
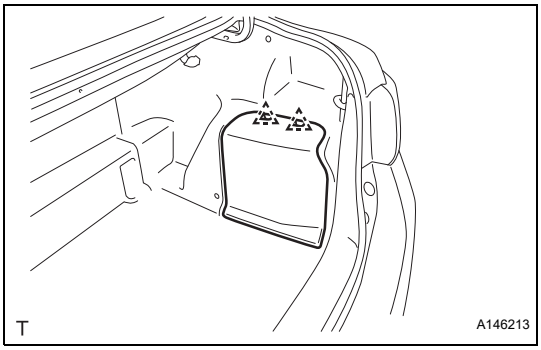
(b) Tilt the service plug grip 90° and slide it down until a click sound is heard.

(c) Install the battery service hole cover.
NOTICE:
Make sure that the battery service hole cover is installed securely.

54. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

55. INSTALL LUGGAGE TRIM SERVICE HOLE COVER

(a) Install the luggage trim service hole cover with the 2 craws.



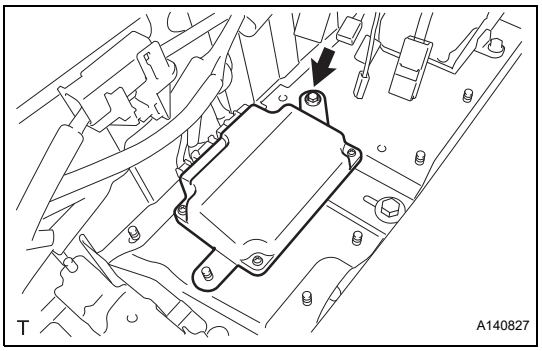
56. PERFORM INITIALIZATION

(a) Perform initialization procedure (See page IN-43).
HINT:
Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

HB

REMOVAL

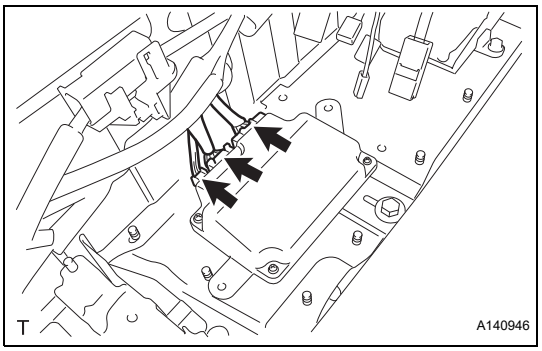
1. **PRECAUTION**
   See page IN-5
2. **CHECK FOR DTCS (See page HB-86)**
3. **REMOVE LUGGAGE TRIM SERVICE HOLE COVER (See page HB-86)**
4. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (See page HV-560)**
5. **REMOVE SERVICE PLUG GRIP (See page HB-86)**
6. **REMOVE NO. 2 ENGINE ROOM SIDE LH COVER (See page HV-560)**
7. **REMOVE CONNECTOR COVER ASSEMBLY (See page HV-560)**
8. **CHECK TERMINAL VOLTAGE (See page HV-561)**
9. **INSTALL CONNECTOR COVER ASSEMBLY (See page HV-566)**
10. **INSTALL NO. 2 ENGINE ROOM SIDE LH COVER (See page HV-568)**
11. **REMOVE REAR SEAT HEADREST ASSEMBLY**
12. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
13. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
14. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)**
15. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)**
16. **REMOVE FRONT LUGGAGE COMPARTMENT TRIM COVER (See page HB-106)**
17. **REMOVE NO. 5 HV BATTERY INTAKE DUCT (See page HB-106)**
18. **REMOVE WIRE HARNESS CLAMP BRACKET (See page HB-107)**
19. **REMOVE UPPER BATTERY CARRIER SUB-ASSEMBLY (See page HB-107)**
20. **DISCONNECT FRAME WIRE (See page HB-107)**
21. **REMOVE NO. 1 BATTERY COVER LID (See page HB-108)**
22. **REMOVE NO. 5 BATTERY CARRIER PANEL (See page HB-108)**
23. **REMOVE FILTER NOISE CAPACITOR (See page HB-108)**
24. **REMOVE HV RELAY ASSEMBLY (See page HB-108)**



25. **REMOVE BATTERY SMART UNIT**
    (a) Remove the bolt and battery smart unit.
    CAUTION:
    Wear insulated gloves.

    (b) Disconnect the 3 connectors from the battery smart unit.
    CAUTION:
    Wear insulated gloves.

INSTALLATION



1. **INSTALL BATTERY SMART UNIT**
    (a) Connect the 3 connectors to the battery smart unit.
    CAUTION:
    Wear insulated gloves.

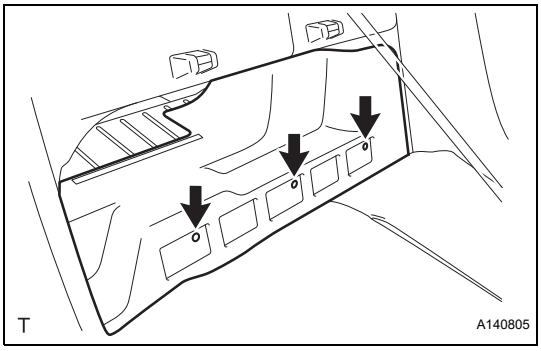
    (b) Install the battery smart unit with the bolt.
    Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
    CAUTION:
    Wear insulated gloves.

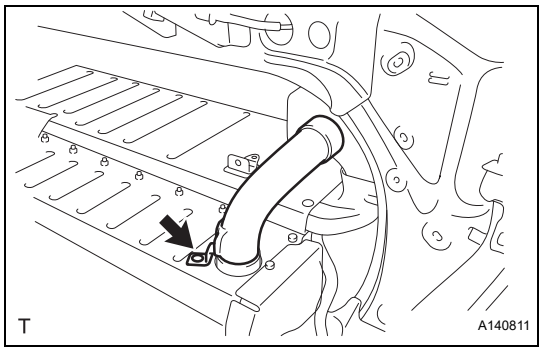
2. **INSTALL HV RELAY ASSEMBLY (See page HB-110)**
3. **INSTALL FILTER NOISE CAPACITOR (See page HB-111)**
4. **INSTALL NO. 5 BATTERY CARRIER PANEL (See page HB-111)**
5. **INSTALL NO. 1 BATTERY COVER LID (See page HB-111)**
6. **CONNECT FRAME WIRE (See page HB-111)**
7. **INSTALL UPPER BATTERY CARRIER SUB-ASSEMBLY (See page HB-112)**
8. **INSTALL WIRE HARNESS CLAMP BRACKET (See page HB-112)**
9. **INSTALL NO. 5 HV BATTERY INTAKE DUCT (See page HB-113)**

10. **INSTALL FRONT LUGGAGE COMPARTMENT TRIM COVER (See page HB-113)**
11. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**
12. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**
13. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**
14. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
15. **INSTALL REAR SEAT HEADREST ASSEMBLY**
16. **INSTALL SERVICE PLUG GRIP (See page HB-97)**
17. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
18. **INSTALL LUGGAGE TRIM SERVICE HOLE COVER (See page HB-98)**
19. **PERFORM INITIALIZATION**
    (a) Perform the initialization procedure (See page IN-43).
    HINT:
    Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

REMOVAL

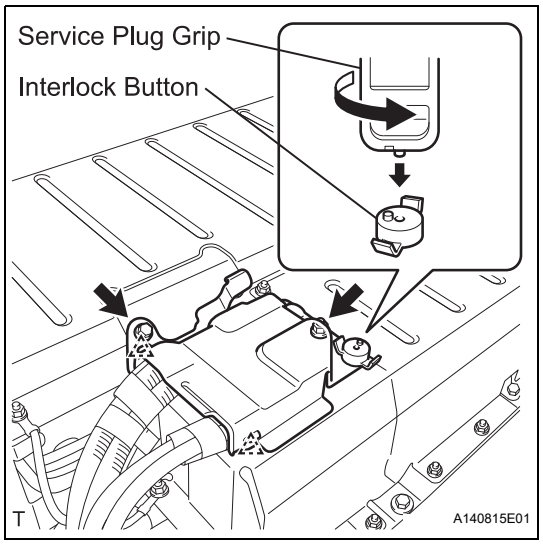
1. **PRECAUTION**
   See page IN-5
2. **CHECK FOR DTCS (See page HB-86)**
3. **REMOVE LUGGAGE TRIM SERVICE HOLE COVER (See page HB-86)**
4. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (See page HV-560)**
5. **REMOVE SERVICE PLUG GRIP (See page HB-86)**
6. **REMOVE NO. 2 ENGINE ROOM SIDE LH COVER (See page HV-560)**
7. **REMOVE CONNECTOR COVER ASSEMBLY (See page HV-560)**
8. **CHECK TERMINAL VOLTAGE (See page HV-561)**
9. **INSTALL CONNECTOR COVER ASSEMBLY (See page HV-566)**
10. **INSTALL NO. 2 ENGINE ROOM SIDE LH COVER (See page HV-568)**
11. **REMOVE REAR SEAT HEADREST ASSEMBLY**
12. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
13. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
14. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)**
15. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)**
16. **REMOVE FRONT LUGGAGE COMPARTMENT TRIM COVER**
    (a) Remove the 3 clips and front luggage compartment trim cover.





17. REMOVE NO. 5 HV BATTERY INTAKE DUCT

(a) Remove the clip and No. 5 HV battery intake duct.
CAUTION:
Wear insulated gloves.

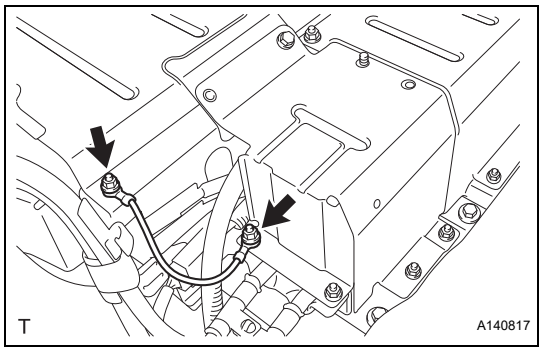


18. REMOVE WIRE HARNESS CLAMP BRACKET

(a) Using the service plug grip, release the interlock button.
CAUTION:
Wear insulated gloves.

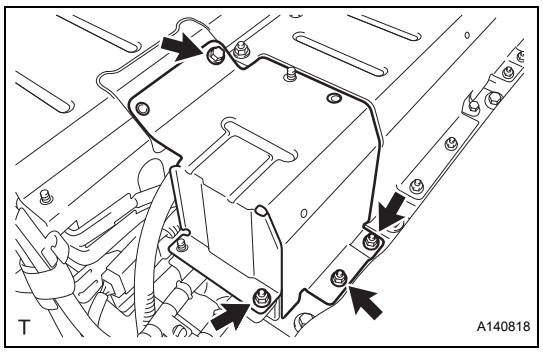
(b) Remove the bolt, nut, and wire harness clamp bracket.
CAUTION:
Wear insulated gloves.

(c) Disconnect the 2 wire harness clamps.
CAUTION:
Wear insulated gloves.



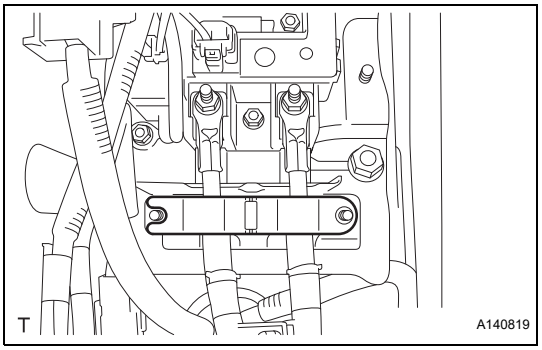
19. REMOVE UPPER BATTERY CARRIER SUB-ASSEMBLY

(a) Remove the 2 nuts and ground cable.
CAUTION:
Wear insulated gloves.



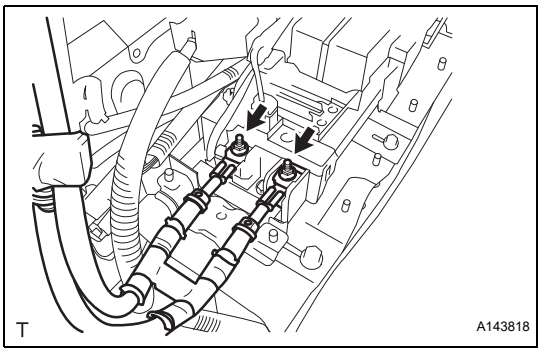
(b) Remove the 3 nuts, bolt, and upper battery carrier sub-assembly.
CAUTION:
Wear insulated gloves.

HB

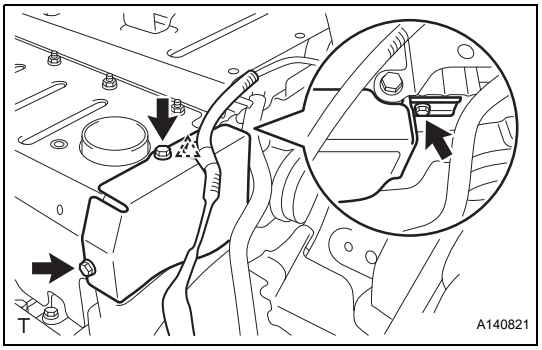


20. DISCONNECT FRAME WIRE

(a) Remove the battery shield contact.
CAUTION:
Wear insulated gloves.

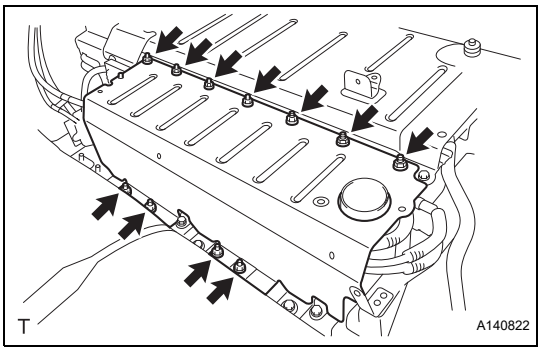


(b) Remove the 2 nuts and disconnect the frame wire (high voltage cable).
CAUTION:
Wear insulated gloves.



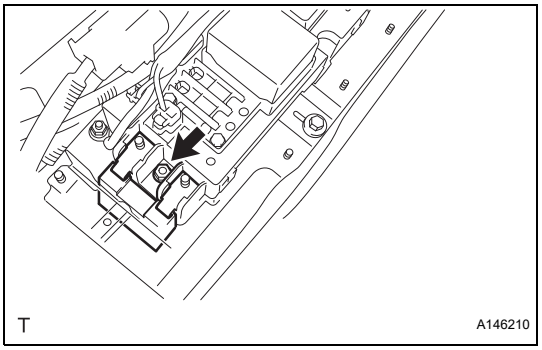
21. REMOVE NO. 1 BATTERY COVER LID

(a) Remove the 3 bolts, clamp, and No. 1 battery cover lid.
CAUTION:
Wear insulated gloves.



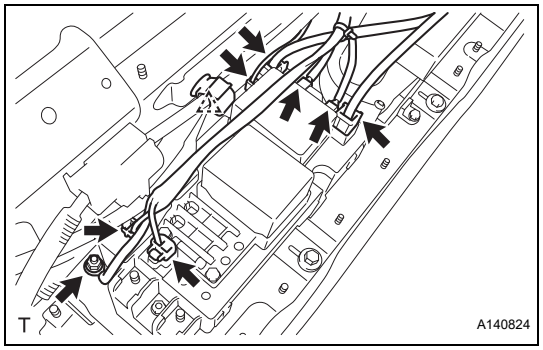
22. REMOVE NO. 5 BATTERY CARRIER PANEL

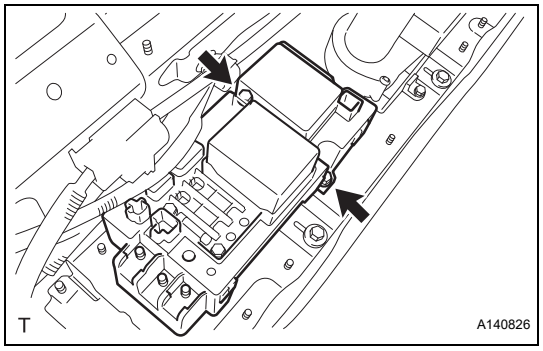
(a) Remove the 11 bolts and No.5 battery carrier panel.
CAUTION:
Wear insulated gloves.



23. REMOVE FILTER NOISE CAPACITOR

(a) Remove the nut and filter noise capacitor.
CAUTION:
Wear insulated gloves.





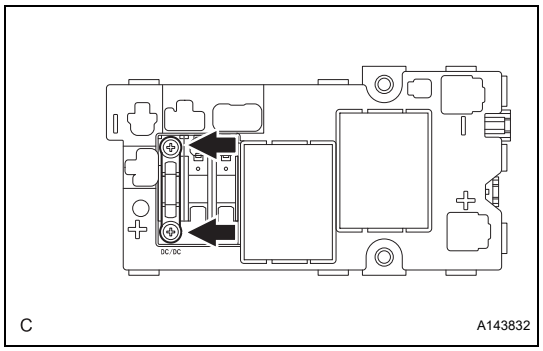
24. REMOVE HV RELAY ASSEMBLY

(a) Remove the nut and disconnect the ground cable.
CAUTION:
Wear insulated gloves.

(b) Disconnect the 7 connectors from the HV relay assembly.
CAUTION:
Wear insulated gloves.

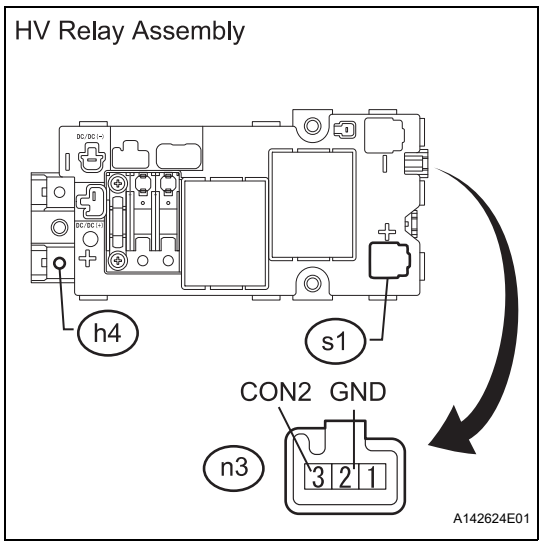
(c) Remove the wire harness clamp.
CAUTION:
Wear insulated gloves.

(d) Remove the 2 bolts and HV relay assembly.
CAUTION:
Wear insulated gloves.



25. REMOVE HIGH VOLTAGE FUSE

(a) Remove the 2 bolts and high voltage fuse.



INSPECTION

1. HV RELAY ASSEMBLY

(a) SMRB inspection

(1) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
h4-1 - s1-1	10 kΩ or more

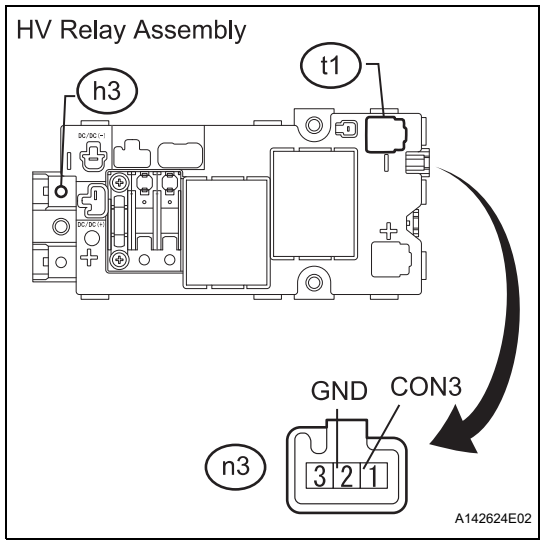
(2) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
h4-1 - s1-1	Below 1 Ω (When battery voltage applied to terminals n3-2 and n3-3)

HB

(3) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
CON2 (n3-3) - GND (n3-2)	18.8 to 32.1 Ω at -35 to 80°C (-31 to 176°F)



(b) SMRG inspection
(1) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
h3-1 - t1-1	10 kΩ or more

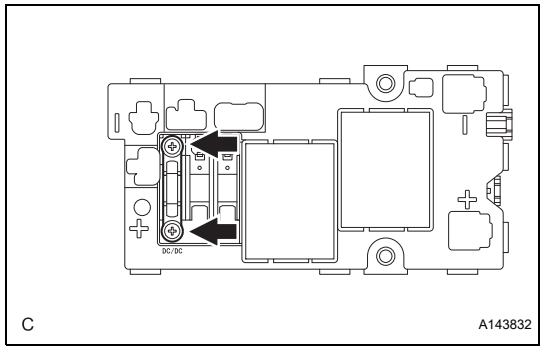
(2) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
h3-1 - t1-1	Below 1 Ω (When battery voltage applied to terminals n3-1 and n3-2)

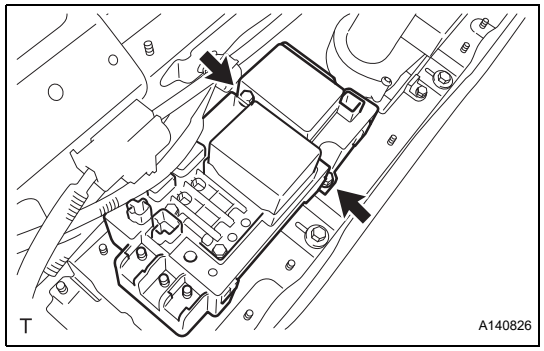
(3) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
CON3 (n3-1) - GND (n3-2)	18.8 to 32.1 Ω at -35 to 80°C (-31 to 176°F)

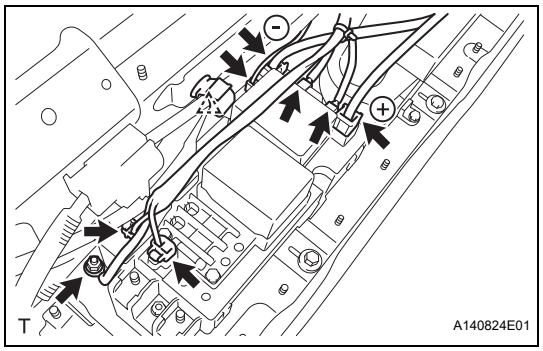
INSTALLATION



1. INSTALL HIGH VOLTAGE FUSE
(a) Install the high voltage fuse with the 2 bolts.
Torque: 4.5 N*m (46 kgf*cm, 40 in.*lbf)
CAUTION:
Wear insulated gloves.
NOTICE:
Be sure to use a torque wrench to tighten the bolts.

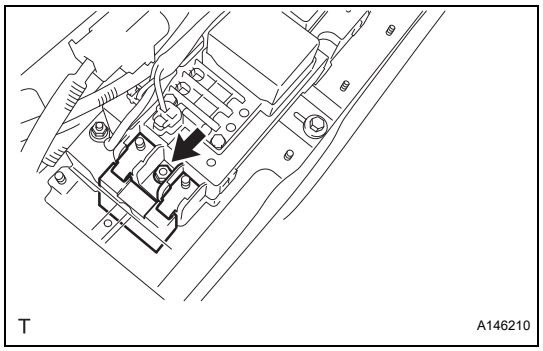


2. INSTALL HV RELAY ASSEMBLY
(a) Install the HV relay assembly with the 2 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.



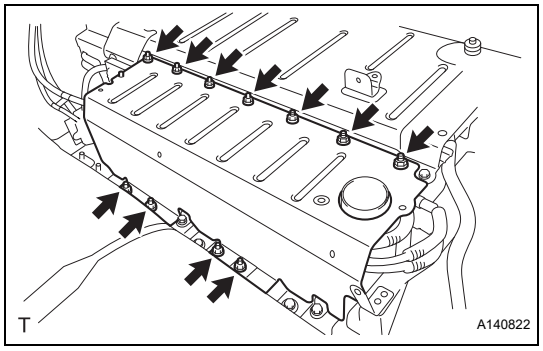
(b) Connect the 7 connectors and clamp to the HV relay assembly.
CAUTION:
Wear insulated gloves.
NOTICE:
- **Connect the wire wrapped with red tape to the terminal indicated by the "+" mark of the HV relay and the wire not wrapped with red tape to the terminal indicated by the "-" mark of the HV battery.**
- **Make sure that the connectors are engaged securely.**

(c) Connect the ground cable with the nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



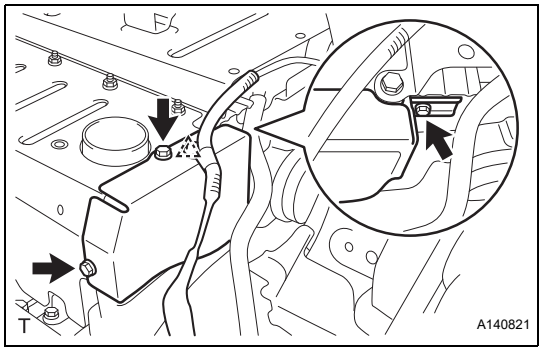
3. INSTALL FILTER NOISE CAPACITOR

(a) Install the filter noise capacitor with the nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.



4. INSTALL NO. 5 BATTERY CARRIER PANEL

(a) Install the No. 5 battery carrier panel with the 11 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.

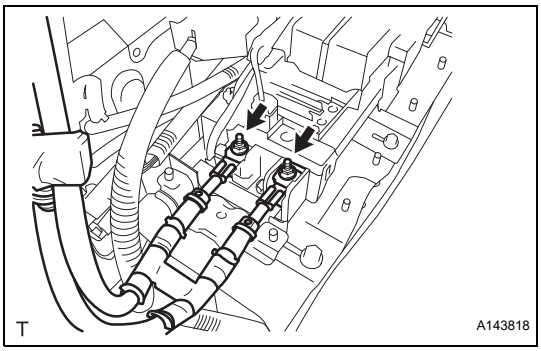


5. INSTALL NO. 1 BATTERY COVER LID

(a) Install the No. 1 battery cover lid with the 3 bolts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.

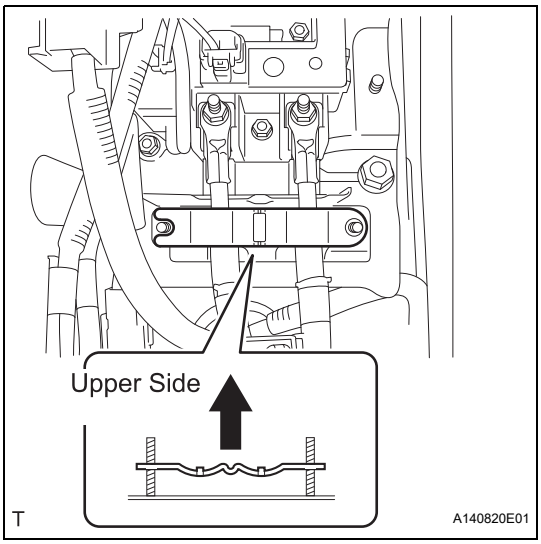
(b) Connect the wire harness clamp to the No. 1 battery cover lid.
CAUTION:
Wear insulated gloves.

HB

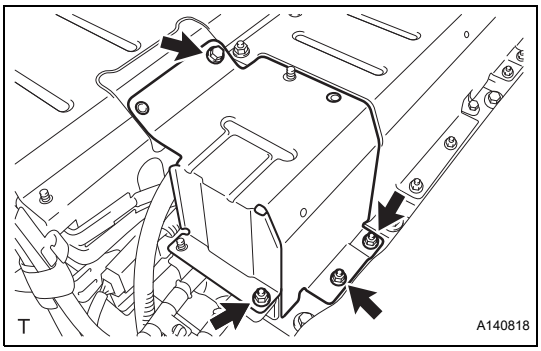


6. CONNECT FRAME WIRE

(a) Connect the frame wire (high voltage cable) with the 2 nuts.
Torque: 9.0 N*m (92 kgf*cm, 80 in.*lbf)
CAUTION:
Wear insulated gloves.

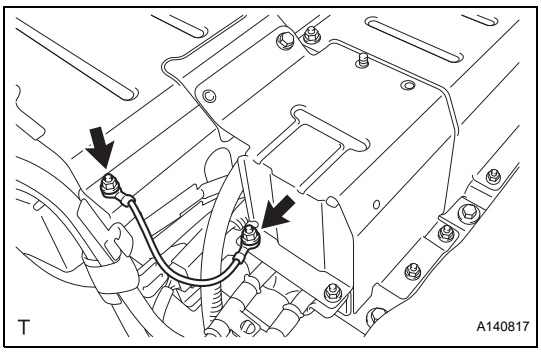


(b) Install the battery shield contact.
CAUTION:
Wear insulated gloves.
NOTICE:
Be sure to install the battery shield contact in the correct direction.



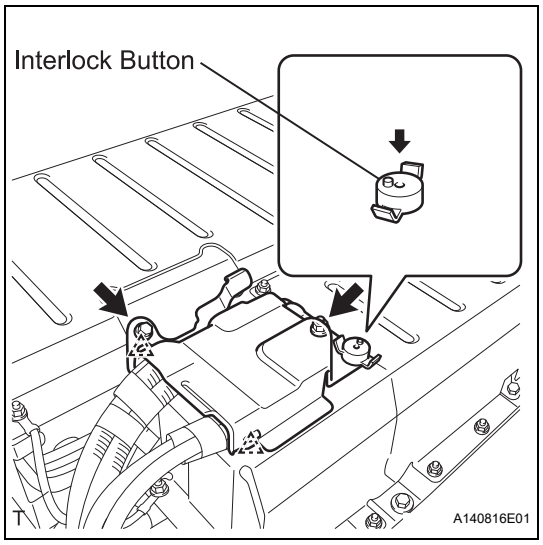
7. INSTALL UPPER BATTERY CARRIER SUB-ASSEMBLY

(a) Install the upper battery carrier sub-assembly with the 3 nuts and bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.

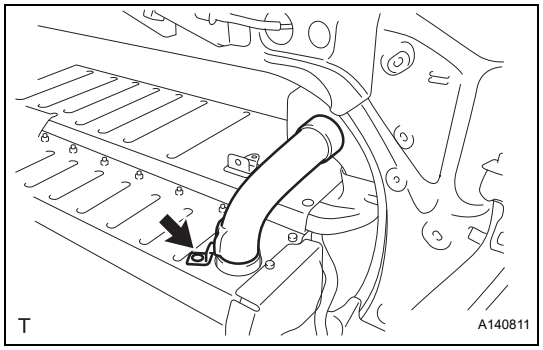


(b) Install the ground cable with the 2 nuts.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.

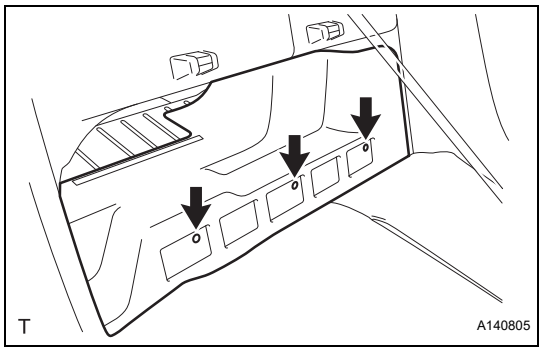
HB



8. **INSTALL WIRE HARNESS CLAMP BRACKET**
   (a) Connect the 2 wire harness clamps.
   CAUTION:
   Wear insulated gloves.
   (b) Install the wire harness clamp bracket with the interlock button.
   CAUTION:
   Wear insulated gloves.
   (c) Press the interlock button.
   CAUTION:
   Wear insulated gloves.
   (d) Secure the wire harness clamp bracket with the bolt and nut.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
   CAUTION:
   Wear insulated gloves.



9. **INSTALL NO. 5 HV BATTERY INTAKE DUCT**
   (a) Install the No. 5 HV battery intake duct with the clamp.
   CAUTION:
   Wear insulated gloves.



10. **INSTALL FRONT LUGGAGE COMPARTMENT TRIM COVER**
    (a) Install the front luggage compartment trim cover with the 3 clips.

11. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**

12. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**

13. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**

14. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**

15. **INSTALL REAR SEAT HEADREST ASSEMBLY**

16. **INSTALL SERVICE PLUG GRIP (See page HB-97)**

17. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

18. **INSTALL LUGGAGE TRIM SERVICE HOLE COVER (See page HB-98)**

19. PERFORM INITIALIZATION

(a) Perform the initialization procedure (See page IN-43).

HINT:

Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

REMOVAL

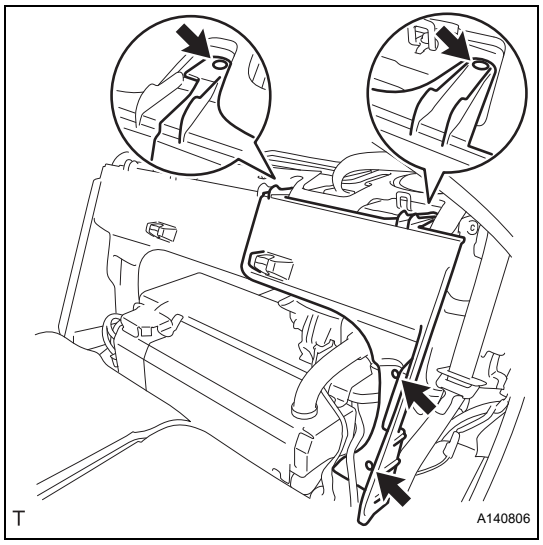
1. REMOVE LUGGAGE COMPARTMENT FLOOR MAT
2. REMOVE SPARE WHEEL COVER CLAMP
3. REMOVE SPARE WHEEL COVER ASSEMBLY
4. REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-97)
5. REMOVE REAR FLOOR FINISH PLATE (See page ED-97)
6. REMOVE LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-97)
7. REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-97)
8. REMOVE REAR SEAT HEADREST ASSEMBLY
9. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
10. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)
11. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)
12. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)
13. REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)
14. REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)
15. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-13)
16. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH
17. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-13)
18. REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH
19. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-33)
20. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-15)
21. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-15)
22. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-40)
23. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-41)

24. **REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-33)**

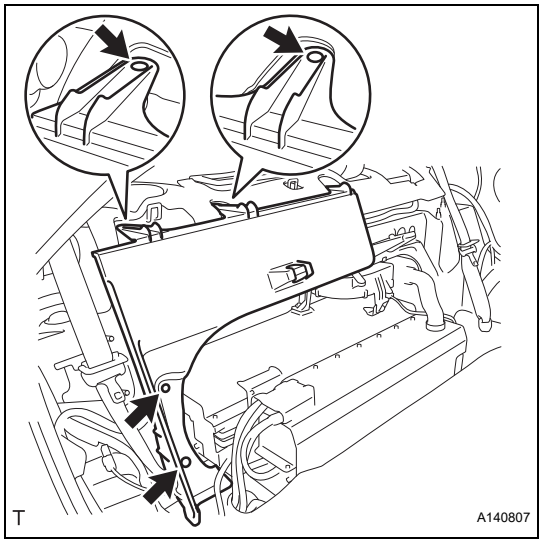
25. **REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-33)**

26. **REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-33)**

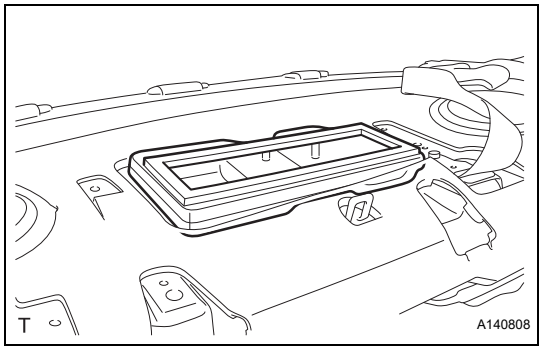
27. **REMOVE FRONT LUGGAGE COMPARTMENT TRIM COVER (See page HB-106)**



28. **REMOVE ROOM PARTITION BOARD LH**
    (a) Remove the 4 clips and room partition board LH.

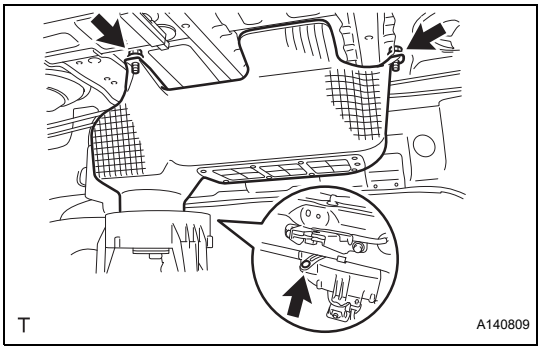


29. **REMOVE ROOM PARTITION BOARD RH**
    (a) Remove the 4 clips and room partition board RH.



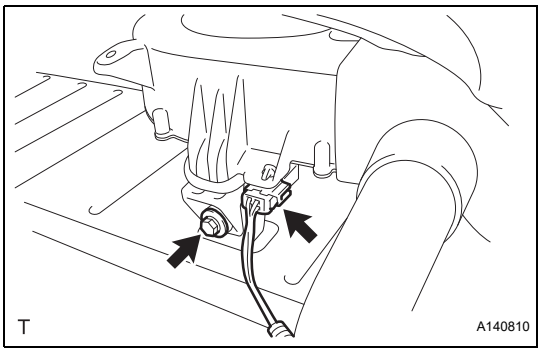
30. **REMOVE NO. 1 HV BATTERY INTAKE DUCT**
    (a) Remove the No. 1 HV battery intake duct.

HB



31. REMOVE NO. 2 HV BATTERY INTAKE DUCT

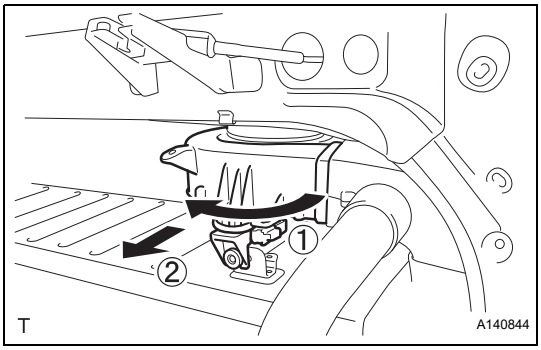
(a) Remove the 2 bolts, clip, and No. 2 HV battery intake duct.



32. REMOVE BATTERY COOLING BLOWER ASSEMBLY

(a) Remove the bolt from the battery cooling blower assembly.

(b) Disconnect the connector from the battery cooling blower assembly.

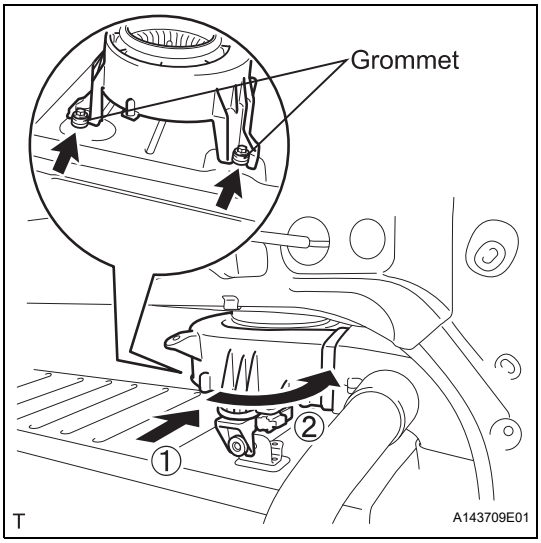


(c) Remove the battery cooling blower assembly shown in the illustration.

NOTICE:

- **Do not touch the fan of the battery cooling blower assembly.**
- **Do not hold the wire harness when lifting the battery cooling blower assembly.**

INSTALLATION

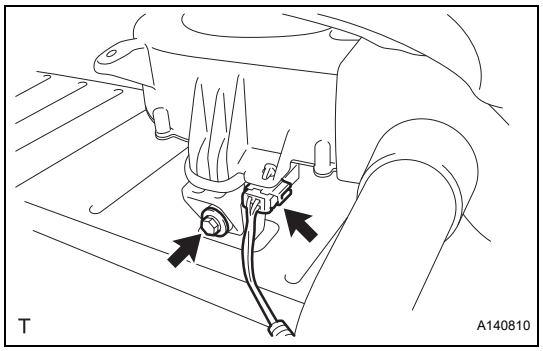


1. INSTALL BATTERY COOLING BLOWER ASSEMBLY

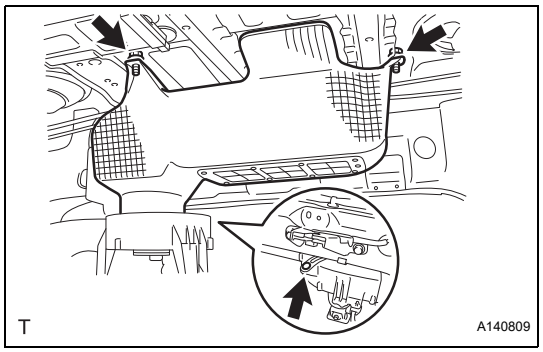
(a) Install the battery cooling blower assembly as shown in the illustration.

NOTICE:

- **Do not touch the fan of the battery cooling blower assembly.**
- **Do not hold the wire harness when lifting the battery cooling blower assembly.**
- **Be sure to engage the cutout on the battery cooling blower assembly to the bushing securely.**

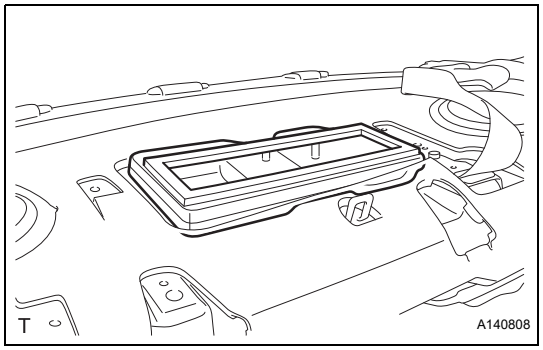


(b) Install the bolt to the battery cooling blower assembly.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



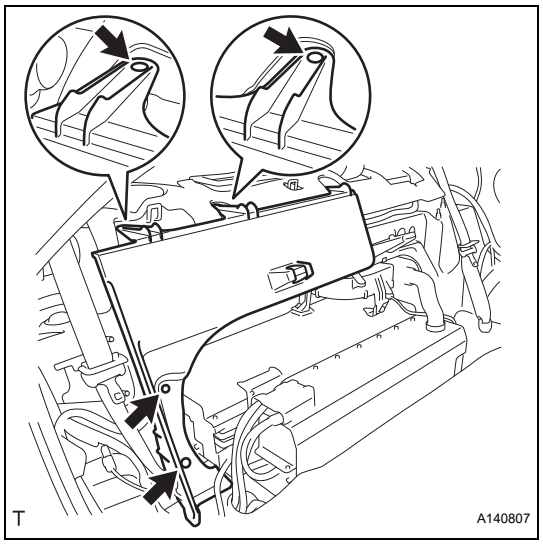
2. INSTALL NO. 2 HV BATTERY INTAKE DUCT

(a) Install the No. 2 HV battery intake duct with the 2 bolts and clip.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)



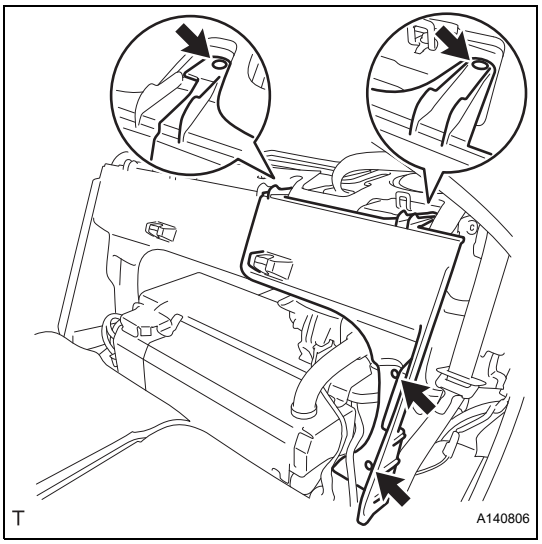
3. INSTALL NO. 1 HV BATTERY INTAKE DUCT

(a) Install the No. 1 HV battery intake duct.



4. INSTALL ROOM PARTITION BOARD RH

(a) Install the room partition board RH with the 4 clips.



5. **INSTALL ROOM PARTITION BOARD LH**
   (a) Install the room partition board LH with the 4 clips.
6. **INSTALL FRONT LUGGAGE COMPARTMENT TRIM COVER (See page HB-113)**
7. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-34)**
8. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-35)**
9. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-35)**
10. **INSTALL REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-42)**
11. **INSTALL REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-42)**
12. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-39)**
13. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-39)**
14. **INSTALL REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-35)**
15. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH**
16. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-43)**
17. **INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH**
18. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-43)**
19. **INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (See page SE-54)**
20. **INSTALL REAR SIDE SEAT BACK ASSEMBLY RH**
21. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**
22. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**
23. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**
24. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
25. **INSTALL REAR SEAT HEADREST ASSEMBLY**
26. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-102)**
27. **INSTALL LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-102)**

28. **INSTALL REAR FLOOR FINISH PLATE (See page ED-103)**
29. **INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-103)**
30. **INSTALL SPARE WHEEL COVER ASSEMBLY**
31. **INSTALL SPARE WHEEL COVER CLAMP**
32. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT**

REMOVAL

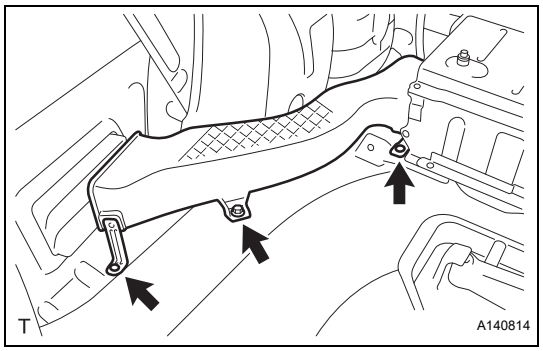
1. **PRECAUTION**
   See page IN-5
2. **CHECK FOR DTCS (See page HB-86)**
3. **REMOVE LUGGAGE TRIM SERVICE HOLE COVER (See page HB-86)**
4. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (See page HV-560)**
5. **REMOVE SERVICE PLUG GRIP (See page HB-86)**
6. **REMOVE NO. 2 ENGINE ROOM SIDE LH COVER (See page HV-560)**
7. **REMOVE CONNECTOR COVER ASSEMBLY (See page HV-560)**
8. **CHECK TERMINAL VOLTAGE (See page HV-561)**
9. **INSTALL CONNECTOR COVER ASSEMBLY (See page HV-566)**
10. **INSTALL NO. 2 ENGINE ROOM SIDE LH COVER (See page HV-568)**
11. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
12. **REMOVE SPARE WHEEL COVER CLAMP**
13. **REMOVE SPARE WHEEL COVER ASSEMBLY**
14. **REMOVE NO.1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-97)**
15. **REMOVE REAR FLOOR FINISH PLATE (See page ED-97)**
16. **REMOVE LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-97)**
17. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-97)**
18. **REMOVE REAR SEAT HEADREST ASSEMBLY**
19. **REMOVE REAR CENTER SEAT HEADREST ASSEMBLY**
20. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
21. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)**
22. **REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)**
23. **REMOVE FRONT LUGGAGE COMPARTMENT TRIM COVER (See page HB-106)**
24. **REMOVE NO. 5 HV BATTERY INTAKE DUCT (See page HB-106)**

25. **REMOVE WIRE HARNESS CLAMP BRACKET (See page HB-107)**

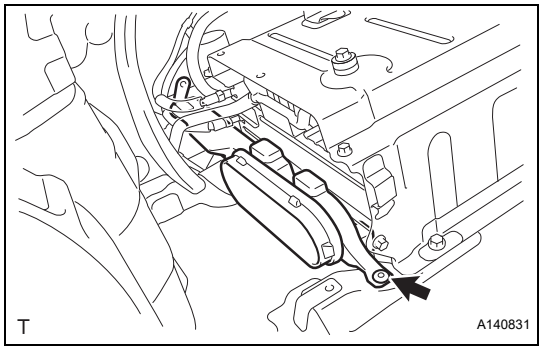
26. **REMOVE UPPER BATTERY CARRIER SUB-ASSEMBLY (See page HB-107)**

27. **REMOVE NO. 1 BATTERY COVER LID (See page HB-108)**

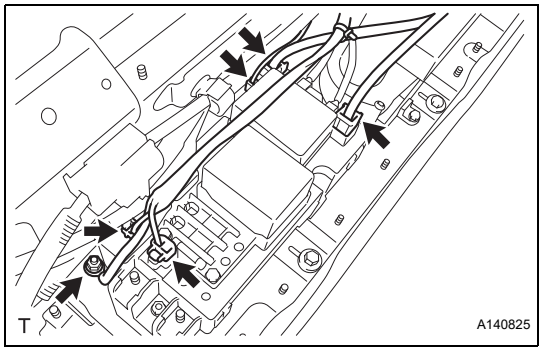
28. **REMOVE NO. 5 BATTERY CARRIER PANEL (See page HB-108)**



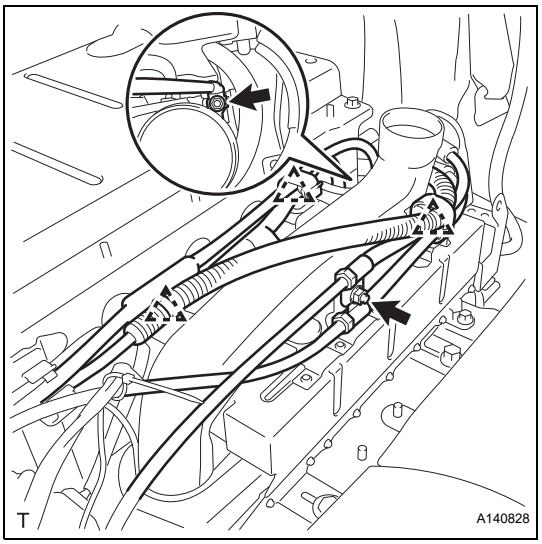
29. **REMOVE NO. 2 HV BATTERY EXHAUST DUCT**
    (a) Remove the 2 clips, nut and No. 2 HV battery exhaust duct.



30. **REMOVE NO. 1 HV BATTERY EXHAUST DUCT**
    (a) Remove the clip and No. 1 HV battery exhaust duct.
    CAUTION:
    Wear insulated gloves.

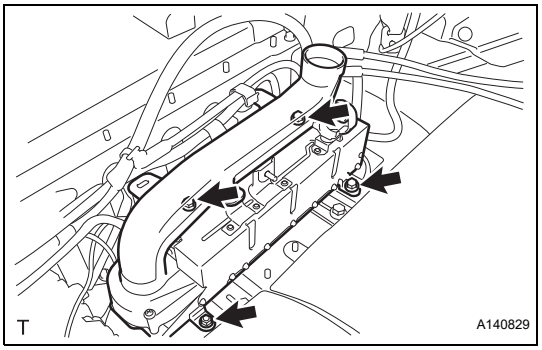


31. **DISCONNECT HV RELAY ASSEMBLY**
    (a) Remove the nut and disconnect the ground cable.
    CAUTION:
    Wear insulated gloves.
    (b) Disconnect the 5 connectors from the HV relay assembly.
    CAUTION:
    Wear insulated gloves.

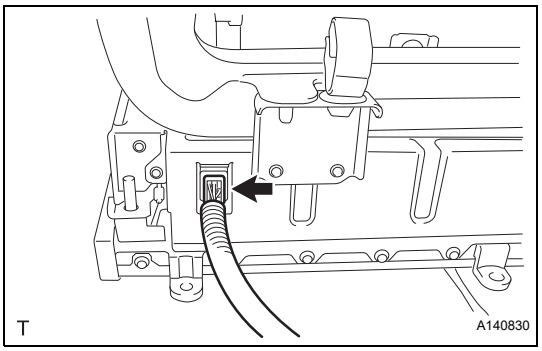


32. REMOVE HYBRID VEHICLE CONVERTER

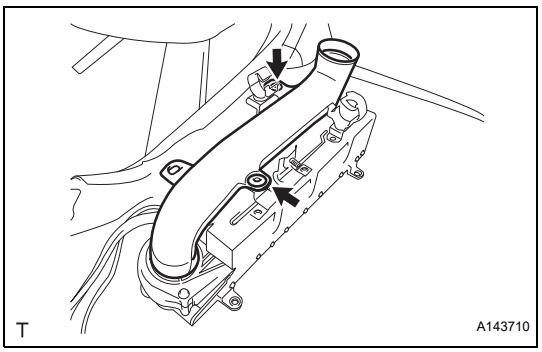
(a) Remove the 2 nuts and 3 clamps and disconnect the wire harness from the hybrid vehicle converter.
CAUTION:
Wear insulated gloves.



(b) Remove the 3 bolts, nut, and hybrid vehicle converter.
CAUTION:
Wear insulated gloves.



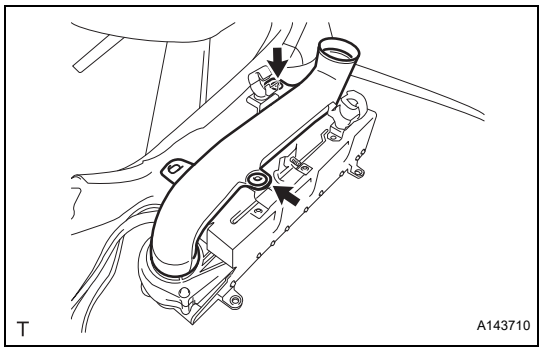
(c) Disconnect the connector from the hybrid vehicle converter.
CAUTION:
Wear insulated gloves.



33. REMOVE VENTILATOR INNER DUCT

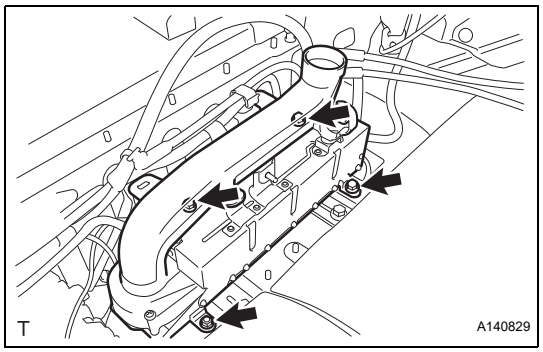
(a) Remove the 2 clips and ventilator inner duct.

INSTALLATION



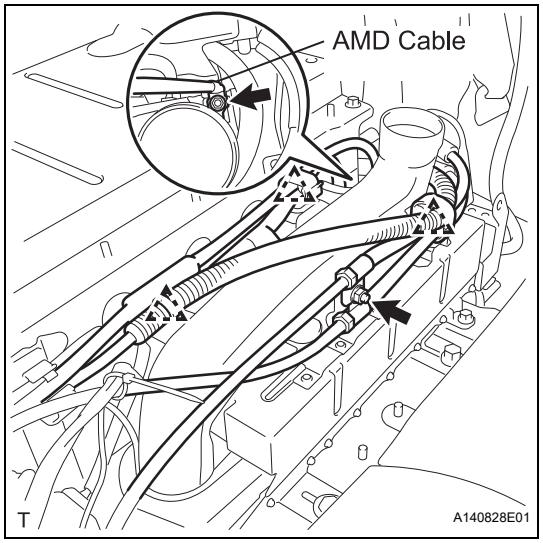
1. INSTALL VENTILATOR INNER DUCT

(a) Install the ventilator inner duct with the 2 clips.



2. INSTALL HYBRID VEHICLE CONVERTER

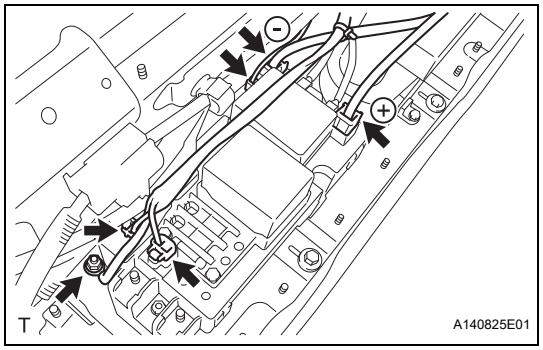
(a) Install the hybrid vehicle converter with the 3 bolts and nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.



(b) Connect the wire harness with the 3 clamps.
CAUTION:
Wear insulated gloves.

(c) Connect the AMD cable with the nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.

(d) Connect the high voltage cable with the nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
CAUTION:
Wear insulated gloves.

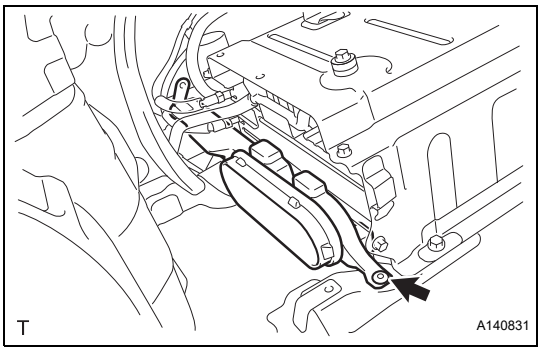


3. CONNECT HV RELAY ASSEMBLY

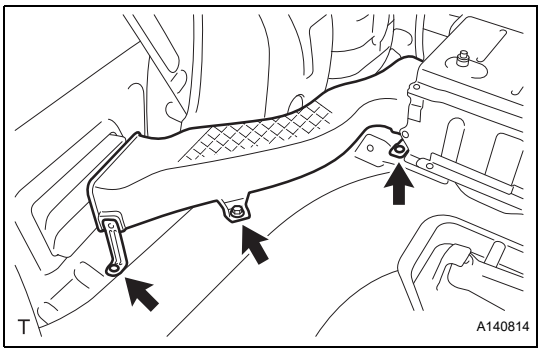
(a) Connect the 5 connectors to the HV relay assembly.
CAUTION:
Wear insulated gloves.
NOTICE:
- **Connect the wire wrapped with red tape to the terminal indicated by the "+" mark of the HV relay and the wire not wrapped with red tape to the terminal indicated by the "-" mark of the HV battery.**
- **Make sure that the connectors are engaged securely.**

(b) Connect the ground cable with the nut.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

HB



4. **INSTALL NO. 1 HV BATTERY EXHAUST DUCT**
   (a) Install the No. 1 battery exhaust duct with the clip.
   CAUTION:
   Wear insulated gloves.



5. **INSTALL NO. 2 HV BATTERY EXHAUST DUCT**
   (a) Install the No. 2 battery exhaust duct with the bolt and 2 clips.
   Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)
6. **INSTALL NO. 5 BATTERY CARRIER PANEL (See page HB-111)**
7. **INSTALL NO. 1 BATTERY COVER LID (See page HB-111)**
8. **INSTALL UPPER BATTERY CARRIER SUB-ASSEMBLY (See page HB-112)**
9. **INSTALL WIRE HARNESS CLAMP BRACKET (See page HB-112)**
10. **INSTALL NO. 5 HV BATTERY INTAKE DUCT (See page HB-113)**
11. **INSTALL FRONT LUGGAGE COMPARTMENT TRIM COVER (See page HB-113)**
12. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**
13. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**
14. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**
15. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
16. **INSTALL REAR SEAT HEADREST ASSEMBLY**
17. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER LH (See page ED-102)**
18. **INSTALL LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-102)**
19. **INSTALL REAR FLOOR FINISH PLATE (See page ED-103)**
20. **INSTALL NO.1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-103)**
21. **INSTALL SPARE WHEEL COVER ASSEMBLY**
22. **INSTALL SPARE WHEEL COVER CLAMP**

23. **INSTALL LUGGAGE COMPARTMENT FLOOR MAT**
24. **INSTALL SERVICE PLUG GRIP (See page HB-97)**
25. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
26. **INSTALL LUGGAGE TRIM SERVICE HOLE COVER (See page HB-98)**
27. **PERFORM INITIALIZATION**
    (a) Perform the initialization procedure (See page IN-43).
    HINT:
    Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

DIAGNOSTIC TROUBLE CODE CHART

HINT:

- If no abnormality is found when the parts are inspected, inspect the tire pressure warning ECU.
- If a trouble code is displayed during the DTC check, inspect the circuit listed for that code. For details of each code, refer to the relevant page listed under respective "DTC Code" in the DTC chart.

TIRE PRESSURE WARNING SYSTEM

DTC Code	Detection Item	Trouble Area	See page
C2111/11	Transmitter ID1 Operation Stop	1. Tire pressure warning valve and transmitter 2. Tire pressure warning ECU	TW-34
C2112/12	Transmitter ID2 Operation Stop	1. Tire pressure warning valve and transmitter 2. Tire pressure warning ECU	TW-34
C2113/13	Transmitter ID3 Operation Stop	1. Tire pressure warning valve and transmitter 2. Tire pressure warning ECU	TW-34
C2114/14	Transmitter ID4 Operation Stop	1. Tire pressure warning valve and transmitter 2. Tire pressure warning ECU	TW-34
C2121/21	No Signal from Transmitter ID1 in Main Mode	1. Tire pressure warning valve and transmitter 2. Tire pressure warning antenna and receiver 3. Wire harness or connector 4. Tire pressure warning ECU	TW-36
C2122/22	No Signal from Transmitter ID2 in Main Mode	1. Tire pressure warning valve and transmitter 2. Tire pressure warning antenna and receiver 3. Wire harness or connector 4. Tire pressure warning ECU	TW-36
C2123/23	No Signal from Transmitter ID3 in Main Mode	1. Tire pressure warning valve and transmitter 2. Tire pressure warning antenna and receiver 3. Wire harness or connector 4. Tire pressure warning ECU	TW-36
C2124/24	No Signal from Transmitter ID4 in Main Mode	1. Tire pressure warning valve and transmitter 2. Tire pressure warning antenna and receiver 3. Wire harness or connector 4. Tire pressure warning ECU	TW-36
C2141/41	Transmitter ID1 Error	1. Tire pressure warning valve and transmitter 2. Tire pressure warning ECU	TW-43
C2142/42	Transmitter ID2 Error	1. Tire pressure warning valve and transmitter 2. Tire pressure warning ECU	TW-43
C2143/43	Transmitter ID3 Error	1. Tire pressure warning valve and transmitter 2. Tire pressure warning ECU	TW-43
C2144/44	Transmitter ID4 Error	1. Tire pressure warning valve and transmitter 2. Tire pressure warning ECU	TW-43
C2165/65	Abnormal Temperature Inside ID1 Tire	1. Tires 2. Tire pressure warning valve and transmitter 3. Tire pressure warning ECU	TW-46

DTC Code	Detection Item	Trouble Area	See page
C2166/66	Abnormal Temperature Inside ID2 Tire	1. Tires 2. Tire pressure warning valve and transmitter 3. Tire pressure warning ECU	TW-46
C2167/67	Abnormal Temperature Inside ID3 Tire	1. Tires 2. Tire pressure warning valve and transmitter 3. Tire pressure warning ECU	TW-46
C2168/68	Abnormal Temperature Inside ID4 Tire	1. Tires 2. Tire pressure warning valve and transmitter 3. Tire pressure warning ECU	TW-46

DTC	C2113/13	Transmitter ID3 Operation Stop

DTC	C2114/14	Transmitter ID4 Operation Stop

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the air pressures of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on. The tire pressure warning ECU stores a DTC when the tire pressure warning valve and transmitter stops transmitting signals. At this time, the signals can be forcibly transmitted by releasing the tire pressure rapidly. The stored DTC is cleared when the signal transmission is resumed.

DTC No.	DTC Detecting Condition	Trouble Area
C2111/11 C2112/12 C2113/13 C2114/14	Tire pressure warning valve and transmitters stop transmitting signals	• Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:
It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

NOTICE:
It is necessary to perform initialization (See page TW-17) after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.

1	PERFORM FORCED TRANSMISSION OF TRANSMITTER ID OF ALL WHEELS

(a) Set the tire pressure to the specified value.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)

(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG) and turn the tester on.
(d) Select "TIREPRESS" by following the prompts displayed on the intelligent tester.

TIRE PRESSURE:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire inflation pressure / min.:0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf / cm^2, 92.2 psi)	Actual tire inflation pressure	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TIREPRESS2	ID2 tire inflation pressure / min.:0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf / cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS3	ID3 tire inflation pressure / min.:0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf / cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS4	ID4 tire inflation pressure / min.:0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf / cm^2, 92.2 psi)	Actual tire inflation pressure	-

(e) Rapidly release the pressures from each wheel by approximately 40 kPa (0.4 kgf / cm^2, 5.8 psi) /30 seconds or more.

(1) Check that each tire pressure data displayed on the intelligent tester screen has changed.

OK:

Each tire pressure data displayed on the intelligent tester screen will change to the value of the tire pressure.

NOTICE:

- **It takes about 1 minute or more to display the updated tire pressure data.**
- **When the "TIREPRESS" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.**

(2) After confirming that all of the tire pressure data displayed on the intelligent tester screen have changed, set the tire pressure to the appropriate specified values.

HINT:

If the tire pressure data displayed on the intelligent tester screen has not changed after rechecking, go to other problem procedure (For malfunctions in transmission or reception function (See page TW-22).

NG → **INSPECT OTHER PROBLEM (MALFUNCTION IN TRANSMISSION OR RECEPTION FUNCTION)**

OK

END

DTC	C2183/83	Transmitter ID3 not Received (Test Mode DTC)
DTC	C2184/84	Transmitter ID4 not Received (Test Mode DTC)

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the air pressure of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on.
The tire pressure warning valve and transmitters constantly send radio waves to the tire pressure warning antenna and receiver.
Under the following conditions below, the tire pressure warning antenna and receiver is unable to receive the signals from the tire pressure warning valves and transmitters, and a DTC is stored.

- Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.
- Devices using similar radio frequencies are used in the vehicle.

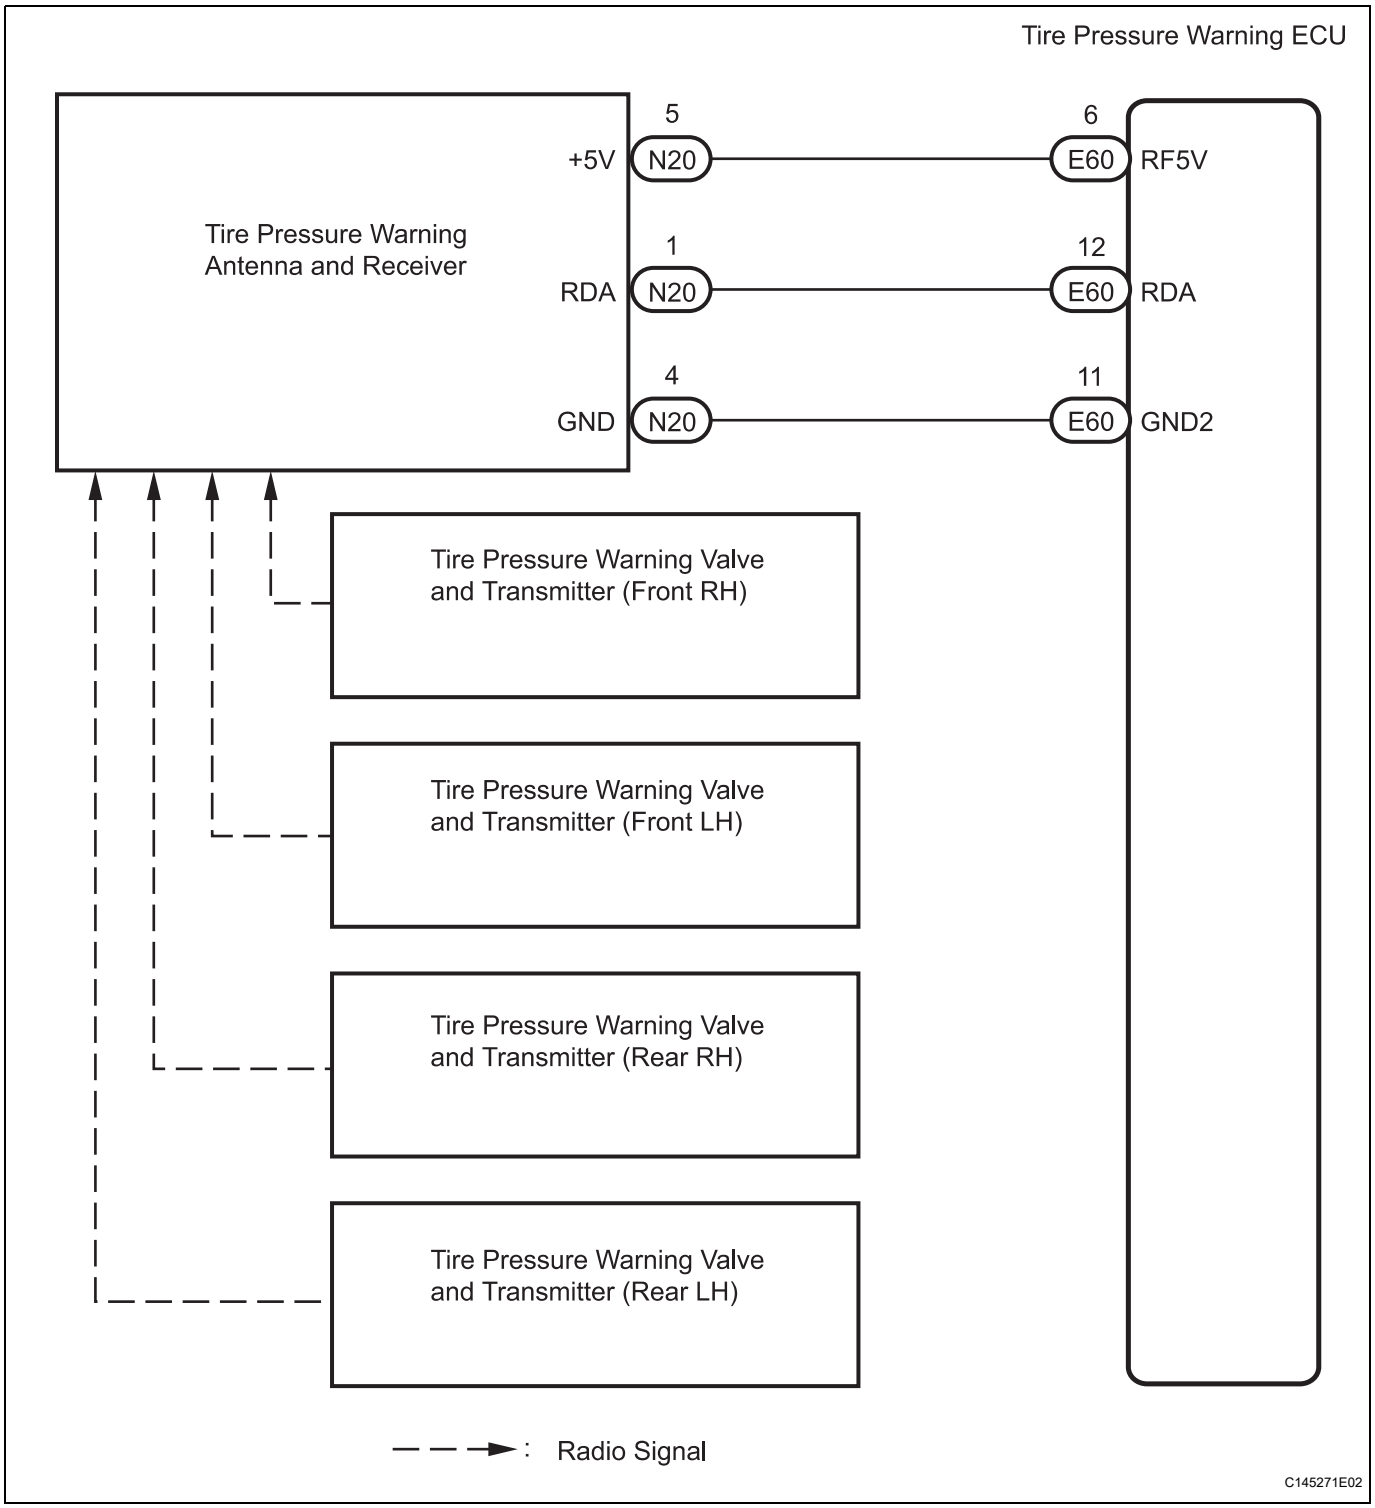
HINT:
When no signals are received for 51 minutes or more, a DTC is output.
DTCs from C2121/21 to C2124/24 can only be cleared by using the tester. DTCs from C2181/81 to C2184/84 can be cleared when the transmitter in the tire pressure warning valve and transmitter sends a forced transmission signal or test mode ends. DTCs from C2181/81 to C2184/84 are output only in test mode.

TW

DTC No.	DTC Detecting Condition	Trouble Area
C2121/21 C2122/22 C2123/23 C2124/24	These DTCs are detected when no signals are received for 51 minutes or more.	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU
C2181/81 C2182/82 C2183/83 C2184/84	Malfunctions in the transmitting/receiving circuit	• Tire pressure warning valve and transmitter • Tire pressure warning antenna and receiver • Wire harness or connector • Tire pressure warning ECU

HINT:
It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-17) after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.**

TW

1	CHECK FREQUENCY RECEIVING CONDITION

(a) Check if the vehicle is not located in areas such as described below:
  (1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.
  HINT:
  If the vehicle is located in areas described above, the tire pressure warning light may come on only in a particular area.
  (2) Devices using similar radio frequencies are used in the vehicle.
  OK:
  Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.
  HINT:
  Radio frequency may be interrupted due to surroundings or devices installed by the user.

NG → **CHECK IF ANY DEVICE IS INSTALLED BY USER**

OK

2	IDENTIFY TRANSMITTER CORRESPONDING TO DTC

(a) Set the tire pressure to the appropriate specified values.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)

(b) Select "TIREPRESS" by following the prompts displayed on the intelligent tester.

TIRE PRESSURE:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS2	ID2 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS3	ID3 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS4	ID4 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-

(c) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.41 kg/cm^2, 5.8 psi) within 30 seconds.
(d) Check the DATA LIST.

NOTICE:

- **It takes about 1 minute or more to display the updated tire pressure data.**
- **When no "TIREPRESS" data has changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.**
- **Record the transmitter ID of which "TIREPRESS" data corresponds to each tire.**

(e) After confirming that one of the "TIREPRESS" data for one tire (ID1 to ID4) has changed, repeat this procedure one by one. Identify the transmitter that corresponds to the DTC.

DTC	C2141/41	Transmitter ID1 Error

DTC	C2142/42	Transmitter ID2 Error

DTC	C2143/43	Transmitter ID3 Error

DTC	C2144/44	Transmitter ID4 Error

DESCRIPTION

The tire pressure warning valve and transmitters that are installed in the tire and wheel assemblies measure the air pressure of the tires. The measured values are transmitted to the tire pressure warning antenna and receiver on the body as radio waves and then sent to the tire pressure warning ECU. The ECU compares the measured air pressure values with the air pressure threshold. When the measured air pressure value is less than this threshold, the warning light in the combination meter comes on.
When the internal circuit of the tire pressure warning valve and transmitter is malfunctioning, this DTC is output.

DTC No.	DTC Detecting Condition	Trouble Area
C2141/41 C2142/42 C2143/43 C2144/44	If an "ERROR" signal is received 3 times consecutively, the tire pressure warning valve and transmitter will be judged as defective and a DTC will be output. This will happen in situations where the inflation pressure is outside the range 0 to 637.5 kPa (0 to 6.48 kgf/cm^2, 0 psi to 92.2 psi), the temperature inside the tire is outside the specified range -40 to 120°C (-40 to 248°F), or an error occurs in the tire pressure warning valve and transmitter or the surrounding area.	• Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:
It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-14) after registration (See page TW-17) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.**

TW

1	IDENTIFY TRANSMITTER CORRESPONDING TO DTC

(a) Set the tire pressure to the specified value.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)

(b) Display the "TIREPRESS" data for each wheel using the intelligent tester.

(c) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.41 kg/cm^2, 5.8 psi) within 30 seconds. If "TIREPRESS" displayed on the tester (ID1 to ID4) does not change, the tire pressure warning valve and transmitter corresponds to the DTC that was detected.
HINT:
- Identify the malfunctioning tire pressure warning valve and transmitter by repeatedly decreasing the tire pressure for each tire.
- Record which "TIREPRESS" data (ID1 to ID4) corresponds to each tire.

TIRE PRESSURE:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS2	ID2 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS3	ID3 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS4	ID4 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-

(d) Check the DATA LIST.

Result

Condition	Detection Condition
One of "TIREPRESS" data (ID1 to ID4) changed.	**Normal**
"TIREPRESS" data did not change.	**Transmitter corresponding to DTC**

NOTICE:
- **When the "TIREPRESS" data has not changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then forcibly transmit the transmitter ID and recheck.**
- **Record the transmitter ID and position of transmitters that are normal.**

(e) When the "TIREPRESS" data (ID1 to ID4) has changed, repeat this procedure to identify the tire pressure warning valve and transmitter that corresponds to a DTC.

(f) When all of the "TIREPRESS" data (ID1 to ID4) have changed, identify the malfunctioning tire pressure warning valve and transmitter using recorded ID numbers and output DTC.

(g) Set the tire pressures to the appropriate specified values.

NEXT

2	REPLACE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Replace the identified tire pressure warning valve and transmitter with a new one (See page TW-75).
HINT:
- Before installing a new tire pressure warning valve and transmitter, read and write down its transmitter ID.
- The IDs for the tire pressure warning valve and transmitter not to be replaced should be checked using the tester and recorded.

NEXT

3	REGISTRATION OF TRANSMITTER ID

(a) Register the transmitter ID for all wheels (See page TW-14).
(b) Set the tire pressure to the specified value.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)

DTC	C2165/65	Abnormal Temperature Inside ID1 Tire

DTC	C2166/66	Abnormal Temperature Inside ID2 Tire

DTC	C2167/67	Abnormal Temperature Inside ID3 Tire

DTC	C2168/68	Abnormal Temperature Inside ID4 Tire

DESCRIPTION

Each tire pressure warning valve and transmitter measures the internal temperature of its tire as well as tire pressure, and transmits the information to the tire pressure warning ECU along with the transmitter ID. If the measured temperature is out of the specified range, the tire pressure warning ECU recognizes it as a malfunction, outputs DTCs, and blinks the tire pressure warning light.

DTC No.	DTC Detecting Condition	Trouble Area
C2165/65 C2166/66 C2167/67 C2168/68	Temperature inside the tire exceeds 119°C (246.2°F) more than once.	• Tires • Tire pressure warning valve and transmitter • Tire pressure warning ECU

HINT:
It is necessary to perform the procedure to identify the tire pressure warning valve and transmitter that is malfunctioning because it cannot be identified by the output DTC.

INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal.**
- **It is necessary to perform initialization (See page TW-17) after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.**

1	CHECK TIRES

(a) Check the tire is not flat, and there is no indication of air pressure drop.
OK:
Tire is normal.
HINT:
If a tire is damaged, the tire pressure warning valve and transmitter may also have been damaged at the same time.

NG → **REPLACE TIRE AND TIRE PRESSURE WARNING VALVE AND TRANSMITTER (See page TW-75)**

OK

2	IDENTIFY TRANSMITTER CORRESPONDING TO DTC

(a) Set the tire pressure to the specified value.

TW

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)

REPLACE TIRE PRESSURE WARNING ECU (See page TW-79)

DTC	C2171/71	Transmitter ID not Registered

DESCRIPTION

The IDs of each tire pressure warning valve and transmitters are registered to the tire pressure warning ECU.
When the ECU detects that an ID is not the one of the registered IDs, or cannot receive an ID signal, this DTC is output.

DTC No.	DTC Detection Condition	Trouble Area
C2171/71	Transmitter ID code is not registered. (When an ID code is unregistered for 51 minutes or more)	Tire pressure warning ECU

INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and note them down before removal.**
- **It is necessary to perform initialization (See page TW-17) after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.**

1 CONFIRM REGISTRATION CONDITION (REGISTERED ID CODES)

(a) Connect the intelligent tester to the DLC3 connector.
(b) Turn the power switch ON (IG) and turn the tester on.
(c) Select REGIT ID CODE by following the prompts displayed on the intelligent tester.

OK:

The registered transmitter ID codes are displayed on the intelligent tester screen.

NG → **Go to step 2**

OK

REPLACE TIRE PRESSURE WARNING ECU (See page TW-79)

2 PERFORM REGISTRATION (TRANSMITTER ID)

(a) Register the transmitter IDs for all the wheels (See page TW-14).
(b) Set the tire pressure of all the wheels to the appropriate specified values.

NEXT

3 READ VALUE OF DATA LIST

(a) Check the DATA LIST (See page TW-29).
(b) Select "TIREPRESS" by following the prompts displayed on the intelligent tester.

HINT:
It may take up to 1 minute or more to display the tire pressure data.

Result

Condition	Proceed to
All tire pressure readings are equal to specified values.	A
Tire pressure values are not displayed	B

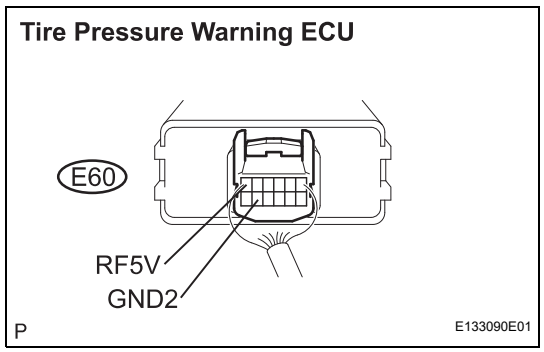
NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-17) after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.**

TW

1	CHECK TIRE PRESSURE WARNING ECU



(a) Measure the voltage according to the value(s) in the table below.

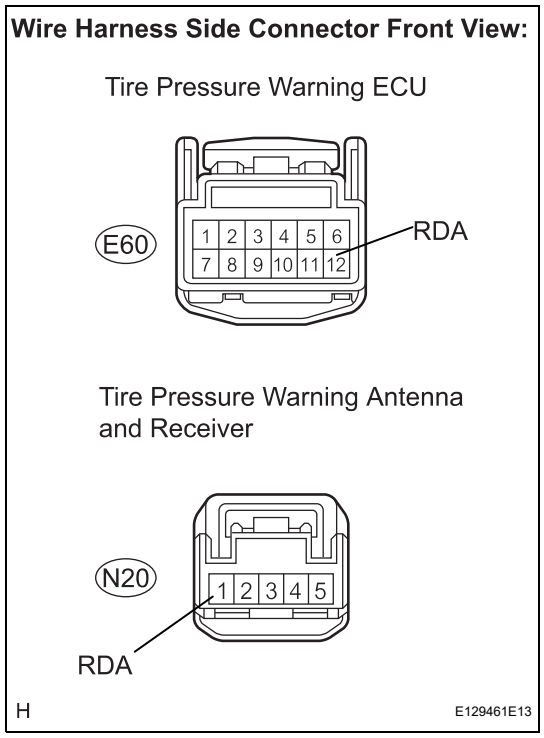
Standard voltage

Tester Connection	Switch Condition	Specified Condition
E60-6 (RF5V) - E60-11 (GND2)	Power switch ON (IG)	4.5 to 5.5 V

NG → Go to step 5

OK

2	CHECK WIRE HARNESS (ECU - RECEIVER)



(a) Disconnect the E60 ECU connector.
(b) Disconnect the N20 receiver connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E60-12 (RDA) - N20-1 (RDA)	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3	REPLACE TIRE PRESSURE WARNING ANTENNA AND RECEIVER

(a) Replace the tire pressure warning antenna and receiver (See page TW-72).

NEXT

4	CHECK FOR DTC

(a) Check for DTCs (See page TW-28).

TW

OK:
DTC is not output.
HINT:
- It is necessary to register IDs when replacing the tire pressure warning ECU (See page TW-14).
- Read the IDs in the DATA LIST before removing the tire pressure warning ECU. Register the ID in the new tire pressure warning ECU.

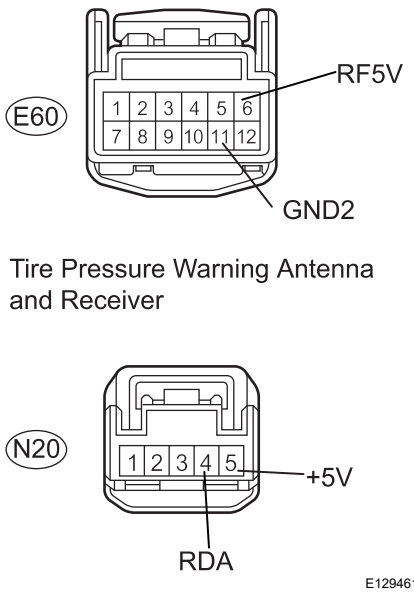
NG → **REPLACE TIRE PRESSURE WARNING ECU (See page TW-79)**

OK

END

5 CHECK HARNESS AND CONNECTOR (ECU - RECEIVER)

Wire Harness Side Connector Front View:



(a) Disconnect the E60 ECU connector.
(b) Disconnect the N20 receiver connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E60-11 (GND2) - N20-4 (GND)	Below 1 Ω
E60-6 (RF5V) - N20-5 (+5V)	

Result

Result	Proceed to
OK	A
OK (When troubleshooting in accordance with PROBLEM SYMPTOMS TABLE)	B
NG	C

A → **REPLACE TIRE PRESSURE WARNING ECU (See page TW-79)**

C → **REPAIR OR REPLACE HARNESS OR CONNECTOR AND REPLACE TIRE PRESSURE WARNING ECU**

B

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page TW-22)

TW

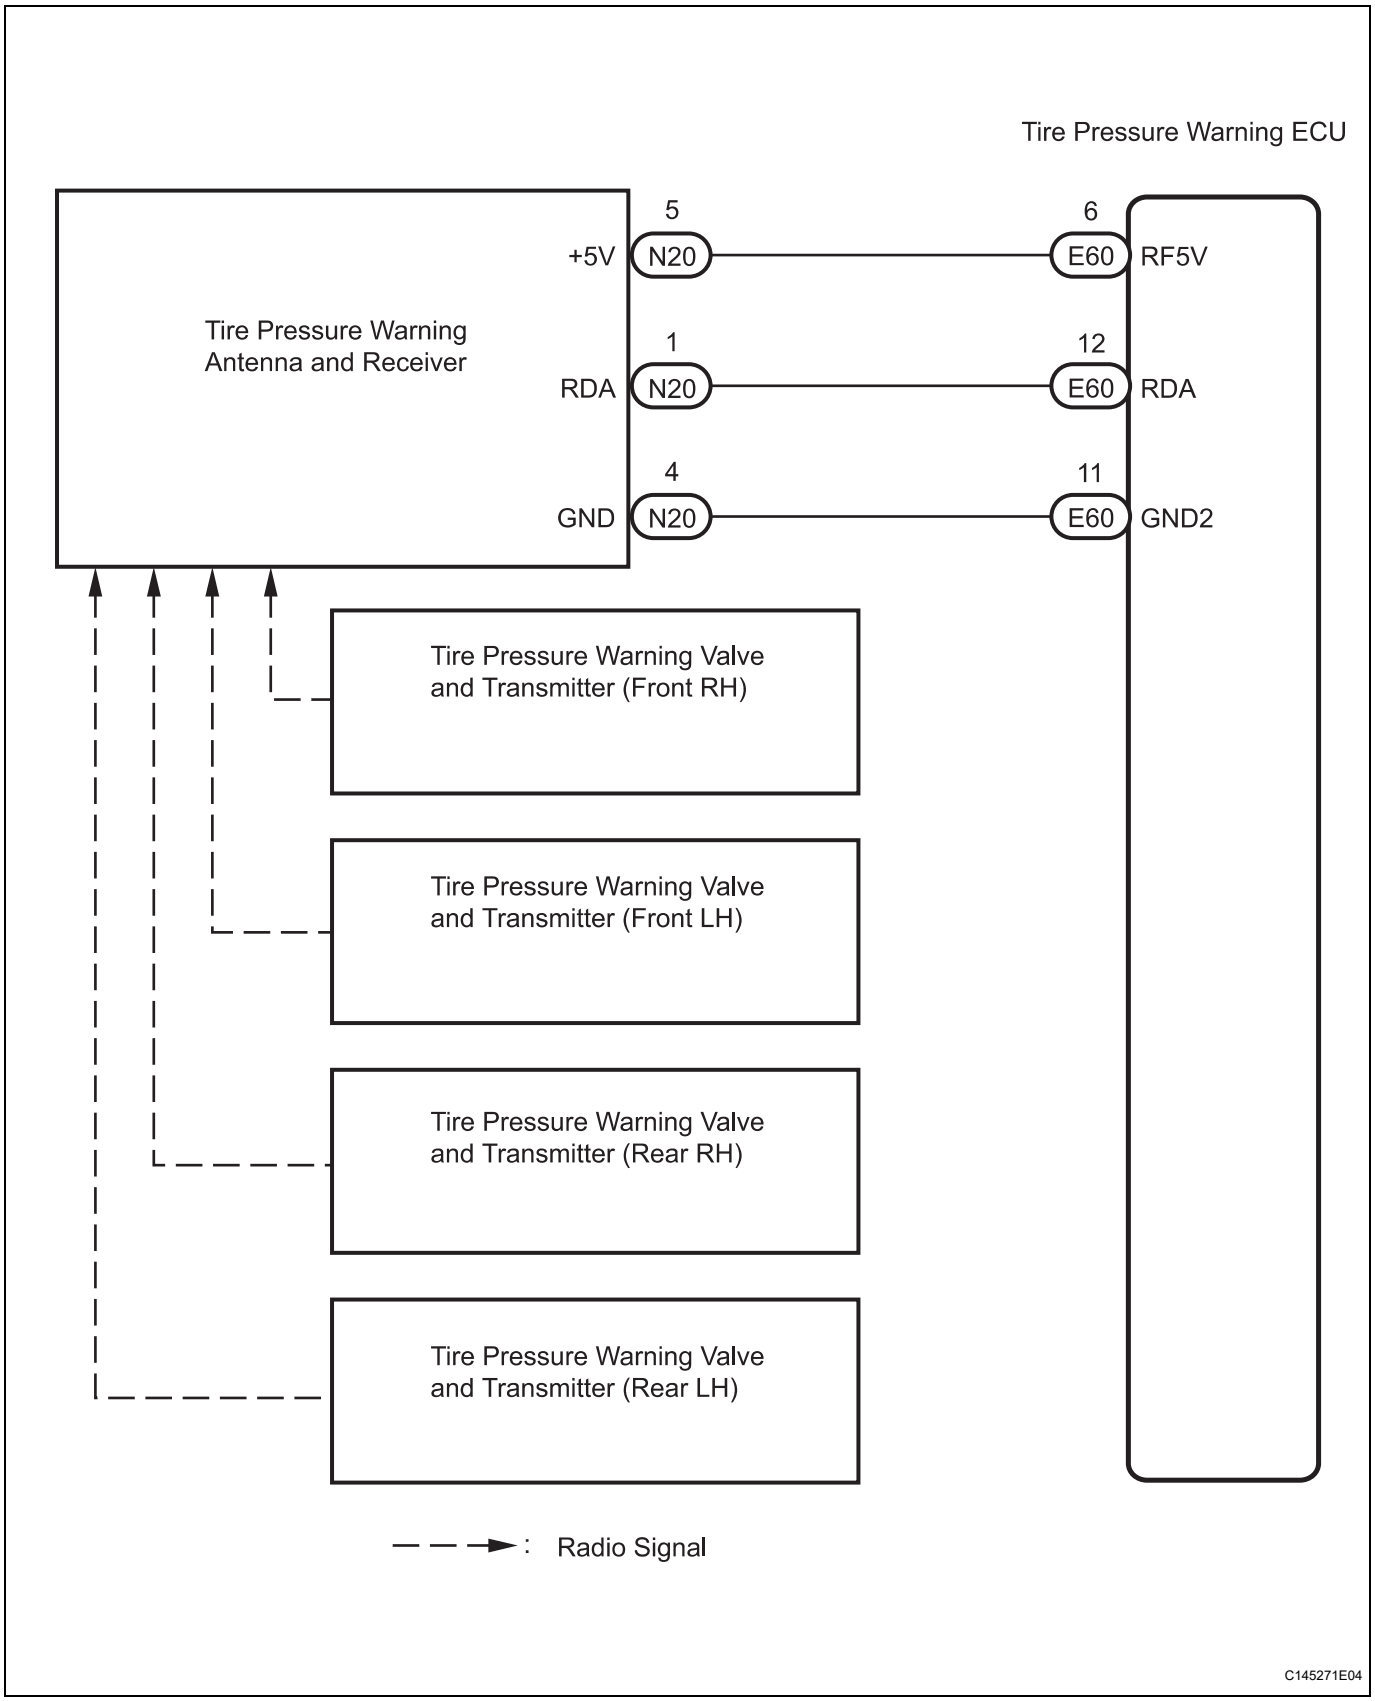
DTC	C2177/77	Initialization not Completed

DESCRIPTION

Initialization is necessary after replacing any of the ECU, tires with different tire pressure, or tire pressure warning valve and transmitter, after rotating the tires or when a new vehicle is delivered.

DTC No.	DTC Detection Condition	Trouble Area
C2177/77	Initialization is not completed after vehicle speed of 5 mph (8 km/h) or more continues for 20 minutes or more (total).	• Tire pressure warning valve and transmitter • Tire pressure warning ECU • Tire pressure warning antenna and receiver • Wire harness or connector

WIRING DIAGRAM



TW

INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the old ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-17) after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.**

1	CHECK FREQUENCY RECEIVING CONDITION

(a) Check if the vehicle is not located in areas such as described below:

(1) Facilities or devices that use similar radio frequencies are located in the vicinity of the vehicle.

HINT:

If the vehicle is located in areas described above, the tire pressure warning light may come on only in a particular area.

(2) Devices using similar radio frequencies are not located in the vicinity of the vehicle.

OK:

Facilities, or devices that use similar radio frequencies are not located in the vicinity of the vehicle.

HINT:

Radio frequency may be interrupted due to surroundings or devices installed by user.

NG → **CHECK IF ANY DEVICE IS INSTALLED BY USER**

OK

2	IDENTIFY TRANSMITTER CORRESPONDING TO DTC

(a) Set the tire pressure to the appropriate specified values.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi	Rear kPa (kgf/cm^2, psi)
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)

(b) Select "TIREPRESS" by following the prompts displayed on the intelligent tester.

TIRE PRESSURE:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TIREPRESS1	ID1 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS2	ID2 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-
TIREPRESS3	ID3 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
TIREPRESS4	ID4 tire inflation pressure/ min.: 0 kPa (0 kgf/cm^2, 0 psi), max.: 637.5 kPa (6.48 kgf/cm^2, 92.2 psi)	Actual tire inflation pressure	-

(c) Rapidly reduce the tire pressure for each wheel at least 40 kPa (0.41 kg/cm^2, 5.8 psi) within 30 seconds.

(d) Check the DATA LIST.

NOTICE:

- **It takes about 1 minute or more to display the updated tire pressure data.**
- **When no "TIREPRESS" data has changed, reset the tire pressure to the appropriate specified value and rotate the tire 90 to 270 degrees. Then rapidly release the tire pressure and recheck it.**
- **Record the transmitter ID of which "TIREPRESS" data corresponds to each tire.**

(e) After confirming that one of "TIREPRESS" data for one tire (ID1 to ID4) has changed, repeat this procedure one by one. Identify the transmitter that corresponds to DTC.

Result

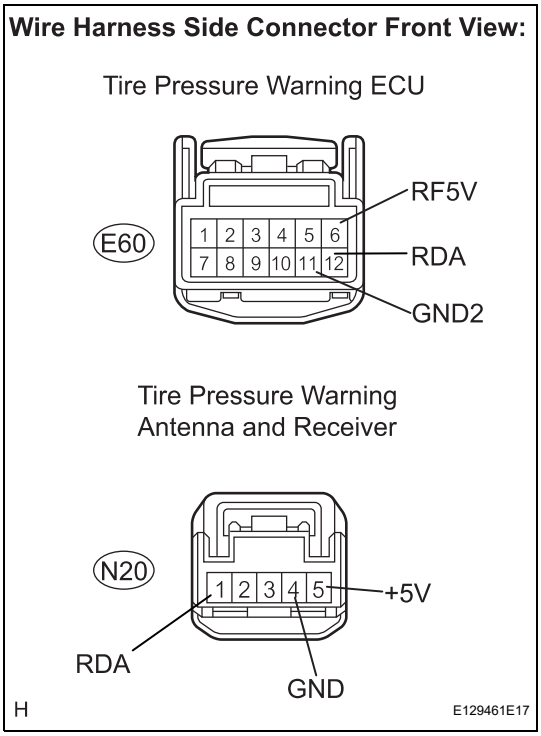
Condition	Proceed to
One or more of transmitters	A
All normal	B
All abnormal	C

A	Go to step 4
B	END

C

3	CHECK HARNESS AND CONNECTOR (ECU - RECEIVER)

Wire Harness Side Connector Front View:



(a) disconnect the E60 ECU connector.
(b) Disconnect the N20 receiver connector.
(c) Measure the resistance according to the value(s) in the table below.

Tester Connection	Specified Condition
E60-12 (RDA) - N20-1 (RDA)	Below 1 Ω
E60-11 (GND2) - N20-4 (GND)	
E60-6 (RF5V) - N20-5 (+5V)	

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

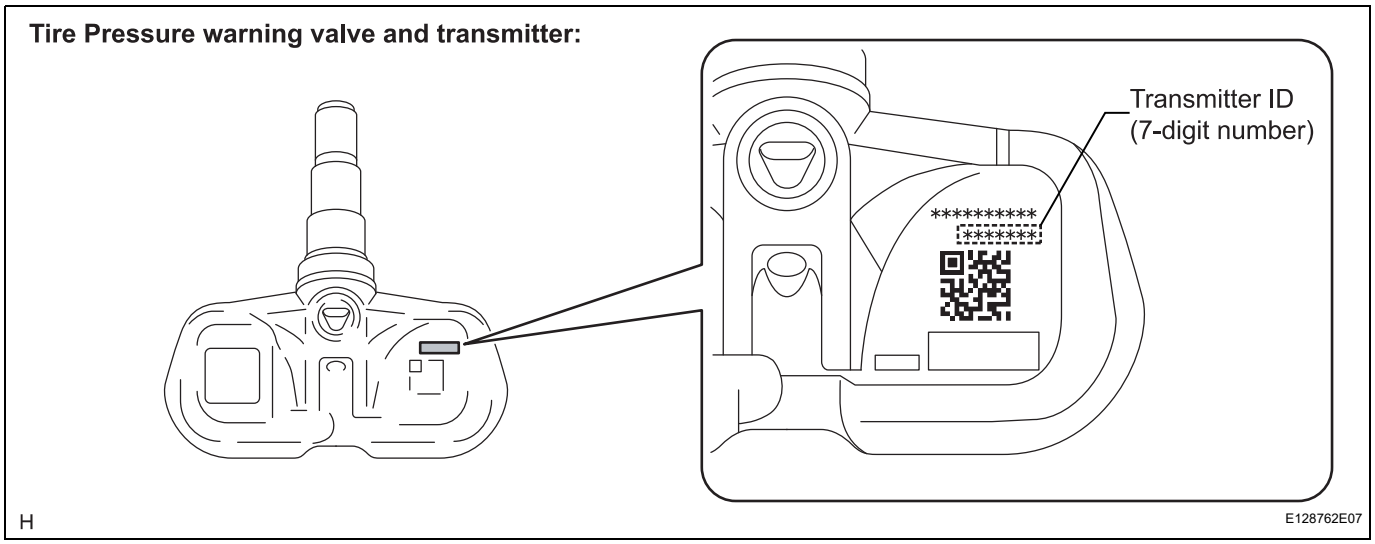
4	INSPECT TIRE PRESSURE WARNING VALVE AND TRANSMITTER

(a) Select REGIT ID CODE by following the prompts displayed on the intelligent tester.

TIRE PRESSURE:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
REGIT ID1 CODE	Registered ID1 code/ min.: 0, max.: FFFFFF*	The ID No. registered in the transmitter ID1 is displayed	*: Displayed only when the ID No. is not registered.
REGIT ID2 CODE	Registered ID2 code/ min.: 0, max.: FFFFFF*	The ID No. registered in the transmitter ID2 is displayed	*: Displayed only when the ID No. is not registered.
REGIT ID3 CODE	Registered ID3 code/ min.: 0, max.: FFFFFF*	The ID No. registered in the transmitter ID3 is displayed	*: Displayed only when the ID No. is not registered.
REGIT ID4 CODE	Registered ID4 code/ min.: 0, max.: FFFFFF*	The ID No. registered in the transmitter ID4 is displayed	*: Displayed only when the ID No. is not registered.

(b) Check the ID number on the identified transmitter by removing it from the tire and wheel.



(c) Confirm that the ID number on the transmitter and recorded transmitter ID match.

Result

Result	Proceed to
Match	A
Do not match	B

B → **Go to step 6**

A

5 REPLACE TIRE PRESSURE WARNING VALVE AND TRANSMITTER

HINT:
(See page TW-75)

NEXT

6 REGISTRATION OF TRANSMITTER ID

(a) Perform registration (See page TW-14).
(b) Set the tire pressure to the appropriate specified values.

Cold tire inflation pressure

Tire size	Front kPa (kgf/cm^2, psi)	Rear kPa (kgf/cm^2, psi)
P215/60R16 94V	220 (2.2, 32)	220 (2.2, 32)

NEXT

7 PERFORM INITIALIZATION

(a) Perform initialization (See page TW-17).

NEXT

TW

8	READ VALUE OF DATA LIST

(a) Turn the power switch off, and then turn it on (IG).
(b) Select "TIREPRESS" by following the prompts displayed on the intelligent tester.
HINT:
It may take up to 1 minute or more to display the tire pressure data.

Result

Condition	Proceed to
All tire pressure readings are equal to specified values.	A
Tire pressure values are not displayed.	B

A → END

B

9	REPLACE TIRE PRESSURE WARNING ANTENNA AND RECEIVER

(a) Replace the tire pressure warning antenna and receiver (See page TW-72).

NEXT

10	READ VALUE OF DATA LIST

(a) Turn the engine switch off, and then turn it on (IG).
(b) Select "TIREPRESS" by following the prompts displayed on the intelligent tester.
HINT:
It may take up to 1 minute or more to display the tire pressure data.

Result

Condition	Proceed to
All tire pressure readings are equal to specified values.	A
Tire pressure values are not displayed	B

B → **REPLACE TIRE PRESSURE WARNING ECU (See page TW-79)**

A

END

DTC	C2191/91	Vehicle Speed Signal Error (Test Mode DTC)

DESCRIPTION

The tire pressure warning ECU receives a speed signal from the combination meter. This DTC is stored upon entering test mode, and cleared when a vehicle speed signal of 12 mph (20 km/h) is detected for 3 seconds or more. This DTC is output only in test mode.

DTC No.	DTC Detecting Condition	Trouble Area
C2191/91	Speed sensor circuit malfunction	• Vehicle speed sensor • Tire pressure warning ECU • Combination meter • Wire harness or connector

WIRING DIAGRAM

INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-17) after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.**

1	READ VALUE ON INTELLIGENT TESTER

(a) Connect the intelligent tester to DLC3.
(b) Turn the power switch on (IG), and turn the intelligent tester on.
(c) Select the item below in the Data List, and read the value displayed on the intelligent tester.

HINT:
Enter the following menus: DIAGNOSIS / OBD/MOBD / METER / DATA LIST.

METER

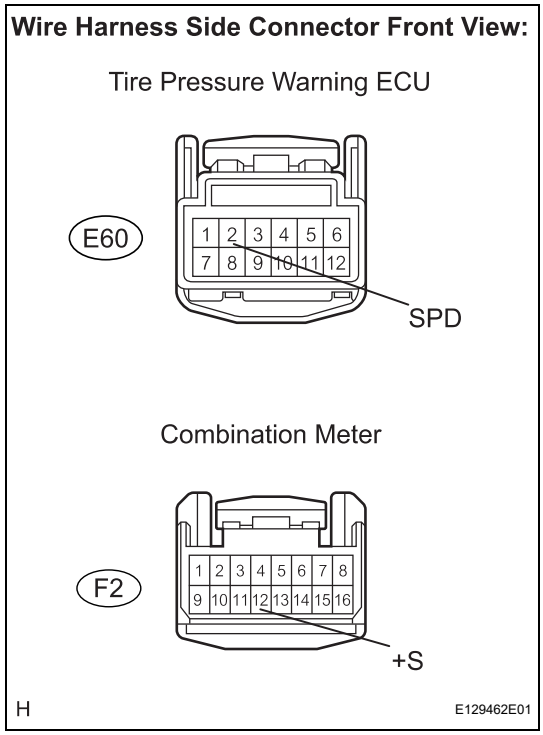
Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
SPEED METER	Vehicle speed/Min.: 0 km/h (0 mph), Max.: 255 km/h (158 mph)	Almost same as actual vehicle speed	-

(d) Check that the values indicated on the tester and on the combination meter are the same.
OK:
Vehicle speed indicated on the intelligent tester indicates the actual speed.

NG → **GO TO METER / GAUGE SYSTEM (See page ME-14)**

OK

2 CHECK HARNESS AND CONNECTOR (ECU - COMBINATION METER)



(a) Disconnect the E60 ECU connector.
(b) Disconnect the F2 meter connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
E60-2 (SPD) - F2-12 (+S)	Below 1 Ω
E60-2 (SPD) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE TIRE PRESSURE WARNING ECU (See page TW-79)

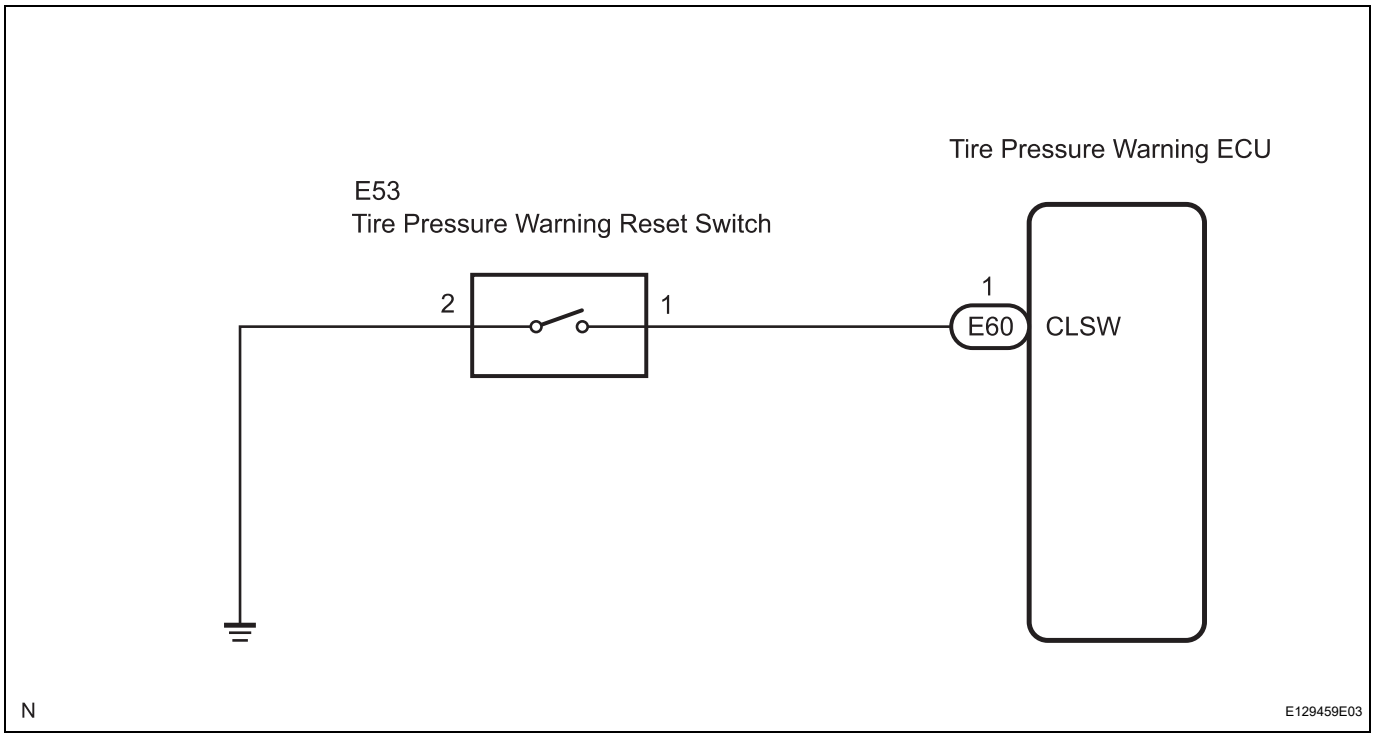
TW

Tire Pressure Warning Reset Switch Circuit

DESCRIPTION

Receiving a signal from the tire pressure warning reset switch, the tire pressure warning ECU and receiver indicates the initialization of the tire pressure warning system.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-17)after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU have been replaced.**

1	CHECK TIRE PRESSURE WARNING RESET SWITCH FUNCTION

TW

(a) Perform the tire pressure warning reset switch test in TEST MODE PROCEDURE (See page TW-19).

OK:

Reset switch ON:
Tire pressure warning light comes on.
Reset switch OFF:
Tire pressure warning light blinks.

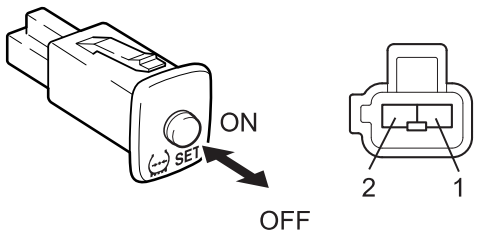
NG → **Go to step 2**

OK

END

2 INSPECT TIRE PRESSURE WARNING RESET SWITCH

Tire Pressure Warning Reset Switch:



(a) Disconnect the tire pressure warning reset switch connector.

(b) Measure the resistance between terminals 1 and 2 of the tire pressure warning reset switch when the tire pressure warning switch is ON and OFF.

Standard resistance

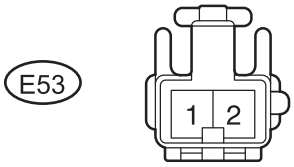
Switch Condition	Specified Condition
ON	Below 1 Ω
OFF	10 kΩ or higher

NG → **REPLACE TIRE PRESSURE WARNING RESET SWITCH (See page TW-82)**

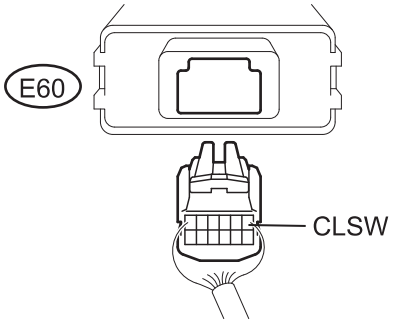
OK

3 CHECK HARNESS AND CONNECTOR (TIRE PRESSURE WARNING RESET SW - TIRE PRESSURE WARNING ECU)

Tire Pressure Warning Reset Switch: (harness side connector)



Tire Pressure Warning ECU:



(a) Disconnect the tire pressure warning reset switch E53 connector and tire pressure warning ECU E60 connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Switch Condition	Specified Condition
E60-1 (CLSW) - E53-1	Below 1 Ω
E60-1 (CLSW) - Body ground	10 kΩ or higher
E53-2 - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE TIRE PRESSURE WARNING ECU (See page TW-79)

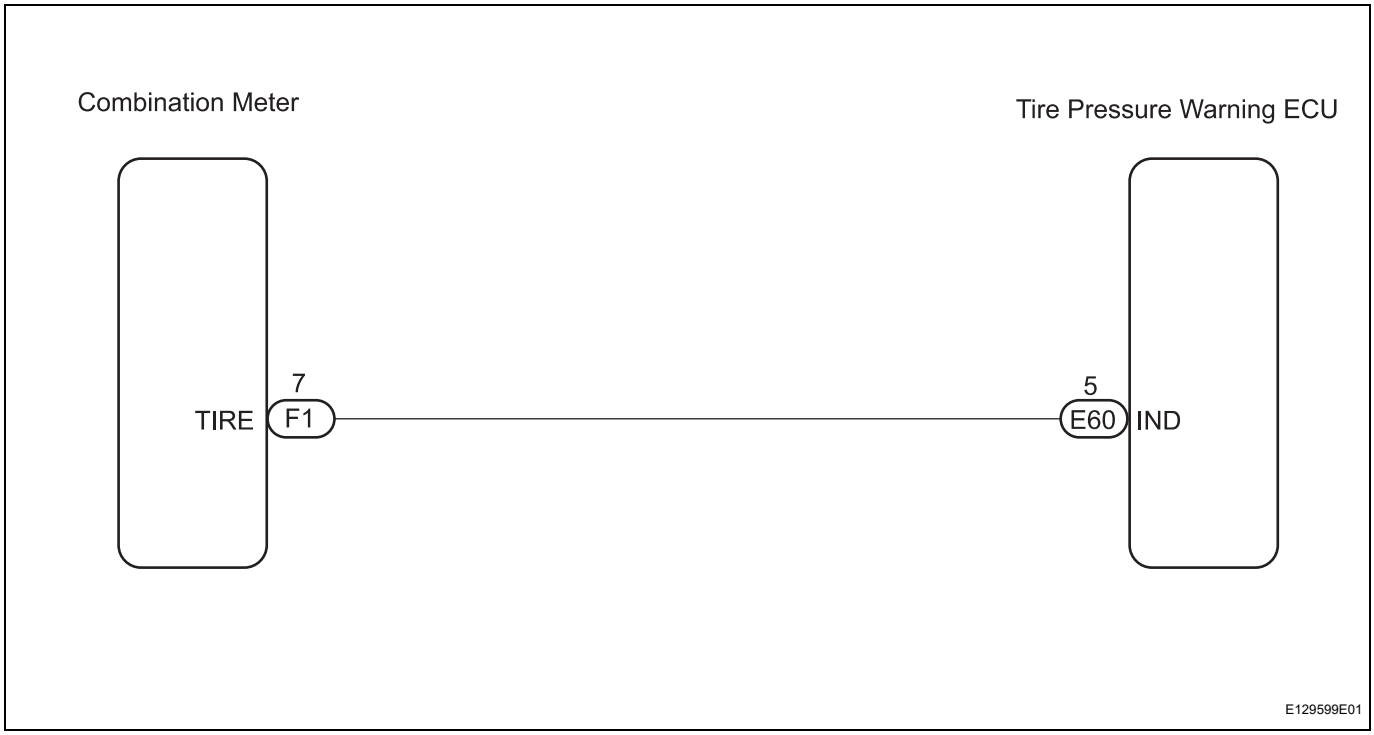
TW

Tire Pressure Warning Light Circuit

DESCRIPTION

If the ECU detects trouble, the tire pressure warning light blinks (comes on after blinking for 1 minute) and tire pressure monitor is cancelled at the same time. At this time, the ECU records a DTC in the memory. Terminals TC and CG of DLC3 to blink the tire pressure warning light and output the DTC.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

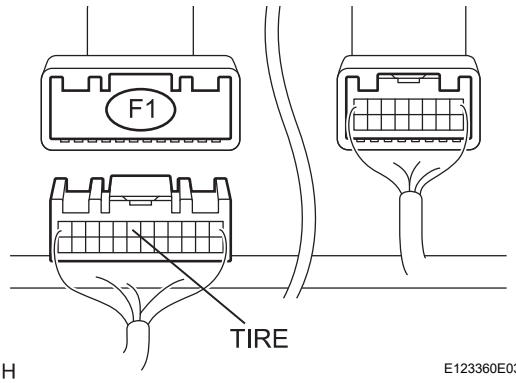
- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-17)after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU has been replaced.**

HINT:

This procedure must be performed according to PROBLEM SYMPTOMS TABLE.

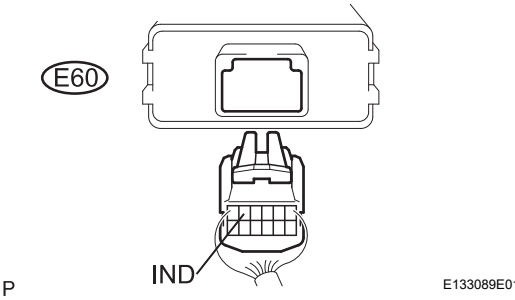
1	CHECK HARNESS AND CONNECTOR (COMBINATION METER - TIRE PRESSURE WARNING ECU)

Combination Meter Assembly Wire Harness View:



(a) Disconnect the F1 combination meter connector.

Tire Pressure Warning ECU



(b) Disconnect the E60 tire pressure warning ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

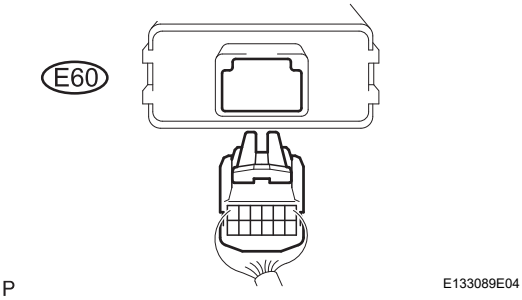
Tester Connection	Specified Condition
F1-7 (TIRE) - E60-5 (IND)	Below 1 Ω
F1-7 (TIRE) - Body ground	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT COMBINATION METER

Tire Pressure Warning ECU



(a) Disconnect the connector from the tire pressure warning ECU.

(b) Turn the power switch on (IG), check the condition of the tire pressure warning light illumination.

Result

Condition	Proceed to
Illuminates	A
Does not illuminate	B

B → **REPLACE COMBINATION METER (See page ME-64)**

A

REPLACE TIRE PRESSURE WARNING ECU (See page TW-79)

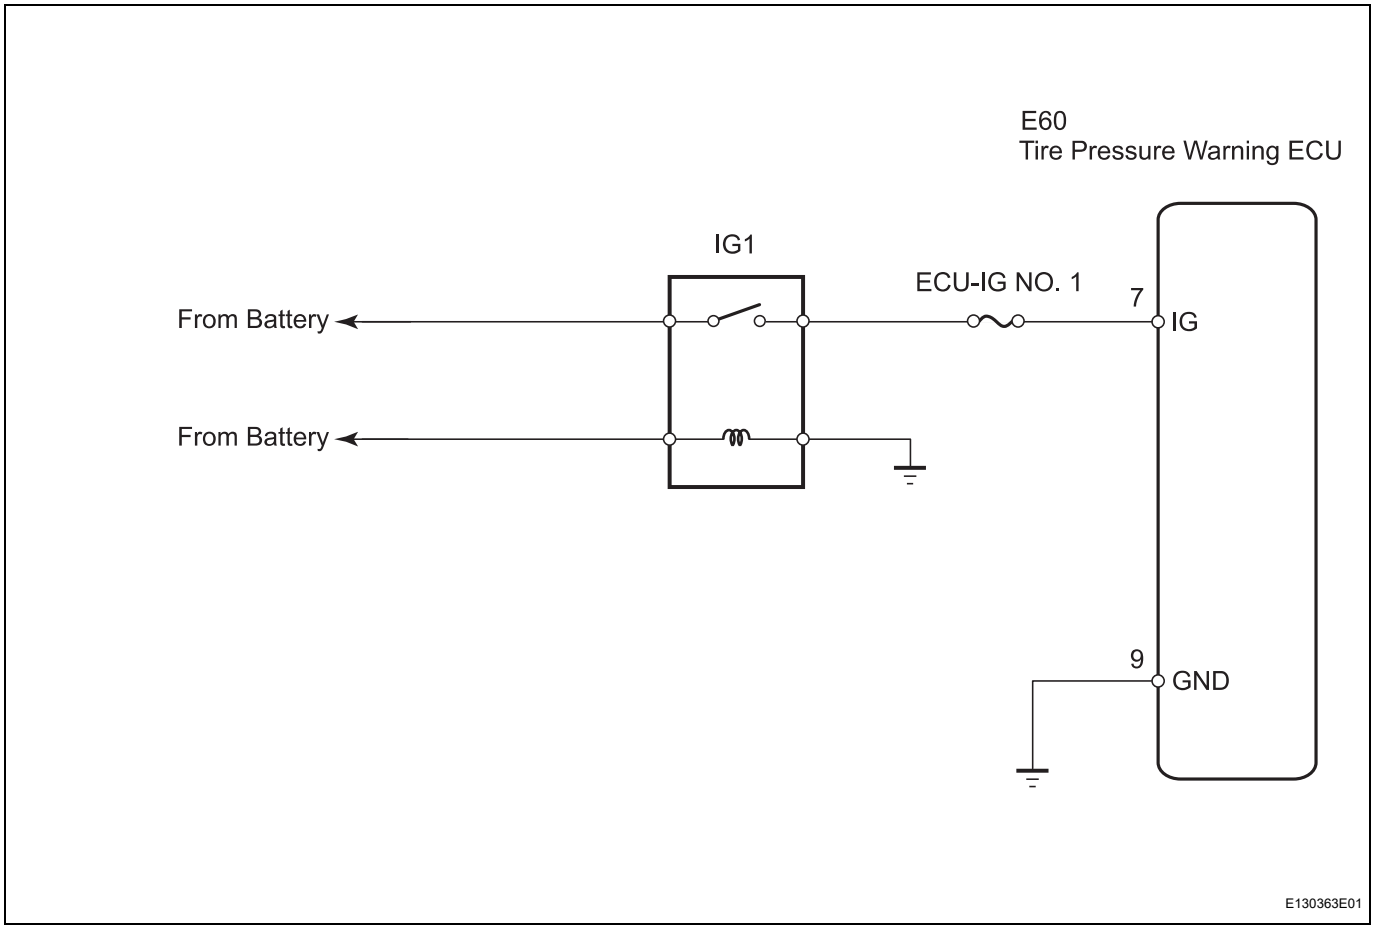
TW

ECU Power Source Circuit

DESCRIPTION

This is the power source for the tire pressure warning ECU.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write the m down before removal.**
- **It is necessary to perform initialization (See page TW-17) after registration (See page TW-14)of the transmitter IDs into the tire pressure warning ECU after the ECU have been replaced.**

TW

1	INSPECT FUSE (ECU-IG NO. 1)

(a) Remove the ECU-IG NO. 1 fuse from the instrument panel junction block.

(b) Measure the resistance of the fuse.

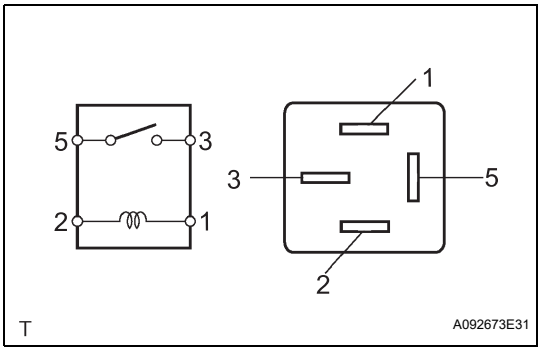
Standard resistance:

Below 1 Ω

NG	REPLACE FUSE

OK

2 INSPECT IG1 RELAY



(a) Remove the IG1 relay from the instrument panel junction block.
(b) Measure the resistance according to the value(s) in the table below.

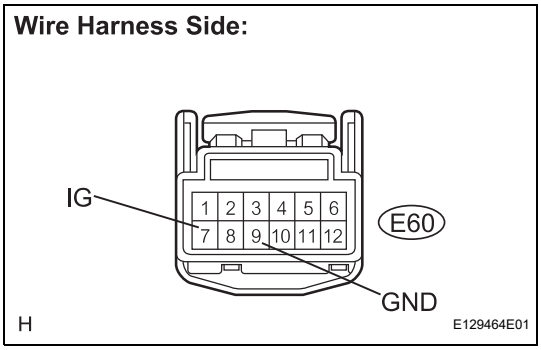
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE IG1 RELAY**

OK

3 CHECK HARNESS AND CONNECTOR (ECU - BATTERY AND BODY GROUND)



(a) Disconnect the E60 ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Switch Condition	Specified Condition
E60-7 (IG) - Body ground	Power switch on (IG)	10 to 14 V
	Power switch off	Below 1 V

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E60-9 (GND) - Body ground	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

TW

OK

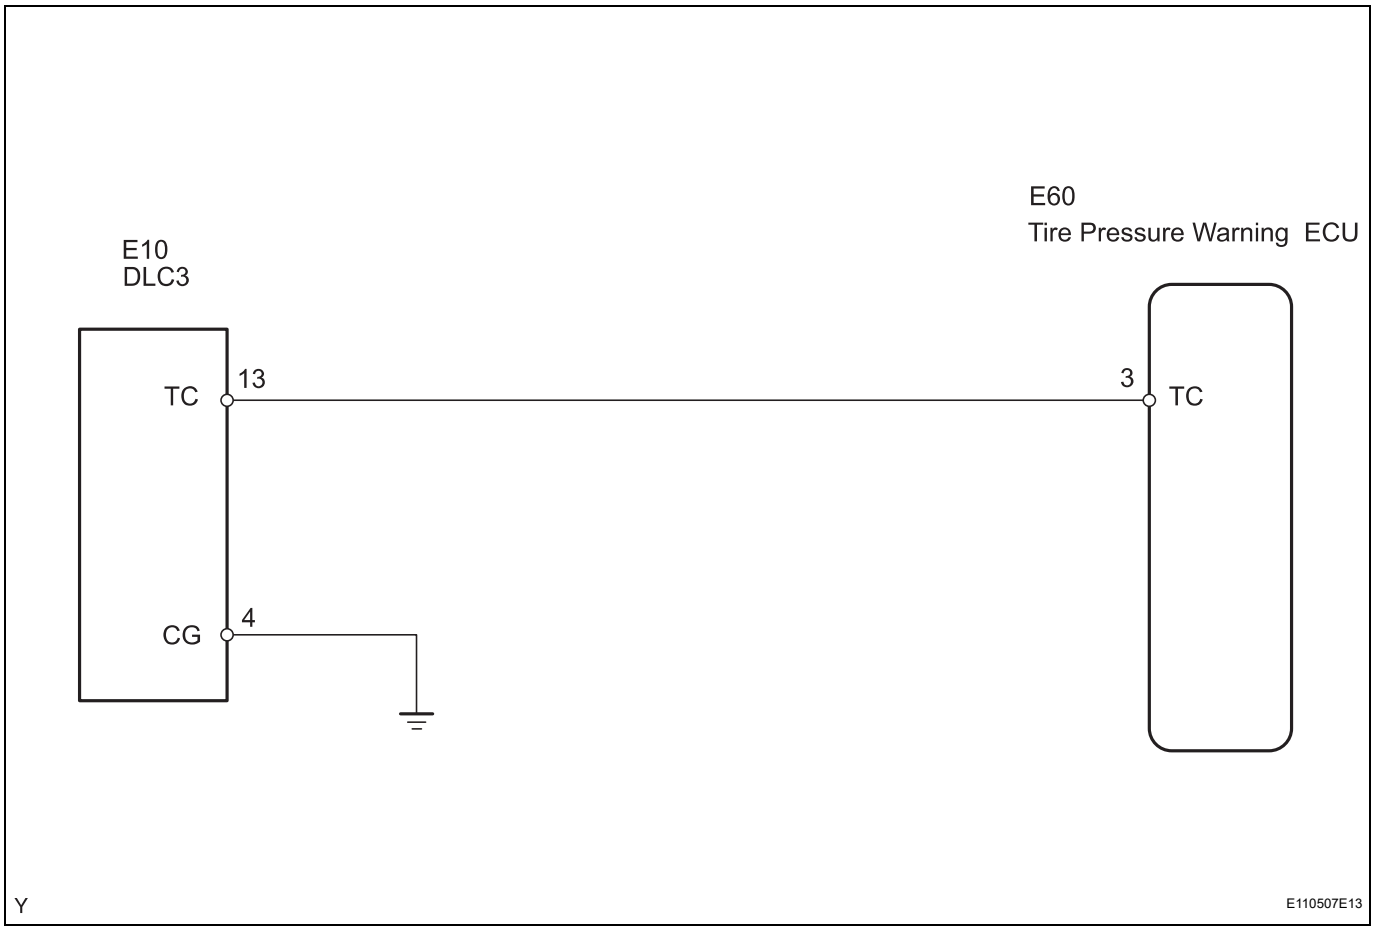
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

TC and CG Terminal Circuit

DESCRIPTION

DTC output mode is set by connecting terminals 13 (TC) and 4 (CG) of the DLC3. The DTCs are indicated by the blinking of the tire pressure warning light.

WIRING DIAGRAM



HINT:
When each warning light blinks continuously, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in an ECU connected to this circuit may have occurred.

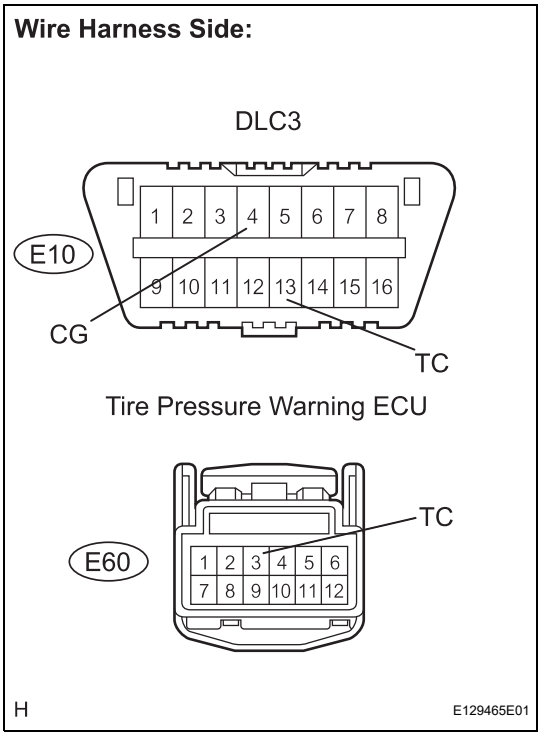
TW

INSPECTION PROCEDURE

NOTICE:

- **When replacing the tire pressure warning ECU, read the IDs stored in the ECU using the intelligent tester and write them down before removal.**
- **It is necessary to perform initialization (See page TW-17) after registration (See page TW-14) of the transmitter IDs into the tire pressure warning ECU after the ECU and/or valve and transmitter has been replaced.**

1	CHECK HARNESS AND CONNECTOR (DLC3 - TIRE PRESSURE WARNING ECU)



(a) Disconnect the E60 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E60-3 (TC) - E10-13 (TC)	Below 1 Ω
E10-4 (CG) - Body ground	

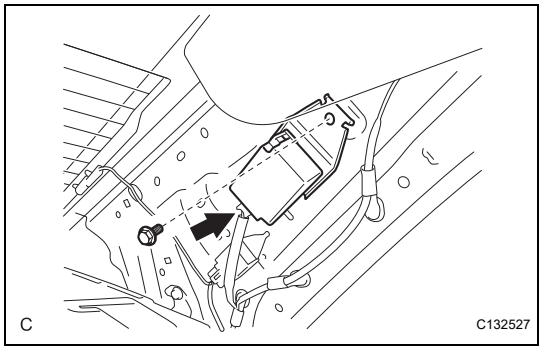
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

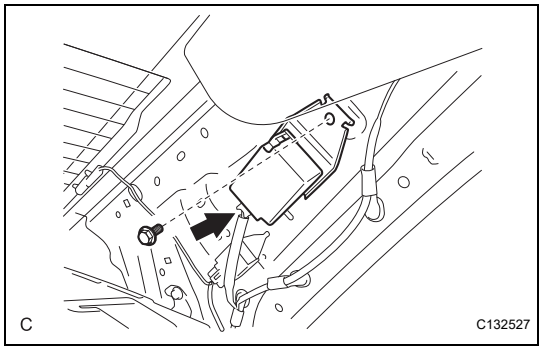
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)**
3. **REMOVE REAR SIDE SEAT BACK ASSEMBLY LH (See page SE-45)**
4. **REMOVE INNER ROOF SIDE GARNISH LH (See page IR-15)**
5. **REMOVE TIRE PRESSURE WARNING RECEIVER ASSEMBLY**
   (a) Remove the bolt.
   (b) Disconnect the connector and remove the tire pressure warning receiver assembly.





INSTALLATION

1. **INSTALL TIRE PRESSURE WARNING RECEIVER ASSEMBLY**
   (a) Connect the connector to the tire pressure warning receiver assembly.
   (b) Install the tire pressure warning receiver assembly with the bolt.
   Torque: 7.5 N*m (77 kgf*cm, 66 in.*lbf)
2. **INSTALL INNER ROOF SIDE GARNISH LH (See page IR-39)**
3. **INSTALL REAR SIDE SEAT BACK ASSEMBLY LH (See page SE-54)**
4. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**
5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
6. **PERFORM INITIALIZATION**
   NOTICE:
   Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43).
7. **INSPECT TIRE PRESSURE WARNING SYSTEM**
   HINT:
   (See page TW-19)

FREEZE FRAME DATA

1. FREEZE FRAME DATA/INFORMATION

(a) Whenever an ABS DTC is detected, the skid control ECU stores the current vehicle (sensor) state as Freeze Frame Data.

(b) The skid control ECU stores the number of times (maximum: 31) the power switch has been turned from off to on (IG) since the last time the ABS was activated.

(c) For DTCs memorized in the skid control ECU, information (INF) codes that are contained in the Freeze Frame Data can be displayed on the intelligent tester.
HINT:
- However, if the vehicle is stopped or at a low speed (7 km/h (4.3 mph) or less), or if a DTC is detected, the skid control ECU will stop counting the number.
- Freeze Frame Data at the time the ABS operates:
  The skid control ECU stores and updates data whenever the ABS system operates.
  When the ECU stores data at the time a DTC is detected, the data stored during ABS operation is erased.
- Freeze Frame Data at the time a DTC is detected:
  When the skid control ECU stores data at the time a DTC is detected, no updates will be performed until the data is cleared.

2. CHECK FREEZE FRAME DATA AND INFORMATION

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG).

(c) On the tester display, select the Freeze Frame Data.

(d) Read the Freeze Frame Data recorded when the DTC was set.

(e) Read the information.

(1) Select the item that has an information (INF) code from the Freeze Frame Data screen.

BC

Tester Display	Measurement Item	Reference Value
VEHICLE SPD	Vehicle speed reading	Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)
STOP LAMP SW	Stop light switch signal	Stop light switch ON: ON, OFF: OFF
#IG ON	Number of operations of power switch on (IG) after storing Freeze Frame Data	0 to 31
MAS CYL PRESS 1	Master cylinder pressure sensor reading	Brake pedal released: 0.3 to 0.9 V
M/C PRESS GRADE	Master cylinder pressure sensor change	Min.: -30 MPa/s, Max.: 225 MPa/s
YAW RATE	Yaw rate sensor reading	Min.: -128 deg/s, Max.: 127 deg/s
STEERING SEN	Steering angle sensor reading	Left turn: Increase Right turn: Decrease
FORWARD&REA G	Forward and backward G	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
BUZZER	Skid control buzzer signal	Skid control buzzer ON: ON, OFF: OFF
ACCELERATOR %	Accelerator opening angle %	Min.: 0 %, Max.: 128 %

Tester Display	Measurement Item	Reference Value
PARKING BRAKE SW	Parking brake switch signal	Parking brake switch ON: ON, OFF: OFF
FR WHEEL SPD	FR wheel speed	Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)
FL WHEEL SPD	FL wheel speed	Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)
RR WHEEL SPD	RR wheel speed	Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)
RL WHEEL SPD	RL wheel speed	Min.: 0 km/h (0 mph), Max.: 326.4 km/h (202 mph)
LATERAL G	Lateral G	Min.: -25.11 m/s^2, Max.: 24.91 m/s^2
LEVER POSITION	Shift lever position information	FAIL 1st 2nd 3rd 4th 5th 6th/B D/M P, N R
OPERATED SYSTEM	Operated system status	ABS activated: ABS VSC activated: VSC TRAC activated: TRAC BA activated: BA Fail safe mode activated: FAIL No system activated: NON System prohibited: SYS
FREEZE TIME	Elapsed time after freeze trigger	Min.: 0 ms, Max.: 500 ms
TROUBLE CODE	Freeze frame DTC	Displays output DTC
PEDAL STROKE	Stroke sensor reading	Min.: 0 V, Max.: 5 V
PEDAL STROKE 2	Stroke sensor 2 reading	Min.: 0 V, Max.: 5 V
FR W/C SENS	FR wheel cylinder pressure sensor reading	Min.: 0 V, Max.: 5 V
FL W/C SENS	FL wheel cylinder pressure sensor reading	Min.: 0 V, Max.: 5 V
RR W/C SENS	RR wheel cylinder pressure sensor reading	Min.: 0 V, Max.: 5 V
RL W/C SENS	RL wheel cylinder pressure sensor reading	Min.: 0 V, Max.: 5 V
ACC PRESS SENS	Accumulator pressure sensor reading	Min.: 0 V, Max.: 5 V
MAS CYL PRESS 2	Master cylinder pressure sensor reading	Brake pedal released: 0.3 to 0.9 V
MTR VOLTAGE	Motor relay voltage value	Min.: 0 V, Max.: 20 V
SLAFR CUR	Linear solenoid (SLAFR) current	Min.: 0 A, Max.: 1.5 A
SLAFL CUR	Linear solenoid (SLAFL) current	Min.: 0 A, Max.: 1.5 A
SLARR CUR	Linear solenoid (SLARR) current	Min.: 0 A, Max.: 1.5 A
SLARL CUR	Linear solenoid (SLARL) current	Min.: 0 A, Max.: 1.5 A
SLRFR CUR	Linear solenoid (SLRFR) current	Min.: 0 A, Max.: 1.5 A
SLRFL CUR	Linear solenoid (SLRFL) current	Min.: 0 A, Max.: 1.5 A
SLRRR CUR	Linear solenoid (SLRRR) current	Min.: 0 A, Max.: 1.5 A
SLRRL CUR	Linear solenoid (SLRRL) current	Min.: 0 A, Max.: 1.5 A
FR TARGET OIL	FR wheel target oil pressure reading	Min.: 0 MPa, Max.: 20 MPa
FL TARGET OIL	FL wheel target oil pressure reading	Min.: 0 MPa, Max.: 20 MPa
RR TARGET OIL	RR wheel target oil pressure reading	Min.: 0 MPa, Max.: 20 MPa
RL TARGET OIL	RL wheel target oil pressure reading	Min.: 0 MPa, Max.: 20 MPa
DETAILED CODE	Detailed code for Freeze Frame DTC	Displays to output INF code
IG1 VOLTAGE	IG1 voltage value	Min.: 0 V, Max.: 20 V
IG2 VOLTAGE	IG2 voltage value	Min.: 0 V, Max.: 20 V
BS1 VOLTAGE	BS1 voltage value	Min.: 0 V, Max.: 20 V
BS2 VOLTAGE	BS2 voltage value	Min.: 0 V, Max.: 20 V

Tester Display	Measurement Item	Reference Value
VM1 VOLTAGE	VM1 voltage value	Min.: 0 V, Max.: 20 V
VM2 VOLTAGE	VM2 voltage value	Min.: 0 V, Max.: 20 V
+B1 VOLTAGE	+B1 voltage value	Min.: 0 V, Max.: 20 V
+B2 VOLTAGE	+B2 voltage value	Min.: 0 V, Max.: 20 V
ELAPSED TIME	Elapsed time after power switch on (IG)	Min.: 0 second, Max.: 100,661.76 seconds
CAPA MODE	Capacitor mode	Capacitor mode ON: ON, OFF: OFF
SCSS	Stroke simulator solenoid (SCSS) signal	Stroke simulator solenoid (SCSS) ON: ON, OFF: OFF
SMC1	Master cut solenoid (SMC1) signal	Master cut solenoid (SMC1) ON: ON, OFF: OFF
SMC2	Master cut solenoid (SMC2) signal	Master cut solenoid (SMC2) ON: ON, OFF: OFF
ECB* RELAY	ABS main relay signal	ABS main relay ON: ON, OFF: OFF
ECB* RELAY 2	ABS main relay 2 signal	ABS main relay 2 ON: ON, OFF: OFF
ECB* MTR RELAY	ABS motor relay signal	ABS motor relay ON: ON, OFF: OFF
ECB* MTR RELAY 2	ABS motor relay 2 signal	ABS motor relay 2 ON: ON, OFF: OFF
RESERVOIR SW	Brake fluid level warning switch signal	Brake fluid level warning switch ON: ON, OFF: OFF

*: Electronically Controlled Brake

3. CLEAR FREEZE FRAME DATA AND INFORMATION

NOTICE:

Clearing the DTC will also clear the Freeze Frame Data and information (INF) code.

(a) Connect the intelligent tester to the DLC3.

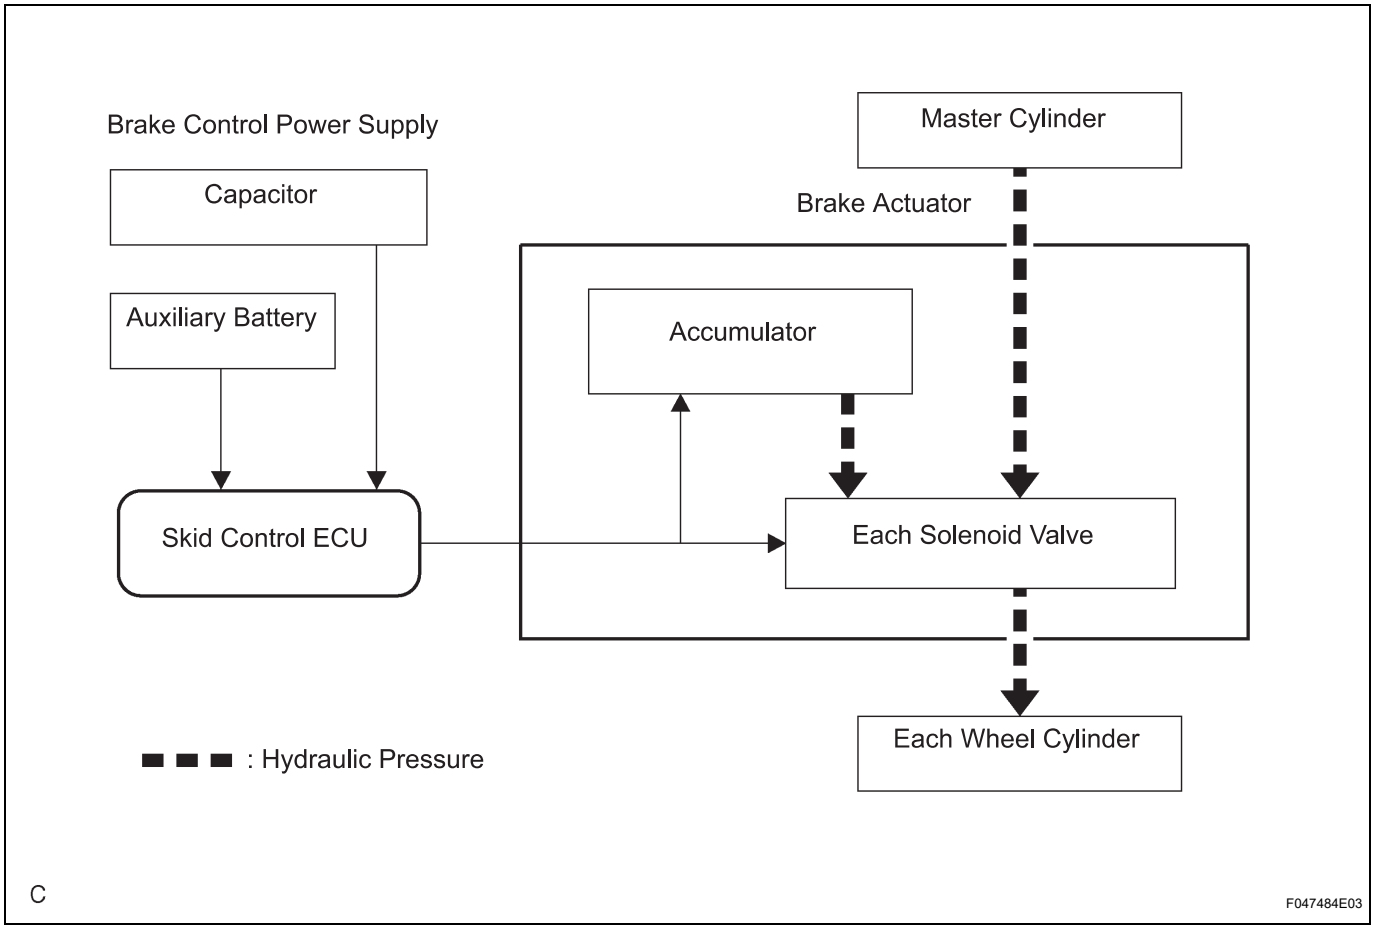
(b) Turn the power switch on (IG).

(c) Clear the DTC and Freeze Frame Data.

HINT:

Refer to the intelligent tester operator's manual for further details.

FAIL-SAFE CHART



1. FAIL-SAFE FUNCTION

(a) If a malfunction occurs in the skid control ECU, sensor signal, or actuator, rest normally operating parts will maintain brake control.

(b) When trouble occurs in the brake control system, the skid control ECU turns the warning light on, displays a DTC corresponding to the malfunctioning systems on the multi information display, and prohibits ABS, BA, and VSC operations.

ABS, EBD and BA system:

Malfunction Area	Control Method
ABS system	ABS, BA, TRAC and VSC control prohibited
BA system	ABS, BA, TRAC and VSC control prohibited
EBD system	ABS, EBD, BA, TRAC and VSC control prohibited

HINT:
A malfunction in either the ABS or BA system will result in an identical operation, with ABS, BA, TRAC and VSC system control prohibited.

TRAC and VSC system:

Malfunction Area	Control Method
Hybrid control system (TRAC and VSC systems)	Before control: Disables control During control: Uses only the brakes to effect control
Brake control system (TRAC and VSC systems)	Before control: Disables control During control: Disables control (by gradually ending control)

HINT:
As for the TRAC and VSC systems, different systems prohibit different controls depending on a malfunctioning part.

(c) The skid control ECU prevents operation of a malfunctioning hydraulic pressure system and continues brake control with the normal hydraulic pressure system.
HINT:
- If control of the Electronically Controlled Brake for any of the 4 wheels is prohibited, that wheel loses brake booster function or braking ability.
- If one of the 4 wheels loses brake booster function, the feeling when depressing the brake pedal changes as the stroke simulator (pedal reactive force generating solenoid) operation will be prohibited.
- If control of the Electronically Controlled Brake for all wheels is prohibited, the 2 front wheels will lose brake booster function.

(d) If the brake control is stopped under such conditions as when trouble occurs with a hydraulic pressure source, the pressure generated in the master cylinder by the driver is applied to the wheel cylinder to ensure braking force.

(e) A power back-up unit is built in as an additional power source to supply stable power to the system.

(f) If the regenerative brake alone does not operate under such conditions as a communication error with the HV control ECU, control is switched so that all braking force is generated with the hydraulic pressure brake.

Malfunction Area	Generated Braking Force
Skid control ECU	Normally operating parts will control brake and generate braking force
Hydraulic pressure controlling parts	Normally operating parts will control brake and generate braking force
Hydraulic pressure source	Braking force generated by the driver

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

With the intelligent tester connected to the DLC3 and the power switch on (IG), the Electronically Controlled Brake, ABS, and VSC Data List can be displayed. Follow the prompts on the tester screen to access the Data List.

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ECB* MTR RELAY	ABS motor relay / ON or OFF	ON: Motor relay ON OFF: Motor relay OFF	-
IDLE SW	Main idle switch / ON or OFF	ON: Accelerator pedal released OFF: Accelerator pedal depressed	-
STOP LAMP SW	Stop light switch / ON or OFF	ON: Brake pedal depressed OFF: Brake pedal released	-
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released	-
LEVER POSITION	Shift lever position information / P/N, R, D/M, 1st-6th/B, FAIL	-	-
FR WHEEL SPD	FR wheel speed sensor reading / min.: 0 km/h (0 mph), max.: 326 km/h (202 mph)	Actual wheel speed	Similar speed as indicated on speedometer
FL WHEEL SPD	FL wheel speed sensor reading / min.: 0 km/h (0 mph), max.: 326 km/h (202 mph)	Actual wheel speed	Similar speed as indicated on speedometer

SMC1	Master cut solenoid (SMC1) / ON or OFF	ON: Operate OFF: Not operate	-
SMC2	Master cut solenoid (SMC2) / ON or OFF	ON: Operate OFF: Not operate	-
SCSS	Stroke simulator solenoid (SCSS) / ON or OFF	ON: Operate OFF: Not operate	-
FR RQST TORQ	FR regenerative request torque / min.: 0 N*m, max.: 65,536 N*m	-	-
FR OPERATE TORQ	FR regenerative operation torque / min.: 0 N*m, max.: 65,536 N*m	-	-
RR RQST TORQ	RR regenerative request torque / min.: 0 N*m, max.: 65,536 N*m	-	-
RR OPERATE TORQ	RR regenerative operation torque / min.: 0 N*m, max.: 65,536 N*m	-	-
REGEN COOP	Regenerative cooperation / ON or OFF	ON: Operate OFF: Not operate	-

*: Electronically Controlled Brake

2. ACTIVE TEST

HINT:

Performing the Active Test using the intelligent tester allows the relay, actuator, and other items to operate without removing any parts. Performing the Active Test as the first step in troubleshooting is one of the methods to save labor time.

It is possible to display the Data List during the Active Test.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) On the tester display, select the Active Test.
HINT:
The power switch must be turned on (IG) to proceed to the Active Test using the intelligent tester.

Tester Display	Test Part	Control Range	Diagnostic Note
ABS WARN LAMP	ABS warning light	Warning light ON / OFF	Observe combination meter
VSC WARN LAMP	VSC warning (master caution indicator light and multi information display)	Warning (light and display) ON / OFF	Observe combination meter
SLIP INDI LAMP	SLIP indicator light	Indicator light ON / OFF	Observe combination meter
BRAKE WARN LAMP	BRAKE warning light	Warning light ON / OFF	Observe combination meter
BUZZER	Skid control buzzer	Buzzer ON / OFF	Buzzer can be heard
ECB* WARN LAMP	Brake control warning light	Warning light ON / OFF	Observe combination meter
ECB* MTR RELAY	ABS motor relay	Relay ON / OFF	Operation sound of relay (clicking sound) and motor can be heard
ECB* MTR RELAY 2	ABS motor relay 2	Relay ON / OFF	Operation sound of relay (clicking sound) and motor can be heard
ECB* INVALID	Electronically Controlled Brake control invalid	Control invalid ON / OFF	Electronically Controlled Brake control is blocked (braking with no boost assist)
ZERO DOWN	Accumulator zero down activation	Activation ON / OFF	Brake fluid existing the accumulator makes noise
ACT PATTERN	Actuator air bleeding pattern activation	Activation ON / OFF	When accumulator pressure lowers, pump operation creates sound
POWER SUPPLY 1	Power supply air bleeding pattern activation 1	Activation ON / OFF	When accumulator pressure lowers, pump operation creates sound
POWER SUPPLY 2	Power supply air bleeding pattern activation 2	Activation ON / OFF	When accumulator pressure lowers, pump operation creates sound
SMC1	Master cut solenoid (SMC1)	Solenoid ON / OFF	Operation sound of solenoid (clicking sound) can be heard
SMC2	Master cut solenoid (SMC2)	Solenoid ON / OFF	Operation sound of solenoid (clicking sound) can be heard
ECB* RELAY	ABS main relay	Relay ON / OFF	Operation sound of relay (clicking sound) can be heard
ECB* RELAY 2	ABS main relay 2	Relay ON / OFF	Operation sound of relay (clicking sound) can be heard
SLRRL CLOSE	Linear solenoid (SLRRL) valve	Valve close ON / OFF	-

Tester Display	Test Part	Control Range	Diagnostic Note
SLARL CLOSE	Linear solenoid (SLARL) valve	Valve close ON / OFF	-
SLRRR CLOSE	Linear solenoid (SLRRR) valve	Valve close ON / OFF	-
SLARR CLOSE	Linear solenoid (SLARR) valve	Valve close ON / OFF	-
SLRFL CLOSE	Linear solenoid (SLRFL) valve	Valve close ON / OFF	-
SLAFL CLOSE	Linear solenoid (SLAFL) valve	Valve close ON / OFF	-
SLRFR CLOSE	Linear solenoid (SLRFR) valve	Valve close ON / OFF	-
SLAFR CLOSE	Linear solenoid (SLAFR) valve	Valve close ON / OFF	-

*: Electronically Controlled Brake

DIAGNOSTIC TROUBLE CODE CHART

HINT:

- If a trouble code is displayed during the DTC check, check the circuit indicated by the DTC. For details of each code, turn to the page for the respective DTC Code in the DTC chart.
- Inspect the fuse and relay before investigating the trouble areas as shown in the table below.

DTC chart of ABS:

DTC Code	Detection Item	INF Code	Trouble Area	See page
42	Electronically Controlled Brake System Malfunction	-	Brake control (Electronically Controlled Brake) system	BC-78
C0200/31	Front Speed Sensor RH Circuit	251 252 253 254 255	1. Front speed sensor RH 2. Speed sensor circuit 3. Sensor installation 4. Speed sensor rotor 5. Skid control ECU	BC-80
C0205/32	Front Speed Sensor LH Circuit	264 265 266 267 268	1. Front speed sensor LH 2. Speed sensor circuit 3. Sensor installation 4. Speed sensor rotor 5. Skid control ECU	BC-80
C0210/33	Rear Speed Sensor RH Circuit	277 278 279 280 281	1. Rear speed sensor RH 2. Speed sensor circuit 3. Sensor installation 4. Speed sensor rotor 5. Skid control ECU	BC-89
C0215/34	Rear Speed Sensor LH Circuit	290 291 292 293 294	1. Rear speed sensor LH 2. Speed sensor circuit 3. Sensor installation 4. Speed sensor rotor 5. Skid control ECU	BC-89
C1235/35	Foreign Object is Attached on Tip of Front Speed Sensor RH	302	1. Front speed sensor RH 2. Speed sensor circuit 3. Sensor installation 4. Speed sensor rotor 5. Skid control ECU	BC-112
C1236/36	Foreign Object is Attached on Tip of Front Speed Sensor LH	303	1. Front speed sensor LH 2. Speed sensor circuit 3. Sensor installation 4. Speed sensor rotor 5. Skid control ECU	BC-112
C1238/38	Foreign Object is Attached on Tip of Rear Speed Sensor RH	304	1. Rear speed sensor RH 2. Speed sensor circuit 3. Sensor installation 4. Speed sensor rotor 5. Skid control ECU	BC-112
C1239/39	Foreign Object is Attached on Tip of Rear Speed Sensor LH	305	1. Rear speed sensor LH 2. Speed sensor circuit 3. Sensor installation 4. Speed sensor rotor 5. Skid control ECU	BC-112
C1243/43	Acceleration Sensor Stuck Malfunction	311 312 317	Yaw rate and acceleration sensor	BC-98
C1244/44	Open or Short in Acceleration Sensor Circuit	314	1. Yaw rate and acceleration sensor 2. Sensor installation	BC-98
C1245/45	Acceleration Sensor Output Malfunction	313	1. Yaw rate and acceleration sensor 2. Sensor installation	BC-98

DTC Code	Detection Item	INF Code	Trouble Area	See page
C1336/98	Zero Point Calibration of Acceleration Sensor Undone	-	1. Skid control ECU 2. Yaw rate and acceleration sensor 3. Zero point calibration undone	BC-107
C1381/97	Yaw Rate and / or Acceleration Sensor Power Supply Voltage Malfunction	315	1. Yaw rate and acceleration sensor 2. Yaw rate and acceleration sensor power source circuit 3. Skid control ECU	BC-98
U0124/95	Lost Communication with Lateral Acceleration Sensor Module	319	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)	BC-209

1. Drive the vehicle at the speed of 50 km/h (31 mph) and depress the brake pedal strongly for approximately 3 seconds.
2. Repeat the above operation 3 times or more and check that the ABS warning light goes off.
3. Clear the DTC.

HINT:

- In some cases, the intelligent tester cannot be used when the ABS warning light remains on.
- When U0073/94, U0123/62, U0124/95, U0126/63, U0131/67, or U0293/59 is output, inspect and repair the trouble areas indicated by these codes first.

DTC chart of VSC:

DTC Code	Detection Item	INF Code	Trouble Area	See page
43	ABS Control System Malfunction	-	ABS control system	BC-77
45	Electronically Controlled Brake System Malfunction	-	Brake control (Electronically Controlled Brake) system	BC-78
C1210/36	Zero Point Calibration of Yaw Rate Sensor Undone	-	1. Skid control ECU 2. Yaw rate and acceleration sensor 3. Zero point calibration undone	BC-107
C1231/31	Steering Angle Sensor Circuit Malfunction	-	1. Steering angle sensor 2. Steering angle sensor circuit 3. Steering angle sensor power supply 4. Skid control ECU	BC-109
C1234/34	Yaw Rate Sensor Malfunction	333 334 335 337	Yaw rate and acceleration sensor	BC-98
C1290/66	Steering Angle Sensor Zero Point Malfunction	-	1. Yaw rate and acceleration sensor zero point calibration incomplete 2. Poor adjustment of the centered position of the steering wheel 3. Poor adjustment of front wheel alignment	BC-164
C1304/27	EPS Control System Malfunction	376	Electronic power steering system	BC-167

(*1): These codes are displayed to indicate the ABS and Electronically Controlled Brake DTCs.

Test Mode DTC of ABS:

DTC Code	Detection Item	INF Code	Trouble Area	See page
C1271/71	Low Output Signal of Front Speed Sensor RH (Test Mode DTC)	-	1. Front speed sensor RH 2. Sensor installation 3. Speed sensor rotor	BC-80
C1272/72	Low Output Signal of Front Speed Sensor LH (Test Mode DTC)	-	1. Front speed sensor LH 2. Sensor installation 3. Speed sensor rotor	BC-80
C1273/73	Low Output Signal of Rear Speed Sensor RH (Test Mode DTC)	-	1. Rear speed sensor RH 2. Sensor installation 3. Speed sensor rotor	BC-89
C1274/74	Low Output Signal of Rear Speed Sensor LH (Test Mode DTC)	-	1. Rear speed sensor LH 2. Sensor installation 3. Speed sensor rotor	BC-89
C1275/75	Abnormal Change in Output Signal of Front Speed Sensor RH (Test Mode DTC)	-	Speed sensor rotor	BC-112
C1276/76	Abnormal Change in Output Signal of Front Speed Sensor LH (Test Mode DTC)	-	Speed sensor rotor	BC-112
C1277/77	Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)	-	Speed sensor rotor	BC-112
C1278/78	Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)	-	Speed sensor rotor	BC-112
C1279/79	Acceleration Sensor Output Voltage Malfunction (Test Mode DTC)	-	1. Yaw rate and acceleration sensor 2. Sensor installation	BC-98
C1281/81	Master Cylinder Pressure Sensor Output Malfunction (Test Mode DTC)	-	1. Stop light switch 2. Master cylinder pressure sensor	BC-128

Test Mode DTC of VSC:

DTC Code	Detection Item	INF Code	Trouble Area	See page
C0371/71	Yaw Rate Sensor (Test Mode DTC)	-	Yaw rate and acceleration sensor	BC-98

Test Mode DTC of Electronically Controlled Brake:

DTC Code	Detection Item	INF Code	Trouble Area	See page
C1346/71	Stroke Sensor Zero Point Learning Malfunction (Test Mode DTC)	-	Brake pedal stroke sensor	BC-136

DTC	36	ABS Control System Malfunction

DTC	43	ABS Control System Malfunction

DESCRIPTION

This DTC is output when the VSC and/or Electronically Controlled Brake system detects a malfunction in the ABS control system.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
36	-	Malfunction in the ABS control system.	ABS control system
43	-	Malfunction in the ABS control system.	ABS control system

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK ABS CONTROL SYSTEM

(a) Clear the DTC (See page BC-57).
(b) Turn the power switch on (IG).
(c) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (ABS control system DTC) is not output	A
DTC (ABS control system DTC) is output	B

B → REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-69)

A

2	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (IG).
(d) Check if the same DTC is recorded (See page BC-57).

BC

Result

Condition	Proceed to
DTCs (36 and/or 43) are not output	A
DTCs (36 and/or 43) are output	B

B → REPLACE SKID CONTROL ECU

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	42	Electronically Controlled Brake System Malfunction

DTC	45	Electronically Controlled Brake System Malfunction

DESCRIPTION

This DTC is output when the ABS and/or VSC system detects a malfunction in the brake control (Electronically Controlled Brake) system.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
42	-	Malfunction in the brake control (Electronically Controlled Brake) system.	Brake control (Electronically Controlled Brake) system
45	-	Malfunction in the brake control (Electronically Controlled Brake) system.	Brake control (Electronically Controlled Brake) system

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK BRAKE CONTROL (ELECTRONICALLY CONTROLLED BRAKE) SYSTEM

(a) Clear the DTC (See page BC-57).
(b) Turn the power switch on (IG).
(c) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (Brake control (Electronically Controlled Brake) system DTC) is not output	A
DTC (Brake control (Electronically Controlled Brake) system DTC) is output	B

B → REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-69)

A

2	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (IG).
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (42 and/or 45) are not output	A
DTCs (42 and/or 45) are output	B

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C0200/31	Front Speed Sensor RH Circuit

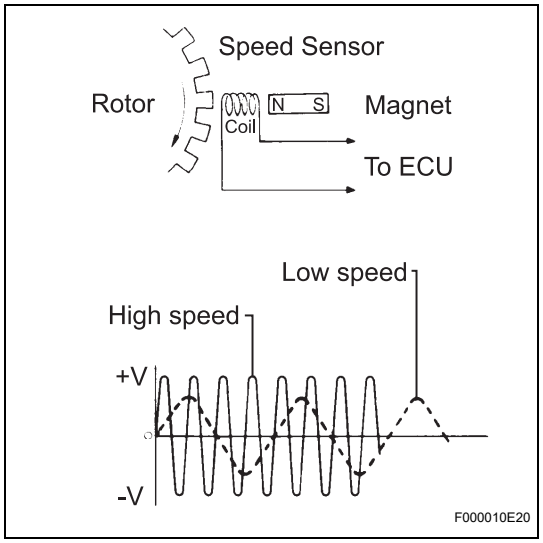
DTC	C0205/32	Front Speed Sensor LH Circuit

DTC	C1271/71	Low Output Signal of Front Speed Sensor RH (Test Mode DTC)

DTC	C1272/72	Low Output Signal of Front Speed Sensor LH (Test Mode DTC)

DESCRIPTION

The speed sensors detect wheel speed and transmit the signals to the ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors has 48 serrations.
When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces an AC voltage.
Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.
DTCs C1271/71 and C1272/72 can be deleted when the speed sensor sends a wheel speed signal or the Test Mode ends. DTCs C1271/71 and C1272/72 are output only in the Test Mode.



DTC Code	INF Code	DTC Detection Condition	Trouble Area
C0200/31	251	At a vehicle speed of 10 km/h (6 mph) or more, an open or short in the sensor signal circuit of the abnormal wheel continues for 1 second or more.	• Front speed sensor RH • Speed sensor circuit • Sensor installation • Speed sensor rotor • Skid control ECU
↑	252	More than 1 wheel is abnormal.	↑
↑	253	Speed sensor signal circuit is open for 0.5 seconds or more.	↑
↑	254	Momentary interruption of sensor signal from the abnormal wheel occurs 7 times or more.	↑
↑	255	Frequency of 2.7 kHz or higher is input.	• Front speed sensor RH • Speed sensor circuit • Speed sensor rotor • Skid control ECU

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C0205/32	264	At a vehicle speed of 10 km/h (6 mph) or more, an open or short in the sensor signal circuit of the abnormal wheel continues for 1 second or more.	• Front speed sensor LH • Speed sensor circuit • Sensor installation • Speed sensor rotor • Skid control ECU
↑	265	More than 1 wheel is abnormal.	↑
↑	266	Speed sensor signal circuit is open for 0.5 seconds or more.	↑
↑	267	Momentary interruption of sensor signal from the abnormal wheel occurs 7 times or more.	↑
↑	268	Frequency of 2.7 kHz or higher is input.	• Front speed sensor LH • Speed sensor circuit • Speed sensor rotor • Skid control ECU
C1271/71 C1272/72	-	Detected only during Test Mode.	• Front speed sensor RH/LH • Sensor installation • Speed sensor rotor

HINT:
- DTCs C0200/31 and C1271/71 are for the front speed sensor RH.
- DTCs C0205/32 and C1272/72 are for the front speed sensor LH.
- The BRAKE warning light comes on when speed sensor malfunctions are detected in two or more wheels.

BC

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1 CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (See page BC-23).

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
FR SPD OPN	FR speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
FL SPD OPN	FL speed sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

Result

Condition	Proceed to
There are no momentary interruptions	**A**
There are momentary interruptions	**B**
There is a constant open circuit	**C**

HINT:

Perform the above inspection before removing the sensor and connector.

B → **Go to step 11**

C → **Go to step 5**

A

2 READ VALUE OF INTELLIGENT TESTER (FRONT SPEED SENSOR)

(a) Turn the power switch off.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (READY).
(d) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
FR WHEEL SPD	FR wheel speed sensor reading / min.: 0 km/h (0 mph), max.: 326 km/h (202 mph)	Actual wheel speed
FL WHEEL SPD	FL wheel speed sensor reading / min.: 0 km/h (0 mph), max.: 326 km/h (202 mph)	Actual wheel speed

(e) Check that there is no difference between the speed value output from the speed sensor displayed on the intelligent tester and the speed value displayed on the speedometer when driving the vehicle.

OK:

The speed value output from the speed sensor displayed on the intelligent tester is the same as the actual vehicle speed.

BC

NG → Go to step 5

OK

3	PERFORM TEST MODE (SIGNAL CHECK)

(a) Perform sensor check in the Test Mode procedure (See page BC-35).
OK:
All Test Mode DTCs are erased.

NG → Go to step 5

OK

4	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Drive the vehicle at the speed of 32 km/h (20 mph) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are not output	A
DTCs (C0200/31 and/or C0205/32) are output	B

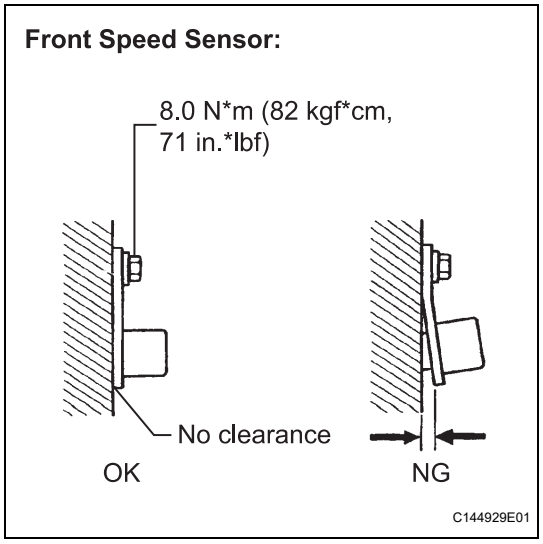
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

B → Go to step 7

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

5	CHECK FRONT SPEED SENSOR INSTALLATION



(a) Turn the power switch off.
(b) Check the speed sensor installation.
OK:
There is no clearance between the sensor and the front steering knuckle.
The installation bolt is tightened properly.
Torque:
8.0 N*m (82 kgf*cm, 71 in.*lbf)

NG → **INSTALL FRONT SPEED SENSOR CORRECTLY**

OK

6	CHECK FRONT SPEED SENSOR TIP

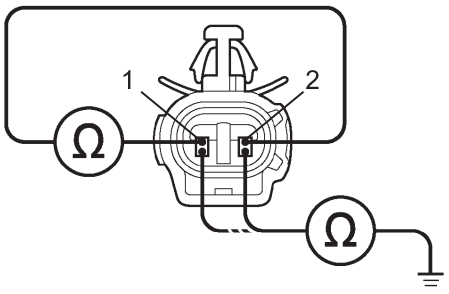
(a) Remove the front speed sensor (See page BC-272).
(b) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-35).

NG → **CLEAN OR REPLACE FRONT SPEED SENSOR**

OK

7	INSPECT FRONT SPEED SENSOR

Front Speed Sensor:



C136017E03

(a) Turn the power switch off.
(b) Install the front speed sensor.
(c) Disconnect the front speed sensor connector.
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
1 (FR+) - 2 (FR-)	Always	1.4 to 1.8 kΩ or at 20°C (68°F)
1 (FR+) - Body ground	Always	10 kΩ or higher
2 (FR-) - Body ground	Always	10 kΩ or higher

LH

Tester Connection	Condition	Specified Condition
1 (FL+) - 2 (FL-)	Always	1.4 to 1.8 kΩ or at 20°C (68°F)
1 (FL+) - Body ground	Always	10 kΩ or higher
2 (FL-) - Body ground	Always	10 kΩ or higher

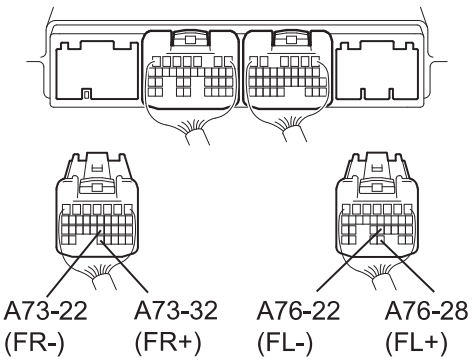
NOTICE:
Check the speed sensor signal after replacement (See page BC-35).

NG → **REPLACE FRONT SPEED SENSOR**

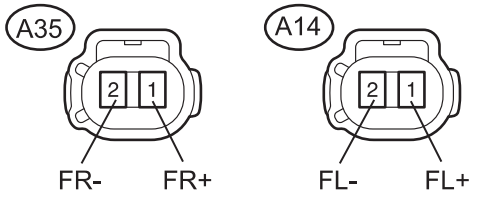
OK

8	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - FRONT SPEED SENSOR)

Skid Control ECU Wire Harness View:



Front Speed Sensor Harness Side Connector Front View:



C140715E01

(a) Disconnect the skid control ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

RH

Tester Connection	Condition	Specified Condition
A73-32 (FR+) - A35-1 (FR+)	Always	Below 1 Ω
A73-32 (FR+) - Body ground	Always	10 kΩ or higher
A73-22 (FR-) - A35-2 (FR-)	Always	Below 1 Ω
A73-22 (FR-) - Body ground	Always	10 kΩ or higher

LH

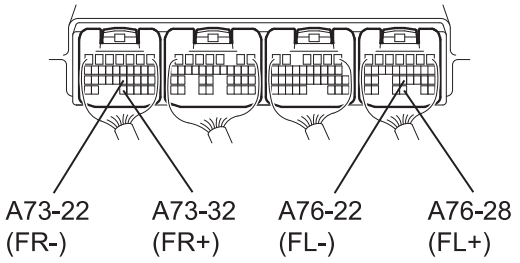
Tester Connection	Condition	Specified Condition
A76-28 (FL+) - A14-1 (FL+)	Always	Below 1 Ω
A76-28 (FL+) - Body ground	Always	10 kΩ or higher
A76-22 (FL-) - A14-2 (FL-)	Always	Below 1 Ω
A76-22 (FL-) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

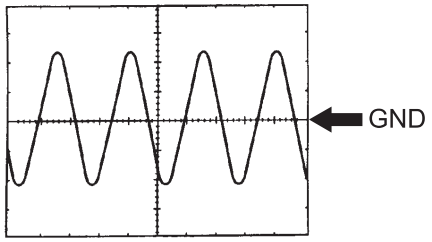
OK

9	CHECK SPEED SENSOR AND SPEED SENSOR ROTOR SERRATIONS

Skid Control ECU Wire Harness View:



Normal Signal Waveform:



C140716E01

(a) Reconnect the skid control ECU connectors and the front speed sensor connector.
(b) Connect the oscilloscope to the front speed sensor terminal of the skid control ECU.
(c) Check that a waveform is output when the tires are rotated.

OK:

The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.

HINT:

- As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to speed sensor rotor's scratches, looseness or foreign matter attached to it.

NOTICE:

Check the speed sensor signal after cleaning or replacement (See page BC-35).

NG → **CLEAN OR REPLACE SPEED SENSOR OR SPEED SENSOR ROTOR**

OK

10	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Drive the vehicle at the speed of 32 km/h (20 mph) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-57).

BC

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are not output	A
DTCs (C0200/31 and/or C0205/32) are output	B

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

B → **REPLACE SKID CONTROL ECU**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

11	REPAIR OR REPLACE HARNESS OR CONNECTOR (SKID CONTROL ECU - FRONT SPEED SENSOR)

(a) Turn the power switch off.
(b) Repair or replace the harness or connector.
(c) Check for any momentary interruption between the skid control ECU and front speed sensor (See page BC-23).
(d) Check that there is no momentary interruption.

