANT DETECTION ECU (See page RS-446)**

INSTALLATION

1. INSTALL FRONT SEAT ASSEMBLY

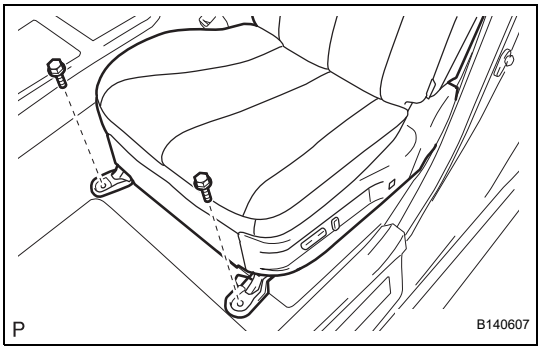
(a) Place the seat in the cabin.

(b) Connect the connectors under the seat.

(c) Connect the cable to the negative (-) battery terminal.

(d) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.

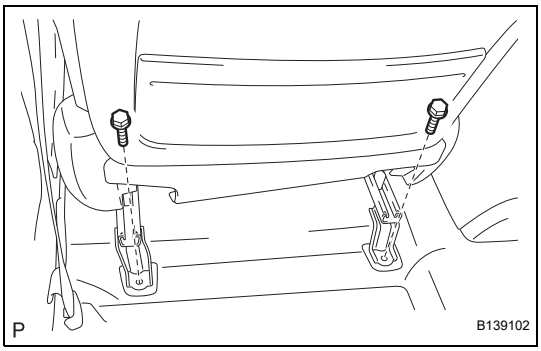
NOTICE:
Check that the seat is locked.



(e) Temporarily install the front side of the front seat assembly with the 2 bolts.

(f) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.

NOTICE:
Check that the seat is locked.



(g) Temporarily install the rear side of the front seat assembly with the 2 bolts.

(h) Move the front seat assembly to the rearmost position by operating the slide and vertical power seat switch knob.

NOTICE:
Check that the seat is locked.

(i) Fully tighten the 2 bolts on the front side of the front seat assembly in the order of the inner side bolt and then the outer side bolt.

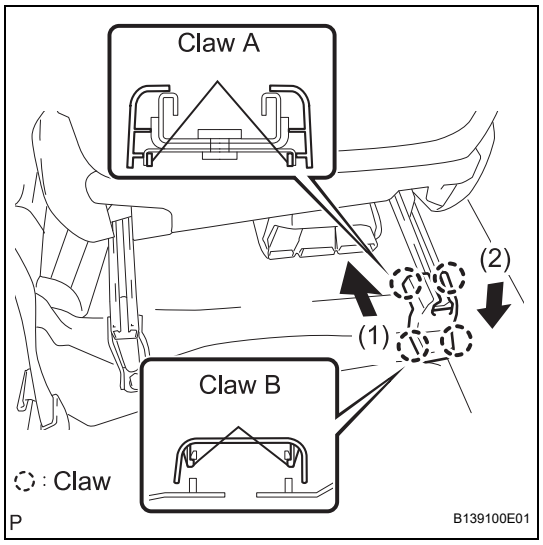
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

(j) Move the front seat assembly fully forward by operating the slide and vertical power seat switch knob.

NOTICE:
Check that the seat is locked.

(k) Fully tighten the 2 bolts on the rear side of the front seat assembly in the order of the inner side bolt and then the outer side bolt.

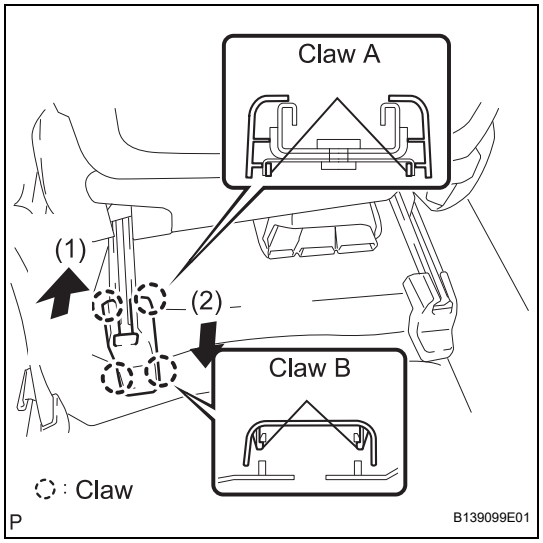
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)



2. INSTALL INNER SEAT TRACK BRACKET COVER

(a) Slide the inner seat track bracket cover along the seat rail toward the front of the vehicle. Engage claw A to the seat rail.

(b) Push the inner seat track bracket cover to engage claw B.



3. INSTALL SEAT TRACK COVER

(a) Slide the seat track cover along the seat rail toward the front of the vehicle. Engage claw A to the seat rail.

(b) Push the seat track cover to engage claw B.

4. INSTALL FRONT SEAT HEADREST ASSEMBLY

5. PERFORM INITIALIZATION

NOTICE:

Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43).

6. PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)

(See page RS-239)

7. INSPECT SRS WARNING LIGHT

Inspect the SRS warning light. (See page RS-33)

8. INSPECT FRONT SEAT ASSEMBLY

(a) Inspect the power seat operation.

(b) Inspect the seat heater operation (with seat heater system).

(1) Turn the ignition switch on (IG).

(2) Turn the seat heater switch ON.

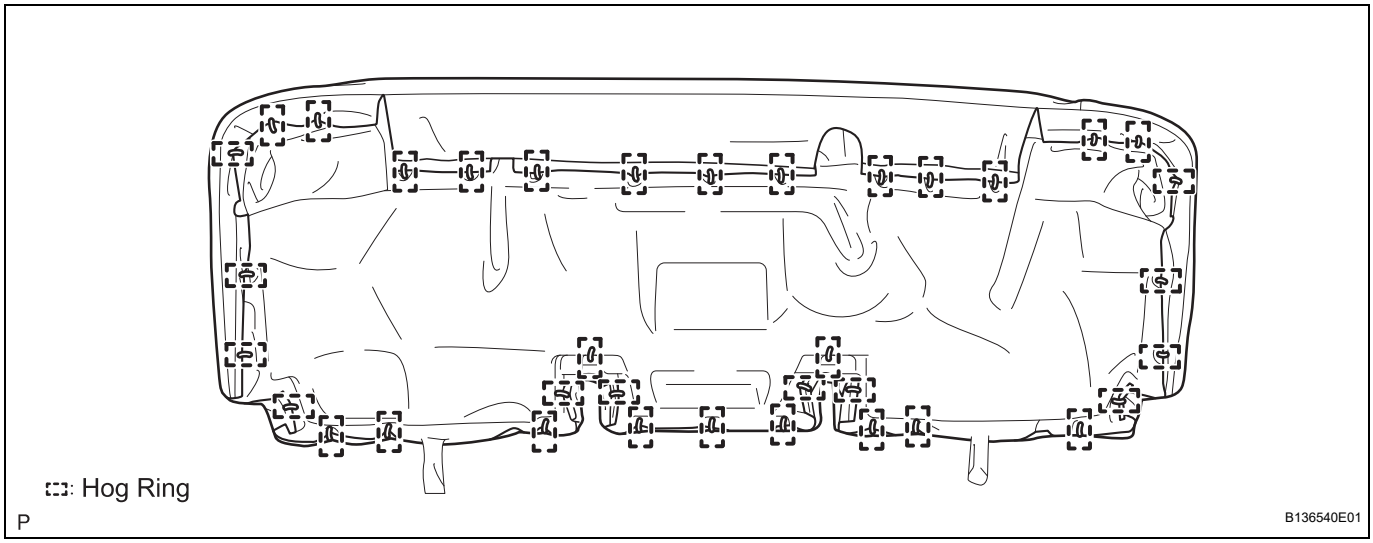
(3) Wait 5 minutes or more and confirm that the seat surface becomes warm.

SE

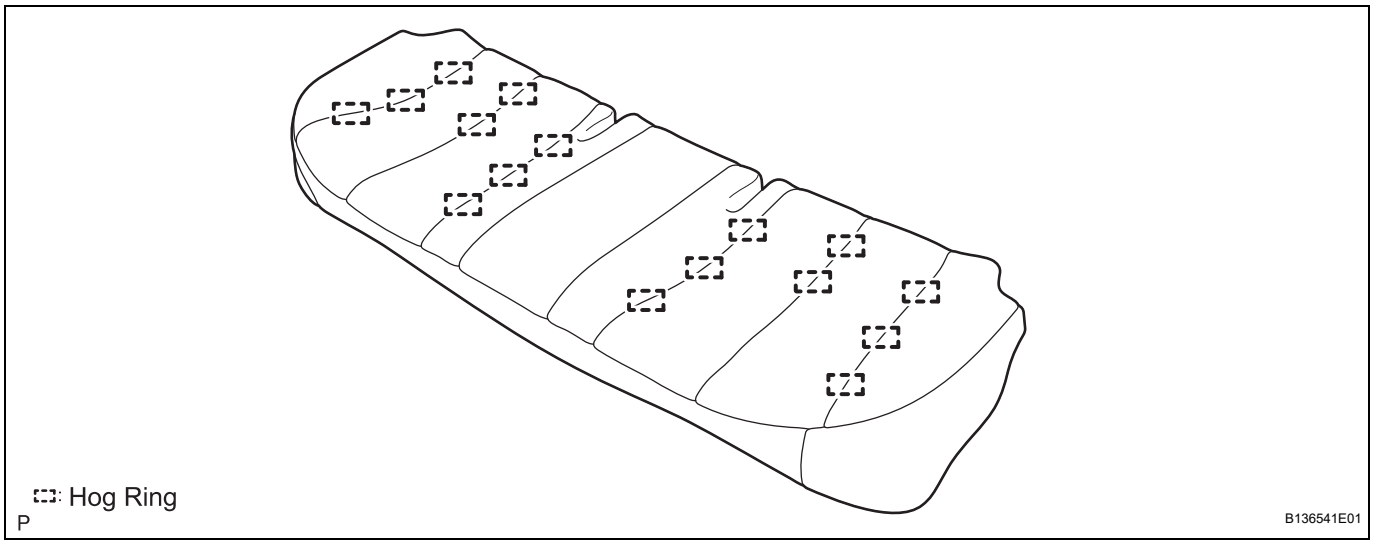
DISASSEMBLY

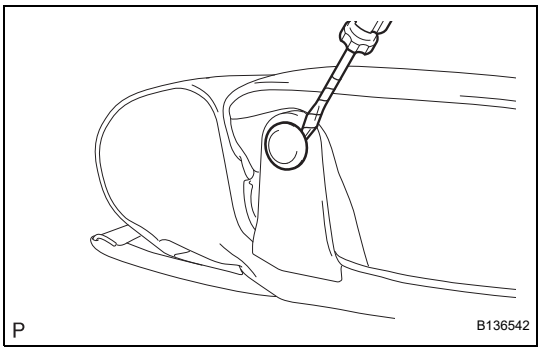
1. REMOVE REAR BENCH TYPE SEAT CUSHION COVER

(a) Remove the 36 hog rings.



(b) Remove the 16 hog rings and rear bench type seat cushion cover.



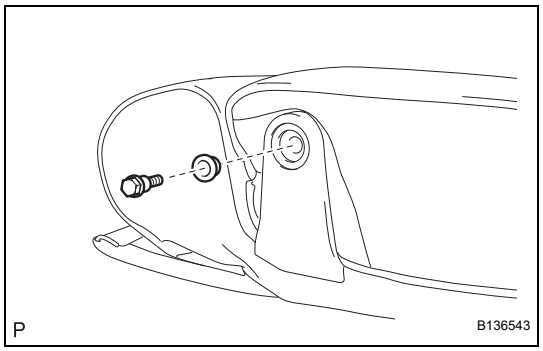


2. REMOVE NO. 1 SEAT ARMREST CAP

(a) Using a screwdriver, remove the No. 1 seat armrest cap.

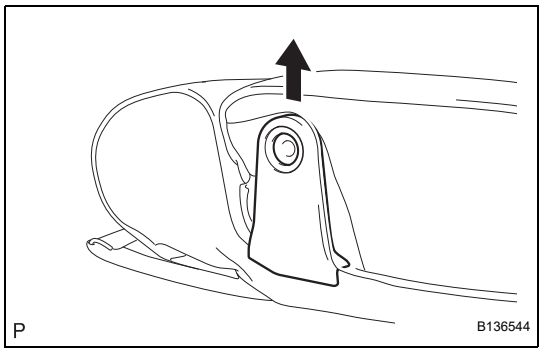
HINT:

Tape the screwdriver tip before use.

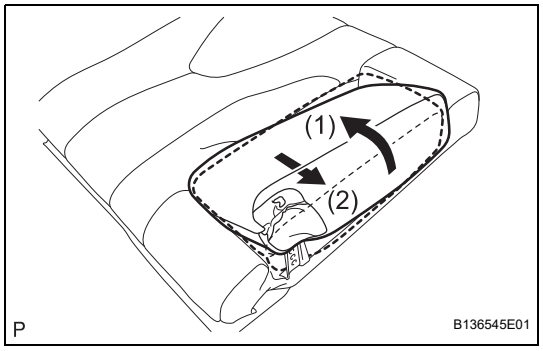


3. REMOVE REAR SEATBACK HINGE COVER

(a) Remove the bolt and bush.

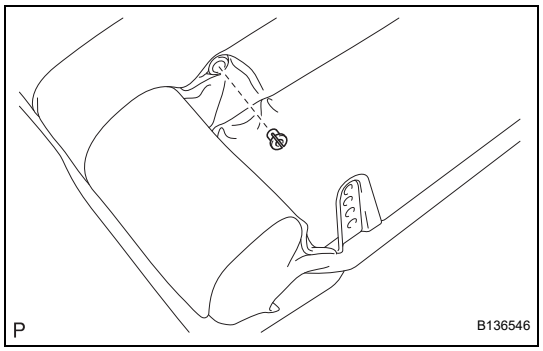


(b) Remove the rear seatback hinge cover.

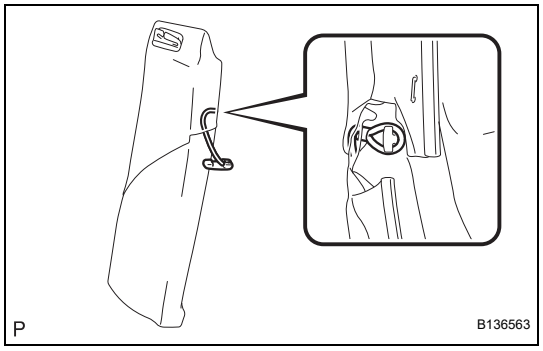


4. REMOVE REAR CENTER SEAT ARMREST ASSEMBLY

(a) Remove the rear center seat armrest assembly as shown in the illustration.



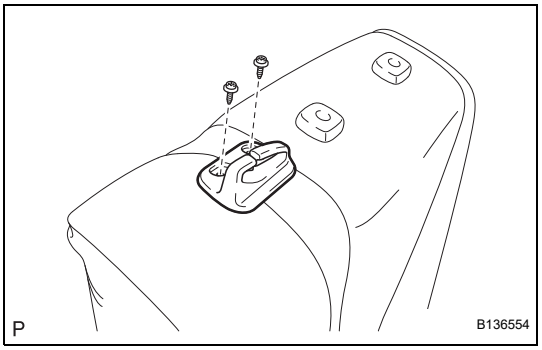
(b) Remove the bush.



5. REMOVE REAR SEAT BELT HOOK

(a) Remove the rear seat belt hook.
HINT:
Use the same procedures for the RH side and LH side.

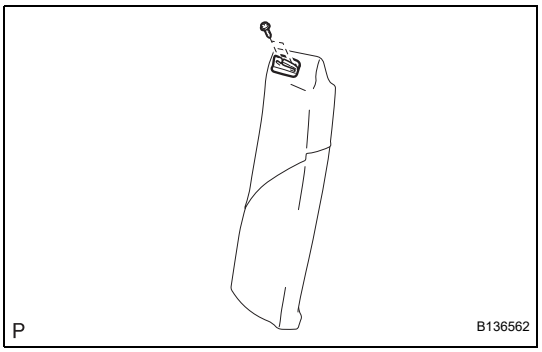
SE



6. REMOVE REAR SEAT SHOULDER BELT GUIDE LH

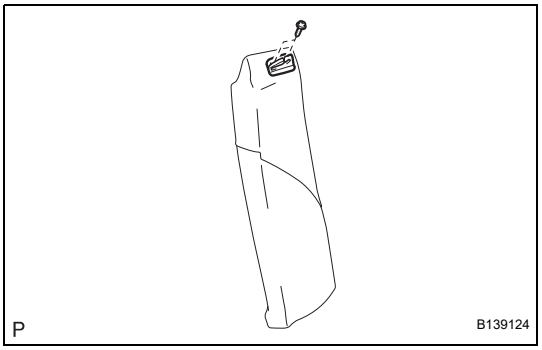
(a) Seatback:

(1) Remove the 2 screws and rear seat shoulder belt guide LH.



(b) Side Seatback:

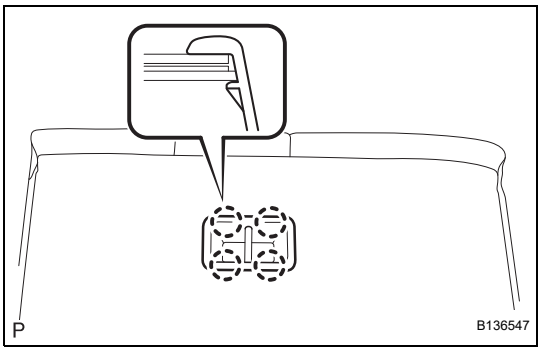
(1) Remove the 2 screws and rear seat shoulder belt guide LH.



7. REMOVE REAR SEAT SHOULDER BELT GUIDE RH

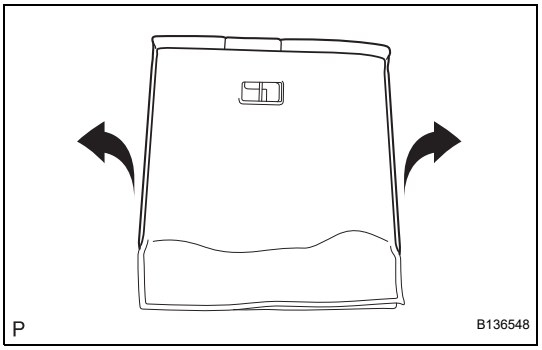
(a) Remove the 2 screws and rear seat shoulder belt guide RH.

SE



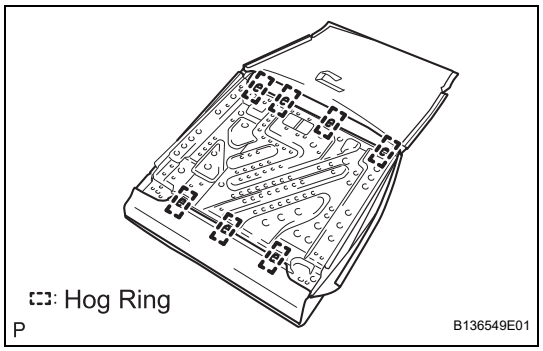
8. REMOVE REAR SEATBACK LOCK BEZEL UPPER (for RH Side)

(a) Disengage the 4 claws and remove the rear seatback lock bezel upper.

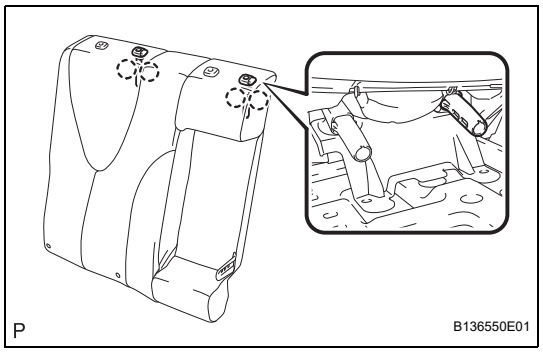


9. REMOVE REAR SEAT HEADREST SUPPORT (for RH Side)

(a) Disengage the 2 hooks and separate the rear separate type seatback cover.

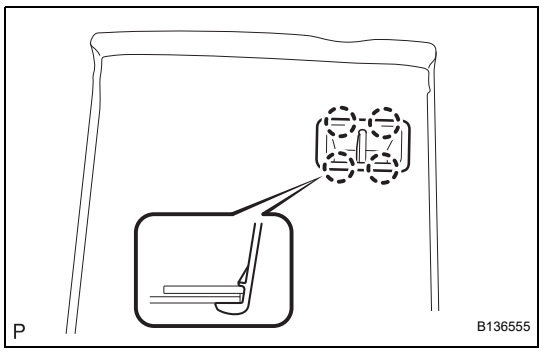


(b) Remove the 7 hog rings.



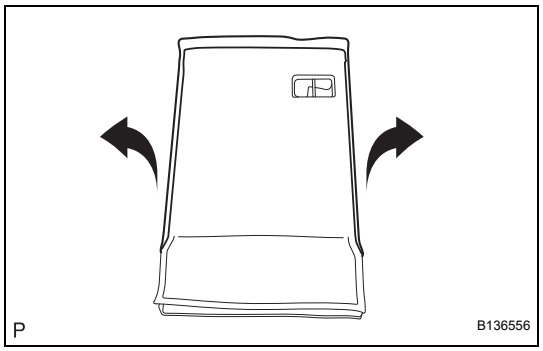
(c) Disengage the 4 claws and remove the 2 rear seat headrest supports.

10. REMOVE REAR SEAT HEADREST SUPPORT (for RH Side)



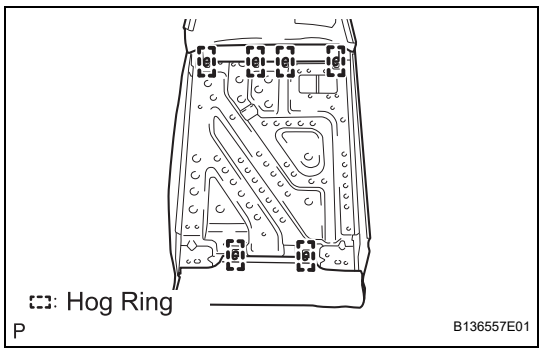
11. REMOVE REAR SEATBACK LOCK BEZEL UPPER (for LH Side)

(a) Disengage the 4 claws and remove the rear seatback lock bezel upper.



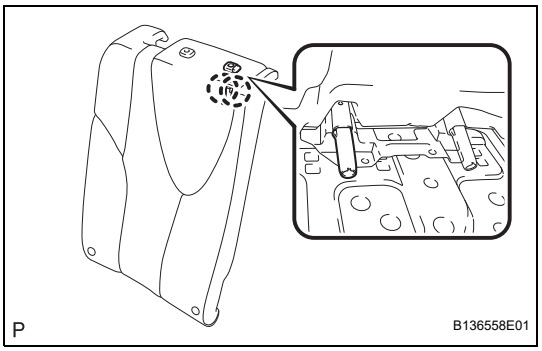
12. REMOVE REAR SEAT HEADREST SUPPORT (for LH Side)

(a) Disengage the 2 hooks and separate the rear separate type seatback cover.



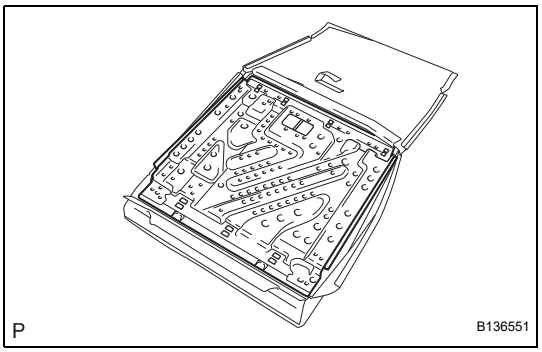
(b) Remove the 6 hog rings.

SE



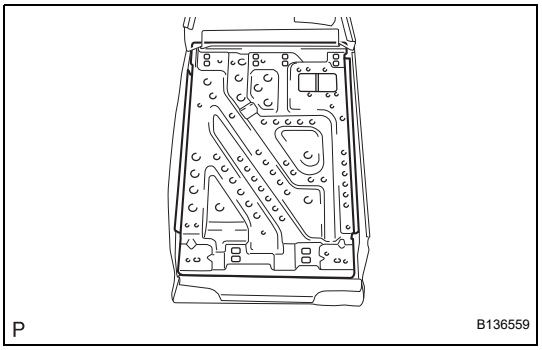
(c) Disengage the 2 claws and remove the rear seat headrest support.

13. REMOVE REAR SEAT HEADREST SUPPORT (for LH Side)



14. REMOVE REAR SEATBACK FRAME SUB-ASSEMBLY RH

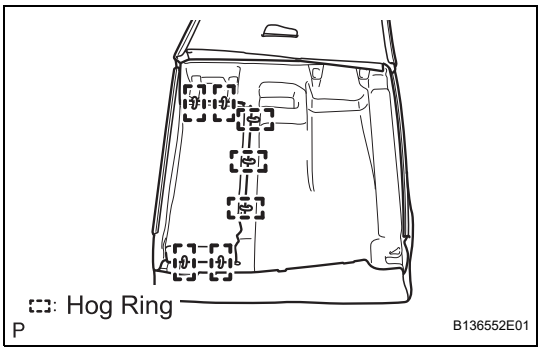
(a) Remove the rear seatback frame sub-assembly RH.



15. REMOVE REAR SEATBACK FRAME SUB-ASSEMBLY LH

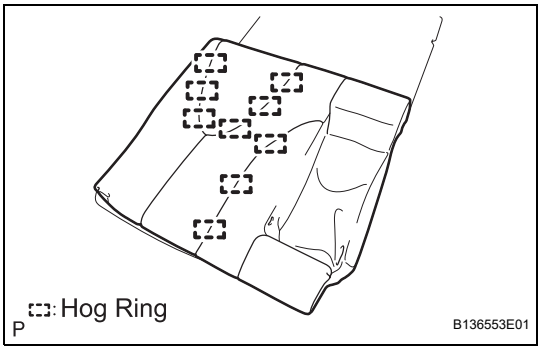
(a) Remove the rear seatback frame sub-assembly LH.

SE



16. REMOVE REAR SEPARATE TYPE SEATBACK COVER (for RH Side)

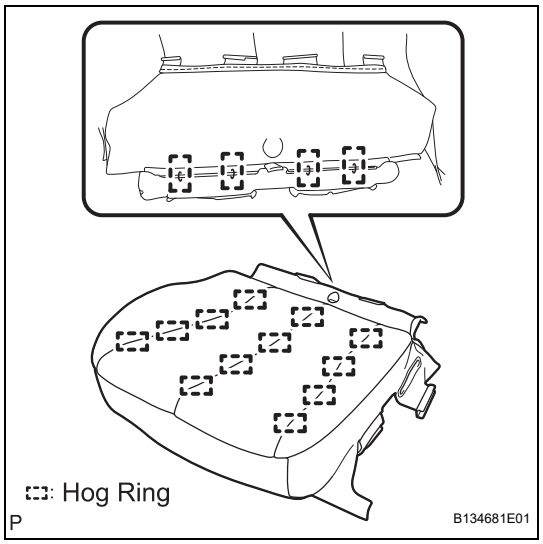
(a) Remove the 7 hog rings.

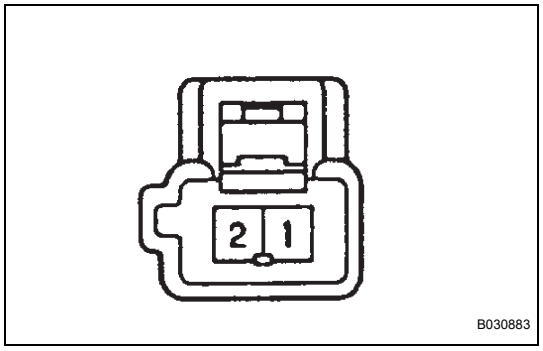


(b) Remove the 9 hog rings and rear separate type seatback cover.

REMOVAL

1. **REMOVE FRONT SEAT HEADREST ASSEMBLY**
2. **REMOVE SEAT TRACK COVER (See page SE-29)**
3. **REMOVE INNER SEAT TRACK BRACKET COVER (See page SE-29)**
4. **REMOVE FRONT SEAT ASSEMBLY (See page SE-29)**
5. **REMOVE RECLINING POWER SEAT SWITCH KNOB (See page SE-30)**
6. **REMOVE SLIDE AND VERTICAL POWER SEAT SWITCH KNOB (See page SE-30)**
7. **REMOVE FRONT SEAT CUSHION SHIELD ASSEMBLY (See page SE-30)**
8. **REMOVE FRONT SEAT INNER BELT ASSEMBLY (See page SB-17)**
9. **REMOVE FRONT INNER SEAT CUSHION SHIELD (See page SE-31)**
10. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION ASSEMBLY (See page SE-32)**
11. **REMOVE FRONT SEPARATE TYPE SEAT CUSHION COVER**
    (a) Remove the 16 hog rings and seat cushion cover from the seat cushion pad.



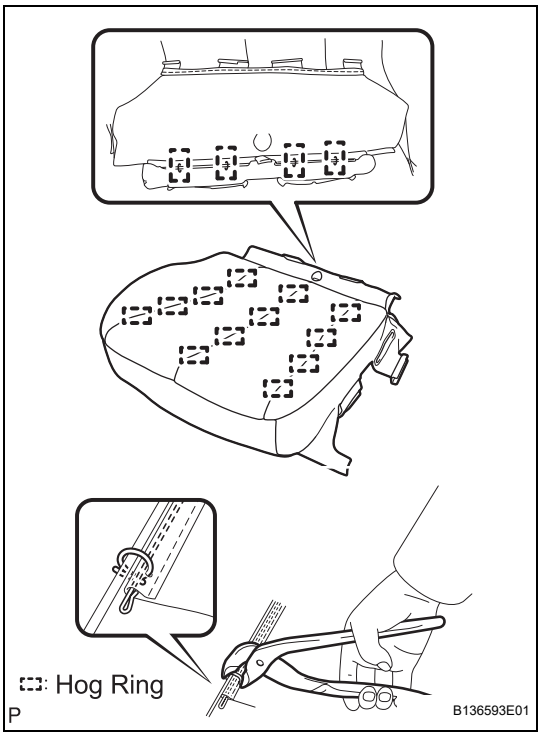


INSPECTION

1. **INSPECT FRONT SEAT CUSHION HEATER**
   (a) Measure the resistance according to the value(s) in the table below.
   Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Always	Below 1 Ω

SE



INSTALLATION

1. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION COVER**
   (a) Using hog ring pliers, install 16 new hog rings.
   NOTICE:
   - **Be careful not to damage the cover.**
   - **When installing the hog rings, take care to minimize wrinkles as much as possible.**
2. **INSTALL FRONT SEPARATE TYPE SEAT CUSHION ASSEMBLY**
3. **INSTALL FRONT INNER SEAT CUSHION SHIELD**
4. **INSTALL FRONT SEAT INNER BELT ASSEMBLY (See page SB-18)**
5. **INSTALL FRONT SEAT CUSHION SHIELD ASSEMBLY**
6. **INSTALL SLIDE AND VERTICAL POWER SEAT SWITCH KNOB**
7. **INSTALL RECLINING POWER SEAT SWITCH KNOB**
8. **INSTALL FRONT SEAT ASSEMBLY (See page SE-38)**
9. **INSTALL INNER SEAT TRACK BRACKET COVER (See page SE-39)**
10. **INSTALL SEAT TRACK COVER (See page SE-39)**
11. **INSTALL FRONT SEAT HEADREST ASSEMBLY**
12. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43).
13. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)** (See page RS-239)
14. **INSPECT SRS WARNING LIGHT**
    Inspect SRS warning light. (See page RS-33)
15. **INSPECT FRONT SEAT ASSEMBLY (See page SE-39)**

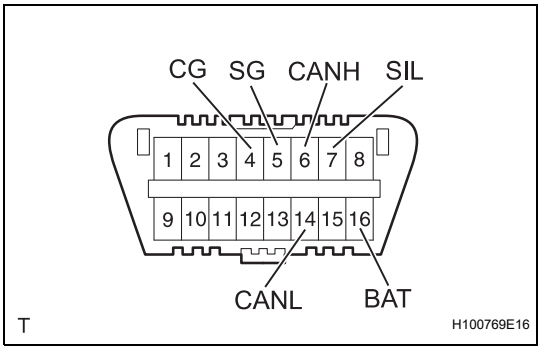
FUEL (A61-48) - E1 (C64-14)	L - W-B	Fuel lid opener switch signal input	Power switch on (IG), fuel lid opener switch is pressed	Below 1 V
			Power switch on (IG), fuel lid opener switch is not pressed	10 to 14 V
LIDO (A61-49) - E1 (C64-14)	W - W-B	Fuel lid courtesy switch signal input	Power switch on (IG), fuel lid is closed	Below 1 V
			Power switch on (IG), fuel lid is opened	10 to 14 V

ED



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The vehicle's ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

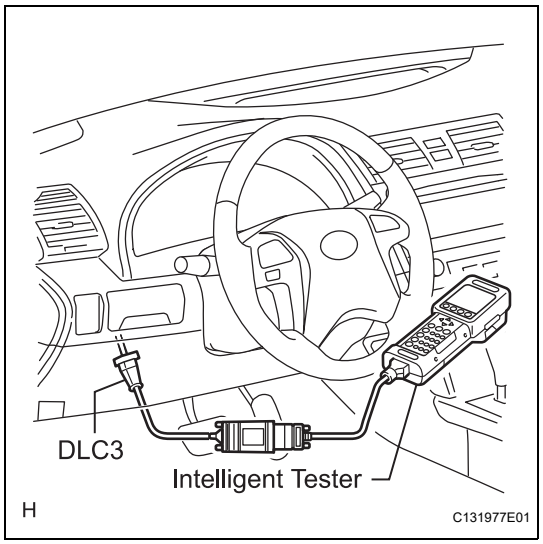
Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω

Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the power switch on (IG) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle side or tester side.

HINT:

- If communication is normal when the tool is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tool is connected to another vehicle, the problem is probably in the tool itself. Consult the Service Department listed in the tool's instruction manual.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By reading the DATA LIST displayed on an intelligent tester, you can check values, including those of the switches, sensors, and actuators, without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method of shortening diagnostic time.

NOTICE:

In the table below, the values listed under Normal Condition are reference only. Do not depend solely on these values when determining whether or not a part is faulty.

(a) Put the engine in inspection mode (See page ES-11).

(b) Warm up the engine.

(c) Turn the power switch off.

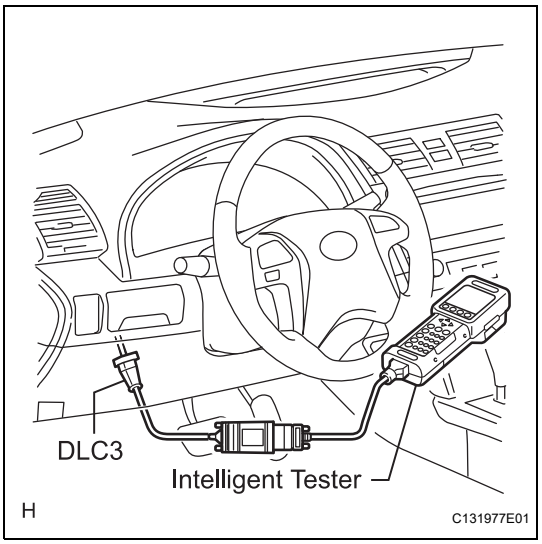
(d) Connect the intelligent tester (with CAN VIM) to the DLC3.

(e) Turn the power switch on (IG).

(f) Turn the tester on.

(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.

(h) Check the values by referring to the table below.



ED

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FUEL LID	Fuel lid position switch: Open or Close	ON: Fuel lid is opened OFF: Fuel lid is closed	-
FUEL LID SW	Fuel lid position switch: ON or OFF	ON: Fuel lid opener switch is pressed OFF: Fuel lid opener switch is not pressed	-

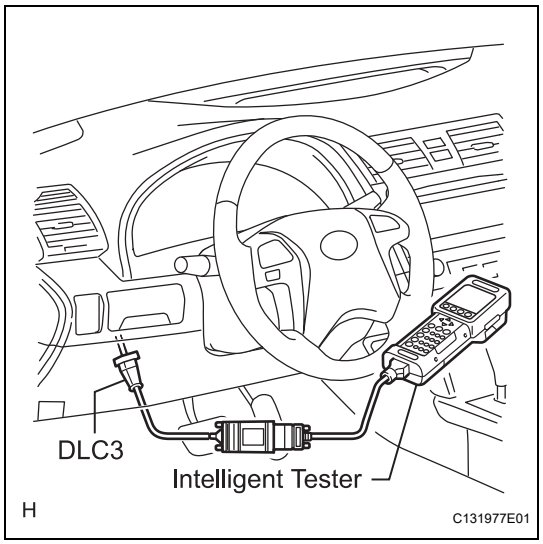
2. ACTIVE TEST

HINT:

Performing an ACTIVE TEST enables components including the relays, VSV (Vacuum Switching Valve) and actuators, to be operated without removing any parts. The ACTIVE TEST can be performed with an intelligent tester. Performing an ACTIVE TEST as the first step in troubleshooting is one method of shortening diagnostic time.

DATA LIST can be displayed during ACTIVE TEST.

(a) Put the engine in inspection mode (See page ES-11).



(b) Connect the intelligent tester (with CAN VIM) to the DLC3.
(c) Turn the power switch on (IG).
(d) Turn the tester on.
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(f) Perform the ACTIVE TEST by referring to the table below.

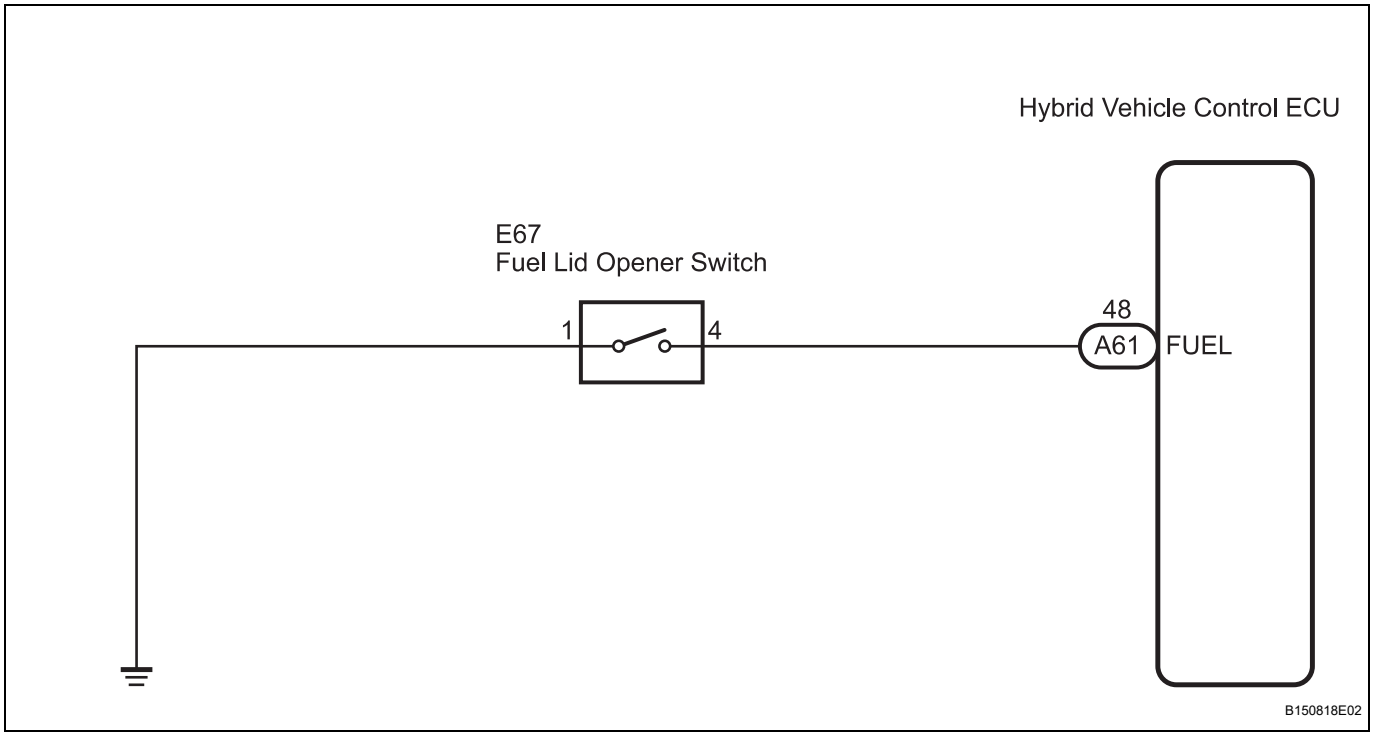
Tester Display	Test Part	Control Range	Diagnostic Note
FUEL FILLER OPN	Fuel lid opener control	ON: Open	-

Fuel Lid Opening Switch Circuit

DESCRIPTION

The hybrid vehicle control ECU detects the condition of the fuel lid opener switch.

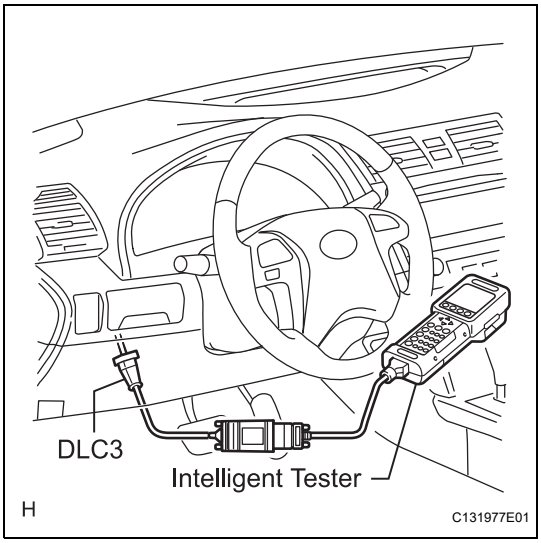
WIRING DIAGRAM



INSPECTION PROCEDURE

ED

1	READ VALUE OF INTELLIGENT TESTER



(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.

(c) Select FUEL LID SW in the DATA LIST and read the tester display.

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FUEL LID SW	Fuel lid opener switch: ON or OFF	ON: Fuel lid opener switch is pressed OFF: Fuel lid opener switch is not pressed	-

OK:
ON or OFF appears on the screen according to the switch condition.

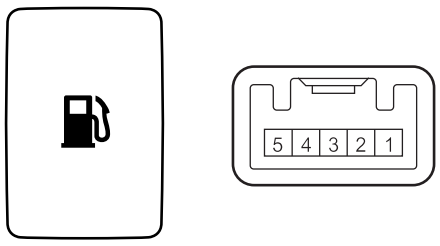
NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ED-12)

2 INSPECT FUEL LID OPENER SWITCH

Fuel Lid Opener Switch:



(a) Remove the fuel lid opener switch (See page ED-108).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

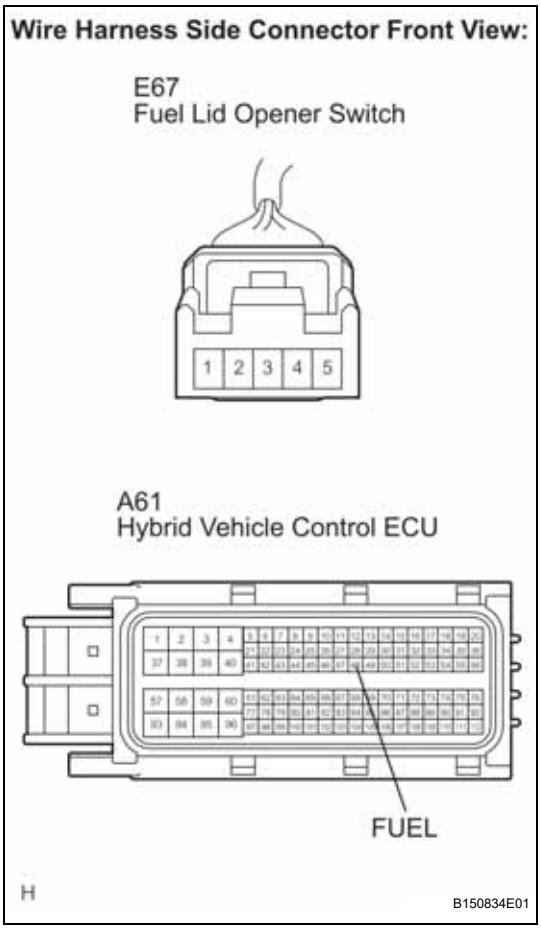
Tester Connection	Condition	Specified Condition
1 - 4	Fuel lid opener switch is not pressed	10 kΩ or higher
	Fuel lid opener switch is pressed	Below 1 Ω

NG → **REPLACE FUEL LID OPENER SWITCH (See page ED-108)**

OK

ED

3	CHECK HARNESS AND CONNECTOR (FUEL LID OPENER SWITCH - HYBRID VEHICLE CONTROL ECU)



(a) Disconnect the A61 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

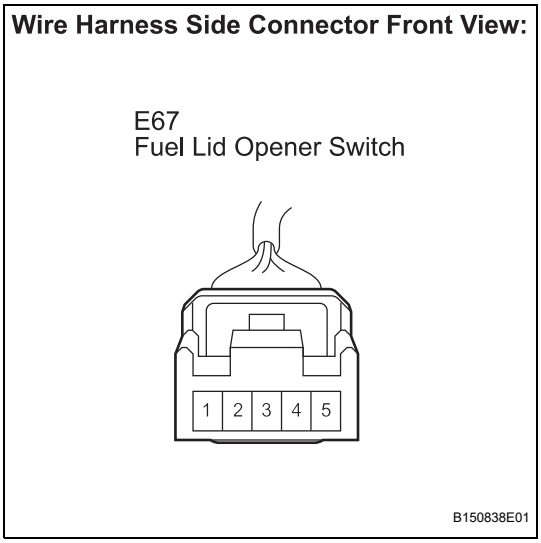
Tester Connection	Condition	Specified Condition
E67-4 - A61-48 (FUEL)	Always	Below 1 Ω
E67-4 - Body ground		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ED

4	CHECK HARNESS AND CONNECTOR (FUEL LID OPENER SWITCH - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E67-1 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

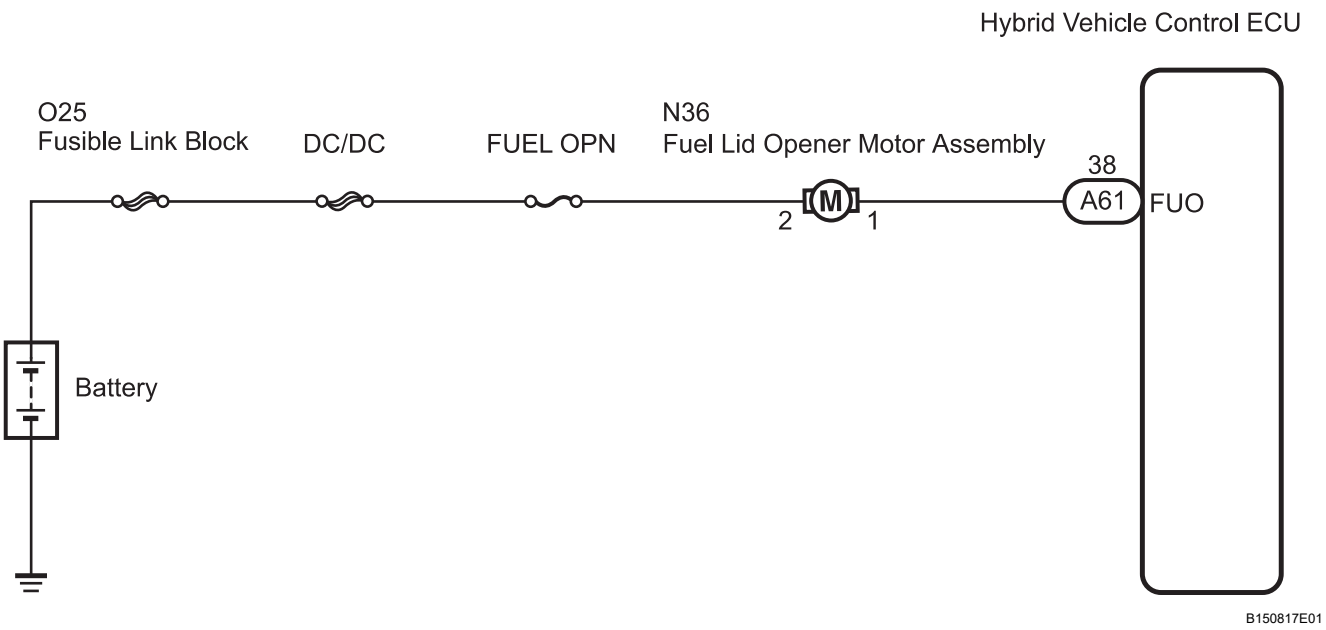
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ED-12)

Fuel Lid Opener Motor Circuit

DESCRIPTION

The hybrid vehicle control ECU receives signals from the fuel lid opener switch, it actives the fuel lid opener motor.

WIRING DIAGRAM



INSPECTION PROCEDURE

ED

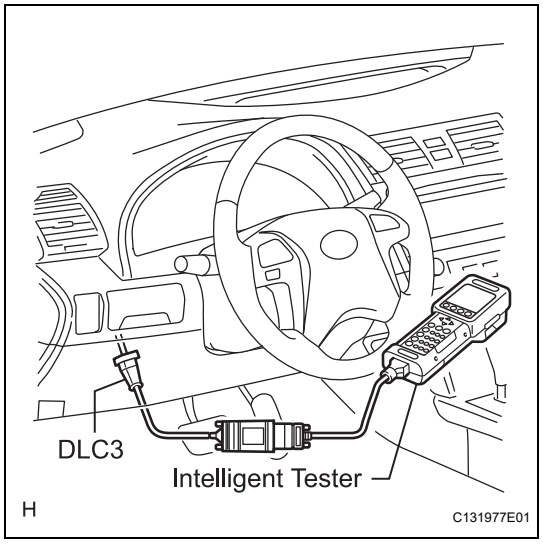
1	INSPECT FUSE (FUEL OPN)

(a) Remove the FUEL OPN fuse from the instrument pane J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE (FUEL OPN)**

OK

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER



(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Perform the ACTIVE TEST according to the tester display.

Tester Display	Test Part	Control Range	Diagnostic Note
FUEL FILLER OPN	Fuel lid opener control	ON: Open	-

OK:
Fuel lid opens.

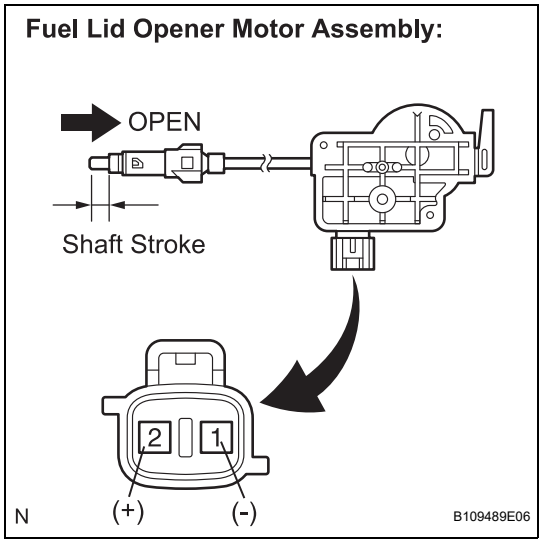
NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ED-12)

3 INSPECT FUEL LID OPENER MOTOR ASSEMBLY

Fuel Lid Opener Motor Assembly:



(a) Remove the fuel lid opener motor assembly (See page ED-106).
(b) Apply battery voltage to the lock terminals and check that the motor operates and the shaft moves in the open direction.
OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 2 Battery negative (-) → Terminal 1	Motor operates and shaft moves in open direction

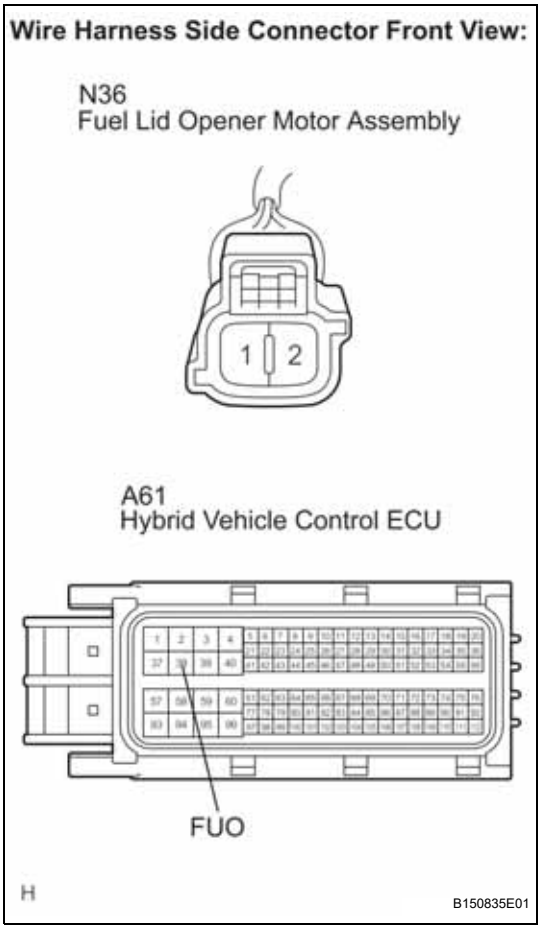
(c) Measure the shaft stroke.
Standard:
10.3 mm (0.406 in.) or more
If the result is not as specified, replace the motor assembly.

NG → **REPLACE FUEL LID OPENER MOTOR ASSEMBLY (See page ED-106)**

ED

OK

4	CHECK HARNESS AND CONNECTOR (FUEL LID OPENER MOTOR - HYBRID VEHICLE CONTROL ECU)



(a) Disconnect the A61 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

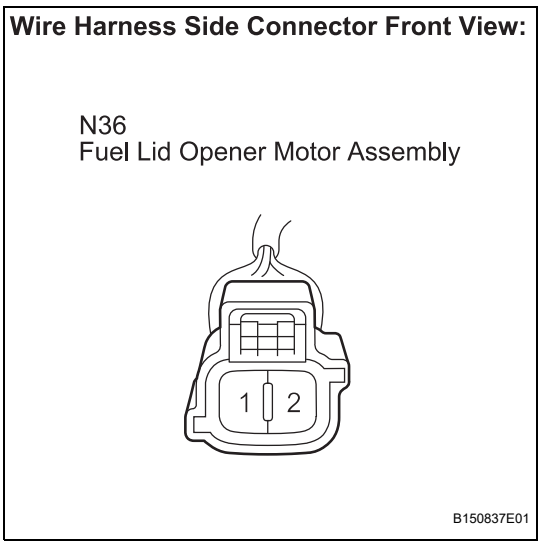
Tester Connection	Condition	Specified Condition
N36-1 - A61-38 (FUO)	Always	Below 1 Ω
N36-1 - Body ground		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

ED

OK

5	CHECK HARNESS AND CONNECTOR (FUEL LID OPENER MOTOR - BATTERY)



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
N36-2 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

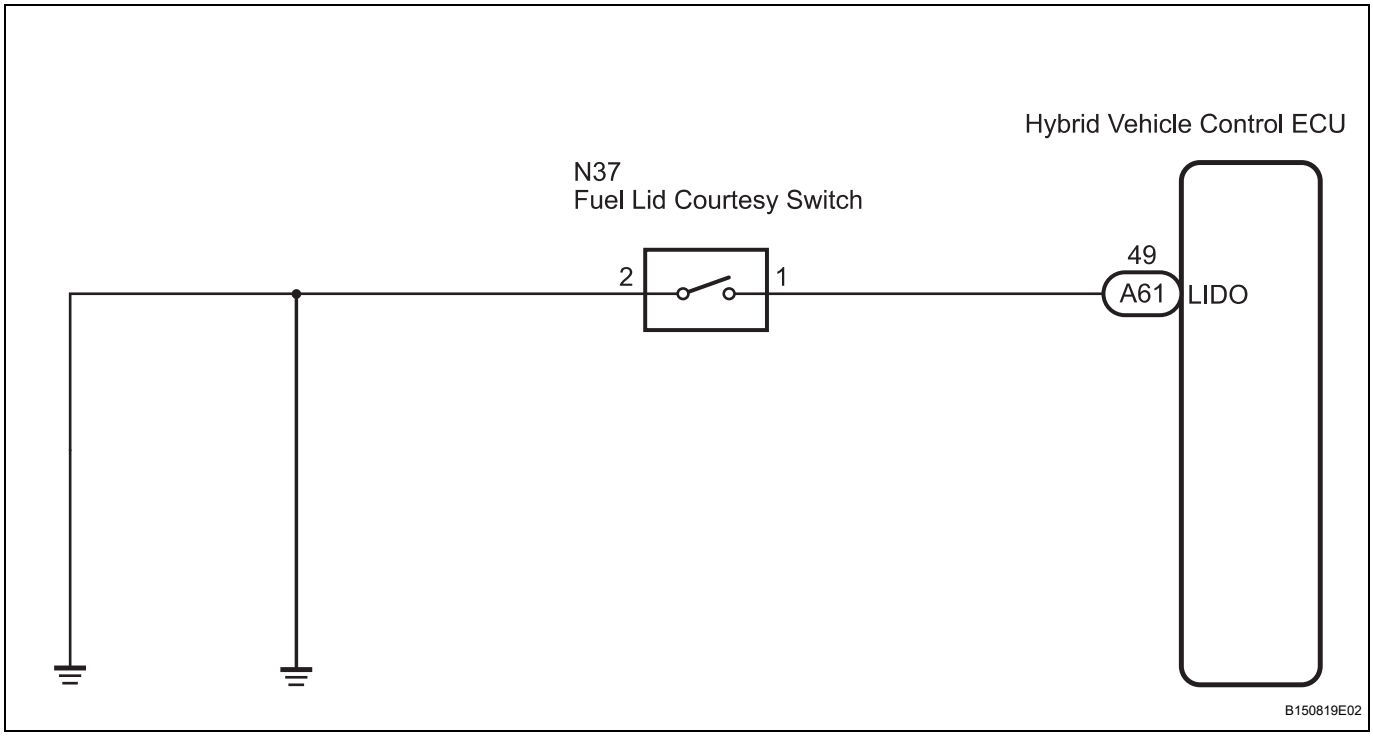
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ED-12)

Fuel Lid Courtesy Switch Circuit

DESCRIPTION

The hybrid vehicle control ECU detects the condition of the fuel lid courtesy switch.

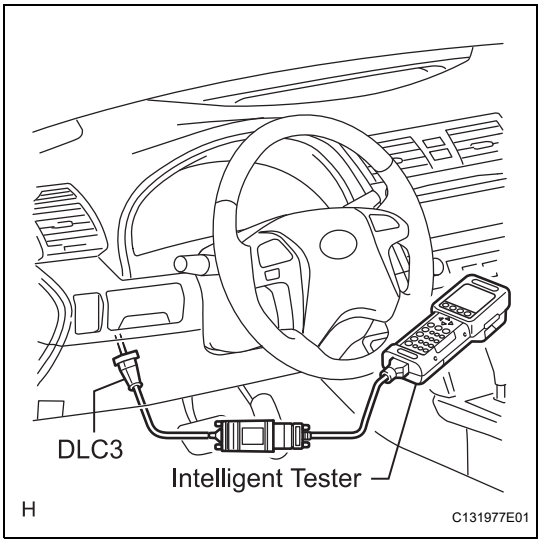
WIRING DIAGRAM



INSPECTION PROCEDURE

ED

1	READ VALUE OF INTELLIGENT TESTER



(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select FUEL LID in the DATA LIST and read the tester display.

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FUEL LID	Fuel lid courtesy switch: ON or OFF	ON: Fuel lid is opened OFF: Fuel lid is not closed	-

OK:
ON or OFF appears on the screen according to the fuel lid condition.

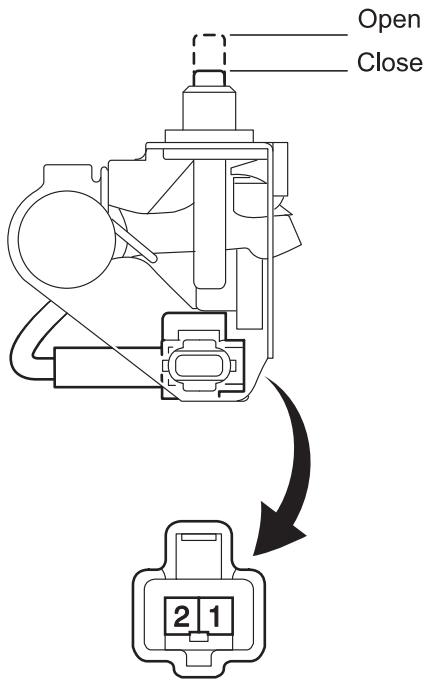
NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ED-12)

2 INSPECT FUEL LID COURTESY SWITCH

Fuel Lid Courtesy Switch:



N B110870E04

(a) Remove the fuel lid courtesy switch (See page ED-111).
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Courtesy switch pushed (Fuel lid closed)	Below 1 Ω
	Courtesy switch free (Fuel lid open)	10 kΩ or higher

NG → **REPLACE FUEL LID COURTESY SWITCH (See page ED-111)**

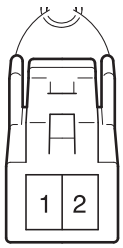
OK

ED

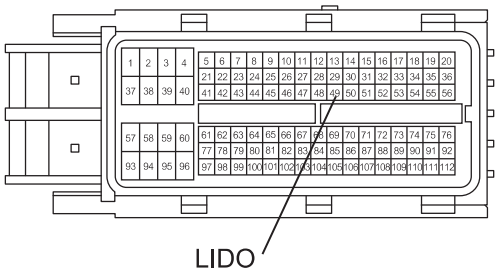
3	CHECK HARNESS AND CONNECTOR (FUEL LID COURTESY SWITCH - HYBRID VEHICLE CONTROL ECU)

Wire Harness Side Connector Front View:

N37 Fuel Lid Courtesy Switch



A61
Hybrid Vehicle Control ECU



B150820E01

(a) Disconnect the A61 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
N37-1 - A61-49 (LIDO)	Always	Below 1 Ω
N37-1 - Body ground		10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

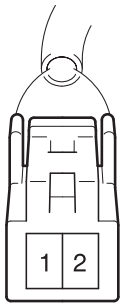
OK

ED

4	CHECK HARNESS AND CONNECTOR (FUEL LID COURTESY SWITCH BODY GROUND)

Wire Harness Side Connector Front View:

N37
Fuel Lid Courtesy Switch



P

B139172E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
N37-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page ED-12)

INSTALLATION

NOTICE:

- **Avoid touching the stroke portions of the rod as much as possible to prevent foreign matter from attaching to the stroke portions. Be sure to hold the cylinders while servicing the vehicle.**
- **Do not wear cotton gloves or other similar materials when handling the rod. Fibers may attach to the rod and result in gas leaks.**
- **Do not apply any load to the cylinders in the horizontal direction in order to prevent the rod from being deformed.**

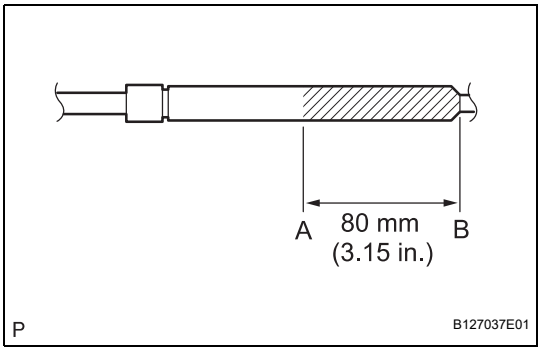
1. INSTALL HOOD SUPPORT ASSEMBLY

(a) Install the hood support assembly.

NOTICE:

- **Install the hood support assembly while supporting the hood by hand.**
- **Check that the hood support assembly is engaged in the ball joint and that the hood support assembly cannot be pulled out.**

DISPOSAL



1. DISPOSE OF HOOD SUPPORT ASSEMBLY

(a) Secure the hood support horizontally in a vise with the piston-rod pulled out.

(b) Wear safety glasses. Use a metal saw to slowly cut a groove between A and B shown in the illustration to release the gas.

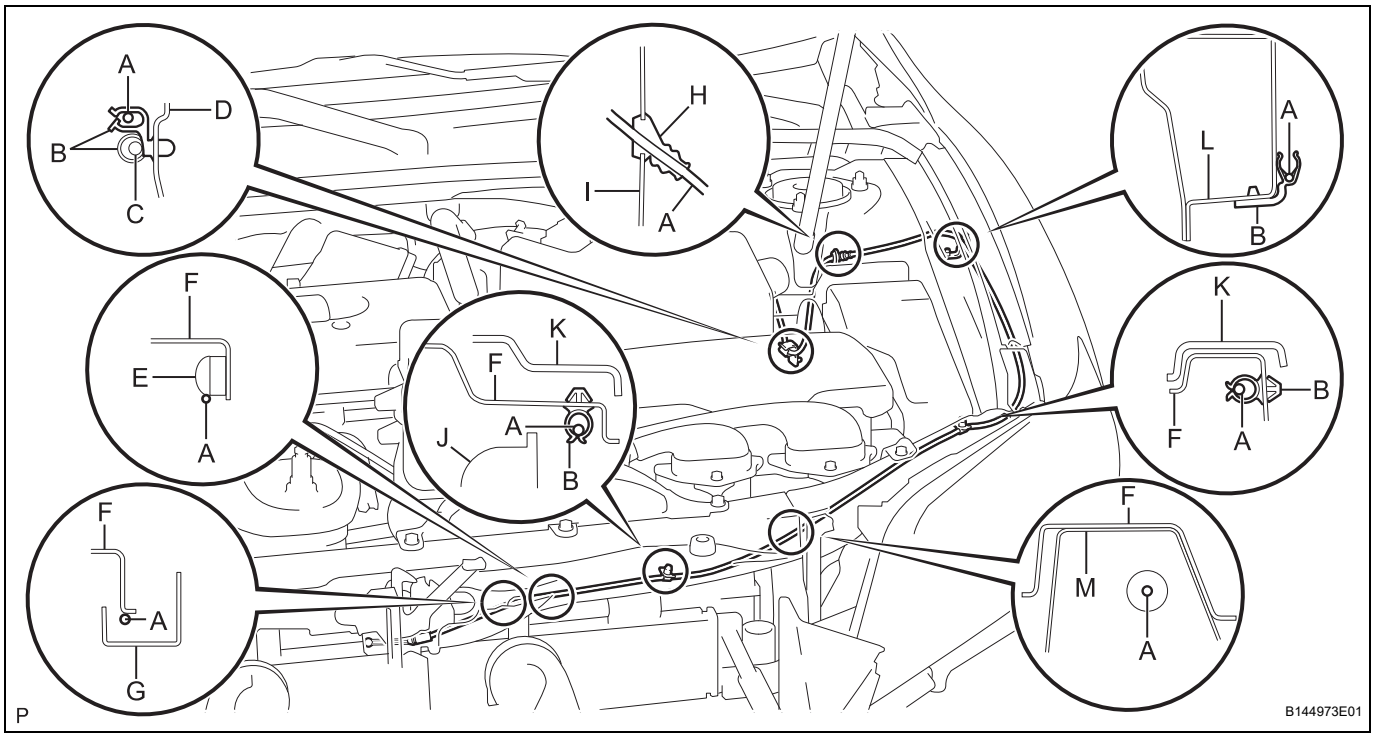
NOTICE:

Although the gas inside the hood support is colorless, odorless, and harmless, metal debris may scatter. Therefore, cover the hood support with a piece of cloth or other material.

INSTALLATION

1. INSTALL HOOD LOCK CONTROL CABLE ASSEMBLY

(a) Pass the hood lock control cable assembly into the engine compartment.



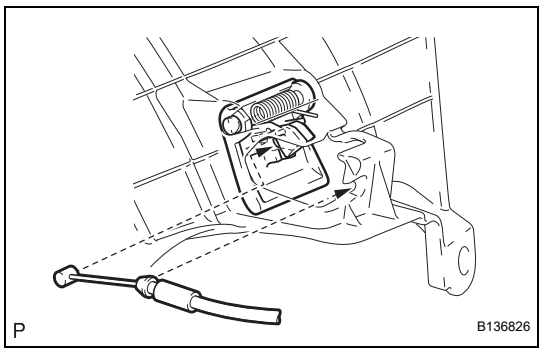
Area	Part Name	Area	Part Name
A	Hood lock control cable	H	Grommet
B	Clamp	I	Side member outer
C	Wire harness	J	Radiator
D	Pillar	K	Radiator support cover
E	Nut	L	Front fender apron
F	Radiator support upper	M	Brace
G	Hood lock protector	-	-

(b) Pass the cable through the upper radiator support.

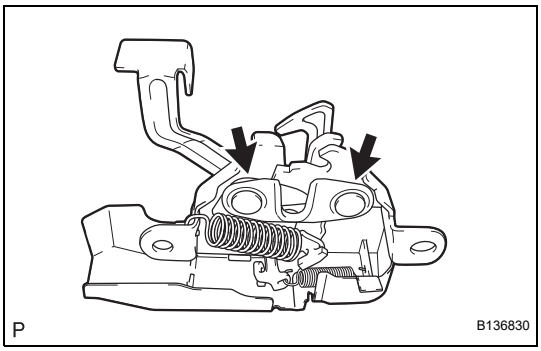
(c) Connect the clamps as shown in the illustration.

2. INSTALL HOOD LOCK CONTROL LEVER SUB-ASSEMBLY

(a) Install the hood lock control lever and connect the hood lock control cable.



ED

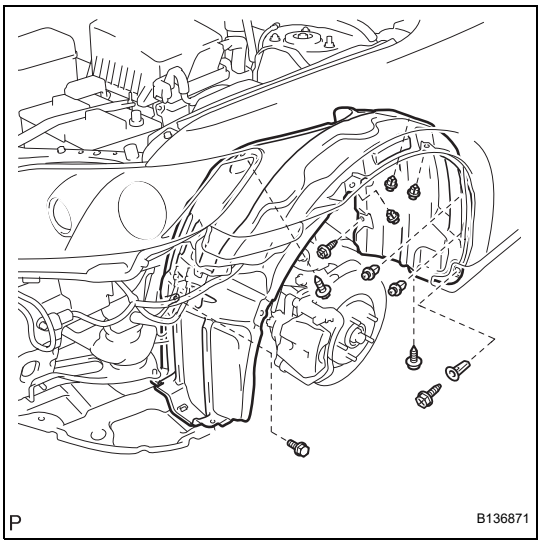


3. **INSTALL HOOD LOCK ASSEMBLY**
   (a) Apply MP grease to the sliding areas of the lock.

   (b) Connect the hood lock control cable.

   (c) Install the hood lock assembly with the 3 bolts.
   Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)

4. **INSTALL HIGH PITCHED HORN ASSEMBLY (See page HO-8)**



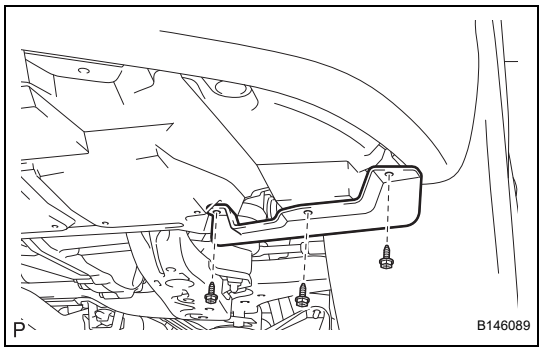
5. **INSTALL FRONT FENDER SPLASH SHIELD SUB-ASSEMBLY**
   (a) Install the front fender splash shield sub-assembly with the grommet and 4 screws.
   (b) Install the bolt and 5 clips.

6. **INSPECT HOOD SUB-ASSEMBLY (See page ED-28)**

7. **ADJUST HOOD SUB-ASSEMBLY (See page ED-28)**

8. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-9)**

ED



9. INSTALL FRONT WHEEL OPENING EXTENSION PAD

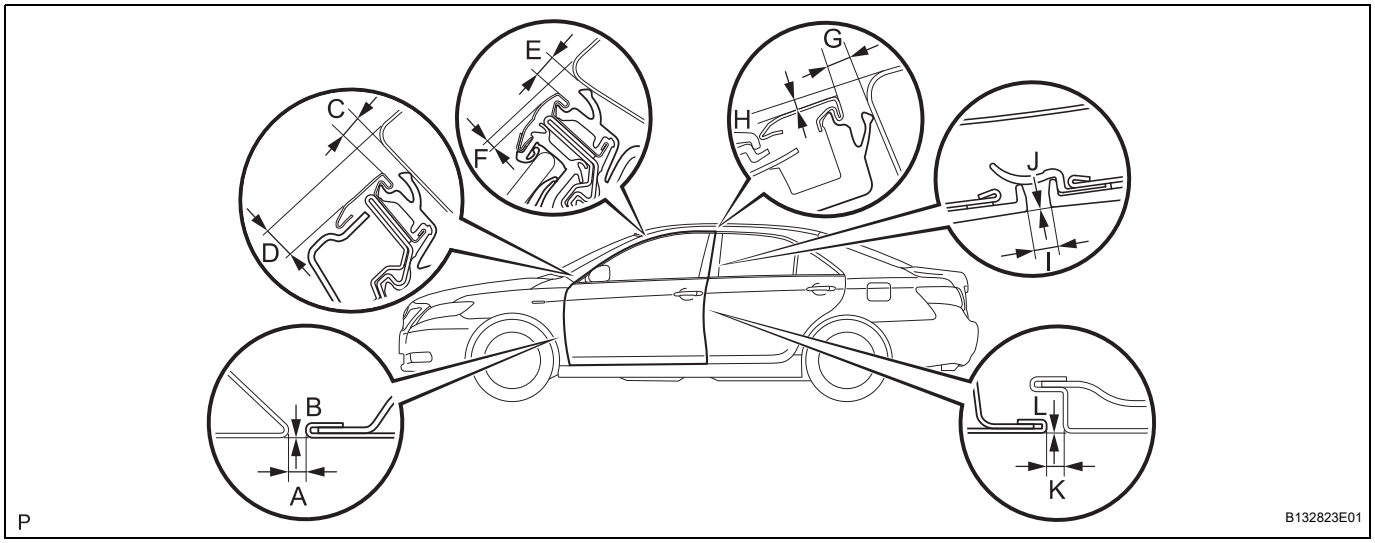
(a) Install the front wheel opening extension pad with the 3 screws.

10. INSTALL FRONT WHEEL (See page SP-19)

ON-VEHICLE INSPECTION

1. INSPECT FRONT DOOR PANEL SUB-ASSEMBLY

(a) Check that the clearance measurements of areas A through L are within each standard range.



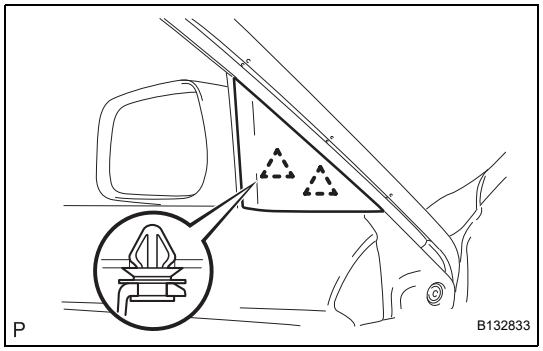
Standard clearance

Area	Measurement	Area	Measurement
A	2.7 to 5.7 mm (0.106 to 0.224 in.)	G	3.3 to 6.3 mm (0.130 to 0.248 in.)
B	-1.5 to 1.5 mm (-0.059 to 0.059 in.)	H	-0.3 to 2.7 mm (-0.012 to 0.106 in.)
C	3.3 to 6.3 mm (0.130 to 0.248 in.)	I	2.3 to 6.3 mm (0.091 to 0.248 in.)
D	6.4 to 9.4 mm (0.252 to 0.370 in.)	J	-2.0 to 2.0 mm (-0.079 to 0.079 in.)
E	3.3 to 6.3 mm (0.130 to 0.248 in.)	K	2.7 to 5.7 mm (0.106 to 0.224 in.)
F	0.9 to 3.9 mm (0.035 to 0.154 in.)	L	-1.5 to 1.5 mm (-0.059 to 0.059 in.)

DISASSEMBLY

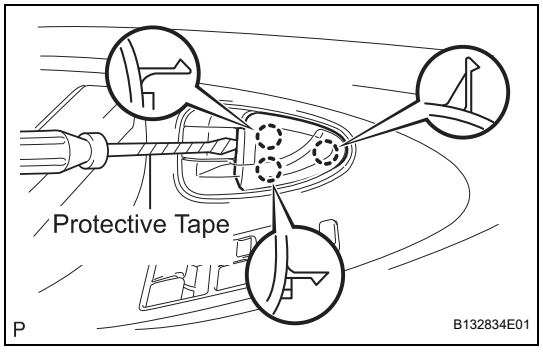
1. REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH

(a) Disengage the 2 clips and remove the front door lower frame bracket garnish.

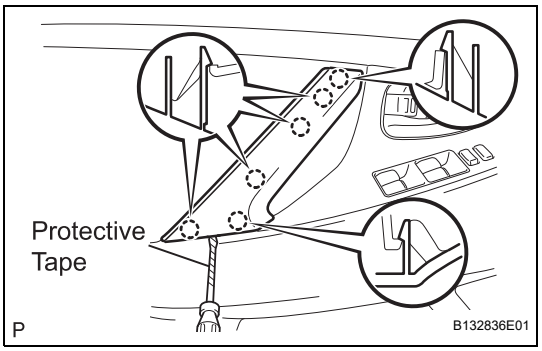


2. REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the 3 claws, and remove the front door inside handle bezel plug.

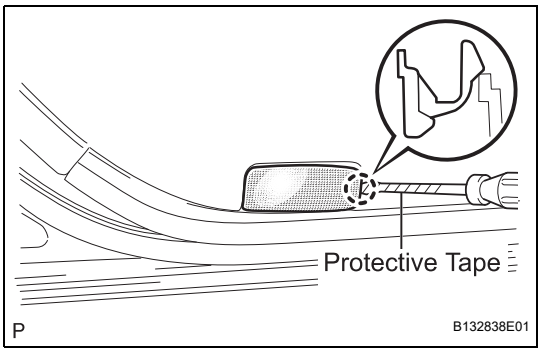


ED



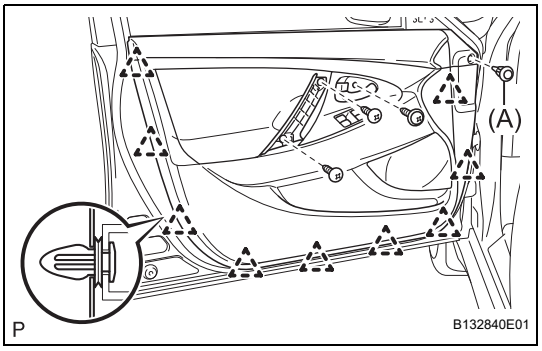
3. REMOVE ASSIST GRIP COVER

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the 6 claws and remove the assist grip cover.



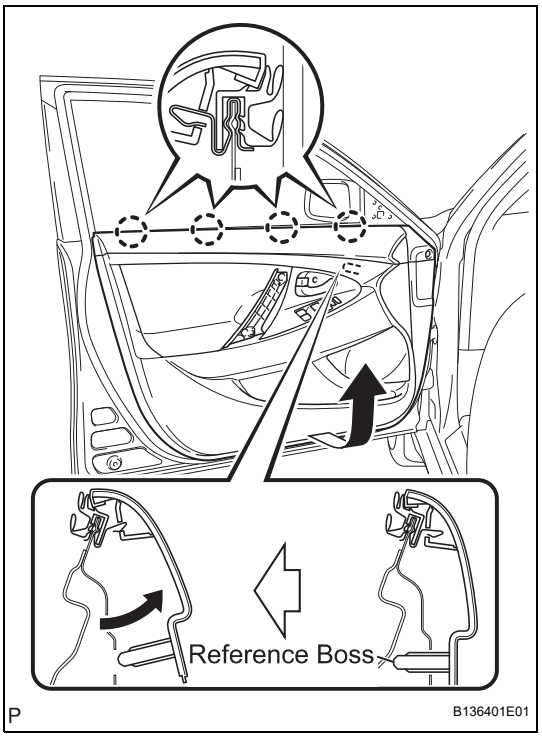
4. REMOVE COURTESY LIGHT ASSEMBLY

(a) Using a screwdriver with the tip wrapped with protective tape, disengage the claw and remove the courtesy light assembly.
(b) Disconnect the connector.



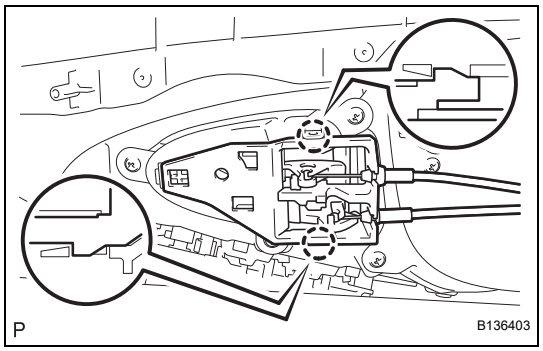
5. REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Remove the 3 screws and clip (A).
(b) Using a clip remover, disengage the 9 clips.

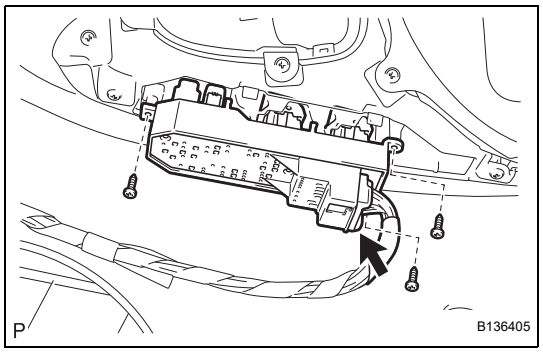


(c) Pull up the front door trim board in the direction indicated by the arrow.
(d) Disengage the reference bosses from the front door panel.
(e) Raise the front door trim board to disengage the 4 claws and remove the front door trim board together with the front door inner glass weatherstrip.

ED

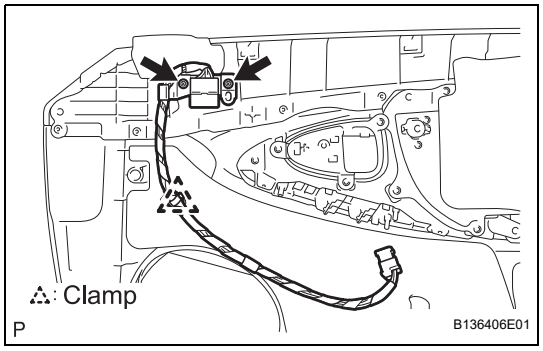


(f) Disengage the 2 claws and disconnect the front door inside handle sub-assembly.



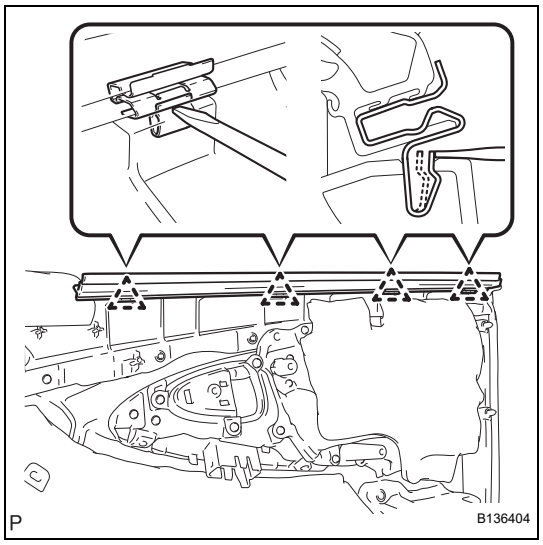
6. REMOVE POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY

(a) Disconnect the connector.
(b) Remove the 3 screws and the power window regulator master switch assembly.



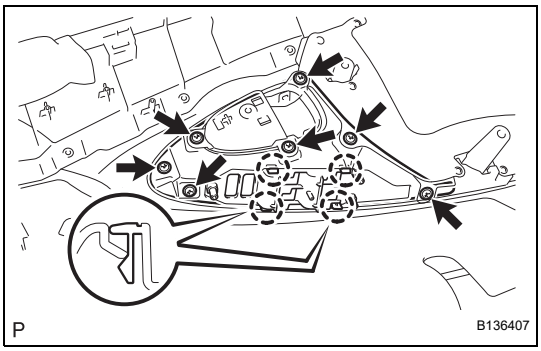
7. REMOVE FRONT DOOR WIRE (for Driver Side)

(a) Disengage the clamp and remove the 2 screws and front door wire.



8. REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP

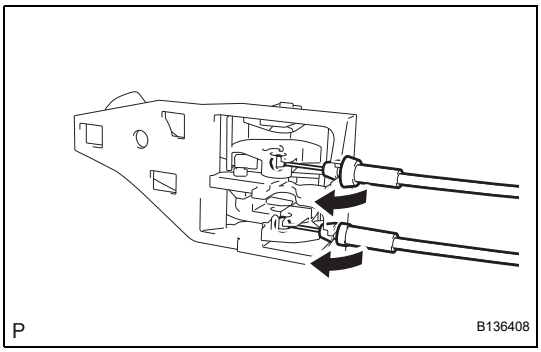
(a) Using a screwdriver, disengage the 4 clips as shown in the illustration and remove the front door inner glass weatherstrip from the front door trim board.



9. REMOVE FRONT ARMREST BASE PANEL UPPER

(a) Remove the 7 screws.

(b) Disengage the 4 claws and remove the front armrest base panel upper.

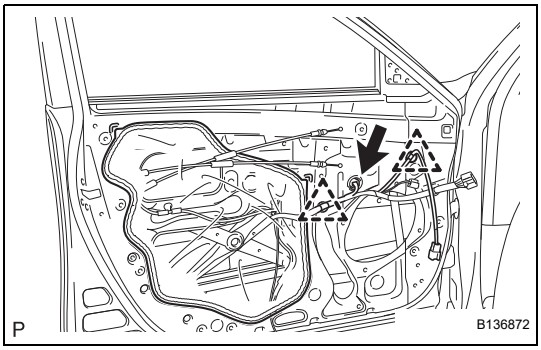


10. REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

(a) Disconnect the front door lock remote control cable and front door inside locking cable and remove the front door inside handle sub-assembly.

11. REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-145)

12. REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-13)



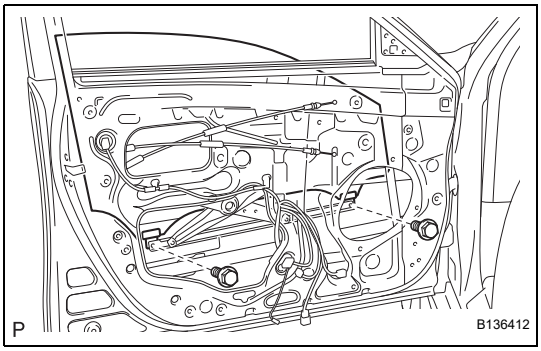
13. REMOVE FRONT DOOR SERVICE HOLE COVER

(a) Disconnect the connector and each clamp, and remove the front door service hole cover.
HINT:
Remove the remaining butyl tape on the door side.

14. REMOVE FRONT DOOR GLASS SUB-ASSEMBLY

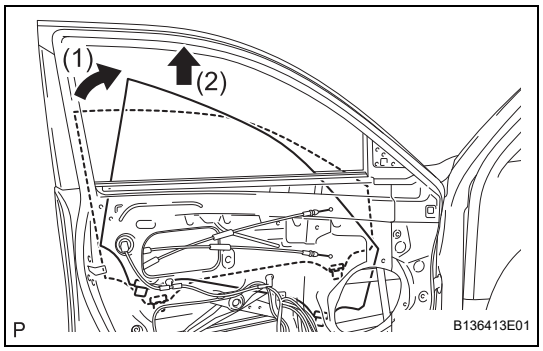
(a) Connect the front power window regulator motor assembly connector.

(b) Connect the power window regulator master switch assembly and move the front door glass sub-assembly so that the door glass bolts can be seen.

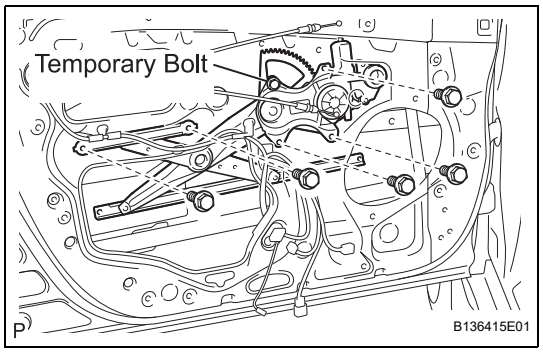


(c) Remove the 2 bolts.
NOTICE:
After the bolts are removed, the door glass may fall, causing damage.

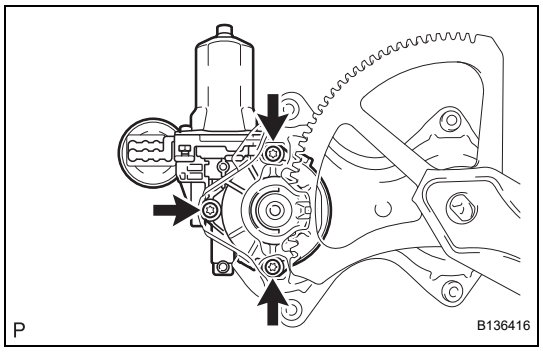
ED



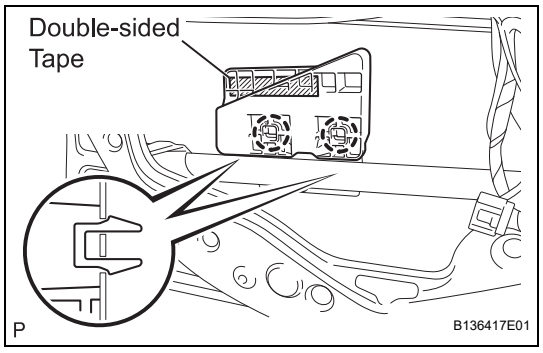
(d) Remove the front door glass sub-assembly as shown in the illustration.
NOTICE:
Do not damage the door glass.
(e) Disconnect the power window regulator master switch assembly and front power window regulator motor assembly connector.



15. REMOVE FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY
(a) Loosen the temporary bolt.
NOTICE:
Do not remove the temporary bolt. If the temporary bolt is removed, the front door window regulator may fall, causing damage.
(b) Remove the 5 bolts.
(c) Remove the front door window regulator sub-assembly and the power window regulator motor assembly front as a unit.
(d) Remove the temporary bolt from the front door window regulator sub-assembly.

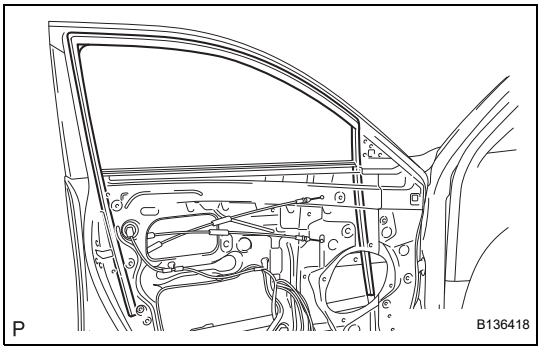


16. REMOVE FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY
(a) Using a "TORX" driver (T25), remove the 3 screws and the front power window regulator motor assembly.



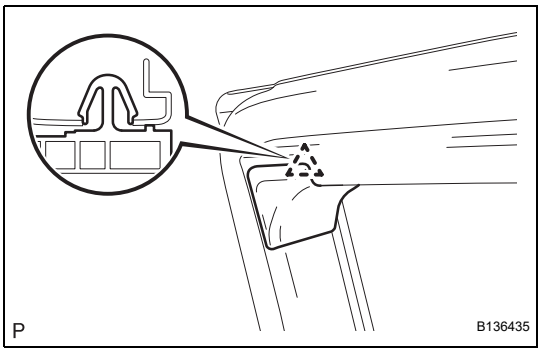
17. REMOVE FRONT NO. 1 DOOR STIFFENER CUSHION
(a) Disengage the 2 claws.
(b) Remove the double-sided tape and the front No. 1 door stiffener cushion.

ED



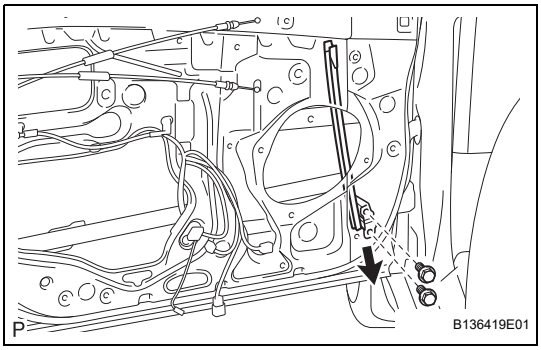
18. REMOVE FRONT DOOR GLASS RUN

(a) Remove the front door glass run.



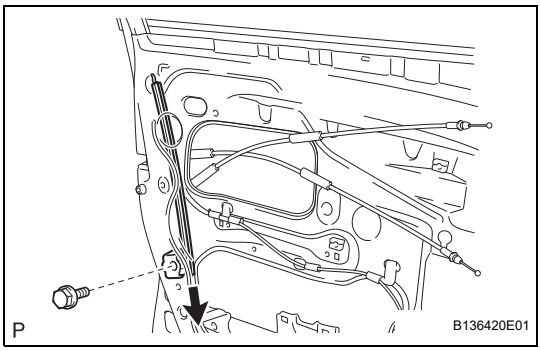
19. REMOVE DOOR FRAME GARNISH

(a) Disengage the clip and remove the door frame garnish.



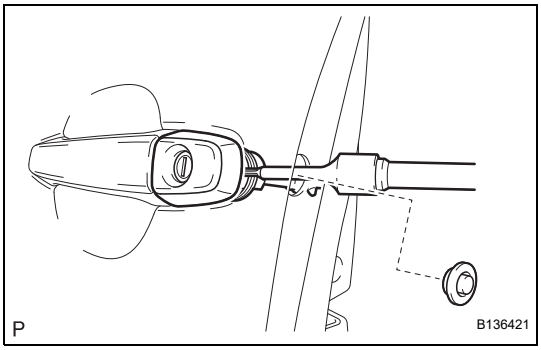
20. REMOVE FRONT DOOR FRONT LOWER FRAME SUB-ASSEMBLY

(a) Remove the 2 bolts and the front door front lower frame sub-assembly as shown in the illustration.



21. REMOVE FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Remove the bolt and the front door rear lower frame sub-assembly as shown in the illustration.

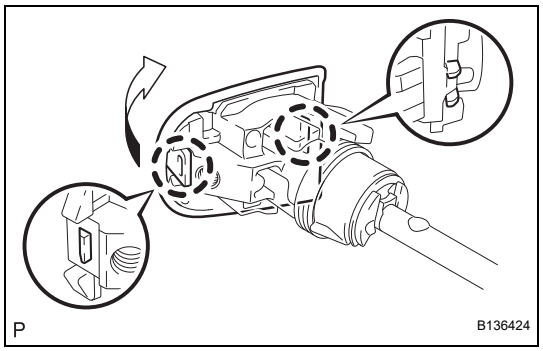


22. REMOVE FRONT DOOR OUTSIDE HANDLE COVER

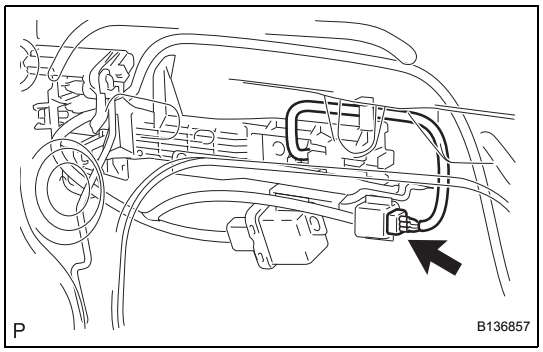
(a) Remove the hole plug.

(b) Using a "TORX" socket wrench (T30), loosen the screw and remove the front door outside handle cover and the door lock key cylinder as a unit.
HINT:
The screw cannot be removed because it is integrated into the front door outside handle frame sub-assembly.

ED

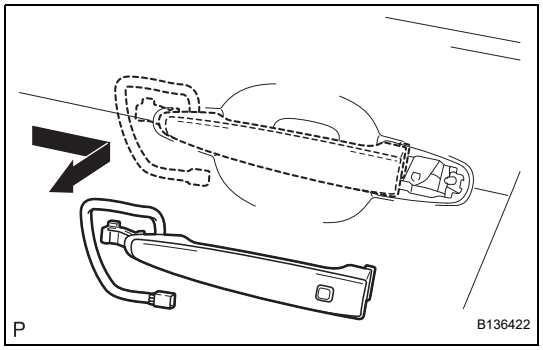


(c) Using a screwdriver, disengage the 2 claws and remove the front door outside handle cover.

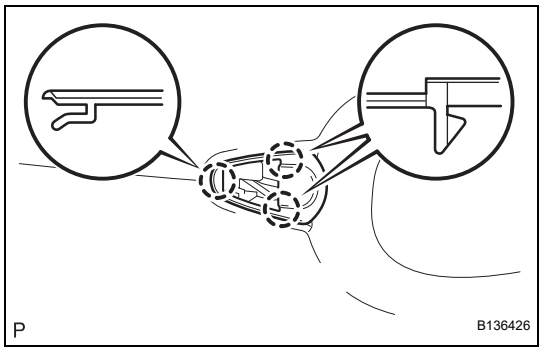


23. REMOVE FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Disconnect the connector.

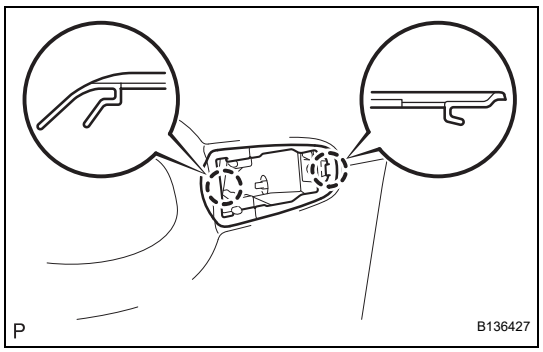


(b) Remove the front door outside handle assembly as shown in the illustration.



24. REMOVE FRONT DOOR FRONT OUTSIDE HANDLE PAD

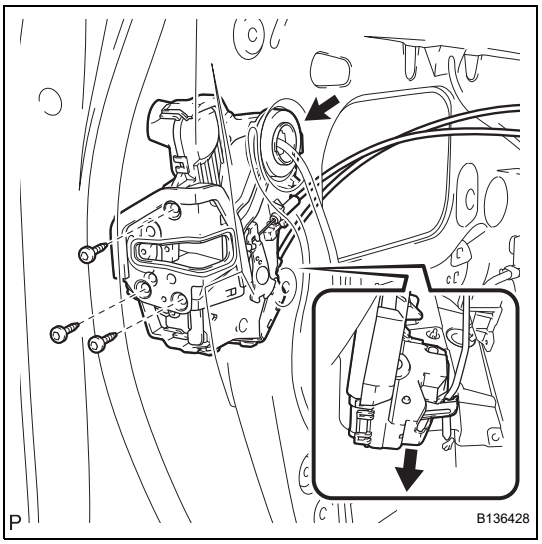
(a) Disengage the 3 claws and remove the front door front outside handle pad.



25. REMOVE FRONT DOOR REAR OUTSIDE HANDLE PAD

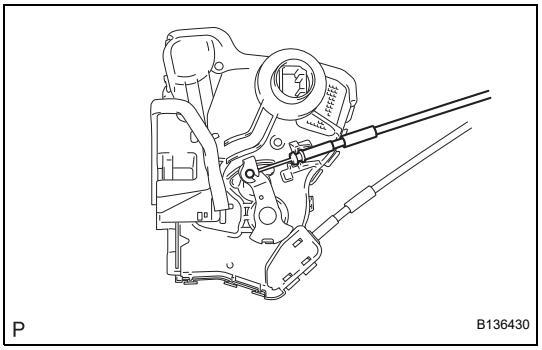
(a) Disengage the 2 claws and remove the front door rear outside handle pad.

ED



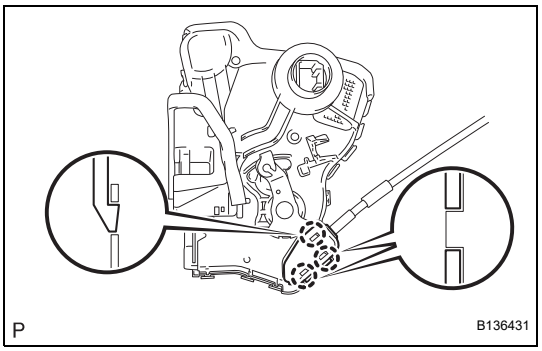
26. REMOVE FRONT DOOR LOCK ASSEMBLY

(a) Disconnect the connector.
(b) Using a "TORX" socket wrench (T30), remove the 3 screws.
(c) Slide the front door lock assembly downward, pull out the front door lock open rod from the outside handle frame, and remove the front door lock assembly and cables as a unit.
(d) Remove the front door lock open rod from the front door lock assembly.
(e) Remove the door lock wiring harness seal from the front door lock assembly.



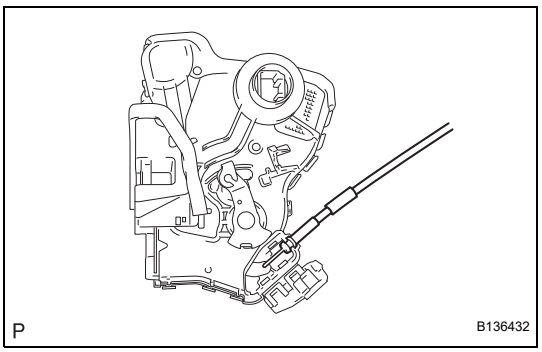
27. REMOVE FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY

(a) Remove the front door lock remote control cable assembly.



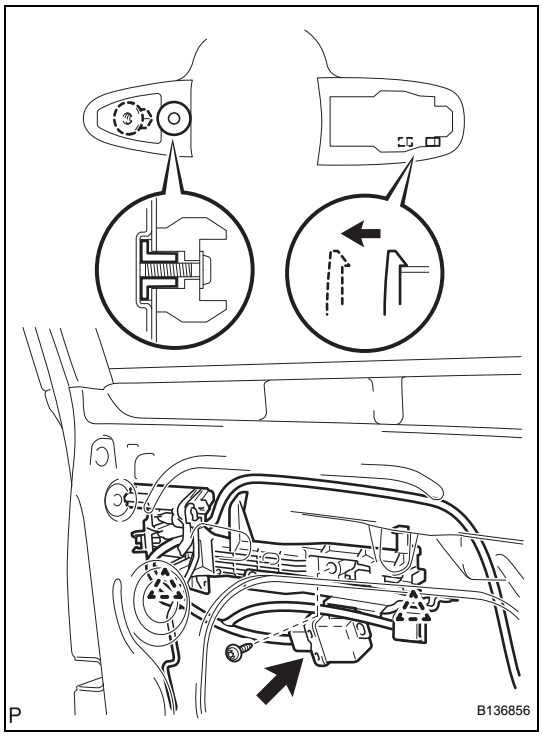
28. REMOVE FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY

(a) Using a screwdriver, disengage the 3 claws.
HINT:
Tape the screwdriver tip before use.



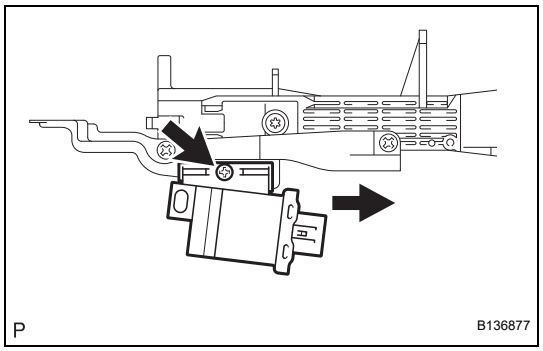
(b) Remove the front door inside locking cable assembly.

ED



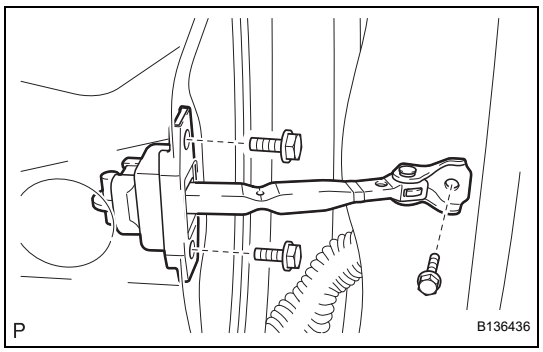
29. REMOVE FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY

(a) Using a "TORX" socket wrench (T30), remove the screw.
(b) Disconnect the connector.
(c) Disengage the 2 clamps.
(d) Disengage the claw and remove the front door outside handle frame sub-assembly.



30. REMOVE DOOR ELECTRICAL KEY OSCILLATOR

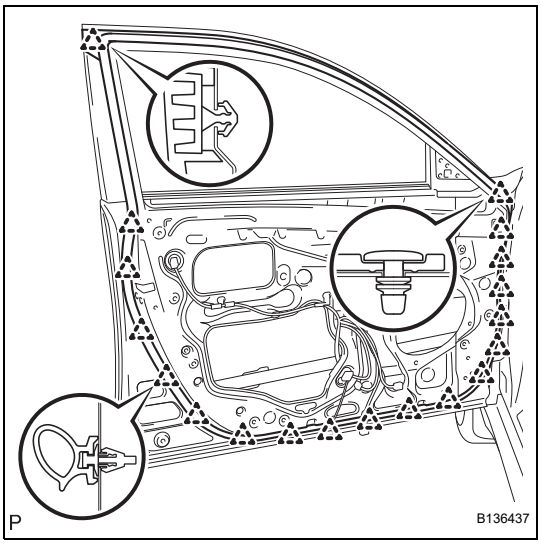
(a) Remove the screw and door electrical key oscillator.

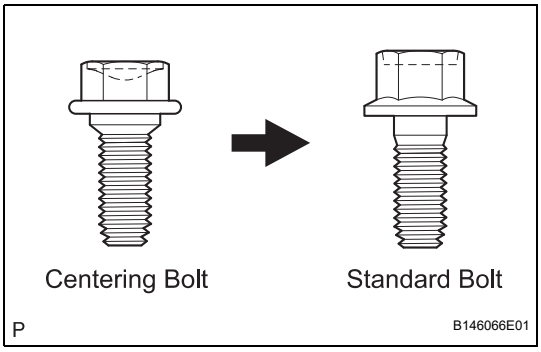


31. REMOVE FRONT DOOR CHECK ASSEMBLY

(a) Remove the 3 bolts and front door check assembly.

ED





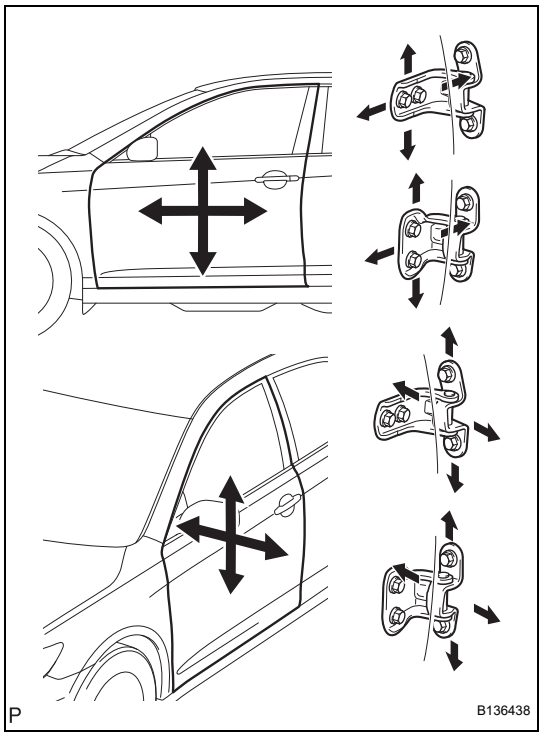
32. **REMOVE FRONT DOOR WEATHERSTRIP**
    (a) Using a clip remover, disengage the 19 clips and remove the front door weatherstrip.
33. **REMOVE FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-23)**
34. **REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING (See page ET-37)**
35. **REMOVE FRONT DOOR UPPER WINDOW FRAME MOULDING (See page ET-38)**
36. **REMOVE FRONT DOOR STRIPE (See page ET-56)**
37. **REMOVE FRONT DOOR LOWER OUTSIDE STRIPE (See page ET-56)**

ADJUSTMENT

HINT:

- Before adjusting the door positions of vehicles equipped with side airbags and curtain shield airbags, be sure to disconnect the battery. After adjustment, inspect the SRS warning light, the side airbag system, and the curtain shield airbag system for normal operation. Then initialize both airbag systems.
- Use the same procedures for the RH side and LH side.
- The procedures listed below are for the LH side.
- Centering bolts are used to mount the door hinge to the vehicle body and door. The door cannot be adjusted with the centering bolts installed on it. Substitute the centering bolts with standard bolts (with washers) when making adjustments.
- A bolt without a torque specification is shown in the standard bolt chart (See page SS-2).

1. **DISCONNECT NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the terminal to prevent airbag deployment (See page RS-1).



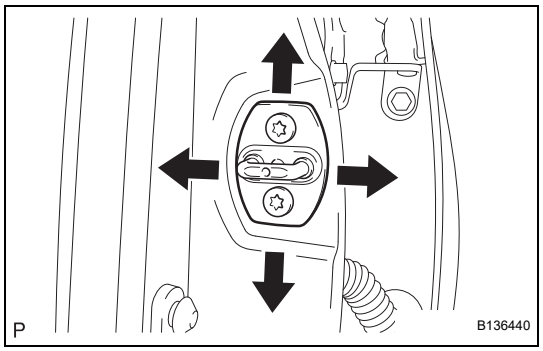
2. ADJUST FRONT DOOR

(a) Using SST, loosen the hinge bolts on the vehicle body and adjust the door position.
SST 09812-00010

(b) Tighten the hinge bolts on the vehicle body after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)

(c) Loosen the hinge bolts on the door and adjust the door position.

(d) Tighten the hinge bolts on the door after the adjustment.
Torque: 26 N*m (265 kgf*cm, 19 ft.*lbf)



(e) Adjust the striker position by slightly loosening the striker mounting screws with a "TORX" socket wrench (T40) and hitting the striker with a plastic hammer.

(f) Using a "TORX" socket wrench (T40), tighten the striker mounting screws after the adjustment.
Torque: 23 N*m (235 kgf*cm, 17 ft.*lbf)

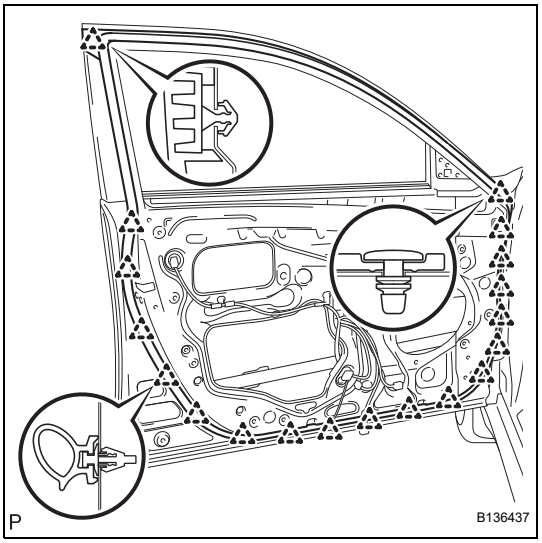
3. CONNECT NEGATIVE BATTERY TERMINAL

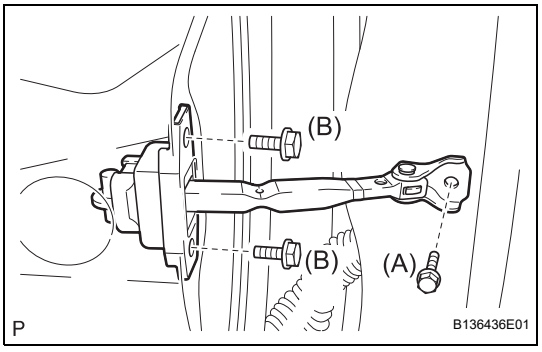
4. PERFORM INITIALIZATION
NOTICE:
Some systems need initialization after reconnecting the negative battery terminal (See page IN-43).

5. INSPECT SRS WARNING LIGHT
(See page RS-33)

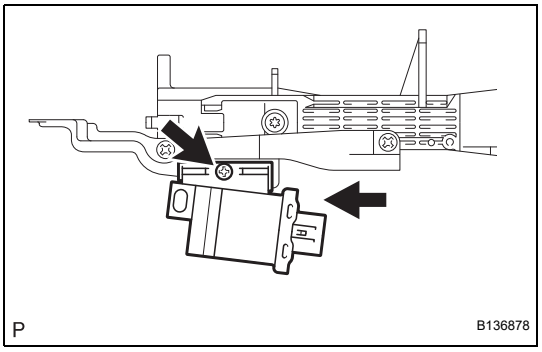
REASSEMBLY

1. **REPAIR INSTRUCTION (See page ET-57)**
2. **INSTALL FRONT DOOR LOWER OUTSIDE STRIPE (See page ET-60)**
3. **INSTALL FRONT DOOR STRIPE (See page ET-60)**
4. **INSTALL FRONT DOOR UPPER WINDOW FRAME MOULDING (See page ET-38)**
5. **INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING (See page ET-39)**
6. **INSTALL FRONT DOOR BELT MOULDING ASSEMBLY (See page ET-23)**
7. **INSTALL FRONT DOOR WEATHERSTRIP**
   (a) Engage the 19 clips to install a new front door weatherstrip.



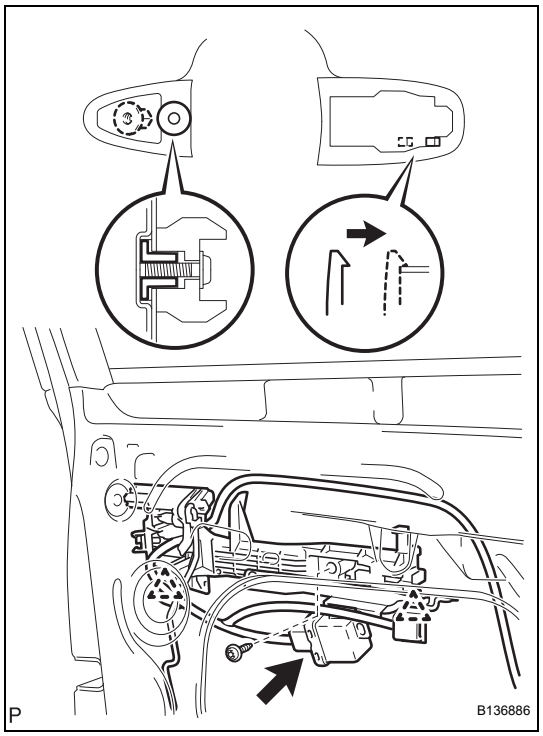


8. **INSTALL FRONT DOOR CHECK ASSEMBLY**
   (a) Install the front door check assembly with the 3 bolts.
   Torque: Bolt (A)
   26 N*m (265 kgf*cm, 19 ft.*lbf)
   Torque: Bolt (B)
   8.0 N*m (82 kgf*cm, 71 in.*lbf)

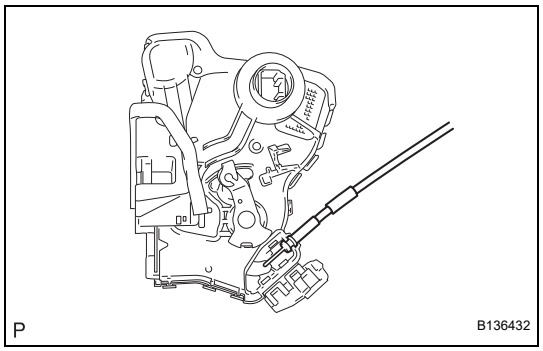


9. **INSTALL DOOR ELECTRICAL KEY OSCILLATOR**
   (a) Install the door electrical key oscillator with the screw.
10. **INSTALL FRONT DOOR OUTSIDE HANDLE FRAME SUB-ASSEMBLY**
    (a) Apply MP grease to the sliding parts of the front door outside handle frame sub-assembly.

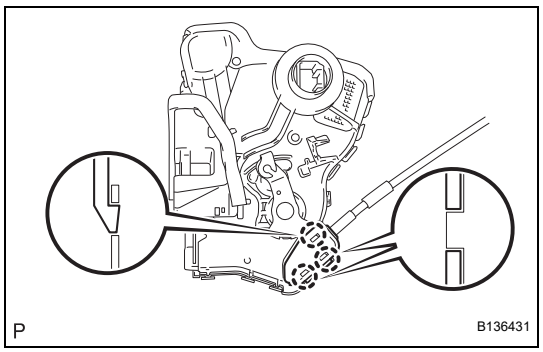
ED



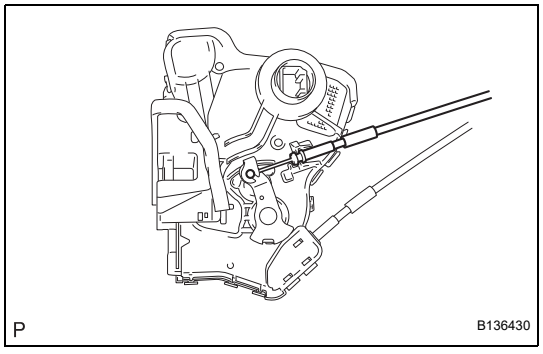
(b) Engage the claw to install the front door outside handle frame sub-assembly.
(c) Using a "TORX" socket wrench (T30), install the front door outside handle frame sub-assembly with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)
(d) Engage the 2 clamps.
(e) Connect the connector.



11. INSTALL FRONT DOOR INSIDE LOCKING CABLE ASSEMBLY
(a) Install the front door inside locking cable assembly.



(b) Engage the 3 claws.



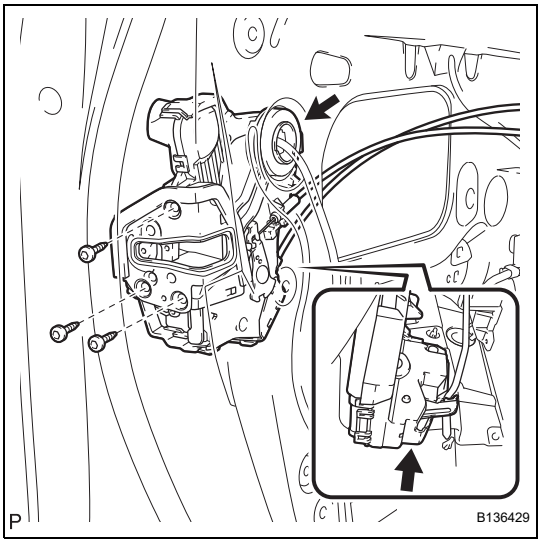
12. INSTALL FRONT DOOR LOCK REMOTE CONTROL CABLE ASSEMBLY
(a) Install the front door lock remote control cable assembly.

13. INSTALL FRONT DOOR LOCK ASSEMBLY
NOTICE:
- **When reusing the removed front door lock assembly, replace the door lock wiring harness seal on the connector with a new one.**

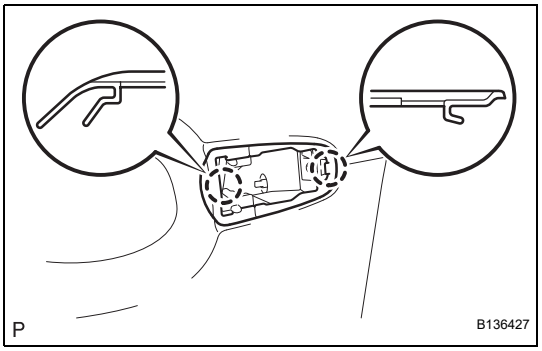
ED

- **Do not allow grease or dust to adhere to the door lock wiring harness seal surface of the connector.**
- **Reusing the door lock wiring harness seal or using a damaged door lock wiring harness seal may cause water intrusion to the connection. This may result in a malfunction of the front door lock assembly.**

(a) Apply MP grease to the sliding parts of the front door lock assembly.
(b) Install a new door lock wiring harness seal to the front door lock assembly.

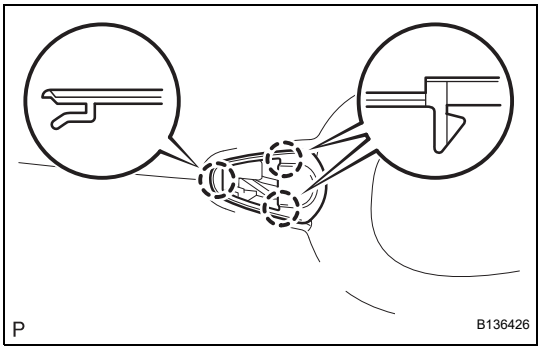


(c) Insert the front door lock open rod to the front door lock assembly, and set it to the front door outside handle frame.
(d) Make sure that the front door lock open rod is securely connected to the front door lock assembly.
(e) Using a "TORX" socket wrench (T30), install the front door lock assembly with the 3 screws.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
(f) Connect the connector.



14. INSTALL FRONT DOOR REAR OUTSIDE HANDLE PAD

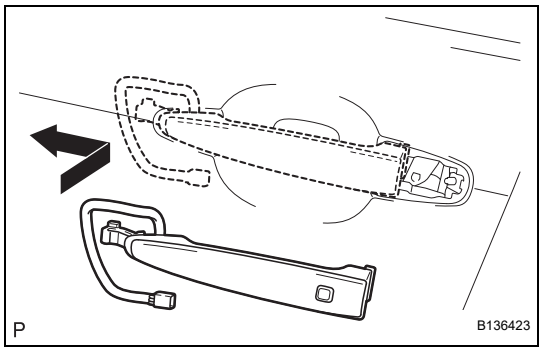
(a) Engage the 2 claws to install the front door rear outside handle pad.



15. INSTALL FRONT DOOR FRONT OUTSIDE HANDLE PAD

(a) Engage the 3 claws to install the front door front outside handle pad.

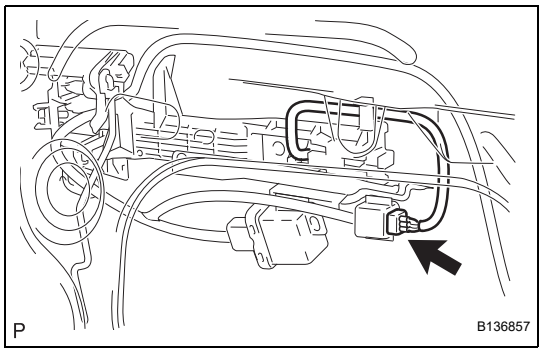
ED



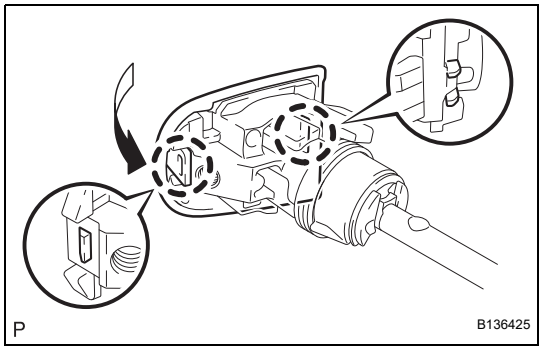
16. INSTALL FRONT DOOR OUTSIDE HANDLE ASSEMBLY

(a) Insert the front end of the front door outside handle assembly into the front door outside handle frame.

(b) Insert the rear end of the front door outside handle assembly into the front door outside handle frame. Next, slide the front door outside handle assembly toward the front of the vehicle to install it.

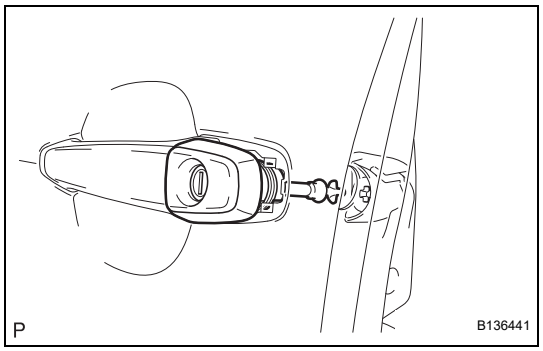


(c) Connect the connector.

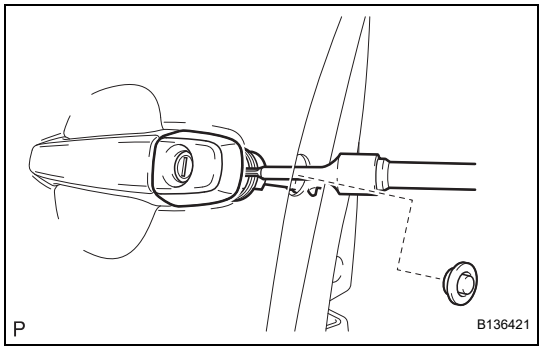


17. INSTALL FRONT DOOR OUTSIDE HANDLE COVER

(a) Engage the 2 claws to install the front door outside handle cover to the front door lock cylinder.



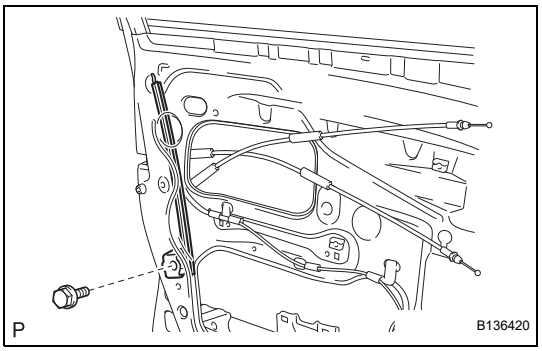
(b) Install the front door lock cylinder.
HINT:
Make sure that the front door lock cylinder rod is inserted into the front door lock assembly.



(c) Using a "TORX" socket wrench (T30), install the front door lock cylinder with the screw.
Torque: 4.0 N*m (41 kgf*cm, 35 in.*lbf)

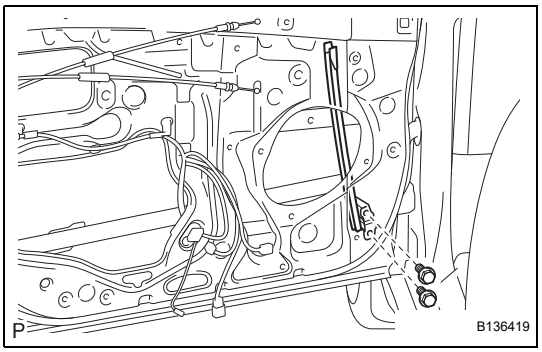
(d) Install the hole plug.

ED



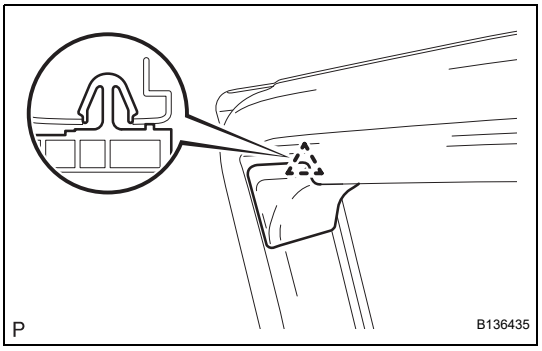
18. INSTALL FRONT DOOR REAR LOWER FRAME SUB-ASSEMBLY

(a) Install the front door rear lower frame sub-assembly with the bolt.



19. INSTALL FRONT DOOR FRONT LOWER FRAME SUB-ASSEMBLY

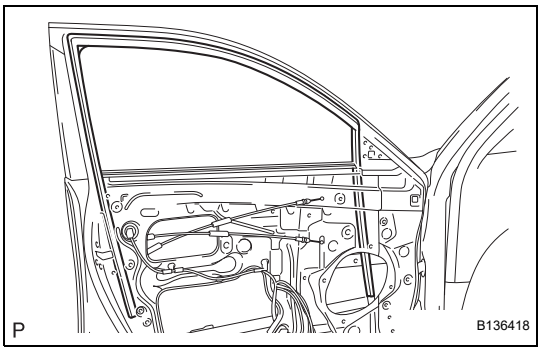
(a) Install the front door front lower frame sub-assembly with the 2 bolts.



20. INSTALL DOOR FRAME GARNISH

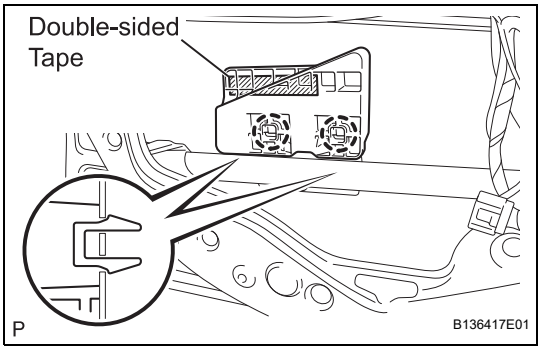
(a) Engage the clip and install a new door frame garnish.

ED



21. INSTALL FRONT DOOR GLASS RUN

(a) Install the front door glass run.



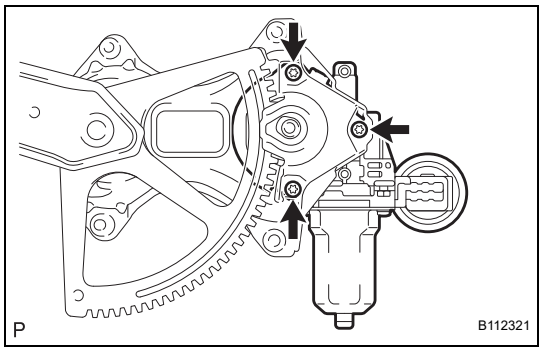
22. INSTALL FRONT NO. 1 DOOR STIFFENER CUSHION

(a) Engage the 2 claws and install a new front No. 1 door stiffener cushion with double-sided tape.

23. INSTALL FRONT POWER WINDOW REGULATOR MOTOR ASSEMBLY

NOTICE:

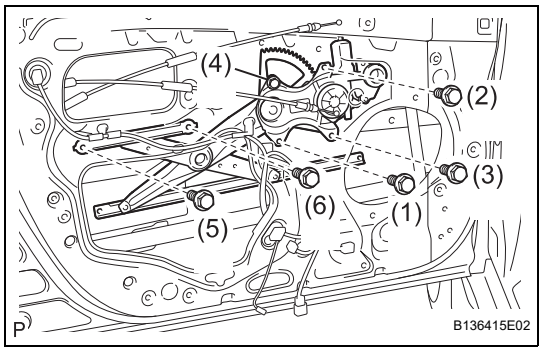
The regulator arm must be below the intermediate position when installing the power window regulator motor.



(a) Using a "TORX" driver (T25), install the front power window regulator motor sub-assembly with the 3 screws.
Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
HINT:
A new front window regulator adopts a self-tapping method. The installation position of the regulator will be threaded when the self-tapping screw is inserted.

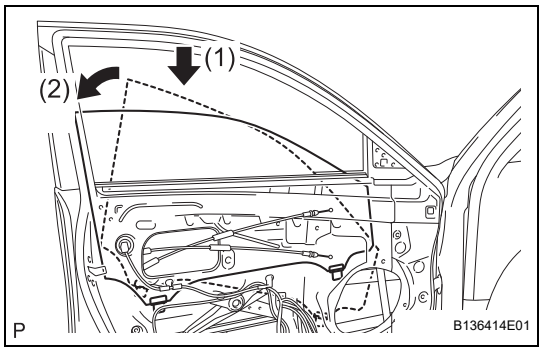
24. INSTALL FRONT DOOR WINDOW REGULATOR SUB-ASSEMBLY

(a) Apply MP grease to the sliding parts of the front door window regulator sub-assembly.

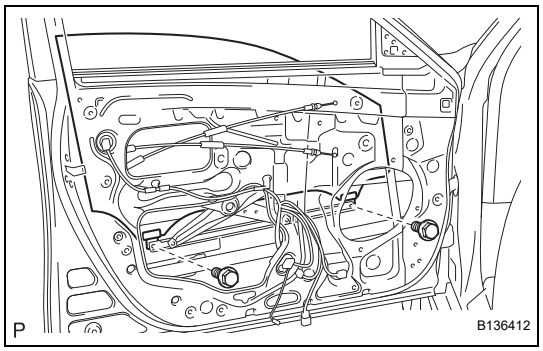


(b) Install the temporary bolt to the front door window regulator sub-assembly.
(c) Temporarily install the window regulator.
(d) Tighten the 6 bolts in the order shown in the illustration to install the front window regulator.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

25. INSTALL FRONT DOOR GLASS SUB-ASSEMBLY



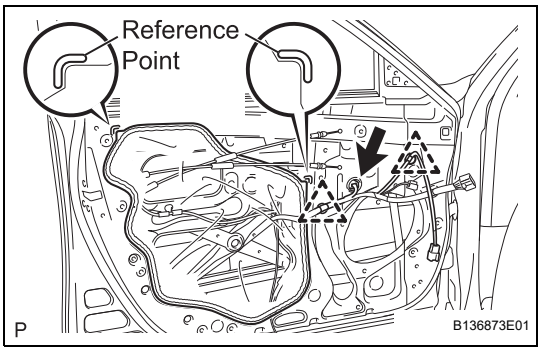
(a) Insert the front door glass sub-assembly into the front door panel along the front door glass run as indicated in the order of the arrows in the illustration.



(b) Install the front door glass sub-assembly with the 2 bolts.
Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

26. INSTALL FRONT DOOR SERVICE HOLE COVER

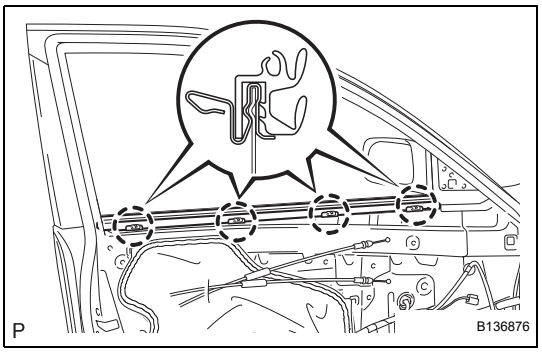
(a) Apply butyl tape to the front door panel.
(b) Pass the front door lock remote control cable and rear door inside locking cable through a new front door service hole cover.



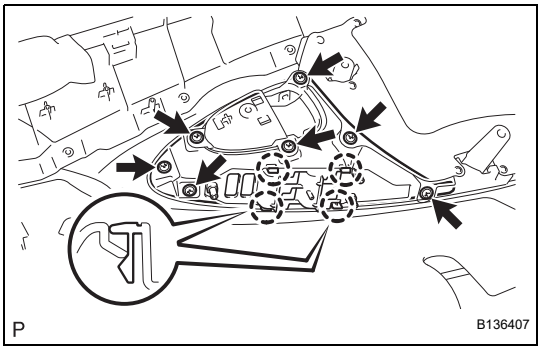
(c) Install the new service hole cover.
NOTICE:
Securely install the front door service hole cover avoiding wrinkles and air bubbles.
(d) Connect each connector and each clamp.

27. INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-15)

28. INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-147)

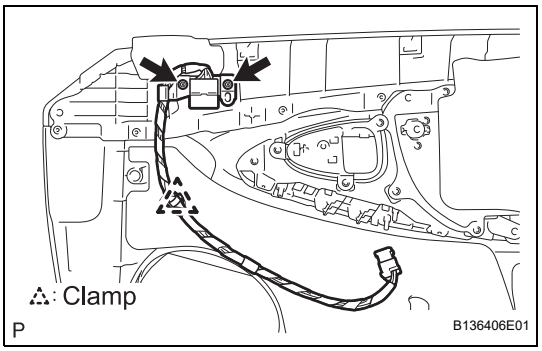


29. INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP
(a) Engage the 4 claws and install the front door inner glass weatherstrip.

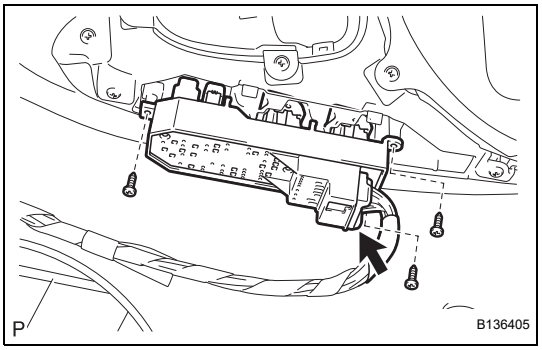


30. INSTALL FRONT ARMREST BASE PANEL UPPER
(a) Engage the 4 claws and install the front armrest base panel upper.
(b) Install the 7 screws.

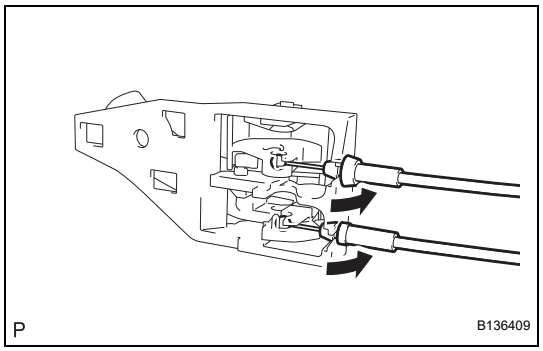
ED



31. INSTALL FRONT DOOR WIRE (for Driver Side)
(a) Install the front door wire with the 2 screws.
(b) Engage the clamp.

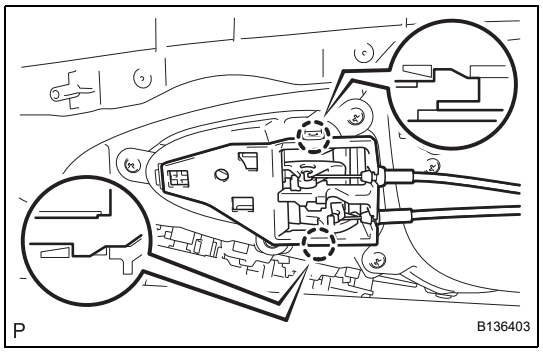


32. INSTALL POWER WINDOW REGULATOR MASTER SWITCH ASSEMBLY
(a) Connect the connector.
(b) Install the power window regulator master switch assembly with the 3 screws.



33. INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY

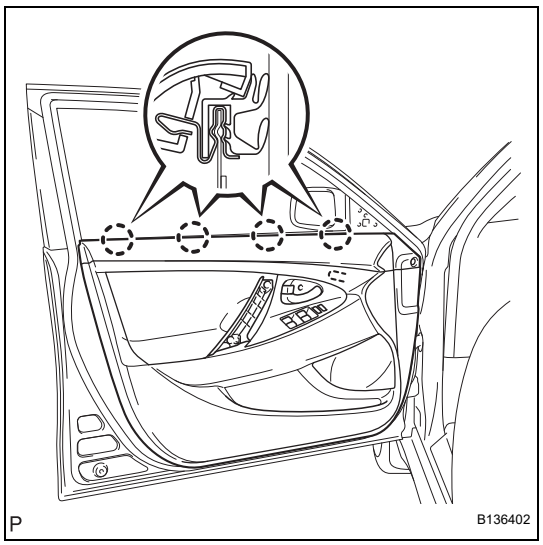
(a) Connect the front door lock remote control cable and front door inside locking cable to the front door inside handle sub-assembly.



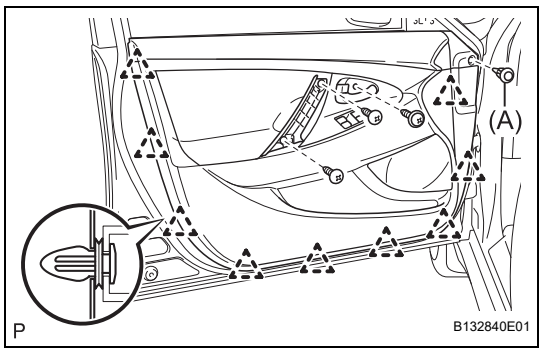
(b) Engage the 2 claws and install the front door inside handle sub-assembly.

34. INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY

(a) Connect each connector.



(b) Engage the front door trim board with the 4 clips of the front door inner glass weatherstrip.



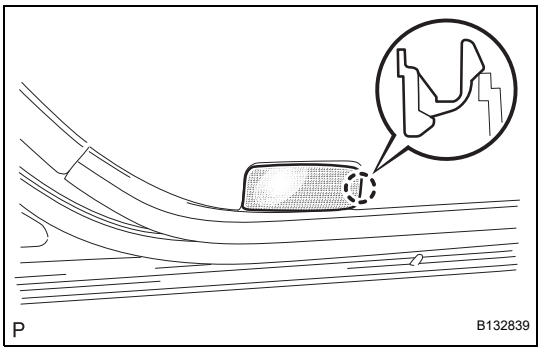
(c) Engage the 9 clips and install the front door trim board to the front door panel.

(d) Install the 3 screws and clip (A).

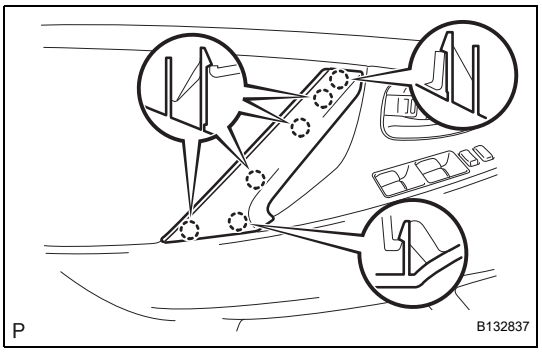
35. INSTALL COURTESY LIGHT ASSEMBLY

(a) Connect the connector.

ED

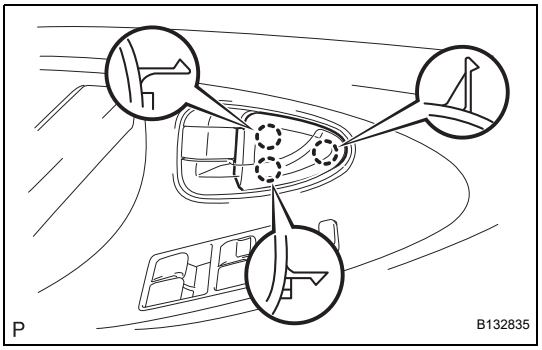


(b) Engage the claw and install the courtesy light assembly.



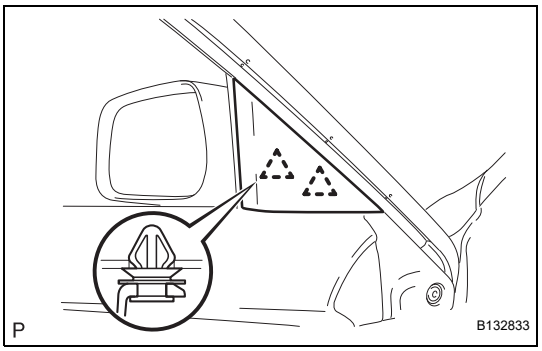
36. INSTALL ASSIST GRIP COVER

(a) Engage the 6 claws and install the assist grip cover.



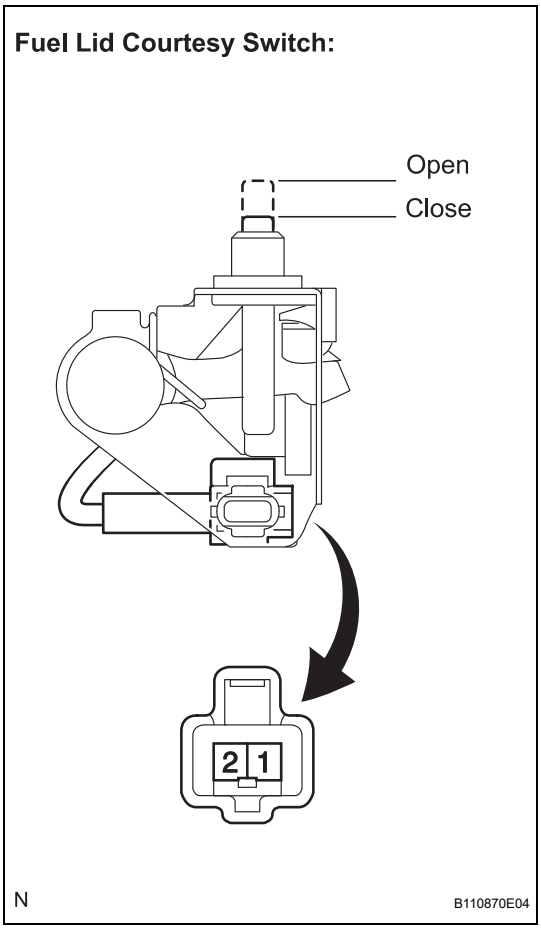
37. INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG

(a) Engage the 3 claws and install the front door inside handle bezel plug.



38. INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH

(a) Engage the 2 clips and install the front door lower frame bracket garnish.

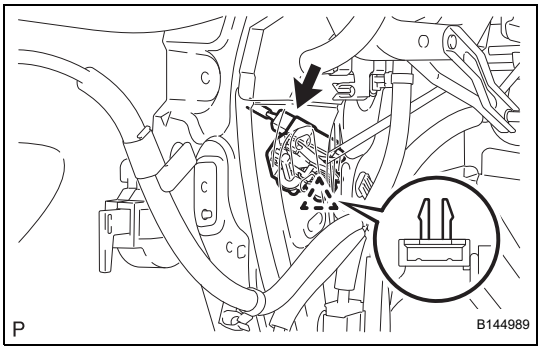


INSPECTION

1. **INSPECT FUEL LID COURTESY SWITCH**
   (a) Check the fuel lid courtesy switch resistance.
   Standard resistance

Tester Connection	Switch Position	Specified Condition
1 - 2	Courtesy switch free (Fuel lid open)	10 kΩ or higher
1 - 2	Courtesy switch pushed (Fuel lid closed)	Below 1 Ω

If the result is not as specified, replace the fuel lid courtesy switch.



INSTALLATION

1. **INSTALL FUEL LID COURTESY SWITCH**
   (a) Connect the connector from the cabin side.
   (b) Engage the clamp and temporarily install the fuel lid courtesy switch.

   (c) Install the fuel lid courtesy switch with the nut and plate from the outside of the vehicle.
   Torque: 5.5 N*m (56 kgf*cm, 49 in.*lbf)

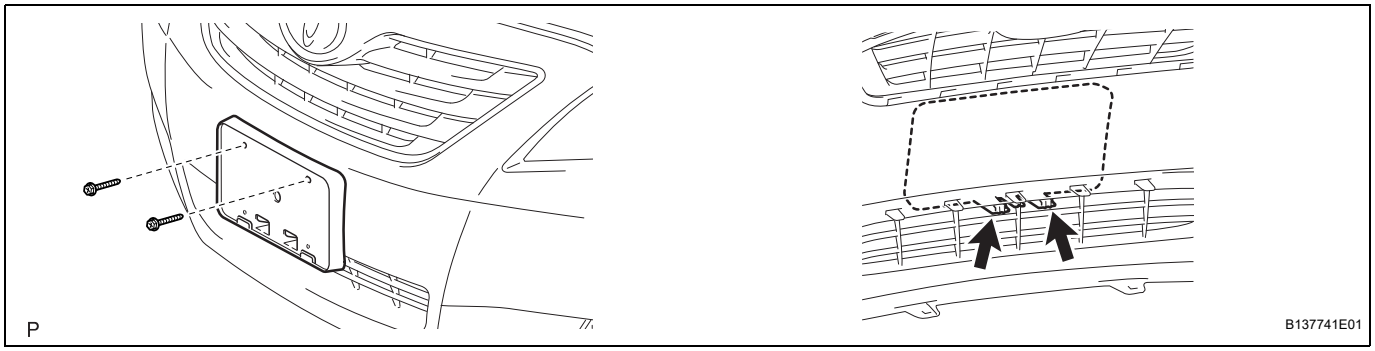
2. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-102)**
3. **INSTALL LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-102)**
4. **INSTALL REAR FLOOR FINISH PLATE (See page ED-103)**
5. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-103)**
6. **INSTALL SPARE WHEEL COVER ASSEMBLY**
7. **INSTALL SPARE WHEEL COVER CLAMP**

8. INSTALL LUGGAGE COMPARTMENT FLOOR MAT

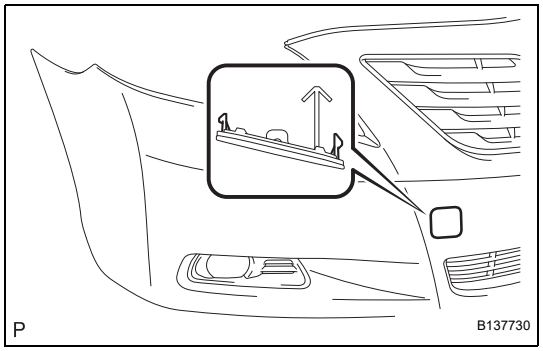
DISASSEMBLY

1. REMOVE FRONT BUMPER EXTENSION MOUNTING BRACKET (w/ Bracket)

(a) Remove the 2 screws.

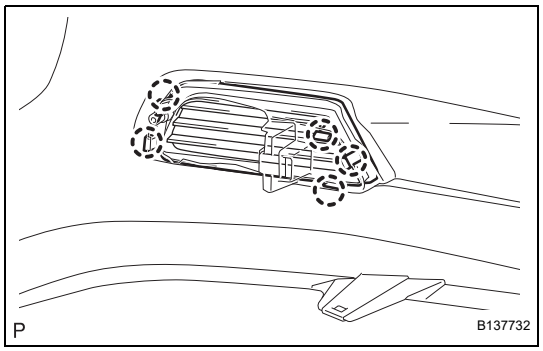


(b) Disengage the 2 claws and remove the front bumper extension mounting bracket.



2. REMOVE FRONT BUMPER LOWER COVER

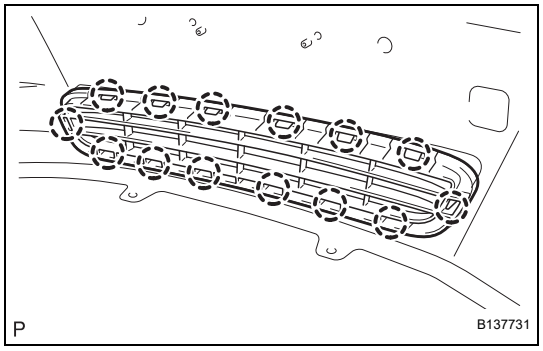
(a) Disengage the 2 claws and remove the front bumper lower cover.



3. REMOVE FRONT BUMPER HOLE COVER LH

(a) Disengage the 5 claws and remove the front bumper hole cover LH.

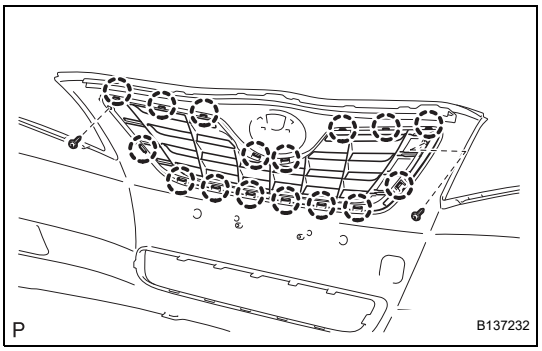
4. REMOVE FRONT BUMPER HOLE COVER RH



5. REMOVE LOWER RADIATOR GRILLE

(a) Disengage the 14 claws and remove the lower radiator grille.

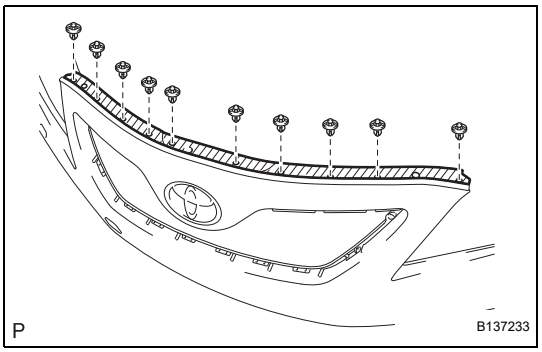
ET



6. REMOVE RADIATOR GRILLE

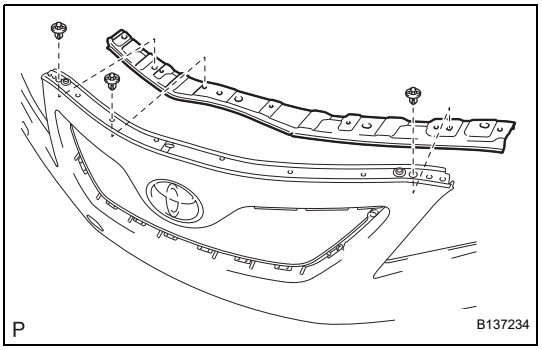
(a) Remove the 2 screws.

(b) Disengage the 16 claws and remove the radiator grille.



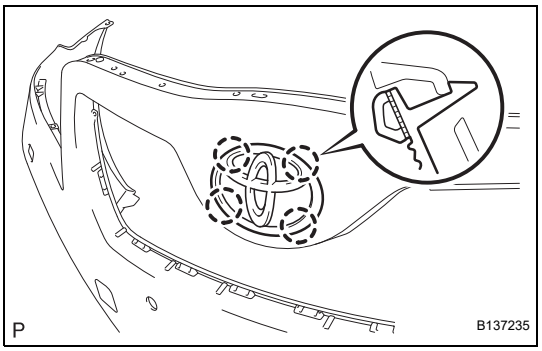
7. REMOVE HOOD TO FRONT END PANEL SEAL

(a) Remove the 10 clips and hood to front end panel seal.



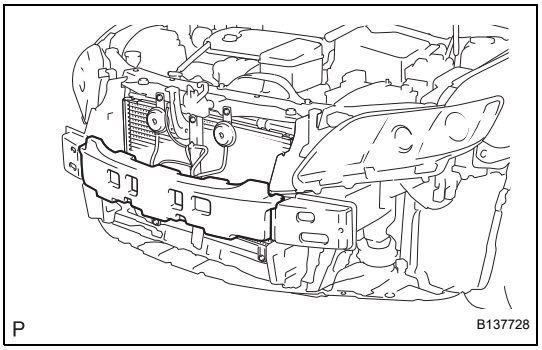
8. REMOVE FRONT BUMPER UPPER RETAINER

(a) Remove the 3 clips and front bumper upper retainer.



9. REMOVE RADIATOR GRILLE EMBLEM

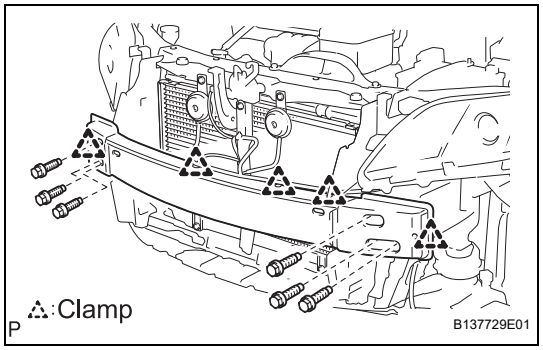
(a) Disengage the 4 claws and remove the radiator grille emblem.



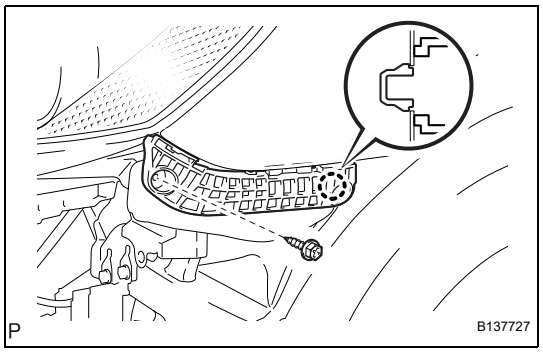
10. REMOVE FRONT BUMPER ENERGY ABSORBER

(a) Remove the front bumper energy absorber from the front bumper reinforcement sub-assembly.

ET



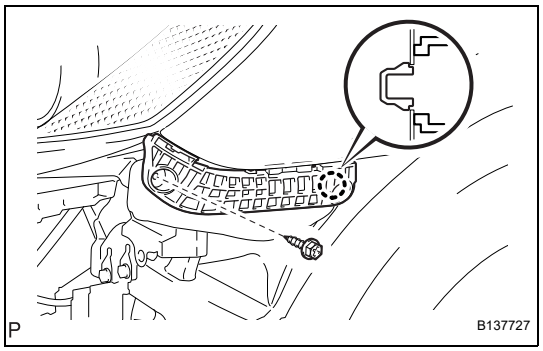
11. REMOVE FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY
(a) Disengage each clamp.
(b) Remove the 6 bolts and front bumper reinforcement sub-assembly.



12. REMOVE FRONT BUMPER SIDE RETAINER LH
(a) Remove the screw.
(b) Disengage the claw and remove the front bumper side retainer LH.

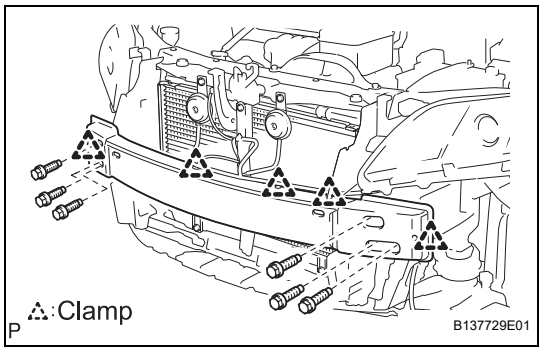
13. REMOVE FRONT BUMPER SIDE RETAINER RH

REASSEMBLY

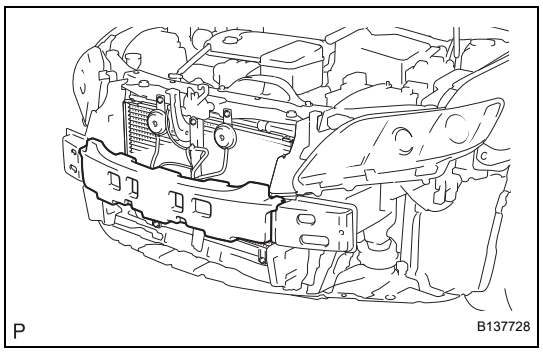


1. INSTALL FRONT BUMPER SIDE RETAINER LH
(a) Engage the claw and install the front bumper side retainer LH.
(b) Install the screw.

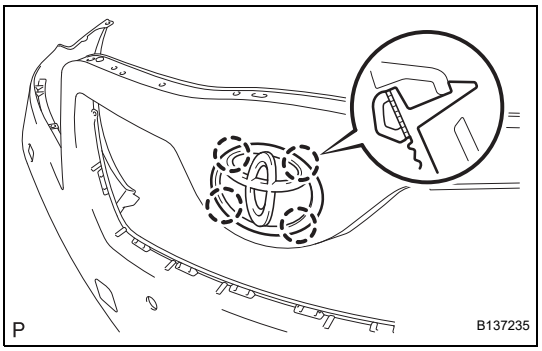
2. INSTALL FRONT BUMPER SIDE RETAINER RH



3. INSTALL FRONT BUMPER REINFORCEMENT SUB-ASSEMBLY
(a) Install the front bumper reinforcement sub-assembly with the 6 bolts.
Torque: 34 N*m (347 kgf*cm, 25 ft.*lbf)
(b) Engage each clamp.

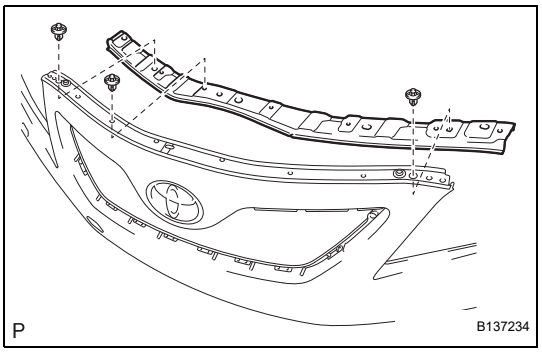


4. INSTALL FRONT BUMPER ENERGY ABSORBER
(a) Install the front bumper energy absorber to the front bumper reinforcement sub-assembly.



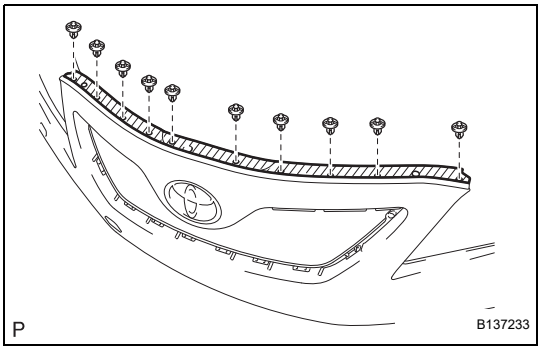
5. INSTALL RADIATOR GRILLE EMBLEM

(a) Engage the 4 claws and install the radiator grille emblem.



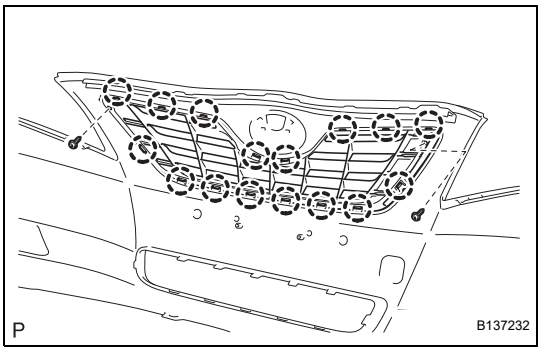
6. INSTALL FRONT BUMPER UPPER RETAINER

(a) Install the front bumper upper retainer with the 3 clips.



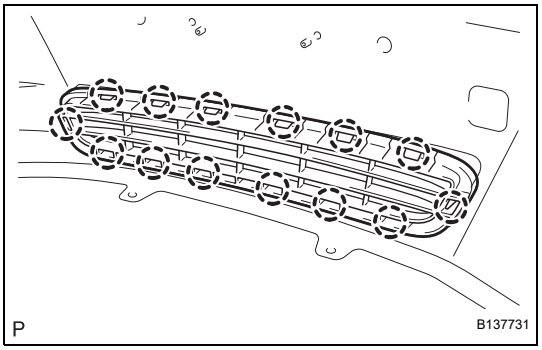
7. INSTALL HOOD TO FRONT END PANEL SEAL

(a) Apply new double-sided tape to the hood to front end panel seal.
(b) Remove the release paper from the hood to front end panel seal.
(c) Install the hood to front end panel seal with the 10 clips.



8. INSTALL RADIATOR GRILLE

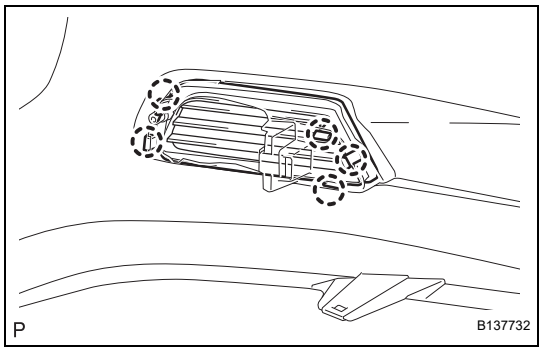
(a) Engage the 16 claws and install the radiator grille.
(b) Install the 2 screws.



9. INSTALL LOWER RADIATOR GRILLE

(a) Engage the 14 claws and install the lower radiator grille.

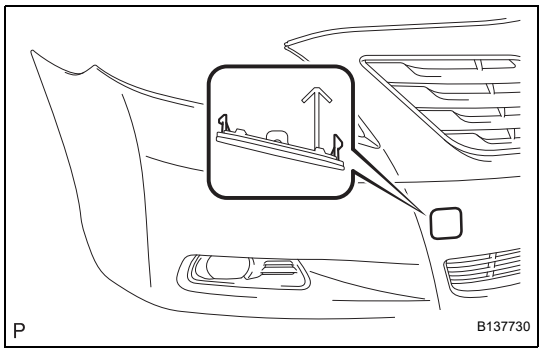
ET



10. INSTALL FRONT BUMPER HOLE COVER LH

(a) Engage the 5 claws and install the front bumper hole cover LH.

11. INSTALL FRONT BUMPER HOLE COVER RH

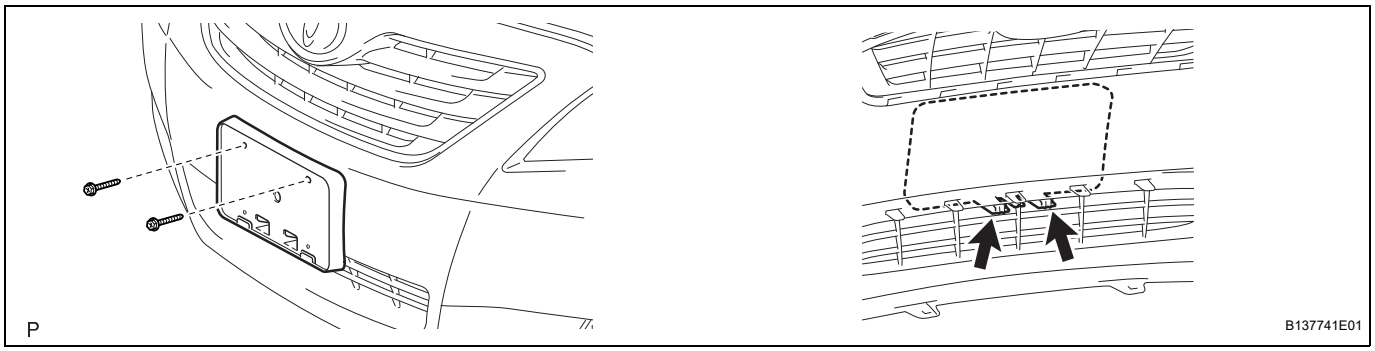


12. INSTALL FRONT BUMPER LOWER COVER

(a) Engage the 2 claws and install the front bumper lower cover.

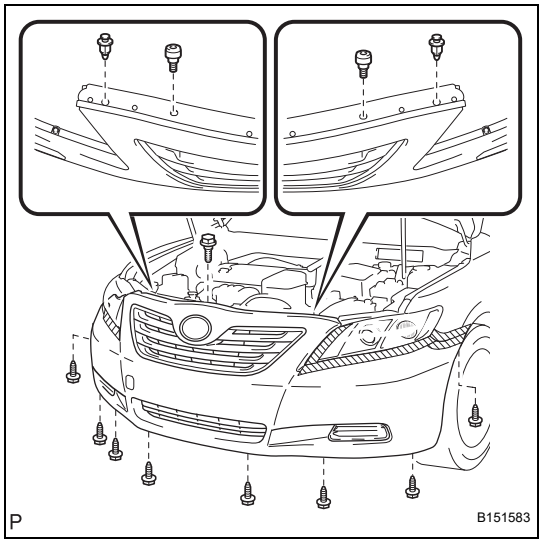
13. INSTALL FRONT BUMPER EXTENSION MOUNTING BRACKET (w/ Bracket)

(a) Engage the 2 claws and install the front bumper extension mounting bracket.



(b) Install the 2 screws.

INSTALLATION

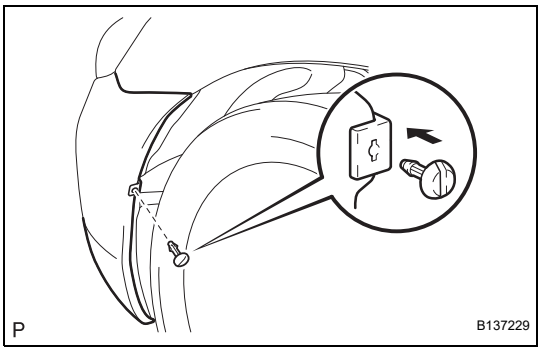


1. INSTALL FRONT BUMPER ASSEMBLY

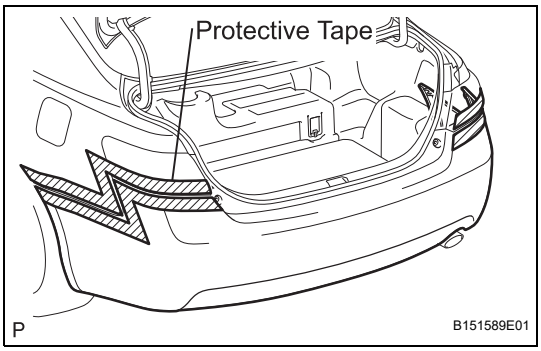
(a) Engage each claw.

(b) Install the front bumper assembly with the 8 screws, 2 clips, 2 radiator grille protectors and bolt.

ET



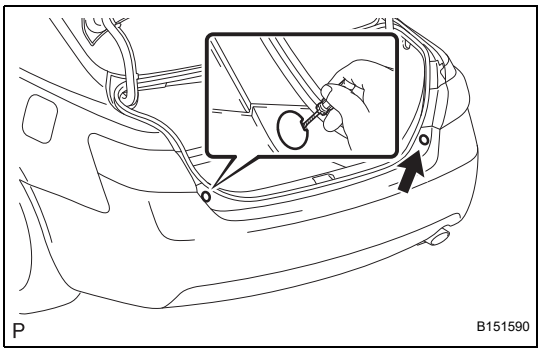
(c) Install the pin hold clip.
HINT:
Use the same procedures for the RH side and LH side.



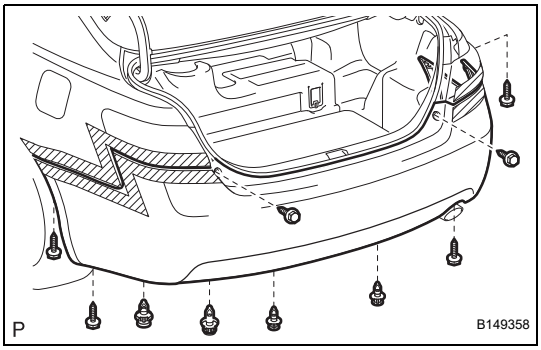
REMOVAL

1. REMOVE REAR BUMPER ASSEMBLY

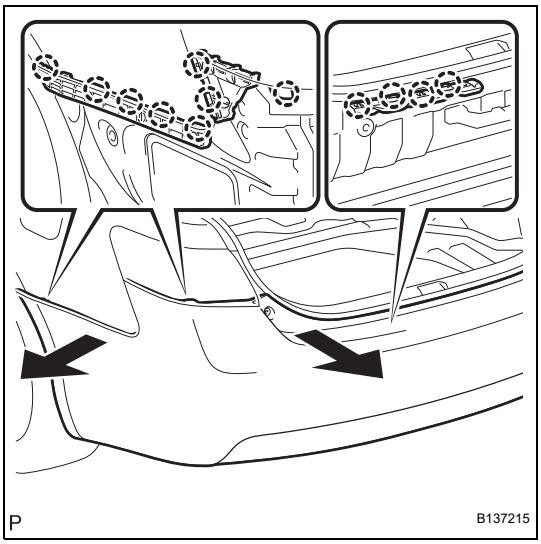
(a) Put protective tape around the rear bumper assembly.



(b) Using a screwdriver, open the 2 rear bumper plates.
HINT:
Tape the screwdriver tip before use.



(c) Remove the 6 screws and 4 clips.



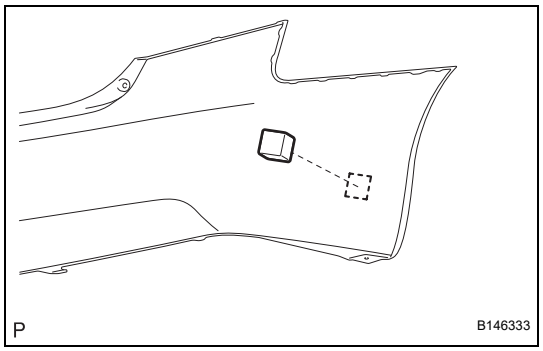
(d) Disengage the 12 claws and disconnect the rear bumper assembly as shown in the illustration.
HINT:
Use the same procedures for the RH side and LH side.

(e) Remove the rear bumper assembly.

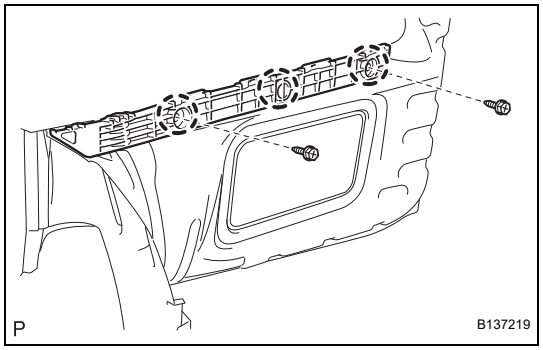
ET

DISASSEMBLY

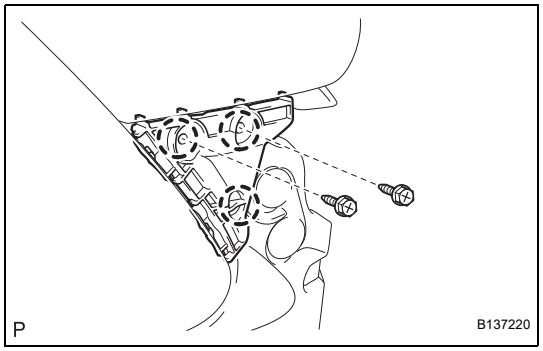
1. **REMOVE REAR BUMPER PLATE LH**
2. **REMOVE REAR BUMPER PLATE RH**
3. **REMOVE REAR BUMPER PAD**
   (a) Remove the rear bumper pad.
   HINT:
   Use the same procedures for the RH side and LH side.



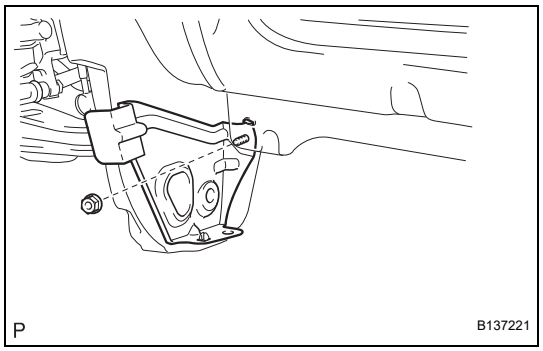
4. **REMOVE REAR BUMPER SIDE SUPPORT LH**
   (a) Remove the 2 screws.
   (b) Disengage the 3 claws and remove the rear bumper side support LH.
5. **REMOVE REAR BUMPER SIDE SUPPORT RH**



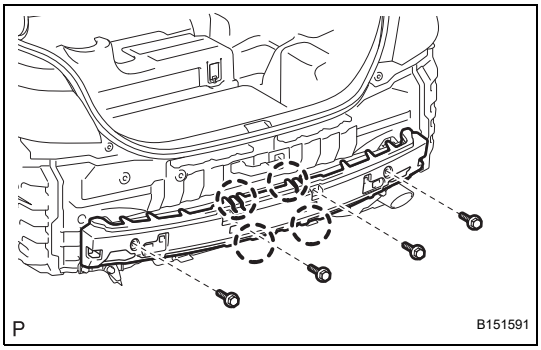
6. **REMOVE REAR BUMPER SIDE RETAINER LH**
   (a) Remove the 2 screws.
   (b) Disengage the 3 claws and remove the rear bumper side retainer LH.
7. **REMOVE REAR BUMPER SIDE RETAINER RH**



8. **REMOVE WHEEL HOUSE REINFORCEMENT LH**
   (a) Remove the nut and wheel house reinforcement LH.
9. **REMOVE WHEEL HOUSE REINFORCEMENT RH**



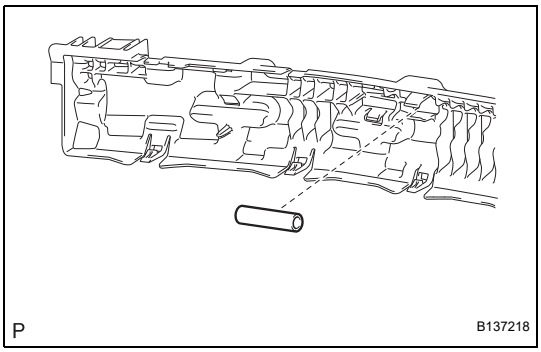
ET



10. REMOVE REAR BUMPER ENERGY ABSORBER

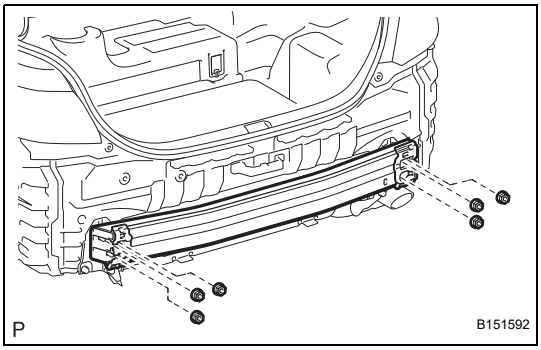
(a) Remove the 4 bolts.

(b) Disengage the 4 claws and remove the rear bumper energy absorber.



11. REMOVE REAR BUMPER BAR

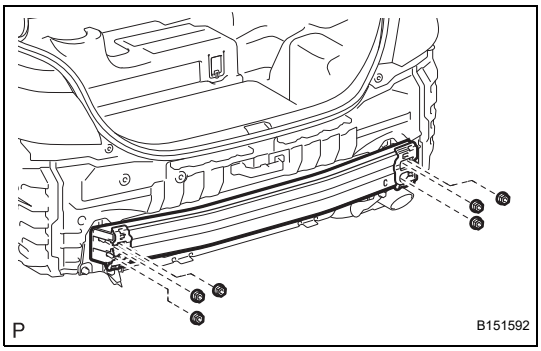
(a) Remove the rear bumper bar from the rear bumper energy absorber.



12. REMOVE REAR BUMPER REINFORCEMENT SUB-ASSEMBLY

(a) Remove the 6 nuts and rear bumper reinforcement sub-assembly.

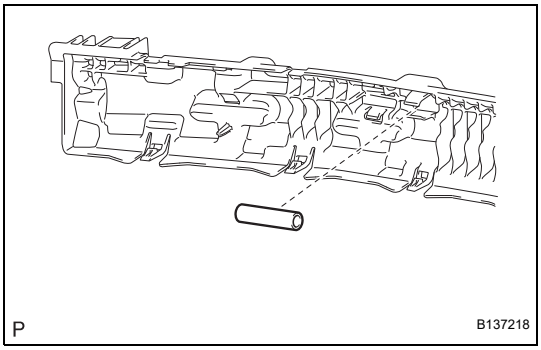
REASSEMBLY



1. INSTALL REAR BUMPER REINFORCEMENT SUB-ASSEMBLY

(a) Install the rear bumper reinforcement sub-assembly with the 6 nuts.

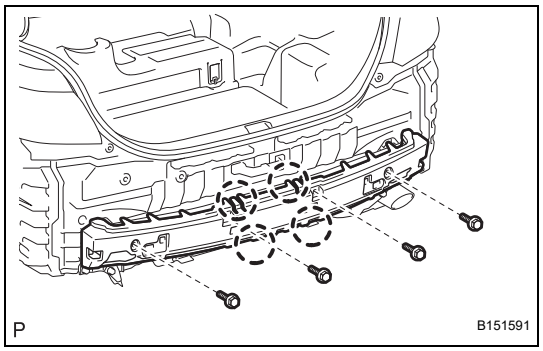
Torque: 68 N*m (693 kgf*cm, 50 ft.*lbf)



2. INSTALL REAR BUMPER BAR

(a) Install the rear bumper bar on the rear bumper energy absorber.

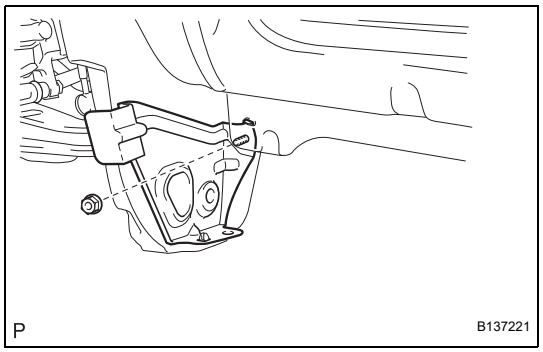
ET



3. INSTALL REAR BUMPER ENERGY ABSORBER

(a) Engage the 4 claws and install the rear bumper energy absorber.

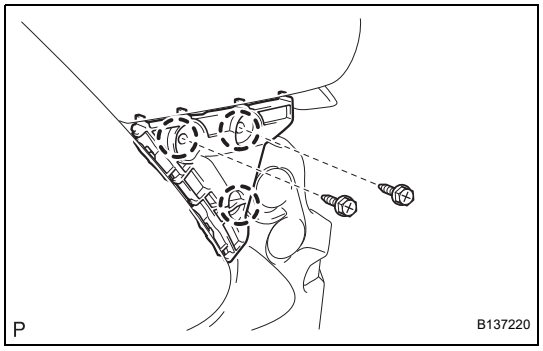
(b) Install the 4 bolts.



4. INSTALL WHEEL HOUSE REINFORCEMENT LH

(a) Install the wheel house reinforcement LH with the nut.

5. INSTALL WHEEL HOUSE REINFORCEMENT RH

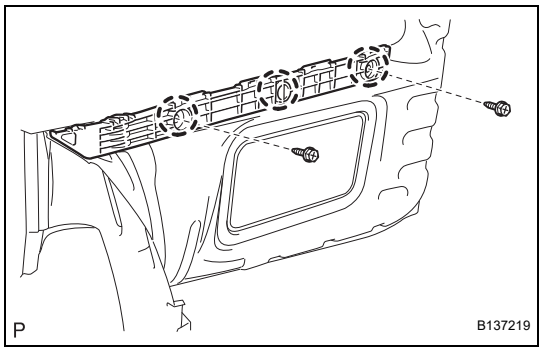


6. INSTALL REAR BUMPER SIDE RETAINER LH

(a) Engage the 3 claws and install the rear bumper side retainer LH.

(b) Install the 2 screws.

7. INSTALL REAR BUMPER SIDE RETAINER RH

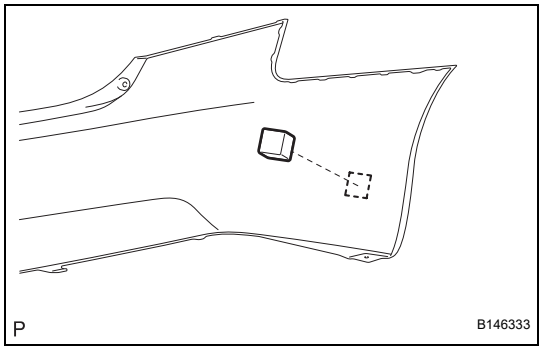


8. INSTALL REAR BUMPER SIDE SUPPORT LH

(a) Engage the 3 claws and install the rear bumper side support LH.

(b) Install the 2 screws.

9. INSTALL REAR BUMPER SIDE SUPPORT RH



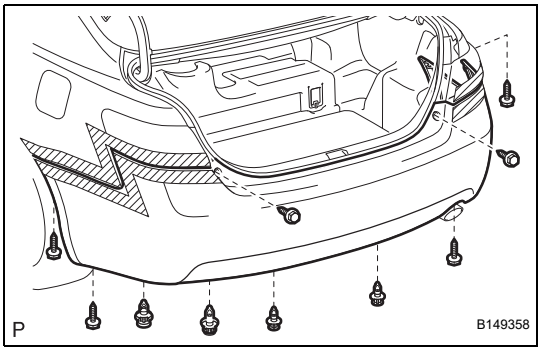
10. INSTALL REAR BUMPER PAD

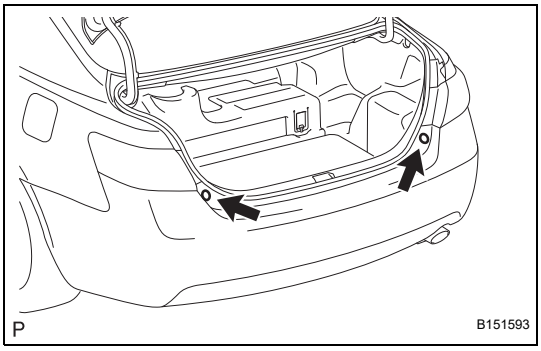
(a) Apply new double-sided tape to the rear bumper pad.

(b) Remove the release paper from the rear bumper pad.

(c) Install the rear bumper pad.
HINT:
Use the same procedures for the RH side and LH side.

11. INSTALL REAR BUMPER PLATE LH





12. INSTALL REAR BUMPER PLATE RH

INSTALLATION

1. INSTALL REAR BUMPER ASSEMBLY

(a) Engage each claw.

(b) Install the rear bumper assembly with the 6 screws and 4 clips.

(c) Install the 2 rear bumper plates.

INSTALLATION

HINT:
When installing the name plate, heat the vehicle body and name plate using a heat light.

Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Name Plate	20 to 30°C (68 to 86°F)

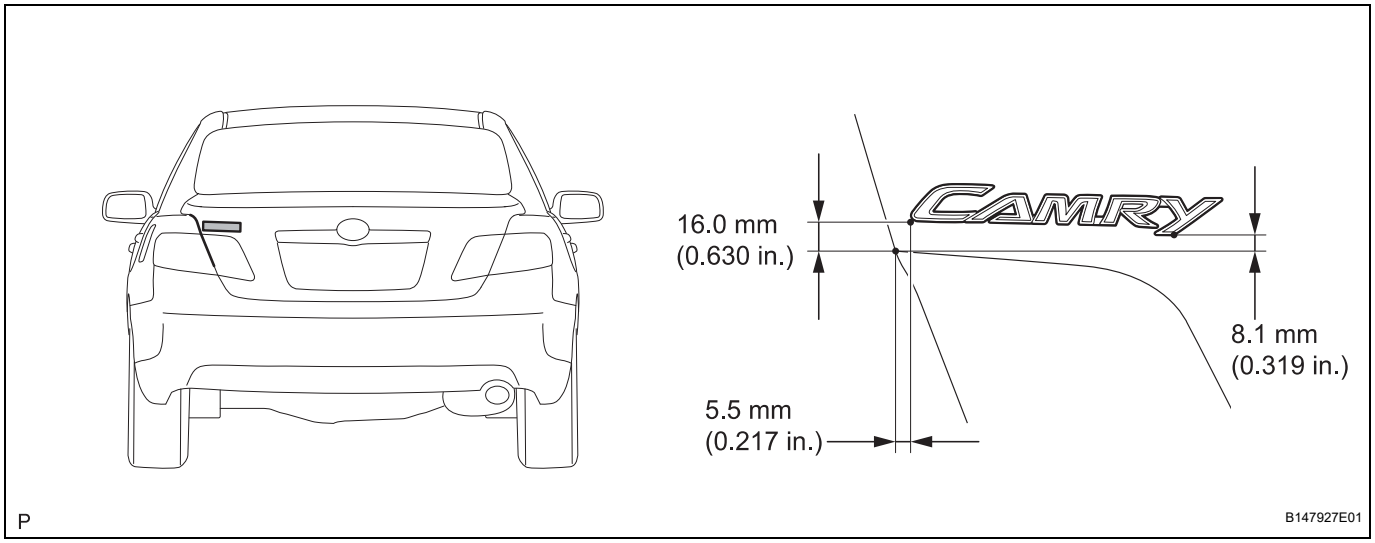
NOTICE:
Do not heat the vehicle body and name plate excessively.

1. INSTALL NO. 2 LUGGAGE COMPARTMENT DOOR NAME PLATE

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the name plate. (If reusing the name plate)
  (1) Using a heat light, heat the name plate.
  (2) Remove the double-sided tape from the name plate.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the name plate.

(c) Install the name plate.



(1) Using a heat light, heat the vehicle body and name plate.
(2) Remove the release paper from the name plate.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
(3) Install the name plate.

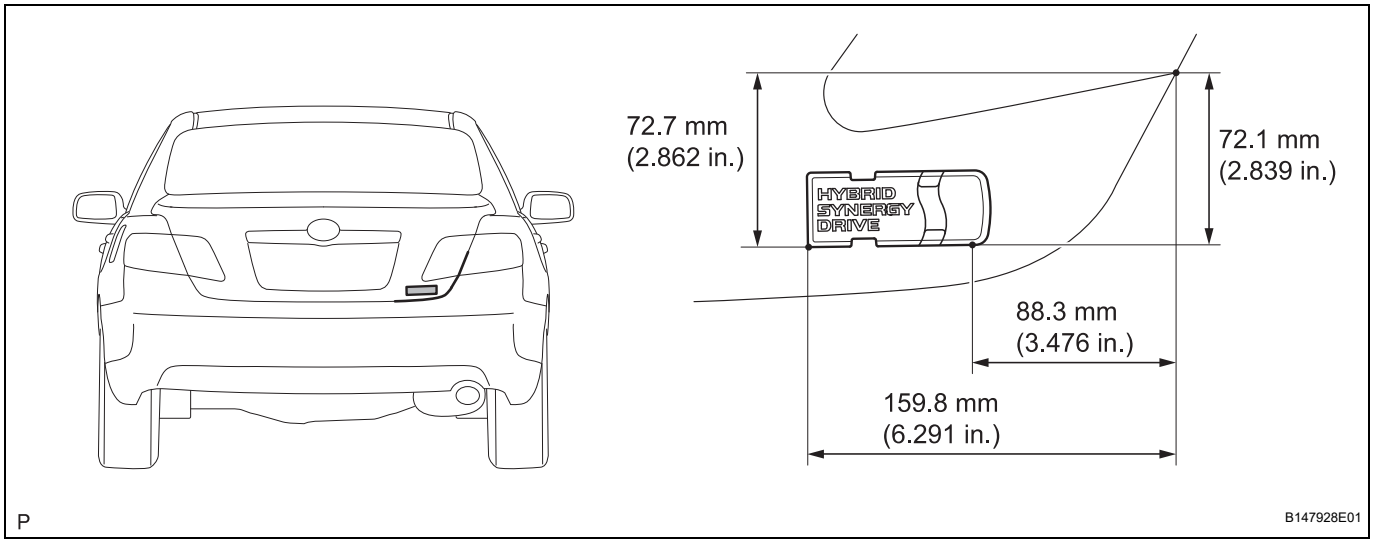
ET

2. INSTALL BACK DOOR NAME PLATE

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the name plate. (If reusing the name plate)
  (1) Using a heat light, heat the name plate.
  (2) Remove the double-sided tape from the name plate.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the name plate.

(c) Install the name plate.
  (1) Using a heat light, heat the vehicle body and name plate.
  (2) Remove the release paper from the name plate.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.
  (3) Install the name plate.



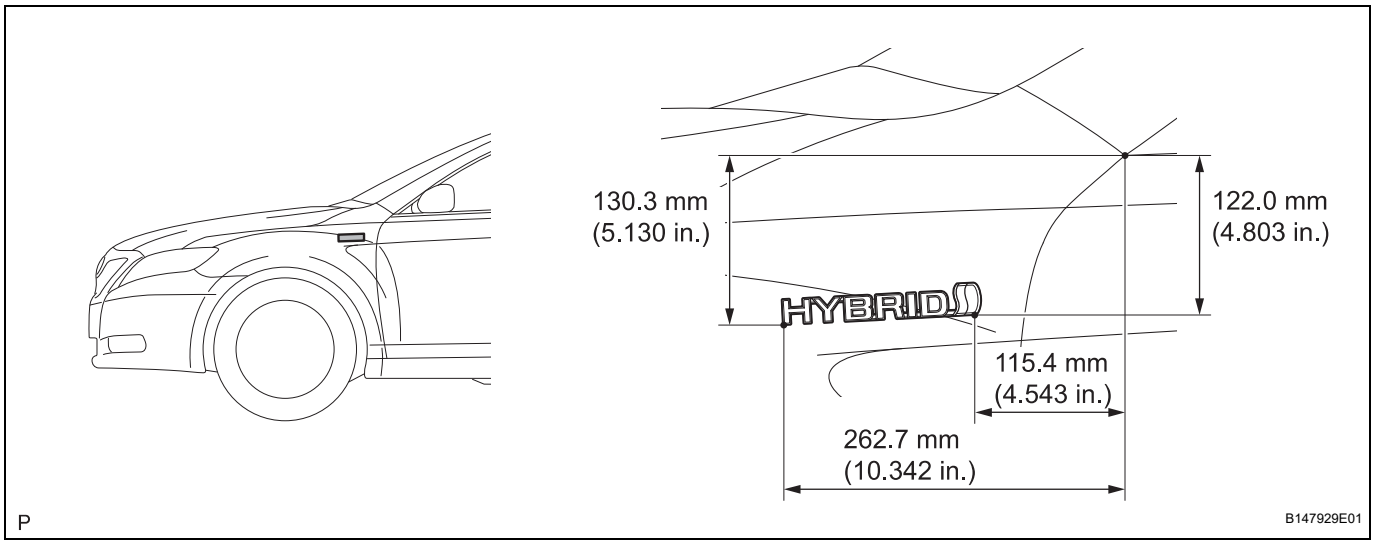
3. INSTALL SIDE PANEL EMBLEM

(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

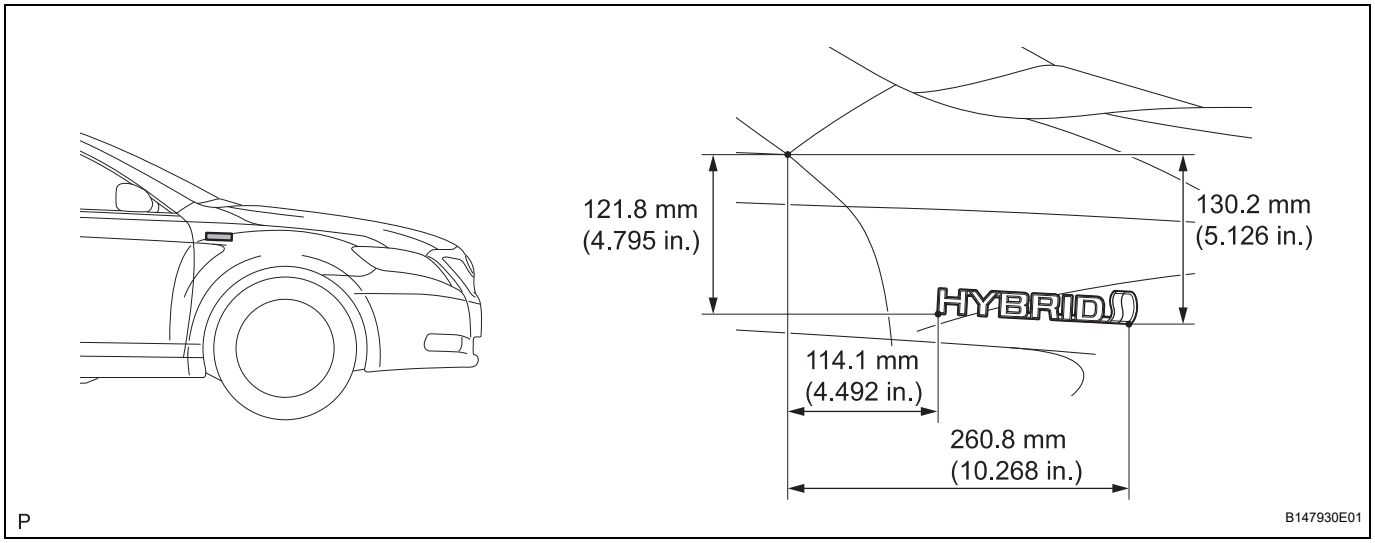
(b) Clean the side panel emblem. (If reusing the side panel emblem)
  (1) Using a heat light, heat the side panel emblem.
  (2) Remove the double-sided tape from the side panel emblem.

(3) Wipe off any tape adhesive residue with cleaner.
(4) Apply new double-sided tape to the side panel emblem.

(c) Install the side panel emblem.
(1) Using a heat light, heat the vehicle body and side panel emblem.
(2) Remove the release paper from the side panel emblem.
HINT:
After removing the release paper, keep the exposed adhesive free from foreign matter.
(3) Install the side panel emblem.
For LH side:



For RH side:



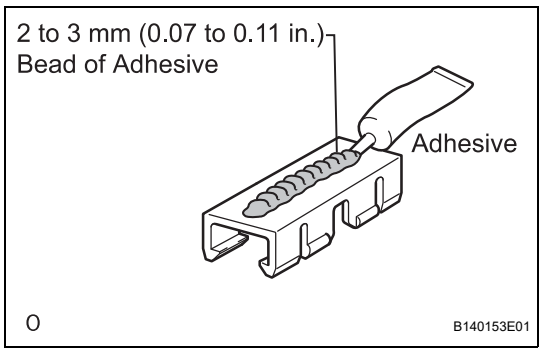
ET

INSTALLATION

1. INSTALL ROOF DRIP SIDE FINISH MOULDING CLIP

NOTICE:

If installing new clips, remove the double-sided tape remaining where the clips will be installed on the body and clean the body with a non-residue type solvent.

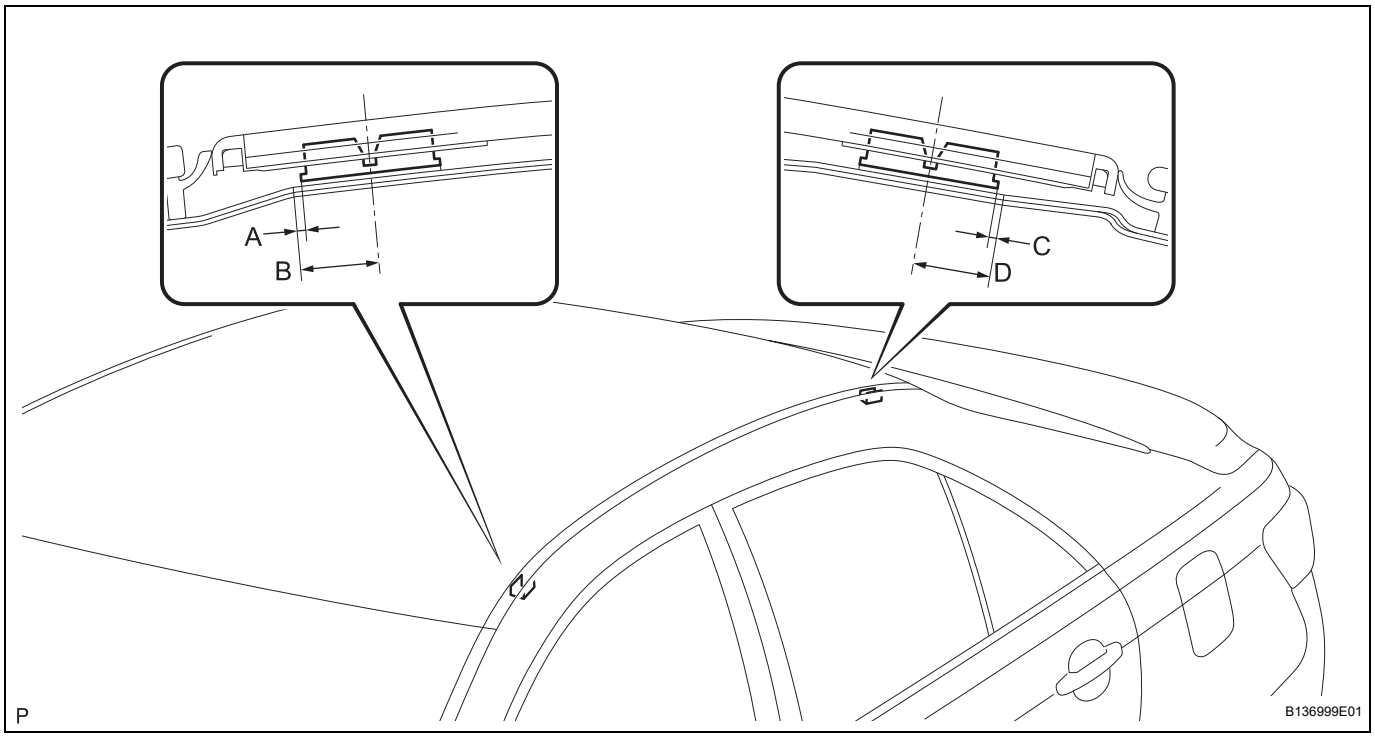


(a) Apply a 2 to 3 mm (0.07 to 0.11 in.) bead of adhesive (3M DP-105 or equivalent) to new roof drip side finish moulding clips.

HINT:

Adhesive strength (tensile strength): 13.7 MPa (140 kgf/cm^2) or more (when the temperature is 23°C)

(b) Install the roof drip side finish moulding clips to the positions on the roof panel shown in the illustration. Determine the locations and firmly press and install the roof drip side finish moulding clips after lightly rubbing up adhesive (3M DP-105 or equivalent).



Standard dimension

Area	Dimension
A	1.4 mm (0.055 in.)
B	12.4 mm (0.488 in.)
C	1.1 mm (0.043 in.)
D	12.1 mm (0.476 in.)

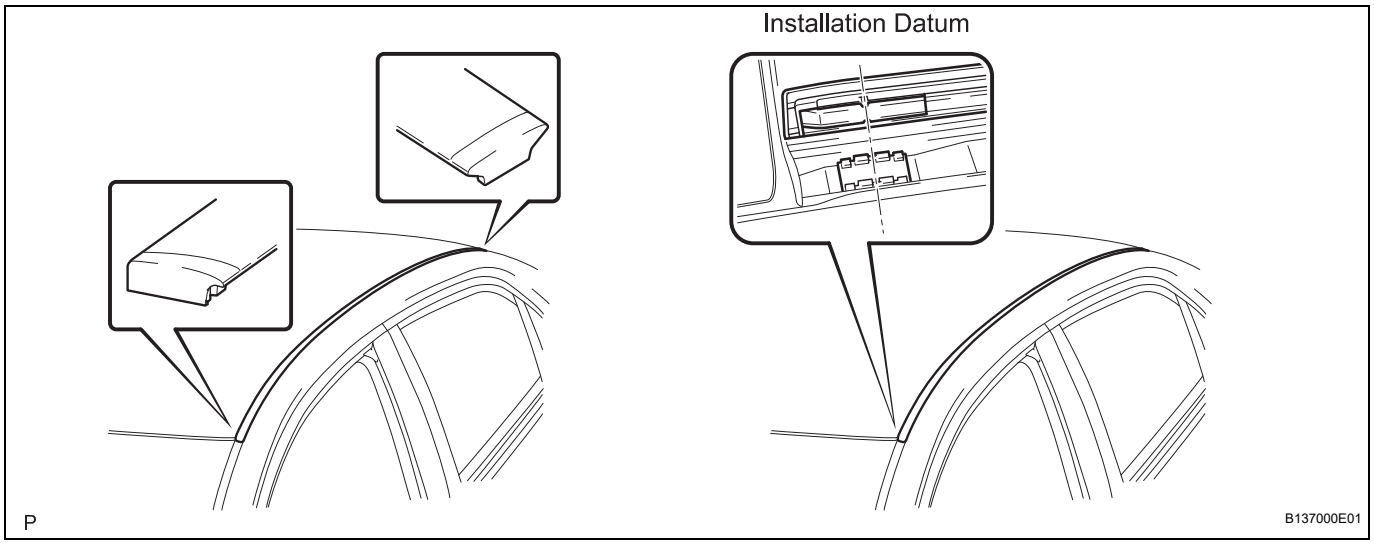
HINT:

- Initial hardening time: 20 minutes
- Complete hardening time: 48 hours

ET

2. INSTALL ROOF DRIP SIDE FINISH MOULDING CENTER

(a) Install the roof drip side finish moulding center when 20 minutes or more have elapsed after pressing and installing the roof drip side finish moulding clips.

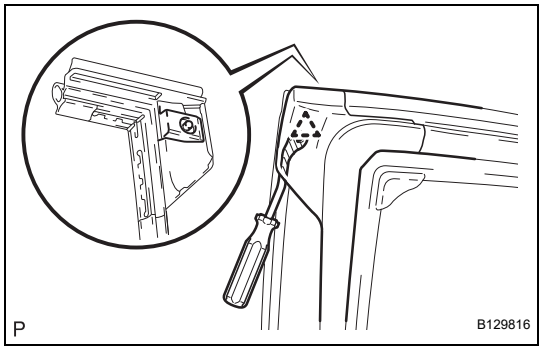


NOTICE:

- **Install the roof drip side finish moulding center in the proper direction.**
- **Set the front clip to the installation datum. Make sure that the front clip and roof drip side finish moulding center are fit each other.**

REMOVAL

1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-41)**
2. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-41)**
3. **REMOVE ASSIST GRIP COVER (See page ED-42)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-42)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-42)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-43)**
7. **REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-44)**
8. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-145)**
9. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-13)**
10. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-44)**
11. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-44)**
12. **REMOVE FRONT DOOR GLASS RUN (See page ED-46)**
13. **REMOVE FRONT DOOR WEATHERSTRIP**
    (a) Using a clip remover, disengage the clip and remove the front door weatherstrip.
    HINT:
    Tape the clip remover tip before use.



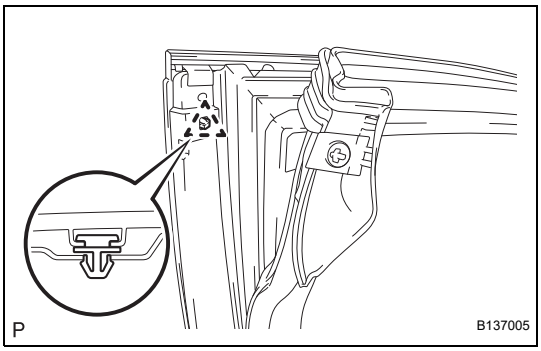
14. **REMOVE FRONT DOOR REAR WINDOW FRAME MOULDING**
    HINT:
    When removing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

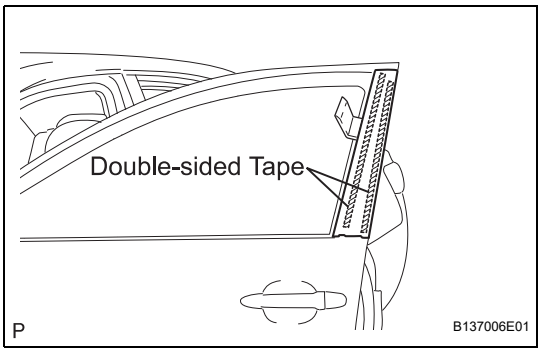
NOTICE:
Do not heat the vehicle body and moulding excessively.

(a) Using a heat light, heat the front door rear window frame moulding.

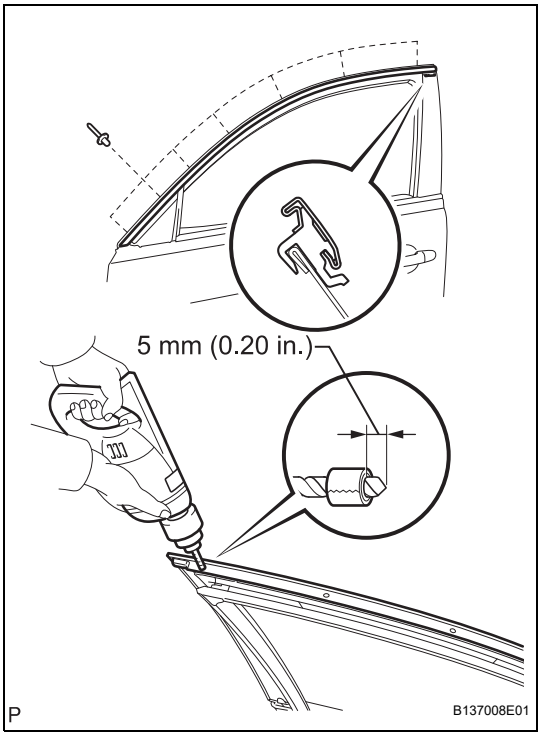
ET



(b) Disengage the clip.



(c) Using a moulding remover, remove the front door rear window frame moulding.



15. REMOVE FRONT DOOR UPPER WINDOW FRAME MOULDING

(a) Put a 4 mm (0.16 in.) drill bit into a drill.

(b) Tape the drill bit without the portion of 5 mm (0.20 in.) from the tip covered.
HINT:
Tape the drill bit to prevent the drill bit from going too deep.

(c) Lightly press the drill against the rivets, drill off the flanges of the rivets, and remove the 7 rivets.
NOTICE:
- **Pressing the drill too firmly will cause the rivet to turn and result in the rivet not being drilled through.**
- **Do not pry the rivets with the drill, because this may cause damage to the installation holes of the rivets or the drill bit.**
- **Be careful when touching the drilled rivets as they may become hot.**

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.

(e) Remove the front door upper window frame moulding from the door frame.

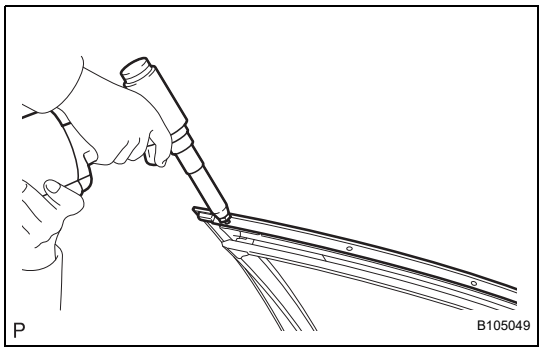
ET

INSTALLATION

1. INSTALL FRONT DOOR UPPER WINDOW FRAME MOULDING

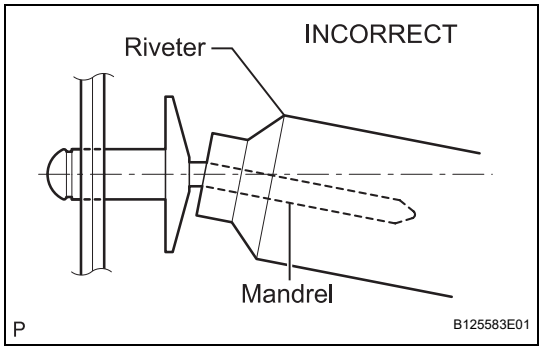
(a) Install the front door upper window frame moulding to the door frame.

(b) Using an air riveter or hand riveter with a nose piece, install the front door upper window frame moulding with 7 new rivets.
HINT:
If the rivet cannot be cut, pull it once and cut it.

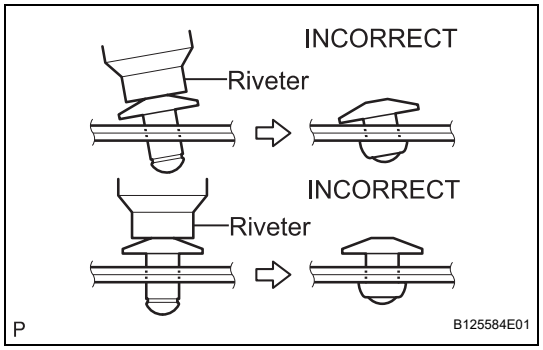


NOTICE:

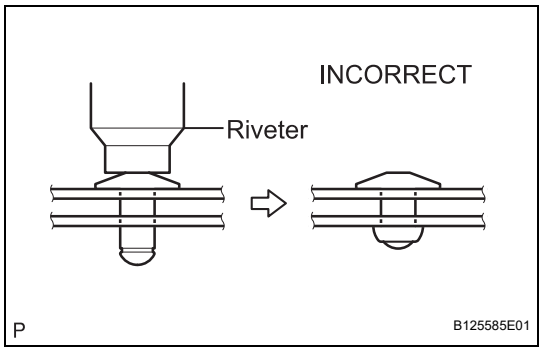
- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**



- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**



- **Do not leave any space between the moulding and door frame. Firmly hold together the 2 items while installing the rivet.**



2. INSTALL FRONT DOOR REAR WINDOW FRAME MOULDING

HINT:
When installing the front door rear window frame moulding, heat the vehicle body and front door rear window frame moulding using a heat light.

Heating temperature

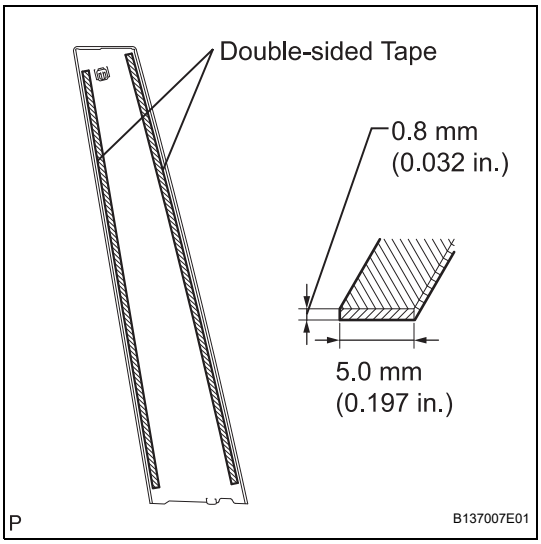
Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

ET

NOTICE:
Do not heat the vehicle body and front door window frame moulding excessively.

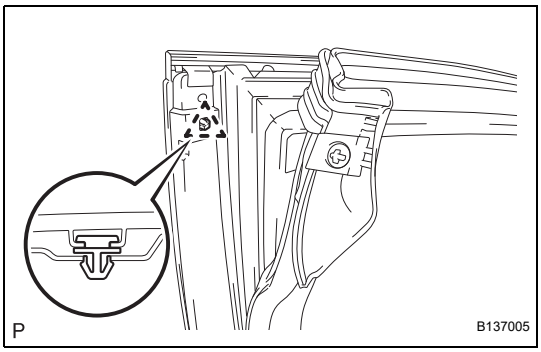
(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the front door rear window frame moulding. (If reusing the front door rear window frame moulding)
  (1) Using a heat light, heat the front door rear window frame moulding.
  (2) Remove the double-sided tape from the front door rear window frame moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the front door rear window frame moulding.

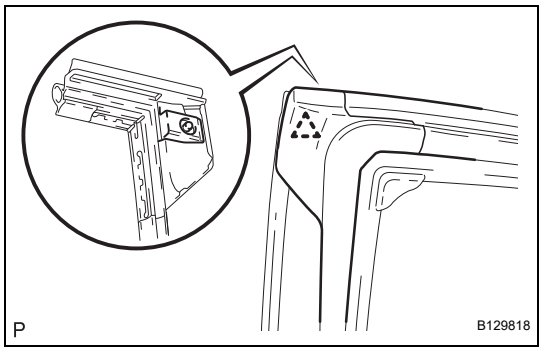


(c) Install the front door rear window frame moulding.
  (1) Using a heat light, heat the vehicle body and front door rear window frame moulding.
  (2) Remove the release paper from the front door rear window frame moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.

  (3) Engage the clip and install the front door rear window frame moulding.



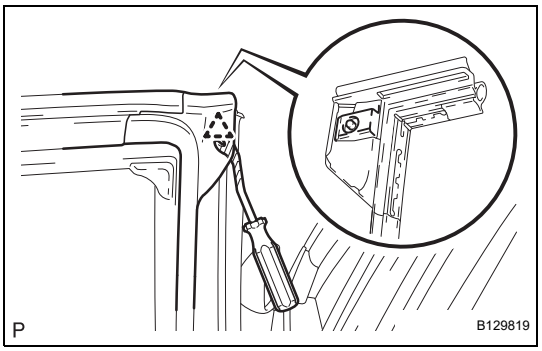
ET



3. **INSTALL FRONT DOOR WEATHERSTRIP**
   (a) Engage the clip and install the front door weatherstrip.
4. **INSTALL FRONT DOOR GLASS RUN (See page ED-56)**
5. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-57)**
6. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-57)**
7. **INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-15)**
8. **INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-147)**
9. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-58)**
10. **INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-59)**
11. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-59)**
12. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-59)**
13. **INSTALL ASSIST GRIP COVER (See page ED-60)**
14. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-60)**
15. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-60)**

REMOVAL

1. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-64)**
2. **REMOVE DOOR ASSIST GRIP COVER (See page ED-64)**
3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-65)**
4. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-66)**
5. **REMOVE REAR DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-66)**
6. **REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-67)**
7. **REMOVE REAR DOOR GLASS RUN (See page ED-68)**
8. **REMOVE REAR DOOR LOWER WINDOW FRAME SUB-ASSEMBLY (See page ED-68)**
9. **REMOVE REAR DOOR QUARTER WINDOW GLASS (See page ED-68)**
10. **REMOVE REAR DOOR GLASS SUB-ASSEMBLY (See page ED-69)**
11. **REMOVE REAR DOOR WEATHERSTRIP**
    (a) Using a clip remover, disengage the clip and remove the rear door weatherstrip.
    HINT:
    Tape the clip remover tip before use.



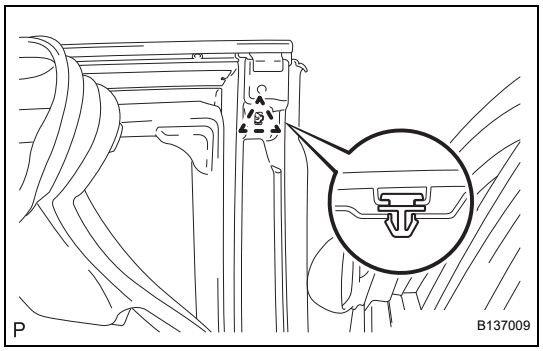
12. **REMOVE REAR DOOR FRONT WINDOW FRAME MOULDING**
    HINT:
    When removing the rear door front window frame moulding, heat the vehicle body and rear door front window frame moulding using a heat light.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

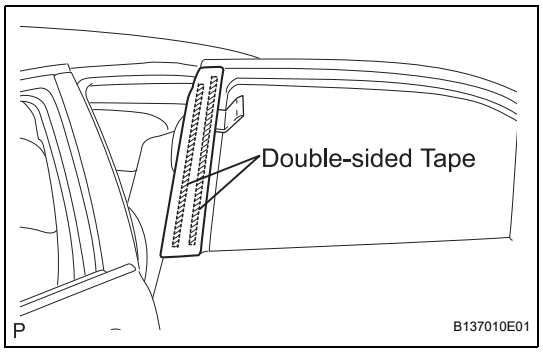
NOTICE:
Do not heat the vehicle body and moulding excessively.

(a) Using a heat light, heat the rear door front window frame moulding.

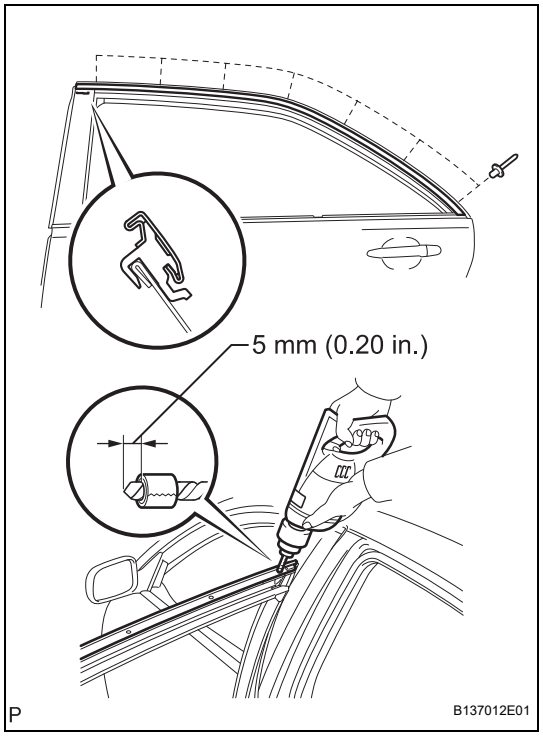
ET



(b) Disengage the clip.



(c) Using a moulding remover, remove the rear door front window frame moulding.



13. REMOVE REAR DOOR UPPER WINDOW FRAME MOULDING

(a) Put a 4 mm (0.16 in.) drill bit into a drill.

(b) Tape the drill bit without the portion of 5 mm (0.20 in.) from the tip covered.
HINT:
Tape the drill bit to prevent the drill bit from going too deep.

(c) Lightly press the drill bit against the rivets, drill off the flanges of the rivets, and remove the 7 rivets.
NOTICE:
- **Pressing the drill too firmly will cause the rivet to turn and result in the rivet not being drilled through.**
- **Do not pry the rivets with the drill, as this may cause damage to the installation holes of the rivets or the drill bit.**
- **Be careful when touching the drilled rivets, as they may become hot.**

(d) Using a vacuum cleaner, remove the rivet fragments and shavings from the drilled areas.

(e) Remove the rear door upper window frame moulding from the door frame.

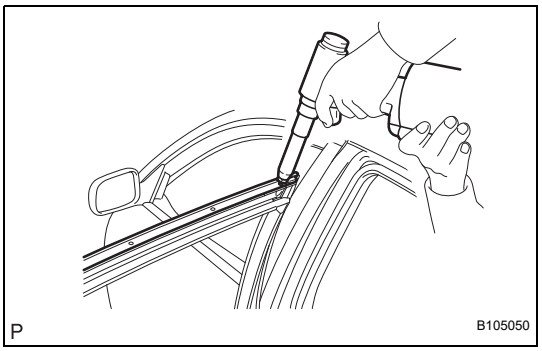
ET

INSTALLATION

1. INSTALL REAR DOOR UPPER WINDOW FRAME MOULDING

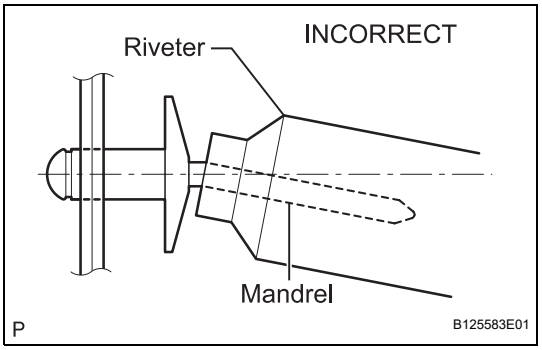
(a) Install the rear door upper window frame moulding to the door frame.

(b) Using an air riveter or hand riveter with a nose piece, install the rear door upper window frame moulding with 7 new rivets.
HINT:
If the rivet cannot be cut, pull it once and cut it.

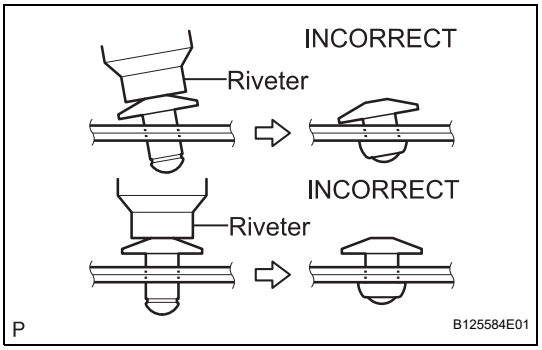


NOTICE:

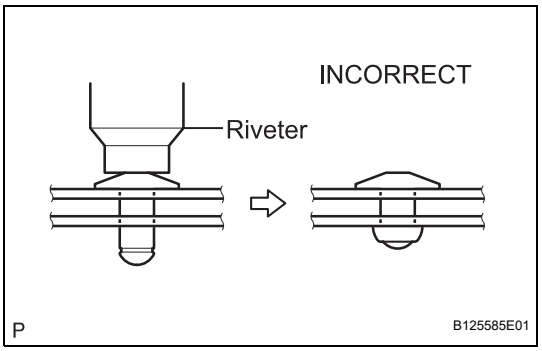
- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**



- **Confirm that the rivets are seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**



- **Do not leave any space between the moulding and door frame. Firmly hold together the 2 items while installing the rivet.**



2. INSTALL REAR DOOR FRONT WINDOW FRAME MOULDING

HINT:
When installing the rear door front window frame moulding, heat the vehicle body and rear door front window frame using a heat light.

Heating temperature

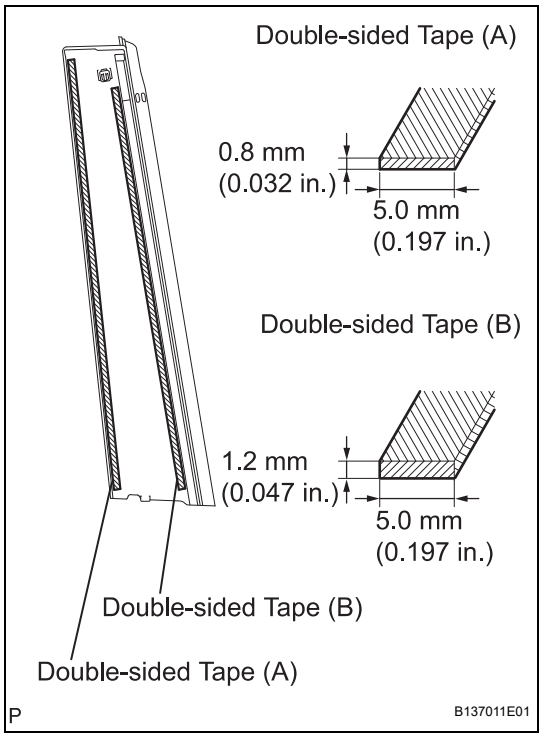
Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)
Moulding	20 to 30°C (68 to 86°F)

ET

NOTICE:
Do not heat the vehicle body and rear door window frame moulding excessively.

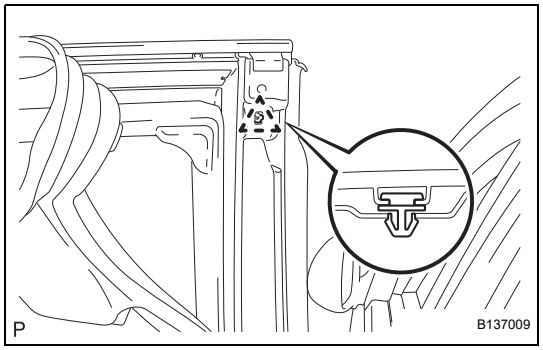
(a) Clean the vehicle body surface.
  (1) Using a heat light, heat the vehicle body surface.
  (2) Remove the double-sided tape from the vehicle body.
  (3) Wipe off any tape adhesive residue with cleaner.

(b) Clean the rear door front window frame moulding. (If reusing the rear door front window frame moulding)
  (1) Using a heat light, heat the rear door front window frame moulding.
  (2) Remove the double-sided tape from the rear door front window frame moulding.
  (3) Wipe off any tape adhesive residue with cleaner.
  (4) Apply new double-sided tape to the rear door front window frame moulding.

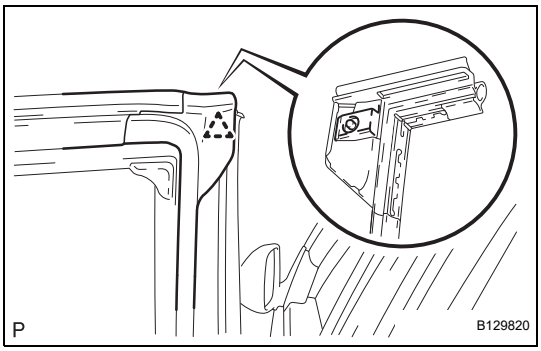


(c) Install the rear door front window frame moulding.
  (1) Using a heat light, heat the vehicle body and rear door front window frame moulding.
  (2) Remove the release paper from the rear door front window frame moulding.
  HINT:
  After removing the release paper, keep the exposed adhesive free from foreign matter.

  (3) Engage the clip and install the rear door front window frame moulding.



ET



3. **INSTALL REAR DOOR WEATHERSTRIP**
   (a) Engage the clip and install the rear door weatherstrip.
4. **INSTALL REAR DOOR GLASS RUN (See page ED-78)**
5. **INSTALL REAR DOOR GLASS SUB-ASSEMBLY (See page ED-78)**
6. **INSTALL REAR DOOR QUARTER WINDOW GLASS (See page ED-78)**
7. **INSTALL REAR DOOR LOWER WINDOW FRAME SUB-ASSEMBLY (See page ED-78)**
8. **INSTALL REAR DOOR SERVICE HOLE COVER (See page ED-79)**
9. **INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-80)**
10. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-80)**
11. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-81)**
12. **INSTALL DOOR ASSIST GRIP COVER (See page ED-82)**
13. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-82)**

REMOVAL

1. **REMOVE FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-41)**
2. **REMOVE FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-41)**
3. **REMOVE ASSIST GRIP COVER (See page ED-42)**
4. **REMOVE COURTESY LIGHT ASSEMBLY (See page ED-42)**
5. **REMOVE FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-42)**
6. **REMOVE FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-43)**
7. **REMOVE FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-44)**
8. **REMOVE FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-145)**
9. **REMOVE OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-13)**
10. **REMOVE FRONT DOOR SERVICE HOLE COVER (See page ED-44)**
11. **REMOVE FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-44)**
12. **REMOVE FRONT DOOR GLASS RUN (See page ED-46)**
13. **REMOVE FRONT DOOR WEATHERSTRIP (See page ET-37)**
14. **REMOVE DOOR FRAME GARNISH (See page ED-46)**
15. **REMOVE FRONT DOOR STRIPE**
    (a) Using a heat light, heat the front door stripe.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

    NOTICE:
    Do not heat the vehicle body excessively.
    (b) Pull back an edge of the front door stripe and pull it parallel to the vehicle body to pull it off.
16. **REMOVE FRONT DOOR LOWER OUTSIDE STRIPE**
    (a) Using a heat light, heat the front door lower outside stripe.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

    NOTICE:
    Do not heat the vehicle body excessively.

ET

(b) Pull back an edge of the front door lower outside stripe and pull it parallel to the vehicle body to pull it off.

INSTALLATION

1. REPAIR INSTRUCTION

(a) Clean the vehicle body surface.

(1) Using a heat light, heat the vehicle body surface.

Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:
Do not heat the vehicle body excessively.

(2) Wipe off any tape adhesive residue with cleaner.

(b) Installation temperature

(1) When ambient temperature is below 15°C, perform the installation procedure after warming the vehicle body surface (installation surface of the door frame) and tape up to between 20 and 30°C using a heat light. When ambient temperature is above 35°C, cool the vehicle body surface (installation surface of the door frame) and tape down to between 20 and 30°C prior to installation.
HINT:
- The most appropriate temperature for installing the tape is 25°C.
- When the temperature is low, the tape turns stiff and comes off easily. When the temperature is high, the tape looses elasticity.

(c) Before installation

(1) Remove any roughness of coating and dirt on and around the vehicle body surface where the tape will be installed (installation surface of the door frame). If any roughness or dirt remains when pressing the tape onto the surface, air will be trapped under the tape and result in a poor appearance.
HINT:
Spray water on the shop floor to settle any dust.

(d) Key points for handling the tape

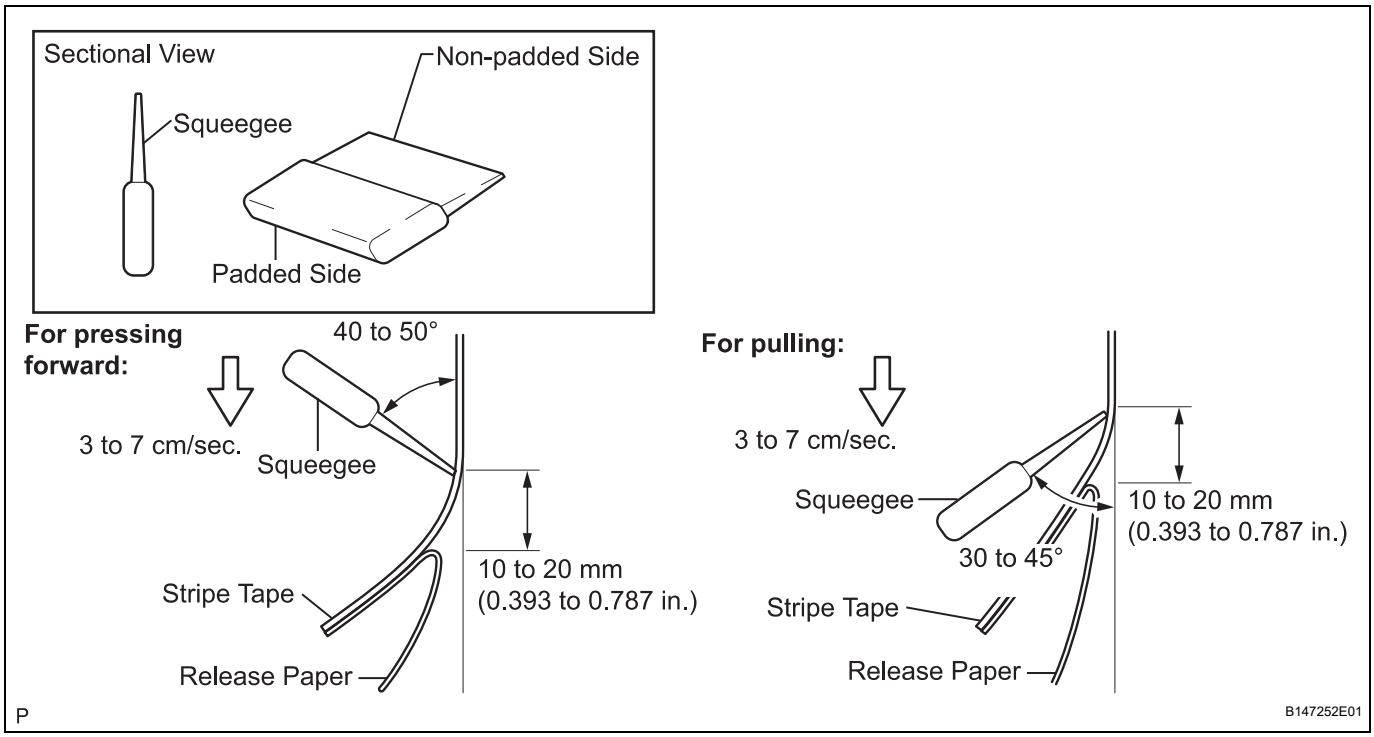
(1) The tape bends and rolls up easily. Store the tape between flat pieces of cardboard or other similar objects and keep it dry and level.
NOTICE:
Do not bend the tape or leave it in high temperature places.

(e) Key points for installation of the tape (how to use a squeegee and installation procedure for flat surfaces)
NOTICE:
- **Conduct positioning of the tape with a high accuracy to achieve a neat finish and to avoid peeling.**

ET

- **The tape cannot be reused because it deforms or does not fit any more after being removed.**

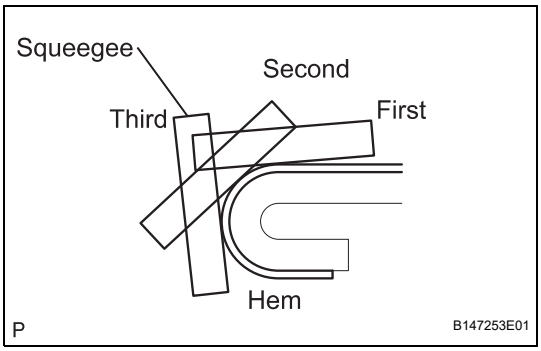
(1) To avoid air bubbles, slightly raise the part of the tape that is going to be applied so that its adhesive surface does not touch the vehicle body while applying the tape. Tilt the squeegee at 40 to 50° (for pressing forward) or 30 to 45° (for pulling) to the vehicle body surface and press the tape onto the vehicle body surface with a force of 20 to 30 N (2 to 3 kgf) at a constant slow speed of 3 to 7 cm per second.



NOTICE:
Be sure to observe the specified pressing speed, force, and angle of the squeegee to avoid wrinkles or air bubbles.
HINT:

- Either angle of the squeegee (for pressing forward or for pulling) is acceptable.
- Be sure to apply the tape while removing the release paper 10 to 20 mm from the edge of the squeegee.

ET



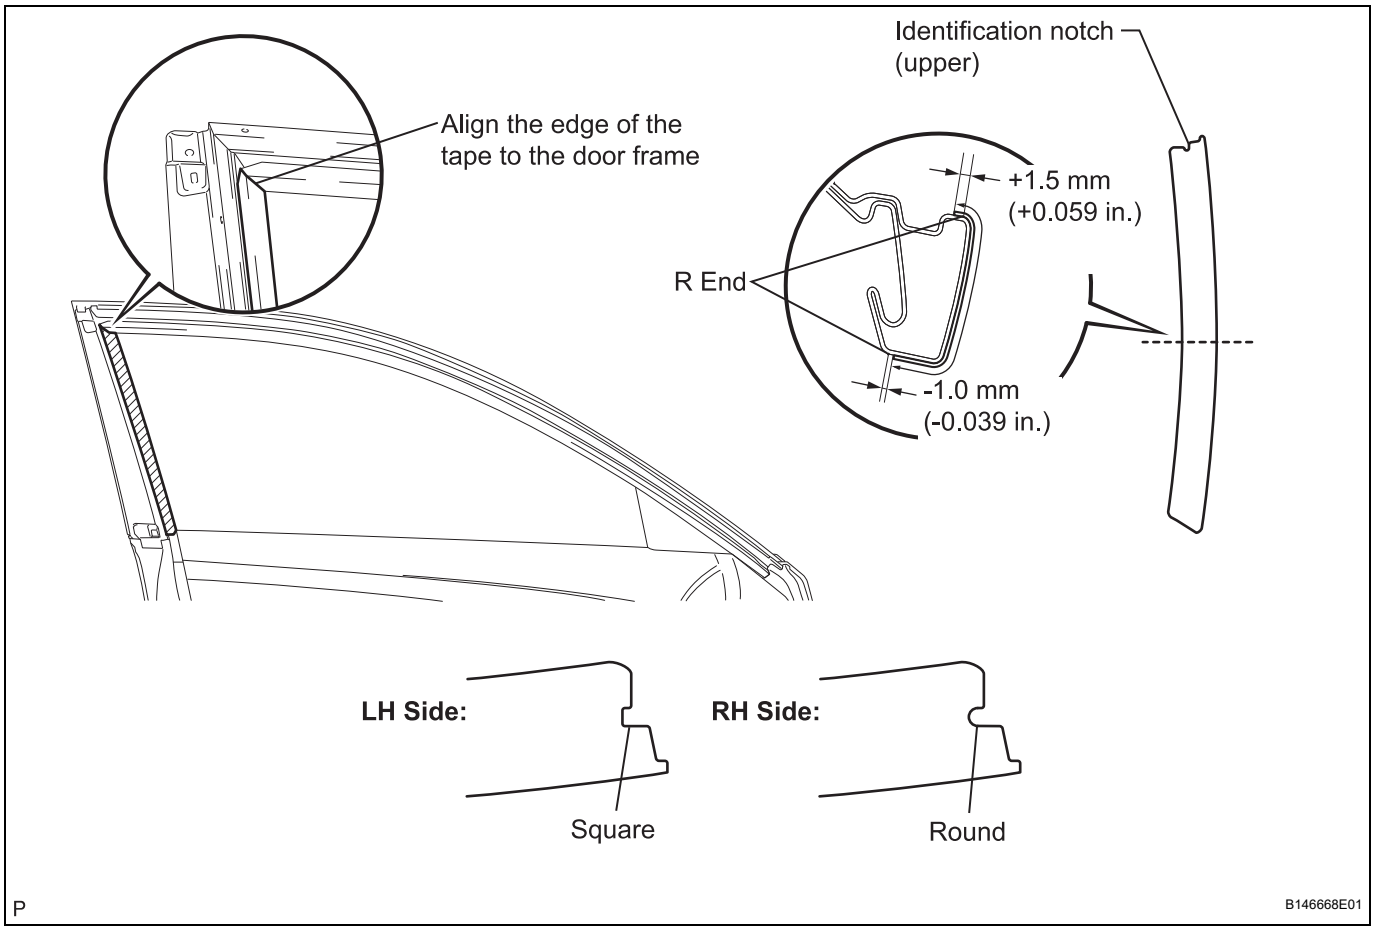
(f) Key points for installation of the tape (how to use a squeegee and installation procedure for hemming surfaces)
  (1) If it is difficult to press the tape, press it in several steps as shown in the illustration. Use your fingers or the padded surface of a squeegee to slowly apply the tape to the hem of the vehicle, especially for a small hem.
  HINT:
  When applying the tape to the backside of a hem, remove the release paper and use your fingers or the padded surface of a squeegee.

(g) Key points for installation of the tape (how to use a squeegee and installation procedure for corners)
  (1) Remove the release paper and apply the tape carefully with your fingers.
  (2) Before applying the tape to each corner, heat the tape using a heat light and gradually apply it, to avoid wrinkles on the tape and achieve a neat finish.

(h) Check after installation
  (1) After completing the application, check if the tape is applied neatly. If the tape is not applied neatly, reapply using new tape.
  NOTICE:
  Do not reuse the tape.

2. INSTALL FRONT DOOR LOWER OUTSIDE STRIPE

(a) Refer to the illustration to position the front door lower outside stripe.



(b) Remove the release paper and apply the stripe.

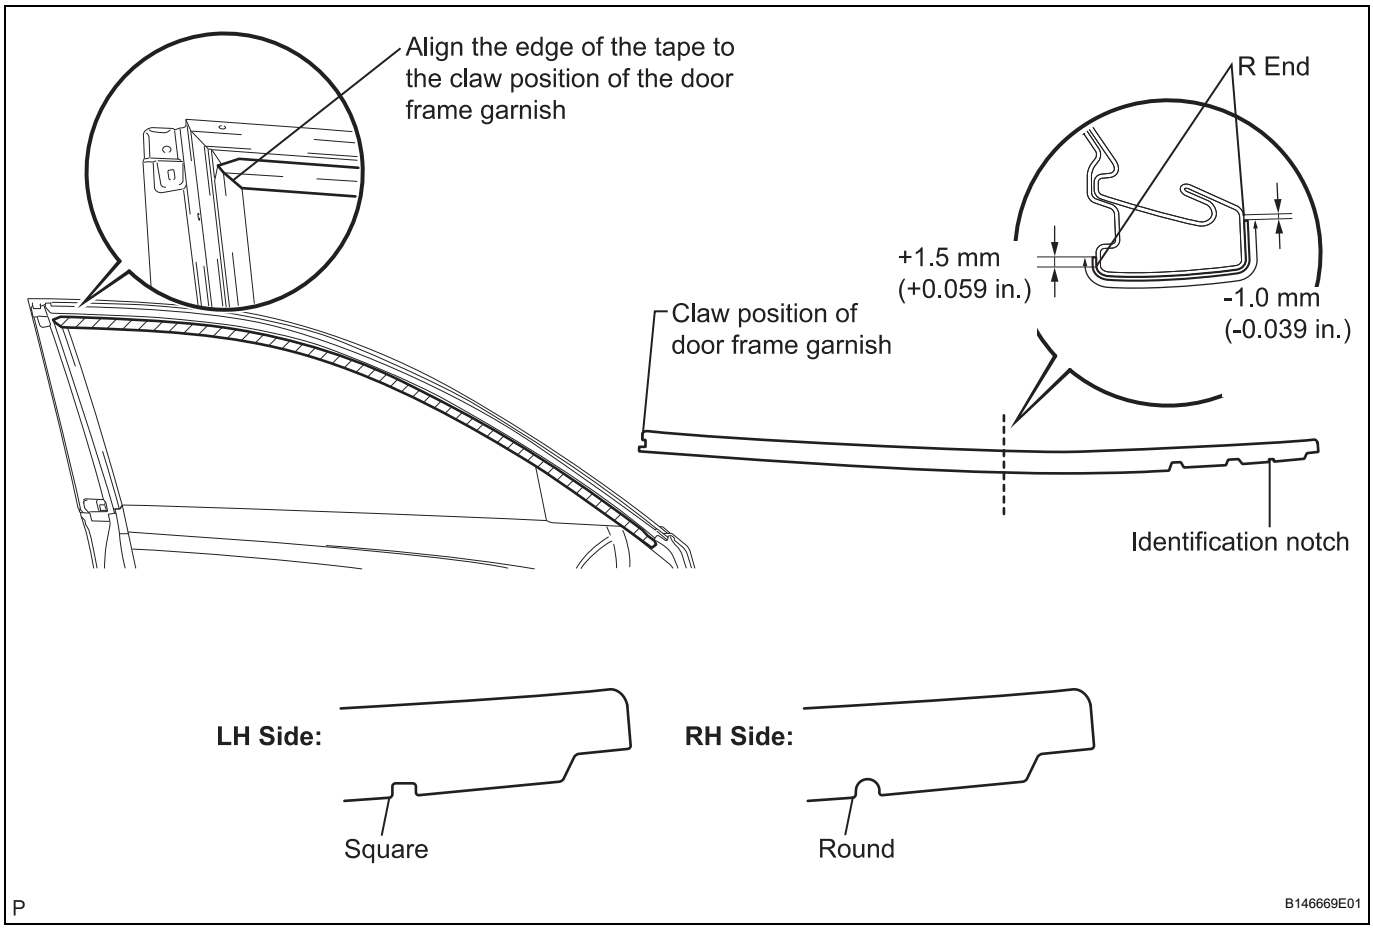
3. INSTALL FRONT DOOR STRIPE

NOTICE:

Be sure to install the front door stripe after applying the front door lower outside stripe.

ET

(a) Refer to the illustration to position the front door stripe.



(b) Remove the release paper and apply the stripe.

4. **INSTALL DOOR FRAME GARNISH (See page ED-56)**
5. **INSTALL FRONT DOOR WEATHERSTRIP (See page ET-40)**
6. **INSTALL FRONT DOOR GLASS RUN (See page ED-56)**
7. **INSTALL FRONT DOOR GLASS SUB-ASSEMBLY (See page ED-57)**
8. **INSTALL FRONT DOOR SERVICE HOLE COVER (See page ED-57)**
9. **INSTALL OUTER REAR VIEW MIRROR ASSEMBLY (See page MI-15)**
10. **INSTALL FRONT NO. 1 SPEAKER ASSEMBLY (See page AV-147)**
11. **INSTALL FRONT DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-59)**
12. **INSTALL FRONT DOOR INNER GLASS WEATHERSTRIP (See page ED-58)**
13. **INSTALL FRONT DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-59)**

14. **INSTALL COURTESY LIGHT ASSEMBLY (See page ED-59)**
15. **INSTALL ASSIST GRIP COVER (See page ED-60)**
16. **INSTALL FRONT DOOR INSIDE HANDLE BEZEL PLUG (See page ED-60)**
17. **INSTALL FRONT DOOR LOWER FRAME BRACKET GARNISH (See page ED-60)**

REMOVAL

1. **REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-64)**
2. **REMOVE DOOR ASSIST GRIP COVER (See page ED-64)**
3. **REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-65)**
4. **REMOVE REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-66)**
5. **REMOVE REAR DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-66)**
6. **REMOVE REAR DOOR SERVICE HOLE COVER (See page ED-67)**
7. **REMOVE REAR DOOR GLASS RUN (See page ED-68)**
8. **REMOVE REAR DOOR LOWER WINDOW FRAME SUB-ASSEMBLY (See page ED-68)**
9. **REMOVE REAR DOOR QUARTER WINDOW GLASS (See page ED-68)**
10. **REMOVE REAR DOOR GLASS SUB-ASSEMBLY (See page ED-69)**
11. **REMOVE REAR DOOR WEATHERSTRIP (See page ET-44)**
12. **REMOVE REAR DOOR FRAME GARNISH (See page ED-68)**
13. **REMOVE REAR DOOR OUTSIDE STRIPE**
    (a) Using a heat light, heat the rear door outside stripe.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

    NOTICE:
    Do not heat the vehicle body excessively.
    (b) Pull back an edge of the rear door outside stripe and pull it parallel to the vehicle body to pull it off.
14. **REMOVE REAR DOOR LOWER OUTSIDE STRIPE**
    (a) Using a heat light, heat the rear door lower outside stripe.
    Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

    NOTICE:
    Do not heat the vehicle body excessively.
    (b) Pull back an edge of the rear door lower outside stripe and pull it parallel to the vehicle body to pull it off.

INSTALLATION

1. REPAIR INSTRUCTION

(a) Clean the vehicle body surface.

(1) Using a heat light, heat the vehicle body surface.

Heating temperature

Item	Temperature
Vehicle Body	40 to 60°C (104 to 140°F)

NOTICE:
Do not heat the vehicle body excessively.

(2) Wipe off any tape adhesive residue with cleaner.

(b) Installation temperature

(1) When ambient temperature is below 15°C, perform the installation procedure after warming the vehicle body surface (installation surface of the door frame) and tape up to between 20 and 30°C using a heat light. When ambient temperature is above 35°C, cool the vehicle body surface (installation surface of the door frame) and tape down to between 20 and 30°C prior to installation.

HINT:

- The most appropriate temperature for installing the tape is 25°C.
- When the temperature is low, the tape turns stiff and comes off easily. When the temperature is high, the tape looses elasticity.

(c) Before installation

(1) Remove any roughness of coating and dirt on and around the vehicle body surface where the tape will be installed (installation surface of the door frame). If any roughness or dirt remains when pressing the tape onto the surface, air will be trapped under the tape and result in a poor appearance.

HINT:

Spray water on the shop floor to settle any dust.

(d) Key points for handling the tape

(1) The tape bends and rolls up easily. Store the tape between flat pieces of cardboard or other similar objects and keep it dry and level.

NOTICE:
Do not bend the tape or leave it in high temperature places.