NEXT

12	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Drive the vehicle at the speed of 32 km/h (20 mph) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C0200/31 and/or C0205/32) are not output	A
DTCs (C0200/31 and/or C0205/32) are output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

B → **Go to step 2**

END

DTC	**C0371/71**	**Yaw Rate Sensor (Test Mode DTC)**
DTC	**C1234/34**	**Yaw Rate Sensor Malfunction**
DTC	**C1243/43**	**Acceleration Sensor Stuck Malfunction**
DTC	**C1244/44**	**Open or Short in Acceleration Sensor Circuit**
DTC	**C1245/45**	**Acceleration Sensor Output Malfunction**
DTC	**C1279/79**	**Acceleration Sensor Output Voltage Malfunction (Test Mode DTC)**
DTC	**C1381/97**	**Yaw Rate and / or Acceleration Sensor Power Supply Voltage Malfunction**

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor through the CAN communication system.
The yaw rate sensor has a built in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).
If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, DTCs U0123/62 (malfunction in CAN communication with the yaw rate sensor) and U0124/95 (malfunction in CAN communication with the acceleration sensor) are output.
These DTCs are also output when calibration has not been completed.
DTCs C0371/71 and C1279/79 can be deleted when the yaw rate and acceleration sensor sends a yaw rate and/or acceleration signal or the Test Mode ends. DTCs C0371/71 and C1279/79 are output only in the Test Mode.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1234/34	333 334 335 337	Malfunction signal that is detected in sensor self check is received when communication with the sensors is valid.	Yaw rate and acceleration sensor
C1243/43	311 312 317	Sensor sticking can be seen 16 times or more in a series at a speed between 30 km/h (18 mph) and 0 km/h (0 mph).	Yaw rate and acceleration sensor
C1244/44	314	Difference between GL1 and GL2 is not less than 0.4 G for at least 60 seconds after the difference is 0.6 G or more when the vehicle speed is 0 km/h (0 mph). Malfunction signal from acceleration sensor is received.	• Yaw rate and acceleration sensor • Sensor installation
C1245/45	313	Difference between the G value calculated from deceleration sensor value and vehicle speed exceeds 0.35 G for at least 60 seconds when vehicle speed is 30 km/h (18 mph).	• Yaw rate and acceleration sensor • Sensor installation
C1381/97	315	Power source voltage is not within specified range when communication between skid control ECU and sensor is valid.	• Yaw rate and acceleration sensor • Yaw rate and acceleration sensor power source circuit • Skid control ECU
C0371/71	-	Detected only during Test Mode.	Yaw rate and acceleration sensor

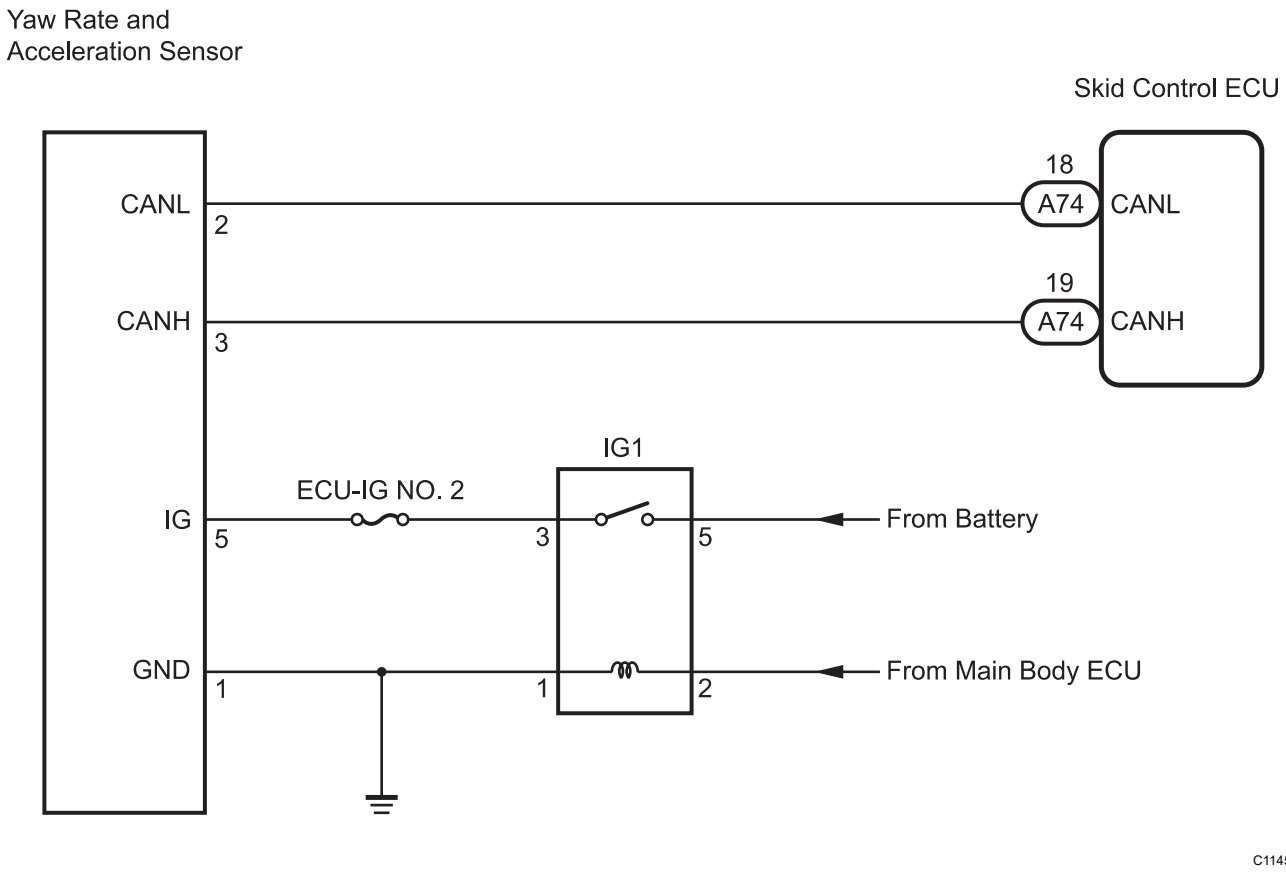
WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the yaw rate and acceleration sensor, perform zero point calibration (See page BC-29).

HINT:

When U0123/62 or U0124/95 is output together with C1234/34, C1243/43, C1244/44, C1245/45, or C1381/97, inspect and repair the trouble areas indicated by U0123/62 or U0124/95 first.

BC

1	CHECK DTC

(a) Clear the DTC (See page BC-57).
(b) Turn the power switch off.
(c) At a speed of 30 km/h (18 mph) or more, drive the vehicle, turn the steering wheel, and decelerate the vehicle (depress the brake pedal).
(d) Turn the power switch on (IG) again and check that no CAN communication system DTC is output.

(e) Check if DTCs indicating that zero point calibration of the yaw rate sensor is undone (C1210/36) or indicating that zero point calibration of the acceleration sensor is undone (C1336/98) are output.

2 CHECK YAW RATE AND ACCELERATION SENSOR INSTALLATION

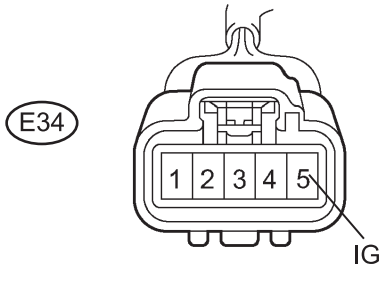
(a) Turn the power switch off.
(b) Check that the yaw rate and acceleration sensor has been installed properly (See page BC-283).
OK:
The sensor is tightened to the specified torque.
The sensor is not tilted.

NG → **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

3 INSPECT YAW RATE AND ACCELERATION SENSOR (IG TERMINAL)

Yaw Rate and Acceleration Sensor Harness Side Connector Front View:



(a) Disconnect the yaw rate and acceleration sensor connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
E34-5 (IG) - Body ground	Power switch on (IG)	10 to 14 V

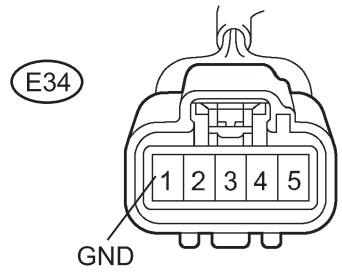
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG CIRCUIT)**

OK

BC

4	INSPECT YAW RATE AND ACCELERATION SENSOR (GND TERMINAL)

Yaw Rate and Acceleration Sensor Harness Side Connector Front View:



(a) Turn the power switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E34-1 (GND) - Body ground	Always	Below 1 Ω

NOTICE:
Check the yaw rate and acceleration sensor signal after replacement (See page BC-35).
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

REPLACE YAW RATE AND ACCELERATION SENSOR

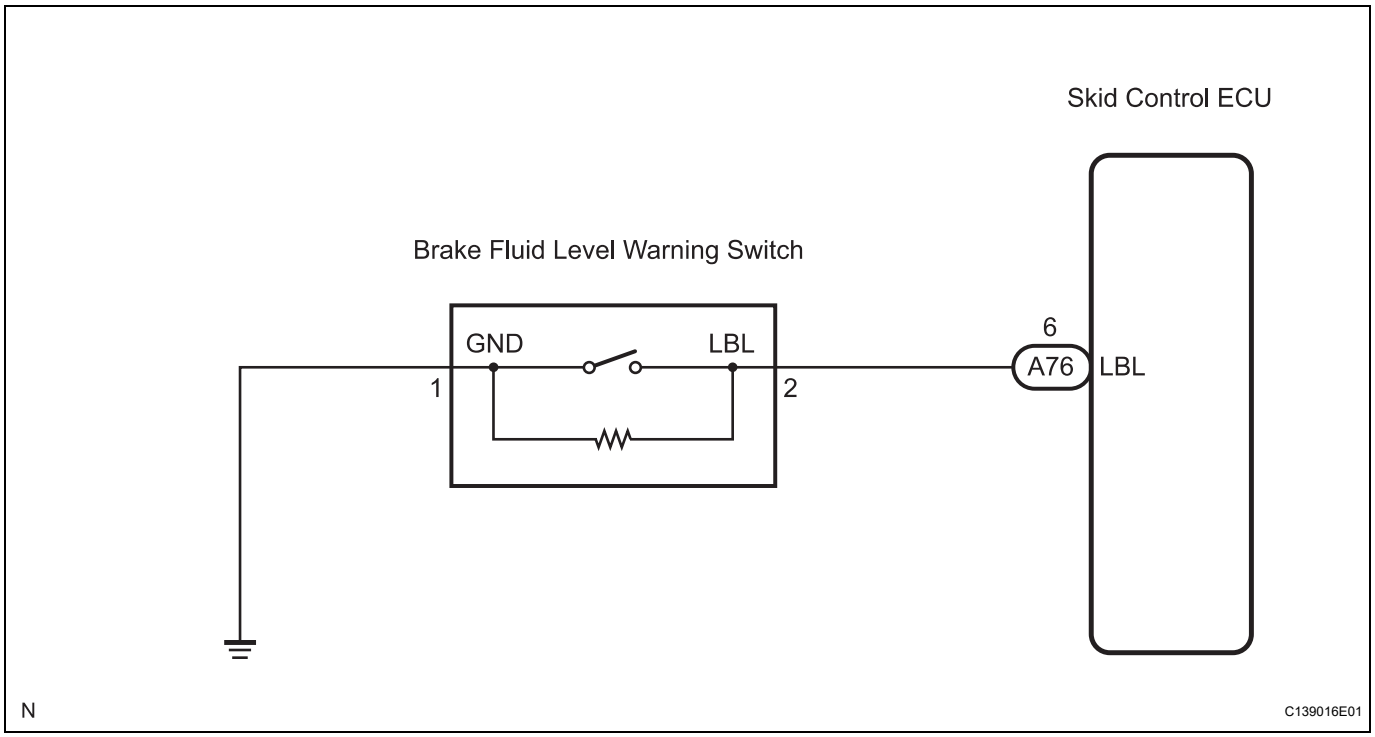
DTC	C1202/68	Master Reservoir Level Malfunction

DESCRIPTION

When a fluid level drop in the master cylinder reservoir is detected, the signal is input to the skid control ECU.
When the DTC for the fluid level drop is memorized, the warning is canceled and the DTC is not stored if the fluid level returns to normal.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1202/68	-	When either of the following is detected: 1. Pump motor operates for specified period when reservoir level drops. 2. Brake operation signal is input when the reservoir level is abnormal and the power switch is on (IG).	• Fluid leakage • Brake fluid level • Brake fluid level warning switch • Brake fluid level warning switch circuit • Skid control ECU
↑	512	An open in the switch signal circuit continues for 2 seconds or more.	• Brake fluid level warning switch • Brake fluid level warning switch circuit • Skid control ECU

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).
HINT:
When releasing the parking brake, set the chocks to hold the vehicle for safety.

1	CHECK BRAKE FLUID LEVEL IN RESERVOIR

(a) Check that the brake fluid level is sufficient.

HINT:
- If the fluid level drops, check for a fluid leak, and repair if found.
- If no leak exists, add and adjust fluid and then check that the trouble code is not output again.

OK:

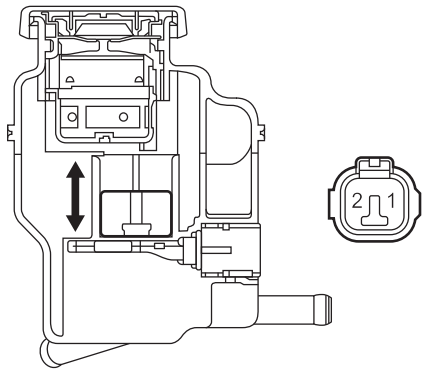
Brake fluid level is proper.

NG → **CHECK AND REPAIR BRAKE FLUID LEAKAGE OR ADD FLUID**

OK

2	INSPECT BRAKE FLUID LEVEL WARNING SWITCH

Brake Fluid Level Warning Switch:



(a) Remove the reservoir tank cap.
(b) Disconnect the brake fluid level warning switch connector.
(c) Measure the resistance according to the value(s) in the table below.

HINT:
A float is located inside the reservoir. Its position can be changed by increasing or decreasing the level of brake fluid.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Float up (Switch OFF)	1.9 to 2.1 kΩ
1 - 2	Float down (Switch ON)	Below 1 Ω

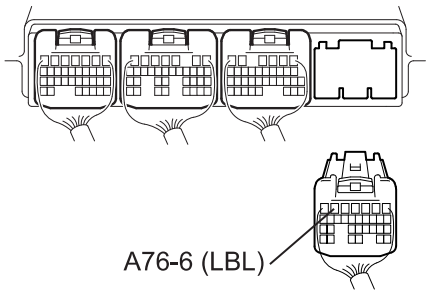
HINT:
If there is no problem after finishing the above check, adjust the brake fluid level to the MAX level.

NG → **REPLACE BRAKE MASTER CYLINDER RESERVOIR ASSEMBLY (BRAKE FLUID LEVEL WARNING SWITCH)**

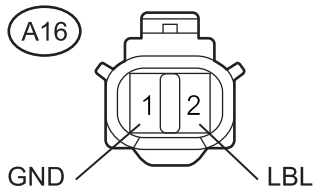
OK

3	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE FLUID LEVEL WARNING SWITCH)

Skid Control ECU Wire Harness View:



Brake Fluid Level Warning Switch Harness Side Connector Front View:



C140718E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

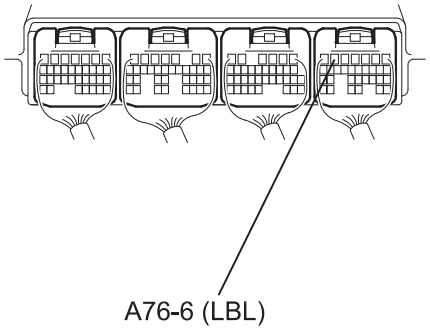
Tester Connection	Condition	Specified Condition
A76-6 (LBL) - A16-2 (LBL)	Always	Below 1 Ω
A76-6 (LBL) - Body ground	Always	10 kΩ or higher
A16-1 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	INSPECT SKID CONTROL ECU (SWITCH INPUT)

Skid Control ECU Wire Harness View:



P

C135838E02

(a) Reconnect the skid control ECU connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A76-6 (LBL) - Body ground	Power switch on (IG)	8 to 14 V

NG → **REPLACE SKID CONTROL ECU**

BC

OK

5	RECONFIRM DTC

(a) Turn the power switch off.
(b) Reconnect the brake fluid level warning switch connector.
(c) Clear the DTC (See page BC-57).
(d) Turn the power switch on (IG).
(e) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (C1202/68) is not output	A
DTC (C1202/68) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

B → REPLACE SKID CONTROL ECU

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1203/95	ECM Communication Circuit Malfunction

DESCRIPTION

The circuit is used to send TRAC and VSC control information from the skid control ECU to the HV control ECU, and hybrid control information from the HV control ECU to the skid control ECU through the CAN communication system.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1203/95	-	When any of the following is detected: 1. No stored information for destination. 2. No stored information whether VSC is in operation or not. 3. Destination information from HV control ECU does not match with stored value.	HV control ECU

INSPECTION PROCEDURE

1 CHECK PART NUMBER (SKID CONTROL ECU AND HV CONTROL ECU)

(a) Check that the proper skid control ECU and HV control ECU are installed.
OK:
Proper ECUs are installed.

NG → **REPLACE ECUS WITH PROPER ONES**

OK ↓

2 RECONFIRM DTC

(a) Clear the DTC (See page BC-57).
(b) Turn the power switch on (IG).
(c) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (C1203/95) is not output	A
DTC (C1203/95) is output	B

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

BC

DTC	C1210/36	Zero Point Calibration of Yaw Rate Sensor Undone

DTC	C1336/98	Zero Point Calibration of Acceleration Sensor Undone

DESCRIPTION

The skid control ECU receives signals from the yaw rate and acceleration sensor through the CAN communication system.
The yaw rate sensor has the built in acceleration sensor and detects the vehicle's condition using 2 circuits (GL1, GL2).
If there is trouble in the bus lines between the yaw rate and acceleration sensor and the CAN communication system, the DTCs U0123/62 (yaw rate sensor communication trouble) and U0124/95 (acceleration sensor communication trouble) are output.
The DTCs are also output when the calibration has not been completed.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1210/36	-	Yaw rate sensor zero point calibration is unfinished.	• Skid control ECU • Yaw rate and acceleration sensor • Zero point calibration undone (Perform zero point calibration and check DTC. If DTC is not output again, the sensor is normal)
C1336/98	-	When either of the following is detected: 1. Vehicle speed increases with unfinished zero point calibration. 2. Zero point calculation is not within specified range when zero point calibration is finished.	• Skid control ECU • Yaw rate and acceleration sensor • Zero point calibration undone (Perform zero point calibration and check DTC. If DTC is not output again, the sensor is normal)

INSPECTION PROCEDURE

NOTICE:
When replacing the skid control ECU, perform initialization of the linear solenoid valve and calibration (See page BC-25).
HINT:
When U0123/62, U0124/95 or U0126/63 is output along with C1210/36 or C1336/98, inspect and repair trouble areas indicated by U0123/62, U0124/95 or U0126/63 first.

1	PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR

(a) Perform zero point calibration of the yaw rate and acceleration sensor (See page BC-29).

BC

NEXT

2	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (IG).
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1210/36 and/or C1336/98) are output	A

Condition	Proceed to
DTCs (C1210/36 and/or C1336/98) are not output	B

HINT:
- The DTCs are recorded because zero point calibration has not been completed.
- End the procedure as the same DTCs are not recorded after completion of zero point calibration.

B → **END**

A

3	CHECK YAW RATE AND ACCELERATION SENSOR INSTALLATION

(a) Turn the power switch off.
(b) Check that the yaw rate and acceleration sensor has been installed properly (See page BC-283).
OK:
The sensor should be tightened to the specified torque.
The sensor should not be tilted.

NG → **INSTALL YAW RATE AND ACCELERATION SENSOR CORRECTLY**

OK

REPLACE SKID CONTROL ECU

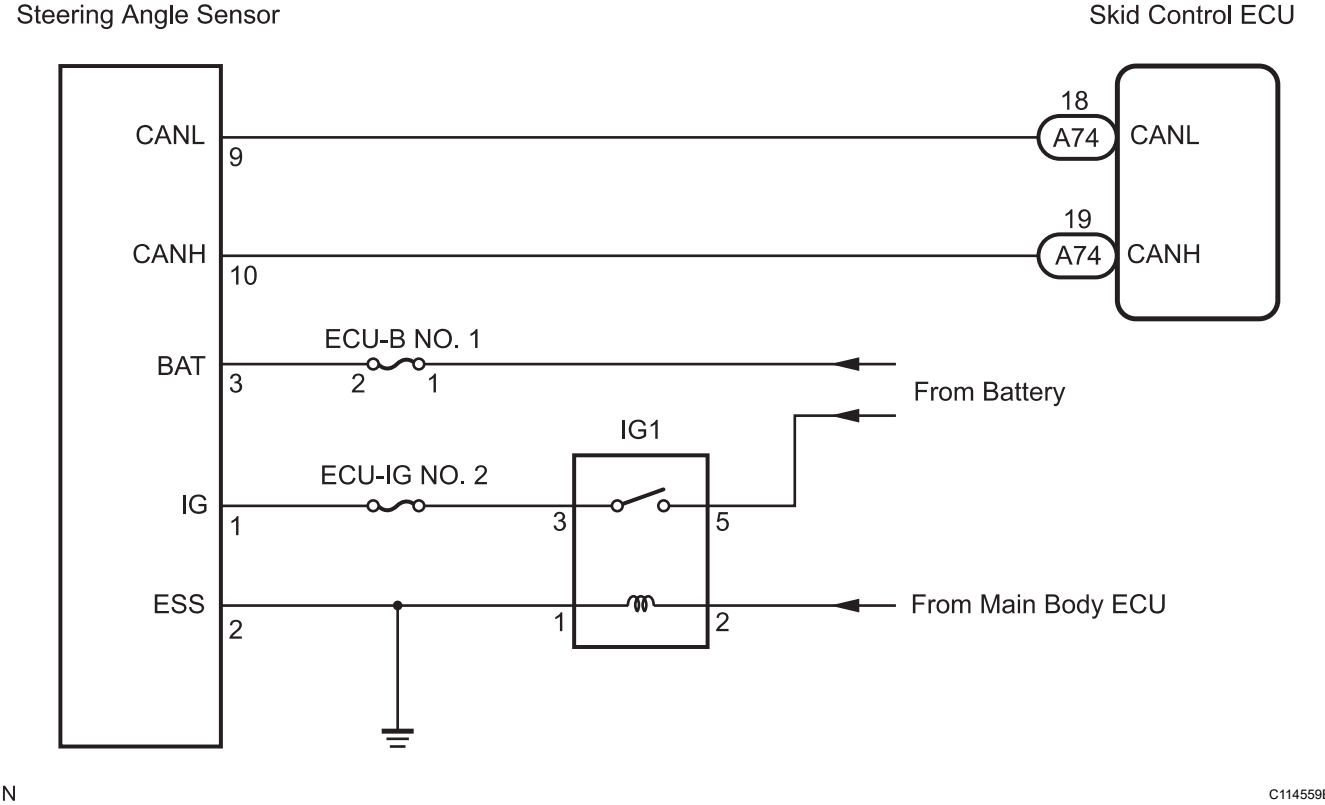
DTC	C1231/31	Steering Angle Sensor Circuit Malfunction

DESCRIPTION

The skid control ECU inputs the steering angle sensor signal through the CAN communication. When a malfunction occurs in the communication line with the steering angle sensor, DTC U0126/63 (malfunction in communication with steering angle sensor) is output.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1231/31	-	When either of the following is detected: 1. Steering angle sensor malfunction signal is received when data transmission is valid (internal malfunction is detected in sensor self check). 2. A signal of +B open in steering angle sensor is received when communication with sensor is valid.	• Steering angle sensor • Steering angle sensor circuit • Steering angle sensor power supply • Skid control ECU

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

HINT:

- When U0126/63 is output together with C1231/31, inspect and repair the trouble areas indicated by U0126/63 first.
- When the speed sensor or the yaw rate sensor has trouble, DTCs for the steering angle sensor may be output even when the steering angle sensor is normal. When DTCs for the speed sensor or yaw rate sensor are output together with other DTCs for the steering angle sensor, inspect and repair the speed sensor and yaw rate sensor first, and then inspect and repair the steering angle sensor.

1	CHECK DTC

(a) Clear the DTC (See page BC-57).
(b) Turn the power switch off.
(c) Turn the power switch on (IG) again and check that no CAN communication system DTC is output.
(d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 35 km/h (22 mph) and check that no speed sensor and yaw rate sensor DTCs are output.

Result

Condition	Proceed to
No CAN communication system DTC and the speed sensor or yaw rate sensor DTC are output	A
CAN communication system DTC is output	B
Speed sensor or yaw rate sensor DTC is output	C

HINT:
- If there is a malfunction in the speed sensor or the yaw rate sensor, an abnormal value may be output although the steering angle sensor is normal.
- If the speed sensor and the yaw rate sensor DTCs are output simultaneously, repair the sensors and inspect the steering angle sensor.

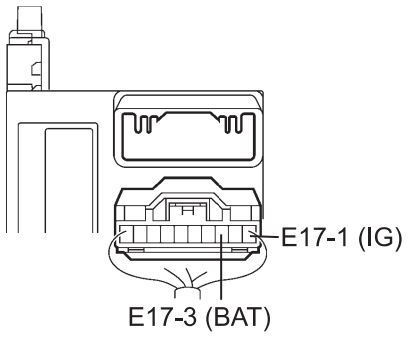
B → **INSPECT CAN COMMUNICATION SYSTEM**

C → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-69)**

A

2	INSPECT STEERING ANGLE SENSOR (POWER SOURCE TERMINAL)

Steering Angle Sensor Wire Harness View:



(a) Turn the power switch off.
(b) Remove the steering wheel and the column cover lower.
(c) Disconnect the steering angle sensor connector.
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E17-1 (IG) - Body ground	Power switch on (IG)	10 to 14 V
E17-3 (BAT) - Body ground	Always	10 to 14 V

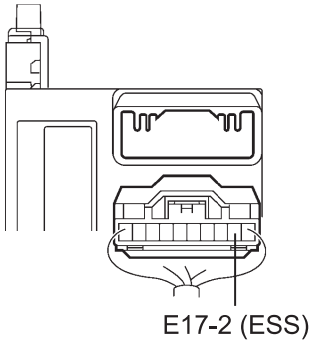
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

BC

3	INSPECT STEERING ANGLE SENSOR (GROUND TERMINAL)

Steering Angle Sensor Wire Harness View:



G030156E21

(a) Turn the power switch off.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E17-2 (ESS) - Body ground	Always	Below 1 Ω

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GROUND CIRCUIT)**

OK

REPLACE STEERING ANGLE SENSOR

DTC	**C1235/35**	**Foreign Object is Attached on Tip of Front Speed Sensor RH**
DTC	**C1236/36**	**Foreign Object is Attached on Tip of Front Speed Sensor LH**
DTC	**C1238/38**	**Foreign Object is Attached on Tip of Rear Speed Sensor RH**
DTC	**C1239/39**	**Foreign Object is Attached on Tip of Rear Speed Sensor LH**
DTC	**C1275/75**	**Abnormal Change in Output Signal of Front Speed Sensor RH (Test Mode DTC)**
DTC	**C1276/76**	**Abnormal Change in Output Signal of Front Speed Sensor LH (Test Mode DTC)**
DTC	**C1277/77**	**Abnormal Change in Output Signal of Rear Speed Sensor RH (Test Mode DTC)**
DTC	**C1278/78**	**Abnormal Change in Output Signal of Rear Speed Sensor LH (Test Mode DTC)**

DESCRIPTION

The speed sensors detect wheel speed and transmit the signals to the ECU. These signals are used for control of the ABS control system. Each of the front and rear rotors has 48 serrations.

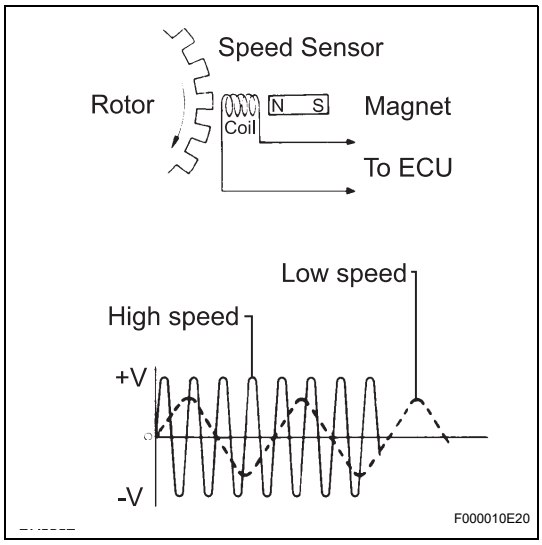
When the rotors rotate, the magnetic field generated by the permanent magnet in the speed sensor induces an AC voltage.

Since the frequency of this AC voltage changes in direct proportion to the speed of the rotor, the frequency is used by the ECU to detect the speed of each wheel.

When foreign matter adheres to the speed sensor tip or speed sensor rotor, or the rotor teeth are chipped, these DTCs are output. An abnormal waveform input from the sensor determines these conditions.

These DTCs may be detected when a malfunction occurs in the connector terminals or wire harness of the speed sensor circuit.

DTCs C1275/75 to C1278/78 can be deleted when the speed sensor sends a wheel speed signal or the Test Mode ends. DTCs from C1275/75 to C1278/78 are output only in the Test Mode.

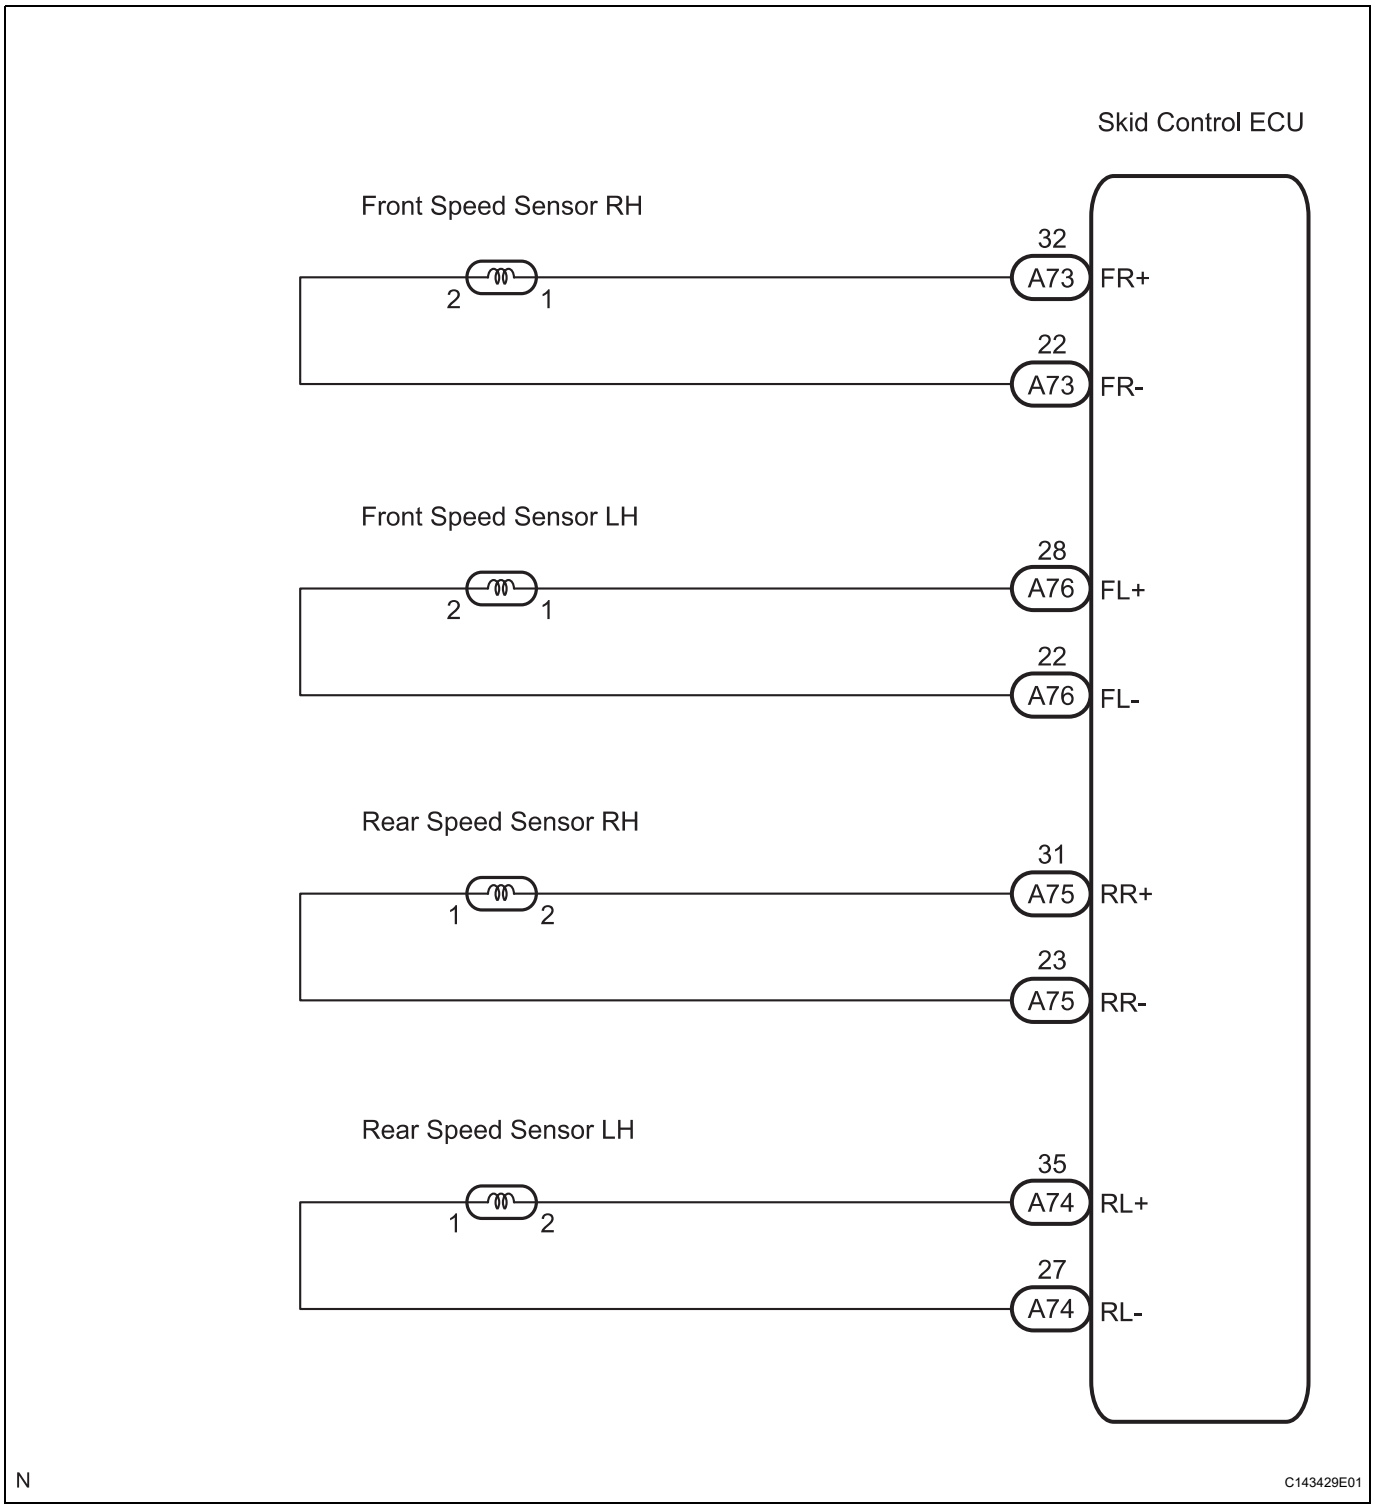


DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1235/35	302	Pulse waveform of speed sensor signal is abnormal for at least 5 seconds when vehicle speed is 20 km/h (12 mph) or more.	• Front speed sensor RH • Speed sensor circuit • Sensor installation • Speed sensor rotor • Skid control ECU
C1236/36	303	Pulse waveform of speed sensor signal is abnormal for at least 5 seconds when vehicle speed is 20 km/h (12 mph) or more.	• Front speed sensor LH • Speed sensor circuit • Sensor installation • Speed sensor rotor • Skid control ECU
C1238/38	304	Pulse waveform of speed sensor signal is abnormal for at least 5 seconds when vehicle speed is 20 km/h (12 mph) or more.	• Rear speed sensor RH • Speed sensor circuit • Sensor installation • Speed sensor rotor • Skid control ECU
C1239/39	305	Pulse waveform of speed sensor signal is abnormal for at least 5 seconds when vehicle speed is 20 km/h (12 mph) or more.	• Rear speed sensor LH • Speed sensor circuit • Sensor installation • Speed sensor rotor • Skid control ECU
C1275/75 C1276/76 C1277/77 C1278/78	-	Detected only during Test Mode.	Speed sensor rotor

HINT:

- DTCs C1235/35 and C1275/75 are for the front speed sensor RH.
- DTCs C1236/36 and C1276/76 are for the front speed sensor LH.
- DTCs C1238/38 and C1277/77 are for the rear speed sensor RH.
- DTCs C1239/39 and C1278/78 are for the rear speed sensor LH.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

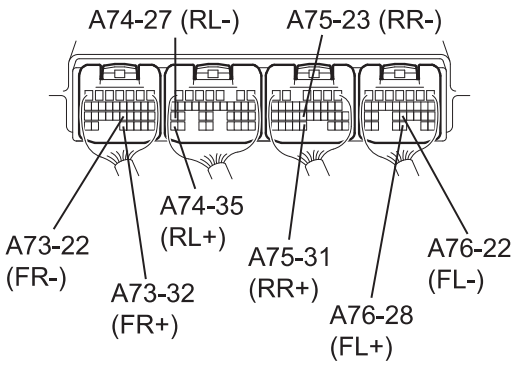
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

HINT:

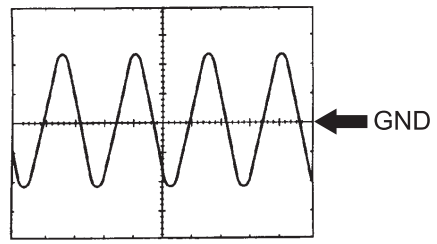
When C0200/31, C0205/32, C0210/33, or C0215/34 is output together with C1235/35, C1236/36, C1238/38, or C1239/39, inspect and repair the trouble areas indicated by C0200/31, C0205/32, C0210/33, or C0215/34 first.

1	CHECK SPEED SENSOR AND SPEED SENSOR ROTOR SERRATIONS

Skid Control ECU Wire Harness View:



Normal Signal Waveform:



C140716E03

(a) Connect the oscilloscope to each speed sensor terminal of the skid control ECU.
(b) Check that a waveform is output when the tires are rotated (by the sensor circuit).
OK:
The same waveform is output from all the 4 wheels and there is no noise or interference in the waveform.
(c) Check that the waveform does not change while jiggling a connector or a wire harness.
OK:
The waveform does not change.
HINT:
- As the vehicle speed (wheel revolution speed) increases, a cycle of the waveform narrows and the output voltage becomes greater.
- When noise is identified in the waveform on the oscilloscope, the erratic signals are generated due to speed sensor rotor's scratches, looseness or foreign matter attached to it.

NG → **Go to step 3**

OK

2	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Drive the vehicle at the speed of 20 km/h (12 mph) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-57).

BC

A74-27 (RL-) - B-2 (RL-)	Always	Below 1 Ω
A74-27 (RL-) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 RECONFIRM DTC

(a) Reconnect the skid control sensor wire.
(b) Reconnect the skid control ECU connectors and the speed sensor connector.
(c) Clear the DTC (See page BC-57).
(d) Turn the power switch on (READY).
(e) Drive the vehicle at the speed of 20 km/h (12 mph) or more for at least 60 seconds.

BC

(f) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output (for front)	A
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are output (for rear)	B
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are not output	C

B → **Go to step 8**

C → **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)**

A

7	CHECK FRONT SPEED SENSOR TIP

(a) Turn the power switch off.
(b) Remove the front speed sensor (See page BC-272).
(c) Check the speed sensor tip.
OK:
No scratches or foreign matter on the sensor tip.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-35).

NG → **CLEAN OR REPLACE FRONT SPEED SENSOR**

OK

8	CHECK EACH SPEED SENSOR ROTOR

(a) Turn the power switch off.
(b) Remove each speed sensor rotor (See page DS-5 for front, or AH-15 for rear).
(c) Check the speed sensor rotor.
OK:
No scratches, missing teeth or foreign matter on the rotors.
NOTICE:
Check the speed sensor signal after cleaning or replacement (See page BC-35).

NG → **CLEAN OR REPLACE EACH SPEED SENSOR ROTOR**

OK

9	RECONFIRM DTC

(a) Install the front speed sensor and the speed sensor rotor.
(b) Clear the DTC (See page BC-57).

(c) Turn the power switch on (READY).
(d) Drive the vehicle at the speed of 20 km/h (12 mph) or more for at least 60 seconds.
(e) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1235/35, C1236/36, C1238/38 and/or C1239/39) are not output	A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1241/41	Low Battery Positive Voltage

DTC	C1242/42	Open in IG1 / IG2 Power Source Circuit

DESCRIPTION

These codes are memorized when the power source voltage for the skid control ECU drops or the voltage for the main relay 1 and main relay 2 operation drops.
Codes may be memorized when the voltage of the auxiliary battery temporarily drops.
When the power source voltage is too high, the skid control ECU stops functioning and outputs no DTCs, and the ABS and BRAKE warning lights remain on.
HINT:
DTC C1256/57 (accumulator low voltage malfunction) may be memorized if the power source voltage drops.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1241/41	81	System 1 is under the following conditions when the power switch is on (IG): • Linear solenoid cannot receive enough current (brake is applied). • BS voltage is less than 8.9 V for at least 3 seconds (brake is not applied). • 12 V power source voltage inside ECU is less than 8.5 V when main relay is opened or VCM voltage is less than 4.7 V or 5 V or more for at least 0.05 seconds.	• Auxiliary battery • ABS NO. 1 relay • ABS NO. 1 relay circuit • Brake control power supply (Capacitor) • Hybrid control system (Charging circuit) • Skid control ECU
↑	82	System 2 is under the following conditions when the power switch is on (IG): • Linear solenoid cannot receive enough current (brake is applied). • BS voltage is less than 8.9 V for at least 3 seconds (brake is not applied). • 12 V power source voltage inside ECU is less than 8.5 V when main relay is opened or VCM voltage is less than 4.7 V or 5.3 V or more for at least 0.05 seconds.	• Auxiliary battery • ABS NO. 2 relay • ABS NO. 2 relay circuit • Brake control power supply (Capacitor) • Hybrid control system (Charging circuit) • Skid control ECU
↑	83	Capacitor mode signal is received from brake control power supply for 3 seconds or more when the power switch is on (IG).	• Auxiliary battery • Brake control power supply (Capacitor) • Hybrid control system (Charging circuit)
↑	84	ABS is requested to operate when the power source voltage of the main relay system is dropping.	• ABS NO. 1 relay • ABS NO. 1 relay circuit • ABS NO. 2 relay • ABS NO. 2 relay circuit • Brake control power supply (Capacitor) • Hybrid control system (Charging circuit) • Skid control ECU

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK HYBRID CONTROL SYSTEM

(a) Check if the hybrid control system DTC is output (See page HV-36).

BC

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **INSPECT HYBRID CONTROL SYSTEM**

A

2 CHECK AUXILIARY BATTERY

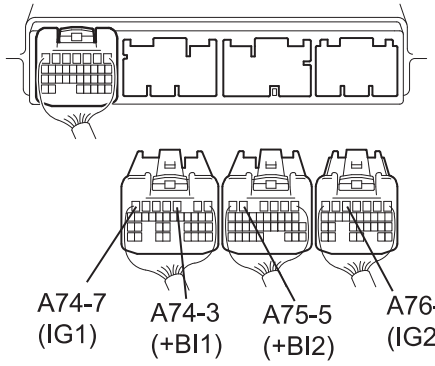
(a) Check the auxiliary battery voltage.
Standard voltage:
11 to 14 V

NG → **CHARGE OR REPLACE AUXILIARY BATTERY**

OK

3 INSPECT SKID CONTROL ECU (IG AND +BI TERMINAL)

Skid Control ECU Wire Harness View:



(a) Disconnect the skid control ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
A74-7 (IG1) - Body ground	Power switch on (IG)	10 to 14 V
A76-5 (IG2) - Body ground	Power switch on (IG)	10 to 14 V
A74-3 (+BI1) - Body ground	Always	10 to 14 V
A75-5 (+BI2) - Body ground	Always	10 to 14 V

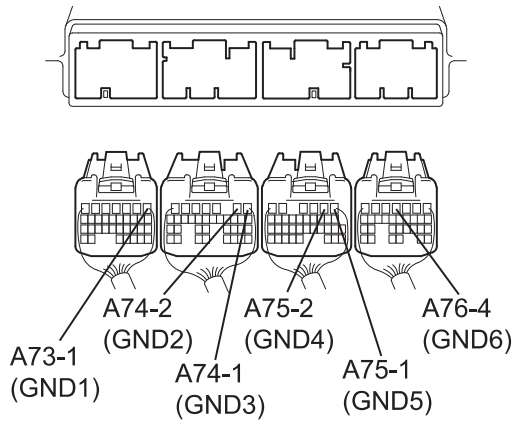
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG OR +BI CIRCUIT)**

OK

BC

4 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Wire Harness View:



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

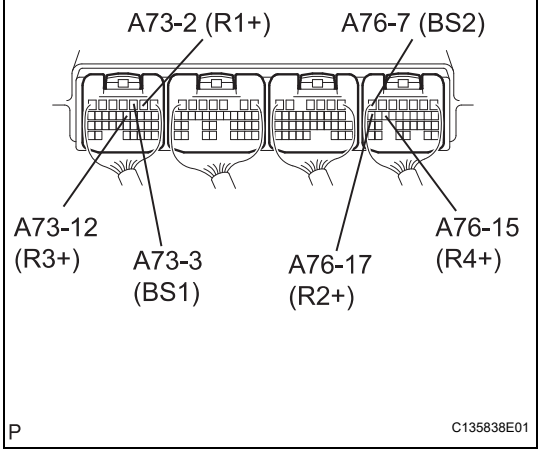
Tester Connection	Condition	Specified Condition
A73-1 (GND1) - Body ground	Always	Below 1 Ω
A74-2 (GND2) - Body ground	Always	Below 1 Ω
A74-1 (GND3) - Body ground	Always	Below 1 Ω
A75-2 (GND4) - Body ground	Always	Below 1 Ω
A75-1 (GND5) - Body ground	Always	Below 1 Ω
A76-4 (GND6) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (RELAY TERMINAL)

Skid Control ECU Wire Harness View:



(a) Reconnect the skid control ECU connectors.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A73-2 (R1+) - Body ground	Power switch on (IG)	9.1 to 13.6 V
A76-17 (R2+) - Body ground	Power switch on (IG)	9.1 to 13.6 V
A73-12 (R3+) - Body ground	Power switch on (IG)	Below 1 V
A76-15 (R4+) - Body ground	Power switch on (IG)	Below 1 V
A73-3 (BS1) - Body ground	Power switch on (IG)	8.8 to 14 V
A76-7 (BS2) - Body ground	Power switch on (IG)	8.8 to 14 V

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1246/46	Master Cylinder Pressure Sensor Malfunction

DTC	C1281/81	Master Cylinder Pressure Sensor Output Malfunction (Test Mode DTC)

DTC	C1364/61	Wheel Cylinder Pressure Sensor Malfunction

DESCRIPTION

The master cylinder pressure sensor and the wheel cylinder pressure sensor are built into the brake actuator, and measure the master cylinder pressure and the wheel cylinder pressure sent to the skid control ECU.

DTC C1281/81 can be deleted when the master cylinder pressure sensor sends a master cylinder pressure signal or the Test Mode ends. DTC C1281/81 is output only in the Test Mode.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1246/46	191	Sensor power source 1 (VCM1) voltage is less than 4.7 V or 5.3 V or more for at least 0.05 seconds.	• Brake actuator assembly (Master cylinder pressure sensor) • Master cylinder pressure sensor circuit • Master cylinder pressure sensor power supply • Brake actuator assembly • Skid control ECU
↑	192	Ratio of M/C pressure sensor output voltage 1 (PMC1) to sensor power source 1 (VCM1) is less than 5% or 90.5% or more for at least 0.05 seconds.	• Brake actuator assembly (Master cylinder pressure sensor) • Master cylinder pressure sensor circuit • Brake actuator assembly • Skid control ECU
↑	194	Sensor power source 2 (VCM2) voltage is less than 4.7 V or 5.3 V or more for at least 0.05 seconds.	• Brake actuator assembly (Master cylinder pressure sensor) • Master cylinder pressure sensor circuit • Master cylinder pressure sensor power supply • Brake actuator assembly • Skid control ECU
↑	195	Ratio of M/C pressure sensor output voltage 2 (PMC2) to sensor power source 2 (VCM2) is less than 5% or 90.5% or more for at least 0.05 seconds.	• Brake actuator assembly (Master cylinder pressure sensor) • Master cylinder pressure sensor circuit • Brake actuator assembly • Skid control ECU
↑	197	M/C pressure sensor output voltage 1 (PMC1) is abnormal.	• Brake actuator assembly • Skid control ECU
↑	198	M/C pressure sensor output voltage 2 (PMC2) is abnormal.	↑
↑	199	M/C pressure sensor output 1 (PMC1) is not approx. 0 Mpa when not braking.	• Brake actuator assembly (Master cylinder pressure sensor) • Master cylinder pressure sensor circuit • Brake actuator assembly • Skid control ECU

BC

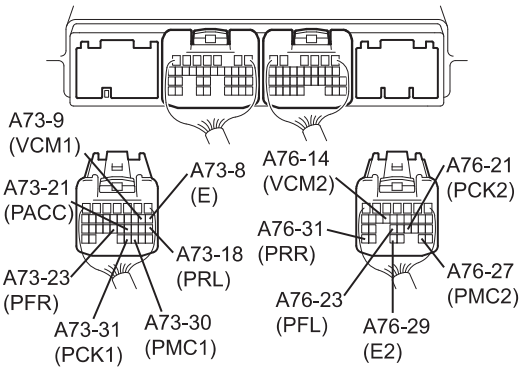
INSPECTION PROCEDURE

NOTICE:

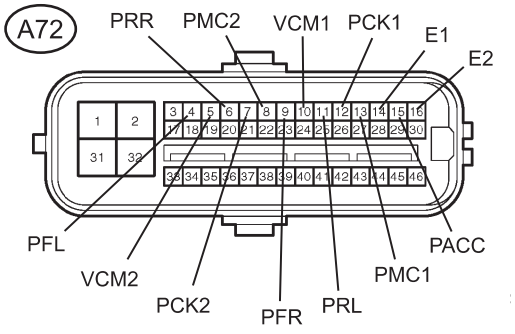
When replacing the skid control ECU or brake actuator assembly, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE ACTUATOR)

Skid Control ECU Wire Harness View:



Brake Actuator Harness Side Connector Front View:



C141361E01

(a) Disconnect the skid control ECU connectors and the brake actuator connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-8 (E) - A72-14 (E1)	Always	Below 1 Ω
A73-8 (E) - Body ground	Always	10 kΩ or higher
A73-9 (VCM1) - A72-10 (VCM1)	Always	Below 1 Ω
A73-9 (VCM1) - Body ground	Always	10 kΩ or higher
A73-18 (PRL) - A72-11 (PRL)	Always	Below 1 Ω
A73-18 (PRL) - Body ground	Always	10 kΩ or higher
A73-21 (PACC) - A72-15 (PACC)	Always	Below 1 Ω
A73-21 (PACC) - Body ground	Always	10 kΩ or higher
A73-23 (PFR) - A72-9 (PFR)	Always	Below 1 Ω
A73-23 (PFR) - Body ground	Always	10 kΩ or higher
A73-30 (PMC1) - A72-13 (PMC1)	Always	Below 1 Ω
A73-30 (PMC1) - Body ground	Always	10 kΩ or higher
A73-31 (PCK1) - A72-12 (PCK1)	Always	Below 1 Ω
A73-31 (PCK1) - Body ground	Always	10 kΩ or higher
A76-14 (VCM2) - A72-5 (VCM2)	Always	Below 1 Ω
A76-14 (VCM2) - Body ground	Always	10 kΩ or higher
A76-21 (PCK2) - A72-7 (PCK2)	Always	Below 1 Ω
A76-21 (PCK2) - Body ground	Always	10 kΩ or higher
A76-23 (PFL) - A72-4 (PFL)	Always	Below 1 Ω
A76-23 (PFL) - Body ground	Always	10 kΩ or higher
A76-27 (PMC2) - A72-8 (PMC2)	Always	Below 1 Ω
A76-27 (PMC2) - Body ground	Always	10 kΩ or higher
A76-29 (E2) - A72-16 (E2)	Always	Below 1 Ω
A76-29 (E2) - Body ground	Always	10 kΩ or higher
A76-31 (PRR) - A72-6 (PRR)	Always	Below 1 Ω
A76-31 (PRR) - Body ground	Always	10 kΩ or higher

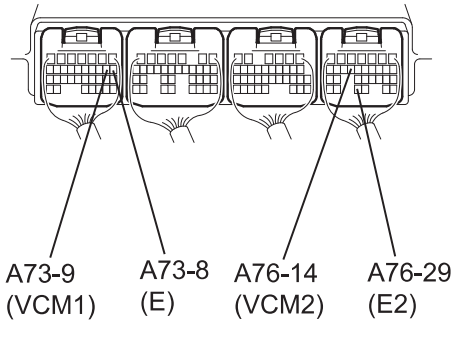
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

2 INSPECT SKID CONTROL ECU (SENSOR INPUT)

Skid Control ECU Wire Harness View:



(a) Reconnect the skid control ECU connectors.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A73-9 (VCM1) - Body ground	Power switch on (IG)	4.75 to 5.25 V
A76-14 (VCM2) - Body ground	Power switch on (IG)	4.75 to 5.25 V

(d) Turn the power switch off.
(e) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-8 (E) - Body ground	Always	Below 1 Ω
A76-29 (E2) - Body ground	Always	Below 1 Ω

NG → **REPLACE SKID CONTROL ECU**

OK

3 READ VALUE OF INTELLIGENT TESTER (MASTER CYLINDER PRESSURE SENSOR)

(a) Reconnect the brake actuator connector.
(b) Connect the pedal effort gauge (See page BC-259).
(c) Connect the intelligent tester to the DLC3.
(d) Turn the power switch on (IG).
(e) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
MAS CYL PRESS 1	Master cylinder pressure sensor 1 reading / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V
MAS CYL PRESS 2	Master cylinder pressure sensor 2 reading / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V

BC

(f) Check the output value of the master cylinder pressure sensor at each fluid pressure.
HINT:
- Check the value while Electronically Controlled Brake control is being prohibited without servo assistance.
- The brake control warning light is on while Electronically Controlled Brake control is being prohibited.

Standard voltage

Brake Effort N (kgf, lbf)	MAS CYL PRESS 1 (Data List Display)	MAS CYL PRESS 2 (Data List Display)
200 (20.4, 45)	0.9 to 1.2 V	0.9 to 1.2 V
500 (51, 112)	2.05 to 2.35 V	2.05 to 2.35 V

NG → REPLACE BRAKE ACTUATOR ASSEMBLY

OK

4 READ VALUE OF INTELLIGENT TESTER (WHEEL CYLINDER PRESSURE SENSOR)

(a) Turn the power switch off.
(b) Install the hydro LSPV gauge (SST) and bleed air (See page BC-259).
SST 09709-29018
(c) Turn the power switch on (IG).
(d) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
FR W/C SENS	FR wheel cylinder pressure sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V
FL W/C SENS	FL wheel cylinder pressure sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V
RR W/C SENS	RR wheel cylinder pressure sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V
RL W/C SENS	RL wheel cylinder pressure sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V

(e) Check the output value of the wheel cylinder pressure sensor at each fluid pressure during the Electronically Controlled Brake control.
Standard voltage:
Front wheel cylinder pressure sensor

Hydraulic Pressure MPa (kgf/cm^2, psi)	FR W/C SENS (Data List Display)	FL W/C SENS (Data List Display)
2.6 (26.5, 376.9)	0.85 to 1.15 V	0.85 to 1.15 V
6.3 (64.3, 914.5)	1.6 to 1.9 V	1.6 to 1.9 V
8.1 (82.6, 1,174.8)	1.95 to 2.25 V	1.95 to 2.25 V
8.2 (83.6, 1,189.0)	2.0 to 2.3 V	2.0 to 2.3 V

Rear wheel cylinder pressure sensor

Hydraulic Pressure MPa (kgf/cm^2, psi)	RR W/C SENS (Data List Display)	RL W/C SENS (Data List Display)
2.6 (26.5, 376.9)	0.85 to 1.15 V	0.85 to 1.15 V
5.0 (51.0, 725.4)	1.35 to 1.65 V	1.35 to 1.65 V

NG → REPLACE BRAKE ACTUATOR ASSEMBLY

OK

5 RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Perform the road and braking test.
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1246/46 and/or C1364/61) are not output	A
DTCs (C1246/46 and/or C1364/61) are output	B

B → **REPLACE SKID CONTROL ECU**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1247/47	Stroke Sensor Malfunction

DTC	C1346/71	Stroke Sensor Zero Point Learning Malfunction (Test Mode DTC)

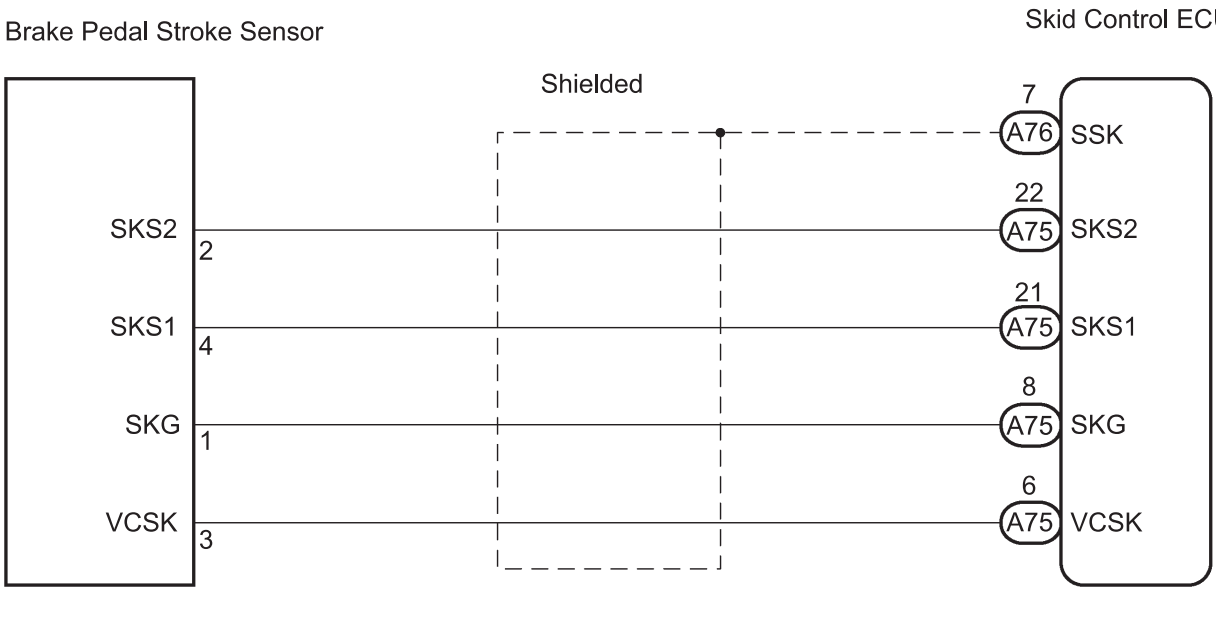
DTC	C1392/48	Stroke Sensor Zero Point Calibration Undone

DESCRIPTION

The stroke sensor inputs the pedal stroke into the skid control ECU.
DTC C1346/71 can be deleted when the brake pedal stroke sensor sends a stroke sensor signal or the Test Mode ends. DTC C1346/71 is output only in the Test Mode.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1247/47	171	Sensor power source voltage (VCSK) is 3.6 V or less or 4.95 V or more for at least 1.2 seconds.	• Brake pedal stroke sensor • Brake pedal stroke sensor power supply • Skid control ECU
↑	172	Ratio of sensor output voltage 1 (SKS1) to sensor power source voltage (VCSK) is less than 3 % or 97 % or more for at least 1.2 seconds.	• Brake pedal stroke sensor • Brake pedal stroke sensor circuit
↑	173	Ratio of sensor output voltage 2 (SKS2) to sensor power source voltage (VCSK) is less than 3 % or 97 % or more for at least 1.2 seconds.	↑
↑	174	Sensor output 1 (SKS1) calculation value becomes 20 mm or more for at least 1.2 seconds at an interval of 0.006 seconds (changes due to interference).	↑
↑	175	Sensor output 2 (SKS2) calculation value becomes 20 mm or more for at least 1.2 seconds at an interval of 0.006 seconds (changes due to interference).	↑
↑	176	Zero point stored value (ratio to power source voltage) of sensor output 1 (SKS1) is 0.46 or more or 0.03 or less.	• Brake pedal stroke sensor • Brake pedal stroke sensor circuit • Sensor installation
↑	177	Zero point stored value (ratio to power source voltage) of sensor output 2 (SKS2) is 0.46 or more or 0.03 or less.	↑
↑	179	When either of the following is detected: 1. Sum of SKS1/VCSK and SKS2/VCSK is 1.155 or more or 0.845 or less for at least 1 second. 2. Difference between sensor output 1 (SKS1) and sensor output 2 (SKS2) is excessively large for at least 0.2 seconds.	• Brake pedal stroke sensor • Brake pedal stroke sensor circuit
↑	180	• Difference between zero point output value and stored value is 0.5 or more for at least 0.05 seconds. • Short between SKS1 and SKS2 output line.	• Brake pedal stroke sensor • Brake pedal stroke sensor circuit • Skid control ECU
C1392/48	-	Zero point calibration of stroke sensor is unfinished.	• Brake pedal stroke sensor zero point calibration undone (Initialization of linear solenoid valve and calibration undone) • Skid control ECU
C1346/71	-	Detected only during Test Mode.	Brake pedal stroke sensor

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU or brake pedal stroke sensor, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK BRAKE PEDAL

(a) Check that the brake pedal and the brake pedal stroke sensor are properly installed and that the pedal can be operated normally.

(b) Check the brake pedal height (See page BR-18).

OK:

The brake pedal is securely installed.

The pedal height is within the specified range.

NG → **ADJUST BRAKE PEDAL**

OK

2	READ VALUE OF INTELLIGENT TESTER (BRAKE PEDAL STROKE SENSOR)

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG).

(c) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
PEDAL STROKE	Stroke sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.7 to 1.3 V
PEDAL STROKE 2	Stroke sensor 2 / min.: 0 V, max.: 5 V	When brake pedal is released: 3.7 to 4.3 V

(d) Read the pedal stroke sensor voltage value on the intelligent tester screen.
OK:
The normal condition value is displayed on the intelligent tester.

NG → **ADJUST BRAKE PEDAL STROKE SENSOR**

OK

3	PERFORM INITIALIZATION OF LINEAR SOLENOID VALVE AND CALIBRATION

(a) Perform initialization of the linear solenoid valve and calibration (See page BC-25).

NEXT

4	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Perform the road and braking test.
(d) Check if the same DTC is recorded (See page BC-57).

Result

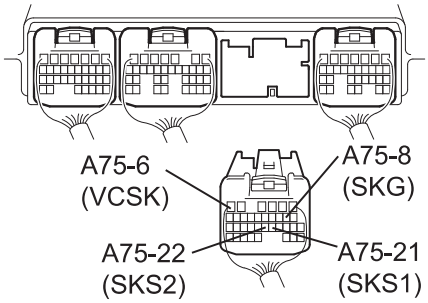
Condition	Proceed to
DTCs (C1247/47 and/or C1392/48) are output	A
DTCs (C1247/47 and/or C1392/48) are not output	B

B → **END**

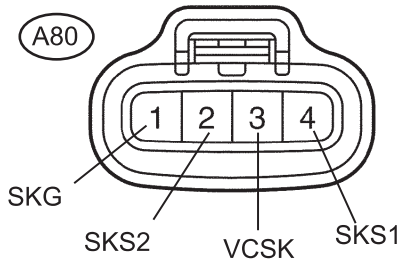
A

5	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE PEDAL STROKE SENSOR)

Skid Control ECU Wire Harness View:



Brake Pedal Stroke Sensor Harness Side Connector Front View:



C141362E01

(a) Turn the power switch off.
(b) Disconnect the skid control ECU connector and the brake pedal stroke sensor connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

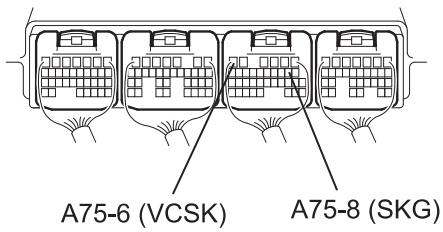
Tester Connection	Condition	Specified Condition
A75-6 (VCSK) - A80-3 (VCSK)	Always	Below 1 Ω
A75-6 (VCSK) - Body ground	Always	10 kΩ or higher
A75-8 (SKG) - A80-1 (SKG)	Always	Below 1 Ω
A75-8 (SKG) - Body ground	Always	10 kΩ or higher
A75-21 (SKS1) - A80-4 (SKS1)	Always	Below 1 Ω
A75-21 (SKS1) - Body ground	Always	10 kΩ or higher
A75-22 (SKS2) - A80-2 (SKS2)	Always	Below 1 Ω
A75-22 (SKS2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	INSPECT SKID CONTROL ECU (SENSOR INPUT)

Skid Control ECU Wire Harness View:



P

C135838E04

(a) Reconnect the skid control ECU connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A75-6 (VCSK) - Body ground	Power switch on (IG)	3.75 to 4.95 V

(d) Turn the power switch off.
(e) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A75-8 (SKG) - Body ground	Always	Below 1 Ω

BC

NG → REPLACE SKID CONTROL ECU

OK

7 READ VALUE OF INTELLIGENT TESTER (BRAKE PEDAL STROKE SENSOR)

(a) Reconnect the brake pedal stroke sensor connector.
(b) Connect the pedal effort gauge.
(c) Connect the intelligent tester to the DLC3.
(d) Turn the power switch on (IG).
(e) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
PEDAL STROKE	Stroke sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.7 to 1.3 V
PEDAL STROKE 2	Stroke sensor 2 / min.: 0 V, max.: 5 V	When brake pedal is released: 3.7 to 4.3 V

(f) When depressing the brake pedal with the amount of force listed in the table below, check that the output value displayed on the intelligent tester is normal.
HINT:
The brake pedal must be depressed gradually.

Standard voltage

Brake Effort N (kgf, lbf)	PEDAL STROKE (Data List Display)	PEDAL STROKE 2 (Data List Display)
50 (5.1, 11)	1.4 to 1.8 V	3.2 to 3.6 V
100 (10.2, 22)	1.55 to 1.95 V	3.05 to 3.45 V
150 (15.3, 34)	1.65 to 2.05 V	2.95 to 3.35 V
200 (20.4, 45)	1.7 to 2.1 V	2.9 to 3.3 V

NG → REPLACE BRAKE PEDAL STROKE SENSOR

OK

8 RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Perform the road and braking test.
(d) Check if the same DTC is recorded (See page BC-57).

BC

Result

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

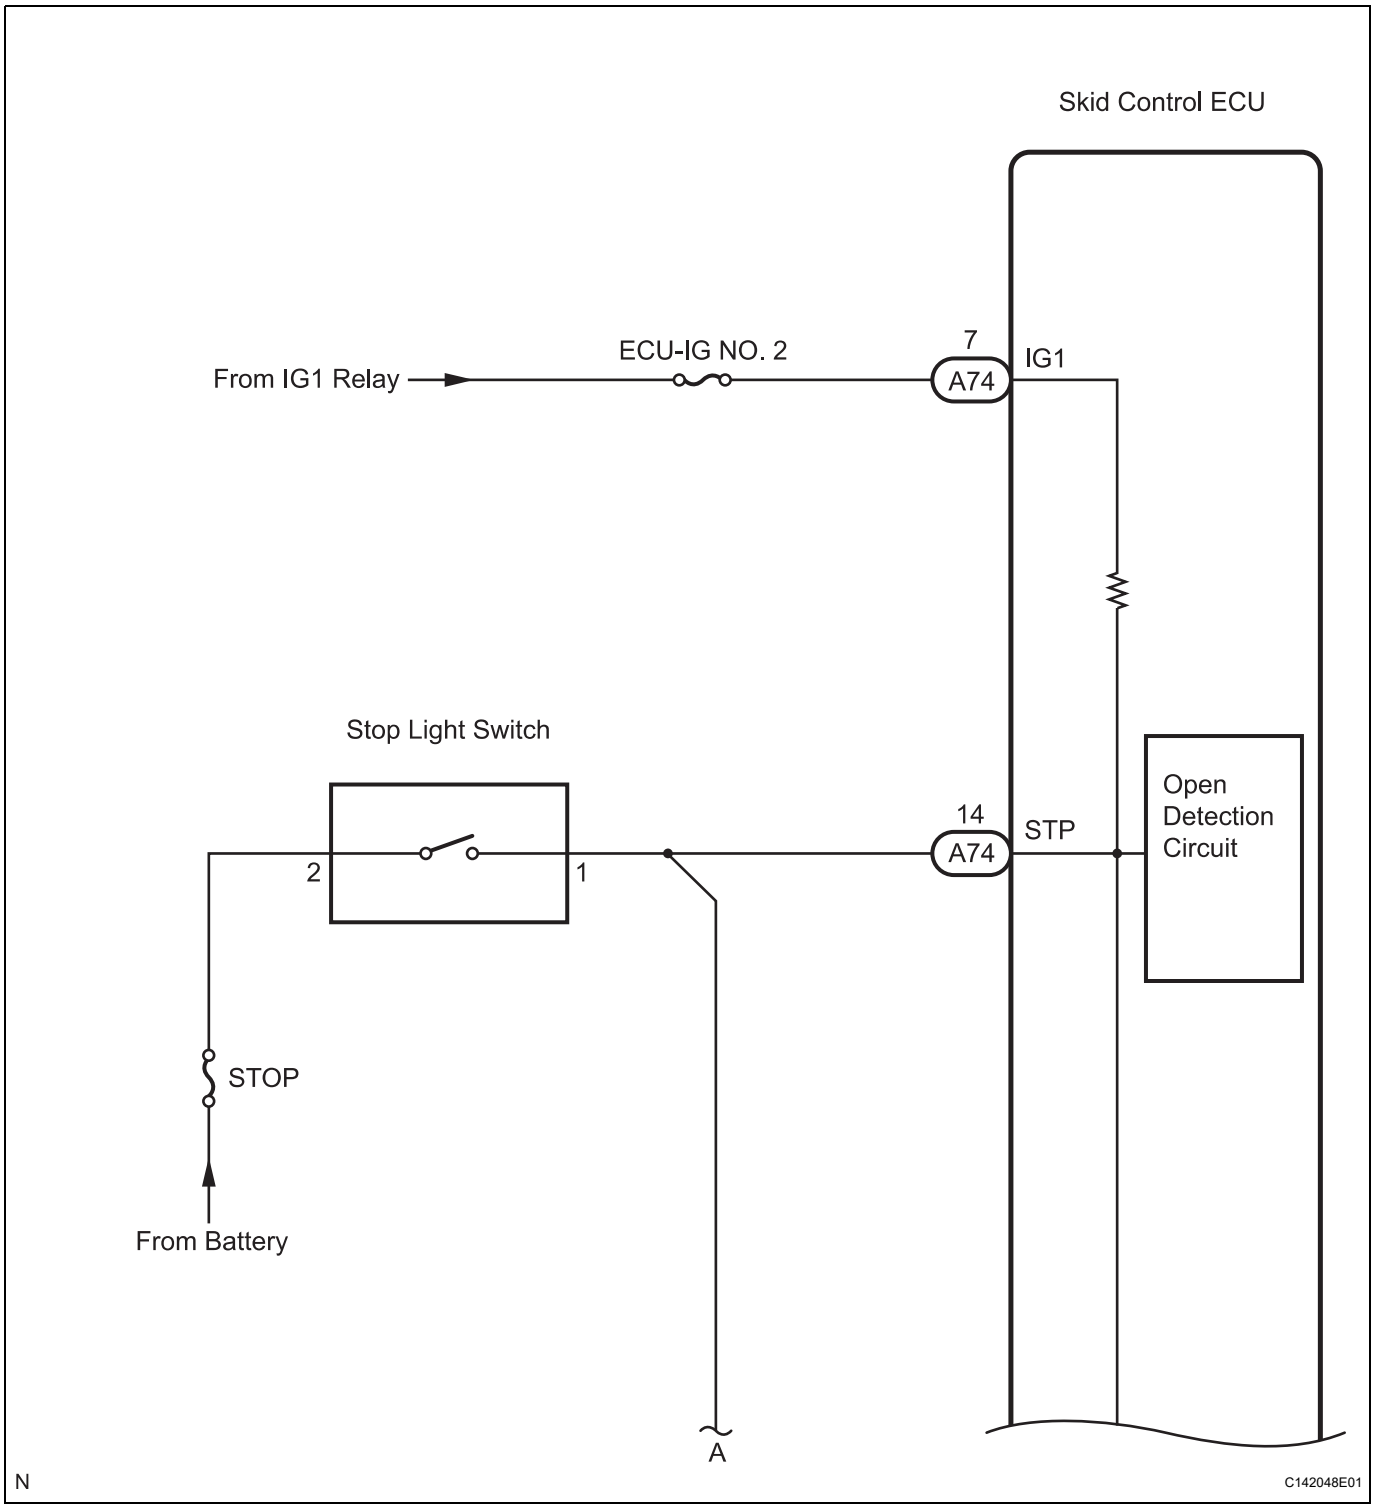
DTC	C1249/49	Open in Stop Light Switch Circuit

DESCRIPTION

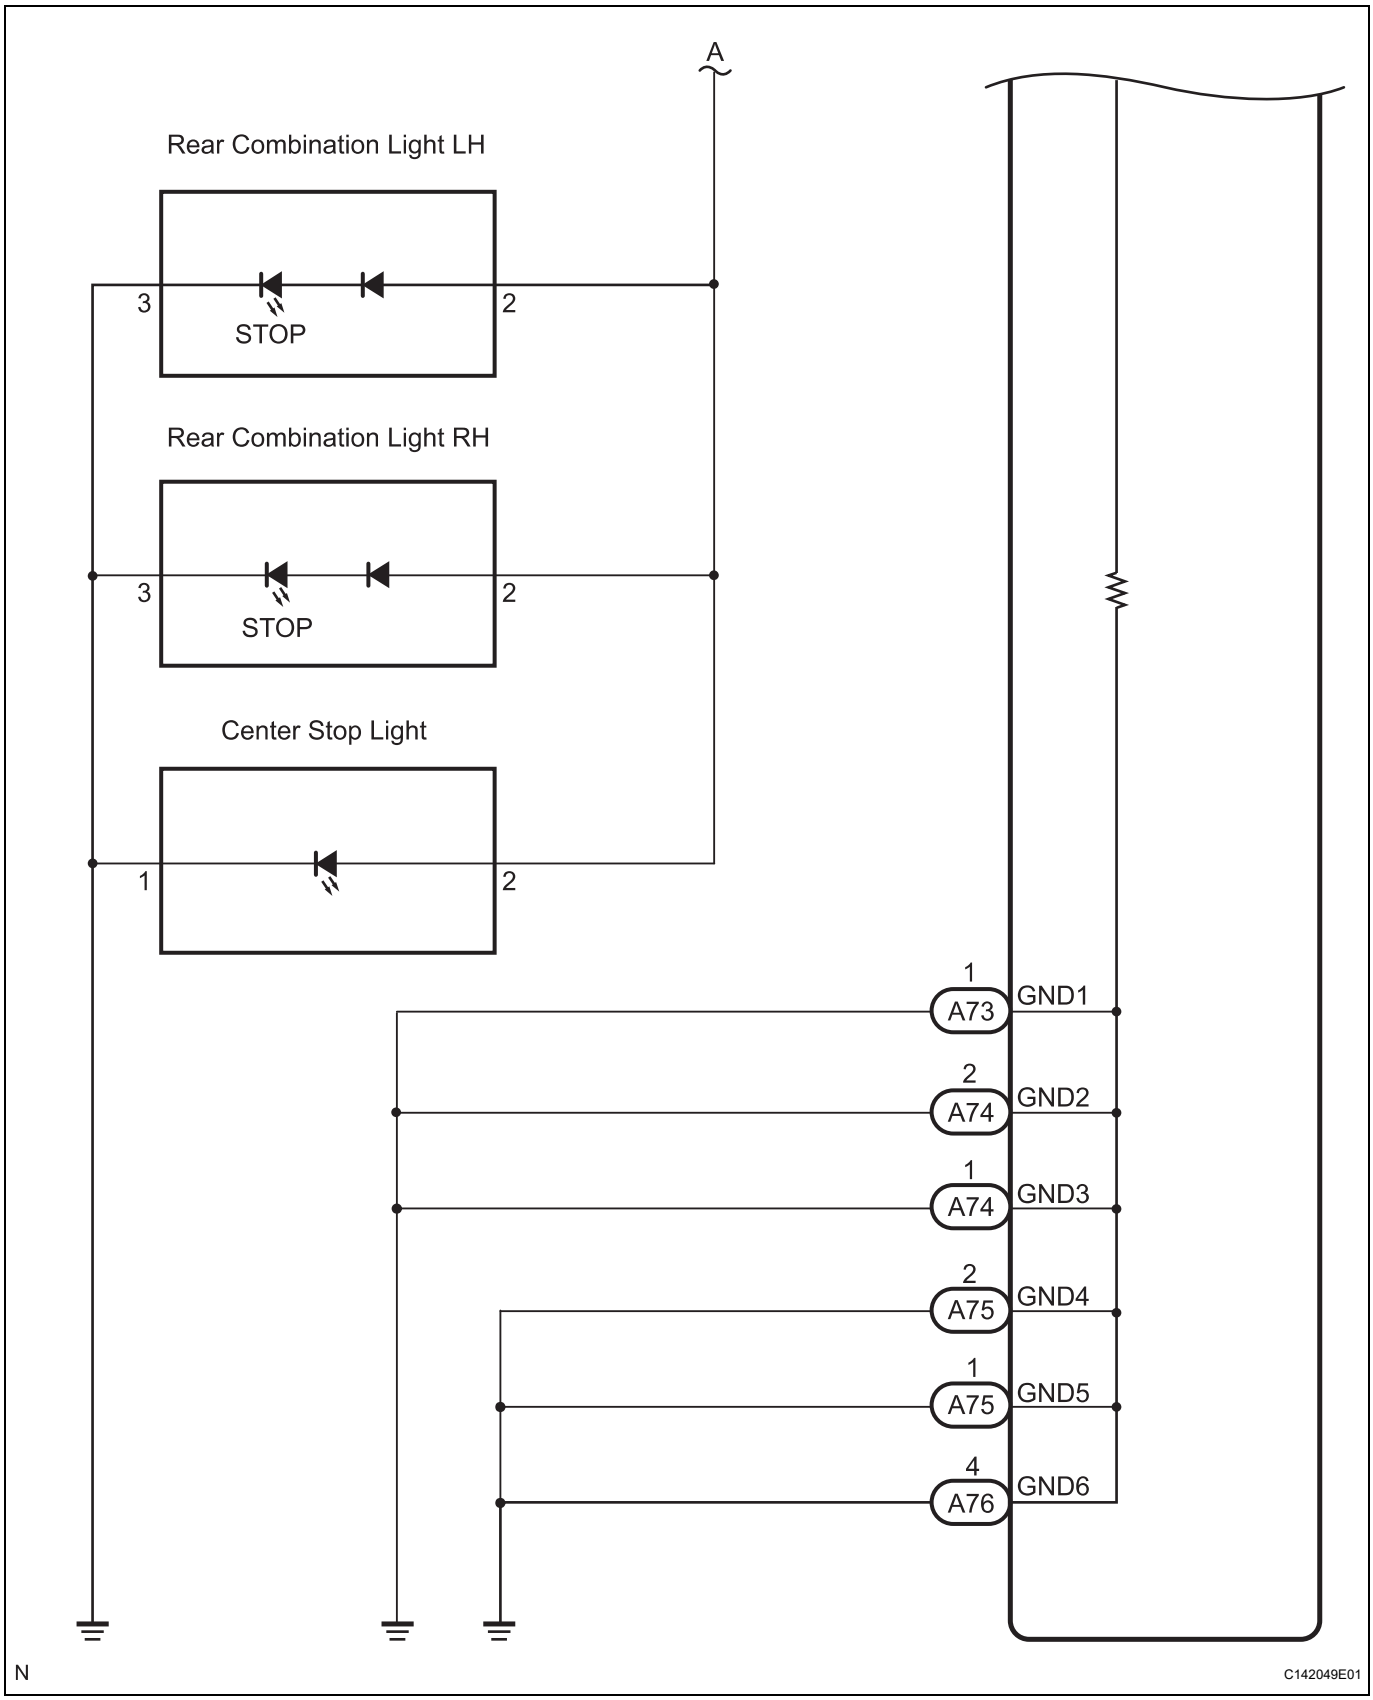
The skid control ECU inputs the stop light switch signal and the condition of brake operation.
The skid control ECU has an open detection circuit, which outputs this DTC when detecting an open in the stop light input line while the stop light switch is OFF.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1249/49	520	When IG1 terminal voltage is 9.5 to 17.2 V, an open circuit of the stop light switch continues for 10 seconds or more.	• STOP fuse • Stop light switch • Stop light switch circuit • Skid control ECU

WIRING DIAGRAM



BC

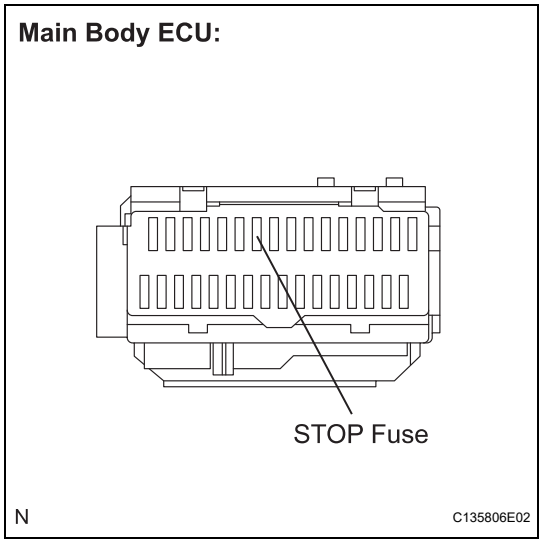


INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	INSPECT STOP FUSE



(a) Remove the STOP fuse from the main body ECU.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
STOP (10 A) fuse	Always	Below 1 Ω

NG → **REPLACE STOP FUSE**

OK

2	CHECK STOP LIGHT OPERATION

(a) Install the STOP fuse.
(b) Check that the stop light comes on when the brake pedal is depressed, and goes off when the brake pedal is released.

OK

Condition	Illumination Condition
Brake pedal depressed	ON
Brake pedal released	OFF

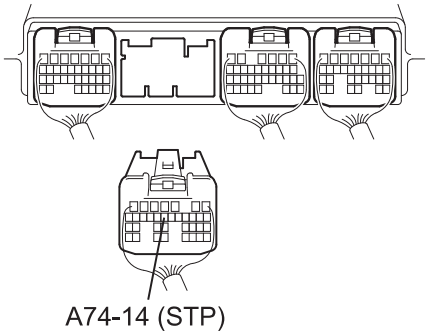
NG → **Go to step 7**

OK

BC

3	INSPECT SKID CONTROL ECU (STP TERMINAL)

Skid Control ECU Wire Harness View:



(a) Disconnect the skid control ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

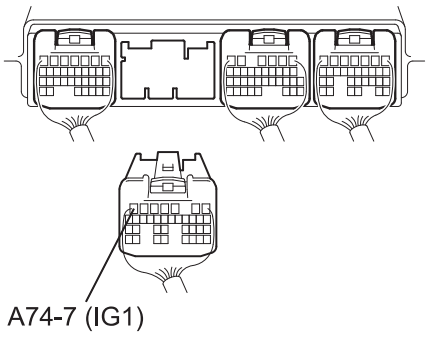
Tester Connection	Condition	Specified Condition
A74-14 (STP) - Body ground	Stop light switch ON (Brake pedal depressed)	8 to 14 V
A74-14 (STP) - Body ground	Stop light switch OFF (Brake pedal released)	Below 1.5 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (STP CIRCUIT)**

OK

4	INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU Wire Harness View:



(a) Turn the power switch on (IG).
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A74-7 (IG1) - Body ground	Power switch on (IG)	10 to 14 V

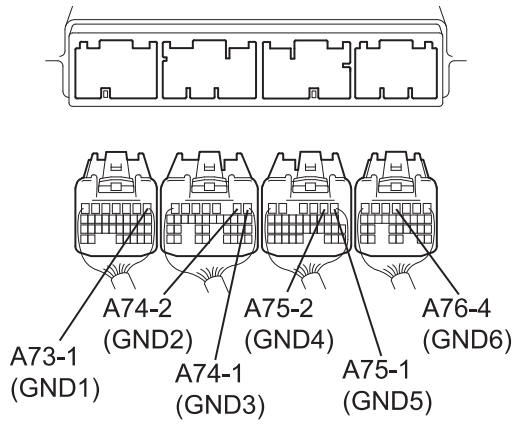
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

BC

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Wire Harness View:



(a) Turn the power switch off.
(b) Disconnect the skid control ECU connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-1 (GND1) - Body ground	Always	Below 1 Ω
A74-2 (GND2) - Body ground	Always	Below 1 Ω
A74-1 (GND3) - Body ground	Always	Below 1 Ω
A75-2 (GND4) - Body ground	Always	Below 1 Ω
A75-1 (GND5) - Body ground	Always	Below 1 Ω
A76-4 (GND6) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6 RECONFIRM DTC

(a) Reconnect the skid control ECU connectors.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Depress the brake pedal several times to test the stop light circuit.
(e) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (C1249/49) is not output	A
DTC (C1249/49) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

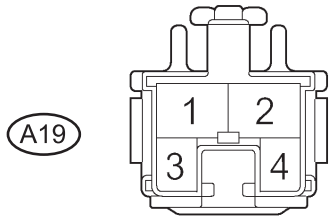
B → **REPLACE SKID CONTROL ECU**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

7	INSPECT STOP LIGHT SWITCH (POWER SOURCE TERMINAL)

Stop Light Switch Harness Side Connector Front View:



C142000E02

(a) Disconnect the stop light switch connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

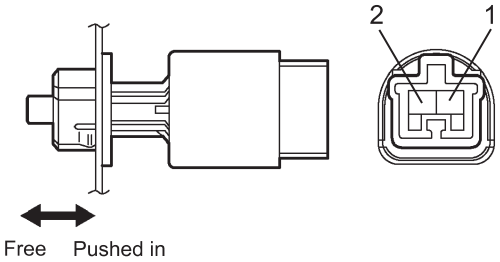
Tester Connection	Condition	Specified Condition
A19-2 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

8	INSPECT STOP LIGHT SWITCH

Stop Light Switch:



C124796E03

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
1 - 2	Switch pin free	Below 1 Ω
1 - 2	Switch pin pushed in	10 kΩ or higher

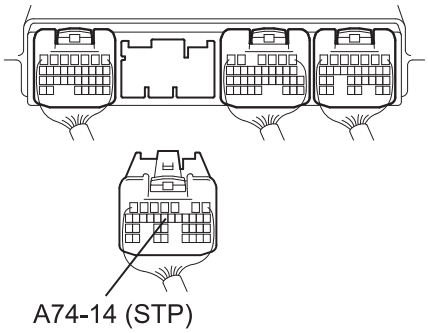
NG → **REPLACE STOP LIGHT SWITCH**

OK

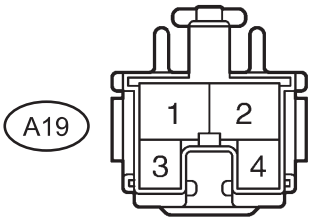
BC

9	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - STOP LIGHT SWITCH)

Skid Control ECU Wire Harness View:



Stop Light Switch Harness Side Connector Front View:



C141363E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A74-14 (STP) - A19-1	Always	Below 1 Ω
A74-14 (STP) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

10	RECONFIRM DTC

(a) Reconnect the skid control ECU connector and the stop light switch connector.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Depress the brake pedal several times to test the stop light circuit.
(e) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (C1249/49) is not output	A
DTC (C1249/49) is output	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

B → **REPLACE SKID CONTROL ECU**

BC

A

INSPECT LIGHTING SYSTEM (STOP LIGHT CIRCUIT)

DTC	C1252/52	Brake Booster Pump Motor on Time Abnormally Long

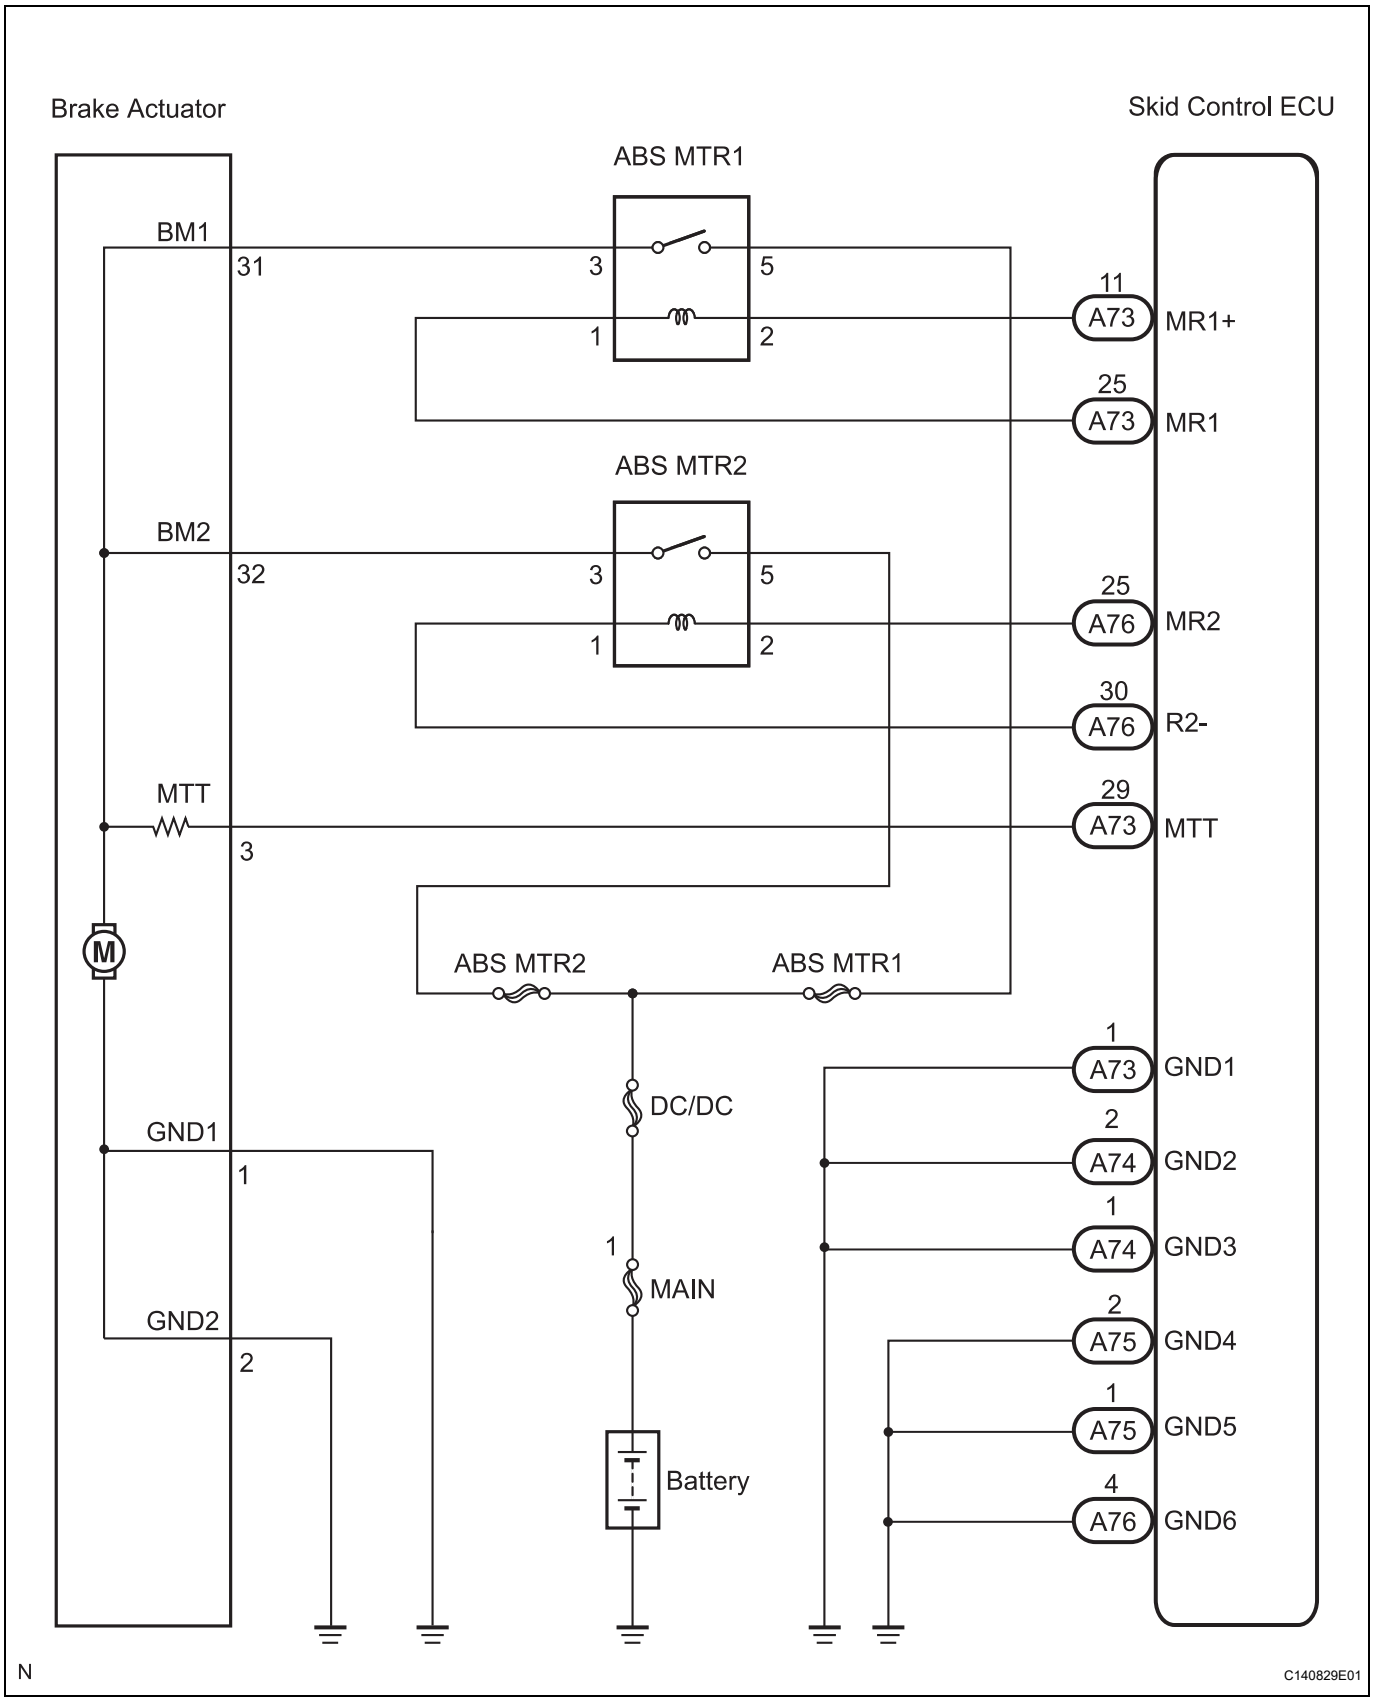
DTC	C1253/53	Hydro Booster Pump Motor Relay Malfunction

DESCRIPTION

The skid control ECU detects decreases in the accumulator pressure according to the data from the accumulator pressure sensor, and then starts and stops the pump motor by operating the motor relay. The skid control ECU usually drives the motor relay 1 for Electronically Controlled Brake control, and the motor relay 2 for ABS control. If either of them is malfunctioning, the other will substitute.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1252/52	130	Motor relay is on for at least 5 minutes.	• ABS MTR1 relay • ABS MTR1 relay circuit • ABS MTR2 relay • ABS MTR2 relay circuit • Brake actuator assembly (Accumulator pressure sensor circuit)
C1253/53	132	Motor relay 1 coil is energized for at least 1 second when linear solenoid power source voltage 1 (BS1) is 9.5 V or more and motor relay 1 is off.	• ABS MTR1 fuse • ABS MTR1 relay • ABS MTR1 relay circuit
↑	133	Motor relay 1 coil is not energized for at least 1 second when linear solenoid power source voltage 1 (BS1) is 9.5 V or more and motor relay 1 is on.	↑
↑	134	MTT input is 3.5 V or less for at least 1 second when linear solenoid power source voltage 1 (BS1) is 9.5 V or more and motor relay 1 is on.	• ABS MTR1 fuse • ABS MTR1 relay • ABS MTR1 relay circuit • Brake actuator assembly (Pump motor) • Pump motor circuit
↑	136	Motor relay 2 coil is energized for at least 1 second when linear solenoid power source voltage 2 (BS2) is 9.5 V or more and motor relay 2 is off.	• ABS MTR2 fuse • ABS MTR2 relay • ABS MTR2 relay circuit
↑	137	Motor relay 2 coil is not energized for at least 1 second when linear solenoid power source voltage 2 (BS2) is 9.5 V or more and motor relay 2 is on.	↑
↑	138	MTT input is 3.5 V or less for at least 1 second when linear solenoid power source voltage 2 (BS2) is 9.5 V or more and motor relay 2 is on.	• ABS MTR2 fuse • ABS MTR2 relay • ABS MTR2 relay circuit • Brake actuator assembly (Pump motor) • Pump motor circuit
↑	140	MTT input is 3.5 V or more for at least 2 seconds when motor relay 1 and 2 are off.	• ABS MTR1 relay • ABS MTR2 relay • Brake actuator assembly (Pump motor) • Pump motor circuit

WIRING DIAGRAM



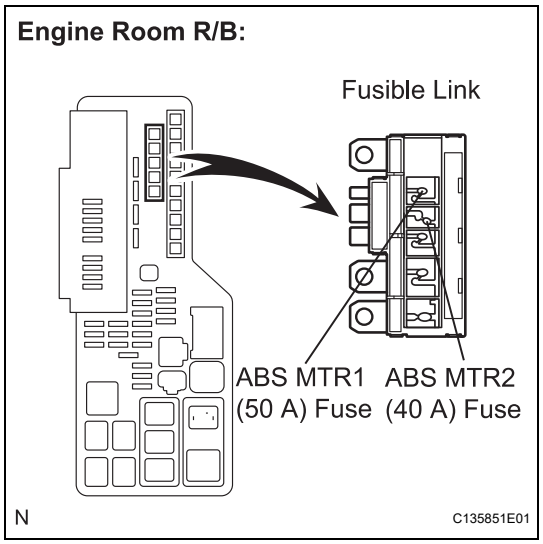
BC

INSPECTION PROCEDURE

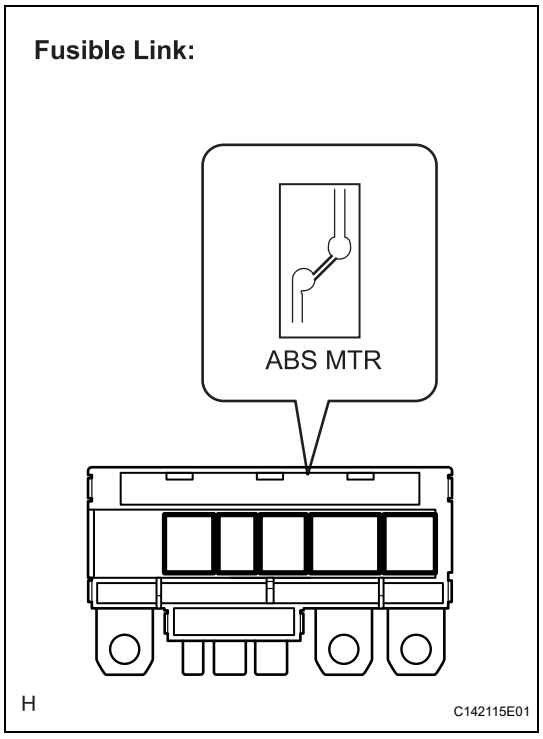
NOTICE:

When replacing the skid control ECU or brake actuator assembly, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	INSPECT ABS MTR FUSE



(a) Remove the fusible link from the engine room R/B.

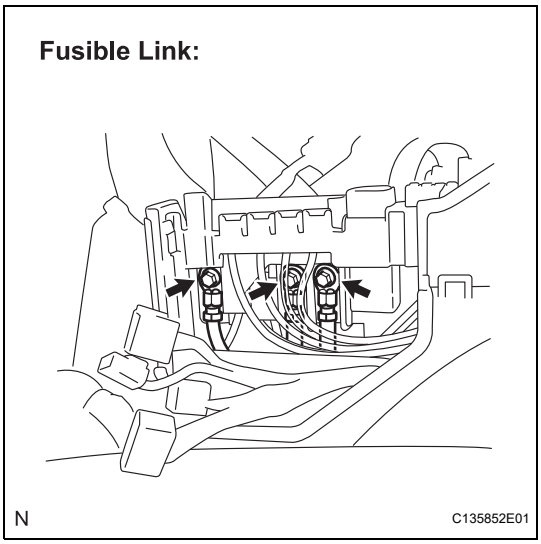


(b) Check if the fusible link is melted.

OK:

The fusible link is melted.

BC



(c) Install the fusible link to the engine room R/B with the bolt.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

NG → **REPLACE FUSIBLE LINK (ABS MTR FUSE)**

OK

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MOTOR RELAY)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the Active Test mode on the intelligent tester.

ABS / VSC:

Tester Display	Test Part	Control Range	Diagnostic Note
ECB* MTR RELAY	ABS motor relay	Relay ON / OFF	Operation sound of relay (clicking sound) and motor can be heard
ECB* MTR RELAY 2	ABS motor relay 2	Relay ON / OFF	Operation sound of relay (clicking sound) and motor can be heard

*: Electronically Controlled Brake

(d) Check the operation sound of the ABS motor relay and motor when operating it with the intelligent tester.

OK:

The operation sound of the ABS motor relay and motor should be heard.

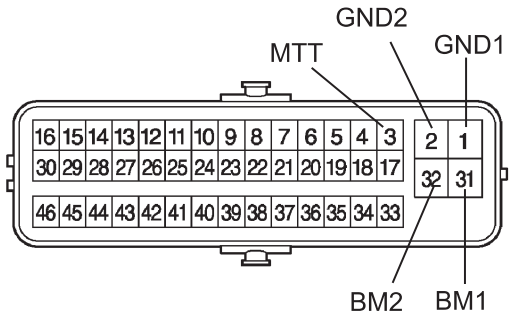
NG → **Go to step 7**

OK

BC

3 INSPECT BRAKE ACTUATOR ASSEMBLY

Brake Actuator:



C126561E04

(a) Turn the power switch off.
(b) Disconnect the brake actuator connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

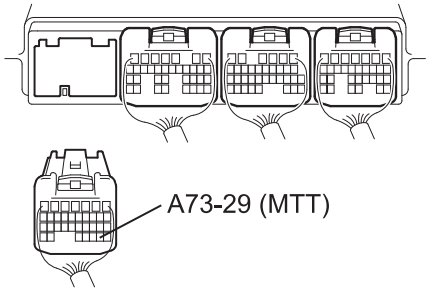
Tester Connection	Condition	Specified Condition
31 (BM1) - 1 (GND1)	Always	Below 10 Ω
32 (BM2) - 1 (GND1)	Always	Below 10 Ω
31 (BM1) - 32 (BM2)	Always	Below 1 Ω
1 (GND1) - 2 (GND2)	Always	Below 1 Ω
31 (BM1) - 3 (MTT)	Always	950 to 1,050 Ω
32 (BM2) - 3 (MTT)	Always	950 to 1,050 Ω

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

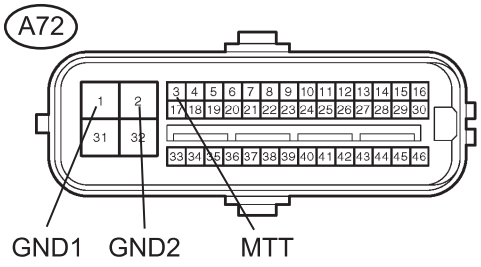
OK

4 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE ACTUATOR)

Skid Control ECU Wire Harness View:



Brake Actuator Harness Side Connector Front View:



C141364E05

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-29 (MTT) - A72-3 (MTT)	Always	Below 1 Ω
A73-29 (MTT) - Body ground	Always	10 kΩ or higher
A72-1 (GND1) - Body ground	Always	Below 1 Ω
A72-2 (GND2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

5	READ VALUE OF INTELLIGENT TESTER (ACCUMULATOR PRESSURE SENSOR)

(a) Reconnect the skid control ECU connector and the brake actuator connector.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
ACC PRESS SENS	Accumulator pressure sensor / min.: 0 V, max.: 5 V	Specified value: 3.3 to 4.7 V

(e) Depress the brake pedal 4 or 5 times to operate the pump motor, and check the output value on the intelligent tester with the motor stopped (not braking).
OK:
Accumulator pressure sensor voltage does not drop.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

6	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (IG).
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1252/52 and/or C1253/53) are not output	A
DTCs (C1252/52 and/or C1253/53) are output	B

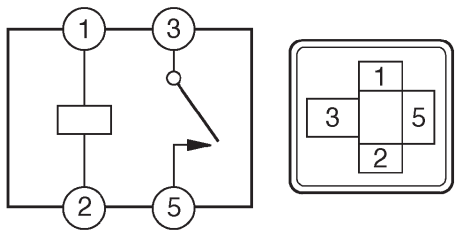
B → **REPLACE SKID CONTROL ECU**

A

BC **CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)**

7 INSPECT ABS MOTOR RELAY (ABS MTR1, 2 RELAY)

ABS MTR1, 2 Relay:



C144829E01

(a) Turn the power switch off.
(b) Remove the ABS MTR1 relay and the ABS MTR2 relay.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

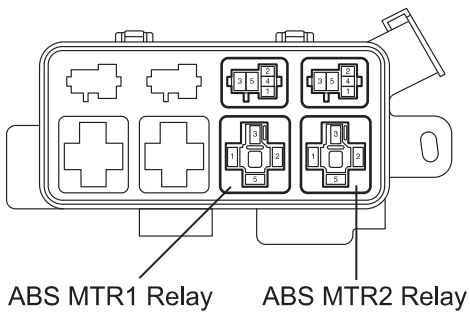
Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

NG → **REPLACE ABS MOTOR RELAY (ABS MTR1, 2 RELAY)**

OK

8 INSPECT ENGINE ROOM NO. 3 RELAY BLOCK (POWER SOURCE TERMINAL)

Engine Room No. 3 R/B:



N

C135850E01

(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
ABS MTR1 relay terminal 5 - Body ground	Always	10 to 14 V
ABS MTR2 relay terminal 5 - Body ground	Always	10 to 14 V

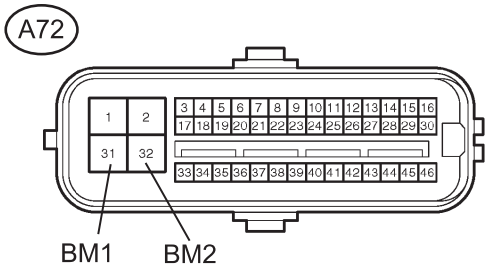
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

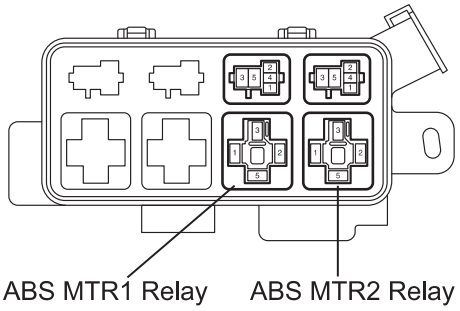
BC

9	CHECK HARNESS AND CONNECTOR (BRAKE ACTUATOR - ENGINE ROOM NO. 3 RELAY BLOCK)

Brake Actuator Harness Side Connector Front View:



Engine Room No. 3 R/B:



N C141365E01

(a) Disconnect the brake actuator connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

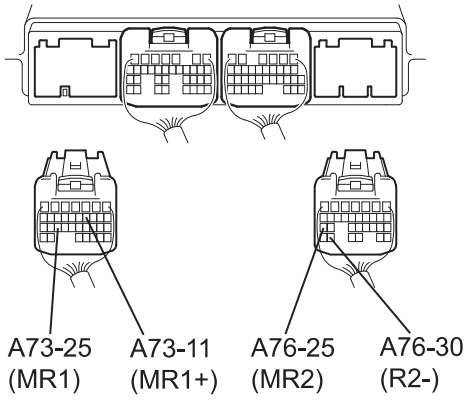
Tester Connection	Condition	Specified Condition
A72-31 (BM1) - ABS MTR1 relay terminal 3	Always	Below 1 Ω
A72-31 (BM1) - Body ground	Always	10 kΩ or higher
A72-32 (BM2) - ABS MTR2 relay terminal 3	Always	Below 1 Ω
A72-32 (BM2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

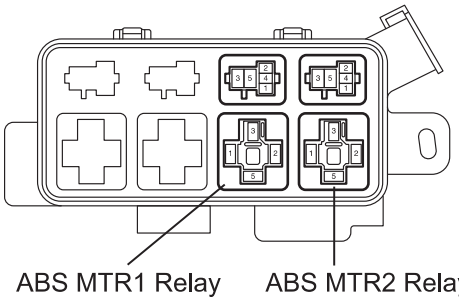
OK

10 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - ENGINE ROOM NO. 3 RELAY BLOCK)

Skid Control ECU Wire Harness View:



Engine Room No. 3 R/B:



N

C142645E01

(a) Disconnect the skid control ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-11 (MR1+) - ABS MTR1 relay terminal 2	Always	Below 1 Ω
A73-11 (MR1+) - Body ground	Always	10 kΩ or higher
A73-25 (MR1) - ABS MTR1 relay terminal 1	Always	Below 1 Ω
A73-25 (MR1) - Body ground	Always	10 kΩ or higher
A76-25 (MR2) - ABS MTR2 relay terminal 2	Always	Below 1 Ω
A76-25 (MR2) - Body ground	Always	10 kΩ or higher
A76-30 (R2-) - ABS MTR2 relay terminal 1	Always	Below 1 Ω
A76-30 (R2-) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

11 RECONFIRM DTC

(a) Clear the DTC (See page BC-57).
(b) Turn the power switch on (IG).
(c) Check if the same DTC is recorded (See page BC-57).
HINT:
Reinstall the relays, connectors, etc. and restore the vehicle to its prior condition before rechecking for DTCs.

Result

Condition	Proceed to
DTCs (C1252/52 and/or C1253/53) are not output	A
DTCs (C1252/52 and/or C1253/53) are output	B

BC

B → **REPLACE SKID CONTROL ECU**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1256/57	Accumulator Low Pressure

DESCRIPTION

The accumulator pressure sensor is built into the actuator and detects the accumulator pressure. The skid control ECU turns on the brake control warning light and sounds the skid control buzzer if it senses a decrease in the accumulator pressure.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1256/57	141	When either of the following is detected: 1. Braking operation is input when accumulator pressure is less than 12.45 MPa and vehicle speed is input (detected value changes if accumulator pressure is low after system start). 2. Accumulator pressure is less than 14.62 MPa for 120 seconds (changes according to power source voltage) after system start (stores the DTC after the conditions are met, and drives buzzer).	• Accumulator pressure • Brake actuator assembly (Accumulator pressure sensor) • Brake actuator assembly (Pump motor)
↑	143	When any of the following is detected: 1. Any of the wheel cylinder pressure sensor value is lower than the target value for at least 0.5 seconds when accumulator pressure is less than 14.62 MPa and vehicle speed is input. 2. Accumulator pressure changes little when accumulator pressure is less than 14.62 MPa for at least 1 second without braking (pump motor is operating). 3. Accumulator pressure is less than 14.62 MPa for at least 0.5 seconds when motor relay is malfunctioning.	↑

WIRING DIAGRAM

Refer to DTCs C1252/52 and C1253/53 (See page BC-151).

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU or brake actuator assembly, perform initialization of linear solenoid valve and calibration (See page BC-25).

HINT:

When C1241/41, C1252/52 or C1253/53 is output together with C1256/57, inspect and repair the trouble areas indicated by C1241/41, C1252/52 or C1253/53 first.

1	BRAKE PROBLEM CHECK

(a) Ask the customer if frequent braking is performed when the brake control warning light comes on.

OK

Condition	Proceed to
Frequent braking is performed	**A**
Frequent braking is not performed	**B**

HINT:

This DTC is output even if the accumulator pressure drops only temporarily due to frequent braking.

B → END

A

2 READ VALUE OF INTELLIGENT TESTER (ACCUMULATOR PRESSURE SENSOR)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
ACC PRESS SENS	Accumulator pressure sensor / min.: 0 V, max.: 5 V	Specified value: 3.3 to 4.7 V

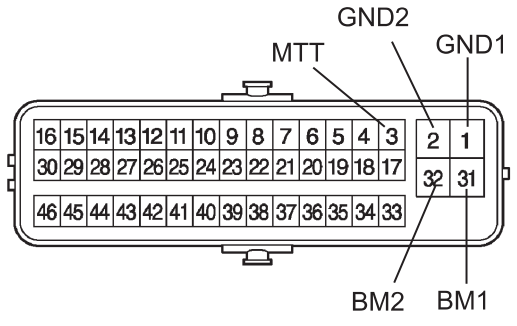
(d) Depress the brake pedal 4 or 5 times to operate the pump motor, and check the output value on the intelligent tester with the motor stopped (not braking).
OK:
Accumulator pressure sensor's output voltage does not drop.

OK → **Go to step 4**

NG

3 INSPECT BRAKE ACTUATOR ASSEMBLY

Brake Actuator:



(a) Turn the power switch off.
(b) Disconnect the brake actuator connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
31 (BM1) - 1 (GND1)	Always	Below 10 Ω
32 (BM2) - 1 (GND1)	Always	Below 10 Ω
31 (BM1) - 32 (BM2)	Always	Below 1 Ω
1 (GND1) - 2 (GND2)	Always	Below 1 Ω
31 (BM1) - 3 (MTT)	Always	950 to 1,050 Ω
32 (BM2) - 3 (MTT)	Always	950 to 1,050 Ω

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

4 RECONFIRM DTC

(a) Reconnect the brake actuator connector.
(b) Clear the DTC (See page BC-57).
(c) Perform the road and braking test.
(d) Check if the same DTC is recorded (See page BC-57).

BC

Result

Condition	Proceed to
DTC (C1256/57) is not output	A
DTC (C1256/57) is output	B

B → **REPLACE SKID CONTROL ECU**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1259/58	HV System Regenerative Malfunction

DTC	C1310/51	Malfunction in HV system

DESCRIPTION

The skid control ECU communicates with the HV control ECU and controls braking force according to the motor's regenerative force.
The skid control ECU sends enhanced VSC signal to the HV control ECU and inputs operating signal from the HV control ECU.
The skid control ECU uses CAN communication for communication with the HV control ECU. If a communication malfunction is memorized, the skid control ECU prohibits enhanced VSC operation and a part of Electronically Controlled Brake control by fail safe function.
C1259/58 is stored if the power switch on (IG) with the HV battery service plug disconnected.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1259/58	150	The regeneration malfunction signal is input for at least 0.02 seconds when IG2 terminal voltage is 9.5 V or more for at least 2 seconds and communication with HV control ECU is valid.	Hybrid control system
C1310/51	156	The traction control prohibition signal is received for at least 0.07 seconds when IG2 terminal voltage is 10.5 V or more for at least 1.5 seconds and communication with HV control ECU is valid.	Hybrid control system

HINT:
This DTC is output from the skid control ECU when the HV control ECU sends a malfunction signal to the skid control ECU.

INSPECTION PROCEDURE

1	CHECK HYBRID CONTROL SYSTEM

(a) Check if the hybrid control system DTC is output (See page HV-36).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

BC

B → INSPECT HYBRID CONTROL SYSTEM

A

REPLACE HV CONTROL ECU

DTC	C1290/66	Steering Angle Sensor Zero Point Malfunction

DESCRIPTION

The skid control ECU acquires steering angle sensor zero point every time the power switch is turned on (IG) and the vehicle is driven at 35 km/h (22 mph) or more for approximately 5 seconds. The ECU also stores the previous zero point.
If front wheel alignment or steering wheel position is adjusted without disconnecting the negative battery terminal, or if yaw rate and acceleration sensor zero point is not acquired after the adjustments have been completed, the skid control ECU detects the difference between the previous zero point and newly acquired zero point and outputs this DTC to indicate a poor adjustment.
Warning of the steering angle sensor zero point malfunction will be cancelled by turning the power switch off.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1290/66	-	The steering angle sensor zero point calibration position vastly differs from the recorded value	• Yaw rate and acceleration sensor zero point calibration incomplete • Poor adjustment of the centered position of the steering wheel • Poor adjustment of front wheel alignment

INSPECTION PROCEDURE

NOTICE:
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	PERFORM ZERO POINT CALIBRATION OF YAW RATE AND ACCELERATION SENSOR

(a) Perform zero point calibration of the yaw rate and acceleration sensor (See page BC-29).
HINT:
- When the stored zero point of the yaw rate and acceleration sensor is erased, steering angle sensor zero point will also be erased.
- If the zero point and output value of the yaw rate and acceleration sensor and the output value of the speed sensors are not normal, steering angle sensor zero point cannot be acquired normally even if the vehicle is driven straight ahead at 35 km/h (22 mph) or more.

NEXT

BC

2	CHECK STEERING ANGLE SENSOR ZERO POINT CALIBRATION

(a) Drive the vehicle straight ahead at 35 km/h (22 mph) or more for at least 5 seconds.
(b) Check that the centered position of the steering wheel is correctly set, while driving straight ahead.
HINT:
If front wheel alignment and steering position are adjusted as a result of abnormal centered position of the steering wheel, acquire yaw rate and acceleration sensor zero point again after the adjustments are completed.

OK:
The centered position of the steering wheel is correctly set.

NG → **ADJUST FRONT WHEEL ALIGNMENT OR STEERING POSITION**

OK

3	RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Drive the vehicle and turn the steering wheel to the right and left at the speed of 35 km/h (22 mph) or more.
(e) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (C1290/66) is not output	A
DTC (C1290/66) is output	B

B → **REPLACE SKID CONTROL ECU**

A

END

DTC	C1300	Skid Control ECU Malfunction

DESCRIPTION

The skid control ECU outputs this DTC if malfunctions are found in the circuit inside the computer by self diagnosis.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1300	-	Malfunction in the skid control ECU.	Skid control ECU

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	REPLACE SKID CONTROL ECU

(a) Replace the skid control ECU (See page BC-289).

NEXT

END

DTC	C1304/27	EPS Control System Malfunction

DESCRIPTION

The skid control ECU communicates with the power steering (EPS) ECU via CAN communication.
If a malfunction in the electronic power steering (EPS) system is detected, cooperative control of the steering is prohibited by the fail safe function.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1304/27	376	The EPS system fail signal continues to be output for 5 seconds or more.	Electronic power steering system

INSPECTION PROCEDURE

1	CHECK ELECTRONIC POWER STEERING SYSTEM

(a) Check if the electronic power steering system DTC is output (See page PS-17).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT ELECTRONIC POWER STEERING SYSTEM

REPLACE POWER STEERING ECU

DTC	C1311/11	Open in Main Relay 1 Circuit

DTC	C1312/12	Short in Main Relay 1 Circuit

DTC	C1313/13	Open in Main Relay 2 Circuit

DTC	C1314/14	Short in Main Relay 2 Circuit

DESCRIPTION

The main relay 1 supplies power to the changeover solenoid and the linear solenoid.
The main relay remains ON for approximately 2 minutes after the power switch is turned off and the input of brake operation signals stops, and supplies power to the system to keep it ready to operate.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1311/11	1	When either of the following is detected: 1. Relay contact is off (BS1 terminal is less than 3.5 V) for at least 0.2 seconds when R1+ terminal voltage is 9.5 V or more and main relay 1 is on. 2. R1+ terminal voltage is less than 9.5 V and main relay 1 cannot be on for at least 0.2 seconds when main relay 1 is turned on (BS1 terminal is 3.5 V or more).	• ABS NO. 1 relay • ABS NO. 1 relay circuit • Skid control ECU
C1312/12	3	Relay contact is on for at least 4 seconds when main relay 1 is off.	↑
C1313/13	4	When either of the following is detected: 1. Relay contact is off (BS2 terminal is less than 3.5 V) for at least 0.2 seconds when R2+ terminal voltage is 9.5 V or more and main relay 2 is on. 2. R2+ terminal voltage is less than 9.5 V and main relay 2 cannot be on for at least 2 seconds when main relay 2 is turned on (BS2 terminal is 3.5 V or more).	• ABS NO. 2 relay • ABS NO. 2 relay circuit • Skid control ECU
C1314/14	6	Relay contact is on for at least 4 seconds when main relay 2 is off.	↑

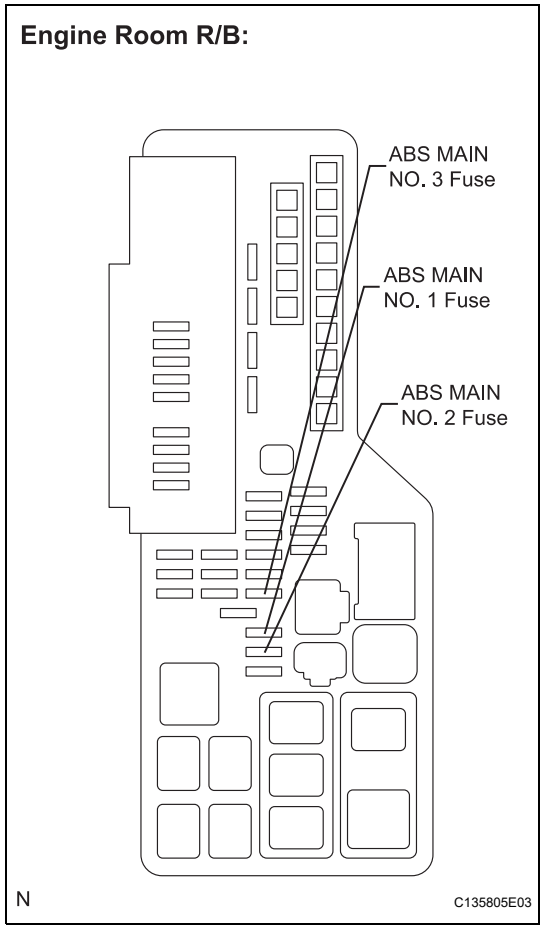
WIRING DIAGRAM

Refer to DTCs C1241/41 and C1242/42 (See page BC-122).

INSPECTION PROCEDURE

NOTICE:
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	INSPECT ABS MAIN FUSE



(a) Remove the ABS MAIN NO. 1, ABS MAIN NO. 2 and ABS MAIN NO. 3 fuses from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
ABS MAIN NO. 1 (10 A) fuse	Always	Below 1 Ω
ABS MAIN NO. 2 (10 A) fuse	Always	Below 1 Ω
ABS MAIN NO. 3 (10 A) fuse	Always	Below 1 Ω

NG → REPLACE ABS MAIN FUSE

OK

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (ABS MAIN RELAY)

(a) Install the ABS MAIN NO. 1, ABS MAIN NO. 2 and ABS MAIN NO. 3 fuses.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Select the Active Test mode on the intelligent tester.

BC

ABS / VSC:

Tester Display	Test Part	Control Range	Diagnostic Note
ECB* RELAY	ABS main relay	Relay ON / OFF	Operating sound of relay (clicking sound) can be heard
ECB* RELAY 2	ABS main relay 2	Relay ON / OFF	Operating sound of relay (clicking sound) can be heard

*: Electronically Controlled Brake

(e) Check the operating sound of the ABS main relay when operating it with the intelligent tester.

OK:

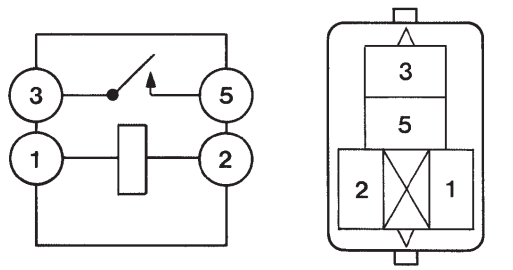
The operating sound of the ABS main relay should be heard.

OK → Go to step 6

NG

3 INSPECT ABS MAIN RELAY (ABS NO. 1, 2 RELAY)

ABS NO. 1, 2 Relay:



C143433E01

(a) Turn the power switch off.
(b) Remove the ABS NO. 1 relay and ABS NO. 2 relay.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

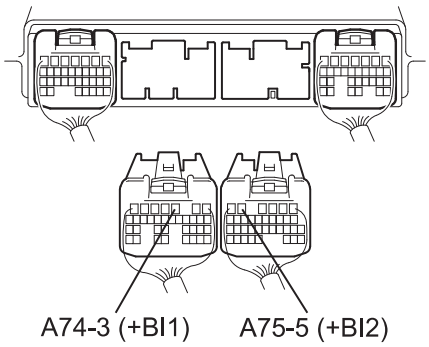
Tester Connection	Condition	Specified Condition
3 - 5	Always	10 kΩ or higher
3 - 5	Apply B+ between terminals 1 and 2	Below 1 Ω

NG → REPLACE ABS MAIN RELAY (ABS NO. 1, 2 RELAY)

OK

4 INSPECT SKID CONTROL ECU (+BI TERMINAL)

Skid Control ECU Wire Harness View:



P

C135832E01

(a) Install the ABS NO. 1 relay and ABS NO. 2 relay.
(b) Disconnect the skid control ECU connectors.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A74-3 (+BI1) - Body ground	Always	10 to 14 V
A75-5 (+BI2) - Body ground	Always	10 to 14 V

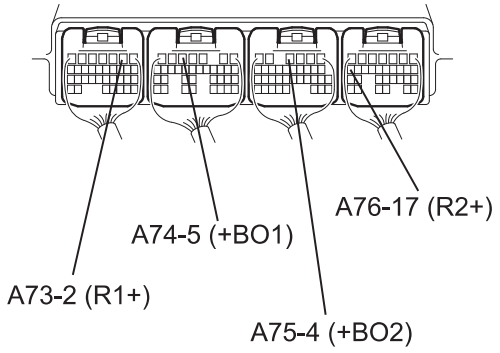
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (+BI CIRCUIT)

OK

BC

5 INSPECT SKID CONTROL ECU (RELAY TERMINAL)

Skid Control ECU Wire Harness View:



(a) Reconnect the skid control ECU connectors.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

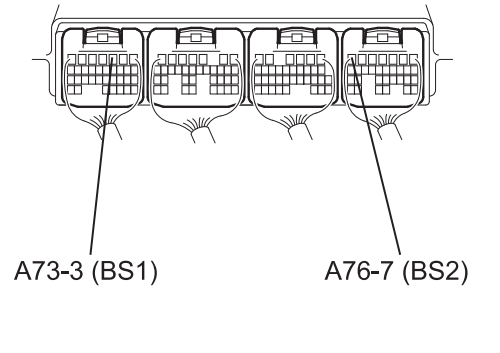
Tester Connection	Condition	Specified Condition
A73-2 (R1+) - Body ground	Power switch on (IG)	9.1 to 13.6 V
A76-17 (R2+) - Body ground	Power switch on (IG)	9.1 to 13.6 V
A74-5 (+BO1) - Body ground	Power switch on (IG)	8.8 to 14 V
A75-4 (+BO2) - Body ground	Power switch on (IG)	8.8 to 14 V

NG → **REPLACE SKID CONTROL ECU**

OK

6 INSPECT SKID CONTROL ECU (BS TERMINAL)

Skid Control ECU Wire Harness View:



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A73-3 (BS1) - Body ground	Power switch on (IG)	8.8 to 14 V
A76-7 (BS2) - Body ground	Power switch on (IG)	8.8 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (BS CIRCUIT)**

OK

7 RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (IG).
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1311/11, C1312/12, C1313/13 and/or C1314/14) are not output	A
DTCs (C1311/11, C1312/12, C1313/13 and/or C1314/14) are output	B

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1315/31	SMC1 Changeover Solenoid Malfunction
DTC	C1316/32	SMC2 Changeover Solenoid Malfunction
DTC	C1352/21	Front Increasing Pressure Solenoid RH Malfunction
DTC	C1353/23	Front Increasing Pressure Solenoid LH Malfunction
DTC	C1354/25	Rear Increasing Pressure Solenoid RH Malfunction
DTC	C1355/27	Rear Increasing Pressure Solenoid LH Malfunction
DTC	C1356/22	Front Decreasing Pressure Solenoid RH Malfunction
DTC	C1357/24	Front Decreasing Pressure Solenoid LH Malfunction
DTC	C1358/26	Rear Decreasing Pressure Solenoid RH Malfunction
DTC	C1359/28	Rear Decreasing Pressure Solenoid LH Malfunction

DESCRIPTION

Each solenoid adjusts pressure which affects each wheel cylinder according to signals from the skid control ECU and controls the vehicle.

The master cut solenoid (SMC1/2) is closed and blocks the master cylinder pressure from the Electronically Controlled Brake control pressure when the system is normal. The master cut solenoid is open and sends the master cylinder fluid pressure to the non-assisted brake wheel cylinders during the fail safe due to a system malfunction.

BC

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1315/31	61	When either of the following is detected: 1. SMC1 drive circuit is malfunctioning for 0.05 seconds or more. 2. Short to +B in SMC1.	• Brake actuator assembly (SMC1) • SMC1 circuit • Skid control ECU
↑	62	Current leaks for 0.05 seconds or more when SMC1 is off.	↑

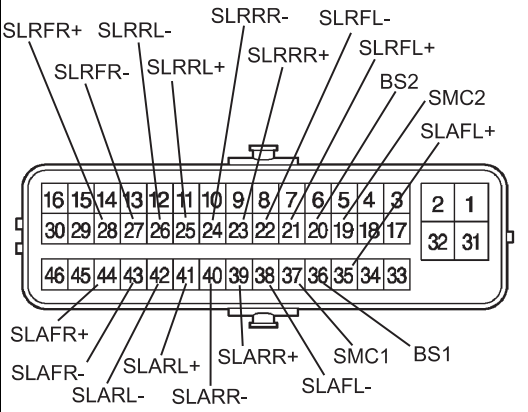
INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU or brake actuator assembly, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	INSPECT BRAKE ACTUATOR ASSEMBLY

Brake Actuator:



(a) Disconnect the brake actuator connector.

(b) Measure the resistance according to the value(s) in the table below.

HINT:

Check the brake actuator assembly when it is cooled down.

Standard resistance

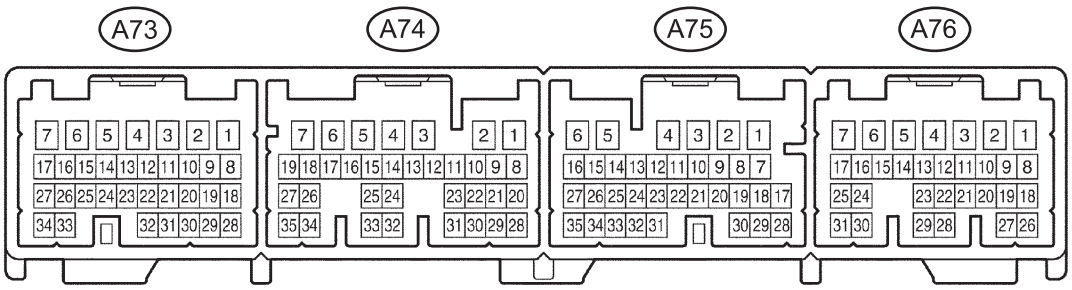
Tester Connection	Condition	Specified Condition
37 (SMC1) - 36 (BS1)	Always	15.3 to 17.3 Ω
37 (SMC1) - Body ground	Always	10 kΩ or higher
19 (SMC2) - 20 (BS2)	Always	15.3 to 17.3 Ω
19 (SMC2) - Body ground	Always	10 kΩ or higher
44 (SLAFR+) - 43 (SLAFR-)	Always	3.6 to 4.2 Ω
44 (SLAFR+) - Body ground	Always	10 kΩ or higher
35 (SLAFL+) - 38 (SLAFL-)	Always	3.6 to 4.2 Ω
35 (SLAFL+) - Body ground	Always	10 kΩ or higher
39 (SLARR+) - 40 (SLARR-)	Always	3.6 to 4.2 Ω
39 (SLARR+) - Body ground	Always	10 kΩ or higher
41 (SLARL+) - 42 (SLARL-)	Always	3.6 to 4.2 Ω
41 (SLARL+) - Body ground	Always	10 kΩ or higher
28 (SLRFR+) - 27 (SLRFR-)	Always	3.6 to 4.2 Ω
28 (SLRFR+) - Body ground	Always	10 kΩ or higher
21 (SLRFL+) - 22 (SLRFL-)	Always	3.6 to 4.2 Ω
21 (SLRFL+) - Body ground	Always	10 kΩ or higher
23 (SLRRR+) - 24 (SLRRR-)	Always	4.4 to 5.0 Ω
23 (SLRRR+) - Body ground	Always	10 kΩ or higher
25 (SLRRL+) - 26 (SLRRL-)	Always	4.4 to 5.0 Ω
25 (SLRRL+) - Body ground	Always	10 kΩ or higher

NG → REPLACE BRAKE ACTUATOR ASSEMBLY

OK

2	INSPECT SKID CONTROL ECU

Skid Control ECU:



C138589E03

(a) Turn the power switch on (IG).
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A73-4 (SMC1) - Body ground	Brake pedal released	10 to 14 V
A76-3 (SMC2) - Body ground	Brake pedal released	10 to 14 V
A73-7 (SLAFR+) - Body ground	Brake pedal released	Pulse generation (see waveform 1) (See page BC-48)
A73-6 (SLAFR-) - Body ground	Brake pedal released	Pulse generation (see waveform 1) (See page BC-48)
A76-1 (SLAFL+) - Body ground	Brake pedal released	Pulse generation (see waveform 1) (See page BC-48)
A76-2 (SLAFL-) - Body ground	Brake pedal released	Pulse generation (see waveform 1) (See page BC-48)
A76-19 (SLARR+) - Body ground	Brake pedal released	Pulse generation (see waveform 1) (See page BC-48)
A76-9 (SLARR-) - Body ground	Brake pedal released	Pulse generation (see waveform 1) (See page BC-48)
A73-15 (SLARL+) - Body ground	Brake pedal released	Pulse generation (see waveform 1) (See page BC-48)
A73-27 (SLARL-) - Body ground	Brake pedal released	Pulse generation (see waveform 1) (See page BC-48)
A73-17 (SLRFR+) - Body ground	Brake pedal released	Below 1.5 V
A73-34 (SLRFR-) - Body ground	Brake pedal released	Below 1.5 V
A76-8 (SLRFL+) - Body ground	Brake pedal released	Below 1.5 V
A76-26 (SLRFL-) - Body ground	Brake pedal released	Below 1.5 V
A76-20 (SLRRR+) - Body ground	Brake pedal released	Below 1.5 V
A76-18 (SLRRR-) - Body ground	Brake pedal released	Below 1.5 V
A73-16 (SLRRL+) - Body ground	Brake pedal released	Below 1.5 V
A73-26 (SLRRL-) - Body ground	Brake pedal released	Below 1.5 V

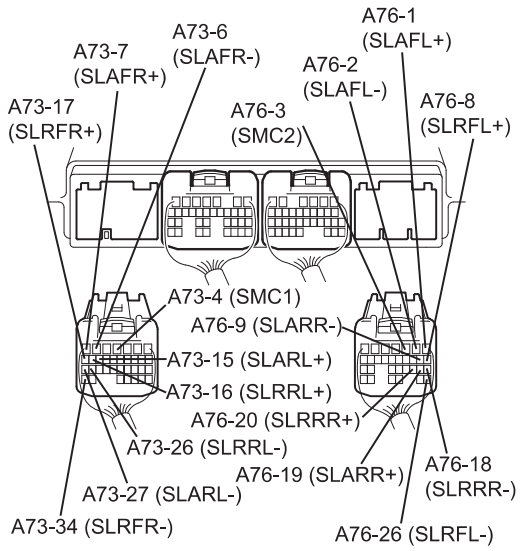
NG → REPLACE SKID CONTROL ECU

BC

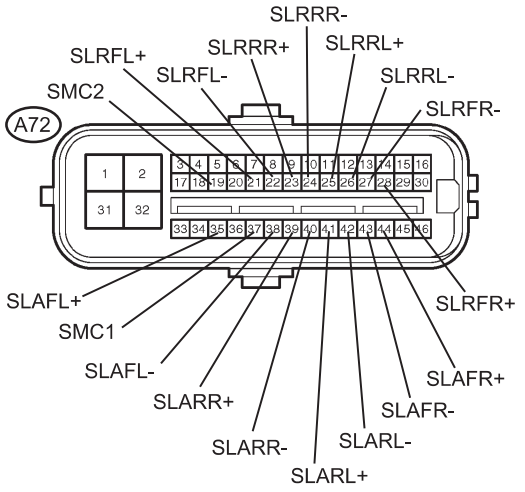
OK

3 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE ACTUATOR)

Skid Control ECU Wire Harness View:



Brake Actuator Harness Side Connector Front View:



C141366E02

(a) Turn the power switch off.
(b) Disconnect the skid control ECU connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-4 (SMC1) - A72-37 (SMC1)	Always	Below 1 Ω
A73-4 (SMC1) - Body ground	Always	10 kΩ or higher
A76-3 (SMC2) - A72-19 (SMC2)	Always	Below 1 Ω
A76-3 (SMC2) - Body ground	Always	10 kΩ or higher
A73-7 (SLAFR+) - A72-44 (SLAFR+)	Always	Below 1 Ω
A73-7 (SLAFR+) - Body ground	Always	10 kΩ or higher
A73-6 (SLAFR-) - A72-43 (SLAFR-)	Always	Below 1 Ω
A73-6 (SLAFR-) - Body ground	Always	10 kΩ or higher
A76-1 (SLAFL+) - A72-35 (SLAFL+)	Always	Below 1 Ω
A76-1 (SLAFL+) - Body ground	Always	10 kΩ or higher
A76-2 (SLAFL-) - A72-38 (SLAFL-)	Always	Below 1 Ω
A76-2 (SLAFL-) - Body ground	Always	10 kΩ or higher
A76-19 (SLARR+) - A72-39 (SLARR+)	Always	Below 1 Ω
A76-19 (SLARR+) - Body ground	Always	10 kΩ or higher
A76-9 (SLARR-) - A72-40 (SLARR-)	Always	Below 1 Ω
A76-9 (SLARR-) - Body ground	Always	10 kΩ or higher
A73-15 (SLARL+) - A72-41 (SLARL+)	Always	Below 1 Ω
A73-15 (SLARL+) - Body ground	Always	10 kΩ or higher
A73-27 (SLARL-) - A72-42 (SLARL-)	Always	Below 1 Ω
A73-27 (SLARL-) - Body ground	Always	10 kΩ or higher
A73-17 (SLRFR+) - A72-28 (SLRFR+)	Always	Below 1 Ω
A73-17 (SLRFR+) - Body ground	Always	10 kΩ or higher
A73-34 (SLRFR-) - A72-27 (SLRFR-)	Always	Below 1 Ω
A73-34 (SLRFR-) - Body ground	Always	10 kΩ or higher
A76-8 (SLRFL+) - A72-21 (SLRFL+)	Always	Below 1 Ω
A76-8 (SLRFL+) - Body ground	Always	10 kΩ or higher
A76-26 (SLRFL-) - A72-22 (SLRFL-)	Always	Below 1 Ω
A76-26 (SLRFL-) - Body ground	Always	10 kΩ or higher
A76-20 (SLRRR+) - A72-23 (SLRRR+)	Always	Below 1 Ω
A76-20 (SLRRR+) - Body ground	Always	10 kΩ or higher

BC

Tester Connection	Condition	Specified Condition
A76-18 (SLRRR-) - A72-24 (SLRRR-)	Always	Below 1 Ω
A76-18 (SLRRR-) - Body ground	Always	10 kΩ or higher
A73-16 (SLRRL+) - A72-25 (SLRRL+)	Always	Below 1 Ω
A73-16 (SLRRL+) - Body ground	Always	10 kΩ or higher
A73-26 (SLRRL-) - A72-26 (SLRRL-)	Always	Below 1 Ω
A73-26 (SLRRL-) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 RECONFIRM DTC

(a) Reconnect the skid control ECU connectors and the brake actuator connector.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1315/31, C1316/32, C1352/21, C1353/23, C1354/25, C1355/27, C1356/22, C1357/24, C1358/26 and/or C1359/28) are not output	A
DTCs (C1315/31, C1316/32, C1352/21, C1353/23, C1354/25, C1355/27, C1356/22, C1357/24, C1358/26 and/or C1359/28) are output	B

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

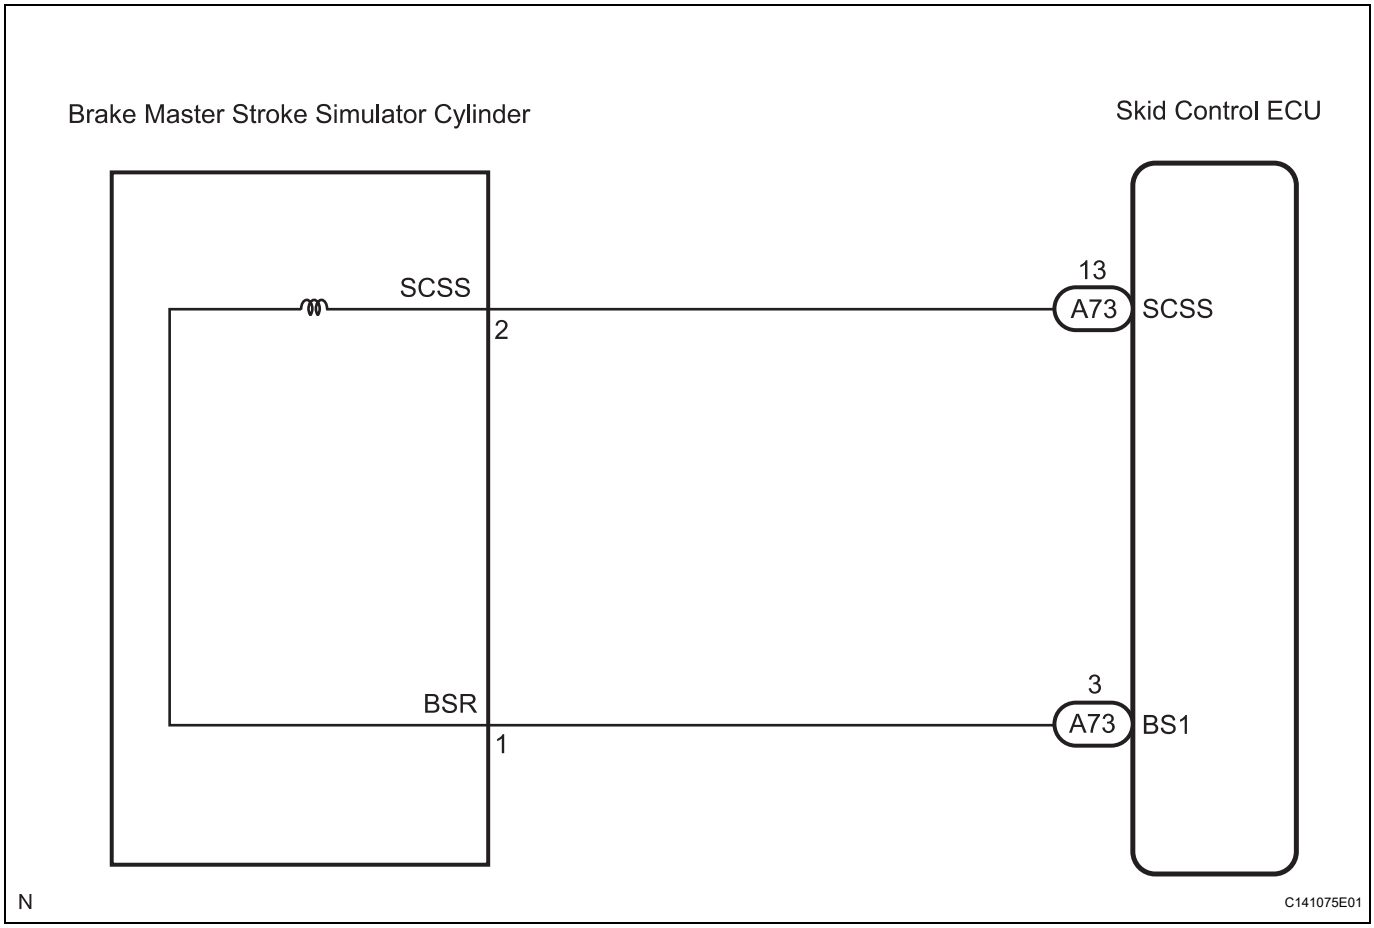
DTC	C1319/35	SCSS Changeover Solenoid Malfunction

DESCRIPTION

The stroke simulator solenoid (SCSS) generates pedal reactive effort during Electronically Controlled Brake control. If one or more of the front wheels loses brake booster function, the simulator operation is prohibited.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1319/35	71	When either of the following is detected: 1. SCSS drive circuit is malfunctioning for 0.05 seconds or more. 2. Short to +B in SCSS.	• Brake master stroke simulator • Brake master stroke simulator circuit • Skid control ECU
↑	72	Current leaks for 0.05 seconds or more when SCSS is off.	↑
↑	73	Open circuit in SCSS continues for 0.05 seconds or more.	↑
↑	74	Overcurrent in SCSS continues for 0.05 seconds or more.	↑

WIRING DIAGRAM



INSPECTION PROCEDURE

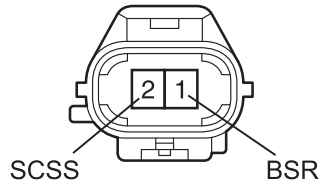
NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

BC

1	INSPECT BRAKE MASTER STROKE SIMULATOR CYLINDER ASSEMBLY

Brake Master Stroke Simulator Cylinder:



(a) Disconnect the brake master stroke simulator cylinder connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

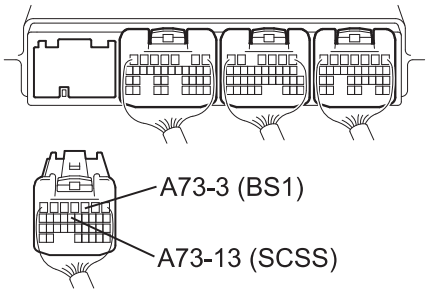
Tester Connection	Condition	Specified Condition
1 (BSR) - 2 (SCSS)	Always	21.45 to 23.15 Ω
1 (BSR) - Body ground	Always	10 kΩ or higher

NG → **REPLACE BRAKE MASTER STROKE SIMULATOR CYLINDER ASSEMBLY**

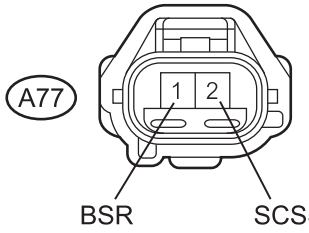
OK

2	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE MASTER STROKE SIMULATOR CYLINDER)

Skid Control ECU Wire Harness View:



Brake Master Stroke Simulator Cylinder Harness Side Connector Front View:



(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-13 (SCSS) - A77-2 (SCSS)	Always	Below 1 Ω
A73-13 (SCSS) - Body ground	Always	10 kΩ or higher
A73-3 (BS1) - A77-1 (BSR)	Always	Below 1 Ω
A73-3 (BS1) - Body ground	Always	10 kΩ or higher

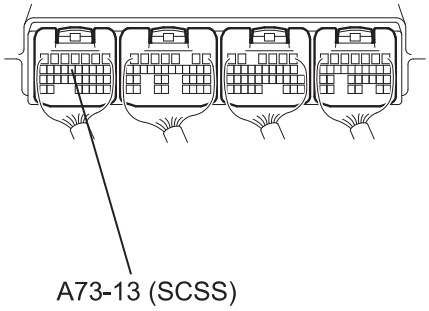
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

3	INSPECT SKID CONTROL ECU (SOLENOID INPUT)

Skid Control ECU Wire Harness View:



(a) Reconnect the skid control ECU connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A73-13 (SCSS) - Body ground	Brake pedal depressed (Stroke simulator ON)	Below 1.5 V
A73-13 (SCSS) - Body ground	Brake pedal released (Stroke simulator OFF)	10 to 14 V

NG → REPLACE SKID CONTROL ECU

OK

4	RECONFIRM DTC

(a) Turn the power switch off.
(b) Reconnect the brake master stroke simulator cylinder connector.
(c) Clear the DTC (See page BC-57).
(d) Turn the power switch on (READY).
(e) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (C1319/35) is not output	A
DTC (C1319/35) is output	B

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1341/62	Front Hydraulic System RH Malfunction

DTC	C1342/63	Front Hydraulic System LH Malfunction

DTC	C1343/64	Rear Hydraulic System RH Malfunction

DTC	C1344/65	Rear Hydraulic System LH Malfunction

DESCRIPTION

The skid control ECU controls braking force according to the hybrid control system regenerative braking force and inputs the fluid pressure necessary for operating each wheel cylinder according to the wheel cylinder pressure sensor.
DTCs may be stored if brake fluid leaks, the wheel cylinder vibrates due to uneven wear of the brake disc rotor, or foreign matter enters the solenoid valve.
DTCs may be stored if the line pressure drops during air bleeding.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1341/62	551 552	Hydraulic pressure control on FR wheel has deteriorated.	• Fluid leakage • Brake actuator assembly
↑	553	There is a malfunction, such as leakage in the pressure increase control valve of FR wheel.	• Fluid leakage • Disc rotor • Brake actuator assembly
↑	554 555	There is a malfunction, such as leakage in the pressure decrease control valve of FR wheel.	↑
C1342/63	561 562	Hydraulic pressure control on FL wheel has deteriorated.	• Fluid leakage • Brake actuator assembly
↑	563	There is a malfunction, such as leakage in pressure increase control valve of FL wheel.	• Fluid leakage • Disc rotor • Brake actuator assembly
↑	564 565	There is a malfunction, such as leakage in pressure decrease control valve of FL wheel.	↑
C1343/64	571 572	Hydraulic pressure control on RR wheel has deteriorated.	• Fluid leakage • Brake actuator assembly
↑	573	There is a malfunction, such as leakage in pressure increase control valve of RR wheel.	• Fluid leakage • Disc rotor • Brake actuator assembly
↑	574 575	There is a malfunction, such as leakage in pressure decrease control valve of RR wheel.	↑
C1344/65	581 582	Hydraulic pressure control on RL wheel has deteriorated.	• Fluid leakage • Brake actuator assembly
↑	583	There is a malfunction, such as leakage in pressure increase control valve of RL wheel.	• Fluid leakage • Disc rotor • Brake actuator assembly
↑	584 585	There is a malfunction, such as leakage in pressure decrease control valve of RL wheel.	↑

BC

WIRING DIAGRAM

Refer to DTCs C1246/46, C1281/81 and C1364/61 (See page BC-131).

INSPECTION PROCEDURE

NOTICE:
When replacing the brake actuator assembly, perform initialization of linear solenoid valve and calibration (See page BC-25).

HINT:
When C1364/61 is output together with C1341/62, C1342/63, C1343/64 or C1344/65, inspect and repair the trouble areas indicated by C1364/61 first.

1	CHECK FOR BRAKE FLUID LEAKS

(a) Check that there is no fluid leakage in the brake line between the brake actuator and the wheel cylinder which is the cause of DTCs.
(b) Check that the brake is not dragging.
OK:
There is no fluid leakage or dragging.

NG → **REPAIR OR REPLACE APPLICABLE PART**

OK

2	PERFORM AIR BLEEDING

(a) Bleed the air from the front and rear brake systems (See page BR-5).

NEXT

3	RECONFIRM DTC

(a) Clear the DTC (See page BC-57).
(b) Repeat the braking test under malfunction conditions recreated based on the Freeze Frame Data or customer problem analysis.
(c) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1341/62, C1342/63, C1343/64 and/or C1344/65) are output	A
DTCs (C1341/62, C1342/63, C1343/64 and/or C1344/65) are not output	B

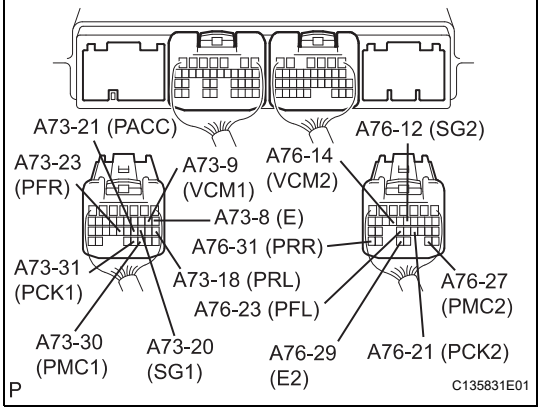
HINT:
DTC may be stored if foreign matter or air enters the solenoid valve.

B → **END**

A

4 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BODY GROUND)

Skid Control ECU Wire Harness View:



(a) Turn the power switch off.
(b) Disconnect the skid control ECU connectors and the brake actuator connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
A73-8 (E) - Body ground	Always	10 kΩ or higher
A73-9 (VCM1) - Body ground	Always	10 kΩ or higher
A73-18 (PRL) - Body ground	Always	10 kΩ or higher
A73-20 (SG1) - Body ground	Always	10 kΩ or higher
A73-21 (PACC) - Body ground	Always	10 kΩ or higher
A73-23 (PFR) - Body ground	Always	10 kΩ or higher
A73-30 (PMC1) - Body ground	Always	10 kΩ or higher
A73-31 (PCK1) - Body ground	Always	10 kΩ or higher
A76-12 (SG2) - Body ground	Always	10 kΩ or higher
A76-14 (VCM2) - Body ground	Always	10 kΩ or higher
A76-21 (PCK2) - Body ground	Always	10 kΩ or higher
A76-23 (PFL) - Body ground	Always	10 kΩ or higher
A76-27 (PMC2) - Body ground	Always	10 kΩ or higher
A76-29 (E2) - Body ground	Always	10 kΩ or higher
A76-31 (PRR) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 READ VALUE OF INTELLIGENT TESTER (WHEEL CYLINDER PRESSURE SENSOR)

(a) Reconnect the skid control ECU connectors and the brake actuator connector.
(b) Connect the pedal effort gauge (See page BC-259).
(c) Install the hydro LSPV gauge (SST) and bleed air (See page BC-259).

SST 09709-29018

(d) Connect the intelligent tester to the DLC3.
(e) Turn the power switch on (IG).
(f) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
FR W/C SENS	FR wheel cylinder pressure sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V
FL W/C SENS	FL wheel cylinder pressure sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V
RR W/C SENS	RR wheel cylinder pressure sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V
RL W/C SENS	RL wheel cylinder pressure sensor / min.: 0 V, max.: 5 V	When brake pedal is released: 0.3 to 0.9 V

(g) Check the output value of the wheel cylinder pressure at each fluid pressure during the Electronically Controlled Brake control.
Standard voltage:
Front wheel cylinder pressure sensor

Hydraulic Pressure MPa (kgf/cm^2, psi)	FR W/C SENS (Data List Display)	FL W/C SENS (Data List Display)
2.6 (26.5, 376.9)	0.85 to 1.15 V	0.85 to 1.15 V
6.3 (64.3, 914.5)	1.6 to 1.9 V	1.6 to 1.9 V
8.1 (82.6, 1174.8)	1.95 to 2.25 V	1.95 to 2.25 V
8.2 (83.6, 1189.0)	2.0 to 2.3 V	2.0 to 2.3 V

Rear wheel cylinder pressure sensor

Hydraulic Pressure MPa (kgf/cm^2, psi)	RR W/C SENS (Data List Display)	RL W/C SENS (Data List Display)
2.6 (26.5, 376.9)	0.85 to 1.15 V	0.85 to 1.15 V
5.0 (51.0, 725.4)	1.35 to 1.65 V	1.35 to 1.65 V

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

6 CHECK BRAKE DISC

(a) Turn the power switch off.
(b) Disconnect the brake pedal stroke sensor connector.
(c) Carry out the running and braking test according to Freeze Frame Data or customer problem analysis. Check the brake line pressure vibration caused due to uneven wear of the disc according to brake pedal vibration.
OK:
Brake pedal does not vibrate during braking.
HINT:
- The brake pedal does not kick back due to wheel cylinder piston vibration during Electronically Controlled Brake control.
- If the brake pedal stroke sensor connector is disconnected, the fail safe function will prohibit Electronically Controlled Brake control.
- The Active Test does not prohibit Electronically Controlled Brake control when the vehicle is running, so disconnect the stroke sensor connector and carry out inspection.
- Disc wear can be checked by measuring the disc thickness.

NG → **REPLACE BRAKE DISC**

OK

BC

7	RECONFIRM DTC

(a) Reconnect the brake pedal stroke sensor connector.
(b) Clear the DTC (See page BC-57).
(c) Repeat the braking test under malfunction conditions recreated based on the Freeze Frame Data or customer problem analysis.
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1341/62, C1342/63, C1343/64 and/or C1344/65) are not output	A
DTCs (C1341/62, C1342/63, C1343/64 and/or C1344/65) are output	B

B → REPLACE BRAKE ACTUATOR ASSEMBLY

A → CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	C1345/66	Linear Solenoid Valve Offset Learning Undone

DTC	C1368/67	Linear Solenoid Valve Offset Malfunction

DESCRIPTION

The skid control ECU stores and corrects the difference in each individual part such as the stroke sensor, actuator solenoids, and stroke simulator solenoid. Perform initialization of linear solenoid valve and calibration if these parts are replaced.
The skid control ECU receives shift position P signals from the HV control ECU through CAN communication system.
The DTCs are cancelled when the result of linear valve offset learning is normal.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1345/66	-	Value of initialization of linear solenoid valve and calibration for the FR, FL, RR, and RL wheels is not stored.	• Initialization of linear solenoid valve and calibration undone • Skid control ECU
C1368/67	-	Value of initialization of linear solenoid valve and calibration is not within the brake actuator's standard value.	• Initialization of linear solenoid valve and calibration undone • Skid control ECU

INSPECTION PROCEDURE

NOTICE:
When replacing the brake actuator assembly, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK DTC

(a) Clear the DTC (See page BC-57).
(b) Turn the power switch off.
(c) Turn the power switch on (IG).
(d) Check that the DTCs (Electronically Controlled Brake and hybrid control system) are recorded.

Result

Condition	Proceed to
DTCs (except C1345/66, C1368/67 and/or hybrid control system DTC) are not output	A
Hybrid control system DTC is output	B
DTCs (except C1345/66 and/or C1368/67) are output	C

B → INSPECT HYBRID CONTROL SYSTEM

C → REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-69)

A

2	PERFORM INITIALIZATION OF LINEAR SOLENOID VALVE AND CALIBRATION

(a) Perform initialization of the linear solenoid valve and calibration (See page BC-25).

BC

NEXT

3	RECONFIRM DTC

(a) Turn the power switch off.

(c) Turn the power switch on (IG).
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTCs (C1345/66 and/or C1368/67) are not output	A
DTCs (C1345/66 and/or C1368/67) are output	B

B → REPLACE SKID CONTROL ECU

A

END

DTC	C1365/54	Accumulator Pressure Sensor Malfunction

DESCRIPTION

The accumulator pressure sensor is built into the brake actuator.
The skid control ECU detects the accumulator pressure from the data sent from the accumulator pressure sensor, and then runs and stops the pump motor by operating the motor relay.
DTCs may be output if the accumulator pressure drops due to frequent braking (this is not a malfunction).

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1365/54	211	Sensor power 1 (VCM1) voltage is 4.7 V or less or 5.3 V or more for at least 0.05 seconds.	• Brake actuator assembly (Accumulator pressure sensor) • Accumulator pressure sensor circuit • Accumulator pressure sensor power supply • Brake actuator assembly • Skid control ECU
↑	212	Ratio of accumulator pressure sensor output voltage (PACC) to sensor power 1 (VCM1) voltage is 5% or less or 90.5% or more for at least 0.05 seconds.	↑
↑	214	Total wheel cylinder pressure sensor exceeds 18 MPa after depressing brake pedal, but accumulator pressure sensor output voltage (PACC) changes less than 0.5 MPa for at least 0.5 seconds.	↑
↑	215	Ratio of accumulator pressure sensor output voltage (PACC) to sensor power 1 (VCM1) voltage is 90.5% or less for at least 0.1 second during self diagnosis.	↑
↑	216	Voltage difference is 0.3 V or more before and after changing the pull up resistance in sensor signal input circuit (loose contact).	↑

WIRING DIAGRAM

Refer to DTCs C1246/46, C1281/81 and C1364/61 (See page BC-131).

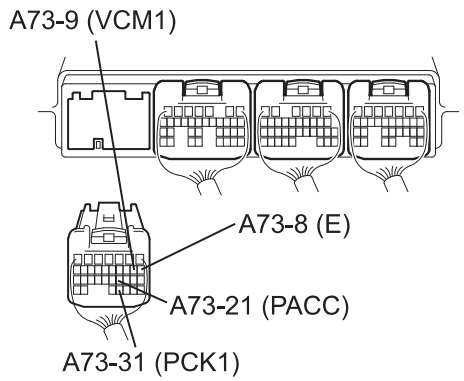
INSPECTION PROCEDURE

NOTICE:

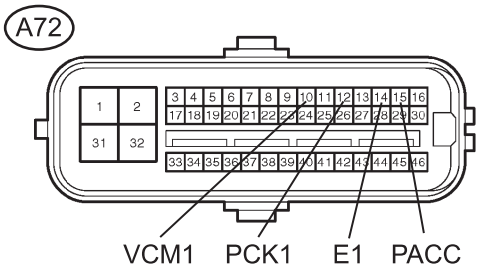
When replacing the skid control ECU or brake actuator assembly, perform initialization of linear solenoid valve and calibration (See page BC-25).

1 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - BRAKE ACTUATOR)

Skid Control ECU Wire Harness View:



Brake Actuator Harness Side Connector Front View:



C141364E04

(a) Disconnect the skid control ECU connector and the brake actuator connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

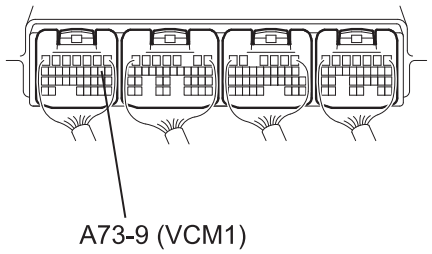
Tester Connection	Condition	Specified Condition
A73-8 (E) - A72-14 (E1)	Always	Below 1 Ω
A73-8 (E) - Body ground	Always	10 kΩ or higher
A73-9 (VCM1) - A72-10 (VCM1)	Always	Below 1 Ω
A73-9 (VCM1) - Body ground	Always	10 kΩ or higher
A73-21 (PACC) - A72-15 (PACC)	Always	Below 1 Ω
A73-21 (PACC) - Body ground	Always	10 kΩ or higher
A73-31 (PCK1) - A72-12 (PCK1)	Always	Below 1 Ω
A73-31 (PCK1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT SKID CONTROL ECU (SENSOR INPUT)

Skid Control ECU Wire Harness View:



P

C135838E09

(a) Reconnect the skid control ECU connector and the brake actuator connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A73-9 (VCM1) - Body ground	Power switch on (IG)	4.75 to 5.25 V

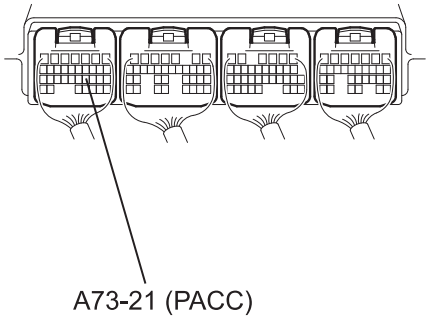
NG → **REPLACE SKID CONTROL ECU**

OK

BC

3 INSPECT SKID CONTROL ECU (SENSOR OUTPUT)

Skid Control ECU Wire Harness View:



(a) Depress the brake pedal to operate the pump motor, and then check that the pump motor stops.
(b) Measure the voltage according to the value(s) in the table below.

NOTICE:
Do not depress the brake pedal until the pump motor stops and the voltage check is finished in order to keep the accumulator pressure.

Standard voltage

Tester Connection	Condition	Specified Condition
A73-21 (PACC) - Body ground	Power switch on (IG)	3.3 to 4.7 V

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

4 READ VALUE OF INTELLIGENT TESTER (ACCUMULATOR PRESSURE SENSOR)

(a) Turn the power switch off.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
ACC PRESS SENS	Accumulator pressure sensor / min.: 0 V, max.: 5 V	Specified value: 3.3 to 4.7 V

(e) Depress the brake pedal 4 or 5 times to operate the pump motor, and check the output value on the intelligent tester with the motor stopped (no braking).

OK:
Accumulator pressure sensor voltage does not drop.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

5 RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Perform the road and braking test.
(d) Check if the same DTC is recorded (See page BC-57).

Result

Condition	Proceed to
DTC (C1365/54) is not output	A
DTC (C1365/54) is output	B

BC

B → **REPLACE SKID CONTROL ECU**

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC C1377/43 Capacitor Malfunction

DESCRIPTION

The brake control power supply (capacitor) is used as auxiliary power for brake control when battery voltage is low.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1377/43	101	Brake control power supply is deteriorated (indicates a need to replace).	Brake control power supply (Capacitor)
↑	102	Self discharge (current leak) is excessive (internal malfunction).	↑
↑	103	Overvoltage (16.4 V or more) continues to be applied from the auxiliary battery to the capacitor voltage input (+BC) for 10 seconds or more.	Apply high voltage
↑	105	Circuit inside the power back up unit (charge) is malfunctioning.	Brake control power supply (Capacitor)
↑	106	Circuit inside the power back up unit (back up output circuit) is malfunctioning.	↑
↑	107	Malfunction in the forced discharge circuit.	↑
↑	108	Circuit inside the power back up unit (voltage monitor circuit) is malfunctioning.	↑
↑	109	Open circuit between auxiliary battery (12 V) and capacitor power input (+BC terminal).	• ABS MAIN NO. 3 fuse • Brake control power supply circuit
↑	110	When either of the following is detected: 1. Open or short circuit between auxiliary battery (12 V) and capacitor output 1 (OUT1). 2. Open or short circuit between auxiliary battery (12 V) and capacitor output 2 (OUT2).	• ABS MAIN NO. 1 fuse • ABS MAIN NO. 2 fuse • Brake control power supply circuit

WIRING DIAGRAM

Refer to DTCs C1241/41 and C1242/42 (See page BC-122).

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1 CHECK FREEZE FRAME DATA

(a) Check the INF code from the Freeze Frame Data memorized when the DTC (C1377/43) is stored (See page BC-59).

Result

Condition	Proceed to
INF codes (109 and/or 110) are output	A
INF codes (101, 102, 105, 106, 107 and/or 108) are output	B
INF code (103) is output	C

B → REPLACE BRAKE CONTROL POWER SUPPLY (CAPACITOR)

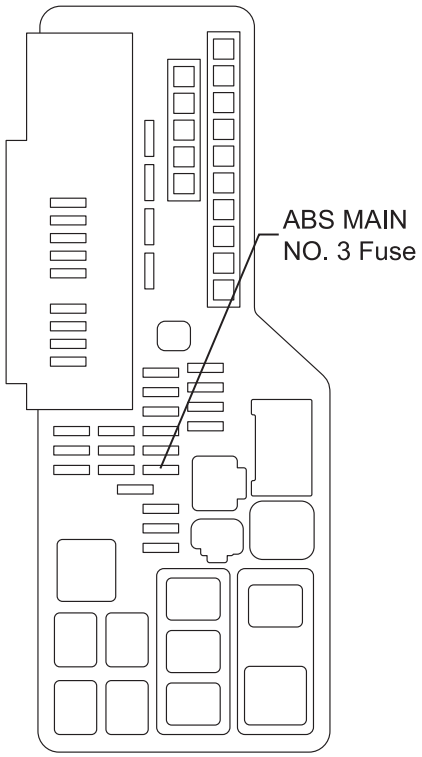
C → Go to step 9

BC

A

2	INSPECT ABS MAIN NO. 3 FUSE

Engine Room R/B:



(a) Remove the ABS MAIN NO. 3 fuse from the engine room R/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

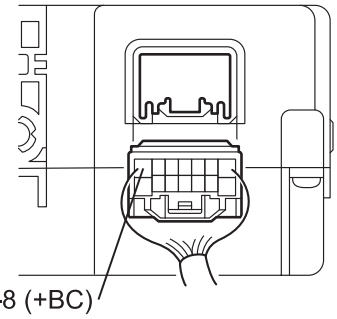
Tester Connection	Condition	Specified Condition
ABS MAIN NO. 3 (10 A) fuse	Always	Below 1 Ω

NG → REPLACE ABS MAIN NO. 3 FUSE

OK

3	INSPECT BRAKE CONTROL POWER SUPPLY (+BC TERMINAL)

Brake Control Power Supply Wire Harness View:



(a) Install the ABS MAIN NO. 3 fuse.
(b) Disconnect the brake control power supply connector.
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
O23-8 (+BC) - Body ground	Always	10 to 14 V

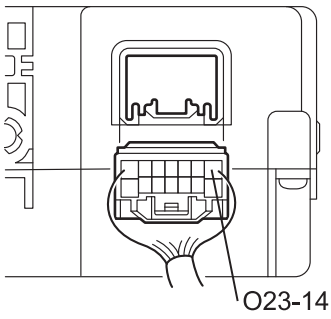
NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (+BC CIRCUIT)

BC

OK

4 INSPECT BRAKE CONTROL POWER SUPPLY (GND TERMINAL)

Brake Control Power Supply Wire Harness View:



N C140720E02

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

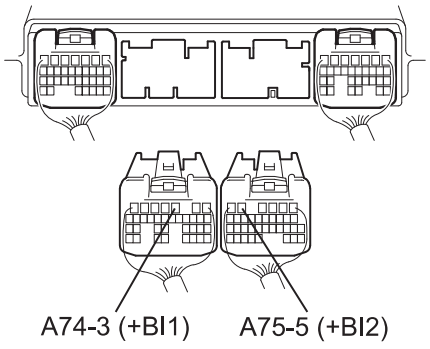
Tester Connection	Condition	Specified Condition
O23-14 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (+BI TERMINAL)

Skid Control ECU Wire Harness View:



P C135832E01

(a) Disconnect the skid control ECU connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
A74-3 (+BI1) - Body ground	Always	10 to 14 V
A75-5 (+BI2) - Body ground	Always	10 to 14 V

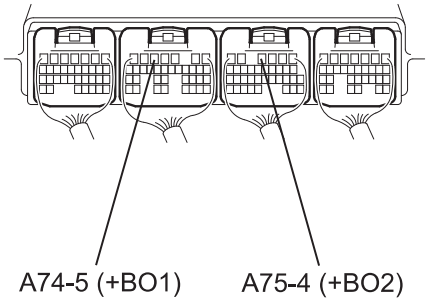
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (+BI CIRCUIT)**

OK

BC

6 INSPECT SKID CONTROL ECU (RELAY INPUT)

Skid Control ECU Wire Harness View:



(a) Reconnect the skid control ECU connectors.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

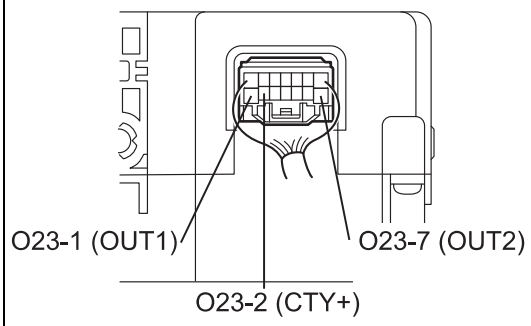
Tester Connection	Condition	Specified Condition
A74-5 (+BO1) - Body ground	Power switch on (IG)	8.8 to 14 V
A75-4 (+BO2) - Body ground	Power switch on (IG)	8.8 to 14 V

NG → **REPLACE SKID CONTROL ECU**

OK

7 INSPECT BRAKE CONTROL POWER SUPPLY (OUT AND CTY+ TERMINAL)

Brake Control Power Supply Wire Harness View:



(a) Reconnect the brake control power supply connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

HINT:
Perform inspection while the brake is not operated.