(e) Key points for installation of the tape (how to use a squeegee and installation procedure for flat surfaces)

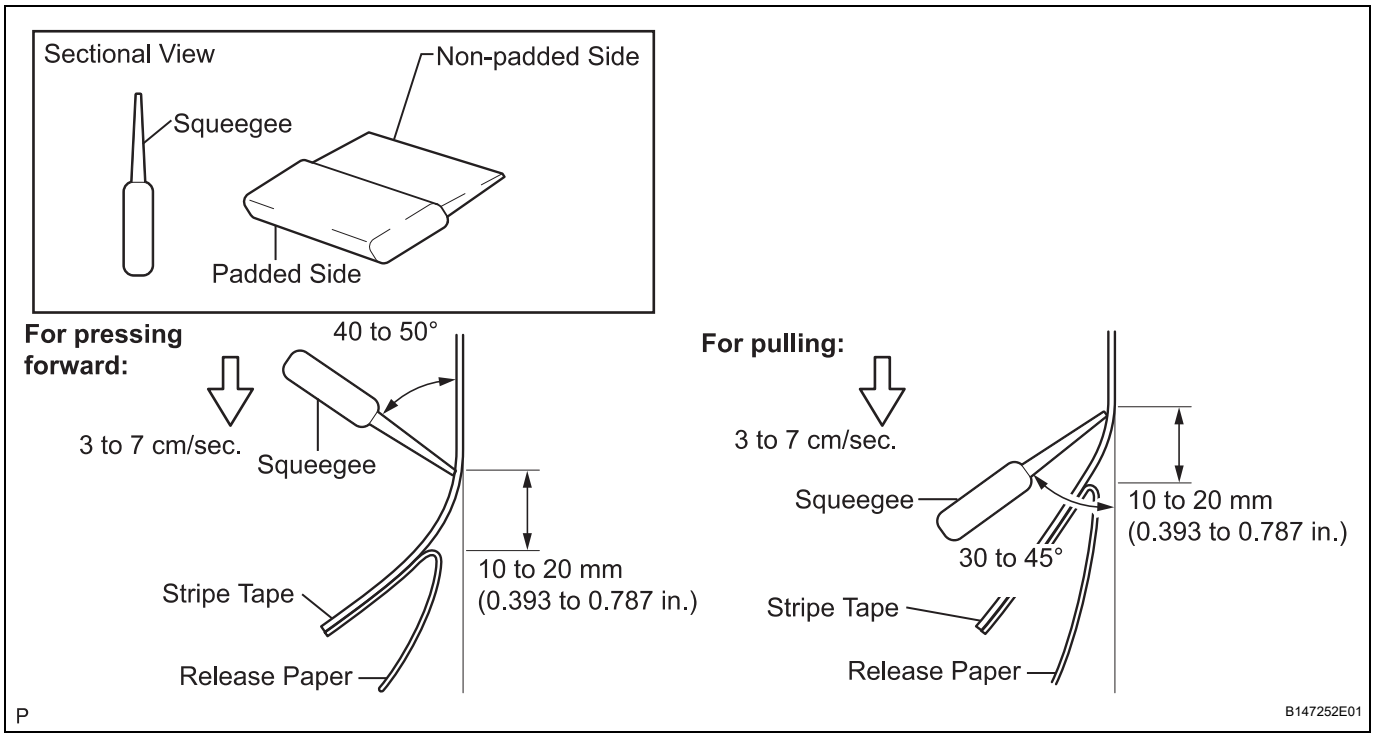
NOTICE:

- **Conduct positioning of the tape with a high accuracy to achieve a neat finish and to avoid peeling.**

ET

- **The tape cannot be reused because it deforms or does not fit any more after being removed.**

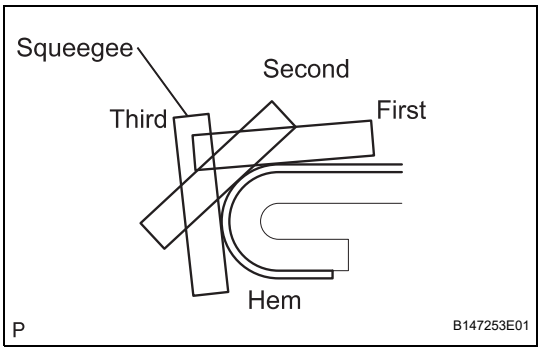
(1) To avoid air bubbles, slightly raise the part of the tape that is going to be applied so that its adhesive surface does not touch the vehicle body while applying the tape. Tilt the squeegee at 40 to 50° (for pressing forward) or 30 to 45° (for pulling) to the vehicle body surface and press the tape onto the vehicle body surface with a force of 20 to 30 N (2 to 3 kgf) at a constant slow speed of 3 to 7 cm per second.



NOTICE:
Be sure to observe the specified pressing speed, force, and angle of the squeegee to avoid wrinkles or air bubbles.
HINT:

- Either angle of the squeegee (for pressing forward or for pulling) is acceptable.
- Be sure to apply the tape while removing the release paper 10 to 20 mm from the edge of the squeegee.

ET



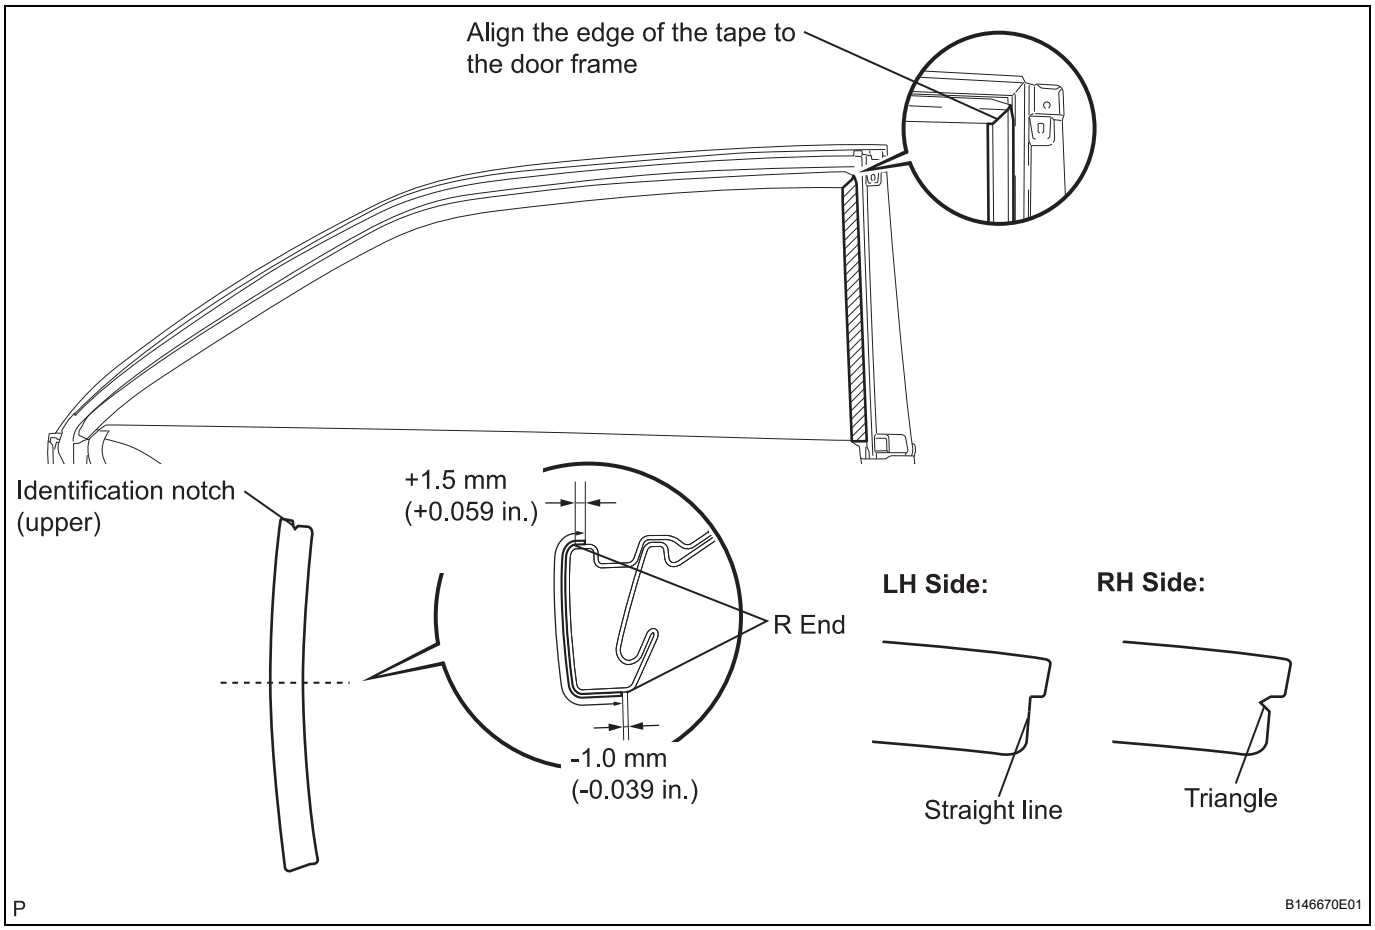
(f) Key points for installation of the tape (how to use a squeegee and installation procedure for hemming surfaces)
  (1) If it is difficult to press the tape, press it in several steps as shown in the illustration. Use your fingers or the padded surface of a squeegee to slowly apply the tape to the hem of the vehicle, especially for a small hem.
  HINT:
  When applying the tape to the backside of a hem, remove the release paper and use your fingers or the padded surface of a squeegee.

(g) Key points for installation of the tape (how to use a squeegee and installation procedure for corners)
  (1) Remove the release paper and apply the tape carefully with your fingers.
  (2) Before applying the tape to each corner, heat the tape using a heat light and gradually apply it, to avoid wrinkles on the tape and achieve a neat finish.

(h) Check after installation
  (1) After completing the application, check if the tape is applied neatly. If the tape is not applied neatly, reapply using new tape.
  NOTICE:
  Do not reuse the tape.

2. INSTALL REAR DOOR LOWER OUTSIDE STRIPE

(a) Refer to the illustration to position the rear door lower outside stripe.



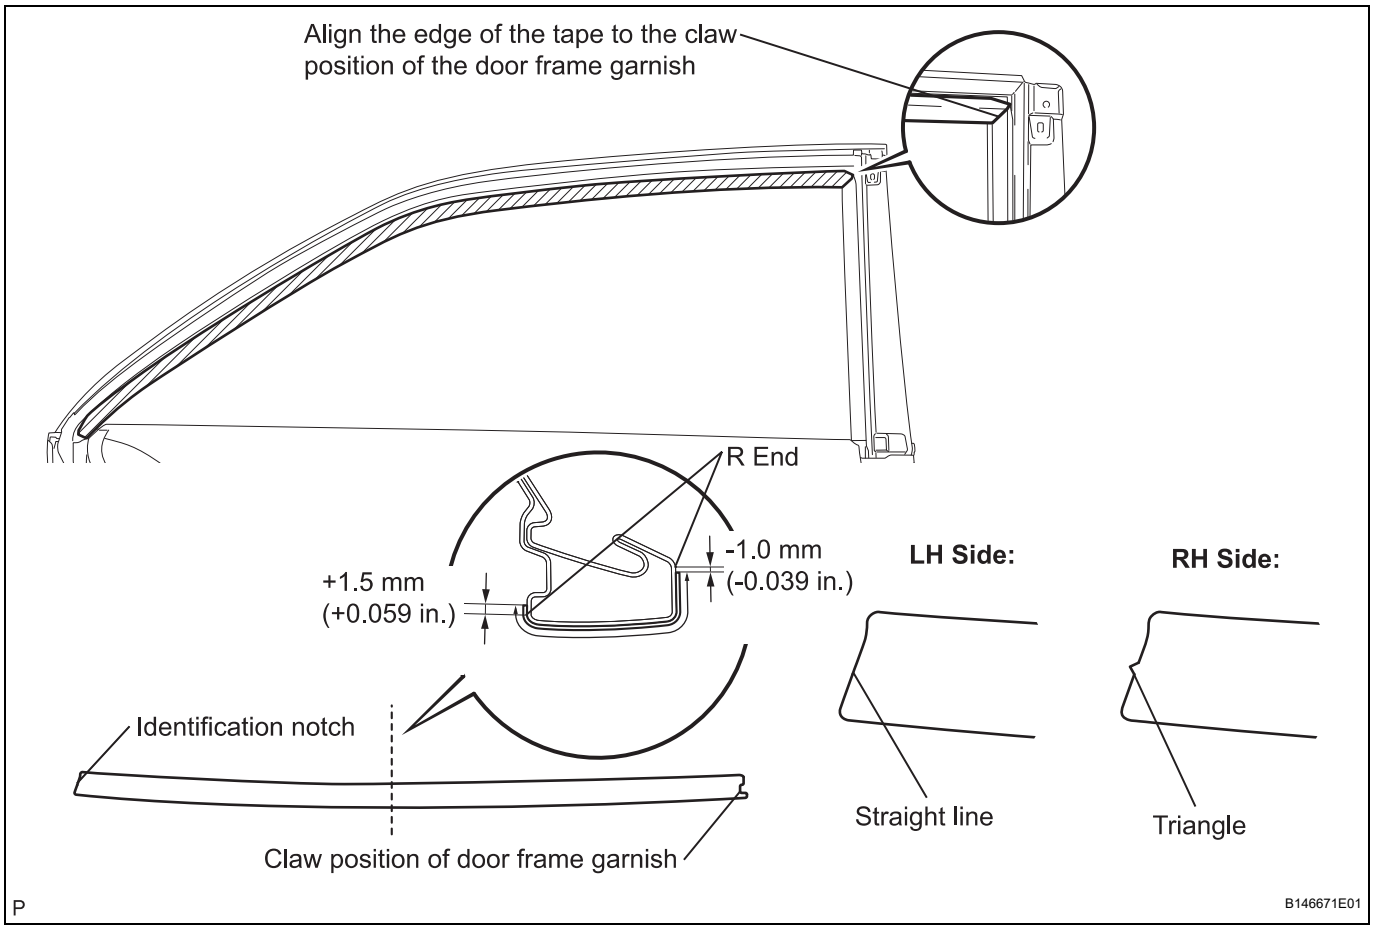
(b) Remove the release paper and apply the stripe.

3. INSTALL REAR DOOR OUTSIDE STRIPE

NOTICE:

Be sure to install the rear door outside stripe after applying the rear door lower outside stripe.

(a) Refer to the illustration to position the rear door outside stripe.



(b) Remove the release paper and apply the stripe.

4. **INSTALL REAR DOOR FRAME GARNISH (See page ED-77)**
5. **INSTALL REAR DOOR WEATHERSTRIP (See page ET-48)**
6. **INSTALL REAR DOOR GLASS RUN (See page ED-78)**
7. **INSTALL REAR DOOR GLASS SUB-ASSEMBLY (See page ED-78)**
8. **INSTALL REAR DOOR QUARTER WINDOW GLASS (See page ED-78)**
9. **INSTALL REAR DOOR LOWER WINDOW FRAME SUB-ASSEMBLY (See page ED-78)**
10. **INSTALL REAR DOOR SERVICE HOLE COVER (See page ED-79)**
11. **INSTALL REAR DOOR INSIDE HANDLE SUB-ASSEMBLY (See page ED-80)**
12. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP (See page ED-80)**
13. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY (See page ED-81)**

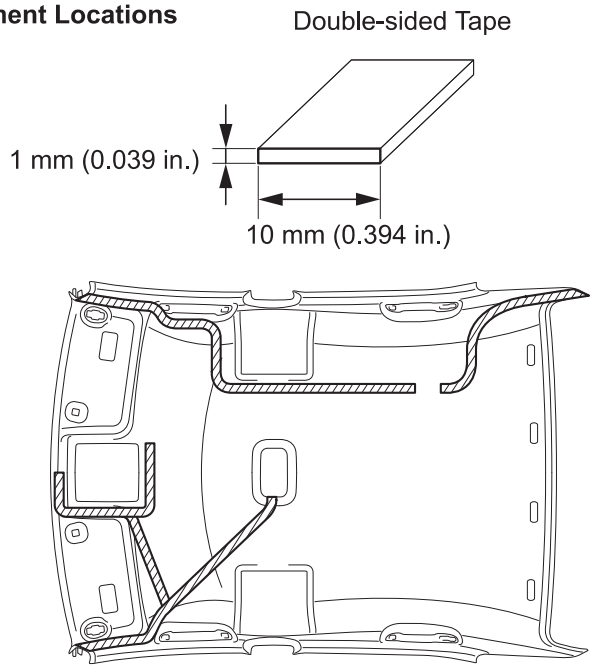
14. **INSTALL DOOR ASSIST GRIP COVER (See page ED-82)**
15. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG (See page ED-82)**

INSTALLATION

1. INSTALL NO. 1 ROOF WIRE (w/o Sliding Roof)

(a) Apply new double-sided tape to locations shown in the illustration while aligning the tape with the markings on the roof headlining.

Reference: Tape Attachment Locations



P B149255E01

NOTICE:
Securely apply the double-sided tape to prevent it from being out of alignment and peeling off.

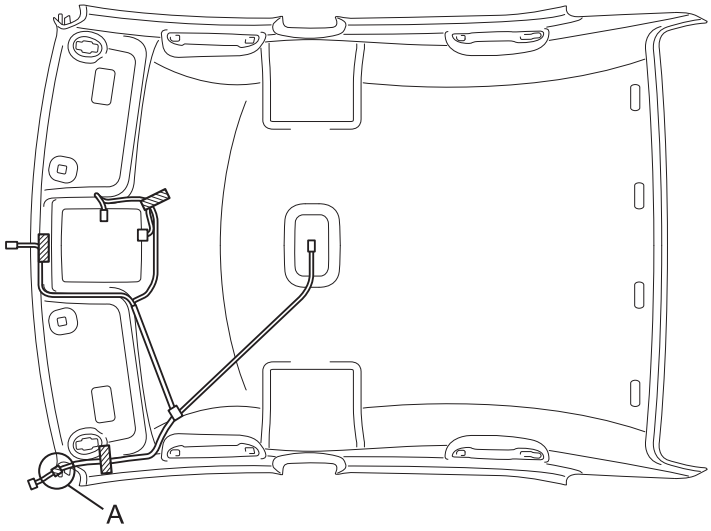
(b) Peel off the release paper from the double-sided tape.

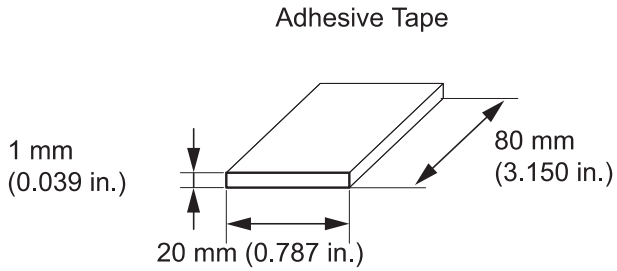
(c) Attach the No. 1 roof wire along the double-sided tape so that the marking surface of the wire harness faces downward.

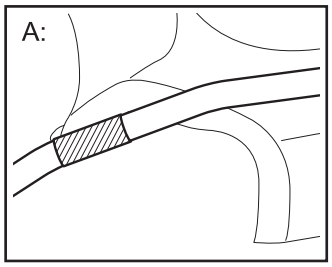
NOTICE:
- **Securely attach the No. 1 roof wire.**
- **Failure to do so may cause abnormal noise.**

(d) Apply adhesive tape to locations shown in the illustration.

Reference: Tape Attachment Locations







P

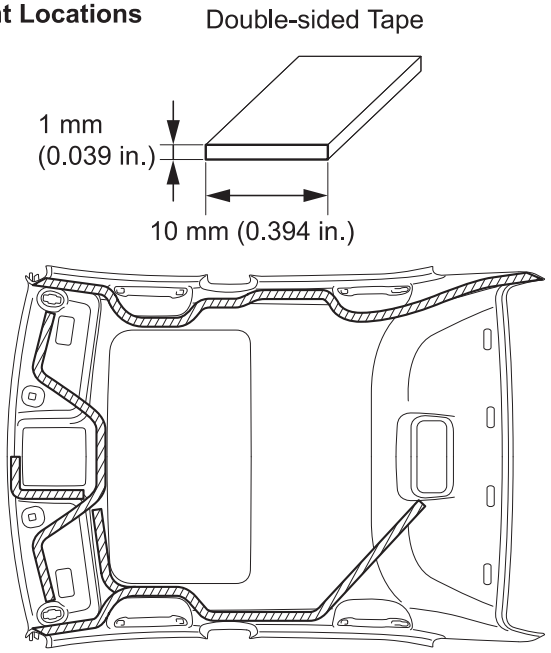
B149256E01

HINT:
As shown in illustration A, line up and secure the reference tape of the wire harness to the tip of the roof headlining assembly.

2. INSTALL NO. 1 ROOF WIRE (w/ Sliding Roof)

(a) Apply new double-sided tape to locations shown in the illustration while aligning the tape with the markings on the roof headlining.

Reference: Tape Attachment Locations



NOTICE:
Securely apply the double-sided tape to prevent it from being out of alignment and peeling off.

(b) Peel off the release paper from the double-sided tape.

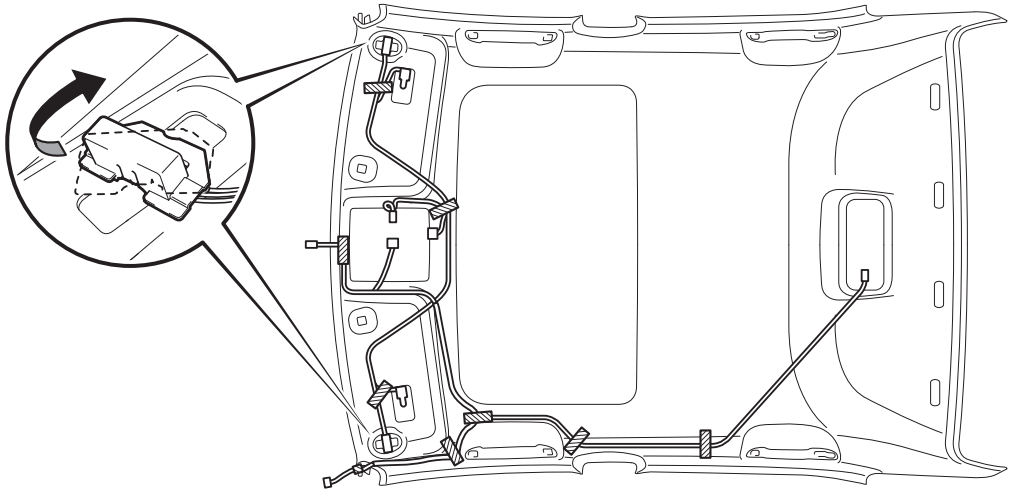
(c) Turn the visor connectors clockwise approximately 90° to install the connectors to the roof headlining.

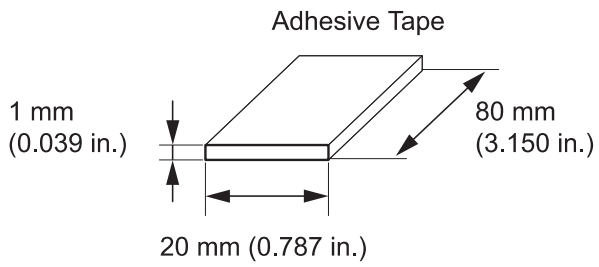
(d) Attach the No. 1 roof wire along the double-sided tape so that the marking surface of the wire harness faces downward.

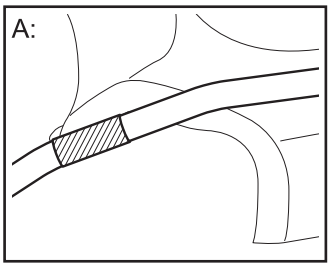
NOTICE:
- **Securely attach the No. 1 roof wire.**
- **Failure to do so may cause abnormal noise.**

(e) Apply adhesive tape to locations shown in the illustration.

Reference: Tape Attachment Locations







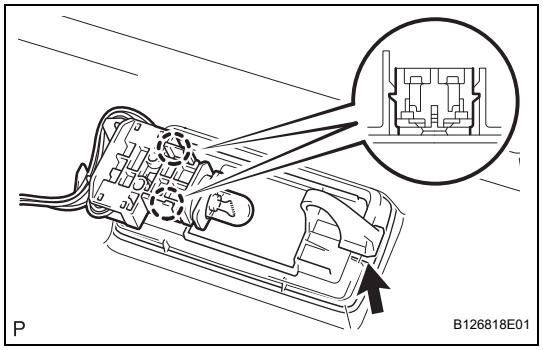
P B149258E01

HINT:
As shown in illustration A, line up and secure the reference tape of the wire harness to the tip of the roof headlining assembly.

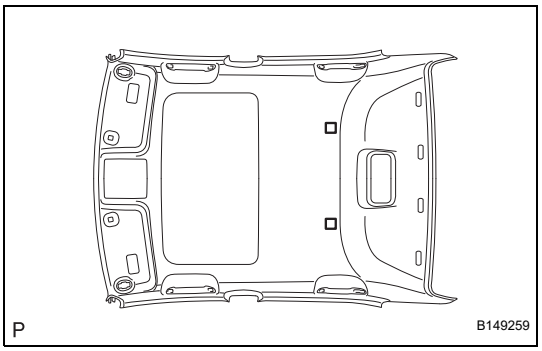
3. INSTALL ANTENNA CORD SUB-ASSEMBLY (See page AV-178)

4. INSTALL VANITY LIGHT ASSEMBLY

(a) Engage the 3 claws and install the vanity light assembly.

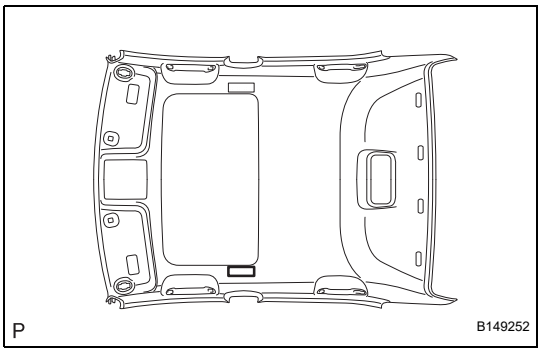


P B126818E01



5. INSTALL FASTENER HOOK (w/ Sliding Roof)

(a) Align the markings on the roof headlining assembly with the fastener hooks and install the fastener hooks using hot melt glue as shown in the illustration.



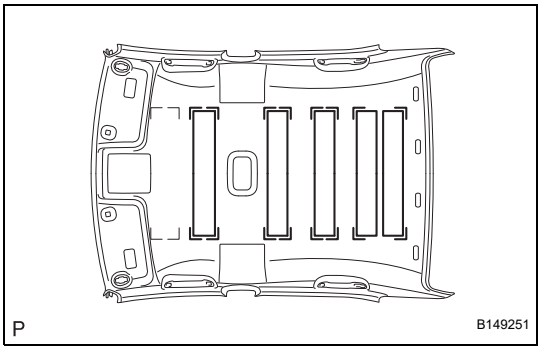
6. INSTALL NO. 2 REAR SIDE RAIL SPACER LH (w/ Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 2 rear side rail spacer LH and install the spacer using hot melt glue as shown in the illustration.

7. INSTALL NO. 2 REAR SIDE RAIL SPACER RH (w/ Sliding Roof)

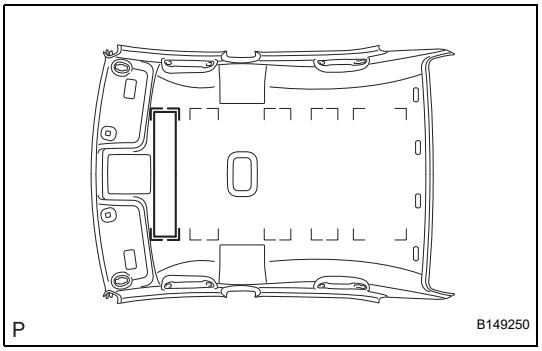
HINT:

Use the same procedure for the RH side and the LH side.



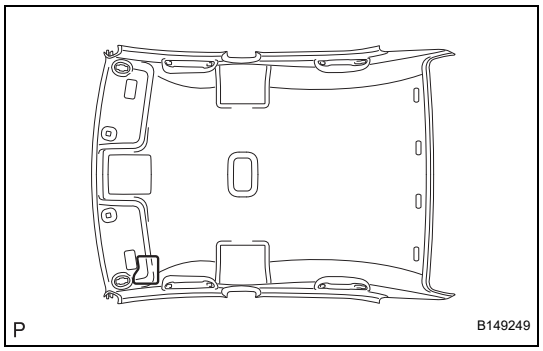
8. INSTALL NO. 4 ROOF SILENCER PAD (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 4 roof silencer pads and install the silencer pads using hot melt glue or double-sided tape as shown in the illustration.



9. INSTALL NO. 2 ROOF SILENCER PAD (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 2 roof silencer pad and install the silencer pad using hot melt glue or double-sided tape as shown in the illustration.



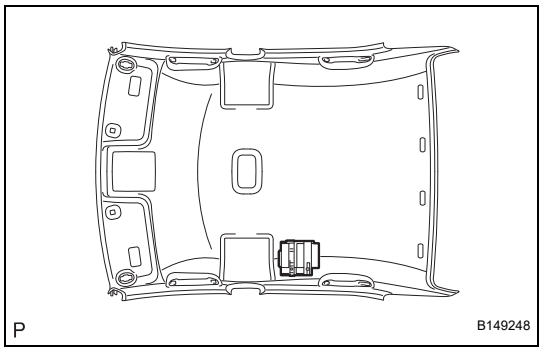
10. INSTALL ROOF SIDE RAIL SILENCER PAD LH (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the roof side rail silencer pad LH and install the silencer pad using hot melt glue as shown in the illustration.

11. INSTALL ROOF SIDE RAIL SILENCER PAD RH (w/o Sliding Roof)

HINT:

Use the same procedure for the RH side and the LH side.



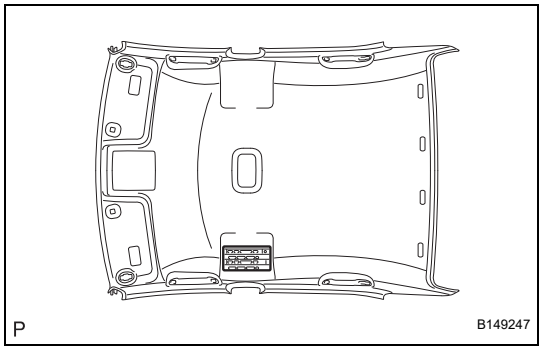
12. INSTALL NO. 3 REAR SIDE RAIL SPACER LH (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 3 rear side rail spacer LH and install the spacer using hot melt glue as shown in the illustration.

13. INSTALL NO. 3 REAR SIDE RAIL SPACER RH (w/o Sliding Roof)

HINT:

Use the same procedure for the RH side and the LH side.



14. INSTALL NO. 2 REAR SIDE RAIL SPACER LH (w/o Sliding Roof)

(a) Align the markings on the roof headlining assembly with the No. 2 rear side rail spacer LH and install the spacer using hot melt glue as shown in the illustration.

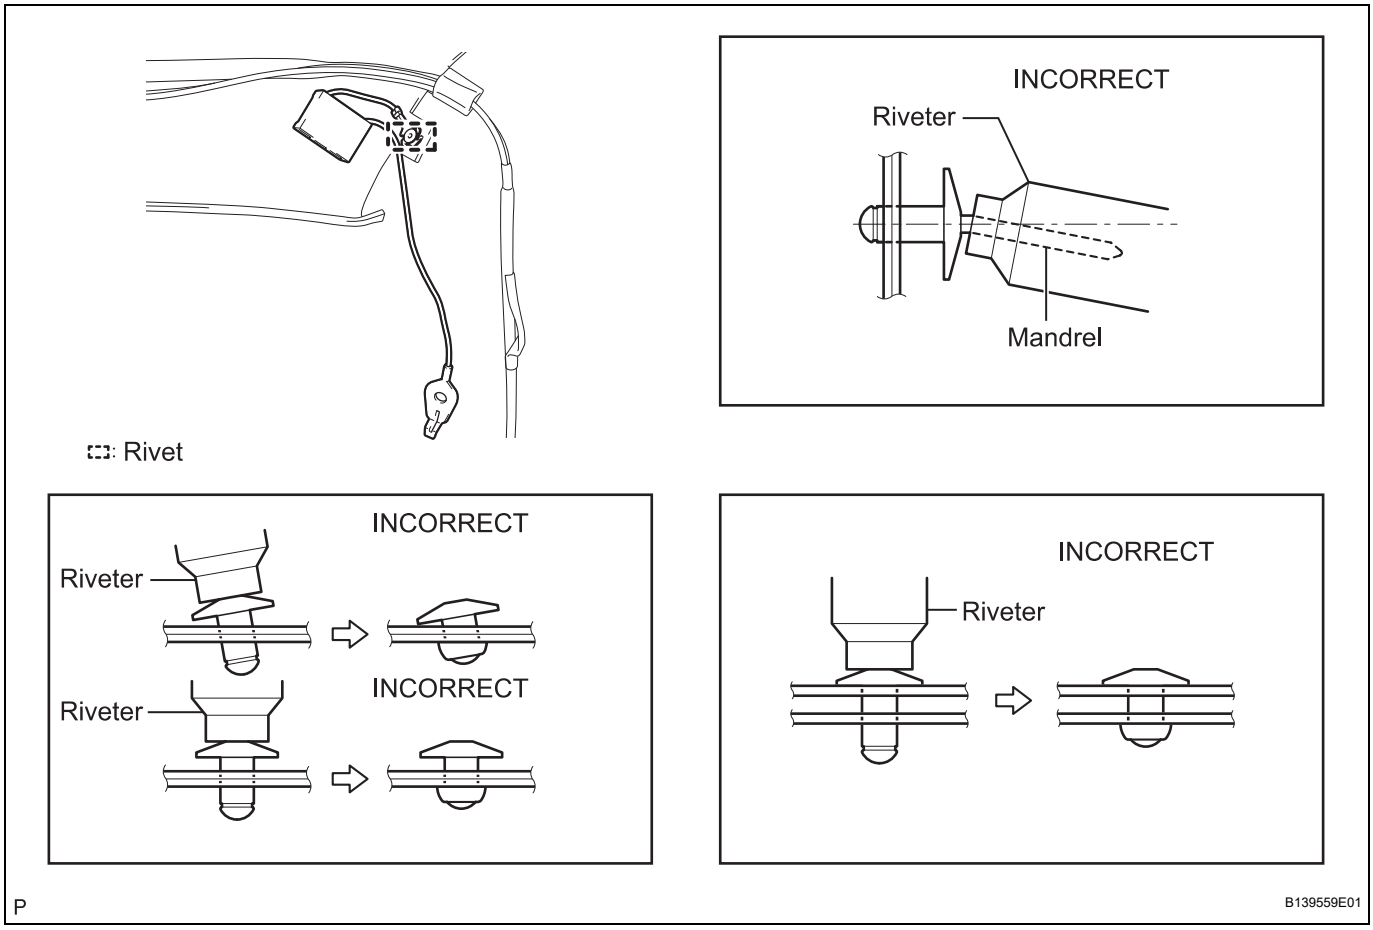
15. INSTALL NO. 2 REAR SIDE RAIL SPACER RH (w/o Sliding Roof)

HINT:

Use the same procedure for the RH side and the LH side.

16. INSTALL RADIO SETTING CONDENSER

(a) Using an air riveter or hand riveter with a nose piece, install the radio setting condenser with a new rivet.

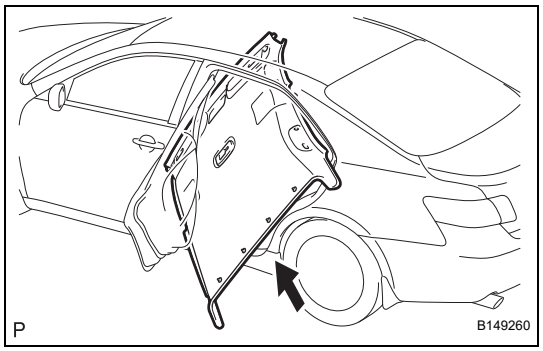


NOTICE:

- **Do not pry the rivet with the riveter, as this will cause damage to the riveter and mandrel.**
- **Confirm that the rivet is seated properly against the moulding. Do not tilt the riveter when installing the rivet to the moulding. Do not leave any space between the rivet head and moulding.**
- **Do not leave any space between the moulding and door frame. Firmly hold the 2 items together while installing the rivet.**

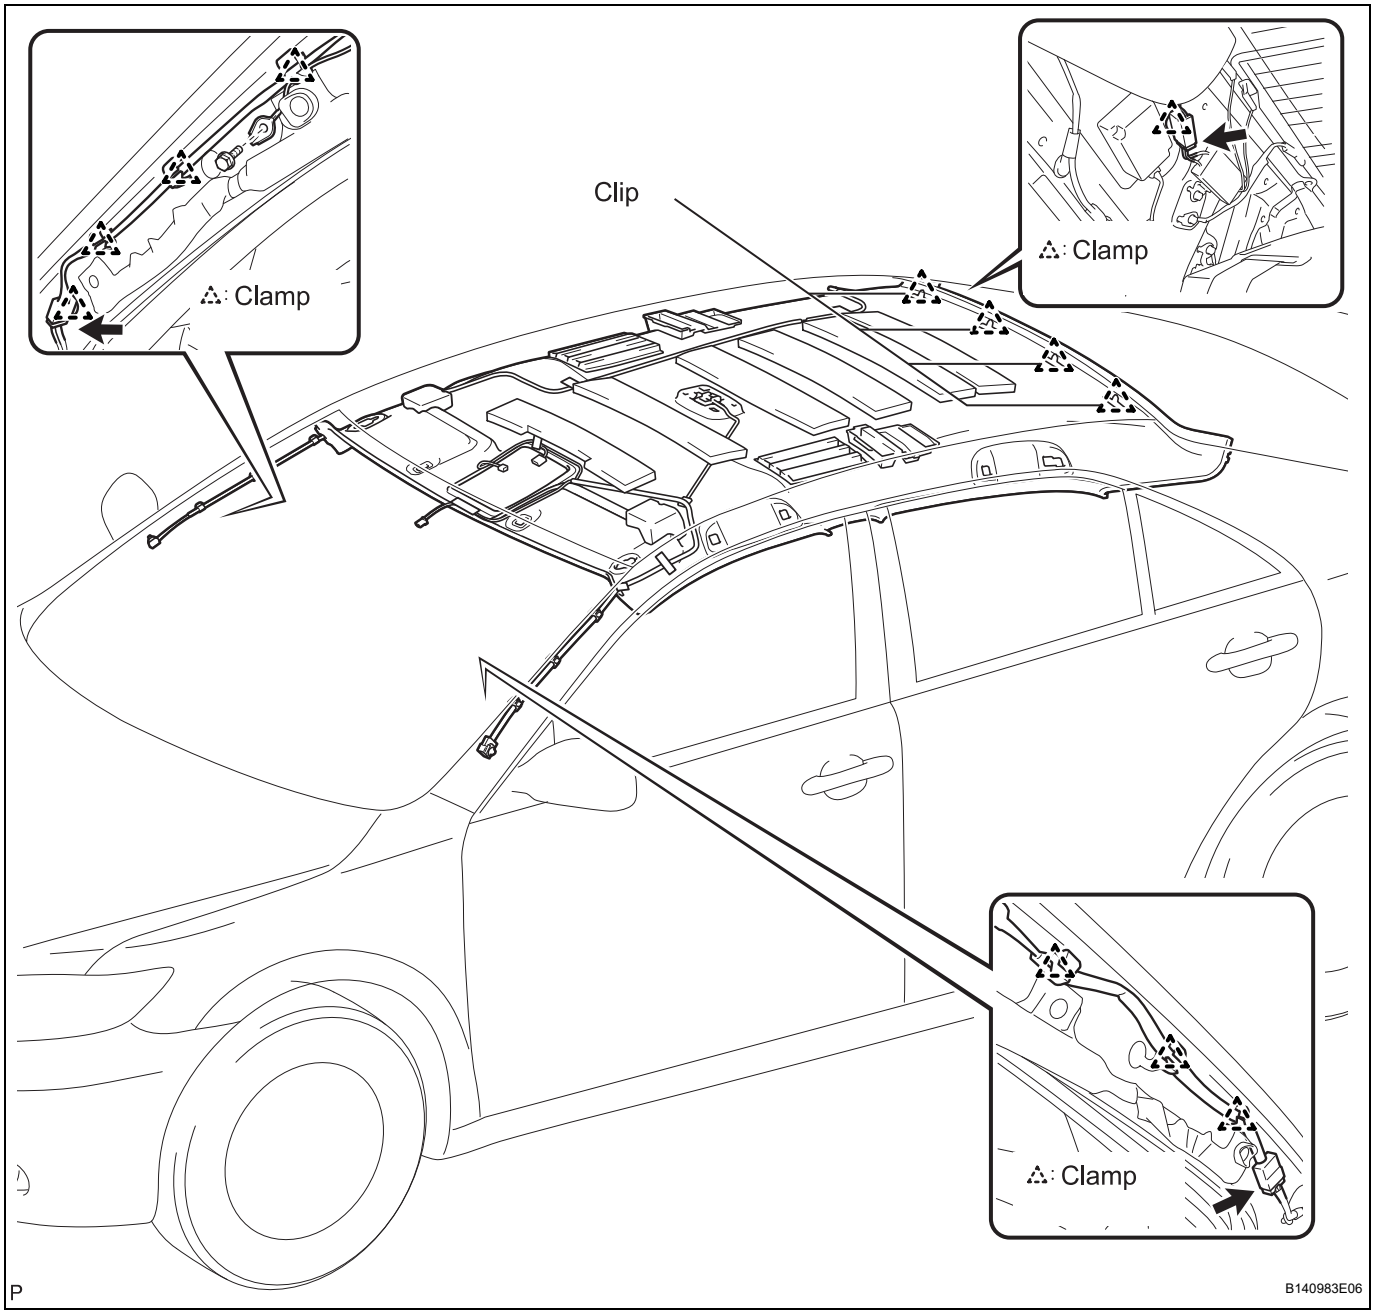
HINT:

If the rivet cannot be cut, pull it once and cut it.

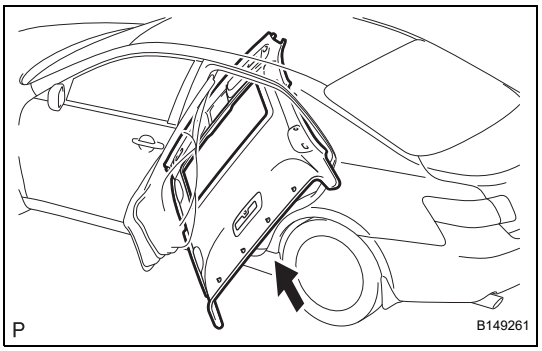


17. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof)

(a) Pull the roof headlining assembly into the vehicle through the rear left door.
(b) Engage the 4 clips.
(c) Connect the antenna cord sub-assembly connector and engage the clamp to the rear pillar RH.
(d) Connect the antenna cord sub-assembly connector and engage each clamp to the front pillar RH.
(e) Install the radio setting condenser to the front pillar RH with the bolt.
(f) Connect the No. 1 roof wire connector and engage each clamp to the front pillar LH.

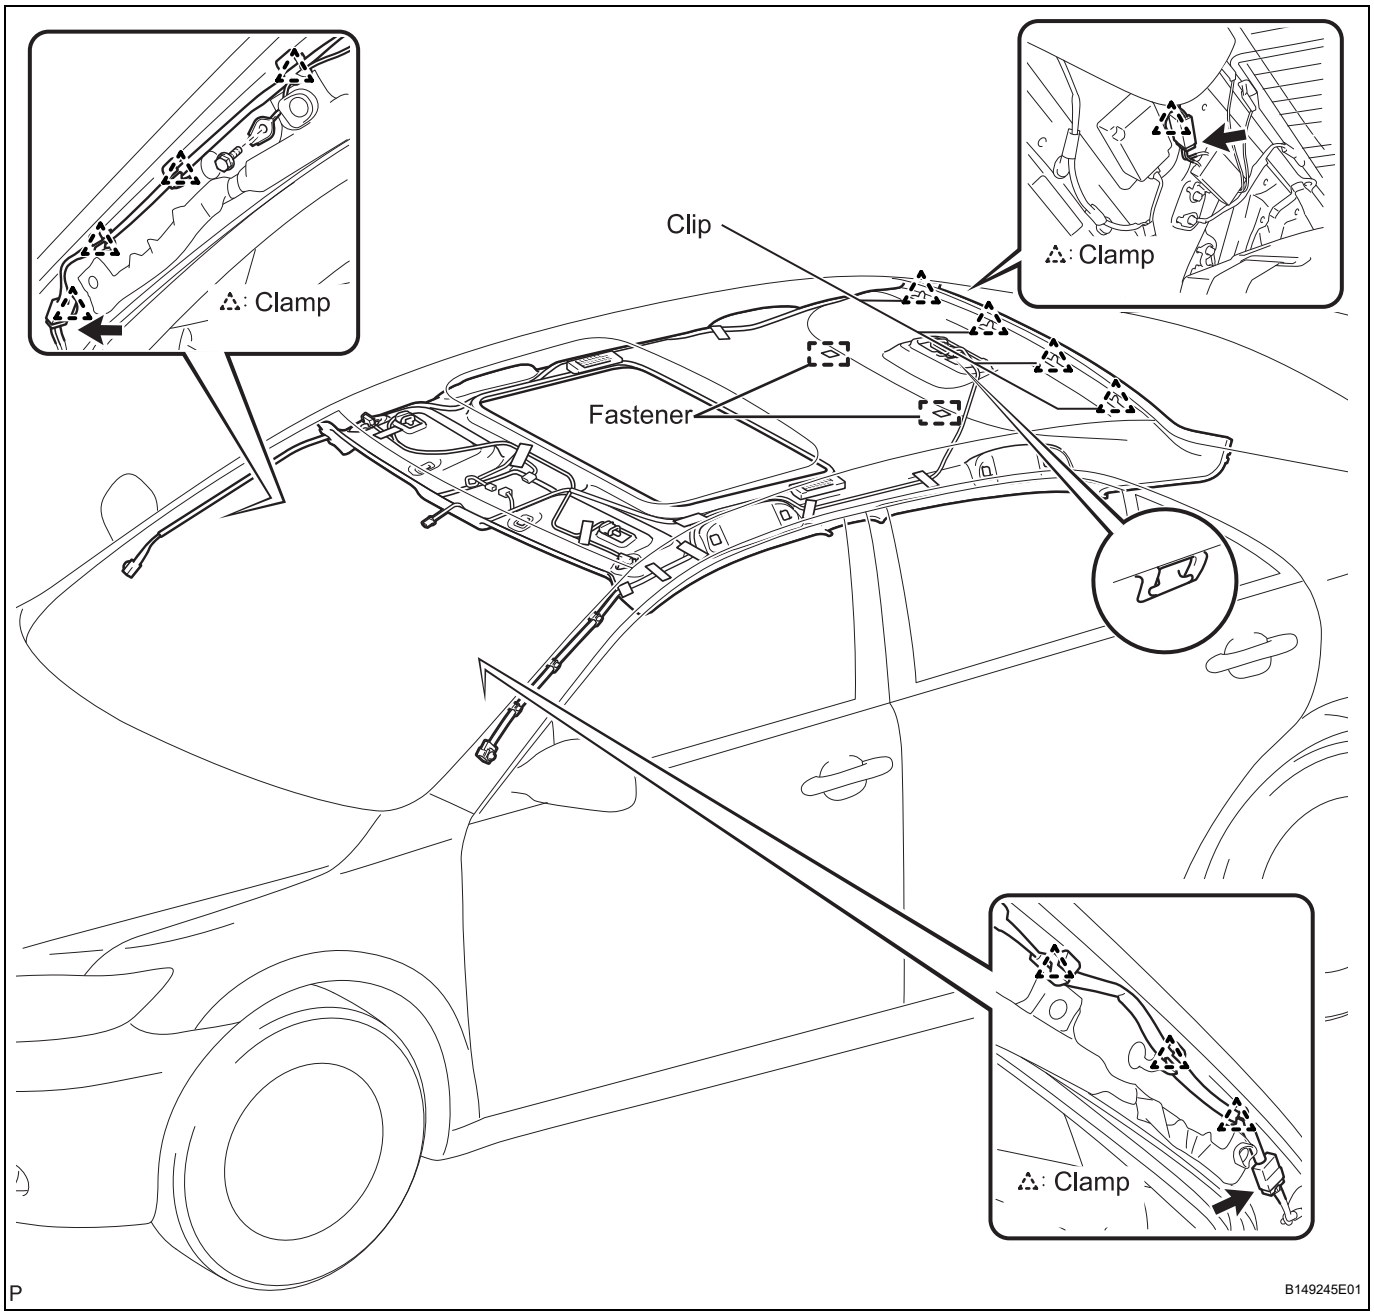


IR

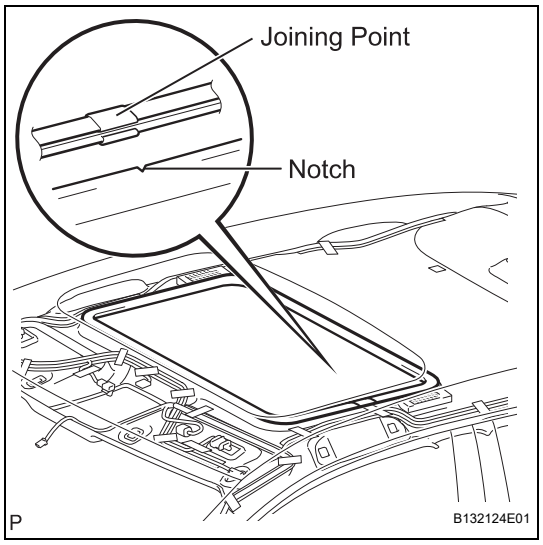


18. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof)

(a) Pull the roof headlining assembly into the vehicle through the rear left door.
(b) Engage the hook, 4 clips, and 2 fasteners.
(c) Connect the sliding roof drive gear connector.
(d) Connect the antenna cord sub-assembly connector and engage the clamp to the rear pillar RH.
(e) Connect the antenna cord sub-assembly connector and engage each clamp to the front pillar RH.
(f) Install the radio setting condenser to the front pillar RH with the bolt.
(g) Connect the No. 1 roof wire connector and engage each clamp to the front pillar LH.



IR

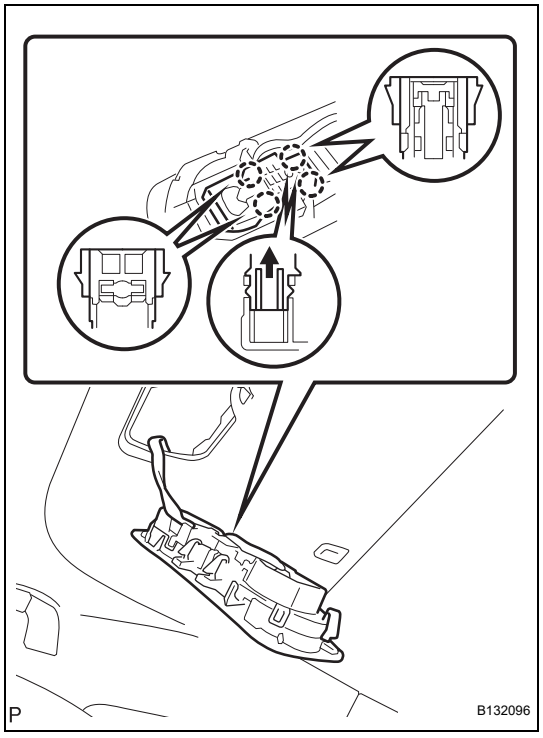


19. INSTALL SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof)

(a) Align the joining point of the moulding with the notch of the roof headlining assembly, and install the sun roof opening trim moulding.

NOTICE:

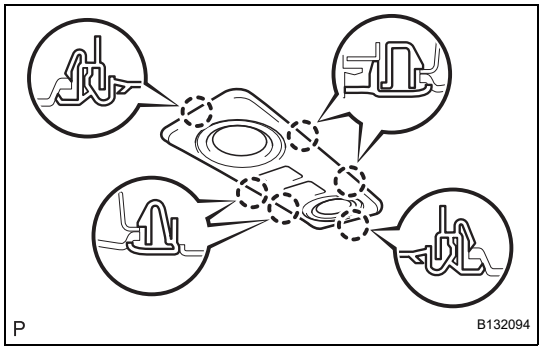
After installation, check that the corners fit correctly.



20. INSTALL SPOT LIGHT ASSEMBLY (w/ Sliding Roof)

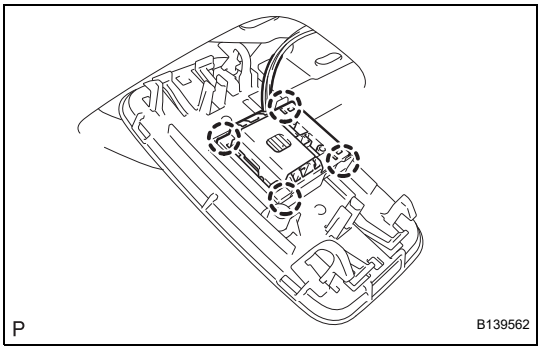
(a) Push the light bulb holder in the direction indicated by the arrow in the illustration to engage the claw.

(b) Engage the 4 claws.



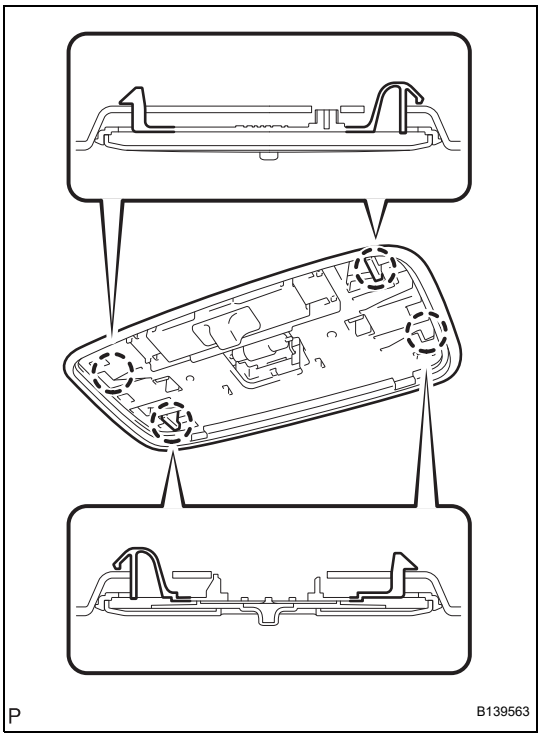
(c) Engage the 6 claws and install the spot light assembly.

IR

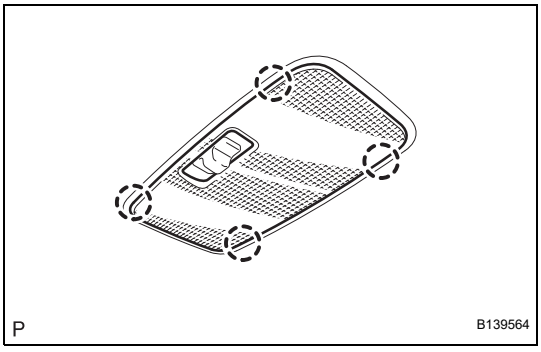


21. INSTALL NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof)

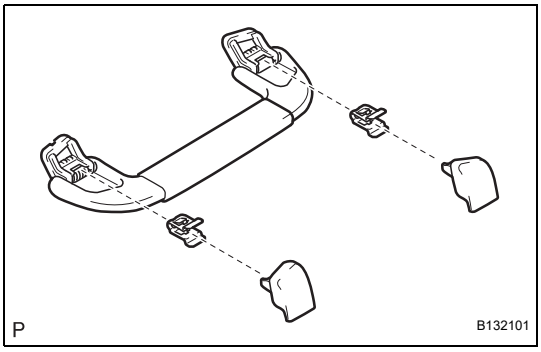
(a) Engage the 4 claws and install the room light switch base to the No. 1 room light assembly.



(b) Engage the 4 claws.

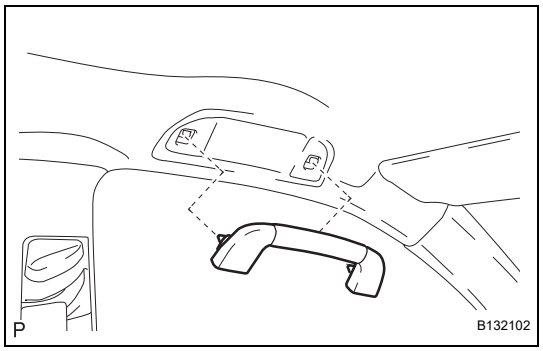


(c) Engage the 4 claws and install the lens cover.



22. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY

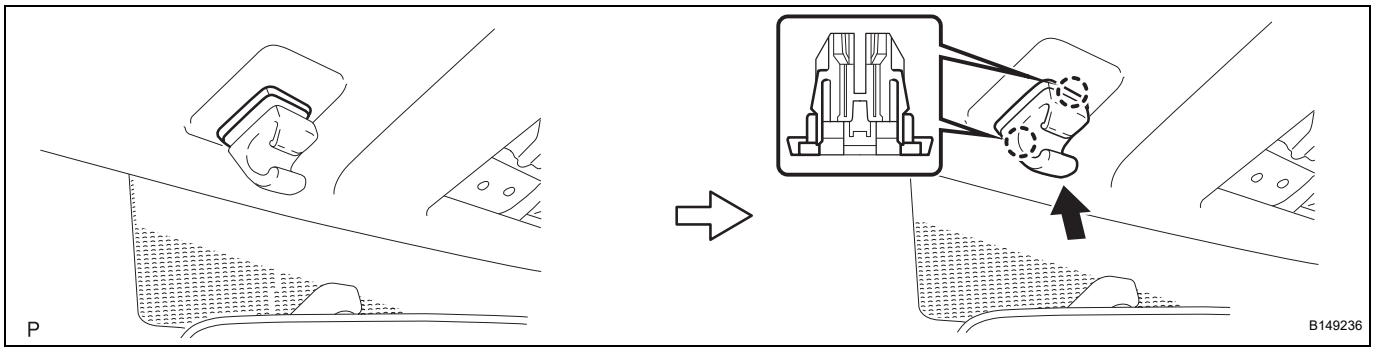
(a) Assemble the front assist grip sub-assembly as shown in the illustration.

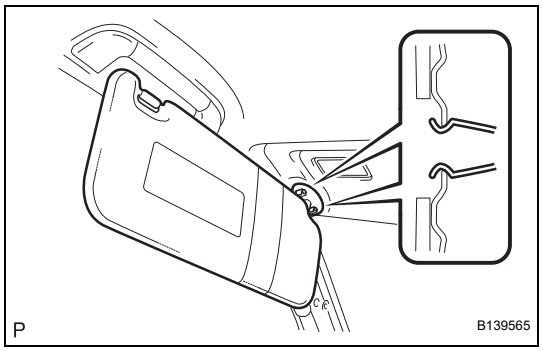


(b) Install the front assist grip sub-assembly.
HINT:
Use the same procedure for the RH side and the LH side.

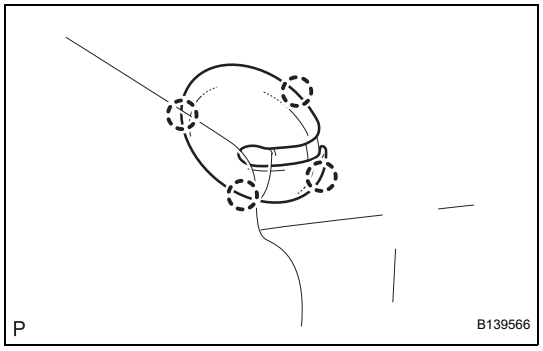
23. INSTALL REAR ASSIST GRIP SUB-ASSEMBLY
HINT:
Use the same procedure for the rear side and the front side.

24. INSTALL VISOR HOLDER
(a) Engage the 2 claws.
(b) Push in the visor holder as shown in the illustration.





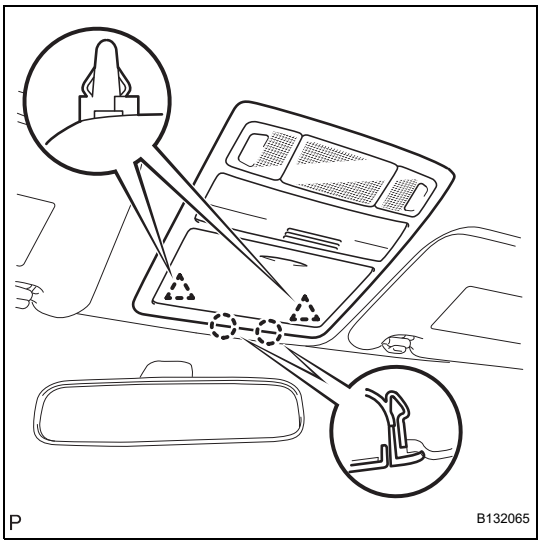
25. INSTALL VISOR ASSEMBLY LH
(a) Engage the 2 clips and install the visor assembly LH.



(b) Engage the 4 claws and install the visor bracket cover.

26. INSTALL VISOR ASSEMBLY RH
HINT:
Use the same procedure for the RH side and the LH side.

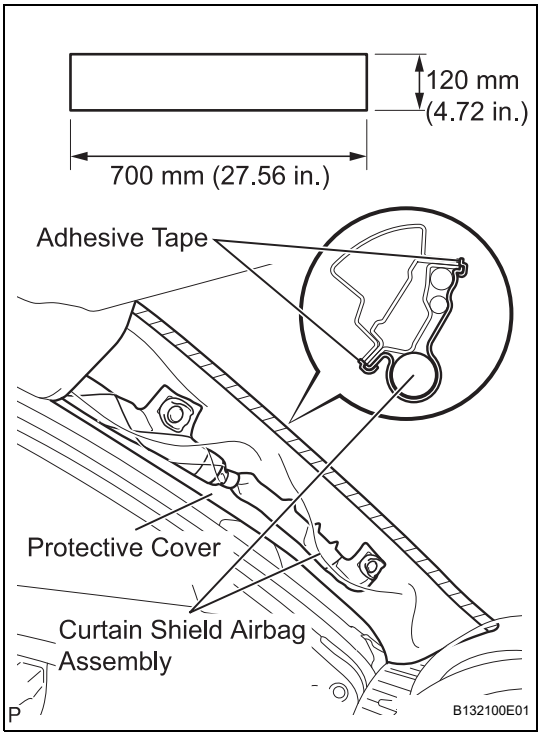
IR



27. INSTALL ROOF CONSOLE BOX ASSEMBLY

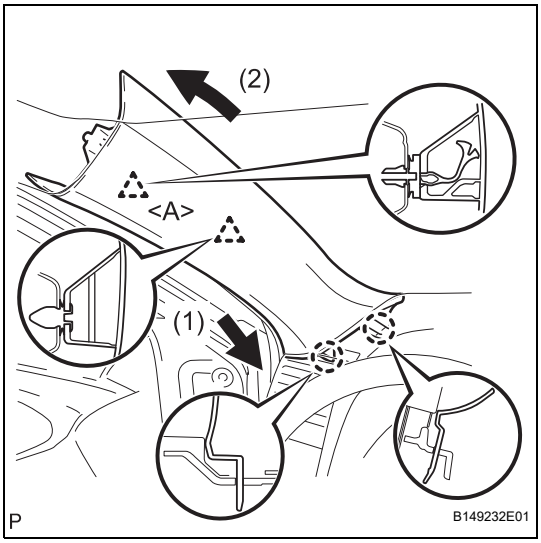
(a) Connect the connectors.

(b) Engage the 2 claws and 2 clips, and then install the roof console box assembly.



28. INSTALL FRONT PILLAR GARNISH LH

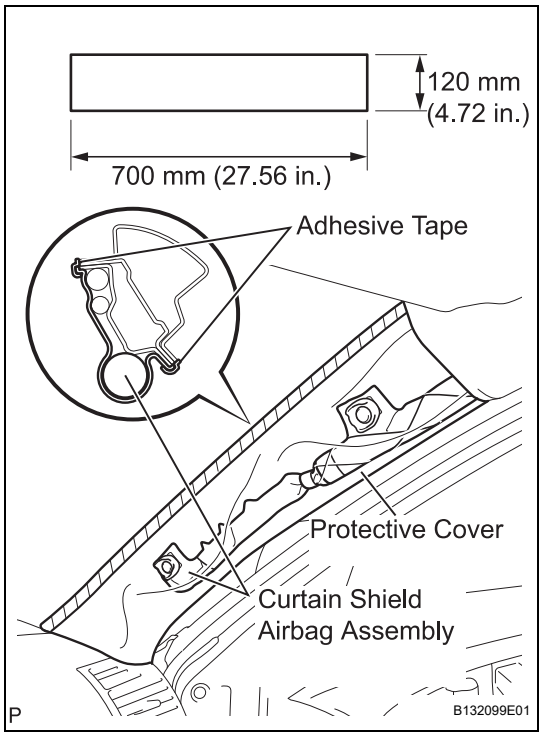
(a) Remove the protective cover.



(b) Install a new clip <A> on the front pillar garnish LH.

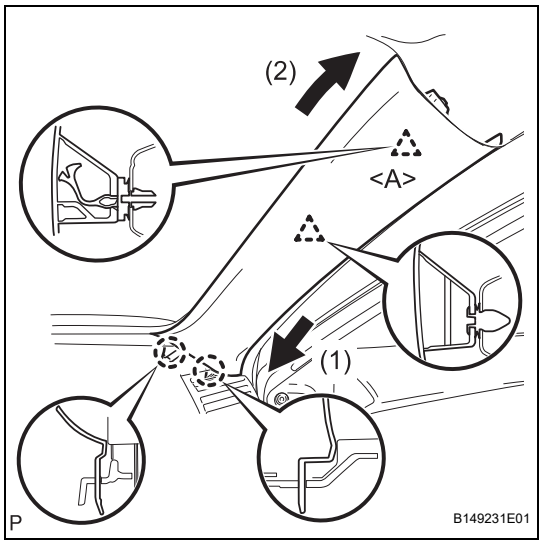
(c) Engage the 2 claws and 2 clips, then install the front pillar garnish LH.

IR



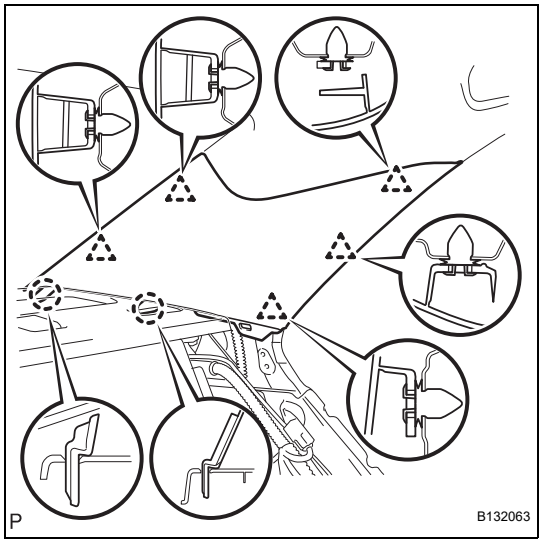
29. INSTALL FRONT PILLAR GARNISH RH

(a) Remove the protective cover.



(b) Install a new clip <A> on the front pillar garnish RH.

(c) Engage the 2 claws and 2 clips, then install the front pillar garnish RH.



30. INSTALL ROOF SIDE INNER GARNISH LH

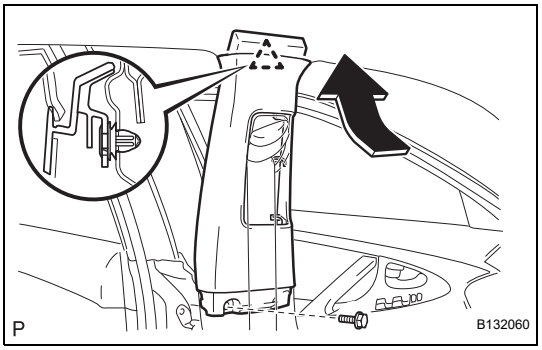
(a) Engage the 5 clips and 2 claws, then install the roof side inner garnish LH.

31. INSTALL ROOF SIDE INNER GARNISH RH

HINT:

Use the same procedure for the RH side and the LH side.

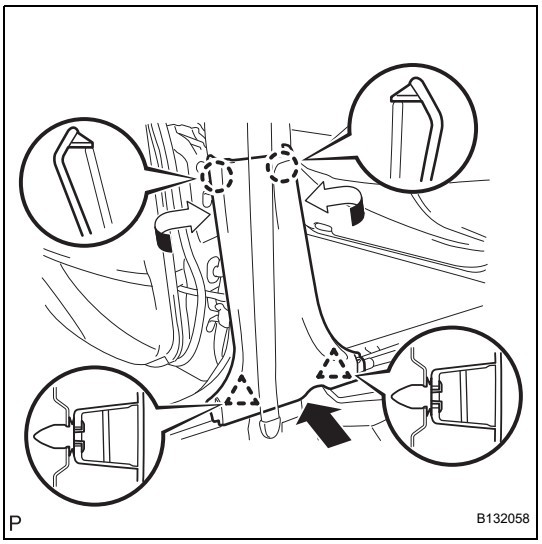
IR



32. INSTALL UPPER CENTER PILLAR GARNISH LH

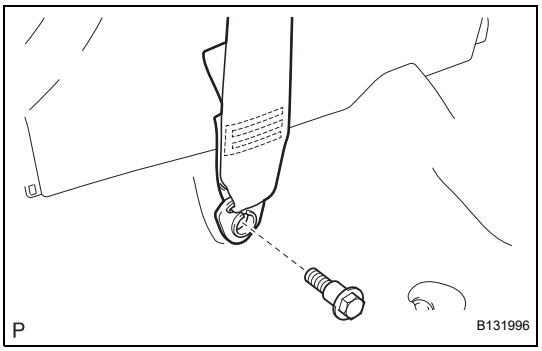
(a) Engage the clip.

(b) Install the upper center pillar garnish LH with the bolt.



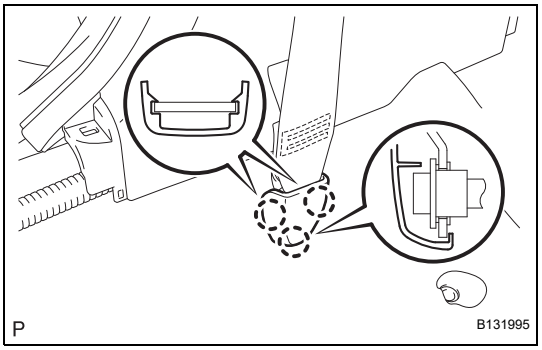
33. INSTALL LOWER CENTER PILLAR GARNISH LH

(a) Engage the 2 claws and 2 clips, then install the lower center pillar garnish LH.



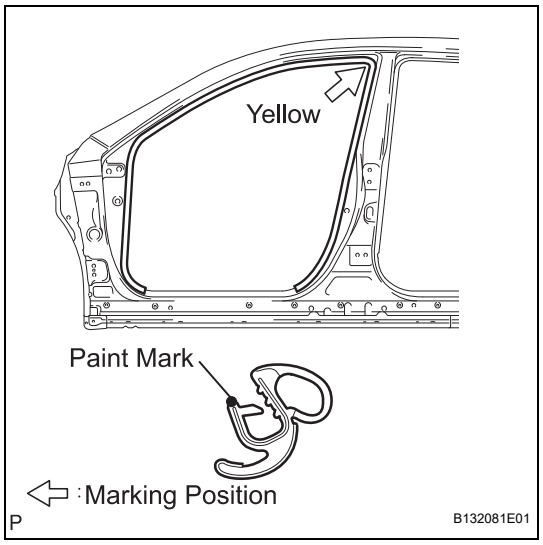
34. CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH

(a) Install the floor end of the front seat outer belt assembly with the bolt.
Torque: 42 N*m (428 kgf*cm, 31 ft.*lbf)



35. INSTALL LAP BELT OUTER ANCHOR COVER (for LH Side)

(a) Engage the 3 claws and install the lap belt outer anchor cover.

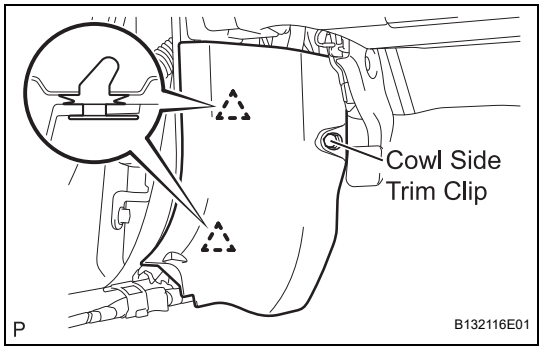


36. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH

(a) Install the front door opening trim weatherstrip LH as shown in the illustration.

NOTICE:

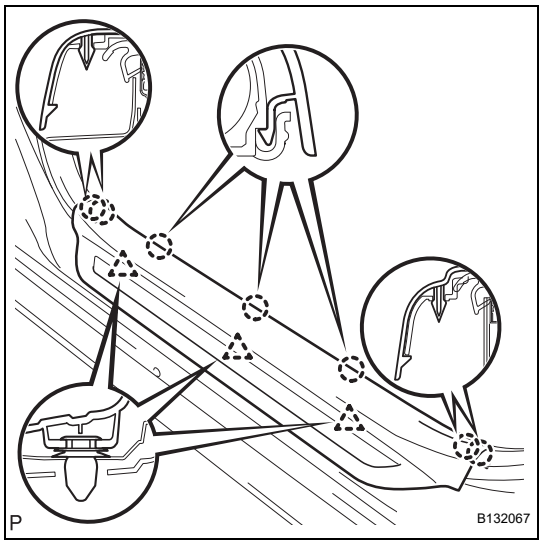
After installation, check that the corners fit correctly.



37. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH

(a) Engage the 2 clips.

(b) Install the cowl side trim sub-assembly LH with the cowl side trim clip.



38. INSTALL FRONT DOOR SCUFF PLATE LH

(a) Engage the 7 claws and 3 clips, then install the front door scuff plate LH.

39. INSTALL UPPER CENTER PILLAR GARNISH RH

HINT:

Use the same procedure for the RH side and the LH side.

40. INSTALL LOWER CENTER PILLAR GARNISH RH

HINT:

Use the same procedure for the RH side and the LH side.

41. CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH

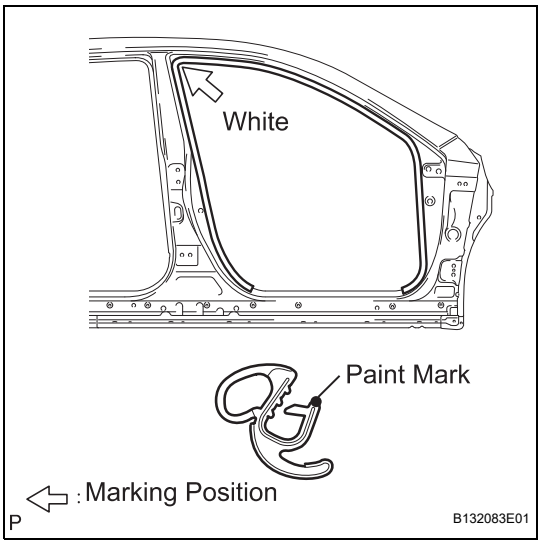
HINT:

Use the same procedure for the RH side and the LH side.

42. INSTALL LAP BELT OUTER ANCHOR COVER (for RH Side)

HINT:

Use the same procedure for the RH side and the LH side.



43. **INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Install the front door opening trim weatherstrip RH as shown in the illustration.
    NOTICE:
    After installation, check that the corners fit correctly.

44. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH**
    HINT:
    Use the same procedure for the RH side and the LH side.

45. **INSTALL FRONT DOOR SCUFF PLATE RH**
    HINT:
    Use the same procedure for the RH side and the LH side.

46. **INSTALL REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-80)**

47. **INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-81)**

48. **INSTALL DOOR ASSIST GRIP COVER LH (See page ED-82)**

49. **INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-82)**

50. **INSTALL REAR SIDE SEATBACK ASSEMBLY LH (See page SE-54)**

51. **INSTALL REAR SIDE SEATBACK ASSEMBLY RH**

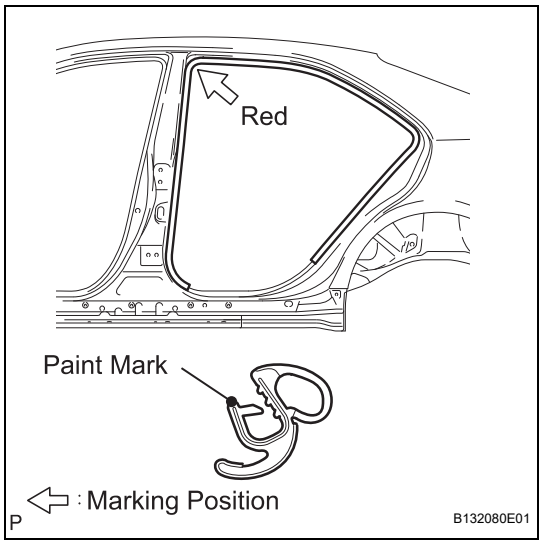
52. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**

53. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**

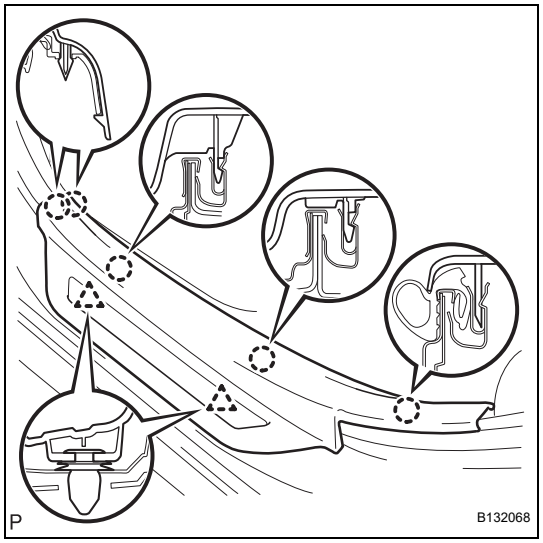
54. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**

55. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**

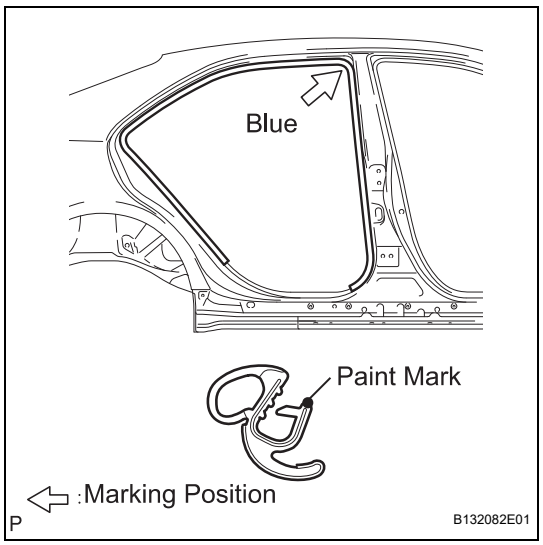
56. **INSTALL REAR SEAT HEADREST ASSEMBLY**



57. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH**
    (a) Install the rear door opening trim weatherstrip LH as shown in the illustration.
    NOTICE:
    After installation, check that the corners fit correctly.



58. **INSTALL REAR DOOR SCUFF PLATE LH**
    (a) Engage the 5 claws and 2 clips, then install the rear door scuff plate LH.



59. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH**
    (a) Install the rear door opening trim weatherstrip RH as shown in the illustration.
    NOTICE:
    After installation, check that the corners fit correctly.

60. **INSTALL REAR DOOR SCUFF PLATE RH**
    HINT:
    Use the same procedure for the RH side and the LH side.

61. **INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-38)**

62. **INSTALL INNER SEAT TRACK BRACKET COVER LH (for Power Seat) (See page SE-39)**

63. **INSTALL SEAT TRACK COVER LH (for Power Seat) (See page SE-39)**

64. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**

65. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat)**
HINT:
Use the same procedure for the RH side and the LH side.

66. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Power Seat)**
HINT:
Use the same procedure for the RH side and the LH side.

67. **INSTALL SEAT TRACK COVER RH (for Power Seat)**
HINT:
Use the same procedure for the RH side and the LH side.

68. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
HINT:
Use the same procedure for the RH side and the LH side.

69. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page SE-23)**

70. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page SE-24)**

71. **INSTALL SEAT TRACK COVER RH (for Manual Seat) (See page SE-24)**

72. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**

73. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**

74. **PERFORM INITIALIZATION**
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43)

75. **PERFORM ZERO POINT CALIBRATION AND SENSITIVITY CHECK (for Front Passenger Seat)**
(See page RS-239)

76. **INSPECT SRS WARNING LIGHT**
(See page RS-33)

77. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-39)**

78. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the sliding roof system.
- *: Use the intelligent tester.

1 VEHICLE BROUGHT TO WORKSHOP

NEXT

2 INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

3 INSPECT COMMUNICATION FUNCTION OF CAN COMMUNICATION SYSTEM*

(a) Using the intelligent tester, check if the CAN communication system is functioning normally.

Result

Result	Proceed to
DTC is not output	A
DTC is output	B

B → **Go to CAN COMMUNICATION SYSTEM**

A

4 PROBLEM SYMPTOMS TABLE

Result

Result	Proceed to
Fault is not listed in problem symptoms table	A
Fault is listed in problem symptoms table	B

CUSTOMIZE PARAMETERS

CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER (REFERENCE)

HINT:

The following items can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

Sliding roof ECU

Display (Item)	Default	Contents	Setting
OPEN/DOOR KEY	ON	Function to manually open sliding roof linked with power window if holding driver's side and passenger's side door key for 1.5 seconds or more to unlock position when power switch is off	ON/OFF
CLOSE/DOOR KEY	ON	Function to manually close sliding roof linked with power window if holding driver's side and passenger's side door key for 1.5 seconds or more to lock position when power switch is off	ON/OFF
OPEN/WIRELESS	ON	Function to manually open sliding roof linked with power window if pressing transmitter UNLOCK switch for 2.4 seconds or more when power switch is off	ON/OFF
CLOSE/WIRELESS	ON	Function to manually open sliding roof linked with power window if pressing transmitter LOCK switch for 2.4 seconds or more when power switch is off	ON/OFF
DOOR KEY OPER	SLIDE	Function to select tilt up or slide open of manual sliding roof operation linked with power window Activated by holding driver's side door key for 1.5 seconds or more to unlock position when power switch is off	TILT/SLIDE
WIRELESS OPER	SLIDE	Function to select tilt up or slide open of manual sliding roof operation linked with power window Activated by pressing transmitter UNLOCK switch for 2.4 seconds or more when power switch is off	TILT/SLIDE

INITIALIZATION

1. INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY

NOTICE:

When replacing the sliding roof drive gear, the sliding roof drive gear requires initialization. If a reset is not executed, the following functions do not operate: auto operation and key off operation.

(a) Turn the power switch on (IG).

(b) Make sure that the sliding roof is fully closed.

(c) Push and hold the CLOSE switch or the UP switch until the following movement finishes: Tilt up → approximately 1 second → tilt down → slide open → slide closed.

(d) Check that the sliding roof stops at the fully closed position.

(e) Finish the initialization.

(f) Check that the AUTO operation works normally.

NOTICE:

If the following conditions occur during initialization procedure, initialization will fail:

- **Power switch is turned off.**
- **Sliding roof control switch is released while sliding roof is operating.**
- **Vehicle speed is 5 km/h (3 mph) or more.**
- **Communication is cut off.**
- **Another switch is turned on during initialization.**
- **The vehicle experiences a strong vibration during initialization, such as the slamming of a door.**

HINT:

- If the sliding roof cannot be fully closed or its position has become misaligned, perform initialization again.
- If the roof glass stops moving or starts moving in the opposite direction while the CLOSE or UP switch is held down, continue to hold the switch for another 10 seconds or more to return the sliding roof control ECU to an uninitialized condition. Then perform the initialization procedure again.
- If the AUTO operation function and jam protection function do not operate after the drive gear has been reset, replace the sliding roof drive gear (sliding roof ECU).

PROBLEM SYMPTOMS TABLE

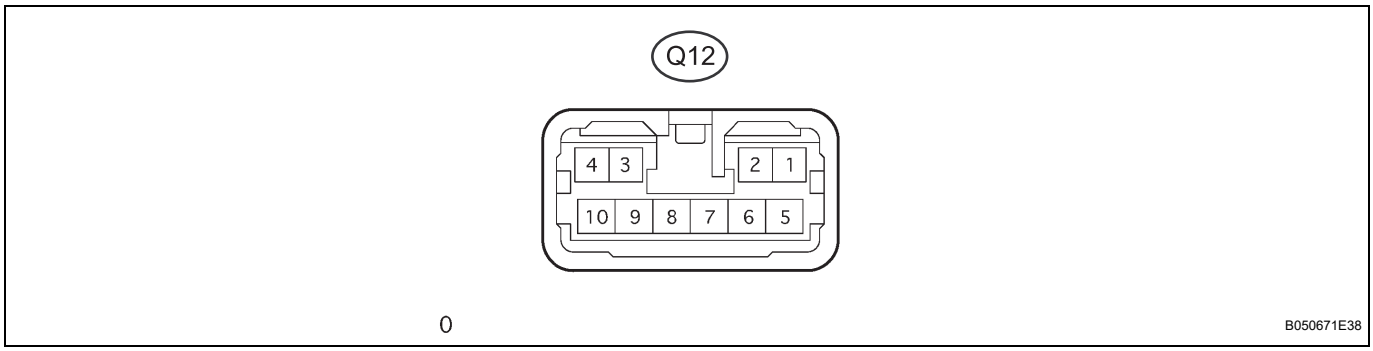
HINT:
Use the table below to help determine the cause of the problem symptom. The potential causes of the symptoms are listed in order of probability in the "Suspected Area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
Inspect the fuses and relays related to this system before inspecting the suspected areas below.

Sliding Roof System

Symptom	Suspected Area	See page
Sliding function and tilt function do not operate	Sliding roof ECU power source circuit	RF-28
Either sliding function or tilt function does not operate	Sliding roof control switch circuit	RF-26

TERMINALS OF ECU

1. CHECK SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)



(a) Disconnect the Q12 ECU connector.
(b) Measure the resistance and voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
B (Q12-1) - E (Q12-2)	B - W-B	+B power supply	Always	10 to 14 V
IG (Q12-5) - E (Q12-2)	Y - W-B	Power switch power supply	Power switch off	Below 1 V
IG (Q12-5) - E (Q12-2)	Y - W-B	Power switch power supply	Power switch on (IG)	10 to 14 V
OPN (Q12-7) - E (Q12-2)	BR - W-B	Sliding roof motor open	OPEN switch OFF	10 kΩ or higher
OPN (Q12-7) - E (Q12-2)	BR - W-B	Sliding roof motor open	OPEN switch ON	Below 1 Ω
CLS (Q12-9) - E (Q12-2)	L - W-B	Sliding roof motor closed	CLOSE switch OFF	10 kΩ or higher
CLS (Q12-9) - E (Q12-2)	L - W-B	Sliding roof motor closed	CLOSE switch ON	Below 1 Ω
UP (Q12-10) - E (Q12-2)	W - W-B	Sliding roof motor up	UP switch OFF	10 kΩ or higher
UP (Q12-10) - E (Q12-2)	W - W-B	Sliding roof motor up	UP switch ON	Below 1 Ω
DWN (Q12-8) - E (Q12-2)	G - W-B	Sliding roof motor down	DOWN switch OFF	10 kΩ or higher
DWN (Q12-8) - E (Q12-2)	G - W-B	Sliding roof motor down	DOWN switch ON	Below 1 Ω
E (Q12-2) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.
(c) Reconnect the Q12 ECU connector.
(d) Measure the voltage according to the value(s) in the table below.

RF

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
OPN (Q12-7) - E (Q12-2)	BR - W-B	Sliding roof motor open	Power switch on (IG), sliding roof closed, OPEN switch OFF	Below 1 V
OPN (Q12-7) - E (Q12-2)	BR - W-B	Sliding roof motor open	Power switch on (IG), sliding roof closed, OPEN switch ON	10 to 14 V
CLS (Q12-9) - E (Q12-2)	L - W-B	Sliding roof motor closed	Power switch on (IG), sliding roof open, CLOSE switch OFF	Below 1 V
CLS (Q12-9) - E (Q12-2)	L - W-B	Sliding roof motor closed	Power switch on (IG), sliding roof open, CLOSE switch ON	10 to 14 V
UP (Q12-10) - E (Q12-2)	W - W-B	Sliding roof motor up	Power switch on (IG), sliding roof tilted downward, UP switch OFF	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
UP (Q12-10) - E (Q12-2)	W - W-B	Sliding roof motor up	Power switch on (IG), sliding roof tilted downward, UP switch ON	10 to 14 V
DWN (Q12-8) - E (Q12-2)	G - W-B	Sliding roof motor down	Power switch on (IG), sliding roof tilted upward, DOWN switch OFF	Below 1 V
DWN (Q12-8) - E (Q12-2)	G - W-B	Sliding roof motor down	Power switch on (IG), sliding roof tilted upward, DOWN switch ON	10 to 14 V

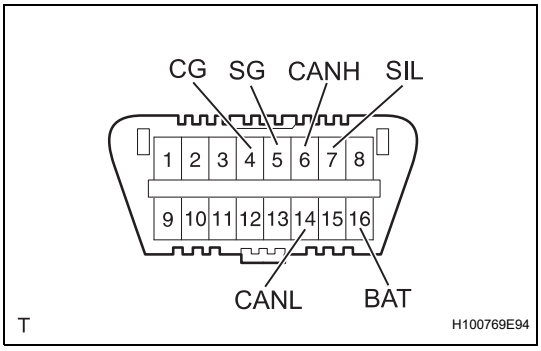
If the result is not as specified, the ECU may have a malfunction.

DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Sliding roof system data and Diagnostic Trouble Codes (DTCs) can be read through the vehicle's Data Link Connector 3 (DLC3). When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3



HINT:

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format. If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

Symbols (Terminals No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	HIGH-LEVEL CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-LEVEL CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-LEVEL CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - BAT (16)	LOW-LEVEL CAN bus line	Power switch off*	6 kΩ or higer

NOTICE:

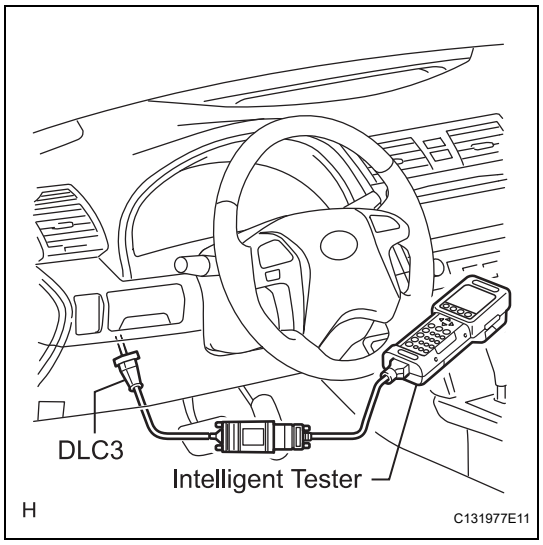
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.



3. INSPECT BATTERY VOLTAGE

Standard voltage:

11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:
Using the intelligent tester's Data List allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the Data List early in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Read the Data List according to the display on the tester.

SLIDE ROOF:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
OPEN SW	Slide switch open signal/ON or OFF	ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.	-
CLOSE SW	Slide switch close signal/ON or OFF	ON: CLOSE switch is pressed. OFF: CLOSE switch is not pressed.	-

HALL IC2 PULSE	Sliding roof operation signal/LO or HI	LO: Sliding roof motor is not operating. HI: Sliding roof motor is operating.	-
WIRLES OPN OPRT	Wireless sliding roof open signal/ ON or OFF	ON: Transmitter UNLOCK switch is pressed. OFF: Transmitter UNLOCK switch is not pressed.	-
WIRLES CL OPRT	Wireless sliding roof close signal/ ON or OFF	ON: Transmitter UNLOCK switch is not pressed. OFF: Transmitter UNLOCK switch is pressed.	-
KEY OPEN OPERT	Door key-linked open operation signal/ON or OFF	ON: Driver's side door is open for 1.5 sec. or more. OFF: Driver's side door is not open for 1.5 sec. or more.	-
KEY CLOSE OPERT	Door key-linked open operation signal/ON or OFF	ON: Driver's side door is kept closed for 1.5 sec. or more. OFF: Driver's side door is not kept closed for 1.5 sec. or more.	-
D-DOOR WARN SW	Driver's door courtesy light switch signal/ON or OFF	ON: Driver's door is open. OFF: Driver's door is closed.	-
IG (MPX)	Power switch signal (MPX signal)/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG (DIRCT SIG)	Power switch signal/ON or OFF	ON: Power switch on (IG) OFF: Power switch off	-
KEY OFF PERMS	Key-OFF sliding roof operation permit signal (Current)/ON or OFF	ON: Driver's side door is not closed within 45 sec. after power switch is turned off. OFF: Any status except "ON" status	-
WIRELESS OPER	Wireless sliding roof operating direction signal/Tilt or Slide	Tilt: Slide close direction → Tilt up direction SLIDE: Slide open direction → Tilt down direction	-
DOOR KEY OPER	Key-linked sliding roof operating direction signal/Tilt or Slide	Tilt: Slide close direction → Tilt up direction SLIDE: Slide open direction → Tilt down direction	-
CLOSE / WIRELESS	Wireless sliding roof close permit signal/Available or Not available	Available: No key is in vehicle and all doors are opened. Not Available: Any status except "Available" status.	-
OPEN / WIRELESS	Wireless sliding roof open permit signal/Available or Not available	Available: No key is in vehicle and all doors are closed. Not Available: Any status except "AVAIL" status.	-
CLOSE / DOOR KEY	Key-linked sliding roof close permit signal/Available or Not available	Available: Driver's side door is not closed within 45 sec. after power switch is turned off. Not Available: Any status except "AVAIL" status.	-
OPEN / DOOR KEY	Key-linked sliding roof open permit signal/Available or Not available	Available: Driver's side door is not closed within 45 sec. after power switch is turned off. Not Available: Any status except "AVAIL" status.	-
CURRENT DOWN SW	Down switch failure signal (Current)/Fail or Not Fail	Fail: Sliding roof tilt down signal failure (Current) Not Fail: Sliding roof tilt down signal not fail (Current)	-
CURRENT UP SW	Up switch failure signal (Current)/ Fail or Not Fail	Fail: Sliding roof tilt up signal failure (Current) Not Fail: Sliding roof tilt up signal not fail (Current)	-
CURRENT CLS SW	Close switch failure signal (Current)/Fail or Not Fail	Fail: Sliding roof close signal failure (Current) Not Fail: Sliding roof close signal not fail (Current)	-
CURRENT OPN SW	Open switch failure signal (Current)/Fail or Not Fail	Fail: Sliding roof open signal failure (Current) Not Fail: Sliding roof open signal not fail (Current)	-
PAST DOWN SW	Down switch failure signal (Past)/ Fail or Not Fail	Fail: Sliding roof tilt down signal failure (Past) Not Fail: Sliding roof tilt down signal not fail (Past)	-
PAST UP SW	Up switch failure signal (Past)/ Fail or Not Fail	Fail: Sliding roof tilt up signal failure (Past) Not Fail: Sliding roof tilt up signal not fail (Past)	-
PAST CLS SW	Close switch failure signal (Past)/ Fail or Not Fail	Fail: Sliding roof close signal failure (Past) Not Fail: Sliding roof close signal not fail (Past)	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
PAST OPN SW	Open switch failure signal (Past)/ Fail or Not Fail	Fail: Sliding roof open signal failure (Past) Not Fail: Sliding roof open signal not fail (Past)	-
#CODE	Number of trouble code	Number of trouble code	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's Active Test allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the Active Test early in troubleshooting is one way to save time. The Data List can be displayed during the Active Test.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Perform the Active Test according to the display on the tester.

SLIDE ROOF:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE ROOF	Operate sliding roof SLIDE CLOSE/TILT UP	CLOS/UP: Sliding roof SLIDE CLOSE or TILT UP operation occurs. OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof SLIDE OPEN/TILT DOWN	OPEN/DWN: Sliding roof SLIDE OPEN or TILT DOWN operation occurs OFF: Sliding roof is not operating	-

DIAGNOSTIC TROUBLE CODE CHART

If any trouble code is displayed during DTC check, check the circuit corresponding to the code in the table below. Proceed to the page given for the circuit.

Sliding Roof System

DTC Code	Detection Item	Trouble Area	See page
B2341	Sensor (Motor) Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-15
B2342	Switch Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-19
B2343	Position Initialization Incomplete	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-23
B2344	Position Failure	1. Sliding roof drive gear sub-assembly (Sliding roof control ECU) 2. Roof console box assembly (Sliding roof control switch) 3. Wire harness	RF-15

ON-VEHICLE INSPECTION

1. CHECK AUTO OPERATION

(a) Turn the power switch on (IG).

(b) When the roof glass is fully closed, press the OPEN switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully opened.

(c) When the roof glass is fully open, press the CLOSE switch for 0.3 seconds or more. Check that the roof glass automatically slides until it is fully closed.

(d) When the roof glass is fully closed, press the UP switch for 0.3 seconds or more. Check that the roof glass automatically tilts until it is fully tilted upward.

(e) When the roof glass is fully open, press the DOWN switch for 0.3 seconds or more. Check that the roof glass automatically tilts until it is fully tilted downward.

(f) When the auto operation is operating, check that pressing any personal light switch stops the roof glass operation.

HINT:

When pressing the switch for 0.3 seconds or less, the roof glass moves but auto operation does not operate.

2. CHECK SLIDING ROOF OPERATION AFTER POWER SWITCH IS TURNED OFF

(a) Turn the power switch from on (IG) to off, and check that the sliding roof operates. Then open and close the driver's side door once, and check that the sliding roof does not operate.

(b) Turn the power switch from on (IG) to off and wait for approximately 43 seconds. Check that the sliding roof does not operate.

(c) Operate the auto (SLIDE OPEN/CLOSE or TILT UP/DOWN) operation. While the roof glass is in motion, turn the power switch from on (IG) to off. Check that the auto operation continues until the roof glass opens or closes fully.

RF

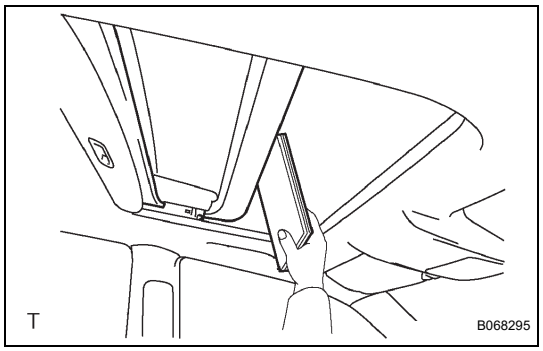
3. CHECK JAM PROTECTION FUNCTION

CAUTION:

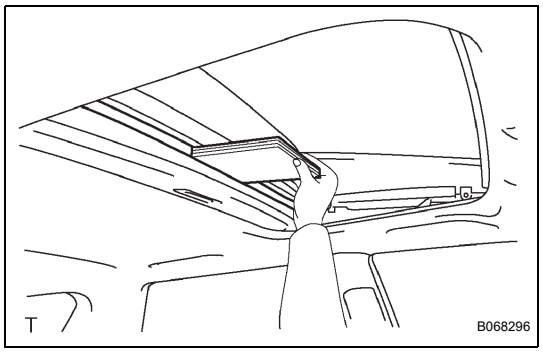
- **Do not use a part of your body; for example, your hand, to check the jam protection.**
- **Do not allow anything to become caught in the sliding roof by accident in this procedure.**
- **Perform the inspection from the inside of the vehicle.**

NOTICE:

- **Do not use hard objects such as a hammer, to avoid damage to the roof.**
- **If the jam protection does not operate, reset the sliding roof drive gear (motor).**



(a) When the sliding roof auto operation is operating and an object is caught between the vehicle body and glass, check that the roof glass opens 218 mm (8.58 in.) from the point of contact with the object, or opens fully if there is not an opening distance of 218 mm (8.58 in.).



(b) When the TILT UP/DOWN function is operating, and an object is caught between the vehicle body and the roof glass, check that the sliding roof tilts up fully.

DTC	B2341	Sensor (Motor) Failure

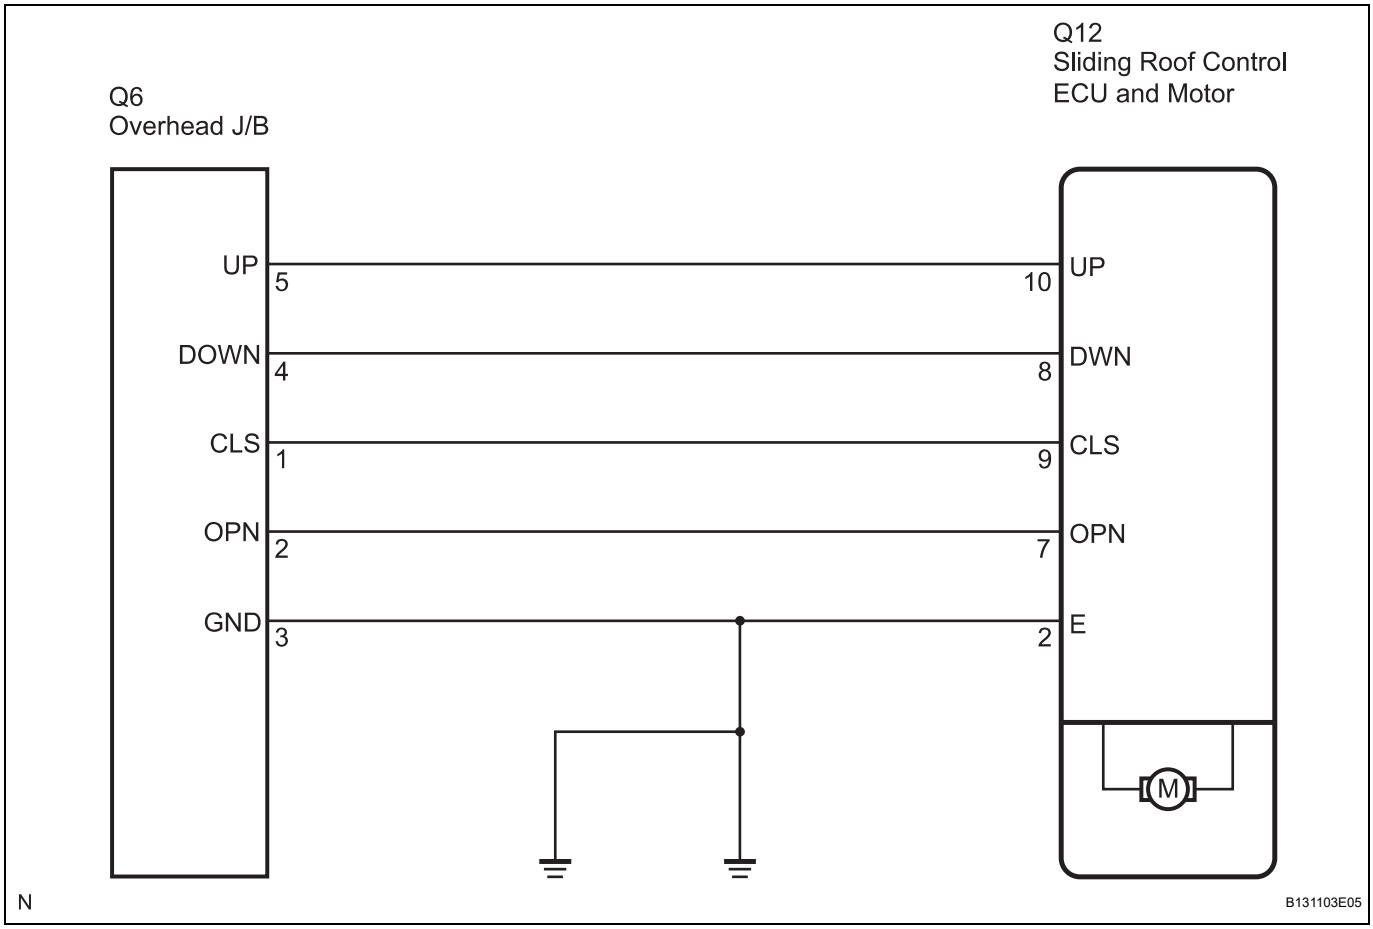
DTC	B2344	Position Failure

DESCRIPTION

When the sliding roof drive gear sub-assembly (sliding roof control ECU) detects malfunctions in the motor, and the sliding roof operation is stopped, DTC B2341 is output. When the sliding roof drive gear sub-assembly (sliding roof control ECU) detects malfunctions in the gear, and the sliding roof operation is stopped, DTC B2344 is output.

DTC No.	DTC Detection Condition	Trouble Area
B2341	Sensor (motor) Failure	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness
B2344	Position Failure	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness

WIRING DIAGRAM



RF

INSPECTION PROCEDURE

1	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, DOWN, CLOSE, and UP switches (See page RF-13).
OK:
Auto operation operates normally with OPEN, DOWN, CLOSE, and UP switches.

NG → **Go to step 3**

OK

2	DELETE DTC

(a) Delete the DTCs (See page RF-9).

NEXT

END

3	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

(a) Check that the sliding roof drive gear sub-assembly can be initialized (See page RF-6).
OK:
Sliding roof drive gear sub-assembly can be initialized.

NG → **Go to step 6**

OK

4	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, DOWN, CLOSE, and UP switches (See page RF-13).
OK:
Auto operation operates normally with OPEN, DOWN, CLOSE, and UP switches.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

5	DELETE DTC

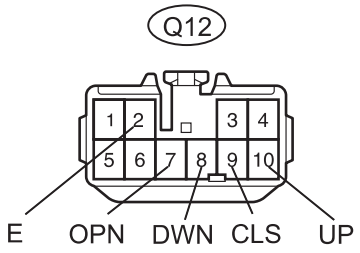
(a) Delete the DTCs (See page RF-9).

NEXT

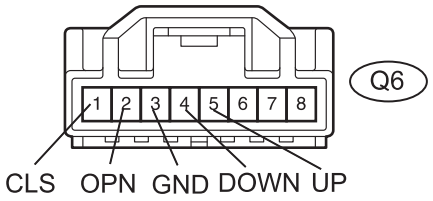
END

6	CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - ROOF CONSOLE BOX ASSEMBLY)

Sliding Roof Control ECU Connector:



Roof Console Box Assembly Connector:



N

B131169E03

(a) Disconnect the Q12 and Q6 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

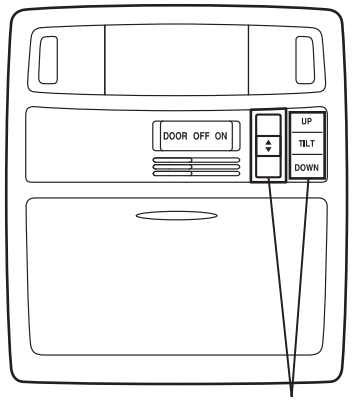
Tester Connection	Condition	Specified Condition
Q12-2 (E) - Q6-3 (GND)	Always	Below 1 Ω
Q12-7 (OPN) - Q6-2 (OPN)	Always	Below 1 Ω
Q12-8 (DWN) - Q6-4 (DOWN)	Always	Below 1 Ω
Q12-9 (CLS) - Q6-1 (CLS)	Always	Below 1 Ω
Q12-10 (UP) - Q6-5 (UP)	Always	Below 1 Ω
Q6-1 (CLS) - Body ground	Always	10 kΩ or higher
Q6-2 (OPN) - Body ground	Always	10 kΩ or higher
Q6-3 (GND) - Body ground	Always	Below 1 Ω
Q6-4 (DOWN) - Body ground	Always	10 kΩ or higher
Q6-5 (UP) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

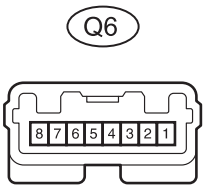
OK

7	INSPECT ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Roof Console Box Assembly Connector:



Sliding Roof Control Switch



N B131165E02

(a) Remove the roof console box assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q6-1 (CLS) - Q6-3 (GND)	CLOSE	Below 100 Ω
Q6-2 (OPN) - Q6-3 (GND)	OPEN	Below 100 Ω
Q6-4 (DOWN) - Q6-3 (GND)	DOWN	Below 100 Ω
Q6-5 (UP) - Q6-3 (GND)	UP	Below 100 Ω
Q6-1 (CLS) - Q6-3 (GND)	OPEN	1 kΩ or higher
Q6-2 (OPN) - Q6-3 (GND)	CLOSE	1 kΩ or higher
Q6-4 (DOWN) - Q6-3 (GND)	UP	1 kΩ or higher
Q6-5 (UP) - Q6-3 (GND)	DOWN	1 kΩ or higher

NG → **REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

DTC	B2342	Switch Failure

DESCRIPTION

This DTC is output when the sliding roof drive gear sub-assembly (sliding roof control ECU) detects that the OPEN, CLOSE, UP, or DOWN switch in the roof console box assembly (sliding roof control switch) is stuck for 30 seconds or more.

DTC No.	DTC Detection Condition	Trouble Area
B2342	Sliding roof drive gear sub-assembly (sliding roof control ECU) detects OPEN, CLOSE, UP, or DOWN switch in overhead junction block is stuck for 30 seconds or more	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness

WIRING DIAGRAM

Refer to DTC B2341 (See page RF-15).

INSPECTION PROCEDURE

1	READ VALUE ON INTELLIGENT TESTER (SLIDE OPEN AND TILT UP SWITCH)

(a) Use the DATA LIST to check if the sliding roof switch is functioning properly.

SLIDE ROOF

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
OPEN SW	Slide switch open signal/ON or OFF	ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.	-
CLOSE SW	Slide switch close signal/ON or OFF	ON: CLOSE switch is pressed. OFF: CLOSE switch is not pressed.	-
UP SW	Tilt switch up signal/ON or OFF	ON: UP switch is pressed. OFF: UP switch is not pressed.	-
DOWN SW	Tilt switch down signal/ON or OFF	ON: DOWN switch is pressed. OFF: DOWN switch is not pressed.	-

OK:
The intelligent tester displays as shown in the table according to the operation of each switch.

NG → **Go to step 4**

OK

2	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, CLOSE, UP, and DOWN switches (See page RF-13).

OK:
Auto operation operates normally with OPEN, CLOSE, UP, and DOWN switches.

NG → **Go to step 7**

OK

3	DELETE DTC

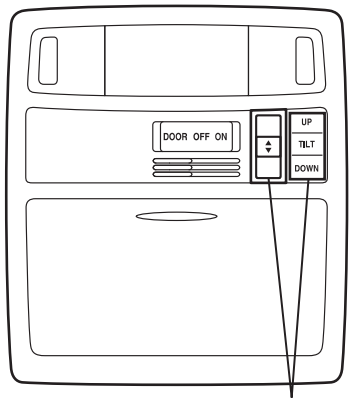
(a) Delete the DTCs (See page RF-9).

NEXT

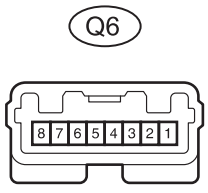
END

4	INSPECT ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Roof Console Box Assembly Connector:



Sliding Roof Control Switch



N B131165E02

(a) Remove the roof console box assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q6-1 (CLS) - Q6-3 (GND)	CLOSE	Below 100 Ω
Q6-2 (OPN) - Q6-3 (GND)	OPEN	Below 100 Ω
Q6-4 (DOWN) - Q6-3 (GND)	DOWN	Below 100 Ω
Q6-5 (UP) - Q6-3 (GND)	UP	Below 100 Ω
Q6-1 (CLS) - Q6-3 (GND)	OPEN	1 kΩ or higher
Q6-2 (OPN) - Q6-3 (GND)	CLOSE	1 kΩ or higher
Q6-4 (DOWN) - Q6-3 (GND)	UP	1 kΩ or higher
Q6-5 (UP) - Q6-3 (GND)	DOWN	1 kΩ or higher

OK → Go to step 10

NG

5	REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

(a) Temporarily replace the roof console box assembly (sliding roof control switch) with a new one or normally functioning one (See page LI-84).

NEXT

RF

6	DELETE DTC

(a) Delete the DTCs (See page RF-9).

NEXT

END

7	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

(a) Check that the sliding roof drive gear sub-assembly can be initialized (See page RF-6).
OK:
Sliding roof drive gear sub-assembly can be initialized.

NG → **Go to step 10**

OK

8	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, CLOSE, UP, and DOWN switches (See page RF-13).
OK:
Auto operation operates normally with OPEN, CLOSE, UP, and DOWN switches.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

9	DELETE DTC

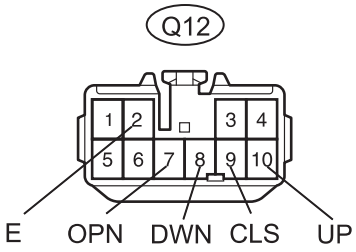
(a) Delete the DTCs (See page RF-9).

NEXT

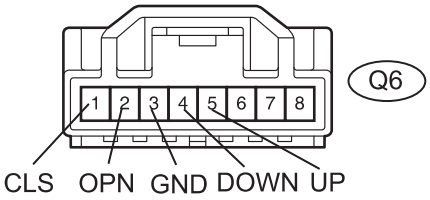
END

10	CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - ROOF CONSOLE BOX ASSEMBLY)

Sliding Roof Control ECU Connector:



Roof Console Box Assembly Connector:



N B131169E03

(a) Disconnect the Q12 and Q6 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Q12-2 (E) - Q6-3 (GND)	Always	Below 1 Ω
Q12-7 (OPN) - Q6-2 (OPN)	Always	Below 1 Ω
Q12-8 (DWN) - Q6-4 (DOWN)	Always	Below 1 Ω
Q12-9 (CLS) - Q6-1 (CLS)	Always	Below 1 Ω
Q12-10 (UP) - Q6-5 (UP)	Always	Below 1 Ω
Q6-1 (CLS) - Body ground	Always	10 kΩ or higher
Q6-2 (OPN) - Body ground	Always	10 kΩ or higher
Q6-3 (GND) - Body ground	Always	Below 1 Ω
Q6-4 (DOWN) - Body ground	Always	10 kΩ or higher
Q6-5 (UP) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

DTC	B2343	Position Initialization Incomplete

DESCRIPTION

This DTC is output when the sliding roof drive gear sub-assembly (sliding roof control ECU) has not been initialized.

DTC No.	DTC Detection Condition	Trouble Area
B2343	Sliding roof drive gear sub-assembly (sliding roof control ECU) has not been initialized	• Sliding roof drive gear sub-assembly (sliding roof control ECU) • Roof console box assembly (sliding roof control switch) • Wire harness

WIRING DIAGRAM

Refer to DTC B2341 (See page RF-15).

INSPECTION PROCEDURE

1	INITIALIZE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

(a) Check that the sliding roof drive gear sub-assembly can be initialized (See page RF-6).

OK:

Sliding roof drive gear sub-assembly can be initialized.

NG → **Go to step 3**

OK

2	CHECK SLIDING ROOF FUNCTION

(a) Check the auto operation with the OPEN, CLOSE, UP, and DOWN switches (See page RF-13).

OK:

Auto operation operates normally with OPEN, CLOSE, UP, and DOWN switches.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

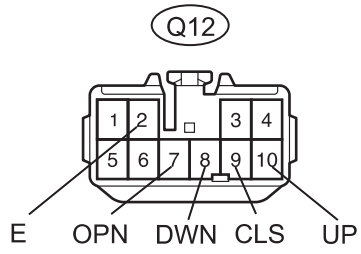
OK

END

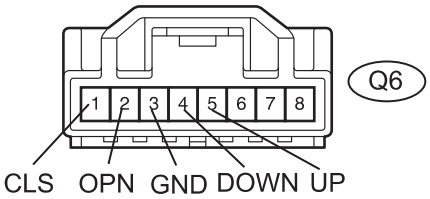
RF

3	CHECK WIRE HARNESS (SLIDING ROOF DRIVE GEAR - OVERHEAD JUNCTION BLOCK)

Sliding Roof Control ECU Connector:



Roof Console Box Assembly Connector:



N B131169E03

(a) Disconnect the Q12 and Q6 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

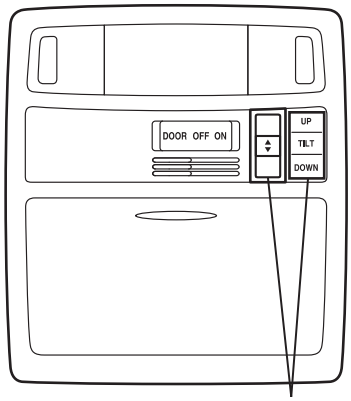
Tester Connection	Condition	Specified Condition
Q12-2 (E) - Q6-3 (GND)	Always	Below 1 Ω
Q12-7 (OPN) - Q6-2 (OPN)	Always	Below 1 Ω
Q12-8 (DWN) - Q6-4 (DOWN)	Always	Below 1 Ω
Q12-9 (CLS) - Q6-1 (CLS)	Always	Below 1 Ω
Q12-10 (UP) - Q6-5 (UP)	Always	Below 1 Ω
Q6-1 (CLS) - Body ground	Always	10 kΩ or higher
Q6-2 (OPN) - Body ground	Always	10 kΩ or higher
Q6-3 (GND) - Body ground	Always	Below 1 Ω
Q6-4 (DOWN) - Body ground	Always	10 kΩ or higher
Q6-5 (UP) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

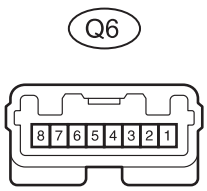
OK

4	INSPECT ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

Roof Console Box Assembly Connector:



Sliding Roof Control Switch



N B131165E02

(a) Remove the roof console box assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Switch Position	Specified Condition
Q6-1 (CLS) - Q6-3 (GND)	CLOSE	Below 100 Ω
Q6-2 (OPN) - Q6-3 (GND)	OPEN	Below 100 Ω
Q6-4 (DOWN) - Q6-3 (GND)	DOWN	Below 100 Ω
Q6-5 (UP) - Q6-3 (GND)	UP	Below 100 Ω
Q6-1 (CLS) - Q6-3 (GND)	OPEN	1 kΩ or higher
Q6-2 (OPN) - Q6-3 (GND)	CLOSE	1 kΩ or higher
Q6-4 (DOWN) - Q6-3 (GND)	UP	1 kΩ or higher
Q6-5 (UP) - Q6-3 (GND)	DOWN	1 kΩ or higher

NG → **REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)**

OK

REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)

Sliding Roof Control Switch Circuit

DESCRIPTION

The sliding roof drive gear sub-assembly (sliding roof control ECU) receives slide switch and tilt switch signals and drives its built-in motor.

WIRING DIAGRAM

Refer to DTC B2341 (See page RF-15).

INSPECTION PROCEDURE

1 **PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SLIDING ROOF OPERATION)**

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the sliding roof slides open/close and tilts up/down.

SLIDE ROOF

Tester Display	Test Part	Control Range	Diagnostic Note
SLIDE ROOF	Operate sliding roof SLIDE CLOSE/TILT UP	CLOS/UP: Sliding roof SLIDE CLOSE or TILT UP operation occurs. OFF: Sliding roof is not operating	-
SLIDE ROOF	Operate sliding roof SLIDE OPEN/TILT DOWN	OPN/DWN: Sliding roof SLIDE OPEN or TILT DOWN operation occurs OFF: Sliding roof is not operating	-

OK:
Sliding roof operates normally.

NG → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

OK

2 **READ VALUE OF INTELLIGENT TESTER (SLIDING ROOF SWITCH)**

(a) Use the DATA LIST to check if the sliding roof switch is functioning properly.

SLIDE ROOF

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
OPEN SW	Slide switch open signal/ON or OFF	ON: OPEN switch is pressed. OFF: OPEN switch is not pressed.	-
CLOSE SW	Slide switch close signal/ON or OFF	ON: CLOSE switch is pressed. OFF: CLOSE switch is not pressed.	-
UP SW	Tilt switch up signal/ON or OFF	ON: UP switch is pressed. OFF: UP switch is not pressed.	-
DOWN SW	Tilt switch down signal/ON or OFF	ON: DOWN switch is pressed. OFF: DOWN switch is not pressed.	-

OK:
The intelligent tester displays as shown in the table according to the operation of each switch.

OK → **REPLACE SLIDING ROOF DRIVE GEAR SUB-ASSEMBLY (SLIDING ROOF CONTROL ECU)**

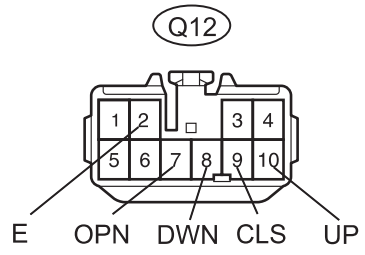
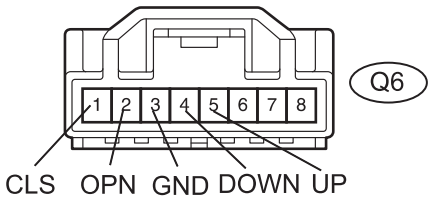
3	CHECK WIRE HARNESS (SLIDING ROOF CONTROL ECU - ROOF CONSOLE BOX ASSEMBLY)

Sliding Roof Control ECU Connector:



Roof Console Box Assembly Connector:



N B131169E03

(a) Disconnect the Q12 and Q6 connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Q12-2 (E) - Q6-3 (GND)	Always	Below 1 Ω
Q12-7 (OPN) - Q6-2 (OPN)	Always	Below 1 Ω
Q12-8 (DWN) - Q6-4 (DOWN)	Always	Below 1 Ω
Q12-9 (CLS) - Q6-1 (CLS)	Always	Below 1 Ω
Q12-10 (UP) - Q6-5 (UP)	Always	Below 1 Ω
Q6-1 (CLS) - Body ground	Always	10 kΩ or higher
Q6-2 (OPN) - Body ground	Always	10 kΩ or higher
Q6-3 (GND) - Body ground	Always	Below 1 Ω
Q6-4 (DOWN) - Body ground	Always	10 kΩ or higher
Q6-5 (UP) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

RF **OK**

REPLACE ROOF CONSOLE BOX ASSEMBLY (SLIDING ROOF CONTROL SWITCH)

SYSTEM DESCRIPTION

1. BRIEF DESCRIPTION

(a) Two different types of CAN buses are used. The CAN buses are classified into two types based on typical communication speed.
The HS-CAN bus is a high-speed communication bus that is used for powertrain, chassis, and some body electrical communication. The HS-CAN bus is referred to as the "CAN bus" and it operates at speeds of approximately 500 kbps. Terminating resistors for the HS-CAN bus are located in the HV control ECU and combination meter.
The MS-CAN bus is a medium-speed communication bus that is used for body electrical communication. The MS-CAN bus is referred to as the "CAN MS bus" and it operates at speeds of approximately 250 kbps. Terminating resistors for the MS-CAN bus are located in the main body ECU and the certification ECU. The resistance of the MS-CAN bus cannot be measured from the DLC3 connector.
Communication between these networks is handled via the main body ECU, which acts as a gateway.

(b) By pairing the CANH and CANL bus wires, the CAN performs communication based on differential voltage.

(c) Many ECUs (sensors) installed on the vehicle operate by sharing information and communicating with each other.

(d) The CAN has two resistors of 120 Ω which are necessary to enable communication on the main bus wire.

2. DEFINITION OF TERMS

(a) Main bus wire

(1) The main bus wire is a wire harness between the two terminus circuits on the bus (communication line).

(b) Branch wire

(1) The branch wire is a wire harness which diverges from the main bus wire to an ECU or sensor.

(c) Terminating resistors

(1) Two resistors of 120 Ω are installed in parallel across the ends of the CAN main bus wires. They are called terminating resistors. These resistors allow the changes of the voltage differential between the CAN bus wires to be accurately judged. To allow proper function of CAN communication, it is necessary to have both terminating resistors installed. Since the two resistors are installed in parallel, a measurement of resistance between the two CAN bus wires should produce a reading of approximately 60 Ω.

3. ECUS OR SENSORS WHICH COMMUNICATE THROUGH CAN COMMUNICATION SYSTEM

(a) Skid control ECU
(b) Air conditioning amplifier
(c) Main body ECU
(d) Combination meter ECU
(e) Yaw rate sensor
(f) Steering angle sensor
(g) Center airbag sensor
(h) HV control ECU
(i) Certification ECU (with smart key system)
(j) Radio and navigation assembly
(k) Power steering ECU
(l) Accessory gateway

4. DIAGNOSTIC CODE FOR CAN COMMUNICATION SYSTEM

(a) DTCs for the CAN communication system are as follows: U0001, U0073, U0100, U0100-211, U0100-212, U0100-530, U0100-774, U0100-784, U0123, U0124, U0126, U0129, U0129-220, U0129-222, U0129-528, U0129-529, U0140-146, U0151-763, U0164-594, U0164-827, U0293, U0424-537, B1207 and B2326.

5. TROUBLESHOOTING REMARKS

(a) DTCs for the CAN communication system can be checked using the intelligent tester via the CAN VIM. The DLC3 is connected to the CAN communication system, but no DTCs exist regarding problems in the DLC3 or the DLC3 branch wires. If there is trouble in the DLC3 or the DLC3 branch wires, ECUs on the CAN network cannot output codes to the intelligent tester via the CAN VIM.
(b) Trouble in the CAN buses (communication lines) can be checked by measuring the resistance between terminals of the DLC3. However, an open circuit in a branch wire other than the DLC3 branch wires cannot be checked from the DLC3.
NOTICE:
Do not insert the tester probes directly into the DLC3. Be sure to use a service wires.

6. HOW TO DISTINGUISH THE CAN J/C CONNECTOR

(a) In the CAN communication system, the shape of all connectors connected to the CAN J/C is the same. The connectors connected to the CAN J/C can be distinguished by the colors of the bus wire and the connecting side of the junction connector.
HINT:
See "TERMINALS OF ECU" (See page CA-10) for bus wire color or the type of connecting surface.

CA

HOW TO PROCEED WITH TROUBLESHOOTING

NOTICE:

- **DTCs for the CAN communication system are as follows: U0001, U0073, U0100, U0100-211, U0100-212, U0100-530, U0100-774, U0100-784, U0123, U0124, U0129, U0129-220, U0129-222, U0129-528, U0129-529, U0140-146, U0151-763, U0164-594, U0164-827, U0293, U0424-537, B1207 and B2326.**
- **Refer to troubleshooting of each system if DTCs regarding the CAN communication system are not output.**

1	CHECK AND CLEAR DTCS

NEXT

2	CHECK FOR INSTALLED SYSTEMS (ECUS & SENSORS) THAT ADOPT CAN COMMUNICATION)

(a) Check which of the following is adopted: Navigation system and accessory gateway (See page CA-22).

NEXT

3	CHECK CAN BUS WIRE

(a) Check the CAN bus wires (See page CA-64).

NEXT

4	CHECK INTELLIGENT TESTER

(a) Select "BUS CHECK" (See page CA-22).

Result

Symptom	Proceed to
All the ECUs and sensors connected to the CAN communication system are displayed on the screen.	A (Go to step 5)
An ECU or sensor not connected to the CAN communication system is displayed on the screen.	B (CA-9)
More than one of the ECUs and sensors not connected to the CAN communication system are displayed on the screen. (If the displayed ECUs and sensors are only those relating to the "Engine" and "ECT", proceed to B.)	C (CA-134)

NOTICE:

- **The systems (ECUs, sensors) that adopt CAN communication vary depending on the vehicle and option settings. Check which systems (ECUs, sensors) are installed on the vehicle (See page CA-22).**

CA

- **Non-installed ECUs or sensors are not displayed. Do not mistake ECUs that are not installed for being in communication stop mode.**
- **If 2 or more ECUs or sensors are not displayed on the intelligent tester, perform troubleshooting for communication stop mode for each undisplayed ECU or sensor. (Open in one side of the CAN branch wires.)**

B	**GO TO "COMMUNICATION STOP MODE TABLE"**
C	**GO TO "OPEN IN ONE SIDE OF CAN BRANCH LINE"**

A

5	**DTC COMBINATION TABLE**

(a) Confirm trouble according to the combination of output DTCs regarding the CAN communication system (See page CA-22).
HINT:
Previous CAN communication system DTCs may be the cause if CAN communication system DTCs are output and all ECUs and sensors connected to the CAN communication system are displayed on the intelligent tester "BUS CHECK" screen.

6. CENTER AIRBAG SENSOR ASSEMBLY

(a) Disconnect the E30 connector from the center airbag sensor assembly.

(b) Measure the resistance according to the value(s) in the table below.

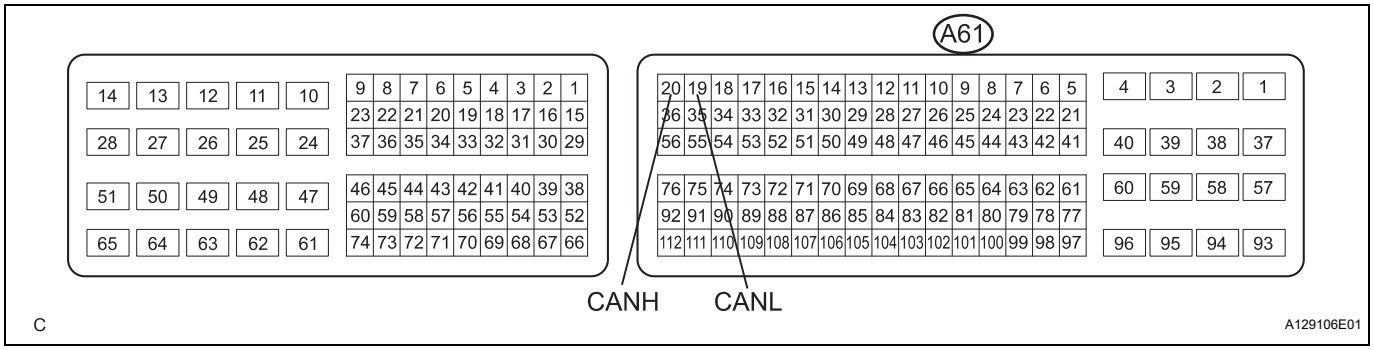
Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E30-13 (CANH) - E30-22 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Power Switch off	54 to 69 Ω
E30-13 (CANH) - E30-25 (E1)	B - W-B	HIGH-level CAN bus wire - Ground	Power Switch off	200 Ω or higher
E30-22 (CANL) - E30-25 (E1)	W - W-B	LOW-level CAN bus wire - Ground	Power Switch off	200 Ω or higher
E30-13 (CANH) - E10-16 (BAT)	B - L	HIGH-level CAN bus wire - Battery positive	Power Switch off	6 kΩ or higher
E30-22 (CANL) - E10-16 (BAT)	W - L	LOW-level CAN bus wire - Battery positive	Power Switch off	6 kΩ or higher

7. HV CONTROL ECU

(a) Disconnect the A61 connector from the HV control ECU.

CA

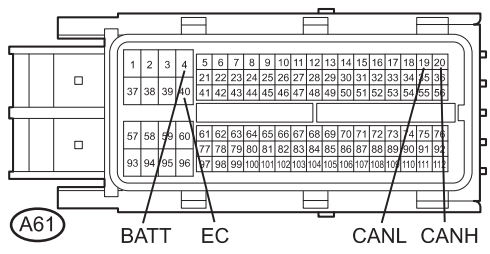


(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Condition	Specified Condition
A61-20 (CANH) - A61-19 (CANL)	Power switch off	108 to 132 Ω

HV Control ECU (Wire Harness Side View):

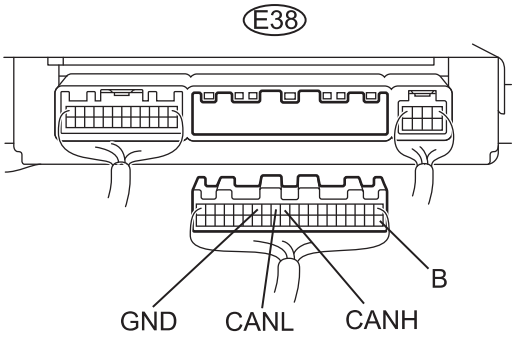


(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
A61-20 (CANH) - A61-19 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Power switch off	108 to 132 Ω
A61-20 (CANH) - A61-40 (EC)	B - W	HIGH-level CAN bus wire - Ground	Power switch off	200 Ω or higher
A61-19 (CANL) - A61-40 (EC)	B - W	LOW-level CAN bus wire - Ground	Power switch off	200 Ω or higher
A61-20 (CANH) - A61-4 (BATT)	B - W	HIGH-level CAN bus wire - Battery positive	Power switch off	6 kΩ or higher
A61-19 (CANL) - A61-4 (BATT)	B - W	LOW-level CAN bus wire - Battery positive	Power switch off	6 kΩ or higher

Air Conditioning Amplifier (Wire Harness Side):



8. AIR CONDITIONING AMPLIFIER

(a) Check harness side connector E38 of the air conditioning amplifier.

(1) Disconnect connector E38 from the air conditioning amplifier.

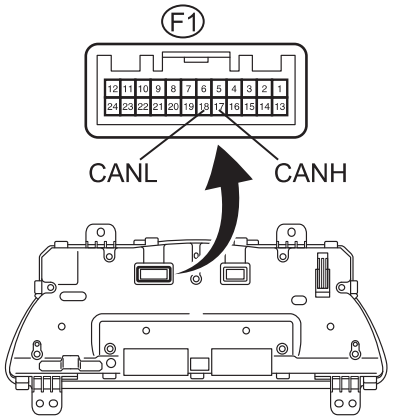
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E38-11 (CANH) - E38-12 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Power switch off	54 to 69 Ω
E38-11 (CANH) - E38-14 (GND)	B - W-B	HIGH-level CAN bus wire - Ground	Power switch off	200 Ω or higher
E38-12 (CANL) - E38-14 (GND)	W - W-B	LOW-level CAN bus wire - Ground	Power switch off	200 Ω or higher
E38-11 (CANH) - E38-21 (B)	B - GR	HIGH-level CAN bus wire - Battery positive	Power switch off	6 kΩ or higher

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E38-12 (CANL) - E38-21 (B)	W - GR	LOW-level CAN bus wire - Battery positive	Power switch off	6 kΩ or higher

Combination Meter (Component Side):



9. COMBINATION METER ECU

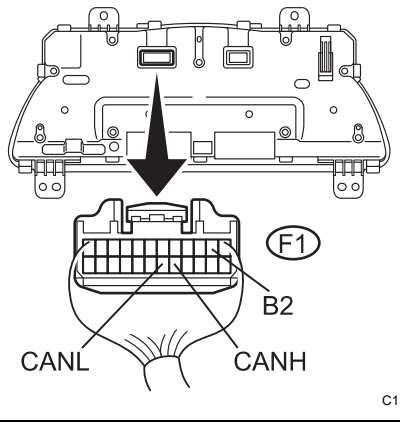
(a) Disconnect the F1 connector from the combination meter.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Condition	Specified Condition
F1-17 (CANH) - F1-18 (CANL)	Power switch off	108 to 132 Ω

Combination Meter (Wire Harness Side):



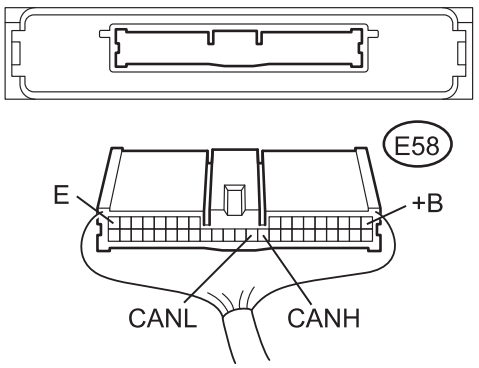
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
F1-17 (CANH) - F1-18 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Power switch off	108 to 132 Ω
F1-17 (CANH) - F1-12 (E2)	B - W-B	HIGH-level CAN bus wire - Ground	Power switch off	200 Ω or higher
F1-18 (CANL) - F1-12 (E2)	B - W-B	LOW-level CAN bus wire - Ground	Power switch off	200 Ω or higher
F1-17 (CANH) - F1-2 (B2)	B - R	HIGH-level CAN bus wire - Battery positive	Power switch off	6 kΩ or higher
F1-18 (CANL) - F1-2 (B2)	B - R	LOW-level CAN bus wire - Battery positive	Power switch off	6 kΩ or higher

CA

Certification ECU (Wire Harness Side):



10. CERTIFICATION ECU

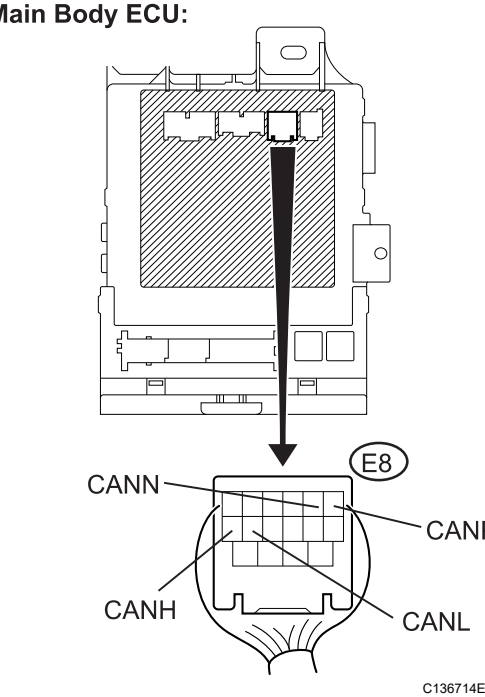
(a) Disconnect the E58 connector from the certification ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E58-27 (CANH) - E58-28 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Power switch off	108 to 132 Ω
E58-27 (CANH) - E58-17 (E)	B - W-B	HIGH-level CAN bus wire - Ground	Power switch off	200 Ω or higher
E58-28 (CANL) - E58-17 (E)	B - W-B	LOW-level CAN bus wire - Ground	Power switch off	200 Ω or higher
E58-27 (CANH) - E58-1 (+B)	B - W	HIGH-level CAN bus wire - Battery positive	Power switch off	6 kΩ or higher
E58-28 (CANL) - E58-1 (+B)	W - W	LOW-level CAN bus wire - Battery positive	Power switch off	6 kΩ or higher

Main Body ECU:



11. MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Disconnect the E8 connector from the main body ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition
E8-5 (CANH) - E8-6 (CANL)	B - W	HIGH-level CAN bus wire - LOW-level CAN bus wire	Power switch off	54 to 69 Ω

CA

Terminals	Wiring Color	Terminal Description	Condition	Specified Condition

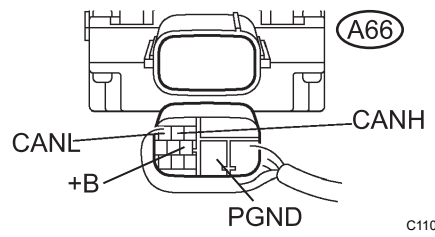
Power Steering ECU Wire Harness View:



H C110545E17

12. POWER STEERING ECU

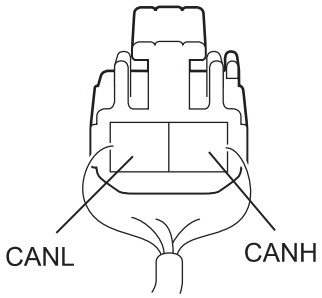
(a) Disconnect the A66 connector from the power steering ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Condition	Specified Condition
A66-2 (CANH) - A66-3 (CANL)	B - W	Power switch off	54 to 69 Ω
A66-2 (CANH) - A66-9 (PGND)	B - B	Power switch off	200 Ω or higher
A66-3 (CANL) - A66-9 (PGND)	W - B	Power switch off	200 Ω or higher
A66-2 (CANH) - A66-6 (+B)	B- B-W	Power switch off	6 kΩ or higher
A66-3 (CANL) - A66-6 (+B)	W - B-W	Power switch off	6 kΩ or higher

Accessory Gateway:



C136715E02

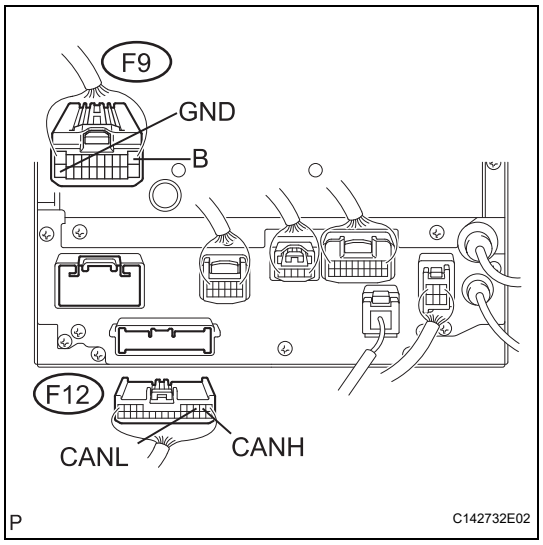
13. ACCESSORY GATEWAY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Terminal Description	Condition	Specified Condition
E61-1 (CANH) - E61-2 (CANL)	HIGH-level CAN bus wire - LOW-level CAN bus wire	Power switch off	54 to 69 Ω

CA

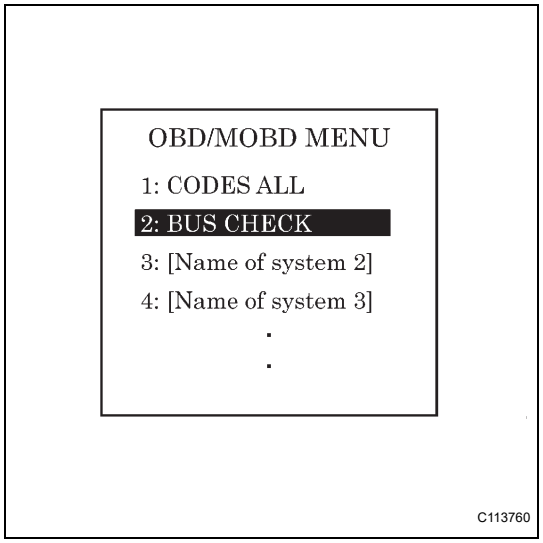


14. RADIO AND NAVIGATION ASSEMBLY (W/ NAVIGATION SYSTEM)

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminals	Wiring Color	Condition	Specified Condition
F12-2 (CANH) - F12-3 (CANL)	B - W	Power switch off	54 to 69 Ω
F12-2 (CANH) - F9-20 (GND)	B - B	Power switch off	200 Ω or higher
F12-3 (CANL) - F9-20 (GND)	W - B	Power switch off	200 Ω or higher
F12-2 (CANH) - F9-1 (B)	B- B-W	Power switch off	6 kΩ or higher
F12-3 (CANL) - F9-1 (B)	W - B-W	Power switch off	6 kΩ or higher



DIAGNOSIS SYSTEM

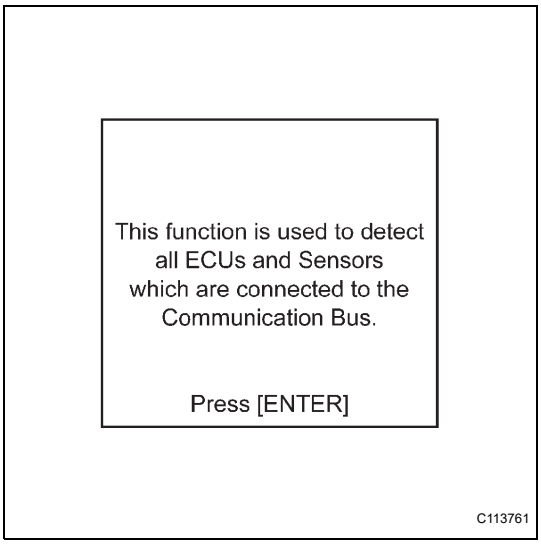
1. BUS CHECK

(a) Select "BUS CHECK" from the "OBD/MOBD MENU" screen.

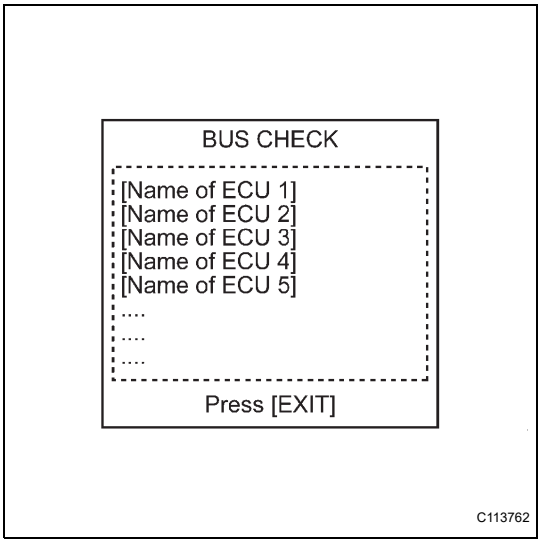
HINT:

The ECUs and sensors that are properly connected to the CAN communication system can be displayed using the intelligent tester via the CAN VIM.

CA



(b) Press "ENTER" on the intelligent tester.



(c) The screen displays the ECUs and sensors that are properly connected to the CAN communication system.
HINT:
Properly connected ECUs or sensors that are not displayed on the screen indicate that a communication stop is occurring in the system, sensor, or ECU which is not displayed.

2. CHECK FOR INSTALLED SYSTEMS (ECUS AND SENSORS) THAT USE CAN COMMUNICATION

(a) Systems (ECUs, sensors) that use CAN communication vary depending on the vehicle's optional equipment. Check which systems (ECUs, sensors) are installed on the vehicle.

ECU/Sensor name	Check method
ABS/VSC/TRC	Installed on all vehicles
STEERING SENSOR	Installed on all vehicles
YAW / DECELERAT	Installed on all vehicles
HYBRID CONTROL	Installed on all vehicles
AVN	With navigation system
SRS AIRBAG	Installed on all vehicles
A/C	Installed on all vehicles
METER	Installed on all vehicles
MAIN BODY	Installed on all vehicles
ACCESSORY G/W	With dealer option
SMART ACCESS/KEY	Installed on all vehicles
EPS	Installed on all vehicles

3. DTC TABLE BY ECU

HINT:

- For the CAN communication system, CAN communication system DTCs stored in certain ECUs can be displayed using the intelligent tester.

CA

- If CAN communication system DTCs are output, trouble cannot be determined only by the DTCs. Perform troubleshooting according to "HOW TO PROCEED WITH TROUBLESHOOTING" (See page CA-7).

(a) HV CONTROL ECU (Engine)

DTC No.	Detection Item
U0001*	Control Module Communication Bus Off
U0293	Communication Error from HV ECU

HINT:
- DTC communication uses the CAN communication system.
- *: The HV control ECU is malfunctioning if only U0001 is output. Replace the HV control ECU.

(b) HV CONTROL ECU (Hybrid control)

DTC No.	Detection Item
U0100-211	Lost Communication with ECM/PCM "A"
U0100-212	Lost Communication with ECM/PCM "A"
U0100-530	Lost Communication with ECM/PCM "A"
U0100-774	Lost Communication with ECM/PCM "A"
U0100-784	Lost Communication with ECM/PCM "A"
U0129-220	Lost Communication with Brake System Control Module
U0129-222	Lost Communication with Brake System Control Module
U0129-528	Lost Communication with Brake System Control Module
U0129-529	Lost Communication with Brake System Control Module
U0140-146	Lost Communication with Body Control Module
U0164-594	Lost Communication with HVAC Control Module
U0164-827	Lost Communication with HVAC Control Module
U0151-763	Lost Communication with Restraints Control Module
U0424-537	Invalid Data Received From HVAC Control Module

- Check for INFORMATION (See page HV-65)
- U0110-159, U0110-160, U0110-656, and U0110-657 are not CAN communication system DTCs. Therefore, refer to the troubleshooting procedures for the hybrid control system.

(c) SKID CONTROL ECU

DTC No.	Detection Item
U0073	Control Module Communication Bus Off
U0293	Lost Communication with HV Control ECU
U0123	Lost Communication with Yaw Rate Sensor Module
U0124	Lost Communication with Lateral Acceleration Sensor Module
U0126	Lost Communication with Steering Angle Sensor Module
U0131	Lost Communication with Power Steering Control Module

HINT:
DTC communication uses the CAN communication system.

(d) COMBINATION METER ECU

DTC No.	Detection Item
U0100	Lost Communication with ECM/PCM "A"
U0129	Lost Communication with Brake System Control Module

HINT:
DTC communication uses the CAN communication system.

(e) MAIN BODY ECU

DTC No.	Detection Item
B1207*	Certification ECU Communication Malfunction
B2326*	CAN MS Bus Line Communication Malfunction

HINT:
- DTC communication uses the CAN communication system.
- *: The main body ECU is malfunctioning if B1207 and/or B2326 are output alone. Refer to the DTC chart (See page CA-29).

(f) POWER STEERING ECU

DTC No.	Detection Item
U0073	Control Module Communication off
U0100	Lost Communication with ECM/PCM "A"
U0129	Lost Communication with Brake System Control Module
U0293	CAN Error from HV ECU

HINT:
DTC communication uses the CAN communication system.

(g) RADIO AND NAVIGATION ASSEMBLY

HINT:
Although the radio and navigation assembly is connected to the CAN communication system, CAN communication DTCs are not output.

(h) CENTER AIRBAG SENSOR

HINT:
Although the center airbag sensor is connected to the CAN communication system, CAN communication DTCs are not output.

(i) CERTIFICATION ECU

HINT:
Although the certification ECU is connected to the CAN communication system, CAN communication DTCs are not output.

4. DTC COMBINATION TABLE

(a) DTC COMBINATION TABLE

DTC		Trouble Mode			
Output from	**Output DTC**	**HV Control ECU Communication Stop Mode**	**Skid Control ECU Communication Stop Mode**	**Steering Angle Sensor Communication Stop Mode**	**Yaw Rate Sensor Communication Stop Mode**
HV Control ECU (HV Control)	U0100-211 *1	X	X	X	X

FAIL-SAFE CHART

1. FAIL-SAFE FUNCTION

(a) When communication fails in any of the CAN bus wire (communication lines) due to a short circuit or other causes, the fail-safe function, which is specified for each system operates to prevent the system from malfunctioning.

(b) The following chart shows the relationships between components, system functions, and effects of communication failure on these functions. (For further details, see the pages for each system.)

Function (Function Description)	Control Master	System Related	Fail-safe Operation	DTC (Driver Detectable)
Toyota Hybrid System-II (THS-II) Control (to optimize the combination between the engine and motor drive power for driving)	HV Control ECU (HV control)	HV Control ECU (Engine control)	Safe running	U0100 (Master warning light and MIL come on)
Gradient Determination (Hill start assist operation)	HV Control ECU (HV control)	Skid Control ECU	Hill start assist function stops	U0129 (VSC warning light comes on)
Regenerative Braking (the motor acts as a generator that depends on wheel rotation and generates electricity to be stored in the HV battery)	Skid Control ECU	HV Control ECU (HV control)	Regenerative braking will stop	U0073, U0293 (VSC, ABS, and ECB warning lights come on)
VDIM Control (Controls driving force while VDIM is in operation)	Skid Control ECU	• HV Control ECU (HV control) • Power Steering ECU • Steering Angle Sensor • Yaw Rate Sensor	VDIM function will stop	U0073, U0293, U0123, U0124, U0126 (VSC, ABS, and ECB warning lights come on)
Vehicle Information Display	HV Control ECU (HV control)	• Combination Meter • Radio and Navigation Assembly	Vehicle information is not displayed	None (Vehicle information is not displayed)
Smart Entry / Power Door Lock Control	Certification ECU	• Main Body ECU • Combination Meter	Unlock permitted	B1207, B2326 (Wireless door lock cannot operate)
Security Function	Certification ECU	Main Body ECU	Security function is inoperative (Theft deterrent system cannot be set)	B1207, B2326 (Security indicator light does not come on)
Illumination Control	Main Body ECU	• HV Control ECU (HV control) • Combination Meter	Light illumination rheostat inoperative	None (Rheostat inoperative)
Air Conditioning Control	A/C Amplifier	• HV Control ECU (HV control) • HV Control ECU (Engine control) • Combination Meter • Main Body ECU	Air conditioning function will stop	B1499 (Air Conditioning inoperative)
Buzzer Control	Combination Meter	• HV Control ECU (HV control) • Skid Control ECU • Certification ECU • Main Body ECU	Buzzer function will stop	U0100, U0129 (Buzzer does not sound)
Meter Display (Displays vehicle status and controls indicator lights)	Combination Meter	• HV Control ECU (HV control) • Skid Control ECU • Certification ECU • Main Body ECU • Center Airbag Sensor Assembly • Power Steering ECU	Light does not come on, illuminates abnormally, or blinks abnormally	U0100, U0129 (Abnormal operation of the indicator lights)

DIAGNOSTIC TROUBLE CODE CHART

CAN COMMUNICATION SYSTEM:

DTC Code	Detection Item	Trouble Area	See page
B1207	Certification ECU Communication Malfunction	1. CAN MS bus wire or connector 2. Certification ECU power source circuit 3. Certification ECU 4. Main body ECU	CA-30
B2326	CAN MS Bus Line Communication Malfunction	1. CAN MS bus wire or connector 2. Certification ECU power source circuit 3. Certification ECU 4. Main body ECU	CA-30

DTC	B1207	Certification ECU Communication Malfunction

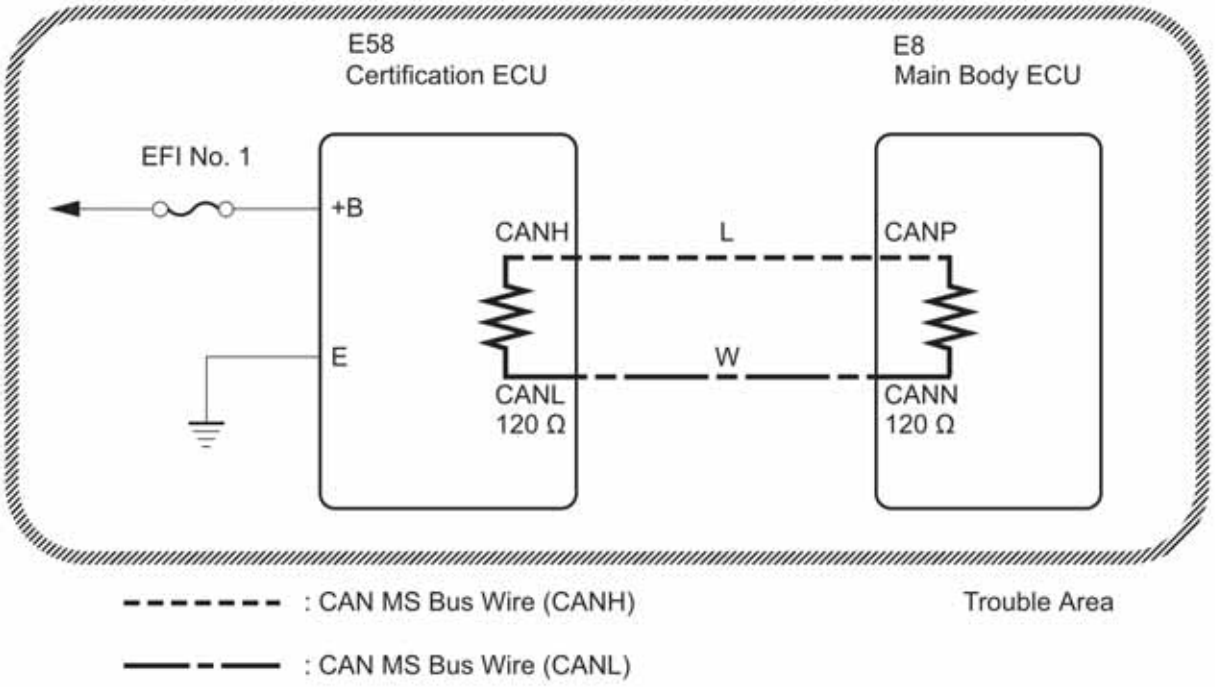
DTC	B2326	CAN MS Bus Line Communication Malfunction

DESCRIPTION

The main body ECU and certification ECU perform 2-way communication with each other via the Controller Area Network (CAN). If the certification ECU cannot communicate with the main body ECU, the main body ECU will conclude that there is a malfunction in the CAN system, and set a DTC.

DTC No.	DTC Detection Condition	Trouble Area
B1207 B2326	No communication from certification ECU	• CAN MS bus wire or connector • Certification ECU power source circuit • Certification ECU • Main body ECU

WIRING DIAGRAM



C133252E02

CA

INSPECTION PROCEDURE

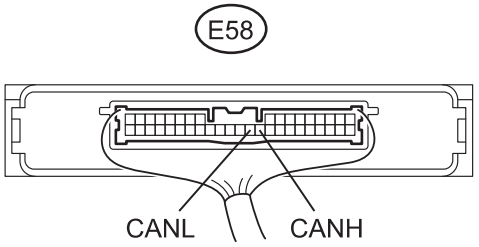
NOTICE:

- **Turn the power switch off before measuring the resistances of CAN bus main wires and CAN bus branch wires.**
- **After the power switch is turned off, check that the key reminder warning system and lighting system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the power switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause resistance value to change.

1 CHECK CAN MS BUS WIRE

Certification ECU Connector:



N C144965E01

(a) Turn the power switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition	Proceed to
E58-27 (CANH) - E58-28 (CANL)	Power switch off	54 to 69 Ω	A
E58-27 (CANH) - E58-28 (CANL)	Power switch off	69 Ω or more	B
E58-27 (CANH) - E58-28 (CANL)	Power switch off	54 Ω or less	C

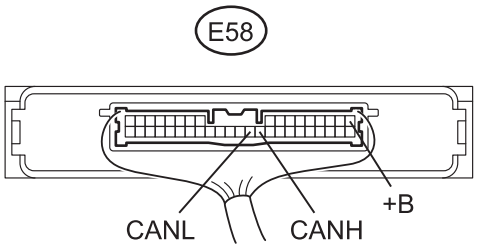
B → **Go to step 9**

C → **Go to step 11**

A

2 CHECK FOR SHORT TO +B IN CAN MS BUS WIRE

Certification ECU Connector:



N C144965E03

(a) Turn the power switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-1 (+B)	Power switch off	6 kΩ or higher
E58-28 (CANL) - E58-1 (+B)	Power switch off	6 kΩ or higher

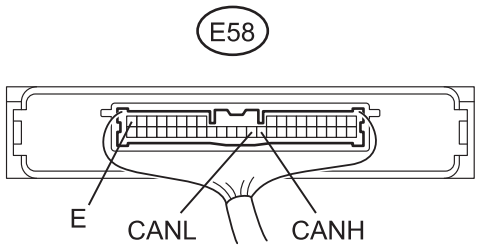
NG → **Go to step 5**

OK

CA

3	CHECK FOR SHORT TO GND IN CAN MS BUS WIRE

Certification ECU Connector:



N C144965E04

(a) Turn the power switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

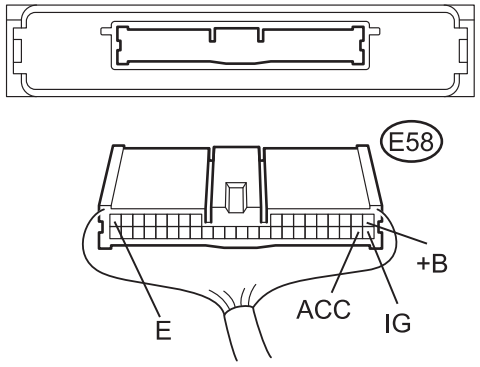
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-17 (E)	Power switch off	200 Ω or higher
E58-28 (CANL) - E58-17 (E)	Power switch off	200 Ω or higher

NG → **Go to step 7**

OK

4	CHECK CERTIFICATION ECU (POWER SOURCE CIRCUIT)

Certification ECU Connector:



N C144966E02

(a) Turn the power switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E58-17 (E) - Body ground	Always	Below 1 Ω

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E58-1 (B) - Body ground	Always	10 to 14 V
E58-18 (IG) - Body ground	Power switch on (IG)	10 to 14 V
E58-19 (ACC) - Body ground	Power switch on (ACC)	10 to 14 V

OK → **REPLACE CERTIFICATION ECU**

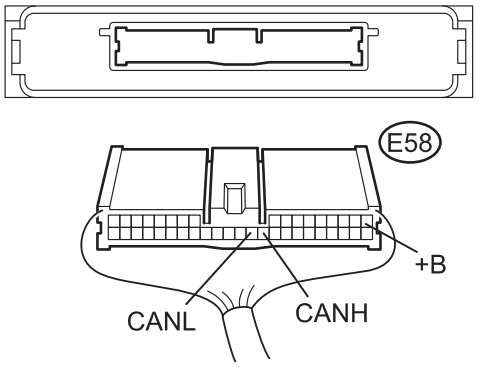
NG

REPLACE HARNESS OR CONNECTOR (FUSES - ECU, ECU - BODY GROUND)

CA

5	CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (CERTIFICATION ECU)

Certification ECU Connector (Wire Harness Side):



N C144966E03

(a) Turn the power switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

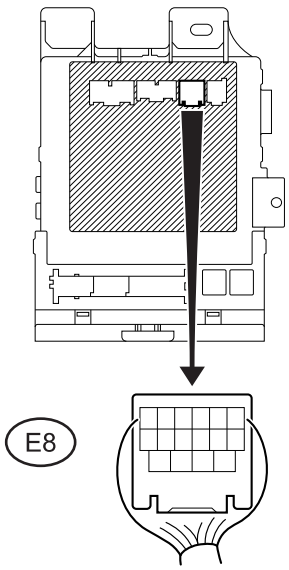
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-1 (+B)	Power switch off	6 kΩ or higher
E58-28 (CANL) - E58-1 (+B)	Power switch off	6 kΩ or higher

OK → **REPLACE CERTIFICATION ECU**

NG

6	CHECK FOR SHORT TO +B IN CAN MS BUS WIRE (CERTIFICATION ECU - MAIN BODY ECU)

Main Body ECU:

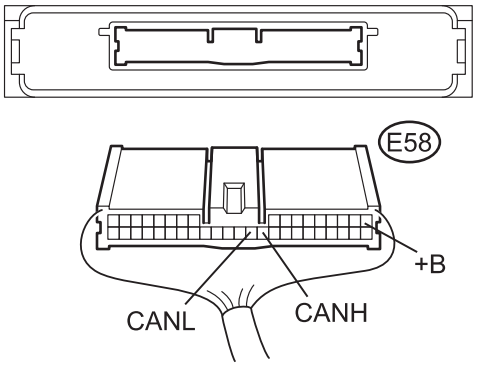


C C140857E01

(a) Turn the power switch off.
(b) Disconnect the E8 main body ECU connector.

CA

Certification ECU Connector (Wire Harness Side):



(c) Measure the resistance according to the value(s) in the table below.
HINT:
The resistance must be measured after the E58 certification ECU connector is disconnected.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-1 (+B)	Power switch off	6 kΩ or higher
E58-28 (CANL) - E58-1 (+B)	Power switch off	6 kΩ or higher

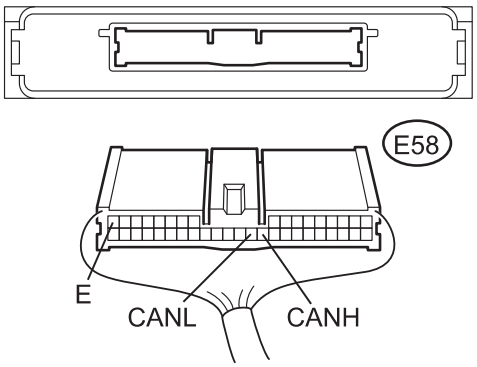
OK → **REPLACE MAIN BODY ECU**

NG

REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR

7 CHECK FOR SHORT TO GND IN CAN MS BUS WIRE (CERTIFICATION ECU)

Certification ECU Connector (Wire Harness Side):



(a) Turn the power switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-17 (E)	Power switch off	6 kΩ or higher
E58-28 (CANL) - E58-17 (E)	Power switch off	6 kΩ or higher

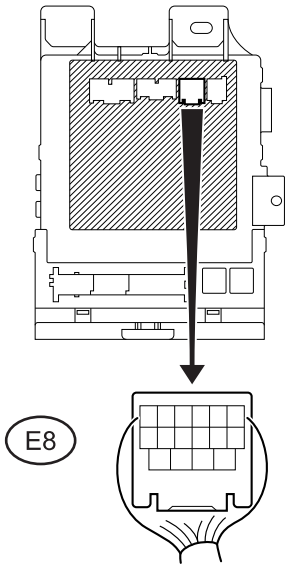
OK → **REPLACE CERTIFICATION ECU**

NG

CA

8	CHECK FOR SHORT TO GND IN CAN MS BUS WIRE

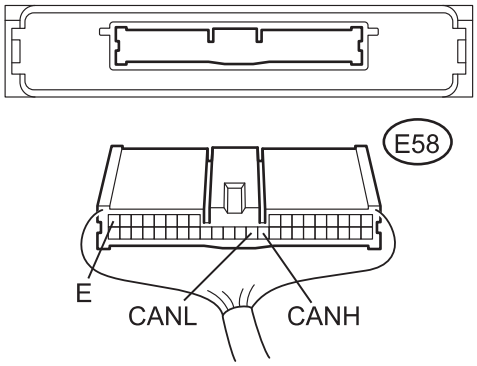
Main Body ECU:



C C140857E01

(a) Turn the power switch off.
(b) Disconnect the E8 main body ECU connector.

Certification ECU Connector (Wire Harness Side):



N C144966E04

(c) Measure the resistance according to the value(s) in the table below.
HINT:
The resistance must be measured after the E58 certification ECU connector is disconnected.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-17 (E)	Power switch off	6 kΩ or higher
E58-28 (CANL) - E58-17 (E)	Power switch off	6 kΩ or higher

OK → **REPLACE MAIN BODY ECU**

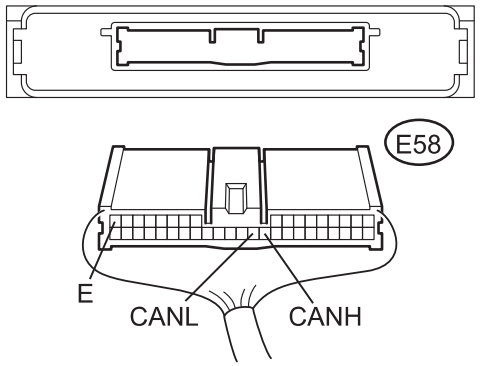
NG

REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR

CA

9	CHECK CAN MS BUS MAIN WIRE OR CONNECTOR (CERTIFICATION ECU)

Certification ECU Connector (Wire Harness Side):



(a) Turn the power switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

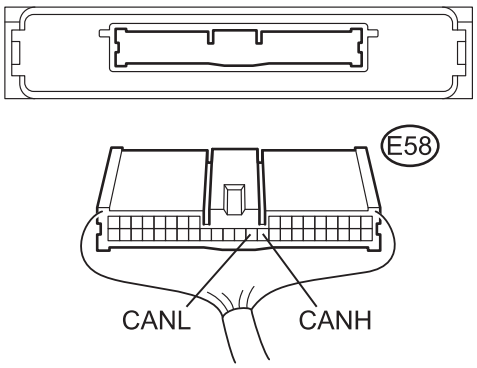
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-28 (CANL)	Power switch off	108 to 132 Ω or higher

OK → **REPLACE CERTIFICATION ECU**

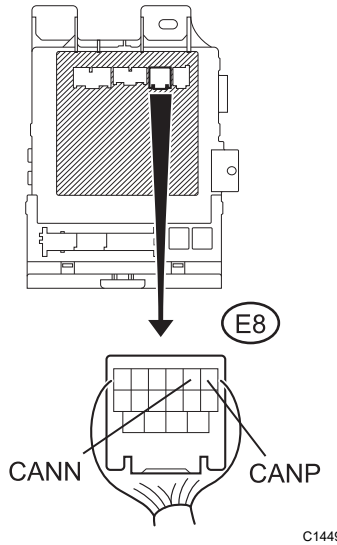
NG

10	**CHECK CAN MS BUS MAIN WIRE OR CONNECTOR (CERTIFICATION ECU - MAIN BODY ECU)**

Certification ECU Connector (Wire Harness Side):



Main Body ECU Connector (Wire Harness Side):



C

C144968E01

(a) Turn the power switch off.
(b) Disconnect the E8 main body ECU connector.
(c) Measure the resistance according to the value(s) in the table below.
HINT:
The resistance must be measured after the E58 certification ECU connector is disconnected.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E8-16 (CANP)	Always	Below 1 Ω
E58-28 (CANL) - E8-15 (CANN)	Always	Below 1 Ω

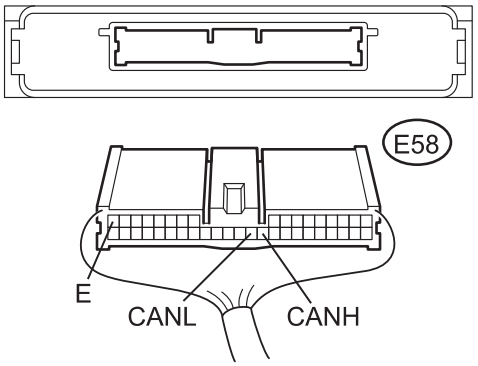
OK → **REPLACE MAIN BODY ECU**

NG

REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR

11	CHECK FOR SHORT IN CAN MS BUS WIRES (CERTIFICATION ECU)

Certification ECU Connector (Wire Harness Side):



(a) Turn the power switch off.
(b) Disconnect the E58 certification ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

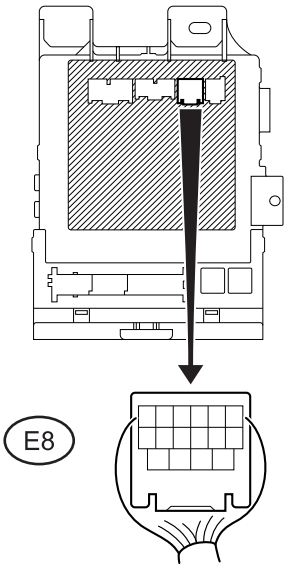
Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-28 (CANL)	Power switch off	108 to 132 Ω

OK → **REPLACE CERTIFICATION ECU**

NG

12	CHECK FOR SHORT IN CAN MS BUS WIRES

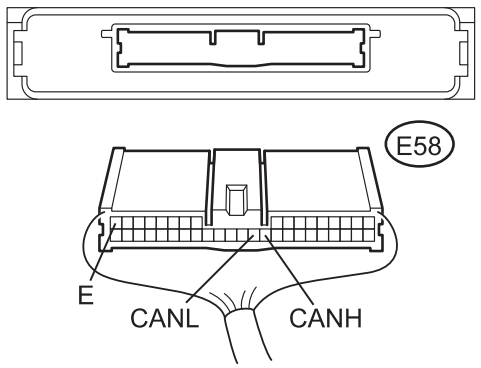
Main Body ECU:



(a) Turn the power switch off.
(b) Disconnect the E8 main body ECU connector.

CA

Certification ECU Connector (Wire Harness Side):



(c) Measure the resistance according to the value(s) in the table below.
HINT:
The resistance must be measured after the E58 certification ECU connector is disconnected.
Standard resistance

Tester Connection	Condition	Specified Condition
E58-27 (CANH) - E58-28 (CANL)	Power switch off	1 MΩ or higher

OK → **REPLACE MAIN BODY ECU**

NG

REPLACE CAN MS BUS MAIN WIRE OR CONNECTOR

CA

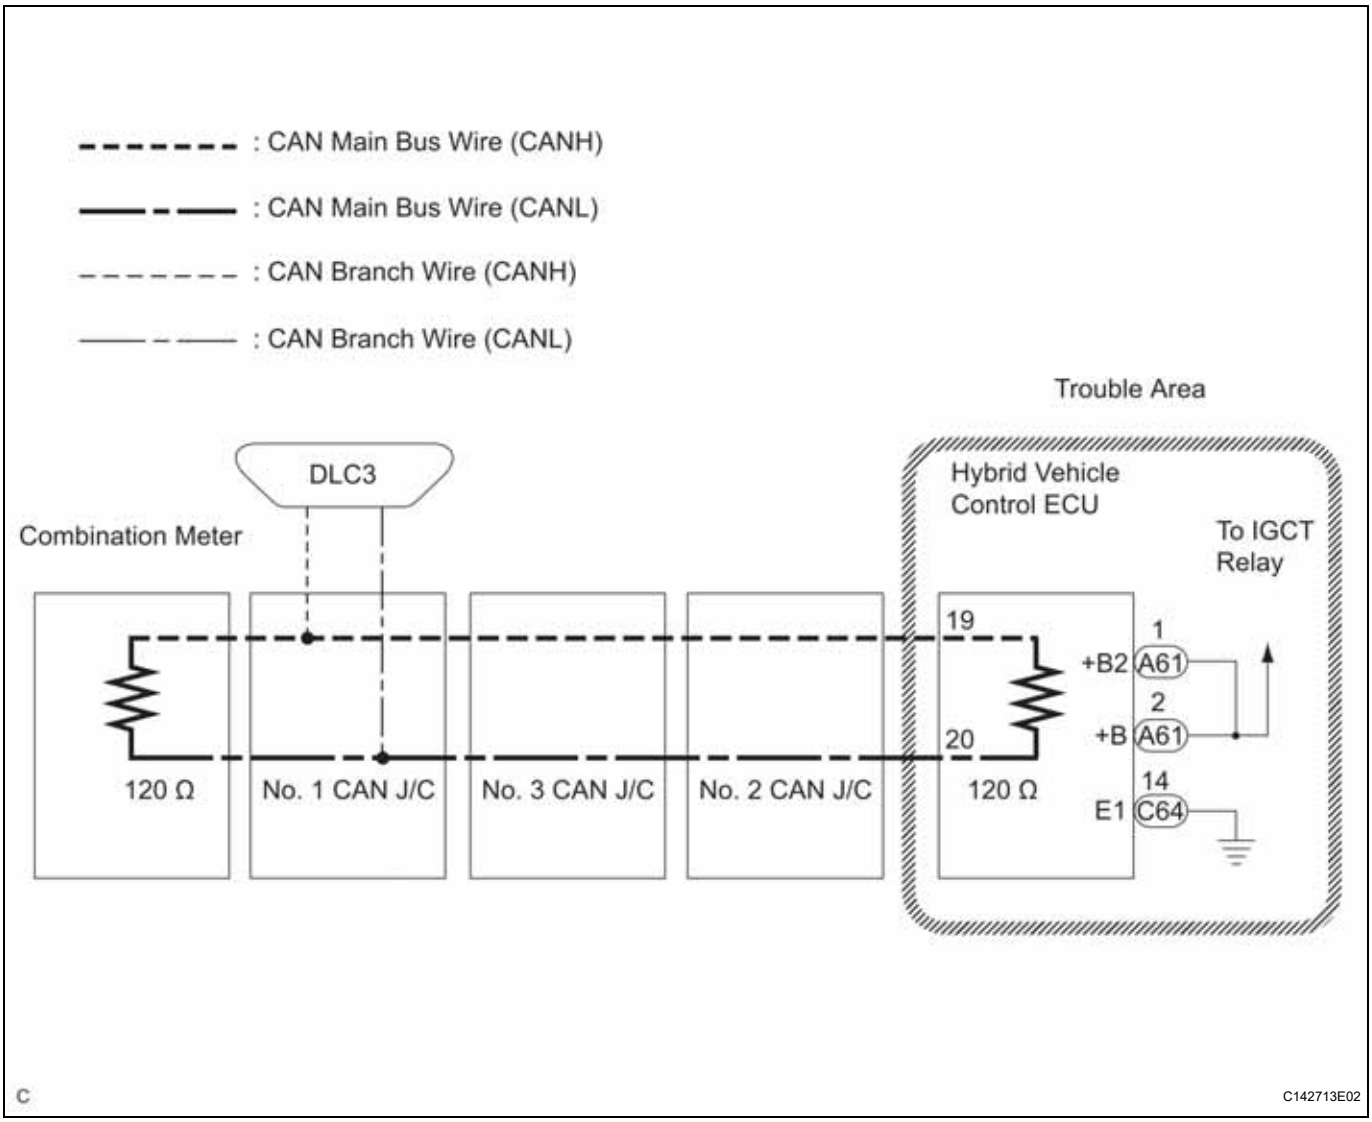
Hybrid Vehicle Control ECU Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
HV Control ECU Communication Stop Mode	• "HYBRID CONTROL" is not displayed on the "BUS CHECK" screen of the intelligent tester • Applies to "Hybrid Vehicle Control Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the HV control ECU • HV control ECU main bus wire or connector • HV control ECU

HINT:
"HYBRID CONTROL" refers to the circuit that includes the hybrid vehicle control ECU.

WIRING DIAGRAM



CA

INSPECTION PROCEDURE

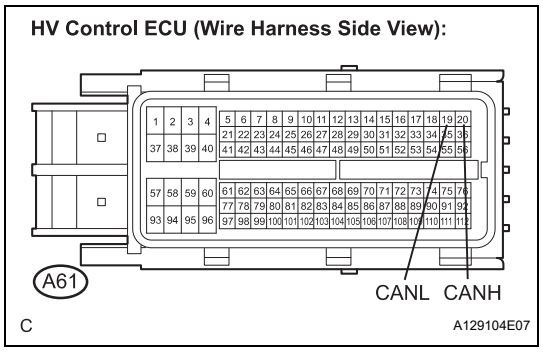
NOTICE:

- **Turn the power switch off before measuring the resistances of CAN bus main wires and CAN bus branch wires.**
- **After the power switch is turned off, check that the key reminder warning system and lighting system are not operating.**

- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the power switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.

1	CHECK FOR OPEN IN CAN BUS WIRE (HV CONTROL ECU MAIN WIRE)



(a) Disconnect HV control ECU connector A61.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
A61-19 (CANH) - A61-20 (CANL)	Power switch off	108 to 132 Ω

NG → **REPLACE HV CONTROL ECU MAIN WIRE OR CONNECTOR**

OK

2	CHECK ECM POWER SOURCE CIRCUIT

(a) Check the ECM power source circuit (See page ES-356).

NG → **REPAIR OR REPLACE ECM POWER SOURCE CIRCUIT**

OK

REPLACE HV CONTROL ECU

CA

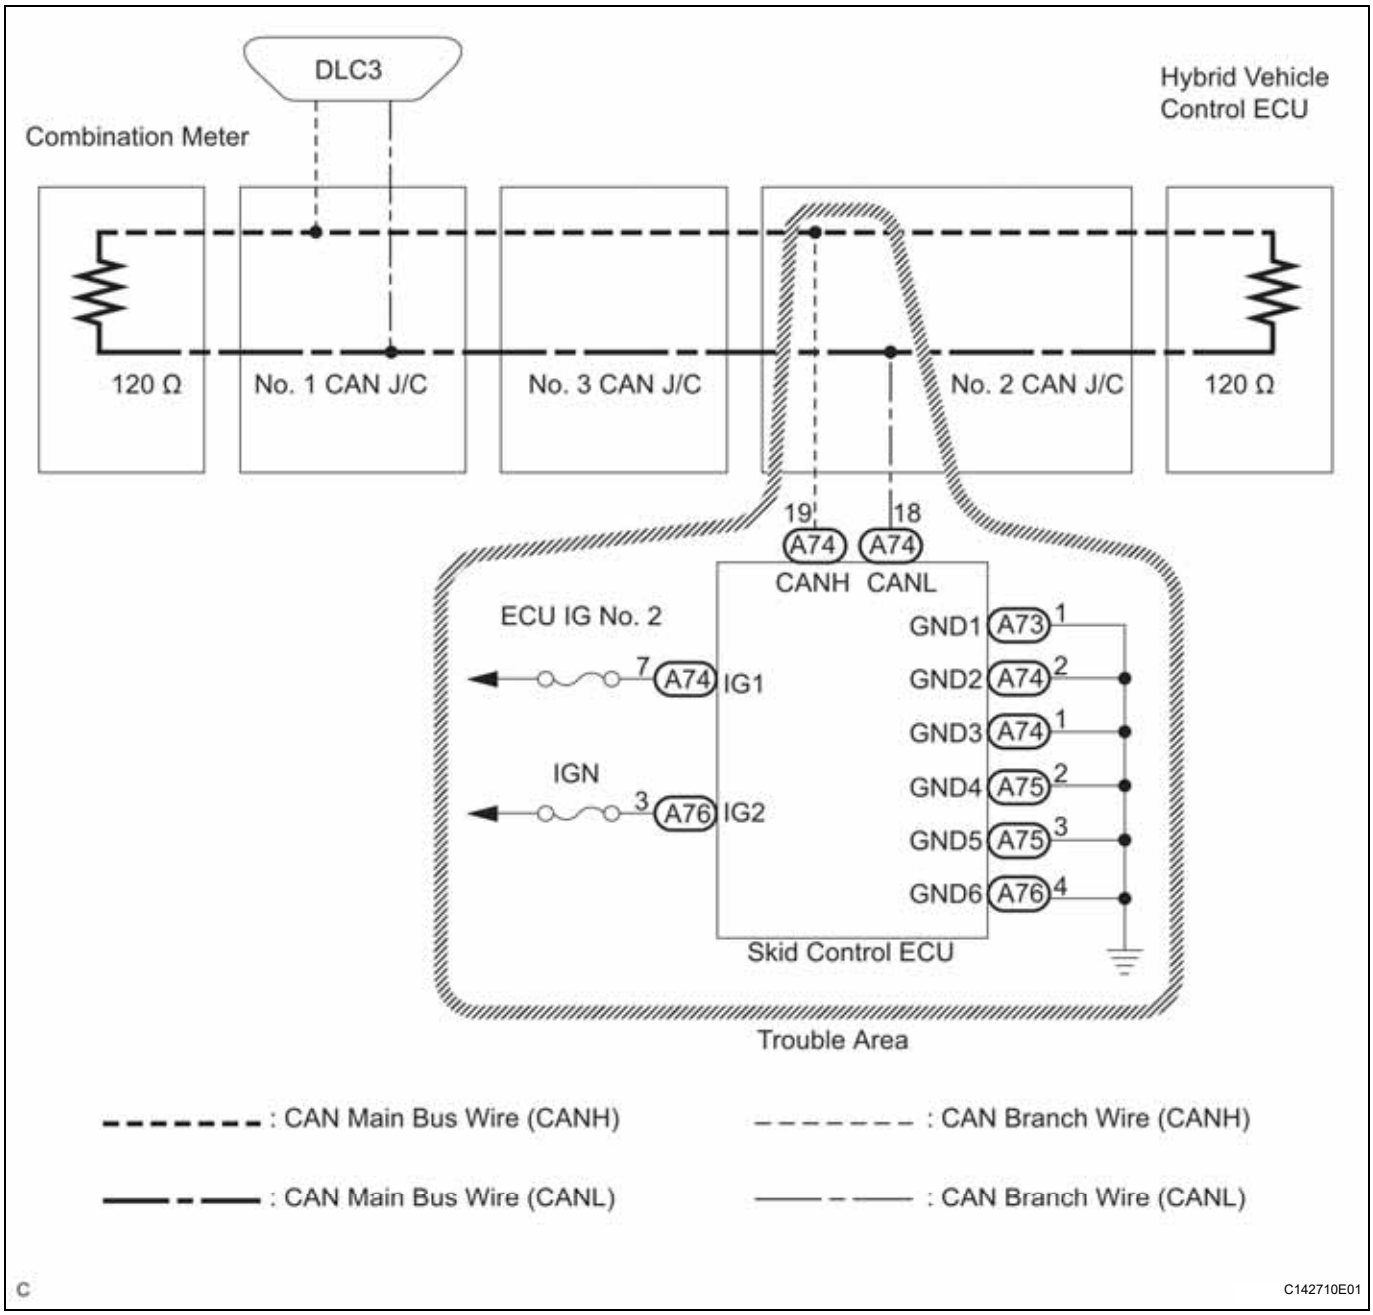
Skid Control ECU Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Skid Control ECU Communication Stop Mode	• "ABS/VSC/TRAC" is not displayed on the "BUS CHECK" screen of the intelligent tester • Applies to "Skid Control ECU Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the skid control ECU • Skid control ECU branch wire or connector • Skid control ECU

HINT:
"ABS/VSC/TRAC" refers to the circuit that includes the skid control ECU.

WIRING DIAGRAM



CA

INSPECTION PROCEDURE

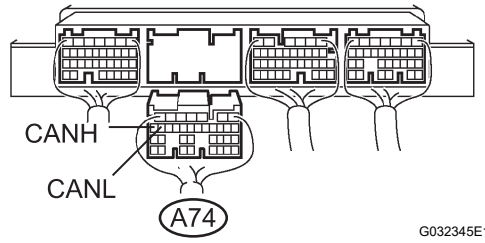
NOTICE:

- **Turn the power switch off before measuring the resistances of the CAN bus main wires and CAN bus branch wires.**
- **After the power switch is turned off, check that the key reminder warning system and lighting system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the power switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.

1 CHECK FOR OPEN IN CAN BUS WIRE (SKID CONTROL ECU BRANCH WIRE)

Skid Control ECU Wire Harness View:



(a) Turn the ignition switch off.
(b) Disconnect the skid control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

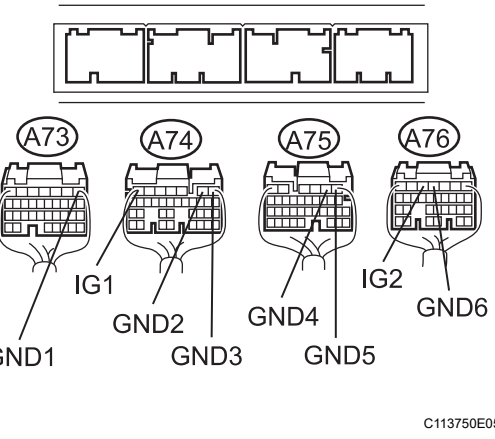
Tester Connection	Condition	Specified Value
A74-19 (CANH) - A74-18 (CANL)	Disconnect the negative battery cable	54 to 69 Ω

NG → **REPLACE SKID CONTROL ECU BRANCH WIRE OR CONNECTOR (CAN-H, CAN-L)**

OK

2 CHECK WIRE HARNESS (IG1, GND1, GND2)

Skid Control ECU Wire Harness View:



(a) Disconnect skid control ECU connectors A73, A75, and A76.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
A73-1 (GND1) - Body ground	Always	Below 1 Ω
A74-2 (GND2) - Body ground	Always	Below 1 Ω
A74-1 (GND3) - Body ground	Always	Below 1 Ω
A75-2 (GND4) - Body ground	Always	Below 1 Ω
A75-1 (GND5) - Body ground	Always	Below 1 Ω
A76-4 (GND6) - Body ground	Always	Below 1 Ω

HINT:
Measure the resistance with skid control ECU connector A74 disconnected.

CA

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Value
A74-7 (IG1) - Body ground	Power switch on (IG)	10 to 14 V
A76-5 (IG2) - Body ground	Power switch on (IG)	10 to 14 V

HINT:
Measure the voltage with skid control ECU connector A74 disconnected.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE BRAKE ACTUATOR ASSEMBLY

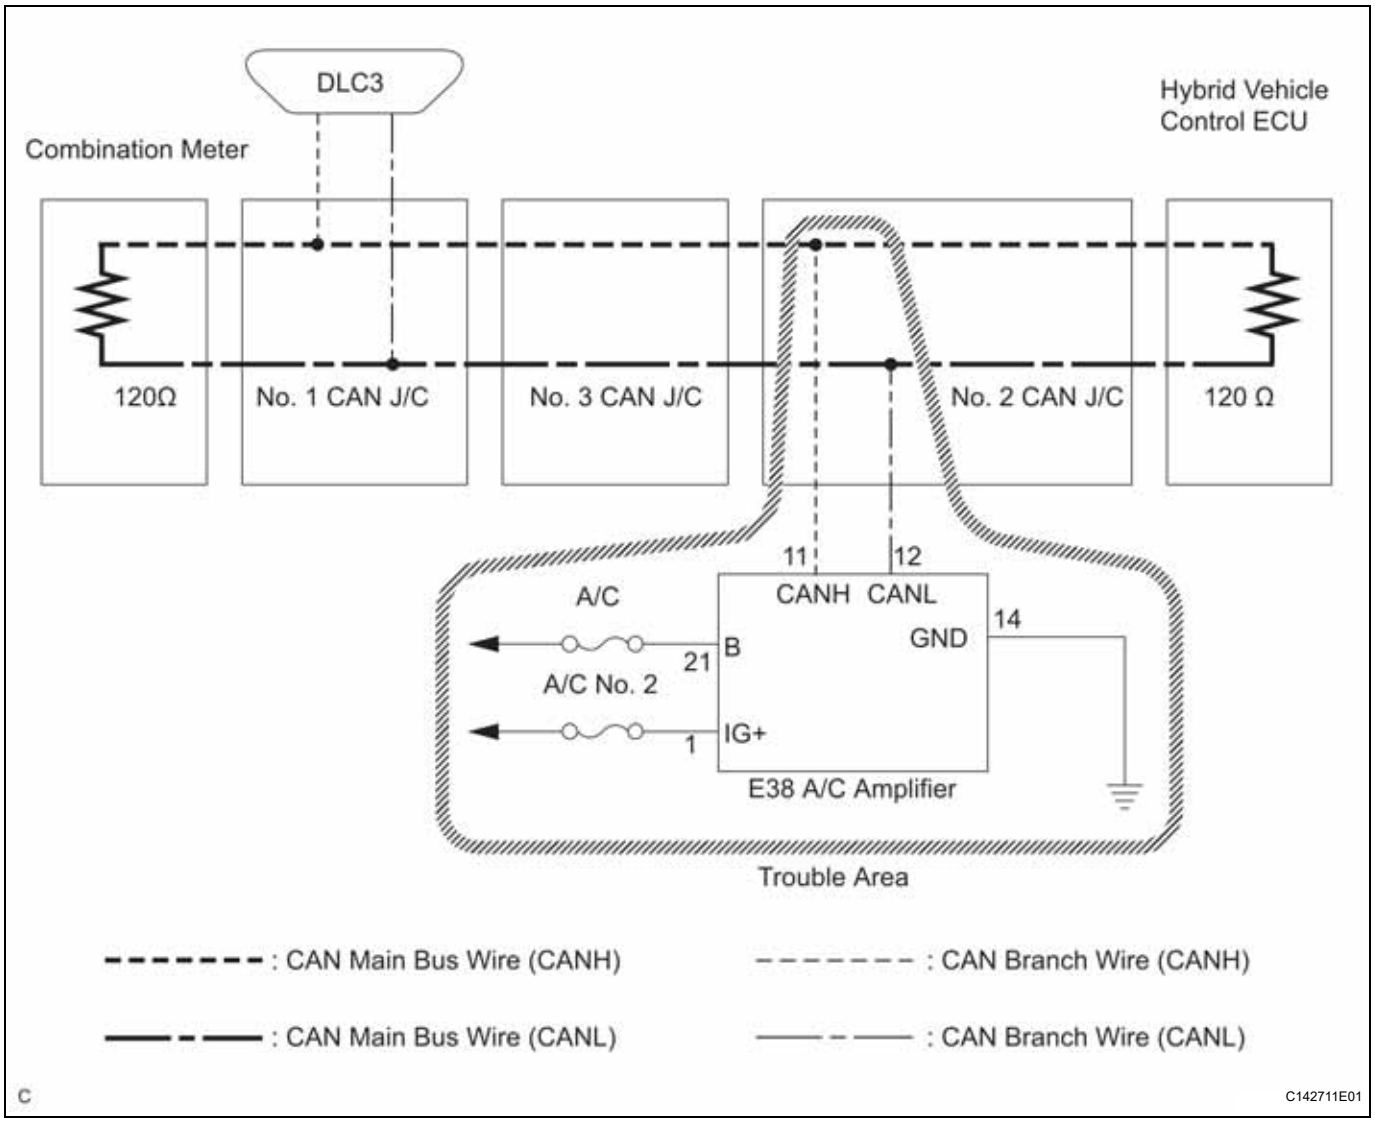
Air Conditioning Amplifier Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Air Conditioning Amplifier Communication Stop Mode	• "A/C" is not displayed on the "BUS CHECK" screen of the intelligent tester • Applies to "Air Conditioning Amplifier Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the air conditioning amplifier • Air conditioning amplifier branch wire or connector • Air conditioning amplifier

HINT:
"A/C" refers to the circuit that includes the air conditioning amplifier.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **Turn the power switch off before measuring the resistances of CAN bus main wires and CAN bus branch wires.**
- **After the power switch is turned off, check that the key reminder warning system and lighting system are not operating.**

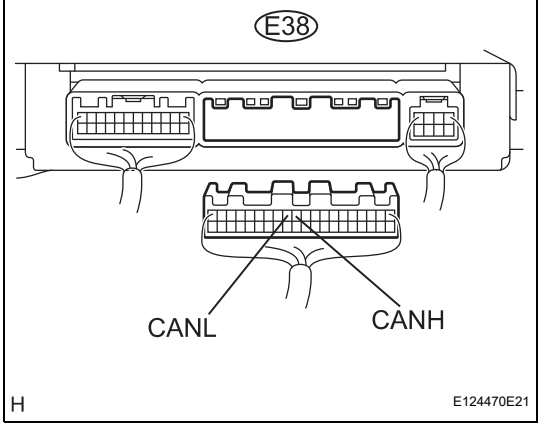
CA

- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the power switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.

1	CHECK CAN BUS WIRE FOR DISCONNECTION (AIR CONDITIONING AMPLIFIER BRANCH WIRE)

Air Conditioning Amplifier (Wire Harness Side):



(a) Turn the power switch off.
(b) Disconnect the air conditioning amplifier connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

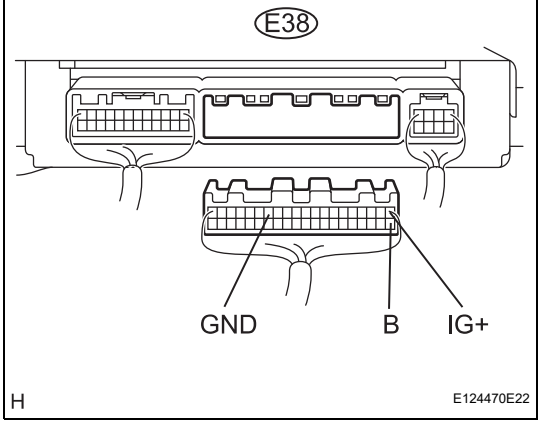
Tester Connection	Condition	Specified Condition
E38-11 (CANH) - E38-12 (CANL)	Power switch off	54 to 69 Ω

NG → **REPLACE CAN BRANCH WIRE CONNECTED TO AIR CONDITIONING AMPLIFIER (CAN-H, CAN-L)**

OK

2	CHECK HARNESS AND CONNECTOR (IG+, B, GND)

Air Conditioning Amplifier (Wire Harness Side):



(a) Disconnect the air conditioning amplifier connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E38-14 (GND) - Body Ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E38-1 (IG+) - Body Ground	Power switch on (IG)	10 to 14 V
E38-21 (B)- Body Ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

CA

OK

REPLACE AIR CONDITIONING AMPLIFIER

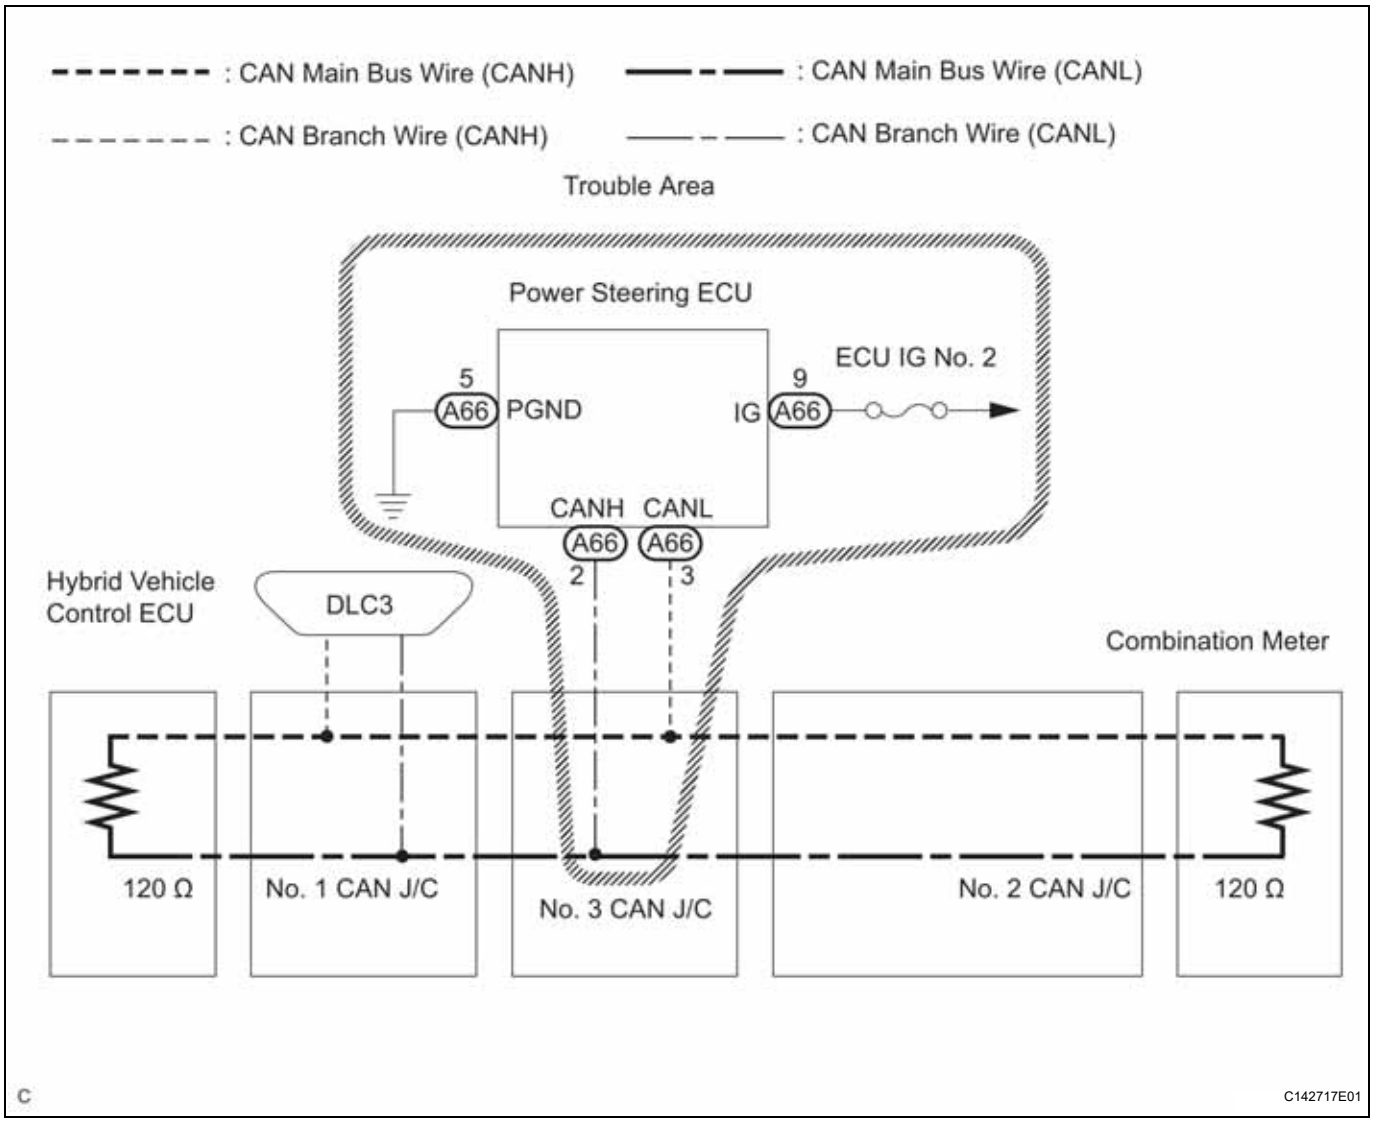
Power Steering ECU Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Power Steering ECU Communication Stop Mode	"EPS" is not displayed on the "BUS CHECK" screen of the intelligent tester	• Power source circuit of the power steering ECU • Power steering ECU branch wire or connector • Power steering ECU

HINT:
"EPS" refers to the circuit that includes the power steering ECU.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **Turn the power switch off before measuring the resistances of CAN bus main wires and CAN bus branch wires.**
- **After the power switch is turned off, check that the key reminder warning system and lighting system are not operating.**

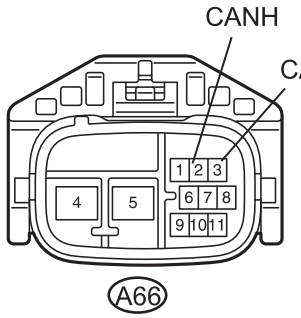
CA

- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the power switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.

1	CHECK OPEN IN CAN BUS WIRE (POWER STEERING ECU BRANCH WIRE)

Power Steering ECU
Connector Front View:



(a) Turn the power switch off.
(b) Disconnect power steering ECU connector A66.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

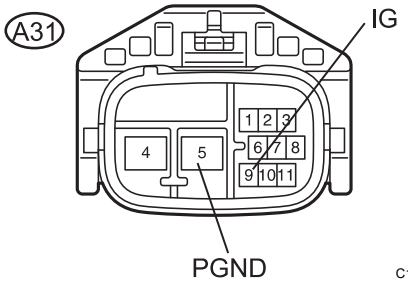
Tester Connection	Condition	Specified Value
A66-2 (CANH) - A66-3 (CANL)	Power switch off	54 to 69 Ω

NG → **REPAIR OR REPLACE POWER STEERING ECU BRANCH WIRE OR CONNECTOR (CANH, CANL)**

OK

2	CHECK WIRE HARNESS (IG, PGND)

Power Steering ECU
Connector Front View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
A66-5 (PGND) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Value
A66-9 (IG) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE POWER STEERING ECU

CA

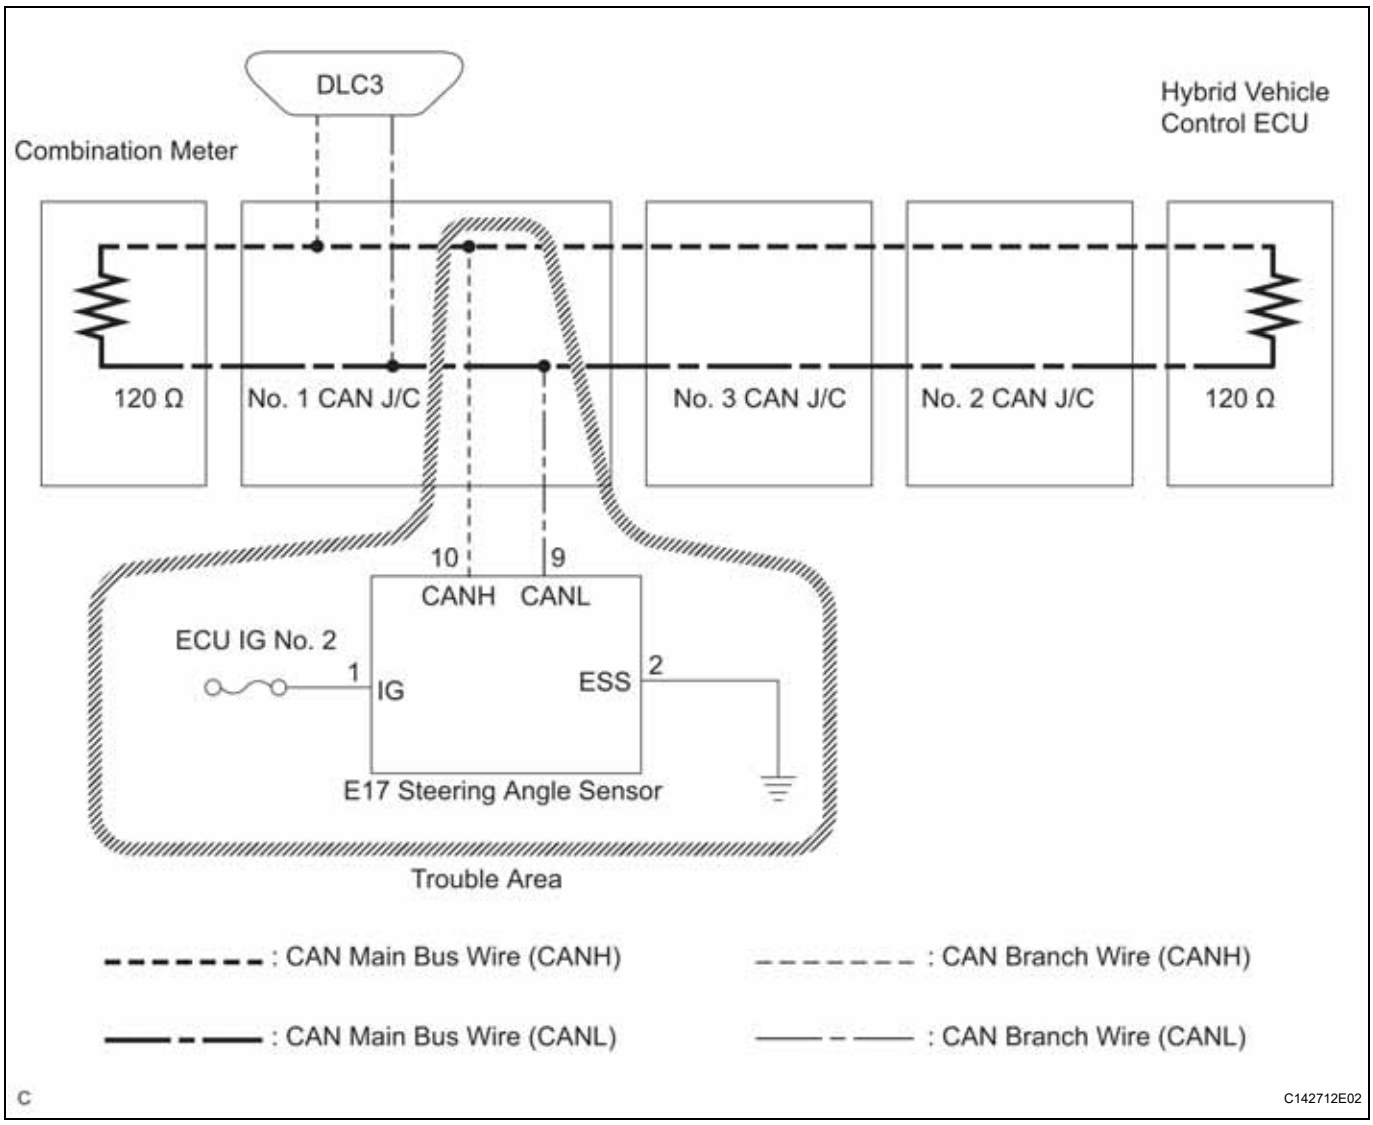
Steering Angle Sensor Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Steering Angle Sensor Communication Stop Mode	• "STEERING SENSOR" is not displayed on the "BUS CHECK" screen of the intelligent tester • Applies to "Steering Angle Sensor Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the steering angle sensor • Steering angle sensor branch wire or connector • Steering angle sensor

HINT:
"STEERING SENSOR" refers to the circuit that includes the steering angle sensor.

WIRING DIAGRAM



CA

INSPECTION PROCEDURE

NOTICE:

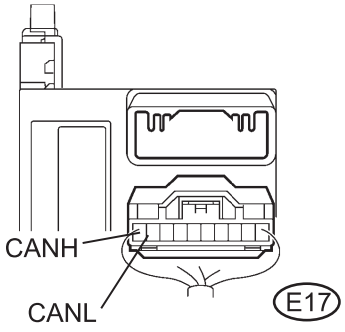
- **Turn the power switch off before measuring the resistances of CAN bus main wires and CAN bus branch wires.**

- **After the power switch is turned off, check that the key reminder warning system and lighting system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the power switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.

1 CHECK FOR OPEN IN CAN BUS WIRE (STEERING ANGLE SENSOR BRANCH WIRE)

Steering Angle Sensor Connector (Wire Harness View):



G030155E40

(a) Turn the power switch off.
(b) Disconnect the steering angle sensor connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

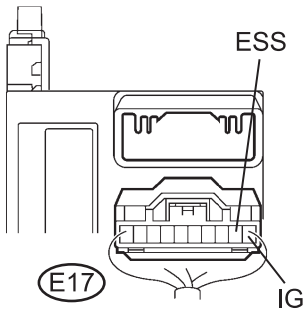
Tester Connection	Condition	Specified Value
E17-10 (CANH) - E17-9 (CANL)	Power switch off	54 to 69 Ω

NG → **REPLACE STEERING ANGLE SENSOR BRANCH WIRE OR CONNECTOR**

OK

2 CHECK WIRE HARNESS (POWER SOURCE CIRCUIT)

Steering Angle Sensor Connector (Wire Harness View):



G030155E41

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E17-2 (ESS) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Value
E17-1 (IG) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE STEERING ANGLE SENSOR

CA

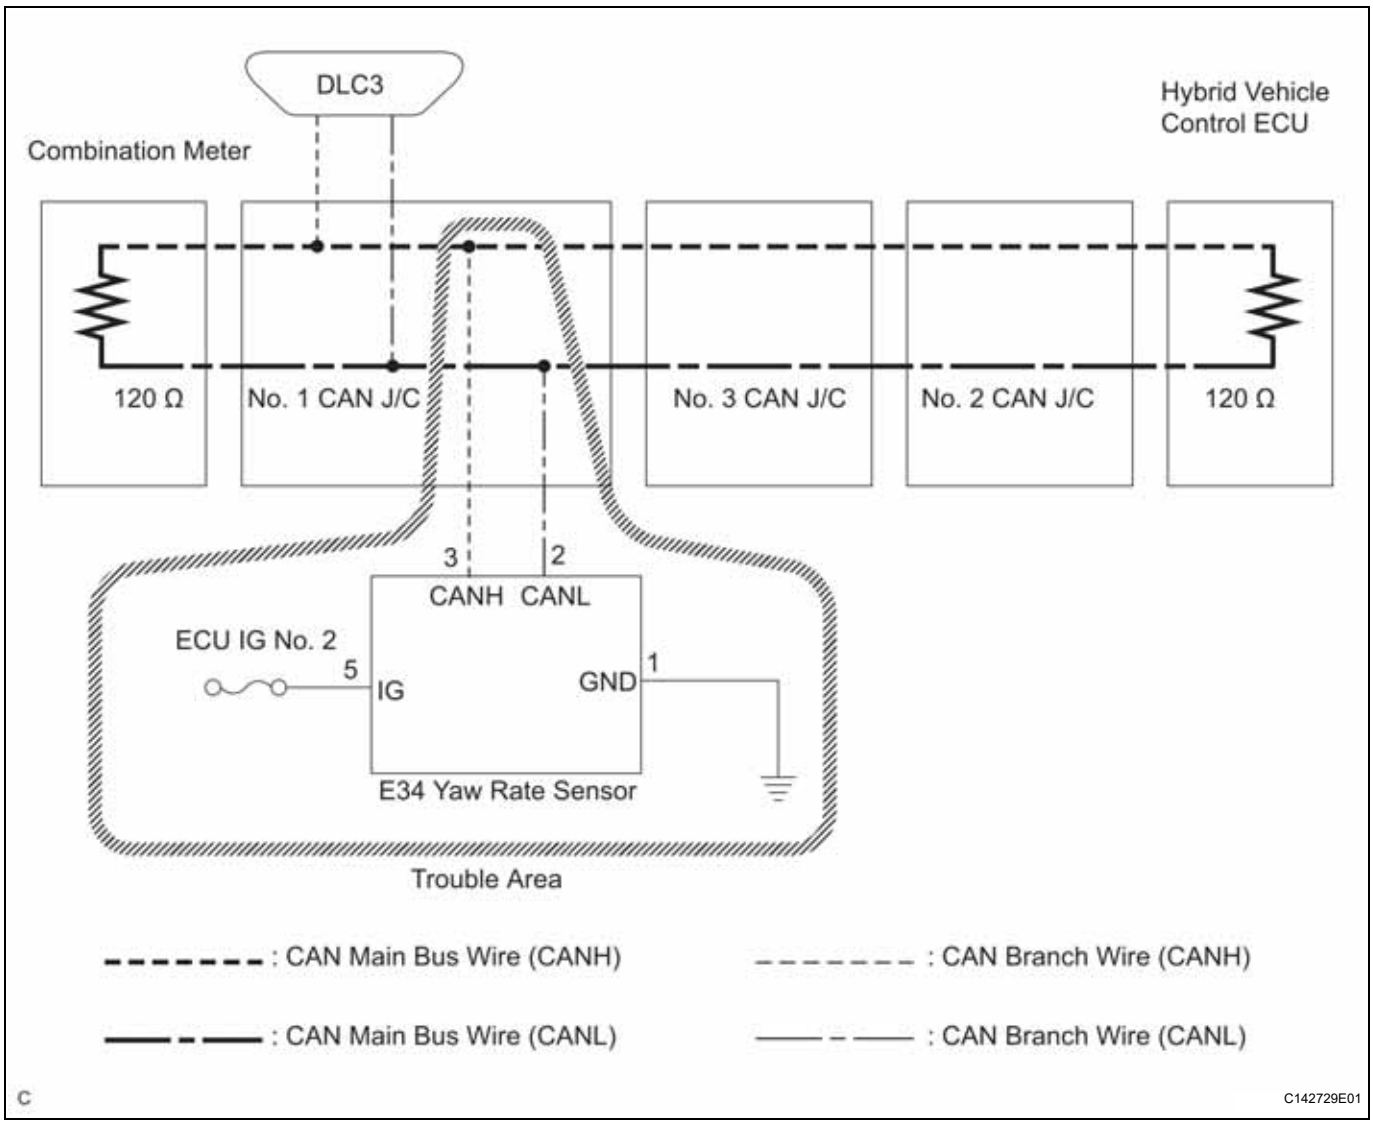
Yaw Rate Sensor Communication Stop Mode

DESCRIPTION

Detection Item	Symptom	Trouble Area
Yaw Rate Sensor Communication Stop Mode	• "YAW/DECELERAT" is not displayed on the "BUS CHECK" screen of the intelligent tester • Applies to "Yaw Rate Sensor Communication Stop Mode" in the "DTC COMBINATION TABLE"	• Power source circuit of the yaw rate sensor • Yaw rate sensor branch wire or connector • Yaw rate sensor

HINT:
"YAW/DECELERAT" refers to the circuit that includes the yaw rate sensor.

WIRING DIAGRAM



CA

INSPECTION PROCEDURE

NOTICE:

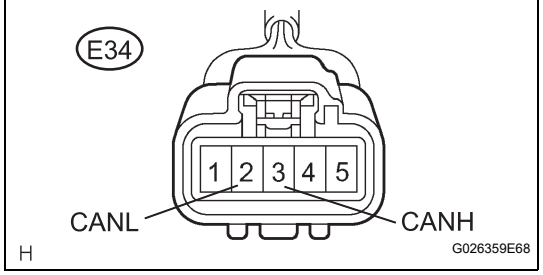
- **Turn the power switch off before measuring the resistances of CAN bus main wires and CAN bus branch wires.**

- **After the power switch is turned off, check that the key reminder warning system and lighting system are not operating.**
- **Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the doors. If any doors need to be opened in order to check connectors, open the doors and leave them open.**

HINT:
Operating the power switch, any other switches, or a door triggers related ECU and sensor communication on the CAN. This communication will cause the resistance value to change.

1 CHECK FOR OPEN IN CAN BUS WIRE (YAW RATE SENSOR BRANCH WIRE)

Yaw Rate Sensor Wire Harness View:



(a) Turn the power switch off.
(b) Disconnect the yaw rate sensor connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

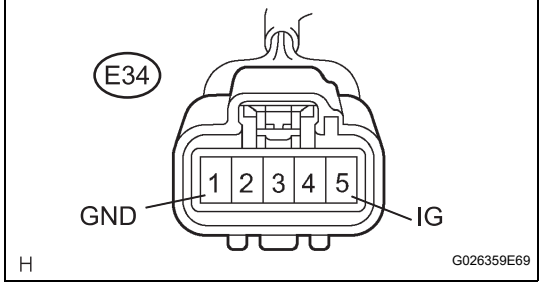
Tester Connection	Condition	Specified Value
E34-3 (CANH) - E34-2 (CANL)	Power switch off	54 to 69 Ω

NG → **REPLACE YAW RATE SENSOR BRANCH WIRE OR CONNECTOR**

OK

2 CHECK WIRE HARNESS (POWER SOURCE CIRCUIT)

Yaw Rate Sensor Wire Harness View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Value
E34-1 (GND) - Body ground	Always	Below 1 Ω

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Value
E34-5 (IG) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE YAW RATE AND ACCELERATION SENSOR

CA

FAIL-SAFE CHART

If any of the following DTCs are set, the ECM (Included in Hybrid Vehicle Control ECU) enters fail-safe mode to allow the vehicle to be driven temporarily.

DTC	Component	Fail-Safe Operation	Fail Safe Deactivation Condition
P0031, P0032	Air-Fuel Ratio (A/F) Sensor Heater	ECM turns off A/F sensor heater	Power switch off
P0037, P0038	Heated Oxygen Sensor (HO2S) Heater	ECM turns off HO2 sensor heater	Power switch off
	High pressure side fuel pump	• Stop the high side fuel pump • Limit the engine speed to 2,000 rpm or less	Pass condition detected
P0100, P0102 and P0103	Mass Air Flow (MAF) Meter	ECM calculates ignition timing according to engine speed and throttle valve position	Pass condition detected
P0110, P0112 and P0113	Intake Air Temperature (IAT) Sensor	ECM estimates IAT to be 20°C (68°F)	Pass condition detected
P0115, P0117 and P0118	Engine Coolant Temperature (ECT) Sensor	ECM estimates ECT to be 80°C (176°F)	Pass condition detected
P0120, P0121, P0122, P0123, P0220, P0222, P0223, P0604, P0606, P0607, P0657, P2102, P2103, P2111, P2112, P2118, P2119 and P2135	Electronic Throttle Control System (ECTS)	ECM cuts off throttle actuator current and throttle valve returns to 6.5° throttle position by return spring. ECM then adjusts engine output by controlling fuel injection (intermittent fuel-cut) and ignition timing in accordance with accelerator pedal opening angle to allow vehicle to continue at minimal speed*.	Pass condition detected and then power switch turned off
P0327, P0328, P0332 and P0333	Knock Sensor	ECM sets ignition timing to maximum retard.	Power switch off
P0351 to P0356	Igniter	ECM cuts fuel	Pass condition detected

NOTICE:

***: The vehicle can be driven slowly when the accelerator pedal is depressed gently. If the accelerator pedal is depressed quickly, the vehicle may speed up and slow down erratically.**

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

By reading the DATA LIST displayed on an intelligent tester, you can check values, including those of the switches, sensors, and actuators, without removing any parts. Reading the DATA LIST as the first step in troubleshooting is one method of shortening diagnostic time.

NOTICE:

In the table below, the values listed under Normal Condition are for reference only. Do not depend solely on these values when determining whether or not a part is faulty.

(a) Put the engine in inspection mode (See page ES-35).
(b) Warm up the engine.
(c) Turn the power switch off.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the power switch on (IG).
(f) Turn the tester on.
(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST.
(h) Check the values by referring to the table below.

Tester Display	Measurement Item/Range	Normal Condition *1	Diagnostic Note
INJECTOR	Injection period of No. 1 cylinder/ Min.: 0 ms, Max.: 32.64 ms	1.5 to 2.7 ms: Idling (Inspection mode)	-
IGN ADVANCE	Ignition timing advance for No. 1 cylinder/Min.: -64 deg., Max.: 63.5 deg.	BTDC 5 to 25° : Idling (Inspection mode)	-
CALC LOAD	Calculated load by ECM/Min.: 0%, Max.: 100%	• 11 to 30%: Idling (Inspection mode) • 12.1 to 30% : Running without load (2,500 rpm)	-
VEHICLE LOAD	Vehicle load/Min.: 0%, Max.: 25700%	Actual vehicle load	-
MAF	Air flow rate from MAF meter/Min.: 0 g/s , Max.: 655 g/s	2.0 to 4.3 g/s: Idling (Inspection mode) 2.4 to 8 g/s: 2,500 rpm (without load)	If value approximately 0.0 g/s: • Mass air flow meter power source circuit open • VG circuit open or short If value 160.0 g/s or more: • E2G circuit open
ENGINE SPD	Engine speed/Min.: 0 rpm, Max.: 16,383 rpm	900 rpm: Idling (Inspection mode)	-
VEHICLE SPD	Vehicle speed/Min.: 0 km/h, Max.: 255 Km/h	Actual vehicle speed	Speed indicated on speedometer
COOLANT TEMP	Engine coolant temperature/Min.: -40°C, Max.: 140°C	80 to 100°C (176 to 212°F): After warming up	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
INTAKE AIR	Intake air temperature/Min.: -40°C, Max.: 140°C	Equivalent to ambient air temperature	• If value -40°C (-40°F): sensor circuit open • If value 140°C (284°F): sensor circuit shorted
AIR-FUEL RATIO	Air-fuel ratio/Min.: 0 ,Max.: 1.999	0.8 to 1.2 : During idling (Inspection mode)	-

Tester Display	Measurement Item/Range	Normal Condition *1	Diagnostic Note
AMBIENT TEMP	Ambient air temperature/Min.: -40°C, Max.: 215°C	Equivalent to ambient air temperature	• If the value is -40°C: sensor circuit open • If the value is 215°C: sensor circuit shorted
PURGE DENSITY	Learning value of purge density/ Min.: -50, Max.: 350	-30 to 1% Idling (Inspection mode)	Service data
EVAP PURGE FLOW	Purge flow/Min.: 0%, Max.: 102.4%	0 to 100%: Idling (Inspection mode)	-
EVAP PURGE VSV	Purge VSV control duty/Min.: 0%, Max.: 100%	0 to 20%: Idling	Order signal from ECM
VAPOR PRESS PUMP	EVAP vapor pressure/Min.: 0 kPa, Max.: 327.675 kPa	-	-
VAPOR PRESS CALC	Vapor pressure (calculated)/Min.: -5.632 kPa, Max.715.264 kPa	-	-
KNOCK CRRT VAL	Correction learning value of knocking/Min: -64 CA, Max.: 1,984 CA	0 to 21°CA: Driving at 47 mph (75 km/h)	Service data
KNOCK FB VAL	Feedback value of knocking/Min: -64 CA, Max.: 1,984 CA	-21 to 0°CA: Driving at 47 mph (75 km/h)	Service data
VAPOR PRESS TANK	Vapor pressure/Min.: 33.853 kPa, Max.: 125.596 kPa	Atmospheric pressure: Fuel tank cap removed	Pressure inside fuel tank monitored by vapor pressure sensor
CLUTCH	Clutch current/Min.: 0 A, Max.: 2.49 A	-	-
THRTL LEARN VAL	Throttle valve fully closed (learned value)/Min.: 0 V, Max.: 5 V	0.4 to 0.8 V	-
FAIL #1	Whether or not fail safe function is executed/ON or OFF	ETCS has failed: ON	-
SYS GUARD JUDGE	System guard/ON or OFF	-	ETCS service data
THROTTLE POS	Absolute throttle position sensor/ Min.: 0%, Max.: 100%	• 0 to 24%: Throttle fully closed • 64 to 96%: Throttle fully open	Read value with intrusive operation (active test)
THROTTLE IDL POS	Whether or not throttle position sensor is detecting idle/ON or OFF	Idling: ON (Inspection mode)	Read value with intrusive operation (active test)
THRTL REQ POS	Throttle requirement position/Min.: 0 V, Max.: 5 V	0.5 to 1.0 V: Idling (Inspection mode)	-
THROTLLE POS	Throttle sensor positioning/Min.: 0%, Max.: 100%	0 to 10%: Idling (Inspection mode)	Calculated value based on VTA1
THROTTLE POS #2	Throttle sensor positioning #2/ Min.: 0%, Max.: 100%	-	Calculated value based on VTA2
THROTTLE POS #1	Throttle position sensor No. 1 output voltage/Min.: 0 V, Max.: 4.9 V	-	ETCS freeze data
THROTTLE POS #2	Throttle position sensor No. 2 output voltage/Min.: 0 V, Max.: 4.9 V	-	ETCS freeze data
THROTTLE POS #1	Throttle position No. 1/Min.: 0 V, Max.: 5 V	• 0.5 to 1.2 V: Throttle fully closed • 3.2 to 4.8 V: Throttle fully open	-
THROTTLE POS #2	Throttle position No. 2/Min.: 0 V, Max.: 5 V	• 2.1 to 3.1 V: Throttle fully closed • 4.5 to 5.5 V: Throttle fully open	Read value with intrusive operation (active test)
THRTL COMND VAL	Throttle position command value/ Min.: 0 V, Max.: 4.98 V	0.5 to 4.8 V	ETCS service data
THROTTLE SSR #1	Throttle sensor opener position No. 1/Min.: 0 V, Max.: 4.98 V	0.6 to 1.0 V	ETCS service data

ES

Tester Display	Measurement Item/Range	Normal Condition *1	Diagnostic Note
THROTTLE SSR #2	Throttle sensor opener position No. 2/Min.: 0 V, Max.: 4.98 V	2.0 to 2.6 V	ETCS service data
THRTL SSR #1 AD	Throttle sensor opener position No. 1 (AD)/Min.: 0 V, Max.: 4.98 V	0.6 to 0.9 V	ETCS service data
THROTTLE MOT	Throttle motor current/Min.: 0 A, Max.: 80 A	0 to 3.0 A: Idling (Inspection mode)	-
THROTTLE MOT	Whether or not throttle motor control is permitted/ON or OFF	Idling: ON (Inspection mode)	-
THROTTLE MOT	Throttle motor/Min.: 0%, Max.: 100%	0.5 to 40%: Idling (Inspection mode)	-
THROTTLE MOT	Throttle motor current/Min.: 0 A, Max.: 19.92 A	0 to 3.0 A: Idling (Inspection mode)	-
THROTL OPN DUTY	Throttle motor opening duty ratio/ Min.: 0%, Max.: 100%	0 to 40%: During idling (Inspection mode)	When accelerator pedal depressed, duty ratio increased
THROTL CLS DUTY	Throttle motor closed duty ratio/ Min.: 0%, Max.: 100%	0 to 40%: During idling (Inspection mode)	When accelerator pedal released quickly, duty ratio increased
THROTL MOT (OPN)	Throttle motor duty ratio (open)/ Min.: 0%, Max.: 100%	-	ETCS service data
THROTL MOT (CLS)	Throttle motor duty ratio (close)/ Min.: 0%, Max.: 100%	-	ETCS service data
O2S B1 S2	Heated oxygen sensor output voltage for bank 1 sensor 2/Min.: 0 V Max.: 1.275 V	0.1 to 0.9 V: Driving at 47 mph (75 km/h)	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check voltage output of sensor
AFS B1 S1	A/F sensor output voltage for bank 1 sensor 1/Min.: 0 V Max.: 7.999 V	2.8 to 3.8 V: Idling (Inspection mode)	Performing INJ VOL or A/F CONTROL function of ACTIVE TEST enables technician to check voltage output of sensor
TOTAL FT #1	Total fuel trim of bank 1 Average value for fuel trim system of bank 1/Min.: -0.5, Max.: 0.496	-0.2 to 0.2: Idling (Inspection mode)	-
SHORT FT #1	Short-term fuel trim of bank 1/ Min.: -100%, Max.: 99.2%	0 +- 20%	Short-term fuel compensation used to maintain air-fuel ratio at stoichiometric air-fuel ratio
LONG FT #1	Long-term fuel trim of bank 1/Min.: -100%, Max.: 99.2%	0 +- 20%	Overall fuel compensation carried out in long-term to compensate for continual deviation of short-term fuel trim from central value
FUEL SYS #1	Fuel system status (Bank 1)/OL or CL or OL DRIVE or OL FAULT or CL FAULT	CL: Idling after warming up (Inspection mode)	• OL (Open Loop): Has not yet satisfied conditions to go closed loop • CL (Closed Loop): Using heated oxygen sensor as feedback for fuel control • OL DRIVE: Open loop due to driving conditions (fuel enrichment) • OL FAULT: Open loop due to detected system fault • CL FAULT: Closed loop but heated oxygen sensor, which used for fuel control, malfunctioning
O2FT B1 S2	Short-term fuel trim associated with bank 1 sensor 2/Min.: -100%, Max.: 99.2%	-	Same as SHORT FT #1
AF FT B1 S1	Short-term fuel trim associated with bank 1 sensor 1/Min.: 0, Max.: 1.999	• Value less than 1 (0.000 to 0.999) =Lean • Stoichiometric air-fuel ratio=1 • Value greater than 1 (1.001 to 1.999) = RICH	-

Tester Display	Measurement Item/Range	Normal Condition *1	Diagnostic Note
AFS B1 S1	A/F sensor (bank 1 sensor 1) current/Min.: -128 mA, Max.: 127.99 mA	-0.5 to 0.5 mA: idling	-
CAT TEMP B1S1	Catalyst temperature (Bank 1, sensor 1)/Min.: -40°C, Max.: 6,513.5°C	-	-
CAT TEMP B1S2	Catalyst temperature (Bank 1, sensor 2)/Min.: -40°C, Max.: 6,513.5°C	-	-
S O2S B1S2	HO2 impedance bank 1 sensor 2/ Min.: 0 ohm, Max, 21247.68 ohm	5 to 15,000 ohm: Driving at constant vehicle speed	-
INI COOL TEMP	Initial engine coolant temperature/ Min.: -40°C, Max.: 120°C	Coolant temperature when engine started	Service data
INI INTAKE TEMP	Initial intake air temperature/Min.: -40°C, Max.: 120°C	Intake air temperature when engine started	Service data
INJ VOL	Injection volume (Cylinder 1)/Min.: 0 ml, Max.: 2.048 ml	0 to 0.5 ml	Fuel volume for 10 injections
CTP SW	Closed throttle position switch/ON or OFF	• ON: Throttle fully closed • OFF: Throttle open	-
ENG OIL PRES SW	Engine oil pressure switch signal/ 0: OFF, 1: ON	Indicating ON while engine is running	-
FUEL LID	Fuel lid position switch/Open or Close	ON: Open	-
STOP LIGHT SW	Stop light switch/ON or OFF	ON: Brake pedal depressed	-
FUEL LID SW	Fuel lid open switch/ON or OFF	ON: Open	-
+BM	Whether or not electric throttle control system power is inputted/ ON or OFF	Idling: ON (Inspection mode)	-
+BM VOLTAGE	+BM voltage/Min.: 0, Max.: 19.92	10 to 15 V: Idling (Inspection mode)	ETCS service data
BATTERY VOLTAGE	Battery voltage/Min.: 0, Max.: 65.535 V	9 to 14 V: Idling (Inspection mode)	-
ACTUATOR POWER	Actuator power supply/ON or OFF	Idling: ON (Inspection mode)	-
ATM PRESSURE	Atmospheric pressure/Min.: 0 kPa, Max.: 255 kPa	Equivalent to atmospheric pressure (absolute pressure)	-
EVAP (Purge) VSV	VSV status for EVAP control/ON or OFF	-	Active Test support data
FUEL PUMP / SPD	Fuel pump/status/ON or OFF	-	Active Test support data
VVT CTRL B1	VVT control (bank 1) status/ON or OFF	-	Active Test support data
VACUUM PUMP	Key-off EVAP system pump status/ON or OFF	-	Active Test support data
EVAP VENT VAL	Key-off EVAP system vent valve status/ON or OFF	-	Active Test support data
FAN MOTOR	Electric fan motor/ON or OFF	-	Active Test support data
EVAP VENT VAL	Key-off EVAP system vent valve status/ON or OFF	-	Active Test support data
TC/TE1	TC and TE1 terminal of DLC3/ON or OFF	-	-
FVCV	Key-off EVAP system vapor-containment valve status/ON or OFF	-	Active Test support data
FUEL FILLER OPN	Fuel lid opener motor actuating status/On or OFF	OFF: Motor is not actuated	Active Test support data
VVTL AIM ANGL #1	VVT aim angle (bank 1)/Min.: 0%, Max.: 100%	0%: Idling (Inspection mode)	VVT duty signal value during intrusive operation

Tester Display	Measurement Item/Range	Normal Condition *1	Diagnostic Note
VVT CHNG ANGL #1	VVT change angle/Min.: 0°FR, Max.: 60°FR	0 to 5°FR: Idling (Inspection mode)	Displacement angle during intrusive operation
VVT OCV DUTY B1	VVT OCV operation duty/Min.: 0%, Max.: 100%	0%: Idling (Inspection mode)	Requested duty value for intrusive operation
FC IDL	Fuel cut idle/ON or OFF	ON: Fuel cut operation	FC IDL = "ON" when throttle valve fully closed and engine speed over 2,800 rpm
FC TAU	Fuel cut TAU/ Fuel cut with very light load/ON or OFF	ON: Fuel cut operating	Fuel cut being performed under very light load to prevent incomplete engine combustion
IGNITION	Ignition counter/Min.: 0, Max.: 800	0 to 800	-
CYL #1, #2, #3, #4	Misfire ratio of cylinder 1 to 4/Min.: 0, Max.: 255	0%	This item displayed only during idling
CYL ALL	All cylinders misfire rate/Min.: 0, Max.: 255	0 to 35	-
MISFIRE RPM	Engine RPM for first misfire range/Min.: 0 rpm, Max.: 6,375 rpm	0 rpm: Misfire 0	-
MISFIRE LOAD	Engine load for first misfire range/ Min.: 0 g/rev, Max.: 3.98 g/rev	0 g/rev: Misfire 0	-
MISFIRE MARGIN	Misfire monitoring/Min.: -100%, Max.: 99.22%	-100 to 99.22%	Misfire detecting margin
#CODES	#Codes/Min.: 0, Max.: 255	-	Number of detected DTCs
CHECK MODE	Check mode/0: OFF, 1: ON	ON: Check mode ON	See page ES-34
MISFIRE TEST	Check mode result for misfire monitor/0: COMPL, 1: INCMPL	-	-
OXS2 TEST	Check mode result for HO2 sensor (bank 2)/0: COMPL, 1: INCMPL	-	-
OXS1 TEST	Check mode result for HO2 sensor (bank 1)/0: COMPL, 1: INCMPL	-	-
A/F SSR TEST B1	Check mode result for air-fuel ratio sensor (bank 1)/0: COMPL, 1: INCMPL	-	-
MIL	MIL status/ON or OFF	ON: MIL ON	-
MIL ON RUN DIST	MIL ON run distance/Min.: 0 second, Max.: 65,535 seconds	Distance after DTC detected	-
MIL ON RUN TIME	Running time from MIL ON/Min.: 0 minute, Max.: 65,535 minutes	Equivalent to running time after MIL ON	-
ENG RUN TIME	Engine run time/Min.: 0 second, Max.: 255 seconds	Time after engine start	Service data
TIME DTC CLEAR	Time after DTC cleared/Min.: 0 minute, Max.: 65,535 minutes	Equivalent to time after DTCs erased	-
DIST DTC CLEAR	Distance after DTC cleared/Min.: 0 km/h, Max.: 65,535 km/h	Equivalent to drive distance after DTCs erased	-
WU CYC DTC CLEAR	Warm-up cycle after DTC cleared/ Min.: 0, Max.: 255	-	Number of warm-up cycles after DTC cleared

Tester Display	Measurement Item/Range	Normal Condition *1	Diagnostic Note
ENGINE RUN TIME	Engine run time/Min.: 0 second, Max.: 255 seconds	0 to 255 seconds	Flag information for hybrid vehicle
ENGINE RUN TIME	Request engine run time/Min.: 0 second, Max.: 25.5 seconds	0 to 25.5 seconds	Flag information for hybrid vehicle
IGNITION TIME	Judgment time for ignition of engine/Min.: 0 second, Max.: 25.5 seconds	0 to 25.5 seconds	Flag information for hybrid vehicle
OUTPUT TIME	Judgment time for engine output/ Min.: 0 second, Max.: 25.5 seconds	0 to 25.5 seconds	Flag information for hybrid vehicle
EST PORT TEMP	Estimated intake port temperature/Min.: -40°C, Max.: 215°C	80 to 100°C	Flag information for hybrid vehicle
FUEL LEVEL	Fuel level/0: EMPTY, 1: NOT EMPTY	-	-
ISC LEARNING	ISC learning/0: INCMPL, 1: COMPL	-	-
FUEL CUT	Fuel cut for engine stop request/0: OFF, 1: ON	-	-
INDPNDNT OPR	Engine independent operation/0: NOT OPR, 1: OPERATE	-	-
RACING	Racing operation/0: NOT OPR, 1: OPERATE	-	-
WARM UP	Request engine warm-up/0: NOT REQ, 1: REQUEST	-	-
INDPNDNT CNTRL	Engine independent control operation/0: NOT OPR, 1: OPERATE	-	-
ISC LEARN VAL	ISC learning value/Max: 19.92L/s, Min.: 0 L/s	-	Flag information for hybrid vehicle
MODEL CODE	Model code	-	Identifying model code: AHV40L
ENGINE TYPE	Engine type	-	Identifying engine type: 2AZFXE
CYLINDER NUMBER	Cylinder number/Min.: 0, Max.: 255	-	Identifying cylinder number: 4
DESTINATION	Destination	-	Identifying destination: A (America)
MODEL YEAR	Model year/Min.: 1,900, Max.: 2,155	-	Identifying model year: 200#
SYSTEM	System identification	-	Identifying engine system: HV

HINT:
*1: If no idling conditions are specified, the transmission gear selector lever should be in the N or P position, and the A/C switch and all accessory switches should be OFF.

2. ACTIVE TEST

HINT:
Performing an ACTIVE TEST enables components including the relays, VSV (Vacuum Switching Valve) and actuators, to be operated without removing any parts. The ACTIVE TEST can be performed with an intelligent tester. Performing an ACTIVE TEST as the first step in troubleshooting is one method of shortening diagnostic time.
DATA LIST can be displayed during ACTIVE TEST.

(a) Put the engine in inspection mode (See page ES-35).
(b) Connect the intelligent tester to the DLC3.

(c) Turn the power switch on (IG).
(d) Turn the tester on.
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST.
(f) Perform the ACTIVE TEST by referring to the below.

Tester Display	Test Part	Control Range	Diagnostic Note
INJ VOL	Change injection volume	Between -12.5 and 24.8%	• All injectors tested at same time • Perform test at less than 3,000 rpm • Injection volume can be changed in 1% graduations within control range
A/F CONTROL	Change injection volume	Lower by 12.5% or increase by 24.8%	• Perform test at less than 3,000 rpm • A/F CONTROL enables checking and graphing of A/F (Air Fuel Ratio) sensor and Heated Oxygen (HO2) sensor voltage outputs • To conduct test, select following menu items: ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2, and press YES and ENTER followed by F4
EVAP VSV (ALONE)	Activate purge VSV control	ON/OFF	-
FUEL PUMP /SPD	Activate fuel pump (C/OPN Relay)	ON/OFF	-
TC/TE1	Turn on and off TC and TE1 connection	ON/OFF	• ON: TC and TE1 connected • OFF: TC and TE1 disconnected
FC IDL PROHBT	Prohibit idling fuel cut control	ON/OFF	-
COOLING FAN	Control electric cooling fan	ON/OFF	Test possible when following conditions met: • Power switch on (IG) • Engine is stopped
ETCS OPEN SLOW	Throttle actuator	ON: Throttle valve opens slowly	Test possible when following conditions met: • Power switch ON (IG) • Engine stopped • Accelerator pedal fully depressed (APP: 58 degrees or more)
ETCS CLOSE SLOW	Throttle actuator	ON: Throttle valve closes slowly	Same as above
ETCS OPEN FAST	Throttle actuator	ON: Throttle valve opens fast	Same as above
ETCS CLOSE FAST	Throttle actuator	ON: Throttle valve closes fast	Same as above
VVT B1	Control VVT (bank 1)	-128 to 127% This value added to present OCV control duty 100%: Maximum advance -100%: Maximum retard	Engine stall or rough idle when VVT actuator operated by 100%. Test possible during idle.
VVT CTRL B1	Turn on and off OCV (Oil Control Valve)	ON/OFF	• Engine stalls or idles roughly when OCV turned ON • Normal engine running or idling when OCV off
VACCUM PUMP	Vaccum pump	ON/OFF	-
VENT VALVE	Vent valve	ON/OFF	-
FUEL FILLER OPN	Fuel lid opener control	ON: Open	-
FVCV	Fuel vapor-containment valve control	ON: Open OFF: Close	-

ES

Tester Display	Test Part	Control Range	Diagnostic Note
FUEL CUT #1	Cylinder #1 injector fuel cut	ON/OFF	Test possible during vehicle stopping and engine idling.
FUEL CUT #2	Cylinder #2 injector fuel cut	ON/OFF	Same as above
FUEL CUT #3	Cylinder #3 injector fuel cut	ON/OFF	Same as above
FUEL CUT #4	Cylinder #4 injector fuel cut	ON/OFF	Same as above

3. SYSTEM CHECK

HINT:

Performing a SYSTEM CHECK enables the system, which consists of multiple actuators, to be operated without removing any parts. In addition, it can show whether or not any DTCs are set, and can detect potential malfunctions in the system. The SYSTEM CHECK can be performed with an intelligent tester.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK.
(e) Perform the SYSTEM CHECK by referring to the below.

Tester Display	Test Part	Control Range	Diagnostic Note
EVAP SYS CHECK (AUTO OPERATION)	Perform 9 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	• If no DTCs in PENDING CODE after performing this test, system functioning normally • Refer to EVAP System (See page ES-317)
EVAP SYS CHECK (MANUAL OPERATION)	Perform 9 steps in order to operate EVAP key-off monitor automatically	35°C (95°F) or less	• Used to detect malfunctioning parts • Refer to EVAP System (See page ES-317)

DIAGNOSTIC TROUBLE CODE CHART

HINT:
Parameters listed in the chart may be different than your readings depending on the type of instruments and other factors.
If any DTCs are displayed during a check mode DTC check, check the circuits for the DTCs listed in the table below. For details of each DTC, refer to the page indicated.

SFI SYSTEM:

DTC Code	Detection Item	Trouble Area	MIL	Memory	See page
P0010	Camshaft Position "A" Actuator Circuit (Bank 1)	1. Open or short in OCV circuit 2. OCV 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-54
P0011	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)	1. Valve timing 2. OCV 3. OCV filter 4. Camshaft timing gear assembly 5. Hybrid vehicle control ECU	Comes on	DTC stored	ES-58
P0012	Camshaft Position "A" - Timing Over-Retarded (Bank 1)	1. Valve timing 2. OCV 3. OCV filter 4. Camshaft timing gear assembly 5. Hybrid vehicle control ECU	Comes on	DTC stored	ES-58
P0016	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)	1. Mechanical system (Timing chain has jumped tooth or chain stretched) 2. Hybrid vehicle control ECU	Comes on	DTC stored	ES-64
P0031	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)	1. Open in A/F sensor heater circuit 2. A/F sensor heater (sensor 1) 3. Integration relay (EFI MAIN relay) 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-67
P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)	1. Short in A/F sensor heater circuit 2. A/F sensor heater (sensor 1) 3. Integration relay (EFI MAIN relay) 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-67
P0037	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)	1. Open in HO2 sensor heater circuit 2. HO2 sensor heater (sensor 2) 3. Integration relay (EFI MAIN relay) 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-73
P0038	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)	1. Short in HO2 sensor heater circuit 2. HO2 sensor heater (sensor 2) 3. Integration relay (EFI MAIN relay) 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-73
P0100	Mass or Volume Air Flow Circuit	1. Open or short in MAF meter circuit 2. MAF meter 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-78
P0101	Mass Air Flow Circuit Range / Performance Problem	1. Mass Air Flow (MAF) meter 2. Air induction system 3. PCV hose connections	Comes on	DTC stored	ES-85
P0102	Mass or Volume Air Flow Circuit Low Input	1. Open or short in MAF meter circuit 2. MAF meter 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-78
P0103	Mass or Volume Air Flow Circuit High Input	1. Open or short in MAF meter circuit 2. MAF meter 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-78
P0110	Intake Air Temperature Circuit Malfunction	1. Open or short in IAT sensor circuit 2. IAT sensor (built into MAF meter) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-89
P0112	Intake Air Temperature Circuit Low Input	1. Short in IAT sensor circuit 2. IAT sensor (built into MAF meter) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-89

DTC Code	Detection Item	Trouble Area	MIL	Memory	See page
P0113	Intake Air Temperature Circuit High Input	1. Open in IAT sensor circuit 2. IAT sensor (built into MAF meter) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-89
P0115	Engine Coolant Temperature Circuit Malfunction	1. Open or short in ECT sensor circuit 2. ECT sensor 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-95
P0116	Engine Coolant Temperature Circuit Range / Performance Problem	1. Thermostat 2. ECT sensor	Comes on	DTC stored	ES-101
P0117	Engine Coolant Temperature Circuit Low Input	1. Short in ECT sensor 2. ECT sensor 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-95
P0118	Engine Coolant Temperature Circuit High Input	1. Open in ECT sensor circuit 2. ECT sensor 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-95
P0120	Throttle / Pedal Position Sensor / Switch "A" Circuit Malfunction	1. Throttle Position (TP) sensor (built into throttle body) 2. Hybrid vehicle control ECU	Comes on	DTC stored	ES-104
P0121	Throttle / Pedal Position Sensor / Switch "A" Circuit Range / Performance Problem	TP sensor (built into throttle body)	Comes on	DTC stored	ES-111
P0122	Throttle / Pedal Position Sensor / Switch "A" Circuit Low Input	1. TP sensor (built into throttle body) 2. Short in VTA1 circuit 3. Open in VC circuit 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-104
P0123	Throttle / Pedal Position Sensor / Switch "A" Circuit High Input	1. TP sensor (built into throttle body) 2. Open in VTA1 circuit 3. Open in E2 circuit 4. Short between VC and VTA1 circuits 5. Hybrid vehicle control ECU	Comes on	DTC stored	ES-104
P0125	Insufficient Coolant Temperature for Closed Loop Fuel Control	1. ECT sensor 2. Cooling system 3. Thermostat	Comes on	DTC stored	ES-113
P0128	Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)	1. Thermostat 2. Cooling system 3. ECT sensor 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-116
P0136	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2)	1. Open or short in HO2 sensor (sensor 2) circuit 2. HO2 sensor (sensor 2) 3. HO2 sensor heater (sensor 2) 4. Air-fuel Ratio (A/F) sensor (sensor 1) 5. Integration relay (EFI MAIN relay) 6. Gas leakage from exhaust system	Comes on	DTC stored	ES-119
P0137	Oxygen Sensor Circuit Low Voltage (Bank 1 Sensor 2)	1. Open in HO2 sensor (sensor 2) circuit 2. HO2 sensor (sensor 2) 3. HO2 sensor heater (sensor 2) 4. Integration relay (EFI MAIN relay) 5. Gas leakage from exhaust system	Comes on	DTC stored	ES-119
P0138	Oxygen Sensor Circuit High Voltage (Bank 1 Sensor 2)	1. Short in HO2 sensor (sensor 2) circuit 2. HO2 sensor (sensor 2) 3. ECM internal circuit malfunction	Comes on	DTC stored	ES-119
P0141	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)	1. HO2 sensor heater 2. Hybrid vehicle control ECU	Comes on	DTC stored	ES-73

DTC Code	Detection Item	Trouble Area	MIL	Memory	See page
P0171	System Too Lean (Bank 1)	1. Air induction system 2. Injector blockage 3. Mass Air Flow (MAF) meter 4. Engine Coolant Temperature (ECT) sensor 5. Fuel pressure 6. Gas leakage from exhaust system 7. Open or short in A/F sensor (sensor 1) circuit 8. A/F sensor (sensor 1) 9. A/F sensor heater (sensor 1) 10. Integration relay (EFI MAIN relay) 11. A/F sensor heater and EFI MAIN relay circuits 12. PCV valve and hose 13. PCV hose connections 14. Hybrid vehicle control ECU	Comes on	DTC stored	ES-137
P0172	System Too Rich (Bank 1)	1. Injector leakage or blockage 2. MAF meter 3. ECT sensor 4. Ignition system 5. Fuel pressure 6. Gas leakage from exhaust system 7. Open or short in A/F sensor (sensor 1) circuit 8. A/F sensor (sensor 1) 9. A/F sensor heater (sensor 1) 10. Integration relay (EFI MAIN relay) 11. A/F sensor heater and EFI MAIN relay circuits 12. Hybrid vehicle control ECU	Comes on	DTC stored	ES-137
P0220	Throttle / Pedal Position Sensor / Switch "B" Circuit	1. TP sensor (built into throttle body) 2. Hybrid vehicle control ECU	Comes on	DTC stored	ES-104
P0222	Throttle / Pedal Position Sensor / Switch "B" Circuit Low Input	1. TP sensor (built into throttle body) 2. Short in VTA2 circuit 3. Open in VC circuit 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-104
P0223	Throttle / Pedal Position Sensor / Switch "B" Circuit High Input	1. TP sensor (built into throttle body) 2. Open in VTA2 circuit 3. Open in E2 circuit 4. Short between VC and VTA2 circuits 5. Hybrid vehicle control ECU	Comes on	DTC stored	ES-104
P0300	Random / Multiple Cylinder Misfire Detected	1. Open or short in engine wire harness 2. Connector connection 3. Vacuum hose connections 4. Ignition system 5. Injector 6. Fuel pressure 7. Mass Air Flow (MAF) meter 8. Engine Coolant Temperature (ECT) sensor 9. Compression pressure 10. Valve clearance 11. Valve timing 12. PCV valve and hose 13. PCV hose connections 14. Air induction system 15. Hybrid vehicle control ECU	Comes on	DTC stored	ES-146

DTC Code	Detection Item	Trouble Area	MIL	Memory	See page
P0301	Cylinder 1 Misfire Detected	1. Open or short in engine wire harness 2. Connector connection 3. Vacuum hose connections 4. Ignition system 5. Injector 6. Fuel pressure 7. Mass Air Flow (MAF) meter 8. Engine Coolant Temperature (ECT) sensor 9. Compression pressure 10. Valve clearance 11. Valve timing 12. PCV valve and hose 13. PCV hose connections 14. Air induction system 15. Hybrid vehicle control ECU	Comes on	DTC stored	ES-146
P0302	Cylinder 2 Misfire Detected	1. Open or short in engine wire harness 2. Connector connection 3. Vacuum hose connections 4. Ignition system 5. Injector 6. Fuel pressure 7. Mass Air Flow (MAF) meter 8. Engine Coolant Temperature (ECT) sensor 9. Compression pressure 10. Valve clearance 11. Valve timing 12. PCV valve and hose 13. PCV hose connections 14. Air induction system 15. Hybrid vehicle control ECU	Comes on	DTC stored	ES-146
P0303	Cylinder 3 Misfire Detected	1. Open or short in engine wire harness 2. Connector connection 3. Vacuum hose connections 4. Ignition system 5. Injector 6. Fuel pressure 7. Mass Air Flow (MAF) meter 8. Engine Coolant Temperature (ECT) sensor 9. Compression pressure 10. Valve clearance 11. Valve timing 12. PCV valve and hose 13. PCV hose connections 14. Air induction system 15. Hybrid vehicle control ECU	Comes on	DTC stored	ES-146
P0304	Cylinder 4 Misfire Detected	1. Open or short in engine wire harness 2. Connector connection 3. Vacuum hose connections 4. Ignition system 5. Injector 6. Fuel pressure 7. Mass Air Flow (MAF) meter 8. Engine Coolant Temperature (ECT) sensor 9. Compression pressure 10. Valve clearance 11. Valve timing 12. PCV valve and hose 13. PCV hose connections 14. Air induction system 15. Hybrid vehicle control ECU	Comes on	DTC stored	ES-146
P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)	1. Short in knock sensor circuit 2. Knock sensor 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-159

DTC Code	Detection Item	Trouble Area	MIL	Memory	See page
P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)	1. Open in knock sensor curcuit 2. Knock sensor 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-159
P0335	Crankshaft Position Sensor "A" Circuit	1. Open or short in CKP sensor circuit 2. CKP sensor 3. CKP sensor plate 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-163
P0340	Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)	1. Open or short in CMP sensor circuit 2. CMP sensor 3. Camshaft 4. Jumped tooth of timing chain 5. Hybrid vehicle control ECU	Comes on	DTC stored	ES-169
P0351	Ignition Coil "A" Primary / Secondary Circuit	1. Ignition system 2. Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil with igniter and hybrid vehicle control ECU 3. No. 1 to No. 4 ignition coils with igniters 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-173
P0352	Ignition Coil "B" Primary / Secondary Circuit	1. Ignition system 2. Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil with igniter and hybrid vehicle control ECU 3. No. 1 to No. 4 ignition coils with igniters 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-173
P0353	Ignition Coil "C" Primary / Secondary Circuit	1. Ignition system 2. Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil with igniter and hybrid vehicle control ECU 3. No. 1 to No. 4 ignition coils with igniters 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-173
P0354	Ignition Coil "D" Primary / Secondary Circuit	1. Ignition system 2. Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil with igniter and hybrid vehicle control ECU 3. No. 1 to No. 4 ignition coils with igniters 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-173
P0420	Catalyst System Efficiency Below Threshold (Bank 1)	1. Front exhaust pipe (with TWC) 2. Gas leakage from exhaust system 3. Air-Fuel Ratio (A/F) sensor (sensor 1) 4. Heated Oxygen (HO2) sensor (sensor 2)	Comes on	DTC stored	ES-182
P043E	Evaporative Emission System Reference Orifice Clog Up	1. Canister pump module (Reference orifice, leak detection pump, vent valve) 2. Connector / wire harness (Canister pump module - Hybrid vehicle control ECU) 3. EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-189
P043F	Evaporative Emission System Reference Orifice High Flow	1. Canister pump module (Reference orifice, leak detection pump, vent valve) 2. Connector / wire harness (Canister pump module - Hybrid vehicle control ECU) 3. EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-189

DTC Code	Detection Item	Trouble Area	MIL	Memory	See page
P0441	Evaporative Emission Control System Incorrect Purge Flow	1. EVAP VSV 2. Connector / wire harness (EVAP VSV - Hybrid vehicle control ECU) 3. Hybrid vehicle control ECU 4. Pump module 5. Leakage from EVAP system 6. Leakage from EVAP line (EVAP VSV - Intake manifold)	Comes on	DTC stored	ES-194
P0450	Evaporative Emission Control System Pressure Sensor / Switch	1. Pump module 2. Hybrid vehicle control ECU	Comes on	DTC stored	ES-201
P0451	Evaporative Emission Control System Pressure Sensor Range / Performance	1. Pump module 2. Connector / wire harness (Pump module - Hybrid vehicle control ECU) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-201
P0452	Evaporative Emission Control System Pressure Sensor / Switch Low Input	1. Pump module 2. Connector / wire harness (Pump module - Hybrid vehicle control ECU) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-201
P0453	Evaporative Emission Control System Pressure Sensor / Switch High Input	1. Pump module 2. Connector / wire harness (Pump module - Hybrid vehicle control ECU) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-201
P0505	Idle Control System Malfunction	1. ETCS 2. Air induction system 3. PCV hose connections 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-210
P050A	Cold Start Idle Air Control System Performance	1. Throttle body assembly 2. Mass air flow meter 3. Air induction system 4. PCV hose connections 5. VVT system 6. Air cleaner filter element 7. Hybrid vehicle control ECU	Comes on	DTC stored	ES-214
P050B	Cold Start Ignition Timing Performance	1. Throttle body assembly 2. Mass air flow meter 3. Air induction system 4. PCV hose connections 5. VVT system 6. Air cleaner filter element 7. Hybrid vehicle control ECU	Comes on	DTC stored	ES-214
P0560	System Voltage	1. Open in back up power source circuit 2. Battery 3. Battery terminals 4. EFI MAIN fuse 5. Hybrid vehicle control ECU	Comes on	DTC stored	ES-220
P0604	Internal Control Module Random Access Memory (RAM) Error	Hybrid vehicle control ECU	Comes on	DTC stored	ES-224
P0606	ECM / PCM Processor	Hybrid vehicle control ECU	Comes on	DTC stored	ES-226
P0607	Control Module Performance	Hybrid vehicle control ECU	Comes on	DTC stored	ES-229
P0657	Actuator Supply Voltage Circuit / Open	Hybrid vehicle control ECU	Comes on	DTC stored	ES-231
P1420	Evaporative Emission Canister Small Leak	1. Leakage from EVAP line (Canister - Fuel vapor-containment valve) 2. Leakage from EVAP line (Purge VSV - Canister) 3. Pump module 4. Leakage from canister	Comes on	DTC stored	ES-233
P1421	Evaporative Emission Canister Gross Leak	Same above	Comes on	DTC stored	ES-233

DTC Code	Detection Item	Trouble Area	MIL	Memory	See page
P1422	Fuel Tank Small Leak	1. Leakage from EVAP line (Canister - Fuel vapor-containment valve) 2. Leakage from EVAP line (Purge VSV - Canister) 3. Pump module 4. Leakage from canister	Comes on	DTC stored	ES-238
P1423	Fuel Tank Gross Leak	Same above	Comes on	DTC stored	ES-238
P1450	Fuel Tank Pressure Sensor	1. Fuel tank pressure sensor 2. Hybrid vehicle control ECU	Comes on	DTC stored	ES-243
P1451	Fuel Tank Pressure Sensor Range/ Performance	1. Fuel tank pressure sensor 2. Connector / wire harness (Fuel tank pressure sensor - Hybrid vehicle control ECU) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-243
P1452	Fuel Tank Pressure Sensor Low Input	1. Fuel tank pressure sensor 2. Connector / wire harness (Fuel tank pressure sensor - Hybrid vehicle control ECU) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-243
P1453	Fuel Tank Pressure Sensor High Input	1. Fuel tank pressure sensor 2. Connector / wire harness (Fuel tank pressure sensor - Hybrid vehicle control ECU) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-243
P2102	Throttle Actuator Control Motor Circuit Low	1. Open in throttle actuator circuit 2. Throttle actuator 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-252
P2103	Throttle Actuator Control Motor Circuit High	1. Short in throttle actuator circuit 2. Throttle actuator 3. Throttle valve 4. Throttle body assembly 5. Hybrid vehicle control ECU	Comes on	DTC stored	ES-252
P2111	Throttle Actuator Control System - Stuck Open	1. Throttle actuator 2. Throttle body 3. Throttle valve	Comes on	DTC stored	ES-256
P2112	Throttle Actuator Control System - Stuck Closed	1. Throttle actuator 2. Throttle body 3. Throttle valve	Comes on	DTC stored	ES-256
P2118	Throttle Actuator Control Motor Current Range / Performance	1. Open in ETCS power source circuit 2. Battery 3. Battery terminals 4. ETCS fuse 5. Hybrid vehicle control ECU	Comes on	DTC stored	ES-259
P2119	Throttle Actuator Control Throttle Body Range / Performance	1. ETCS 2. Hybrid vehicle control ECU	Comes on	DTC stored	ES-266
P2135	Throttle / Pedal Position Sensor / Switch "A" / "B" Voltage Correlation	1. Short between VTA1 and VTA2 circuits 2. TP sensor (built into throttle body) 3. Hybrid vehicle control ECU	Comes on	DTC stored	ES-104
P2195	Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1)	1. Open or short in A/F sensor (sensor 1) circuit 2. A/F sensor (sensor 1) 3. A/F sensor heater (sensor 1) 4. Integration relay (EFI MAIN relay) 5. A/F sensor heater and EFI MAIN relay circuits 6. Hybrid vehicle control ECU 7. A/F sensor	Comes on	DTC stored	ES-269

DTC Code	Detection Item	Trouble Area	MIL	Memory	See page
P2196	Oxygen (A/F) Sensor Signal Stuck Rich (Bank 1 Sensor 1)	1. Open or short in A/F sensor (sensor 1) circuit 2. A/F sensor (sensor 1) 2. A/F sensor heater (sensor 1) 3. Integration relay (EFI MAIN relay) 4. A/F sensor heater and EFI MAIN relay circuits 5. Hybrid vehicle control ECU 6. A/F sensor	Comes on	DTC stored	ES-269
P2238	Oxygen (A/F) Sensor Pumping Current Circuit Low (Bank 1 Sensor 1)	1. Open or short in A/F sensor (sensor 1) circuit 2. A/F sensor (sensor 1) 3. A/F sensor heater (sensor 1) 4. Integration relay (EFI MAIN relay) 5. A/F sensor heater and EFI MAIN relay circuits 6. Hybrid vehicle control ECU	Comes on	DTC stored	ES-283
P2239	Oxygen (A/F) Sensor Pumping Current Circuit High (Bank 1 Sensor 1)	1. Open or short in A/F sensor (sensor 1) circuit 2. A/F sensor (sensor 1) 3. A/F sensor heater (sensor 1) 4. Integration relay (EFI MAIN relay) 5. A/F sensor heater and EFI MAIN relay circuits 6. Hybrid vehicle control ECU	Comes on	DTC stored	ES-283
P2252	Oxygen (A/F) Sensor Reference Ground Circuit Low (Bank 1 Sensor 1)	1. Open or short in A/F sensor (sensor 1) circuit 2. A/F sensor (sensor 1) 3. A/F sensor heater (sensor 1) 4. Integration relay (EFI MAIN relay) 5. A/F sensor heater and EFI MAIN relay circuits 6. Hybrid vehicle control ECU	Comes on	DTC stored	ES-283
P2253	Oxygen (A/F) Sensor Reference Ground Circuit High (Bank 1 Sensor 1)	1. Open or short in A/F sensor (sensor 1) circuit 2. A/F sensor (sensor 1) 3. A/F sensor heater (sensor 1) 4. Integration relay (EFI MAIN relay) 5. A/F sensor heater and EFI MAIN relay circuits 6. Hybrid vehicle control ECU	Comes on	DTC stored	ES-283
P2401	Evaporative Emission Leak Detection Pump Stuck OFF	1. Canister pump module (Reference orifice, leak detection pump, vent valve) 2. Connector / wire harness (Canister pump module - Hybrid vehicle control ECU) 3. EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) 4. Hybrid vehicle control ECU	Comes on	DTC stored	ES-189
P2402	Evaporative Emission Leak Detection Pump Stuck ON	1. Canister pump module (Reference orifice, leak detection pump, vent valve) 2. *1: Blinks when a terrible misfire is detected.

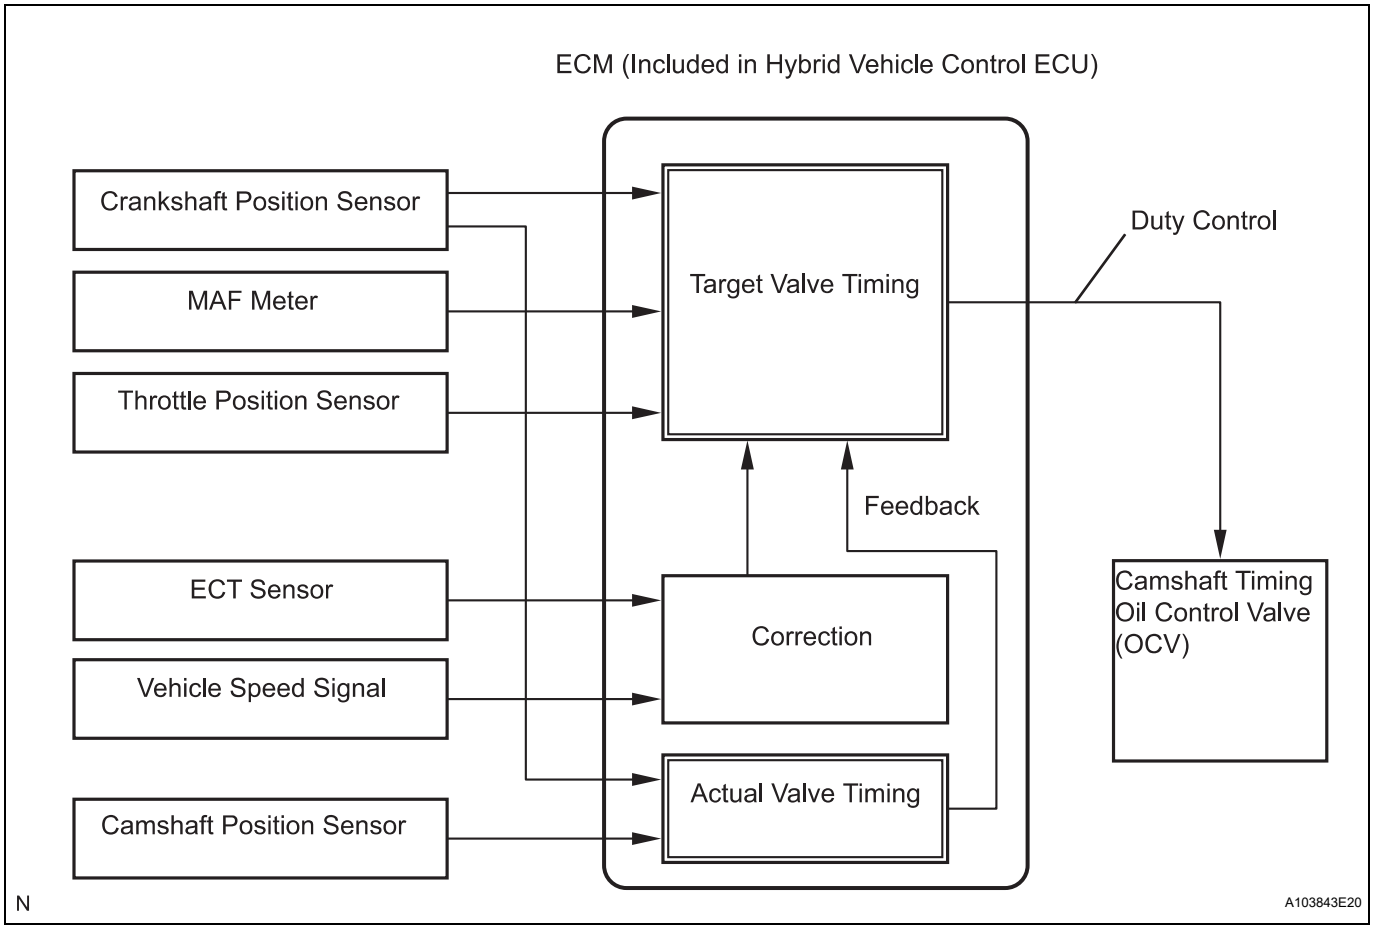
DTC	P0010	Camshaft Position "A" Actuator Circuit (Bank 1)

DESCRIPTION

The Variable Valve Timing (VVT) system includes the ECM (included in hybrid vehicle control ECU), OCV and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as the intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improve, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual intake valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.



DTC No.	DTC Detection Conditions	Trouble Areas
P0010	Open or short in OCV circuit (1-trip detection logic)	• Open or short in OCV circuit • OCV • Hybrid vehicle control ECU

HINT:
This DTC relates to the Oil Control Valve (OCV).

MONITOR DESCRIPTION

The ECM optimizes the valve timing using the VVT system to control the intake camshaft. The VVT system includes the ECM, the OCV and the VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft.
After the ECM sends the target duty-cycle control signal to the OCV, the ECM monitors the OCV current to establish an actual duty-cycle. The ECM determines the existence of a malfunction and sets the DTC when the actual duty-cycle ratio varies from the target duty-cycle ratio.

MONITOR STRATEGY

Related DTCs	P0010: VVT OCV range check
Required Sensors/Components (Main)	VVT OCV
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
All of following conditions met	-
Starter	OFF
Power switch	ON
Time after power switch OFF to ON	0.5 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

One of following conditions met	-
A. All of following conditions met	-
Battery voltage	11 to 13 V
Target duty ratio	Less than 70%
Output signal duty ratio	100%
B. All of following conditions met	-
Battery voltage	13 V or more
Target duty ratio	Less than 80%
Output signal duty ratio	100%
C. Both of following conditions met	-
Current cut status	Not cut
Output signal duty ratio	3% or less

COMPONENT OPERATING RANGE

VVT OCV duty ratio	3 to 100%

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM (include in hybrid vehicle control ECU) records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(f) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

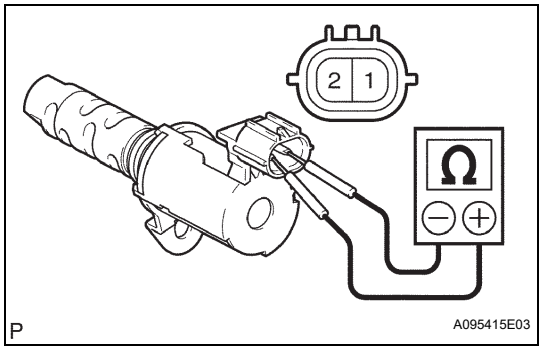
OK

Tester Operations	Specified Conditions
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

OK → CHECK FOR INTERMITTENT PROBLEMS

NG

2 INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY



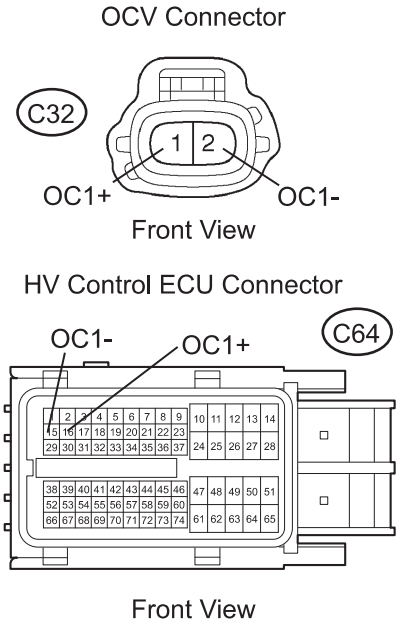
(a) Disconnect the C32 OCV connector.
(b) Measure the resistance between the terminals of the OCV.
Standard resistance:
6.9 to 7.9 Ω at 20°C (68°F)
(c) Reconnect the OCV connector.

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**

OK

3 CHECK HARNESS AND CONNECTOR (OCV - HV CONTROL ECU)

Wire Harness Side:



(a) Disconnect the C32 OCV connector.
(b) Disconnect the A61 hybrid vehicle control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C32-1 (OC1+) - C64-16 (OC1+)	Below 1 Ω
C32-2 (OC1-) - C64-15 (OC1-)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C32-1 (OC1+) or C64-16 (OC1+) - Body ground	10 kΩ or higher
C32-2 (OC1-) or C64-15 (OC1-) - Body ground	10 kΩ or higher

(d) Reconnect the OCV connector.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

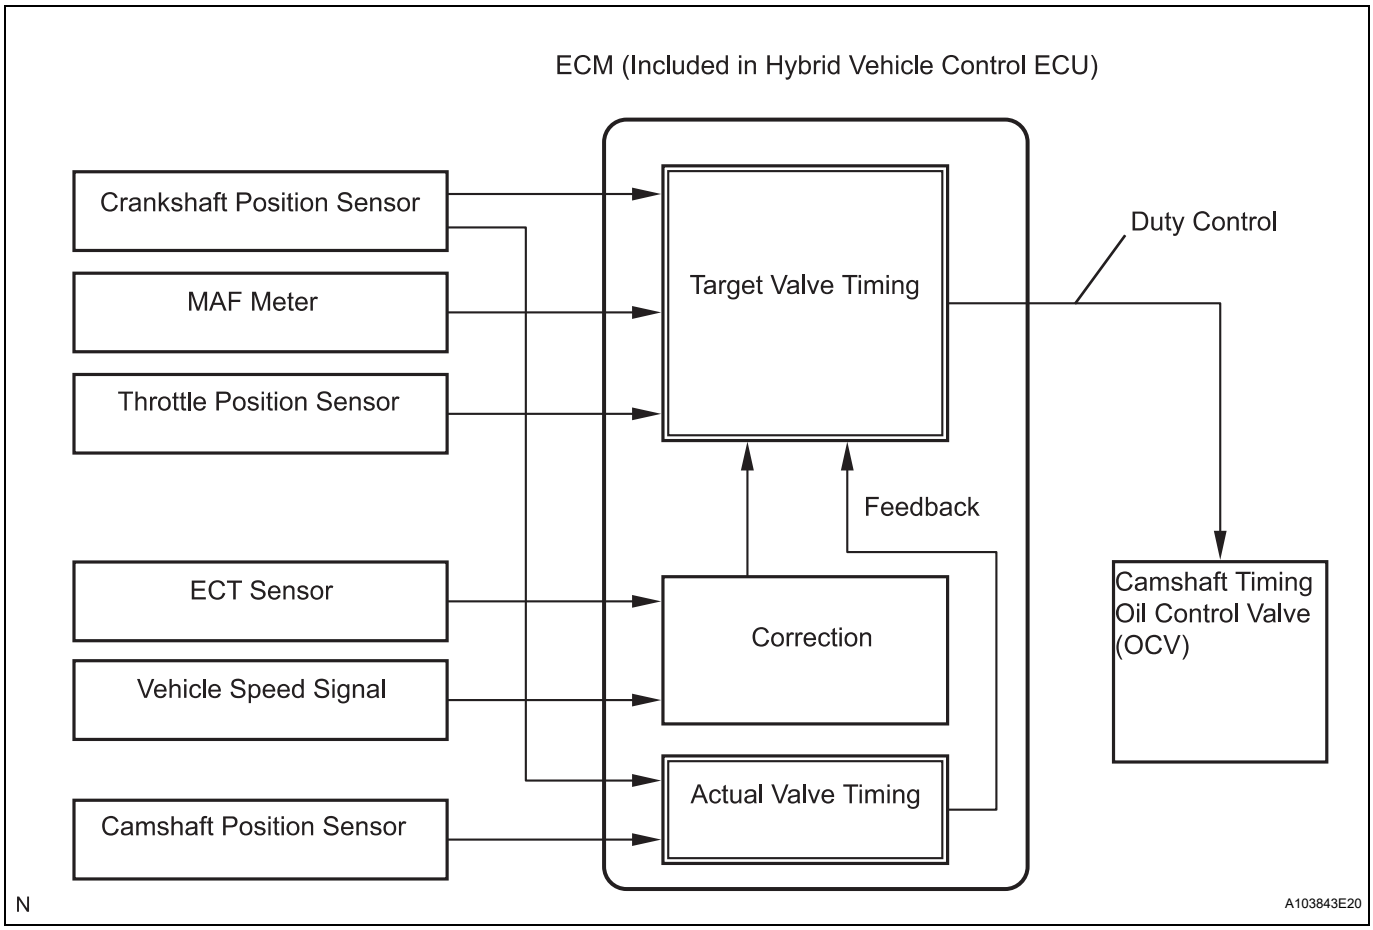
ES

DTC	P0011	Camshaft Position "A" - Timing Over-Advanced or System Performance (Bank 1)

DTC	P0012	Camshaft Position "A" - Timing Over-Retarded (Bank 1)

DESCRIPTION

The VVT system includes the ECM (include in hybrid vehicle control ECU), Oil Control Valve (OCV) and VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. Camshaft timing control is performed according to engine operating conditions such as the intake air volume, throttle valve position and engine coolant temperature. The ECM controls the OCV, based on the signals transmitted by several sensors. The VVT controller regulates the intake camshaft angle using oil pressure through the OCV. As a result, the relative positions of the camshaft and crankshaft are optimized, the engine torque and fuel economy improve, and the exhaust emissions decrease under overall driving conditions. The ECM detects the actual intake valve timing using signals from the camshaft and crankshaft position sensors, and performs feedback control. This is how the target intake valve timing is verified by the ECM.



DTC No.	DTC Detection Conditions	Trouble Areas
P0011	Advanced camshaft timing: With warm engine and engine speed of between 800 rpm and 4,000 rpm, all conditions (1), (2) and (3) met (1-trip detection logic): 1. Difference between target and actual intake valve timings more than 5°CA (Crankshaft Angle) for 4.5 seconds 2. Current intake valve timing fixed (timing changes less than 5°CA in 5 seconds) 3. Variations in VVT controller timing more than 19°CA of maximum delayed timing (malfunction in advance timing)	• Valve timing • OCV • OCV filter • Camshaft timing gear assembly • Hybrid vehicle control ECU
P0012	Retarded camshaft timing: With warm engine and engine speed of between 800 rpm and 4,000 rpm, all conditions (1), (2) and (3) met (2-trip detection logic): 1. Difference between target and actual intake valve timings more than 5°CA (Crankshaft Angle) for 4.5 seconds 2. Current intake valve timing fixed (timing changes less than 5°CA in 5 seconds) 3. Variations in VVT controller timing 19°CA or less of maximum delayed timing (malfunction in retarded timing)	• Valve timing • OCV • OCV filter • Camshaft timing gear assembly • Hybrid vehicle control ECU

ES

MONITOR DESCRIPTION

The ECM optimizes the intake valve timing using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the Oil Control Valve (OCV) and the VVT controller. The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft. If the difference between the target and actual intake valve timings is large, and changes in the actual intake valve timing are small, the ECM interprets this as a VVT controller stuck malfunction and sets a DTC.

Example:

A DTC is set when the following conditions 1, 2 and 3 are met:

1. The difference between the target and actual intake valve timing is more than 5°CA (Crankshaft Angle) and the condition continues for more than 4.5 seconds.
2. It takes 5 seconds or more to change the valve timing by 5°CA.
3. After above conditions 1 and 2 are met, the OCV is forcibly activated 63 times or more.

DTC P0011 (Advanced Cam Timing) is subject to 1-trip detection logic.

DTC P0012 (Retarded Cam Timing) is subject to 2-trip detection logic.

These DTCs indicate that the VVT controller cannot operate properly due to OCV malfunctions or presence of foreign objects in the OCV.

The monitor will run if all of the following conditions are met:

– The engine is warm (the engine coolant temperature is 75°C [167°F] or more).
– The vehicle has been driven at more than 40 mph (64 km/h) for 3 minutes.
– The engine has idled for 3 minutes.

MONITOR STRATEGY

Related DTCs	P0011: Advanced camshaft timing P0012: Retarded camshaft timing
Required Sensors/Components (Main)	VVT OCV and VVT Actuator
Required Sensors/Components (Related)	Crankshaft position sensor, camshaft position sensor and engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	Within 10 seconds

MIL Operation	Advanced camshaft timing: Immediate Retarded camshaft timing: 2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0100 - P0103 (MAF meter) P0115 - P0118 (ECT sensor) P0125 (Insufficient ECT for closed loop) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter)
Battery voltage	11 V or more
Engine RPM	800 to 4,000 rpm
ECT	75°C (167°F) to 100°C (212°F)

TYPICAL MALFUNCTION THRESHOLDS

Advanced camshaft timing:

All of following conditions met	-
Crank angle between reference position and actual intake camshaft angle	62°CA or more
Valve timing	No change at advanced valve timing

Retard camshaft timing:

All of following conditions met	-
Crank angle between reference point and actual intake camshaft angle	Less than 62°CA
Valve timing	No change at retarded valve timing

If the difference between the target and actual camshaft timings is greater than the specified value, the ECM operates the VVT actuator.
Then, the ECM monitors the camshaft timing change for 5 seconds.

WIRING DIAGRAM

Refer to DTC P0010 (See page ES-56).

INSPECTION PROCEDURE

NOTICE:
DTC P0011 or P0012 may be set when foreign objects in the engine oil are caught in some parts of the system. The DTC will remain set even if the system returns to normal after a short time. Foreign objects are filtered out by the oil filter.
HINT:
If DTC P0011 or P0012 is present, check the VVT (Variable Valve Timing) system.
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0011 OR P0012)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.

(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0011 or P0012	A
P0011 or P0012 and other DTCs	B

HINT:
If any DTCs other than P0011 or P0012 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

ES

2 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(f) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

Tester Operations	Specified Conditions
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → Go to step 4

OK

3 CHECK WHETHER DTC OUTPUT RECURS (DTC P0011 OR P0012)

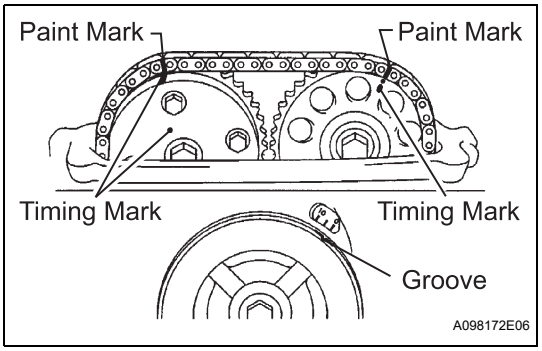
(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-31).
(d) Put the engine in inspection mode (See page ES-35).
(e) Warm up the engine.
(f) Switch the hybrid vehicle control ECU from normal mode to check mode using the tester.
(g) Drive the vehicle for more than 10 minutes.
(h) Read the DTCs using the tester.
OK:
No DTC output.

NG → Go to step 4

OK

END

4	CHECK VALVE TIMING (CHECK FOR LOOSE AND JUMPED TEETH ON TIMING CHAIN)

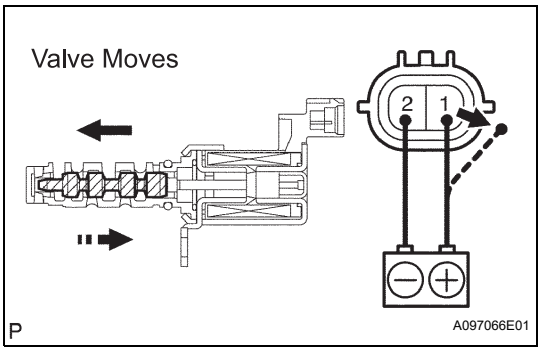


(a) Remove the cylinder head cover.
(b) Turn the crankshaft pulley, and align its groove with the timing mark "0" on the timing chain cover.
(c) Check that the timing marks on the camshaft timing sprocket and camshaft timing gear are facing upward as shown in the illustration.
If not, turn the crankshaft 1 revolution (360°), then align the marks as above.
OK:
Timing marks on camshaft timing gears are aligned as shown in the illustration.
(d) Reinstall the cylinder head cover.

NG → **ADJUST VALVE TIMING**

OK

5	INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY (OCV)

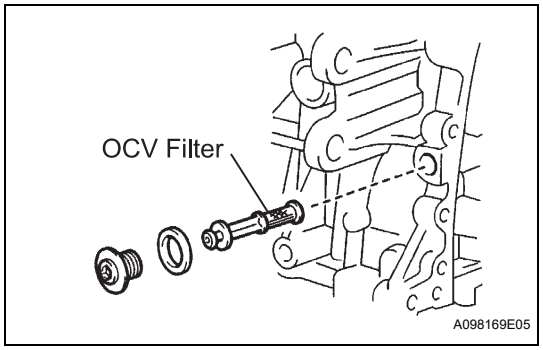


(a) Remove the OCV.
(b) Measure the resistance between the terminals of the OCV.
Standard resistance:
6.9 to 7.9 Ω at 20°C (68°F)
(c) Apply positive battery voltage to terminal 1 and negative battery voltage to terminal 2. Check the valve operation.
OK:
Valve moves quickly.
(d) Reinstall the OCV.

NG → **REPLACE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**

OK

6	INSPECT OIL CONTROL VALVE FILTER



(a) Remove the generator.
(b) Remove the OCV filter.
(c) Check that the filter is not clogged.
OK:
Filter is not clogged.
(d) Reinstall the OCV filter.
(e) Reinstall the generator.

NG → **CLEAN OIL CONTROL VALVE FILTER**

ES

OK

7	REPLACE CAMSHAFT TIMING GEAR ASSEMBLY

NEXT

8	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-31).
(d) Put the engine in inspection mode (See page ES-35).
(e) Warm up the engine.
(f) Switch the hybrid vehicle control ECU from normal mode to check mode using the tester.
(g) Drive the vehicle for more than 10 minutes.
(h) Read the output DTCs using the tester.
Standard:
No DTC output.
HINT:
DTC P0011 or P0012 is output when foreign objects in engine oil are caught in some parts of the system. These codes will stay registered even if the system returns to normal after a short time. These foreign objects are then captured by the oil filter, thus eliminating the source of the problem.

OK → **SYSTEM IS OK**

NG

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0016	Crankshaft Position - Camshaft Position Correlation (Bank 1 Sensor A)

DESCRIPTION

In the VVT (Variable Valve Timing) system, the appropriate intake valve open and close timing is controlled by the ECM (included in hybrid vehicle control ECU). The ECM performs intake valve control by performing the following: 1) controlling the camshaft and camshaft timing oil control valve, and operating the camshaft timing gear; and 2) changing the relative positions of the gaps between the camshaft and crankshaft.

DTC No.	DTC Detection Conditions	Trouble Areas
P0016	Deviation in crankshaft and camshaft position sensor signals (2-trip detection logic)	• Mechanical system (Timing chain has jumped tooth or chain stretched) • Hybrid vehicle control ECU

ES

MONITOR DESCRIPTION

The ECM optimizes the valve timing by using the VVT (Variable Valve Timing) system to control the intake camshaft. The VVT system includes the ECM, the Oil Control Valve (OCV) and the VVT controller.
The ECM sends a target duty-cycle control signal to the OCV. This control signal regulates the oil pressure supplied to the VVT controller. The VVT controller can advance or retard the intake camshaft.
The ECM calibrates the intake valve timing by setting the intake camshaft to the most retarded angle while the engine is idling. The ECM closes the OCV to retard the cam. The ECM stores this value as the VVT learning value. When the difference between the target and actual intake valve timings is 5°CA (Crankshaft Angle) or less, the ECM stores it.
If the VVT learning value matches the following conditions, the ECM determines the existence of a malfunction in the VVT system, and sets the DTC.

- VVT learning value: Less than 25°CA, or more than 51°CA.
- Above condition continues for 18 seconds or more.

This DTC indicates that the angle between the intake camshaft and the crankshaft is incorrect due to factors such as the timing chain having jumped a tooth.
This monitor begins to run after the engine has idled for 5 minutes.

MONITOR STRATEGY

Related DTCs	P0016: Camshaft timing misalignment at idling
Required Sensors/Components	VVT actuator
Required Sensors/Components	Camshaft position sensor, Crankshaft position sensor
Frequency of Operation	Once per driving cycle
Duration	Within 1 minute
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0011 (VVT system 1 - advance) P0012 (VVT system 1 - retarded) P0115 - P0118 (ECT sensor)
Engine RPM	800 to 1,000 rpm

TYPICAL MALFUNCTION THRESHOLDS

One of following conditions met	-
VVT learning value when camshaft maximum retarded	Less than 27.8°CA

VVT learning value when camshaft maximum retarded	More than 48°CA

WIRING DIAGRAM

Refer to DTC P0335 (See page ES-163).

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1	**CHECK VALVE TIMING (CHECK FOR LOOSE AND JUMPED TOOTH OF TIMING CHAIN) (See page ES-68)**

NG → **Go to step 3**

OK

NEXT → **Go to step 4**

3	**ADJUST VALVE TIMING**

NEXT

4	**CHECK WHETHER DTC OUTPUT RECURS**

NOTICE:

After replacing the hybrid vehicle control ECU or adjusting intake valve timing, confirm that the DTC output does not recur.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear DTCs (See page ES-31).
(e) Switch the hybrid vehicle control ECU from normal mode to check mode using the tester (See page ES-34).
(f) Put the engine in inspection mode (See page ES-35).
(g) Warm up the engine.
(h) Allow the engine to idle for 1 minute or more, and then drive the vehicle for 1 minute or more.
(i) Confirm that no DTC is set, using the tester.

OK:

No DTC output

NEXT

END

DTC	P0031	Oxygen (A/F) Sensor Heater Control Circuit Low (Bank 1 Sensor 1)

DTC	P0032	Oxygen (A/F) Sensor Heater Control Circuit High (Bank 1 Sensor 1)

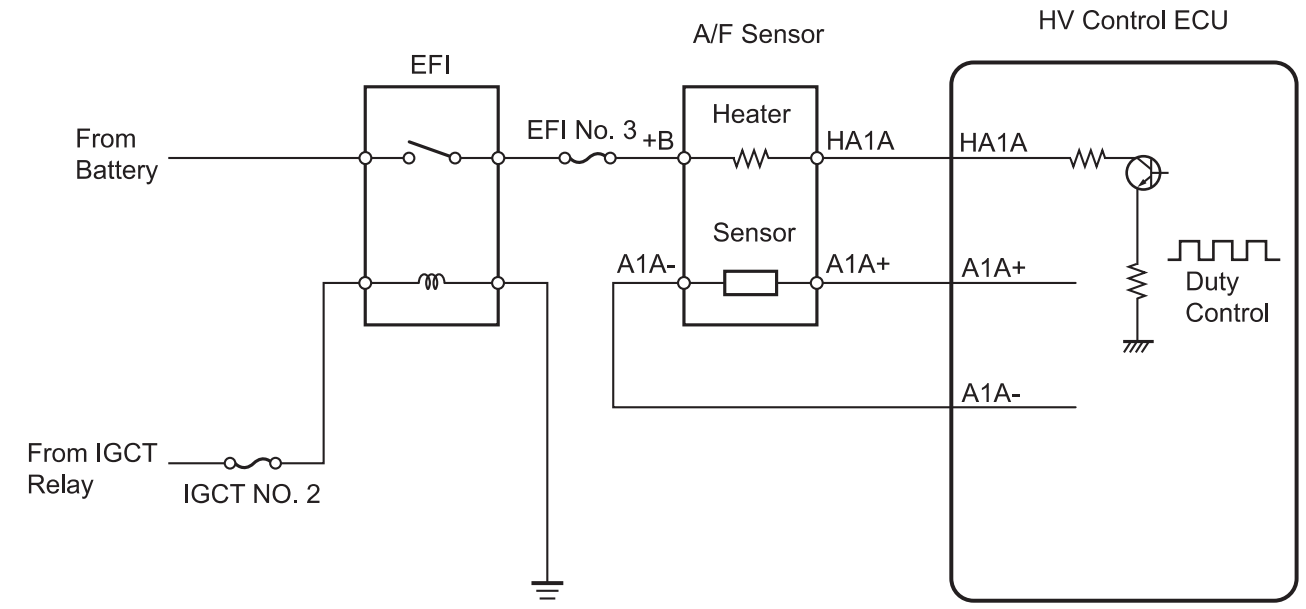
HINT:
- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

ES

DESCRIPTION

Refer to DTC P2195 (See page ES-269).
HINT:
- When either of these DTCs is set, the ECM (included in hybrid vehicle control ECU) enters fail-safe mode. In fail-safe mode, the ECM turns off the A/F sensor heater. Fail-safe mode continues until the power switch is turned off.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The A/F sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (System Diagram of Bank 1 Sensor 1):



DTC No.	DTC Detection Conditions	Trouble Areas
P0031	Air-Fuel Ratio (A/F) sensor heater current less than 0.8 A (1-trip detection logic)	• Open in A/F sensor heater circuit • A/F sensor heater (sensor 1) • Integration relay (EFI MAIN relay) • Hybrid vehicle control ECU
P0032	Air-Fuel Ratio (A/F) sensor heater current more than 10 A (1-trip detection logic)	• Short in A/F sensor heater circuit • A/F sensor heater (sensor 1) • Integration relay (EFI MAIN relay) • Hybrid vehicle control ECU

MONITOR DESCRIPTION

The ECM uses information from the Air-Fuel Ratio (A/F) sensor to regulate the air-fuel ratio and keep it close to the stoichiometric level. This maximizes the ability of the Three-Way Catalytic Converter (TWC) to purify the exhaust gases.

The A/F sensor detects oxygen levels in the exhaust gas and transmits the information to the ECM. The inner surface of the sensor element is exposed to the outside air. The outer surface of the sensor element is exposed to the exhaust gas. The sensor element is made of platinum coated zirconia and includes an integrated heating element.

The zirconia element generates a small voltage when there is a large difference in the oxygen concentrations between the exhaust gas and outside air. The platinum coating amplifies this voltage generation.

The A/F sensor is more efficient when heated. When the exhaust gas temperature is low, the sensor cannot generate useful voltage signals without supplementary heating. The ECM regulates the supplementary heating using a duty-cycle approach to adjust the average current in the sensor heater element. If the heater current is outside the normal range, the signal transmitted by the A/F sensor becomes inaccurate, as a result, the ECM is unable to regulate air-fuel ratio properly.

When the current in the A/F sensor heater is outside the normal operating range, the ECM interprets this as a malfunction in the sensor heater and sets a DTC.

Example:

The ECM sets DTC P0032 when the current in the A/F sensor heater is more than 10 A. Conversely, when the heater current is less than 0.8 A, DTC P0031 is set.

MONITOR STRATEGY

Related DTCs	P0031: A/F sensor heater open/short (Low electrical current) P0032: A/F sensor heater open/short (High electrical current)
Required Sensors/Components (Main)	A/F sensor heater
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	10 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs not present	None

P0031:

Battery voltage	10.5 V or more
A/F sensor heater duty-cycle ratio	50% or more
Time after engine start	10 seconds or more

P0032:

Time after engine start	10 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

P0031:

A/F sensor heater current	Less than 0.8 A

P0032:

A/F sensor heater current	More than 10 A

COMPONENT OPERATING RANGE

A/F sensor heater current	0.9 to 9.9 A

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-273).

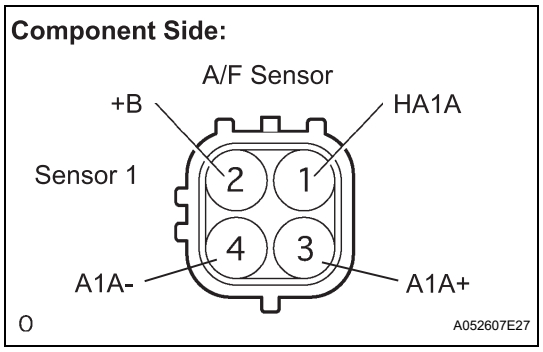
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1 INSPECT AIR-FUEL RATIO SENSOR (HEATER RESISTANCE)



(a) Disconnect the C15 A/F sensor connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

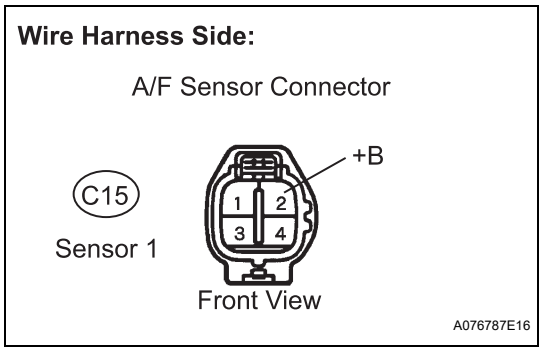
Tester Connections	Specified Conditions
1 (HA1A) - 2 (+B)	1.8 to 3.4 Ω at 20°C (68°F)
1 (HA1A) - 4 (A1A-)	10 kΩ or higher

(c) Reconnect the A/F sensor connector.

NG → REPLACE AIR-FUEL RATIO SENSOR

OK

2 CHECK TERMINAL VOLTAGE (+B OF A/F SENSOR)



(a) Disconnect the C15 A/F sensor connector.

(b) Turn the power switch on (IG).

(c) Measure the voltage between the terminal of the C15 A/F sensor connector and body ground.

Standard voltage

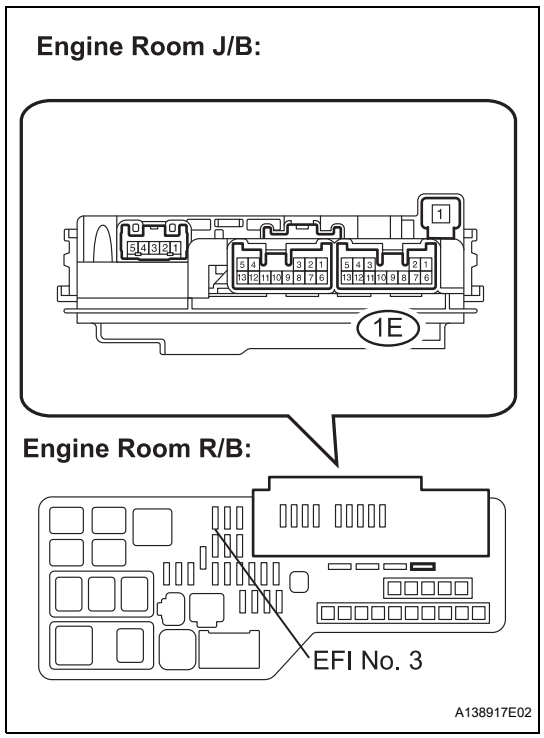
Tester Connections	Specified Conditions
C15-2 (+B) - Body ground	9 to 14 V

(d) Reconnect the A/F sensor connector.

OK → Go to step 5

NG

3	INSPECT INTEGRATION RELAY (EFI RELAY)



(a) Remove the integration relay from the engine room R/B and J/B.
(b) Inspect the EFI No. 3 fuse.
  (1) Remove the EFI No. 3 fuse from the integration relay.
  (2) Measure the EFI No. 3 fuse resistance.
    Standard resistance:
    Below 1 Ω
  (3) Reinstall the EFI No. 3 fuse.
(c) Inspect the EFI relay.
  (1) Measure the EFI relay resistance.
    Standard resistance

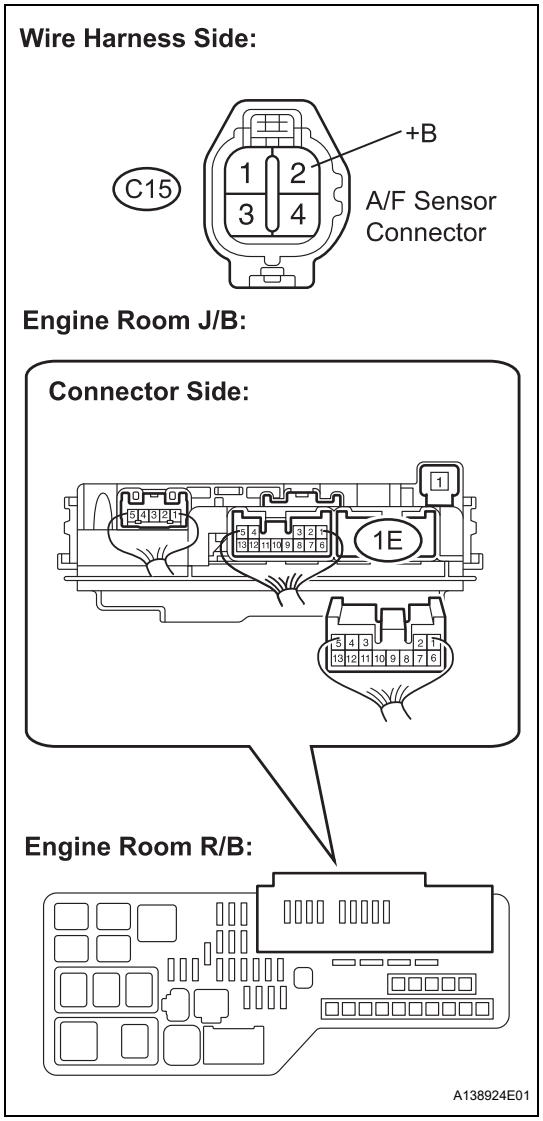
Tester Connections	Specified Conditions
1E-7 - 1E-12	10 kΩ or higher
	Below 1 Ω (Apply battery voltage between terminals 1E-9 and 1E-10)

(d) Reinstall the integration relay.

NG → **REPLACE INTEGRATION RELAY**

OK

4	CHECK HARNESS AND CONNECTOR (A/F SENSOR - EFI RELAY)



(a) Disconnect the C15 A/F sensor connector.
(b) Remove the integration relay from the engine room R/B and J/B.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C15-2 (+B) - 1E-7 (Engine room R/B and J/B)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C15-2 (+B) or 1E-7 (Engine room R/B and J/B) - Body ground	10 kΩ or higher

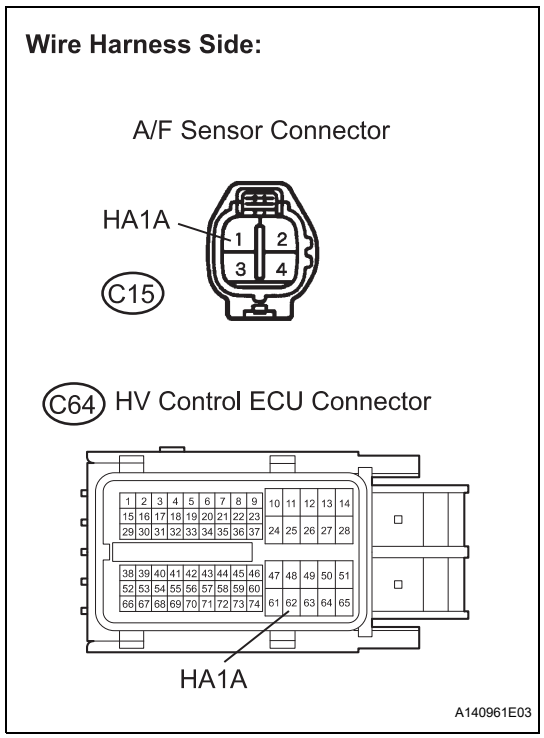
(d) Reconnect the A/F sensor connector.
(e) Reinstall the integration relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECM POWER SOURCE CIRCUIT

5	CHECK HARNESS AND CONNECTOR (A/F SENSOR - HV CONTROL ECU)



(a) Disconnect the C15 A/F sensor connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C15-1 (HA1A) - C64-62 (HA1A)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C15-1 (HA1A) or C64-62 (HA1A) - Body ground	10 kΩ or higher

(d) Reconnect the A/F sensor connector.

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0037	Oxygen Sensor Heater Control Circuit Low (Bank 1 Sensor 2)

DTC	P0038	Oxygen Sensor Heater Control Circuit High (Bank 1 Sensor 2)

DTC	P0141	Oxygen Sensor Heater Circuit Malfunction (Bank 1 Sensor 2)

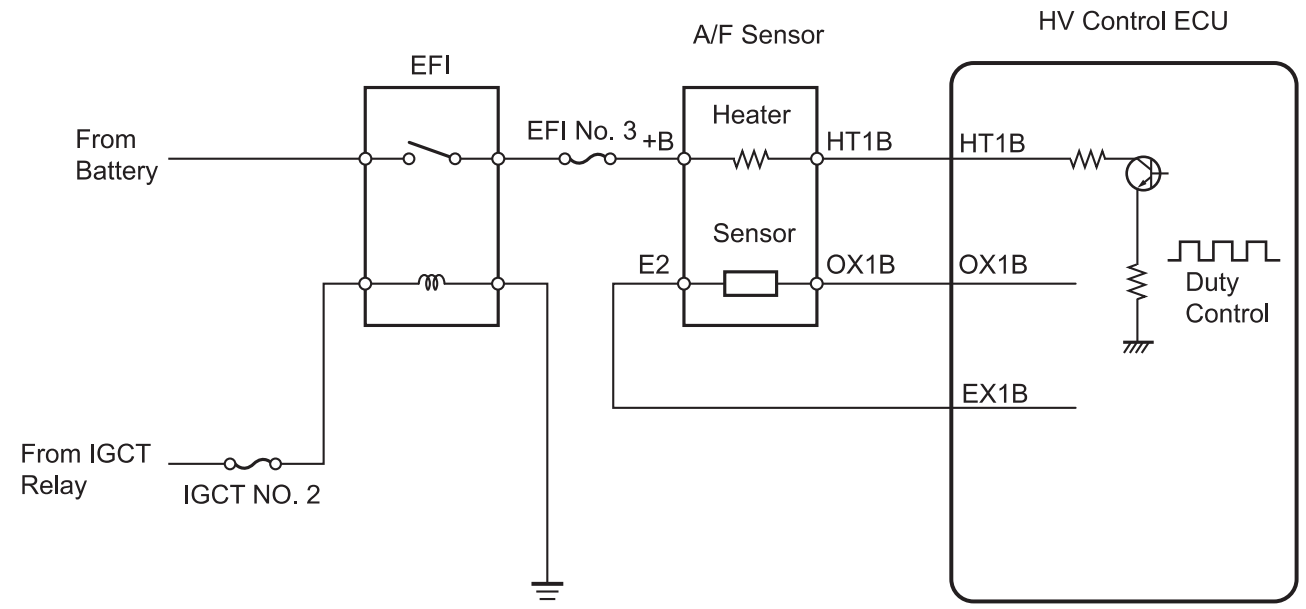
DESCRIPTION

Refer to DTC P0136 (See page ES-119).

HINT:

- When any of these DTCs are set, the ECM (included in hybrid vehicle control ECU) enters fail-safe mode. In fail-safe mode, the ECM turns off the Heated Oxygen (HO2) Sensor heater. Fail-safe mode continues until the power switch is turned off.
- The ECM provides a pulse width modulated control circuit to adjust the current through the heater. The HO2 sensor heater circuit uses a relay on the B+ side of the circuit.

Reference (System Diagram of Bank 1 Sensor 2):



DTC No.	DTC Detection Conditions	Trouble Areas
P0037	Heated Oxygen (HO2) sensor heater current less than 0.3 A (1-trip detection logic)	• Open in HO2 sensor heater circuit • HO2 sensor heater (sensor 2) • Integration relay (EFI MAIN relay) • Hybrid vehicle control ECU
P0038	Heated Oxygen (HO2) sensor heater current more than 2 A (1-trip detection logic)	• Short in HO2 sensor heater circuit • HO2 sensor heater (sensor 2) • Integration relay (EFI MAIN relay) • Hybrid vehicle control ECU
P0141	Cumulative heater resistance correction value exceeds the acceptable threshold. (2-trip detection logic)	• HO2 sensor heater • Hybrid vehicle control ECU

MONITOR DESCRIPTION

The sensing position of the Heated Oxygen (HO2) sensor has a zirconia element which is used to detect the oxygen concentration in the exhaust gas. If the zirconia element is at the appropriate temperature, and the difference between the oxygen concentrations surrounding the inside and outside surfaces of the sensor is large, the zirconia element generates voltage signals. In order to increase the oxygen concentration detecting capacity of the zirconia element, the ECM supplements the heat from the exhaust with heat from a heating element inside the sensor.

Heated oxygen sensor heater range check (P0037 and P0038):

The ECM monitors the current applied to the O2 sensor heater to check the heater for malfunctions. If the current is below the threshold value, the ECM determines that there is an open circuit in the heater. If the current is above the threshold value, the ECM determines that there is a short circuit in the heater.

The ECM constantly monitors the current applied to the heater. If the ECM detects an open or short circuit, the ECM turns the MIL on and sets a DTC.

If a malfunction is detected, the ECM cuts off the current applied to the heater.

Example:

The ECM sets DTC P0038 when the current in the HO2 sensor heater is more than 2 A. Conversely, when the heater current is less than 0.3 A, DTC P0037 is set.

MONITOR STRATEGY

Related DTCs	P0037: Heated oxygen sensor heater range check (Low electrical current) P0038: Heated oxygen sensor heater range check (High electrical current) P0141: Heated oxygen sensor heater performance
Required Sensors/Components (Main)	Heated oxygen sensor heater
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous: P0037 and P0038 Once per driving cycle: P0141

Battery voltage	10.5 to 20 V

TYPICAL MALFUNCTION THRESHOLDS

P0037:

Heater current	Less than 0.3 A

P0038:

Heater current	More than 2 A

COMPONENT OPERATING RANGE

Heated Oxygen (HO2) sensor heater current	0.4 to 1 A (when engine idles, HO2 sensor warmed up and battery voltage 11 to 14 V)

WIRING DIAGRAM

Refer to DTC P0136 (See page ES-126).

CONFIRMATION DRIVING PATTERN

These DTCs are detected when the engine idles for 110 seconds or more.

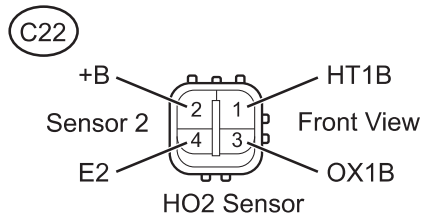
INSPECTION PROCEDURE

HINT:
Sensor 2 refers to the sensor mounted behind the Three-Way Catalytic Converter (TWC) and located far from the engine assembly.
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1 INSPECT HEATED OXYGEN SENSOR (HEATER RESISTANCE)

Component Side :



A115661E07

(a) Disconnect the C22 Heated Oxygen (HO2) sensor connector.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connections	Specified Conditions
1 (HT1B) - 2 (+B)	11 to 16 Ω at 20°C (68°F)
1 (HT1B) - 4 (E2)	10 kΩ or higher

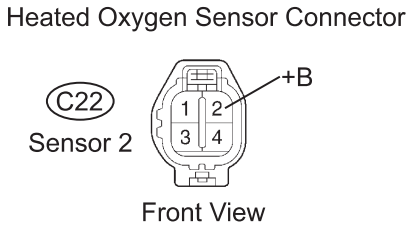
(c) Reconnect the HO2 sensor connector.

NG → REPLACE HEATED OXYGEN SENSOR

OK

2 CHECK TERMINAL VOLTAGE (+B OF HO2 SENSOR)

Wire Harness Side:



A072895E14

(a) Disconnect the C22 HO2 sensor connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage between the terminals of the C22 HO2 sensor connector and body ground.
Standard voltage

Tester Connections	Specified Conditions
C22-2 (+B) - Body ground	9 to 14 V

(d) Reconnect the HO2 sensor connector.

OK → Go to step 5

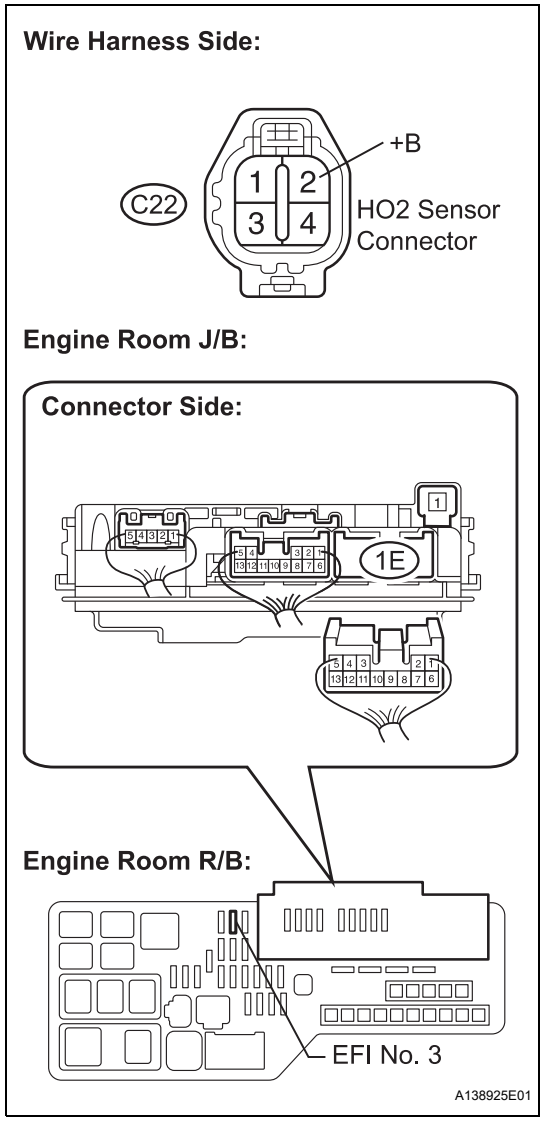
NG

3	INSPECT INTEGRATION RELAY (EFI RELAY) (See page ES-76)

NG → REPLACE INTEGRATION RELAY

OK

4	CHECK HARNESS AND CONNECTOR (HO2 SENSOR - EFI RELAY)



(a) Check the EFI No. 3 fuse.
(b) Disconnect the C22 HO2 sensor connector.
(c) Remove the integration relay from the engine room R/B and J/B.
(d) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C22-2 (+B) - 1E-6 (Engine room R/B and J/B)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C22-2 (+B) or 1E-6 (Engine room R/B and J/B) - Body ground	10 kΩ or higher

(e) Reconnect the HO2 sensor connector.
(f) Reinstall the integration relay.

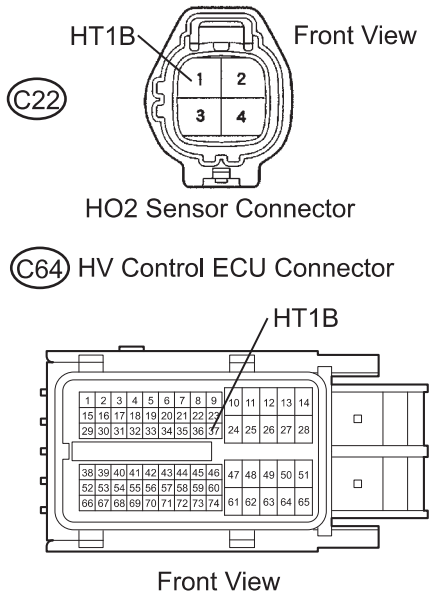
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

CHECK ECM POWER SOURCE CIRCUIT

5 CHECK HARNESS AND CONNECTOR (HO2 SENSOR - HV CONTROL ECU)

Wire Harness Side:



(a) Disconnect the C22 HO2 sensor connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C22-1 (HT1B) - C64-37 (HT1B)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C22-1 (HT1B) or C64-37 (HT1B) - Body ground	10 kΩ or higher

(d) Reconnect the HO2 sensor connector.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-31).
(e) Put the engine in inspection mode (See page ES-35).
(f) Allow the engine to idle for 2 minutes or more.

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0100	Mass or Volume Air Flow Circuit

DTC	P0102	Mass or Volume Air Flow Circuit Low Input

DTC	P0103	Mass or Volume Air Flow Circuit High Input

DESCRIPTION

The Mass Air Flow (MAF) meter is a sensor that measures the amount of air flowing through the throttle valve.

The ECM (included in hybrid vehicle control ECU) uses this information to determine the fuel injection time and to provide the appropriate air-fuel ratio.

ES

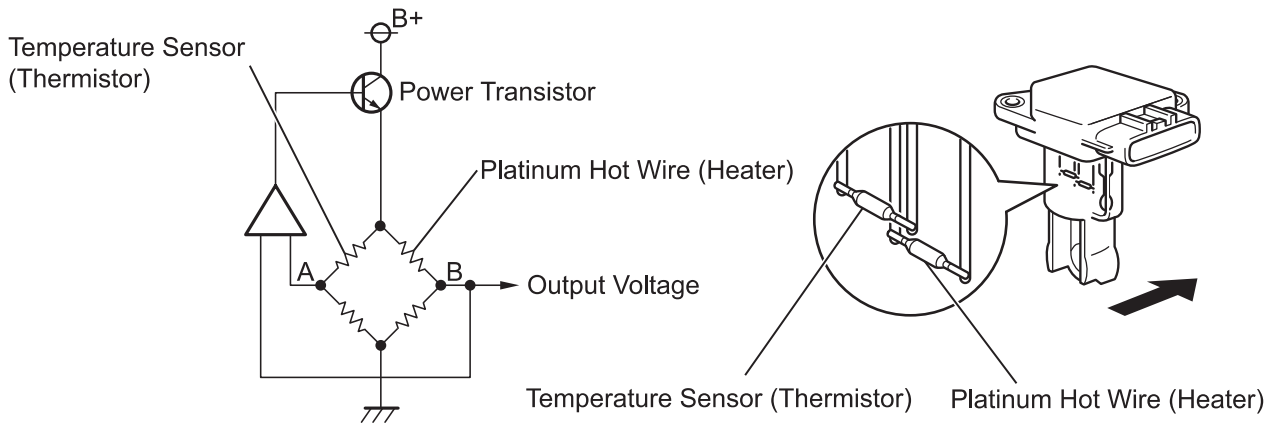
Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air.

By applying a specific electrical current to the wire, the ECM heats it to a given temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components in the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.

The circuit is constructed so that the platinum hot wire and the temperature sensor create a bridge circuit, and the power transistor is controlled so that the potentials of A and B remain equal to maintain the predetermined temperature.

HINT:

When any of these DTCs are set, the ECM enters fail-safe mode. During fail-safe mode, the ignition timing is calculated by the ECM, according to the engine RPM and throttle valve position. Fail-safe mode continues until a pass condition is detected.



DTC No.	DTC Detection Conditions	Trouble Areas
P0100	MAF meter voltage less than 0.2 V, or more than 4.9 V for 3 seconds (1-trip detection logic)	• Open or short in MAF meter circuit • MAF meter • Hybrid vehicle control ECU
P0102	MAF meter voltage less than 0.2 V for 3 seconds (1-trip detection logic)	• Open or short in MAF meter circuit • MAF meter • Hybrid vehicle control ECU
P0103	MAF meter voltage more than 4.9 V for 3 seconds (1-trip detection logic)	• Open or short in MAF meter circuit • MAF meter • Hybrid vehicle control ECU

HINT:
When any of these DTCs are set, check the air-flow rate by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II/ DATA LIST / PRIMARY / MAF.

Mass Air Flow Rate (g/sec.)	Malfunctions
Approximately 0.0	• Open in Mass Air Flow (MAF) meter power source circuit • Open or short in VG circuit
271.0 or more	• Open in E2G circuit

MONITOR DESCRIPTION

If there is a defect in the MAF meter or an open or short circuit, the voltage level deviates from the normal operating range. The ECM interprets this deviation as a malfunction in the MAF meter and sets a DTC.
Example:
When the sensor output voltage remains less than 0.2 V, or more than 4.9 V, for more than 3 seconds, the ECM sets a DTC.
If the malfunction is not repaired successfully, a DTC is set 3 seconds after the engine is next started.

MONITOR STRATEGY

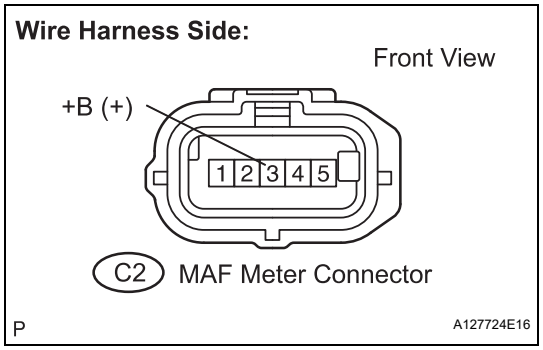
ES

2 INSPECT MASS AIR FLOW METER (POWER SOURCE VOLTAGE)



(a) Disconnect the C2 Mass Air Flow (MAF) meter connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage between the terminal of the wire harness side connector and body ground.
Standard voltage

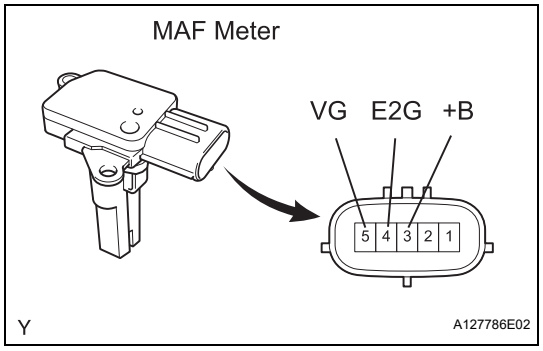
Tester Connections	Specified Conditions
C2-3 (+B) - Body ground	9 to 14 V

(d) Reconnect the MAF meter connector.

NG → Go to step 5

OK

3 INSPECT MASS AIR FLOW METER (VG VOLTAGE)



(a) Output voltage inspection.
(1) Apply battery voltage across terminals +B and E2G.
(2) Connect the positive (+) tester probe to terminal VG, and the negative (-) tester probe to terminal E2G.
(3) Measure the voltage.
Standard voltage

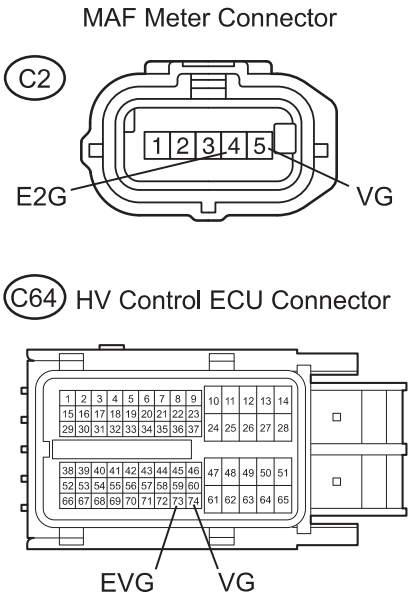
Tester Connections	Specified Conditions
5 (VG) - 4 (E2G)	0.2 to 4.9 V

NG → REPLACE MASS AIR FLOW METER

OK

4	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - HV CONTROL ECU)

Wire Harness Side:



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C2-5 (VG) - C64-74 (VG)	Below 1 Ω
C2-4 (E2G) - C64-73 (EVG)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C2-5 (VG) or C64-74 (VG) - Body ground	10 kΩ or higher

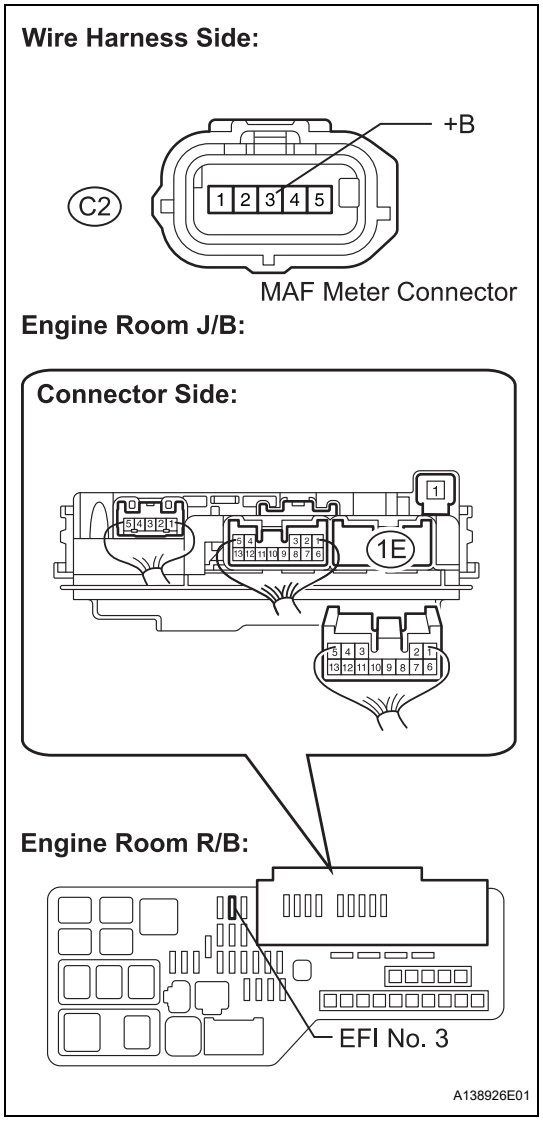
(d) Reconnect the MAF meter connector.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

5	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - INTEGRATION RELAY)



(a) Check the EFI No. 1 fuse.
(b) Disconnect the C2 MAF meter connector.
(c) Remove the integration relay from the engine room R/B and J/B.
(d) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C2-3 (+B) - 1E-6	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C2-3 (+B) or 1E-6 - Body ground	10 kΩ or higher

(e) Reconnect the MAF meter connector.
(f) Reinstall the integration relay.

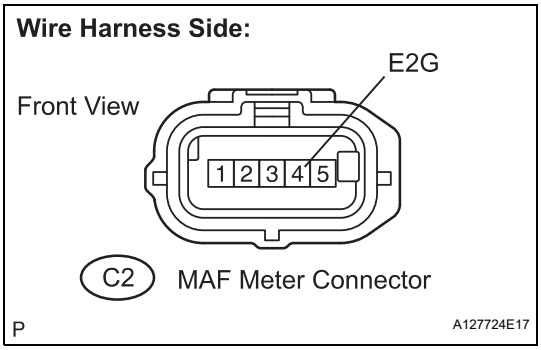
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK ECU POWER SOURCE CIRCUIT

ES

6	CHECK HARNESS AND CONNECTOR (SENSOR GROUND)



(a) Disconnect the C2 MAF meter connector.
(b) Measure the resistance.

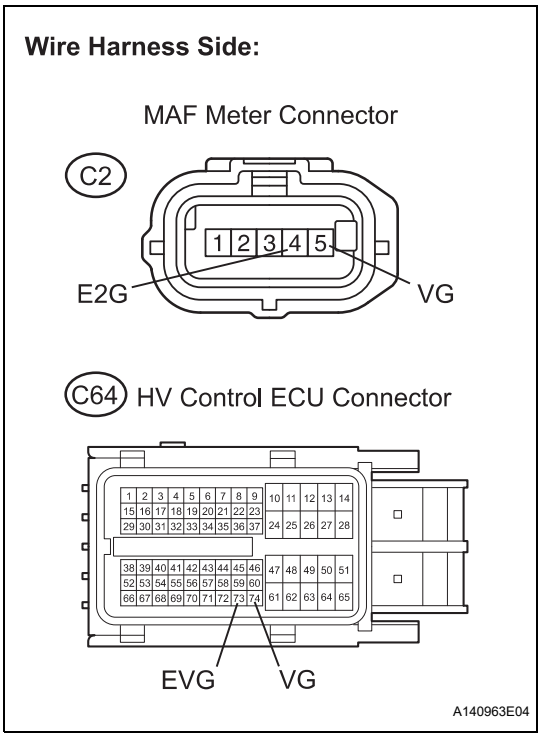
OK → **REPLACE MASS AIR FLOW METER**

NG

7	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - HV CONTROL ECU)



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C2-5 (VG) - C64-74 (VG)	Below 1 Ω
C2-4 (E2G) - C64-73 (EVG)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C2-5 (VG) or C64-74 (VG) - Body ground	10 kΩ or higher

(d) Reconnect the MAF meter connector.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0101	Mass Air Flow Circuit Range / Performance Problem

DESCRIPTION

Refer to DTC P0100 (See page ES-78).

DTC No.	DTC Detection Conditions	Trouble Areas
P0101	Conditions (a), (b) and (c) continue for more than 10 seconds (2-trip detection logic): (a) Engine speed is less than 2,000 rpm (b) Engine coolant temperature is 70°C (158°F) or higher (c) Output voltage of MAF meter more than 2.2 V (varies with throttle position sensor voltage).	• Mass Air Flow (MAF) meter • Air induction system • PCV hose connections
	Condition (a) and (b) continue for more than 6 seconds (2-trip detection logic): (a) Engine speed is more than 500 rpm (b) Output voltage of MAF meter less than 0.93 V (varies with throttle position sensor voltage).	

ES

MONITOR DESCRIPTION

The MAF meter is a sensor that measures the amount of air flowing through the throttle valve. The ECM (include in hybrid vehicle control ECU) uses this information to determine the fuel injection time and to provide an appropriate air-fuel ratio. Inside the MAF meter, there is a heated platinum wire which is exposed to the flow of intake air. By applying a specific electrical current to the wire, the ECM heats it to a specific temperature. The flow of incoming air cools both the wire and an internal thermistor, affecting their resistance. To maintain a constant current value, the ECM varies the voltage applied to these components of the MAF meter. The voltage level is proportional to the airflow through the sensor, and the ECM uses it to calculate the intake air volume.

The ECM monitors the average engine load value ratio to check the MAF meter for malfunctions. The average engine load value ratio is obtained by comparing the average engine load calculated from the MAF meter output to the average engine load estimated from the driving conditions, such as the engine speed and the throttle opening angle. If the average engine load value ratio is below the threshold value, the ECM determines that the intake air volume is low, and if the average engine load value ratio is above the threshold value, the ECM determines that the intake air volume is high.

If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

MONITOR STRATEGY

Related DTCs	P0101: Mass air flow meter rationality
Required Sensors/Components (Main)	Mass air flow meter
Required Sensors/Components (Related)	Crankshaft Position (CKP) sensor, Engine Coolant Temperature (ECT) sensor and Throttle Position (TP) sensor
Frequency of Operation	Continuous
Duration	10 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for closed loop) P0335 (CKP sensor) P0340 (CMP sensor)
Speed	Less than 2,000 rpm

Engine coolant temperature	70°C (158°F) or more

Mass Air Flow Meter Rationality (High Voltage):

Engine speed	Less than 2,000 rpm
Engine coolant temperature	70 °C (158 °F) or higher
IAT sensor circuit	OK
ECT sensor circuit	OK
CKP sensor circuit	OK
TP sensor circuit	OK
Canister pressure sensor circuit	OK
EVAP leak detection pump	OK
EVAP vent valve	OK

ES

Mass Air Flow Meter Rationality (Low Voltage):

Engine speed	More than 500 rpm
Fuel out	OFF

TYPICAL MALFUNCTION THRESHOLDS

Mass Air Flow Meter Rationality (High Voltage):

Mass air flow meter voltage	More than 2.2 V (Varies with throttle position sensor voltage)

Mass Air Flow Meter Rationality (Low Voltage):

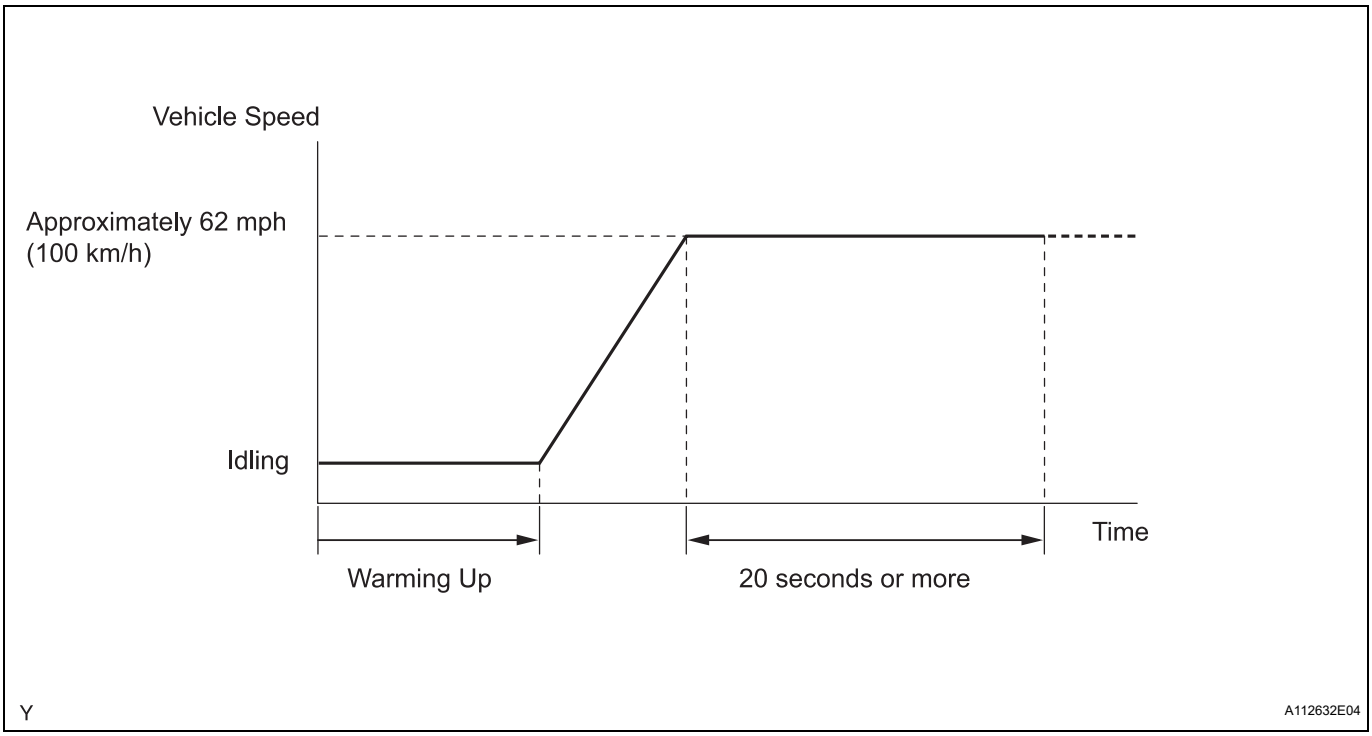
Mass air flow meter voltage	Less than 0.93 V (Varies with throttle position sensor voltage)

WIRING DIAGRAM

Refer to DTC P0100 (See page ES-80).

CONFIRMATION DRIVING PATTERN

HINT:
Performing this confirmation pattern will activate the mass air flow performance monitor.



1. Connect the intelligent tester to the DLC3.

2. Turn the power switch on (IG).
3. Turn the tester on.
4. Clear the DTCs (See page ES-31).
5. Put the engine in inspection mode (See page ES-35).
6. Warm it up until the engine coolant temperature reaches 70°C (158°F) or higher.
7. Drive the vehicle at approximately 62 mph (100 km/h) for 20 seconds or more.
8. On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0101)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0101	A
P0101 and other DTCs	B

HINT:
If any DTCs other than P0101 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

3	CHECK PCV HOSE (HOSE CONNECTION)

OK:
PCV hose is connected correctly and is not damaged.

NG → REPAIR OR REPLACE PCV HOSE

OK

REPLACE MASS AIR FLOW METER

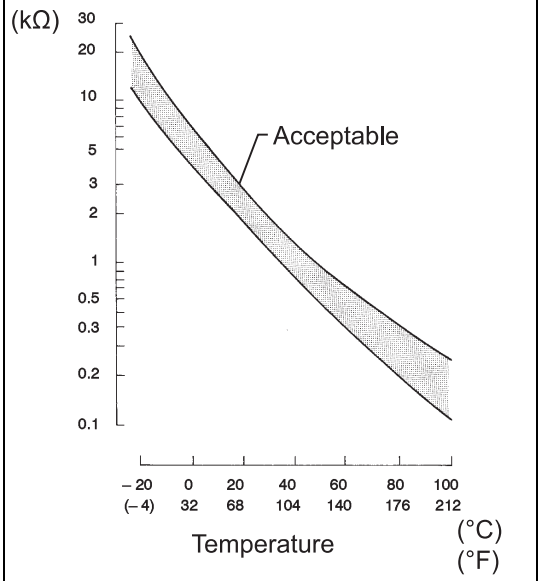
DTC	P0110	Intake Air Temperature Circuit Malfunction

DTC	P0112	Intake Air Temperature Circuit Low Input

DTC	P0113	Intake Air Temperature Circuit High Input

DESCRIPTION

Fig. 1



The Intake Air Temperature (IAT) sensor, mounted on the Mass Air Flow (MAF) meter, monitors the IAT. The IAT sensor has a built-in thermistor with a resistance that varies according to the temperature of the intake air. When the IAT is low, the resistance of the thermistor increases. When the temperature is high, the resistance drops. These variations in resistance are transmitted to the ECM (include in hybrid vehicle control ECU) as voltage changes (see Fig. 1).

The IAT sensor is powered by a 5 V supply from the THA terminal of the ECM, via resistor R.

Resistor R and the IAT sensor are connected in series. When the resistance value of the IAT sensor changes, according to changes in the IAT, the voltage at terminal THA also varies. Based on this signal, the ECM increases the fuel injection volume when the engine is cold to improve drivability.

HINT:

When any of DTCs P0110, P0112 and P0113 are set, the ECM enters fail-safe mode. During fail-safe mode, the IAT is estimated to be 20°C (68°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC No.	DTC Detection Conditions	Trouble Areas
P0110	Open or short in IAT sensor circuit for 0.5 seconds (1-trip detection logic)	• Open or short in IAT sensor circuit • IAT sensor (built into MAF meter) • Hybrid vehicle control ECU
P0112	Short in IAT sensor circuit for 0.5 seconds (1-trip detection logic)	• Short in IAT sensor circuit • IAT sensor (built into MAF meter) • Hybrid vehicle control ECU
P0113	Open in IAT sensor circuit for 0.5 seconds (1-trip detection logic)	• Open in IAT sensor circuit • IAT sensor (built into MAF meter) • Hybrid vehicle control ECU

HINT:
When any of these DTCs are set, check the IAT by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.

Temperature Displayed	Malfunctions
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The ECM monitors the sensor voltage and uses this value to calculate the IAT. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a malfunction in the IAT sensor and sets a DTC.

ES

Example:
If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the IAT sensor circuit, and sets DTC P0113. Conversely, if the output voltage is less than 0.18 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0112.
If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

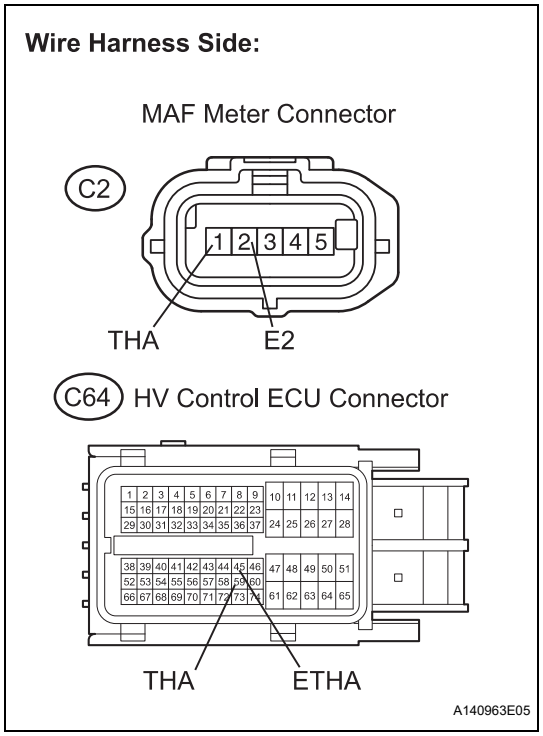
140°C (284°F) or higher
(i) Reconnect the MAF meter connector.

OK → **REPLACE MASS AIR FLOW METER**

NG

4 CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - HV CONTROL ECU)



(a) Confirm good connection of the hybrid vehicle control ECU connectors.
(b) Disconnect the C2 MAF meter connector.
(c) Disconnect the C64 hybrid vehicle control ECU connector.
(d) Measure the resistance.
Standard resistance

Tester Connections	Specified Conditions
C2-1 (THA) - C64-59 (THA)	Below 1 Ω
C2-2 (E2) - C64-45 (ETHA)	Below 1 Ω

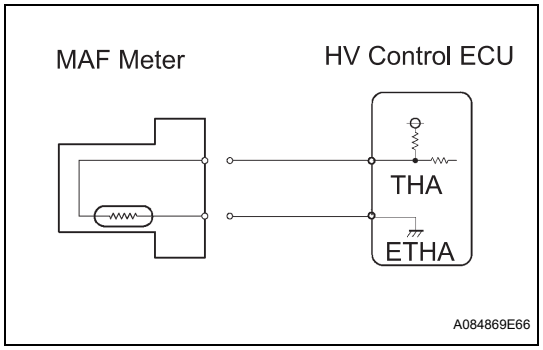
(e) Reconnect the MAF meter connector.
(f) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

5 READ VALUE USING INTELLIGENT TESTER (CHECK FOR SHORT IN WIRE HARNESS)



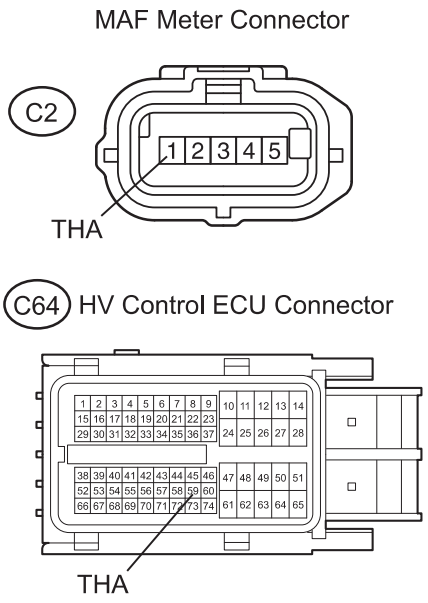
(a) Disconnect the C2 MAF meter connector.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Turn the tester on.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / INTAKE AIR.
(f) Read the value displayed on the tester.
Standard value:
-40°C (-40°F)
(g) Reconnect the MAF meter connector.

OK → **REPLACE MASS AIR FLOW METER**

NG

6	CHECK HARNESS AND CONNECTOR (MASS AIR FLOW METER - HV CONTROL ECU)

Wire Harness Side:



(a) Disconnect the C2 MAF meter connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.
Standard resistance

Tester Connections	Specified Conditions
C2-1 (THA) or C64-59 (THA) - Body ground	10 kΩ or higher

(d) Reconnect the MAF meter connector.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

ES

DTC	P0115	Engine Coolant Temperature Circuit Malfunction

DTC	P0117	Engine Coolant Temperature Circuit Low Input

DTC	P0118	Engine Coolant Temperature Circuit High Input

DESCRIPTION

A thermistor, whose resistance value varies according to the ECT, is built into the Engine Coolant Temperature (ECT) sensor.

The structure of the sensor and its connection to the ECM (included in hybrid vehicle control ECU) are the same as those of the Intake Air Temperature (IAT) sensor.

HINT:

When any of DTCs P0115, P0117 and P0118 are set, the ECM enters fail-safe mode. During fail-safe mode, the ECT is estimated to be 80°C (176°F) by the ECM. Fail-safe mode continues until a pass condition is detected.

DTC No.	DTC Detection Conditions	Trouble Areas
P0115	Open or short in ECT sensor circuit for 0.5 seconds (1-trip detection logic)	• Open or short in ECT sensor circuit • ECT sensor • Hybrid vehicle control ECU
P0117	Short in ECT sensor circuit for 0.5 seconds (1-trip detection logic)	• Short in ECT sensor • ECT sensor • Hybrid vehicle control ECU
P0118	Open in ECT sensor circuit for 0.5 seconds (1-trip detection logic)	• Open in ECT sensor circuit • ECT sensor • Hybrid vehicle control ECU

HINT:

When any of these DTCs are set, check the ECT by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.

Temperature Displayed	Malfunctions
-40°C (-40°F)	Open circuit
140°C (284°F) or higher	Short circuit

MONITOR DESCRIPTION

The Engine Coolant Temperature (ECT) sensor is used to monitor the ECT. The ECT sensor has a thermistor with a resistance that varies according to the temperature of the engine coolant. When the coolant temperature is low, the resistance in the thermistor increases. When the temperature is high, the resistance drops. These variations in resistance are reflected in the output voltage from the sensor. The ECM monitors the sensor voltage and uses this value to calculate the ECT. When the sensor output voltage deviates from the normal operating range, the ECM interprets this as a fault in the ECT sensor and sets a DTC.

Example:

If the sensor output voltage is more than 4.91 V for 0.5 seconds or more, the ECM determines that there is an open in the ECT sensor circuit, and sets DTC P0118. Conversely, if the voltage output is less than 0.14 V for 0.5 seconds or more, the ECM determines that there is a short in the sensor circuit, and sets DTC P0117.

If the malfunction is not repaired successfully, a DTC is set 0.5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0115: ECT sensor range check (Fluctuating) P0117: ECT sensor range check (Low voltage) P0118: ECT sensor range check (High voltage)
Required Sensors/Components (Main)	ECT sensor
Required Sensors/Components (Related)	-

Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

ES

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None

TYPICAL MALFUNCTION THRESHOLDS

P0115:

ECT sensor voltage	Less than 0.14 V, or more than 4.91 V

P0117:

ECT sensor voltage [ECT]	Less than 0.14 V [More than 140°C (284°F)]

P0118:

ECT sensor voltage [ECT]	More than 4.91 V [Less than -40°C (-40°F)]

COMPONENT OPERATING RANGE

ECT sensor voltage [ECT]	0.14 to 4.91 V [-40°C to 140°C (-40°F to 284°F)]

WIRING DIAGRAM

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	READ OUTPUT DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0115	A
P0117	B
P0118	C

B → **Go to step 5**

C → **Go to step 3**

A

2	READ VALUE USING INTELLIGENT TESTER (ENGINE COOLANT TEMPERATURE)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(e) Read the value displayed on the tester.

Standard value:
Between 80°C and 100°C (167°F and 212°F) with warm engine.

Result

Temperature Displayed	Proceed to
-40°C (-40°F)	A
140°C (284°F) or higher	B
Between 80°C and 100°C (176°F and 212°F)	C

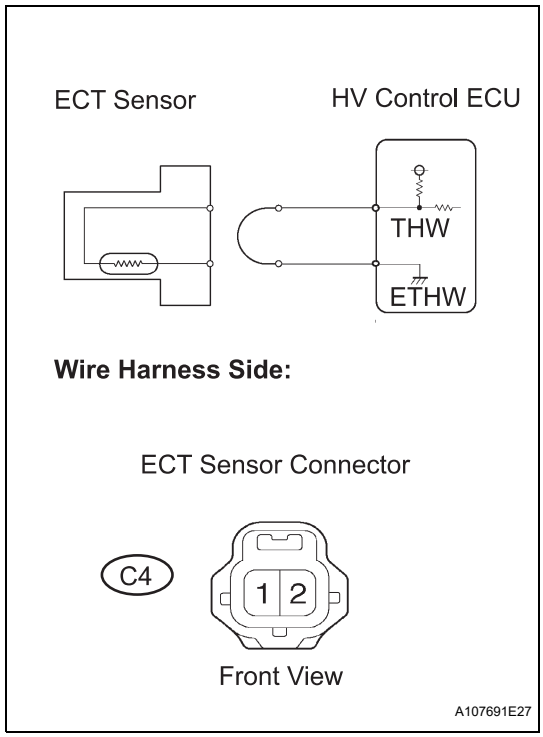
HINT:
- If there is an open circuit, the intelligent tester indicates -40°C (-40°F).
- If there is a short circuit, the intelligent tester indicates 140°C (284°F) or higher.

B → **Go to step 5**

C → CHECK FOR INTERMITTENT PROBLEMS

A

3	READ VALUE USING INTELLIGENT TESTER (CHECK FOR OPEN IN WIRE HARNESS)

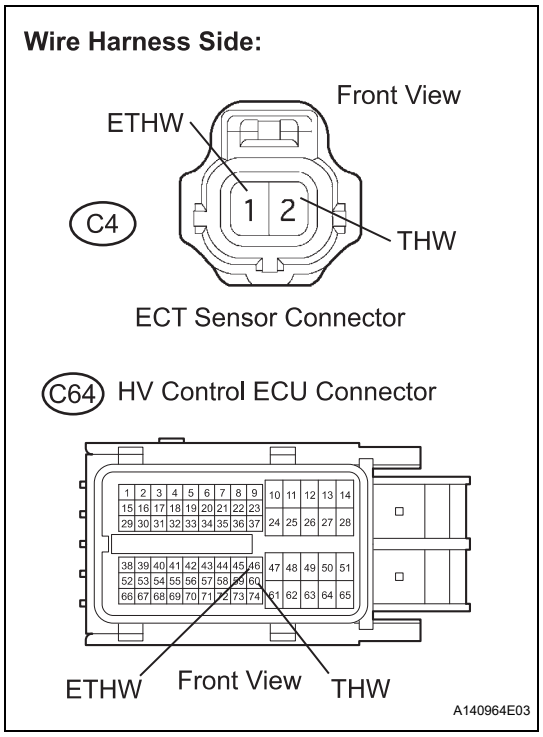


(a) Confirm good condition of the Engine Coolant Temperature (ECT) sensor.
(b) Disconnect the C4 ECT sensor connector.
(c) Connect terminals 1 and 2 of the ECT sensor connector on the wire harness side.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the power switch on (IG).
(f) Turn the tester on.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(h) Read the value displayed on the tester.
Standard value:
140°C (284°F) or higher.
(i) Reconnect the ECT sensor connector.

OK → REPLACE ENGINE COOLANT TEMPERATURE SENSOR

NG

4	CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - HV CONTROL ECU)



(a) Confirm good connection of the hybrid vehicle control ECU connectors.
(b) Disconnect the C4 ECT sensor connector.
(c) Disconnect the C64 hybrid vehicle control ECU connector.
(d) Measure the resistance.
Standard resistance

Tester Connections	Specified Conditions
C4-2 (THW) - C64-60 (THW)	Below 1 Ω
C4-1 (E2) - C64-46 (ETHW)	Below 1 Ω

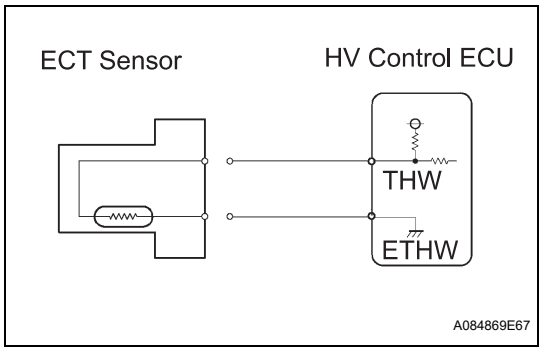
(e) Reconnect the ECT sensor connector.
(f) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

5	READ VALUE USING INTELLIGENT TESTER (CHECK FOR SHORT IN WIRE HARNESS)



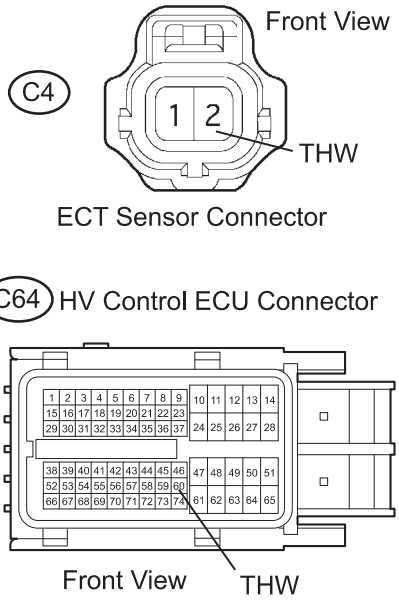
(a) Disconnect the C4 ECT sensor connector.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Turn the tester on.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(f) Read the value displayed on the tester.
Standard value:
-40°C (-40°F)
(g) Reconnect the ECT sensor connector.

OK → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

NG

6	CHECK HARNESS AND CONNECTOR (ENGINE COOLANT TEMPERATURE SENSOR - HV CONTROL ECU)

Wire Harness Side:



(a) Disconnect the C4 ECT sensor connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.
Standard resistance

Tester Connections	Specified Conditions
C4-2 (THW) or C64-60 (THW) - Body ground	10 kΩ or higher

(d) Reconnect the ECT sensor connector.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0116	Engine Coolant Temperature Circuit Range / Performance Problem

DESCRIPTION

Refer to DTC P0115 (See page ES-95).

DTC No.	DTC Detection Conditions	Trouble Areas
P0116	When either of following conditions met (2-trip detection logic): • When cold engine started and engine warmed up, Engine Coolant Temperature (ECT) sensor value does not change. • After warmed up engine started, ECT sensor value does not change when engine stopped and then next cold engine start performed.	• Thermostat • ECT sensor

ES

MONITOR DESCRIPTION

Engine coolant temperature (ECT) sensor cold start monitor

When a cold engine start is performed and then the engine is warmed up, if the ECT sensor value does not change, it is determined that a malfunction has occurred. If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

ECT sensor soak monitor

After a warmed up engine is started, if the ECT sensor value does not change when the engine is stopped and then the next cold engine start is performed, it is determined that a malfunction has occurred. If this is detected in 2 consecutive driving cycles, the MIL is illuminated and a DTC is set.

MONITOR STRATEGY

Related DTCs	P0116: Engine coolant temperature (ECT) sensor output stuck at low engine coolant temperature P0116: ECT sensor output stuck at high engine coolant temperature
Required Sensors/Components (Main)	ECT sensor
Required Sensors/Components (Related)	Crankshaft position sensor, intake air temperature sensor and mass air flow meter
Frequency of Operation	Once per driving cycle
Duration	250 seconds
MIL Operation	2 driving cycles: ETC sensor output stuck at low engine coolant temperature 6 driving cycles: ECT sensor output stuck at high engine coolant temperature
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Engine Coolant Temperature Sensor Output Stuck at Low Engine Coolant Temperature:

Monitor runs whenever following DTCs not present	P0100 to P0103: Mass air flow meter
Cumulative idle off period	250 seconds or more
Speed increase by 18.6 mph (30km/h) or more	10 times or more
Engine coolant temperature at engine start	35 to 60°C (95 to 140°F)
Intake air temperature after engine start	-6.7°C (20°F) or more

Engine Coolant Temperature Sensor Output Stuck at High Engine Coolant Temperature:

Monitor runs whenever following DTCs not present	P0100 to P0103: Mass air flow meter
Engine coolant temperature at engine start	60°C (140°F) or more
Intake air temperature after engine start	-6.7°C (20°F) or more
Stop and go *1	Once or more

Steady driving and stop *2	Once or more
Engine running time after engine start	0.3 seconds or more

*1: The vehicle stopped for 20 seconds or more and accelerated to more than 43.5 mph (70 km/h) within 40 seconds.
*2: 1) the vehicle is driven at 40.4 mph (65 km/h) or more for 30 seconds or more and the vehicle speed reaches 43.5 mph (70 km/h); 2) the vehicle is decelerated from 40.4 mph (65 km/h) to 1.86 mph (3 km/h) or less within 35 seconds; and 3) the vehicle is stopped for 10 seconds.

TYPICAL MALFUNCTION THRESHOLDS

Engine Coolant Temperature Sensor Output Stuck at Low Engine Coolant Temperature:

Variation of engine coolant temperature	Less than 3°C (5.4°F)

ES

Engine Coolant Temperature Sensor Output Stuck at High Engine Coolant Temperature:

Variation of engine coolant temperature	1°C (1.8°F) or less

COMPONENT OPERATING RANGE

ECT	ECT sensor value changes in accordance with actual ECT

INSPECTION PROCEDURE

HINT:
- If any of DTCs P0115, P0117, P0118 or P0125 are set simultaneously with DTC P0116, the ECT sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0116)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0116	A
P0116 and other DTCs	B

B → GO TO DTC CHART

A

2	INSPECT THERMOSTAT

(a) Remove the thermostat (See page CO-12).
(b) Measure the valve opening temperature of the thermostat.

Standard value:
80°C to 84°C (176°F to 183°F)
HINT:
In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.

(c) Reinstall the thermostat (See page CO-13).

NG → **REPLACE THERMOSTAT**

OK

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

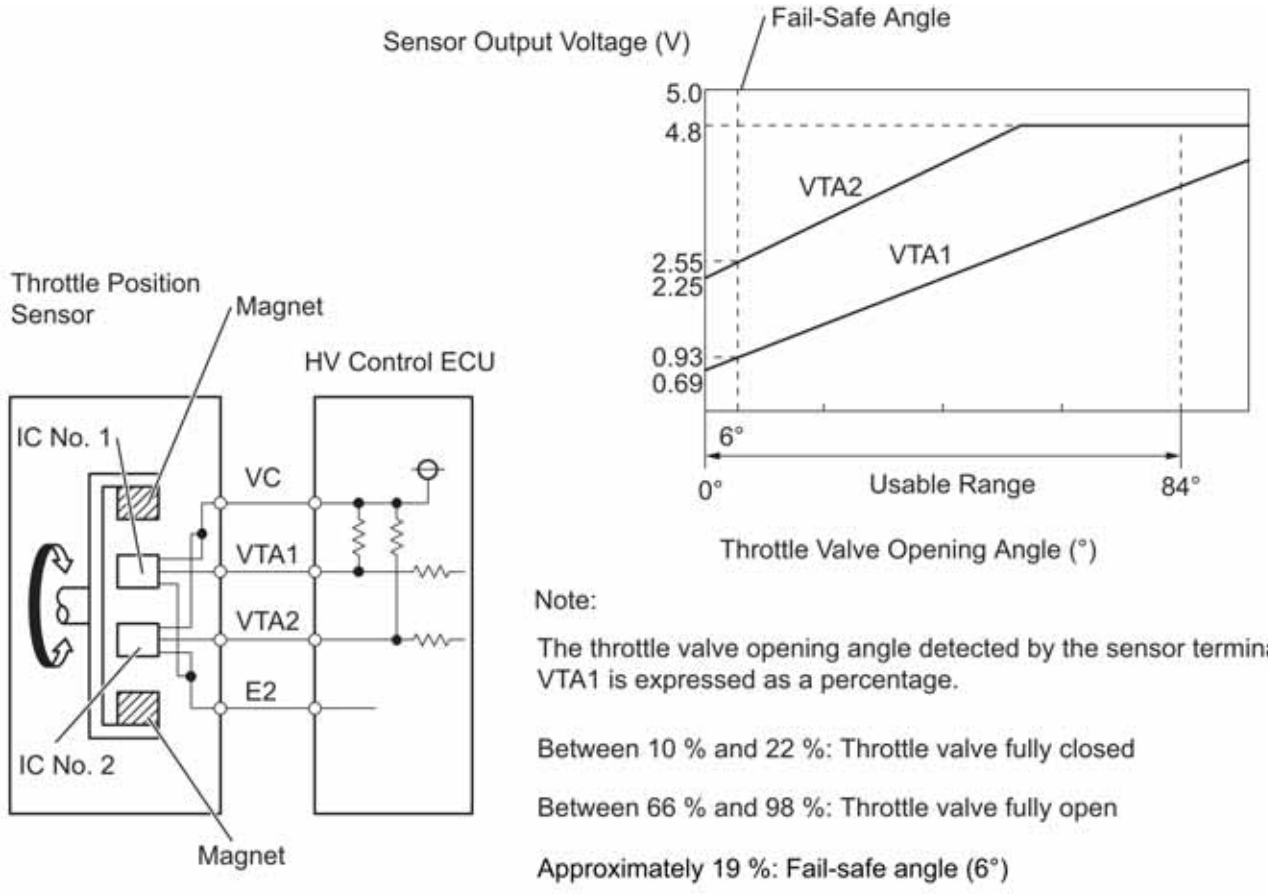
DTC	P0120	Throttle / Pedal Position Sensor / Switch "A" Circuit Malfunction
DTC	P0122	Throttle / Pedal Position Sensor / Switch "A" Circuit Low Input
DTC	P0123	Throttle / Pedal Position Sensor / Switch "A" Circuit High Input
DTC	P0220	Throttle / Pedal Position Sensor / Switch "B" Circuit
DTC	P0222	Throttle / Pedal Position Sensor / Switch "B" Circuit Low Input
DTC	P0223	Throttle / Pedal Position Sensor / Switch "B" Circuit High Input
DTC	P2135	Throttle / Pedal Position Sensor / Switch "A" / "B" Voltage Correlation

ES

HINT:
These DTCs relate to the Throttle Position (TP) sensor.

DESCRIPTION

The TP sensor is mounted on the throttle body, and detects the opening angle of the throttle valve. This sensor is a non-contact type. It uses Hall-effect elements in order to yield accurate signals even in extreme driving conditions, such as at high speeds as well as very low speeds.
The TP sensor has two sensor circuits which each transmits a signal, VTA1 and VTA2. VTA1 is used to detect the throttle valve angle and VTA2 is used to detect malfunctions in VTA1. The sensor signal voltages vary between 0 V and 5 V in proportion to the throttle valve opening angle, and are transmitted to the VTA terminals of the ECM (included in hybrid vehicle control ECU).
As the valve closes, the sensor output voltage decreases and as the valve opens, the sensor output voltage increases. The ECM calculates the throttle valve opening angle according to these signals and controls the throttle actuator in response to driver inputs. These signals are also used in calculations such as air-fuel ratio correction, power increase correction and fuel-cut control.



Note:

The throttle valve opening angle detected by the sensor terminal VTA1 is expressed as a percentage.

Between 10 % and 22 %: Throttle valve fully closed

Between 66 % and 98 %: Throttle valve fully open

Approximately 19 %: Fail-safe angle (6°)

A122493E07

DTC No.	DTC Detection Conditions	Trouble Areas
P0120	Output voltage of VTA1 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds when accelerator pedal depressed (1-trip detection logic)	• Throttle Position (TP) sensor (built into throttle body) • Hybrid vehicle control ECU
P0122	Output voltage of VTA1 0.2 V or less for 2 seconds when accelerator pedal depressed (1-trip detection logic)	• TP sensor (built into throttle body) • Short in VTA1 circuit • Open in VC circuit • Hybrid vehicle control ECU
P0123	Output voltage of VTA1 4.535 V or more for 2 seconds when accelerator pedal depressed (1-trip detection logic)	• TP sensor (built into throttle body) • Open in VTA1 circuit • Open in E2 circuit • Short between VC and VTA1 circuits • Hybrid vehicle control ECU
P0220	Output voltage of VTA2 quickly fluctuates beyond lower and upper malfunction thresholds for 2 seconds when accelerator pedal depressed (1-trip detection logic)	• TP sensor (built into throttle body) • Hybrid vehicle control ECU

DTC No.	DTC Detection Conditions	Trouble Areas
P0222	Output voltage of VTA2 1.75 V or less for 2 seconds when accelerator pedal depressed (1-trip detection logic)	• TP sensor (built into throttle body) • Short in VTA2 circuit • Open in VC circuit • Hybrid vehicle control ECU
P0223	Output voltage of VTA2 4.8 V or more, and VTA1 between 0.2 V and 2.02 V for 2 seconds when accelerator pedal depressed (1-trip detection logic)	• TP sensor (built into throttle body) • Open in VTA2 circuit • Open in E2 circuit • Short between VC and VTA2 circuits • Hybrid vehicle control ECU
P2135	Either condition (a) or (b) met (1-trip detection logic): (a) Difference between output voltages of VTA1 and VTA2 0.02 V or less for 0.5 seconds or more (b) Output voltage of VTA1 0.2 V or less, and VTA2 1.75 V or less, for 0.4 seconds or more	• Short between VTA1 and VTA2 circuits • TP sensor (built into throttle body) • Hybrid vehicle control ECU

ES

HINT:

- When any of these DTCs are set, check the throttle valve opening angle by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE POS #1 AND THROTTLE POS #2.
- THROTTLE POS #1 denotes the VTA1 signal, and THROTTLE POS #2 denotes the VTA2 signal.

Reference (Normal Condition):

Tester Display	Accelerator Pedal Fully Released	Accelerator Pedal Fully Depressed
THROTTLE POS #1	0.5 to 1.1 V	3.3 to 4.9 V
THROTTLE POS #2	2.1 to 3.1 V	4.6 to 5.0 V

MONITOR DESCRIPTION

The ECM uses the Throttle Position (TP) sensor to monitor the throttle valve opening angle. There are several checks that the ECM performs to confirm proper operation of the TP sensor.

- A specific voltage difference is expected between the sensor terminals, VTA1 and VTA2, for each throttle valve opening angle. If the difference between VTA1 and VTA2 is incorrect, the ECM interprets this as a malfunction in the sensor, and sets a DTC.
- VTA1 and VTA2 each have a specific voltage range. If VTA1 or VTA2 is outside the normal operating range, the ECM interprets this as a malfunction in the sensor, and sets a DTC.
- VTA1 and VTA2 should never be close to the same voltage level. If VTA1 is within 0.02 V of VTA2, the ECM determines that there is a short circuit in the sensor, and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0120: Throttle position sensor 1 range check (Fluctuating) P0122: Throttle position sensor 1 range check (Low voltage) P0123: Throttle position sensor 1 range check (High voltage) P0220: Throttle position sensor 2 range check (Fluctuating) P0222: Throttle position sensor 2 range check (Low voltage) P0223: Throttle position sensor 2 range check (High voltage) P2135: Throttle position sensor range check (Correlation)

VTA2 voltage when VTA1 0.2 V or more, and 2.02 V or less	4.8 V or more

P2135 Case 1:

Difference between VTA1 and VTA2 voltages	0.02 V or less

P2135 Case 2:

VTA1 voltage	0.2 V or less
VTA2 voltage	1.75 V or less

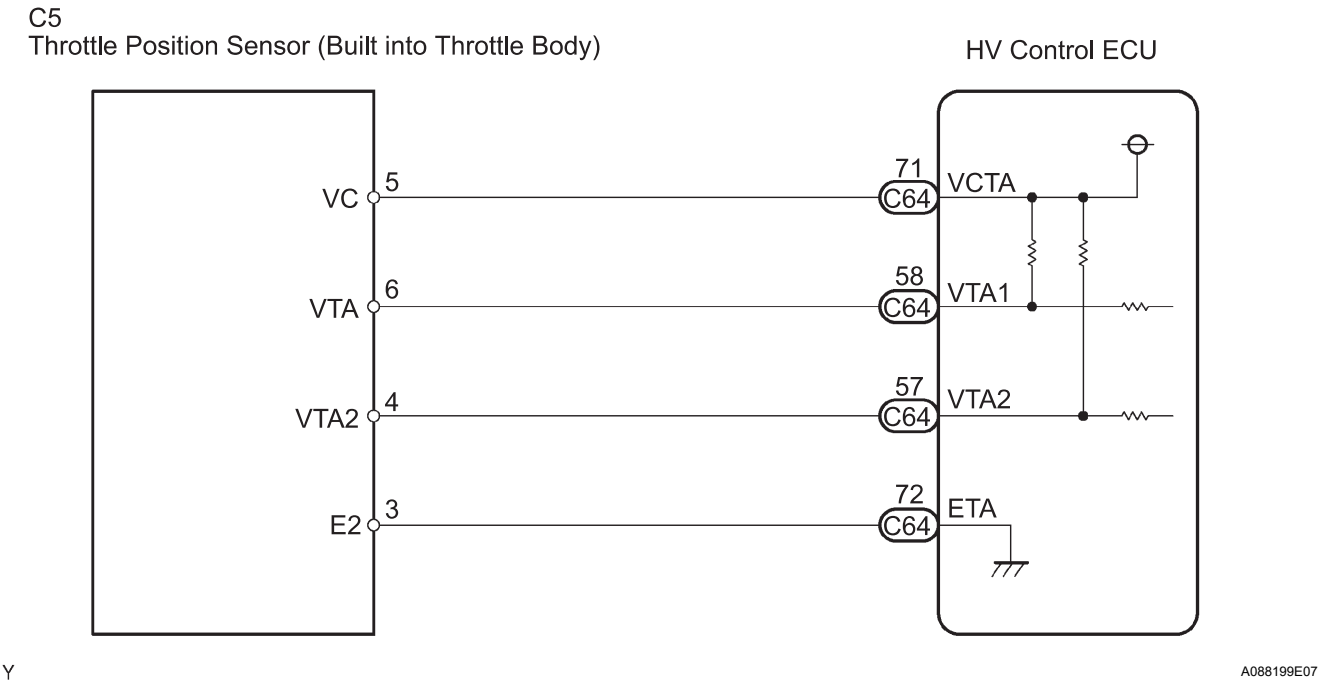
COMPONENT OPERATING RANGE

VTA1 voltage	0.69 to 4.05 V
VTA2 voltage	2.25 to 4.8 V

FAIL-SAFE

When any of these DTCs, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the power switch is then turned off.

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (THROTTLE POS #1 AND THROTTLE POS #2)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE POS #1 and THROTTLE POS #2.
(d) Check the values displayed on the tester.

Result

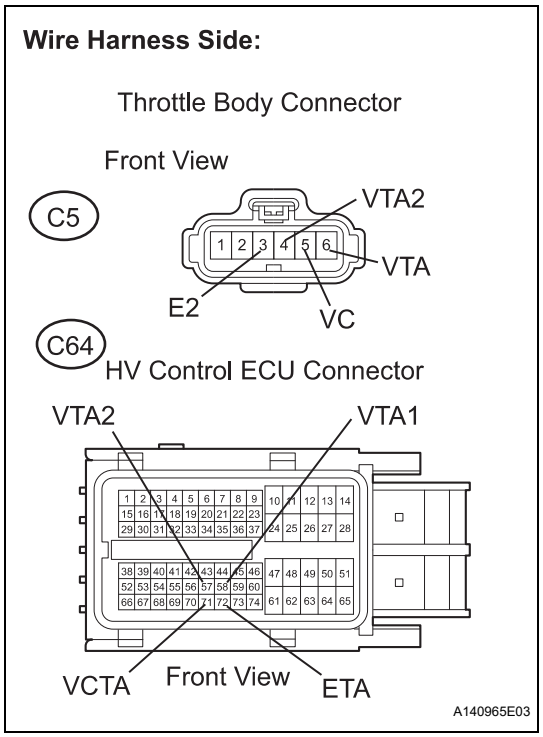
2 CHECK HARNESS AND CONNECTOR (THROTTLE POSITION SENSOR - HV CONTROL ECU)



(a) Disconnect the C5 throttle body connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C5-5 (VC) - C64-71 (VCTA)	Below 1 Ω
C5-6 (VTA) - C64-58 (VTA1)	Below 1 Ω
C5-4 (VTA2) - C64-57 (VTA2)	Below 1 Ω
C5-3 (E2) - C64-72 (ETA)	Below 1 Ω

Standard resistance (Check for short)

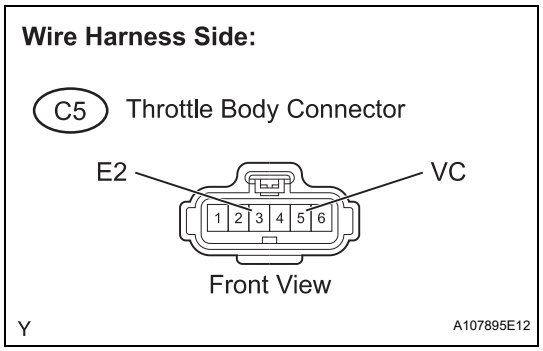
Tester Connections	Specified Conditions
C5-5 (VC) or C64-71 (VCTA) - Body ground	10 kΩ or higher
C5-6 (VTA) or C64-58 (VTA1) - Body ground	10 kΩ or higher
C5-4 (VTA2) or C64-57 (VTA2) - Body ground	10 kΩ or higher

(d) Reconnect the throttle body connector.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 INSPECT HYBRID VEHICLE CONTROL ECU (VC VOLTAGE)



(a) Disconnect the C5 throttle body connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage between the terminals of the throttle body connector.

Standard voltage

Tester Connections	Specified Conditions
C5-5 (VC) - C5-3 (E2)	4.5 to 5.5 V

(d) Reconnect the throttle body connector.

NG → REPLACE HYBRID VEHICLE CONTROL ECU

OK

4	REPLACE THROTTLE BODY ASSEMBLY

NEXT

5	CHECK WHETHER DTC OUTPUT RECURS (THROTTLE POSITION SENSOR DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-31).
(d) Put the engine in inspection mode (See page ES-35).
(e) Allow the engine to idle for 15 seconds or more.
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

ES

Result

Display (DTC Output)	Proceed to
P0120, P0122, P0123, P0220, P0222, P0223, and/or P2135	A
No output	B

B → SYSTEM IS OK

A

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0121	Throttle / Pedal Position Sensor / Switch "A" Circuit Range / Performance Problem

HINT:
This DTC relates to the Throttle Position (TP) sensor.

DESCRIPTION

Refer to DTC P0120 (See page ES-104).

DTC No.	DTC Detection Conditions	Trouble Areas
P0121	Difference between VTA1 and VTA2 voltages less than 0.8 V, or more than 1.6 V for 2 seconds (1-trip detection logic)	TP sensor (built into throttle body)

MONITOR DESCRIPTION

The ECM uses the TP sensor to monitor the throttle valve opening angle.
This sensor transmits two signals: VTA1 and VTA2. VTA1 is used to detect the throttle opening angle and VTA2 is used to detect malfunctions in VTA1. The ECM (included in hybrid vehicle control ECU) performs several checks to confirm proper operation of the TP sensor and VTA1.
For each throttle opening angle, a specific voltage difference is expected between the outputs of VTA1 and VTA2. If the output voltage difference between the two signals deviates from the normal range, the ECM interprets this as a malfunction of the TP sensor. The ECM illuminates the MIL and sets the DTC. If the malfunction is not repaired successfully, the DTC is set 2 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0121: TP sensor rationality
Required Sensors/Components (Main)	TP sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	Within 2 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0120 - P0223, P2135 (TP sensor)
Either of following conditions A or B set	-
A. Power switch	ON
B. Electric throttle motor power	ON

TYPICAL MALFUNCTION THRESHOLDS

Difference in voltage between VAT1 and VTA2 TP sensor 1 - [TP sensor 2 x 0.8 (corrected by learning value)]	Less than 0.8 V, or more than 1.6 V

FAIL-SAFE

When this DTC, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the power switch is then turned off.

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0121)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.

REPLACE THROTTLE BODY ASSEMBLY

DTC	P0125	Insufficient Coolant Temperature for Closed Loop Fuel Control

DESCRIPTION

Refer to DTC P0115 (See page ES-95).

DTC No.	DTC Detection Conditions	Trouble Areas
P0125	Engine Coolant Temperature (ECT) does not reach closed-loop enabling temperature for 20 minutes (this period varies with ECT at engine start) (2-trip detection logic)	• ECT sensor • Cooling system • Thermostat

MONITOR DESCRIPTION

The resistance of the ECT sensor varies in proportion to the actual ECT. The ECT supplies a constant voltage to the sensor and monitors the signal output voltage of the sensor. The signal voltage output varies according to the changing resistance of the sensor. After the engine is started, the ECT is monitored through this signal. If the ECT sensor indicates that the engine is not yet warm enough for closed-loop fuel control, despite a specified period of time having elapsed since the engine was started, the ECM (included in hybrid vehicle control ECU) interprets this as a malfunction in the sensor or cooling system and sets the DTC.

Example:

The ECT is 0°C (32°F) at engine start. After about 1 minute running time, the ECT sensor still indicates that the engine is not warm enough to begin closed-loop fuel (air-fuel ratio feedback) control. The ECM interprets this as a malfunction in the sensor or cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0125: Insufficient engine coolant temperature for closed-loop fuel control
Required Sensors/Components (Main)	Thermostat, cooling system
Required Sensors/Components (Related)	Engine coolant temperature sensor and mass air flow meter
Frequency of Operation	Once per driving cycle
Duration	56.4 seconds or more: Engine coolant temperature is -8.34°C (-15°F) or more at engine start 100.3 seconds or more: Engine coolant temperature is -19.45 to -8.34°C (-35 to -15°F) at engine start 20 minutes or more: Engine coolant temperature is less than -19.45°C (-35°F) at engine start
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor)
Thermostat failure	Not detected

TYPICAL MALFUNCTION THRESHOLDS

Time until actual engine coolant temperature reaches closed-loop fuel control enabling temperature	56.4 seconds or more: Engine coolant temperature is -8.34°C (-15°F) or more at engine start 100.3 seconds or more: Engine coolant temperature is -19.45 to -8.34°C (-35 to -15°F) at engine start 20 minutes or more: Engine coolant temperature is less than -19.45°C (-35°F) at engine start

WIRING DIAGRAM

Refer to DTC P0115 (See page ES-96).

INSPECTION PROCEDURE

HINT:

- If any of DTCs P0115, P0116, P0117 or P0118 are set simultaneously with DTC P0125, the Engine Coolant Temperature (ECT) sensor may have an open or a short circuit. Troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0125)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.

REPLACE ENGINE COOLANT TEMPERATURE SENSOR

DTC	P0128	Coolant Thermostat (Coolant Temperature Below Thermostat Regulating Temperature)

HINT:
This DTC relates to the thermostat.

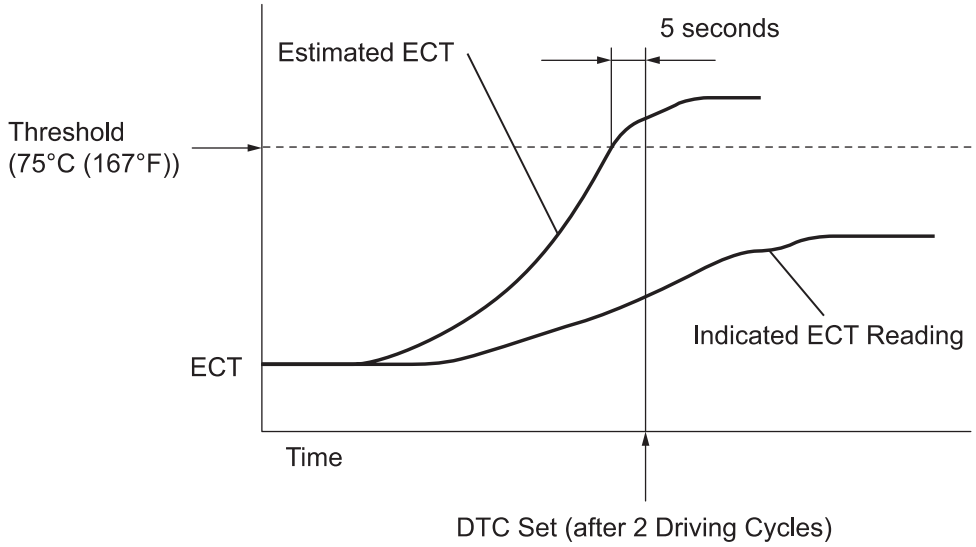
DESCRIPTION

This DTC is set when the Engine Coolant Temperature (ECT) does not reach 75°C (167°F) despite sufficient engine warm-up time having elapsed.

DTC No.	DTC Detection Conditions	Trouble Areas
P0128	Conditions (a), (b) and (c) met for 5 seconds (2-trip detection logic): (a) Cold start (b) Engine warmed up (c) ECT less than 75°C (167°F)	• Thermostat • Cooling system • ECT sensor • Hybrid vehicle control ECU

ES

MONITOR DESCRIPTION



Y A121605E02

The ECM (included in hybrid vehicle control ECU) estimates the ECT based on the starting temperature, engine loads, and engine speeds. The ECM then compares the estimated temperature with the actual ECT. When the estimated ECT reaches 75°C (167°F), the ECM checks the actual ECT. If the actual ECT is less than 75°C (167°F), the ECM interprets this as a malfunction in the thermostat or the engine cooling system and sets the DTC.

MONITOR STRATEGY

Related DTCs	P0128: Coolant Thermostat

In addition to the above check, confirm that the valve is completely closed when the temperature is below the standard.
(c) Reinstall the thermostat (See page CO-13).

NG → REPLACE THERMOSTAT

OK

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0136	Oxygen Sensor Circuit Malfunction (Bank 1 Sensor 2)

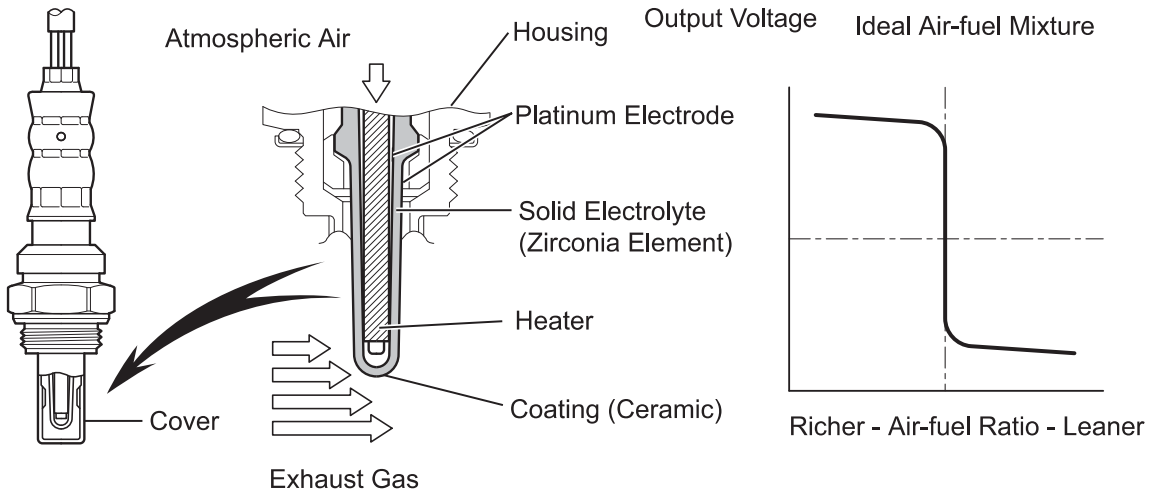
DTC	P0137	Oxygen Sensor Circuit Low Voltage (Bank 1 Sensor 2)

DTC	P0138	Oxygen Sensor Circuit High Voltage (Bank 1 Sensor 2)

DESCRIPTION

ES

A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio. For the purpose of helping the ECM to deliver accurate air-fuel ratio control, the Heated Oxygen (HO2) sensor is used.
The HO2 sensor is located behind the TWC, and detects the oxygen concentration in the exhaust gas. Since the sensor is integrated with the heater that heats the sensing portion, it is possible to detect the oxygen concentration even when the intake air volume is low (the exhaust gas temperature is low).
When the air-fuel ratio becomes lean, the oxygen concentration in the exhaust gas is rich. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is lean (low voltage, i.e. less than 0.45 V).
Conversely, when the air-fuel ratio is richer than the stoichiometric air-fuel level, the oxygen concentration in the exhaust gas becomes lean. The HO2 sensor informs the ECM that the post-TWC air-fuel ratio is rich (high voltage, i.e. more than 0.45 V). The HO2 sensor has the property of changing its output voltage drastically when the air-fuel ratio is close to the stoichiometric level.
The ECM uses the supplementary information from the HO2 sensor to determine whether the air-fuel ratio after the TWC is rich or lean, and adjusts the fuel injection time accordingly. Thus, if the HO2 sensor is working improperly due to internal malfunctions, the ECM is unable to compensate for deviations in the primary air-fuel ratio control.



DTC No.	DTC Detection Conditions	Trouble Areas
P0136	• Abnormal voltage output: During active air-fuel ratio control, following conditions (a) and (b) met for certain period of time (2-trip detection logic): (a) Heated Oxygen (HO2) sensor voltage does not decrease to less than 0.59 V (b) HO2 sensor voltage does not increase to more than 0.21 V • Low impedance: Sensor impedance less than 5 Ω for more than 30 seconds when ECM presumes sensor to be warmed up and operating normally (2-trip detection logic)	• Open or short in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • HO2 sensor heater (sensor 2) • Air-fuel Ratio (A/F) sensor (sensor 1) • Integration relay (EFI MAIN relay) • Gas leakage from exhaust system
P0137	• Low voltage (open): During active air-fuel ratio control, following conditions (a) and (b) met for certain period of time (2-trip detection logic): (a) HO2 sensor voltage output less than 0.21 V (b) Target air-fuel ratio rich • High impedance: Sensor impedance 15 kΩ or more for more than 90 seconds when ECM presumes sensor to be warmed up and operating normally (2-trip detection logic)	• Open in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • HO2 sensor heater (sensor 2) • Integration relay (EFI MAIN relay) • Gas leakage from exhaust system
P0138	• High voltage (short): During active air-fuel ratio control, following conditions (a) and (b) met for certain period of time (2-trip detection logic): (a) HO2 sensor voltage output more than 0.59 V (b) Target air-fuel ratio lean • Extremely high voltage (short): HO2 sensor voltage output exceeds 1.2 V for more than 10 seconds (2-trip detection logic)	• Short in HO2 sensor (sensor 2) circuit • HO2 sensor (sensor 2) • ECM internal circuit malfunction

ES

MONITOR DESCRIPTION

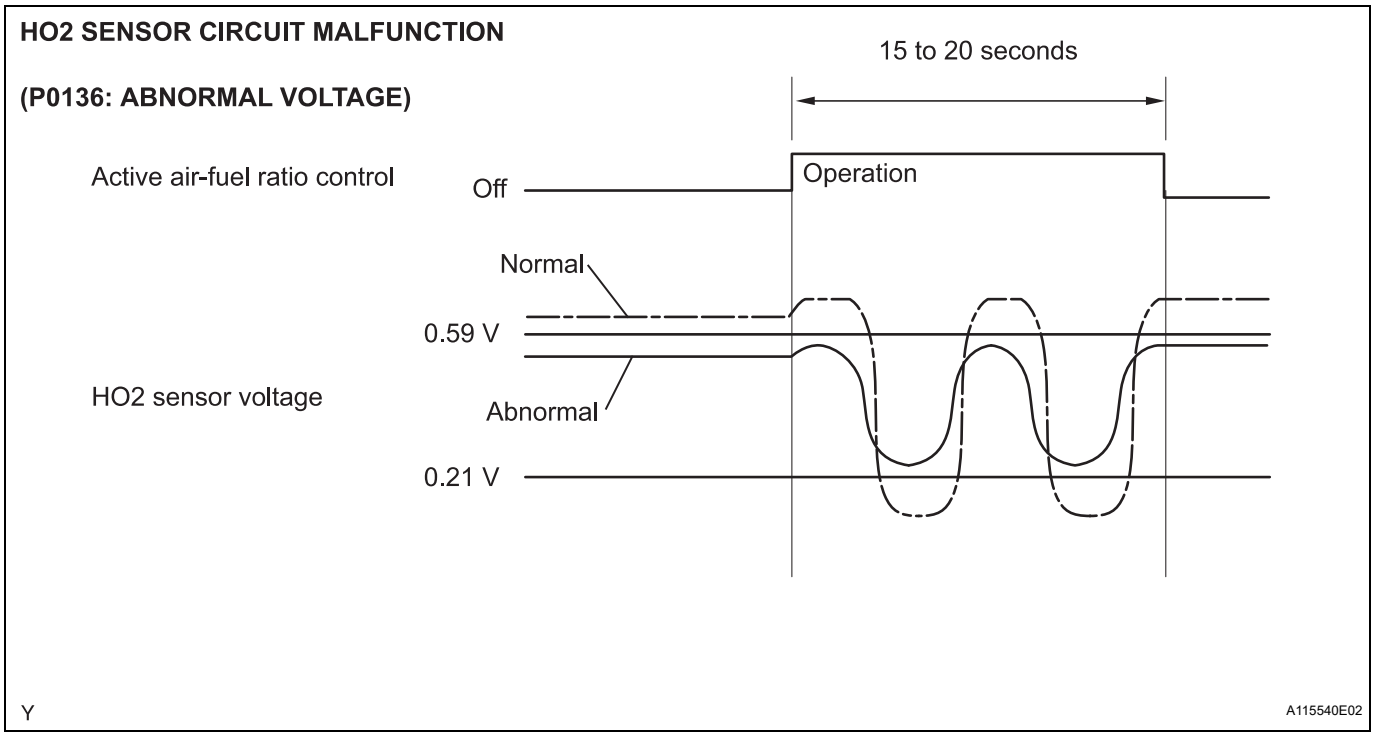
Active Air-Fuel Ratio Control

The ECM usually performs air-fuel ratio feedback control so that the Air-Fuel Ratio (A/F) sensor output indicates a near stoichiometric air-fuel level. This vehicle includes active air-fuel ratio control in addition to regular air-fuel ratio control. The ECM performs active air-fuel ratio control to detect any deterioration in the Three-Way Catalytic Converter (TWC) and Heated Oxygen (HO2) sensor malfunctions (refer to the diagram below).

Active air-fuel ratio control is performed for approximately 15 to 20 seconds while driving with a warm engine. During active air-fuel ratio control, the air-fuel ratio is forcibly regulated to become lean or rich by the ECM. If the ECM detects a malfunction, one of the following DTCs is set: DTC P0136 (abnormal voltage output), P0137 (open circuit) and P0138 (short circuit).

Abnormal Voltage Output of HO2 Sensor (DTC P0136)

While the ECM is performing active air-fuel ratio control, the air-fuel ratio is forcibly regulated to become rich or lean. If the sensor is not functioning properly, the voltage output variation is small. For example, when the HO2 sensor voltage does not decrease to less than 0.21 V and does not increase to more than 0.59 V during active air-fuel ratio control, the ECM determines that the sensor voltage output is abnormal and sets DTC P0136.



Open or Short in Heated Oxygen (HO2) Sensor Circuit (DTC P0137 or P0138)

During active air-fuel ratio control, the ECM calculates the Oxygen Storage Capacity (OSC)* of the Three-Way Catalytic Converter (TWC) by forcibly regulating the air-fuel ratio to become rich or lean. If the HO2 sensor has an open or short, or the voltage output of the sensor decreases significantly, the OSC indicates an extraordinarily high value. Even if the ECM attempts to continue regulating the air-fuel ratio to become rich or lean, the HO2 sensor output does not change.

While performing active air-fuel ratio control, when the target air-fuel ratio is rich and the HO2 sensor voltage output is 0.21 V or less (lean), the ECM interprets this as an abnormally low sensor output voltage and sets DTC P0137. When the target air-fuel ratio is lean and the voltage output is 0.59 V or more (rich) during active air-fuel ratio control, the ECM determines that the sensor voltage output is abnormally high, and sets DTC P0138.

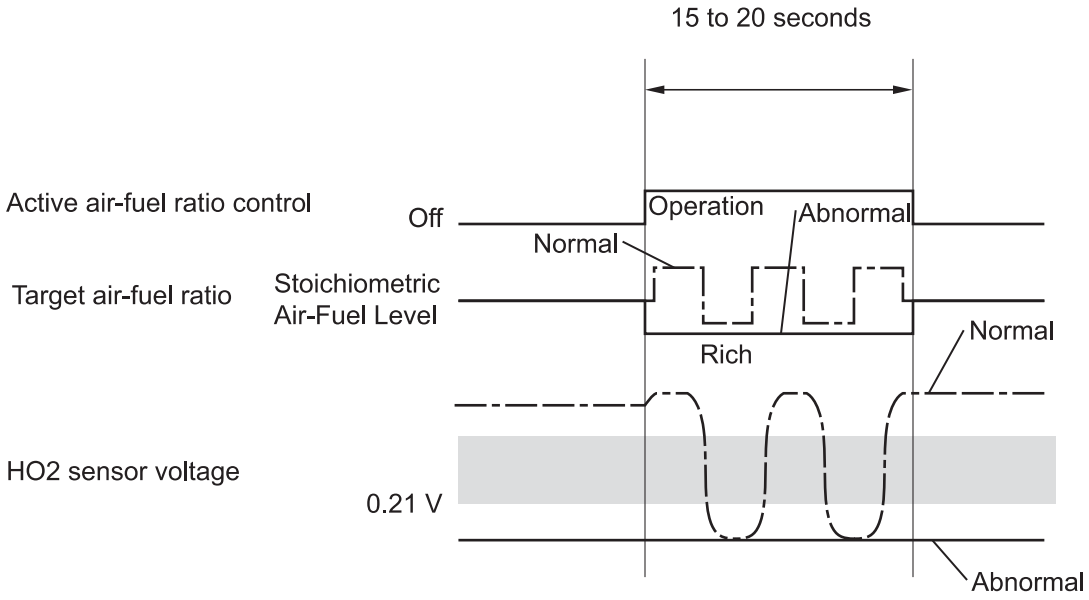
HINT:

DTC P0138 is also set if the HO2 sensor voltage output is more than 1.2 V for 10 seconds or more.

*: The TWC has the capability to store oxygen. The OSC and the emission purification capacity of the TWC are mutually related. The ECM determines whether the catalyst has deteriorated based on the calculated OSC value (See page ES-182).

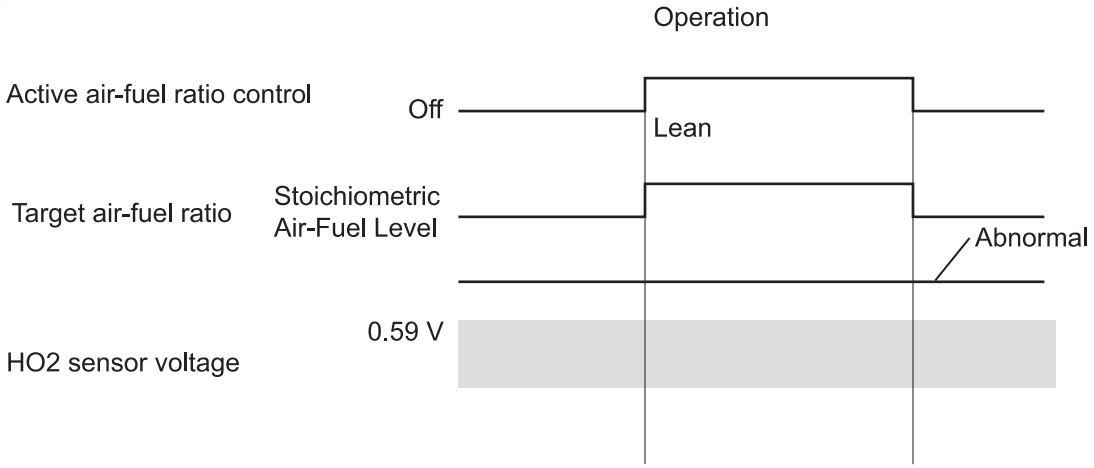
HO2 SENSOR CIRCUIT LOW VOLTAGE

(P0137: OPEN)



HO2 SENSOR CIRCUIT HIGH VOLTAGE

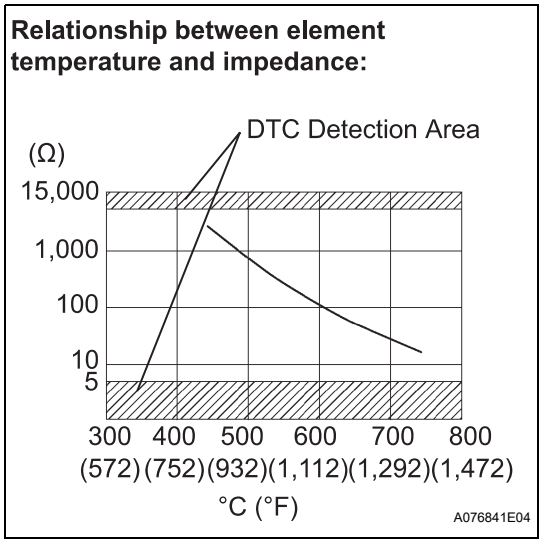
(P0138: SHORT)



Y

A115541E02

High or Low Impedance of Heated Oxygen (HO2) Sensor (DTC P0136 or P0137)



During normal air-fuel ratio feedback control, there are small variations in the exhaust gas oxygen concentration. In order to continuously monitor the slight variations in the HO2 sensor signal while the engine is running, the impedance* of the sensor is measured by the ECM. The ECM determines that there is a malfunction in the sensor when the measured impedance deviates from the standard range.
*: The effective resistance in an alternating current electrical circuit.
HINT:

- The impedance cannot be measured using an ohmmeter.
- DTC P0136 indicates deterioration of the HO2 sensor. The ECM sets this DTC by calculating the impedance of the sensor when the typical enabling conditions are satisfied (2 driving cycles).
- DTC P0137 indicates an open or short circuit in the HO2 sensor (2 driving cycles). The ECM sets this DTC when the impedance of the sensor exceeds the threshold 15 kΩ.

MONITOR STRATEGY

ES

Heated Oxygen Sensor Output Voltage (Abnormal Voltage Output, High Voltage and Low Voltage):

Active air-fuel ratio control	Executing
Active air-fuel ratio control begins when all of following conditions met:	-
Battery voltage	11 V or more
Engine coolant temperature	75°C (167°F) or more
Idling	ON
Engine RPM	Less than 3,200 rpm
A/F sensor status	Activated
Fuel system status	Closed loop
Fuel cut	OFF
Engine load	10 to 70%
Shift position	1 or more

Heated Oxygen Sensor Impedance (Low):

Battery voltage	11 V or more
Estimated rear HO2 sensor temperature	Less than 700°C (1,292°F)
ECM monitor	Completed
DTC P0606	Not set

Heated Oxygen Sensor Impedance (High):

Battery voltage	11 V or more
Estimated rear HO2 sensor temperature	450°C (842°F) or more
ECM monitor	Completed
DTC P0606	Not set

Heated Oxygen Sensor Output Voltage (Extremely High):

Battery voltage	11 V or more
Time after engine start	2 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Heated Oxygen Sensor Output Voltage (Abnormal Voltage Output):

Either of following conditions met:	1 or 2
1. All of following conditions (a), (b) and (c) met	-
(a) Commanded air-fuel ratio	14.3 or less
(b) Rear HO2 sensor voltage	0.21 to 0.59 V
(c) OSC (Oxygen Storage Capacity of Catalyst)	2.3 g or more
2. All of following conditions (d), (e) and (f) met	-
(d) Commanded air-fuel ratio	14.9 or more

(e) Rear HO2 sensor voltage	0.21 to 0.59 V
(f) OSC	2.3 g or more

Heated Oxygen Sensor Output Voltage (Low):

All of following conditions (a), (b) and (c) met	-
(a) Commanded air-fuel ratio	14.3 or less
(b) Rear HO2 sensor voltage	Less than 0.21 V
(c) OSC	2.3 g or more

Heated Oxygen Sensor Output Voltage (High):

All of following conditions (a), (b) and (c) met	-
(a) Commanded air-fuel ratio	14.9 or more
(b) Rear HO2 sensor voltage	More than 0.59 V
(c) OSC	2.3 g or more

ES

Heated Oxygen Sensor Impedance (Low):

Duration of following condition met	30 seconds or more
Heated oxygen sensor impedance	Less than 5 Ω

Heated Oxygen Sensor Impedance (High):

Duration of following condition met	60 seconds or more
Heated oxygen sensor impedance	15 kΩ or more

Heated Oxygen Sensor Output Voltage (Extremely High):

Duration of following condition met	10 seconds or more
Heated oxygen sensor voltage	1.2 V or more

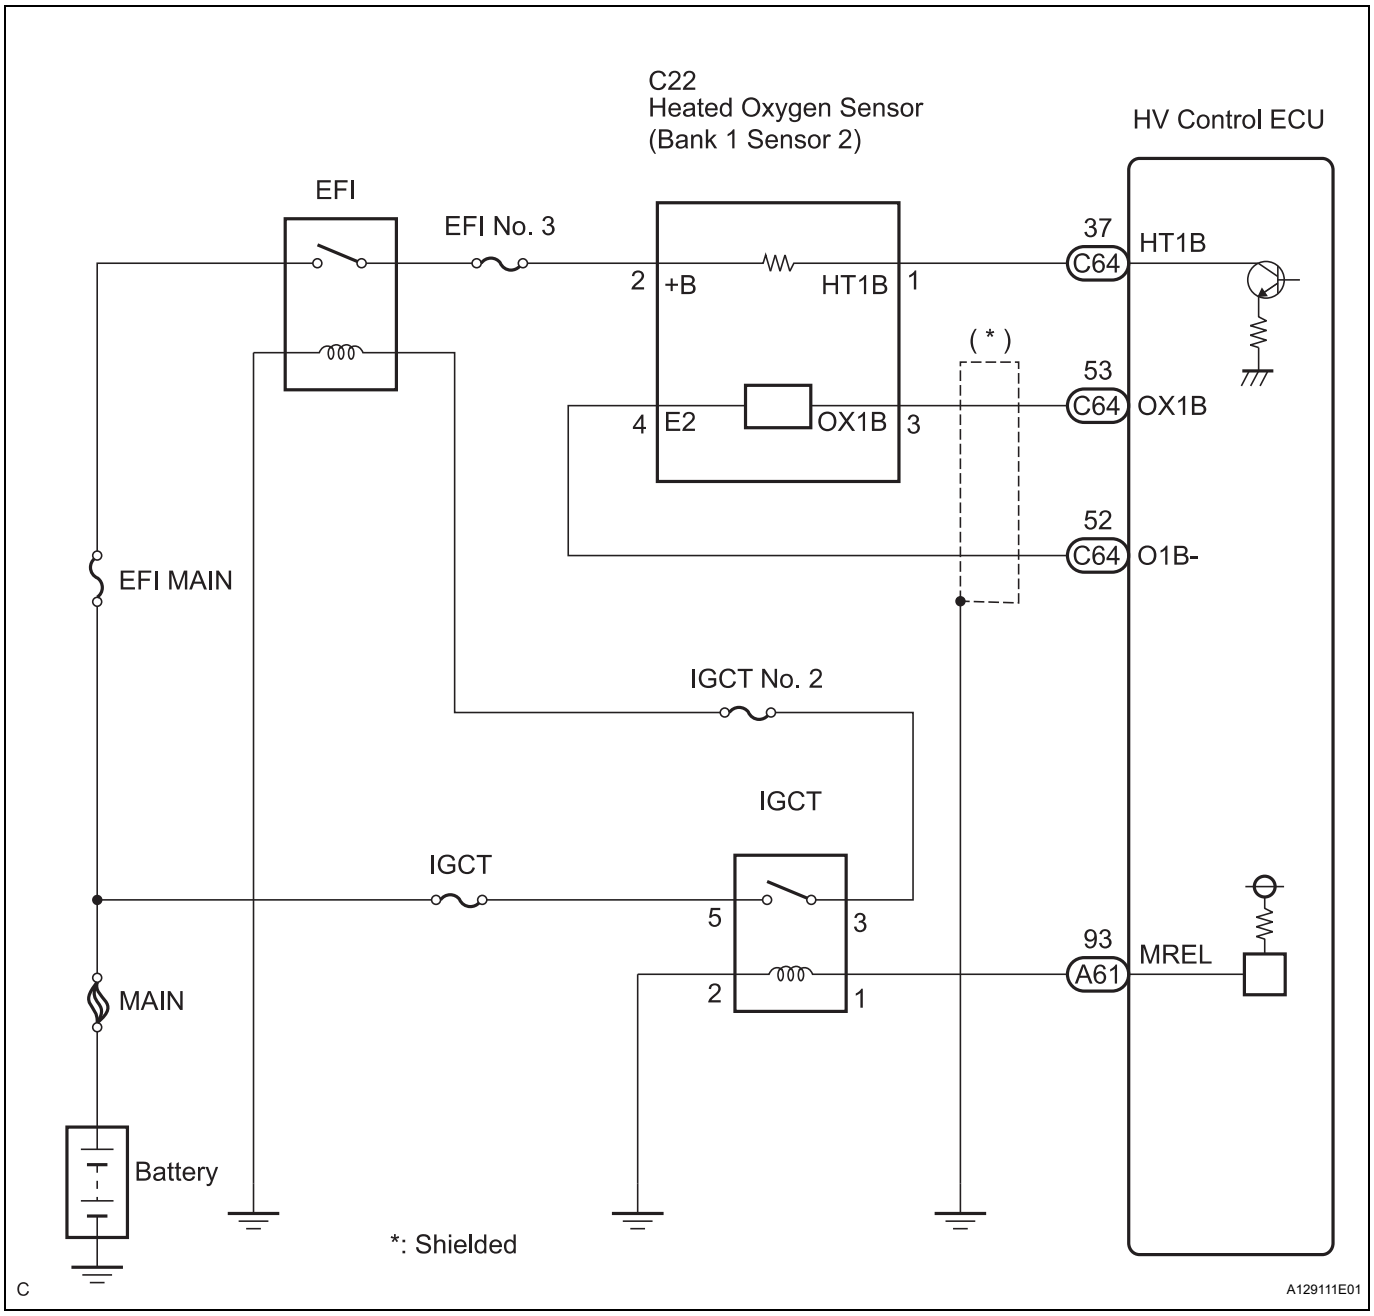
COMPONENT OPERATING RANGE

Duration of following condition met	30 seconds or more
Heated oxygen sensor voltage	Varies between 0.1 and 0.9 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-182).

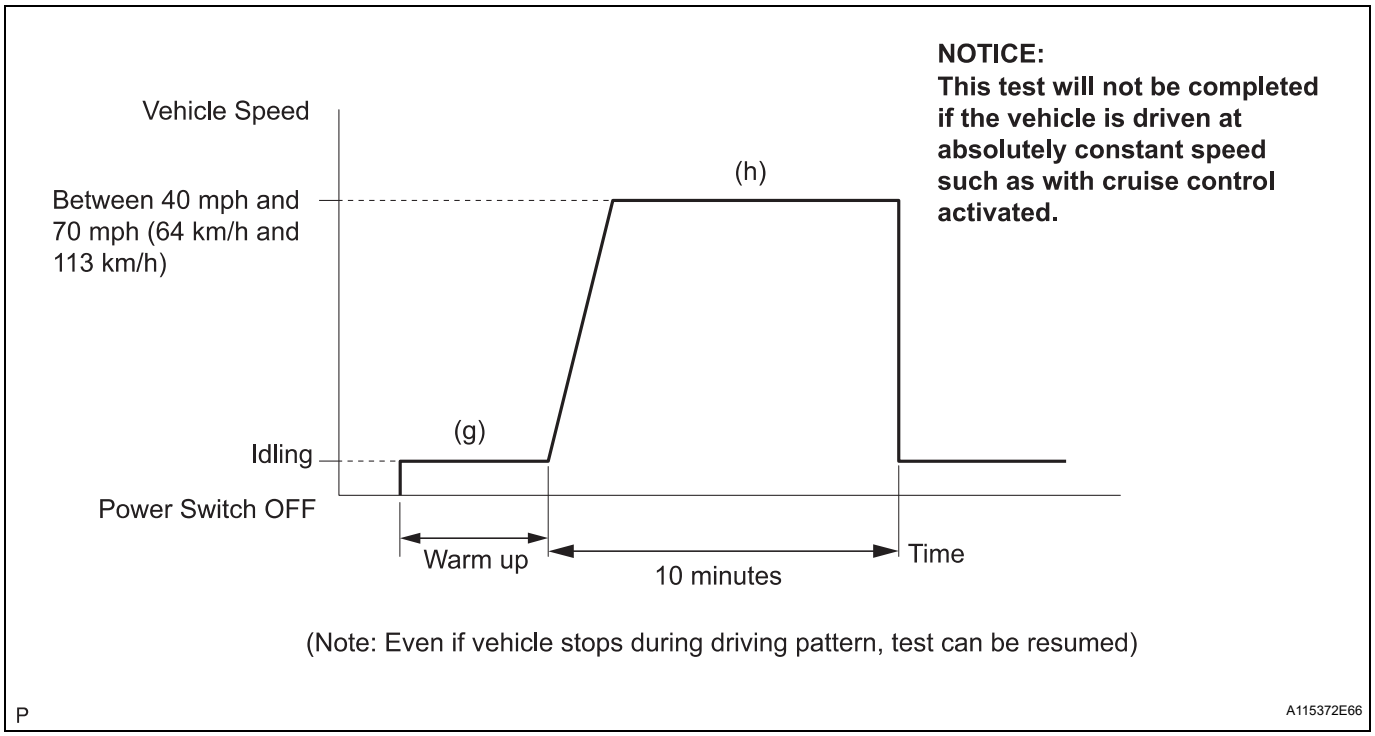
WIRING DIAGRAM

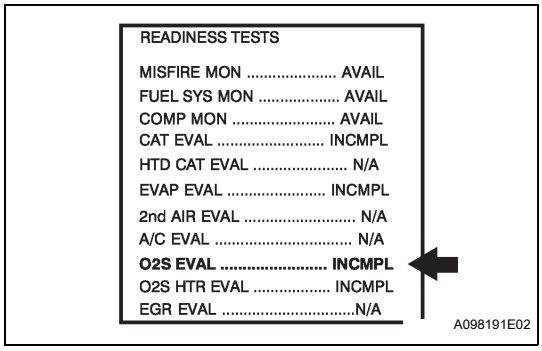


CONFIRMATION DRIVING PATTERN

HINT:

- This confirmation driving pattern is used in the "PERFORM CONFIRMATION DRIVING PATTERN" procedure of the following diagnostic troubleshooting procedure.
- Performing this confirmation pattern will activate the Heated Oxygen (HO2) sensor monitor. (The catalyst monitor is performed simultaneously.) This is very useful for verifying the completion of a repair.





(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (if set) (See page ES-31).
(e) Select the following menu items: DIAGNOSIS / CARB OBD II / READINESS TESTS.
(f) Check that O2S EVAL is INCMPL (incomplete).
(g) Put the engine in inspection mode (See page ES-35), and warm it up.
(h) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.
(i) Note the state of the Readiness Tests items. Those items will change to COMPL (complete) as the O2S EVAL monitor operates.
(j) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.
HINT:
If O2S EVAL does not change to COMPL, and any pending DTCs fail to be set, extend the driving time.

INSPECTION PROCEDURE

HINT:
Sensor 2 refers to the sensor mounted behind the Three-Way Catalytic Converter (TWC) and located far from the engine assembly.
HINT:
Intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.
The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.
(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(f) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
(g) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

ES

HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volumes	Status	Voltages
AFS B1 S1 (A/F)	+25%	Rich	Less than 3.0
	-12.5%	Lean	More than 3.35
O2S B1 S2 (HO2)	+25%	Rich	More than 0.5
	-12.5%	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
4	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction	NG	Output Voltage Almost no reaction	NG	

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2; then press the YES button and then the ENTER button followed by the F4 button.
HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If the OX1B wire from the hybrid vehicle control ECU connector is short-circuited to the +B wire, DTC P0138 will be set.

ES

1	READ OUTPUT DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC output)	Proceed to
P0138	A
P0137	B
P0136	C

B → Go to step 14

C → Go to step 7

A

2	READ VALUE USING INTELLIGENT TESTER (OUTPUT VOLTAGE OF HEATED OXYGEN SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / O2S B1 S2.
(d) Allow the engine to idle.
(e) Read the Heated Oxygen (HO2) sensor output voltage while idling.

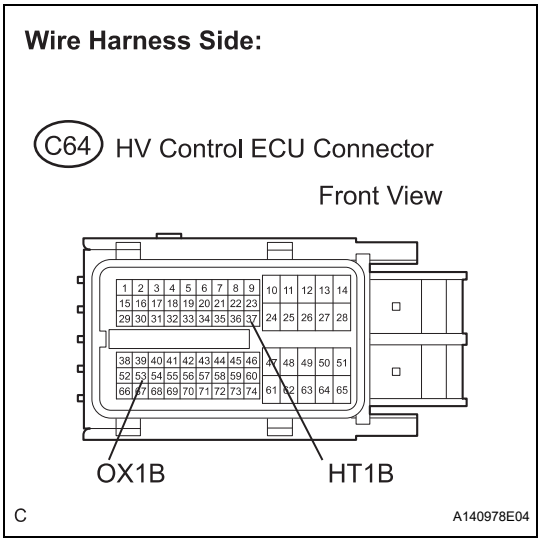
Result

HO2 Sensor Output Voltages	Proceed to
More than 1.2 V	A
Less than 1.0 V	B

B → Go to step 5

A

3 CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT)



(a) Turn the power switch off and wait for 5 minutes.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.
Standard resistance

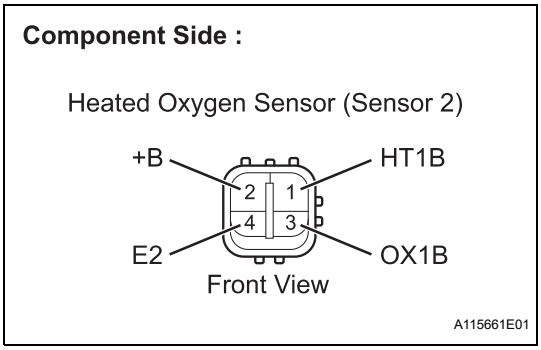
Tester Connections	Specified Conditions
C64-37 (HT1B) - C64-53 (OX1B)	10 kΩ or higher

(d) Reconnect the hybrid vehicle control ECU connector.

OK → REPLACE HYBRID VEHICLE CONTROL ECU

NG

4 INSPECT HEATED OXYGEN SENSOR (CHECK FOR SHORT)



(a) Disconnect the C22 HO2 sensor connector.
(b) Measure the resistance.
Standard resistance

Tester Connections	Specified Conditions
2 (+B) - 4 (E2)	10 kΩ or higher
2 (+B) - 3 (OX1B)	10 kΩ or higher

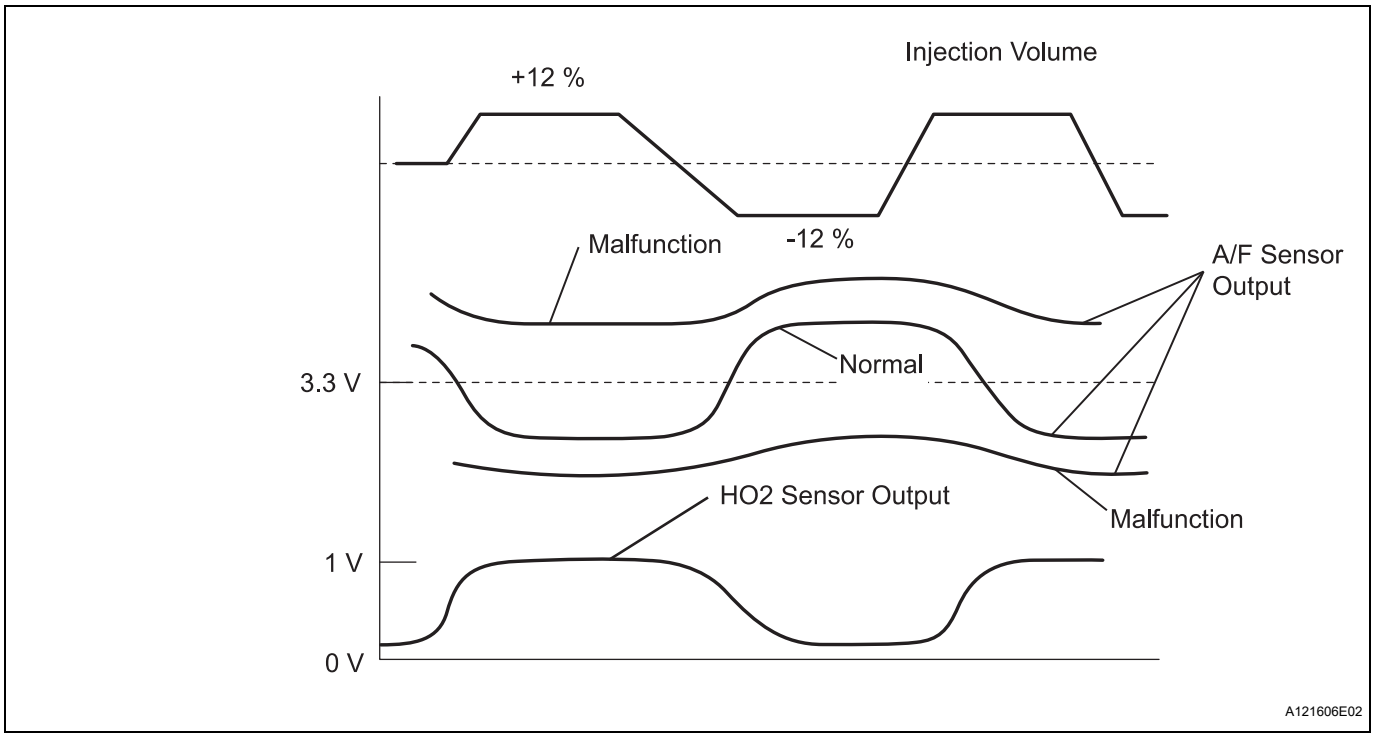
13	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (INJECTION VOLUME)

(a) Connect the intelligent tester to the DLC3.



(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / INJ VOL.
(f) Change the fuel injection volume using the tester, monitoring the voltage output of Air-Fuel Ratio (A/F) and HO2 sensors displayed on the tester.
HINT:
- Change the fuel injection volume within the range of -12% and +12%. The injection volume can be changed in 1% graduations within the range.
- The A/F sensor is displayed as AFS B1 S1, and the HO2 sensor is displayed as O2S B1 S2, on the intelligent tester.

Result

Tester Display (Sensor)	Voltage Variations	Proceed to
AFS B1 S1 (A/F)	Alternates between more and less than 3.3 V	OK
	Remains at more than 3.3 V	NG
	Remains at less than 3.3 V	NG

HINT:
A normal HO2 sensor voltage (O2S B1 S2) reacts in accordance with increases and decreases in fuel injection volumes. When the A/F sensor voltage remains at either less or more than 3.3 V despite the HO2 sensor indicating a normal reaction, the A/F sensor is malfunctioning.

NG → **REPLACE AIR-FUEL RATIO SENSOR**

OK

REPLACE HEATED OXYGEN SENSOR

DTC	P0171	System Too Lean (Bank 1)

DTC	P0172	System Too Rich (Bank 1)

DESCRIPTION

The fuel trim is related to the feedback compensation value, not to the basic injection time. The fuel trim consists of both the short-term and the long-term fuel trims.

The short-term fuel trim is fuel compensation that is used to constantly maintain the air-fuel ratio at stoichiometric levels. The signal from the Air-Fuel Ratio (A/F) sensor indicates whether the air-fuel ratio is rich or lean compared to the stoichiometric ratio. This triggers a reduction in the fuel injection volume if the air-fuel ratio is rich and an increase in the fuel injection volume if it is lean.

Factors such as individual engine differences, wear over time and changes in operating environment cause short-term fuel trim to vary from the central value. The long-term fuel trim, which controls overall fuel compensation, compensates for long-term deviations in the fuel trim from the central value caused by the short-term fuel trim compensation.

If both the short-term and long-term fuel trims are lean or rich beyond predetermined values, it is interpreted as a malfunction, and the ECM (included in hybrid vehicle control ECU) illuminates the MIL and sets a DTC.

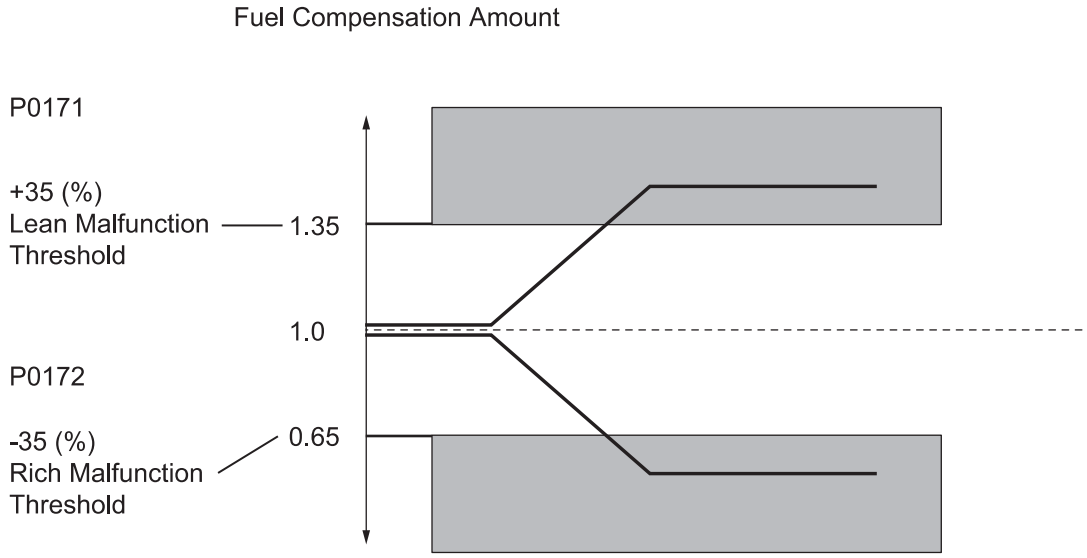
DTC No.	DTC Detection Conditions	Trouble Areas
P0171	With warm engine and stable air-fuel ratio feedback, fuel trim considerably in error to lean side (2-trip detection logic)	• Air induction system • Injector blockage • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Fuel pressure • Gas leakage from exhaust system • Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI MAIN relay) • A/F sensor heater and EFI MAIN relay circuits • PCV valve and hose • PCV hose connections • Hybrid vehicle control ECU
P0172	With warm engine and stable air-fuel ratio feedback, fuel trim considerably in error to rich side (2-trip detection logic)	• Injector leakage or blockage • MAF meter • ECT sensor • Ignition system • Fuel pressure • Gas leakage from exhaust system • Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI MAIN relay) • A/F sensor heater and EFI MAIN relay circuits • Hybrid vehicle control ECU

HINT:

- When DTC P0171 is set, the actual air-fuel ratio is on the lean side. When DTC P0172 is set, the actual air-fuel ratio is on the rich side.
- If the vehicle runs out of fuel, the air-fuel ratio is lean and DTC P0171 may be set. The MIL is then illuminated.
- When the total of the short-term and long-term fuel trim values is within 20% (and the engine coolant temperature is more than 75°C [167°F]), the system is functioning normally.

MONITOR DESCRIPTION

Under closed-loop fuel control, fuel injection volumes that deviate from those estimated by the ECM cause changes in the long-term fuel trim compensation value. The long-term fuel trim is adjusted when there are persistent deviations in the short-term fuel trim values. Deviations from the ECM's estimated fuel injection volumes also affect the average fuel trim learning value, which is a combination of the average short-term fuel trim (fuel feedback compensation value) and the average long-term fuel trim (learning value of the air-fuel ratio). If the average fuel trim learning value exceeds the malfunction threshold, the ECM interprets this as a fault in the fuel system and sets a DTC.
Example:
The average fuel trim learning value is +35% or more or -35% or less, the ECM interprets this as a fuel system malfunction.



MONITOR STRATEGY

Related DTCs	P0171: Fuel trim lean P0172: Fuel trim rich
Required Sensors/Components (Main)	Fuel system
Required Sensors/Components (Related)	A/F sensor, Mass air flow meter, Crankshaft position sensor

MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0010 (VVT OCV) P0011 (VVT System 1 - Advance) P0012 (VVT System 1 - Retard) P0031, P0032 (A/F sensor heater - Sensor 1) P0100 - P0103 (MAF meter) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter) P0500 (VSS)
Fuel system status	Closed loop
Battery voltage	11 V or more
Either of following conditions 1 or 2 set	-
1. Engine RPM	Below 1,400 rpm
2. Intake air amount per revolution	0.22 g/rev or more
Catalyst monitor	Not executed

TYPICAL MALFUNCTION THRESHOLDS

Purge-cut	Executing
Either of following conditions 1 or 2 met	-
1. Average of short-term fuel trim and long-term fuel trim	35% or more (varies with ECT)
2. Average of short-term fuel trim and long-term fuel trim	-35% or less (varies with ECT)

WIRING DIAGRAM

Refer to DTC P2195 (See page ES-273).

INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0171 OR P0172)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0171 or P0172	A
P0171 or P0172 and other DTCs	B

HINT:
If any DTCs other than P0171 or P0172 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (A/F CONTROL)

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(f) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
(g) Monitor the output voltages of the A/F and HO2 sensors (AFS B1S1 and O2S B1S2) displayed on the tester.

Result:

The A/F sensor reacts in accordance with increases and decreases in the fuel injection volume:
+25% = Rich output:
Less than 3.0 V
-12.5% = Lean output:
More than 3.35 V

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		-
	Output Voltage More than 3.35 V Less than 3.0 V	OK	Output Voltage More than 0.5 V Less than 0.4 V	OK	
2	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction	NG	Output Voltage More than 0.5 V Less than 0.4 V	OK	

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
3	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		Extremely rich or lean actual air-fuel ratio • Injector leakage or blockage • Gas leakage from exhaust system • Fuel pressure • MAF meter • ECT sensor • Air induction system • PCV hose connections
	Output Voltage Almost no reaction	NG	Output Voltage Almost no reaction	NG	

ES

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1S1 and O2S B1S2; then press the YES button and then the ENTER button followed by the F4 button.

Result

Result	Proceed to
Case 1	C
Case 2	B

C → **Go to step 15**

A

3	READ VALUE USING INTELLIGENT TESTER (MAF)

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF and COOLANT TEMP.
(e) Allow the engine to idle until the COOLANT TEMP reaches 75°C (167°F) or more.
(f) Read the MAF with the engine in an idling condition and at an engine speed of 2,500 rpm.
Standard:
MAF while engine idling:
Between 1 g/sec. and 3 g/sec. (shift position: N, A/C: OFF).
MAF at an engine speed of 2,500 rpm:
Between 2 g/sec. and 6 g/sec. (shift position: N, A/C: OFF).

NG → REPLACE MASS AIR FLOW METER

OK

4	READ VALUE USING INTELLIGENT TESTER (COOLANT TEMP)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / COOLANT TEMP.
(d) Read the COOLANT TEMP twice, when the engine is both cold and warmed up.

Standard:
With cold engine:
Same as ambient air temperature.
With warm engine:
Between 75°C and 100°C (167°F and 212°F).

NG → REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK

5	CHECK PCV HOSE (HOSE CONNECTIONS)

(a) Check PCV hose connections.

OK:
PCV hose is connected correctly and is not damaged.

NG → REPAIR OR REPLACE PCV HOSE

OK

6	CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.

OK:
No leakage from air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

7	CHECK FOR SPARK AND IGNITION (See page ES-160)

NG → REPAIR OR REPLACE IGNITION SYSTEM

OK

8	CHECK FOR EXHAUST GAS LEAK

(a) Check for exhaust gas leakage.
OK:
No gas leakage.

NG → **REPAIR OR REPLACE EXHAUST SYSTEM**

DTC	P0300	Random / Multiple Cylinder Misfire Detected

DTC	P0301	Cylinder 1 Misfire Detected

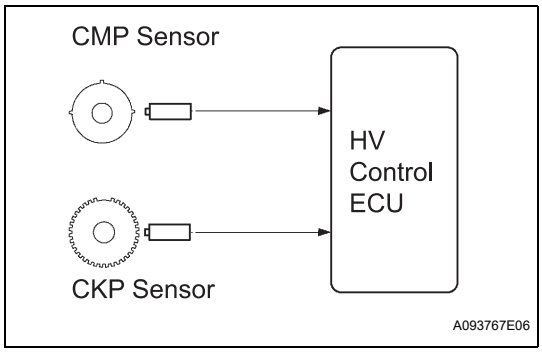
DTC	P0302	Cylinder 2 Misfire Detected

DTC	P0303	Cylinder 3 Misfire Detected

DTC	P0304	Cylinder 4 Misfire Detected

ES

DESCRIPTION



When the engine misfires, high concentrations of hydrocarbons (HC) enter the exhaust gas. Extremely high HC concentration levels can cause increases in exhaust emission levels. High concentrations of HC can also cause increases in the Three-Way Catalytic Converter (TWC) temperature, which may cause damage to the TWC. To prevent these increases in emissions and to limit the possibility of thermal damage, the ECM (included in hybrid vehicle control ECU) monitors the misfire rate. When the temperature of the TWC reaches the point of thermal degradation, the ECM blinks the MIL. To monitor misfires, the ECM uses both the Camshaft Position (CMP) sensor and the Crankshaft Position (CKP) sensor. The CMP sensor is used to identify any misfiring cylinders and the CKP sensor is used to measure variations in the crankshaft rotation speed. Misfires are counted when the crankshaft rotation speed variations exceed predetermined thresholds.
If the misfire rate exceeds the threshold level, and could cause emission deterioration, the ECM illuminates the MIL and sets a DTC.

DTC No.	DTC Detection Conditions	Trouble Areas
P0300	Simultaneous misfiring of several cylinders detected (2-trip detection logic)	• Open or short in engine wire harness • Connector connection • Vacuum hose connections • Ignition system • Injector • Fuel pressure • Mass Air Flow (MAF) meter • Engine Coolant Temperature (ECT) sensor • Compression pressure • Valve clearance • Valve timing • PCV valve and hose • PCV hose connections • Air induction system • Hybrid vehicle control ECU
P0301 P0302 P0303 P0304	Misfiring of specific cylinder detected (2-trip detection logic)	

When DTCs for misfiring cylinders are randomly set, but DTC P0300 is not set, misfires have been detected in different cylinders at different times. DTC P0300 is only set when several misfiring cylinders are detected at the same time.

MONITOR DESCRIPTION

The ECM illuminates the MIL and sets a DTC when either of the following conditions, which could cause emission deterioration, is detected (2-trip detection logic).

- Within the first 1,000 crankshaft revolutions of the engine starting, an excessive misfiring rate (approximately 20 to 50 misfires per 1,000 crankshaft revolutions) occurs once.
- After the first 1,000 crankshaft revolutions, an excessive misfiring rate (approximately 20 to 50 misfires per 1,000 crankshaft revolutions) occurs 4 times in sequential crankshaft revolutions.

The ECM flashes the MIL and sets a DTC when either of the following conditions, which could cause Three-Way Catalytic Converter (TWC) damage, is detected (2-trip detection logic).

- In every 200 crankshaft revolutions at a high engine rpm, the threshold misfiring percentage is recorded once.
- In every 200 crankshaft revolutions at a normal engine rpm, the threshold misfiring percentage is recorded 3 times.

MONITOR STRATEGY

Related DTCs	P0300: Multiple cylinder misfire P0301: Cylinder 1 misfire P0302: Cylinder 2 misfire P0303: Cylinder 3 misfire P0304: Cylinder 4 misfire
Required Sensors/Components (Main)	Crankshaft position sensor and camshaft position sensor
Required Sensors/Components (Related)	Engine coolant temperature and intake air temperature sensors and mass air flow meter
Frequency of Operation	Continuous
Duration	1,000 to 4,000 crankshaft revolutions: Emission related misfire 200 to 600 crankshaft revolutions: Catalyst damaged misfire
MIL Operation	2 driving cycles: Emission related misfire MIL flashes immediately: Catalyst damaged misfire
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Misfire:

Monitor runs whenever following DTCs not present	P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0327, P0328 (Knock sensor) P0335 (CKP sensor) P0340 (CMP sensor) P0500 (VSS)
Battery voltage	8 V or more
VVT system	Not operated by scan tool
Engine RPM	750 to 6,400 rpm
Either of following conditions (a) or (b) met	-
(a) ECT at engine start	More than -7°C (19°F)
(b) ECT	More than 20°C (68°F)
Fuel cut	OFF

Monitor period of emission-related-misfire:

First 1,000 revolutions after engine start, or check mode	Crankshaft 1,000 revolutions
Except above	Crankshaft 1,000 revolutions x 4

Monitor period of catalyst-damaged-misfire (MIL blinks):

All of following conditions 1, 2 and 3 met	Crankshaft 200 revolutions x 3
1. Driving cycles	1st

2. Check mode	OFF
3. Engine RPM	Less than 3.500 rpm
Except above	Crankshaft 200 revolutions

TYPICAL MALFUNCTION THRESHOLDS

Monitor period of emission-related-misfire:

Misfire rate	2.2% or more

Monitor period of catalyst-damaged-misfire (MIL blinks):

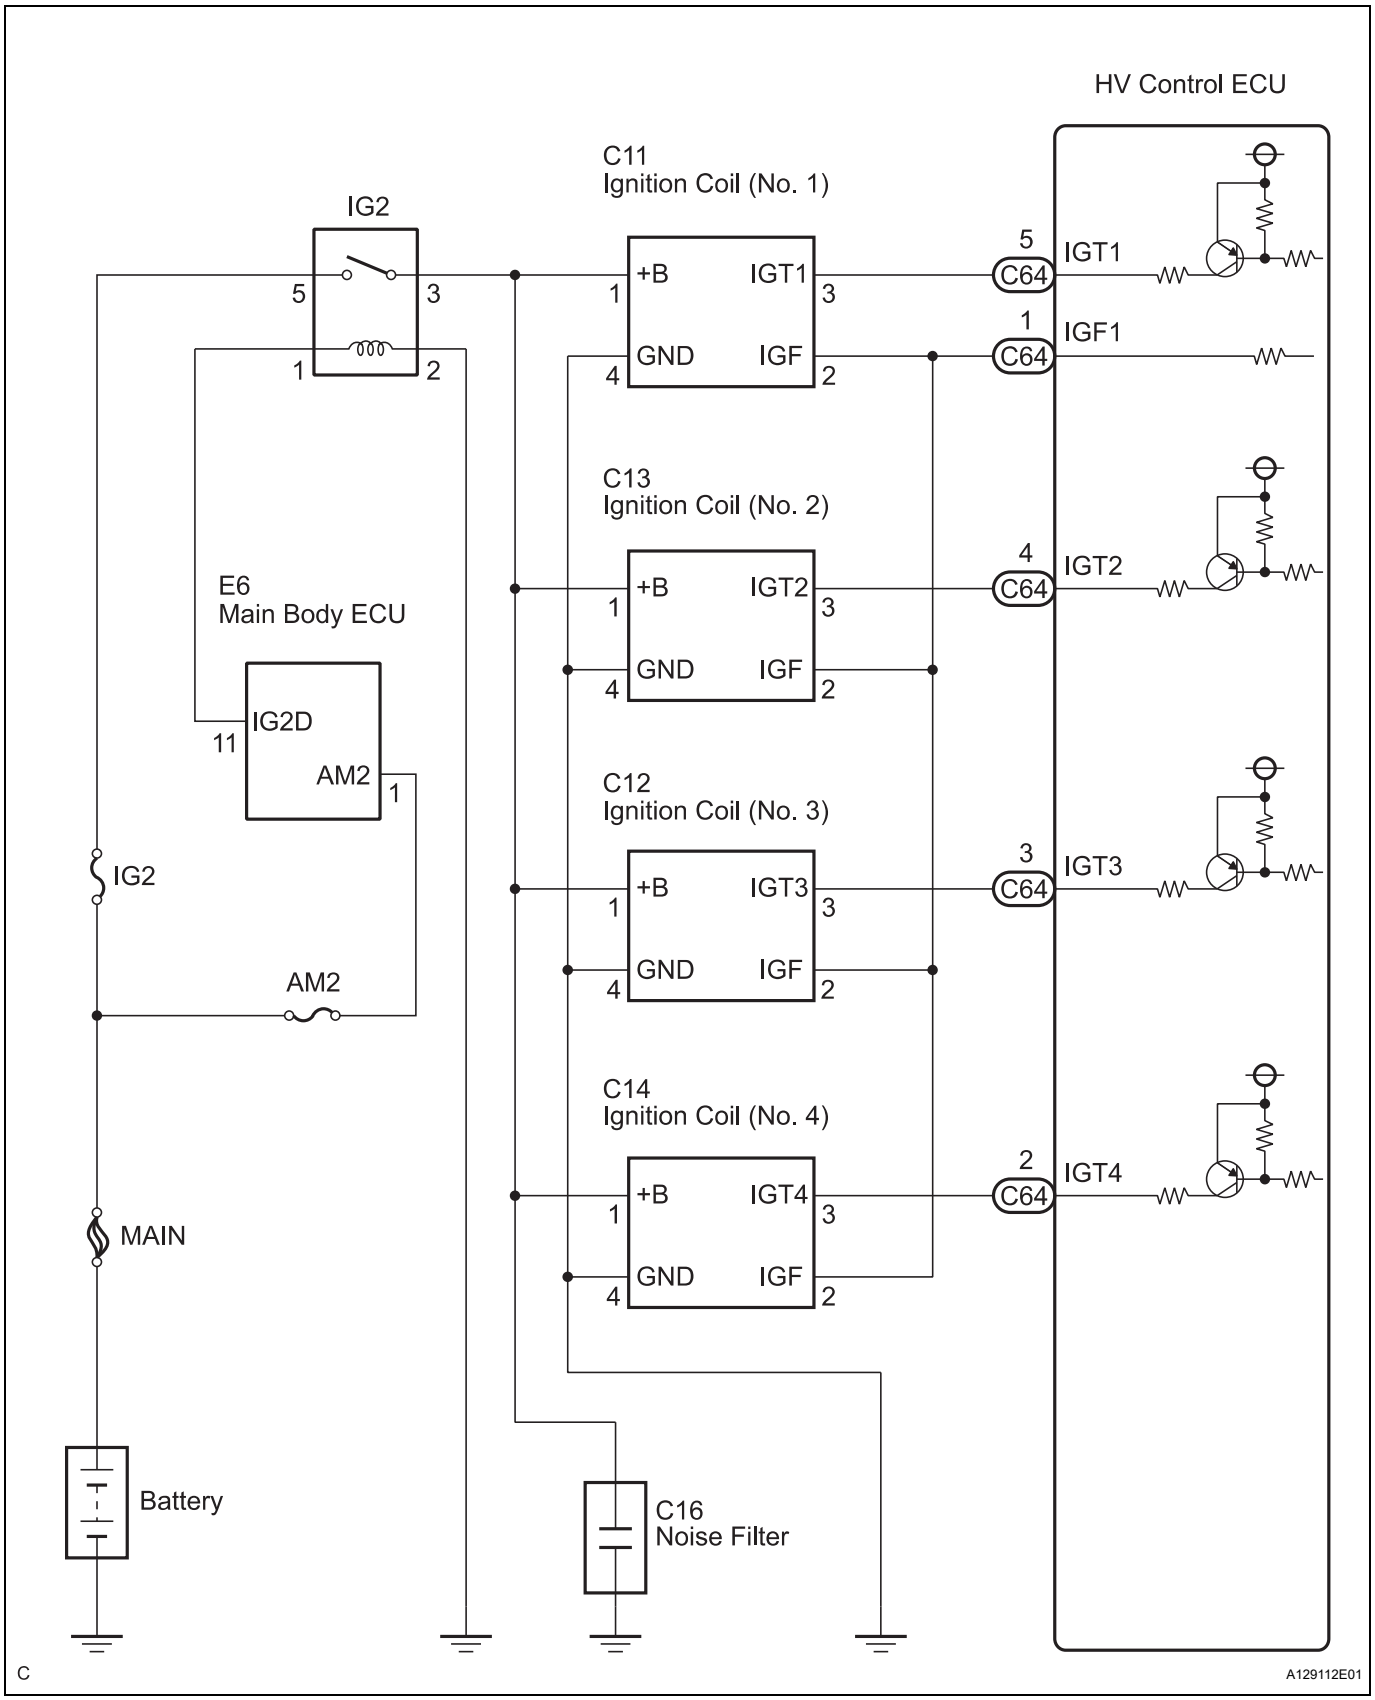
Number of misfire per 200 revolutions	118 or more (varies with intake air amount and RPM)

MONITOR RESULT

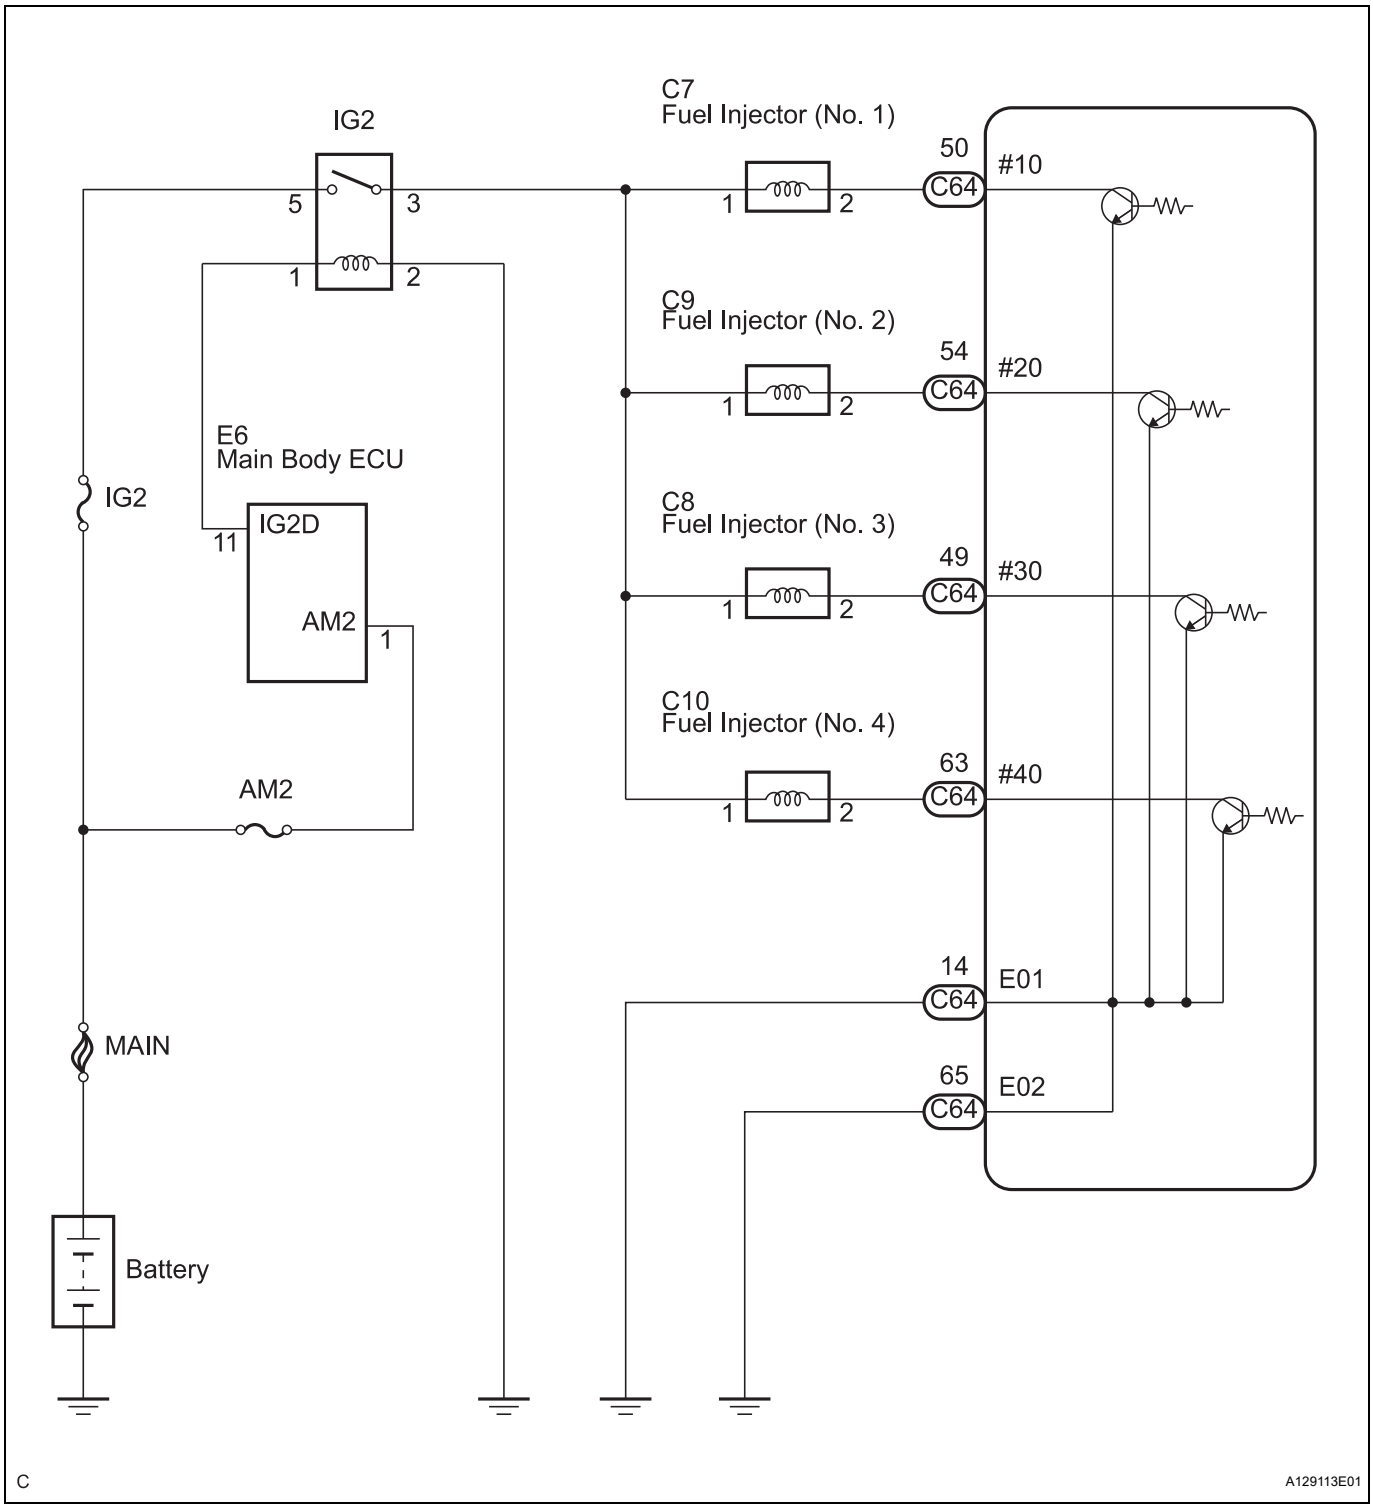
Refer to CHECKING MONITOR STATUS (See page ES-14).

WIRING DIAGRAM

Wiring diagram of the ignition system.



Wiring diagram of the injector circuit.



CONFIRMATION DRIVING PATTERN

1. Connect the intelligent tester to the DLC3.
2. Turn the power switch on (IG).
3. Turn the tester on.
4. Record the DTC(s) and freeze frame data.
5. Using the tester, switch the ECM from normal mode to check mode (See page ES-17).
6. Read the misfire counts of each cylinder (CYL #1 to #4) with the engine in an idling condition. If any misfire count is displayed, skip the following confirmation driving pattern.

7. Drive the vehicle several times with the conditions, such as an engine rpm and engine load, shown in MISFIRE RPM and MISFIRE LOAD in the DATA LIST.
   HINT:
   In order to store misfire DTCs, it is necessary to drive the vehicle for the period of time shown in the table below, with the MISFIRE RPM and MISFIRE LOAD in the DATA LIST.

Engine RPM	Duration
Idling	3.5 minutes or more
1,000	3 minutes or more
2,000	1.5 minutes or more
3,000	1 minute or more

8. Check whether misfires have occurred by checking DTCs and freeze frame data.
   HINT:
   Do not turn the power switch off until the stored DTC(s) and freeze frame data have been recorded. When the ECM returns to normal mode (default), the stored DTC(s), freeze frame data and other data will be erased.
9. Record the DTC(s), freeze frame data and misfire counts.
10. Turn the power switch off and wait for at least 5 seconds.

ES

INSPECTION PROCEDURE

HINT:

- If any DTCs other than misfire DTCs are output, troubleshoot those DTCs first.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- If the misfire does not recur when the vehicle is brought to the workshop, reproduce the conditions stored in the freeze frame data.
- If the misfire still cannot be reproduced even though the conditions stored in the freeze frame data have been duplicated, one of the following factors is considered to be a possible cause of the problem:
  (a) The fuel level is low.
  (b) Improper fuel is used.
  (c) The spark plugs are dirty.
  (d) The problem is complex due to multiple factors.
- After finishing repairs, check that no misfires occur in each cylinder (CYL #1, #2, #3 and #4).
- Be sure to confirm that no misfiring cylinder DTCs are set again by conducting the confirmation driving pattern, after the repairs.
- For 6 and 8 cylinder engines, the ECM intentionally does not set the specific misfiring cylinder DTCs at a high engine RPM. If misfires only occur during high engine RPM driving, only DTC P0300 is set.
  In the event of DTC P0300 being present, perform the following operations:
  (a) Clear the DTC (See page ES-31).
  (b) Start the engine and conduct the confirmation driving pattern.
  (c) Read the misfiring rates of each cylinder or DTC(s) using the tester.
  (d) Repair the cylinder(s) that has a high misfiring rate or is indicated by the DTC.
  (e) After finishing repairs, conduct the confirmation driving pattern again, in order to verify that DTC P0300 is not set.
- When either SHORT FT #1 or LONG FT #1 in the freeze frame data is outside the range of +-20%, the air-fuel ratio may be rich (-20% or less) or lean (+20% or more).
- When the COOLANT TEMP in the freeze frame data is less than 75°C (167°F), misfires occurred only while warming up the engine.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO MISFIRE DTCS)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0300, P0301, P0302, P0303 and/or P0304	A
P0300, P0301, P0302, P0303 and/or P0304 and other DTCs	B

HINT:
If any DTCs other than P0300, P0301, P0302, P0303 and P0304 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

2	READ VALUE USING INTELLIGENT TESTER (MISFIRE RPM AND MISFIRE LOAD)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MISFIRE / MISFIRE RPM and MISFIRE LOAD.
(d) Read and note the MISFIRE RPM and MISFIRE LOAD (engine load) values.
HINT:
The MISFIRE RPM and MISFIRE LOAD values indicate the vehicle conditions under which the misfire occurred.

NEXT

3	CHECK PCV HOSE (HOSE CONNECTIONS)

OK:
PCV hose is connected correctly and is not damaged.

NG → REPAIR OR REPLACE PCV HOSE

OK

4	CHECK MISFIRE COUNT (CYL #1, #2, #3 AND #4)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-31).

(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / MISFIRE / CYL #1, #2, #3 and #4.
(f) Put the engine in inspection mode (See page ES-35).
(g) Read each value for CYL #1 to #4 displayed on the tester. If no misfire counts occur in any cylinders, perform the following procedures:
  (1) Shift the gear selector lever to the D position.
  (2) Check CYL #1 to #4.
  (3) If misfire counts are still not displayed, perform steps (h) and (i) and then check the misfire counts again.
(h) Drive the vehicle with the MISFIRE RPM and MISFIRE LOAD noted in the "READ VALUE USING INTELLIGENT TESTER (MISFIRE RPM AND MISFIRE LOAD)" procedures above.
(i) Read the CYL #1 to #4 or DTCs displayed on the tester.

Result

Misfire Count	Proceed to
Most misfires occur in only 1 or 2 cylinders	A
3 cylinders or more have equal misfire counts	B

HINT:
- If it is difficult to reproduce misfires for each cylinder, check the DATA LIST item, MISFIRE MARGIN. Try to find vehicle driving conditions that lower the MISFIRE MARGIN value. Values above 30% are considered normal.
- If the freeze frame data's record of the ECT is below 75°C (167°F), misfire may be detected only when the engine is cold.
- If the freeze frame data's record of the ENGINE RUN TIME is below 120 seconds, misfire may be detected immediately after the engine is started.

B → Go to step 14

A

5	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (FUEL CUT #1 TO #4)

(a) Put the engine in inspection mode (See page ES-35).
(b) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL CUT#1 (to #4).
(c) If a cylinder has a high misfire count, cut fuel to that cylinder. Compare the misfire count of the cylinder before fuel cut and after fuel cut.

Result

Misfire Count in Each Cylinder	Proceed to
Misfire count of cylinder before fuel cut and after fuel cut roughly the same	A
Misfire count of cylinder before fuel cut lower than after fuel cut	B

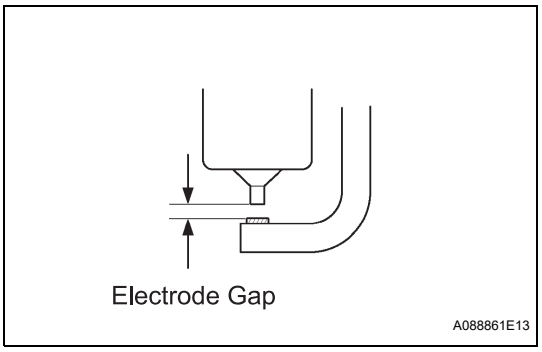
NOTICE:
This ACTIVE TEST cannot be performed while the vehicle is being driven.
HINT:
If the misfire count of the cylinder before and after the fuel cut are roughly the same, the cylinder is misfiring.
If the misfire count of the cylinder before the fuel cut is lower than after the fuel cut, the cylinder misfires sometimes.

B → **Go to step 11**

A

ES

6 CHECK SPARK PLUG



(a) Remove the ignition coil and the spark plug of the misfiring cylinder.
(b) Measure the spark plug electrode gap.
Standard gap:
1.0 to 1.1 mm (0.039 to 0.043 in.)
(c) Check the electrode for carbon deposits.
Recommended spark plug:

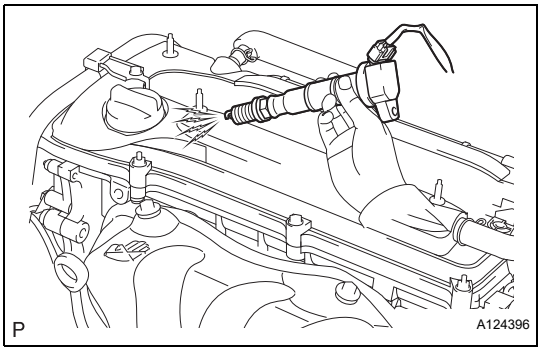
Manufacturers	Products
DENSO	SK20R11
NGK	IFR6A11

NOTICE:
If the electrode gap is larger than the standard, replace the spark plug. Do not adjust the electrode gap.

NG → **REPLACE SPARK PLUG**

OK

7 CHECK FOR SPARKS AND IGNITION



(a) Remove the ignition coil from the cylinder head.
(b) Install the spark plug onto the ignition coil.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the power switch on (IG) and turn the tester on.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL CUT ALL.
(f) Attach the spark plug assembly to the cylinder head.
(g) Perform the FUEL CUT ALL operation (press the RIGHT or LEFT button to change to ON).
NOTICE:
When FUEL CUT ALL is OFF and the engine is cranked, fuel injection will occur.
(h) Crank the engine for less than 2 seconds and check the spark.
OK:
Sparks jump across electrode gap.

(i) Install the ignition coil.

NG → Go to step 9

OK

8	CHECK CYLINDER COMPRESSION PRESSURE (MISFIRING CYLINDER)

(a) Measure the cylinder compression pressure of the misfiring cylinder.

OK → Go to step 10

NG

ES

CHECK ENGINE TO DETERMINE CAUSE OF LOW COMPRESSION

9	CHANGE WITH NORMAL SPARK PLUG AND CHECK SPARK OF MISFIRING CYLINDER (MISFIRING CYLINDER)

(a) Change the installed spark plug with a spark plug that functions normally.

(b) Perform a spark test.

CAUTION:
Always disconnect all injector connectors.
NOTICE:
Do not crank the engine for more than 2 seconds.

(1) Install the spark plug to the ignition coil and connect the ignition coil connector.
(2) Disconnect the injector connector.
(3) Ground the spark plug.
(4) Check if sparks occur while the engine is being cranked.

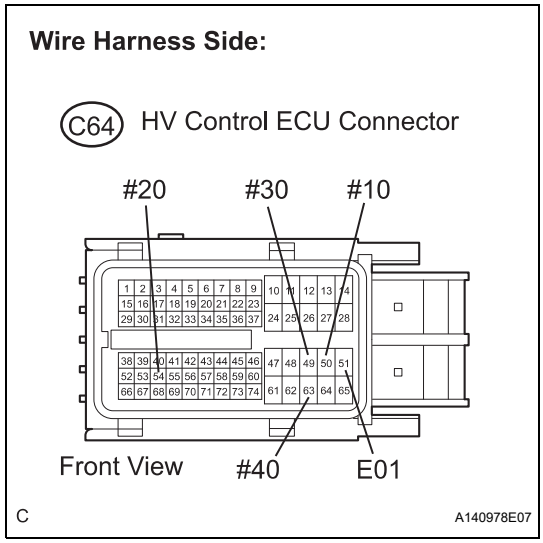
OK:
Sparks jump across electrode gap.

NG → REPLACE IGNITION COIL ASSEMBLY

OK

REPLACE SPARK PLUG

10 INSPECT HV CONTROL ECU TERMINAL VOLTAGE (MISFIRING CYLINDER)



(a) Disconnect the C64 hybrid vehicle control ECU connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage between the terminals of the hybrid vehicle control ECU connector.

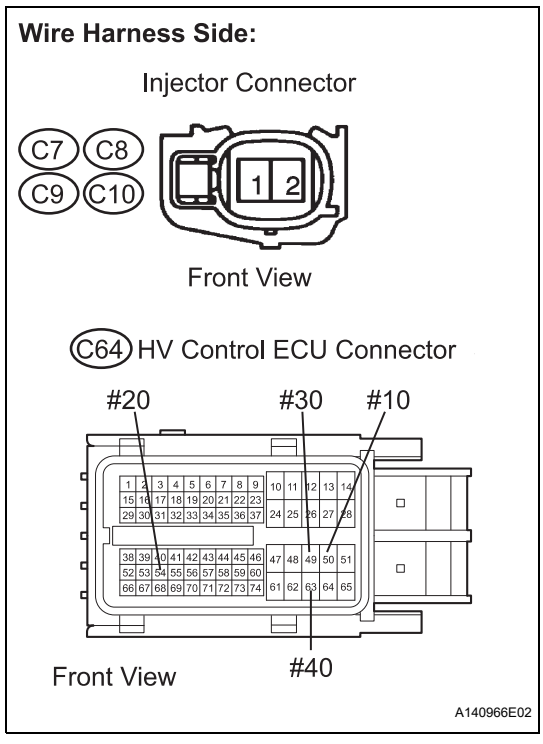
Standard voltage

Tester Connections	Specified Conditions
C64-50 (#10) - C64-51 (E01)	9 to 14 V
C64-54 (#20) - C64-51 (E01)	9 to 14 V
C64-49 (#30) - C64-51 (E01)	9 to 14 V
C64-63 (#40) - C64-51 (E01)	9 to 14 V

OK → **Go to step 12**

NG

11 CHECK HARNESS AND CONNECTOR (INJECTOR - HV CONTROL ECU)



(a) Disconnect the injector connector (of the misfiring cylinder).
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Turn the power switch on (IG).
(d) Measure the resistance and voltage between the injector and the hybrid vehicle control ECU connector terminals.

Standard voltage

Cylinder	Tester Connections	Specified Conditions
No. 1	C7-1 - Ground	9 to 14 V
No. 2	C9-1 - Ground	9 to 14 V
No. 3	C8-1 - Ground	9 to 14 V
No. 4	C10-1 - Ground	9 to 14 V

Standard resistance

Cylinder	Tester Connections	Specified Conditions
No. 1	C7-2 - Ground	10 kΩ or higher
	C7-2 - C64-50 (#10)	Below 1 Ω
No. 2	C9-2 - Ground	10 kΩ or higher
	C9-2 - C64-54 (#20)	Below 1 Ω
No. 3	C8-2 - Ground	10 kΩ or higher
	C8-2 - C64-49 (#30)	Below 1 Ω
No. 4	C10-2 - Ground	10 kΩ or higher
	C10-2 - C64-63 (#40)	Below 1 Ω

(e) Reconnect the injector connector.
(f) Reconnect the hybrid vehicle control ECU connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

12 CHECK FUEL INJECTOR (MISFIRING CYLINDER)

(a) Check the injector injection (whether fuel volume is high or low, and whether injection pattern is poor).

NG → REPLACE FUEL INJECTOR ASSEMBLY

OK

13 CHECK VALVE CLEARANCE (MISFIRING CYLINDER)

NG → ADJUST VALVE CLEARANCE

OK

14 CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

15 CHECK VALVE TIMING

NG → ADJUST VALVE TIMING

OK

16 CHECK FUEL PRESSURE

(a) Check the fuel pressure (See page FU-9).

NG → CHECK AND REPLACE FUEL PUMP, PRESSURE REGULATOR, FUEL PIPE LINE AND FILTER

OK

ES

17	READ VALUE USING INTELLIGENT TESTER (COOLANT TEMP) (See page ES-148)

NG → REPLACE ENGINE COOLANT TEMPERATURE SENSOR

OK ↓

18	READ VALUE USING INTELLIGENT TESTER (MAF) (See page ES-147)

NG → REPLACE MASS AIR FLOW METER

OK ↓

CHECK FOR INTERMITTENT PROBLEMS

DTC	P0327	Knock Sensor 1 Circuit Low Input (Bank 1 or Single Sensor)

DTC	P0328	Knock Sensor 1 Circuit High Input (Bank 1 or Single Sensor)

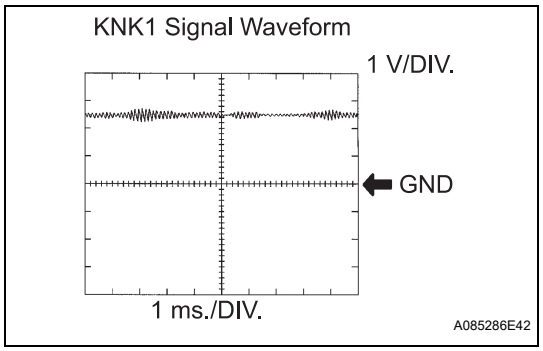
DESCRIPTION

Flat type knock sensors (non-resonant type) have structures that can detect vibrations over a wide band of frequencies: between approximately 6 kHz and 15 kHz.
The knock sensor is fitted onto the engine block to detect engine knocking.
The knock sensor contains a piezoelectric element which generates a voltage when it becomes deformed. The voltage is generated when the engine block vibrates due to knocking. Any occurrence of engine knocking can be suppressed by delaying the ignition timing.

ES

DTC No.	DTC Detection Condition	Trouble Area
P0327	Output voltage of knock sensor less than 0.5 V (1-trip detection logic)	• Short in knock sensor circuit • Knock sensor • Hybrid vehicle control ECU
P0328	Output voltage of knock sensor more than 4.5 V (1-trip detection logic)	• Open in knock sensor circuit • Knock sensor • Hybrid vehicle control ECU

HINT:
When any of DTCs P0327 and P0328 are set, the ECM (included in hybrid vehicle control ECU) enters fail-safe mode. During fail-safe mode, the ignition timing is delayed to its maximum retardation. Fail-safe mode continues until the power switch is turned off.
Reference: Inspection using an oscilloscope



The correct waveform is as shown.

Items	Contents
Terminals	KNK1 - EKNK
Equipment Settings	1 V/DIV. 1 ms./DIV.
Conditions	Keep engine speed at 4,000 rpm with warm engine

MONITOR DESCRIPTION

If the output voltage transmitted by the knock sensor remains low or high for more than 1 second, the ECM (included in hybrid vehicle control ECU) interprets this as a malfunction in the sensor circuit, and sets a DTC.
The monitor for DTCs P0327 and P0328 begins to run when 5 seconds have elapsed since the engine was started.
If the malfunction is not repaired successfully, either DTC P0327 or P0328 is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0327: Knock sensor range check (Low voltage) P0328: Knock sensor range check (High voltage)
Required Sensors/Components (Main)	Knock sensor
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	1 second
MIL Operation	Immediate
Sequence of Operation	None

ES

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs are not present	None
Battery voltage	10.5 V or more
Time after engine start	5 seconds or more
Power switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

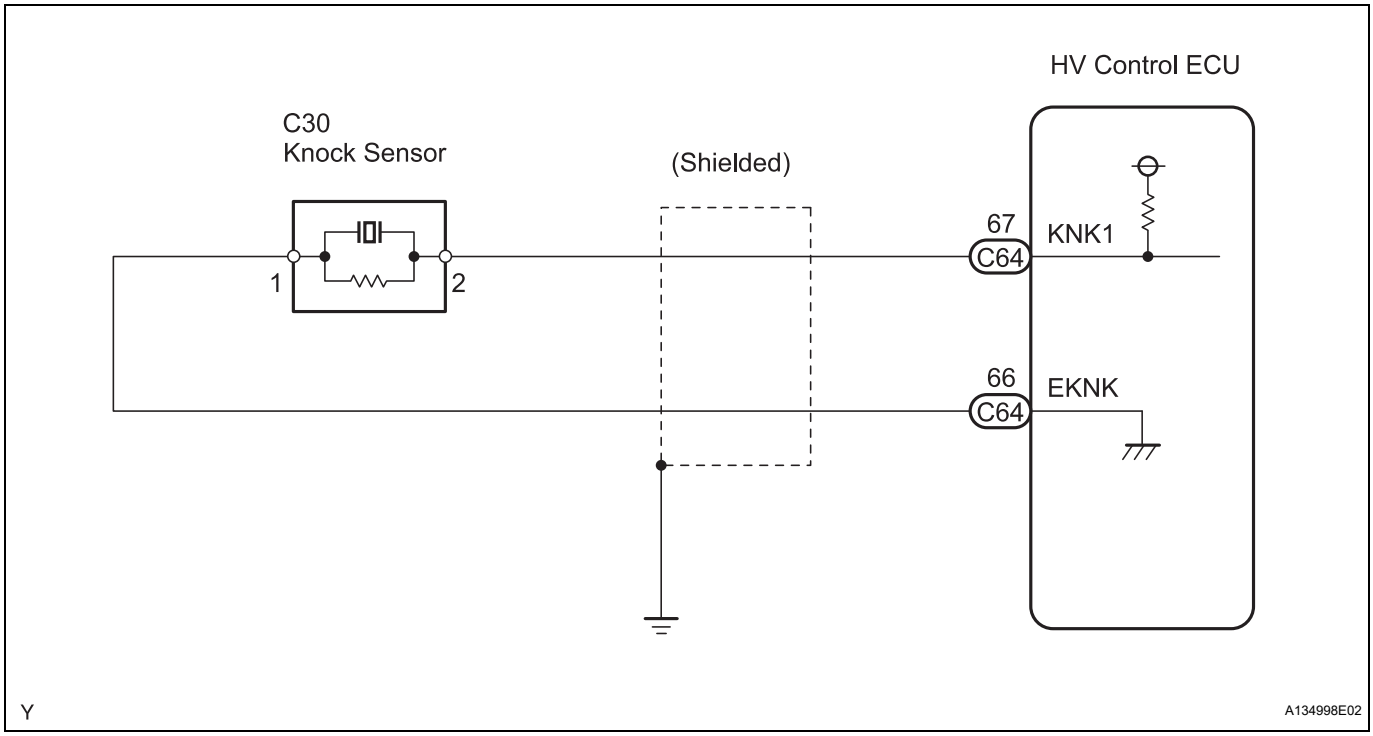
Knock Sensor Range Check (Low voltage) P0327:

Knock sensor voltage	Less than 0.5 V

Knock Sensor Range Check (High voltage) P0328:

Knock sensor voltage	More than 4.5 V

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	READ VALUE USING INTELLIGENT TESTER (KNOCK FB VAL)

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / KNOCK FB VAL.
(f) Read the values displayed on the tester while driving the vehicle.

Standard:

The values change.

HINT:

Malfunction does not occur	Knock Feedback Values change
Malfunctions occur	Knock Feedback Values do not change

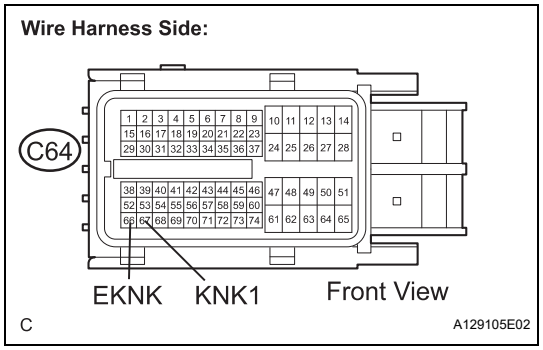
The knock feedback value change can be confirmed by running the engine with a high load, for example, by activating the air conditioning system and revving up the engine.

NG → **Go to step 2**

OK

CHECK FOR INTERMITTENT PROBLEMS

2	CHECK HARNESS AND CONNECTOR (ECM - KNOCK SENSOR)



(a) Disconnect the C64 hybrid vehicle control ECU connector.
(b) Measure the resistance between the terminals.

Standard

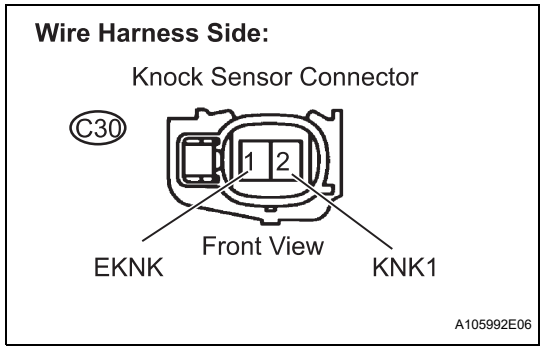
Tester Connection	Specified Condition
C64-67 (KNK1) - C64-66 (EKNK)	120 to 280 kΩ at 20°C (68°F)

(c) Reconnect the hybrid vehicle control ECU connector.

NG → **Go to step 4**

OK

3	INSPECT ECM (KNK1 VOLTAGE)



(a) Disconnect the C30 knock sensor connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage between the knock sensor terminals.

Standard voltage

Tester Connection	Specified Condition
C30-2 (KNK1) - C30-1 (EKNK)	4.5 to 5.5 V

(d) Reconnect the knock sensor connector.

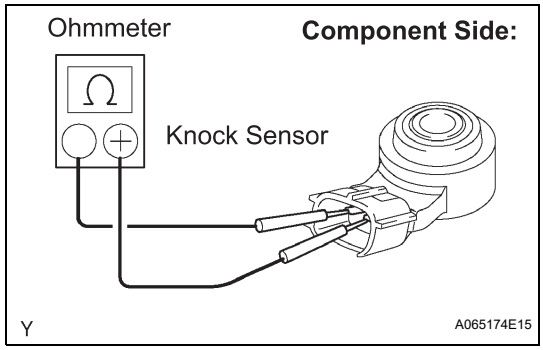
NOTICE:
Fault may be intermittent. Check the wire harness and connectors carefully and retest.

NG → **REPLACE HYBRID VEHICLE CONTROL ECU**

OK

CHECK FOR INTERMITTENT PROBLEMS

4	INSPECT KNOCK SENSOR



(a) Remove the knock sensor.
(b) Measure the resistance between the terminals.

Standard resistance

Tester Connection	Specified Condition
2 (KNK1) - 1 (EKNK)	120 to 280 kΩ at 20°C (68°F)

(c) Reinstall the knock sensor.

NG → **REPLACE KNOCK SENSOR**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR

ES

DTC	P0335	Crankshaft Position Sensor "A" Circuit

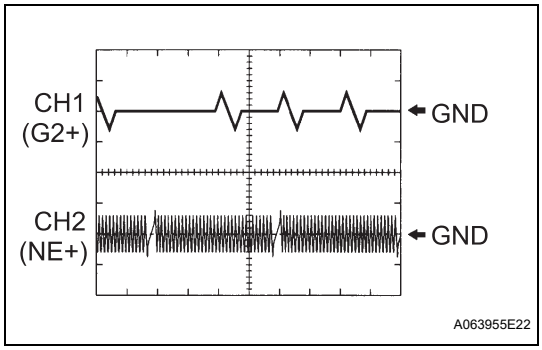
DESCRIPTION

The Crankshaft Position (CKP) sensor system consists of a CKP sensor plate and a pickup coil.
The sensor plate has 34 teeth and is installed on the crankshaft. The pickup coil is made of wound copper wire, an iron core and magnet. The sensor plate rotates and, as each tooth passes through the pickup coil, a pulse signal is created. The pickup coil generates 34 signals per engine revolution. Based on these signals, the ECM (included in hybrid vehicle control ECU) calculates the crankshaft position and engine RPM. Using these calculations, the fuel injection time and ignition timing are controlled.

DTC No.	DTC Detection Conditions	Trouble Areas
P0335	When either condition below is met: • No CKP sensor signal to ECM while cranking (1-trip detection logic) • No CKP sensor signal to ECM at engine speed of 600 rpm or more (1-trip detection logic)	• Open or short in CKP sensor circuit • CKP sensor • CKP sensor plate • Hybrid vehicle control ECU

ES

Reference: Inspection using an oscilloscope.



HINT:
- The correct waveform is as shown.
- G2+ stands for the Camshaft Position (CMP) sensor signal, and NE+ stands for the CKP sensor signal.
- Grounding failure of the shielded wire may cause noise in waveforms.

Items	Contents
Terminals	CH1: G2+ - G2- CH2: NE+ - NE-
Equipment Settings	5 V/DIV. 20 ms./DIV.
Conditions	Cranking or idling

MONITOR DESCRIPTION

If there is no signal from the CKP sensor despite the engine revolving, the ECM interprets this as a malfunction of the sensor.
If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0335: CKP sensor range check or rationality
Required Sensors/Components (Main)	CKP sensor
Required Sensors/Components (Related)	CMP sensor
Frequency of Operation	Continuous
Duration	3 times
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs not present	None

Case 1:

Time after starter OFF to ON	0 seconds or more
Number of CMP sensor signal pulse	6 times
Battery voltage	7 V or more
CMP sensor circuit failure	Not detected
Power switch	ON

Case 2:

Starter	OFF
Engine speed	600 rpm or more
Time after starter from ON to OFF	3 seconds or more

TYPICAL MALFUNCTION THRESHOLDS

Case 1:

Number of CKP sensor signal pulse	44 or less, and 58 or more

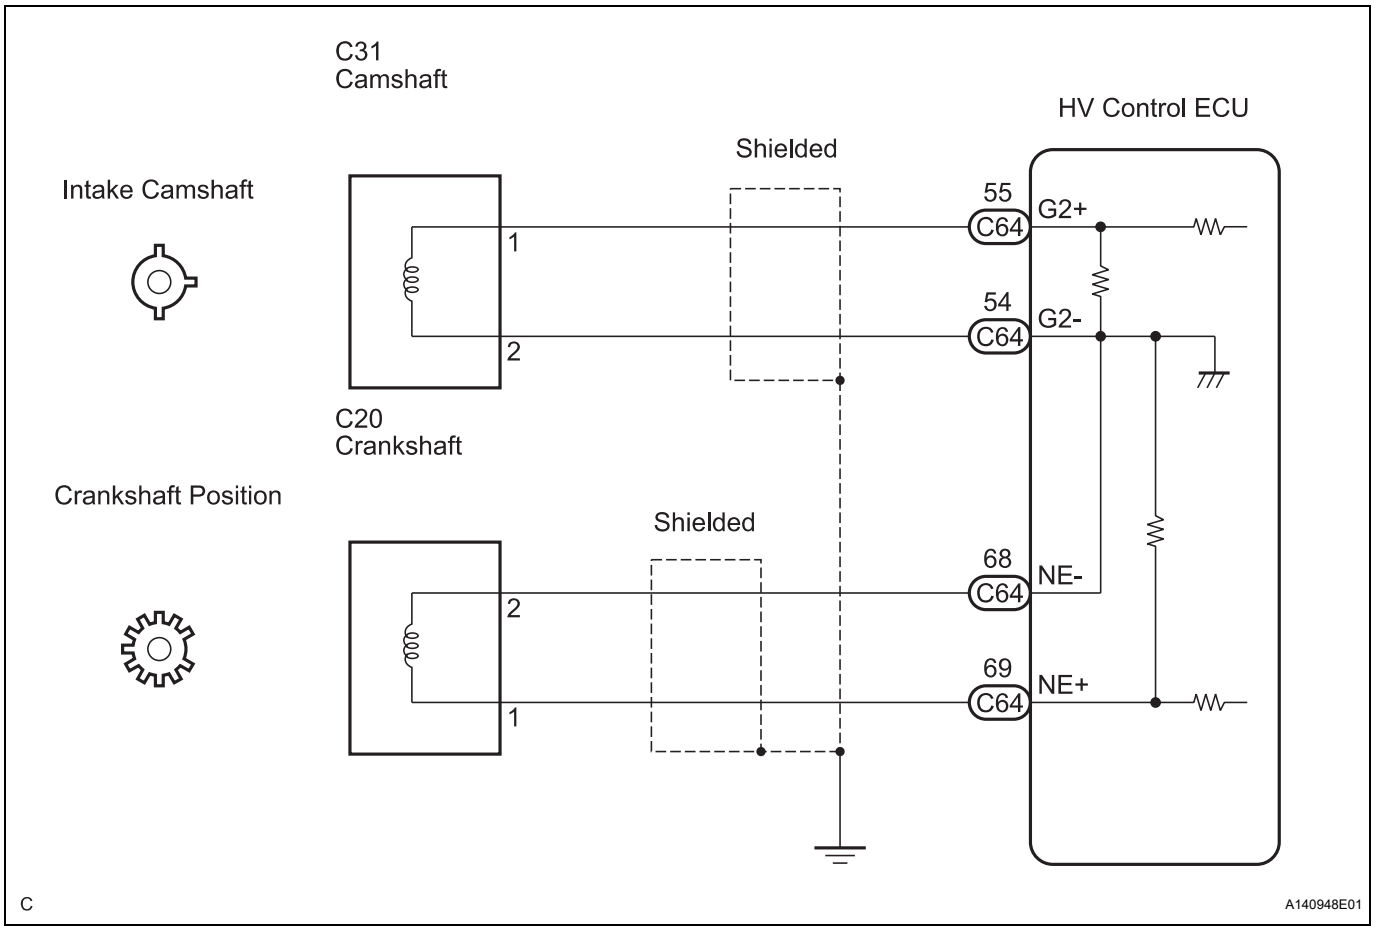
Case 2:

Engine speed signal	No signal

COMPONENT OPERATING RANGE

CKP sensor	• CKP sensor output voltage fluctuates while crankshaft revolving • 34 CKP sensor signals per crankshaft revolution

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:

- If no problem is found through this diagnostic troubleshoot procedure, troubleshoot the engine mechanical systems.
- Check the engine speed. The engine speed can be checked by using the intelligent tester. To check, follow the operation below:
  (a) Connect the intelligent tester to the DLC3.
  (b) Put the engine in inspection mode (See page ES-35).
  (c) Turn the tester on.
  (d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
  The engine speed may be indicated as zero despite the engine revolving normally. This is caused by a lack of NE signals from the Crankshaft Position (CKP) sensor. Alternatively, the engine speed may be indicated as lower than the actual engine speed if the CKP sensor output voltage is insufficient.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**READ VALUE USING INTELLIGENT TESTER (ENGINE SPD)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

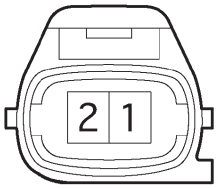
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / ENGINE SPD.
(e) Put the engine in inspection mode (See page ES-35).
(f) Read the values displayed on the tester while the engine is running.
Standard:
Correct values are displayed.
HINT:
- To check the engine speed change, display the graph on the tester.
- If the engine does not start, check the engine speed while cranking.
- If the engine speed indicated on the tester remains zero (0), there may be an open or short in the Crankshaft Position (CKP) sensor circuit.

OK → **CHECK FOR INTERMITTENT PROBLEMS**

NG

2	INSPECT CRANKSHAFT POSITION SENSOR (RESISTANCE)

Component Side:



CKP Sensor

G037727E07

(a) Disconnect the C20 CKP sensor connector.
(b) Measure the resistance between terminals 1 and 2.
Standard resistance

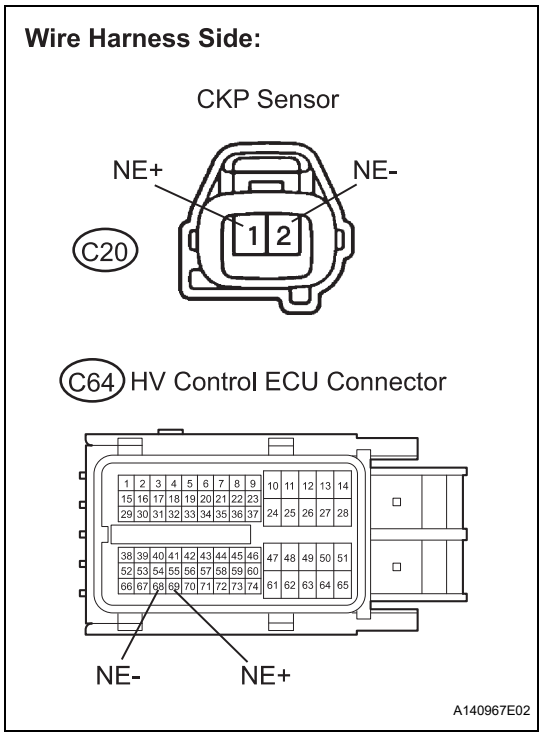
Tester Connections	Conditions	Specified Conditions
1 - 2	Cold	985 to 1,600 Ω
1 - 2	Hot	1,265 to 1,890 Ω

HINT:
Terms "cold" and "hot" refer to the temperature of the sensor. "Cold" means approximately -10 to 50°C (14 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).
(c) Reconnect the CKP sensor connector.

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

OK

3 CHECK HARNESS AND CONNECTOR (CRANKSHAFT POSITION SENSOR - HV CONTROL ECU)



(a) Disconnect the C20 CKP sensor connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C20-1 (NE+) - C64-69 (NE+)	Below 1 Ω
C20-2 (NE-) - C64-68 (NE-)	Below 1 Ω

Standard resistance (Check for short)

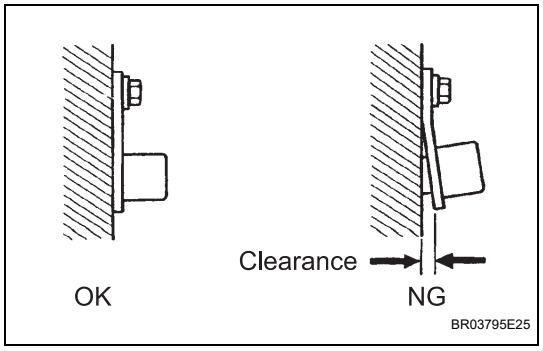
Tester Connections	Specified Conditions
C20-1 (NE+) or C64-69 (NE+) - Body ground	10 kΩor higher
C20-2 (NE-) or C64-68 (NE-) - Body ground	10 kΩor higher

(d) Reconnect the hybrid vehicle control ECU connector.
(e) Reconnect the CKP sensor connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK CRANKSHAFT POSITION SENSOR (SENSOR INSTALLATION)



(a) Check the CKP sensor installation.

OK:

Sensor is installed correctly.

NG → **SECURELY REINSTALL SENSOR**

OK

5 CHECK CRANKSHAFT POSITION SENSOR PLATE (TEETH OF SENSOR PLATE)

(a) Check the teeth of the sensor plate.

OK:

Sensor plate does not have any cracks or deformation.

NG → **REPLACE CRANKSHAFT POSITION SENSOR PLATE**

OK

6	REPLACE CRANKSHAFT POSITION SENSOR

NEXT

7	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-31).
(e) Put the engine in inspection mode (See page ES-35).
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Read the DTCs.

Result

Display (DTC Output)	Proceed to
No output	A
P0335	B

HINT:
If the engine does not start, replace the hybrid vehicle control ECU.

B → REPLACE HYBRID VEHICLE CONTROL ECU

A

END

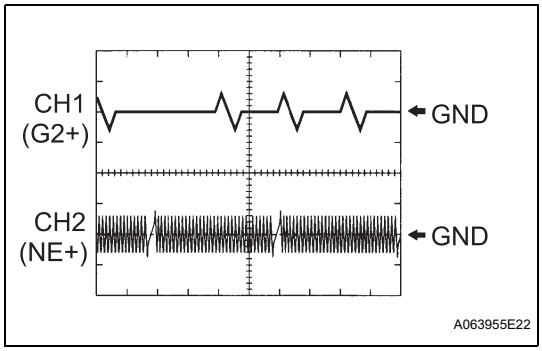
DTC	P0340	Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)

DESCRIPTION

The Camshaft Position (CMP) sensor consists of a magnet and an iron core which is wrapped with copper wire, and is installed onto the cylinder head. When the camshaft rotates, each of 3 teeth on the camshaft passes through the CMP sensor. This activates the internal magnet in the sensor, generating a voltage in the copper wire. The camshaft rotation is synchronized with the crankshaft rotation. When the crankshaft turns twice, the voltage is generated 3 times in the CMP sensor. The generated voltage in the sensor acts as a signal, allowing the ECM (included in hybrid vehicle control ECU) to detect the camshaft position. This signal is then used to control ignition timing, fuel injection timing, and the VVT system.

DTC No.	DTC Detection Conditions	Trouble Areas
P0340	Camshaft/Crankshaft misalignment detected at engine speed of 600 rpm or more (1 trip detection logic)	• Open or short in CMP sensor circuit • CMP sensor • Camshaft • Jumped tooth of timing chain • Hybrid vehicle control ECU

HINT:
DTC P0340 indicates a malfunction relating to the CMP sensor (+) circuit (the wire harness between the ECM and CMP sensor, and the CMP sensor itself).
Reference: Inspection using an oscilloscope



HINT:
- The correct waveform is as shown in the illustration.
- G2+ stands for the CMP sensor signal, and NE+ stands for the Crankshaft Position (CKP) sensor signal.
- Grounding failure of the shielded wire may cause noise in waveforms.

Items	Contents
Terminals	CH1: G2+ - G2- CH2: NE+ - NE-
Equipment Settings	5 V/DIV., 20 ms./DIV.
Conditions	Cranking or idling

MONITOR DESCRIPTION

If no signal is transmitted by the CMP sensor despite the engine revolving, or the rotation of the camshaft and the crankshaft is not synchronized, the ECM interprets this as a malfunction of the sensor.
If the malfunction is not repaired successfully, a DTC is set 10 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0340: Camshaft position sensor range check P0340: Camshaft position/crankshaft position misalignment

Monitor runs whenever following DTCs not present	None
Engine speed	600 rpm or more
Starter	OFF

ES

TYPICAL MALFUNCTION THRESHOLDS

Camshaft Position Sensor Range Check:

CMP sensor signal	No signal

Camshaft Position/Crankshaft Position Misalignment:

Camshaft position and crankshaft position phase	Misaligned

COMPONENT OPERATING RANGE

CMP sensor	• CMP sensor output voltage fluctuates while camshaft revolving • 3 CMP sensor signals per 2 crankshaft revolutions

WIRING DIAGRAM

Refer to DTC P0335 (See page ES-165).

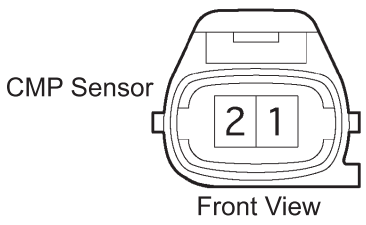
INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT CAMSHAFT POSITION SENSOR (RESISTANCE)

Component Side:



(a) Disconnect the C31 Camshaft Position (CMP) sensor connector.

(b) Measure the resistance between terminals 1 and 2.

Standard resistance

Tester Connections	Conditions	Specified Conditions
1 - 2	Cold	835 to 1,400 Ω
1 - 2	Hot	1,060 to 1,645 Ω

HINT:

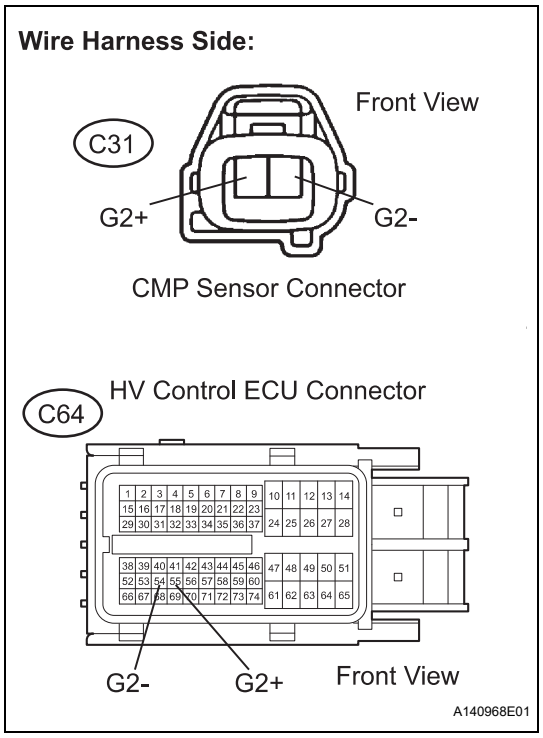
Terms "cold" and "hot" refer to the temperature of the sensor. "Cold" means approximately -10 to 50°C (14 to 122°F). "Hot" means approximately 50 to 100°C (122 to 212°F).

(c) Reconnect the CMP sensor connector.

NG → REPLACE CAMSHAFT POSITION SENSOR

OK

2 CHECK HARNESS AND CONNECTOR (CAMSHAFT POSITION SENSOR - HV CONTROL ECU)



(a) Disconnect the C31 CMP sensor connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C31-1 (G2+) - C64-55 (G2+)	Below 1 Ω
C31-2 (G2-) - C64-54 (G2-)	Below 1 Ω

Standard resistance (Check for short)

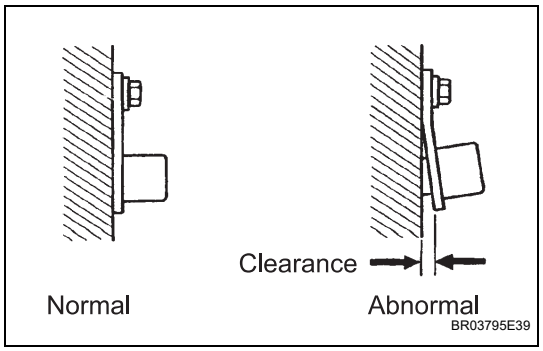
Tester Connections	Specified Conditions
C31-1 (G2+) or C64-55 (G2+) - Body ground	10 kΩor higher
C31-2 (G2-) or C64-54 (G2-) - Body ground	10 kΩor higher

(d) Reconnect the hybrid vehicle control ECU connector.
(e) Reconnect the CMP sensor connector.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK CAMSHAFT POSITION SENSOR (SENSOR INSTALLATION)



(a) Check the CMP sensor installation.

OK:

Sensor is installed correctly.

NG → SECURELY REINSTALL SENSOR

OK

4 CHECK VALVE TIMING (See page ES-68)

NG → ADJUST VALVE TIMING

OK

5	CHECK CAMSHAFT

(a) Check the teeth of the camshaft.
OK:
Camshaft teeth do not have any cracks or deformation.

NG → **REPLACE CAMSHAFT**

OK

ES

6	REPLACE CAMSHAFT POSITION SENSOR

NEXT

7	CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-31).
(e) Put the engine in inspection mode (See page ES-35).
(f) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(g) Read the DTCs.

Result

Display (DTC Output)	Proceed to
No output	A
P0340	B

HINT:
If the engine does not start, replace the hybrid vehicle control ECU.

B → **REPLACE HYBRID VEHICLE CONTROL ECU**

A

END

DTC	P0351	Ignition Coil "A" Primary / Secondary Circuit

DTC	P0352	Ignition Coil "B" Primary / Secondary Circuit

DTC	P0353	Ignition Coil "C" Primary / Secondary Circuit

DTC	P0354	Ignition Coil "D" Primary / Secondary Circuit

DESCRIPTION

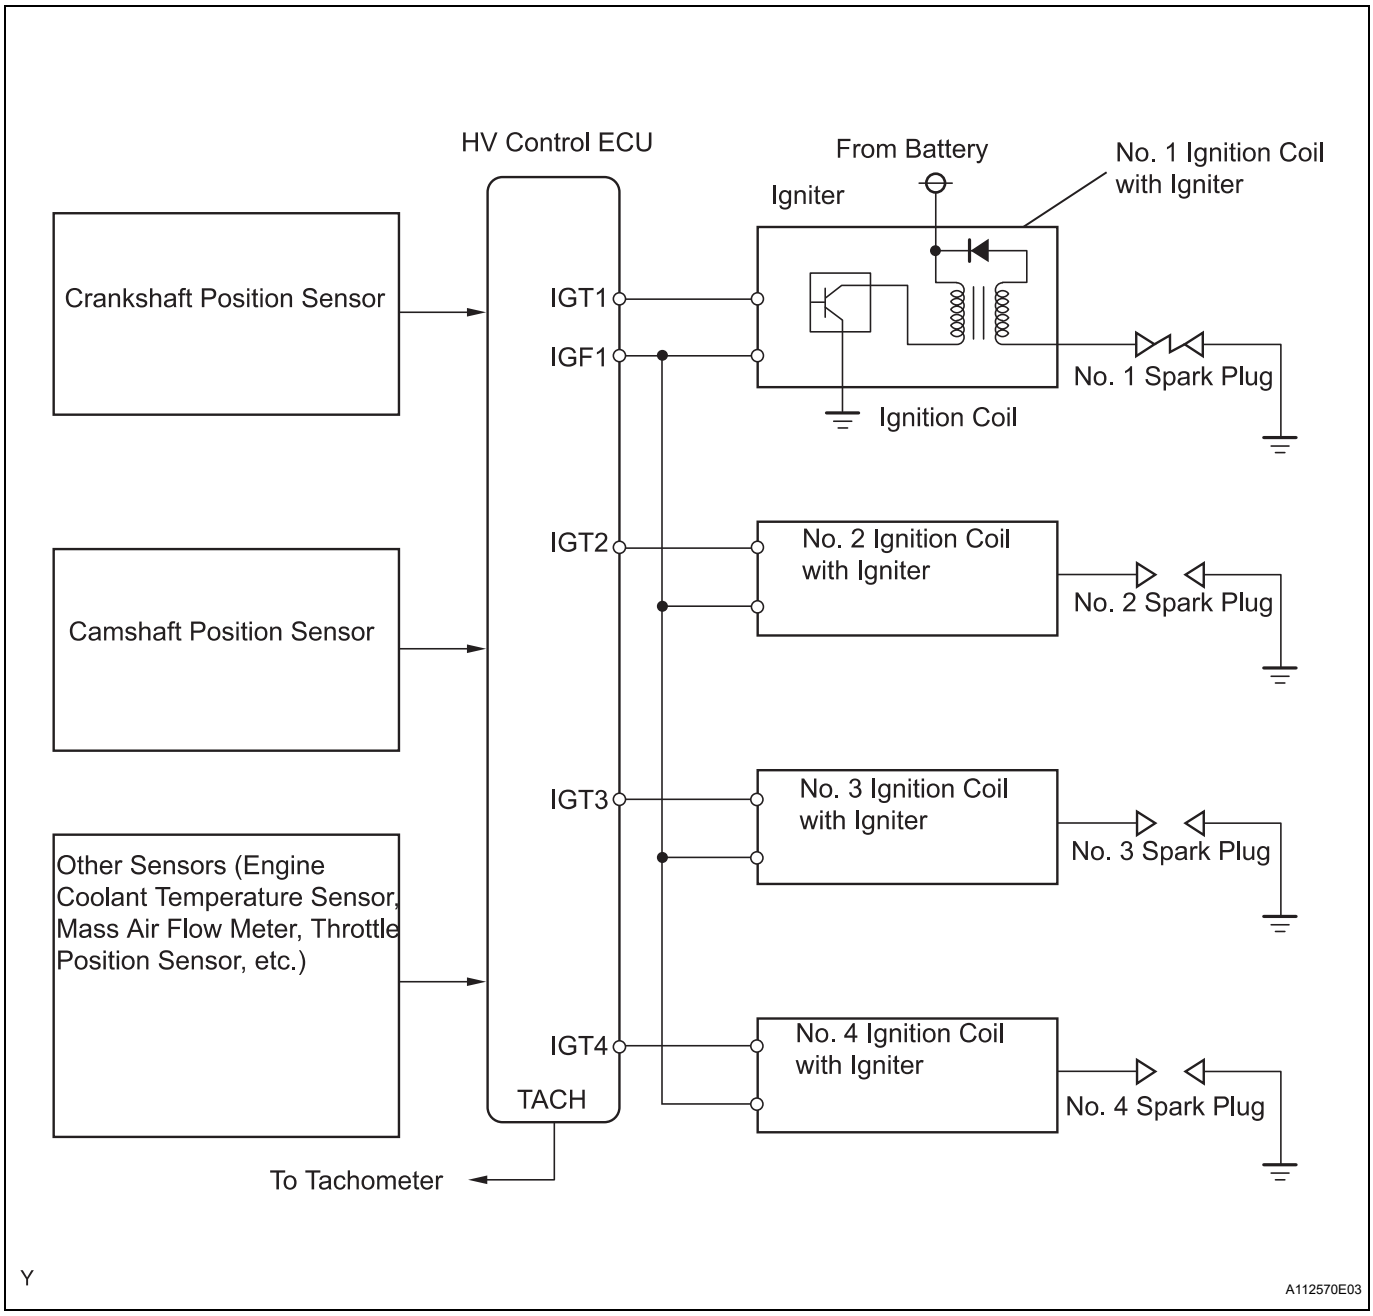
HINT:

- These DTCs indicate malfunctions relating to the primary circuit.
- If DTC P0351 is set, check the No. 1 ignition coil with igniter circuit.
- If DTC P0352 is set, check the No. 2 ignition coil with igniter circuit.
- If DTC P0353 is set, check the No. 3 ignition coil with igniter circuit.
- If DTC P0354 is set, check the No. 4 ignition coil with igniter circuit.

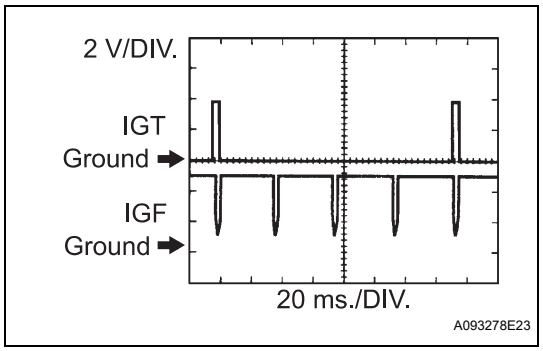
A Direct Ignition System (DIS) is used on this vehicle.

The DIS is a 1-cylinder ignition system in which each cylinder is ignited by one ignition coil and one spark plug is connected to the end of each secondary wiring. A powerful voltage, generated in the secondary wiring, is applied directly to each spark plug. The sparks of the spark plugs pass from the center electrode to the ground electrodes.

The ECM (included in hybrid vehicle control ECU) determines the ignition timing and transmits the ignition (IGT) signals to each cylinder. Using the IGT signal, the ECM turns the power transistor inside the igniter on and off. The power transistor, in turn, switches on and off the current to the primary coil. When the current to the primary coil is cut off, a powerful voltage is generated in the secondary coil. This voltage is applied to the spark plugs, causing them to spark inside the cylinders. As the ECM cuts the current to the primary coil, the igniter sends back an ignition confirmation (IGF) signal to the ECM, for each cylinder ignition.



DTC No.	DTC Detection Conditions	Trouble Areas
P0351 P0352 P0353 P0354	No IGF signal to ECM while engine running (1-trip detection logic)	• Ignition system • Open or short in IGF1 or IGT circuit (1 to 4) between ignition coil with igniter and hybrid vehicle control ECU • No. 1 to No. 4 ignition coils with igniters • Hybrid vehicle control ECU

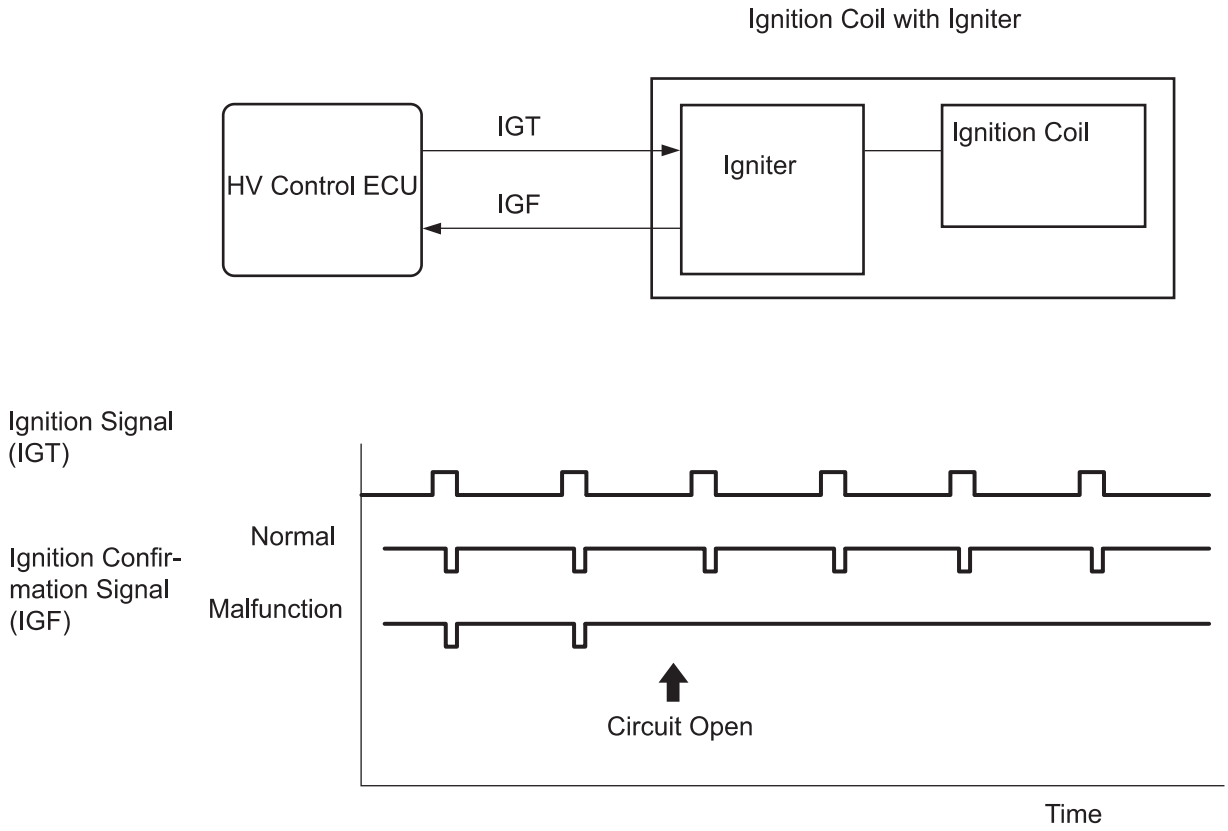


Reference: Inspection using an oscilloscope.
While cranking or idling the engine, check the waveform between terminals IGT (1 to 4) and E1, and IGF1 and E1 of the ECM connector.

ES

Items	Contents
Terminals	CH1: IGT1, IGT2, IGT3, IGT4 - E1 CH2: IGF1 - E1
Equipment Settings	2 V/DIV. 20 ms./DIV.
Conditions	Cranking or idling

MONITOR DESCRIPTION



If the ECM does not receive any IGF signals despite transmitting the IGT signal, it interprets this as a fault in the igniter and sets a DTC.
If the malfunction is not repaired successfully, a DTC is set 1 second after the engine is next started.