Standard voltage

Tester Connection	Condition	Specified Condition
O23-1 (OUT1) - Body ground	Power switch on (IG)	10 to 14 V
O23-2 (CTY+) - Body ground	Power switch on (IG)	10 to 14 V (*1)
O23-7 (OUT2) - Body ground	Power switch on (IG)	10 to 14 V

(*1): For 5 seconds after the driver's door is opened.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (OUT OR CTY+ CIRCUIT)**

OK

8 RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (IG).

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

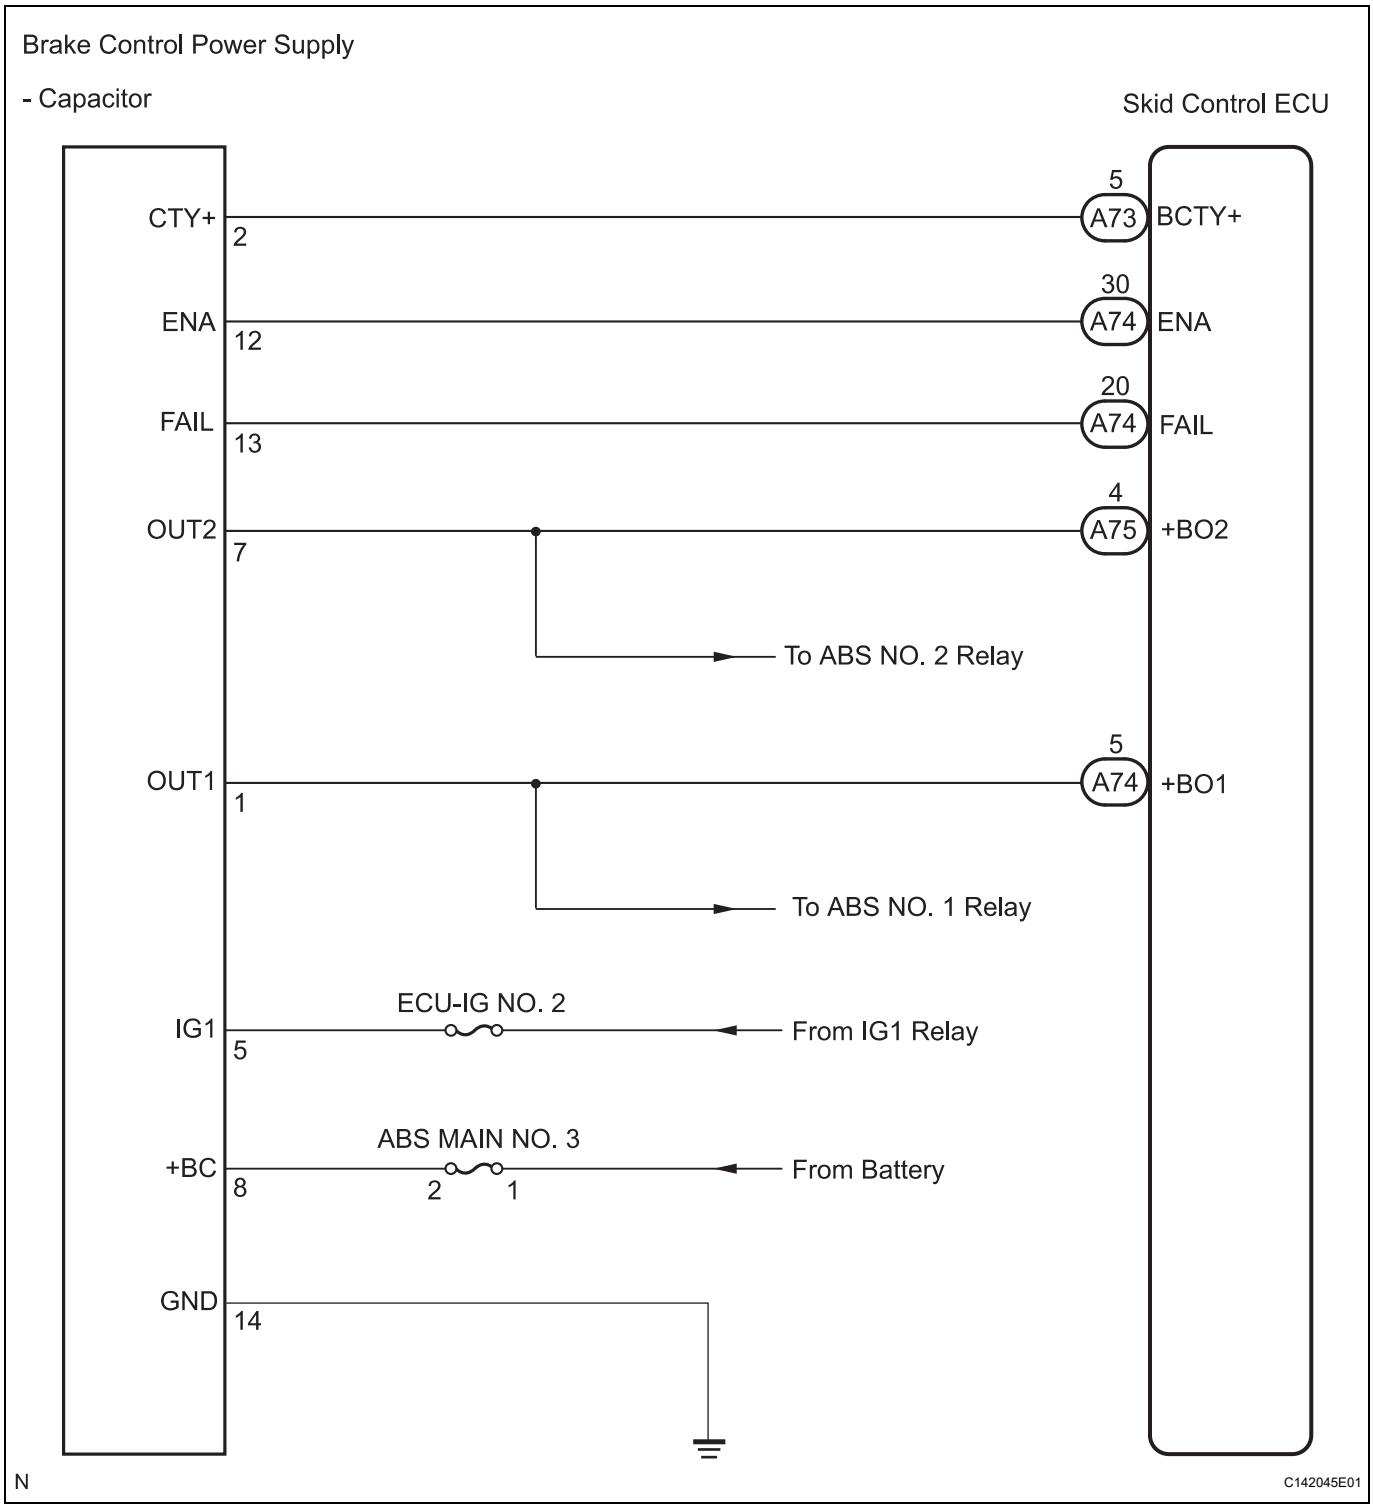
DTC	C1378/44	Capacitor Communication Malfunction

DESCRIPTION

The brake control power supply (capacitor) provides auxiliary power for brake control when an auxiliary battery (12 V) voltage drops.
The FAIL and ENA lines are placed between the skid control ECU and the brake control power supply. Signals indicating that the brake control power supply is in auxiliary mode are sent to the skid control ECU through the FAIL line.
Charge permit prohibition signals are sent to the brake control power supply through the ENA line.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1378/44	112	When either of the following is detected: 1. Open or short in FAIL line. 2. Malfunction inside the power back up unit.	• Brake control power supply (Capacitor) • Brake control power supply circuit

WIRING DIAGRAM



BC

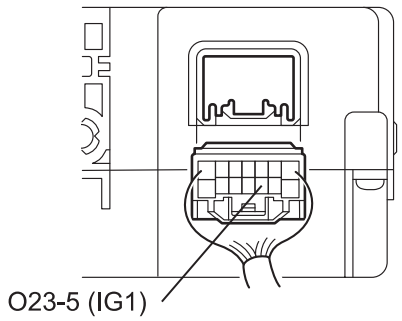
INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1 INSPECT BRAKE CONTROL POWER SUPPLY (IG1 TERMINAL)

Brake Control Power Supply Wire Harness View:



(a) Disconnect the brake control power supply connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

REPLACE SKID CONTROL ECU

DTC C1391/69 Accumulator Leak Malfunction

DESCRIPTION

The DTC is stored if a brake fluid, internal or other leak is detected due to improper sealing in the actuator. Internal leakage is suspected if the pump motor operates frequently without braking.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
C1391/69	591	Accumulator performance is deteriorated (improper sealing inside the actuator, gas pressure drop inside the accumulator, leak in each pressure boosting valve).	• Fluid leakage • Brake actuator assembly

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU or brake actuator assembly, perform initialization of linear solenoid valve and calibration (See page BC-25).

1 CHECK FOR BRAKE FLUID LEAKS

(a) Check that there is no fluid leakage in the brake line between the brake actuator and the wheel cylinder which is the cause of DTCs.

(b) Check that the brake is not dragging.

OK:

There is no fluid leakage or dragging.

NG → **REPAIR OR REPLACE APPLICABLE PART**

OK

2 READ VALUE OF INTELLIGENT TESTER (ACCUMULATOR PRESSURE SENSOR)

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG).

(c) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
ACC PRESS SENS	Accumulator pressure sensor / min.: 0 V, max.: 5 V	Specified value: 3.3 to 4.7 V

(d) Wait a few minutes without operating the brake pedal.

(e) Check that the output value of the accumulator pressure sensor does not decrease and that the pump motor is not activated due to a decrease in accumulator pressure.

OK:

Accumulator pressure does not decrease and the pump motor is not activated due to a decrease in accumulator pressure.

NG → **REPLACE BRAKE ACTUATOR ASSEMBLY**

OK

BC

3	RECONFIRM DTC

(a) Turn the power switch off.

A

CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

DTC	U0073/94	Control Module Communication Bus OFF

DTC	U0123/62	Lost Communication with Yaw Rate Sensor Module

DTC	U0124/95	Lost Communication with Lateral Acceleration Sensor Module

DTC	U0126/63	Lost Communication with Steering Angle Sensor Module

DTC	U0131/67	Lost Communication with Power Steering Control Module

DTC	U0293/59	Communication Error from HV ECU

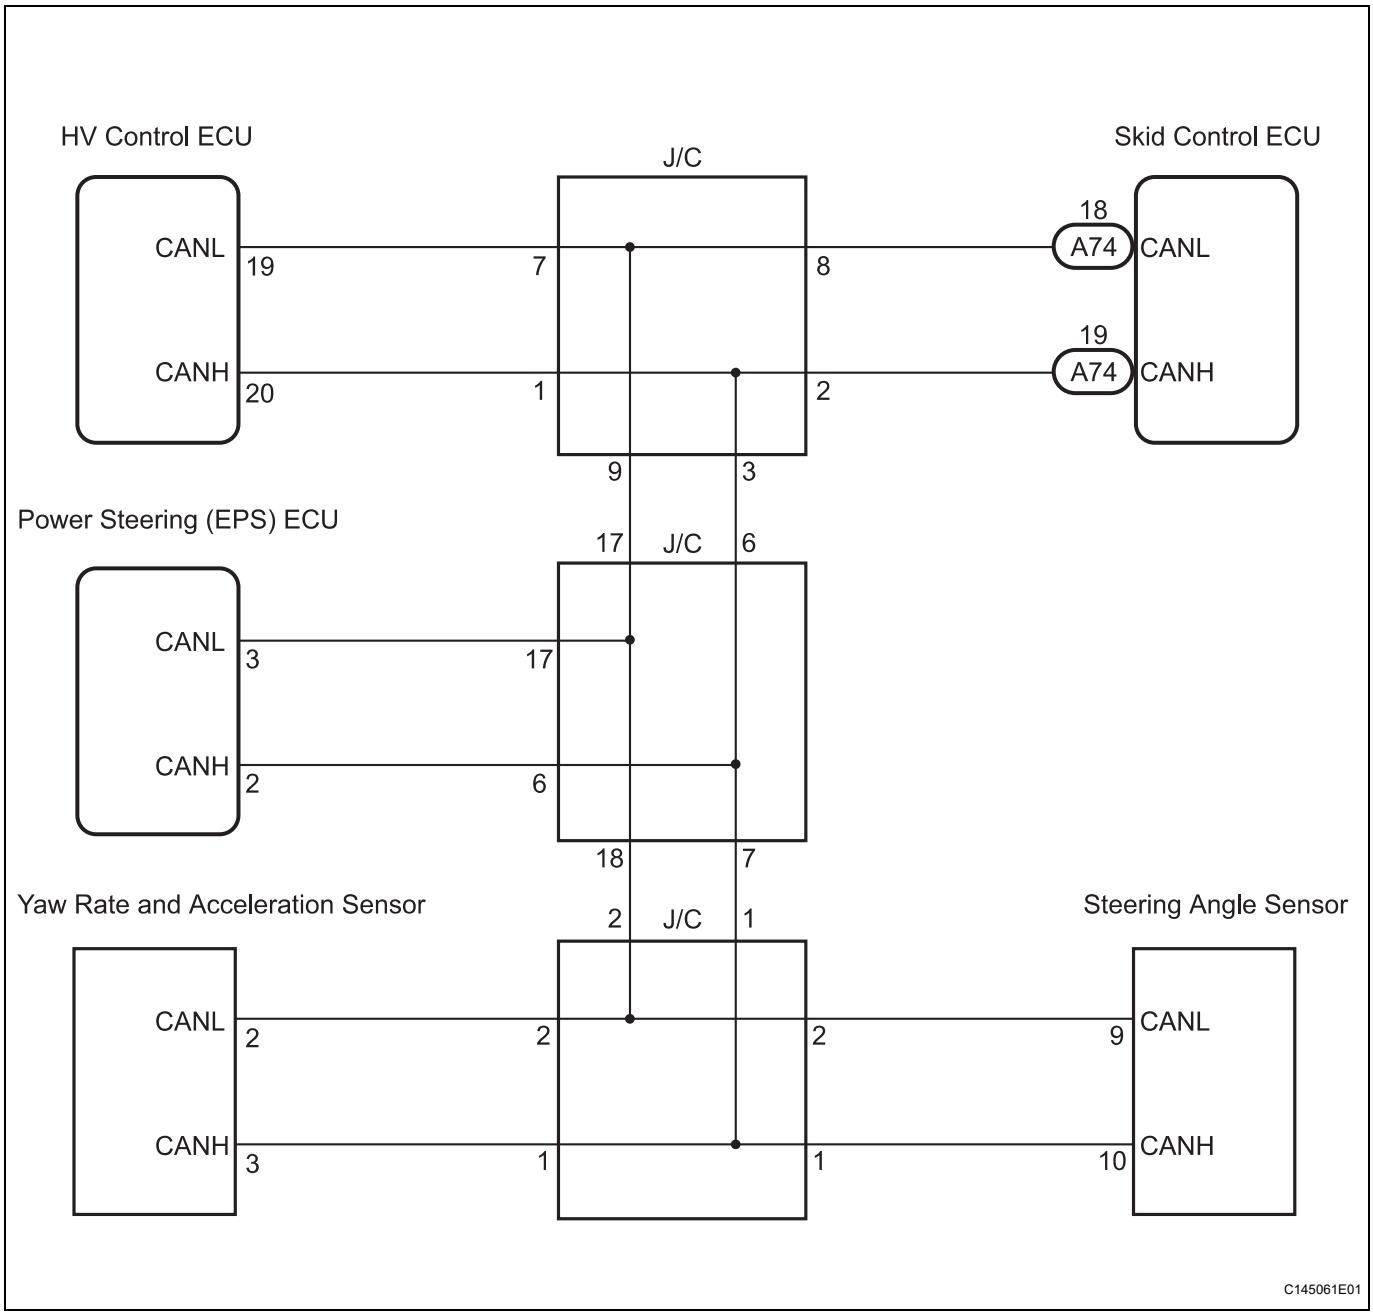
DESCRIPTION

The skid control ECU receives the signals from the HV control ECU, power steering (EPS) ECU, steering angle sensor, and yaw rate and acceleration sensor via the CAN communication system.

DTC Code	INF Code	DTC Detection Condition	Trouble Area
U0073/94	360	When either of the following is detected: 1. After the output of data from the skid control ECU is completed, the sending continues for 5 seconds or more. 2. The condition that bus OFF state occurs once or more within 100 ms occurs 10 times in succession. (Sent signals cannot be received.)	CAN communication system
U0123/62	338	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the yaw rate sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession. • The condition that data from the yaw rate sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)
U0124/95	319	When either of the following is detected: 1. With the IG1 terminal voltage 9.5 V or more, data from the deceleration sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 9.5 V or more, the following occurs 10 times in succession. • The condition that data from the deceleration sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to yaw rate and acceleration sensor)
U0126/63	350	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the steering sensor cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession. • The condition that data from the steering angle sensor cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to steering angle sensor)

DTC Code	INF Code	DTC Detection Condition	Trouble Area
U0131/67	374 375	When either of the following is detected: 1. With the IG1 terminal voltage 10 V or more, data from the EPS ECU cannot be received for 1 second or more. 2. With the IG1 terminal voltage 10 V or more, the following occurs 10 times in succession within 60 seconds. • The condition that data from the EPS ECU cannot be received occurs once or more within 5 seconds.	CAN communication system (Skid control ECU to power steering (EPS) ECU)
U0293/59	152	With the IG2 terminal voltage at 9.5 V or more for 2 seconds or more, communication with the HV control ECU remains invalid for 2 seconds or more.	CAN communication system (Skid control ECU to HV control ECU)
↑	153	With the G2 terminal voltage at 9.5 V or more for 2 seconds or more, communication with the HV control ECU that occurs once or more within 5 seconds changes from being valid communication to being invalid communication 10 times or more within 1 minute.	↑
↑	154	With the IG2 terminal voltage at 9.5 V or more for 2 seconds or more, abnormal regenerative braking torque value or braking request torque value is received for 2 seconds or more.	↑

WIRING DIAGRAM



BC INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (MOMENTARY INTERRUPTION)

(a) Using the intelligent tester, check for any momentary interruption in the wire harness and connector corresponding to a DTC (See page BC-23).

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
HV COM OPN	HV communication open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal
STEERING OPN	Steering sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

Tester Display	Measurement Item/Range	Normal Condition
YAW RATE OPN	Yaw rate sensor open detection / ERROR or NORMAL	ERROR: Momentary interruption NORMAL: Normal

Result

Condition	Proceed to
There is a constant open circuit	A
There are no momentary interruptions	B
There are momentary interruptions	C

HINT:
Perform the above inspection before removing the sensor and connector.

B → Go to step 3

C → Go to step 4

A

2 CHECK IF EACH SENSOR AND ECU CONNECTOR IS SECURELY CONNECTED

(a) Turn the power switch off.
(b) Check if each sensor and ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → **CONNECT CONNECTOR TO EACH SENSOR OR ECU CORRECTLY**

OK

3 RECONFIRM DTC

(a) Turn the power switch off.
(b) Record the output DTCs (for ABS, VSC, Electronically Controlled Brake, and CAN communication).
HINT:
If the CAN communication system DTC and the relevant sensor DTCs are output simultaneously, troubleshoot the relevant sensor DTCs (for ABS, VSC and Electronically Controlled Brake) after the CAN communication system returns to normal.

BC

Result

Condition	Proceed to
DTC (CAN communication system DTC) is output	A
DTC (ABS, VSC and/or Electronically Controlled Brake DTC) is output	B
DTC is not output	C

B → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-69)**

C → CHECK FOR INTERMITTENT PROBLEMS (SYMPTOM SIMULATION)

A

INSPECT CAN COMMUNICATION SYSTEM

4 REPAIR OR REPLACE HARNESS OR CONNECTOR

(a) Turn the power switch off.
(b) Repair or replace the harness or connector.
(c) Check for any momentary interruption between the skid control ECU and each sensor or ECU (See page BC-23).
(d) Check that there is no momentary interruption.

NEXT

5 RECONFIRM DTC

(a) Turn the power switch off.
(b) Clear the DTC (See page BC-57).
(c) Turn the power switch on (READY).
(d) Drive the vehicle and turn the steering wheel to the right and left at a speed of 15 km/h (9 mph) or more.
(e) Check that no CAN communication system DTC is output.
(f) If ABS, VSC and Electronically Controlled Brake DTCs are output, record them.

Result

Condition	Proceed to
DTC output for the CAN communication system	A
No DTC is output (ABS, VSC and/or Electronically Controlled Brake DTC is output)	B
No DTC is output (No ABS, VSC and/or Electronically Controlled Brake DTC is output)	C

HINT:
The CAN communication system must be normal when repairing each sensor DTC (for ABS, VSC and Electronically Controlled Brake).

B → REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-69)

C → END

A

INSPECT CAN COMMUNICATION SYSTEM

ABS Warning Light Remains ON

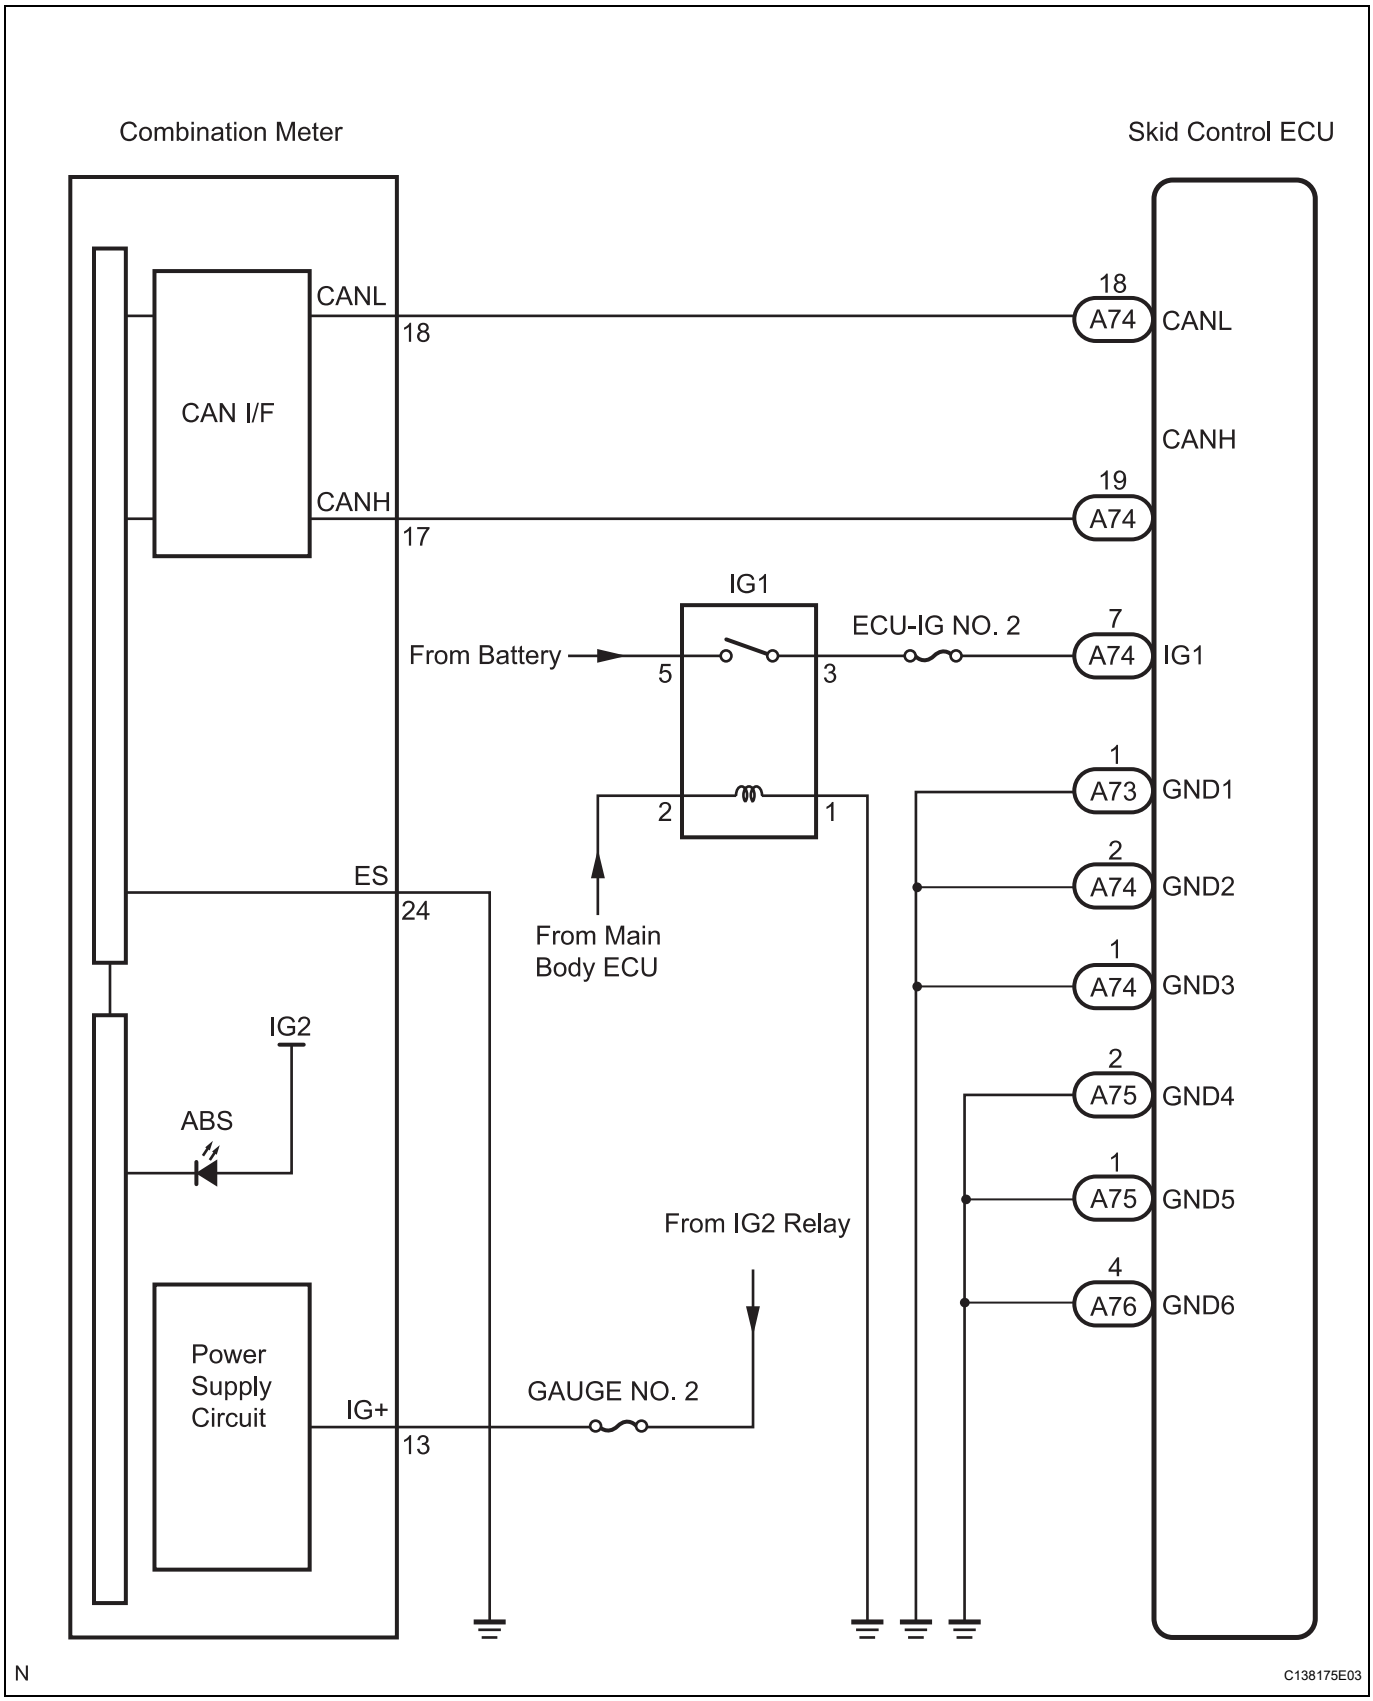
DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
If any of the following is detected, the ABS warning light remains on.

- The skid control ECU connectors are disconnected from the skid control ECU.
- There is a malfunction in the skid control ECU internal circuit.
- There is an open in the harness between the combination meter and the skid control ECU.

HINT:
In some cases, the intelligent tester cannot be used when the skid control ECU is abnormal.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM**

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.

OK:

The connector should be securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

3	CHECK AUXILIARY BATTERY

(a) Check the auxiliary battery voltage.

Standard voltage:

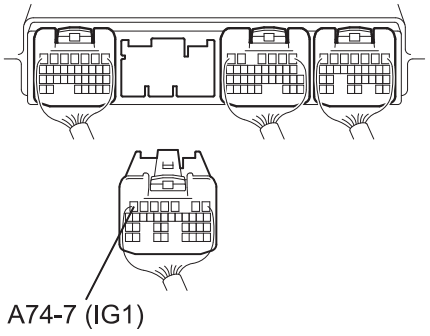
11 to 14 V

NG → **CHARGE OR REPLACE AUXILIARY BATTERY**

OK

4 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU Wire Harness View:



(a) Disconnect the skid control ECU connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

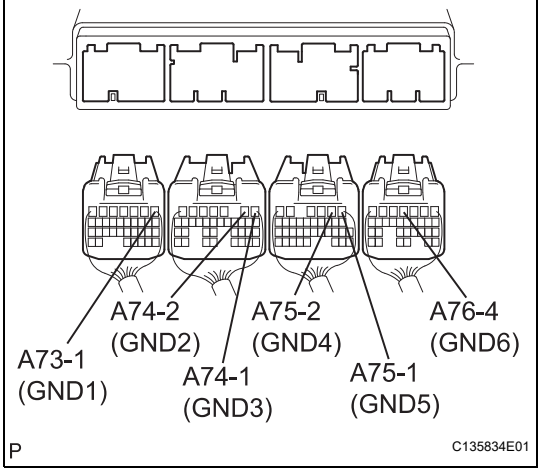
Tester Connection	Condition	Specified Condition
A74-7 (IG1) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)**

OK

5 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Wire Harness View:



(a) Turn the power switch off.
(b) Disconnect the skid control ECU connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-1 (GND1) - Body ground	Always	Below 1 Ω
A74-2 (GND2) - Body ground	Always	Below 1 Ω
A74-1 (GND3) - Body ground	Always	Below 1 Ω
A75-2 (GND4) - Body ground	Always	Below 1 Ω
A75-1 (GND5) - Body ground	Always	Below 1 Ω
A76-4 (GND6) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

6 INSPECT COMBINATION METER ASSEMBLY

(a) Reconnect the skid control ECU connectors.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).

BC

OK:

The ABS warning light turns on or off in accordance with the intelligent tester.

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE SKID CONTROL ECU

ABS Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.

WIRING DIAGRAM

Refer to ABS Warning Light Remains ON (See page BC-215).

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK ABS WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the power switch on (IG).
(c) Check that the ABS warning light comes on.

OK:

The ABS warning light comes on.

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

OK → REPLACE SKID CONTROL ECU

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the power switch off.
(b) Reconnect the skid control ECU connector.
(c) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).

OK:

The ABS warning light turns on or off in accordance with the intelligent tester.

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

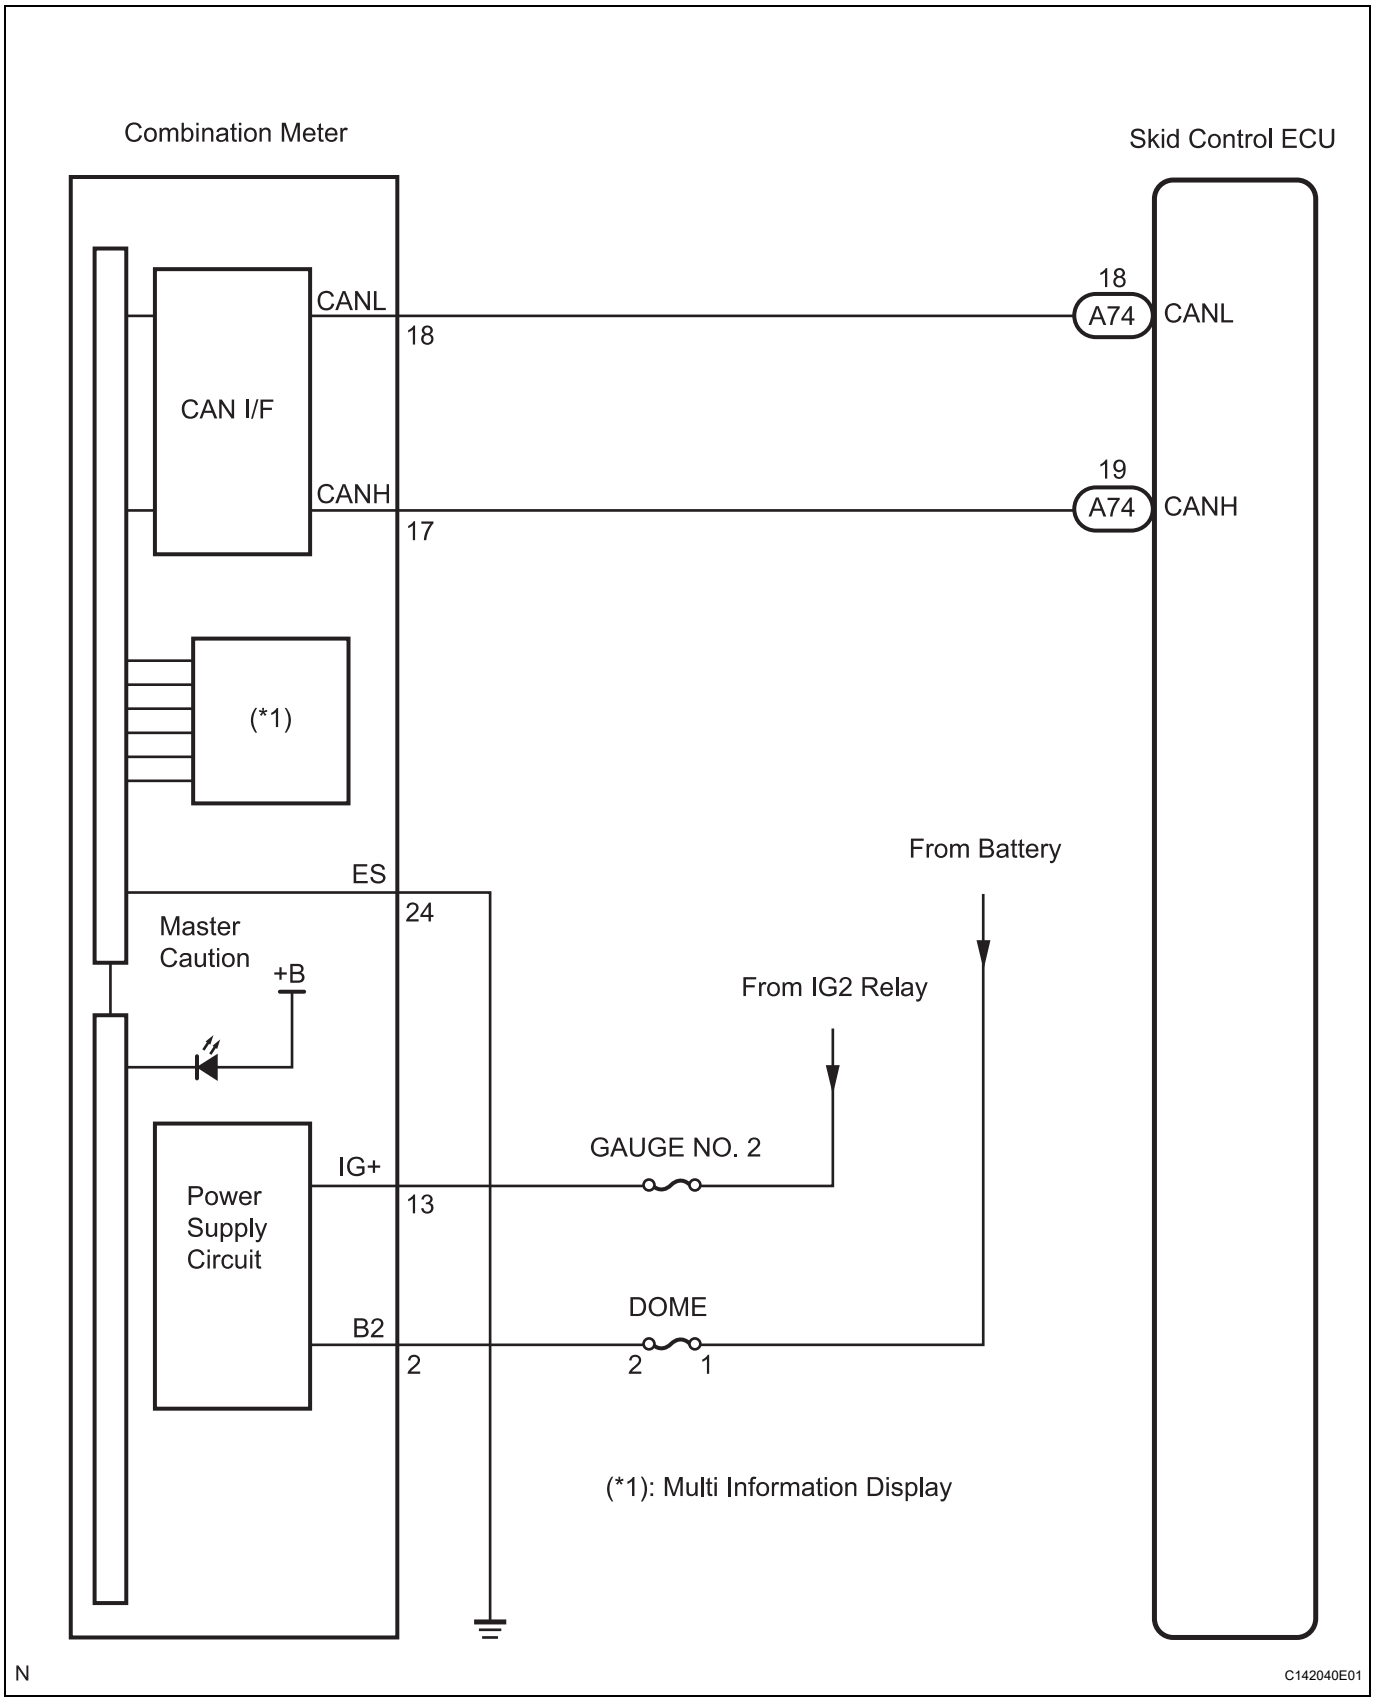
REPLACE SKID CONTROL ECU

VSC Warning Light Remains ON

DESCRIPTION

The skid control ECU communicates with the combination meter via CAN communication.
If the ECU stores a DTC, the master caution indicator light will come on and the DTC will be displayed on the multi information display in the combination meter.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.

OK:

The connector should be securely connected.

NG → CONNECT CONNECTOR TO ECU CORRECTLY

OK

3	CHECK AUXILIARY BATTERY

(a) Check the auxiliary battery voltage.

Standard voltage:

11 to 14 V

NG → CHARGE OR REPLACE AUXILIARY BATTERY

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).

OK:

The VSC warning (master caution indicator light and multi information display) turns on or off in accordance with the intelligent tester.

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE SKID CONTROL ECU

VSC Warning Light does not Come ON

DESCRIPTION

The skid control ECU communicates with the combination meter via CAN communication.
If the ECU stores a DTC, the master caution indicator light will come on and the DTC will be displayed on the multi information display in the combination meter.

WIRING DIAGRAM

Refer to VSC Warning Light Remains ON (See page BC-222).

INSPECTION PROCEDURE

NOTICE:
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK VSC WARNING LIGHT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (READY).
(c) Select "VSC WARN LAMP" in the Active Test and operate the VSC warning (master caution indicator light and multi information display) using the intelligent tester.

ABS / VSC:

Tester Display	Test Part	Control Range	Diagnostic Note
VSC WARN LAMP	VSC warning (master caution indicator light and multi information display)	Warning (light and display) ON / OFF	Observe combination meter

(d) Check that "ON" and "OFF" of the VSC warning (master caution indicator light and multi information display) are indicated on the combination meter when using the intelligent tester.

OK:

The VSC warning (master caution indicator light and multi information display) turns on or off in accordance with the intelligent tester.

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

OK → **REPLACE SKID CONTROL ECU**

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the power switch off.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).
OK:
The VSC warning (master caution indicator light and multi information display) turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE SKID CONTROL ECU

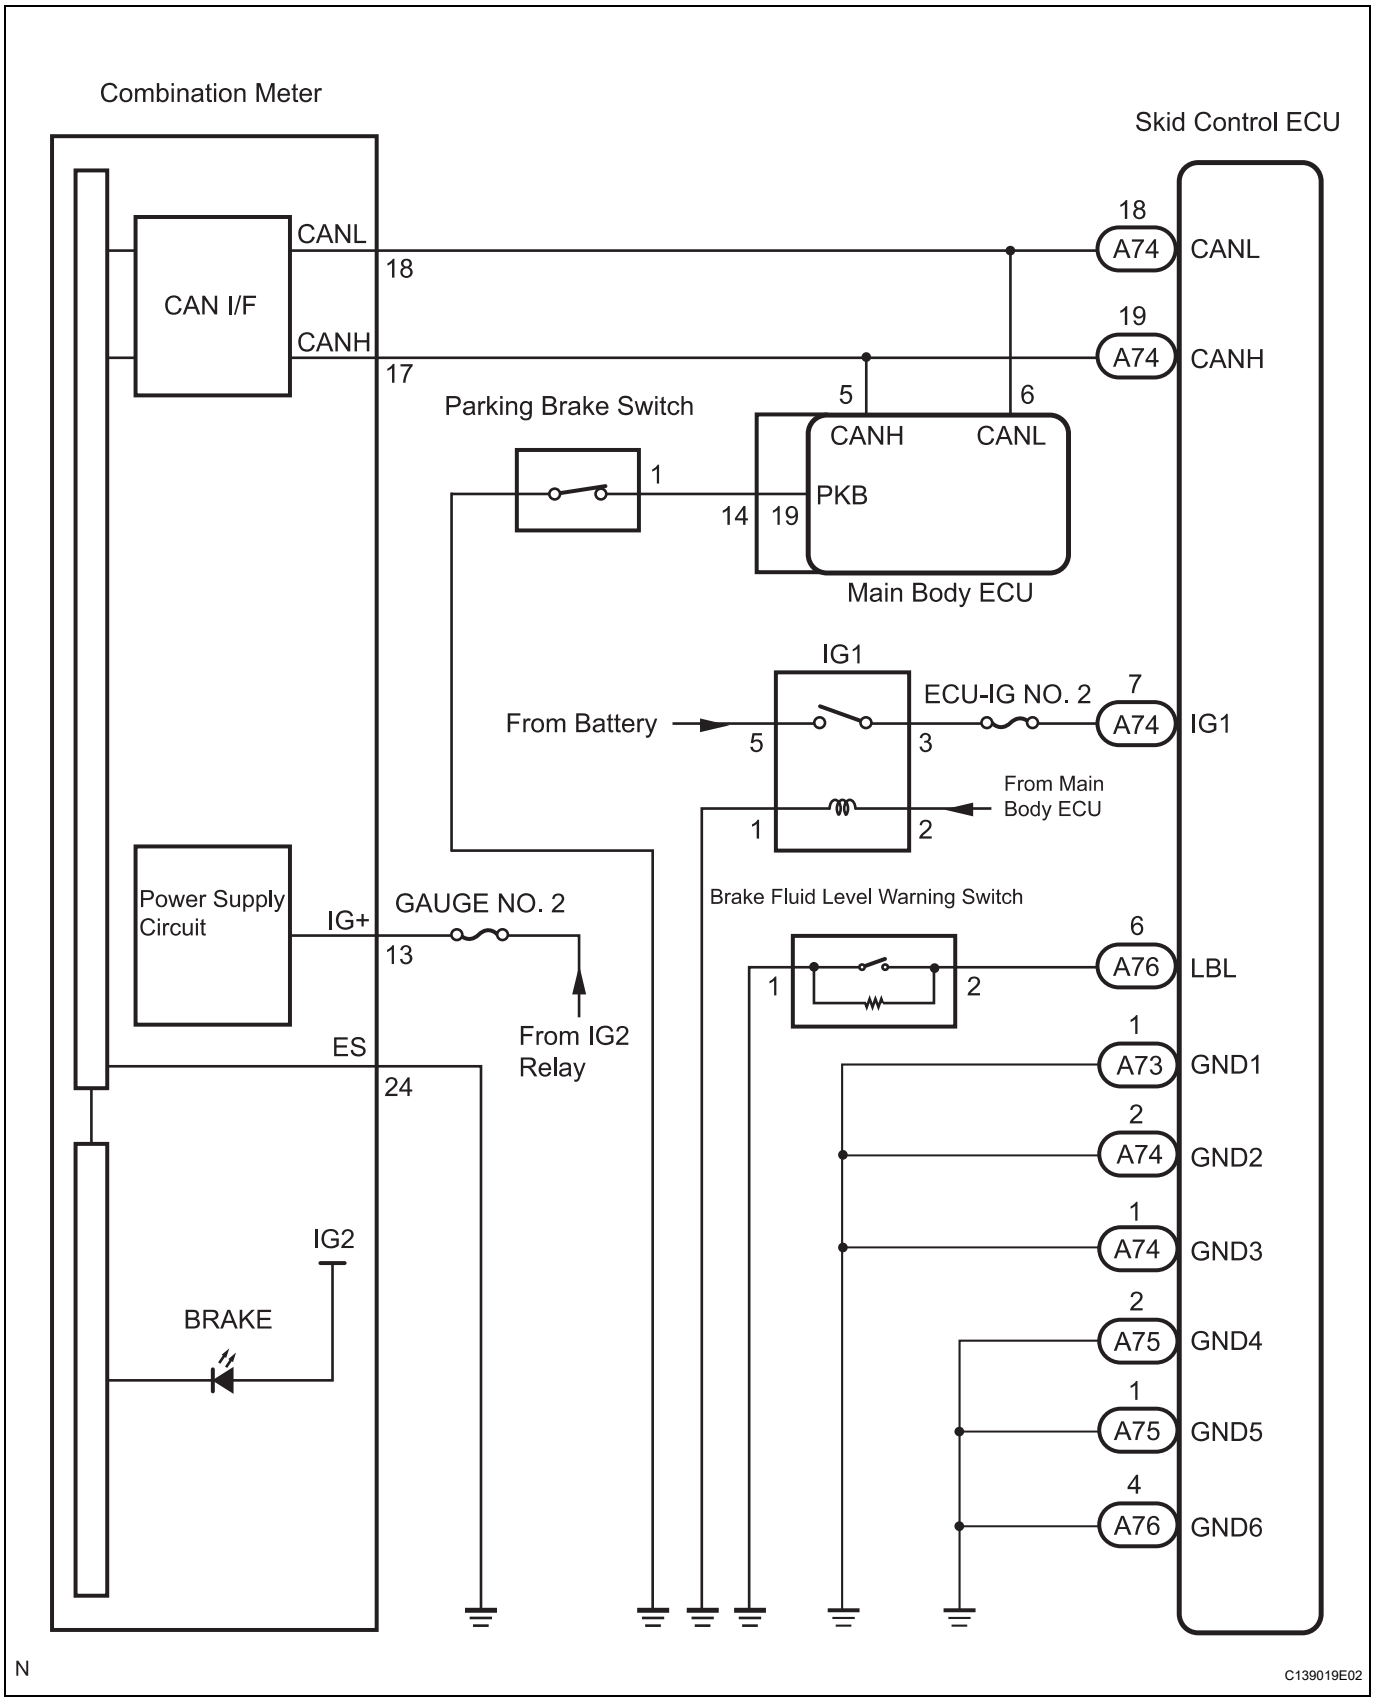
Brake Warning Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
If any of the following is detected, the BRAKE warning light remains on:

- The skid control ECU connector is disconnected from the skid control ECU.
- The brake fluid level is insufficient.
- The parking brake is applied.
- EBD operation is not possible.

WIRING DIAGRAM



BC

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK DTC

(a) Check if the ABS, VSC and/or Electronically Controlled Brake DTC is output (See page BC-57).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **REPAIR CIRCUIT INDICATED BY OUTPUT DTC (See page BC-69)**

A

2	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM**

A

3	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.

OK:

The connector should be securely connected.

NG → **CONNECT CONNECTOR TO ECU CORRECTLY**

OK

4	CHECK AUXILIARY BATTERY

(a) Check the auxiliary battery voltage.

Standard voltage:

11 to 14 V

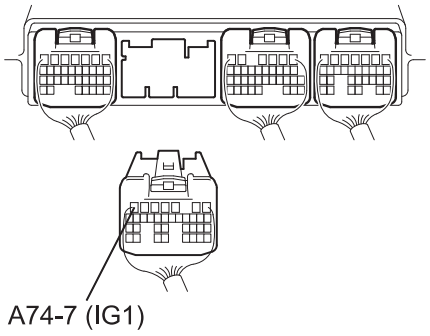
BC

NG → CHARGE OR REPLACE AUXILIARY BATTERY

OK

5 INSPECT SKID CONTROL ECU (IG1 TERMINAL)

Skid Control ECU Wire Harness View:



(a) Disconnect the skid control ECU connector.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

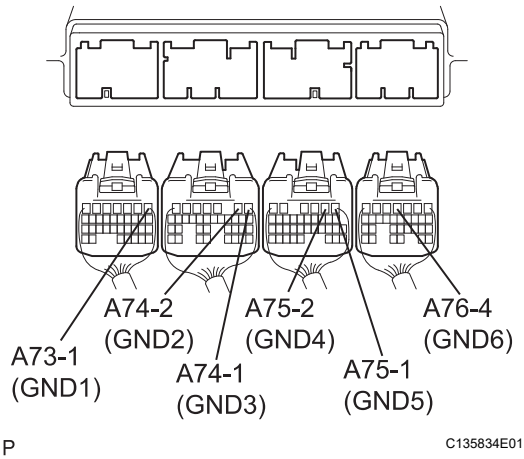
Tester Connection	Condition	Specified Condition
A74-7 (IG1) - Body ground	Power switch on (IG)	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (IG1 CIRCUIT)

OK

6 INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Wire Harness View:



(a) Turn the power switch off.
(b) Disconnect the skid control ECU connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-1 (GND1) - Body ground	Always	Below 1 Ω
A74-2 (GND2) - Body ground	Always	Below 1 Ω
A74-1 (GND3) - Body ground	Always	Below 1 Ω
A75-2 (GND4) - Body ground	Always	Below 1 Ω
A75-1 (GND5) - Body ground	Always	Below 1 Ω
A76-4 (GND6) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)

OK

BC

7	READ VALUE OF INTELLIGENT TESTER (PARKING BRAKE SWITCH)

(a) Reconnect the skid control ECU connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Select the Data List mode on the intelligent tester.

ABS / VSC:

Tester Display	Measurement Item/Range	Normal Condition
PARKING BRAKE SW	Parking brake switch / ON or OFF	ON: Parking brake applied OFF: Parking brake released

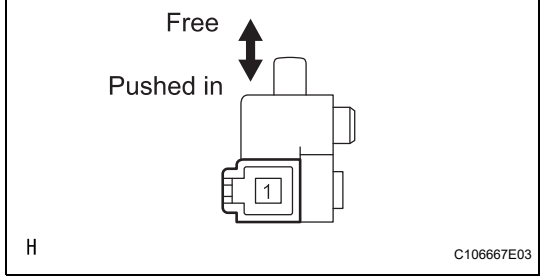
(e) Using the intelligent tester, check the input of switch operation when the parking brake pedal is operated.
OK:
When the parking brake is operated, the display changes as shown above.

OK → **Go to step 10**

NG

8	INSPECT PARKING BRAKE SWITCH

Parking Brake Switch:



(a) Turn the power switch off.
(b) Disconnect the parking brake switch connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
1 - Body ground	Parking brake switch ON (Switch pin free)	Below 1 Ω
1 - Body ground	Parking brake switch OFF (Switch pin pushed in)	10 kΩ or higher

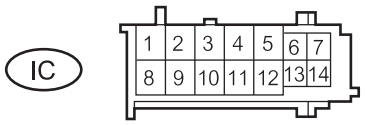
NG → **REPLACE PARKING BRAKE SWITCH**

OK

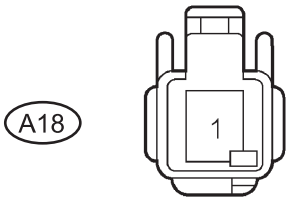
BC

9	CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - PARKING BRAKE SWITCH)

Main Body ECU Harness Side Connector Front View:



Parking Brake Switch Harness Side Connector Front View:



C141686E02

(a) Disconnect the main body ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
IC-14 (PKB) - A18-1	Always	Below 1 Ω
IC-14 (PKB) - Body ground	Always	10 kΩ or higher

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE SKID CONTROL ECU

10	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the power switch off.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).

OK:

The BRAKE warning light turns on or off in accordance with the intelligent tester.

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

BC

OK

REPLACE SKID CONTROL ECU

Brake Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.

WIRING DIAGRAM

Refer to Brake Warning Light Remains ON (See page BC-228).

INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK BRAKE WARNING LIGHT

(a) Disconnect the skid control ECU connector.
(b) Turn the power switch on (IG).
(c) Check that the BRAKE warning light comes on.

OK:

The BRAKE warning light comes on.

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

OK → REPLACE SKID CONTROL ECU

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the power switch off.
(b) Reconnect the skid control ECU connector.
(c) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).

OK:

The BRAKE warning light turns on or off in accordance with the intelligent tester.

HINT:

If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK ↓

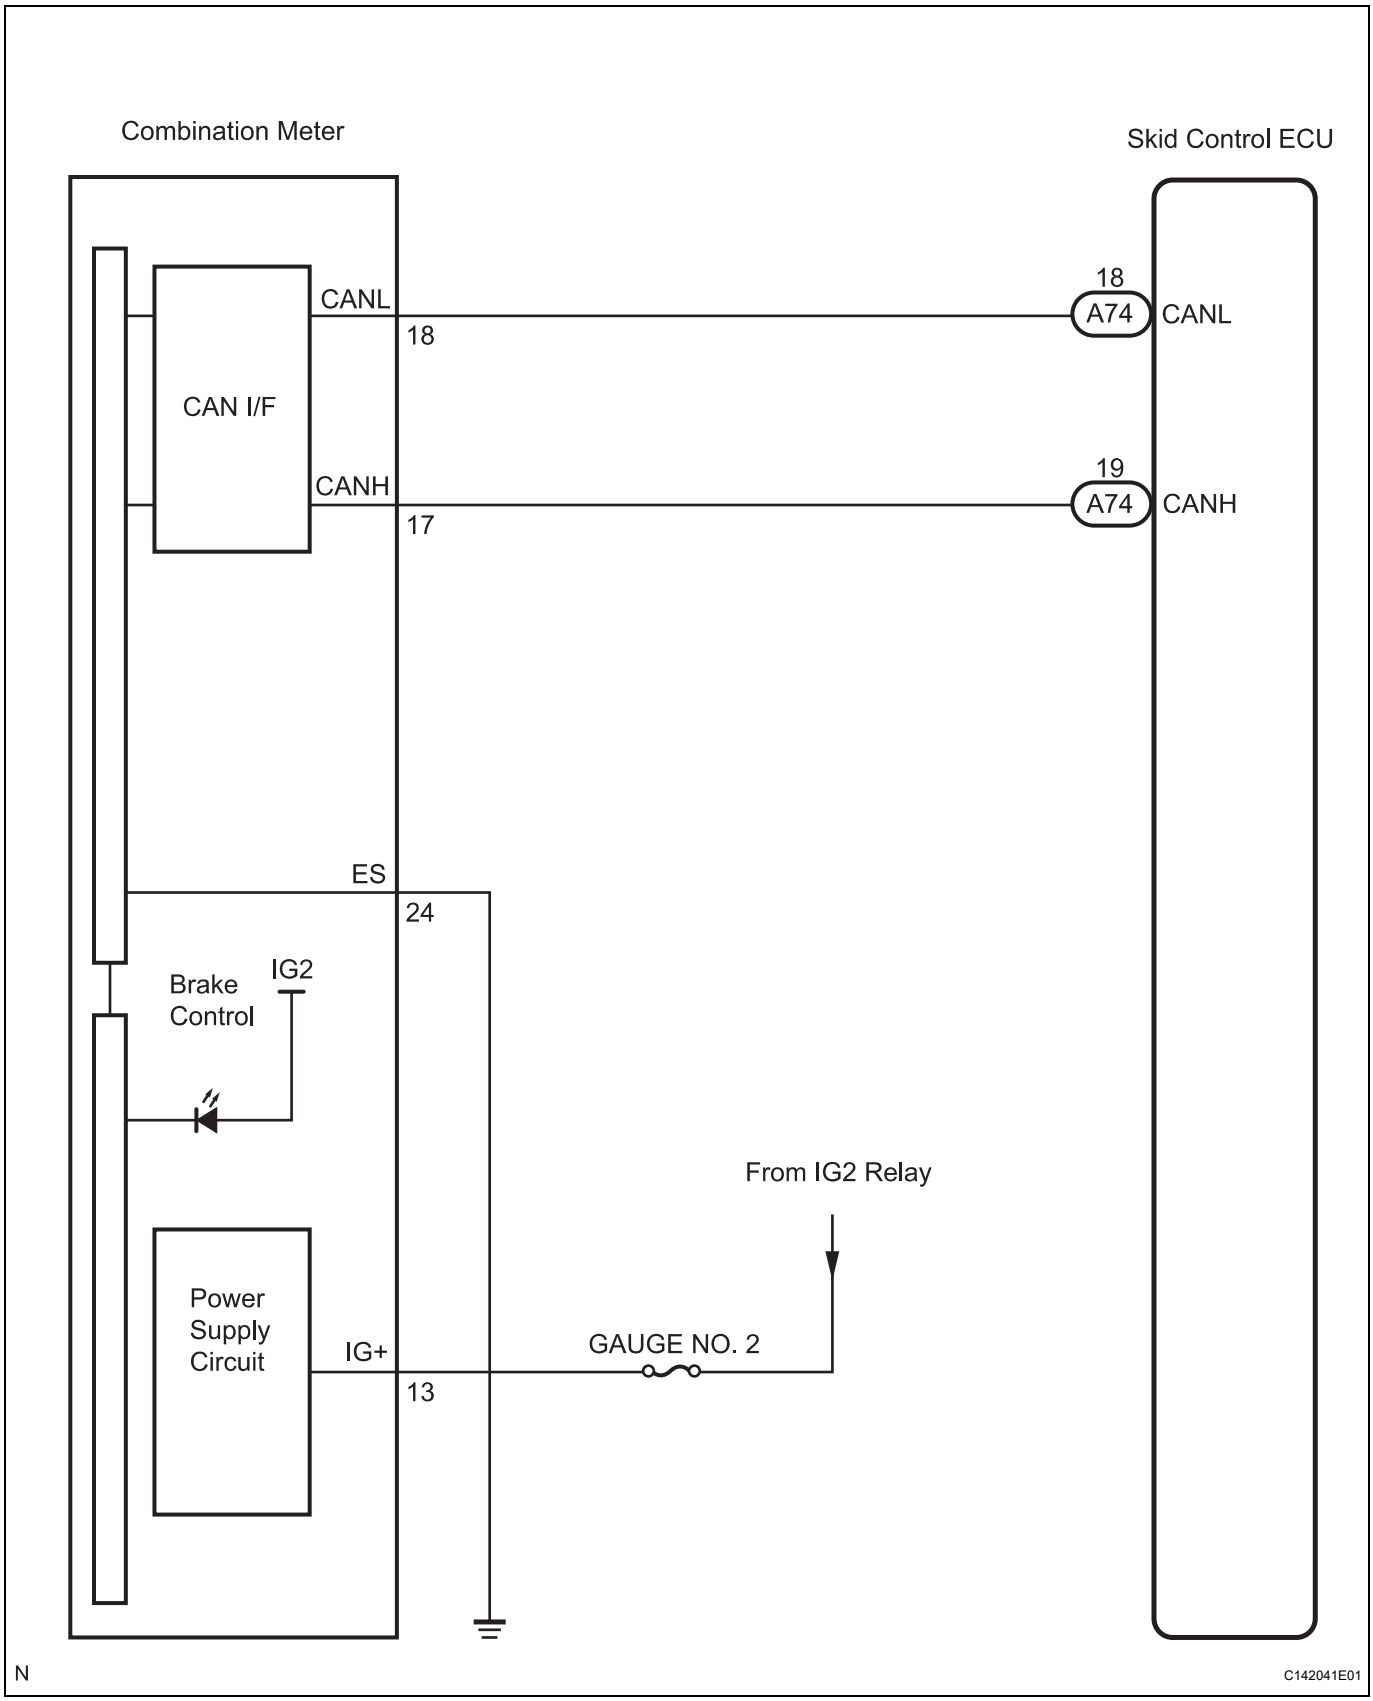
REPLACE SKID CONTROL ECU

Brake Control Warning Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
If the ECU stores a DTC, the brake control warning light comes on in the combination meter.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.

OK:

The connector should be securely connected.

NG → CONNECT CONNECTOR TO ECU CORRECTLY

OK

3	CHECK AUXILIARY BATTERY

(a) Check the auxiliary battery voltage.

Standard voltage:

11 to 14 V

NG → CHARGE OR REPLACE AUXILIARY BATTERY

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).

OK:

The brake control warning light turns on or off in accordance with the intelligent tester.

BC

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE SKID CONTROL ECU

Brake Control Warning Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
If the ECU stores a DTC, the brake control warning light comes on in the combination meter.

WIRING DIAGRAM

Refer to Brake Control Warning Light Remains ON (See page BC-237).

INSPECTION PROCEDURE

NOTICE:
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK BRAKE CONTROL WARNING LIGHT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (READY).
(c) Select "ECB* WARN LAMP" in the Active Test and operate the brake control warning light using the intelligent tester.

ABS / VSC:

Tester Display	Test Part	Control Range	Diagnostic Note
ECB* WARN LAMP	Brake control warning light	Warning light ON / OFF	Observe combination meter

*: Electronically Controlled Brake

(d) Check that "ON" and "OFF" of the brake control warning light are indicated on the combination meter when using the intelligent tester.

OK:

The brake control warning light turns on or off in accordance with the intelligent tester.

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

OK → REPLACE SKID CONTROL ECU

BC

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the power switch off.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).
OK:
The brake control warning light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

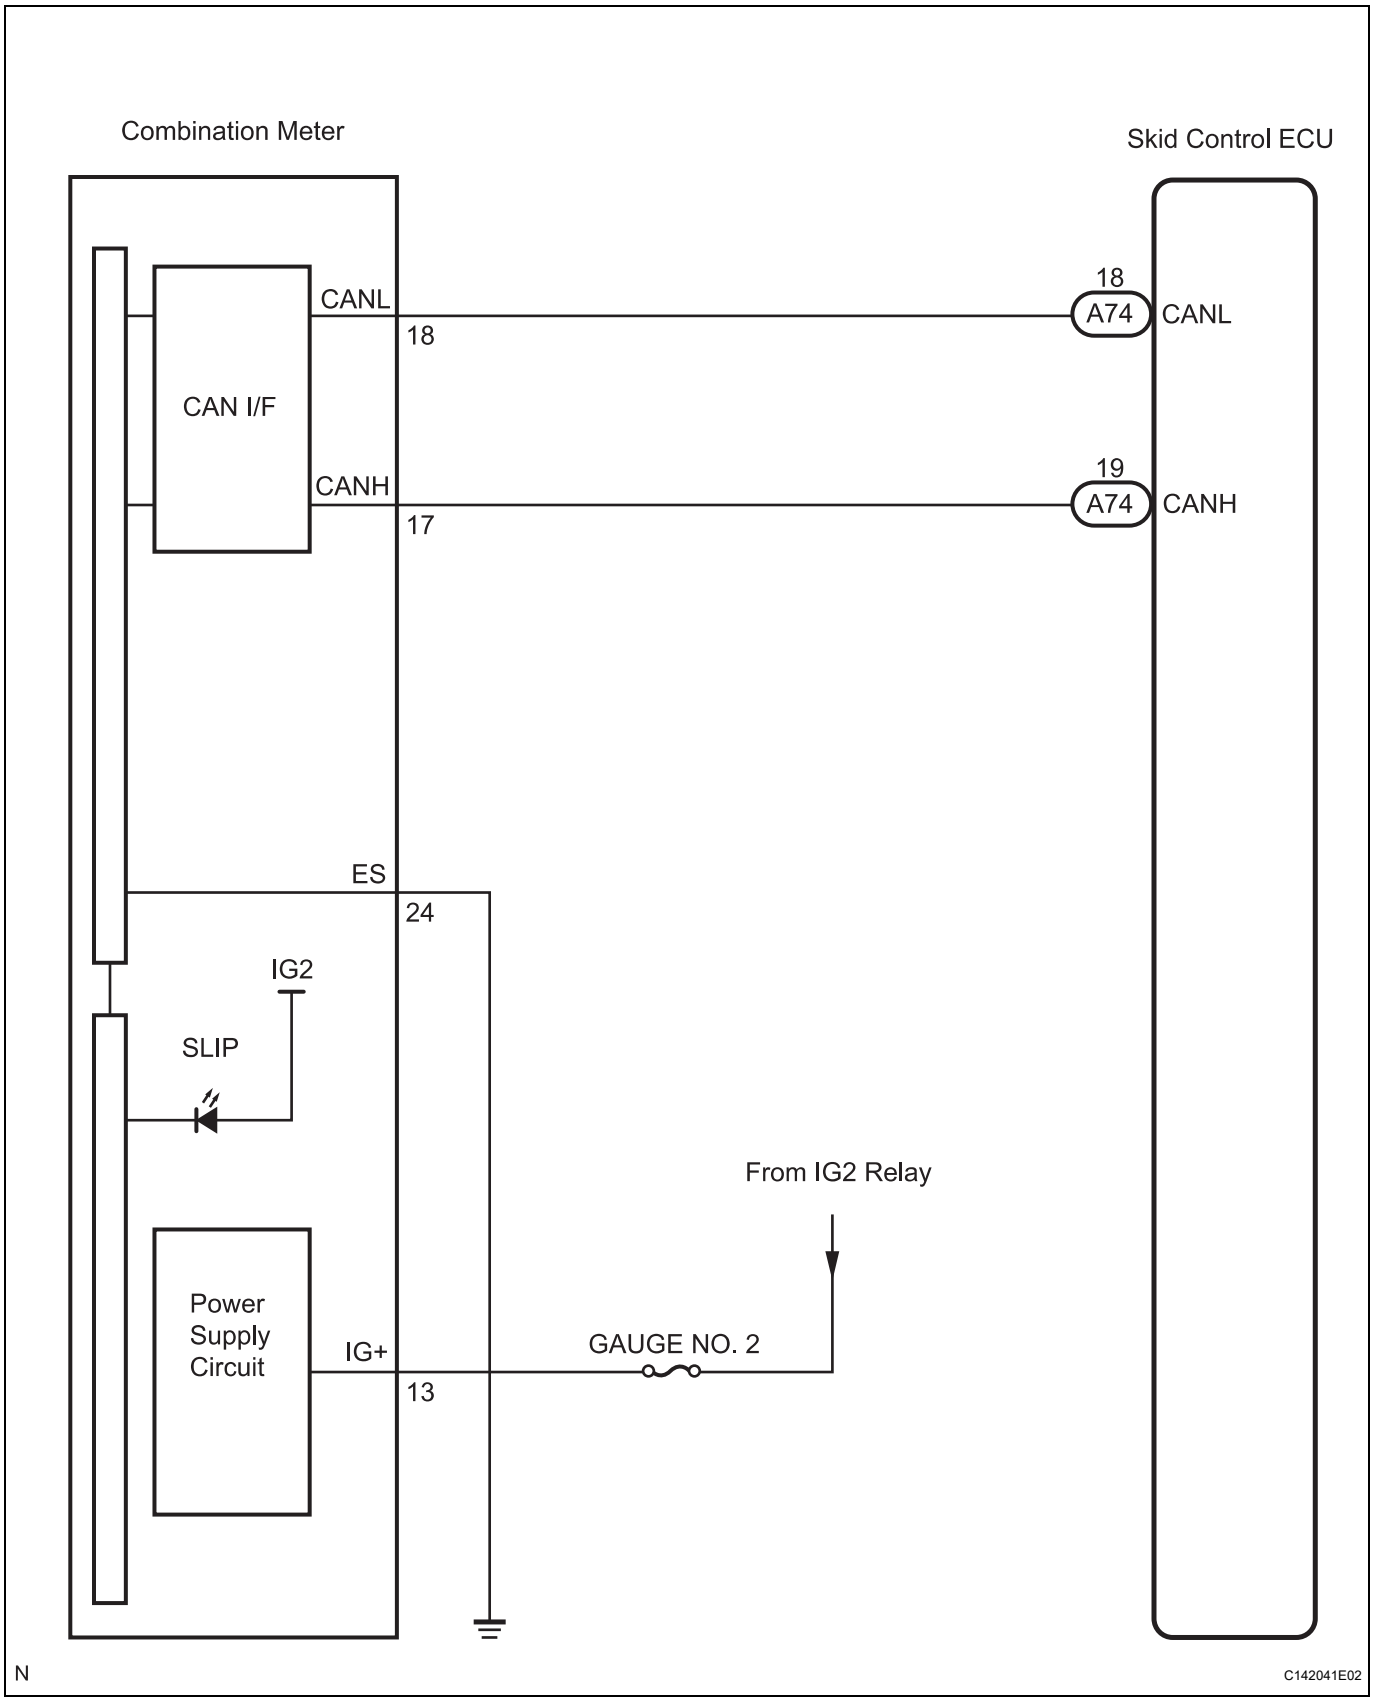
REPLACE SKID CONTROL ECU

Slip Indicator Light Remains ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
The SLIP indicator blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator comes on to warn the driver (See page BC-54).

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → INSPECT CAN COMMUNICATION SYSTEM

A

2	CHECK IF SKID CONTROL ECU CONNECTOR IS SECURELY CONNECTED

(a) Check if the skid control ECU connector is securely connected.
OK:
The connector should be securely connected.

NG → CONNECT CONNECTOR TO ECU CORRECTLY

OK

3	CHECK AUXILIARY BATTERY

(a) Check the auxiliary battery voltage.
Standard voltage:
11 to 14 V

NG → CHARGE OR REPLACE AUXILIARY BATTERY

OK

4	INSPECT COMBINATION METER ASSEMBLY

(a) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.

BC

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

REPLACE SKID CONTROL ECU

Slip Indicator Light does not Come ON

DESCRIPTION

The skid control ECU is connected to the combination meter via CAN communication.
The SLIP indicator blinks during VSC and/or TRAC operation.
When the system fails, the SLIP indicator comes on to warn the driver (See page BC-54).

WIRING DIAGRAM

Refer to Slip Indicator Light Remains ON (See page BC-243).

INSPECTION PROCEDURE

NOTICE:
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1 CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

B → **INSPECT CAN COMMUNICATION SYSTEM**

A

2 CHECK SLIP INDICATOR LIGHT

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (READY).
(c) Select "SLIP INDI LAMP" in the Active Test and operate the SLIP indicator light using the intelligent tester.

ABS / VSC:

Tester Display	Test Part	Control Range	Diagnostic Note
SLIP INDI LAMP	SLIP indicator light	Indicator light ON / OFF	Observe combination meter

(d) Check that "ON" and "OFF" of the SLIP indicator light are indicated on the combination meter when using the intelligent tester.
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

OK → **REPLACE SKID CONTROL ECU**

BC

NG

3	INSPECT COMBINATION METER ASSEMBLY

(a) Turn the power switch off.
(b) Perform Active Test of the combination meter (meter CPU) using the intelligent tester (See page ME-30).
OK:
The SLIP indicator light turns on or off in accordance with the intelligent tester.
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

NG → **REPLACE COMBINATION METER ASSEMBLY**

OK

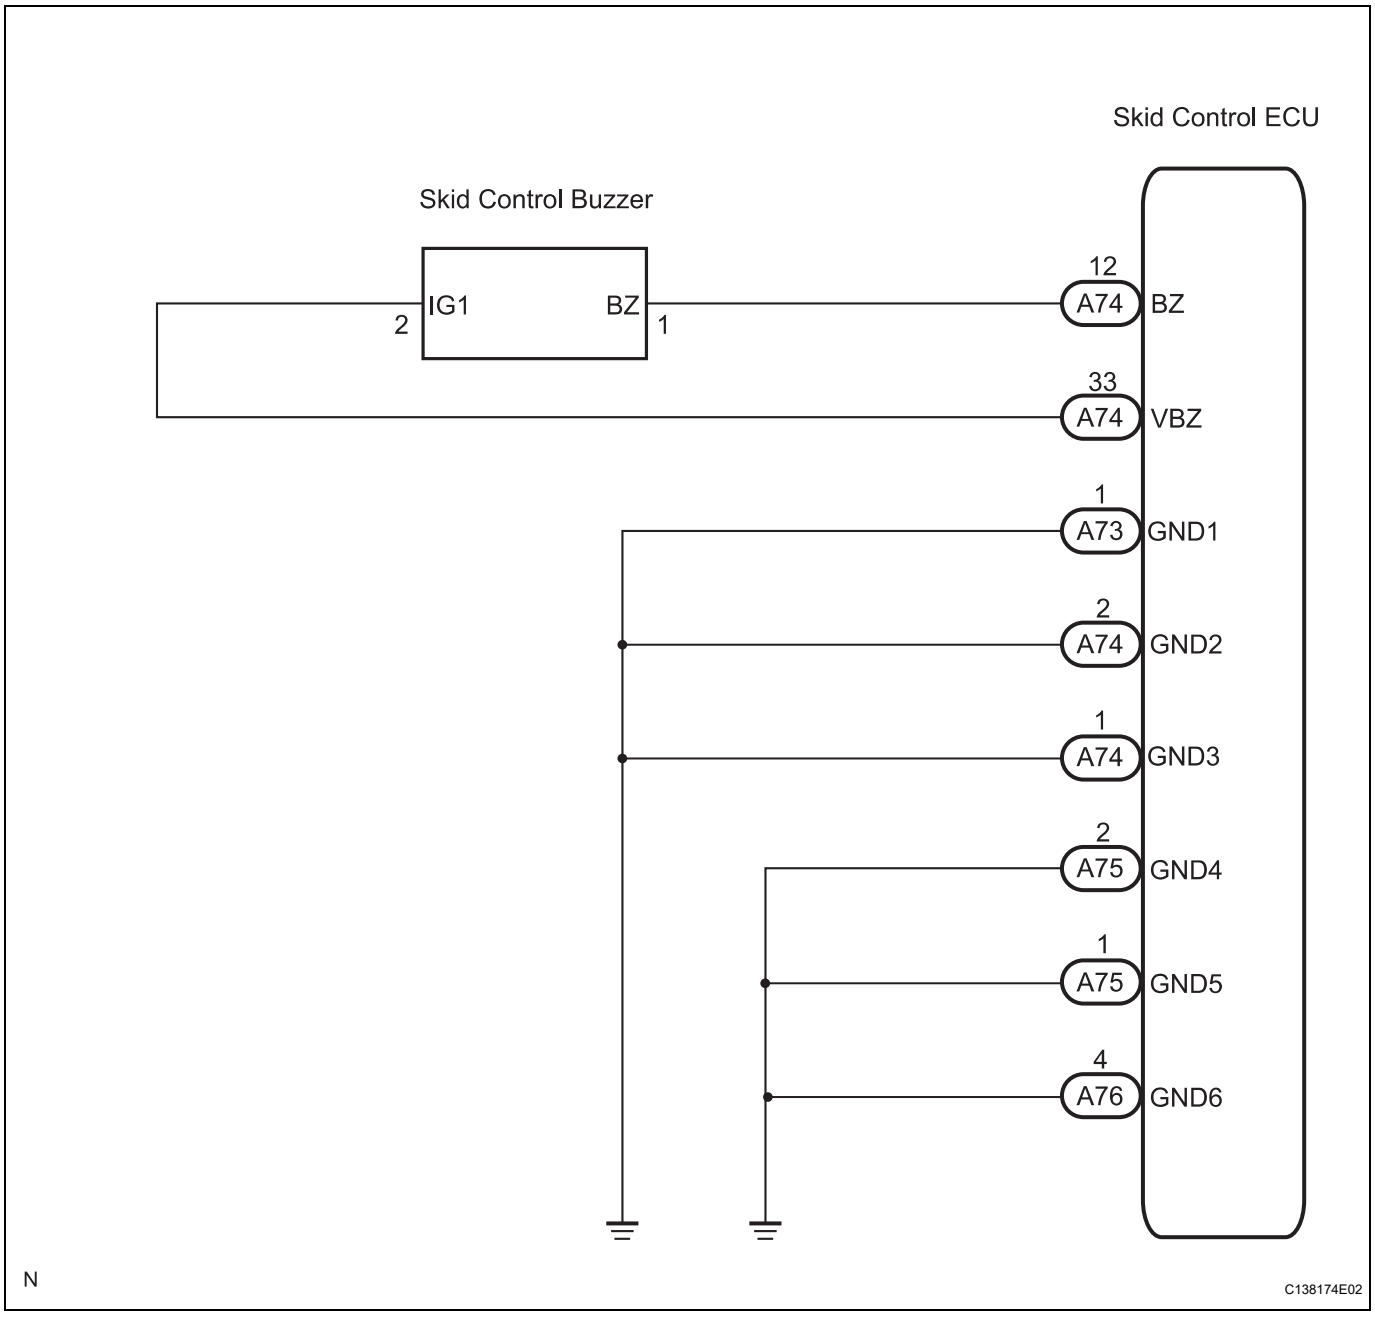
REPLACE SKID CONTROL ECU

Skid Control Buzzer Circuit

DESCRIPTION

The skid control buzzer sounds while the accumulator pressure is abnormally low or when an abnormality causing low fluid pressure occurs, and then the VSC is activated.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

BC

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (SKID CONTROL BUZZER)

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (READY).
(c) Select the Active Test mode on the intelligent tester.

ABS / VSC:

Tester Display	Test Part	Control Range	Diagnostic Note
BUZZER	Skid control buzzer	Buzzer ON / OFF	Buzzer can be heard

(d) Check that the buzzer sounds/stops when turning the skid control buzzer on/off by using the intelligent tester.

Result

Condition	Proceed to
Buzzer does not sound or sounds constantly	**A**
Buzzer sounds/stops	**B**

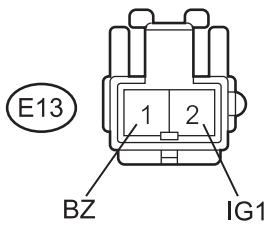
HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step (See page BC-46).

B → **END**

A

2	INSPECT SKID CONTROL BUZZER (POWER SOURCE TERMINAL)

Skid Control Buzzer Harness Side Connector Front View:



H

C143346E01

(a) Turn the power switch off.
(b) Disconnect the skid control buzzer connector.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E13-2 - Body ground	**Power switch on (IG)**	**10 to 14 V**

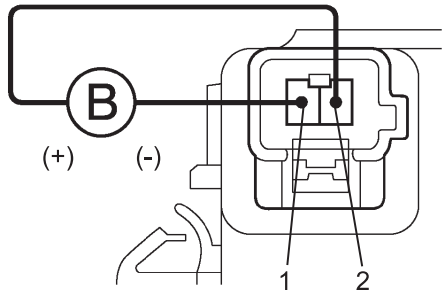
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (POWER SOURCE CIRCUIT)**

OK

BC

3 INSPECT SKID CONTROL BUZZER

Skid Control Buzzer:



C125130E01

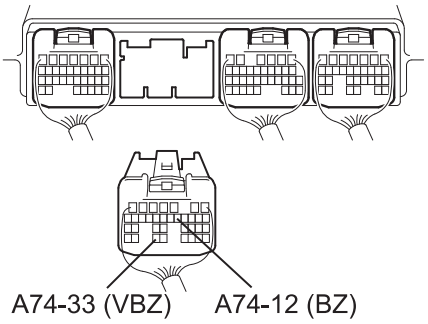
(a) Apply battery negative voltage to terminal 1, and battery positive voltage to terminal 2 of the skid control buzzer, and then check that the buzzer sounds.
OK:
The skid control buzzer sounds.

NG → **REPLACE SKID CONTROL BUZZER**

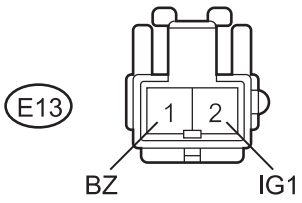
OK

4 CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - SKID CONTROL BUZZER)

Skid Control ECU Wire Harness View:



Skid Control Buzzer Harness Side Connector Front View:



H

C140729E01

(a) Turn the power switch off.
(b) Disconnect the skid control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
A74-12 (BZ) - E13-1 (BZ)	Always	Below 1 Ω
A74-12 (BZ) - Body ground	Always	10 kΩ or higher
A74-33 (VBZ) - E13-2 (IG1)	Always	Below 1 Ω
A74-33 (VBZ) - Body ground	Always	10 kΩ or higher

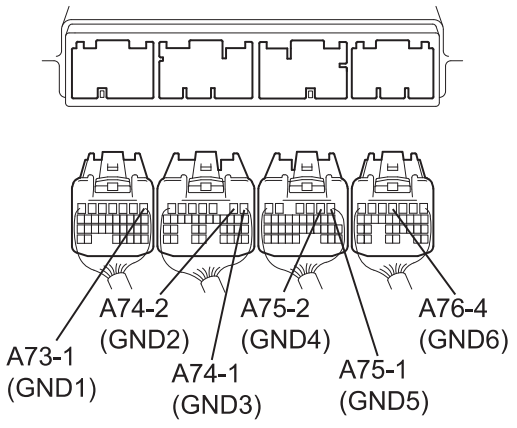
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

5	INSPECT SKID CONTROL ECU (GND TERMINAL)

Skid Control ECU Wire Harness View:



(a) Disconnect the skid control ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A73-1 (GND1) - Body ground	Always	Below 1 Ω
A74-2 (GND2) - Body ground	Always	Below 1 Ω
A74-1 (GND3) - Body ground	Always	Below 1 Ω
A75-2 (GND4) - Body ground	Always	Below 1 Ω
A75-1 (GND5) - Body ground	Always	Below 1 Ω
A76-4 (GND6) - Body ground	Always	Below 1 Ω

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR (GND CIRCUIT)**

OK

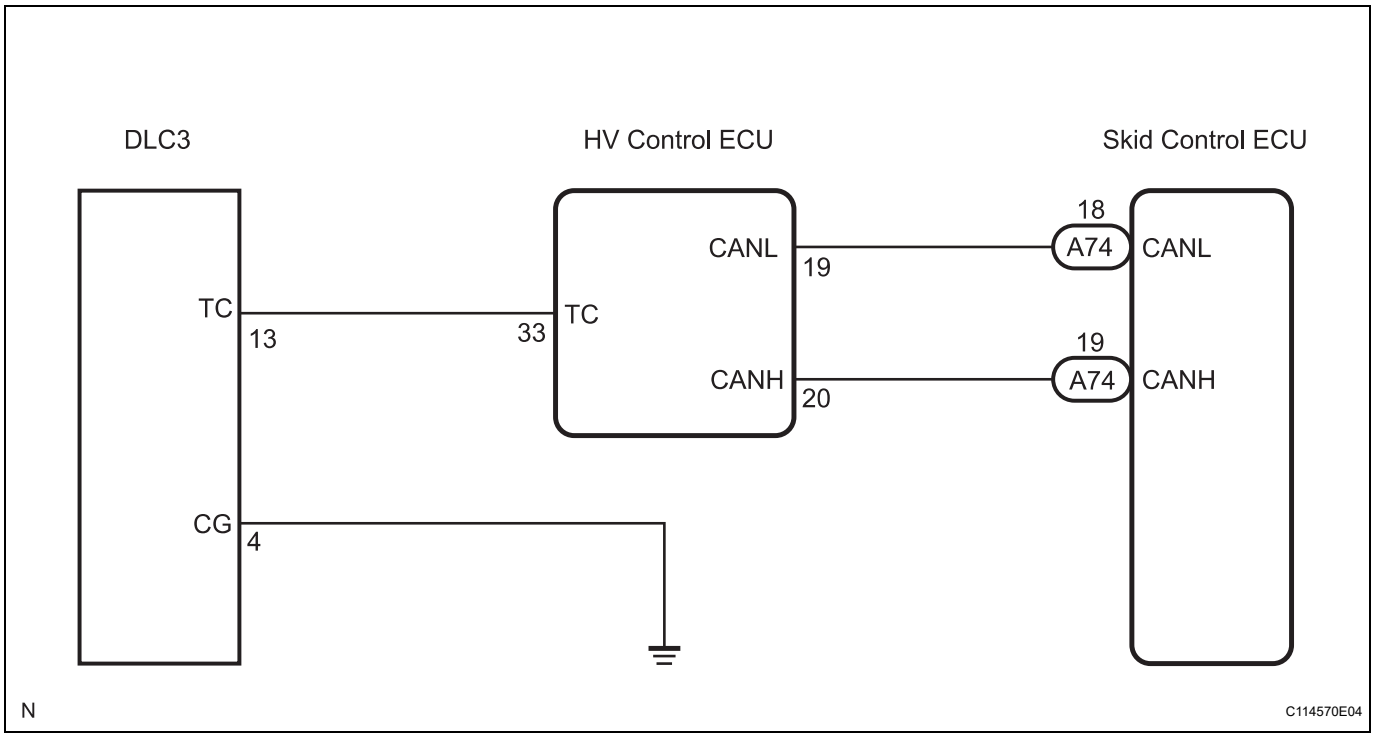
REPLACE SKID CONTROL ECU

TC and CG Terminal Circuit

DESCRIPTION

Connecting terminals TC and CG of the DLC3 causes the ECU to display the DTC by blinking the ABS warning light.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if the CAN communication system DTC is output (See page CA-22).

Result

Condition	Proceed to
DTC is not output	A
DTC is output	B

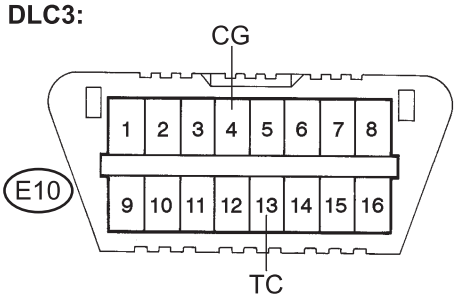
B → INSPECT CAN COMMUNICATION SYSTEM

A

BC

2	INSPECT DLC3

DLC3:



(a) Turn the power switch on (IG).
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

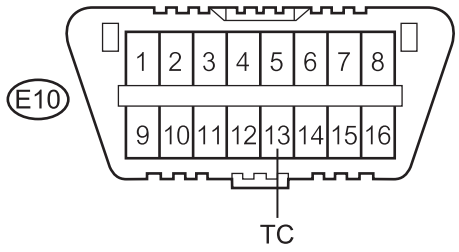
Tester Connection	Condition	Specified Condition
E10-13 (TC) - E10-4 (CG)	Power switch on (IG)	10 to 14 V

OK → Go to step 5

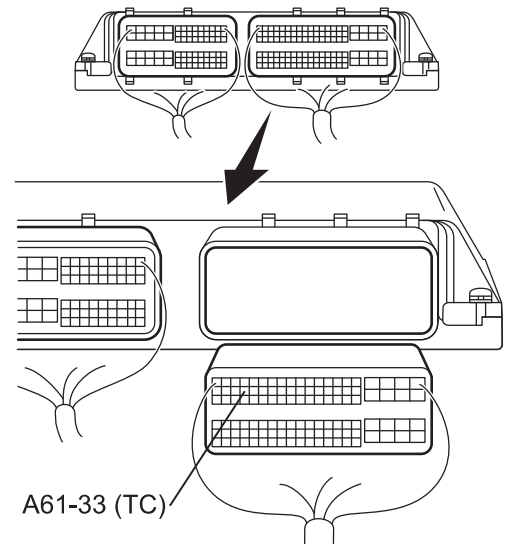
NG

3	CHECK HARNESS AND CONNECTOR (TC of DLC3 - HV CONTROL ECU)

DLC3:



HV Control ECU Wire Harness View:



(a) Turn the power switch off.
(b) Disconnect the HV control ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

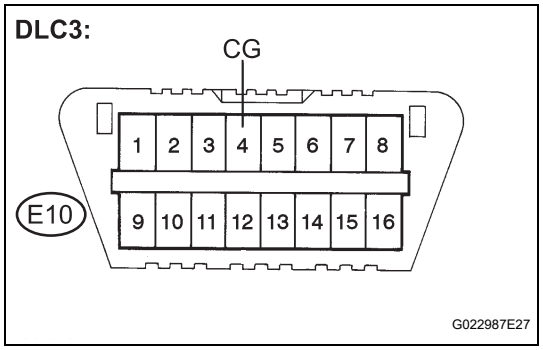
Tester Connection	Condition	Specified Condition
E10-13 (TC) - A61-33 (TC)	Always	Below 1 Ω
E10-13 (TC) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

BC

4 CHECK HARNESS AND CONNECTOR (CG of DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

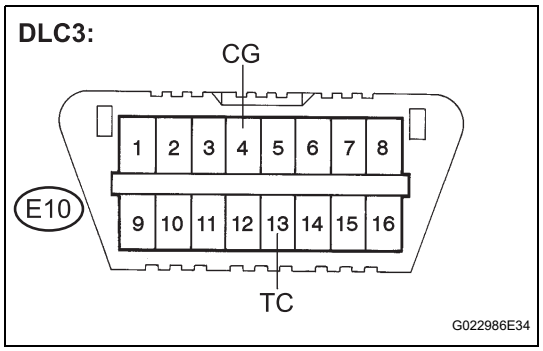
Standard resistance

Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK HV CONTROL ECU (TC of DLC3 INPUT)



(a) Turn the power switch off.
(b) Reconnect the HV control ECU connector.
(c) Using the SST, connect terminals TC and CG of the DLC3.
(d) Turn the power switch on (IG).
(e) Check that the check engine warning light is blinking.

Result

Condition	Proceed to
Check engine warning light is blinking	A
Check engine warning light is not blinking	B

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

B → **REPAIR OR REPLACE WIRE HARNESS OR HV CONTROL ECU (TC of HV CONTROL ECU CIRCUIT)**

A

REPLACE SKID CONTROL ECU

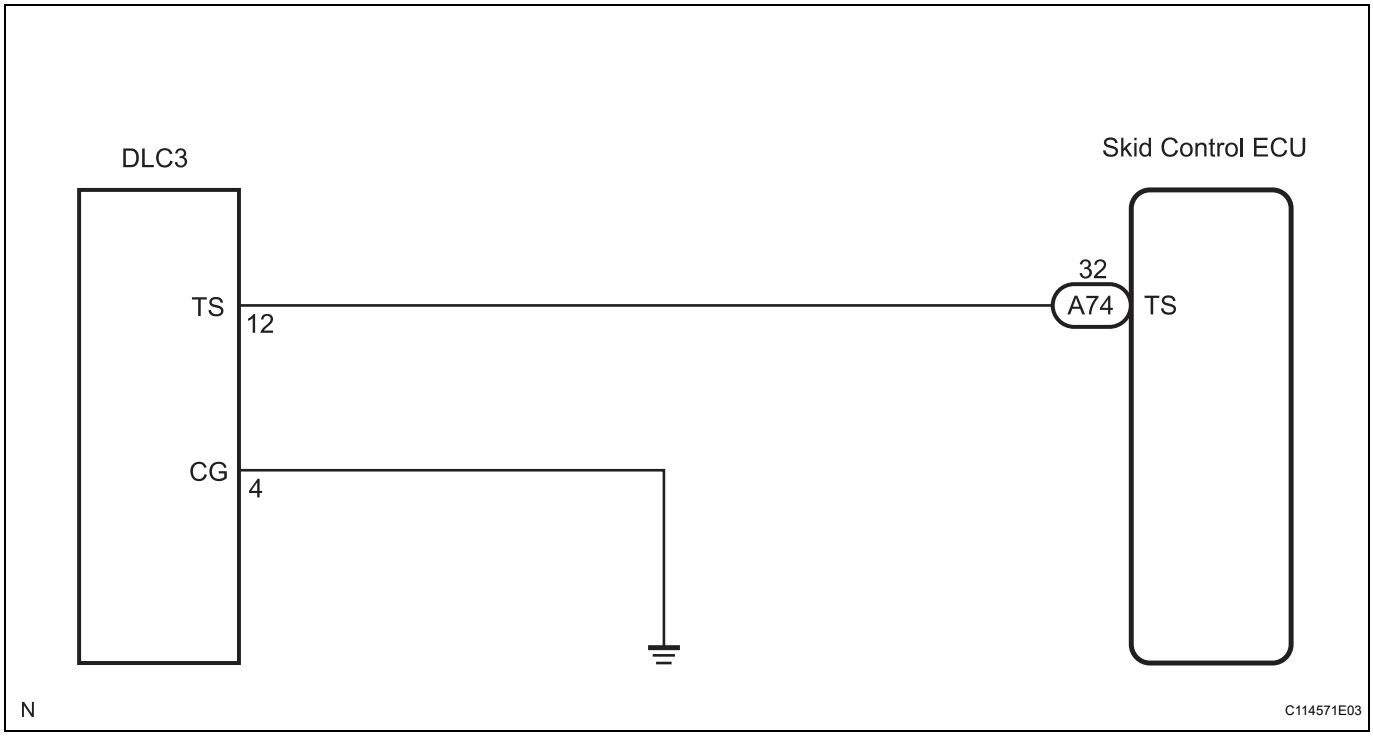
BC

TS and CG Terminal Circuit

DESCRIPTION

In the Test Mode (signal check), a malfunction of the speed sensor that cannot be detected when the vehicle is stopped can be detected while driving.
Transition to the sensor check mode can be performed by connecting terminals TS and CG of the DLC3 and turning the power switch from off to on (IG).

WIRING DIAGRAM

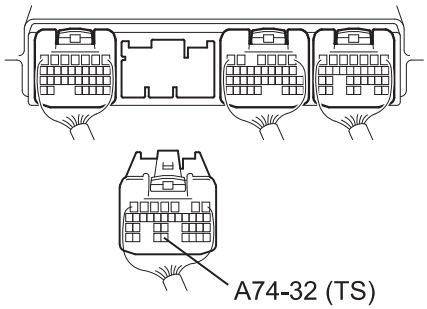


INSPECTION PROCEDURE

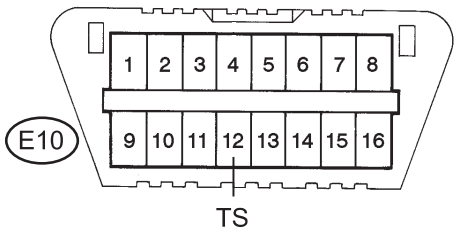
NOTICE:
When replacing the skid control ECU, perform initialization of linear solenoid valve and calibration (See page BC-25).

1	CHECK HARNESS AND CONNECTOR (SKID CONTROL ECU - TS of DLC3)

Skid Control ECU Wire Harness View:



DLC3:



C140730E01

(a) Disconnect the skid control ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

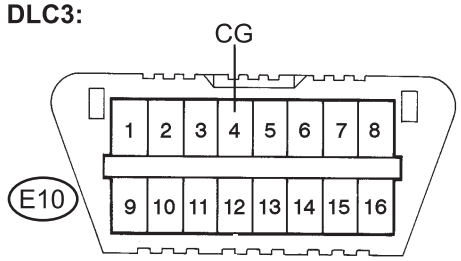
Tester Connection	Condition	Specified Condition
A74-32 (TS) - E10-12 (TS)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK HARNESS AND CONNECTOR (CG of DLC3 - BODY GROUND)

DLC3:



G022987E27

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

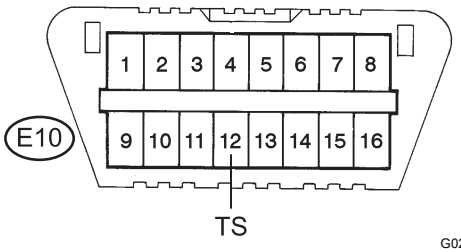
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

BC

3	CHECK HARNESS AND CONNECTOR (TS of DLC3 - BODY GROUND)

DLC3:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-12 (TS) - Body ground	Always	10 kΩ or higher

HINT:
If troubleshooting has been carried out according to the Problem Symptoms Table, refer back to the table and proceed to the next step before replacing the part (See page BC-46).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE SKID CONTROL ECU

ON-VEHICLE INSPECTION

1. INSPECT BRAKE ACTUATOR ASSEMBLY OPERATION

(a) Pre-check preparation

(1) Move the shift lever to the P position. Apply the parking brake and connect the intelligent tester to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn on the intelligent tester. Select "MAS CYL PRS 1", "MAS CYL PRS 2", "FR PRESS SENS", "FL PRESS SENS", "RR PRESS SENS" and "RL PRESS SENS".

(b) Check the FR system solenoids (SLA**, SLR**, SMC1, SMC2).

(1) Select "SLAFR CLASE". → Enter and check the output voltage.

NOTICE:

Do not depress the brake pedal.

HINT:

- It takes approximately 35 seconds to complete the check.
- If incorrect, troubleshoot the brake system. (See page BC-46)

Standard voltage

Sensor	10 to 20 sec. after check start (V)	35 sec. or more after check start (V)
MAS CYL PRS 1	0.3 to 0.7	0.3 to 0.7
MAS CYL PRS 2	0.3 to 0.7	0.3 to 0.7
FR PRESS SENS	2.5 to 4.5	0.3 to 0.7
FL PRESS SENS	0.3 to 0.7	0.3 to 0.7
RR PRESS SENS	0.3 to 0.7	0.3 to 0.7
RL PRESS SENS	0.3 to 0.7	0.3 to 0.7

(c) Check the FL system solenoids (SLA**, SLR**, SMC1, SMC2).

(1) Select "SLAFL CLOSE". → Enter and check the output voltage.

NOTICE:

Do not depress the brake pedal.

HINT:

- It takes approximately 35 seconds to complete the check.
- If incorrect, troubleshoot the brake system. (See page BC-46)

BC

Standard voltage

Sensor	10 to 20 sec. after check start (V)	35 sec. or more after check start (V)
MAS CYL PRS 1	0.3 to 0.7	0.3 to 0.7
MAS CYL PRS 2	0.3 to 0.7	0.3 to 0.7
FR PRESS SENS	0.3 to 0.7	0.3 to 0.7
FL PRESS SENS	2.5 to 4.5	0.3 to 0.7
RR PRESS SENS	0.3 to 0.7	0.3 to 0.7
RL PRESS SENS	0.3 to 0.7	0.3 to 0.7

(d) Check the RR system solenoids (SLA**, SLR**, SMC1, SMC2).
(1) Select "SLARR CLOSE". → Enter and check the output voltage.
NOTICE:
Do not depress the brake pedal.
HINT:
- It takes approximately 35 seconds to complete the check.
- If incorrect, troubleshoot the brake system. (See page BC-46)

Standard voltage

Sensor	10 to 20 sec. after check start (V)	35 sec. or more after check start (V)
MAS CYL PRS 1	0.3 to 0.7	0.3 to 0.7
MAS CYL PRS 2	0.3 to 0.7	0.3 to 0.7
FR PRESS SENS	0.3 to 0.7	0.3 to 0.7
FL PRESS SENS	0.3 to 0.7	0.3 to 0.7
RR PRESS SENS	2.5 to 4.5	0.3 to 0.7
RL PRESS SENS	0.3 to 0.7	0.3 to 0.7

(e) Check the RL system solenoids (SLA**, SLR**, SMC1, SMC2).
(1) Select "SLAFL CLOSE". → Enter and check the output voltage.
NOTICE:
Do not depress the brake pedal.
HINT:
- It takes approximately 35 seconds to complete the check.
- If incorrect, troubleshoot the brake system. (See page BC-46)

Standard voltage

Sensor	10 to 20 sec. after check start (V)	35 sec. or more after check start (V)
MAS CYL PRS 1	0.3 to 0.7	0.3 to 0.7
MAS CYL PRS 2	0.3 to 0.7	0.3 to 0.7
FR PRESS SENS	0.3 to 0.7	0.3 to 0.7
FL PRESS SENS	0.3 to 0.7	0.3 to 0.7
RR PRESS SENS	0.3 to 0.7	0.3 to 0.7
RL PRESS SENS	2.5 to 4.5	0.3 to 0.7

(f) Check SMC1 and SMC2.
(1) Select "ELECTRONICALLY CONTROLLED BRAKE SYSTEM INVALID" on the intelligent tester menu screen to prohibit the brake control.
(2) Check that the brake control warning light comes on.
(3) Check the output voltage by depressing the brake pedal.
Standard voltage:
Difference in the output voltage between "MAS CYL PRS 1" and "FR PRESS SENS" is less than 0.4 V.

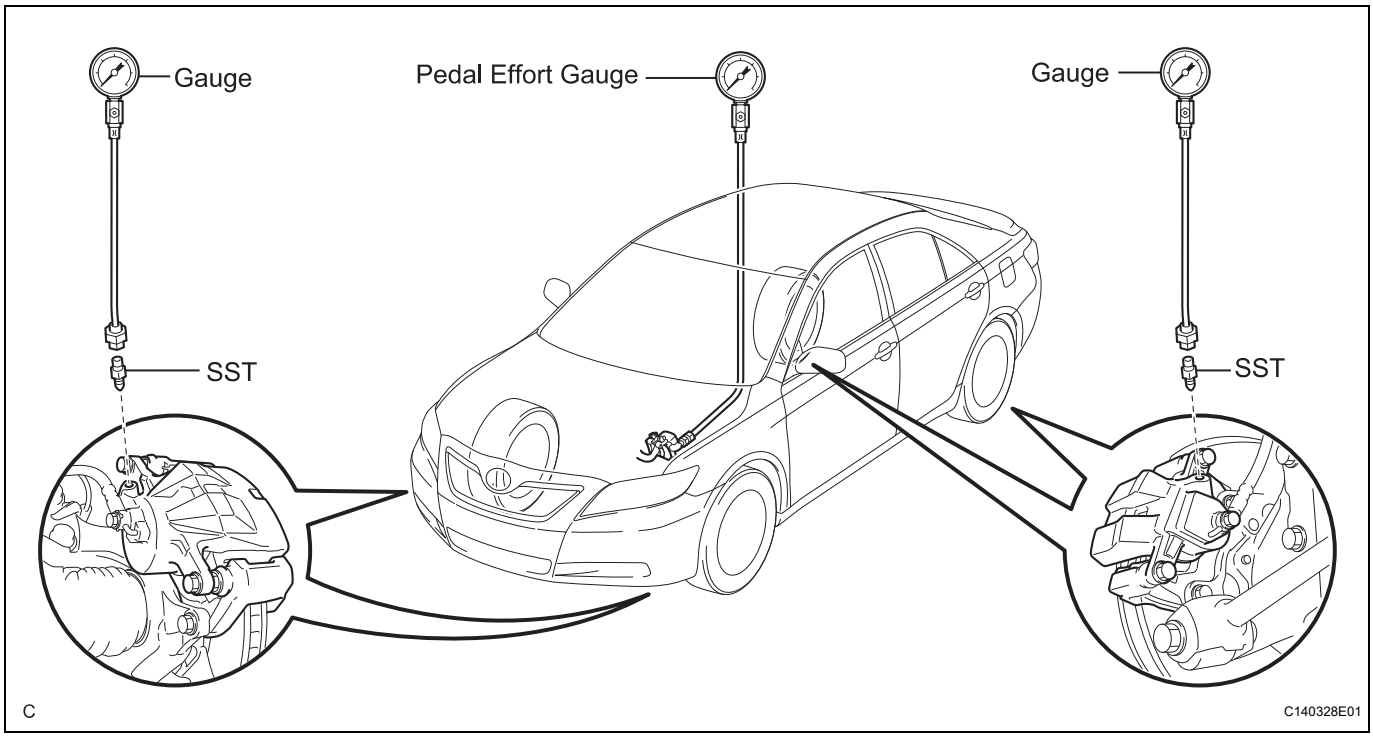
Standard Voltage:
Difference in the output voltage between "MAS CYL PRS 2" and "FL PRESS SENS" is less than 0.4 V.

(4) Press the return key on the intelligent tester and cancel brake control prohibition (ELECTRONICALLY CONTROLLED BRAKE SYSTEM INVALID).

2. INSPECT PRESSURE SENSOR OPERATION

(a) Check the battery voltage.
Standard voltage:
10 to 14 V (when the engine is not running and the power switch is off)

(b) Connect the LSPV pressure gauge (SST) and pedal effort gauge.
(1) Install the hydro LSPV gauge (SST) and brake pedal effort gauge.
SST 09709-29018



(2) Bleed the air from the hydro booster pressure gauge.
(3) Move the shift lever to the P position. Connect the intelligent tester to the DLC3 with the parking brake applied.
(4) Turn the power switch on (IG).
(5) Clear the DTCs.

(c) Check the wheel cylinder pressure sensor and master pressure sensor.
(1) Turn on the intelligent tester. Select "MAS CYL PRS 1", "MAS CYL PRS 2", "FR PRESS SENS", "FL PRESS SENS", "RR PRESS SENS", and "RL PRES SENS".

(2) Check the brake pedal effort gauge, hydro booster pressure gauge reading, and output pressure voltage. If incorrect, troubleshoot the brake system. (See page BC-46)

Standard voltage

Brake effort {N (kgf, lbf)}	MAS CYL PRS 1 (V)	MAS CYL PRS 2 (V)
200 (20.4, 45)	0.85 to 1.15	0.85 to 1.15
500 (51, 112)	1.85 to 2.15	1.85 to 2.15

Standard voltage

Brake effort {N (kgf, lbf)}	Front right wheel hydraulic pressure {MPa (kgf/cm^2, psi)}	FR PRESS SENS (V)
50 (5.1, 11)	2.4 (24.5, 348)	0.85 to 1.15
100 (10.2, 22)	5.0 (51.0, 725)	1.35 to 1.65
150 (15.3, 34)	5.0 (51.0, 725)	1.35 to 1.65
200 (20.4, 45)	5.1 (52.0, 740)	1.4 to 1.7

Standard voltage

Brake effort {N (kgf, lbf)}	Front left wheel hydraulic pressure {MPa (kgf/cm^2, psi)}	FL PRESS SENS (V)
50 (5.1, 11)	2.4 (24.5, 348)	0.85 to 1.15
100 (10.2, 22)	5.0 (51.0, 725)	1.35 to 1.65
150 (15.3, 34)	5.0 (51.0, 725)	1.35 to 1.65
200 (20.4, 45)	5.1 (52.0, 740)	1.4 to 1.7

Standard voltage

Brake effort {N (kgf, lbf)}	Rear right wheel hydraulic pressure {MPa (kgf/cm^2, psi)}	RR PRESS SENS (V)
50 (5.1, 11)	2.4 (24.5, 348)	0.85 to 1.15
100 (10.2, 22)	5.0 (51.0, 725)	1.35 to 1.65
150 (15.3, 34)	5.0 (51.0, 725)	1.35 to 1.65
200 (20.4, 45)	5.0 (51.0, 725)	1.35 to 1.65

Standard voltage

Brake effort {N (kgf, lbf)}	Rear left wheel hydraulic pressure {MPa (kgf/cm^2, psi)}	RL PRESS SENS (V)
50 (5.1, 11)	2.4 (24.5, 348)	0.85 to 1.15
100 (10.2, 22)	5.0 (51.0, 725)	1.35 to 1.65
150 (15.3, 34)	5.0 (51.0, 725)	1.35 to 1.65
200 (20.4, 45)	5.0 (51.0, 725)	1.35 to 1.65

(d) Check the accumulator (ACC) pressure sensor.

(1) Move the shift lever to the P position. Apply the parking brake and connect the intelligent tester to the DLC3.

(2) Turn the power switch on (IG).

(3) Turn on the intelligent tester. Select the accumulator (ACC) pressure sensor 1 (ACC PRESS SENS) in the data list.

(4) Temporarily operate the pump motor by depressing the brake pedal 4 or 5 times.
(5) After confirming that the pump motor stops, check the pressure output voltage.
Standard voltage:
2.6 to 3.8 V
If incorrect, troubleshoot the brake system.
(See page BC-46)

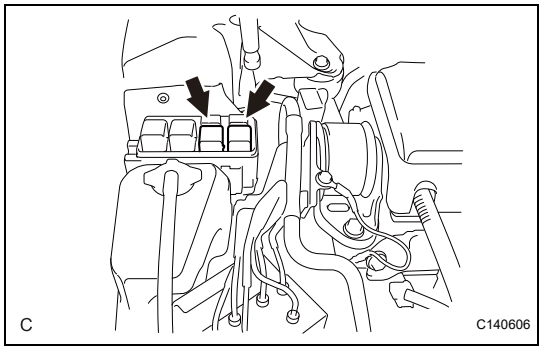
REMOVAL

NOTICE:
If brake fluid spills on any painted surface, wash or otherwise remove it completely.

1. **PERFORM ACCUMULATOR PRESSURE ZERO DOWN (See page BR-12)**

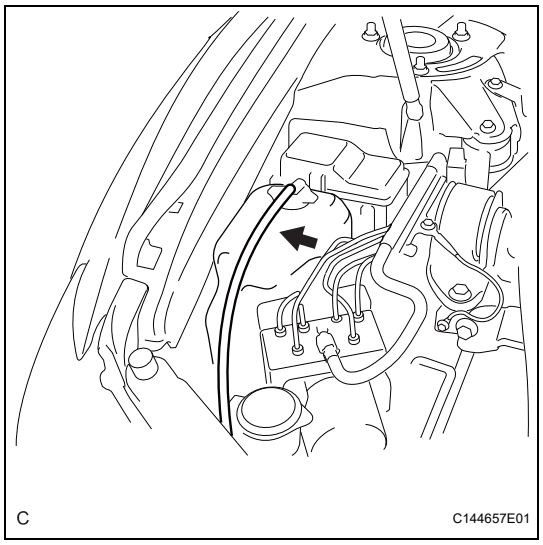
2. **DISCONNECT CABLE FROM BATTERY NEGATIVE TERMINAL**

3. **REMOVE ABS MOTOR RELAY**

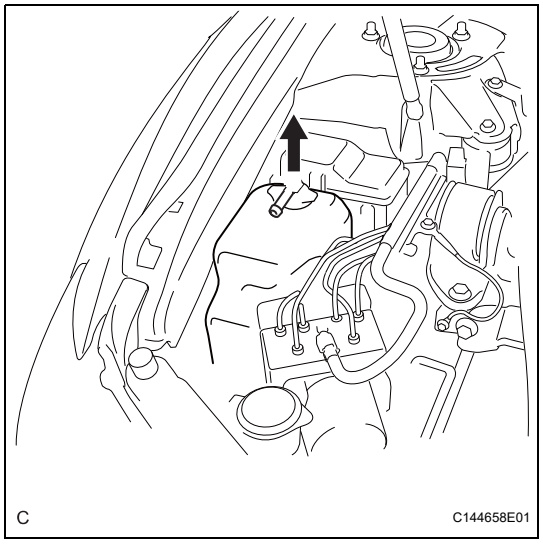


(a) In order to prohibit brake control, remove the 2 ABS motor relays with the power switch off.
NOTICE:
If the pump motor operates while air remains inside the brake actuator hose, the air will enter the actuator, resulting in difficulty in bleeding the brakes.

4. **REMOVE RADIATOR RESERVE TANK ASSEMBLY**

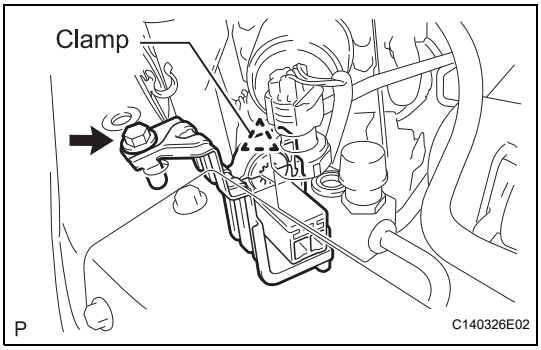


(a) Remove the radiator reservoir hose.



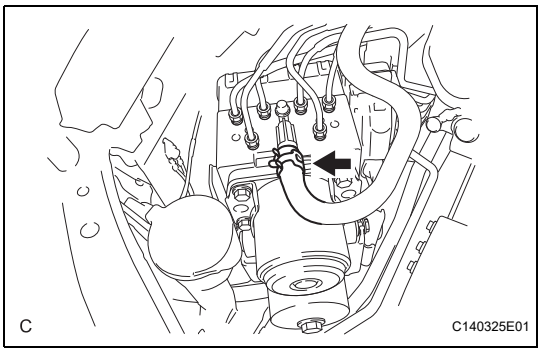
(b) Remove the radiator reserve tank assembly.

BC



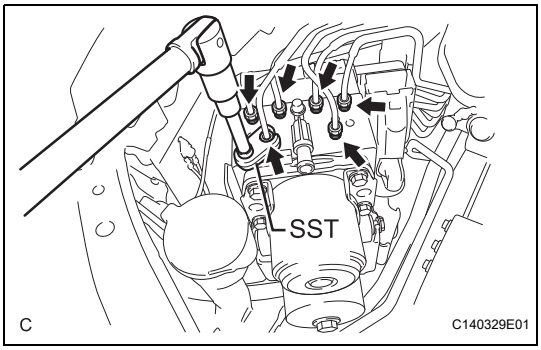
5. REMOVE COOLER BRACKET

(a) Remove the bolt, clamp and the cooler bracket.

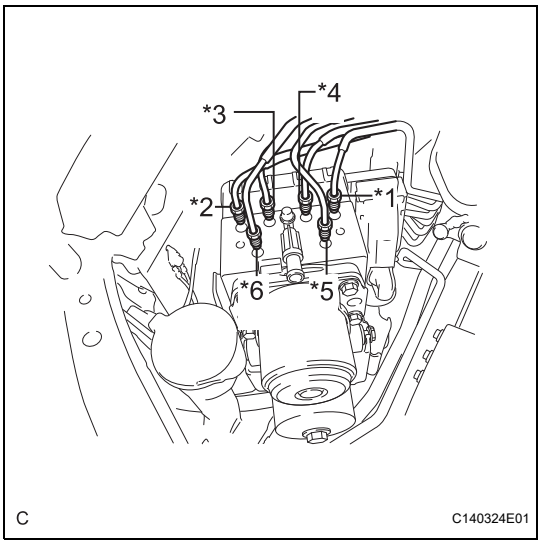


6. REMOVE BRAKE ACTUATOR WITH NO. 1 BRAKE ACTUATOR BRACKET

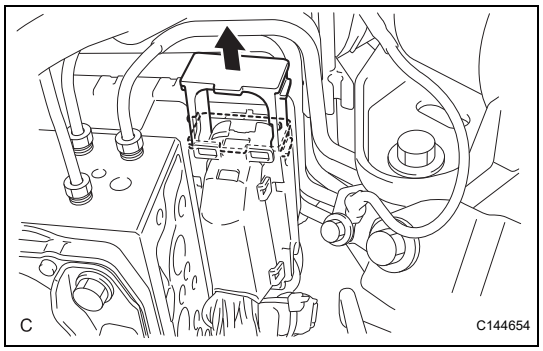
(a) Move the clip and disconnect the brake actuator hose from the brake actuator with No. 1 brake actuator bracket.



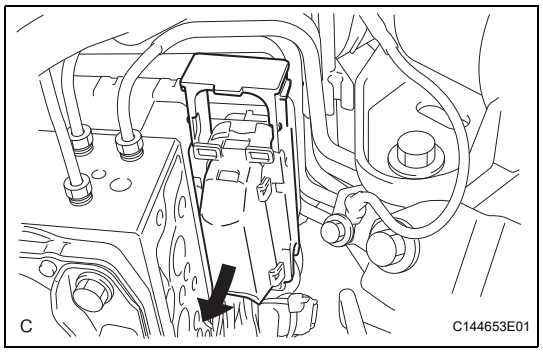
(b) Using SST, disconnect the 6 brake lines from the brake actuator with No. 1 brake actuator bracket.
SST 09023-00101



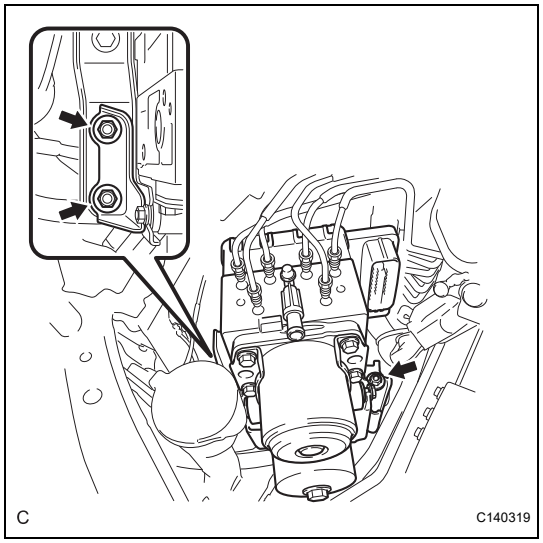
(c) Use tags or make a memo to identify the places to reconnect.
HINT:
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From Master Cylinder
- *6: From Stroke Simulator Cylinder



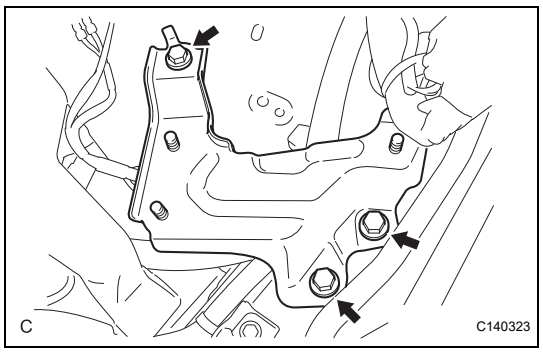
(d) Release the lock lever.



(e) Disconnect the actuator connector.



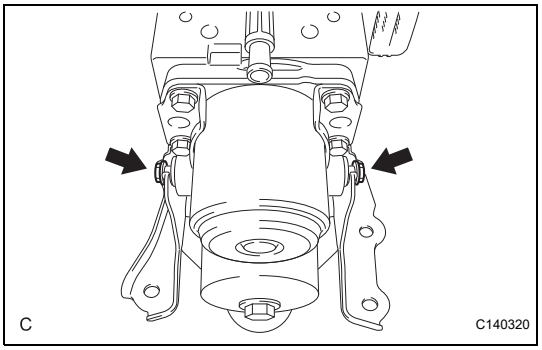
(f) Remove the 3 nuts and brake actuator with No. 1 brake actuator bracket.
NOTICE:
Do not damage the brake lines.



7. REMOVE BRAKE ACTUATOR BRACKET ASSEMBLY

(a) Remove the 3 bolts and brake actuator bracket assembly.

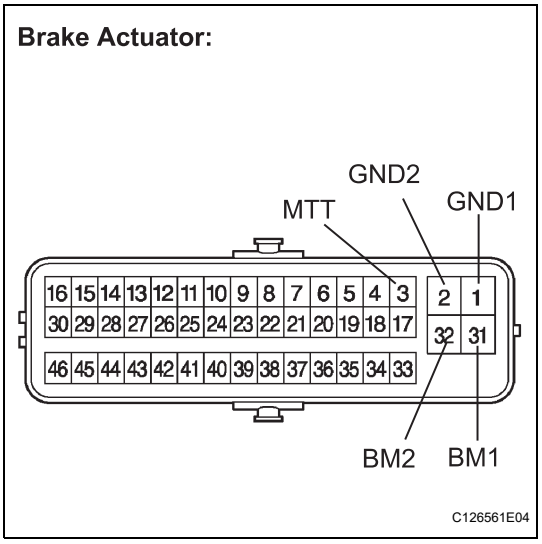
BC



DISASSEMBLY

1. REMOVE NO. 1 BRAKE ACTUATOR BRACKET

(a) Remove the 2 nuts and brake actuator assembly from the No. 1 brake actuator bracket.



INSPECTION

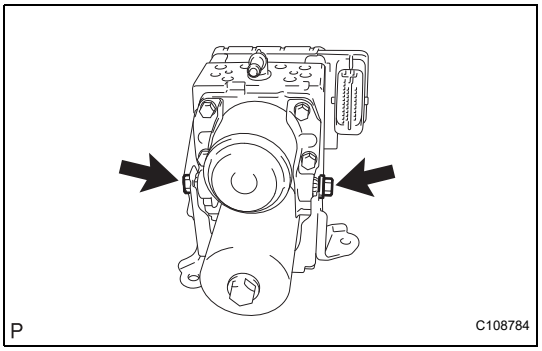
1. INSPECT BRAKE ACTUATOR ASSEMBLY

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
31 (BM1) - 1 (GND1)	Always	Below 10 Ω
32 (BM2) - 1 (GND1)	Always	Below 10 Ω
31 (BM1) - 32 (BM2)	Always	Below 1 Ω
1 (GND1) - 2 (GND2)	Always	Below 1 Ω
31 (BM1) - 3 (MTT)	Always	950 to 1,050 Ω
32 (BM2) - 3 (MTT)	Always	950 to 1,050 Ω

If the value is not as specified, replace the brake actuator assembly.



REASSEMBLY

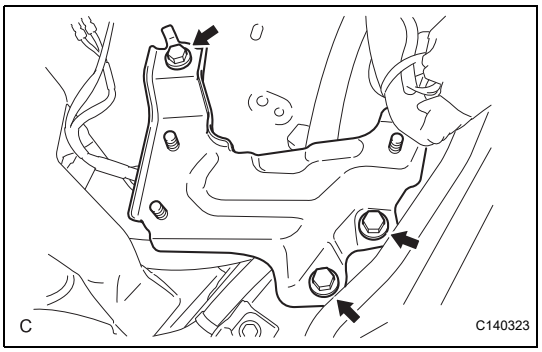
1. INSTALL NO. 1 BRAKE ACTUATOR BRACKET

(a) Install the brake actuator assembly to the No. 1 brake actuator bracket with the 2 nuts.

Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

NOTICE:

Do not remove the hole plug before connecting the brake line because a new brake actuator assembly is filled with brake fluid.

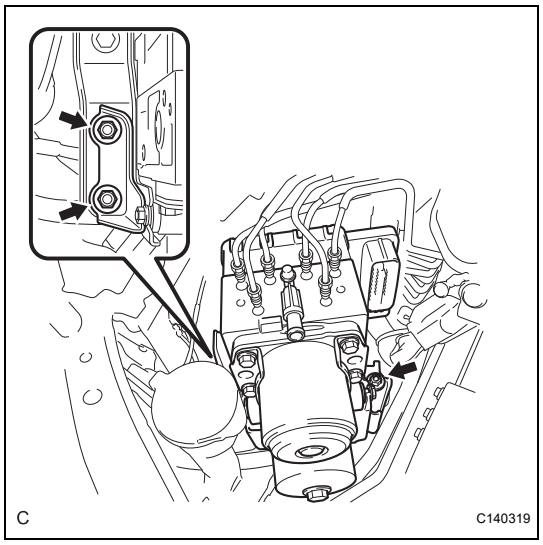


INSTALLATION

1. INSTALL BRAKE ACTUATOR BRACKET ASSEMBLY

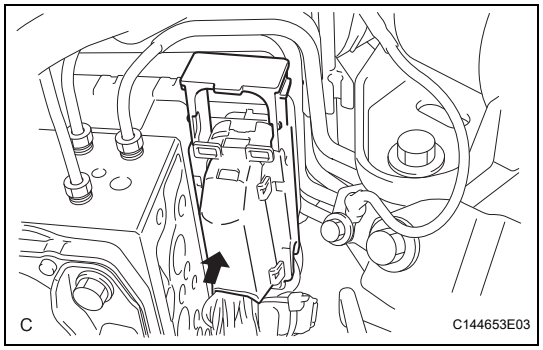
(a) Install the brake actuator bracket assembly with the 3 bolts.

Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)

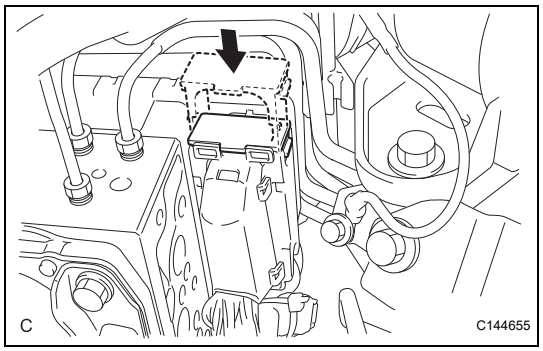


2. INSTALL BRAKE ACTUATOR WITH NO. 1 BRAKE ACTUATOR BRACKET

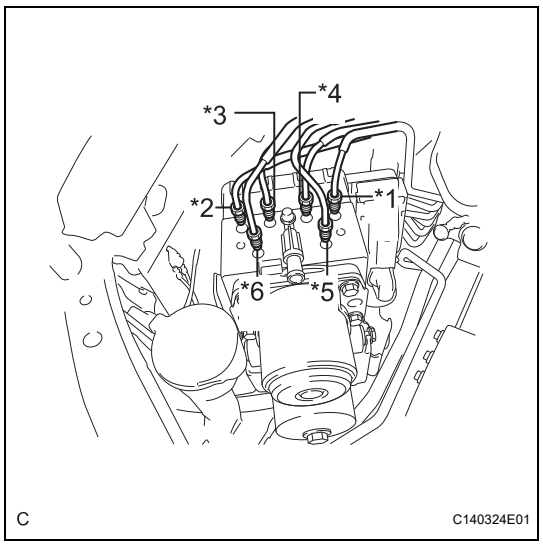
(a) Install the brake actuator with No. 1 brake actuator bracket to the body with the 3 nuts.
Torque: 19 N*m (194 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not damage the brake lines.



(b) Connect the brake actuator connector.

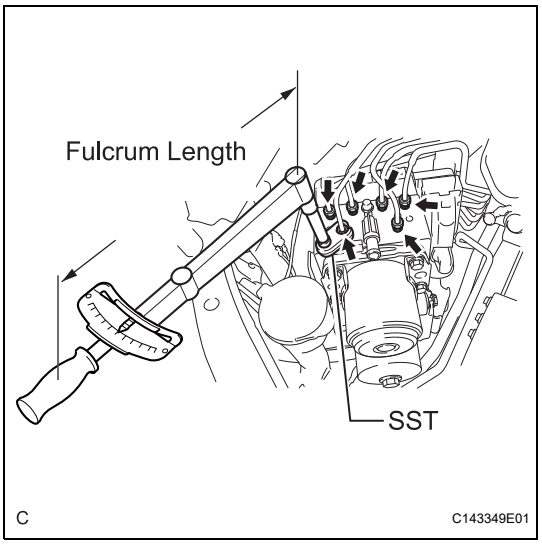


(c) Lock the lock lever.
NOTICE:
Make sure that the connector is locked securely.

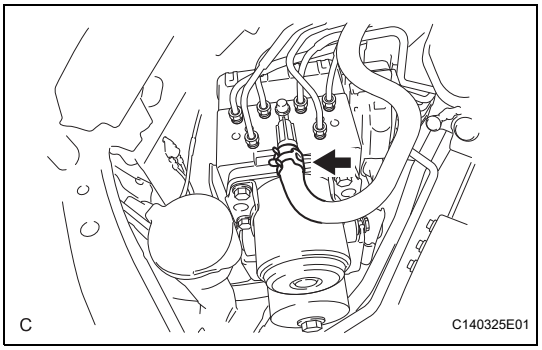


(d) Temporarily tighten each brake line to the correct positions of the brake actuator with No. 1 brake actuator bracket as shown in the illustration.
HINT:
- *1: To Front Wheel Cylinder RH
- *2: To Front Wheel Cylinder LH
- *3: To Rear Wheel Cylinder RH
- *4: To Rear Wheel Cylinder LH
- *5: From Master Cylinder
- *6: From Stroke Simulator Cylinder

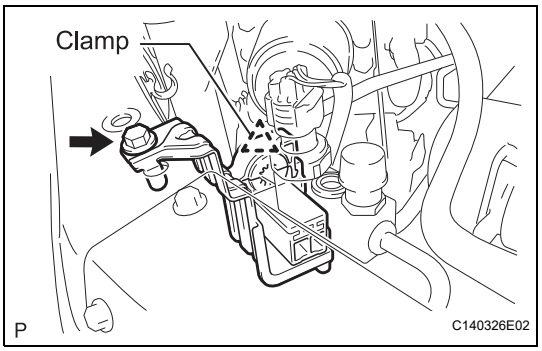
BC



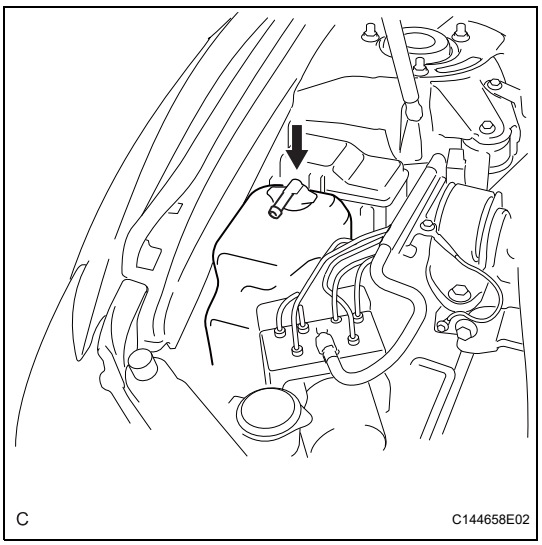
(e) Using SST, fully tighten each brake line.
SST 09023-00101
Torque: without SST
15 N*m (155 kgf*cm, 11 ft.*lbf)
with SST
14 N*m (143 kgf*cm, 10 ft.*lbf)
NOTICE:
- **Use a torque wrench with a fulcrum length of 250 mm (9.84 in.).**
- **This torque value is effective when SST is parallel to a torque wrench.**



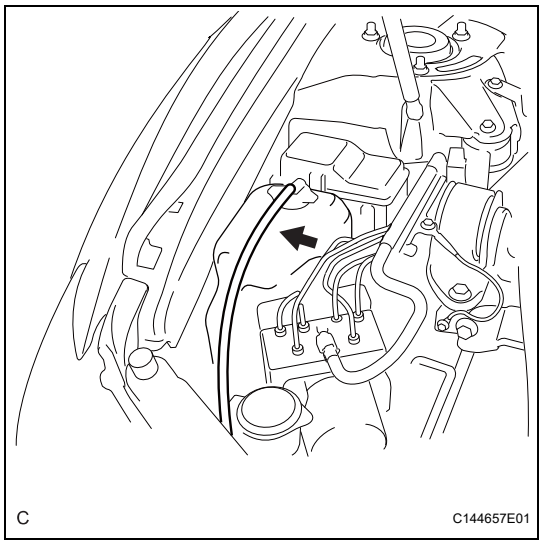
(f) Connect the brake actuator hose to the brake actuator and move the clip.



3. INSTALL COOLER BRACKET
(a) Install the cooler bracket with the bolt and clamp.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



4. INSTALL RADIATOR RESERVE TANK ASSEMBLY
(a) Install the radiator reserve tank assembly.



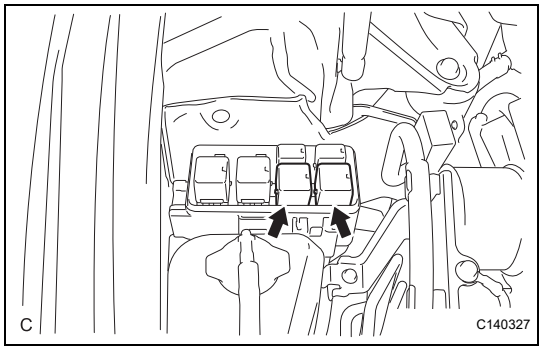
(b) Install the radiator reservoir hose.

5. **FILL RESERVOIR WITH BRAKE FLUID (See page BR-7)**

6. **BLEED BRAKE ACTUATOR HOSE (See page BR-8)**

7. **BLEED FRONT BRAKE SYSTEM (See page BR-10)**

8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**



9. **INSTALL ABS MOTOR RELAY**
(a) Install the 2 ABS motor relays.

10. **CLEAR DTC FOR BRAKE CONTROL SYSTEM**
HINT:
Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-57)

11. **BLEED REAR BRAKE SYSTEM (See page BR-11)**

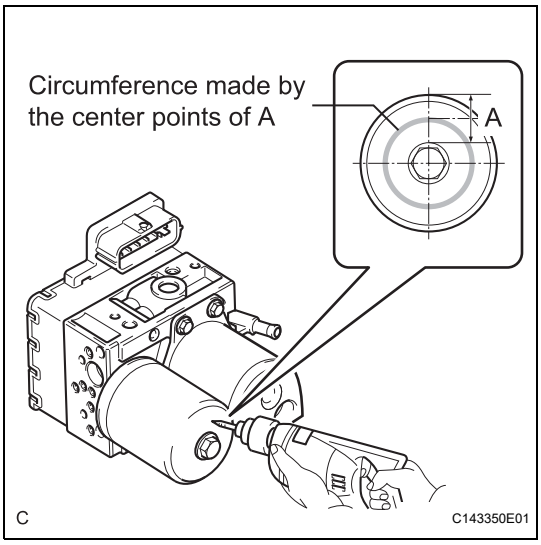
12. **PERFORM ACCUMULATOR PRESSURE ZERO DOWN (See page BR-12)**

13. **CHECK BRAKE FLUID LEVEL IN RESERVOIR (See page BR-13)**

14. **PERFORM LINEAR VALVE OFFSET LEARNING**
HINT:
Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-25)

15. **INSPECT FOR BRAKE FLUID LEAK**

16. **PERFORM INITIALIZATION**
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)



DISPOSAL

1. DISPOSE OF BRAKE ACTUATOR ASSEMBLY

(a) Using a drill, slowly make a hole on the circumference made by the center points of A and discharge the gas.

CAUTION:

Be sure to wear protective glasses to protect the eyes from fragments that may become airborne due to high pressure.

HINT:

- The hole may be drilled up to approximately 5 to 10 mm (0.20 to 0.39 in.) away from the circumference made by the center point of A without problem.
- The gas is nitrogen, which is colorless, odorless, and harmless.

INSPECTION

1. INSPECT FRONT SPEED SENSOR

(a) Inspect the front speed sensor. If any of the following occurs, replace the front speed sensor with a new one:
- The surface of the front speed sensor is cracked, dented, or chipped off.
- The connector or wire harness is scratched, cracked, or damaged.
- The front speed sensor has been dropped.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

LH

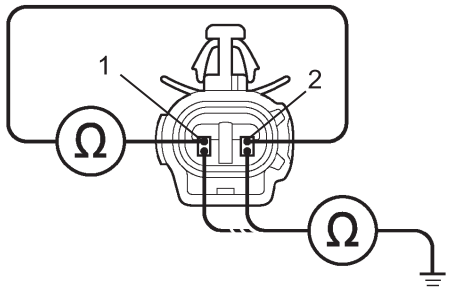
Tester Connection	Condition	Specified Condition
1 (FL+) - 2 (FL-)	Always	1.4 to 1.8 kΩ or at 20°C (68°F)
1 (FL+) - Body ground	Always	10 kΩ or higher
2 (FL-) - Body ground	Always	10 kΩ or higher

RH

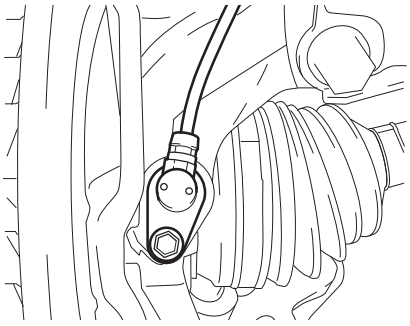
Tester Connection	Condition	Specified Condition
1 (FR+) - 2 (FR-)	Always	1.4 to 1.8 kΩ or at 20°C (68°F)
1 (FR+) - Body ground	Always	10 kΩ or higher
2 (FR-) - Body ground	Always	10 kΩ or higher

If the value is not as specified, replace the front speed sensor.

Front Speed Sensor:



C136017E01



C132782

INSTALLATION

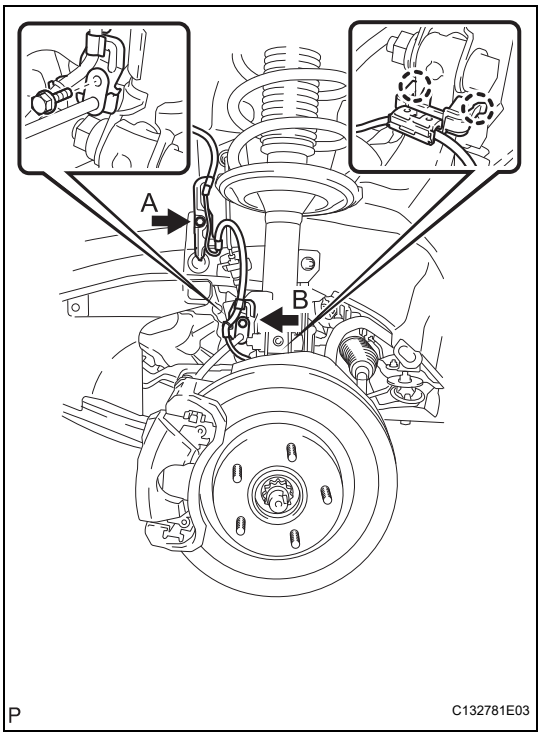
1. INSTALL FRONT SPEED SENSOR

(a) Install the front speed sensor with the bolt.

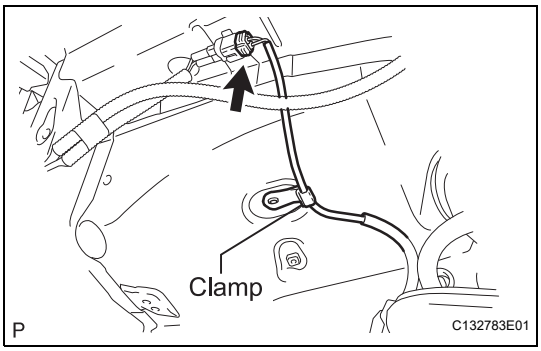
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

NOTICE:
- **Prevent foreign matter from attaching to the sensor tip.**
- **Clean the installation hole and the surface for the speed sensor every time the speed sensor is removed.**

BC



(b) Install the front speed sensor with the 2 bolts and engage the 2 claws.
Torque: Bolt A
5.0 N*m (51 kgf*cm, 44 in.*lbf)
Bolt B
19 N*m (194 kgf*cm, 14 ft.*lbf)
NOTICE:
Do not twist the wire harness for the front speed sensor when installing the speed sensor.



(c) Connect the front speed sensor connector and clamp.

2. **INSTALL FRONT FENDER LINER (See page ED-36)**
3. **INSTALL FRONT WHEEL OPENING EXTENSION PAD (See page ED-37)**
4. **INSTALL FRONT WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
5. **CHECK SPEED SENSOR SIGNAL**
HINT:
Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-35)

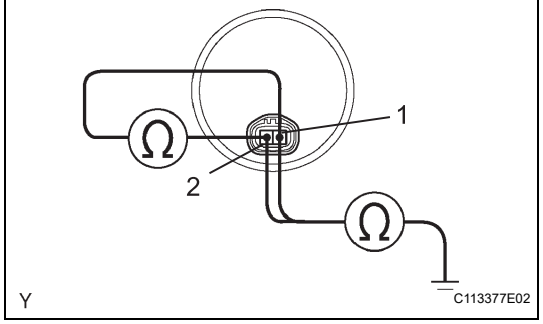
INSPECTION

1. INSPECT SKID CONTROL SENSOR

(a) Inspect the skid control sensor. If any of the following occurs, replace the skid control sensor with a new one:
- The surface of the skid control sensor is cracked, dented, or chipped off.
- The connector is scratched, cracked, or damaged.
- The skid control sensor has been dropped.

(b) Measure the resistance according to the value(s) in the table below.

Rear Speed Sensor:



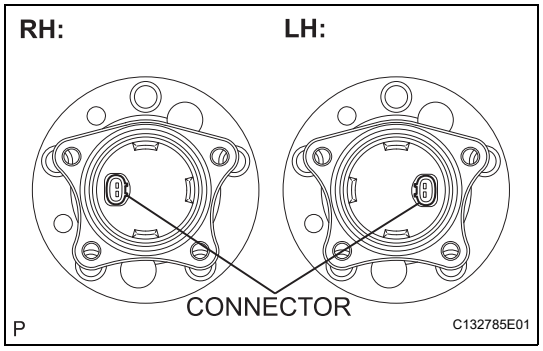
Standard resistance
LH

Tester Connection	Condition	Tester Connection
2 (RL+) - 1 (RL-)	Always	Below 1.45 kΩ at 20°C (68°F)
2 (RL+) - Body ground	Always	10 kΩ or higher
1 (RL-) - Body ground	Always	10 kΩ or higher

Standard resistance
RH

Tester Connection	Condition	Tester Connection
2 (RR+) - 1 (RR-)	Always	Below 1.45 kΩ at 20°C (68°F)
2 (RR+) - Body ground	Always	10 kΩ or higher
1 (RR-) - Body ground	Always	10 kΩ or higher

If the value is not as specified, replace the skid control sensor.



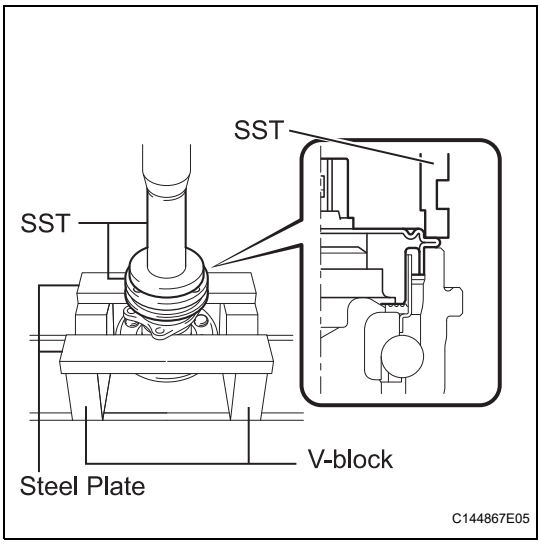
INSTALLATION

1. INSTALL SKID CONTROL SENSOR

(a) Clean the contact surface between the axle hub and a new skid control sensor.

NOTICE:
Prevent foreign matter from attaching to the sensor rotor.

(b) Place the skid control sensor on the axle hub so that the connector is positioned as shown in the illustration.



(c) Using SST, a press, 2 V-blocks, and 2 steel plates, install the skid control sensor to the axle hub.
SST 09309-36010, 09213-58013
NOTICE:
- **Keep the sensor away from magnets.**
- **Do not use a hammer on the skid control sensor.**
- **Check that there is no foreign matter such as iron chips on the detecting portion of the skid control sensor.**
- **Slowly press the skid control sensor straight.**

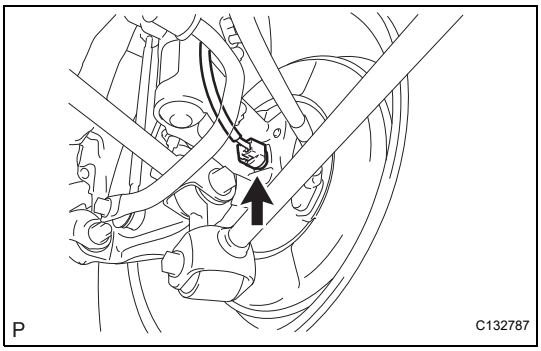
2. **INSTALL REAR AXLE HUB AND BEARING ASSEMBLY WITH SKID CONTROL SENSOR (See page AH-16)**

3. **INSPECT REAR AXLE HUB BEARING LOOSENESS (See page AH-15)**

4. **INSPECT REAR AXLE HUB RUNOUT (See page AH-15)**

5. **INSTALL REAR DISC (See page BR-64)**

6. **INSTALL REAR DISC BRAKE CALIPER ASSEMBLY (See page PB-40)**



7. **CONNECT SKID CONTROL SENSOR WIRE**
(a) Connect the connector to the skid control sensor.

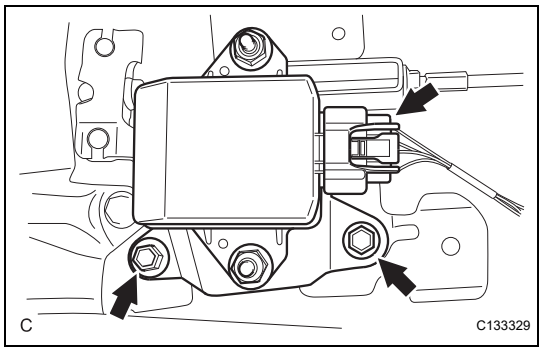
8. **INSTALL REAR WHEEL**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

9. **INSPECT AND ADJUST REAR WHEEL ALIGNMENT**
HINT:
Refer the procedures up to "REAR WHEEL ALIGNMENT". (See page SP-11)

10. **CHECK SPEED SENSOR SIGNAL**
HINT:
Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-35)

REMOVAL

1. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL
2. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)
3. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
4. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
5. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)
6. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)
7. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)
8. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)
9. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)
10. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)
11. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-13)
12. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)
13. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)
14. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)
15. REMOVE CONSOLE BOX POCKET (See page IP-17)
16. REMOVE CONSOLE BOX CARPET (See page IP-17)
17. REMOVE CONSOLE BOX ASSEMBLY (See page IP-17)
18. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-18)
19. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (See page IP-18)
20. REMOVE NO. 1 CONSOLE BOX DUCT (See page AC-188)



21. REMOVE YAW RATE AND ACCELERATION SENSOR

(a) Disconnect the yaw rate and acceleration sensor connector.

(b) Remove the 2 bolts and yaw rate and acceleration sensor.

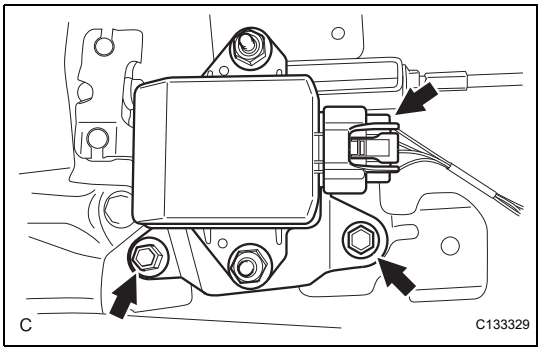
NOTICE:

Do not remove the yaw rate and acceleration sensor from the bracket.

INSPECTION

1. **INSPECT YAW RATE AND ACCELERATION SENSOR**
   (a) Inspect the yaw rate and acceleration sensor. If any of the following occurs, replace the yaw rate and acceleration sensor with a new one:
   - The surface of the yaw rate and acceleration sensor is cracked, dented, or chipped off.
   - The connector is scratched, cracked, or damaged.
   - The yaw rate and acceleration sensor has been dropped.

INSTALLATION

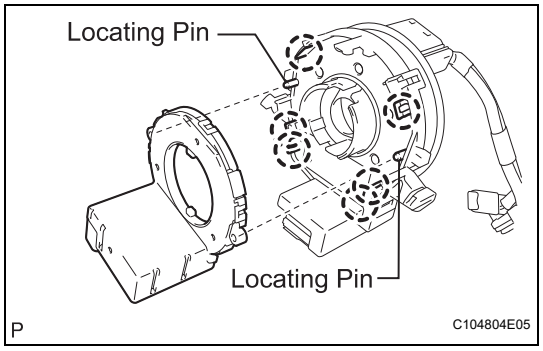


1. **INSTALL YAW RATE AND ACCELERATION SENSOR**
   (a) Install the yaw rate and acceleration sensor with the 2 bolts.
   Torque: 13 N*m (133 kgf*cm, 10 ft.*lbf)
   NOTICE:
   - **Do not damage the yaw rate and acceleration sensor.**
   - **Make sure that the yaw rate and acceleration sensor is installed securely.**
   (b) Connect the yaw rate and acceleration sensor connector.
2. **INSTALL NO. 1 CONSOLE BOX DUCT (See page AC-204)**
3. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (See page IP-29)**
4. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-30)**
5. **INSTALL CONSOLE BOX ASSEMBLY (See page IP-30)**
6. **INSTALL CONSOLE BOX CARPET (See page IP-30)**
7. **INSTALL CONSOLE BOX POCKET (See page IP-30)**
8. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)**
9. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)**
10. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-33)**
11. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-33)**
12. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**
13. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)**
14. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-41)**

15. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
16. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**
17. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)**
18. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**
19. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**
20. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)**
21. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
22. **PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION**
    HINT:
    Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-29)
23. **INSPECT SENSOR SIGNAL**
    HINT:
    Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-35)
24. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)

INSPECTION

1. **INSPECT STEERING ANGLE SENSOR**
   (a) Inspect the steering angle sensor. If any of the following occurs, replace the steering angle sensor with a new one:
   - The surface of the steering angle sensor is cracked, dented, or chipped off.
   - The connector is scratched, cracked, or damaged.
   - The steering angle sensor has been dropped.



INSTALLATION

1. **INSTALL STEERING ANGLE SENSOR**
   (a) Align the locating pins, engage the claws, and install the steering angle sensor to the spiral cable.
2. **INSTALL SPIRAL CABLE SUB-ASSEMBLY WITH STEERING ANGLE SENSOR (See page RS-359)**
3. **INSTALL STEERING COLUMN COVER (See page SR-41)**
4. **ADJUST SPIRAL CABLE (See page RS-360)**
5. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-42)**
6. **INSPECT STEERING WHEEL CENTER POINT**
7. **INSTALL STEERING PAD (See page RS-346)**
8. **INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-347)**
9. **INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-347)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
11. **INSPECT STEERING PAD (See page RS-347)**
12. **INSPECT SRS WARNING LIGHT (See page SR-42)**
13. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)

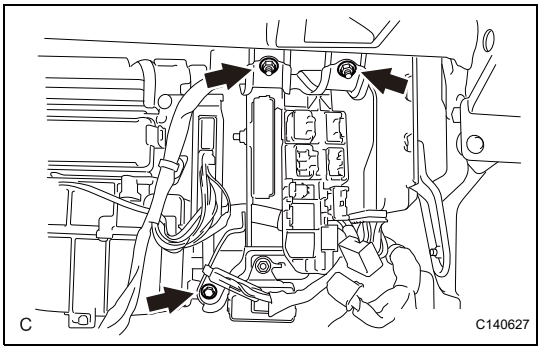
REMOVAL

1. **PRECAUTION**
   NOTICE:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).

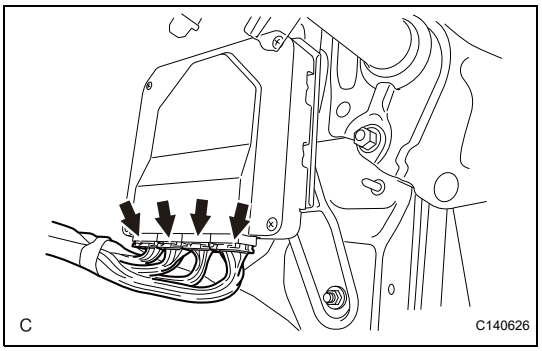
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

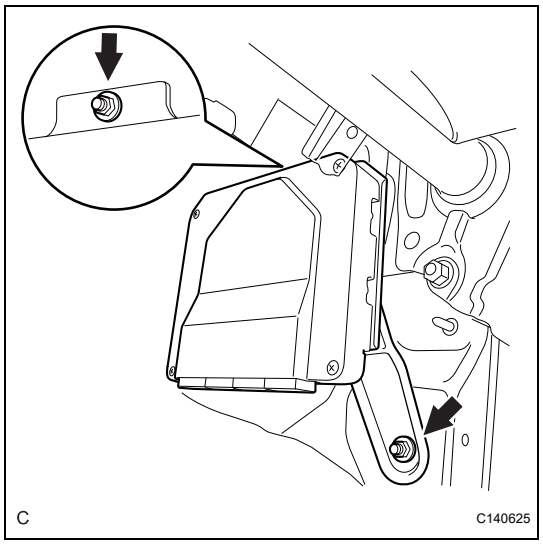
3. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY**
   HINT:
   Refer the procedures up to "REMOVE INSTRUMENT PANEL SAFETY PAD". (See page IP-11)

4. **SEPARATE WIRING HARNESS CLAMP BRACKET**
   (a) Disconnect the wiring harness clamp and connectors.
   (b) Remove the 2 nuts and the bolt, and separate the wiring harness clamp bracket.



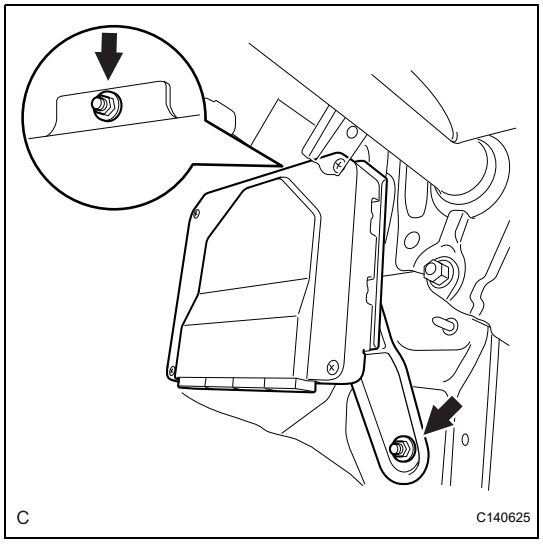
5. **REMOVE SKID CONTROL ECU**
   (a) Disconnect the 4 skid control ECU connectors.





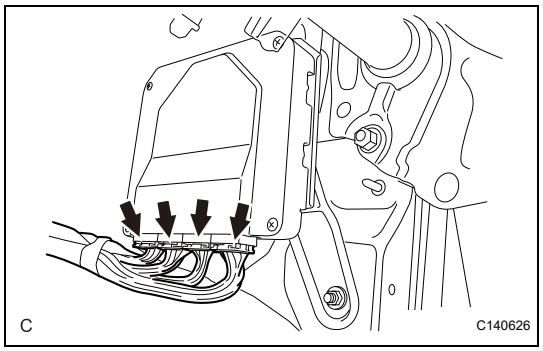
(b) Remove the 2 nuts and skid control ECU.

INSTALLATION

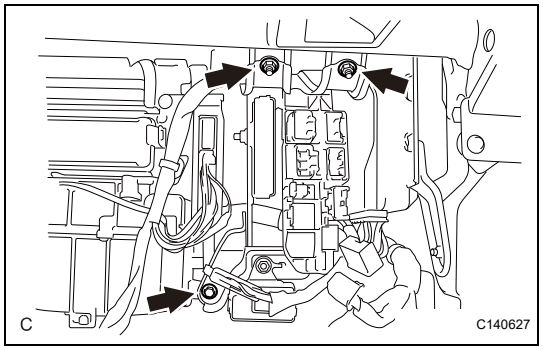


1. INSTALL SKID CONTROL ECU

(a) Install the skid control ECU with the 2 nuts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



(b) Connect the 4 skid control ECU connectors.



2. INSTALL WIRING HARNESS CLAMP BRACKET

(a) Install the wiring harness clamp bracket with the 2 nuts and the bolt.
Torque: 8.0 N*m (82 kgf*cm, 71 in.*lbf)

(b) Connect the wiring harness clamp and connectors.

3. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY

HINT:
Refer the procedures up to "INSTALL INSTRUMENT PANEL SAFETY PAD". (See page IP-25)

4. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

5. **CLEAR DTC FOR BRAKE CONTROL SYSTEM**
   HINT:
   Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-57)

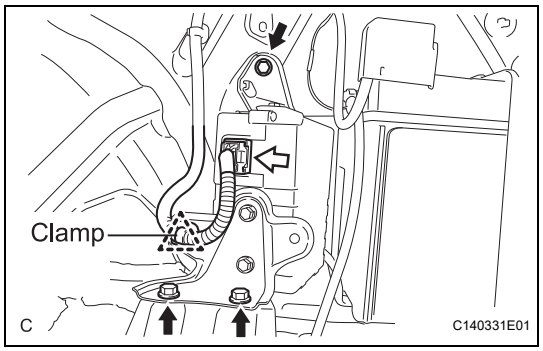
6. **PERFORM LINEAR VALVE OFFSET LEARNING**
   HINT:
   Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-25)

7. **PERFORM YAW RATE SENSOR ZERO POINT CALIBRATION**
   HINT:
   Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-29)

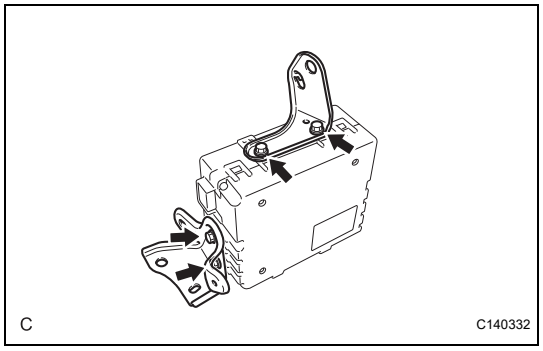
8. **PERFORM INITIALIZATION**
   NOTICE:
   Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)

REMOVAL

1. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
2. **REMOVE LUGGAGE COMPARTMENT TRIM HOOK NO.1 (See page ED-97)**
3. **REMOVE REAR FLOOR FINISH PLATE (See page ED-97)**
4. **REMOVE LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-97)**
5. **REMOVE LUGGAGE TRIM SERVICE HOLE COVER**
6. **REMOVE LUGGAGE COMPARTMENT INNER TRIM COVER RH (See page ED-98)**
7. **REMOVE BRAKE CONTROL POWER SUPPLY WITH BRACKET**
   (a) Disconnect the brake control power supply connector and separate the clamp.
   (b) Remove the 3 bolts and brake control power supply with bracket.



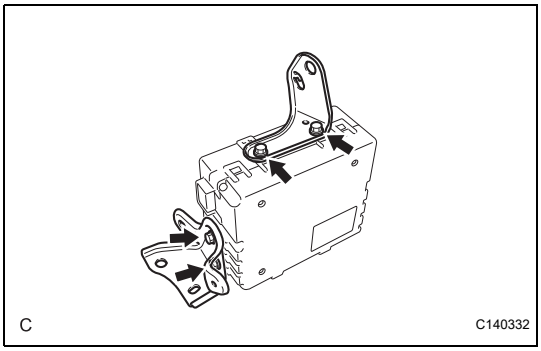
8. **REMOVE BRAKE CONTROL POWER SUPPLY ASSEMBLY**
   (a) Remove the 2 bolts and No. 1 brake control power supply bracket.
   (b) Remove the 2 bolts and No. 2 brake control power supply bracket.



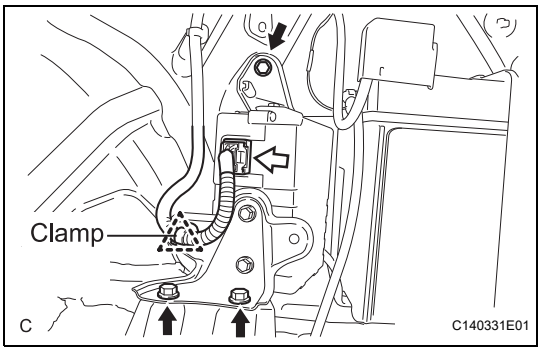
INSPECTION

1. **INSPECT BRAKE CONTROL POWER SUPPLY**
   (a) Inspect the brake control power supply assembly. If any of the following occurs, replace the brake control power supply assembly with a new one:
   - The surface of the brake control power supply assembly is cracked, dented, or chipped off.
   - The connector is scratched, cracked, or damaged.
   - The brake control power supply assembly has been dropped.

INSTALLATION



1. **INSTALL BRAKE CONTROL POWER SUPPLY ASSEMBLY**
   (a) Install the No. 2 brake control power supply bracket with the 2 bolts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (b) Install the No. 2 brake control power supply bracket with the 2 bolts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)



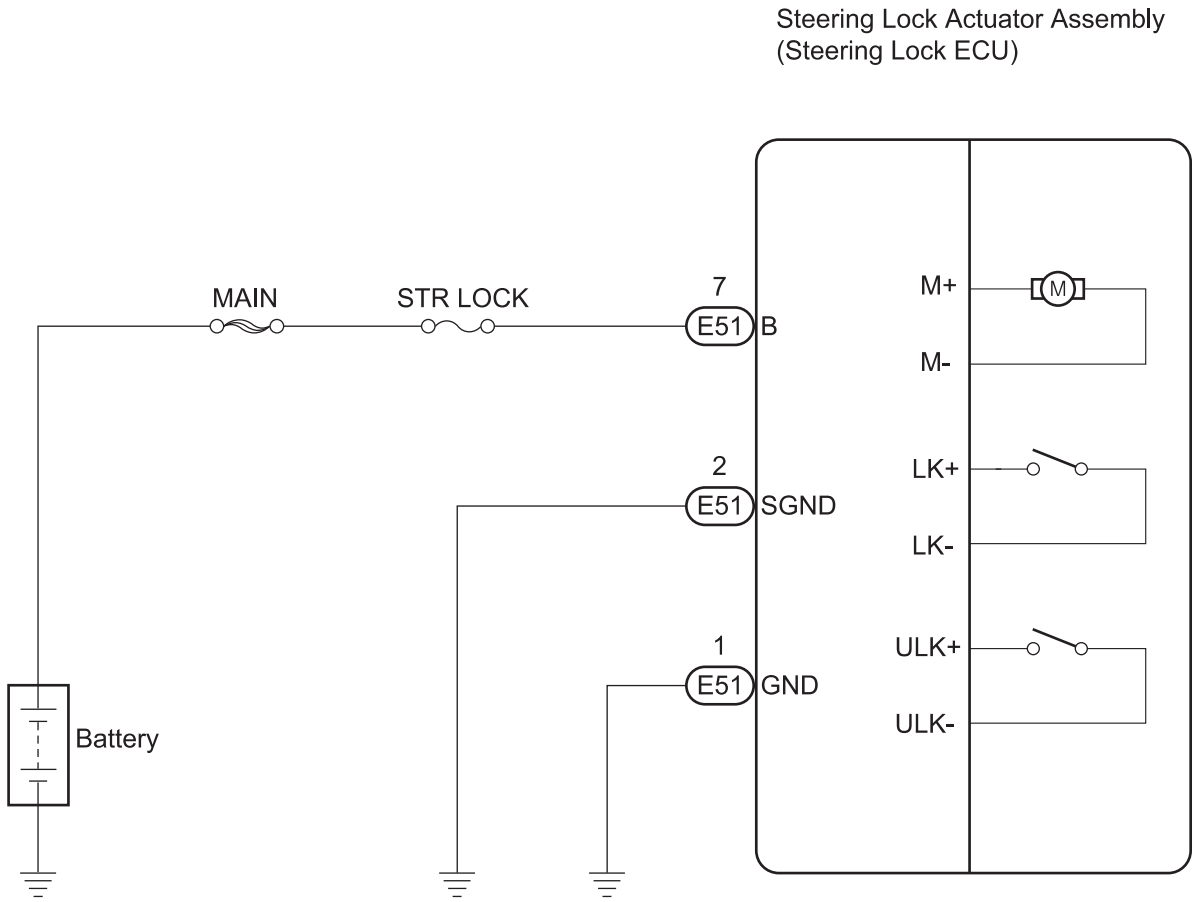
2. **INSTALL BRAKE CONTROL POWER SUPPLY WITH BRACKET**
   (a) Install the brake control power supply with bracket with the 3 bolts.
   Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
   (b) Connect the brake control power supply connector and install the clamp.
3. **INSTALL LUGGAGE COMPARTMENT INNER TRIM COVER RH (See page ED-102)**
4. **INSTALL LUGGAGE TRIM SERVICE HOLE COVER**
5. **INSTALL LUGGAGE COMPARTMENT REAR TRIM COVER (See page ED-102)**
6. **INSTALL REAR FLOOR FINISH PLATE (See page ED-103)**
7. **INSTALL LUGGAGE COMPARTMENT TRIM HOOK NO.1 (See page ED-103)**
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
9. **CLEAR DTC FOR BRAKE CONTROL SYSTEM**
   HINT:
   Refer the procedures up to "ELECTRONICALLY CONTROLLED BRAKE SYSTEM". (See page BC-57)
10. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43)

Power Source Circuit

DESCRIPTION

This circuit supplies voltage from the battery to terminal B of the steering lock ECU. This circuit is used as power source for the steering lock CPU, motor, communication, and peripheral circuits.

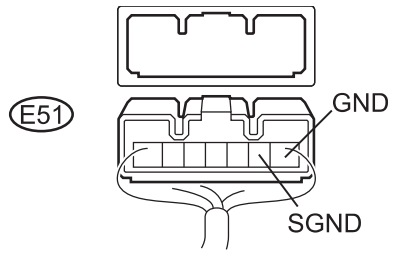
WIRING DIAGRAM



INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BODY GROUND)

Steering Lock Actuator Assembly:



(a) Disconnect the E51 connector from the steering lock actuator assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

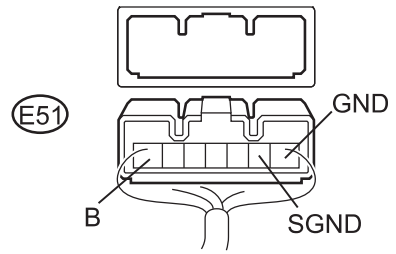
Tester Connection	Condition	Specified Condition
E51-1 (GND) - Body ground	Always	Below 1 Ω
E51-2 (SGND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 CHECK HARNESS AND CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BATTERY)

Steering Lock Actuator Assembly:



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E51-7 (B) - E51-1 (GND)	Always	10 to 14 V
E51-7 (B) - E51-2 (SGND)	Always	10 to 14 V

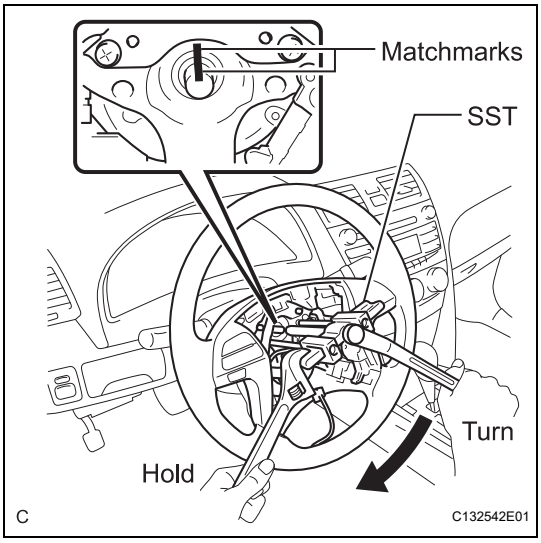
OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

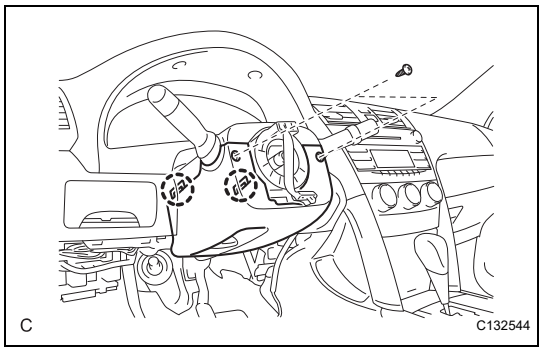
REPAIR OR REPLACE HARNESS OR CONNECTOR (STEERING LOCK ACTUATOR ASSEMBLY - BATTERY)

REMOVAL

1. **PRECAUTION**
   HINT:
   (See page SR-1)
2. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait at least 90 seconds after disconnecting the cable from the negative (-) battery terminal to prevent airbag and seat belt pretensioner activation.
4. **REMOVE FRONT WHEEL LH**
5. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
6. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
7. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**
8. **REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-363)**
9. **REMOVE NO. 3 LOWER STEERING WHEEL COVER (See page RS-345)**
10. **REMOVE NO. 2 LOWER STEERING WHEEL COVER (See page RS-345)**
11. **REMOVE STEERING PAD (See page RS-345)**
12. **REMOVE STEERING WHEEL ASSEMBLY**
    (a) Remove the steering wheel assembly set nut.
    (b) Put matchmarks on the steering wheel assembly and the steering main shaft.
    (c) Disconnect the connectors from the spiral cable sub-assembly.
    (d) Using SST, remove the steering wheel assembly.
    SST 09950-50013 (09951-05010, 09952-05010, 09953-05020, 09954-05031)



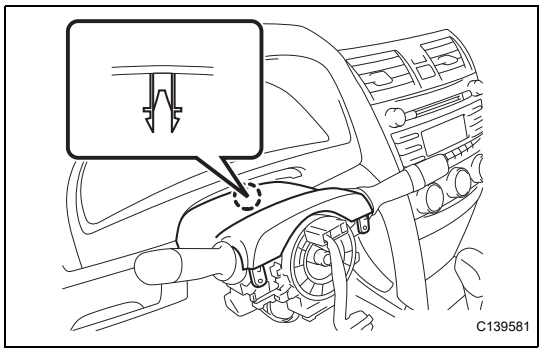
SR



13. REMOVE STEERING COLUMN COVER

(a) Remove the 2 screws.

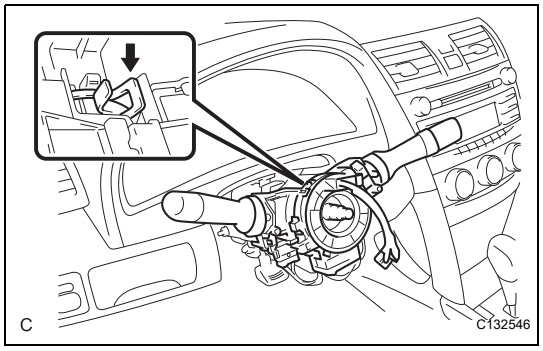
(b) Disengage the 2 claws to remove the lower steering column cover.



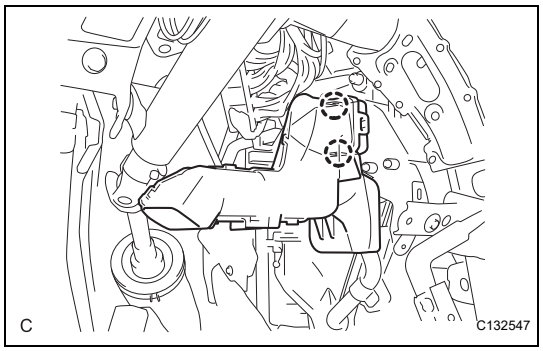
(c) Disengage the claw to remove the upper steering column cover.

14. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

(a) Disconnect the connectors from the turn signal switch assembly with spiral cable sub-assembly.

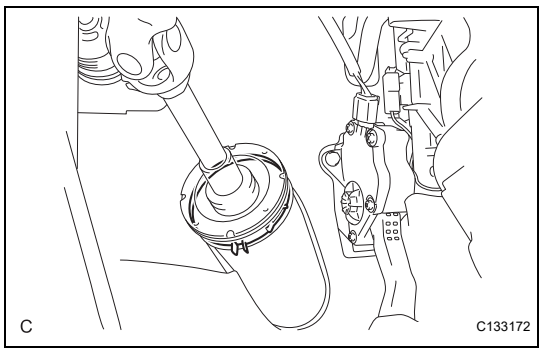


(b) Using pliers, grip the claws of the clip and remove the turn signal switch assembly with spiral cable sub-assembly.



15. REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY

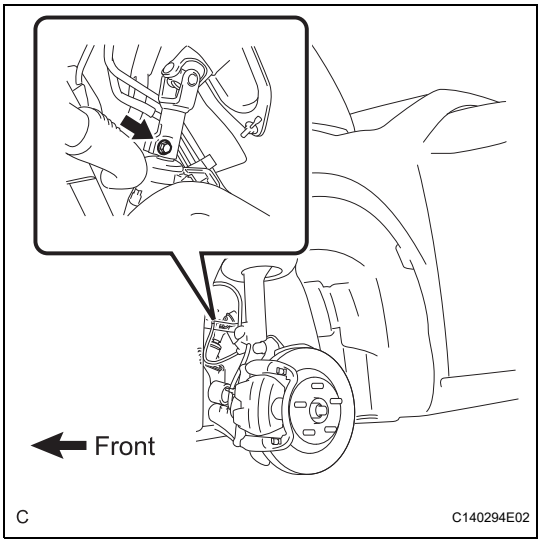
(a) Disengage the 2 claws and remove the No. 1 air duct sub-assembly.



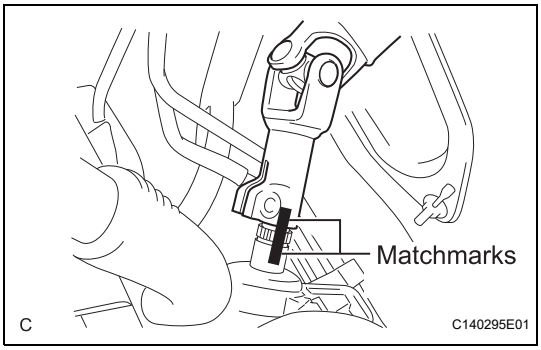
16. SEPARATE STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Remove the clamp from the steering column hole shield.

SR



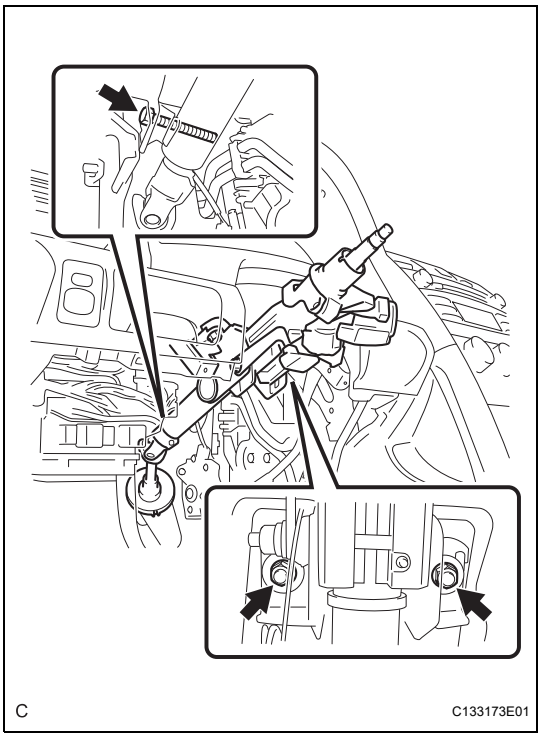
(b) Remove the bolt and slide the steering intermediate shaft assembly.
NOTICE:
Do not separate the steering intermediate shaft assembly from the power steering link assembly.



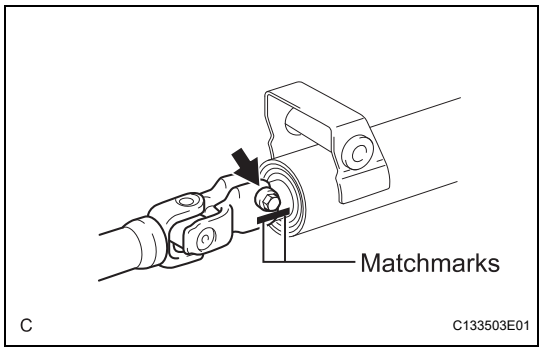
(c) Put matchmarks on the steering intermediate shaft assembly and the power steering link assembly.
(d) Separate the steering intermediate shaft assembly from the power steering link assembly.

17. REMOVE STEERING COLUMN ASSEMBLY

(a) Disconnect the connectors and wire harness clamps from the steering column assembly.



(b) Remove the bolt, 2 nuts, and the steering column assembly.



18. REMOVE STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Put matchmarks on the steering intermediate shaft assembly and the steering column assembly.

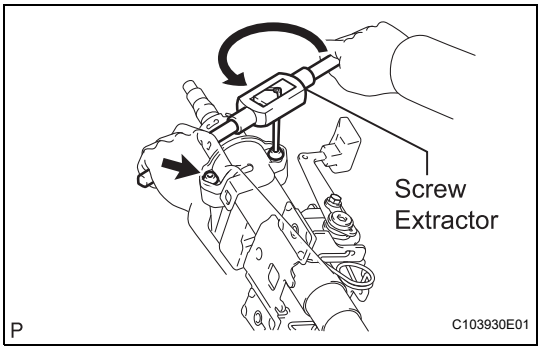
(b) Remove the bolt and the steering intermediate shaft assembly from the steering column assembly.

DISASSEMBLY

NOTICE:
When using a vise, do not overtighten it.

1. REMOVE STEERING LOCK ACTUATOR ASSEMBLY

(a) Secure the steering column assembly in a vise.
(b) Using a center punch, mark the center of the 2 tapered-head bolts.
(c) Using a 3 to 4 mm (0.12 to 0.16 in.) drill, drill a hole in the 2 tapered-head bolts.
(d) Using a screw extractor, remove the 2 tapered-head bolts, and then remove the steering lock actuator assembly and the steering lock bracket from the steering column assembly.

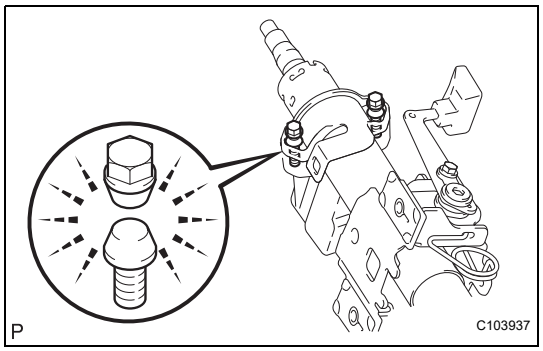


REASSEMBLY

1. INSTALL STEERING LOCK ACTUATOR ASSEMBLY

(a) Temporarily install the steering lock actuator assembly and the steering lock bracket with 2 new tapered-head bolts.

(b) Tighten the 2 tapered-head bolts until the bolt heads break off.

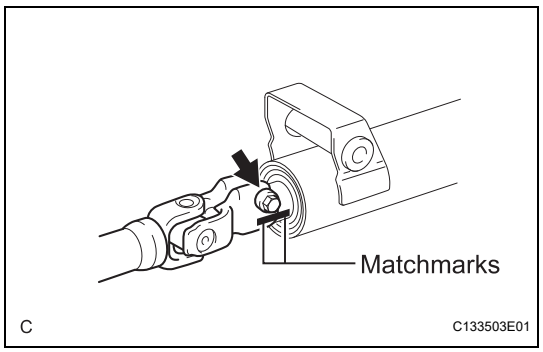


INSTALLATION

1. INSTALL STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Align the matchmarks on the steering intermediate shaft assembly and the steering column assembly.

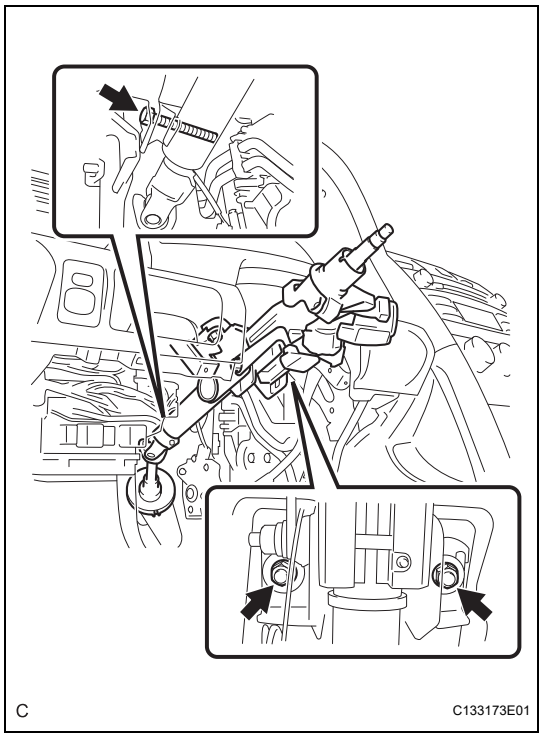
(b) Install the bolt.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)

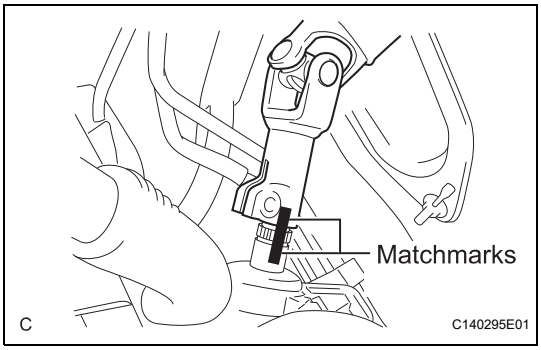


2. INSTALL STEERING COLUMN ASSEMBLY

(a) Install the steering column assembly with the bolt and 2 nuts.
Torque: 21 N*m (214 kgf*cm, 15 ft.*lbf)

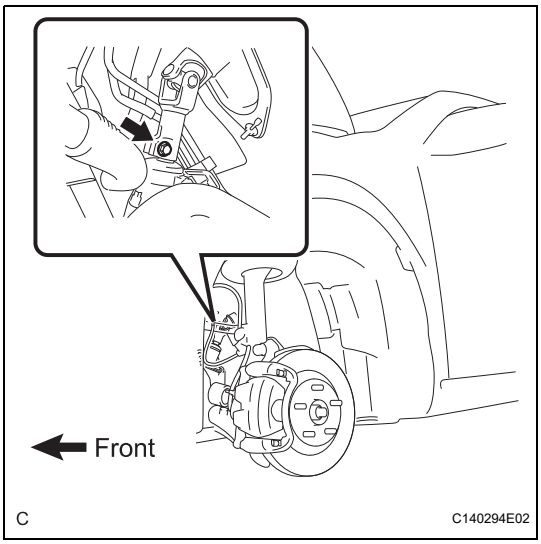
(b) Connect the connectors and wire harness clamps to the steering column assembly.



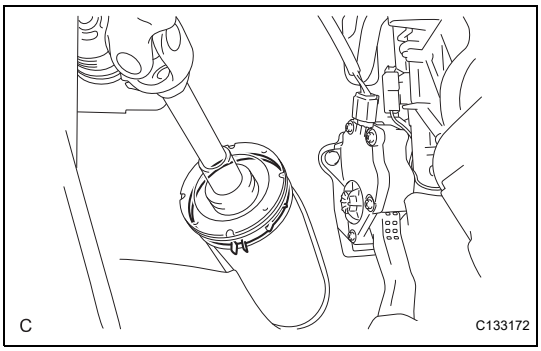


3. CONNECT STEERING INTERMEDIATE SHAFT ASSEMBLY

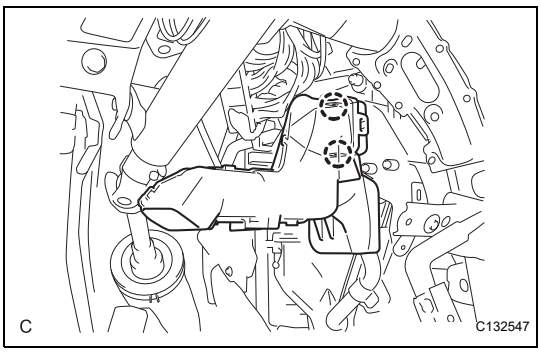
(a) Align the matchmarks on the steering intermediate shaft assembly and the power steering link assembly.



(b) Install the bolt.
Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)



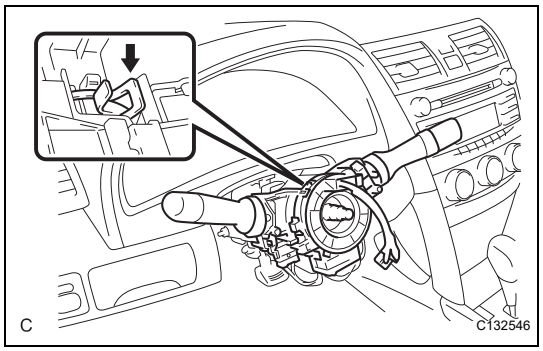
(c) Install the clamp to the steering column hole shield.



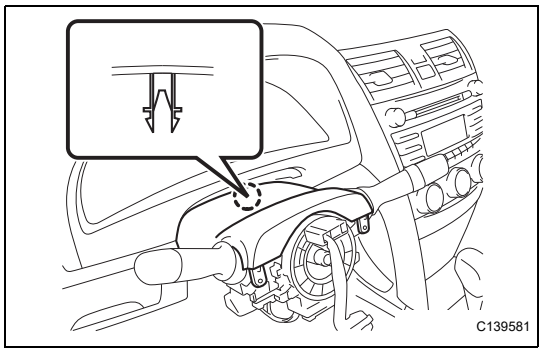
4. INSTALL NO. 1 AIR DUCT SUB-ASSEMBLY

(a) Engage the 2 claws to install the No. 1 air duct sub-assembly.

5. PLACE FRONT WHEELS FACING STRAIGHT AHEAD



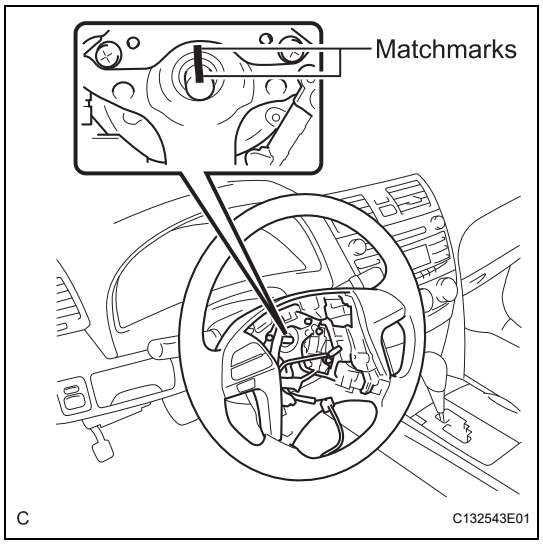
6. **INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY**
   (a) Install the turn signal switch assembly with spiral cable sub-assembly to the steering column assembly with the clamp.
   (b) Connect the connectors to the turn signal switch assembly with spiral cable sub-assembly.



7. **INSTALL STEERING COLUMN COVER**
   (a) Engage the claw to install the upper steering column cover.

   (b) Engage the 2 claws to install the lower steering column cover.
   (c) Install the 2 screws.
   Torque: 2.0 N*m (20 kgf*cm, 1.5 in.*lbf)

8. **ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-360)**



9. **INSTALL STEERING WHEEL ASSEMBLY**
   (a) Align the matchmarks on the steering wheel assembly and steering main shaft.
   (b) Install the steering wheel assembly set nut.
   Torque: 50 N*m (510 kgf*cm, 37 ft.*lbf)
   (c) Connect the connectors to the spiral cable sub-assembly.

10. **INSPECT STEERING WHEEL CENTER POINT**
11. **INSTALL STEERING PAD (See page RS-346)**
12. **INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-347)**
13. **INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-347)**
14. **INSPECT STEERING PAD (See page RS-347)**
15. **INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-363)**
16. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**

17. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**

18. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**

19. **INSTALL FRONT WHEEL LH**
Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)

20. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

21. **INSPECT SRS WARNING LIGHT**
HINT:
(See page RS-33)

22. **PERFORM INITIALIZATION**
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal. (See page IN-43).

DTC	C1515	Torque Sensor Zero Point Adjustment Undone

DTC	C1525	Rotation Angle Sensor Initialization Undone

DESCRIPTION

These DTCs do not indicate a malfunction. The power steering ECU assembly outputs these DTCs when it determines that rotation angle sensor value initialization and torque sensor zero point calibration have not been performed. When IG terminal voltage is 9 V or less, rotation angle sensor initialization and torque sensor zero point calibration cannot be performed.

DTC No.	DTC Detection Condition	Procedure
C1515	This DTC is detected when torque sensor zero point calibration has not been performed.	There is no malfunction if this DTC is not output again after performing zero point calibration.
C1525	This DTC is detected when rotation angle sensor value initialization has not been performed.	There is no malfunction if this DTC is not output again after performing rotation angle sensor value initialization.

INSPECTION PROCEDURE

1	INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT

(a) Initialize the rotation angle sensor and calibrate the torque sensor zero point (See page PS-13).

NEXT

2	RECONFIRM DTC

(a) Check for DTCs (See page PS-17).

Result

Result	Proceed to
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times.	**A**
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration once or twice.	**B**
Normal system code is output.	**C**

HINT:
Replace the power steering ECU assembly if DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times.

B	Go to step 1
C	END

PS

A

3	REPLACE POWER STEERING ECU ASSEMBLY

(a) Replace the power steering ECU assembly (See page PS-68).

NEXT

4	INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NEXT

5	RECONFIRM DTC

(a) Check for DTCs (See page PS-17).
Result

Result	Proceed to
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times.	A
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration once or twice.	B
Normal system code is output.	C

HINT:
Replace the power steering link assembly if DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times.
NOTICE:
If replacing the power steering link assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point (See page PS-13).

B	Go to step 4
C	END

A

REPLACE POWER STEERING LINK ASSEMBLY (See page PS-58)

DTC	C1516	Torque Sensor Zero Point Adjustment Incomplete

DTC	C1526	Rotation Angle Sensor Initialization Incomplete

DESCRIPTION

These DTCs do not indicate a malfunction. The power steering ECU assembly outputs these DTCs when it determines that rotation angle sensor value initialization and torque sensor zero point calibration are incomplete.

DTC No.	DTC Detection Condition	Procedure
C1516	Steering zero point calibration is incomplete due to the steering wheel being touched during calibration.	There is no malfunction if this DTC is not output again after clearing the DTCs and torque sensor calibration value, and performing zero point calibration.
C1526	Rotation angle sensor value initialization is incomplete due to the steering wheel being touched during calibration.	There is no malfunction if this DTC is not output again after clearing the DTCs and torque sensor calibration value, and performing rotation angle sensor value initialization.

INSPECTION PROCEDURE

1	CLEAR DTC

(a) Clear the DTCs (See page PS-17).

NEXT

2	INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT

(a) Initialize the rotation angle sensor and calibrate the torque sensor zero point (See page PS-13).

NEXT

3	RECONFIRM DTC

(a) Check for DTCs (See page PS-17).
Result

Result	Proceed to
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times.	**A**
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration once or twice.	**B**
Normal system code is output.	**C**

HINT:
Replace the power steering ECU assembly if DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times.

PS

B	Go to step 2
C	END

A

4	REPLACE POWER STEERING ECU ASSEMBLY

(a) Replace the power steering ECU assembly (See page PS-68).

NEXT

5	CLEAR DTC

(a) Clear the DTCs (See page PS-17).

NEXT

6	INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NEXT

7	RECONFIRM DTC

(a) Check for DTCs (See page PS-17).
Result

Result	Proceed to
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times.	A
DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration once or twice.	B
Normal system code is output.	C

HINT:
Replace the power steering link assembly if DTCs are still output after performing rotation angle sensor value initialization and steering zero point calibration 3 times.
NOTICE:
If replacing the power steering link assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point (See page PS-13).

B	Go to step 6
C	END

PS

A

REPLACE POWER STEERING LINK ASSEMBLY (See page PS-58)

DTC	C1521	Motor Circuit Malfunction
DTC	C1522	Motor Circuit Malfunction
DTC	C1531	ECU Malfunction
DTC	C1532	ECU Malfunction
DTC	C1533	ECU Malfunction
DTC	C1534	ECU Malfunction
DTC	C1554	Power Supply Relay Failure
DTC	C1555	Motor Relay Welding Failure

DESCRIPTION

If the power steering ECU assembly detects these DTCs, it will shut off the motor current sensor, power source relay, motor relay circuit (built into the power steering ECU assembly) and stop power assistance. However, power assistance will continue if DTC C1533 or C1534 is output.

DTC No.	DTC Detection Item	Trouble Area
C1521	Motor overcurrent	Power steering ECU assembly
C1522	Motor current sensor malfunction	Power steering ECU assembly
C1531	ECU internal malfunction (CPU malfunction) is detected	Power steering ECU assembly
C1532	ECU internal malfunction (Peripheral circuit malfunction) is detected	Power steering ECU assembly
C1533	ECU internal malfunction (Substrate temp sensor malfunction) is detected	Power steering ECU assembly
C1534	ECU internal malfunction (EEPROM error) is detected	Power steering ECU assembly
C1554	Power source relay malfunction is detected.	Power steering ECU assembly
C1555	Motor relay malfunction is detected.	Power steering ECU assembly

INSPECTION PROCEDURE

1	RECONFIRM DTC

(a) Check for DTCs (See page PS-17).

OK:

DTCs are not output.

NOTICE:

If replacing the power steering ECU assembly, initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NG	REPLACE POWER STEERING ECU ASSEMBLY (See page PS-68)

OK

USE SIMULATION METHOD TO CHECK

DTC	C1523	Motor Circuit Malfunction

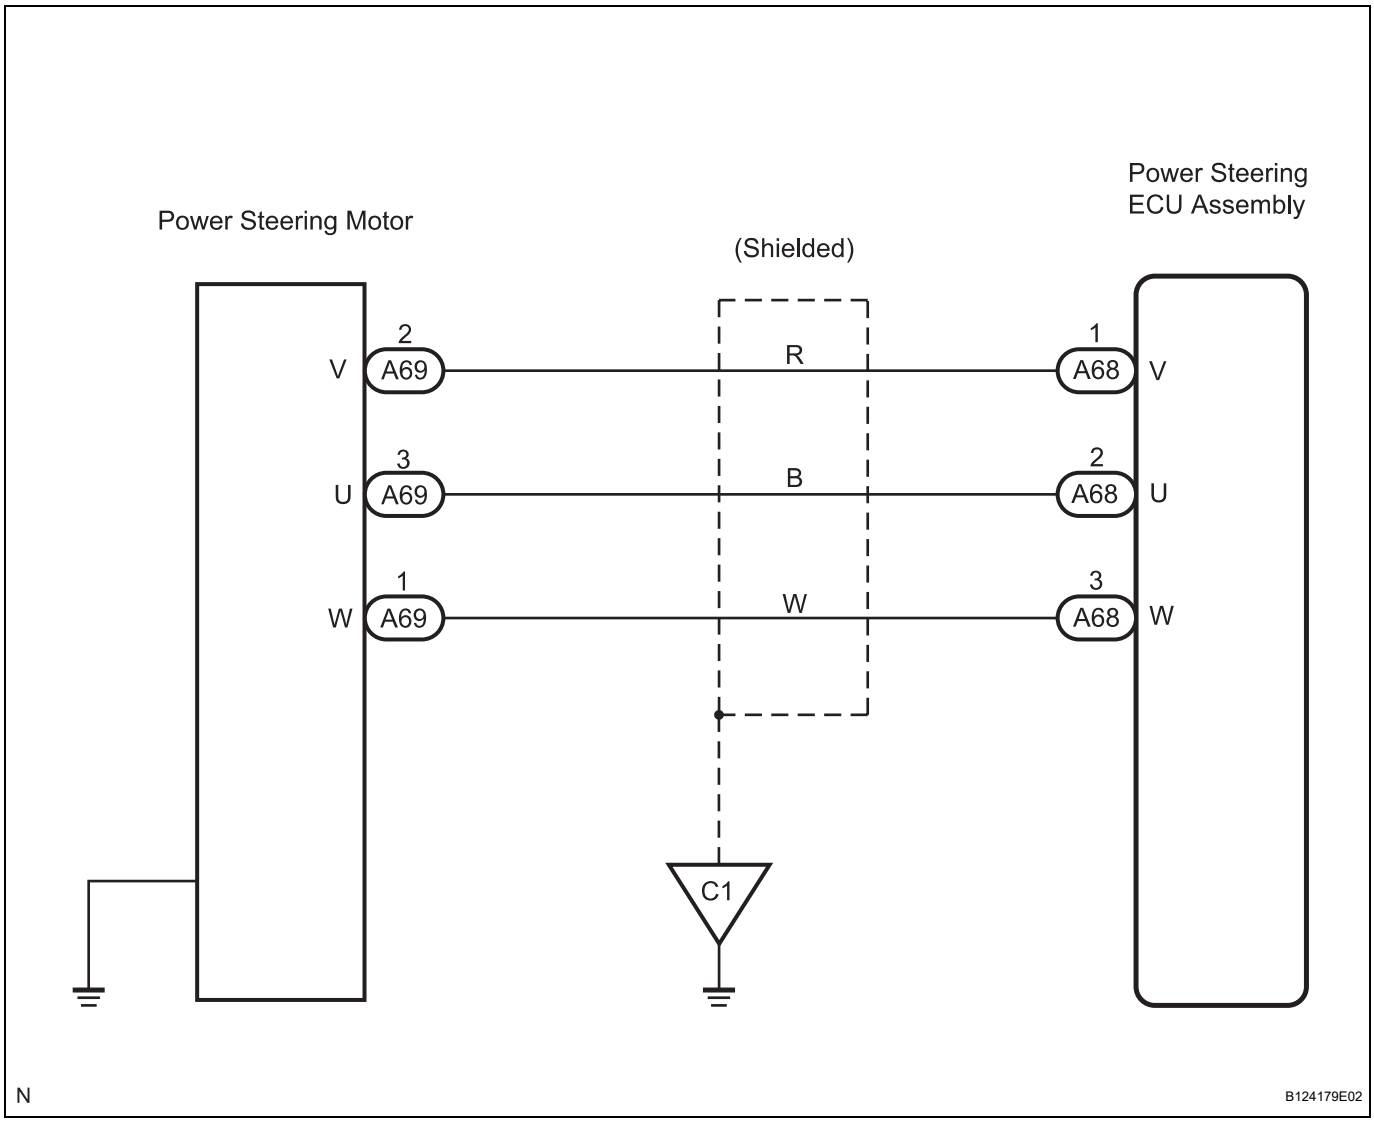
DTC	C1524	Motor Circuit Malfunction

DESCRIPTION

The power steering ECU assembly supplies current to the power steering motor through this circuit.

DTC No.	DTC Detection Item	Trouble Area
C1523	Excessively large current deviation	• Wire harness • Power steering motor (built into power steering link assembly) • Power steering ECU assembly
C1524	Voltage error between motor terminals	• Wire harness • Power steering motor (built into power steering link assembly) • Power steering ECU assembly

WIRING DIAGRAM



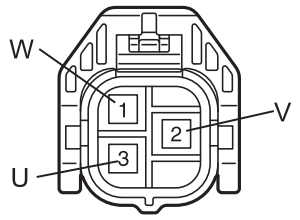
PS

INSPECTION PROCEDURE

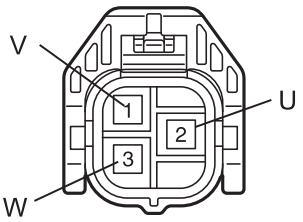
1 CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - POWER STEERING MOTOR)

Wire Harness Side Connector Front View:

A69 Power Steering Motor



A68
Power Steering ECU Assembly



C116653E03

(a) Disconnect the A68 connector from the power steering ECU assembly.
(b) Disconnect the A69 connector from the power steering motor.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

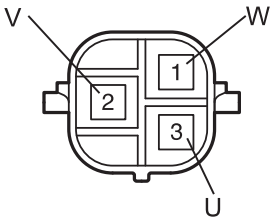
Tester Connection	Condition	Specified Condition
A68-1 (V) - A69-2 (V)	Always	Below 1 Ω
A68-2 (U) - A69-3 (U)	Always	Below 1 Ω
A68-3 (W) - A69-1 (W)	Always	Below 1 Ω
A68-1 (V) - Body ground	Always	10 kΩ or higher
A68-2 (U) - Body ground	Always	10 kΩ or higher
A68-3 (W) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT POWER STEERING LINK ASSEMBLY (POWER STEERING MOTOR)

Power Steering Motor:



P

C116649E01

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A69-3 (U) - A69-2 (V)	Always	Below 1 Ω
A69-2 (V) - A69-1 (W)	Always	Below 1 Ω
A69-1 (W) - A69-3 (U)	Always	Below 1 Ω
A69-3 (U) - Motor body	Always	10 kΩ or higher
A69-2 (V) - Motor body	Always	10 kΩ or higher
A69-1 (W) - Motor body	Always	10 kΩ or higher

NOTICE:

- **If replacing the power steering link assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor, and calibrate the torque sensor zero point (See page PS-13).**
- **If replacing the power steering ECU assembly, initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).**

PS

NG → REPLACE POWER STEERING LINK ASSEMBLY (See page PS-58)

OK

REPLACE POWER STEERING ECU ASSEMBLY (See page PS-68)

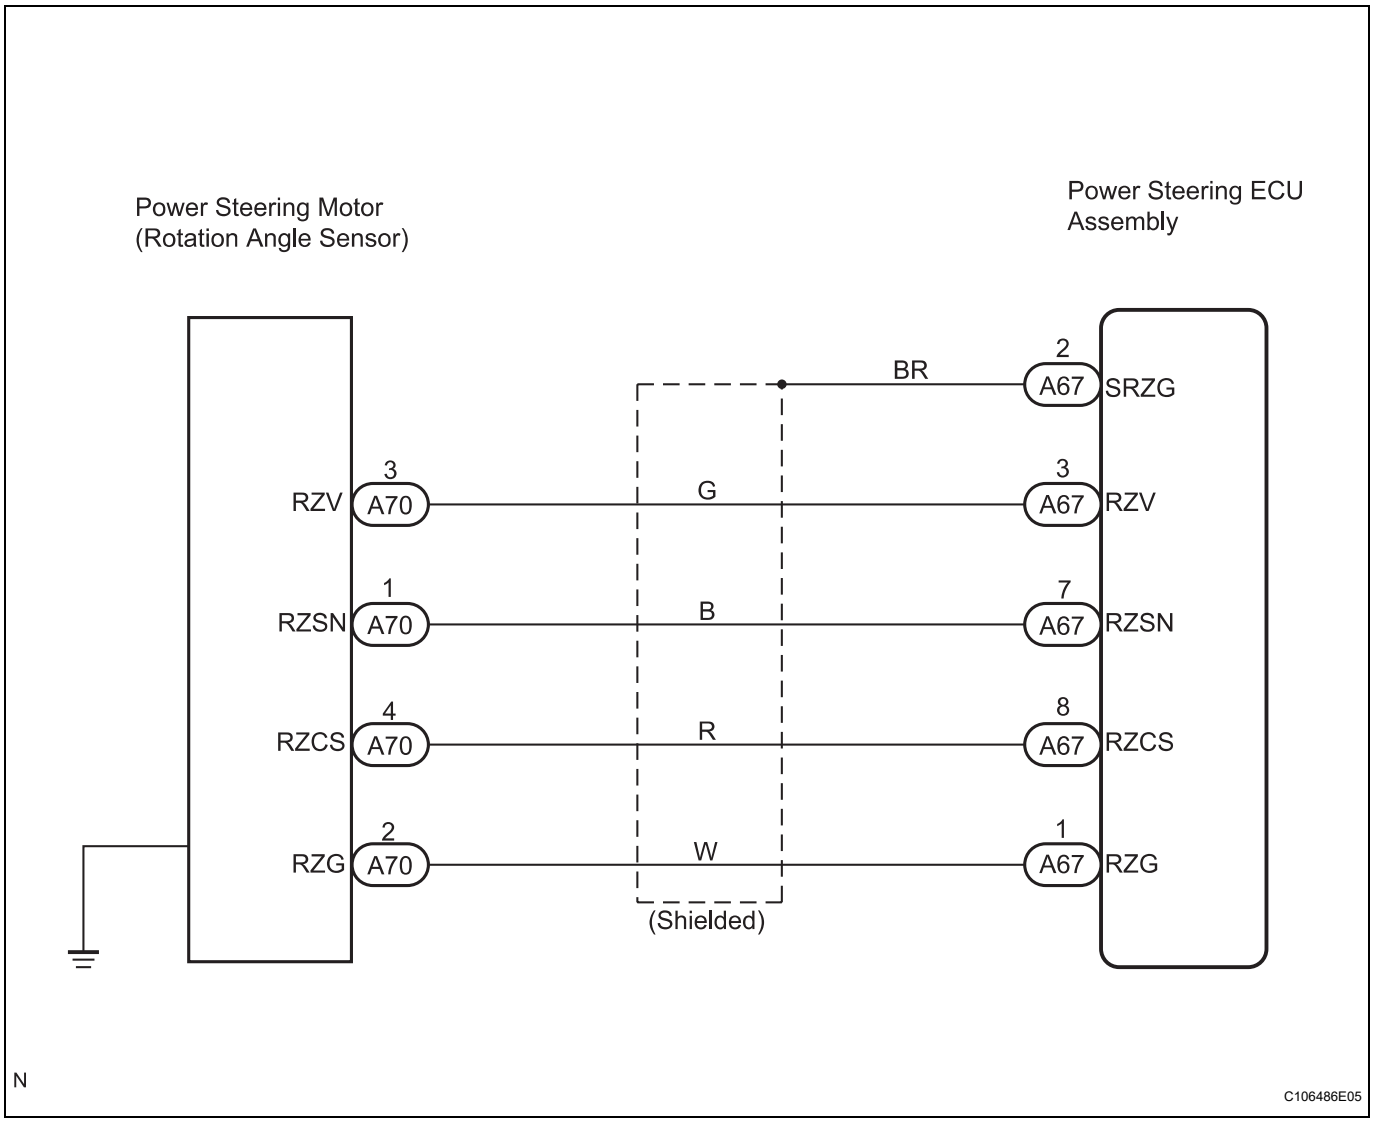
DTC	C1528	Motor Rotation Angle Sensor Malfunction

DESCRIPTION

The motor rotation angle sensor detects the motor rotation angle and sends this information to the power steering ECU assembly.

DTC No.	DTC Detection Item	Trouble Area
C1528	Motor rotation angle sensor malfunction (e.g. An open, short to ground, or short to B+ in the rotation angle sensor circuit)	• Motor rotation angle sensor (built into power steering link assembly) • Wire harness • Power steering earth wire • Power steering ECU assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK POWER STEERING EARTH WIRE (POWER STEERING LINK ASSEMBLY - BODY GROUND)

(a) Check the installation condition of the power steering earth wire connected to the power steering link assembly.

OK:

The power steering earth wire is securely installed to the power steering link assembly and body ground.

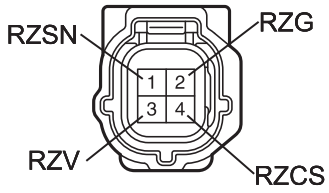
NG → **REINSTALL POWER STEERING EARTH WIRE**

OK

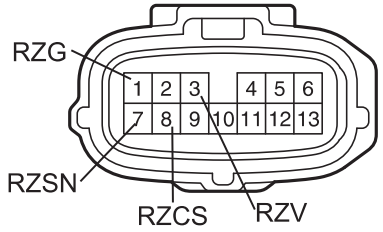
2	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - MOTOR ROTATION ANGLE SENSOR)

Wire Harness Side Connector Front View:

A70
Motor Rotation Angle Sensor



A67
Power Steering ECU Assembly



C116654E03

(a) Disconnect the A70 connector from the power steering link assembly.

(b) Disconnect the A67 connector from the power steering ECU.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
A70-1 (RZSN) - A67-7 (RZSN)	Always	Below 1 Ω
A70-2 (RZG) - A67-1 (RZG)	Always	Below 1 Ω
A70-3 (RZV) - A67-3 (RZV)	Always	Below 1 Ω
A70-4 (RZCS) - A67-8 (RZCS)	Always	Below 1 Ω
A70-1 (RZSN) - Body ground	Always	10 kΩ or higher
A70-2 (RZG) - Body ground	Always	10 kΩ or higher
A70-3 (RZV) - Body ground	Always	10 kΩ or higher
A70-4 (RZCS) - Body ground	Always	10 kΩ or higher

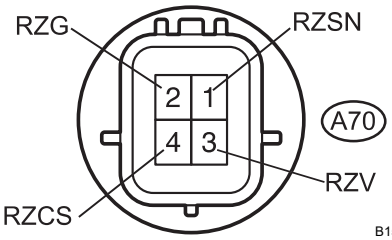
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PS

3	INSPECT POWER STEERING LINK ASSEMBLY (MOTOR ROTATION ANGLE SENSOR)

Motor Rotation Angle Sensor:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection (Symbols)	Condition	Specified condition
A70-1 (RZSN) - A70-2 (RZG)	Always	50 to 140 Ω
A70-3 (RZV) - A70-2 (RZG)	Always	50 to 140 Ω
A70-4 (RZCS) - A70-2 (RZG)	Always	15 to 45 Ω

NOTICE:
If replacing the power steering link assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point (See page PS-13).

NG → **REPLACE POWER STEERING LINK ASSEMBLY (See page PS-58)**

OK

4	REPLACE POWER STEERING ECU ASSEMBLY

(a) Replace the power steering ECU assembly (See page PS-68).

NEXT

5	INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT

(a) Initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NEXT

6	RECONFIRM DTC

(a) Check for DTCs (See page PS-17).

Result

DTC Condition	Proceed to
DTC is not output	A
DTC C1528 is output	B

NOTICE:
If replacing the power steering link assembly, clear the rotation angle sensor calibration value, initialize the rotation angle sensor value, and calibrate the torque sensor zero point (See page PS-13).

B → REPLACE POWER STEERING LINK ASSEMBLY (See page PS-58)

A

END

DTC	C1541	Vehicle Speed Signal Malfunction

DESCRIPTION

The power steering ECU assembly receives vehicle speed signals from the skid control ECU via CAN communication. The ECU provides appropriate assisting force in accordance with the vehicle speed, based on the signals.
If the ECU detects this DTC, it adjusts the amount of power assistance for driving at a speed of 100 km/h (62 mph) and continues the system control.

DTC No.	DTC Detection Condition	Trouble Area
C1541	This DTC is detected when vehicle speed signals via CAN communication are cut off for 3 seconds or more.	• Speed sensor circuit • Skid control ECU • CAN communication system • Power steering ECU assembly

INSPECTION PROCEDURE

1	CHECK DTC OUTPUT (CAN COMMUNICATION SYSTEM)

(a) Check if DTC U0073 or U0129 is output.
Result

DTC Condition	Proceed to
DTC is not output	A
DTC U0073 or U0129 is output	B

HINT:
- DTC U0073 indicates a CAN communication malfunction in the electronic power steering system.
- DTC U0129 indicates a skid control ECU communication malfunction in the electronic power steering system.

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

A

2	CHECK DTC OUTPUT (BREAK CONTROL SYSTEM)

(a) Check for DTCs of the ABS system.
Result

DTC Condition	Proceed to
DTC is not output	A
DTC C0200, C0205, C0210, C0215, C1235, C1236, C1238, or C1239 is output	B

NOTICE:
If replacing the power steering ECU assembly, initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

PS

B → GO TO BRAKE CONTROL SYSTEM (SPEED SENSOR CIRCUIT) (See page BC-21)

A

REPLACE POWER STEERING ECU ASSEMBLY (See page PS-68)

DTC	C1551	IG Power Supply Voltage Malfunction

DESCRIPTION

If the power steering ECU assembly determines that there is a malfunction in the IG circuit inside the ECU, it outputs this DTC. This DTC is not output when there is an open circuit in the wire harness connected to terminal IG or a battery voltage drops.

DTC No.	DTC Detection Condition	Trouble Area
C1551	IG power source circuit malfunction inside ECU	Power steering ECU assembly

INSPECTION PROCEDURE

1	REPLACE POWER STEERING ECU ASSEMBLY

(a) Replace the power steering ECU assembly (See page PS-68).

NOTICE:

If replacing the power steering ECU assembly, initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NEXT

END

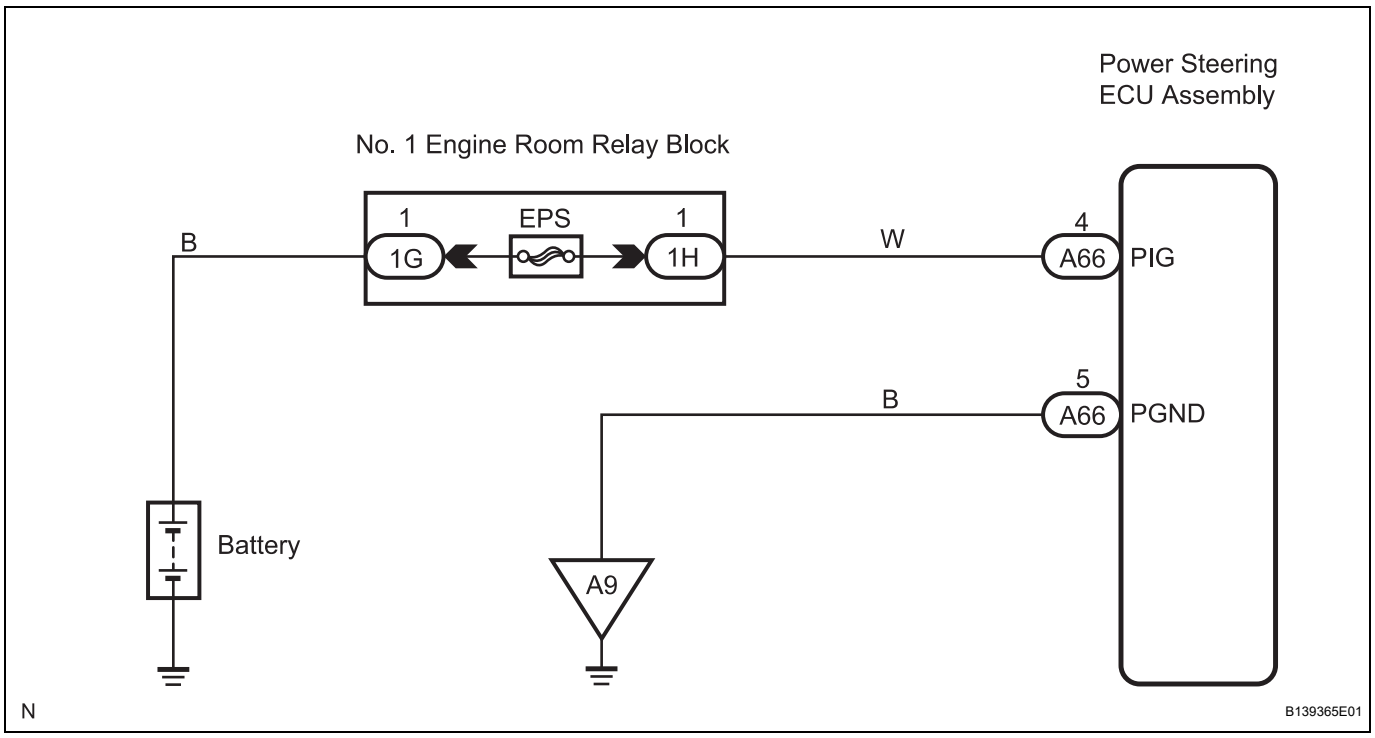
DTC	C1552	PIG Power Supply Voltage Malfunction

DESCRIPTION

This circuit supplies power to drive the power steering motor.

DTC No.	DTC Detection Condition	Trouble Area
C1552	This DTC is detected when power source voltage drops or remains high.	• EPS fuse • Wire harness • Power steering ECU assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT FUSE (EPS FUSE)

(a) Remove the EPS fuse from the engine room relay block.
(b) Check resistance of the EPS fuses.
OK:
Below 1 Ω

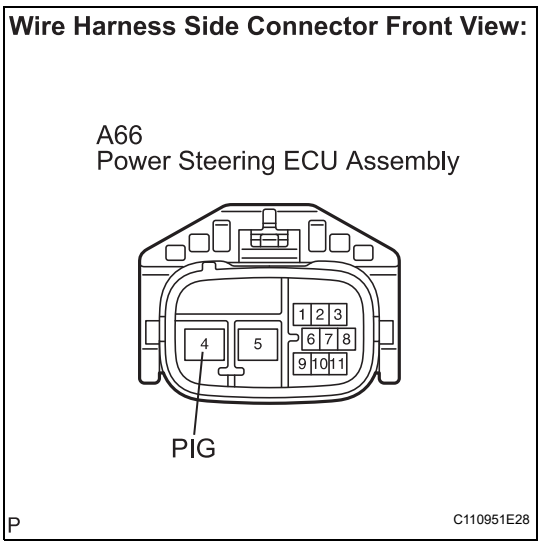
NG → **REPLACE FUSE**

OK

PS

2	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - BATTERY)

Wire Harness Side Connector Front View:



(a) Disconnect the A66 connector from the power steering ECU assembly.

(b) Measure the voltage according value(s) in the table below.

Standard voltage

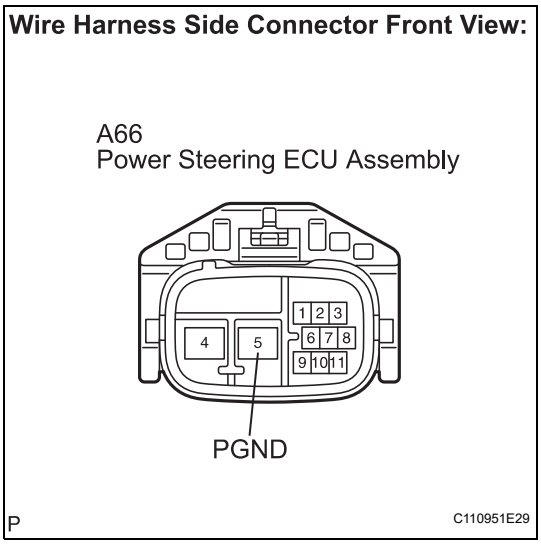
Tester Connection	Condition	Specified Condition
A66-4 (PIG) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - BODY GROUND)

Wire Harness Side Connector Front View:



(a) Measure the resistance according value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A66-5 (PGND) - Body ground	Always	Below 1 Ω

NOTICE:
If replacing the power steering ECU assembly, initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE POWER STEERING ECU ASSEMBLY (See page PS-68)

DTC	C1581	Assist Map Number Un-Writing

DESCRIPTION

The power steering ECU assembly outputs this DTC when it determines that the assist map is not written in the ECU.
HINT:
The assist map is data written in the power steering ECU assembly to control the degree of assistance. The assist map is selected based on the vehicle's specified communication data (designation and grade package information).

DTC No.	DTC Detection Item	Trouble Area
C1581	Assist map is not written in the power steering ECU assembly.	• Hybrid vehicle control ECU • Main body ECU (Instrument panel J/B) • Power steering ECU assembly

INSPECTION PROCEDURE

1 PERFORM ASSIST MAP WRITING

(a) Turn the power switch on (IG), and wait for 30 seconds or more.
HINT:
The assist map is automatically written when approximately 30 seconds have elapsed after the power switch is turned on (IG). DTC C1581 will be cleared after the assist map is written.
(b) Check for DTCs.
OK:
DTC C1581 is not output.

NG → **Go to step 2**

OK

END

2 CHECK CAN COMMUNICATION SYSTEM

(a) Using the intelligent tester, check for DTCs and confirm that there are no problems in the CAN communication system.
OK:
DTCs are not output.

NG → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

OK

3	CHECK HYBRID VEHICLE CONTROL ECU

(a) Check if the correct hybrid vehicle control ECU for the engine type and drivetrain of the vehicle is installed.
OK:
The correct hybrid vehicle control ECU is installed.

NG → **REPLACE HYBRID VEHICLE CONTROL ECU (See page HV-570)**

OK

4	CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Check if the correct main body ECU (instrument panel J/B) for the model and grade of the vehicle is installed.
OK:
The correct main body ECU (instrument panel J/B).
NOTICE:
If replacing the power steering ECU assembly, initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NG → **REPLACE MAIN BODY ECU (INSTRUMENT PANEL J/B)**

OK

REPLACE POWER STEERING ECU ASSEMBLY (See page PS-68)

DTC	U0073	Control Module Communication Bus OFF

DTC	U0100	Lost Communication with ECM/PCM "A"

DTC	U0129	Lost Communication with Skid Control ECU

DTC	U0293	Lost Communication with HV ECU

DESCRIPTION

The power steering ECU assembly receives signals from the hybrid vehicle control ECU, skid control ECU and steering control ECU via CAN communication.

DTC No.	DTC Detection Item	Inspection Area
U0073	CAN communication error (CAN bus is off)	CAN communication system
U0100	Hybrid vehicle control ECU communication error	• CAN communication system • Hybrid vehicle control ECU
U0129	Skid control ECU communication error	• CAN communication system • Skid control ECU
U0293	Hybrid vehicle control ECU communication error	• CAN communication system • Hybrid vehicle control ECU

HINT:

- When two or more DTCs starting with "U" are output simultaneously, inspect the connectors and wire harness of each ECU.
- If the power steering ECU assembly detects DTC U0129 only, it adjusts the amount of power assistance for driving at a speed of 100 km/h (62 mph) and continues system control.

INSPECTION PROCEDURE

Refer to the U0073 (CAN communication system) (See page CA-64).
Refer to the U0100 (CAN communication system) (See page CA-40).
Refer to the U0129 (CAN communication system) (See page CA-42).
Refer to the U0293 (CAN communication system) (See page CA-40).

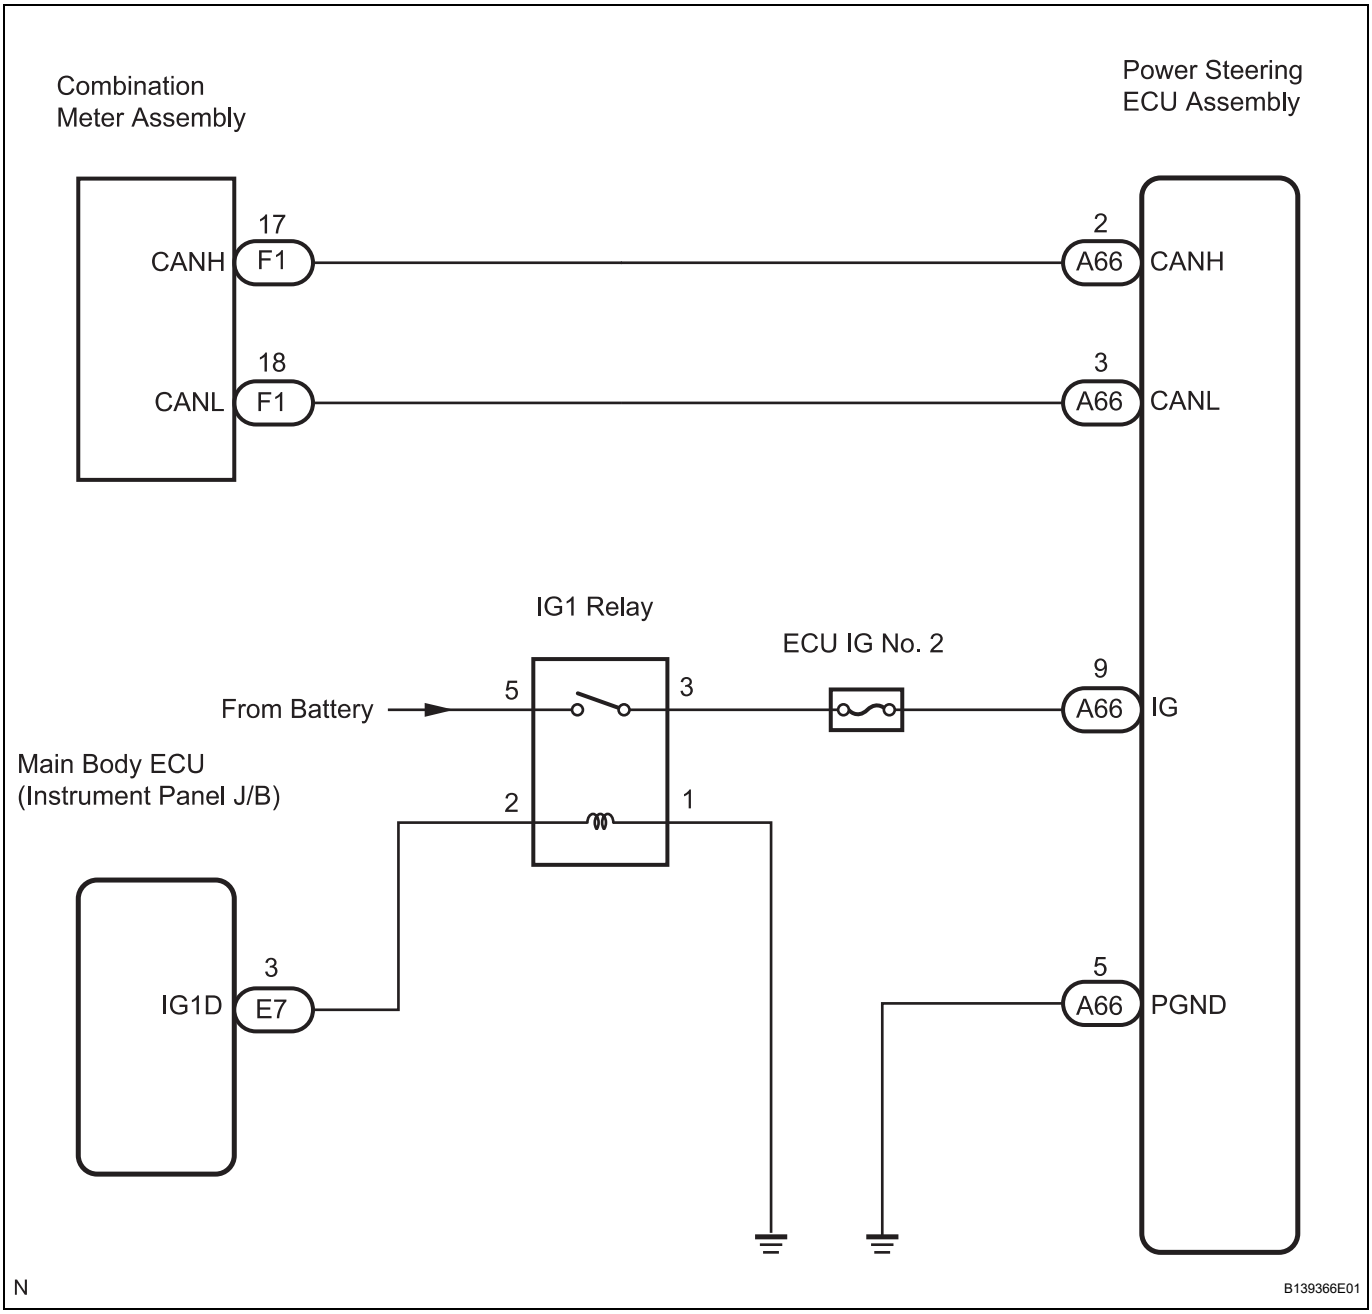
PS Warning Light Remains ON

DESCRIPTION

The power steering ECU is connected to the combination meter via CAN communication. If any of the following are detected, the PS warning light remains on.

- The power steering ECU connectors are disconnected from the power steering ECU.
- There is a malfunction in the power steering ECU internal circuit.
- There is an open in the harness between the combination meter and power steering ECU assembly.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR

(a) Check the indication of the PS warning light while wiggling the power steering ECU assembly connector and wire harness up and down, and right and left.
OK:
PS warning light indication does not change.

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT CAN COMMUNICATION SYSTEM

(a) Using the intelligent tester, check for DTCs and confirm that there are no problems in the CAN communication system.
OK:
DTCs are not output.

NG → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

OK

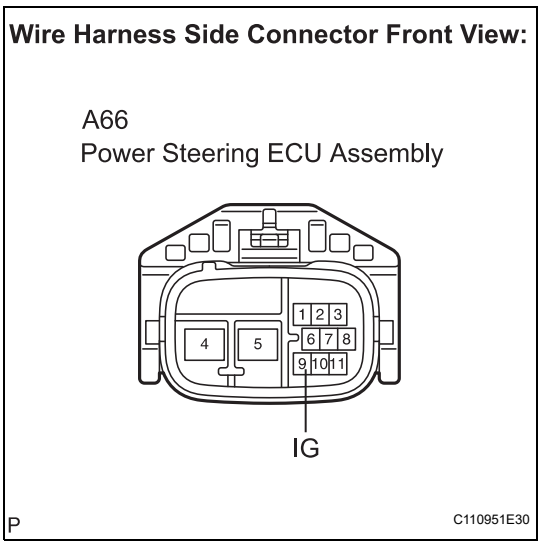
3	INSPECT FUSE

(a) Remove the ECU-IG LH fuse from the instrument panel J/B.
(b) Check the resistance of the ECU-IG LH fuse.
OK:
Below 1 Ω

NG → **REPLACE FUSE**

OK

4	INSPECT POWER STEERING ECU ASSEMBLY



(a) Disconnect the A66 connector from the power steering ECU assembly.
(b) Measure the voltage according to the value(s) in the table below.

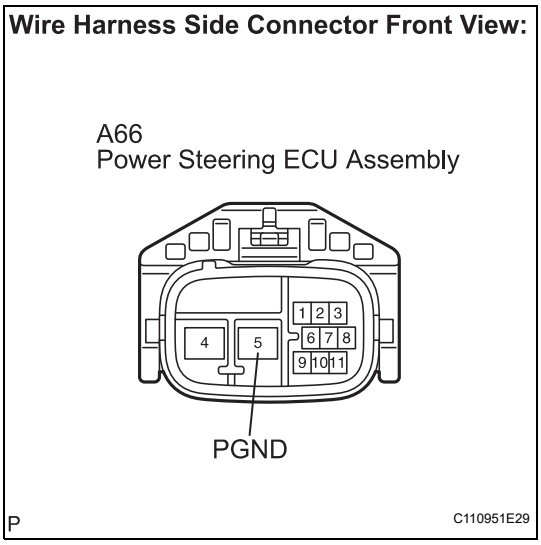
Standard voltage

Tester Connection	Condition	Specified Condition
A66-9 (IG) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK HARNESS AND CONNECTOR (POWER STEERING ECU ASSEMBLY - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

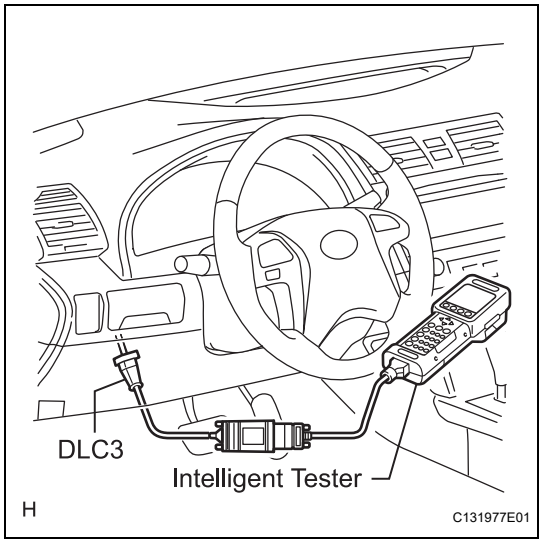
Standard resistance

Tester Connection	Condition	Specified Condition
A66-5 (PGND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	INSPECT COMBINATION METER ASSEMBLY



(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

METER:

Tester Display	Test Part	Control Range	Diagnostic Note
EPS INDIC	PS indicator light OFF/ON	OFF / ON	-

OK:
The PS warning light comes on or goes off according to the tester operation.
NOTICE:
If replacing the power steering ECU assembly, initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

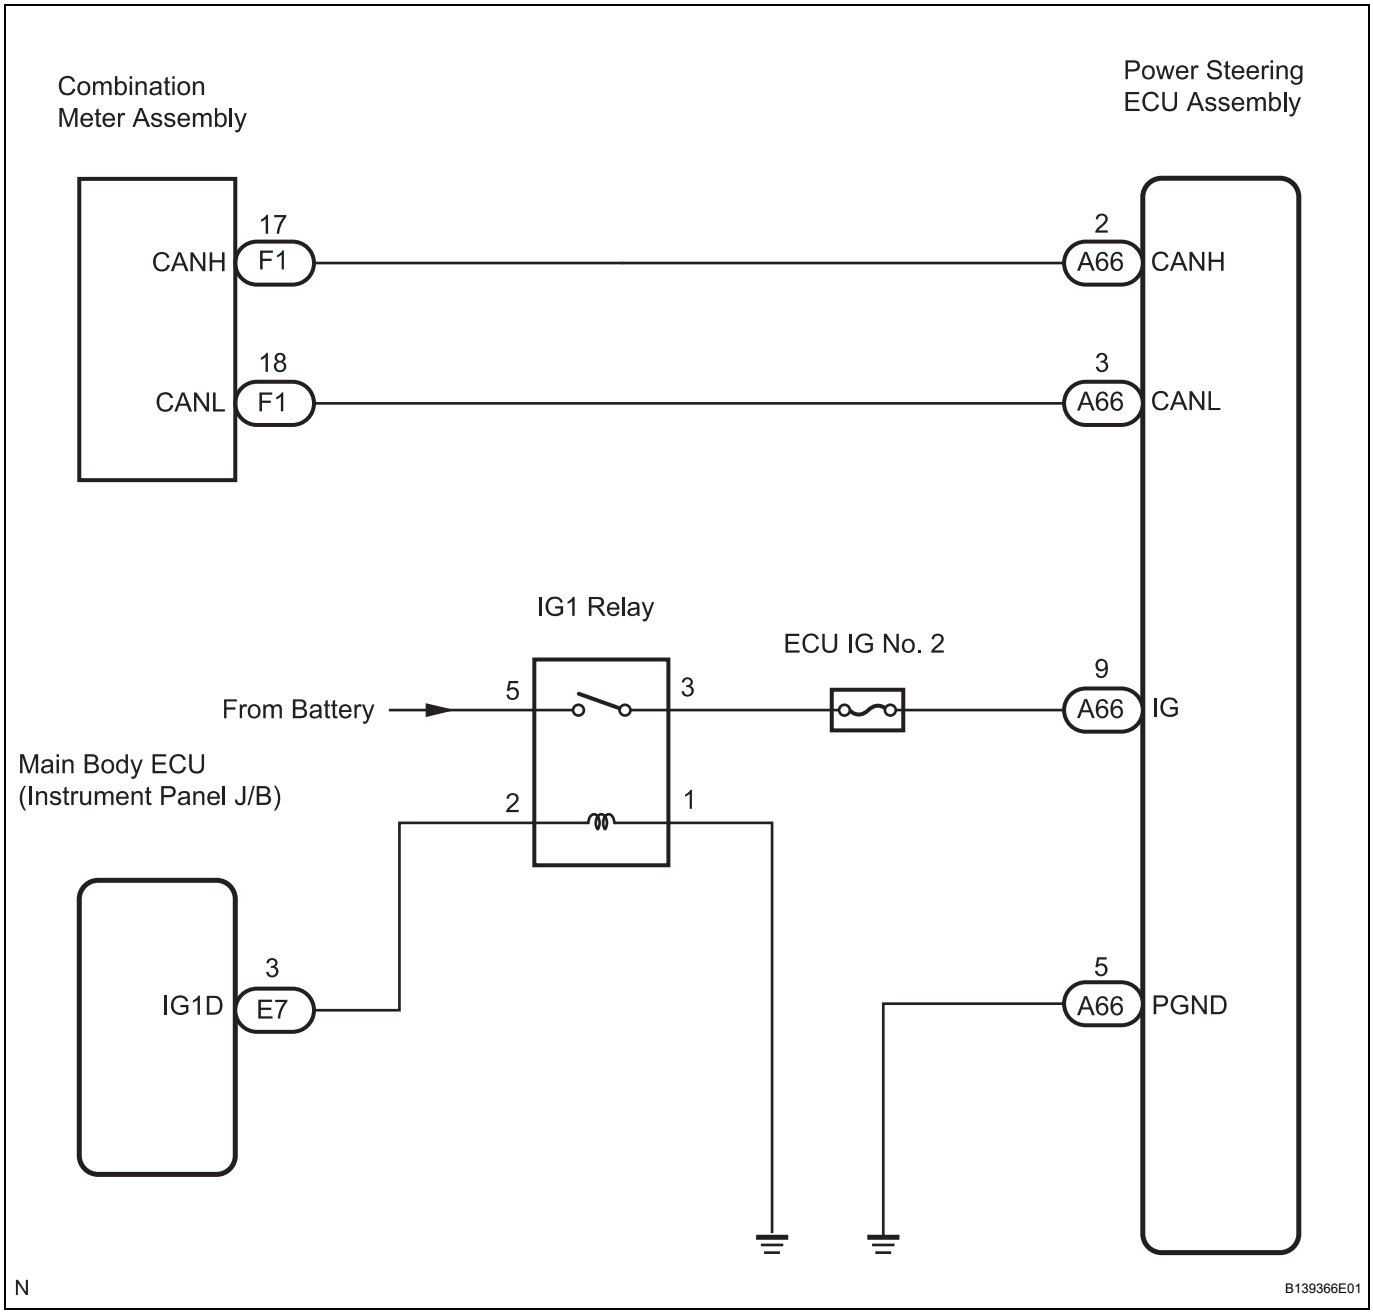
NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-64)**

OK

REPLACE POWER STEERING ECU ASSEMBLY (See page PS-68)

PS Warning Light does not Come ON

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT CAN COMMUNICATION SYSTEM

(a) Using the intelligent tester, check for DTCs and confirm that there are no problems in the CAN communication system.

OK:

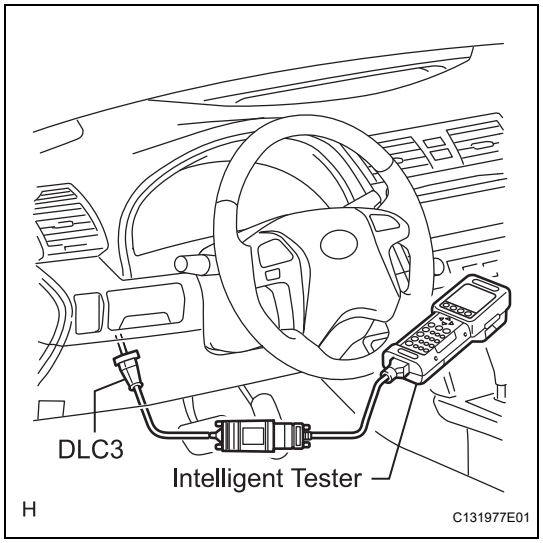
DTCs are not output.

PS

NG → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

OK

2	INSPECT COMBINATION METER ASSEMBLY



(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (IG).
(c) Perform the ACTIVE TEST according to the display on the tester.

COMBINATION METER:

Tester Display	Test Part	Control Range	Diagnostic Note
EPS INDIC	PS indicator light OFF/ON	ON / OFF	-

OK:
The PS warning light comes on or goes off according to the tester operation.
NOTICE:
If replacing the power steering ECU assembly, initialize the rotation angle sensor value and calibrate the torque sensor zero point (See page PS-13).

NG → **REPLACE COMBINATION METER ASSEMBLY (See page ME-64)**

OK

REPLACE POWER STEERING ECU ASSEMBLY (See page PS-68)

REMOVAL

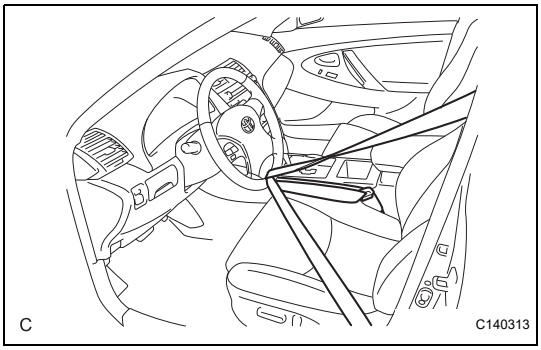
1. PLACE FRONT WHEELS FACING STRAIGHT AHEAD

2. DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL

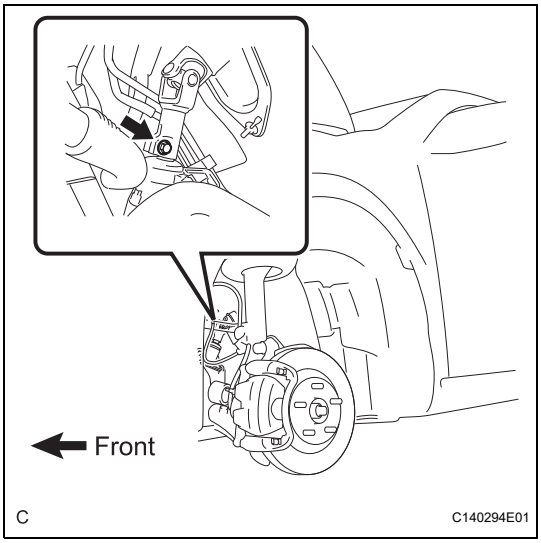
3. REMOVE FRONT WHEELS

4. SEPARATE STEERING INTERMEDIATE SHAFT ASSEMBLY

(a) Secure the steering wheel with the seat belt in order to prevent rotation.
HINT:
This operation is useful to prevent damage to the spiral cable.

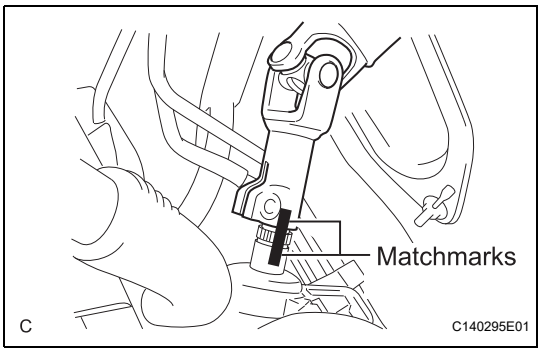


(b) Remove the bolt and slide the steering intermediate shaft assembly.
NOTICE:
Do not separate the steering intermediate shaft assembly from the power steering link assembly.



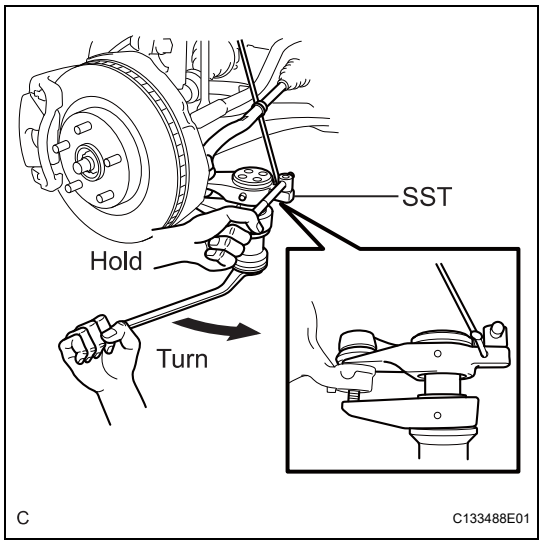
(c) Put matchmarks on the steering intermediate shaft assembly and the power steering link assembly.

(d) Separate the steering intermediate shaft assembly from the power steering link assembly.



5. SEPARATE TIE ROD ASSEMBLY LH

(a) Remove the cotter pin and the nut.



(b) Using SST, separate the tie rod assembly LH from the steering knuckle.
SST 09628-00011
NOTICE:
- **Hang SST with a string, etc. to prevent it from falling.**
- **Do not damage the front disc brake dust cover.**
- **Do not damage the ball joint dust cover.**
- **Do not damage the steering knuckle.**

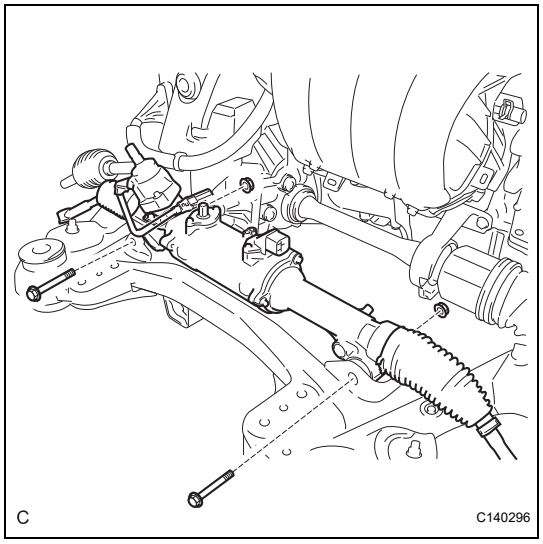
6. SEPARATE TIE ROD ASSEMBLY RH
SST 09628-00011
HINT:
Perform the same procedure as for the LH side.

7. REMOVE ENGINE ASSEMBLY WITH TRANSAXLE
HINT:
Refer to the instructions for REMOVAL of the ENGINE ASSEMBLY (See page EM-89).

8. REMOVE NO. 1 FRONT STABILIZER BRACKET LH (See page SP-28)

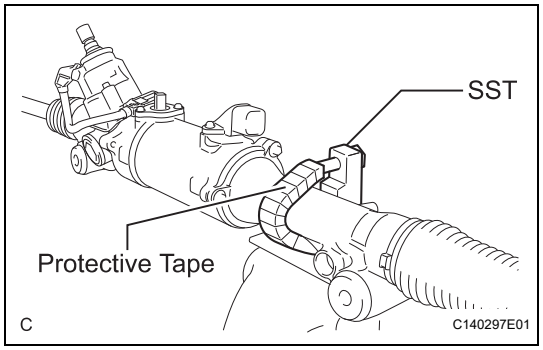
9. REMOVE NO. 1 FRONT STABILIZER BRACKET RH (See page SP-29)

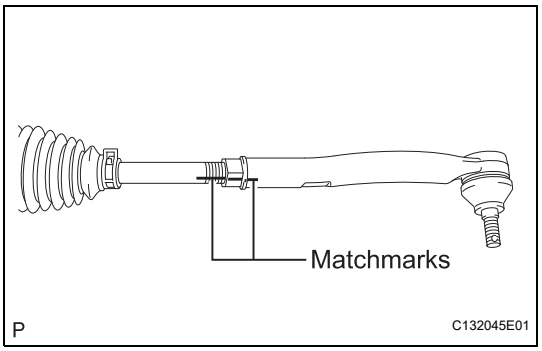
10. REMOVE POWER STEERING LINK ASSEMBLY
(a) Remove the 2 bolts, 2 nuts, and the power steering link assembly from the front frame assembly.
NOTICE:
Because the nut has its own stopper, do not turn the nut. Loosen the bolt with the nut fixed.

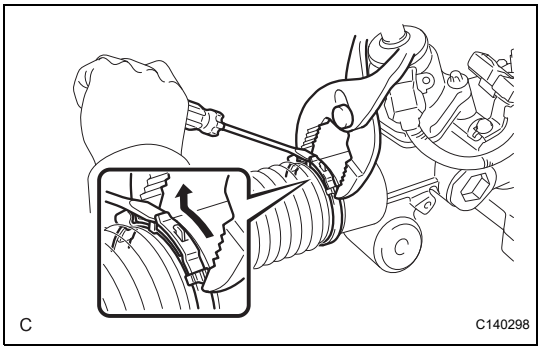


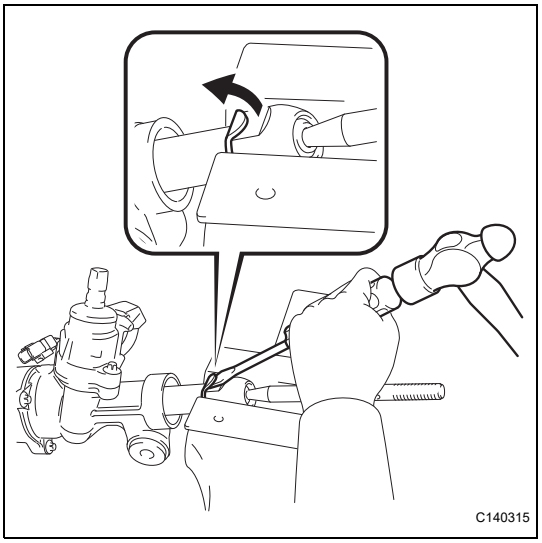
DISASSEMBLY

1. SECURE POWER STEERING LINK ASSEMBLY
(a) Using SST, secure the power steering link assembly.
SST 09612-00012
HINT:
Tape the SST before use.









2. REMOVE TIE ROD ASSEMBLY LH

(a) Put matchmarks on the tie rod assembly LH and the steering rack end sub-assembly.

(b) Loosen the lock nut, and remove the tie rod assembly LH and the lock nut.

3. REMOVE TIE ROD ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

4. REMOVE STEERING RACK BOOT CLIP

(a) Using pliers, remove the 2 steering rack boot clips.

5. REMOVE NO. 2 STEERING RACK BOOT CLAMP

(a) Using pliers and a screwdriver, remove the No. 2 steering rack boot clamp as shown in the illustration.

NOTICE:

Be careful not to damage the steering rack boot.

6. REMOVE NO. 1 STEERING RACK BOOT CLAMP

HINT:

Perform the same procedure as for the No. 2 steering rack boot clamp.

7. REMOVE NO. 2 STEERING RACK BOOT

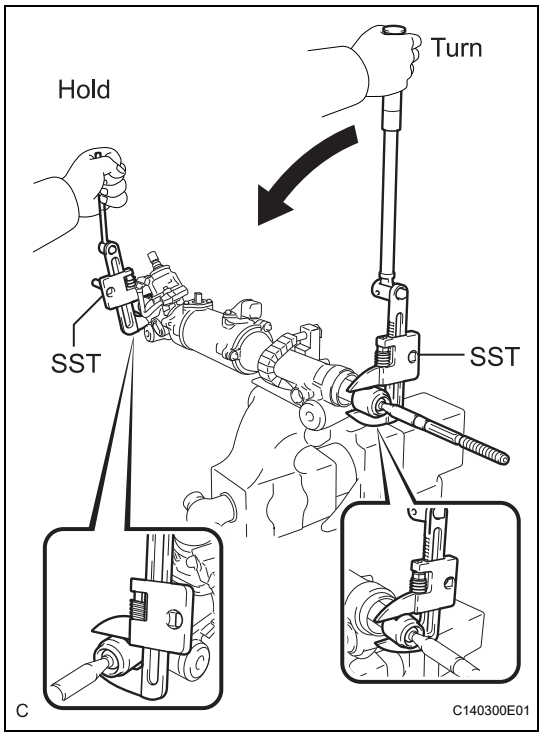
8. REMOVE NO. 1 STEERING RACK BOOT

9. REMOVE STEERING RACK END SUB-ASSEMBLY

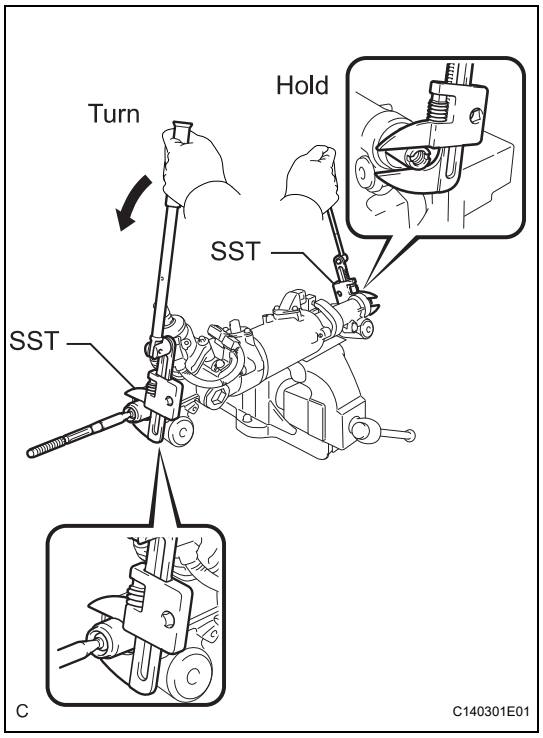
(a) Using a screwdriver and a hammer, unstake the RH and LH claw washers.

NOTICE:

Avoid any impact to the steering rack.



(b) Using SST, remove the steering rack end sub-assembly (RH side) and the claw washer.
SST 09922-10010
NOTICE:
Use SST 09922-10010 as shown in the illustration.



(c) Using SST, remove the steering rack end sub-assembly (LH side) and the claw washer.
SST 09922-10010
NOTICE:
Use SST 09922-10010 as shown in the illustration.
HINT:
Using SST, hold the rack and remove the steering rack end sub-assembly.

INSPECTION

1. INSPECT TIE ROD ASSEMBLY LH

(a) Secure the tie rod assembly LH in a vise.

(b) Install the nut to the stud bolt.

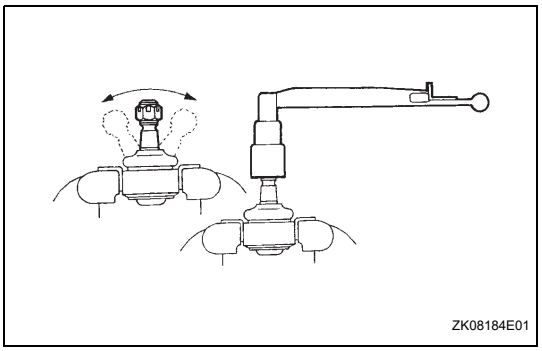
(c) Flip the ball joint back and forth 5 times or more.

(d) Using a torque wrench, turn the nut continuously at a rate of 3 to 5 seconds per turn and take the torque reading on the 5th turn.

Torque: Turning torque

0.98 to 3.92 N*m (10 to 40 kgf*cm, 8.7 to 34.7 in.*lbf)

If the turning torque is not within the specified range, replace the tie rod assembly LH.



2. INSPECT TIE ROD ASSEMBLY RH

HINT:

Perform the same procedure as for the LH side.

3. INSPECT TOTAL PRELOAD

(a) Temporarily install the left and right steering rack ends to prevent steering rack over stroke.

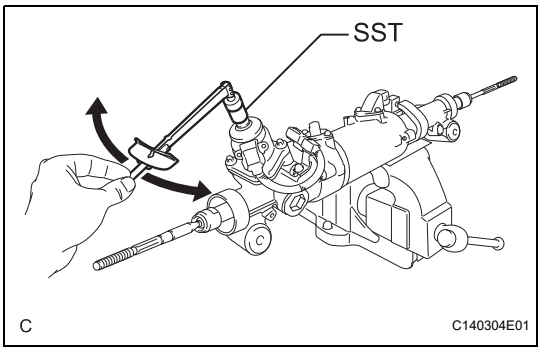
(b) Using SST and a torque wrench, inspect total preload.

SST 09616-00011

Torque: Preload (turning)

1.0 to 2.0 N*m (10 to 20 kgf*cm, 8.9 to 17.7 in.*lbf)

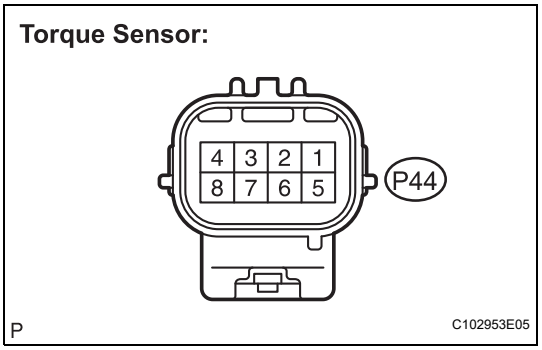
If the turning torque is not as specified, replace the power steering link assembly.



4. INSPECT POWER STEERING LINK ASSEMBLY (TORQUE SENSOR)

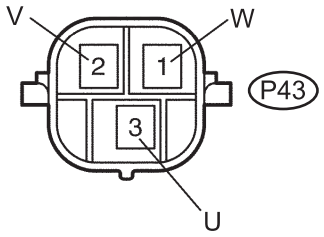
(a) Measure the resistance according to the value(s) in the table below.

Resistance



Tester connection (Symbols)	Condition	Specified condition
P44-1 (INCS) - P44-7 (TQG2)	Always	90 to 170 Ω
P44-2 (INSN) - P44-7 (TQG2)	Always	300 to 430 Ω
P44-4 (TRQV) - P44-8 (TQG1)	Always	4 to 14 Ω
P44-5 (OUCS) - P44-7 (TQG2)	Always	90 to 170 Ω
P44-6 (OUSN) - P44-7 (TQG2)	Always	300 to 430 Ω

Power Steering Motor:



P C110602E02

5. INSPECT POWER STEERING LINK ASSEMBLY (POWER STEERING MOTOR)

(a) Measure the resistance according to the value(s) in the table below.

Resistance

Tester connection (Symbols)	Condition	Specified condition
P43-3 (U) - P43-2 (V)	Always	Below 1 Ω
P43-2 (V) - P43-1 (W)	Always	Below 1 Ω
P43-1 (W) - P43-3 (U)	Always	Below 1 Ω

REASSEMBLY

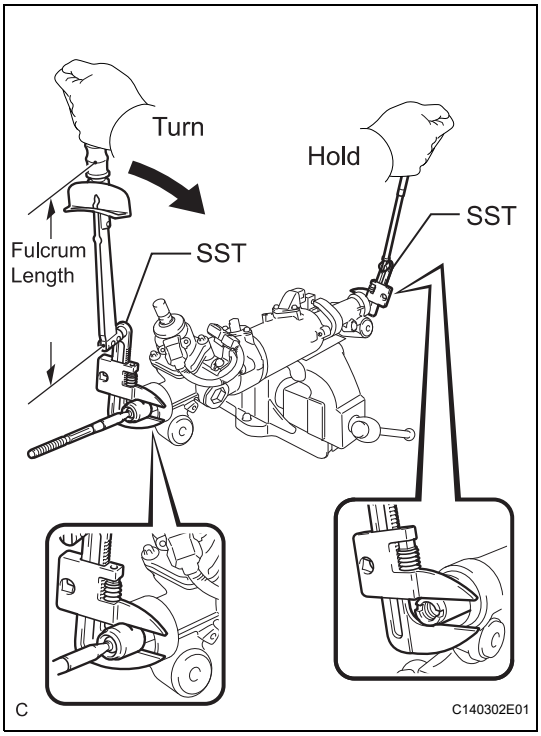
NOTICE:
When installing, coat the parts indicated by arrows with silicone grease (See page PS-56).

1. INSTALL STEERING RACK END SUB-ASSEMBLY

(a) Install 2 new claw washers.
HINT:
Align the claws of the claw washer with the steering rack grooves.

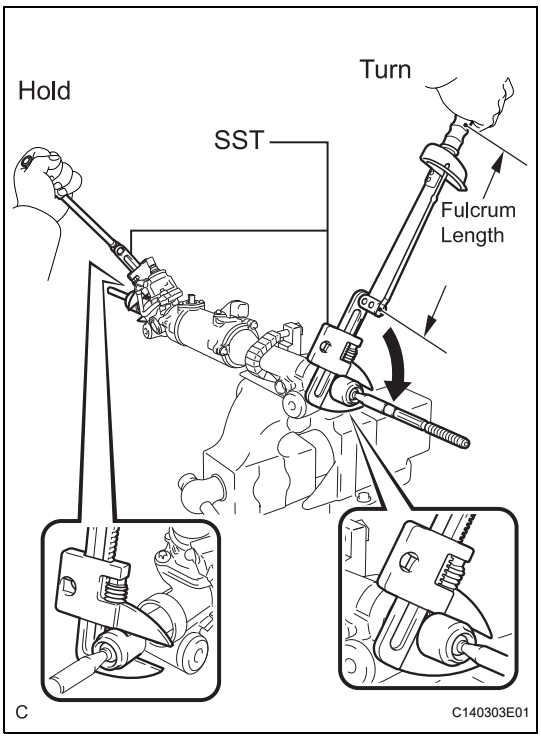
(b) Using SST, install the steering rack end sub-assembly (LH side).
SST 09922-10010
Torque: Without SST
103 N*m (1,050 kgf*cm, 76 ft.*lbf)
With SST
74 N*m (755 kgf*cm, 55 ft.*lbf)
NOTICE:
- **Use SST 09922-10010 as shown in the illustration.**
- **Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).**
- **This torque value is effective when SST is parallel to the torque wrench.**

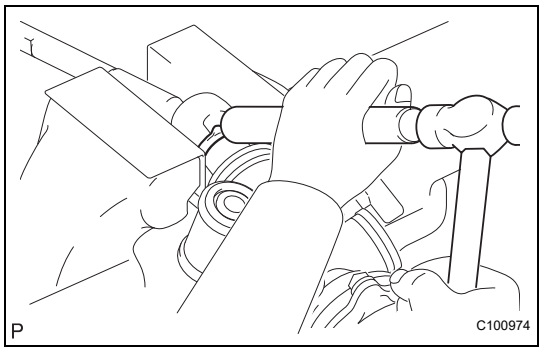
HINT:
Using SST, hold the steering rack and install the steering rack end sub-assembly.



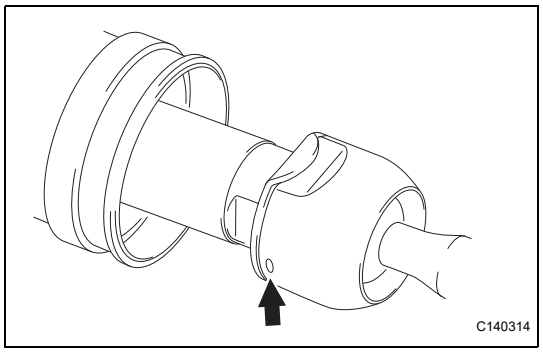
(c) Using SST, install the steering rack end sub-assembly (RH side).
SST 09922-10010
Torque: Without SST
103 N*m (1,050 kgf*cm, 76 ft.*lbf)
With SST
74 N*m (755 kgf*cm, 55 ft.*lbf)
NOTICE:
- **Use SST 09922-10010 as shown in the illustration.**
- **Use a torque wrench with a fulcrum length of 345 mm (13.58 in.).**
- **This torque value is effective when SST is parallel to the torque wrench.**

HINT:
Using SST, hold the steering rack and install the steering rack end sub-assembly.

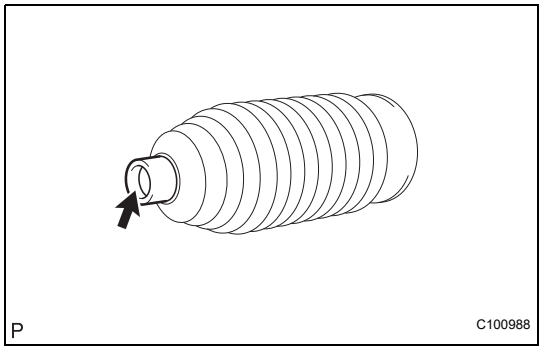




(d) Using a brass bar and a hammer, stake the 2 claw washers.
NOTICE:
Avoid any impact to the steering rack.

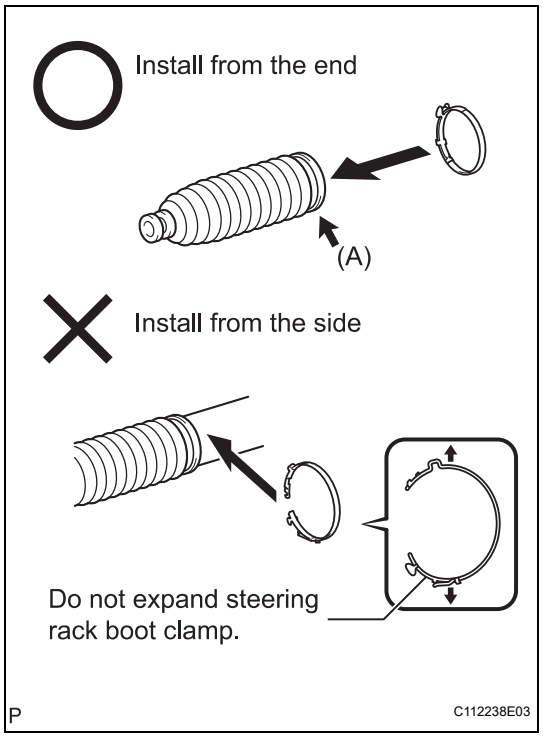


(e) Ensure that the holes of the rack ends are not clogged with grease.
HINT:
If the hole is clogged, the pressure inside the boot will change after it is assembled and the steering wheel is turned.



2. INSTALL NO. 2 STEERING RACK BOOT

(a) Apply silicone grease to the inside of the small opening of the No. 2 steering rack boot.



(b) Temporarily install a new No. 2 steering rack boot clamp to the large opening of the No. 2 steering rack boot at the position shown by arrow (A).
NOTICE:
- **Use a new No. 2 steering rack boot clamp.**
- **Do not expand the No. 2 steering rack boot clamp more than necessary for installation.**
- **Do not deform the No. 2 steering rack boot clamp.**
- **Tightening force of the No. 1 steering rack boot clamp becomes uneven if it is installed after being expanded as shown in the illustration. As a result, rust is caused by water entering from the clearance between the boot and rack housing, causing a malfunction.**
- **Use only the supply parts which are applicable to the vehicle to secure the boot.**

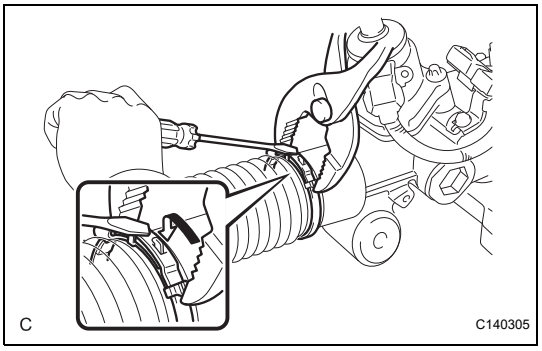
HINT:
After disengaging the claw of a new No. 2 steering rack boot clamp, temporarily install it from the end without expanding the clamp diameter more than necessary.

(c) Install the No. 2 rack boot to the groove on the rack housing.

NOTICE:
- **Be careful not to damage or twist the boot.**
- **Do not damage the No. 2 steering rack boot.**
- **Ensure that the No. 2 steering rack boot clamp is installed before installing the No. 2 steering rack boot to the rack housing.**

3. INSTALL NO. 1 STEERING RACK BOOT

HINT:
Perform the same procedure as for the No. 2 steering rack boot.



4. INSTALL NO. 2 STEERING RACK BOOT CLAMP

(a) Using pliers and a screwdriver, install the No. 2 steering rack boot clamp.

NOTICE:
- **Be careful not to damage the No. 2 steering rack boot.**
- **Do not twist the No. 2 steering rack boot.**

5. INSTALL NO. 1 STEERING RACK BOOT CLAMP

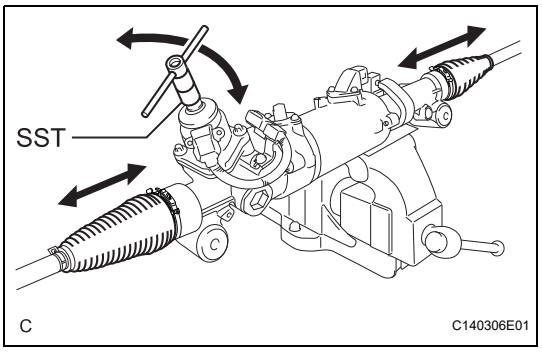
HINT:
Perform the same procedure as for the No. 2 steering rack boot clamp.

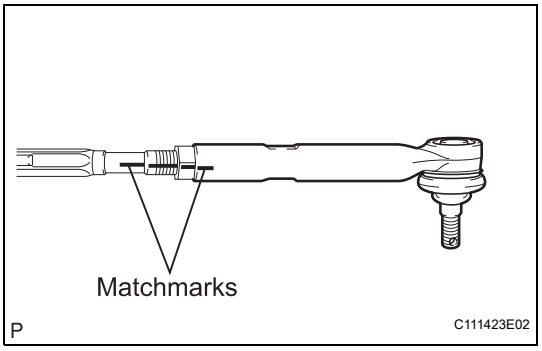
6. INSTALL STEERING RACK BOOT CLIP

(a) Using pliers, install the 2 boot clips.

(b) Using SST, turn the pinion and check that the rack boots expand and contract smoothly.

SST 09616-00011





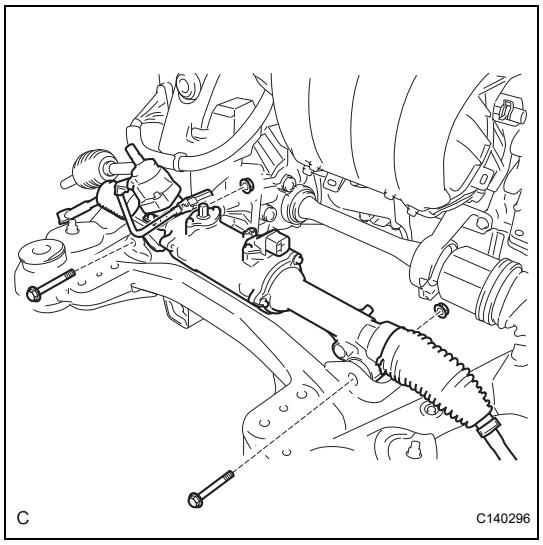
7. INSTALL TIE ROD ASSEMBLY LH

(a) Install the lock nut and the tie rod assembly LH to the steering rack end sub-assembly until the matchmarks are aligned.

HINT:
After adjusting toe-in, tighten the lock nut.

8. INSTALL TIE ROD ASSEMBLY RH

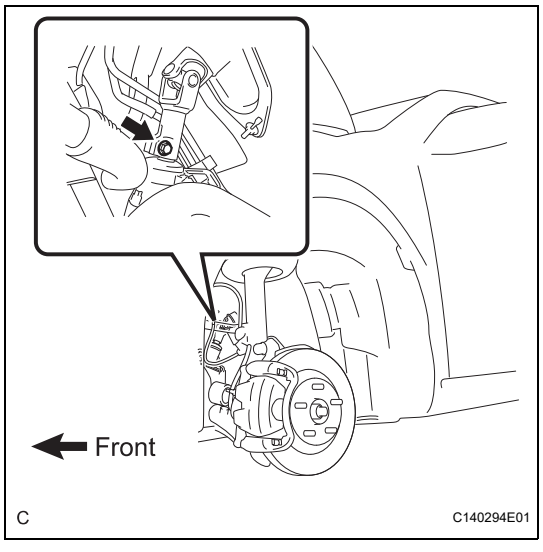
HINT:
Perform the same procedure as for the LH side.



INSTALLATION

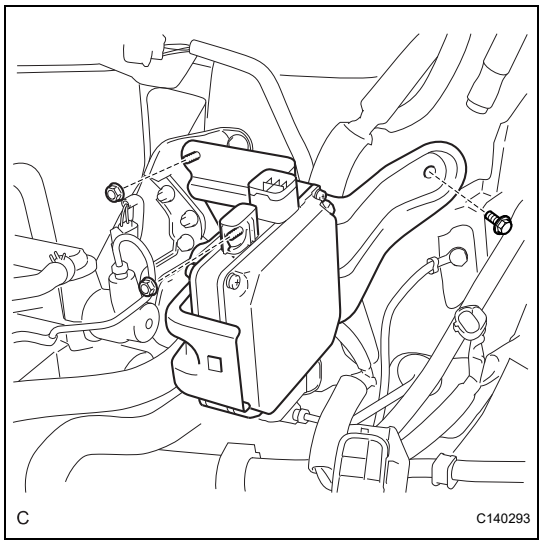
1. **INSTALL POWER STEERING LINK ASSEMBLY**
   (a) Install the power steering link assembly with the 2 bolts and 2 nuts.
   Torque: 70 N*m (714 kgf*cm, 52 ft.*lbf)
   NOTICE:
   Because the nut has its own stopper, do not turn the nut. Tighten the bolt with the nut fixed.
2. **INSTALL FRONT STABILIZER BAR (See page SP-30)**
3. **INSTALL ENGINE ASSEMBLY WITH TRANSAXLE**
   HINT:
   Refer to the instructions for INSTALLATION of the ENGINE ASSEMBLY (See page EM-102).
4. **CONNECT TIE ROD ASSEMBLY LH**
   (a) Connect the tie rod assembly LH to the steering knuckle with the nut.
   Torque: 49 N*m (500 kgf*cm, 36 ft.*lbf)
   (b) Install a new cotter pin.
   NOTICE:
   Further tighten the nut up to 60° if the holes for the cotter pin are not aligned.
5. **CONNECT TIE ROD ASSEMBLY RH**
   HINT:
   Perform the same procedure as for the LH side.
6. **CONNECT STEERING INTERMEDIATE SHAFT ASSEMBLY**
   (a) Align the matchmarks on the steering intermediate shaft assembly and the power steering link assembly.

   (b) Install the bolt.
   Torque: 35 N*m (360 kgf*cm, 26 ft.*lbf)
7. **INSTALL FRONT WHEELS**
   Torque: 103 N*m (1,050 kgf*cm, 76 ft.*lbf)
8. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
9. **PLACE FRONT WHEELS FACING STRAIGHT AHEAD**
10. **INSPECT AND ADJUST FRONT WHEEL ALIGNMENT**
    HINT:
    (See page SP-4)



11. **PERFORM INITIALIZATION**
NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43).

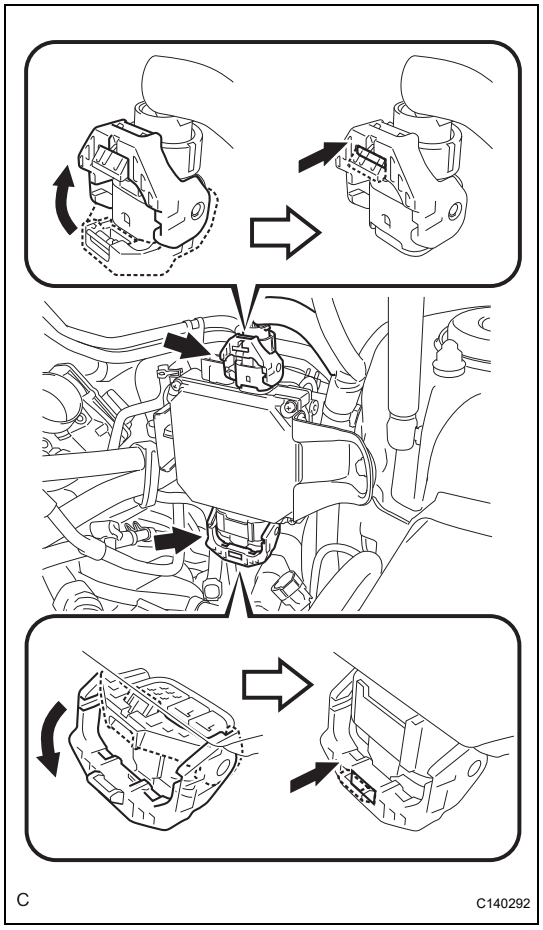
12. **INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT**
HINT:
(See page PS-13)



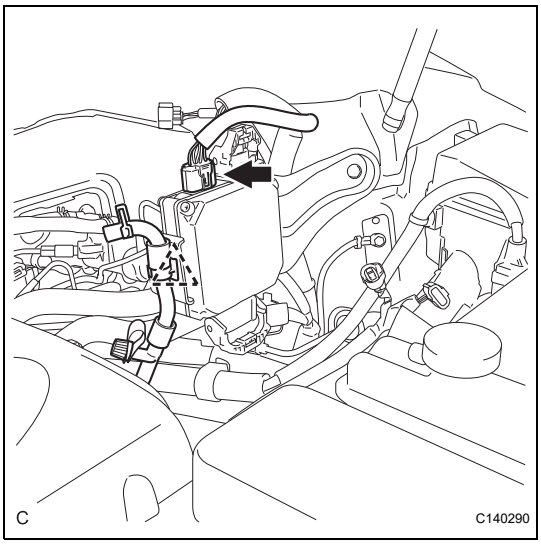
INSTALLATION

1. INSTALL POWER STEERING ECU ASSEMBLY

(a) Install the power steering ECU assembly with the bolt and 2 nus.
Torque: 8.5 N*m (87 kgf*cm, 75 in.*lbf)



(b) Connect the 2 power steering ECU assembly connectors and securely lock the connectors as shown in the illustration.



(c) Connect the connector and install the hose clamp to the power steering ECU assembly.

2. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-405)**
3. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-13)**
4. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)**
5. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)**
6. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)**
7. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)**
8. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)**
9. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-33)**
10. **INSTALL AIR CLEANER CASE SUB-ASSEMBLY (See page EM-113)**
11. **INSTALL AIR CLEANER CAP SUB-ASSEMBLY (See page ES-398)**
12. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
13. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
14. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal (See page IN-43).
15. **INITIALIZE ROTATION ANGLE SENSOR AND CALIBRATE TORQUE SENSOR ZERO POINT**
    HINT:
    (See page PS-13)

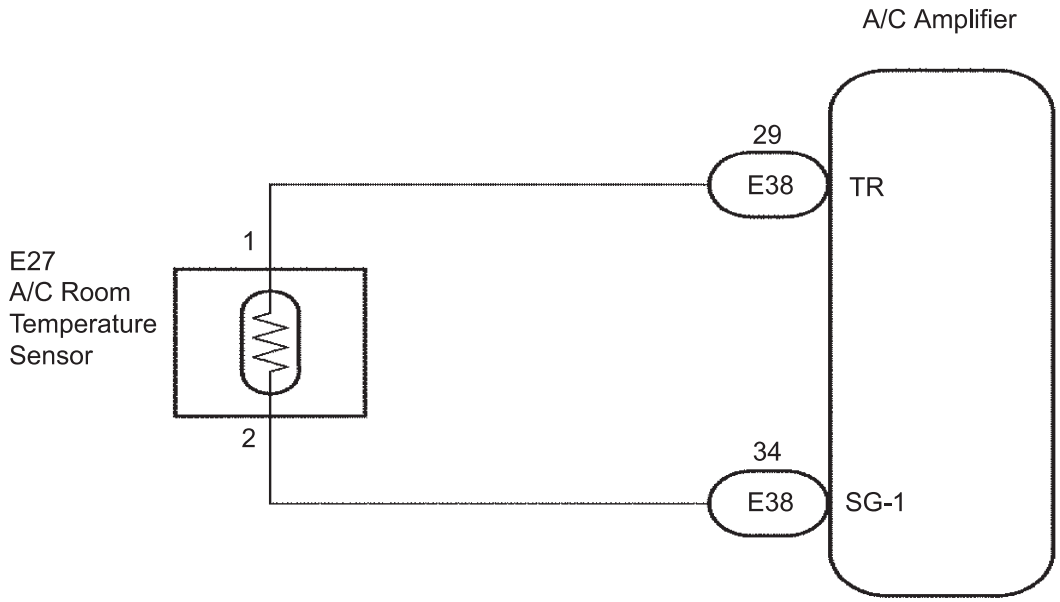
DTC	B1411/11	Room Temperature Sensor Circuit

DESCRIPTION

This sensor detects the cabin temperature that is used as the basis for temperature control and sends a signal to the A/C amplifier.

DTC No.	DTC Detection Condition	Trouble Area
B1411/11	Room temperature sensor circuit (Open or short)	• A/C room temperature sensor • Harness or connector between A/C room temperature sensor and A/C amplifier • A/C amplifier

WIRING DIAGRAM



I008282E06

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.

(c) Select the item below in the DATA LIST, and read the display on the intelligent tester.

DATA LIST / AIR CONDITIONER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ROOM TEMP (Room temperature sensor)	Room temperature sensor / Min.: -6.5°C (20.3°F), Max.: 57.25°C (135.05°F)	Actual cabin temperature is displayed	-

OK:

The display is as specified in the normal condition column.

Result

Result	Proceed to
NG	A
OK (When troubleshooting according to the PROBLEM SYMPTOMS TABLE)	B
OK (When troubleshooting according to the DTC)	C

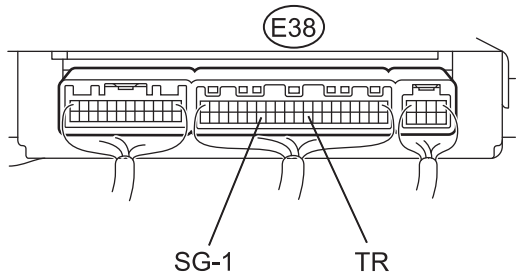
B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

C → REPLACE AIR CONDITIONING AMPLIFIER

A

2 INSPECT AIR CONDITIONING AMPLIFIER

Air Conditioning Amplifier Connector Wire Harness View:



(a) Remove the A/C amplifier with the connectors still connected.

(b) Turn the power switch on (IG).

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-29 (TR) - E38-34 (SG-1)	Power switch on (IG) at 25°C (77°F)	1.35 to 1.75 V
E38-29 (TR) - E38-34 (SG-1)	Power switch on (IG) at 40°C (104°F)	0.9 to 1.2 V

HINT:

As the temperature increases, the voltage decreases.

Result

Result	Proceed to
NG	A
OK (When troubleshooting according to the PROBLEM SYMPTOMS TABLE)	B
OK (When troubleshooting according to the DTC)	C

B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

C → REPLACE AIR CONDITIONING AMPLIFIER

AC

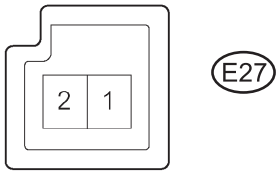
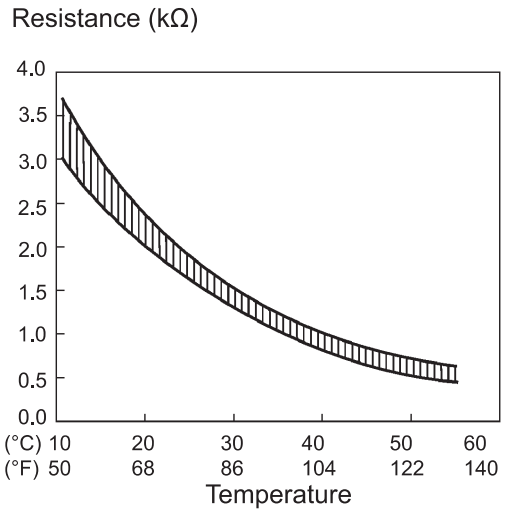
3 INSPECT A/C ROOM TEMPERATURE SENSOR

A/C Room Temperature Sensor Connector Front View:





(a) Remove the A/C room temperature sensor.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E27-1 - E27-2	10°C (50°F)	3.00 to 3.73 kΩ
E27-1 - E27-2	15°C (59°F)	2.45 to 2.88 kΩ
E27-1 - E27-2	20°C (68°F)	1.95 to 2.30 kΩ
E27-1 - E27-2	25°C (77°F)	1.60 to 1.80 kΩ
E27-1 - E27-2	30°C (86°F)	1.28 to 1.47 kΩ
E27-1 - E27-2	35°C (95°F)	1.00 to 1.22 kΩ
E27-1 - E27-2	40°C (104°F)	0.80 to 1.00 kΩ
E27-1 - E27-2	45°C (113°F)	0.65 to 0.85 kΩ
E27-1 - E27-2	50°C (122°F)	0.50 to 0.70 kΩ
E27-1 - E27-2	55°C (131°F)	0.44 to 0.60 kΩ
E27-1 - E27-2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:
- **Hold the sensor only by its connector. Touching the sensor may change the resistance value.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

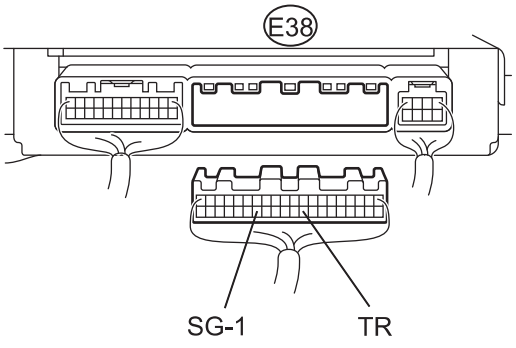
HINT:
As the temperature increases, the resistance decreases (see the graph).

NG → **REPLACE A/C ROOM TEMPERATURE SENSOR**

OK

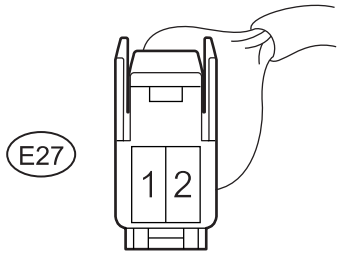
4	CHECK HARNESS AND CONNECTOR (A/C ROOM TEMPERATURE SENSOR - AIR CONDITIONING AMPLIFIER)

A/C Amplifier Connector Wire Harness View:



(a) Disconnect the connector from the A/C amplifier.

A/C Room Temperature Sensor Connector Front View:



(b) Disconnect the connector from the A/C room temperature sensor.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E38-29 (TR) - E27-1	Always	Below 1 Ω
E38-34 (SG-1) - E27-2	Always	Below 1 Ω
E38-29 (TR) - Body ground	Always	10 kΩ or higher
E38-34 (SG-1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE AIR CONDITIONING AMPLIFIER

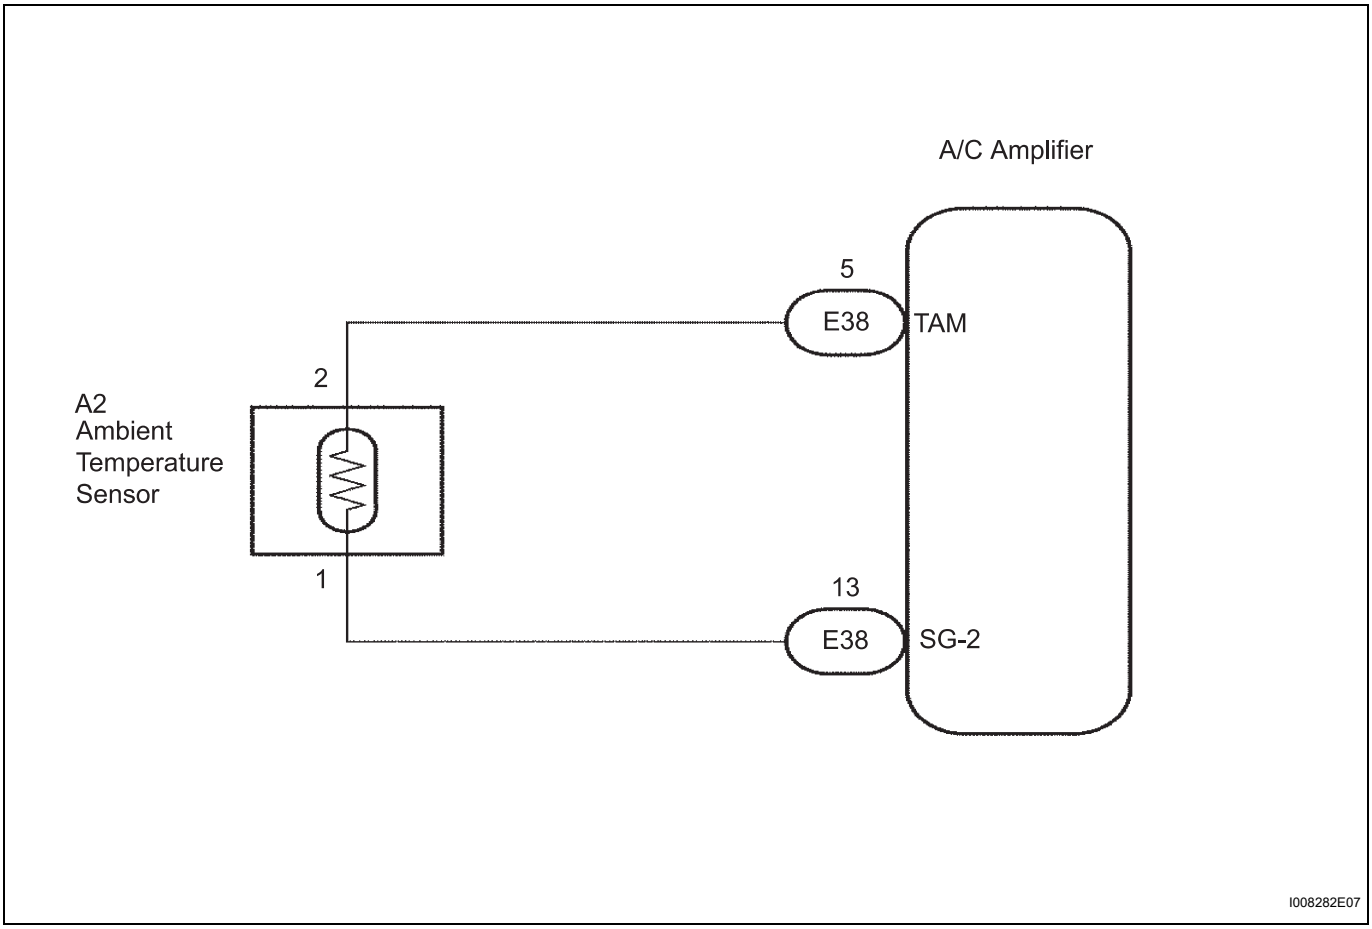
DTC	B1412/12	Ambient Temperature Sensor Circuit

DESCRIPTION

The ambient temperature sensor is installed in front of the condenser to detect the ambient temperature which is used to control the air conditioner "AUTO" mode. This sensor is connected to the A/C amplifier and detects fluctuations in the ambient temperature. This data is used for controlling the cabin temperature. The sensor sends a signal to the A/C amplifier. The resistance of the ambient temperature sensor changes in accordance with the ambient temperature. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.
The A/C amplifier applies voltage (5 V) to the ambient temperature sensor and reads voltage changes as the resistance of the ambient temperature sensor changes.

DTC No.	DTC Detection Condition	Trouble Area
B1412/12	Open or short in ambient temperature sensor circuit	• Ambient temperature sensor • Harness or connector between ambient temperature sensor and A/C amplifier • A/C amplifier

WIRING DIAGRAM



INSPECTION PROCEDURE

AC

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the DATA LIST, and read the display on the intelligent tester.

DATA LIST / AIR CONDITIONER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
AMBI TEMP SENS (Ambient temperature sensor)	Ambient temperature sensor / Min: -23.3°C (-9.94°F), Max: 65.95°C (150.71°F)	Actual ambient temperature is displayed	Open in circuit: -23.3°C (-9.94°F) Short in circuit: 65.95°C (150.71°F)

OK:
The display is as specified in the normal condition column.

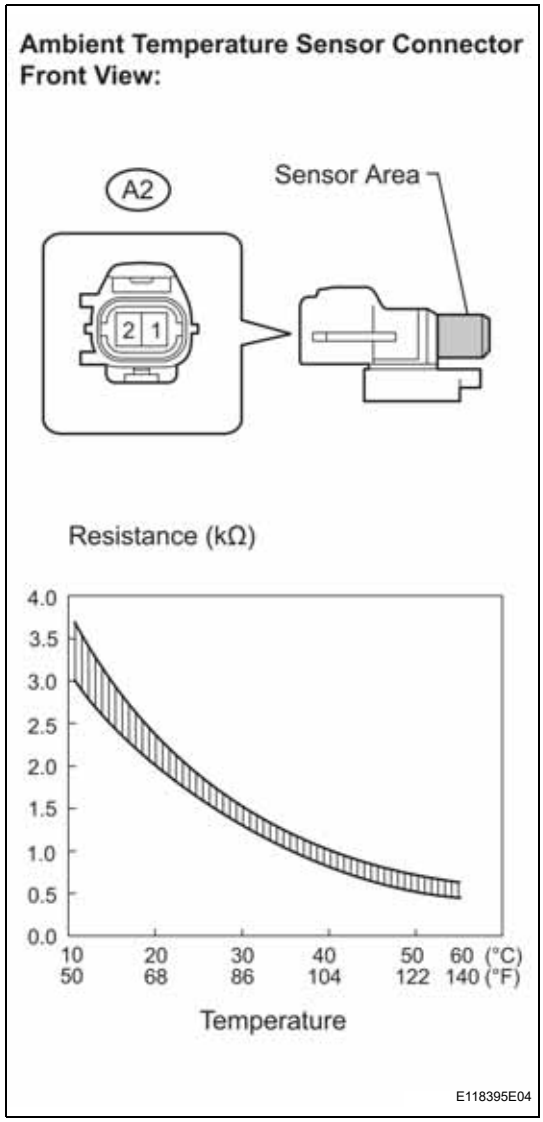
3	INSPECT AMBIENT TEMPERATURE SENSOR



(a) Remove the ambient temperature sensor.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A2-1 - A2-2	10°C (50°F)	3.00 to 3.73 kΩ
A2-1 - A2-2	15°C (59°F)	2.45 to 2.88 kΩ
A2-1 - A2-2	20°C (68°F)	1.95 to 2.30 kΩ
A2-1 - A2-2	25°C (77°F)	1.60 to 1.80 kΩ
A2-1 - A2-2	30°C (86°F)	1.28 to 1.47 kΩ
A2-1 - A2-2	35°C (95°F)	1.00 to 1.22 kΩ
A2-1 - A2-2	40°C (104°F)	0.80 to 1.00 kΩ
A2-1 - A2-2	45°C (113°F)	0.65 to 0.85 kΩ
A2-1 - A2-2	50°C (122°F)	0.50 to 0.70 kΩ
A2-1 - A2-2	55°C (131°F)	0.44 to 0.60 kΩ
A2-1 - A2-2	60°C (140°F)	0.36 to 0.50 kΩ

NOTICE:

- **Even slightly touching the sensor may change the resistance value. Be sure to hold the connector of the sensor.**
- **When measuring, the sensor temperature must be the same as the ambient temperature.**

HINT:

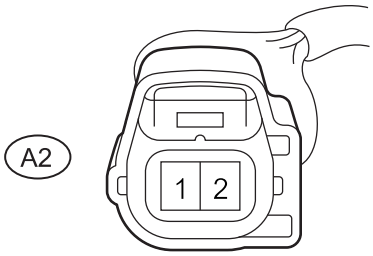
As the temperature increases, the resistance decreases (see the graph).

NG → **REPLACE AMBIENT TEMPERATURE SENSOR**

OK

4	CHECK HARNESS AND CONNECTOR (AMBIENT TEMPERATURE SENSOR - A/C AMPLIFIER)

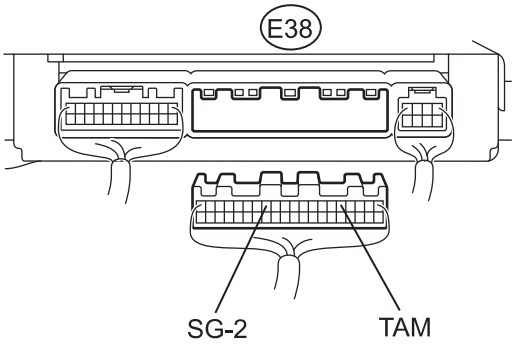
Ambient Temperature Sensor Connector Front View:



H E124473E02

(a) Disconnect the ambient temperature sensor connector.

Air Conditioning Amplifier Connector Wire Harness View:



H E124470E03

REPLACE AIR CONDITIONING AMPLIFIER

DTC	B1413/13	Evaporator Temperature Sensor Circuit

DESCRIPTION

The evaporator temperature sensor (A/C thermistor) is installed on the evaporator in the air conditioning unit. It detects the temperature of the cooled air that has passed through the evaporator and its signal is used to control the air conditioning. It sends a signal to the A/C amplifier. The resistance of the evaporator temperature sensor (A/C thermistor) changes in accordance with the temperature of the cooled air that has passed through the evaporator. As the temperature decreases, the resistance increases. As the temperature increases, the resistance decreases.
The A/C amplifier applies voltage (5 V) to the evaporator temperature sensor (A/C thermistor) and reads voltage changes as the resistance of the evaporator temperature sensor (A/C thermistor) changes. This sensor is used to prevent the evaporator from freezing.

DTC No.	DTC Detection Condition	Trouble Area
B1413/13	Open or short in evaporator temperature sensor circuit	• Evaporator temperature sensor • Air conditioning harness • A/C amplifier

OK

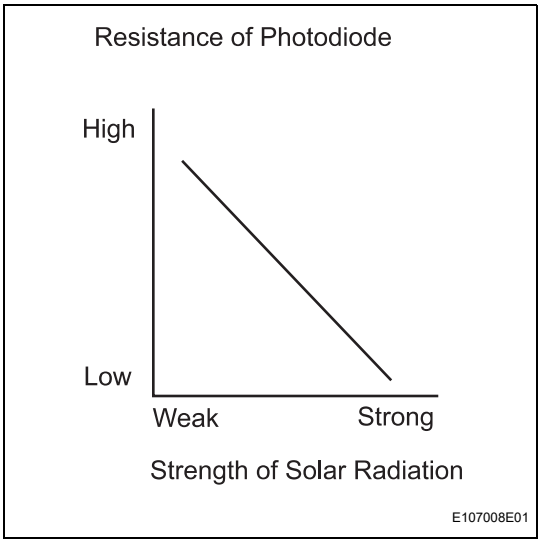
REPLACE AIR CONDITIONING AMPLIFIER

DTC	B1421/21	Solar Sensor Circuit (Passenger Side)

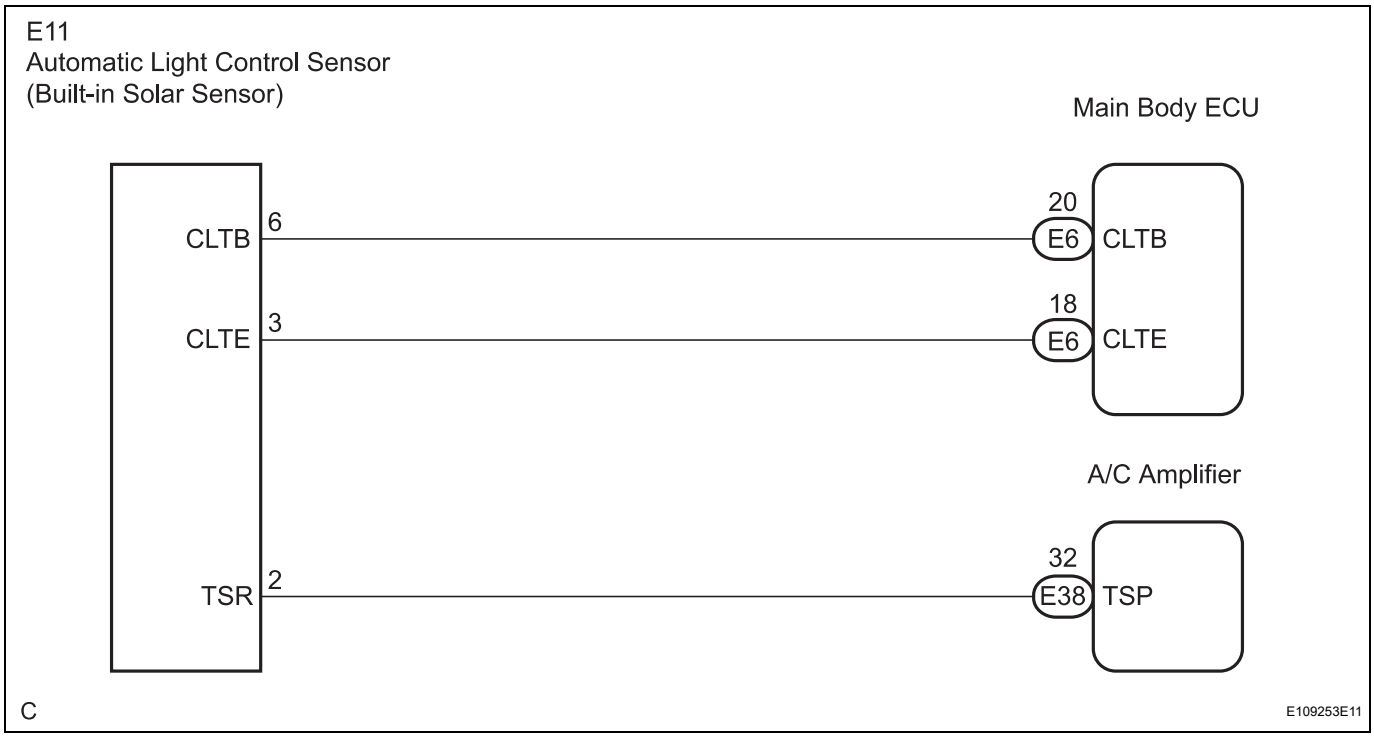
DESCRIPTION



The solar sensor, which is installed on the upper side of the instrument panel, detects sunlight and controls the air conditioning in AUTO mode. The output voltage from the solar sensor varies according to the amount of sunlight. When the sunlight increases, the output voltage increases. As the sunlight decreases, the output voltage decreases. The A/C amplifier detects voltage output from the solar sensor.

DTC No.	DTC Detection Condition	Trouble Area
B1421/21	Open or short in passenger side solar sensor circuit	• Solar sensor • Harness or connector between solar sensor and A/C amplifier • Harness or connector between solar sensor and main body ECU • A/C amplifier • Main body ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If DTC B1244 is output at the same time, troubleshoot DTC B1244 first (See page LI-23).
- If the check is performed in a dark place, DTC B1421/21 or B1424/24 (solar sensor circuit abnormal) may be output even though the system is normal.

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Expose the sensing portion of the solar sensor to light.
HINT:
Use an incandescent light for inspection.
(d) Select the item below in the DATA LIST, and read the display on the intelligent tester.

DATA LIST / AIR CONDITIONER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
SOLAR SENS-P (Solar sensor (P side))	Passenger side solar sensor / Min.: 0, Max.: 255	Passenger side solar sensor value increases as brightness increases	-

OK:

The display is as specified in the normal condition column.

Result

Result	Proceed to

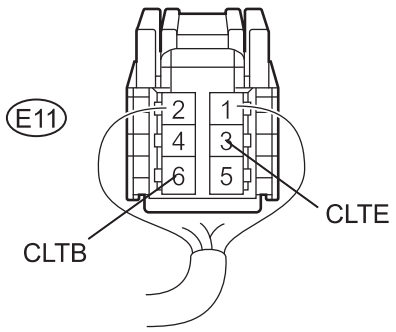
2 CHECK HARNESS AND CONNECTOR (SOLAR SENSOR)

A/C Solar Sensor Connector Wire Harness View:



H E124476E02

(a) Disconnect the solar sensor connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

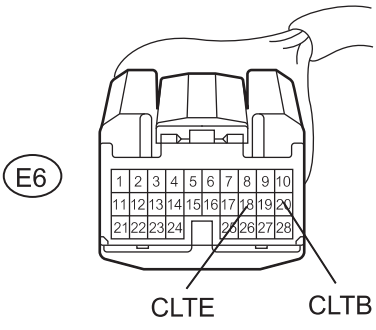
Tester Connection (Symbols)	Condition	Specified Condition
E11-6 (CLTB) - E11-3 (CLTE)	Power switch off	Below 1 V
E11-6 (CLTB) - E11-3 (CLTE)	Power switch on (IG)	10 to 14 V

OK → Go to step 4

NG

3 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - SOLAR SENSOR)

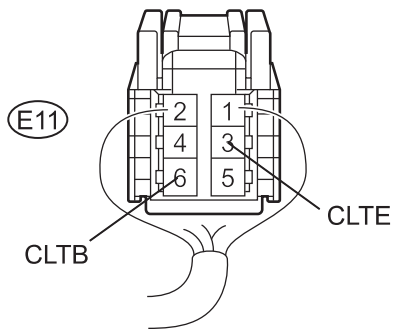
Main Body ECU Connector Front View:



H E124475E02

(a) Disconnect the main body ECU connector.

A/C Solar Sensor Connector Wire Harness View:



H E124476E02

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E6-20 (CLTB) - E11-6 (CLTB)	Always	Below 1 Ω
E6-18 (CLTE) - E11-3 (CLTE)	Always	Below 1 Ω
E6-20 (CLTB) - Body ground	Always	10 kΩ or higher
E6-18 (CLTE) - Body ground	Always	10 kΩ or higher

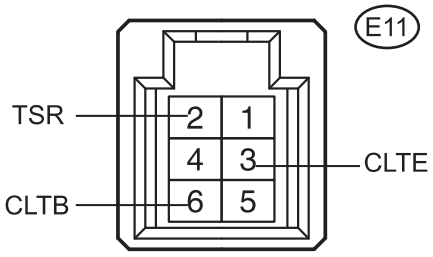
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE MAIN BODY ECU

4 CHECK SOLAR SENSOR

Solar Sensor Connector Front View:



P E109215E12

(a) Remove the solar sensor with its connector still connected.

(b) Connect the positive (+) lead from the battery to terminal 6 (CLTB), and the negative (-) lead to terminal 3 (CLTE) of the solar sensor.

(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E11-2 (TSR) - E11-3 (CLTE)	Sensor is subjected to electric light	0.8 to 4.3 V
E11-2 (TSR) - E11-3 (CLTE)	Sensor is covered with a cloth	Below 0.8 V

NOTICE:

- **The connection procedure for using a digital tester such as a TOYOTA electrical tester is shown above. When using an analog tester, connect the negative (-) lead to terminal 6, and the positive (+) lead to terminal 3 of the solar sensor.**
- **While using the battery during inspection, do not bring the positive and negative tester probes too close to each other as a short circuit may occur.**

HINT:

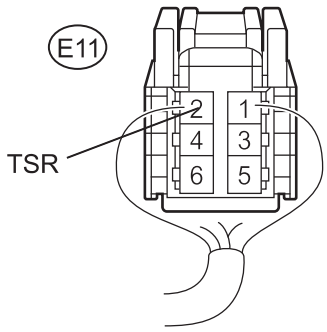
- Use an incandescent light for inspection. Bring it within about 30 cm (11.8 in.) of the solar sensor.
- As the inspection light is moved away from the sensor, the voltage increases.

NG → REPLACE SOLAR SENSOR

OK

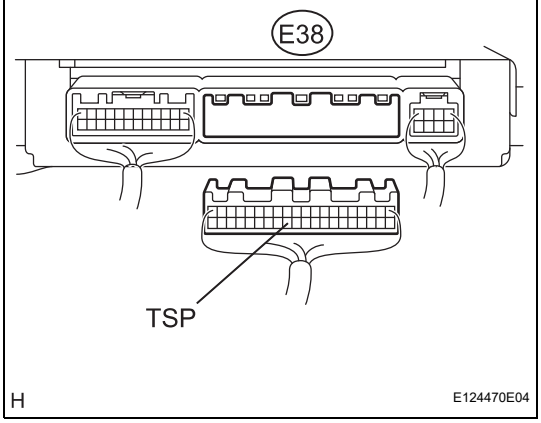
5 CHECK HARNESS AND CONNECTOR (SOLAR SENSOR - A/C AMPLIFIER)

A/C Solar Sensor Connector Wire Harness View:



(a) Disconnect the solar sensor connector.

Air Conditioning Amplifier Connector Wire Harness View:



(b) Disconnect the A/C amplifier connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E38-32 (TSP) - E11-2 (TSR)	Always	Below 1 Ω
E38-32 (TSP) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE AIR CONDITIONING AMPLIFIER

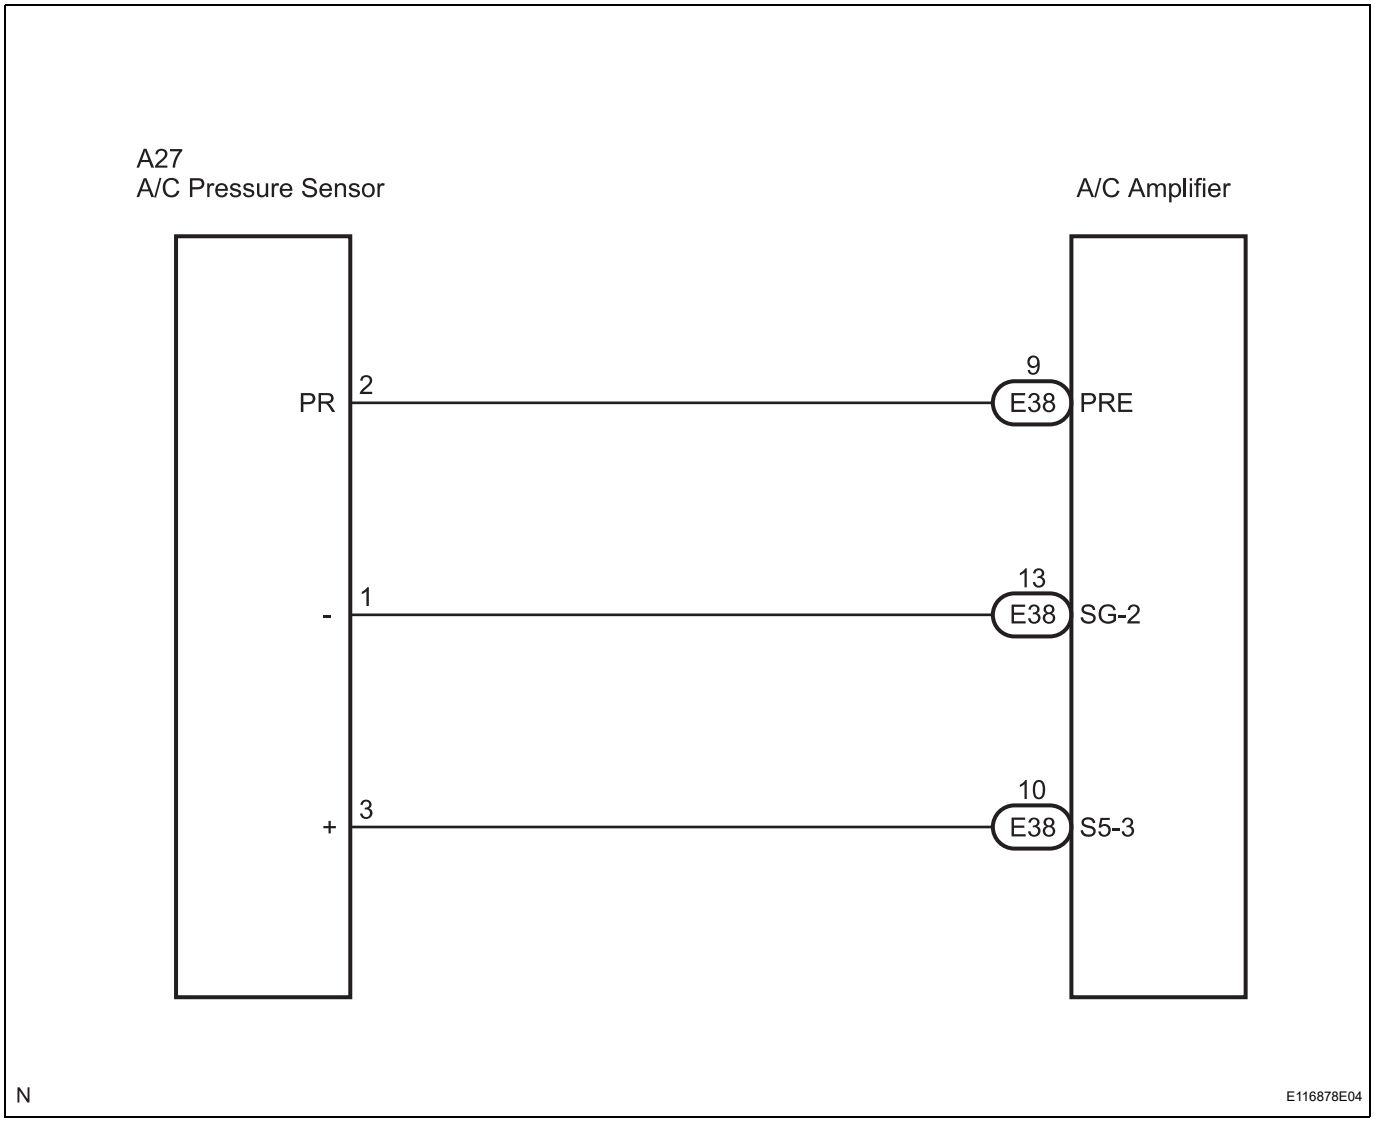
DTC	B1423/23	Pressure Sensor Circuit

DESCRIPTION

This DTC is output when refrigerant pressure is extremely low (0.19 MPa (2.0 kgf/cm^2, 28 psi) or less) or extremely high (3.14 MPa (32.0 kgf/cm^2, 455 psi) or more). The A/C pressure sensor, which is installed on the pipe of the high pressure side to detect refrigerant pressure, outputs a refrigerant pressure signal to the A/C amplifier. The A/C amplifier converts this signal to pressure according to the sensor characteristics to control the compressor.
HINT:
Be sure to check the refrigerant volume first when this DTC is output because this DTC can also be output if there is no refrigerant in the system.

DTC No.	DTC Detection Condition	Trouble Area
B1423/23	Open or short in pressure switch circuit	• A/C pressure sensor • Harness or connector between A/C pressure sensor and A/C amplifier • Refrigerant pipe line • A/C amplifier

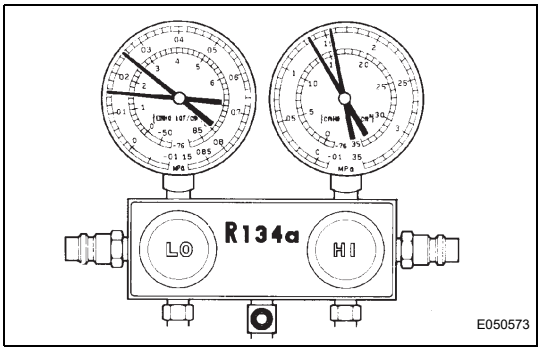
WIRING DIAGRAM



AC

INSPECTION PROCEDURE

1	CHECK REFRIGERANT PRESSURE



(a) Install the manifold gauge set (See page AC-165).
(b) Read the manifold gauge pressure when the following conditions are established.
  (1) Prepare the vehicle according to the chart below.

Item	Condition
Vehicle Doors	All fully open
Engine speed	1,500 rpm
Temperature Setting	MAX COLD
Blower Speed	HI
A/C switch	ON
R/F Switch	RECIRCULATION (30 to 35°C (86 to 95°F))

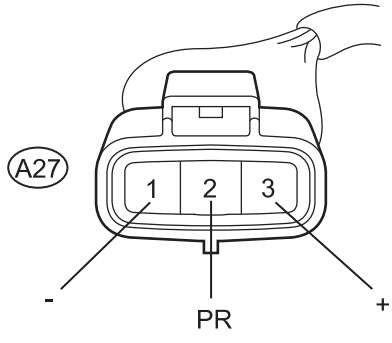
Standard pressure:
Low pressure side:
0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm^2, 21.3 to 35.6 psi)
High pressure side:
1.37 to 1.57 MPa (14 to 16 kgf/cm^2, 199 to 228 psi)

NG → **CHARGE REFRIGERANT**

OK

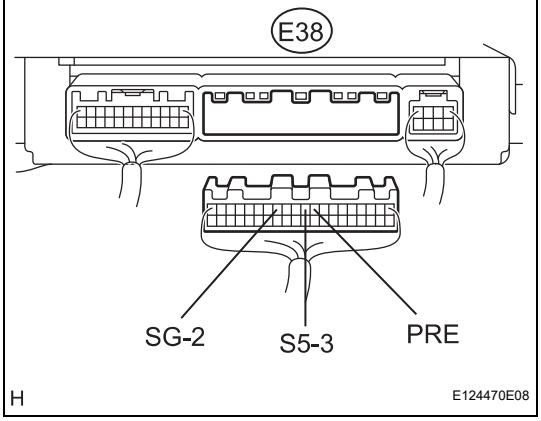
2	CHECK HARNESS AND CONNECTOR (A/C PRESSURE SENSOR - A/C AMPLIFIER)

A/C Pressure Sensor Connector Front View:



(a) Disconnect the A/C pressure sensor connector.

Air Conditioning Amplifier Connector Wire Harness View:



(b) Disconnect the A/C amplifier connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

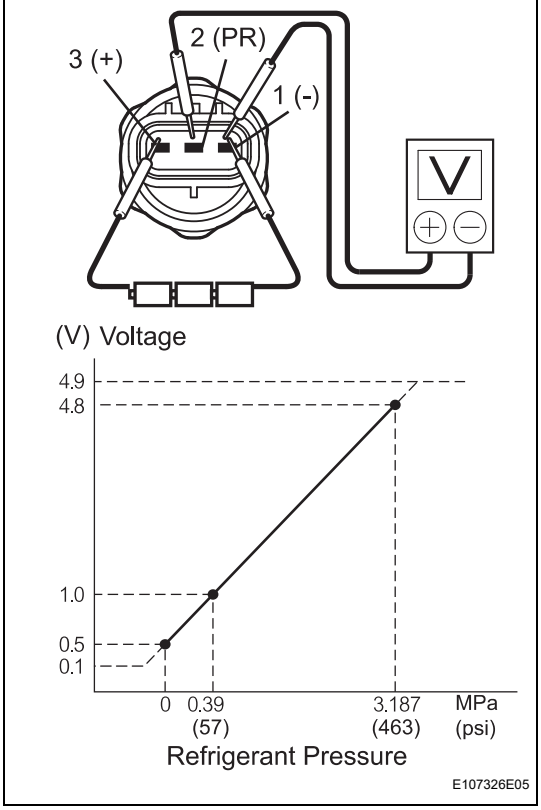
Tester Connection (Symbols)	Condition	Specified Condition
A27-2 (PR) - E38-9 (PRE)	Always	Below 1 Ω
A27-3 (+) - E38-10 (S5-3)	Always	Below 1 Ω
A27-1 (-) - E38-13 (SG-2)	Always	Below 1 Ω
E38-9 (PRE) - Body ground	Always	10 kΩ or higher
E38-10 (S5-3) - Body ground	Always	10 kΩ or higher
E38-13 (SG-2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 INSPECT A/C PRESSURE SENSOR

A/C Pressure Sensor Connector Front View:



(a) Install the manifold gauge set (See page AC-165).
(b) Connect the three 1.5 V dry cell batteries' positive (+) lead to terminal 3, and the negative (-) lead to terminal 1. Then connect the voltmeter's positive (+) lead to terminal 2, and the negative (-) lead to terminal 1. Measure the voltage.

OK:

The voltage changes according to refrigerant pressure, as shown in the graph.

Result

Result	Proceed to
NG	A
OK (When troubleshooting according to the DTC)	B

2	REPLACE AIR OUTLET CONTROL SERVO MOTOR

(a) Replace the air outlet control servo motor.
HINT:
Since the servo motor cannot be inspected while it is removed from the vehicle, replace the servo motor with a normal one and check that the condition returns to normal.
(b) Check for DTCs.
Result

Result	Proceed to
DTC B1443/43 is output	A
DTC B1443/43 is not output	B

B → **END**

A

REPLACE AIR CONDITIONING HARNESS

DTC	B1446/46	Air Mix Damper Control Servo Motor Circuit (Driver Side)

DESCRIPTION

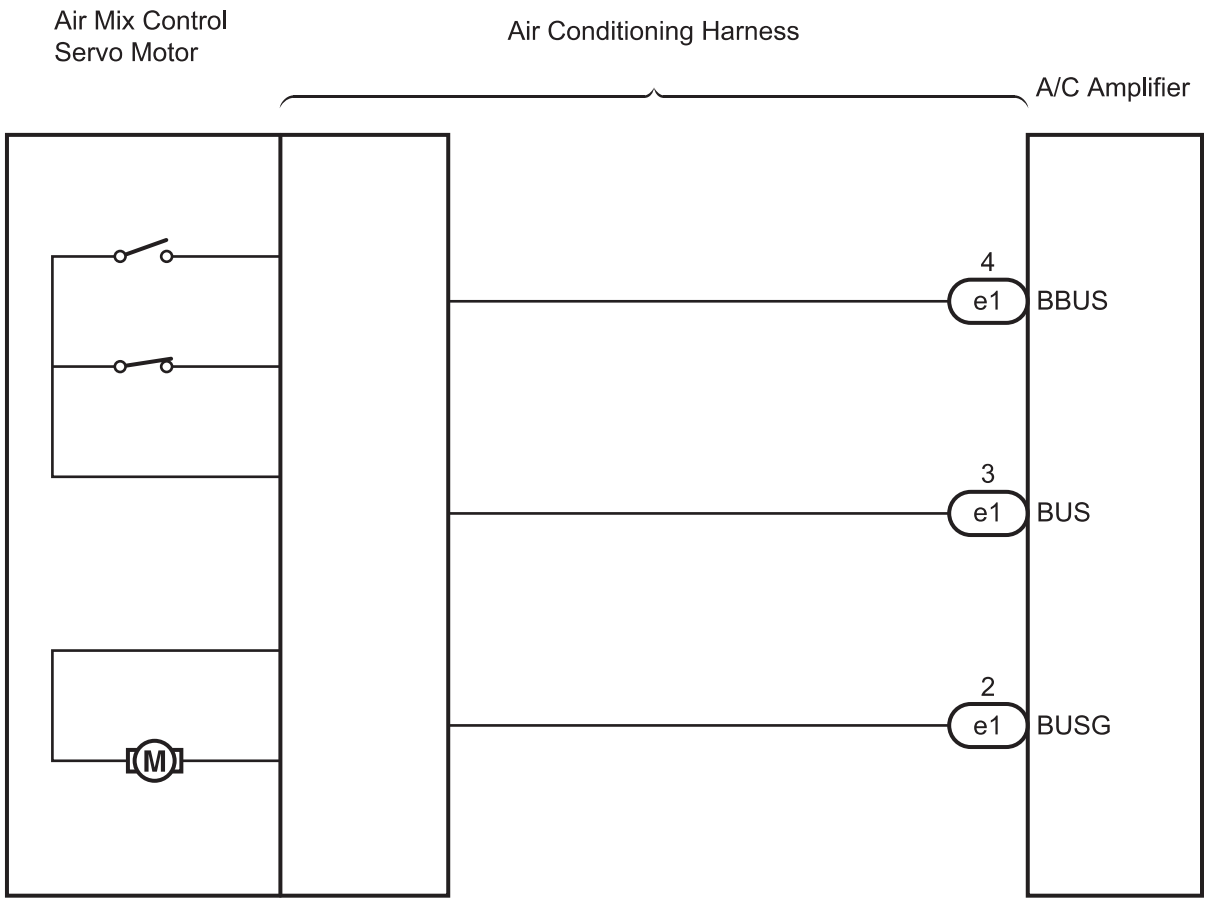
The air mix damper servo sends pulse signals to inform the air conditioning amplifier of the damper position. The air conditioning amplifier activates the motor (normal, reverse) based on the signals to move the air mix damper (driver seat) to any position. As a result, the amount of air passing through the heater core after passing through the evaporator is adjusted, and the temperature of the air blowing toward the driver seat side is controlled.

HINT:

Confirm that no mechanical problem is present because this diagnostic code can be output when either a damper link or damper is mechanically locked.

DTC No.	DTC Detection Condition	Trouble Area
B1446/46	Air mix damper position sensor value does not change even if air conditioning amplifier operates air mix control servo motor	• Air mix control servo motor • Air conditioning harness • A/C amplifier

WIRING DIAGRAM



AC

INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Operate the driver side temperature adjustment switch.
(d) Select the item below in the DATA LIST, and read the display on the intelligent tester.

DATA LIST / AIR CONDITIONER:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
AIR MIX PULSE-D (Air mix servomotor target pulse (D side))	Driver side air mix servo motor target pulse / Min.: 0, Max.: 255	MAX COLD: 5 (pulse) MAX HOT: 103 (pulse)	-

OK:
The display is as specified in the normal condition column.

Result

Result	Proceed to
NG	A
OK (When troubleshooting according to the PROBLEM SYMPTOMS TABLE)	B
OK (When troubleshooting according to the DTC)	C

B → PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

C → REPLACE AIR CONDITIONING AMPLIFIER

A

2	REPLACE AIR MIX CONTROL SERVO MOTOR

(a) Replace the air mix control servo motor.
HINT:
Since the servo motor cannot be inspected while it is removed from the vehicle, replace the servo motor with a normal one and check that the condition returns to normal.
(b) Check for DTCs.
Result

Result	Proceed to
DTC B1446/46 is output	A
DTC B1446/46 is not output	B

B → END

A

REPLACE AIR CONDITIONING HARNESS

AC

DTC	B1471/71	A/C Inverter High Voltage Power Resource System Malfunction

DESCRIPTION

The A/C inverter assembly monitors power voltage from the main battery in the circuit. It stops compressor control and outputs the DTC when the monitored voltage is outside the specified range. The output DTC is memorized as previous trouble. Compressor control may not resume unless the power switch is turned off.

CAUTION:

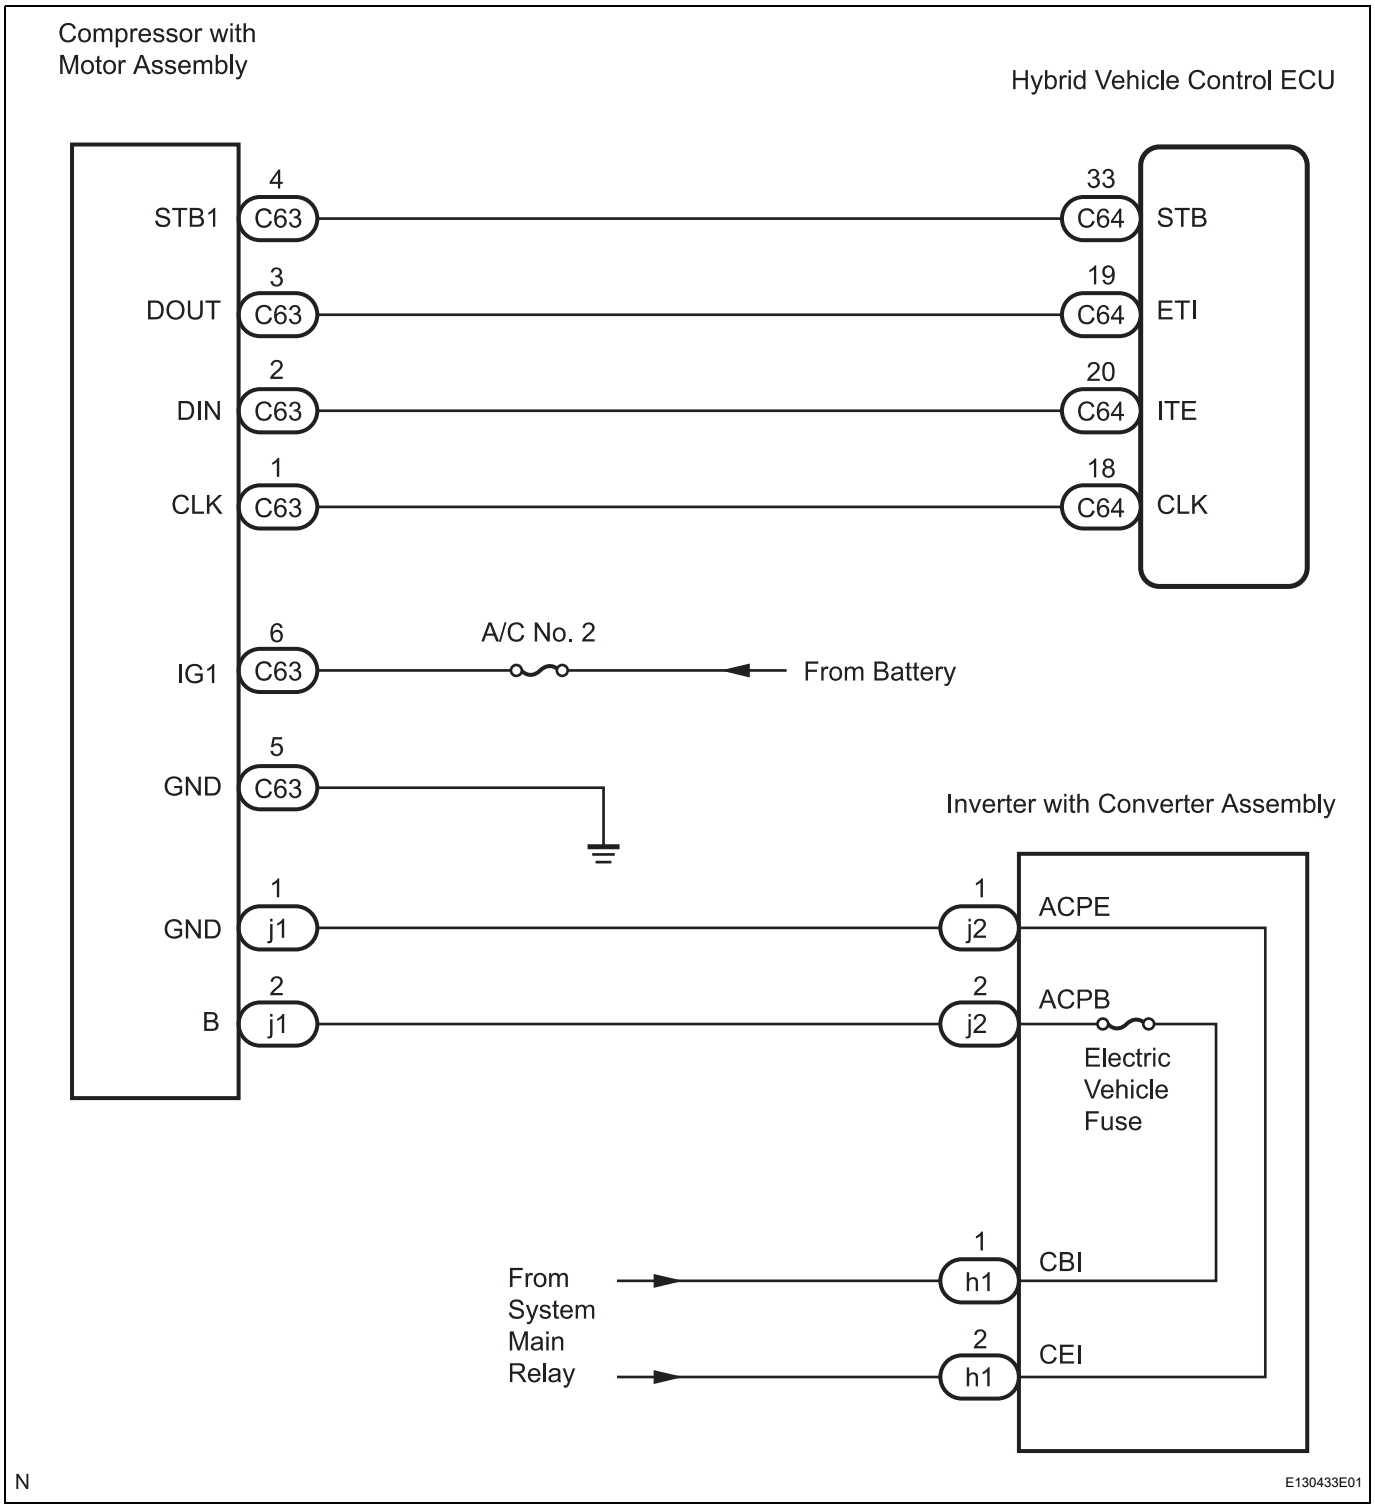
- **Wear electrically insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors. Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

NOTICE:

The hybrid control system and air conditioning system output DTCs separately. Inspect DTCs following the flow chart for the hybrid control system first if any DTCs from those systems are output simultaneously.

DTC No.	DTC Detection Condition	Trouble Area
B1471/71	• Open or short in A/C inverter high voltage power resource system. • The boost pressure system is broken or malfunctioning.	• Harness or connector between compressor with motor assembly and inverter with converter assembly • Compressor with motor assembly • Hybrid control system • Inverter with converter assembly • CAN communication system

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Wear electrically insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors. Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

1	CHECK CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

A

2	CHECK DIAGNOSTIC TROUBLE CODE (HYBRID CONTROL SYSTEM)

(a) Check if DTCs for the hybrid control system are output using the intelligent tester.
OK:
Hybrid control system DTCs are not output.

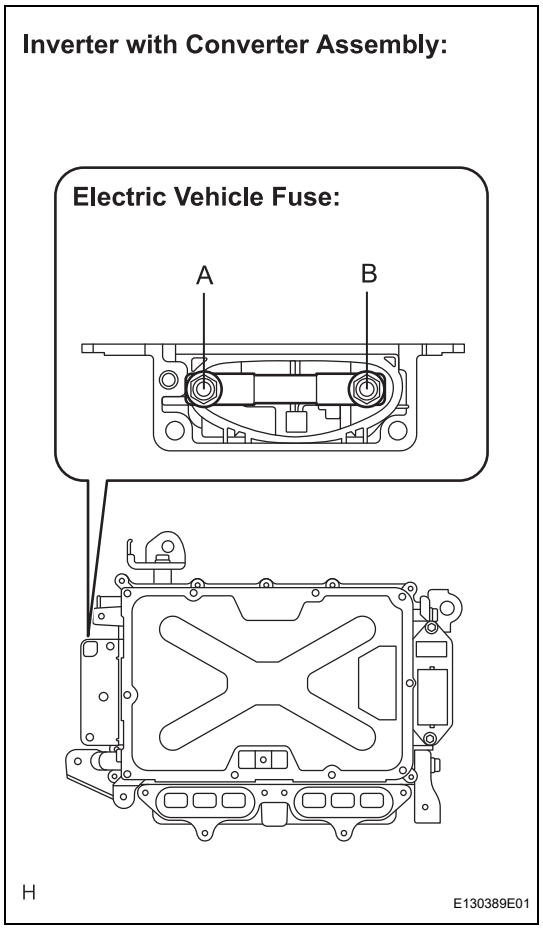
NG → **GO TO HYBRID CONTROL SYSTEM (See page HV-15)**

OK

3	INSPECT ELECTRIC VEHICLE FUSE

(a) Turn the power switch off.
(b) Remove the service plug grip.
CAUTION:
- **Be sure to wear insulated gloves.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

NOTICE:
Do not start the engine with the service plug grip removed because it may cause a malfunction.
(c) Remove the connector cover assembly.
CAUTION:
Be sure to wear insulated gloves.
NOTICE:
Be sure to prevent foreign objects or water from entering the inverter with converter assembly.



(d) Check that bolts A and B are tightened securely.
(e) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Item (Tester Connection)	Condition	Specified Condition
ELECTRIC VEHICLE fuse (A - B)	Always	Below 1 Ω

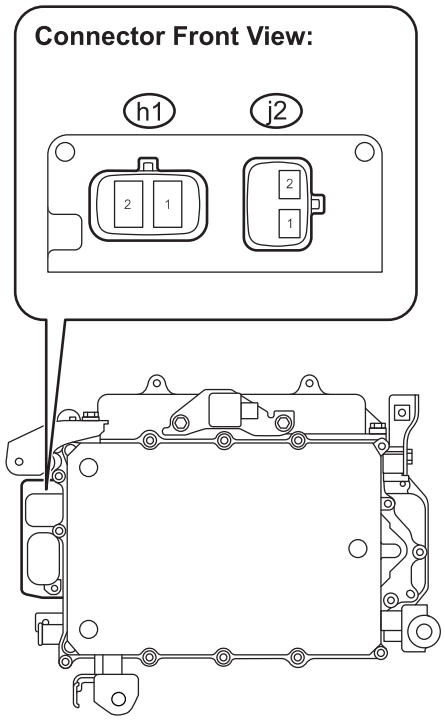
NG → REPLACE ELECTRIC VEHICLE FUSE

OK

4	INSPECT INVERTER WITH CONVERTER ASSEMBLY

CAUTION:
- **Be sure to wear insulated gloves.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

Inverter with Converter Assembly:



(a) Disconnect the connector from the inverter with converter assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
j2-1 (ACPE) - h1-2 (CEI)	Always	Below 1 Ω
j2-2 (ACPB) - h1-1 (CBI)	Always	Below 1 Ω

NG → **REPLACE INVERTER WITH CONVERTER ASSEMBLY**

OK

(a) Disconnect the connector from engine wire No. 4.
CAUTION:
Be sure to wear insulated gloves.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
j1-1 (GND) - j2-1 (ACPE)	Always	Below 1 Ω
j1-2 (B) - j2-2 (ACPB)	Always	Below 1 Ω
j1-1 (GND) - j1-2 (B)	Always	10 kΩ or higher

NG → **REPLACE ENGINE WIRE NO. 4**

OK

REPLACE COMPRESSOR WITH MOTOR ASSEMBLY

DTC	B1472/72	A/C Inverter High Voltage Output System Malfunction

DESCRIPTION

The inverter in the compressor with motor assembly outputs high-voltage to operate the motor. If there is an open or short in the output circuit, the ECU will stop compressor operation and output the DTC. The output DTC will be memorized as a past DTC. The compressor operation remains stopped until both the past and present DTCs are cleared.

CAUTION:

- **Wear electrically insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors. Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

DTC No.	DTC Detection Condition	Trouble Area
B1472/72	Open or short in A/C inverter high voltage output system.	• Compressor with motor assembly • CAN communication system

INSPECTION PROCEDURE

CAUTION:

- **Wear electrically insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors. Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

1	CHECK CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.

2 CHECK DIAGNOSTIC TROUBLE CODE

(a) Check if DTCs for the air conditioning system and the hybrid control system are output using the intelligent tester.

Result

Result	Proceed to
Only DTC B1473 is output	A
DTCs B1473 and P3108 are output simultaneously (B1498 is not output)	
DTCs B1473 and B1498 are output simultaneously (P3108 is not output)	B
DTCs B1473, B1498 and P3108 are output simultaneously	
DTCs other than P3108 are output for hybrid control system	C

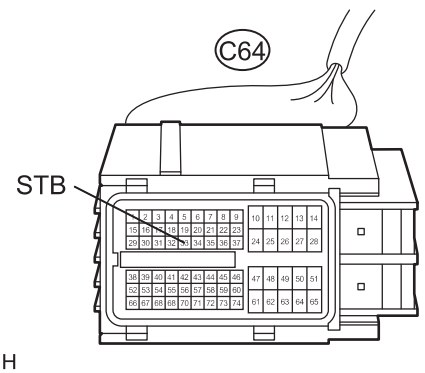
B → GO TO DTC B1498/98 (See page AC-112)

C → GO TO HYBRID CONTROL SYSTEM (See page HV-15)

A

3 CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - COMPRESSOR WITH MOTOR ASSEMBLY)

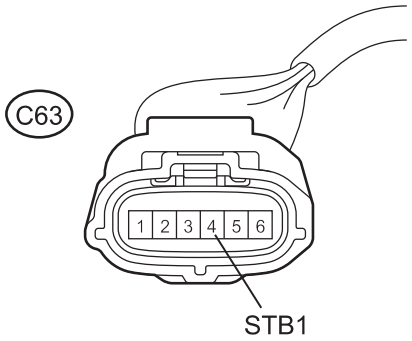
Hybrid Vehicle Control ECU Connector Front View:



(a) Disconnect the connector from the hybrid vehicle control ECU.

AC

Compressor with Motor Assembly Connector Front View:



(b) Disconnect the connector from the compressor with motor assembly.
CAUTION:
Do not disconnect the connector on the high-voltage side.

(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

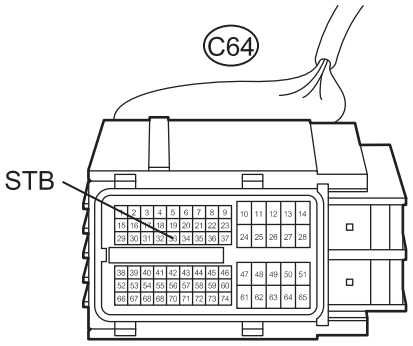
Tester Connection (Symbols)	Condition	Specified Condition
C64-33 (STB) - C63-4 (STB1)	Always	Below 1 Ω
C64-33 (STB) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 INSPECT COMPRESSOR WITH MOTOR ASSEMBLY

Hybrid Vehicle Control ECU Connector Front View:



(a) Reconnect the connector to the compressor with motor assembly.

(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
C64-33 (STB) - Body ground	Power switch on (IG)	10 to 14 V
C64-33 (STB) - Body ground	Power switch off	Below 1 V

NG → **REPLACE COMPRESSOR WITH MOTOR ASSEMBLY**

OK

REPLACE HYBRID VEHICLE CONTROL ECU

DTC	B1474/74	A/C Inverter Malfunction

DESCRIPTION

DTC No.	DTC Detecting Condition	Trouble Area
B1474/74	A/C inverter malfunction	• Compressor with motor assembly • CAN communication system

INSPECTION PROCEDURE

CAUTION:

- **Wear electrically insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors. Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

1	CHECK CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

REPLACE COMPRESSOR WITH MOTOR ASSEMBLY

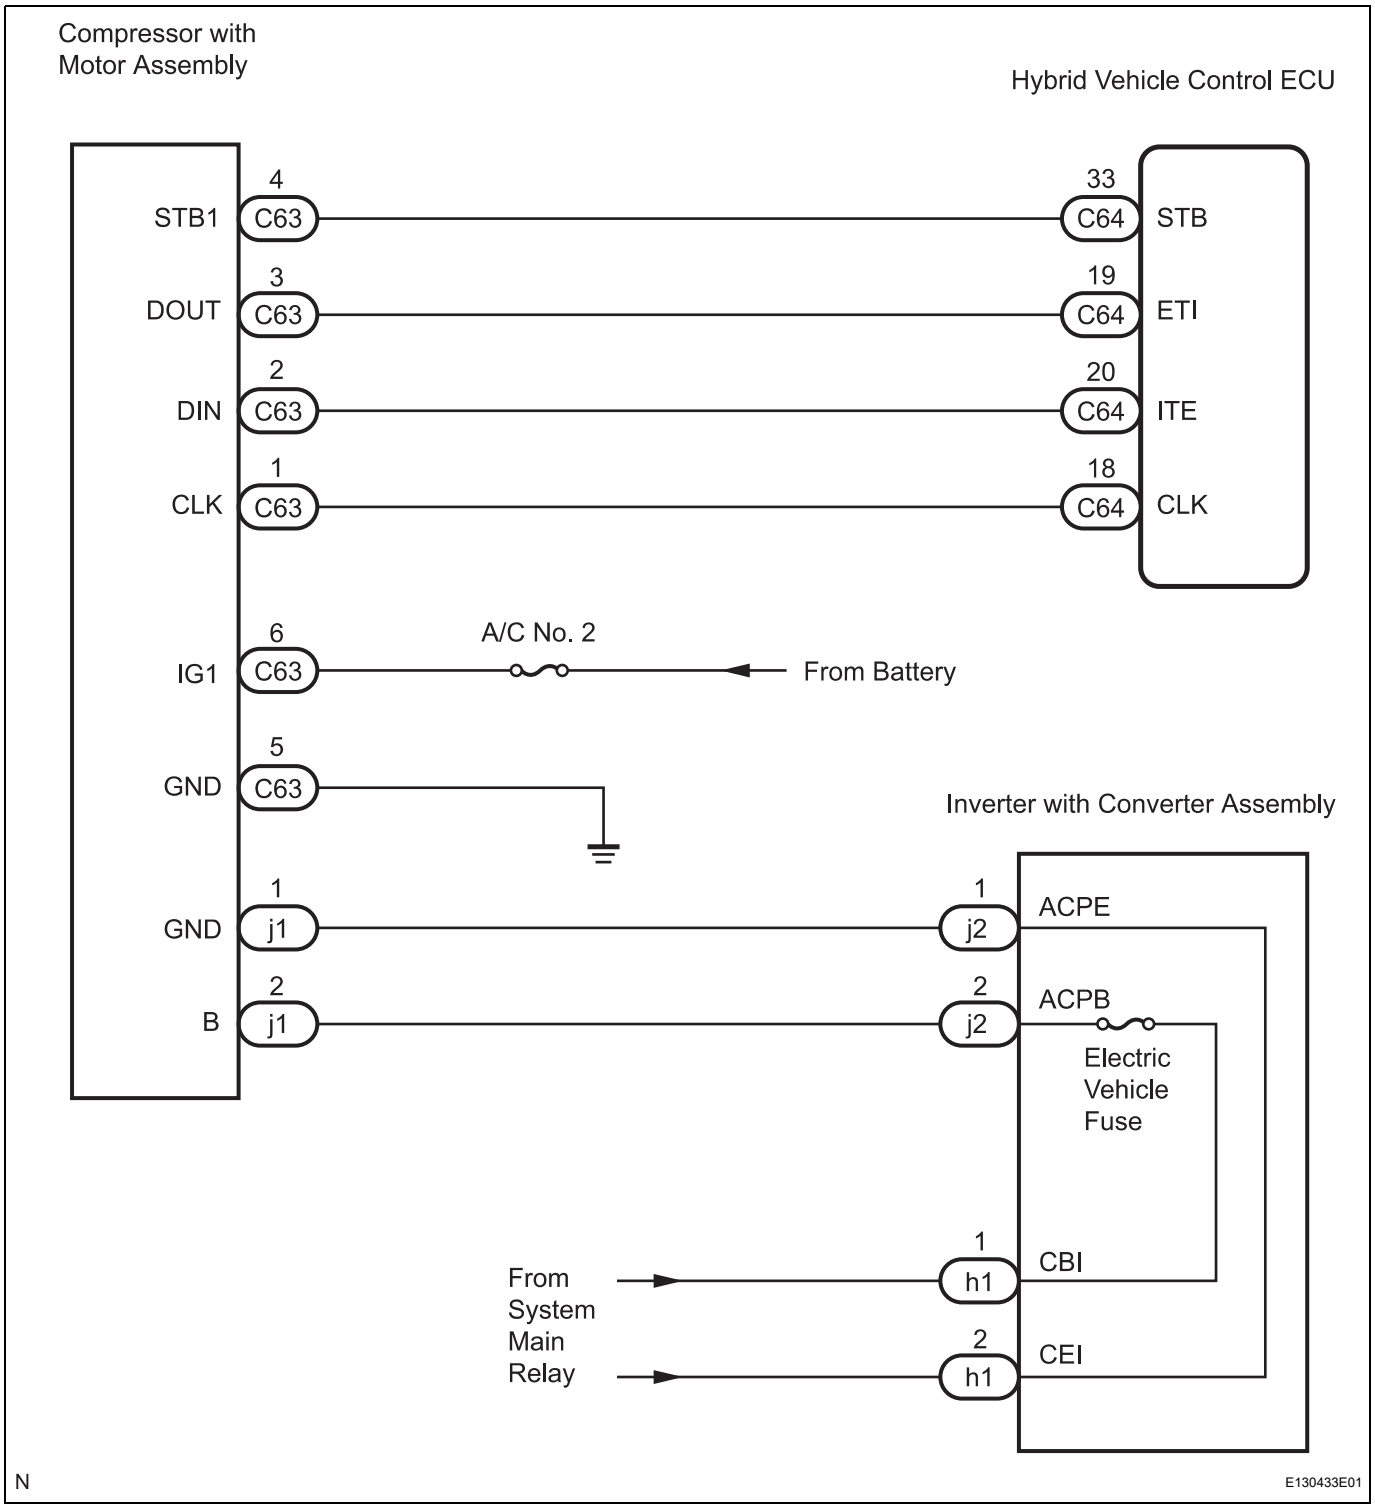
DTC	B1475/75	A/C Inverter Cooling / Heating System Malfunction

DESCRIPTION

The temperature sensor of the compressor with motor assembly detects inverter temperature.
If the temperature exceeds the maximum, the compressor with motor assembly stops compressor operation, and this DTC will be output.