MONITOR STRATEGY

Related DTCs	P0351: Igniter (cylinder 1) malfunction P0352: Igniter (cylinder 2) malfunction P0353: Igniter (cylinder 3) malfunction P0354: Igniter (cylinder 4) malfunction
Required Sensors/Components (Main)	Igniter
Required Sensors/Components (Related)	Crankshaft position sensor
Frequency of Operation	Continuous
Duration	0.512 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None
Either of following conditions A or B met	-

A. Engine RPM	1,500 rpm or less
B. Starter	OFF
Either of following conditions C or D met	-
C. Both of following conditions (a) and (b) met	-
(a) Engine speed	500 rpm or less
(b) Battery voltage	6 V or more
D. All of following conditions (a), (b) and (c) met	-
(a) Engine speed	More than 500 rpm
(b) Battery voltage	10 V or more
(c) Number of sparks after CPU reset	5 sparks or more

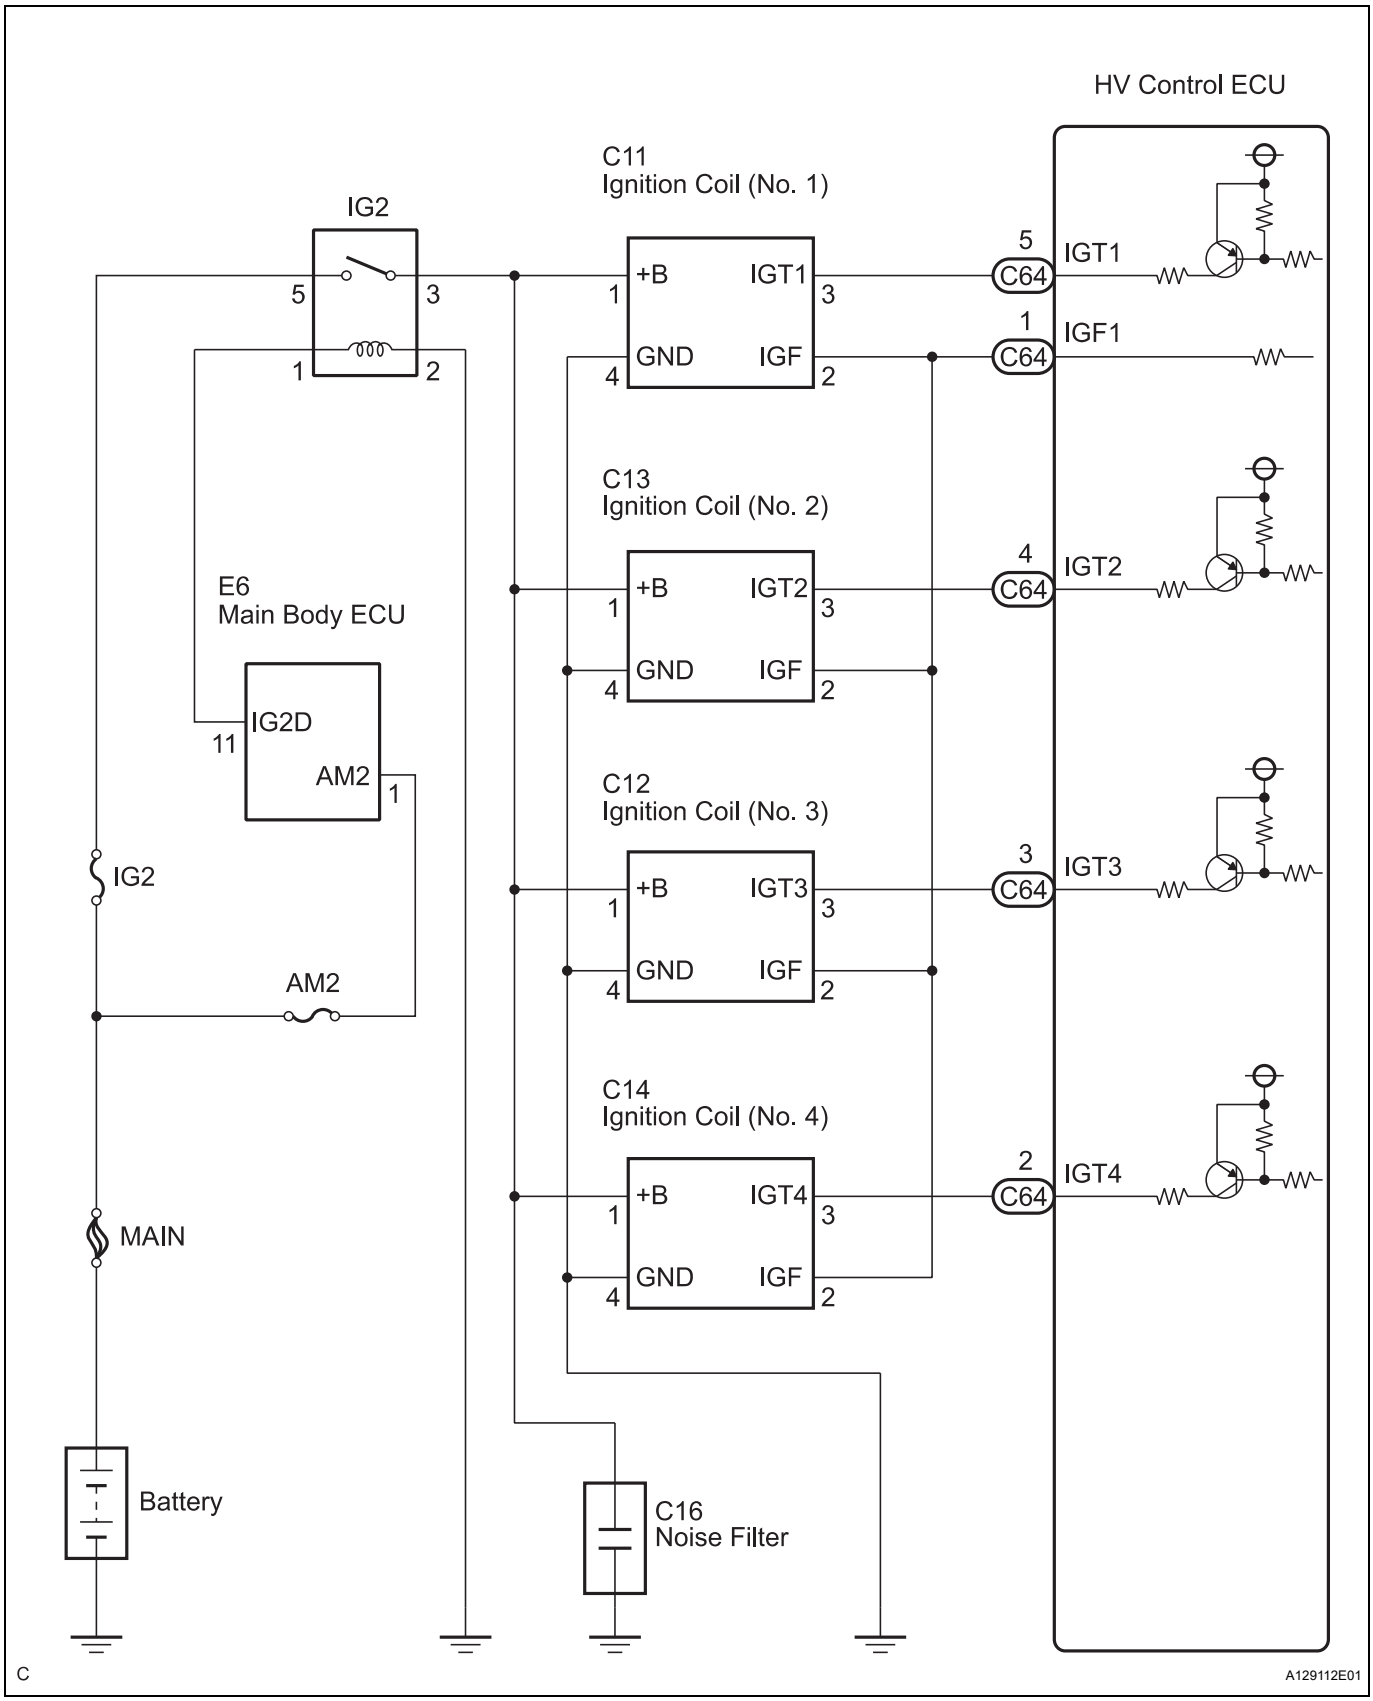
TYPICAL MALFUNCTION THRESHOLDS

IGF signal	ECM does not receive any IGF signal despite ECM sending IGT signal to igniter

COMPONENT OPERATING RANGE

IGF signal	Igniter transmits IGF signal when it receives IGT signal from ECM

WIRING DIAGRAM



INSPECTION PROCEDURE

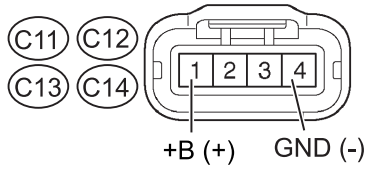
HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	INSPECT IGNITION COIL ASSEMBLY (POWER SOURCE)

Wire Harness Side:

Ignition Coil with Igniter Connector



Front View

Y

A054393E75

(a) Disconnect the ignition coil with igniter connector.

(b) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C11-4 (GND) - Body ground	Below 1 Ω
C12-4 (GND) - Body ground	Below 1 Ω
C13-4 (GND) - Body ground	Below 1 Ω
C14-4 (GND) - Body ground	Below 1 Ω

(c) Turn the power switch on (IG).

(d) Measure the voltage between the terminals of the wire harness side connector.

Standard voltage

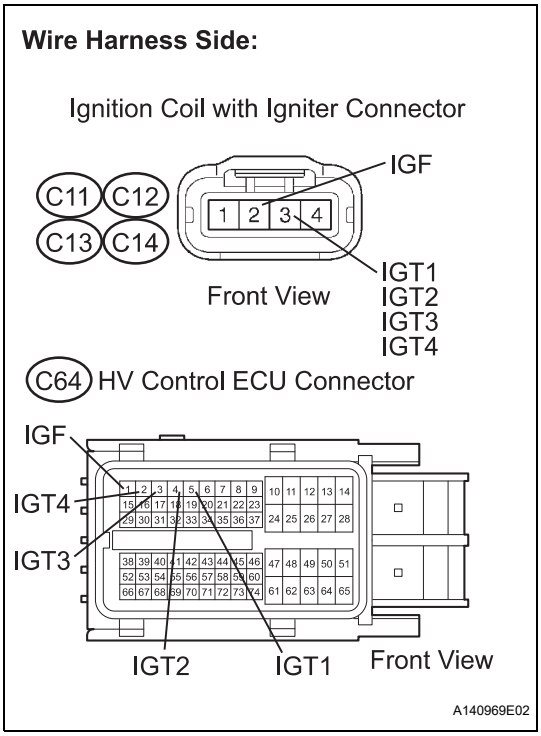
Tester Connections	Specified Conditions
C11-1 (+B) - C11-4 (GND)	9 to 14 V
C12-1 (+B) - C12-4 (GND)	9 to 14 V
C13-1 (+B) - C13-4 (GND)	9 to 14 V
C14-1 (+B) - C14-4 (GND)	9 to 14 V

(e) Reconnect the ignition coil with igniter connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK HARNESS AND CONNECTOR (IGNITION COIL ASSEMBLY - HV CONTROL ECU)



(a) Disconnect the ignition coil with connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C11-2 (IGF) - C64-1 (IGF1)	Below 1 Ω
C12-2 (IGF) - C64-1 (IGF1)	Below 1 Ω
C13-2 (IGF) - C64-1 (IGF1)	Below 1 Ω
C14-2 (IGF) - C64-1 (IGF1)	Below 1 Ω

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C11-3 (IGT1) - C64-5 (IGT1)	Below 1 Ω
C12-3 (IGT2) - C64-4 (IGT2)	Below 1 Ω
C13-3 (IGT3) - C64-3 (IGT3)	Below 1 Ω
C14-3 (IGT4) - C64-2 (IGT4)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C11-2 (IGF) or C64-1 (IGF1) - Body ground	10 kΩ or higher
C12-2 (IGF) or C64-1 (IGF1) - Body ground	10 kΩ or higher
C13-2 (IGF) or C64-1 (IGF1) - Body ground	10 kΩ or higher
C14-2 (IGF) or C64-1 (IGF1) - Body ground	10 kΩ or higher

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C11-3 (IGT1) or C64-5 (IGT1) - Body ground	10 kΩ or higher
C12-3 (IGT2) or C64-4 (IGT2) - Body ground	10 kΩ or higher
C13-3 (IGT3) or C64-3 (IGT3) - Body ground	10 kΩ or higher
C14-3 (IGT4) or C64-2 (IGT4) - Body ground	10 kΩ or higher

(d) Reconnect the hybrid vehicle control ECU connector.
(e) Reconnect the ignition coil with igniter connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK WHETHER DTC OUTPUT RECURS (DTC P0351, P0352, P0353 OR P0354)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-31).
(d) Shuffle arrangement of the ignition coils with igniters (among No. 1 to No. 4 cylinders).
NOTICE:
Do not shuffle the connectors.
(e) Perform a simulation test.

(f) Check the DTCs displayed on the tester.

Result

Display (DTC Output)	Proceed to
Same DTC output	A
Different ignition coil DTC output	B

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0420	Catalyst System Efficiency Below Threshold (Bank 1)

MONITOR DESCRIPTION

The ECM (included in hybrid vehicle control ECU) uses sensors mounted in front of and behind the Three-Way Catalytic Converter (TWC) to monitor its efficiency.
The first sensor, the Air-Fuel Ratio (A/F) sensor, sends pre-catalyst information to the ECM. The second sensor, the Heated Oxygen (HO2) sensor, sends post-catalyst information to the ECM.
In order to detect any deterioration in the TWC, the ECM calculates the Oxygen Storage Capacity (OSC) of the TWC. This calculation is based on the voltage output of the HO2 sensor while performing active air-fuel ratio control, rather than the conventional detecting method, which uses the locus ratio.
The OSC value is an indication of the oxygen storage capacity of the TWC. When the vehicle is being driven with a warm engine, active air-fuel ratio control is performed for approximately 15 to 20 seconds. When it is performed, the ECM deliberately sets the air-fuel ratio to lean or rich levels. If the rich-lean cycle of the HO2 sensor is long, the OSC becomes greater. There is a direct correlation between the OSCs of the HO2 sensor and the TWC.
The ECM uses the OSC value to determine the state of the TWC. If any deterioration has occurred, it illuminates the MIL and sets the DTC.

DTC No.	DTC Detection Conditions	Trouble Areas
P0420	OSC value smaller than standard value under active air-fuel ratio control (2-trip detection logic)	• Front exhaust pipe (with TWC) • Gas leakage from exhaust system • Air-Fuel Ratio (A/F) sensor (sensor 1) • Heated Oxygen (HO2) sensor (sensor 2)

MONITOR STRATEGY

Related DTCs	P0420: Catalyst Deterioration
Required Sensors/Components (Main)	A/F sensor and HO2 sensor
Required Sensors/Components (Related)	Intake air temperature sensor, mass air flow meter, crankshaft position sensor and engine coolant temperature sensor
Frequency of Operation	Once per driving cycle
Duration	About 30 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	P0011 (VVT System 1 - Advance) P0012 (VVT System 1 - Retard) P0031, 32 (A/F Sensor heater - Sensor 1) P0037, 38 (O2 Sensor heater - Sensor 2) P0100 - P0103 (MAF meter) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0136 (O2 Sensor - Sensor 2) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0351 - P0354 (Igniter) P0500 (VSS) P2196 (A/F Sensor - rationality) P2A00 (A/F Sensor - slow response)
Battery voltage	11 V or more
Intake air temperature	-10°C (14°F) or more

Engine coolant temperature	75°C (167°F) or more
Atmospheric pressure	76 kPa (570 mmHg) or more
Idling	OFF
Engine RPM	Less than 3,200 rpm
A/F sensor status	Activated
Fuel system status	Closed loop
Engine load	10 to 70%
All of following conditions (a), (b) and (c) met	-
(a) Mass air flow rate	10 to 28 g/sec.
(b) Estimated front catalyst temperature	600 to 800°C (1,112 to 1,472°F)
(c) Estimated rear catalyst temperature	430 to 675°C (800 to 1,247°F)
Rear HO2 sensor heater monitor	Completed

ES

TYPICAL MALFUNCTION THRESHOLDS

Oxygen Storage Capacity (OSC) of Three-Way Catalytic Converter (TWC)	Less than 0.07 g

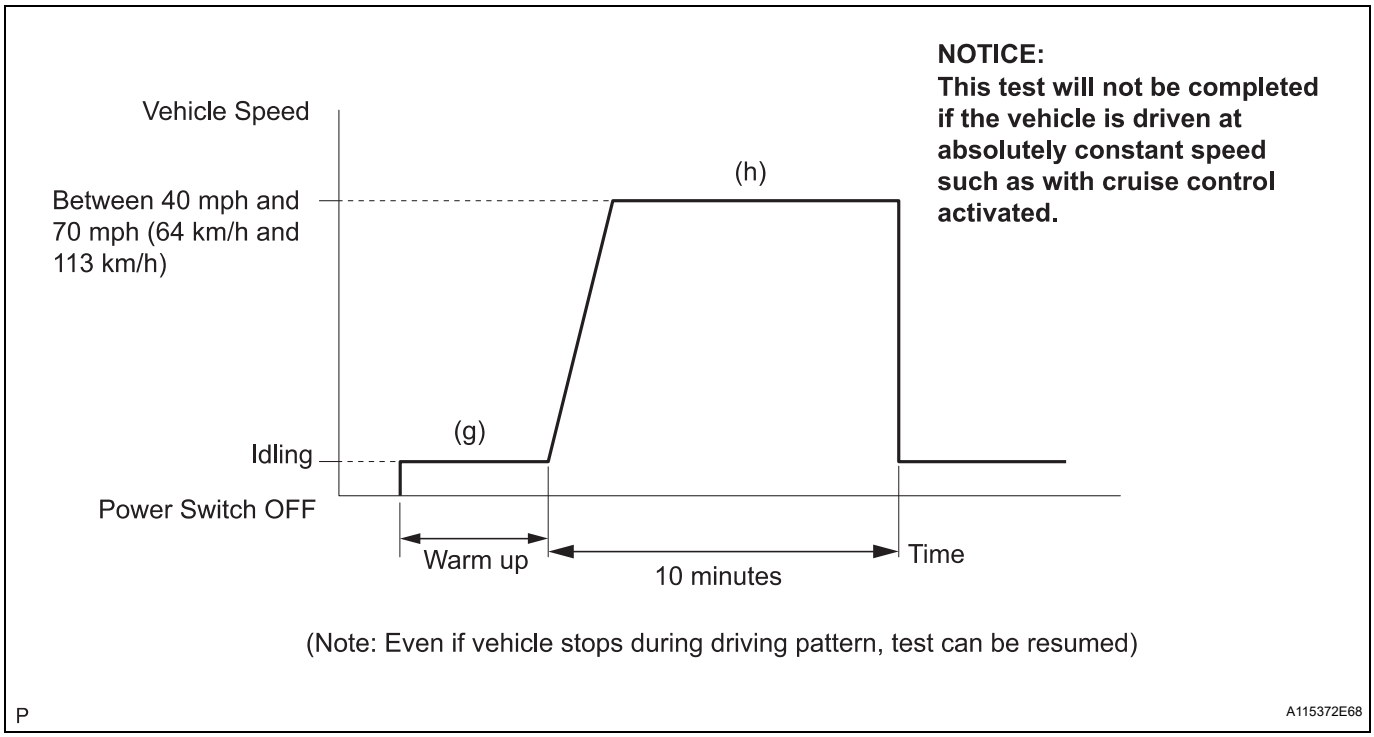
MONITOR RESULT

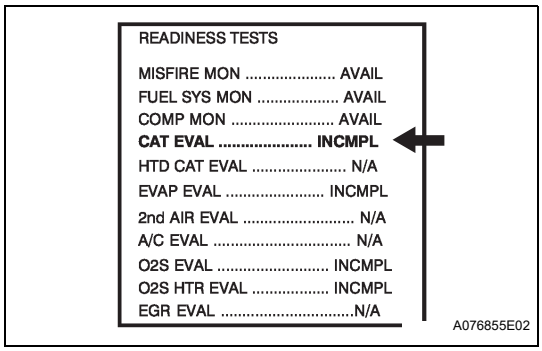
Refer to CHECKING MONITOR STATUS (See page ES-14).

CONFIRMATION DRIVING PATTERN

HINT:

Performing this confirmation pattern will activate the catalyst monitor. This is very useful for verifying completion of a repair.

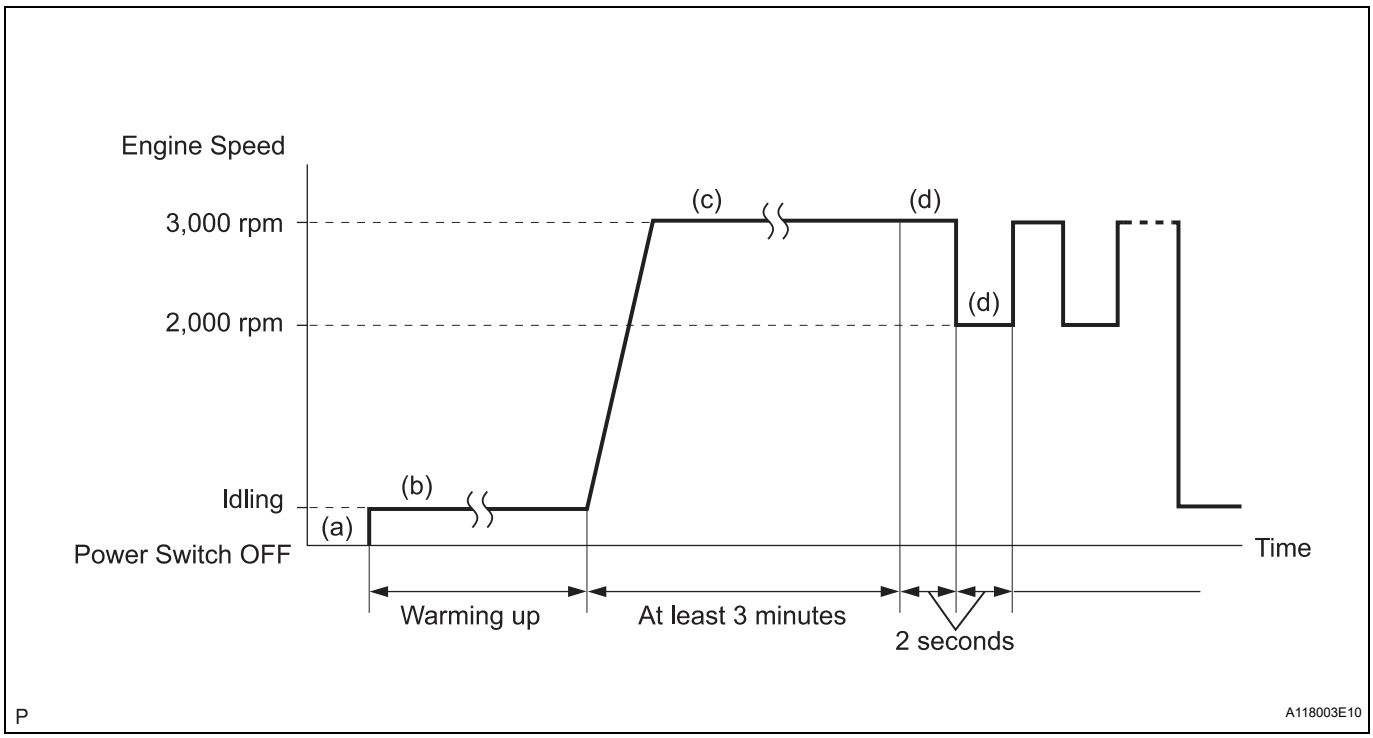




(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (if set) (See page ES-31).
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / CAT CMPL.
(f) Check that CAT CMPL is INCMPL (incomplete).
(g) Put the engine in inspection mode (See page ES-35), and warm it up.
(h) Drive the vehicle at between 40 mph and 70 mph (64 km/h and 113 km/h) for at least 10 minutes.
(i) Note the state of the Readiness Tests items. Those items will change to COMPL (complete) as CAT CMPL monitor operates.
(j) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES and check if any DTCs (any pending DTCs) are set.
HINT:
If CAT CMPL does not change to COMPL, and any pending DTCs fail to be set, extend the driving time.

CONDITIONING FOR SENSOR TESTING

HINT:
Perform the operation with the engine speeds and time durations described below prior to checking the waveforms of the A/F and HO2 sensors. This is in order to activate the sensors sufficiently to obtain the appropriate inspection results.



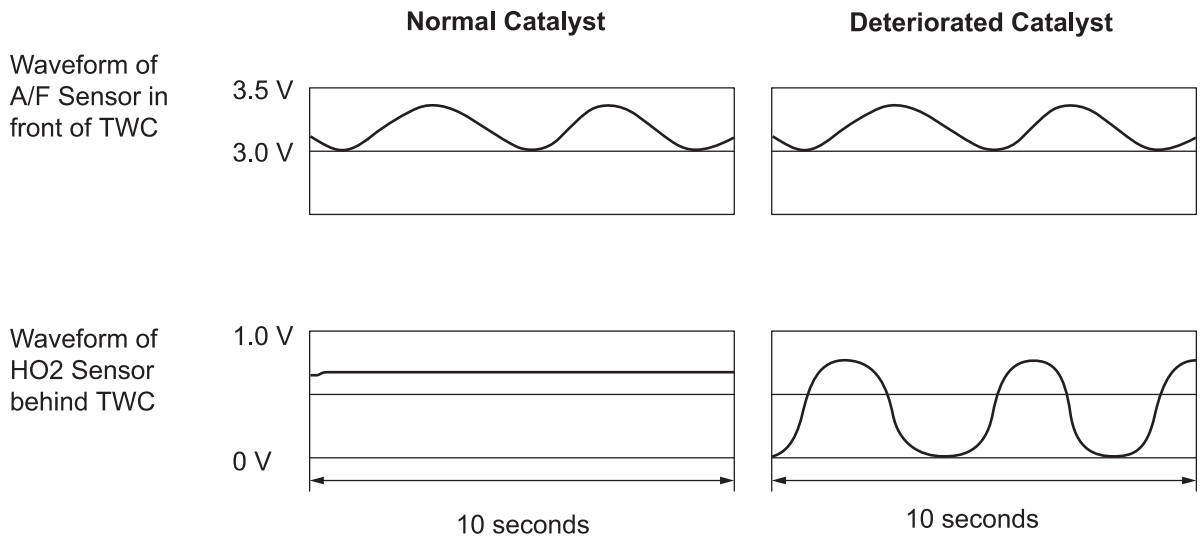
(a) Connect the intelligent tester to the DLC3.

(b) Put the engine in inspection mode (See page ES-35), and warm it up with all the accessories switched OFF, until the engine coolant temperature stabilizes.
(c) Run the engine at an engine speed of between 2,500 rpm and 3,000 rpm for at least 3 minutes.
(d) While running the engine at 3,000 rpm and 2,000 rpm alternating at 2 second intervals, check the waveforms of the A/F and HO2 sensors using the tester.
HINT:

- If either voltage output of the Air-Fuel Ratio (A/F) or Heated Oxygen (HO2) sensor does not fluctuate, or there is a noise in the waveform of either sensor, the sensor may be malfunctioning.
- If the voltage outputs of both the sensors remain lean or rich, the air-fuel ratio may be extremely lean or rich. In such cases, perform the following A/F CONTROL using the intelligent tester.
- If the Three-Way Catalytic Converter (TWC) has deteriorated, the HO2 sensor (located behind the TWC) voltage output fluctuates up and down frequently, even under normal driving conditions (active air-fuel ratio control is not performed).

ES

Voltage output when active air-fuel ratio control not performed:



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0420)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0420	A

Display (DTC Output)	Proceed to
P0420 and other DTCs	B

HINT:
If any DTCs other than P0420 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (A/F CONTROL)

ES

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(f) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
(g) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

Result:

A/F sensor reacts in accordance with increases and decreases in fuel injection volume:
+25% = Rich output:
Less than 3.0 V
-12.5% = Lean output:
More than 3.35 V

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• Catalyst • Exhaust gas leakage
	Output Voltage More than 3.35 V Less than 3.0 V	OK	Output Voltage More than 0.5 V Less than 0.4 V	OK	
2	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction	NG	Output Voltage More than 0.5 V Less than 0.4 V	OK	

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
3	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		Extremely rich or lean actual air-fuel ratio • Injector • Fuel pressure • Gas leakage from exhaust system
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

ES

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2; then press the YES button and then the ENTER button followed by the F4 button.

DTC	P043E	Evaporative Emission System Reference Orifice Clog Up

DTC	P043F	Evaporative Emission System Reference Orifice High Flow

DTC	P2401	Evaporative Emission Leak Detection Pump Stuck OFF

DTC	P2402	Evaporative Emission Leak Detection Pump Stuck ON

DTC	P2419	Evaporative Emission System Switching Valve Control Circuit Low

DTC SUMMARY

DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P043E	Reference orifice clogged	P043E, P043F, P2401, P2402 and P2419 present when one of following conditions met during key-off EVAP monitor: • Reference orifice clogged • Reference orifice high-flow • Leak detection pump ON stuck • Leak detection pump OFF stuck • Vent valve ON (close) stuck	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector / wire harness (Canister pump module - Hybrid vehicle control ECU) • EVAP system hose (pipe from air inlet port to canister pump module, canister filter, fuel tank vent hose) • Hybrid vehicle control ECU	Power switch OFF	2-trips
P043F	Reference orifice high-flow				
P2401	Leak detection pump stuck OFF				
P2402	Leak detection pump stuck ON				
P2419	Vent valve stuck closed				

DESCRIPTION

Refer to the EVAP System (See page ES-317).

INSPECTION PROCEDURE

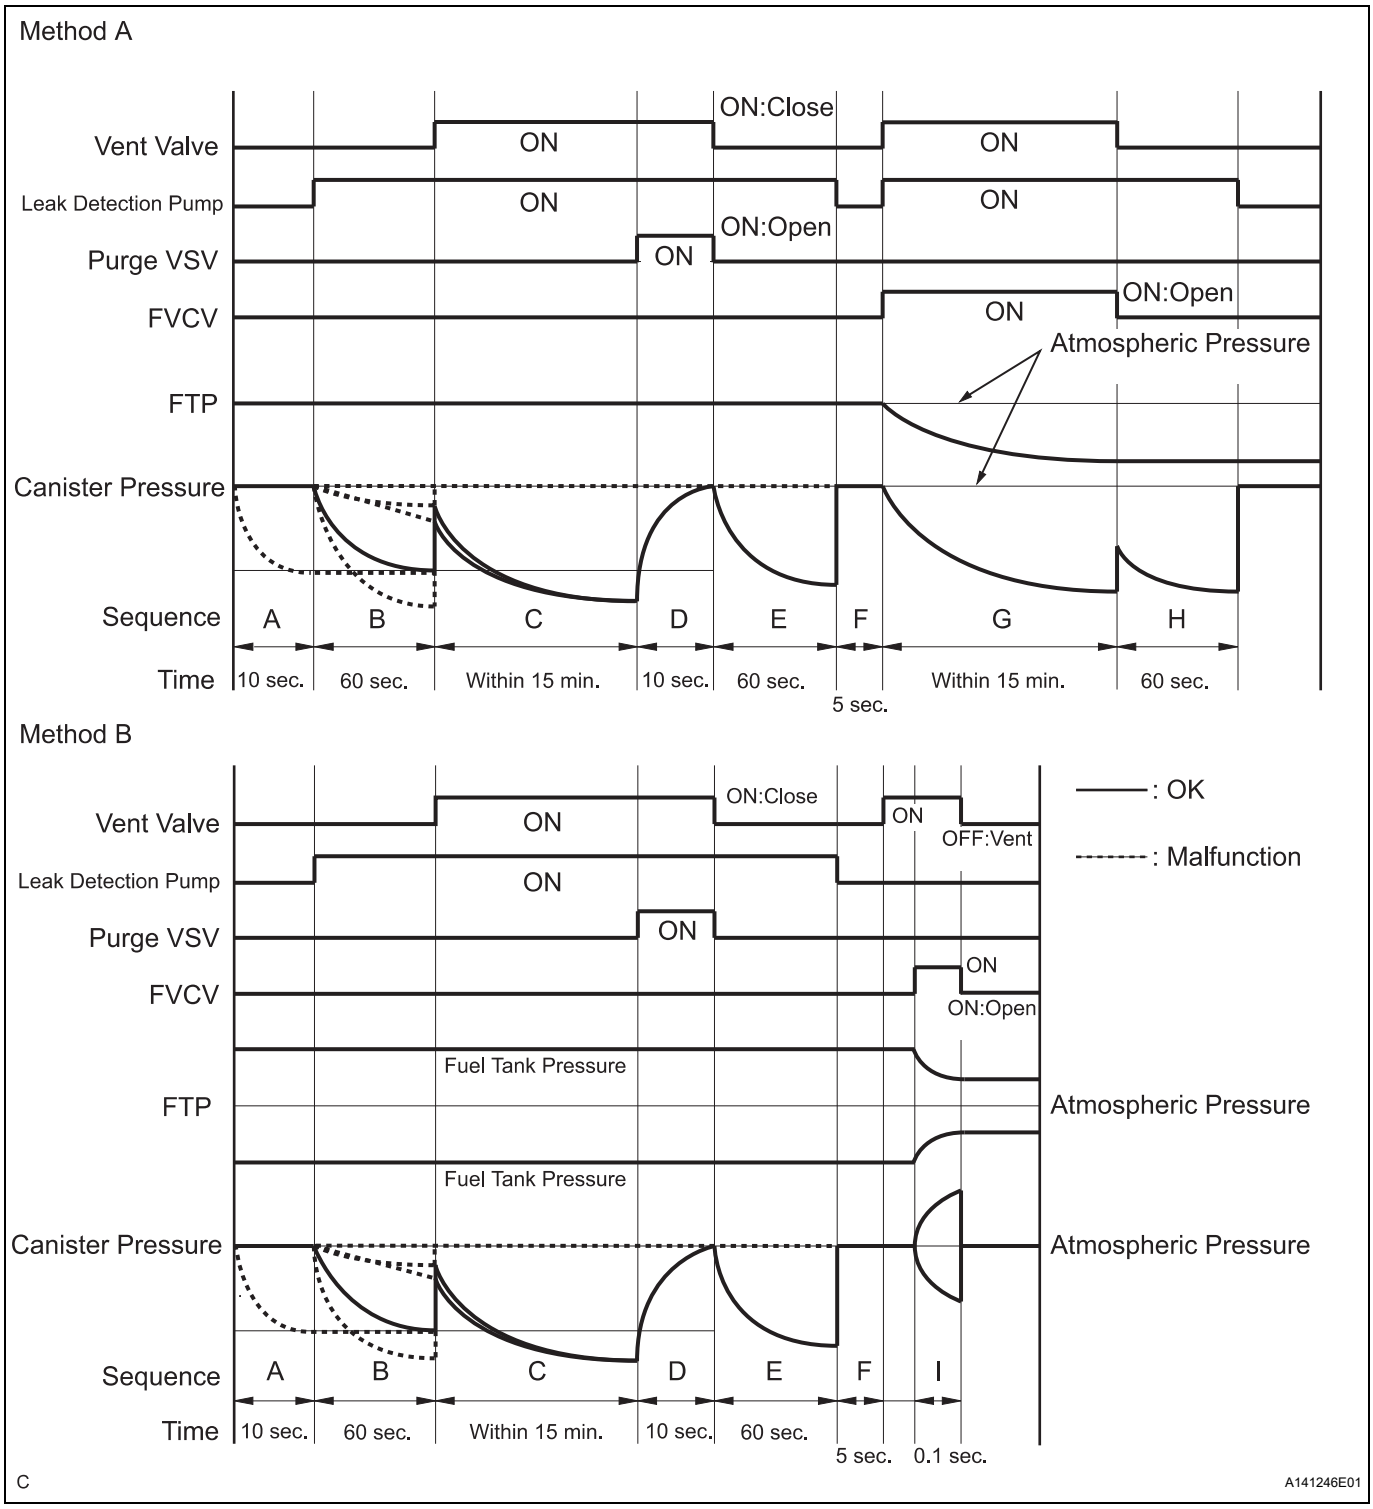
Refer to the EVAP System (See page ES-328).

MONITOR DESCRIPTION

In sequence B and E, the leak detection pump creates negative pressure (vacuum) through the reference orifice. The EVAP system pressure is then measured by the ECM, using the canister pressure sensor, to determine the reference pressure. If the pressure is one of the following conditions, the ECM illuminates the MIL and sets the DTC (2-trip detection logic).

- Canister pressure is lower than the malfunction criterion (ex. 724 mmHg).
- Canister pressure is higher than the malfunction criterion (ex. 752 mmHg).

- Canister pressure is not saturated within 60 seconds.
- Canister pressure difference of sequence B and sequence E is large.



MONITOR STRATEGY

Required Sensors/Components (Main)	Canister pump module
Required Sensors/Components (Related)	A/F sensor, rear HO2S, IAT sensor, MAF meter, crankshaft position sensor, ECT sensor
Frequency of Operation	Once per driving cycle
Duration	Within 2 minutes
MIL Operation	2 driving cycles

Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	-
EVAP key-off monitor runs when all of the following conditions are met:	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Power switch	OFF
Engine condition	Not running
Canister pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
FTP sensor malfunction (P1451, P1452 and P1453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of the following conditions are met before power switch OFF	Conditions 1 and 2
1. Duration that vehicle is being driven	5 minutes or more
2. Purge flow	Executed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)
Time after engine stopped	5 hours

ES

Example of restart time

First time	7 hours
Second time	9 hours and 30 minutes

Key-off monitor sequence 1 to 15

1. Atmospheric pressure measurement

Next sequence is run if the following condition is met:	-
Atmospheric pressure change for 10 seconds	Less than 0.3 kPa (2.25 mmHg) for 1 second

2. First reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.38 to -7.93 mmHg)
3. Reference pressure	Saturated

3. Vent valve stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after vent valve ON (Closed)	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction for canister

Next sequence is run if the following condition is met:	-
Vacuum introduction time	15 minutes or less

5. Purge VSV stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after Purge VSV ON (Open).	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3 and 4
1. EVAP pressure 1.9 sec. after reference pressure measurement	-1 kPa (-7.5 mmHg) or less

2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the first and second	Less than 0.7 kPa (5.25 mmHg)

7. Canister leak

Next sequence is run if the following condition is met:	-
Canister leak when vacuum introduction was complete	Second reference pressure or less

8. Fuel vapor-containment valve (FVCV stuck closed check)

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 kPa (-15 mmHg) or less, or 3 kPa (22.5 mmHg) or more
2. FTP change while FVCV and vent valve are open	0.5 kPa (3.75 mmHg) or more

ES

9. Vacuum introduction for fuel tank

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 to 3 kPa (-15 to 22.5 mmHg)
2. Vacuum introduction time	15 minutes or less

10. FVCV stuck closed check

Next sequence is run if the following condition is met:	
FTP change when vacuum introduction for fuel tank	0.5 kPa (3.75 mmHg)

11. FTP sensor stuck check

Next sequence is run if the following condition is met:	
FTP change when FVCV closed	0.35 kPa (2.6 mmHg) or less

12 Third reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3, and 4
1. FTP 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the second and third	Less than 0.7 kPa (5.25 mmHg)

13. Fuel tank leak check

Sequence is run if the following condition is met:	
FTP when vacuum introduction for fuel tank was complete	Less than third reference pressure

14. FTP sensor stuck check

Next sequence is run if the following condition is met:	-
FTP change while FVCV and vent valve are open	Less than 0.35 kPa (2.6 mmHg)

15. Atmospheric pressure measurement

Monitor is complete if the following condition is met:	-
Atmospheric pressure difference between sequence 1 and 8	0.3 kPa (2.25 mmHg) or less

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.1 kPa (0.75 mmHg) in 30 seconds.

One of the following conditions is met:	-
FTP just after reference pressure measurement began	More than -1 kPa (-7.5 mmHg)
Reference pressure	Less than -4.85 kPa (-36.4 mmHg)
Reference pressure	-1.057 kPa (-7.93 mmHg) or more
Reference pressure	Not saturated
Reference pressure difference between the first and second	0.7 kPa (5.25 mmHg) or more

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-325).

DTC	P0441	Evaporative Emission Control System Incorrect Purge Flow

DTC SUMMARY

DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P0441	Purge VSV (Vacuum Switching Valve) stuck open	Vacuum pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure is measured. 0.02 inch leak pressure standard is measured at the start and at the end of leak check. If stabilized pressure is higher than [second 0.02 inch leak pressure standard x 0.2], ECM determines that Purge VSV stuck open	• Purge VSV • Connector / wire harness (Purge VSV - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU • Pump module • Leakage from EVAP system	Power switch off	2-trips
P0441	Purge VSV stuck closed	After EVAP leak check is performed, Purge VSV turned ON (open), and atmospheric air is introduced into EVAP system. 0.02 inch leak pressure standard is measured at the start and at the end of the check. If pressure does not return to near atmospheric pressure, ECM determines that purge valve stuck closed	• Purge VSV • Connector / wire harness (Purge VSV - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU • Pump module • Leakage from EVAP system	Power switch off	2-trips
P0441	Purge flow	While engine running, the following conditions are successively met: • Negative pressure is not created in EVAP system when Purge VSV turned ON (open) • EVAP system pressure change is less than 0.5 kPa (3.75 mmHg) when vent valve turned ON (closed) • Atmospheric pressure change between before and after purge flow monitor is less than 0.1 kPa (0.75 mmHg)	• Purge VSV • Connector / wire harness (Purge VSV - Hybrid Vehicle Control ECU) • Leakage from EVAP line (Purge VSV - Intake manifold) • Hybrid vehicle control ECU	While engine running	2-trips

DESCRIPTION

Refer to the EVAP System (See page ES-317).

MONITOR DESCRIPTION

The two monitors, Key-Off and Purge Flow, are used to detect malfunctions relating to DTC P0441. The Key-Off monitor is initiated by the ECM (included in the hybrid vehicle control ECU) internal timer, known as the soak timer, 5 hours* after the power switch is turned off. The purge flow monitor runs while the engine is running.

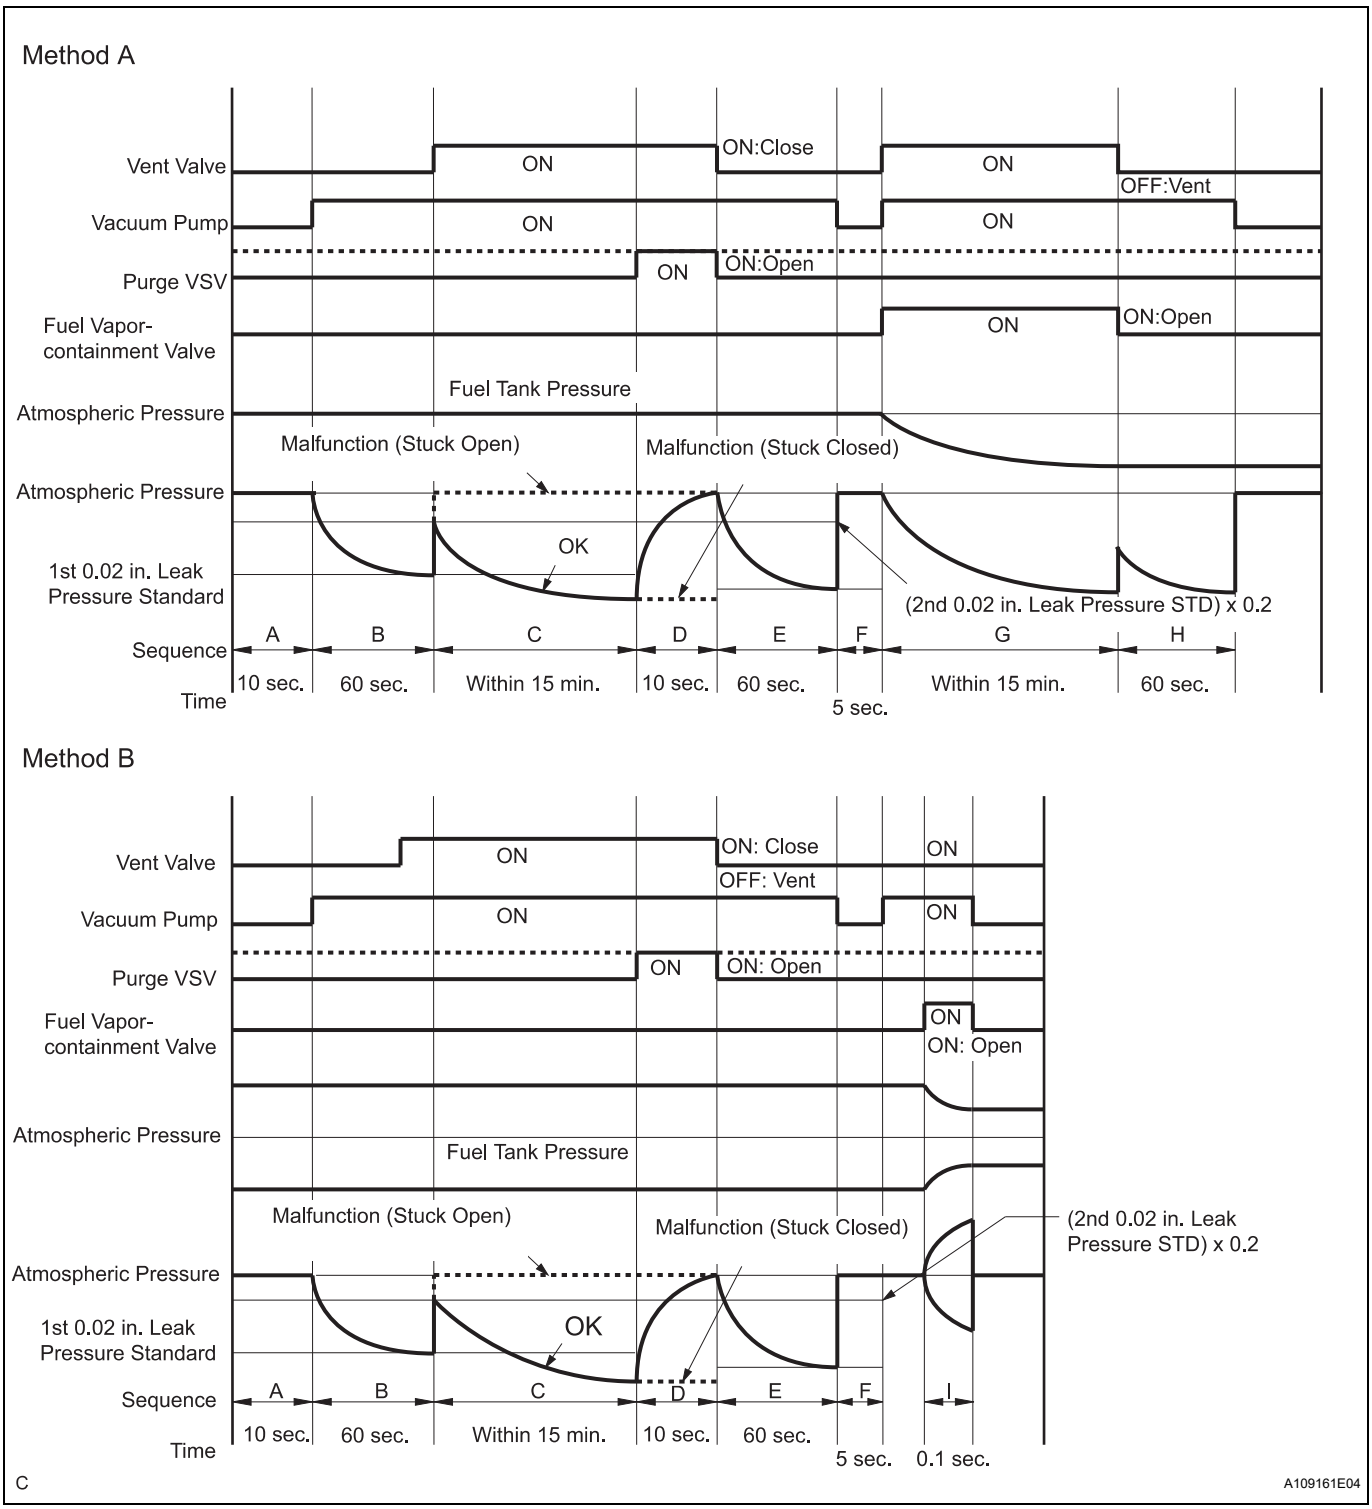
1. KEY-OFF MONITOR

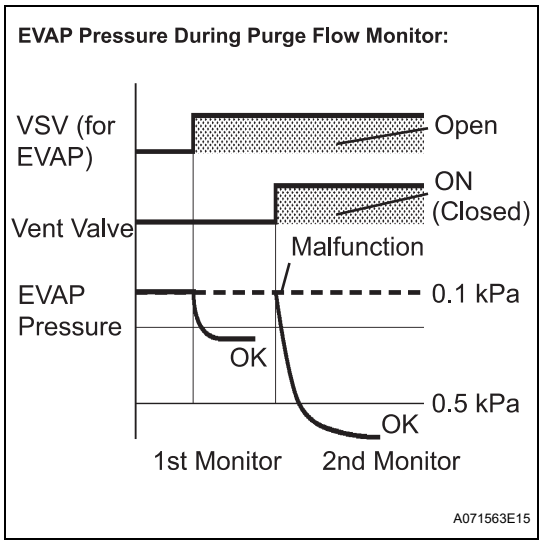
(a) Purge VSV stuck open

In operation C, the vacuum pump creates negative pressure (vacuum) in the EVAP (Evaporative Emission) system. The EVAP system pressure is then measured by the ECM (included in the hybrid vehicle control ECU) using the pressure sensor. If the stabilized system pressure is higher than [second 0.02 inch leak pressure standard x 0.2], the ECM (included in the hybrid vehicle control ECU) interprets this as the Purge VSV (Vacuum Switching Valve) being stuck open. The ECM illuminates the MIL and sets the DTC (2-trip detection logic).

(b) Purge VSV stuck closed

In operation D, the pressure sensor measures the EVAP (Evaporative Emission) system pressure. The pressure measurement for Purge VSV monitor begins when the Purge VSV is turned ON (open) after the EVAP leak check. When the measured pressure indicates an increase of 0.3 kPa (2.25 mmHg) or more, the Purge VSV is functioning normally. If the pressure does not increase, the ECM (included in the hybrid vehicle control ECU) interprets this as the Purge VSV being stuck closed. The ECM illuminates the MIL and sets the DTC (2-trip detection logic).





2. PURGE FLOW MONITOR

The purge flow monitor consists of the two step monitors. The 1st monitor is conducted every time and the 2nd monitor is activated if necessary.

- The 1st monitor
  While the engine is running and the Purge VSV (Vacuum Switching Valve) is ON (open), the ECM (included in the hybrid vehicle control ECU) monitors the purge flow by measuring the EVAP pressure change. If negative pressure is not created, the ECM begins the 2nd monitor.
- The 2nd monitor
  The vent valve is turned ON (closed) and the EVAP pressure is then measured. If the variation in the pressure is less than 0.5 kPa (3.75 mmHg), the ECM (included in the hybrid vehicle control ECU) interprets this as the Purge VSV being stuck closed. The ECM illuminates the MIL and sets DTC P0441 (2-trip detection logic).

Atmospheric pressure check:
In order to ensure reliable malfunction detection, the variation in atmospheric pressure, before and after conduction of the purge flow monitor is measured by the ECM.

ES

MONITOR STRATEGY

The monitor is run whenever this DTC is not present	P0011 (VVT System 1 - Advance) P0012 (VVT System 1 - Retard) P0021 (VVT System 2 - Advance) P0022 (VVT System 2 - Retard) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120-P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0171, P0172 (Fuel system) P0300 - P0308 (Misfire) P0335 (CKP sensor) P0340, P0341 (CMP sensor) P0351 - P0356 (Ignitor) P0450 - P0453 (EVAP pressure sensor) P0500 (VSS)

Purge flow:

Engine	Running
ECT	4.4°C (40°F) or more
IAT	4.4°C (40°F) or more
Pressure sensor or pump module malfunction (P0450, P0452, P0453)	Not detected

Purge VSV	Not operated by scan tool
EVAP system check	Not detected by scan tool
Battery voltage	10 V or more
Purge duty cycle	8% or more

Purge VSV stuck open and closed:

Key-off monitor is run when all of the following conditions are met:	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	2.5 mph (4 km/h) or less
Power switch	OFF
Engine Condition	Not running
Key-off duration	5 hours or 7 hours or 9 hours and 30 minutes
Pressure sensor of pump module malfunction (P1450, P1452, P1453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of the following conditions (a) and (b) are met before key off:	
(a) Duration that vehicle is being driven	5 minutes or more
(b) Purge flow	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)

Key-off monitor sequence 1 to 15

1. Atmospheric pressure measurement

Next sequence is run if the following condition is met:	-
Atmospheric pressure change for 10 seconds	Less than 0.3 kPa (2.25 mmHg) for 1 second

2. First reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.38 to -7.93 mmHg)
3. Reference pressure	Saturated

3. Vent valve stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after vent valve ON (Closed)	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction for canister

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. Vacuum introduction time	15 minutes or less
2. FTP	Saturated

5. Purge VSV stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after Purge VSV ON (Open).	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3 and 4
1. EVAP pressure when 1.9 sec. after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the first and second	0.7 kPa (5.25 mmHg) or less

7. Canister leak

Next sequence is run if the following condition is met:	-
Canister leak when vacuum introduction was complete	Second reference pressure or less

8. Fuel vapor-containment valve (FVCV stuck closed check)

Sequence 14 is run if all of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 kPa (-15 mmHg) or less, or 3 kPa (22.5 mmHg) or more
2. FTP change while FVCV and vent valve are open	0.5 kPa (3.75 mmHg) or more

9. Vacuum introduction for fuel tank

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 to 3 kPa (-15 to 22.5 mmHg)
2. Vacuum introduction time	15 minutes or less

10. FVCV stuck closed check

Next sequence is run if the following condition is met:	
FTP change when vacuum introduction for fuel tank	0.5 kPa (3.75 mmHg)

11. FTP sensor stuck check

Next sequence is run if the following condition is met:	
FTP change when FVCV closed	0.35 kPa (2.6 mmHg) or less

12. Third reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3, and 4
1. FTP 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or more
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between second and third	Less than 0.7 kPa (5.25 mmHg)

13. Fuel tank leak check

Sequence is run if the following condition is met:	
FTP when vacuum introduction for fuel tank was complete	Less than third reference pressure

14. FTP sensor stuck check

Next sequence is run if the following condition is met:	-
FTP change while FVCV and vent valve are open	Less than 0.35 kPa (2.6 mmHg)

15. Atmospheric pressure measurement

Monitor is complete if the following condition is met:	-
Atmospheric pressure difference between sequence 1 and 8	0.3 kPa (2.25 mmHg) or less

TYPICAL MALFUNCTION THRESHOLDS

Purge VSV stuck open:

EVAP pressure when vacuum introduction for canister was complete	Higher than reference pressure x 0.2

Purge VSV stuck open and closed:

EVAP pressure change for 10 seconds after purge VSV ON	Less than 0.3 kPa (2.25 mmHg)

Purge flow:

Both of the following conditions are met:	Conditions (a) and (b)
(a) EVAP pressure change when purge operation is started	Less than 0.1 kPa (0.75 mmHg)
(b) EVAP pressure change during purge operation when vent valve is closed	Less than 0.5 kPa (3.75 mmHg)

MONITOR RESULT

Refer to the EVAP System (See page ES-317).

INSPECTION PROCEDURE

Refer to the EVAP System (See page ES-317).

DTC	P0450	Evaporative Emission Control System Pressure Sensor / Switch

DTC	P0451	Evaporative Emission Control System Pressure Sensor Range / Performance

DTC	P0452	Evaporative Emission Control System Pressure Sensor / Switch Low Input

DTC	P0453	Evaporative Emission Control System Pressure Sensor / Switch High Input

DTC SUMMARY

DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P0450	Pressure sensor abnormal voltage fluctuation	Sensor output voltage rapidly fluctuates beyond upper and lower malfunction thresholds for 0.5 seconds.	• Pump module • Hybrid vehicle control ECU	• EVAP monitoring (Power switch off) • Power switch ON (IG)	1-trip
P0451	Pressure sensor abnormal voltage fluctuation	Sensor output voltage fluctuates frequently in certain time period.	• Pump module • Connector / wire harness (Pump module - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	• EVAP monitoring (Power switch off) • Engine switch running	2-trips
P0451	Pressure sensor constant voltage	Sensor output voltage does not vary in certain time period.	• Pump module • Connector / wire harness (Pump module - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	• EVAP monitoring (Power switch off)	2-trips
P0452	Pressure sensor voltage low	Sensor output voltage is less than 0.45 V for 0.5 seconds.	• Pump module • Connector / wire harness (Pump module - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	• EVAP monitoring (Power switch off) • Power switch ON (IG)	1-trip
P0453	Pressure sensor voltage high	Sensor output voltage is more than 4.9 V for 0.5 seconds.	• Pump module • Connector / wire harness (Pump module - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	• EVAP monitoring (Power switch off) • Power switch ON (IG)	1-trip

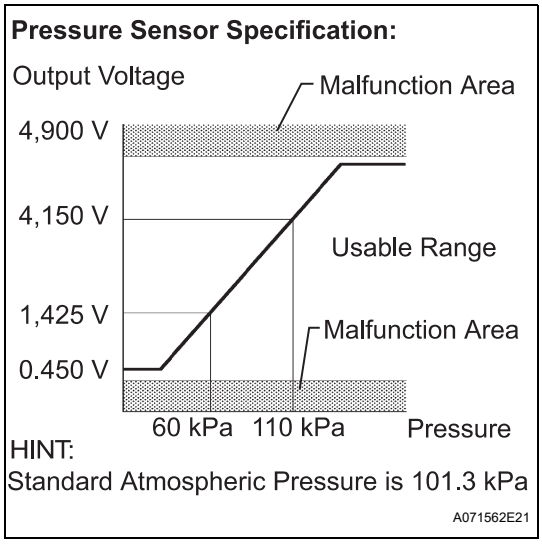
HINT:
The pressure sensor is built into the pump module.

DESCRIPTION

Refer to the EVAP System (See page ES-317).

MONITOR DESCRIPTION

1. DTC P0450: Pressure sensor abnormal voltage fluctuation
   If the pressure sensor output voltage rapidly fluctuates between less than 0.45 V and more than 4.9 V, the ECM interprets this as an open or short circuit malfunction in the pressure sensor or its circuit, and stops the EVAP (Evaporative Emission) system monitor. The ECM (included in the hybrid vehicle control ECU) then illuminates the MIL and sets the DTC (1-trip detection logic).



2. DTC P0451: Pressure sensor abnormal voltage fluctuation or being constant
   If the pressure sensor output voltage fluctuates rapidly for 10 seconds, the ECM (included in the hybrid vehicle control ECU) stops the EVAP system monitor. The ECM interprets this as the pressure sensor voltage fluctuating, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC.
   Alternatively, if the sensor output voltage does not change for 10 seconds, the ECM interprets this as the sensor voltage being constant, and stops the monitor. The ECM then illuminates the MIL and sets the DTC.
   (Both the malfunctions are detected by 2-trip detection logic).
3. DTC P0452: Pressure sensor voltage low
   If the pressure sensor output voltage is below 0.45 V, the ECM (included in the hybrid vehicle control ECU) interprets this as an open or short circuit malfunction in the pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1-trip detection logic).
4. DTC P0453: Pressure sensor voltage high
   If the pressure sensor voltage output is 4.9 V or more, the ECM (included in the hybrid vehicle control ECU) interprets this as an open or short circuit malfunction in the pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1-trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Pump module
Frequency of Operation	Once per driving cycle: P0451 sensor constant voltage Continuous: P0451 sensor abnormal voltage fluctuation, P0450, P0452 and P0453
Duration	0.5 seconds: P0450, P0452, P0453 Within 15 seconds: P0451
MIL Operation	Immediate: P0450, P0452, P0453 2 driving cycles: P0451

Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P0451 (Noise Monitor):

Atmospheric pressure	70 kPa (525 mmHg) to 110 kPa (825 mmHg)
Battery voltage	8 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
EVAP pressure sensor malfunction (P0450, P0452, P0453)	Not detected
Either of the following conditions is met:	A or B
A. Power switch	ON
B. Soak time (Power switch off time)	5 hours

Example of restart time:

First time	7 hours
Second time	9 hours and 30 minutes

P0451 (Stuck Monitor):

Atmospheric pressure	Less than 70 kPa (525 mmHg) or 110 kPa (825 mmHg) or more
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
EVAP pressure sensor malfunction (P0450, P0452, P0453)	Not detected
Soak time (Power switch off time)	5 hours

Example of restart time:

First time	7 hours
Second time	9 hours and 30 minutes

P0450, P0452 and P0453:

The monitor will run whenever these DTCs are not present	None
Battery voltage	8 V or more
Starter	OFF
Power switch	ON

TYPICAL MALFUNCTION THRESHOLDS

1. P0450: Pressure sensor chattering

EVAP Pressure	Less than 42.11 kPa (315.82 mmHg), or more than 123.761 kPa (928.207 mmHg)

2. P0451: Pressure sensor noise

Frequency that EVAP pressure change is 0.3 kPa or more	10 times or more in 10 seconds

3. P0451: Pressure sensor stuck

EVAP pressure change during reference pressure measurement	Less than 0.65 kPa (4.87 mmHg)

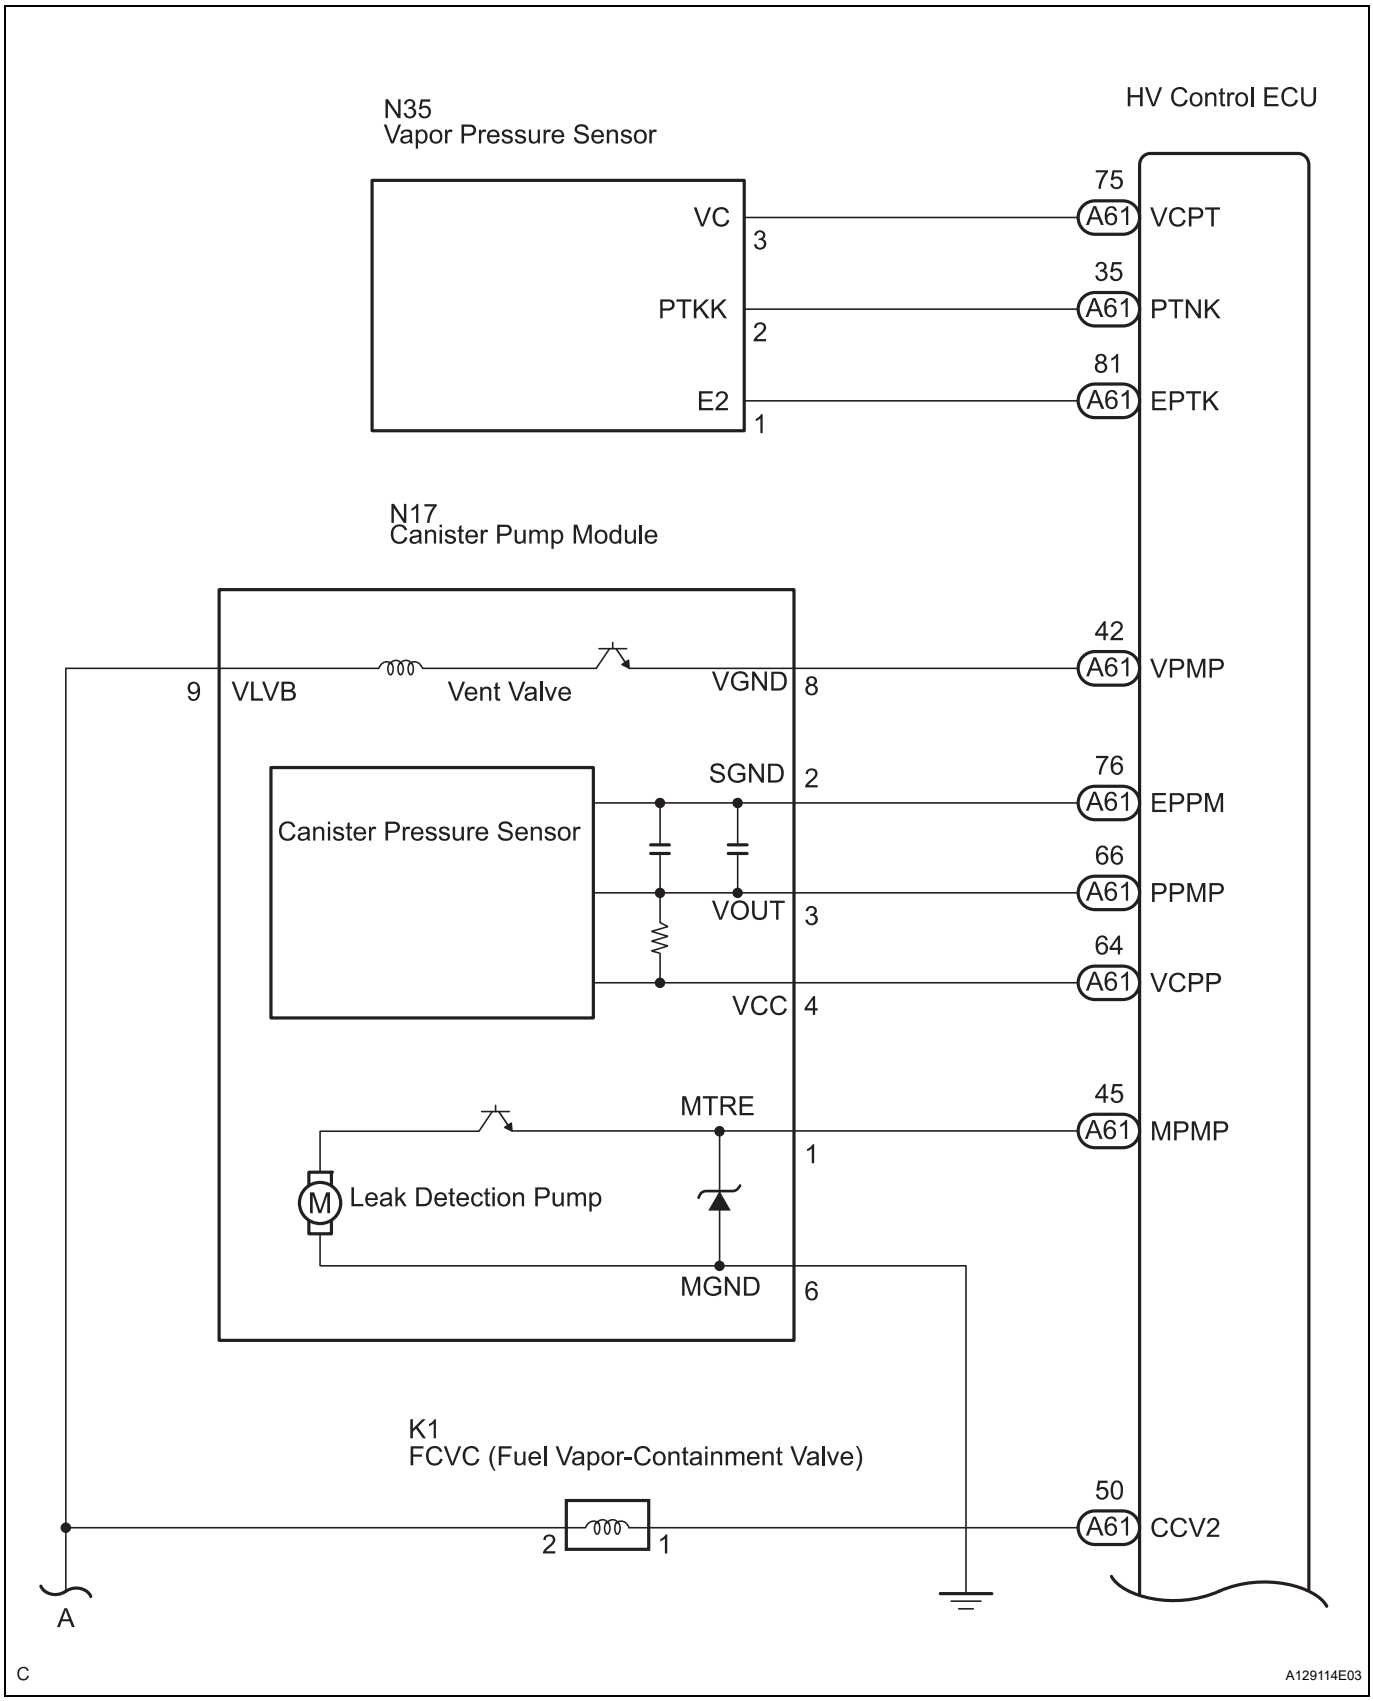
4. P0452: Pressure sensor low voltage

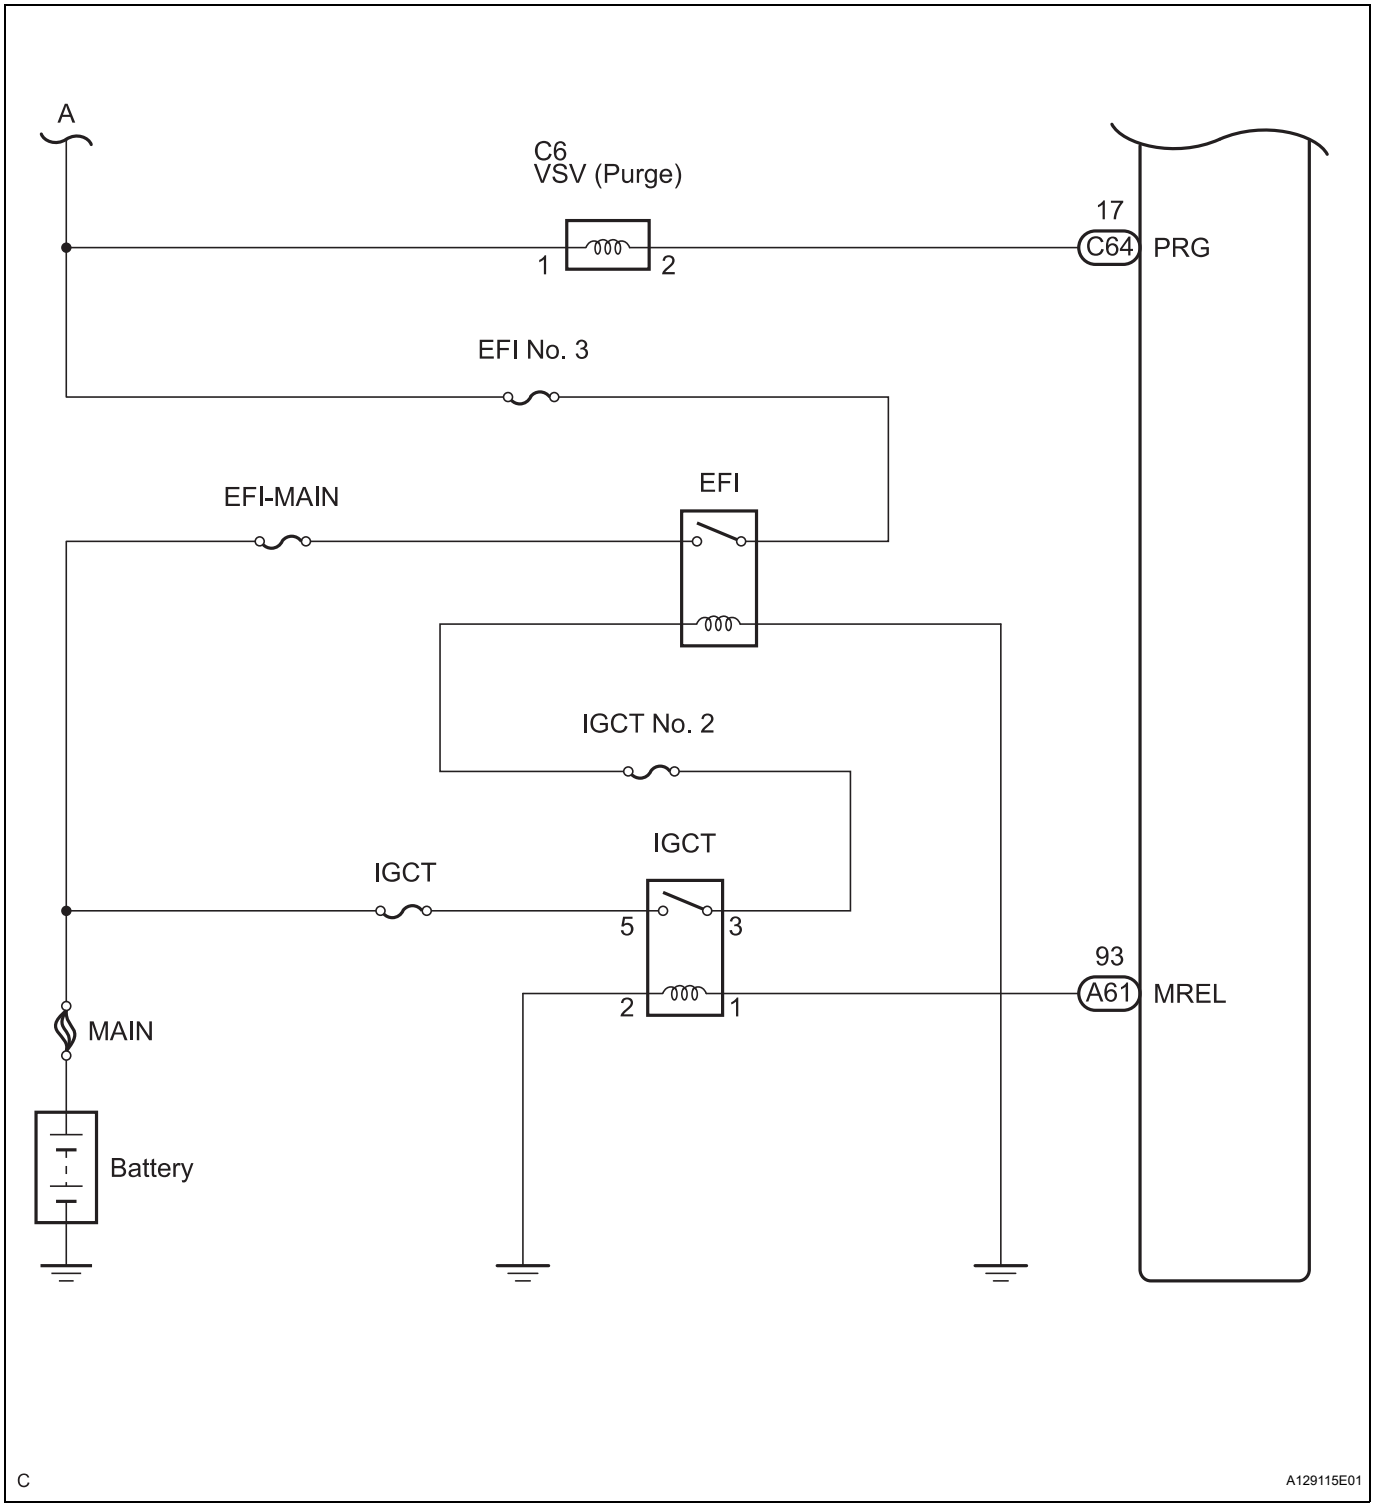
EVAP Pressure	Less than 42.11 kPa (315.82 mmHg)

5. P0453: Pressure sensor high voltage

EVAP Pressure	More than 123.761 kPa (928.207 mmHg)

WIRING DIAGRAM





INSPECTION PROCEDURE

NOTICE:

- **When a vehicle is brought into the workshop, leave it as it is. Do not change the vehicle condition. For example, do not tighten the fuel tank cap.**
- **Do not disassemble the pump module.**
- **The intelligent tester is required to conduct the following diagnostic troubleshooting procedure.**

1	CONFIRM DTC AND EVAP PRESSURE

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / EVAP / VAPOR PRESS PUMP.
(g) Read the EVAP (Evaporative Emission) pressure displayed on the tester.

ES

Result

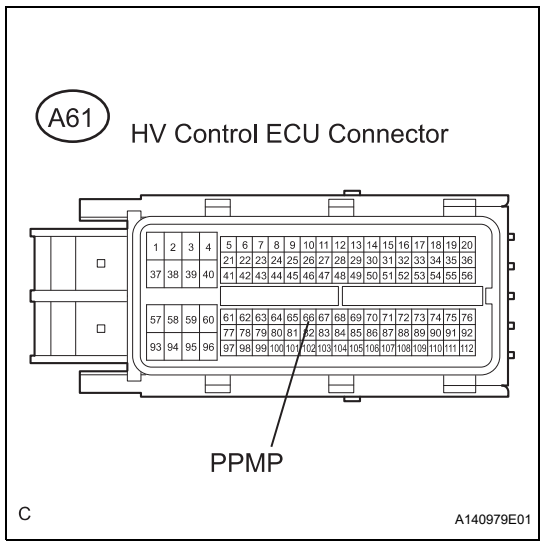
Display (DTC Output)	Test Result	Suspected Trouble Area	Proceed to
P0451	-	• Pressure sensor	C
P0450 and/or P0452	Less than 45 kPa (338 mmHg)	• Wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor) • Pressure sensor • Short in hybrid vehicle control ECU	A
P0450 and/or P0453	More than 120 kPa (900 mmHg)	• Wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor) • Pressure sensor • Open in hybrid vehicle control ECU	B

B → Go to step 4

C → GO TO EVAP INSPECTION PROCEDURE

A

2	CHECK HARNESS AND CONNECTOR (PUMP MODULE CONTROL ECU)



(a) Turn the power switch off.
(b) Disconnect the A61 hybrid vehicle control ECU connector.
(c) Measure the resistance between the PPMP terminal of the hybrid vehicle control ECU connector and body ground.

Result

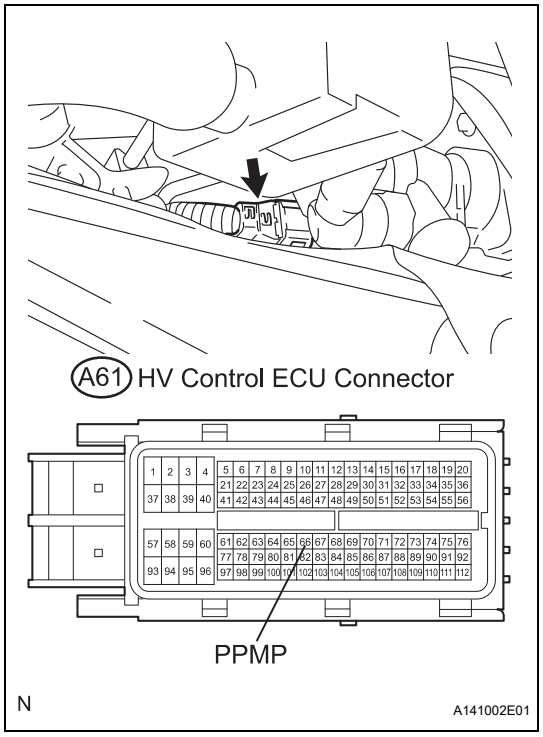
Test Result	Suspected Trouble Area	Proceed to
10 Ω or less	• Wire harness/ connector (HV Control ECU - pressure sensor) • Short in pressure sensor circuit	A
10 kΩ or more	• Wire harness/ connector (Hybrid Vehicle Control ECU - pressure sensor) • Short in hybrid vehicle control ECU	B

(d) Reconnect the hybrid vehicle control ECU connector.

B	Go to step 7

A

3 CHECK HARNESS AND CONNECTOR (PUMP MODULE - HV CONTROL ECU)



(a) Disconnect the N17 canister connector.
(b) Disconnect the A61 hybrid vehicle control ECU connector.
(c) Measure the resistance between the PPMP terminal of the hybrid vehicle control ECU connector and body ground.

Result

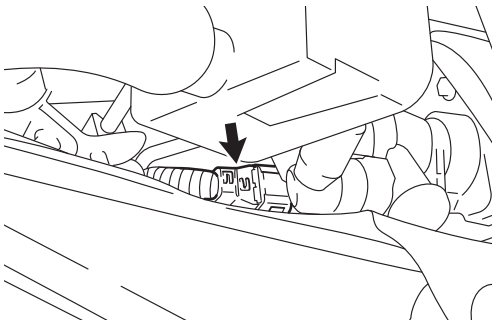
Test Result	Suspected Trouble Area	Proceed to
10 kΩ or more	• Short in pressure sensor circuit	A
10 Ω or less	• Short in wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor)	B

(d) Reconnect the canister connector.
(e) Reconnect the hybrid vehicle control ECU connector.

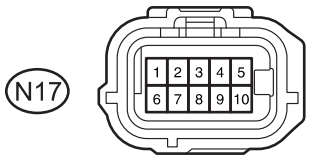
A	Go to step 5
B	Go to step 6

ES

4	CHECK HARNESS AND CONNECTOR (PUMP MODULE - HV CONTROL ECU)



Wire Harness Side (Front View):



Canister Connector

N A140992E01

(a) Disconnect the N17 canister connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage and resistance according to the value(s) in the table below.

Standard

Tester Connection	Specified Condition
N17-4 - Body ground	4.5 to 5.0 V
N17-3 - Body ground	4.5 to 5.0 V
N17-2 - Body ground	100 Ω or less

Result

Test Result	Suspected Trouble Area	Proceed to
Voltage and resistance within standard ranges	• Open in pressure sensor circuit	A
Voltage and resistance outside standard ranges	• Open in wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor)	B

(d) Reconnect the canister connector.

A	Go to step 5
B	Go to step 6

5	REPLACE CHARCOAL CANISTER

NEXT	Go to step 8

6	REPAIR OR REPLACE HARNESS OR CONNECTOR

HINT:
If the exhaust tail pipe has been removed, go to the next step before reinstalling it.

NEXT	Go to step 8

7	REPLACE HYBRID VEHICLE CONTROL ECU

NEXT	Go to step 8

8	CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Wait for at least 60 seconds.

(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTC is displayed on the tester, the repair has been successfully completed.

NEXT

COMPLETED

DTC	P0505	Idle Control System Malfunction

DESCRIPTION

The idling speed is controlled by the ETCS (Electronic Throttle Control System). The ETCS is comprised of: 1) the one valve type throttle body; 2) the throttle actuator, which operates the throttle valve; 3) the Throttle Position (TP) sensor, which detects the opening angle of the throttle valve; 4) the Accelerator Pedal Position (APP) sensor, which detects the accelerator pedal position; and 5) the ECM (included in hybrid vehicle control ECU), which controls the ETCS. Based on the target idling speed, the ECM controls the throttle actuator to provide the proper throttle valve opening angle.

DTC No.	DTC Detection Conditions	Trouble Areas
P0505	Idling speed continues to vary greatly from target idling speed (2-trip detection logic)	• ETCS • Air induction system • PCV hose connections • Hybrid vehicle control ECU

ES

MONITOR DESCRIPTION

The ECM monitors the idling speed and idling air flow volume to conduct Idle Speed Control (ISC). The ECM determines that the ISC system is malfunctioning if the following conditions are met:

- The learned idling air flow volume remains at the maximum or minimum volume 5 times or more during a drive cycle.
- After driving at 6.25 mph (10 km/h) or more, the actual engine idling speed varies from the target idling speed by between 100 rpm and 200 rpm, 5 times or more during a drive cycle.

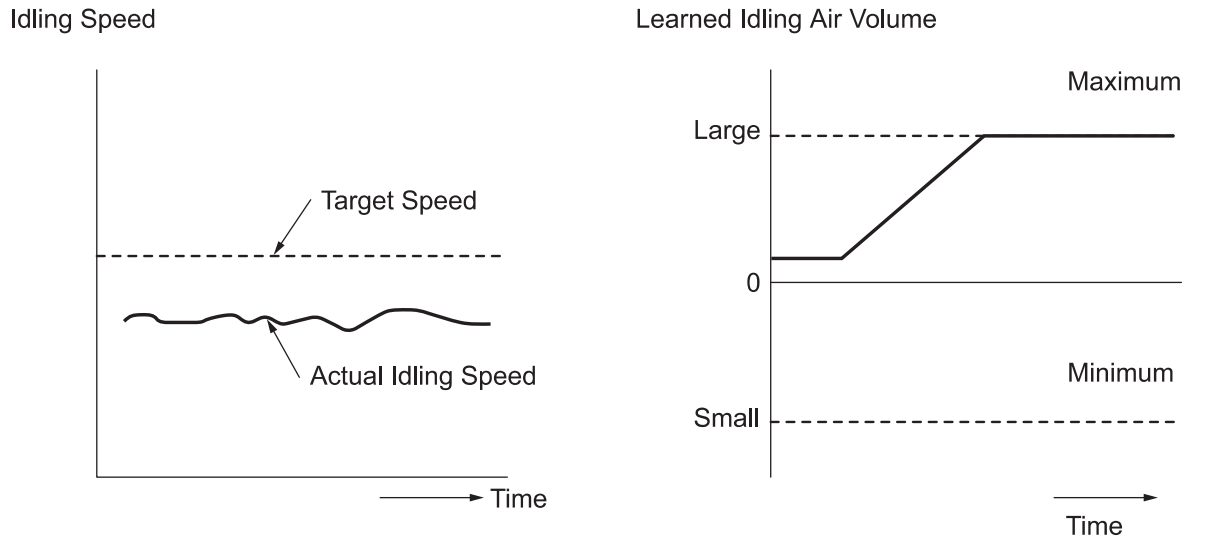
Example:

If the actual idling speed varies from the target idling speed by more than 200 rpm* 5 times during a drive cycle, the ECM illuminates the MIL and sets the DTC.

HINT:

*: Threshold idling speed varies with engine load.

Example:



Y A121611E02

MONITOR STRATEGY

Related DTCs	P0505: ISC function
Required Sensors/Components (Main)	ETCS
Required Sensors/Components (Related)	Crankshaft position sensor, engine coolant temperature sensor, and vehicle speed sensor
Frequency of Operation	Once per driving cycle: Functional check Continuous: Range check
Duration	10 minutes: Functional check 10 seconds: Range check
MIL Operation	2 driving cycles: Functional check Immediate: Range check
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Engine	Running

TYPICAL MALFUNCTION THRESHOLDS

Either of following conditions 1 or 2 met	-
1. Frequency that both of following conditions (a) and (b) set	5 times or more
(a) Engine rpm - Target engine rpm	Less than -100 rpm, or more than 150 rpm
(b) Vehicle condition	Stop after vehicle was driven by 6.25 mph (10 km/h) or more
2. Frequency that both of following conditions (c) and (d) set	Once
(c) Engine rpm - Target engine rpm	Less than -100 rpm, or more than 150 rpm

(d) IAC flow rate learning value	1.1 L/sec. or less, or 7 L/sec. or more

INSPECTION PROCEDURE

HINT:

- The following conditions may also cause DTC P0505 to be set:
  (a) The throttle valve is not fully closed. (e.g. The accelerator pedal is slightly depressed by something such as a floor carpet overlapping the accelerator pedal.)
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P0505)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following the menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0505	A
P0505 and other DTCs	B

HINT:
If any DTCs other than P0505 are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

2 CHECK PCV HOSE (HOSE CONNECTIONS)

OK:
PCV hose is connected correctly and is not damaged.

NG → **REPAIR OR REPLACE PCV HOSE**

OK

3 CHECK AIR INDUCTION SYSTEM

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **REPAIR OR REPLACE AIR INDUCTION SYSTEM**

OK

4	CHECK THROTTLE VALVE

(a) Check the throttle valve condition.
OK:
Throttle valve is not contaminated with foreign objects and moves smoothly.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P050A	Cold Start Idle Air Control System Performance

DTC	P050B	Cold Start Ignition Timing Performance

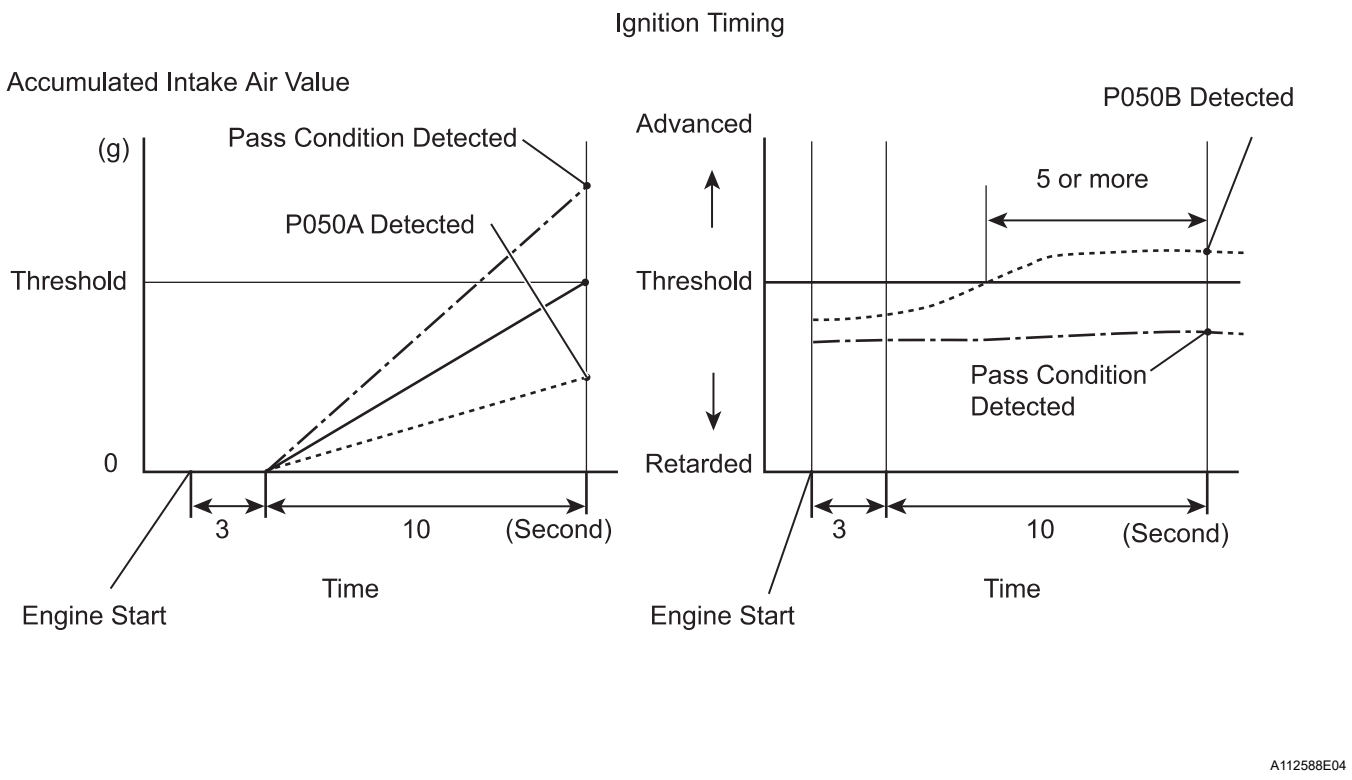
DESCRIPTION

The Electronic Throttle Control System (ETCS) controls the engine idling speed. The ETCS operates the throttle actuator to open and close the throttle valve, and adjusts the intake air amount to achieve the target idling speed.
In addition, the ECM (included in hybrid vehicle control ECU) retards the ignition timing and the ETCS increases the intake air amount to quickly increase the catalyst temperature at cold start to reduce emissions.

ES

DTC No.	DTC Detection Conditions	Trouble Areas
P050A	Accumulated intake air amount during 10 seconds of idling after cold start is less than threshold (2-trip detection logic)	• Throttle body assembly • Mass air flow meter • Air induction system • PCV hose connections • VVT system • Air cleaner filter element • Hybrid vehicle control ECU
P050B	Ignition timing retard value insufficient for 5 seconds or more during 10 seconds of P050A monitoring duration at cold start (2-trip detection logic)	• Throttle body assembly • Mass air flow meter • Air induction system • PCV hose connections • VVT system • Air cleaner filter element • Hybrid vehicle control ECU

MONITOR DESCRIPTION



The ECM monitors the intake air amount during idling and the ignition timing.
When the Engine Coolant Temperature (ECT) is between -10°C and 50°C (14°F and 122°F), the ECM calculates the idling intake air amount for 10 seconds, beginning 3 seconds after the engine starts.
When the accumulated value is below the threshold, the ECM interprets this as a malfunction in the Idle Speed Control (ISC) system at cold start.
The ECM also monitors the ignition timing at cold start, and judges it to be incorrect when it is advanced to the same value for a warm engine for 5 seconds or more of the 10-second monitoring period.
Example:
P050A is detected when all conditions below are met (2-trip detection logic):
1. The ECT is between -10°C and 50°C (14°F and 122°F) when the engine starts.
2. The engine idles for 13 seconds after engine start.
3. The accumulated intake air amount is below the threshold.

The ECM sets the DTC and illuminates the MIL 13 seconds after the engine is next started.

NOTICE:

When the negative battery terminal is disconnected during inspection or repairs, the ISC learning values are cleared. The ISC learning must be performed by warming up the engine and idling for 5 minutes with the ECT at 75°C (167°F) or more because DTCs cannot be detected with the ISC learning values cleared.

MONITOR STRATEGY

Related DTCs	P050A: Idle speed control problem at cold P050B: Idle ignition timing problem at cold
Required Sensors/Components (Main)	Mass air flow meter
Required Sensors/Components (Related)	Engine Coolant Temperature (ECT) sensor, throttle position sensor, vehicle speed sensor

Frequency of Operation	Once per driving cycle
Duration	10 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P050A:

Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
ECT at engine start	-10°C (14°F) or more
ECT	-10 to 50°C (14 to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)
Time after shift position changed (A/T)	1 second or more
Atmospheric pressure	76 kPa (570 mmHg) or more

P050B:

Battery voltage	8 V or more
Time after engine start	3 seconds or more
Starter	OFF
ECT at engine start	-10°C (14°F) or more
ECT	-10 to 50°C (14 to 122°F)
Engine idling time	3 seconds or more
Fuel-cut	OFF
Vehicle speed	Less than 1.875 mph (3 km/h)

TYPICAL MALFUNCTION THRESHOLDS

P050A:

Accumulated air flow amount (A/T)	Varies with ECT (Example: Less than 1.44 g)

P050B:

Accumulated time when ignition timing retard value insufficient	5 seconds or more

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P050A AND/OR P050B)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following the menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P050A and/or P050B	A
P050A and/or P050B and other DTCs	B

HINT:
If any DTCs other than P050A and P050B are output, troubleshoot those DTCs first.

B → **GO TO DTC CHART**

A

2 READ VALUE USING INTELLIGENT TESTER (FUEL TRIM)

HINT:
Calculate the total fuel trim values to check the characteristic deviation of the mass air flow meter.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / SHORT FT #1 and LONG FT #1.
(e) Read the values displayed on the tester.
(f) Add together the SHORT FT #1 and LONG FT #1 values to obtain the total FUEL TRIM.
OK:
Total of SHORT FT #1 and LONG FT #1 values is between -20% and 20%.

OK → **Go to step 12**

NG

3 PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE OCV)

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VVT CTRL B1.
(f) Check the engine speed while operating the Oil Control Valve (OCV) using the tester.

OK

Tester Operations	Specified Conditions
OCV OFF	Normal engine speed
OCV ON	Engine idles roughly or stalls (soon after OCV switched from OFF to ON)

NG → **Go to step 8**

OK

4	CHECK PCV HOSE (HOSE CONNECTIONS)

OK:
PCV hose is connected correctly and is not damaged.

NG → **Go to step 9**

OK

5	CHECK AIR INDUCTION SYSTEM

ES

(a) Check the air induction system for vacuum leakage.
OK:
No leakage from air induction system.

NG → **Go to step 10**

OK

6	CHECK AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

(a) Visually check that the air cleaner filter element is not excessively contaminated with dirt or oil.
OK:
Air cleaner filter element is not excessively contaminated with dirt or oil.

NG → **Go to step 11**

OK

7	REPLACE MASS AIR FLOW METER

NEXT → **Go to step 15**

8	CHECK AND REPAIR VVT SYSTEM

NEXT → **Go to step 15**

9	REPAIR OR REPLACE PCV HOSE

NEXT → **Go to step 15**

10	REPAIR OR REPLACE AIR INDUCTION SYSTEM

NEXT → **Go to step 15**

11	REPLACE AIR CLEANER FILTER ELEMENT SUB-ASSEMBLY

NEXT → Go to step 15

12	CHECK THROTTLE VALVE

(a) Check for deposits around the throttle valve and throttle valve condition.

OK:

No deposits around throttle valve and throttle valve moves smoothly.

NG → Go to step 14

OK

13	REPLACE HYBRID VEHICLE CONTROL ECU

NEXT → Go to step 15

14	REPAIR OR REPLACE THROTTLE BODY ASSEMBLY

NEXT → Go to step 15

15	CHECK WHETHER DTC OUTPUT RECURS (DTC P050A AND/OR P050B)

NOTICE:

In this operation, the engine must be cold (the same level as the engine coolant temperature recorded in the freeze frame data).

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-31).
(e) Switch the ECM from normal mode to check mode using the tester (See page ES-34).
(f) Start the engine to idle for a minute.

OK:

Stable fast idling.

(g) Read the DTCs.

OK:

No DTC output.

NEXT

END

DTC	P0560	System Voltage

DESCRIPTION

The battery supplies electricity to the ECM (included in hybrid vehicle control ECU) even when the power switch is off. This power allows the ECM to store data such as DTC history, freeze frame data and fuel trim values. If the battery voltage falls below a minimum level, the memory is cleared and the ECM determines that there is a malfunction in the power supply circuit. When the engine is next started, the ECM illuminates the MIL and sets the DTC.

DTC No.	DTC Detection Conditions	Trouble Areas
P0560	Open in ECM back up power source circuit (1-trip detection logic)	• Open in back up power source circuit • Battery • Battery terminals • EFI MAIN fuse • Hybrid vehicle control ECU

ES

HINT:
If DTC P0560 is set, the ECM does not store other DTCs or the data stored in the ECM are partly erased.

MONITOR STRATEGY

Related DTCs	P0560: ECM system voltage
Required Sensors/Components (Main)	ECM
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	3 seconds
MIL Operation	Immediate (MIL illuminated after next engine start)
Sequence of Operation	None

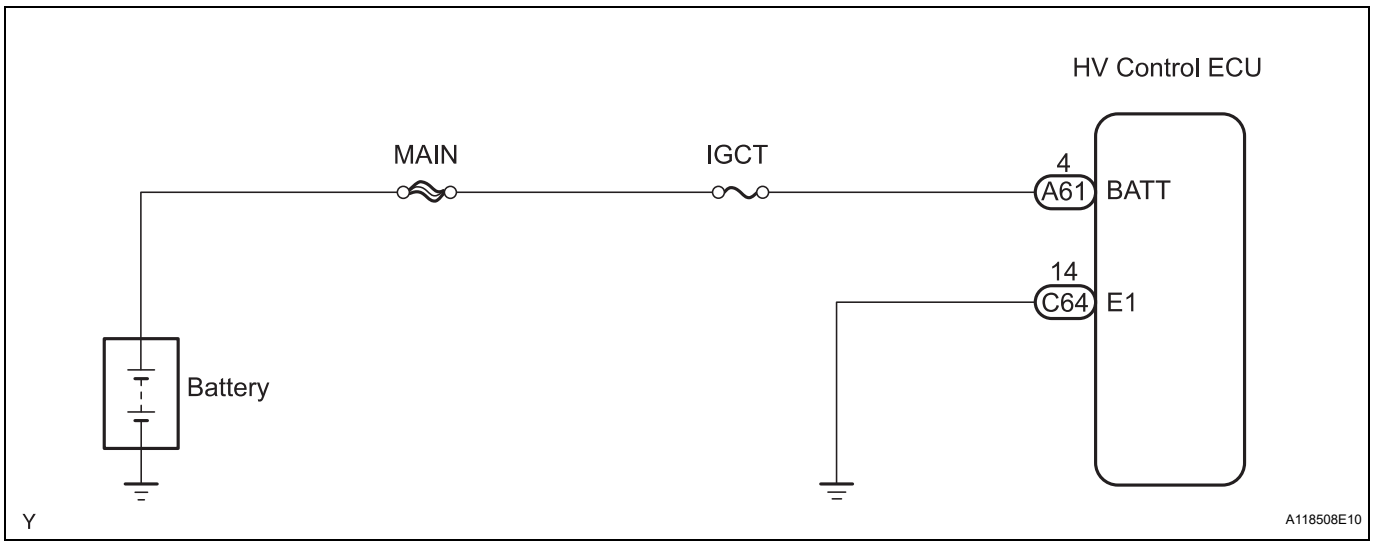
TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None

TYPICAL MALFUNCTION THRESHOLDS

ECM power source	Less than 3.5 V

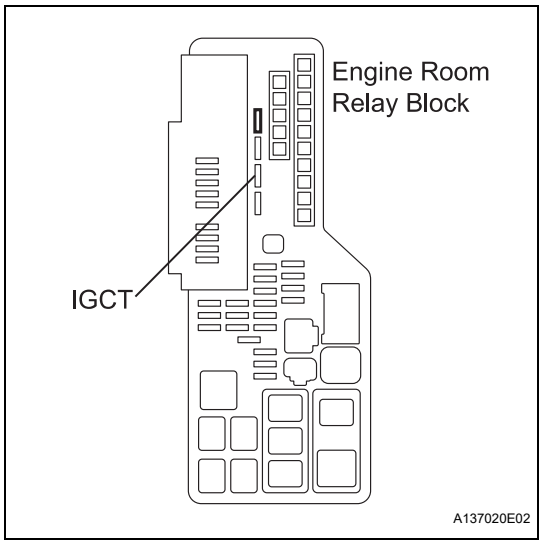
WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK FUSE (IGCT FUSE)

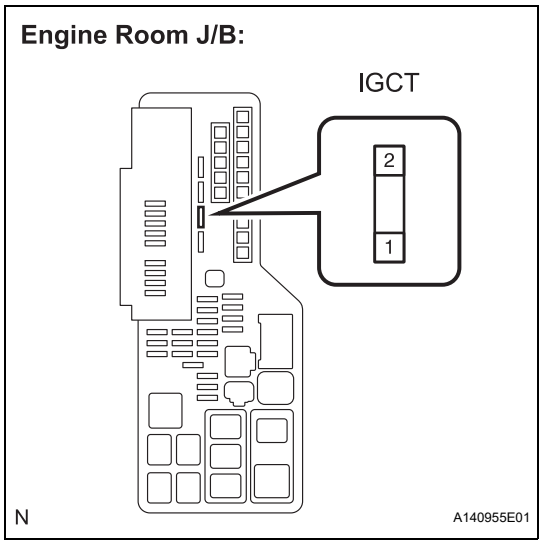


(a) Remove the EFI MAIN fuse and P/I fuse from the engine room R/B and J/B.
(b) Measure the resistance of the IGCT fuse.
Standard resistance:
Below 1 Ω
(c) Reinstall the IGCT fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

2	CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - IGCT FUSE, IGCT FUSE - BATTERY)



(a) Check the harness and the connector between the IGCT fuse and hybrid vehicle control ECU.
(1) Remove the IGCT fuse from the engine room R/B and J/B.
(2) Disconnect the A61 hybrid vehicle control ECU connector.
(3) Measure the resistance.
Standard resistance (Check for open)

Tester Connections	Specified Conditions
2 (IGCT fuse) - A61-4 (BATT)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
2 (IGCT fuse) or A61-4 (BATT) - Body ground	10 kΩ or higher

(4) Reconnect the hybrid vehicle control ECU connector.
(5) Reinstall the IGCT fuse.
(b) Check the harness and the connector between the IGCT fuse and battery.
(1) Remove the IGCT fuse from the engine room R/B and J/B.

(2) Disconnect the positive battery terminal.
(3) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
Battery positive terminal - 1 (IGCT fuse)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
Battery positive terminal or 1 (IGCT fuse) - Body ground	10 kΩ or higher

(4) Reconnect the positive battery terminal.
(5) Reinstall the IGCT fuse.

ES

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT BATTERY

(a) Check that the battery is not depleted.
OK:
Battery is not depleted

NG → **REPLACE BATTERY**

OK

4 CHECK BATTERY TERMINAL

(a) Check that the battery terminals are not loose or corroded.
OK:
Battery terminals are not loose or corroded

NG → **REPAIR OR REPLACE BATTERY TERMINAL**

OK

5 CHECK WHETHER DTC OUTPUT RECURS

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-31).
(d) Turn the power switch off and turn the tester off.
(e) Put the engine in inspection mode (See page ES-35).
(f) Turn the tester on.
(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(h) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P0560	A

Display (DTC Output)	Proceed to
No output	B

B → CHECK FOR INTERMITTENT PROBLEMS

A

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0604	Internal Control Module Random Access Memory (RAM) Error

DESCRIPTION

The ECM (included in hybrid vehicle control ECU) continuously monitors its internal memory status. This self-check ensures that the ECM is functioning properly. It is diagnosed by internal "mirroring" of the main CPU and sub CPU to detect the Random Access Memory (RAM) errors. If outputs from these CPUs are different and deviate from the standards, the ECM will illuminate the MIL and set a DTC immediately.

DTC	DTC Setting Condition	Trouble Area
P0604	ECM RAM errors	Hybrid vehicle control ECU

ES

MONITOR STRATEGY

Related DTC	P0604: ECM RAM error
Required sensors/Components	ECM
Frequency of Operation	Continuous
Duration	16 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor will run whenever this DTC is not present	None

TYPICAL MALFUNCTION THRESHOLDS

Main CPU and sub CPU mirroring	Fail

INSPECTION PROCEDURE

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P0604)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Clear the DTC.
(e) Turn the engine switch off.
(f) Disconnect the battery negative terminal and wait for 1 minute.
(g) Connect the battery negative terminal.
(h) Turn the engine switch on (IG).
(i) Enter the following menus: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(j) Read the DTCs.

Result

Display (DTC output)	Proceed to
P0604	A
No output DTC	B

B → CHECK FOR INTERMITTENT PROBLEMS

A

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0606	ECM / PCM Processor

DESCRIPTION

The ECM (included in hybrid vehicle control ECU) continuously monitors its internal processors (CPUs), A/F sensor transistors and heated oxygen sensor (HO2S) transistors. This self-check ensures that the ECM is functioning properly. These are diagnosed by internal "mirroring" of the main and sub CPUs to detect the processors error. If outputs from the processors deviate from the standards, the ECM will illuminate the MIL and set a DTC immediately.

DTC	DTC Setting Condition	Trouble Area
P0606	• ECM CPUs malfunction • A/F sensor transistors malfunction • HO2S transistors malfunction	• Exhaust gas leak • HO2 Sensor • Hybrid vehicle control ECU

ES

MONITOR STRATEGY

Related DTC	P0606: ECM range check
Required sensors/Components (main)	ECM
Required sensors/Components (sub)	APP sensor, TP sensor, Brake switch, Cruise control, A/F sensor HO2S
Frequency of Operation	Continuous
Duration	60 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor will run whenever this DTC is not present	None
Engine	Running
Estimated A/F sensor temperature	450 to 800°C (842 to 1,472°F)
Estimated HO2S temperature	450 to 800°C (842 to 1,472°F)

TYPICAL MALFUNCTION THRESHOLDS

Difference of main APP and sub APP	0.3 V or more
Difference of main TP and sub TP	0.3 V or more
Difference of main brake switch signal and sub brake switch signal	Different
Cruise control	Fail
A/F sensor transistors	Fail
HO2S transistors	Fail

INSPECTION PROCEDURE

1	CHECK FOR EXHAUST GAS LEAK

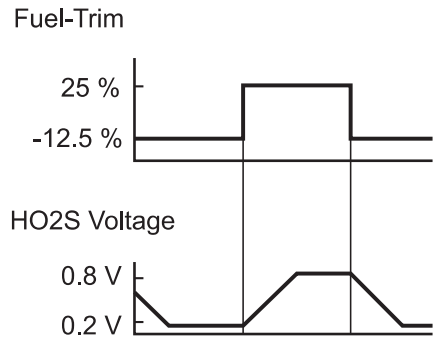
(a) Allow the engine to idle.
(b) Check for exhaust gas leak around the heated oxygen sensor.
OK:
No leak from the heated oxygen sensor.

NG → REPAIR OR REPLACE EXHAUST GAS LEAKAGE POINT

OK

2 CHECK HEATED OXYGEN SENSOR

Fuel-Trim and Rear HO2S Voltage Cross-reference



(a) Connect the intelligent tester to the DLC3.
(b) Start the engine and turn the tester on.
(c) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(d) Enter the following menus: DIAGNOSIS / ENHANCED II / ACTIVE TEST / A/F CONTROL.
(e) Perform the A/F CONTROL operation with the engine in an idling condition (press the RIGHT or LEFT button to change the fuel injection volume).
(f) Monitor the voltage outputs of the HO2 sensor displayed on the tester.
HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- Each sensor reacts in accordance with increases in the fuel injection volume.

Standard voltage

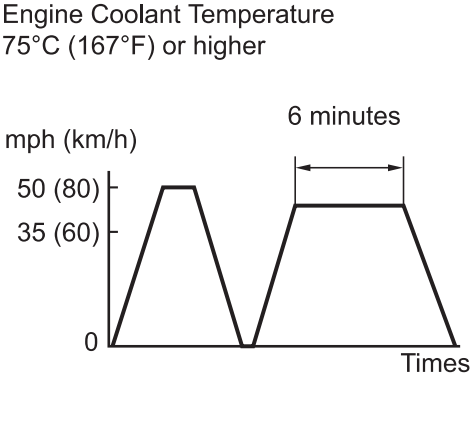
Tester Display (Sensor)	Injection Volume	Voltage
O2S B1S2 or O2S B2S2	-12.5%	Less than 0.2 V
	+25%	More than 0.8 V

NG → REPLACE HEATED OXYGEN SENSOR

OK

3 CHECK WHETHER DTC OUTPUT RECURS (IN ADDITION TO DTC P0606)

Monitor Drive Pattern for P0606



(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Clear the DTC.
(e) Turn the engine switch off.
(f) Disconnect the battery negative terminal and wait for 1 minute.
(g) Connect the battery negative terminal.
(h) Start the engine.
(i) Perform the drive pattern.
(1) Warm up the engine.
(2) Accelerate the vehicle to 50 mph (80 km/h) and stop the vehicle.
(3) Drive the vehicle at 35 to 50 mph (60 to 80 km/h) for 5 minutes or more.
(j) Enter the following menus: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.

(k) Read the DTCs.
Result

Display (DTC output)	Proceed to
P0606	A
No output DTC	B

B → CHECK FOR INTERMITTENT PROBLEMS

A → REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0607	Control Module Performance

DESCRIPTION

The ECM (included in hybrid vehicle control ECU) continuously monitors its main and sub CPUs. This self-check ensures that the ECM is functioning properly. If outputs from the CPUs are different and deviate from the standards, the ECM will illuminate the MIL and set a DTC immediately.
The ECM also monitors the cruise control cancel circuit. If this circuit malfunctions, the ECM will set a DTC immediately (MIL is not illuminated).

DTC No.	DTC Detection Condition	Trouble Area
P0607	• ECM main CPU error • ECM sub CPU error • Cruise control cancel circuit malfunction	Hybrid vehicle control ECU

NOTICE:
First check for an exhaust gas leak around the HO2S if P0606 is present. An exhaust gas leak generates noise in the HO2S output. The ECM may interpret this as an HO2S transistor malfunction.

MONITOR STRATEGY

Related DTC	P0607: ECM CPU malfunction
Required sensors/Components	ECM
Frequency of Operation	Continuous
Duration	Within 1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor will run whenever this DTC is not present	None

TYPICAL MALFUNCTION THRESHOLDS

Either of the following conditions is met:	Condition A or B
A. All of the following conditions are met:	Conditions (a), (b) and (c)
(a) CPU reset	1 time or more
(b) Leaned TP - learned APP	0.4 V or more
Throttle actuator	OFF
B. CPU reset	2 times or more

INSPECTION PROCEDURE

1	CHECK WHETHER DTC OUTPUT RECURS (IN ADDITION TO DTC P0607)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Clear the DTC.
(e) Turn the engine switch off.
(f) Disconnect the battery negative terminal and wait for 1 minute.
(g) Connect the battery negative terminal.

(h) Turn the engine switch on (IG).
(i) Enter the following menus: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(j) Read the DTCs.

ES

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P0657	Actuator Supply Voltage Circuit / Open

DESCRIPTION

The ECM (included in hybrid vehicle control ECU) monitors the output voltage to the throttle actuator. This self-check ensures that the ECM is functioning properly. The output voltage usually is 0 V when the engine switch is turned off. If the output voltage is higher than 7 volts when the engine switch is turned off, the ECM will illuminate the MIL and set a DTC when the engine switch is turned on.

DTC	DTC Setting Condition	Trouble Area
P0657	Throttle actuator power supply error	Hybrid vehicle control ECU

MONITOR STRATEGY

Related DTC	P0657: ETCS power supply
Required sensors/Components (main)	ECM
Required sensors/Components (sub)	Throttle actuator
Frequency of Operation	Once per driving cycle
Duration	Within 1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor will run whenever this DTC is not present	None
Engine switch	From ON to OFF

TYPICAL MALFUNCTION THRESHOLDS

Throttle actuator power supply	7 V or more

INSPECTION PROCEDURE

1	CHECK WHETHER DTC OUTPUT RECURS (IN ADDITION TO DTC P0657)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the engine switch on (IG).
(c) Turn the tester on.
(d) Clear the DTC.
(e) Turn the engine switch off.
(f) Disconnect the battery negative terminal and wait for 1 minute.
(g) Connect the battery negative terminal.
(h) Turn the engine switch on (IG) for 10 seconds.
(i) Turn the engine switch off.
(j) Turn the engine switch on (IG).
(k) Enter the following menus: DIAGNOSIS / ENHANCED II / DTC INFO / CURRENT CODES.
(l) Read the DTCs.

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P1420	Evaporative Emission Canister Small Leak

DTC	P1421	Evaporative Emission Canister Gross Leak

DTC SUMMARY

DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P1420	EVAP small leak	Vacuum pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure is measured. 0.02 inch leak pressure standard is measured at the start and at the end of leak check. If stabilized pressure is higher than second 0.02 inch leak pressure standard, ECM determines that EVAP system has a small leakage.	• Leakage from EVAP line (Canister -Fuel vapor-containment valve) • Leakage from EVAP line (Purge VSV - Canister) • Pump module • Leakage from canister	Power switch off	2-trips
P1421	EVAP gross leak	Vacuum pump creates negative pressure (vacuum) in EVAP system and EVAP system pressure is measured. 0.02 inch leak pressure standard is measured at the start and at the end of leak check. If stabilized pressure is higher than [second 0.02 inch leak pressure standard x 0.2], ECM determines that purge VSV stuck open	Same above	Power switch off	2-trips

ES

DESCRIPTION

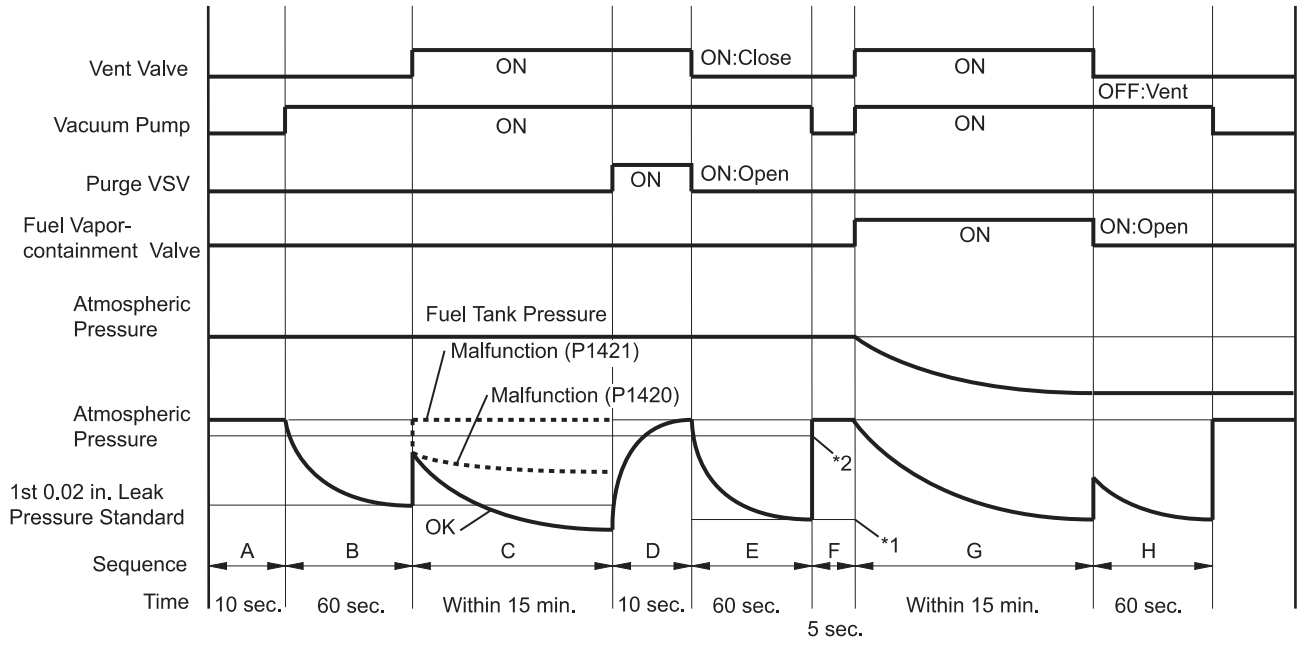
Refer to EVAP System (See page ES-317).

MONITOR DESCRIPTION

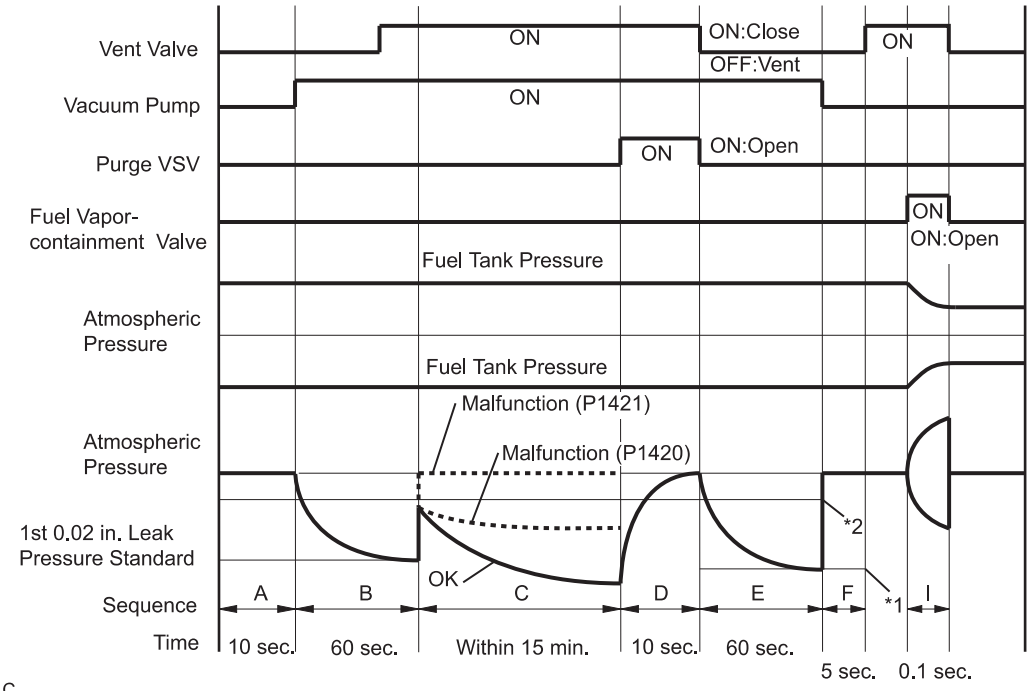
1. P1420: EVAP (Evaporative Emission) very small leak
   In operation C, the vacuum pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than the second 0.02 inch leak pressure standard, the ECM (included in the hybrid vehicle control ECU) determines that the EVAP system has a large leakage. The ECM illuminates the MIL and sets the DTC (2-trip detection logic).

2. P1421: EVAP very gross leak
In operation C, the vacuum pump creates negative pressure (vacuum) in the EVAP system and the EVAP system pressure is measured. If the stabilized system pressure is higher than (second 0.02 inch leak pressure standard x 0.2) (near atmospheric pressure), the ECM (included in the hybrid vehicle control ECU) determines that the EVAP system has a large leakage. The ECM illuminates the MIL and sets the DTC (2-trip detection logic).

Method A



Method B



*1: Second 0.02 in. Leak Pressure Standard

*2: (Second 0.02 in. Leak Pressure Standard) x 0.2

C

MONITOR STRATEGY

Required Sensors/Components	Purge VSV and pump module
Frequency of Operation	Once per driving cycle

Duration	Within 15 minutes (varies with the amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	
EVAP key-off monitor runs when all of the following conditions are met:	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Power switch	OFF
Engine condition	Not running
Pressure sensor (built in pump module) malfunction (P0450, P0451, P0452 and/or P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of the following conditions are met before power switch OFF	Conditions 1 and 2
1. Duration that vehicle is being driven	5 minutes or more
2. Purge flow	Executed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)
Time after engine stopped	5 hours

Example of restart time:

First time	7 hours
Second time	9 hours and 30 minutes

Key-off monitor sequence 1 to 15
1. Atmospheric pressure measurement

Next sequence is run if the following condition is met:	-
Atmospheric pressure change for 10 sec.	Less than 0.3 kPa (2.25 mmHg) for 1 second

2. First reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.38 to -7.93 mmHg)
3. Reference pressure	Saturated within 1 minute

3. Vent valve stuck closed check

Next sequence is run if the following condition is met:	-
EVAP change for 10 seconds after vent valve ON (Closed)	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction for canister

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. Vacuum introduction time	12 minutes or less
2. EVAP pressure	Saturated

5. Purge VSV stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after purge VSV ON (Open).	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure 1.9 sec. after reference pressure measurement began	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the first and second	0.7 kPa (5.25 mmHg) or less

7. Canister leak check

Next sequence is run if the following condition is met:	-
EVAP pressure when vacuum introduction was complete	Less than second reference pressure

8. Fuel vapor-containment valve (FVCV stuck closed check)

Sequence 14 is run if all of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 kPa (-15 mmHg) or less, or 3 kPa (22.5 mmHg) or more
2. FTP change while FVCV and vent valve are open	0.5 kPa (3.75 mmHg) or more

9. Vacuum introduction for fuel tank

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 to 3 kPa (-15 to 22.5 mmHg)
2. Vacuum introduction time	15 minutes or less

10. FVCV stuck closed check

Next sequence is run if the following condition is met:	
FTP change when vacuum introduction for fuel tank	0.5 kPa (3.75 mmHg)

11. FTP sensor stuck check

Next sequence is run if the following condition is met:	
FTP change when FVCV closed	0.35 kPa (2.6 mmHg) or less

12. Third reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3, and 4
1. FTP 1.9 seconds after reference pressure measurement began	-1 kPa (-7.5 mmHg) or more
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the second and third	Less than 0.7 kPa (5.25 mmHg)

13. Fuel tank leak check

Sequence is run if the following condition is met:	
FTP when vacuum introduction for fuel tank was complete	Less than third reference pressure

14. FTP sensor stuck check

Next sequence is run if the following condition is met:	-
FTP change while FVCV and vent valve are open	Less than 0.35 kPa (2.6 mmHg)

15. Atmospheric pressure measurement

Monitor is complete if the following condition is met:	-
Atmospheric pressure difference between sequence 1 and 8	0.3 kPa (2.25 mmHg) or less

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.75 mmHg (0.1 kPa) in 30 seconds.

P1421: EVAP gross leak

EVAP pressure when vacuum introduction complete	Higher than reference pressure x 0.2

P1420: EVAP small leak

EVAP pressure when vacuum introductions complete	Between conditions 1 and 2
Condition 1	Higher than second reference pressure
Condition 2	Lower than reference pressure x 0.2
Atmospheric pressure (absolute pressure)	70 kPa (525 mmHg) or more, and less than 110 kPa (825 mmHg)

MONITOR RESULT

Refer to EVAP System (See page ES-325).

INSPECTION PROCEDURE

Refer to EVAP System (See page ES-328).

DTC	P1422	Fuel Tank Small Leak

DTC	P1423	Fuel Tank Gross Leak

DTC SUMMARY

DTC No.	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection Logic
P1422	Fuel tank small leak	Vacuum pump creates negative pressure (vacuum) in fuel tank and fuel tank pressure is measured. 0.02 inch leak pressure standard is measured at the start and at the end of leak check. If stabilized pressure is higher than third 0.02 inch leak pressure standard, ECM (Included in Hybrid Vehicle Control ECU) determines that fuel tank has a small leakage.	• Leakage from EVAP line (Canister - Fuel vapor-containment valve) • Leakage from EVAP line (Purge VSV - Canister) • Pump module • Leakage from canister	Power switch off	2-trips
P1423	Fuel tank gross leak	Vacuum pump creates negative pressure (vacuum) in fuel tank and fuel tank pressure is measured. 0.02 inch leak pressure standard is measured at the start and at the end of leak check. If stabilized pressure is higher than [third 0.02 inch leak pressure standard x 0.2], ECM (Included in Hybrid Vehicle Control ECU) determines that fuel tank has a large leakage.	Same above	Power switch off	2-trips

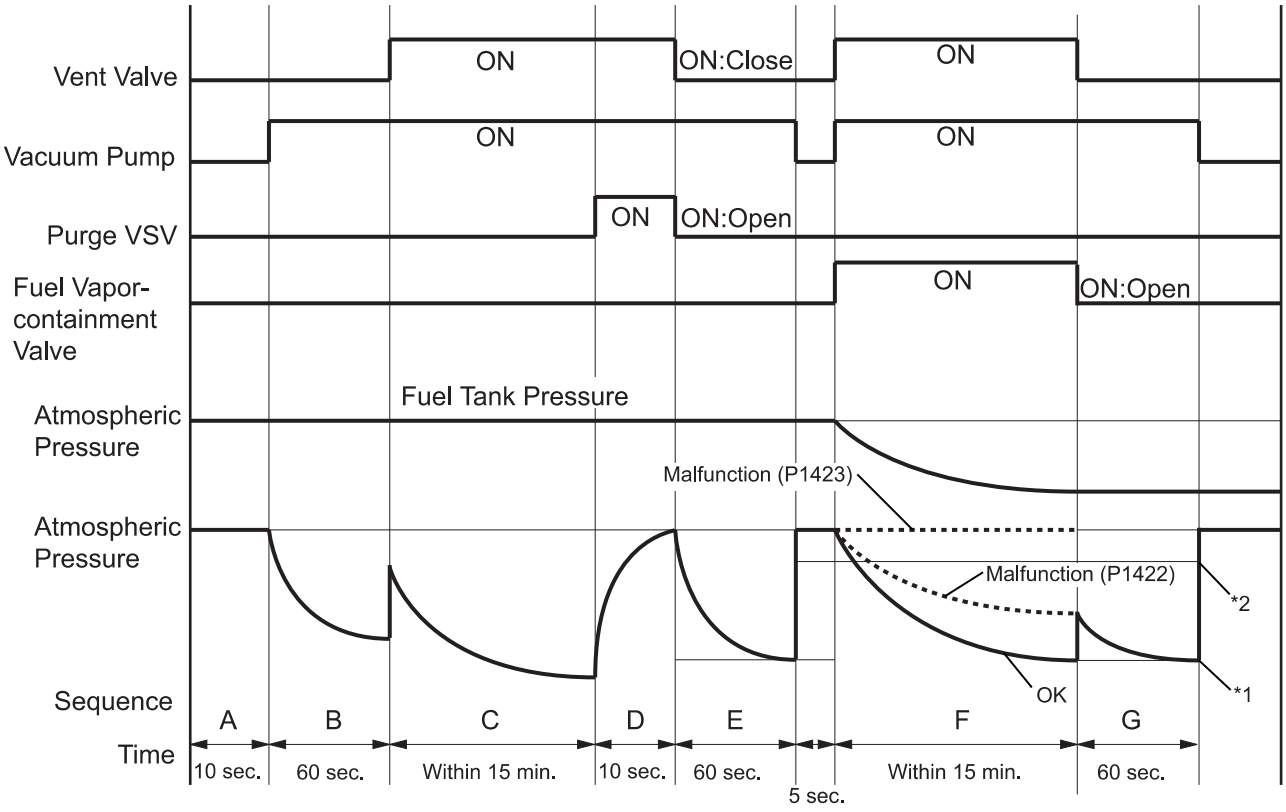
DESCRIPTION

Refer to the EVAP System (See page ES-317).

MONITOR DESCRIPTION

1. P1422: Fuel tank very small leak
   In operation G, the vacuum pump creates negative pressure (vacuum) in the fuel tank and the fuel tank pressure is measured. If the stabilized system pressure is higher than the third 0.02 inch leak pressure standard, the ECM (included in the hybrid vehicle control ECU) determines that the fuel tank has a large leakage. The ECM illuminates the MIL and sets the DTC (2-trip detection logic).

2. P1423: Fuel tank gross leak
In operation G, the vacuum pump creates negative pressure (vacuum) in the fuel tank and the fuel tank pressure is measured. If the stabilized system pressure is higher than [third 0.02 inch leak pressure standard x 0.2] (near atmospheric pressure), the ECM (included in the hybrid vehicle control ECU) determines that the fuel tank has a large leakage. The ECM illuminates the MIL and sets the DTC (2-trip detection logic).



*1: Third 0.02 in. Leak Pressure Standard

*2: (Third 0.02 in. Leak Pressure Standard) x 0.2

C A109166E03

MONITOR STRATEGY

Required Sensors/Components	Fuel tank and pump module
Frequency of Operation	Once per driving cycle

Duration	Within 15 minutes (varies with the amount of fuel in tank)
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	
EVAP key-off monitor runs when all of the following conditions are met:	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Power switch	OFF
Engine condition	Not running
FTP sensor malfunction (P1450, P1452 and/or P1453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of the following conditions are met before power switch OFF:	Conditions 1 and 2
1. Duration that vehicle is being driven	5 minutes or more
2. Purge flow	Executed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)
Time after engine stopped	5 hours

Example of restart time:

First time	7 hours
Second time	9 hours and 30 minutes

Key-off monitor sequence 1 to 15
1. Atmospheric pressure measurement

Next sequence is run if the following condition is met:	-
Atmospheric pressure change for 10 seconds	Less than 0.3 kPa (2.25 mmHg) for 1 second

2. First reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, and 3
1. EVAP pressure 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.38 to -7.93 mmHg)
3. Reference pressure	Saturated

3. Vent valve stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after vent valve ON (Closed)	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction for canister

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. Vacuum introduction time	15 minutes or less
2. FTP	Saturated

5. Purge VSV stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after purge VSV ON (Open)	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3 and 4

1. EVAP pressure 1.9 sec. after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the first and second	0.7 kPa (5.25 mmHg) or less

7. Canister leak

Next sequence is run if the following condition is met:	-
Canister leak when vacuum introduction was complete	Second reference pressure or less

8. Fuel vapor-containment valve (FVCV stuck closed check)

Sequence 14 is run if all of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 kPa (-15 mmHg) or less, or 3 kPa (22.5 mmHg) or more
2. FTP change while FVCV and vent valve are open	0.5 kPa (3.75 mmHg) or more

ES

9. Vacuum introduction for fuel tank

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 to 3 kPa (-15 to 22.5 mmHg)
2. Vacuum introduction time	15 minutes or less

10. FVCV stuck closed check

Next sequence is run if the following condition is met:	
FTP change when vacuum introduction for fuel tank	0.5 kPa (3.75 mmHg)

11. FTP sensor stuck check

Next sequence is run if the following condition is met:	
FTP change when FVCV closed	0.35 kPa (2.6 mmHg) or less

12. Third reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3, and 4
1. FTP 1.9 seconds after reference pressure measurement began	-1 kPa (-7.5 mmHg) or more
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the second and third	Less than 0.7 kPa (5.25 mmHg)

13. Fuel tank leak check

Sequence is run if the following condition is met:	
FTP when vacuum introduction for fuel tank was complete	Less than third reference pressure

14. FTP sensor stuck check

Next sequence is run if the following condition is met:	-
FTP change while FVCV and vent valve are open	Less than 0.35 kPa (2.6 mmHg)

15. Atmospheric pressure measurement

Monitor is complete if the following condition is met:	0.3 kPa (2.25 mmHg) or less
Atmospheric pressure difference between sequence 1 and 8	0.3 kPa (2.25 mmHg) or less

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicateds that the fuel tank pressure change is less than 0.1 kPa (0.75 mmHg) in 30 seconds.

P1423: Fuel tank gross leak

FTP when vacuum introduction complete	Higher than reference pressure x 0.2

P1422: Fuel tank small leak

FTP when vacuum introduction is complete	Between conditions 1 and 2
Condition 1	Higher than the second reference pressure

Condition 2	Lower than reference pressure x 0.2
Atmospheric pressure (absolute pressure)	70 kPa (525 mmHg) or more, and less than 110 kPa (825 mmHg)

MONITOR RESULT

Refer to EVAP System (See page ES-325).

INSPECTION PROCEDURE

Refer to EVAP System (See page ES-328).

DTC	P1450	Fuel Tank Pressure Sensor

DTC	P1451	Fuel Tank Pressure Sensor Range/Performance

DTC	P1452	Fuel Tank Pressure Sensor Low Input

DTC	P1453	Fuel Tank Pressure Sensor High Input

DTC SUMMARY

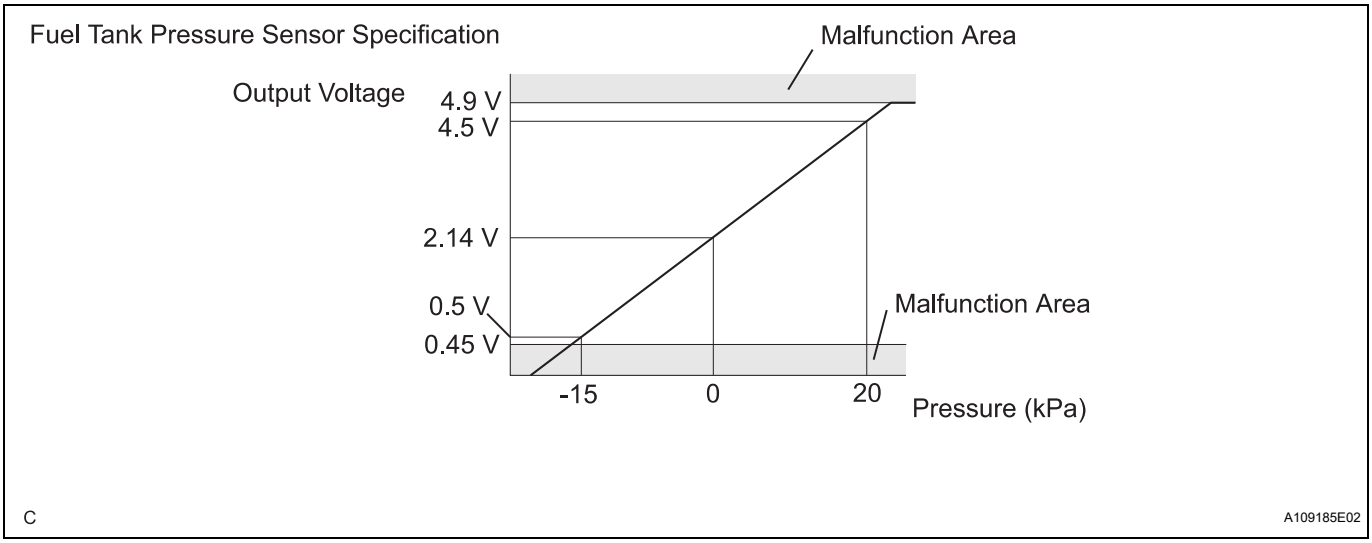
DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P1450	Pressure sensor abnormal voltage fluctuation	Sensor output voltage rapidly fluctuates beyond upper and lower malfunction thresholds for 0.5 seconds.	• Fuel tank pressure sensor • Hybrid vehicle control ECU	• Power switch on	1-trip
P1451	Pressure sensor abnormal voltage fluctuation	Sensor output voltage fluctuates frequently in certain time period.	• Fuel tank pressure sensor • Connector / wire harness (Fuel tank pressure sensor - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	• EVAP monitoring (power switch off) • Engine running	2-trips
P1451	Pressure sensor constant voltage	Sensor output voltage does not vary in certain time period.	• Fuel tank pressure sensor • Connector / wire harness (Fuel tank pressure sensor - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	• EVAP monitoring (power switch off)	2-trips
P1452	Pressure sensor voltage low	Sensor output voltage is less than 0.45 V for 0.5 seconds.	• Fuel tank pressure sensor • Connector / wire harness (Fuel tank pressure sensor - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	• EVAP monitoring (power switch off) • Power switch on	1-trip
P1453	Pressure sensor voltage high	Sensor output voltage is more than 4.9 V for 0.5 seconds.	• Fuel tank pressure sensor • Connector / wire harness (Fuel tank pressure sensor - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	• EVAP monitoring (power switch off) • Power switch on	1-trip

DESCRIPTION

Refer to EVAP System (See page ES-317).

MONITOR DESCRIPTION

1. DTC P1451: Pressure sensor abnormal voltage fluctuation or being constant
   If the pressure sensor output voltage fluctuates rapidly for 10 seconds, the ECM (included in the hybrid vehicle control ECU) stops the EVAP system monitor. The ECM interprets this as the pressure sensor voltage fluctuating, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC.
   Alternatively, if the sensor output voltage does not change for 10 seconds, the ECM interprets this as the sensor voltage being constant, and stops the monitor. The ECM then illuminates the MIL and sets the DTC.
   (Both the malfunctions are detected by 2-trip detection logic).



2. DTC P1452: Pressure sensor voltage low
   If the pressure sensor output voltage is below 0.45 V, the ECM (included in the hybrid vehicle control ECU) interprets this as an open or short circuit malfunction in the pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1-trip detection logic).
3. DTC P1453: Pressure sensor voltage high
   If the pressure sensor voltage output is 4.9 V or more, the ECM (included in the hybrid vehicle control ECU) interprets this as an open or short circuit malfunction in the pressure sensor or its circuit, and stops the EVAP system monitor. The ECM then illuminates the MIL and sets the DTC (1-trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Pump module
Frequency of Operation	Once per driving cycle: P1451 sensor constant voltage Continuous: P1451 sensor abnormal voltage fluctuation, P1452 and P1453
Duration	0.5 seconds: P1452, P1453 Within 15 seconds: P1451
MIL Operation	Immediate: P1452, P1453 2 driving cycles: P1451
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

P1451: (Noise Monitor)

Atmospheric pressure	70 kPa (525 mmHg) to 110 kPa (825 mmHg)
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)

EVAP pressure sensor malfunction (P1450, P1452, P1453)	Not detected
Either of the following conditions is met	A or B
A. Engine	Running
B. Soak time (power switch off time)	5 hours

Example of restart time:

First time	7 hours
Second time	9 hours and 30 minutes

P1451: (Stuck Monitor)

Atmospheric pressure	Less than 70 kPa (525 mmHg) or 110 kPa (825 mmHg) or more
Battery voltage	10.5 V or more
Intake air temperature	4.4 to 35°C (40 to 95°F)
EVAP pressure sensor malfunction (P1450, P1452, P1453)	Not detected
Soak time (power switch off time)	5 hours

Example of restart time:

First time	7 hours
Second time	9 hours and 30 minutes

P1450, P1452 and P1453:

The monitor will run whenever these DTCs are not present	None
Battery voltage	8 V or more
Starter	OFF
Power switch	ON

TYPICAL MALFUNCTION THRESHOLDS

1. P1450: Fuel tank pressure sensor

Fuel tank pressure	Less than -17.187 kPa (-128.93 mmHg), or more than 23.5 kPa (176.69 mmHg)

2. P1451: Pressure sensor noise

Frequency that fuel tank pressure change is 0.3 kPa or more	10 times or more in 10 seconds

3. P1451: Pressure sensor stuck

Fuel tank pressure change during reference pressure measurement	Less than 0.35 kPa (2.63 mmHg)

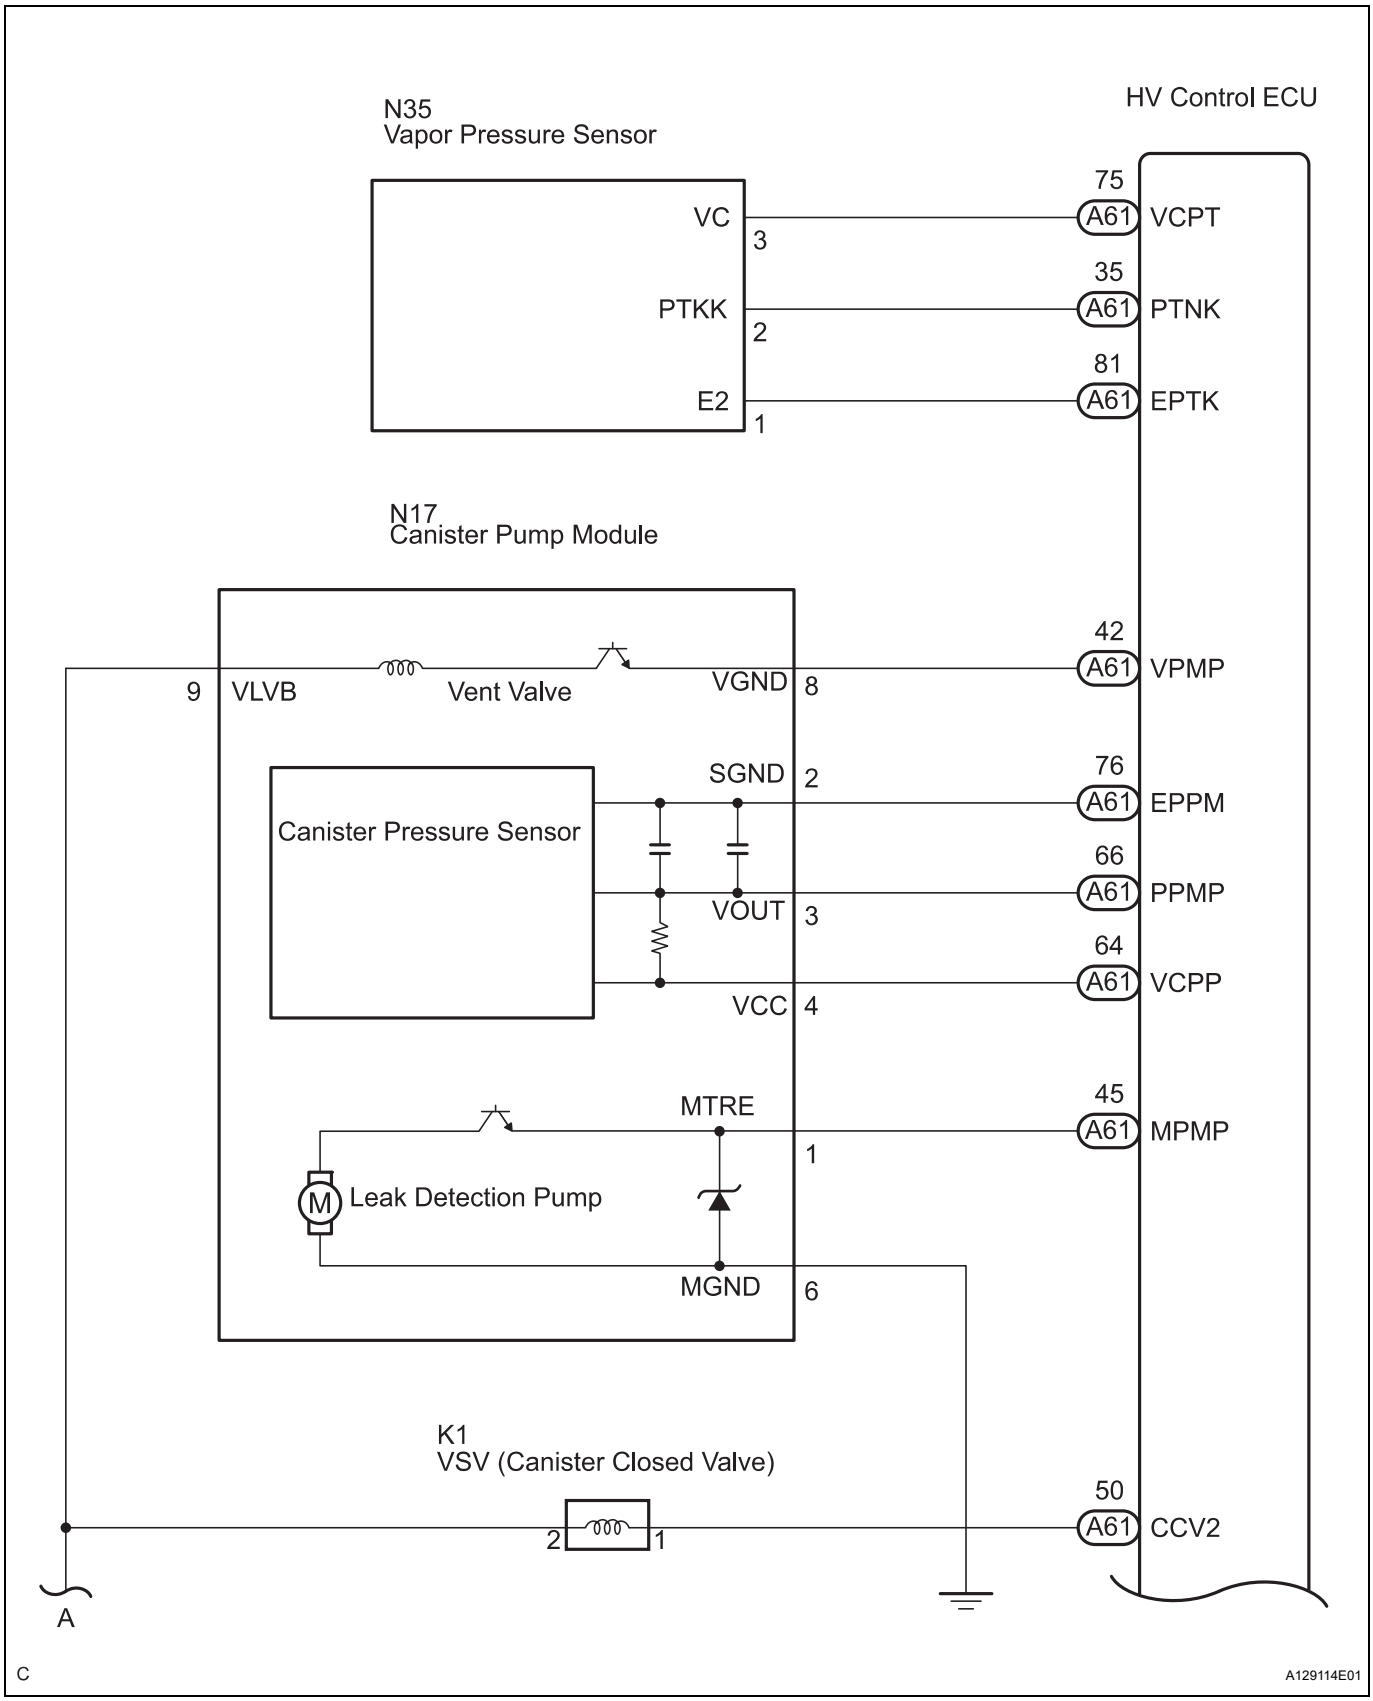
4. P1452: Pressure sensor low voltage

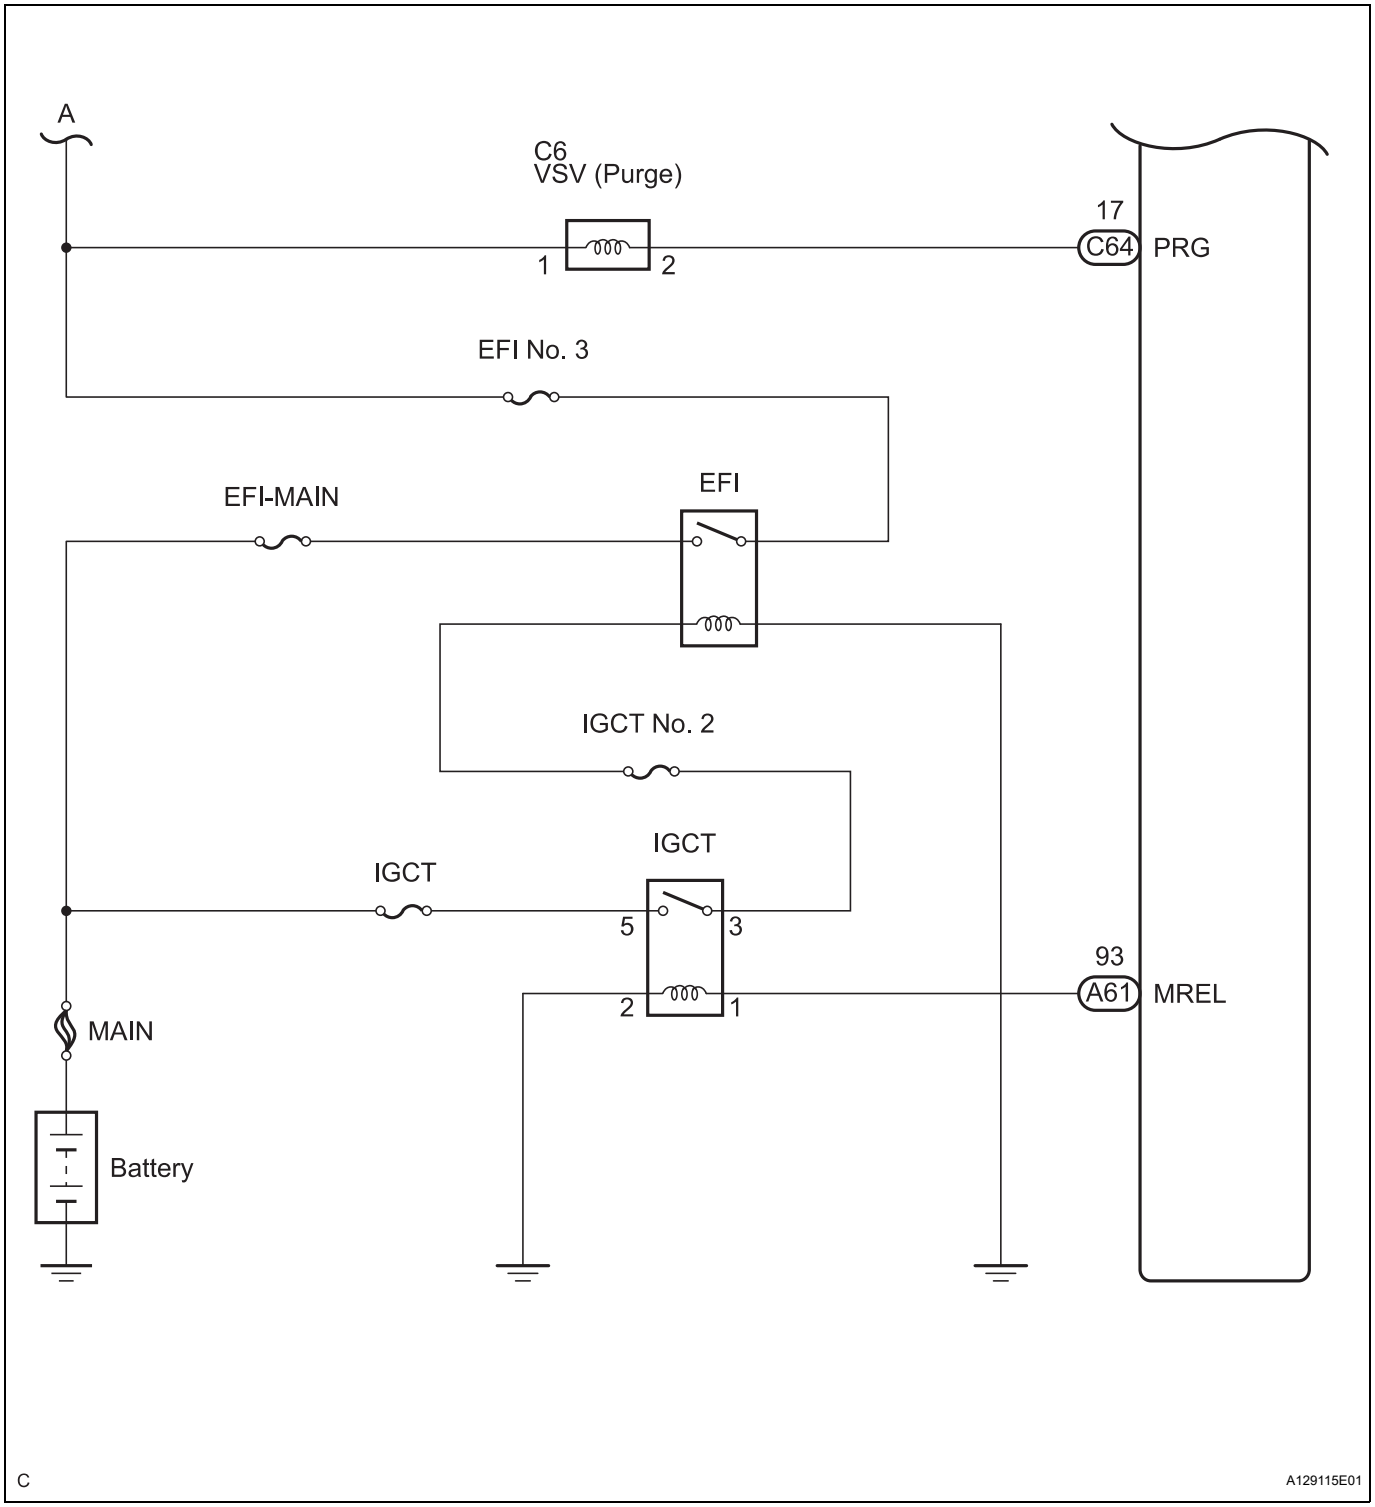
Fuel tank pressure	Less than -17.187 kPa (-128.93 mmHg)

5. P1453: Pressure sensor high voltage

Fuel tank pressure	More than 23.5 kPa (176.69 mmHg)

WIRING DIAGRAM





INSPECTION PROCEDURE

NOTICE:

- **When a vehicle is brought into the workshop, leave it as it is. Do not change the vehicle condition. For example, do not tighten the fuel tank cap.**
- **Do not disassemble the pump module.**
- **The intelligent tester is required to conduct the following diagnostic troubleshooting procedure.**

1	CONFIRM DTC AND FUEL TANK PRESSURE

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / EVAP / VAPOR PRESS TANK.
(g) Read the EVAP (Evaporative Emission) pressure displayed on the tester.

ES

Result

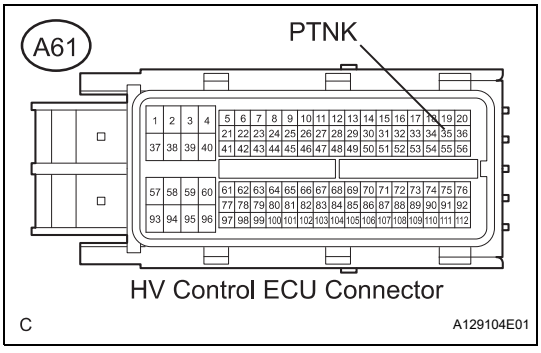
Display (DTC Output)	Test Result	Suspected Trouble Area	Proceed to
P1451	-	• Pressure sensor	C
P1450 and/or P1452	Less than -17.187 kPa (-128.93 mmHg)	• Wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor) • Pressure sensor • Short in ECM (included in hybrid vehicle control ECU) circuit	A
P1450 and/or P1453	More than 23.5 kPa (176.69 mmHg)	• Wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor) • Pressure sensor • Open in ECM (included in hybrid vehicle control ECU) circuit	B

B → Go to step 4

C → GO TO EVAP INSPECTION PROCEDURE

A

2	CHECK HARNESS AND CONNECTOR (FUEL TANK PRESSURE SENSOR - HV CONTROL ECU)



(a) Turn the power switch off.
(b) Disconnect the A61 hybrid vehicle control ECU connector.
(c) Measure the resistance between the PTNK terminal of the hybrid vehicle control ECU connector and body ground.

Result

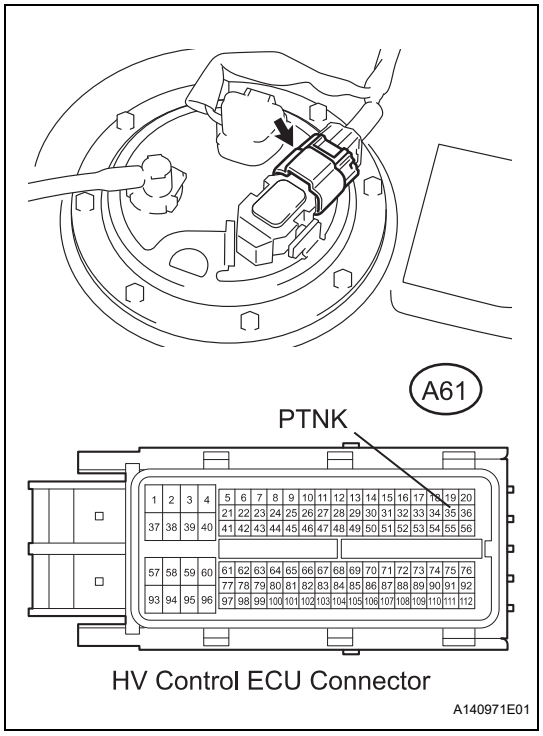
Test Result	Suspected Trouble Area	Proceed to
10 Ω or less	• Wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor) • Short in pressure sensor circuit	A
10 kΩ or more	• Wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor) • Short in ECM (included in hybrid vehicle control ECU) circuit	B

(d) Reconnect the hybrid vehicle control ECU connector.

B	Go to step 7

A

3	CHECK HARNESS AND CONNECTOR (VAPOR PRESSURE SENSOR - HV CONTROL ECU)



(a) Remove the fuel tank assembly.
(b) Disconnect the N35 vapor pressure sensor connector.
(c) Disconnect the A61 hybrid vehicle control ECU connector.
(d) Measure the resistance between the PTNK terminal of the hybrid vehicle control ECU connector and body ground.

ES

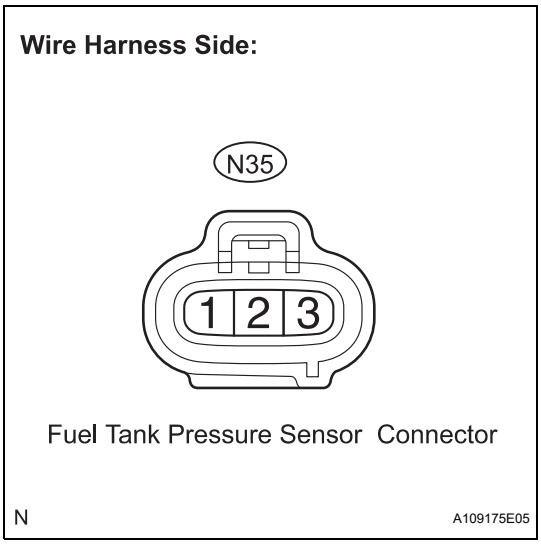
Result

Test Result	Suspected Trouble Area	Proceed to
10 kΩ or more	Short in pressure sensor circuit	A
10 Ω or less	Short in wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor)	B

(e) Reconnect the pressure sensor connector.
(f) Reconnect the hybrid vehicle control ECU connector.

A	Go to step 5
B	Go to step 6

4	CHECK HARNESS AND CONNECTOR (VAPOR PRESSURE SENSOR - HV CONTROL ECU)



(a) Remove the fuel tank assembly.
(b) Disconnect the N35 vapor pressure sensor connector.
(c) Turn the power switch on (IG).
(d) Measure the voltage and resistance according to the value(s) in the table below.

Standard

Tester Connection	Specified Condition
N35-3 - Body ground	4.5 to 5.0 V
N35-2 - Body ground	100 Ω or less

Result

Test Result	Suspected Trouble Area	Proceed to
Voltage and resistance within standard ranges	Open in pressure sensor circuit	A
Voltage and resistance outside standard ranges	Open in wire harness/connector (Hybrid Vehicle Control ECU - pressure sensor)	B

(e) Reconnect the canister connector.

B → Go to step 6

A

5	REPLACE FUEL TANK PRESSURE SENSOR

NEXT → Go to step 8

6	REPAIR OR REPLACE HARNESS AND CONNECTOR

HINT:
If the exhaust tail pipe has been removed, go to the next step before reinstalling it.

NEXT → Go to step 8

7	REPLACE HYBRID VEHICLE CONTROL ECU

NEXT → Go to step 8

8	CHECK WHETHER DTC OUTPUT RECURS (AFTER REPAIR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Wait for at least 60 seconds.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
HINT:
If no pending DTC is displayed on the tester, the repair has been successfully completed.

NEXT

ES

COMPLETED

DTC	P2102	Throttle Actuator Control Motor Circuit Low

DTC	P2103	Throttle Actuator Control Motor Circuit High

DESCRIPTION

The throttle actuator is operated by the ECM (included in hybrid vehicle control ECU) and opens and closes the throttle valve using gears.
The opening angle of the throttle valve is detected by the Throttle Position (TP) sensor, which is mounted on the throttle body. The TP sensor provides feedback to the ECM. This feedback allows the ECM to appropriately control the throttle actuator and monitor the throttle opening angle as the ECM responds to driver inputs.

HINT:
This ETCS (Electronic Throttle Control System) does not use a throttle cable.

DTC No.	DTC Detection Conditions	Trouble Areas
P2102	Conditions (a) and (b) continue for 2.0 seconds (1-trip detection logic): (a) Throttle actuator duty ratio 80% or more (b) Throttle actuator current 0.5 A or less	• Open in throttle actuator circuit • Throttle actuator • Hybrid vehicle control ECU
P2103	Either of following conditions met (1-trip detection logic): • Hybrid IC diagnosis signal failure • Hybrid IC current limiter port failure	• Short in throttle actuator circuit • Throttle actuator • Throttle valve • Throttle body assembly • Hybrid vehicle control ECU

MONITOR DESCRIPTION

The ECM monitors the electrical current through the electronic actuator, and detects malfunctions and open circuits in the throttle actuator based on this value. If the current is outside the standard range, the ECM determines that there is a malfunction in the throttle actuator. In addition, if the throttle valve does not function properly (for example, stuck on), the ECM determines that there is a malfunction. The ECM then illuminates the MIL and sets a DTC.
Example:
When the electrical current is less than 0.5 A and the throttle actuator duty ratio exceeds 80%, the ECM interprets this as the current being outside the standard range, and illuminates the MIL and sets a DTC. If the malfunction is not repaired successfully, a DTC is set when the engine is quickly revved up to a high rpm several times after the engine has idled for 5 seconds after engine start.

MONITOR STRATEGY

Related DTCs	P2102: Throttle actuator current (low current) P2103: Throttle actuator current (high current)
Required Sensors/Components (Main)	Throttle actuator (throttle body)
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	2 seconds: P2102 0.1 seconds or 0.6 seconds: P2103
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None

P2102:

Throttle actuator	Activated

Duty-cycle ratio to open throttle actuator	80% or more
Throttle actuator power supply	8 V or more

P2103:

Throttle actuator	Activated
Throttle actuator power supply	8 V or more
Battery voltage	8 V or more
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

P2102:

Throttle actuator current	Less than 0.5 A

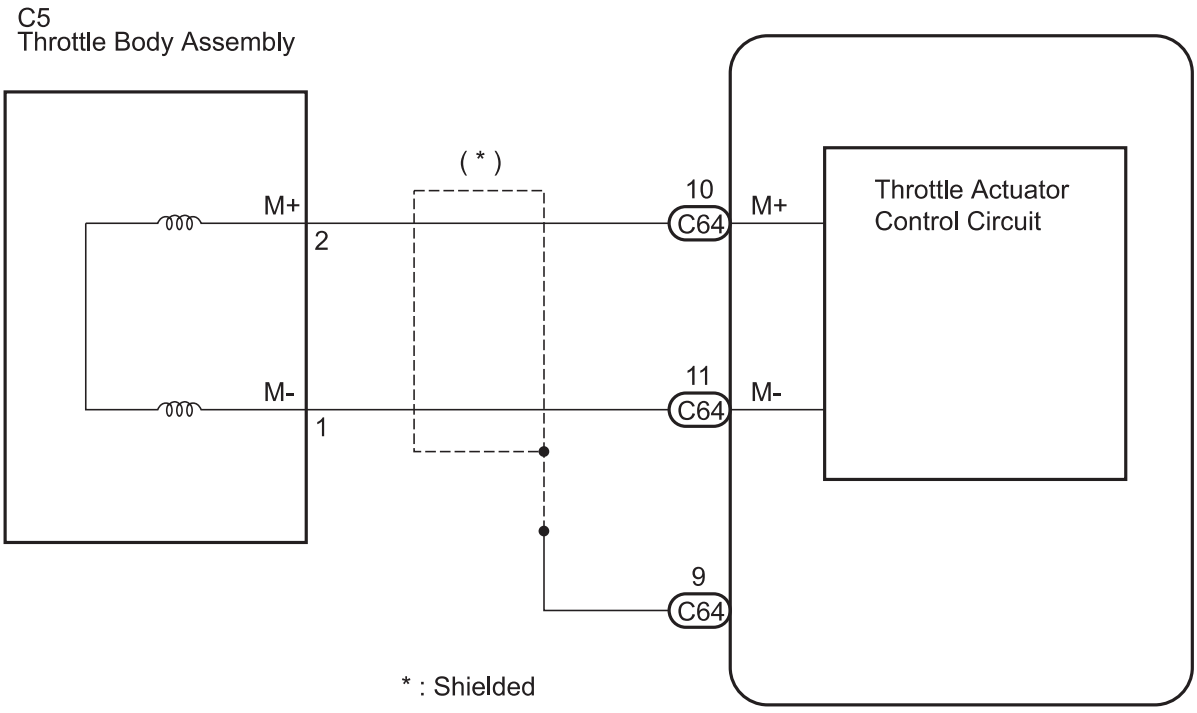
P2103:

Hybrid IC current limiter port	Fail

FAIL-SAFE

When either of these DTCs, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the power switch is then turned off.

WIRING DIAGRAM



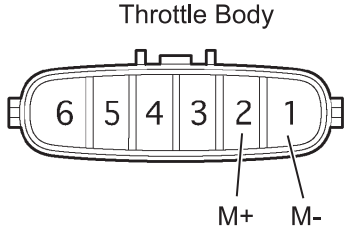
INSPECTION PROCEDURE

HINT:

- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- The throttle actuator current (THROTTLE MOT) and the throttle actuator duty ratio (THROTL OPN DUTY / THROTL CLS DUTY) can be read using the intelligent tester. However, the ECM shuts off the throttle actuator current when the ETCS malfunctions.

1	INSPECT THROTTLE BODY (RESISTANCE OF THROTTLE ACTUATOR)

Component Side:



(a) Disconnect the C5 throttle body connector.
(b) Measure the resistance of the throttle actuator.
Standard resistance

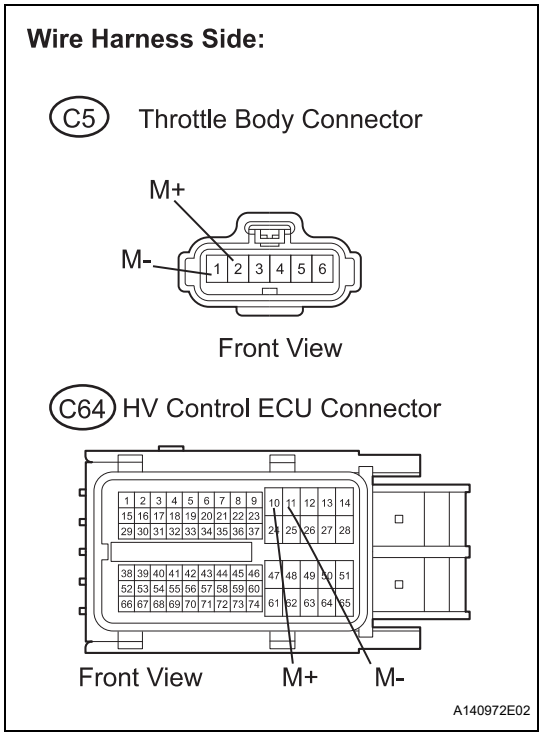
Tester Connections	Specified Conditions
2 (M+) - 1 (M-)	0.3 to 100 Ω at 20°C (68°F)

(c) Reconnect the throttle body connector.

NG	REPLACE THROTTLE BODY ASSEMBLY

OK

2 CHECK HARNESS AND CONNECTOR (THROTTLE ACTUATOR - HV CONTROL ECU)



(a) Disconnect the C5 throttle body connector.
(b) Disconnect the C64 hybrid vehicle control ECU connector.
(c) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
C5-2 (M+) - C64-10 (M+)	Below 1 Ω
C5-1 (M-) - C64-11 (M-)	Below 1 Ω

ES

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C5-2 (M+) or C64-10 (M+) - Body ground	10 kΩ or higher
C5-1 (M-) or C64-11 (M-) - Body ground	10 kΩ or higher

(d) Reconnect the throttle body connector.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT THROTTLE BODY ASSEMBLY

(a) Check for foreign objects between the throttle valve and the housing.

OK:

No foreign objects between throttle valve and housing.

NG → **REMOVE FOREIGN OBJECT AND CLEAN THROTTLE BODY**

OK

4 INSPECT THROTTLE VALVE

(a) Check if the throttle valve opens and closes smoothly.

OK:

Throttle valve opens and closes smoothly.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	P2111	Throttle Actuator Control System - Stuck Open

DTC	P2112	Throttle Actuator Control System - Stuck Closed

SYSTEM DESCRIPTION

The throttle actuator is operated by the ECM (included in hybrid vehicle control ECU), and opens and closes the throttle valve using gears. The opening angle of the throttle valve is detected by the Throttle Position (TP) sensor, which is mounted on the throttle body. The TP sensor provides feedback to the ECM in order that it can control the throttle actuator, and therefore the throttle valve, appropriately in response to driver inputs.

HINT:

This ETCS (Electronic Throttle Control System) does not use a throttle cable.

DTC No.	DTC Detection Condition	Trouble Area
P2111	ECM (included in hybrid vehicle control ECU) signals throttle actuator to close, but stuck (1-trip detection logic)	• Throttle actuator • Throttle body • Throttle valve
P2112	ECM signals throttle actuator to open, but stuck (1-trip detection logic)	• Throttle actuator • Throttle body • Throttle valve

MONITOR DESCRIPTION

The ECM (included in hybrid vehicle control ECU) determines that there is a malfunction in the ETCS when the throttle valve remains at a fixed angle despite a high drive current from the ECM. The ECM illuminates the MIL and sets a DTC.

If the malfunction is not repaired successfully, a DTC is set when the accelerator pedal is fully depressed and released quickly (to fully open and close the throttle valve) after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2111: Throttle actuator stuck open P2112: Throttle actuator stuck closed
Required Sensors/Components (Main)	Throttle actuator
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	0.5 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

All:

Monitor runs whenever following DTCs not present	None

P2111 (Throttle actuator stuck open):

All of following conditions met	-
System guard*	ON
Throttle actuator current	2 A or more
Duty cycle to close throttle	80% or more

P2112 (Throttle actuator stuck closed):

All of following conditions met	-
System guard*	ON

Throttle actuator current	2 A or more
Duty cycle to open throttle	80% or more

TYPICAL MALFUNCTION THRESHOLDS

P2111 (Throttle actuator stuck open):

TP sensor voltage change	No change

P2112 (Throttle actuator stuck closed):

TP sensor voltage change	No change

FAIL-SAFE

When either of these DTCs, as well as other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, is set, the ECM (included in hybrid vehicle control ECU) enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the power switch is then turned off.

ES

WIRING DIAGRAM

Refer to DTC P2102 (See page ES-254).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2111 or P2112)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2111 or P2112	A
P2111 or P2112 and other DTCs	B

HINT:
If any DTCs other than P2111 or P2112 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	INSPECT THROTTLE BODY (VISUALLY CHECK THROTTLE VALVE)

(a) Check for contamination between the throttle valve and the housing. If necessary, clean the throttle body. And check that the throttle valve moves smoothly.
OK:
Throttle valve is not contaminated with foreign objects and moves smoothly.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

ES

3	CHECK WHETHER DTC OUTPUT RECURS (DTC P2111 OR P2112)

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-34).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-31).
(e) Put the engine in inspection mode (See page ES-35).
(f) Fully depress and release the accelerator pedal quickly (to fully open and close the throttle valve).
(g) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES
(h) Read the DTCs.

Result

Display (DTC Output)	Proceed to
No DTC	A
P2111 or P2112	B

B → **REPLACE HYBRID VEHICLE CONTROL ECU**

A

CHECK FOR INTERMITTENT PROBLEMS

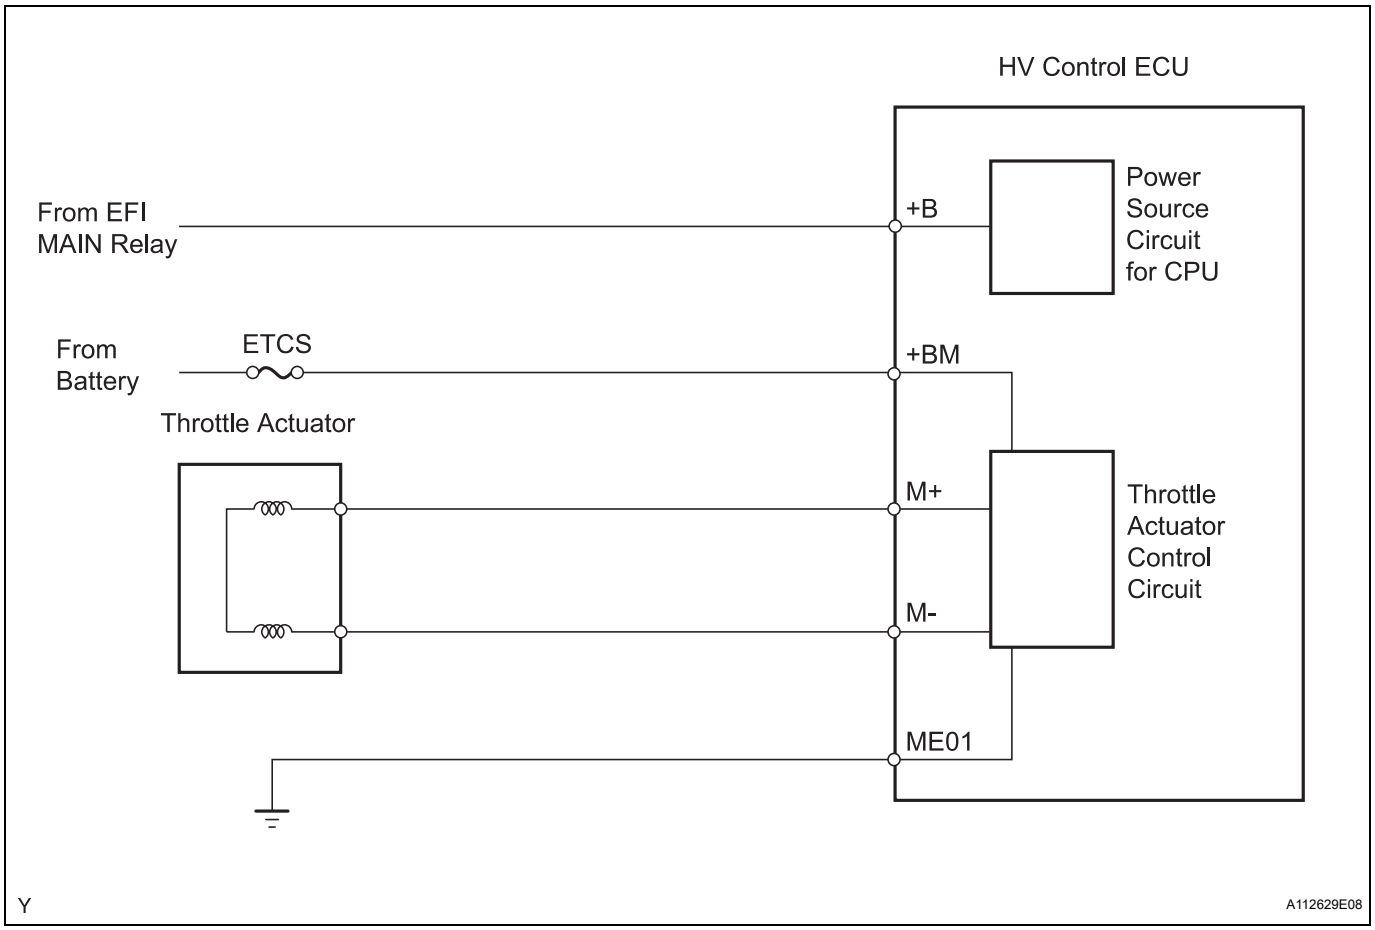
DTC	P2118	Throttle Actuator Control Motor Current Range / Performance

DESCRIPTION

The ETCS (Electronic Throttle Control System) has a dedicated power supply circuit. The voltage (+BM) is monitored and when it is low (less than 4 V), the ECM (included in hybrid vehicle control ECU) determines that there is a malfunction in the ETCS and cuts off the current to the throttle actuator. When the voltage becomes unstable, the ETCS itself becomes unstable. For this reason, when the voltage is low, the current to the throttle actuator is cut. If repairs are made and the system returns to normal, turn the power switch off. The ECM then allows the current to flow to the throttle actuator so that it can be restarted.

HINT:

The ETCS does not use a throttle cable.



DTC No.	DTC Detection Conditions	Trouble Areas
P2118	Open in ETCS power source (+BM) circuit (1-trip detection logic)	• Open in ETCS power source circuit • Battery • Battery terminals • ETCS fuse • Hybrid vehicle control ECU

MONITOR DESCRIPTION

The ECM monitors the battery supply voltage applied to the throttle actuator.

When the power supply voltage (+BM) drops below 4 V for 0.8 seconds or more, the ECM interprets this as an open in the power supply circuit (+BM). The ECM illuminates the MIL and sets the DTC.

If the malfunction is not repaired successfully, the DTC is set 5 seconds after the engine is next started.

MONITOR STRATEGY

Related DTCs	P2118: Throttle actuator power supply
Required Sensors/Components (Main)	Throttle actuator, throttle valve, ETCS fuse
Required Sensors/Components (Related)	None
Frequency of Operation	Continuous
Duration	0.8 seconds
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

ES

Monitor runs whenever following DTCs not present	None
Battery voltage	8 V or more
Electronic throttle actuator power	ON

TYPICAL MALFUNCTION THRESHOLDS

Throttle actuator power supply voltage (+BM)	Less than 4 V

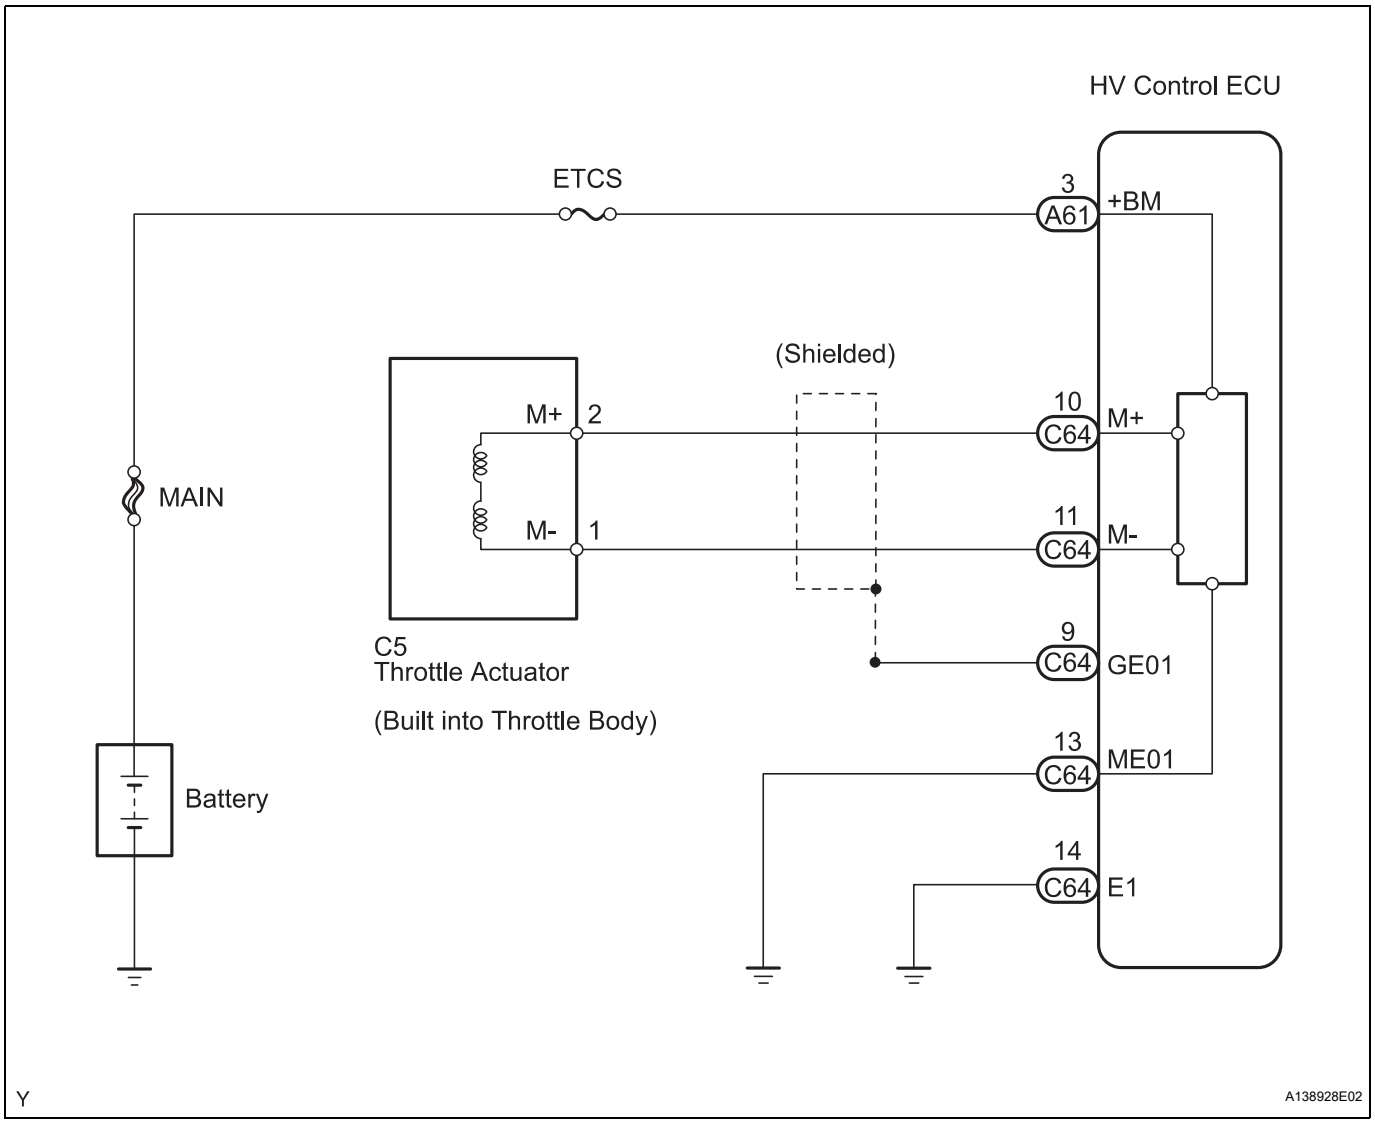
COMPONENT OPERATING RANGE

Throttle actuator power supply voltage (+BM)	9 to 14 V

FAIL-SAFE

When this DTC, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.
Fail-safe mode continues until a pass condition is detected, and the power switch is then turned off.

WIRING DIAGRAM



ES

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

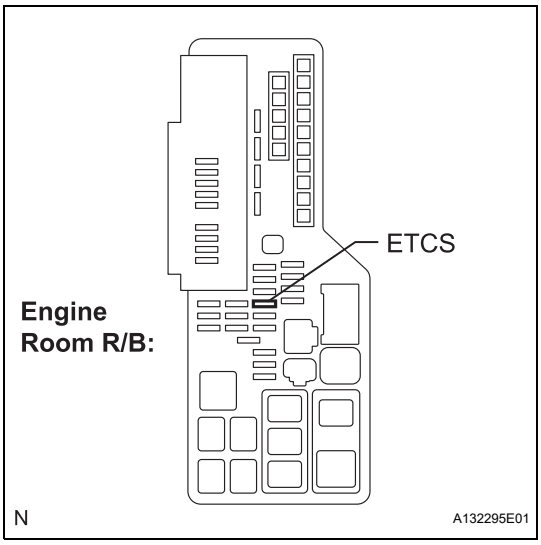
1	READ VALUE USING INTELLIGENT TESTER (+BM VOLTAGE)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / +BM VOLTAGE.
(e) Read the value displayed on the tester.
Standard voltage:
9 to 14 V

OK → Go to step 5

NG

2	CHECK FUSE (ETCS FUSE)



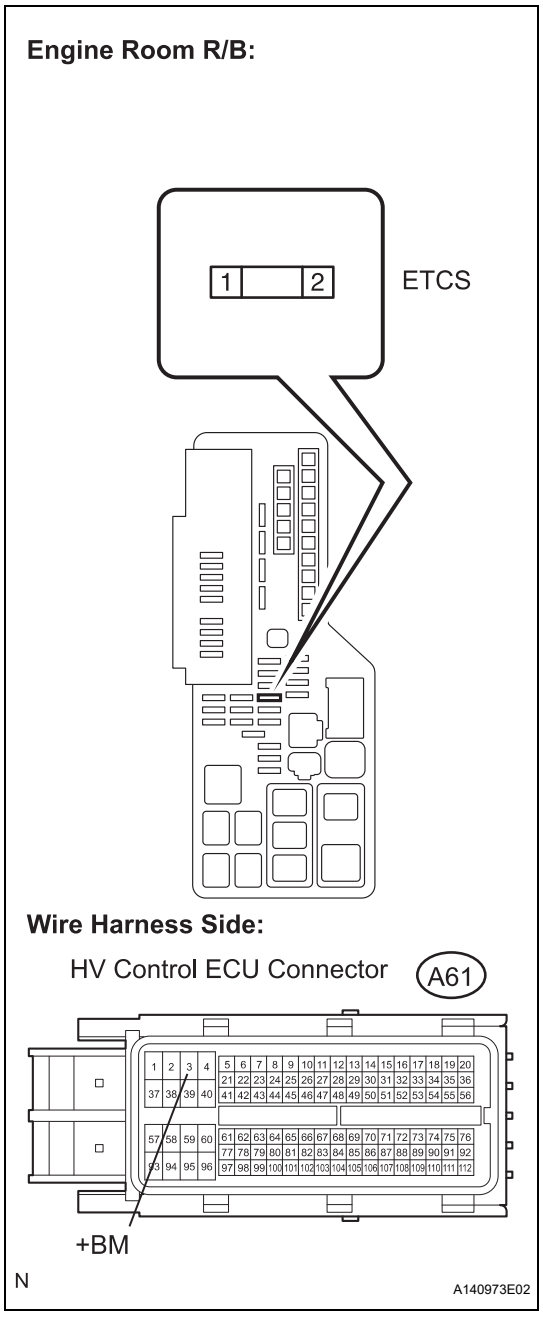
(a) Remove the ETCS fuse from the engine room R/B and J/B.
(b) Measure the ETCS fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the ETCS fuse.

NG → **CHECK FOR SHORTS IN ALL HARNESSES AND CONNECTORS CONNECTED TO FUSE AND REPLACE FUSE**

OK

ES

3	CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - ETCS FUSE, ETCS FUSE - BATTERY)



(a) Check the harness and connector between the ETCS fuse and hybrid vehicle control ECU.
  (1) Remove the ETCS fuse from the engine room relay block.
  (2) Disconnect the A61 hybrid vehicle control ECU connector.
  (3) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
2 (ETCS fuse) - A61-3 (+BM)	Below 1 Ω

Standard resistance (Check for short)

Tester Connections	Specified Conditions
2 (ETCS fuse) or A61-3 (+BM) - Body ground	10 kΩ or higher

  (4) Reinstall the ETCS fuse.
  (5) Reconnect the hybrid vehicle control ECU connector.

(b) Check the harness and connector between the ETCS fuse and positive battery cable.
  (1) Remove the ETCS fuse from the engine room relay block.
  (2) Disconnect the cable from the positive (+) battery terminal.
  (3) Measure the resistance.

Standard resistance (Check for open)

Tester Connections	Specified Conditions
Positive battery cable - 1 (ETCS fuse)	Below 1 Ω

Standard resistance (Check for short)

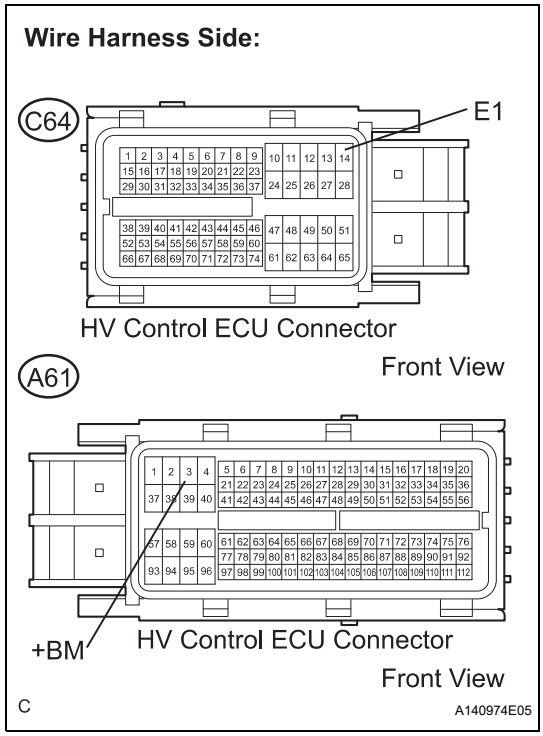
Tester Connections	Specified Conditions
Positive battery cable or 1 (ETCS fuse) - Body ground	10 kΩ or higher

  (4) Reinstall the ETCS fuse.
  (5) Reconnect the cable to the positive (+) battery terminal.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT HYBRID VEHICLE CONTROL ECU (+BM VOLTAGE)



(a) Disconnect the A61 and C64 hybrid vehicle control ECU connectors.

(b) Measure the voltage between the terminals of the A61 and C64 hybrid vehicle control ECU connectors.

Standard voltage

Tester Connections	Specified Conditions
A61-3 (+BM) - C64-14 (E1)	9 to 14 V

(c) Reconnect the hybrid vehicle control ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (TERMINAL E1 - BODY GROUND)**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

5	INSPECT BATTERY

(a) Check that the battery is not depleted.

OK:

Battery is not depleted

NG → **REPLACE BATTERY**

OK

6	CHECK BATTERY TERMINAL

(a) Check that the battery terminals and hybrid vehicle control ECU ground are not loose or corroded.

OK:

Battery terminals and hybrid vehicle control ECU ground are not loose or corroded

NG → **REPAIR OR REPLACE BATTERY TERMINAL**

OK

CHECK FOR INTERMITTENT PROBLEMS

DTC	P2119	Throttle Actuator Control Throttle Body Range / Performance

DESCRIPTION

The Electronic Throttle Control System (ETCS) is composed of the throttle actuator, Throttle Position (TP) sensor, Accelerator Pedal Position (APP) sensor, and ECM (included in hybrid vehicle control ECU). The ECM operates the throttle actuator to regulate the throttle valve in response to driver inputs. The TP sensor detects the opening angle of the throttle valve, and provides the ECM with feedback so that the throttle valve can be appropriately controlled by the ECM.

DTC No.	DTC Detection Conditions	Trouble Areas
P2119	Throttle valve opening angle continues to vary greatly from target opening angle (1-trip detection logic)	• ETCS • Hybrid vehicle control ECU

ES

MONITOR DESCRIPTION

The ECM determines the actual opening angle of the throttle valve from the TP sensor signal. The actual opening angle is compared to the target opening angle commanded by the ECM. If the difference between these two values is outside the standard range, the ECM interprets this as a malfunction in the ETCS. The ECM then illuminates the MIL and sets the DTC.
If the malfunction is not repaired successfully, the DTC is set when the accelerator pedal is quickly released (to close the throttle valve) after the engine speed reaches 5,000 rpm by the accelerator pedal being fully depressed (fully open the throttle valve).

MONITOR STRATEGY

Related DTCs	P2119: ETCS malfunction
Required Sensors/Components (Main)	Throttle actuator
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	Within 1 second
MIL Operation	Immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Monitor runs whenever following DTCs not present	None

TYPICAL MALFUNCTION THRESHOLDS

Either of following conditions A or B met	-
A. Difference between commanded closed throttle position and current closed throttle position	0.3 V or more for 1 second
B. Difference between commanded open throttle position and current open throttle position	0.3 V or more for 0.6 seconds

FAIL-SAFE

When this DTC, or other DTCs relating to ETCS (Electronic Throttle Control System) malfunctions, are set, the ECM enters fail-safe mode. During fail-safe mode, the ECM cuts the current to the throttle actuator off, and the throttle valve is returned to a 6° throttle angle by the return spring. The ECM then adjusts the engine output by controlling the fuel injection (intermittent fuel-cut) and ignition timing, in accordance with the accelerator pedal opening angle, to allow the vehicle to continue at a minimal speed. If the accelerator pedal is depressed gently, the vehicle can be driven slowly.

Fail-safe mode continues until a pass condition is detected, and the power switch is then turned off.

WIRING DIAGRAM

Refer to DTC P2102 (See page ES-254).

INSPECTION PROCEDURE

HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

ES

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2119)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2119	A
P2119 and other DTCs	B

HINT:
If any DTCs other than P2119 are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

2	CHECK WHETHER DTC OUTPUT RECURS (DTC P2119)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-31).
(e) Allow the engine to idle for 15 seconds.
CAUTION:
Exercise extreme care and take precautions in steps (f) and (g) below. Failure to do so may result in the vehicle unexpectedly rolling away.
(f) Securely apply the parking brake and move the gear selector lever to the D position.
(g) While depressing the brake pedal securely, fully depress the accelerator pedal for 5 seconds.
(h) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.

HINT:
The output voltage of the throttle position sensor can be checked during step (g) using the intelligent tester. Variations in the output voltage indicate that the throttle actuator is in operation. To check the output voltage using the intelligent tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE POS #1.
OK:
No DTC output.

(i) Read the DTCs.

NG → **REPLACE THROTTLE BODY ASSEMBLY**

CHECK FOR INTERMITTENT PROBLEMS

DTC	P2195	Oxygen (A/F) Sensor Signal Stuck Lean (Bank 1 Sensor 1)

DTC	P2196	Oxygen (A/F) Sensor Signal Stuck Rich (Bank 1 Sensor 1)

HINT:
- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.
- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

ES

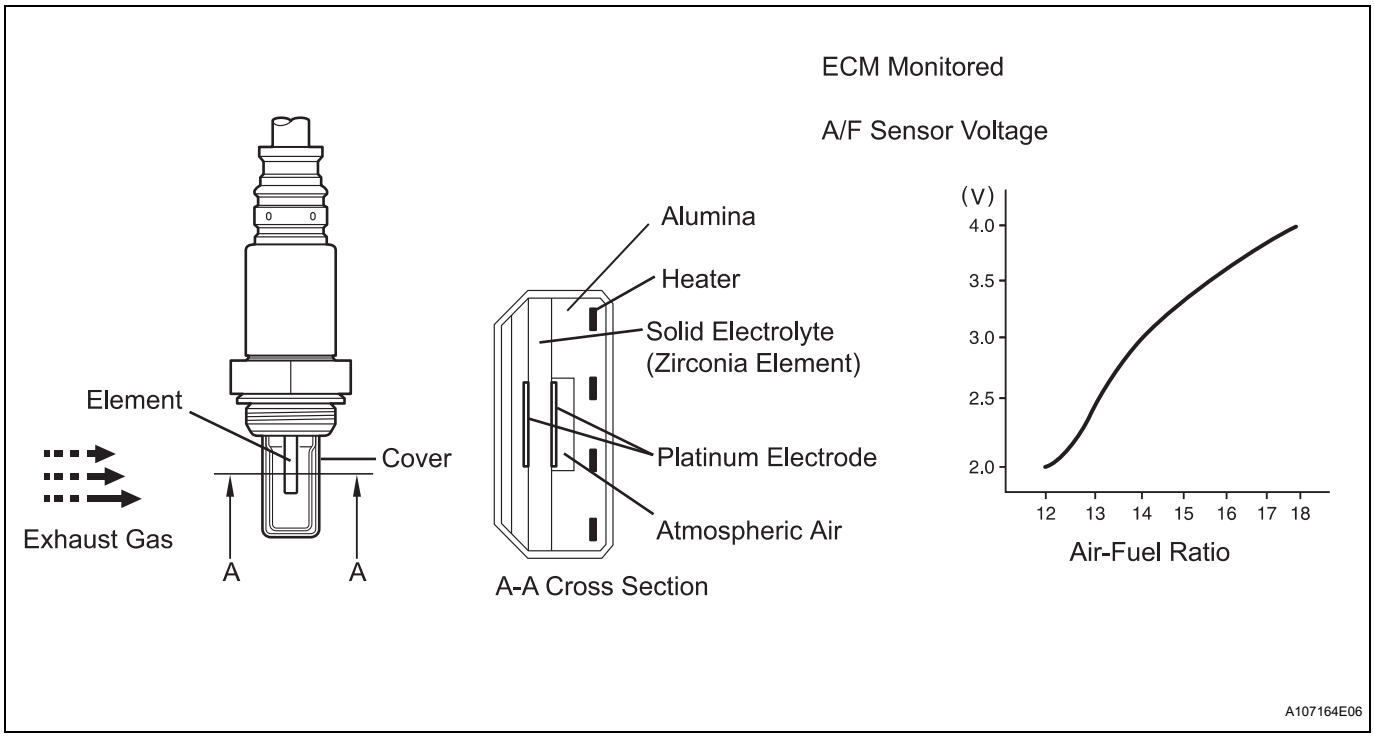
DESCRIPTION

The A/F sensor generates a voltage* that corresponds to the actual air-fuel ratio. This sensor voltage is used to provide the ECM (included in hybrid vehicle control ECU) with feedback so that it can control the air-fuel ratio. The ECM determines the deviation from the stoichiometric air-fuel ratio level, and regulates the fuel injection time. If the A/F sensor malfunctions, the ECM is unable to control the air-fuel ratio accurately.

The A/F sensor is of the planar type and is integrated with the heater, which heats the solid electrolyte (zirconia element). This heater is controlled by the ECM. When the intake air volume is low (the exhaust gas temperature is low), a current flows into the heater to heat the sensor, in order to facilitate accurate air-fuel ratio detection. In addition, the sensor and heater portions are narrower than the conventional type. The heat generated by the heater is conducted to the solid electrolyte through the alumina, therefore the sensor activation is accelerated.

A three-way catalytic converter (TWC) is used in order to convert the carbon monoxide (CO), hydrocarbon (HC), and nitrogen oxide (NOx) into less harmful substances. To allow the TWC to function effectively, it is necessary to keep the air-fuel ratio of the engine near the stoichiometric air-fuel ratio.

*: Value changes inside the ECM. Since the A/F sensor is the current output element, a current is converted into a voltage inside the ECM. Any measurements taken at the A/F sensor or ECM connectors will show a constant voltage.



DTC No.	DTC Detection Conditions	Trouble Areas
P2195	Conditions (a) and (b) continue for 10 seconds or more (2-trip detection logic): (a) A/F sensor voltage more than 3.8 V (b) Heated Oxygen (HO2) sensor voltage 0.15 V or more	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI MAIN relay) • A/F sensor heater and EFI MAIN relay circuits • Hybrid vehicle control ECU
	While fuel-cut operation performed (during vehicle deceleration), A/F sensor current 3.6 mA or more for 3 seconds (2-trip detection logic)	• A/F sensor • Hybrid vehicle control ECU
P2196	Conditions (a) and (b) continue for 10 seconds or more (2-trip detection logic): (a) A/F sensor voltage less than 2.8 V for 10 seconds (b) HO2 sensor voltage less than 0.6 V	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI MAIN relay) • A/F sensor heater and EFI MAIN relay circuits • Hybrid vehicle control ECU
	While fuel-cut operation performed (during vehicle deceleration), A/F sensor current less than 1.0 mA for 3 seconds (2-trip detection logic)	• A/F sensor • Hybrid vehicle control ECU

ES

HINT:
- When either of these DTCs is set, check the A/F sensor output voltage by selecting the following menu items on the intelligent tester: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / AFS B1 S1.
- Short-term fuel trim values can also be read using the intelligent tester.
- The ECM regulates the voltages at the A1A+ and A1A- terminals of the ECM to a constant level. Therefore, the A/F sensor output voltage cannot be confirmed without using the intelligent tester.
- If the A/F sensor is malfunctioning, the ECM sets DTC P2195 or P2196.

MONITOR DESCRIPTION

Sensor voltage detection monitor

Under the air-fuel ratio feedback control, if the A/F sensor output voltage indicates rich or lean for a certain period of time, the ECM determines that there is a malfunction in the A/F sensor. The ECM illuminates the MIL and sets a DTC.

Example:

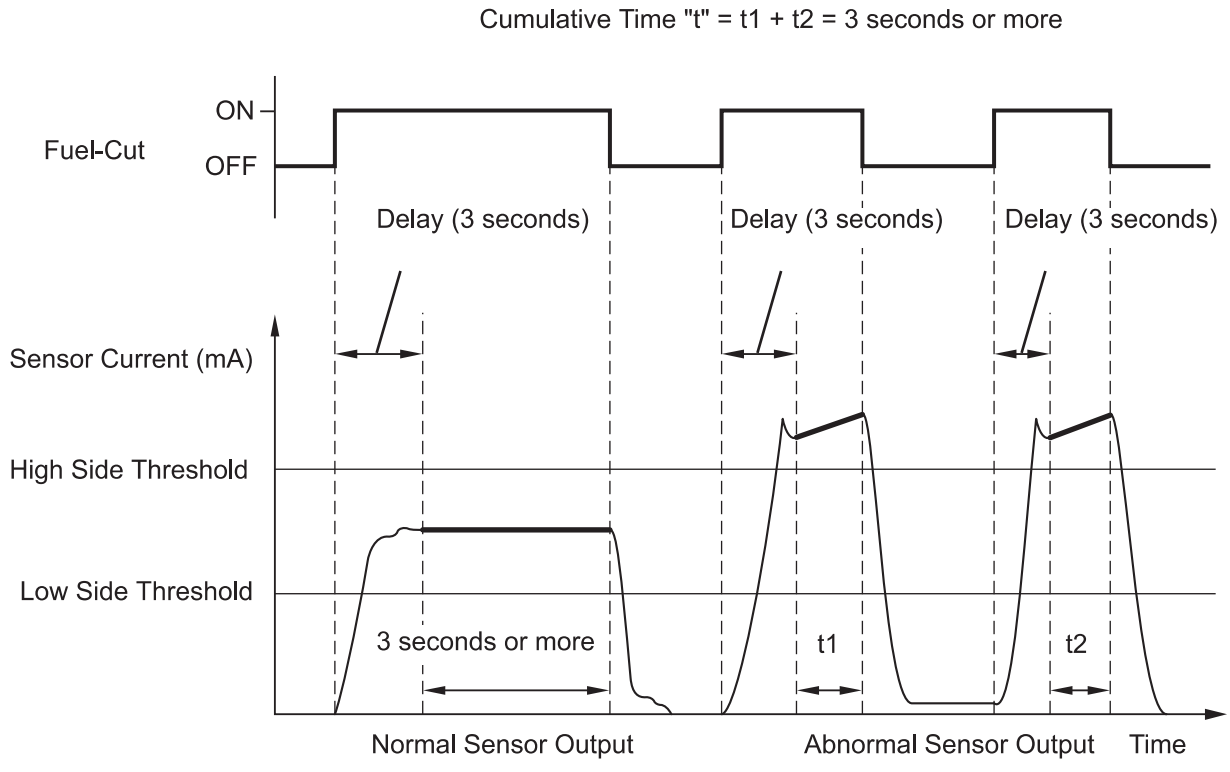
If the A/F sensor output voltage is less than 2.8 V (very rich condition) for 10 seconds, despite the rear HO2 sensor output voltage being less than 0.6 V, the ECM sets DTC P2196. Alternatively, if the A/F sensor output voltage is more than 3.8 V (very lean condition) for 10 seconds, despite the rear HO2 sensor output voltage being 0.15 V or more, DTC P2195 is set.

Sensor current detection monitor

A rich air-fuel mixture causes a low A/F sensor current, and a lean air-fuel mixture causes a high A/F sensor current. Therefore, the sensor output becomes low during acceleration, and it becomes high during deceleration with the throttle valve fully closed. The ECM monitors the A/F sensor current during fuel-cut and detects any abnormal current values.

If the A/F sensor output is 3.6 mA or more for more than 3 seconds of cumulative time, the ECM interprets this as a malfunction in the A/F sensor and sets DTC P2195 (high-side stuck). If the A/F sensor output is less than 1.0 mA for more than 3 seconds of cumulative time, the ECM sets DTC P2196 (low-side stuck).

A/F Sensor Current Monitor:



MONITOR STRATEGY

Related DTCs	P2195: A/F sensor signal stuck lean P2196: A/F sensor signal stuck rich
Required Sensors/Components (Main)	A/F sensor

Monitor runs whenever following DTCs not present	P0031, P0032 (A/F sensor heater - Sensor 1) P0037, P0038 (O2 sensor heater - Sensor 2) P0100 - P0103 (MAF meter) P0110 - P0113 (IAT sensor) P0115 - P0118 (ECT sensor) P0120 - P0223, P2135 (TP sensor) P0125 (Insufficient ECT for Closed Loop) P0136 (O2 Sensor - Sensor 2) P0171, P0172 (Fuel system) P0300 - P0304 (Misfire) P0335 (CKP sensor) P0340 (CMP sensor) P0455, P0456 (EVAP system) P0500 (VSS)

Sensor voltage detection monitor (Lean side malfunction P2195):

Duration while all of following conditions met	2 seconds or more
Rear HO2 sensor voltage	0.15 V or more
Time after engine start	30 seconds or more
A/F sensor status	Activated
Fuel system status	Closed-loop
Engine	Running

Sensor voltage detection monitor (Rich side malfunction P2196):

Duration while all of following conditions met	2 seconds or more
Rear HO2 sensor voltage	Below 0.6 V
Time after engine start	30 seconds or more
A/F sensor status	Activated
Fuel system status	Closed-loop
Engine	Running

Sensor current detection monitor P2195 and P2196:

Battery voltage	11 V or more
Atmospheric pressure	76 kPa (570 mmHg) or more
A/F sensor status	Activated
Continuous time of fuel cut	3 to 10 seconds
ECT	75°C (167°F) or more

TYPICAL MALFUNCTION THRESHOLDS

Sensor voltage detection monitor (Lean side malfunction P2195):

A/F sensor voltage	More than 3.8 V for 10 seconds

Sensor voltage detection monitor (Rich side malfunction P2196):

A/F sensor voltage	Less than 2.8 V for 10 seconds

Sensor current detection monitor (High side malfunction P2195):

A/F sensor current during fuel cut	3.6 mA or more

Sensor current detection monitor (Rich side malfunction P2196):

A/F sensor current during fuel cut	Less than 1 mA

MONITOR RESULT

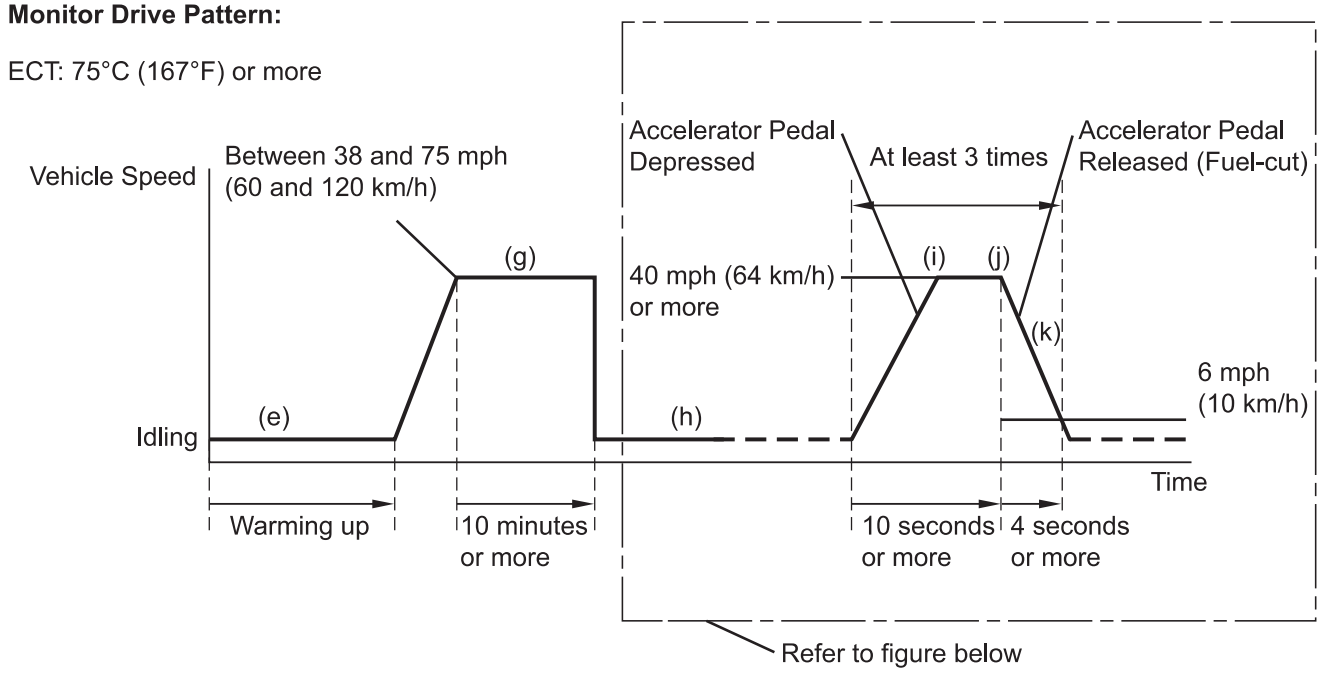
CONFIRMATION DRIVING PATTERN

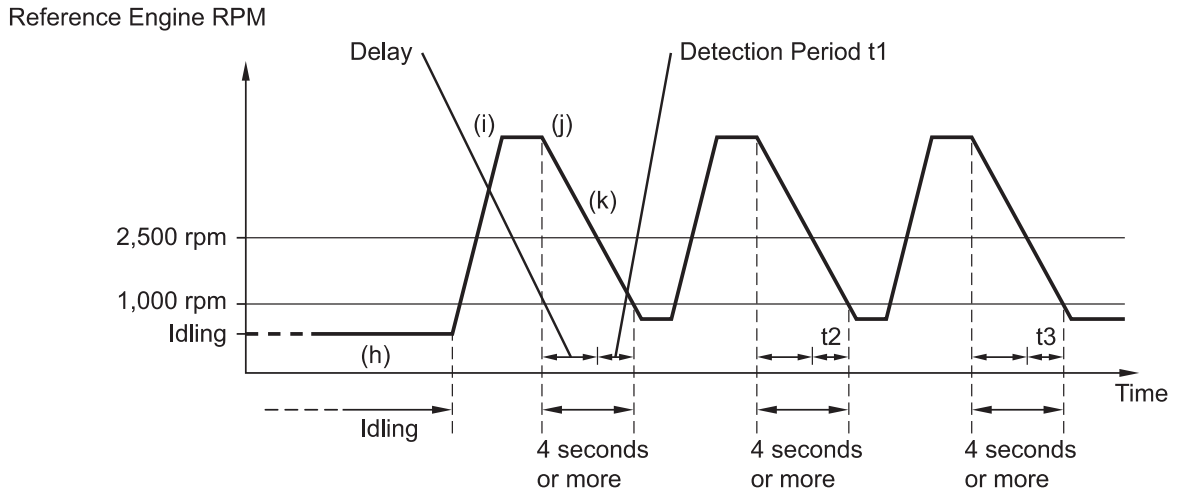
This confirmation driving pattern is used in the "PERFORM CONFIRMATION DRIVING PATTERN" procedure of the following diagnostic troubleshooting procedure.

Monitor Drive Pattern:



Driving Pattern Detail for (h) through (k):

Cumulative Detection Period "t" = t1 + t2 + t3 = 3 seconds or more



(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (See page ES-31).
(e) Put the engine in inspection mode (See page ES-35), warm it up until the ECT reaches 75°C (167°F) or higher.
(f) On the intelligent tester, select the following menu items to check the fuel-cut status: DIAGNOSIS / ENHANCED OBD II / DATA LIST / USER DATA / FC IDL.
(g) Drive the vehicle at between 38 mph (60 km/h) and 75 mph (120 km/h) for at least 10 minutes.
(h) Change the transmission to the 2nd gear.

(i) Drive the vehicle at a proper vehicle speed to perform fuel-cut operation.
HINT:
Fuel-cut is performed when the following conditions are met:
- Accelerator pedal is fully released.
- Engine speed is 2,500 rpm or more (fuel injection resumes at 1,000 rpm).

(j) Accelerate the vehicle to 40 mph (64 km/h) or more by depressing the accelerator pedal for at least 10 seconds.
(k) Soon after performing step (j) above, release the accelerator pedal for at least 4 seconds without depressing the brake pedal, in order to execute fuel-cut control.
(l) Allow the vehicle to decelerate until the vehicle speed declines to less than 6 mph (10 km/h).
(m) Repeat steps from (h) through (k) above at least 3 times in one driving cycle.
HINT:
Completion of all A/F sensor monitors is required to change the value in TEST RESULT.
CAUTION:
Strictly observe posted speed limits, traffic laws, and road conditions when performing these drive patterns.

INSPECTION PROCEDURE

HINT:
Intelligent tester only:
Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.
The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.
(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(f) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
(g) Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.
HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volume	Status	Voltages
AFS B1 S1 (A/F)	+25%	Rich	Less than 3.0
	-12.5%	Lean	More than 3.35
O2S B1 S2 (HO2)	+25%	Rich	More than 0.5
	-12.5%	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor (sensor 2) output has a maximum output delay of approximately of 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2, and press the YES button and then the ENTER button followed by the F4 button.
HINT:

- DTC P2A00 may be set when the air-fuel ratio is stuck rich or lean.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.

1	CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO P2195 OR P2196)

(a) Connect an intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to
P2195 or P2196	A
P2195 or P2196 and other DTCs	B

HINT:
If any DTCs relating to the A/F sensor (DTCs for the A/F sensor heater or A/F sensor admittance) are output, troubleshoot those DTCs first.

B → GO TO DTC CHART

A

ES

2 READ VALUE USING INTELLIGENT TESTER (TEST VALUE OF A/F SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Clear the DTCs (See page ES-31).
(d) Drive the vehicle in accordance with the drive pattern described in CONFIRMATION DRIVING PATTERN.
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR STATUS.
(f) Check that the status of O2S MON is COMPL.
If the status is still INCMPL, drive the vehicle according to the driving pattern again.
HINT:
- AVAIL indicates that the component has not been monitored yet.
- COMPL indicates that the component is functioning normally.
- INCMPL indicates that the component is malfunctioning.

(g) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / TEST RESULT / RANGE B1 S1; then press the ENTER button.
(h) Check the test value of the A/F sensor output current during fuel-cut.

Result

Test Value	Proceed to
Within normal range (1.0 mA or more, and less than 3.6 mA)	A
Outside normal range (Less than 1.0 mA, or 3.6 mA or more)	B

B → Go to step 12

A

3 READ VALUE USING INTELLIGENT TESTER (OUTPUT VOLTAGE OF A/F SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.

(d) Warm up the A/F sensor at an engine speed of 2,500 rpm for 90 seconds.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / SNAPSHOT / MANUAL SNAPSHOT / USER DATA / AFS B1 S1 and ENGINE SPD.
(f) Check the A/F sensor voltage 3 times, when the engine is in each of the following conditions:
(1) While idling (check for at least 30 seconds)
(2) At an engine speed of approximately 2,500 rpm (without any sudden changes in engine speed)
(3) Drive the vehicle at a constant speed of between 40 mph and 70 mph (65 km/h and 113 km/h) and then quickly release the accelerator pedal so that the throttle valve is fully closed.

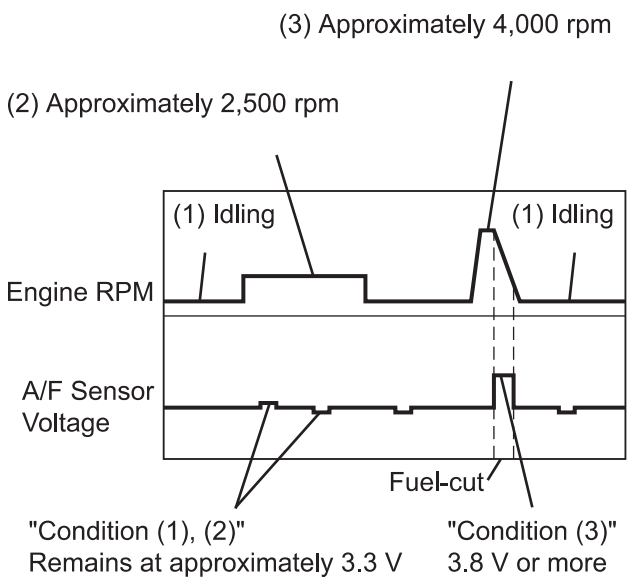
ES

Standard voltage

Conditions	A/F Sensor Voltage Variations	Reference
(1) and (2)	Remains at approximately 3.3 V	Between 3.1 V and 3.5 V
(3)	Increases to 3.8 V or more	This occurs during engine deceleration (when fuel-cut performed)

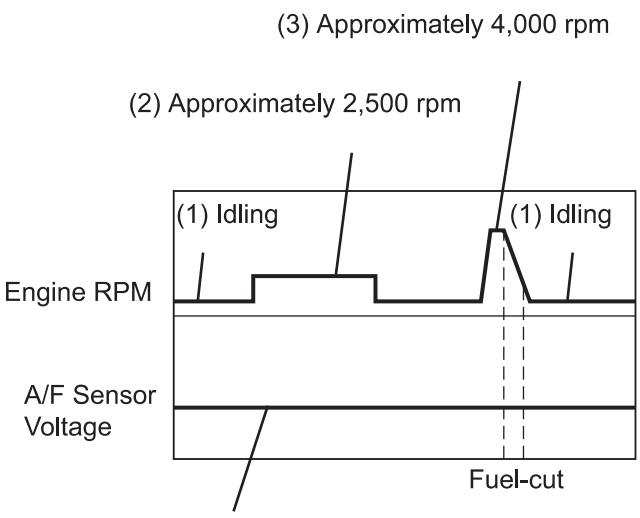
HINT:
- For more information, see the diagrams below.

Normal Condition:



N

Malfunction Condition:



A107161E17

- If the output voltage of the A/F sensor remains at approximately 3.3 V (see Malfunction Condition diagram) under any conditions, including those above, the A/F sensor may have an open circuit. (This will also happen if the A/F sensor heater has an open circuit.)

- If the output voltage of the A/F sensor remains at either approximately 3.8 V or more, or 2.8 V or less (see Malfunction Condition diagram) under any conditions, including those above, the A/F sensor may have a short circuit.
- The ECM stops fuel injection (fuel cut) during engine deceleration. This causes a lean condition and results in a momentary increase in the A/F sensor output voltage.
- The ECM must establish a closed throttle valve position learning value to perform fuel cut. If the battery terminal has been reconnected, the vehicle must be driven over 10 mph (16 km/h) to allow the ECM to learn the closed throttle valve position.
- When the vehicle is driven:
  The output voltage of the A/F sensor may be below 2.8 V during fuel enrichment. For the vehicle, this is translated to a sudden increase in speed with the accelerator pedal fully depressed when trying to overtake another vehicle. The A/F sensor is functioning normally.
- The A/F sensor is a current output element; therefore, the current is converted into a voltage inside the ECM. Measuring the voltage at the connectors of the A/F sensor or ECM will show a constant voltage result.

P2253	AF- voltage more than 4.5 V for 5.0 seconds or more (2-trip detection logic)	• Open or short in A/F sensor (sensor 1) circuit • A/F sensor (sensor 1) • A/F sensor heater (sensor 1) • Integration relay (EFI MAIN relay) • A/F sensor heater and EFI MAIN relay circuits • Hybrid vehicle control ECU

MONITOR DESCRIPTION

The Air-Fuel Ratio (A/F) sensor varies its output voltage in proportion to the air-fuel ratio. If the A/F sensor impedance (alternating current resistance) or output voltage deviates greatly from the standard range, the ECM determines that there is an open or short in the A/F sensor circuit.

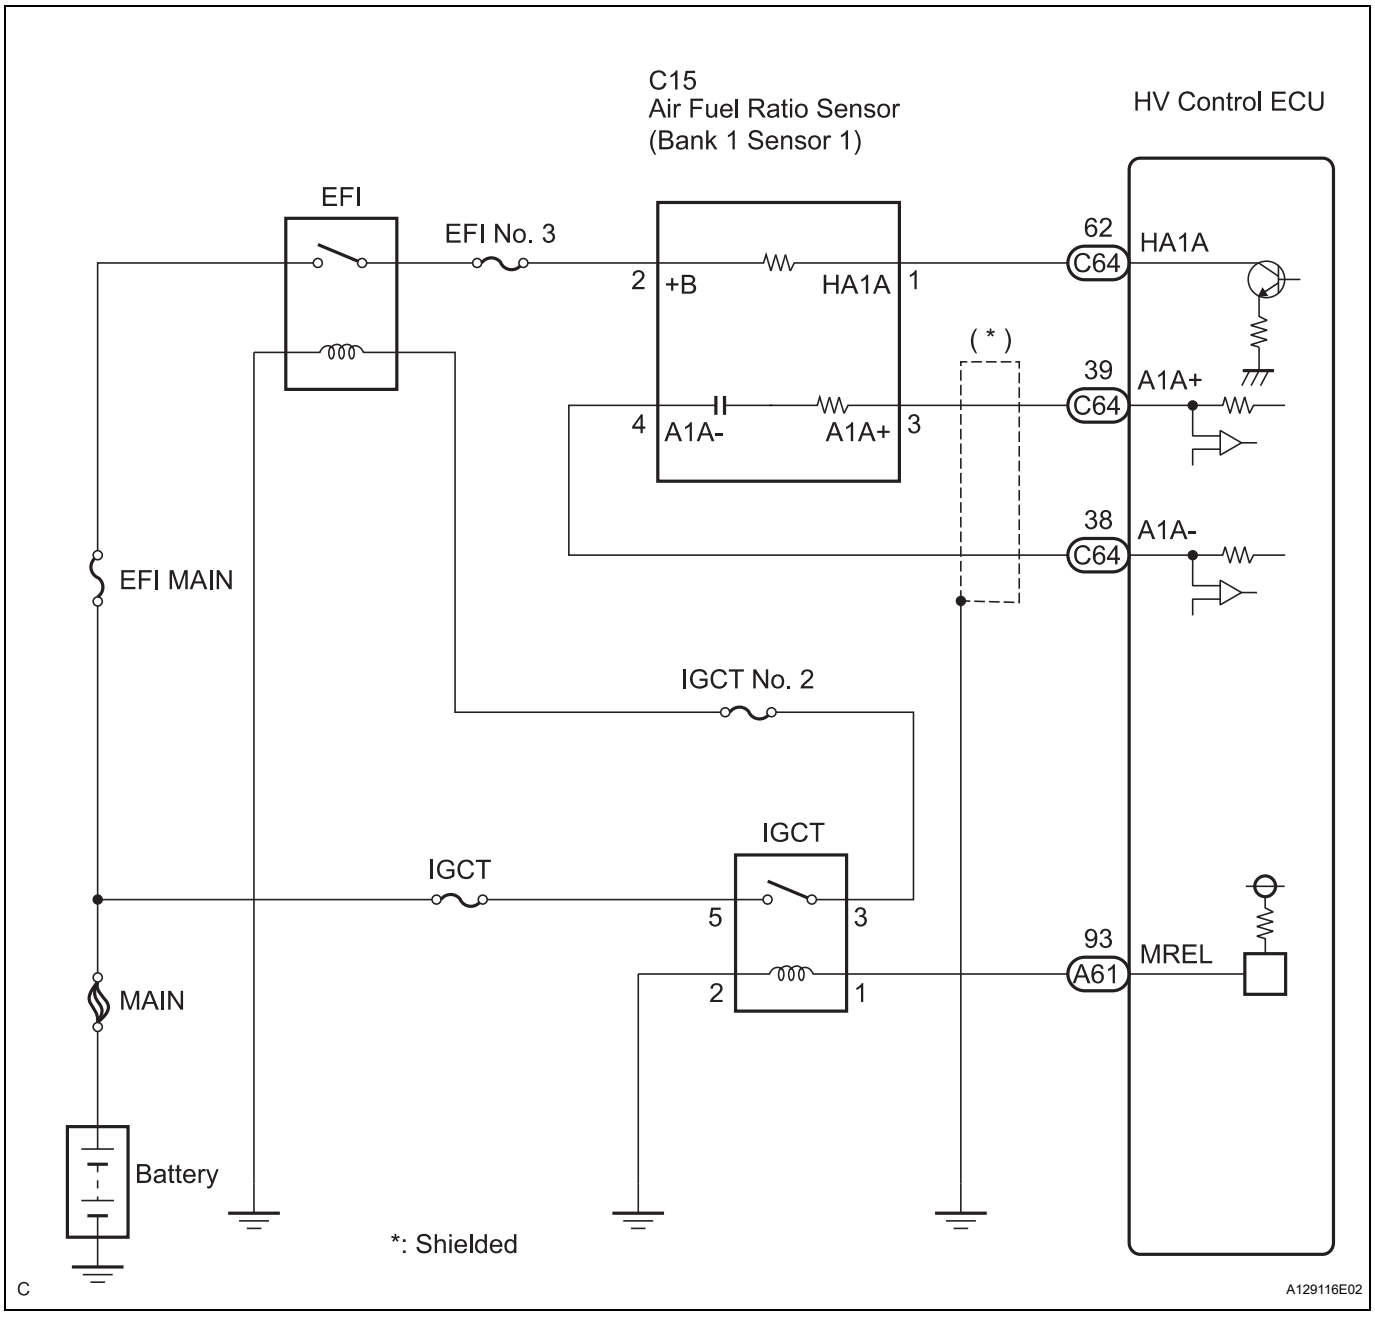
AF- terminal voltage	More than 4.5 V

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- Although the DTC titles say oxygen sensor, these DTCs relate to the Air-Fuel Ratio (A/F) sensor.

- Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

HINT:
Intelligent tester only:
Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.
The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.
(a) Connect the intelligent tester to the DLC3.
(b) Put the engine in inspection mode (See page ES-35).
(c) Turn the tester on.
(d) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.
(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(f) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
(g) Monitor the output voltages of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.

HINT:
- The A/F CONTROL operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volume	Status	Voltages
AFS B1 S1 (A/F)	+25%	Rich	Less than 3.0
	-12.5%	Lean	More than 3.35
O2S B1 S2 (HO2)	+25%	Rich	More than 0.5
	-12.5%	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
3	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output Voltage Almost no reaction		

ES

Following the A/F CONTROL procedure enables technicians to check and graph the output voltages of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2; then press the YES button and then the ENTER button followed by the F4 button.
HINT:
Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	**INSPECT AIR-FUEL RATIO SENSOR (HEATER RESISTANCE) (See page ES-75)**

DTC	P2420	Evaporative Emission System Switching Valve Control Circuit High

DTC SUMMARY

DTCs	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection Logic
P2420	Vent valve stuck open (vent)	Vent valve open stuck is detected during EVAP key-off monitor	• Canister pump module (Reference orifice, leak detection pump, vent valve) • Connector / wire harness (Canister pump module - Hybrid vehicle control ECU) • Hybrid vehicle control ECU	Power switch OFF	2-trips

ES

DESCRIPTION

The description can be found in EVAP (Evaporative Emission) System (See page ES-317).

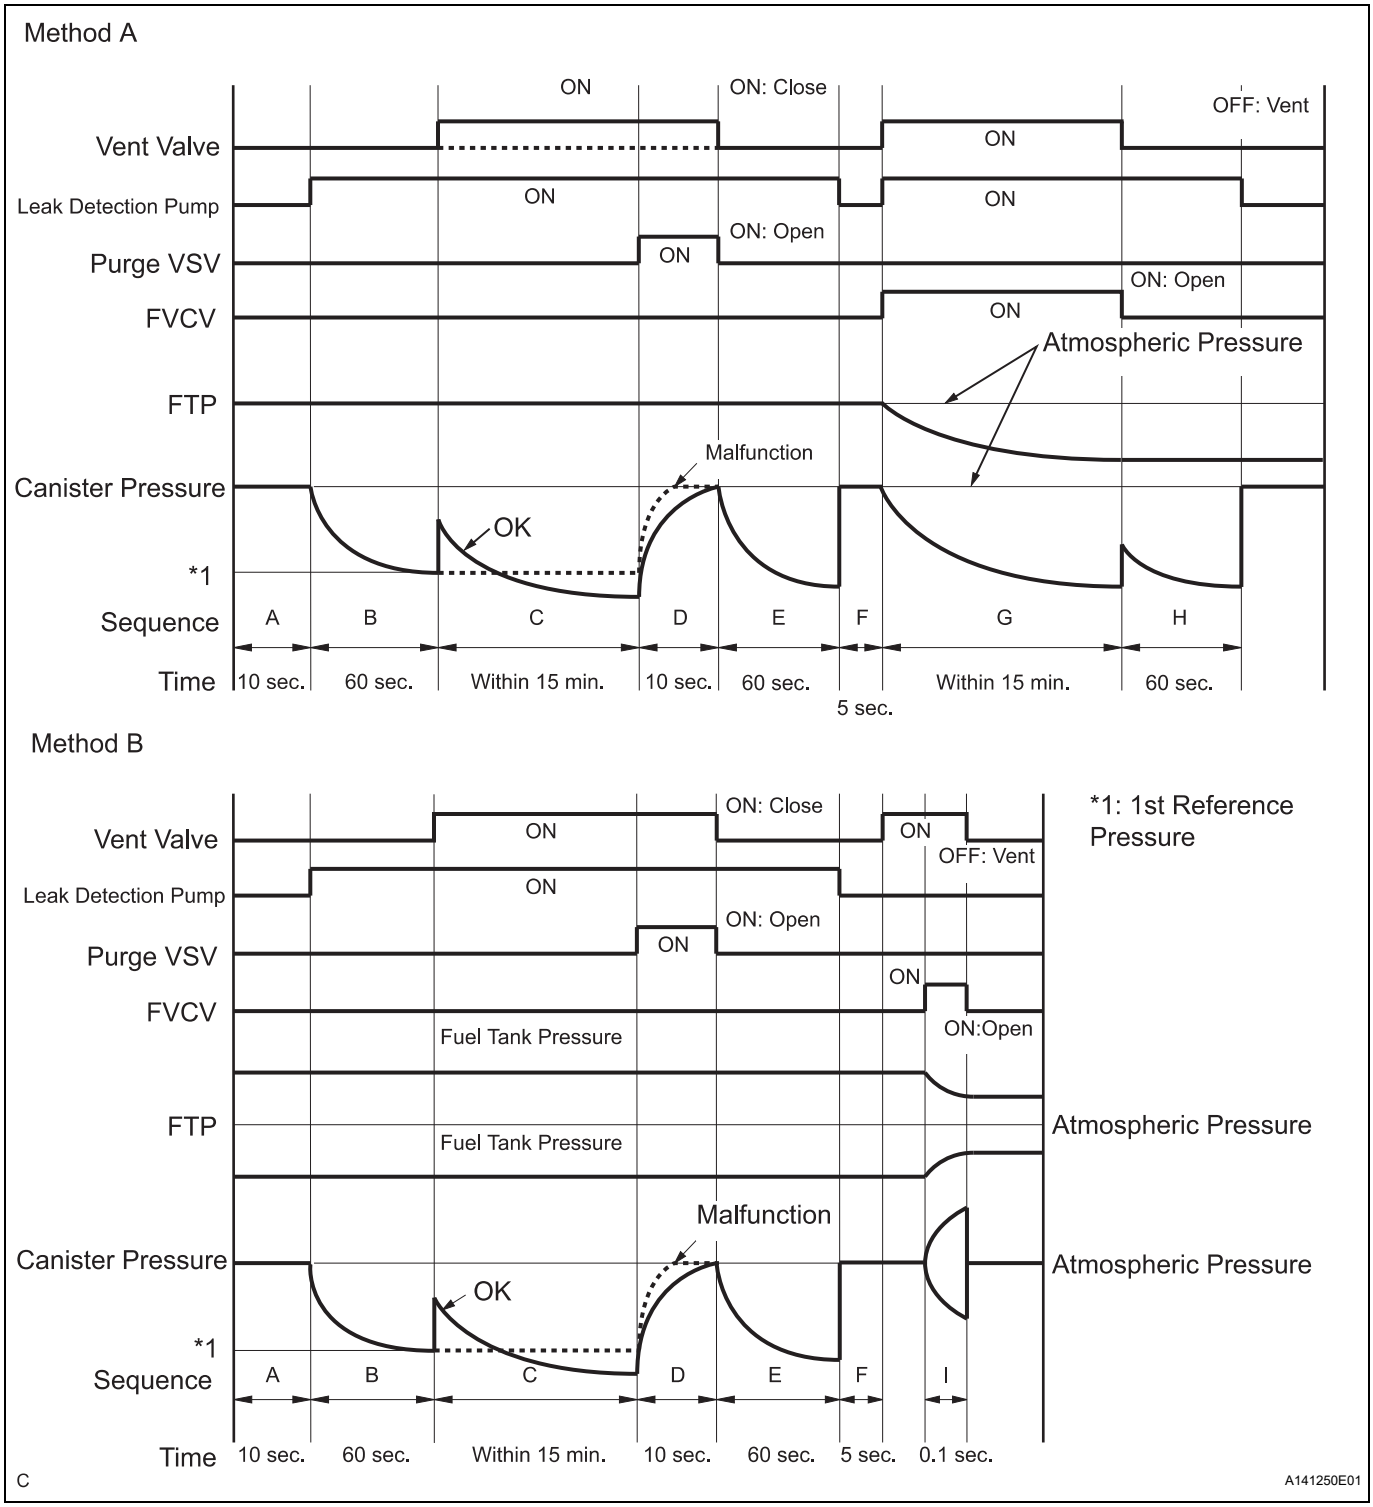
INSPECTION PROCEDURE

Refer to EVAP System (See page ES-328).

MONITOR DESCRIPTION

Vent valve stuck open (vent)

In operation C, the vent valve turns ON (closes) and the EVAP system pressure is then measured by the ECM, using the canister pressure sensor, to conduct an EVAP leak check. If the pressure does not increase when the vent valve is open, the ECM interprets this as the vent valve being stuck open. The ECM illuminates the MIL and sets the DTC.



MONITOR STRATEGY

Required Sensors/Components (Main)	Purge VSV and canister pump module
Frequency of Operation	Once per driving cycle
Duration	Within 15 minutes
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever these DTCs are not present	-
EVAP key-off monitor runs when all of the following conditions are met:	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Power switch	OFF
Engine condition	Not running
Canister pressure sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
FTP sensor malfunction (P1451, P1452 and P1453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of the following conditions are met before power switch OFF	Conditions 1 and 2
1. Duration that vehicle is being driven	5 minutes or more
2. Purge flow	Executed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)
Time after engine stopped	5 hours

Example of restart time

First time	7 hours
Second time	9 hours and 30 minutes

Key-off monitor sequence 1 to 15

1. Atmospheric pressure measurement

Next sequence is run if the following condition is met:	-
Atmospheric pressure change for 10 seconds	Less than 0.3 kPa (2.25 mmHg) for 1 second

2. First reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.38 to -7.93 mmHg)
3. Reference pressure	Saturated

3. Vent valve stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after vent valve ON (Closed)	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction for canister

Next sequence is run if the following condition is met:	-
Vacuum introduction time	15 minutes or less

5. Purge VSV stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after Purge VSV ON (Open).	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3 and 4
1. EVAP pressure 1.9 sec. after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated

4. Reference pressure difference between the first and second	Less than 0.7 kPa (5.25 mmHg)

7. Canister leak

Next sequence is run if the following condition is met:	-
Canister leak when vacuum introduction was complete	Second reference pressure or less

8. Fuel vapor-containment valve (FVCV stuck closed check)

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 kPa (-15 mmHg) or less, or 3 kPa (22.5 mmHg) or more
2. FTP change while FVCV and vent valve are open	0.5 kPa (3.75 mmHg) or more

9. Vacuum introduction for fuel tank

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 to 3 kPa (-15 to 22.5 mmHg)
2. Vacuum introduction time	15 minutes or less

ES

10. FVCV stuck closed check

Next sequence is run if the following condition is met:	
FTP change when vacuum introduction for fuel tank	0.5 kPa (3.75 mmHg)

11. FTP sensor stuck check

Next sequence is run if the following condition is met:	
FTP change when FVCV closed	0.35 kPa (2.6 mmHg) or less

12 Third reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3, and 4
1. FTP 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the second and third	Less than 0.7 kPa (5.25 mmHg)

13. Fuel tank leak check

Sequence is run if the following condition is met:	
FTP when vacuum introduction for fuel tank was complete	Less than third reference pressure

14. FTP sensor stuck check

Next sequence is run if the following condition is met:	-
FTP change while FVCV and vent valve are open	Less than 0.3 kPa (2.25 mmHg)

15. Atmospheric pressure measurement

Monitor is complete if the following condition is met:	-
Atmospheric pressure difference between sequence 1 and 8	0.35 kPa (2.6 mmHg) or less

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa (2.14 mmHg) in 60 seconds.

Vent valve stuck open (vent)

EVAP pressure change after EVAP canister vent valve is ON	Less than 0.3 kPa (2.25 mmHg)

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-325).

DTC	P2450	Fuel Vapor-containment Valve Stuck Open

DTC	P2451	Fuel Vapor-containment Valve Stuck Close

DTC SUMMARY

DTC No.	Monitoring Item	DTC Detection Condition	Trouble Area	Detection Timing	Detection Logic
P2450	Fuel vapor-containment valve stuck open	One of the following condition is met when FTP is between -2 kPa (-15 mmHg) and 3 kPa (22.5 mmHg). • FTP change when vacuum introduction for fuel tank is less than 0.5 kPa (3.75 mmHg) • EVAP pressure change when FVCV is open is less than 0.9 kPa (6.75 mmHg)	• Fuel vapor-containment valve • Connector / wire harness (Fuel vapor-containment valve - Hybrid Vehicle Control ECU) • Hybrid vehicle control ECU	Power switch off	2-trips
P2451	Fuel vapor-containment valve stuck closed	One of the following conditions are met when FTP is between -2 kPa (-15 mmHg) and 3 kPa (22.5 mmHg). • FTP change when vacuum introduction for canister is less than 0.5 kPa (3.75 mmHg) • EVAP pressure when vacuum introduction for canister was complete is higher than (third reference pressure x 0.2)	• Fuel vapor-containment valve • Connector / wire harness (Fuel vapor-containment valve - Hybrid Vehicle Control ECU • Hybrid vehicle control ECU	Power switch off	2-trips

DESCRIPTION

Refer to EVAP System (See page ES-317).

MONITOR DESCRIPTION

1. P2450: Fuel vapor-containment valve (FVCV) stuck open
   During sequence C, the vacuum pump creates vacuum pressure in the EVAP system. If the pressure in the fuel tank drops, the ECM (included in hybrid vehicle control ECU) determines that the fuel vapor-containment valve is stuck open. The ECM then illuminates the MIL and sets the DTC. (This DTC is set according to 2-trip detection logic.)

2. P2451: Fuel vapor-containment valve (FVCV) stuck closed (vent)
During sequence G, the fuel vapor-containment valve opens to allow vacuum pressure generated by the vacuum pump into the fuel tank. If the pressure in the fuel tank does not drop, the ECM determines that the fuel vapor-containment valve is stuck closed. The ECM then illuminates the MIL and sets the DTC. (This DTC is set according to 2-trip detection logic.)
During sequence I, the fuel vapor-containment valve opens to allow atmospheric pressure into the fuel tank. If there is no change in fuel tank pressure, the ECM determines that the fuel vapor-containment valve is stuck closed. The ECM then illuminates the MIL and sets the DTC. (This DTC is set according to 2-trip detection logic.)

MONITOR STRATEGY

Required Sensors/Components	Pump module
Frequency of Operation	Once per driving cycle: P0451 sensor constant voltage Continuous: P0451 sensor abnormal voltage fluctuation, P0450, P0452 and P0453
Duration	0.5 seconds: P0450, P0452, P0453 Within 15 seconds: P0451
MIL Operation	Immediate: P0450, P0452, P0453 2 driving cycles: P0451
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

EVAP key-off monitor runs when all of the following conditions are met:	-
Atmospheric pressure	70 to 110 kPa (525 to 825 mmHg)
Battery voltage	10.5 V or more
Vehicle speed	Below 2.5 mph (4 km/h)
Power switch	OFF
FTP sensor malfunction (P0450, P0451, P0452 and P0453)	Not detected
Purge VSV	Not operated by scan tool
Vent valve	Not operated by scan tool
Leak detection pump	Not operated by scan tool
Both of the following conditions are met before power switch OFF:	Conditions 1 and 2
1. Duration that vehicle is being driven	5 minutes or more
2. EVAP purge operation	Performed
ECT	4.4 to 35°C (40 to 95°F)
IAT	4.4 to 35°C (40 to 95°F)
Time after engine stop	5 hours

Example of restart time:

First time	7 hours
Second time	9 hours and 30 minutes

Key-off monitor sequence 1 to 15

1. Atmospheric pressure measurement

Next sequence is run if the following condition is met:	-
Atmospheric pressure change for 10 seconds	Less than 0.3 kPa (2.25 mmHg) for 1 second

2. First reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2 and 3
1. EVAP pressure 1.9 seconds after reference pressure measurement	-1 kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.38 to -7.93 mmHg)
3. Reference pressure	Saturated

3. Vent valve stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after vent valve ON (Closed)	0.3 kPa (2.25 mmHg) or more

4. Vacuum introduction for canister

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. Vacuum introduction time	15 minutes or less
2. FTP	Saturated

5. Purge VSV stuck closed check

Next sequence is run if the following condition is met:	-
EVAP pressure change for 10 seconds after purge VSV ON (Open)	0.3 kPa (2.25 mmHg) or more

6. Second reference pressure measurement

Next sequence is run if all of the following conditions are met:	Conditions 1, 2, 3 and 4
1. EVAP pressure 1.9 sec. after reference pressure measurement	-1kPa (-7.5 mmHg) or less
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.92 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the first and second	0.7 kPa (5.25 mmHg) or less

7. Canister leak

Next sequence is run if the following condition is met:	-
Canister leak when vacuum introduction was complete	Second reference pressure or less

8. Fuel vapor-containment valve (FVCV stuck closed check)

Sequence 14 is run if all of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 kPa (-15 mmHg) or less, or 3 kPa (22.5 mmHg) or more
2. FTP change while FVCV and vent valve are open	3.75 mmHg (0.5 kPa) or more

9. Vacuum introduction for fuel tank

Next sequence is run if both of the following conditions are met:	Conditions 1 and 2
1. FTP when EVAP monitor started	-2 to 3 kPa (-15 to 22.5 mmHg)
2. Vacuum introduction time	15 minutes or less

10. FVCV stuck closed check

Next sequence is run if the following condition is met:	
FTP change when vacuum introduction for fuel tank	0.5 kPa (5.25 mmHg)

11. FTP sensor stuck check

Next sequence is run if the following condition is met:	
FTP change when FVCV closed	0.35 kPa (2.6 mmHg) or less

12. Third reference pressure measurement

Next sequence is run if all of the following conditions are met::	Conditions 1, 2, 3, and 4
1. FTP 1.9 seconds after reference pressure measurement began	-1 kPa (-7.5 mmHg) or more
2. Reference pressure	-4.85 to -1.057 kPa (-36.4 to -7.93 mmHg)
3. Reference pressure	Saturated
4. Reference pressure difference between the second and third	Less than 0.7 kPa (5.25 mmHg)

13. Fuel tank leak check

Sequence is run if the following conditions is met:	
FTP when vacuum introduction for fuel tank was complete	Less than third reference pressure

14. FTP sensor stuck check

Next sequence is run if the following condition is met:	-
FTP change while FVCV and vent valve are open	Less than 0.35 kPa (2.6 mmHg)

15. Atmospheric pressure measurement

Monitor is complete if the following condition is met:	-
Atmospheric pressure difference between sequence 1 and 8	0.3 kPa (2.25 mmHg) or less

TYPICAL MALFUNCTION THRESHOLDS

"Saturated" indicates that the EVAP pressure change is less than 0.286 kPa (2.14 mmHg) in 60 seconds.

P2450: Fuel vapor-containment valve stuck open

One of the following conditions is met when FTP is between -2 kPa (-15 mmHg) and 3 kPa (22.5 mmHg)	1 or 2
1. Both of the following conditions met	(a) or (b)
(a) FTP	-2 to 3 kPa (-15 to 22.5 mmHg)
(b) FTP change when vacuum introduction for fuel tank	More than 0.5 kPa (3.75 mmHg)
1. Both of the following conditions met	(a) or (b)
(a) FTP	-2 to 3 kPa (-15 to 22.5 mmHg)
(b) Canister pressure change when FVCV is open	More than 0.9 kPa (6.75 mmHg)

P2451: Fuel vapor-containment valve stuck closed

One of the following conditions is met when FTP is between -2 kPa (-15 mmHg) and 3 kPa (22.5 mmHg)	1 or 2
1. FTP change when vacuum introduction for fuel tank	Less than 0.5 kPa (3.75 mmHg)
2. Canister pressure when vacuum introduction for canister was complete	Higher than reference pressure x 0.2

MONITOR RESULT

Refer to EVAP System (See page ES-325).

INSPECTION PROCEDURE

Refer to EVAP System (See page ES-328).

DTC	P2610	ECM / PCM Internal Engine Off Timer Performance

DTC SUMMARY

DTC No.	Monitoring Item	Malfunction Detection Condition	Trouble Area	Detection Timing	Detection Logic
P2610	Soak timer (built into hybrid vehicle control ECU)	Hybrid vehicle control ECU internal malfunction	Hybrid vehicle control ECU	Engine running	2-trips

DESCRIPTION

To ensure the accuracy of the EVAP (Evaporative Emission) monitor values, the soak timer, which is built into the ECM (included in the hybrid vehicle control ECU), measures 5 hours (+/- 15 minutes) from when the power switch is turned off, before the monitor begins to run. This allows the fuel to cool down, which stabilizes the Fuel Tank Pressure (FTP). When 5 hours have elapsed, the ECM turns on.

MONITOR DESCRIPTION

5 hours after the power switch is turned off, the soak timer activates the ECM (included in the hybrid vehicle control ECU) to begin the EVAP system monitor. While the engine is running, the ECM monitors the synchronization of the soak timer and the CPU clock. If these two are not synchronized, the ECM interprets this as a malfunction. The ECM illuminates the MIL and sets the DTC (2-trip detection logic).

MONITOR STRATEGY

Required Sensors/Components	Hybrid vehicle control ECU
Frequency of Operation	Once per driving cycle
Duration	600 seconds
MIL Operation	2 driving cycles
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Case 1:

The monitor will run whenever these DTCs are not present	None
Power switch	ON
Engine	Running
Battery voltage	8 V or more
Starter	OFF

Case 2 and Case 3:

Soak time	20 minutes or more
Battery voltage	8 V or more
Power switch	ON
Starter	OFF

TYPICAL MALFUNCTION THRESHOLDS

Case 1:

Soak timer measurement when hybrid vehicle control ECU CPU clock counts 10 minutes	Less than 7 minutes or more than 13 minutes

Case 2:

History hybrid vehicle control ECU had woken up by internal engine off timer	Yes
How long vehicle has been soaked	Less than programmed period

Case 3:

History hybrid vehicle control ECU had woken up by internal engine off timer	No
How long vehicle has been soaked	More than or equal to programmed period

INSPECTION PROCEDURE

HINT:

- DTC P2610 is set if an internal ECM (included in the hybrid vehicle control ECU) problem is detected. Diagnostic procedures are not required. ECM replacement is required.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data, from the time the malfunction occurred.

1	**REPLACE HYBRID VEHICLE CONTROL ECU**

NEXT

2	**CHECK WHETHER DTC OUTPUT RECURS**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Clear the DTCs (See page ES-31).
(d) Put the engine in inspection mode (See page ES-35).
(e) Wait for 10 minutes or more.
(f) On the tester, enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC / INFO / PENDING CODEs.
(g) If no pending DTC is displayed, the repair has been successfully completed.

NEXT

END

DTC	P2A00	A/F Sensor Circuit Slow Response (Bank 1 Sensor 1)

HINT:
Sensor 1 refers to the sensor mounted in front of the Three-Way Catalytic Converter (TWC) and located near the engine assembly.

DESCRIPTION

Refer to DTC P2195 (See page ES-269).

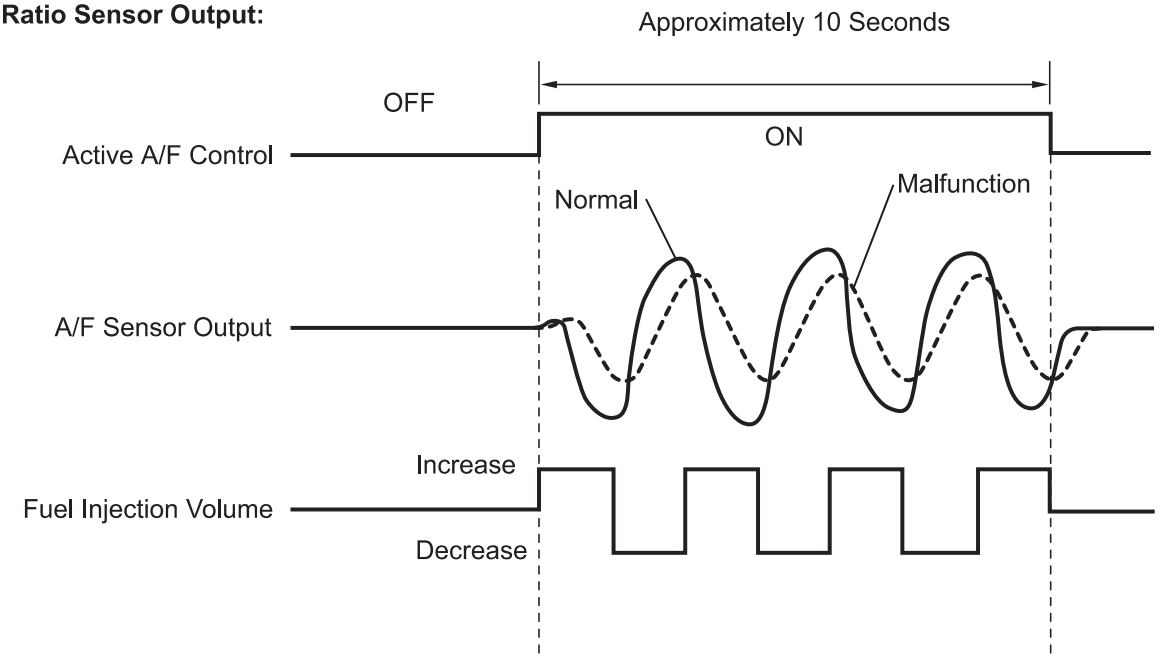
DTC No.	DTC Detection Conditions	Trouble Areas
P2A00	Calculated value of air-fuel ratio (A/F) sensor response rate deterioration level less than threshold (2-trip detection logic)	• Open or short in A/F sensor circuit • A/F sensor • Hybrid vehicle control ECU

ES

MONITOR DESCRIPTION

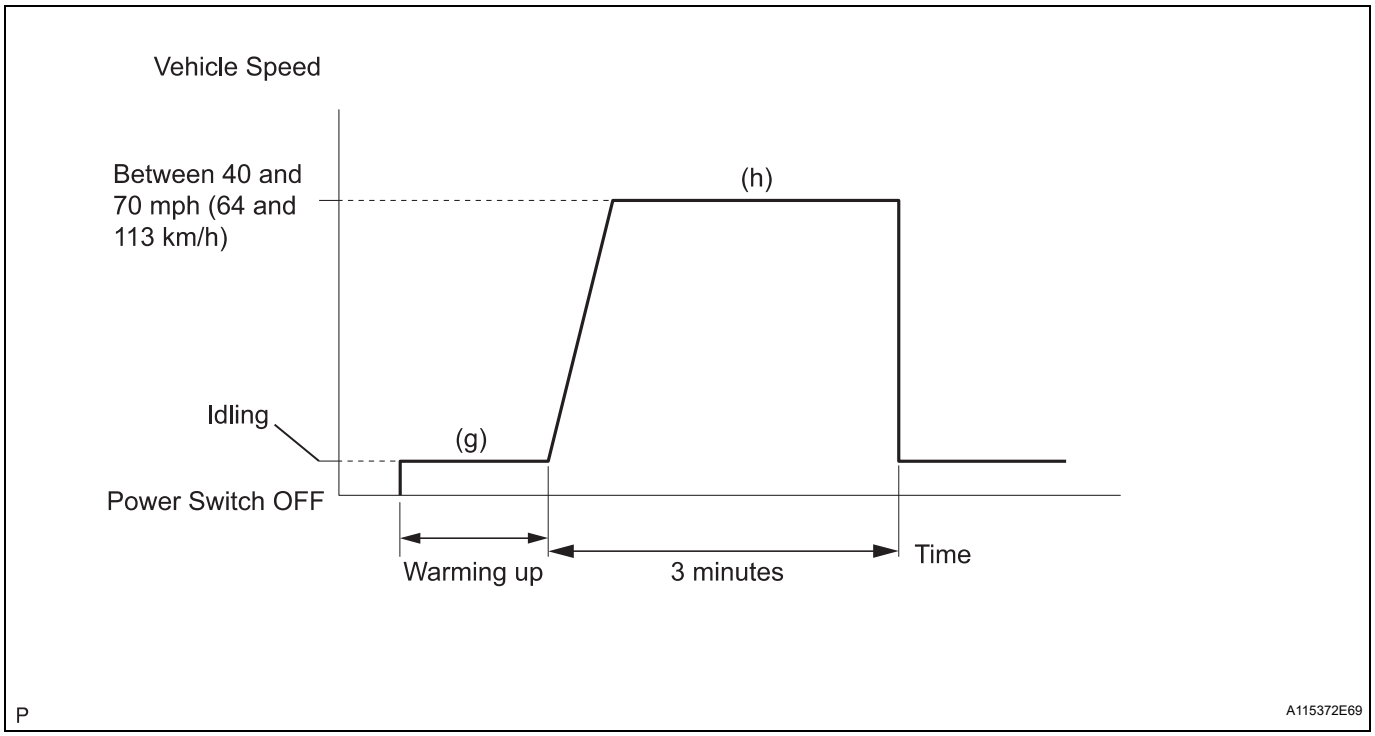
After the engine is warmed up, the ECM (included in hybrid vehicle control ECU) performs air-fuel ratio feedback control to maintain the air-fuel ratio at the stoichiometric level. In addition, active A/F control is performed for approximately 10 seconds after the preconditions are met in order to measure the A/F sensor response rate. During active A/F control, the ECM forcibly increases and decreases the injection volume a certain amount, based on the stoichiometric air-fuel ratio learned during normal air-fuel ratio control, and measures the A/F sensor response rate. The ECM receives a signal from the A/F sensor while performing active A/F control and uses it to calculate the A/F sensor response rate deterioration level.
If the A/F sensor response rate deterioration level is less than the threshold, the ECM interprets this as a malfunction and sets the DTC.

Air-Fuel Ratio Sensor Output:

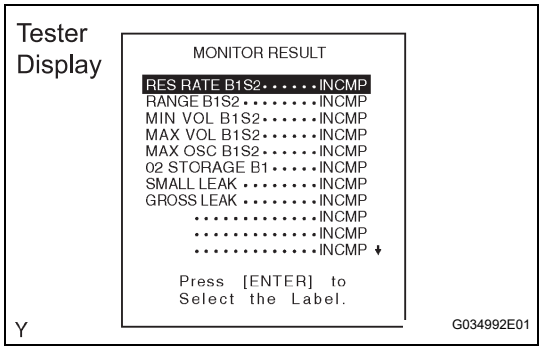


CONFIRMATION DRIVING PATTERN

HINT:
Performing this confirmation pattern will activate the A/F sensor response monitor.



(a) Connect the intelligent tester to the DLC3.



(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Clear the DTCs (if set) (See page ES-31).
(e) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / MONITOR RESULT.
(f) Check that RES RATE B1S1 is INCOMP.
(g) Put the engine in inspection mode (See page ES-35), and warm it up.
(h) Drive the vehicle at a constant speed of between 40 mph and 70 mph (64 km/h and 113 km/h) for 3 minutes.
(i) Check the monitor result values on the intelligent tester by selecting the following menu items: DIAGNOSIS / ENHANCED OBD II / MONITOR INFO / TEST RESULT.
(j) If the values indicated on the tester do not change, perform READINESS MONITOR DRIVE PATTERN for the A/F sensor and the heated oxygen sensor (See page ES-17).
HINT:
Completion of all A/F sensor monitors is required to change the value in TEST RESULT.
(k) Note the value of the Monitor Result.
(l) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / PENDING CODES.
(m) Check if any DTCs (any pending DTCs) are set.

MONITOR STRATEGY

Related DTCs	P2A00: Air-Fuel Ratio (A/F) sensor slow response

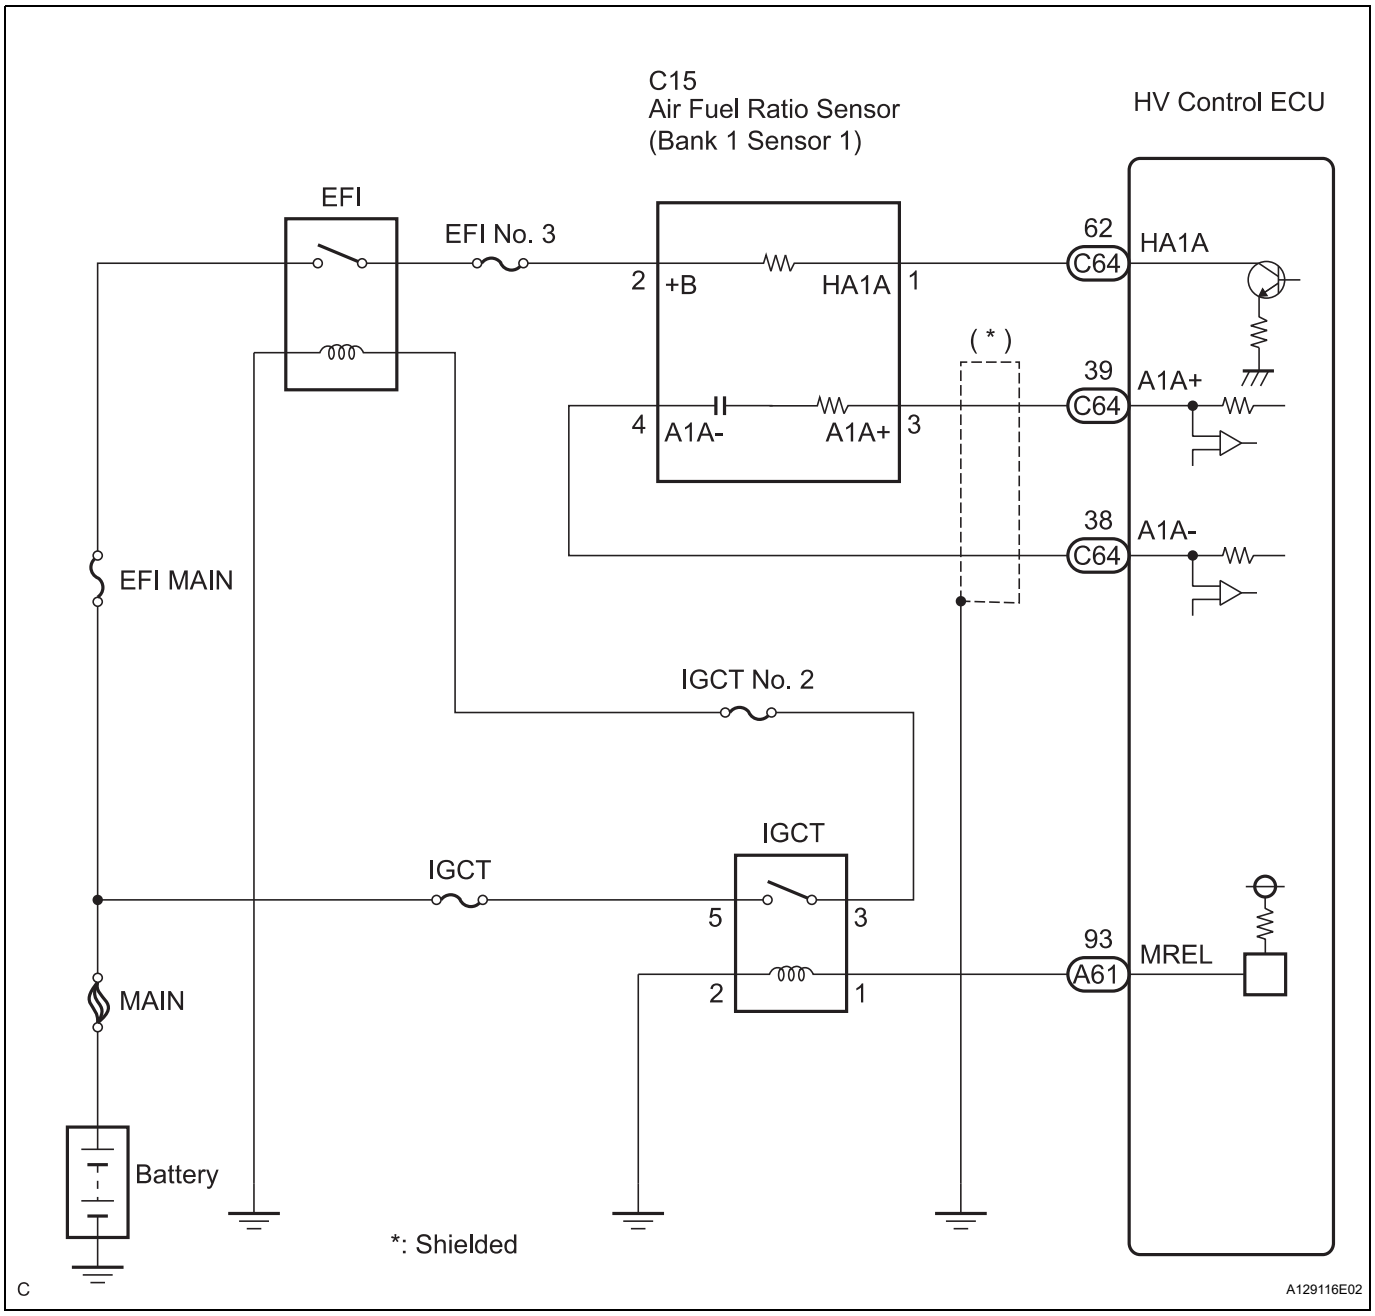
TYPICAL MALFUNCTION THRESHOLDS

Response rate deterioration level	Less than 0.25 V

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-14).

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Intelligent tester only:

Malfunctioning areas can be identified by performing the A/F CONTROL function provided in the ACTIVE TEST. The A/F CONTROL function can help to determine whether the Air-Fuel Ratio (A/F) sensor, Heated Oxygen (HO2) sensor and other potential trouble areas are malfunctioning.

The following instructions describe how to conduct the A/F CONTROL operation using the intelligent tester.

(a) Connect the intelligent tester to the DLC3.

(b) Put the engine in inspection mode (See page ES-35).

(c) Turn the tester on.

(d) Warm up the engine at an engine speed of 2,500 rpm for approximately 90 seconds.

(e) On the tester, select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL.
(f) Perform the A/F CONTROL operation with the engine idling (press the RIGHT or LEFT button to change the fuel injection volume).
(g) Monitor the voltage outputs of the A/F and HO2 sensors (AFS B1 S1 and O2S B1 S2) displayed on the tester.
HINT:

- The A/F CONTROL operation lowers the fuel injection volume by 12.5% or increases the injection volume by 25%.
- The sensors react in accordance with increases and decreases in the fuel injection volume.

Standard

Tester Display (Sensor)	Injection Volumes	Status	Voltages
AFS B1 S1 (A/F)	+25%	Rich	Less than 3.0
	-12.5%	Lean	More than 3.35
O2S B1 S2 (HO2)	+25%	Rich	More than 0.5
	-12.5%	Lean	Less than 0.4

NOTICE:
The A/F sensor has an output delay of a few seconds and the HO2 sensor has a maximum output delay of approximately 20 seconds.

Case	A/F Sensor (Sensor 1) Output Voltage		HO2 Sensor (Sensor 2) Output Voltage		Main Suspected Trouble Areas
1	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		-
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage More than 0.5 V Less than 0.4 V		
2	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• A/F sensor • A/F sensor heater • A/F sensor circuit
	Output Voltage Almost no reaction		Output Voltage More than 0.5 V Less than 0.4 V		
3	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• HO2 sensor • HO2 sensor heater • HO2 sensor circuit
	Output Voltage More than 3.35 V Less than 3.0 V		Output Voltage Almost no reaction		
4	Injection Volume +25% -12.5%		Injection Volume +25% -12.5%		• Injector • Fuel pressure • Gas leakage from exhaust system (Air-fuel ratio extremely lean or rich)
	Output Voltage Almost no reaction		Output voltage Almost no reaction		

Following the A/F CONTROL procedure enables technicians to check and graph the voltage outputs of both the A/F and HO2 sensors.
To display the graph, select the following menu items on the tester: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / A/F CONTROL / USER DATA / AFS B1 S1 and O2S B1 S2; and press the YES button and then the ENTER button followed by the F4 button.

HINT:
- DTC P2A00 may be set when the air-fuel ratio is stuck rich or lean.
- A low A/F sensor voltage could be caused by a rich air-fuel mixture. Check for conditions that would cause the engine to run rich.
- A high A/F sensor voltage could be caused by a lean air-fuel mixture. Check for conditions that would cause the engine to run lean.
- Read freeze frame data using the intelligent tester. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was moving or stationary, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1 CHECK ANY OTHER DTCS OUTPUT (IN ADDITION TO DTC P2A00)

ES

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC Output)	Proceed to

DTC	P3190	Poor Engine Power

DTC	P3191	Engine does not Start

DTC	P3193	Fuel Run Out

DESCRIPTION

From the HV ECU, the ECM (included in hybrid vehicle control ECU) receives data such as power output required for the engine (required output), estimated torque produced by the engine (estimated torque), engine RPM of control target (target RPM), whether the engine is in start mode or not. Then, based on the required output and target RPM, the ECM (included in hybrid vehicle control ECU) calculates a target torque that is to be produced by the engine and compares it with the estimated torque. If the estimated torque is very low compared with the target torque, or the engine start mode continues for the specific duration calculated by water temperature, an abnormal condition is detected.

ES

DTC No.	DTC Detection Condition	Trouble Area
P3190	Following conditions continue at a fixed engine RPM or a fixed length of time: • Communication with HV ECU is normal • Engine RPM is a fixed value or more • Engine start mode is not active • Target torque is a fixed value • Ratio of estimated torque against target torque is less than 20%	• Air induction system • Throttle body • Fuel pressure • Engine • Mass Air flow meter • Out of fuel • Engine coolant temperature sensor • Crankshaft position sensor • Camshaft position sensor • Hybrid vehicle control ECU
P3191	Following conditions continue at a fixed engine RPM or a fixed length of time: • Communication with HV ECU is normal • Engine RPM is a fixed value or more • Engine start mode is active	• Air induction system • Throttle body • Fuel pressure • Engine • Mass Air flow meter • Out of fuel • Engine coolant temperature sensor • Crankshaft position sensor • Camshaft position sensor • Hybrid vehicle control ECU
P3193	Following conditions are met: • Fuel low level signal input into ECM (Included in hybrid vehicle control ECU) • Detection condition for P3190 or P3191 is satisfied	• Out of fuel • Hybrid vehicle control ECU

MONITOR DESCRIPTION

The ECM (Included in hybrid vehicle control ECU) and hybrid vehicle control ECU are connected by a communication line called CAN. The ECM (included in hybrid vehicle control ECU) sends information on the engine speed and other data to the hybrid vehicle control ECU while the hybrid vehicle control ECU sends the information such as a requirement for the engine power to the ECM (included in hybrid vehicle control ECU) using the CAN communication line. When the communication between the ECM (included in hybrid vehicle control ECU) and hybrid vehicle control ECU is normal and the following items becomes specific conditions, the ECM (included in hybrid vehicle control ECU) will illuminate the MIL and set a DTC.

1. Engine speed
2. Power switch
3. Target torque
4. Ratio of target torque against estimated torque
5. Fuel level

MONITOR STRATEGY

Related DTCs	P3190: Poor engine power P3191: Engine does not start P3193: Fuel run out
Required sensors/components	Main sensors: Crankshaft position sensor Related sensors: Hybrid vehicle control ECU
Frequency of operation	Continuous
Duration	100 engine revolutions and 6 seconds
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

ES

Monitor runs whenever following DTCs not present	None
Fuel cut operation	Not operated
Engine speed	650 rpm or more (varies with engine coolant temperature)

TYPICAL MALFUNCTION THRESHOLDS

Case1: P3190

Time for low engine torque	100 engine revolutions or more, and 6 seconds or more (varies with engine coolant temperature)
Fuel level	Not empty

Case2: P3191

Engine start no-determination time (received from HV ECU)	100 engine revolutions or more, and 6 seconds or more (varies with engine coolant temperature)
Fuel level	Not empty

Case3: P3193

Time for low engine torque or Engine start no-determination time	100 engine revolutions or more, and 6 seconds or more (varies with engine coolant temperature)
Fuel level	Empty

INSPECTION PROCEDURE

HINT:

Read freeze frame data using the intelligent tester or the OBD II scan tool. The ECM records vehicle and driving condition information as freeze frame data the moment a DTC is stored. When troubleshooting, freeze frame data can help determine if the vehicle was running or stopped, if the engine was warmed up or not, if the air-fuel ratio was lean or rich, and other data from the time the malfunction occurred.

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC P3190, P3191 AND/OR P3193)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the intelligent tester or the OBD II scan tool on.
(d) On the intelligent tester, select the items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs using the intelligent tester or the OBD II scan tool.

Result

Display (DTC output)	Proceed to
P3190, P3191 and/or P3193	A

Display (DTC output)	Proceed to
P3190, P3191 and/or P3193, and other DTCs	B

HINT:
If any other codes besides P3190, P3191 and/or P3193 are output, perform troubleshooting for those DTCs first.

B → GO TO DTC CHART

A

2 CHECK FOR FUEL (SHORTAGE OF FUEL)

NG → REFILL FUEL

OK

3 CHECK AIR INDUCTION SYSTEM

OK:
The air induction system has no leakage and blockages.

NG → REPAIR OR REPLACE AIR INDUCTION SYSTEM

OK

4 CHECK FOR SYMPTOMS

(a) Check for unusual noise or vibration when starting the engine or when the engine is revving up.

OK:
Unusual noise and vibration do not occur.

NG → REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA

OK

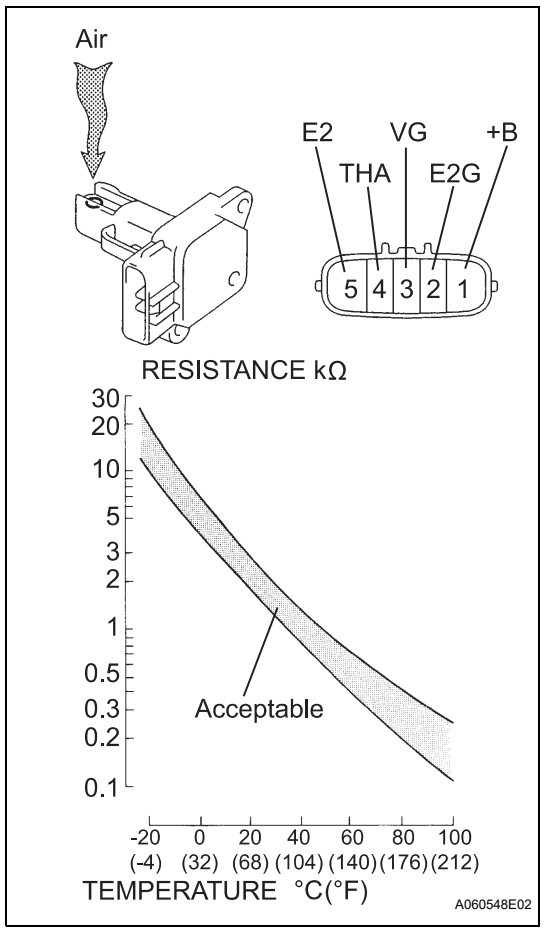
5 CHECK FUEL PRESSURE

(a) Check the fuel pressure (See page FU-9).
Standard:
304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)

NG → CHECK AND REPLACE FUEL SYSTEM

OK

6	INSPECT MASS AIR FLOW METER ASSEMBLY



(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / PRIMARY / MAF.
Standard:
0.54 g/s or less
(d) Inspect resistance.
(1) Measure the resistance between the terminals of the mass air flow meter.
Standard resistance

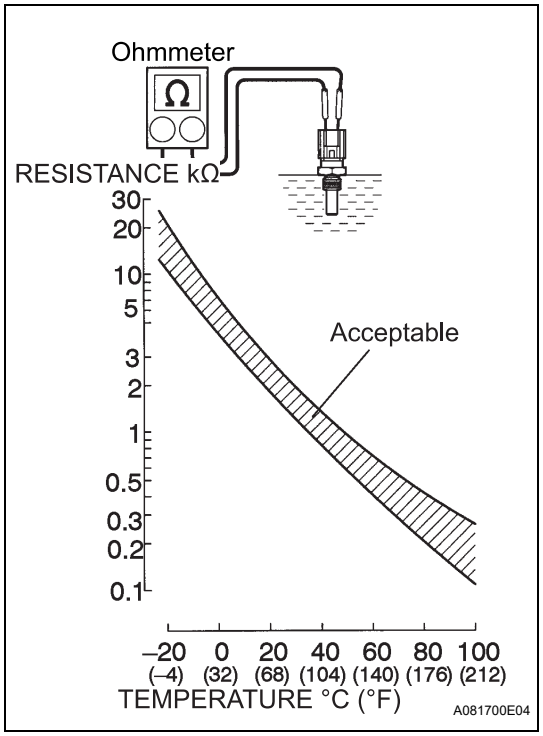
Tester Connection	Specified Condition
THA (4) - E2 (5)	13.6 to 18.4 kΩ at -20°C (-4°F)
THA (4) - E2 (5)	2.21 to 2.69 kΩ at 20°C (68°F)
THA (4) - E2 (5)	0.49 to 0.67 kΩ at 60°C (140°F)

(e) Reinstall the mass air flow meter.

NG → **REPLACE MASS AIR FLOW METER ASSEMBLY**

OK

7 INSPECT ENGINE COOLANT TEMPERATURE SENSOR



(a) Remove the engine coolant temperature sensor.
(b) Measure the resistance between the terminals of the engine coolant temperature sensor.
Standard resistance

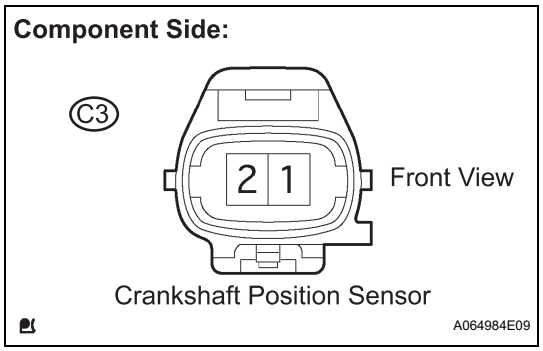
Tester Connection	Specified Condition
1 - 2	2 to 3 kΩ at 20°C (68°F)
1 - 2	0.2 to 0.4 kΩ at 80°C (176°F)

NOTICE:
In case of checking the engine coolant temperature sensor in water, be careful not to allow water to contact the terminals. After checking, dry the sensor.
HINT:
Alternate procedure: Connect an ohmmeter to the installed engine coolant temperature sensor and read the resistance. Use an infrared thermometer to measure the engine temperature in the immediate vicinity of the sensor. Compare these values to the resistance/ temperature graph. Change the engine temperature (warm up or allow to cool down) and repeat the test.
(c) Reinstall the engine coolant temperature sensor.

NG → **REPLACE ENGINE COOLANT TEMPERATURE SENSOR**

OK

8 INSPECT CRANKSHAFT POSITION SENSOR



(a) Disconnect the C3 crankshaft position sensor connector.
(b) Measure the resistance between the terminals of the crankshaft position sensor connector.
Standard resistance

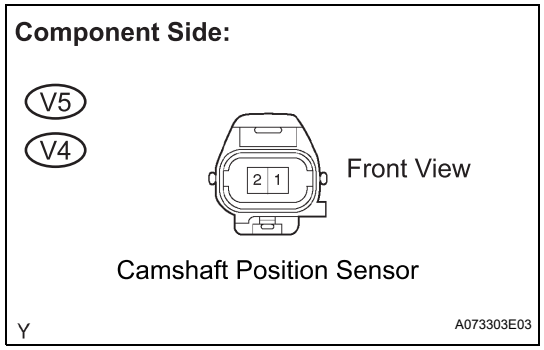
Tester Connection	Specified Condition
1 - 2	985 to 1,600 Ω at cold
1 - 2	1,265 to 1,890 Ω at hot

(c) Reconnect the crankshaft position sensor connector.
NOTICE:
Terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately -10°C to 50°C (14°F to 122°F). "Hot" means approximately 50°C to 100°C (122°F to 212°F).

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

OK

9 INSPECT CAMSHAFT POSITION SENSOR



(a) Disconnect the V5 and V4 camshaft position sensor connectors.
(b) Measure the resistance between the terminals of camshaft position sensor connector.
Standard resistance

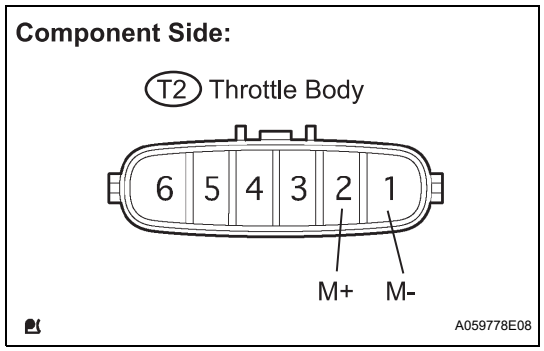
Tester Connection	Specified Condition
1 - 2	1,630 to 2,740 Ω at cold
1 - 2	2,065 to 3, 225 Ω at hot

(c) Reconnect the camshaft position sensor connector.
NOTICE:
Terms "cold" and "hot" refer to the temperature of the coils. "Cold" means approximately -10°C to 50°C (14°F to 122°F). "Hot" means approximately 50°C to 100°C (122°F to 212°F).

NG → **REPLACE CAMSHAFT POSITION SENOR**

OK

10 INSPECT THROTTLE CONTROL MOTOR



(a) Disconnect the throttle control motor connector.
(b) Using an ohmmeter, measure the motor resistance between terminals 1 (M-) and 2 (M+).
Standard resistance

Tester Connection	Specified Condition
1 - 2	0.3 to 100 Ω at 20°C (68°F)

NG → **REPLACE THROTTLE BODY ASSEMBLY**

OK

11 INSPECT THROTTLE POSITION SENSOR

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester on.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DATA LIST / ETCS / THROTTLE SSR #1 and THROTTLE SSR #2.
(d) Check the values displayed on the tester.

Standard voltage

Item	Condition	Specified Condition
THROTTLE SSR #1	Throttle fully closed	2.15 to 2.35 V
	Throttle fully open	4.5 to 5.0 V

Item	Condition	Specified Condition
THROTTLE SSR #2	Throttle fully closed	0.66 to 0.76 V
	Throttle fully open	3.8 to 4.2 V

NG → REPLACE THROTTLE BODY ASSEMBLY

OK

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	U0001	High Speed CAN Communication Circuit

DESCRIPTION

The engine control unit and the transmission control unit are located inside the ECM (Included in hybrid vehicle control ECU). The engine control unit intercommunicates with the transmission control ECU using the Controller Area Network (CAN).
If there is a problem in this intercommunication, the ECM sets a DTC.

DTC No.	DTC Detection Condition	Trouble Area
U0001	Following conditions are met for 2 seconds (1-trip detection logic): (a) Power switch on (IG) (b) Battery voltage is 10.5 V or more (c) No intercommunication between engine control ECU and hybrid vehicle control ECU	Hybrid vehicle control ECU

ES

MONITOR STRATEGY

Related DTCs	U0001: Verify communication
Required Sensors/Components (Main)	Hybrid vehicle control ECU
Required Sensors/Components (Related)	-
Frequency of Operation	Continuous
Duration	10.6 seconds
MIL Operation	immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Battery Voltage	10.5 V or more (0.5 second or more)
Power switch	ON

TYPICAL MALFUNCTION THRESHOLDS

Communication between hybrid vehicle control ECU and TCM	No communication

INSPECTION PROCEDURE

1	CHECK OTHER DTC OUTPUT (IN ADDITION TO DTC U0001)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester on.
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(e) Read the DTCs.

Result

Display (DTC output)	Proceed to
U0001	A
U0001 and other DTCs	B

B → GO TO DTC CHART

A

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	U0293	Lost Communication with HV ECU

DESCRIPTION

The controller Area Network (CAN) is a serial data communication system for real-time applications. It is a multiplex communication system designed for on-vehicle use that provides a superior communication speed of 500 kbps and a capability to detect malfunctions. Through the combination of the CANH and CANL bus lines, the CAN is able to maintain communication based on differential voltage.

DTC No.	DTC Detecting Condition	Trouble Area
U0293	When communication with hybrid vehicle control ECU is interrupted	• Wire harness • Hybrid vehicle control ECU

MONITOR STRATEGY

Related DTCs	U0001: Lost communication with hybrid vehicle control ECU
Required Sensors/Components (Main)	ECM
Frequency of Operation	Continuous
Duration	0.68 seconds
MIL Operation	immediate
Sequence of Operation	None

TYPICAL ENABLING CONDITIONS

Battery Voltage	10.5 V or more (0.5 second or more)
Power switch	ON

TYPICAL MALFUNCTION THRESHOLDS

Communication signal	No signal from hybrid vehicle control ECU

INSPECTION PROCEDURE

Refer to CAN Communication System (See page CA-7).

EVAP System

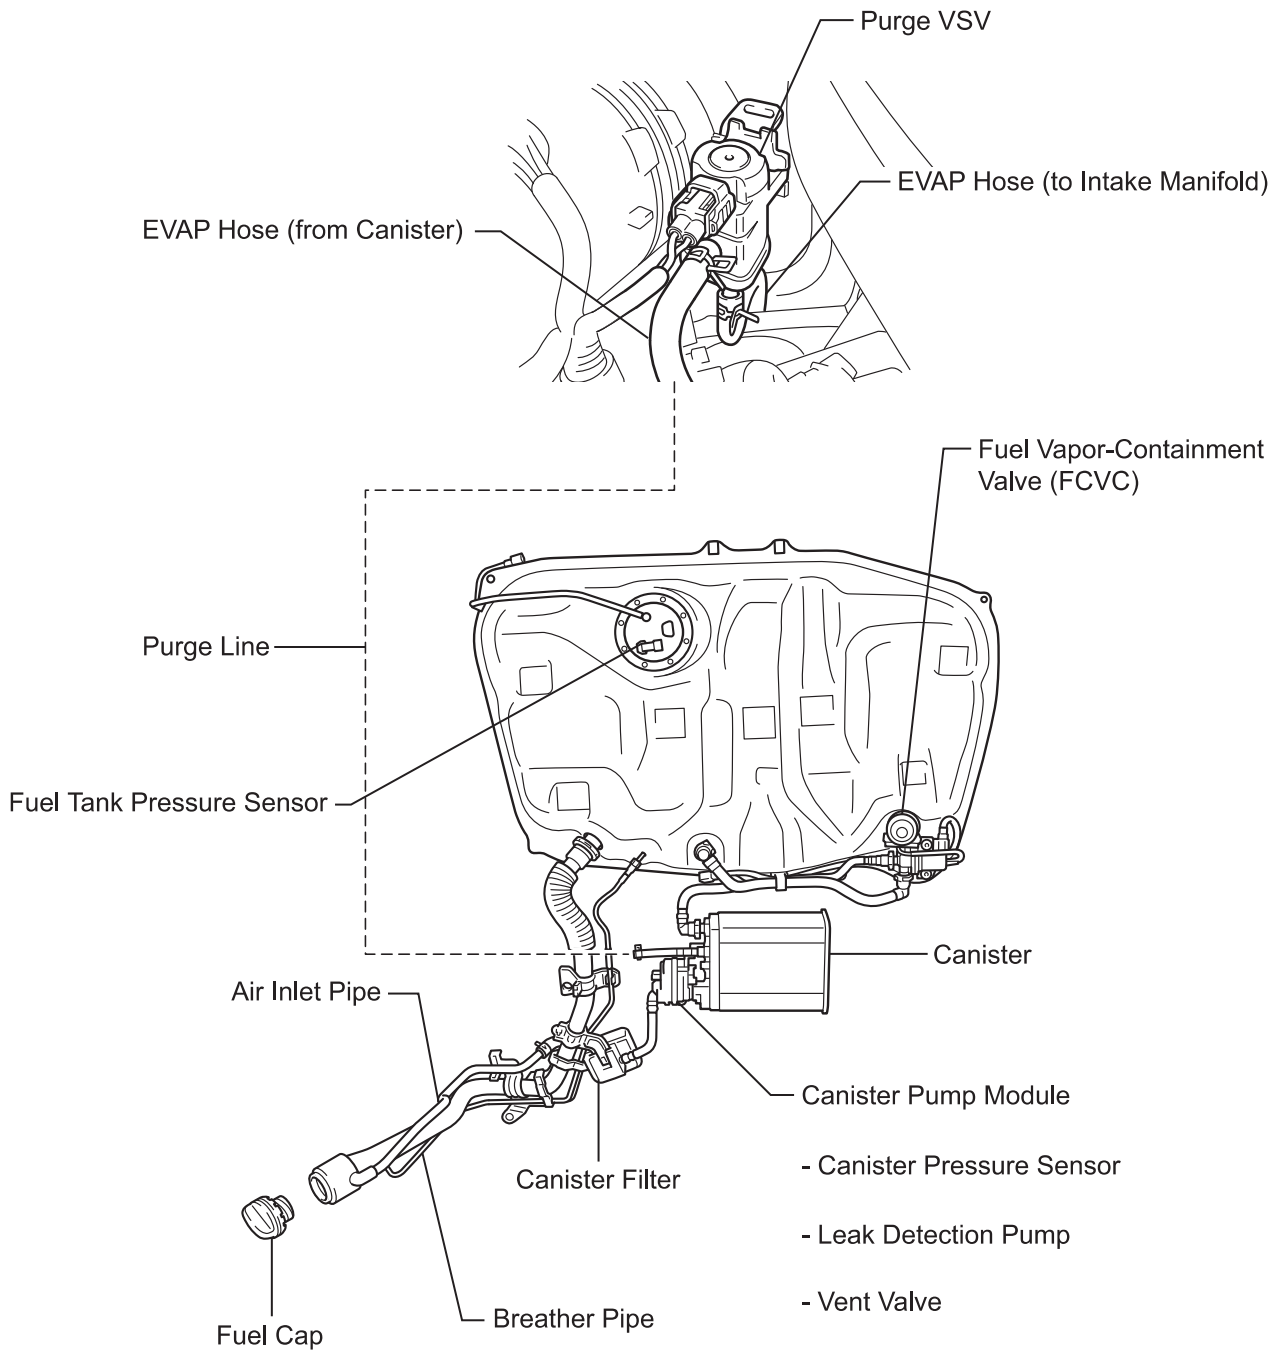
DESCRIPTION

While the engine is running, if a predetermined condition (closed loop, etc.) is met, the purge VSV is opened by the ECM (included in hybrid vehicle control ECU) and stored fuel vapors in the canister are purged to the intake manifold. The ECM will change the duty cycle ratio of the purge VSV to control purge flow volume.

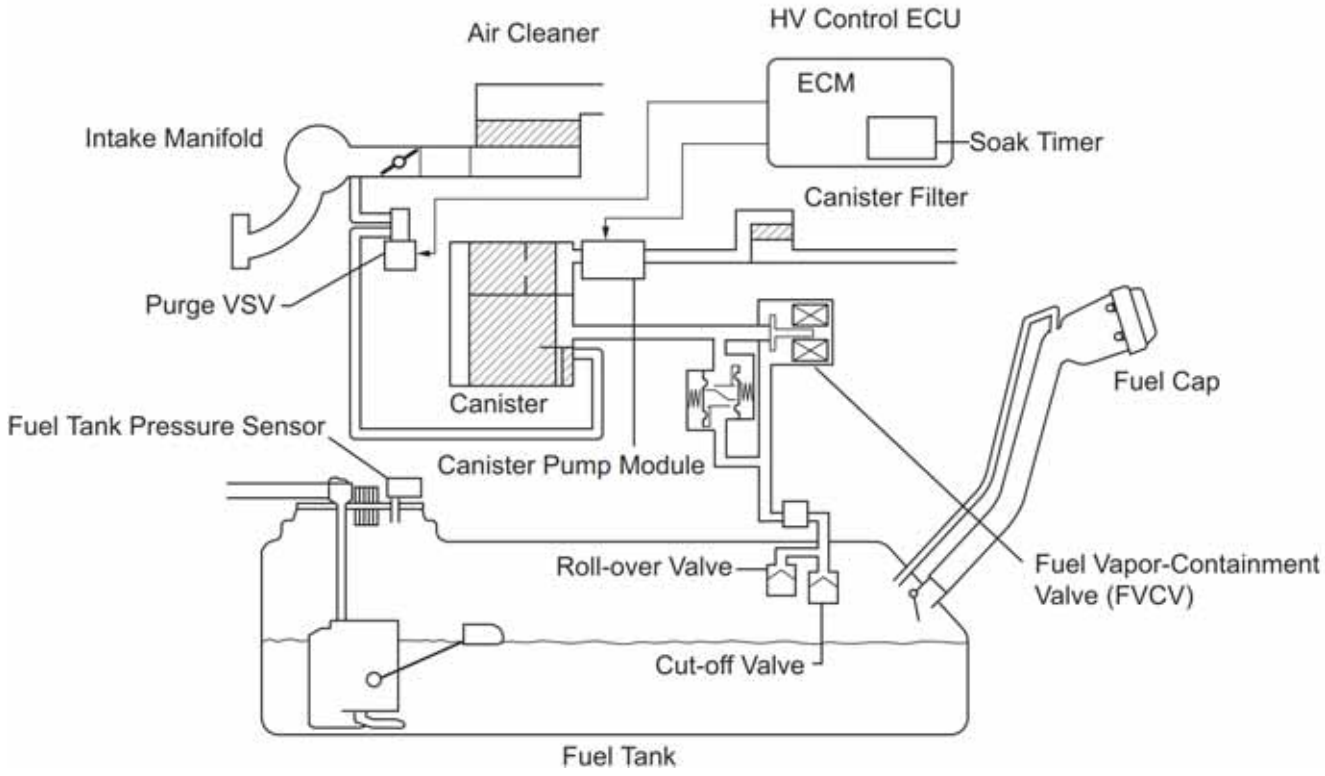
Purge flow volume is also determined by the intake manifold pressure. Atmospheric pressure is allowed into the canister through the vent valve to ensure that purge flow is maintained when negative pressure (vacuum) is applied to the canister.

The ECM monitors the condition of both the key-off monitor and purge flow monitor to ensure proper operation of the EVAP system.

Location of EVAP (Evaporative Emission) System:



EVAP System Circuit



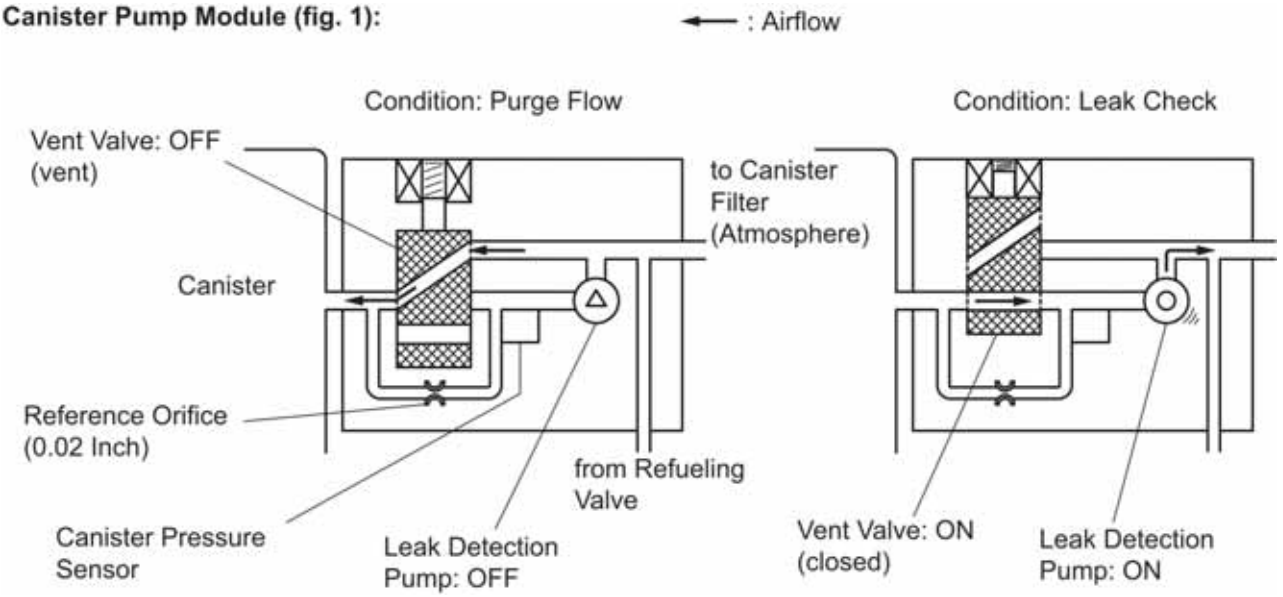
Y

A109157E07

Component	Operation
Canister	Contains activated charcoal to absorb EVAP that is created in fuel tank.
Cut-off valve	Located in the fuel tank. Valve closes by its own weight when vehicle is overturned to prevent fuel from spilling out.
Purge VSV	Opens or closes line between canister and intake manifold. ECM opens and closes purge VSV to control EVAP purge flow. ECM opens purge valve to purge vapor gas that was absorbed by canister to intake manifold. ECM controls EVAP volume purged to intake manifold by duty cycle (current-carrying time) to purge valve. (ON: Open, OFF: Closed)
Roll-over valve	Located in fuel tank. Valve floats and closes when fuel tank is filled to 100%. Also, valve closes by its own weight when vehicle is over turned to prevent fuel from spilling out.
Soak timer	Built into ECM. Soak timer counts power switch OFF time.
Fuel vapor-containment valve (FVCV)	Opens and closes line between fuel tank and canister. When vehicle is stopped, this valve closes to keep vapor in the tank and prevent it from being absorbed in canister. During refueling, valve opens and vapor is absorbed in canister. When driving, valve acts to change pressure in the tank slightly positive.
Fuel tank pressure sensor	Converts fuel tank pressure into voltage and outputs that voltage. ECM supplies a constant voltage of 5 V to pressure sensor and uses feedback from sensor to monitor fuel tank pressure. (fig. 3)
Canister pump module	(a) to (e) below are canister pump module components. Canister pump module cannot be disassembled.
(a) Vent valve	Vents and closes EVAP system. When ECM turns valve ON, EVAP system is closed. When, ECM turns valve OFF, EVAP system is vented. Negative pressure (vacuum) created in EVAP system to check EVAP leaks by closing purge VSV, turning on vent valve (closed) and operating vacuum pump (refer to fig. 1).
(b) Canister pressure sensor	Indicates EVAP pressure as voltage 5 V is applied by ECM. ECM detects EVAP system pressure using this voltage (refer to fig. 2).
(c) Check valve	Composed of nylon ball and spring. Valve blocks off atmosphere from the vacuum pump.
(d) Leak detection pump	Negative pressure (vacuum) is created in EVAP system for leak check.

Component	Operation
(e) Reference orifice	Diameter is 0.02 inch. Negative pressure (vacuum) is created in reference orifice to measure reference pressure by closing purge VSV, turning off vent valve (vent) and operating leak detection pump. Reference pressure indicates criterion of EVAP small leak.

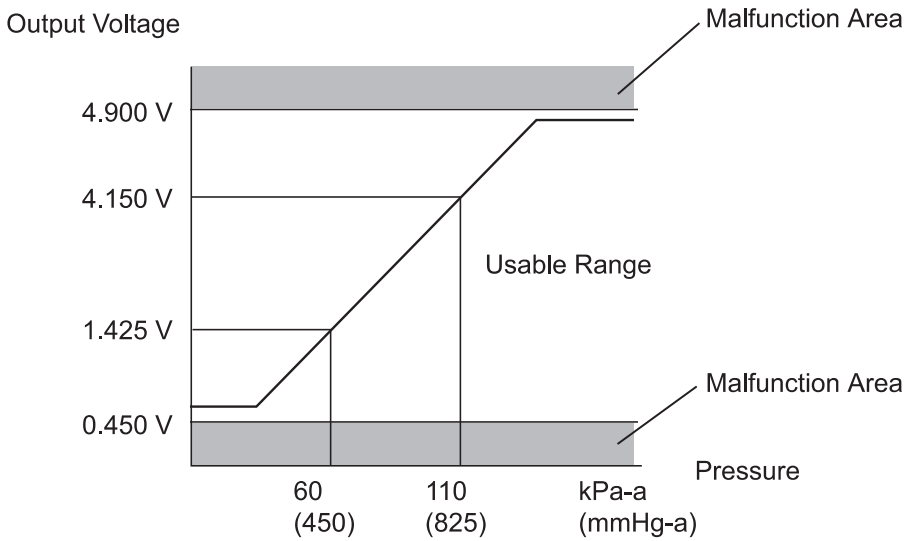
Canister Pump Module (fig. 1):



Y

A115902E03

Canister Pressure Sensor Specification (fig. 2):

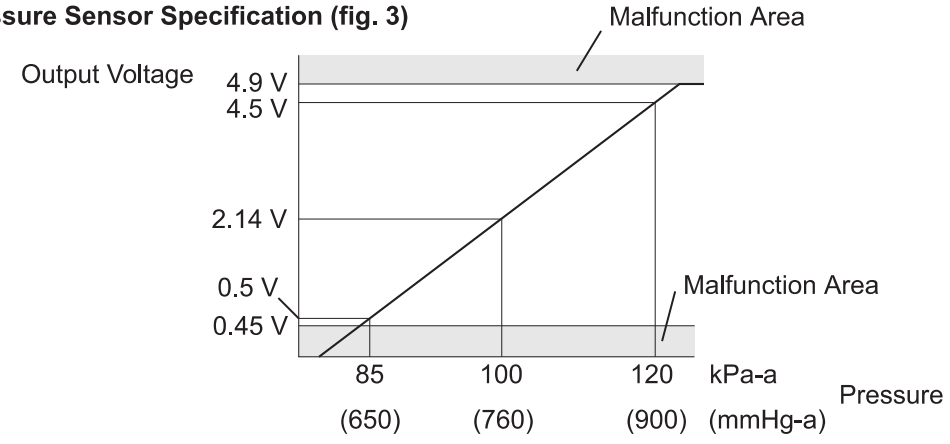


HINT:

Standard atmospheric pressure is 101.3 kPa-a (760 mmHg-a)

A115543E08

Fuel Tank Pressure Sensor Specification (fig. 3)



ES

Key-off monitor

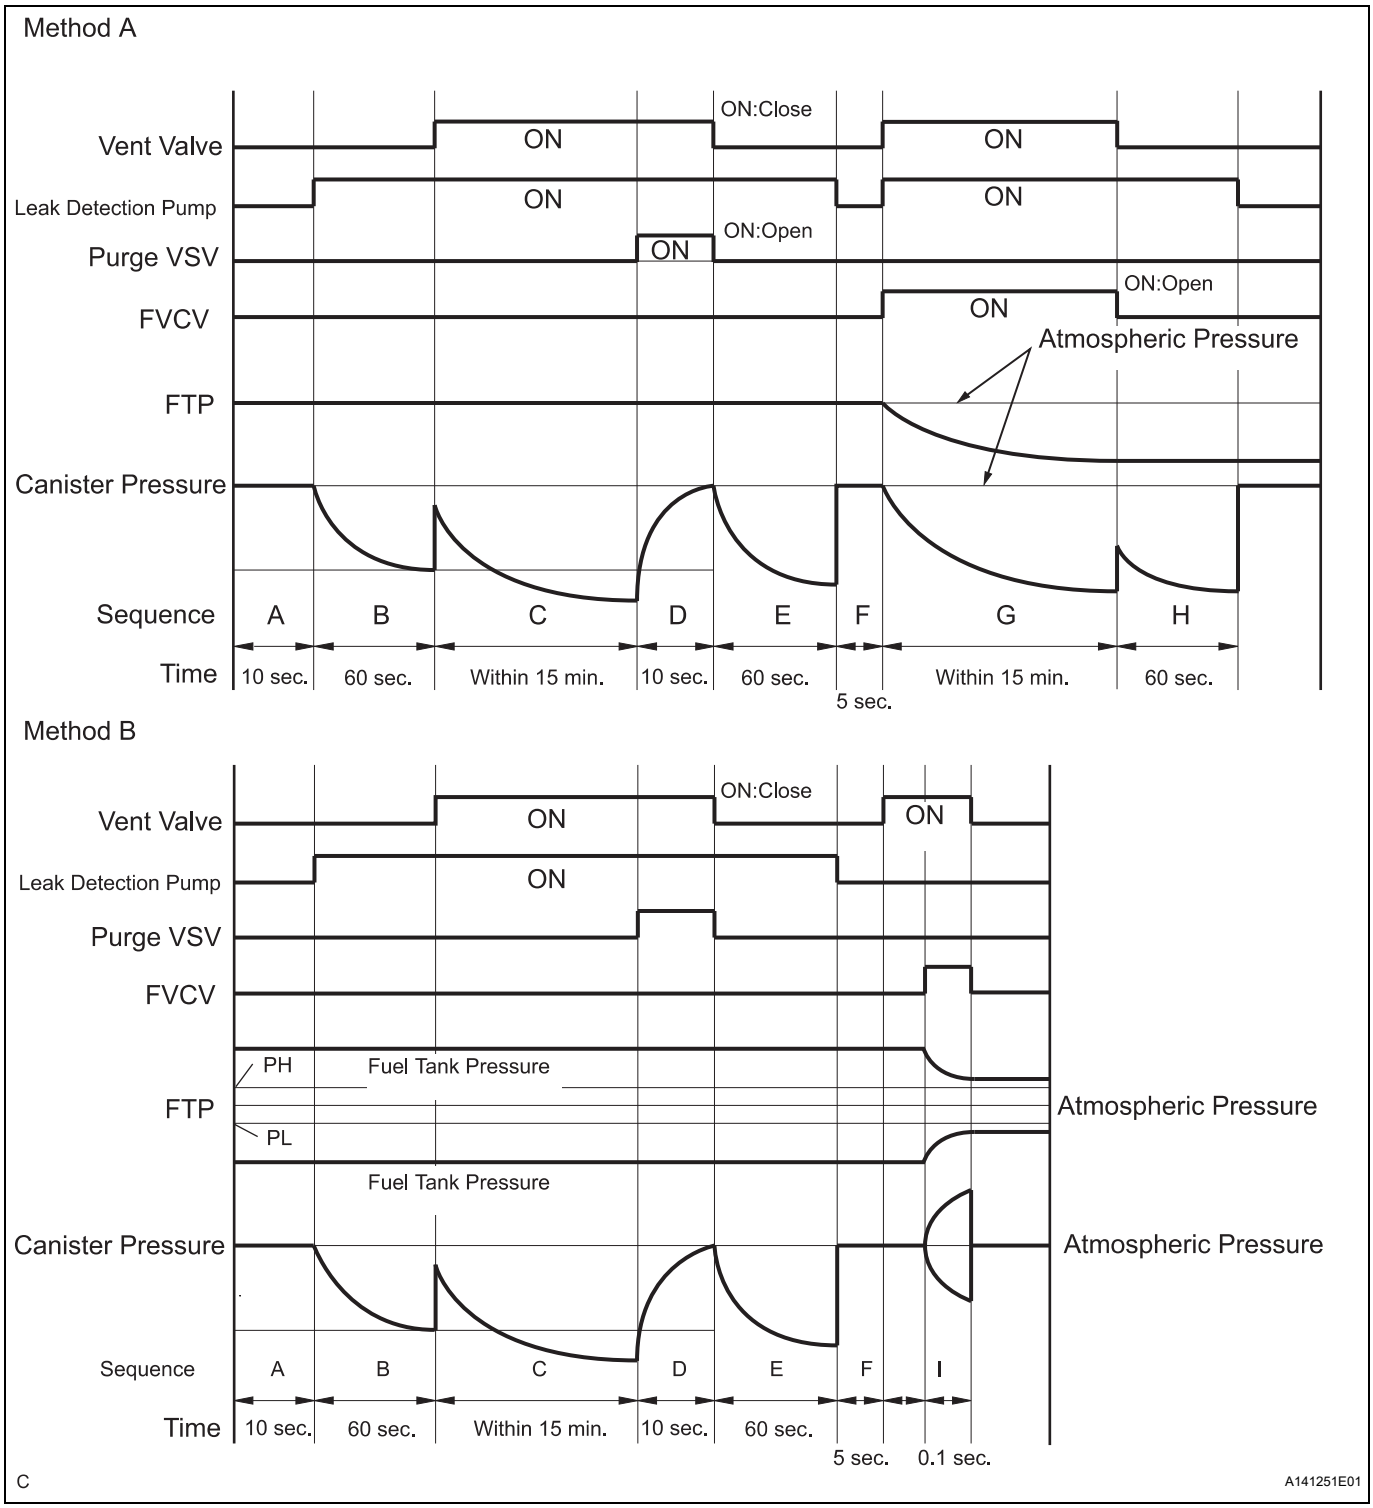
This monitoring system checks for canister pump module malfunctions and leaks from the EVAP and closed tank systems. Be sure to leave the vehicle for at least 5 hours to sufficiently cool the fuel and stabilize fuel tank pressure. This makes EVAP system monitoring more accurate.

HINT:

If the engine coolant temperature is 35°C (95°F) or more, 5 hours after the power switch has been turned off, the ECM will begin performing a monitor check after another 2 hours. If the engine coolant temperature is still 35°C (95°F) or more, 7 hours after the power switch has been turned off, the ECM will begin performing a monitor check after another 2.5 hours.

There are two methods for monitoring the EVAP system.

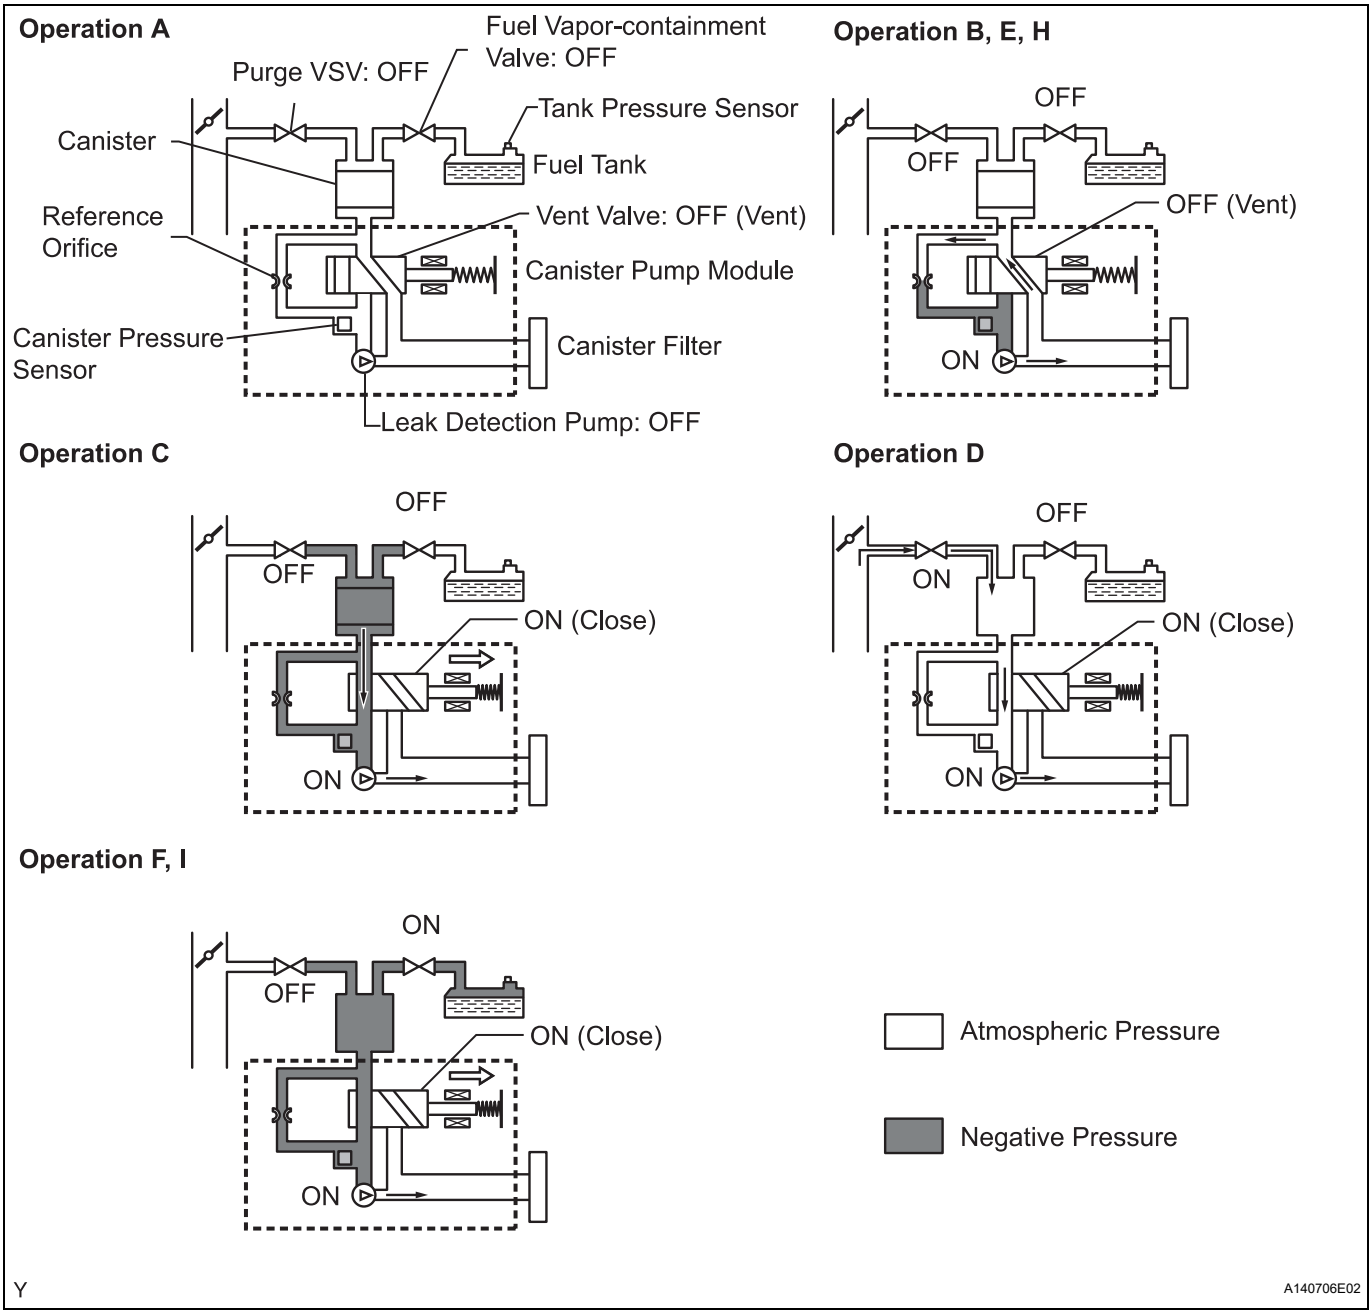
1. If the fuel tank pressure is higher or lower than the atmospheric pressure, the system determines that there are no leaks in the closed tank system and the system will check for leaks from the piping and canister between the purge VSV and canister pump module. (Method A)
2. If the fuel tank pressure is almost the same as the atmospheric pressure, vacuum pressure will enter the fuel tank and the system will check for leaks from the fuel tank after checking for leaks from the canister. (Method B)



Sequence	Operation	Description	Duration
-	ECM activation	Activated by soak timer, 5 hours (7 or 9.5 hours) after power switch turned OFF.	-
A	Atmospheric pressure measurement	Vent valve turned OFF (vent) and EVAP system pressure is measured by ECM in order to register atmospheric pressure. If pressure in EVAP system is not between 70 kPa and 110 kPa (525 mmHg and 825 mmHg), ECM cancels EVAP system monitor.	10 seconds
B	First reference pressure measurement	In order to determine reference pressure standard, leak detection pump creates negative pressure (vacuum) through reference orifice and then ECM checks if leak detection pump and vent valve operate normally.	60 seconds

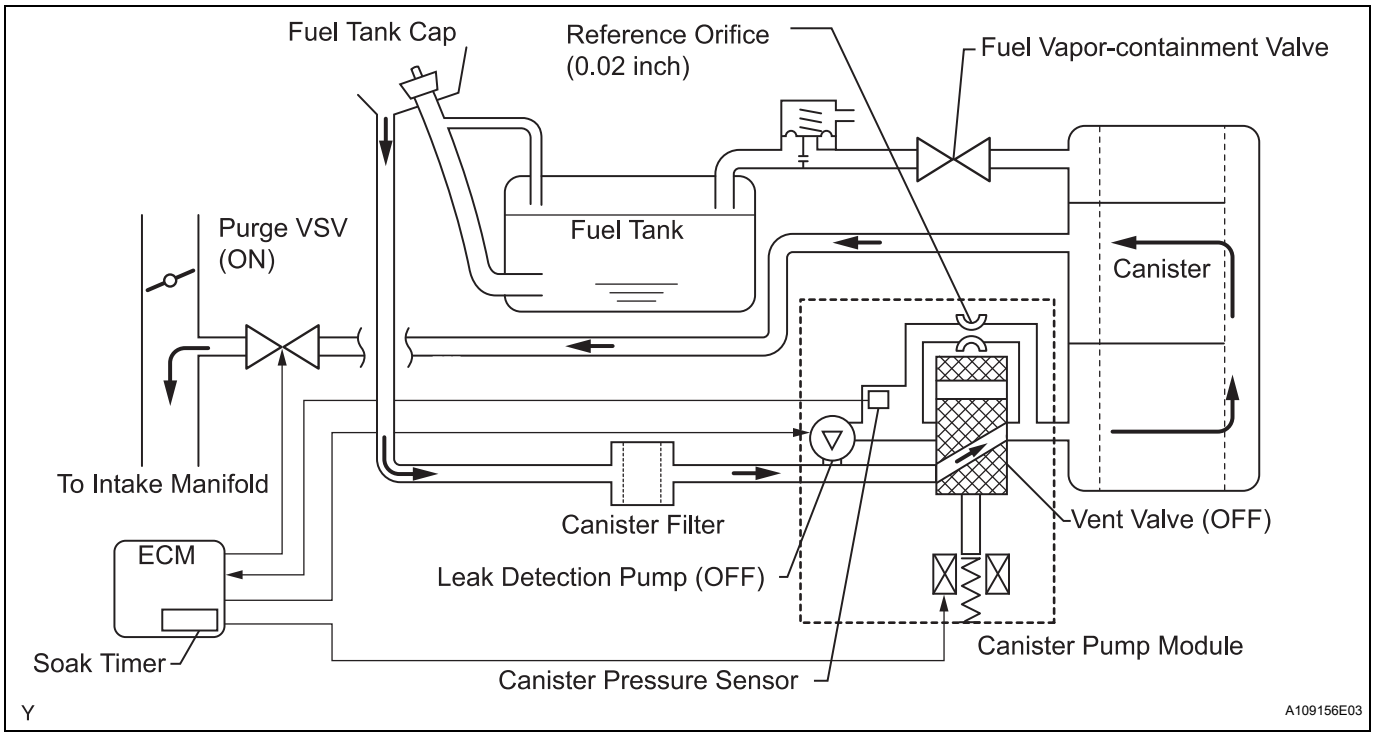
Sequence	Operation	Description	Duration
C	EVAP system pressure measurement	Vent valve is turned ON (closed) to shut EVAP system. Negative pressure (vacuum) is created in EVAP system, and EVAP system pressure is then measured. Write down measured values as they will be used in leak check. If EVAP pressure does not stabilize within 15 minutes, ECM cancels EVAP system monitor.	15 minutes
D	Purge VSV monitor	Purge VSV opens and then EVAP system pressure is measured by ECM. Large increase indicates normal.	10 seconds
E	Second reference pressure measurement	After second reference pressure measurement, leak check is performed by comparing the first and second reference pressure standards. If stabilized system pressure is higher than the second reference pressure standard, ECM determines that EVAP system has a leakage.	60 seconds
F		Fuel tank pressure is compared with atmospheric pressure. If tank pressure is higher than PH or lower than PL, ECM determines that EVAP system is normal and runs sequence I in method B. If tank pressure is around atmospheric pressure, ECM performs sequence G in method A.	5 seconds
G	Fuel tank pressure measurement	Vent valve is turned ON (closed). Fuel vapor-containment valve opens to allow negative pressure into the fuel tank and fuel tank pressure is measured. Write down measured values because they will be used in leak check. If fuel tank pressure does not stabilize within 15 minutes, ECM stops monitoring.	15 minutes*
H	Third reference pressure measurement	After 3rd reference pressure measurement, leak check of fuel tank is performed. If recorded fuel tank pressure is higher than 3rd reference pressure, ECM determines that EVAP system has leakage.	60 seconds
I	Fuel vapor-containment valve close stuck check	Fuel vapor-containment valve is opened for a certain period of time to check whether the valve is stuck closed.	0.1 second
J	Final check	Atmospheric pressure is measured and then monitoring result is recorded by ECM.	-

HINT:
*: If there is only a small amount of fuel in the fuel tank, stabilizing the EVAP pressure takes longer than usual.



Purge flow monitor

If EVAP system pressure change is less than 7.5 mmHg (1 kPa) when the engine is running and the purge VSV is turned ON (closed), the ECM determines that the purge flow is insufficient.



RELATED DTCS

DTC No.	Monitoring Item
P043E	Reference orifice low flow (built into canister pump module)
P043F	Reference orifice high flow (built into canister pump module)
P0441	• Purge VSV close stuck • Purge VSV open stuck • Insufficient purge flow
P1420	Small leak from canister
P1421	Gross leak from canister
P1422	Small leak from fuel tank
P1423	Gross leak from fuel tank
P2401	Leak detection pump OFF stuck (built into canister pump module)
P2402	Leak detection pump ON stuck (built into canister pump module)
P2419	Vent valve ON (close) stuck (built into canister pump module)
P2420	Vent valve OFF (vent) stuck (built into canister pump module)
P2450	Fuel vapor-containment valve open stuck
P2451	Fuel vapor-containment valve close stuck

MONITOR RESULT

Refer to CHECKING MONITOR STATUS (See page ES-14).

CONFIRMATION DRIVING PATTERN

1. KEY-OFF MONITOR DRIVE PATTERN

(a) Connect the intelligent tester to the DLC3.

(b) Confirm the following conditions are satisfied:

- The fuel level is less than 90%.
- The altitude is less than 8,000 ft. (2,400 m).
- The vehicle is stopped (the vehicle speed is less than 2 mph).
- The ECT is 4.4 to 35°C (40 to 95°F).

- The IAT is 4.4 to 35°C (40 to 95°F).

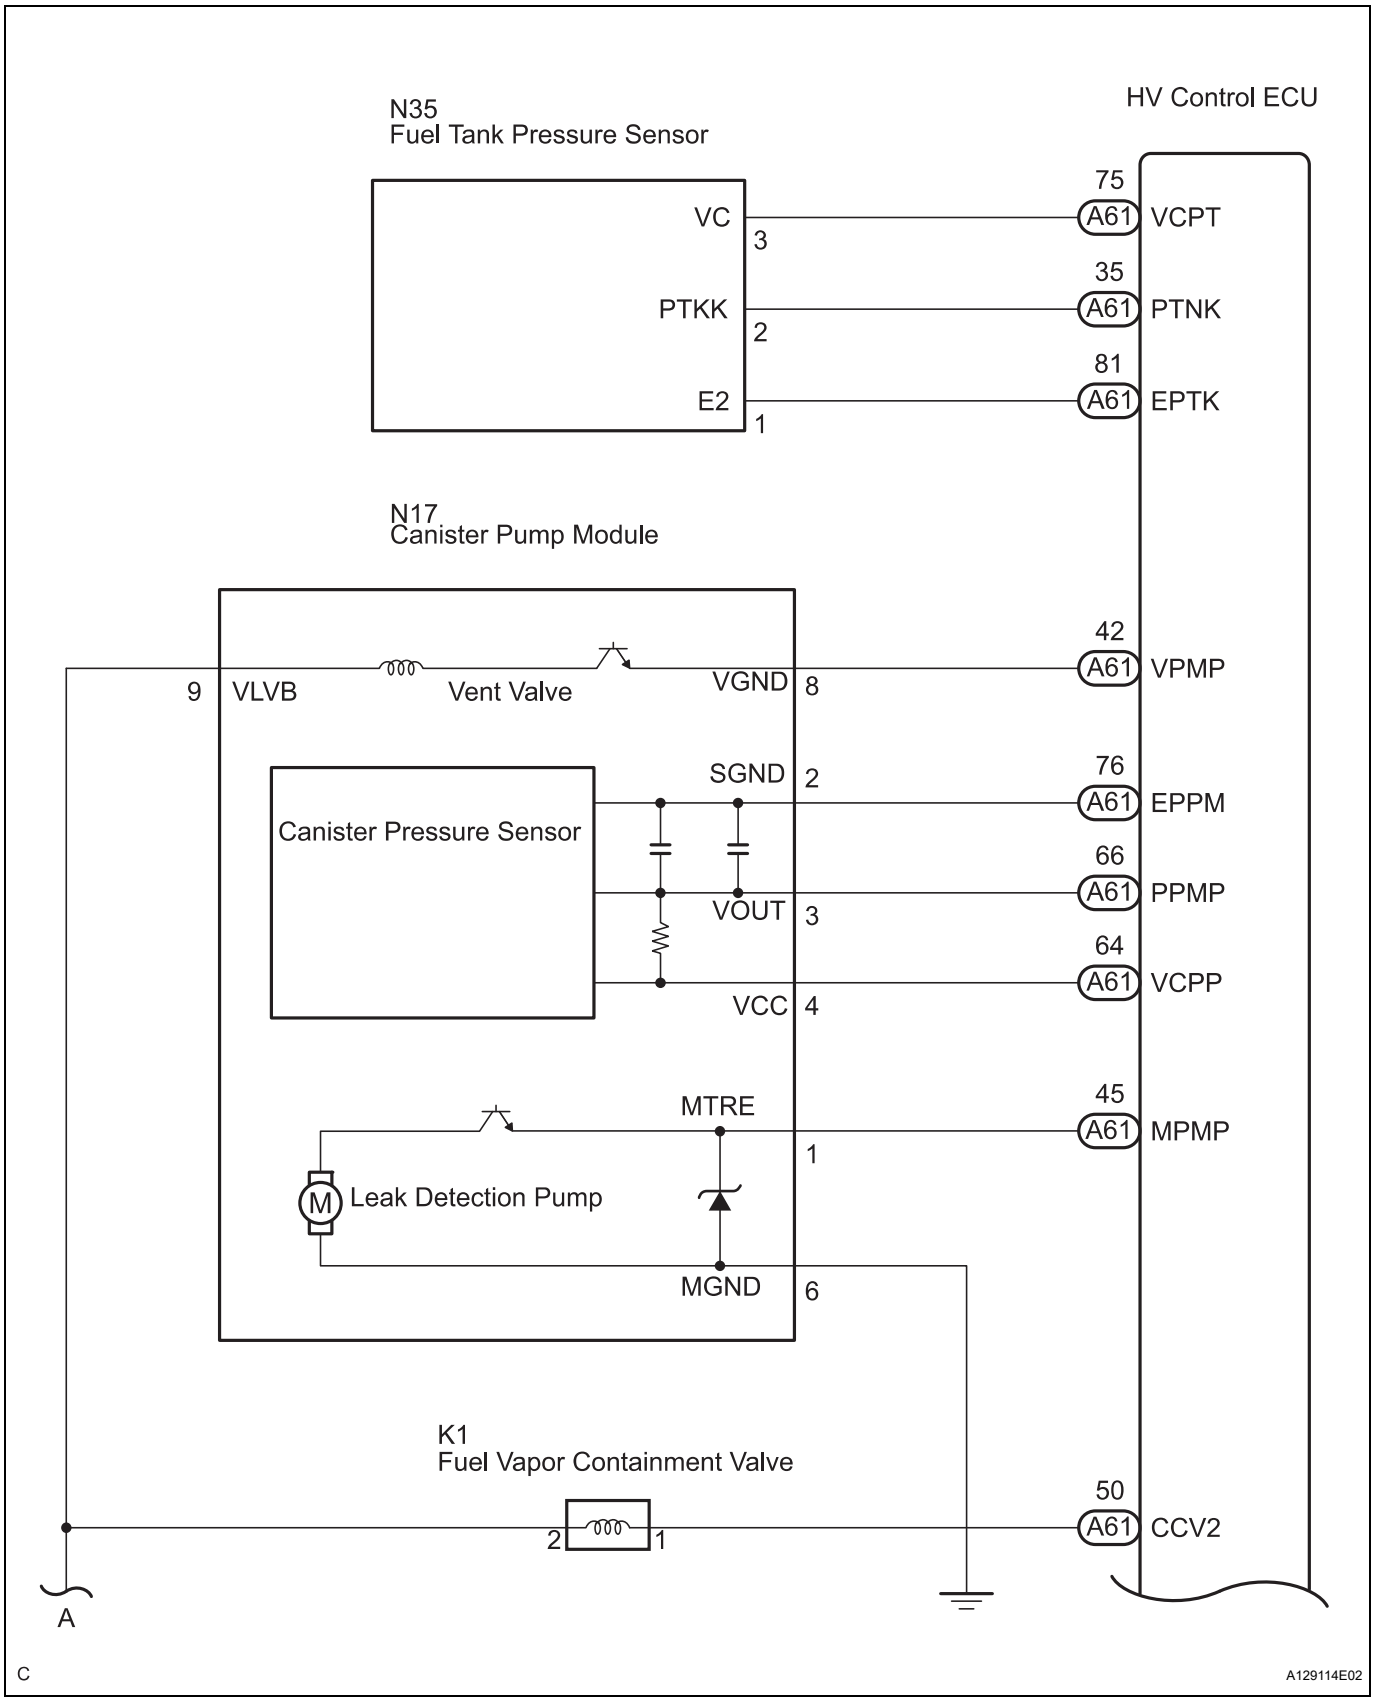
(c) Perform the drive pattern:
(1) Allow the engine to idle for 5 minutes or more.
(2) Turn the power switch off and wait 6 hours.
(d) Check the monitor status with the intelligent tester.

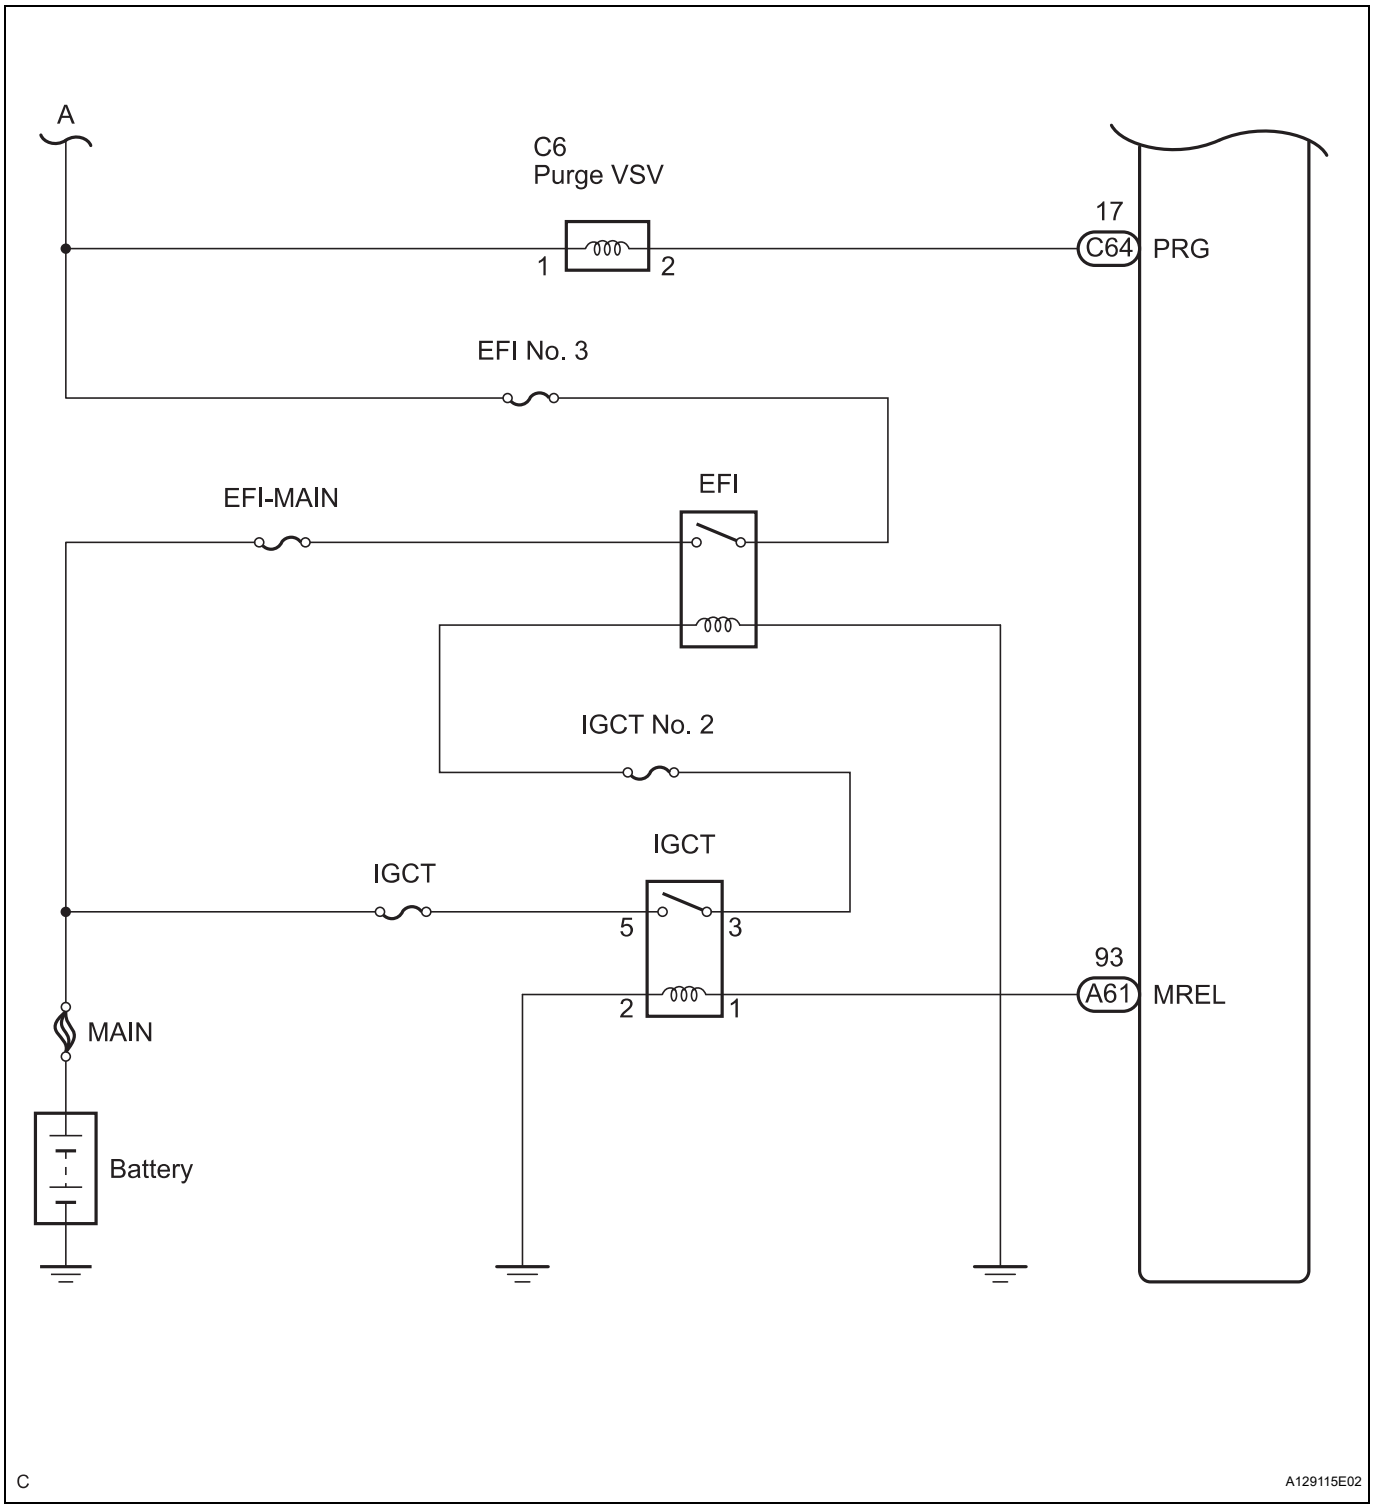
2. PURGE FLOW MONITOR DRIVE PATTERN (P0441)

(a) Connect the intelligent tester to the DLC3.
(b) Confirm that the following conditions are satisfied:
- The Engine Coolant Temperature (ECT) is more than 4.4°C (40°F).
- The Intake Air Temperature (IAT) is more than 4.4°C (40°F).

(c) Perform the drive pattern:
(1) Remove and reinstall the fuel cap to release the fuel tank pressure.
(2) Warm up the engine until the ECT reaches 75°C (167°F) or more.
(3) Run the engine at 2,500 rpm once.
(4) Allow the engine to idle and turn on the air conditioning (A/C) for 1 minute.
(d) Check the monitor status with the intelligent tester.

WIRING DIAGRAM





INSPECTION PROCEDURE

1	**CONFIRM DTC**

(a) Turn the power switch off and wait 10 seconds.
(b) Turn the power switch on (IG).
(c) Turn the power switch off and wait 10 seconds.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the power switch on (IG) and turn the tester on.

(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(g) Confirm the DTCs.

DTC and Malfunction Cross-Reference:

DTC	Suspected Malfunction
P043E, P043F, P2401, P2402 and P2419	• Reference orifice low flow • Reference orifice high flow • Leak detection pump OFF stuck • Leak detection pump ON stuck • Vent valve ON (close) stuck
P2420	Vent valve OFF (vent) stuck
P0441	Purge VSV close stuck
P0441 and P1421	• Gross leak from canister • Purge VSV open stuck
P1420	Small leak from canister
P1422	Small leak from fuel tank
P1423	Gross leak from fuel tank
P1423 and P2450	FVCV open stuck
P2451	FVCV close stuck

2	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (AUTOMATIC OPERATION))

NOTICE:

- **In EVAP SYSTEM CHECK (AUTOMATIC OPERATION), a series of 6 EVAP SYSTEM CHECK steps are performed automatically. A maximum of 15 minutes is required.**
- **Do not perform EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed and the leak check of the fuel tank is unavailable.**
- **Do not run the engine.**
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing an EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

(a) Clear the DTCs with the intelligent tester.
(b) Remove the fuel tank cap and reinstall the fuel cap.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / AUTO OPERATION.
(d) After EVAP SYSTEM CHECK is completed, check for DTCs.

Result

DTC	Result	Proceed to
Set	**A malfunction occurs and troubleshooting can be performed**	**A**

3 IDENTIFICATION OF TROUBLE AREAS

(a) Identification of trouble areas according to DTCs.
(b) Refer to the table below to determine the next procedure according to the output DTCs.

Result

DTC	Suspected Malfunction	Proceed to
P0441, P1420, P1421, P1422, P1423, P2450 and/or P2451	• Purge VSV open stuck • Purge VSV close stuck • Gross leak from canister • Small leak from canister • Gross leak from fuel tank • Small leak from fuel tank • FVCV open stuck • FVCV close stuck	A
P043E, P043F, P2401, P2402, P2419 and/or P2420	• Reference orifice low flow • Reference orifice high flow • Leak detection pump OFF stuck • Leak detection pump ON stuck • Vent valve ON (close) stuck • Vent valve OFF (vent) stuck	B

B	Go to step 11

A

4 IDENTIFICATION OF TROUBLE AREAS

(a) Identification of trouble areas according to DTCs.
(b) Refer to the table below to determine the next procedure according to the output DTCs.

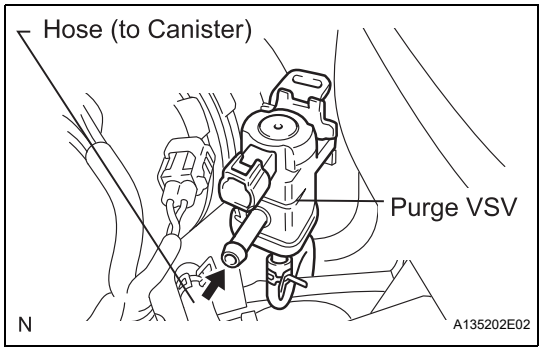
Result

DTC	Suspected Malfunction	Proceed to
P0441	Purge VSV close stuck	A
P0441 and P1421	•Gross leak from canister •Purge VSV open stuck	B
P1420	Small leak from canister	
P1422	Small leak from fuel tank	C
P1423	Gross leak from fuel tank	
P1423 and P2450	FVCV open stuck	D
P2451	FVCV close stuck	

B	Go to step 18
C	Go to step 21
D	Go to step 23

A

5	CHECK VACUUM HOSE (PURGE VSV - INTAKE MANIFOLD)



(a) Disconnect the hose (to intake manifold) from the purge VSV.
(b) Put the engine in inspection mode (See page ES-35).
(c) Use your finger and confirm that the purge VSV has suction.

ES

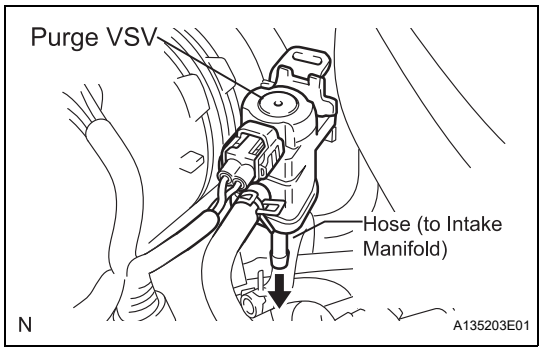
Result

Result	Proceed to
There is suction. Conclusion: EVAP hose between purge VSV and intake manifold is normal.	OK
There is no suction. Conclusion: Problem in intake manifold or hose between purge VSV and intake manifold	NG

NG → Go to step 32

OK

6	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (PURGE VSV)



(a) Disconnect the hose (to canister) from the purge VSV.
(b) Put the engine in inspection mode (See page ES-35).
(c) Enter the following menu: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / EVAP VSV (ALONE).
(d) Turn the purge VSV OFF (Purge VSV: OFF).
(e) Use your finger and confirm that the purge VSV has no suction.
(f) Turn the purge VSV ON (Purge VSV: ON).
(g) Use your finger to confirm that the purge VSV has suction.

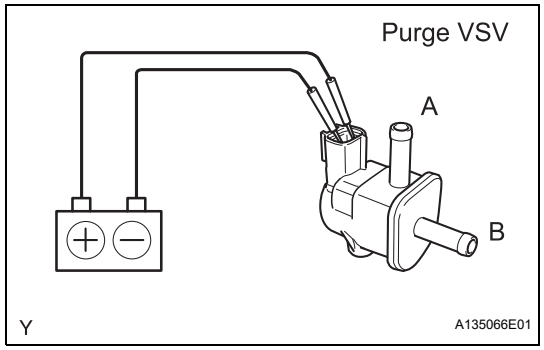
OK:

Purge VSV functions normally

OK → Go to step 32

NG

7	CHECK PURGE VSV



(a) Remove the purge VSV.
(b) Apply compressed air to the purge VSV, confirm that no air flows from A to B as shown in the illustration.
(c) Apply battery voltage to the purge VSV.
(d) While applying compressed air, confirm that air flows from A to B as shown in the illustration.

ES

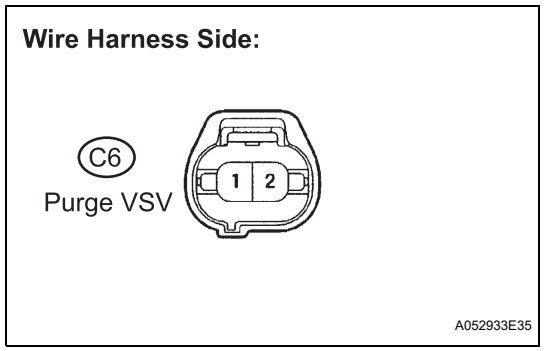
Result

Result	Proceed to
Air flows from A to B. Conclusion: purge VSV is normal.	OK
No air flows from A to B. Conclusion: purge VSV is malfunctioning.	NG

NG → Go to step 27

OK

8	CHECK HARNESS AND CONNECTOR (PURGE VSV - EFI NO.2 FUSE)



(a) Disconnect the C6 purge VSV connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage between terminal 1 of the E18 connector and body ground.

Result

Result	Proceed to
11 to 14 V Conclusion: No problem exists on power source's wires.	OK
Except above Conclusion: Problem in wire or connector between purge VSV and ECM.	NG

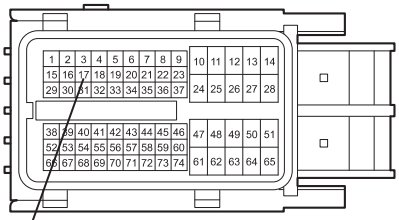
NG → Go to step 31

OK

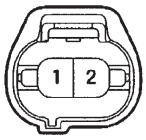
9	CHECK HARNESS AND CONNECTOR (PURGE VSV - HV CONTROL ECU)

Wire Harness Side:

C64 HV Control ECU Connector



C6 Purge VSV Connector



A140999E01

(a) Disconnect the C64 hybrid vehicle control ECU connector and the C6 purge VSV connector.
(b) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
PRG (C64-17) - C6-2	10 Ω or less
PRG (C64-17) - Body ground	10 kΩ or more
C6-2 - Body ground	10 kΩ or more

NG → **Go to step 31**

ES

OK

10	REPLACE HYBRID VEHICLE CONTROL ECU

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

11	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (VACUUM PUMP)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VACUUM PUMP.
(d) Turn the leak detection pump ON with the tester.
(e) Touch the canister pump module and check if the pump is moving.

OK:
Pump operates

NG → **Go to step 13**

OK

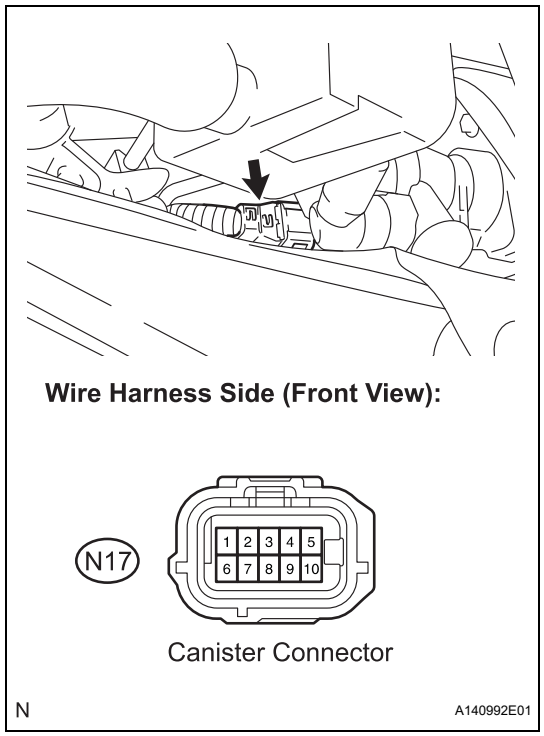
12	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (VENT VALVE)

(a) Remove the canister lower cover.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VENT VALVE.
(e) Touch the canister pump module, use the tester to turn the vent valve ON and OFF, and check if the vent valve is moving.
OK:
Vent valve vibration can be felt.

ES

OK	Go to step 28
NG	Go to step 16

13	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (VACUUM PUMP)



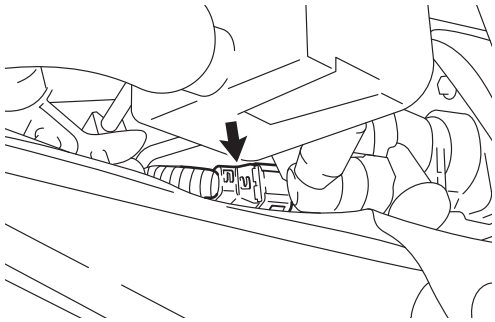
(a) Turn the power switch off.
(b) Remove the canister lower cover.
(c) Disconnect the canister pump module connector.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the power switch on (IG).
(f) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / VACUUM PUMP.
(g) Turn the leak detection pump ON with the tester.
(h) Measure the voltage between MTRB terminal 1 of the canister pump module connector and body ground when the leak detection pump is turned ON and OFF using the tester.
Standard voltage:
10 to 14 V

NG	Go to step 15

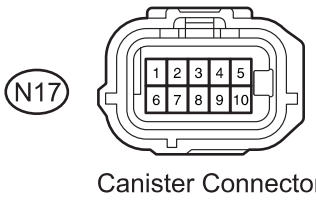
OK

14	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - BODY GROUND)

(a) Remove the canister lower cover.



Wire Harness Side (Front View):



Canister Connector

N A140992E01

(b) Disconnect the canister pump module connector.
(c) Measure the resistance between the MGND terminal of the canister pump module and body ground.
Standard resistance:
Below 1 Ω

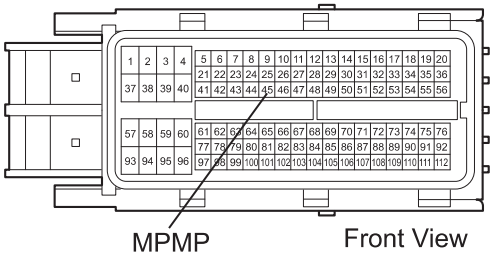
OK	**Go to step 28**
NG	**Go to step 32**

ES

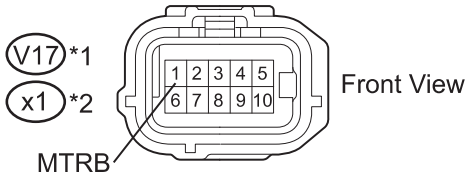
15 CHECK HARNESS AND CONNECTOR (ECM - CANISTER PUMP MODULE)

Wire Harness Side:

A61 HV Control ECU Connector



Canister Pump Module Connector



*1: without Active Stabilizer

*2: with Active Stabilizer

A140997E01

(a) Disconnect the A53 ECM connector.
(b) Disconnect the canister pump module connector.
(c) Measure the resistance between the MPMP terminal of the ECM connector and the MTRB terminal of the canister pump module connector.
Standard resistance:
without Active Stabilizer

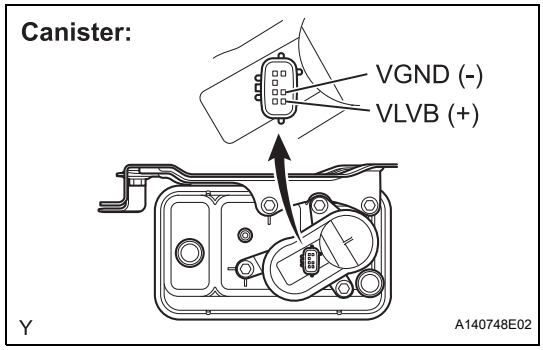
Tester Connection	Specified Condition
MPMP (A53-16) - MTRB (V17-1)	10 Ω or less
MPMP (A53-16) or MTRB (V17-1) - Body ground	10 kΩ or more

with Active Stabilizer

Tester Connection	Specified Condition
MPMP (A53-16) - MTRB (x1-1)	10 Ω or less
MPMP (A53-16) or MTRB (x1-1) - Body ground	10 kΩ or more

OK	**Go to step 26**
NG	**Go to step 32**

16	INSPECT CANISTER PUMP MODULE (VENT VALVE OPERATION)



(a) Turn the power switch off.
(b) Remove the canister lower cover.
(c) Disconnect the canister pump module connector.
(d) Apply battery voltage to the VLVB and VGND terminals of the canister pump module.
(e) Touch the canister pump module to confirm the vent valve operation.

ES

Result

Test Results	Suspected Trouble Areas	Proceed to
Operating	1. Wire harness between vent valve and ECM 2. ECM	A
Not operating	Vent valve	B

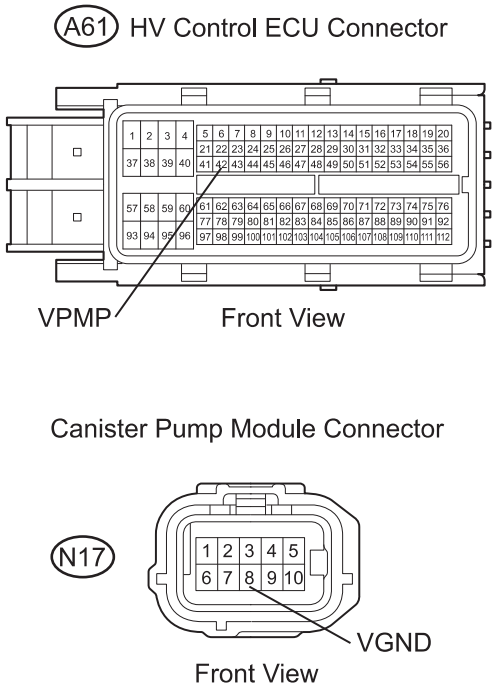
(f) Reconnect the canister connector.

B → Go to step 28

A

17	CHECK HARNESS AND CONNECTOR (CANISTER PUMP MODULE - HV CONTROL ECU)

Wire Harness Side:



(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Disconnect the canister pump module connector.
(c) Measure the resistance between the VPMP terminal of the ECM connector and the VGND terminal of the canister pump module connector.

Standard resistance

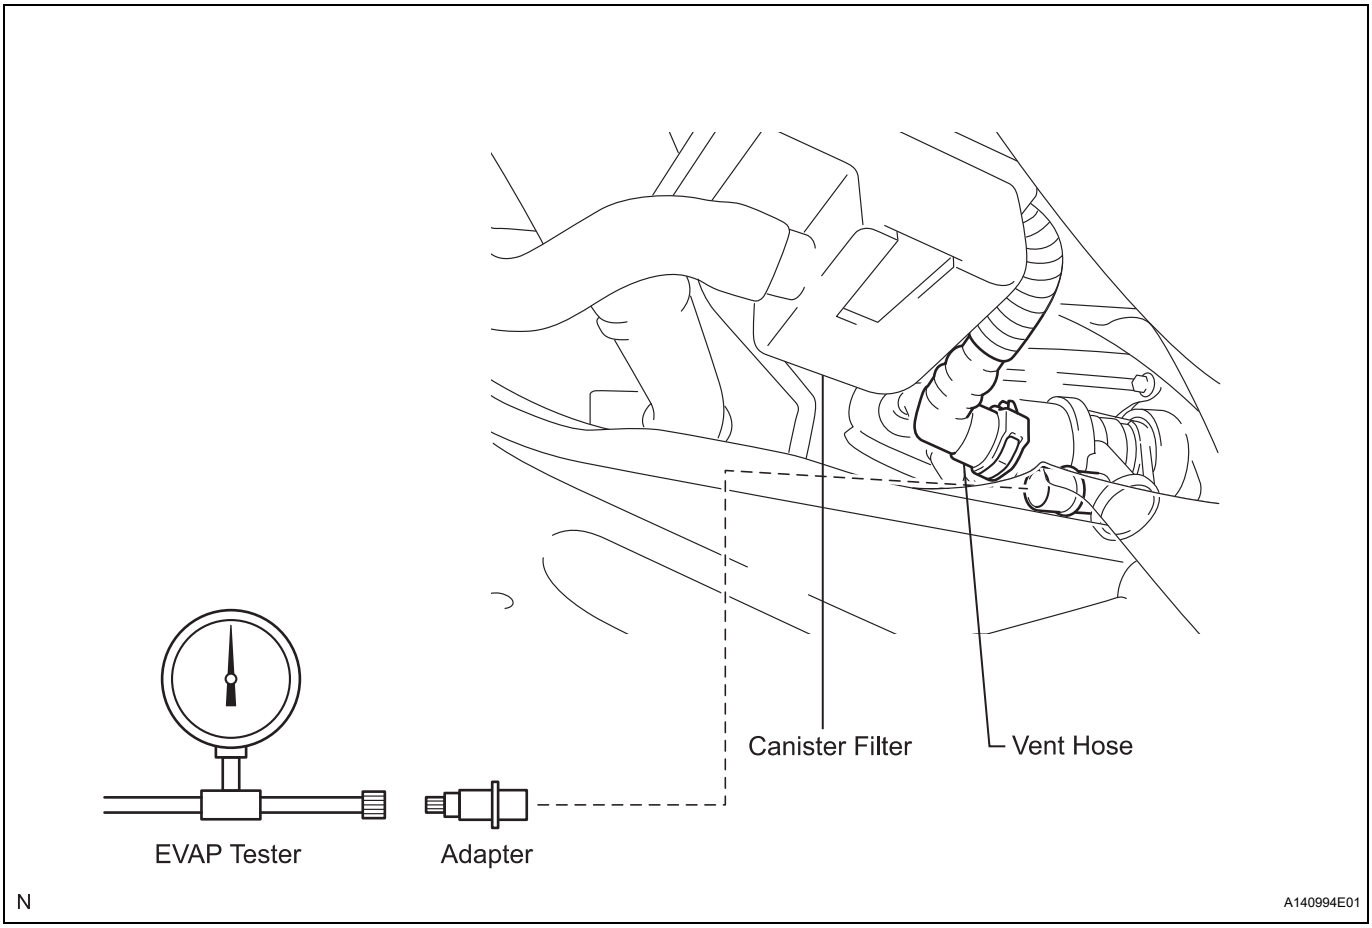
Tester Connection	Specified Condition
VPMP (A61-42) - VGND (N17-8)	10 Ω or less
VPMP (A61-42) or VGND (N17-8) - Body ground	10 kΩ or more

(d) Reconnect the hybrid vehicle control ECU connector.
(e) Reconnect the canister pump module connector.

OK	Go to step 26
NG	Go to step 31

ES

18	LOCATE EVAP LEAK PART (PURGE VSV - CANISTER)



(a) Disconnect the vent hose.
(b) Connect the EVAP tester to the vent hose with the adapter.
(c) Pressurize the EVAP system to 3.2 to 3.7 kPa (24 to 28 mmHg).
(d) Apply soapy water to the piping and connecting parts of the EVAP system.
(e) Look for areas where bubbles appear. This indicates the leak point.
(f) Repair or replace the leak point.
HINT:
Disconnect the hose between the canister and the fuel tank from the canister. Block the canister side and conduct an inspection. In this way, the fuel tank can be excluded as an area suspected of causing fuel leaks.

NEXT

19	REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

20	CHECK FUEL TANK CAP ASSEMBLY

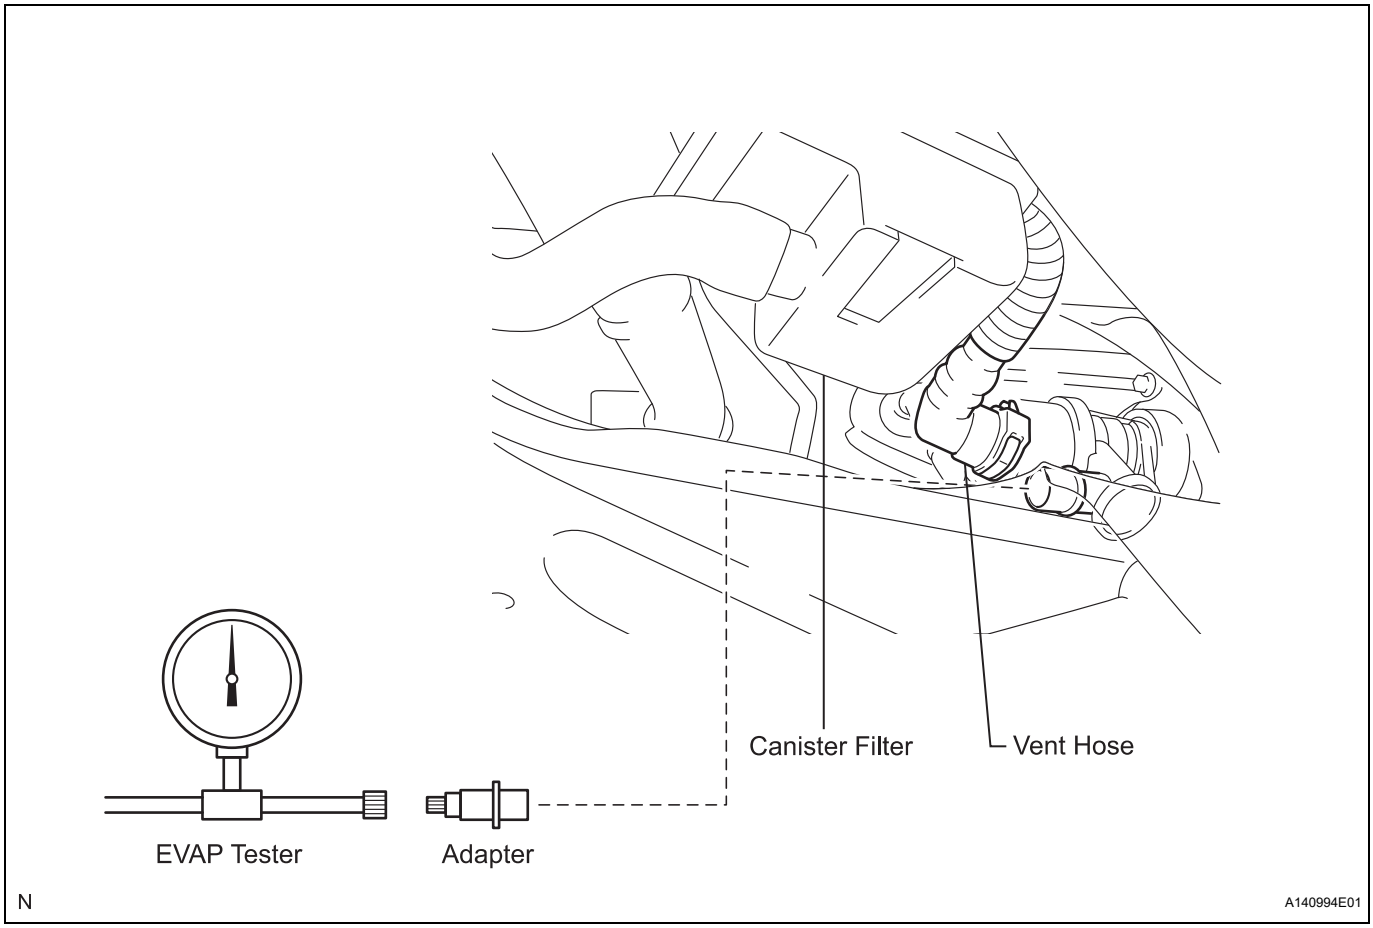
(a) Check if the fuel cap is tightened until a few "click" sounds are heard.

(b) If you have the EVAP tester, check the fuel cap using the fuel cap adaptor.
   (1) Install the fuel cap to the fuel cap adaptor, and connect the hose from the EVAP tester's pump.
   (2) Pressurize the fuel cap adaptor to between 24 and 28 mmHg for 45 seconds.
   (3) Stop the pump and seal the fuel cap adaptor.
   (4) Wait 2 minutes.
   (5) Confirm that the pressure is higher than 15 mmHg.
   OK:
   Higher than 15 mmHg

NG → **Go to step 30**

OK

21	LOCATE EVAP LEAK PART (FUEL VAPOR-CONTAINMENT VALVE - FUEL TANK)



(a) Disconnect the vent hose.
(b) Connect the EVAP tester to the vent hose with the adapter.
(c) Connect the intelligent tester to DLC3.
(d) Turn the power switch on (IG).
(e) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FVCV.
(f) Turn the fuel vapor-containment valve ON with the tester.
(g) Pressurize the EVAP system to 3.2 to 3.7 kPa (24 to 28 mmHg).
(h) Apply soapy water to the piping and connecting parts of the EVAP system.
(i) Look for areas where bubbles appear. This indicates the leak point.
(j) Repair or replace the leak point.
HINT:
Disconnect the hose between the canister and the fuel tank from the canister. Block the canister side and conduct an inspection. In this way, the fuel tank can be excluded as an area suspected of causing fuel leaks.

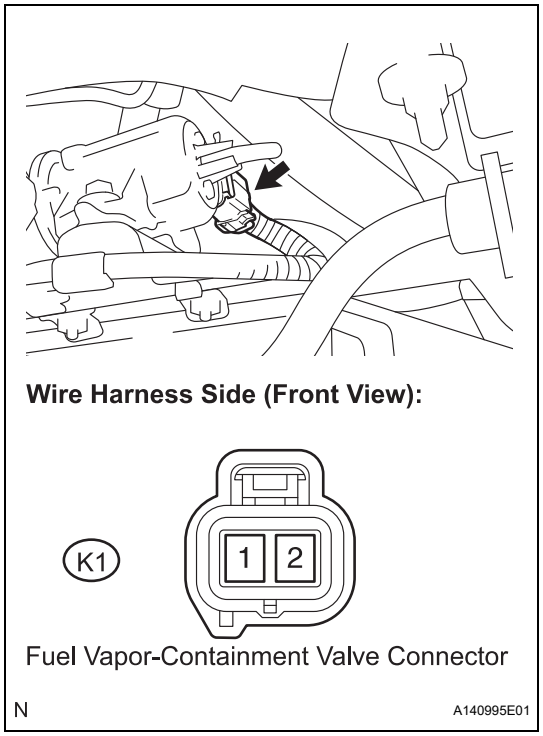
NEXT

22	REPLACE MALFUNCTIONING PART

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

23	CHECK FUEL VAPOR-CONTAINMENT VALVE ASSEMBLY (POWER SOURCE CIRCUIT)



(a) Disconnect the K1 fuel vapor-containment valve connector.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / TANK CLS VALVE.
(e) Turn the fuel vapor-containment valve ON with the tester.
(f) Measure the voltage between terminals 5 and 6 of the eV1 connector.
Standard voltage:
10 to 14 V

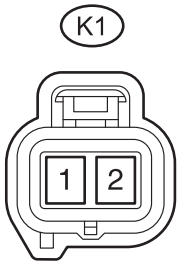
OK	Go to step 29

NG

ES

24	CHECK HARNESS AND CONNECTOR (FUEL VAPOR-CONTAINMENT VALVE - EFI NO. 2 FUSE)

Wire Harness Side (Front View):



Fuel Vapor-Containment Valve Connector

N A141003E01

(a) Disconnect the K1 fuel vapor-containment valve.
(b) Measure the voltage between terminal eV1-6 and body ground.
Standard voltage:
10 to 14 V

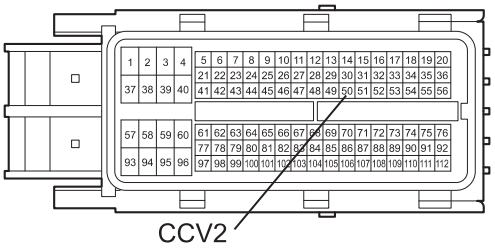
NG → **Go to step 31**

OK

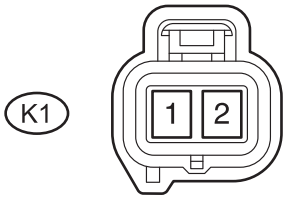
25	CHECK HARNESS AND CONNECTOR (FUEL VAPOR-CONTAINMENT VALVE ASSEMBLY - ECM)

Wire Harness Side:

A61 HV Control ECU Connector



Wire Harness Side (Front View):



Fuel Vapor-Containment Valve Connector

Y A141000E01

(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Disconnect the K1 fuel vapor-containment valve.
(c) Measure the resistance.
Standard resistance

Tester Connection	Specified Condition
CCV2 (A61-50) - K1-1	10 Ω or less
CCV2 (A61-50) or K1-1 - Body ground	10 kΩ or more

NG → **Go to step 31**

OK

26	REPLACE HYBRID VEHICLE CONTROL ECU

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

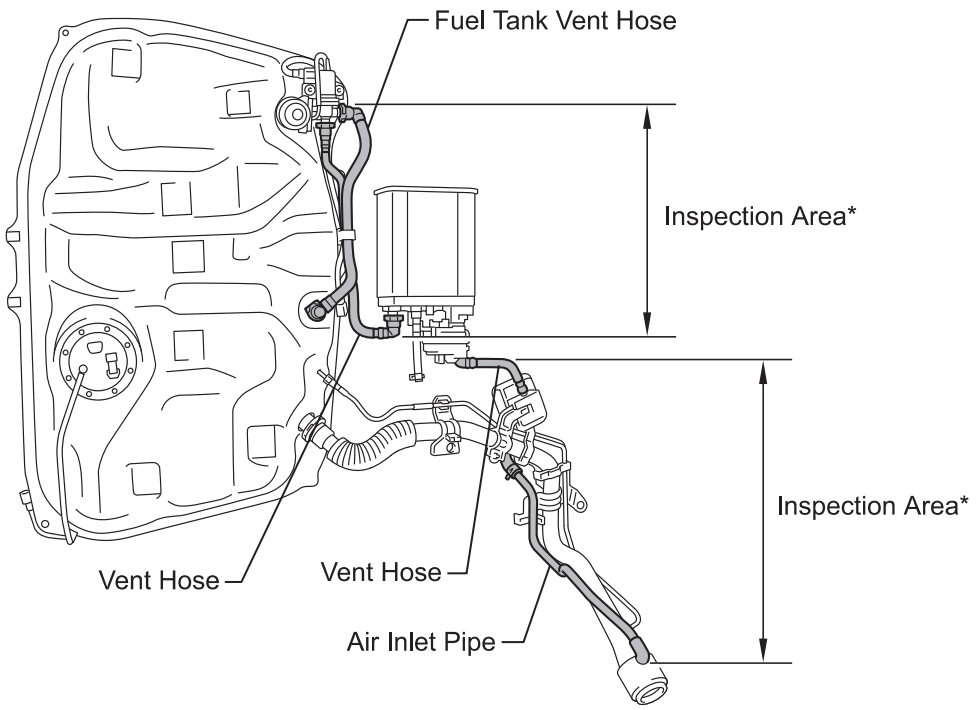
27	REPLACE PURGE VSV

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

28	REPLACE CANISTER ASSEMBLY

(a) Replace the canister assembly (See page EC-9).
NOTICE:
When replacing the canister, check the canister pump module interior and related pipes for water, fuel and other liquids. If liquids are present, check for disconnections and/or cracks in the following: 1) the pipe from the air inlet port to the canister pump module; 2) the canister filter; and 3) the hose from the canister to the fuel tank.



*: Check for disconnection and/or crack

N

A140996E02

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

29	REPLACE FUEL VAPOR-CONTAINMENT VALVE

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

30	REPLACE FUEL TANK CAP

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

31	REPAIR OR REPLACE HARNESS AND CONNECTOR

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

32	REPAIR OR REPLACE VACUUM HOSE

NEXT

PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

33	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION))

HINT:
In the manual operation check, the EVAP system can be checked in signal steps. Valve operation and pressure in each step can also be checked.

(a) Clear the DTCs (See page ES-31).
(b) Remove the fuel tank cap and reinstall the fuel cap.
(c) Enter the following menus: DIAGNOSIS / ENHANCED OBD II / SYSTEM CHECK / EVAP SYS CHECK / MANUAL OPERATION.

NOTICE:

- **In EVAP SYSTEM CHECK (AUTO OPERATION), the series of 9 EVAP SYSTEM CHECK steps is performed automatically. It takes a maximum of approximately 18 minutes.**
- **Do not perform EVAP SYSTEM CHECK when the fuel tank is more than 90% full because the cut-off valve may be closed, making the leak check of the fuel tank unavailable.**
- **Do not run the engine in this step.**
- **When the temperature of the fuel is 35°C (95°F) or more, a large amount of vapor forms and any check results become inaccurate. When performing EVAP SYSTEM CHECK, keep the temperature below 35°C (95°F).**

NEXT

34	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION STEP 1))

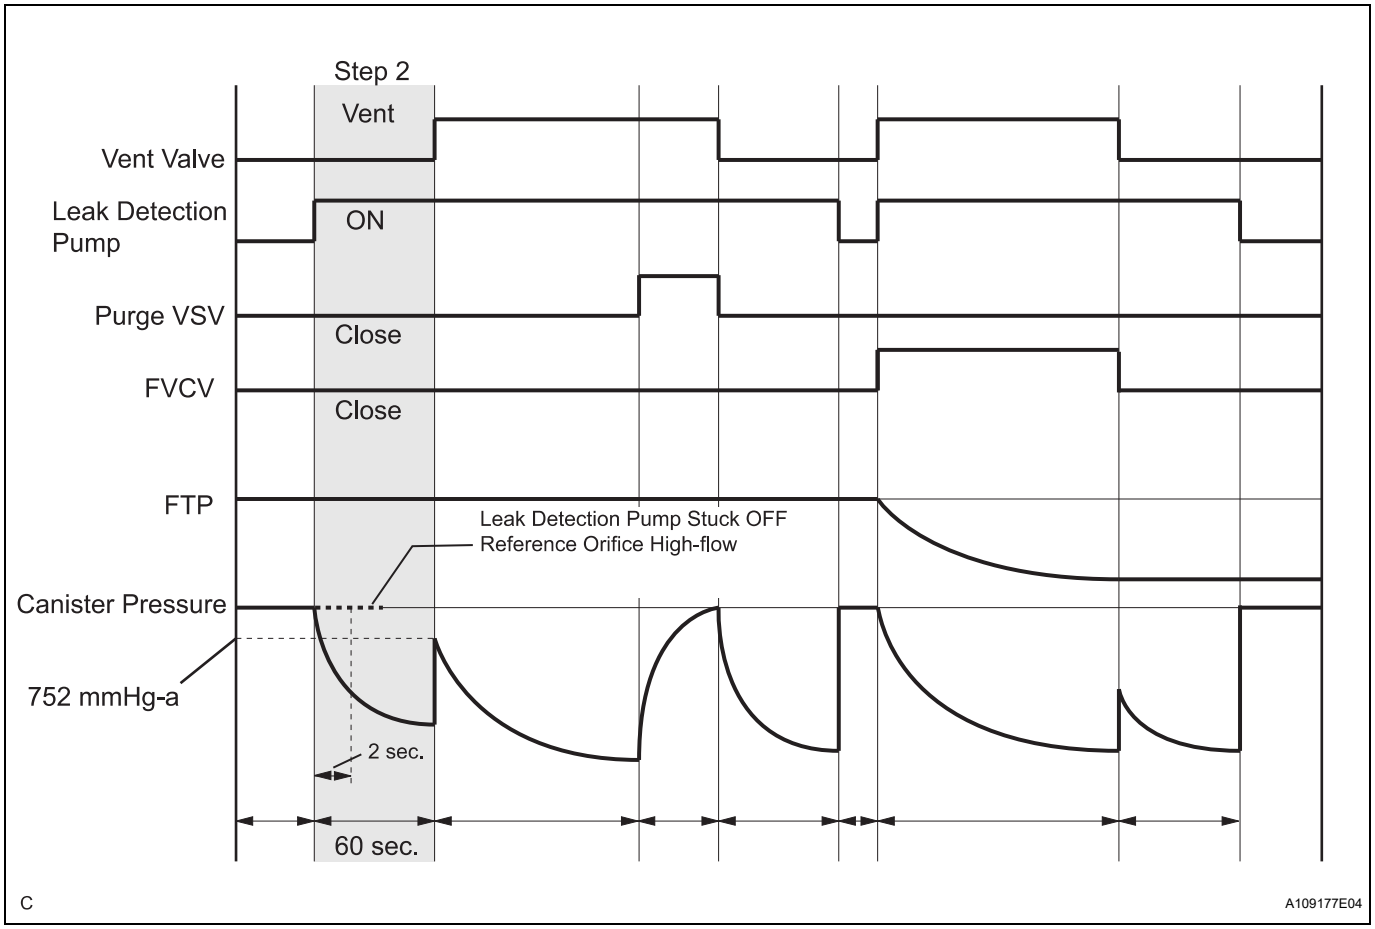
(a) Select step 1 and wait 10 seconds.

NEXT

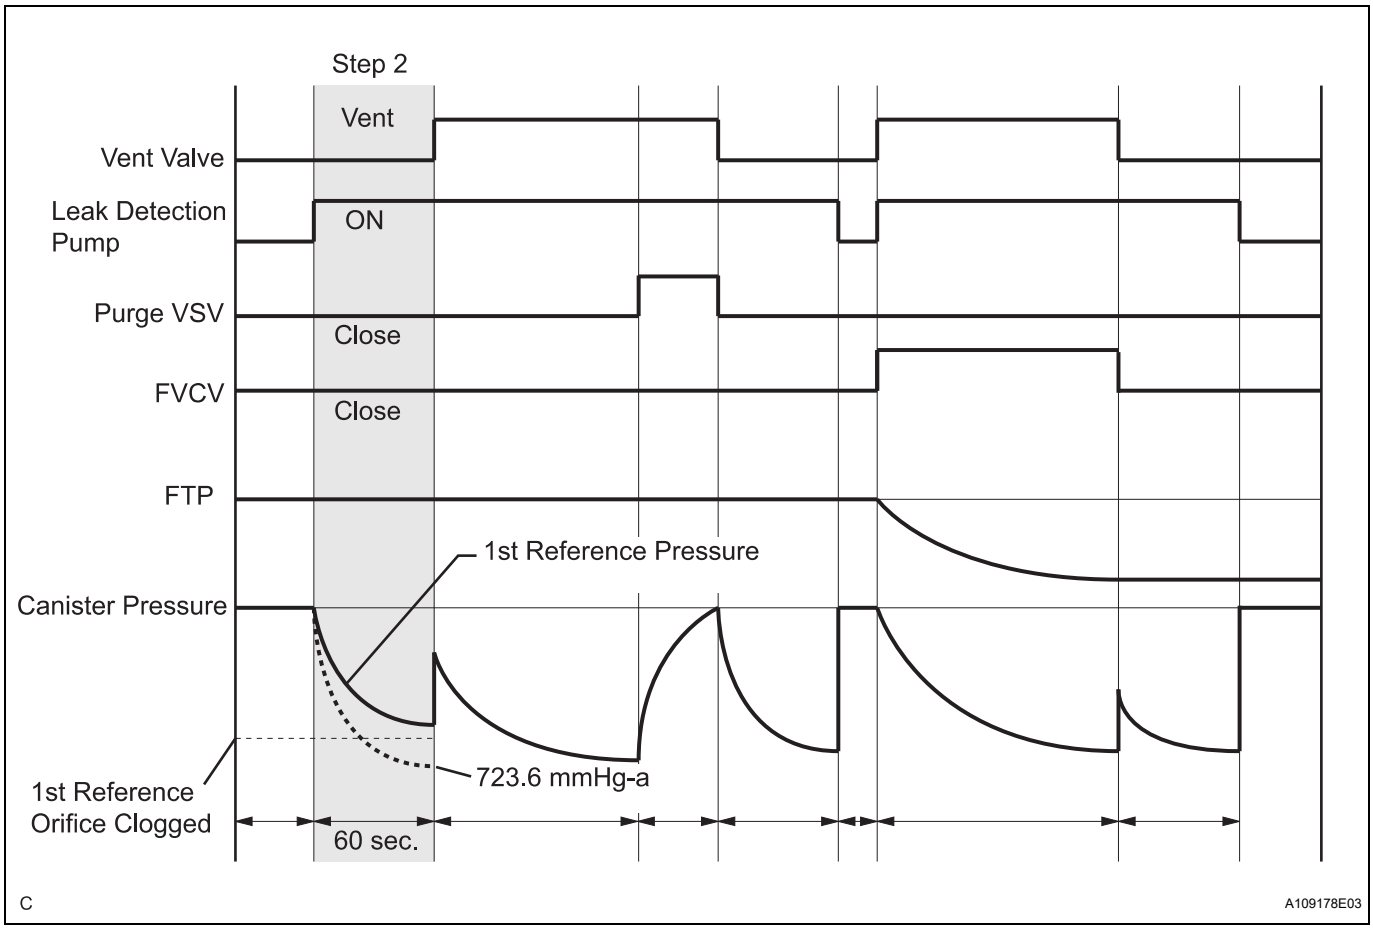
35	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION STEP 2))

(a) Perform step 2.
(b) Check the EVAP pressure 2 seconds after the leak detection pump is activated*.
*: The leak detection pump begins to operate at the start of step 2.

ES



(c) Check the EVAP pressure again when it has stabilized. This pressure is the first reference pressure standard.



Result

Test Result	Suspected Trouble Area	Proceed to
EVAP pressure in step (b) is between 723.6 mmHg-a and 752 mmHg-a	Not yet determined	A
EVAP pressure in step (b) is 752 mmHg-a or more	• Reference orifice high-flow • Leak detection pump stuck OFF	B
EVAP pressure in step (b) is below 723.6 mmHg-a	Reference orifice clogged	C

B → Go to step 11

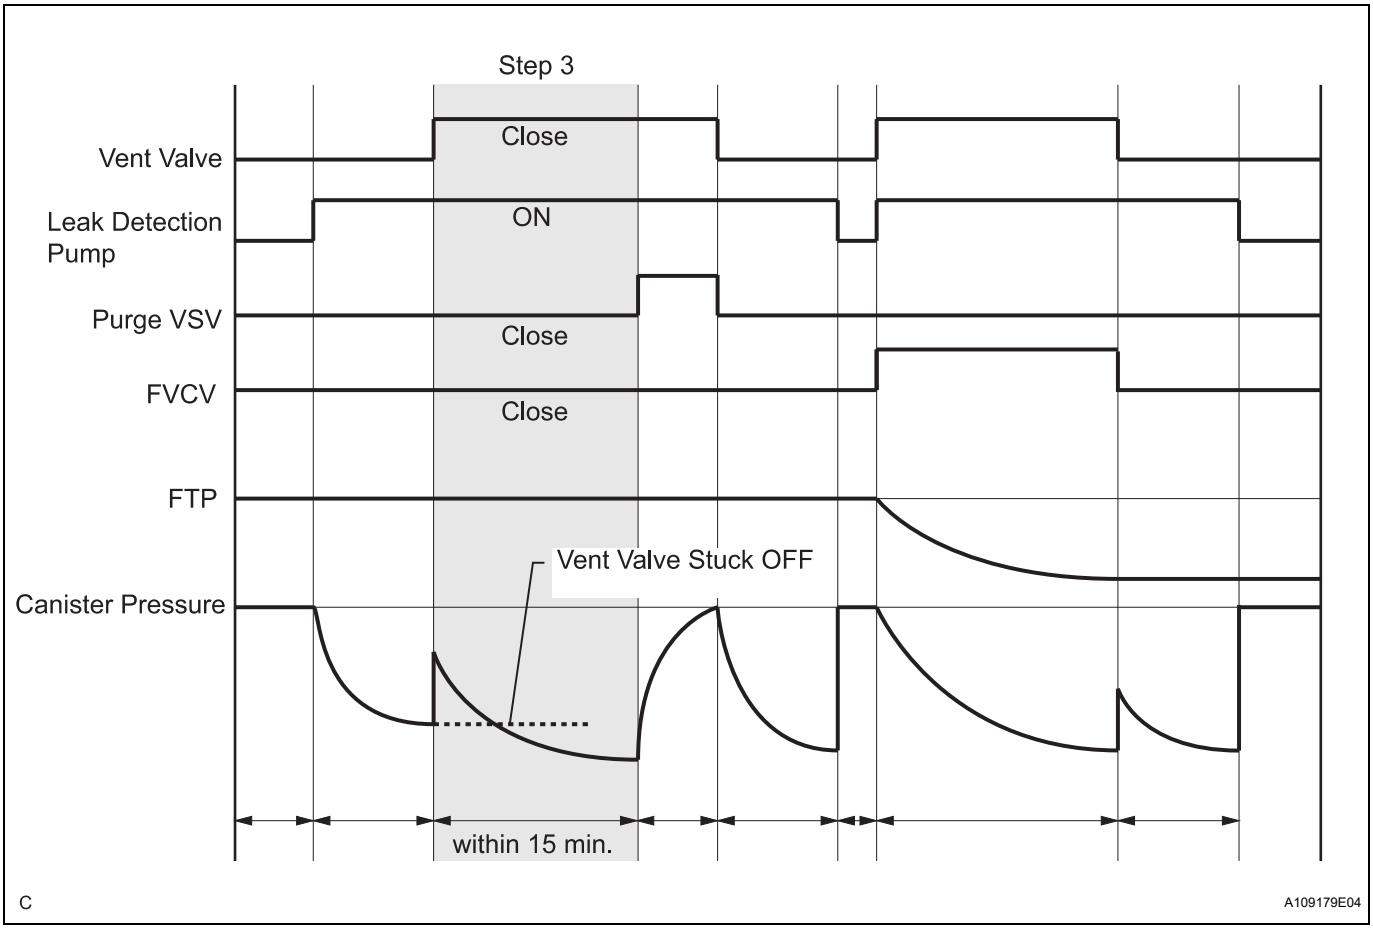
C → Go to step 28

A

36	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION STEP 3))

(a) Perform step 3.

(b) Check the EVAP pressure change in step 3.

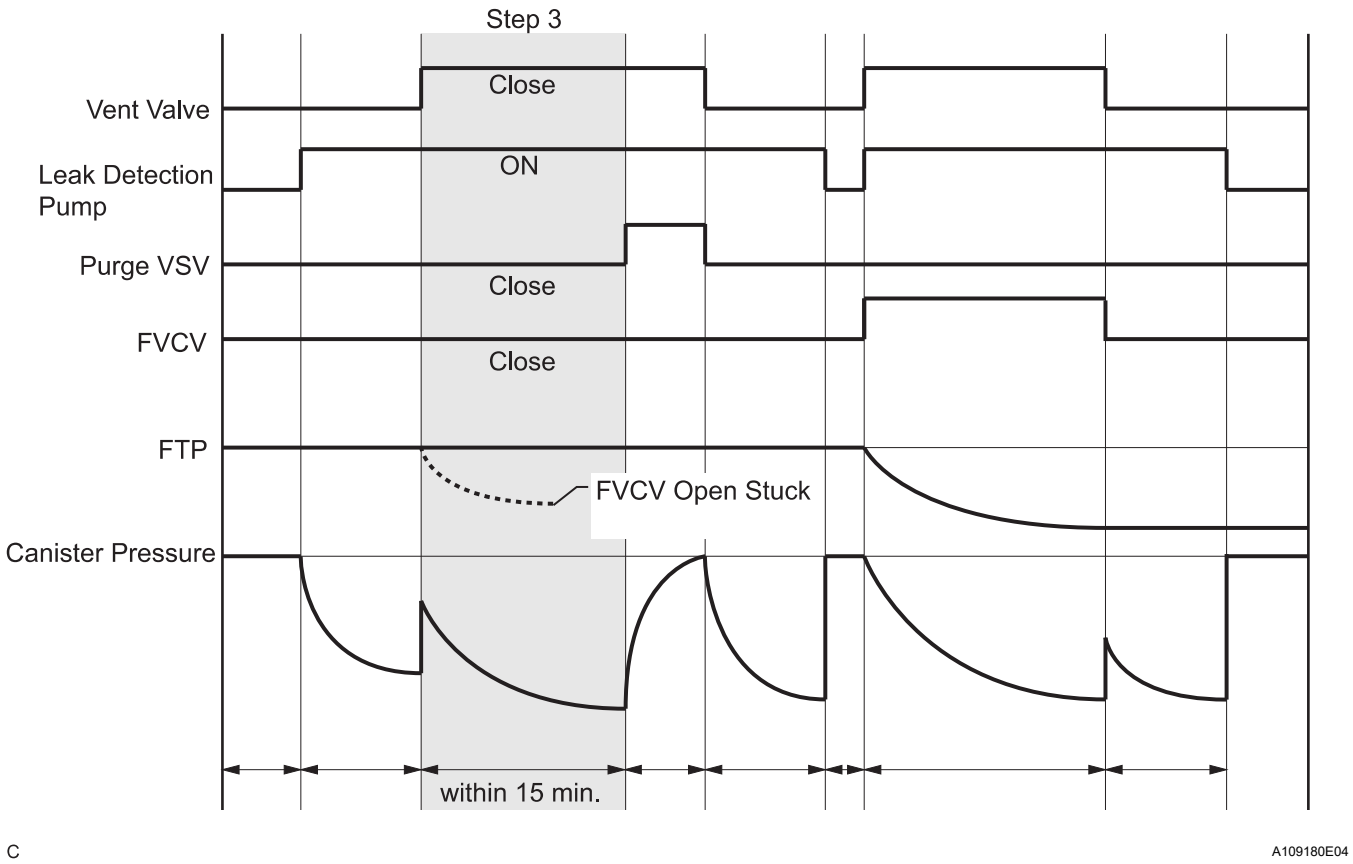


Result

Test Result	Suspected Trouble Area	Proceed to
EVAP pressure change in step (b) is 762 mmHg-a or more	Not yet determined	A
EVAP pressure in step (b) is below 762 mmHg-a	Vent valve stuck OFF	B

ES

(c) Check the fuel tank pressure change in step 3.

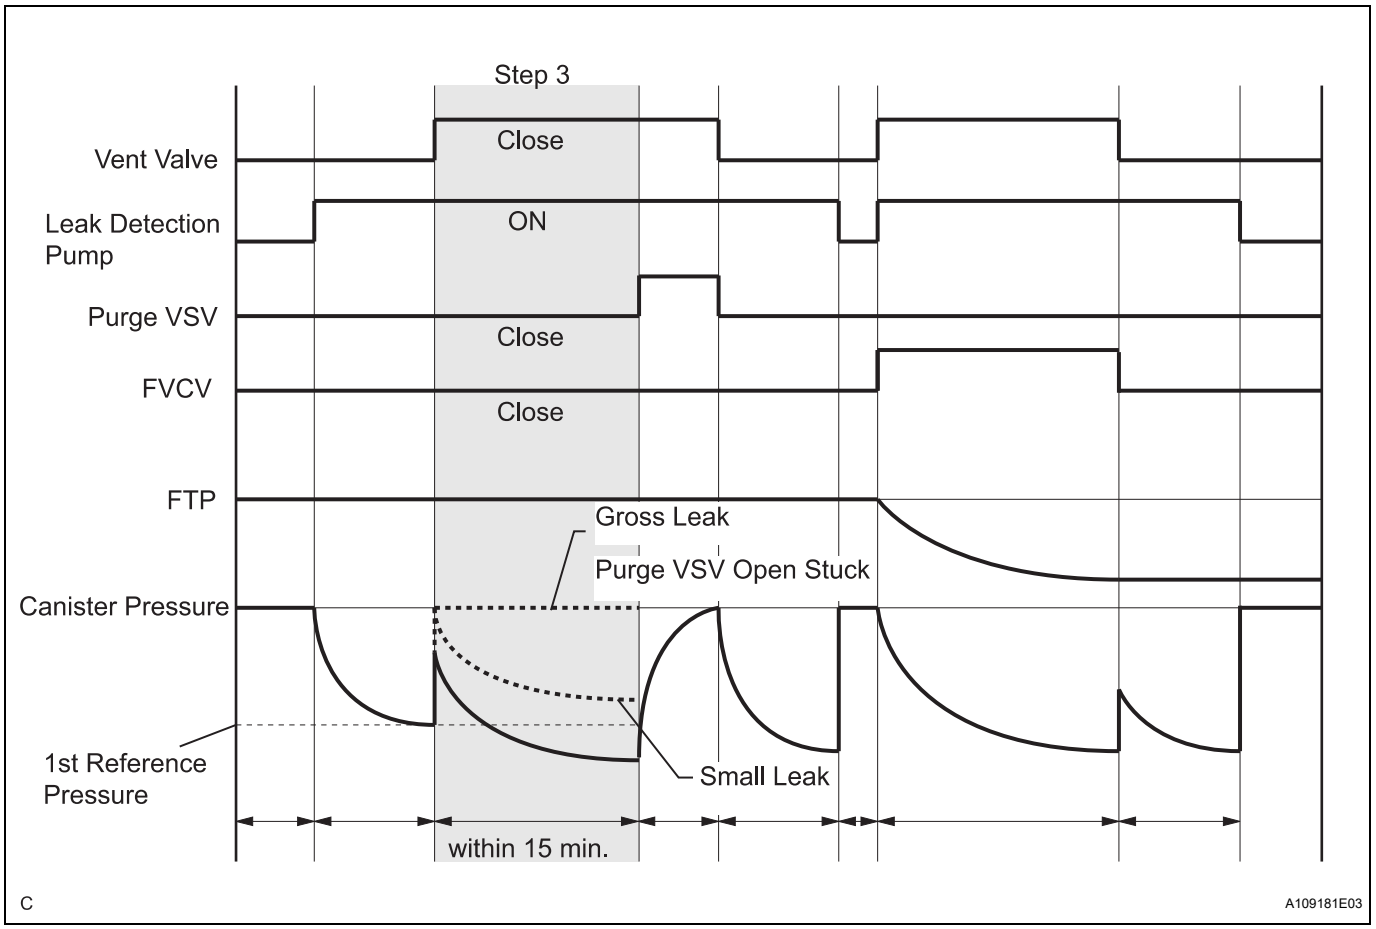


Result

Test Result	Suspected Trouble Area	Proceed to
Fuel tank pressure in step (b) is below 763.7 mmHg-a	**Not yet determined**	**A**
Fuel tank pressure change in step (b) is 763.7 mmHg-a or more	**Fuel vapor-containment valve (FVCV) ON (open) stuck**	**C**

(d) Check the EVAP pressure again when it has stabilized. This pressure is the canister leak pressure standard.

(e) Compare the first reference pressure with the canister leak pressure.



Result

Test Result	Suspected Trouble Area	Proceed to
Lower than first reference pressure	Not yet determined	A
First reference pressure or higher	• Purge VSV open stuck • Leakage from line between purge VSV and canister	D

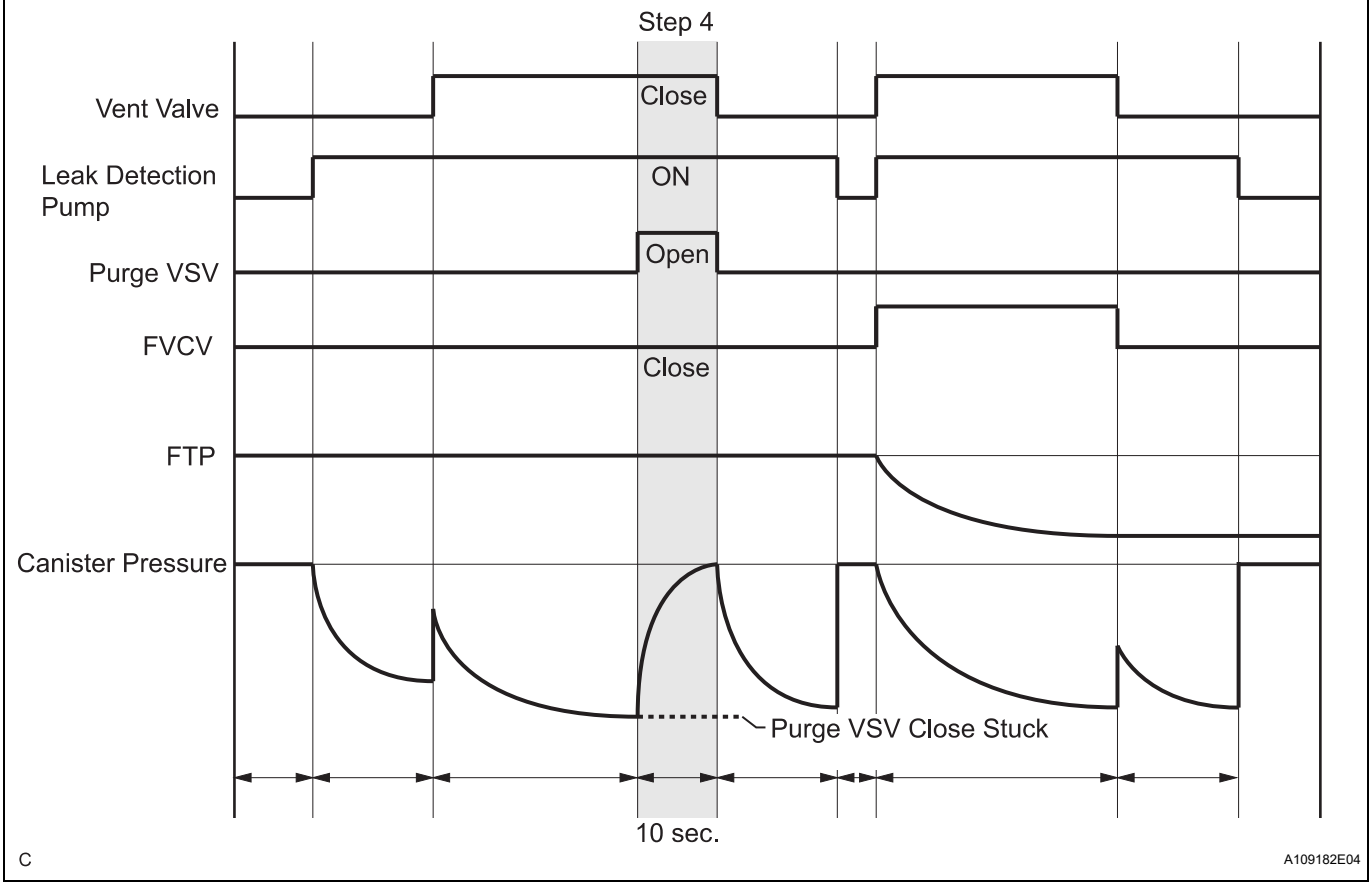
B	Go to step 16
C	Go to step 23
D	Go to step 18

A

37	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION STEP 4))

(a) Perform step 4.

(b) Check the EVAP pressure change in step 4.



Result

Test Result	Suspected Trouble Area	Proceed to
EVAP pressure change in step (b) is 762 mmHg-a or more	Not yet determined	A
EVAP pressure in step (b) is below 762 mmHg-a	Purge VSV close stuck	B

B → Go to step 5

A

38	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION STEP 5))

(a) Perform step 5 and wait 60 seconds.
(b) Check the EVAP pressure. This pressure is the second reference pressure standard.

NEXT

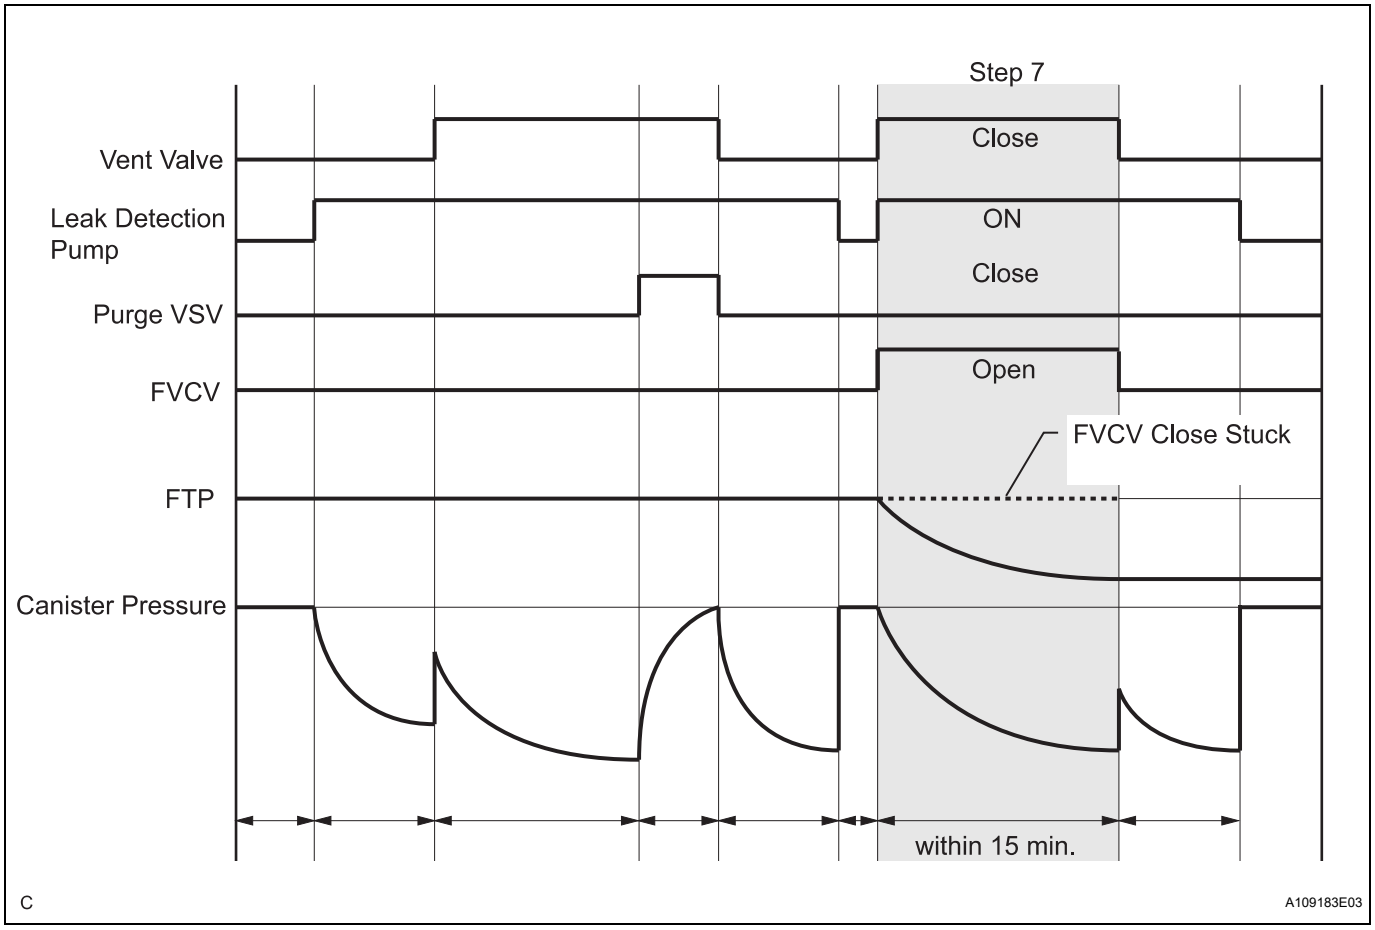
39	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION STEP 6))

(a) Perform step 6 and wait 5 seconds.

NEXT

40	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION STEP 7))

(a) Perform step 7.
(b) Check that the tank pressure and EVAP pressure change.
(c) Check the tank pressure again when it has stabilized. This pressure is the fuel tank leak pressure standard.



Result

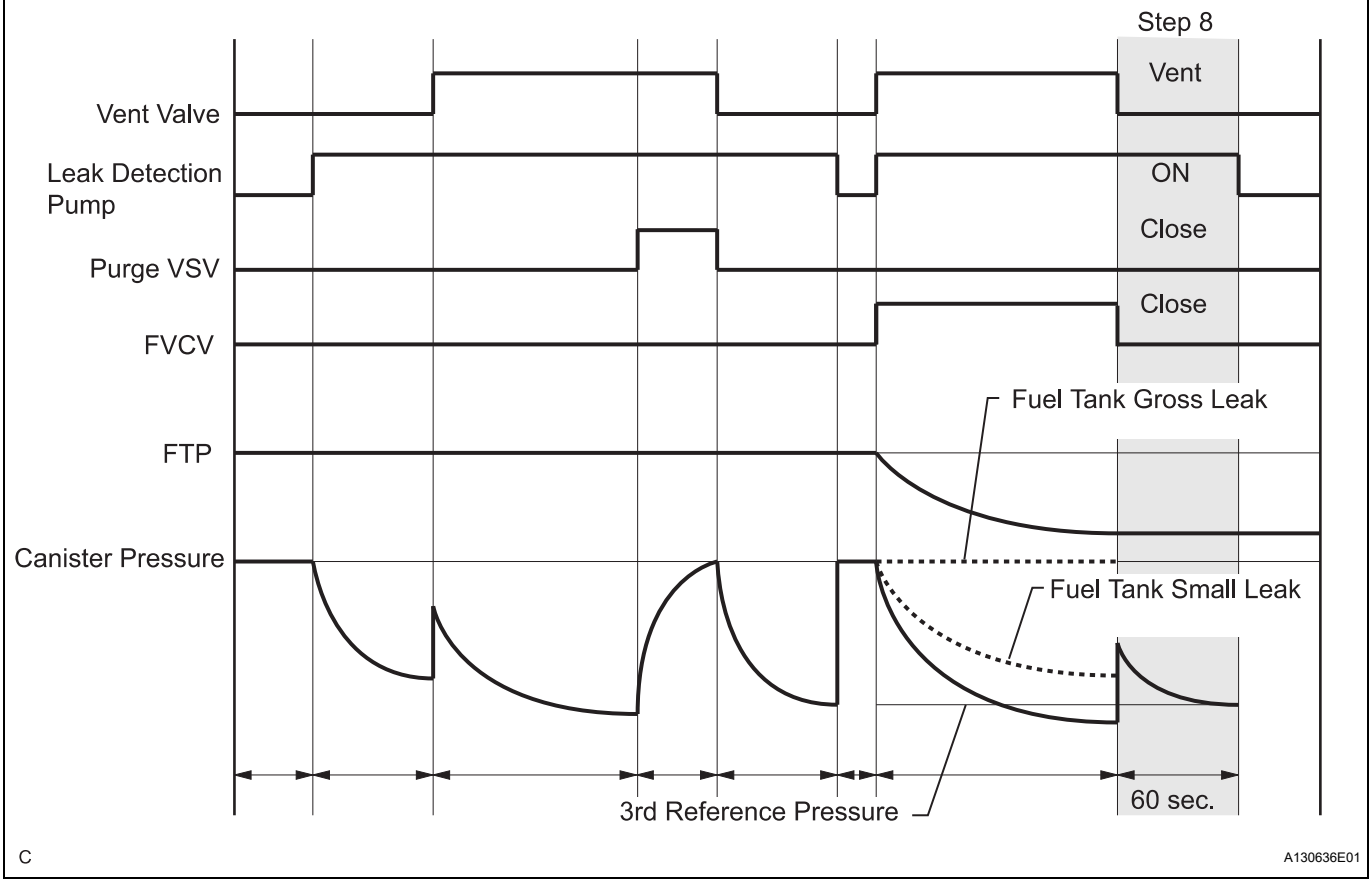
Test Result	Suspected Trouble Area	Proceed to
Tank pressure change is more than 766.7 mmHg-a and EVAP pressure is more than 752.5 mmHg-a	Not yet determined	A
Tank pressure change is less than 766.7 mmHg-a and EVAP pressure is less than 752.5 mmHg-a	Fuel vapor-containment valve (FVCV) OFF (close) stuck	B

B → Go to step 23

A

41	PERFORM SYSTEM CHECK (EVAP SYSTEM CHECK (MANUAL OPERATION STEP 8))

(a) Perform step 8 and wait 60 seconds.
(b) Check the EVAP pressure. This pressure is the third reference pressure standard.
(c) Compare the tank pressure checked in step 8 with the third reference pressure.



Result

Test Result	Suspected Trouble Area	Proceed to
Lower than third reference pressure	Not yet determined	A
Third reference pressure or higher	Leakage from line between fuel vapor-containment valve and fuel tank	B

B → **Go to step 20**

A

42	PERFORM CONFIRMATION DRIVING PATTERN

(a) KEY-OFF MONITOR DRIVE PATTERN
  (1) Connect the intelligent tester to the DLC3.
  (2) Confirm the following conditions are satisfied:
    - The fuel level is less than 90%.
    - The altitude is less than 8,000 ft. (2,400 m).
    - The vehicle is stopped (the vehicle speed is less than 2 mph).
    - The ECT is 4.4 to 35°C (40 to 95°F.)
    - The IAT is 4.4 to 35°C (40 to 95°F).
    - Drive the vehicle in a city area or on free-way for 10 minutes or more.
  (3) Perform the drive pattern:
    1. Allow the engine to idle for 5 minutes or more.
    2. Turn the power switch off and wait 6 hours.

(4) Check the monitor status with the intelligent tester.

(b) PURGE FLOW MONITOR DRIVE PATTERN (P0441)

(1) Connect the intelligent tester to the DLC3.

(2) Confirm that the following conditions are satisfied:

- The Engine Coolant Temperature (ECT) is more than 4.4°C (40°F).
- The Intake Air Temperature (IAT) is more than 4.4°C (40°F).

(3) Perform the drive pattern:

1. Remove and reinstall the fuel cap to release the fuel tank pressure.
2. Warm up the engine until the ECT reaches 75°C (167°F) or more.
3. Drive vehicle in a city area or on free-way for 10 minutes or more.

(4) Check the monitor status with the intelligent tester.

NEXT

PERFORM EVAP SYSTEM (EVAP SYSTEM CHECK AGAIN (AUTOMATIC OPERATION))

ECM Power Source Circuit

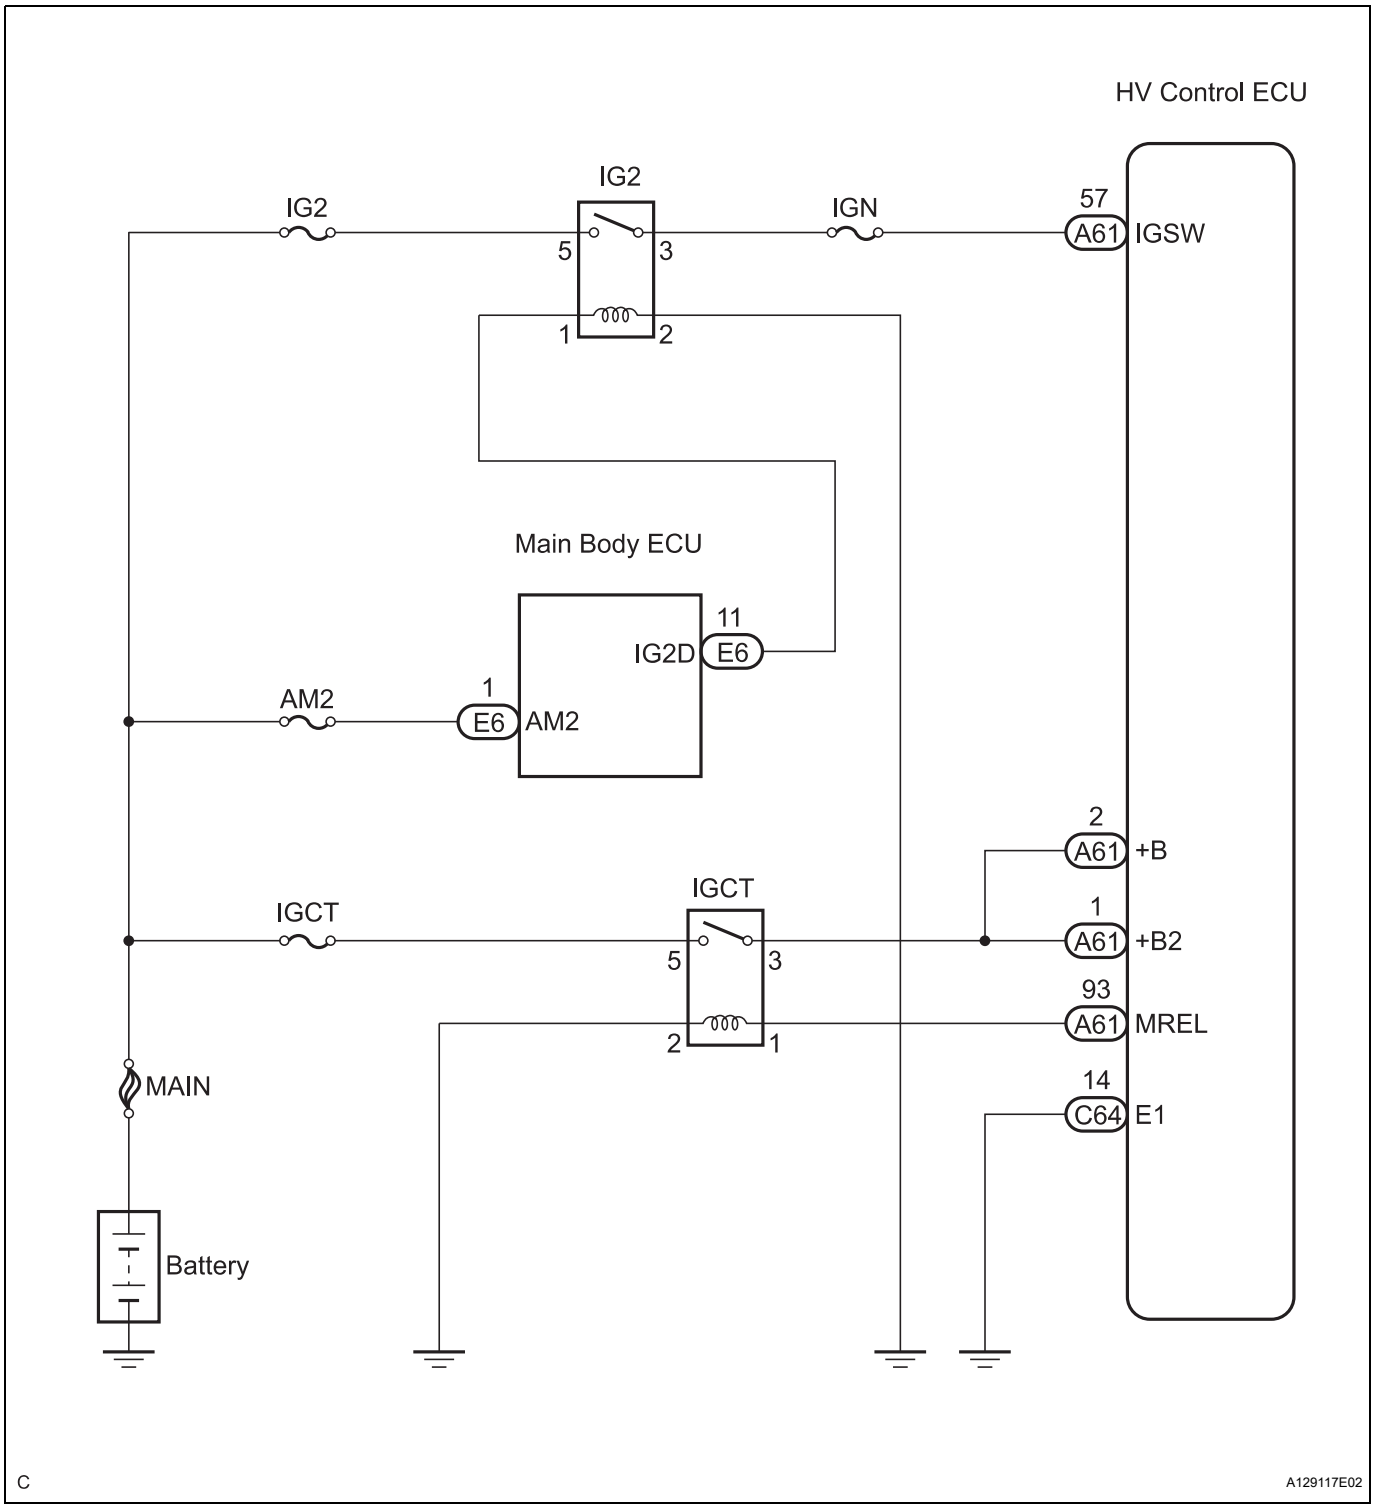
DESCRIPTION

When the power switch is turned on (IG), the battery voltage is applied to terminal IGSW of the hybrid vehicle control ECU. The hybrid vehicle control ECU MREL output signal causes a current to flow to the coil, closing the contacts of the IGCT relay and supplying power to terminal +B of the hybrid vehicle control ECU.

If the power switch is turned off, the hybrid vehicle control ECU holds the IGCT relay ON for a maximum of 2 seconds to allow for the initial setting of the throttle valve.

When the power switch is turned on (IG), voltage from the hybrid vehicle control ECU MREL terminal applies to the IGCT relay. This causes the contacts of the IGCT relay to close, which supplies power to terminal +B or +B1 of the hybrid vehicle control ECU.

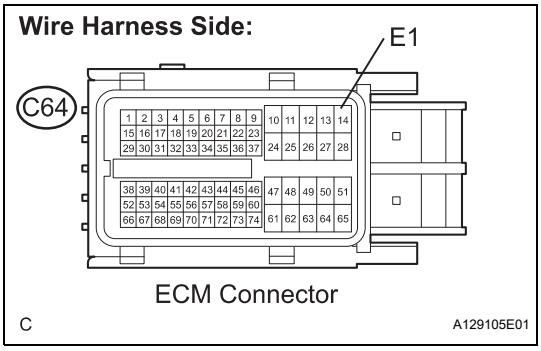
WIRING DIAGRAM



ES

INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - BODY GROUND)



(a) Disconnect the C64 hybrid vehicle control ECU connector.
(b) Measure the resistance between the terminal and body ground.
Standard resistance

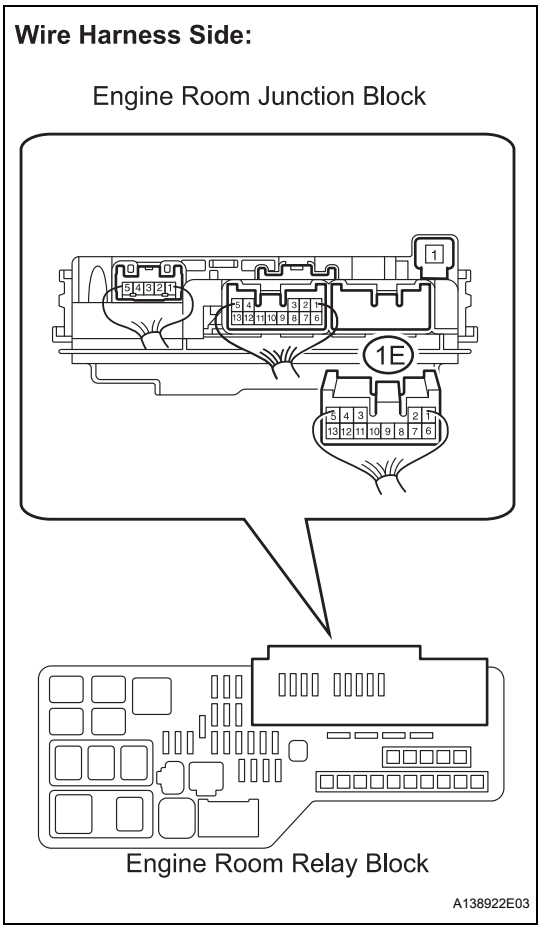
Tester Connection	Specified Condition
E1 (C64-81) - Body ground	Below 1 Ω

(c) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK ENGINE ROOM JUNCTION BLOCK (IGCT RELAY VOLTAGE)



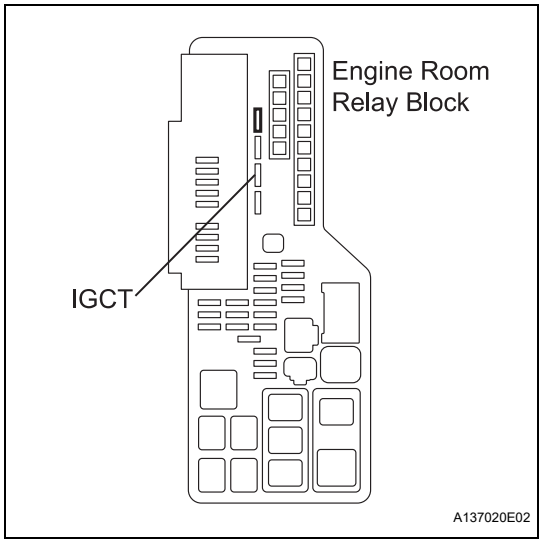
(a) Remove the engine room junction block from the engine room R/B.
(b) Turn the power switch on (IG).
(c) Measure the voltage between the terminal and body ground.
Standard voltage

Tester Connection	Specified Condition
5 - Body ground	9 to 14 V

OK → **Go to step 5**

NG

3	INSPECT IGCT FUSE



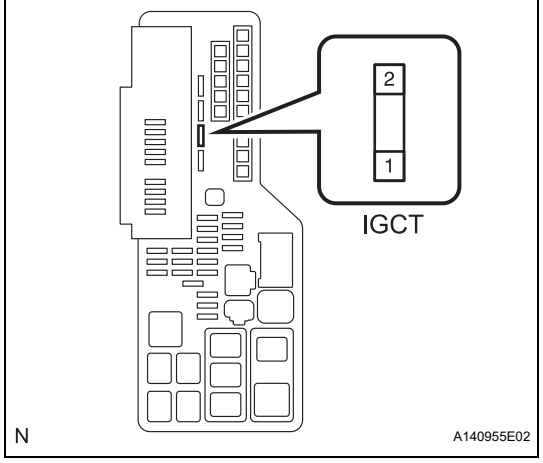
(a) Remove the IGCT fuse from the engine room R/B.
(b) Measure the IGCT fuse resistance.
Standard resistance:
Below 1 Ω
(c) Reinstall the IGCT fuse.

NG → **REPLACE IGCT FUSE**

OK

4	CHECK HARNESS AND CONNECTOR (IGCT FUSE - BATTERY)

Engine Room Relay Block:



(a) Disconnect the positive battery terminal.
(b) Remove the IGCT fuse from the engine room R/B.
(c) Measure the resistance between the terminals.
Standard resistance (Check for open)

Tester Connection	Specified Condition
1 - Positive battery terminal	Below 1 Ω

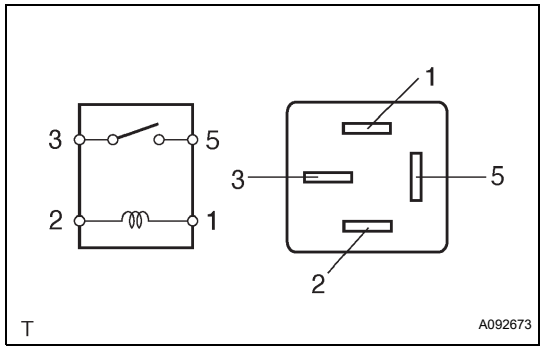
(d) Reinstall the IGCT fuse.
(e) Reconnect the positive battery terminal.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

5 INSPECT IGCT RELAY



(a) Remove the IGCT relay from the engine room R/B.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage between terminals 1 and 2)

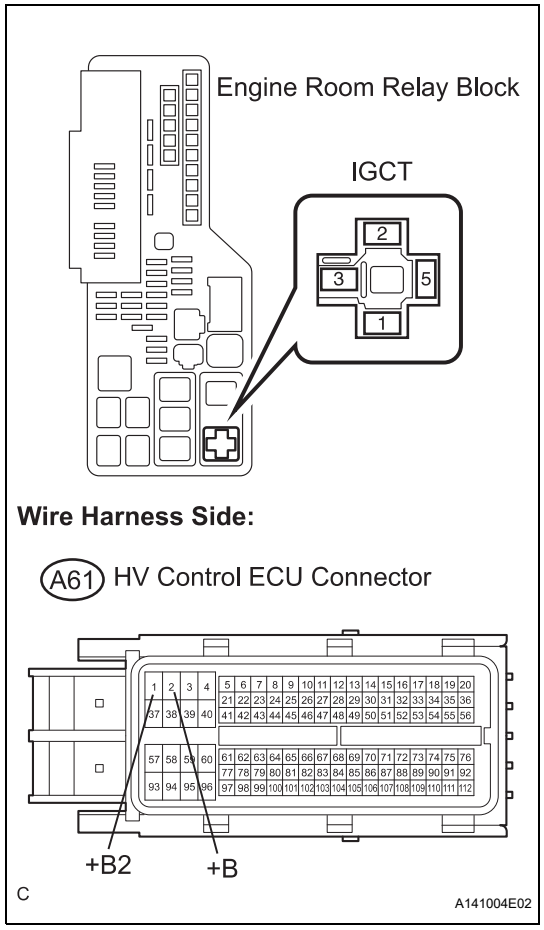
(c) Reinstall the IGCT relay.

ES

NG → **REPLACE IGCT RELAY**

OK

6 CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - IGCT RELAY)



(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Remove the engine IGCT relay from the engine room R/B.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance (Check for open)

Tester Connection	Specified Condition
IGCT relay (3) - +B (A61-2)	Below 1 Ω
IGCT relay (3) - +B2 (A61-1)	Below 1 Ω

Standard resistance (Check for short)

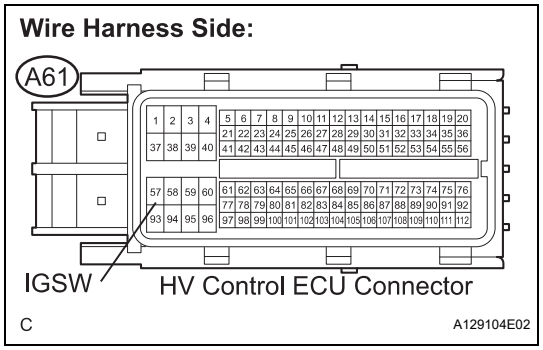
Tester Connection	Specified Condition
IGCT relay (3) or +B (A61-2) - Body ground	10 kΩ or higher
IGCT relay (3) or +B2 (A61-1) - Body ground	10 kΩ or higher

(d) Reinstall the engine room junction block.
(e) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 INSPECT ECM (IGSW VOLTAGE)



(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Measure the voltage between the terminal and body ground.
Standard voltage

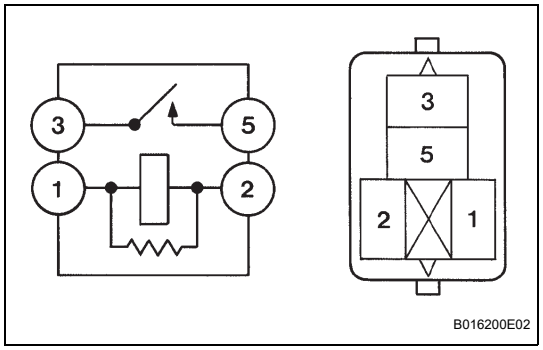
Tester Connection	Specified Condition
IGSW (A61-57) - Body ground	9 to 14 V

(c) Reconnect the hybrid vehicle control ECU connector.

OK → **Go to step 10**

NG

8 INSPECT IG2 RELAY



(a) Remove the IG2 relay from the engine room R/B.
(b) Measure the resistance between the terminals.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage between terminals 1 and 2)

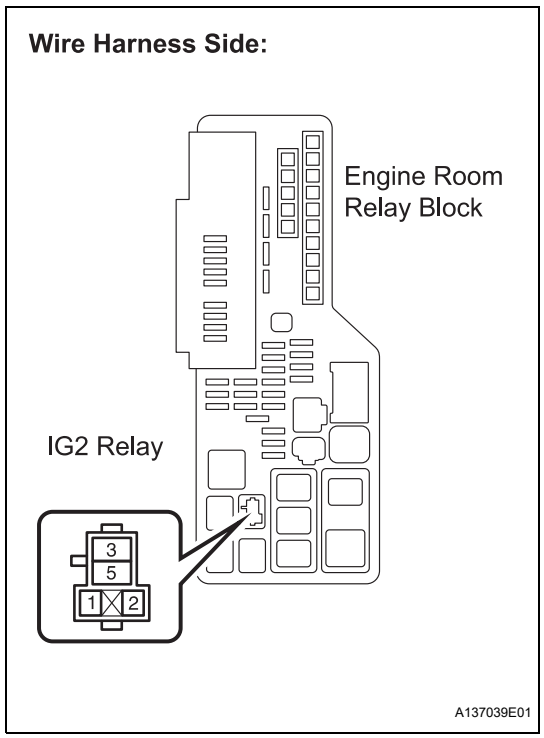
(c) Reinstall the IG2 relay.

NG → **REPLACE IG2 RELAY**

OK

ES

9	CHECK HARNESS AND CONNECTOR (IG2 RELAY - BODY GROUND)



(a) Remove the IG2 relay from the engine room R/B.
(b) Measure the resistance between the terminal and body ground.
Standard resistance

Tester Connection	Specified Condition
IG2 relay terminal 2 - Body ground	Below 1 Ω

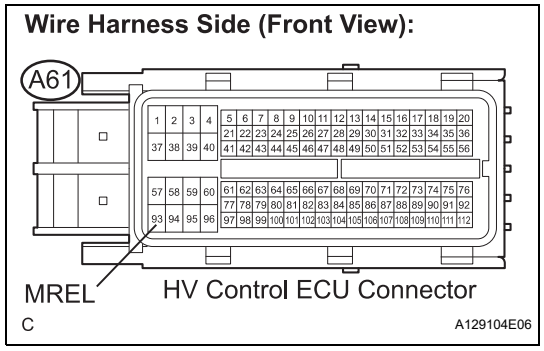
(c) Reinstall the IG2 relay.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

GO TO SMART ACCESS SYSTEM WITH PUSH-BUTTON START

10	CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - BODY GROUND)



(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Measure the resistance between the terminal and body ground.
Standard resistance

Tester Connection	Specified Condition
MREL (A61-93) - Body ground	Below 1 Ω

(c) Reconnect the hybrid vehicle control ECU connector.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

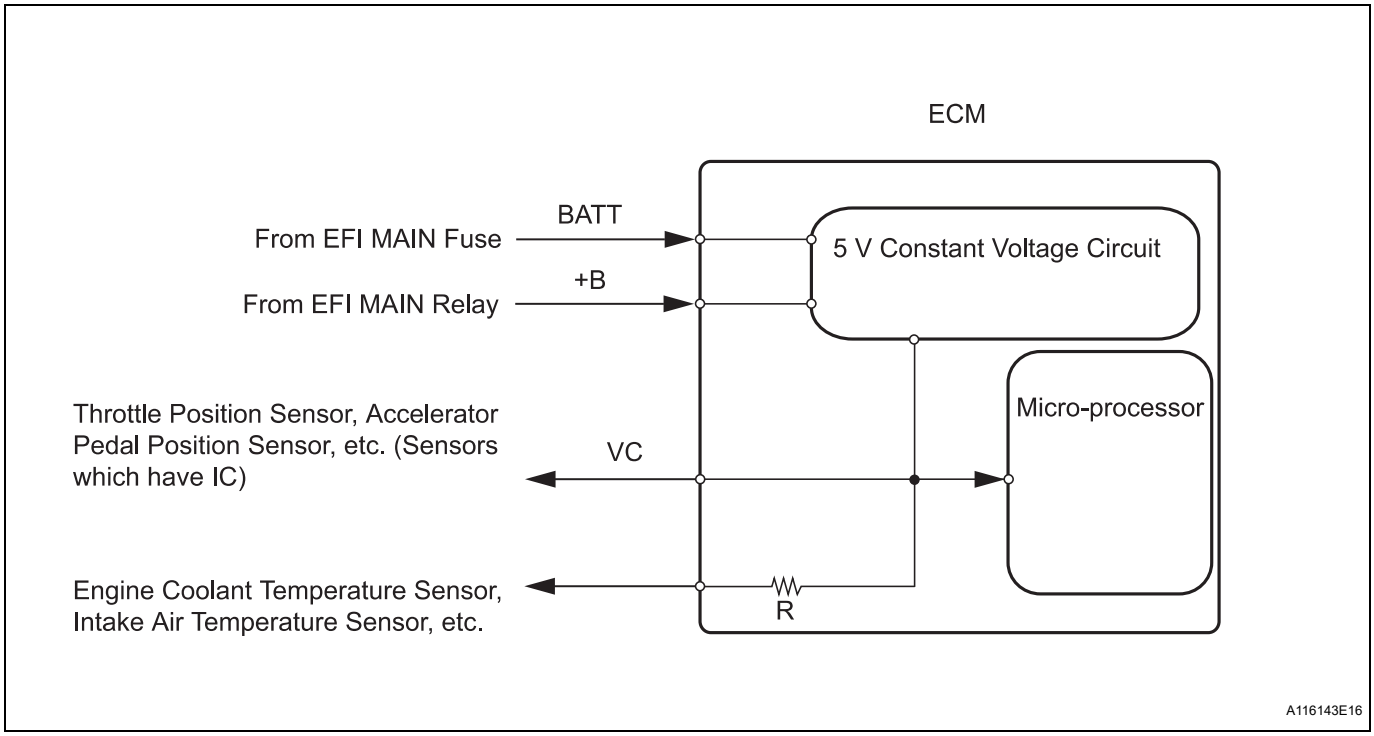
OK

REPLACE HYBRID VEHICLE CONTROL ECU

VC Output Circuit

DESCRIPTION

The ECM constantly generates 5 V power from the battery voltages supplied to the +B (BATT) terminal to operate the Micro-processor. The ECM also provides this power to the sensors through the VC output circuit.

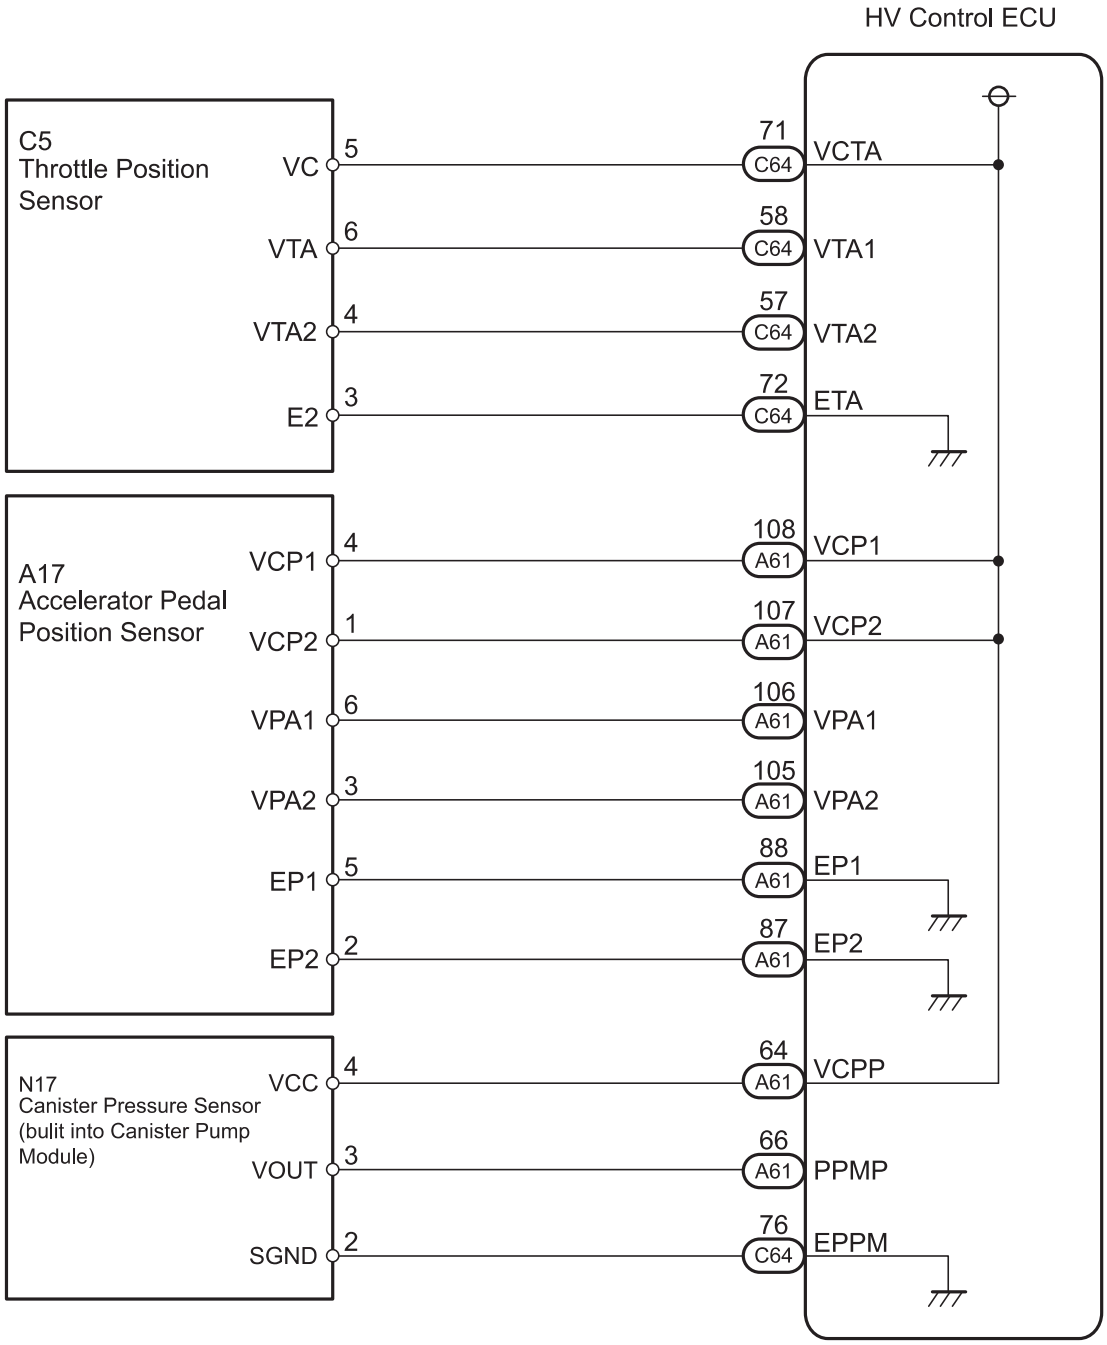


When the VC circuit is short-circuited, the Micro-processor in the ECM (included in hybrid vehicle control ECU) and sensors that are supplied with power through the VC circuit are deactivated because the power is not supplied from the VC circuit. Under this condition, the system does not start up and the MIL does not illuminate even if the system malfunctions.

HINT:

Under normal conditions, the MIL is illuminated for several seconds when the power switch is first turned on. The MIL goes off when the engine is started.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**CHECK MIL**

(a) Check that the Malfunction Indicator Lamp (MIL) lights up when turning the power switch on (IG).
OK:
MIL lights up

OK → SYSTEM IS OK

NG

2	CHECK COMMUNICATION BETWEEN INTELLIGENT TESTER AND ECM

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and tester on.
(c) Check the communication between the tester and hybrid vehicle control ECU.

Result

Result	Proceed to
Communication is possible	A
Communication is not possible	B

A → GO TO MIL CIRCUIT

B

3	CHECK MIL (THROTTLE POSITION SENSOR)

(a) Disconnect the C5 throttle body connector.
(b) Turn the power switch on (IG).
(c) Check the MIL.

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the throttle body connector.

A → REPLACE THROTTLE BODY ASSEMBLY

B

4	CHECK MIL (ACCELERATOR PEDAL POSITION SENSOR)

(a) Disconnect the A17 accelerator pedal position sensor connector.
(b) Turn the power switch on (IG).
(c) Check the MIL.

Result

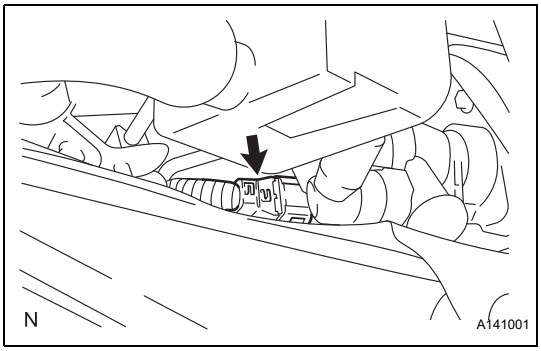
Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

(d) Reconnect the accelerator pedal position sensor connector.

A → REPLACE ACCELERATOR PEDAL POSITION SENSOR

B

5	CHECK MIL (CANISTER PUMP MODULE)



(a) Disconnect the N17 canister pump module connector.
(b) Turn the power switch on (IG).
(c) Check the MIL.

ES

Result

Result	Proceed to
MIL illuminates	A
MIL does not illuminate	B

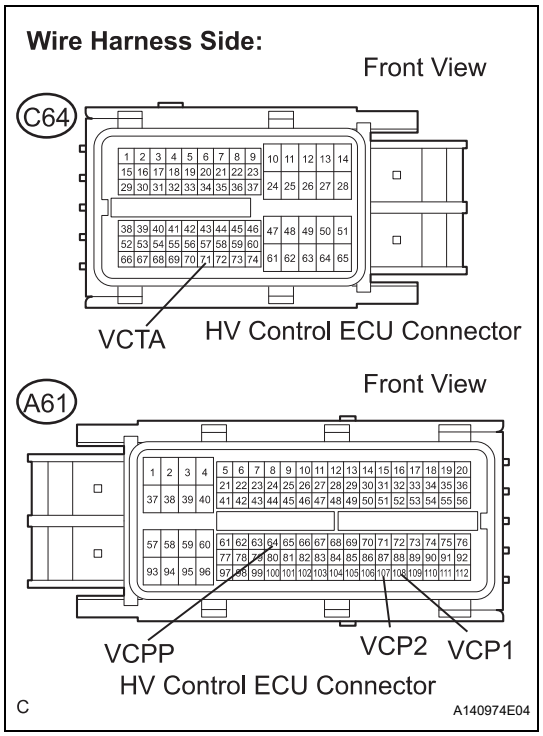
(d) Reconnect the canister pump module connector.

A → **REPLACE CHARCOAL CANISTER ASSEMBLY**

B

6	CHECK HARNESS AND CONNECTOR

(a) Disconnect the C5 throttle body connector.
(b) Disconnect the A17 accelerator pedal position sensor connector.
(c) Disconnect the N17 canister pump module connector.



(d) Disconnect the A61 and C64 hybrid vehicle control ECU connectors.

(e) Measure the resistance.

Standard resistance (Check for short)

Tester Connections	Specified Conditions
C64-71 (VCTA) - Body ground	10 kΩ or higher
A61-108 (VCP1) - Body ground	10 kΩ or higher
A61-107 (VCP2) - Body ground	10 kΩ or higher
A61-64 (VCPP) - Body ground	10 kΩ or higher

(f) Reconnect the throttle body connector.

(g) Reconnect the accelerator pedal position sensor connector.

(h) Reconnect the canister pump module connector.

(i) Reconnect the battery current sensor connector.

(j) Reconnect the hybrid vehicle control ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

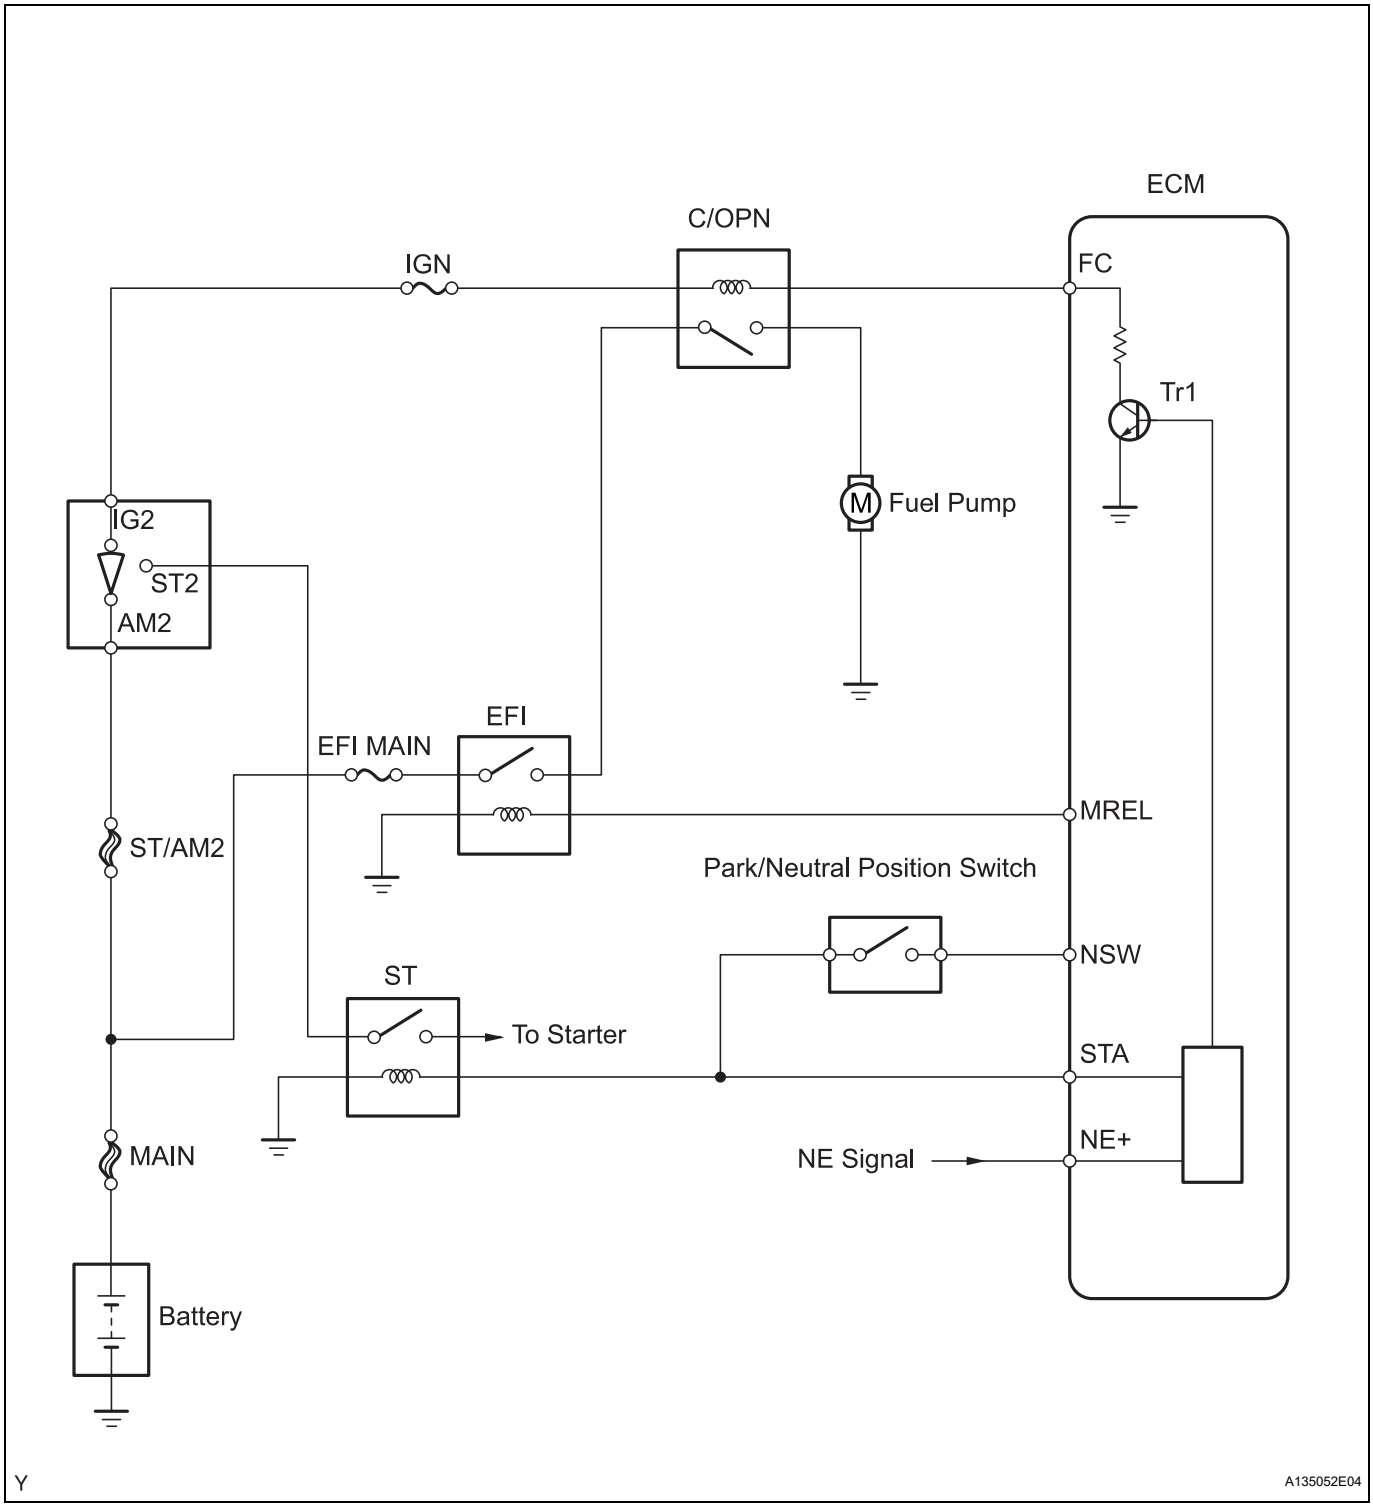
ES

Fuel Pump Control Circuit

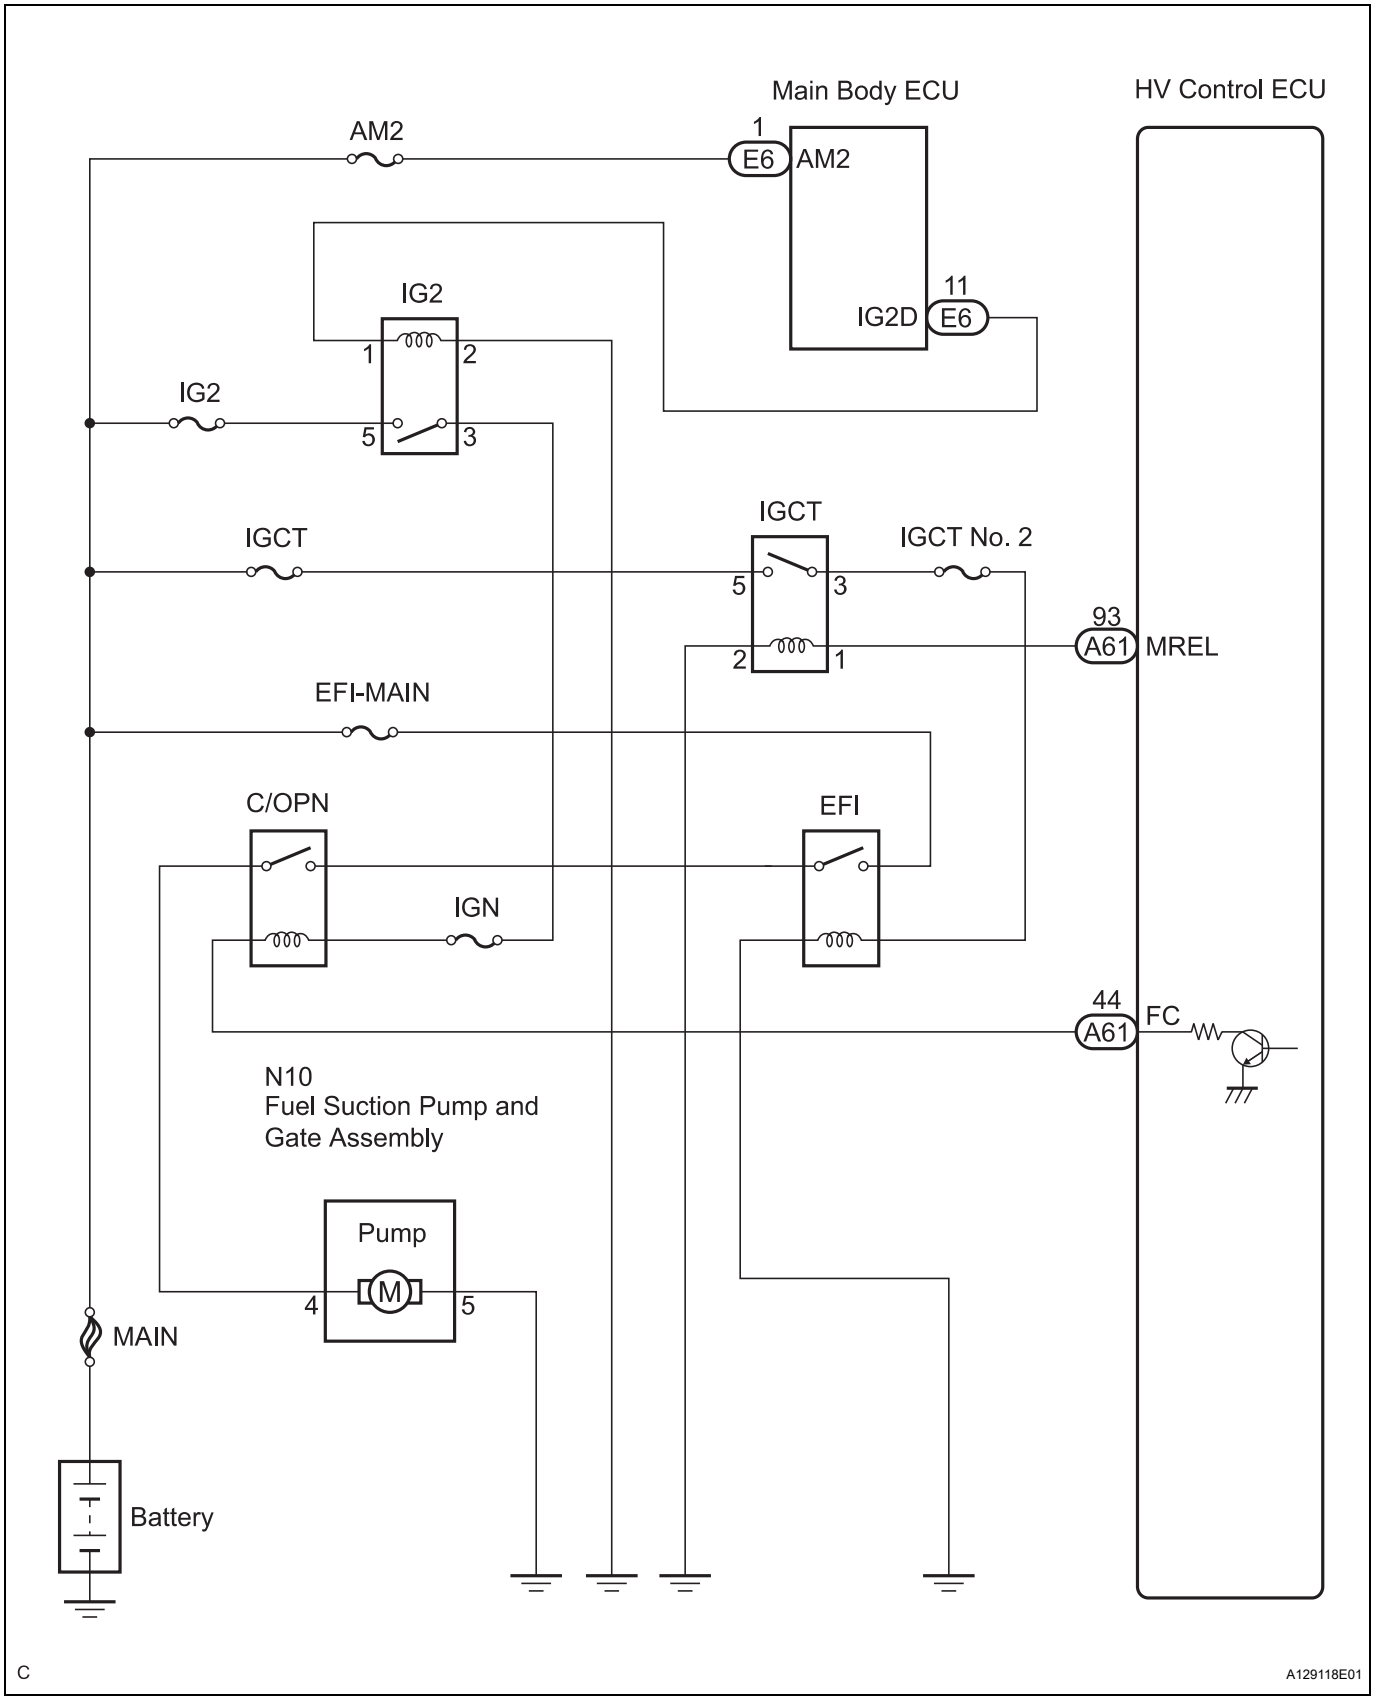
DESCRIPTION

When the engine is cranked, the starter relay drive signal output from the STAR terminal of the ECM (included in hybrid vehicle control ECU) is input into the STA terminal of the ECM, and NE signal generated by the crankshaft position sensor is also input into the NE+ terminal. Thus, the ECM interprets that the engine is cranked, and turns the transistor Tr1 in the ECM internal circuit ON. The current flows to the C/OPN (Circuit Opening) relay by turning the Tr1 ON. Then, the fuel pump operates.
While the NE signal is input into the ECM, when the engine is running, the ECM turns the Tr1 on continuously.

ES



WIRING DIAGRAM



ES

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER (OPERATE C/OPN RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / ACTIVE TEST / FUEL PUMP / SPD.
(d) Check whether the fuel pump operation sound occurs when performing the Active Test on the tester.
OK:
Fuel pump operating sound occurs.

ES

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

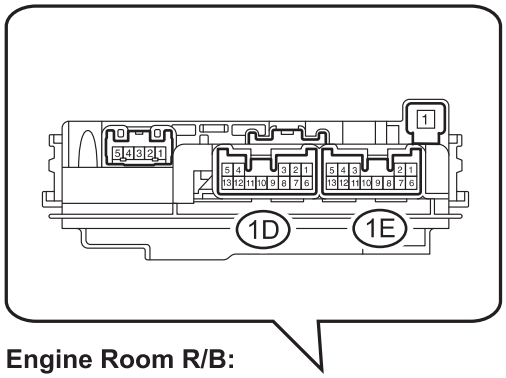
2	CHECK ECM POWER SOURCE CIRCUIT

NG → **REPAIR OR REPLACE ECM POWER SOURCE CIRCUIT**

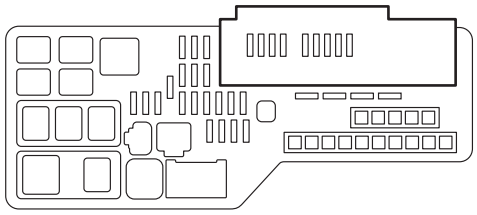
OK

3	INSPECT ENGINE ROOM J/B (C/OPN RELAY)

Engine Room J/B:



Engine Room R/B:



A138918E02

(a) Remove the engine room J/B from the engine room R/B.
(b) Inspect the C/OPN relay.
(1) Measure the C/OPN relay resistance.
Standard resistance

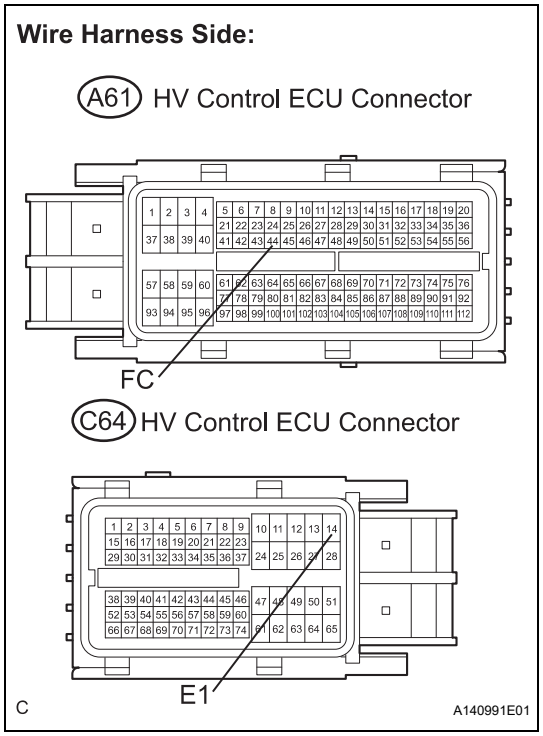
Tester Connection	Specified Condition
1E-7 - 1E-13	10 kΩ or higher
	Below 1 Ω (Apply battery voltage between terminals 1D-12 and 1E-8)

(c) Reinstall the engine room J/B.

NG → **REPLACE ENGINE ROOM J/B**

OK

4 INSPECT ECM (FC VOLTAGE)



(a) Disconnect the A61 and C64 hybrid vehicle control ECU connectors.

(b) Measure the voltage between the terminals of the A24 and C24 ECM connectors.

Standard voltage

Tester Connection	Specified Condition
A61-44 (FC) - C64-14 (E1)	9 to 14 V

(c) Reconnect the hybrid vehicle control ECU connectors.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (ECM - BATTERY)**

ES

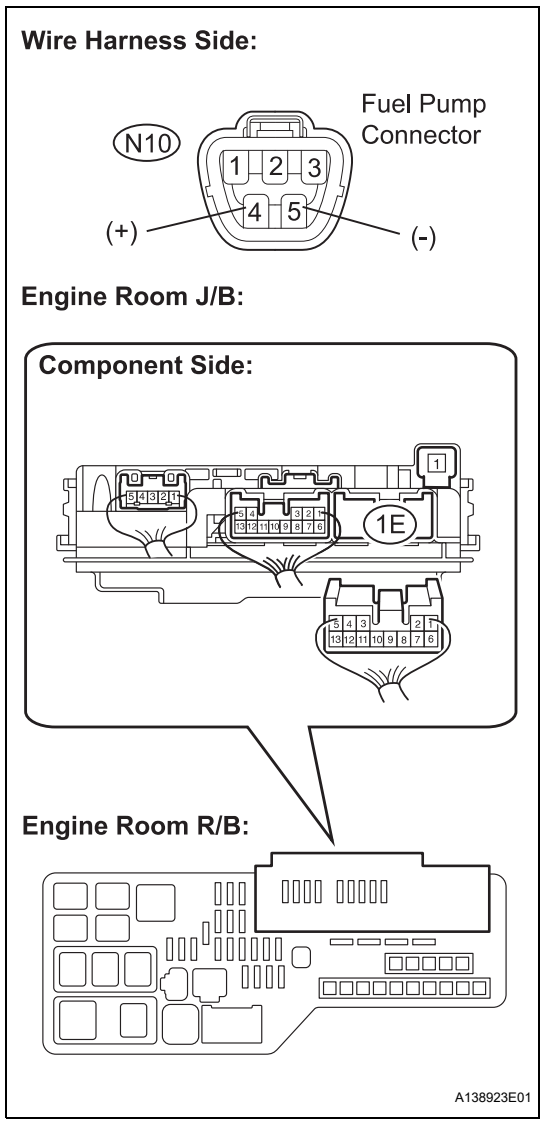
OK

5 INSPECT FUEL PUMP

NG → **REPLACE FUEL PUMP**

OK

6	CHECK HARNESS AND CONNECTOR (C/OPN RELAY - FUEL PUMP - BODY GROUND)



(a) Check the harness and the connectors between the engine room J/B and the fuel pump.
  (1) Remove the engine room J/B from the engine room R/B.
  (2) Disconnect the 1E engine room J/B connector.
  (3) Disconnect the N10 fuel pump connector.
  (4) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
1E-13 - N10-4 (Fuel pump)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
1E-13 or N10-4 (Fuel pump) - Body ground	10 kΩ or higher

(b) Check the harness and the connectors between the fuel pump and body ground.
  (1) Disconnect the N10 fuel pump connector.
  (2) Measure the resistance.

Standard resistance (Check for open)

Tester Connection	Specified Condition
N10-5 (Fuel pump) - Body ground	Below 1 Ω

(c) Reconnect the engine room J/B connector.
(d) Reconnect the fuel pump connector.
(e) Reinstall the engine room J/B.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

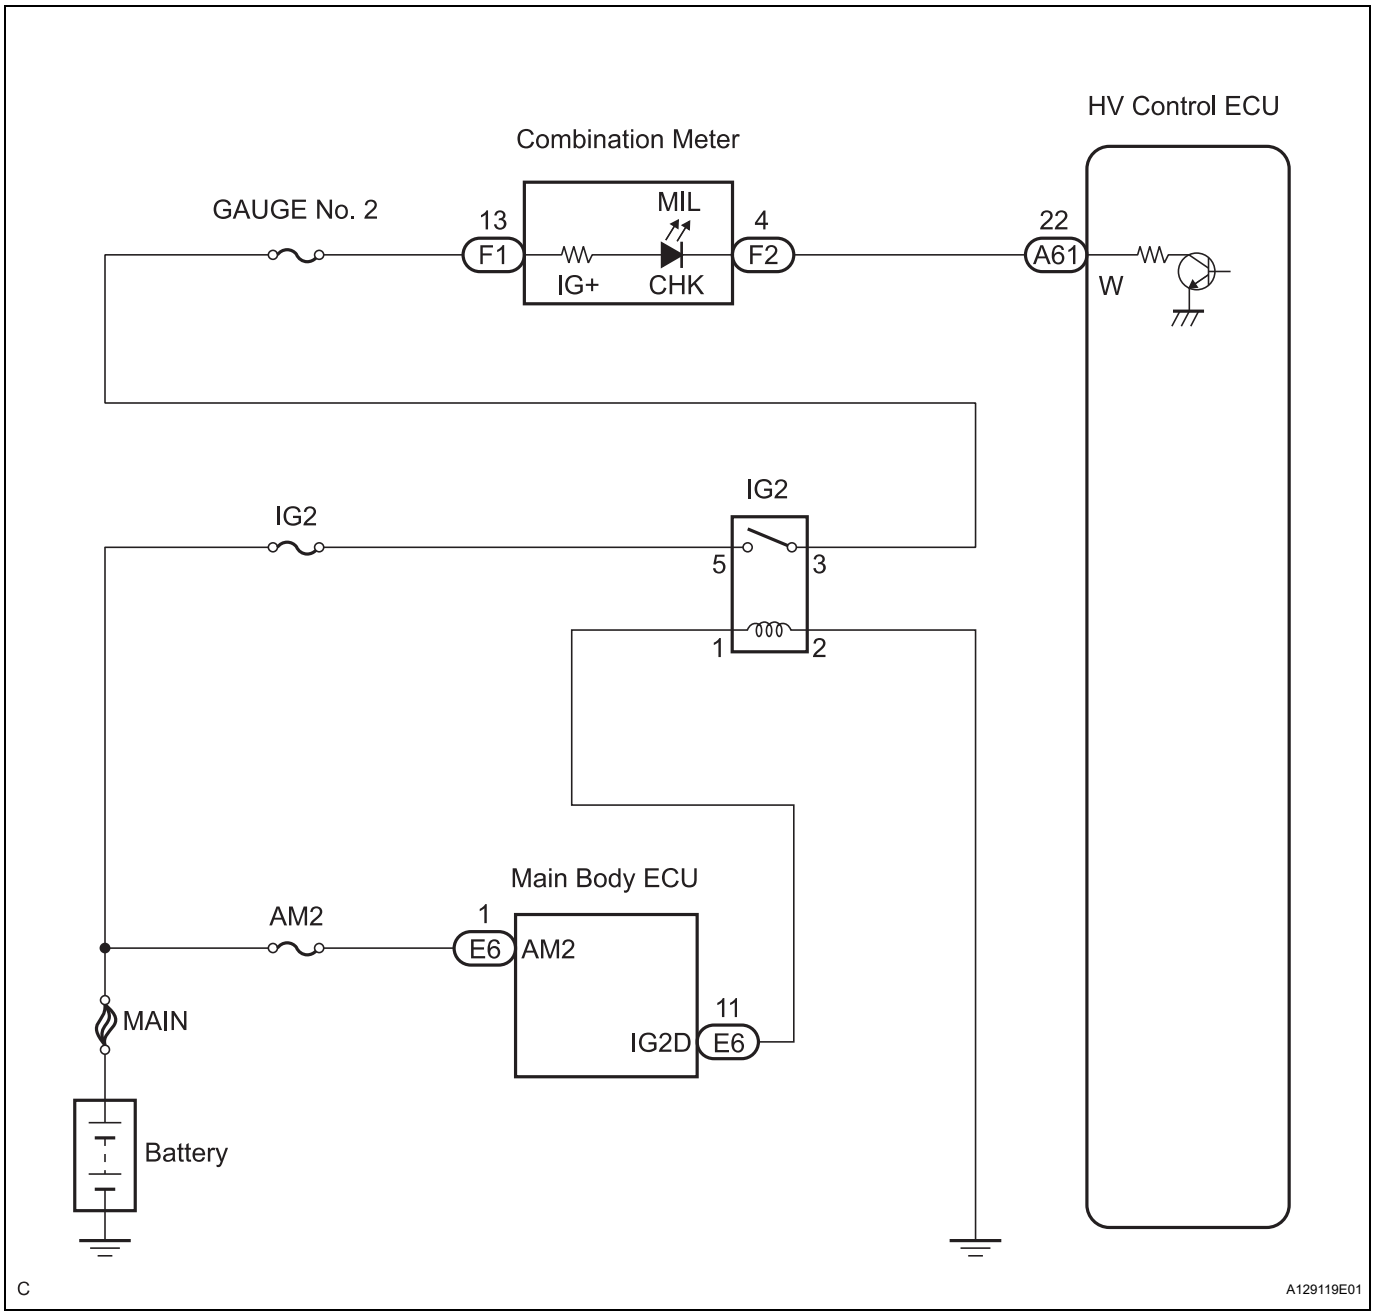
REPLACE HYBRID VEHICLE CONTROL ECU

MIL Circuit

DESCRIPTION

The MIL (Malfunction Indicator Lamp) is used to indicate vehicle malfunction detections by the ECM (included in hybrid vehicle control ECU). When the power switch on (IG), power is supplied to the MIL circuit, and the ECM provides the circuit ground which illuminates the MIL.
The MIL operation can be checked visually: When the power switch is first turned on (IG), the MIL should be illuminated and should then turn off. If the MIL remains illuminated or is not illuminated, conduct the following troubleshooting procedure using the intelligent tester.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK MIL CONDITION (MIL IS ILLUMINATED)

(a) Perform troubleshooting in accordance with the table below.

Conditions	Proceed to
MIL remains ON	A
MIL does not illuminate	B

B → **Go to step 5**

ES

A

2	CHECK MIL CONDITION (WHETHER MIL TURNS OFF)

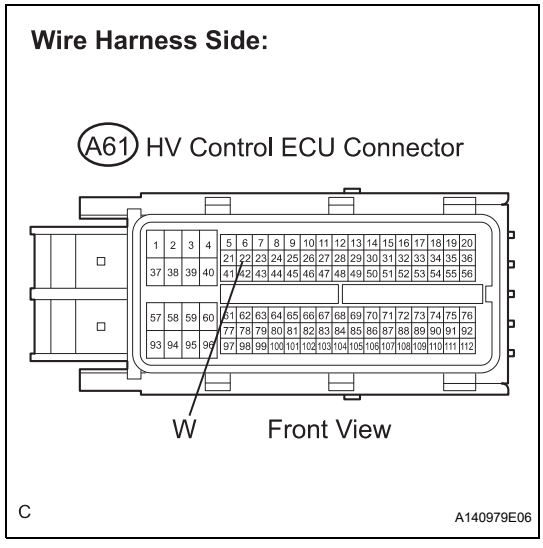
(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the tester on.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Check if any DTCs have been stored. Note down any DTCs.
(e) Clear the DTCs (See page ES-31).
(f) Check if the MIL goes off.
Standard:
MIL should go off.

OK → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

NG

3	CHECK HARNESS AND CONNECTOR (CHECK FOR SHORT IN WIRE HARNESS)

Wire Harness Side:

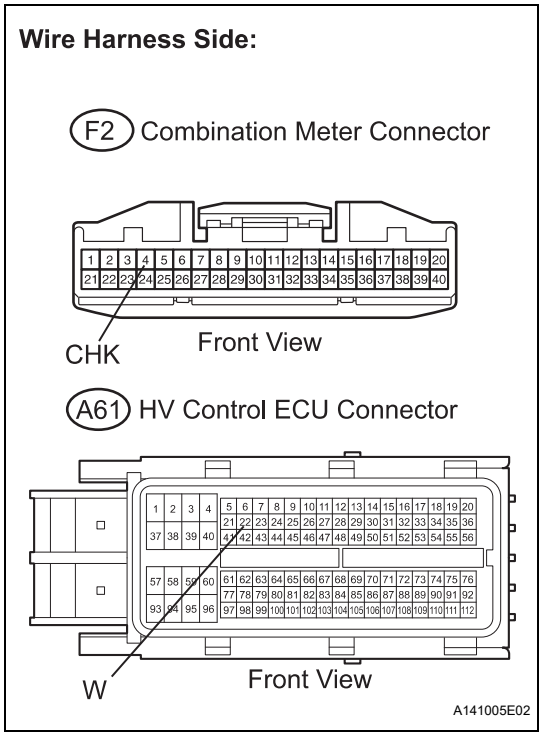


(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Turn the power switch on (IG).
(c) Check that the MIL is not illuminated.
OK:
MIL is not illuminated.
(d) Reconnect the hybrid vehicle control ECU connector.

OK → **REPLACE HYBRID VEHICLE CONTROL ECU**

NG

4 CHECK HARNESS AND CONNECTOR (COMBINATION METER - HV CONTROL ECU)



(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Disconnect the F2 combination meter connector.
(c) Measure the resistance.
Standard resistance (Check for short)

Tester Connections	Specified Conditions
A61-22 (W) or F2-4 (CHK) - Body ground	10 kΩ or higher

(d) Reconnect the hybrid vehicle control ECU connector.
(e) Reconnect the combination meter connector.

ES

OK → **REPAIR OR REPLACE COMBINATION METER ASSEMBLY**

NG

REPAIR OR REPLACE HARNESS OR CONNECTOR

5 CHECK MIL CONDITION (MIL ILLUMINATED)

(a) Check if the MIL is illuminated when the power switch is turned on (IG).
OK:
MIL should be illuminated.

OK → **SYSTEM IS OK**

NG

6 CHECK THAT ENGINE START

(a) Turn the power switch on (IG).
(b) Put the engine in inspection mode (See page ES-35).
Result

Result	Proceed to
Engine starts	A
Engine does not start*	B

HINT:
*: The intelligent tester cannot communicate with the hybrid vehicle control ECU.

B → GO TO VC OUTPUT CIRCUIT

A

7	INSPECT COMBINATION METER ASSEMBLY (MIL CIRCUIT)

(a) Check the MIL circuit (See page ME-17).

NG → REPAIR OR REPLACE COMBINATION METER ASSEMBLY

ES

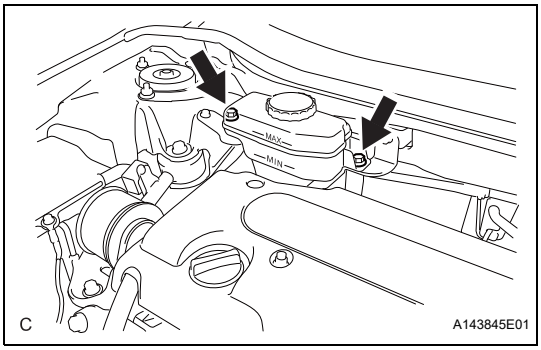
OK

CHECK AND REPLACE HARNESS OR CONNECTOR (COMBINATION METER - HV CONTROL ECU)

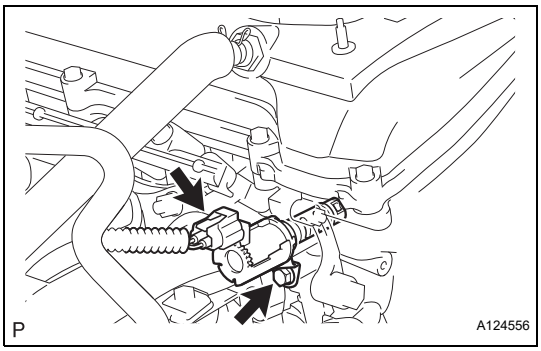
REMOVAL

1. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-90)**

2. **SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
   (a) Remove the 2 bolts and separate the brake master cylinder reservoir sub-assembly.



3. **REMOVE CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY**
   (a) Disconnect the camshaft timing oil control valve assembly connector.
   (b) Remove the bolt and camshaft timing oil control valve assembly.



INSPECTION

1. INSPECT CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

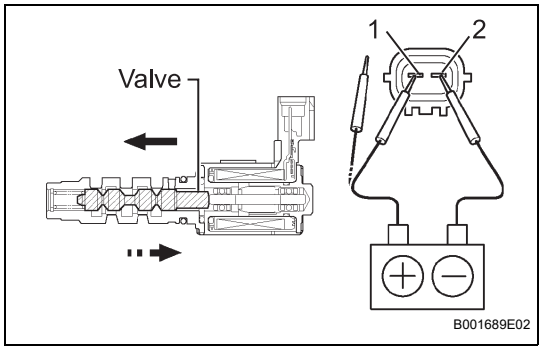
(a) Resistance inspection.

(1) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance:

6.9 to 7.9 Ω at 20°C (68°F)

If necessary, replace the camshaft timing oil control valve assembly.



(b) Movement inspection.

(1) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2, and check the movement of the valve.

NOTICE:

Confirm that the valve moves freely and does not stick in any position.

If necessary, replace the camshaft timing oil control valve assembly.

HINT:

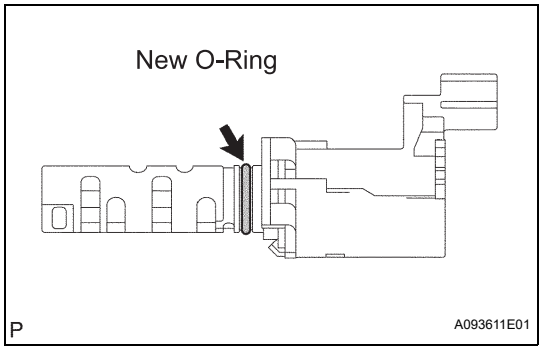
Accumulation of foreign objects causes subtle pressure leaks. The subtle pressure leaks will cause the camshaft to advance, and this will cause a DTC to be set.

ES

INSTALLATION

1. INSTALL CAMSHAFT TIMING OIL CONTROL VALVE ASSEMBLY

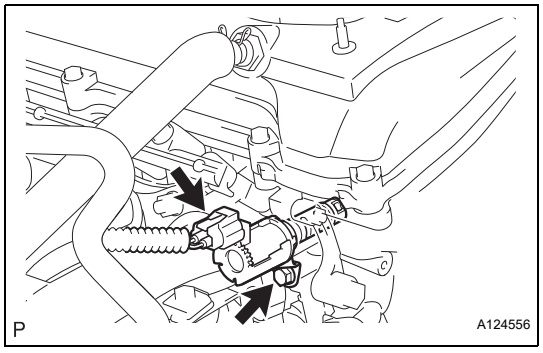
(a) Apply a light coat of engine oil to an O-ring of the camshaft timing oil control valve assembly sensor.

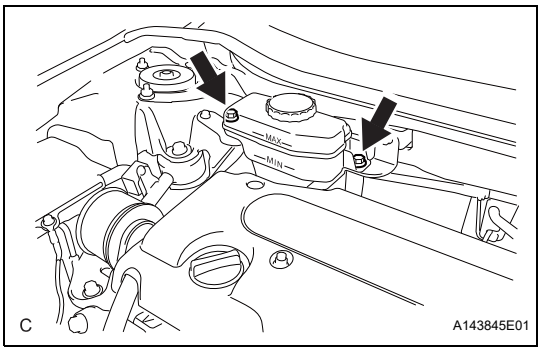


(b) Install the camshaft timing oil control valve assembly with the bolt.

Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)

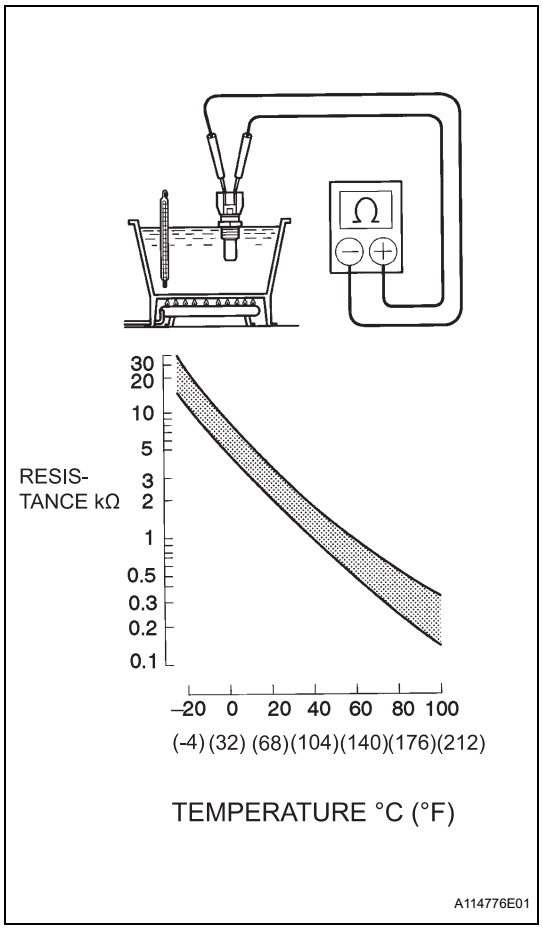
(c) Connect the camshaft timing oil control valve assembly connector.





2. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY**
   (a) Install the brake master cylinder reservoir sub-assembly with the 2 bolts.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

3. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**



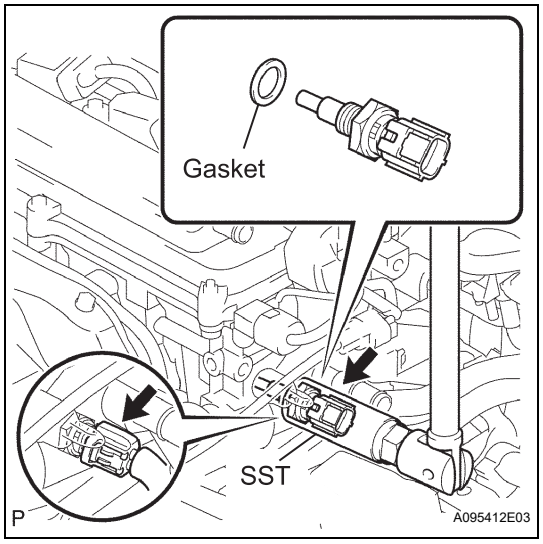
INSPECTION

1. **INSPECT ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Using an ohmmeter, measure the resistance between the terminals.
   Standard resistance

Condition	Specified Condition
20°C (68°F)	2.32 to 2.59 kΩ
80°C (176°F)	0.310 to 0.326 kΩ

If the result is not as specified, replace the sensor.
NOTICE:
In case of checking the water temperature sensor in water, do not allow water to go into the terminals. After checking, dry the sensor.

ES

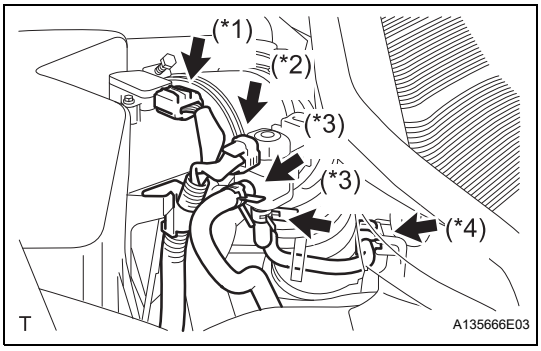


INSTALLATION

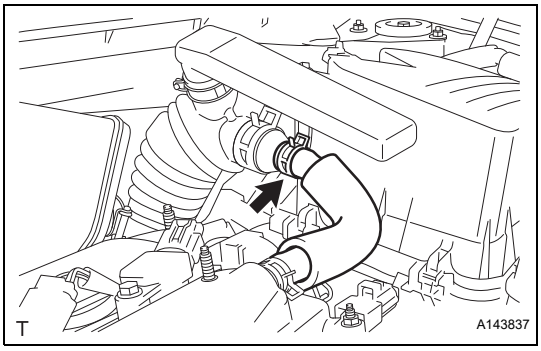
1. **INSTALL ENGINE COOLANT TEMPERATURE SENSOR**
   (a) Install a new gasket onto the engine coolant temperature sensor.
   (b) Using SST, install the engine coolant temperature sensor.
   SST 09817-33190
   Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
   (c) Connect the engine coolant temperature sensor connector.
2. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-113)**
3. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**
4. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
5. **ADD ENGINE COOLANT (See page CO-5)**
6. **INSPECT FOR COOLANT LEAK (See page CO-1)**
7. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**

REMOVAL

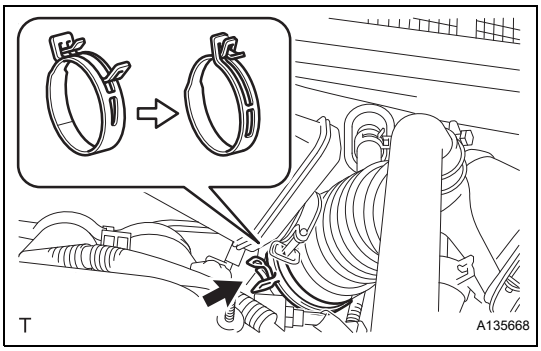
1. **DRAIN ENGINE COOLANT (See page CO-5)**
2. **REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-90)**
3. **REMOVE AIR CLEANER CAP SUB-ASSEMBLY**



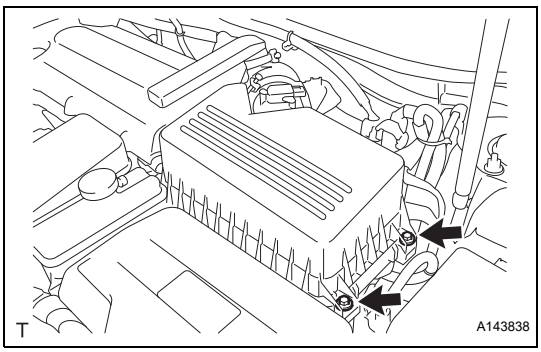
(a) Disconnect the mass air flow meter connector (*1).
(b) Disconnect the purge VSV connector (*2).
(c) Disconnect the 2 purge VSV vacuum hoses (*3).
(d) Disconnect the purge line hose from the clamp (*4).



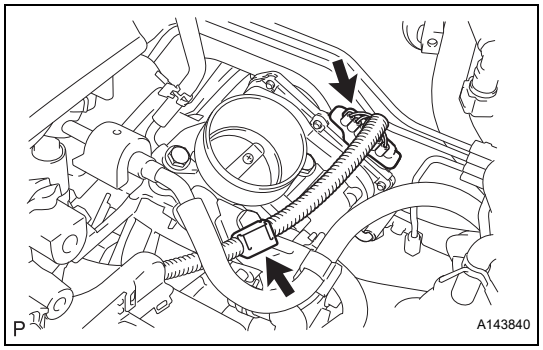
(e) Disconnect the No. 2 ventilation hose from the air cleaner hose.



(f) Lock the No. 1 air cleaner hose clamp, and then disconnect the No. 1 air cleaner hose from the throttle body.

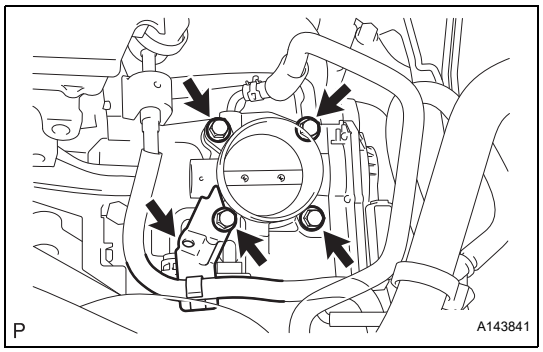


(g) Remove the 2 bolts and air cleaner cap.
(h) Remove the air cleaner filter element from the air cleaner case.

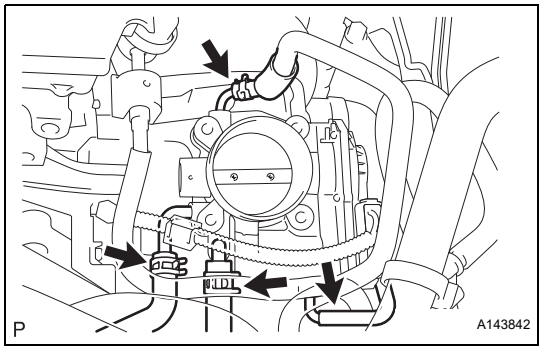


4. REMOVE THROTTLE BODY

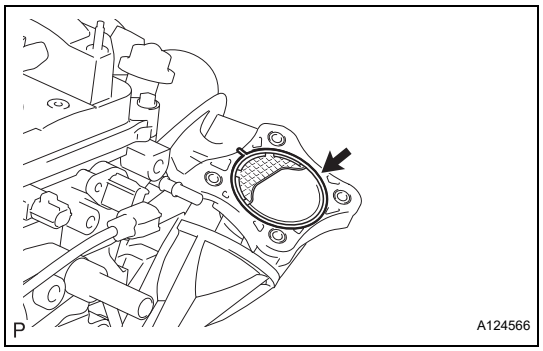
(a) Disconnect the throttle position sensor connector and wire harness clamp.



(b) Remove the 4 bolts, and then remove the fuel pipe support and throttle body.



(c) Disconnect the purge line hose from the throttle body.
(d) Disconnect the water by-pass hose from the throttle body.
(e) Disconnect the No. 2 water by-pass hose from the throttle body.
(f) Disconnect the No. 1 throttle body hose from the throttle body.



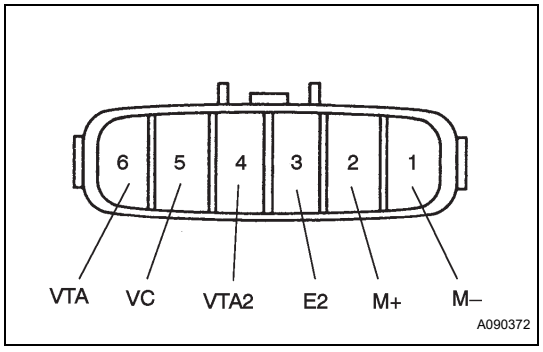
(g) Remove the gasket from the intake manifold.

INSPECTION

1. INSPECT THROTTLE BODY ASSEMBLY

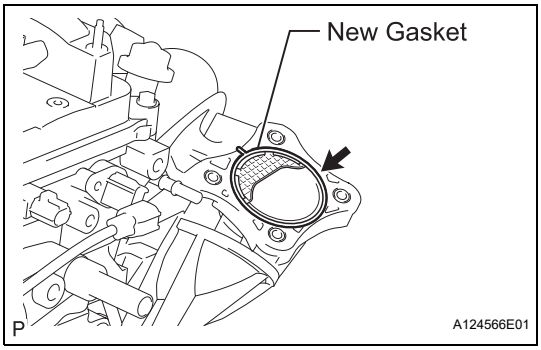
(a) Using an ohmmeter, measure the resistance between the terminals.

Standard resistance



Symbols (terminal No.)	Resistance	Temperature
M+ (2) - M- (1)	0.3 to 100 Ω	20°C (68°F)

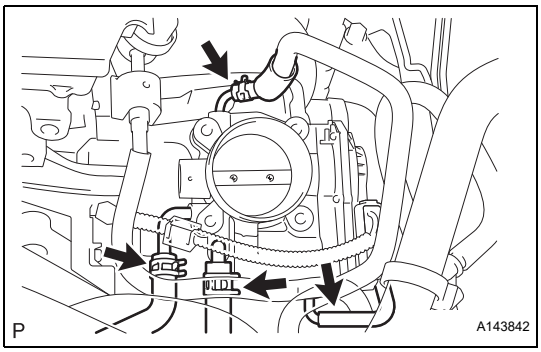
If the result is not as specified, replace the throttle body assembly.



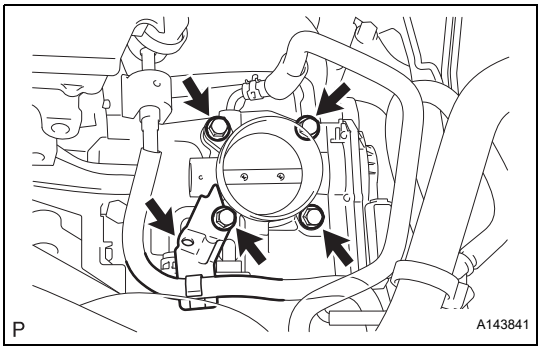
INSTALLATION

1. INSTALL THROTTLE BODY

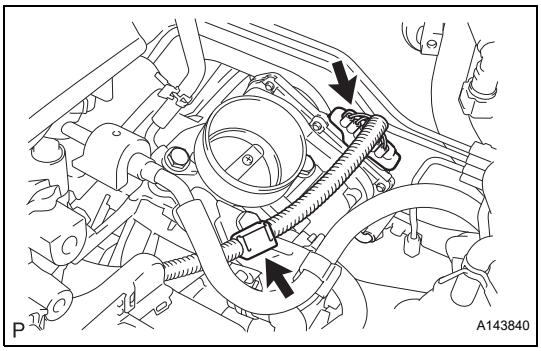
(a) Install a new gasket onto the intake manifold.



(b) Connect the purge line hose to the throttle body.
(c) Connect the water by-pass hose to the throttle body.
(d) Connect the No. 2 water by-pass hose to the throttle body.
(e) Connect the No. 1 throttle body hose to the throttle body.



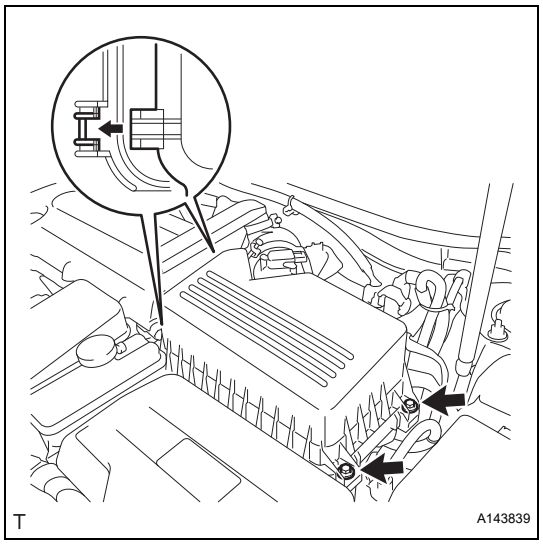
(f) Install the throttle body and fuel pipe clamp with the 4 bolts.
Torque: 30 N*m (305 kgf*cm, 22 ft.*lbf)
(g) Connect the fuel tube into the clamp.



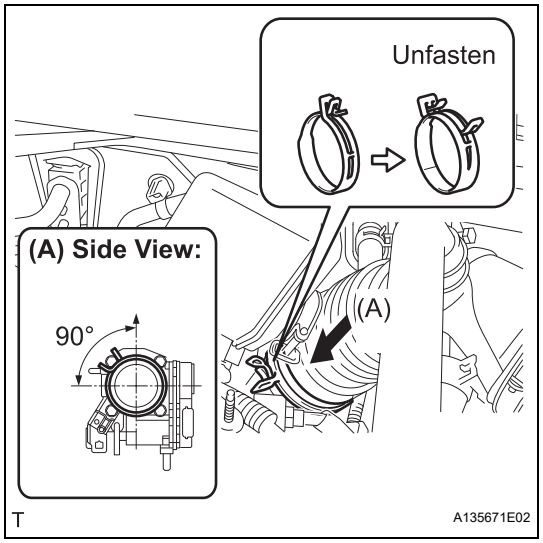
(h) Connect the throttle position sensor connector.
(i) Connect the wire harness clamp.

2. INSTALL AIR CLEANER CAP SUB-ASSEMBLY

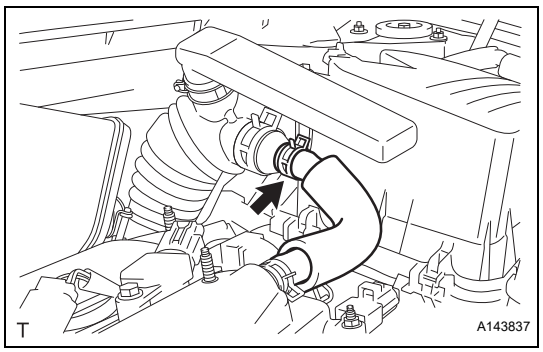
(a) Install the air cleaner filter element onto the air cleaner case.



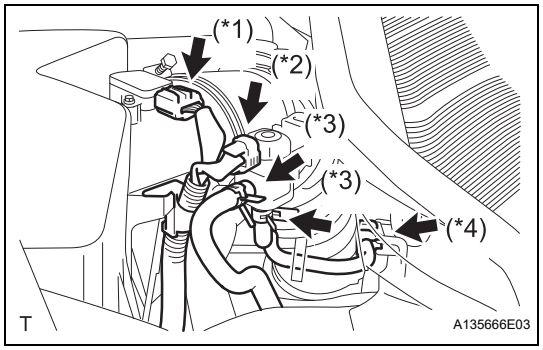
(b) Insert the hinges. Install the air cleaner cap sub-assembly with the 2 bolts.



(c) Align the matchmarks of the No. 1 air cleaner hose and throttle body. Connect the air cleaner hose No. 1 to the throttle body and unfasten the No. 1 air cleaner hose clamp.
NOTICE:
Make sure that the hose clamp is at the correct angle.



(d) Connect the No. 2 ventilation hose to the air cleaner hose.



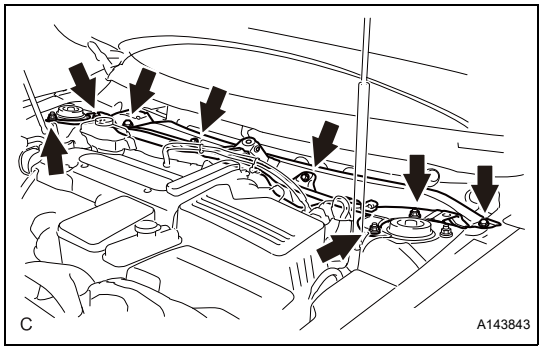
(e) Connect the purge line hose to the clamp (*1).
(f) Connect the 2 purge VSV vacuum hoses (*2).
(g) Connect the purge VSV connector (*3).
(h) Connect the mass air flow meter connector (*4).

3. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
4. **ADD ENGINE COOLANT (See page CO-5)**
5. **INSPECT FOR COOLANT LEAK (See page CO-1)**

6. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY**
(See page EM-114)

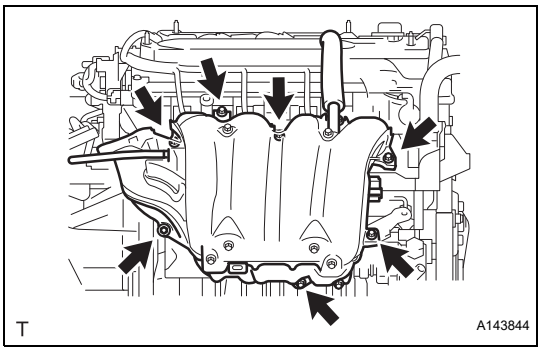
REMOVAL

1. DISCHARGE FUEL SYSTEM PRESSURE (See page FU-36)
2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
3. REMOVE NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-90)
4. DRAIN ENGINE COOLANT (See page CO-5)
5. REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)
6. REMOVE WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)
7. REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)
8. REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)
9. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)
10. SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY
11. REMOVE WINDSHIELD WIPER MOTOR AND LINK (See page WW-10)
12. REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY
    (a) Remove the 4 bolts, 4 nuts and cowl top panel outer sub-assembly.

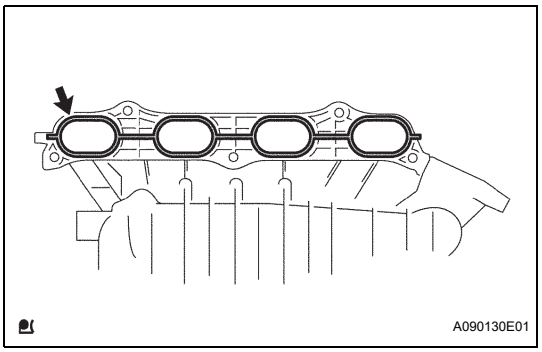


13. REMOVE AIR CLEANER CAP SUB-ASSEMBLY (See page ES-395)
14. REMOVE AIR CLEANER CASE SUB-ASSEMBLY (See page EM-90)
15. REMOVE THROTTLE BODY (See page ES-396)
16. DISCONNECT FUEL TUBE (See page FU-12)
17. REMOVE FUEL DELIVERY PIPE WITH INJECTOR (See page FU-13)
18. REMOVE INTAKE MANIFOLD
    (a) Disconnect the union to check valve hose from the brake booster.

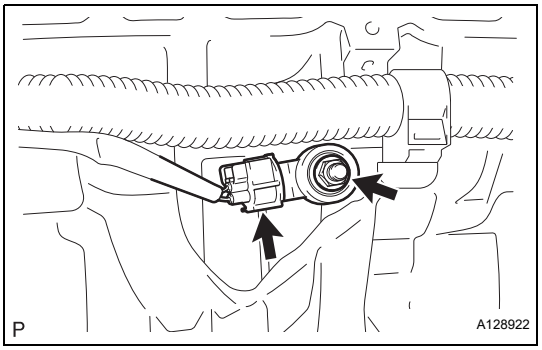
ES



(b) Disconnect the camshaft timing oil control valve connector.
(c) Remove the wire harness clamp.
(d) Remove the union to check valve hose from the vacuum hose clamp.
(e) Remove the 5 bolts, 2 nuts and intake manifold.



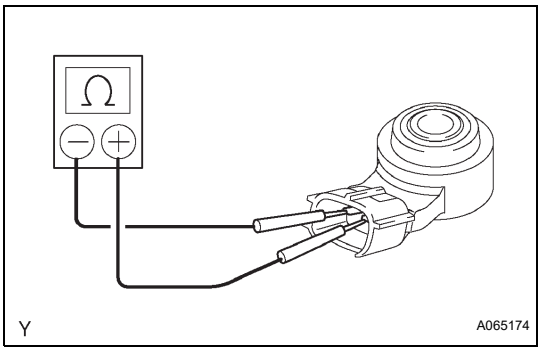
(f) Remove the gasket from the intake manifold.



19. REMOVE KNOCK SENSOR
(a) Disconnect the knock sensor connector.
(b) Remove the nut and knock sensor.

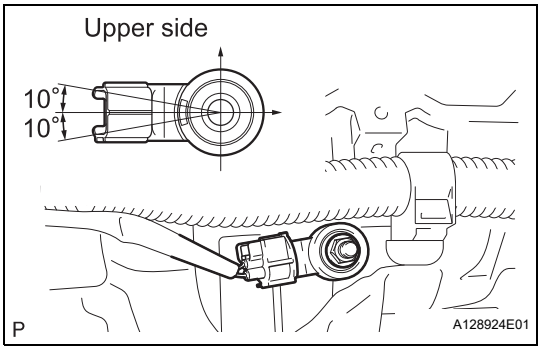
INSPECTION

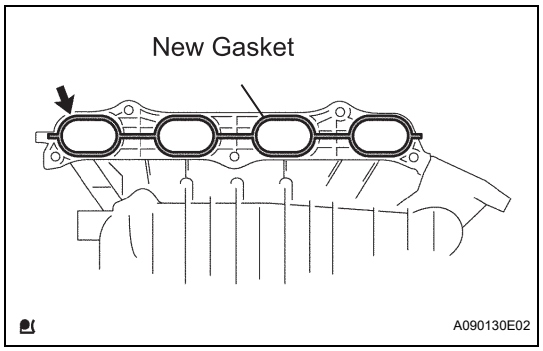
1. KNOCK CONTROL SENSOR
(a) Using an ohmmeter, measure the resistance between the terminals.
Standard resistance:
120 to 280 kΩ at 20°C (68°F)
If the resistance is not specified, replace the sensor.