DTC No.	DTC Detection Condition	Trouble Area
B1475/75	Cooling water temperature in the inverter is outside the specified range (temperature is too high), or there is an open or short to ground in the temperature sensor circuit.	• Cooling fan system • Refrigerant volume • Compressor with motor assembly • CAN communication system

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**CHECK CAN COMMUNICATION SYSTEM**

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.

AC

Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

A

2 PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the fan operates.

ACTIVE TEST / AIR CONDITIONER:

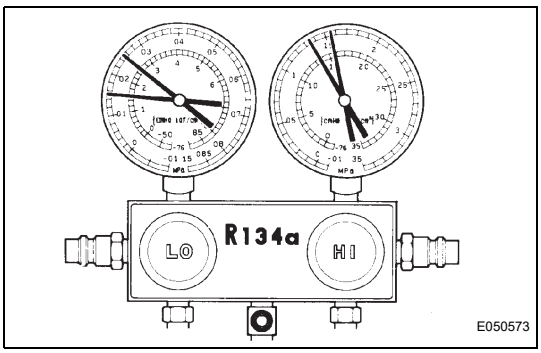
Tester Display	Test Part	Control Range
ELECTRICAL FAN (Electrical fan)	Electrical fan/OFF, ON	-

OK:
Electrical fan operates smoothly.

NG → **GO TO COOLING FAN SYSTEM (See page CO-3)**

OK

3 CHECK REFRIGERANT PRESSURE



(a) Install the manifold gauge set (See page AC-165).
(b) Read the manifold gauge pressure when the following conditions are established.
(1) Prepare the vehicle according to the chart below.

Item	Condition
Vehicle Doors	All fully open
Engine speed	1,500 rpm
Temperature Setting	MAX COLD
Blower Speed	HI
A/C switch	ON
R/F Switch	RECIRCULATION (30 to 35°C (86 to 95°F))

Standard pressure:
Low pressure side:
0.15 to 0.25 MPa (1.5 to 2.5 kgf/cm^2, 21.3 to 35.6 psi)
High pressure side:
1.37 to 1.57 MPa (14 to 16 kgf/cm^2, 199 to 228 psi)

NG → CHARGE REFRIGERANT

OK

4	READ OUTPUT DTC (DTC B1475/75)

(a) Clear the DTCs (See page AC-39).
(b) Prepare the vehicle according to the table below.

Item	Condition
Engine speed	Engine idling
Blower speed	HI
A/C switch	ON
Temperature setting	MAX. COLD

(c) Check for DTCs (See page AC-39).

Result

Result	Proceed to
DTC B1475/75 is not output (normal)	A
DTC B1475/75 is output	B

NOTICE:
If the engine keeps idling when ambient temperature is high, the compressor may automatically stop to protect the inverter circuit, and DTC B1475/75 may be stored.

B → REPLACE COMPRESSOR WITH MOTOR ASSEMBLY

A

SYSTEM IS OK

DTC	B1476/76	A/C Inverter Load System Malfunction

DESCRIPTION

The compressor with motor assembly stops compressor control and outputs this DTC if the rotation load is too large or too small while controlling motor rotation in the compressor with motor assembly.
Possible causes are refrigerant gas leakage, overcharged refrigerant gas, insufficient cooling because of a condenser fan circuit malfunction, or compressor lock.

DTC No.	DTC Detection Condition	Trouble Area
B1476/76	Motor's rotation load while the compressor is operating is too large or too small.	• Refrigerant volume • Compressor with motor assembly • Cooling fan system • CAN communication system

INSPECTION PROCEDURE

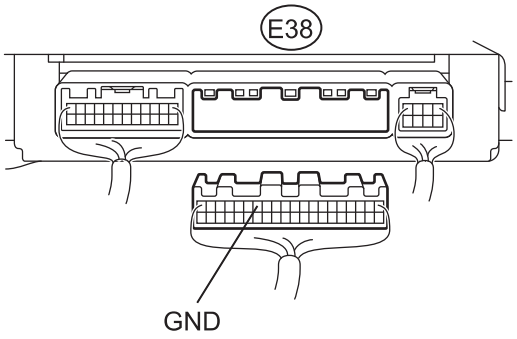
1	CHECK HARNESS AND CONNECTOR

(a) Remove the A/C amplifier.

Air Conditioning Amplifier Connector Wire Harness View:



(b) Disconnect the connector from the A/C amplifier.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

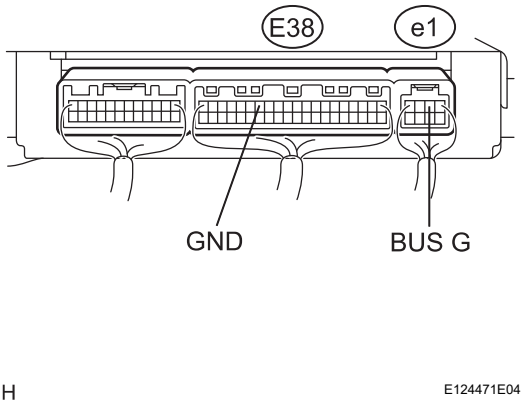
Tester Connection (Symbols)	Condition	Specified Condition
E38-14 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT AIR CONDITIONING AMPLIFIER

Air Conditioning Amplifier Connector Wire Harness View:



(a) Reconnect the connector to the A/C amplifier.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

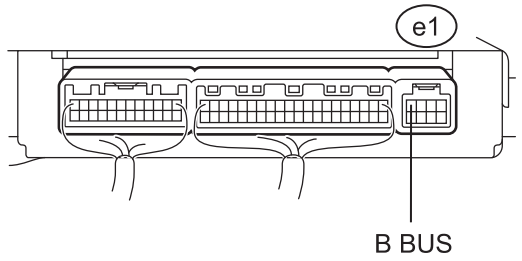
Tester Connection (Symbols)	Condition	Specified Condition
e1-2 (BUS G) - E38-14 (GND)	Always	Below 1 Ω

NG → **REPLACE AIR CONDITIONING AMPLIFIER**

OK

3	INSPECT AIR CONDITIONING AMPLIFIER

Air Conditioning Amplifier Connector Wire Harness View:



H E124471E10

(a) Disconnect the connector (e1) from the A/C amplifier.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
e1-4 (B BUS) - Body ground	Power switch off	Below 1 V
e1-4 (B BUS) - Body ground	Power switch on (IG)	10 to 14 V

NG → REPLACE AIR CONDITIONING AMPLIFIER

OK

4	REPLACE AIR CONDITIONING HARNESS

(a) Replace the air conditioning harness.
HINT:
Since the air conditioning harness cannot be inspected while it is removed from the vehicle, replace the air conditioning harness with a normal one and check that the condition returns to normal.
(b) Check for DTCs.

Result

Result	Proceed to
DTC B1497/97 is output.	A
DTC B1497/97 is not output.	B

B → END

A

REPLACE AIR CONDITIONING AMPLIFIER

DTC	B1498/98	Communication Malfunction (A/C Inverter Local)

DESCRIPTION

The hybrid vehicle control ECU and compressor with motor assembly transmit information to one another via a communication line. Compressor control is stopped and the DTC is output if communication information is cut off or abnormal information occurs.

The DTC is also detected if high-voltage power supplied from the inverter with converter assembly to the compressor control circuit is shut off.

The output DTC is memorized as previous trouble.

CAUTION:

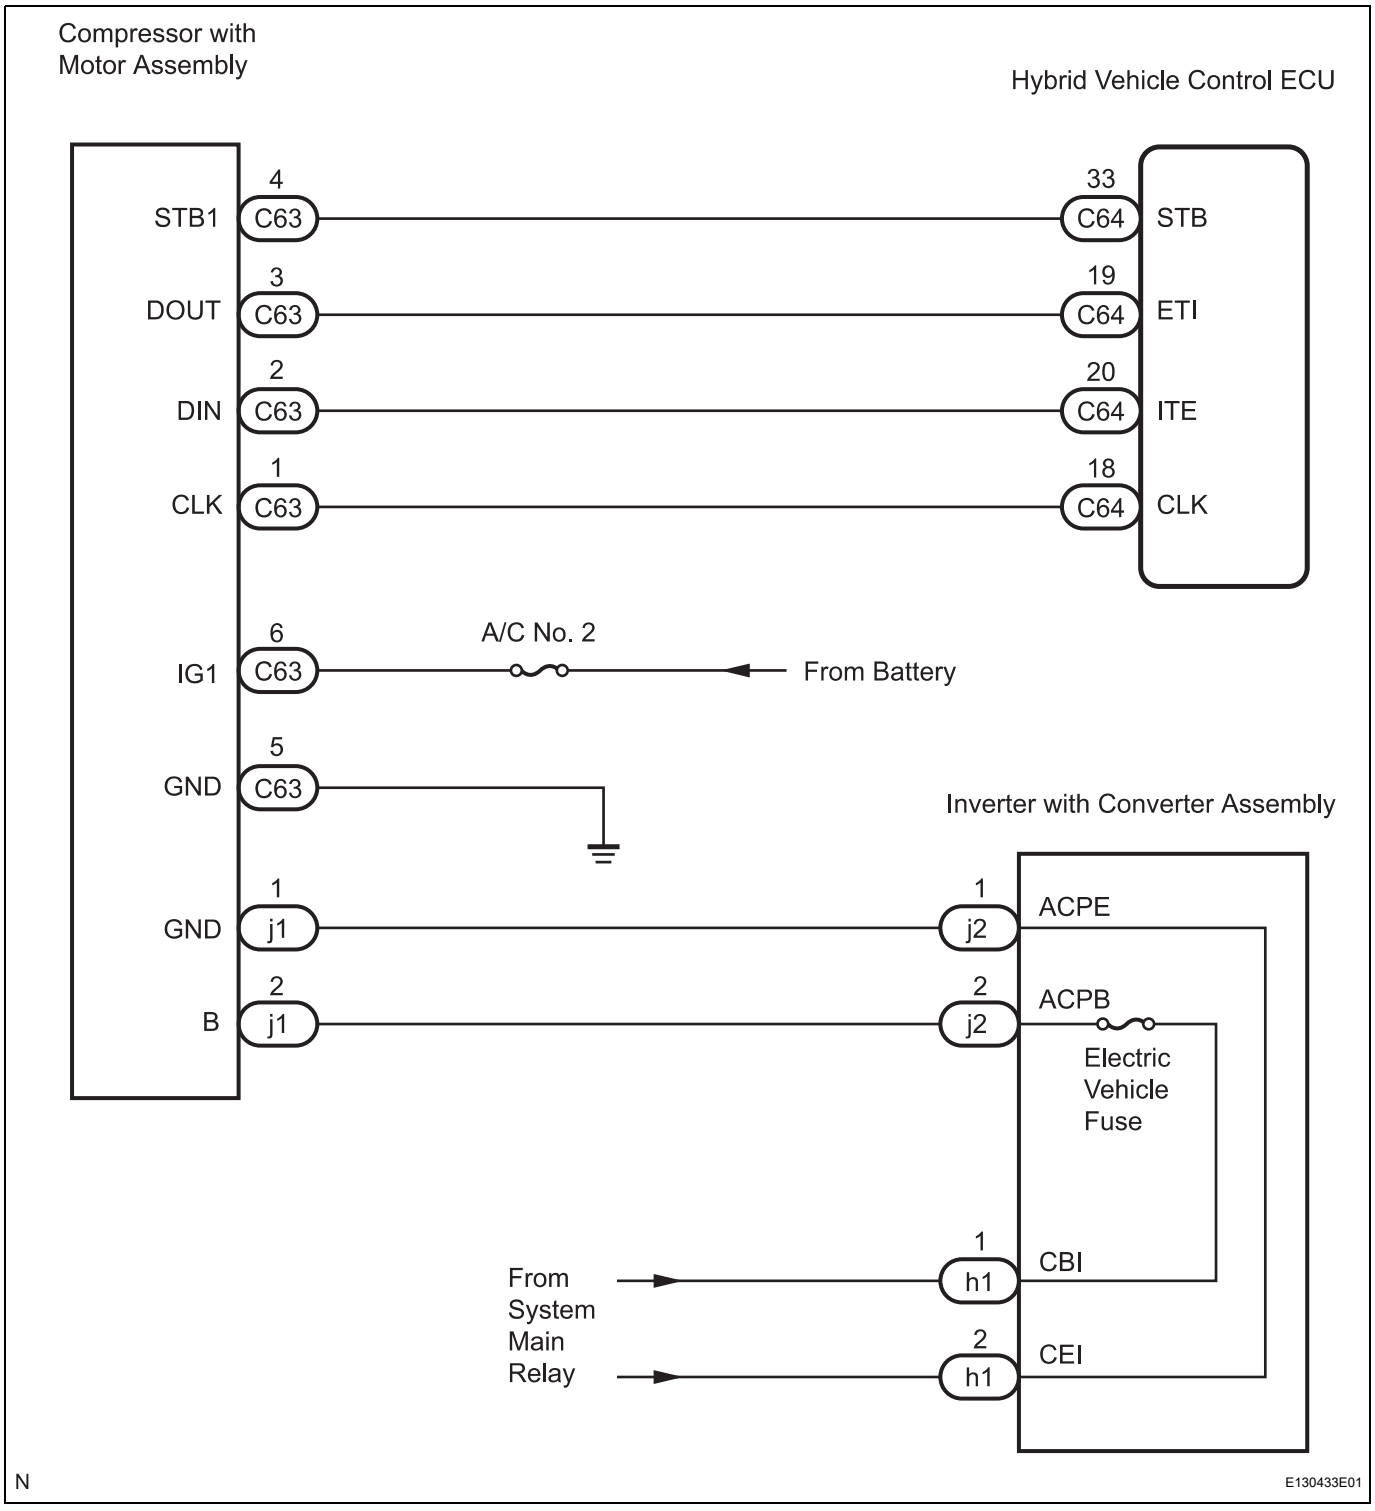
- **Wear electrically insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors. Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

NOTICE:

Depending on the timing of the power supply to the 12 V power supply circuit and high-voltage circuit when the power switch is turned on (READY), an abnormal information signal may be output, causing this DTC to be stored. If the output DTC is a code that was memorized in the past, check the fuses and wire harnesses. If there is no malfunction, erase the DTC.

DTC No.	DTC Detection Condition	Trouble Area
B1498/98	• Communication line error or open between the hybrid vehicle control ECU and the compressor with motor assembly. • High-voltage power source is shut off.	• Harness or connector between hybrid vehicle control ECU, compressor with motor assembly, and body ground • Hybrid vehicle control ECU • Compressor with motor assembly • Inverter with converter assembly • Engine wire No. 4 • Electric vehicle fuse • CAN communication system • Hybrid control system

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Wear electrically insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors. Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

NOTICE:
Depending on the timing of the power supply to the 12 V power supply circuit and high-voltage circuit when the power switch is turned on (READY), an abnormal information signal may be output, causing this DTC to be stored. If the output DTC is a code that was memorized in the past, check the fuses and wire harnesses. If there is no malfunction, erase the DTC.

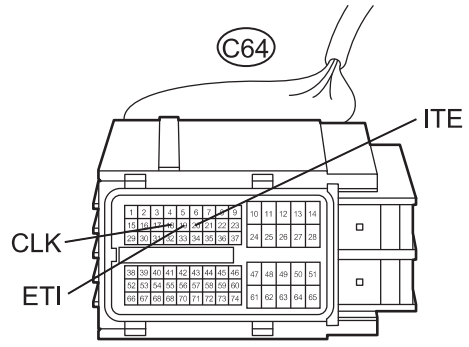
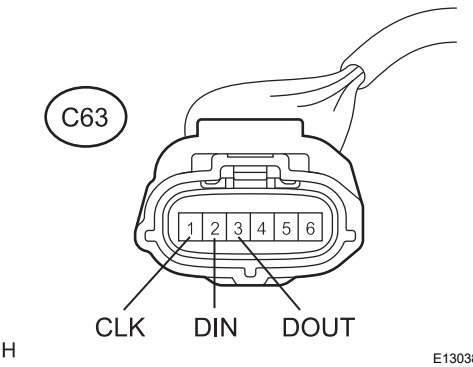
Hybrid Vehicle Control ECU Connector Front View:



(a) Disconnect the connector from the hybrid vehicle control ECU.

Compressor with Motor Assembly Connector Front View:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
C63-1 (CLK) - C64-18 (CLK)	Always	Below 1 Ω
C63-2 (DIN) - C64-20 (ITE)	Always	Below 1 Ω
C63-3 (DOUT) - C64-19 (ETI)	Always	Below 1 Ω
C63-1 (CLK) - Body ground	Always	10 kΩ or higher
C63-2 (DIN) - Body ground	Always	10 kΩ or higher
C63-3 (DOUT) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

7	INSPECT ELECTRIC VEHICLE FUSE

(a) Turn the power switch off.

(b) Remove the service plug grip.

CAUTION:

- **Be sure to wear insulated gloves.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

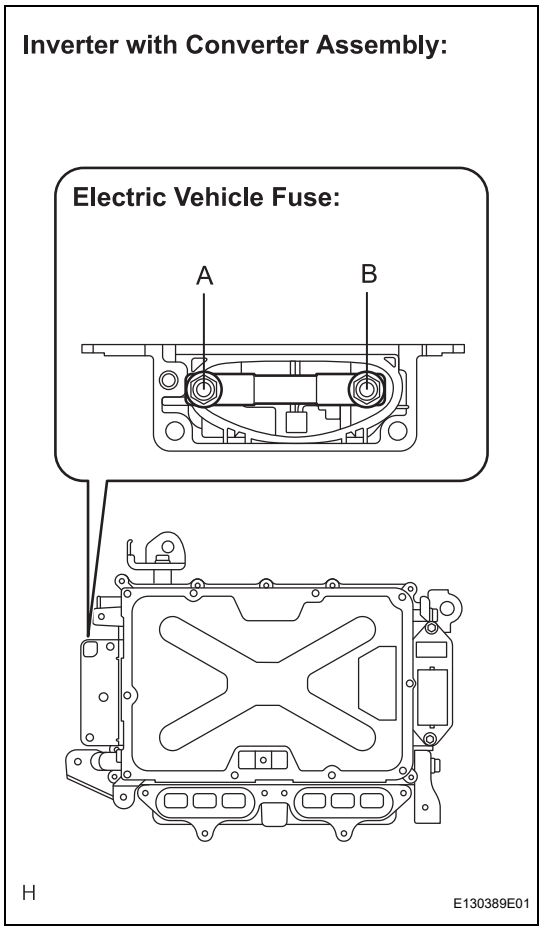
NOTICE:

Do not start the engine with the service plug grip removed because it may cause a malfunction.

(c) Remove the connector cover assembly.

CAUTION:
Be sure to wear insulated gloves.
NOTICE:
Be sure to prevent foreign objects or water from entering the inverter with converter assembly.

(d) Check that bolts A and B are tightened securely.
(e) Measure the resistance according to the value(s) in the table below.



Standard resistance

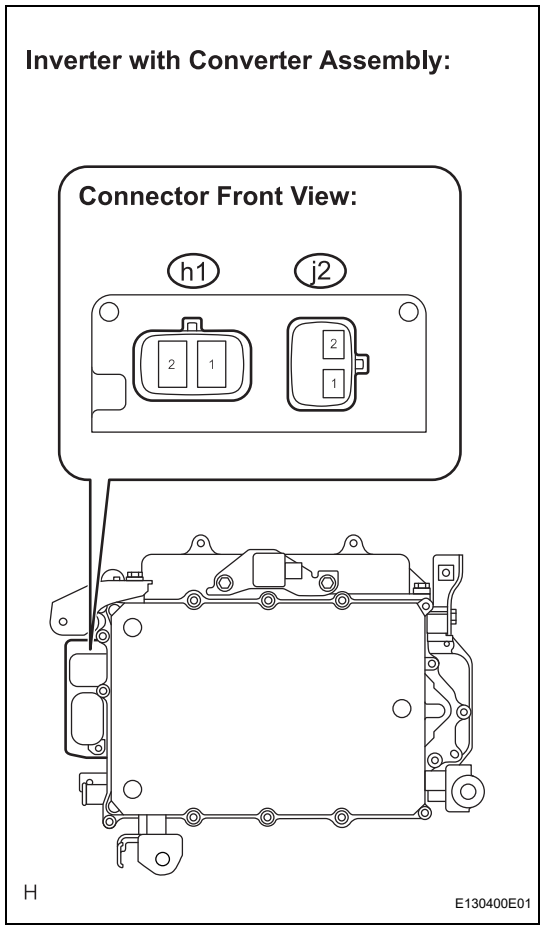
Tester Item (Tester Connection)	Condition	Specified Condition
ELECTRIC VEHICLE fuse (A - B)	Always	Below 1 Ω

NG → **REPLACE ELECTRIC VEHICLE FUSE**

OK

8	INSPECT INVERTER WITH CONVERTER ASSEMBLY

CAUTION:
- **Be sure to wear insulated gloves.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**



(a) Disconnect the connector from the inverter with converter assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
j2-1 (ACPE) - h1-2 (CEI)	Always	Below 1 Ω
j2-2 (ACPB) - h1-1 (CBI)	Always	Below 1 Ω

NG → **REPLACE INVERTER WITH CONVERTER ASSEMBLY**

OK →

DTC	P0AA6-611	Hybrid Battery Voltage System Isolation Fault

DESCRIPTION

The DTC is output if there is insulation trouble with the high-voltage circuits in the air conditioning system. Possible causes are poor insulation in the compressor with motor assembly, or mixing of any oil other than ND-OIL 11 in the refrigerant cycle.

The motor driven with high-voltage is built into the electrical compressor and is cooled directly with refrigerant. Compressor oil (ND-OIL 11) with high insulation performance is used because a leakage of electrical power may occur if regular compressor oil (ND-OIL 8) is used.

NOTICE:

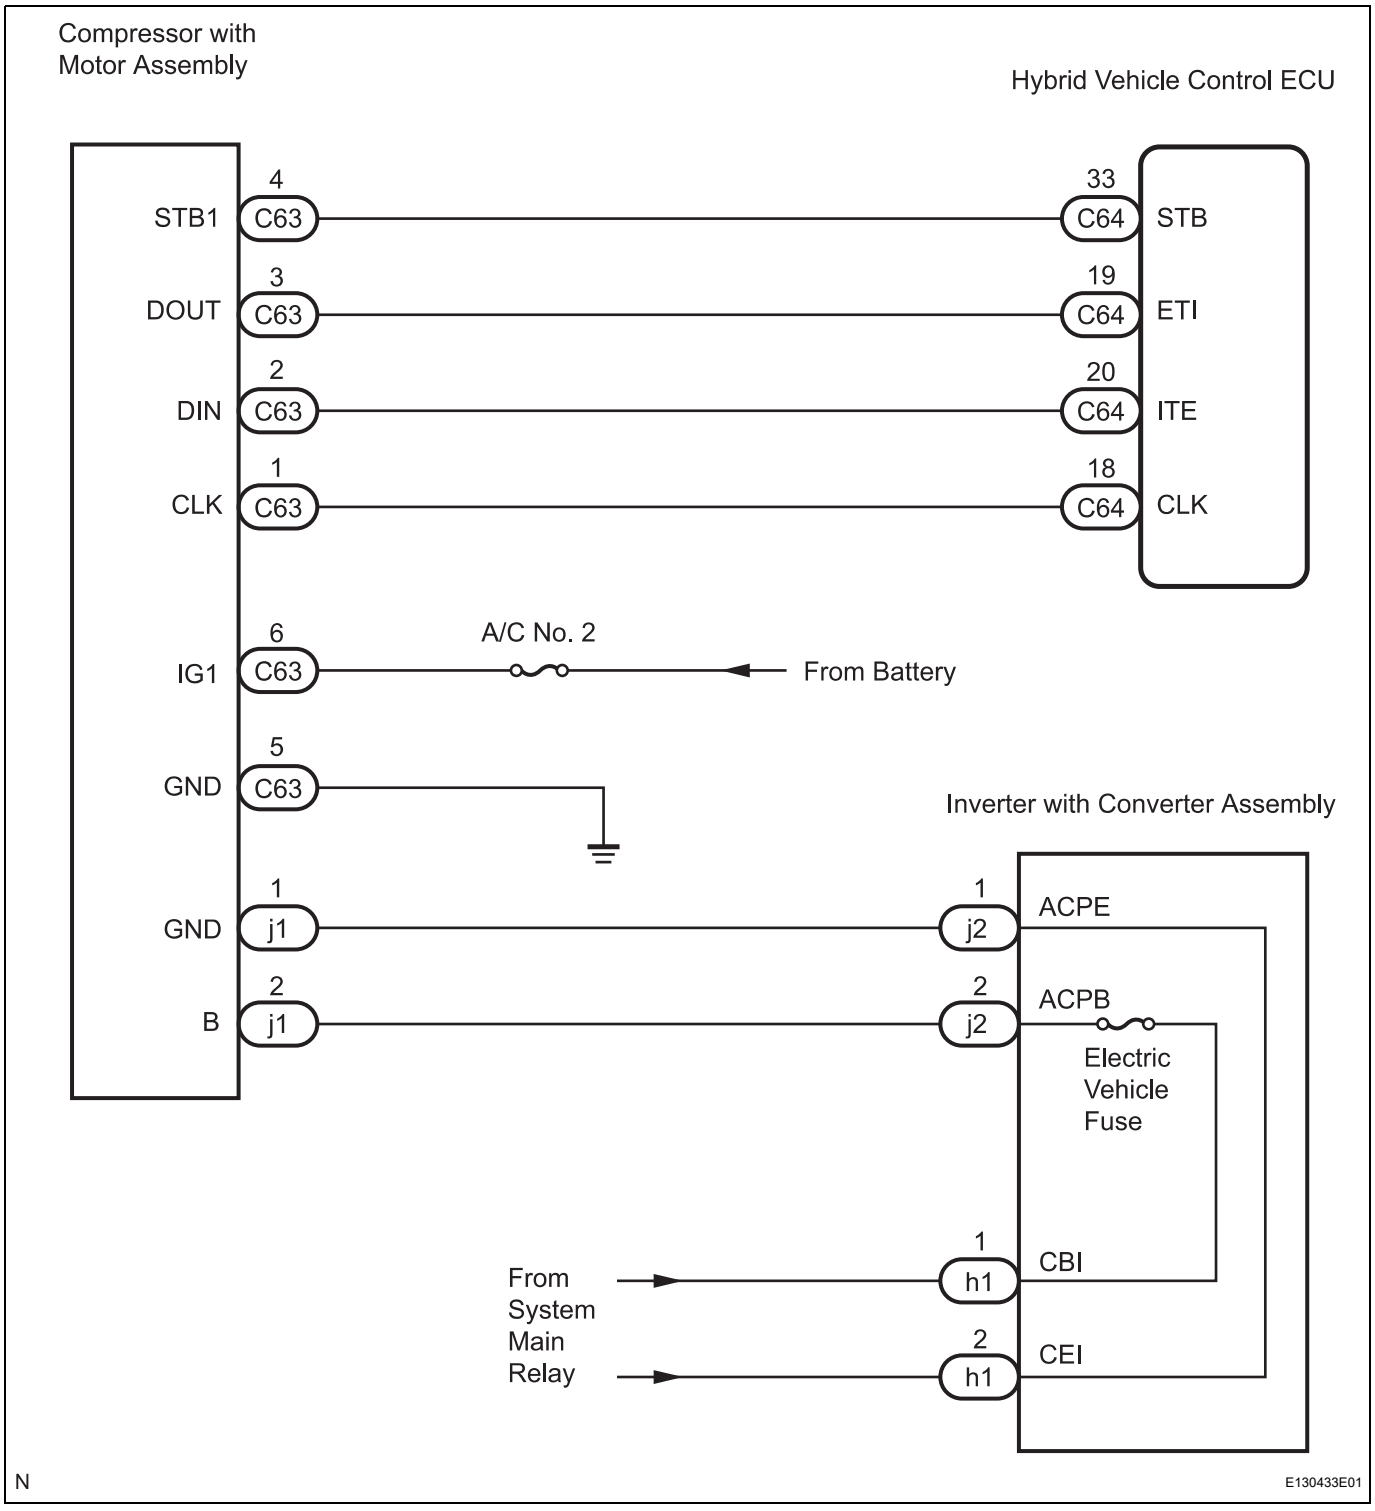
- **Electrical insulation performance may decrease significantly if even a small amount of oil other than ND-OIL 11 is used (or enters) in the refrigerant cycle, causing the DTC to be output.**
- **If other oil is accidentally used and a DTC is output, collect the oil in the refrigerant cycle into the compressor and replace it with ND-OIL 11 to increase the ND-OIL 11 ratio amount.**
- **Replace the main components (evaporator, condenser, and compressor) if a large amount of oil other than ND-OIL 11 enters the system. Failing to do so may cause electrical insulation performance to remain low, causing the DTC to be output.**

CAUTION:

- **Wear insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors.**
- **Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

DTC No.	DTC Detection Condition	Trouble Area
P0AA6-611	High voltage system insulation malfunction	• Compressor oil • Refrigerant pipe line • Compressor with motor assembly • CAN communication system

WIRING DIAGRAM



INSPECTION PROCEDURE

CAUTION:

- **Wear insulated gloves and pull out the service plug grip before inspection as procedures may require disconnecting high-voltage connectors.**
- **Be sure to carry the removed service plug grip because other workers may install it by mistake.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

HINT:
If it can be confirmed that any compressor oil other than ND-OIL 11 has been used in the vehicle, replace the air conditioning cycle.

1	CHECK CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

A

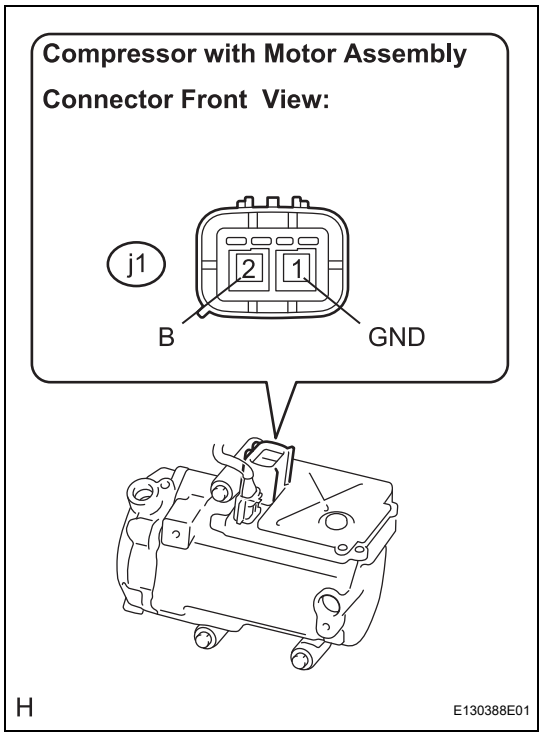
2	INSPECT COMPRESSOR WITH MOTOR ASSEMBLY

(a) Clear the DTCs (See page AC-39).
(b) Turn the power switch on (IG).
(c) Prepare the vehicle according to the table below for 3 minutes.

Item	Condition
Blower speed	HI
Temperature setting	MAX COLD
A/C	ON

(d) Turn the power switch off.
(e) Remove the service plug grip.
CAUTION:
- **Because the compressor has a high-voltage circuit, wear insulated gloves and pull out the service plug grip to cut off the high-voltage circuit before inspection.**
- **Do not touch the high-voltage connectors or terminals for 10 minutes after the service plug grip is removed.**

NOTICE:
Do not start the engine with the service plug grip removed because it may cause a malfunction.



(f) Disconnect the connector (j1) from the compressor with motor assembly.

(g) Using a megohmmeter, measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
j1-1 (GND) - Body ground	Always	2 MΩ or higher
j1-2 (B) - Body ground	Always	2 MΩ or higher

NG → **REPLACE COMPRESSOR WITH MOTOR ASSEMBLY**

OK

3	INSPECT AIR CONDITIONING CYCLE

(a) Reconnect the connector (j1) to the compressor with motor assembly.

(b) Install the service plug grip.

(c) Turn the power switch on (IG).

(d) Set the A/C setting temperature to 25°C (77°F) and the blower switch LO and then operate the compressor for 10 minutes to circulate the refrigerant cycle with refrigerant and collect as much compressor oil as possible.

(e) Turn the power switch off.

(f) Using a spot cooler or other tools, cool down the compressor with motor assembly for 30 minutes, or leave the vehicle overnight before inspection.

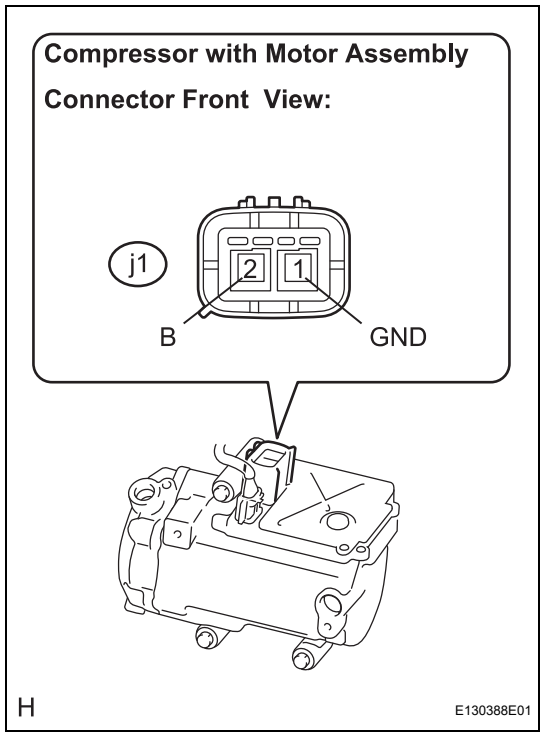
NOTICE:

Do not operate the compressor before inspection.

(g) Remove the service plug grip.

NOTICE:

Do not start the engine with the service plug grip removed because it may cause a malfunction.



(h) Disconnect the connector (j1) from the compressor with motor assembly.

(i) Using a megohmmeter, measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
j1-1 (GND) - Body ground	Always	3 MΩ or higher
j1-2 (B) - Body ground	Always	3 MΩ or higher

NOTICE:
If the results are out of the specified range, replace the compressor without operating.

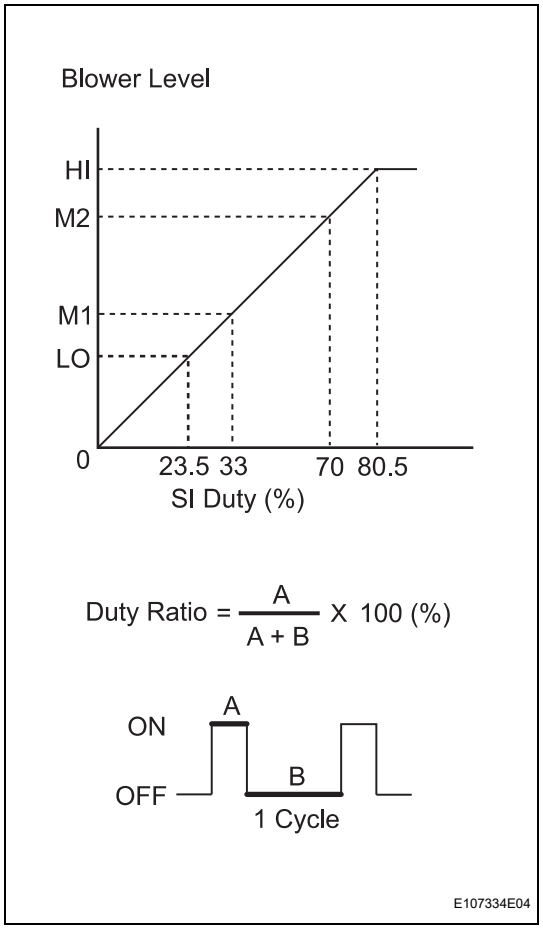
NG → **REPLACE AIR CONDITIONING CYCLE**

OK

REPLACE COMPRESSOR WITH MOTOR ASSEMBLY

Blower Motor Circuit

DESCRIPTION



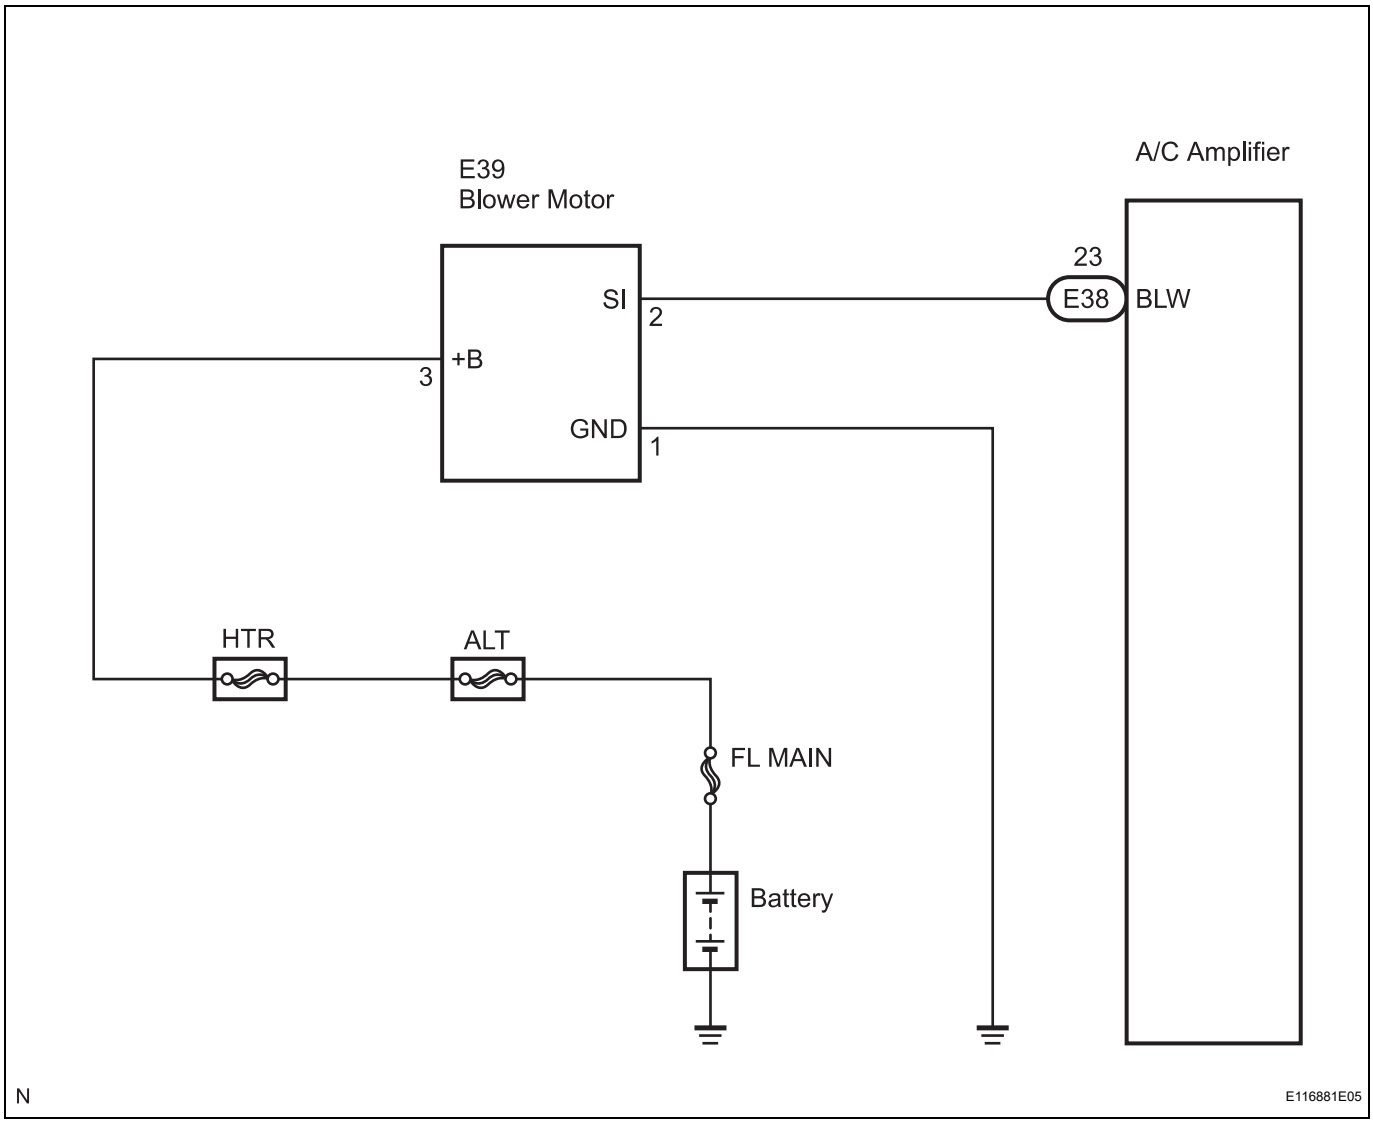
The blower motor is operated by signals from the A/C amplifier. The blower motor speed is controlled using various duty ratios.

Duty Ratio:

The duty ratio is the ratio of the blower motor ON time (A) to the total of the blower motor ON and OFF time (A + B).

The blower motor controller controls the blower motor speed.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the blower motor operates.

ACTIVE TEST / AIR CONDITIONER:

Tester Display	Test Parts	Control Range
BLOWER MOTOR (Blower motor)	Blower motor / Min.: Level 01, Max.: Level 31	-

Result

Result	Proceed to
OK	A
NG (blower motor does not operate)	B

AC

Result	Proceed to
NG (blower motor operates but does not change speed)	C

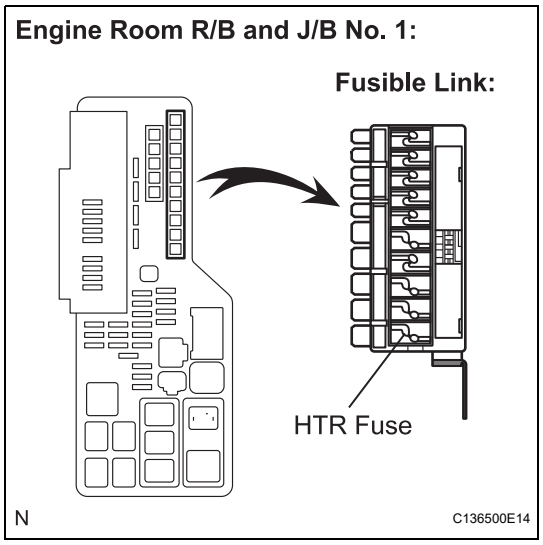
B → Go to step 2

C → Go to step 6

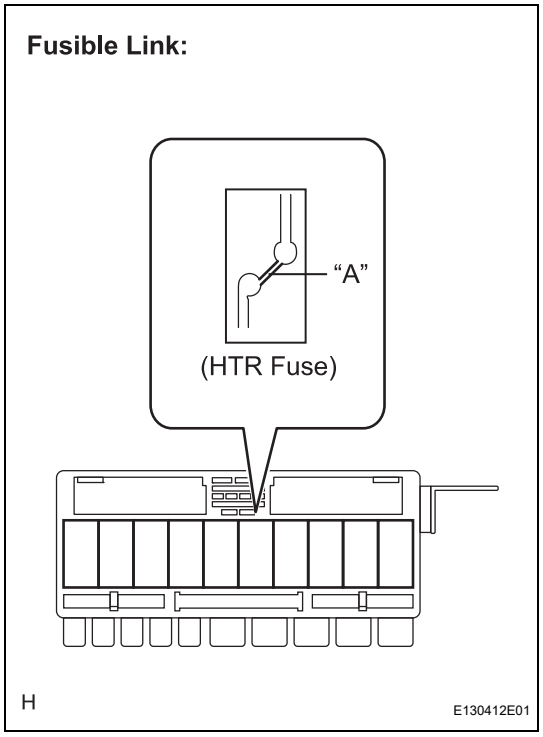
A

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT FUSIBLE LINK (HTR)



(a) Remove the fusible link from the engine room relay block and junction block No. 1.



(b) Check if the fusible link is melted.
OK:
The point indicated by "A" is not melted.

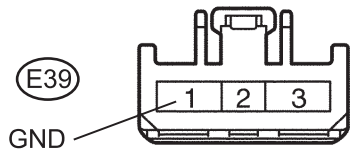
(c) Install the fusible link to the engine room relay block and junction block No. 1 with the nut.

NG → **REPLACE FUSIBLE LINK (HTR)**

OK

3 CHECK HARNESS AND CONNECTOR (BLOWER MOTOR - BODY GROUND)

Blower Motor Connector Front View:



I041124E15

(a) Disconnect the blower motor connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

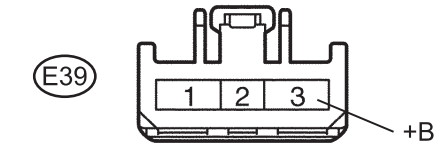
Tester Connection (Symbols)	Condition	Specified Condition
E39-1 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4 CHECK HARNESS AND CONNECTOR (BLOWER MOTOR - BATTERY)

Blower Motor Connector Front View:



I041124E16

(a) Disconnect the blower motor connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

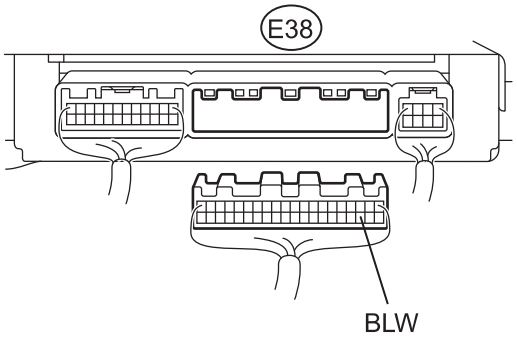
Tester Connection (Symbols)	Condition	Specified Condition
E39-3 (+B) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5 CHECK HARNESS AND CONNECTOR (A/C AMPLIFIER - BLOWER MOTOR)

Air Conditioning Amplifier Connector Wire Harness View:



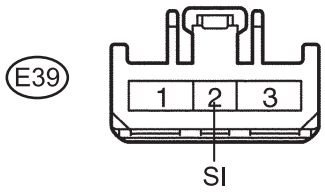
H

E124470E12

(a) Disconnect the A/C amplifier connector.

AC

Blower Motor Connector Front View:



I041124E17

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

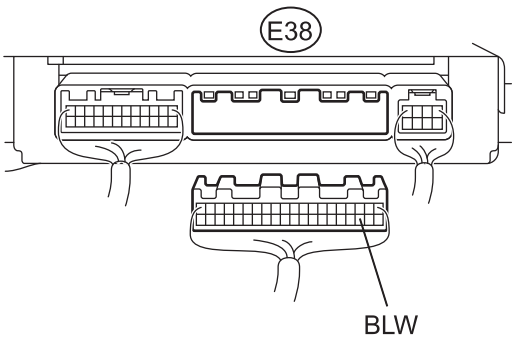
Tester Connection (Symbols)	Condition	Specified Condition
E39-2 (SI) - E38-23 (BLW)	Always	Below 1 Ω
E39-2 (SI) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6 INSPECT BLOWER MOTOR

Air Conditioning Amplifier Connector Wire Harness View:



H

E124470E12

(a) Reconnect the connector to the blower motor.

(b) Measure the voltage on the A/C amplifier connector side according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-23 (BLW) - Body ground	Power switch on (IG)	4.5 to 5.5 V

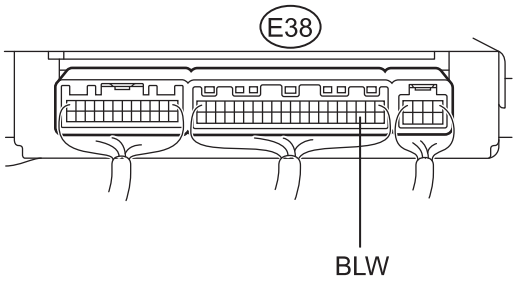
NG → **REPLACE BLOWER MOTOR**

OK

7 INSPECT AIR CONDITIONING AMPLIFIER

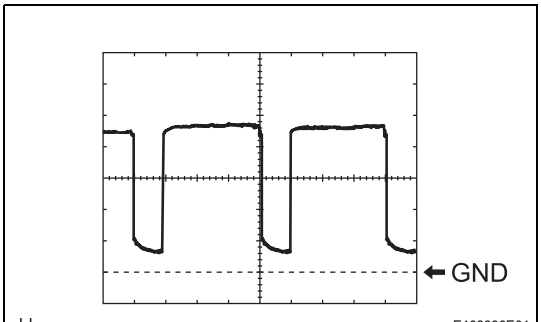
(a) Remove the A/C amplifier.

Air Conditioning Amplifier Connector Wire Harness View:



H E124471E06

(b) Reconnect the connector to the A/C amplifier.



H E103396E01

(c) Turn the power switch on (IG).
(d) Turn the blower switch ON.
(e) Measure the waveform between terminal E38-23 (BLW) of the A/C amplifier and body ground.
OK:
Waveform is as shown in the illustration.
HINT:
Waveform varies with the blower level.

Item	Contents
Tool setting	1 V/DIV., 500 μs/DIV.
Vehicle condition	Power switch on (IG) Blower switch: ON

NG → **REPLACE AIR CONDITIONING AMPLIFIER**

OK

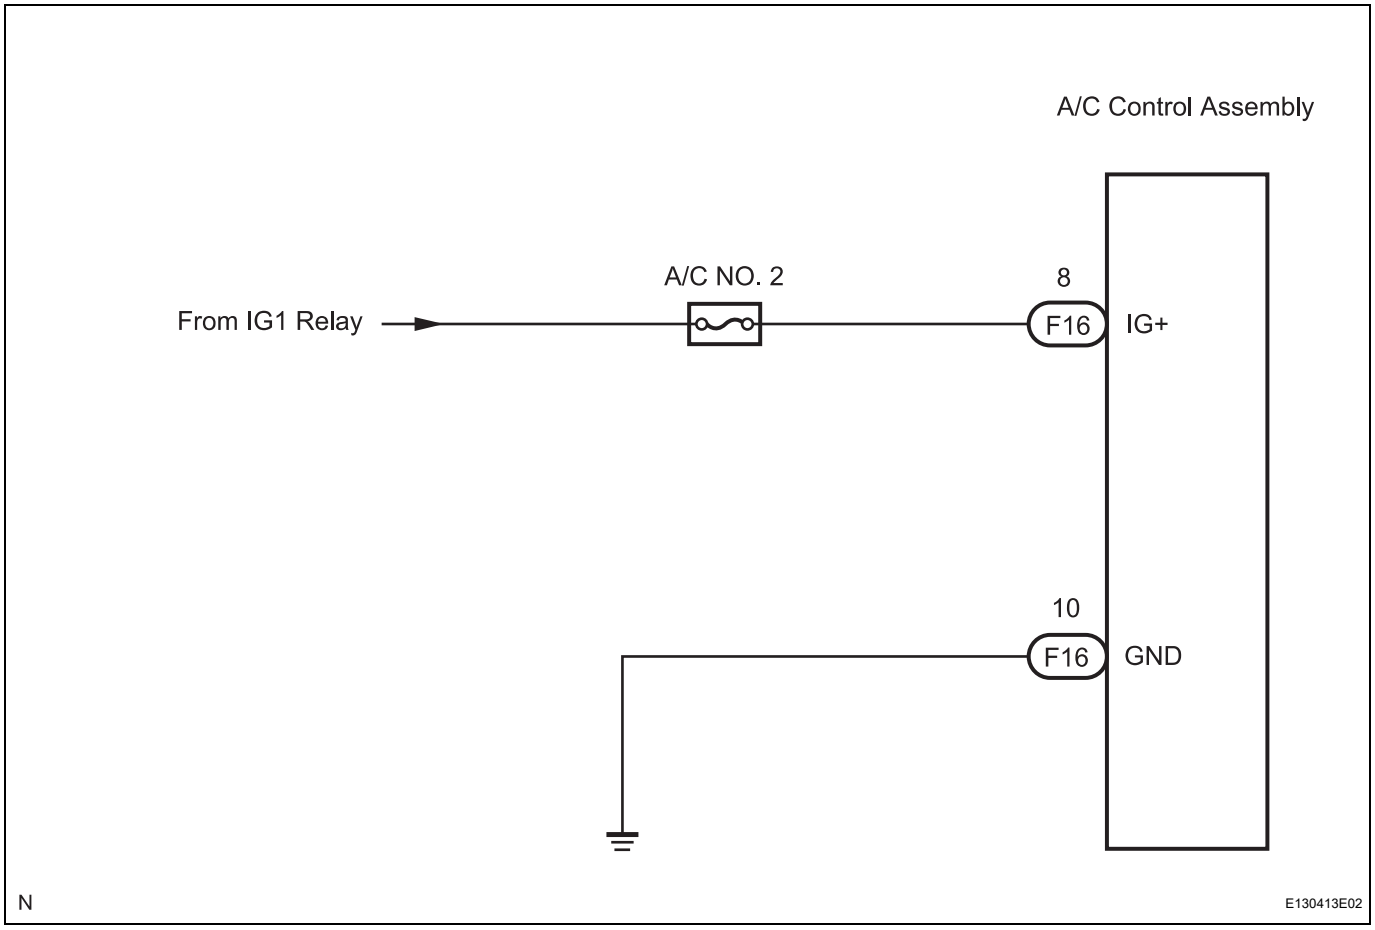
REPLACE BLOWER MOTOR

Heater Control Panel Power Source Circuit

DESCRIPTION

Battery voltage is supplied to the heater control panel (A/C control assembly) through the A/C No. 2 fuse.

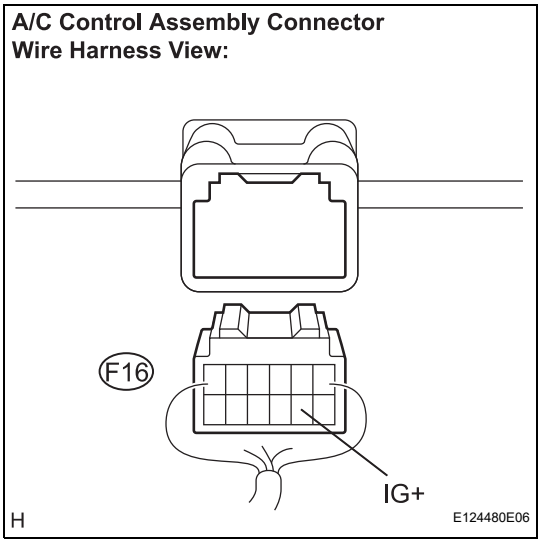
WIRING DIAGRAM



INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (IG+, B - BODY GROUND)

A/C Control Assembly Connector
Wire Harness View:



(a) Disconnect the connector from the heater control panel.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

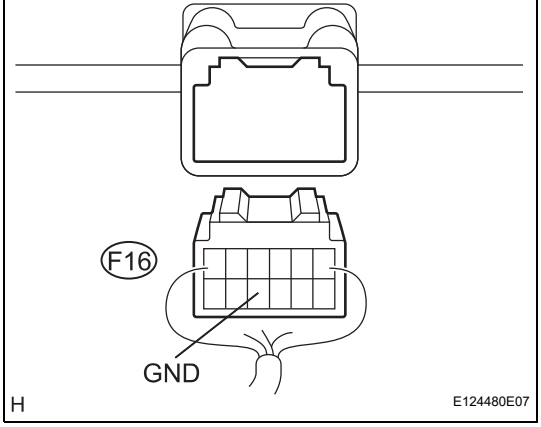
Tester Connection (Symbols)	Condition	Specified Condition
F16-8 (IG+) - Body ground	Power switch on (IG)	10 to 14 V
F16-8 (IG+) - Body ground	Power switch off	Below 1 V

NG → **GO TO SMART KEY SYSTEM (See page ST-10)**

OK

2 CHECK HARNESS AND CONNECTOR (GND - BODY GROUND)

A/C Control Assembly Connector
Wire Harness View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
F16-10 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

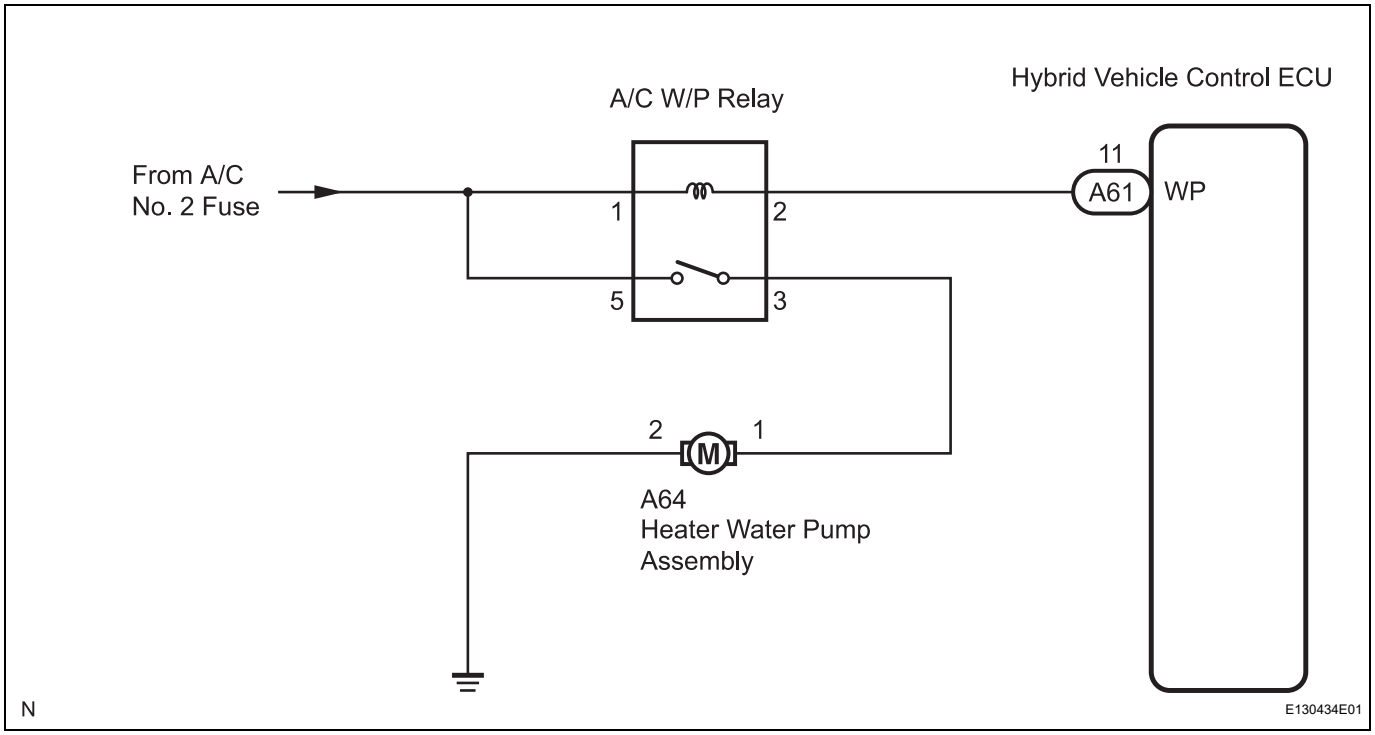
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Heater Water Pump Circuit

DESCRIPTION

The heater water pump assembly sends engine coolant to the heater core assembly while the engine is stopped to prevent heater effectiveness from becoming low. Directed by the A/C amplifier, the hybrid vehicle control ECU operates the water pump relay and drives the heater water pump assembly.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Use the intelligent tester to check if the CAN Communication System is functioning normally.
Result

Result	Proceed to
CAN DTC is not output	A
CAN DTC is output	B

B → **GO TO CAN COMMUNICATION SYSTEM (See page CA-7)**

A

2	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and check that the relay operates.

ACTIVE TEST / AIR CONDITIONER:

Tester Display	Test Part	Control Range
WATER PUMP (Water pump)	Activate the water pump/OFF, ON	-

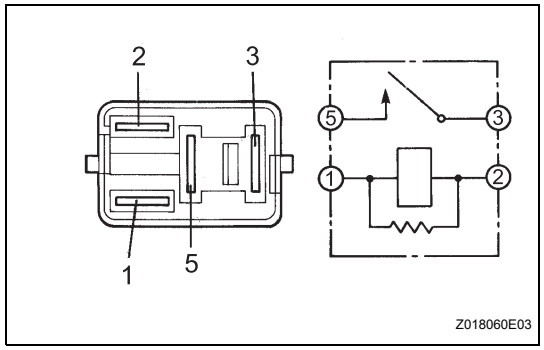
OK:
Heater water pump operates smoothly.

NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

3 INSPECT RELAY (A/C W/P)



(a) Remove the A/C W/P relay from the engine room relay block and junction block No. 1.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

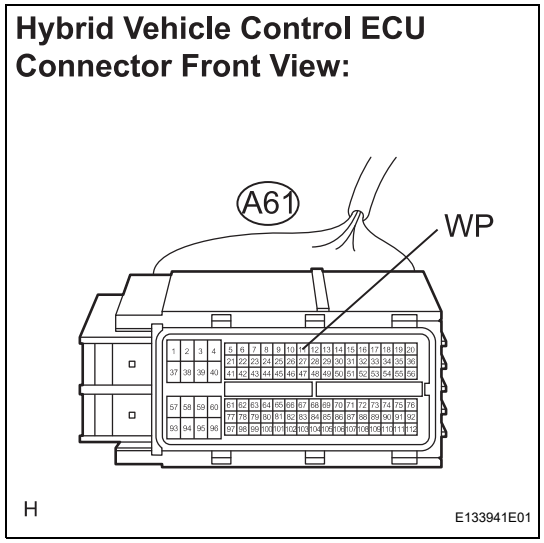
Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE RELAY (A/C W/P)**

OK

4 CHECK HARNESS AND CONNECTOR (HYBRID VEHICLE CONTROL ECU - BATTERY)

Hybrid Vehicle Control ECU Connector Front View:



(a) Disconnect the connector from the hybrid vehicle control ECU.
(b) Measure the voltage according to the value(s) in the table below.
Standard voltage

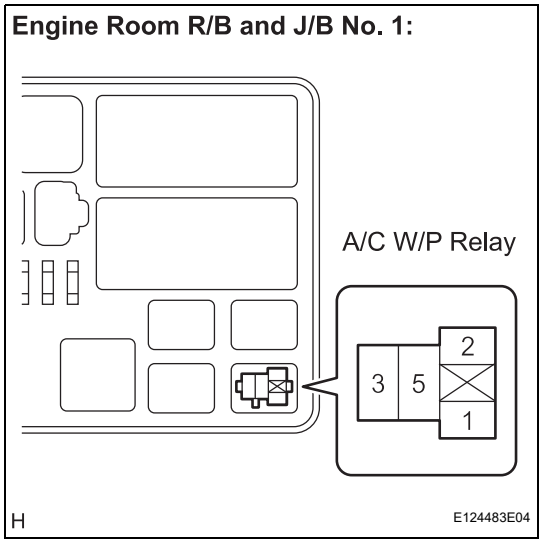
Tester Connection (Symbols)	Condition	Specified Condition
A61-11 (WP) - Body ground	Power switch off	Below 1 V
A61-11 (WP) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

AC

OK

5	CHECK HARNESS AND CONNECTOR (BATTERY - ENGINE ROOM R/B AND J/B NO. 1)



(a) Remove the A/C W/P relay from the engine room relay block and junction block No. 1.
(b) Measure the voltage according to the value(s) in the table below.

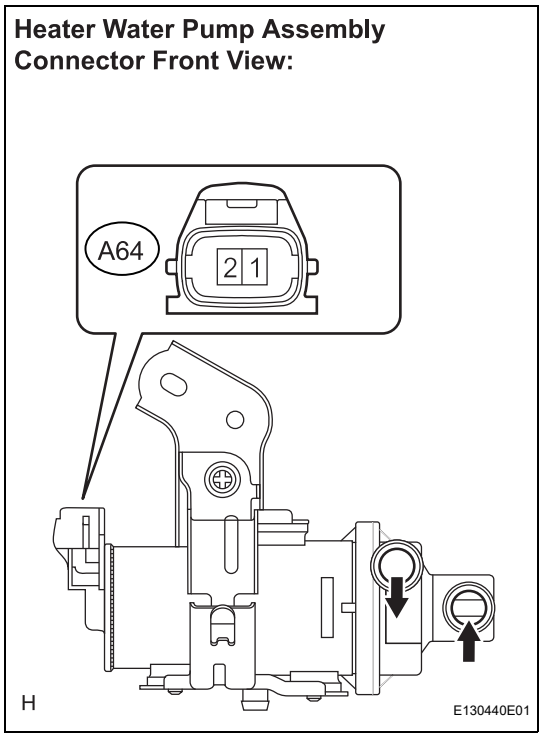
Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
Relay block A/C W/P relay terminal 5 - Body ground	Power switch on (IG)	10 to 14 V
Relay block A/C W/P relay terminal 5 - Body ground	Power switch off	Below 1 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

6	INSPECT HEATER WATER PUMP ASSEMBLY



(a) Disconnect the connector from the heater water pump assembly.
(b) Connect the positive (+) lead from the battery to terminal 1 and the negative (-) lead to terminal 2.

OK:

Heater water pump operates smoothly.

NOTICE:

Complete this inspection within 10 seconds if there is no water in the heater water pump assembly.

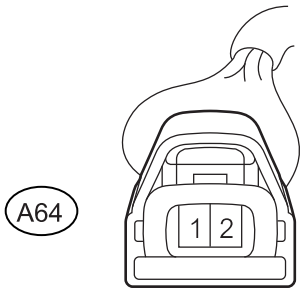
NG → **REPLACE HEATER WATER PUMP ASSEMBLY**

OK

AC

7	CHECK HARNESS AND CONNECTOR (HEATER WATER PUMP ASSEMBLY - BODY GROUND)

Heater Water Pump Assembly Connector Front View:



H

E130435E01

(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

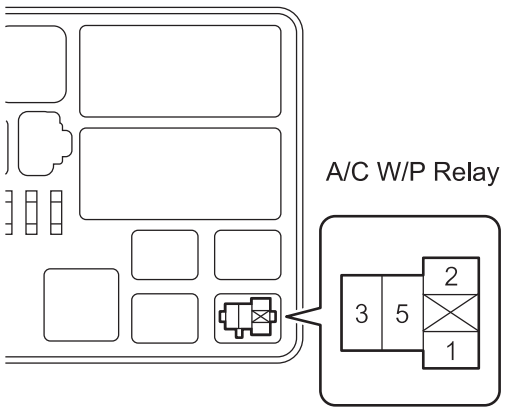
Tester Connection	Condition	Specified Condition
A64-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

8	CHECK HARNESS AND CONNECTOR (HEATER WATER PUMP ASSEMBLY - ENGINE ROOM R/B AND J/B NO. 1)

Engine Room R/B and J/B No. 1:

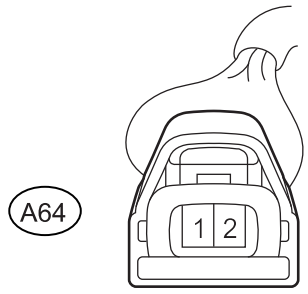


H

E124483E04

(a) Remove the A/C W/P relay from the engine room relay block and junction block No. 1.

Heater Water Pump Assembly Connector Front View:



H

E130435E01

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
A64-1 - Relay block A/C W/P relay terminal 3	Always	Below 1 Ω
A64-1 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

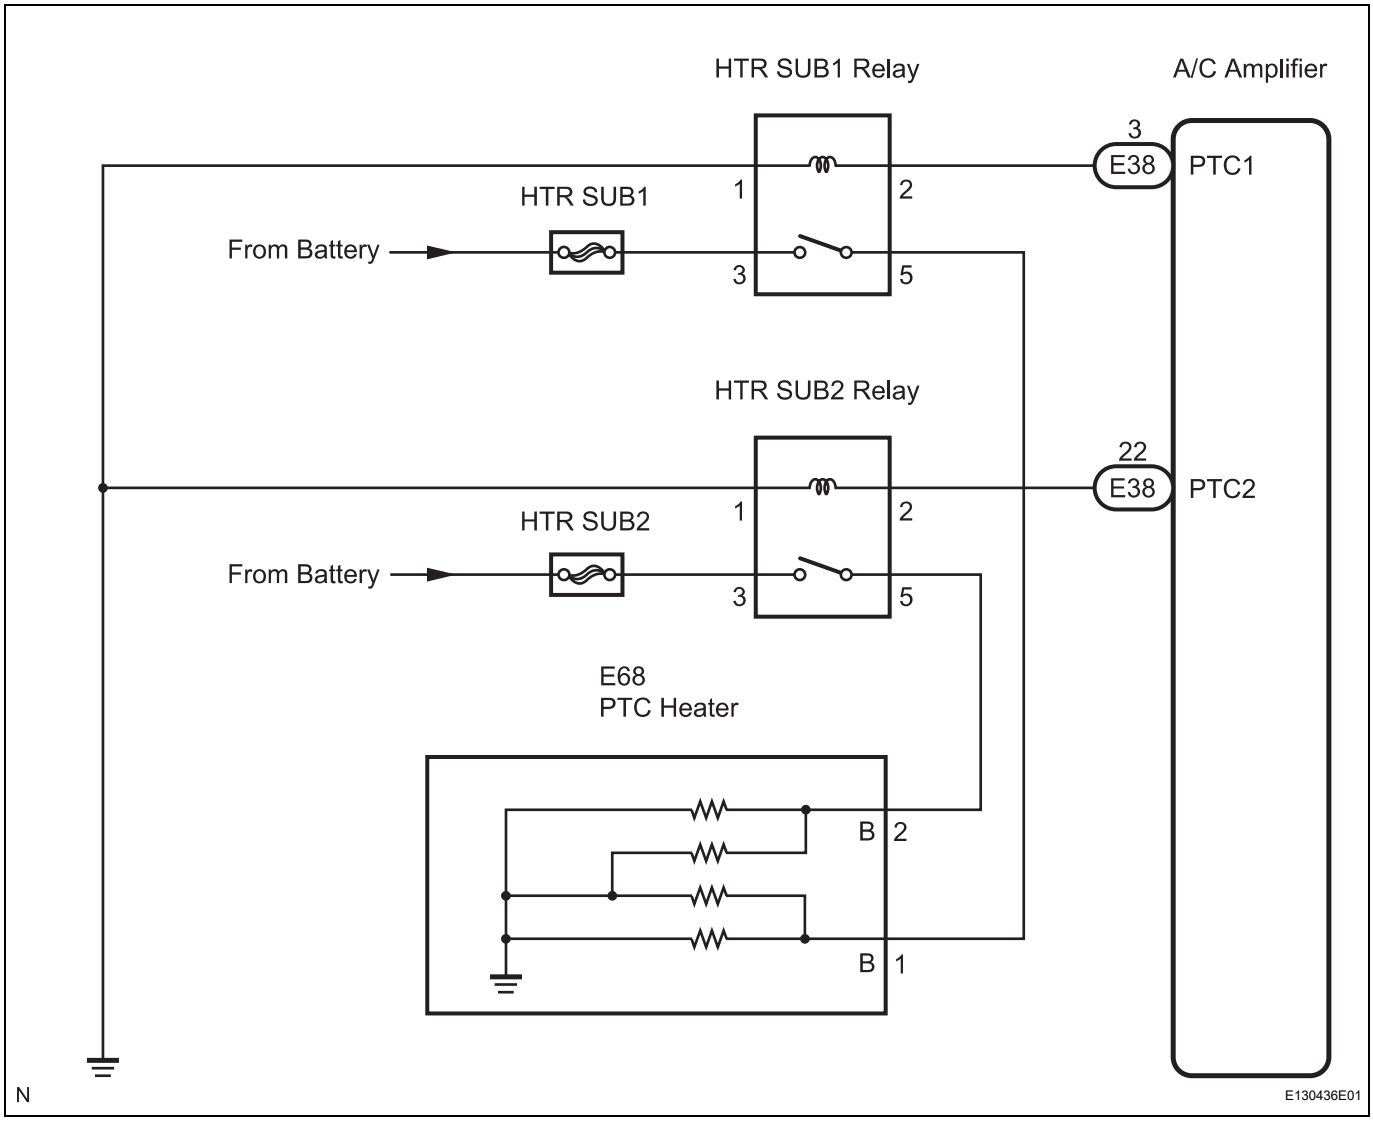
REPLACE HYBRID VEHICLE CONTROL ECU

PTC Heater Circuit

DESCRIPTION

The PTC heater is installed in the radiator in the heater unit and operates when cooling water temperature is low and normal heater effectiveness is insufficient.
The air conditioning amplifier switches the circuit in the PTC relay and operates the PTC heater when the operating conditions (cooling water temperature is below 55°C (131°F), setting temperature is MAX. HOT, air outlet damper position is FOOT or FOOT/DEF, and blower switch is not OFF) are met.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**PERFORM ACTIVE TEST BY INTELLIGENT TESTER**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.

AC

(c) Select the item below in the ACTIVE TEST and then check that the relay operates.

ACTIVE TEST / AIR CONDITIONER:

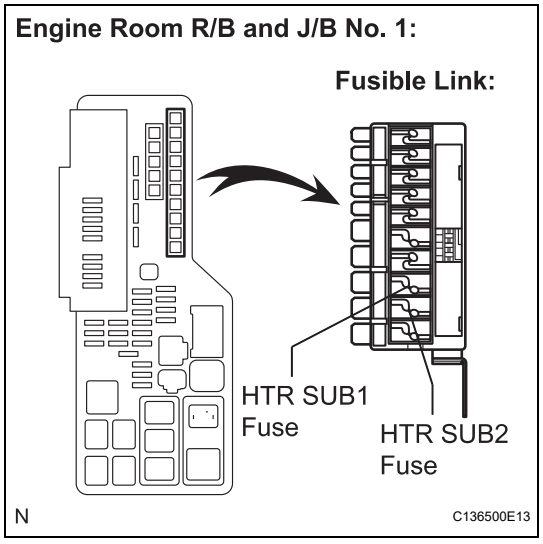
Tester Display	Test Part	Control Range
HEATER1 (Electric heater1)	Electric heater1/ON, OFF	-
HEATER2 (Electric heater2)	Electric heater2/ON, OFF	-

NG → **Go to step 2**

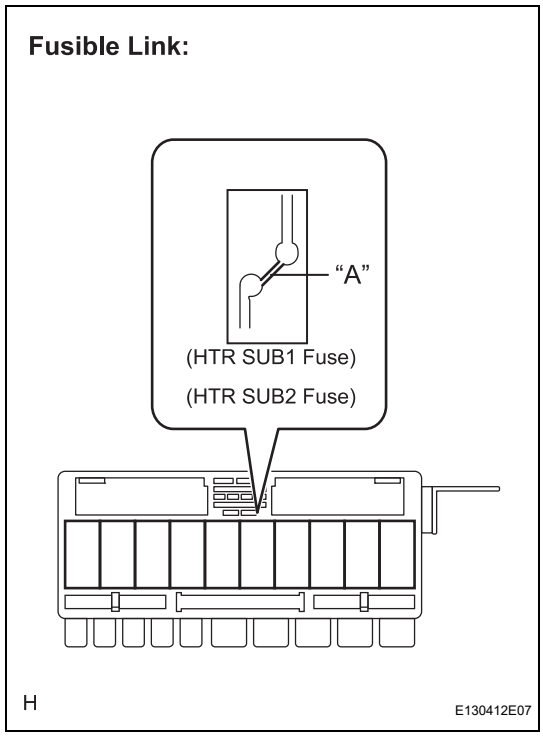
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT FUSIBLE LINK (HTR SUB1, HTR SUB2)



(a) Remove the fusible link from the engine room relay block and junction block No. 1.



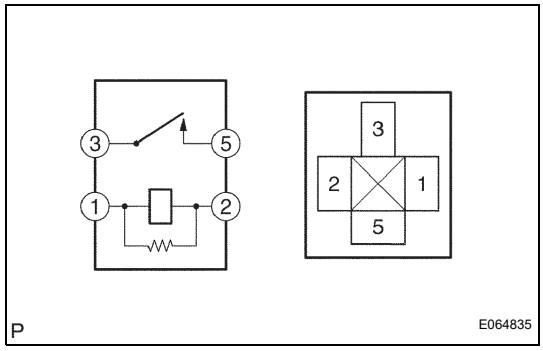
(b) Check if the fusible link is melted.
OK:
The point indicated by "A" is not melted.

(c) Install the fusible link to the engine room relay block and junction block No. 1 with the nut.

NG → **REPLACE FUSIBLE LINK (HTR SUB1, HTR SUB2)**

OK

3 INSPECT PTC HEATER RELAY



(a) Remove the PTC heater relay from the engine room relay block No. 3.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
3 - 5	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)

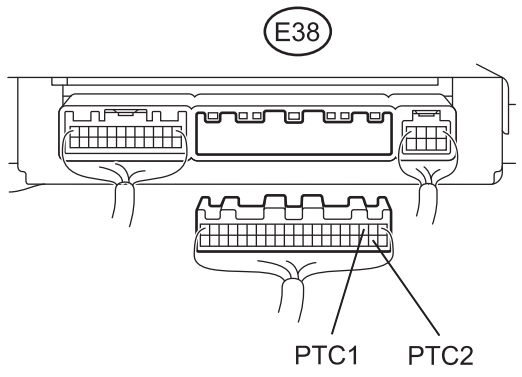
(c) Install the PTC heater relay to the engine room relay block No. 3.

NG → **REPLACE PTC HEATER RELAY**

OK

4	CHECK HARNESS AND CONNECTOR (AIR CONDITIONING AMPLIFIER - BODY GROUND)

A/C Amplifier Connector Wire Harness View:



(a) Disconnect the connector from the A/C amplifier.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

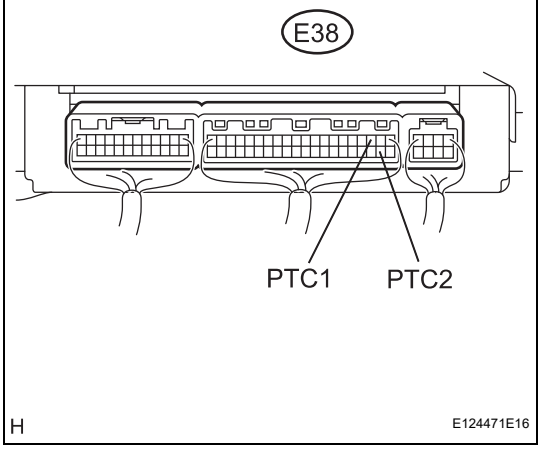
Tester Connection (Symbols)	Condition	Specified Condition
E38-3 (PTC1) - Body ground	Always	Below 1 Ω
E38-22 (PTC2) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	INSPECT AIR CONDITIONING AMPLIFIER (PTC1, PTC2)

A/C Amplifier Connector Wire Harness View:



(a) Reconnect the connector to the A/C amplifier.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-3 (PTC1) - Body ground	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: OFF	10 to 14 V
E38-3 (PTC1) - Body ground	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: ON	Below 1 V
E38-22 (PTC2) - Body ground	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: OFF	10 to 14 V

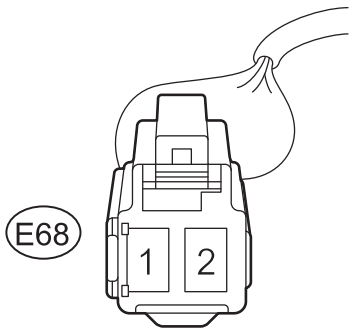
Tester Connection (Symbols)	Condition	Specified Condition
E38-22 (PTC2) - Body ground	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: ON	Below 1 V

NG → REPLACE AIR CONDITIONING AMPLIFIER

OK

6 CHECK HARNESS AND CONNECTOR (BATTERY - PTC HEATER)

PTC Heater Connector Front View:



(a) Disconnect the connector from the PTC heater.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E68-1 - Body ground	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: OFF	Below 1 V
E68-1 - Body ground	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: ON	10 to 14 V
E68-2 - Body ground	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: OFF	Below 1 V
E68-2 - Body ground	Power switch on (IG) Temperature setting: MAX. HOT MODE switch: FOOT Engine coolant temperature: 55°C (131°F) or lower Blower switch: ON	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

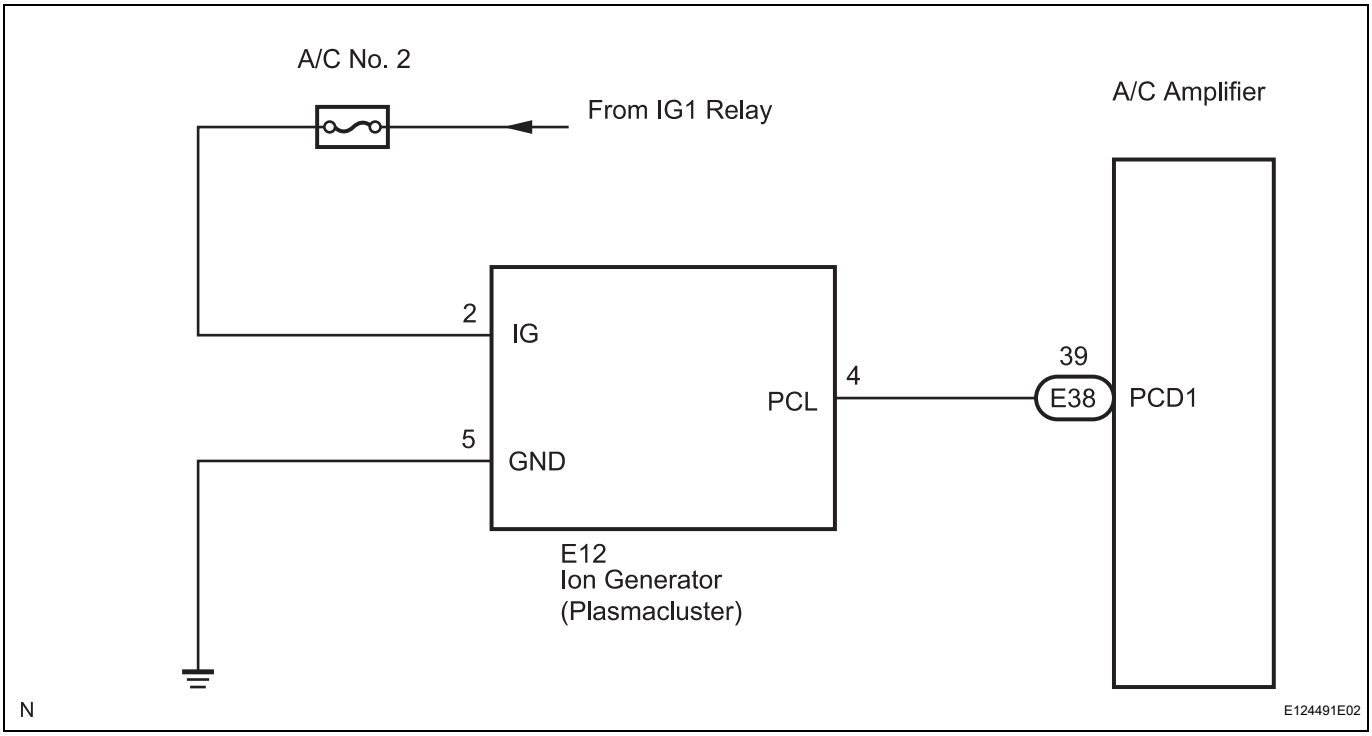
REPLACE PTC HEATER

Plasmacluster Circuit

DESCRIPTION

The plasmacluster operates in conjunction with blower switch operation.

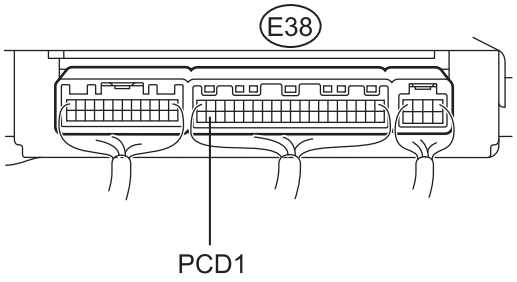
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT AIR CONDITIONING AMPLIFIER

Air Conditioning Amplifier Connector Wire Harness View:



(a) Remove the A/C amplifier with the connectors still connected.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-39 (PCD1) - Body ground	Power switch on (IG) Blower switch: OFF	10 to 14 V
E38-39 (PCD1) - Body ground	Power switch on (IG) Blower switch: ON	Below 1 V

NG	Go to step 2

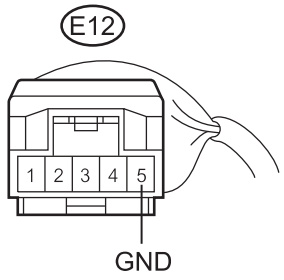
AC

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 CHECK HARNESS AND CONNECTOR (ION GENERATOR - BODY GROUND)

Ion Generator Connector Front View:



H E116928E03

(a) Disconnect the connector from the ion generator.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

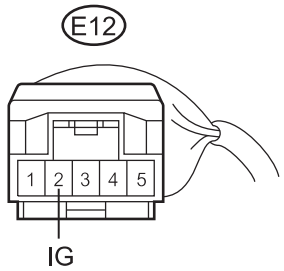
Tester Connection (Symbols)	Condition	Specified Condition
E12-5 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3 CHECK HARNESS AND CONNECTOR (ION GENERATOR - BATTERY)

Ion Generator Connector Front View:



H E116928E04

(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

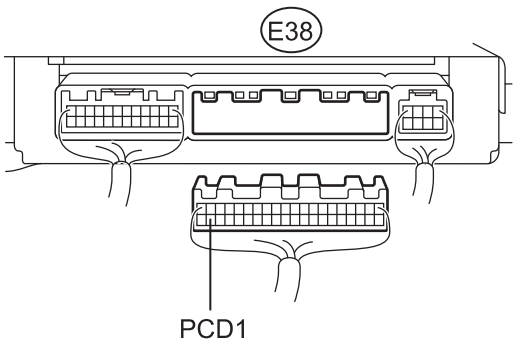
Tester Connection (Symbols)	Condition	Specified Condition
E12-2 (IG) - Body ground	Power switch off	Below 1 V
E12-2 (IG) - Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

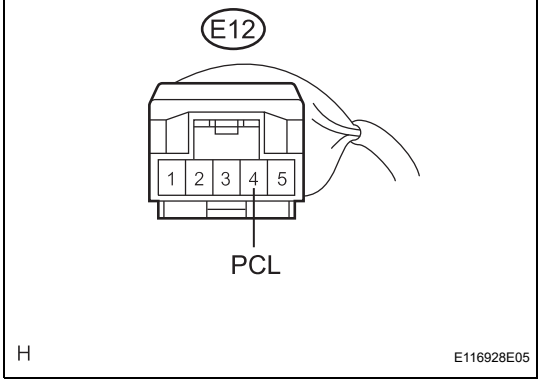
4	CHECK HARNESS AND CONNECTOR (ION GENERATOR - A/C AMPLIFIER)

Air Conditioning Amplifier Connector Wire Harness View:



(a) Disconnect the connector from the A/C amplifier.

Ion Generator Connector Front View:



(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E12-4 (PCL) - E38-39 (PCD1)	Always	Below 1 Ω
E12-4 (PCL) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE ION GENERATOR

Steering Pad Switch Circuit

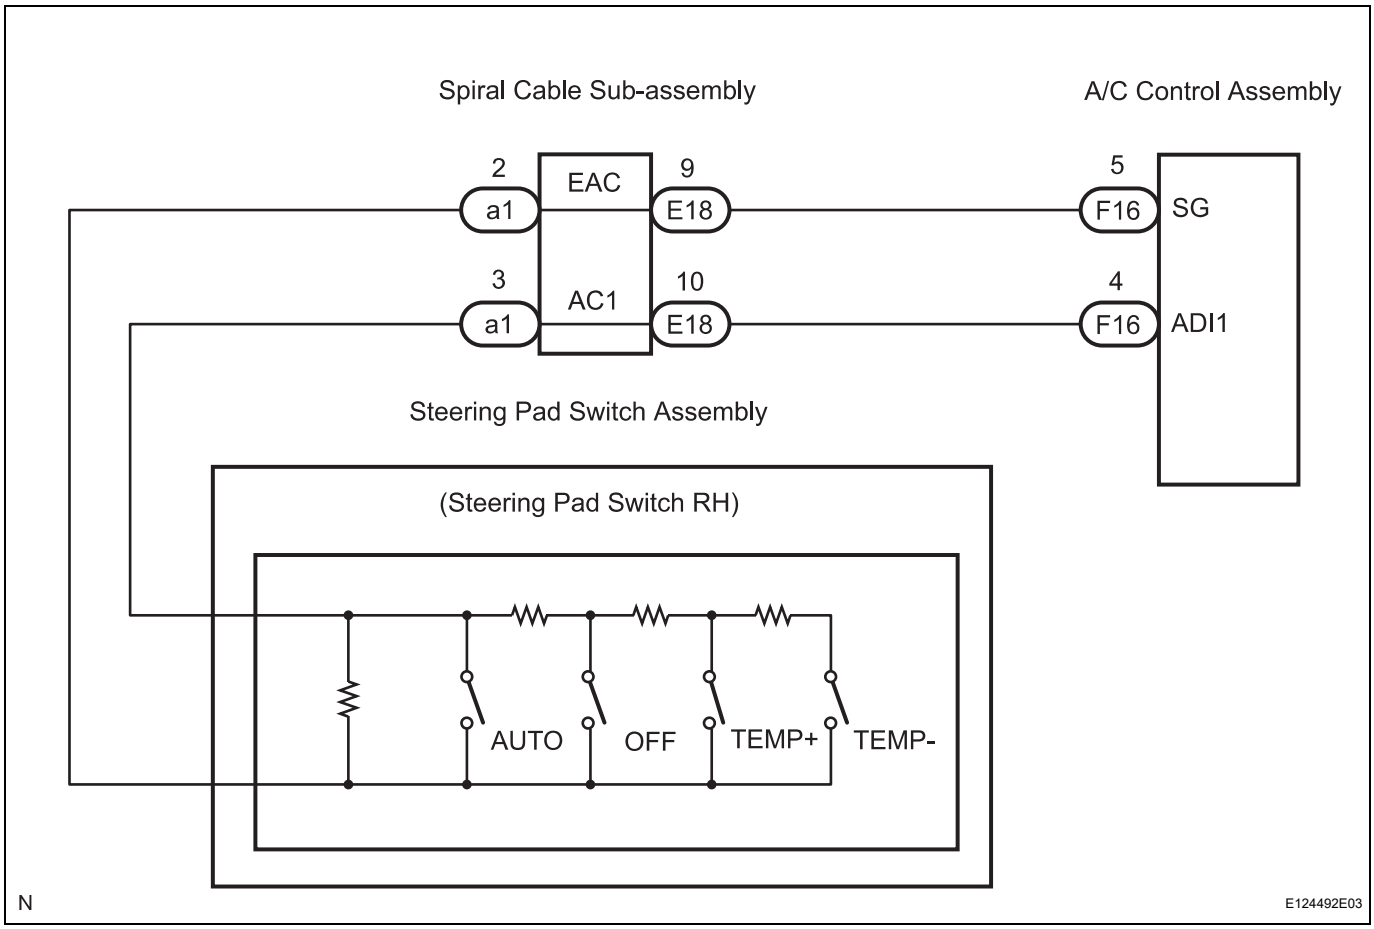
DESCRIPTION

AUTO, OFF, TEMP UP (+), and TEMP DOWN (-) switches are located on the steering pad switch. The resistance of the steering pad switch changes in accordance with switch operation. The A/C control assembly outputs voltage to the steering pad switch and reads voltage changes due to the resistance changes that result from switch operation.

HINT:

If there is an open in the circuit, the A/C system cannot be operated by the steering pad switch assembly. If there is a short in the circuit, the resulting condition is the same as if the switch were continuously depressed. Therefore, the A/C control assembly cannot be operated by the steering pad switch assembly, and the A/C control assembly will not be able to function correctly.

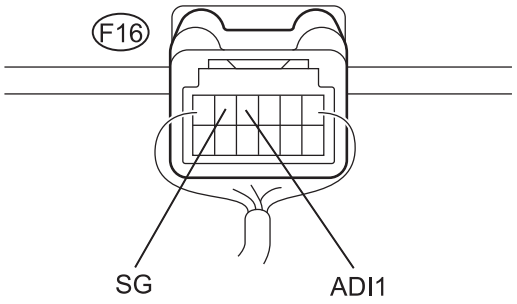
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT AIR CONDITIONING CONTROL ASSEMBLY

A/C Control Assembly Connector Wire Harness View:



H E124479E03

(a) Remove the A/C control assembly with the connectors still connected.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
F16-4 (ADI1) - F16-5 (SG)	AUTO switch: ON	Below 2.5 Ω
F16-4 (ADI1) - F16-5 (SG)	OFF switch: ON	Approx. 329 Ω
F16-4 (ADI1) - F16-5 (SG)	TEMP+ switch: ON	Approx. 1,000 Ω
F16-4 (ADI1) - F16-5 (SG)	TEMP- switch: ON	Approx. 3,110 Ω

NG → Go to step 2

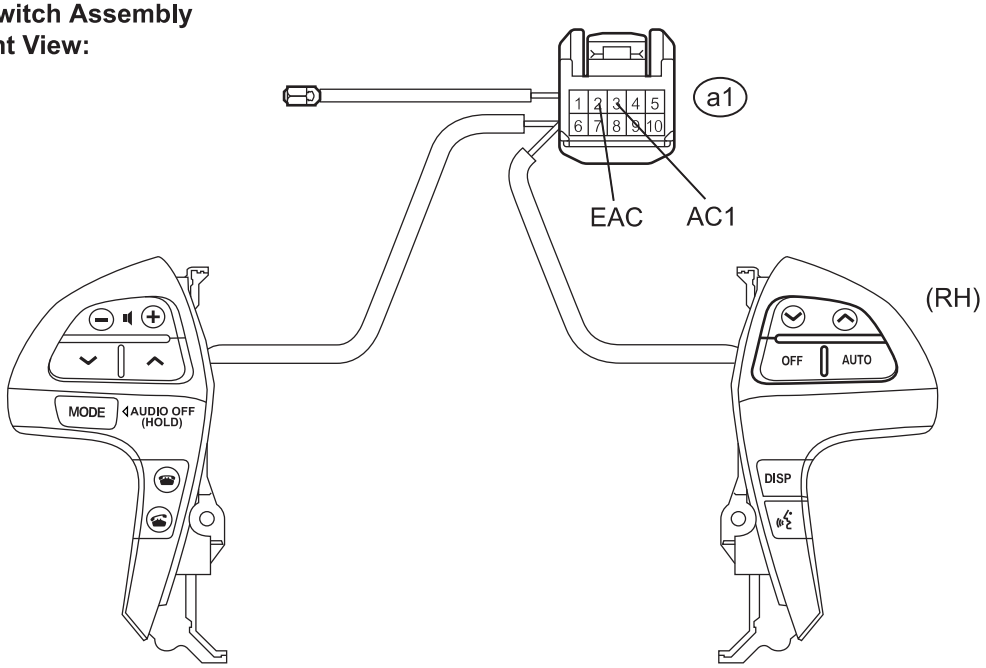
OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2	INSPECT STEERING PAD SWITCH ASSEMBLY

(a) Remove the steering pad switch assembly.
(b) Disconnect the connector from the steering pad switch assembly.

Steering Pad Switch Assembly Connector Front View:



H

E124484E01

(c) Measure the resistance according to the value(s) in the table below.

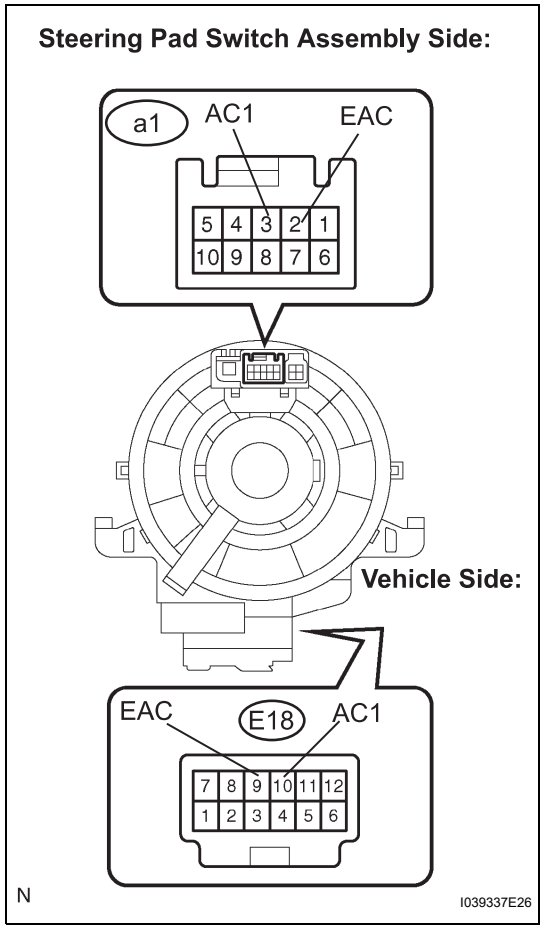
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
a1-3 (AC1) - a1-2 (EAC)	AUTO switch: ON	Below 2.5 Ω
a1-3 (AC1) - a1-2 (EAC)	OFF switch: ON	Approx. 329 Ω
a1-3 (AC1) - a1-2 (EAC)	TEMP+ switch: ON	Approx. 1,000 Ω
a1-3 (AC1) - a1-2 (EAC)	TEMP- switch: ON	Approx. 3,110 Ω

NG → **REPLACE STEERING PAD SWITCH ASSEMBLY**

OK

3	INSPECT SPIRAL CABLE SUB-ASSEMBLY



(a) Disconnect the connector from the spiral cable sub-assembly.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

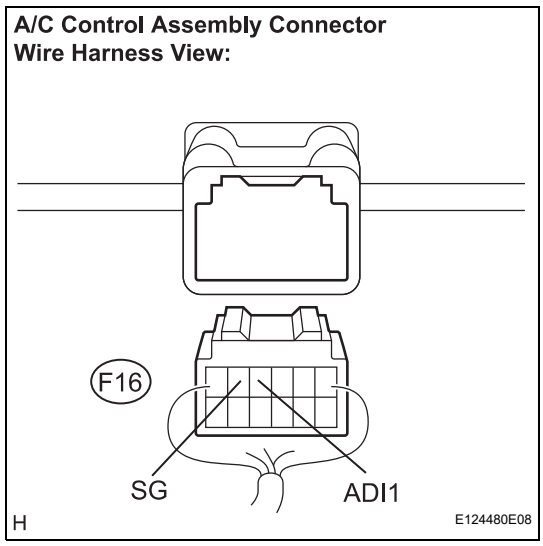
Tester Connection (Symbols)	Condition	Specified Condition
E18-10 (AC1) - a1-3 (AC1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
E18-9 (EAC) - a1-2 (EAC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

HINT:
The spiral cable makes a maximum of approximately 5 rotations.

NG → REPLACE SPIRAL CABLE SUB-ASSEMBLY

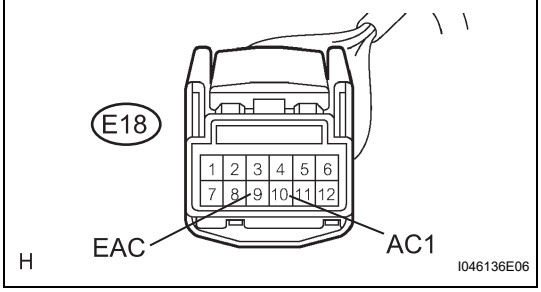
OK

4	CHECK HARNESS AND CONNECTOR (A/C CONTROL ASSEMBLY - SPIRAL CABLE SUB-ASSEMBLY)



(a) Disconnect the connector from the A/C control assembly.

Spiral Cable Sub-assembly Connector Front View:



(b) Disconnect the connector from the spiral cable sub-assembly.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
F16-4 (ADI1) - E18-10 (AC1)	Always	Below 1 Ω
F16-5 (SG) - E18-9 (EAC)	Always	Below 1 Ω
F16-4 (ADI1) - E18-10 (AC1)	Always	10 kΩ or higher
F16-5 (SG) - E18-9 (EAC)	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

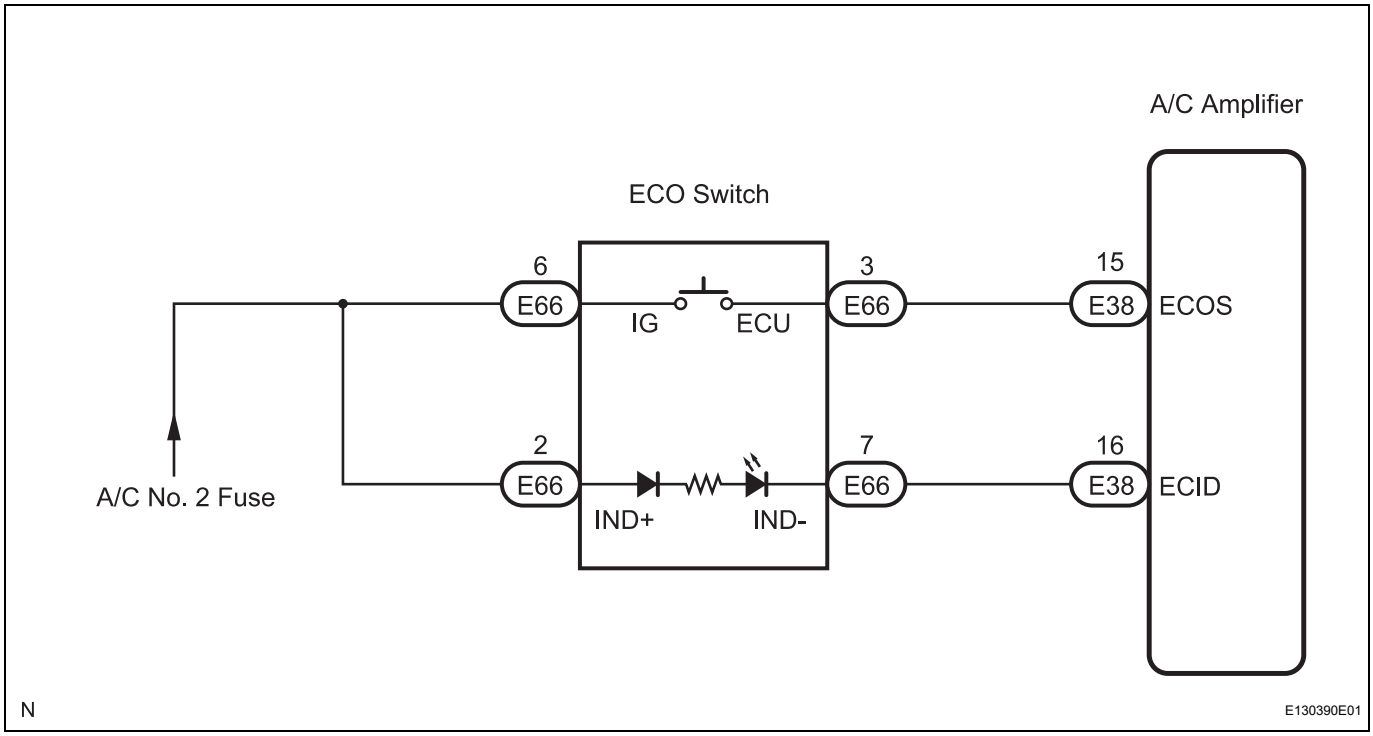
REPLACE AIR CONDITIONING CONTROL ASSEMBLY

ECO Switch Circuit

DESCRIPTION

The ECO switch is installed on the instrument panel on the driver's seat side. When the ECO switch is turned on, the A/C amplifier receives an ECO switch ON signal and controls the air conditioning to enhance fuel efficiency.
When the heater is on, the engine ON request coolant temperature will be set to a lower level. Thus, the length of time that the engine operates to generate the heat necessary to operate the heater will be limited. When the engine coolant temperature drops, the amount of air flow of the blower motor will also decrease. If FOOT/DEF or DEF is selected, or if the temperature is set to MAX HOT, the fuel efficiency control due to the ECO switch operation will be canceled.
When the air conditioning is used to cool the vehicle, the power consumption of the compressor will be limited. Initially, the air conditioning will operate normally until the cabin temperature stabilizes. After the cabin temperature stabilizes, the power consumption of the compressor will be limited while stabilizing the cabin temperature. If the temperature is set to MAX COOL, the fuel efficiency control due to the ECO switch operation will be canceled.

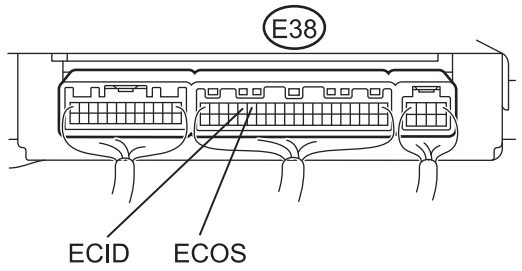
WIRING DIAGRAM



INSPECTION PROCEDURE

1 INSPECT AIR CONDITIONING AMPLIFIER

Air Conditioning Amplifier Connector Wire Harness View:



H E124471E14

(a) Remove the A/C amplifier with the connectors still connected.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-15 (ECOS) - Body ground	Power switch on (IG) ECO switch: OFF (when switch is not pressed)	Below 1 V
E38-15 (ECOS) - Body ground	Power switch on (IG) ECO switch: ON (when switch is pressed)	10 to 14 V
E38-16 (ECID) - Body ground	Power switch on (IG) ECO switch: OFF	10 to 14 V
E38-16 (ECID) - Body ground	Power switch on (IG) ECO switch: ON	Below 1 V

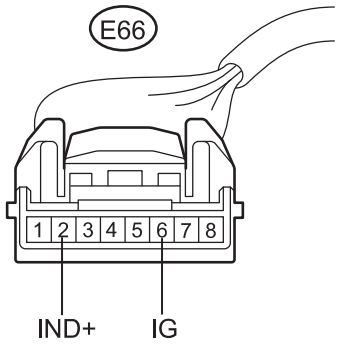
NG → Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 CHECK HARNESS AND CONNECTOR (ECO SWITCH - BATTERY)

ECO Switch Wire Harness Connector Front View:



H E130392E01

(a) Disconnect the connector from the ECO switch.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

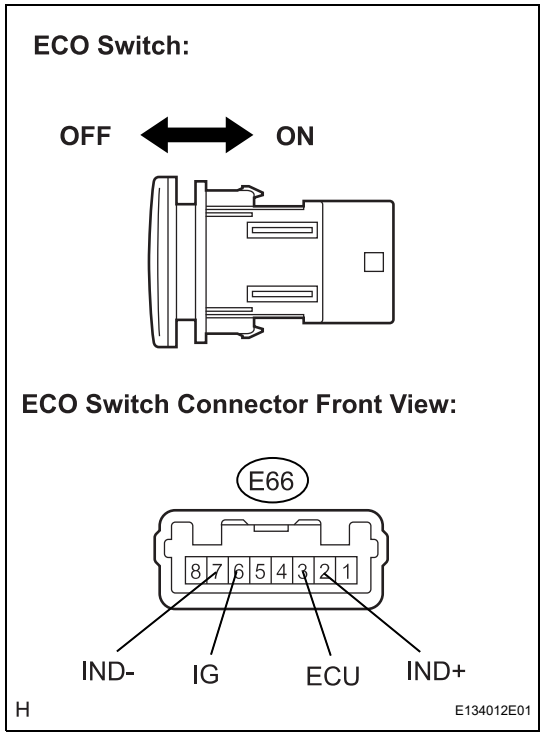
Tester Connection (Symbols)	Condition	Specified Condition
E66-6 (IG) - Body ground	Power switch off	Below 1 V
E66-6 (IG) - Body ground	Power switch on (IG)	10 to 14 V
E66-2 (IND+) - Body ground	Power switch off	Below 1 V
E66-2 (IND+) - Body ground	Power switch on (IG)	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

AC

3 INSPECT ECO SWITCH



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E66-6 (IG) - E66-3 (ECU)	ECO switch: OFF (when switch is not pressed)	10 kΩ or higher
E66-6 (IG) - E66-3 (ECU)	ECO switch: ON (when switch is pressed)	Below 1 Ω

(b) Connect the positive (+) lead from the battery to terminal 2 (IND+), and the negative (-) lead to terminal 7 (IND-). Check that the indicator light comes on.

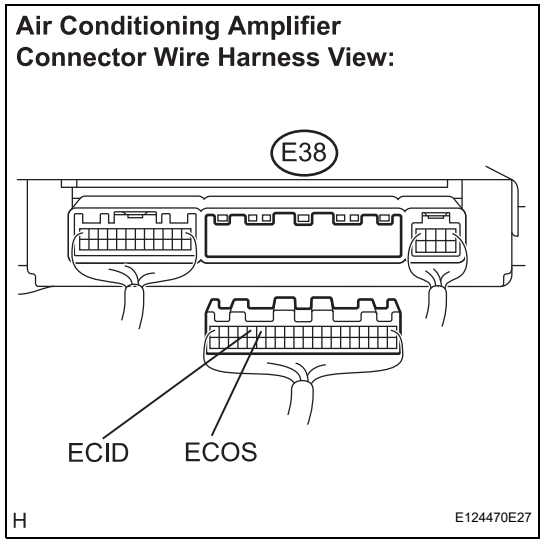
OK:

Indicator light comes on.

NG → **REPLACE ECO SWITCH**

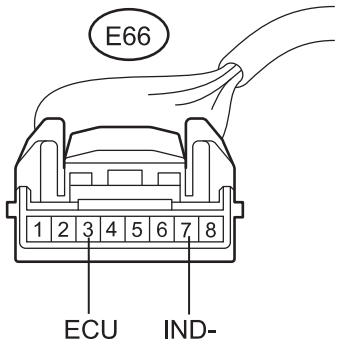
OK

4 CHECK HARNESS AND CONNECTOR (ECO SWITCH - A/C AMPLIFIER)



(a) Disconnect the connector from the A/C amplifier.

ECO Switch Wire Harness Connector Front View:



H

E130392E03

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E38-15 (ECOS) - E66-3 (ECU)	Always	Below 1 Ω
E38-15 (ECOS) - Body ground	Always	10 kΩ or higher
E38-16 (ECID) - E66-7 (IND-)	Always	Below 1 Ω
E38-16 (ECID) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

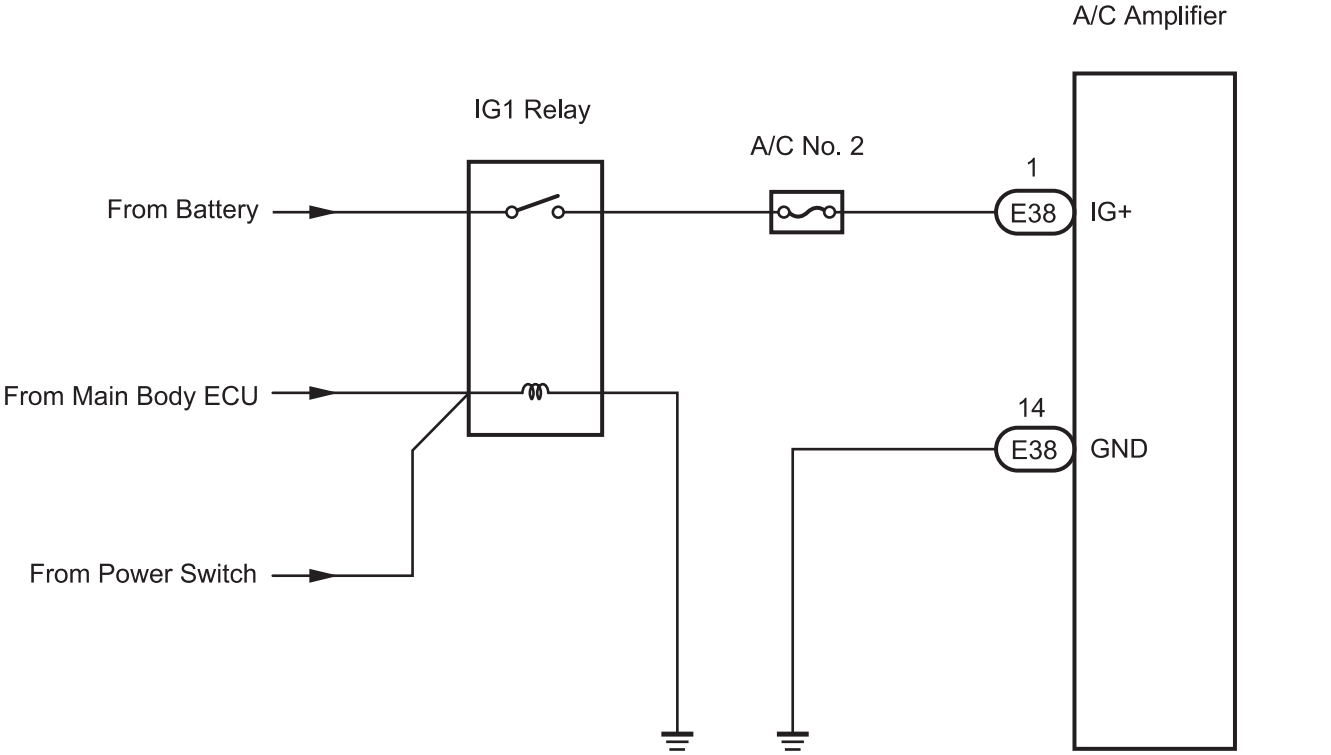
REPLACE AIR CONDITIONING AMPLIFIER

IG Power Source Circuit

DESCRIPTION

The main power source is supplied to the A/C amplifier when the power switch is turned on (IG).
The power source is used for operating the A/C amplifier and servo motor, etc.

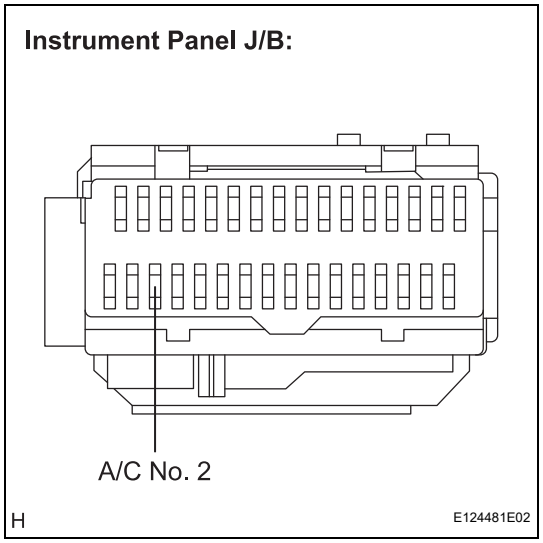
WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:
Start the engine before inspection. Check the IG1 relay or battery if the engine does not start.

1 INSPECT FUSE (A/C NO. 2)



(a) Remove the A/C No. 2 fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

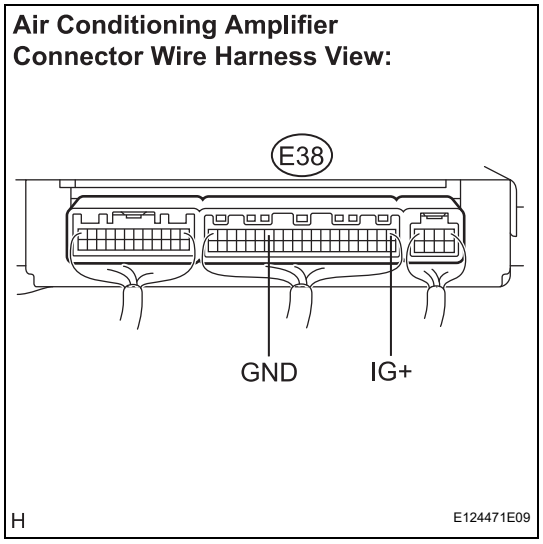
Standard resistance

Tester Item	Condition	Specified Condition
A/C No. 2 fuse	Always	Below 1 Ω

NG → **REPLACE FUSE (A/C NO. 2)**

OK

2 INSPECT AIR CONDITIONING AMPLIFIER (IG+ - GND)



(a) Remove the A/C amplifier with its connectors still connected.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-1 (IG+) - E38-14 (GND)	Power switch on (IG)	10 to 14 V

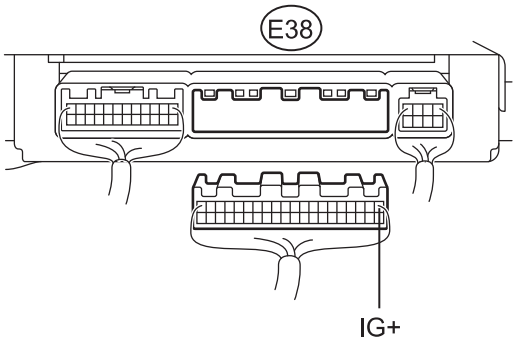
NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

3	CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BATTERY)

Air Conditioning Amplifier Connector Wire Harness View:



(a) Disconnect the A/C amplifier connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

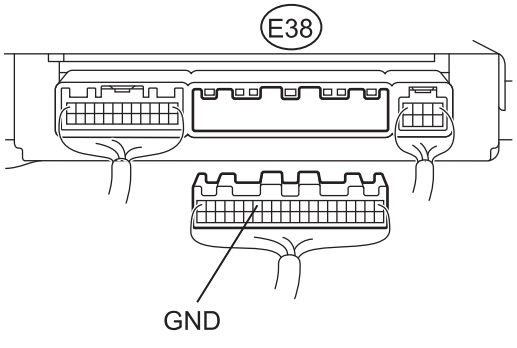
Tester Connection (Symbols)	Condition	Specified Condition
E38-1 (IG+) - Body ground	Power switch off	Below 1 V
	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK WIRE HARNESS (AIR CONDITIONING AMPLIFIER - BODY GROUND)

Air Conditioning Amplifier Connector Wire Harness View:



(a) Disconnect the A/C amplifier connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E38-14 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

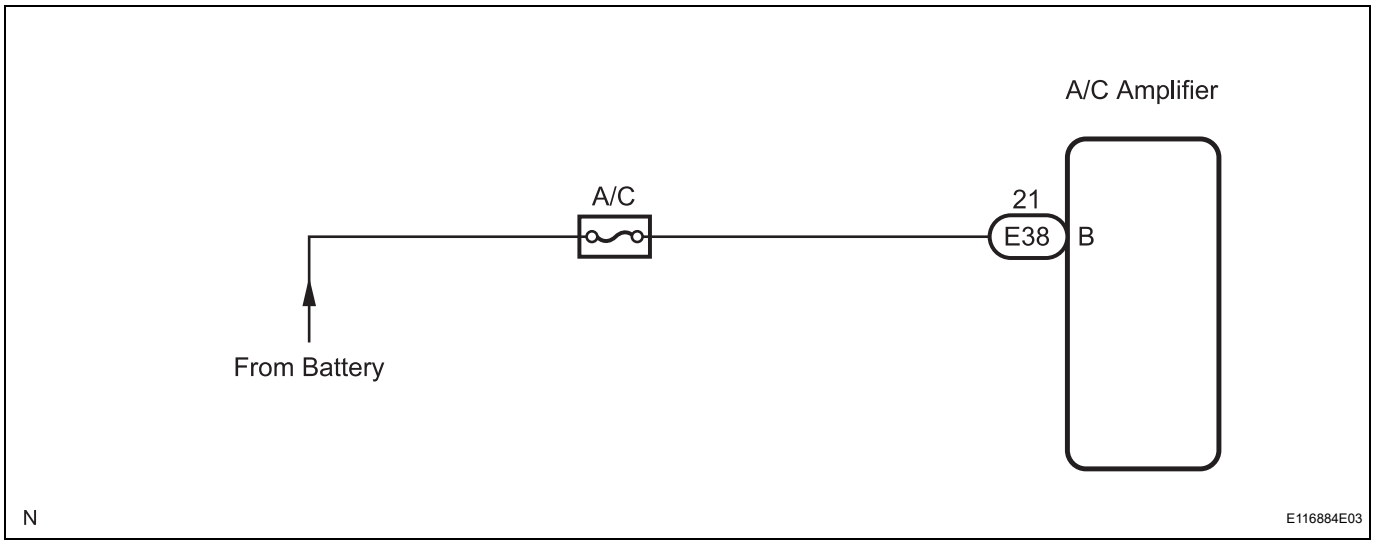
REPLACE AIR CONDITIONING AMPLIFIER

Back-up Power Source Circuit

DESCRIPTION

The back-up power source circuit for the A/C amplifier is shown below. Power is supplied even when turning the power switch off and is used for diagnostic trouble code memory, etc.

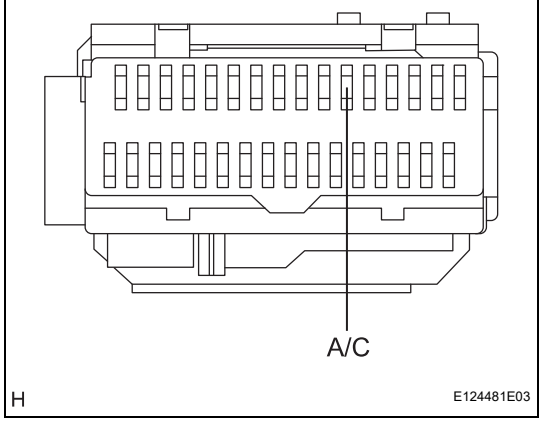
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT FUSE (A/C)

Instrument Panel J/B:



(a) Remove the A/C fuse from the instrument panel J/B.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Item	Condition	Specified Condition
A/C fuse	Always	Below 1 Ω

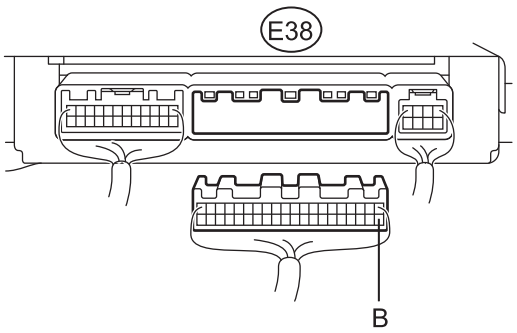
NG → **REPLACE FUSE (A/C)**

OK

AC

2	INSPECT AIR CONDITIONING AMPLIFIER (AIR CONDITIONING AMPLIFIER - BODY GROUND)

Air Conditioning Amplifier Connector Wire Harness View:



(a) Disconnect the A/C amplifier connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E38-21 (B) - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

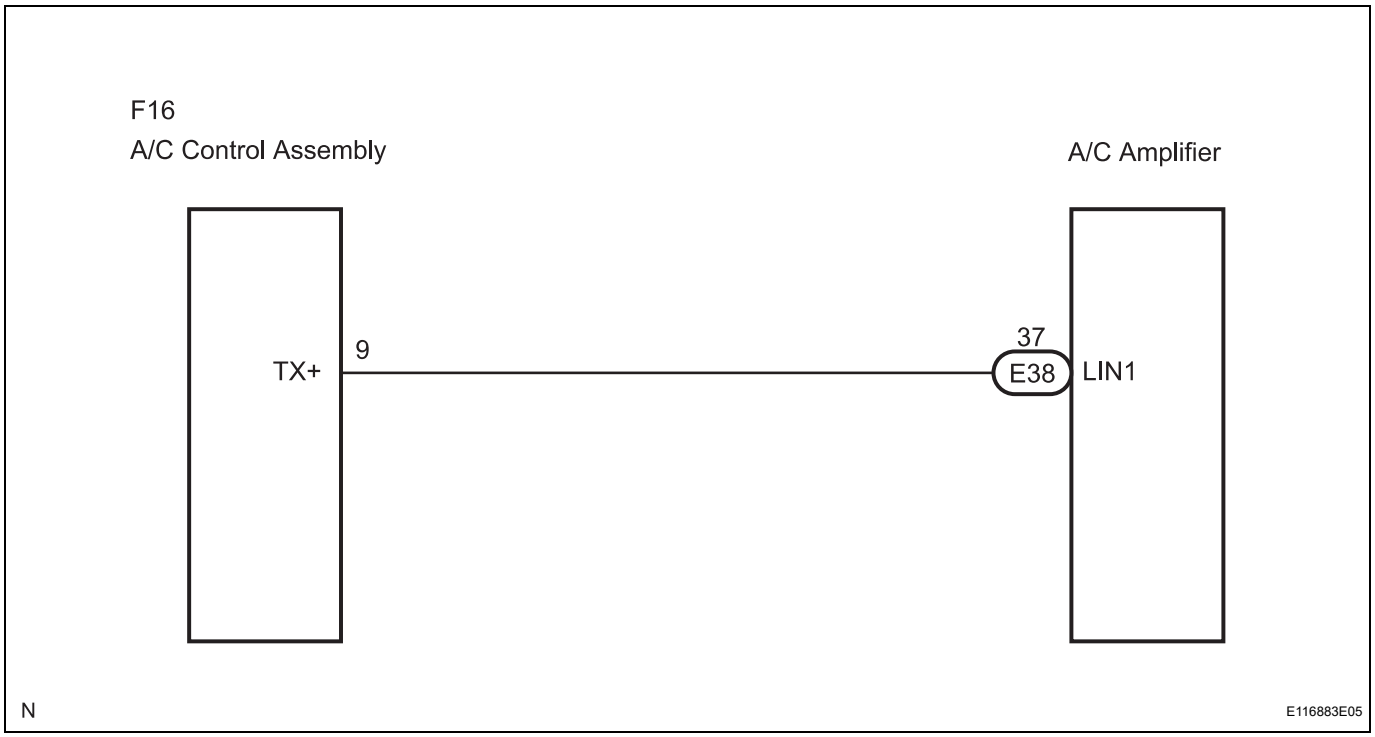
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

LIN Communication Circuit

DESCRIPTION

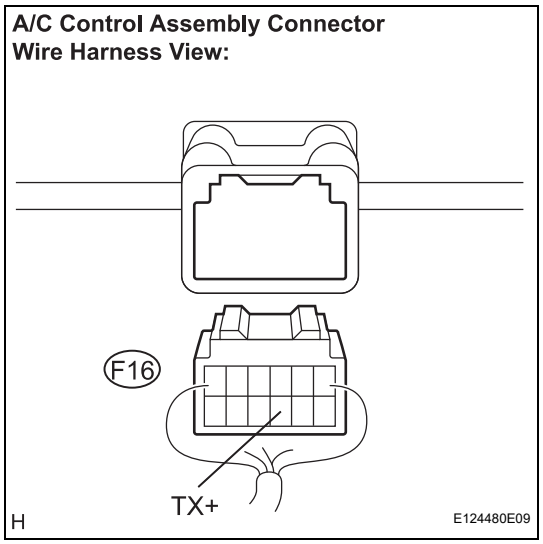
The operation signal of a switch etc. is exchanged between terminal TX+ of the A/C control assembly and terminal LIN1 of the A/C amplifier.

WIRING DIAGRAM



INSPECTION PROCEDURE

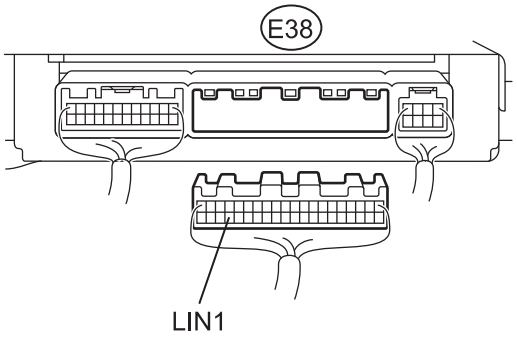
1	CHECK HARNESS AND CONNECTOR (A/C CONTROL ASSEMBLY - AIR CONDITIONING AMPLIFIER)



(a) Disconnect the connector from the A/C control assembly.

AC

Air Conditioning Amplifier Connector Wire Harness View:



H E124470E17

(b) Disconnect the connector from the A/C amplifier.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E38-37 (LIN1) - F16-9 (TX+)	Always	Below 1 Ω
E38-37 (LIN1) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

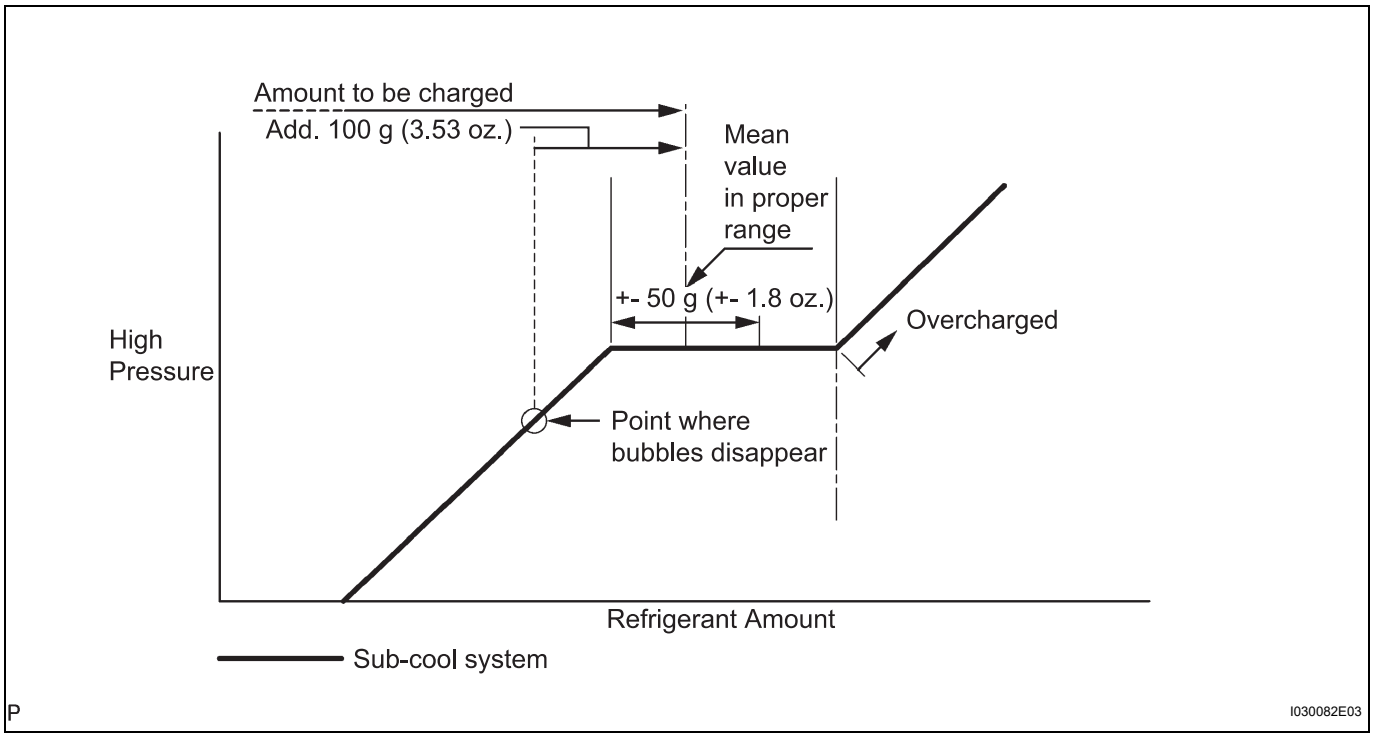
REPLACEMENT

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM

(a) Turn the A/C switch on.
(b) Operate the A/C with the setting temperature at 25°C (77°F) and the blower level at LO for 10 minutes to circulate the refrigerant. This causes most of the compressor oil from the various components of the A/C system to collect in the A/C compressor.
(c) Turn the power switch off.
(d) Recover the refrigerant from the A/C system using a refrigerant recovery unit.

2. CHARGE WITH REFRIGERANT

(a) Perform vacuum purging using a vacuum pump.
(b) Charge with refrigerant HFC-134a (R134a).



Standard:
480 to 580 g (16.9 to 20.5 oz.)
SST 07110-58060 (07117-58060, 07117-58070, 07117-58080, 07117-58090, 07117-78050, 07117-88060, 07117-88070, 07117-88080)
NOTICE:

- **Do not turn the A/C on before charging with refrigerant. Doing so will cause the compressor to work without refrigerant, resulting in overheating of the cooler compressor.**

- **Approximately 100 g (3.53 oz.) of refrigerant may need to be charged after bubbles disappear.**
  The refrigerant amount should be checked by quantity, not with the sight glass.
- **Avoid using the gauge manifold set that had been used for vehicles with conventional compressor oil (ND-OIL11 or equivalent) as much as possible. This will cause compressor oil remaining in the manifold to enter the vehicle, resulting in insulation performance deterioration. A gauge manifold set that had been used 3 times or less can be reused if an appropriate one is not available.**

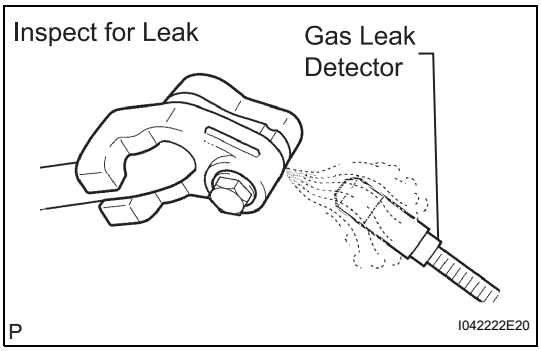
HINT:
Ensure that sufficient refrigerant is available to recharge the system when using a refrigerant recovery unit. Refrigerant recovery units are not always able to recover 100% of the refrigerant from an A/C system.

3. WARM UP COMPRESSOR

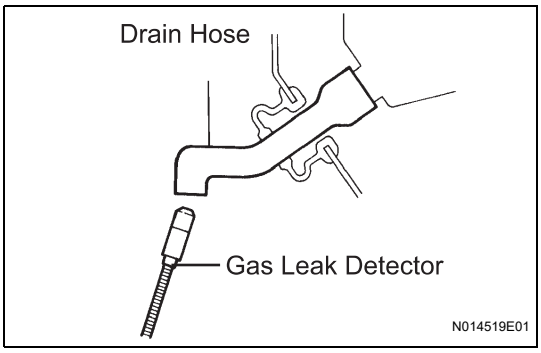
(a) Keep the A/C switch on for at least 2 minutes to warm up the compressor.
NOTICE:
Be sure to warm up the compressor when turning the A/C on after removing and installing the cooler refrigerant lines (including the compressor), to prevent damage to the compressor.

4. INSPECT FOR REFRIGERANT LEAK

(a) After recharging with refrigerant gas, inspect for a refrigerant leak using a halogen leak detector.
(b) Carry out the test under the following conditions:
- Power switch OFF
- Secure good ventilation (the gas leak detector may react to volatile gases which are not refrigerant, such as evaporated gasoline and exhaust gas).
- Repeat the test 2 or 3 times.
- Make sure that there is some refrigerant remaining in the refrigeration system.
  When the compressor is off: approx. 392 to 588 kPa (4 to 6 kgf/cm^2, 57 to 85 psi)



(c) Using a gas leak detector, inspect for a leak from the refrigerant lines.



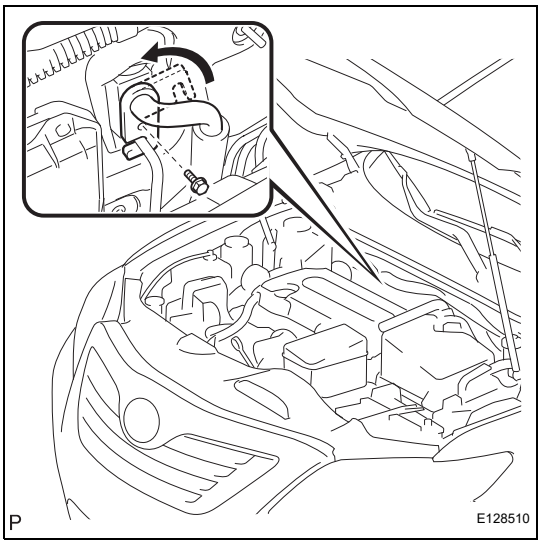
(d) Bring the gas leak detector close to the drain hose with the detector's power off, and then turn the detector on.
HINT:
- After the blower motor has stopped, let the cooling unit stand for more than 15 minutes.
- Bring the gas leak detector sensor under the drain hose.
- When bringing the gas leak detector close to the drain hose, make sure that the gas leak detector does not react to volatile gases.
  If it is not possible to avoid interference form volatile gases, the vehicle should be lifted up to allow testing.

(e) If a gas leak is not detected from the drain hose, remove the blower motor control from the cooling unit. Insert the gas leak detector sensor into the unit and perform the test.

(f) Disconnect the pressure switch connector and leave it for approximately 20 minutes. Bring the gas leak detector close to the pressure switch and perform the test.

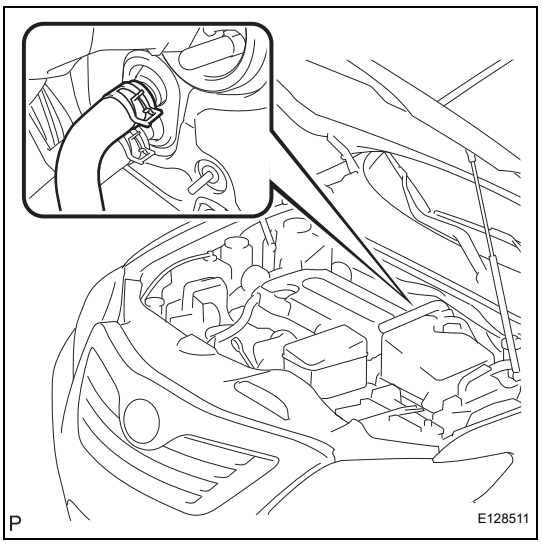
REMOVAL

1. **RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM**
   (a) Start up the engine.
   (b) Turn the A/C switch on.
   (c) Operate the cooler compressor at an engine speed of approximately 1,000 rpm for 5 to 6 minutes to circulate the refrigerant. This causes most of the compressor oil from the various components of the A/C system to collect in the A/C compressor.
   (d) Stop the engine.
   (e) Recover the refrigerant from the A/C system using a refrigerant recovery unit.
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT NEGATIVE BATTERY TERMINAL**
   NOTICE:
   Wait for 90 seconds after disconnecting the terminal to prevent the airbag from deploying (See page RS-1).
4. **SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-27)**
5. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)**
6. **REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)**
7. **REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)**
8. **REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)**
9. **REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)**
10. **REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)**
11. **REMOVE COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-403)**



12. **DISCONNECT SUCTION PIPE SUB-ASSEMBLY**
    (a) Remove the bolt, and slide the hook connector.
    (b) Disconnect the suction pipe sub-assembly.
    (c) Remove the O-ring from the suction hose sub-assembly.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.

13. **DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY**
    (a) Disconnect the air conditioner tube and accessory.
    (b) Remove the O-ring from the air conditioner tube and accessory.
    NOTICE:
    Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.



14. **DISCONNECT HEATER OUTLET WATER HOSE**
    (a) Using pliers, grip the claws of the clip and slide the clip to disconnect the heater outlet water hose.
    NOTICE:
    - **Do not apply excessive force to the heater outlet water hose.**
    - **Prepare a drain pan or cloth in case the coolant leaks.**

15. **DISCONNECT HEATER INLET WATER HOSE**
    HINT:
    Disconnection procedure for the heater inlet water hose is the same as that for the heater outlet water hose.

16. **REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-345)**

17. **REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-345)**

18. **REMOVE STEERING PAD (See page RS-345)**

19. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-36)**

20. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**

21. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**

22. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**

23. **REMOVE STEERING COLUMN COVER (See page IP-12)**

24. **REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-37)**

25. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-12)**

26. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)
27. REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-13)
28. REMOVE COMBINATION METER ASSEMBLY (See page IP-13)
29. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)
30. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)
31. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-13)
32. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)
33. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)
34. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
35. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
36. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)
37. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)
38. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)
39. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-16)
40. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-136)
41. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-193)
42. REMOVE CONSOLE BOX POCKET (See page IP-17)
43. REMOVE CONSOLE BOX CARPET (See page IP-17)
44. REMOVE CONSOLE BOX ASSEMBLY (See page IP-17)
45. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-18)
46. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (See page IP-18)
47. REMOVE FRONT PILLAR GARNISH LH (See page IR-16)

48. **REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-18)**

49. **REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-19)**

50. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)**

51. **REMOVE FRONT PILLAR GARNISH RH (See page IR-16)**

52. **REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-19)**

53. **REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-19)**

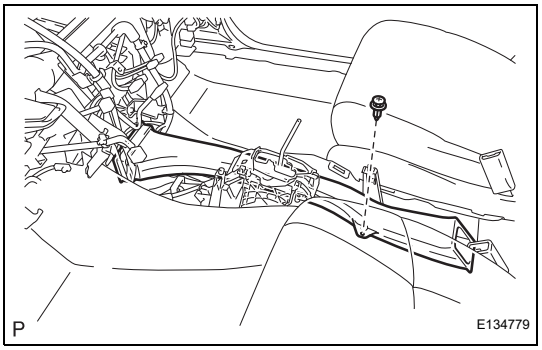
54. **REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-19)**

55. **REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-20)**

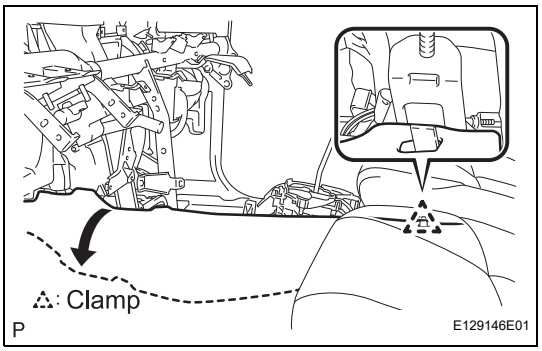
56. **DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY**

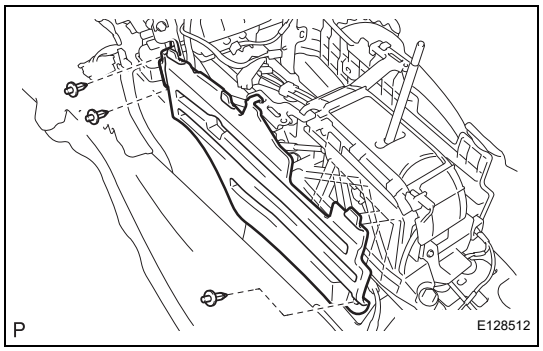
57. **REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (See page IP-20)**

58. **REMOVE NO. 1 CONSOLE BOX DUCT**
    (a) Remove the clip and No. 1 console box duct.

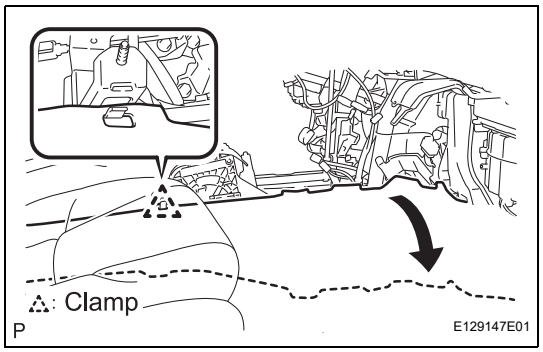


59. **REMOVE FLOOR CARPET BRACKET LH**
    (a) Release the clamp.
    (b) Turn back the floor carpet.



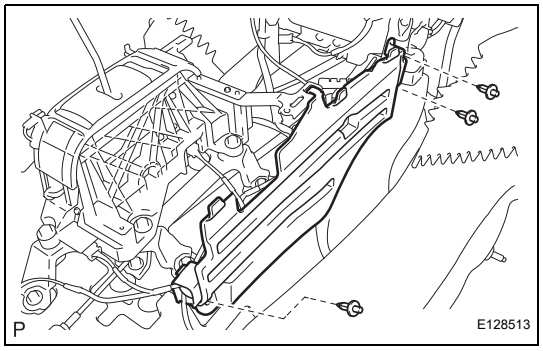


(c) Remove the 3 clips.
(d) Remove the floor carpet bracket LH.

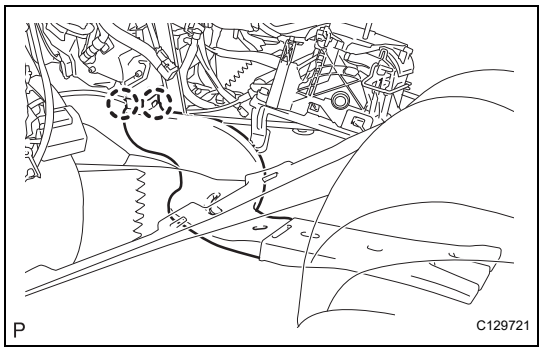


60. REMOVE FLOOR CARPET BRACKET RH

(a) Release the clamp.
(b) Turn back the floor carpet.

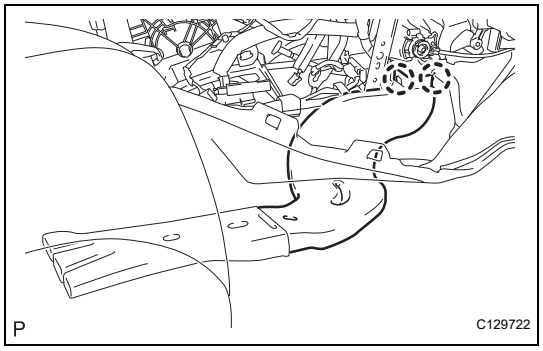


(c) Remove the 3 clips.
(d) Remove the floor carpet bracket RH.



61. REMOVE REAR NO. 2 AIR DUCT

(a) Release the 2 claws and remove the rear No. 2 air duct.



62. REMOVE REAR NO. 1 AIR DUCT

(a) Release the 2 claws and remove the rear No. 1 air duct.

63. REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY (See page SR-37)

64. SEPARATE STEERING INTERMEDIATE SHAFT ASSEMBLY (See page SR-37)

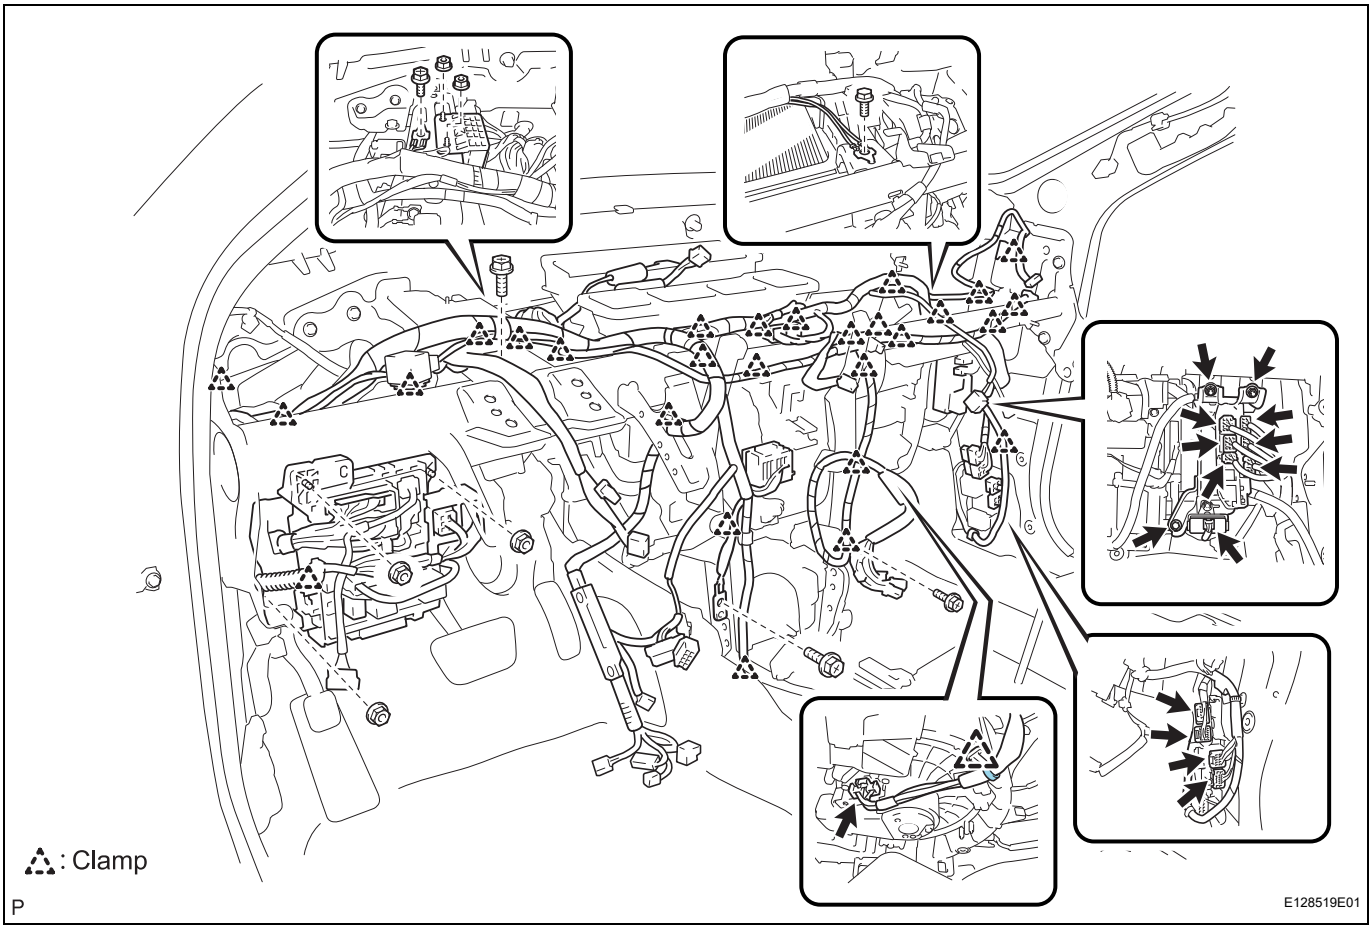
65. REMOVE STEERING COLUMN ASSEMBLY (See page SR-38)

66. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY (See page AC-269)

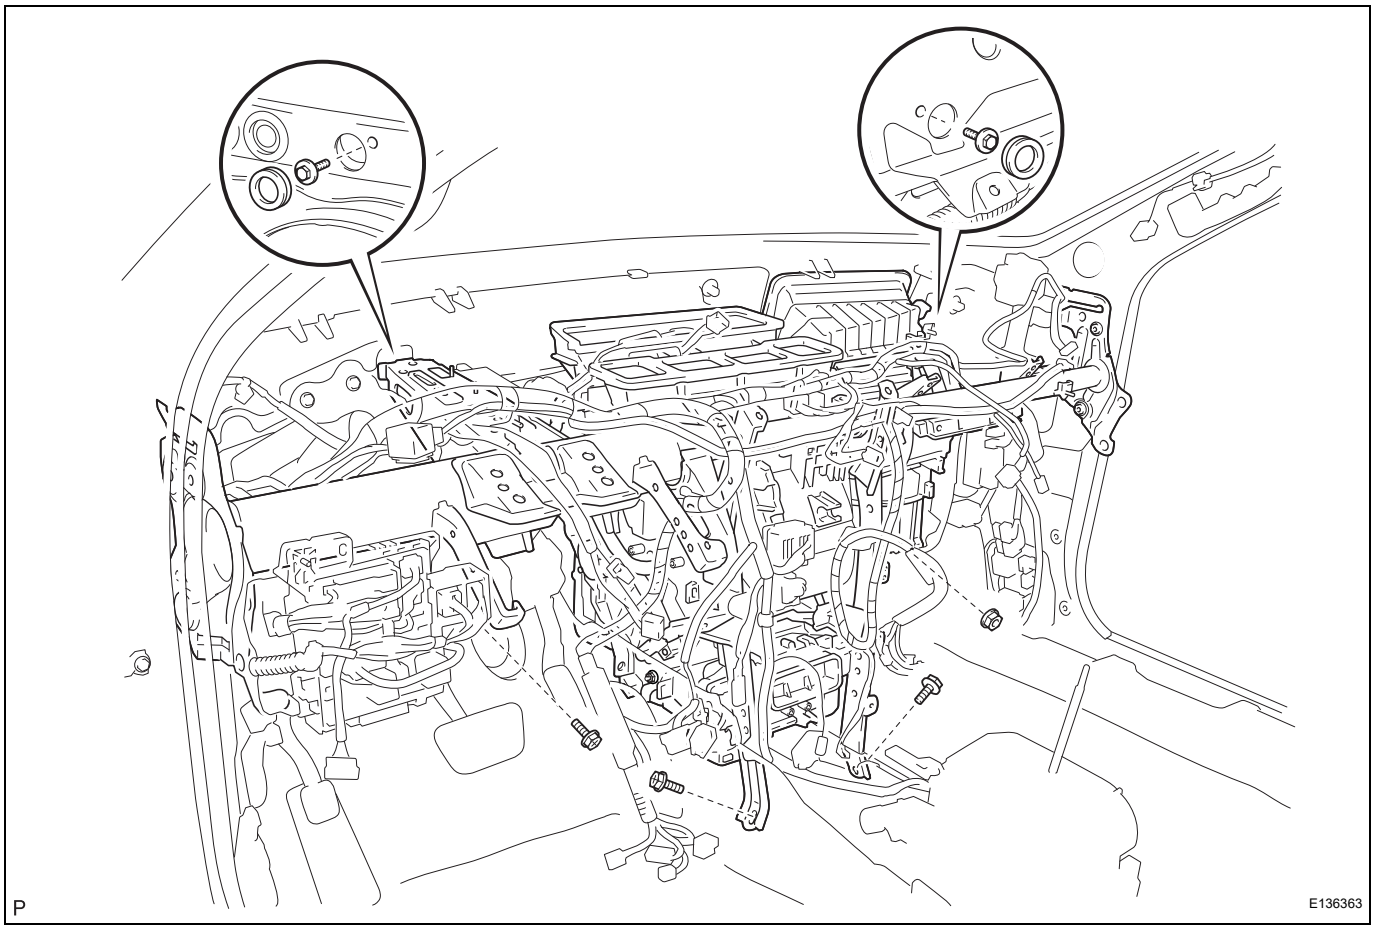
67. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

(a) Remove the 28 clamps, disconnect the 11 connectors, and then disconnect the wire harness.

(b) Remove the 6 nuts, 7 bolts, and junction block.

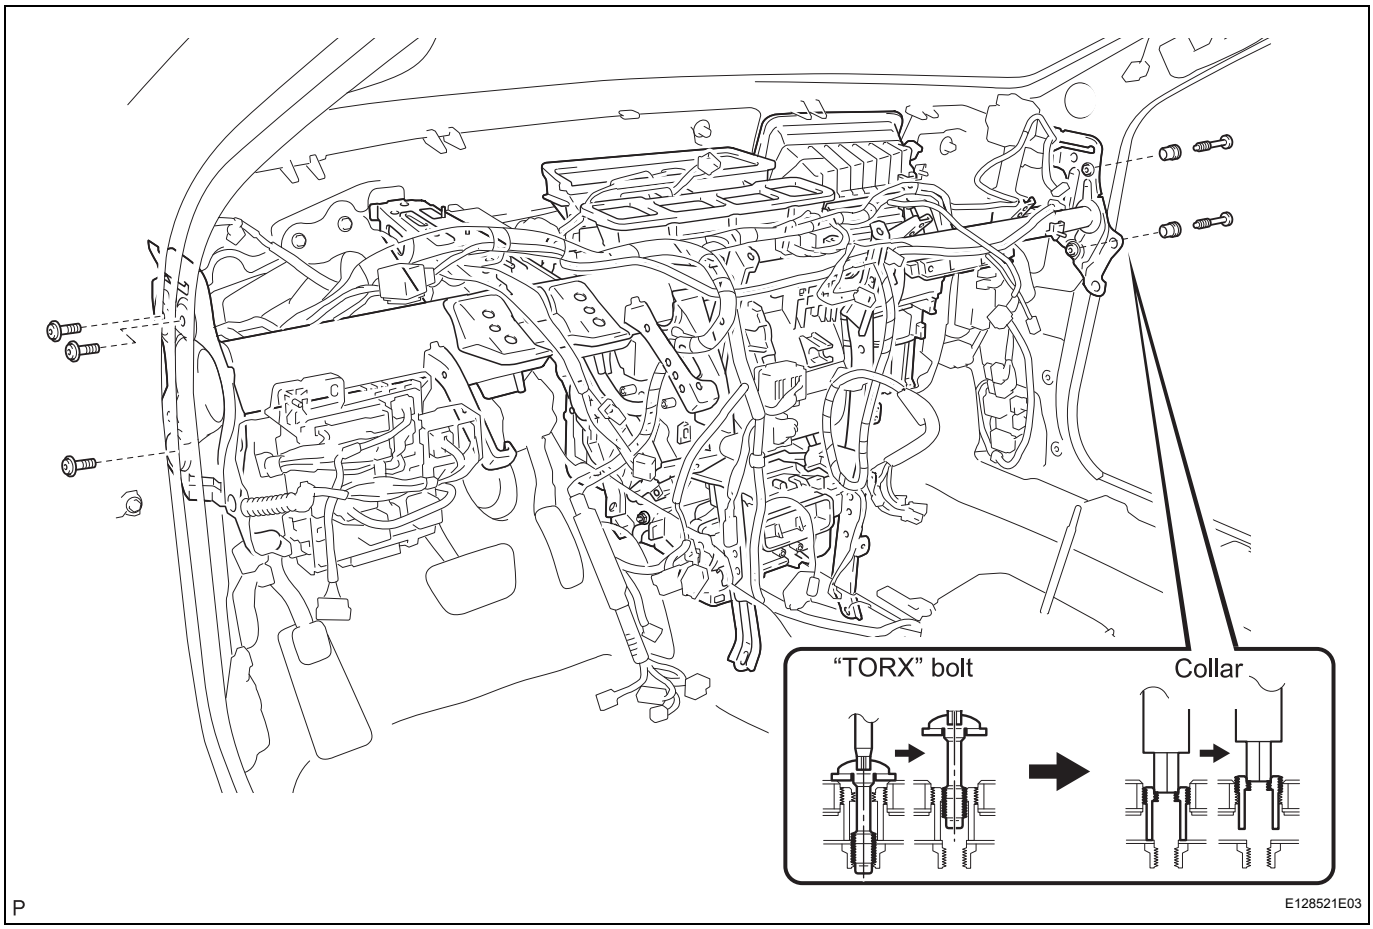


(c) Remove the 2 caps and 2 bolts from the engine compartment side.



(d) Remove the 3 bolts and nut.

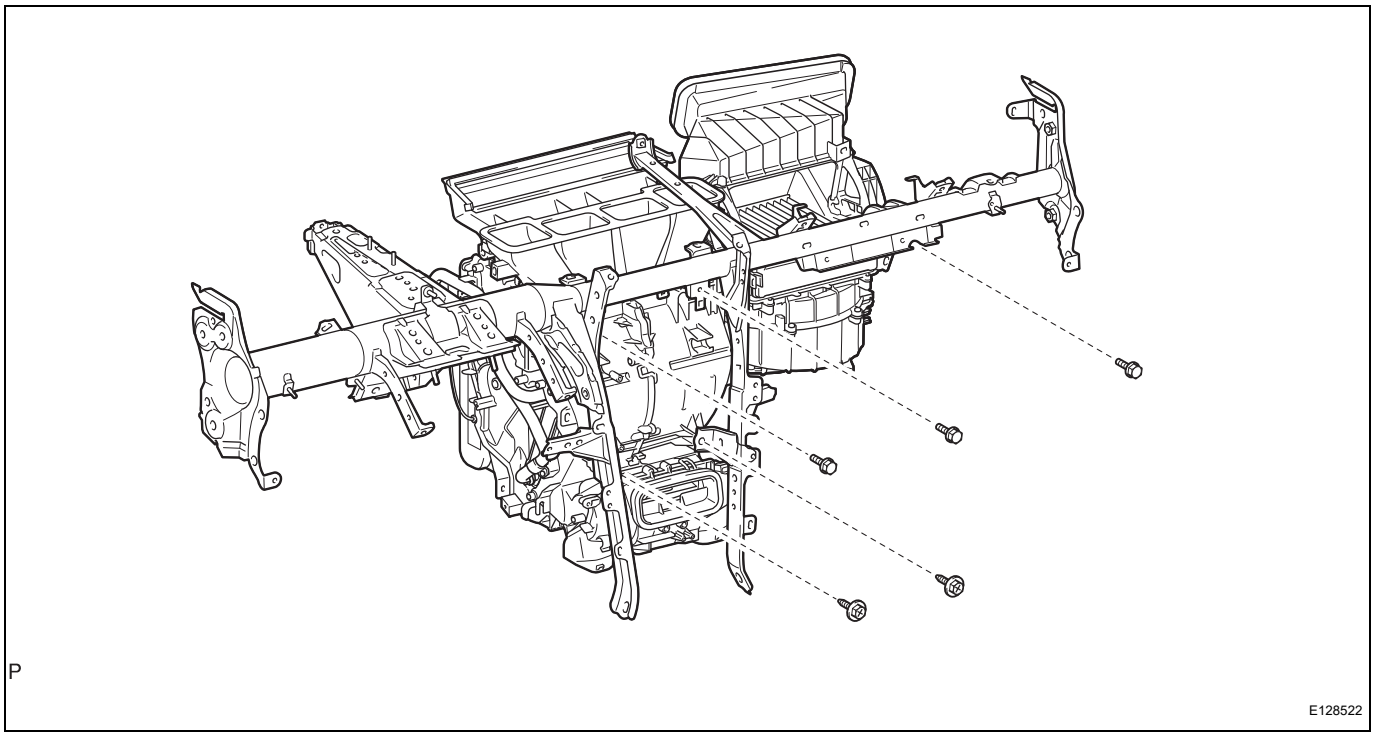
(e) Using a "TORX" socket wrench (T40), remove the 5 "TORX" bolts.

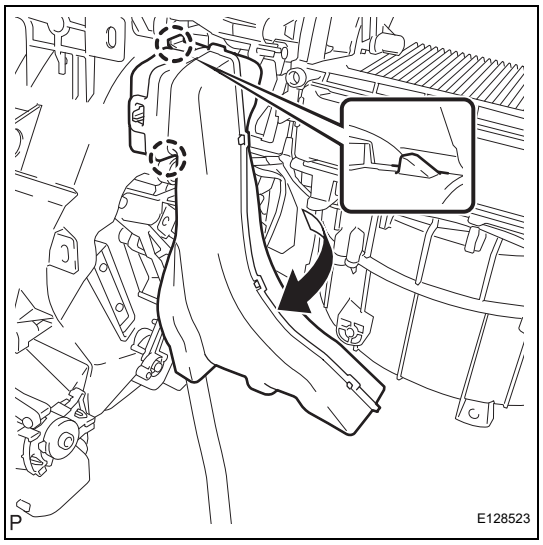


HINT:
The "TORX" bolts on the passenger side can be removed with the collars for adjustment.

(f) Using a 12 mm hexagon wrench, remove the 2 collars and instrument panel reinforcement assembly with the air conditioning unit assembly.

(g) Remove the 3 bolts, 2 screws, and instrument panel reinforcement assembly.





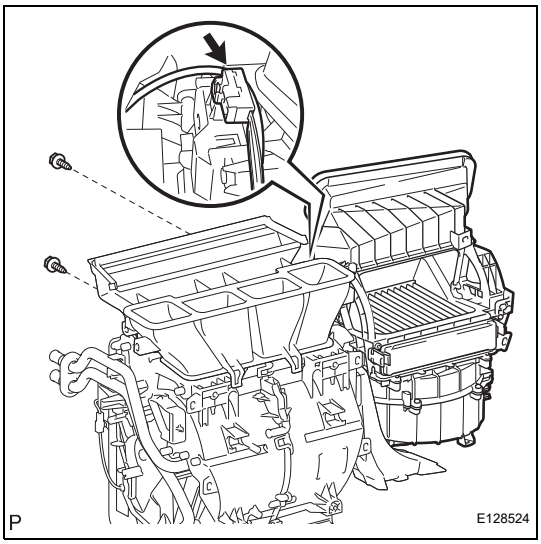
DISASSEMBLY

1. REMOVE NO. 2 AIR DUCT SUB-ASSEMBLY

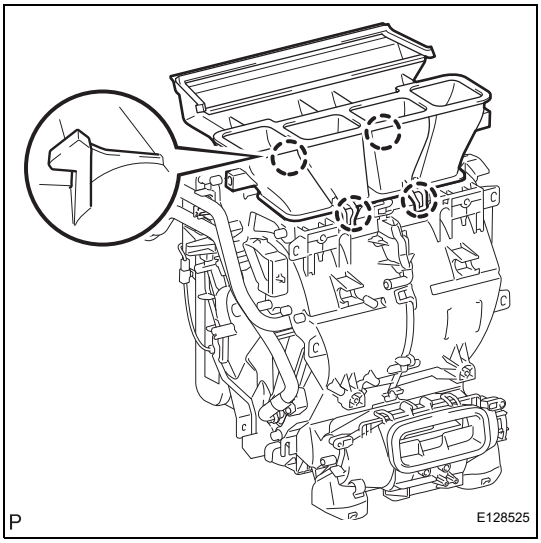
(a) Release the 2 claws and remove the No. 2 air duct sub-assembly as shown in the illustration.

2. REMOVE BLOWER ASSEMBLY

(a) Disconnect the connector.

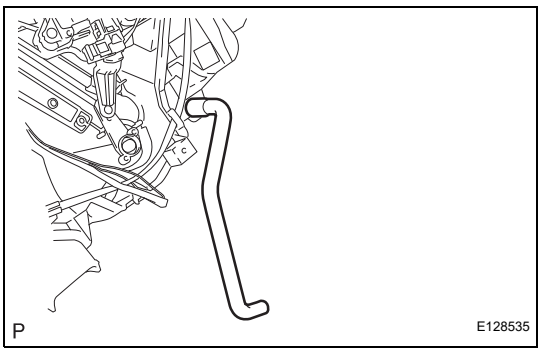


(b) Remove the 2 screws and blower assembly.



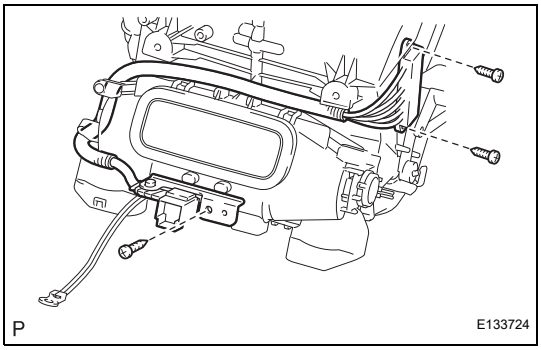
3. REMOVE NO. 6 HEATER TO REGISTER DUCT ASSEMBLY

(a) Release the 4 claws and remove the No. 6 heater to register duct assembly.



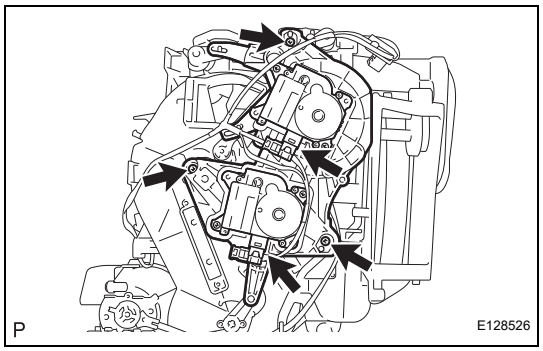
4. REMOVE DRAIN COOLER HOSE

(a) Remove the drain cooler hose from the air conditioning radiator assembly.



5. REMOVE QUICK HEATER ASSEMBLY

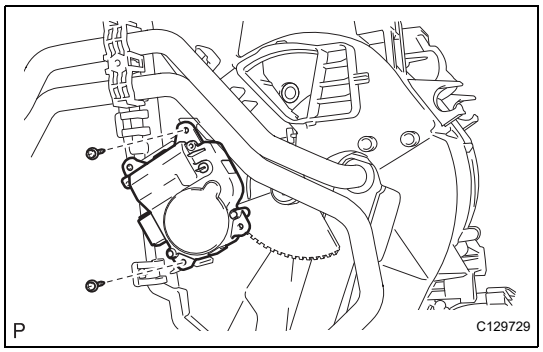
(a) Remove the 3 screws and quick heater assembly.



6. REMOVE AIR OUTLET CONTROL SERVO MOTOR

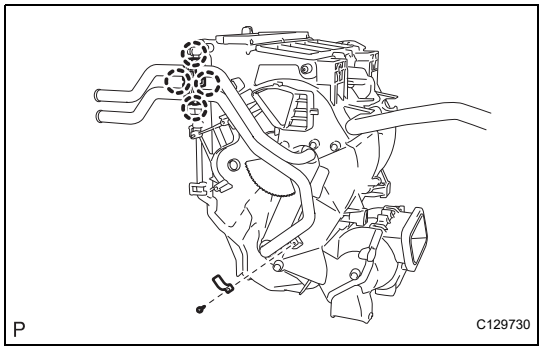
(a) Disconnect the 2 connectors and remove the air conditioner harness.

(b) Remove the 3 screws and then remove the air outlet control servo motor.



7. REMOVE AIR MIX CONTROL SERVO MOTOR

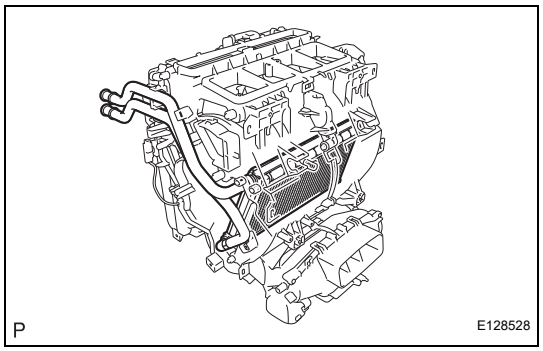
(a) Remove the 2 screws and air mix control servo motor.



8. REMOVE HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Remove the screw and clamp.

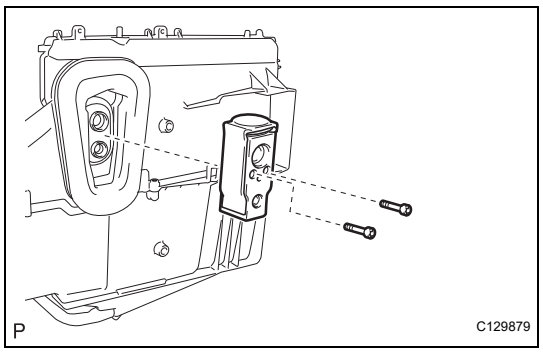
(b) Release the 4 claws and remove the clamp.



(c) Remove the heater radiator unit sub-assembly from the air conditioning radiator assembly.