INSTALLATION

1. INSTALL KNOCK SENSOR
(a) Install the knock sensor with the nut.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)
NOTICE:
Make sure that the knock sensor is in the correct position.
(b) Connect the knock sensor connector.

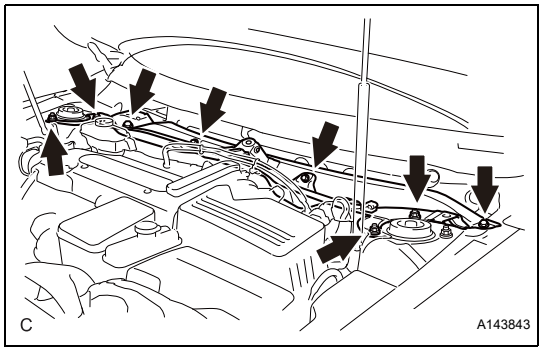




2. **INSTALL INTAKE MANIFOLD**
   (a) Install a new gasket into the intake manifold.

   (b) Install the intake manifold with the 5 bolts and 2 nuts.
   Torque: 30 N*m (306 kgf*cm, 22 ft.*lbf)
   (c) Fit the union to check valve hose into the vacuum hose clamp.
   (d) Install the wire harness clamp.
   (e) Connect the camshaft timing oil control valve connector.
   (f) Connect the union to check valve hose to the brake booster.

3. **INSTALL FUEL DELIVERY PIPE WITH INJECTOR (See page FU-15)**
4. **INSTALL FUEL TUBE (See page FU-16)**
5. **INSTALL THROTTLE BODY (See page ES-397)**
6. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-113)**
7. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**
8. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
9. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (See page EM-113)**
10. **ADD ENGINE COOLANT (See page CO-5)**
11. **INSPECT FOR COOLANT LEAK (See page CO-1)**
12. **INSPECT FOR FOR FUEL LEAK (See page FU-9)**
13. **INSTALL NO. 1 ENGINE COVER SUB-ASSEMBLY (See page EM-114)**



14. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY**
   (a) Install the cowl top panel outer sub-assembly with the 4 bolts and 4 nuts.
   Torque: Bolt
   5.0 N*m (51 kgf*cm, 44 in.*lbf)
   Nut
   85 N*m (867 kgf*cm, 63 ft.*lbf)
15. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page ES-383)**

ES

16. **INSTALL WINDSHIELD WIPER MOTOR AND LINK (See page WW-13)**
17. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)**
18. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)**
19. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)**
20. **INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)**
21. **INSTALL WINDSHIELD WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)**
22. **PERFORM INITIALIZATION**
    (a) Perform initialization procedure (See page IN-43).
    NOTICE:
    Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

2007 *Camry Hybrid* Repair Manual

トヨタ

toyoda

トヨタ

toyota

HOW TO USE THIS MANUAL

GENERAL INFORMATION

1. GENERAL DESCRIPTION

(a) This manual is written in accordance with SAE J2008.
  (1) Diagnosis
  (2) Removing / Installing, Replacing, Disassembling / Reassembling, Checking and Adjusting
  (3) Final Inspection

(b) The following procedures are omitted from this manual. However, these procedures must be performed.
  (1) Use a jack or lift to perform operations
  (2) Clean all removed parts
  (3) Perform a visual check

2. INDEX

(a) An alphabetical INDEX section is provided at the end of the manual as a reference to help you find the item to be repaired.

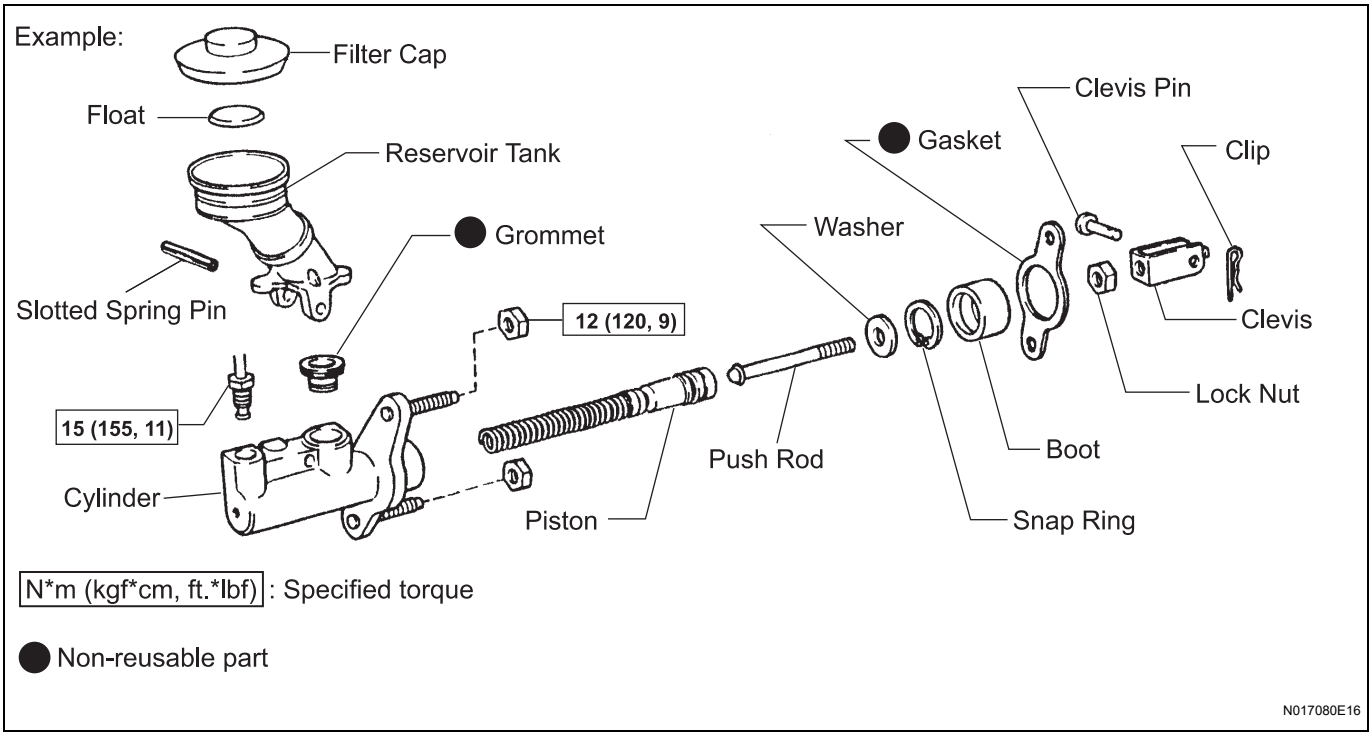
3. PREPARATION

(a) Use of Special Service Tools (SST) and Special Service Materials (SSM) may be required, depending on the repair procedure. Be sure to use SST and SSM when they are required and follow the working procedure properly. A list of SST and SSM is in the "Preparation" section of this manual.

4. REPAIR PROCEDURES

(a) A component illustration is placed under the title where necessary.

(b) Non-reusable parts, grease application areas, precoated parts and torque specifications are noted in the component illustrations.
The following illustration is an example.



(c) Torque specifications, grease application areas and non-reusable parts are emphasized in the procedures.
HINT:
There are cases where such information can only be explained by using an illustration. In these cases, torque, oil and other information are described in the illustration.

(d) Only items with key points are described in the text. What to do and other details are explained using illustrations next to the text. Both the text and illustrations are accompanied by standard values and notices.

Illustration	What to do and where to do it
Task heading	What work will be performed
Explanation text	How to perform the task Also has information such as specifications and warnings, which are written in boldface text

(e) Illustrations of similar vehicle models are sometimes used. In these cases, minor details may be different from the actual vehicle.

(f) Procedures are presented in a step-by-step format.

5. SERVICE SPECIFICATIONS

(a) SPECIFICATIONS are presented in boldface text throughout the manual. The specifications are also found in the "Service Specifications" section for reference.

6. TERM DEFINITIONS

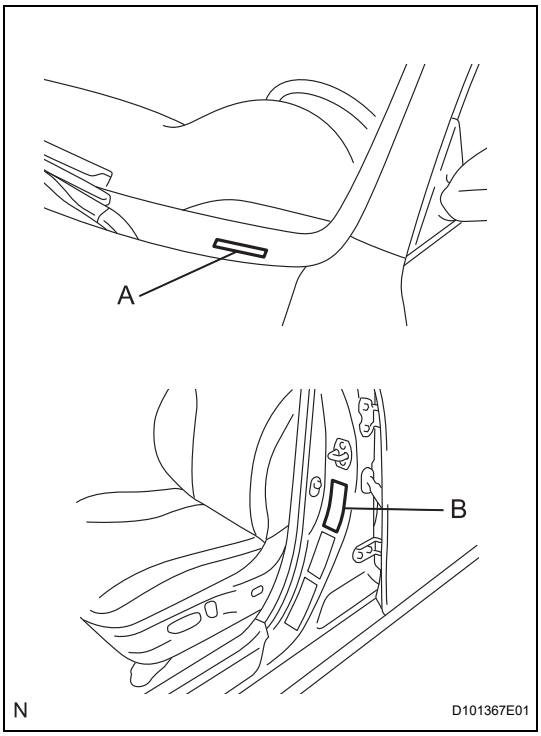
CAUTION	Possibility of injury to you or other people.
NOTICE	Possibility of damage to components being repaired.
HINT	Provides additional information to help you perform repairs.

7. INTERNATIONAL SYSTEM OF UNITS

(a) The units used in this manual comply with the International System of Units (SI UNIT) standard. Units from the metric system and the English systems are also provided.
Example:
Torque: 30 N*m (310 kgf*cm, 22 ft.*lbf)

IDENTIFICATION INFORMATION

VEHICLE IDENTIFICATION AND SERIAL NUMBERS

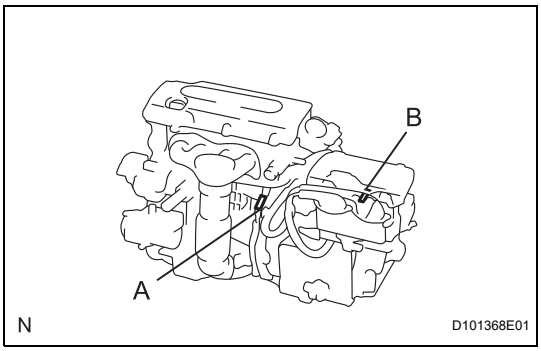


1. VEHICLE IDENTIFICATION NUMBER

(a) The vehicle identification number is stamped on the vehicle body and on the certification label, as shown in the illustration.

A:
Vehicle Identification Number

B:
Certification Label



2. ENGINE SERIAL NUMBER AND TRANSAXLE SERIAL NUMBER

(a) The engine serial number is stamped on the cylinder block of the engine, and the transaxle serial number is stamped on the housing, as shown in the illustration.

A:
Engine Serial Number

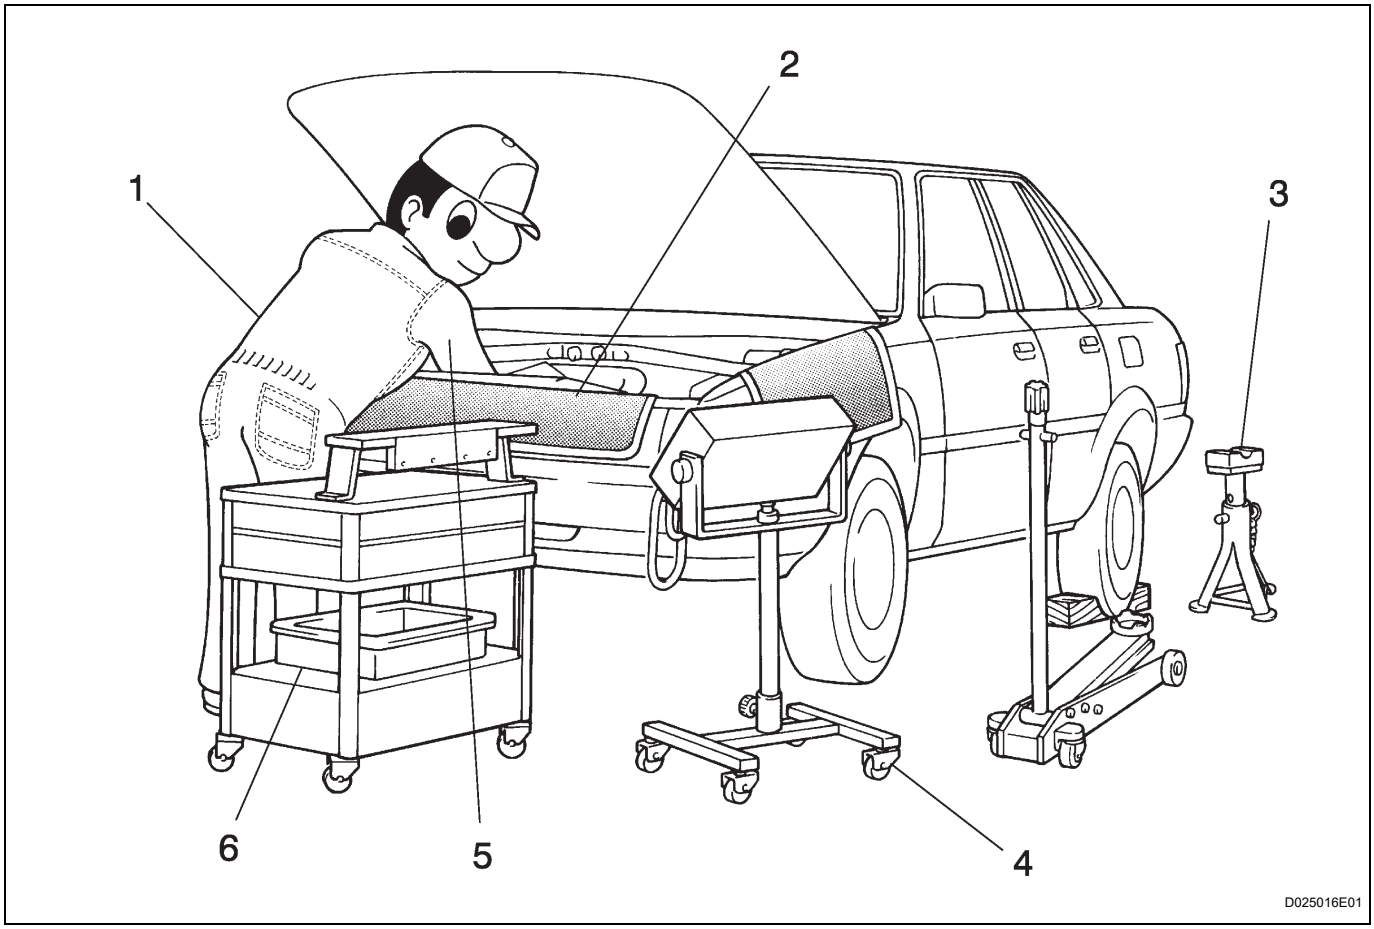
B:
Transaxle Serial Number

REPAIR INSTRUCTION

PRECAUTION

1. BASIC REPAIR HINT

(a) HINTS ON OPERATIONS

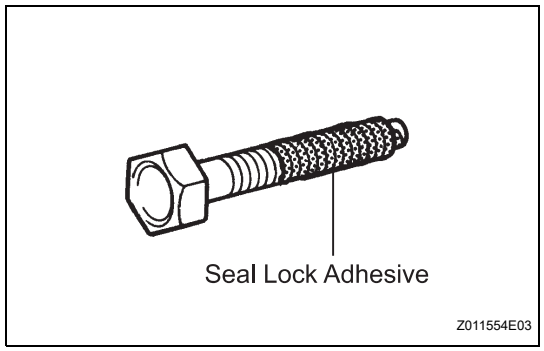


1	Attire	• Always wear a clean uniform. • Hat and safety shoes must be worn.
2	Vehicle protection	Prepare a grille cover, fender cover, seat cover and floor mat before starting the operation.
3	Safety operation	• When working in a pair or groups, be sure to check safety for one another. • When working with the engine running, make sure to provide ventilation for exhaust fumes in the workshop. • If working on high temperature, high pressure, rotating, moving, or vibrating parts, wear appropriate safety equipment and take extra care not to injure yourself or others. • When jacking up the vehicle, be sure to support the specified location with a safety stand. • When lifting up the vehicle, use appropriate safety equipment.
4	Preparation of tools and measuring gauge	Before starting operation, prepare a tool stand, SST, gauge, oil and parts for replacement.
5	Removal and installation, disassembly and assembly operations	• Diagnose with a thorough understanding of proper procedures and of the reported problem. • Before removing the parts, check the general condition of the assembly and for deformation and damage. • When the assembly is complicated, take notes. For example, note the total number of electrical connections, bolts, or hoses removed. Add matchmarks to insure reassembly of components in the original positions. Temporarily mark hoses and their fittings if needed. • Clean and wash the removed parts if necessary and assemble them after a thorough check.

6	Removed parts	• Place the removed parts in a separate box to avoid mixing them up with the new parts or contaminating the new parts. • For non-reusable parts such as gaskets, O-rings, and self-locking nuts, replace them with new ones as instructed in this manual. • Retain the removed parts for customer inspection if requested.

IN

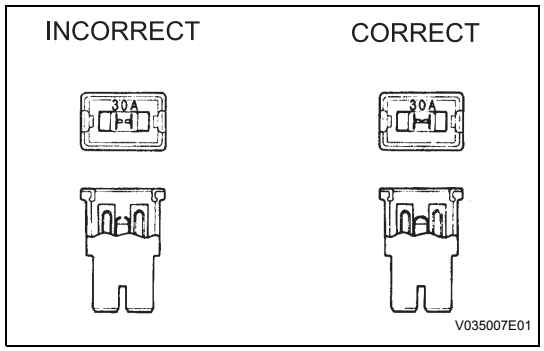
(b) JACKING UP AND SUPPORTING VEHICLE
(1) Care must be taken when jacking up and supporting the vehicle. Be sure to lift and support the vehicle at the proper locations.



(c) PRECOATED PARTS
(1) Precoated parts are bolts and nuts that are coated with a seal lock adhesive at the factory.
(2) If a precoated part is retightened, loosened or moved in any way, it must be recoated with the specified adhesive.
(3) When reusing a precoated part, clean off the old adhesive and dry the part with compressed air. Then apply new seal lock adhesive appropriate to that part.
(4) Some seal lock agents harden slowly. You may have to wait for the seal lock adhesive to harden.

(d) GASKETS
(1) When necessary, use a sealer on gaskets to prevent leaks.

(e) BOLTS, NUTS AND SCREWS
(1) Carefully follow all the specifications for tightening torques. Always use a torque wrench.



(f) FUSES
(1) When inspecting a fuse, check that the wire of the fuse is not broken.
(2) When replacing fuses, be sure that the new fuse has the correct amperage rating. Do not exceed the rating or use one with a lower rating.

Illustration	Symbol	Part Name	Abbreviation
 N	N	FUSE	FUSE

Illustration	Symbol	Part Name	Abbreviation
 N	 N	MEDIUM CURRENT FUSE	M-FUSE
 N	N	HIGH CURRENT FUSE	H-FUSE
 N	N	FUSIBLE LINK	FL
 N	N	CIRCUIT BREAKER	CB

(g) CLIPS

(1) The removal and installation methods of typical clips used for vehicle body parts are shown in the table below.

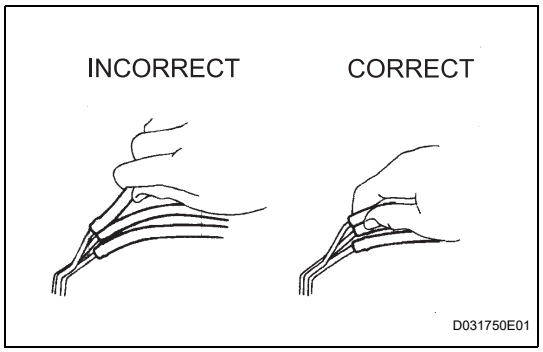
HINT:

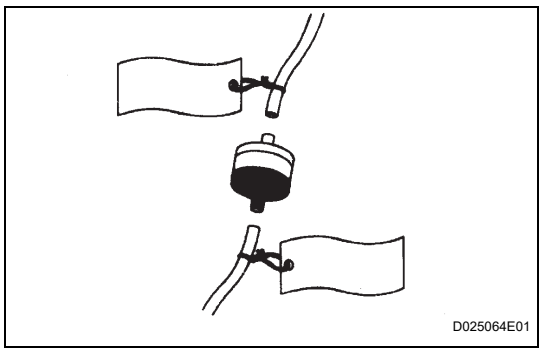
If clips are damaged during work, always replace the damaged clip with a new one.

IN

Shape (Example)	Removal/Installation
 N	Remove clips with clip remover or pliers.  N
 N	Remove fasteners with clip remover or screwdriver.  N
 N	Remove clips with wide scraper to prevent panel damage.  N
 N	Remove clips by pushing center pin through and prying out shell.  N

Shape (Example)	Removal/Installation
 N	Remove clips by unscrewing center pin and prying out shell.  N
 N	Remove clips by prying out pin and then prying out shell.  N





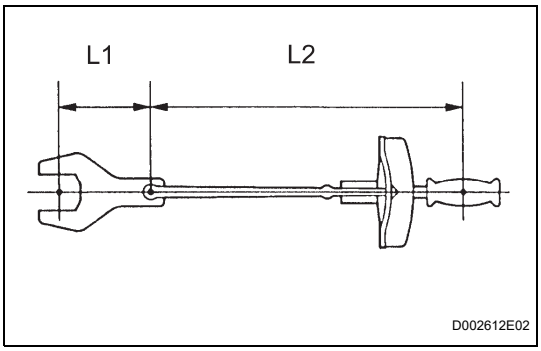
(h) REMOVAL AND INSTALLATION OF VACUUM HOSES

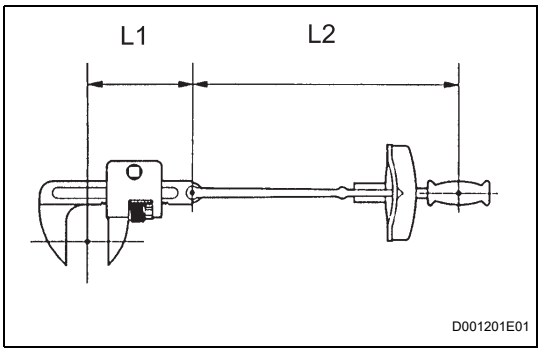
(1) To disconnect a vacuum hose, pull and twist from the end of the hose. Do not pull from the middle of the hose as this may damage the hose.

(2) When disconnecting vacuum hoses, use tags to identify where they should be reconnected.

(3) After completing any hose related repairs, double check that the vacuum hoses are properly connected. The label under the hood shows the proper layout.

(4) When using a vacuum gauge, never force the hose onto a connector that is too large. If a hose has been stretched, air may leak. Use a step-down adapter if necessary.





(i) TORQUE WHEN USING TORQUE WRENCH WITH EXTENSION TOOL

(1) Use the formula below to calculate special torque values for situations where SST or an extension tool is combined with the torque wrench.

Formula:

T' = L2/(L1 + L2) * T

T'	**Reading of torque wrench {N*m (kgf*cm, ft.*lbf)}**
T	**Torque {N*m (kgf*cm, ft.*lbf)}**
L1	**Length of SST or extension tool {cm (in.)}**
L2	**Length of torque wrench {cm (in.)}**

NOTICE:

If an extension tool or SST is combined with a torque wrench and the wrench is used to tighten to a torque specification in this manual, the actual torque will be excessive and parts will be damaged.

2. PRECAUTIONS FOR HIGH-VOLTAGE CIRCUIT INSPECTION AND SERVICE

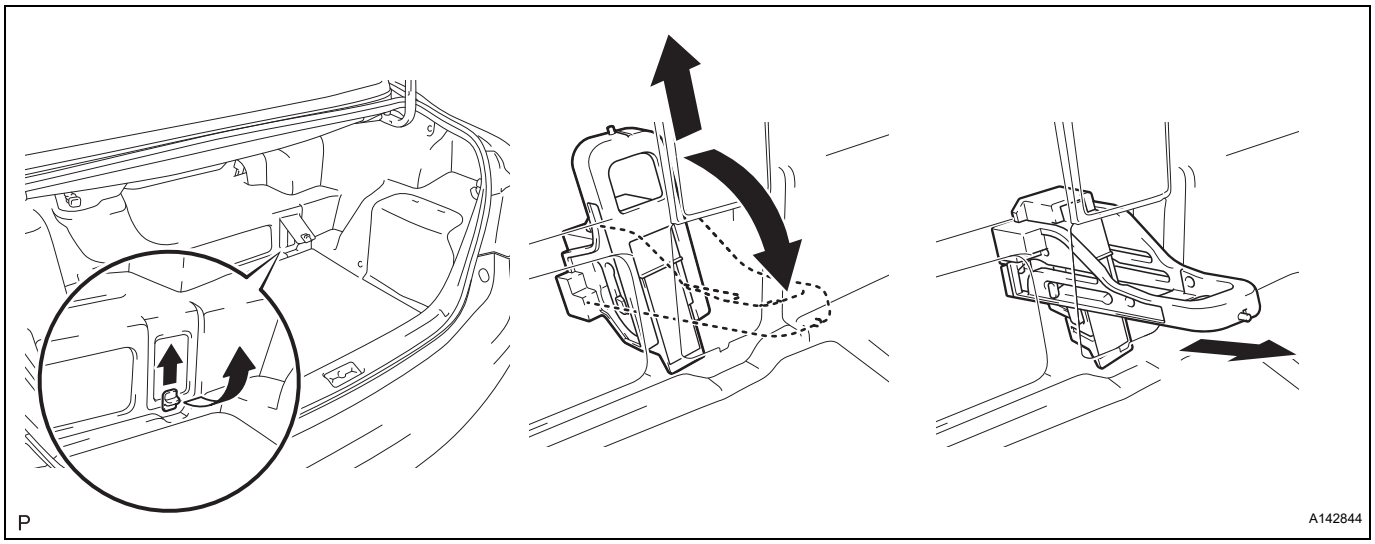
NOTICE:

The hybrid system contains a 244.8 V high-voltage system with a strong alkali solution of potassium hydroxide. Be sure to follow the instructions in this manual to handle the system correctly. Failure to do so may result in serious injury or electrocution.

(a) Engineer must undergo special training to be able to perform high-voltage system inspection and servicing.

(b) All high-voltage wire harness connectors are colored orange. The HV battery and other high-voltage components have "High Voltage" caution labels. Do not carelessly touch these wires and components.

(c) Before inspecting or servicing the high-voltage system, be sure to follow safety measures, such as wearing insulated gloves and removing the service plug to prevent electrocution. Carry the removed service plug in your pocket to prevent other technicians from reinstalling it while your are servicing the vehicle.

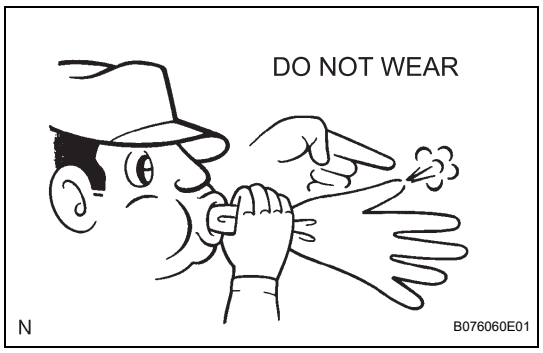


P A142844

NOTICE:

- **Before removing the service plug, confirm power switch off.**
- **Do not put the vehicle into the READY-on state after removing the service plug grip as the ECU may be damaged.**

(d) After removing the service plug, wait 10 minutes before touching any of the high-voltage connectors and terminals.
HINT:
10 minutes are required to discharge the high-voltage condenser inside the inverter.

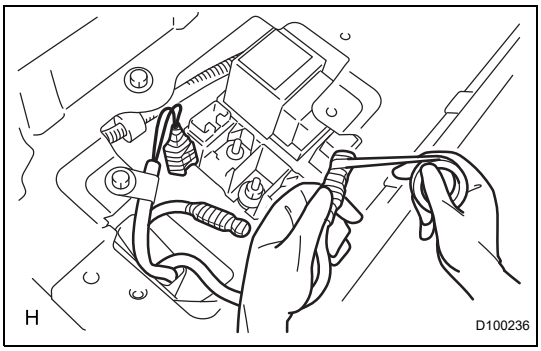


N B076060E01

(e) Before wearing insulated gloves, make sure that they are not cracked, ruptured, torn, or damaged in any way. Do not wear wet insulated gloves.

(f) When servicing the vehicle, do not carry metal objects like mechanical pencils or scales that can be dropped accidentally and cause a short circuit.

(g) Before touching a bare high-voltage terminal, wear insulated gloves and use a tester to make sure that the terminal voltage is 0 V.



(h) After disconnecting or exposing a high-voltage connector or terminal, insulate it immediately using insulation tape.

(i) The screw of a high-voltage terminal should be tightened firmly to the specified torque. Both insufficient and excessive torque can cause failure.

(j) Use the "CAUTION: HIGH VOLTAGE. DO NOT TOUCH DURING OPERATION" sign to notify other engineers that a high-voltage system is being inspected and/or repaired.

IN

Person in charge: _____

CAUTION:
HIGH VOLTAGE. DO
NOT TOUCH DURING
OPERATION.

CAUTION:
HIGH VOLTAGE. DO NOT TOUCH DURING OPERATION.

Person in charge: _____

Copy this page and put it after folding on the roof of the vehicle in service.

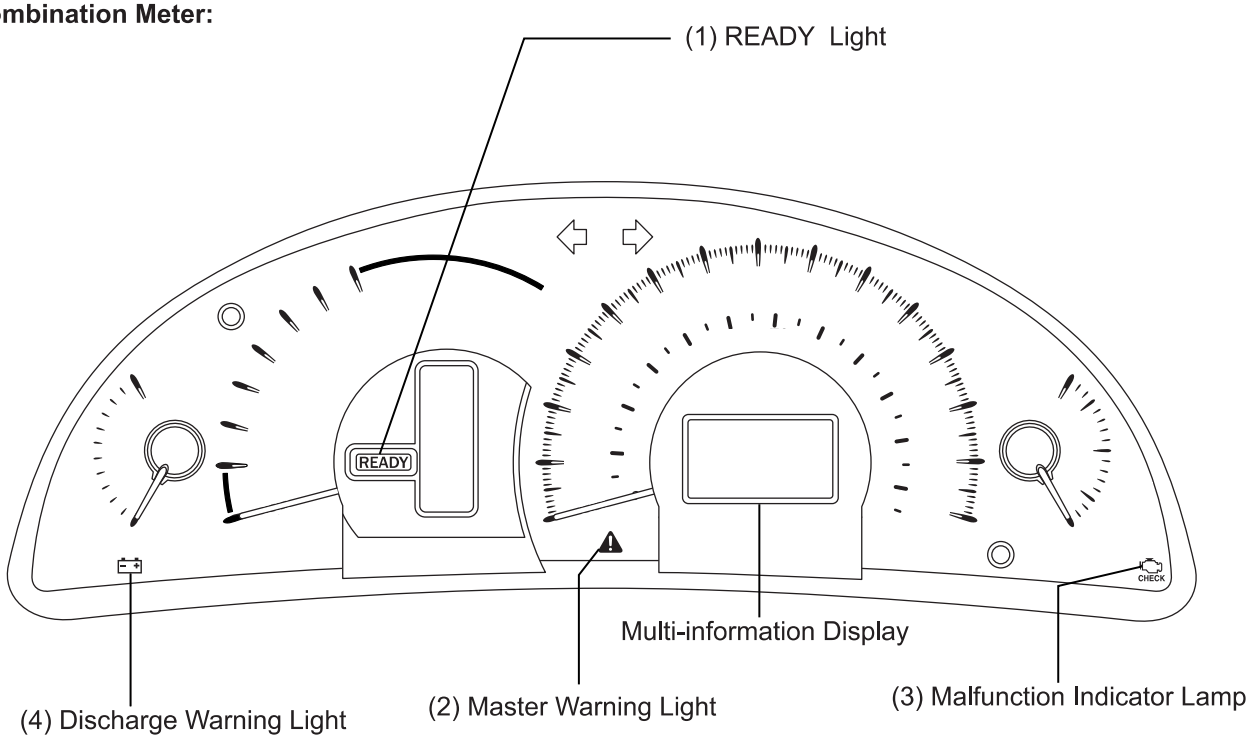
B075514E01

(k) After servicing the high-voltage system and before reinstalling the service plug, check again that you have not left a part or tool inside, that the high-voltage terminal screws are firmly tightened, and that the connectors are correctly connected.

(l) Do not place the battery upside down while removing and installing it.

3. ACTIONS TO BE TAKEN WHEN THE WARNING LIGHT IS LIT

Combination Meter:



H

E123357E03

Multi-information Display:

(5) LOW T. BATT STOP THE VEHICLE SHIFT TO P

(6) CHECK HYBRID SYSTEM

(7) HYBRID SYSTEM OVER HEAT

N

D100395E01

(a) If one of the warning lights (2) to (7) becomes lit, connect an intelligent tester to the DLC3 connector to check the DTCs (Diagnostic Trouble Codes). Then, refer to the applicable troubleshooting steps in this manual to inspect and repair the affected area. The foregoing actions are also required if the READY light does not illuminate when the vehicle is first started.

Combination Meter

Warning Light	Outline
(1) READY Light	This light blinks when the driver simultaneously presses the brake pedal and turns on the power switch while the shift lever is in the P position. Thereafter, the light changes to illumination when the system starts, thus informing the driver that the vehicle is drivable.
(2) Master Warning Light	The primary function of this warning light, which illuminates simultaneously with the sounding of a warning buzzer, is to inform the driver in case of a certain condition is detected.
(3) Malfunction Indicator Lamp	Turns on when there is a malfunction in the engine control system.
(4) Discharge Warning Light	Turn on when there is a malfunction in the DC 12 V charging system (converter assembly).

Multi-information Display

Multi-information Display	Outline
(5) LOW T. BATT STOP THE VEHICLE SHIFT TO P	This warning display indicates to the driver that the SOC is lower than the minimum standard value (%). At the same time, the master warning light blinks and the buzzer sounds.
(6) CHECK HYBRID SYSTEM	This warning display indicates to the driver that a malfunction has occurred in the THS II system. At the same time, the master warning light illuminates and the buzzer sounds. However, these are inactive for 5 seconds after the power source is turned to power switch on (IG).
(7) HYBRID SYSTEM OVER HEAT	This warning display indicates to the driver that the temperatures of any parts related to the THS II system exceed the standard value. At the same time, the master warning light illuminates and the buzzer sounds.

4. ACTIONS TO BE TAKEN WHEN BATTERIES ARE DEPLETED

HINT:

The CAMRY HV uses a 12 V auxiliary and a 244.8 V hybrid vehicle battery. Therefore, there are two recharging methods when the batteries are depleted.

(a) Perform this procedure when the auxiliary battery is fully depleted.

HINT:

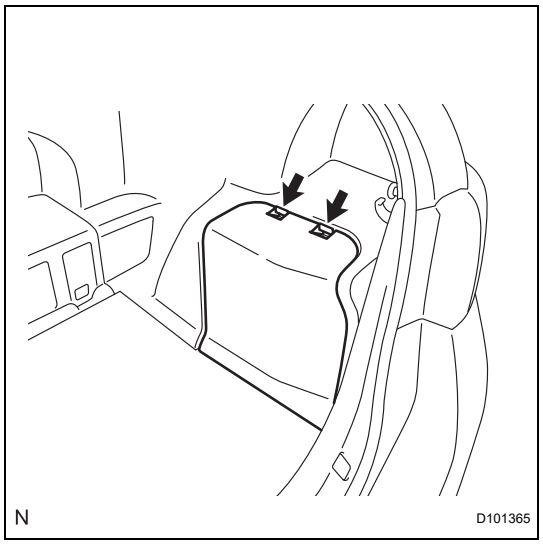
The following problems indicate that the auxiliary battery is depleted:

- No display appears on the instrument panel when the power switch is set to on (IG).
- The hybrid system does not start.
- The headlights are dim.
- The sound from the horn is weak.

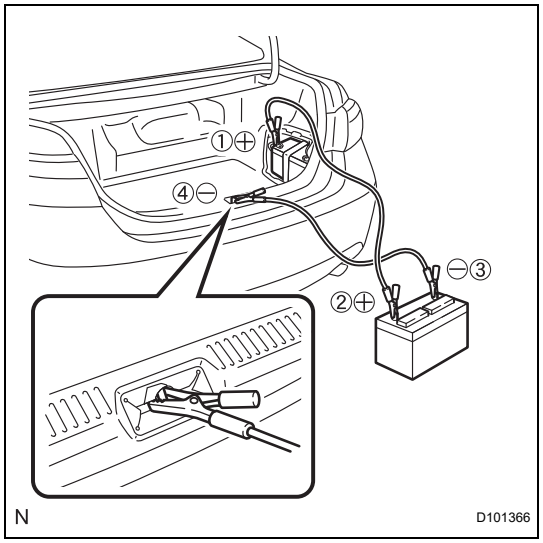
CAUTION:

Never use a quick charger.

(1) Move the shift lever to the P position and engage the parking brake.



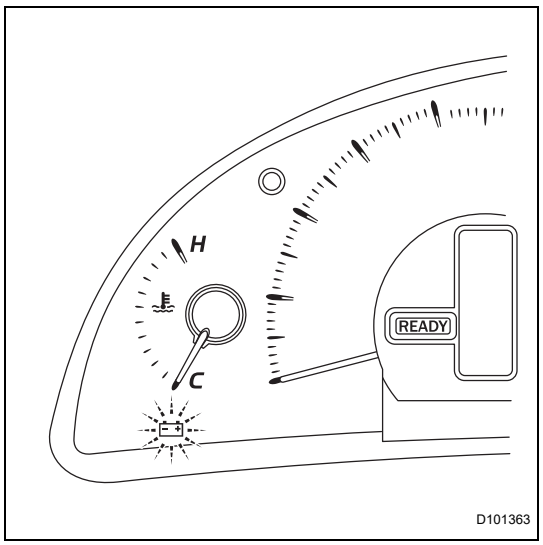
(2) Release the 2 claws, then remove the auxiliary battery cover.



(3) Using a booster cable, connect the 12 V battery of the rescue vehicle and the auxiliary battery of the stalled vehicle, as shown in the illustration.

Connecting Sequence	Connecting Location
1	Positive battery terminal of stalled vehicle
2	Positive battery terminal of rescue vehicle
3	Negative battery terminal of rescue vehicle
4	Luggage compartment door striker

(4) Start the engine of the rescue vehicle and run the engine at a speed slightly higher than usual.



(5) Put the vehicle into the READY-on state to start the hybrid system.
NOTICE:
Immediately disconnect the booster cable in the reverse order of connection after the hybrid system and the engine have started. Do not leave the booster cable connected because it is not designed for recharging purposes.
If the hybrid system fails to start and the discharge warning light turns ON, the HV battery may be depleted.

(b) When the hybrid vehicle battery is depleted:
Replace the hybrid vehicle battery.
HINT:
When the hybrid vehicle battery is depleted, the HYBRID VEHICLE BATTERY WARNING illuminates, and DTC P3000-389 is stored in the hybrid vehicle control ECU.

5. SPECIAL NOTES FOR VEHICLE INSPECTION

CAUTION:

If the vehicle is run in the inspection mode, for such as a speedometer test, DTC ●●●●● may be output. Therefore, if the warning light comes on, after canceling the inspection mode, check for DTCs using the intelligent tester and clear the DTCs.

(a) Vehicle conditions

(1) Before activating inspection mode, turn the air conditioning off, start the engine with the shift lever in the P position, and check that the engine stops within several seconds after starting (engine warm up check).

(2) Activate inspection mode and inspect the vehicle.

Shift position for each test

Test item	Inspection mode	Shift position
1. Speedometer test	Inspection mode	D

(3) Reset inspection mode immediately after completion of inspection.

CAUTION:

After canceling the inspection mode, turn the power switch on (IG) again and check that the warning light is OFF.

(b) Special notes for speedometer test

CAUTION:

- **Be sure to perform the test in the inspection mode (See page IN-65).**
- **Do not use the speedometer tester to perform rapid starting or quick acceleration/ deceleration without first setting the proper load on the vehicle. Failing to set the load may damage the transaxle.**

(1) Depress the accelerator pedal slowly and gradually accelerate the vehicle. Make a measurement.

(2) After the measurement, use the brake to gradually decelerate the vehicle.

(c) Special notes for using the chassis dynamometer

(1) Always set an appropriate load before starting the test.

NOTICE:

- **Be sure to perform the test in the inspection mode (See page IN-65).**
- **Suddenly acceleration or deceleration of the vehicle on a chassis dynamometer under minimal load may damage the transaxle.**

6. ACTIONS TO BE TAKEN FOR VEHICLE DAMAGED BY IMPACT

NOTICE:

The hybrid system contains a 244.8 V high-voltage system with a strong alkali solution of potassium hydroxide. Be sure to follow the instructions in this manual to handle the system correctly. Failure to do so may result in serious injury or electrocution.

(a) Items to be prepared or operation at the accident site

- Protective clothing (insulated gloves, rubber gloves, goggles, and safety shoes)
- Saturated boric acid solution 20 L (obtain 800 g of boric acid powder, put it into a container, and dissolve it in water)
- Red litmus paper
- ABC fire extinguisher (effective against both oil flames and electrical flames)
- A shop rag or piece of cloth (for wiping off the electrolyte)
- Insulation tape (for insulating cable)
- Electrical tester

(b) Actions to be taken at the accident site

NOTICE:

Do not touch a bare cable that may have high-voltage. If the cable must be touched or if accidental contact is unavoidable, wear insulated gloves and insulate the cable using insulation tape.

- If the vehicle catches on fire, use an ABC fire extinguisher to extinguish the fire. Trying to extinguish a fire using only a small amount of water can be more dangerous than effective. Use a substantial amount of water or wait for firefighters.
- Visually check the HV battery and the immediate area for any electrolyte leakage. Do not touch any leaked liquid because it could be highly alkaline electrolyte.
- Work on the vehicle only after the vehicle has been pulled out of the water.

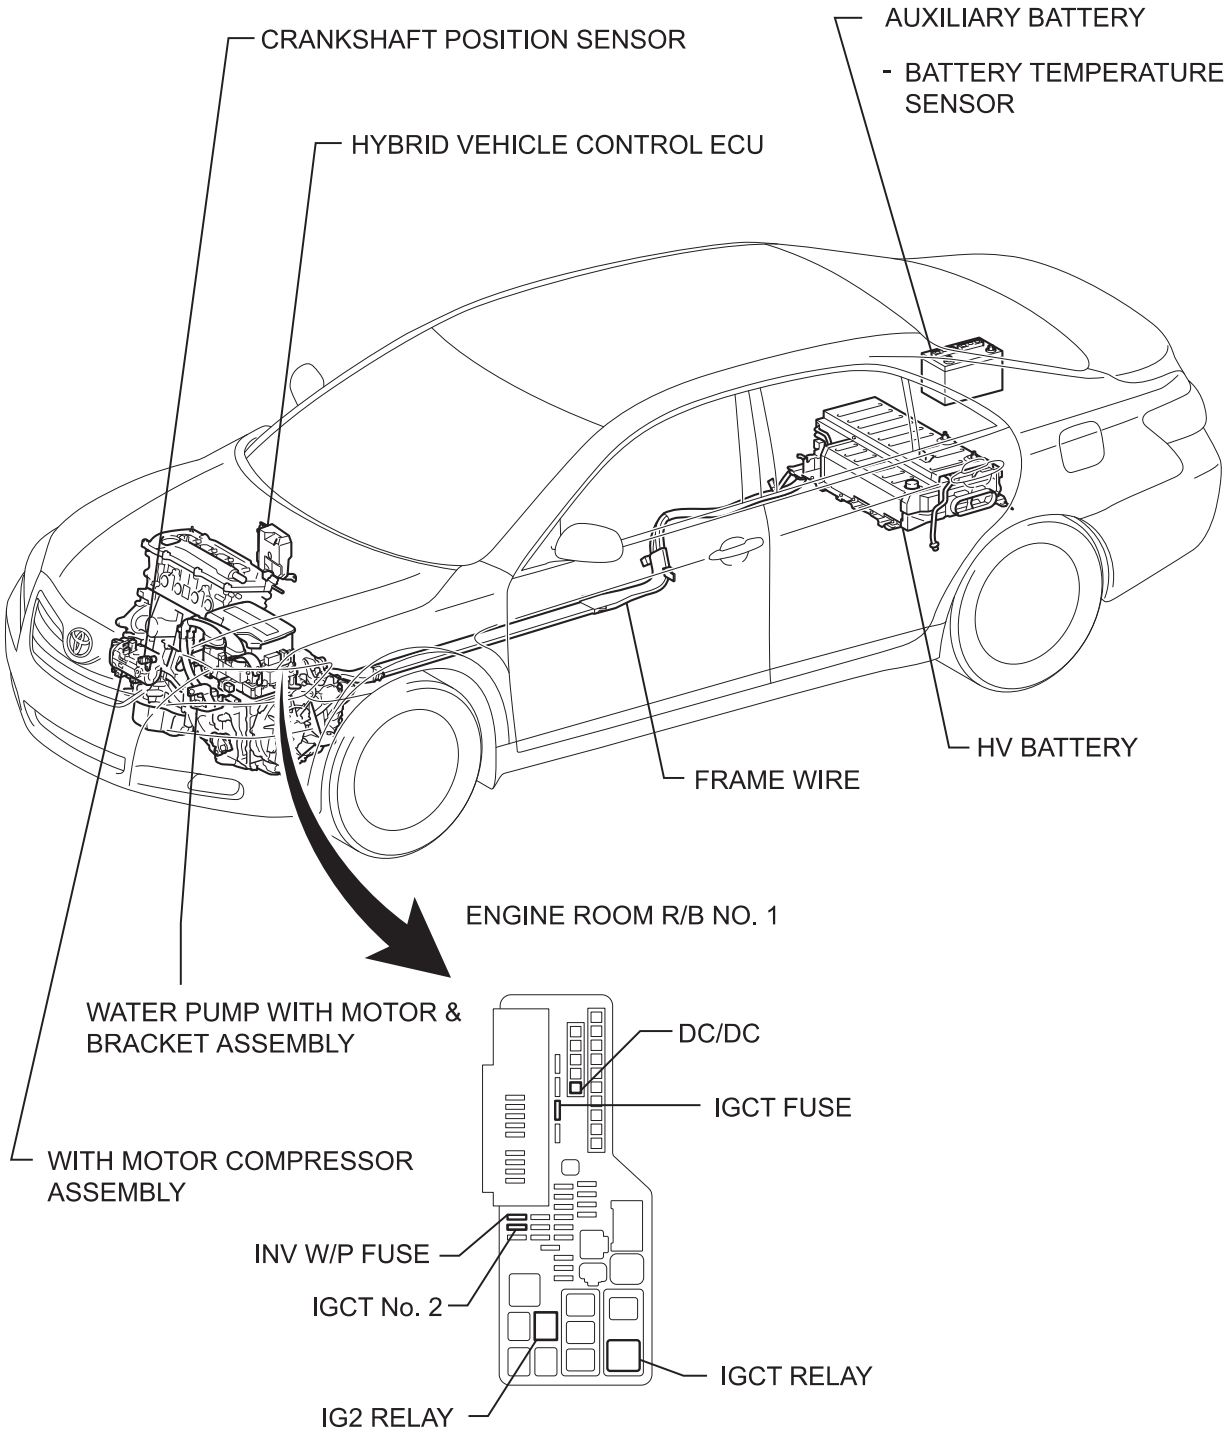
(1) Check the vicinity of the hybrid vehicle battery for any leakage of the electrolyte.

NOTICE:

Do not touch any leaked liquid because it could be highly alkaline electrolyte. Wear rubber gloves and goggles, neutralize the liquid with saturated boric acid solution, and then apply red litmus paper to the leak. Check that the paper does not turn blue. Wipe the neutralized liquid with a shop rag or piece of cloth.

(2) If damage to any of the high-voltage components and cable is suspected, cut the high-voltage circuit using the procedure on the following pages.

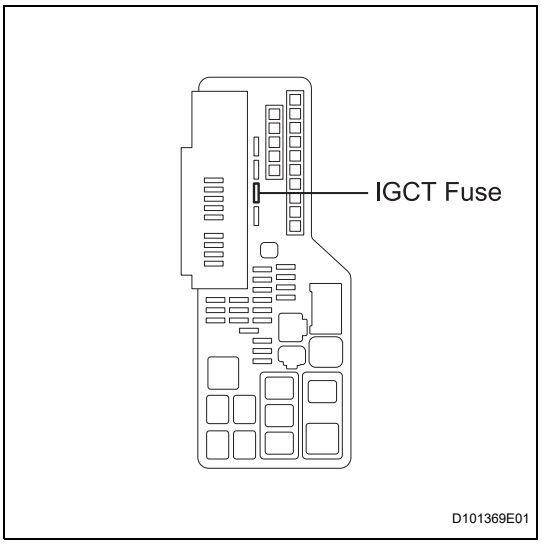
IN

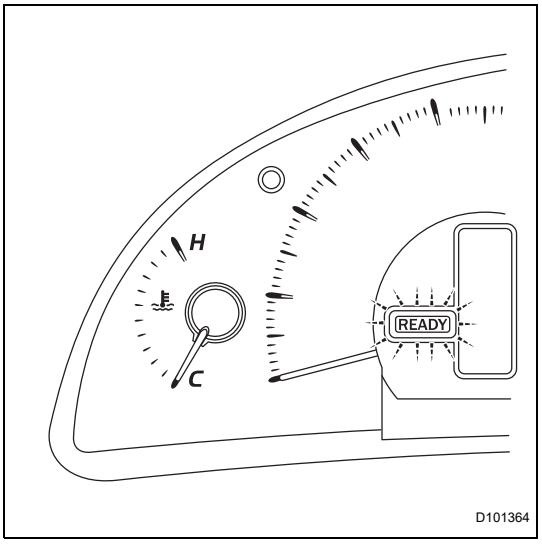


C

A142561E02

IN





(3) Turn the power switch off.
HINT:
If the power switch cannot be turned off, remove the IGCT fuse from the engine room R/B No. 1 or disconnect the cable from the negative terminal of the auxiliary battery.

(4) Wear insulated gloves, and then remove the service plug.
NOTICE:
Be sure to install the service plug before turning the power switch on (IG). Starting the hybrid system with the service plug removed may damage the ECU.

(c) Moving the damaged vehicle
If any of the following conditions are met, tow the vehicle away using a tow truck.
- One or more of the high-voltage components and cables are damaged.
- The driving, traction, or fuel system is damaged.
- The master warning light is on.
- The READY light does not come on when the vehicle is in the READY-on state.

CAUTION:
- **Before towing the vehicle away using a tow truck, disconnect the cable from the negative (-) terminal of the auxiliary battery and remove the service plug.**

NOTICE:
Perform the procedure below if the READY light turns off , or there are abnormal noises, unusual smells, or strong vibrations while driving:

(1) Park the vehicle in a safe place.
(2) Shift the shift lever to the "P" position, and apply the parking brake.
(3) Turn the power switch off, and disconnect the power cable from the negative (-) terminal of the auxiliary battery.
(4) Remove the service plug while wearing insulated gloves.

(d) Actions required after moving the damaged vehicle
(1) Procedure
If you see any liquid on the road surface, it could be highly alkaline electrolyte leakage.
Wear rubber gloves and goggles, neutralize the liquid with saturated boric acid solution, and then apply red litmus paper to the leak. Check that the paper does not turn blue. Wipe the neutralized liquid with a shop rag or piece of cloth.

(e) Items to be prepared (when repairing damaged vehicles)
- Protective clothing (Insulated gloves, rubber gloves, goggles, and safety shoes)

- Saturated boric acid solution 20 L (obtain 800 g of boric acid powder, put it into a container, and dissolve it in water)
- Red litmus paper
- A shop rag or piece of cloth (for wiping off the electrolyte)
- Vinyl tape (for insulating cable)
- Electrical tester

(f) Precautions to be observed when servicing the damaged vehicle

NOTICE:

Always follow instructions to ensure safety.

(1) Wear insulated or rubber gloves, goggles, and safety shoes.

(2) Check the HV battery and immediate area for any electrolyte leakage.
Do not touch any leaked liquid because it could be highly alkaline electrolyte. Wear rubber gloves and goggles, neutralize the liquid with saturated boric acid solution, and then apply red litmus paper to the leak. Check that the paper does not turn blue. Wipe the neutralized liquid with a shop rag or piece of cloth.
NOTICE:
- **If the electrolyte comes in contact with your skin, use a saturated boric acid solution or a large amount of water to wash it off. If the electrolyte comes in contact with an article of clothing, take it off immediately.**
- **If the electrolyte comes in contact with your eyes, call out loudly for help. Do not rub your eyes. Wash them immediately with a large amount of water and seek medical care.**

(3) Do not touch a bare cable that could be a high voltage cable. If the cable must be touched or if accidental contact is unaroidable, follow the following instructions: 1) wear insulated or rubber gloves and goggles, 2) measure the voltage between the cable and the body ground using an electrical tester, and 3) insulate the cable using insulation tape.

(4) If damage to any of the high-voltage components and cables is suspected, cut the high-voltage circuit using the procedure below.
NOTICE:
Do not touch a bare cable that may have high-voltage. If the cable must be touched or if accidental contact is unavoidable, wear insulated gloves and insulate the cable using insulation tape.

(5) Turn the power switch off.
HINT:
If the power switch cannot be turned off, remove the IGCT fuse from the HV relay block or disconnect the cable from the negative terminal of the auxiliary battery.
(6) Wear insulated gloves, and then remove the service plug.

(g) Precautions to be taken when disposing of the vehicle
(1) Disposing of HV battery
When scrapping the vehicle, remove the HV battery from the vehicle and return it to the location specified by the manufacturer. Any damaged HV battery should also be returned to the specified location.

CAUTION:
- **After removing the battery, keep it away from water. Water may heat the battery, which results in fire.**
- **Accidents such as electric shocks could result if the vehicle and its hybrid vehicle battery are disposed of improperly or abandoned. Therefore, make sure to return any hybrid battery to the prescribed recovery route through a TOYOTA dealer.**

(h) Precautions to be observed when towing
(1) Tow the damaged vehicle with its front and rear wheels lifted off the ground.
CAUTION:
Towing the damaged vehicle with its front wheels on the ground may cause the motor to generate electricity. This electricity could, depending on the nature of the damage, leak and cause a fire.

(i) Towing with the 4 wheels on the ground
CAUTION:
- **If the damaged vehicle needs to be towed using a rope, do not exceed 30 km/h (19 mph) and tow a limit distance and then have the vehicle towed by a truck.**
- **Turn the power switch on (IG) and shift the selector lever to the N position.**
- **If any abnormality is present in the damaged vehicle during towing, stop towing immediately.**

7. FOR VEHICLES EQUIPPED WITH SRS AIRBAG AND SEAT BELT PRETENSIONER

The CAMRY HV is equipped with a Supplemental Restraint System (SRS).

CAUTION:

Failure to carry out the service operations in the correct sequence could cause the SRS to unexpectedly deploy during servicing and lead to serious injury. Furthermore, if a mistake is made when servicing SRS, it is possible that the SRS may fail to operate properly. Before servicing (including removal or installation of parts, inspection or replacement), be sure to read the following section carefully.

(a) GENERAL NOTICE

(1) As malfunctions of the SRS are difficult to confirm, the Diagnostic Trouble Codes (DTCs) become the most important source of information when troubleshooting. When troubleshooting the SRS, always check the DTCs before disconnecting the battery.

(2) Work must be started at least 90 seconds after the power switch is turned off and after the cable is disconnected from the negative (-) battery terminal.

The SRS is equipped with a back-up power source. If work is started within 90 seconds after turning the power switch off and disconnecting the cable from the negative (-) battery terminal, the SRS may deploy.

When the cable is disconnected from the negative (-) battery terminal, clock and audio system memory is erased. Before starting work, make a note of the settings of each memory system. When work is finished, reset the clock and audio system as before.

CAUTION:

Never use a back-up power source (battery or other) to avoid erasing system memory. The back-up power source may inadvertently power the SRS and cause it to deploy.

(3) In minor collisions where the SRS does not deploy, the steering pad, front passenger airbag assembly, driver side knee airbag assembly, front seat side airbag assembly, curtain shield airbag assembly and front seat outer belt assembly should be inspected before further use of the vehicle.
(See page RS-348 for steering pad)
(See page RS-385 for front passenger airbag assembly)
(See page RS-415 for front seat side airbag assembly)
(See page RS-365 for driver side knee airbag assembly)
(See page RS-409 for curtain shield airbag assembly)
(See page SB-24 for front seat outer belt assembly)

(4) Never use SRS parts from another vehicle. When replacing parts, use new parts.

(5) Before repairs, remove the airbag sensor assemblies if impacts are likely to be applied to the sensor during repairs.

(6) Never disassemble and attempt to repair all airbag sensor assemblies and all airbag assemblies.
1. Steering pad
2. Front passenger airbag assembly
3. Driver side knee airbag assembly
4. Front seat side airbag assembly
5. Curtain shield airbag assembly
6. Front seat outer belt assembly

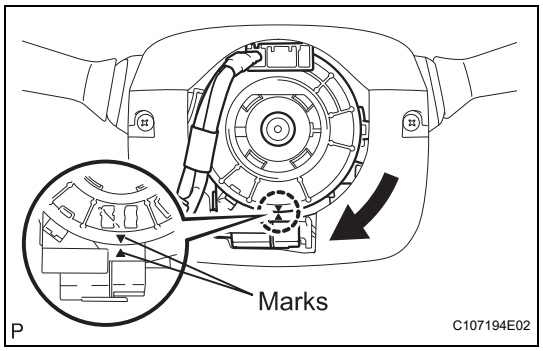
(7) Replace the airbag sensor assemblies and the airbag assemblies if: 1) damage has occurred from being dropped, or 2) cracks, dents or other defects in the case, bracket or connector are present.

(8) Do not directly expose the airbag sensor assembly or airbag assembly to hot air or flames.

(9) Use a voltmeter / ohmmeter with high impedance (minimum = 10 kΩ) for troubleshooting electrical circuits.

(10) Information labels are attached to the SRS components. Follow the instructions on the labels.

(11) After work on the SRS is completed, check the SRS warning light.

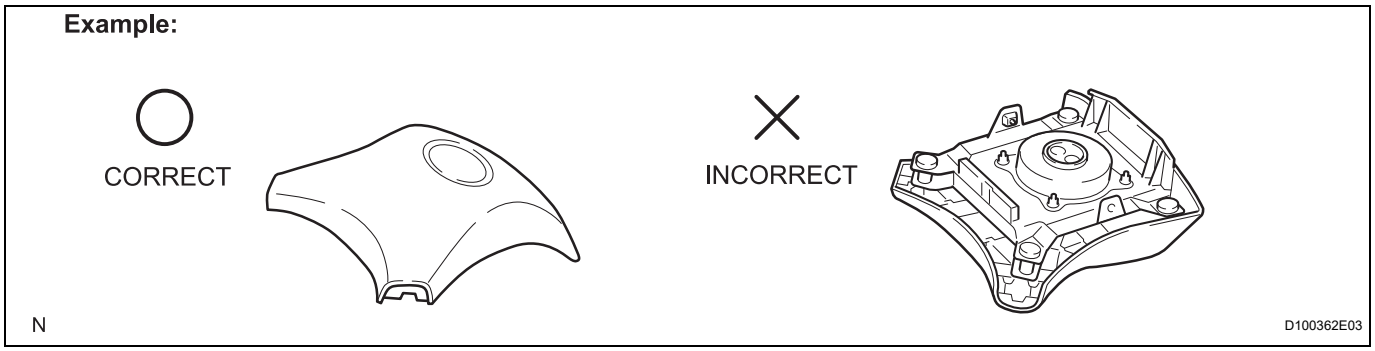


(b) SPIRAL CABLE

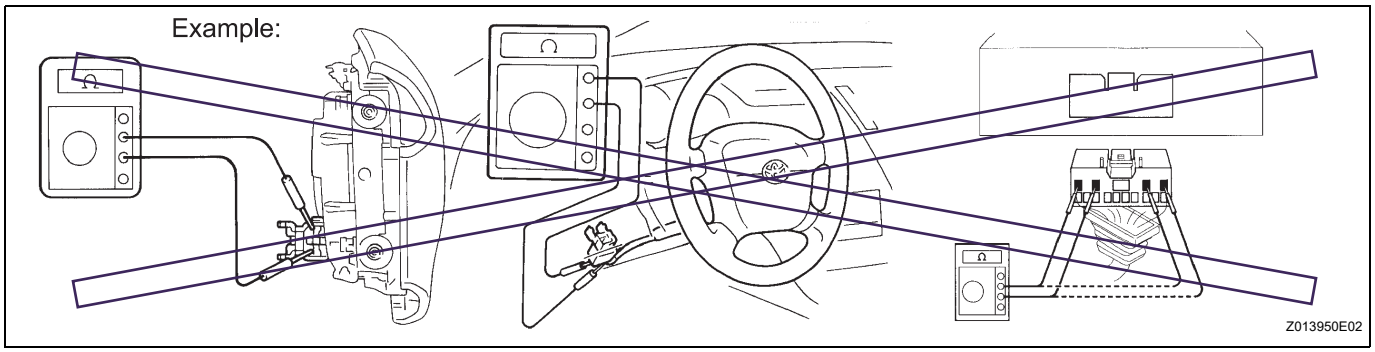
(1) The steering wheel must be fitted correctly to the steering column with the spiral cable at the neutral position, as cable disconnection and other problems may occur. Refer to the information about correct installation of the steering wheel (See page RS-359).

(c) STEERING PAD

(1) Always place a removed or new steering pad surface upward as shown in the illustration. Placing the horn button with the pad surface facing down could cause a serious accident if the airbag inflates. Also, do not place anything on top of the horn button.



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the horn button.

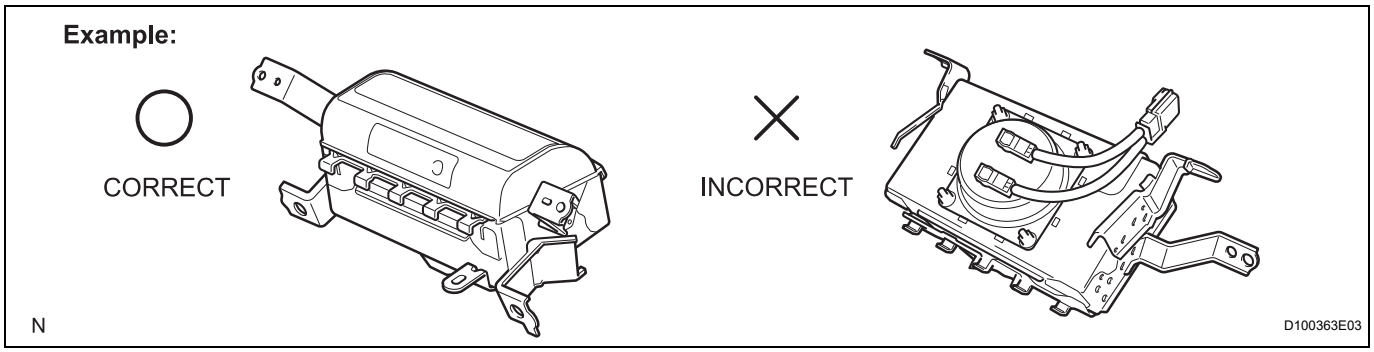
(4) Store the horn button assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

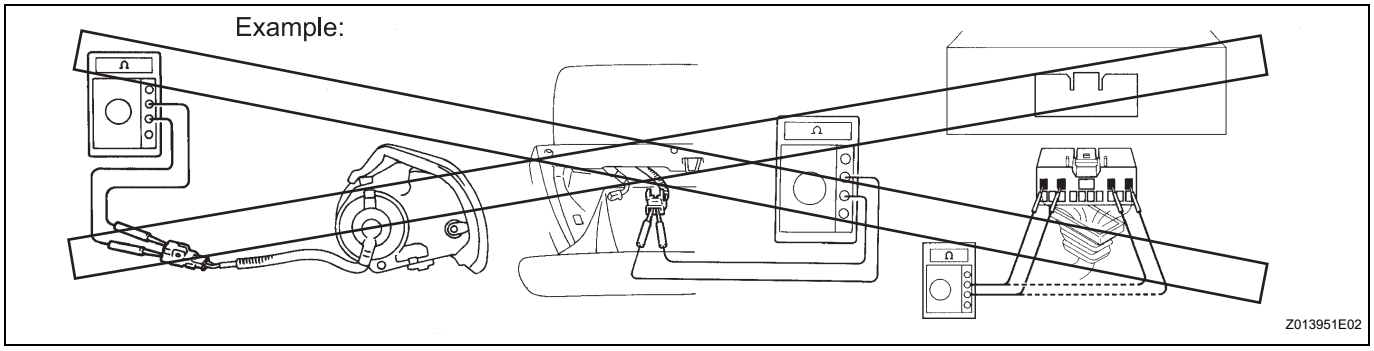
(6) When disposing of the vehicle or the horn button assembly by itself, the airbag should be deployed using SST before disposal (See page RS-348). Activate the airbag in a safe place away from electrical noise.

(d) FRONT PASSENGER AIRBAG ASSEMBLY

(1) Always place a removed or new front passenger airbag assembly with the pad surface facing upward as shown in the illustration. Placing the airbag assembly with the airbag inflation direction facing down could cause a serious accident if the airbag inflates.



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the front passenger airbag assembly.

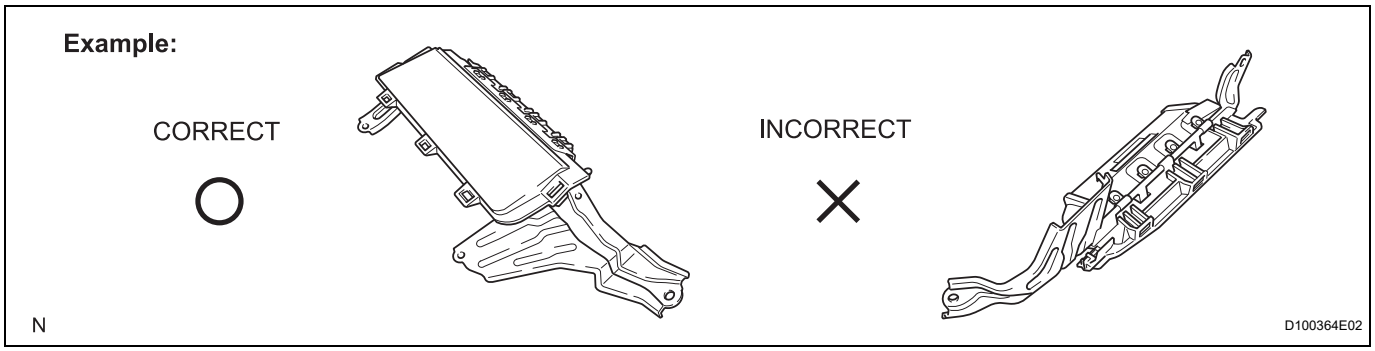
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

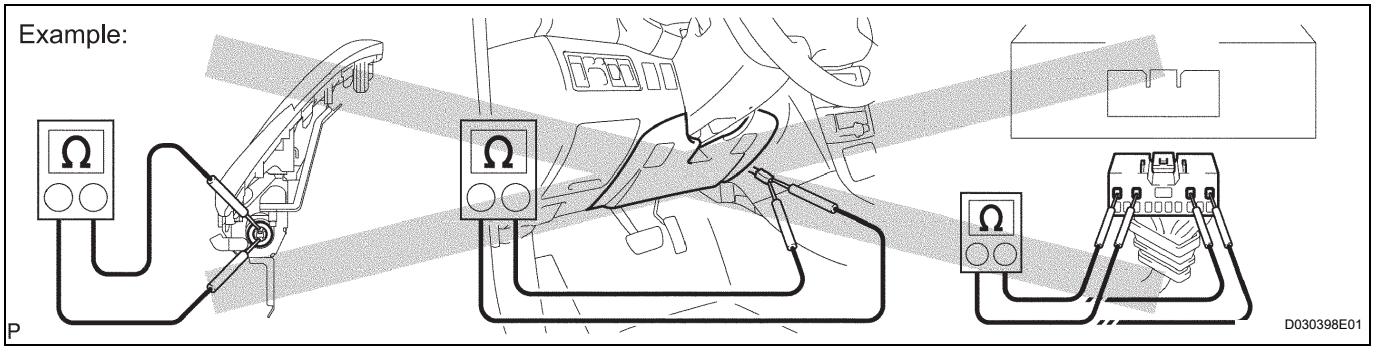
(6) When disposing of the vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal (See page RS-385). Activate in a safe place, away from electrical noise.

(e) DRIVER SIDE KNEE AIRBAG ASSEMBLY

(1) Always place a removed or new knee airbag assembly with the airbag inflation direction facing upward. Placing the airbag assembly with the airbag inflation direction facing downward could cause a serious accident if the airbag inflates.



(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the knee airbag assembly.

(4) Store the knee airbag assembly where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.

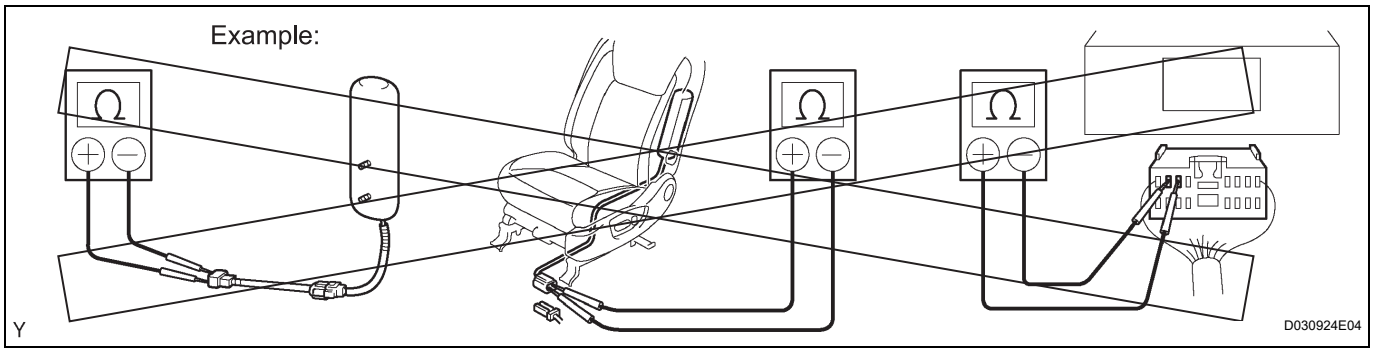
(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.

(6) When disposing of a vehicle or knee airbag assembly unit by itself, the airbag should be inflated using SST before disposal (See page RS-365). Activate in a safe place, away from electrical noise.

(f) FRONT SEAT SIDE AIRBAG ASSEMBLY

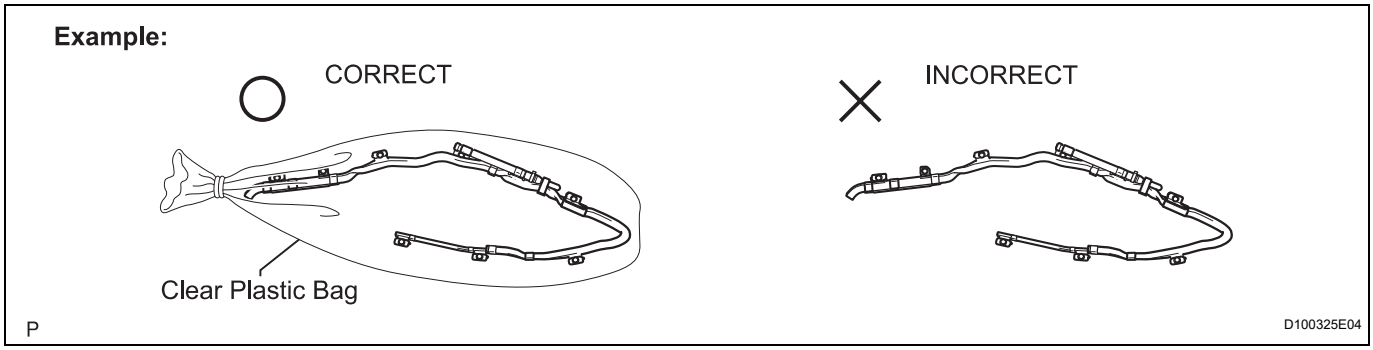
(1) Always place a removed or new front seat side airbag assembly with the airbag inflation direction facing up.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



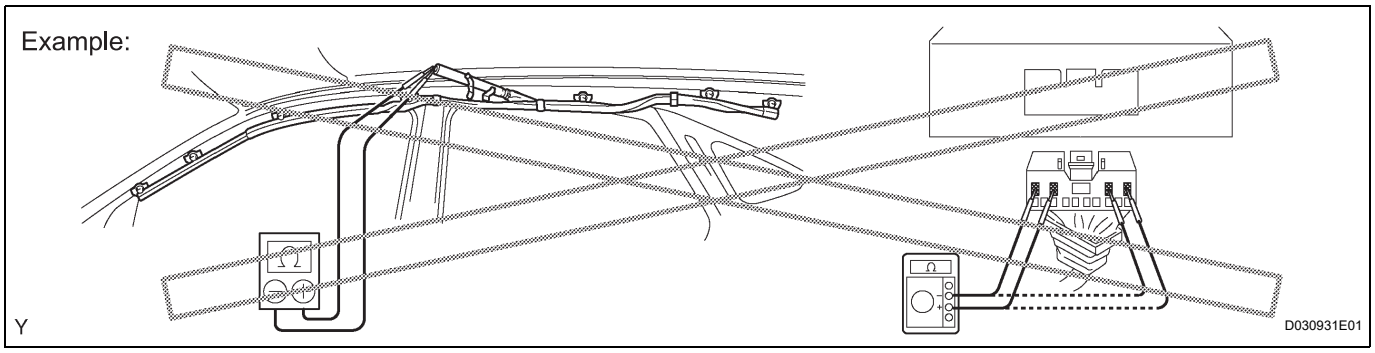
(3) Grease or detergents of any kind should not be applied to the front seat side airbag assembly.
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.
(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal (See page RS-415). Activate in a safe place away from electrical noise.

(g) CURTAIN SHIELD AIRBAG ASSEMBLY
(1) Always place a removed or new curtain shield airbag assembly in a clear plastic bag, and keep it in a safe place.



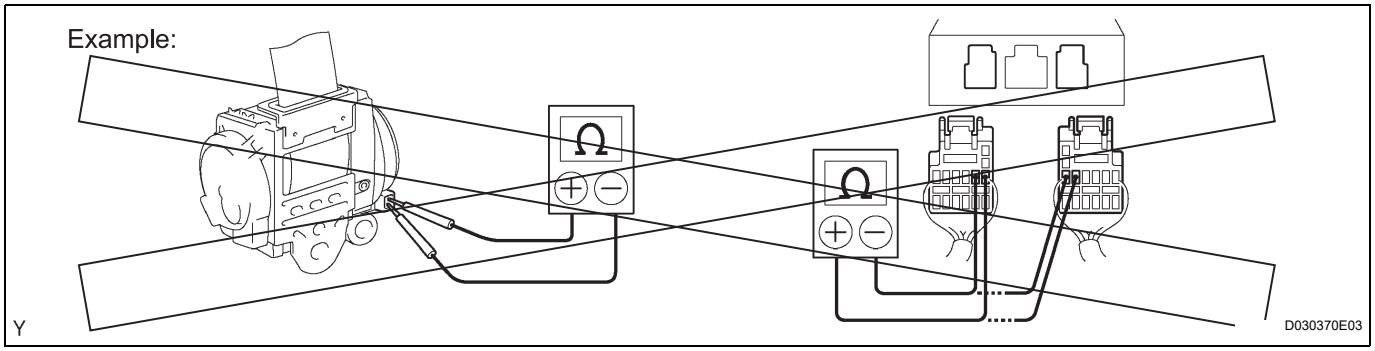
CAUTION:
The plastic bag is not reusable.
NOTICE:
Never disassemble the curtain shield airbag assembly.

(2) Never measure the resistance of the airbag squib. This may cause the airbag to inflate, which could cause serious injury.



(3) Grease or detergents of any kind should not be applied to the curtain shield airbag assembly.
(4) Store the airbag assembly in an area where the ambient temperature is below 93°C (200°F), the humidity is not high and there is no electrical noise.
(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (4 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
(6) When disposing of a vehicle or the airbag assembly unit by itself, the airbag should be deployed using SST before disposal (See page RS-409). Activate in a safe place away from electrical noise.

(h) FRONT SEAT OUTER BELT ASSEMBLY AND REAR SEAT OUTER BELT ASSEMBLY (SEAT BELT PRETENSIONER)
(1) Never measure the resistance of the seat outer belt. This may cause the pretensioner of the seat belt to activate, which could cause serious injury.

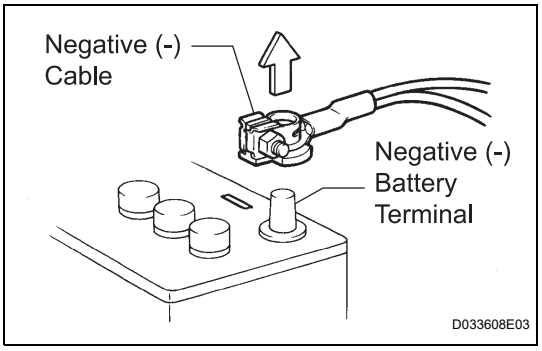


(2) Never disassemble the seat outer belt.
(3) Never install the seat outer belt on another vehicle.
(4) Store the seat outer belt in an area where the ambient temperature is below 80°C (176°F), the humidity is not high and there is no electrical noise.

(5) When using electric welding anywhere on the vehicle, disconnect the airbag ECU connectors (2 pins). These connectors contain shorting springs. This feature reduces the possibility of the airbag deploying due to current entering the squib wiring.
(6) When disposing of a vehicle or the seat outer belt unit by itself, the seat outer belt should be activated before disposal (See page SB-24). Activate in a safe place away from electrical noise.
(7) As the seat outer belt is hot after being activated, allow some time for it to cool down sufficiently before disposal. Never apply water to cool down the seat outer belt.
(8) Grease, detergents, oil or water should not be applied to the front seat outer belt.

(i) AIRBAG SENSOR ASSEMBLY
(1) Never reuse an airbag sensor assembly that has been involved in a collision where the SRS has deployed.
(2) The connectors to the airbag sensor assembly should be connected or disconnected with the sensor placed on the floor. If the connectors are connected or disconnected while the airbag sensor assembly is not placed on the floor, the SRS may activate.
(3) Work must be started at least 90 seconds after the power switch is turned off and the cable is disconnected from the negative (-) battery terminal, even if only loosening the set bolts of the airbag sensor assembly.

(j) WIRE HARNESS AND CONNECTOR
(1) The SRS wire harness is integrated with the instrument panel wire harness assembly. All the connectors in the system are standard yellow. If the SRS wire harness becomes disconnected or the connector becomes broken, repair or replace it.



8. ELECTRONIC CONTROL

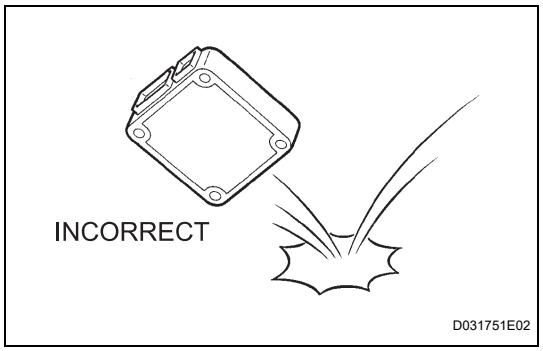
(a) REMOVAL AND INSTALLATION OF BATTERY TERMINAL

NOTICE:

Certain systems need to be initialized after disconnecting and reconnecting the cable from the negative (-) battery terminal.

(1) Before performing electronic work, disconnect the cable from the negative (-) battery terminal to prevent component and wire damage caused by accidental short circuits.

(2) When disconnecting the cable, turn the power switch and headlight dimmer switch off and loosen the cable nut completely. Perform these operations without twisting or prying the cable. Then disconnect the cable.
(3) Clock settings, radio settings, audio system memory, DTCs and other data are erased when the cable is disconnected from the negative (-) battery terminal. Write down any necessary data before disconnecting the cable.



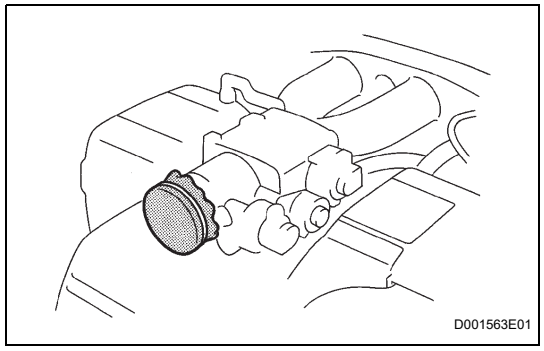
(b) HANDLING OF ELECTRONIC PARTS
(1) Do not open the cover or case of the ECU unless absolutely necessary. If the IC terminals are touched, the IC may be rendered inoperative by static electricity.
(2) Do not pull the wires when disconnecting electronic connectors. Pull the connector itself.
(3) Do not drop electronic components, such as sensors or relays. If they are dropped on a hard surface, they should be replaced.
(4) When cleaning the engine with steam, protect the electronic components, air filter and emission-related components from water.
(5) Never use an impact wrench to remove or install temperature switches or temperature sensors.
(6) When measuring the resistance between terminals of a wire connector, insert the tester probe carefully to prevent terminals from bending.

9. REMOVAL AND INSTALLATION OF FUEL CONTROL PARTS

(a) PLACE FOR REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Work in a location with good air ventilation that does not have welders, grinders, drills, electric motors, stoves, or any other engine sources.
(2) Never work in a pit or near a pit as vaporized fuel will collect in those places.

(b) REMOVING AND INSTALLING FUEL SYSTEM PARTS
(1) Prepare a fire extinguisher before starting the operation.
(2) To prevent static electricity, install a ground wire to the fuel changer, vehicle and fuel tank, do not spray the surrounding area with water. Be careful when performing work in this area, as the work surface will become slippery. Do not clean up gasoline spills with water, as this may cause the gasoline to spread, and possibly create a fire hazard.
(3) Avoid using electric motors, working lights and other electric equipments that can cause sparks or high temperatures.

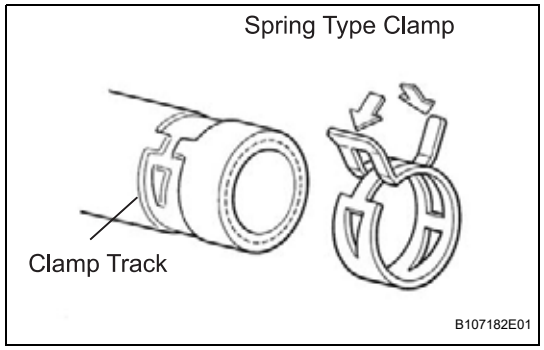
(4) Avoid using iron hammers as they may create sparks.
(5) Dispose of fuel-contaminated cloth separately using a fire resistant container.



D001563E01

10. REMOVAL AND INSTALLATION OF ENGINE INTAKE PARTS

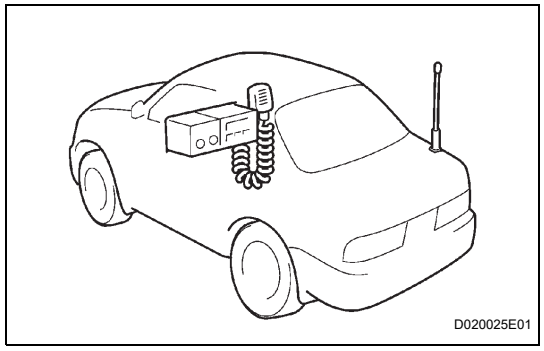
(a) If any metal particles enter inlet system parts, this may damage the engine.
(b) When removing and installing inlet system parts, cover the openings of the removed parts and engine openings. Use gummed tape or other suitable materials.
(c) When installing inlet system parts, check that no metal particles have entered the engine or the installed parts.



B107182E01

11. HANDLING OF HOSE CLAMPS

(a) Before removing the hose, check the clamp position so that it can be reinstalled in the same position.
(b) Replace any deformed or dented clamps with new ones.
(c) When reusing a hose, attach the clamp on the clamp track portion of the hose.
(d) For a spring type clamp, you may spread the tabs slightly after installation by pushing in the direction of the arrows as shown in the illustration.



D020025E01

12. FOR VEHICLES EQUIPPED WITH MOBILE COMMUNICATION SYSTEMS

(a) Install the antenna far away from the ECU and sensors of the vehicle electronic systems as possible.
(b) Install an antenna feeder at least 20 cm (7.87 in.) away from the ECU and sensors of the vehicle electronic systems. For details about ECU and sensors locations, refer to the section on the applicable components.
(c) Keep the antenna and feeder separate from other wirings as much as possible. This will prevent signals sent from the communication equipment from affecting vehicle equipment and vice-versa.
(d) Check that the antenna and feeder are correctly adjusted.
(e) Do not install any high-powered mobile communication system.

13. FOR VEHICLES EQUIPPED WITH TRACTION CONTROL (TRC) AND VEHICLE STABILITY CONTROL (VSC) SYSTEMS

When testing with a 2-wheel drum tester such as a speedometer tester, a combination tester for jacking up the front wheels and turning the wheels, perform the following procedure to enter the inspection mode and stop the TRC and VSC systems.

(a) NOTICES WHEN USING DRUM TESTER

(b) Activating inspection mode (Not using the intelligent tester)
HINT:
Perform procedures "A" to "D" within 60 seconds.
(1) Turn the power switch on (IG) (Procedure "A").
(2) Fully depress the accelerator pedal twice with the shift P position (Procedure "B").
(3) Fully depress the accelerator pedal twice with the shift N position (Procedure "C").
(4) Fully depress the accelerator pedal twice with the shift P position (Procedure "D").
(5) Check that the HV system warning light blinked on the multi-information display (Procedure "E").
(6) Start the engine by turning the power switch while depressing the brake pedal (Procedure "F").

(c) Activating inspection mode (Using the intelligent tester)
(1) Connect the intelligent tester to the DLC3.
(2) Turn the power switch on (IG).
(3) Turn the intelligent tester on.
(4) Select following menu items: DIAGNOSIS / OBD/MOBD / HV ECU / ACTIVE TEST / INSPECTION MOD1 / ON.
(5) Check that the HV system warning light blinks on the multi-information display and the master warning light are illuminated in the combination meter.
(6) Start the engine by turning the power switch while depressing the brake pedal.

(d) NOTICES OF RELATED OPERATIONS TO VSC
(1) Do not carry out unnecessary installation and removal as it might affect the adjustment of VSC related parts.
(2) Be sure to follow the instructions for work preparation and final confirmation of proper operation of the VSC system.

14. FOR VEHICLES EQUIPPED WITH CATALYTIC CONVERTER

CAUTION:

If a large amount of unburned gasoline or gasoline vapors flow into the converter, it may cause overheating and create a fire hazard. To prevent this, observe the following precautions:

(a) Use only unleaded gasoline.
(b) Avoid idling the engine for more than 20 minutes.
(c) Avoid performing unnecessary spark jump tests.
(1) Perform a spark jump test only when absolutely necessary. Perform this test as rapidly as possible.
(2) While testing, never race the engine.
(d) Avoid a prolonged engine compression measurement. Engine compression measurements must be performed as rapidly as possible.

(e) Do not run the engine when the fuel tank is nearly empty. This may cause the engine to misfire and create an extra load on the converter.

HOW TO TROUBLESHOOT ECU CONTROLLED SYSTEMS

GENERAL INFORMATION

A large number of ECU controlled systems are used in the CAMRY HV. In general, ECU controlled systems are considered to be very intricate, requiring a high level of technical knowledge to troubleshoot. However, most problem checking procedures only involve inspecting the ECU controlled system's circuits one by one. An adequate understanding of the system and a basic knowledge of electricity is enough to perform effective troubleshooting, accurate diagnoses and necessary repairs.

FOR USING INTELLIGENT TESTER

– Before using the intelligent tester, read the tester operator's manual thoroughly.
– If the tester cannot communicate with the ECU controlled systems when the tester is connected to the DLC3 with the power switch on (IG) and the tester turned on, there is a problem on the vehicle side or tester side.
  (1) If communication is normal when the tester is connected to another vehicle, inspect the diagnosis data link line (Bus (+) line) or ECU power circuit of the vehicle.
  (2) If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Perform the Self Test procedures outlined in the tester operator's manual.

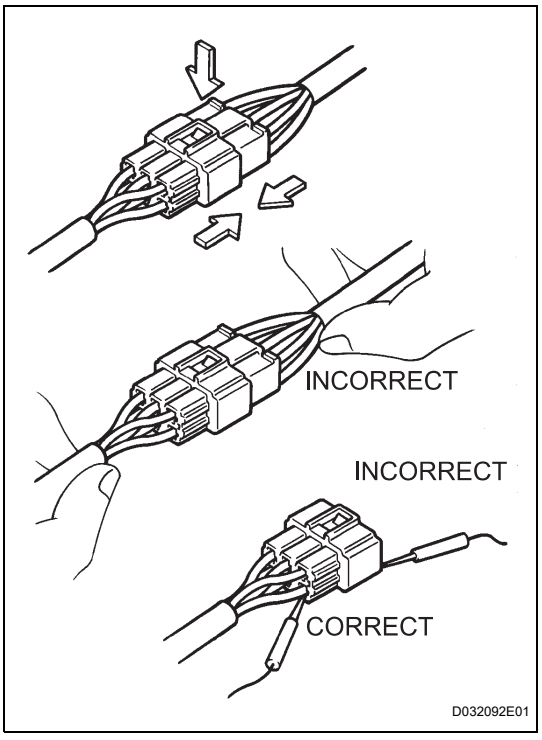
IN

ELECTRONIC CIRCUIT INSPECTION PROCEDURE

1. BASIC INSPECTION

(a) WHEN MEASURING RESISTANCE OF ELECTRONIC PARTS

(1) Unless otherwise stated, all resistance measurements should be made at an ambient temperature of 20°C (68°F). Resistance measurements may be inaccurate if measured at high temperatures, i.e. immediately after the engine has been stopped. Measurements should be made after the engine has cooled down.



(b) HANDLING CONNECTORS

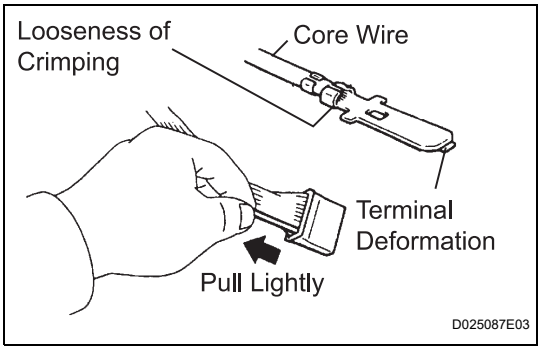
(1) When disconnecting a connector, first squeeze the mating connector housing halves tightly together to release the lock, and then press the lock claw and separate the connector.

(2) When disconnecting a connector, do not pull on the harnesses. Grasp the connector directly and separate it.

(3) Before connecting a connector, check that there are no deformations, damage, looseness or missing terminals.

(4) When connecting a connector, press firmly until it locks with a "click" sound.

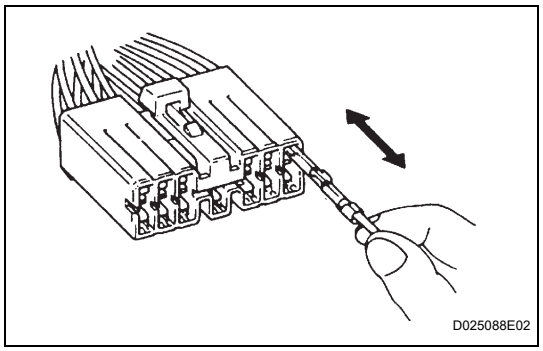
(5) If checking a connector with a TOYOTA electrical tester, check the connector from the backside (harness side) using a mini test lead.
NOTICE:
- **As a waterproof connector cannot be checked from the backside, check it by connecting a sub-harness.**
- **Do not damage the terminals by moving the inserted tester needle.**



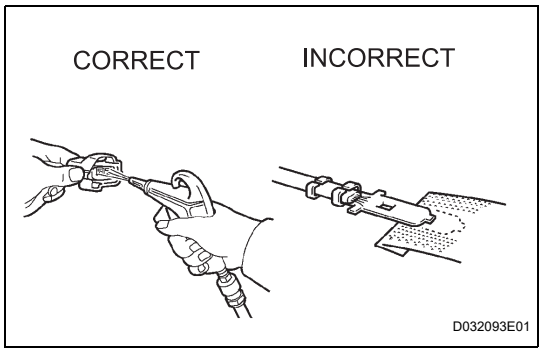
(c) CHECKING CONNECTORS

(1) Checking when a connector is connected: Squeeze the connector together to confirm that they are fully connected and locked.

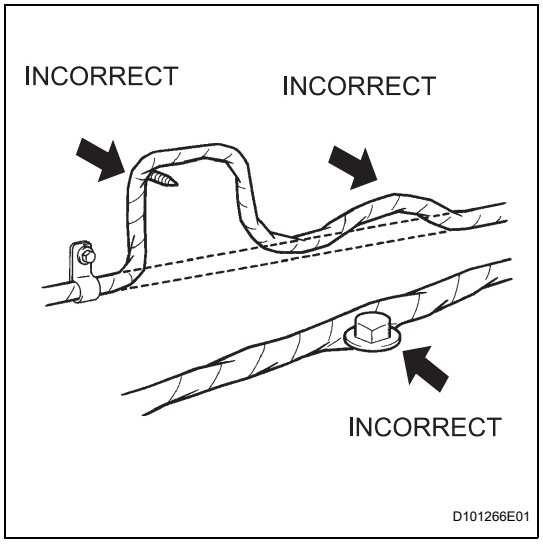
(2) Checking when a connector is disconnected: Check by pulling the wire harness lightly from the backside of the connector. Look for unlatched terminals, missing terminals, loose crimps or broken conductor wires. Check visually for corrosion, metallic or foreign matter and water, and bent, rusted, overheated, contaminated, or deformed terminals.



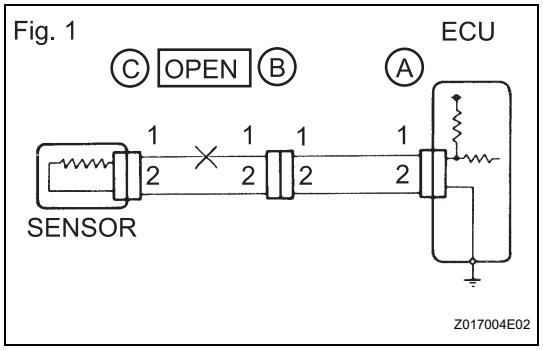
(3) Checking the contact pressure of the terminal:
Prepare a spare male terminal. Insert it into a female terminal, and check for ample tension when inserting and after full engagement.
NOTICE:
When testing a gold-plated female terminal, always use a gold-plated male terminal.



(d) REPAIR METHOD OF CONNECTOR TERMINAL
(1) If there is any foreign matter on the terminal, clean the contact point with compressed air or a cloth. Never rub the contact point using sandpaper as the plating may come off.
(2) If there is abnormal contact pressure, replace the female terminal. If the male terminal is gold-plated (gold color), use a gold-plated female terminal; if it is silver-plated (silver color), use a silver-plated female terminal.
(3) Damaged, deformed, or corroded terminals should be replaced. If the terminal does not lock into the housing, the housing may have to be replaced.



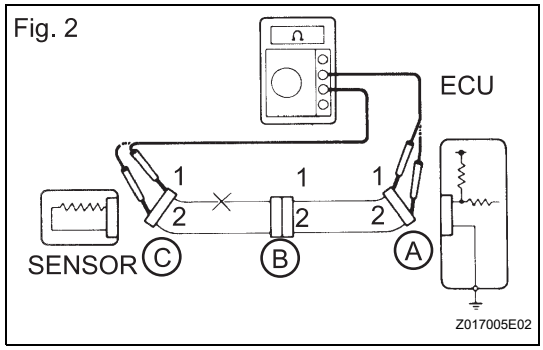
(e) HANDLING OF WIRE HARNESS
(1) If removing a wire harness, check the wiring and clamping before proceeding so that it can be restored in the same way.
(2) Never twist, pull or slacken the wire harness more than necessary.
(3) The wire harness should never come into contact with a high temperature part, or rotating, moving, vibrating or sharp-edged parts. Avoid contact with panel edges, screw tips and other sharp items.
(4) When installing parts, never pinch the wire harness.
(5) Never cut or break the cover of the wire harness. If it is cut or broken, replace it or repair it with vinyl tape.



2. CHECK FOR OPEN CIRCUIT

(a) For an open circuit in the wire harness in Fig. 1, the resistance or voltage, as described below.

Fig. 2



(b) Check the resistance.

(1) Disconnect connectors A and C and measure the resistance between the terminals of the connectors.

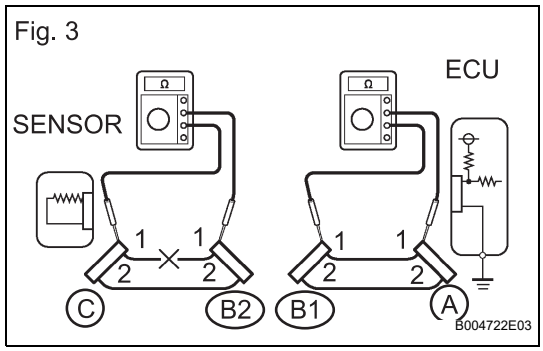
Standard resistance (Fig. 2)

Tester Connection	Specified Condition
Connector A terminal 1 - Connector C terminal 1	10 kΩ or higher
Connector A terminal 2 - Connector C terminal 2	Below 1 Ω

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If the results match the examples above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

Fig. 3



(2) Disconnect connector B and measure the resistance between the terminals of the connectors.

Standard resistance (Fig. 3)

Tester Connection	Specified Condition
Connector A terminal 1 - Connector B1 terminal 1	Below 1 Ω
Connector B2 terminal 2 - Connector C terminal 2	10 kΩ or higher

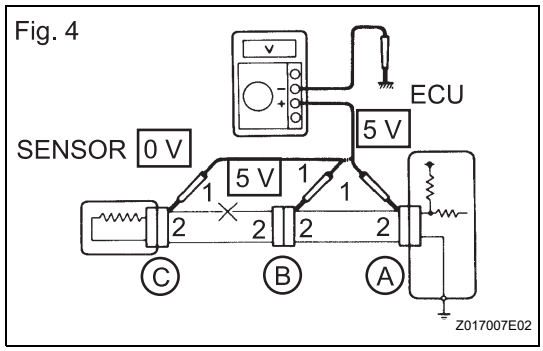
If the results match the examples above, an open circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

(c) Check the voltage.

(1) In a circuit in which voltage is applied to the ECU connector terminal, an open circuit can be checked by conducting a voltage check.
With each connector still connected, measure the voltage between the body ground and these terminals (in this order): 1) terminal 1 of connector A, 2) terminal 1 of connector B, and 3) terminal 1 of connector C.

Standard voltage (Fig. 4)

Fig. 4



Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	5 V
Connector B terminal 1 - Body ground	5 V
Connector C terminal 1 - Body ground	Below 1 V

If the results match the examples above, an open circuit exists in the wire harness between terminal 1 of connector B and terminal 1 of connector C.

Fig. 5

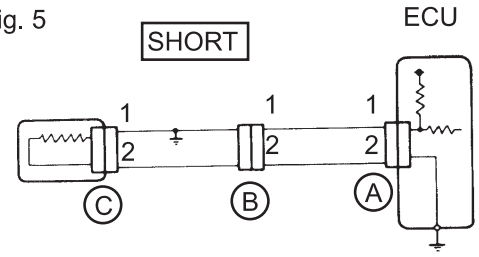


Fig. 6

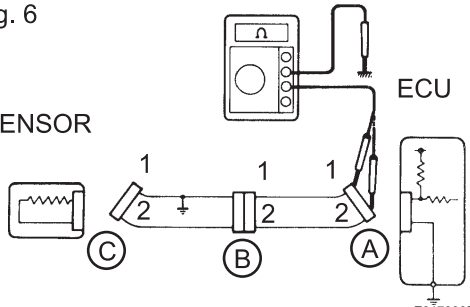

Fig. 7

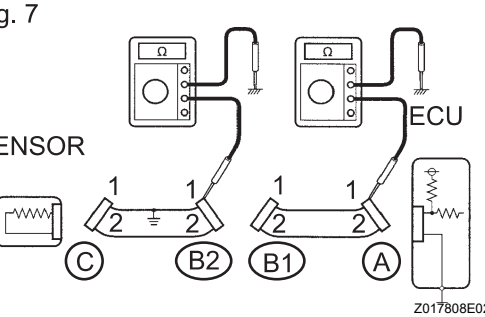


3. CHECK FOR SHORT CIRCUIT

(a) If the wire harness is ground shorted (Fig. 5), locate the section by conducting a resistance check with the body ground (below).

(b) Check the resistance with the body ground.

(1) Disconnect connectors A and C and measure the resistance.

Standard resistance (Fig. 6)

Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	Below 1 Ω
Connector A terminal 2 - Body ground	10 kΩ or higher

HINT:

Measure the resistance while lightly shaking the wire harness vertically and horizontally. If your results match the examples above, an open circuit exists between terminal 1 of connector A and terminal 1 of connector C.

(2) Disconnect connector B and measure the resistance.

Standard resistance (Fig. 7)

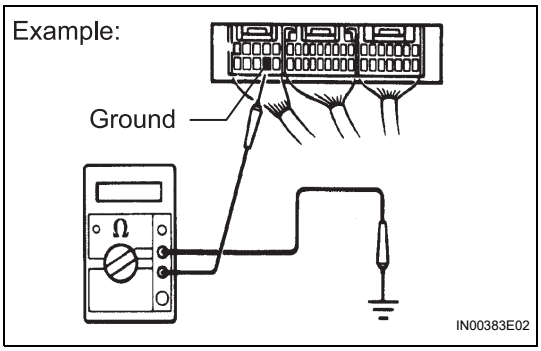
Tester Connection	Specified Condition
Connector A terminal 1 - Body ground	10 kΩ or higher
Connector B2 terminal 2 - Body ground	Below 1 Ω

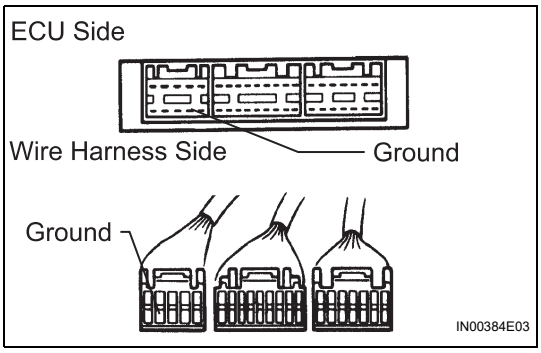
If the results match the examples above, a short circuit exists between terminal 1 of connector B2 and terminal 1 of connector C.

4. CHECK AND REPLACE ECU

NOTICE:

- **The connector should not be disconnected from the ECU. Perform the inspection from the backside of the connector on the wire harness side.**
- **When no measuring condition is specified, perform the inspection with the engine stopped and the power switch on (IG).**
- **Check that the connectors are fully seated. Check for loose, corroded or broken wires.**





(a) First, check the ECU ground circuit. If it is faulty, repair it. If it is normal, the ECU could be faulty. Temporarily replace the ECU with a normally functioning one and check if the symptoms occur. If the trouble symptoms disappear, replace the original ECU.

(1) Measure the resistance between the ECU ground terminal and body ground.
Standard resistance:
Below 1 Ω

(2) Disconnect the ECU connector. Check the ground terminal on the ECU side and wire harness side for bending, corrosion or foreign matter. Lastly, check the contact pressure of the female terminals.

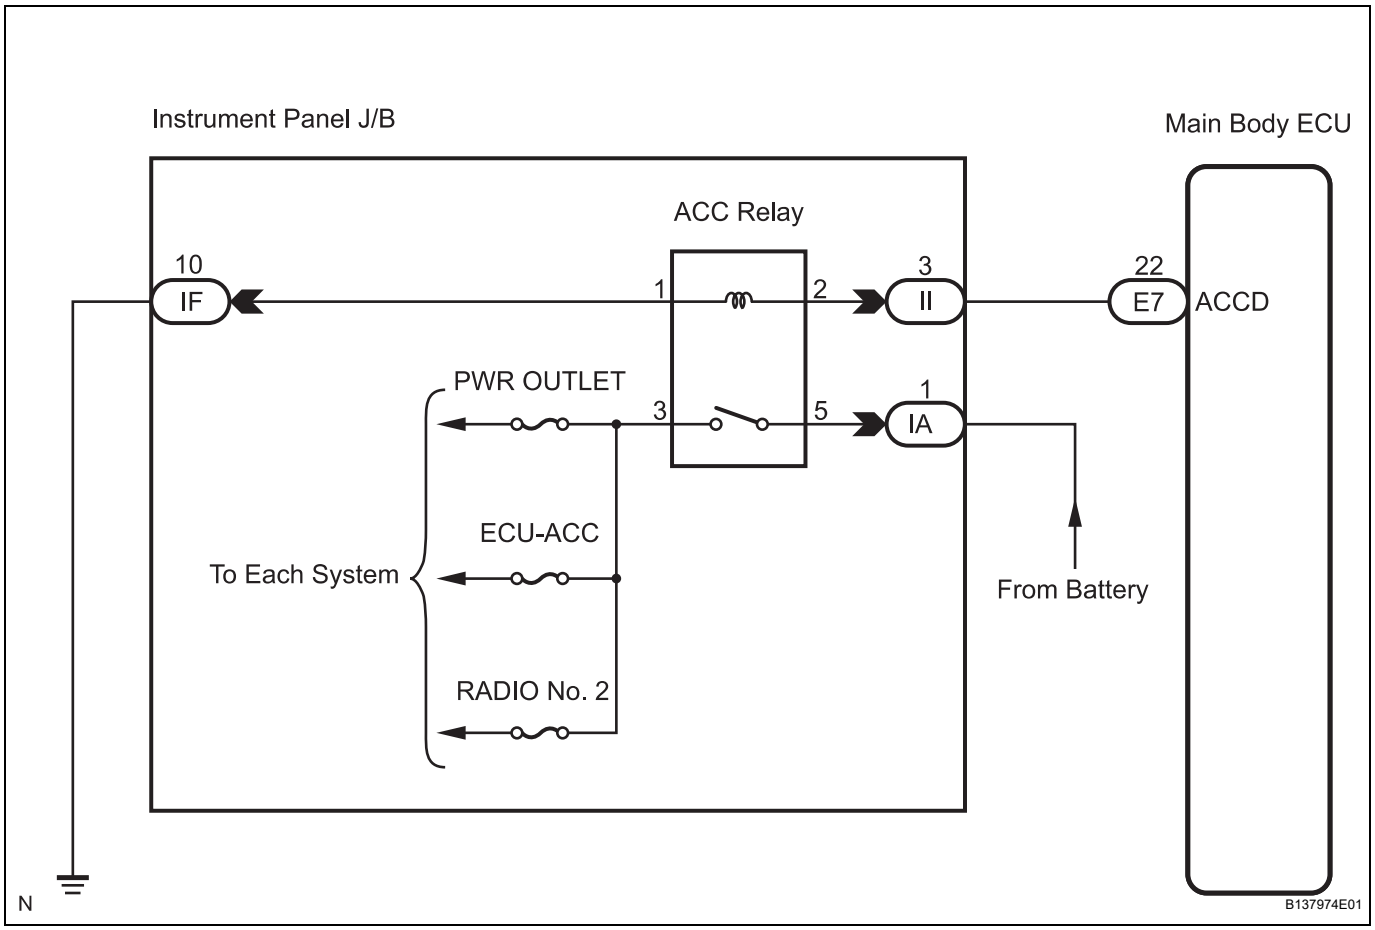
DTC	B2274	ACC Monitor Malfunction

DESCRIPTION

This DTC is output when there is a problem in the ACCD output circuit, which is from the inside of the main body ECU to the ACC relay.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2274	ACC relay actuation circuit inside main body ECU or other related circuit is malfunctioning	• Main body ECU • ACC relay • Wire harness or connector

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Read the Data List according to the displays on the tester.
HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
ACC RELAY MON	Status of ACC Relay Monitor / ON or OFF	ON: Power switch on (IG) (ACC) OFF: Power switch off	-

OK:
"ON" (Power switch on (ACC)) appears on the screen.

NG → **Go to step 3**

OK

2 CHECK POWER SWITCH CONDITION

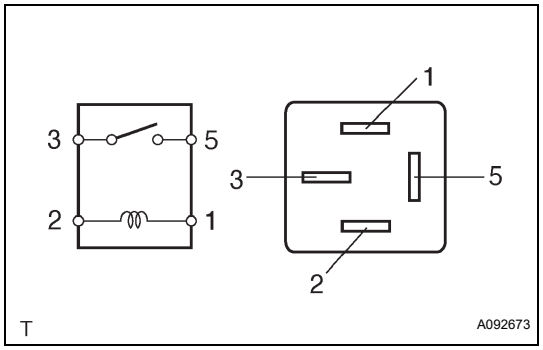
(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the power switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-91).
- If power mode does not change to ON (IG) (See page ST-99).
- If power mode does not change to ON (ACC) (See page ST-108).

NG → **GO TO OTHER PROBLEM**

OK

ST

3	INSPECT RELAY (ACC RELAY)



(a) Remove the ACC relay from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

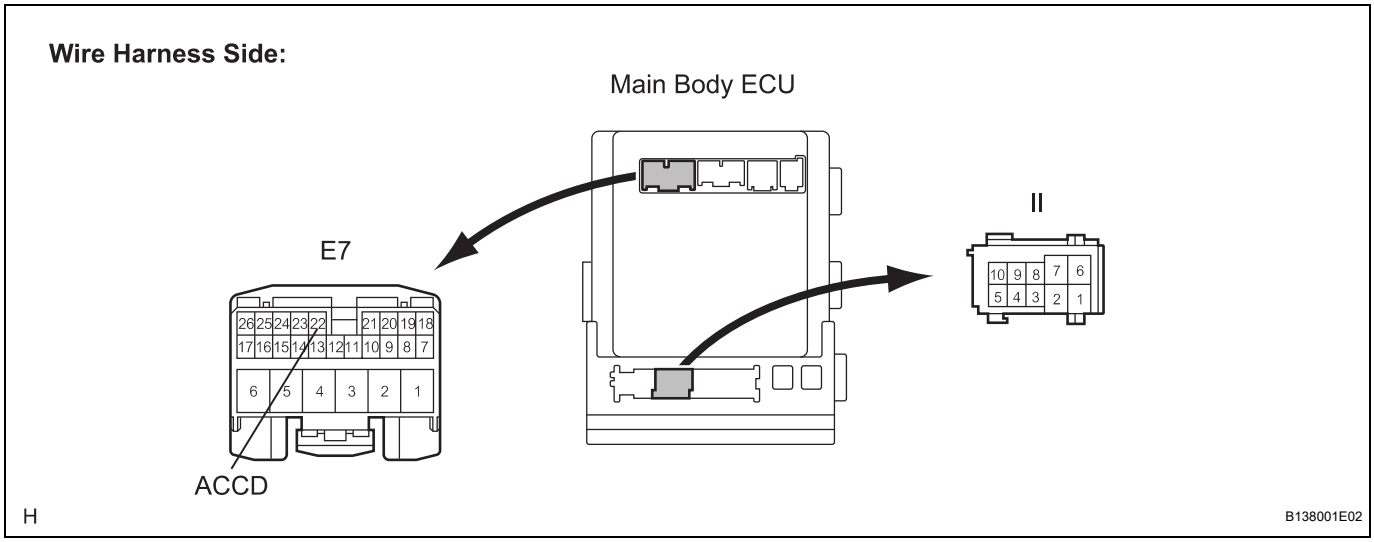
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → REPLACE RELAY

OK

4	CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - MAIN BODY ECU)

(a) Disconnect the E7 ECU connector.



(b) Disconnect the II J/B connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

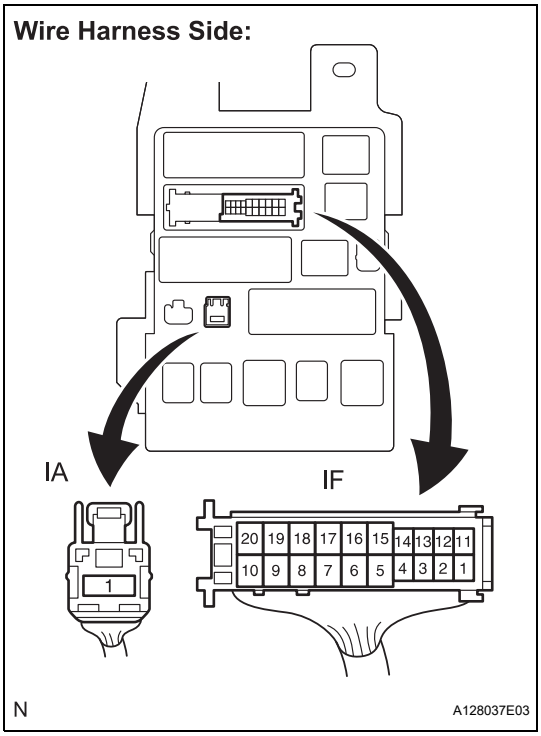
Terminal No. (Symbol)	Condition	Specified Condition
II-3 - E7-22 (ACCD)	Always	Below 1 Ω
E7-22 or II-3 - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

ST

5	CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - BATTERY AND BODY GROUND)



(a) Disconnect the IF and IA J/B connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal No.	Condition	Specified Condition
IF-10 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

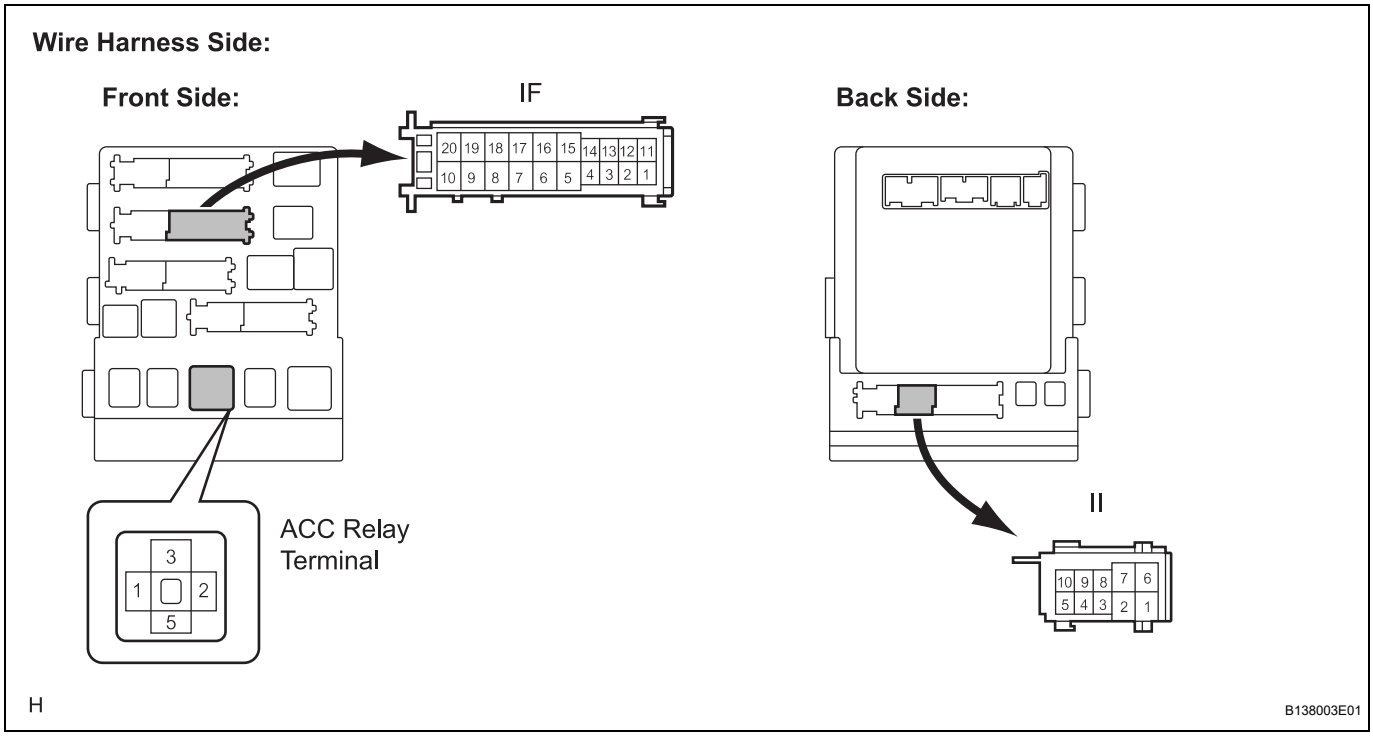
Terminal No.	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	INSPECT INSTRUMENT PANEL J/B

(a) Measure the resistance according to the value(s) in the table below.



Standard resistance

Terminal No.	Condition	Specified Condition
ACC relay terminal 1 - IF-10	Always	Below 1 Ω
ACC relay terminal 2 - II-3	Always	Below 1 Ω
IF-10 - Body ground	Always	10 kΩ or higher
II-3 - Body ground	Always	10 kΩ or higher

NG → REPLACE INSTRUMENT PANEL J/B

OK

REPLACE MAIN BODY ECU

DTC	B2275	STSW Monitor Malfunction

DESCRIPTION

This DTC is output when there is an open, short, or any other problem in the HV control system on (READY) request output circuit inside the main body ECU or in the external circuit.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2275	STSW output circuit (HV control system activation request signal circuit) inside main body ECU or other related circuit is malfunctioning	• Main body ECU • HV control ECU • Wire harness or connector

WIRING DIAGRAM

ST

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page ST-21).
HINT:
After all DTCs are cleared, turn the power switch on (IG) and depress the brake pedal. After 15 seconds have elapsed, check if the trouble occurs again.
(b) Check for DTCs again.
OK:
No DTC is output.

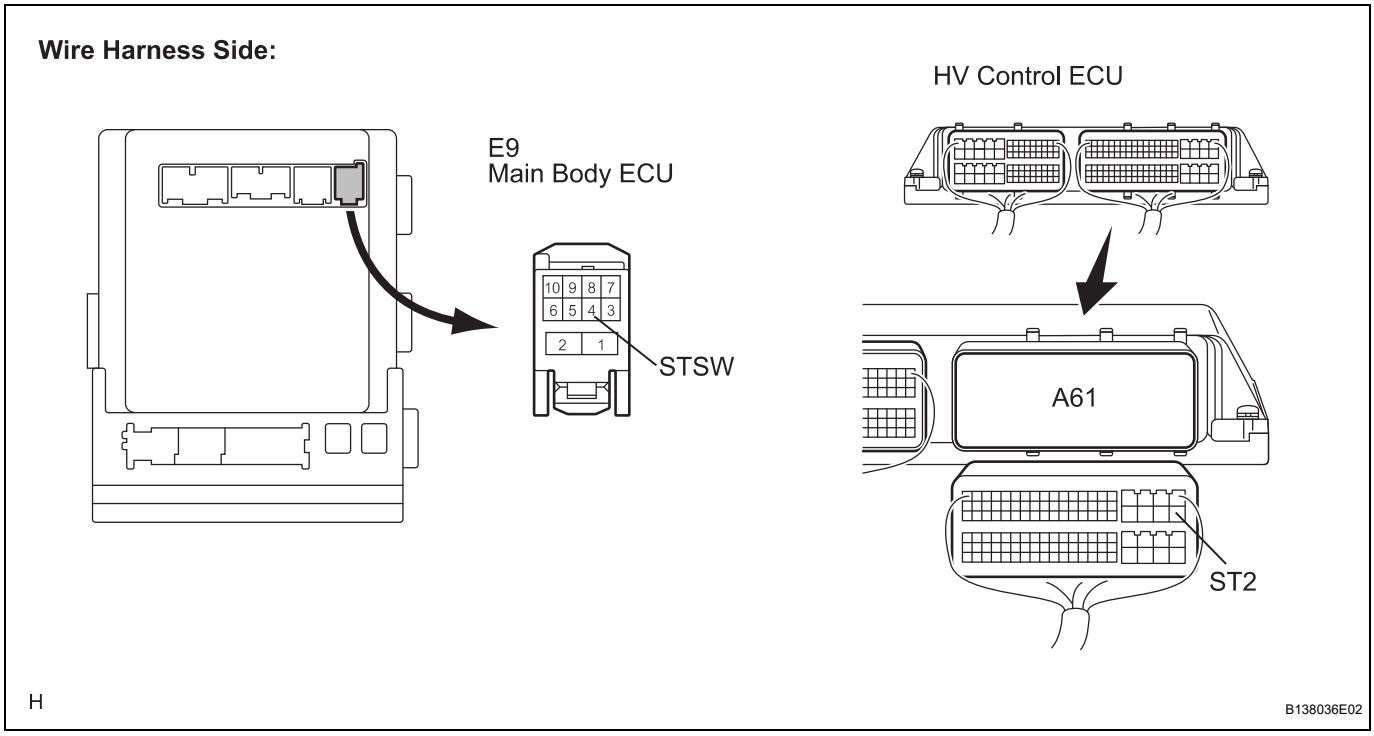
NG	Go to step 2

OK

CHECK INTERMITTENT PROBLEMS

2	CHECK WIRE HARNESS (MAIN BODY ECU - HV CONTROL ECU)

(a) Disconnect the E9 ECU connector.



(b) Disconnect the A61 ECM connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

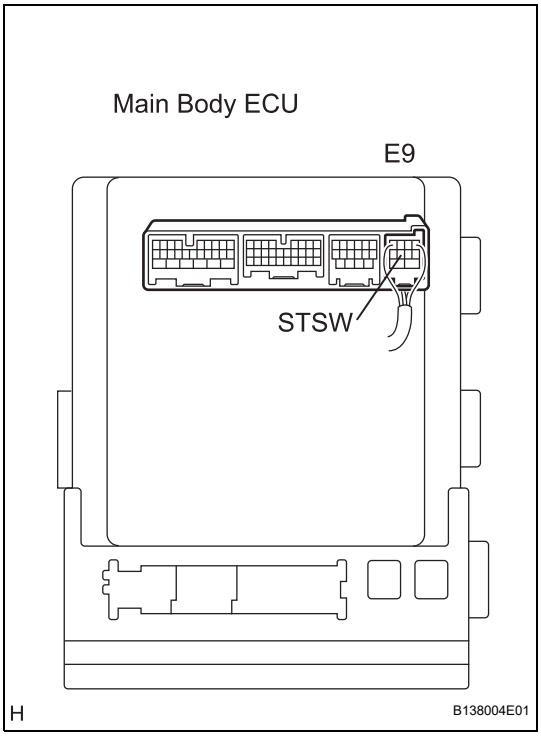
Terminal No. (Symbol)	Condition	Specified Condition
E9-4 (STSW) - A61-37 (ST2)	Always	Below 1 Ω
E9-4 (STSW) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

ST

3	INSPECT MAIN BODY ECU



(a) Reconnect the connectors.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Terminal No. (Symbol)	Condition	Specified Condition
E9-4 (STSW) - Body ground	Brake pedal depressed, shift lever P position, power switch is pushed once	Output voltage at terminal AM1 or AM2 is -2 V or more.

NG → **REPLACE MAIN BODY ECU**

OK

ST

4	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check the power source mode change.
(1) When the key is inside the vehicle, the brake pedal is depressed and the shift lever is in the P position, check that pressing the power switch causes the power source mode to change to on (READY).
OK:
Power switch on (READY).
HINT:
If power mode does not change to ON (READY) (See page ST-116).

NG → **GO TO OTHER PROBLEM**

OK

END (MAIN BODY ECU DEFECTIVE)

DTC	B2277	Detecting Vehicle Submersion

DESCRIPTION

This DTC is output when the submersion circuit monitor inside the main body ECU detects that the vehicle is submerged in water.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2277	Submersion circuit monitor inside main body ECU detects that vehicle is submerged in water	Main body ECU

INSPECTION PROCEDURE

1	CHECK FOR WATER DAMAGE

(a) Check the main body ECU, peripheral components, and wire harnesses for traces of water.
OK:
There are no traces of water.

NG → **TAKE APPROPRIATE MEASURES AGAINST CAUSE OF WATER DAMAGE AND REPLACE MAIN BODY ECU**

OK

2	CHECK DTC OUTPUT

(a) Delete the DTCs (See page ST-21).
HINT:
After all DTCs are cleared, check if the trouble occurs again 30 seconds after the power switch is turned on (IG).
(b) Check for DTCs again.
OK:
No DTC is output.

NG → **REPLACE MAIN BODY ECU**

OK

END

ST

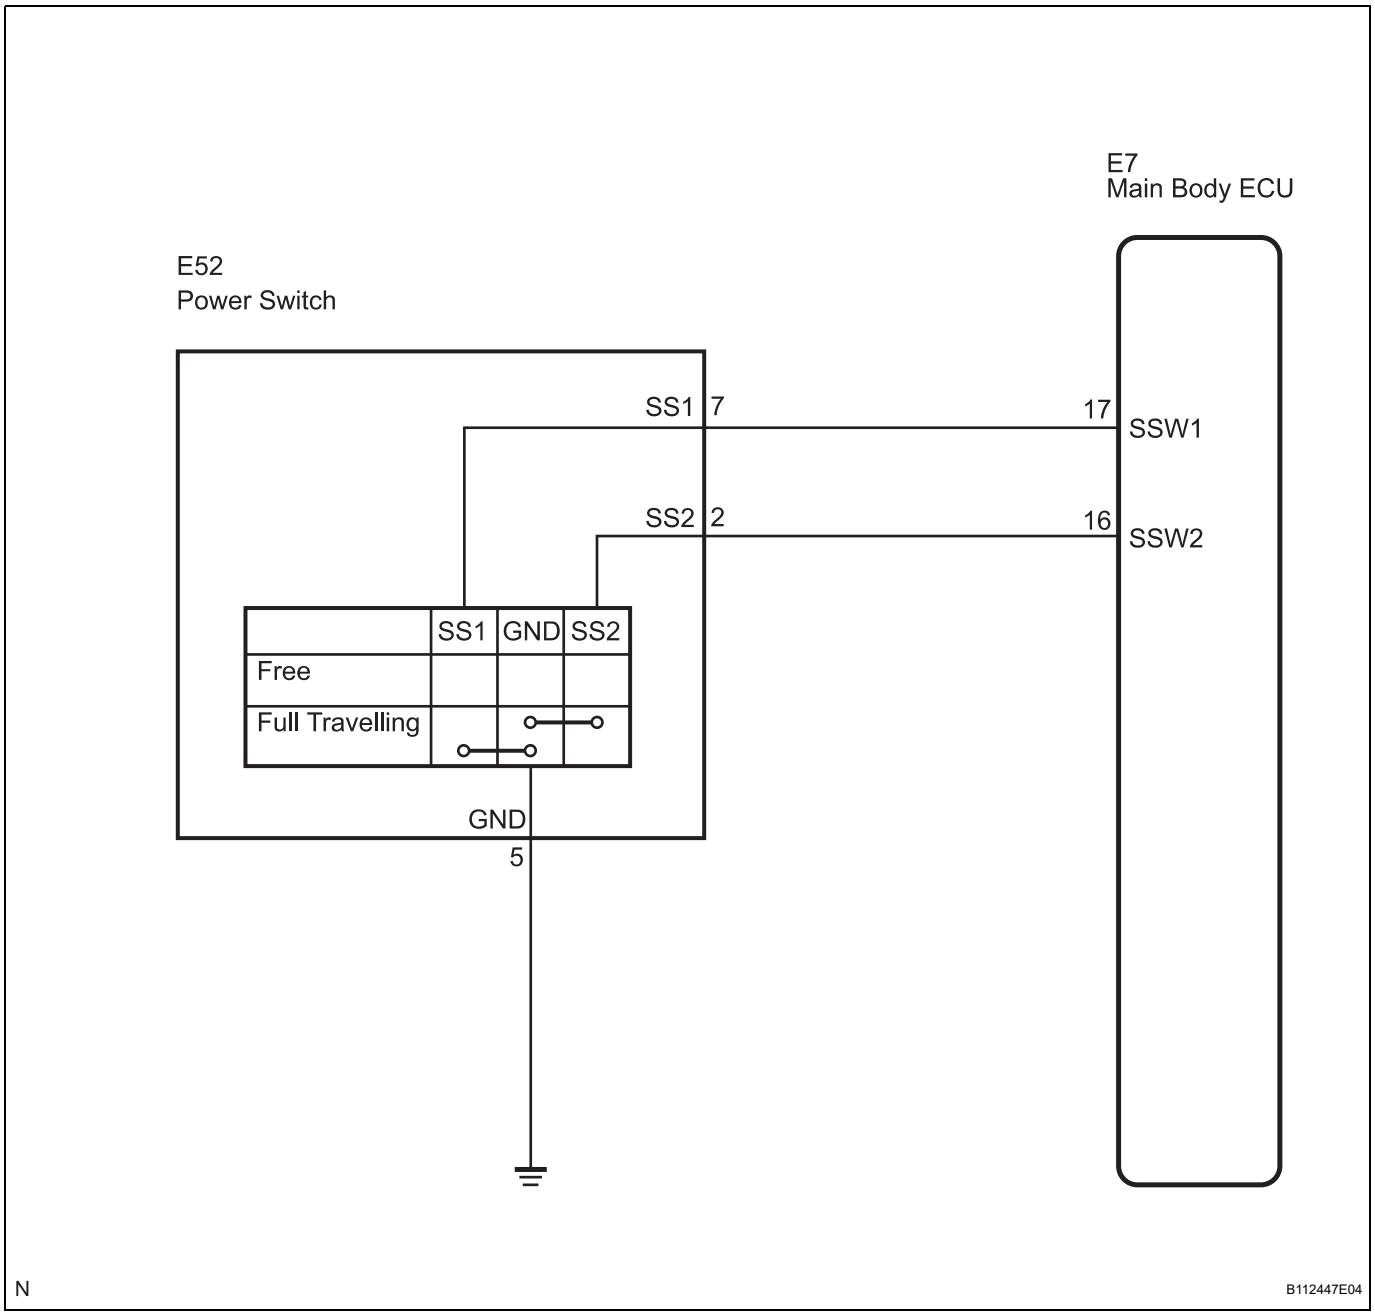
DTC	B2278	Power Switch Circuit Malfunction

DESCRIPTION

This DTC is output when 1) a malfunction is detected between the main body ECU and the power switch; or 2) either of the switches inside the power switch is malfunctioning.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2278	Communication is abnormal between the main body ECU and power switch or the power switch is defective	• Power switch • Main body ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Check the DATA LIST for proper functioning of the start switch.
HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

ST

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STSW1	Start Switch 1/ON or OFF	ON: Power switch is pushed OFF: Power switch is not pushed	-
START SW2	Start Switch 2/ON or OFF	ON: Power switch is pushed OFF: Power switch is not pushed	-

OK:
"ON" (Power switch on (IG)) and "OFF" (Power switch off) appear on the screen.

NG → **Go to step 3**

OK

2 CHECK POWER SWITCH CONDITION

(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the power switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-91).
- If power mode does not change to ON (IG) (See page ST-99).
- If power mode does not change to ON (ACC) (See page ST-108).

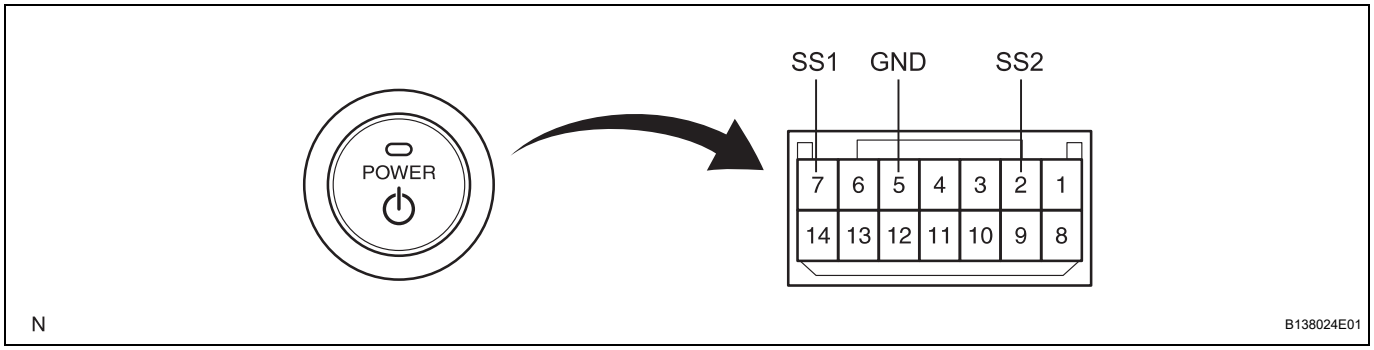
NG → **GO TO OTHER PROBLEM**

OK

END

3 INSPECT POWER SWITCH

(a) Remove the power switch.



(b) Disconnect the switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

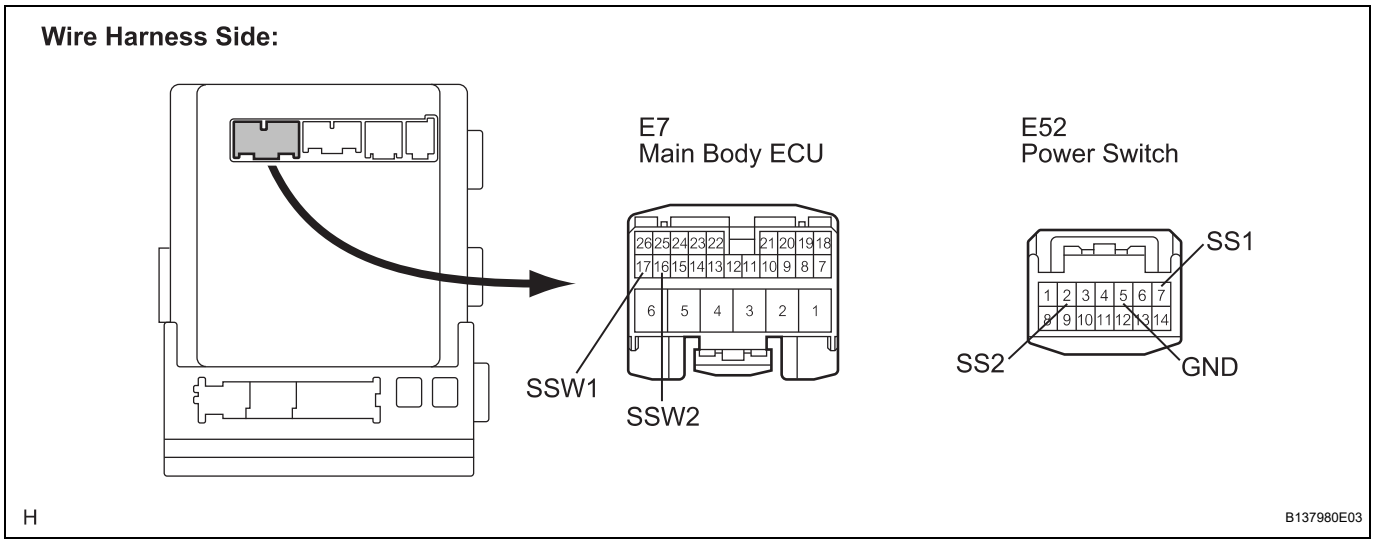
HINT:
This switch is a momentary type switch.

NG → **REPLACE POWER SWITCH**

OK

4 CHECK WIRE HARNESS (POWER SWITCH - MAIN BODY ECU AND BODY GROUND)

(a) Disconnect the E7 ECU connector.



(b) Disconnect the E52 switch connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E52-7 (SS1) - E7-17 (SSW1)	Always	Below 1 Ω
E52-2 (SS2) - E7-16 (SSW2)	Always	Below 1 Ω
E52-5 (GND) - Body ground	Always	Below 1 Ω
E52-7 (SS1) or E7-17 (SSW1) - Body ground	Always	10 kΩ or higher
E52-2 (SS2) or E7-16 (SSW2) - Body ground	Always	10 kΩ or higher

ST

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

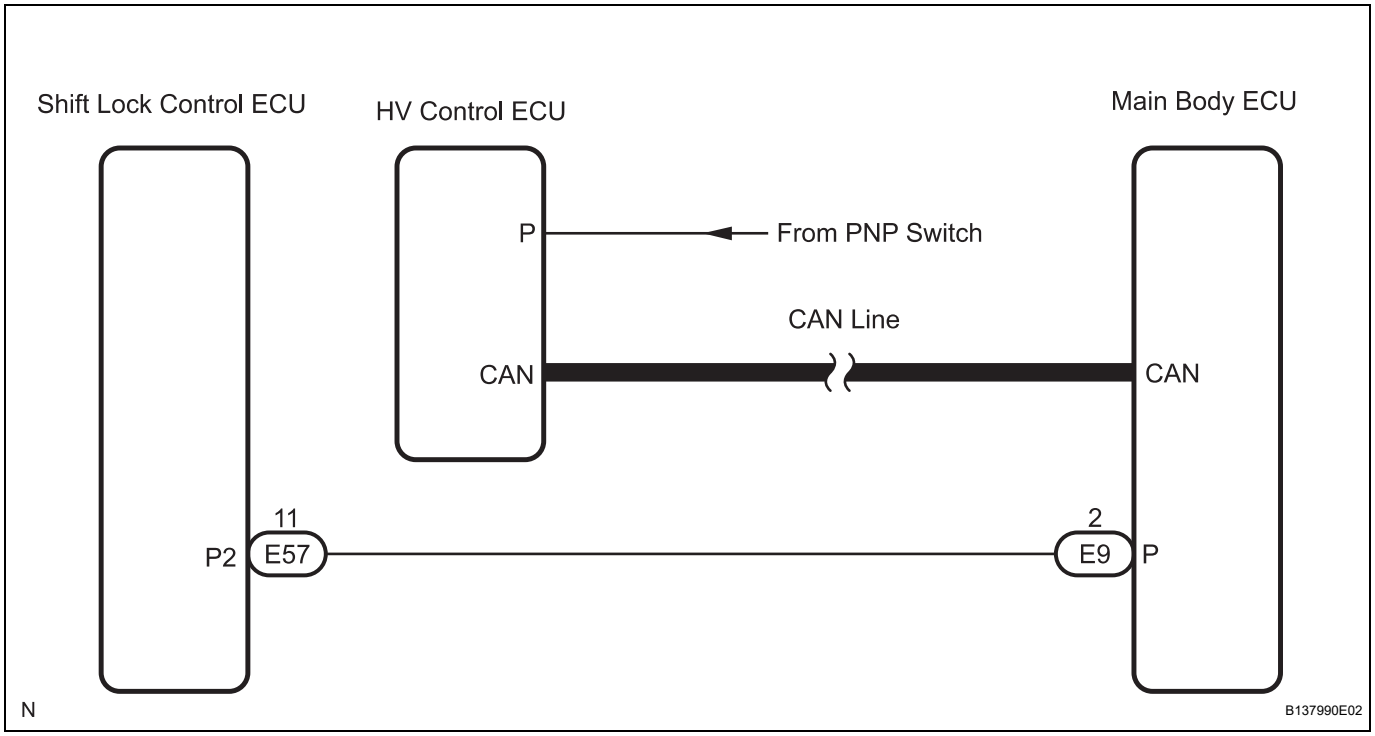
DTC	B2281	"P" Signal Malfunction

DESCRIPTION

The HV control ECU and the shift lock control ECU are connected by a cable and the CAN. If the cable information and CAN information are inconsistent, this DTC will be output.
HINT:
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2281	Cable information and CAN information between main body ECU and shift lock control ECU are inconsistent	• Main body ECU • Shift lock control ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Read the DATA LIST according to the displays on the tester.

MAIN BODY:

Item	Measurement Item / Range (Display)	Normal Condition	Diagnostic Note
SHIFT P SIG	Shift P Signal / ON or OFF	ON: Shift P signal ON (Shift position is P) OFF: Shift P signal OFF (Shift position is not P)	-

OK:
"ON" (P signal is ON) and "OFF" (P signal is OFF) appear on the screen.

HINT:
If the result is not as specified, there may be a malfunction with the shift lock control ECU (See page SR-32).

NG	Go to step 2

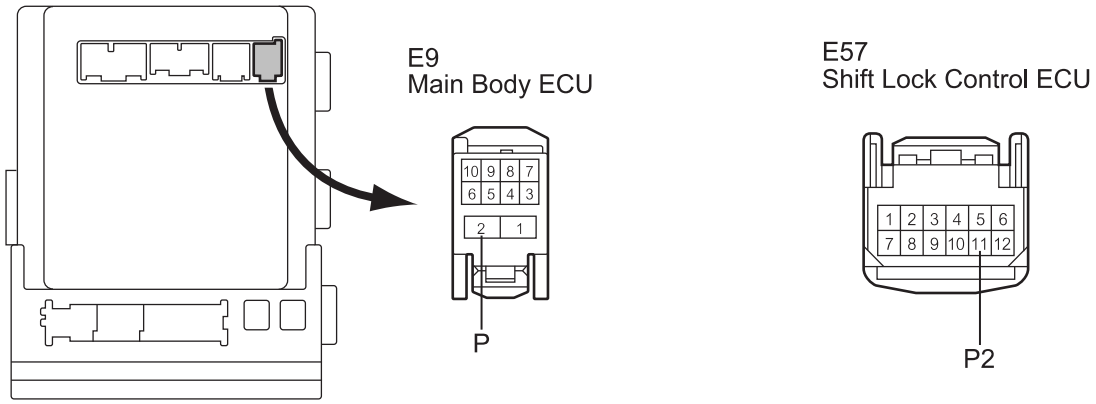
OK

GO TO SHIFT LOCK CONTROL SWITCH

2	CHECK WIRE HARNESS (MAIN BODY ECU - SHIFT LOCK CONTROL ECU)

(a) Disconnect the E9 and E57 ECU connectors.

Wire Harness Side:



H B138006E01

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal No. (Symbol)	Condition	Specified Condition
E9-2 (P) - E57-11 (P2)	Always	Below 1 Ω
E9-2 (P) - Body ground	Always	10 kΩ or higher

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check the power source mode change.
(1) When the key is inside the vehicle, the brake pedal is depressed and the shift lever is in P, check that pressing the power switch causes the power source mode to change to on (READY).
OK:
Power switch on (READY).
HINT:
If power mode does not change to ON (READY) (See page ST-116).

NG → **GO TO OTHER PROBLEM**

OK

END (MAIN BODY ECU DEFECTIVE)

DTC	B2282	Vehicle Speed Signal Malfunction

DESCRIPTION

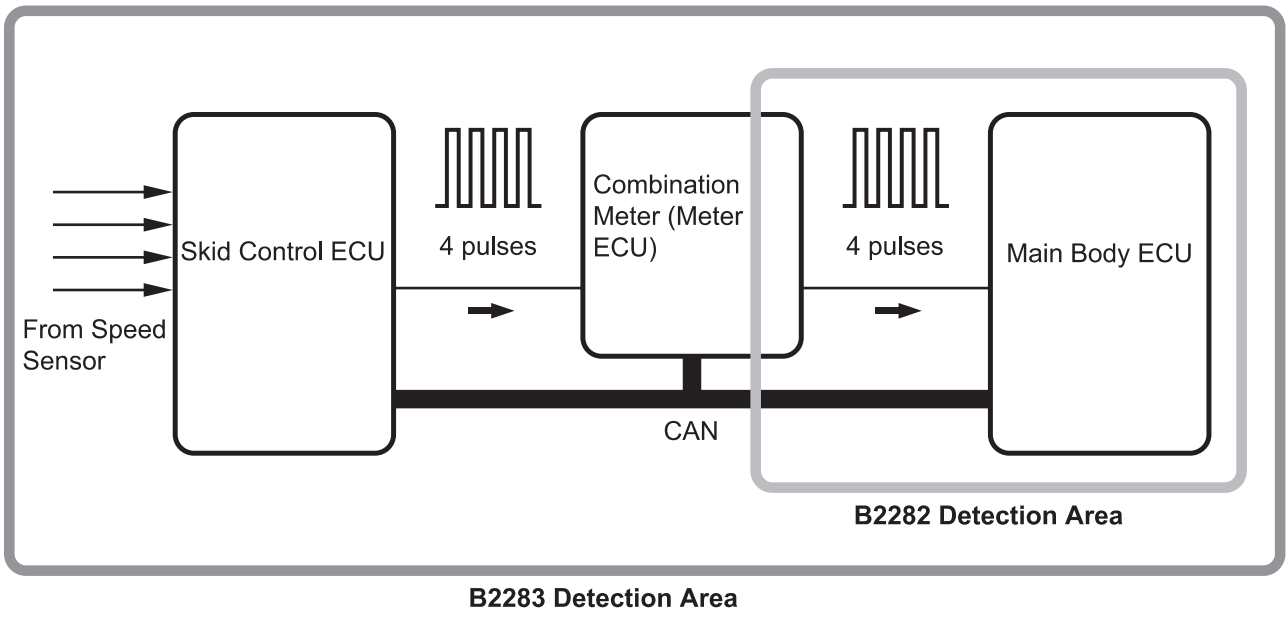
The main body ECU and the combination meter are connected by a cable and the CAN. DTC B2282 is output when: 1) the cable information and CAN information are inconsistent; and 2) a malfunction is detected between the vehicle speed sensor and combination meter.

HINT:

When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2282	When both conditions below are met: • Cable information and CAN information between the main body ECU and the combination meter are inconsistent • Malfunction is detected between the vehicle speed sensor and the combination meter	• CAN communication system • Combination meter system • Main body ECU • Wire harness or connector

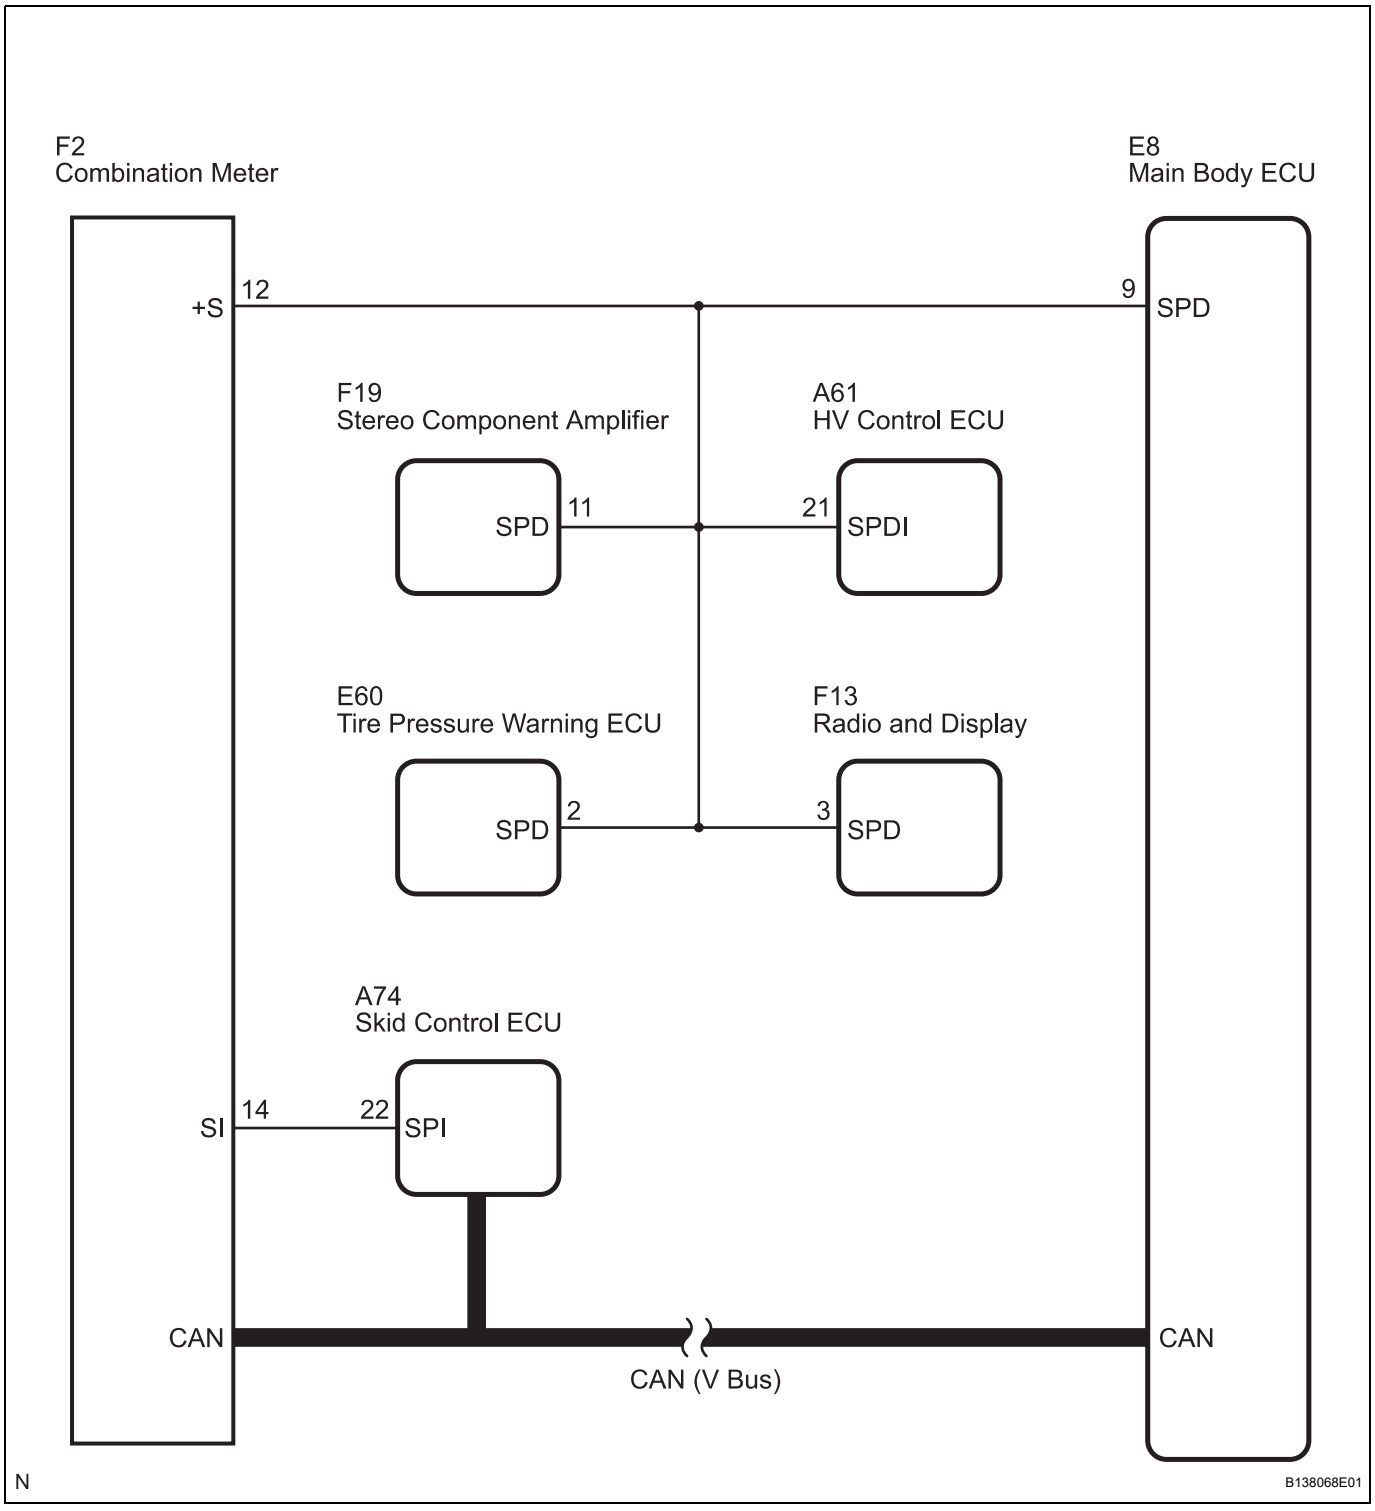


N

B138069E01

ST

WIRING DIAGRAM



HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram above will not operate normally.

ST

INSPECTION PROCEDURE

1	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the function of the speedometer in the combination meter is normal.
OK:
Actual vehicle speed and the speed indicated on the speedometer are the same.
HINT:
- The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.
- The meter CPU receives vehicle speed signals from the skid control ECU via the CAN communication lines. The vehicle speed sensor detects the voltage that varies according to the vehicle speed. The skid control ECU supplies power to the vehicle speed sensor. The skid control ECU detects vehicle speed signals based on the pulses of the voltage.

OK → **Go to step 3**

NG

2	CHECK DTC OUTPUT (CAN COMMUNICATION SYSTEM)

(a) Delete the DTCs (See page ST-21).
(b) Check for CAN communication system DTCs (See page CA-7).
HINT:
If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first (See page CA-22).
OK:
No DTC is output.

NG → **GO TO CAN COMMUNICATION SYSTEM**

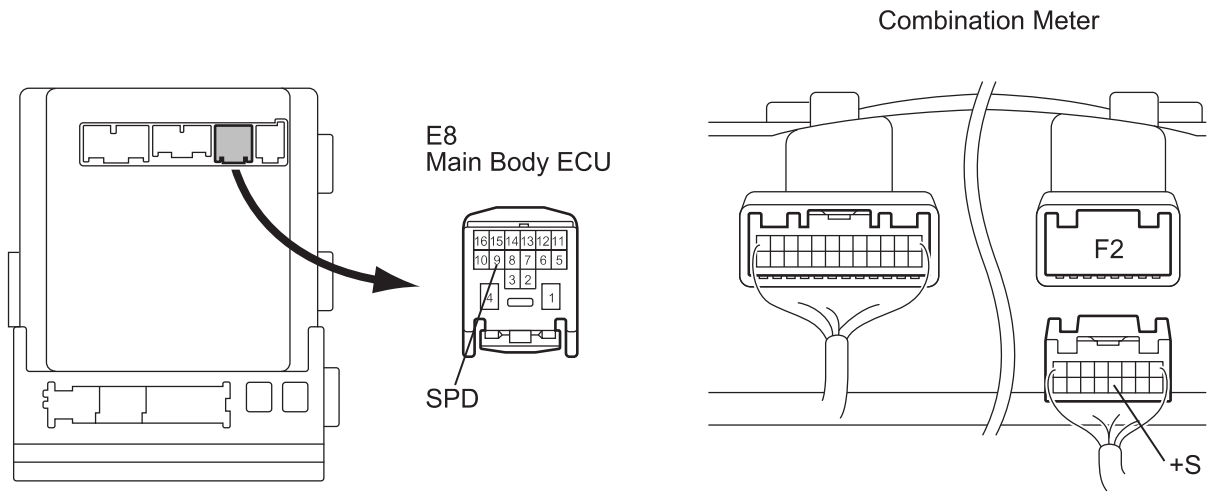
OK

GO TO COMBINATION METER SYSTEM

3	CHECK WIRE HARNESS (MAIN BODY ECU - COMBINATION METER)

(a) Disconnect the E8 ECU connector.

Wire Harness Side:



(b) Disconnect the F2 meter connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

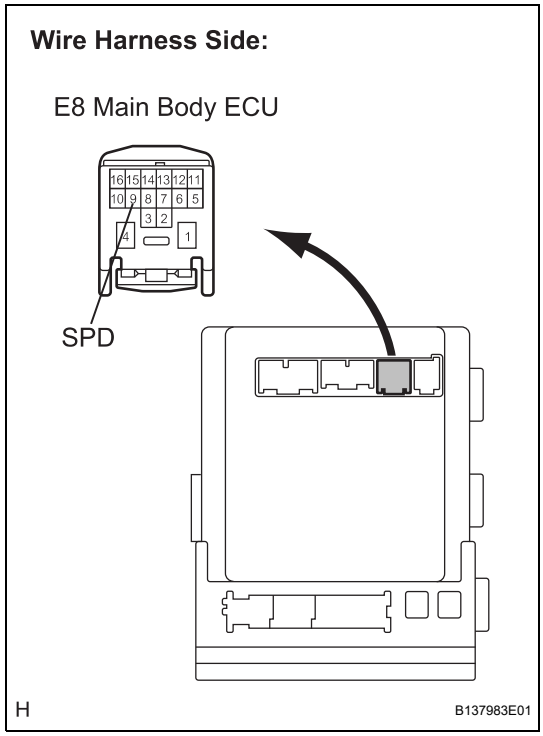
Tester Connection (Symbols)	Condition	Specified Condition
E8-9 (SPD) - F2-12 (+S) - Body ground	Always	Below 1 Ω

ST

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK WIRE HARNESS (MAIN BODY ECU - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E8-9 (SPD) - Body ground	Always	10 kΩ or higher

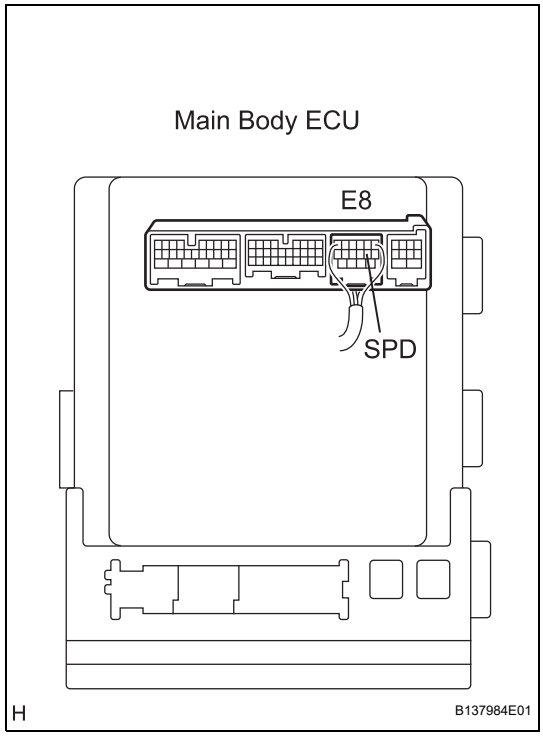
HINT:
If the result of the inspection for a short circuit is not as specified, there may be a short in the ECU.

NG → **REPAIR OR REPLACE HARNESS, CONNECTOR OR EACH ECU**

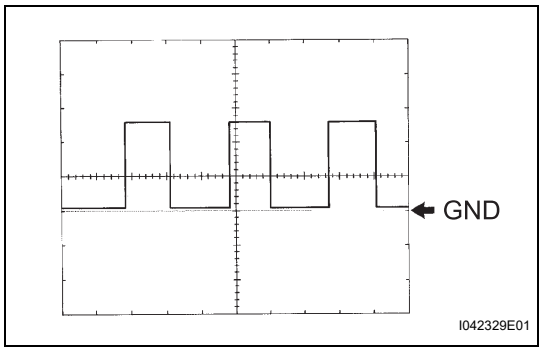
OK

ST

5	INSPECT MAIN BODY ECU (SPEED SIGNAL)



(a) Check the input signal waveform.
(1) Reconnect the connectors.
(2) Remove the combination meter assembly with the connector(s) still connected.
(3) Connect an oscilloscope to terminal E8-9 (SPD) and body ground.
(4) Turn the power switch on (IG).
(5) Turn the wheel slowly.



(6) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	5 V/DIV., 10 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:

The waveform is displayed as shown in the illustration.

HINT:

As the vehicle speed increases, the cycle of the signal waveform narrows.

NG → **REPLACE COMBINATION METER**

OK

REPLACE MAIN BODY ECU

ST

DTC	B2283	Vehicle Speed Sensor Malfunction

DESCRIPTION

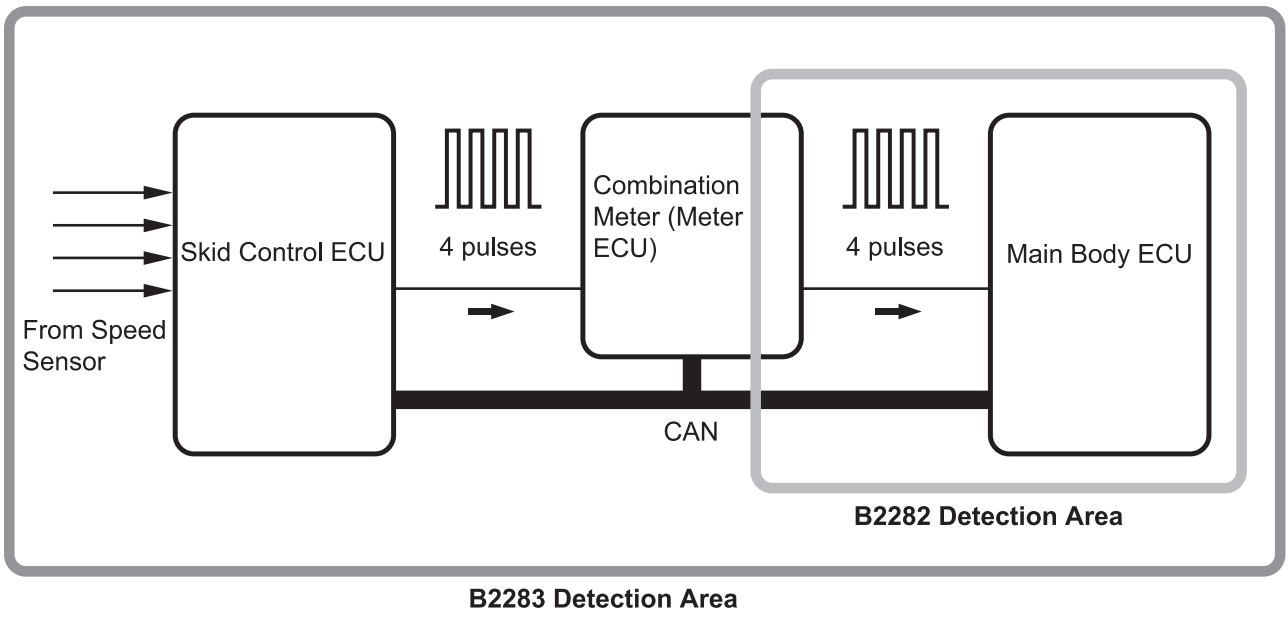
The skid control ECU converts these signals into 4-pulse signals and sends them to the combination meter. After this signal is converted into a more precise rectangular waveform by the waveform shaping circuit inside the combination meter, it is then transmitted to the main body ECU. The main body ECU determines the vehicle speed based on the frequency of these pulse signals.

HINT:

When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

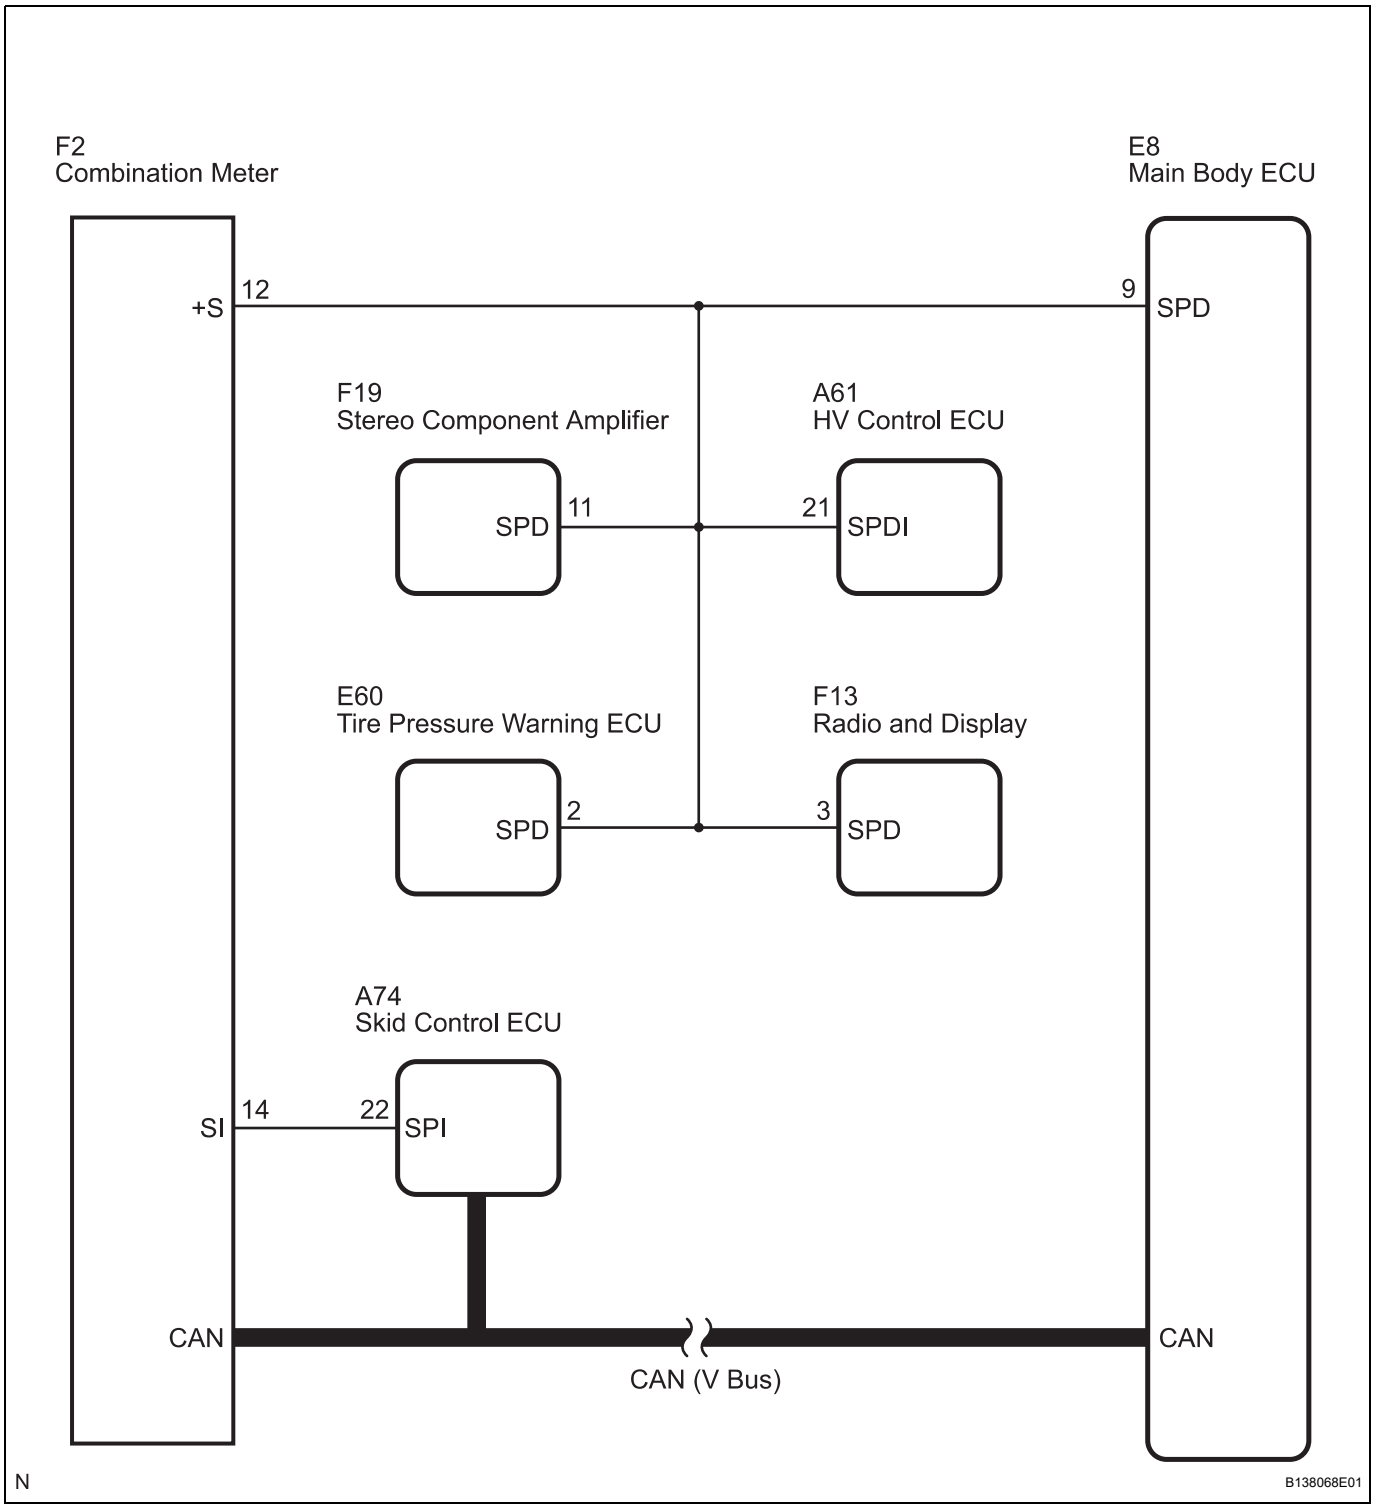
DTC No.	DTC Detection Condition	Trouble Area
B2283	When both conditions below are met: • Over-deceleration in vehicle speed • Vehicle speed and engine speed or HV motor speed do not match	• DTC B2282 detection area • Combination meter • Speed sensor • Skid control ECU • Main body ECU • Wire harness or connector



N

B138069E01

WIRING DIAGRAM



HINT:

- A voltage of 12 V or 5 V is output from each ECU and then input to the combination meter. The signal is changed to a pulse signal at the transistor in the combination meter. Each ECU controls the respective system based on the pulse signal.
- If a short occurs in an ECU, all systems in the diagram above will not operate normally.

ST

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT (SMART KEY SYSTEM)

(a) Delete the DTCs (See page ST-21).
(b) After all DTCs are cleared, check if the trouble occurs again 320 seconds after the power switch is turned on (IG).
(c) Check for DTC B2282 and DTC B2283.

Result

Display (DTC output)	Proceed to
"DTC B2283" only	A
"DTC B2283" and "DTC B2282"	B
No DTC	C

HINT:
If DTC B2282 and DTC B2283 are output, perform troubleshooting for DTC B2282 first (See page ST-54).

B → **GO TO DTC B2282**

C → **CHECK INTERMITTENT PROBLEMS**

A

2	CHECK OPERATION OF SPEEDOMETER

(a) Drive the vehicle and check if the function of the speedometer in the combination meter is normal.
OK:
Actual vehicle speed and the speed indicated on the speedometer are the same.
HINT:
- The vehicle speed sensor is functioning normally when the indication on the speedometer is normal.
- The meter CPU receives vehicle speed signals from the skid control ECU via the CAN communication lines. The vehicle speed sensor detects the voltage that varies according to the vehicle speed. The skid control ECU supplies power to the vehicle speed sensor. The skid control ECU detects vehicle speed signals based on the pulses of the voltage.

OK → **Go to step 4**

NG

3	CHECK DTC OUTPUT (BRAKE CONTROL)

(a) Delete the DTCs (See page ST-21).
(b) Check for DTCs.
OK:
No DTC is output.

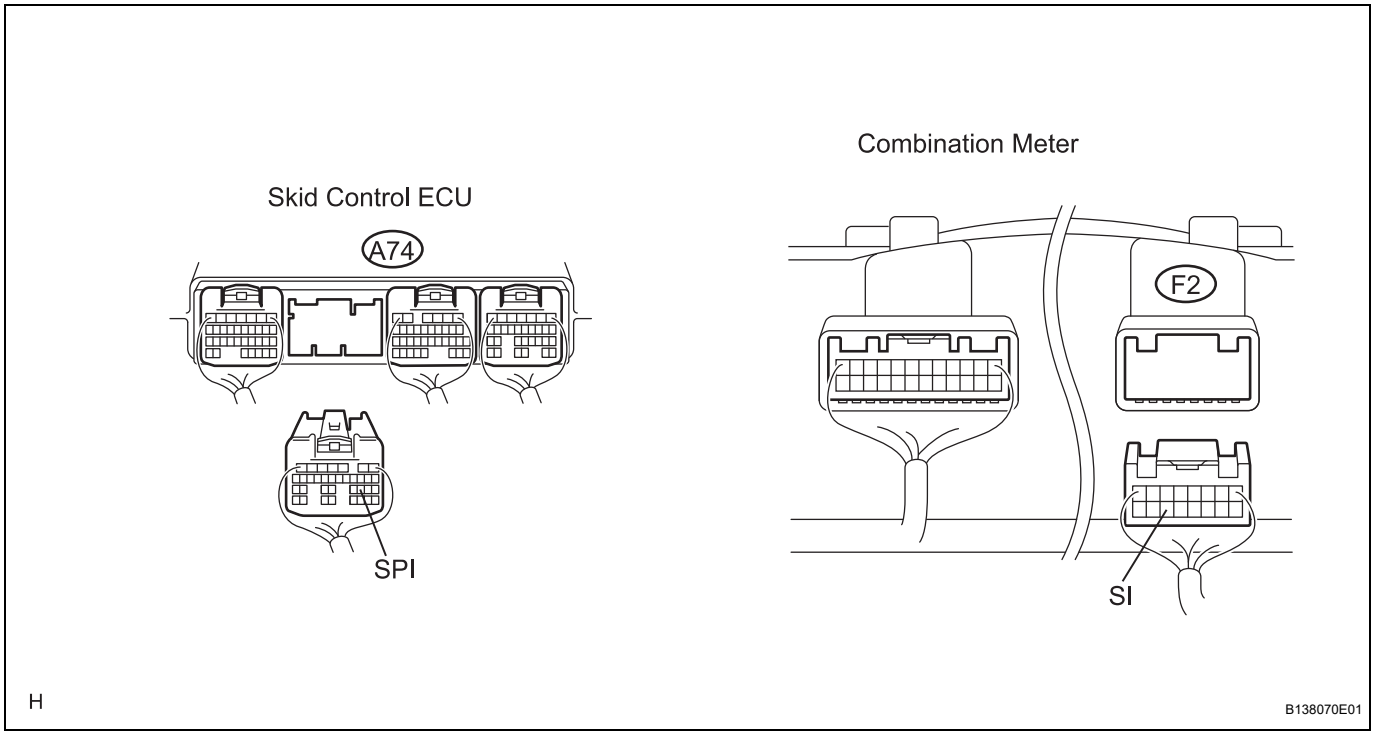
NG → GO TO BRAKE CONTROL SYSTEM

OK

REPLACE MAIN BODY ECU

4	CHECK WIRE HARNESS (SKID CONTROL ECU - COMBINATION METER)

(a) Disconnect the F2 meter connector.



(b) Disconnect the A74 ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

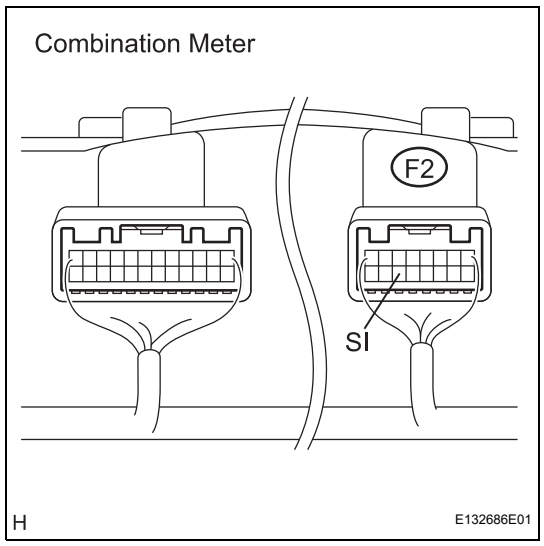
Tester Connection (Symbols)	Condition	Specified Condition
A74-22 (SPI) - F2-14 (SI)	Always	Below 1 Ω
A74-22 (SPI) or F2-14 (SI) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

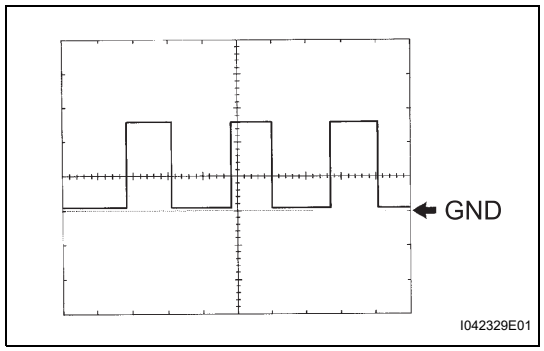
OK

ST

5	INSPECT MAIN BODY ECU (SPEED SIGNAL)



(a) Check the input signal waveform.
(1) Reconnect the connectors.
(2) Remove the combination meter assembly with the connector(s) still connected.
(3) Connect an oscilloscope to terminal F2-14 (SI) and body ground.
(4) Turn the power switch on (IG).
(5) Turn the wheel slowly.



(6) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	5 V/DIV., 10 ms./DIV.
Vehicle condition	Driving at approx. 20 km/h (12 mph)

OK:
The waveform is displayed as shown in the illustration.
HINT:
As the vehicle speed increases, the cycle of the signal waveform narrows.

NG → **REPLACE SKID CONTROL ECU**

OK

REPLACE COMBINATION METER

ST

DTC	B2284	Brake Signal Malfunction

DESCRIPTION

This DTC is output when: 1) the brake signal circuit between the main body ECU and the stop light switch is malfunctioning; and 2) the CAN information is inconsistent.

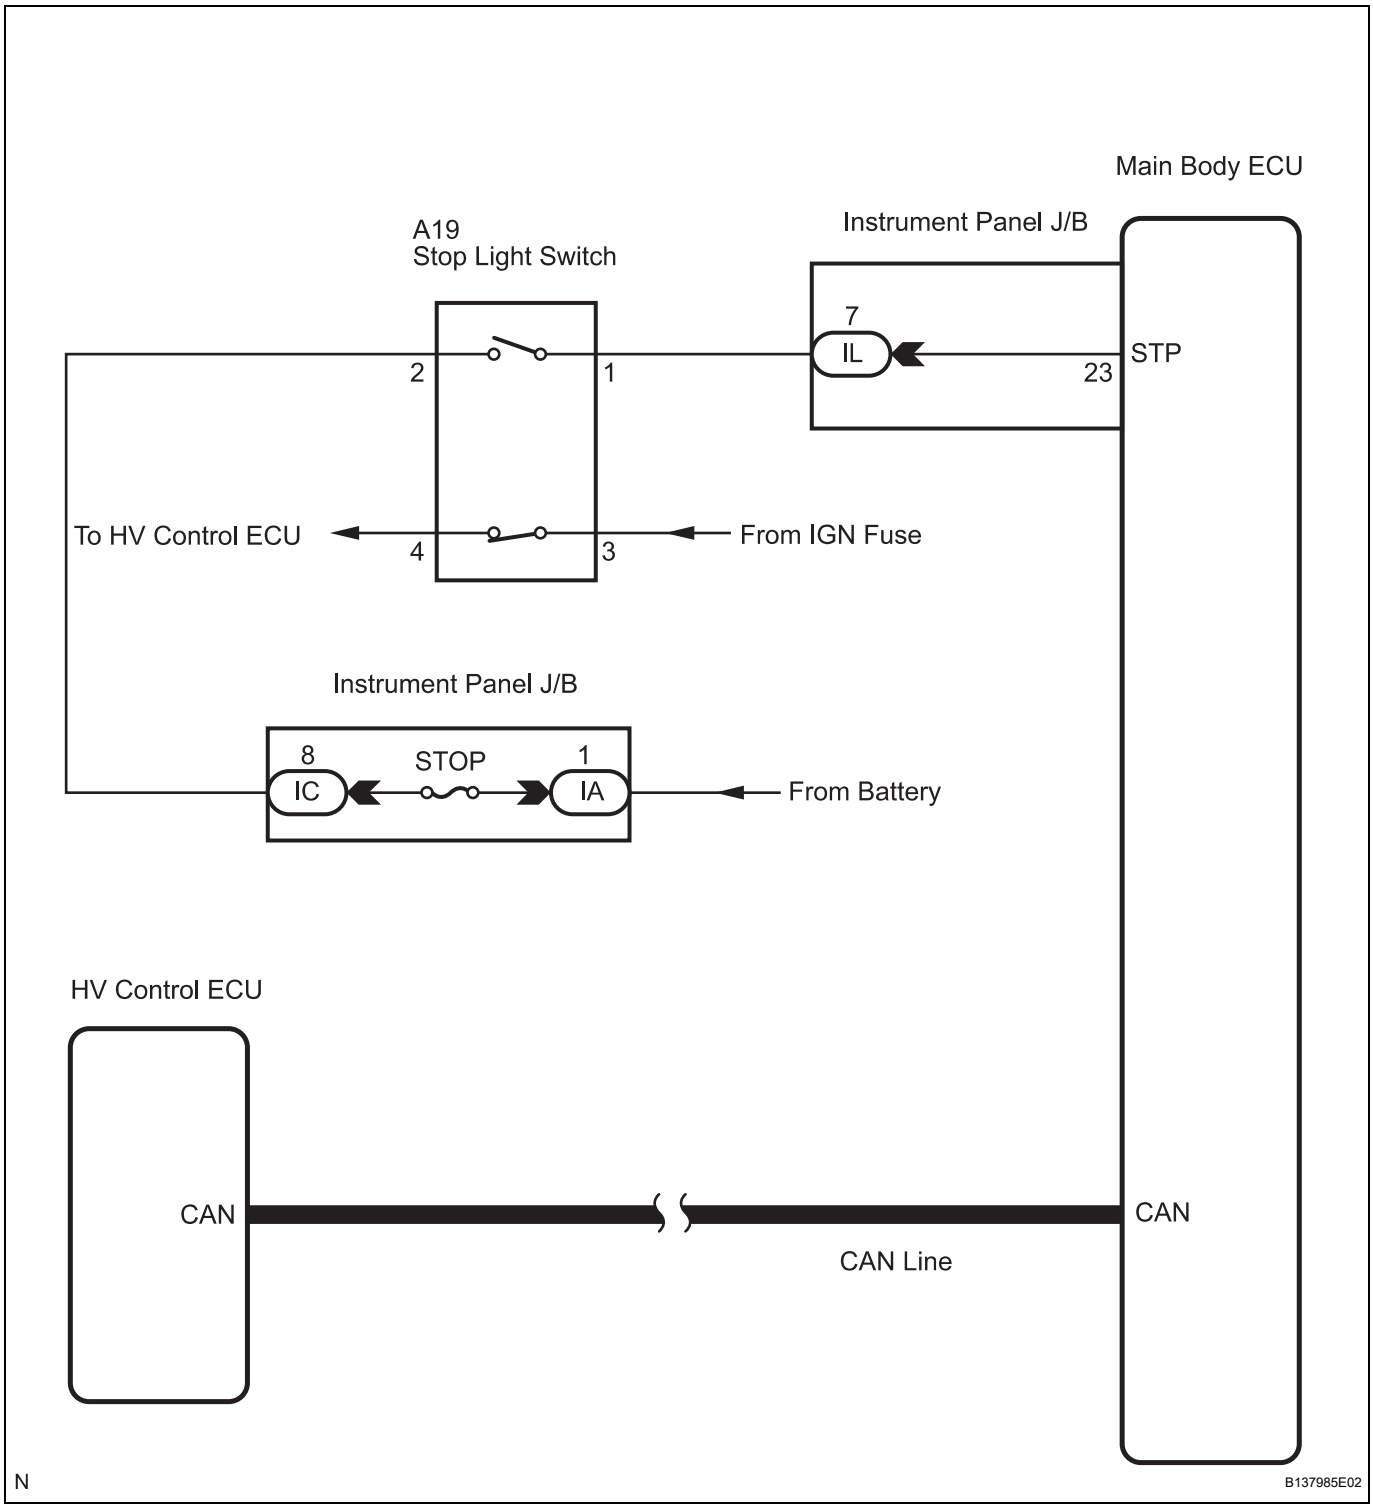
HINT:

When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2284	Communication or communication line is abnormal between the main body ECU and the stop light switch	• Stop light switch • CAN communication system • HV control ECU • Main body ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

Before performing the inspection, depress the brake pedal and check that the stop lights come on. If the stop lights do not come on when the brake pedal is depressed, refer to the page shown in the brackets (See page LI-12).

1	READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Check the DATA LIST for proper functioning of the stop light switch.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STOP LAMP SW	Stop light switch/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:
ON (brake pedal depressed) and OFF (brake pedal released) appear on the screen.

NG → **Go to step 4**

OK

2	CHECK DTC OUTPUT (CAN COMMUNICATION SYSTEM)

(a) Delete the DTCs (See page ST-21).
(b) Check for CAN communication system DTCs (See page CA-7).
HINT:
If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first (See page CA-22).
OK:
No DTC is output.

NG → **GO TO CAN COMMUNICATION SYSTEM**

OK

3	CHECK DTC OUTPUT (HYBRID CONTROL SYSTEM)

(a) Delete the DTCs (See page ST-21).
(b) Check for hybrid control system DTCs (See page HV-46).
OK:
No DTC is output.

NG → **GO TO HYBRID CONTROL SYSTEM**

OK

REPLACE MAIN BODY ECU

ST

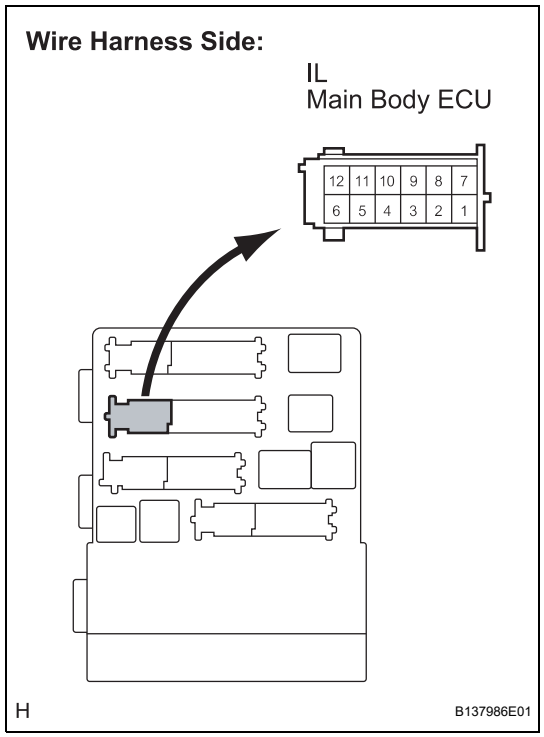
4	INSPECT FUSE (STOP)

(a) Remove the STOP fuse from the instrument panel J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

5	CHECK WIRE HARNESS (BATTERY - MAIN BODY ECU)



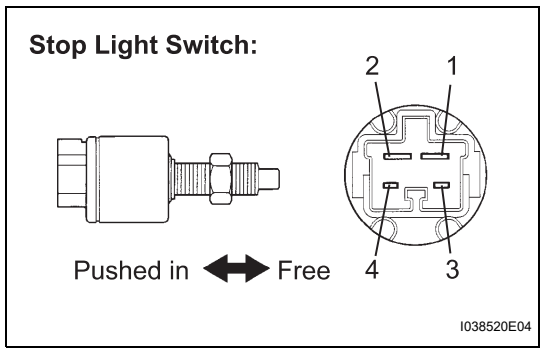
(a) Disconnect the IL ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
IL-7 - Body ground	Brake pedal released	Below 1 V
IL-7 - Body ground	Brake pedal depressed	10 to 14 V

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

NG

6	INSPECT STOP LIGHT SWITCH



(a) Remove the switch.
(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
3 - 4	Switch pin free	10 kΩ or higher
1 - 2	Switch pin pushed in	10 kΩ or higher
3 - 4	Switch pin pushed in	Below 1 Ω

NG → **REPLACE STOP LIGHT SWITCH**

ST

OK

REPLACE MAIN BODY ECU

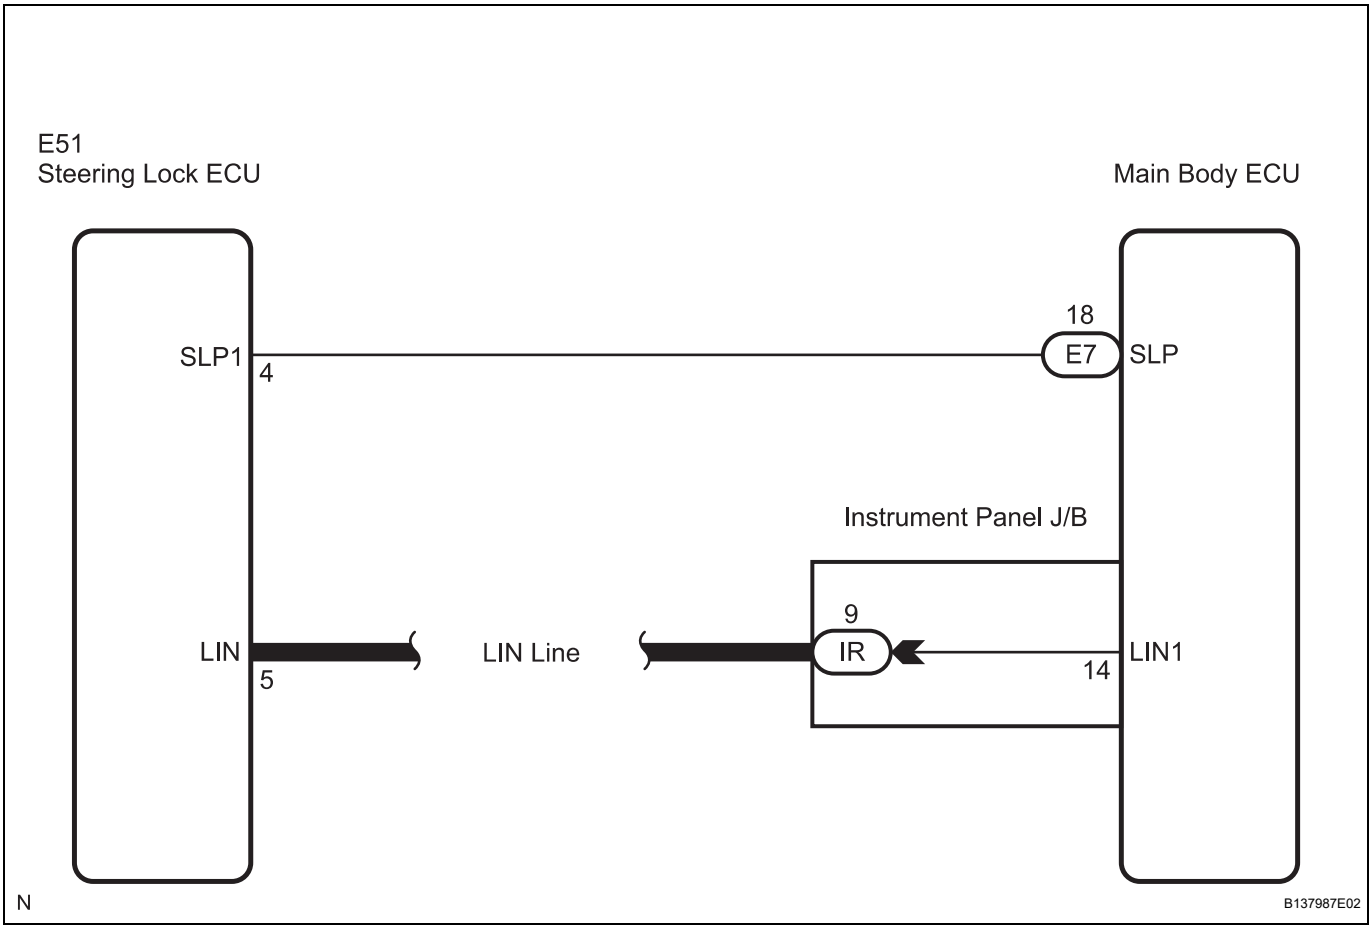
DTC	B2285	Steering Lock Position Signal Circuit Malfunction

DESCRIPTION

This DTC is output when serial communication signals and LIN communication signals in the circuit between the main body ECU and steering lock actuator (steering lock ECU) are inconsistent.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU or steering lock ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2285	Cable and LIN information between the main body ECU and the steering lock ECU are inconsistent	• Main body ECU • Steering lock ECU • Wire harness or connector

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Check the DATA LIST for proper functioning of the steering lock function.
HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STR UNLOCK SW	Steering lock condition/ON or OFF	ON: Steering is unlocked (Power switch on (ACC)) OFF: Steering is locked (Power switch off)	-

OK:
"ON "(Steering is unlocked) and "OFF" (Steering is locked) appear on the screen.

NG → **Go to step 3**

OK

2 CHECK FOR DTCS

(a) Delete the DTCs (See page ST-21).
(b) Check for DTC B2285, DTC B2287 and DTC B2785.

Result

Display (DTC output)	Proceed to
"DTC B2285" only	A
"DTC B2287" and/or "DTC B2785"	B
No DTC	C

HINT:
- If DTC B2287 is output (See page ST-77).
- If DTC B2785 is output (See page EI-30).

B → **GO TO DTC CHART**

C → **CHECK INTERMITTENT PROBLEMS**

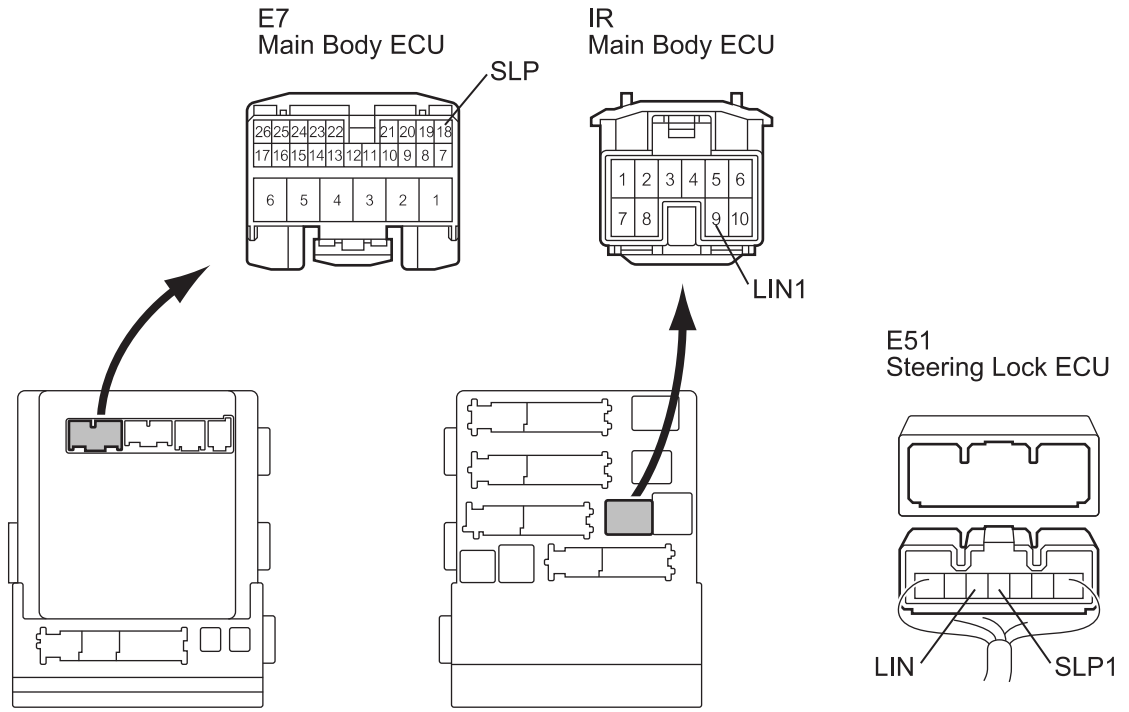
A

REPLACE MAIN BODY ECU

3 CHECK WIRE HARNESS (MAIN BODY ECU - STEERING LOCK ECU)

(a) Disconnect the IR, E7 and E51 ECU connectors.

Wire Harness Side:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E7-18 (SLP) - E51-4 (SLP1)	Always	Below 1 Ω
IR-9 (LIN1) - E51-5 (LIN)	Always	Below 1 Ω
E7-18 (SLP) or E51-4 (SLP1) - Body ground	Always	10 kΩ or higher
IR-9 (LIN1) or E51-5 (LIN) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

4	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check the power source mode change.
  (1) When the key is inside the vehicle, the brake pedal is depressed and the shift lever is in P, check that pressing the power switch causes the power source mode to change to on (READY).
  OK:
  Power switch on (READY).

NG → **REPLACE STEERING LOCK ECU**

OK

END (MAIN BODY ECU DEFECTIVE)

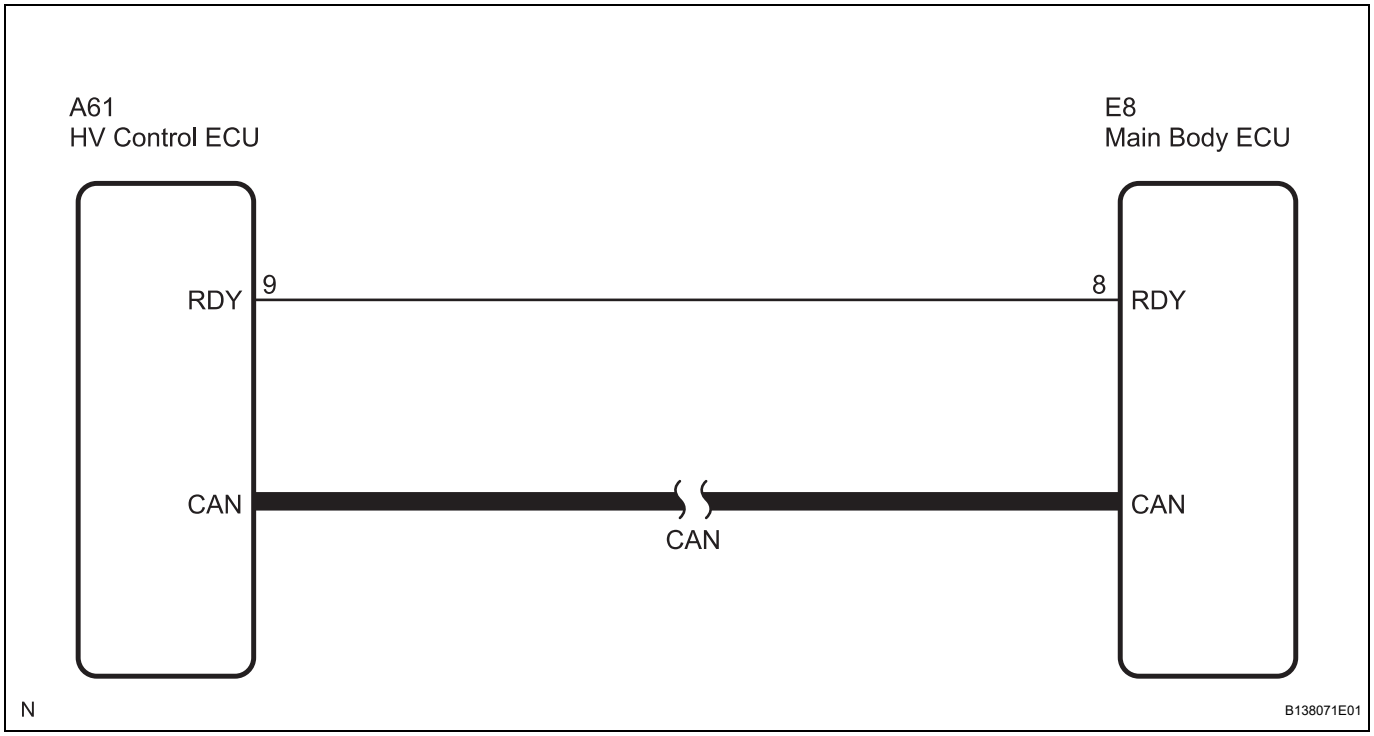
DTC	B2286	Runnable Signal Malfunction

DESCRIPTION

This DTC is output when serial communication signals and CAN communication signals in the circuit between the main body ECU and HV control ECU are inconsistent.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2286	Serial communication signals and CAN communication signals in the circuit between the main body ECU and HV control ECU are inconsistent.	• CAN communication system • HV control ECU • Main body ECU • Wire harness or connector

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT (CAN COMMUNICATION SYSTEM)

(a) Delete the DTCs (See page ST-21).
(b) Check for the CAN communication system DTC U0146.
HINT:
If the DTCs for the CAN communication system malfunction are output, inspect those DTCs first (See page CA-7).

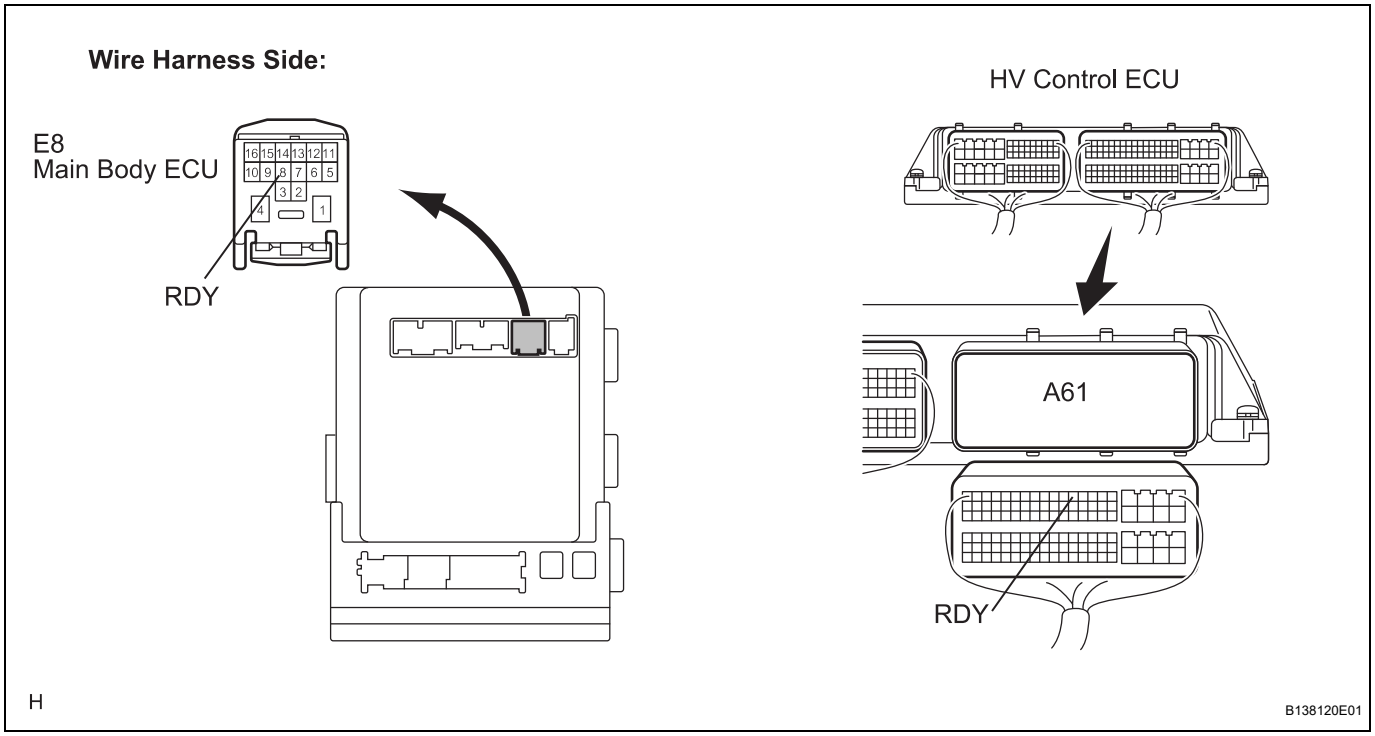
OK:
No DTC is output.

NG → **GO TO CAN COMMUNICATION SYSTEM**

OK

2 CHECK WIRE HARNESS (MAIN BODY ECU - ECM)

(a) Disconnect the A61 ECU connector.



(b) Disconnect the E8 ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E8-8 (RDY) - A61-9 (RDY)	Always	Below 1 Ω
E8-8 (RDY) or A61-9 (RDY) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 READ VALUE OF INTELLIGENT TESTER

(a) Reconnect the connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Check the DATA LIST for proper functioning of the HV control system on (READY).

ST

HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
READY SIG	HV control system on (READY)/ ON or OFF	ON: System is on (READY) OFF: System is off	-

OK:
OFF (system is off) and ON (system is on (READY)) appear on the screen.

NG → **REPLACE HYBRID VEHICLE CONTROL ECU**

OK

REPLACE MAIN BODY ECU

DTC	B2287	LIN Communication Master Malfunction

DESCRIPTION

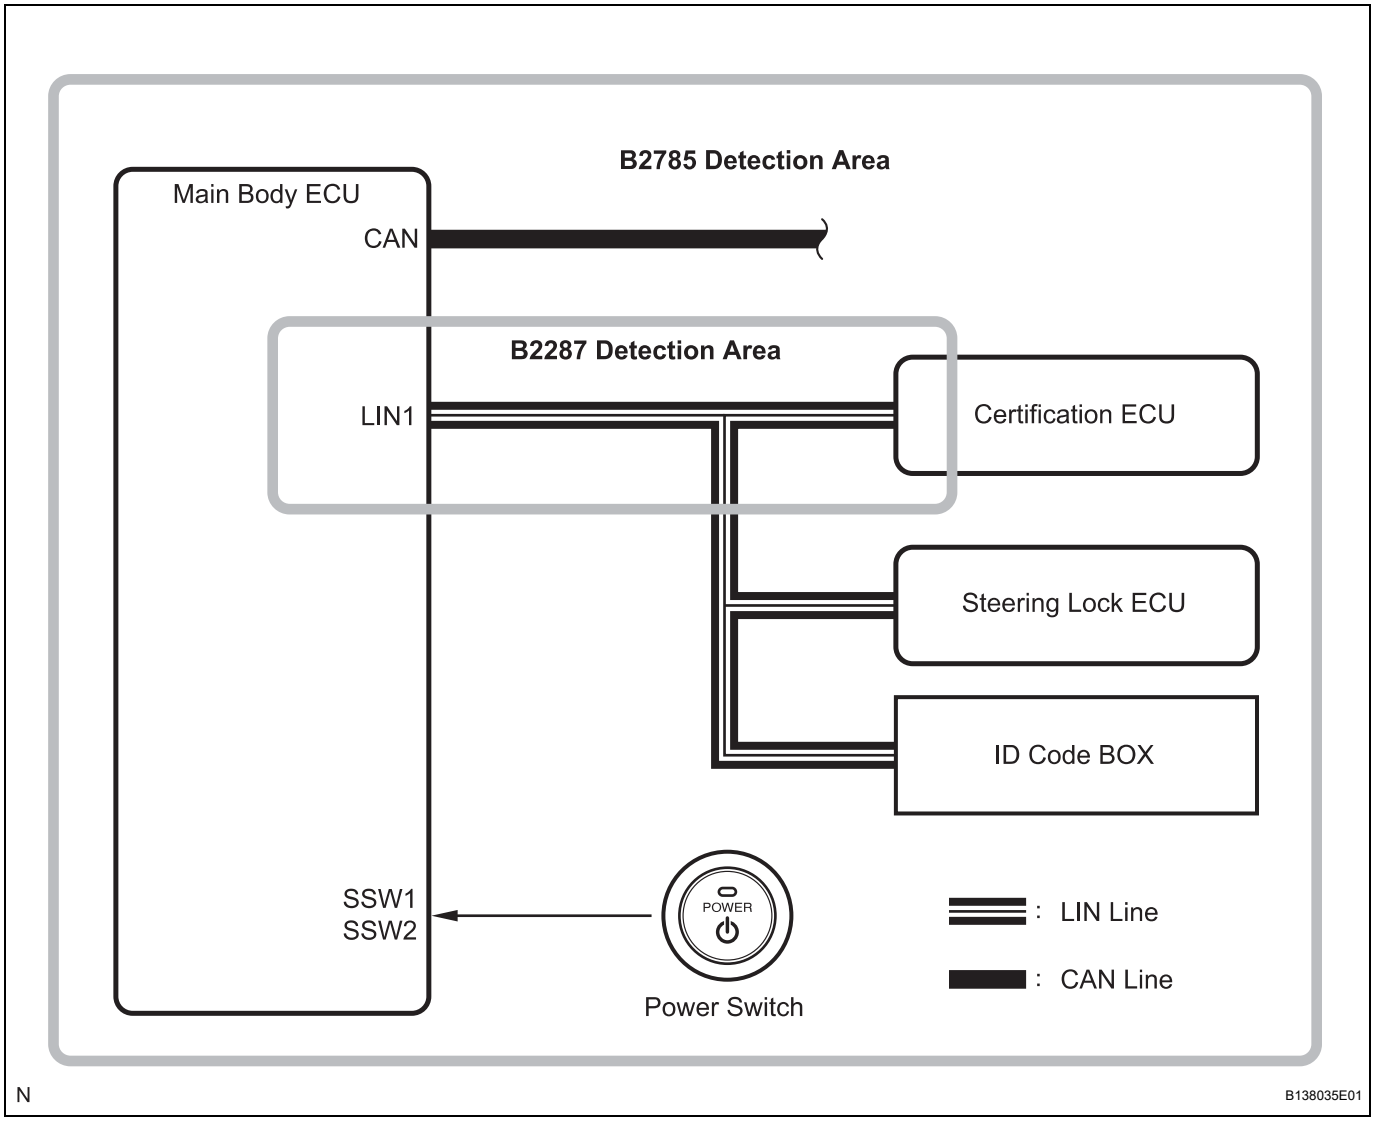
This DTC is output when there is a LIN communication problem between the main body ECU and certification ECU.

HINT:

When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.

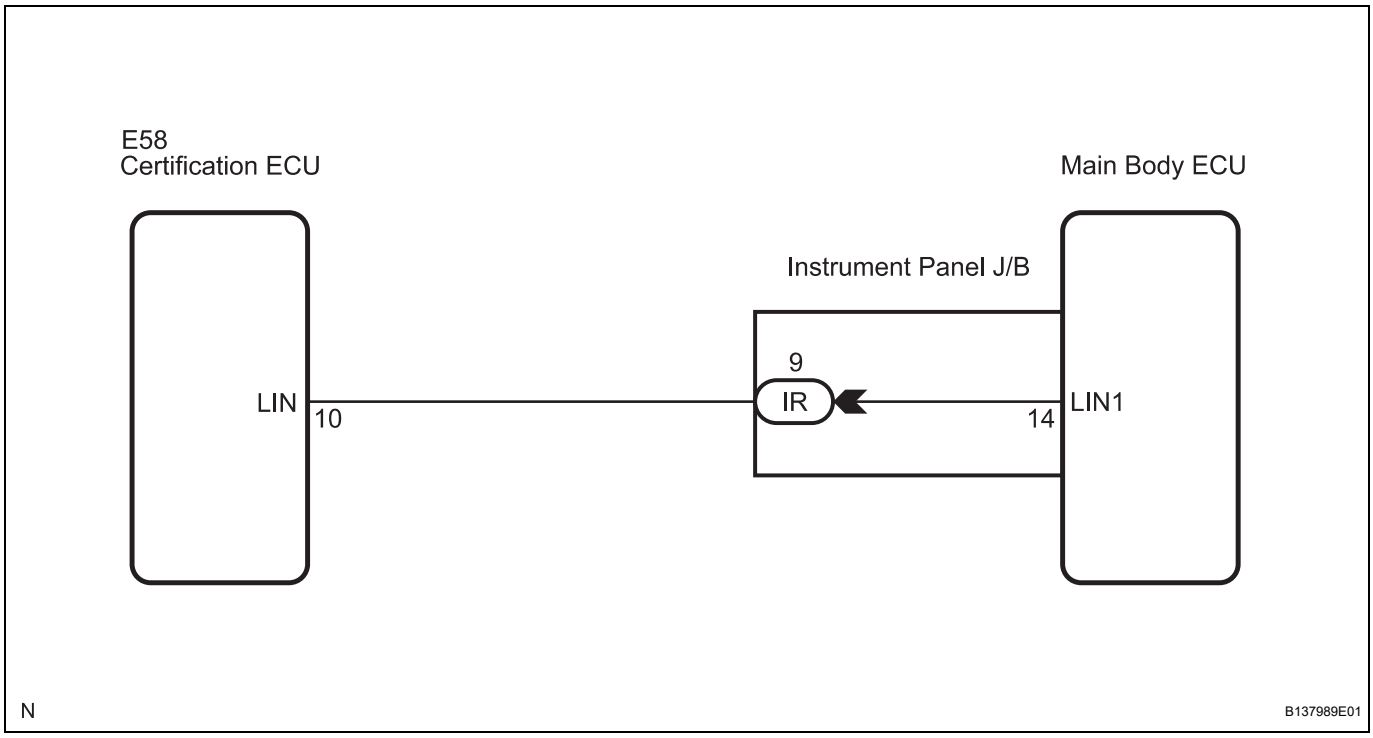
After the main body ECU or certification ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2287	Communication or communication line is abnormal between the main body ECU and the certification ECU	• Main body ECU • Certification ECU • Wire harness or connector



ST

WIRING DIAGRAM



INSPECTION PROCEDURE

ST

1	CHECK FOR DTCS

(a) Delete the DTCs (See page ST-21).
(b) Check for DTC B2287 and B2785.

Result

Display (DTC output)	Proceed to
"DTC B2287" only	A
"DTC B2287" and "DTC B2785"	B
No DTC	C

HINT:
If DTC B2785 is output, perform troubleshooting for DTC B2785 first (See page EI-30).

B → GO TO DTC B2785

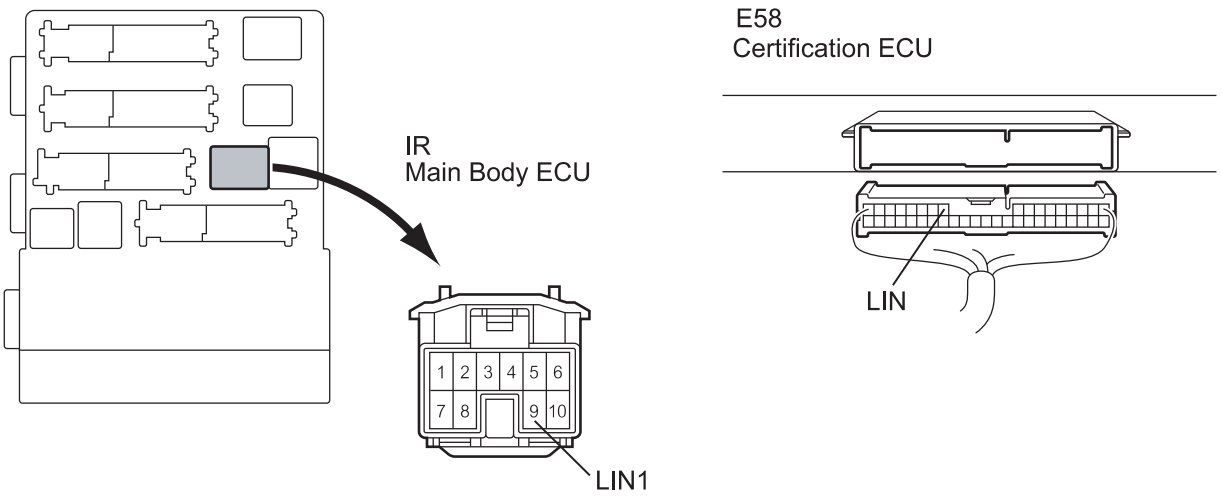
C → CHECK INTERMITTENT PROBLEMS

A

2	CHECK WIRE HARNESS (MAIN BODY ECU - CERTIFICATION ECU)

(a) Disconnect the E58 and IR ECU connectors.

Wire Harness Side:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IR-9 (LIN1) - E58-10 (LIN)	Always	Below 1 Ω
IR-9 (LIN1) or E58-10 (LIN) - Body ground	Always	10 kΩ or higher

ST

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check the power source mode change.
(1) When the key is inside the vehicle, the brake pedal is depressed and the shift lever is in P, check that pressing the power switch causes the power source mode to change to on (READY).

OK:

Power switch on (READY).

NG → **REPLACE CERTIFICATION ECU**

OK

END (MAIN BODY ECU DEFECTIVE)

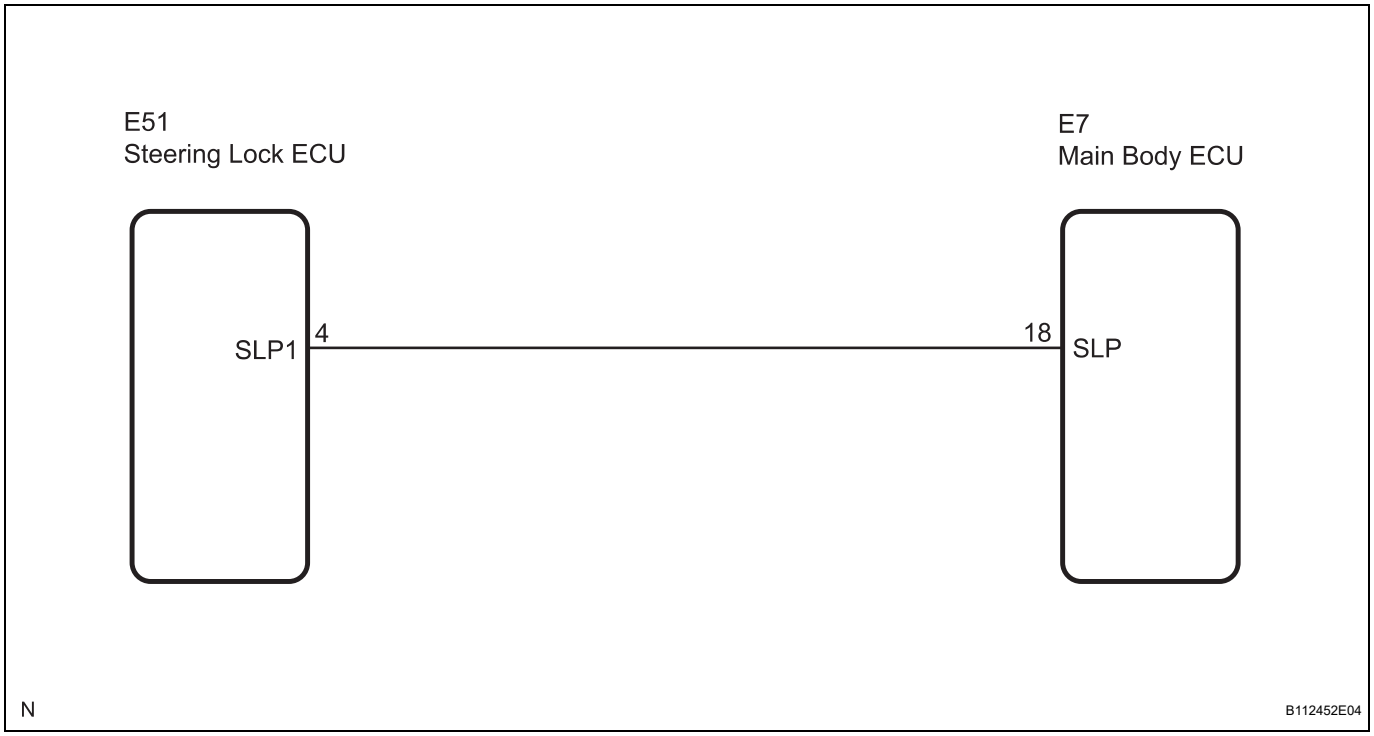
DTC	B2288	Steering Lock Signal Circuit Malfunction

DESCRIPTION

This DTC is output when the main body ECU cannot detect the unlock condition of the steering lock within a specified time.
HINT:
When the main body ECU is replaced with a new one and the negative (-) battery terminal is connected, the power source mode becomes the IG-ON mode. When the battery is removed and reinstalled, the power source mode that was selected when the battery was removed is restored.
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2288	After turning power switch from off to on (IG), the steering wheel does not unlock for a certain period of time (ECU unlocks steering wheel only when it receives an unlock signal from LIN communication and cable)	• Main body ECU • Steering lock ECU • Wire harness or connector

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	CHECK FOR DTCS

(a) Delete the DTCs (See page ST-21).
(b) After all DTCs are cleared, check if the trouble occurs again 5 seconds after the power switch is turned on (IG).
(c) Check for DTCs again.
OK:
DTC B2287, DTC B2781 and DTC B2785 are not output.

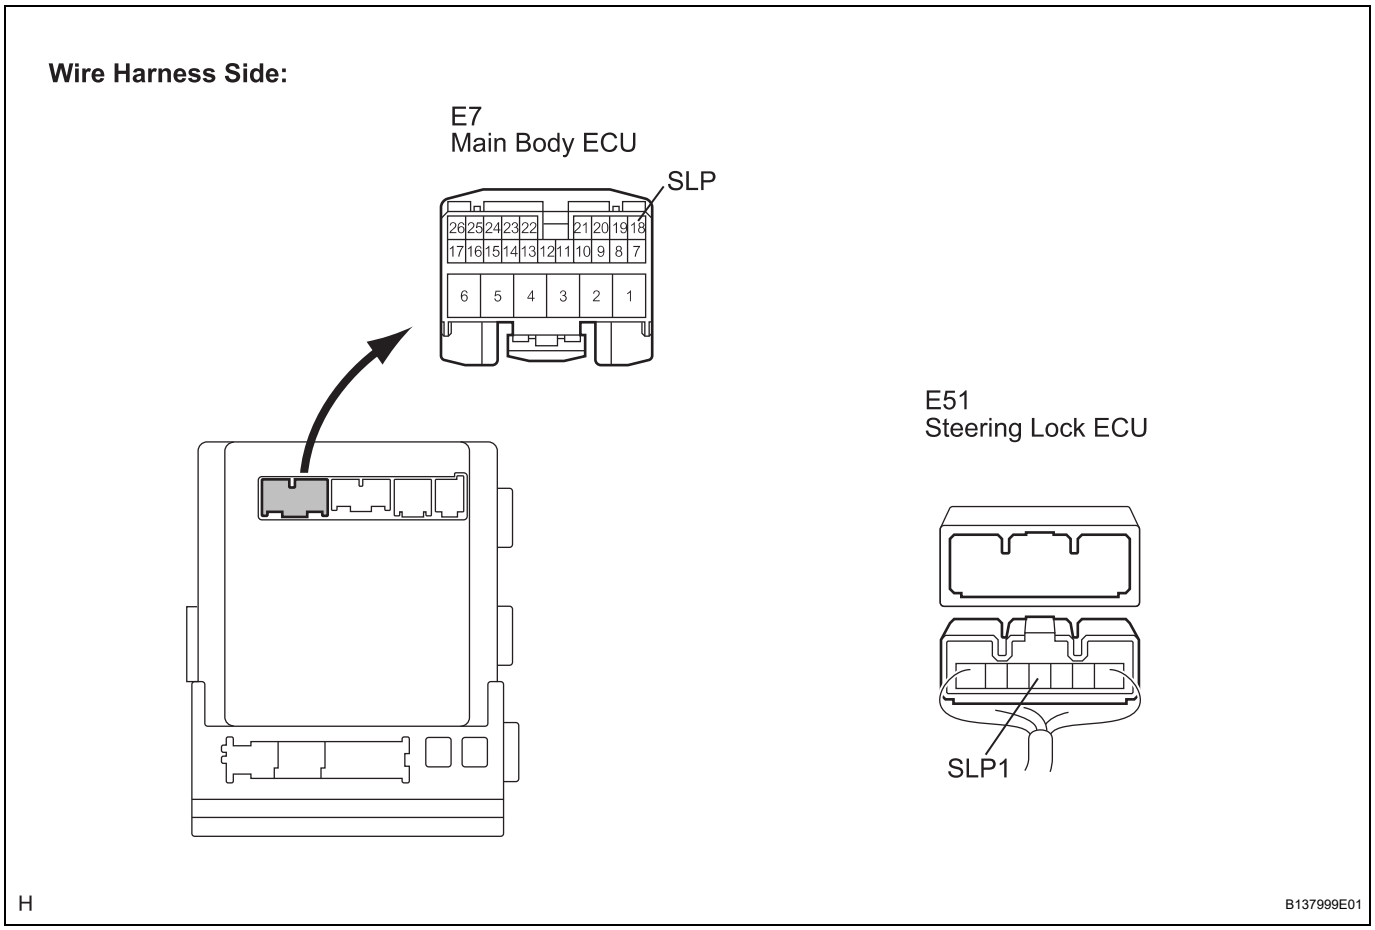
HINT:
- If DTC B2271 is output (See page ST-26).
- If DTC B2287 is output (See page ST-77).
- If DTC B2785 is output (See page EI-30).

NG → **GO TO DTC CHART**

OK

2	CHECK WIRE HARNESS (MAIN BODY ECU - STEERING LOCK ECU)

(a) Disconnect the E7 and E51 ECU connectors



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E7-18 (SLP) - E51-4 (SLP1)	Always	Below 1 Ω
E7-18 (SLP) or E51-4 (SLP1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the steering lock/unlock function operates normally.
OK:
Steering lock/unlock function operates normally.
HINT:
If steering lock/unlock function does not operate, refer to PROBLEM SYMPTOMS TABLE of the electrical steering lock (steering wheel cannot be unlocked) (See page SR-10).

NG → **GO TO ELECTRIC STEERING LOCK**

OK

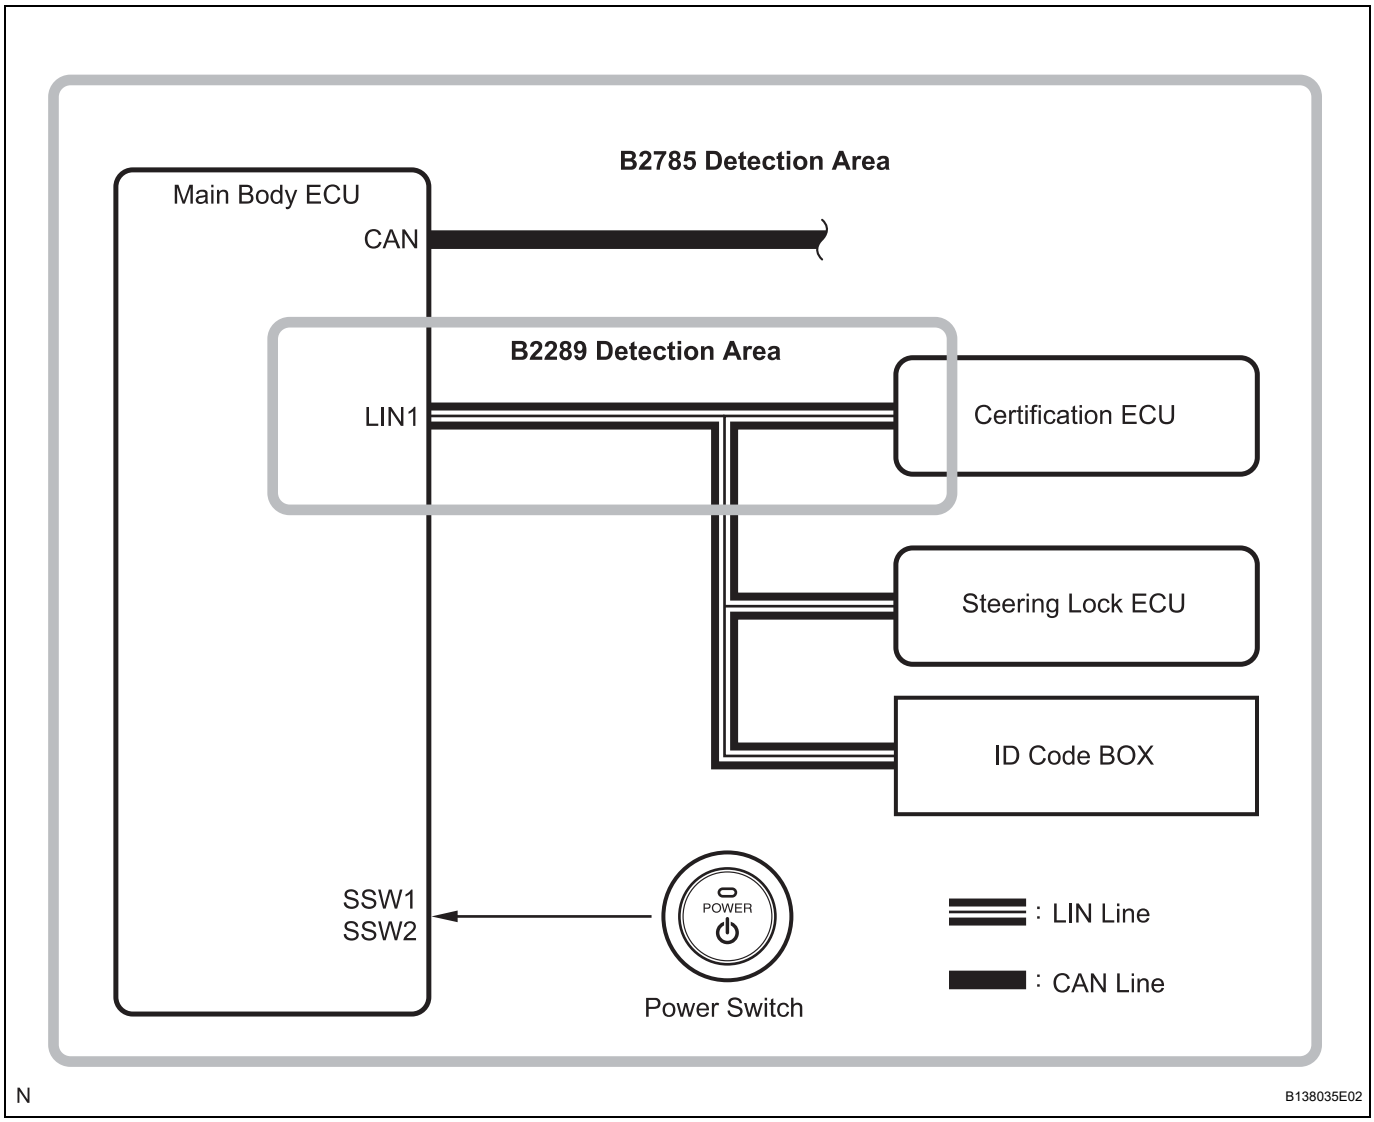
END (MAIN BODY ECU DEFECTIVE)

DTC	B2289	Key Collation Waiting Time Over

DESCRIPTION

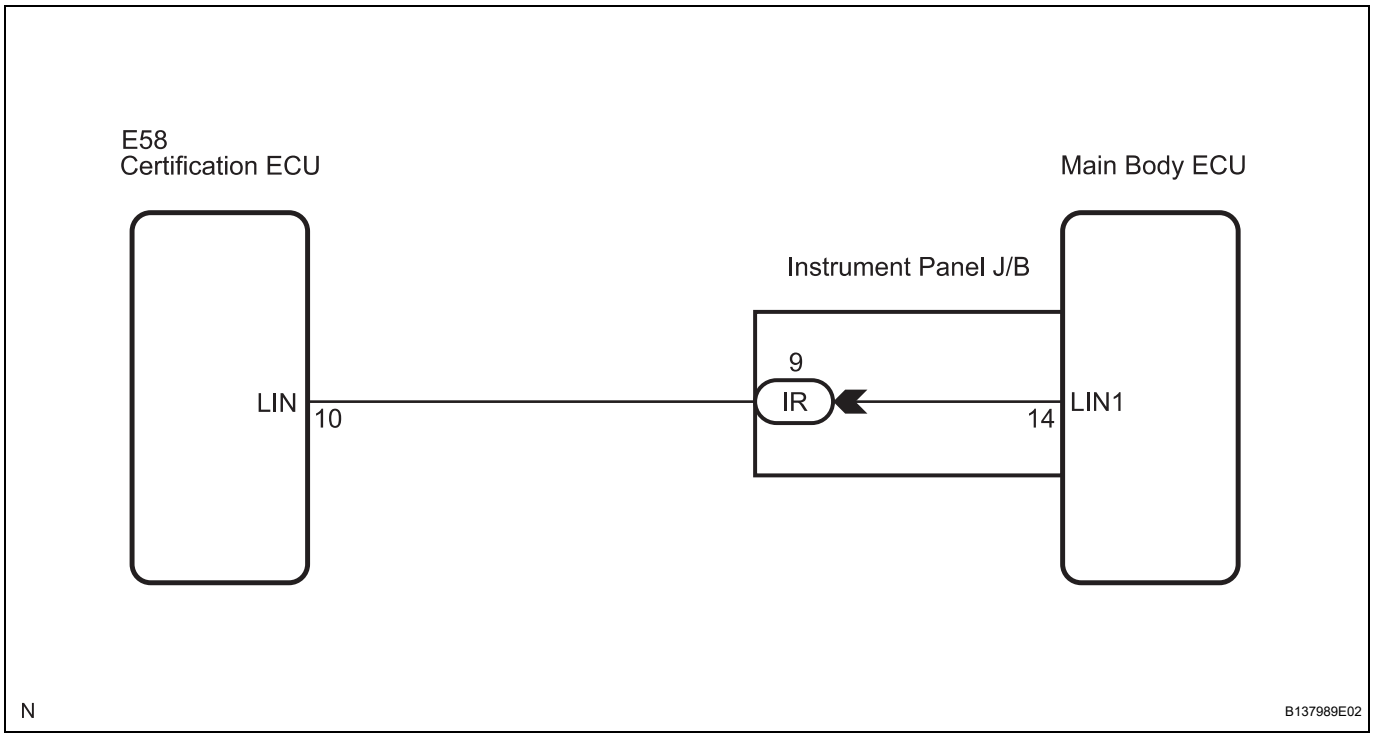
This DTC is output when there is a LIN communication problem between the main body ECU and certification ECU or when there is a problem in the engine immobiliser system.
HINT:
After the main body ECU is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

DTC No.	DTC Detection Condition	Trouble Area
B2289	Either condition below is met: • Cable and CAN are abnormal between the main body ECU and the engine immobiliser system • The engine immobiliser system is malfunctioning	• Main body ECU • Engine immobiliser system • Wire harness or connector • Certification ECU



ST

WIRING DIAGRAM



INSPECTION PROCEDURE

ST

1	CHECK FOR DTCS

(a) Delete the DTCs (See page ST-21).
(b) Check for DTC B2289 and B2785.

Result

Display (DTC output)	Proceed to
"DTC B2289" only	A
"DTC B2785" only	B
No DTC	C

HINT:
If DTC B2785 is output, perform troubleshooting for DTC B2785 first (See page EI-30).

B → **GO TO DTC B2785**

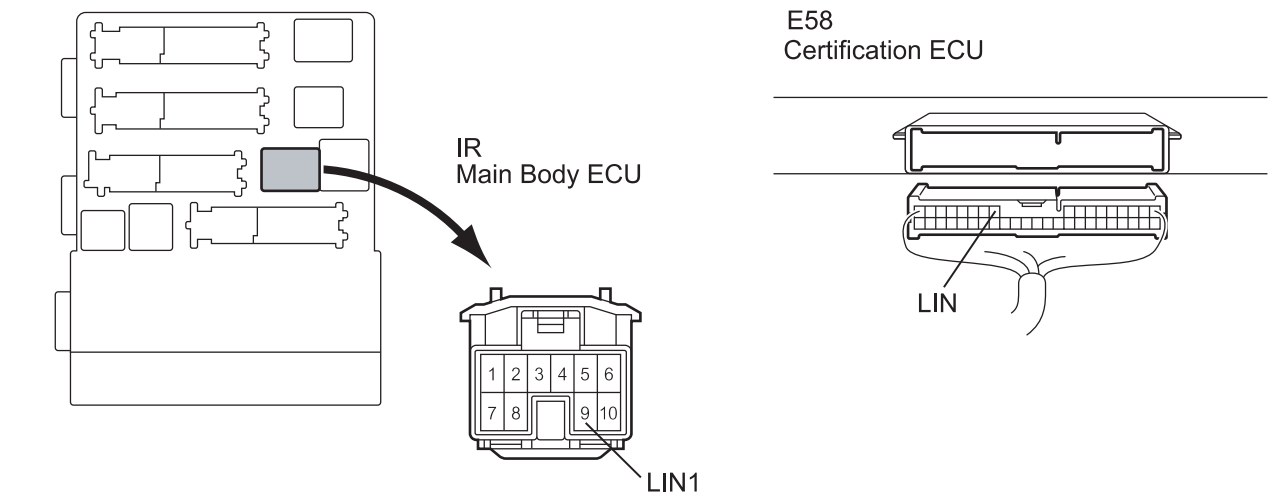
C → **CHECK INTERMITTENT PROBLEMS**

A

2	CHECK WIRE HARNESS (MAIN BODY ECU - CERTIFICATION ECU)

(a) Disconnect the E58 and IR ECU connectors.

Wire Harness Side:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IR-9 (LIN1) - E58-10 (LIN)	Always	Below 1 Ω
IR-9 (LIN1) or E58-10 (LIN) - Body ground	Always	10 kΩ or higher

ST

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK MAIN BODY ECU OPERATION

(a) After replacing the main body ECU with a normally functioning ECU, check that the power source mode to change on (READY).

OK:

Power switch on (READY).

HINT:

If power mode change to on (READY), refer to PROBLEM SYMPTOMS TABLE of the smart key system (entry) (matching for the inside of the cabin cannot be performed) (See page DL-121).

NG → **GO TO SMART KEY SYSTEM (ENTRY)**

OK

END (MAIN BODY ECU DEFECTIVE)

Power Switch Indicator Circuit

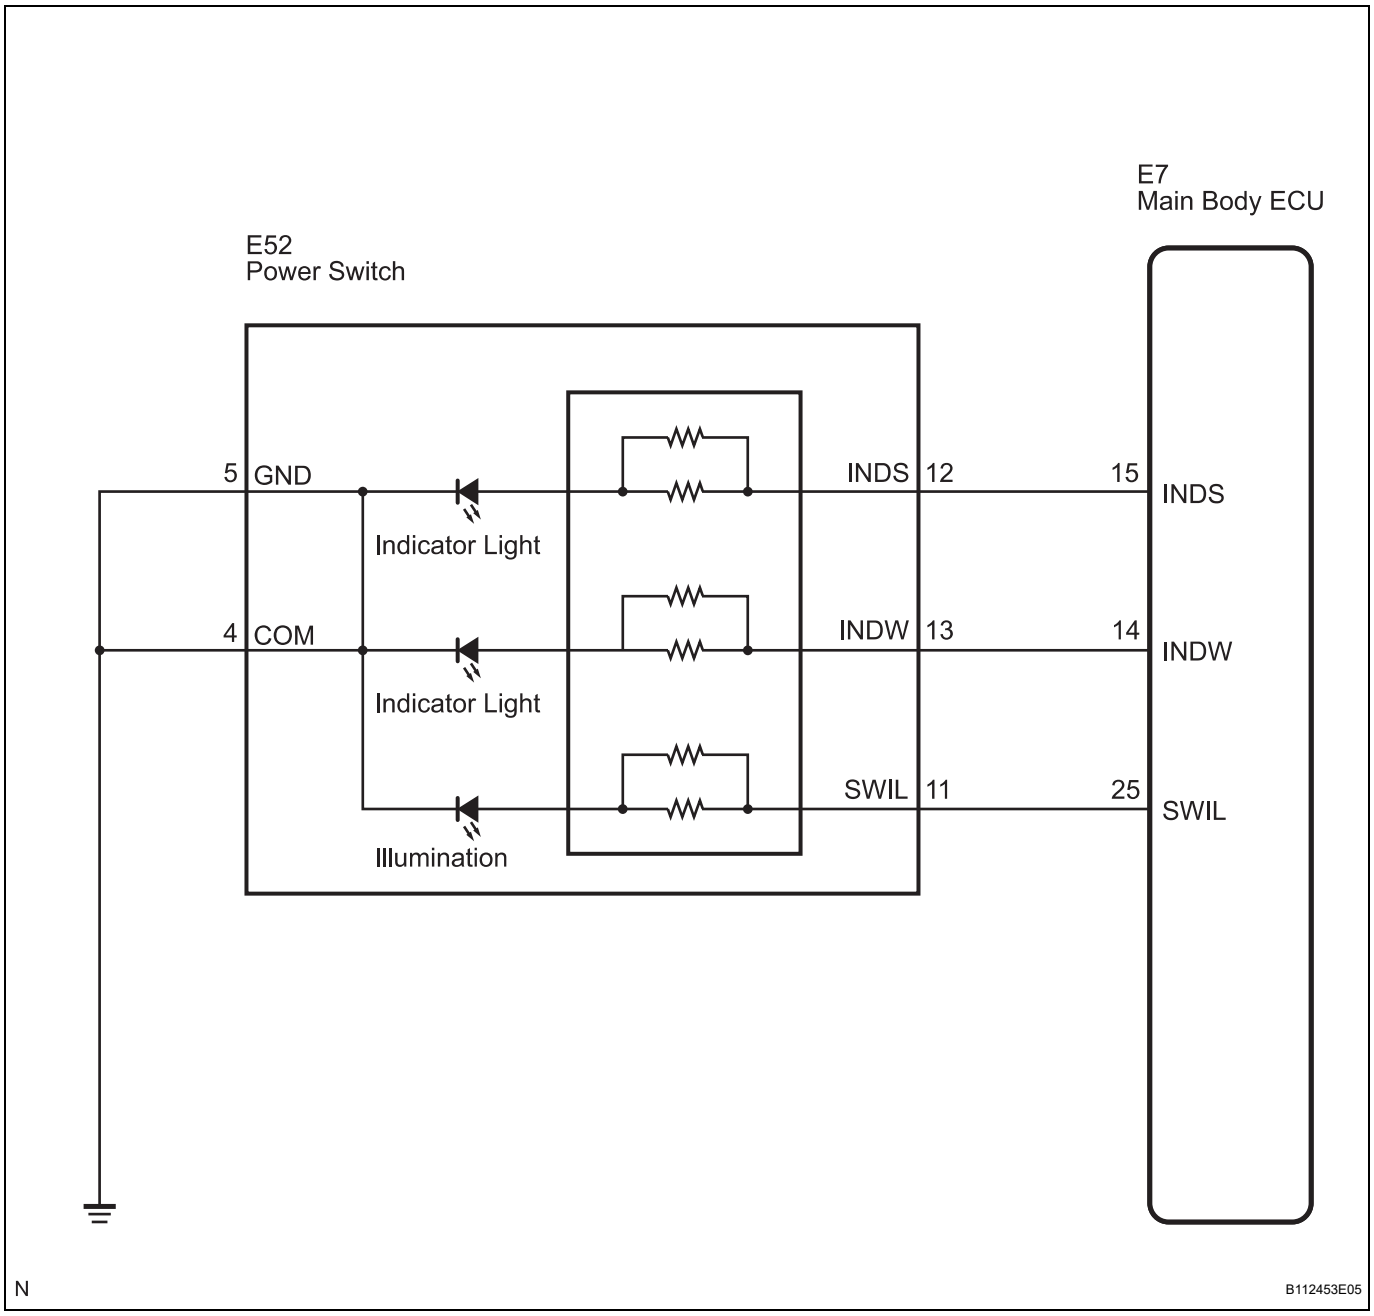
DESCRIPTION

HV control system on (READY) conditions or system malfunctions can be checked by the status of the power switch indicator light.

Power switch indicator light condition:

Power Source Mode/Condition	Indicator Light Condition	
	Brake pedal released	Brake pedal depressed, shift lever in P
off	OFF	ON (Green) (When key and vehicle IDs match)
on (ACC, IG)	ON (Amber)	ON (Green)
HV control system on (READY)	OFF	OFF
Steering lock not unlocked	Flashes (Green) for 15 sec.	Flashes (Green) for 15 sec.
System malfunction	Flashes (Amber) for 15 sec.	Flashes (Amber) for 15 sec.

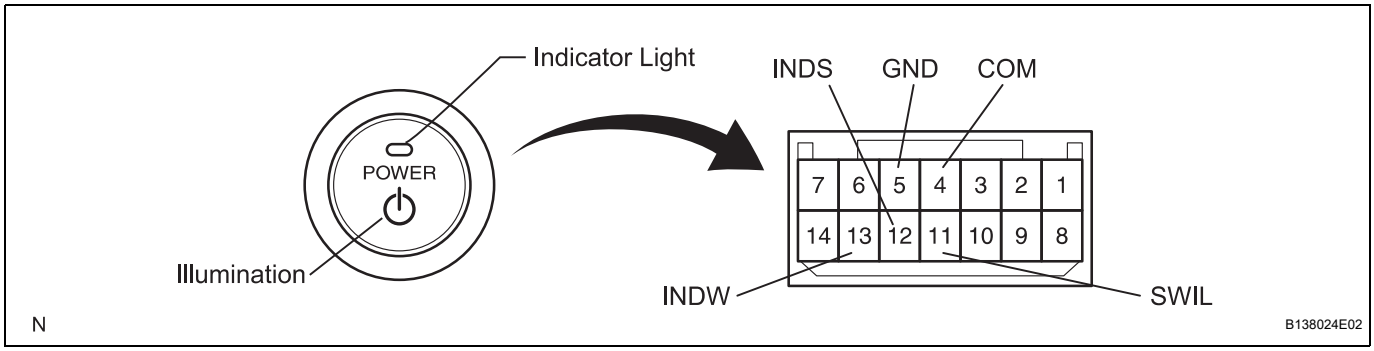
WIRING DIAGRAM



INSPECTION PROCEDURE

1	**INSPECT POWER SWITCH**

(a) Remove the power switch.



(b) Apply battery voltage between the terminals of the switch, and check the illumination condition of the switch.

NOTICE:

- **If the positive (+) lead and the negative (-) lead are incorrectly connected, the power switch indicator will not illuminate.**
- **If the voltage is too low, the indicator will not illuminate.**

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 11 (SWIL) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) → Terminal 12 (INDS) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) → Terminal 13 (INDW) Battery negative (-) → Terminal 4 (COM) or 5 (GND)	Illuminates

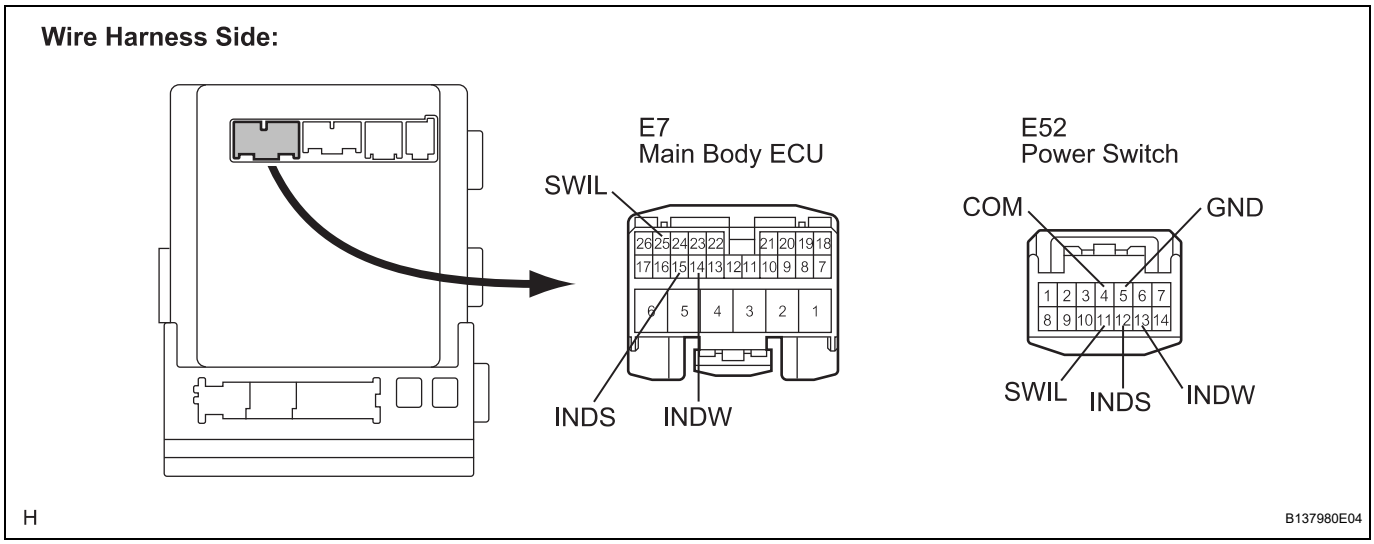
ST

NG → **REPLACE POWER SWITCH**

OK

2 CHECK WIRE HARNESS (POWER SWITCH - MAIN BODY ECU AND BODY GROUND)

(a) Disconnect the E52 switch connector.