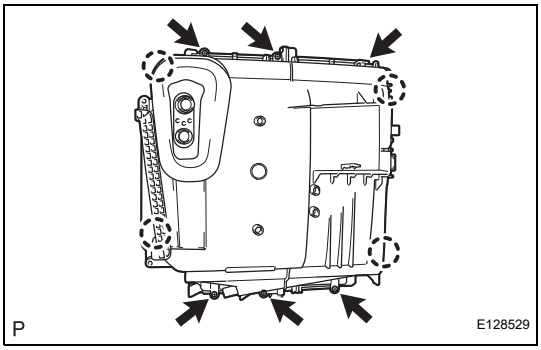
NOTICE:

Prepare a drain pan or cloth in case the coolant water leaks.



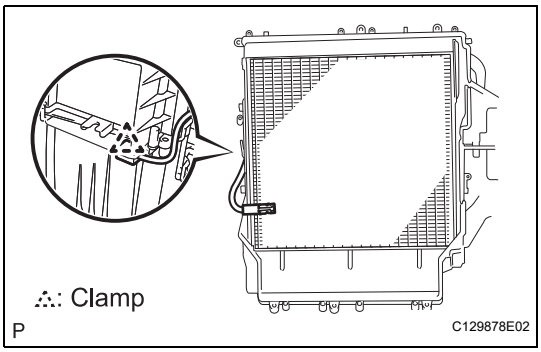
9. REMOVE COOLER EXPANSION VALVE

(a) Using a 4 mm hexagon wrench, remove the 2 hexagon bolts and cooler expansion valve.

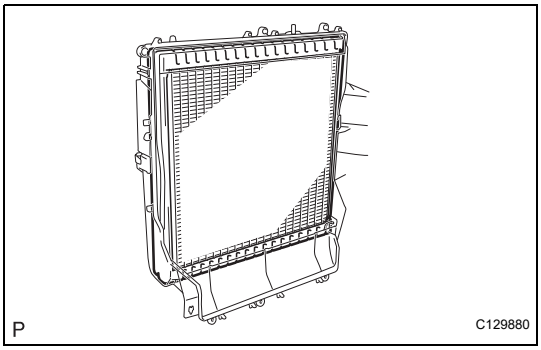


10. REMOVE NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

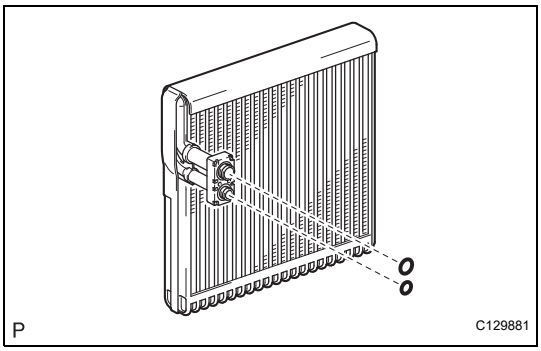
(a) Remove the 6 screws, release the 4 claws, and remove the plate cover.



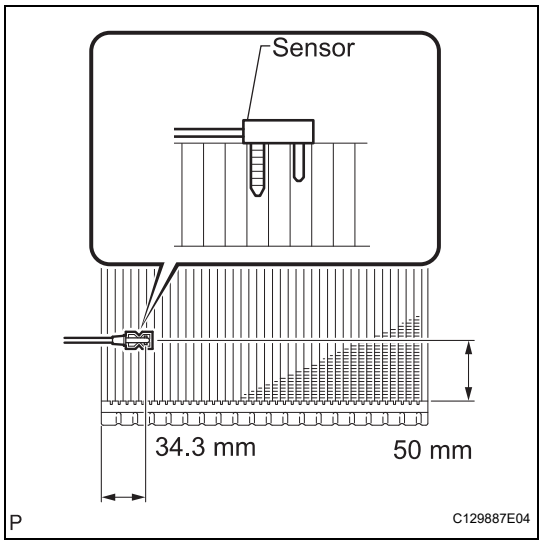
(b) Remove the clamp and No. 1 cooler thermistor.



(c) Remove the No. 1 cooler evaporator sub-assembly.



(d) Remove the 2 O-rings from the No. 1 cooler evaporator sub-assembly.

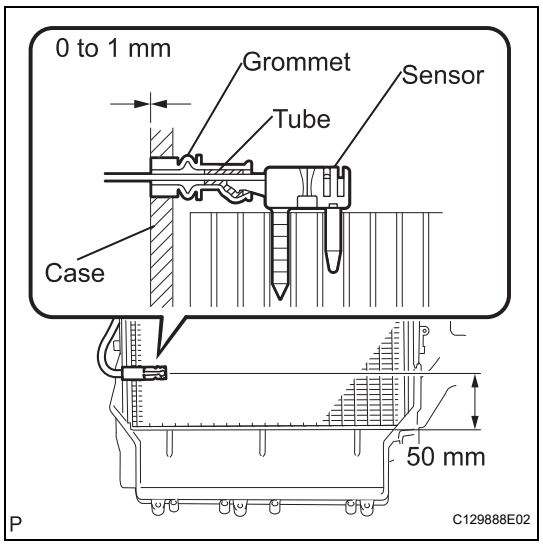


REASSEMBLY

1. INSTALL NO. 1 COOLER THERMISTOR

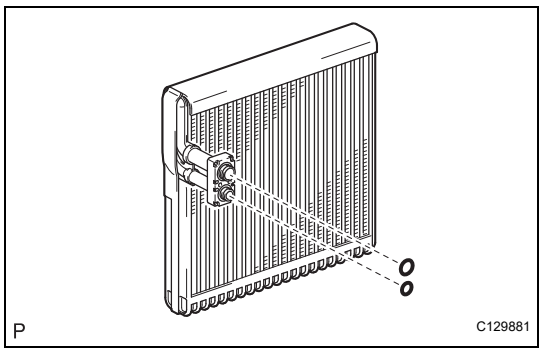
(a) If using a new evaporator:

(1) Install the No. 1 cooler thermistor to the evaporator as shown in the illustration.



(b) If reusing the evaporator:

(1) Install the No. 1 cooler thermistor to the evaporator as shown in the illustration.

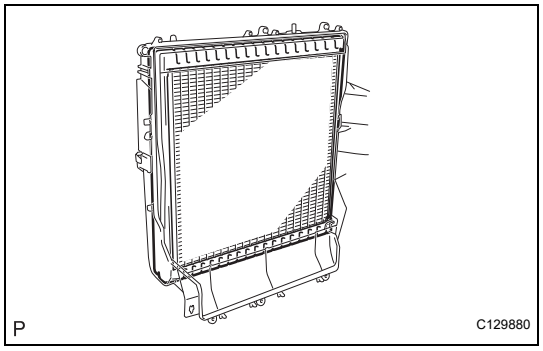


2. INSTALL NO. 1 COOLER EVAPORATOR SUB-ASSEMBLY

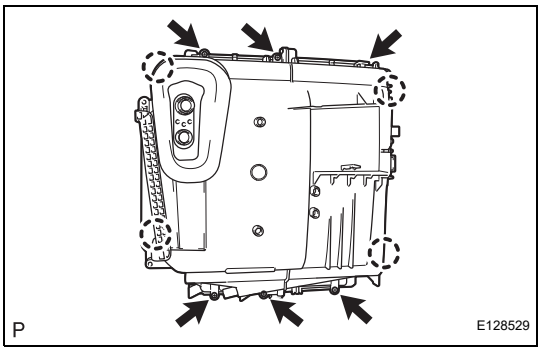
(a) Sufficiently apply compressor oil to 2 new O-rings and the fitting surfaces. Install the 2 O-rings to the No. 1 cooler evaporator sub-assembly.

Compressor oil:

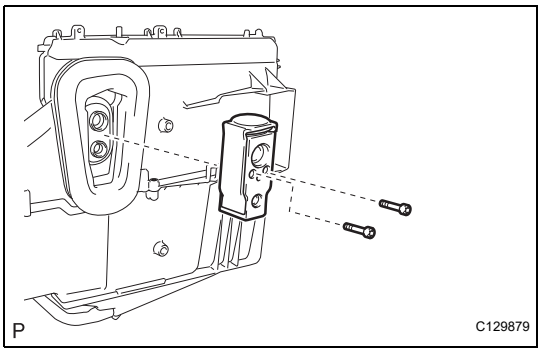
ND-OIL 11 or equivalent



(b) Install the No. 1 cooler evaporator sub-assembly.

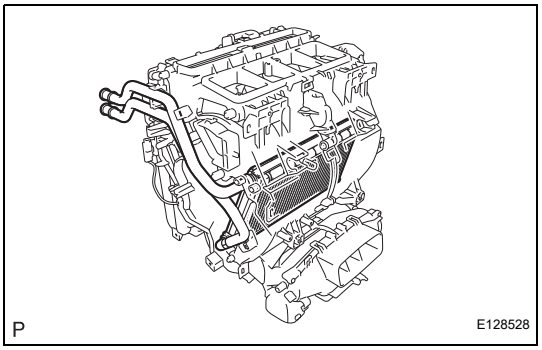


(c) Engage the 4 claws and install the plate cover with the 6 screws.



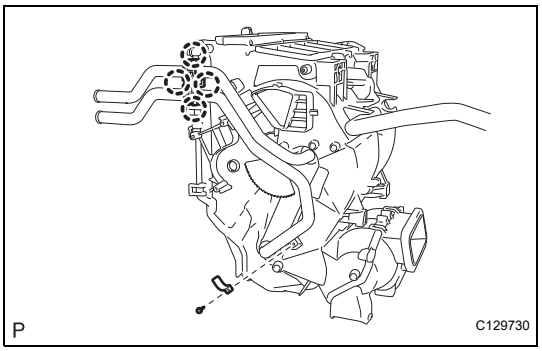
3. INSTALL COOLER EXPANSION VALVE

(a) Using a 4 mm hexagon wrench, install the cooler expansion valve with the 2 hexagon bolts.
Torque: 3.5 N*m (35 kgf*cm, 30 in.*lbf)

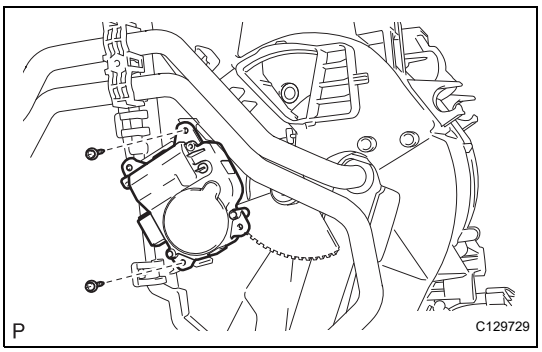


4. INSTALL HEATER RADIATOR UNIT SUB-ASSEMBLY

(a) Install the heater radiator unit sub-assembly to the air conditioning radiator assembly.

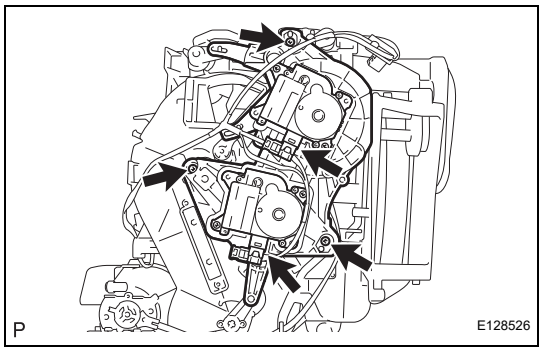


(b) Install the clamp with the screw.
(c) Engage the 4 claws and install the heater clamp.



5. INSTALL AIR MIX DAMPER CONTROL MOTOR

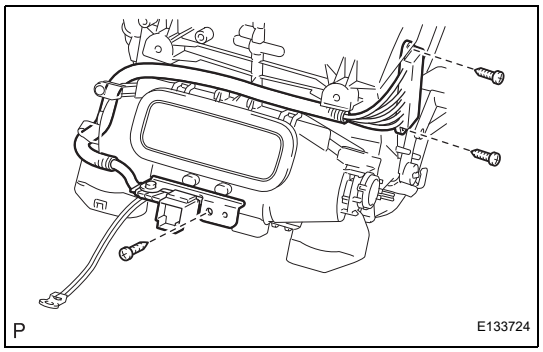
(a) Install the air mix damper control motor with the 2 screws.



6. INSTALL AIR OUTLET CONTROL SERVO MOTOR

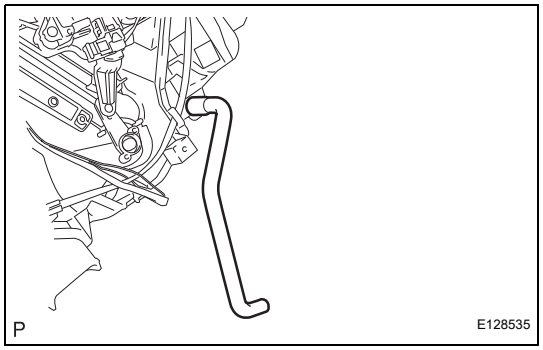
(a) Install the air outlet control servo motor with the 3 screws.

(b) Connect the 2 connectors and install the air conditioner harness.



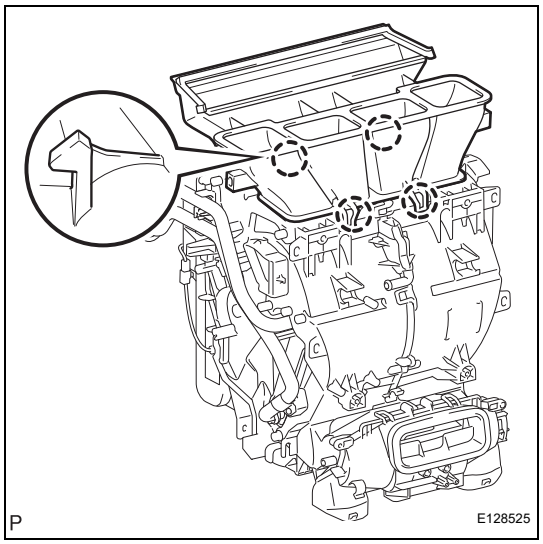
7. INSTALL QUICK HEATER ASSEMBLY

(a) Install the quick heater assembly with the 3 screws.



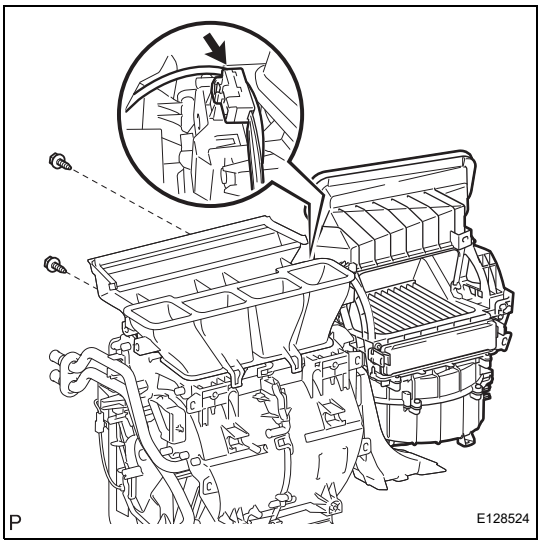
8. INSTALL DRAIN COOLER HOSE

(a) Install the drain cooler hose to the air conditioning radiator assembly.



9. INSTALL NO. 6 HEATER TO REGISTER DUCT ASSEMBLY

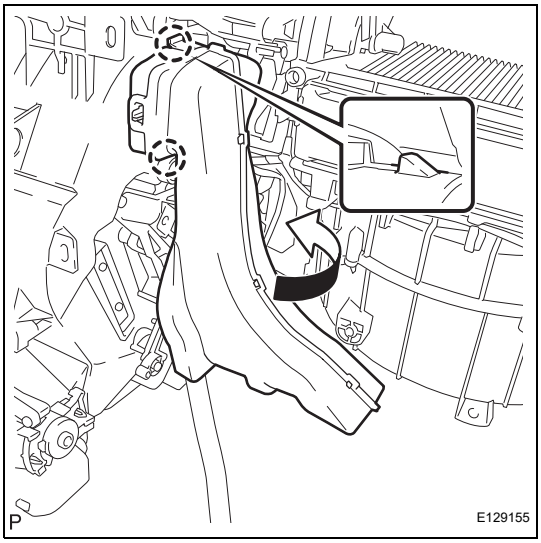
(a) Engage the 4 claws to install the No. 6 heater to register duct assembly.



10. INSTALL BLOWER ASSEMBLY

(a) Install the blower assembly with the 2 screws.

(b) Connect the connector.



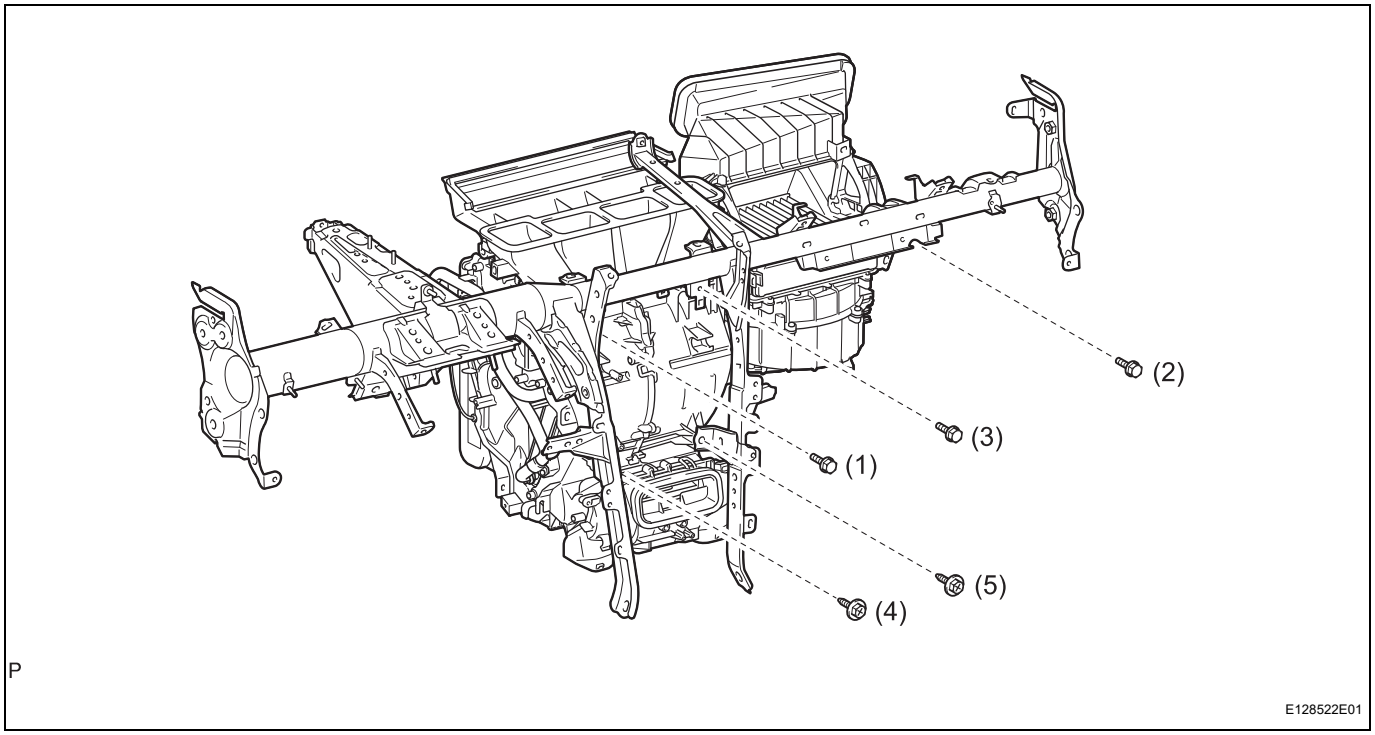
11. INSTALL NO. 2 AIR DUCT SUB-ASSEMBLY

(a) Engage the 2 claws to install the No. 2 air duct sub-assembly.

INSTALLATION

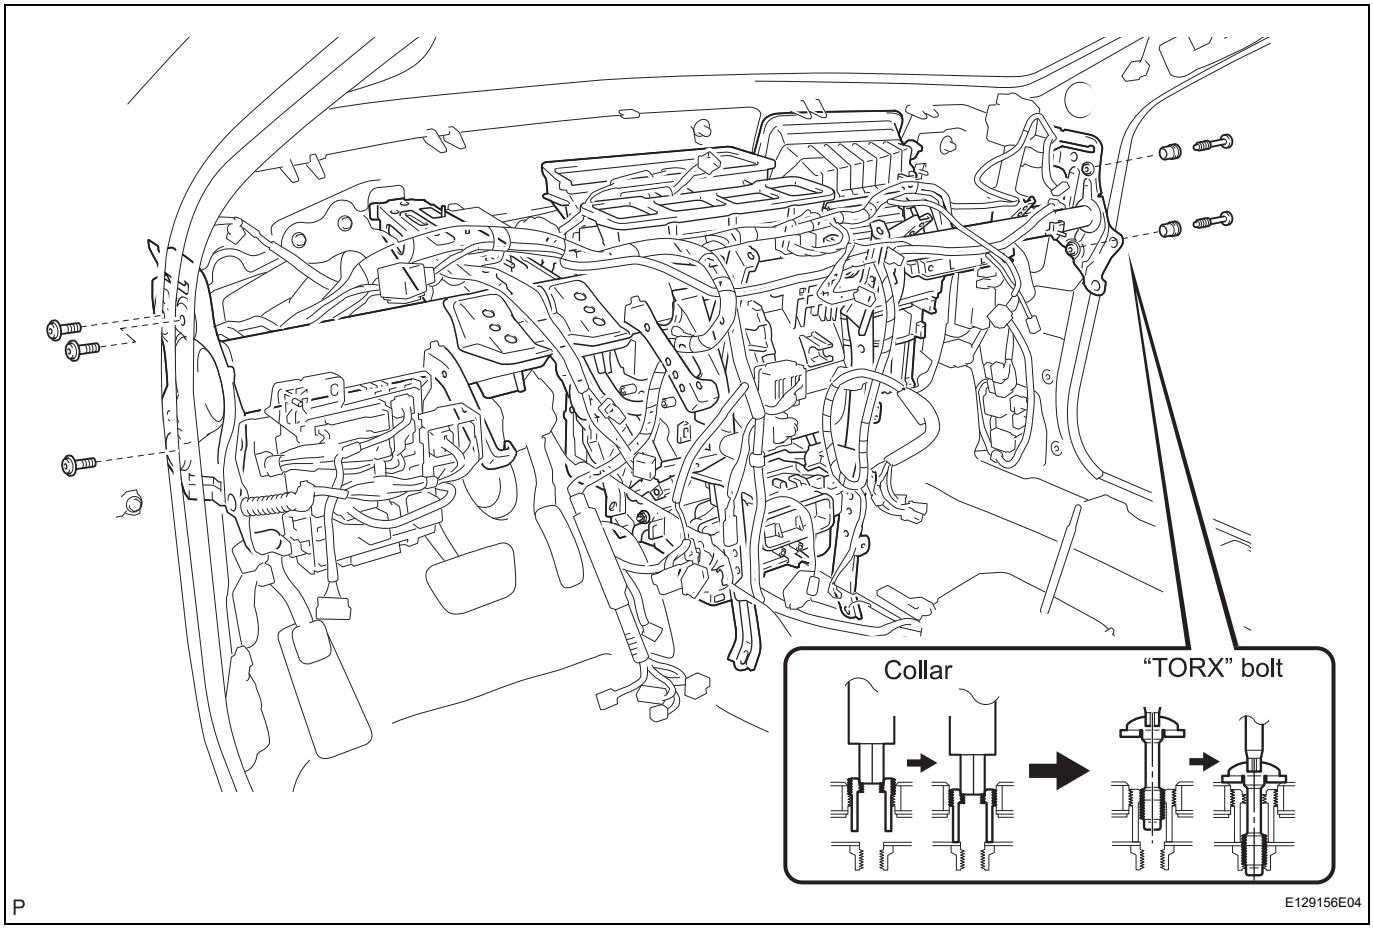
1. INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY

(a) Install the air conditioning unit assembly to the instrument panel reinforcement assembly with the 2 screws and 3 bolts.



Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
NOTICE:
Tighten the bolts and screws in the order shown in the illustration to install the air conditioning unit assembly.

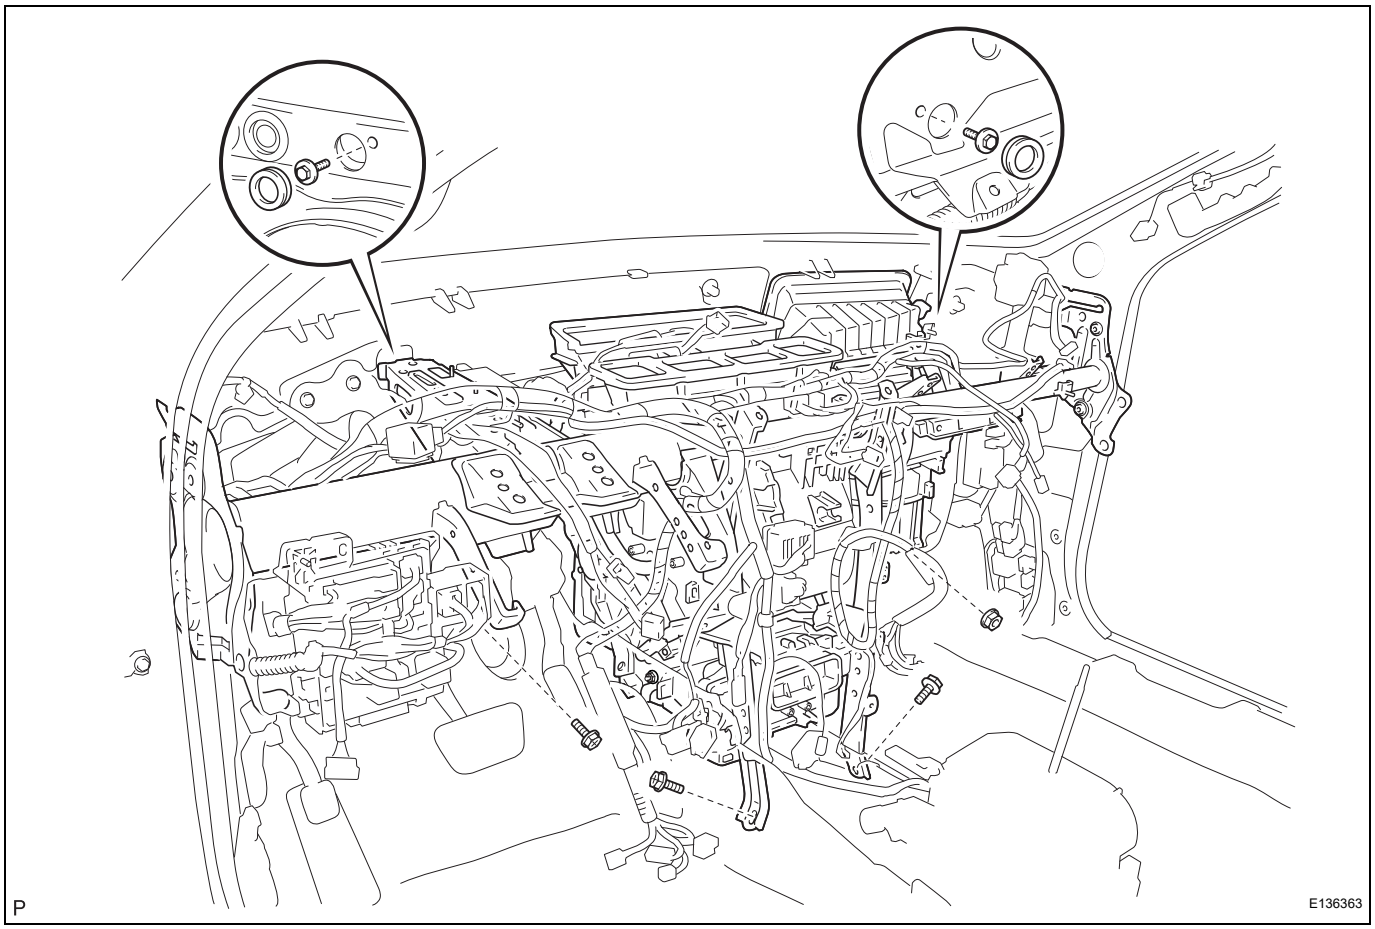
(b) Driver seat:
(1) Using a "TORX" socket wrench (T40), install the instrument panel reinforcement assembly with the 3 "TORX" bolts.



Torque: 17 N*m (173 kgf*cm, 13 ft.*lbf)

(c) Passenger seat:
(1) Using a 12 mm hexagon wrench, adjust the position of the 2 collars.
Torque: 6.0 N*m (61 kgf*cm, 53 in.*lbf)
(2) Using a "TORX" socket wrench (T40), install the instrument panel reinforcement assembly with the 2 "TORX" bolts.
Torque: 20 N*m (204 kgf*cm, 15 ft.*lbf)

(d) Install the instrument panel reinforcement assembly with the 3 bolts and nut.

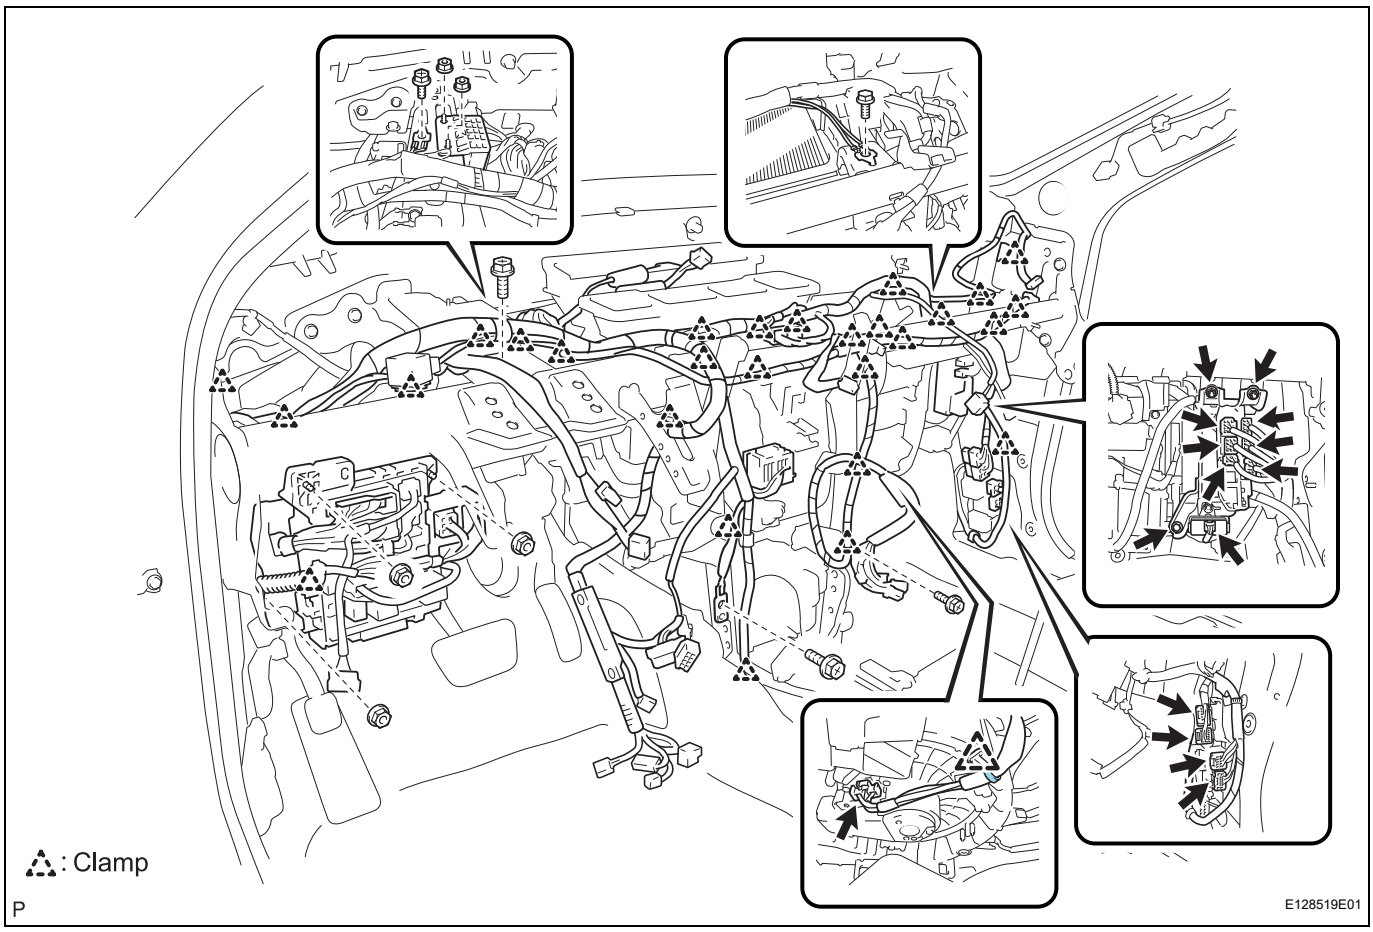


Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf) (NUT)

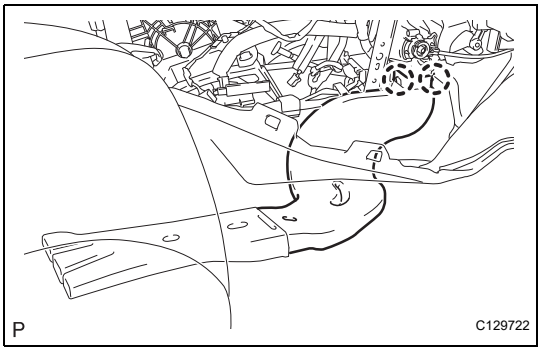
(e) Install the 2 bolts and 2 caps.

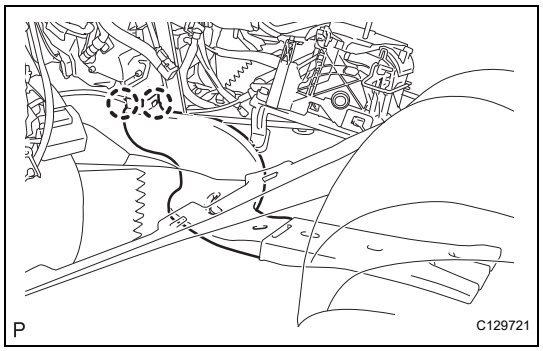
(f) Connect the connectors and clamps.

(g) Install the 6 nuts and 7 bolts.

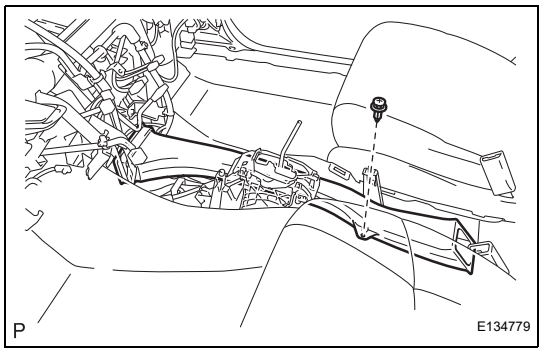


2. **INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY (See page AC-269)**
3. **INSTALL STEERING COLUMN ASSEMBLY (See page SR-40)**
4. **CONNECT STEERING INTERMEDIATE SHAFT ASSEMBLY (See page SR-40)**
5. **INSTALL NO. 1 AIR DUCT SUB-ASSEMBLY (See page SR-41)**
6. **INSTALL REAR NO. 1 AIR DUCT**
   (a) Engage the 2 claws to install the rear No. 1 air duct.





7. **INSTALL REAR NO. 2 AIR DUCT**
   (a) Engage the 2 claws to install the rear No. 2 air duct.
8. **INSTALL FLOOR CARPET BRACKET RH**
9. **INSTALL FLOOR CARPET BRACKET LH**



10. **INSTALL NO. 1 CONSOLE BOX DUCT**
    (a) Install the No. 1 console box duct with the clip.
11. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (See page IP-25)**
12. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY**
13. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-28)**
14. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)**
15. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-28)**
16. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-28)**
17. **INSTALL FRONT PILLAR GARNISH LH (See page IR-38)**
18. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-28)**
19. **INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-29)**
20. **INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-29)**
21. **INSTALL FRONT PILLAR GARNISH RH (See page IR-39)**
22. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (See page IP-29)**
23. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-30)**
24. **INSTALL CONSOLE BOX ASSEMBLY (See page IP-30)**
25. **INSTALL CONSOLE BOX CARPET (See page IP-30)**
26. **INSTALL CONSOLE BOX POCKET (See page IP-30)**
27. **INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-137)**

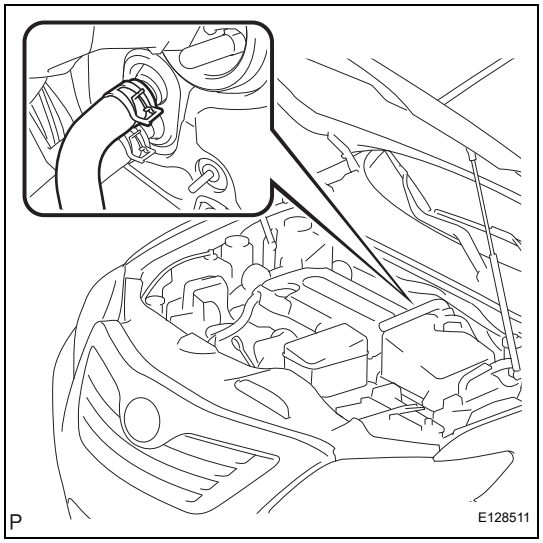
28. INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-194)
29. INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-31)
30. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)
31. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)
32. INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)
33. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
34. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
35. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)
36. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-33)
37. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-33)
38. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)
39. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-42)
40. INSTALL COMBINATION METER ASSEMBLY (See page IP-33)
41. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-34)
42. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-34)
43. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-34)
44. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY
45. ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-360)
46. INSTALL STEERING COLUMN COVER (See page IP-35)
47. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)
48. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)
49. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)

50. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-42)**

51. **INSTALL STEERING PAD (See page RS-346)**

52. **INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-347)**

53. **INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-347)**



54. **INSTALL HEATER INLET WATER HOSE**
    (a) Install the water hose and attach the clip.

55. **INSTALL HEATER OUTLET WATER HOSE**
    (a) Use the same procedures described for the heater inlet water hose.

56. **INSTALL AIR CONDITIONER TUBE AND ACCESSORY**
    (a) Remove the attached vinyl tape from the tube.
    (b) Sufficiently apply compressor oil to a new O-ring and fitting surface of the air conditioner tube and accessory.
    Compressor oil:
    ND-OIL 11 or equivalent
    (c) Install the O-ring on the air conditioner tube and accessory.
    (d) Install the air conditioner tube and accessory.

57. **INSTALL SUCTION HOSE SUB-ASSEMBLY**
    (a) Remove the attached vinyl tape from the hose.
    (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the suction hose sub-assembly.
    Compressor oil:
    ND-OIL 11 or equivalent
    (c) Install the O-ring on the suction hose sub-assembly.

    (d) Move the hook connector in the direction indicated by the arrow in the illustration.
    (e) Insert the pipe joint into the fitting hole securely and tighten the bolt.
    Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)

58. **INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-405)**

59. **INSTALL WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-13)**

60. **INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)**

61. **INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)**

62. **INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)**

63. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)**

64. **INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)**
65. **INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-33)**
66. **CONNECT NEGATIVE BATTERY TERMINAL**
67. **INSPECT STEERING PAD (See page RS-347)**
68. **INSPECT SRS WARNING LIGHT**
    (See page RS-33)
69. **PERFORM INITIALIZATION**
    NOTICE:
    Some systems need initialization after reconnecting the negative battery terminal (See page IN-43).
70. **ADD ENGINE COOLANT (See page CO-5)**
71. **INSPECT FOR COOLANT LEAK**
72. **CHARGE WITH REFRIGERANT (See page AC-169)**
73. **WARM UP COMPRESSOR (See page AC-171)**
74. **INSPECT FOR REFRIGERANT LEAK (See page AC-171)**

REMOVAL

1. RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-169)
2. ALIGN FRONT WHEELS FACING STRAIGHT AHEAD
3. DISCONNECT NEGATIVE BATTERY TERMINAL
   NOTICE:
   Wait for 90 seconds after disconnecting the terminal to prevent the airbag from deploying (See page RS-1).
4. SEPARATE BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-27)
5. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-9)
6. REMOVE FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-9)
7. REMOVE FRONT FENDER TO COWL SIDE SEAL LH (See page WW-9)
8. REMOVE FRONT FENDER TO COWL SIDE SEAL RH (See page WW-9)
9. REMOVE COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-10)
10. REMOVE WINDSHIELD WIPER MOTOR AND LINK ASSEMBLY (See page WW-10)
11. REMOVE COWL TOP OUTER FRONT PANEL SUB-ASSEMBLY (See page ES-403)
12. DISCONNECT SUCTION PIPE SUB-ASSEMBLY (See page AC-186)
13. DISCONNECT AIR CONDITIONER TUBE AND ACCESSORY (See page AC-186)
14. DISCONNECT HEATER OUTLET WATER HOSE (See page AC-186)
15. DISCONNECT HEATER INLET WATER HOSE (See page AC-186)
16. REMOVE LOWER NO. 3 STEERING WHEEL COVER (See page RS-345)
17. REMOVE LOWER NO. 2 STEERING WHEEL COVER (See page RS-345)
18. REMOVE STEERING PAD (See page RS-345)
19. REMOVE STEERING WHEEL ASSEMBLY (See page SR-36)
20. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)
21. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)

22. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)
23. REMOVE STEERING COLUMN COVER (See page IP-12)
24. REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-37)
25. REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-12)
26. REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)
27. REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-13)
28. REMOVE COMBINATION METER ASSEMBLY (See page IP-13)
29. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)
30. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)
31. REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-13)
32. REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)
33. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)
34. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
35. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
36. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)
37. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)
38. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)
39. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-16)
40. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-136)
41. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (See page NS-193)
42. REMOVE CONSOLE BOX POCKET (See page IP-17)
43. REMOVE CONSOLE BOX CARPET (See page IP-17)

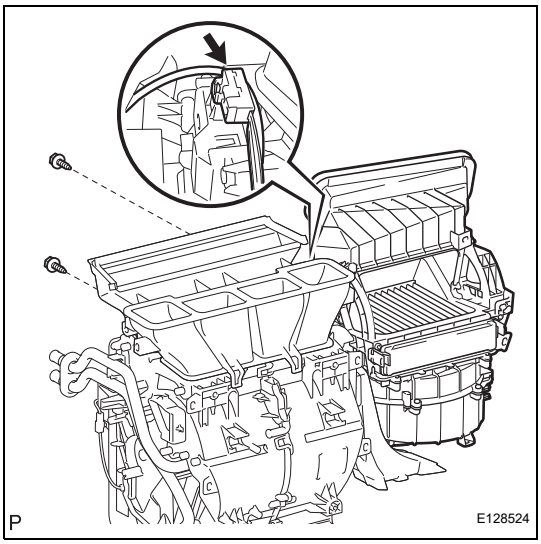
44. REMOVE CONSOLE BOX ASSEMBLY (See page IP-17)
45. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-18)
46. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (See page IP-18)
47. REMOVE FRONT PILLAR GARNISH LH (See page IR-16)
48. REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-18)
49. REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-19)
50. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)
51. REMOVE FRONT PILLAR GARNISH RH (See page IR-16)
52. REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-19)
53. REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-19)
54. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-19)
55. REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-20)
56. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY
57. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (See page IP-20)
58. REMOVE NO. 1 CONSOLE BOX DUCT (See page AC-188)
59. REMOVE FLOOR CARPET BRACKET LH (See page AC-188)
60. REMOVE FLOOR CARPET BRACKET RH (See page AC-189)
61. REMOVE REAR NO. 2 AIR DUCT (See page AC-189)
62. REMOVE REAR NO. 1 AIR DUCT (See page AC-189)
63. REMOVE NO. 1 AIR DUCT SUB-ASSEMBLY (See page SR-37)
64. SEPARATE STEERING INTERMEDIATE SHAFT ASSEMBLY (See page SR-37)
65. REMOVE STEERING COLUMN ASSEMBLY (See page SR-38)
66. REMOVE AIR CONDITIONING AMPLIFIER ASSEMBLY (See page AC-269)

67. REMOVE INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (See page AC-190)

68. REMOVE BLOWER ASSEMBLY

(a) Disconnect the connector.

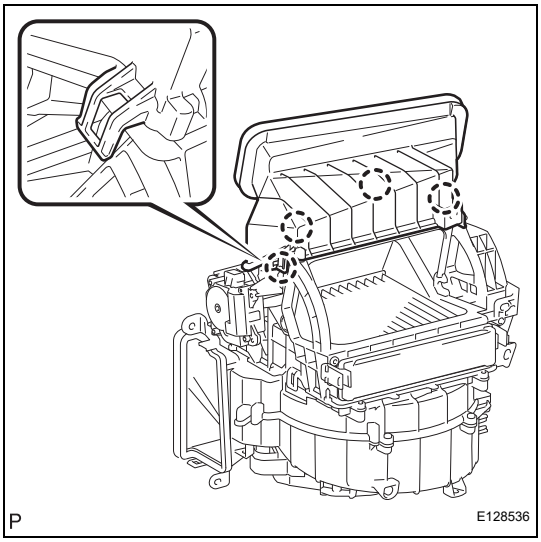
(b) Remove the 2 screws and blower assembly.



DISASSEMBLY

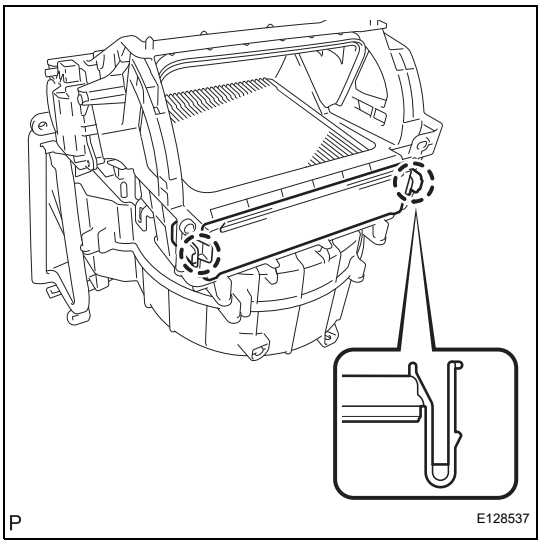
1. REMOVE AIR DUCT SUB-ASSEMBLY

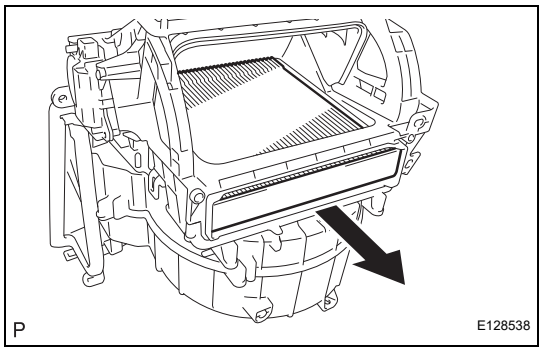
(a) Release the 4 claws and remove the air duct sub-assembly.



2. REMOVE AIR FILTER COVER PLATE

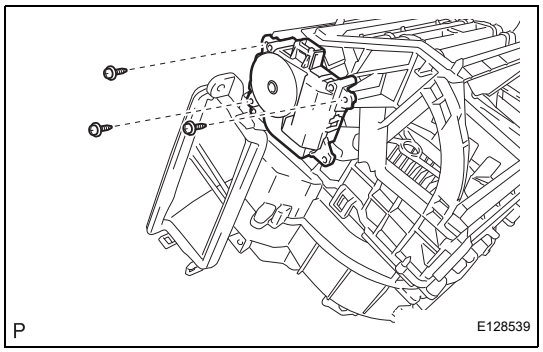
(a) Release the 2 claws and remove the air filter cover plate.





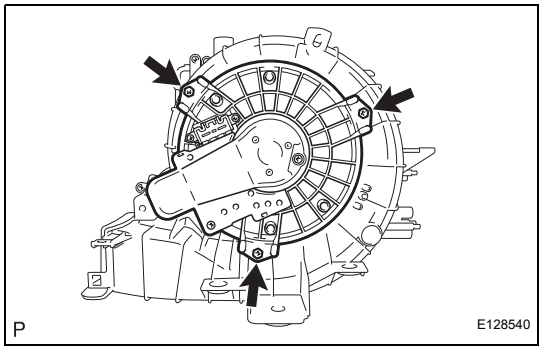
3. REMOVE CLEAN AIR FILTER

(a) Remove the clean air filter as shown in the illustration.



4. REMOVE AIR INLET SERVO MOTOR

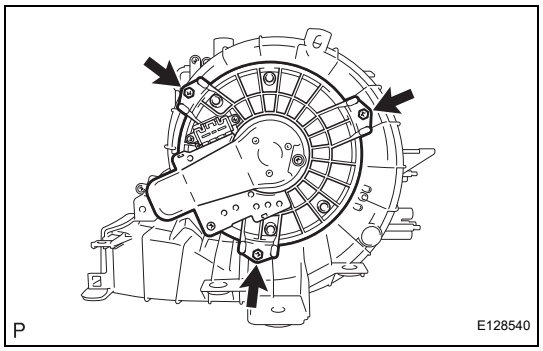
(a) Remove the 3 screws and air inlet servo motor.



5. REMOVE BLOWER WITH FAN MOTOR SUB-ASSEMBLY

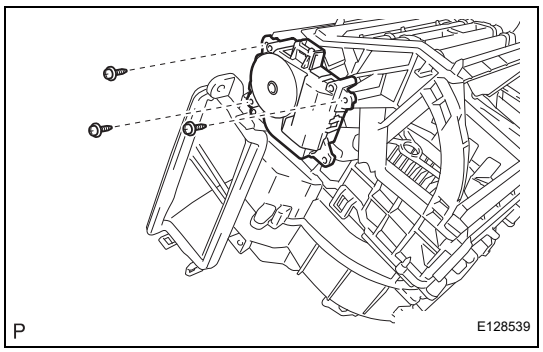
(a) Remove the 3 screws and blower with fan motor sub-assembly.

REASSEMBLY



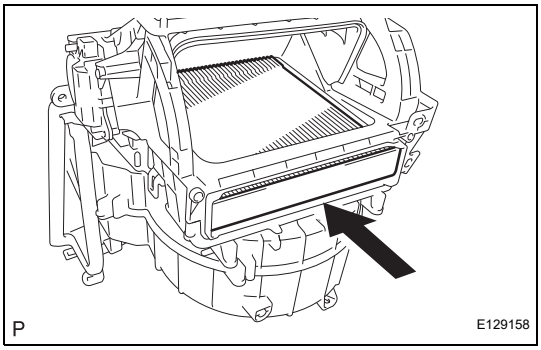
1. INSTALL BLOWER WITH FAN MOTOR SUB-ASSEMBLY

(a) Install the blower with fan motor sub-assembly with the 3 screws.



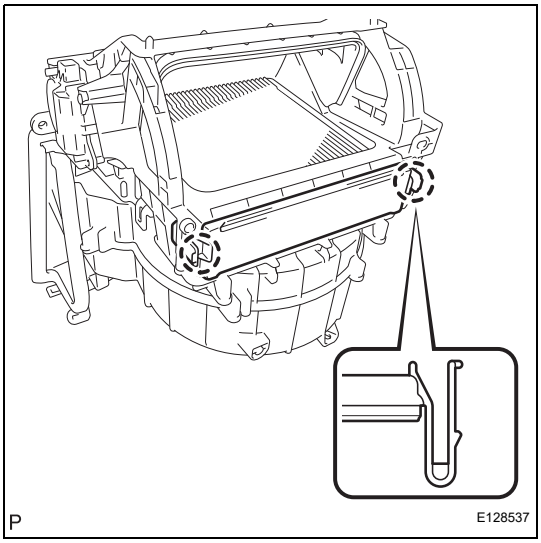
2. INSTALL AIR INLET SERVO MOTOR

(a) Install the air inlet servo motor with the 3 screws.



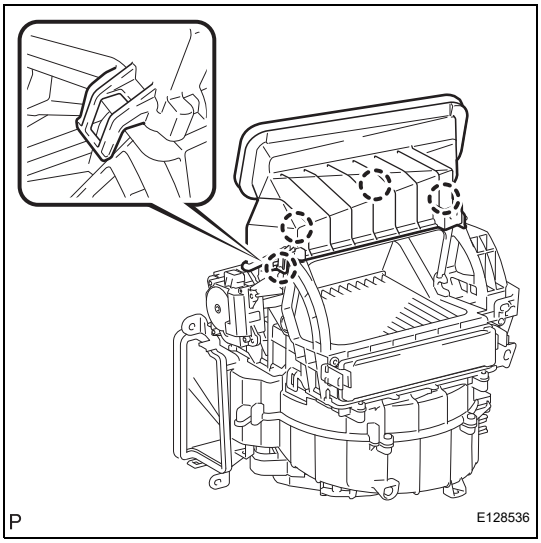
3. INSTALL CLEAN AIR FILTER

(a) Install the clean air filter as shown in the illustration.



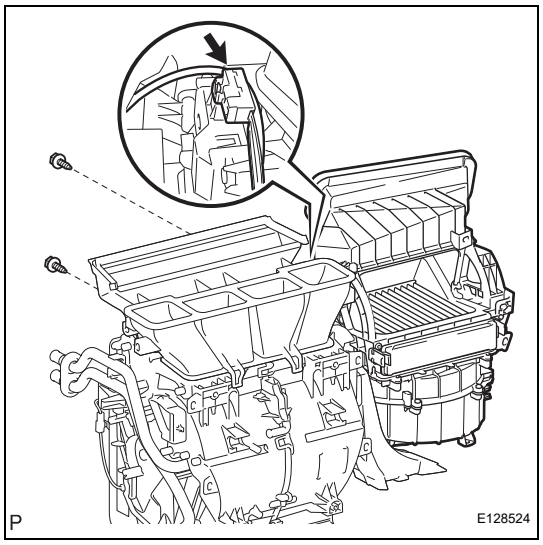
4. INSTALL AIR FILTER COVER PLATE

(a) Engage the 2 claws to install the air filter cover plate.



5. INSTALL AIR DUCT SUB-ASSEMBLY

(a) Engage the 4 claws to install the air duct sub-assembly.



INSTALLATION

1. **INSTALL BLOWER ASSEMBLY**
   (a) Install the blower assembly with the 2 screws.
   (b) Connect the connector.
2. **INSTALL INSTRUMENT PANEL REINFORCEMENT ASSEMBLY (See page AC-200)**
3. **INSTALL AIR CONDITIONING AMPLIFIER ASSEMBLY (See page AC-269)**
4. **INSTALL STEERING COLUMN ASSEMBLY (See page SR-40)**
5. **CONNECT STEERING INTERMEDIATE SHAFT ASSEMBLY (See page SR-40)**
6. **INSTALL NO. 1 AIR DUCT (See page SR-41)**
7. **INSTALL REAR NO. 1 AIR DUCT (See page AC-203)**
8. **INSTALL REAR NO. 2 AIR DUCT (See page AC-204)**
9. **INSTALL FLOOR CARPET BRACKET RH**
10. **INSTALL FLOOR CARPET BRACKET LH**
11. **INSTALL NO. 1 CONSOLE BOX DUCT (See page AC-204)**
12. **INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (See page IP-25)**
13. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY**
14. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-28)**
15. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)**
16. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-28)**
17. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-28)**
18. **INSTALL FRONT PILLAR GARNISH LH (See page IR-38)**
19. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-28)**
20. **INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-28)**
21. **INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-29)**
22. **INSTALL FRONT PILLAR GARNISH RH (See page IR-39)**
23. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (See page IP-29)**

24. INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-30)
25. INSTALL CONSOLE BOX ASSEMBLY (See page IP-30)
26. INSTALL CONSOLE BOX CARPET (See page IP-30)
27. INSTALL CONSOLE BOX POCKET (See page IP-30)
28. INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-137)
29. INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-194)
30. INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-31)
31. INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)
32. INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)
33. INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)
34. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
35. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
36. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)
37. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-33)
38. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-33)
39. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)
40. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-42)
41. INSTALL COMBINATION METER ASSEMBLY (See page IP-33)
42. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-34)
43. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-34)
44. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-34)
45. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY

46. ADJUST SPIRAL CABLE SUB-ASSEMBLY (See page RS-360)
47. INSTALL STEERING COLUMN COVER (See page IP-35)
48. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)
49. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)
50. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)
51. INSTALL STEERING WHEEL ASSEMBLY (See page SR-42)
52. INSTALL STEERING PAD (See page RS-346)
53. INSTALL LOWER NO. 3 STEERING WHEEL COVER (See page RS-347)
54. INSTALL LOWER NO. 2 STEERING WHEEL COVER (See page RS-347)
55. INSTALL HEATER INLET WATER HOSE (See page AC-206)
56. INSTALL HEATER OUTLET WATER HOSE (See page AC-206)
57. INSTALL AIR CONDITIONER TUBE AND ACCESSORY (See page AC-206)
58. INSTALL SUCTION HOSE SUB-ASSEMBLY (See page AC-206)
59. INSTALL COWL TOP PANEL OUTER SUB-ASSEMBLY (See page ES-405)
60. INSTALL WINDSHIELD WIPER MOTOR AND LINK (See page WW-13)
61. INSTALL COWL TOP VENTILATOR LOUVER SUB-ASSEMBLY (See page WW-14)
62. INSTALL FRONT FENDER TO COWL SIDE SEAL LH (See page WW-14)
63. INSTALL FRONT FENDER TO COWL SIDE SEAL RH (See page WW-14)
64. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY LH (See page WW-14)
65. INSTALL FRONT WIPER ARM AND BLADE ASSEMBLY RH (See page WW-15)
66. INSTALL BRAKE MASTER CYLINDER RESERVOIR SUB-ASSEMBLY (See page BR-33)
67. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL
68. INSPECT STEERING PAD (See page RS-347)

69. **INSPECT SRS WARNING LIGHT**
(See page RS-33)

70. **PERFORM INITIALIZATION**
NOTICE:
Some systems need initialization after reconnecting the negative battery terminal (See page IN-43).

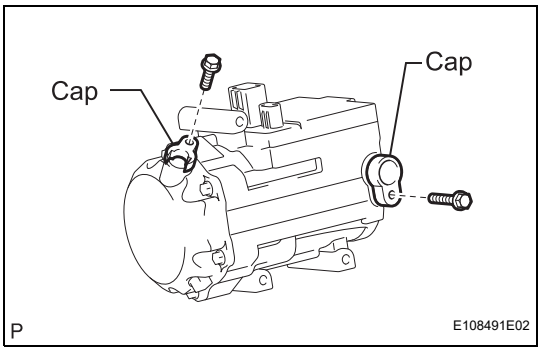
71. **ADD ENGINE COOLANT (See page CO-5)**

72. **INSPECT FOR COOLANT LEAK**

73. **CHARGE WITH REFRIGERANT (See page AC-169)**

74. **WARM UP COMPRESSOR (See page AC-169)**

75. **INSPECT FOR REFRIGERANT LEAK (See page AC-171)**



INSTALLATION

1. ADJUST COMPRESSOR OIL

(a) When replacing the electric inverter compressor with a new one, gradually discharge the inert gas (helium) from the cap, and drain the following amount of oil from the new electric inverter compressor before installation.

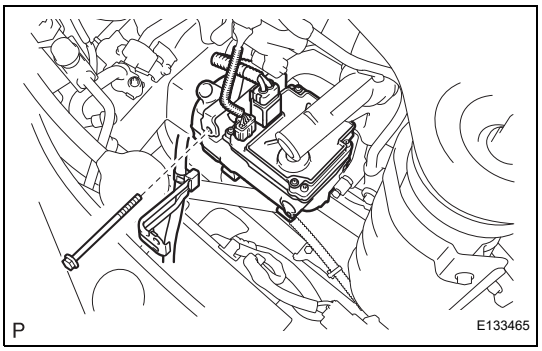
Standard:

(Oil capacity inside the new electric inverter compressor: 120 to 135 cc (4.1 to 4.6 fl.oz.)) - (Remaining oil amount in the removed electric inverter compressor) = (Oil amount to be removed from the new compressor when replacing)

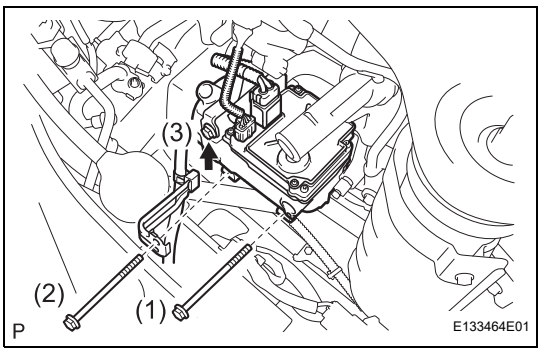
NOTICE:

- **When checking the compressor oil level, observe the precautions on the cooler removal/installation.**
- **If a new electric inverter compressor is installed without removing some oil, due to the oil remaining in the pipes of the vehicle, the oil amount will be too large. This prevents heat exchange in the refrigerant cycle and causes refrigerant failure.**
- **If the volume of oil remaining in the removed electric inverter compressor is too small, inspect for an oil leak.**
- **Be sure to use ND-OIL 11 or equivalent for compressor oil.**

2. INSTALL ELECTRIC INVERTER COMPRESSOR



(a) Temporarily install the electric inverter compressor with the bolt.

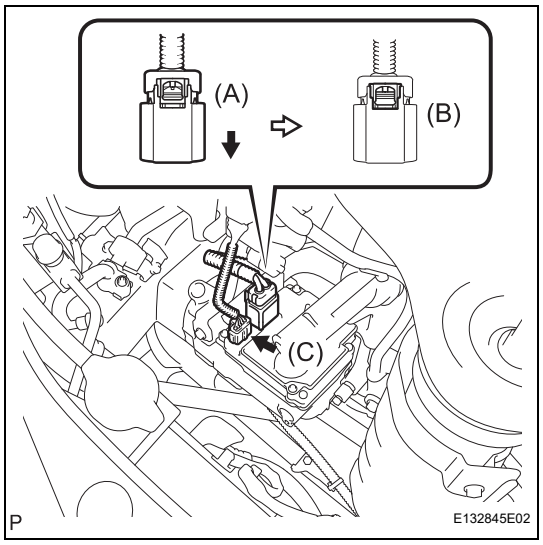


(b) Install the electric inverter compressor with the 3 bolts.

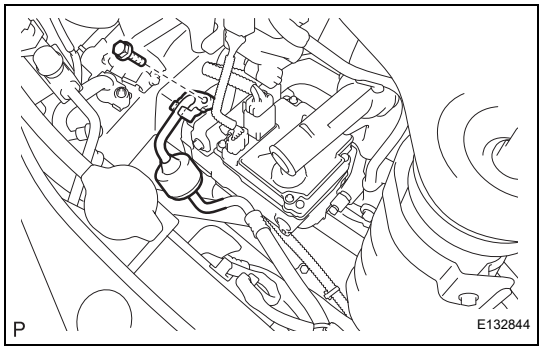
CAUTION:

Tighten the bolts in the order indicated in the illustration.

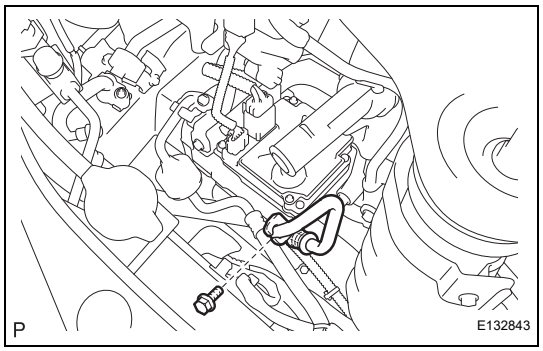
Torque: 25 N*m (255 kgf*cm, 18 ft.*lbf)



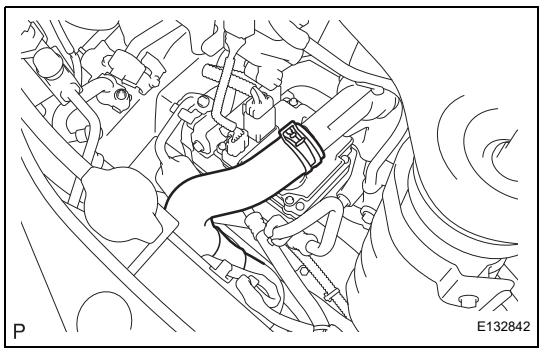
(c) Connect the connector (A).
NOTICE:
Wear insulated gloves when performing this procedure.
(d) Lock the green-colored lock (B).
NOTICE:
Wear insulated gloves when performing this procedure.
(e) Connect the connector (C).



3. INSTALL NO. 1 COOLER REFRIGERANT DISCHARGE HOSE
(a) Remove the attached vinyl tape from the hose.
(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the electric inverter compressor.
Compressor oil:
ND-OIL 11 or equivalent
(c) Install the O-ring onto the No. 1 cooler refrigerant discharge hose.
(d) Install the No. 1 cooler refrigerant discharge hose onto the electric inverter compressor with the bolt.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



4. INSTALL NO. 1 COOLER REFRIGERANT SUCTION HOSE
(a) Remove the attached vinyl tape from the hose.
(b) Apply sufficient compressor oil to a new O-ring and the fitting surface of the electric inverter compressor.
Compressor oil:
ND-OIL 11 or equivalent
(c) Install the O-ring onto the No. 1 cooler refrigerant suction hose.
(d) Install the No. 1 cooler refrigerant suction hose onto the electric inverter compressor with the bolt.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



5. INSTALL RADIATOR HOSE OUTLET
(a) Install the radiator hose outlet and attach the clip.

6. INSTALL SERVICE PLUG GRIP (See page HB-97)

7. CONNECT NEGATIVE BATTERY TERMINAL

8. ADD ENGINE COOLANT (See page CO-5)

9. INSPECT FOR COOLANT LEAK

10. CHARGE WITH REFRIGERANT (See page AC-169)

11. WARM UP COMPRESSOR (See page AC-171)

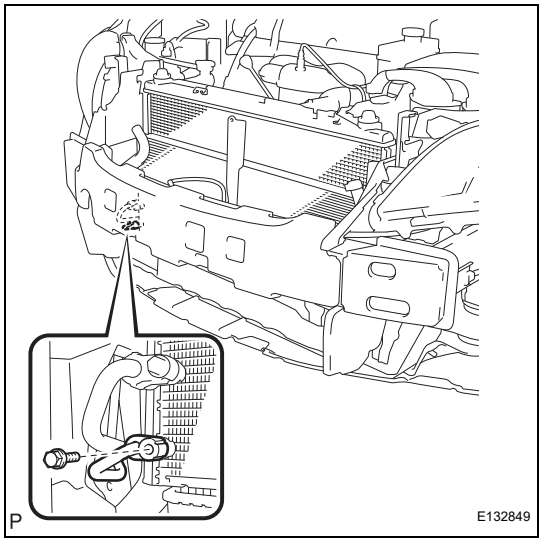
12. INSPECT FOR REFRIGERANT LEAK (See page AC-171)

13. PERFORM INITIALIZATION

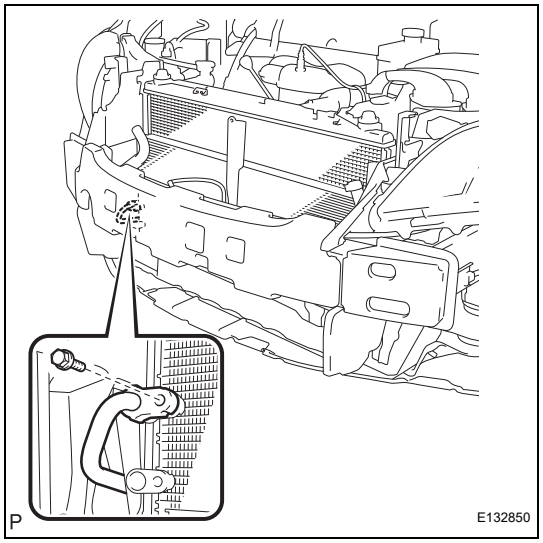
(a) Perform initialization procedure (See page IN-43).
HINT:
Some vehicle systems require initialization after reconnecting the cable to the negative battery terminal.

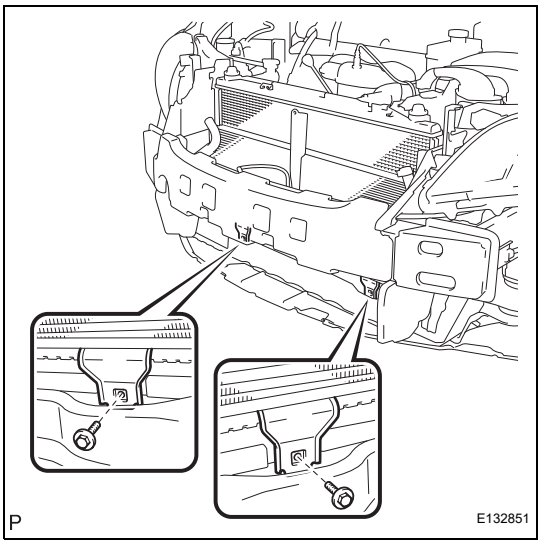
REMOVAL

1. **RECOVER REFRIGERANT FROM REFRIGERATION SYSTEM (See page AC-169)**
2. **DRAIN COOLANT (for Inverter) (See page HV-556)**
3. **REMOVE AIR CLEANER INLET ASSEMBLY (See page EM-90)**
4. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-3)**
5. **REMOVE FRONT BUMPER ENERGY ABSORBER (See page ET-6)**
6. **REMOVE RADIATOR SUPPORT UPPER (See page CO-23)**
7. **REMOVE RADIATOR ASSEMBLY (See page HV-577)**
8. **DISCONNECT LIQUID TUBE SUB-ASSEMBLY**
   (a) Remove the bolt and disconnect the liquid tube sub-assembly from the condenser.
   (b) Remove the O-ring from the liquid tube sub-assembly.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.



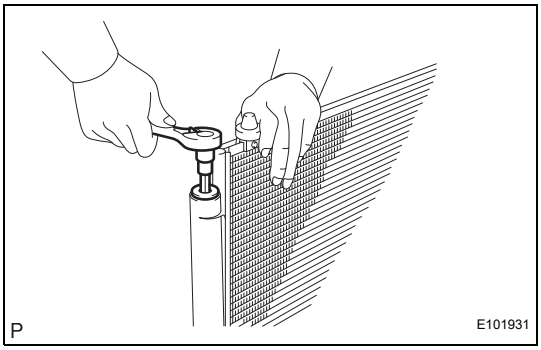
9. **DISCONNECT COOLER REFRIGERANT DISCHARGE PIPE**
   (a) Remove the bolt and disconnect the cooler refrigerant discharge pipe from the condenser.
   (b) Remove the O-ring from the cooler refrigerant discharge pipe.
   NOTICE:
   Seal the openings of the disconnected parts using vinyl tape to prevent entry of moisture and foreign matter.





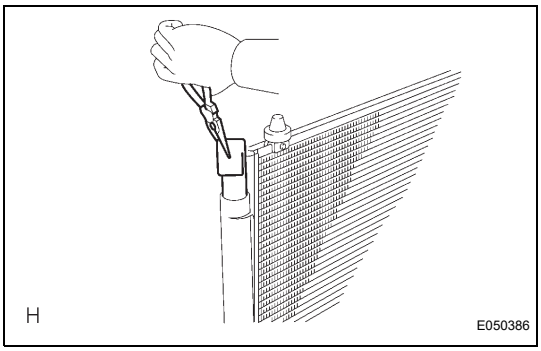
10. REMOVE COOLER CONDENSER ASSEMBLY

(a) Remove the 2 bolts and condenser.



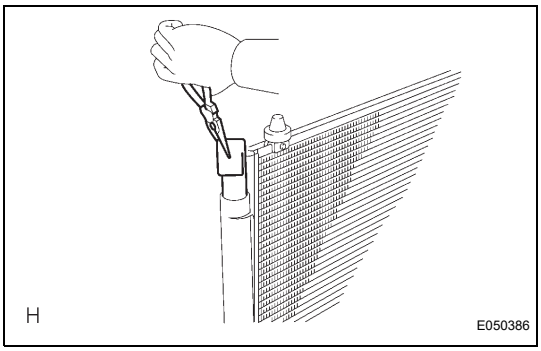
11. REMOVE COOLER DRYER

(a) Using a 14 mm straight hexagon wrench, remove the cap from the modulator.



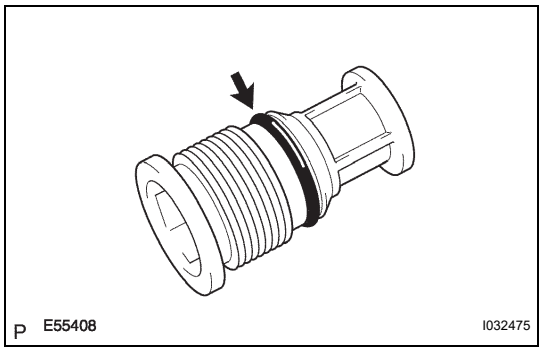
(b) Using pliers, remove the cooler dryer.

INSTALLATION

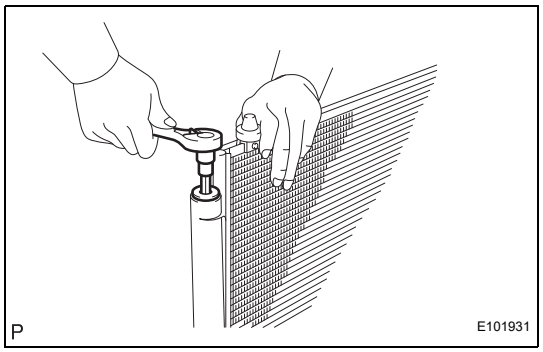


1. INSTALL COOLER DRYER

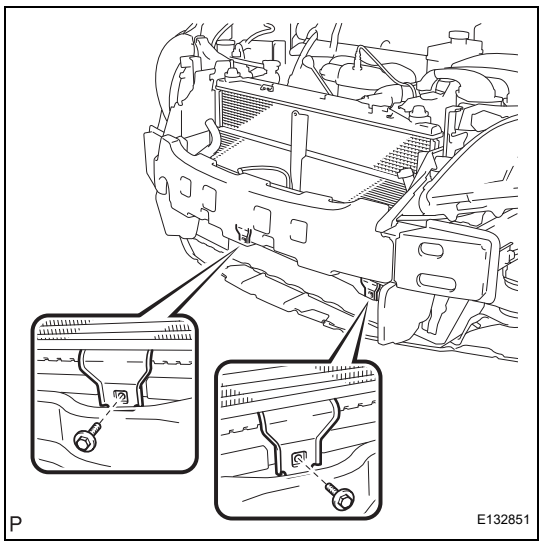
(a) Using pliers, install the cooler dryer to the modulator.



(b) Apply sufficient compressor oil to an O-ring and cap fitting surface.
Compressor oil:
ND-OIL 11 or equivalent

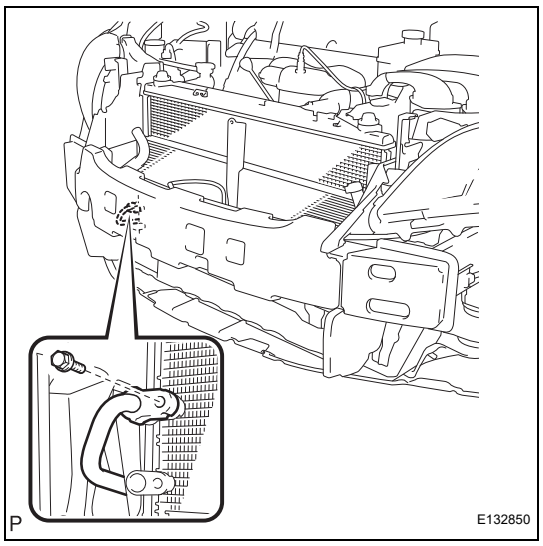


(c) Using a 14 mm straight hexagon wrench, install the cap to the cooler condenser core.
Torque: 2.9 N*m (30 kgf*cm, 26 in.*lbf)



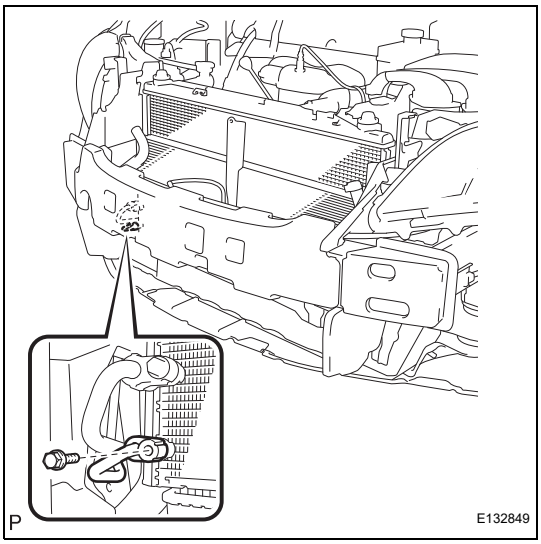
2. INSTALL COOLER CONDENSER ASSEMBLY

(a) Install the cooler condenser assembly with the 2 bolts.
Torque: 5.0 N*m (51 kgf*cm, 44 in.*lbf)
HINT:
If the condenser is replaced with a new one, add compressor oil to the new condenser.
Capacity:
40 cc (1.4 fl. oz.)
Compressor oil:
ND-OIL 11 or equivalent



3. INSTALL COOLER REFRIGERANT DISCHARGE PIPE

(a) Remove the attached vinyl tape from the pipe and the connecting part of the cooler condenser assembly.
(b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the pipe joint.
Compressor oil:
ND-OIL 11 or equivalent
(c) Install the O-ring on the cooler refrigerant discharge pipe.
Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)



4. **INSTALL LIQUID TUBE SUB-ASSEMBLY**
   (a) Remove the attached vinyl tape from the tube and the connecting part of the cooler condenser assembly.
   (b) Sufficiently apply compressor oil to a new O-ring and the fitting surface of the tube joint.
   Compressor oil:
   ND-OIL 11 or equivalent
   (c) Install the O-ring on the liquid tube sub-assembly.
   (d) Install the liquid tube sub-assembly on the cooler condenser assembly with the bolt.
   Torque: 9.8 N*m (100 kgf*cm, 87 in.*lbf)
5. **INSTALL RADIATOR ASSEMBLY (See page HV-577)**
6. **INSTALL RADIATOR SUPPORT UPPER (See page CO-29)**
7. **INSTALL AIR CLEANER INLET ASSEMBLY (See page EM-113)**
8. **ADD COOLANT (for Inverter) (See page HV-556)**
9. **INSPECT FOR COOLANT LEAK (for Inverter) (See page HV-555)**
10. **CHARGE WITH REFRIGERANT (See page AC-169)**
11. **WARM UP ENGINE (See page AC-171)**
12. **INSPECT FOR REFRIGERANT LEAK (See page AC-171)**
13. **INSTALL FRONT BUMPER ENERGY ABSORBER (See page ET-7)**
14. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-9)**

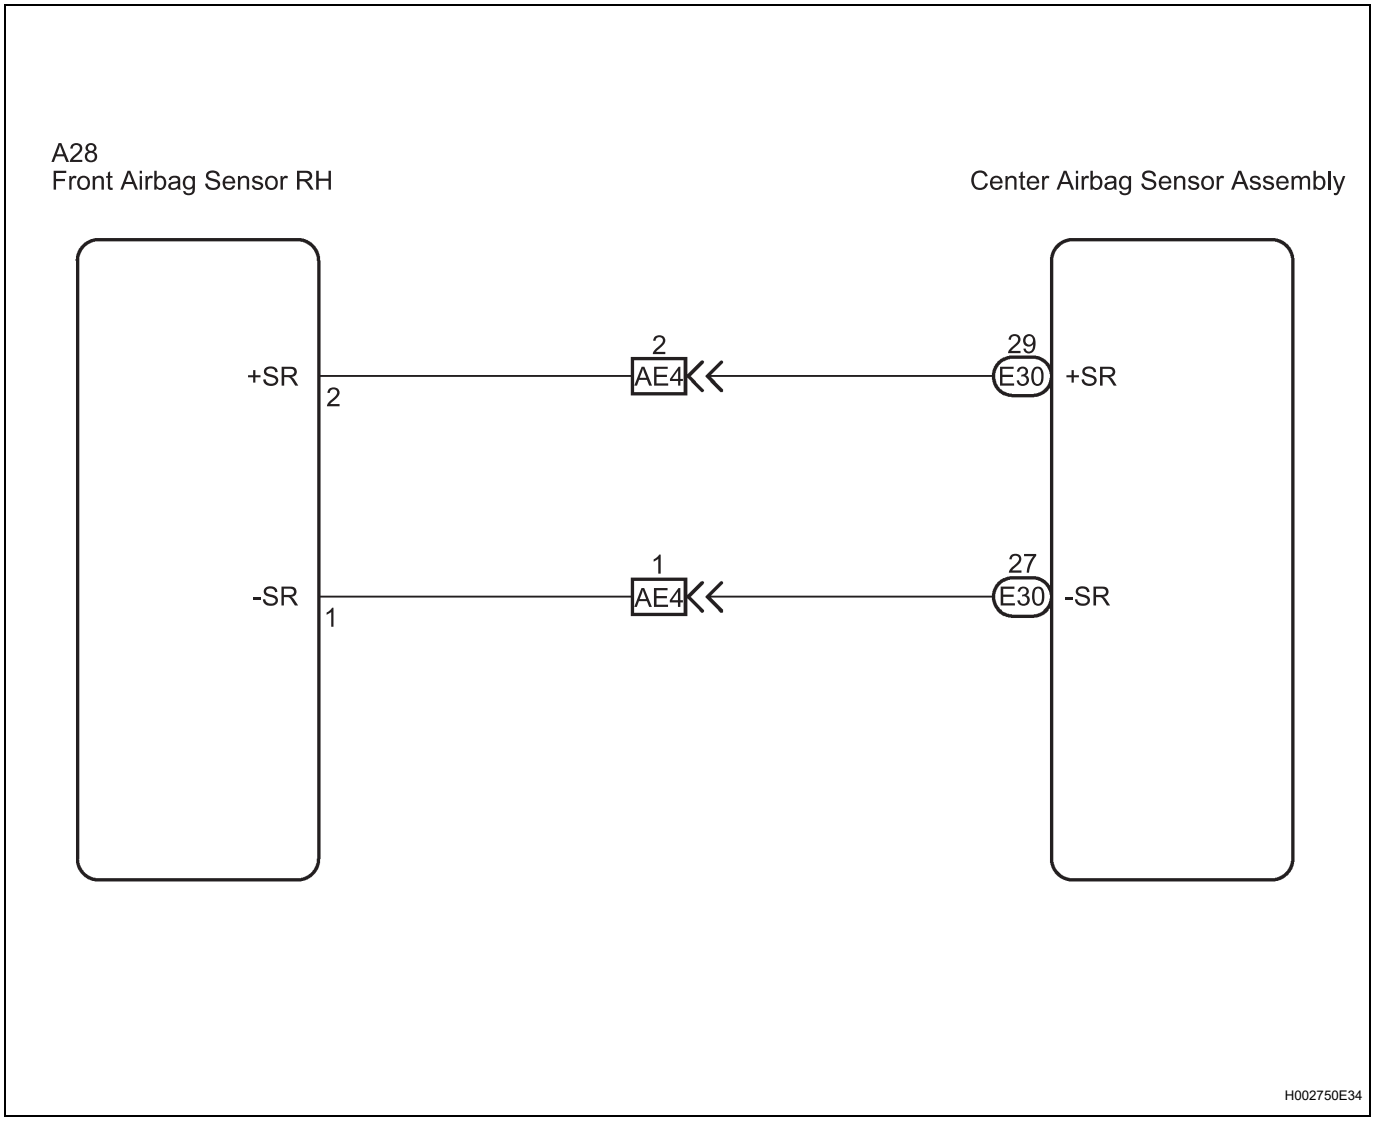
DTC	B1610/13	Front Airbag Sensor RH Malfunction

DESCRIPTION

The front airbag sensor RH consists of the diagnostic circuit, the frontal deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the frontal deceleration sensor, it determines whether the SRS should be activated.
DTC B1610/13 is recorded when a malfunction is detected in the front airbag sensor RH.

DTC No.	DTC Detection Condition	Trouble Area
B1610/13	• Front airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Front airbag sensor RH • Center airbag sensor assembly

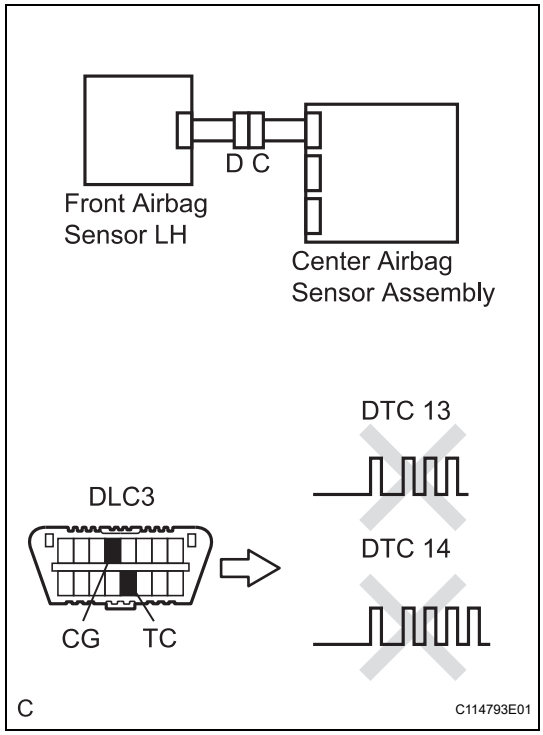
WIRING DIAGRAM



RS

INSPECTION PROCEDURE

1	CHECK FRONT AIRBAG SENSOR RH



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Interchange the front airbag sensor LH with RH and connect the connectors to them.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Clear the DTCs stored in the memory (See page RS-41).
(g) Turn the power switch off.
(h) Turn the power switch on (IG), and wait for at least 60 seconds.
(i) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1610/13 is output.	A
DTC B1615/14 is output.	B
DTC B1610/13 and B1615/14 are not output.	C

HINT:
Codes other than DTC B1610/13 and B1615/14 may be output at this time, but they are not related to this check.

A → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

B → **REPLACE FRONT AIRBAG SENSOR RH (See page RS-428)**

C

USE SIMULATION METHOD TO CHECK (See page RS-33)

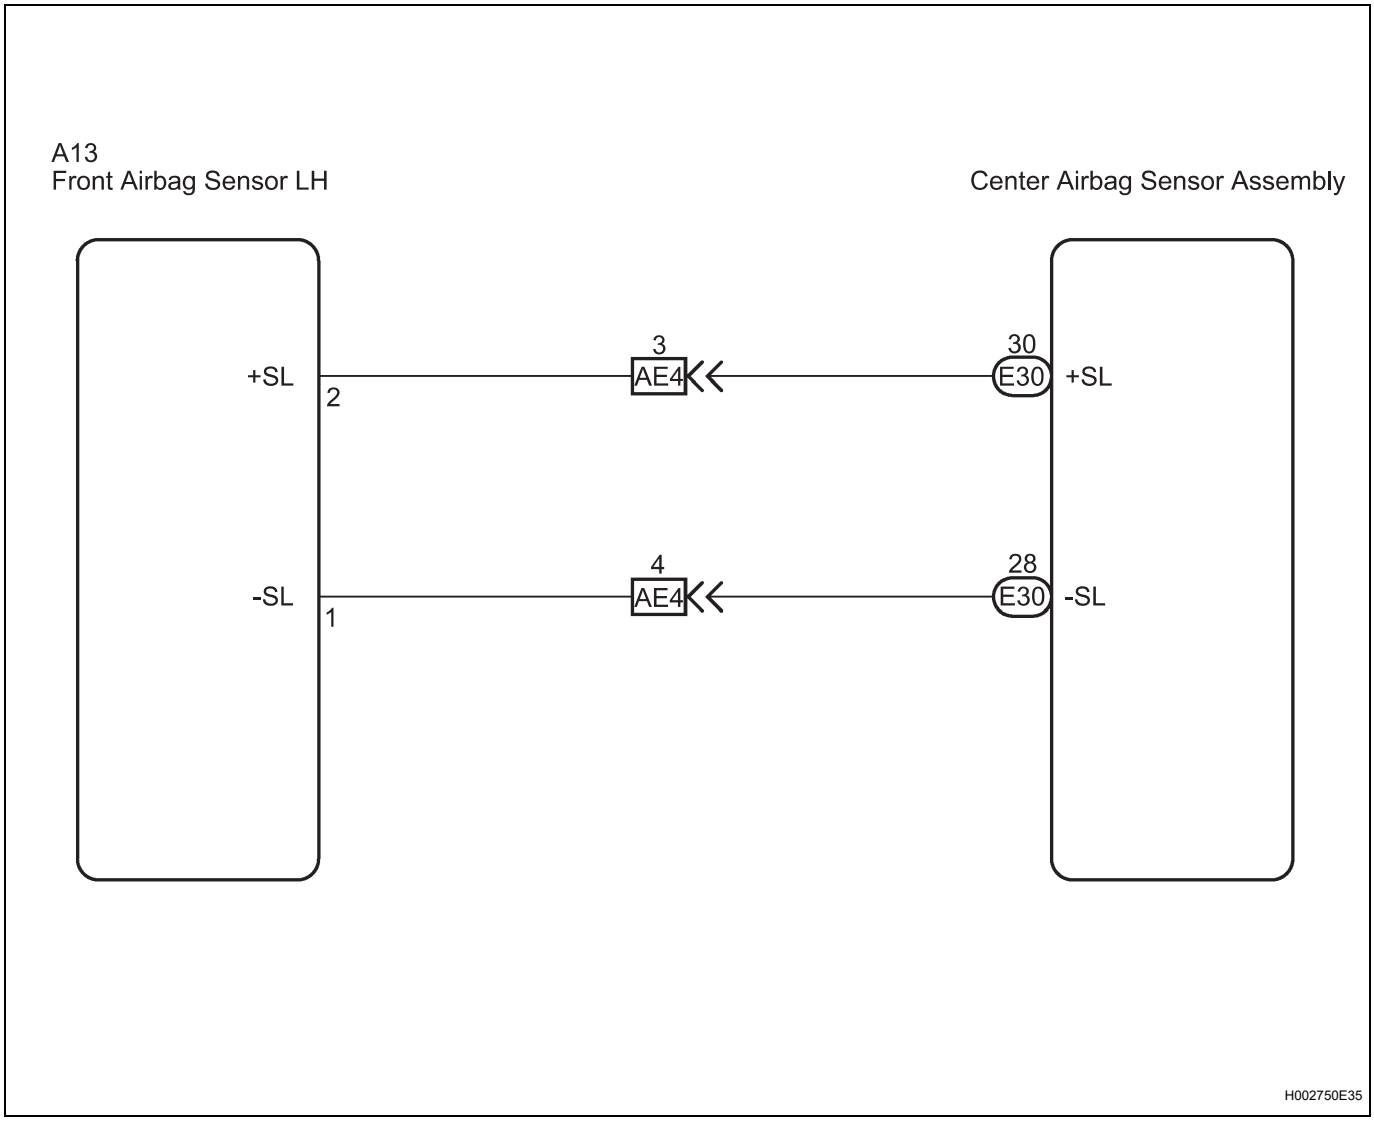
DTC	B1615/14	Front Airbag Sensor LH Malfunction

DESCRIPTION

The front airbag sensor LH consists of the diagnostic circuit and the frontal deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the frontal deceleration sensor, it determines whether the SRS should be activated.
DTC B1615/14 is recorded when a malfunction is detected in the front airbag sensor LH.

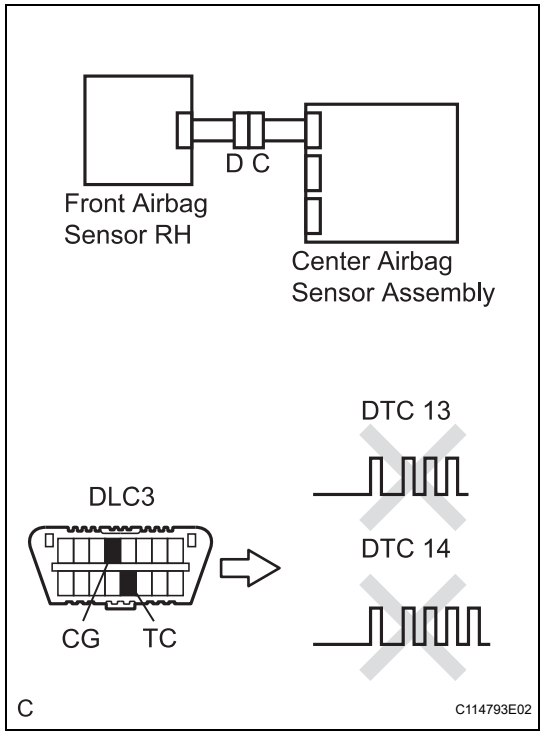
DTC No.	DTC Detection Condition	Trouble Area
B1615/14	• Front airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Front airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK FRONT AIRBAG SENSOR LH



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Interchange the front airbag sensor RH with LH and connect the connectors to them.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Clear the DTCs stored in the memory (See page RS-41).
(g) Turn the power switch off.
(h) Turn the power switch on (IG), and wait for at least 60 seconds.
(i) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1615/14 is output.	A
DTC B1610/13 is output.	B
DTC B1610/13 and B1615/14 are not output.	C

HINT:
Codes other than DTC B1610/13 and B1615/14 may be output at this time, but they are not related to this check.

C

USE SIMULATION METHOD TO CHECK (See page RS-33)

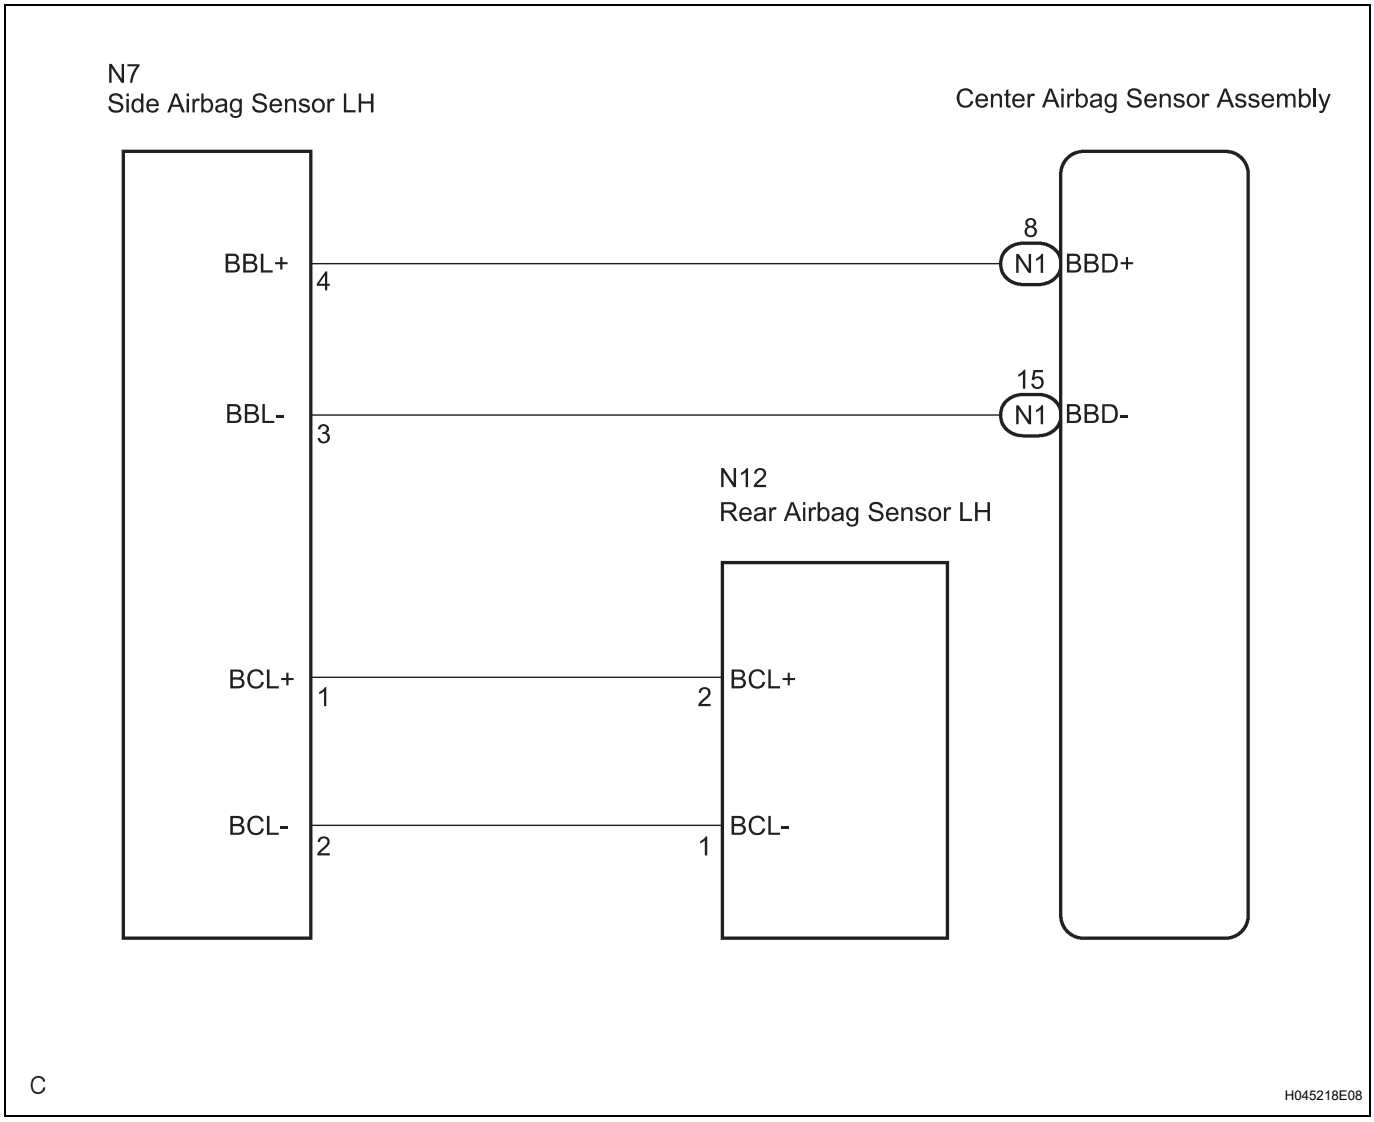
DTC	B1620/21	Driver Side - Side Airbag Sensor Malfunction

DESCRIPTION

The side airbag sensor LH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
DTC B1620/21 is recorded when a malfunction is detected in the side airbag sensor LH.

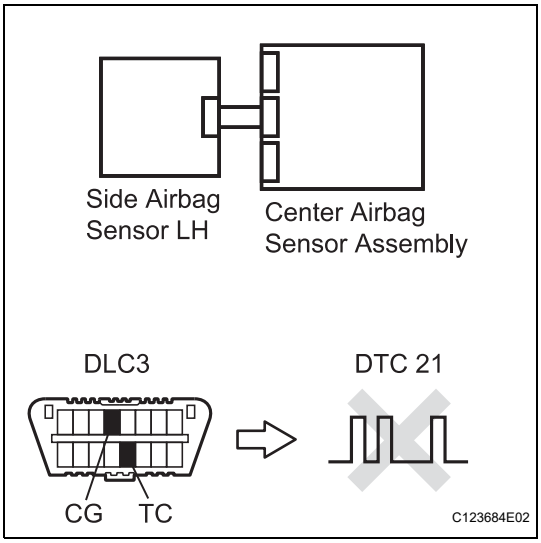
DTC No.	DTC Detection Condition	Trouble Area
B1620/21	• Side airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Side airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the power switch off.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).
OK:
DTC B1620/21 is not output.
HINT:
Codes other than DTC B1620/21 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

NG

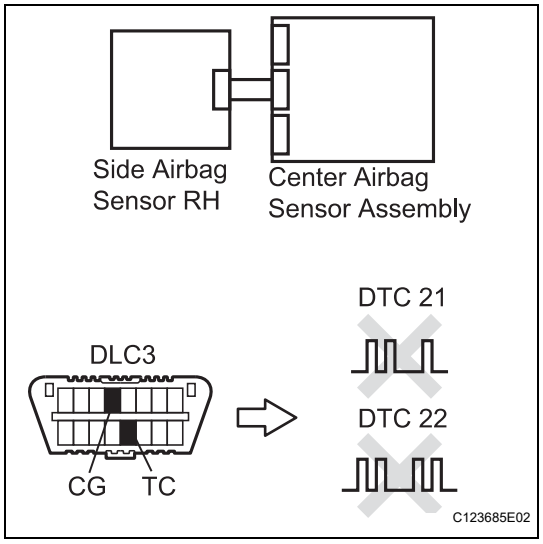
2	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the part number of the side airbag sensor LH is equal to the number of the other side.
OK:
Those numbers are the same.

NG → **Go to step 4**

OK

3 CHECK SIDE AIRBAG SENSOR LH



(a) Interchange the side airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1620/21 is output.	A
DTC B1625/22 is output.	B
DTC B1620/21 and B1625/22 are not output.	C

HINT:
Codes other than DTC B1620/21 and B1625/22 may be output at this time, but they are not related to this check.

(h) Turn the power switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

A	**Go to step 5**
B	**REPLACE SIDE AIRBAG SENSOR LH (See page RS-431)**

C

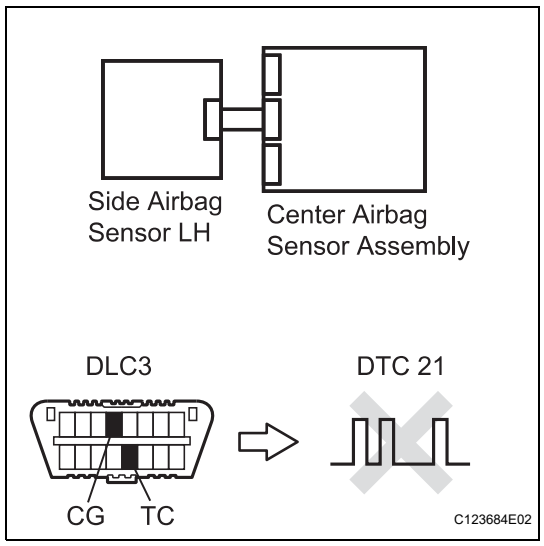
USE SIMULATION METHOD TO CHECK (See page RS-33)

4 REPLACE SIDE AIRBAG SENSOR LH

(a) Replace the side airbag sensor LH (See page RS-431).
HINT:
Perform inspection using parts from a normal vehicle if possible.

NEXT

5	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1620/21 is not output.

HINT:

Codes other than DTC B1620/21 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1622/81	Lost Communication with Driver Side - Side Airbag Sensor Assembly
DTC	B1623/81	Driver Side - Side Airbag Sensor Assembly Initialization Incomplete
DTC	B1632/81	Lost Communication with Driver Side Rear Airbag Sensor
DTC	B1633/81	Driver Side Rear Airbag Sensor Initialization Incomplete
DTC	B1642/81	Lost Communication with Driver Side Satellite Sensor Bus
DTC	B1643/81	Driver Side Satellite Sensor Bus Initialization Incomplete

DESCRIPTION

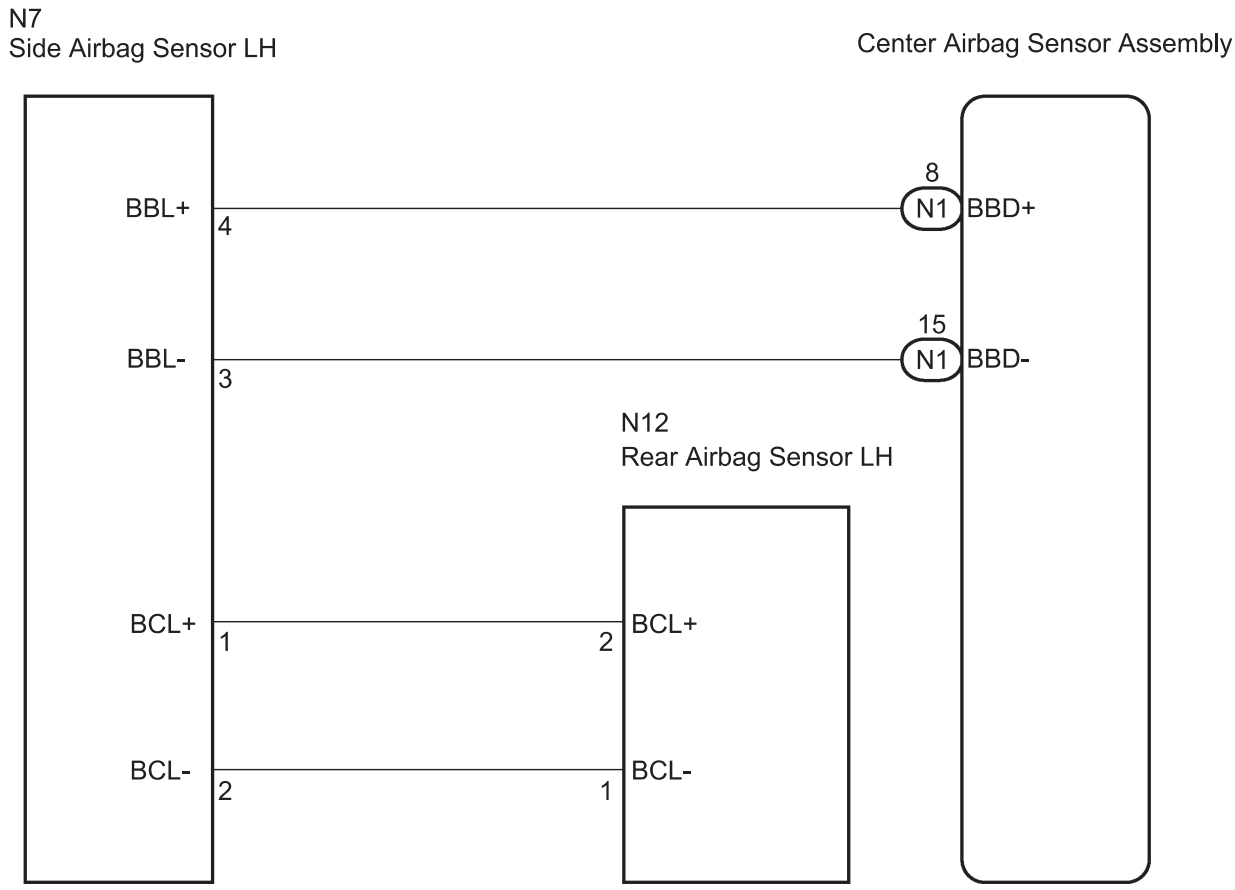
The circuit for the side collision sensor LH (to determine deployment of the front seat side airbag assembly LH and curtain shield airbag assembly LH) is composed of the center airbag sensor assembly, side airbag sensor LH, and rear airbag sensor LH.

The side airbag sensor LH and rear airbag sensor LH detect impacts to the vehicle and send signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1622/81, B1623/81, B1632/81, B1633/81, B1642/81, or B1643/81 is recorded when a malfunction is detected in the circuit for the side collision sensor LH (to determine deployment of the front seat side airbag assembly LH and curtain shield airbag assembly LH).

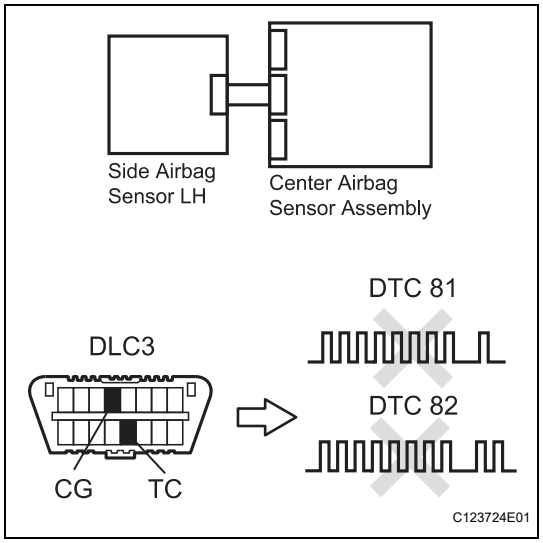
DTC No.	DTC Detecting Condition	Trouble Area
1622/81 1623/81 1632/81 1633/81 1642/81 1643/81	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor LH (to determine deployment of the front seat side airbag assembly LH and curtain shield airbag assembly LH) for 2 seconds. • Side airbag sensor LH malfunction • Rear airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Floor wire • Side airbag sensor LH • Rear airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1 CHECK PRESENT DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Turn the power switch off.
HINT:
If a communication error occurs, DTCs for both the LH and RH sides will be stored simultaneously. To identify the malfunctioning area, turn the power switch off and then on (IG) again.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Check the present DTCs (See page RS-41).
Result

Result	Proceed to
Present DTC B1623, B1633, B1643, or 81 is output.	A
Present DTC B1628, B1638, B1648, or 82 is output.	B
Present DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

HINT:
- DTCs indicating communication errors will be changed to DTCs indicating errors in initialization by turning the power switch off and then on (IG) again.
- Codes other than present DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

B → **REPAIR CIRCUITS INDICATED BY OUTPUT DTCS**

C → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

A

2 CHECK PAST DTC

(a) Check the past DTCs (See page RS-41).
Result

Result	Proceed to
• Past DTC B1632, B1642, or 81 is output. • Past DTC B1622, B1632, B1642, or 81 is not output.	A
Past DTC B1622 is output.	B

HINT:
Codes other than past DTC B1622, B1632, B1642, or 81 may be output at this time, but they are not related to this check.

B → Go to step 20

A

3	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the side airbag sensor LH.
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

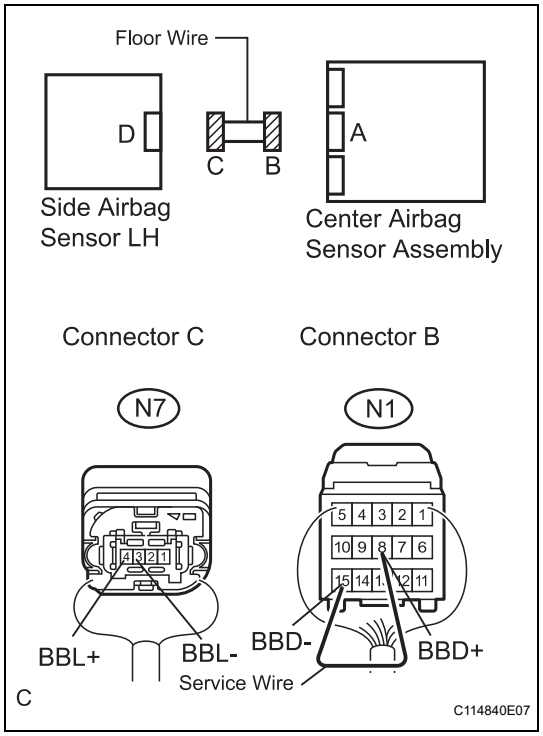
4	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and side airbag sensor LH.
(b) Check that the connectors (on the center airbag sensor assembly side and side airbag sensor LH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → REPAIR OR REPLACE FLOOR WIRE

OK

5 CHECK FLOOR WIRE (OPEN)



(a) Using a service wire, connect terminals 8 (BBD+) and 15 (BBD-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

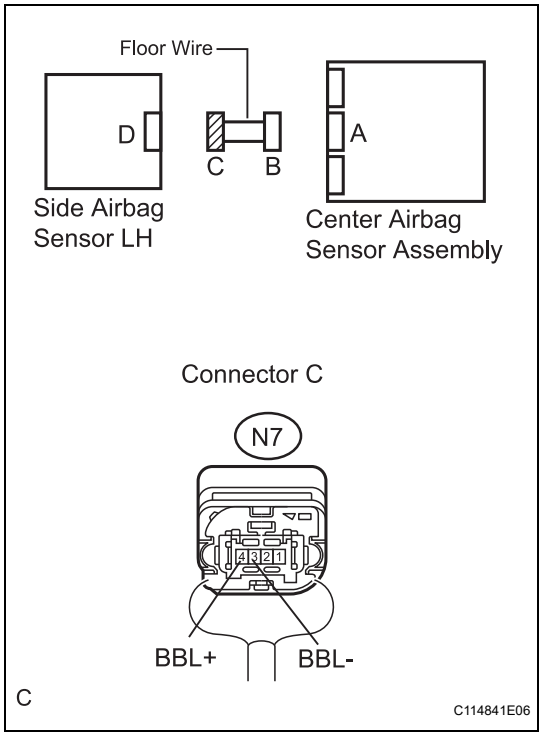
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
N7-4 (BBL+) - N7-3 (BBL-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

6 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

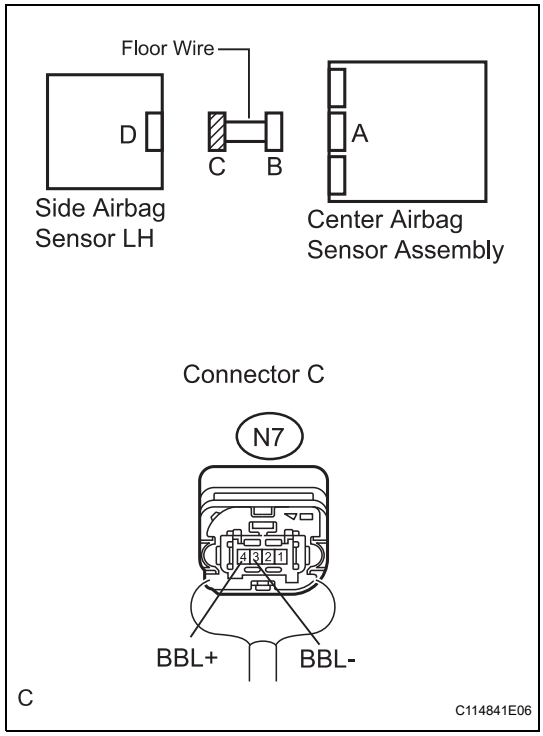
Tester connection	Condition	Specified condition
N7-4 (BBL+) - N7-3 (BBL-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

7 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

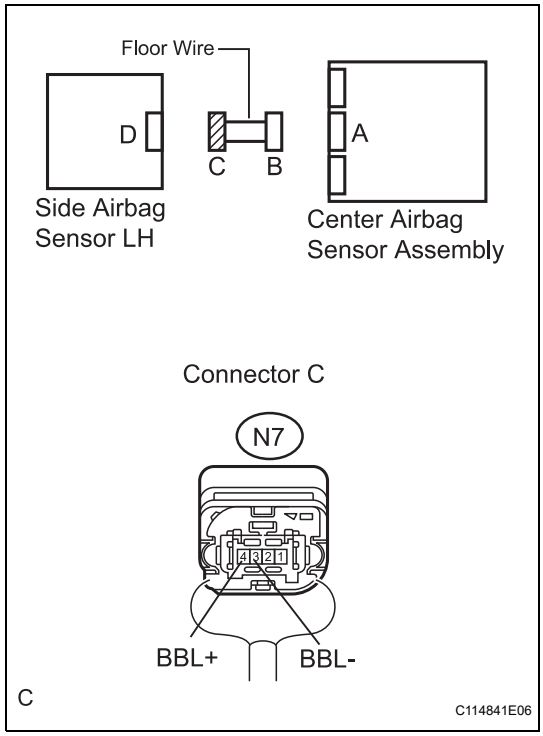
Standard voltage

Tester connection	Condition	Specified condition
N7-4 (BBL+) - Body ground	Power switch on (IG)	Below 1 V
N7-3 (BBL-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

8 CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
N7-4 (BBL+) - Body ground	Always	1 MΩ or higher
N7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

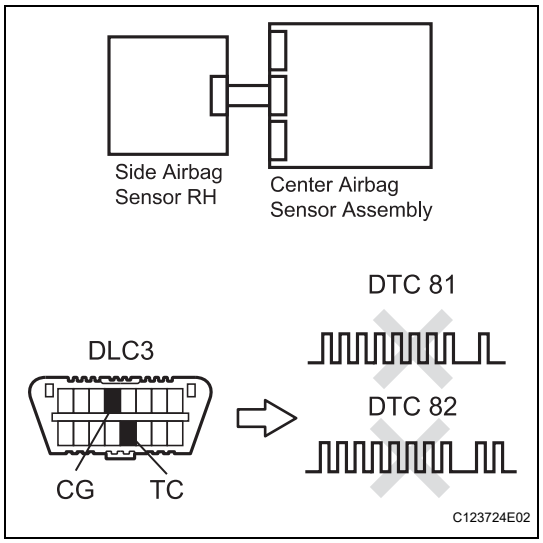
9	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Check that the part number of the side airbag sensor LH is equal to the number of the other side.
OK:
Those numbers are the same.
(b) Connect the connectors to the center airbag sensor assembly and the side airbag sensor LH.

NG → **Go to step 11**

OK

10	CHECK SIDE AIRBAG SENSOR LH



(a) Interchange the side airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).
Result

Result	Proceed to
DTC B1623, B1633, B1643, or 81 is output.	A
DTC B1628, B1638, B1648, or 82 is output.	B
DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

HINT:
Codes other than DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.
(h) Turn the power switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the side airbag sensor RH and LH to their original positions and connect the connectors to them.

B → **REPLACE SIDE AIRBAG SENSOR LH (See page RS-431)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

A

11	CHECK CONNECTION OF CONNECTOR

(a) Check that the connector is properly connected to the rear airbag sensor LH.
OK:
The connector is properly connected.

NG → **CONNECT CONNECTOR PROPERLY**

OK

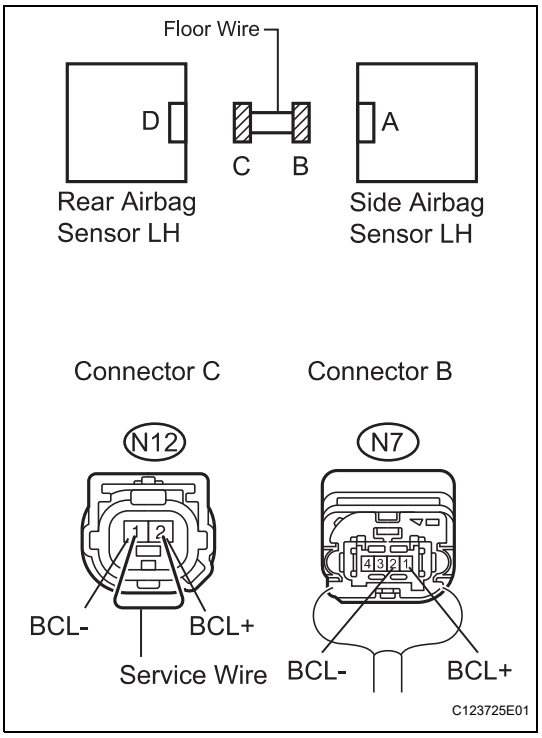
12	CHECK CONNECTOR

(a) Disconnect the connector from the rear airbag sensor LH.
(b) Check that the connector (on the rear airbag sensor LH side) is not damaged.
OK:
The connector is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

13	CHECK FLOOR WIRE (OPEN)



(a) Disconnect the connector from the side airbag sensor LH.
(b) Using a service wire, connect terminals 2 (BCL+) and 1 (BCL-) of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

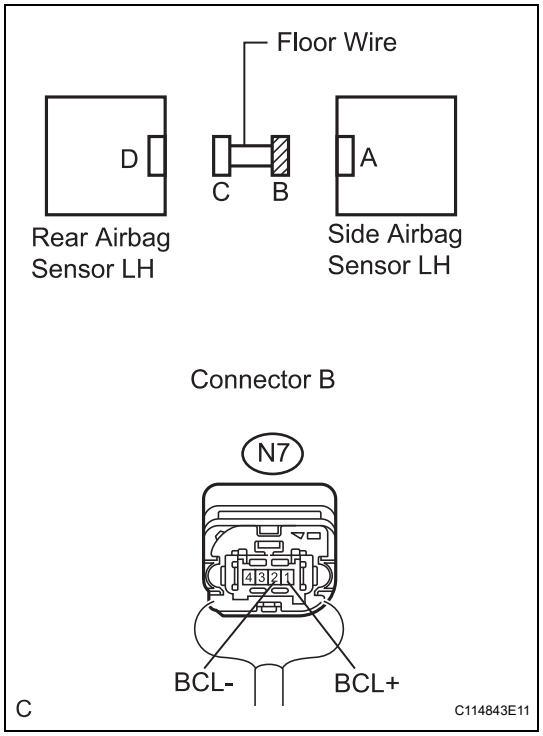
Tester connection	Condition	Specified condition
N7-1 (BCL+) - N7-2 (BCL-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

14 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

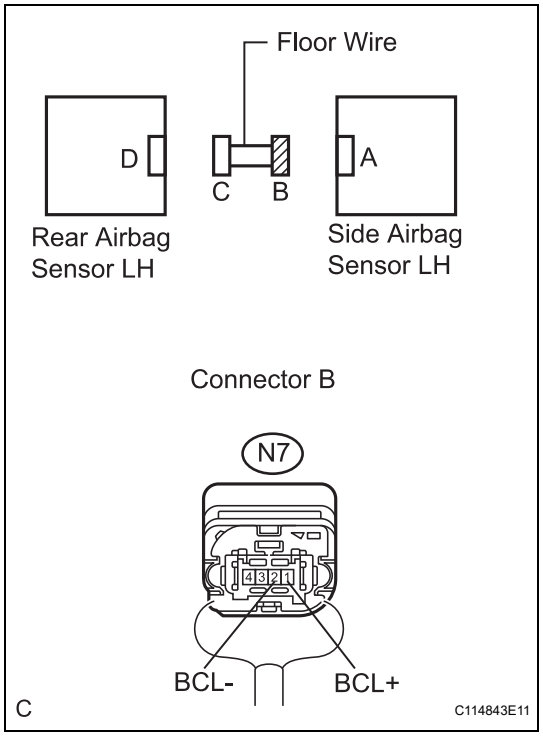
Standard resistance

Tester connection	Condition	Specified condition
N7-1 (BCL+) - N7-2 (BCL-)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

15 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

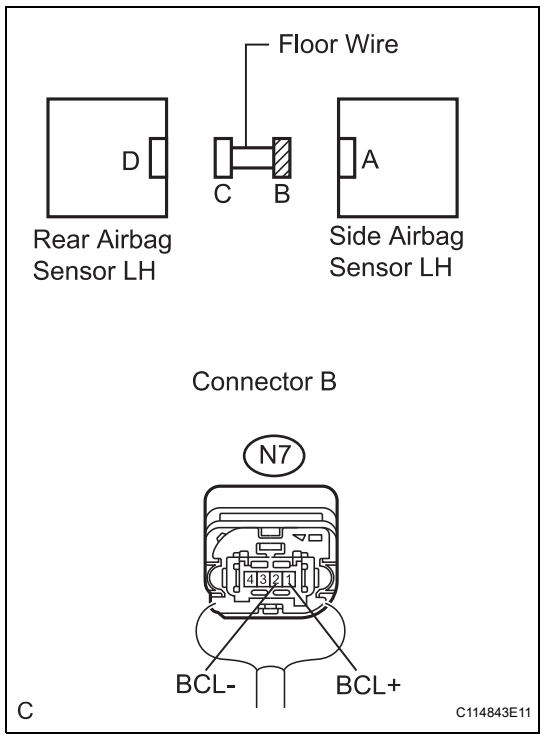
Standard voltage

Tester connection	Condition	Specified condition
N7-1 (BCL+) - Body ground	Power switch on (IG)	Below 1 V
N7-2 (BCL-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

16	CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
N7-1 (BCL+) - Body ground	Always	1 MΩ or higher
N7-2 (BCL-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

17	CONFIRM PART NUMBER OF REAR AIRBAG SENSOR

(a) Check that the part number of the rear airbag sensor LH is equal to the number of the other side.

OK:

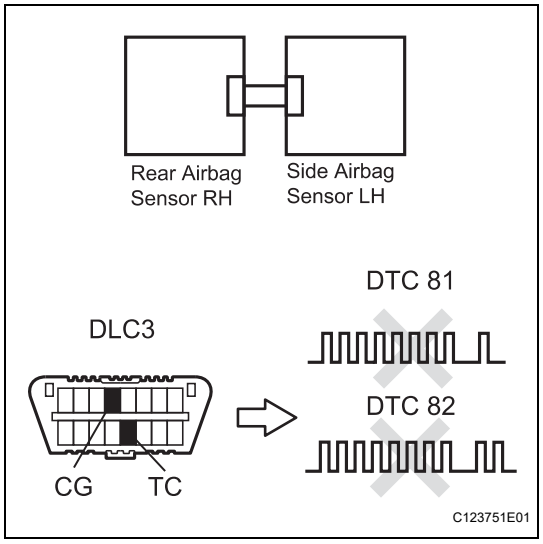
Those numbers are the same.

(b) Connect the connectors to the side airbag sensor LH and the rear airbag sensor LH.

NG → **Go to step 19**

OK

18 CHECK REAR AIRBAG SENSOR LH



(a) Interchange the rear airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1623, B1633, B1643, or 81 is output.	A
DTC B1628, B1638, B1648, or 82 is output.	B
DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

HINT:
Codes other than DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

(h) Turn the power switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the rear airbag sensor RH and LH to their original positions and connect the connectors to them.

B → **REPLACE REAR AIRBAG SENSOR LH (See page RS-435)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

A

19 CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1623, B1633, B1643, or 81 is not output.

HINT:
Codes other than DTC B1623, B1633, B1643, or 81 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

20	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the side airbag sensor LH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

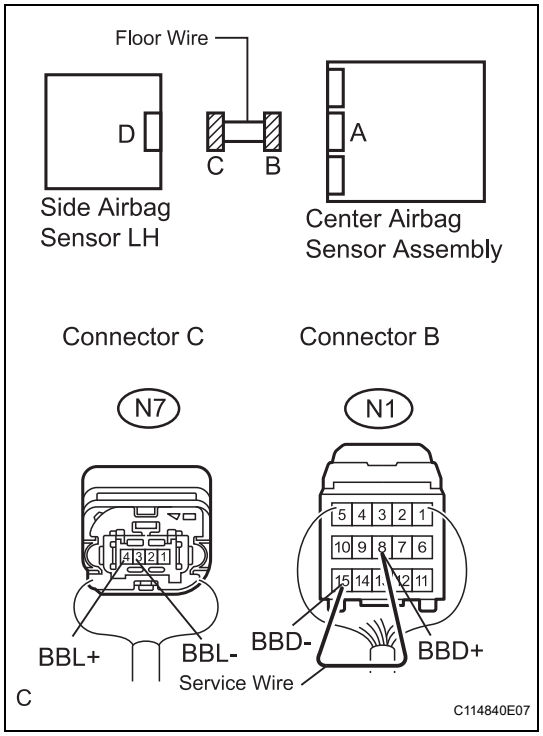
21	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and side airbag sensor LH.
(b) Check that the connectors (on the center airbag sensor assembly side and side airbag sensor LH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

22 CHECK FLOOR WIRE (OPEN)



(a) Using a service wire, connect terminals 8 (BBD+) and 15 (BBD-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

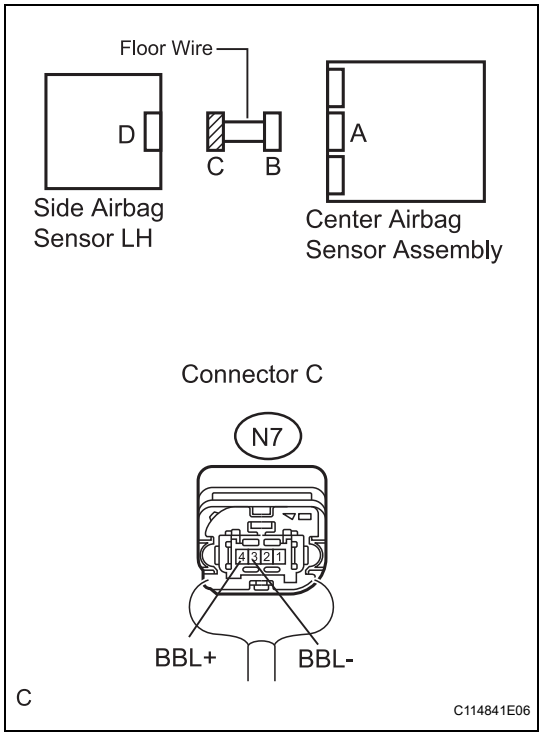
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
N7-4 (BBL+) - N7-3 (BBL-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

23 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

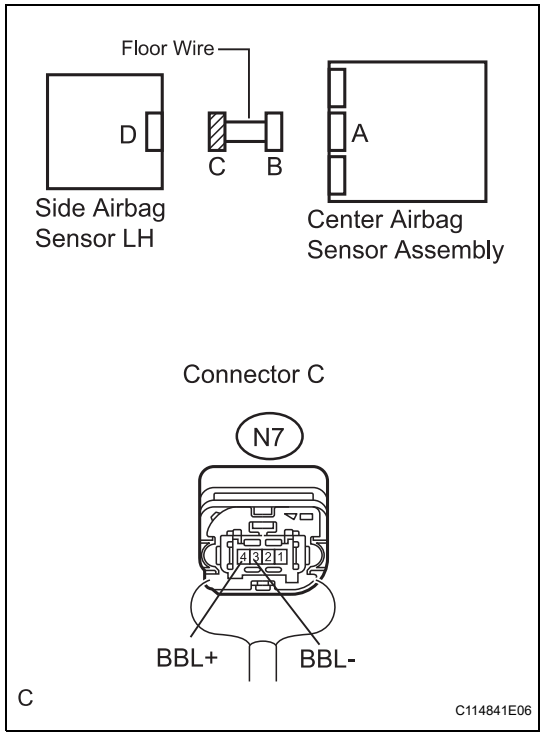
Tester connection	Condition	Specified condition
N7-4 (BBL+) - N7-3 (BBL-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

24 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

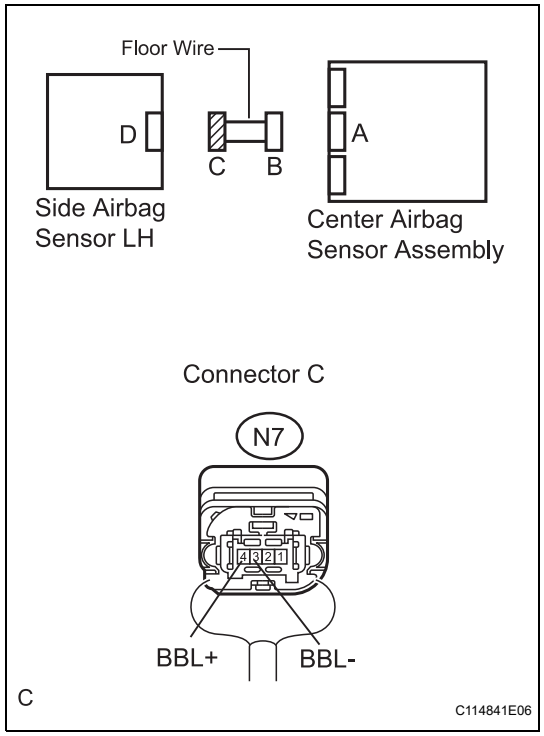
Standard voltage

Tester connection	Condition	Specified condition
N7-4 (BBL+) - Body ground	Power switch on (IG)	Below 1 V
N7-3 (BBL-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

25 CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
N7-4 (BBL+) - Body ground	Always	1 MΩ or higher
N7-3 (BBL-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

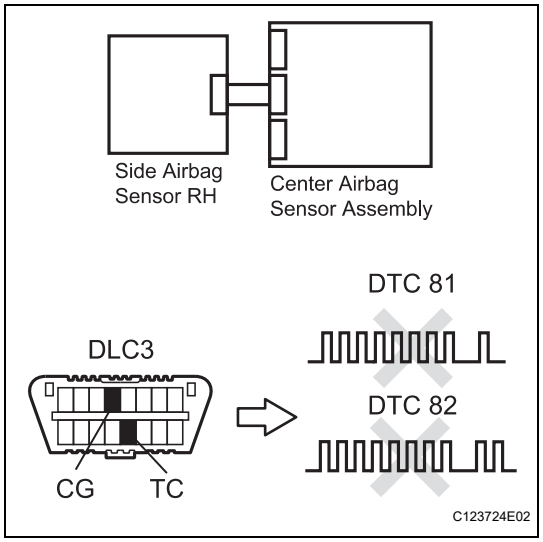
26	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Check that the part number of the side airbag sensor LH is equal to the number of the other side.
OK:
Those numbers are the same.
(b) Connect the connectors to the center airbag sensor assembly and the side airbag sensor LH.

NG → **Go to step 28**

OK

27	CHECK SIDE AIRBAG SENSOR LH



(a) Interchange the side airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

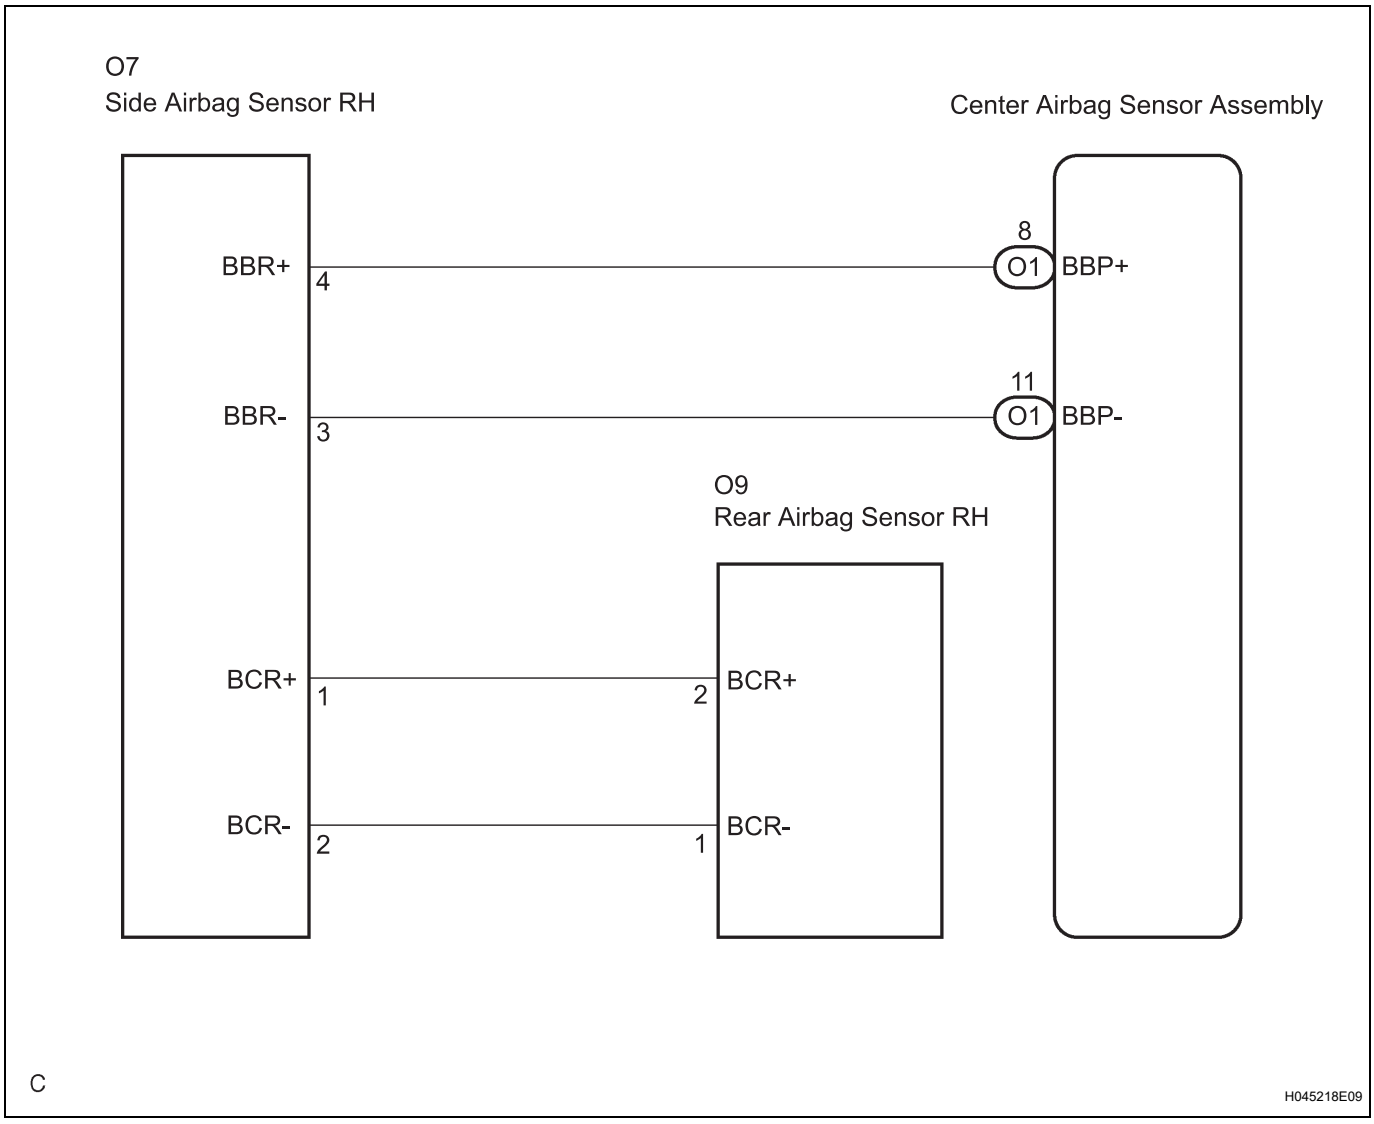
DTC	B1625/22	Front Passenger Side - Side Airbag Sensor Malfunction

DESCRIPTION

The side airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
DTC B1625/22 is recorded when a malfunction is detected in the side airbag sensor RH.

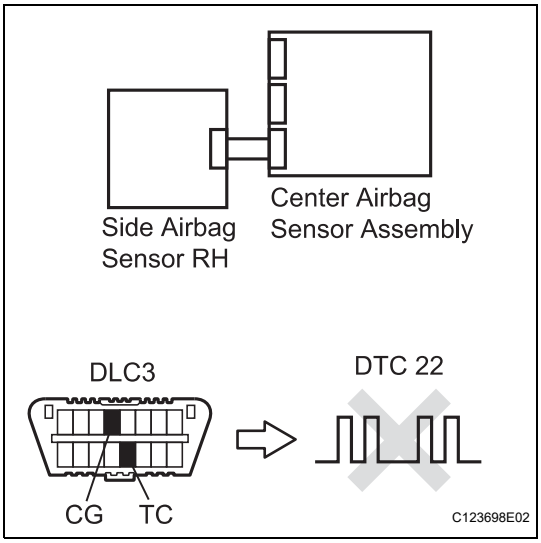
DTC No.	DTC Detection Condition	Trouble Area
B1625/22	• Side airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Side airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the power switch off.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).

OK:

DTC B1625/22 is not output.

HINT:

Codes other than DTC B1625/22 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

NG

2	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the part number of the side airbag sensor RH is equal to the number of the other side.

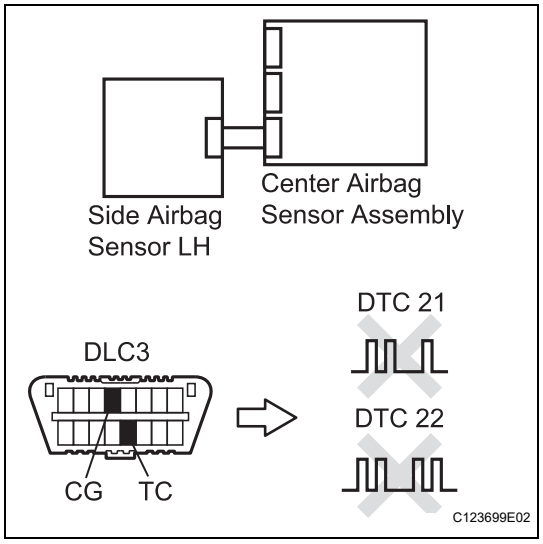
OK:

Those numbers are the same.

NG → **Go to step 4**

OK

3 CHECK SIDE AIRBAG SENSOR RH



(a) Connect the connectors to the center airbag sensor assembly.
(b) Interchange the side airbag sensor LH with RH and connect the connectors to them.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Clear the DTCs stored in the memory (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1625/22 is output.	A
DTC B1620/21 is output.	B
DTC B1620/21 and B1625/22 are not output.	C

HINT:
Codes other than DTC B1620/21 and B1625/22 may be output at this time, but they are not related to this check.

(i) Turn the power switch off.
(j) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(k) Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

A	Go to step 5
B	REPLACE SIDE AIRBAG SENSOR RH (See page RS-431)

C

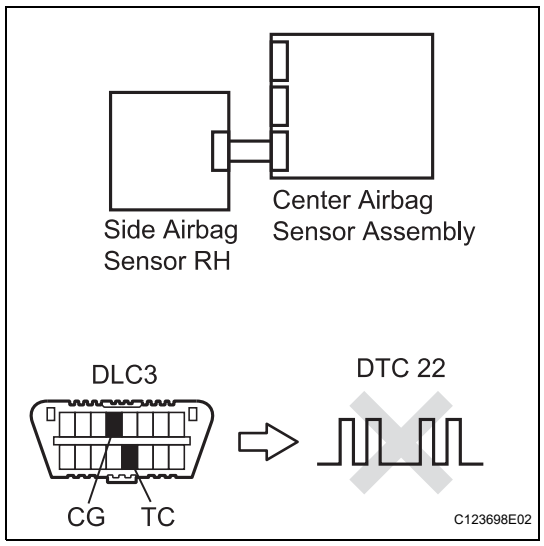
USE SIMULATION METHOD TO CHECK (See page RS-33)

4 REPLACE SIDE AIRBAG SENSOR RH

(a) Replace the side airbag sensor RH (See page RS-431).
HINT:
Perform inspection using parts from a normal vehicle if possible.

NEXT

5	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1625/22 is not output.

HINT:

Codes other than DTC B1625/22 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1627/82	Lost Communication with Front Passenger Side - Side Airbag Sensor Assembly

DTC	B1628/82	Front Passenger Side - Side Airbag Sensor Assembly Initialization Incomplete

DTC	B1637/82	Lost Communication with Passenger Side Rear Airbag Sensor

DTC	B1638/82	Passenger Side Rear Airbag Sensor Initialization Incomplete

DTC	B1647/82	Lost Communication with Front Passenger Side Satellite Sensor Bus

DTC	B1648/82	Front Passenger Side Satellite Sensor Bus Initialization Incomplete

DESCRIPTION

The circuit for the side collision sensor RH (to determine deployment of the front seat side airbag assembly RH and curtain shield airbag assembly RH) is composed of the center airbag sensor assembly, side airbag sensor RH, and rear airbag sensor RH.

The side airbag sensor RH and rear airbag sensor RH detect impacts to the vehicle and send signals to the center airbag sensor assembly to determine if the airbag should be deployed.

DTC B1627/82, B1628/82, B1637/82, B1638/82, B1647/82, or B1648/82 is recorded when a malfunction is detected in the circuit for the side collision sensor RH (to determine deployment of the front seat side airbag assembly RH and curtain shield airbag assembly RH).

DTC No.	DTC Detecting Condition	Trouble Area
B1627/82 B1628/82 B1637/82 B1638/82 B1647/82 B1648/82	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the circuit for the side collision sensor RH (to determine deployment of the front seat side airbag assembly RH and curtain shield airbag assembly RH) for 2 seconds. • Side airbag sensor RH malfunction • Rear airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Side airbag sensor RH • Rear airbag sensor RH • Center airbag sensor assembly

A

2	CHECK PAST DTC

(a) Check the past DTCs (See page RS-41).
Result

Result	Proceed to
• Past DTC B1637, B1647, or 82 is output. • Past DTC B1627, B1637, B1647, or 82 is not output.	A
Past DTC B1627 is output.	B

HINT:
Codes other than past DTC B1627, B1637, B1647, or 82 may be output at this time, but they are not related to this check.

B → Go to step 20

A

3	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the side airbag sensor RH.
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

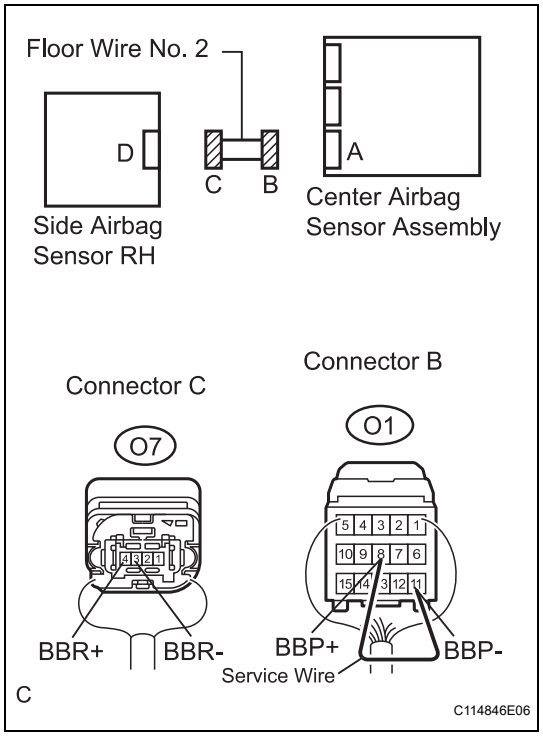
4	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and side airbag sensor RH.
(b) Check that the connectors (on the center airbag sensor assembly side and side airbag sensor RH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

5 CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Using a service wire, connect terminals 8 (BBP+) and 11 (BBP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

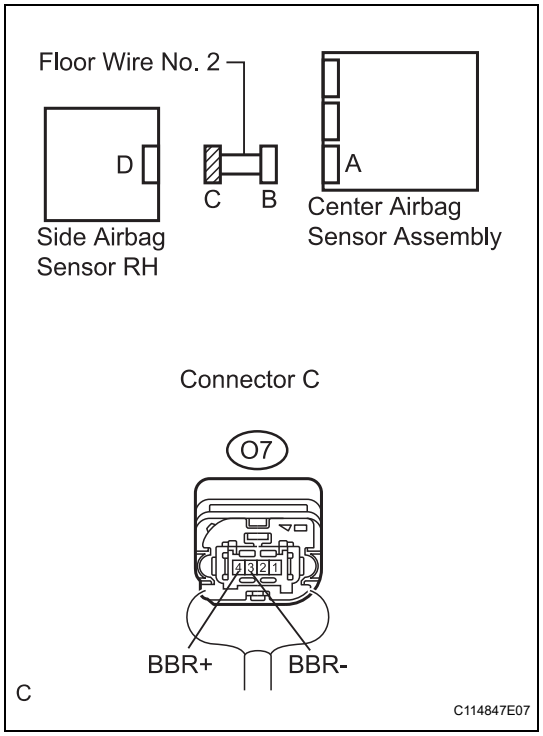
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
O7-4 (BBR+) - O7-3 (BBR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

6 CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the service wire from connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

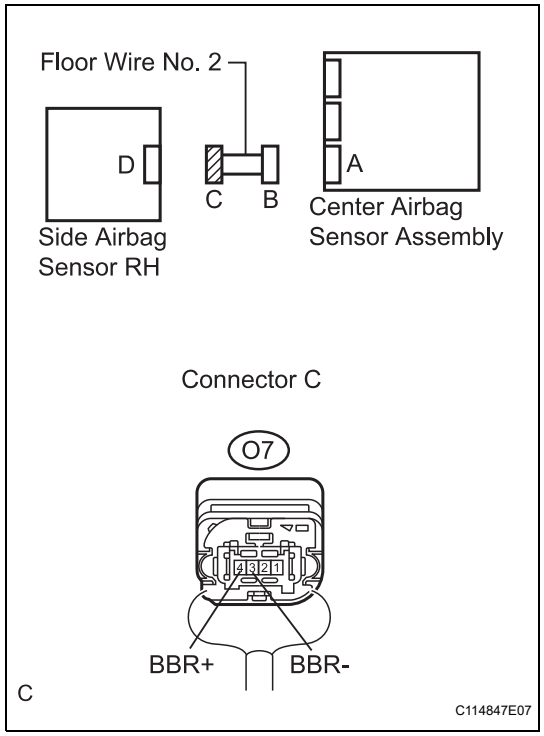
Tester connection	Condition	Specified condition
O7-4 (BBR+) - O7-3 (BBR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

7 CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

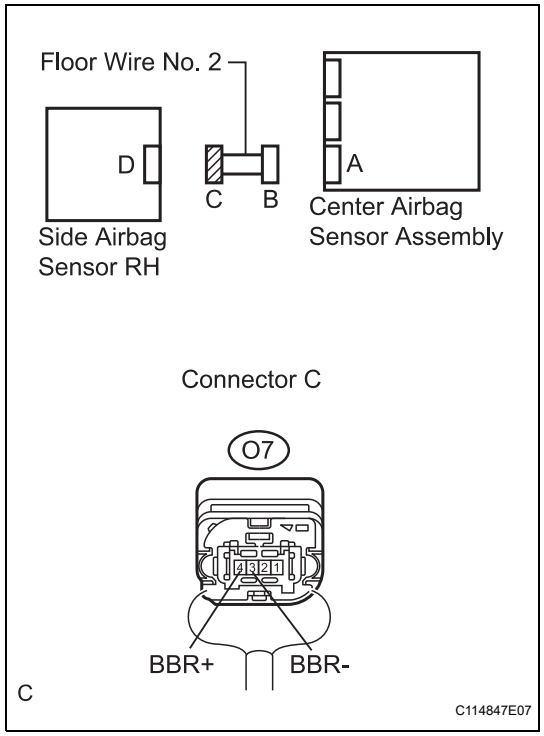
Standard voltage

Tester connection	Condition	Specified condition
O7-4 (BBR+) - Body ground	Power switch on (IG)	Below 1 V
O7-3 (BBR-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

8 CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
O7-4 (BBR+) - Body ground	Always	1 MΩ or higher
O7-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

RS

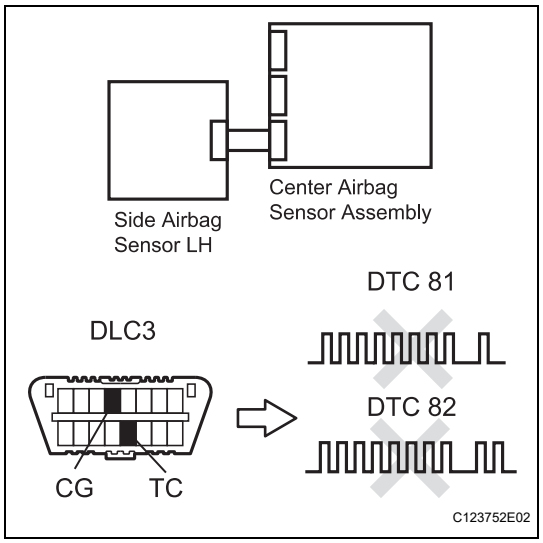
9	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Check that the part number of the side airbag sensor RH is equal to the number of the other side.
OK:
Those numbers are the same.
(b) Connect the connectors to the center airbag sensor assembly and the side airbag sensor RH.

NG → **Go to step 11**

OK

10	CHECK SIDE AIRBAG SENSOR RH



(a) Interchange the side airbag sensor LH with RH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).
Result

Result	Proceed to

(h) Turn the power switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

B → **REPLACE SIDE AIRBAG SENSOR RH (See page RS-431)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

A

11	CHECK CONNECTION OF CONNECTOR

(a) Check that the connector is properly connected to the rear airbag sensor RH.
OK:
The connector is properly connected.

NG → **CONNECT CONNECTOR PROPERLY**

OK

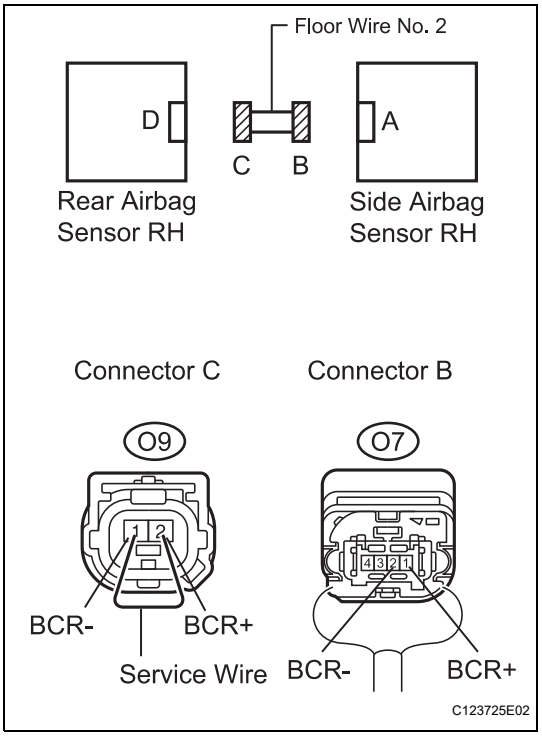
12	CHECK CONNECTOR

(a) Disconnect the connectors from the rear airbag sensor RH.
(b) Check that the connector (on the rear airbag sensor RH side) is not damaged.
OK:
The connector is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

13	CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Disconnect the connectors from the side airbag sensor RH.
(b) Using a service wire, connect terminals 2 (BCR+) and 1 (BCR-) of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

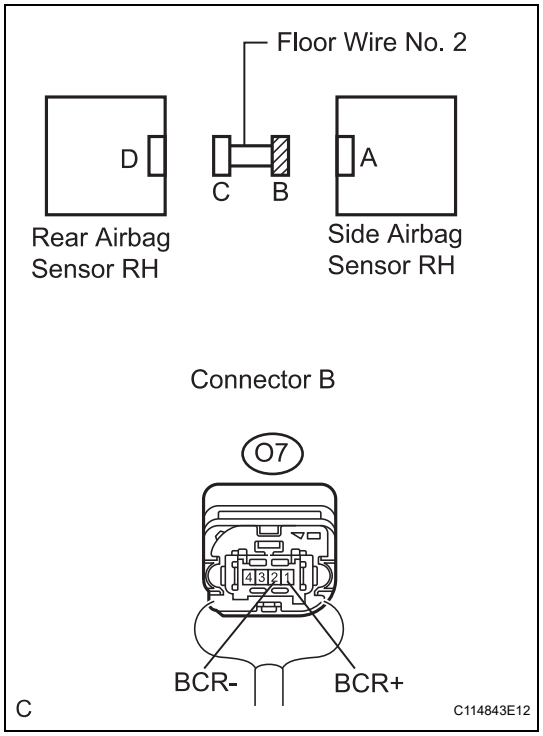
Tester connection	Condition	Specified condition
O7-2 (BCR-) - O7-1 (BCR+)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

14 CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

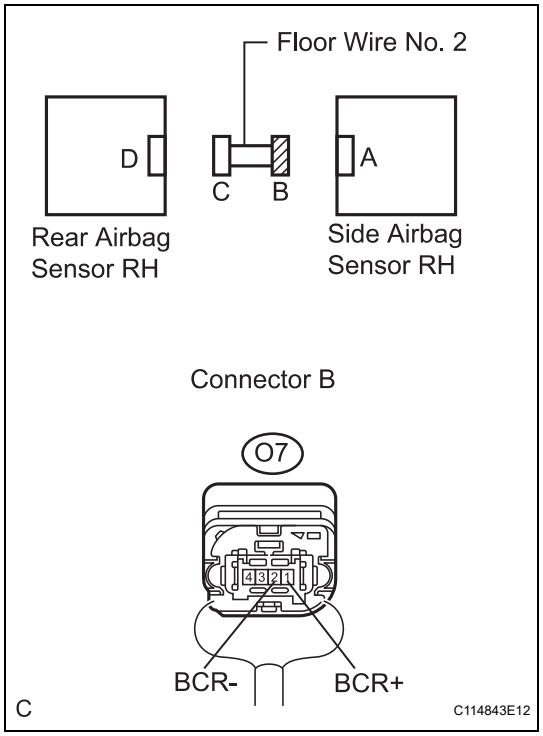
Standard resistance

Tester connection	Condition	Specified condition
O7-1 (BCR+) - O7-2 (BCR-)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

15 CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

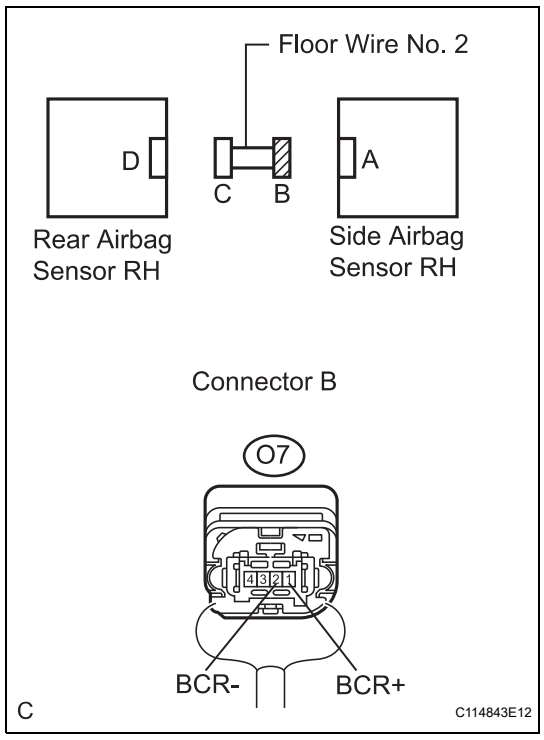
Standard voltage

Tester connection	Condition	Specified condition
O7-1 (BCR+) - Body ground	Power switch on (IG)	Below 1 V
O7-2 (BCR-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

16	CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
O7-1 (BCR+) - Body ground	Always	1 MΩ or higher
O7-2 (BCR-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

17	CONFIRM PART NUMBER OF REAR AIRBAG SENSOR

(a) Check that the part number of the rear airbag sensor RH is equal to the number of the other side.

OK:

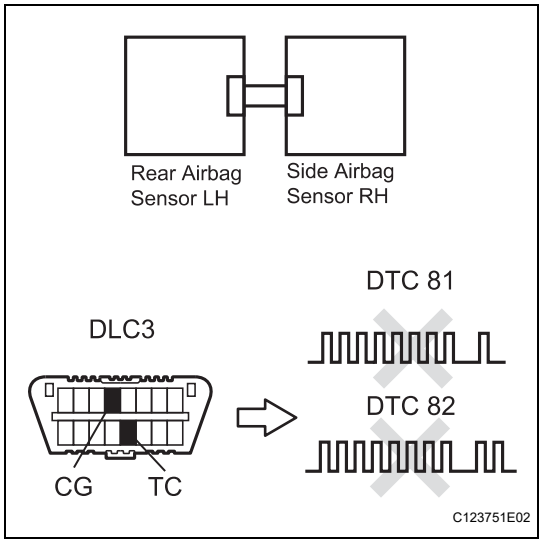
Those numbers are the same.

(b) Connect the connectors to the side airbag sensor RH and the rear airbag sensor RH.

NG → **Go to step 19**

OK

18 CHECK REAR AIRBAG SENSOR RH



(a) Interchange the rear airbag sensor LH with RH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

Result

Result	Proceed to
DTC B1628, B1638, B1648, or 82 is output.	A
DTC B1623, B1633, B1643, or 81 is output.	B
DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 are not output.	C

HINT:
Codes other than DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

(h) Turn the power switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the rear airbag sensor LH and RH to their original positions and connect the connectors to them.

B → **REPLACE REAR AIRBAG SENSOR RH (See page RS-435)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

A

19 CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1628, B1638, B1648, or 82 is not output.

HINT:
Codes other than DTC B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

20	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the side airbag sensor RH.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

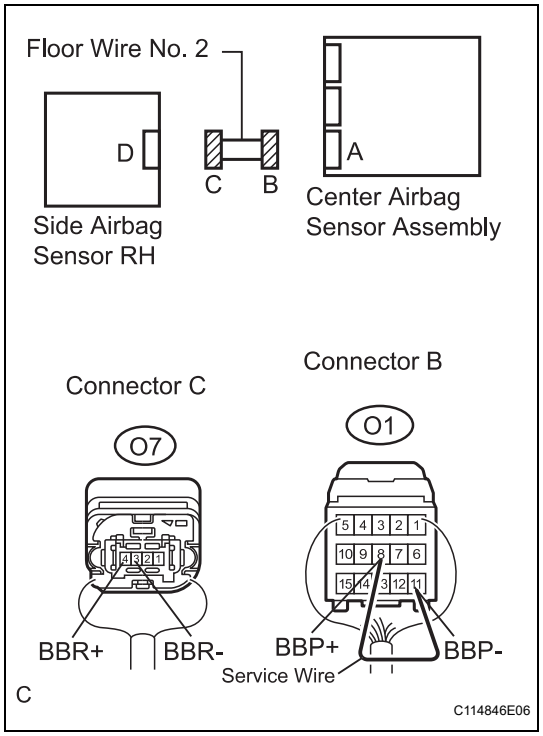
21	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and side airbag sensor RH.
(b) Check that the connectors (on the center airbag sensor assembly side and side airbag sensor RH side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

22 CHECK FLOOR WIRE NO. 2 (OPEN)



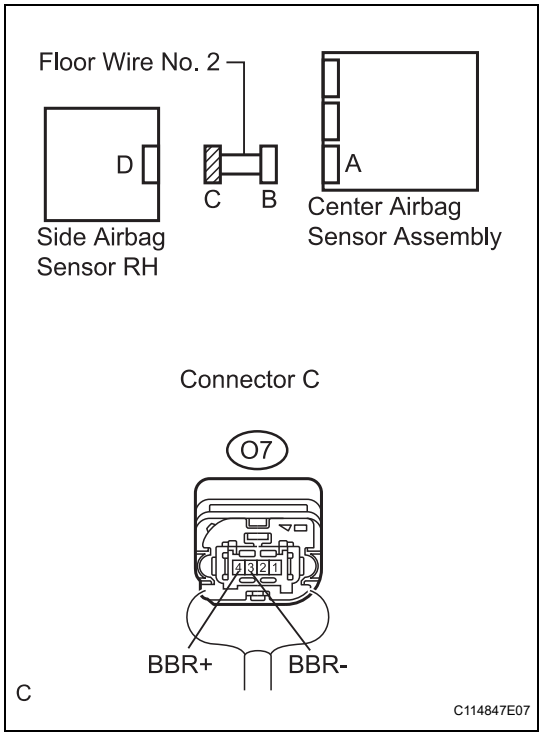
(a) Using a service wire, connect terminals 8 (BBP+) and 11 (BBP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
O7-4 (BBR+) - O7-3 (BBR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

23 CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

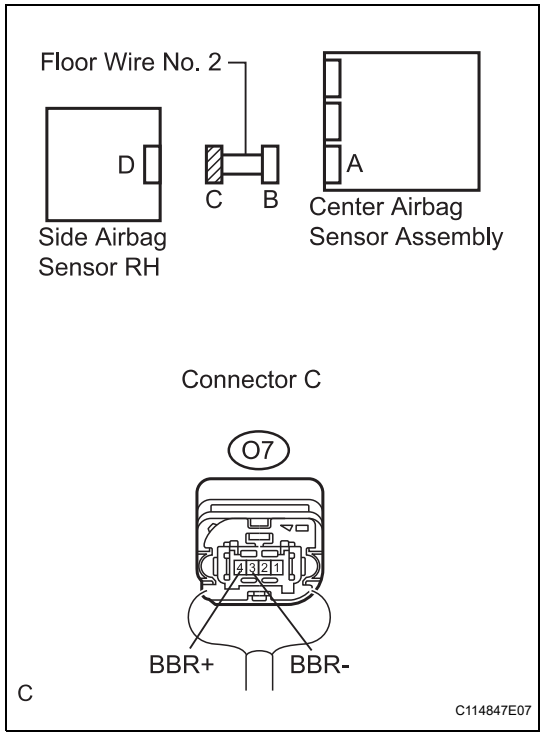
Tester connection	Condition	Specified condition
O7-4 (BBR+) - O7-3 (BBR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

24 CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

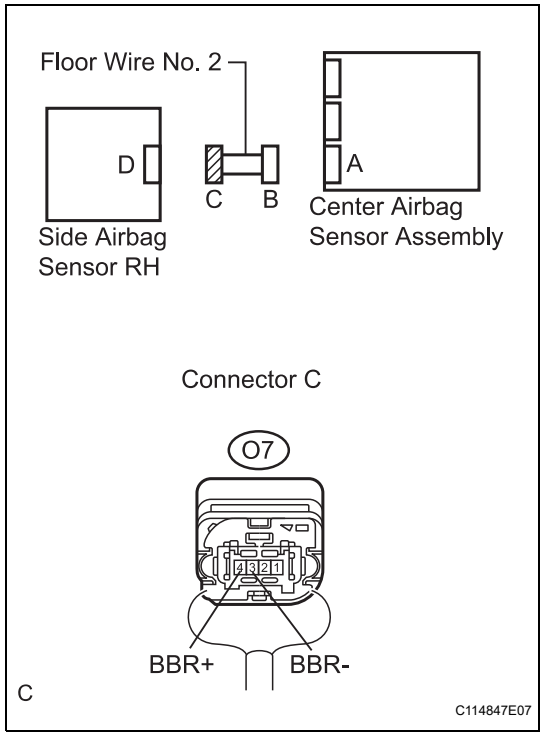
Standard voltage

Tester connection	Condition	Specified condition
O7-4 (BBR+) - Body ground	Power switch on (IG)	Below 1 V
O7-3 (BBR-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

25 CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
O7-4 (BBR+) - Body ground	Always	1 MΩ or higher
O7-3 (BBR-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

RS

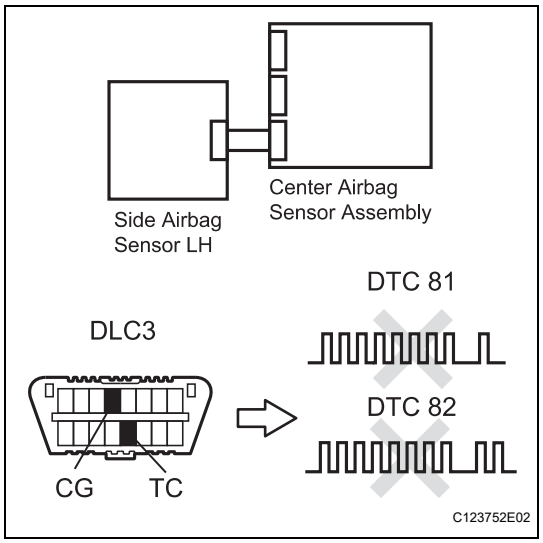
26	CONFIRM PART NUMBER OF SIDE AIRBAG SENSOR

(a) Check that the part number of the side airbag sensor RH is equal to the number of the other side.
OK:
Those numbers are the same.
(b) Connect the connectors to the center airbag sensor assembly and the side airbag sensor RH.

NG → **Go to step 28**

OK

27	CHECK SIDE AIRBAG SENSOR RH



(a) Interchange the side airbag sensor LH with RH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).
Result

Result	Proceed to

Codes other than DTC B1623, B1633, B1643, or 81 and B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.
(h) Turn the power switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the side airbag sensor LH and RH to their original positions and connect the connectors to them.

B → **REPLACE SIDE AIRBAG SENSOR RH (See page RS-431)**

C → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

A

28	CHECK CENTER AIRBAG SENSOR ASSEMBLY

(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).
OK:
DTC B1628, B1638, B1648, or 82 is not output.
HINT:
Codes other than DTC B1628, B1638, B1648, or 82 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

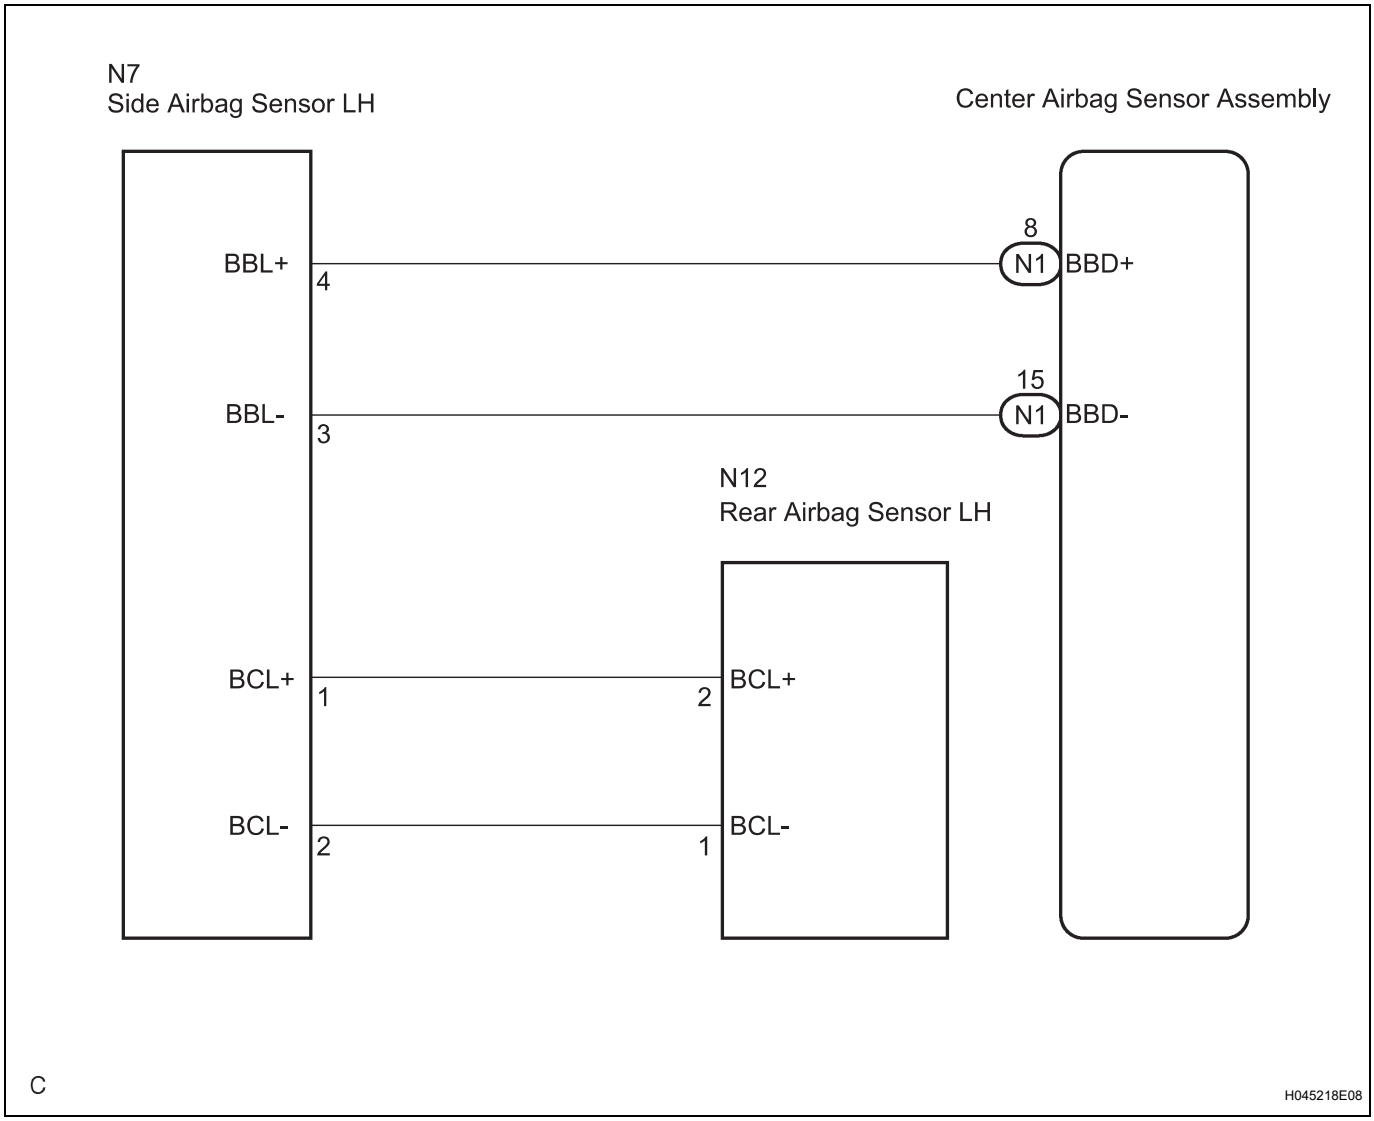
DTC	B1630/23	Driver Side Rear Airbag Sensor Malfunction

DESCRIPTION

The rear airbag sensor LH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
DTC B1630/23 is recorded when a malfunction is detected in the rear airbag sensor LH.