(b) Disconnect the E7 ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E52-11 (SWIL) - E7-25 (SWIL)	Always	Below 1 Ω
E52-12 (INDS) - E7-15 (INDS)	Always	Below 1 Ω
E52-13 (INDW) - E7-14 (INDW)	Always	Below 1 Ω
E52-5 (GND) - Body ground	Always	Below 1 Ω
E52-4 (COM) - Body ground	Always	Below 1 Ω
E52-11 (SWIL) or E7-25 (SWIL) - Body ground	Always	10 kΩ or higher
E52-12 (INDS) or E7-15 (INDS) - Body ground	Always	10 kΩ or higher
E52-13 (INDW) or E7-14 (INDW) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

Power Source Mode does not Change to ON (IG and ACC)

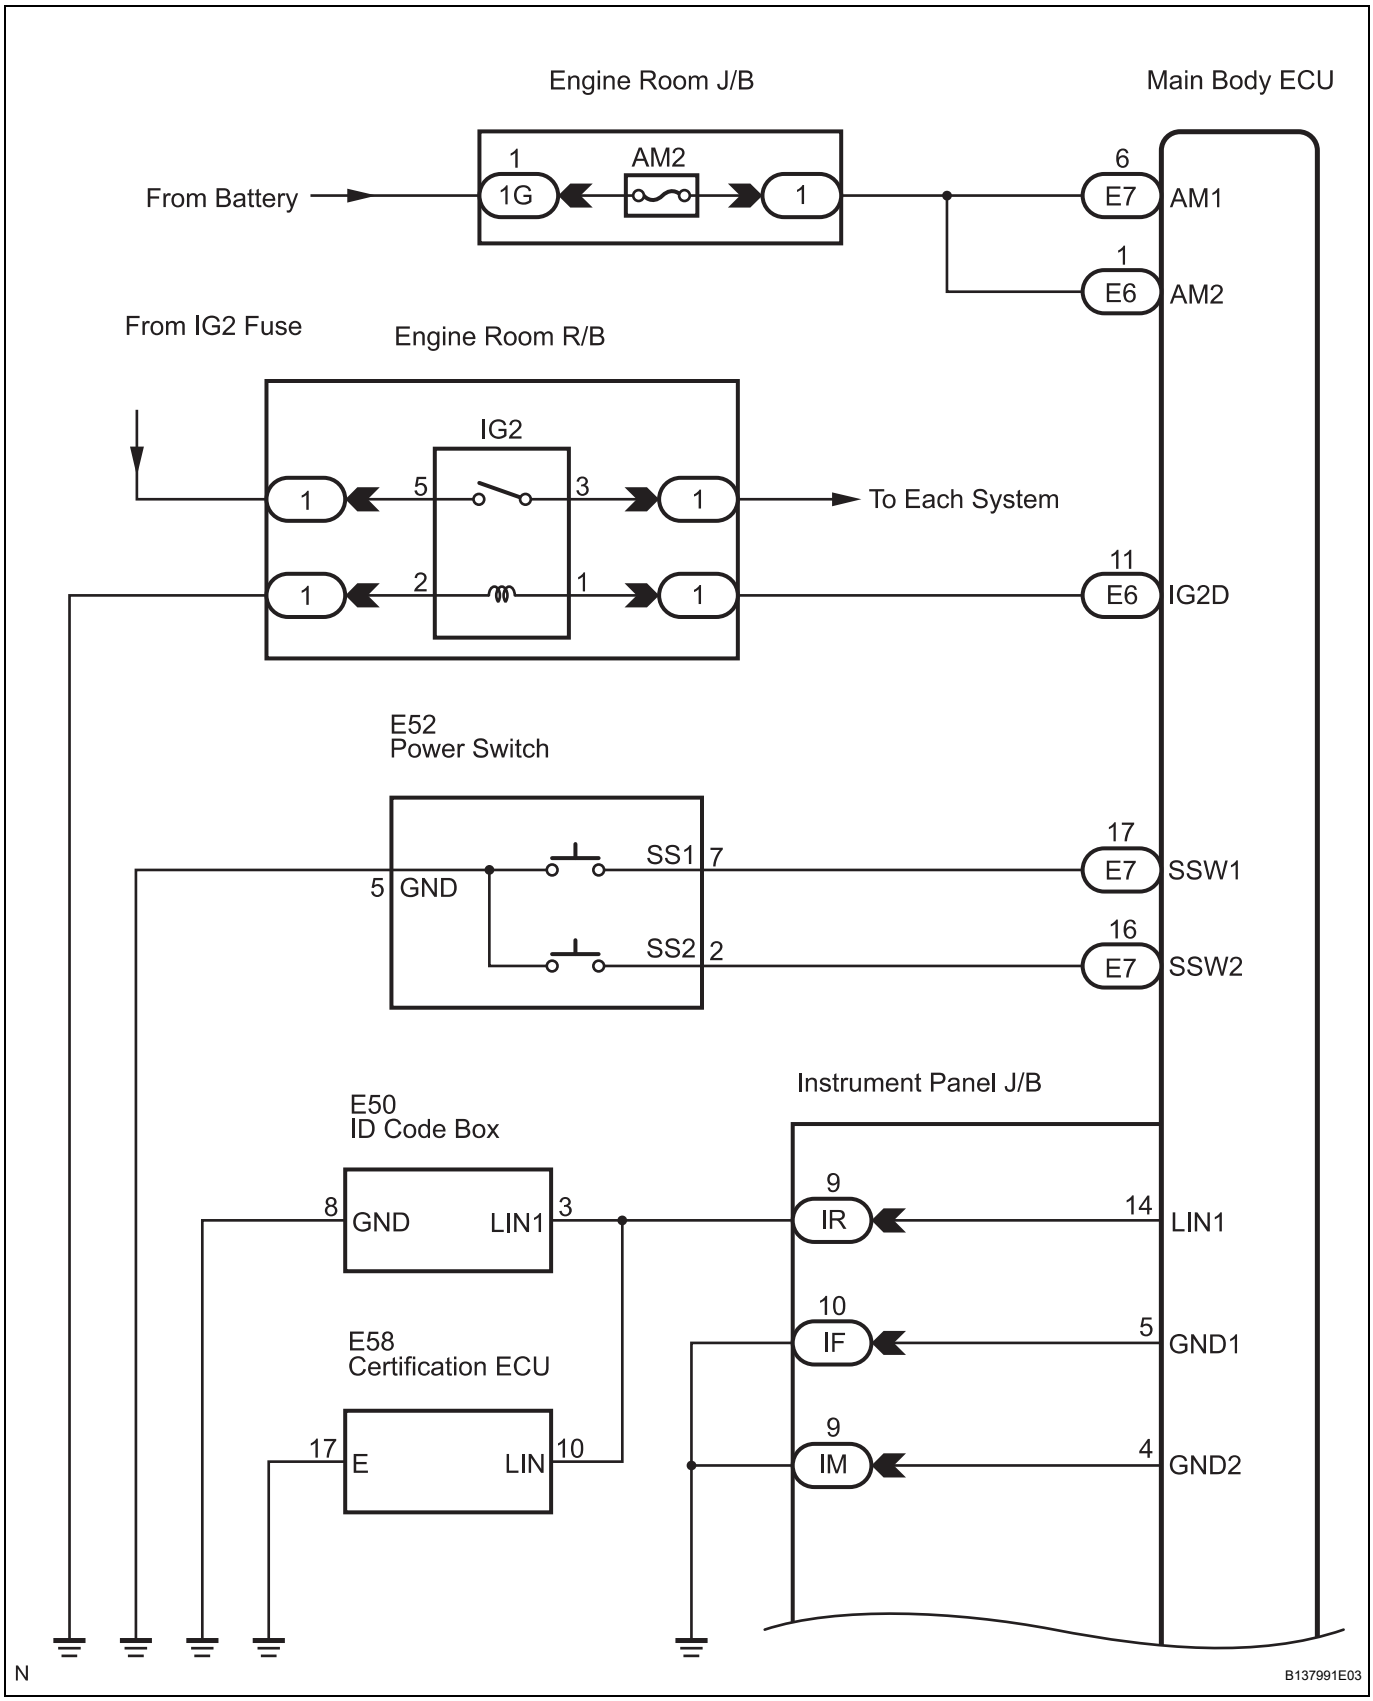
DESCRIPTION

When the power switch is pushed with the electrical key in the cabin, the main body ECU receives signals to switch the power source mode.

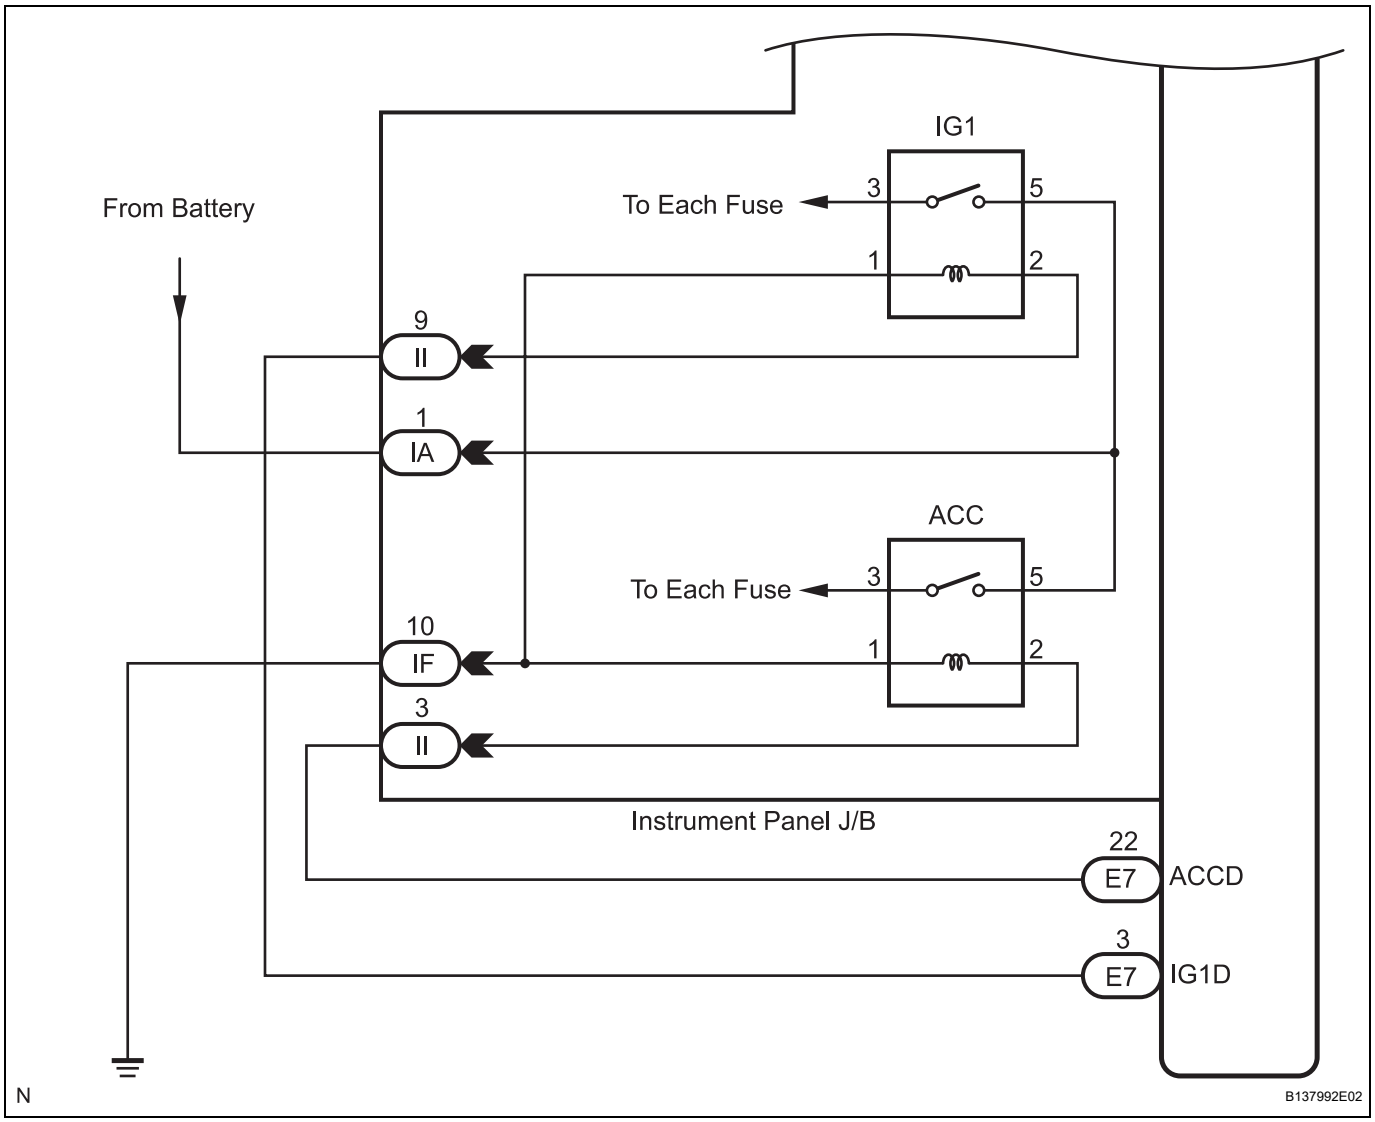
HINT:

To allow use of the intelligent tester to inspect the push-button start function when the power switch is off, repeat opening and closing any of the doors. Opening and closing a door establishes communication between the intelligent tester and the main body ECU. (Opening and closing a door can also be simulated by operating a door courtesy light switch.)

WIRING DIAGRAM

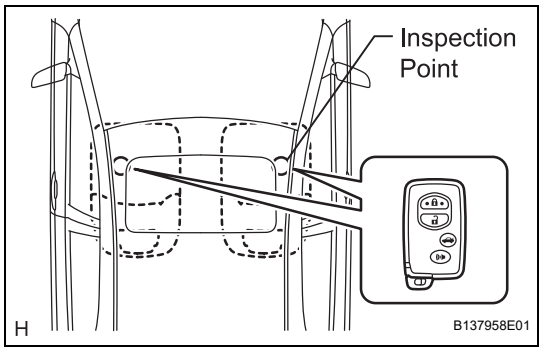


ST



INSPECTION PROCEDURE

1	CHECK ENTRY FUNCTION DETECTION AREA



(a) Inspect entry detection area.

(1) When the electrical key is in either of the 2 inspection points in the illustration, the shift lever is in the P position and brake pedal is depressed, check that the power switch indicator illuminates in green.

OK:

Power switch illuminates in green.

HINT:

- If the power switch does not illuminate, perform troubleshooting according to the PROBLEM SYMPTOMS TABLE of the smart key system (start) (power switch indicator light does not come on) (See page ST-13) and the smart key system (entry) (matching for inside of the cabin cannot be performed) (See page DL-121).

ST

NG → GO TO OTHER PROBLEM

OK

2	INSPECT FUSE (AM2)

(a) Remove the AM2 fuse from the engine room J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → REPLACE FUSE

OK

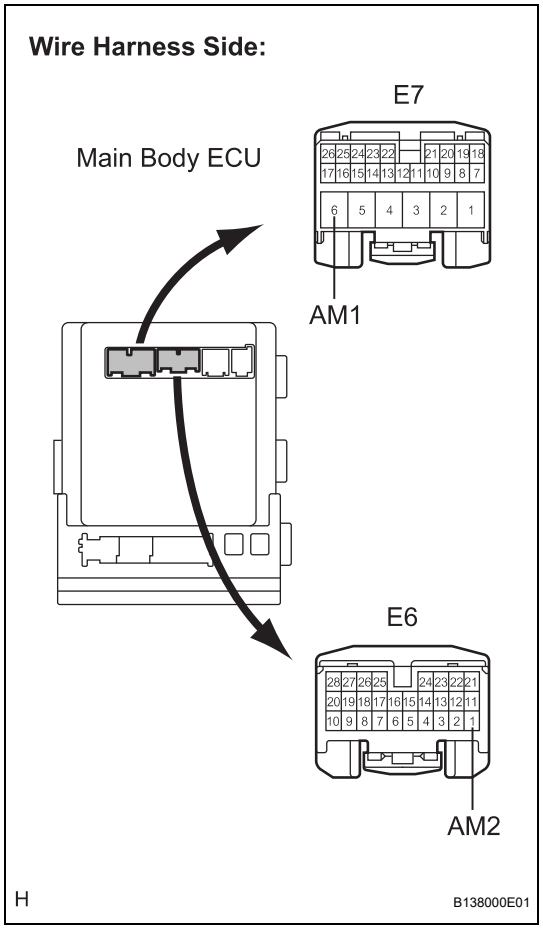
3	CHECK CONNECTORS

(a) Check that the connectors are securely connected and the terminals are not deformed or loose.
OK:
The connectors are securely connected and the terminals are not deformed or loose.

NG → REPAIR OR REPLACE CONNECTORS

OK

4	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E6 and E7 ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

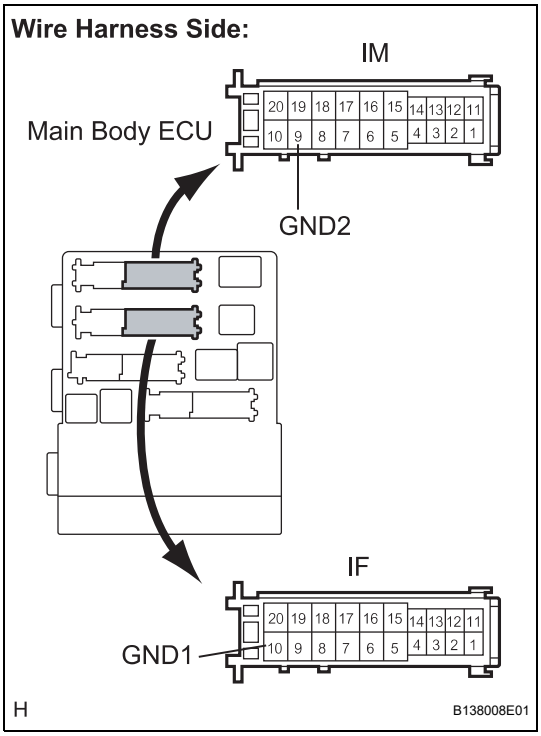
Tester Connection (Symbols)	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

5 CHECK WIRE HARNESS (MAIN BODY ECU - BODY GROUND)



(a) Disconnect the IF and IM ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IF-10 (GND1) - Body ground	Always	Below 1 Ω
IM-9 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

6 CHECK FOR DTCS

(a) Delete the DTCs (See page ST-21).
HINT:
After all the DTCs are cleared, check if the trouble occurs again 5 seconds after the power switch is turned on (IG).
(b) Check for DTCs again.
HINT:
If the DTCs for the smart key system malfunction are output, inspect those DTCs first (See page ST-23).
OK:
No DTC is output.

NG → **GO TO DTC CHART**

OK

7 READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Check the DATA LIST for proper functioning of the start switches 1 and 2.

HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STSW1	Start Switch 1/ON or OFF	ON: Power switch is pushed OFF: Power switch is not pushed	-
START SW2	Start Switch 2/ON or OFF	ON: Power switch is pushed OFF: Power switch is not pushed	-

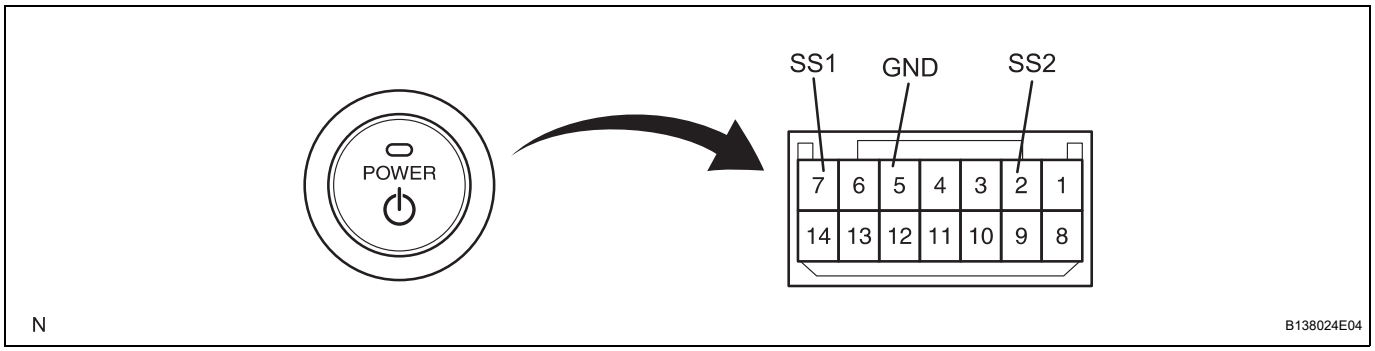
OK:
"ON" (Power switch on (IG)) and "OFF" (Power switch off) appear on the screen.

OK → **REPLACE MAIN BODY ECU**

NG

8 INSPECT POWER SWITCH

(a) Remove the power switch.



(b) Measure the resistance of the switch.
Standard resistance

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

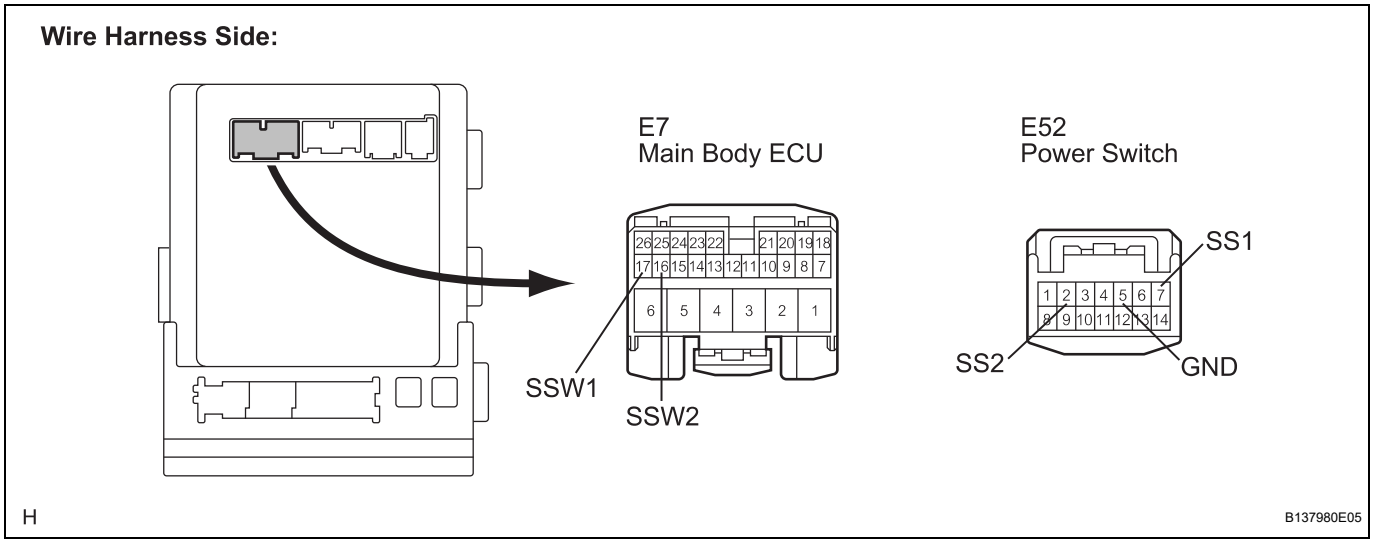
NG → **REPLACE POWER SWITCH**

OK

9 CHECK WIRE HARNESS (MAIN BODY ECU AND BODY GROUND - POWER SWITCH)

(a) Disconnect the E7 ECU connector.

ST



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E52-7 (SS1) - E7-17 (SSW1)	Always	Below 1 Ω
E52-2 (SS2) - E7-16 (SSW2)	Always	Below 1 Ω
E52-5 (GND) - Body ground	Always	Below 1 Ω
E52-7 (SS1) or E7-17 (SSW1) - Body ground	Always	10 kΩ or higher
E52-2 (SS2) or E7-16 (SSW2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

ST

Power Source Mode does not Change to ON (IG)

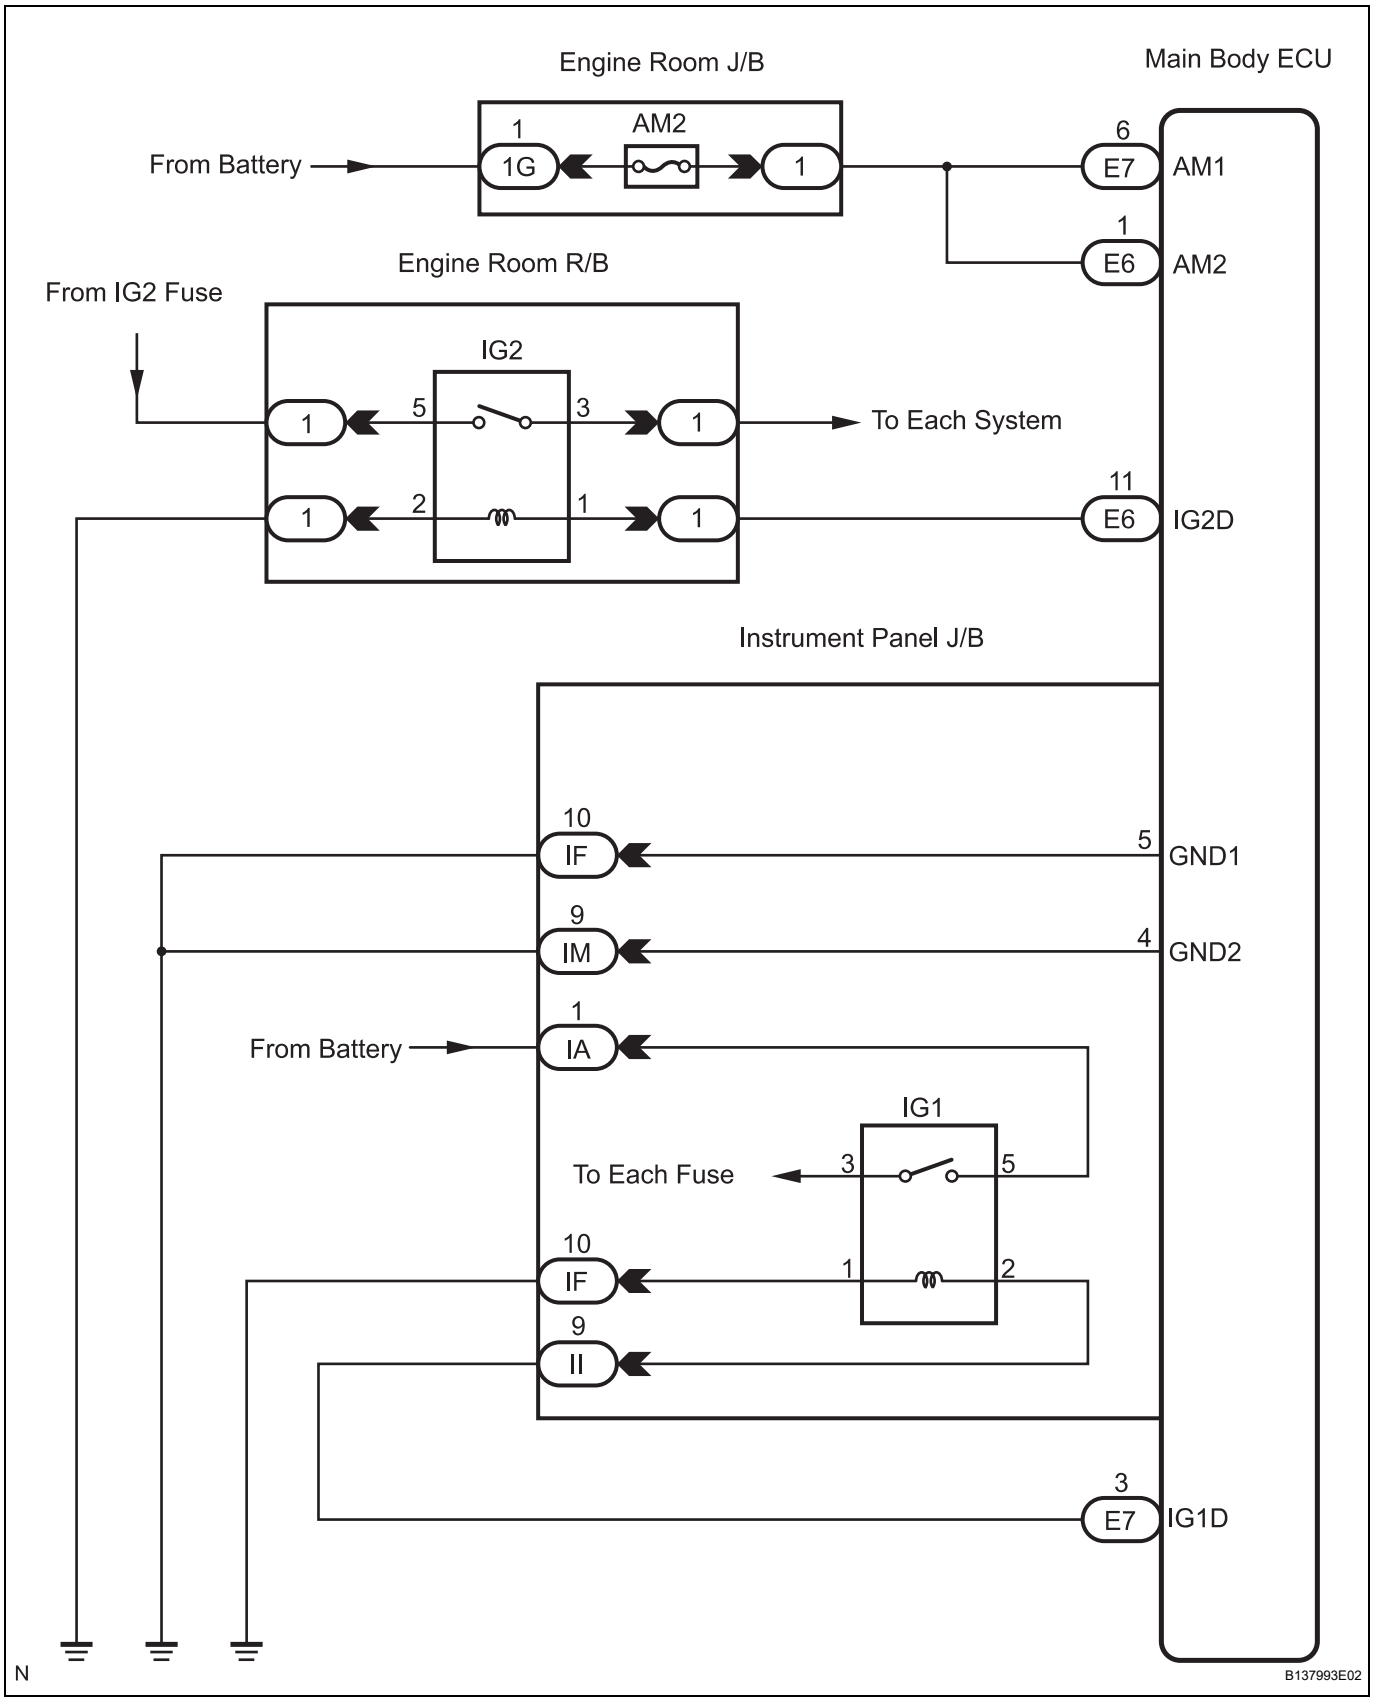
DESCRIPTION

When the power switch is pushed with the electrical key in the cabin, the main body ECU receives signals to switch the power source mode.

HINT:

To allow use of the intelligent tester to inspect the push-button start function when the power switch is off, repeat opening and closing any of the doors. Opening and closing a door establishes communication between the intelligent tester and the main body ECU. (Opening and closing a door can also be simulated by operating a door courtesy light switch.)

WIRING DIAGRAM



ST

INSPECTION PROCEDURE

1	INSPECT FUSE (AM2)

(a) Remove the AM2 fuse from the engine room J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

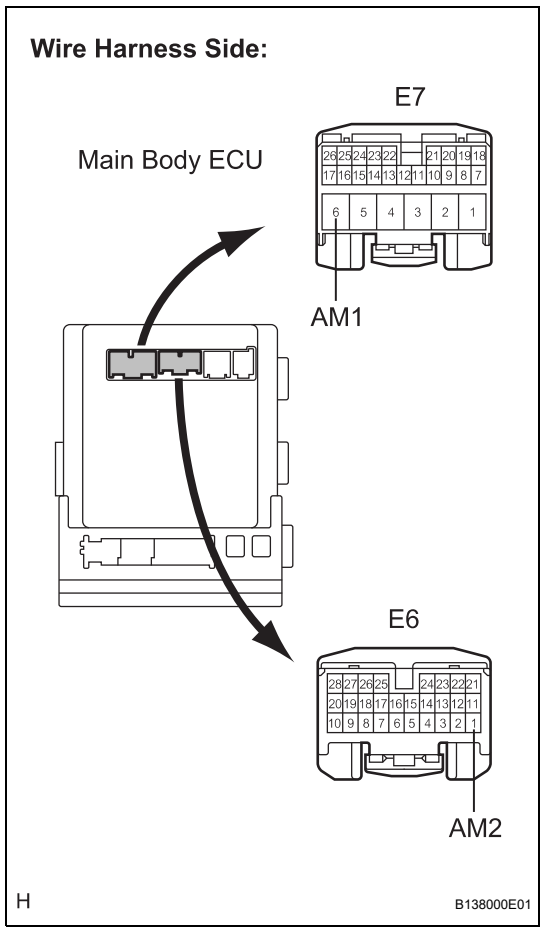
2	CHECK CONNECTORS

(a) Check that the connectors are securely connected and the terminals are not deformed or loose.
OK:
The connectors are securely connected and the terminals are not deformed or loose.

NG → **REPAIR OR REPLACE CONNECTORS**

OK

3	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E6 and E7 ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

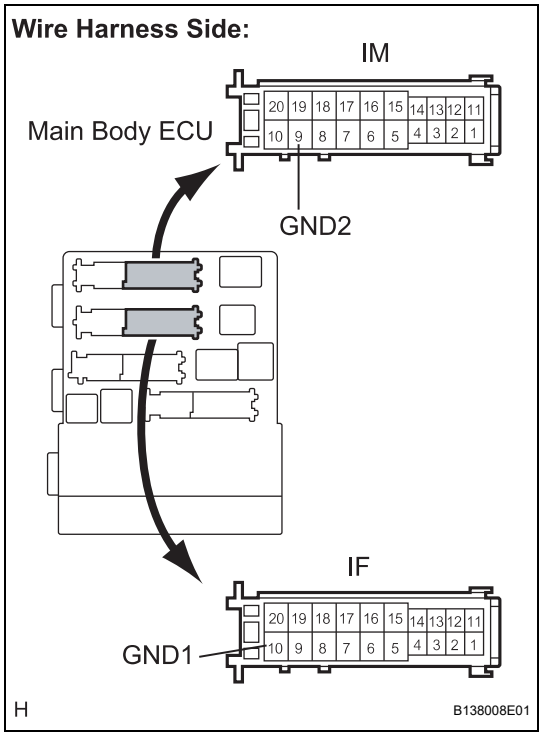
Tester Connection (Symbols)	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

4 CHECK WIRE HARNESS (MAIN BODY ECU - BODY GROUND)



(a) Disconnect the IF and IM ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

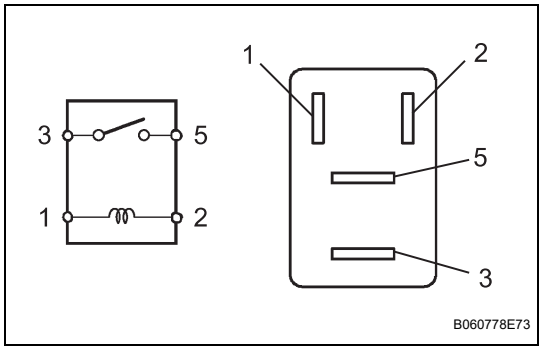
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IF-10 (GND1) - Body ground	Always	Below 1 Ω
IM-9 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 INSPECT RELAY (IG2 RELAY)



(a) Remove the IG2 relay from the engine room R/B No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE RELAY**

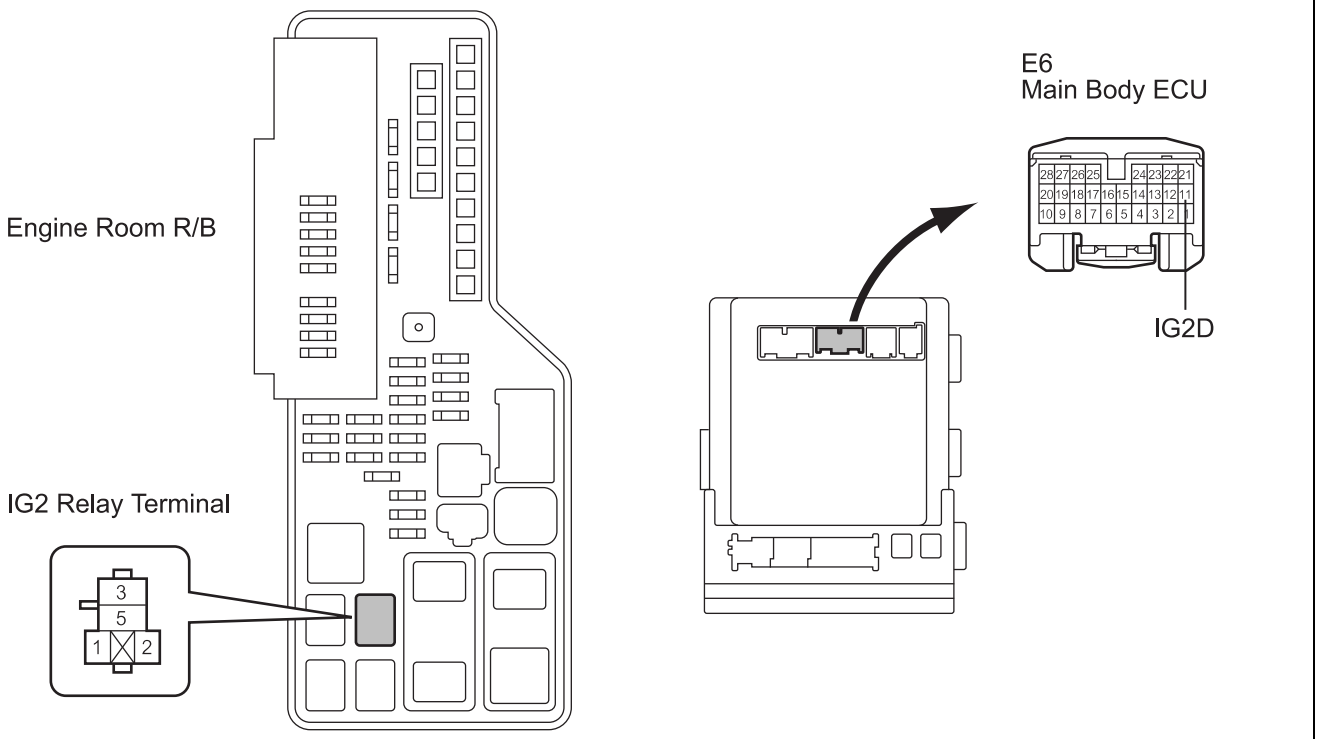
OK

6 CHECK WIRE HARNESS (ENGINE ROOM R/B - MAIN BODY ECU AND BODY GROUND)

(a) Remove the IG2 relay from the engine room R/B.

ST

Wire Harness Side:



ST

(b) Disconnect the E6 ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

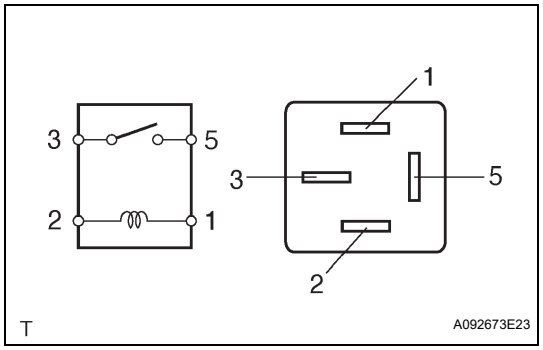
Standard resistance

Terminal No. (Symbol)	Specified Condition
Engine Room R/B IG2 relay terminal 1 - E6-11 (IG2D)	Below 1 Ω
Engine Room R/B IG2 relay terminal 2 - Body ground	Below 1 Ω
E6-11 (IG2D) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7 INSPECT RELAY (IG1 RELAY)



(a) Remove the IG1 relay from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

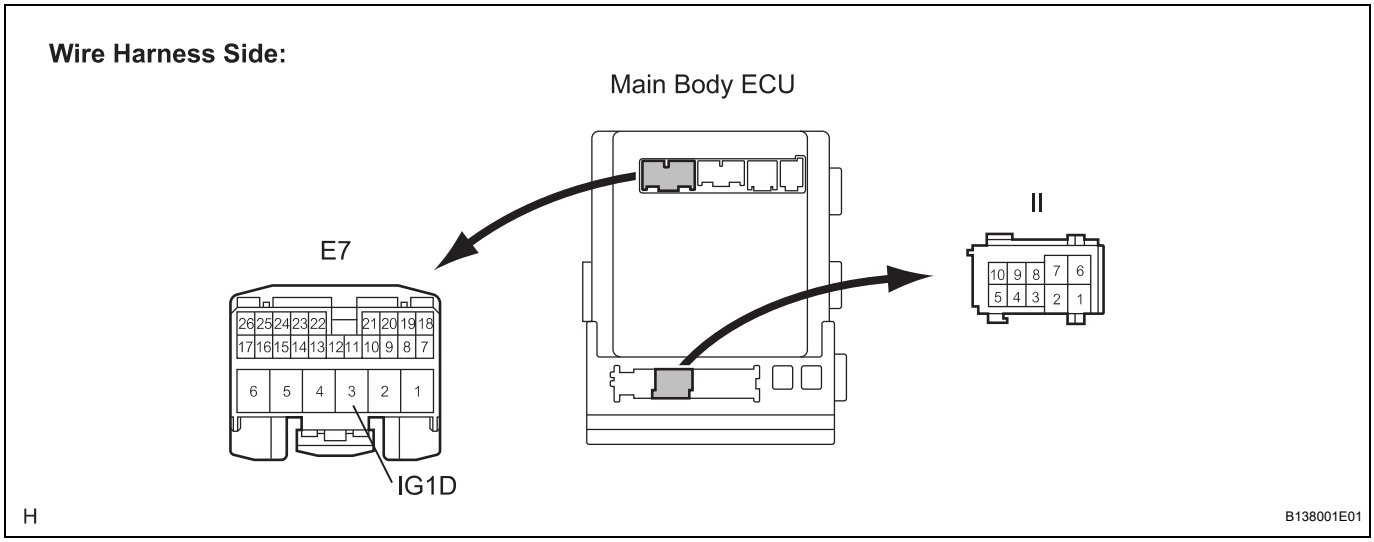
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

NG → **REPLACE RELAY**

OK

8 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - MAIN BODY ECU)

(a) Disconnect the II J/B connector.



(b) Disconnect the E7 ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

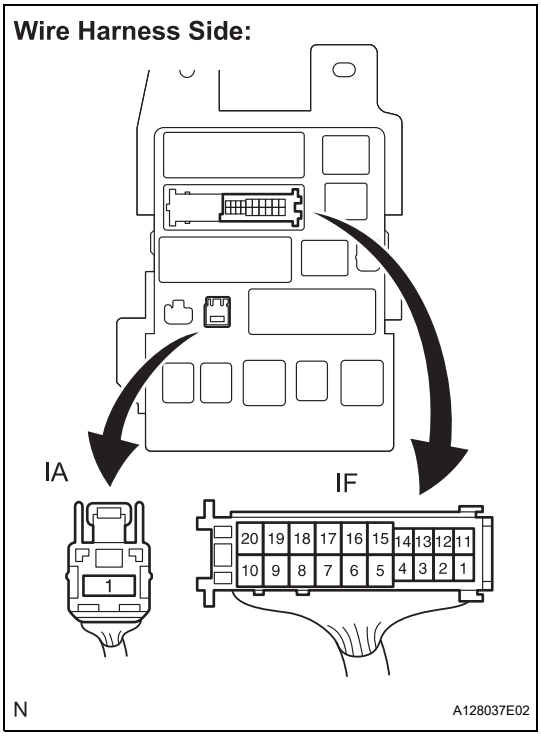
Terminal No. (Symbol)	Condition	Specified Condition
II-9 - E7-3 (IG1D)	Always	Below 1 Ω
E7-3 (IG1D) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

9	CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - BATTERY AND BODY GROUND)



(a) Disconnect the IF and IA J/B connectors.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Terminal No.	Condition	Specified Condition
IF-10 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

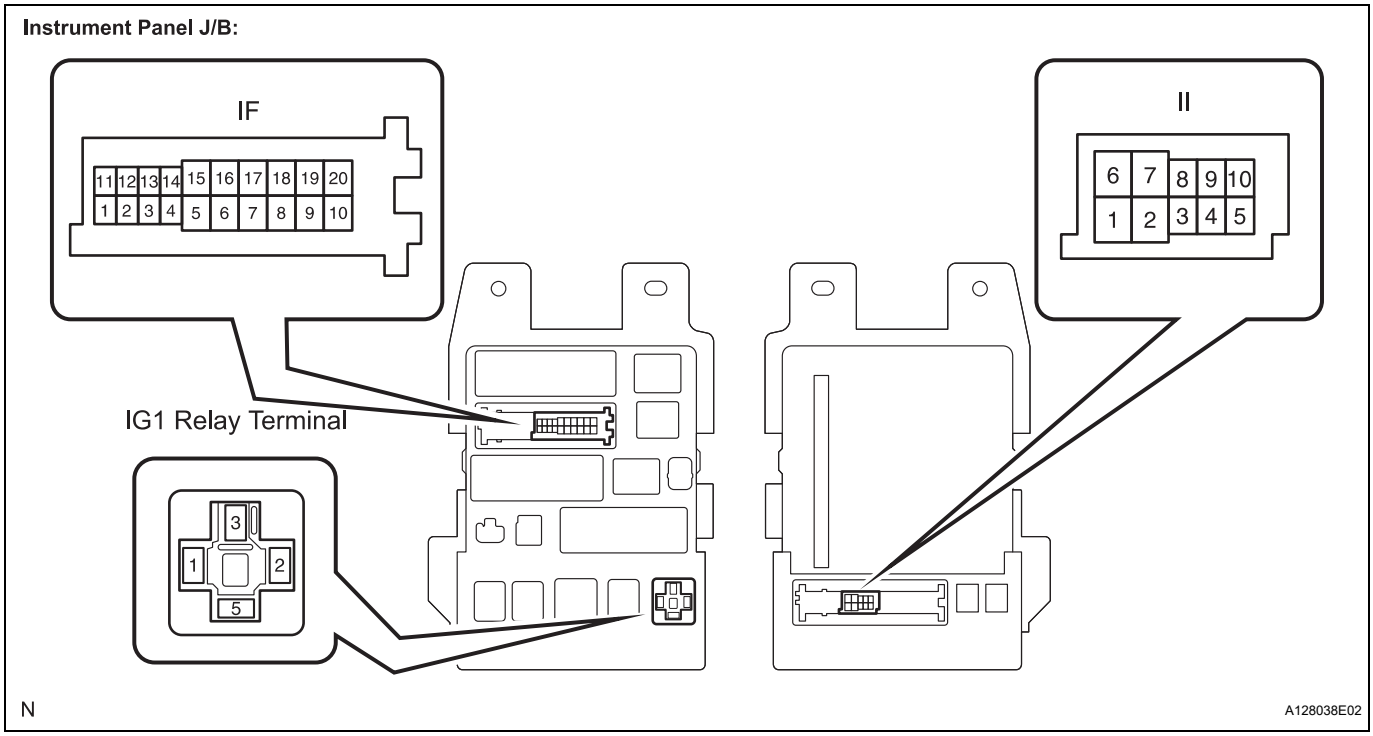
Terminal No.	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10	INSPECT INSTRUMENT PANEL J/B

(a) Measure the resistance according to the value(s) in the table below.



Standard resistance

Terminal No.	Condition	Specified Condition
IF-10 - IG1 relay terminal-1	Always	Below 1 Ω
II-9 - IG1 relay terminal-2	Always	Below 1 Ω
IF-10 - Body ground	Always	10 kΩ or higher
II-9 - Body ground	Always	10 kΩ or higher

OK → REPLACE MAIN BODY ECU

NG

REPLACE INSTRUMENT PANEL J/B

ST

Power Source Mode does not Change to ON (ACC)

DESCRIPTION

When the power switch is pushed with the electrical key in the cabin, the main body ECU receives signals to switch the power source mode.

HINT:

To allow use of the intelligent tester to inspect the push-button start function when the power switch is off, repeat opening and closing any of the doors. Opening and closing a door establishes communication between the intelligent tester and the main body ECU. (Opening and closing a door can also be simulated by operating a door courtesy light switch.)

INSPECTION PROCEDURE

1	INSPECT FUSE (AM2)

(a) Remove the AM2 fuse from the engine room J/B.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

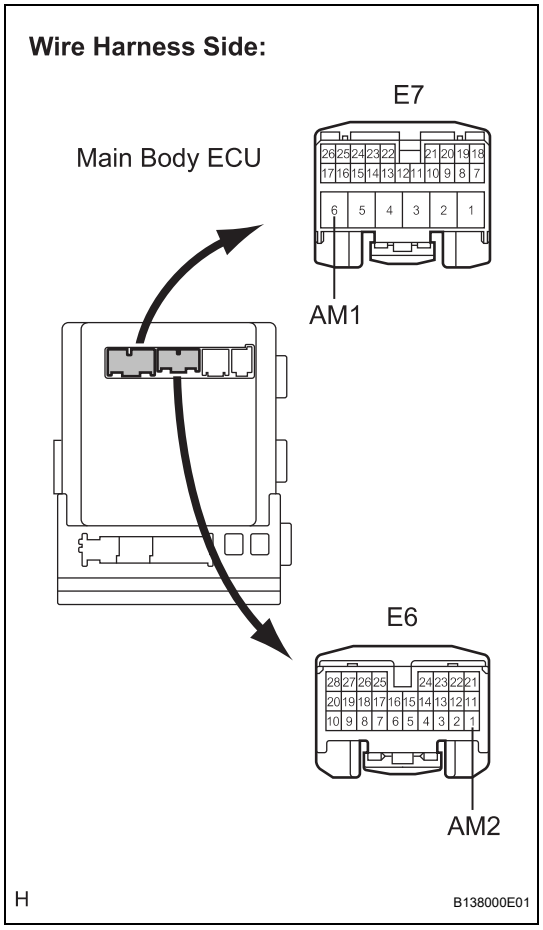
2	CHECK CONNECTORS

(a) Check that the connectors are securely connected and the terminals are not deformed or loose.
OK:
The connectors are securely connected and the terminals are not deformed or loose.

NG → **REPAIR OR REPLACE CONNECTORS**

OK

3	CHECK WIRE HARNESS (MAIN BODY ECU - BATTERY)



(a) Disconnect the E6 and E7 ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

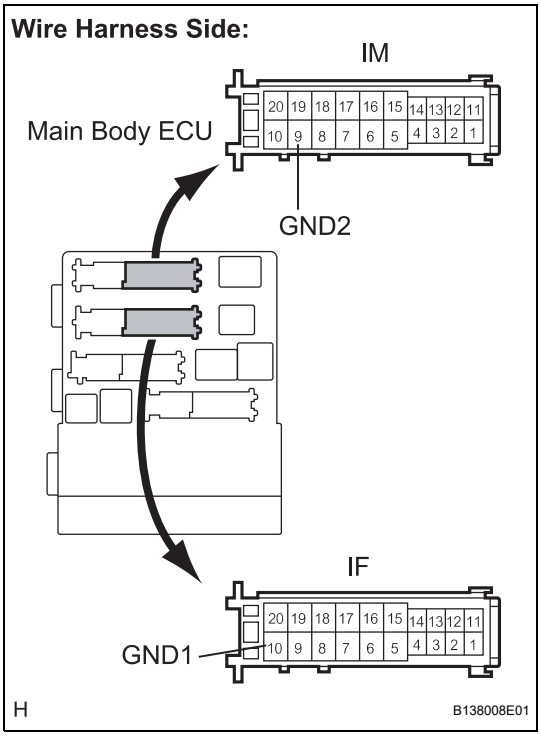
Tester Connection (Symbols)	Condition	Specified Condition
E7-6 (AM1) - Body ground	Always	10 to 14 V
E6-1 (AM2) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

4 CHECK WIRE HARNESS (MAIN BODY ECU - BODY GROUND)



(a) Disconnect the IF and IM ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

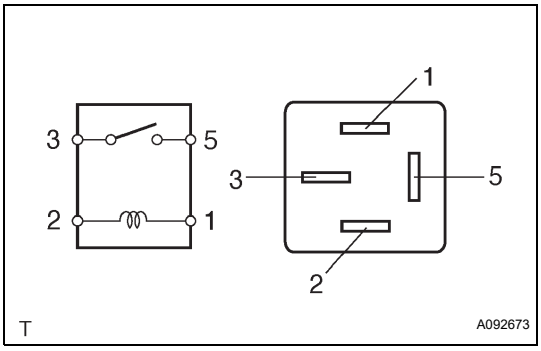
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
IF-10 (GND1) - Body ground	Always	Below 1 Ω
IM-9 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 INSPECT RELAY (ACC RELAY)



(a) Remove the ACC relay from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

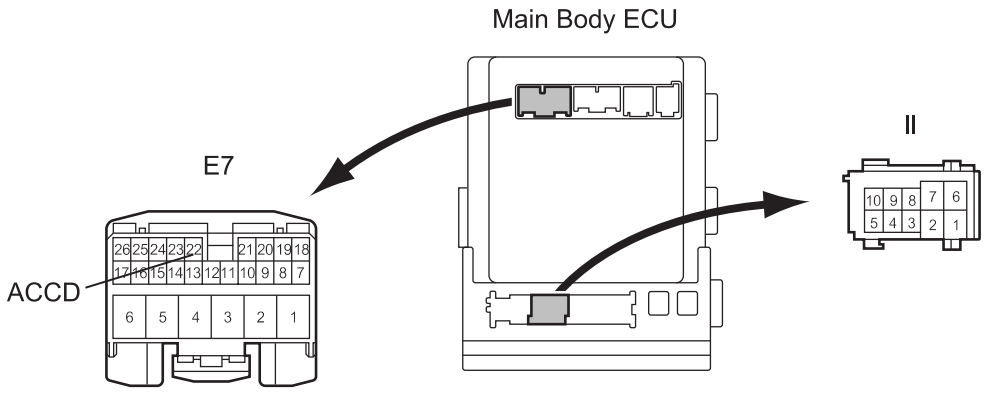
NG → **REPLACE RELAY**

OK

6 CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - MAIN BODY ECU)

(a) Disconnect the E7 ECU connector.

Wire Harness Side:



H

B138001E03

(b) Disconnect the II J/B connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

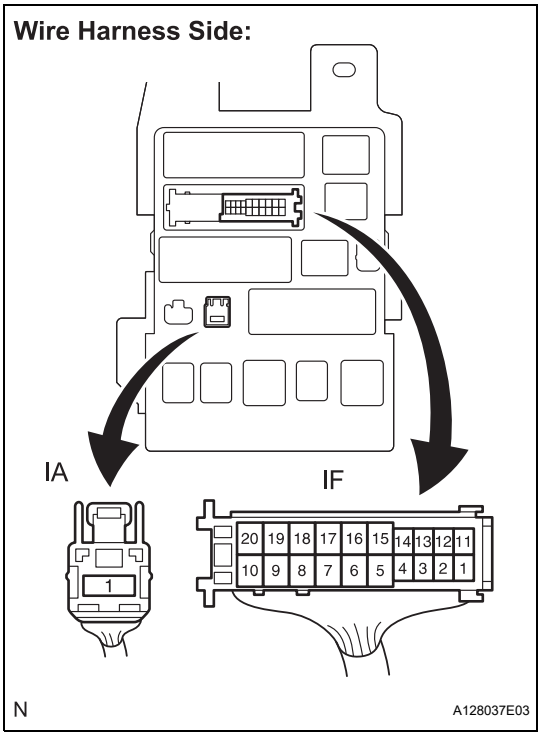
Terminal No. (Symbol)	Condition	Specified Condition
II-3 - E7-22 (ACCD)	Always	Below 1 Ω
E7-22 or II-3 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

ST

7	CHECK WIRE HARNESS (INSTRUMENT PANEL J/B - BATTERY AND BODY GROUND)



(a) Disconnect the IF and IA J/B connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Terminal No.	Condition	Specified Condition
IF-10 - Body ground	Always	Below 1 Ω

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

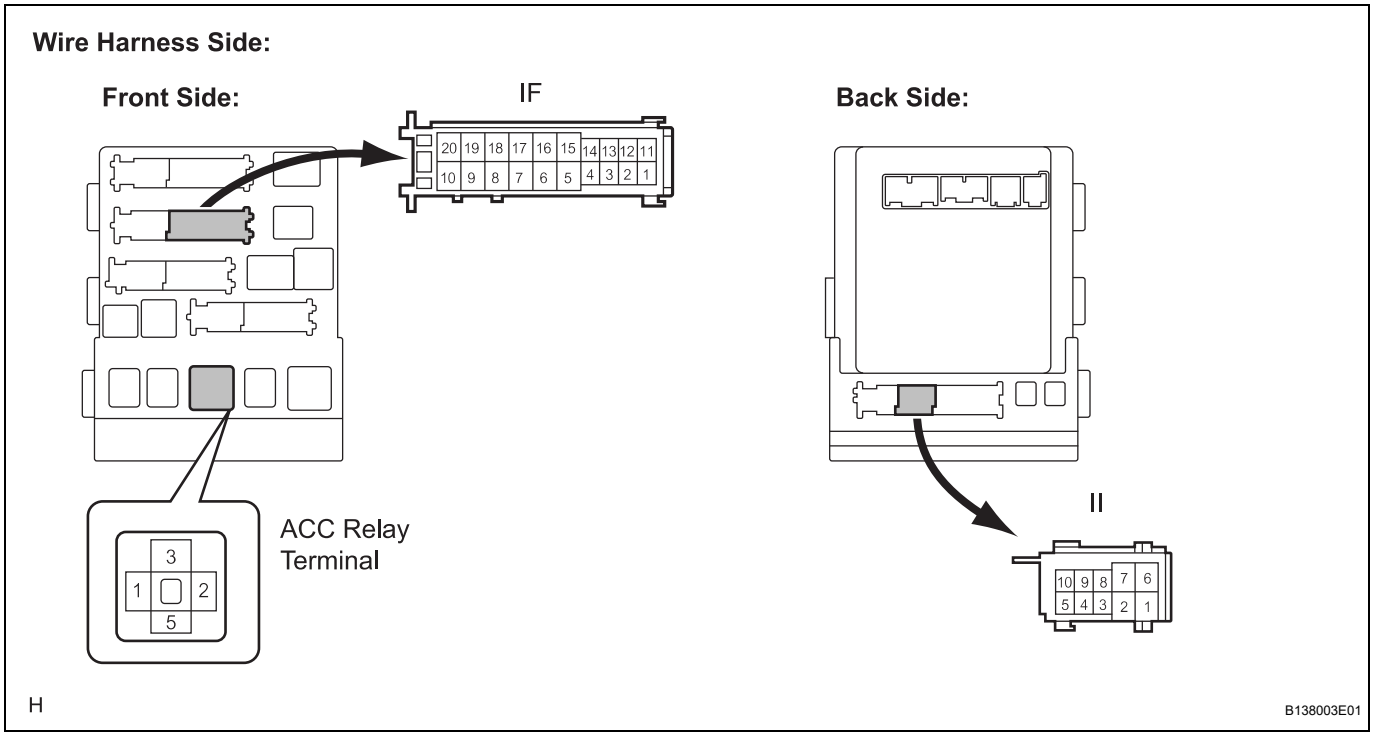
Terminal No.	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	INSPECT INSTRUMENT PANEL J/B

(a) Measure the resistance according to the value(s) in the table below.



Standard resistance

Terminal No.	Condition	Specified Condition
ACC relay terminal 1 - IF-10	Always	Below 1 Ω
ACC relay terminal 2 - II-3	Always	Below 1 Ω
IF-10 - Body ground	Always	10 kΩ or higher
II-3 - Body ground	Always	10 kΩ or higher

NG → REPLACE INSTRUMENT PANEL J/B

OK

REPLACE MAIN BODY ECU

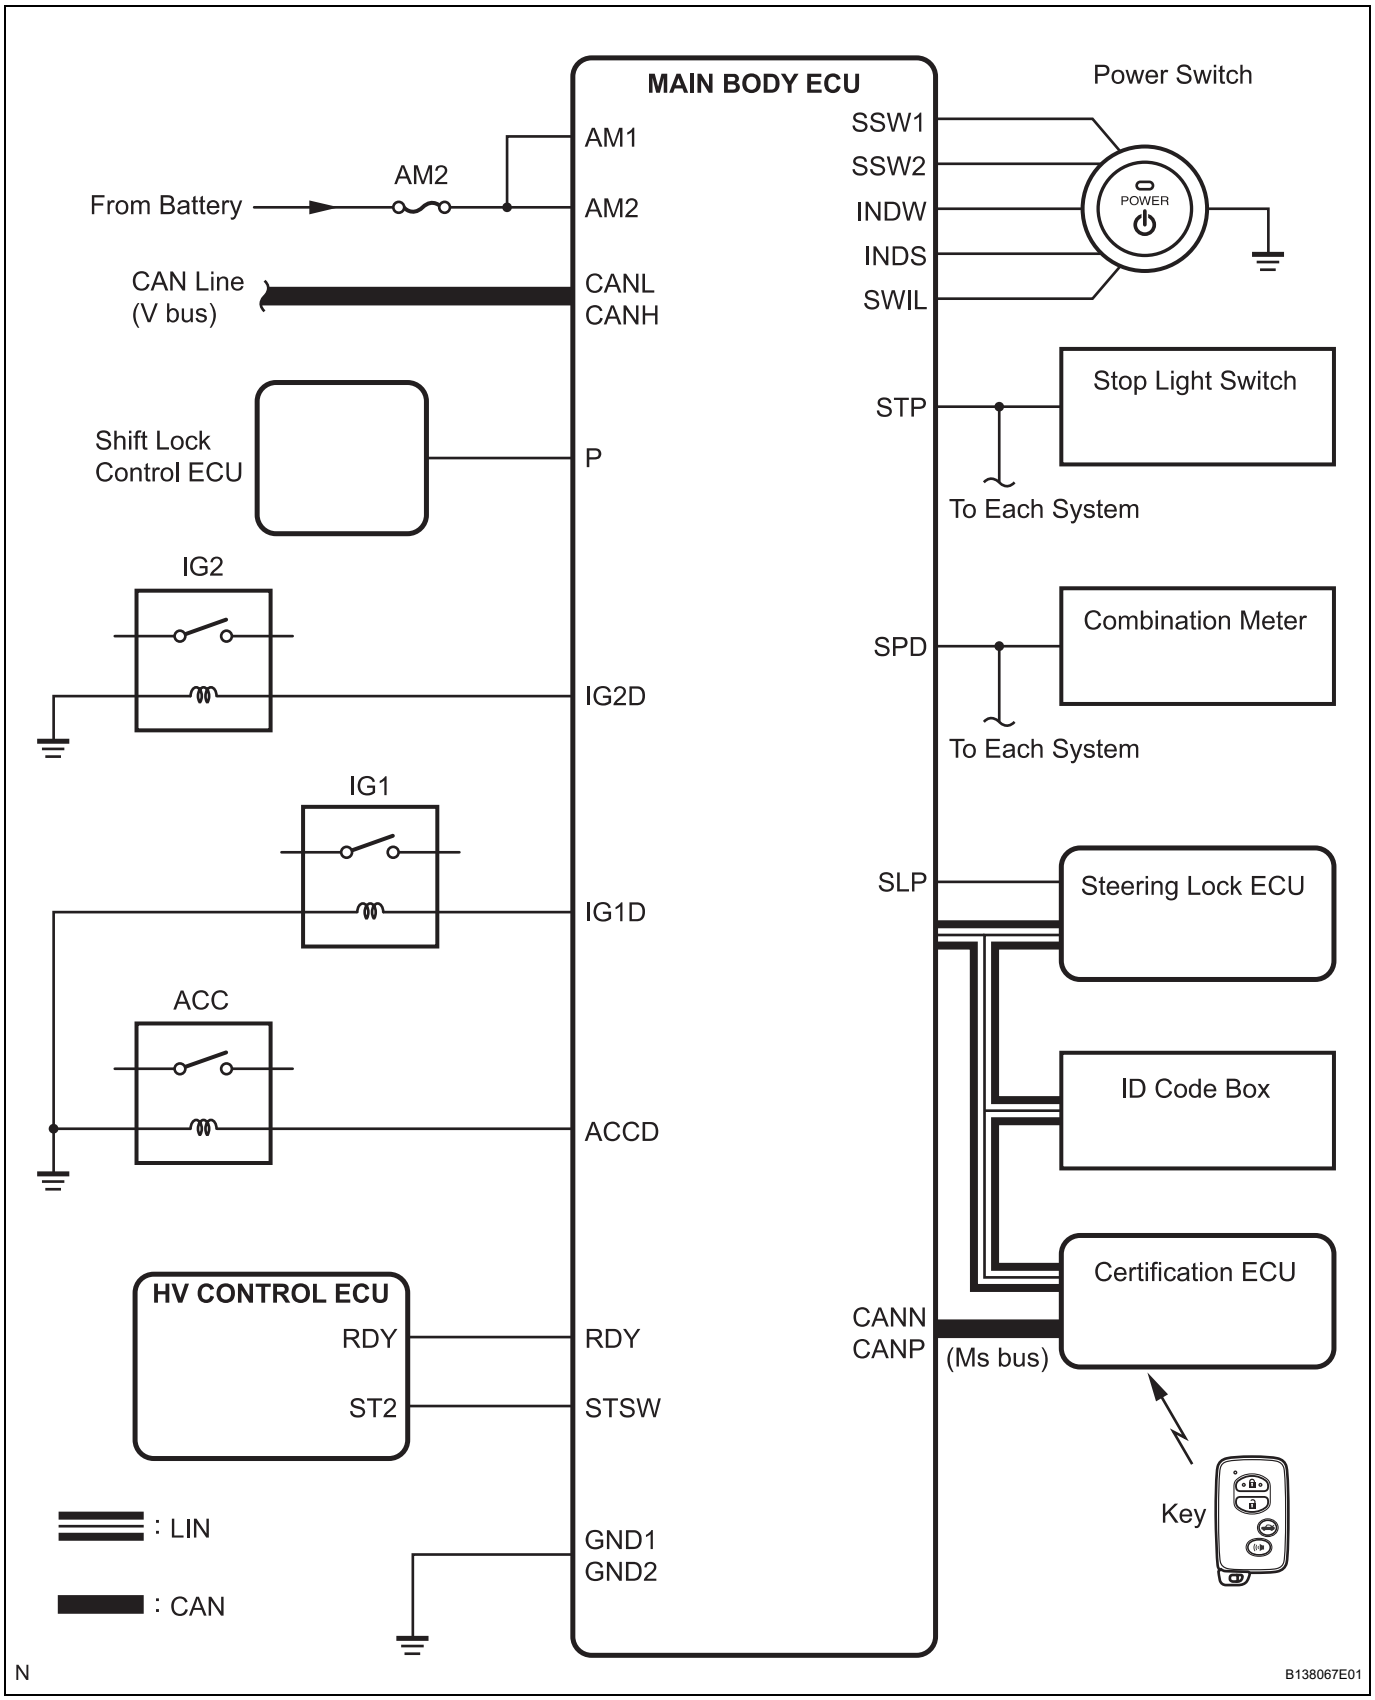
Power Source Mode does not Change to ON (READY)

DESCRIPTION

1. POWER SWITCH ON (READY) FUNCTION

(a) If the power switch is pressed with the shift lever in the P position and the brake pedal depressed, the main body ECU determines that it is a HV control system on (READY) request.
(b) The certification ECU and other ECUs perform key verification via the LIN communication line.
(c) The main body ECU activates the ACC relay.
(d) The main body ECU activates the IG1 and IG2 relays.
(e) The certification ECU outputs a steering UNLOCK signal. The signal is sent to the main body ECU via the steering lock ECU.
(f) The main body ECU sends an on (READY) request signal to the HV control ECU.
(g) When HV control system on (READY) requests signal, the main body ECU determines that the HV control system has been on (READY).
The ECU reactivates turns off the power switch indicator light.

Symbols of main body ECU	Signals
STP	Stop light switch ON signal
SSW1/SSW2	Power switch ON signal
ACCD	ACC relay operation signal
IG1D	IG1 relay operation signal
SLP	Steering lock position signal
IG2D	IG2 relay operation signal
P	Park/neutral position switch signal
RDY	HV control system on (READY) detection signal
STSW	HV control system on (READY) request signal



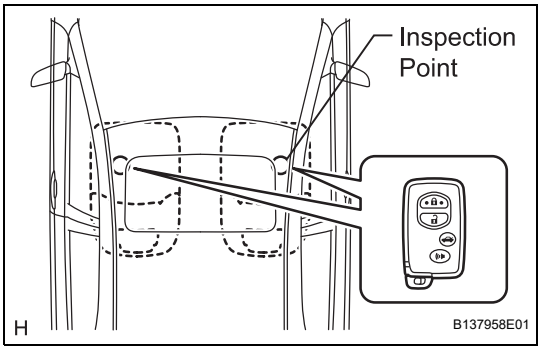
ST

INSPECTION PROCEDURE

HINT:

After the main body ECU, certification ECU, steering lock ECU, ID code box and/or HV control ECU are/is replaced, perform the registration procedures for the engine immobiliser system (See page EI-9).

1	CHECK ENTRY FUNCTION DETECTION AREA



(a) Inspect entry detection area.
(1) When the electrical key is in either of the 2 inspection points in the illustration, the shift lever is in the P position and the brake pedal is depressed, check that the power switch indicator illuminates in green.
OK:
Power switch illuminates in green.
HINT:
If the power switch does not illuminate, perform troubleshooting according to the PROBLEM SYMPTOMS TABLE of the smart key system (starting function) (power switch indicator light does not come on) (See page ST-13) and the smart key system (entry door lock function) (matching for the inside of the cabin cannot be performed) (See page DL-121).

NG → **GO TO OTHER PROBLEM**

OK

2	CHECK IF POWER SWITCH ON (READY) (INITIALIZE STEERING LOCK)

(a) Make sure that the shift lever is in the P position.
(b) Open and close the driver's door with the power switch off. Check if the HV control system can be started.
OK:
HV control system can be started.
HINT:
After the battery is discharged and then recharged, the HV control system may not start unless the steering lock is initialized using the above procedure (See page SR-9).

OK → **END**

NG

3	CHECK FOR DTC

(a) Delete the DTCs (See page ST-21).
(b) Check for DTCs again.
OK:
No DTC is output.
HINT:
- If smart key system (starting function) DTCs are output (See page ST-23).
- If smart key system (entry door lock function) DTCs are output (See page DL-133).

ST

- If electrical steering lock DTCs are output (See page SR-16).
- If engine immobiliser system DTCs are output (See page EI-27).
- If HV control system DTCs are output (See page HV-46).

NG → GO TO DTC CHART

OK

4 CHECK POWER SWITCH CONDITION

(a) Check the power source mode change.
(1) When the key is inside the vehicle and the shift lever is in the P position, check that pressing the power switch causes the power source mode to change as follows:
OK:
off → on (ACC) → on (IG) → off
HINT:
- If power mode does not change to ON (IG and ACC) (See page ST-91).
- If power mode does not change to ON (IG) (See page ST-99).
- If power mode does not change to ON (ACC) (See page ST-108).

NG → GO TO OTHER PROBLEM

OK

5 READ VALUE OF INTELLIGENT TESTER (P SIGNAL)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Read the DATA LIST according to the displays on the tester screen.

MAIN BODY:

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
SHIFT P SIG	Shift P signal/ON or OFF	ON: Shift position is P (Power switch on (ACC)) OFF: Shift position is not P (Power switch off)	-

OK:
ON (P signal is ON) and OFF (P signal is OFF) appear on the screen.
HINT:
If the result is not as specified, perform troubleshooting for DTC B2281 first (See page ST-51).

NG → GO TO DTC B2281

OK

6	READ VALUE OF INTELLIGENT TESTER (STOP LIGHT SWITCH)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Check the DATA LIST for proper functioning of the stop light switch.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STOP LAMP SW	Stop light Switch/ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-

OK:
ON (brake pedal depressed) and OFF (brake pedal released) appear on the screen.
HINT:
If the result is not as specified, perform troubleshooting for DTC B2284 first (See page ST-65).

NG → **GO TO DTC B2284**

OK

7	READ VALUE OF INTELLIGENT TESTER (STEERING LOCK)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
STR UNLOCK SW	Steering lock condition/ON or OFF	ON: Steering is unlocked (Power switch on (ACC)) OFF: Steering is locked (Power switch off)	-

OK:
ON (steering is unlocked) and OFF (steering is locked) appear on the screen.
HINT:
If the result is not as specified, perform troubleshooting for DTCs B2285 and B2288 first (See page ST-23).

NG → **GO TO DTC B2285 AND B2288**

OK

8	CHECK STEERING LOCK

(a) Check if the steering lock is released when turning the power switch on (ACC).
OK:
The steering lock is released.

ST

NG → GO TO STEERING LOCK SYSTEM

OK

9	READ VALUE OF INTELLIGENT TESTER (L CODE)

(a) Reconnect the connectors.
(b) Connect the intelligent tester to the DLC3.
HINT:
When using intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.
(c) Turn the power switch on (IG).

SMART KEY (Certification ECU):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
L CODE CHK	L code check/ON or NG	OK: Normal NG: Malfunction	Electrical key in the cabin

OK:
OK is displayed on the screen.
HINT:
If the result is not as specified, there may be a malfunction with the steering lock ECU or the ID code box.

NG → GO TO ENGINE IMMOBILISER SYSTEM

OK

10	READ VALUE OF INTELLIGENT TESTER (ON (READY))

(a) Connect the intelligent tester to the DLC3.
HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.
(b) Turn the power switch on (IG).

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
READY SIG	HV control system on (READY) response/ON or OFF	ON: System is on (READY) OFF: System is off	-

OK:
ON and OFF appear on the screen.

NG → REPLACE CERTIFICATION ECU

OK

11	READ VALUE OF INTELLIGENT TESTER (S CODE)

(a) Connect the intelligent tester to the DLC3.
HINT:
When using the intelligent tester with the power switch off, turn on and off any of the door courtesy light switches repeatedly at 1.5 second intervals or less until communication between the tester and vehicle starts.
(b) Turn the power switch on (IG).

SMART KEY (Certification ECU):

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
S CODE CHK	S code check/OK or NG	OK: Normal NG: Malfunction	-

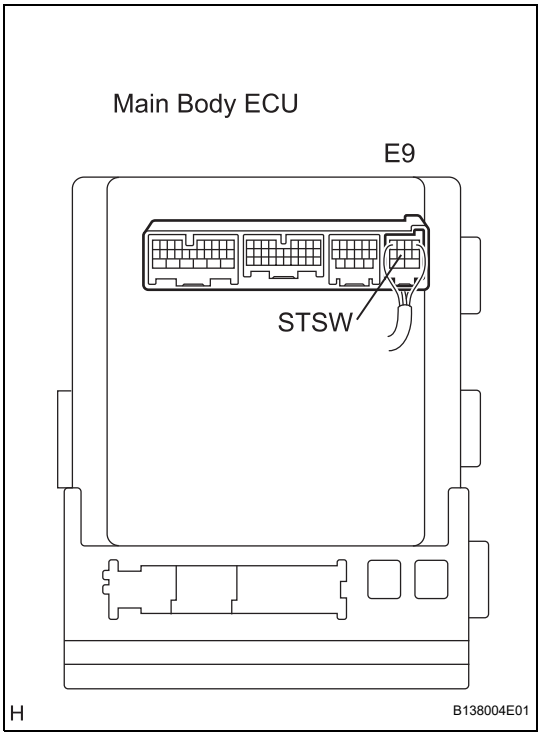
OK:
OK is displayed on the screen.
HINT:
If the result is not as specified, there may be a malfunction with the certification ECU or the ID code box.

NG → **GO TO ENGINE IMMOBILISER SYSTEM**

OK

ST

12	INSPECT MAIN BODY ECU (STSW VOLTAGE)



(a) Disconnect the A61 HV control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

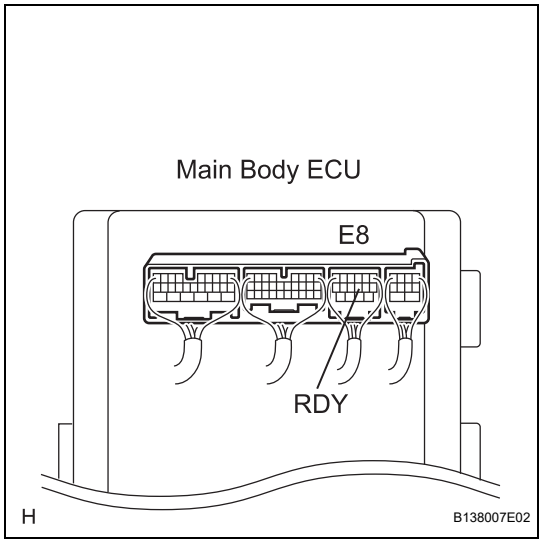
Tester Connection (Symbols)	Condition	Specified Condition
E9-4 (STSW) - Body ground	Brake pedal depressed, shift lever P position, power switch is pushed once	Output voltage at terminal AM1 or AM2 is - 2 V or more.

HINT:
If the result is not as specified, perform troubleshooting for DTC B2275 first (See page ST-42).

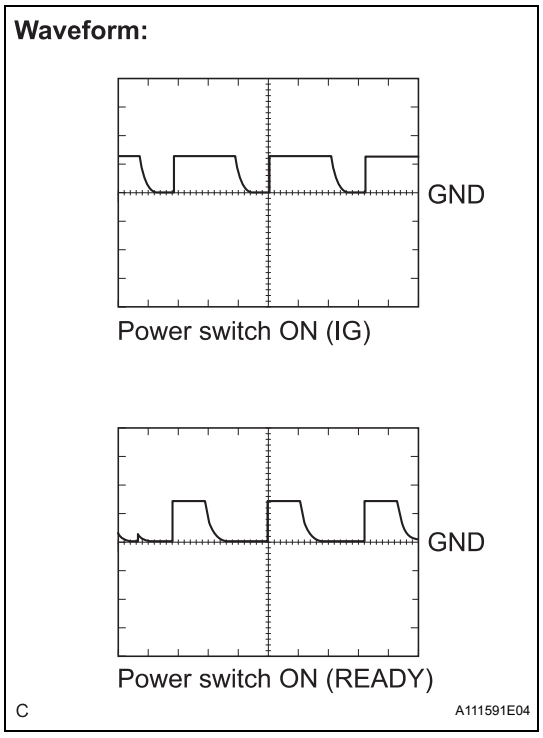
NG → **GO TO DTC B2275**

OK

13	INSPECT HYBRID VEHICLE CONTROL ECU (RDY SIGNAL)



(a) Check the input signal waveform.
(1) Reconnect the HV control ECU connector.
(2) Connect an oscilloscope to terminal E8-8 (RDY) and body ground.
(3) Turn the power switch on (IG).



(4) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	10 V/DIV., 10 ms./DIV.
Vehicle condition	Power switch on (IG) or on (READY)

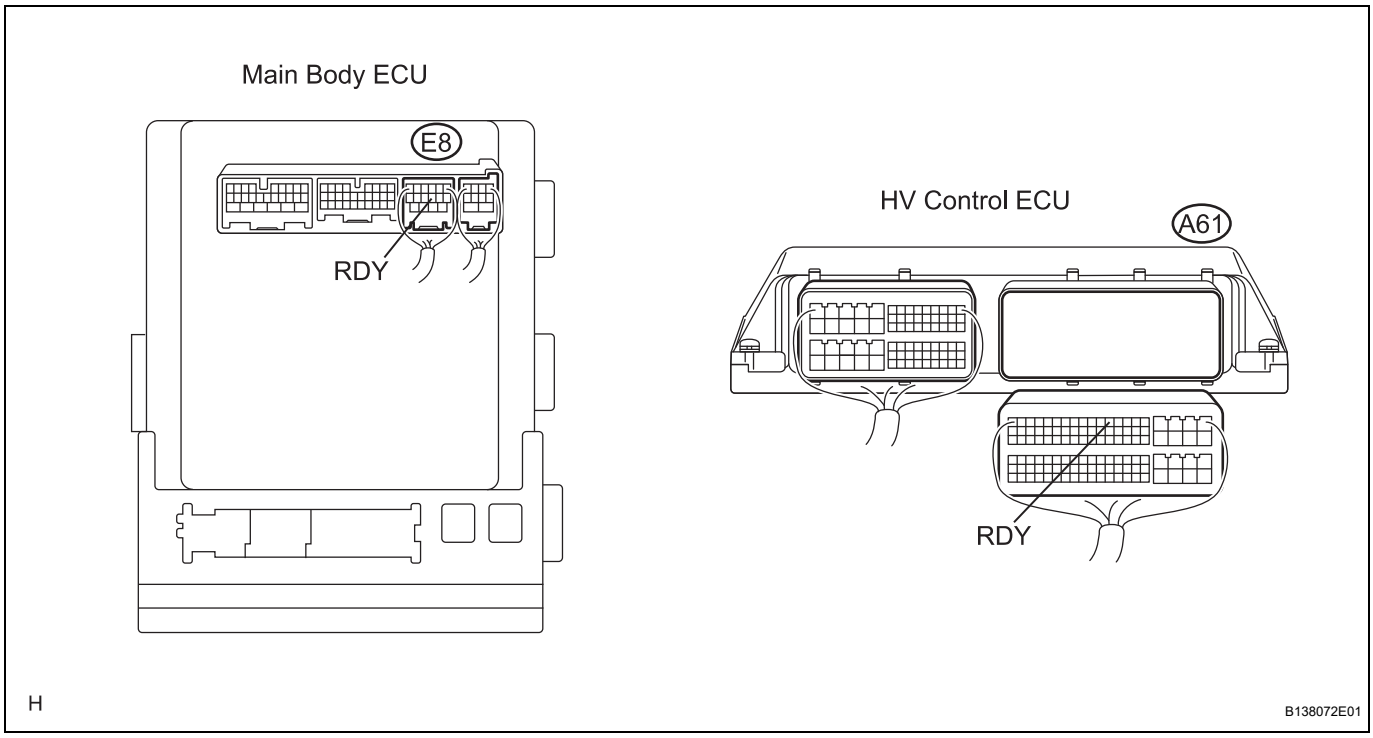
OK:
The waveform is displayed as shown in the illustration.
HINT:
As the vehicle speed increases, the cycle of the signal waveform narrows.

OK	Go to step 15

NG

14	CHECK WIRE HARNESS (MAIN BODY ECU - HV CONTROL ECU)

(a) Disconnect the E8 and A61 ECU connectors.



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E8-8 (RDY) - A61-9 (RDY)	Always	Below 1 Ω
E8-8 (RDY) or A61-9 (RDY) - Body ground	Always	10 kΩ or higher

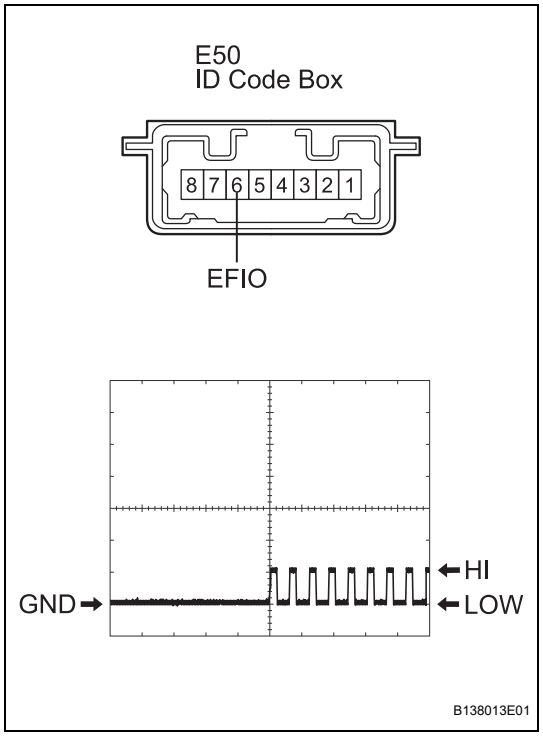
ST

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

15	INSPECT ID CODE BOX



(a) Check the input signal waveform.
  (1) Connect an oscilloscope to terminal E50-6 (EFIO) and body ground.
  (2) Turn the power switch on (IG).
  (3) Check the signal waveform according to the condition(s) in the table below.

Item	Condition
Tool setting	10 V/DIV., 100 ms./DIV.
Vehicle condition	Power switch on (IG)

NG → **REPLACE ID CODE BOX**

OK

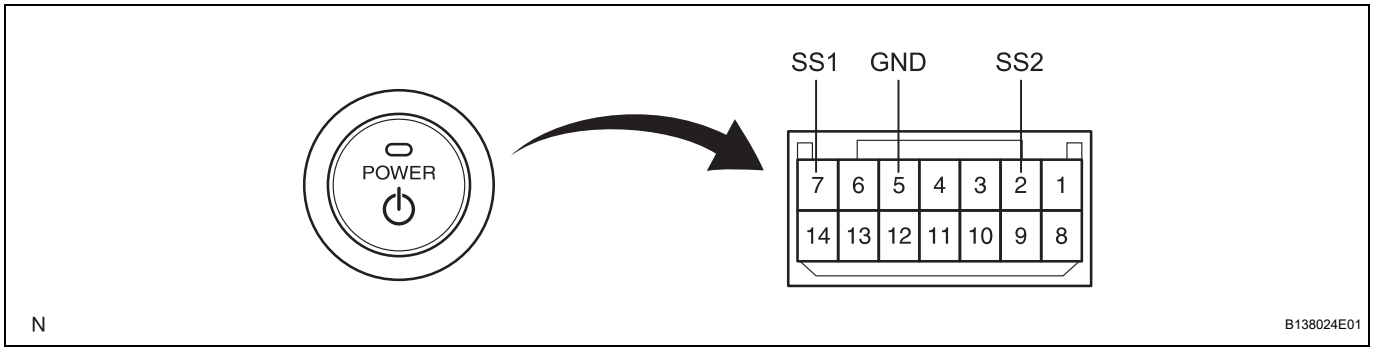
REPLACE MAIN BODY ECU

ST

INSPECTION

1. INSPECT POWER SWITCH

(a) Measure the resistance according to the value(s) in the table below.



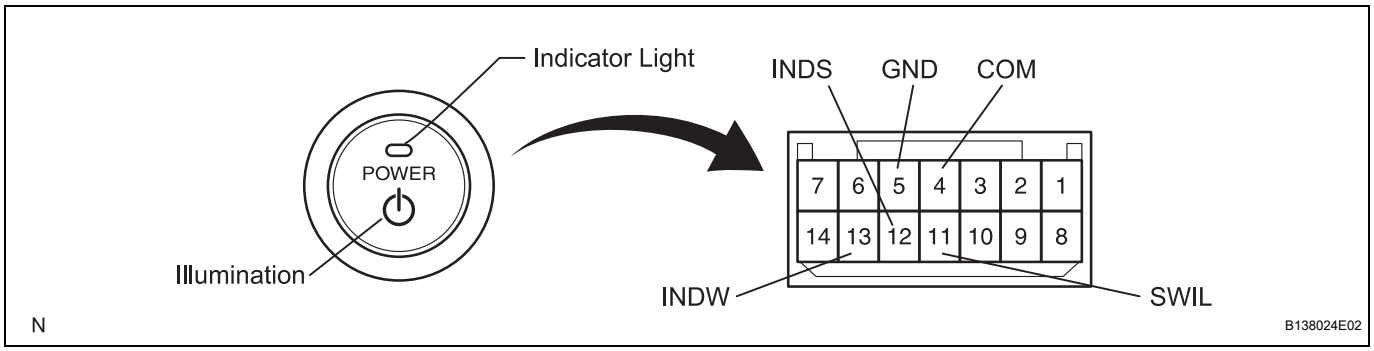
Standard resistance

Tester Connection	Switch Condition	Specified Condition
7 (SS1) - 5 (GND)	Pushed	Below 1 Ω
2 (SS2) - 5 (GND)	Pushed	Below 1 Ω
7 (SS1) - 5 (GND)	Not pushed	10 kΩ or higher
2 (SS2) - 5 (GND)	Not pushed	10 kΩ or higher

If the result is not as specified, replace the power switch.

(b) Apply battery voltage between the terminals of the switch, and check the illumination condition of the switch.

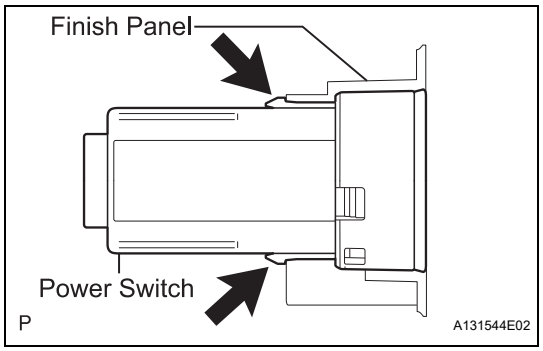
ST



Standard resistance

Measurement Condition	Specified Condition
Battery positive (+) →Terminal 11 (SWIL) Battery negative (-) →Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) →Terminal 12 (INDS) Battery negative (-) →Terminal 4 (COM) or 5 (GND)	Illuminates
Battery positive (+) →Terminal 13 (INDW) Battery negative (-) →Terminal 4 (COM) or 5 (GND)	Illuminates

If the result is not as specified, replace the power switch.



INSTALLATION

1. **INSTALL POWER SWITCH**
   (a) Attach the 2 claws to install the power switch.
2. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-34)**

OPERATION HISTORY DATA

1. OPERATION HISTORY DATA

HINT:

The HV control ECU records inappropriate operations performed by the driver and the number of abnormal conditions that have been input to the ECU as operation history data.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester on.

(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / HV ECU / DATA LIST.

(d) Select the menu to view the number of special operations or controls that have been effected.

HINT:

- LATEST OPER: Among the past occurrences, the number of special operations or controls that have been effected during the most recent 1 trip detection.
- LATEST TRIP: The number of trips after the occurrence of LATEST OPER.
- BEF LATST OPER: The number of occurrences during the trip previous to the LATEST OPER.
- BEF LATST TRIP: The number of trips after the occurrence of BEF LATST OPER.

Special operation and history data:

Intelligent Tester Display	Count Condition
SHIFT BEF READY (Shift gear before READY)	Shift lever moved with READY light blinking
N RANGE CTRL 1 (N range control in half shift)	Shift position cannot be determined
N RANGE CTRL 2 (N range control by busy shift)	N position control effected due to frequent shifting operation
STEP ACCEL IN N (Step accelerator in N range)	Accelerator pedal depressed in N position
AUX. BATT LOW (Auxiliary Battery Low)	Auxiliary battery voltage below 9.5 V
HV INTERMITTENT (HV ECU Intermittent problems)	Instantaneous open circuit at IGSW terminal of HV control ECU
MG2 TEMP HI (MG2 (motor) temperature high)	Motor temperature rose above 168°C (334°F)
MG1 TEMP HI (MG1 (generator) temperature high)	Generator temperature rose above 168°C (334°F)
MG2 INV TEMP HI (MG2 (motor) Inverter temperature high)	Motor inverter temperature rose above 120°C (248°F)
MG1 INV TEMP HI (MG1 (generator) Inverter temperature high)	Generator inverter temperature rose above 120°C (248°F)
MAIN BATT LOW (Main Battery low voltage)	Battery state of charge dropped below 30%
RESIST OVR HEAT (Resister over heat)	System main resistor overheated
COOLANT HEAT (Coolant heating)	Inverter coolant forecast temperature rose above 65°C (149°F)
CONVERTER HEAT (Converter heating)	Boost converter temperature rose above 120°C (248°F)

Intelligent Tester Display	Count Condition
BKWRD DIR SHIFT (Shift backward direction)	Shifted to R while moving forward or shifted to D or B while moving in reverse
PREVENT STAYING (Prevention control of staying)	Engine speed stays in resonance frequency band
ACCEL AND BRK (Accelerator and brake depressing)	Both accelerator and brake pedals depressed

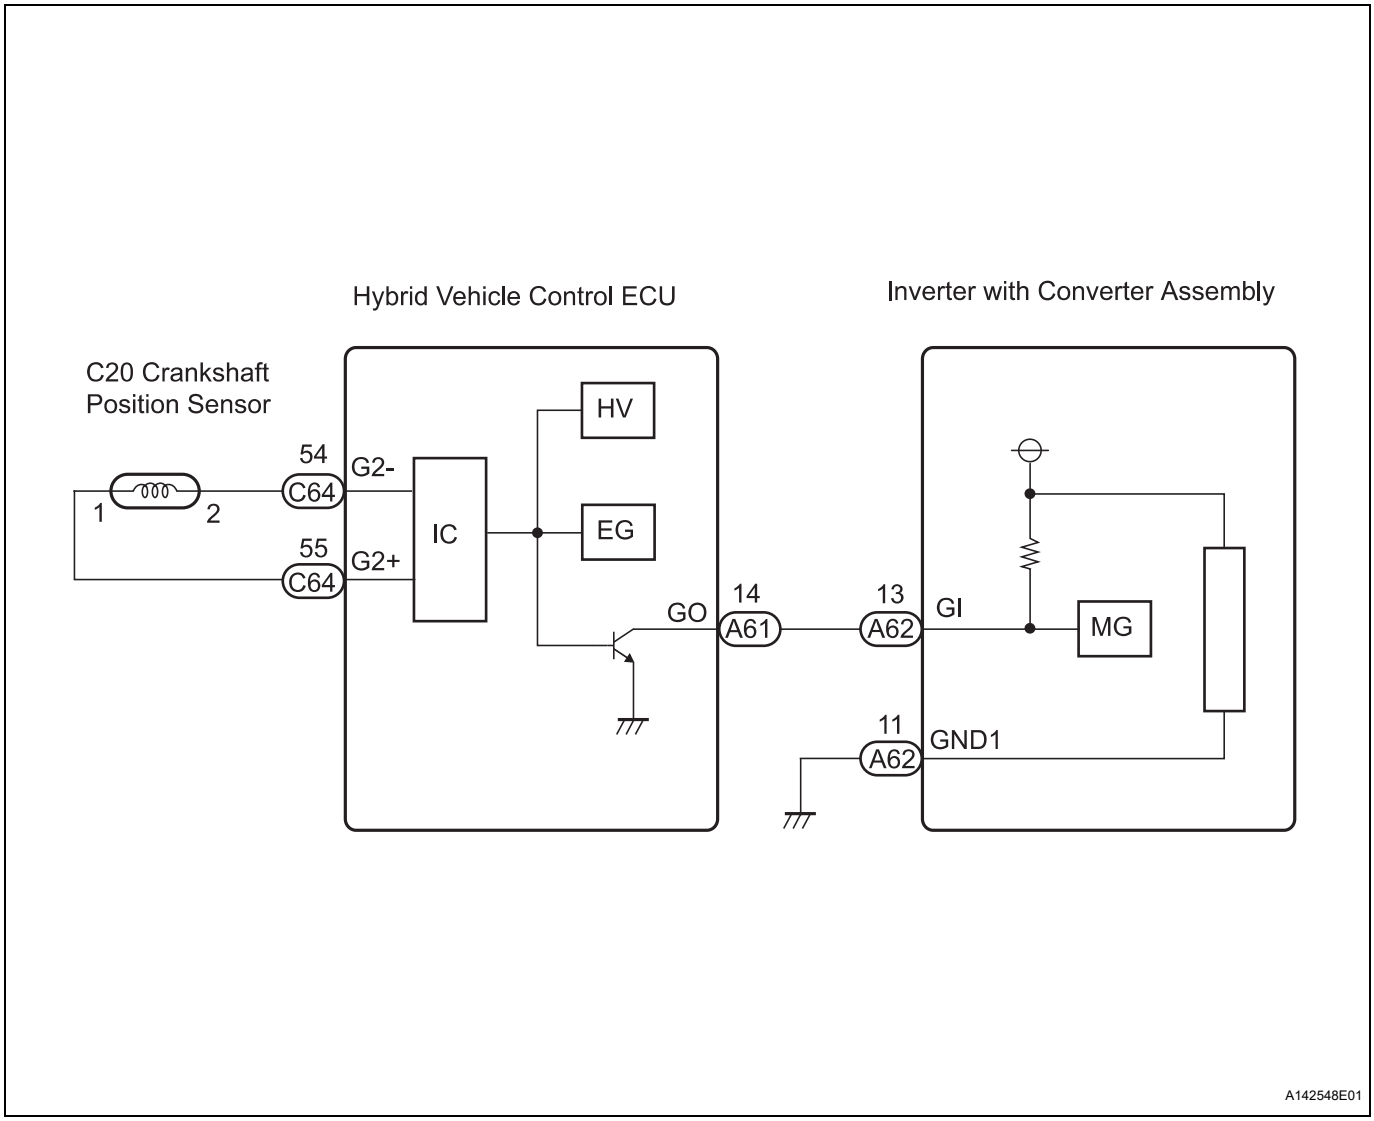
DTC	P0343-747	Camshaft Position Sensor "A" Circuit High Input

DESCRIPTION

The crankshaft position sensor sends the engine speed signal (NE) to the engine CPU and HV CPU of the hybrid vehicle control ECU. The hybrid vehicle control ECU compares the input engine speed signals (NE) in the engine CPU and HV CPU. If any abnormality is found, this DTC will be output.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0343	747	GI signal is not input for 2 sec. or more while the engine is running.	• Wire harness or connector • Hybrid vehicle control ECU • Inverter with converter assembly

WIRING DIAGRAM



HV

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (ENGINE CONTROL SYSTEM)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBDII / ENGINE / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
Any two or more of the following DTCs are output simultaneously.

DTC No.	Relevant Diagnosis
P0340	Camshaft Position Sensor "A" Circuit (Bank 1 or Single Sensor)

HV

YES → **GO TO DTC CHART (P0340) (See page ES-45)**

NO

2	CHECK ENGINE START

(a) Check if the engine can start.
(b) Connect the intelligent tester to the DLC3.
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBDII / ENGINE / DTC INFO / CURRENT DTC.
(d) Read output DTCs.

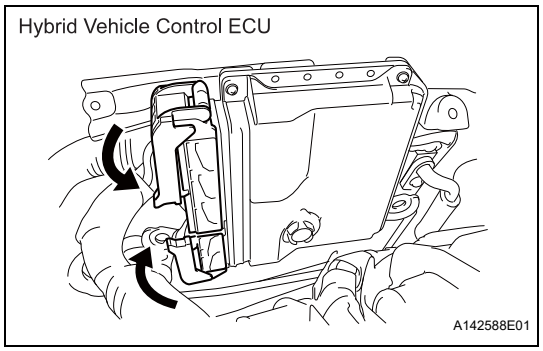
Result

Result	Proceed to
The engine cannot start.	B
The engine can start and DTC P0340 is output within 10 seconds.	B
The engine can start and DTC P0340 is not output.	A

B → **GO TO DTC CHART (P0340) (See page ES-45)**

A

3	CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONTROL ECU CONNECTOR)



(a) Check the connections of the hybrid vehicle control ECU connectors.

OK:

The connectors are connected securely and there are no contact problems.

NG → **CONNECT SECURELY**

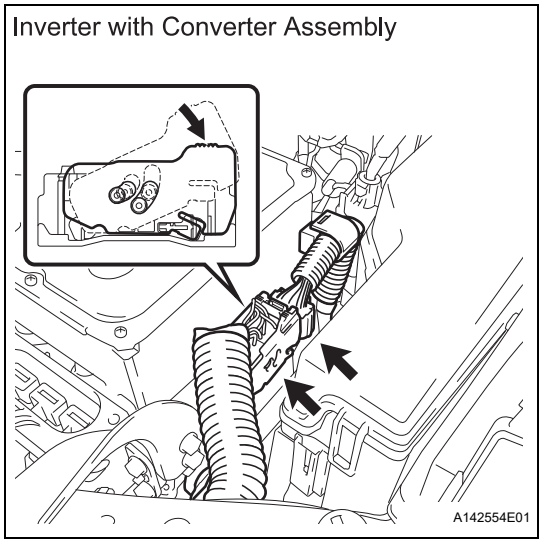
OK

4	CHECK CONNECTOR CONNECTION CONDITION (INVERTER WITH CONVERTER ASSEMBLY)

CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).

NOTICE:
Do not turn the power switch on (READY) with the service plug grip removed as this may cause a malfunction.



(b) Check the connections of the inverter with converter assembly connectors.

OK:

The connectors are connected securely and there are no contact problems.

NG → **CONNECT SECURELY**

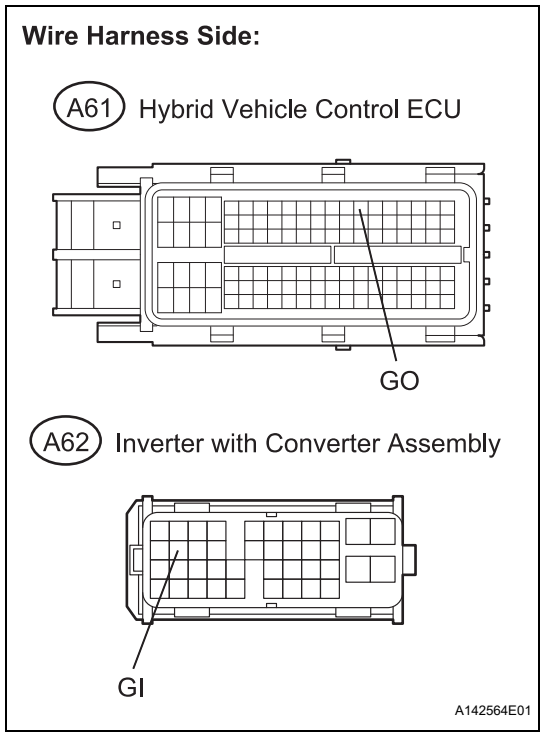
OK

5	CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - INVERTER WITH CONVERTER ASSEMBLY)

(a) Disconnect the A61 hybrid vehicle control ECU connector.

(b) Disconnect the A62 inverter with converter assembly connector.

HV



(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
GO (A61-14) - GI (A62-13)	Below 1 Ω

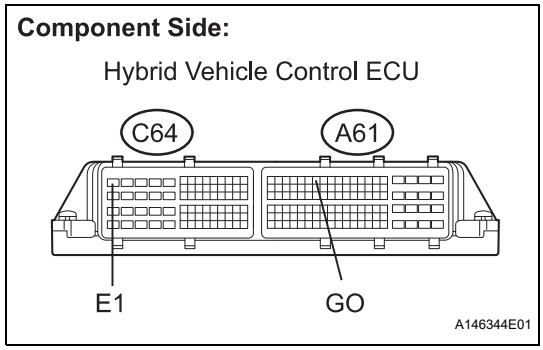
Standard resistance (Check for short)

Tester Connection	Specified Condition
GO (A61-14) or GI (A62-13) - Body ground	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 CHECK HYBRID VEHICLE CONTROL ECU



(a) Remove the hybrid vehicle control ECU (See page HV-569).

(b) Measure the resistance according to the value(s) in the table below.

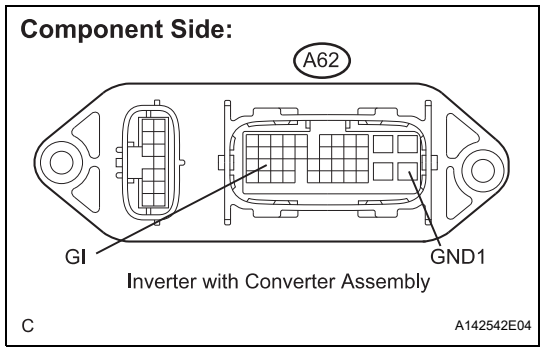
Standard resistance

Tester Connection	Specified Condition
GO (A61-14) - E1 (C64-14)	100 Ω or more

NG → **REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)**

OK

7 CHECK INVERTER WITH CONVERTER ASSEMBLY



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
GI (A62-13) - GND1 (A62-11)	10 kΩ or more

HINT:
After the inspection, check for DTCs. If DTC P0343-747 is output again, replace the inverter with converter assembly.

NG → **REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)**

OK

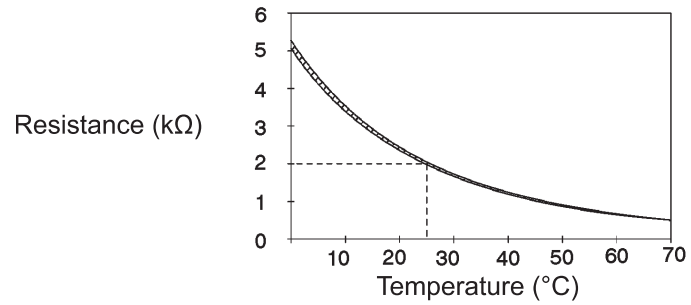
REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P0516-769	Battery Temperature Sensor Circuit Low

DTC	P0517-770	Battery Temperature Sensor Circuit High

DESCRIPTION

The auxiliary battery temperature sensor detects the auxiliary battery temperature. The resistance of the thermistor built into the auxiliary battery temperature sensor changes in accordance with changes in the auxiliary battery temperature. The lower the auxiliary battery temperature, the more the thermistor resistance. Conversely, the more the temperature, the lower the resistance. The auxiliary battery temperature sensor is connected to the hybrid vehicle control ECU. A voltage of 5 V is supplied to the auxiliary battery temperature sensor from the THB terminal of the hybrid vehicle control ECU through its internal resistor R. This means that resistor R and the auxiliary battery temperature sensor are connected in series. The voltage at the THB terminal and the resistance value change in accordance with changes in the auxiliary battery temperature. Based on this signal, the hybrid vehicle control ECU reduces the charging current when the auxiliary battery temperature is high to protect the auxiliary battery.

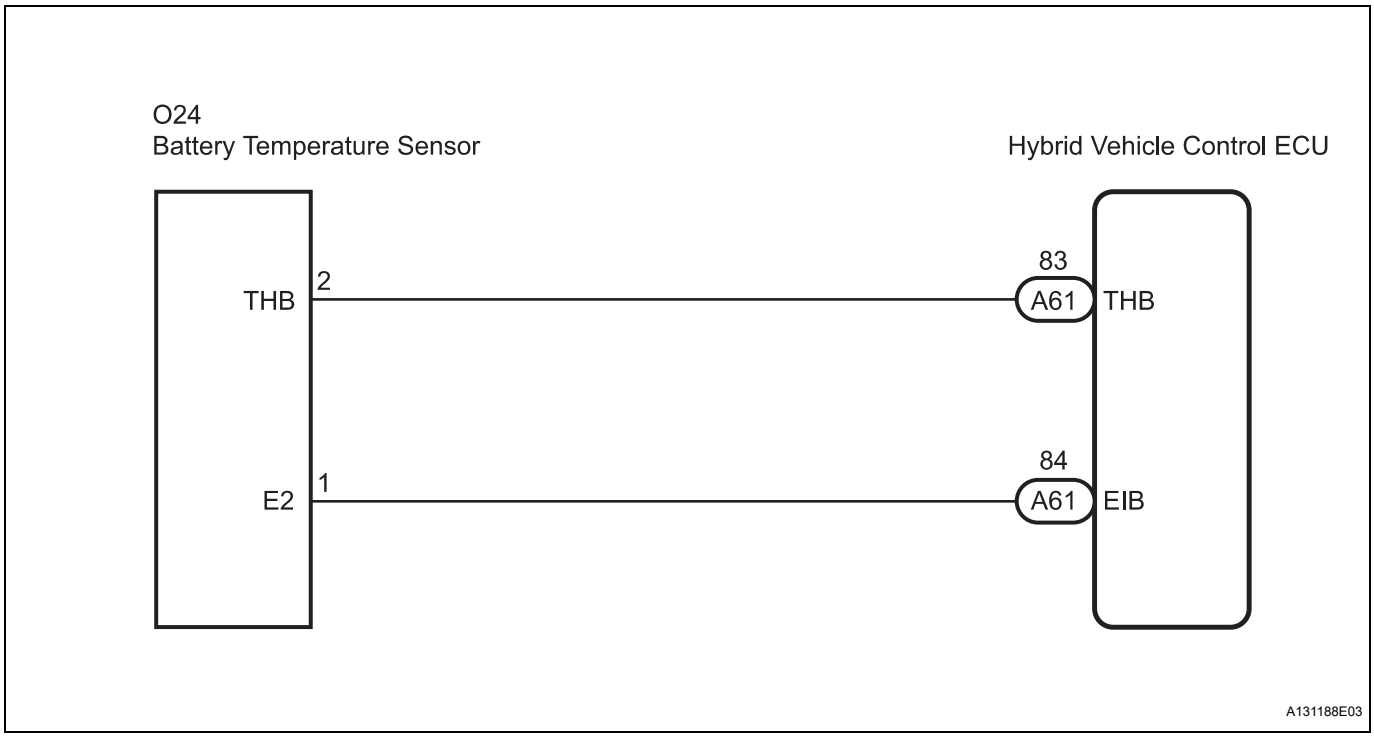


A080941E02

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0516	769	Malfunction in the auxiliary battery temperature sensor circuit (short to GND)	• Auxiliary battery (battery temperature sensor) • Wire harness or connector • Hybrid vehicle control ECU
P0517	770	Malfunction in the auxiliary battery temperature sensor circuit (open or +B short circuit)	• Auxiliary battery (battery temperature sensor) • Wire harness or connector • Hybrid vehicle control ECU

HV

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

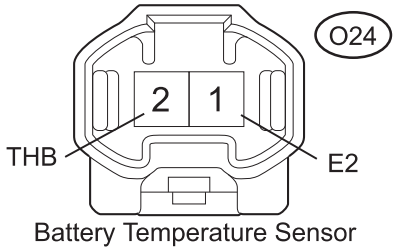
- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HV

1	INSPECT BATTERY (AUXILIARY BATTERY TEMPERATURE SENSOR)

Component Side:



(a) Disconnect the O24 auxiliary battery temperature sensor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

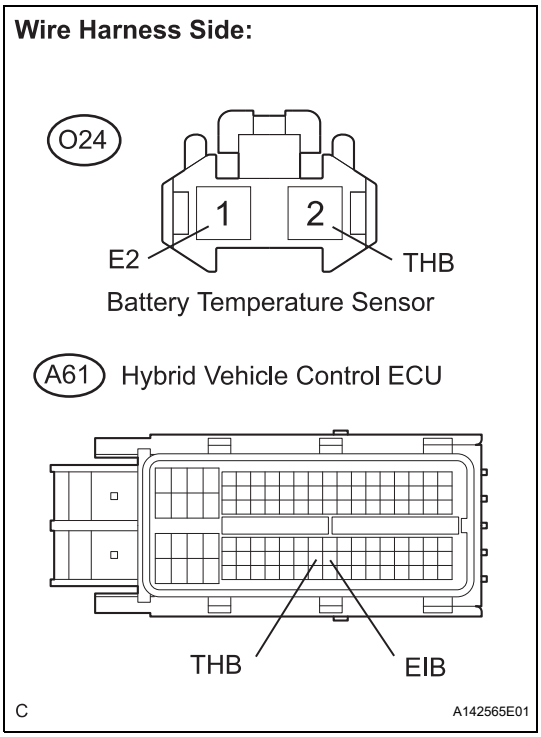
Tester Connection	Temperature	Specified Condition
THB (O24-2) - E2 (O24-1)	0°C (32°F)	5.0 to 5.3 kΩ
	20°C (68°F)	2.3 to 2.5 kΩ
	40°C (104°F)	1.1 to 1.3 kΩ

HINT:
The auxiliary battery temperature sensor is not available separately. If it requires replacement, replace the battery.

NG → REPLACE AUXILIARY BATTERY

OK

2 CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - BATTERY TEMPERATURE SENSOR)



(a) Disconnect the A61 hybrid vehicle control ECU connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
THB (A61-83) - THB (O24-2)	Below 1 Ω
EIB (A61-84) - E2 (O24-1)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
THB (A61-83) or THB (O24-2) - Body ground	10 kΩ or more
EIB (A61-84) or E2 (O24-1) - Body ground	10 kΩ or more

(c) Turn the power switch on (IG).

(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
THB (A61-83) or THB (O24-2) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the hybrid vehicle control ECU connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK FOR INTERMITTENT PROBLEMS

(a) Check for intermittent problems (See page HV-17).

NG → REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

HV

DTC	P0560-117	System Voltage

DESCRIPTION

Battery power is constantly supplied to the BATT terminal of the hybrid vehicle control ECU to allow DTCs and freeze frame data to be retained in memory even though the power switch is turned off. The back-up power is supplied even when the power switch is off.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0560	117	Malfunction in the hybrid vehicle control ECU back-up power source circuit	• Wire harness or connector • Hybrid vehicle control ECU

MONITOR DESCRIPTION

If a period of time has elapsed with a low voltage at the BATT terminal of the hybrid vehicle control ECU, the hybrid vehicle control ECU will determine that a malfunction has occurred in the back-up power supply system, and set a DTC. The MIL will illuminate the next time the engine is started.

MONITOR STRATEGY

Related DTCs	P0560 (INF 117): Battery signal malfunction
Required sensors / components	Main: Back-up power source circuit Sub: Hybrid vehicle control ECU
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	1 driving cycle
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

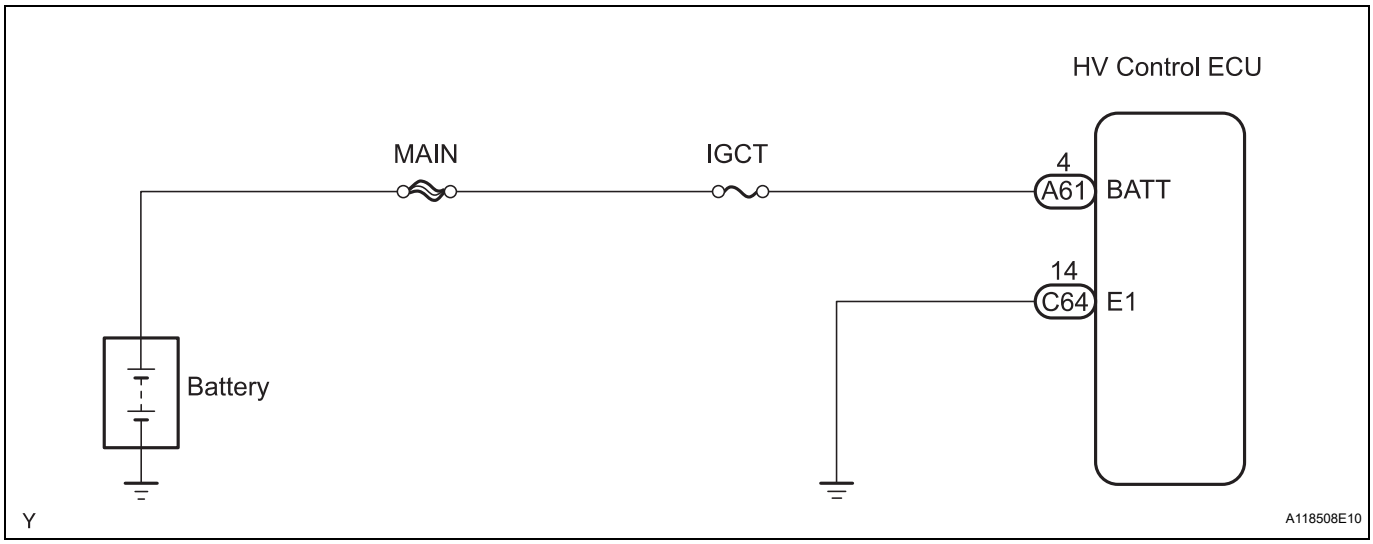
TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Auxiliary battery voltage	Between 9 and 14 V

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HV

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	**CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONTROL ECU CONNECTOR) (See page HV-79)**

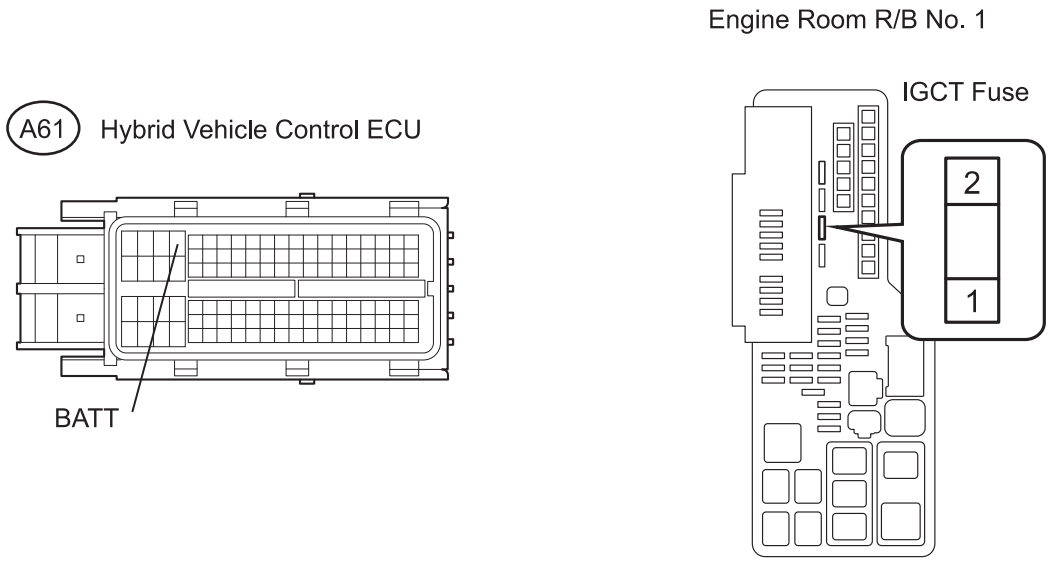
NG → **CONNECT SECURELY**

OK

2	**CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - IGCT FUSE)**

(a) Turn the power switch off.
(b) Remove the IGCT fuse from the engine room R/B No. 1.
(c) Disconnect the A61 hybrid vehicle control ECU connector.
(d) Measure the resistance according to the value(s) in the table below.

Wire Harness Side:



Standard Resistance (Check for open)

Tester Connection	Specified Condition
BATT (A61-4) - Engine room R/B No. 1 IGCT fuse terminal 2	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
BATT (A61-4) or Engine room R/B No. 1 IGCT fuse terminal 2 - Body ground	10 kΩ or more

HV

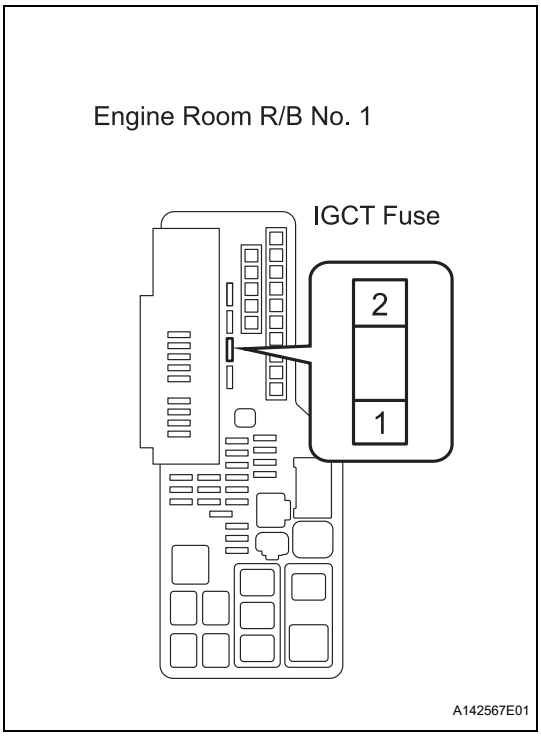
NOTICE:
When taking measurements with a tester, do not apply excessive force to the tester probes to avoid damaging the fuse holder or terminals.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	**CHECK HARNESS AND CONNECTOR (IGCT NO. 1 FUSE - BATTERY POSITIVE TERMINAL)**

(a) Disconnect the positive and negative terminals from the auxiliary battery.



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
Engine room R/B No. 1 IGCT fuse terminal 1 - positive (+) battery terminal	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
Engine room R/B No. 1 IGCT fuse terminal 1 - Body ground	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	RECONFIRM DTC OUTPUT (HV)

HV

HINT:
If DTC P0560-117 is output after this inspection, replace the hybrid vehicle control ECU. If the DTC is not output, check for intermittent problems (See page HV-17) because there may be a malfunction in the wire harness or connector.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Recheck for DTCs.

Result:

DTC P0560-117 is output again.

NO → **CHECK FOR INTERMITTENT PROBLEMS (See page HV-17)**

YES

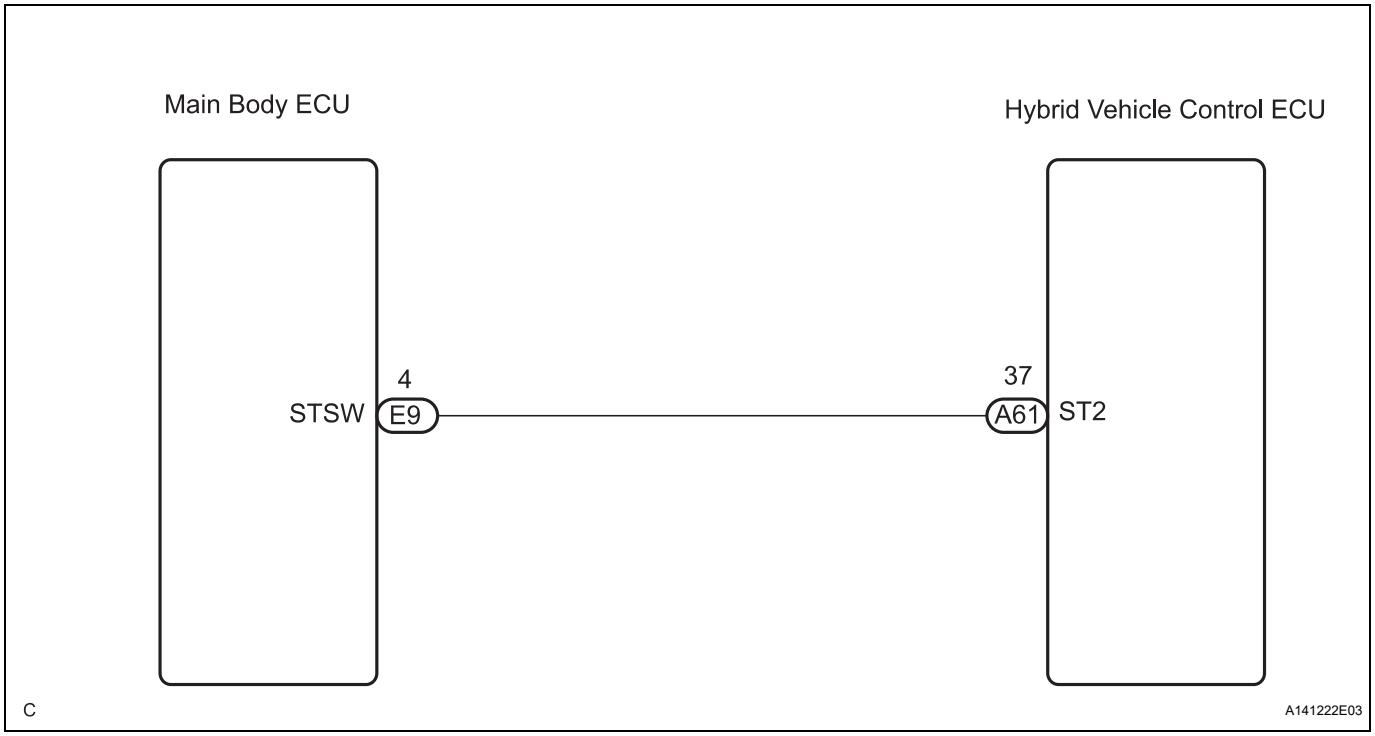
REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P0617-142	Starter Relay Circuit High

DESCRIPTION

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0617	142	An ST signal from the hybrid vehicle control ECU is present when the power switch is off.	• Wire harness or connector • Hybrid vehicle control ECU • Main body ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

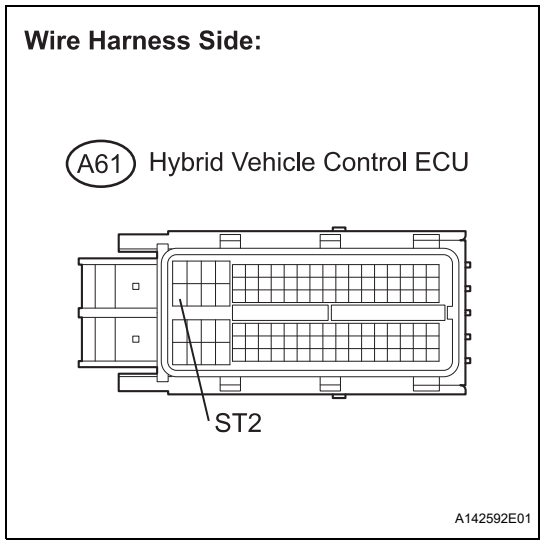
HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK HARNESS AND CONNECTOR (ST2 TERMINAL VOLTAGE)

(a) Disconnect the A61 hybrid vehicle control ECU connector.

HV



(b) Measure the voltage according to the value(s) in the table below when the power switch is off.

Standard voltage

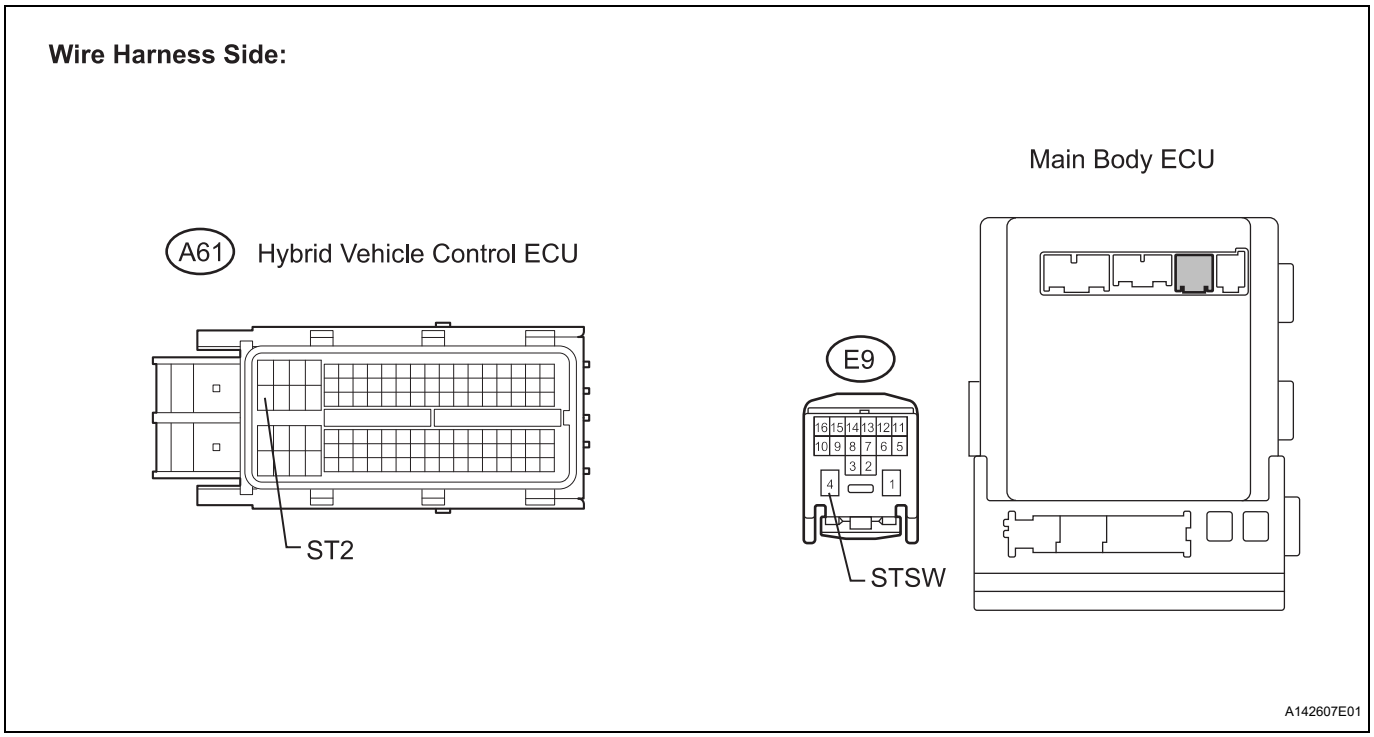
Tester Connection	Specified Condition
ST2 (A61-37) - Body ground	Below 1 V

OK → **Go to step 3**

NG

2	CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - MAIN BODY ECU)

(a) Disconnect the E9 main body ECU connector .
(b) Measure the voltage according to the value(s) in the table below when the power switch is off.



Standard voltage

Tester Connection	Specified Condition
ST2 (A61-37) or STSW (E9-4) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

3	CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Read and record the DTCs and freeze frame data.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.
(e) Clear the DTCs.

NEXT

4	RECONFIRM DTC OUTPUT

(a) Turn the power switch off and leave the vehicle as it is for approximately 5 seconds.
(b) Turn the power switch on (IG) again.
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Recheck for DTCs.
Result:
DTC P0617-142 is output again.

NO → **CHECK FOR INTERMITTENT PROBLEMS (See page HV-17)**

YES

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P062F-143	EEPROM Malfunction

DESCRIPTION

The hybrid vehicle control ECU monitors its internal operation and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P062F	143	ECU internal error	Hybrid vehicle control ECU

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	REPLACE HYBRID VEHICLE CONTROL ECU

HINT:
See page HV-569

NEXT

HV

COMPLETED

DTC	P0630-804	VIN not Programmed or Mismatch-ECM / PCM

DESCRIPTION

DTC P0630 is set if the Vehicle Identification Number (VIN) is not stored in the hybrid vehicle control ECU or the input VIN is not accurate. Input the VIN with the intelligent tester (See page HV-18).

DTC No.	INF No.	DTC Detection Condition	Trouble Area
P0630	804	• VIN not stored in hybrid vehicle control ECU • Input VIN in hybrid vehicle control ECU not accurate	Hybrid vehicle control ECU

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

NOTICE:

If P0630 is set, the VIN must be input to the hybrid vehicle control ECU using the intelligent tester. However, all DTCs are cleared automatically by the tester when inputting the VIN. If DTCs other than P0630-804 are set, check them first.

HV

NEXT

2	INPUT VIN WITH INTELLIGENT TESTER

(a) Input the VIN with the intelligent tester (See page HV-18).

NOTICE:

Be sure to check the auxiliary battery voltage before performing VIN writing because VIN writing cannot be performed if the auxiliary battery voltage is below 10 V.

NEXT

3	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.

(d) Check if DTCs are output.

OK:

DTC P0630-804 is not output.

NG → **REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)**

OK

COMPLETED

DTC	P0705-757	Transmission Range Sensor Circuit

DTC	P0705-758	Transmission Range Sensor Circuit

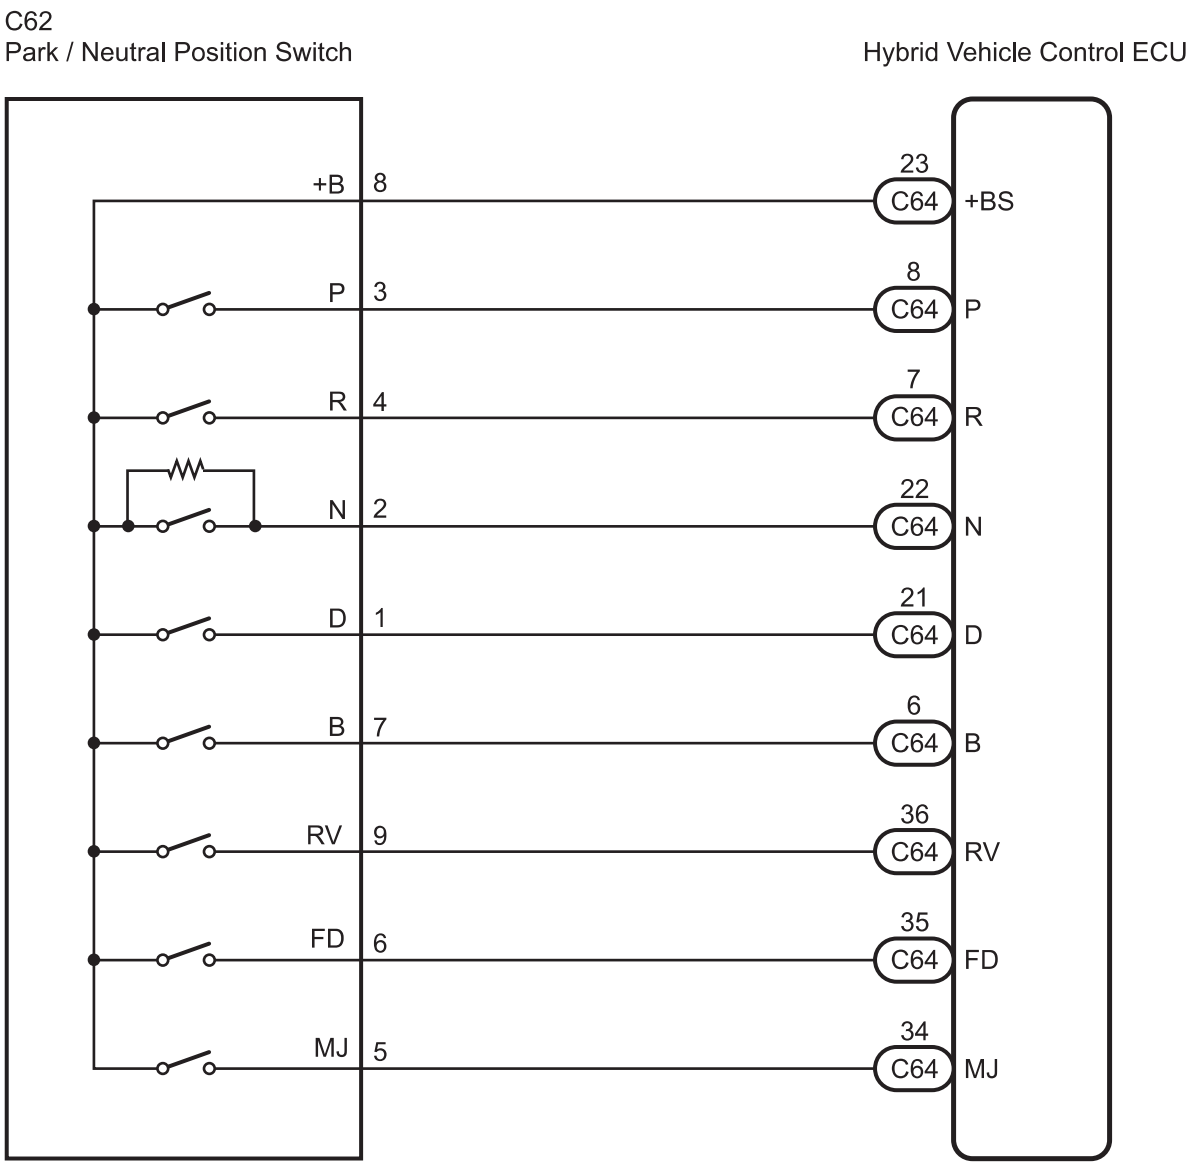
DTC	P0851-775	Park / Neutral Switch Input Circuit Low

DESCRIPTION

The park / neutral position switch can send 8 different switch signals to the hybrid vehicle control ECU. The hybrid vehicle control ECU uses the signals to detect the shift lever position (P, R, N, D or B). The hybrid vehicle control ECU also uses this information to determine intended direction of travel (forward or reverse).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0705	757	Park / neutral position switch pattern problem	• Wire harness or connector • Park / neutral position switch • Hybrid vehicle control ECU
P0705	758	Shifting malfunction (open circuit in MJ)	• Wire harness or connector • Park / neutral position switch • Hybrid vehicle control ECU
P0851	775	N signal line malfunction	• Wire harness or connector • Park / neutral position switch • Hybrid vehicle control ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**

- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Read and record the DTCs and freeze frame data.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.
(e) Clear the DTCs.

NEXT

2	READ VALUE OF INTELLIGENT TESTER (SHIFT POSITION)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) While slowly moving the shift lever from P to B, and then back to the P position, read the data list (SHIFT POSITION) displayed on the intelligent tester.
HINT:
Make sure to move the shift lever slowly.

Result

	Shift Position				
Data List	P	R	N	D	B
SHIFT SW P	ON	OFF	OFF	OFF	OFF
SHIFT SW R	OFF	ON	OFF	OFF	OFF
SHIFT SW N	OFF	OFF	ON	OFF	OFF
SHIFT SW D	OFF	OFF	OFF	ON	OFF
SHIFT SW B	OFF	OFF	OFF	OFF	ON
SHIFT SW RV	OFF	ON	OFF	OFF	OFF
SHIFT SW FD	OFF	OFF	OFF	ON	ON
SHIFT SW MJ	ON	ON	ON	ON	ON

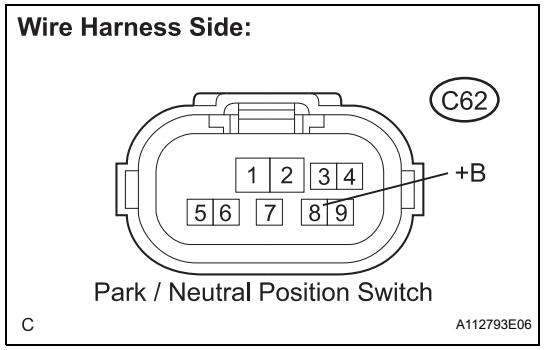
(d) Check if DTCs are output.
Result:
DTCs P0705-757, P0705-758, and P0851-775 are not output.

OK → **Go to step 6**

NG

HV

3	CHECK HARNESS AND CONNECTOR (POWER SOURCE CIRCUIT)



(a) Disconnect the C62 park / neutral position switch connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

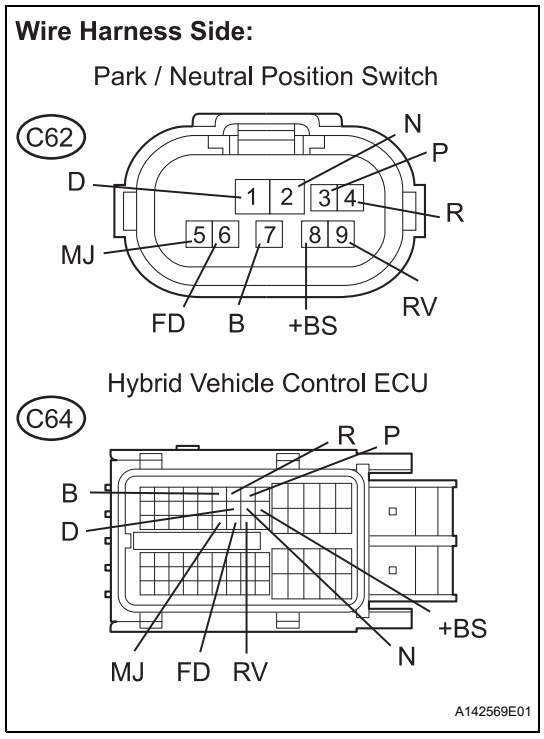
Tester Connection	Specified Condition
+B (C62-8) - Body ground	10 to 14 V

NOTICE:
Turning the power switch on (IG) with the park / neutral position switch connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - PARK / NEUTRAL POSITION SWITCH)



(a) Disconnect the C64 hybrid vehicle control ECU connector.
(b) Disconnect the C62 park / neutral position switch connector .
(c) Measure the voltage according to the value(s) in the table below when the power switch is on (IG).

Standard voltage

Tester Connection	Specified Condition
+BS (C64-23) - Body ground	Below 1 V
P (C64-8) - Body ground	Below 1 V
R (C64-7) - Body ground	Below 1 V
N (C64-22) - Body ground	Below 1 V
D (C64-21) - Body ground	Below 1 V
B (C64-6) - Body ground	Below 1 V
MJ (C64-34) - Body ground	Below 1 V
FD (C64-35) - Body ground	Below 1 V
RV (C64-36) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the park / neutral position switch connector and hybrid vehicle control ECU connectors disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

(d) Turn the power switch off.
(e) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
+BS (C64-23) - +B (C62-8)	Below 1 Ω
P (C64-8) - P (C62-3)	Below 1 Ω
R (C64-7) - R (C62-4)	Below 1 Ω
N (C64-22) - N (C62-2)	Below 1 Ω
D (C64-21) - D (C62-1)	Below 1 Ω
B (C64-6) - B (C62-7)	Below 1 Ω
MJ (C64-34) - MJ (C62-5)	Below 1 Ω
FD (C64-35) - FD (C62-6)	Below 1 Ω
RV (C64-36) - RV (C62-9)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
+BS (C64-23) or +B (C62-8) - Body ground	10 kΩ or more
P (C64-8) or P (C62-3) - Body ground	10 kΩ or more
R (C64-7) or R (C62-4) - Body ground	10 kΩ or more
N (C64-22) or N (C62-2) - Body ground	10 kΩ or more
D (C64-21) or D (C62-1) - Body ground	10 kΩ or more
B (C64-6) or B (C62-7) - Body ground	10 kΩ or more
MJ (C64-34) or MJ (C62-5) - Body ground	10 kΩ or more
FD (C64-35) or FD (C62-6) - Body ground	10 kΩ or more
RV (C64-36) or RV (C62-9) - Body ground	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

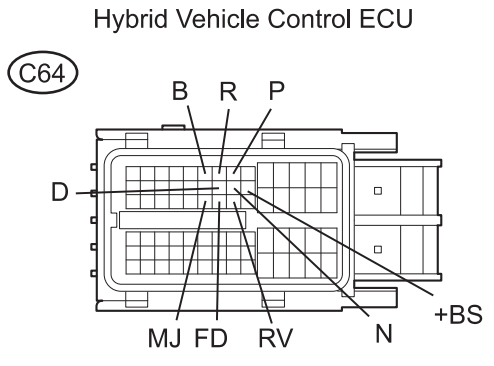
OK

HV

5 CHECK PARK / NEUTRAL POSITION SWITCH

(a) Connect the park / neutral position switch connector.
(b) Measure the resistance according to the value(s) in the table below.

Wire Harness Side:



Standard resistance (Check for open)

Shift Lever Position	Tester Connection	Specified Condition
P	+BS (C64-23) - P (C64-8) +BS (C64-23) - MJ (C64-34)	Below 1 Ω

Shift Lever Position	Tester Connection	Specified Condition
R	+BS (C64-23) - R (C64-7) +BS (C64-23) - MJ (C64-34) +BS (C64-23) - RV (C64-36)	Below 1 Ω
N	+BS (C64-23) - N (C64-22) +BS (C64-23) - MJ (C64-34)	Below 1 Ω
D	+BS (C64-23) - D (C64-21) +BS (C64-23) - MJ (C64-34) +BS (C64-23) - FD (C64-35)	Below 1 Ω
B	+BS (C64-23) - B (C64-6) +BS (C64-23) - MJ (C64-34)	Below 1 Ω

Standard resistance (Check for short)

Shift Lever Position	Tester Connection	Specified Condition
P	+BS (C64-23) or P (C64-8) - Body ground and other terminal +BS (C64-23) or MJ (C64-34) - Body ground and other terminal	10 kΩ or more
R	+BS (C64-23) or R (C64-7) - Body ground and other terminal +BS (C64-23) or MJ (C64-34) - Body ground and other terminal +BS (C64-23) or RV (C64-36) - Body ground and other terminal	10 kΩ or more
N	+BS (C64-23) or N (C64-22) - Body ground and other terminal +BS (C64-23) or MJ (C64-34) - Body ground and other terminal	10 kΩ or more
D	+BS (C64-23) or D (C64-21) - Body ground and other terminal +BS (C64-23) or MJ (C64-34) - Body ground and other terminal +BS (C64-23) or FD (C64-35) - Body ground and other terminal	10 kΩ or more
B	+BS (C64-23) or B (C64-6) - Body ground and other terminal +BS (C64-23) or MJ (C64-34) - Body ground and other terminal	10 kΩ or more

HINT:
The resistance between terminals +BS and N should be 4.2 to 5.2 kΩ.

NG → **REPLACE PARK / NEUTRAL POSITION SWITCH**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

6 CHECK FOR INTERMITTENT PROBLEMS

(a) Check for intermittent problems (See page HV-17).

NG → **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P0A01-725	Motor Electronics Coolant Temperature Sensor Circuit Range / Performance

DTC	P0A01-726	Motor Electronics Coolant Temperature Sensor Circuit Range / Performance

DESCRIPTION

Refer to the description for DTC P0A02-719 (See page HV-99).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A01	725	Sudden change in HV coolant temperature sensor output	• Wire harness or connector • Inverter cooling system • Cooling fan system • Water pump with motor & bracket assembly • Inverter with converter assembly • Hybrid vehicle control ECU
P0A01	726	HV coolant temperature sensor output deviation	• Wire harness or connector • Inverter cooling system • Cooling fan system • Water pump with motor & bracket assembly • Inverter with converter assembly • Hybrid vehicle control ECU

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HV

1	CHECK DTC (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC	P0A02-719	Motor Electronics Coolant Temperature Sensor Circuit Low

DTC	P0A03-720	Motor Electronics Coolant Temperature Sensor Circuit High

DESCRIPTION

The hybrid vehicle control ECU detects HV coolant temperature through the coolant temperature sensor built into the inverter with converter assembly. The inverter cooling system is the same as that for MG2 or MG1, and operates independently of the engine cooling system. The hybrid vehicle control ECU controls the inverter cooling system to prevent overheating based on signals from the HV coolant temperature sensor. The ECU also monitors cooling system operation and detects malfunctions in the HV coolant temperature sensor and the circuit.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A02	719	Short to GND in the HV coolant temperature sensor circuit	Inverter with converter assembly
P0A03	720	Open or short to +B in the HV coolant temperature sensor circuit	Inverter with converter assembly

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HV

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	REPLACE INVERTER WITH CONVERTER ASSEMBLY

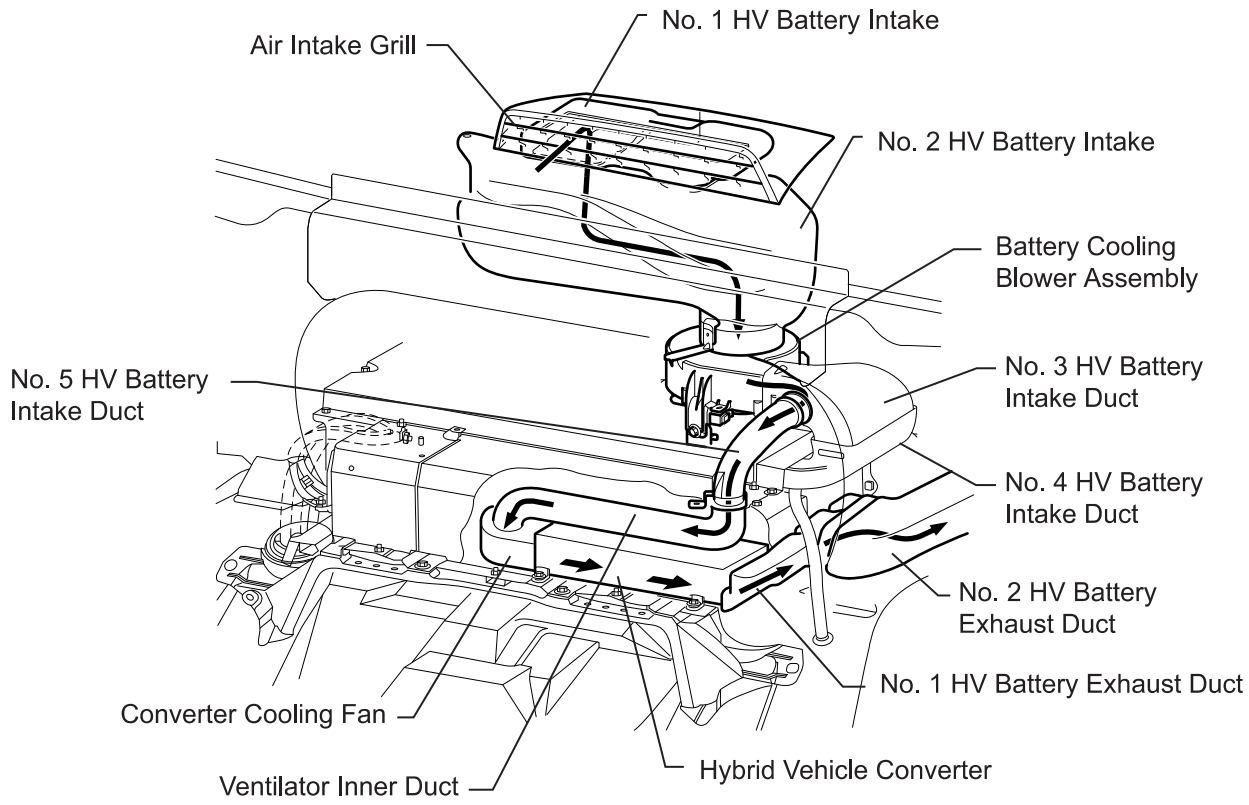
NEXT

COMPLETED

DTC	P0A08-101	DC / DC Converter Status Circuit

DESCRIPTION

The cooling fan of the HV battery and cooling fan in the hybrid vehicle converter are used to cool the hybrid vehicle converter (DC/DC converter).



DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A08	101	Overheating of the hybrid vehicle converter	• Duct • Hybrid vehicle converter • Auxiliary battery

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**

- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.
Placing an object on the package tray trim panel assembly, which is the inlet of the duct, may cause the duct to be unable to take in air. In this case, DTCs may be set.

1	CHECK PACKAGE TRAY TRIM PANEL ASSEMBLY

(a) Check that the air intake grill of the package tray trim panel assembly is not clogged.
OK:
The air intake grill is not clogged.

NG → **REMOVE FOREIGN OBJECT**

OK

2	CHECK AIR DUCT (ALL)

(a) Check if the duct is installed correctly.
OK:
The duct is installed correctly.
(b) Check the duct for clogging.
OK:
The duct is not clogged.

NG → **REPAIR OR REPLACE AIR DUCT (ALL)**

OK

3	REPLACE HYBRID VEHICLE CONVERTER

(a) Replace the hybrid vehicle converter (See page HB-123).

NEXT

4	CHECK AUXILIARY BATTERY

(a) Turn the power switch on (READY).
(b) Leave the vehicle for 5 minutes.
(c) Measure the voltage of the auxiliary battery.
Standard voltage:
More than 10.5 V

NG → **CHECK AND REPLACE AUXILIARY BATTERY**

OK

COMPLETED

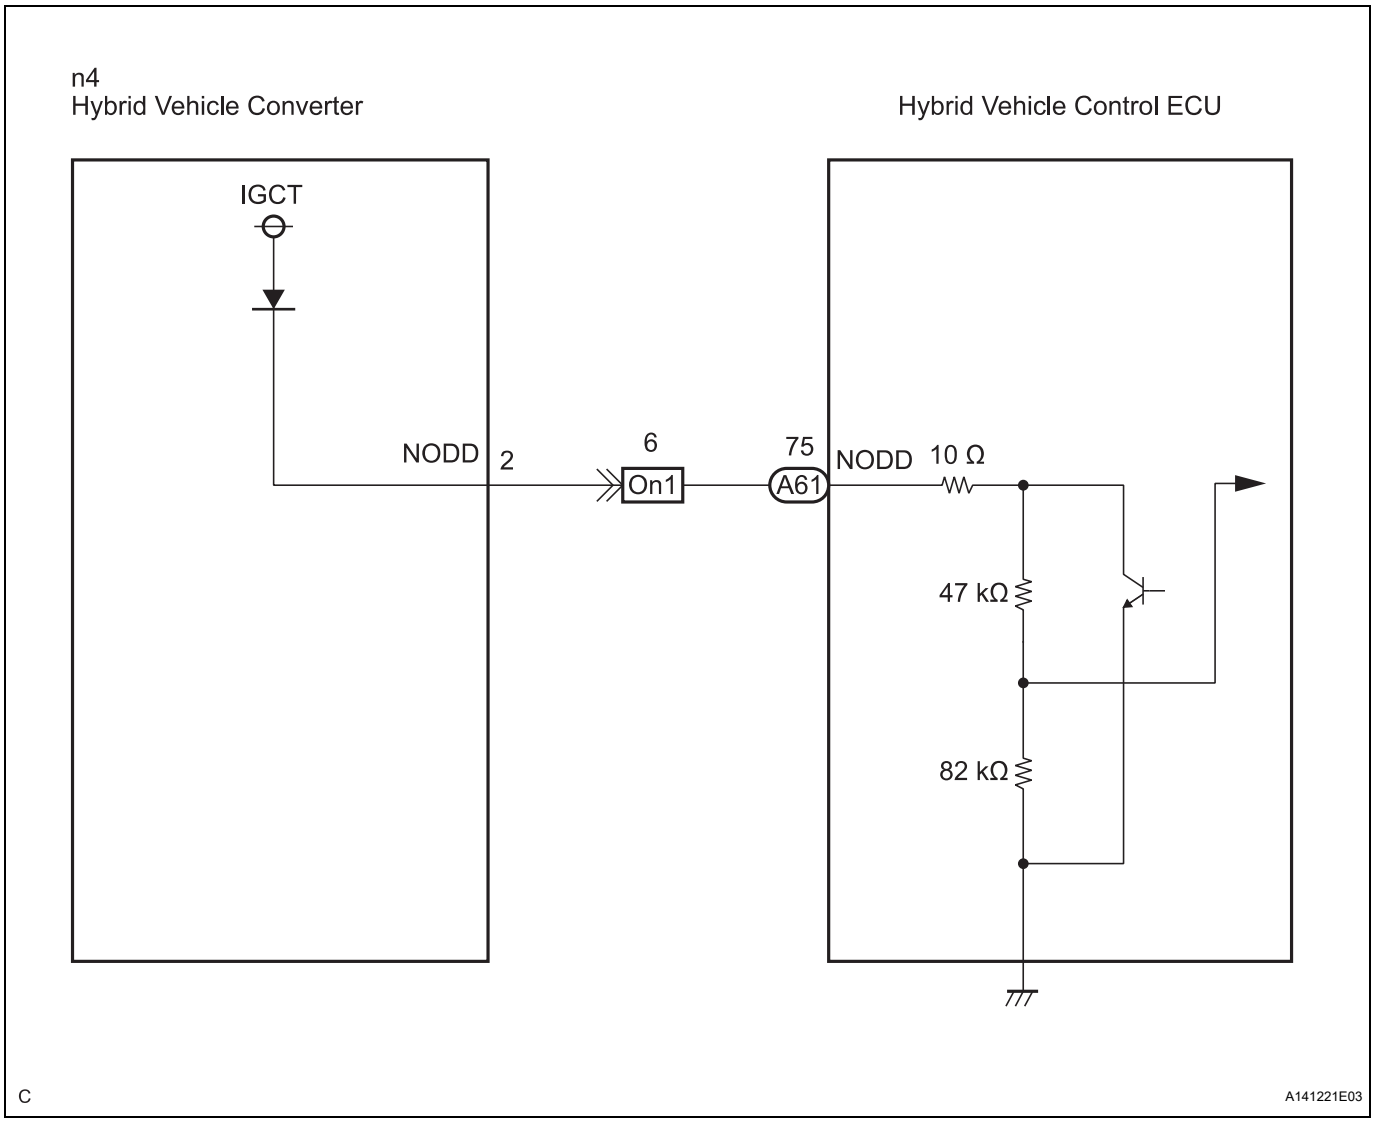
DTC	P0A08-264	DC / DC Converter Status Circuit

DESCRIPTION

For a description of the hybrid vehicle converter (DC/DC converter), (See page HV-109).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A08	264	Malfunction in the hybrid vehicle converter	• Wire harness or connector • Fusible link or fuse • Frame wire • Hybrid vehicle converter (DC/DC connector) • Hybrid vehicle control ECU

WIRING DIAGRAM



HV

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC No.	Relevant Diagnosis
P0A94-547, 548, 549, 550, 124, 125, 126, 127	Boost converter circuit
P0ABC-226, P0ADB-227, P0ADB-229, P0AF0-228	SMR circuit
P3004-131, 803	High-voltage system
P0AE6-225	SMRP circuit

HV

YES → GO TO DTC CHART

NO

2	CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONTROL ECU CONNECTOR) (See page HV-79)

NG → CONNECT SECURELY

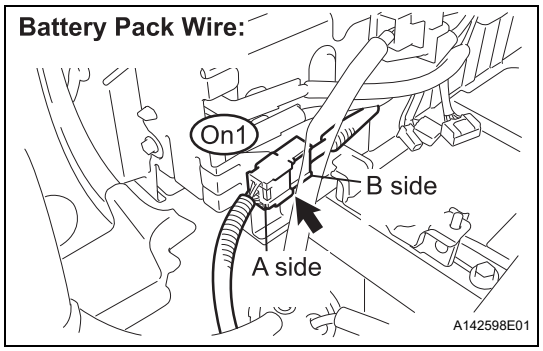
OK

3	CHECK CONNECTOR CONNECTION CONDITION (BATTERY PACK WIRE CONNECTOR) (See page HV-118)

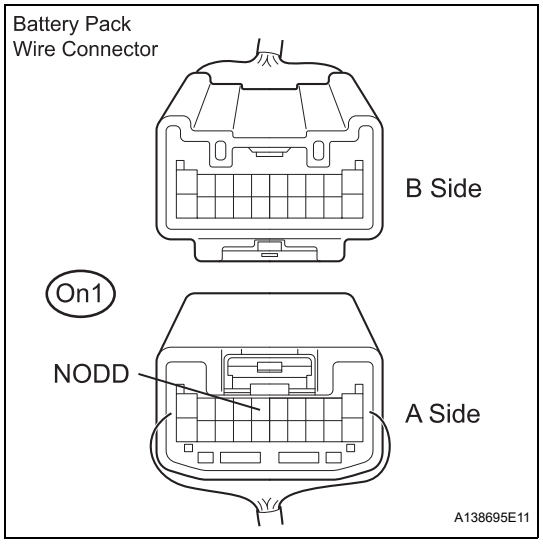
NG → CONNECT SECURELY

OK

4	CHECK HARNESS AND CONNECTOR (RESISTANCE VALUE OF NODD INSIDE HYBRID VEHICLE CONTROL ECU)



(a) Disconnect the On1 battery pack wire connector (See page HB-81).



(b) Measure the resistance according to the value(s) in the table below.

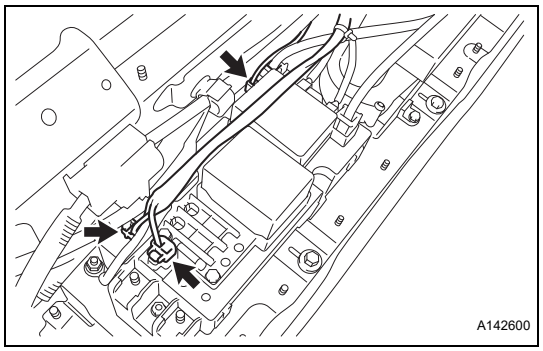
Standard resistance

Tester Connection	Specified Condition
NODD (On1-6) - Body ground	120 to 140 kΩ

NG → **Go to step 11**

OK

5	CHECK CONNECTOR CONNECTION CONDITION (HV RELAY ASSEMBLY CONNECTOR)



CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).

NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(b) Check the connections of the HV relay assembly connectors.

Result:

The connectors are connected securely and there are no contact problems.

HINT:

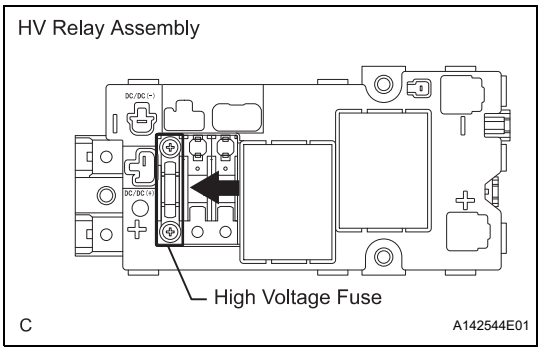
For the removal procedure of the HV relay assembly connector, (See page HB-104).

HV

NG → CONNECT SECURELY

OK

6	CHECK HV RELAY ASSEMBLY (HIGH VOLTAGE FUSE)



CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
(b) Remove the HV relay assembly (See page HB-104).
(c) Measure the resistance according the the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
High voltage fuse terminal	Below 1 Ω

NG → REPLACE HIGH VOLTAGE FUSE

OK

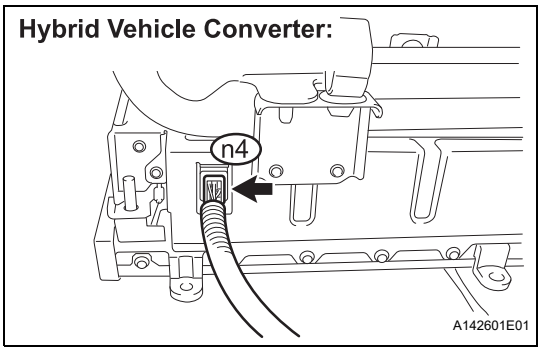
7	CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONVERTER CONNECTOR) (See page HV-120)

NG → CONNECT SECURELY

OK

HV

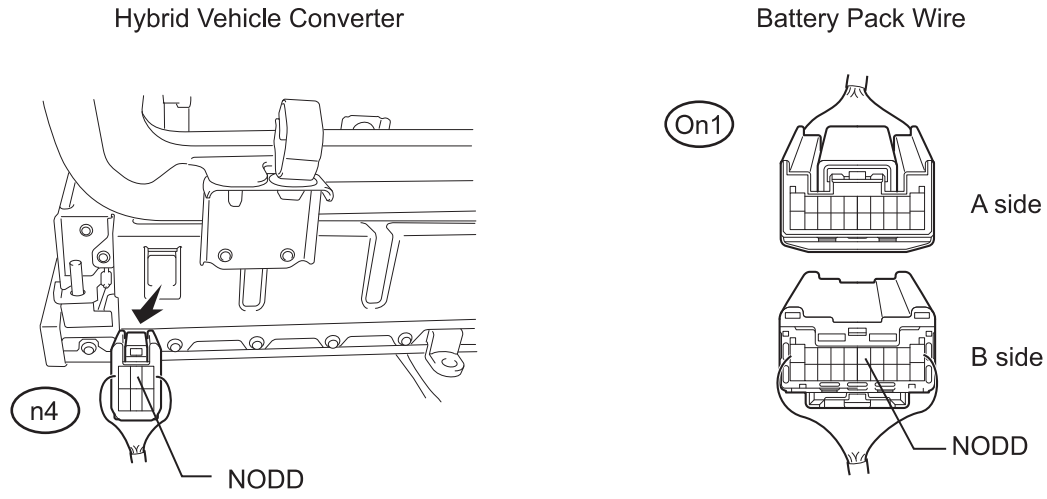
8	CHECK HARNESS AND CONNECTOR (BATTERY PACK WIRE - HYBRID VEHICLE CONVERTER)



CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
(b) Disconnect the n4 hybrid vehicle converter connector (See page HB-123).
(c) Measure the resistance according to the value(s) in the table below.

Wire Harness Side:



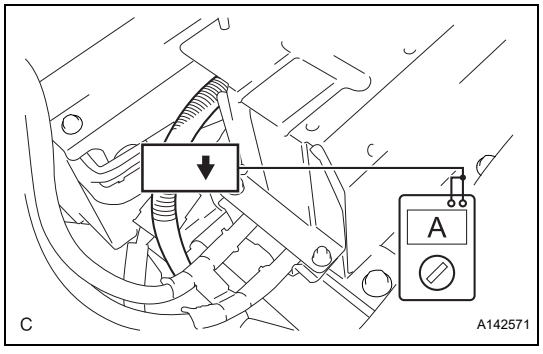
Standard resistance

Tester Connection	Specified Condition
NODD (On1-6) - NODD (n4-2)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

9 INSPECT HYBRID VEHICLE CONVERTER



(a) Connect all the disconnected connectors.
(b) Install the service plug grip.
(c) Measure the current output from the hybrid vehicle converter with the headlight position switch and blower motor switch in the HI position, and the rear window defogger turned on (*1).
(d) Measure the auxiliary battery voltage according to the previous conditions (*1).

Result

Item	Specified Condition
Current flowing from the hybrid vehicle converter	60 to 140 A
Auxiliary battery voltage	13 to 15 V

NG → **REPLACE HYBRID VEHICLE CONVERTER (See page HB-123)**

OK

HV

10	CHECK FOR INTERMITTENT PROBLEMS

(a) Check for intermittent problems (See page HV-17).

YES → **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

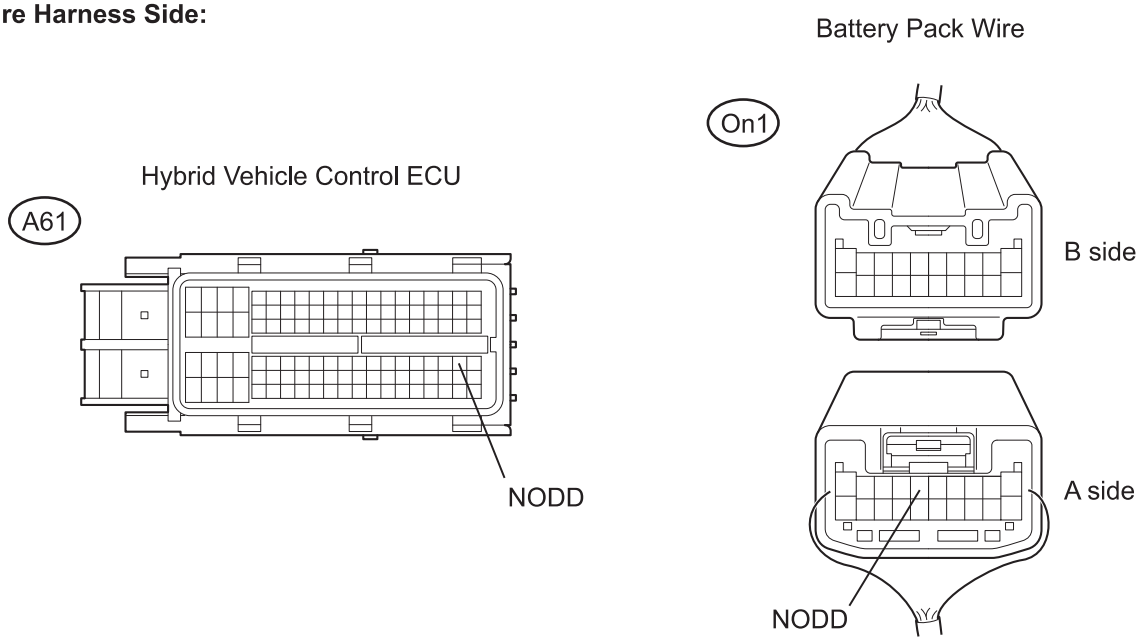
NO

REPLACE HYBRID VEHICLE CONVERTER (See page HB-123)

11	CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - BATTERY PACK WIRE CONNECTOR)

(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Wire Harness Side:



Standard voltage

Tester Connection	Specified Condition
NODD (A61-75) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the hybrid vehicle control ECU connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

(d) Turn the power switch off.

(e) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
NODD (A61-75) - NODD (On1-6)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
NODD (A61-75) or NODD (On1-6) - Body ground	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

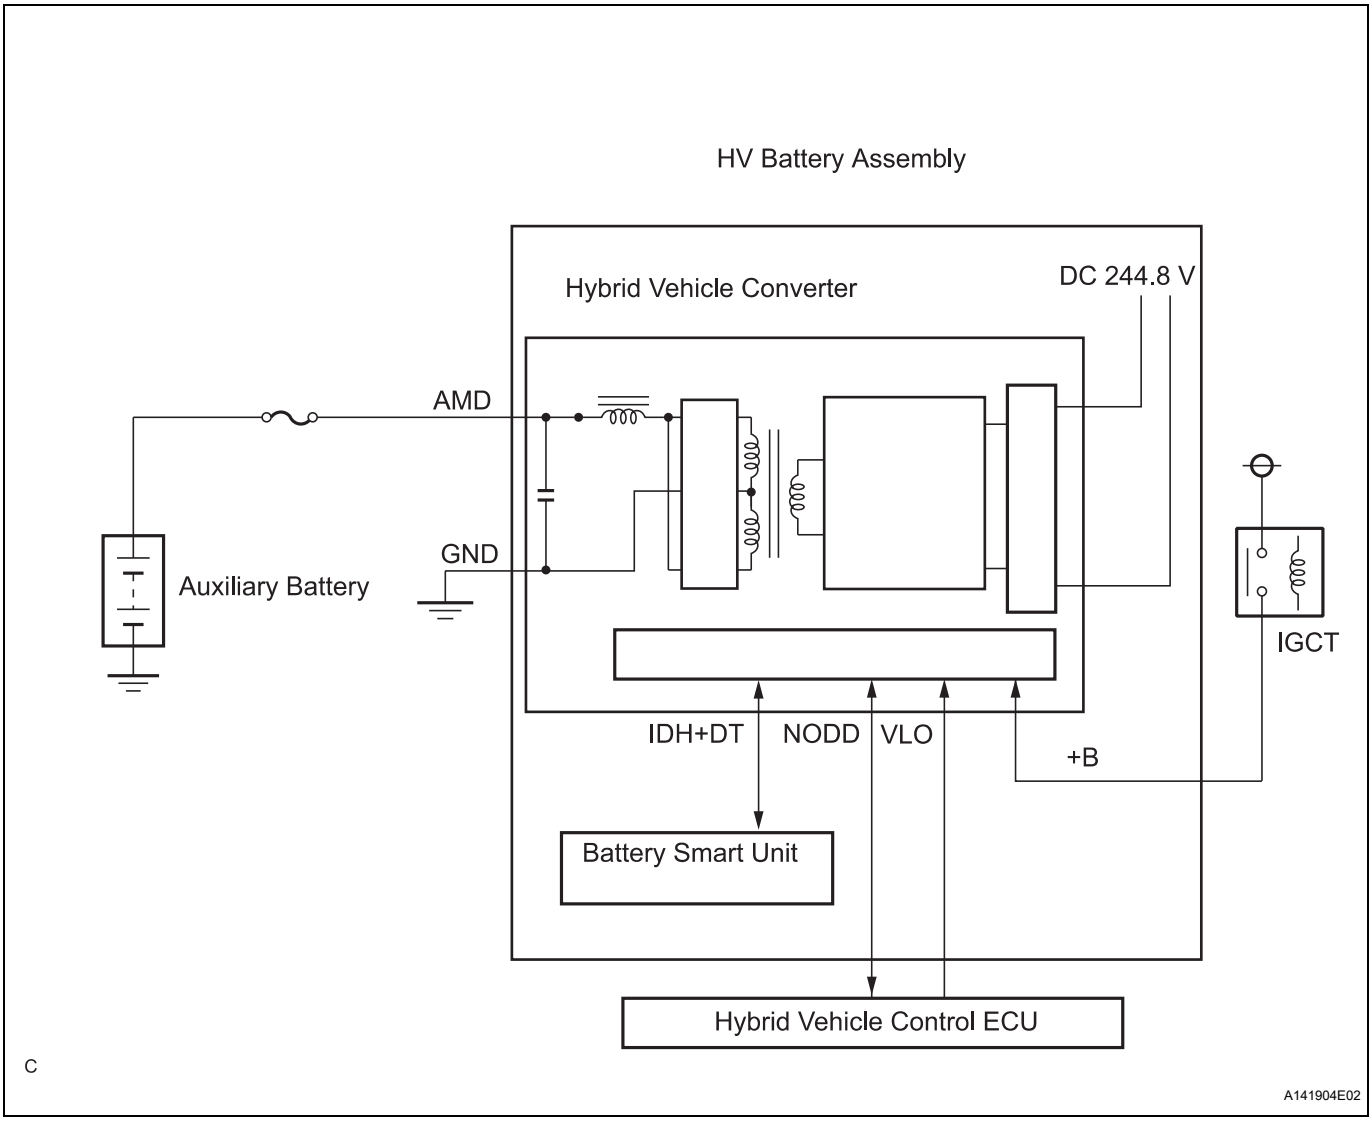
DTC	P0A09-265	DC / DC Converter Status Circuit Low Input

DESCRIPTION

The hybrid vehicle converter (DC/DC converter) converts the DC 244.8 V of the HV battery into DC 12 V in order to supply power to areas such as the vehicle's lighting, audio, and ECU systems. In addition, it charges the auxiliary battery.

A transistor bridge circuit initially converts DC 244.8 V into alternating current, and a transformer lowers its voltage. Then, it is rectified and smoothed (into DC) and converted into DC 12 V.

The hybrid vehicle converter controls the output voltage in order to keep a constant voltage at the terminals of the auxiliary battery.



The hybrid vehicle control ECU uses the NODD signal line to transmit a stop command to the hybrid vehicle converter and receive signals indicating the normal or abnormal condition of the 12 V charging system.

If the vehicle is being driven with an inoperative hybrid vehicle converter, the voltage of the auxiliary battery will drop, which will prevent the continued operation of the vehicle. Therefore, the hybrid vehicle control ECU monitors the operation of the hybrid vehicle converter and alerts the driver if it detects a malfunction.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A09	265	Open or short to GND in the hybrid vehicle converter (NODD) signal line	• Wire harness or connector • Hybrid vehicle converter (DC/DC converter) • Hybrid vehicle control ECU

WIRING DIAGRAM

Refer to the wiring diagram (See page HV-102).

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1 CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0AE6-225 is also output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC (P0AE6-225)**

NO

2 CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONTROL ECU CONNECTOR) (See page HV-79)

NG → **CONNECT SECURELY**

OK

3 CHECK CONNECTOR CONNECTION CONDITION (BATTERY PACK WIRE CONNECTOR) (See page HV-120)

NG → **CONNECT SECURELY**

HV

OK

4	CHECK HARNESS AND CONNECTOR (RESISTANCE VALUE OF NODD INSIDE HYBRID VEHICLE CONTROL ECU) (See page HV-109)

NG → Go to step 7

OK

5	CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONVERTER CONNECTOR) (See page HV-120)

NG → CONNECT SECURELY

OK

6	CHECK HARNESS AND CONNECTOR (BATTERY PACK WIRE CONNECTOR - HYBRID VEHICLE CONVERTER) (See page HV-110)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

HV

REPLACE HYBRID VEHICLE CONVERTER (See page HB-123)

7	CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - BATTERY PACK WIRE CONNECTOR) (See page HV-112)

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

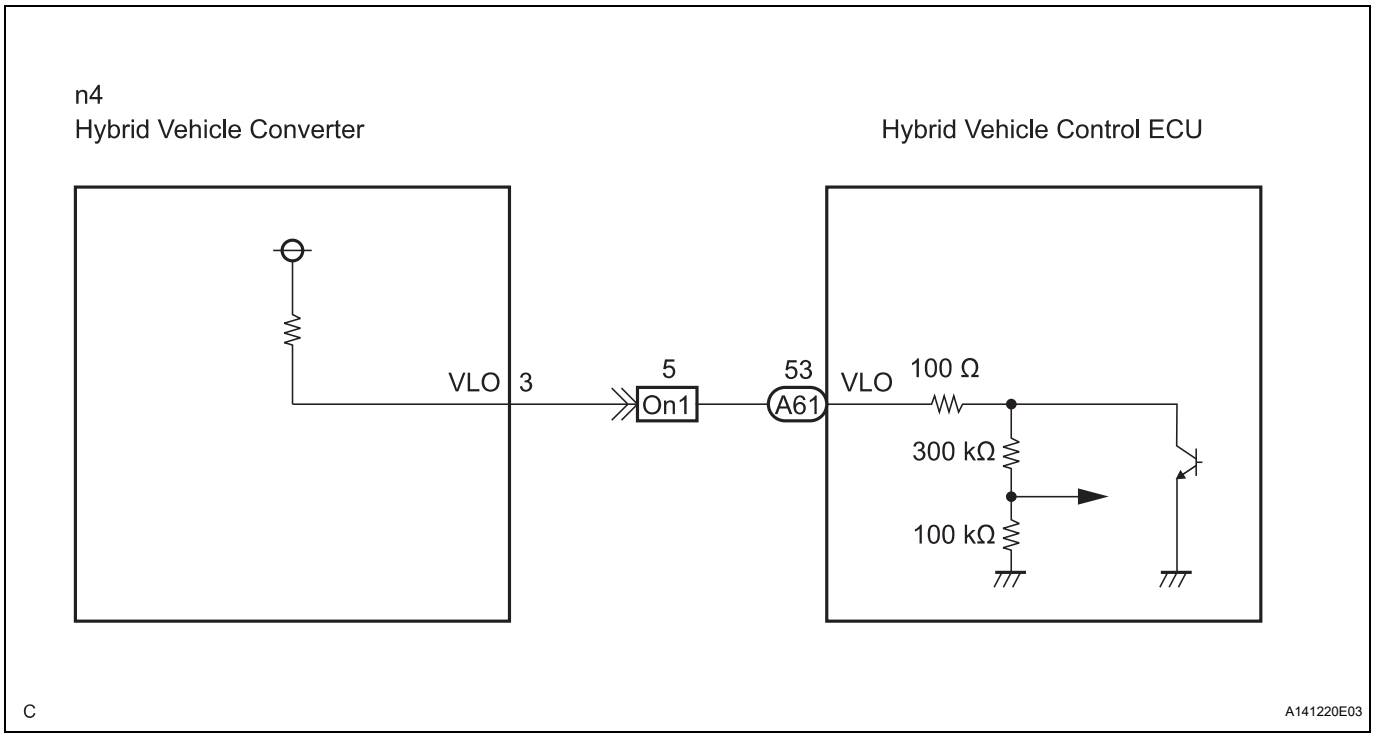
DTC	P0A09-591	DC / DC Converter Status Circuit Low Input

DESCRIPTION

The hybrid vehicle converter (DC/DC converter) controls output voltage based on voltage switching signals sent from the hybrid vehicle control ECU.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A09	591	Hybrid vehicle converter voltage switching (VLO) signal circuit malfunction (Open or short to GND)	• Hybrid vehicle converter (DC/DC converter) • Hybrid vehicle control ECU • Wire harness or connector

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks.**
  After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

HV

(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0AE6-225 is also output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC (P0AE6-225)**

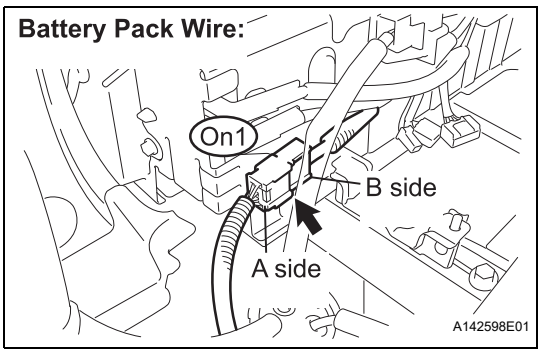
NO

2	CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONTROL ECU CONNECTOR) (See page HV-79)

NG → **CONNECT SECURELY**

OK

3	CHECK CONNECTOR CONNECTION CONDITION (BATTERY PACK WIRE CONNECTOR)



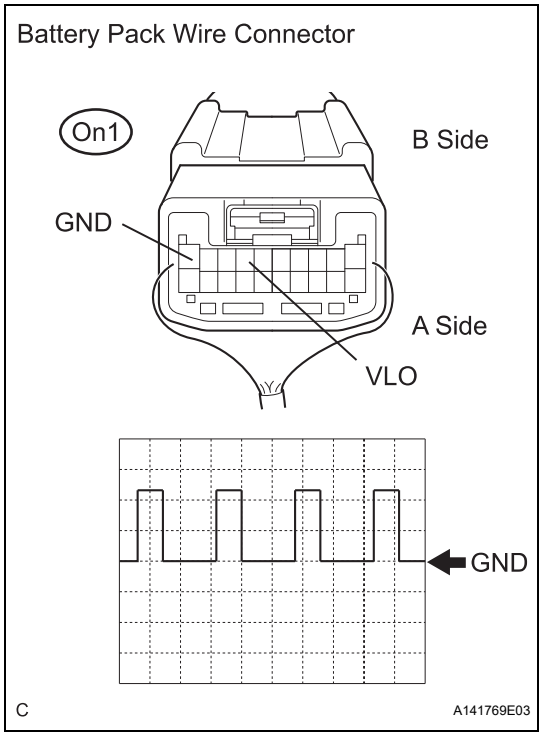
(a) Check the connection of the battery pack wire connector.
OK:
The connector is connected securely and there are no contact problems.
HINT:
For the removal and installation procedures related to inspection of the connection of the battery pack wire connector, (See page HB-81).

NG → **CONNECT SECURELY**

OK

HV

4 CHECK HYBRID VEHICLE CONTROL ECU



(a) Connect an oscilloscope between the battery pack wire terminals specified in the table below, and measure the waveform.

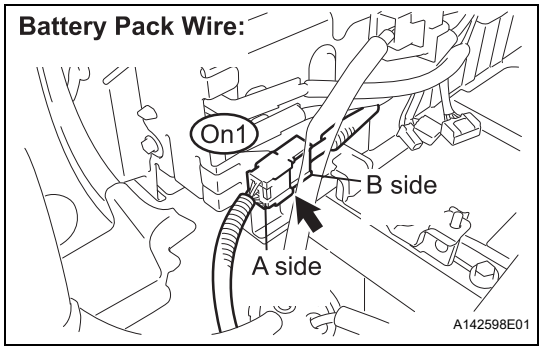
Item	Contents
Terminal	VLO (On1-7) - GND (On1-10)
Equipment Setting	5 V/DIV, 50 ms./DIV
Condition	Power switch on (IG)

HINT:
Perform this inspection with the battery pack wire connected.

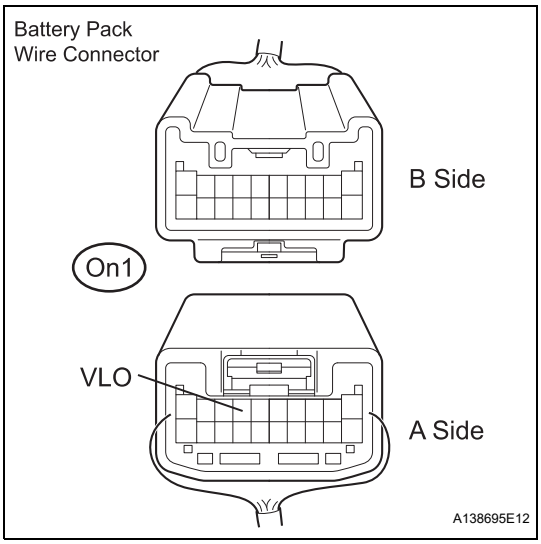
OK → **Go to step 9**

NG

5 CHECK HARNESS AND CONNECTOR (RESISTANCE VALUE INSIDE HV CONTROL ECU)



(a) Disconnect the battery pack wire connector.



(b) Measure the resistance according to the value(s) in the table below.

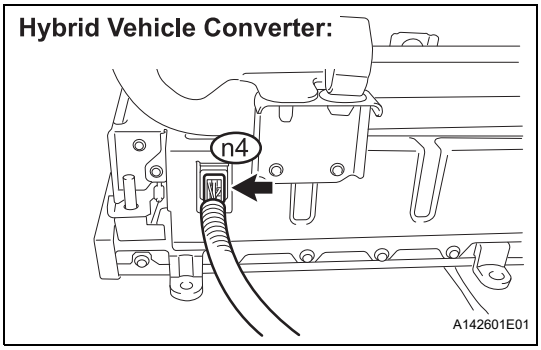
Standard resistance

Tester Connection	Specified Condition
VLO (On1-7) - Body ground	370 to 430 kΩ

NG → **Go to step 8**

OK

6	CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONVERTER CONNECTOR)



CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
(b) Check the connection of the hybrid vehicle converter connector.

OK:

The connector is connected securely and there are no contact problems.

NG → **CONNECT SECURELY**

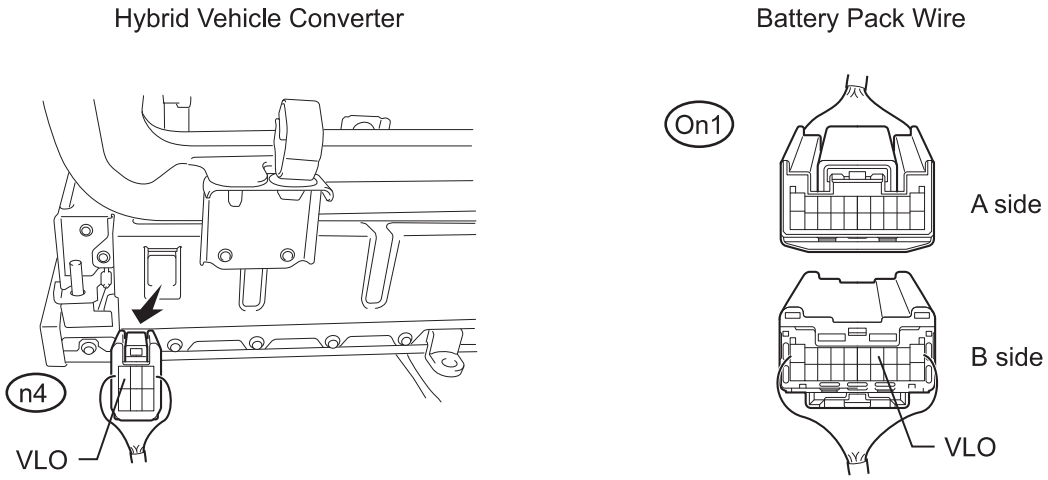
OK

7	CHECK HARNESS AND CONNECTOR (BATTERY PACK WIRE CONNECTOR - HYBRID VEHICLE CONVERTER)

CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
(b) Disconnect the n4 hybrid vehicle converter connector (See page HB-123).
(c) Measure the resistance according to the value(s) in the table below.

Wire Harness Side:



Standard resistance (Check for open)

Tester Connection	Specified Condition
VLO (On1-7) - VLO (n4-3)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
VLO (On1-7) or VLO (n4-3) - Body ground	10 kΩ or more

HV

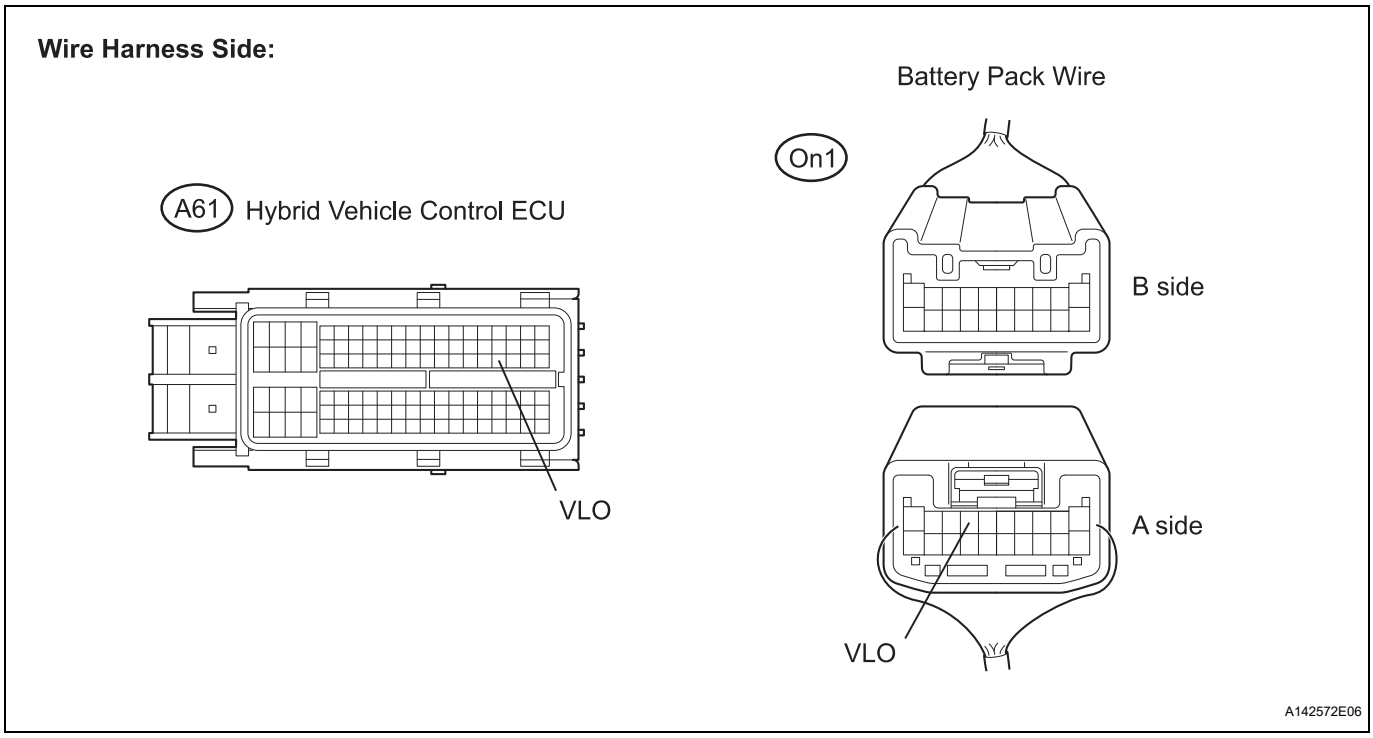
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONVERTER (See page HB-123)

8	CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - BATTERY PACK WIRE CONNECTOR)

(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.



Standard resistance (Check for open)

Tester Connection	Specified Condition
VLO (A61-53) - VLO (On1-7)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
VLO (A61-53) or VLO (On1-7) - Body ground	10 kΩ or more

HV

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

9	CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Read and record the DTCs and freeze frame data.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.
(e) Clear the DTCs.

NEXT

10	RECONFIRM DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A09-591 is output.
(e) Clear the DTCs.

YES → **REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)**

NO

11	CHECK FOR INTERMITTENT PROBLEMS

(a) Check for intermittent problems (See page HV-17).

NG → **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P0A0D-350	High Voltage System Inter-Lock Circuit High

DTC	P0A0D-351	High Voltage System Inter-Lock Circuit High

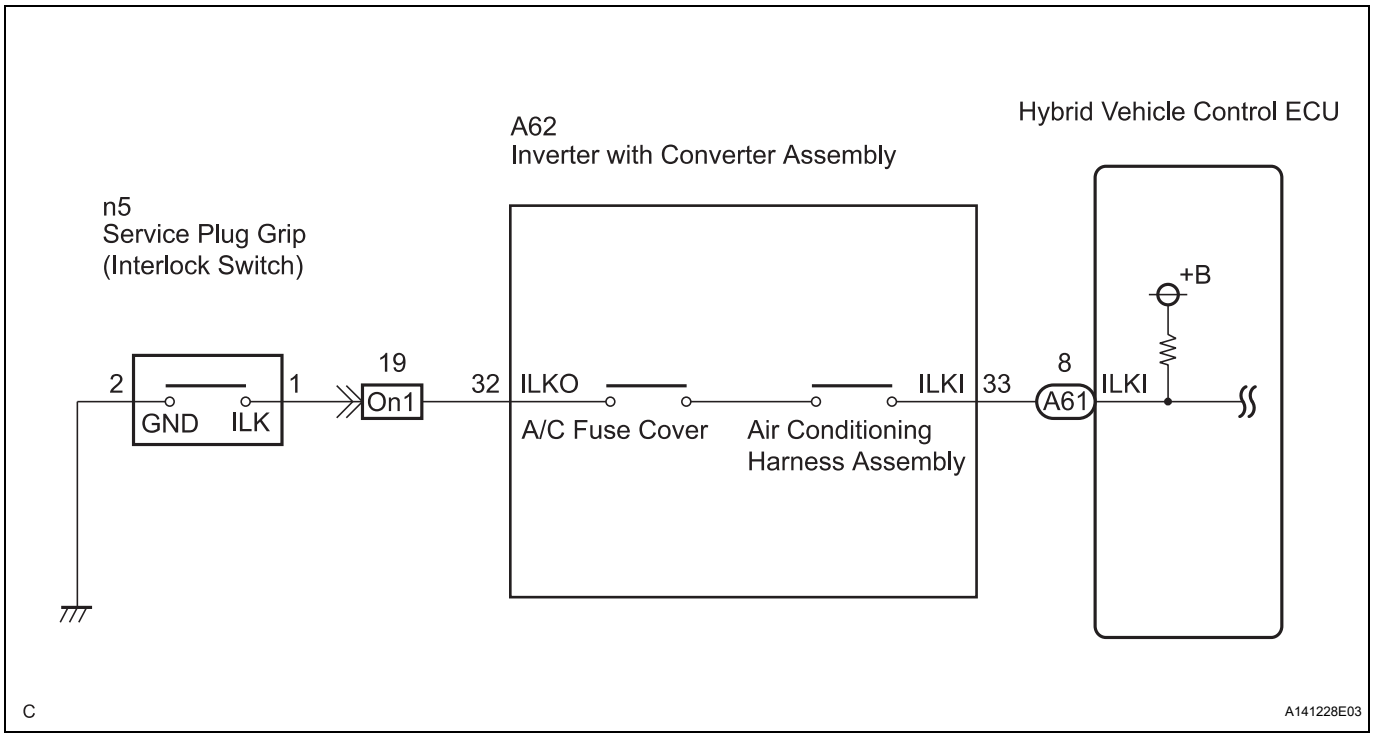
DESCRIPTION

When the hybrid vehicle control ECU detects that a safety device is operated, it will prohibit the hybrid system operation or shut off the system main relay. There are three safety devices in three different locations. The first safety device is located at the service plug grip. The second one is located at the air conditioner fuse maintenance A/C fuse cover of the inverter with converter assembly. The third one is located at the air conditioning harness assembly that is connected to the inverter with converter assembly. If the service plug grip, A/C fuse cover, or air conditioning harness assembly is removed, the interlock signal line will be open. If the vehicle is being driven, this condition will be determined to be an open malfunction and the system main relay will not be shut off. If the safety devices are installed correctly, the system returns to normal when the power switch is turned on (IG).

DTCNo.	INF Code	DTC Detection Condition	Trouble Area
P0A0D	350	Operating any of the safety devices with the vehicle stopped (ILK signal is ON)	• Wire harness or connector • Hybrid vehicle control ECU • Service plug grip • Inverter with converter assembly • Air conditioning harness assembly
P0A0D	351	Interlock signal line opens while the vehicle is being driven	• Wire harness or connector • Hybrid vehicle control ECU • Service plug grip • Inverter with converter assembly • Air conditioning harness assembly

HV

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1D is output.

YES → **GO TO DTC CHART**

NO

2	CLEAR DTC (HV)

(a) Turn the power switch on (IG).
(b) Read and record the DTCs and freeze frame data.
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.
(d) Clear the DTCs.

NEXT

3	RECONFIRM DTC OUTPUT (HV)

(a) Turn the power switch on (IG).
(b) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(c) Recheck for DTCs.
Result:
DTC P0A0D-350 or P0A0D-351 is output again.

NO → **Go to step 11**

YES

HV

4	CHECK SERVICE PLUG GRIP

CAUTION:
Be sure to wear insulated gloves.

(a) Check if the service plug grip is installed correctly.
Result:
The service plug grip is installed correctly.
HINT:
For the removal and installation procedures, (See page HV-1).

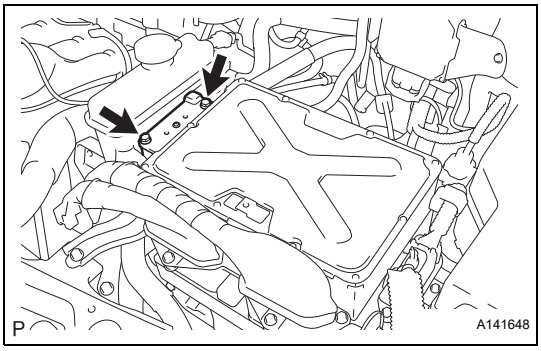
NO → **CONNECT SECURELY**

YES

5	CHECK INVERTER WITH CONVERTER (A/C FUSE COVER INSTALLATION CONDITION)

CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).
(b) Check if the A/C fuse cover of the inverter with converter assembly is installed correctly.
Result:
The A/C fuse cover of the inverter with converter assembly is installed correctly.



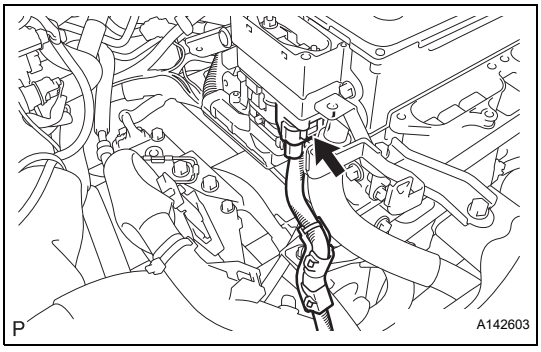
NO → **CONNECT SECURELY**

YES

6	CHECK AIR CONDITIONING HARNESS ASSEMBLY (AIR CONDITIONING HARNESS ASSEMBLY CONNECTION CONDITION)

CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
(b) Check if the air conditioning harness assembly connector is connected correctly.
Result:
The air conditioning harness assembly connector is connected correctly.



NO → **CONNECT SECURELY**

HV

YES

7	CHECK HYBRID VEHICLE CONTROL ECU

CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

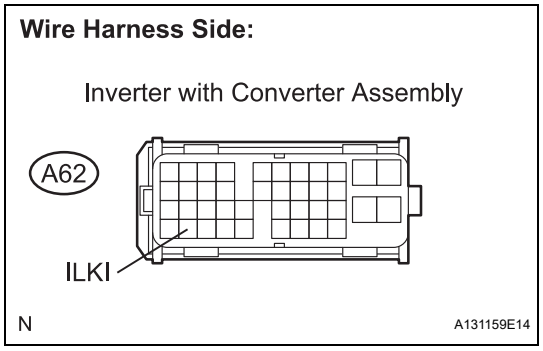
(b) Disconnect the A62 inverter with converter assembly connector.

(c) Turn the power switch on (IG).

(d) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Specified Condition
ILKI (A62-33) - Body ground	9 to 14 V

NOTICE:
Turning the power switch on (IG) with the inverter with converter assembly connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.



NG → Go to step 17

OK

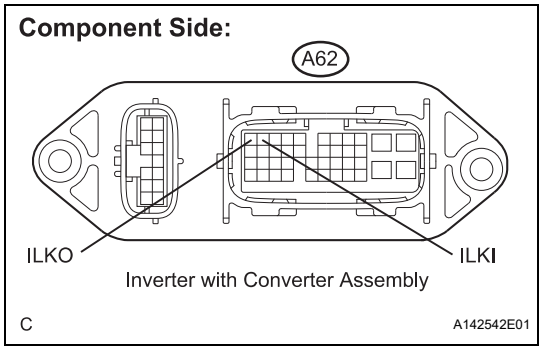
8	CHECK INVERTER WITH CONVERTER ASSEMBLY

CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
ILKI (A62-33) - ILKO (A62-32)	1 Ω or less



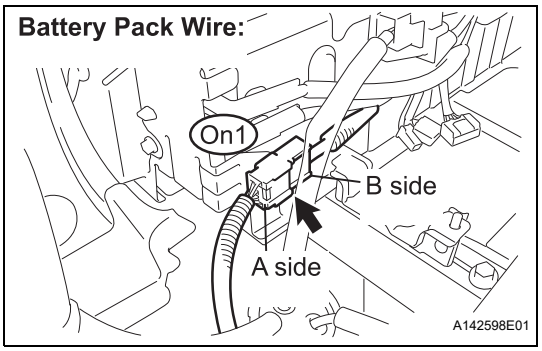
NG → Go to step 15

OK

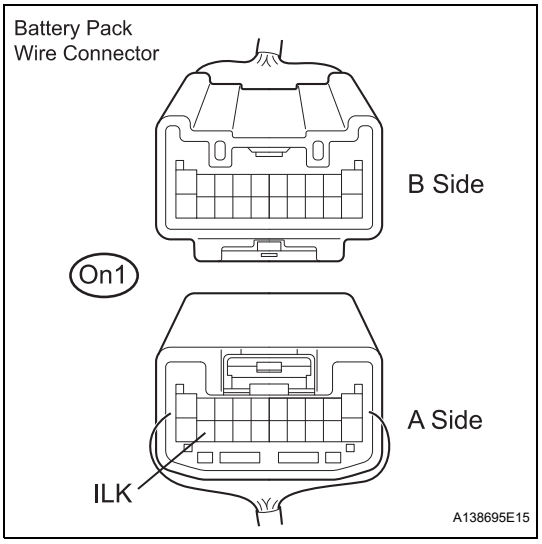
9	CHECK HARNESS AND CONNECTOR (INVERTER WITH CONVERTER ASSEMBLY - BATTERY PACK WIRE)

(a) Connect the inverter with converter assembly connector.

HV



(b) Disconnect the On1 battery pack wire connector (See page HB-81).
(c) Turn the power switch on (IG).



(d) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Specified Condition
ILK (On1-19) - Body ground	9 to 14 V

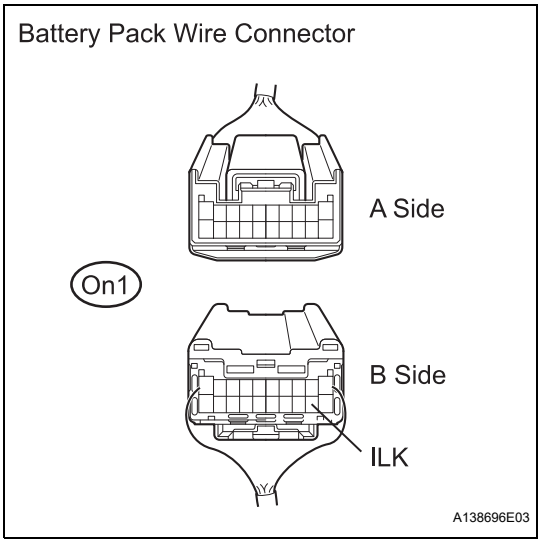
NOTICE:
Turning the power switch on (IG) with the battery pack wire connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

HV

10	CHECK HARNESS AND CONNECTOR (BATTERY PACK WIRE - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
ILK (On1-19) - Body ground	Below 1 Ω

NG → **Go to step 12**

OK

11	CHECK CONNECTOR CONNECTION CONDITION (INTERLOCK CIRCUIT)

(a) Check the connections of each connector.

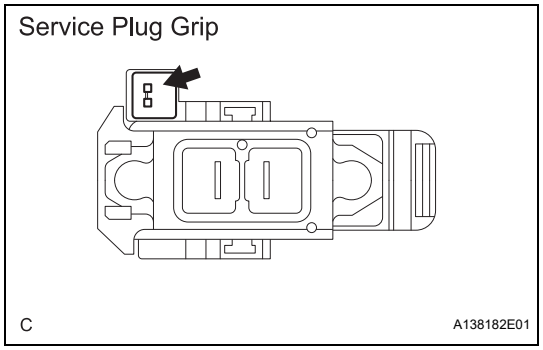
Result:
Dirt or foreign objects have not entered the connection, or there is no evidence of contamination.

NG → **REPAIR OR REPLACE CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

12 CHECK SERVICE PLUG GRIP



CAUTION:
Be sure to wear insulated gloves.

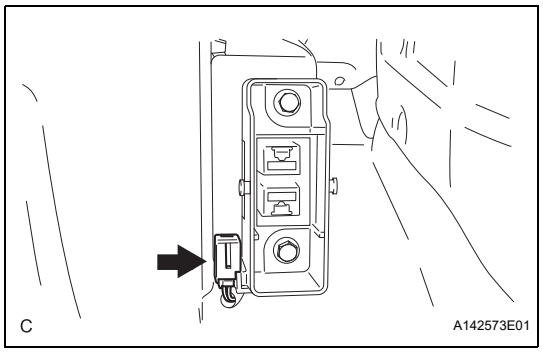
(a) Turn the power switch off and remove the service plug grip (See page HV-1).
NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(b) Check the condition of the service plug grip interlock.
Result:
Dirt or foreign objects have not entered the connection, or there is no evidence of contamination.

NG → **REPLACE SERVICE PLUG GRIP**

OK

13 CHECK HARNESS AND CONNECTOR (INTERLOCK CONNECTOR CONNECTION CONDITION)



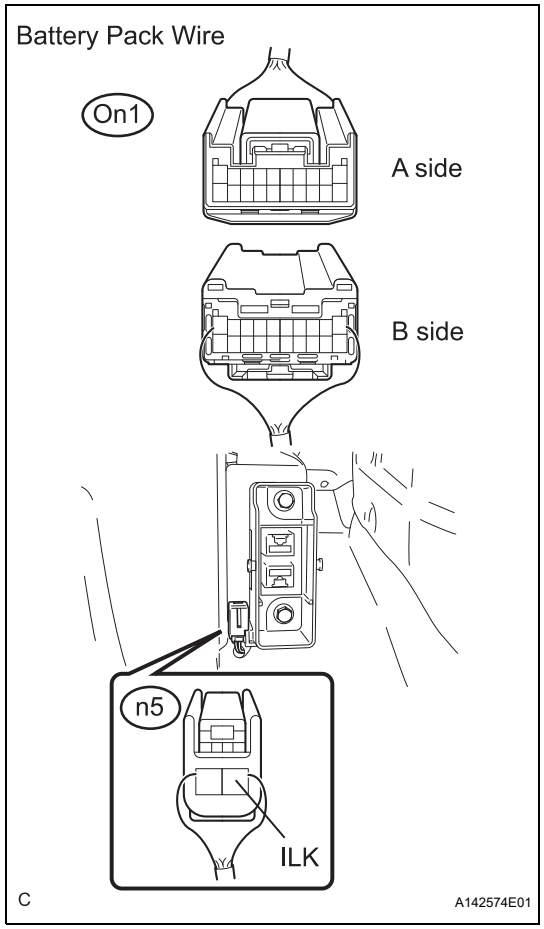
(a) Check that the interlock connector at the service plug grip installation socket is connected correctly.
Result:
The connector is connected correctly.

NG → **CONNECT SECURELY**

OK

HV

14	CHECK HARNESS AND CONNECTOR (BATTERY PACK WIRE CONNECTOR - SERVICE PLUG GRIP)



CAUTION:
Be sure to wear insulated gloves.

(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
ILK (On1-19) - ILK (n5-1)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (BATTERY PACK WIRE CONNECTOR - SERVICE PLUG GRIP)**

OK

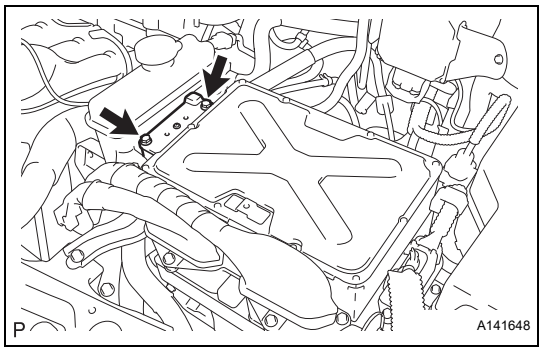
REPAIR OR REPLACE HARNESS OR CONNECTOR (SERVICE PLUG GRIP - BODY GROUND)

15	CHECK INVERTER WITH CONVERTER ASSEMBLY (A/C FUSE COVER OF INVERTER WITH CONVERTER)

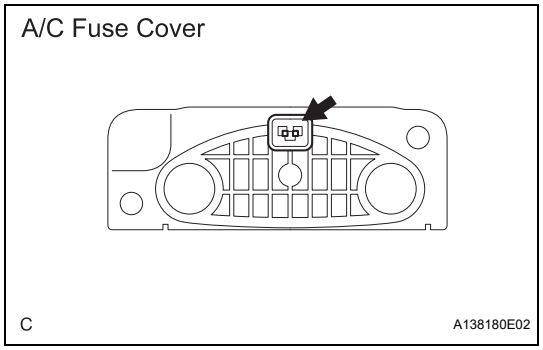
CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).
NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

HV



(b) Remove the A/C fuse cover from the inverter with converter assembly.



(c) Check the condition of the A/C fuse cover interlock.
Result:
Dirt or foreign objects have not entered the connection, or there is no evidence of contamination.

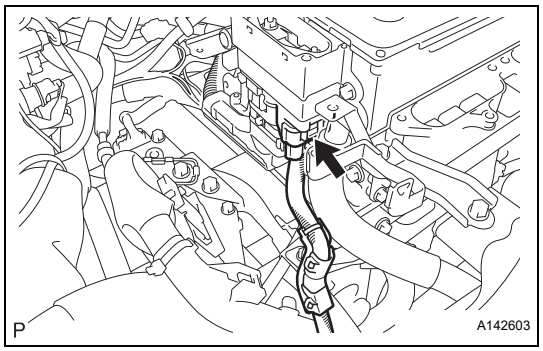
NG	**REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)**

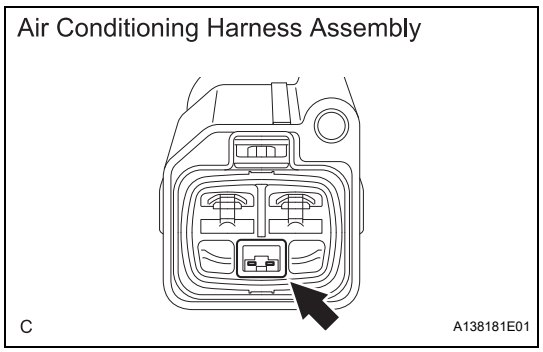
OK

16 CHECK AIR CONDITIONING HARNESS ASSEMBLY (INTERLOCK)

CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
(b) Remove the air conditioning harness assembly from the inverter with converter assembly.





(c) Check the condition of the air conditioning harness assembly interlock.
Result:
Dirt or foreign objects have not entered the connection, or there is no evidence of contamination.

NG	**REPLACE AIR CONDITIONING HARNESS ASSEMBLY**

HV

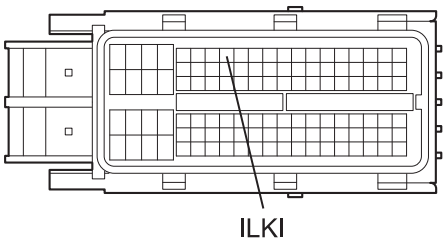
OK

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

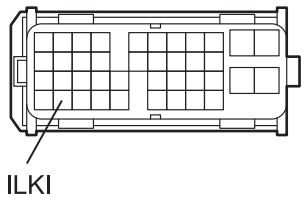
17	CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - INVERTER WITH CONVERTER ASSEMBLY)

Wire Harness Side:

A61 Hybrid Vehicle Control ECU



A62 Inverter with Converter Assembly



A142564E02

(a) Turn the power switch off.
(b) Disconnect the A61 hybrid vehicle control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
ILKI (A61-8) - ILKI (A62-33)	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

HV

DTC	P0A0F-204	Engine Failed to Start

DTC	P0A0F-205	Engine Failed to Start

DTC	P0A0F-533	Engine Failed to Start

DTC	P0A0F-534	Engine Failed to Start

DESCRIPTION

The hybrid vehicle control system performs the fail-safe control based on an abnormal signal from the EFI system.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A0F	204	Abnormal signal input from the ECM (abnormal engine output)	• Hybrid vehicle control ECU • Engine control system
P0A0F	205	Abnormal signal input from the ECM (engine is unable to start)	• Hybrid vehicle control ECU • Engine control system
P0A0F	533	Abnormal signal input from the ECM (abnormal engine output when running out of fuel)	• Hybrid vehicle control ECU • Engine control system
P0A0F	534	Abnormal signal input from the ECM (fuel level not sufficient to start the engine)	• Hybrid vehicle control ECU • Engine control system

HV

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (ENGINE CONTROL SYSTEM)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBDII / ENGINE / DTC INFO / CURRENT CODES.
(d) Read output DTC.

OK:

DTCs are output

YES → GO TO DTC CHART

NO

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P0A0F-238	Engine Failed to Start

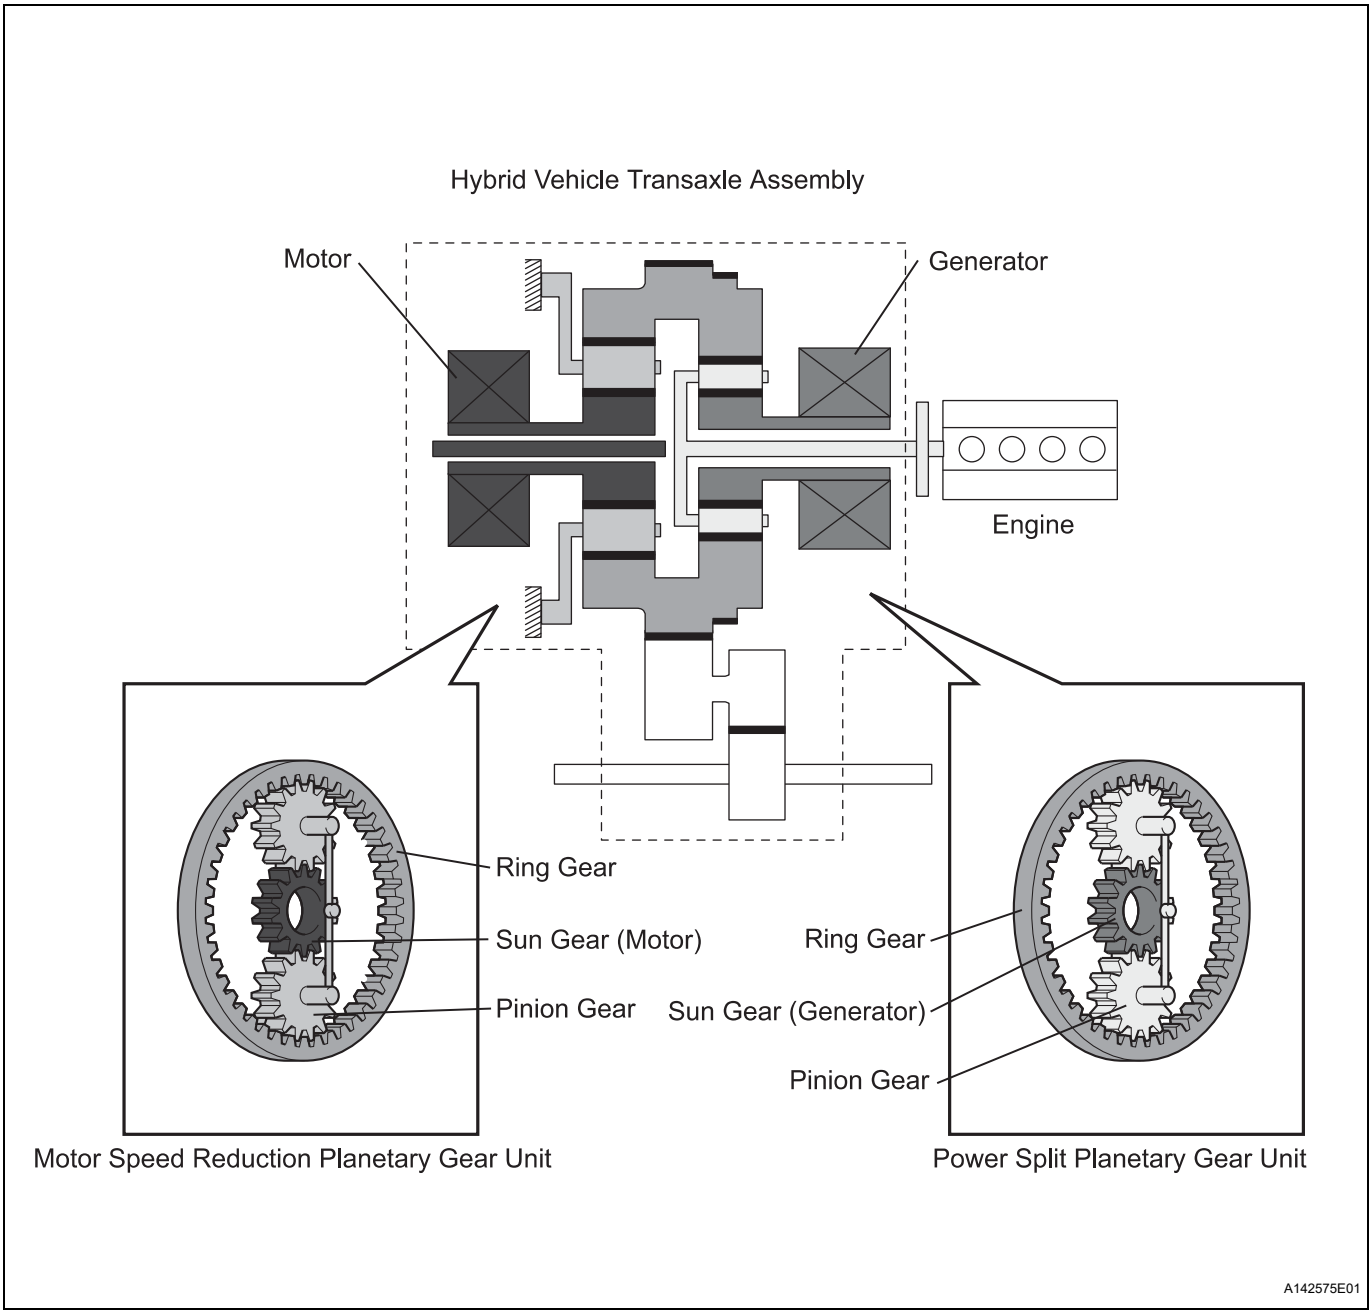
DESCRIPTION

The hybrid vehicle control ECU detects this DTC and effects fail-safe control if the engine or transaxle gear has seized up, or foreign objects have been caught in either of them.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A0F	238	Engine does not start even though cranking it (transaxle input malfunction [engine system])	• Engine • Hybrid vehicle transaxle assembly (shaft, gear) • Transmission input damper • Wire harness or connector • Hybrid vehicle control ECU

HINT:

If this DTC is output, the engine or transaxle gear may be seized up. Be sure to check the level of the engine oil, transaxle oil (ATF), and coolant before inspection.



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (ENGINE CONTROL SYSTEM)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBDII / ENGINE / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTCs are output.

YES → **GO TO DTC CHART**

NO

2	CHECK CRANKSHAFT PULLEY REVOLUTION (P POSITION)

(a) Turn the power switch off, move the shift lever to the P position, and lift up the vehicle.
(b) Turn the crankshaft pulley by hand to check if the crankshaft rotates.
CAUTION:
Do not turn the power switch on (READY) while performing this inspection. Be sure to turn the power switch off before performing this inspection, to prevent the engine from starting.
OK:
The crankshaft rotates.

NG → **Go to step 11**

OK

3	CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - CRANKSHAFT POSITION SENSOR) (See page ES-167)

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT CRANKSHAFT POSITION SENSOR (See page ES-166)

NG → **REPLACE CRANKSHAFT POSITION SENSOR**

OK

5	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.

HV

(b) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(c) Check if DTCs are output.
(d) Confirm and record the DTCs, freeze frame data, and information for the HV system.

NEXT

6	CLEAR DTC

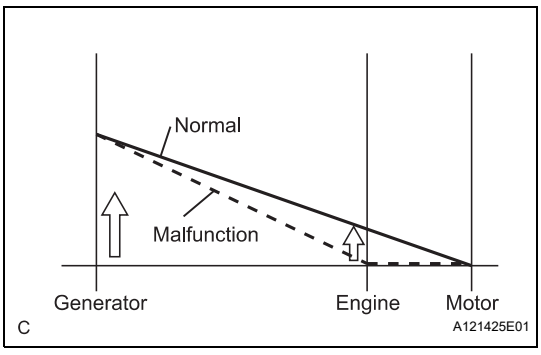
(a) Connect the intelligent tester to the DLC3.
(b) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.
(c) Clear the DTCs of the HV system.

NEXT

7	CHECK READY LIGHT ON

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA LIST / MG1 REV and ENGINE SPD.
(d) Depress the brake pedal and turn the power switch on (READY).
OK:
The READY light comes on.
HINT:
- If the READY light does not come on and the reading on the intelligent tester shows DTC P0A90-239 (hybrid vehicle transaxle input malfunction [shaft damaged]), or the READY light comes on and MG1 turns but the engine does not crank, replace the hybrid vehicle transaxle assembly.
- If this DTC (P0A0F-238) is output, the HV battery may be dead and DTC P3000-388 or P3000-389 may be output.

(e) Refer to the graph for data list confirmation of "MG1 REV" and "ENGINE SPD".



Engine speed	Generator speed
Approx. 900 rpm	Approx. 3,200 rpm
Approx. 1,500 rpm	Approx. 5,400 rpm

NG → **REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)**

OK

8	CHECK ENGINE RACING

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA LIST / MG1 REV and ENGINE SPD.
(d) While the READY light is on, depress the accelerator pedal for 10 seconds with the shift lever in the P position.
OK:
The engine revs up.
HINT:
If the engine does not rev up and the reading on the intelligent tester shows DTC P3147-239 (hybrid vehicle transaxle input malfunction [shaft damaged]), or the Generator turns but the engine does not crank, replace the hybrid vehicle transaxle assembly.

NG → **REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)**

OK

9	CHECK CREEP MOVEMENT

(a) Connect the intelligent tester to the DLC3.
(b) Depress the brake pedal, move the shift lever to the D position, and release the brake pedal.
OK:
The wheels turn (creeping along).
HINT:
If the wheels do not turn and the reading on the intelligent tester shows DTC P3147 (transaxle malfunction), replace the hybrid vehicle transaxle assembly.

NG → **REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)**

OK

10	ENGINE SPEED

(a) Connect the intelligent tester to the DLC3.
(b) While driving at the vehicle speed of more than 6 mph (10 km/h), fully depress the accelerator pedal to raise the engine speed.
OK:
Engine speed increases smoothly.

HINT:
If the engine over-revs or the reading on the intelligent tester shows DTC P3147-241 (transaxle input malfunction [torque limiter slipping]), replace the transmission input damper.

NG → **REPLACE TRANSMISSION INPUT DAMPER ASSEMBLY**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

11	CHECK FRONT TIRE REVOLUTION

(a) Lift up the vehicle.
(b) Move the shift lever to the N position with the power switch off.
CAUTION:
Do not turn the power switch on (READY) while performing this inspection. Be sure to turn the power switch off before performing this inspection, to prevent the engine from starting.
(c) Turn the crank pulley by hand to check if the front tires rotate.
OK:
The front tires do not rotate.

NG → **CHECK AND REPAIR ENGINE**

OK

REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)

DTC	P0A10-263	DC / DC Converter Status Circuit High Input

DESCRIPTION

Refer to the circuit description for DTC P0A08-264 (See page HV-109).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A10	263	+B short in hybrid vehicle converter (DC/DC converter) NODD signal line	• Wire harness or connector • Hybrid vehicle converter (DC/DC converter) • Hybrid vehicle control ECU

WIRING DIAGRAM

Refer to the wiring diagram for P0A08-264 (See page HV-102).

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HV

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

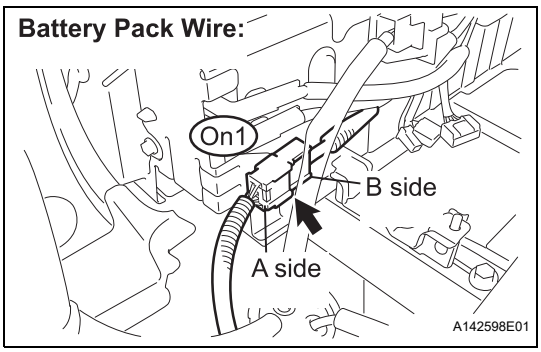
Result:

DTC P0A10-263 and other DTCs are output.

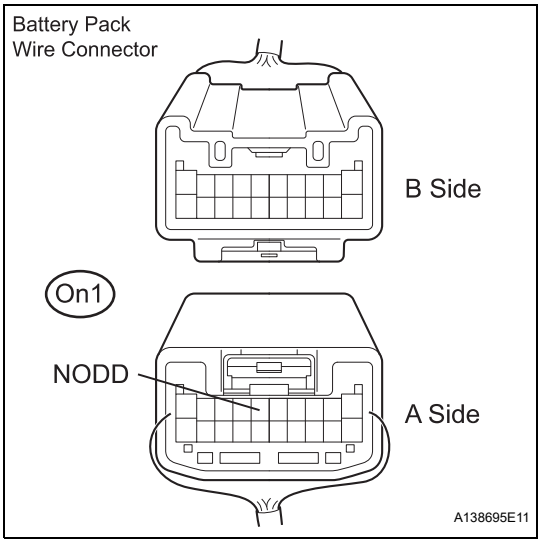
YES → **GO TO DTC CHART**

NO

2	CHECK HARNESS AND CONNECTOR



(a) Disconnect the On1 battery pack wire connector (See page HB-81).
(b) Turn the power switch on (IG).



(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

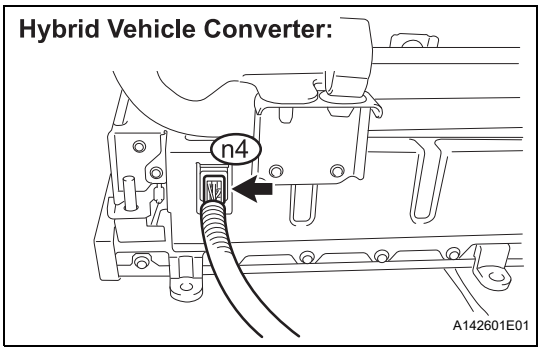
Tester Connection	Specified Condition
NODD (On1-6) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the battery pack wire connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

NG → **Go to step 4**

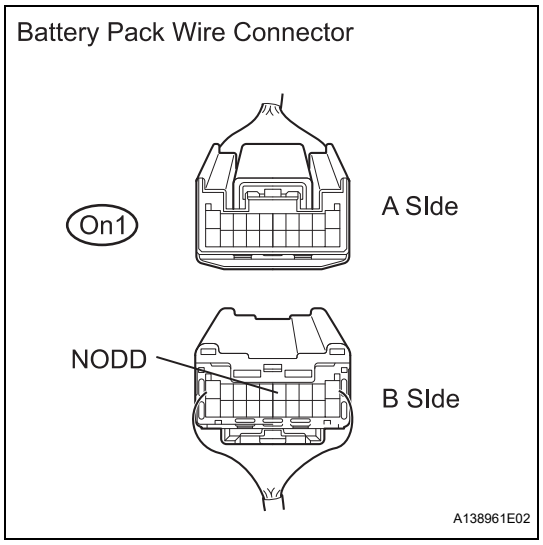
OK

3	CHECK HARNESS AND CONNECTOR (BATTERY PACK WIRE CONNECTOR - HYBRID VEHICLE CONVERTER)



CAUTION:
Be sure to wear insulated gloves.
(a) Check that the service plug grip is not installed.
(b) Disconnect the n4 hybrid vehicle converter connector (See page HB-123).
(c) Turn the power switch on (IG).

HV



(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
NODD (On1-6) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the battery pack wire connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

(e) Turn the power switch off.

(f) Measure the resistance according to the value(s) in the table below.

Standard resistance

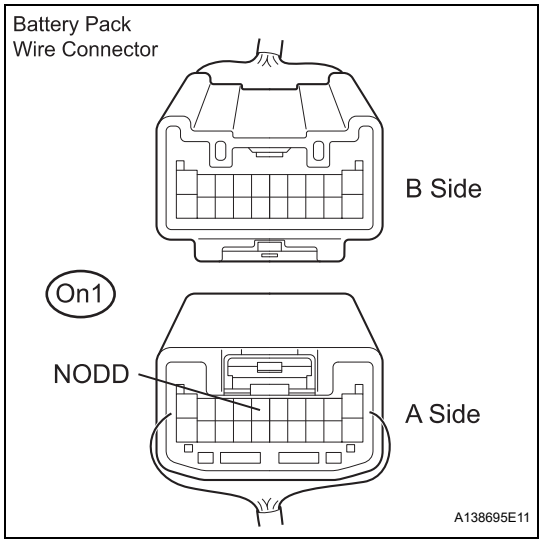
Tester Connection	Specified Condition
NODD (On1-6) - Each of the other terminals	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONVERTER (See page HB-123)

4 CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - BATTERY PACK WIRE)



(a) Disconnect the A61 hybrid vehicle control ECU connector.

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
NODD (On1-6) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the battery pack wire connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

HV

DTC	P0A10-592	DC / DC Converter Status Circuit High Input

DESCRIPTION

Refer to the circuit description for DTC P0A09-591 (See page HV-112).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A10	592	Hybrid vehicle converter (DC/DC converter) voltage switching (VLO) signal circuit malfunction (+B short)	Hybrid vehicle control ECU

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0A09-591 (See page HV-112).

INSPECTION PROCEDURE

CAUTION:

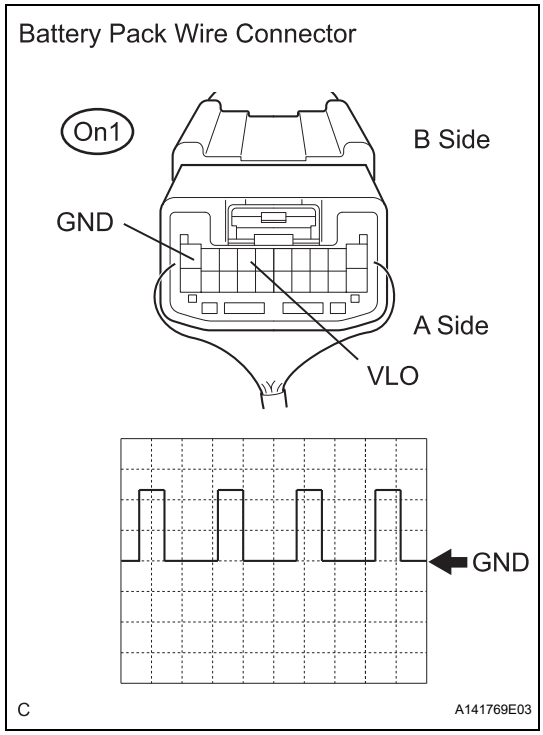
- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HV

1	CHECK HYBRID VEHICLE CONTROL ECU



(a) Connect an oscilloscope between the battery pack wire terminals specified in the table below, and measure the waveform.

Item	Contents
Terminal	VLO (On1-7) - GND (On1-10)
Equipment Setting	5 V/DIV., 50 ms./DIV.
Condition	Power switch on (IG)

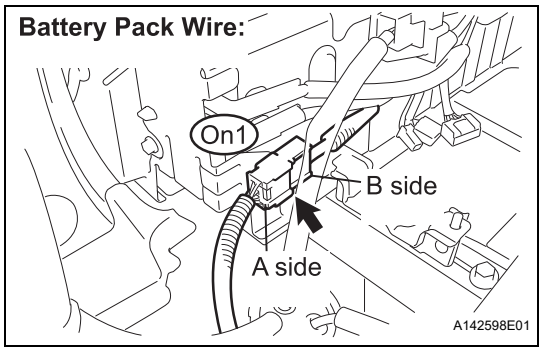
HINT:

Perform this inspection with the battery pack wire connected.

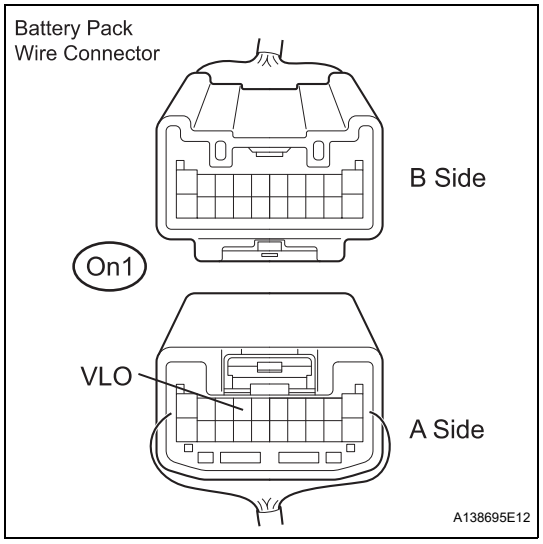
OK → **Go to step 4**

NG

2	CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - BATTERY PACK WIRE CONNECTOR)



(a) Disconnect the battery pack wire connector.
(b) Turn the power switch on (IG).



(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

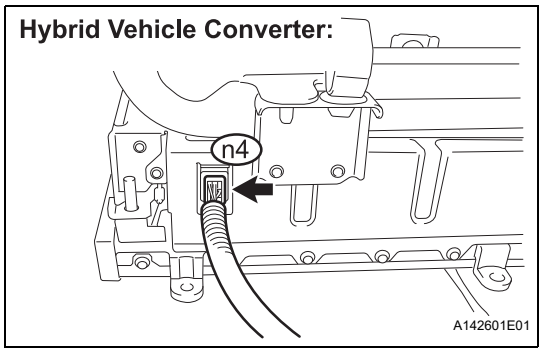
Tester Connection	Specified Condition
VLO (On1-7) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the hybrid vehicle control ECU connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONVERTER - BATTERY PACK WIRE CONNECTOR)



(a) Turn the power switch off.

CAUTION:
Be sure to wear insulated gloves.

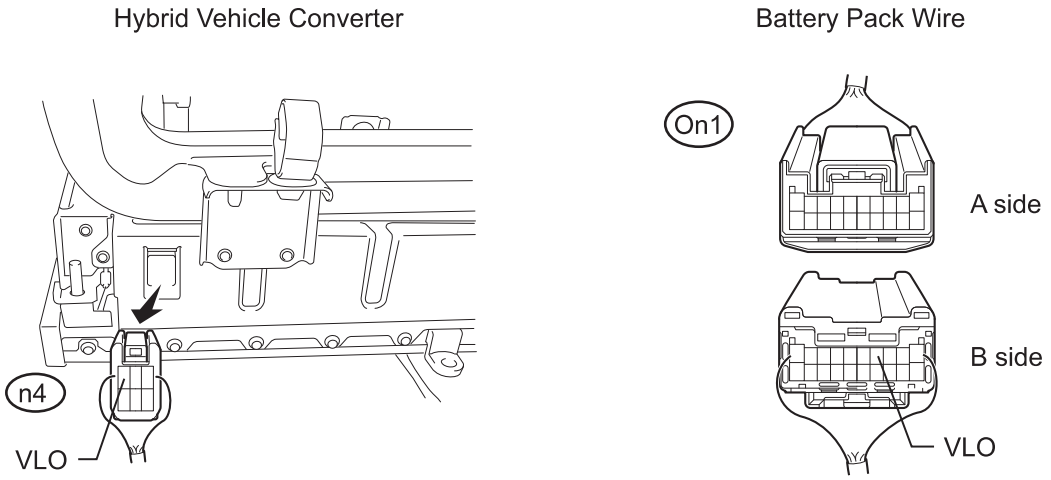
(b) Turn the power switch off and remove the service plug grip.

NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(c) Disconnect the n4 hybrid vehicle converter connector.
(d) Measure the voltage according to the value(s) in the table below.

HV

Wire Harness Side:



Standard voltage

Tester Connection	Specified Condition
VLO (On1-7) or VLO (n4-3) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the hybrid vehicle control ECU connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

HV

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

4	CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG)
(c) Read and record the DTCs and freeze frame data.
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.
(e) Clear the DTCs.

NEXT

5	RECONFIRM DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Read output DTCs.
Result:
DTC P0A10-592 is output.

YES → **REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)**

NO

6	CHECK FOR INTERMITTENT PROBLEMS

(a) Check for intermittent problems (See page HV-17).

NG → **REPAIR OR REPLACE MALFUNCTIONING PARTS, COMPONENT AND AREA**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P0A1A-151	Generator Control Module
DTC	P0A1A-155	Generator Control Module
DTC	P0A1A-156	Generator Control Module
DTC	P0A1A-166	Generator Control Module
DTC	P0A1A-658	Generator Control Module
DTC	P0A1A-659	Generator Control Module
DTC	P0A1A-791	Generator Control Module

DESCRIPTION

The inverter with converter assembly (MG ECU) monitors its internal operation and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1A	151	Run pulse error	Inverter with converter assembly (MG ECU)
P0A1A	155	A/D error	Inverter with converter assembly (MG ECU)
P0A1A	156	ROM-RAM error	Inverter with converter assembly (MG ECU)
P0A1A	166	R/D converter NM stop error	Inverter with converter assembly (MG ECU)
P0A1A	658	ALU error	Inverter with converter assembly (MG ECU)
P0A1A	659	Communication error (from MG1 to MG2)	Inverter with converter assembly (MG ECU)
P0A1A	791	R/D converter communication error	Inverter with converter assembly (MG ECU)

MONITOR DESCRIPTION

The MG ECU performs many diagnostic tests to verify proper operation of internal ECU systems. For one of these diagnostics, the MG ECU checks the result of the generator CPU self-test. If the MG ECU detects a "Fail" from the generator CPU self-test, it will conclude that there is an internal malfunction in the generator CPU. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1A (INF 151): RUN pulse malfunction P0A1A (INF 155): A/D malfunction (1 MG CPU) P0A1A (INF 156): RAM and ROM destruction P0A1A (INF 166): RD converter NM signal stop abnormality P0A1A (INF 658): MG CPU ALU malfunction P0A1A (INF 659): MG CPU communication malfunction (1 MG CPU to 2 MG CPU) P0A1A (INF 791): RD converter communication malfunction

Required sensors / components	Inverter with converter (MG ECU)

NEXT

COMPLETED

DTC	P0A1A-200	Generator Control Module

DTC	P0A1A-792	Generator Control Module

DTC	P0A1A-793	Generator Control Module

DESCRIPTION

The inverter with converter assembly (MG ECU) monitors its internal operation and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1A	200	Generator R/D resolver angle error	• Inverter with converter assembly (MG ECU) • Hybrid vehicle transaxle assembly (Generator resolver) • Wire harness or connector
P0A1A	792	REF frequency error	• Inverter with converter assembly (MG ECU) • Hybrid vehicle transaxle assembly (Generator resolver) • Wire harness or connector
P0A1A	793	REF signal open error	• Inverter with converter assembly (MG ECU) • Hybrid vehicle transaxle assembly (Generator resolver) • Wire harness or connector

MONITOR DESCRIPTION

HV

The MG ECU (in the inverter with converter assembly) performs many diagnostic tests to verify proper operation of internal ECU systems. For this diagnostic monitor, the MG ECU checks for an R/D (Resolver/Digital converter) malfunction involving the generator resolver. If MG ECU detects an R/D error, it will conclude that there is an internal malfunction involving the generator resolver. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1A (INF 200): RD converter resolver angle abnormality P0A1A (INF 792): REF malfunction (frequency abnormality) P0A1A (INF 793): REF malfunction (REF signal abnormality)

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC No.	Relevant Diagnosis
P0A4B-253, P0A4C-513, P0A4D-255	Generator resolver circuit

YES → GO TO DTC CHART

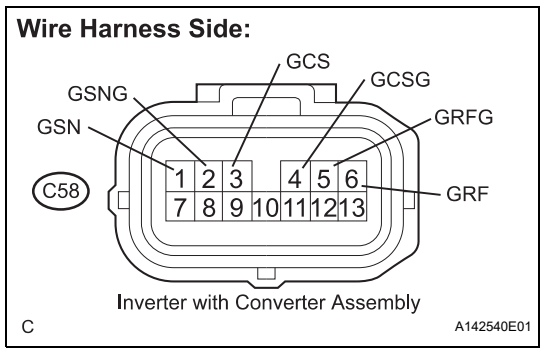
NO

2	CHECK CONNECTOR CONNECTION CONDITION (INVERTER WITH CONVERTER ASSEMBLY CONNECTOR) (See page HV-79)

NG → CONNECT SECURELY

OK

3	CHECK HARNESS AND CONNECTOR (INVERTER WITH CONVERTER ASSEMBLY - GENERATOR RESOLVER)



CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).
NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(b) Disconnect the C58 inverter with converter assembly connector.

(c) Turn the power switch on (IG).

(d) Measure the voltage according to the value(s) in the table below.
Standard voltage

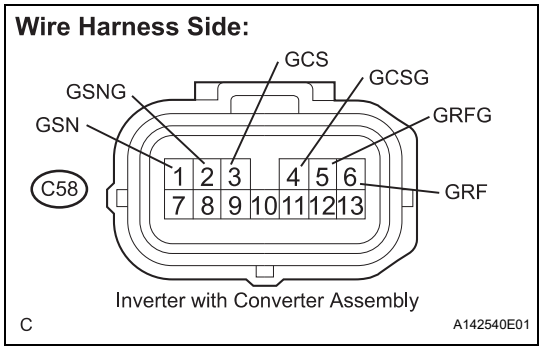
Tester Connection	Specified Condition
GRF (C58-6) - Body ground	Below 1 V
GRFG (C58-5) - Body ground	Below 1 V
GSN (C58-1) - Body ground	Below 1 V
GSNG (C58-2) - Body ground	Below 1 V
GCS (C58-3) - Body ground	Below 1 V
GCSG (C58-4) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the inverter with converter assembly connector disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

4 CHECK GENERATOR RESOLVER



(a) Turn the power switch off.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance (Check for open)

Tester Connection	Specified Condition
GRF (C58-6) - GRFG (C58-5)	5.8 to 11.8 Ω
GSN (C58-1) - GSNG (C58-2)	11.7 to 17.7 Ω
GCS (C58-3) - GCSG (C58-4)	11.7 to 17.7 Ω

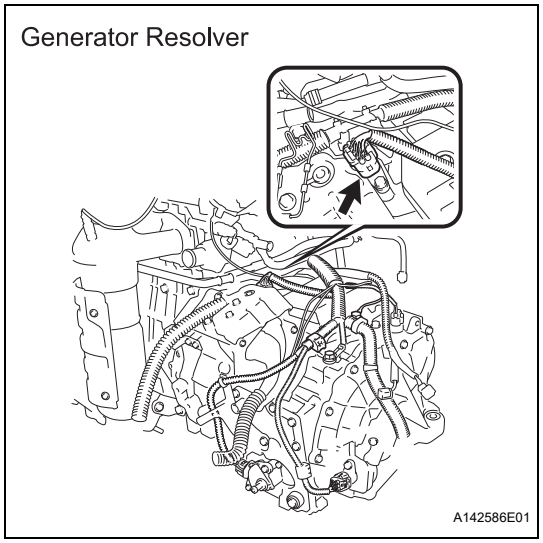
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance (Check for short)

Tester Connection	Specified Condition
GRF (C58-6) or GRFG (C58-5) - Body ground	10 kΩ or more
GSN (C58-1) or GSNG (C58-2) - Body ground	10 kΩ or more
GCS (C58-3) or GCSG (C58-4) - Body ground	10 kΩ or more

OK → **REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)**

NG

5 CHECK CONNECTOR CONNECTION CONDITION (GENERATOR RESOLVER CONNECTOR)



(a) Check the connection of the generator resolver connector.
OK:
The connector is connected securely and there are no contact problems.

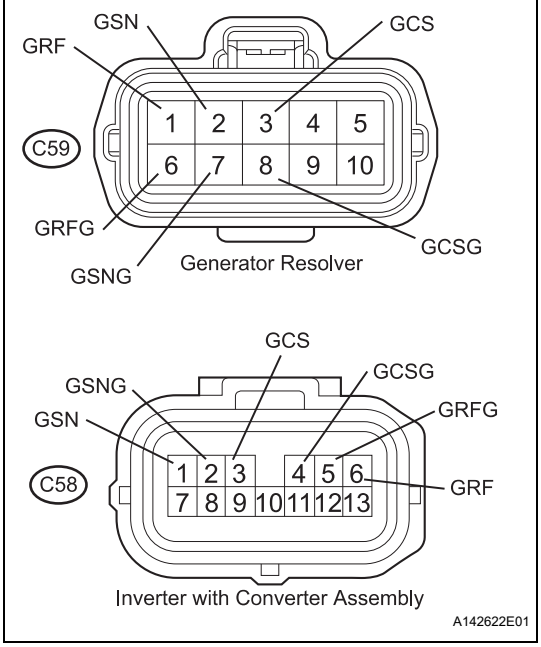
NG → **CONNECT SECURELY**

OK

HV

6	CHECK HARNESS AND CONNECTOR (INVERTER WITH CONVERTER ASSEMBLY - GENERATOR RESOLVER)

Wire Harness Side:



(a) Disconnect the C59 generator resolver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
GRF (C58-6) - GRF (C59-1)	Below 1 Ω
GRFG (C58-5) - GRFG (C59-6)	Below 1 Ω
GSN (C58-1) - GSN (C59-2)	Below 1 Ω
GSNG (C58-2) - GSNG (C59-7)	Below 1 Ω
GCS (C58-3) - GCS (C59-3)	Below 1 Ω
GCSG (C58-4) - GCSG (C59-8)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
GRF (C58-6) or GRF (C59-1) - Body ground	10 kΩ or more
GRFG (C58-5) or GRFG (C59-6) - Body ground	10 kΩ or more
GSN (C58-1) or GSN (C59-2) - Body ground	10 kΩ or more
GSNG (C58-2) or GSNG (C59-7) - Body ground	10 kΩ or more
GCS (C58-3) or GCS (C59-3) - Body ground	10 kΩ or more
GCSG (C58-4) or GCSG (C59-8) - Body ground	10 kΩ or more

HINT:
The generator resolver is not available separately. If it requires replacement, replace the hybrid vehicle transaxle assembly.

DTC	P0A1B-168	Drive Motor "A" Control Module

DTC	P0A1B-795	Drive Motor "A" Control Module

DTC	P0A1B-796	Drive Motor "A" Control Module

DESCRIPTION

The inverter with converter assembly (MG ECU) monitors its internal operation and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1B	168	Motor R/D resolver angle error	• Inverter with converter assembly (MG ECU) • Hybrid vehicle transaxle assembly (Motor resolver) • Wire harness or connector
P0A1B	795	REF frequency error	• Inverter with converter assembly (MG ECU) • Hybrid vehicle transaxle assembly (Motor resolver) • Wire harness or connector
P0A1B	796	REF signal open error	• Inverter with converter assembly (MG ECU) • Hybrid vehicle transaxle assembly (Motor resolver) • Wire harness or connector

MONITOR DESCRIPTION

The MG ECU (in the inverter with converter assembly) performs many diagnostic tests to verify proper operation of internal ECU systems. For this diagnostic monitor, the MG ECU checks for an R/D (Resolver/Digital converter) malfunction involving the motor resolver. If the MG ECU detects an R/D converter error, it will conclude that there is an internal malfunction involving the motor resolver. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

Standard resistance (Check for short)

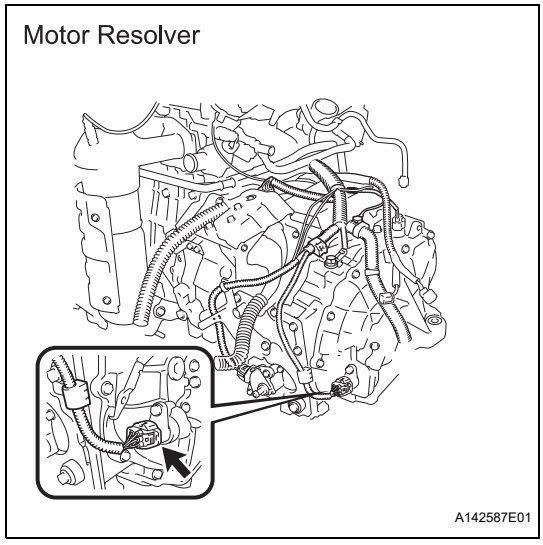
Tester Connection	Specified Condition
MRF (C58-13) or MRFG (C58-12) - Body ground	10 kΩ or more
MSN (C58-11) or MSNG (C58-7) - Body ground	10 kΩ or more
MCS (C58-8) or MCSG (C58-9) - Body ground	10 kΩ or more

OK → **REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)**

NG

5	CHECK CONNECTOR CONNECTION CONDITION (MOTOR RESOLVER CONNECTOR)

HV



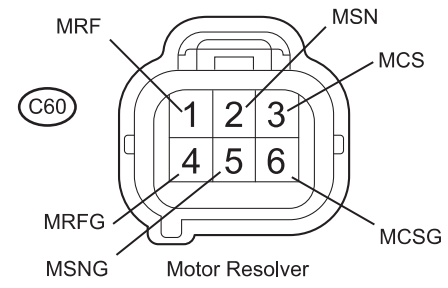
(a) Check the connection of the motor resolver connector.
OK:
The connector is connected securely and there are no contact problems.

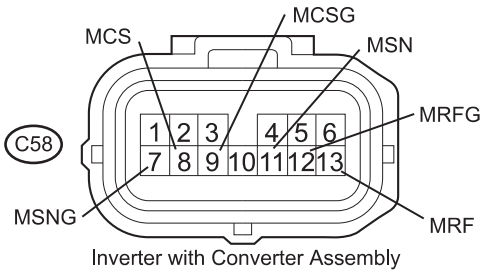
NG → **CONNECT SECURELY**

OK

6	CHECK HARNESS AND CONNECTOR (INVERTER WITH CONVERTER ASSEMBLY - MOTOR RESOLVER)

Wire Harness Side:





A142623E01

(a) Disconnect the C60 motor resolver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
MRF (C58-13) - MRF (C60-1)	Below 1 Ω
MRFG (C58-12) - MRFG (C60-4)	Below 1 Ω
MSN (C58-11) - MSN (C60-2)	Below 1 Ω
MSNG (C58-7) - MSNG (C60-5)	Below 1 Ω
MCS (C58-8) - MCS (C60-3)	Below 1 Ω
MCSG (C58-9) - MCSG (C60-6)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
MRF (C58-13) or MRF (C60-1) - Body ground	10 kΩ or more
MRFG (C58-12) or MRFG (C60-4) - Body ground	10 kΩ or more
MSN (C58-11) or MSN (C60-2) - Body ground	10 kΩ or more
MSNG (C58-7) or MSNG (C60-5) - Body ground	10 kΩ or more
MCS (C58-8) or MCS (C60-3) - Body ground	10 kΩ or more
MCSG (C58-9) or MCSG (C60-6) - Body ground	10 kΩ or more

HINT:
The motor resolver is not available separately. If it requires replacement, replace the hybrid vehicle transaxle assembly.

HV

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)

DTC	P0A1B-788	Drive Motor "A" Control Module

DESCRIPTION

If the inverter with converter assembly (MG ECU) is reset due to a problem with the power source in the inverter, the hybrid vehicle control ECU will set this DTC.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1B	788	Error in reset signal from power source IC	• Wire harness or connector • Inverter with converter assembly (MG ECU) • Hybrid vehicle transaxle assembly

HINT:
Clearing the DTCs using the intelligent tester when DTC U0110-657 is detected and the problem is still occurring will cause DTC P0A1B-788 to be stored. However, it is not necessary to perform inspection for DTC P0A1B-788 because DTC P0A1B-788 indicates a communication system malfunction.

MONITOR DESCRIPTION

If an abnormal power source IC CPU reset is detected in the MG ECU, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1B (INF 788): Reset from power IC
Required sensors / components	Inverter with converter (MG ECU)
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	1 driving cycle
Sequence of operation	None

HV

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

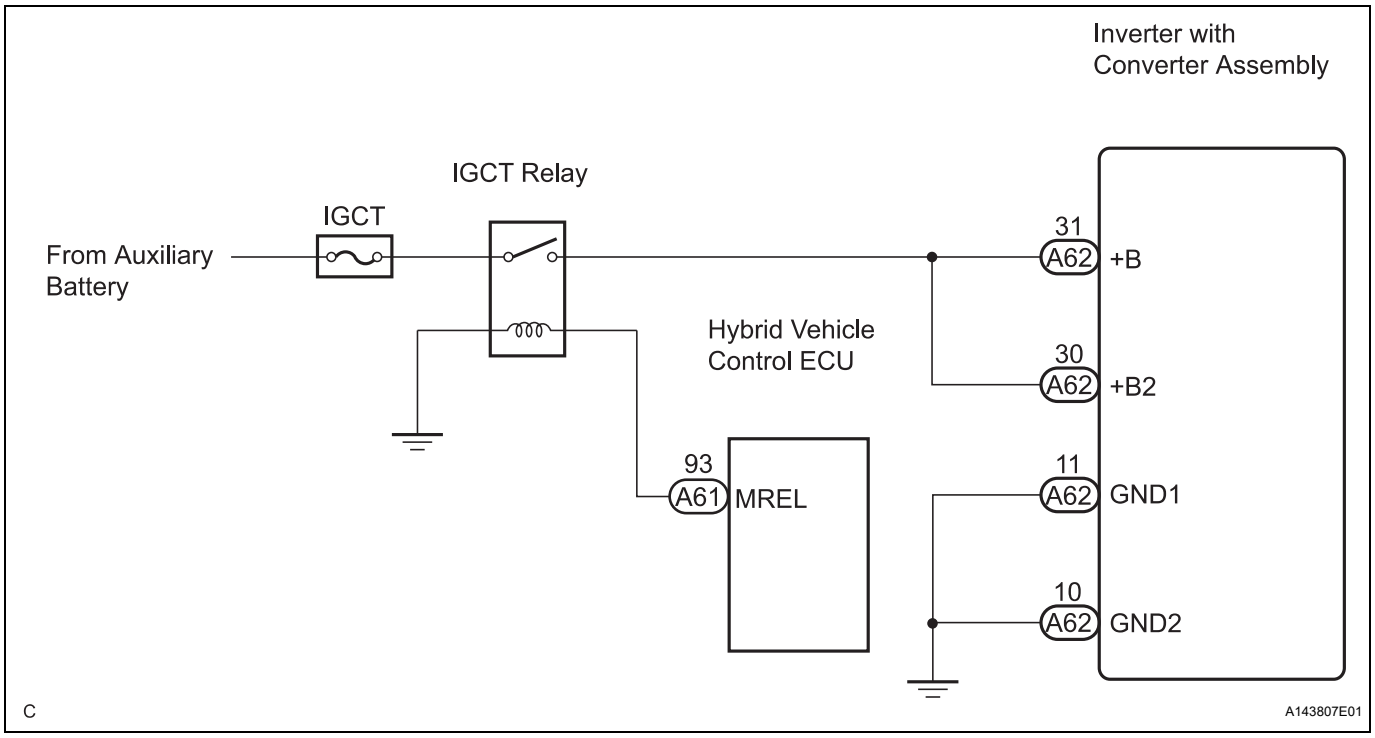
TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Hybrid vehicle control ECU	DTC P0A1B (INF 788) is not detected

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HV

1	**CHECK CONNECTOR CONNECTION CONDITION (INVERTER WITH CONVERTER ASSEMBLY CONNECTOR) (See page HV-79)**

NG → **CONNECT SECURELY**

OK

2	**CHECK HARNESS AND CONNECTOR (INVERTER WITH CONVERTER ASSEMBLY - ENGINE ROOM R/B NO. 1)**

CAUTION:

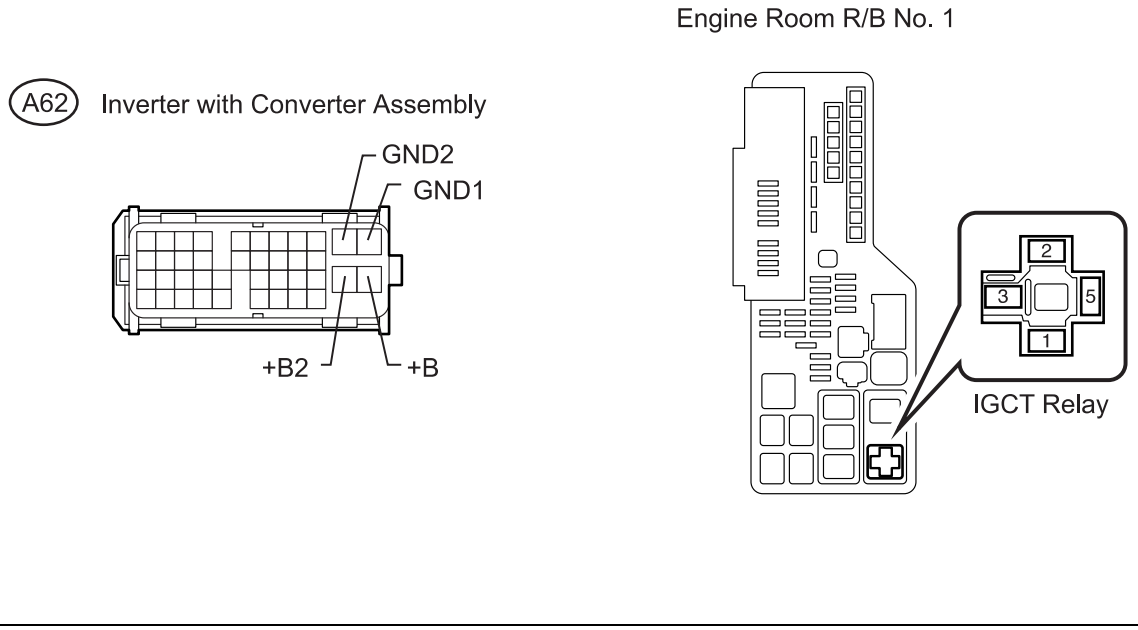
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).

NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(b) Remove the IGCT relay from the engine room R/B No. 1.
(c) Disconnect the A62 inverter with converter assembly connector.
(d) Measure the resistance according to the value(s) in the table below.

Wire Harness Side:



A143867E01

Standard resistance (Check for open)

Tester Connection	Specified Condition
+B (A62-31) - IGCT relay terminal 1	Below 1 Ω
+B2 (A62-30) - IGCT relay terminal 1	Below 1 Ω
GND1 (A62-11) - Body ground	Below 1 Ω
GND2 (A62-10) - Body ground	Below 1 Ω

Standard resistance (Check for short)

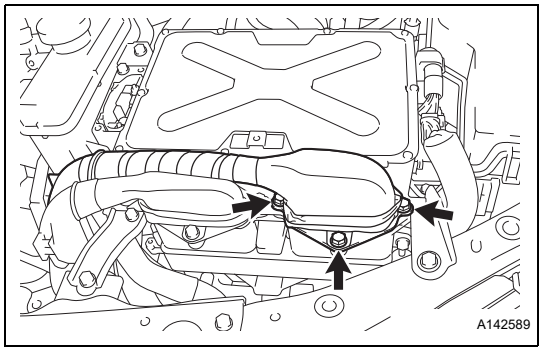
Tester Connection	Specified Condition
+B (A62-31) or +B2 (A62-30) - Body ground	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	**CHECK INVERTER WITH CONVERTER ASSEMBLY (MOTOR CABLE CONNECTION CONDITION)**

CAUTION:
Be sure to wear insulated gloves.

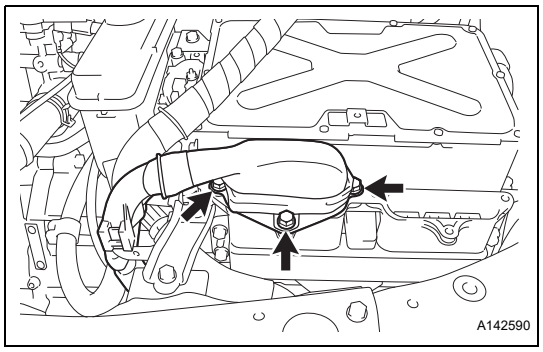


(a) Check that the service plug grip is not installed.
(b) Check that the bolts for the motor cable are tightened to the specified torque.
NOTICE:
Make sure that the tightening torque of the bolts is between 6.4 and 9.6 N*m (65 and 98 kgf*cm, 57 and 85 in.*lbf).
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

NG → **TIGHTEN TO SPECIFIED TORQUE**

OK

4	CHECK INVERTER WITH CONVERTER ASSEMBLY (GENERATOR CABLE CONNECTION CONDITION)

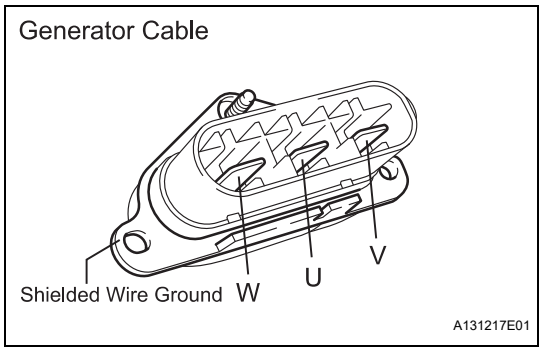


CAUTION:
Be sure to wear insulated gloves.
(a) Check that the service plug grip is not installed.
(b) Check that the bolts for the generator cable are tightened to the specified torque.
NOTICE:
Make sure that the tightening torque of the bolts is between 6.4 and 9.6 N*m (65 and 98 kgf*cm, 57 and 85 in.*lbf).
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

NG → **TIGHTEN TO SPECIFIED TORQUE**

OK

5	INSPECT HYBRID VEHICLE TRANSAXLE ASSEMBLY (MG1)



CAUTION:
Be sure to wear insulated gloves.
(a) Check that the service plug grip is not installed.
(b) Disconnect the generator cable and motor cable from the inverter with converter assembly (See page HV-558).
(c) Using a milliohmmeter, measure the resistance according to the value(s) in the table below. (Check MG1 for an interphase short.)
HINT:
If the MG1 temperature is high, the resistance varies greatly. Therefore, measure the resistance at least 8 hours after the vehicle is stopped.
Standard resistance

Tester Connection	Specified Condition
U - V	59 to 65 mΩ
V - W	56 to 62 mΩ
W - U	56 to 62 mΩ

HINT:
To correct the variation of the measured resistance due to temperature, use the following formula to calculate the resistance at 20°C.
R20 = Rt / {1 + 0.00393 X (T - 20)}
The calculation is based on the following:
R20: Resistance at 20°C (mΩ)
Rt: Measured resistance (mΩ)
T: Temperature when the resistance is measured (°C)

(d) Using a megohmmeter (500 V range), measure the resistance according to the value(s) in the table below.

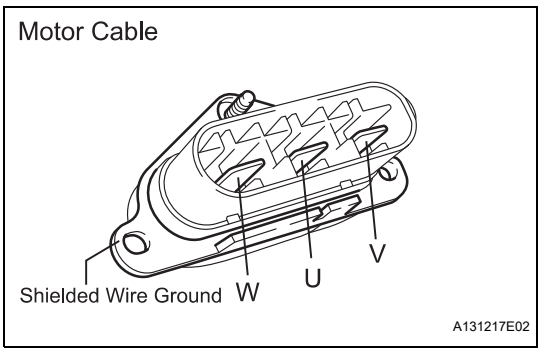
Standard resistance

Tester Connection	Specified Condition
U - Body ground and shielded wire ground	10 MΩ or more
V - Body ground and shielded wire ground	10 MΩ or more
W - Body ground and shielded wire ground	10 MΩ or more

NG → **REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)**

OK

6 INSPECT HYBRID VEHICLE TRANSAXLE ASSEMBLY (MG2)



CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
(b) Disconnect the generator cable and motor cable from the inverter with converter assembly (See page HV-558).
(c) Using a milliohmmeter, measure the resistance according to the value(s) in the table below. (Check MG2 for an interphase short.)
HINT:
If the MG2 temperature is high, the resistance varies greatly. Therefore, measure the resistance at least 8 hours after the vehicle is stopped.

Standard resistance

Tester Connection	Specified Condition
U - V	69.5 to 76.5 m Ω
V - W	66.5 to 73.5 m Ω
W - U	66.5 to 73.5 m Ω

HINT:
To correct the variation of the measured resistance due to temperature, use the following formula to calculate the resistance at 20°C.
R20 = Rt / {1 + 0.00393 X (T - 20)}
The calculation is based on the following:
R20: Resistance at 20°C (mΩ)
Rt: Measured resistance (mΩ)
T: Temperature when the resistance is measured (°C)

(d) Using a megohmmeter (500 V range), measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
U - Body ground and shielded wire ground	10 MΩ or more
V - Body ground and shielded wire ground	10 MΩ or more
W - Body ground and shielded wire ground	10 MΩ or more

NG → **REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)**

OK

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

DTC	P0A1D-103	Hybrid Powertrain Control Module

DESCRIPTION

The hybrid vehicle control ECU monitors its internal operation and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1D	103	ECU internal error	Hybrid vehicle control ECU

MONITOR DESCRIPTION

The hybrid vehicle control ECU performs diagnostic monitoring to verify proper operation of internal ECU systems. In this diagnostic monitor, the hybrid vehicle control ECU checks the communication bus off count and the message register of the CAN (Controller Area Network) controller. If the hybrid vehicle control ECU detects an error in the communication bus off count or message register, it will conclude that there is a malfunction in the hybrid vehicle control ECU. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1D (INF 103): Register value stuck
Required sensors / components	Hybrid vehicle control ECU
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

DTC	P0A1D-134	Hybrid Powertrain Control Module

DTC	P0A1D-135	Hybrid Powertrain Control Module

DTC	P0A1D-570	Hybrid Powertrain Control Module

DESCRIPTION

The hybrid vehicle control ECU monitors its internal operation and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1D	134	ECU internal error	Hybrid vehicle control ECU
P0A1D	135	ECU internal error	Hybrid vehicle control ECU
P0A1D	570	ECU internal error	Hybrid vehicle control ECU

MONITOR DESCRIPTION

The hybrid vehicle control ECU performs diagnostic monitoring to verify proper operation of vehicle systems. One of these monitors the rationality of internal analog (signal) to digital conversions. The hybrid vehicle control ECU monitors the internal A/D (Analog/Digital converter) value. If there is an A/D converter malfunction, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTCs other than P0A1D-390 and P3004-133 are output.

YES → **GO TO DTC CHART**

NO

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P0A1D-393	Hybrid Powertrain Control Module

DESCRIPTION

The hybrid vehicle control ECU monitors its internal operation and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1D	393	ECU internal error	Hybrid vehicle control ECU

MONITOR DESCRIPTION

The hybrid vehicle control ECU performs many diagnostic tests to verify proper operation of internal ECU systems. In one of these diagnostics, the hybrid vehicle control ECU performs a self-test. If the hybrid vehicle control ECU detects an internal problem during this self-test, it will conclude that there is an internal malfunction. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1D (INF 393): HV CPU operation malfunction
Required sensors / components	Hybrid vehicle control ECU
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

HV

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Hybrid vehicle control ECU	DTC P0A1D (INF 393) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	**REPLACE HYBRID VEHICLE CONTROL ECU**

HINT:
See page HV-569

COMPLETED

DTC	P0A1D-721	Hybrid Powertrain Control Module
DTC	P0A1D-722	Hybrid Powertrain Control Module
DTC	P0A1D-723	Hybrid Powertrain Control Module
DTC	P0A1D-765	Hybrid Powertrain Control Module
DTC	P0A1D-787	Hybrid Powertrain Control Module

DESCRIPTION

The hybrid vehicle control ECU monitors its internal operation and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1D	721	ECU internal error	Hybrid vehicle control ECU
P0A1D	722	ECU internal error	Hybrid vehicle control ECU
P0A1D	723	ECU internal error	Hybrid vehicle control ECU
P0A1D	765	ECU internal error	Hybrid vehicle control ECU
P0A1D	787	ECU internal error	Hybrid vehicle control ECU

MONITOR DESCRIPTION

The hybrid vehicle control ECU performs many diagnostic tests to verify proper operation of internal ECU systems. In one of these diagnostics, the hybrid vehicle control ECU checks the result of the ECM self-test. If the hybrid vehicle control ECU detects a "Fail" from the ECM self-test, it will conclude that there is an internal malfunction in the ECM. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1D (INF 721/722/723/765/787): Monitor CPU malfunction

NEXT

COMPLETED

DTC	P0A1F-129	Battery Energy Control Module

DESCRIPTION

The battery smart unit (battery energy control module) sends HV battery voltage information to the hybrid vehicle control ECU via serial communication.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1F	129	HV battery voltage circuit malfunction	Battery smart unit

MONITOR DESCRIPTION

The hybrid vehicle control ECU calculates the differences among the received HV battery voltage, boost converter voltage, and inverter voltage. If any of the differences exceed prescribed values, the hybrid vehicle control ECU determines that there is a malfunction in a battery smart unit circuit. When the hybrid vehicle control ECU detects a malfunction, it will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1F (INF 129): Rationality
Required sensors / components	Battery smart unit
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

HV

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0A1F (INF 129) is not detected

INSPECTION PROCEDURE

NOTICE:

Performing the check procedures for a long time with the shift lever in the N position may cause DTC P3000-388 to be set.

HINT:

To determine if conditions are normal, turn the power switch on (READY), move the shift lever to the N position, and check HV battery voltage (PWR RESOURCE VB), pre-boost voltage (VL), and post-boost voltage (VH) in the data list. This check should be performed after the battery smart unit is replaced. When the system is normal, the PWR RESOURCE VB, VL, and VH values should be almost equal (voltage boosting will not occur when the shift lever is in neutral). If the difference between each voltage exceeds the values specified below, there is a malfunction in the battery smart unit.

Inspection voltage	Maximum voltage difference
Difference between HV battery voltage (PWR RESOURCE VB) and pre-boost voltage (VL)	50 V

Inspection voltage	Maximum voltage difference
Difference between HV battery voltage (PWR RESOURCE VB) and post-boost voltage (VH)	70 V
Difference between pre-boost voltage (VL) and post-boost voltage (VH)	90 V

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	**REPLACE BATTERY SMART UNIT**

NEXT

COMPLETED

DTC	P0A1F-150	Battery Energy Control Module

DTC	P0A1F-157	Battery Energy Control Module

DESCRIPTION

Refer to description for DTC P0A1F-129 (See page HV-187).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A1F	150	Power source voltage of the battery smart unit is insufficient during precharge.	• Battery smart unit • Wire harness or connector
P0A1F	157	Power source voltage of the battery smart unit is insufficient during precharge.	• Battery smart unit • Wire harness or connector

MONITOR DESCRIPTION

The hybrid vehicle control ECU calculates the differences among the received HV battery voltage, boost converter voltage, and inverter voltage. If any of the differences exceed prescribed values, the hybrid vehicle control ECU determines that there is a malfunction in a battery smart unit circuit. When the hybrid vehicle control ECU detects a malfunction, it will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A1F (INF 150): Rationality P0A1F (INF 157): Rationality

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0A1F (INF 150/157) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**

- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

- Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.
- After completing repairs, restart the system (turn the power switch on (READY)) and recheck for DTCs (See page HV-36).

1	CHECK AUXILIARY BATTERY

(a) Measure the voltage between the terminals of the auxiliary battery.
Standard voltage:
11 to 14 V (Battery electrolyte temperature: 20°C (68°F))

NG → **CHARGE OR REPLACE AUXILIARY BATTERY**

OK

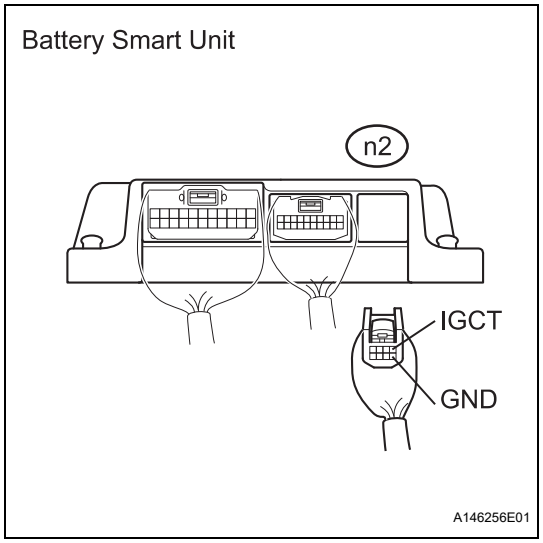
2	CHECK HARNESS AND CONNECTOR (IGCT VOLTAGE)

CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).
(b) Remove the luggage compartment trim cover front (See page HB-81).
(c) Disconnect the frame wire (See page HV-579).
(d) Remove the battery bracket sub-assembly (See page HB-81).
(e) Connect the auxiliary battery positive terminal cable of the frame wire.
(f) Disconnect the n2 battery smart unit connector.
(g) Turn the power switch on (IG).
(h) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Specified Condition
IGCT (n2-1) - GND (n2-5)	8.6 V or more

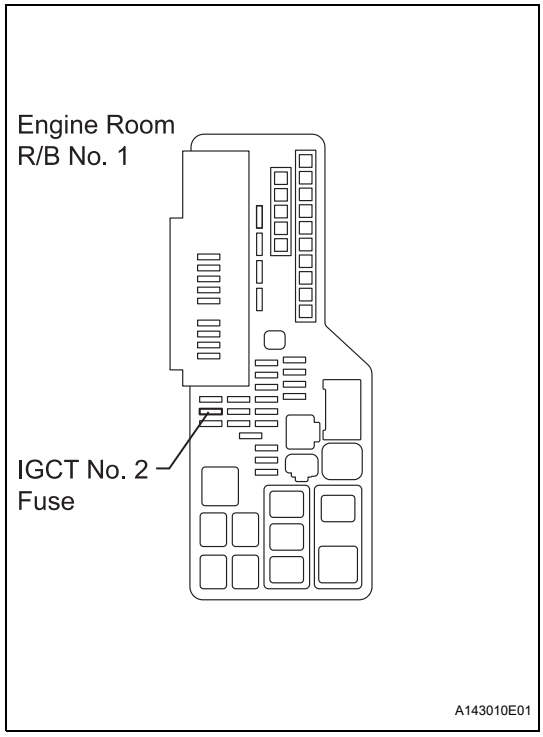
OK → **REPLACE BATTERY SMART UNIT (See page HB-99)**



HV

NG

3	CHECK FUSE (IGCT NO. 2)



(a) Remove the IGCT No. 2 fuse from the engine room R/B No. 1.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
IGCT No. 2 fuse terminal	Below 1 Ω

NG → REPLACE FUSE

OK

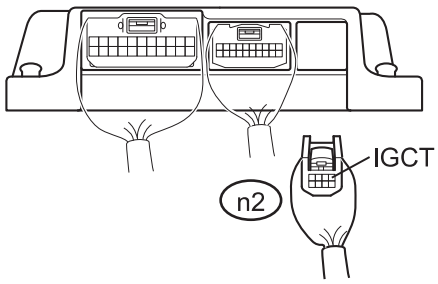
HV

4	CHECK HARNESS AND CONNECTOR (BATTERY SMART UNIT - ENGINE ROOM R/B NO. 1)

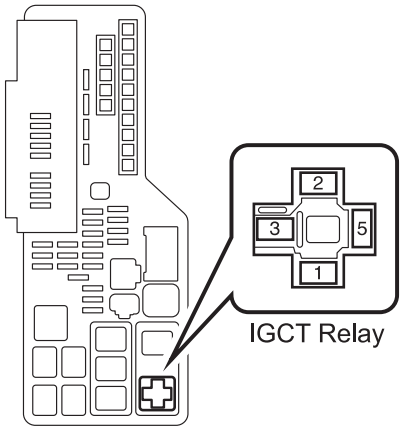
CAUTION:
Be sure to wear insulated gloves.

(a) Install the IGCT No. 2 fuse to the engine room R/B No. 1.
(b) Remove the IGCT relay from the engine room R/B No. 1.
(c) Disconnect connector N2 from the battery smart unit.

Battery Smart Unit



Engine Room R/B No. 1



A144382E01

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
IGCT (n2-1) - Engine room R/B No. 1 IGCT Relay terminal 3	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

CHECK AND REPAIR POWER SOURCE CIRCUIT

HV

DTC	P0A2B-248	Drive Motor "A" Temperature Sensor Circuit Range / Performance

DTC	P0A2B-250	Drive Motor "A" Temperature Sensor Circuit Range / Performance

DESCRIPTION

Refer to the circuit description for DTC P0A2C-247 (See page HV-194).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A2B	248	Motor temperature sensor malfunction	Hybrid vehicle transaxle assembly (Motor temperature sensor)
P0A2B	250	Motor temperature sensor performance problem	Hybrid vehicle transaxle assembly (Motor temperature sensor)

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

NEXT

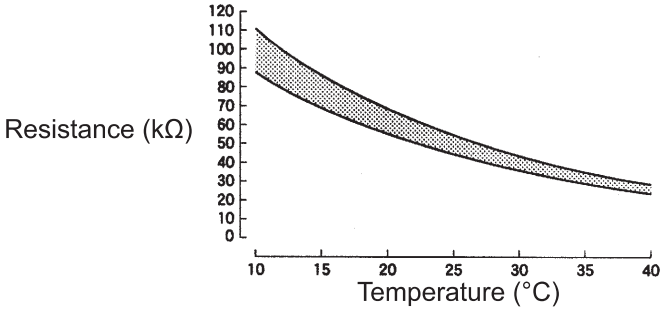
COMPLETED

DTC	P0A2C-247	Drive Motor "A" Temperature Sensor Circuit Low

DTC	P0A2D-249	Drive Motor "A" Temperature Sensor Circuit High

DESCRIPTION

The resistance of the thermistor built into the motor temperature sensor changes in accordance with changes in MG2 temperature. The lower the MG2 temperature, the more the thermistor resistance. Conversely, the more the temperature, the lower the resistance.



A037296E01

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A2C	247	GND short in motor temperature sensor circuit	• Wire harness or connector • Hybrid vehicle control ECU • Hybrid vehicle transaxle assembly (Motor temperature sensor)
P0A2D	249	Open or +B short in motor temperature sensor circuit	• Wire harness or connector • Hybrid vehicle control ECU • Hybrid vehicle transaxle assembly (Motor temperature sensor)

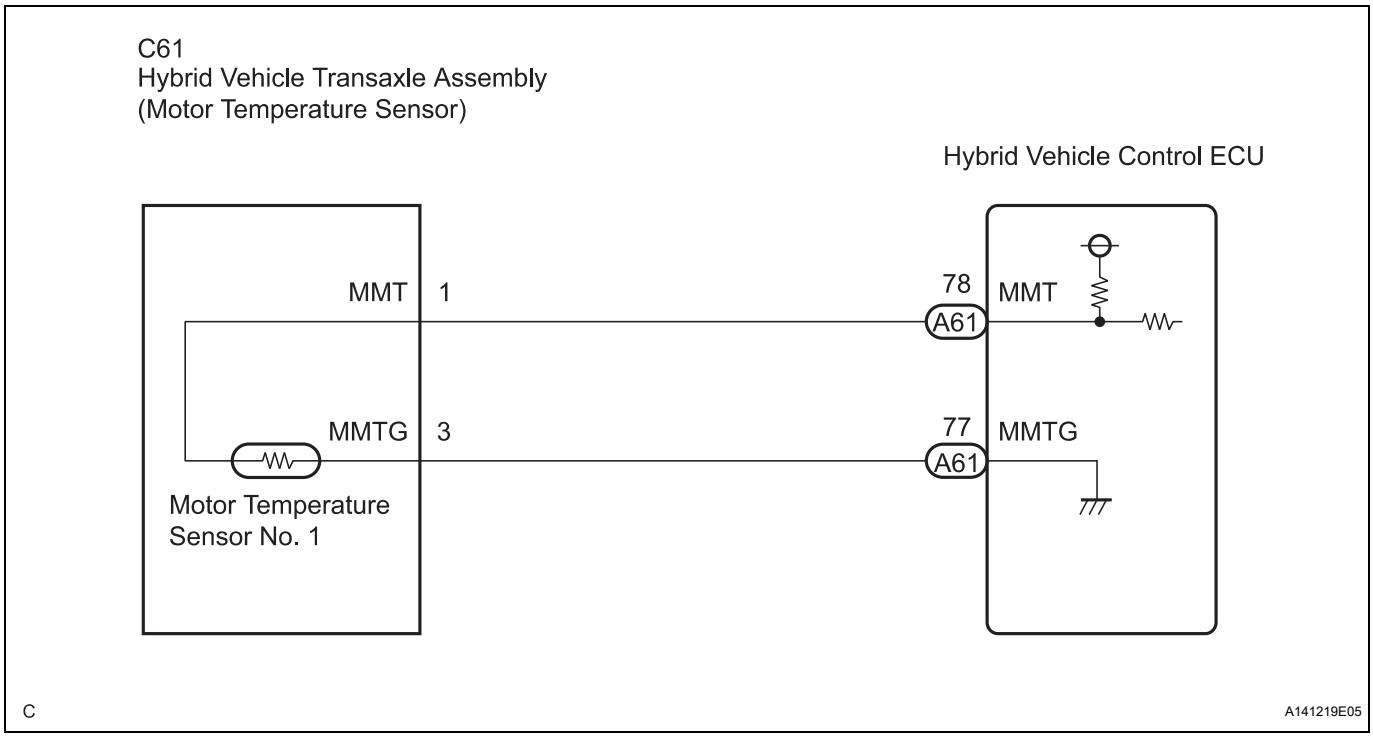
HV

HINT:

After confirming that DTC P0A2C-247 or P0A2D-249 is output, use the intelligent tester to check "MOTOR1 TEMP" in the HV ECU data list.

Displayed Temperature	Malfunction
-50°C (-58°F)	Open or +B short circuit
205°C (401°F)	GND short

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HV

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	**CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONTROL ECU CONNECTOR) (See page HV-79)**

NG → **CONNECT SECURELY**

OK

2	**CHECK CONNECTOR CONNECTION CONDITION (MOTOR TEMPERATURE SENSOR CONNECTOR)**

(a) Check the connections of the motor temperature sensor connectors.

OK:

The connectors are connected securely and there are no contact problems.

NG → CONNECT SECURELY

OK

3 READ VALUE OF INTELLIGENT TESTER (MOTOR1 TEMP)

(a) Turn the power switch on (IG).
(b) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA LIST / MOTOR1 TEMP.
(c) Read the data list.
Result

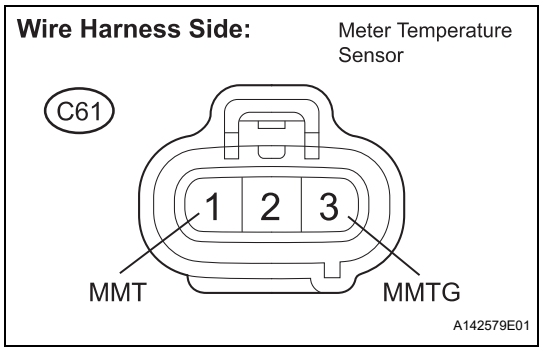
A	B	C
-50°C (-58°F)	205°C (401°F) or more	Same as actual temperature

B → Go to step 6

C → CHECK FOR INTERMITTENT PROBLEMS (See page HV-17)

A

4 READ VALUE OF INTELLIGENT TESTER (MOTOR1 TEMP)



(a) Disconnect the C61 motor temperature sensor connector.
(b) Connect terminals 1 and 3 of the motor temperature sensor vehicle side connector.
(c) Turn the power switch on (IG).
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA LIST / MOTOR1 TEMP.
(e) Read the data list.
Displayed temperature:
205°C (401°F) or more

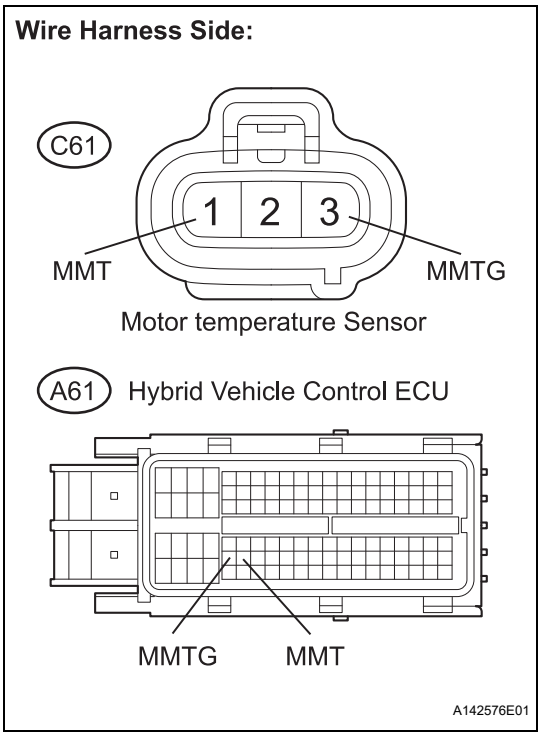
OK → REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)

NG

5 CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - MOTOR TEMPERATURE SENSOR)

(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Turn the power switch on (IG).

HV



(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
MMT (A61-78) - Body ground	Below 1 V
MMTG (A61-77) - Body ground	Below 1 V

NOTICE:
Turning the power switch on (IG) with the hybrid vehicle control ECU connectors disconnected causes other DTCs to be stored. Clear the DTCs after performing this inspection.

(d) Turn the power switch off.

(e) Disconnect the C61 motor temperature sensor connector.

(f) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
MMT (A61-78) - MMT (C61-1)	Below 1 Ω
MMTG (A61-77) - MMTG (C61-3)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
MMT (A61-78) or MMT (C61-1) - Body ground	10 kΩ or more
MMTG (A61-77) or MMTG (C61-3) - Body ground	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

6 READ VALUE OF INTELLIGENT TESTER (MOTOR1 TEMP)

(a) Disconnect the motor temperature sensor connector.

(b) Turn the power switch on (IG).

(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA LIST / MOTOR1 TEMP.

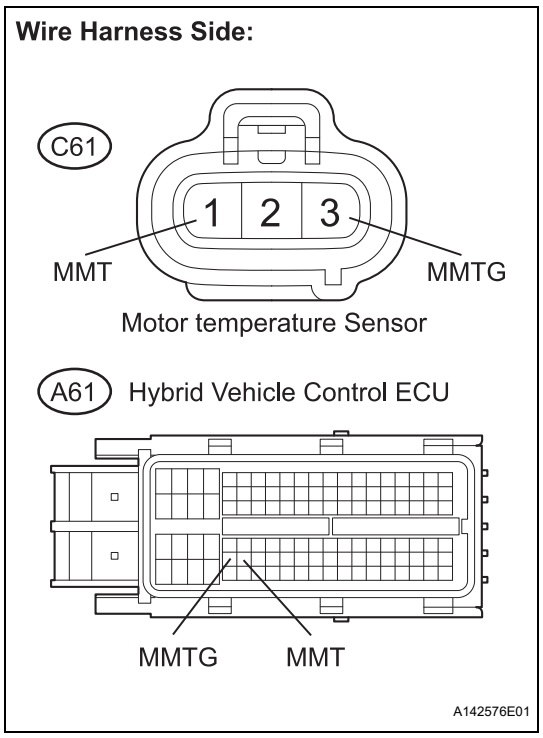
(d) Read the data list.

Displayed temperature:
-50°C (-50°F)

OK → **REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)**

NG

7	CHECK HARNESS AND CONNECTOR (HV CONTROL ECU - MOTOR TEMPERATURE SENSOR)



(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Disconnect the motor temperature sensor connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
MMT (A61-78) - MMT (C61-1)	Below 1 Ω
MMTG (A61-77) - MMTG (C61-3)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
MMT (A61-78) or MMT (C61-1) - Body ground	10 kΩ or more
MMTG (A61-77) or MMTG (C61-3) - Body ground	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

DTC	P0A3F-243	Drive Motor "A" Position Sensor Circuit

DTC	P0A40-500	Drive Motor "A" Position Sensor Circuit Range / Performance

DTC	P0A41-245	Drive Motor "A" Position Sensor Circuit Low

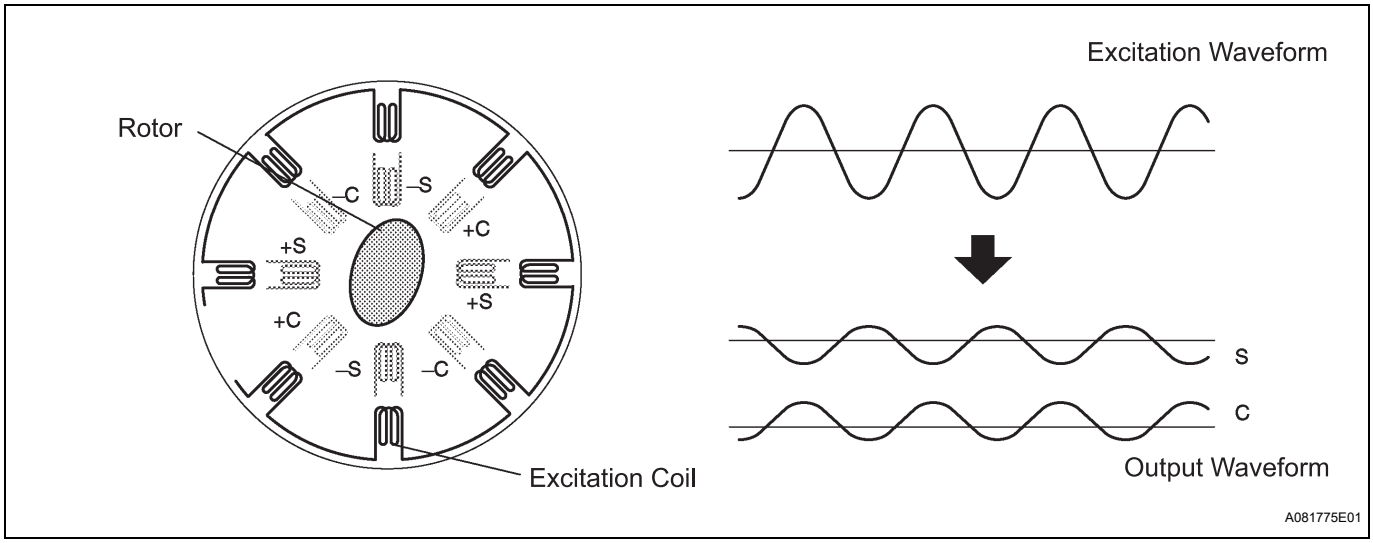
DESCRIPTION

A resolver is a sensor that detects the position of the magnetic poles, which are indispensable for ensuring highly efficient control of MG2 and MG1.

The resolver stator contains an excitation coil and 2 detection coils. The gap between the stator and rotor changes as the rotor turns because the rotor is oval shaped. An alternating current with a predetermined frequency flows through the excitation coil, and detection coils S and C output alternating currents in accordance with the sensor rotor position.

The MG ECU detects the absolute position of the rotor according to the phases of detection coils S and C and the height of their waveforms. Furthermore, the CPU calculates the amount of change in the position within a predetermined length of time, in order to use the resolver as a speed sensor.

The MG ECU monitors signals output from the motor resolver and detects malfunctions.



DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A3F	243	Interphase short in motor resolver circuit	• Wire harness or connector • Hybrid vehicle transaxle assembly (Motor resolver) • Inverter with converter assembly
P0A40	500	Motor resolver output is out of normal range	• Wire harness or connector • Hybrid vehicle transaxle assembly (Motor resolver) • Inverter with converter assembly
P0A41	245	Open or short in motor resolver circuit	• Wire harness or connector • Hybrid vehicle transaxle assembly (Motor resolver) • Inverter with converter assembly

MONITOR DESCRIPTION

The MG ECU monitors the motor resolver output signal. If the MG ECU detects output signals that are out of the normal range or specification, it will conclude that there is a malfunction in the motor resolver. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A3F (INF 243): Short circuit between phases P0A40 (INF 500): Range check P0A41 (INF245): Circuit discontinuity / short circuit

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals. (Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.)**

NOTICE:

Check for output DTCs again after the repair has been completed. If P0A78-286 or P0A7A-324 is output, replace the inverter with converter assembly.

HINT:

- Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.
- If the problem symptom cannot be reproduced, performing a road test on a road on which the vehicle tends to vibrate will make it easier to reproduce the symptom.
- If INF code 243 is output, there may be an interphase short in the motor resolver circuit due to an intrusion of water into the resolver. Therefore, if the problem symptom cannot be reproduced, replace the hybrid vehicle transaxle assembly last.

1	**CHECK CONNECTOR CONNECTION CONDITION (INVERTER WITH CONVERTER ASSEMBLY CONNECTOR) (See page HV-79)**

DTC	P0A4B-253	Generator Position Sensor Circuit

DTC	P0A4C-513	Generator Position Sensor Circuit Range / Performance

DTC	P0A4D-255	Generator Position Sensor Circuit Low

DESCRIPTION

A resolver is a sensor that detects the position of the magnetic poles, which are indispensable for ensuring highly efficient control of MG2 and MG1.
The generator resolver structure and method of connection with the inverter with converter assembly are the same as those of the motor resolver.
The inverter with converter assembly monitors output signals from the generator resolver and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A4B	253	Interphase short in the generator resolver circuit	• Wire harness or connector • Hybrid vehicle transaxle assembly (Generator resolver) • Inverter with converter assembly
P0A4C	513	Generator resolver output is out of the normal range	• Wire harness or connector • Hybrid vehicle transaxle assembly (Generator resolver) • Inverter with converter assembly
P0A4D	255	Open or short in the generator resolver circuit	• Wire harness or connector • Hybrid vehicle transaxle assembly (Generator resolver) • Inverter with converter assembly

HV

MONITOR DESCRIPTION

The MG ECU monitors the generator resolver output signal. If the MG ECU detects output signals that are out of the normal range or specification, it will conclude that there is a malfunction of the generator resolver. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A4B (INF 253): Short circuit between phases P0A4C (INF 513): Range check P0A4D (INF 255): Circuit discontinuity / short circuit
Required sensors / components	Generator resolver
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

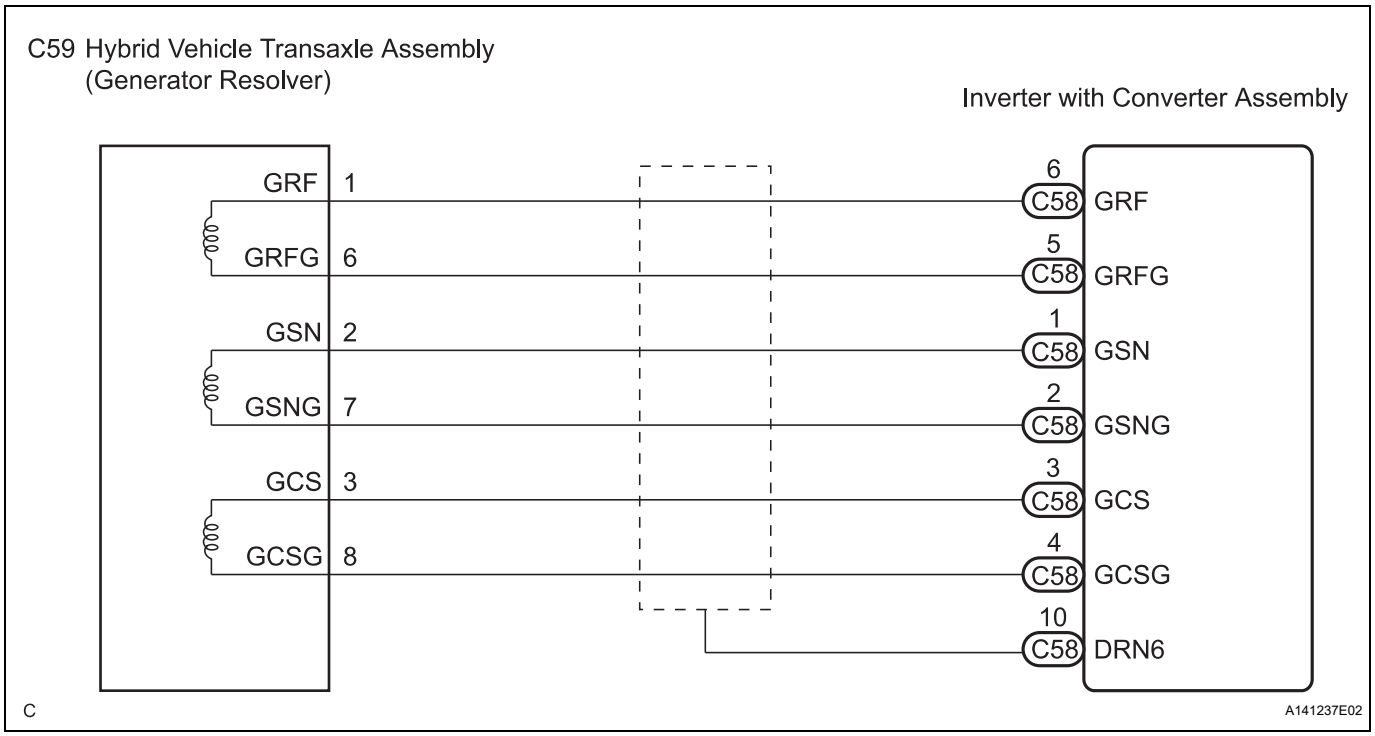
WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals. (Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.)**

NOTICE:

Check for output DTCs again after the repair has been completed. If P0A78-286 or P0A7A-324 is output, replace the inverter with converter assembly.

HINT:

- Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.
- If the problem symptom cannot be reproduced, performing a road test on a road on which the vehicle tends to vibrate will make it easier to reproduce the symptom.

HV

- If INF code 253 is output, there may be an interphase short in the generator resolver circuit due to an intrusion of water into the resolver. Therefore, if the problem symptom cannot be reproduced, replace the hybrid vehicle transaxle assembly last.

DTC	P0A63-302	Drive Motor "A" Phase W Current
DTC	P0A63-502	Drive Motor "A" Phase W Current

DESCRIPTION

The inverter with converter assembly (MG ECU) monitors the inverter current sensor. The MG ECU detects malfunctions in the sensor system and does not detect malfunctions in the high-voltage system.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A60	288	Malfunction in motor inverter current sensor (phase V sub sensor)	• Inverter with converter assembly • Service plug grip
P0A60	290	Malfunction in motor inverter current sensor (phase V main sensor)	• Inverter with converter assembly • Service plug grip
P0A60	294	Malfunction in motor inverter current sensor (Performance problem or open phase V)	• Inverter with converter assembly • Service plug grip
P0A60	501	Malfunction in motor inverter current sensor (phase V main and sub sensors offset)	• Inverter with converter assembly • Service plug grip
P0A63	296	Malfunction in motor inverter current sensor (phase W sub sensor)	• Inverter with converter assembly • Service plug grip
P0A63	298	Malfunction in motor inverter current sensor (phase W main sensor)	• Inverter with converter assembly • Service plug grip
P0A63	302	Malfunction in motor inverter current sensor (Performance problem or open phase W)	• Inverter with converter assembly • Service plug grip
P0A63	502	Malfunction in motor inverter current sensor (phase W main and sub sensors offset)	• Inverter with converter assembly • Service plug grip

MONITOR DESCRIPTION

The hybrid vehicle control ECU monitors the motor inverter current sensor. If the hybrid vehicle control ECU detects a fault, it will illuminate the MIL and set a DTC.

MONITOR STRATEGY

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	**CHECK CONNECTOR CONNECTION CONDITION (INVERTER WITH CONVERTER ASSEMBLY CONNECTOR) (See page HV-79)**

NG → **Go to step 3**

OK

2	REPLACE INVERTER WITH CONVERTER ASSEMBLY

HINT:
If any DTCs indicating malfunctions in the current sensor circuit are output, overcurrent to the electric vehicle fuse is suspected. In this case, replace the electric vehicle fuse installed on the service plug grip.

NEXT

REPLACE SERVICE PLUG GRIP

3	CONNECT SECURELY

HINT:
If any DTCs indicating malfunctions in the current sensor circuit are output, overcurrent to the electric vehicle fuse is suspected. In this case, replace the electric vehicle fuse installed on the service plug grip.

NEXT

REPLACE SERVICE PLUG GRIP

DTC	P0A78-113	Drive Motor "A" Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If the motor inverter overheats, or has a circuit malfunction or internal short, the inverter transmits this information to the MFIV terminal of the MG ECU via the motor inverter fail signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	113	Motor inverter fail signal detection (overcurrent due to system malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HV

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC No.	Relevant Diagnosis

NG → Go to step 13

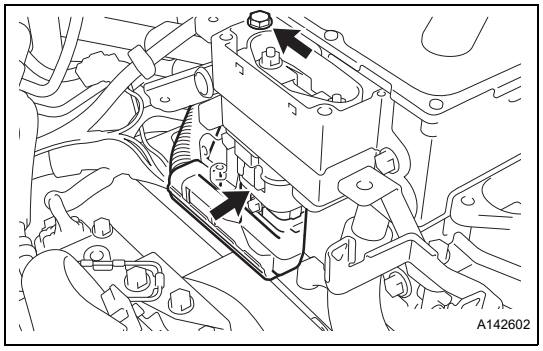
OK

7	CHECK INVERTER WITH CONVERTER ASSEMBLY (HIGH VOLTAGE CONNECTOR CONNECTION CONDITION)

CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.
NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(b) Check the connection of the high voltage connector of the inverter with converter assembly.
OK:
The connector is connected securely and there are no contact peoblems.



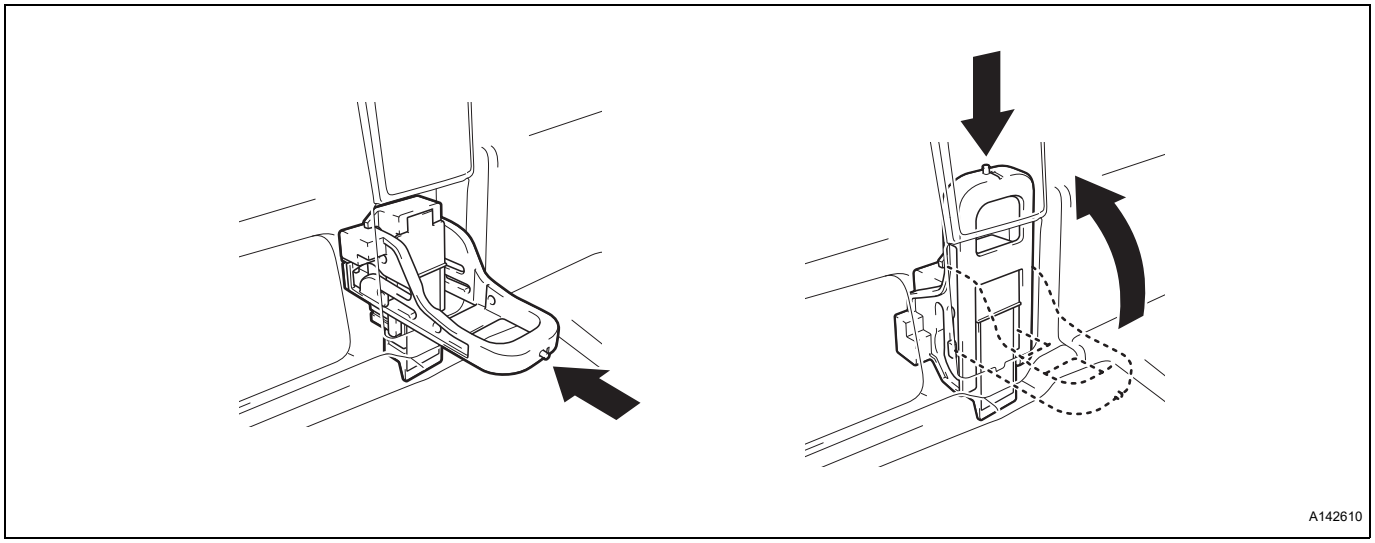
NG → CONNECT SECURELY

OK

8	CHECK SERVICE PLUG GRIP

CAUTION:
Be sure to wear insulated gloves.

(a) Check the connection of the service plug grip.

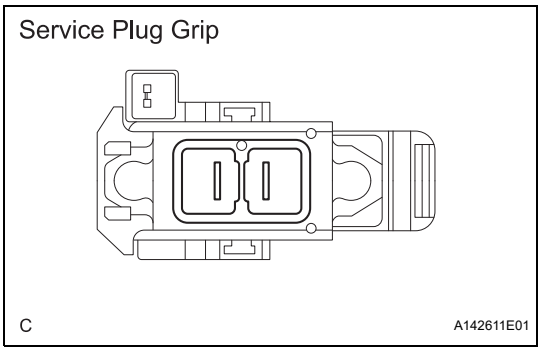


OK:
Dirt or foreign objects have not entered the connection, or there is no evidence of contamination.

NG → **REPLACE SERVICE PLUG GRIP**

OK

9 CHECK SERVICE PLUG GRIP



(a) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
Service plug grip terminal	Below 1 Ω

NG → **REPLACE SERVICE PLUG GRIP**

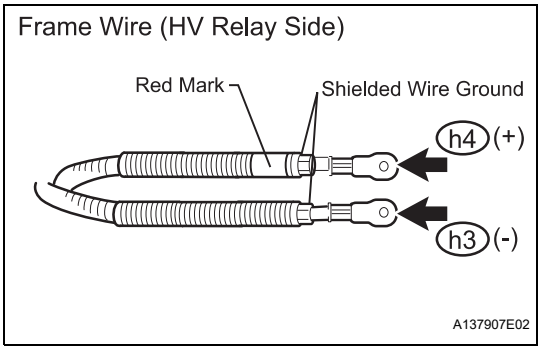
OK

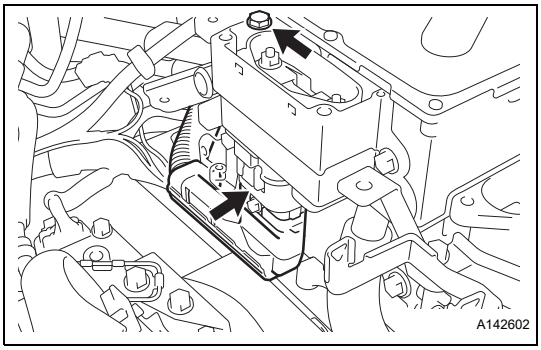
10 CHECK FRAME WIRE

CAUTION:
Be sure to wear insulated gloves and protective goggles.

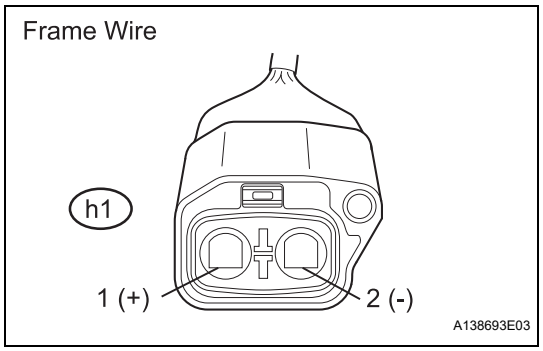
(a) Check that the service plug grip is not installed.
(b) Disconnect the frame wire from the HV relay.
(c) Using a megohmmeter (500 V range), measure the insulation resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
h4-1 - Body ground and shielded wire ground	10 MΩ or more
h3-1 - Body ground and shielded wire ground	10 MΩ or more





(d) Disconnect the frame wire from the high voltage connector of the inverter with converter assembly.



(e) Measure the resistance according to the value(s) in the table below.

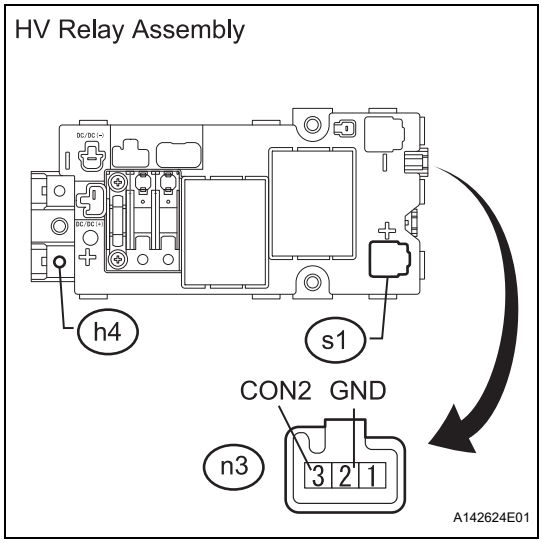
Standard resistance

Tester Connection	Specified Condition
h4-1 (high voltage +) - h1-1 (high voltage +)	Below 1 Ω
h3-1 (high voltage -) - h1-2 (high voltage -)	Below 1 Ω

NG → **REPLACE FRAME WIRE**

OK

11 INSPECT HV RELAY ASSEMBLY (SMRB)



CAUTION:
Be sure to wear insulated gloves.

(a) Check that the service plug grip is not installed.

(b) Remove the HV relay assembly from the vehicle (See page HB-104).

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
h4-1 - s1-1	Below 1 Ω (When battery voltage (12 V) applied to terminals n3-2 and n3-3)

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
CON2 (n3-3) - GND (n3-2)	18.8 to 32.1 Ω at -35 to 80°C (-31 to 176°F)

NG → **REPLACE HV RELAY ASSEMBLY (See page HB-104)**

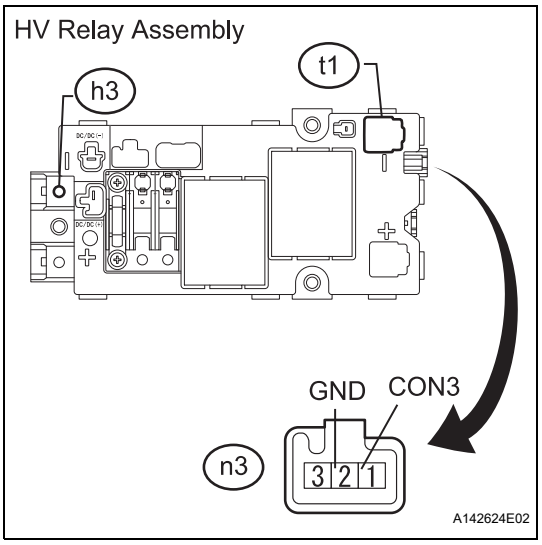
OK

12 INSPECT HV RELAY ASSEMBLY (SMRG)

CAUTION:
Be sure to wear insulated gloves and protective goggles.

(a) Check that the service plug grip is not installed.

HV



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
h3-1 - t1-1	Below 1 Ω (When battery voltage applied to terminals n3-1 and n3-2)

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
CON3 (n3-1) - GND (n3-2)	18.8 to 32.1 Ω at -35 to 80°C (-31 to 176°F)

NG → REPLACE HV RELAY ASSEMBLY (See page HB-104)

OK

REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)

DTC	P0A78-128	Drive Motor "A" Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If an abnormal amount of current flows through the motor inverter, the MG ECU detects it and sends a signal to inform the hybrid vehicle control ECU of the malfunction.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	128	Abnormal motor current value detection (System malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HV

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

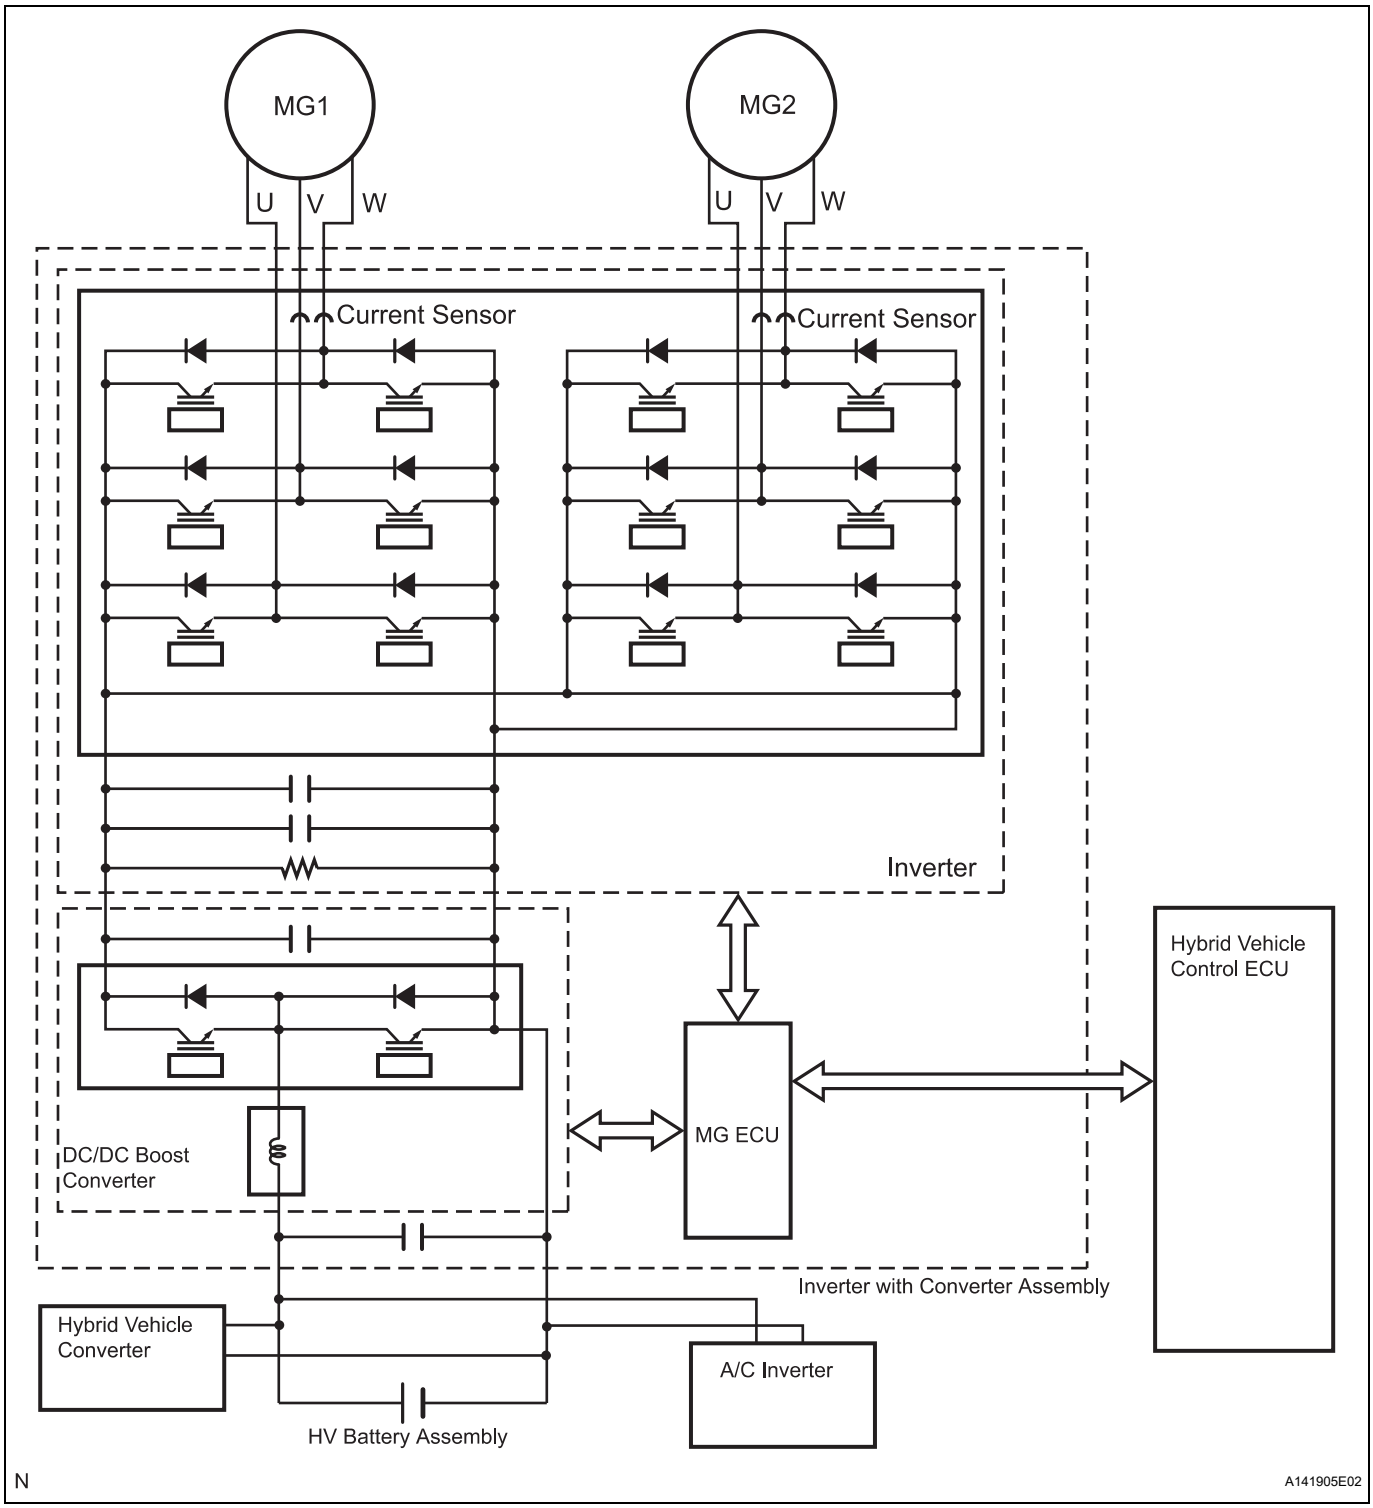
DTC	P0A78-266	Drive Motor "A" Inverter Performance

DTC	P0A78-267	Drive Motor "A" Inverter Performance

DESCRIPTION

The inverter converts high-voltage direct current from the HV battery and alternating current for MG2 and MG1. The inverter contains a three-phase bridge circuit, which consists of six power transistors each for MG2 and MG1, that converts direct current to three-phase alternating current. The MG ECU controls the actuation of the power transistors. The inverter transmits information that is necessary for effecting control, such as the amperage and voltage, to the MG ECU.



The MG ECU uses a voltage sensor, which is built into the inverter, to detect boosted high voltage to allow control of the voltage boost.

The inverter voltage sensor outputs voltage that varies between 0 and 5 V in accordance with the changes in the high voltage. The higher the high voltage, the higher the output voltage, and the lower the high voltage, the lower the output voltage.

The MG ECU monitors the inverter voltage and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	266	Open or short to GND in the inverter voltage (VH) signal line	Inverter with converter assembly
P0A78	267	Short to +B in the inverter voltage (VH) signal line	Inverter with converter assembly

MONITOR DESCRIPTION

The MG ECU monitors the inverter voltage (VH) sensor circuit. If the MG ECU detects an open or short in the VH sensor circuit, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A78 (INF 266): VH malfunction (GND short and disconnection) P0A78 (INF 267): VH malfunction (+B short)
Required sensors / components	Motor inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	1 driving cycle
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A78 (INF 266/267) is not detected

HV

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	**REPLACE INVERTER WITH CONVERTER ASSEMBLY**

NEXT

COMPLETED

DTC	P0A78-279	Drive Motor "A" Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	279	Motor inverter overvoltage signal detection (overvoltage due to inverter with converter assembly malfunction)	Inverter with converter assembly

MONITOR DESCRIPTION

If the motor inverter detects overvoltage, it transmits an overvoltage signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A78 (INF 279): OVH detection (Over high voltage malfunction)
Required sensors / components	Motor inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

HV

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A78 (INF 279) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

DTC	P0A78-287	Drive Motor "A" Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If the motor inverter overheats, or has a circuit malfunction or internal short, the inverter transmits this information to the MFIV terminal of the MG ECU via the motor inverter fail signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	287	Motor inverter fail signal detection (overcurrent due to inverter assembly malfunction)	Inverter with converter assembly

MONITOR DESCRIPTION

If excessive amperage flows through the motor inverter due to an internal short, the motor inverter will transmit an inverter fail signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A78 (INF 287): MFIV detection (Load short circuit)
Required sensors / components	Motor inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

HV

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

DTC	P0A78-306	Drive Motor "A" Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
The MG ECU controls motor torque according to driving conditions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	306	Motor torque execution monitoring malfunction	• Hybrid vehicle transaxle assembly • Inverter with converter assembly

MONITOR DESCRIPTION

If the difference between the requested MG2 torque and the actual MG2 torque exceeds a predetermined value, the MG ECU determines that there is a malfunction in the execution or monitoring of the MG2 torque. Then, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A78 (INF 306): Discrepancy between motor monitored torque and commanded torque
Required sensors / components	Motor inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

HV

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A78 (INF 306) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

DTC	P0A78-505	Drive Motor "A" Inverter Performance

DTC	P0A78-506	Drive Motor "A" Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If an abnormal amount of current flows through the motor inverter, the MG ECU detects it and sends a signal to inform the hybrid vehicle control ECU of the malfunction.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	505	Motor inverter fail signal detection (overcurrent due to MG ECU malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly
P0A78	506	Motor inverter fail signal detection (overcurrent due to hybrid vehicle transaxle assembly malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly

MONITOR DESCRIPTION

The MG ECU monitors the motor inverter electric current. If the current exceeds the threshold for a specified period of time, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A78 (INF 505/506): MFIV detection (Load short circuit)
Required sensors / components	Motor inverter

DTC	P0A78-510	Drive Motor "A" Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
Upon receiving a motor gate shutdown signal from the MG ECU, the inverter forcibly stops MG2 by turning off all power transistors that are actuating MG2.
The MG ECU monitors the motor gate shutdown signal line and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	510	Motor inverter gate malfunction	Inverter with converter assembly

HINT:
- If DTC P0A78-510 is output, the hybrid system cannot be restarted until the DTC is cleared.
- If the malfunction is not reproduced, leave the vehicle for 1 minute with the shift lever in the N position in order to easily reproduce the malfunction.

MONITOR DESCRIPTION

The MG ECU monitors the current that flows in MG2. If the current flows in MG2 while the vehicle is stationary with the power switch on (IG) or the shift lever in the N position, the MG ECU will detect a malfunction. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A78 (INF 510): Malfunction of inverter gate shutdown circuit
Required sensors / components	Motor inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

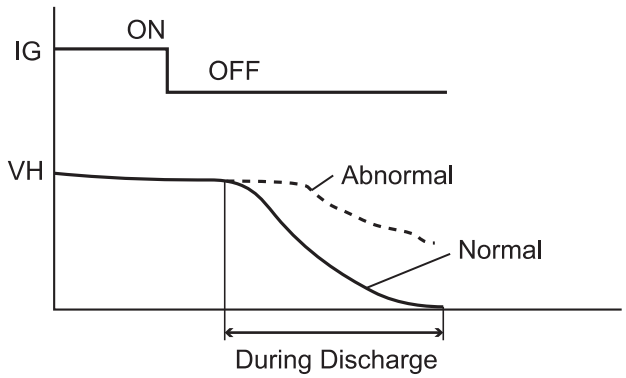
DTC	P0A78-523	Drive Motor "A" Inverter Performance

DESCRIPTION

Refer to the circuit description for DTC P0A78-266 (See page HV-232).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A78	523	Inverter voltage (VH) sensor offset malfunction	Inverter with converter assembly

HINT:
Turning the power switch off causes the voltage in the inverter to discharge. The inverter voltage is almost 0 V after discharge. The DTC will be stored if the inverter voltage is more than the specified value after discharge.



C A111758E02

HV

MONITOR DESCRIPTION

The hybrid vehicle control ECU monitors the inverter voltage (VH) sensor signal. If the hybrid vehicle control ECU detects a fault in the sensor signal, the hybrid vehicle control ECU interprets this as a VH sensor failure. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A78 (INF 523): Voltage (VH) sensor deviation

COMPONENT OPERATING RANGE

MG ECU	DTC P0A78 (INF 807) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

OK

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

DTC	P0A7A-122	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If the generator inverter circuit is opened or shorted, or if the circuit overheats, the information is transmitted from the inverter to the GFIV terminal of the MG ECU via the generator inverter fail signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	122	Generator inverter fail signal detection (overcurrent due to system malfunction)	• Fuel level • Hybrid vehicle transaxle assembly • Engine assembly • Inverter with converter assembly • Wire harness or connector

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HINT:
P0A7A-122 may be set due to a malfunction which also causes DTCs in the table above to be set. In this case, first troubleshoot the output DTCs in the table above. Then, perform a test to attempt to reproduce the problems, and check that no DTCs are output.

YES > **GO TO DTC CHART**

NO

2 CHECK AMOUNT OF GASOLINE

(a) Turn the power switch on (IG).
(b) Check the amount of fuel by referring to the fuel gauge in the meter.
OK:
Proper amount of fuel is in the tank.

NG > **REFUEL VEHICLE**

HV

OK

3 CHECK ENGINE START

(a) Turn the power switch on (READY).
(b) Check if the engine starts.
HINT:
Depressing the accelerator pedal with the shift lever in the P position will cause the engine to start.
OK:
The engine starts.

OK > **Go to step 6**

NG

4 INSPECT CRANKSHAFT PULLEY REVOLUTION (P POSITION)

(a) Turn the power switch off, move the shift lever to the P position, and lift up the vehicle.
(b) Turn the crankshaft pulley using hand tools to check if the crankshaft pulley can rotate.

CAUTION:
Do not turn the power switch on (READY) while performing this inspection. Be sure to turn the power switch off before performing this inspection, to prevent the engine from starting.
OK:
The crankshaft pulley rotates.

OK	Go to step 6

NG

5	INSPECT CRANKSHAFT PULLEY REVOLUTION (N POSITION)

(a) Lower the vehicle.
(b) Turn the power switch off, move the shift lever to the N position, and lift up the vehicle.
(c) Turn the crankshaft pulley using hand tools to check if the crankshaft pulley can rotate.

CAUTION:
Do not turn the power switch on (READY) while performing this inspection. Be sure to turn the power switch off before performing this inspection, to prevent the engine from starting.
OK:
The crankshaft pulley rotates.

DTC	P0A7A-130	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If an abnormal amount of current flows through the generator inverter, the MG ECU detects it and sends a signal to inform the hybrid vehicle control ECU of the malfunction.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	130	Abnormal generator current value detection (System)	• Fuel level • Hybrid vehicle transaxle assembly • Engine assembly • Inverter with converter assembly • Wire harness or connector

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

DTC	P0A7A-322	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If the generator inverter circuit is opened or shorted, or if the circuit overheats, the information is transmitted from the inverter to the GFIV terminal of the MG ECU via the generator inverter fail signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	322	Generator inverter fail signal detection (overheating)	• Inverter cooling system • Water pump with motor & bracket assembly • Hybrid vehicle transaxle assembly • Inverter with converter assembly • Engine assembly • Fuel level • Cooling fan system • Hybrid vehicle control ECU

MONITOR DESCRIPTION

If the generator inverter overheats, it transmits an inverter fail signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A7A (INF 322): GFIV detection (Overheat malfunction)
Required sensors / components	Generator inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

DTC	P0A7A-324	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If the generator inverter circuit is opened or shorted, or if the circuit overheats, the information is transmitted from the inverter to the GFIV terminal of the MG ECU via the generator inverter fail signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	324	Generator inverter fail signal detection (circuit malfunction)	• Inverter cooling system • Water pump with motor & bracket assembly • Hybrid vehicle transaxle assembly • Inverter with converter assembly • Engine assembly • Fuel level • Cooling fan system • Hybrid vehicle control ECU

MONITOR DESCRIPTION

If the generator inverter detects a circuit malfunction, it will transmit a generator inverter fail signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A7A (INF 324): GFIV detection (Circuit malfunction)
Required sensors / components	Generator inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

HV

DTC	P0A7A-325	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If the generator inverter circuit is opened or shorted, or if the circuit overheats, the information is transmitted from the inverter to the GFIV terminal of the MG ECU via the generator inverter fail signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	325	Generator inverter fail signal detection (overcurrent due to inverter assembly malfunction)	Inverter with converter assembly

MONITOR DESCRIPTION

If excessive amperage flows through the generator inverter due to an internal short, the generator inverter will transmit an inverter fail signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A7A (INF 325): GFIV detection (Load short circuit)
Required sensors / components	Generator inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A7A (INF 325) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC No.	Relevant Diagnosis
P0A1D (all INF codes)	Hybrid Powertrain Control Module
P0A1A (all INF codes)	Generator Control Module

HV

HINT:
P0A7A-325 may be set due to a malfunction which also causes DTCs in the table above to be set. In this case, first troubleshoot the output DTCs in the table above. Then, perform a test to attempt to reproduce the problems, and check that no DTCs are output.

YES → GO TO DTC CHART

NO

2	CHECK CONNECTOR CONNECTION CONDITION (INVERTER WITH CONVERTER ASSEMBLY CONNECTOR) (See page HV-79)

NG → CONNECT SECURELY

OK

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

DTC	P0A7A-344	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
The MG ECU controls generator torque according to driving conditions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	344	Generator torque execution monitoring malfunction	• Hybrid vehicle transaxle assembly • Inverter with converter assembly

MONITOR DESCRIPTION

If the difference between the requested MG1 torque and the actual MG1 torque exceeds a predetermined value, the MG ECU determines that there is a malfunction in the execution or monitoring of the MG1 torque. Then, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A7A (INF 344): Discrepancy between generator monitored torque and commanded torque
Required sensors / components	Generator inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A7A (INF 344) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

DTC	P0A7A-517	Generator Inverter Performance

DTC	P0A7A-518	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If the generator inverter circuit is opened or shorted, or if the circuit overheats, the information is transmitted from the inverter to the GFIV terminal of the MG ECU via the generator inverter fail signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	517	Generator inverter fail signal detection (overcurrent due to MG ECU malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly
P0A7A	518	Generator inverter fail signal detection (overcurrent due to hybrid vehicle transaxle assembly malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly

MONITOR DESCRIPTION

If excessive amperage flows through the generator inverter due to an internal short, the generator inverter will transmit an inverter fail signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A7A (INF 517/518): GFIV detection (Load short circuit)

DTC	P0A7A-522	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If the inverter receives a generator gate shutdown signal from the MG ECU, it will turn all power transistors off which are activating the generator to forcibly stop generator operation. The MG ECU monitors the generator gate shutdown signal line and detects malfunctions.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	522	Generator inverter gate malfunction	Inverter with converter assembly

HINT:
- If DTC P0A7A-522 is output, the hybrid system cannot be restarted until the DTC is cleared.
- If the malfunction is not reproduced, leave the vehicle for 1 minute with the shift lever in the N position in order to easily reproduce the malfunction.

MONITOR DESCRIPTION

The MG ECU monitors the current that flows in MG1. If current flows in MG1 while the vehicle is stationary with the power switch on (IG) or the shift lever in the N position, the MG ECU will detect a malfunction. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A7A (INF 522): Malfunction of Inverter gate shut down circuit
Required sensors / components	Generator inverter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately

NG → **CONNECT SECURELY**

OK

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

DTC	P0A7A-809	Generator Inverter Performance

DTC	P0A7A-811	Generator Inverter Performance

DESCRIPTION

For a description of the inverter, (See page HV-232).
If an abnormal amount of current flows through the generator inverter, the MG ECU detects it and sends a signal to inform the hybrid vehicle control ECU of the malfunction.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A7A	809	Abnormal generator current value detection (MG ECU malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly
P0A7A	811	Abnormal generator current value detection (hybrid vehicle transaxle assembly malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly

MONITOR DESCRIPTION

If the MG ECU detects that the generator inverter current exceeds the threshold level for a period of time, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A7A (INF 809/811): Generator inverter abnormal current
Required sensors / components	Generator inverter

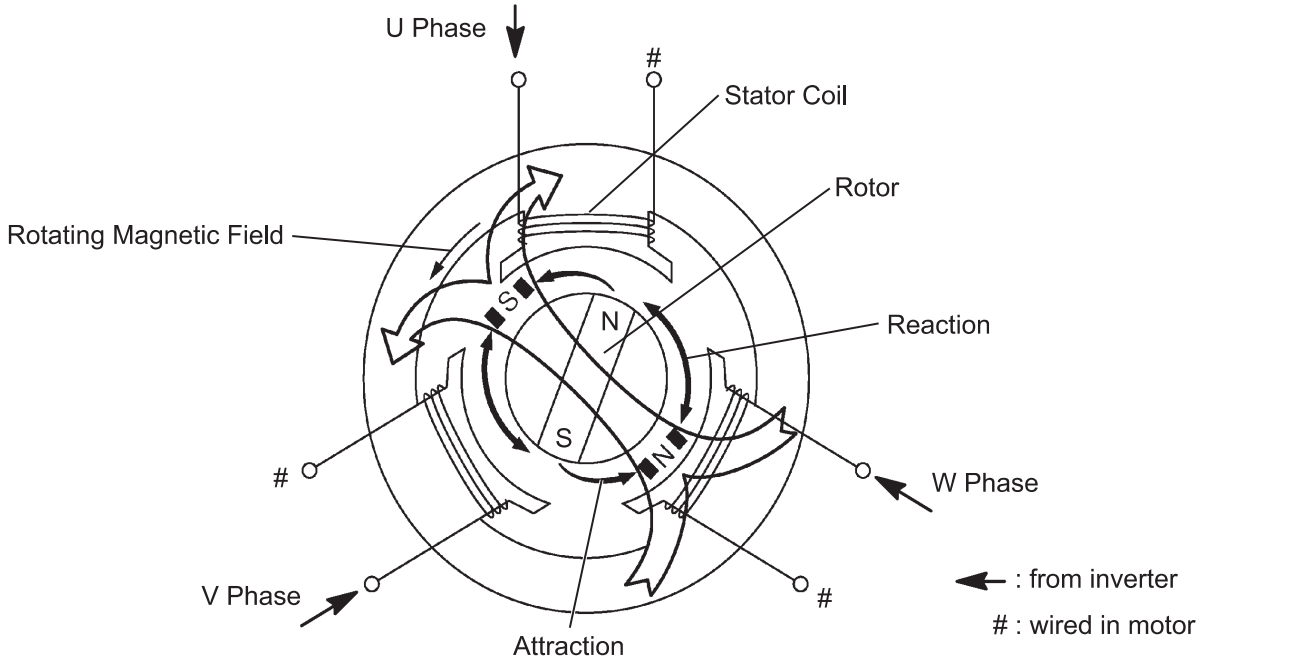
DTC	P0A90-251	Drive Motor "A" Performance

DESCRIPTION

When three-phase alternating current flows through the three-phase windings of the stator coil, a rotating magnetic field is generated in MG2. The system controls the rotation of the magnetic field in accordance with the rotating position and speed of the rotor. As a result, the permanent magnets provided in the rotor are pulled in the direction of rotation, generating torque. The generated torque is almost proportional to the amount of current. The system controls MG2 speed by regulating the frequency of the alternating current. Furthermore, the system properly controls the rotating magnetic field and the angle of the rotor magnets in order to generate high torque in an efficient manner, even at high speeds.



DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A90	251	Motor magnetic force deterioration or same phase short circuit	Hybrid vehicle transaxle assembly

SYSTEM DESCRIPTION

The MG ECU monitors MG2. If the MG ECU detects a reduction in the magnetic force of MG2 or an in-phase short, it interprets this as an MG2 failure. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A90 (INF 251): Magnetic force deterioration / same phase short circuit
Required sensors / components	Hybrid vehicle motor, inverter, motor resolver
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A90 (INF 251) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

DTC	P0A90-509	Drive Motor "A" Performance

DESCRIPTION

For a description of MG2, (See page HV-307).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A90	509	Motor system malfunction	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly

MONITOR DESCRIPTION

The MG ECU monitors the MG2 system. If the MG ECU detects a malfunction of the MG2 system, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A90 (INF 509): Motor system malfunction (No motor torque)
Required sensors / components	Hybrid vehicle motor, inverter, motor resolver
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

HV

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A90 (INF 509) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC No.	Relevant Diagnosis

REPLACE HYBRID VEHICLE TRANSAXLE ASSEMBLY (See page HX-10)

DTC	P0A92-261	Hybrid Generator Performance

DESCRIPTION

For a description of MG1, (See page HV-307).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A92	261	Generator magnetic force deterioration or same phase short circuit	Hybrid vehicle transaxle assembly

MONITOR DESCRIPTION

The MG ECU monitors MG1. If the MG ECU detects a reduction in the magnetic force of MG1 or an in-phase short, it interprets this as an MG1 failure. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

TYPICAL ENABLING CONDITIONS

Related DTCs	P0A92 (INF 261): Magnetic force deterioration / same phase short circuit
Required sensors / components	Hybrid vehicle generator, inverter, generator resolver
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

HV

The monitor will run whenever the following DTC is not present	TMC's intellectual property

DTC	P0A93-346	Inverter Cooling System Performance

DESCRIPTION

The inverter converts the boosted high-voltage direct-current from the HV battery into alternating current for MG2 and MG1. The inverter generates heat during the conversion process, and this heat could damage the inverter if a cooling system is unavailable. Therefore, similar to MG2 and MG1, the inverter is cooled by a special cooling system consisting of an electric water pump, cooling fan, and radiator. This cooling system is independent of the engine cooling system. The hybrid vehicle control ECU monitors the electric water pump, cooling fan, and cooling system, and detects malfunctions.

DTCNo.	INF Code	DTC Detection Condition	Trouble Area
P0A93	346	Inverter cooling system malfunction (HV coolant malfunction)	• Wire harness or connector • Inverter cooling system • Water pump with motor & bracket assembly • Hybrid vehicle control ECU • Inverter with converter assembly • Cooling fan system

MONITOR DESCRIPTION

If the hybrid vehicle control ECU detects a malfunction of the electric water pump, fan or radiator, the ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A93 (INF 346): HV cooling water malfunction
Required sensors / components	Water pump, radiator fan, inverter, boost converter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

HV

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Inverter cooling system	DTC P0A93 (INF 346) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**

- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC No.	Relevant Diagnosis
P0A02-719, P0A03-720	Inverter coolant temperature circuit

YES > GO TO DTC CHART

NO

2	CHECK CONNECTOR CONNECTION CONDITION (INVERTER WITH CONVERTER ASSEMBLY CONNECTOR) (See page HV-79)

NG > CONNECT SECURELY

OK

HV

3	CHECK QUANTITY OF HV COOLANT

(a) Check for coolant leaks.
(b) Check the coolant in the water reserve tank assembly is above the low level.

Result

Result	Proceed to
Coolant leaks are not evident. The coolant level in the water reserve tank assembly is above the low level.	A
Coolant leaks are not evident. The coolant level in the water reserve tank assembly is below the low level.	B
Coolant leaks are evident.	C

HINT:
After repairing the coolant leaks and adding coolant, perform the WATER PUMP and COOLING FAN SPD active tests and make sure that there are no malfunctions.

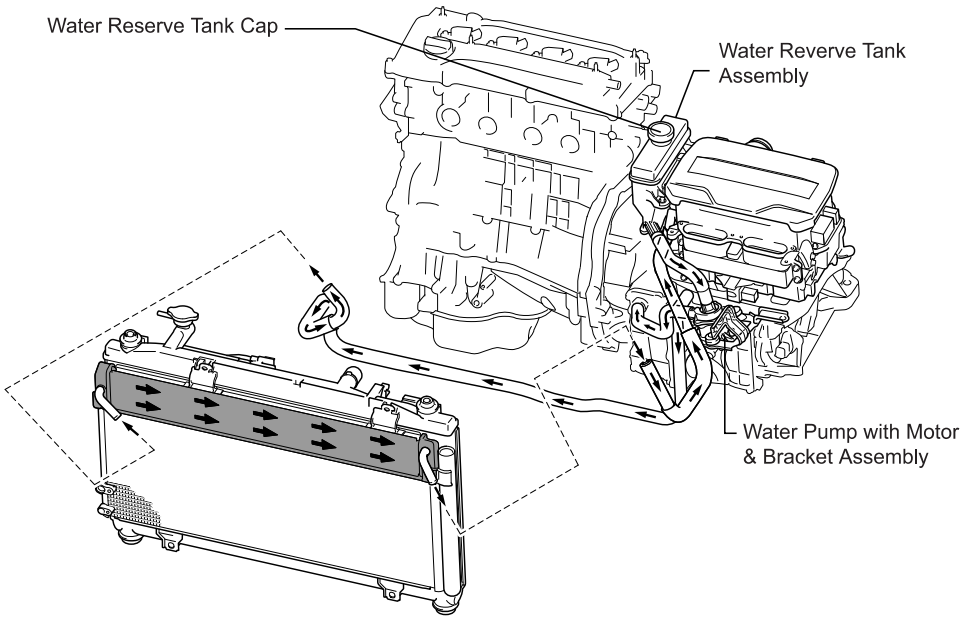
B > ADD COOLANT

C > CHECK FOR COOLANT LEAKS AND ADD COOLANT

A

4	CHECK COOLANT HOSE

(a) Check if the hoses of the cooling system are kinked or clogged.



NG → CORRECT THE PROBLEM

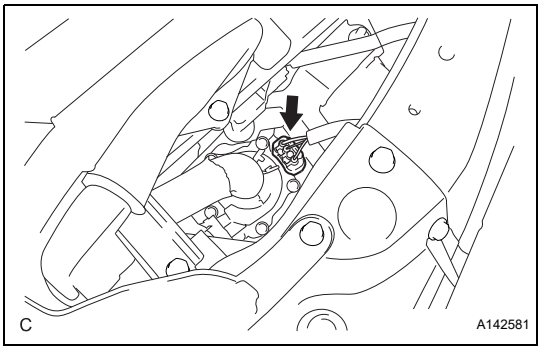
OK

5	CHECK CONNECTOR CONNECTION CONDITION (HYBRID VEHICLE CONTROL ECU CONNECTOR) (See page HV-79)

NG → CONNECT SECURELY

OK

6	CHECK CONNECTOR CONNECTION CONDITION (WATER PUMP WITH MOTOR & BRACKET ASSEMBLY CONNECTOR)



(a) Check the connection of the water pump with motor & bracket assembly connector.

OK:

The connector is connected securely and there are no contact problems.

NG → CONNECT SECURELY

OK

7	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (WATER PUMP)

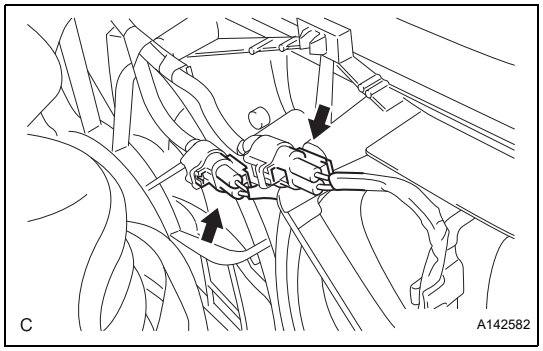
(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / ACTIVE TEST / WATER PUMP.
(d) Perform the WATER PUMP active test.
(e) During the WATER PUMP active test, open the water reserve tank cap and check that there are ripples in the coolant. Continue the active test for at least 1 minute.
Result:
There are ripples in the coolant in the water reserve tank assembly for 1 minute.
NOTICE:
Turning the power switch off or finishing the active test with the water reserve tank cap open will cause the coolant to overflow. Be sure to close the water reserve tank cap before turning the power switch off or finishing the active test.
HINT:
The water pump motor operates even in inspection mode.

NG → **Go to step 11**

OK

HV

8	CHECK CONNECTOR CONNECTION CONDITION (COOLING FAN MOTOR CONNECTOR)



(a) Check the connections of the cooling fan motor connectors.
OK:
The connectors are connected securely and there are no contact problems.

NG → **CONNECT SECURELY**

OK

9	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (COOLING FAN)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / ENHANCED OBDII / ACTIVE TEST / COOLING FAN SPD.
(d) Perform the COOLING FAN SPD active test.

OK:
The cooling fan rotates.

NG → **CHECK COOLING FAN SYSTEM (See page CO-3)**

OK

10	READ VALUE OF INTELLIGENT TESTER

(a) Stop the engine and leave the vehicle for at least 1 hour.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA TEST / INV COOLANT TMP, CONVERTER TEMP, MG1 INVERT TEMP, MG2 INVERT TEMP.
(e) Read the data list.
Result:
The displayed INV COOLANT TMP value is at least 20°C (68°F) higher than MG2 INVERT TEMP, CONVERTER TEMP, and MG 1 INVERT TEMP.
NOTICE:
The lower limit temperature that can be displayed for MG2 INVERT TEMP, CONVERTER TEMP, and MG1 INVERT TEMP is 15°C (59°F). The lower limit temperature for INV COOLANT TMP is -40°C (-40°F). The INV COOLANT TMP value displayed on the intelligent tester may be lower than the others, but this is not a malfunction.

NG → **REPLACE WATER PUMP WITH MOTOR & BRACKET ASSEMBLY**

OK

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

11	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (WATER PUMP)

(a) Connect the intelligent tester to the DLC3.
(b) Compress the inlet hose for the water pump with motor & bracket assembly several times.
(c) Turn the power switch on (IG).
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / ACTIVE TEST / WATER PUMP.
(e) Perform the WATER PUMP active test.
(f) During the WATER PUMP active test, open the water reserve tank cap and check that there are ripples in the coolant. Continue the active test for at least 1 minute.
Result:
There are ripples in the coolant in the water reserve tank assembly for 1 minute.

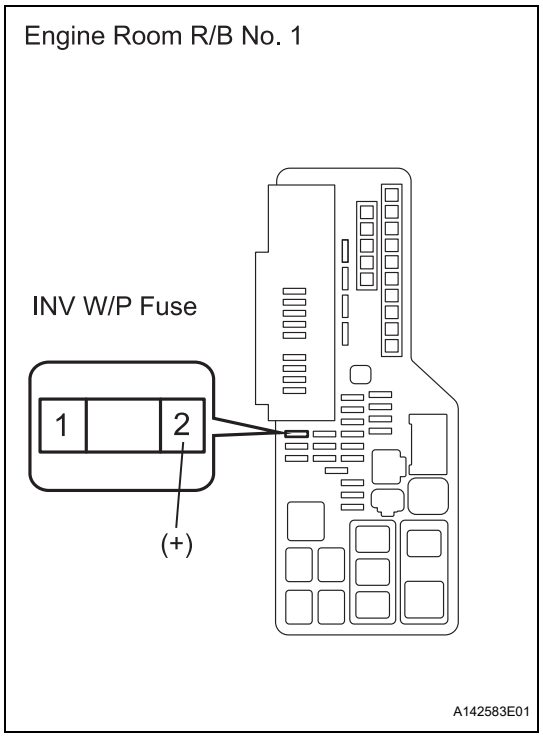
HV

NOTICE:
Turning the power switch off or finishing the active test with the water reserve tank cap open will cause the coolant to overflow. Be sure to close the water reserve tank cap before turning the power switch off or finishing the active test.
HINT:
- Keep compressing the water pump inlet hose until the coolant level in the water reserve tank assembly stops dropping.
- The water pump motor operates even in maintenance mode.
- After repairing the coolant leaks and adding coolant, perform the WATER PUMP and COOLING FAN SPD active tests and make sure that there are no malfunctions.

OK	ADD COOLANT

NG

12	CHECK WATER PUMP WITH MOTOR & BRACKET ASSEMBLY



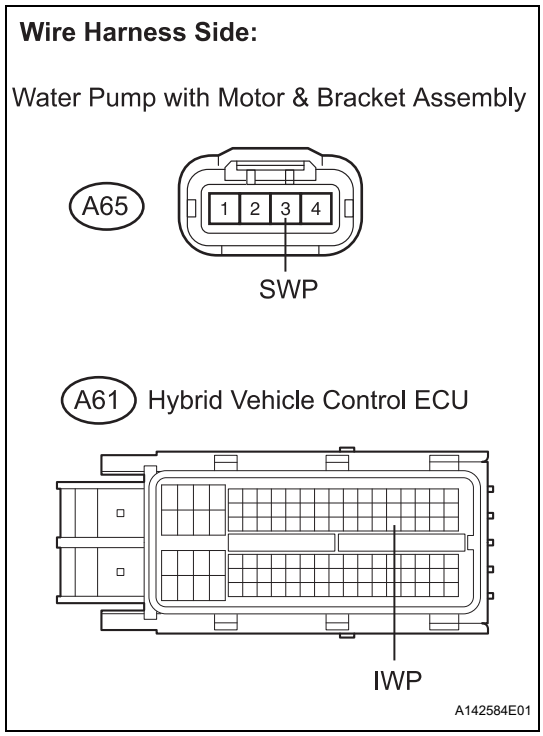
(a) Disconnect the A61 hybrid vehicle control ECU connector.
(b) Remove the INV W/P fuse from the engine room R/B No. 1.
(c) Apply 12 V to terminal 2 of the socket for the fuse in the engine room R/B No. 1 and check that the water pump operates.
OK:
The water pump operates.
(d) Install the INV W/P fuse to the engine room R/B No. 1.

NG	Go to step 14

OK

HV

13	CHECK HARNESS AND CONNECTOR (WATER PUMP WITH MOTOR & BRACKET ASSEMBLY - HV CONTROL ECU)



(a) Disconnect the A65 water pump with motor & bracket assembly connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
IWP (A61-52) - SWP (A65-3)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
IWP (A61-52) or SWP (A65-3) - Body ground	10 kΩ or more

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

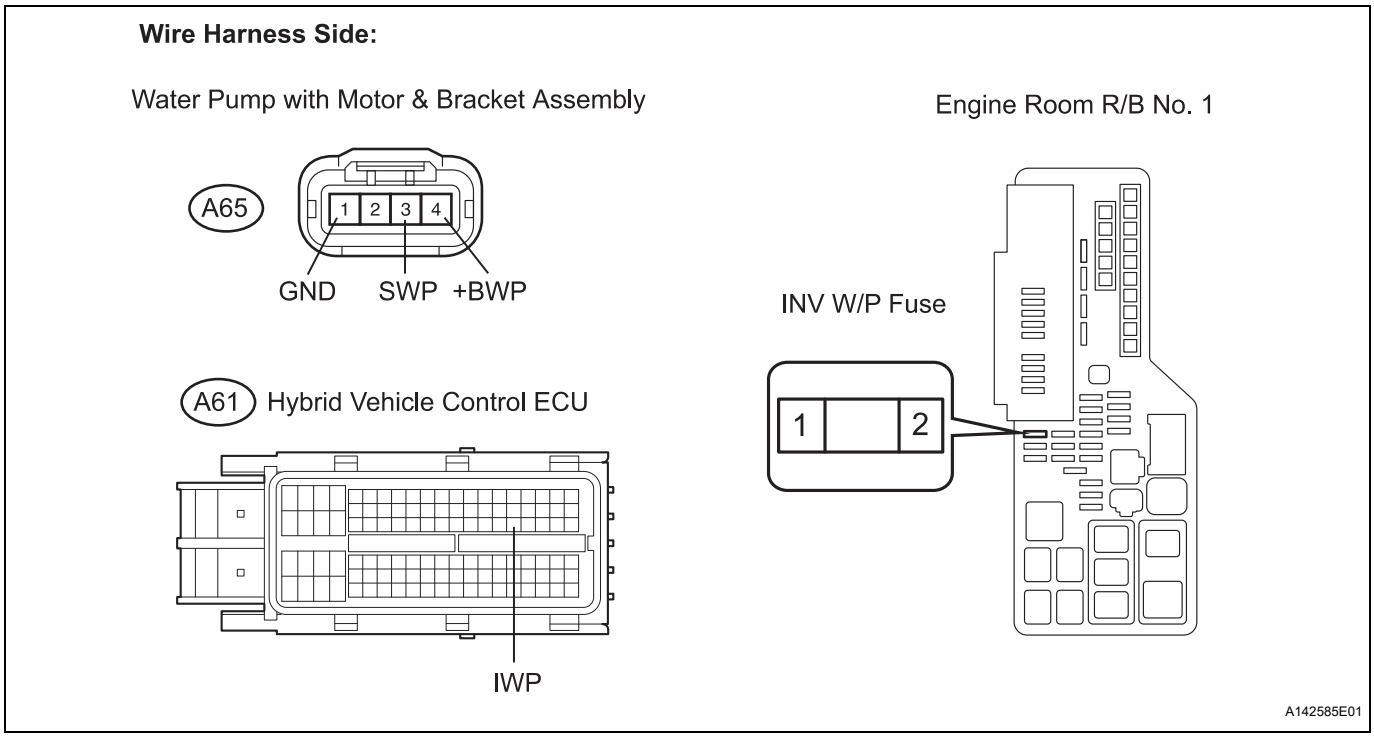
HV

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

14	CHECK HARNESS AND CONNECTOR (WATER PUMP WITH MOTOR POWER SOURCE CIRCUIT)

(a) Remove the INV W/P fuse from the engine room R/B No. 1.

(b) Measure the resistance according to the value(s) in the table below.



Standard resistance (Check for open)

Tester Connection	Specified Condition
IWP (A61-61) - SWP (A65-3)	Below 1 Ω
GND (A65-1) - Body ground	Below 1 Ω
Engine room R/B No. 1 INV W/P fuse terminal 2 - +BWP (A65-4)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
IWP (A61-52) or SWP (A65-3) - Body ground	10 kΩ or more

HV

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE WATER PUMP WITH MOTOR & BRACKET ASSEMBLY

DTC	P0A94-127	DC / DC Converter Performance

DESCRIPTION

For a description of the boost converter, (See page HV-336).
If the boost converter detects a circuit malfunction or overvoltage, it transmits this information to the OVL terminal of the MG ECU via the boost converter overvoltage signal line.

DTCNo.	INF Code	DTC Detection Condition	Trouble Area
P0A94	127	Boost converter overvoltage signal detection (overvoltage due to system malfunction)	• HV relay assembly • Inverter with converter assembly • Service plug grip • Frame wire • Hybrid vehicle transaxle assembly

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

HV

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

DTC	P0A94-172	DC / DC Converter Performance

DESCRIPTION

For a description of the boost converter, (See page HV-336).

DTCNo.	INF Code	DTC Detection Condition	Trouble Area
P0A94	172	Boost converter fail signal detection (overcurrent due to system malfunction)	• Fuel level • Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly • Engine assembly

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

HV

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

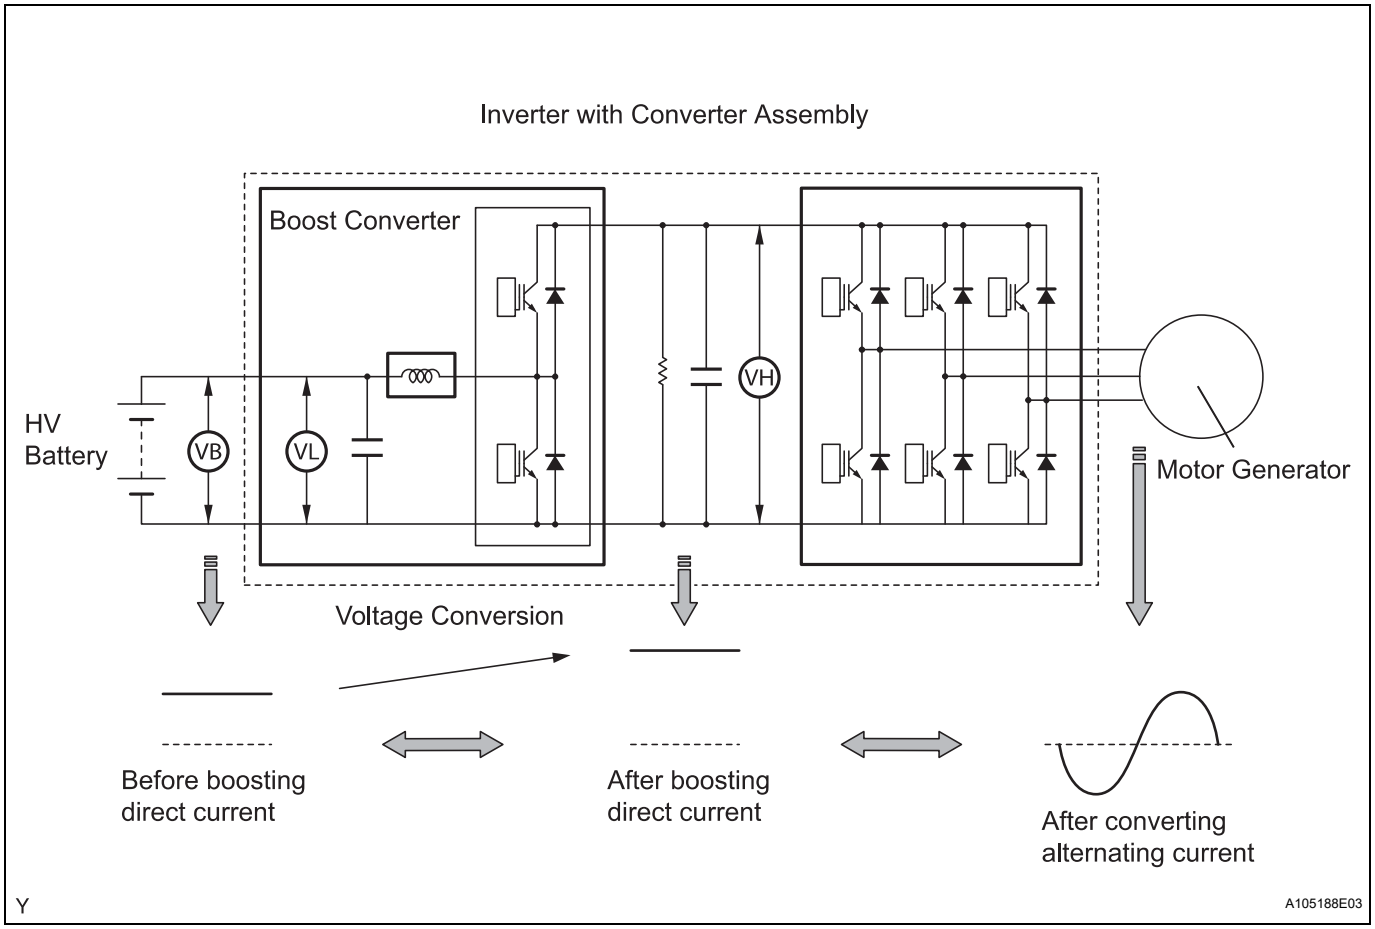
DTC	P0A94-442	DC / DC Converter Performance

DESCRIPTION

The boost converter boosts the 244.8 V DC from the HV battery to a maximum of approximately 650 V DC. The inverter converts the voltage that has been boosted by the boost converter into alternating current, which is used for driving MG2 and MG1. When MG1 and MG2 operate as a generator, the alternating-current voltage from MG1 and MG2 is converted into direct-current voltage by the inverter. Then the boost converter drops this voltage to a direct-current voltage rating of 244.8 V in order to charge the HV battery.



The MG ECU uses a voltage sensor (VL) that is built into the boost converter to detect the high voltage before it is boosted. It also uses a voltage sensor (VH) that is built into the inverter to detect the high voltage after it is boosted. Based on the voltage before and after it is boosted, the hybrid vehicle control ECU controls the operation of the boost converter to boost the voltage to the target voltage.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A94	442	Abnormal voltage execution value	Inverter with converter assembly

MONITOR DESCRIPTION

If the difference between the requested boost converter (inverter with converter assembly) voltage and the actual boost converter voltage exceeds a predetermined value, the hybrid vehicle control ECU determines that there is a malfunction of the execution or monitoring in the boost converter voltage. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A94 (INF 442): Discrepancy between commanded and actual
Required sensors / components	Boost converter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Hybrid vehicle control ECU	DTC P0A94 (INF 442) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HV

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

DTC	P0A94-547	DC / DC Converter Performance

DTC	P0A94-549	DC / DC Converter Performance

DESCRIPTION

For a description of the boost converter, (See page HV-336).
If the boost converter detects a circuit malfunction or overvoltage, it transmits this information to the OVL terminal of the MG ECU via the boost converter overvoltage signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A94	547	Boost converter overvoltage signal detection (overvoltage due to MG ECU malfunction)	• Wire harness or connector • Inverter with converter assembly • Hybrid vehicle transaxle assembly
P0A94	549	Boost converter overvoltage signal detection (overvoltage due to hybrid vehicle transaxle assembly malfunction)	• Wire harness or connector • Inverter with converter assembly • Hybrid vehicle transaxle assembly

MONITOR DESCRIPTION

If the boost converter (inverter with converter assembly) detects an overvoltage, it transmits a boost converter overvoltage signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A94 (INF 547/549): OVL detection over voltage
Required sensors / components	Boost converter
Frequency of operation	Continuous
Duration	TMC's intellectual property

DTC	P0A94-554	DC / DC Converter Performance

DTC	P0A94-556	DC / DC Converter Performance

DESCRIPTION

For a description of the boost converter, (See page HV-336).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A94	554	Boost converter inverter fail signal detection (overcurrent due to MG ECU malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly
P0A94	556	Boost converter inverter fail signal detection (overcurrent due to hybrid vehicle transaxle assembly malfunction)	• Wire harness or connector • Hybrid vehicle transaxle assembly • Inverter with converter assembly

MONITOR DESCRIPTION

If excessive amperage flows through the boost converter (inverter with converter assembly) due to an internal short, the boost converter will transmit a boost converter fail signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A94 (INF 554/556): FCV detection load short circuit
Required sensors / components	Boost converter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A94 (INF 554/556) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**

- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

OK

REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

DTC	P0A94-557	DC / DC Converter Performance

DESCRIPTION

For a description of the boost converter, (See page HV-336).
If the boost converter detects a circuit malfunction, overheat, or internal short, it transmits this information to the FCV terminal of the MG ECU via the boost converter fail signal line.

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A94	557	Boost converter fail signal detection (circuit malfunction)	• Wire harness or connector • Inverter cooling system • Water pump with motor & bracket assembly • Hybrid vehicle transaxle assembly • Inverter with converter assembly • Fuel level • Engine assembly • Cooling fan system

MONITOR DESCRIPTION

If the boost converter detects a circuit malfunction, it transmits a boost converter fail signal to the MG ECU. Upon receiving this signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A94 (INF 557): FCV detection circuit malfunction
Required sensors / components	Boost converter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

DTC	P0A94-585	DC / DC Converter Performance

DESCRIPTION

Refer to the description for DTC P0A94-589 (See page HV-373).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A94	585	Boost converter voltage (VL) sensor performance problem	Inverter with converter assembly

MONITOR DESCRIPTION

The hybrid vehicle control ECU monitors the boost converter voltage sensor signal. If the hybrid vehicle control ECU detects an abnormality in the sensor signal, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A94 (INF 585): Voltage (VL) sensor deviation
Required sensors / components	Boost converter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

HV

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Hybrid vehicle control ECU	DTC P0A94 (INF 585) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC No.	Relevant Diagnosis
P0A1A, P0A1B	MG ECU malfunction
P0A1D	Hybrid vehicle control ECU malfunction

YES → GO TO DTC CHART

NO → REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)

DTC	P0A94-587	DC / DC Converter Performance

DESCRIPTION

For a description for the boost converter, (See page HV-336).
The hybrid vehicle control ECU uses a voltage sensor that is built into the boost converter to detect the high voltage (VL) before it is boosted. The hybrid vehicle control ECU also uses a battery smart unit to detect HV battery voltage (VB).

DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A94	587	Voltages from HV battery voltage (VB) sensor and boost converter voltage (VL) sensor deviate	• Inverter with converter assembly • Battery smart unit

MONITOR DESCRIPTION

The hybrid vehicle control ECU monitors the HV battery voltage (VB) and boost converter voltage (VL) sensors. When a large difference occurs between the voltages from the VB and VL sensors, the hybrid vehicle control ECU interprets this as a failure of either of the sensors. The hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A94 (INF 587): Voltage (VB or VL) sensor deviation
Required sensors / components	Boost converter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	Immediately
Sequence of operation	None

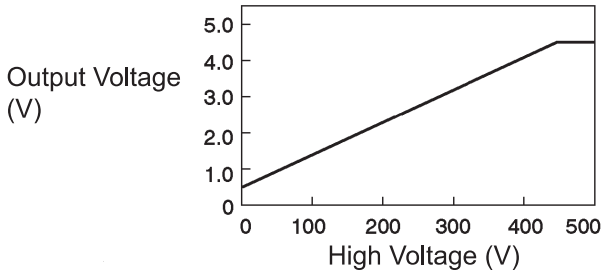
DTC	P0A94-589	DC / DC Converter Performance

DTC	P0A94-590	DC / DC Converter Performance

DESCRIPTION

The MG ECU uses a voltage sensor that is built into the boost converter to detect pre-boost high voltage (VL) to allow boost control. The boost converter voltage sensor outputs a voltage that varies between 0 and 5 V in accordance with changes in the high voltage. The higher the high voltage, the higher the output voltage. Conversely, the lower the high voltage, the lower the output voltage. The MG ECU monitors the boost converter voltage sensor signal line and detects a malfunction.



DTC No.	INF Code	DTC Detection Condition	Trouble Area
P0A94	589	Open or short to GND in the boost converter voltage (VL) sensor circuit	Inverter with converter assembly
P0A94	590	Short to +B in the boost converter voltage (VL) sensor circuit	Inverter with converter assembly

HV

MONITOR DESCRIPTION

The MG ECU monitors the boost converter voltage (VL) sensor circuit. If the MG ECU detects an open or short in the VL sensor circuit, the hybrid vehicle control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A94 (INF 589): VL malfunction (Disconnection and GND short) P0A94 (INF 590): VL malfunction (+B short)
Required sensors / components	Boost converter
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	1 driving cycle
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTC is not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

MG ECU	DTC P0A94 (INF 589/590) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	**REPLACE INVERTER WITH CONVERTER ASSEMBLY**

NEXT

COMPLETED

DTC	P0AA1-231	Hybrid Battery Positive Contactor Circuit Stuck Closed

DESCRIPTION

Refer to the description for DTC P0AE6-225 (See page HV-412).

DTCNo.	INF Code	DTC Detection Condition	Trouble Area
P0AA1	231	System main relay B on the HV battery positive side is stuck closed.	• HV relay assembly • Inverter with converter assembly

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0AE6-225 (See page HV-413).

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

- Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.
- If P0AA1-231 is output, the vehicle is prevented from starting.

HV

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result

DTC No.	Relevant Part
P0AE2-773, 161	SMRP short
P0ADC-226	SMRB control line
P0A1A-156, 658, 151, 155, P0A1B-511, 164, 163, 512, 193, 786, 788, 659, 661, P0A78-266, 267, 523, 586, P0A94-442, P3004-132	VH sensor circuit
P0A1A-200, 791, 792, 793, P0A1B-192, 168, 794, 795, 796, P0A3F-243, P0A41-245, P0A40-500, P0A4B-253, P0A4C-513, P0A4D-255	MG1 and MG2 rotation speed circuit

YES → GO TO DTC CHART

NO

2	CHECK FREEZE FRAME DATA

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Read output DTCs.
(e) Read the freeze frame data of P0AA1-231.

Result

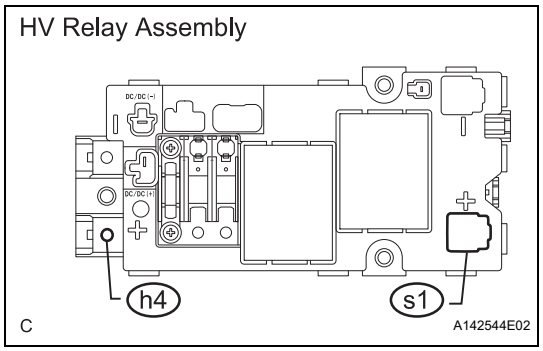
Result	Proceed to
Pre-boost voltage (VL) is less than 60 V.	A
Pre-boost voltage (VL) is 60 V or more.	B

A → **REPLACE INVERTER WITH CONVERTER ASSEMBLY (See page HV-558)**

B

3 CHECK HV RELAY ASSEMBLY

HV Relay Assembly



CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).
NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.
HINT:
For the removal and installation procedures related to inspection of the HV relay assembly, (See page HB-104).

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
h4-1 - s1-1	10 kΩ or more

HINT:
- Leave the HV relay in the vehicle while testing to prevent the movement that occurs during removal from causing a stuck relay to return to normal.
- If the result of reading the freeze frame data is B, the HV relay assembly must be replaced. Measuring resistance can determine that this is either a present or past malfunction.

NG → **REPLACE HV RELAY ASSEMBLY (See page HB-104)**

OK

REPLACE HV RELAY ASSEMBLY (See page HB-104)

HV

DTC	P0AA1-233	Hybrid Battery Positive Contactor Circuit Stuck Closed

DESCRIPTION

Refer to the description for DTC P0AE6-225 (See page HV-412).
This circuit uses the hybrid vehicle control ECU to monitor the system main relays and stops the system if a malfunction is detected in the relays, because it may be impossible to shut off the high-voltage system if any of the relays becomes stuck.

DTCNo.	INF Code	DTC Detection Condition	Trouble Area
P0AA1	233	System main relays B, and G on the HV battery positive and negative sides are stuck closed.	HV relay assembly

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0AE6-225 (See page HV-413).

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system or disconnecting the low voltage connector of the inverter with converter assembly, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

- Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.
- If P0AA1-233 is output, the vehicle is prevented from starting.

HV

1	CHECK DTC OUTPUT (HV)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

NO

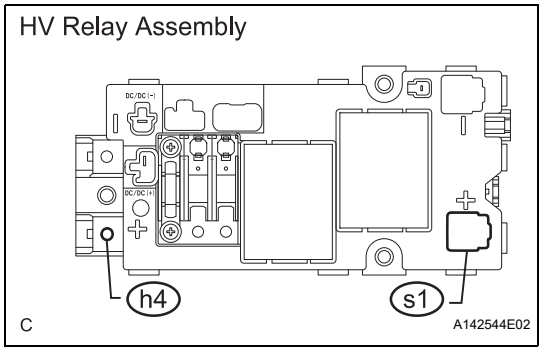
2	CHECK HV RELAY ASSEMBLY (SMRB, SMRG)

CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch off and remove the service plug grip (See page HV-1).
NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.

(b) Disconnect the high voltage connector of the HV relay assembly (See page HB-104).

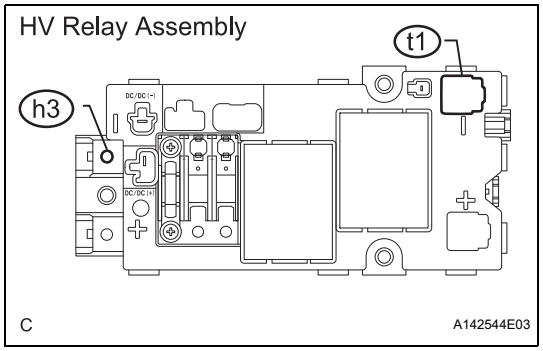
(c) Measure the resistance according to the value(s) in the table below. (SMRB inspection) (*1)
Standard resistance



Tester Connection	Specified Condition
h4-1 - s1-1	10 kΩ or more

HINT:
- Leave the HV relay in the vehicle while testing to prevent the movement that occurs during removal from causing a stuck relay to return to normal.
- Measuring resistance can determine that this is either a present or past malfunction

(d) Measure the resistance according to the value(s) in the table below. (SMRG inspection) (*2)
Standard resistance



Tester Connection	Specified Condition
h3-1 - t1-1	10 kΩ or more

HINT:
- Leave the HV relay in the vehicle while testing to prevent the movement that occurs during removal from causing a stuck relay to return to normal.
- Measuring resistance can determine that this is either a present or past malfunction

DTC	P0A82-123	Hybrid Battery Pack Cooling Fan 1

DESCRIPTION

Refer to the circuit description for DTC P0A84-123 (See page HB-35).

DTC No.	DTC Detection Condition	Trouble Area
P0A82-123	The speed of the battery cooling blower assembly is not within the specified range (1 trip detection)	• Battery cooling blower assembly • Battery smart unit • HV battery intake duct • Wire harness or connector

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0A84-123 (See page HB-36).

INSPECTION PROCEDURE

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

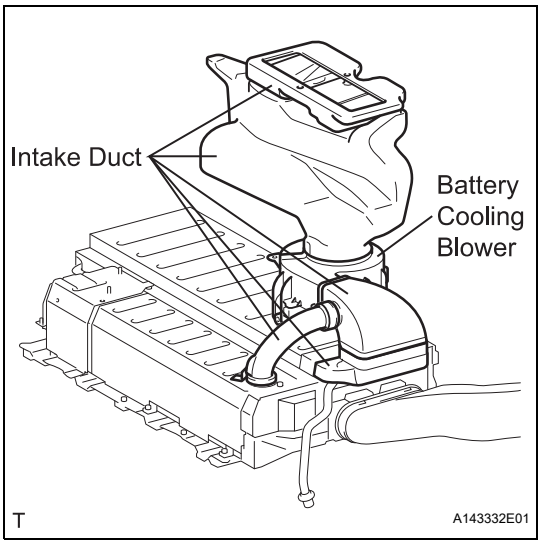
(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	CHECK DUCT AND BLOWER

(a) Remove the luggage compartment front trim cover (See page HB-86).
(b) Remove the luggage compartment rear trim cover (See page HB-86).



(c) Check that the intake ducts and battery cooling blower are not disconnected, damaged, or clogged with foreign objects, and that the acoustical materials have not peeled.

OK:

The ducts and blower are not disconnected, damaged, or clogged with foreign objects and the acoustical materials have not peeled.

NG → **CORRECT THE PROBLEM**

OK

3	CHECK HARNESS AND CONNECTOR (BATTERY SMART UNIT - HYBRID VEHICLE CONTROL ECU)

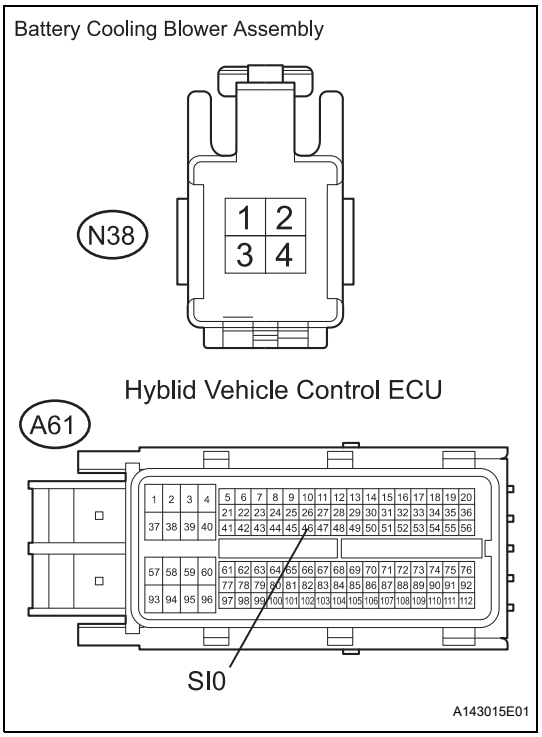
(a) Disconnect the battery cooling blower assembly connector.

(b) Disconnect connector A61 from the hybrid vehicle control ECU.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
N38-3 or SI0 (A61-46) - Body ground	10 kΩ or higher

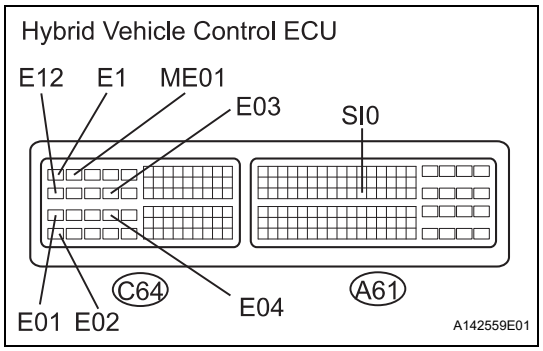


NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK HYBRID VEHICLE CONTROL ECU (GROUND SHORT CHECK)

(a) Remove the hybrid vehicle control ECU (See page HV-570).



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
SI0 (A61-46) - E02 (C64-65)	10 kΩ or higher
SI0 (A61-46) - ME01 (C64-13)	10 kΩ or higher
SI0 (A61-46) - E03 (C64-25)	10 kΩ or higher
SI0 (A61-46) - E04 (C64-48)	10 kΩ or higher
SI0 (A61-46) - E01 (C64-51)	10 kΩ or higher
SI0 (A61-46) - E1 (C64-14)	10 kΩ or higher
SI0 (A61-46) - E12 (C64-28)	10 kΩ or higher

NG → **REPLACE HYBRID VEHICLE CONTROL ECU**

OK

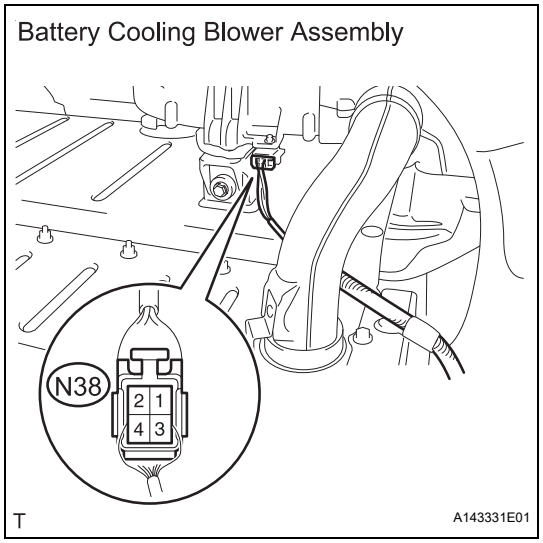
5 READ VALUE ON INTELLIGENT TESTER

(a) Connect the battery cooling blower assembly connector.
(b) Connect connector A61 to the hybrid vehicle control ECU.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the power switch on (IG).
(e) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / ACTIVE TEST / COOLING FAN SPD.
HINT:
Check COOLING FAN MODE1 in the DATA LIST using the intelligent tester. If the COOLING FAN MODE1 is 1 to 6, it is not necessary to perform the ACTIVE TEST.
(f) Select the following menu items: USER DATA / VMF FAN VOLT 1.
(g) Select each air volume mode (1 to 6) in the COOLING FAN SPD active test to operate the battery cooling blower assembly.
(h) While the cooling fan is operating, compare the value in the user data (VMF FAN VOLT 1) with the voltage value that was actually measured at the battery cooling blower assembly connector.

Standard

Tester Connection	Specified Condition
N38-2 - N38-4	There is no difference between the value in the data list (cooling fan voltage) and the voltage value that was actually measured at the battery cooling blower assembly connector.

OK:
Difference of voltage is 1 V or less.



NG → **REPLACE BATTERY SMART UNIT (See page HB-99)**

HB

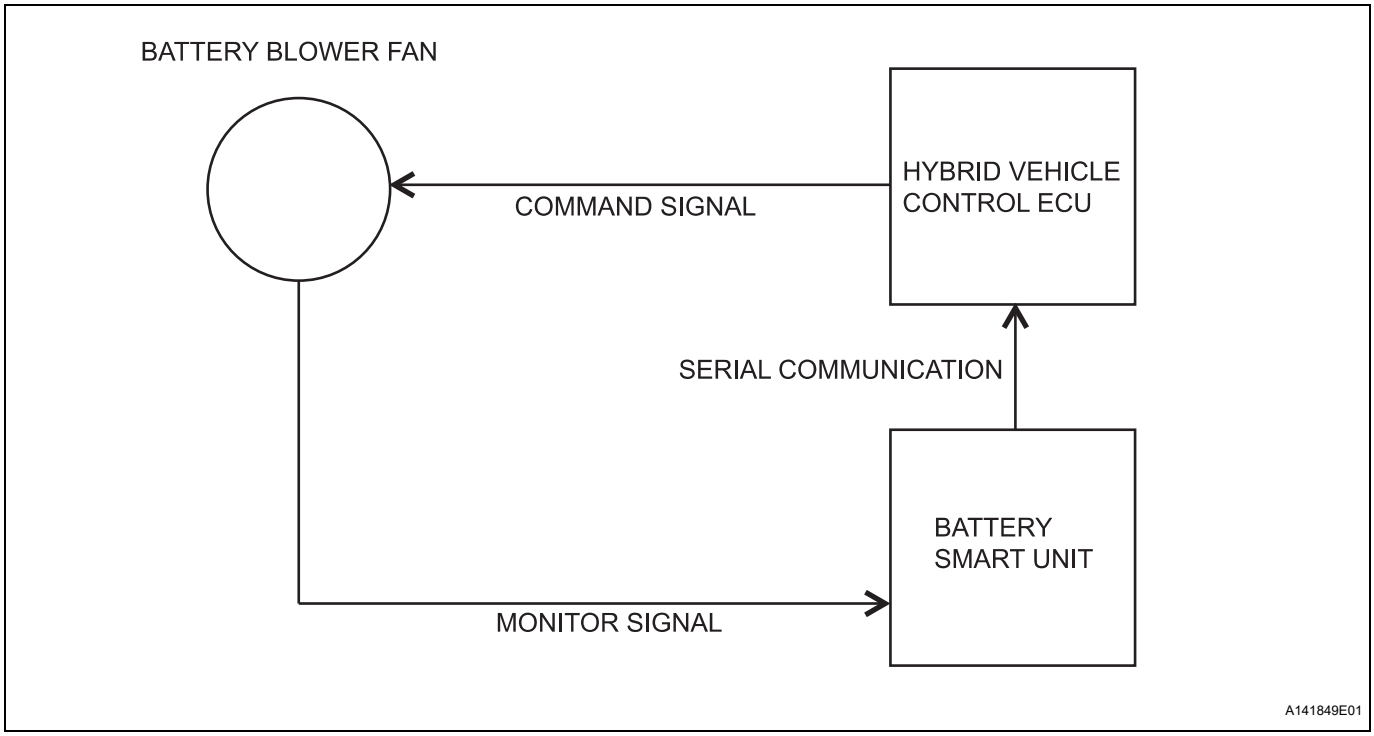
OK

REPLACE BATTERY COOLING BLOWER ASSEMBLY (See page HB-115)

DTC	P0A84-123	Hybrid Battery Pack Cooling Fan 1

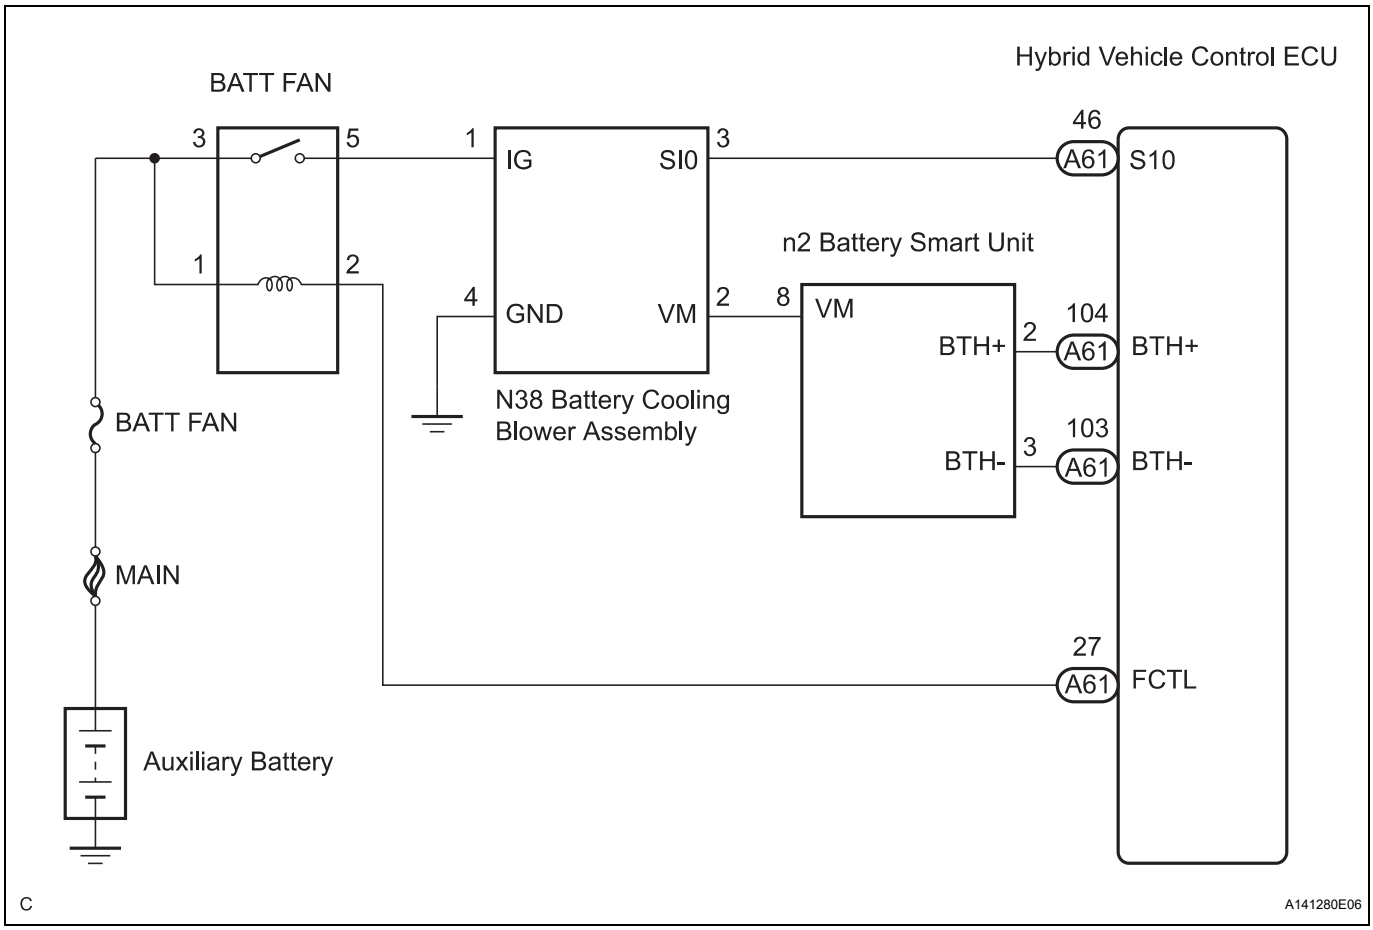
DESCRIPTION

The speed of the battery cooling blower assembly is controlled by the hybrid vehicle control ECU. Battery cooling blower assembly power is supplied when the FCTL terminal of the hybrid vehicle control ECU turns on the battery blower relay. The hybrid vehicle control ECU sends command signals (SI) to the battery cooling blower assembly to get the fan speed corresponding to the HV battery temperature. Information about the voltage applied to the battery cooling blower assembly (VM) is sent to the hybrid vehicle control ECU as a monitor signal using serial communication via the battery smart unit.



DTC No.	DTC Detection Condition	Trouble Area
P0A84-123	When the output voltage of the battery cooling blower assembly (VM) is too low to the target control voltage range (1 trip detection)	• Wire harness or connector • BATT FAN fuse • Battery blower relay • Battery cooling blower assembly • Battery smart unit • Hybrid vehicle control ECU • HV battery

WIRING DIAGRAM



CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

INSPECTION PROCEDURE

1	**CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
Result:
DTC P0A1F-123 is output.
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

YES	**GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

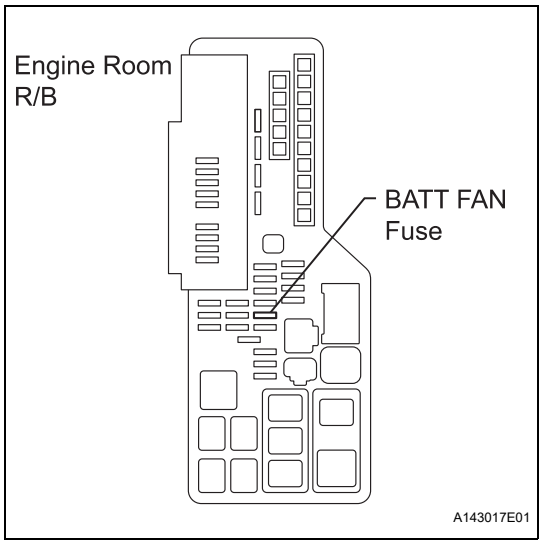
2	PERFORM ACTIVE TEST USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / ACTIVE TEST / COOLING FAN SPD.
HINT:
Check COOLING FAN MODE1 in the DATA LIST using the intelligent tester. If the COOLING FAN MODE1 is 1 to 6, it is not necessary to perform the ACTIVE TEST.
(d) Select air volume mode 6 in the COOLING FAN SPD active test to operate the battery cooling blower assembly.
(e) Check that the fan operates and air is sucked into the inlet duct of the package tray trim panel assembly.
HINT:
The cooling fan may not stop even when turning the cooling fan off in the COOLING FAN SPD active test. This is due to HV system control and not a malfunction.
OK:
The fan operates.

OK	Go to step 14

NG

3	CHECK FUSE (BATT FAN)



(a) Measure the resistance of the BATT FAN fuse.
Standard resistance:
Below 1 Ω

OK	Go to step 7

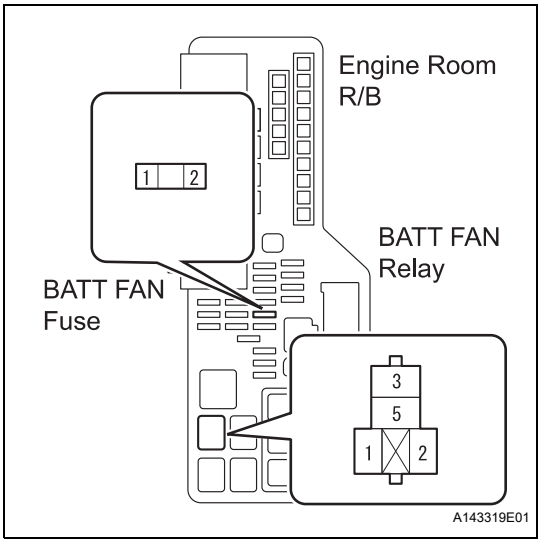
NG

HB

4	REPLACE FUSE (BATT FAN)

NEXT

5	CHECK HARNESS AND CONNECTOR (BATT FAN FUSE - BODY GROUND)



(a) Remove the BATT FAN fuse from the engine room R/B.
(b) Remove the BATT FAN relay from the engine room R/B.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
BATT FAN fuse 2 or BATT FAN relay 3 or 1 - Body ground	10 kΩ or higher

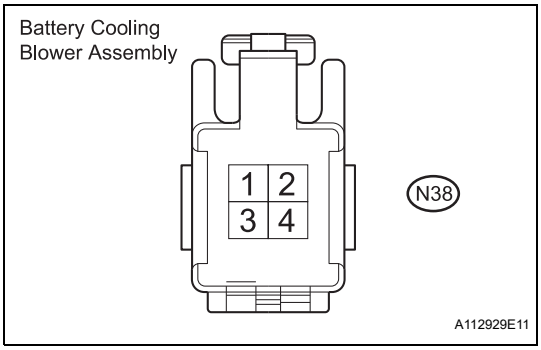
NOTICE:
When taking measurements with an electrical tester, do not apply excessive force to the tester probes to avoid damaging the fuse holder or terminals.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

HB

6	CHECK HARNESS AND CONNECTOR (BATTERY COOLING BLOWER - BODY GROUND)



(a) Remove the front luggage compartment trim cover (See page HB-86).
(b) Disconnect the battery cooling blower assembly connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
N38-1 - Body ground	10 kΩ or higher

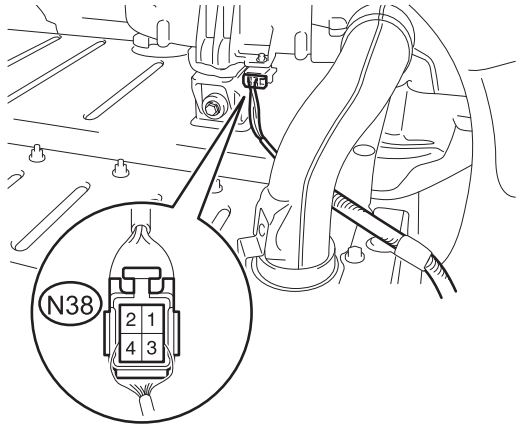
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE BATTERY COOLING BLOWER ASSEMBLY (See page HB-115)

7 CHECK HARNESS AND CONNECTOR (VOLTAGE)

Battery Cooling Blower Assembly



(a) Remove the front luggage compartment trim cover (See page HB-86).
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

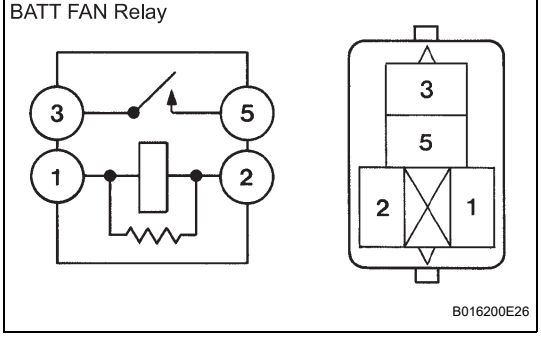
Tester Connection	Specified Condition
1 (+B) - 4 (GND)	9 to 14 V

OK → **Go to step 14**

NG

8 INSPECT RELAY (BATTERY FAN)

BATT FAN Relay



(a) Remove the BATT FAN relay from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

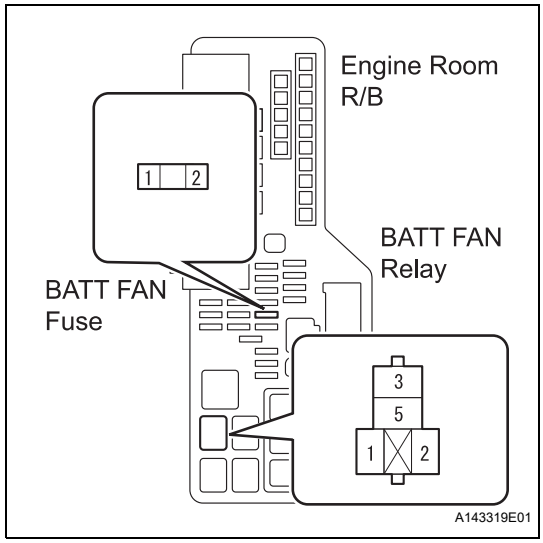
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (Apply battery voltage to terminals 1 and 2)

NG → **REPLACE RELAY (BATTERY BLOWER)**

OK

HB

9	CHECK HARNESS AND CONNECTOR (BATT FAN FUSE - BATT FAN RELAY)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

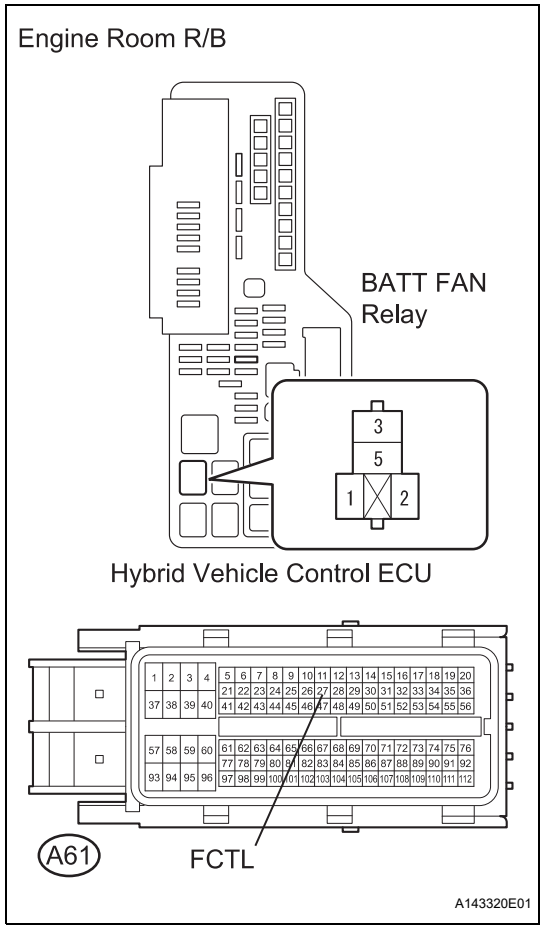
Tester Connection	Specified Condition
BATT FAN fuse 2 - BATT FAN relay 1	Below 1 Ω
BATT FAN fuse 2 - BATT FAN relay 3	Below 1 Ω

NOTICE:
When taking measurements with an electrical tester, do not apply excessive force to the tester probes to avoid damaging the fuse holder or terminals.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10	CHECK HARNESS AND CONNECTOR (BATT FAN RELAY - HYBRID VEHICLE CONTROL ECU)



(a) Disconnect connector A61 from the hybrid vehicle control ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
2 - FCTL (A61-27)	Below 1 Ω

NOTICE:
When taking measurements with an electrical tester, do not apply excessive force to the tester probes to avoid damaging the fuse holder or terminals.

(c) Turn the power switch on (IG).

(d) Measure the resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
2 or FCTL (A61-27) - Body ground	Below 1 V

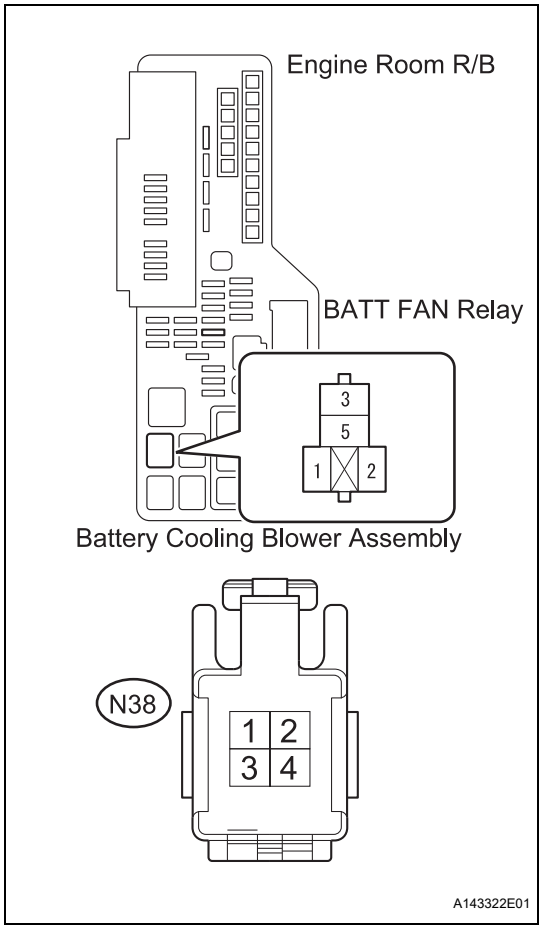
NOTICE:
When taking measurements with an electrical tester, do not apply excessive force to the tester probes to avoid damaging the fuse holder or terminals.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

HB

OK

11	CHECK HARNESS AND CONNECTOR (BATT FAN RELAY - BATTERY COOLING BLOWER)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
5 - N38-1	Below 1 Ω

NOTICE:
When taking measurements with an electrical tester, do not apply excessive force to the tester probes to avoid damaging the fuse holder or terminals.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

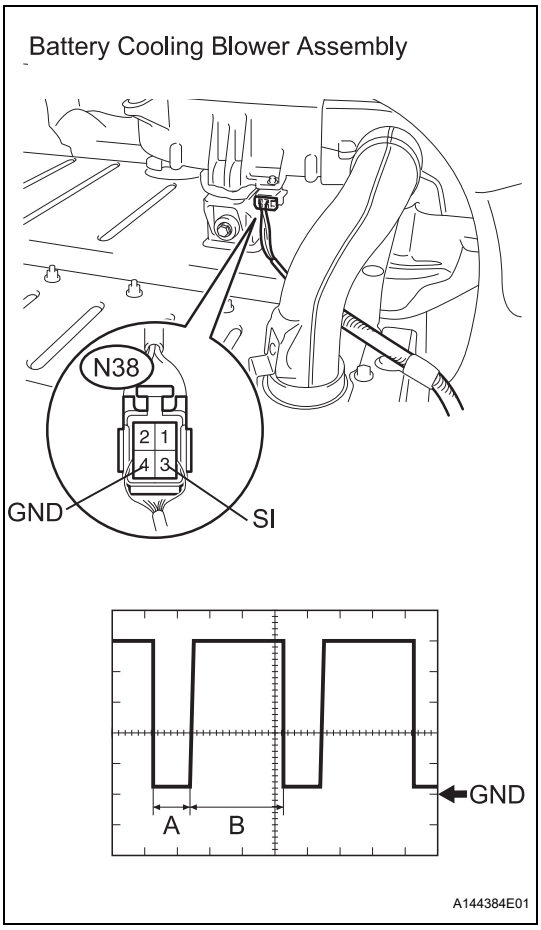
OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

12	CHECK WAVEFORM

(a) Install the BATT FAN fuse to the engine room R/B No. 1.
(b) Connect the battery cooling blower assembly connector.
(c) Connect an oscilloscope between connector terminals 3 (SI) and 4 (GND) of the battery cooling blower assembly.
(d) Connect the intelligent tester to the DLC3.
(e) Turn the power switch on (IG).
(f) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / ACTIVE TEST / COOLING FAN SPD.
(g) Select air volume mode 1 to 6 in the COOLING FAN SPD active test to operate the battery cooling blower assembly.

HB



(h) Measure the waveform.

Item	Contents
Terminal	CH1: N38-3 - N38-4
Equipment Setting	1 V/DIV., 500 μs/DIV.
Condition	Power switch on (IG) or Power switch on (READY)

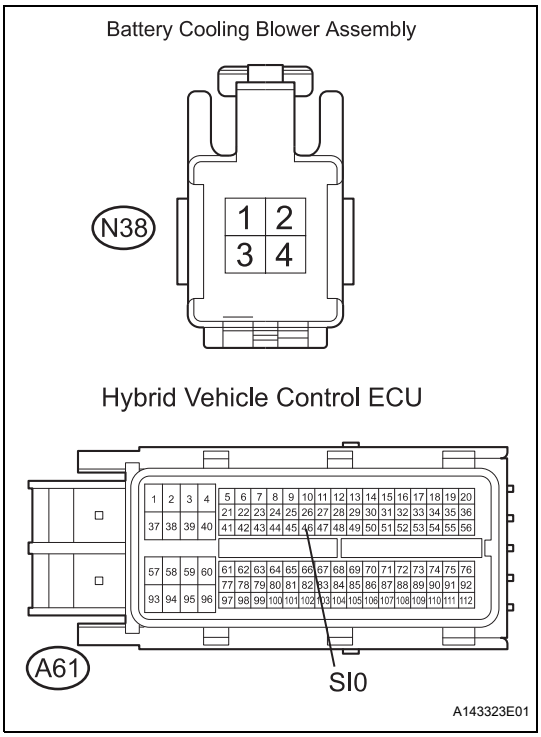
HINT:
- A and B in the DUTY waveform shown in the illustration vary depending on the cooling fan mode.
- The actual duty command value is influenced by variance in fan motors and the change of power supply voltage.

OK → **REPLACE BATTERY COOLING BLOWER ASSEMBLY (See page HB-115)**

NG

HB

13 CHECK HARNESS AND CONNECTOR (BATTERY COOLING BLOWER - HYBRID VEHICLE CONTROL ECU)



(a) Disconnect the battery cooling blower assembly connector.
(b) Disconnect connector A61 from the hybrid vehicle control ECU.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
N38-3 - SI0 (A61-46)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
N38-3 or SI0 (A61-46)- Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

14 CHECK BATTERY COOLING BLOWER ASSEMBLY (VOLTAGE)

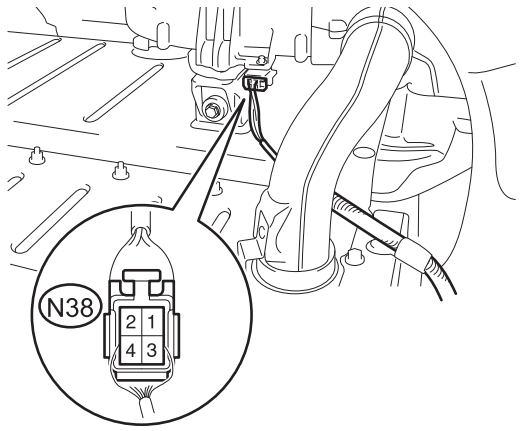
(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / ACTIVE TEST / COOLING FAN SPD.
HINT:
Check COOLING FAN MODE1 in the DATA LIST using the intelligent tester. If the COOLING FAN MODE1 is 1 to 6, it is not necessary to perform the ACTIVE TEST.
(d) Select the following menu items: USER DATA / VMF FAN VOLT 1.
(e) Select each air volume mode (1 to 6) in the COOLING FAN SPD active test to operate the battery cooling blower assembly.
(f) While the cooling fan is operating, compare the value in the user data (VMF FAN VOLT 1) with the voltage value that was actually measured at the battery cooling blower assembly connector.

Standard

Tester Connection	Specified Condition
N38-2 - N38-4	There is no difference between the value in the data list (cooling fan voltage) and the voltage value that was actually measured at the battery cooling blower assembly connector.

OK:
Difference of voltage is 1 V or less.

Battery Cooling Blower Assembly



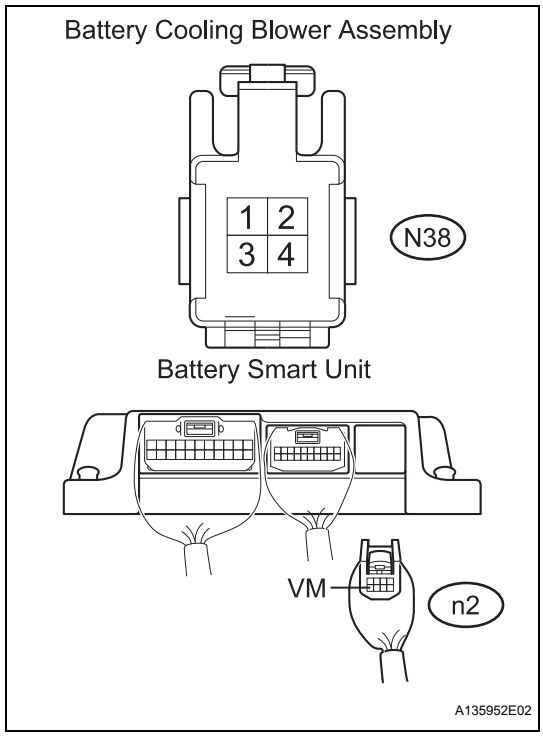
NG → **REPLACE BATTERY COOLING BLOWER ASSEMBLY (See page HB-115)**

OK

15 CHECK HARNESS AND CONNECTOR (BATTERY COOLING BLOWER - BATTERY SMART UNIT)

CAUTION:
Be sure to wear insulated gloves.
(a) Remove the service plug grip (See page HB-86).
(b) Remove the battery smart unit (See page HB-100).
(c) Disconnect connector n2 from the battery smart unit.

HB



(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
N38-2 - VM (n2-8)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
N38-2 or VM (n2-8) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE BATTERY SMART UNIT (See page HB-99)

DTC	P0A85-123	Hybrid Battery Pack Cooling Fan 1

DESCRIPTION

Refer to the circuit description for DTC P0A84-123 (See page HB-35).

DTC No.	DTC Detection Condition	Trouble Area
P0A85-123	When the output voltage of the battery cooling blower assembly (VM) is too high to the target control voltage range (1 trip detection)	• Wire harness or connector • Battery cooling blower assembly • Battery smart unit • HV battery

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0A84-123 (See page HB-36).

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result:

DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	CHECK HARNESS AND CONNECTOR (VOLTAGE)

CAUTION:

Be sure to wear insulated gloves.

(a) Remove the service plug grip (See page HB-86).
(b) Remove the battery smart unit (See page HB-100).
HINT:
Do not disconnect the battery smart unit connectors.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the power switch on (IG).

(e) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / ACTIVE TEST / COOLING FAN SPD.

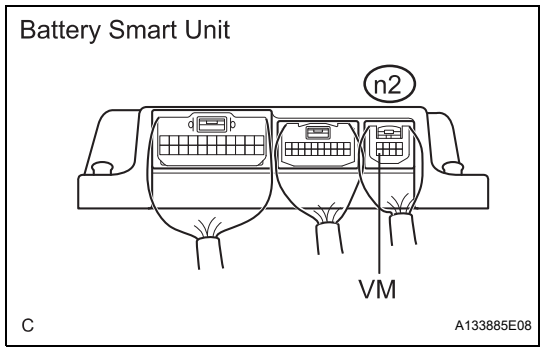
HINT:
Check COOLING FAN MODE1 in the DATA LIST using the intelligent tester. If the COOLING FAN MODE1 is 1 to 6, it is not necessary to perform the ACTIVE TEST.

(f) Select each air volume mode (1 to 6) in the COOLING FAN SPD active test to operate the battery cooling blower assembly.

(g) Measure the voltage according to the value(s) in the table below while the cooling fan is operating.

Standard voltage

Tester Connection	Specified Condition
VM (n2-8) - Body ground	Below 5 V



OK → **Go to step 5**

NG

3 CHECK HARNESS AND CONNECTOR (BATTERY COOLING BLOWER - BATTERY SMART UNIT)

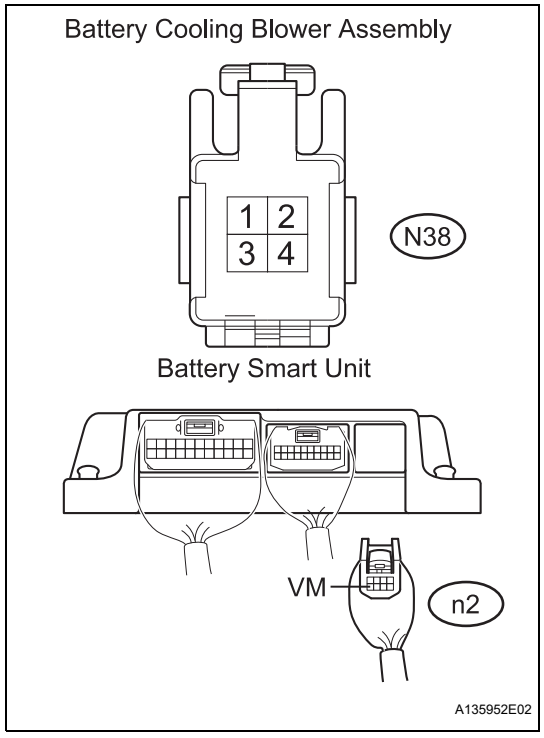
CAUTION:
Be sure to wear insulated gloves.

(a) Disconnect connector n2 from the battery smart unit.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
N38-2 or VM (n2-8) - Other terminal	10 kΩ or higher

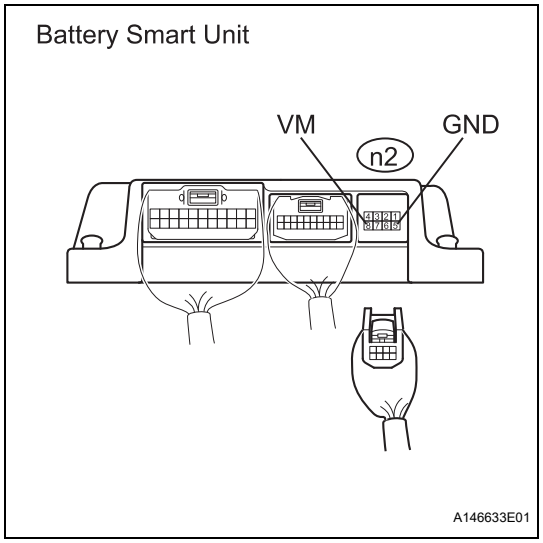


NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

HB

4	CHECK BATTERY SMART UNIT (VOLTAGE)



CAUTION:
Be sure to wear insulated gloves.

(a) Turn the power switch on (IG).
(b) Measure the resistance according to the value(s) in the table below.

Standard voltage

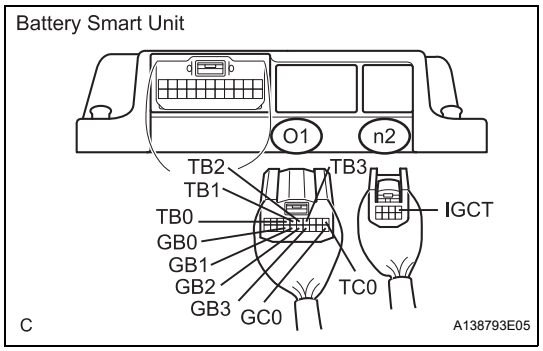
Tester Connection	Specified Condition
VM (n2-8) - GND (n2-5)	Below 5 V

NG → **REPLACE BATTERY SMART UNIT (See page HB-99)**

OK

REPLACE BATTERY COOLING BLOWER ASSEMBLY (See page HB-115)

5	CHECK HV BATTERY (BATTERY TEMPERATURE SENSOR AND INLET AIR TEMPERATURE SENSOR)



CAUTION:
Be sure to wear insulated gloves.

(a) Disconnect connector O1 from the battery smart unit.
(b) Disconnect connector n2 from the battery smart unit.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
TB0 (O1-7) - IGCT (n2-1)	10 kΩ or higher
GB0 (O1-17) - IGCT (n2-1)	10 kΩ or higher
TB1 (O1-6) - IGCT (n2-1)	10 kΩ or higher
GB1 (O1-16) - IGCT (n2-1)	10 kΩ or higher
TB2 (O1-5) - IGCT (n2-1)	10 kΩ or higher
GB2 (O1-15) - IGCT (n2-1)	10 kΩ or higher
TB3 (O1-4) - IGCT (n2-1)	10 kΩ or higher
GB3 (O1-14) - IGCT (n2-1)	10 kΩ or higher
TC0 (O1-1) - IGCT (n2-1)	10 kΩ or higher
GC0 (O1-11) - IGCT (n2-1)	10 kΩ or higher

NG → **REPLACE HV BATTERY (See page HB-81)**

HB

OK

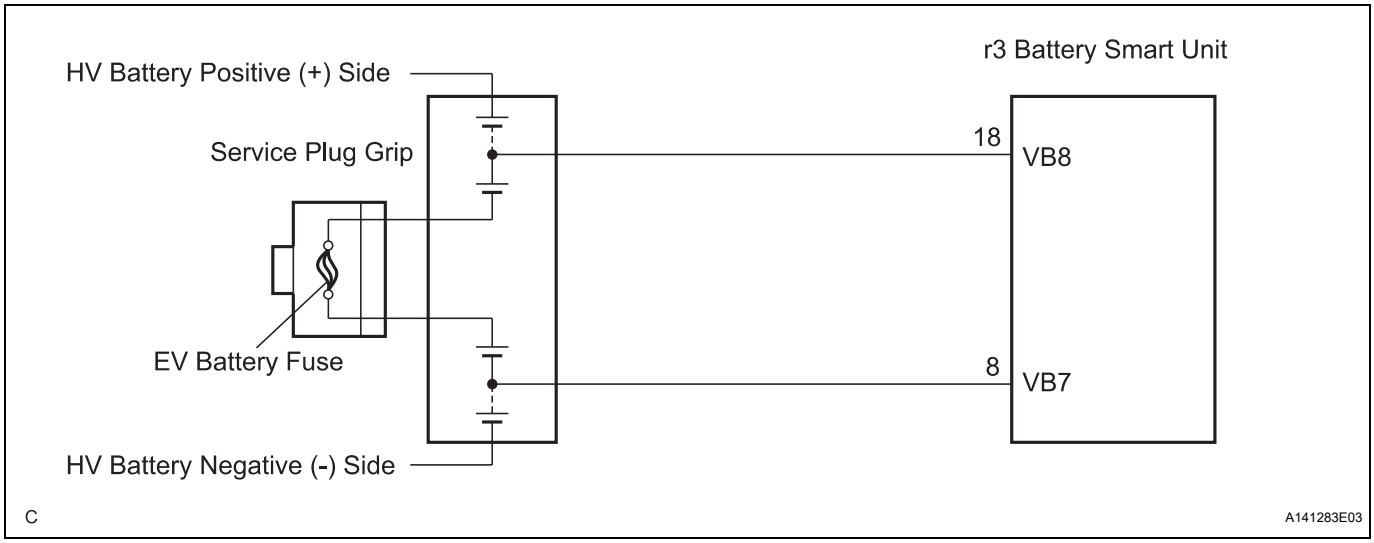
REPLACE BATTERY SMART UNIT (See page HB-99)

DTC	P0A95-123	High Voltage Fuse

DESCRIPTION

DTC No.	DTC Detection Condition	Trouble Area
P0A95-123	Voltage between VBB7 and VBB8 terminals is below the standard despite the interlock switch being engaged (1 trip detection)	• EV battery • Service plug grip • HV battery • Battery smart unit

WIRING DIAGRAM



INSPECTION PROCEDURE

HB

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC

NO

2	CHECK FOR DTCS (DTCS OTHER THAN P0A95-123)

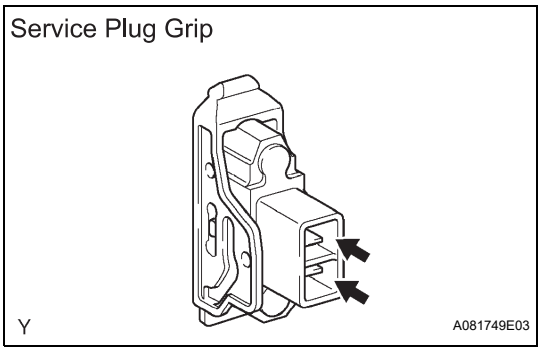
(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTCs other than P0A95-123 are output.

YES → GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC

NO

3	INSPECT SERVICE PLUG GRIP

CAUTION:
Be sure to wear insulated gloves.
(a) Turn the power switch off and remove the service plug grip (See page HB-86).
NOTICE:
After removing the service plug grip, do not turn the power switch on (READY), unless instructed by the repair manual because this may cause a malfunction.
(b) Measure the resistance between the terminals of the service plug grip.
Standard resistance:
Below 1 Ω



OK → REPLACE HV BATTERY (See page HB-81)

NG

REPLACE SERVICE PLUG GRIP (See page HB-81)

DTC	P0A9C-123	Hybrid Battery Temperature Sensor "A"

DESCRIPTION

Refer to the circuit description for DTC P0A9D-123. (See page HB-54)

DTC No.	DTC Detection Condition	Trouble Area
P0A9C-123	• When the battery temperature sensor performance is abnormal (1 trip detection/2 trip detection)	• HV battery (Battery temperature sensor) • Battery smart unit

MONITOR DESCRIPTION

If the temperature indicated by the battery temperature sensor is lower than the standard level (open), or is higher than the standard level (short), the battery smart unit interprets this as a sensor malfunction. If the battery smart unit detects that the HV battery temperature is out of its normal range or its value is abnormal, the HV control ECU will illuminates the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A9C (INF 123): Rationality
Required sensors / components	Battery temperature sensor
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

HB

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0A9C (INF 123) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

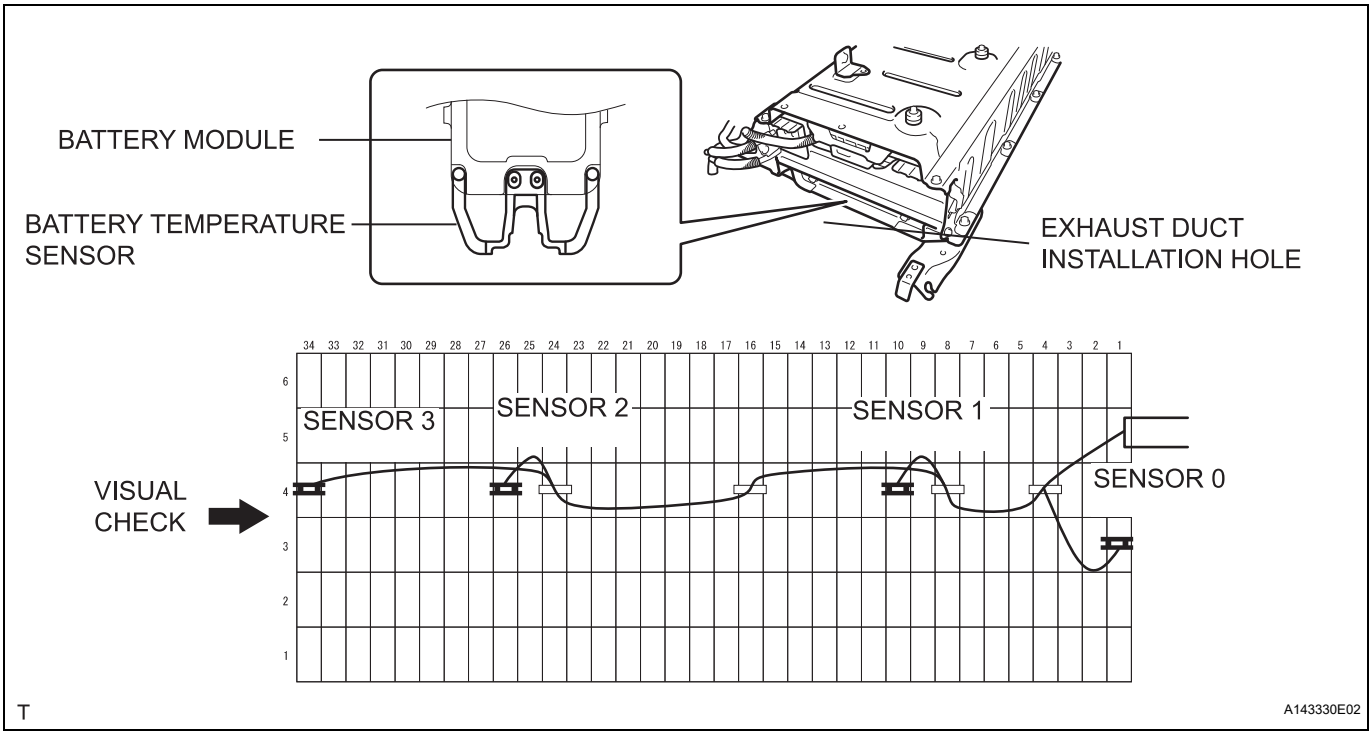
(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	CHECK BATTERY TEMPERATURE SENSOR (BATTERY TEMPERATURE SENSOR 0 TO 3)

CAUTION:
Be sure to wear insulated gloves.
(a) Remove the HV battery assembly. (See page HB-86)
(b) Visually check the installation of the battery temperature sensors (0 to 3) through the exhaust duct installation hole.



OK:
The battery temperature sensors (0 to 3) are securely installed.
NOTICE:
Do not poke the battery temperature sensors with a stick or other objects when checking. Doing so may damage the sensors.

NG → REPLACE HV BATTERY (See page HB-81)

OK

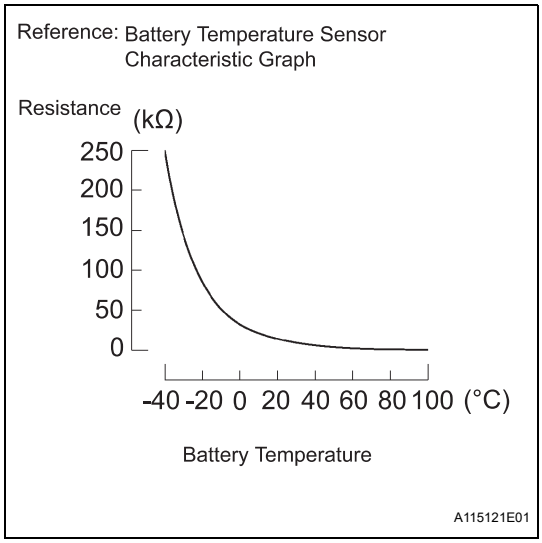
REPLACE BATTERY SMART UNIT (See page HB-99)

DTC	P0A9D-123	Hybrid Battery Temperature Sensor "A" Circuit Low

DTC	P0A9E-123	Hybrid Battery Temperature Sensor "A" Circuit High

DESCRIPTION

The battery temperature sensors are provided at 4 locations on the bottom of the HV battery. The resistance of the thermistor, which is built into each battery temperature sensor, varies in accordance with changes in the HV battery temperature. The lower the battery temperature, the higher the thermistor resistance. Conversely, the higher the temperature, the lower the resistance. The battery smart unit uses the battery temperature sensors to detect the HV battery temperature, and sends the detected values to the hybrid vehicle control ECU. Based on these results, the hybrid vehicle control ECU controls the blower fan. (The blower fan starts when the HV battery temperature rises above a predetermined level.)



HB

DTC No.	DTC Detection Condition	Trouble Area
P0A9D-123 P0A9E-123	When the temperature indicated by the battery temperature sensor is lower than a predetermined limit (open circuit) or is higher than a predetermined limit (short circuit) (1 trip detection)	• HV battery (Battery temperature sensor) • Battery smart unit

HINT:
After confirming that a DTC is output, use the intelligent tester to check "BATT TEMP 1 to 4" in the HV ECU data list.

Displayed Temperature	Malfunction
-45°C or less	Open or +B short circuit
95°C or more	GND short

MONITOR DESCRIPTION

If the temperature indicated by the battery temperature sensor is lower than the standard level (open), or is higher than the standard level (short), the battery smart unit interprets this as a sensor malfunction. If the battery smart unit detects that the HV battery temperature is out of its normal range or its value is abnormal, the HV control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0A9D (INF 123): Range check P0A9E (INF 123): Range check

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result:

DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	CHECK CONNECTOR CONNECTION CONDITION (BATTERY TEMPERATURE SENSOR)

HB

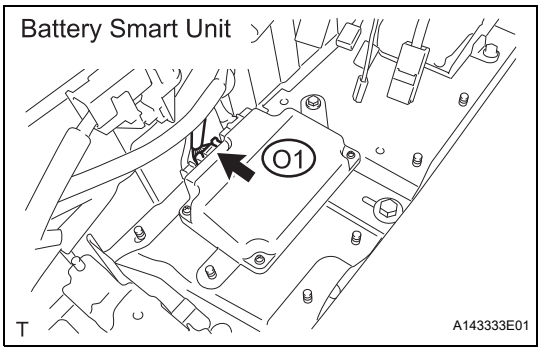
CAUTION:

Be sure to wear insulated gloves.

(a) Remove the service plug grip (See page HB-86).
(b) Remove the HV relay assembly (See page HB-105).
(c) Check the connection of connector O1 of the battery smart unit.

OK:

The connector is connected securely and there are no contact problems.



NG → **CONNECT SECURELY**

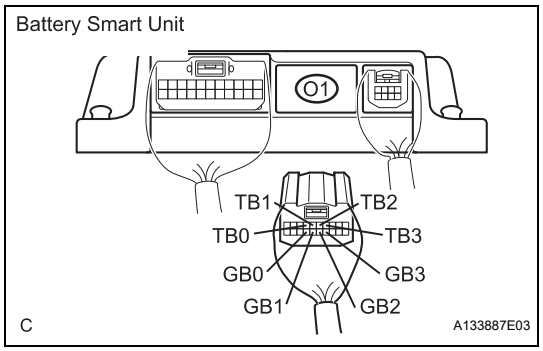
OK

3	CHECK HV BATTERY (BATTERY TEMPERATURE SENSOR)

CAUTION:

Be sure to wear insulated gloves.

(a) Remove the battery smart unit (See page HB-100).
(b) Disconnect connector O1 from the battery smart unit.



(c) For the malfunctioning battery temperature sensor(s) , measure the resistance according to the value(s) in the table below.

Tester Connection	Thermistor No.
TB0 (O1-7) - GB0 (O1 - 17)	0
TB1 (O1-6) - GB1 (O1 - 16)	1
TB2 (O1-5) - GB2 (O1 - 15)	2
TB3 (O1-4) - GB3 (O1 - 14)	3

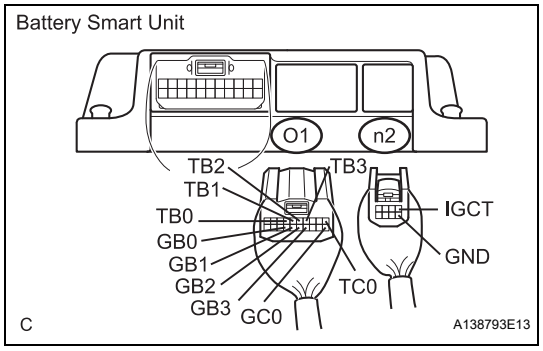
Standard resistance

Thermistor Temperature	Specified Condition
0°C (32°F)	26.7 to 27.9 kΩ
25°C (77°F)	9.9 to 10.1 kΩ
40°C (104°F)	5.7 to 6.0 kΩ

NG → **REPLACE HV BATTERY (See page HB-81)**

OK

4 CHECK HV BATTERY (BATTERY TEMPERATURE SENSOR AND INLET AIR TEMPERATURE SEMSOR)



CAUTION:
Be sure to wear insulated gloves.

(a) Disconnect connector O1 from the battery smart unit.
(b) Disconnect connector n2 from the battery smart unit.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
TB0 (O1-7) - IGCT (n2-1)	10 kΩ or higher
GB0 (O1-17) - IGCT (n2-1)	10 kΩ or higher
TB1 (O1-6) - IGCT (n2-1)	10 kΩ or higher
GB1 (O1-16) - IGCT (n2-1)	10 kΩ or higher
TB2 (O1-5) - IGCT (n2-1)	10 kΩ or higher
GB2 (O1-15) - IGCT (n2-1)	10 kΩ or higher
TB3 (O1-4) - IGCT (n2-1)	10 kΩ or higher
GB3 (O1-14) - IGCT (n2-1)	10 kΩ or higher
TC0 (O1-1) - IGCT (n2-1)	10 kΩ or higher
GC0 (O1-11) - IGCT (n2-1)	10 kΩ or higher
TB0 (O1-7) - GND(n2 - 5)	10 kΩ or higher
TB1 (O1-6) - GND(n2 - 5)	10 kΩ or higher
TB2 (O1-5) - GND(n2 - 5)	10 kΩ or higher
TB3 (O1-4) - GND(n2 - 5)	10 kΩ or higher
TC0 (O1-1) - GND(n2 - 5)	10 kΩ or higher

NG → **REPLACE HV BATTERY (See page HB-81)**

HB

OK

REPLACE BATTERY SMART UNIT (See page HB-99)

DTC	P0AAC-123	Hybrid Battery Pack Air Temperature Sensor "A" Circuit

DESCRIPTION

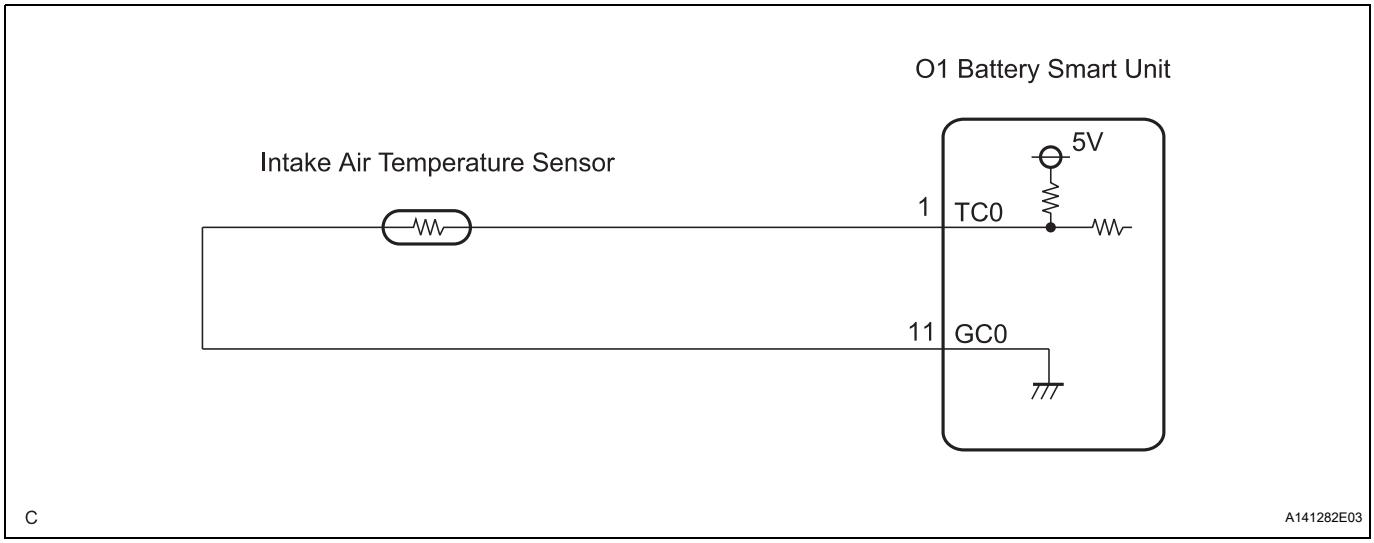
The intake air temperature sensor (battery) is mounted on the HV battery. The resistance of the sensor varies in accordance with changes in the intake air temperature. The characteristics of the intake air temperature sensor are the same as those of the battery temperature sensor. (See page HB-54) The battery smart unit uses signals from the intake air temperature sensor to control the air volume of the battery cooling blower assembly.

DTC No.	DTC Detection Condition	Trouble Area
P0AAC-123	When the temperature indicated by the intake air temperature sensor is lower than a predetermined limit (open circuit) or is higher than a predetermined limit (short circuit)	• HV battery (Intake air temperature sensor) • Battery smart unit

HINT:
After confirming that DTC P0AAC is output, use the intelligent tester to check "BATT INSIDE AIR" in the HV ECU data list.

Displayed Temperature	Malfunction
-45°C or less	Open or +B short circuit
95°C or more	GND short

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

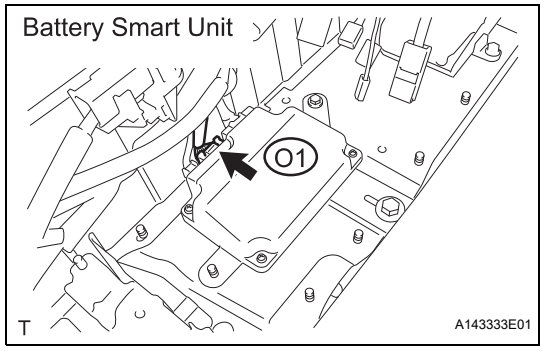
1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	CHECK CONNECTOR CONNECTION CONDITION (INTAKE AIR TEMPERATURE SENSOR)

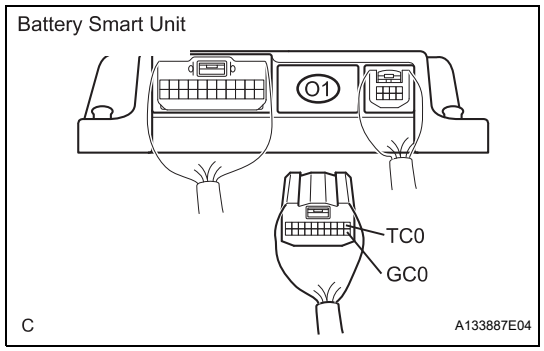


CAUTION:
Be sure to wear insulated gloves.
(a) Remove the service plug grip. (See page HB-86)
(b) Remove the HV relay assembly. (See page HB-105)
(c) Check the connection of connector O1 of the battery smart unit.
OK:
The connector is connected securely and there are no contact problems.
HINT:
The intake air temperature sensor is not available separately. If it requires replacement, replace the HV battery.

NG → **CONNECT SECURELY**

OK

3	CHECK HV BATTERY (INTAKE AIR TEMPERATURE SENSOR)



CAUTION:
Be sure to wear insulated gloves.
(a) Remove the battery smart unit (See page HB-100).
(b) Disconnect connector O1 from the battery smart unit.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

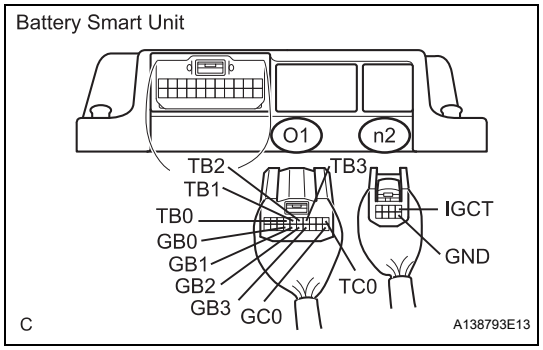
Tester Connection	Specified Condition
TC0 (O1-1) - GC0 (O1-11)	26.7 to 27.9 kΩ at 0°C (32°F)
TC0 (O1-1) - GC0 (O1-11)	9.9 to 10.1 kΩ at 25°C (77°F)
TC0 (O1-1) - GC0 (O1-11)	5.7 to 6.0 kΩ at 40°C (104°F)

NG → **REPLACE HV BATTERY (See page HB-81)**

HB

OK

4	CHECK HV BATTERY (BATTERY TEMPERATURE SENSOR AND INLET AIR TEMPERATURE SENSOR)



CAUTION:
Be sure to wear insulated gloves.

(a) Disconnect connector O1 from the battery smart unit.
(b) Disconnect connector n2 from the battery smart unit.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for short)

Tester Connection	Specified Condition
TB0 (O1-7) - IGCT (n2-1)	10 kΩ or higher
GB0 (O1-17) - IGCT (n2-1)	10 kΩ or higher
TB1 (O1-6) - IGCT (n2-1)	10 kΩ or higher
GB1 (O1-16) - IGCT (n2-1)	10 kΩ or higher
TB2 (O1-5) - IGCT (n2-1)	10 kΩ or higher
GB2 (O1-15) - IGCT (n2-1)	10 kΩ or higher
TB3 (O1-4) - IGCT (n2-1)	10 kΩ or higher
GB3 (O1-14) - IGCT (n2-1)	10 kΩ or higher
TC0 (O1-1) - IGCT (n2-1)	10 kΩ or higher
GC0 (O1-11) - IGCT (n2-1)	10 kΩ or higher
TB0 (O1-7) - GND(n2 - 5)	10 kΩ or higher
TB1 (O1-6) - GND(n2 - 5)	10 kΩ or higher
TB2 (O1-5) - GND(n2 - 5)	10 kΩ or higher
TB3 (O1-4) - GND(n2 - 5)	10 kΩ or higher
TC0 (O1-1) - GND(n2 - 5)	10 kΩ or higher

NG → REPLACE HV BATTERY (See page HB-81)

OK

REPLACE BATTERY SMART UNIT (See page HB-99)

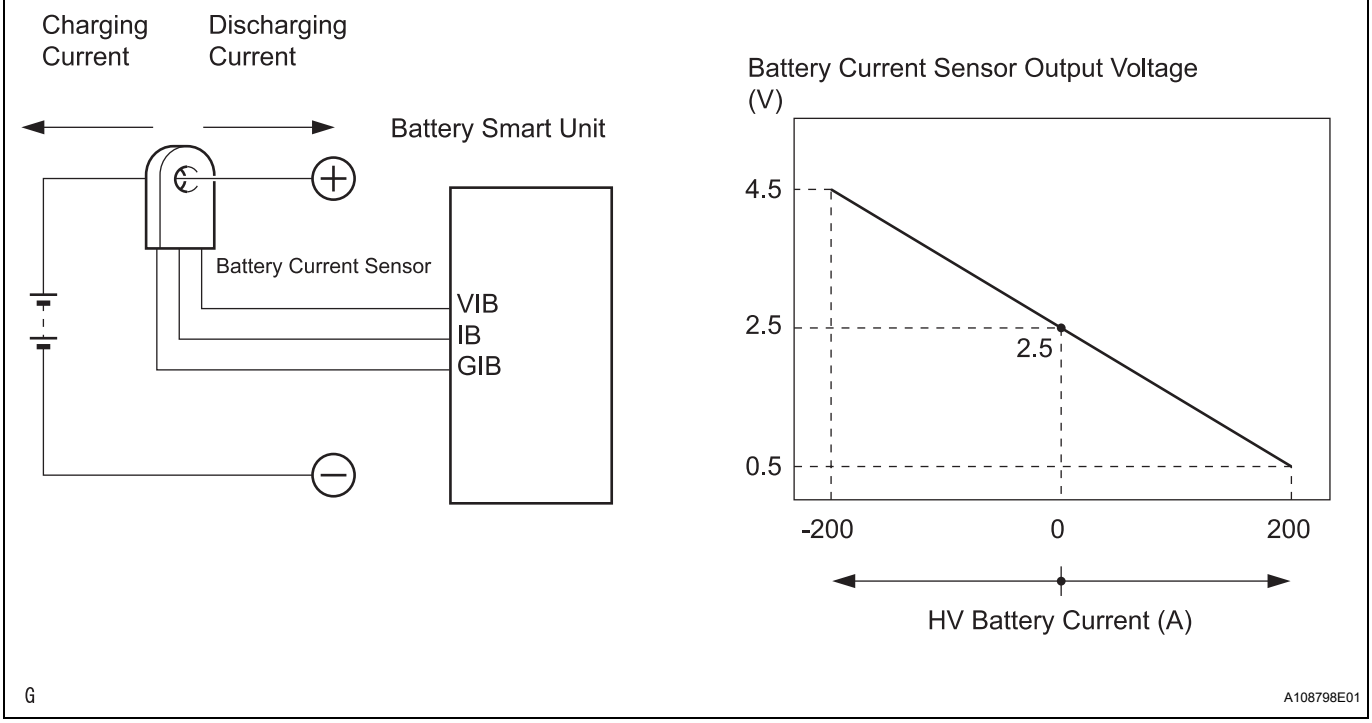
DTC	P0ABF-123	Hybrid Battery Pack Current Sensor Circuit

DTC	P0AC1-123	Hybrid Battery Pack Current Sensor Circuit Low

DTC	P0AC2-123	Hybrid Battery Pack Current Sensor Circuit High

DESCRIPTION

The battery current sensor, which is mounted on the positive cable side of the HV battery, detects the amperage that flows to and from the HV battery. The battery smart unit receives a voltage of between 0 and 5 V that is in proportion to the amperage flowing in the cable. This voltage goes into the IB terminal from the battery current sensor. A battery current sensor output voltage below 2.5 V indicates that the HV battery is being charged, and a voltage above 2.5 V indicates that the HV battery is being discharged. The hybrid vehicle control ECU determines the amount of either charge or discharge amperage that is being received by the HV battery based on the signals that are input to terminal IB of the battery smart unit from the battery smart unit. The hybrid vehicle control ECU also calculates the SOC (state of charge) of the HV battery based on the accumulated amperage.



DTC No.	DTC Detection Condition	Trouble Area
P0ABF-123	When the battery current sensor output is too low or high due to VIB/GIB failure	• HV relay assembly (battery current sensor) • Battery smart unit • Wire harness or connector
P0AC1-123 P0AC2-123	When the battery current sensor output is too low or high due to IB failure	

MONITOR DESCRIPTION

If the battery smart unit detects a malfunction in the battery current sensor, the HV control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0ABF (INF 123): Range check P0AC1 (INF 123): Range check P0AC2 (INF 123): Range check

HB

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.

Result:

DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

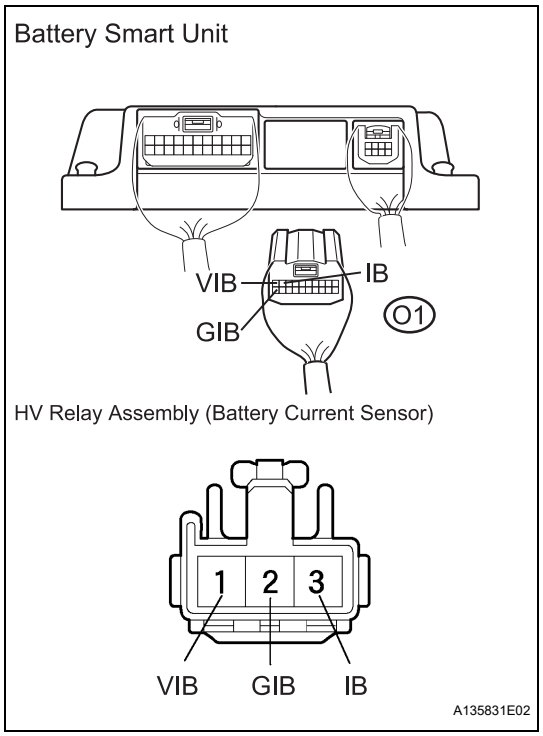
2	CHECK HARNESS AND CONNECTOR (BATTERY ECU - BATTERY CURRENT SENSOR)

HB

CAUTION:

Be sure to wear insulated gloves.

(a) Remove the service plug grip (See page HB-86).
(b) Remove the HV relay assembly (See page HB-105).
(c) Disconnect connector O1 from the battery smart unit.



(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
IB (O1-9) - IB (3)	Below 1 Ω
GIB (O1-20) - GIB (2)	Below 1 Ω
VIB (O1-10) - VIB (1)	Below 1 Ω

Standard resistance (Check for short)

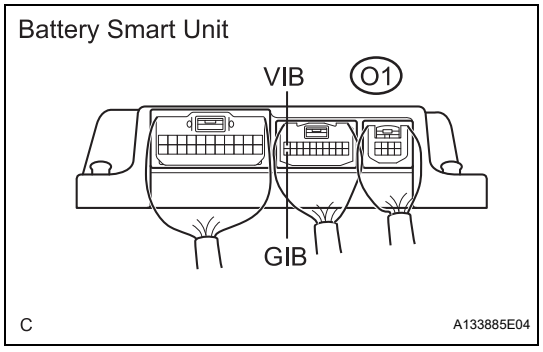
Tester Connection	Specified Condition
IB (O1-9) or IB (3) - Body ground	10 kΩ or higher
GIB (O1-20) or GIB (2) - Body ground	10 kΩ or higher
VIB (O1-10) or VIB (1) - Body ground	10 kΩ or higher

HINT:
The wire harness is not available separately. If it cannot be repaired, replace the HV battery.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK BATTERY SMART UNIT (VIB VOLTAGE)



CAUTION:
Be sure to wear insulated gloves.

(a) Connect connector O1 to the battery smart unit.
(b) Install the battery carrier. (See page HB-110)
(c) Connect the auxiliary battery positive terminal cable of the frame wire. (See page HB-92)
(d) Turn the power switch on (IG).
(e) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
VIB (O1-10) - GIB (O1-20)	4.6 to 5.4 V

HINT:
If the power switch is turned on (IG) with the service plug grip removed, DTC P0A0D-350 for the interlock switch system will be set.

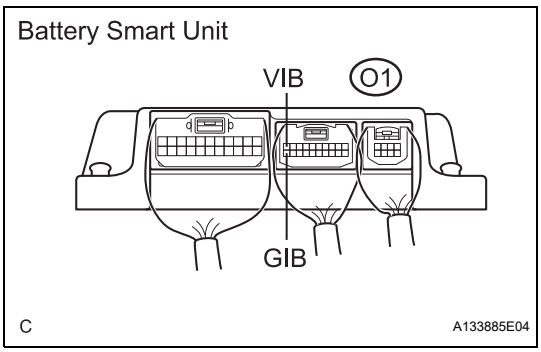
NG → **REPLACE BATTERY SMART UNIT (See page HB-99)**

OK

4 CHECK BATTERY SMART UNIT (IB VOLTAGE)

CAUTION:
Be sure to wear insulated gloves.

HB



(a) Connect the HV relay assembly (battery current sensor) connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
IB (O1-9) - GIB (O1-20)	2.46 to 2.54 V

HINT:
If the power switch is turned on (IG) with the service plug grip removed, DTC P0A0D-350 for the interlock switch system will be set.

NG → **REPLACE HV RELAY ASSEMBLY (See page HB-104)**

OK

REPLACE BATTERY SMART UNIT (See page HB-99)

DTC	P0AC0-123	Hybrid Battery Pack Current Sensor Circuit Range / Performance

DESCRIPTION

Refer to the circuit description for DTC P0ABF-123 (See page HB-62).

DTC No.	DTC Detection Condition	Trouble Area
P0AC0-123	The battery current sensor is output characteristic is abnormal (offset / constant output) (1 trip detection/2 trip detection)	• HV relay assembly (battery current sensor) • Battery smart unit

MONITOR DESCRIPTION

If the battery smart unit detects malfunction in the battery current sensor, the HV control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P0AC0 (INF 123): Range check
Required sensors / components	Battery current sensor
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	P0AC0 (INF 123) is not detected

WIRING DIAGRAM

Refer to the wiring diagram for DTC P0ABF-123. (See page HB-63)

INSPECTION PROCEDURE

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	**REPLACE HV RELAY ASSEMBLY**

See page HB-104.

NEXT

3	**CLEAR DTC**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.
(d) Clear DTCs.
(e) Perform a road test.
HINT:
Turn the power switch off and perform a road test again after the first road test for 2 trip detection.

NEXT

4	**RECONFIRM DTC OUTPUT**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0AC0-123 is output.

YES → **REPLACE BATTERY SMART UNIT (See page HB-99)**

NO

COMPLETED

DTC	P0AFA-123	Hybrid Battery System Voltage Low

DESCRIPTION

Refer to the circuit description for DTC P0A80-123 (See page HB-28).

DTC No.	DTC Detection Condition	Trouble Area
P0AFA-123	Any of the battery block voltages become less than 2.0 V (open). (1 trip detection)	• Battery smart unit • HV battery

MONITOR DESCRIPTION

The battery smart unit monitors a voltage of the battery blocks to detect an open malfunction in internal battery voltage sensor circuits of the battery smart unit and the wire harness between each battery block and battery smart unit. If a voltage at one of the battery blocks is below a standard level or of all the battery blocks is within a specified range, the battery smart unit judges that there is an open in the internal sensor circuit(s) or wire harness. The HV control ECU then illuminates the MIL and sets a DTC.

MONITOR STRATEGY

Related DTCs	P0AFA (INF 123): Range check
Required sensors / components	The wire harness from each battery block to the battery smart unit
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P0AFA (INF 123) is not detected

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)

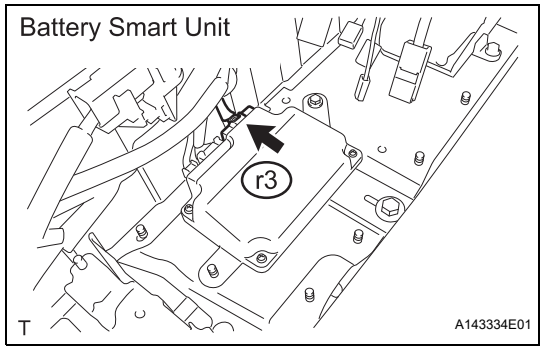
(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	CHECK CONNECTOR CONNECTION CONDITION

CAUTION:
Be sure to wear insulated gloves.
(a) Remove the service plug grip (See page HB-86).
(b) Remove the HV relay assembly (See page HB-105).
(c) Check the connection of connector r3 of the battery smart unit.
OK:
The connector is connected securely and there are no contact problems.



NG → **CONNECT SECURELY**

OK

3	REPLACE BATTERY SMART UNIT

See page HB-99.

NEXT

4	CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CLEAR CODES.
(d) Clear DTCs.

NEXT

5	RECONFIRM DTC OUTPUT

(a) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(b) Check if DTCs are output.
Result:
DTC P0AFA-123 is output.

YES → **REPLACE HV BATTERY (See page HB-81)**

NO

COMPLETED

DTC	P3011-123	Battery Block 1 Becomes Weak
DTC	P3012-123	Battery Block 2 Becomes Weak
DTC	P3013-123	Battery Block 3 Becomes Weak
DTC	P3014-123	Battery Block 4 Becomes Weak
DTC	P3015-123	Battery Block 5 Becomes Weak
DTC	P3016-123	Battery Block 6 Becomes Weak
DTC	P3017-123	Battery Block 7 Becomes Weak
DTC	P3018-123	Battery Block 8 Becomes Weak
DTC	P3019-123	Battery Block 9 Becomes Weak
DTC	P3020-123	Battery Block 10 Becomes Weak
DTC	P3021-123	Battery Block 11 Becomes Weak
DTC	P3022-123	Battery Block 12 Becomes Weak
DTC	P3023-123	Battery Block 13 Becomes Weak
DTC	P3024-123	Battery Block 14 Becomes Weak
DTC	P3025-123	Battery Block 15 Becomes Weak
DTC	P3026-123	Battery Block 16 Becomes Weak
DTC	P3027-123	Battery Block 17 Becomes Weak

DESCRIPTION

Refer to the circuit description for DTC P0A80-123 (See page HB-28).

DTC No.	DTC Detection Condition	Trouble Area
P3011-123 P3012-123 P3013-123 P3014-123 P3015-123 P3016-123 P3017-123 P3018-123 P3019-123 P3020-123 P3021-123 P3022-123 P3023-123 P3024-123 P3025-123 P3026-123 P3027-123	Presence of a malfunctioning block is determined based on each battery block voltage (1 trip detection).	• HV battery • Battery smart unit

HINT:
- DTCs from P3011-123 to P3027-123 cannot be set unless the vehicle is driven for approximately 10 minutes after clearing the DTCs.

MONITOR DESCRIPTION

If there is an abnormal internal resistance or electromotive voltage in the battery blocks, the battery smart unit determines that a malfunction has occurred. When the malfunction detection condition is satisfied, the HV control ECU will illuminate the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P3011 to P3027 (INF 123): Rationality
Required sensors / components	HV battery
Frequency of operation	Continuous
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

HB

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P3011 (INF 123) to P3027 (INF 123) is not detected

INSPECTION PROCEDURE

1	**CHECK FOR DTCS (DTC P0A1F-123 IS OUTPUT)**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

(c) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DTC INFO / CURRENT CODES.
(d) Check if DTCs are output.
Result:
DTC P0A1F-123 is output.

YES → **GO TO INSPECTION PROCEDURE RELEVANT TO OUTPUT DTC**

NO

2	READ VALUE ON INTELLIGENT TESTER

(a) Ensure the safety of the areas in front and at the back of the vehicle.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (READY).
(d) Select the following menu items: DIAGNOSIS / OBD/ MOBD / HV ECU / DATA LIST / V1 to V17 BATT BLOCK.
(e) Fully warm up the engine and turn the air conditioning off.
(f) Firmly depress the brake pedal with your left foot.
(g) Move the shift lever to the D position.
(h) Record each battery block voltage from the data list (V1 to V17 BATT BLOCK) while fully depressing the accelerator pedal.
(i) Compare the battery block voltages (V1 to V17 BATT BLOCK) between the even and odd number groups in each combination shown in the table below.

HB

Even number group	Odd number group	Battery block voltages to be compared
V1 BATT BLOCK	V2 BATT BLOCK	VB0←→VB1
V3 BATT BLOCK	V4 BATT BLOCK	VB2←→VB3
V5 BATT BLOCK	V6 BATT BLOCK	VB4←→VB5
V7 BATT BLOCK	V8 BATT BLOCK	VB6←→VB7
V9 BATT BLOCK	V10 BATT BLOCK	VB8←→VB9
V11 BATT BLOCK	V12 BATT BLOCK	VB10←→VB11
V13 BATT BLOCK	V14 BATT BLOCK	VB12←→VB13
V15 BATT BLOCK	V16 BATT BLOCK	VB14←→VB15
V17 BATT BLOCK	V16 BATT BLOCK	VB16←→VB15

(j) Check the voltage difference in the all 9 combinations.
OK:
The difference in voltage of all combinations is 0.3 V or more.

YES → **REPLACE BATTERY SMART UNIT (See page HB-99)**

NO

REPLACE HV BATTERY (See page HB-81)

DTC	P3105-123	Battery Observation Communication Circuit Malfunction

DESCRIPTION

The battery smart unit detects the HV battery conditions (voltage, current, and temperature) and the battery cooling fan voltages, and sends the detected information to the hybrid vehicle control ECU via serial communication.

DTC No.	DTC Detection Condition	Trouble Area
P3105-123	Problem with serial communication between the battery smart unit and hybrid vehicle control ECU (1 trip)	• Wire harness or connector • Hybrid vehicle control ECU • Battery smart unit

MONITOR DESCRIPTION

If the battery smart unit detects malfunction in serial communication with hybrid vehicle control ECU, it illuminates the MIL and set a DTC.

MONITOR STRATEGY

Related DTCs	P3105 (INF 123): Lost Communication With BSU/HCM
Required sensors / components	Battery smart unit
Frequency of operation	Continuity
Duration	TMC's intellectual property
MIL operation	TMC's intellectual property
Sequence of operation	None

TYPICAL ENABLING CONDITIONS

The monitor will run whenever the following DTCs are not present	TMC's intellectual property
Other conditions belong to TMC's intellectual property	-

HB

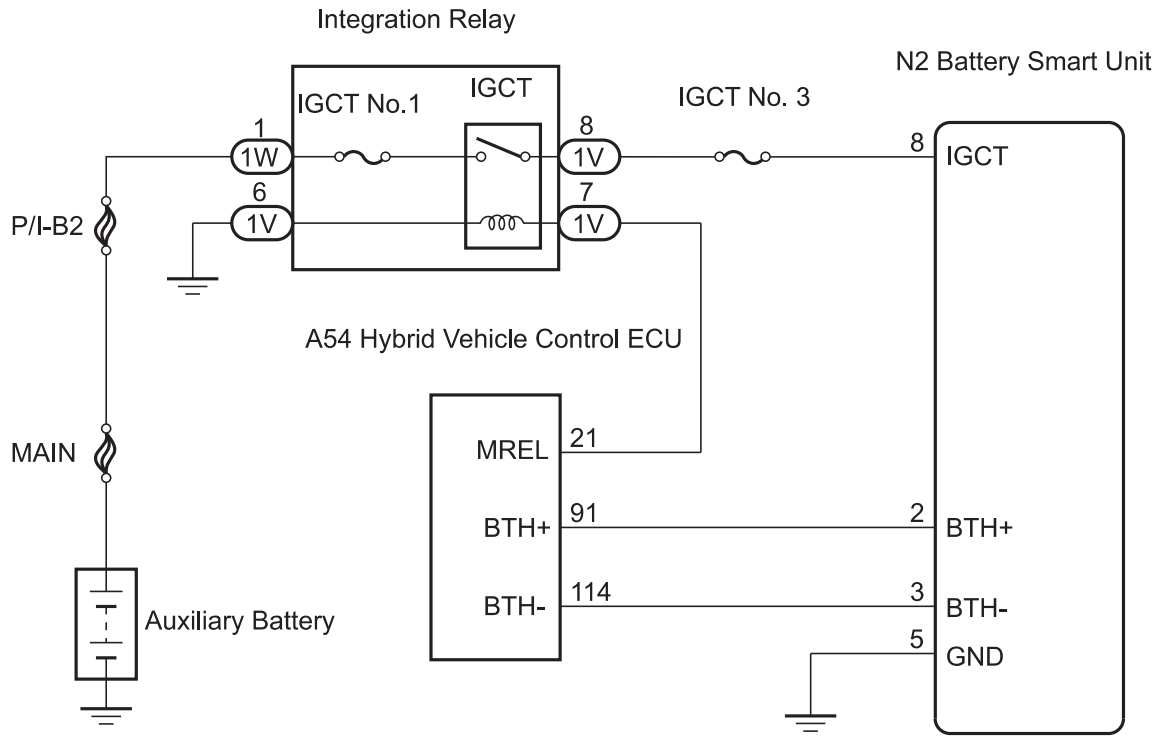
TYPICAL MALFUNCTION THRESHOLDS

TMC's intellectual property	-

COMPONENT OPERATING RANGE

Battery smart unit	DTC P3105 (INF 123) is not detected

WIRING DIAGRAM



HB

INSPECTION PROCEDURE

CAUTION:

- **Before inspecting the high-voltage system, take safety precautions such as wearing insulated gloves and removing the service plug grip to prevent electrical shocks. After removing the service plug grip, put it in your pocket to prevent other technicians from accidentally reconnecting it while you are working on the high-voltage system.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

HINT:

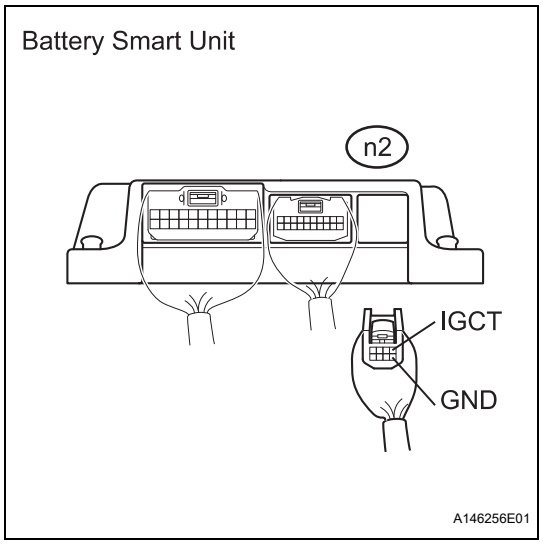
Waiting for at least 10 minutes is required to discharge the high-voltage capacitor inside the inverter with converter assembly.

1	CHECK HARNESS AND CONNECTOR (VOLTAGE)

CAUTION:

Be sure to wear insulated gloves.

(a) Remove the service plug grip (See page HB-86).
(b) Remove the battery smart unit (See page HB-100).
(c) Disconnect connector n2 from the battery smart unit.
(d) Turn the power switch on (IG).



(e) Measure the voltage according to the value(s) in the table below.

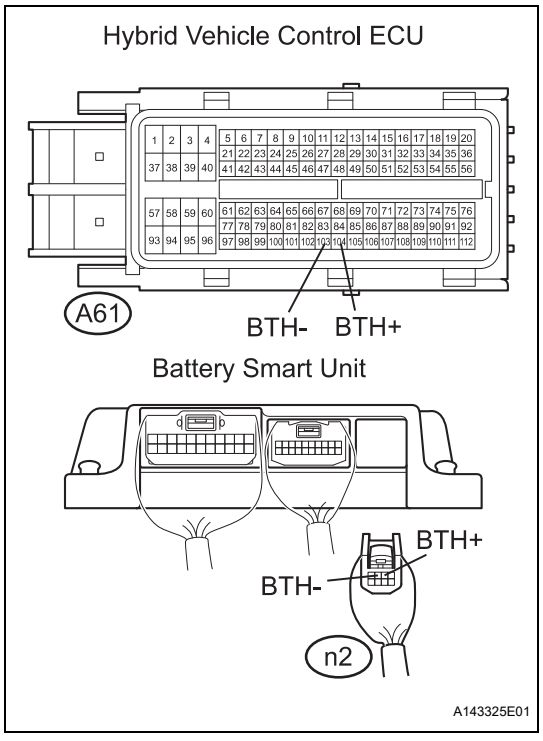
Standard voltage

Tester Connection	Specified Condition
IGCT (n2-1) - GND (n2-5)	11 to 14 V

NG → **Go to step 4**

OK

2 CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - BATTERY SMART UNIT)



CAUTION:
Be sure to wear insulated gloves.

(a) Disconnect connector A61 from the hybrid vehicle control ECU.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
BTH+ (A61-104) - BTH+ (n2-2)	Below 1 Ω
BTH- (A61-103) - BTH- (n2-3)	Below 1 Ω

Standard resistance (Check for short)

Tester Connection	Specified Condition
BTH+ (A61-104) or BTH+ (n2-2) - Body ground	10 kΩ or higher
BTH- (A61-103) or BTH- (n2-3) - Body ground	10 kΩ or higher

(c) Turn the power switch on (IG).

(d) Measure the resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Specified Condition
BTH+ (A61-104) - Body ground	Below 1 V
BTH- (A61-103) - Body ground	Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

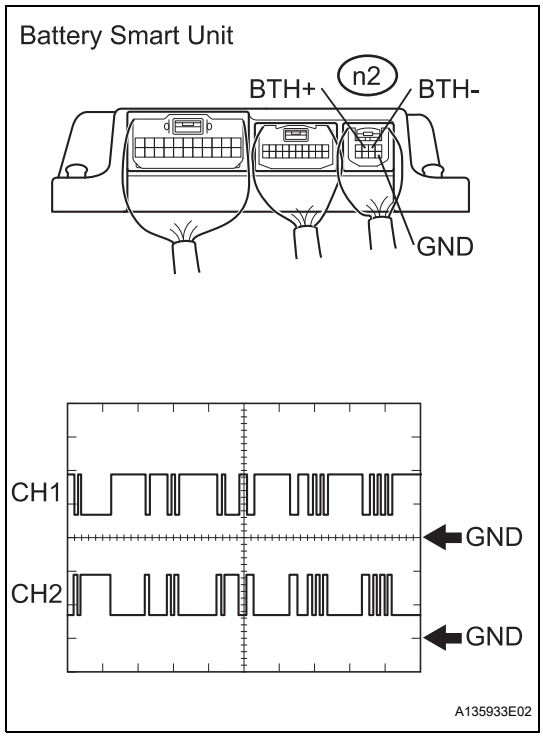
HB

3	CHECK WAVEFORM

CAUTION:
Be sure to wear insulated gloves.

(a) Connect connector A61 from the hybrid vehicle control ECU.
(b) Connect connector n2 to the battery smart unit.
(c) Connect an oscilloscope between the battery smart unit terminals specified in the table below, and measure the waveform.

Item	Contents
Terminal	CH1: BTH+ (n2-2) - GND (n2-5) CH2: BTH- (n2-3) - GND (n2-5)
Equipment Setting	2 V/DIV., 500μs/DIV.
Condition	Power switch on (IG)



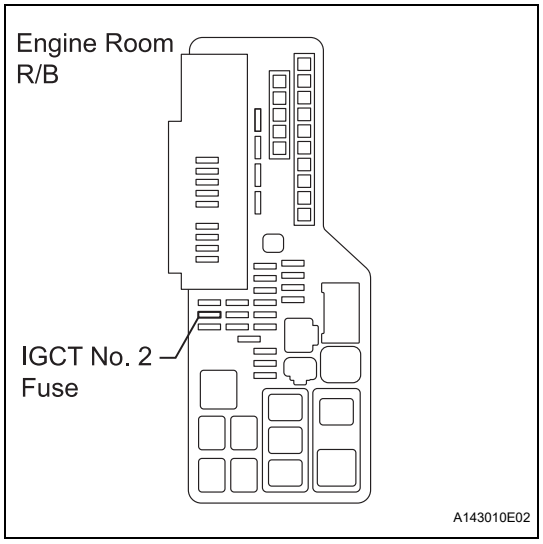
NG → **REPLACE BATTERY SMART UNIT (See page HB-99)**

OK →

REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-569)

HB

4	CHECK FUSE



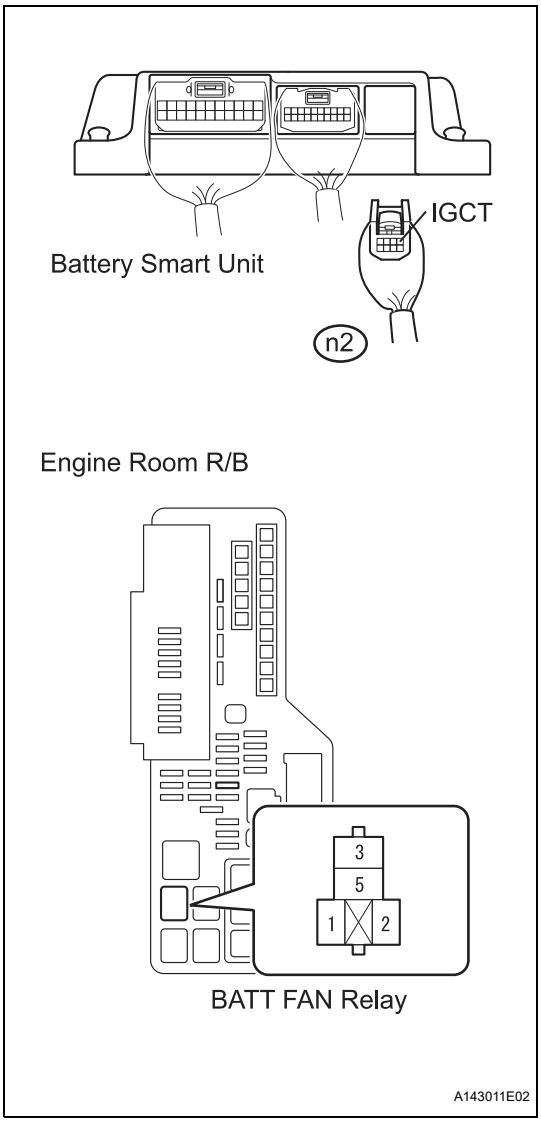
(a) Remove the IGCT No. 2 fuse from the engine room R/B.
(b) Measure the resistance of the IGCT No. 2 fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

5	CHECK HARNESS AND CONNECTOR

CAUTION:
Be sure to wear insulated gloves.
(a) Install the IGCT No. 2 fuse to the engine room R/B No. 1.
(b) Remove the integration relay from the engine room R/B.
(c) Disconnect connector n2 from the battery smart unit.



(d) Measure the resistance according to the value(s) in the table below.

Standard resistance (Check for open)

Tester Connection	Specified Condition
IGCT (n2-1) - 3	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

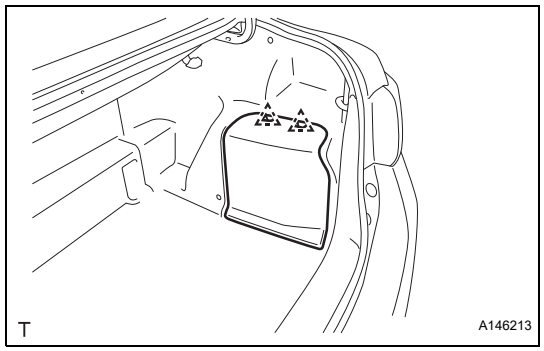
CHECK AND REPAIR POWER SOURCE CIRCUIT

HB

REMOVAL

1. **PRECAUTION**
   See page IN-5

2. **CHECK FOR DTCS**
   (a) Check for DTCs (See page HV-36).
   NOTICE:
   Confirm that P0AA6 (High voltage insulation is unusual) is not output before doing removal or installation work inside the battery. If the DTC is output, perform troubleshooting procedures first.

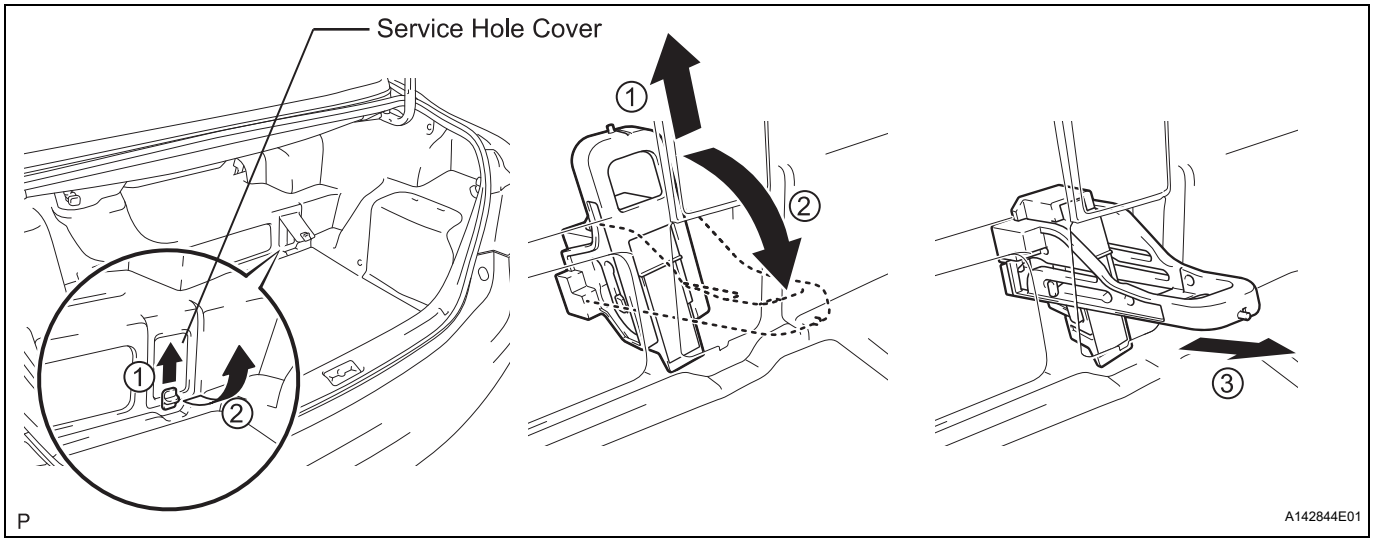


3. **REMOVE LUGGAGE TRIM SERVICE HOLE COVER**
   (a) Release the 2 claws and remove the luggage trim service hole cover.

4. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (See page HV-560)**

5. **REMOVE SERVICE PLUG GRIP**
   CAUTION:
   - **Remove the service plug grip to interrupt a high voltage circuit at the time of the check.**
   - **Keep the removed service plug grip in your pocket to prevent other technicians from accidentally reconnecting it while you are servicing the vehicle.**
   - **All the high voltage wiring connectors are orange colored.**
   - **Be sure to turn the power switch off before removing the service plug grip.**

   (a) Slide the latch upward and open the service hole cover.



(b) Wear insulated gloves. Remove the service plug grip after sliding the lever of the service plug grip.

CAUTION:

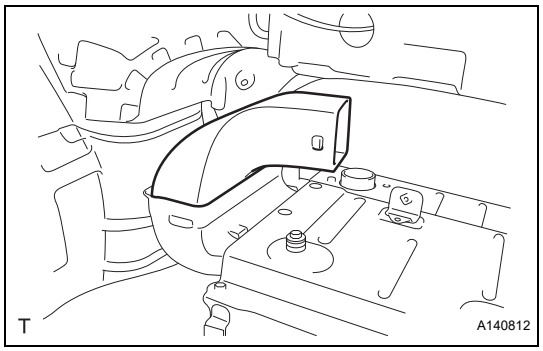
- **Keep the removed service plug grip in your pocket to prevent other technicians from accidentally reconnecting it while you are servicing the vehicle.**
- **After disconnecting the service plug grip, wait for at least 10 minutes before touching any of the high-voltage connectors or terminals.**

NOTICE:

After removing the service plug grip, do not operate the power switch as it may damage the hybrid vehicle control ECU.

6. **REMOVE NO. 2 ENGINE ROOM SIDE LH COVER (See page HV-560)**
7. **REMOVE CONNECTOR COVER ASSEMBLY (See page HV-560)**
8. **CHECK TERMINAL VOLTAGE (See page HV-561)**
9. **INSTALL CONNECTOR COVER ASSEMBLY (See page HV-566)**
10. **INSTALL NO. 2 ENGINE ROOM SIDE LH COVER (See page HV-568)**
11. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
12. **REMOVE SPARE WHEEL COVER CLAMP**
13. **REMOVE SPARE WHEEL COVER ASSEMBLY**
14. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-97)**
15. **REMOVE REAR FLOOR FINISH PLATE (See page ED-97)**
16. **REMOVE LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-97)**
17. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-97)**
18. **REMOVE REAR SEAT HEADREST ASSEMBLY**
19. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
20. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
21. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)**
22. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)**
23. **REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)**

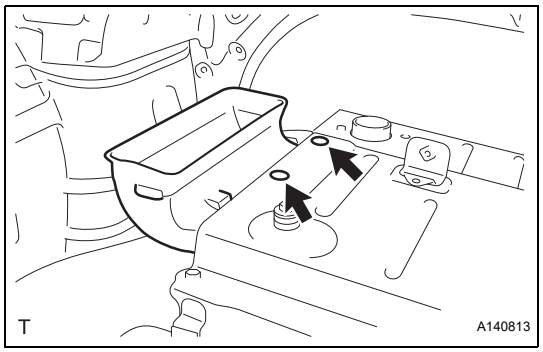
24. REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)
25. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-13)
26. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH
27. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-13)
28. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH
29. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-33)
30. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-15)
31. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-15)
32. REMOVE REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-40)
33. REMOVE REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-41)
34. REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-33)
35. REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-33)
36. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-33)
37. REMOVE FRONT LUGGAGE COMPARTMENT TRIM COVER (See page HB-106)
38. REMOVE ROOM PARTITION BOARD LH (See page HB-119)
39. REMOVE ROOM PARTITION BOARD RH (See page HB-119)
40. REMOVE NO. 1 HV BATTERY INTAKE DUCT (See page HB-119)
41. REMOVE NO. 2 HV BATTERY INTAKE DUCT (See page HB-119)
42. REMOVE BATTERY COOLING BLOWER ASSEMBLY (See page HB-120)
43. REMOVE NO. 5 HV BATTERY INTAKE DUCT (See page HB-106)



44. REMOVE NO. 3 HV BATTERY INTAKE DUCT

(a) Remove the No. 3 HV battery intake duct.

CAUTION:
Wear insulated gloves.



45. REMOVE NO. 4 HV BATTERY INTAKE DUCT

(a) Remove the 2 clips and No. 4 HV battery intake duct.

CAUTION:
Wear insulated gloves.

46. REMOVE NO. 2 HV BATTERY EXHAUST DUCT (See page HB-127)

47. REMOVE WIRE HARNESS CLAMP BRACKET (See page HB-107)

48. REMOVE UPPER BATTERY CARRIER SUB-ASSEMBLY (See page HB-107)

49. DISCONNECT FRAME WIRE (See page HB-107)

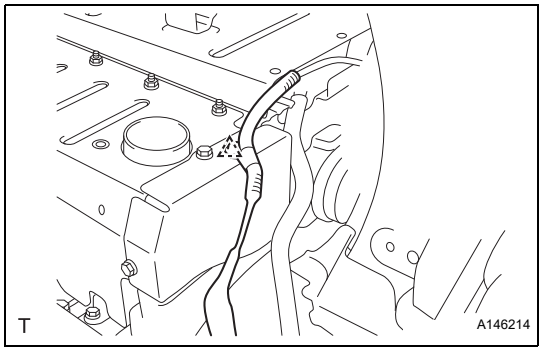
50. INSTALL SPARE WHEEL COVER ASSEMBLY

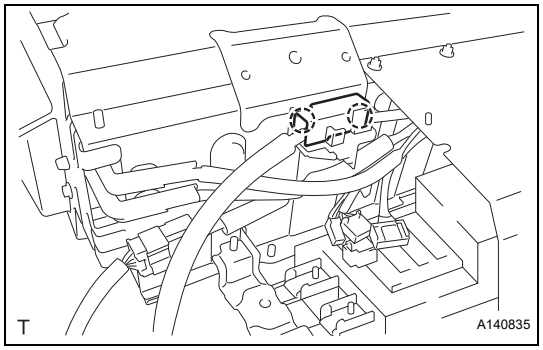
51. INSTALL SPARE WHEEL COVER CLAMP

52. INSTALL LUGGAGE COMPARTMENT FLOOR MAT

53. REMOVE HV BATTERY

(a) Disconnect the wire harness clamp from the No. 1 battery cover.

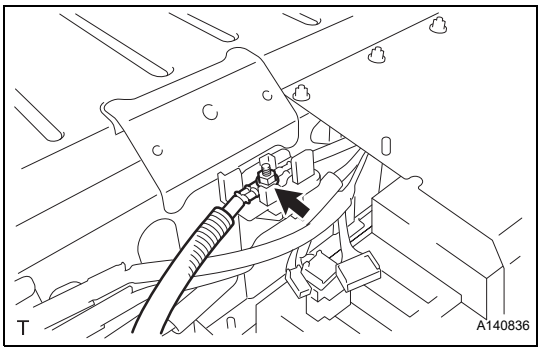




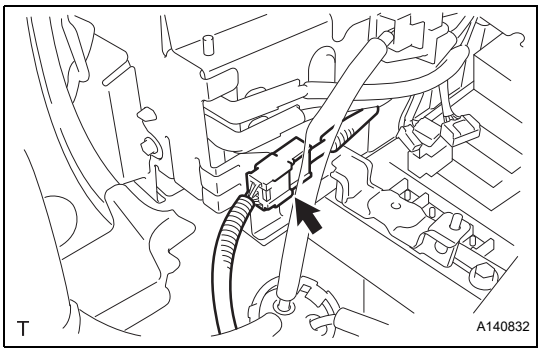
(b) Release the 2 claws and remove the terminal block cover.

CAUTION:
Wear insulated gloves.

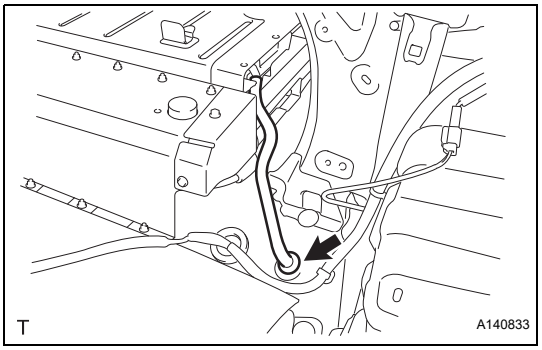
HB



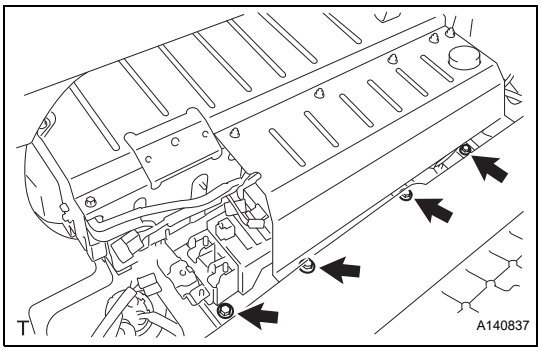
(c) Remove the nut and disconnect the frame wire (AMD cable).
CAUTION:
Wear insulated gloves.



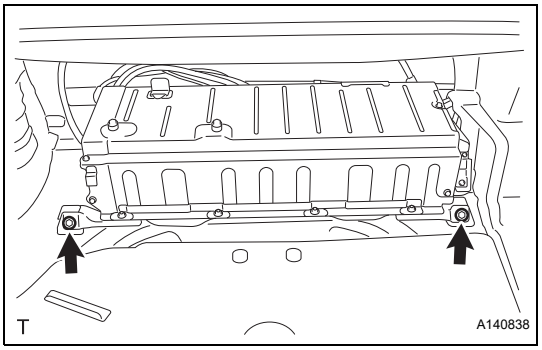
(d) Disconnect the battery pack wire connector.
CAUTION:
Wear insulated gloves.



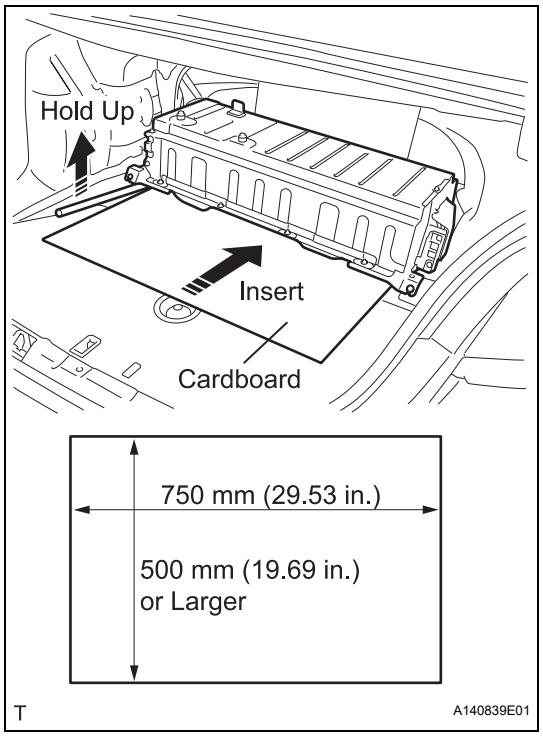
(e) Remove the grommet and battery room ventilation hose.
CAUTION:
Wear insulated gloves.



(f) Remove the 4 bolts from the HV battery.
CAUTION:
Wear insulated gloves.

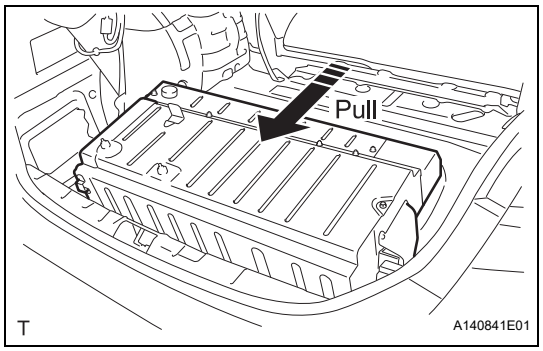


(g) Remove the 2 bolts from the HV battery.

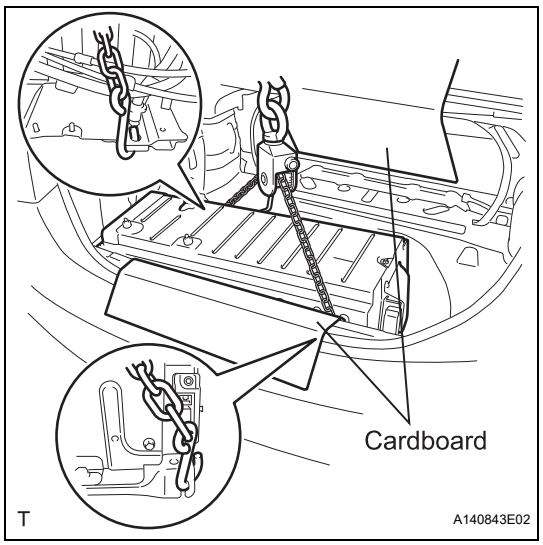


(h) Prepare a piece of cardboard of 750 mm (29.53 in.) X 500 mm (19.69 in.) or larger.

(i) Using an tire lever to hold up the HV battery, insert the cardboard until it cannot be inserted any farther.
CAUTION:
Wear insulated gloves.
NOTICE:
Bind the frame wire with electrical tape to prevent it from getting caught when moving the battery or other parts.



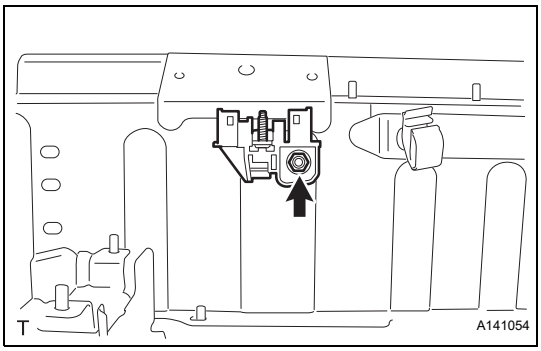
(j) Pull the HV battery together with the cardboard toward the rear of the vehicle.
CAUTION:
Wear insulated gloves.



(k) Using an engine sling device, remove the HV battery while tilting the HV battery 45° at the rear end.
CAUTION:
Wear insulated gloves.
NOTICE:
Use cardboard or other similar material to protect the HV battery and vehicle body from damage.

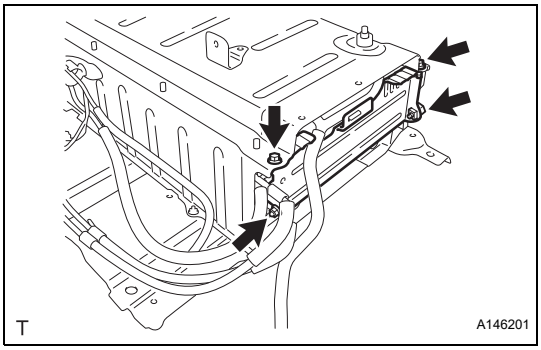
54. **REMOVE NO. 1 BATTERY COVER LID (See page HB-108)**
55. **REMOVE NO. 5 BATTERY CARRIER PANEL (See page HB-108)**
56. **REMOVE NO. 1 HV BATTERY EXHAUST DUCT (See page HB-127)**
57. **REMOVE FILTER NOISE CAPACITOR (See page HB-108)**
58. **REMOVE HV RELAY ASSEMBLY (See page HB-108)**
59. **REMOVE BATTERY SMART UNIT (See page HB-102)**

60. REMOVE HYBRID VEHICLE CONVERTER (See page HB-127)



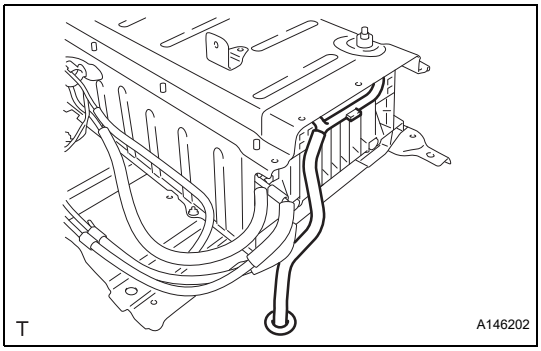
61. REMOVE INVERTER TERMINAL

(a) Remove the nut and inverter terminal from the HV battery.
CAUTION:
Wear insulated gloves.



62. REMOVE BATTERY INSULATOR RUBBER

(a) Remove the 3 bolts, nut and battery carrier bracket.
CAUTION:
Wear insulated gloves.



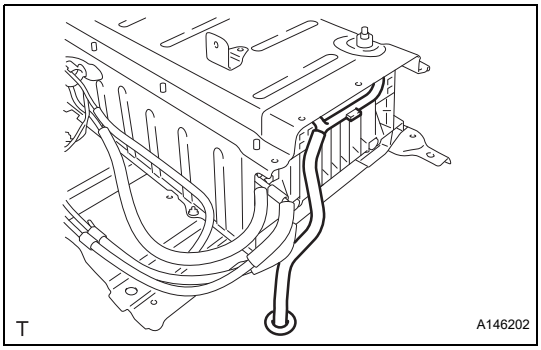
(b) Remove the battery insulator rubber.
CAUTION:
Wear insulated gloves.

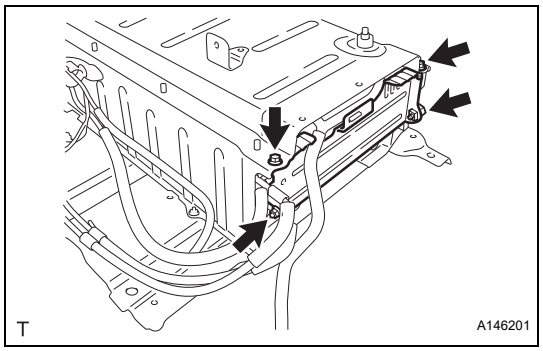
HB

INSTALLATION

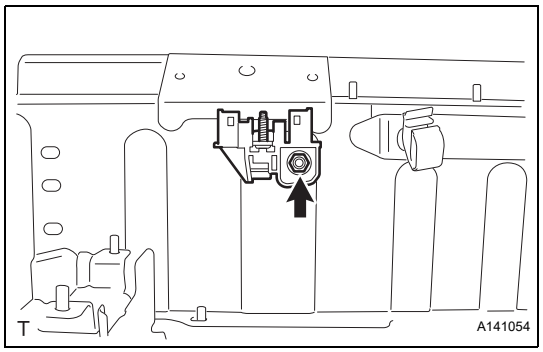
1. INSTALL BATTERY INSULATOR RUBBER

(a) Install the battery insulator rubber.
CAUTION:
Wear insulated gloves.





(b) Install the battery carrier bracket with the 3 bolts and nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.



2. INSTALL INVERTER TERMINAL

(a) Install the inverter terminal to the HV battery with the nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.

3. INSTALL HYBRID VEHICLE CONVERTER (See page HB-128)

4. INSTALL BATTERY SMART UNIT (See page HB-102)

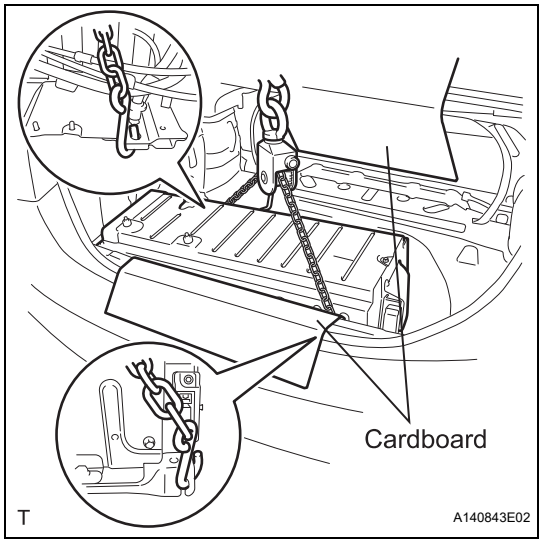
5. INSTALL HV RELAY ASSEMBLY (See page HB-110)

6. INSTALL FILTER NOISE CAPACITOR (See page HB-111)

7. INSTALL NO. 1 HV BATTERY EXHAUST DUCT (See page HB-129)

8. INSTALL NO. 5 BATTERY CARRIER PANEL (See page HB-111)

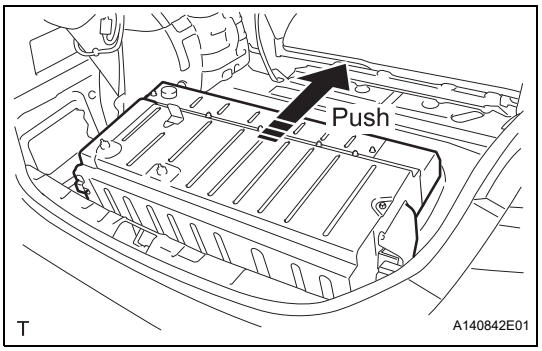
9. INSTALL NO. 1 BATTERY COVER LID (See page HB-111)



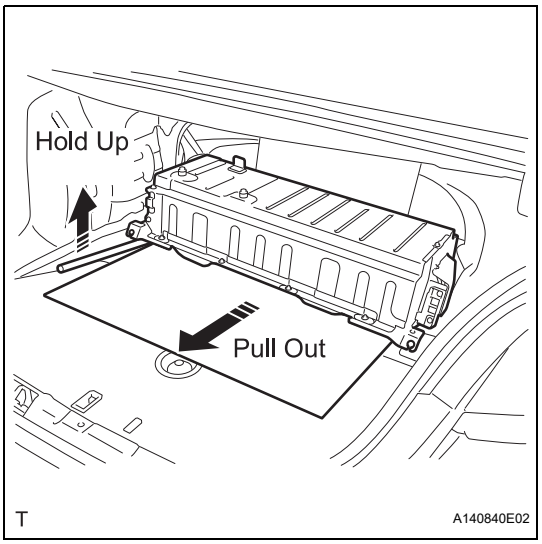
10. INSTALL HV BATTERY

(a) Place a piece of cardboard in the luggage compartment.
CAUTION:
Wear insulated gloves.

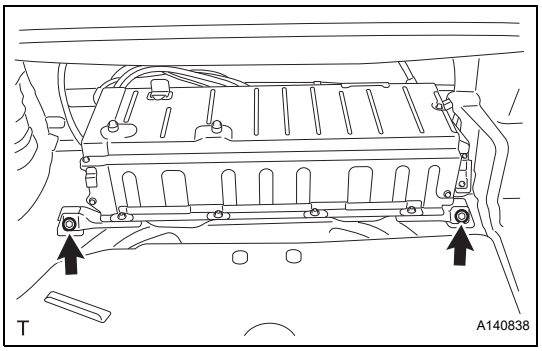
(b) Using an engine sling device, install the HV battery while tilting the HV battery 45° at the rear end.
CAUTION:
Wear insulated gloves.
NOTICE:
Use cardboard or other similar material to protect the HV battery and vehicle body from damage.



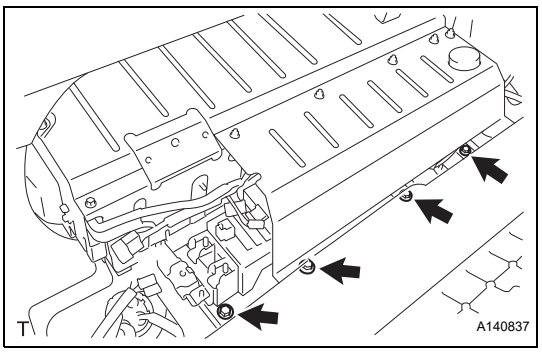
(c) Push the HV battery together with the cardboard toward the front of the vehicle.
CAUTION:
Wear insulated gloves.
NOTICE:
Align the position of the holes for HV battery holding bolts.



(d) Use a tire lever to hold up the HV battery and pull out the cardboard.
CAUTION:
Wear insulated gloves.

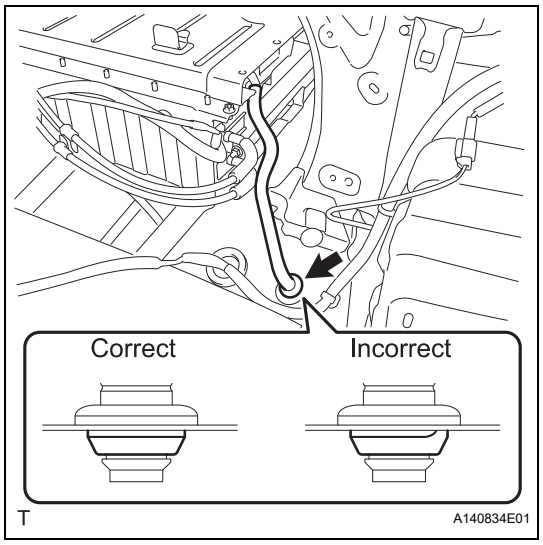


(e) Install the 2 bolts to the HV battery.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
CAUTION:
Wear insulated gloves.

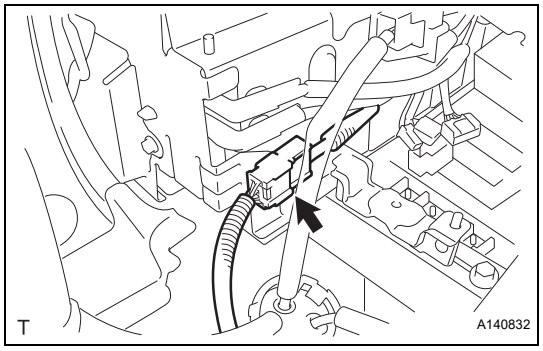


(f) Install the 4 bolts to the HV battery.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
CAUTION:
Wear insulated gloves.

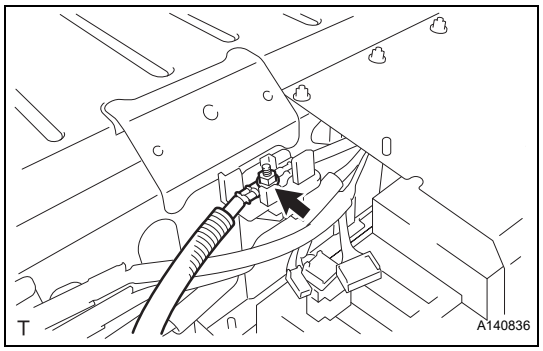
HB



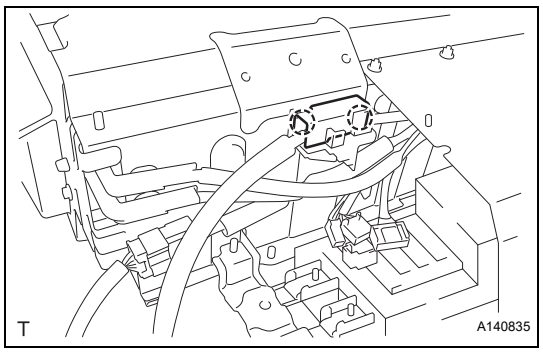
(g) Connect the battery room ventilation hose with the clamp and grommet.
CAUTION:
Wear insulated gloves.
NOTICE:
After installing the grommet, make sure that there is no clearance between the grommet and body.



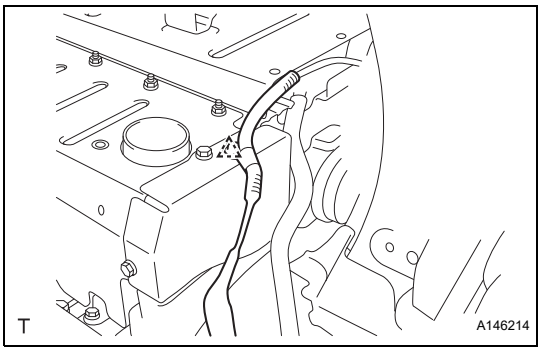
(h) Connect the battery pack wire connector.
CAUTION:
Wear insulated gloves.



(i) Connect the frame wire (AMD cable) with the nut.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
CAUTION:
Wear insulated gloves.

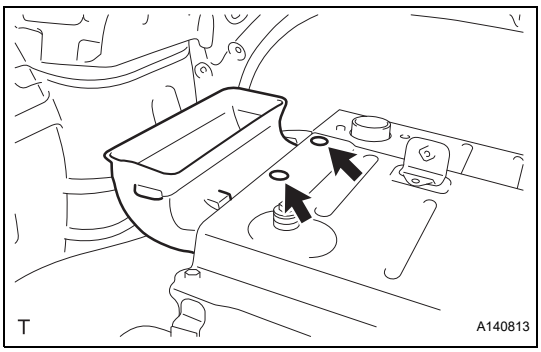


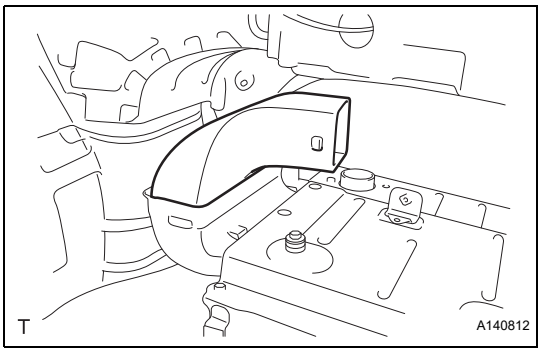
(j) Install the terminal block cover with the 2 claws.
CAUTION:
Wear insulated gloves.



(k) Connect the wire harness clamp to the No. 1 battery cover.

11. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
12. **REMOVE SPARE WHEEL COVER CLAMP**
13. **REMOVE SPARE WHEEL COVER ASSEMBLY**
14. **CONNECT FRAME WIRE (See page HB-111)**
15. **INSTALL UPPER BATTERY CARRIER SUB-ASSEMBLY (See page HB-112)**
16. **INSTALL WIRE HARNESS CLAMP BRACKET (See page HB-112)**
17. **INSTALL NO. 2 HV BATTERY EXHAUST DUCT (See page HB-129)**
18. **INSTALL NO. 4 HV BATTERY INTAKE DUCT**
    (a) Install the No. 4 HV battery intake duct with the 2 clips.





19. **INSTALL NO. 3 HV BATTERY INTAKE DUCT**
    (a) Install the No. 3 HV battery intake duct.
20. **INSTALL NO. 5 HV BATTERY INTAKE DUCT (See page HB-113)**
21. **INSTALL BATTERY COOLING BLOWER ASSEMBLY (See page HB-120)**
22. **INSTALL NO. 2 HV BATTERY INTAKE DUCT (See page HB-121)**
23. **INSTALL NO. 1 HV BATTERY INTAKE DUCT (See page HB-121)**
24. **INSTALL ROOM PARTITION BOARD RH (See page HB-121)**
25. **INSTALL ROOM PARTITION BOARD LH (See page HB-121)**
26. **INSTALL FRONT LUGGAGE COMPARTMENT TRIM COVER (See page HB-113)**
27. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-34)**
28. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-35)**
29. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-35)**