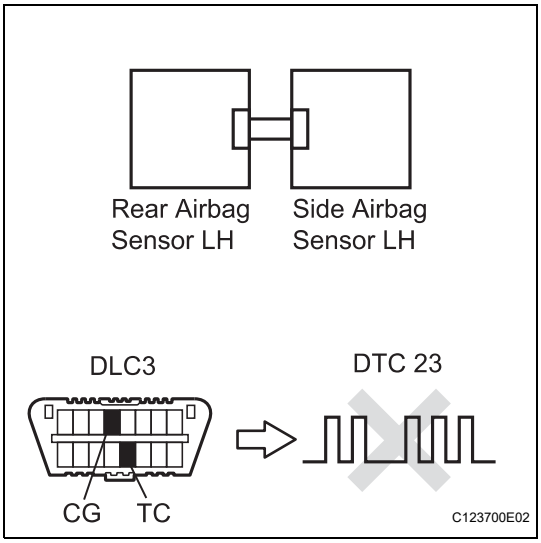
DTC No.	DTC Detection Condition	Trouble Area
B1630/23	• Rear airbag sensor LH malfunction • Center airbag sensor assembly malfunction	• Rear airbag sensor LH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the power switch off.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).

OK:

DTC B1630/23 is not output.

HINT:

Codes other than DTC B1630/23 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

NG

2	CONFIRM PART NUMBER OF REAR AIRBAG SENSOR

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the part number of the rear airbag sensor LH is equal to the number of the other side.

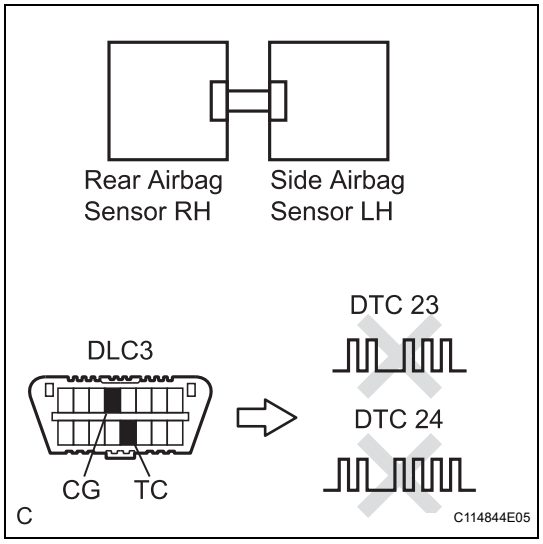
OK:

Those numbers are the same.

NG → **Go to step 4**

OK

3 CHECK REAR AIRBAG SENSOR LH



(a) Interchange the rear airbag sensor RH with LH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

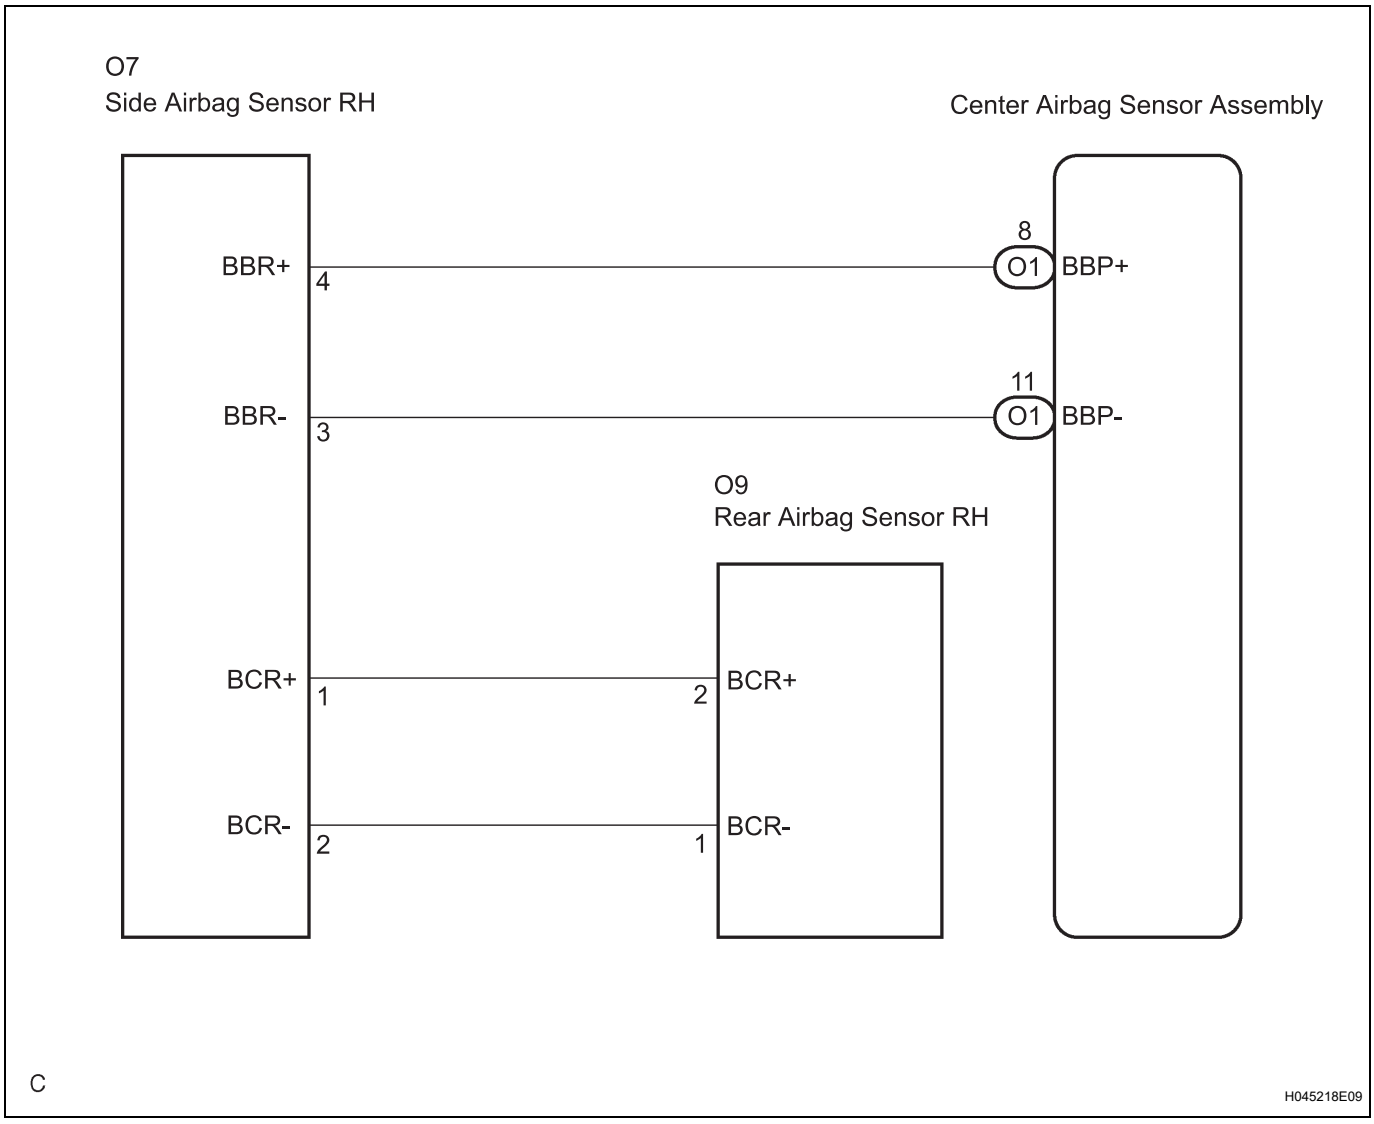
DTC	B1635/24	Front Passenger Side Rear Airbag Sensor Malfunction

DESCRIPTION

The rear airbag sensor RH consists of the safing sensor, the diagnostic circuit, the lateral deceleration sensor, etc.
If the center airbag sensor assembly receives signals from the lateral deceleration sensor, it determines whether the SRS should be activated.
DTC B1635/24 is recorded when a malfunction is detected in the rear airbag sensor RH.

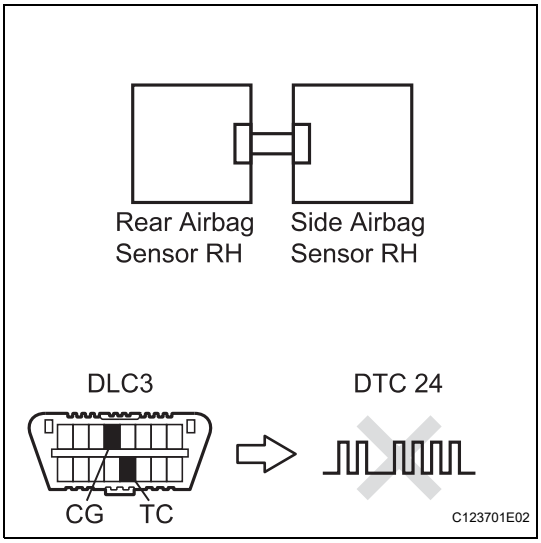
DTC No.	DTC Detection Condition	Trouble Area
B1635/24	• Rear airbag sensor RH malfunction • Center airbag sensor assembly malfunction	• Rear airbag sensor RH • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the power switch off.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).

OK:

DTC B1635/24 is not output.

HINT:

Codes other than DTC B1635/24 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

NG

2	CONFIRM PART NUMBER OF REAR AIRBAG SENSOR

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the part number of the rear airbag sensor RH is equal to the number of the other side.

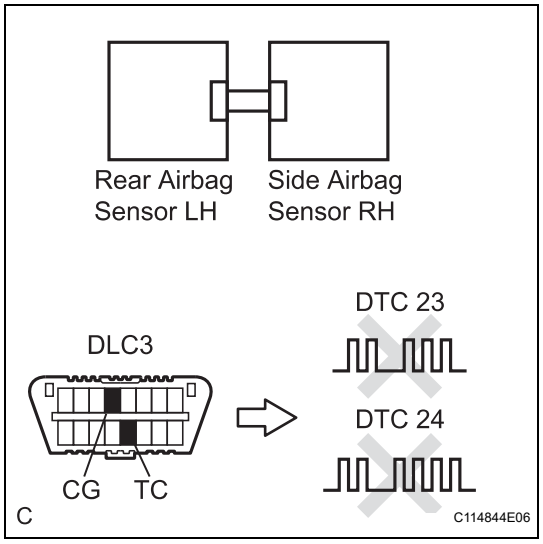
OK:

Those numbers are the same.

NG → **Go to step 4**

OK

3 CHECK REAR AIRBAG SENSOR RH



(a) Interchange the rear airbag sensor LH with RH and connect the connectors to them.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.

DTC B1630/23 and B1635/24 are not output.	C

HINT:
Codes other than DTC B1630/23 and B1635/24 may be output at this time, but they are not related to this check.

(h) Turn the power switch off.
(i) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(j) Return the rear airbag sensor LH and RH to their original positions and connect the connectors to them.

A → **Go to step 5**

B → **REPLACE REAR AIRBAG SENSOR RH (See page RS-435)**

C

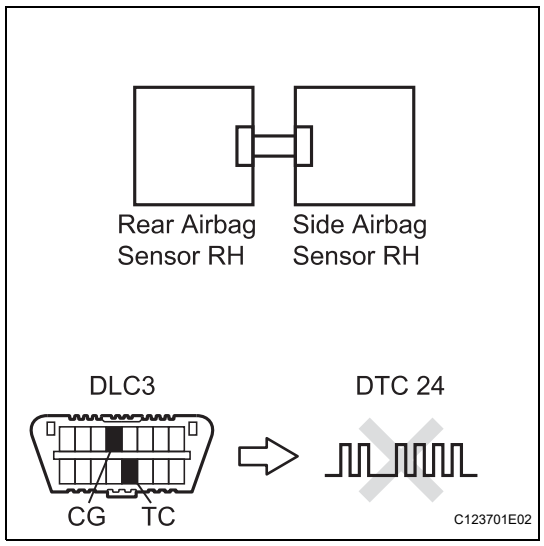
USE SIMULATION METHOD TO CHECK (See page RS-33)

4 REPLACE REAR AIRBAG SENSOR RH

(a) Replace the rear airbag sensor RH (See page RS-435).
HINT:
Perform inspection using parts from a normal vehicle if possible.

NEXT

5	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1635/24 is not output.

HINT:

Codes other than DTC B1635/24 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1650/32	Occupant Classification System Malfunction

DESCRIPTION

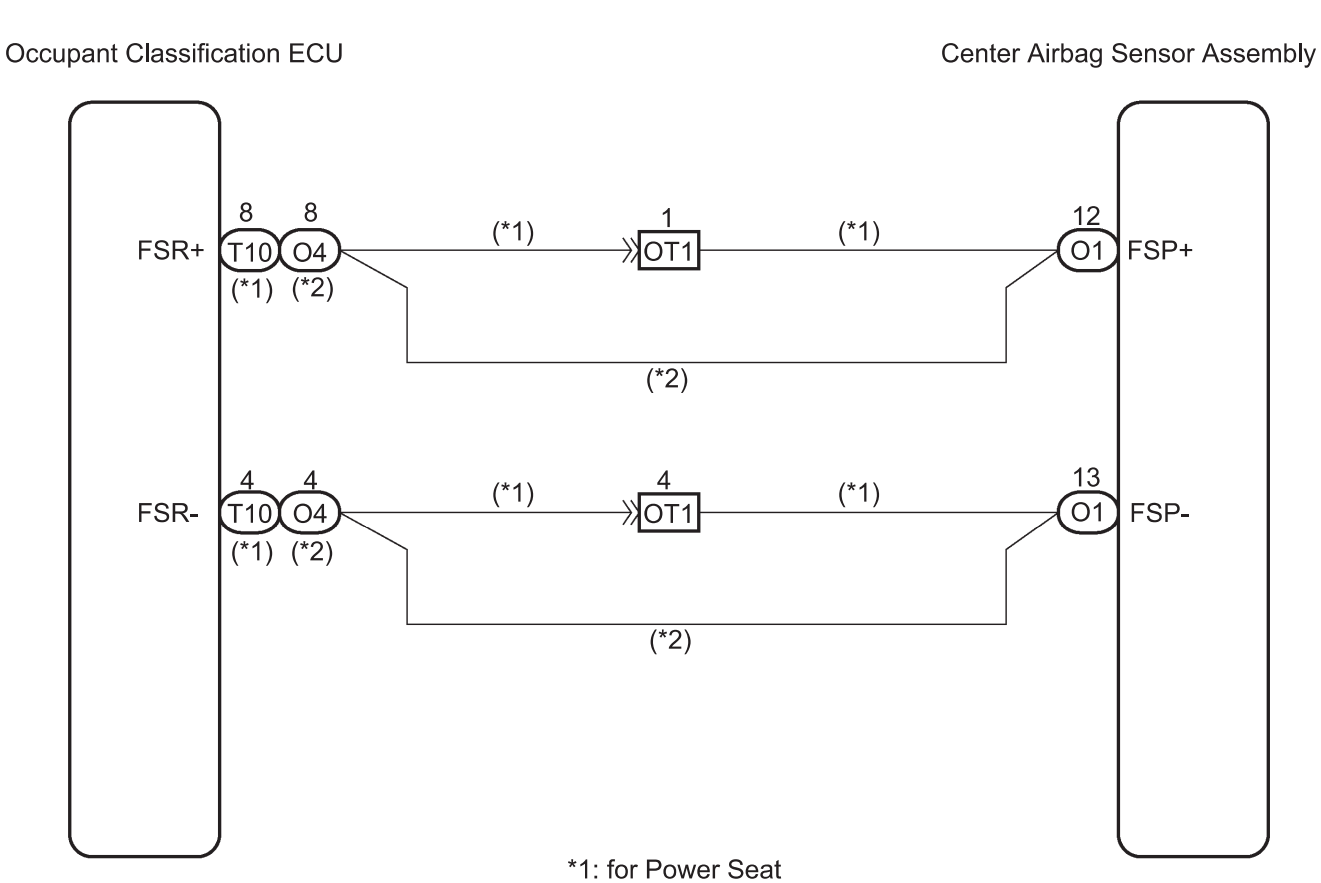
The occupant classification system circuit consists of the center airbag sensor assembly and the occupant classification system.

If the center airbag sensor assembly receives signals from the occupant classification ECU, it determines whether the front passenger airbag assembly, the front seat side airbag assembly RH and front seat outer belt assembly should be operated.

DTC B1650/32 is recorded when a malfunction is detected in the occupant classification system circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1650/32	• Occupant classification system malfunction • The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the occupant classification system circuit for 2 seconds. • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Occupant classification system • Front seat wire RH (for Power Seat) • Center airbag sensor assembly

WIRING DIAGRAM



RS

INSPECTION PROCEDURE

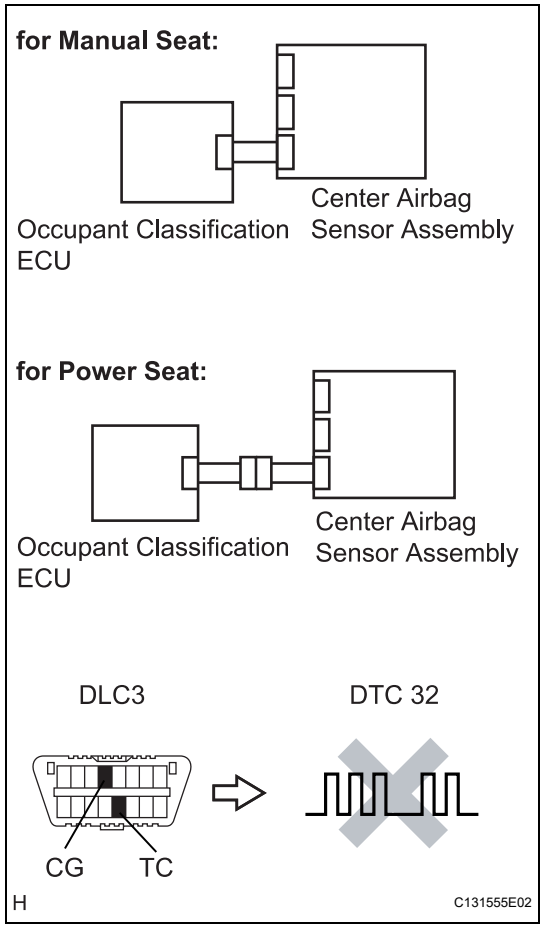
1	CHECK DTC (OCCUPANT CLASSIFICATION ECU)

(a) Turn the power switch on (IG), and wait for at least 10 seconds.
(b) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-248).
OK:
DTC is not output.

NG → **GO TO OCCUPANT CLASSIFICATION SYSTEM (See page RS-250)**

OK

2	CHECK DTC (CENTER AIRBAG SENSOR ASSEMBLY)



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the power switch off.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).
OK:
DTC B1650/32 is not output.
HINT:
Codes other than DTC B1650/32 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

NG

3	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

RS

(c) Check that the connectors are properly connected to the center airbag sensor assembly and the occupant classification ECU.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

4 CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and the occupant classification ECU.
(b) Check that the connectors (on the center airbag sensor assembly side and occupant classification ECU side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

5 CHECK VEHICLE TYPE

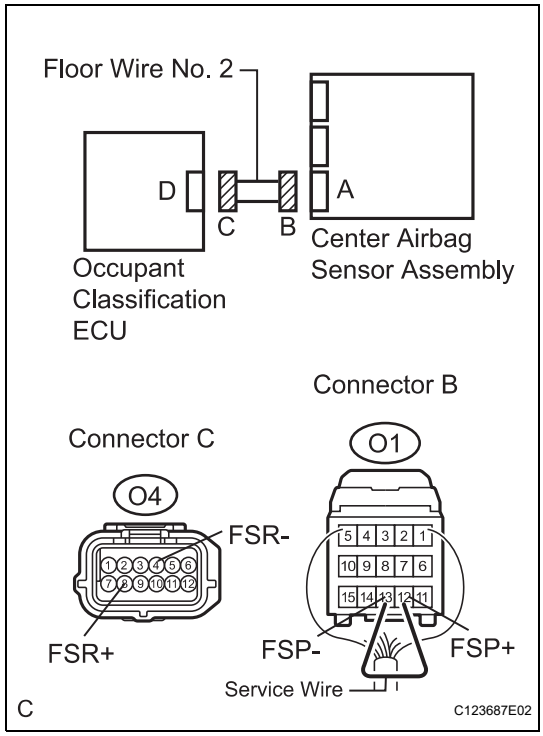
(a) Check the front passenger side seat type.
Result

Result	Proceed to
for Manual seat	A
for Power seat	B

B → **Go to step 10**

A

6	CHECK FLOOR WIRE NO. 2 (OPEN)



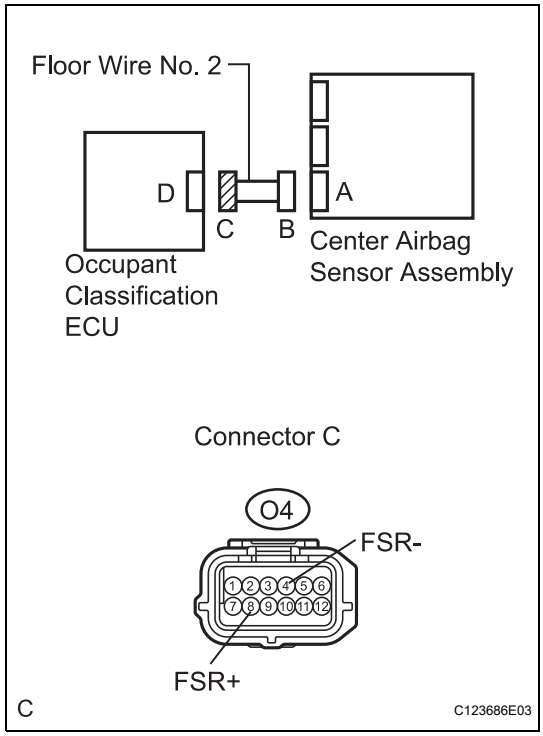
(a) Using a service wire, connect terminals 12 (FSP+) and 13 (FSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Terminal Connection	Condition	Specified Condition
O4-8 (FSR+) - O4-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

7	CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

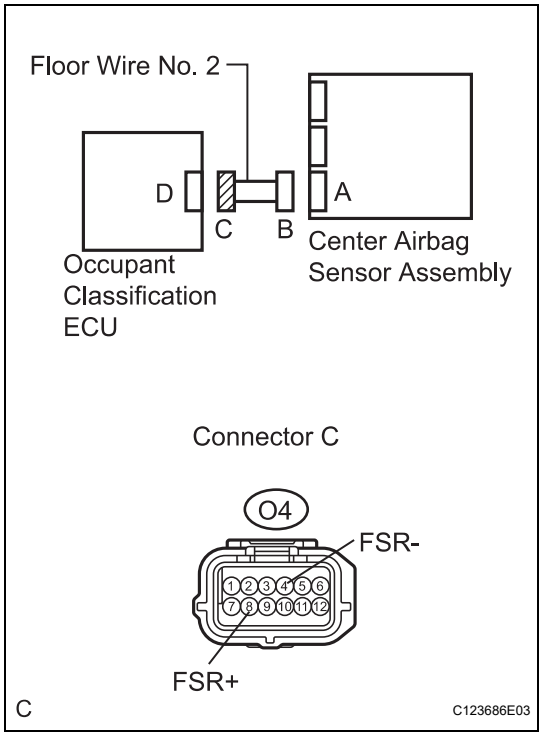
Terminal Connection	Condition	Specified Condition
O4-8 (FSR+) - O4-4 (FSR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

RS

8 CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

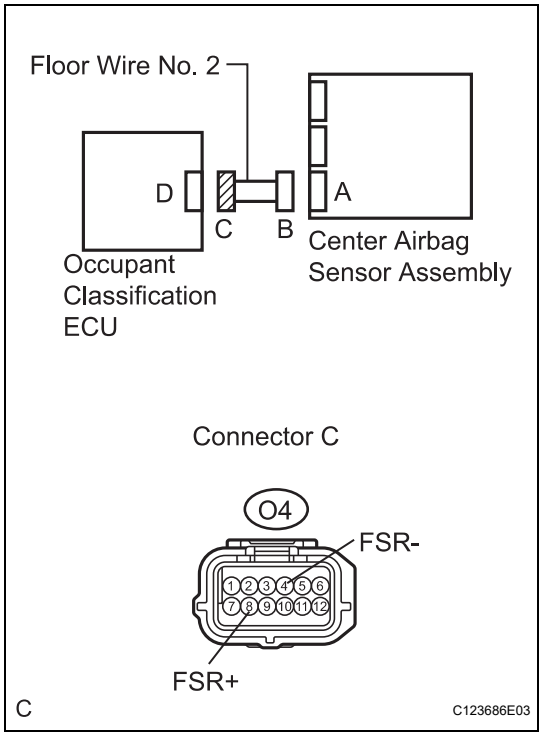
Standard voltage

Tester Connection	Condition	Specified Condition
O4-8 (FSR+) - Body ground	Power switch ON	Below 1 V
O4-4 (FSR-) - Body ground	Power switch ON	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

9 CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O4-8 (FSR+) - Body ground	Always	1 MΩ or higher
O4-4 (FSR-) - Body ground	Always	1 MΩ or higher

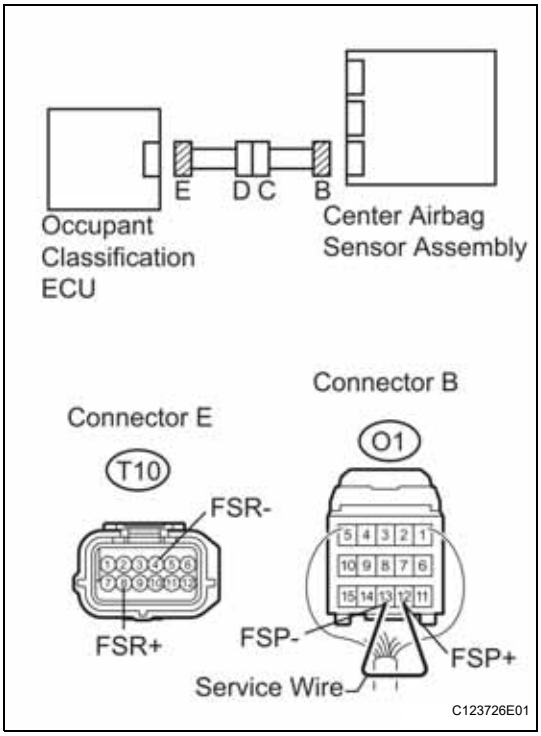
HINT:
After replacing the center airbag sensor assembly, check for DTCs of the center airbag sensor assembly. If the DTC B1650/32 is detected, replace the occupant classification ECU (See page RS-445) and perform "zero point calibration" and "sensitivity check" of the occupant classification system (See page RS-239).

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

10 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (OPEN)



(a) Using a service wire, connect terminals 12 (FSP+) and 13 (FSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminal of the connector when connecting.

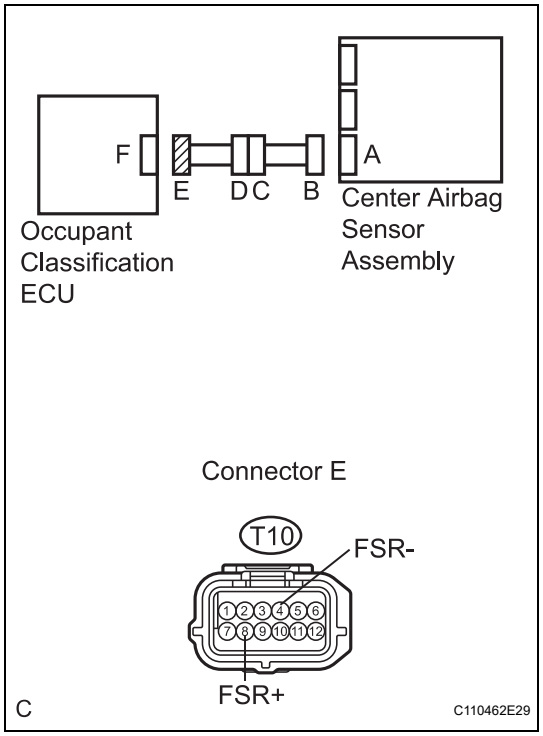
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
T10-8 (FSR+) - T10-4 (FSR-)	Always	Below 1 Ω

NG → **Go to step 14**

OK

11 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

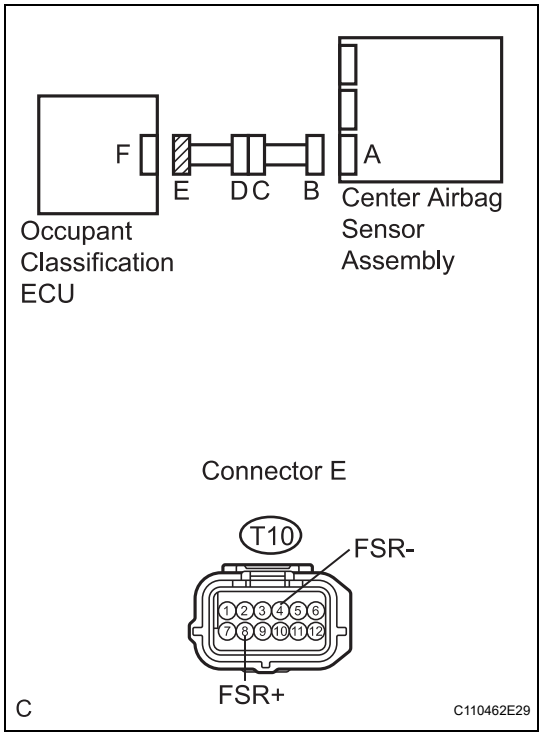
Standard resistance

Tester Connection	Condition	Specified Condition
T10-8 (FSR+) - T10-4 (FSR-)	Always	1 MΩ or higher

NG → **Go to step 15**

OK

12 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

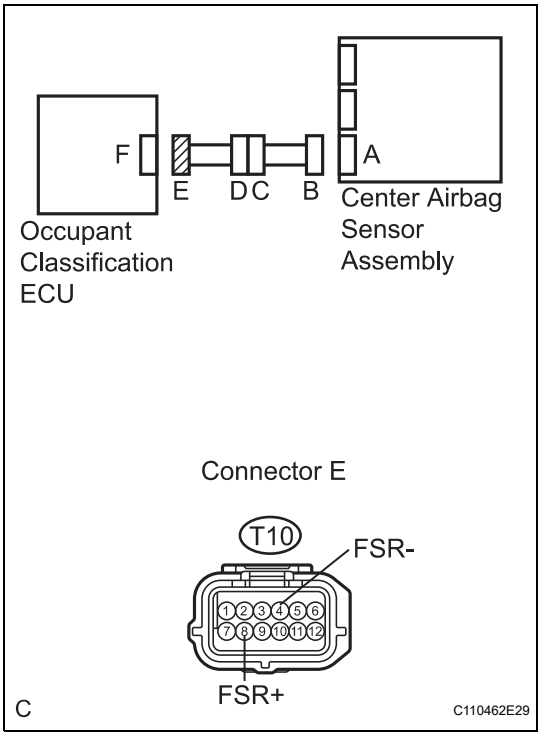
Tester Connection	Condition	Specified Condition
T10-8 (FSR+) - Body ground	Power switch on (IG)	Below 1 V
T10-4 (FSR-) - Body ground	Power switch on (IG)	Below 1 V

NG → **Go to step 16**

OK

RS

13	CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
T10-8 (FSR+) - Body ground	Always	1 MΩ or higher
T10-4 (FSR-) - Body ground	Always	1 MΩ or higher

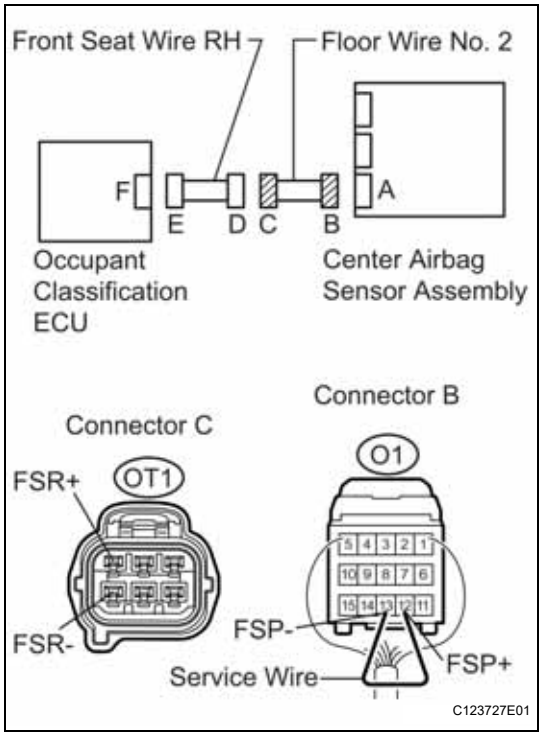
HINT:
After replacing the center airbag sensor assembly, check for DTCs of the center airbag sensor assembly. If the DTC B1650/32 is detected, replace the occupant classification ECU (See page RS-445) and perform "zero point calibration" and "sensitivity check" of the occupant classification system (See page RS-239).

NG → **Go to step 17**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

14	CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
HINT:
The service wire has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

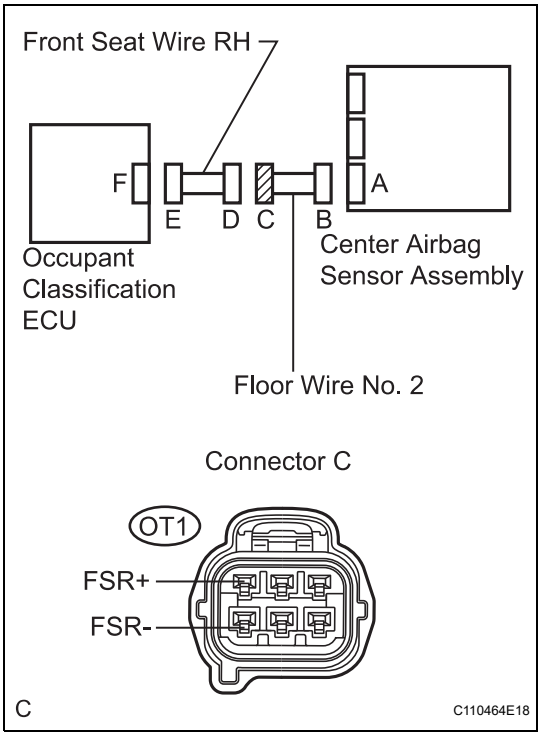
Tester Connection	Condition	Specified Condition
OT1-1 (FSR+) - OT1-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

15	CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

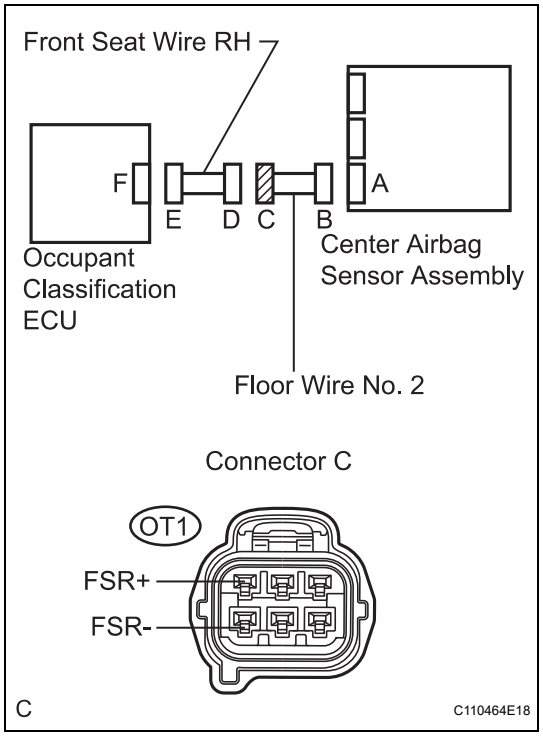
Tester Connection	Condition	Specified Condition
OT1-1 (FSR+) - OT1-4 (FSR-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

16	CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the front seat wire RH connector from the floor wire No. 2.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

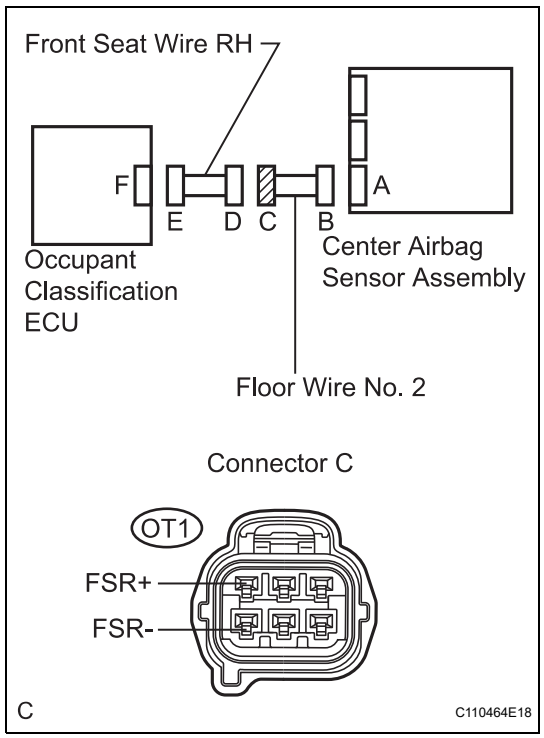
Tester Connection	Condition	Specified Condition
OT1-1 (FSR+) - Body ground	Power switch on (IG)	Below 1 V
OT1-4 (FSR-) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

17	CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
OT1-1 (FSR+) - Body ground	Always	1 MΩ or higher
OT1-4 (FSR-) - Body ground	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

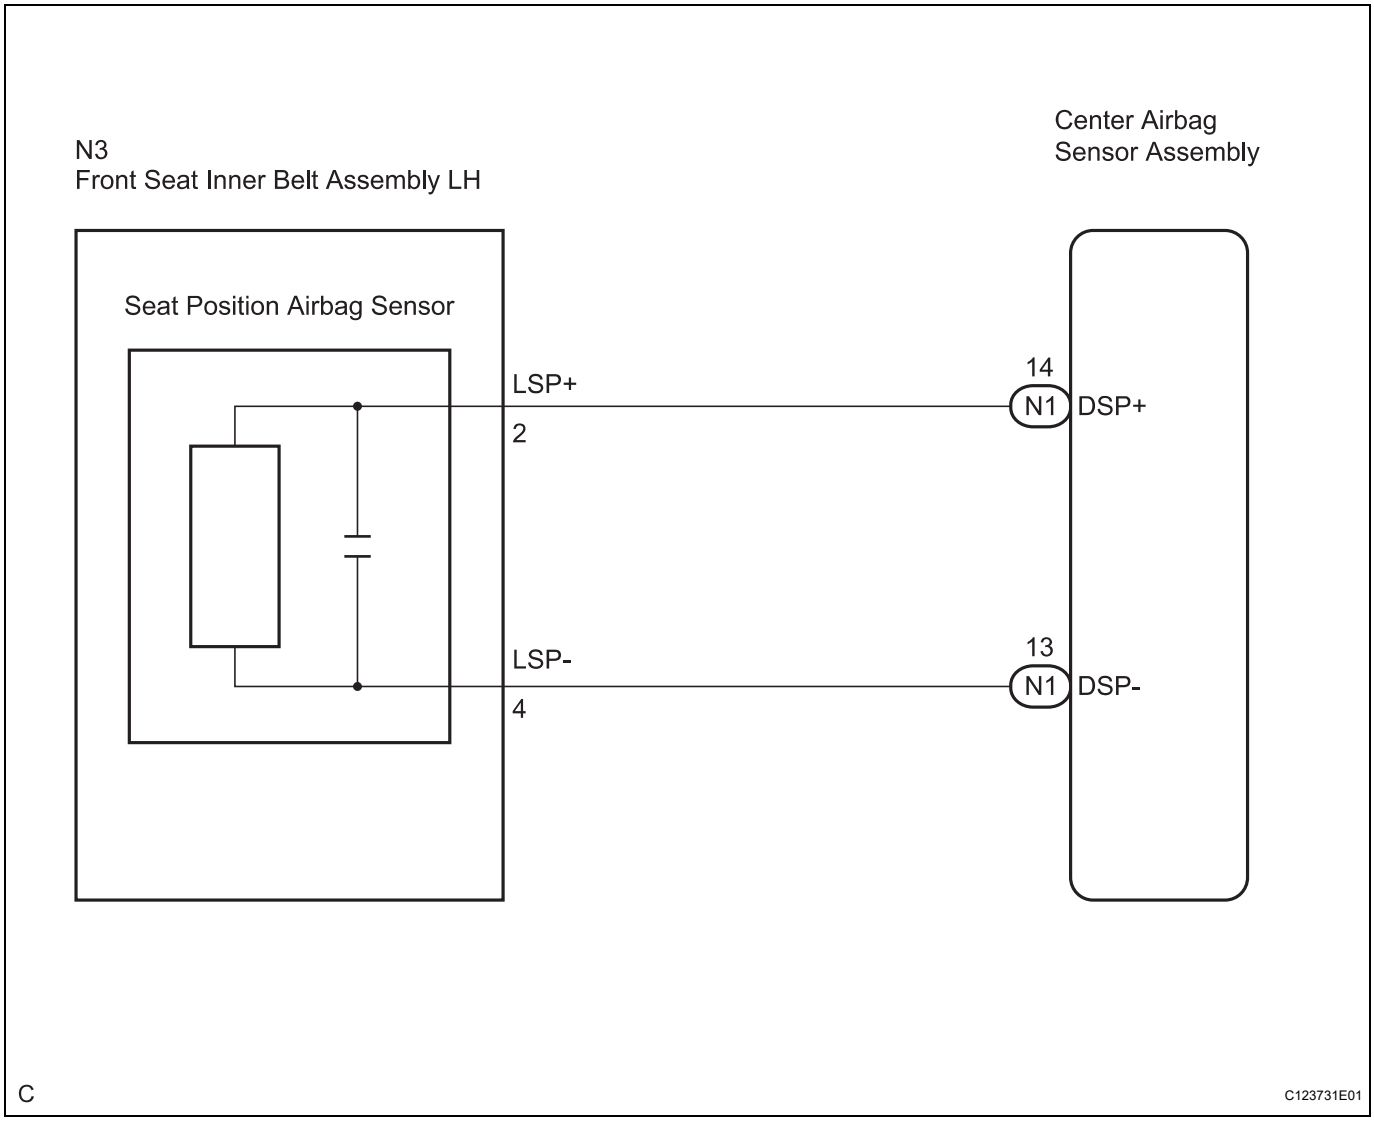
DTC	B1653/35	Seat Position Airbag Sensor Circuit Malfunction

DESCRIPTION

The seat position airbag sensor circuit consists of the center airbag sensor assembly and the seat position airbag sensor.
DTC B1653/35 is recorded when a malfunction is detected in the seat position airbag sensor circuit.

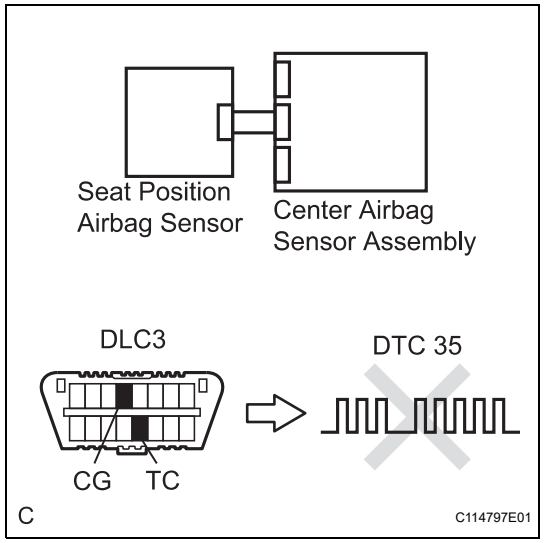
DTC No.	DTC Detecting Condition	Trouble Area
B1653/35	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the seat position airbag sensor circuit for 2 seconds. • Seat position airbag sensor malfunction • Center airbag sensor assembly malfunction	• Floor wire • Seat position airbag sensor • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the power switch off.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-41).
OK:
DTC B1653/35 is not output.
HINT:
Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the seat position airbag sensor.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

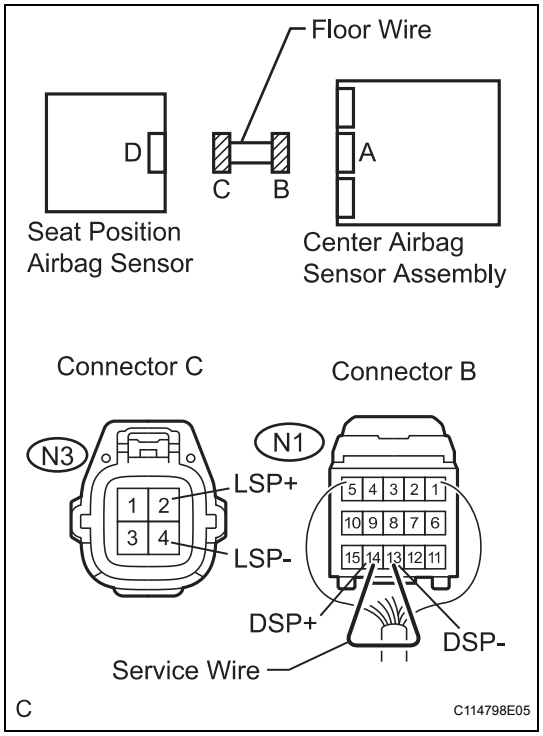
3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and the seat position airbag sensor.
(b) Check that the connectors (on the center airbag sensor assembly side and seat position airbag sensor side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4 CHECK FLOOR WIRE (OPEN)



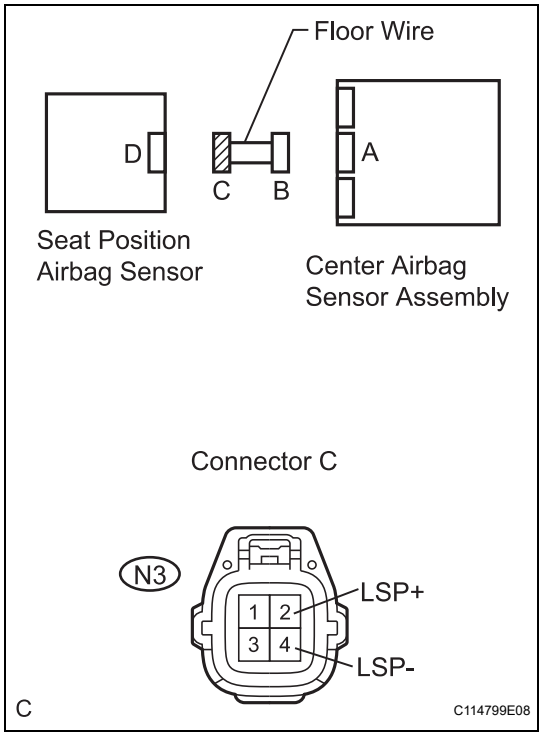
(a) Using a service wire, connect terminals 14 (DSP+) and 13 (DSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
N3-2 (LSP+) - N3-4 (LSP-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

5 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

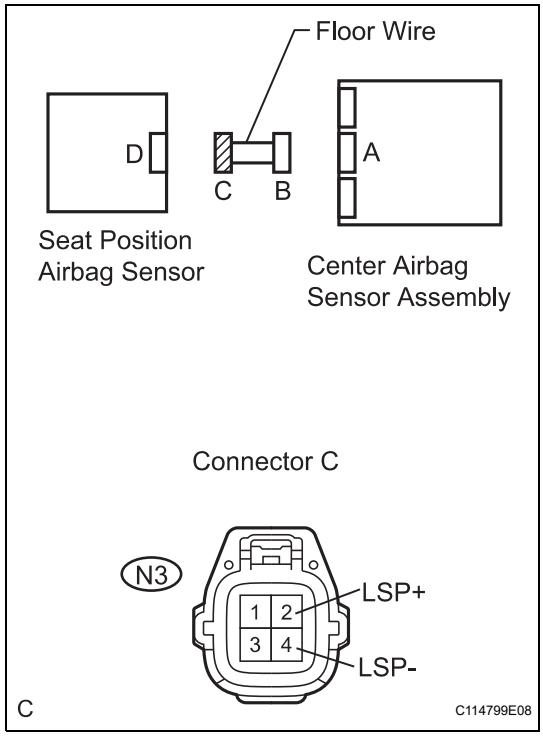
Tester Connection	Condition	Specified Condition
N3-2 (LSP+) - N3-4 (LSP-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

6 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

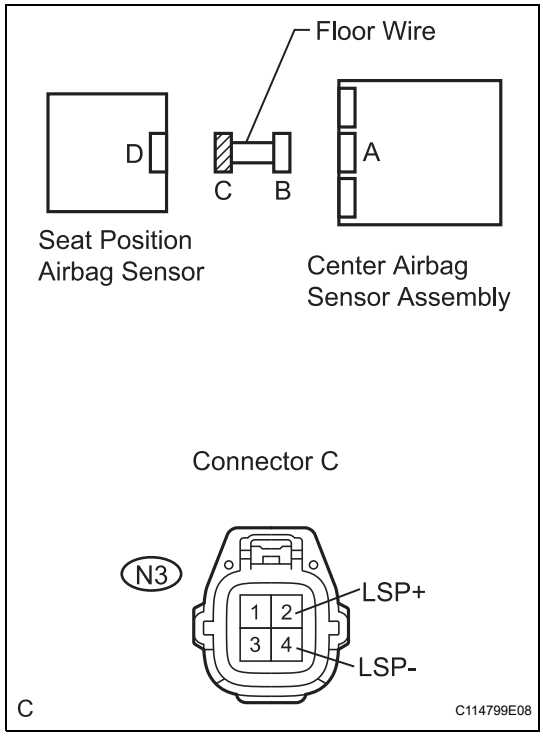
Standard voltage

Tester Connection	Condition	Specified Condition
N3-2 (LSP+) - Body ground	Power switch on (IG)	Below 1 V
N3-4 (LSP-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

7 CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

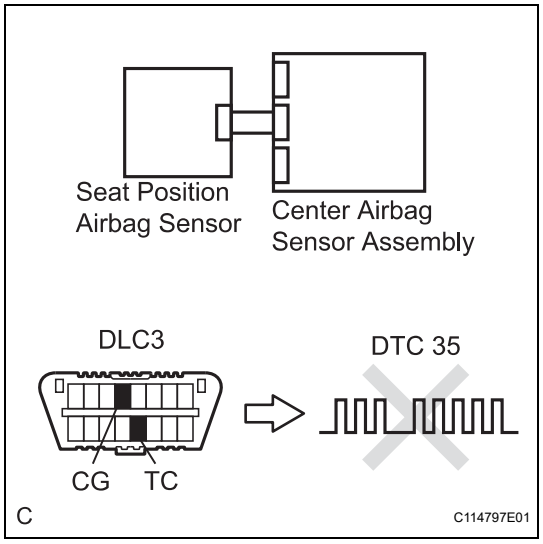
Standard resistance

Tester Connection	Condition	Specified Condition
N3-2 (LSP+) - Body ground	Always	1 MΩ or higher
N3-4 (LSP-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

8	CHECK SEAT POSITION AIRBAG SENSOR



(a) Connect the connectors to the center airbag sensor assembly and the seat position airbag sensor.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

OK	USE SIMULATION METHOD TO CHECK (See page RS-33)

NG

9	REPLACE SEAT POSITION AIRBAG SENSOR

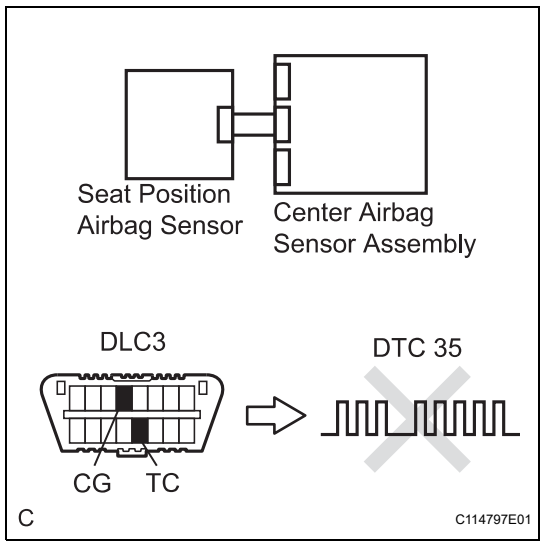
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the seat position airbag sensor (See page RS-439).

HINT:

Perform inspection using parts from a normal vehicle if possible.

NEXT

10	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1653/35 is not output.

HINT:

Codes other than DTC B1653/35 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

END

DTC	B1655/37	Driver Side Seat Belt Buckle Switch Circuit Malfunction

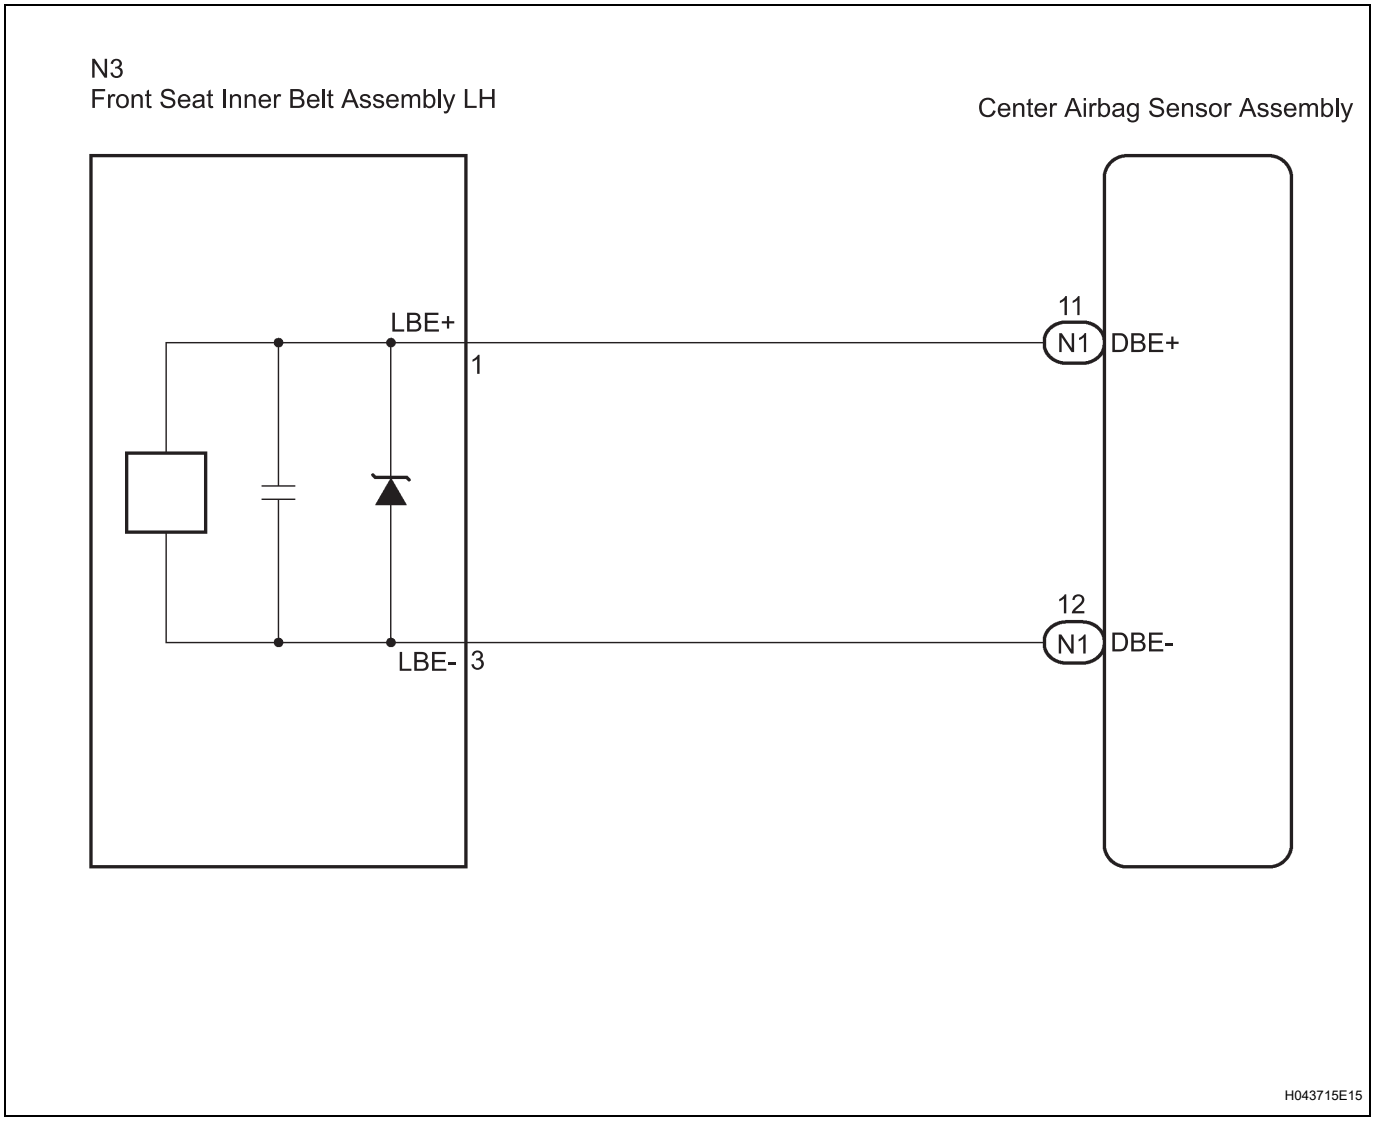
DESCRIPTION

The driver side seat belt buckle switch circuit consists of the center airbag sensor assembly and the front seat inner belt assembly LH.

DTC B1655/37 is recorded when a malfunction is detected in the driver side seat belt buckle switch circuit.

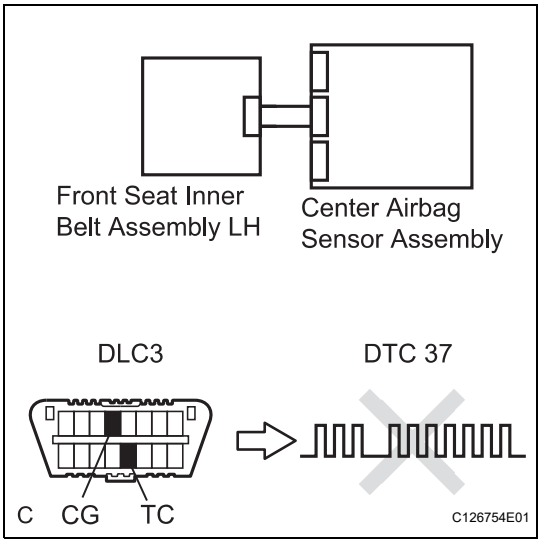
DTC No.	DTC Detection Condition	Trouble Area
B1655/37	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the driver side seat belt buckle switch circuit for 2 seconds. • Front seat inner belt assembly LH malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat inner belt assembly LH (Driver side seat belt buckle switch) • Center airbag sensor assembly

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK DTC



(a) Turn the power switch on (IG), and wait for at least 60 seconds.
(b) Clear the DTCs stored in the memory (See page RS-41).
(c) Turn the power switch off.
(d) Turn the power switch on (IG), and wait for at least 60 seconds.
(e) Check the DTCs (See page RS-44).

OK:

DTC B1655/37 is not output.

HINT:

Codes other than DTC B1655/37 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and front seat inner belt assembly LH.

OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and the front seat inner belt assembly LH.
(b) Check that the connectors (on the center airbag sensor assembly side and front seat inner belt assembly LH side) are not damaged.

OK:

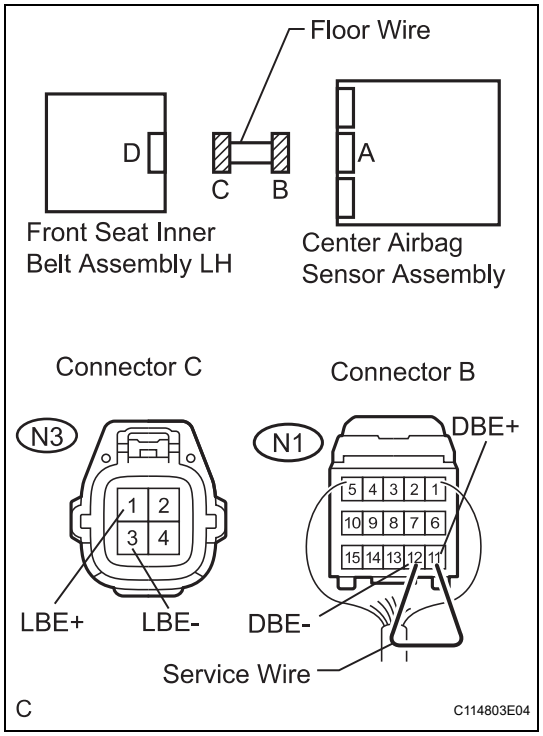
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

4 CHECK FLOOR WIRE (OPEN)



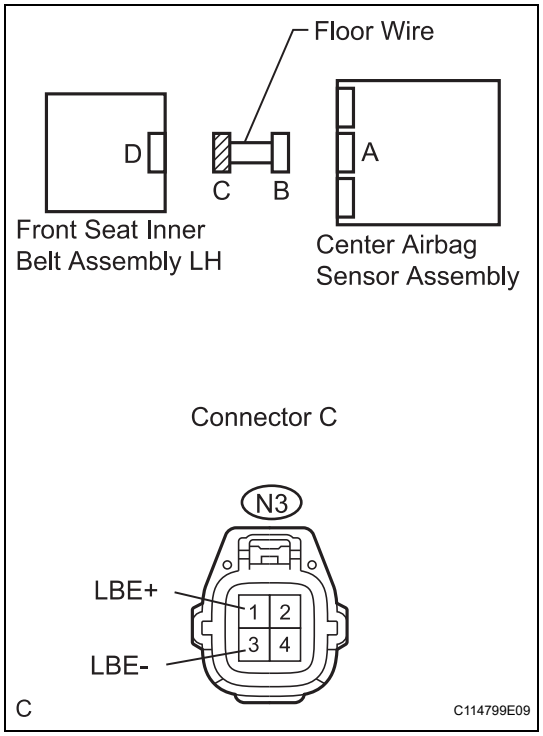
(a) Using a service wire, connect terminals 11 (DBE+) and 12 (DBE-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
N3-1 (LBE+) - N3-3 (LBE-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

5 CHECK FLOOR WIRE (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

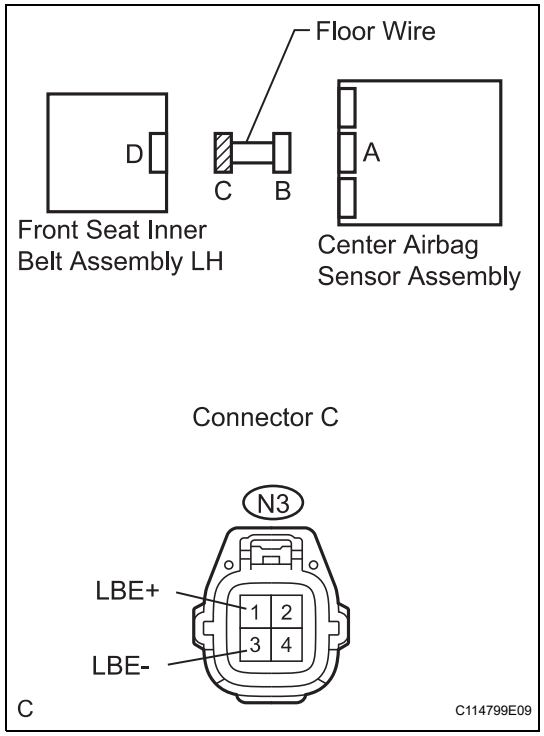
Tester Connection	Condition	Specified Condition
N3-1 (LBE+) - N3-3 (LBE-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

RS

6 CHECK FLOOR WIRE (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

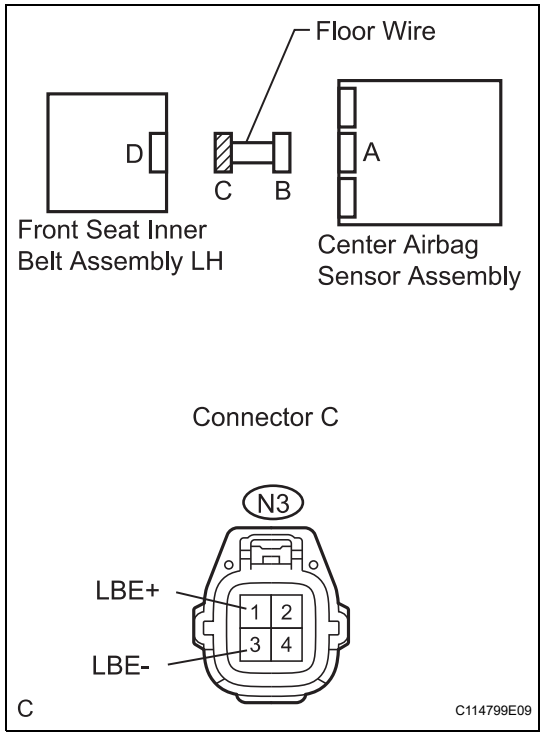
Standard voltage

Tester Connection	Condition	Specified Condition
N3-1 (LBE+) - Body ground	Power switch on (IG)	Below 1 V
N3-3 (LBE-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE

OK

7 CHECK FLOOR WIRE (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

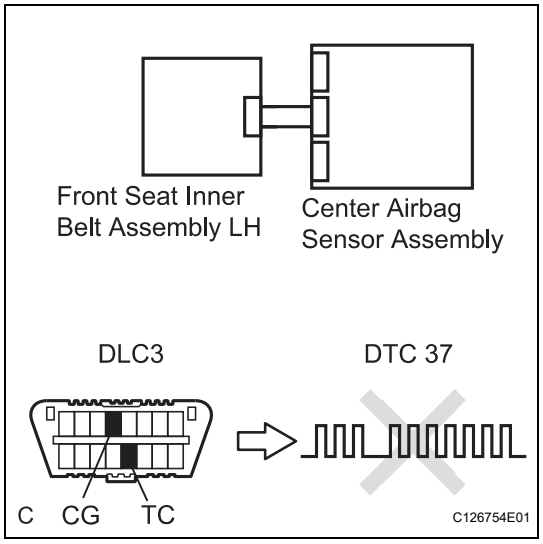
Standard resistance

Tester Connection	Condition	Specified Condition
N3-1 (LBE+) - Body ground	Always	1 MΩ or higher
N3-3 (LBE-) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

8	CHECK FRONT SEAT INNER BELT ASSEMBLY LH



(a) Connect the connector to the center airbag sensor assembly and the front seat inner belt assembly LH.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).
OK:
DTC B1655/37 is not output.
HINT:
Codes other than DTC B1655/37 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

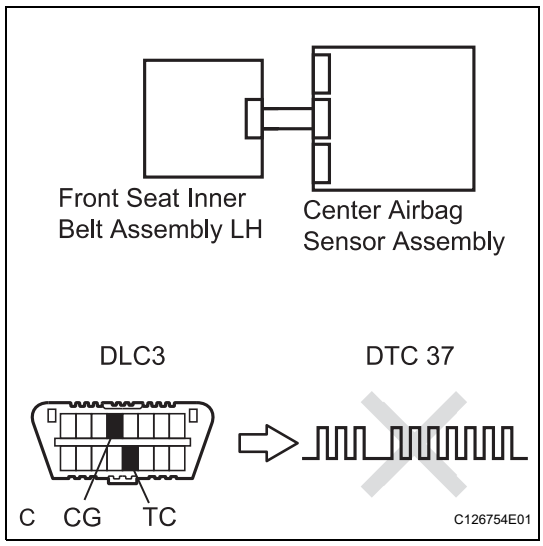
NG

9	REPLACE FRONT SEAT INNER BELT ASSEMBLY LH

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the front seat inner belt assembly LH (See page SB-16).
HINT:
Perform inspection using parts from a normal vehicle if possible.

NEXT

10	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG), and wait for at least 60 seconds.
(c) Clear the DTCs stored in the memory (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Check the DTCs (See page RS-41).

OK:

DTC B1655/37 is not output.

HINT:

Codes other than DTC B1655/37 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

END

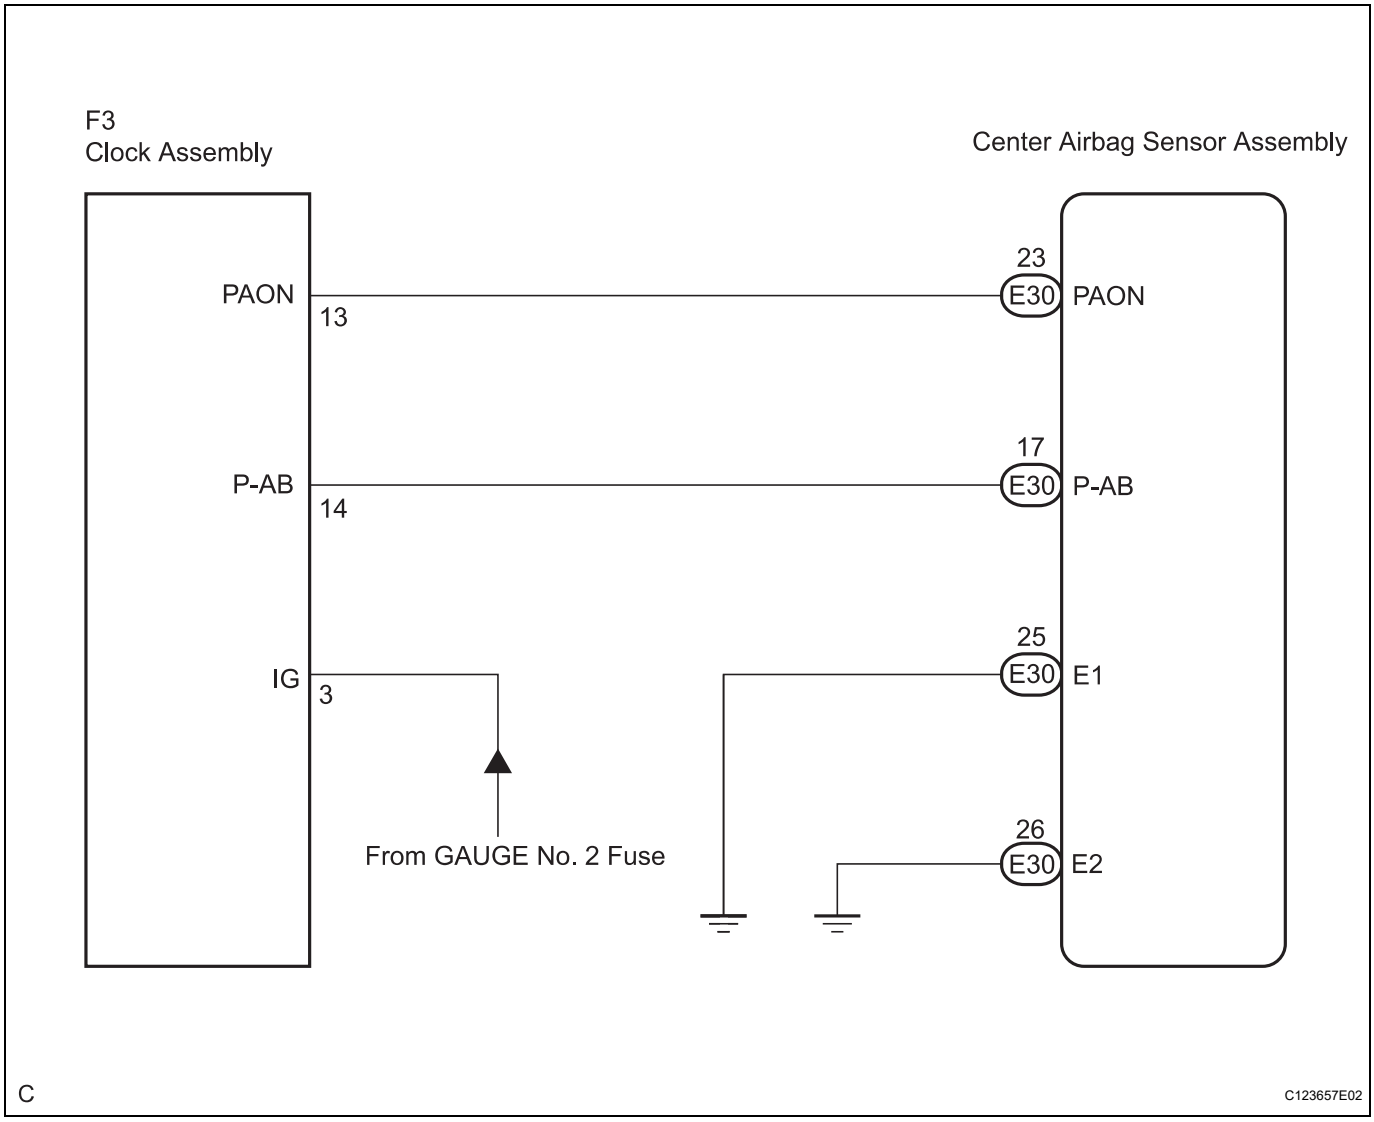
DTC	B1660/43	Passenger Airbag ON / OFF Indicator Circuit Malfunction

DESCRIPTION

The passenger airbag ON/OFF indicator circuit consists of the center airbag sensor assembly and the clock assembly.
The passenger airbag ON/OFF indicator indicates the operation condition of the front passenger airbag assembly and the front seat side airbag assembly RH.
DTC B1660/43 is recorded when a malfunction is detected in the passenger airbag ON/OFF indicator circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1660/43	• The center airbag sensor assembly receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger airbag ON/OFF indicator circuit for 2 seconds. • Clock assembly malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire No. 2 • Clock assembly (Passenger airbag ON/OFF indicator) • Center airbag sensor assembly

WIRING DIAGRAM

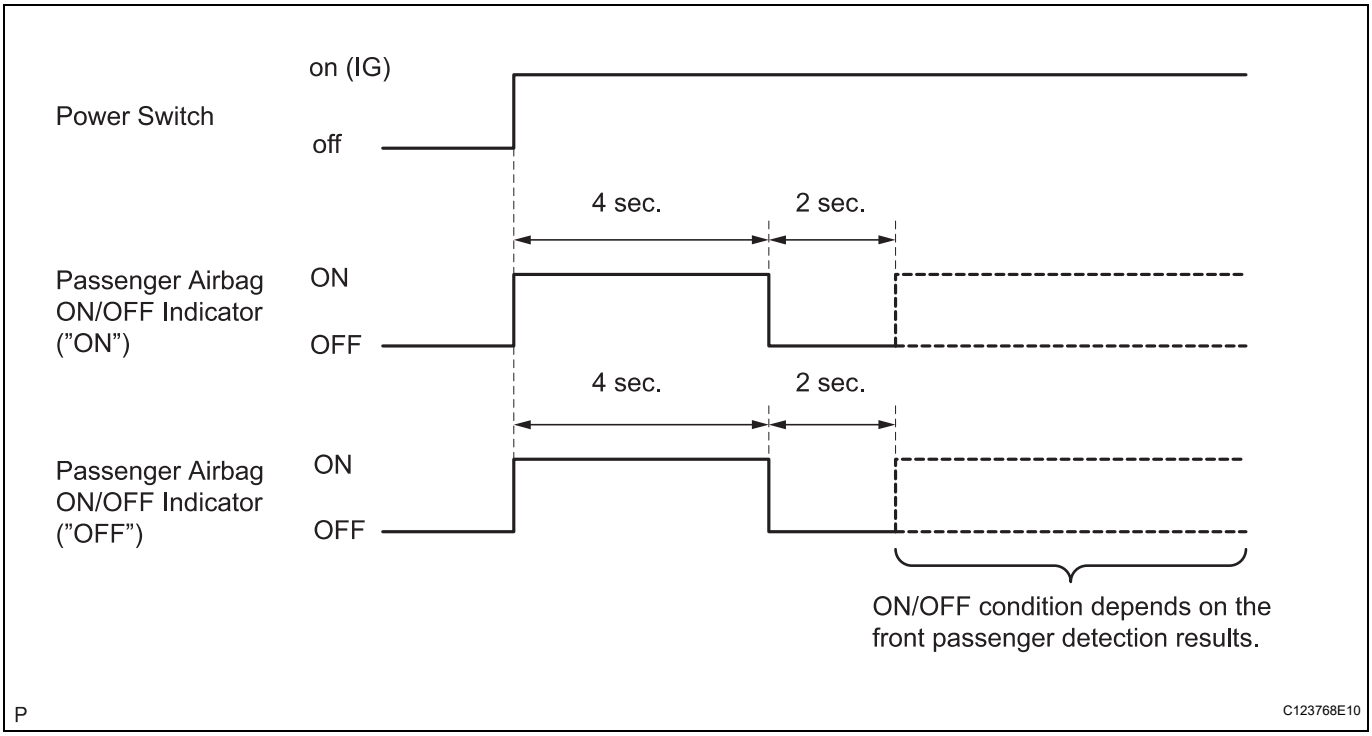


RS

INSPECTION PROCEDURE

1	CHECK PASSENGER AIRBAG ON/OFF INDICATOR CONDITION

(a) Turn the power switch on (IG).
(b) Check the passenger airbag ON/OFF indicator operation.
HINT:
Refer to the normal condition of the passenger airbag ON/OFF indicator (See page RS-33).



Result

ON/OFF Indicator Illumination	Proceed to
Always ON	A
OFF	B

B → **Go to step 10**

A

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the clock assembly.
OK:
The connectors are properly connected.

RS

NG → CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1

OK

3	CHECK CONNECTORS

(a) Disconnect the connectors from the center airbag sensor assembly and the clock assembly.
(b) Check that the connectors (on the center airbag sensor assembly side and clock assembly side) are not damaged.
OK:
The connectors are not deformed or damaged.

NG → REPAIR OR REPLACE WIRE HARNESS

OK

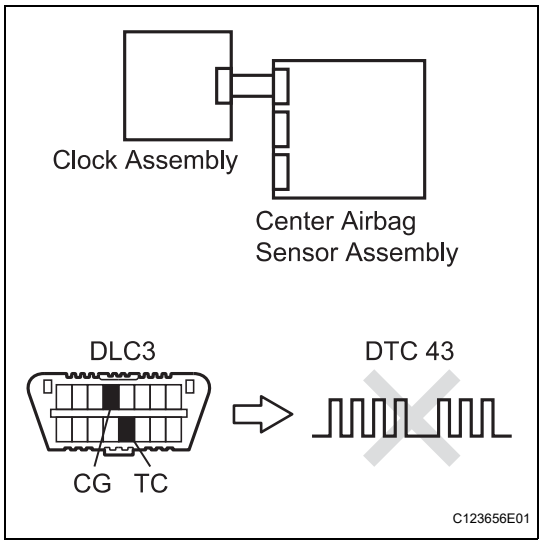
4	CHECK PASSENGER AIRBAG ON/OFF INDICATOR

(a) Connect the connector to the clock assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG).
(d) Check the passenger airbag ON/OFF indicator operation.
OK:
The passenger airbag ON/OFF indicator does not come on.

NG → Go to step 6

OK

5	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connector to the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check for DTCs (See page RS-41).
OK:
DTC B1660/43 is not output.
HINT:
Codes other than DTC B1660/43 may be output at this time, but they are not related to this check.

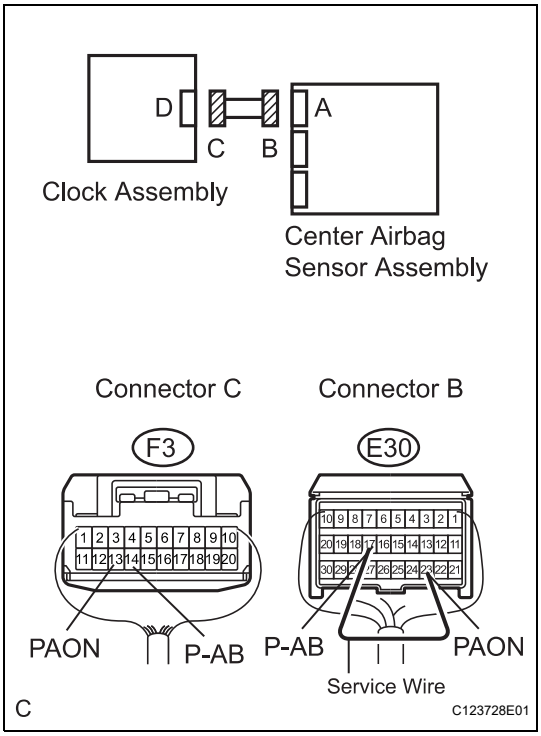
RS

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

6 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (OPEN)



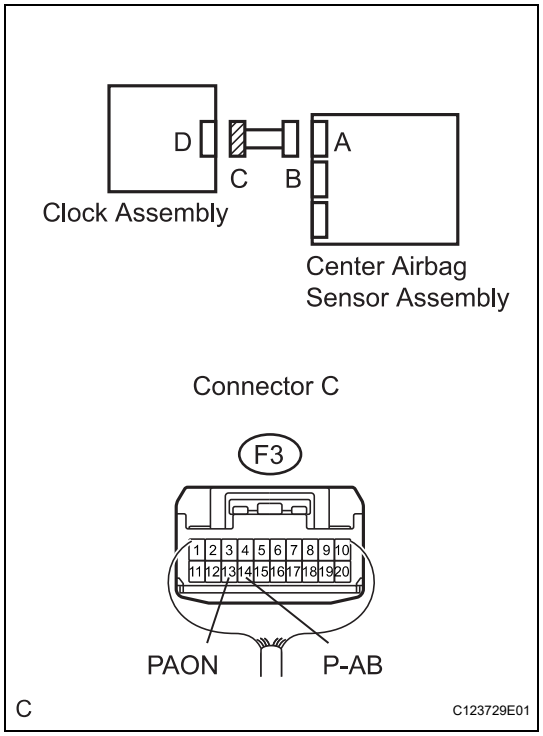
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the clock assembly.
(d) Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(e) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - F3-14 (P-AB)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

7 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

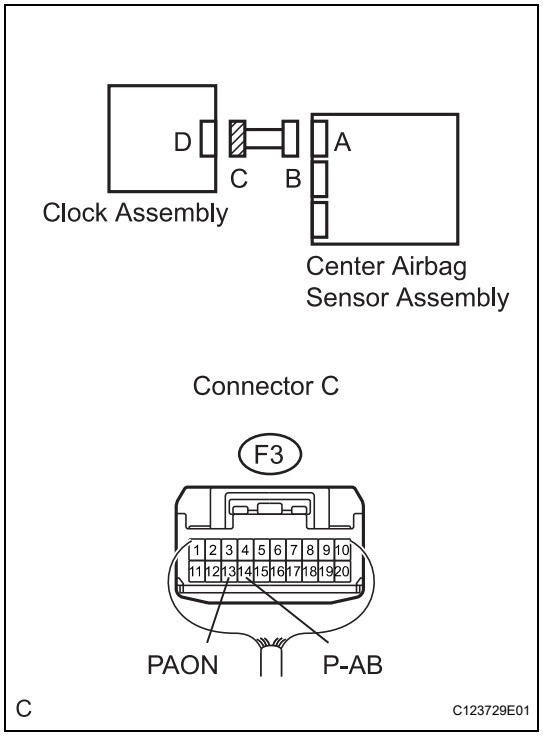
Standard resistance

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - F3-14 (P-AB)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE WIRE HARNESS

OK

8 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

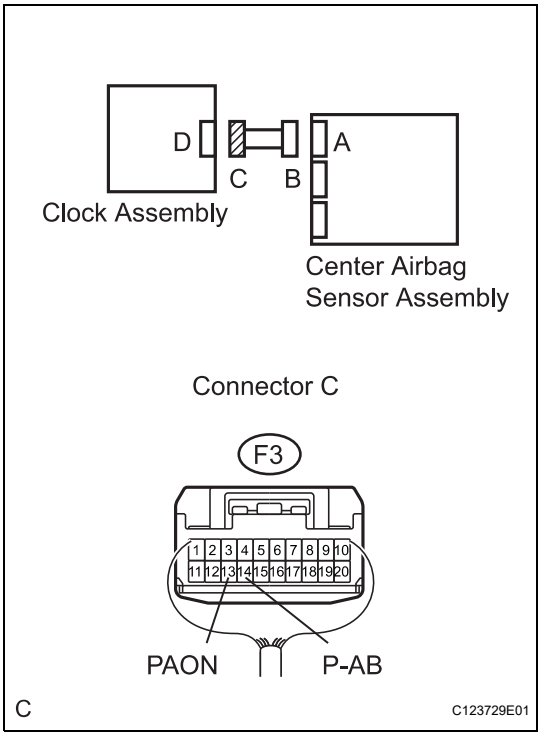
Tester Connection	Condition	Specified Condition
F3-13 (PAON) - Body ground	Always	1 MΩ or higher
F3-14 (P-AB) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE WIRE HARNESS

OK

RS

9	CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - Body ground	Power switch on (IG)	Below 1 V
F3-14 (P-AB) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

REPLACE CLOCK ASSEMBLY (See page OT-5)

10	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and the clock assembly.

OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY**

OK

11	CHECK CONNECTORS

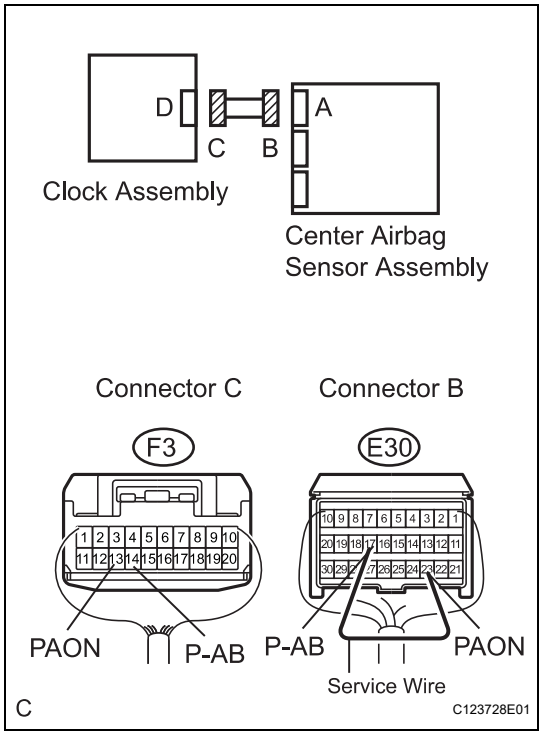
(a) Disconnect the connectors from the center airbag sensor assembly and the clock assembly.
(b) Check that the connectors (on the center airbag sensor assembly side and clock assembly side) are not damaged.

OK:
The connectors are not deformed or damaged.

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

12 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (OPEN)



(a) Using a service wire, connect terminals 23 (PAON) and 17 (P-AB) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.

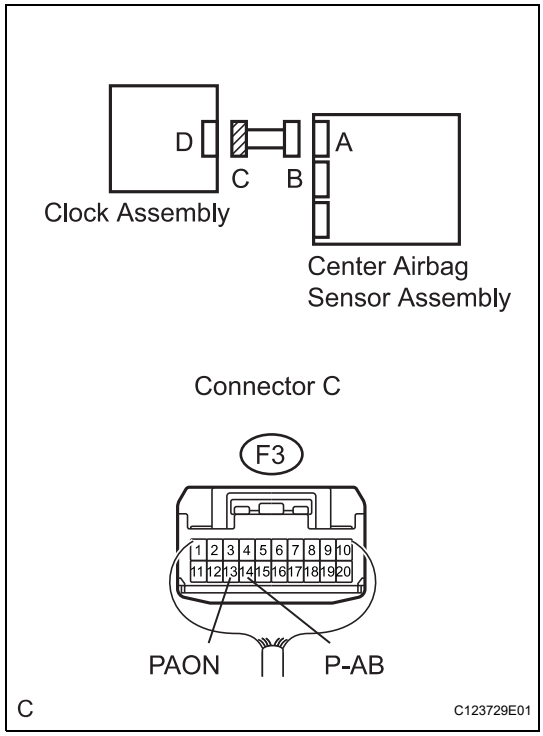
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - F3-14 (P-AB)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

13 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT)



(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.

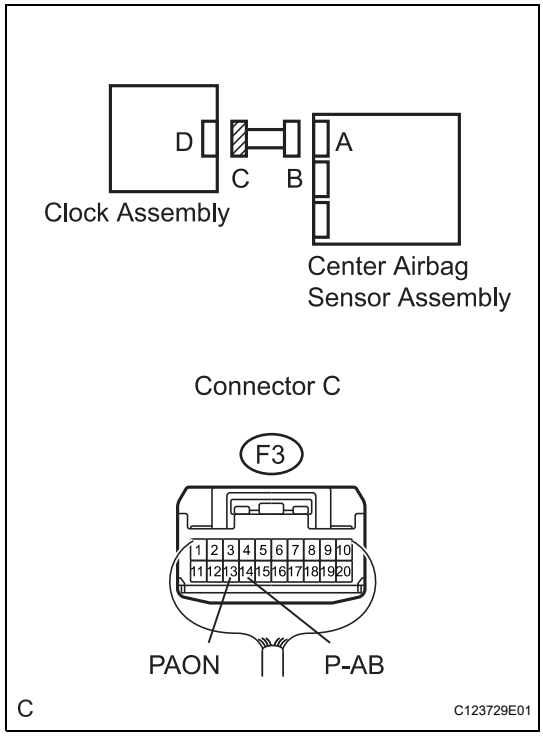
Standard resistance

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - F3-14 (P-AB)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE WIRE HARNESS

OK

14 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

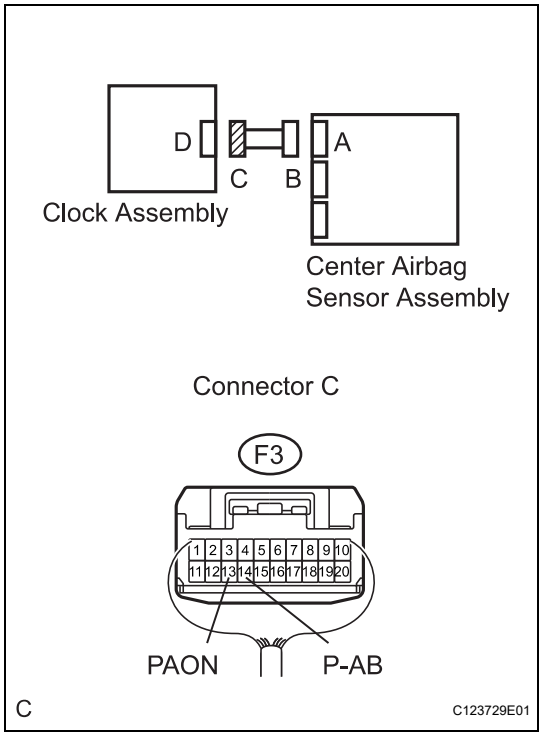
Tester Connection	Condition	Specified Condition
F3-13 (PAON) - Body ground	Always	1 MΩ or higher
F3-14 (P-AB) - Body ground	Always	1 MΩ or higher

NG → REPAIR OR REPLACE WIRE HARNESS

OK

RS

15 CHECK PASSENGER AIRBAG ON/OFF INDICATOR CIRCUIT (SHORT TO B+)



(a) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(b) Turn the power switch on (IG).
(c) Measure the voltage according to the value(s) in the table below.

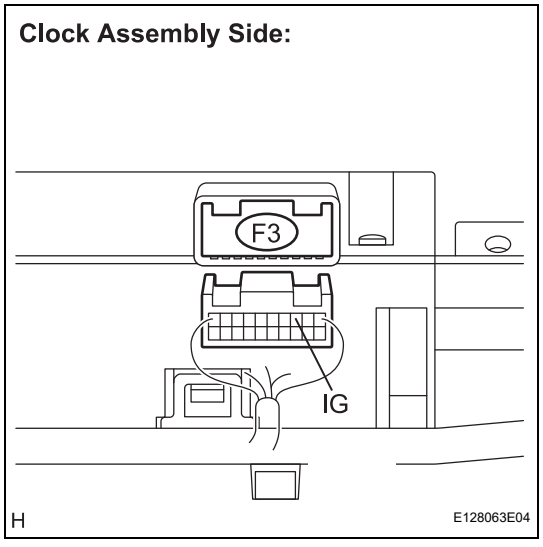
Standard voltage

Tester Connection	Condition	Specified Condition
F3-13 (PAON) - Body ground	Power switch on (IG)	Below 1 V
F3-14 (P-AB) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

16 CHECK CLOCK ASSEMBLY (SOURCE VOLTAGE)



(a) Connect the connectors to the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

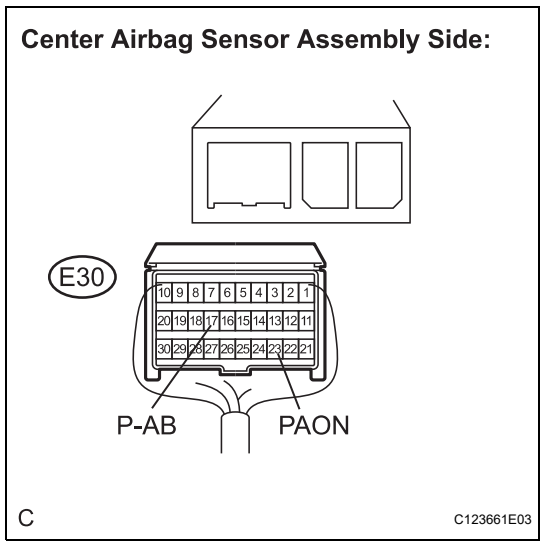
Standard voltage

Tester Connection	Condition	Specified Condition
F3-3 (IG) -Body ground	Power switch on (IG)	10 to 14 V

NG → **REPAIR OR REPLACE WIRE HARNESS (CLOCK ASSEMBLY - BATTERY) OR BATTERY**

OK

17 CHECK PASSENGER AIRBAG ON / OFF INDICATOR



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the clock assembly.
(d) Disconnect the connectors from the center airbag sensor assembly.
(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG).
(g) Check the indicator according to the conditions in the table below.

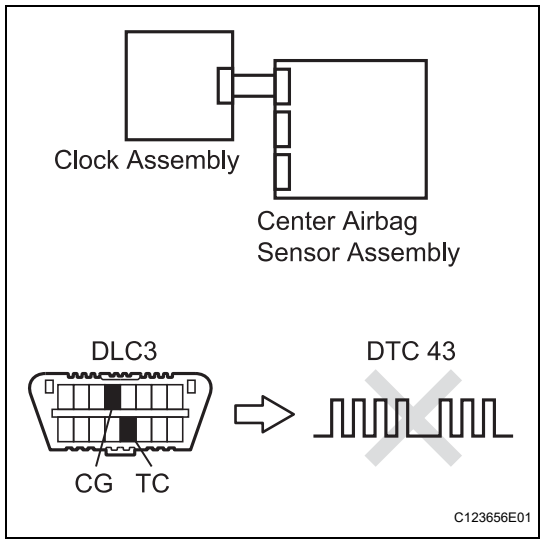
Result

Tester Connection	Condition	Passenger airbag ON/ OFF indicator
E30-23 (PAON) - Body ground	Power switch on (IG)	"ON" comes on
E30-17 (P-AB) - Body ground	Power switch on (IG)	"OFF" comes on

NG → **REPLACE CLOCK ASSEMBLY (See page OT-5)**

OK

18 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connectors to the center airbag sensor assembly.
(d) Connect the negative (-) terminal cable to the battery and wait for at least 2 seconds.
(e) Turn the power switch on (IG), and wait for at least 60 seconds.
(f) Clear the DTCs stored in the memory (See page RS-41).
(g) Turn the power switch off.
(h) Turn the power switch on (IG), and wait for at least 60 seconds.
(i) Check for DTCs (See page RS-41).

OK:

DTC B1660/43 is not output.

HINT:

Codes other than DTC B1660/43 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1800/51	Short in Driver Side Squib Circuit

DTC	B1801/51	Open in Driver Side Squib Circuit

DTC	B1802/51	Short to GND in Driver Side Squib Circuit

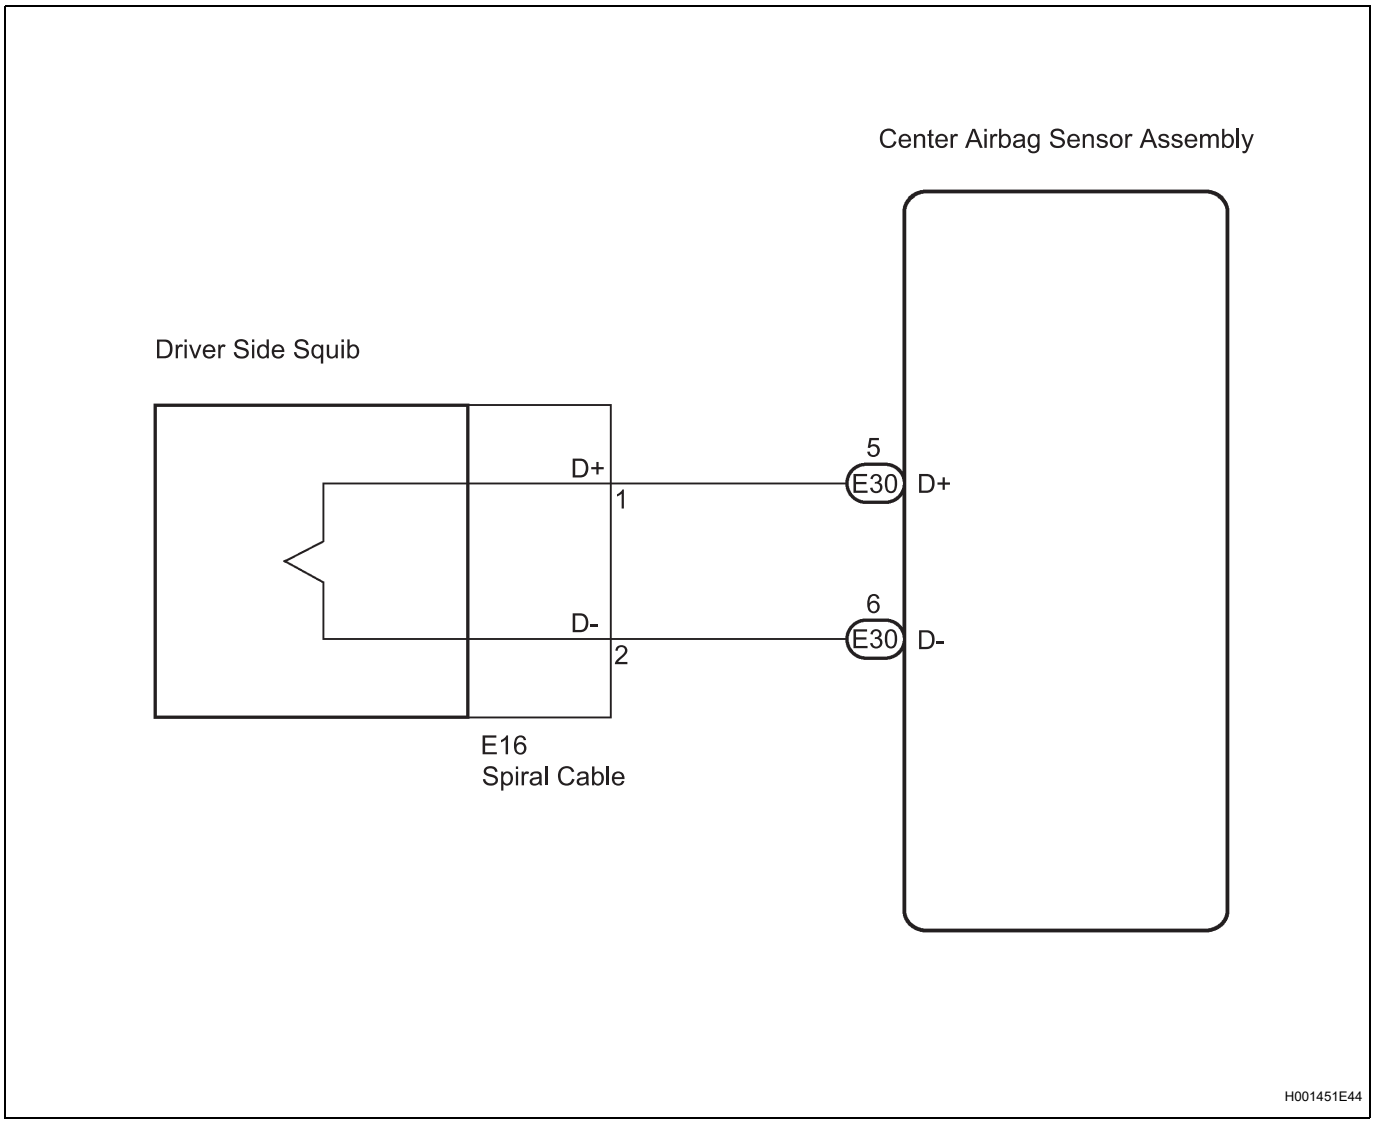
DTC	B1803/51	Short to B+ in Driver Side Squib Circuit

DESCRIPTION

The driver side squib circuit consists of the center airbag sensor assembly, the spiral cable and the steering pad.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the driver side squib circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1800/51	• The center airbag sensor assembly receives a line short circuit signal 5 times in the driver side squib circuit during primary check. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1801/51	• The center airbag sensor assembly receives an open circuit signal in the driver side squib circuit for 2 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1802/51	• The center airbag sensor assembly receives a short circuit to ground signal in the driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly
B1803/51	• The center airbag sensor assembly receives a short circuit to B+ signal in the driver side squib circuit for 0.5 seconds. • Driver side squib malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib) • Center airbag sensor assembly

WIRING DIAGRAM

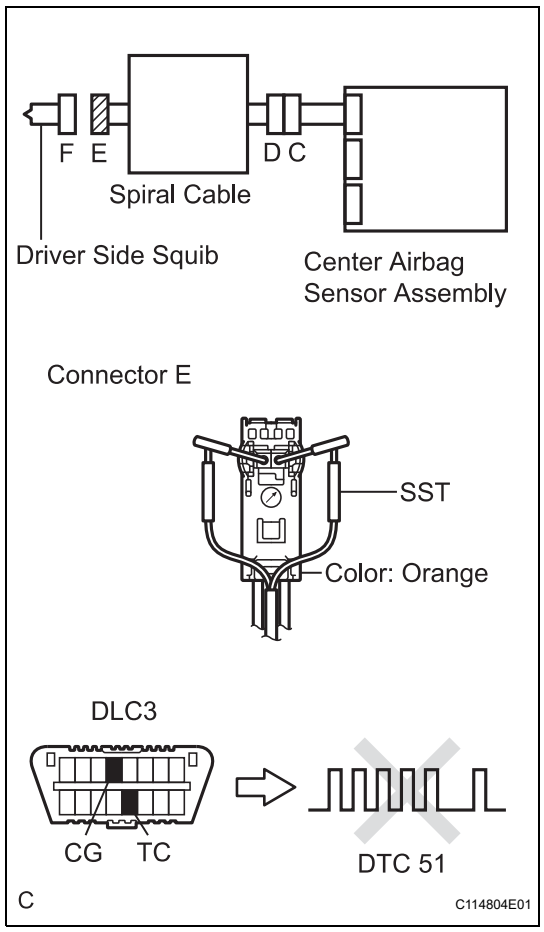


INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting the "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting the "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK STEERING PAD (DRIVER SIDE SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the steering pad.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (orange connector).

CAUTION:
Never connect the tester to the steering pad (driver side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

OK:
DTC B1800, B1801, B1802, B1803, or 51 is not output.

HINT:
Codes other than DTC B1800, B1801, B1802, B1803, and 51 may be output at this time, but they are not related to this check.

OK → **REPLACE STEERING PAD (See page RS-344)**

NG

2	CHECK CONNECTOR

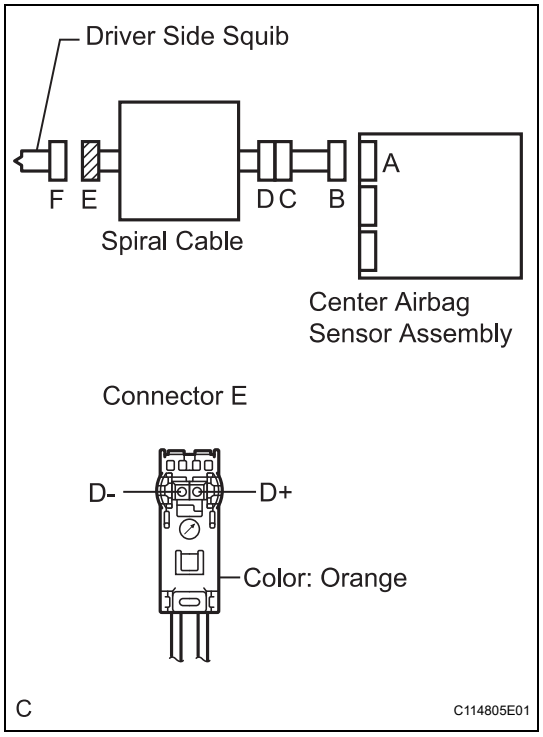
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the spiral cable connectors (on the steering pad side) are not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → REPLACE SPIRAL CABLE (See page RS-357)

OK

3 CHECK DRIVER SIDE SQUIB CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.
 (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
 (2) Turn the power switch on (IG).
 (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
D+ - Body ground	Power switch on (IG)	Below 1 V
D- - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
 (1) Turn the power switch off.
 (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
 (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
 (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D+ - Body ground	Always	1 MΩ or higher
D- - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
 (1) Release the activation prevention mechanism built into connector B (See page RS-33).
 (2) Measure the resistance according to the value(s) in the table below.

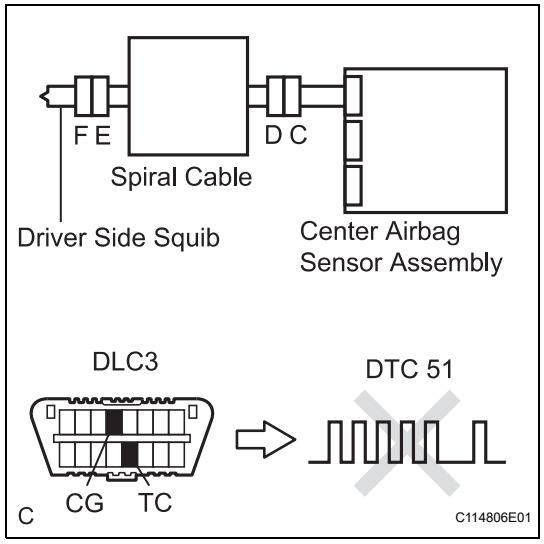
Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	1 MΩ or higher

NG → Go to step 5

OK

4 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the steering pad and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1800, B1801, B1802, B1803, or 51 is not output.

HINT:

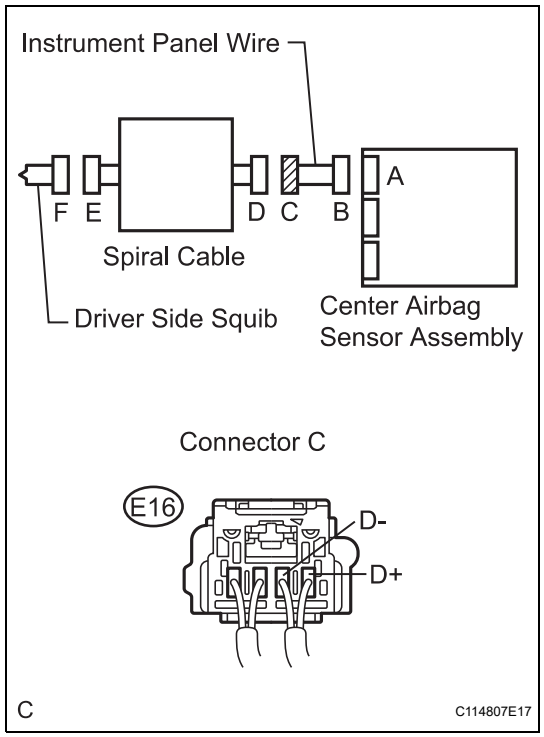
Codes other than DTC B1800, B1801, B1802, B1803, and 51 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

5 CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.
(b) Disconnect the instrument panel wire connector from the spiral cable.
(c) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E16-1 (D+) - Body ground	Power switch on (IG)	Below 1 V
E16-2 (D-) - Body ground	Power switch on (IG)	Below 1 V

(d) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

RS

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-1 (D+) - E16-2 (D-)	Always	Below 1 Ω

(e) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-1 (D+) - Body ground	Always	1 MΩ or higher
E16-2 (D-) - Body ground	Always	1 MΩ or higher

(f) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-33).

(2) Measure the resistance according to the value(s) in the table below.

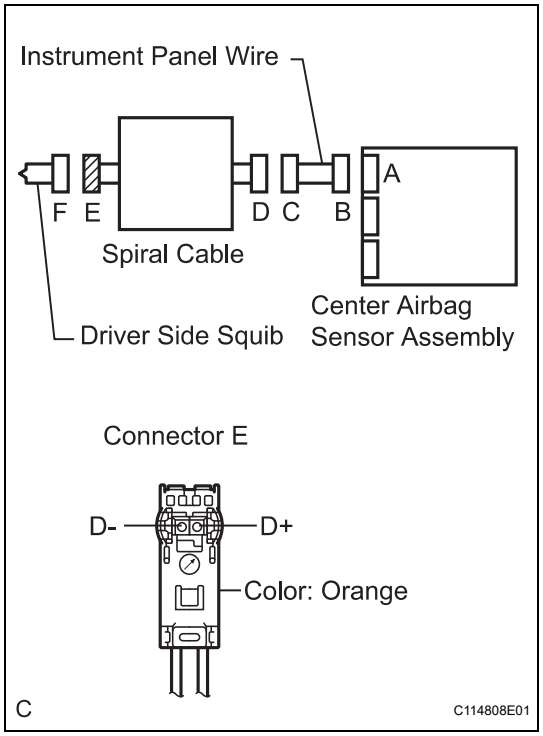
Standard resistance

Tester Connection	Condition	Specified Condition
E16-1 (D+) - E16-2 (D-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK SPIRAL CABLE



(a) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the power switch on (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
D+ - Body ground	Power switch on (IG)	Below 1 V
D- - Body ground	Power switch on (IG)	Below 1 V

(b) Check for an open in the circuit.

(1) Turn the power switch off.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

RS

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D+ - Body ground	Always	1 MΩ or higher
D- - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector D (See page RS-33).

(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D+ - D-	Always	1 MΩ or higher

NG → **REPLACE SPIRAL CABLE (See page RS-357)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1805/52	Short in Front Passenger Side Squib Circuit

DTC	B1806/52	Open in Front Passenger Side Squib Circuit

DTC	B1807/52	Short to GND in Front Passenger Side Squib Circuit

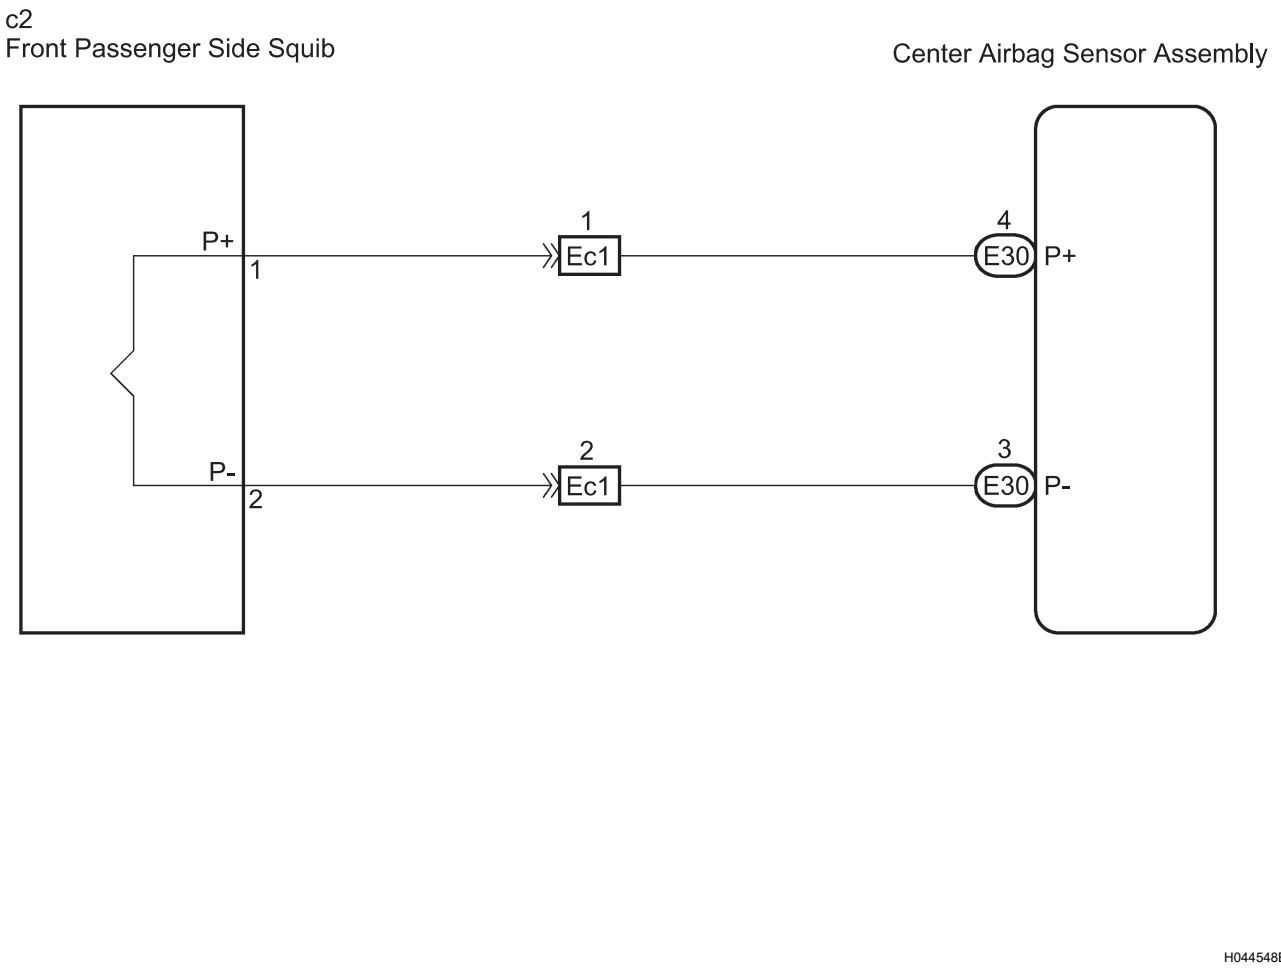
DTC	B1808/52	Short to B+ in Front Passenger Side Squib Circuit

DESCRIPTION

The front passenger side squib circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1805/52	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front passenger side squib circuit during primary check. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1806/52	• The center airbag sensor assembly receives an open circuit signal in the front passenger side squib circuit for 2 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1807/52	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly
B1808/52	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side squib circuit for 0.5 seconds. • Front passenger side squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib) • Center airbag sensor assembly

WIRING DIAGRAM

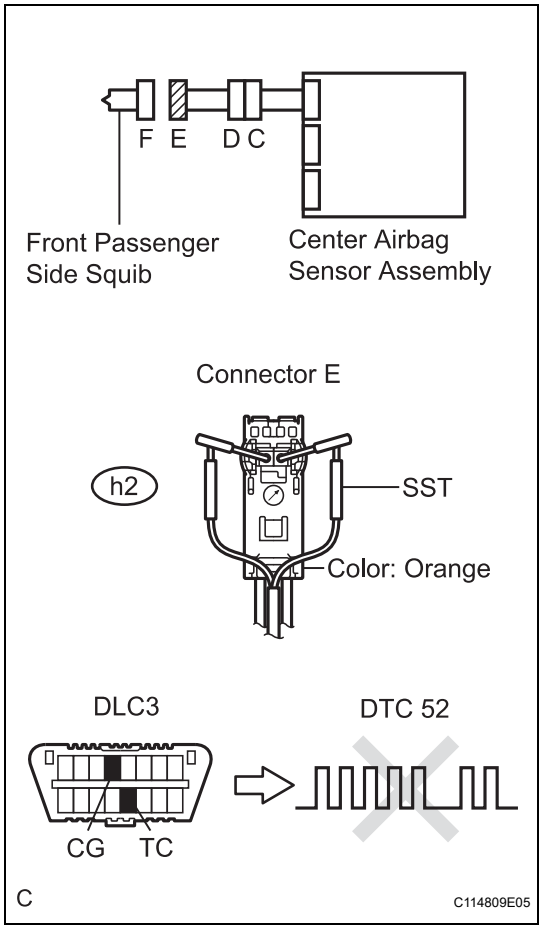


INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK FRONT PASSENGER AIRBAG ASSEMBLY (FRONT PASSENGER SIDE SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front passenger airbag assembly.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (orange connector).

CAUTION:
Never connect the tester to the front passenger airbag assembly (front passenger side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

OK:
DTC B1805, B1806, B1807, B1808, or 52 is not output.

HINT:
Codes other than DTC B1805, B1806, B1807, B1808, and 52 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-379)**

NG

2	CHECK CONNECTOR

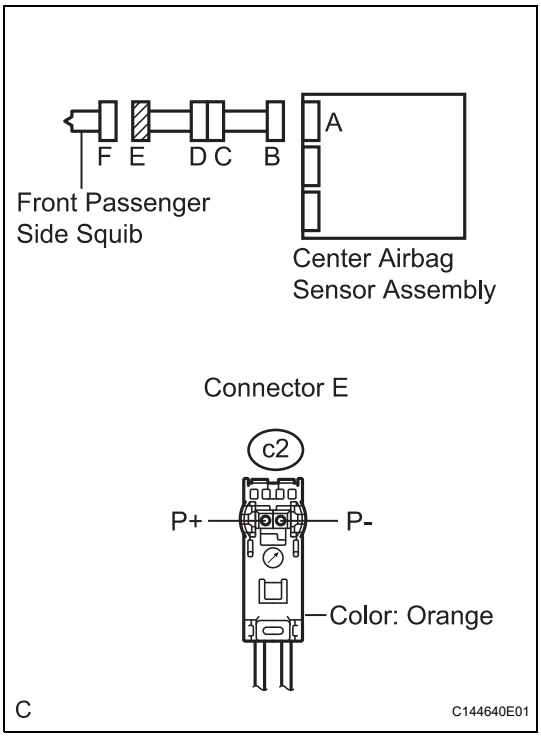
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

3 CHECK FRONT PASSENGER SIDE SQUIB CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.
  Standard voltage

Tester Connection	Condition	Specified Condition
c2-1 (P+) - Body ground	Power switch on (IG)	Below 1 V
c2-2 (P-) - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - c2-2 (P-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - Body ground	Always	1 MΩ or higher
c2-2 (P-) - Body ground	Always	1 MΩ or higher

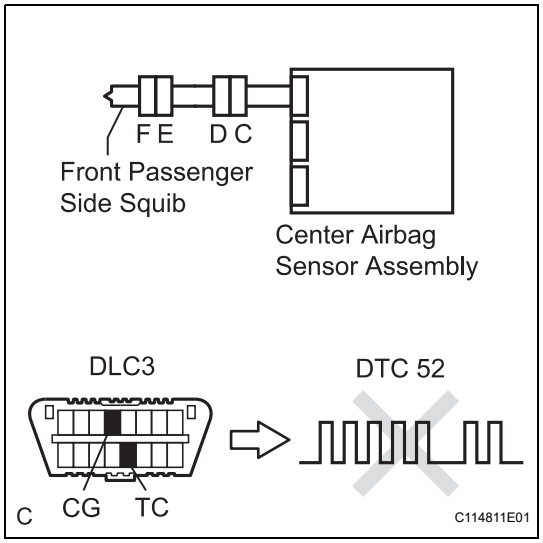
(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - c2-2 (P-)	Always	1 MΩ or higher

NG → **Go to step 5**

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front passenger airbag assembly and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1805, B1806, B1807, B1808, or 52 is not output.

HINT:

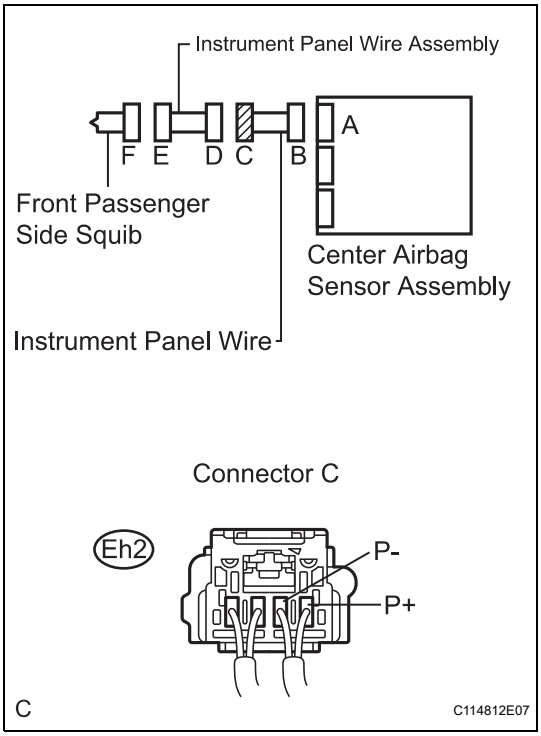
Codes other than DTC B1805, B1806, B1807, B1808, and 52 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

5 CHECK INSTRUMENT PANEL WIRE



(a) Restore the released activation prevention mechanism of connector B to the original condition.

(b) Disconnect the instrument panel wire connector from the instrument panel wire assembly.

(c) Check for a short to B+ in the circuit.

(1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.

(2) Turn the power switch on (IG).

(3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
Ec1-1 (P+) - Body ground	Power switch on (IG)	Below 1 V
Ec1-2 (P-) - Body ground	Power switch on (IG)	Below 1 V

(d) Check for an open in the circuit.

(1) Turn the power switch off.

(2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-1 (P+) - Ec1-2 (P-)	Always	Below 1 Ω

(e) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-1 (P+) - Body ground	Always	1 MΩ or higher
Ec1-2 (P-) - Body ground	Always	1 MΩ or higher

(f) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-33).

(2) Measure the resistance according to the value(s) in the table below.

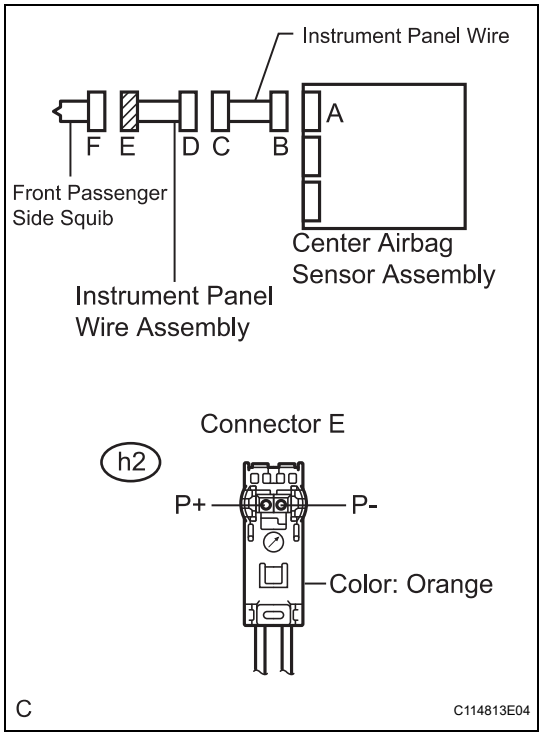
Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-1 (P+) - Ec1-2 (P-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK INSTRUMENT PANEL WIRE ASSEMBLY



(a) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
c2-1 (P+) - Body ground	Power switch on (IG)	Below 1 V
c2-2 (P-) - Body ground	Power switch on (IG)	Below 1 V

(b) Check for a open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - c2-2 (P-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - Body ground	Always	1 MΩ or higher
c2-2 (P-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector D (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c2-1 (P+) - c2-2 (P-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1810/53	Short in Driver Side Squib 2nd Step Circuit

DTC	B1811/53	Open in Driver Side Squib 2nd Step Circuit

DTC	B1812/53	Short to GND in Driver Side Squib 2nd Step Circuit

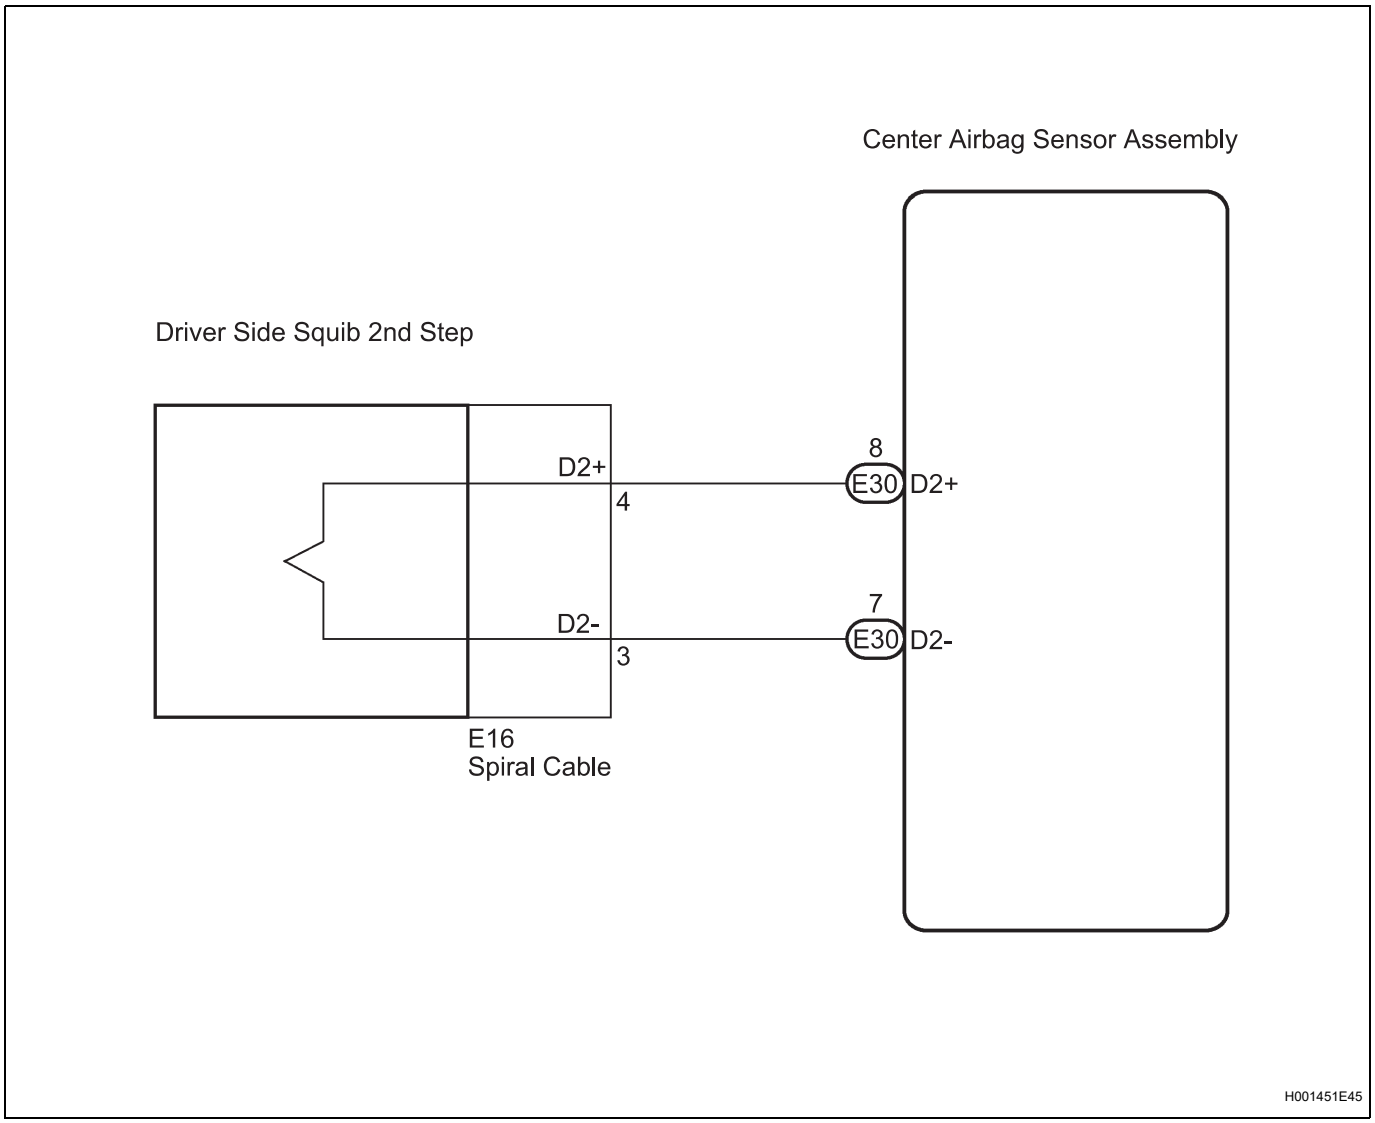
DTC	B1813/53	Short to B+ in Driver Side Squib 2nd Step Circuit

DESCRIPTION

The driver side squib 2nd step circuit consists of the center airbag sensor assembly, the spiral cable, and the steering pad.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the driver side squib 2nd step circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1810/53	• The center airbag sensor assembly receives a line short circuit signal 5 times in the driver side squib 2nd step circuit during primary check. • Driver side squib 2nd step malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib 2nd step) • Center airbag sensor assembly
B1811/53	• The center airbag sensor assembly receives an open circuit signal in the driver side squib 2nd step circuit for 2 seconds. • Driver side squib 2nd step malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib 2nd step) • Center airbag sensor assembly
B1812/53	• The center airbag sensor assembly receives a short circuit to ground signal in the driver side 2nd step circuit for 0.5 seconds. • Driver side squib 2nd step malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib 2nd step) • Center airbag sensor assembly
B1813/53	• The center airbag sensor assembly receives a short circuit to B+ signal in the driver side squib 2nd step circuit for 0.5 seconds. • Driver side squib 2nd step malfunction • Spiral cable malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Spiral cable • Steering pad (Driver side squib 2nd step) • Center airbag sensor assembly

WIRING DIAGRAM

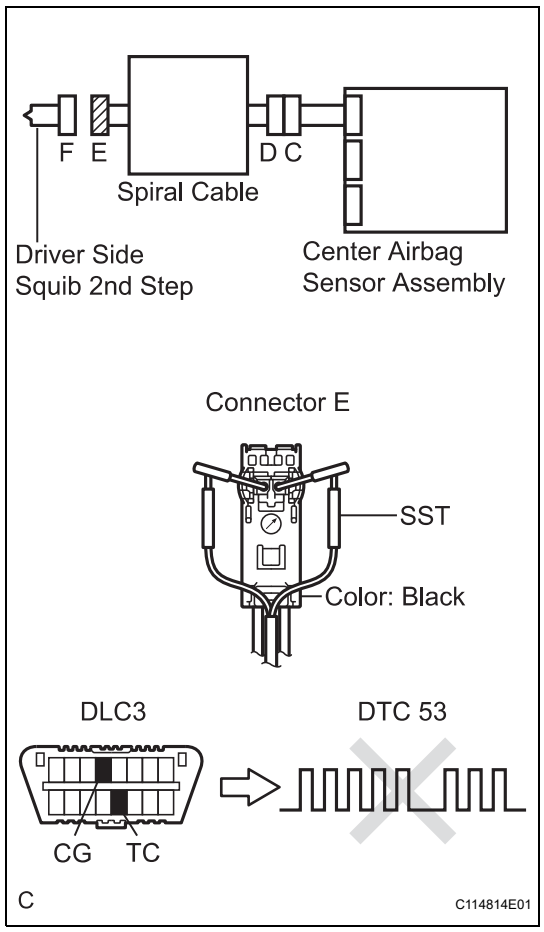


INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK STEERING PAD (DRIVER SIDE SQUIB 2ND STEP)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the steering pad.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (black connector).

CAUTION:
Never connect the tester to the steering pad (driver side squib 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

OK:
DTC B1810, B1811, B1812, B1813, or 53 is not output.

HINT:
Codes other than DTC B1810, B1811, B1812, B1813, and 53 may be output at this time, but they are not related to this check.

OK → **REPLACE STEERING PAD (See page RS-344)**

NG

2	CHECK CONNECTOR

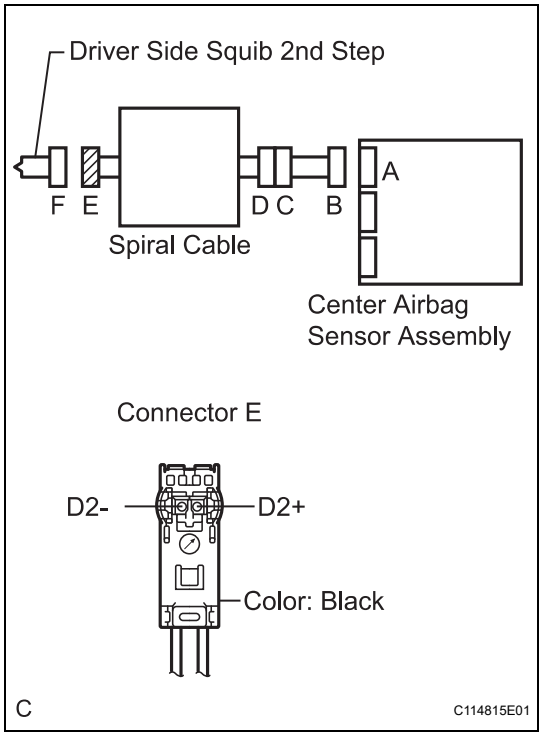
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the spiral cable connectors (on the steering pad side) are not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → REPLACE SPIRAL CABLE (See page RS-357)

OK

3 CHECK DRIVER SIDE SQUIB 2ND STEP CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Power switch on (IG)	Below 1 V
D2- - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Always	1 MΩ or higher
D2- - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

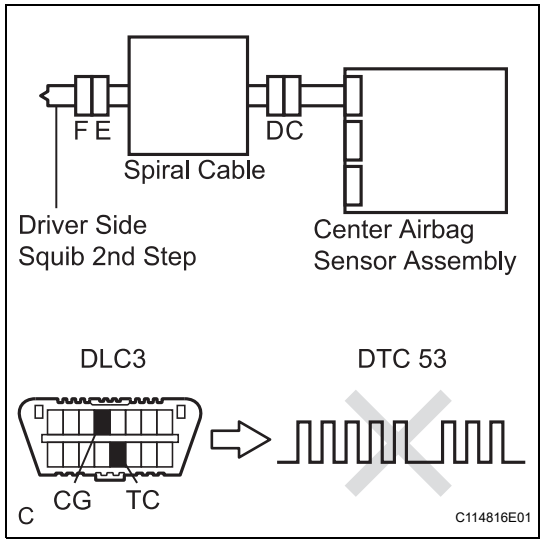
Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	1 MΩ or higher

NG → Go to step 5

OK

4 CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the steering pad and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1810, B1811, B1812, B1813, or 53 is not output.

HINT:

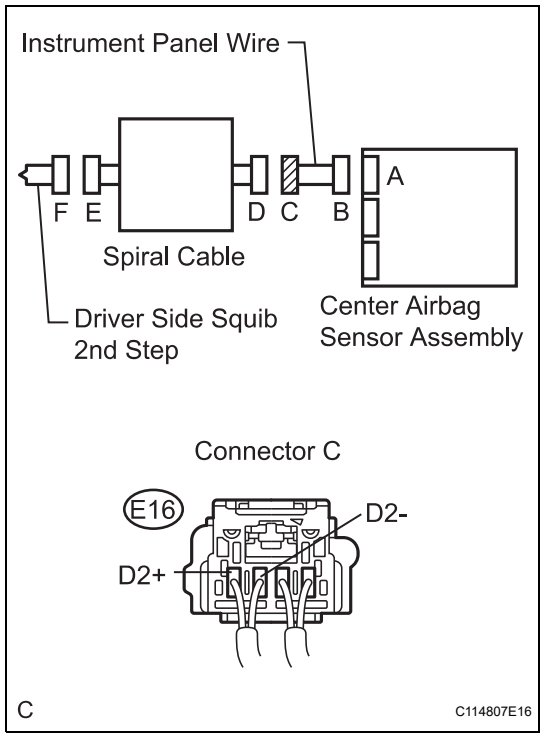
Codes other than DTC B1810, B1811, B1812, B1813, and 53 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

5 CHECK INSTRUMENT PANEL WIRE



(a) Check for a short to B+ in the circuit.
  (1) Restore the released activation prevention mechanism of connector B to the original condition.
  (2) Disconnect the instrument panel wire connector from the spiral cable.
  (3) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (4) Turn the power switch on (IG).
  (5) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E16-4 (D2+) - Body ground	Power switch on (IG)	Below 1 V
E16-3 (D2-) - Body ground	Power switch on (IG)	Below 1 V

(b) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.

RS

(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-4 (D2+) - E16-3 (D2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.

(1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E16-4 (D2+) - Body ground	Always	1 MΩ or higher
E16-3 (D2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.

(1) Release the activation prevention mechanism built into connector B (See page RS-33).

(2) Measure the resistance according to the value(s) in the table below.

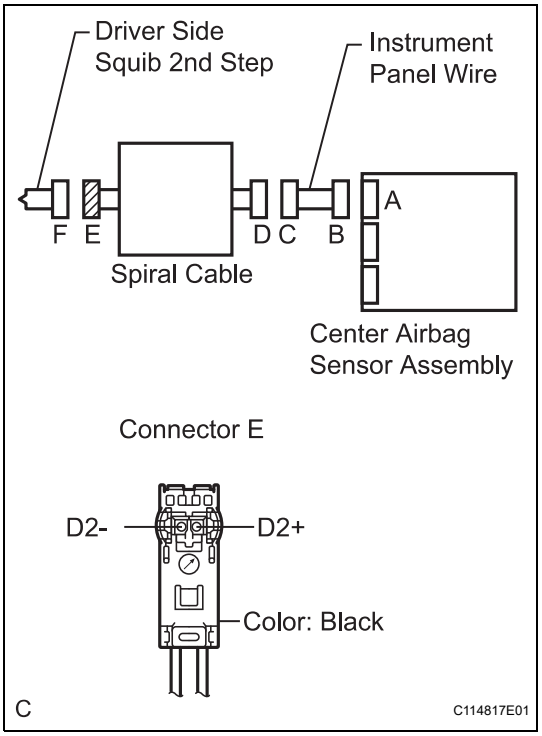
Standard resistance

Tester Connection	Condition	Specified Condition
E16-4 (D2+) - E16-3 (D2-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

6	CHECK SPIRAL CABLE



(a) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Power switch on (IG)	Below 1 V
D2- - Body ground	Power switch on (IG)	Below 1 V

(b) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - Body ground	Always	1 MΩ or higher
D2- - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector D (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
D2+ - D2-	Always	1 MΩ or higher

NG → **REPLACE SPIRAL CABLE (See page RS-357)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1815/54	Short in Front Passenger Side Squib 2nd Step Circuit

DTC	B1816/54	Open in Front Passenger Side Squib 2nd Step Circuit

DTC	B1817/54	Short to GND in Front Passenger Side Squib 2nd Step Circuit

DTC	B1818/54	Short to B+ in Front Passenger Side Squib 2nd Step Circuit

DESCRIPTION

The front passenger side squib 2nd step circuit consists of the center airbag sensor assembly and the front passenger airbag assembly.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side squib 2nd step circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1815/54	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front passenger side squib 2nd step circuit during primary check. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1816/54	• The center airbag sensor assembly receives an open circuit signal in the front passenger side squib 2nd step circuit for 2 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1817/54	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side squib 2nd step circuit for 0.5 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly
B1818/54	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side squib 2nd step circuit for 0.5 seconds. • Front passenger side squib 2nd step malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Instrument panel wire assembly • Front passenger airbag assembly (Front passenger side squib 2nd step) • Center airbag sensor assembly

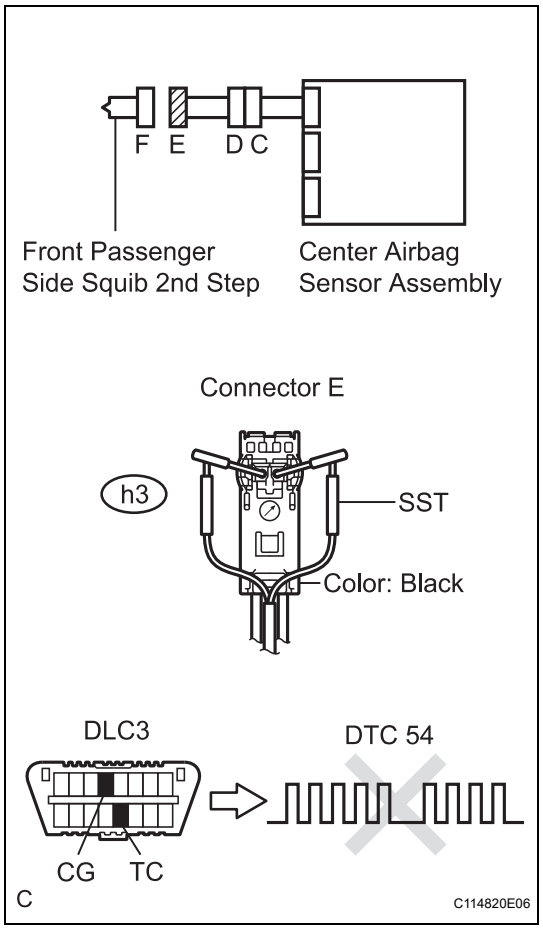
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK FRONT PASSENGER AIRBAG ASSEMBLY (FRONT PASSENGER SIDE SQUIB 2ND STEP)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front passenger airbag assembly.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector E (black connector).
CAUTION:
Never connect the tester to the front passenger airbag assembly (front passenger side squib 2nd step) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).
OK:
DTC B1815, B1816, B1817, B1818, or 54 is not output.
HINT:
Codes other than DTC B1815, B1816, B1817, B1818, and 54 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT PASSENGER AIRBAG ASSEMBLY (See page RS-379)**

NG

2	CHECK CONNECTOR

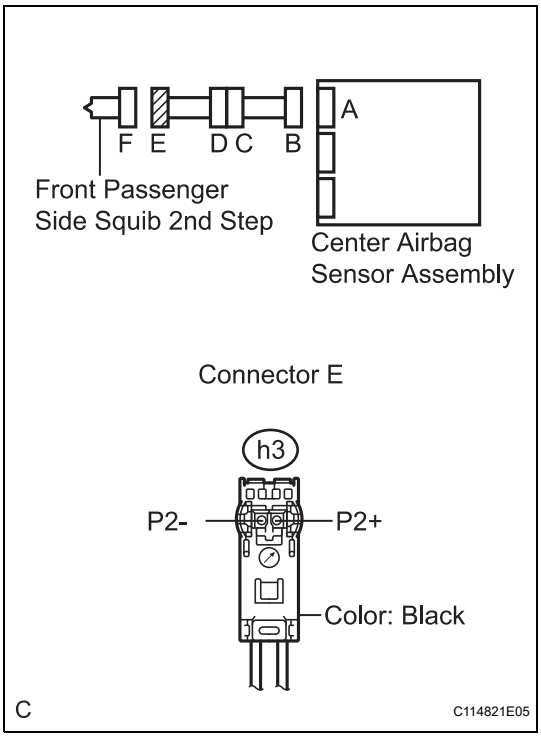
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector E.
(d) Check that the instrument panel wire assembly connectors (on the front passenger airbag assembly side) are not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not damaged or deformed.

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

3	CHECK FRONT PASSENGER SIDE SQUIB 2ND STEP CIRCUIT



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.
  Standard voltage

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - Body ground	Power switch on (IG)	Below 1 V
c1-2 (P2-) - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - c1-2 (P2-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - Body ground	Always	1 MΩ or higher
c1-2 (P2-) - Body ground	Always	1 MΩ or higher

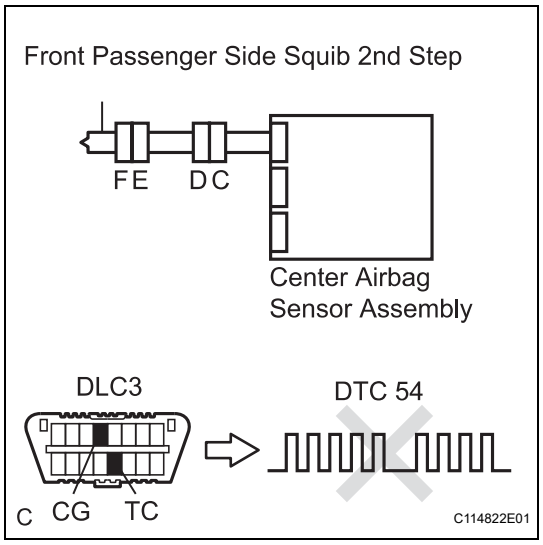
(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - c1-2 (P2-)	Always	1 MΩ or higher

NG → Go to step 5

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front passenger airbag assembly and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1815, B1816, B1817, B1818, or 54 is not output.

HINT:

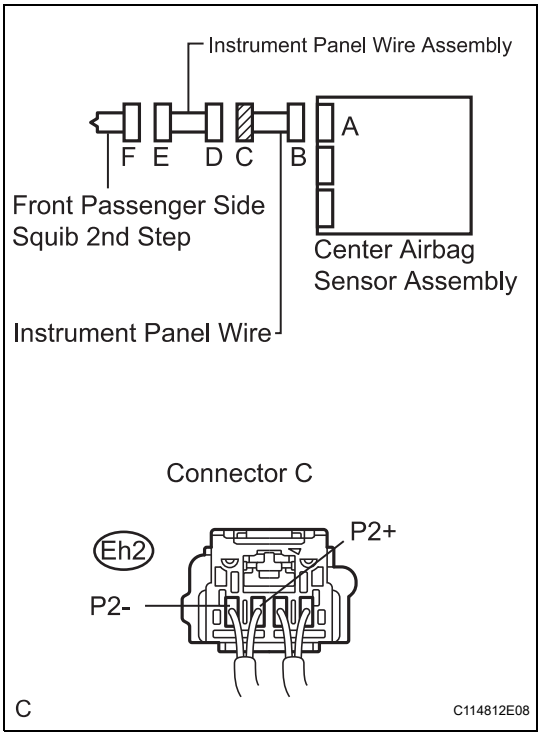
Codes other than DTC B1815, B1816, B1817, B1818, and 54 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

5 CHECK INSTRUMENT PANEL WIRE



(a) Check for a short to B+ in the circuit.
  (1) Restore the released activation prevention mechanism of connector B to the original condition.
  (2) Disconnect the instrument panel wire connector from the instrument panel wire assembly.
  (3) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (4) Turn the power switch on (IG).
  (5) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
Ec1-3 (P2+) - Body ground	Power switch on (IG)	Below 1 V
Ec1-4 (P2-) - Body ground	Power switch on (IG)	Below 1 V

(b) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-3 (P2+) - Ec1-4 (P2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-3 (P2+) - Body ground	Always	1 MΩ or higher
Ec1-4 (P2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

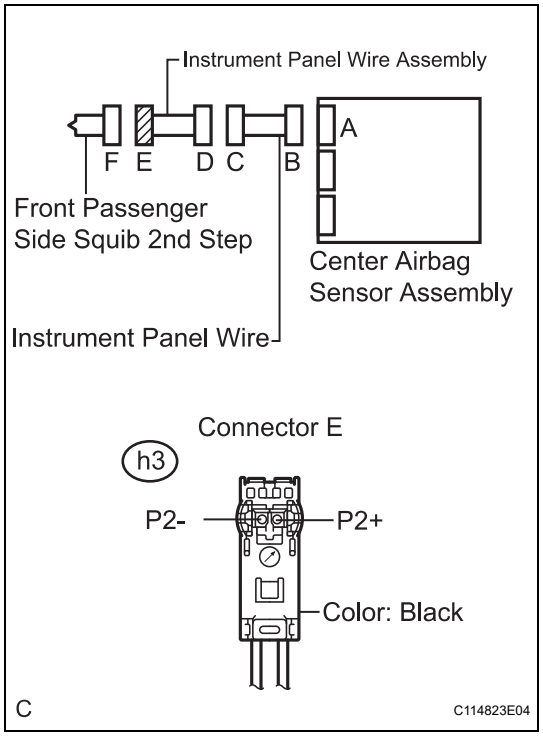
Standard resistance

Tester Connection	Condition	Specified Condition
Ec1-3 (P2+) - Ec1-4 (P2-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

6 CHECK INSTRUMENT PANEL WIRE ASSEMBLY



(a) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - Body ground	Power switch on (IG)	Below 1 V
c1-2 (P2-) - Body ground	Power switch on (IG)	Below 1 V

(b) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - c1-2 (P2-)	Always	Below 1 Ω

(c) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - Body ground	Always	1 MΩ or higher
c1-2 (P2-) - Body ground	Always	1 MΩ or higher

(d) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector D (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
c1-1 (P2+) - c1-2 (P2-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE ASSEMBLY**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1820/55	Short in Front Driver Side - Side Squib Circuit

DTC	B1821/55	Open in Front Driver Side - Side Squib Circuit

DTC	B1822/55	Short to GND in Front Driver Side - Side Squib Circuit

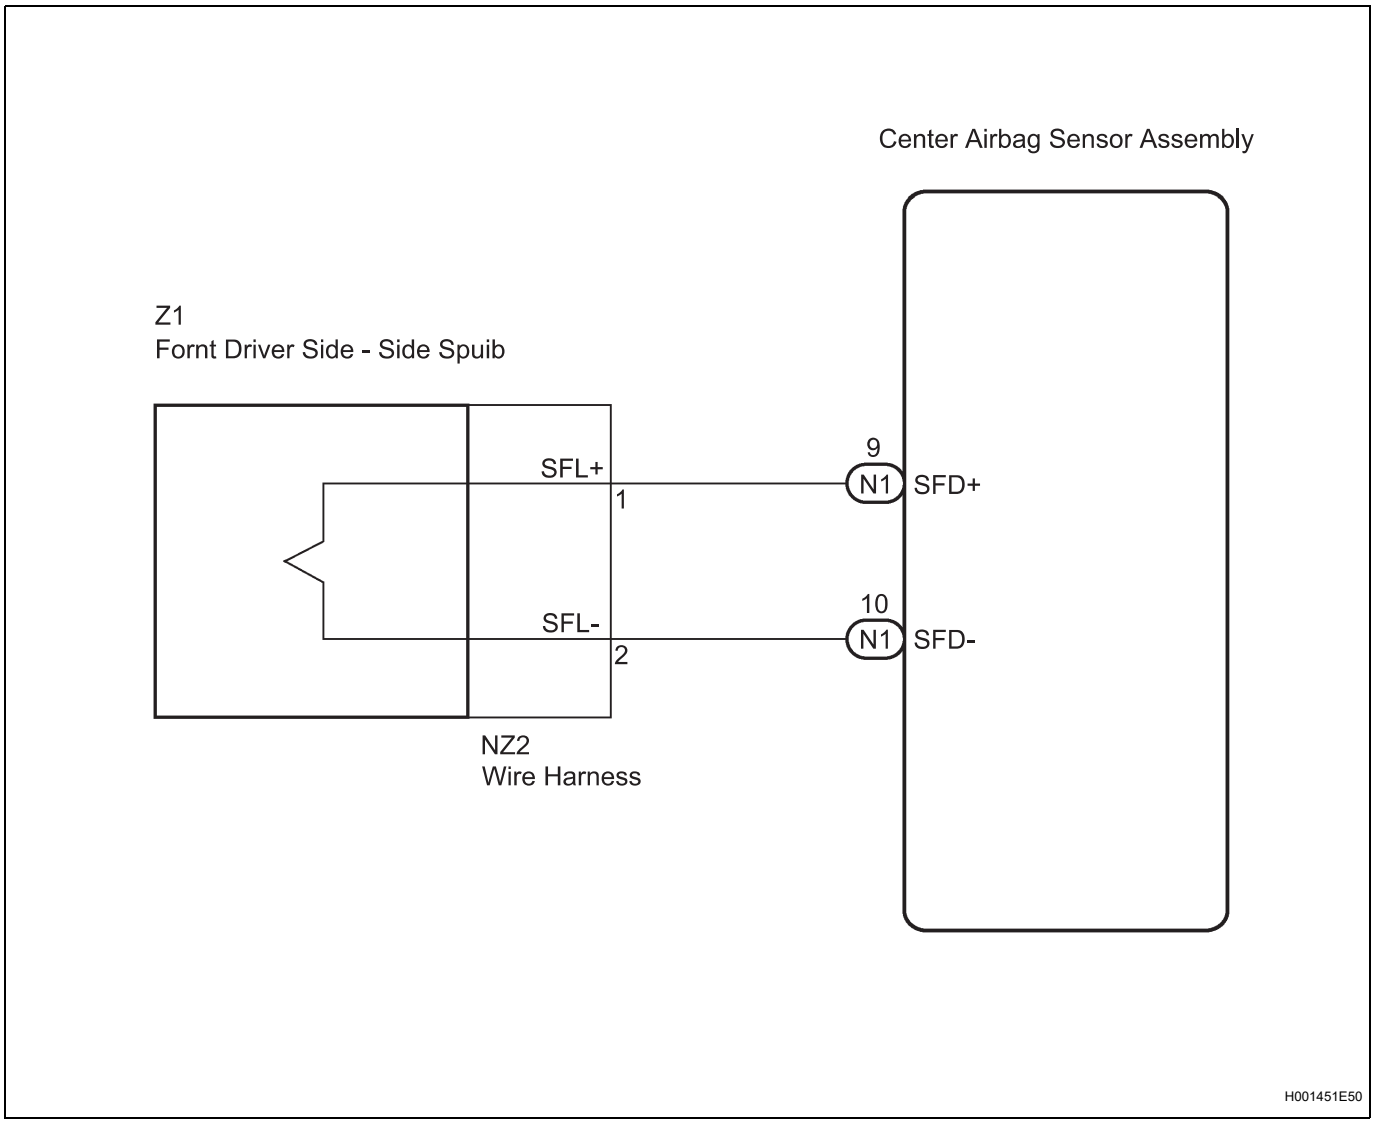
DTC	B1823/55	Short to B+ in Front Driver Side - Side Squib Circuit

DESCRIPTION

The front driver side - side squib circuit consists of the center airbag sensor assembly and the front seat side airbag assembly LH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front driver side - side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1820/55	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front driver side - side squib circuit during primary check. • Front driver side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly LH (Front driver side - side squib) • Center airbag sensor assembly
B1821/55	• The center airbag sensor assembly receives an open circuit signal in the front driver side - side squib circuit for 2 seconds. • Front driver side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly LH (Front driver side - side squib) • Center airbag sensor assembly
B1822/55	• The center airbag sensor assembly receives a short circuit to ground signal in the front driver side - side squib circuit for 0.5 seconds. • Front driver side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly LH (Front driver side - side squib) • Center airbag sensor assembly
B1823/55	• The center airbag sensor assembly receives a short circuit to B+ signal in the front driver side - side squib circuit for 0.5 seconds. • Front driver side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat side airbag assembly LH (Front driver side - side squib) • Center airbag sensor assembly

WIRING DIAGRAM

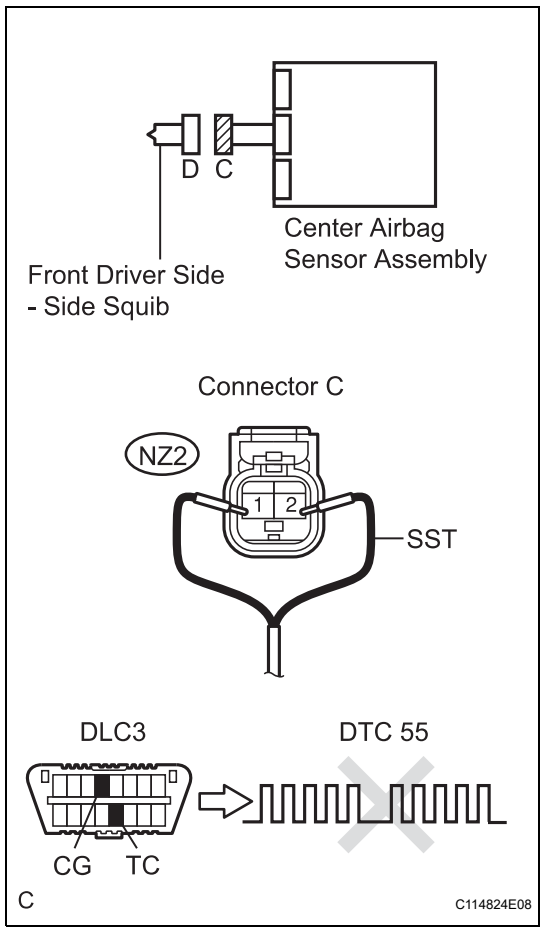


INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY LH (FRONT DRIVER SIDE - SIDE SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the front seat side airbag assembly LH.
(d) Connect the black wire side of SST (resistance 2.1 Ω) to connector C.

CAUTION:
Never connect the tester to the front seat side airbag assembly LH (front driver side - side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

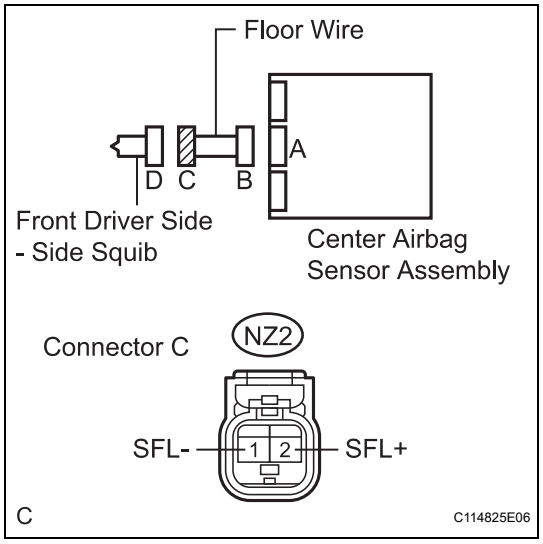
OK:
DTC B1820, B1821, B1822, B1823, or 55 is not output.

HINT:
Codes other than DTC B1820, B1821, B1822, B1823, and 55 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT SEAT ASSEMBLY LH**

NG

2 CHECK FLOOR WIRE (FRONT DRIVER SIDE - SIDE SQUIB CIRCUIT)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Disconnect the connectors from the center airbag sensor assembly.
(e) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
NZ2-2 (SFL+) - Body ground	Power switch on (IG)	Below 1 V
NZ2-1 (SFL-) - Body ground	Power switch on (IG)	Below 1 V

(f) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
NZ2-2 (SFL+) - NZ2-1 (SFL-)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
NZ2-2 (SFL+) - Body ground	Always	1 MΩ or higher
NZ2-1 (SFL-) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

Standard resistance

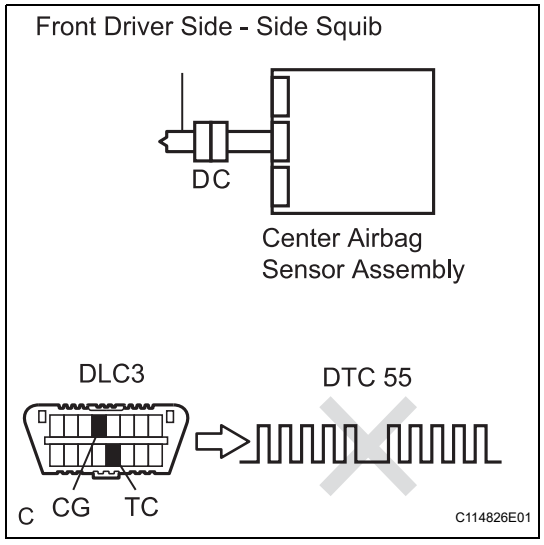
Tester Connection	Condition	Specified Condition
NZ2-2 (SFL+) - NZ2-1 (SFL-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

RS

OK

3	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front seat side airbag assembly LH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1820, B1821, B1822, B1823, or 55 is not output.

HINT:

Codes other than DTC B1820, B1821, B1822, B1823, and 55 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1825/56	Short in Front Passenger Side - Side Squib Circuit

DTC	B1826/56	Open in Front Passenger Side - Side Squib Circuit

DTC	B1827/56	Short to GND in Front Passenger Side - Side Squib Circuit

DTC	B1828/56	Short to B+ in Front Passenger Side - Side Squib Circuit

DESCRIPTION

The front passenger side - side squib circuit consists of the center airbag sensor assembly and the front seat side airbag assembly RH.
The circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side - side squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1825/56	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front passenger side - side squib circuit during primary check. • Front passenger side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Front seat side airbag assembly RH (Front passenger side - side squib) • Center airbag sensor assembly
B1826/56	• The center airbag sensor assembly receives an open circuit signal in the front passenger side - side squib circuit for 2 seconds. • Front passenger side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Front seat side airbag assembly RH (Front passenger side - side squib) • Center airbag sensor assembly
B1827/56	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side - side squib circuit for 0.5 seconds. • Front passenger side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Front seat side airbag assembly RH (Front passenger side - side squib) • Center airbag sensor assembly
B1828/56	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side - side squib circuit for 0.5 seconds. • Front passenger side - side squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Front seat side airbag assembly RH (Front passenger side - side squib) • Center airbag sensor assembly

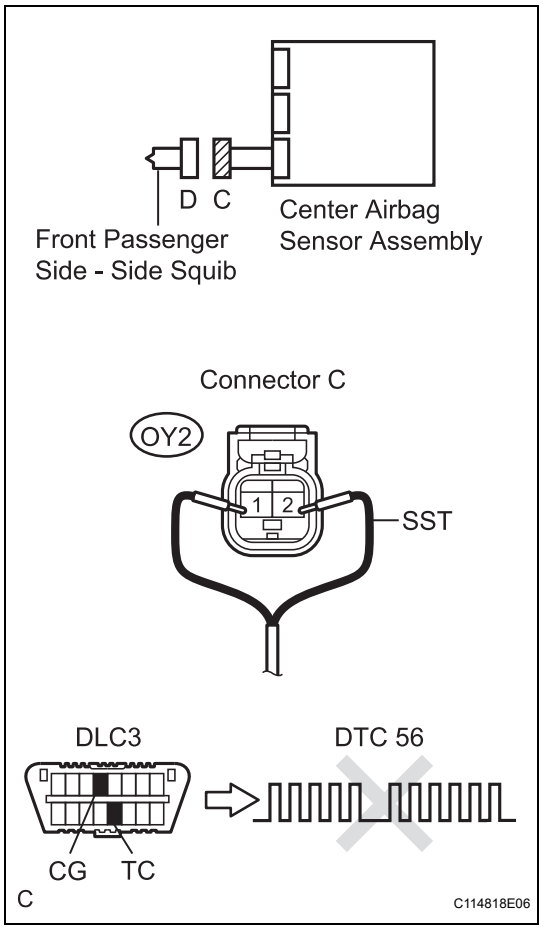
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK FRONT SEAT SIDE AIRBAG ASSEMBLY RH (FRONT PASSENGER SIDE - SIDE SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the front seat side airbag assembly RH.
(d) Connect the black wire side of SST (resistance 2.1 Ω) to connector C.

CAUTION:
Never connect the tester to the front seat side airbag assembly RH (front passenger side - side squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

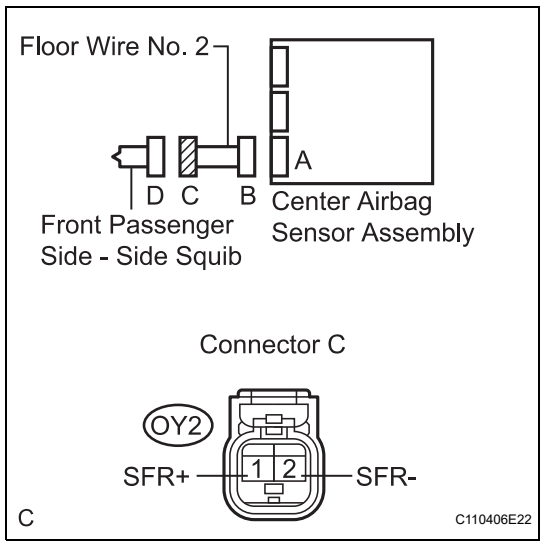
OK:
DTC B1825, B1826, B1827, B1828, or 56 is not output.

HINT:
Codes other than DTC B1825, B1826, B1827, B1828, and 56 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT SEAT ASSEMBLY RH**

NG

2	CHECK FLOOR WIRE NO. 2 (FRONT PASSENGER SIDE - SIDE SQUIB CIRCUIT)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Disconnect the connectors from the center airbag sensor assembly.
(e) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester connection	Condition	Specified condition
OY2-2 (SFR+) - Body ground	Power switch on (IG)	Below 1 V
OY2-1 (SFR-) - Body ground	Power switch on (IG)	Below 1 V

(f) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
OY2-2 (SFR+) - OY2-1 (SFR-)	Always	Below 1 Ω

(g) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
OY2-2 (SFR+) - Body ground	Always	1 MΩ or higher
OY2-1 (SFR-) - Body ground	Always	1 MΩ or higher

(h) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

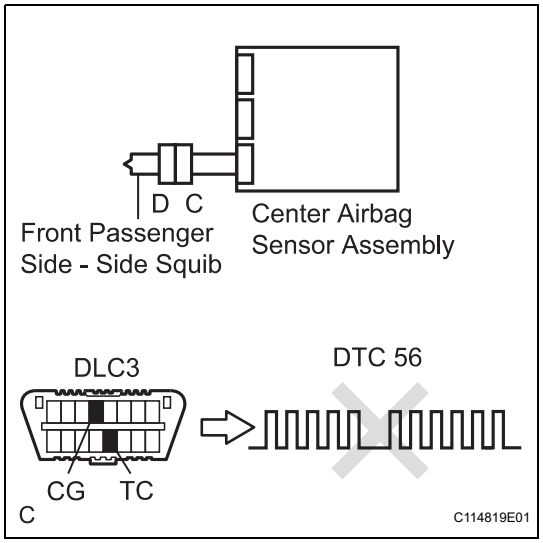
Standard resistance

Tester Connection	Condition	Specified Condition
OY2-2 (SFR+) - OY2-1 (SFR-)	Always	1 MΩ or higher

NG	REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

3	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front seat side airbag assembly RH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1825, B1826, B1827, B1828, or 56 is not output.

HINT:

Codes other than DTC B1825, B1826, B1827, B1828, and 56 may be output at this time, but they are not related to this check.

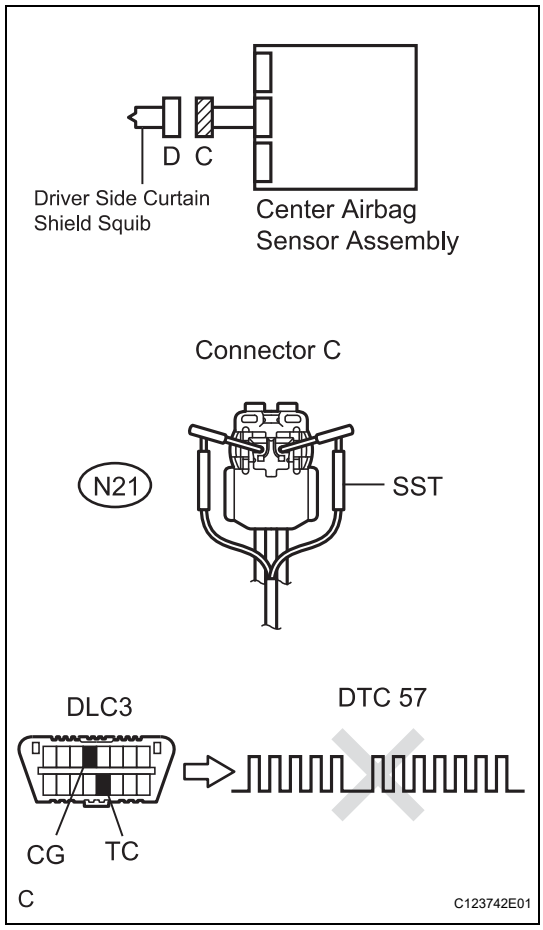
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK CURTAIN SHIELD AIRBAG ASSEMBLY LH (DRIVER SIDE CURTAIN SHIELD SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the curtain shield airbag assembly LH.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.
CAUTION:
Never connect the tester to the curtain shield airbag assembly LH (driver side curtain shield squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).
OK:
DTC B1830, B1831, B1832, B1833, or 57 is not output.
HINT:
Codes other than DTC B1830, B1831, B1832, B1833, and 57 may be output at this time, but they are not related to this check.

OK → **REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY LH (See page RS-401)**

NG

2	CHECK CONNECTOR

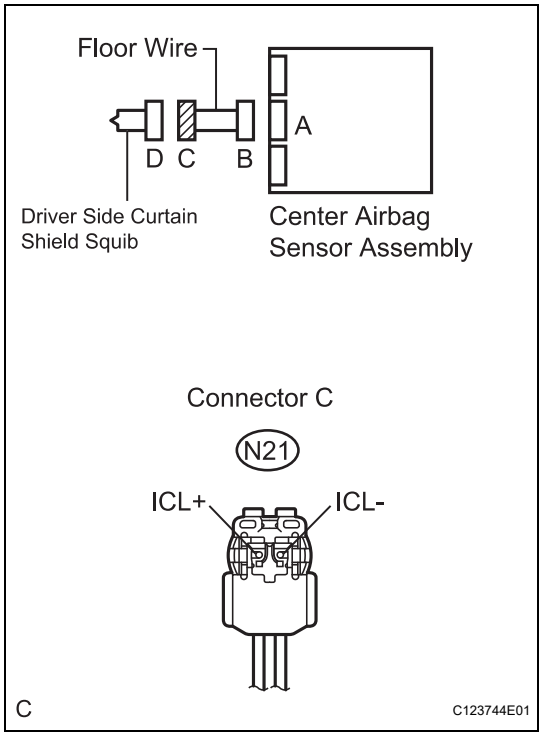
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire connector (on the curtain shield airbag assembly LH side) is not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

3 CHECK FLOOR WIRE (DRIVER SIDE CURTAIN SHIELD SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
N21-1 (ICL+) - Body ground	Power switch on (IG)	Below 1 V
N21-2 (ICL-) - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
N21-1 (ICL+) - N21-2 (ICL-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
N21-1 (ICL+) - Body ground	Always	1 MΩ or higher
N21-2 (ICL-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

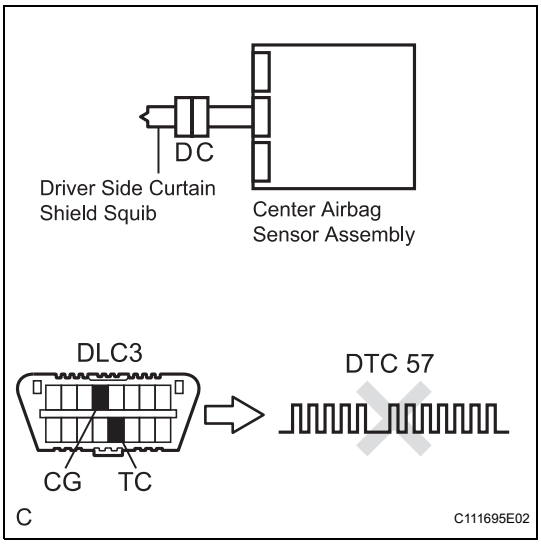
Standard resistance

Tester Connection	Condition	Specified Condition
N21-1 (ICL+) - N21-2 (ICL-)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the curtain shield airbag assembly LH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1830, B1831, B1832, B1833, or 57 is not output.

HINT:

Codes other than DTC B1830, B1831, B1832, B1833, and 57 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1835/58	Short in Front Passenger Side Curtain Shield Squib Circuit

DTC	B1836/58	Open in Front Passenger Side Curtain Shield Squib Circuit

DTC	B1837/58	Short to GND in Front Passenger Side Curtain Shield Squib Circuit

DTC	B1838/58	Short to B+ in Front Passenger Side Curtain Shield Squib Circuit

DESCRIPTION

The front passenger side curtain shield squib circuit consists of the center airbag sensor assembly and the curtain shield airbag assembly RH.

The circuit instructs the SRS to deploy when deployment conditions are met.

These DTCs are recorded when a malfunction is detected in the front passenger side curtain shield squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1835/58	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front passenger side curtain shield squib circuit during primary check. • Front passenger side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Curtain shield airbag assembly RH (Front passenger side curtain shield squib) • Center airbag sensor assembly
B1836/58	• The center airbag sensor assembly receives an open circuit signal in the front passenger side curtain shield squib circuit for 2 seconds. • Front passenger side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Curtain shield airbag assembly RH (Front passenger side curtain shield squib) • Center airbag sensor assembly
B1837/58	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side curtain shield squib circuit for 0.5 seconds. • Front passenger side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Curtain shield airbag assembly RH (Front passenger side curtain shield squib) • Center airbag sensor assembly
B1838/58	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side curtain shield squib circuit for 0.5 seconds. • Front passenger side curtain shield squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Curtain shield airbag assembly RH (Front passenger side curtain shield squib) • Center airbag sensor assembly

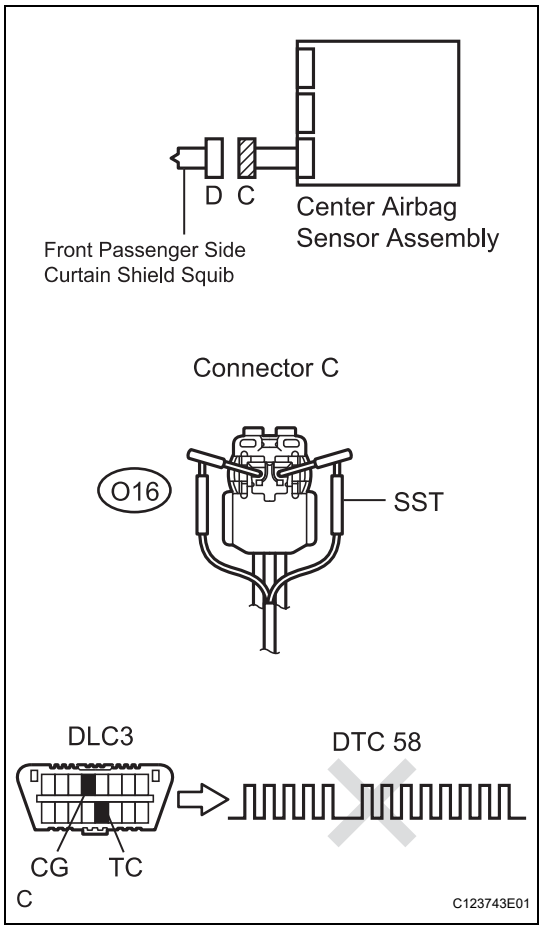
INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK CURTAIN SHIELD AIRBAG ASSEMBLY RH (FRONT PASSENGER SIDE CURTAIN SHIELD SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the curtain shield airbag assembly RH.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.

CAUTION:
Never connect the tester to the curtain shield airbag assembly RH (front passenger side curtain shield squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

OK:
DTC B1835, B1836, B1837, B1838, or 58 is not output.

HINT:
Codes other than DTC B1835, B1836, B1837, B1838, and 58 may be output at this time, but they are not related to this check.

OK → **REPLACE CURTAIN SHIELD AIRBAG ASSEMBLY RH (See page RS-401)**

NG

2	CHECK CONNECTOR

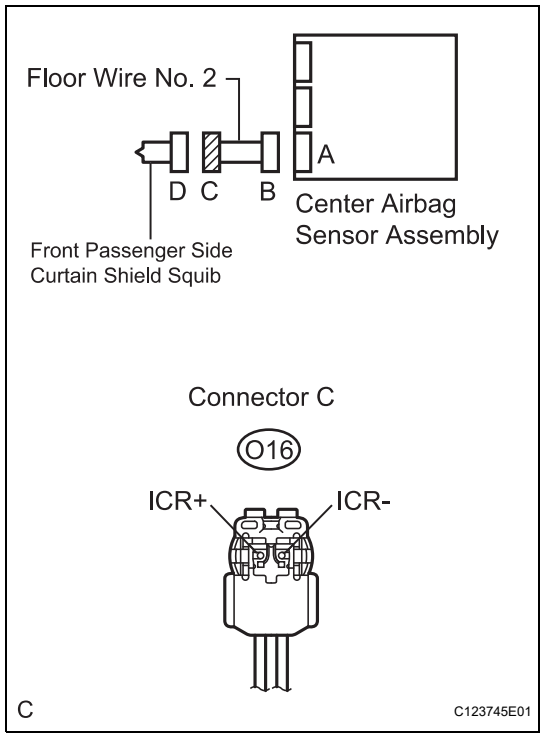
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire No. 2 connectors (on the curtain shield airbag assembly RH side) are not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

3	CHECK FLOOR WIRE NO. 2 (FRONT PASSENGER SIDE CURTAIN SHIELD SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.
  Standard voltage

Tester Connection	Condition	Specified Condition
O16-1 (ICR+) - Body ground	Power switch on (IG)	Below 1 V
O16-2 (ICR-) - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
O16-1 (ICR+) - O16-2 (ICR-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
O16-1 (ICR+) - Body ground	Always	1 MΩ or higher
O16-2 (ICR-) - Body ground	Always	1 MΩ or higher

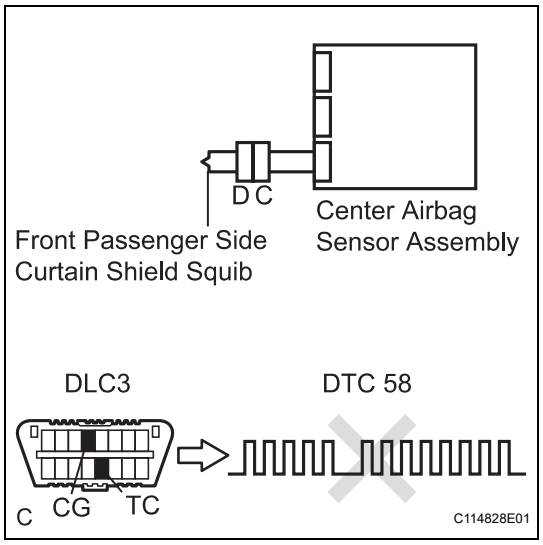
(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
O16-1 (ICR+) - O16-2 (ICR-)	Always	1 MΩ or higher

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the curtain shield airbag assembly RH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1835, B1836, B1837, B1838, or 58 is not output.

HINT:

Codes other than DTC B1835, B1836, B1837, B1838, and 58 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1860/64	Short in Driver Side Knee Airbag Squib Circuit

DTC	B1861/64	Open in Driver Side Knee Airbag Squib Circuit

DTC	B1862/64	Short to GND in Driver Side Knee Airbag Squib Circuit

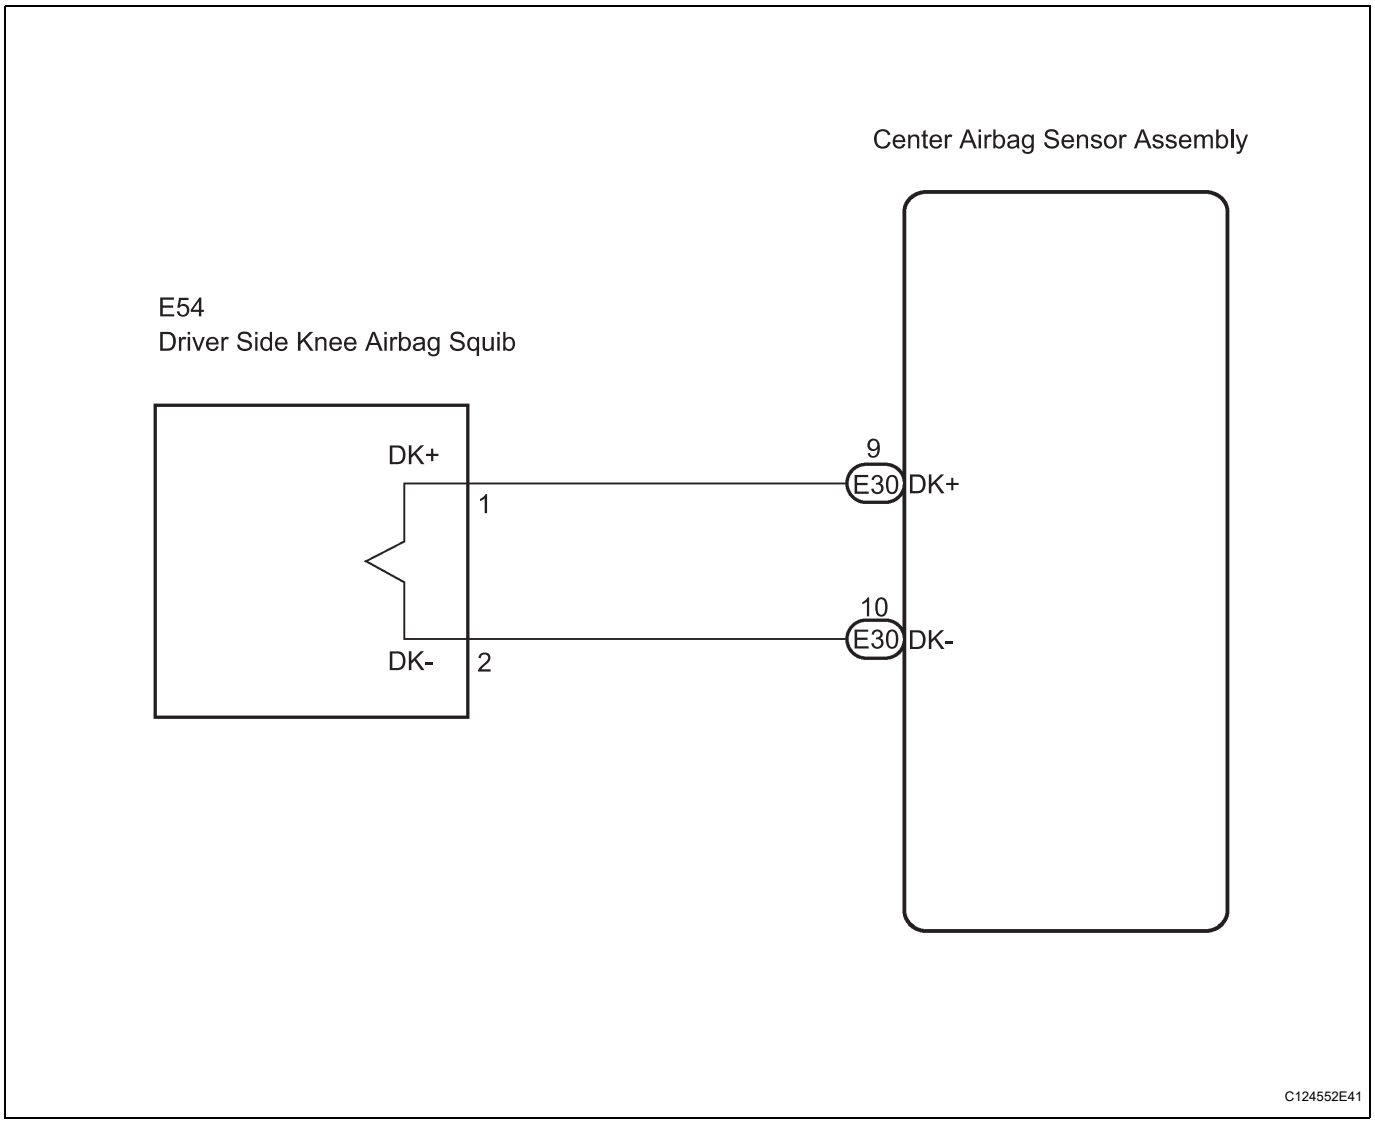
DTC	B1863/64	Short to B+ in Driver Side Knee Airbag Squib Circuit

DESCRIPTION

The driver side knee airbag squib circuit consists of the center airbag sensor assembly and the driver side knee airbag assembly.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the driver side knee airbag squib circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1860/64	• The center airbag sensor assembly receives a line short circuit signal 5 times in the driver side knee airbag squib circuit during primary check. • Driver side knee airbag squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee airbag squib) • Center airbag sensor assembly
B1861/64	• The center airbag sensor assembly receives an open circuit signal in the driver side knee airbag squib circuit for 2 seconds. • Driver side knee airbag squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee airbag squib) • Center airbag sensor assembly
B1862/64	• The center airbag sensor assembly receives a short circuit to ground signal in the driver side knee airbag squib circuit for 0.5 seconds. • Driver side knee airbag squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee airbag squib) • Center airbag sensor assembly
B1863/64	• The center airbag sensor assembly receives a short circuit to B+ signal in the driver side knee airbag squib circuit for 0.5 seconds. • Driver side knee airbag squib malfunction • Center airbag sensor assembly malfunction	• Instrument panel wire • Driver side knee airbag assembly (Driver side knee airbag squib) • Center airbag sensor assembly

WIRING DIAGRAM

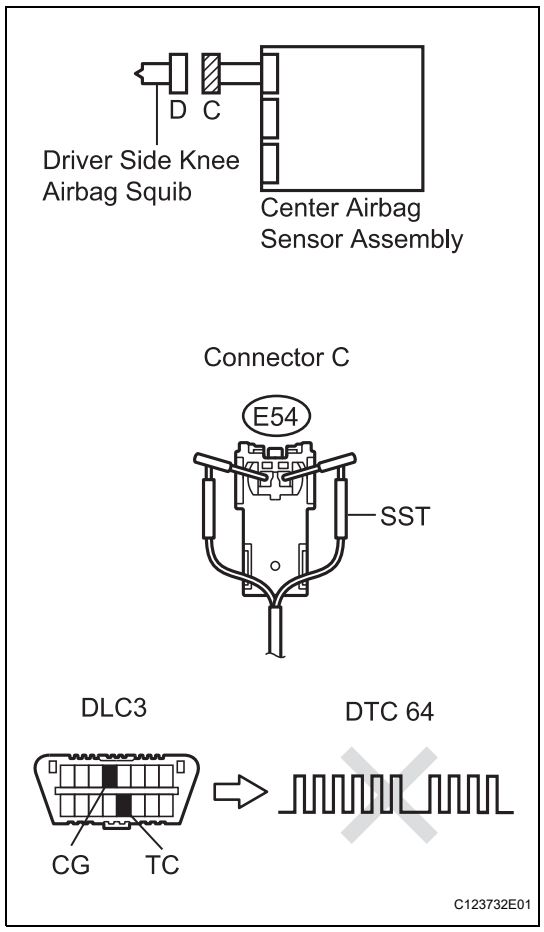


INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK DRIVER SIDE KNEE AIRBAG ASSEMBLY (DRIVER SIDE KNEE AIRBAG SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the driver side knee airbag assembly.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.

CAUTION:
Never connect the tester to the driver side knee airbag assembly (driver side knee airbag squib) for measurement, as this may lead to a serious injury due to airbag deployment.

NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).

OK:
DTC B1860, B1861, B1862, B1863, or 64 is not output.

HINT:
Codes other than DTC B1860, B1861, B1862, B1863, and 64 may be output at this time, but they are not related to this check.

OK → **REPLACE DRIVER SIDE KNEE AIRBAG ASSEMBLY (See page RS-362)**

NG

2	CHECK CONNECTOR

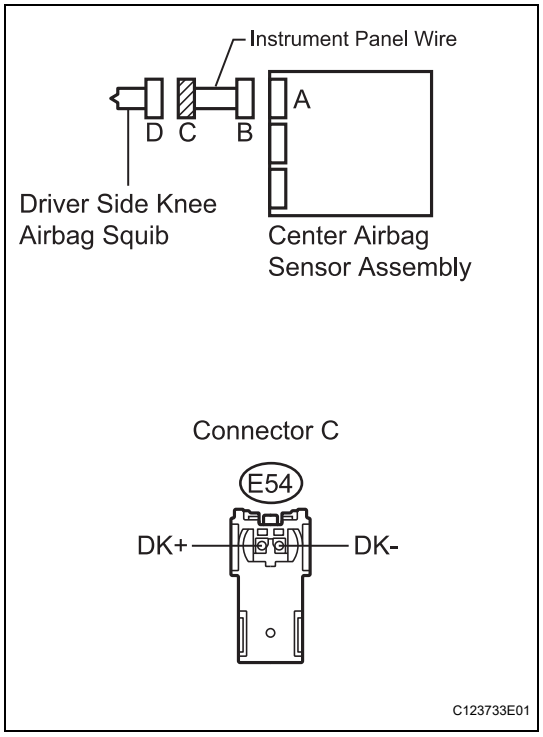
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the instrument panel wire connector (on the driver side knee airbag assembly side) is not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → REPAIR OR REPLACE INSTRUMENT PANEL WIRE

OK

3 CHECK INSTRUMENT PANEL WIRE (DRIVER SIDE KNEE AIRBAG SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.

(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
E54-1 (DK+) - Body ground	Power switch on (IG)	Below 1 V
E54-2 (DK-) - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E54-1 (DK+) - E54-2 (DK-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E54-1 (DK+) - Body ground	Always	1 MΩ or higher
E54-2 (DK-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.

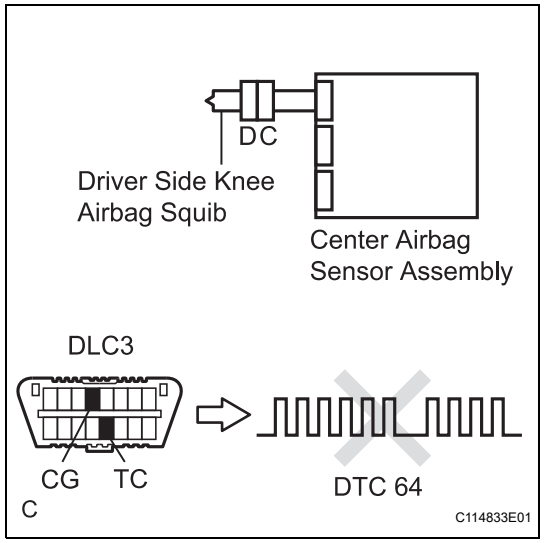
Standard resistance

Tester Connection	Condition	Specified Condition
E54-1 (DK+) - E54-2 (DK-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE INSTRUMENT PANEL WIRE**

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the driver side knee airbag assembly and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the stored DTCs in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1860, B1861, B1862, B1863, or 64 is not output.

HINT:

Codes other than DTC B1860, B1861, B1862, B1863, and 64 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1900/73	Short in Front Driver Side Pretensioner Squib Circuit

DTC	B1901/73	Open in Front Driver Side Pretensioner Squib Circuit

DTC	B1902/73	Short to GND in Front Driver Side Pretensioner Squib Circuit

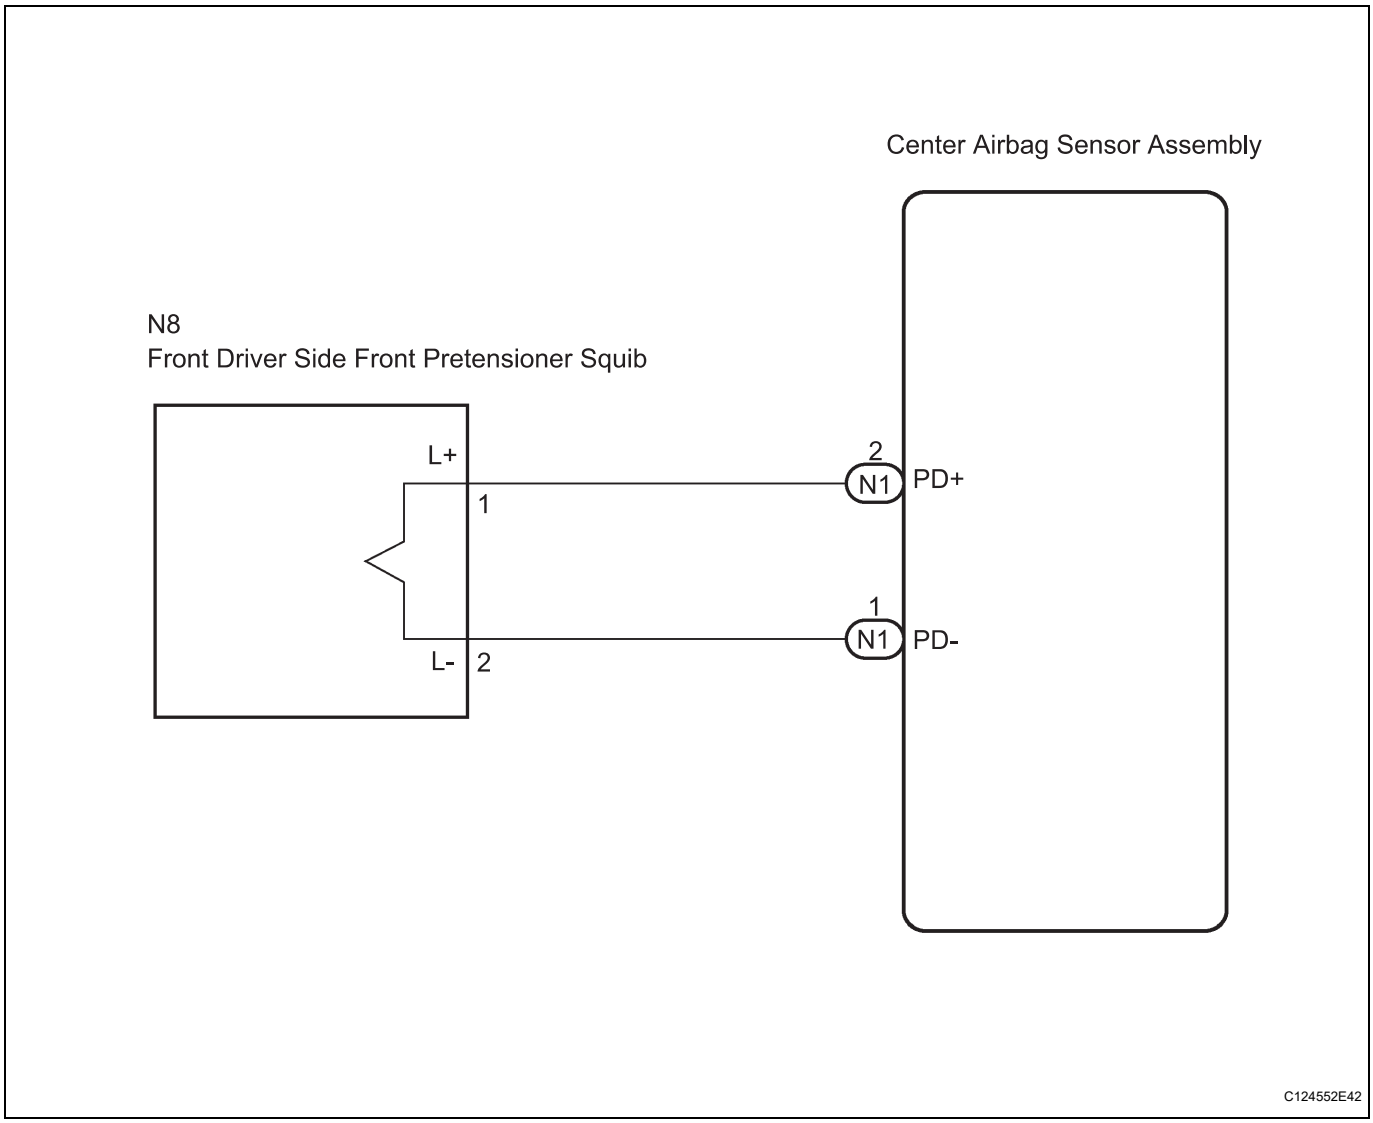
DTC	B1903/73	Short to B+ in Front Driver Side Pretensioner Squib Circuit

DESCRIPTION

The front driver side front pretensioner squib circuit consists of the center airbag sensor assembly and the front seat outer belt assembly LH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front driver side pretensioner squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1900/73	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front driver side pretensioner squib circuit during primary check. • Front driver side pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat outer belt assembly LH (Front driver side pretensioner squib) • Center airbag sensor assembly
B1901/73	• The center airbag sensor assembly receives an open circuit signal in the front driver side pretensioner squib circuit for 2 seconds. • Front driver side pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat outer belt assembly LH (Front driver side pretensioner squib) • Center airbag sensor assembly
B1902/73	• The center airbag sensor assembly receives a short circuit to ground signal in the front driver side pretensioner squib circuit for 0.5 seconds. • Front driver side pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat outer belt assembly LH (Front driver side pretensioner squib) • Center airbag sensor assembly
B1903/73	• The center airbag sensor assembly receives a short circuit to B+ signal in the front driver side pretensioner squib circuit for 0.5 seconds. • Front driver side pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire • Front seat outer belt assembly LH (Front driver side pretensioner squib) • Center airbag sensor assembly

WIRING DIAGRAM

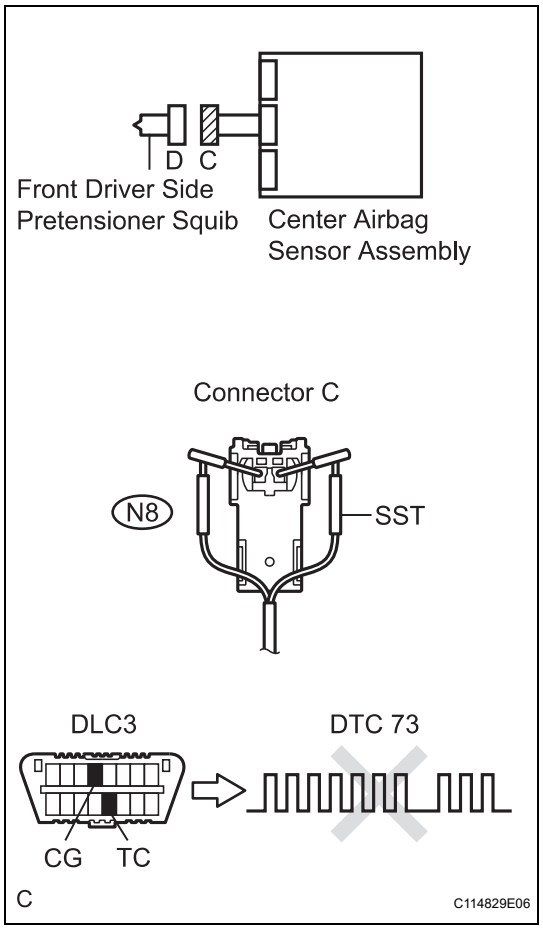


INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK FRONT SEAT OUTER BELT ASSEMBLY LH (FRONT DRIVER SIDE PRETENSIONER SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front seat outer belt assembly LH.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.
CAUTION:
Never connect the tester to the front seat outer belt assembly LH (front driver side pretensioner squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).
OK:
DTC B1900, B1901, B1902, B1903, or 73 is not output.
HINT:
Codes other than DTC B1900, B1901, B1902, B1903, and 73 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY LH (See page SB-21)**

NG

2	CHECK CONNECTOR

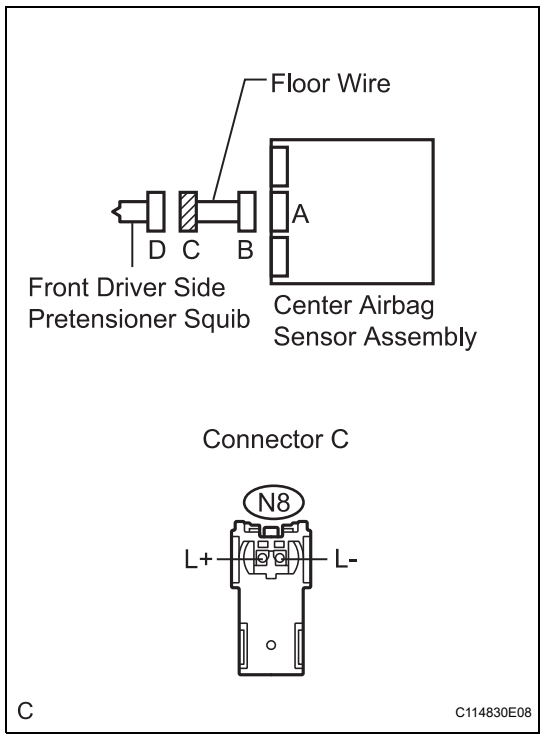
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire connector (on the front seat outer belt assembly LH side) is not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

3	CHECK FLOOR WIRE (FRONT DRIVER SIDE PRETENSIONER SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Check for a short to B+ in the circuit.
  (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
  (2) Turn the power switch on (IG).
  (3) Measure the voltage according to the value(s) in the table below.
  Standard voltage

Tester connection	Condition	Specified condition
N8-1 (L+) - Body ground	Power switch on (IG)	Below 1 V
N8-2 (L-) - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
  (1) Turn the power switch off.
  (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
  (3) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
N8-1 (L+) - N8-2 (L-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
  (1) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
N8-1 (L+) - Body ground	Always	1 MΩ or higher
N8-2 (L-) - Body ground	Always	1 MΩ or higher

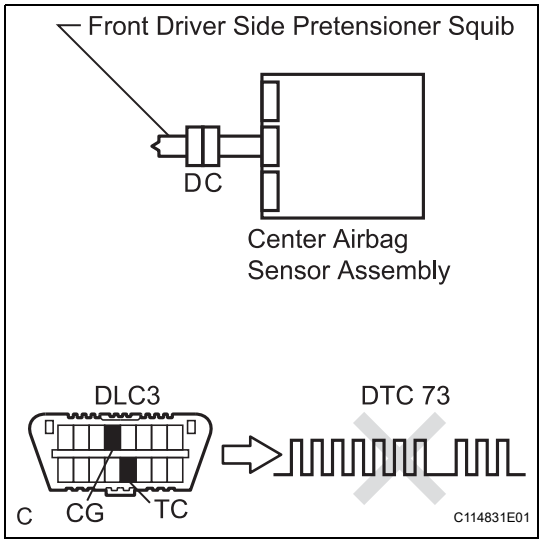
(e) Check for a short in the circuit.
  (1) Release the activation prevention mechanism built into connector B (See page RS-33).
  (2) Measure the resistance according to the value(s) in the table below.
  Standard resistance

Tester Connection	Condition	Specified Condition
N8-1 (L+) - N8-2 (L-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE**

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front seat outer belt assembly LH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1900, B1901, B1902, B1903, or 73 is not output.

HINT:

Codes other than DTC B1900, B1901, B1902, B1903, or 73 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

USE SIMULATION METHOD TO CHECK (See page RS-33)

DTC	B1905/74	Short in Front Passenger Side Pretensioner Squib Circuit

DTC	B1906/74	Open in Front Passenger Side Pretensioner Squib Circuit

DTC	B1907/74	Short to GND in Front Passenger Side Pretensioner Squib Circuit

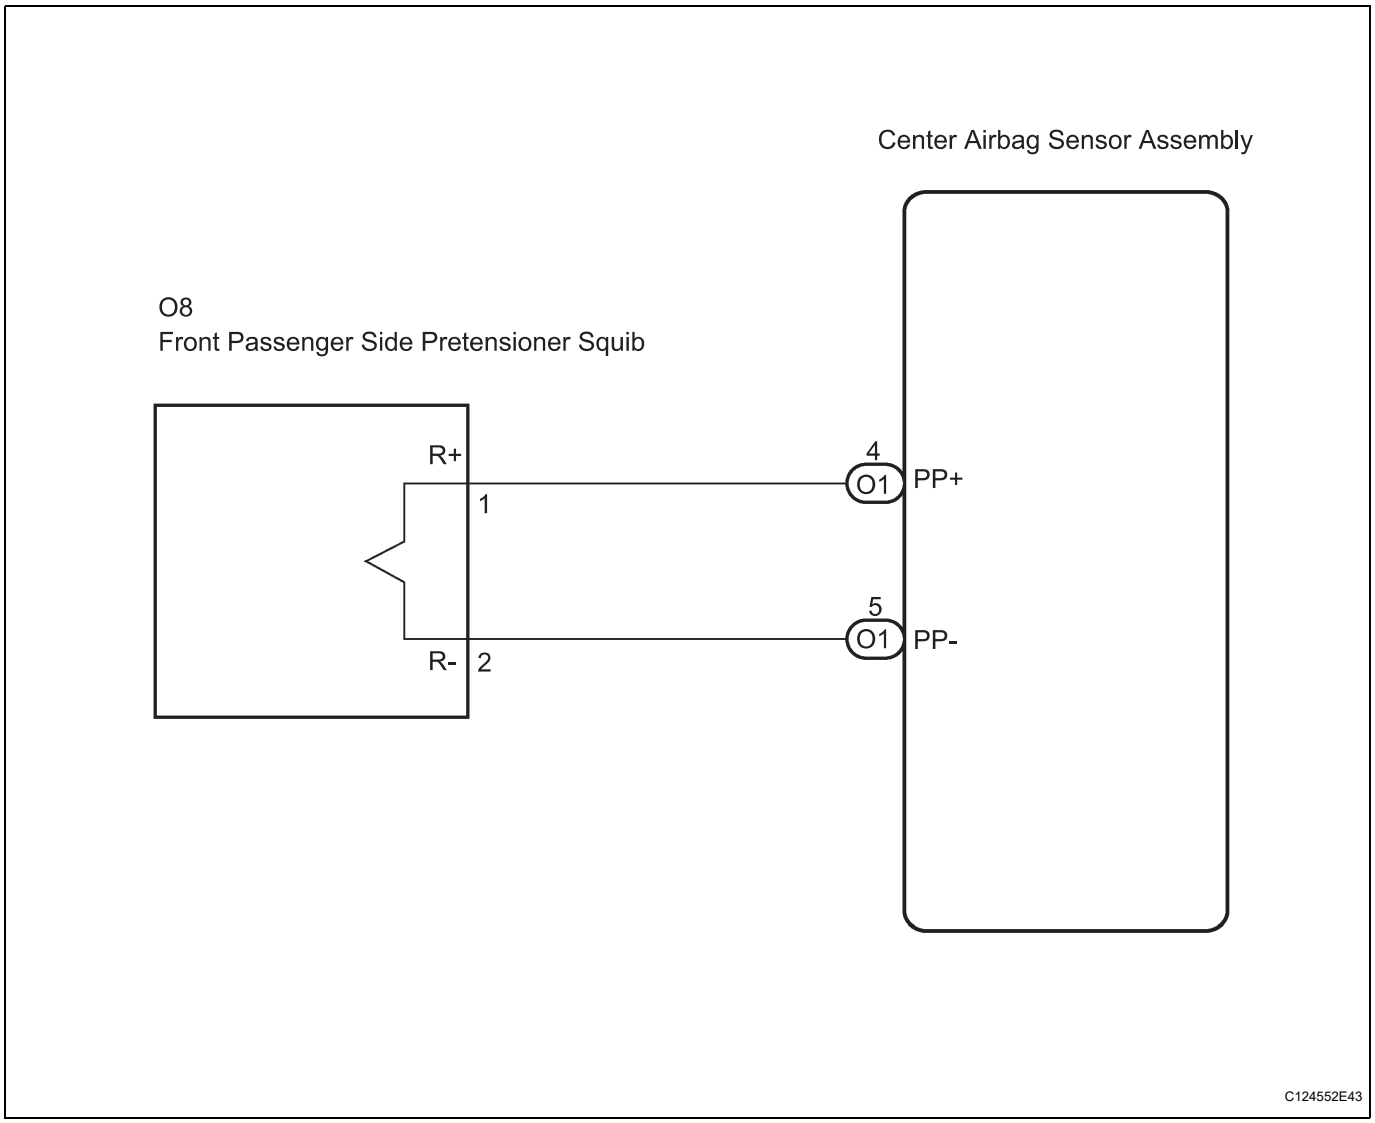
DTC	B1908/74	Short to B+ in Front Passenger Side Pretensioner Squib Circuit

DESCRIPTION

The front passenger side front pretensioner squib circuit consists of the center airbag sensor assembly and the front seat outer belt assembly RH.
This circuit instructs the SRS to deploy when deployment conditions are met.
These DTCs are recorded when a malfunction is detected in the front passenger side front pretensioner squib circuit.

DTC No.	DTC Detection Condition	Trouble Area
B1905/74	• The center airbag sensor assembly receives a line short circuit signal 5 times in the front passenger side front pretensioner squib circuit during primary check. • Front passenger side front pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Front seat outer belt assembly RH (Front passenger side pretensioner squib) • Center airbag sensor assembly
B1906/74	• The center airbag sensor assembly receives an open circuit signal in the front passenger side front pretensioner squib circuit for 2 seconds. • Front passenger side front pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Front seat outer belt assembly RH (Front passenger side pretensioner squib) • Center airbag sensor assembly
B1907/74	• The center airbag sensor assembly receives a short circuit to ground signal in the front passenger side front pretensioner squib circuit for 0.5 seconds. • Front passenger side front pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Front seat outer belt assembly RH (Front passenger side pretensioner squib) • Center airbag sensor assembly
B1908/74	• The center airbag sensor assembly receives a short circuit to B+ signal in the front passenger side front pretensioner squib circuit for 0.5 seconds. • Front passenger side front pretensioner squib malfunction • Center airbag sensor assembly malfunction	• Floor wire No. 2 • Front seat outer belt assembly RH (Front passenger side pretensioner squib) • Center airbag sensor assembly

WIRING DIAGRAM

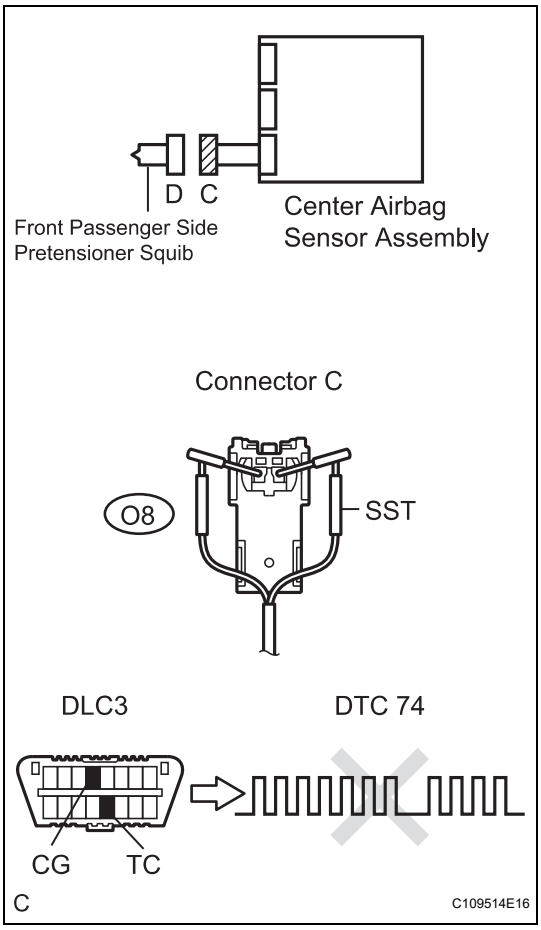


INSPECTION PROCEDURE

HINT:

- Perform the simulation method by selecting "check mode" (signal check) with the intelligent tester (See page RS-44).
- After selecting "check mode" (signal check), perform the simulation method by wiggling each connector of the airbag system or driving the vehicle on a city or rough road (See page RS-44).

1	CHECK FRONT SEAT OUTER BELT ASSEMBLY RH (FRONT PASSENGER SIDE PRETENSIONER SQUIB)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connectors from the front seat outer belt assembly RH.
(d) Connect the white wire side of SST (resistance 2.1 Ω) to connector C.
CAUTION:
Never connect the tester to the front seat outer belt assembly RH (front passenger side pretensioner squib) for measurement, as this may lead to a serious injury due to airbag deployment.
NOTICE:
- **Do not forcibly insert the SST into the terminals of the connector when connecting.**
- **Insert straight the SST into the terminals of the connector.**

SST 09843-18060

(e) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Clear the DTCs stored in the memory (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG), and wait for at least 60 seconds.
(j) Check the DTCs (See page RS-41).
OK:
DTC B1905, B1906, B1907, B1908, or 74 is not output.
HINT:
Codes other than DTC B1905, B1906, B1907, B1908, and 74 may be output at this time, but they are not related to this check.

OK → **REPLACE FRONT SEAT OUTER BELT ASSEMBLY RH (See page SB-21)**

NG

2	CHECK CONNECTOR

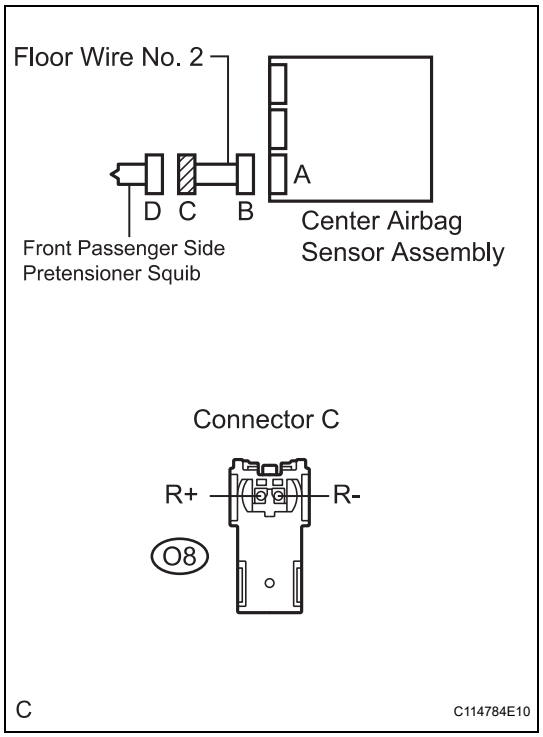
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the SST from connector C.
(d) Check that the floor wire No. 2 connector (on the front seat outer belt assembly RH side) is not damaged.

OK:
The lock button is not disengaged, or the claw of the lock is not deformed or damaged.

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

3	CHECK FLOOR WIRE NO. 2 (FRONT PASSENGER SIDE PRETENSIONER SQUIB CIRCUIT)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Check for a short to B+ in the circuit.
 (1) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
 (2) Turn the power switch on (IG).
 (3) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
O8-1 (R+) - Body ground	Power switch on (IG)	Below 1 V
O8-2 (R-) - Body ground	Power switch on (IG)	Below 1 V

(c) Check for an open in the circuit.
 (1) Turn the power switch off.
 (2) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
 (3) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O8-1 (R+) - O8-2 (R-)	Always	Below 1 Ω

(d) Check for a short to ground in the circuit.
 (1) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
O8-1 (R+) - Body ground	Always	1 MΩ or higher
O8-2 (R-) - Body ground	Always	1 MΩ or higher

(e) Check for a short in the circuit.
 (1) Release the activation prevention mechanism built into connector B (See page RS-33).
 (2) Measure the resistance according to the value(s) in the table below.

Standard resistance

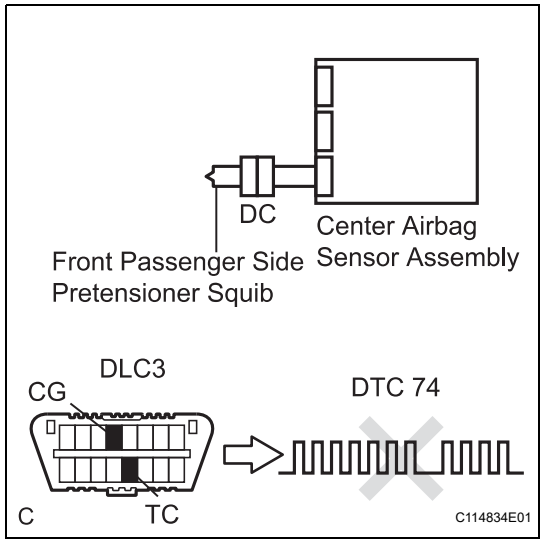
Tester Connection	Condition	Specified Condition
O8-1 (R+) - O8-2 (R-)	Always	1 MΩ or higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

RS

OK

4	CHECK CENTER AIRBAG SENSOR ASSEMBLY



(a) Connect the connectors to the front seat outer belt assembly RH and the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the memory (See page RS-41).
(e) Turn the power switch off.
(f) Turn the power switch on (IG), and wait for at least 60 seconds.
(g) Check the DTCs (See page RS-41).

OK:

DTC B1905, B1906, B1907, B1908, or 74 is not output.

HINT:

Codes other than DTC B1905, B1906, B1907, B1908, and 74 may be output at this time, but they are not related to this check.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

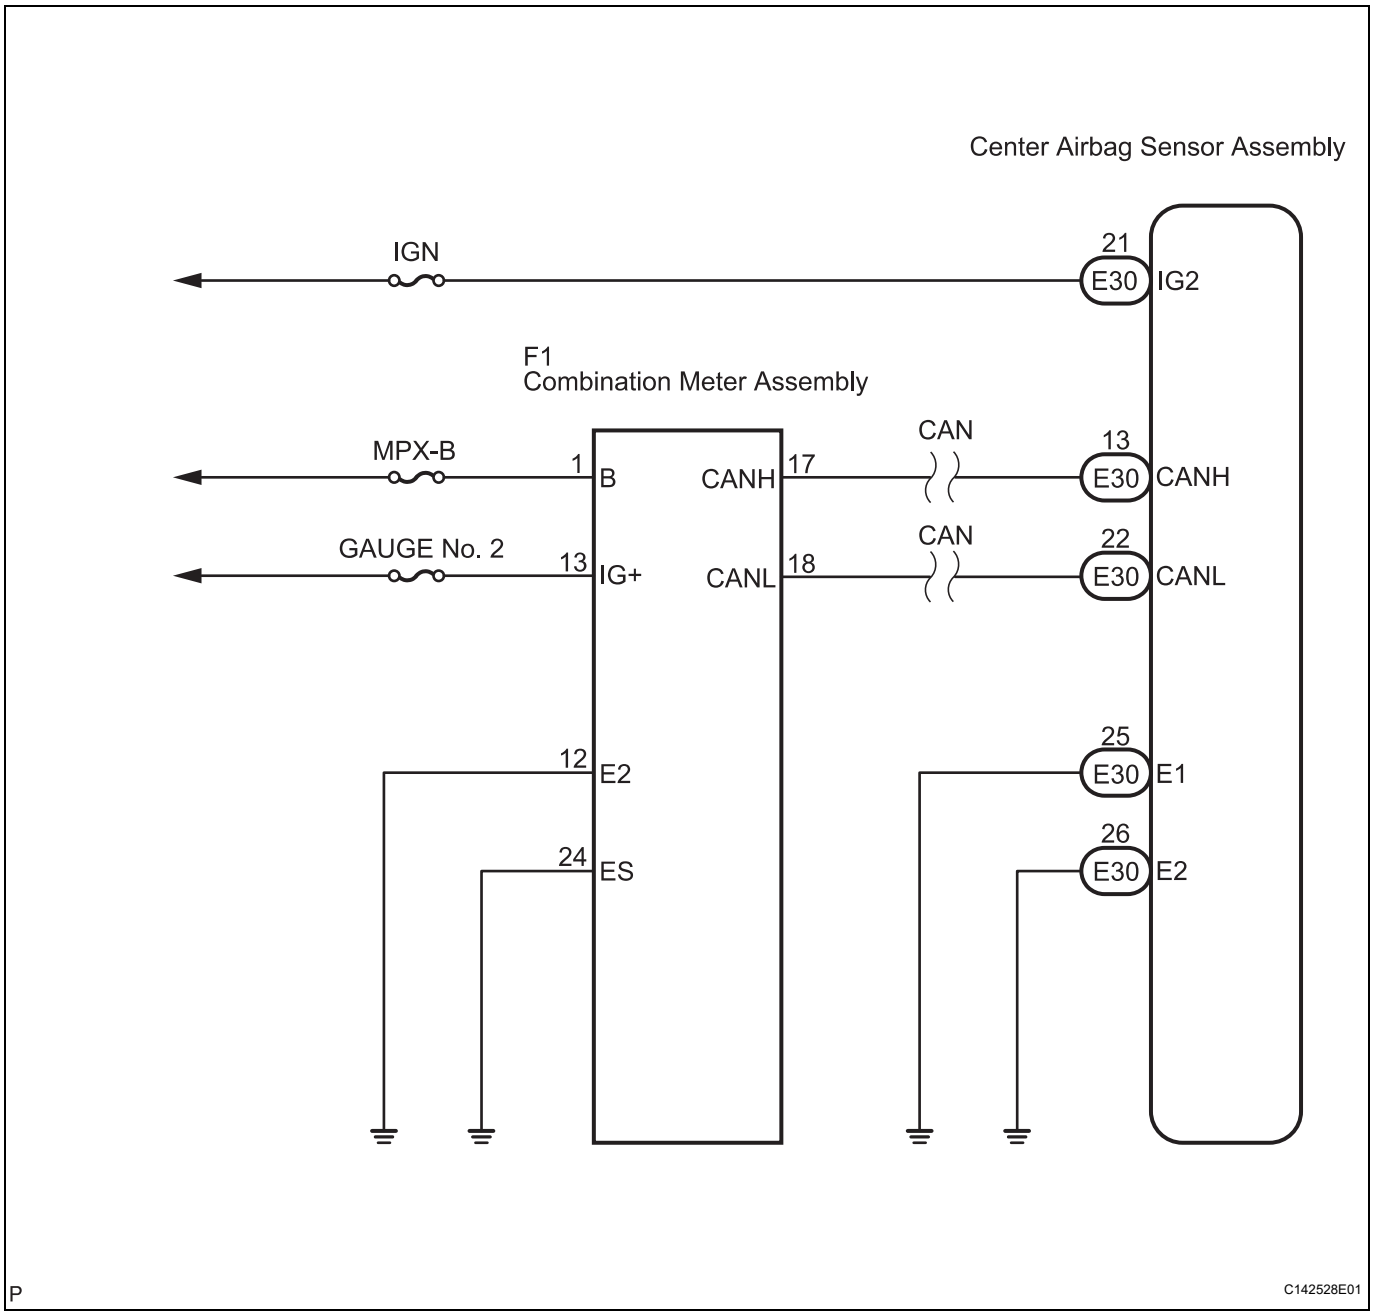
USE SIMULATION METHOD TO CHECK (See page RS-33)

SRS Warning Light Remains ON

DESCRIPTION

The SRS warning light is located on the combination meter assembly.
When the SRS is normal, the SRS warning light comes on for approximately 6 seconds after the power switch is turned from off to on (IG), and then goes off automatically.
If there is a malfunction in the SRS, the SRS warning light comes on to inform the driver of a problem.
When terminals TC and CG of the DLC3 are connected, the DTC is displayed by blinking of the SRS warning light.
The SRS is equipped with a voltage-increase circuit (DC-DC converter) in the center airbag sensor assembly in case the source voltage drops.
When the battery voltage drops, the voltage-increase circuit (DC-DC converter) functions to increase the voltage of the SRS to normal voltage.
A malfunction in this circuit is not recorded in the center airbag sensor assembly. The SRS warning light automatically goes off when the source voltage returns to normal.
The signal to illuminate the SRS warning light is transmitted from the center airbag sensor assembly to the combination meter assembly through the CAN communication system.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication DTC is output (See page CA-22).

Result

Condition	Proceed To
DTC is not output	A
DTC is output	B

RS

B → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A

2 CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → CHECK AND REPLACE BATTERY OR CHARGING SYSTEM

OK

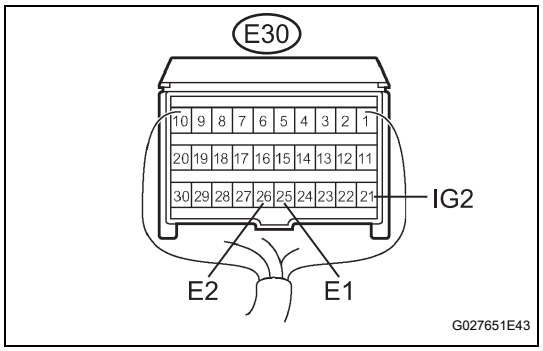
3 CHECK CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the center airbag sensor assembly and combination meter assembly.
OK:
The connectors are properly connected.

NG → CONNECT CONNECTORS PROPERLY

OK

4 CHECK WIRE HARNESS (CENTER AIRBAG SENSOR ASSEMBLY - BODY GROUND)



(a) Disconnect the connectors from the center airbag sensor assembly.
(b) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(c) Turn the power switch on (IG).
(d) Operate all components of the electrical system (defogger, wipers, headlight, heater blower, etc.).
(e) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection	Condition	Specified Condition
E30-21 (IG2) - Body ground	Power switch on (IG)	10 to 14 V

(f) Turn the power switch off.
(g) Measure the resistance according to the value(s) in the table below.

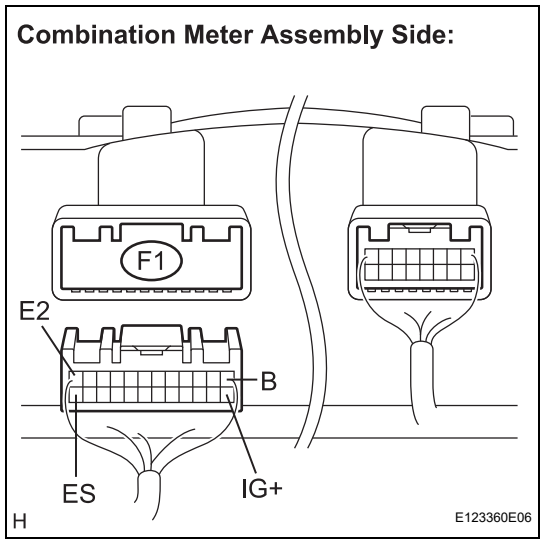
Standard resistance

Tester Connection	Condition	Specified Condition
E30-25 (E1) - Body ground	Always	Below 1 Ω
E30-26 (E2) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS

OK

5 CHECK WIRE HARNESS (COMBINATION METER ASSEMBLY - BODY GROUND)



(a) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(b) Disconnect the F1 connector from the combination meter assembly.
(c) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(d) Turn the power switch on (IG).
(e) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F1-1 (B) - Body ground	Always	10 to 14 V
F1-13 (IG+) - Body ground	Power switch on (IG)	10 to 14 V

(f) Turn the power switch off.
(g) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F1-12 (E2) - Body ground	Always	Below 1 Ω
F1-24 (ES) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS

OK

6 CHECK SRS WARNING LIGHT

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the combination meter assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG).
(f) Check the SRS warning light condition.

OK:

After the primary check period, SRS warning light goes off for approximately 10 seconds, and remains on.

HINT:

The primary check period shows approximately 6 seconds after the power switch is turned on (IG).

NG → **GO TO METER / GAUGE SYSTEM (See page ME-14)**

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

SRS Warning Light does not Come ON

DESCRIPTION

See page RS-222.

WIRING DIAGRAM

See page RS-223.

INSPECTION PROCEDURE

1	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **CHECK AND REPLACE BATTERY OR CHARGING SYSTEM**

OK

2	CHECK CONNECTOR

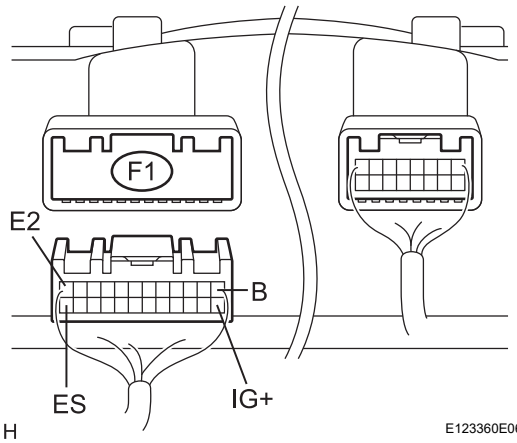
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connector is properly connected to the combination meter assembly.
OK:
The connector is properly connected.

NG → **CONNECT CONNECTOR PROPERLY**

OK

3	CHECK WIRE HARNESS (COMBINATION METER ASSEMBLY - BODY GROUND)

Combination Meter Assembly Side:



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the F1 connector from the combination meter assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
F1-1 (B) - Body ground	Always	10 to 14 V
F1-13 (IG+) - Body ground	Power switch on (IG)	10 to 14 V

(g) Turn the power switch off.
(h) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
F1-12 (E2) - Body ground	Always	Below 1 Ω
F1-24 (ES) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS

OK

4	CHECK SRS WARNING LIGHT

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Connect the connector to the combination meter assembly.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG).
(f) Check the SRS warning light condition.

OK:

After the primary check period, SRS warning light goes off for approximately 10 seconds, and remains on.

HINT:
The primary check period is approximately 6 seconds after the power switch is turned on (IG).

NG → GO TO METER / GAUGE SYSTEM (See page ME-14)

OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

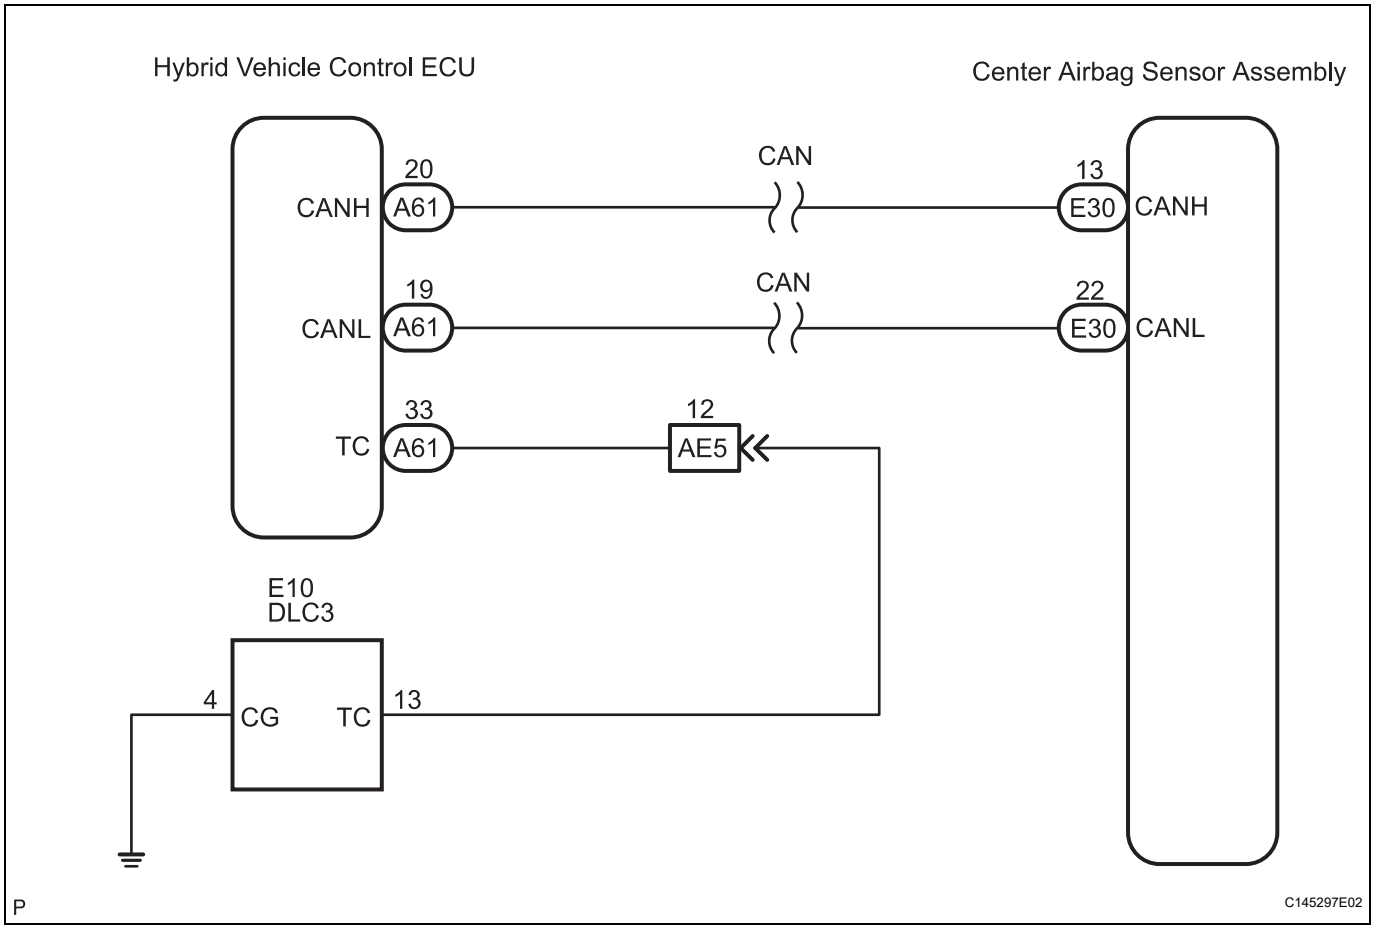
Diagnosis Circuit

DESCRIPTION

DTC output mode is set by connecting terminals TC and CG of the DLC3.
DTCs are displayed by blinking of the SRS warning light.
HINT:

- When each warning light stays blinking, a ground short in the wiring of terminal TC of the DLC3 or an internal ground short in each ECU is suspected.
- A DTC output mode signal is transmitted through CAN communication system to each ECU including the center airbag sensor assembly. Thus when all systems do not enter DTC output mode, there may be an hybrid vehicle control ECU malfunction.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK CAN COMMUNICATION SYSTEM

(a) Check if a CAN communication system DTC is output (See page CA-22).

Result

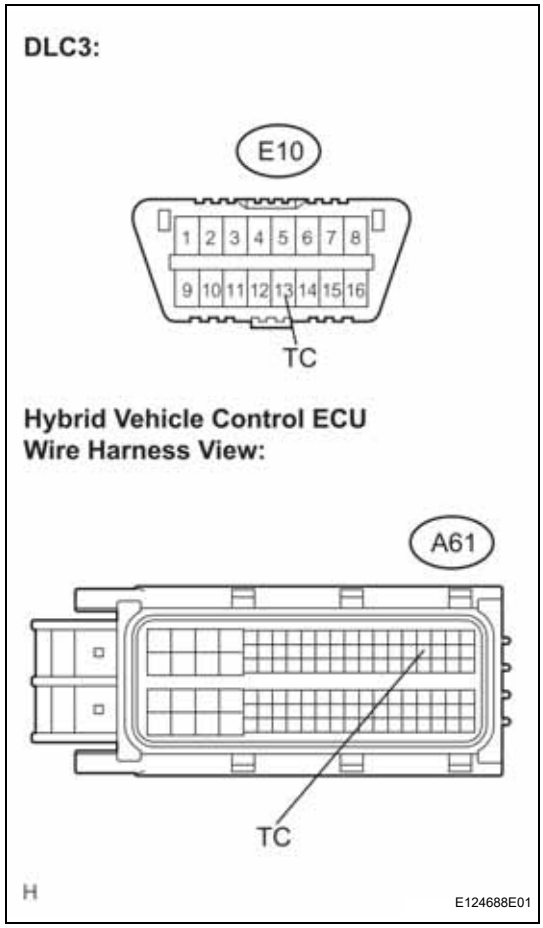
Condition	Proceed to
DTC is not output	A
DTC is output	B

RS

B → REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

A

2 CHECK WIRE HARNESS (DLC3 - HYBRID VEHICLE CONTROL ECU)



(a) Turn the power switch off.
(b) Disconnect the connector from the hybrid vehicle control ECU.
(c) Measure the resistance according to the value(s) in the table below.

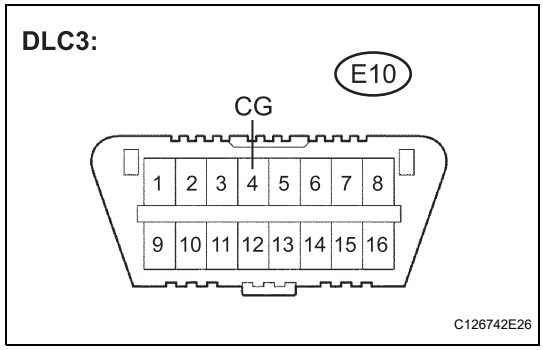
Standard resistance

Tester Connection	Condition	Specified Condition
E10-13 (TC) - A61-33 (TC)	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS (TC OF DLC3 - TC OF HYBRID VEHICLE CONTROL ECU)

OK

3 CHECK WIRE HARNESS (CG OF DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

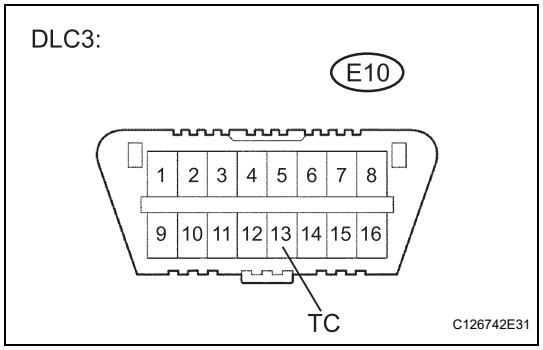
Tester Connection	Condition	Specified Condition
E10-4 (CG) - Body ground	Always	Below 1 Ω

NG → REPAIR OR REPLACE WIRE HARNESS (CG OF DLC3 - BODY GROUND)

RS

OK

4	CHECK WIRE HARNESS (TC OF DLC3 - BODY GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E10-13 (TC) - Body ground	Always	1 MΩ or higher

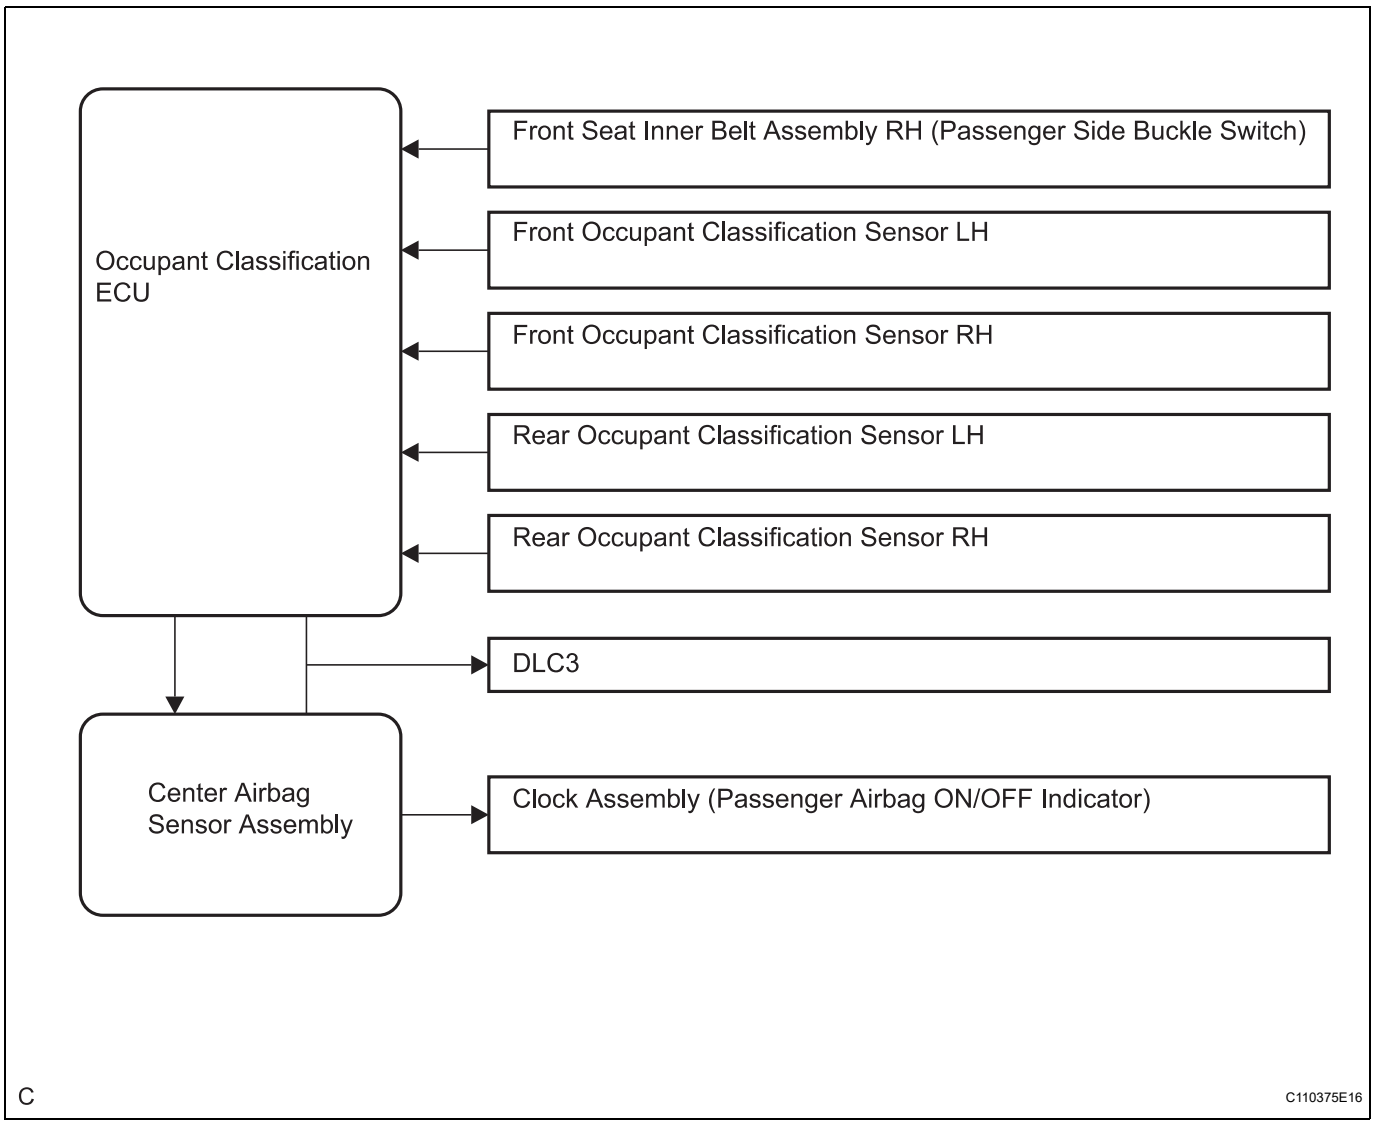
OK

REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

SYSTEM DIAGRAM



SYSTEM DESCRIPTION

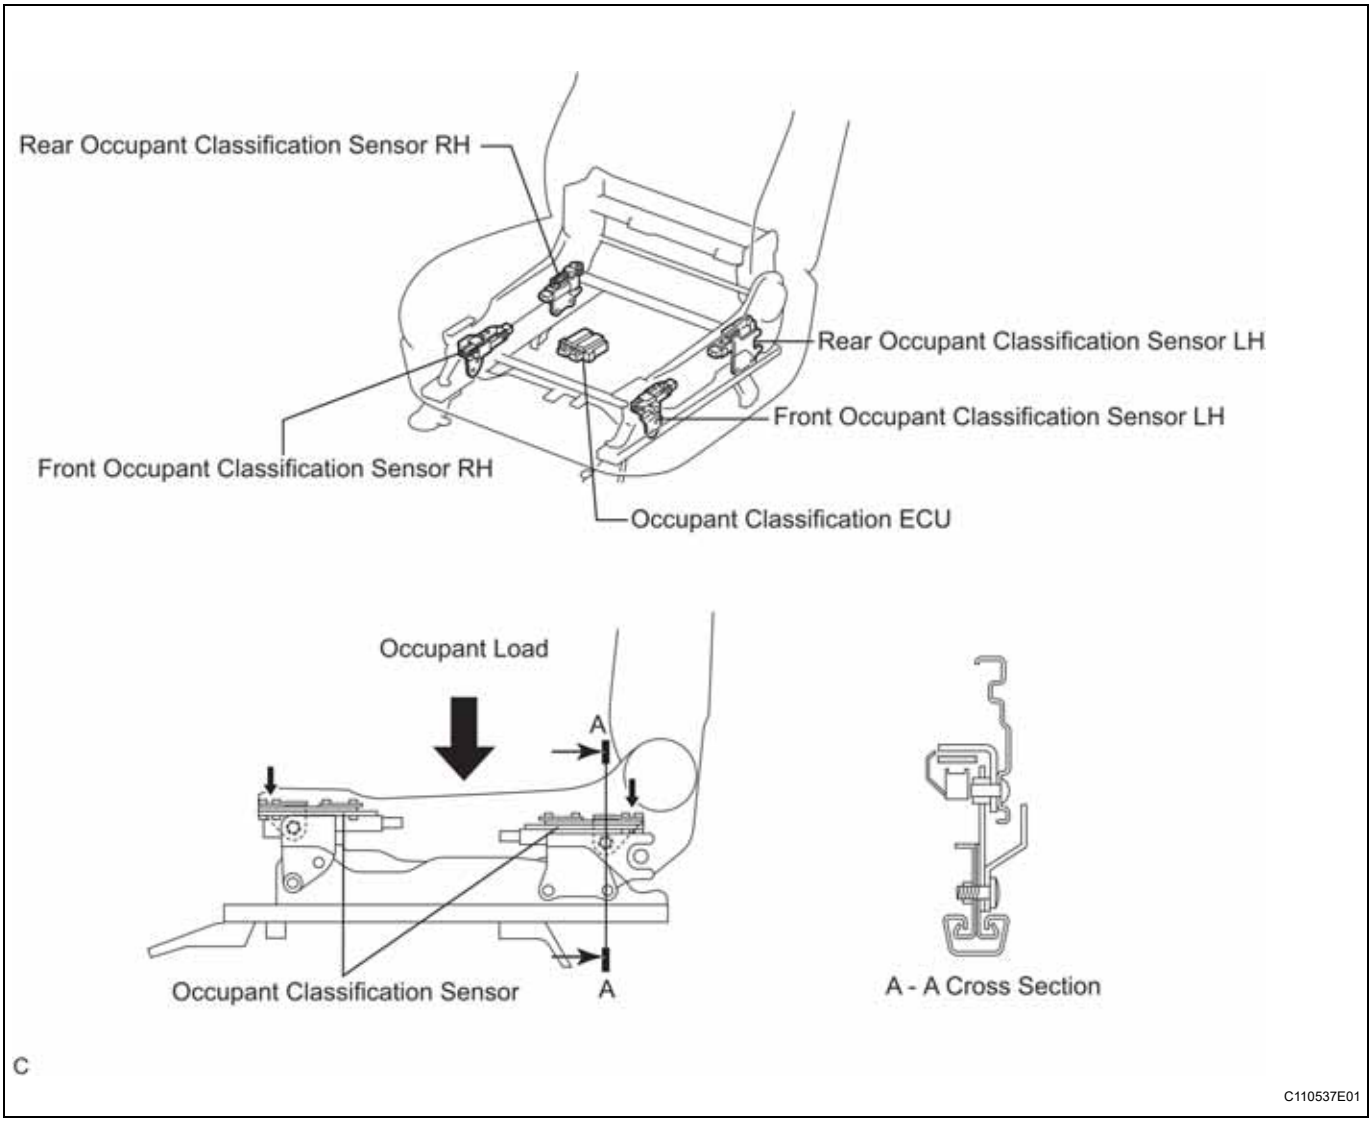
1. DESCRIPTION OF OCCUPANT CLASSIFICATION SYSTEM

(a) GENERAL DESCRIPTION.

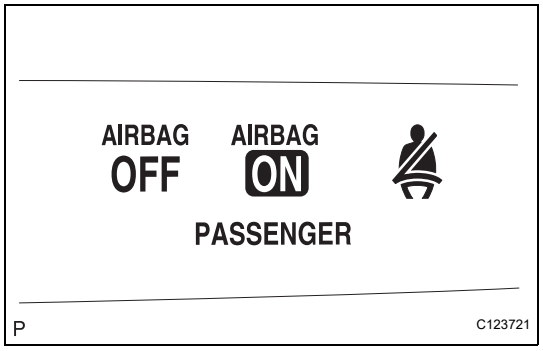
(1) In the occupant classification system, the occupant classification ECU calculates the weight of the occupant based on a signal from the occupant classification sensors. This system recognizes the occupant as a child if it detects a weight of less than 36 kg (79.37 lb), and disables the front passenger airbag and front passenger side-side airbag.

(2) This system is mainly comprised of 4 occupant classification sensors that detect the load on the front passenger seat. The occupant classification ECU controls the system, and the passenger airbag ON/OFF indicator indicates the ON/OFF condition of the front passenger airbag and front passenger side-side airbag.

(b) OCCUPANT CLASSIFICATION SENSOR.



(1) The occupant classification sensors are installed on 4 brackets connecting the seat rail and seat frame. Accordingly, when load is applied to the front passenger seat by an occupant sitting in it, the occupant classification sensors register a distortion.



(c) DESCRIPTION FOR PASSENGER AIRBAG ON/OFF INDICATOR.

(1) The passenger airbag ON/OFF indicator is installed on the clock assembly. This indicator informs the driver whether the occupant classification ECU puts the front passenger airbag assembly into an active state or inactive state.

(2) If a malfunction occurs in the occupant classification system, "OFF" indication of the passenger airbag ON/OFF indicator and the SRS warning light come on.

HOW TO PROCEED WITH TROUBLESHOOTING

The intelligent tester can be used in steps 4, 6, 8, and 9.

INITIALIZATION

1. ZERO POINT CALIBRATION

NOTICE:

Make sure that the front passenger seat is not occupied before performing the operation:

HINT:

Perform zero point calibration and sensitivity check if any of the following conditions occur.

- The occupant classification ECU is replaced.
- Accessories (seatback tray and seat cover, etc.) are installed.
- The front passenger seat is removed from the vehicle.
- The passenger airbag ON/OFF indicator ("OFF") comes on when the front passenger seat is not occupied.
- The vehicle is brought to the workshop for repair due to an accident or a collision.

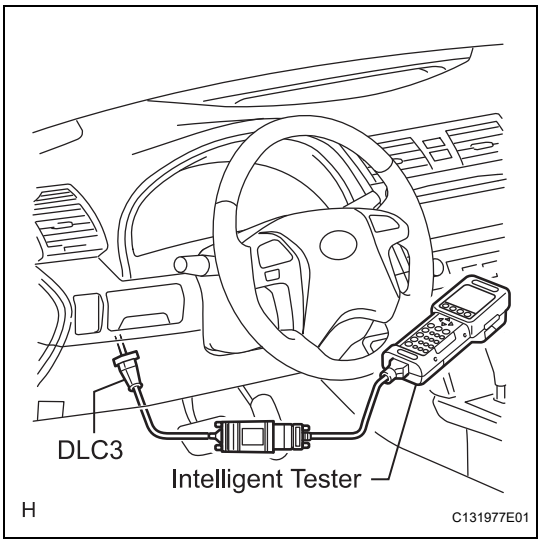
(a) Zero point calibration and sensitivity check procedures.

HINT:

Make sure that zero point calibration has finished normally, and then perform the sensitivity check.

(1) Adjust the seat position according to the table below.

Adjustment Component	Position
Slide Direction	Rearmost position
Reclining Angle	Upright position
Headrest Height	Lowest position
Lifter Height	Lowest position



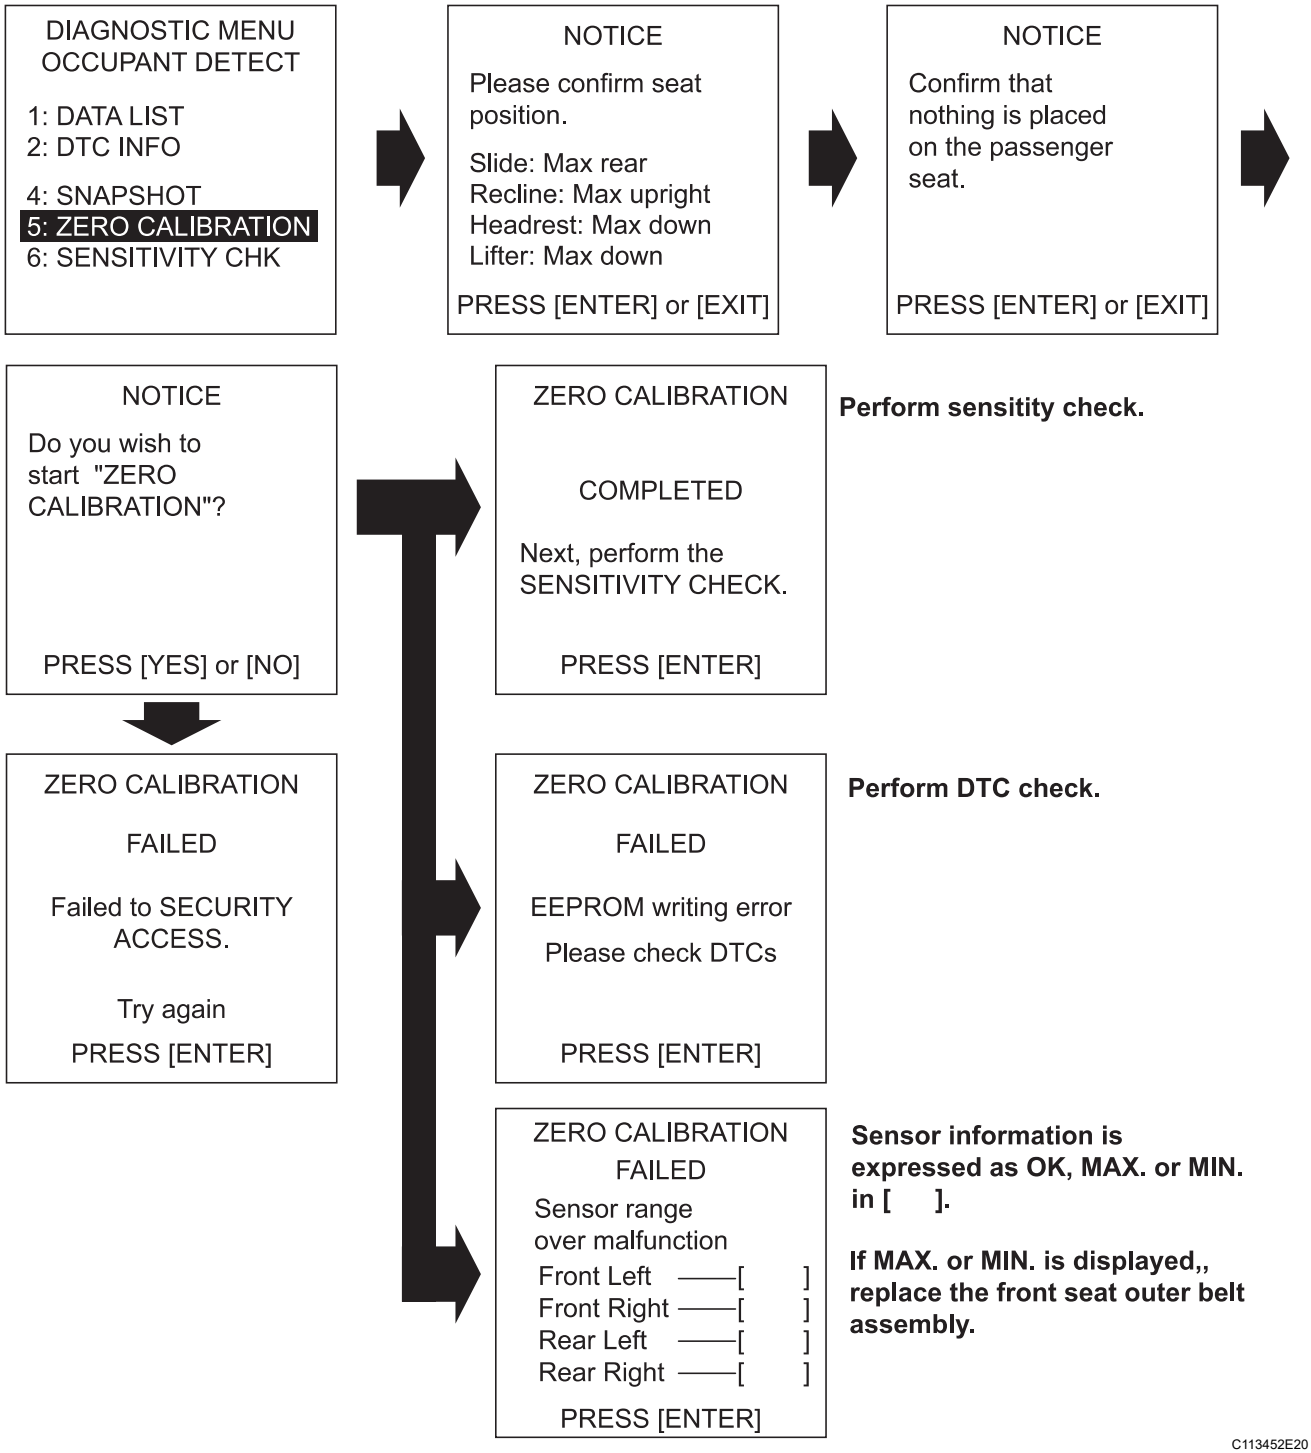
(2) Connect the intelligent tester to the DLC3.

(3) Turn the power switch on (IG).

(4) Perform the zero point calibration by following the prompts on the tester screen.

ZERO POINT CALIBRATION PROCEDURE

"1: DIAGNOSIS" - "1: OBD/MOBD" - "MODEL YEAR" - "MODEL SELECTION" - "CAMRY" - Select the option parts" - "9: OCCUPANT DETECT"
Refer to the following screen flow.



HINT:
Refer to the intelligent tester operator's manual for further details.

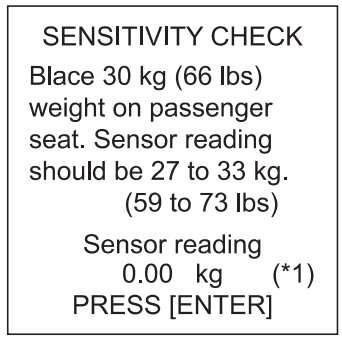
RS

OK:
"COMPLETE" is displayed.

(5) Perform the sensitivity check by following the prompts on the tester screen.
(6) Confirm that the beginning sensor reading within standard value.
Standard value:
-3.2 to 3.2 kg (-7 to 7 lb)
(7) Place a 30 kg (66.14 lb) weight (eg. a 30 kg (66.14 lb) of lead mass) onto the front passenger seat.
(8) Confirm that the sensitivity is within the standard value.

SENSITIVITY CHECK PROCEDURE

"1: DIAGNOSIS" - "1: OBD/MOBD" - "MODEL YEAR" - "MODEL SELECTION = CAMRY" - Select the option parts - "9: OCCUPANT DETECT" - Refer to the following screen flow.



*1: kg = lb

Unit can be changed based on unit conversion setting.

[System Selection Screen]

"1: DIAGNOSIS" - "9: SETUP" - "4: UNIT CONVERSION" - "WEIGHT" (kg = lbs)

C C113453E18

Standard value:
27 to 33 kg (59.52 to 72.75 lb)

HINT:

- When performing the sensitivity check, use a solid metal weight (the check result may not appear properly if the weight made from liquid is used).

- When the sensitivity deviates from the standard value, retighten the bolts of the front passenger seat without deforming the seat rail. After performing this procedure, if the sensitivity is not within the standard value, replace the front seat assembly RH.
- When zero point calibration has not finished normally, replace the front seat assembly RH.

PROBLEM SYMPTOMS TABLE

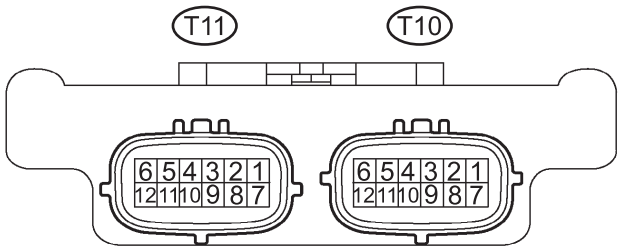
HINT:
Proceed to the troubleshooting for each circuit in the table below.

OCCUPANT CLASSIFICATION SYSTEM:

Symptom	Suspected area	See page
The front passenger seat condition differs from the indication by the passenger airbag ON/OFF indicator (DTC is not output).	Trouble in Passenger Airbag ON/OFF Indicator	RS-339

TERMINALS OF ECU

1. OCCUPANT CLASSIFICATION ECU (for Power seat)

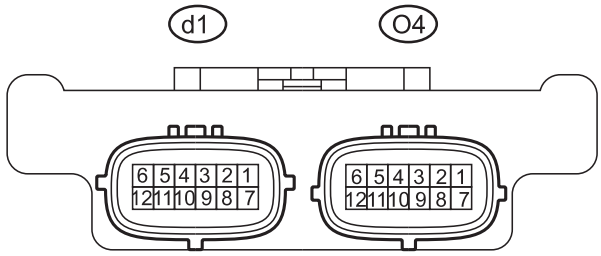


H043128E06

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specification
T10-1 (+B) - T10-3 (GND)	W - W-B	Battery	Always	10 to 14 V
T10-2 (DIA) - T10-3 (GND)	GR - W-B	Diagnosis (DLC3)	Power switch on (IG)	Pulse generation
T10-3 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 V
T10-4 (FSR-) - T10-3 (GND)	Y - W-B	Center airbag sensor assembly communication line (-)	Always	Below 1 V
T10-5 (BGND) - T10-3 (GND)	GR - W-B	Passenger side buckle switch ground line	Always	Below 1 V
T10-7 (IG) - T10-3 (GND)	BR - W-B	Power source (ECU-B Fuse)	Power switch on (IG)	10 to 14 V
T10-8 (FSR+) - T10-4 (FSR-)	L - Y	Center airbag sensor assembly communication line	Power switch on (IG)	Pulse generation
T10-9 (BSW) - T10-5 (BGND)	B - GR	Passenger side buckle switch line	Always	Below 1 V
T11-1 (SGD1) - T10-3 (GND)	G - W-B	Front occupant classification sensor LH ground line	Always	Below 1 V
T11-2 (SGD2) - T10-3 (GND)	O - W-B	Front occupant classification sensor RH ground line	Always	Below 1 V
T11-3 (SGD3) - T10-3 (GND)	W - W-B	Rear occupant classification sensor LH ground line	Always	Below 1 V
T11-4 (SGD4) - T10-3 (GND)	BR - W-B	Rear occupant classification sensor RH ground line	Always	Below 1 V
T11-5 (SVC3) - T11-3 (SGD3)	GR - W	Rear occupant classification sensor LH power supply line	Power switch on (IG), a load is applied to rear occupant classification sensor LH	4.5 to 5.1 V
T11-6 (SVC4) - T11-4 (SGD4)	V - BR	Rear occupant classification sensor RH power supply line	Power switch on (IG), a load is applied to rear occupant classification sensor RH	4.5 to 5.1 V
T11-7 (SIG1) - T11-1 (SGD1)	P - G	Front occupant classification sensor LH signal line	Power switch on (IG), a load is applied to front occupant classification sensor LH	0.2 to 4.9 V
T11-8 (SIG2) - T11-2 (SGD2)	L - O	Front occupant classification sensor RH signal line	Power switch on (IG), a load is applied to front occupant classification sensor RH	0.2 to 4.9 V

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specification
T11-9 (SIG3) - T11-3 (SGD3)	Y - W	Rear occupant classification sensor LH signal line	Power switch on (IG), a load is applied to rear occupant classification sensor LH	0.2 to 4.9 V
T11-10 (SIG4) - T11-4 (SGD4)	B - BR	Rear occupant classification sensor RH signal line	Power switch on (IG), a load is applied to rear occupant classification sensor RH	0.2 to 4.9 V
T11-11 (SVC1) - T11-1 (SGD1)	R - G	Front occupant classification sensor LH power supply line	Power switch on (IG), a load is applied to front occupant classification sensor LH	4.5 to 5.1 V
T11-12 (SVC2) - T11-2 (SGD2)	W - O	Front occupant classification sensor RH power supply line	Power switch on (IG), a load is applied to front occupant classification sensor RH	4.5 to 5.1 V

2. OCCUPANT CLASSIFICATION ECU (for Manual seat)



C

C110373E12

Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specification
O4-1 (+B) - O4-3 (GND)	LG - W-B	Battery	Always	10 to 14 V
O4-2 (DIA) - O4-3 (GND)	O - W-B	Diagnosis (DLC3)	Power switch on (IG)	Pulse generation
O4-3 (GND) - Body ground	W-B - Body ground	Ground	Always	Below 1 V

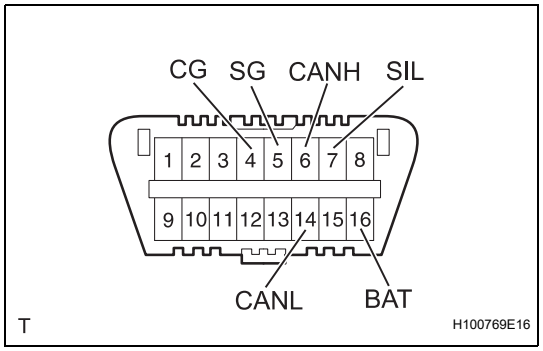
Terminal No. (Symbols)	Wiring Color	Terminal Description	Condition	Specification
d1-5 (SVC3) - d1-3 (SGD3)	GR - W	Rear occupant classification sensor LH power supply line	Power switch on (IG), a load is applied to rear occupant classification sensor LH	4.5 to 5.1 V
d1-6 (SVC4) - d1-4 (SGD4)	V - BR	Rear occupant classification sensor RH power supply line	Power switch on (IG), a load is applied to rear occupant classification sensor RH	4.5 to 5.1 V
d1-7 (SIG1) - d1-1 (SGD1)	SB - G	Front occupant classification sensor LH signal line	Power switch on (IG), a load is applied to front occupant classification sensor LH	0.2 to 4.9 V
d1-8 (SIG2) - d1-2 (SGD2)	L - O	Front occupant classification sensor RH signal line	Power switch on (IG), a load is applied to front occupant classification sensor RH	0.2 to 4.9 V
d1-9 (SIG3) - d1-3 (SGD3)	Y - W	Rear occupant classification sensor LH signal line	Power switch on (IG), a load is applied to rear occupant classification sensor LH	0.2 to 4.9 V
d1-10 (SIG4) - d1-4 (SGD4)	R - BR	Rear occupant classification sensor RH signal line	Power switch on (IG), a load is applied to rear occupant classification sensor RH	0.2 to 4.9 V
d1-11 (SVC1) - d1-1 (SGD1)	R - G	Front occupant classification sensor LH power supply line	Power switch on (IG), a load is applied to front occupant classification sensor LH	4.5 to 5.1 V
d1-12 (SVC2) - d1-2 (SGD2)	W - O	Front occupant classification sensor RH power supply line	Power switch on (IG), a load is applied to front occupant classification sensor RH	4.5 to 5.1 V



DIAGNOSIS SYSTEM

1. CHECK DLC3

(a) The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.

Symbols (Terminal No.)	Terminal Description	Condition	Pulse condition
SIL (7) - SG (5)	Bus "+" Line	During transmission	Pulse generation
CG (4) - Body ground	Chassis Ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	10 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off (*)	54 to 69 Ω
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off (*)	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off (*)	200 Ω or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off (*)	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off (*)	200 Ω or higher

NOTICE:

***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches, or the door.**

If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

If the display shows a communication error message when connecting the cable of the intelligent tester to the DLC3, turning the power switch on (IG) and operating the intelligent tester, there is a problem on the vehicle side or tester side.

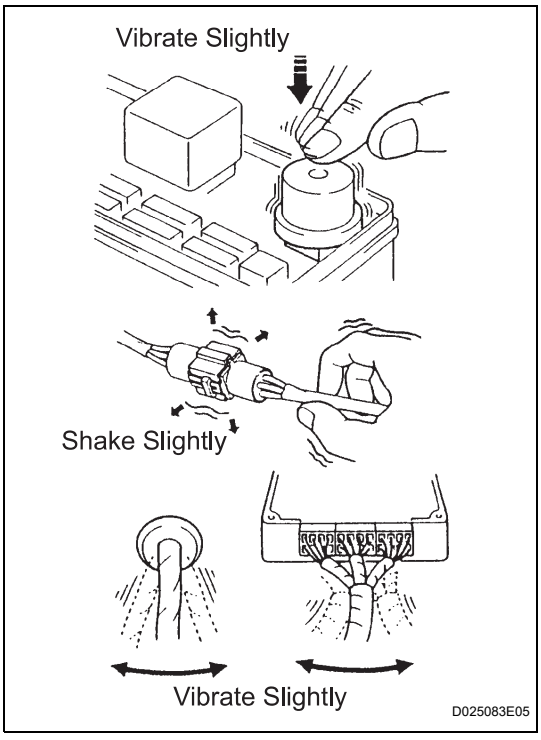
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

2. SYMPTOM SIMULATION

HINT:

The most difficult case in troubleshooting is when no symptoms occur. In such cases, a thorough customer problem analysis must be carried out. Then the same or similar conditions and environment in which the problem occurred in the customer's vehicle should be simulated. No matter how experienced or skilled a technician may be, if he proceeds to troubleshoot without confirming the problem symptoms, he will likely overlook something important and make a wrong guess at some points in the repair operation.

This leads to a standstill in troubleshooting.



(a) Vibration method: When vibration seems to be the major cause.

HINT:

Perform the simulation method only during the primary check period (for approximately 6 seconds after the power switch is turned on (IG)).

(1) Slightly vibrate the part of the sensor considered to be the problem cause with your fingers and check whether the malfunction occurs.

HINT:

Shaking the relays too strongly may result in open relays.

(2) Slightly shake the connector vertically and horizontally.

(3) Slightly shake the wire harness vertically and horizontally.

The connector joint and fulcrum of the vibration are the major areas to be checked thoroughly.

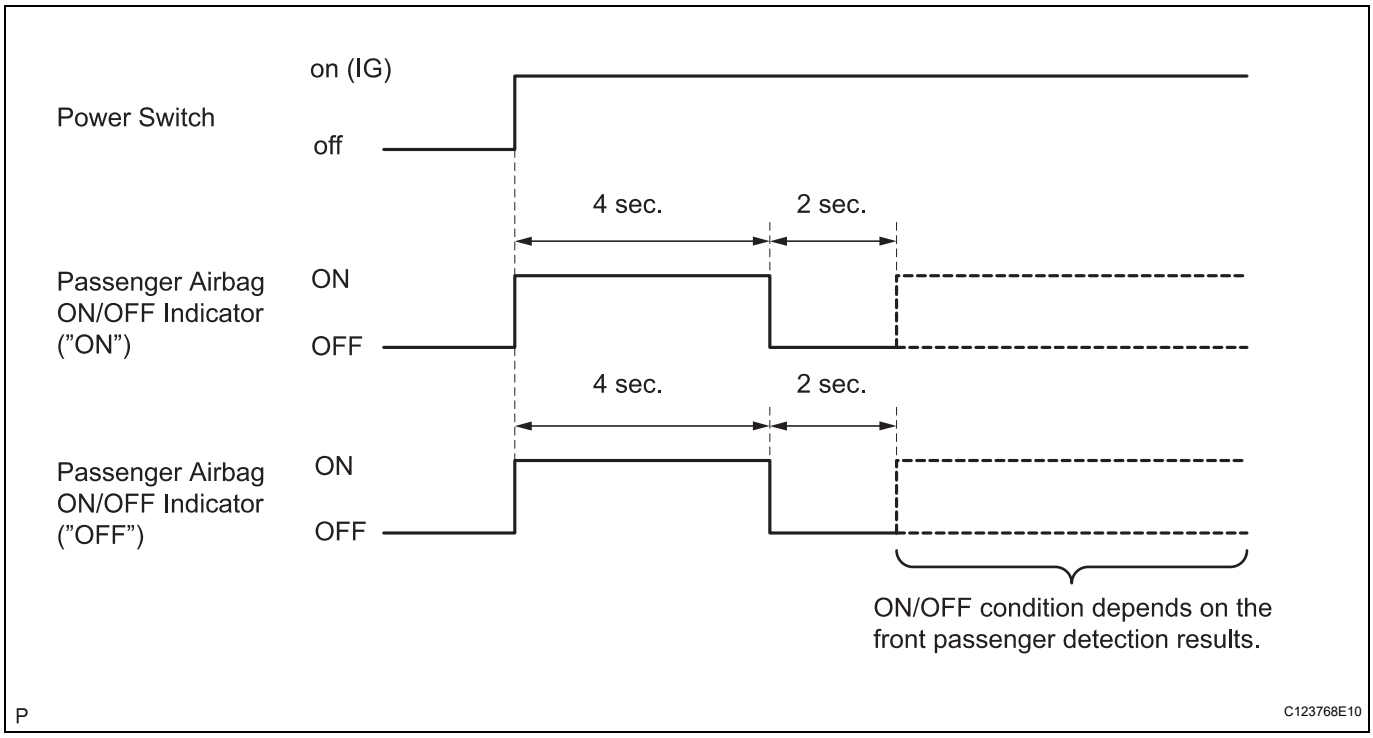
(b) Simulation method for DTC B1794:
Turn the power switch from the off to on (IG), hold it for 10 seconds, and back to off again 50 times in a row.
HINT:
DTC B1794 is output if the occupant classification ECU receives the power switch off-on (IG)-off signal 50 times in a row when a malfunction occurs in the power circuit for the occupant classification system.

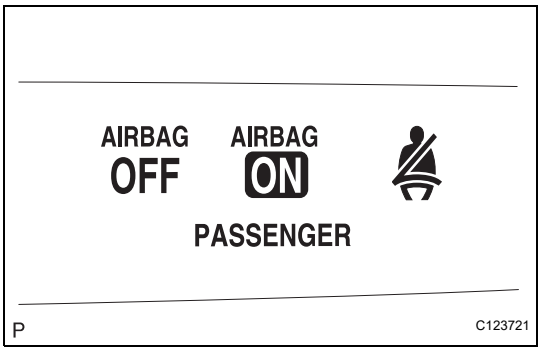
3. FUNCTION OF PASSENGER AIRBAG ON/OFF INDICATOR

(a) Initial check.
(1) Turn the power switch on (IG).
(2) The passenger airbag ON/OFF indicator ("ON" and "OFF") comes on for approximately 4 seconds, then goes off for approximately 2 seconds.
(3) Approximately 6 seconds after the power switch is turned to on (IG), the passenger airbag ON/OFF indicator will show ON or OFF depending on the conditions listed below.

Condition	ON Indicator	OFF Indicator
Vacant	OFF	OFF
Adult is seated. (Above 36 kg (79.37 lb))	ON	OFF
Child is seated. (Less than 36 kg (79.37 lb))	OFF	ON
Child restraint system is set. (*)	OFF	ON
Front passenger occupant classification system failure	OFF	ON

*: Child restraint system less than 7 kg (15.43 lb) and passenger side buckle switch is ON, then 7 to 36 kg (15.43 to 79.37 lb) is set.
HINT:
- The passenger airbag ON/OFF indicator is based on the timing chart below in order to check the indicator light circuit.
- When the occupant classification system has trouble, both the SRS warning light and the passenger airbag ON/OFF indicator ("OFF") come on. In this case, check the DTCs in "AIRBAG SYSTEM" first.





4. CHECK PASSENGER AIRBAG ON/OFF INDICATOR

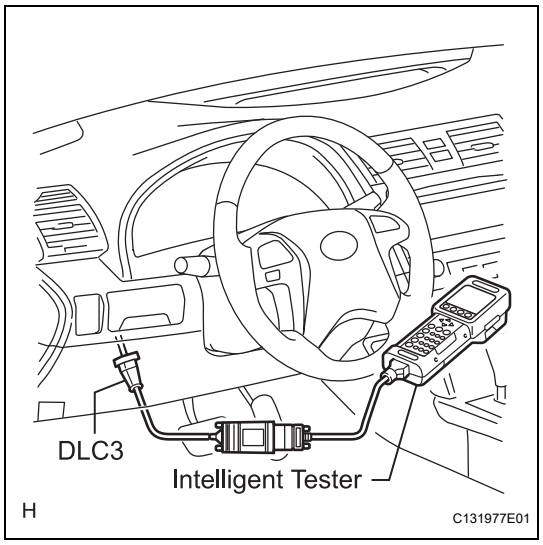
(a) Turn the power switch on (IG).

(b) Check that the passenger airbag ON/OFF indicator ("ON" and "OFF") come on for approximately 4 seconds, then goes off for approximately 2 seconds.
HINT:
Refer to the table in step 3 regarding the passenger airbag ON/OFF indicator when the power switch is turned on (IG) and approximately 6 seconds pass.

DTC CHECK / CLEAR

1. DTC CHECK

HINT:
When DTC B1650/32 is detected as a result of troubleshooting for "AIRBAG SYSTEM", perform troubleshooting for the occupant classification system.

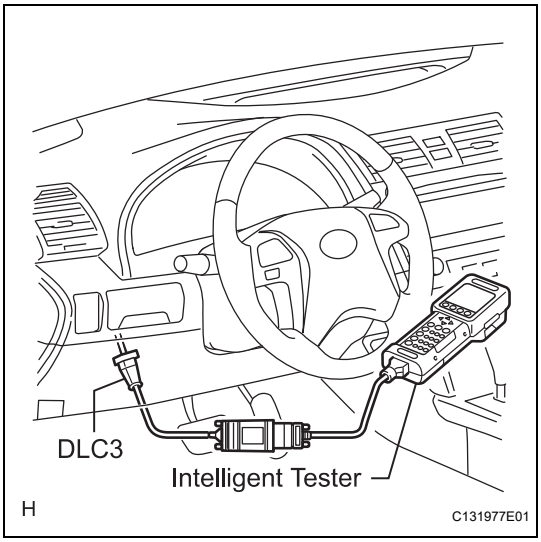


(a) Check for DTCs.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the power switch on (IG).
  (3) Check the DTCs by following the prompts on the tester screen.
    HINT:
    Refer to the intelligent tester operator's manual for further details.

(b) Clear DTCs.
  (1) Connect the intelligent tester to the DLC3.
  (2) Turn the power switch on (IG).
  (3) Clear the DTCs by following the prompts on the tester screen.
    HINT:
    Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

HINT:
By accessing the DATA LIST displayed on the intelligent tester, you can perform such functions as reading the values of switches and sensors without removing any parts. Reading the DATA LIST is the first step in troubleshooting is one method to save labor time.



1. DATA LIST FOR OCCUPANT CLASSIFICATION ECU

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the tester ON.
(d) Enter the following menus: DIAGNOSIS / OBD/ MOBD / OCCUPANT DETECT / DATA LIST.
(e) Check the values by referring to: the table below.

DATA LIST:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
IG SW	Power switch condition/ ON: Power switch on (IG) OFF: Power switch off	ON/OFF	-
P BUCKLE SW	Passenger side buckle switch/ SET: The seat belt is fastened UNSET: The seat belt is not fastened NG: Data is not determined	SET/UNSET	-
PASSENGER CLASS	Passenger classification/ AM50: Adult (more than 54 kg (119.05 lb)) is seated AF05: Adult (36 to 54 kg (79.37 to 119.05 lb)) is seated CHILD: Child (less than 36 kg (79.37 lb)) is seated CRS: Child restraint system (less than 7 kg (15.43 lb)) and passenger side buckle switch is ON, then 7 to 36 kg (15.43 to 79.37 lb) is set OFF: Vacant	AM50/AF05/CHILD/CRS/OFF	-
SENS RANGE INF	Sensor range information/ OK: The value of a sensor is within the range NG: The value of a sensor is over the range	OK	-
FL SENS RANGE	Front left sensor range information/ OK: Sensor range is -17 to 27 kg (-37.48 to 59.52 lb) Min.: Less than -17 kg (-37.48 lb) Max.: More than 27 kg (59.52 lb)	OK	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
FR SENS RANGE	Front right sensor range information/ OK: Sensor range is -17 to 27 kg (-37.48 to 59.52 lb) Min.: Less than -17 kg (-37.48 lb) Max.: More than 27 kg (59.52 lb)	OK	-
RL SENS RANGE	Rear left sensor range information/ OK: Sensor range is -17 to 37 kg (-37.48 to 81.57 lb) Min.: Less than -17 kg (-37.48 lb) Max.: More than 37 kg (81.57 lb)	OK	-
RR SENS RANGE	Rear right sensor range information/ OK: Sensor range is -17 to 37 kg (-37.48 to 81.57 lb) Min.: Less than -17 kg (-37.48 lb) Max.: More than 37 kg (81.57 lb)	OK	-
FL SENS VOL	Front left sensor voltage/ Min.: 0 V Max.: 19.8 V	0 to 4.7 V	-
FR SENS VOL	Front right sensor voltage/ Min.: 0 V Max.: 19.8 V	0 to 4.7 V	-
RL SENS VOL	Rear left sensor voltage/ Min.: 0 V Max.: 19.8 V	0 to 4.7 V	-
RR SENS VOL	Rear right sensor voltage/ Min.: 0 V Max.: 19.8 V	0 to 4.7 V	-
FL SENS WEIGHT	Front left sensor weight information/ Min.: -17 kg (-37.48 lb) Max.: 27 kg (59.52 lb)	-17 to 27 kg (-37.48 to 59.52 lb)	-
FR SENS WEIGHT	Front right sensor weight information/ Min.: -17 kg (-37.48 lb) Max.: 27 kg (59.52 lb)	-17 to 27 kg (-37.48 to 59.52 lb)	-
RL SENS WEIGHT	Rear left sensor weight information/ Min.: -17 kg (-37.48 lb) Max.: 37 kg (81.57 lb)	-17 to 37 kg (-37.48 to 81.57 lb)	-
RR SENS WEIGHT	Rear right sensor weight information/ Min.: -17 kg (-37.48 lb) Max.: 37 kg (81.57 lb)	-17 to 37 kg (-37.48 to 81.57 lb)	-
TOTAL WEIGHT	Total weight information/ Min.: -68 kg (-149.91 lb) Max.: 128 kg (282.19 lb)	-68 to 128 kg (-149.91 to 282.19 lb)	-

B1796	Sleep Operation Failure of Occupant Classification ECU	Occupant classification ECU	ON	RS-337

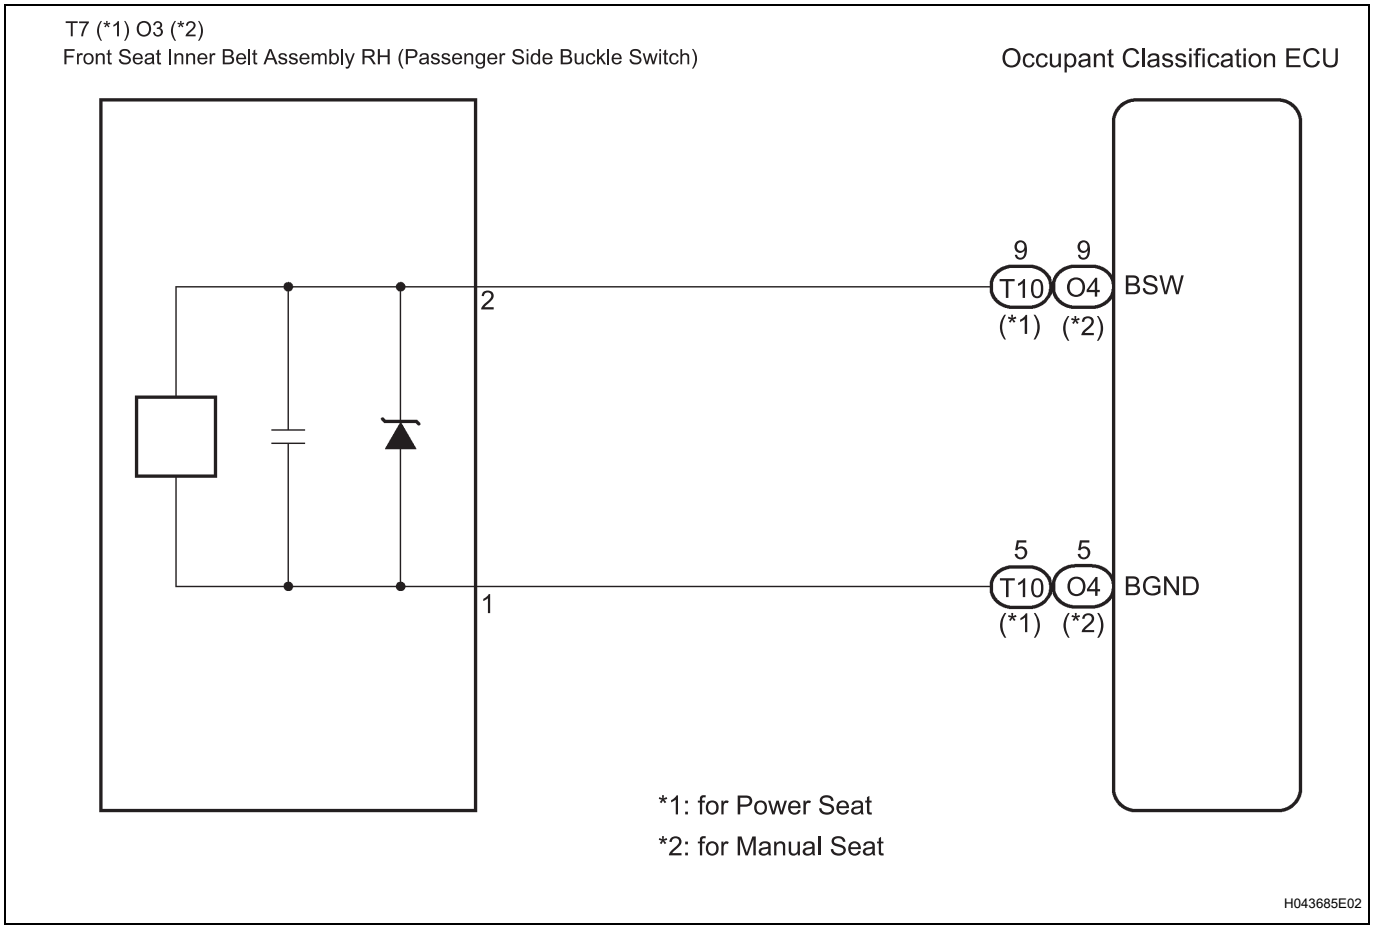
DTC	B1771	Passenger Side Buckle Switch Circuit Malfunction

DESCRIPTION

The passenger side buckle switch circuit consists of the occupant classification ECU and the front seat inner belt assembly RH.
DTC B1771 is recorded when a malfunction is detected in the passenger side buckle switch circuit.
Troubleshoot DTC B1771 first when the DTC B1771 and B1795 are output simultaneously.

DTC No.	DTC Detecting Condition	Trouble Area
B1771	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the passenger side buckle switch circuit for 2 seconds. • Passenger side buckle switch malfunction • Occupant classification ECU malfunction	• Front seat inner belt assembly RH (Passenger side buckle switch) • Occupant classification ECU • Floor wire No. 2 • Front seat wire RH (for Power seat)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

RS

1	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).

OK:

DTC B1771 is not output.

HINT:

Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front seat inner belt assembly RH.

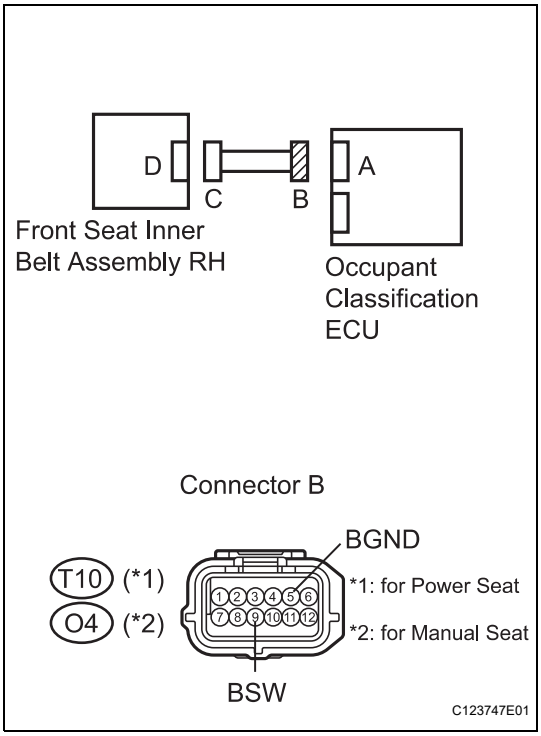
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3	CHECK WIRE HARNESS (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T10-9 (BSW) - Body ground	Power switch on (IG)	Below 1 V
T10-5 (BGND) - Body ground	Power switch on (IG)	Below 1 V

for Manual seat

Tester connection	Condition	Specified condition
O4-9 (BSW) - Body ground)	Power switch on (IG)	Below 1 V
O4-5 (BGND) - Body ground	Power switch on (IG)	Below 1 V

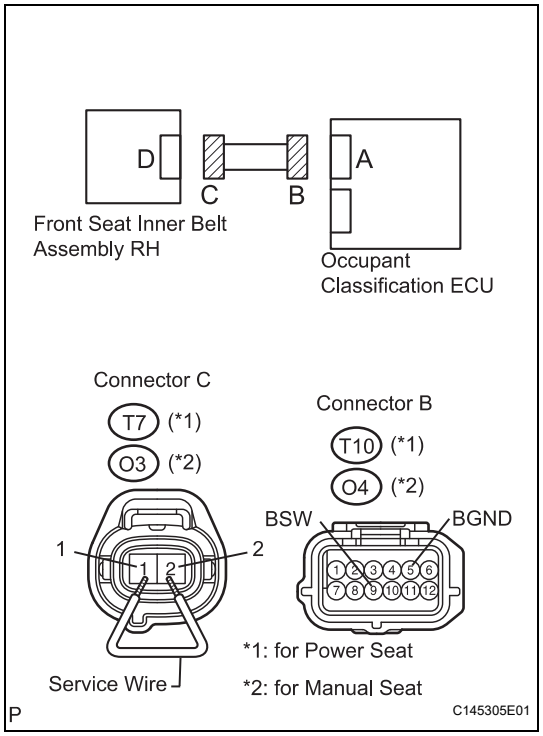
Result

Result	Proceed to
NG (for Power seat)	A
NG (for Manual seat)	B
OK	C

A	REPAIR OR REPLACE FRONT SEAT WIRE RH
B	REPAIR OR REPLACE FLOOR WIRE NO. 2

C

4	CHECK WIRE HARNESS (OPEN)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Using a service wire, connect terminals 2 and 1 of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(d) Measure the resistance according to the value(s) in the table below.
Standard resistance:
for Power seat

Tester connection	Condition	Specified condition
T10-9 (BSW) - T10-5 (BGND)	Always	Below 1 Ω

for Manual seat

Tester connection	Condition	Specified condition
O4-9 (BSW) - O4-5 (BGND)	Always	Below 1 Ω

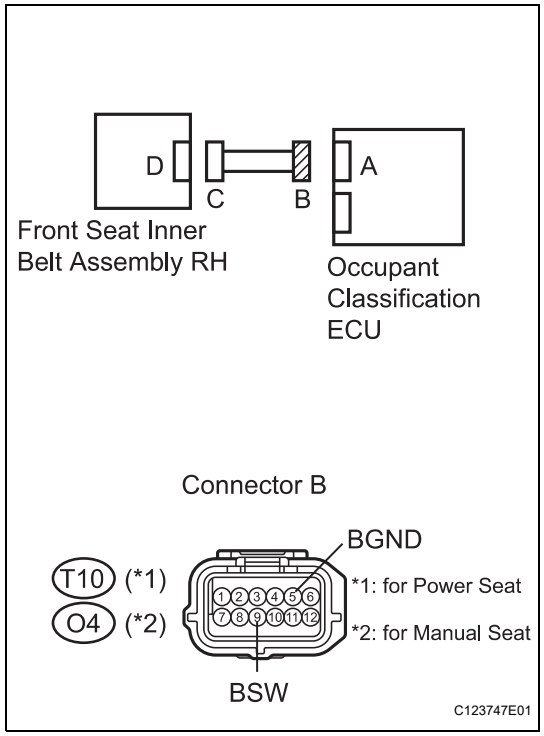
Result

Result	Proceed to
NG (for Power seat)	A
NG (for Manual seat)	B
OK	C

A	REPAIR OR REPLACE FRONT SEAT WIRE RH
B	REPAIR OR REPLACE FLOOR WIRE NO. 2

C

5	CHECK WIRE HARNESS (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T10-9 (BSW) - T10-5 (BGND)	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
O4-9 (BSW) - O4-5 (BGND)	Always	1 MΩ or Higher

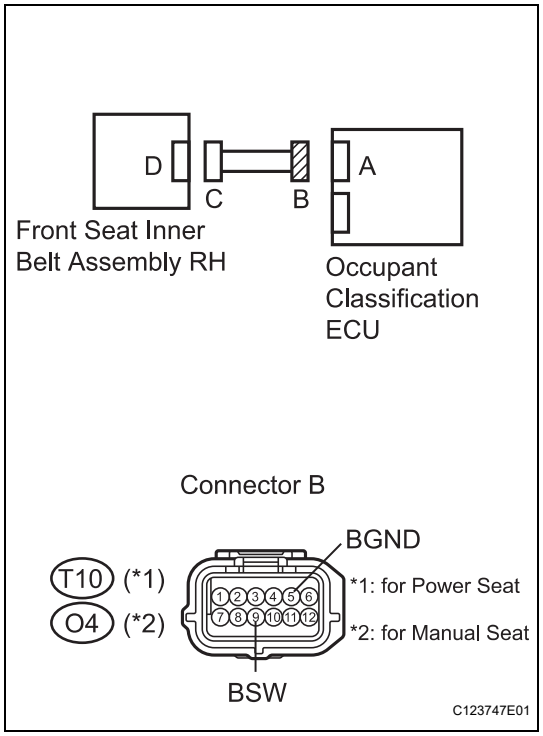
Result

Result	Proceed to
NG (for Power seat)	A
NG (for Manual seat)	B
OK	C

A	REPAIR OR REPLACE FRONT SEAT WIRE RH
B	REPAIR OR REPLACE FLOOR WIRE NO. 2

C

6 CHECK WIRE HARNESS (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T10-9 (BSW) - Body ground	Always	1 MΩ or Higher
T10-5 (BGND) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
O4-9 (BSW) - Body ground	Always	1 MΩ or Higher
O4-5 (BGND) - Body ground	Always	1 MΩ or Higher

Result

Result	Proceed to
NG (for Power seat)	A
NG (for Manual seat)	B
OK	C

A → REPAIR OR REPLACE FRONT SEAT WIRE RH

B → REPAIR OR REPLACE FLOOR WIRE NO. 2

C

7 CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front seat inner belt assembly RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(e) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG).
(h) Check the DTCs (See page RS-248).

OK:

DTC B1771 is not output.

HINT:

Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

8	REPLACE FRONT SEAT INNER BELT ASSEMBLY RH

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat inner belt assembly RH (See page SB-16).
HINT:
Perform the inspection using parts from a normal vehicle if possible.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the power switch on (IG).
(f) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(g) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(h) Turn the power switch off.
(i) Turn the power switch on (IG).
(j) Check the DTCs (See page RS-248).
OK:
DTC B1771 is not output.
HINT:
Codes other than DTC B1771 may be output at this time, but they are not related to this check.

OK → **END**

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-445).

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

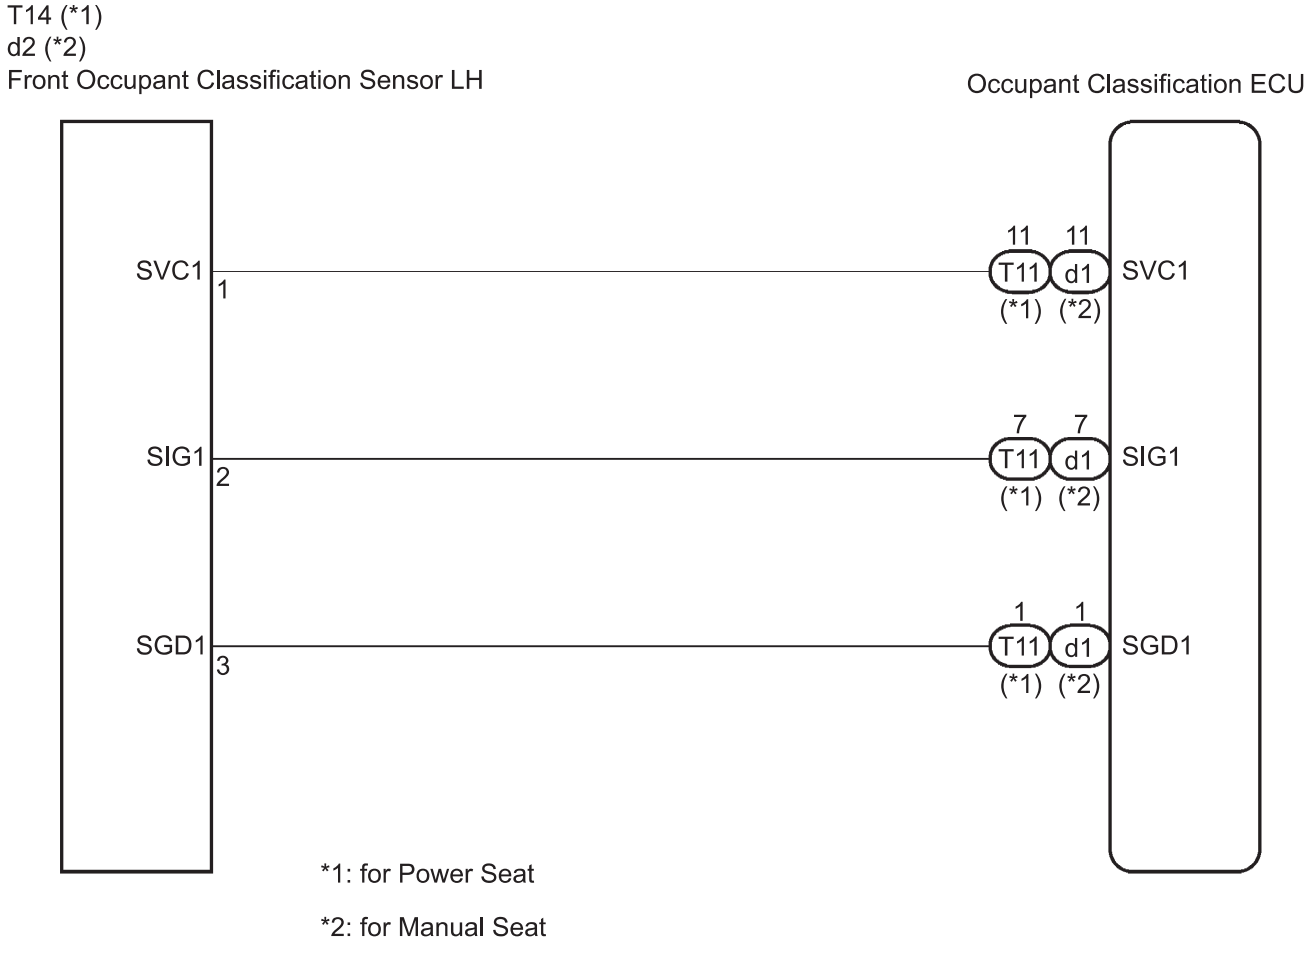
DTC	B1780	Front Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

The front occupant classification sensor LH circuit consists of the occupant classification ECU and the front occupant classification sensor LH.
DTC B1780 is recorded when a malfunction is detected in the front occupant classification sensor LH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1780	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front occupant classification sensor LH circuit for 2 seconds. • Front occupant classification sensor LH malfunction • Occupant classification ECU malfunction	• Front seat assembly RH (Front occupant classification sensor LH) • Front seat wire RH • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).

OK:

DTC B1780 is not output.

HINT:

Codes other than DTC B1780 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front occupant classification sensor LH.

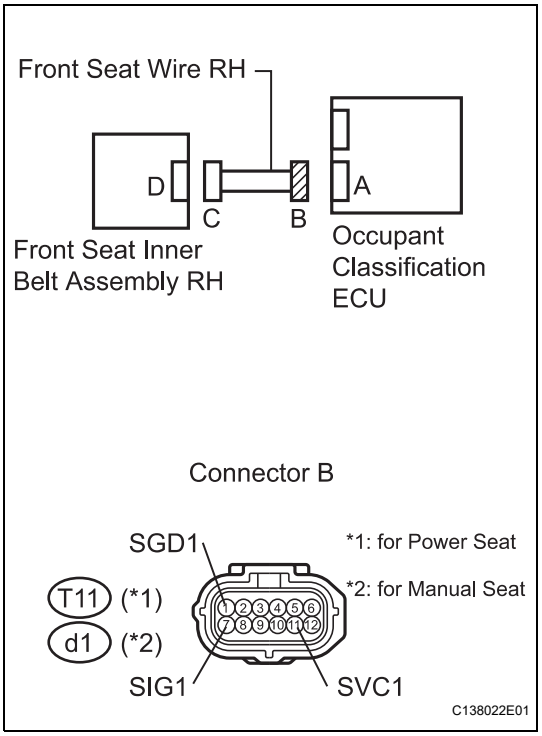
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3	CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-1 (SGD1) - Body ground	Power switch on (IG)	Below 1 V
T11-7 (SIG1) - Body ground	Power switch on (IG)	Below 1 V
T11-11 (SVC1) - Body ground	Power switch on (IG)	Below 1 V

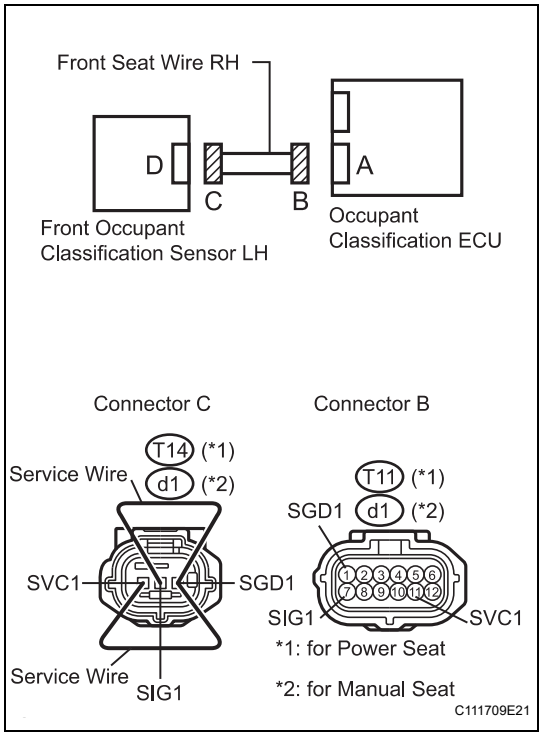
for Manual seat

Tester connection	Condition	Specified condition
d1-1 (SGD1) - Body ground	Power switch on (IG)	Below 1 V
d1-7 (SIG1) - Body ground	Power switch on (IG)	Below 1 V
d1-11 (SVC1) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4	CHECK FRONT SEAT WIRE RH (OPEN)



(a) Turn the power switch off.

(b) Disconnect the negative (-) terminal cable from the battery.

(c) Using a service wire, connect terminals 1 (SVC1) and 3 (SGD1), and connect terminals 2 (SIG1) and 3 (SGD1) of connector C.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector when connecting.

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-7 (SIG1) - T11-1 (SGD1)	Always	Below 1 Ω
T11-11 (SVC1) - T11-1 (SGD1)	Always	Below 1 Ω

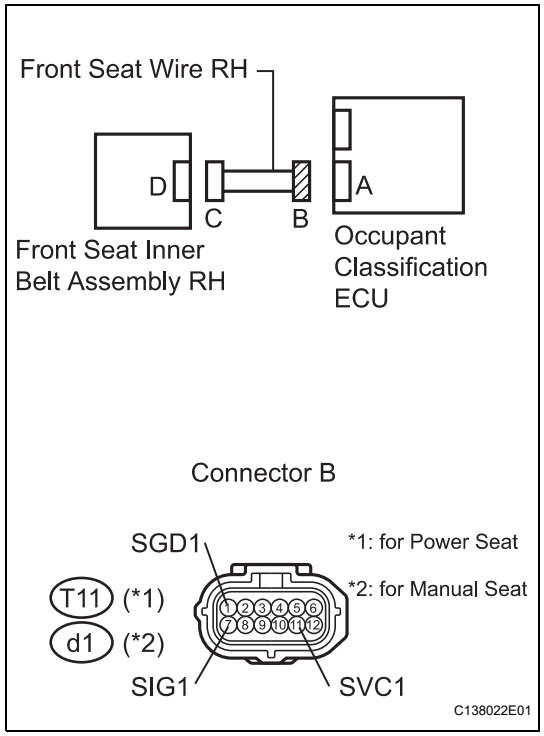
for Manual seat

Tester connection	Condition	Specified condition
d1-7 (SIG1) - d1-1 (SGD1)	Always	Below 1 Ω
d1-11 (SVC1) - d1-1 (SGD1)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-7 (SIG1) - T11-1 (SGD1)	Always	1 MΩ or Higher
T11-11 (SVC1) - T11-1 (SGD1)	Always	1 MΩ or Higher
T11-7 (SIG1) - T11-11 (SVC1)	Always	1 MΩ or Higher

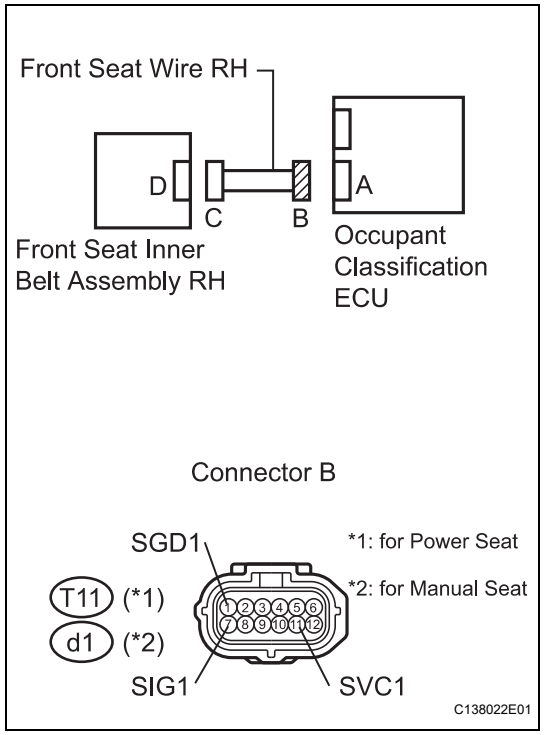
for Manual seat

Tester connection	Condition	Specified condition
d1-7 (SIG1) - d1-1 (SGD1)	Always	1 MΩ or Higher
d1-11 (SVC1) - d1-1 (SGD1)	Always	1 MΩ or Higher
d1-7 (SIG1) - d1-11 (SVC1)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-1 (SGD1) - Body ground	Always	1 MΩ or Higher
T11-7 (SIG1) - Body ground	Always	1 MΩ or Higher
T11-11 (SVC1) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-1 (SGD1) - Body ground	Always	1 MΩ or Higher
d1-7 (SIG1) - Body ground	Always	1 MΩ or Higher
d1-11 (SVC1) - Body ground	Always	1 MΩ or Higher

RS

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the front occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(e) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG).
(h) Check the DTCs (See page RS-248).
OK:
DTC B1780 is not output.
HINT:
Codes other than DTC B1780 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-445).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NG → **Go to step 12**

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1780 is not output.
HINT:
Codes other than DTC B1780 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-29 for power seat or SE-16 for manual seat).

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

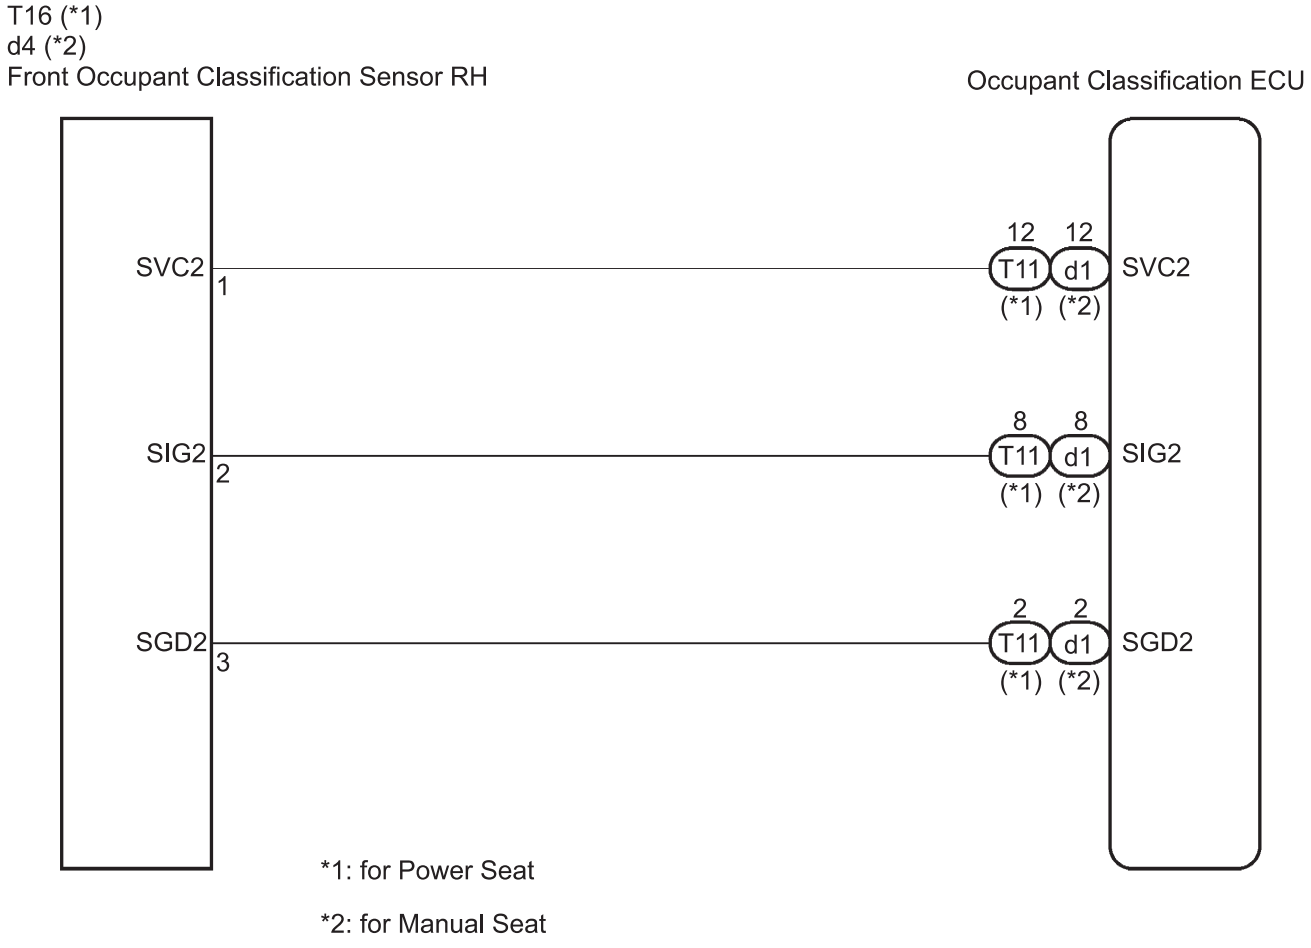
DTC	B1781	Front Occupant Classification Sensor RH Circuit Malfunction

DESCRIPTION

The front occupant classification sensor RH circuit consists of the occupant classification ECU and the front occupant classification sensor RH.
DTC B1781 is recorded when a malfunction is detected in the front occupant classification sensor RH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1781	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the front occupant classification sensor RH circuit for 2 seconds. • Front occupant classification sensor RH malfunction • Occupant classification ECU malfunction	• Front seat assembly RH (Front occupant classification sensor RH) • Front seat wire RH • Occupant classification ECU

WIRING DIAGRAM



C

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-41).

OK:

DTC B1781 is not output.

HINT:

Codes other than DTC B1781 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the front occupant classification sensor RH.

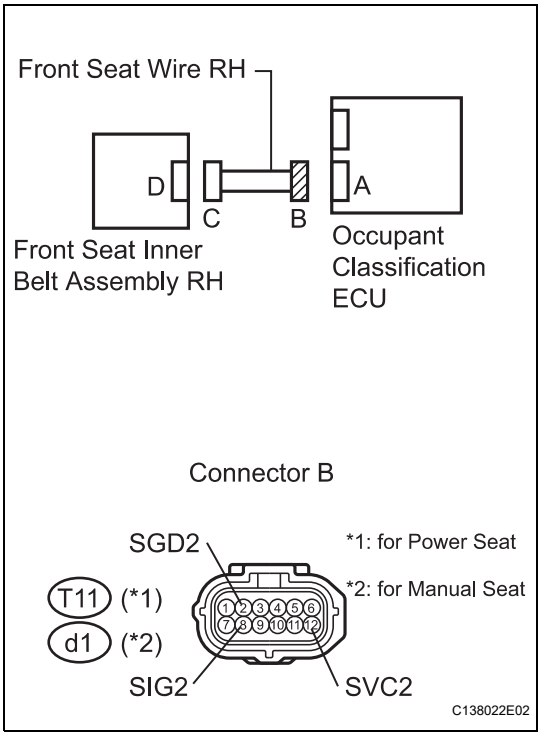
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3	CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the front occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-2 (SGD2) - Body ground	Power switch on (IG)	Below 1 V
T11-8 (SIG2) - Body ground	Power switch on (IG)	Below 1 V
T11-12 (SVC2) - Body ground	Power switch on (IG)	Below 1 V

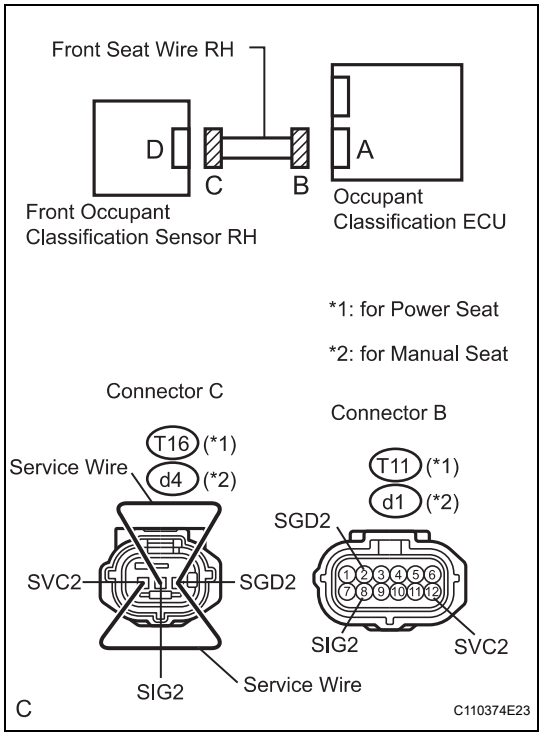
for Manual seat

Tester connection	Condition	Specified condition
d1-2 (SGD2) - Body ground	Power switch on (IG)	Below 1 V
d1-8 (SIG2) - Body ground	Power switch on (IG)	Below 1 V
d1-12 (SVC2) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4	CHECK FRONT SEAT WIRE RH (OPEN)



(a) Turn the power switch off.

(b) Disconnect the negative (-) terminal cable from the battery.

(c) Using a service wire, connect terminals 1 (SVC2) and 3 (SGD2), and connect terminals 2 (SIG2) and 3 (SGD2) of connector C.

NOTICE:

Do not forcibly insert a service wire into the terminals of the connector when connecting.

(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-8 (SIG2) - T11-2 (SGD2)	Always	Below 1 Ω
T11-12 (SVC2) - T11-2 (SGD2)	Always	Below 1 Ω

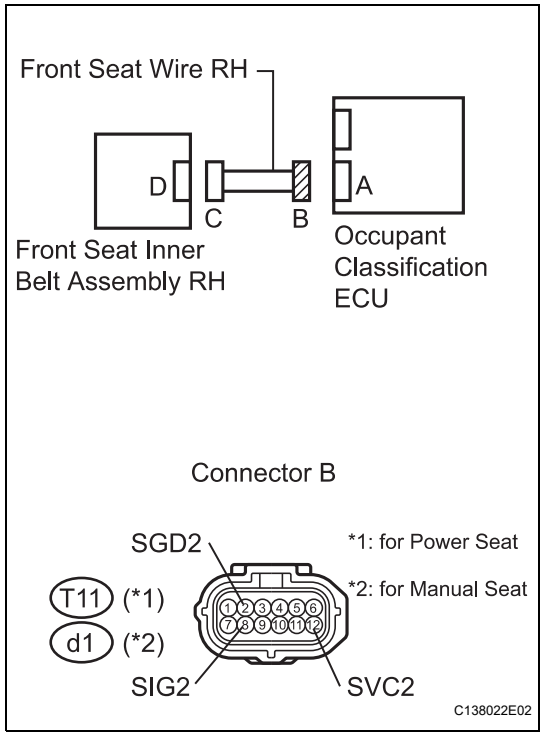
for Manual seat

Tester connection	Condition	Specified condition
d1-8 (SIG2) - d1-2 (SGD2)	Always	Below 1 Ω
d1-12 (SVC2) - d1-2 (SGD2)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-8 (SIG2) - T11-2 (SGD2)	Always	1 MΩ or Higher
T11-12 (SVC2) - T11-2 (SGD2)	Always	1 MΩ or Higher
T11-8 (SIG2) - T11-12 (SVC2)	Always	1 MΩ or Higher

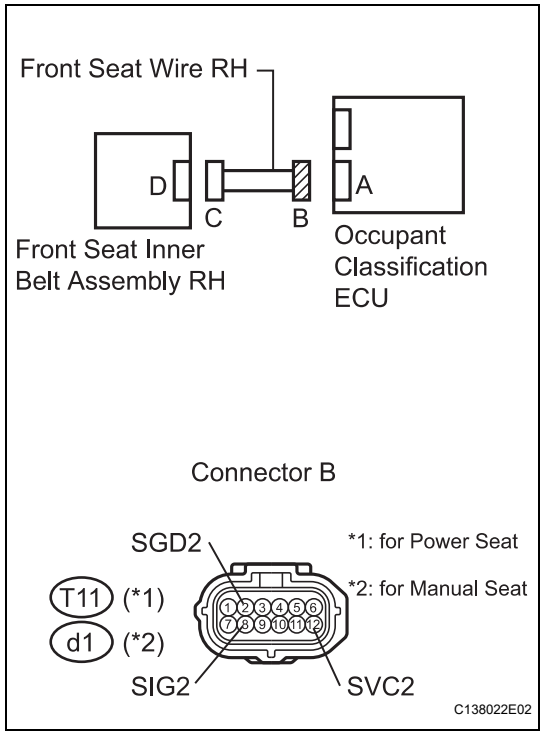
for Manual seat

Tester connection	Condition	Specified condition
d1-8 (SIG2) - d1-2 (SGD2)	Always	1 MΩ or Higher
d1-12 (SVC2) - d1-2 (SGD2)	Always	1 MΩ or Higher
d1-8 (SIG2) - d1-12 (SVC2)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-2 (SGD2) - Body ground	Always	1 MΩ or Higher
T11-8 (SIG2) - Body ground	Always	1 MΩ or Higher
T11-12 (SVC2) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-2 (SGD2) - Body ground	Always	1 MΩ or Higher

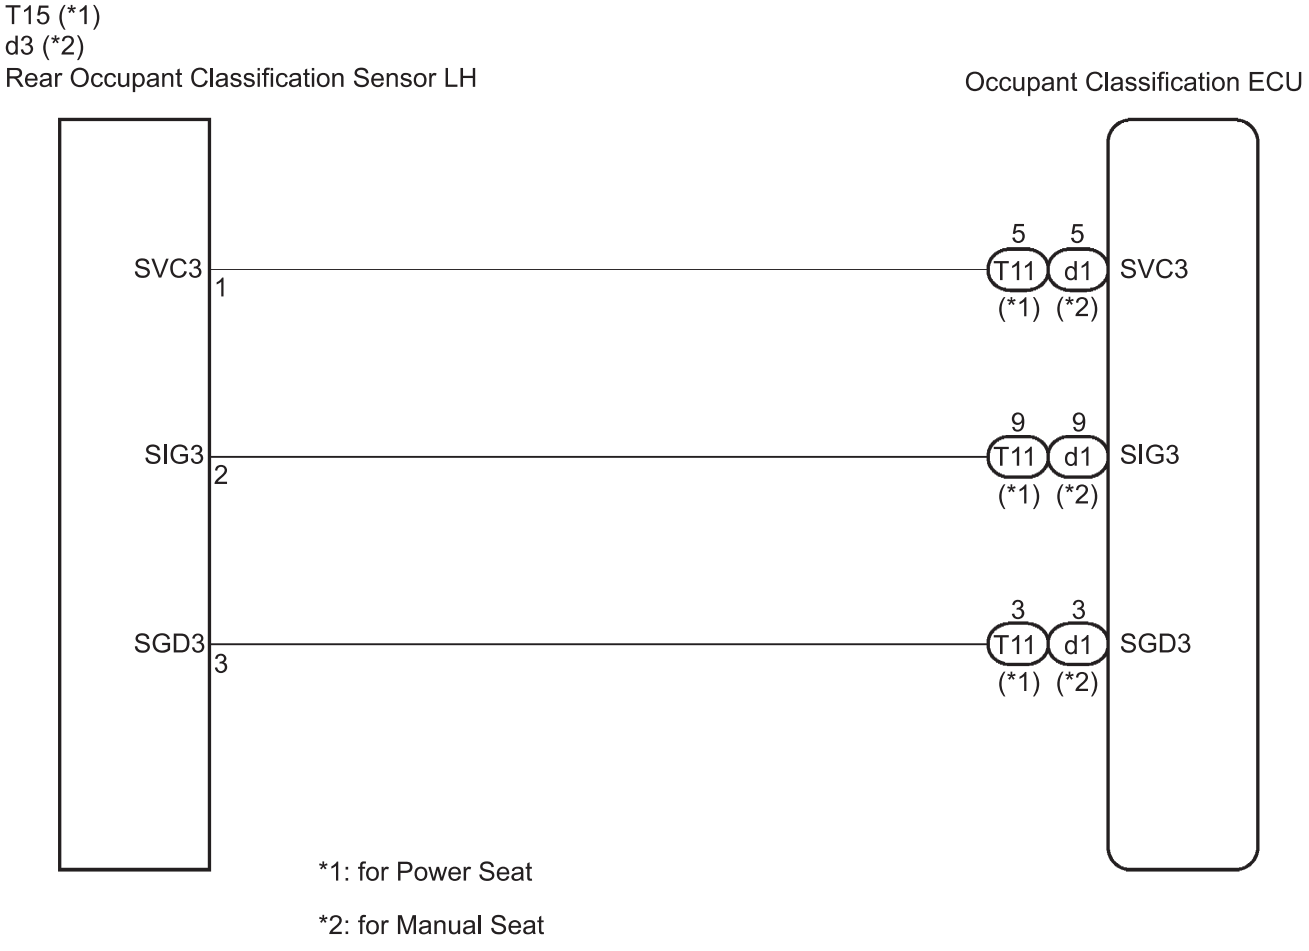
DTC	B1782	Rear Occupant Classification Sensor LH Circuit Malfunction

DESCRIPTION

The rear occupant classification sensor LH circuit consists of the occupant classification ECU and the rear occupant classification sensor LH.
DTC B1782 is recorded when a malfunction is detected in the rear occupant classification sensor LH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1782	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear occupant classification sensor LH circuit for 2 seconds. • Rear occupant classification sensor LH malfunction • Occupant classification ECU malfunction	• Front seat assembly RH (Rear occupant classification sensor LH) • Front seat wire RH • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).

OK:

DTC B1782 is not output.

HINT:

Codes other than DTC B1782 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the rear occupant classification sensor LH.

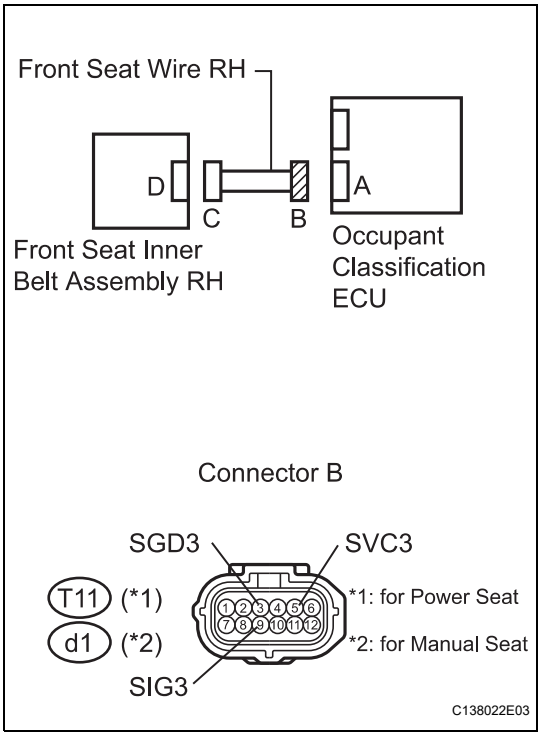
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3	CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the rear occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-3 (SGD3) - Body ground	Power switch on (IG)	Below 1 V
T11-5 (SVC3) - Body ground	Power switch on (IG)	Below 1 V
T11-9 (SIG3) - Body ground	Power switch on (IG)	Below 1 V

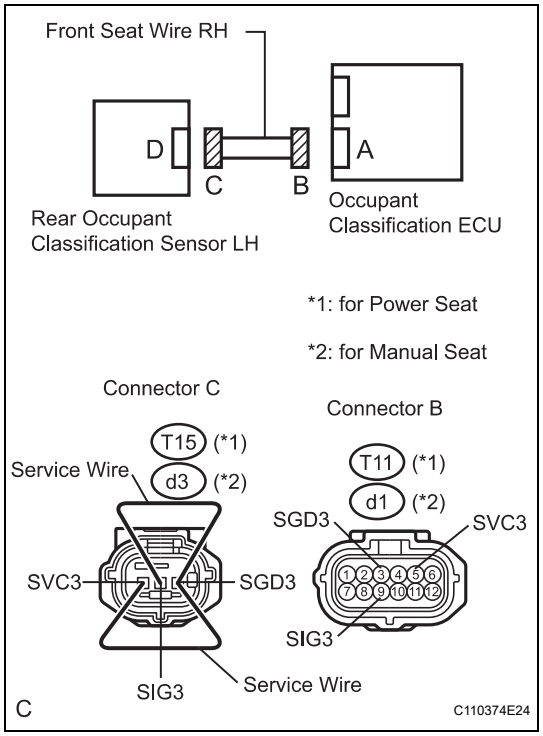
for Manual seat

Tester connection	Condition	Specified condition
d1-3 (SGD3) - Body ground	Power switch on (IG)	Below 1 V
d1-9 (SIG3) - Body ground	Power switch on (IG)	Below 1 V
d1-5 (SVC3) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4	CHECK FRONT SEAT WIRE RH (OPEN)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Using a service wire, connect terminals 1 (SVC3) and 3 (SGD3), and connect terminals 2 (SIG3) and 3 (SGD3) of connector C.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(d) Measure the resistance according to the value(s) in the table below.
Standard resistance:
for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - T11-3 (SGD3)	Always	Below 1 Ω
T11-9 (SIG3) - T11-3 (SGD3)	Always	Below 1 Ω

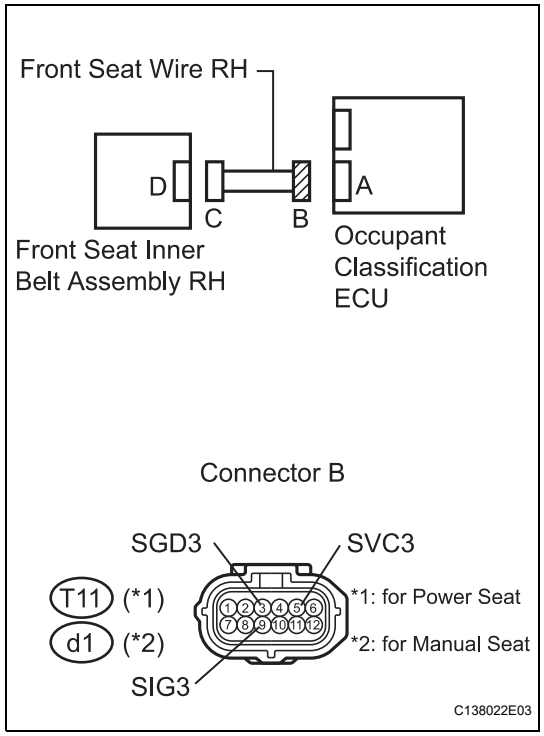
for Manual seat

Tester connection	Condition	Specified condition
d1-9 (SIG3) - d1-3 (SGD3)	Always	Below 1 Ω
d1-5 (SVC3) - d1-3 (SGD3)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:
for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - T11-3 (SGD3)	Always	1 MΩ or Higher
T11-9 (SIG3) - T11-3 (SGD3)	Always	1 MΩ or Higher
T11-5 (SVC3) - T11-9 (SIG3)	Always	1 MΩ or Higher

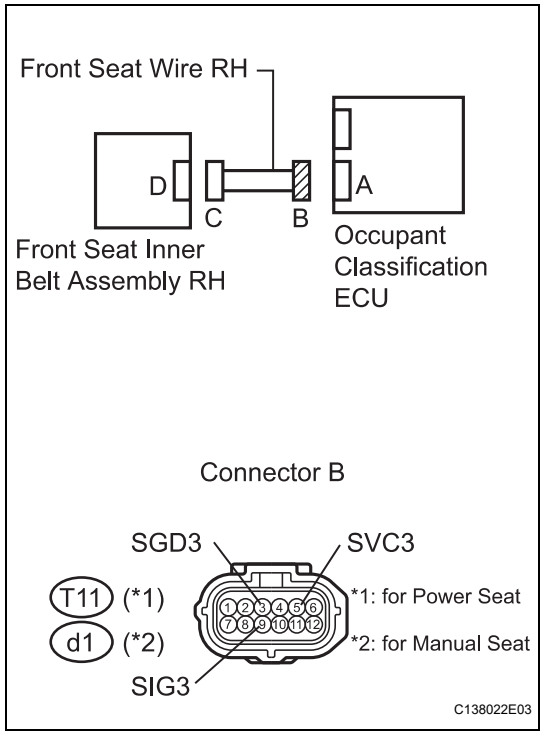
for Manual seat

Tester connection	Condition	Specified condition
d1-9 (SIG3) - d1-3 (SGD3)	Always	1 MΩ or Higher
d1-5 (SVC3) - d1-3 (SGD3)	Always	1 MΩ or Higher
d1-9 (SIG3) - d1-5 (SVC3)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Measure the resistance according to value(s) in the table below.

Standard resistance:
for Power seat

Tester connection	Condition	Specified condition
T11-3 (SGD3) - Body ground	Always	1 MΩ or Higher
T11-5 (SVC3) - Body ground	Always	1 MΩ or Higher
T11-9 (SIG3) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-3 (SGD3) - Body ground	Always	1 MΩ or Higher
d1-9 (SIG3) - Body ground	Always	1 MΩ or Higher
d1-5 (SVC3) - Body ground	Always	1 MΩ or Higher

RS

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the rear occupant classification sensor LH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(e) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG).
(h) Check the DTCs (See page RS-248).
OK:
DTC B1782 is not output.
HINT:
Codes other than DTC B1782 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-445).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NG → **Go to step 12**

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1782 is not output.
HINT:
Codes other than DTC B1782 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-29 for power seat or SE-16 for manual seat).

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.

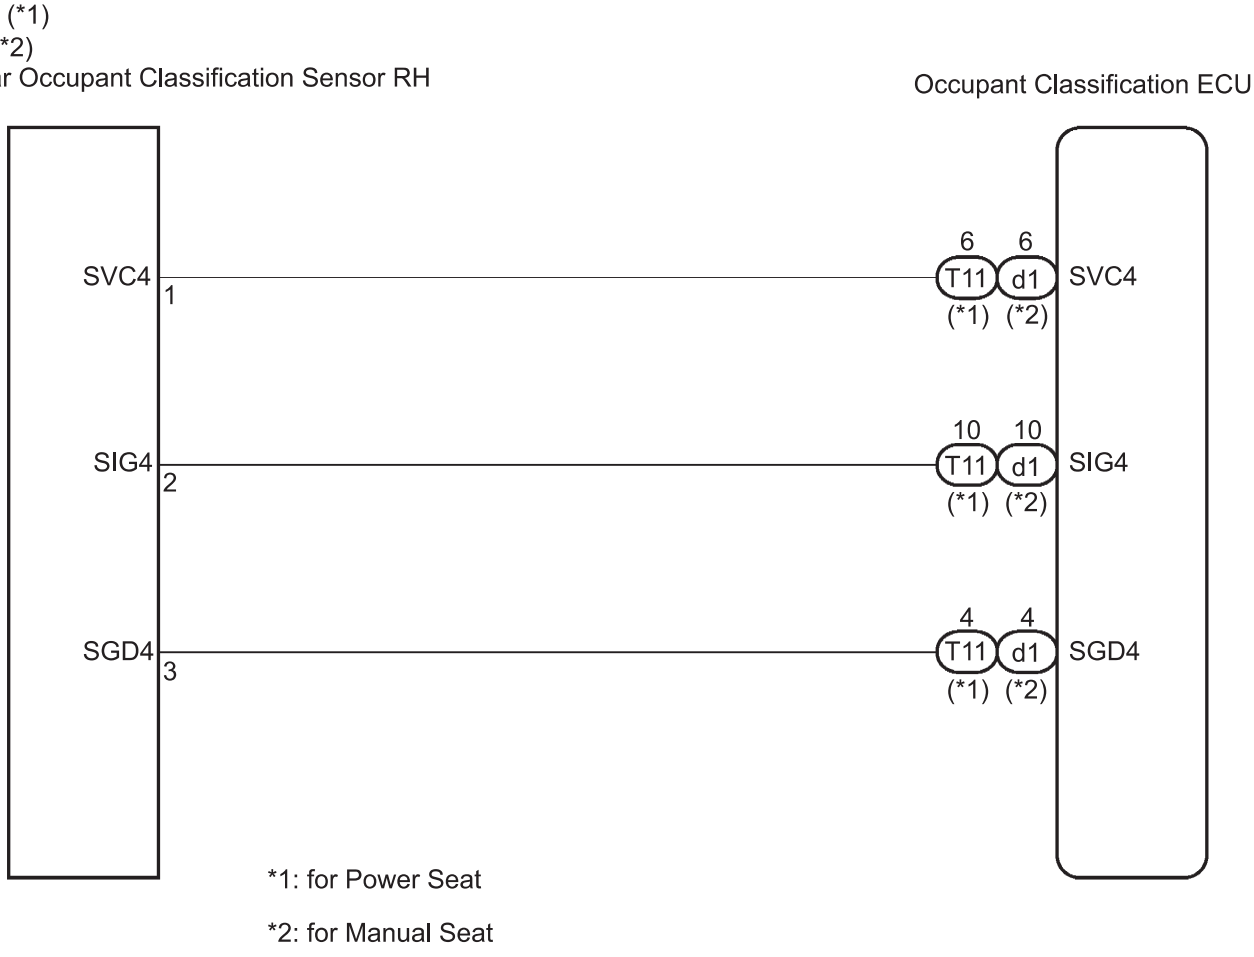
DTC	B1783	Rear Occupant Classification Sensor RH Circuit Malfunction

DESCRIPTION

The rear occupant classification sensor RH circuit consists of the occupant classification ECU and the rear occupant classification sensor RH.
DTC B1783 is recorded when a malfunction is detected in the rear occupant classification sensor RH circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1783	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the rear occupant classification sensor RH circuit for 2 seconds. • Rear occupant classification sensor RH malfunction. • Occupant classification ECU malfunction.	• Front seat assembly RH (Rear occupant classification sensor RH) • Front seat wire RH • Occupant classification ECU

WIRING DIAGRAM



C

H045935E10

INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).

OK:

DTC B1783 is not output.

HINT:

Codes other than DTC B1783 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the rear occupant classification sensor RH.

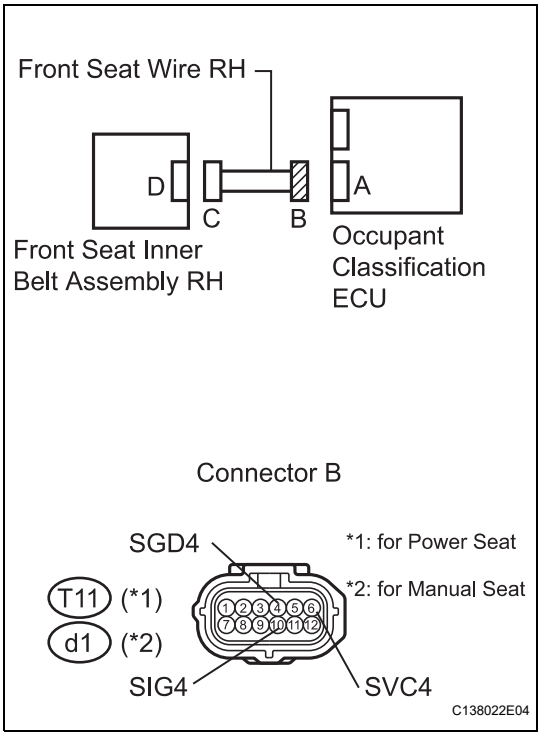
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3	CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the rear occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-4 (SGD4) - Body ground	Power switch on (IG)	Below 1 V
T11-6 (SVC4) - Body ground	Power switch on (IG)	Below 1 V
T11-10 (SIG4) - Body ground	Power switch on (IG)	Below 1 V

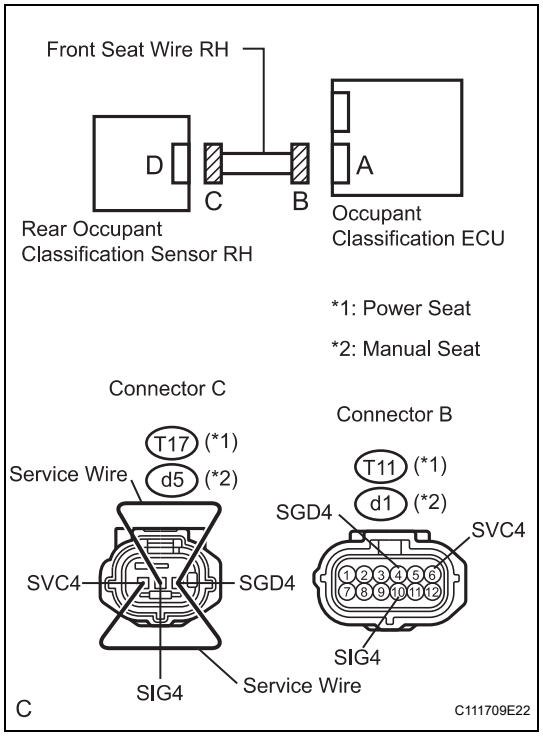
for Manual seat

Tester connection	Condition	Specified condition
d1-4 (SGD4) - Body ground	Power switch on (IG)	Below 1 V
d1-10 (SIG4) - Body ground	Power switch on (IG)	Below 1 V
d1-6 (SVC4) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4	CHECK FRONT SEAT WIRE RH (OPEN)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Using a service wire, connect terminals 1 (SVC4) and 3 (SGD4), and connect terminals 2 (SIG4) and 3 (SGD4) of connector C.
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-6 (SVC4) - T11-4 (SGD4)	Always	Below 1 Ω
T11-10 (SIG4) - T11-4 (SGD4)	Always	Below 1 Ω

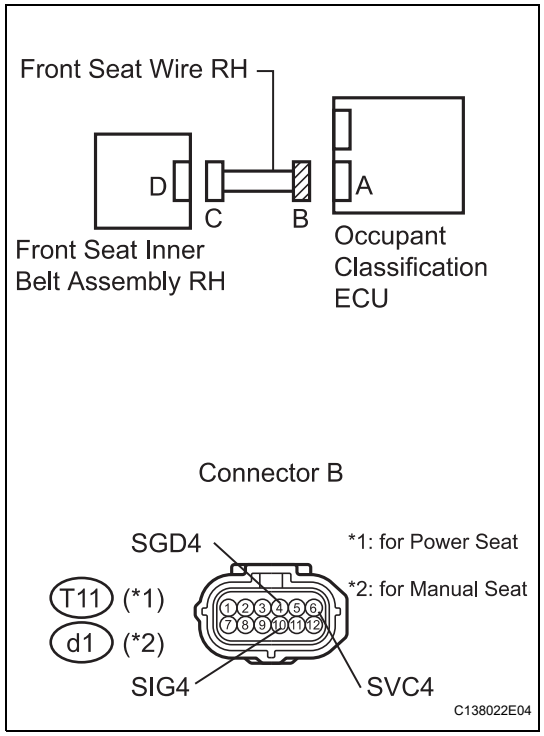
for Manual seat

Tester connection	Condition	Specified condition
d1-10 (SIG4) - d1-4 (SGD4)	Always	Below 1 Ω
d1-6 (SVC4) - d1-4 (SGD4)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (SHORT)



(a) Disconnect the service wire from connector C.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-6 (SVC4) - T11-4 (SGD4)	Always	1 MΩ or Higher
T11-10 (SIG4) - T11-4 (SGD4)	Always	1 MΩ or Higher
T11-6 (SVC4) - T11-10 (SIG4)	Always	1 MΩ or Higher

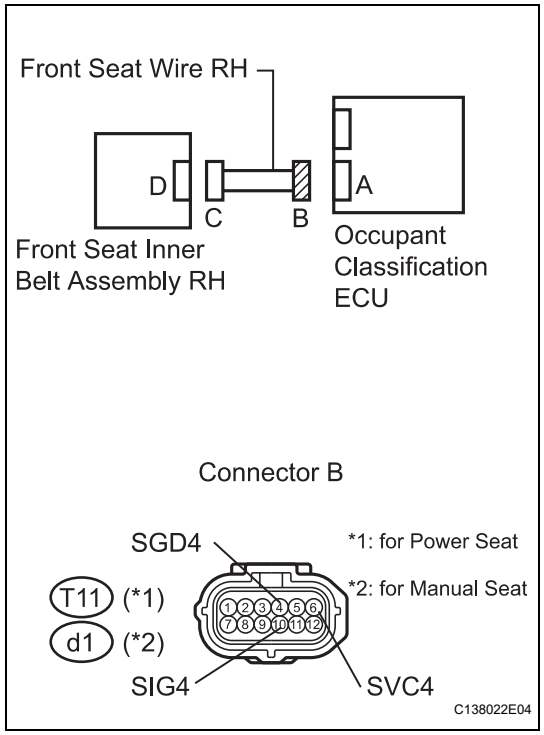
for Manual seat

Tester connection	Condition	Specified condition
d1-10 (SIG4) - d1-4 (SGD4)	Always	1 MΩ or Higher
d1-6 (SVC4) - d1-4 (SGD4)	Always	1 MΩ or Higher
d1-10 (SIG4) - d1-6 (SVC4)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6 CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-4 (SGD4) - Body ground	Always	1 MΩ or Higher
T11-6 (SVC4) - Body ground	Always	1 MΩ or Higher
T11-10 (SIG4) - Body ground	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-4 (SGD4) - Body ground	Always	1 MΩ or Higher
d1-10 (SIG4) - Body ground	Always	1 MΩ or Higher
d1-6 (SVC4) - Body ground	Always	1 MΩ or Higher

RS

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the rear occupant classification sensor RH.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(e) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG).
(h) Check the DTCs (See page RS-248).
OK:
DTC B1783 is not output.
HINT:
Codes other than DTC B1783 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-445).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NG → **Go to step 12**

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1783 is not output.
HINT:
Codes other than DTC B1783 may be output at this time, but they are not related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-16 for power seat or SE-13 for manual seat).

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1785	Front Occupant Classification Sensor LH Collision Detection

DESCRIPTION

DTC B1785 is output when the occupant classification ECU receives a collision detection signal sent by the front occupant classification sensor LH if an accident occurs.
DTC B1785 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the occupant classification ECU outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1785 can be cleared by "zero point calibration" and "sensitivity check".
Therefore, if DTC B1785 is output, first perform "zero point calibration" and "sensitivity check".

DTC No.	DTC Detecting Condition	Trouble Area
B1785	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Front occupant classification sensor LH sensed large load	• Occupant classification ECU • Front seat assembly RH (Front occupant classification sensor LH)

WIRING DIAGRAM

See page RS-261.

INSPECTION PROCEDURE

1 PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NG → **Go to step 4**

OK

2 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 4**

OK

3 CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).

(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1785 is not output.
HINT:
Codes other than DTC B1785 may be output at this time, but they are not related to this check.

OK	END

NG

4	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-16 for power seat or SE-29 for manual seat).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NG	Go to step 8

OK

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG	Go to step 8

OK

7	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1785 is not output.
HINT:
Codes other than DTC B1785 may be output at this time, but they are not related to this check.

OK → END

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-445).

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1786	Front Occupant Classification Sensor RH Collision Detection

DESCRIPTION

DTC B1786 is output when the occupant classification ECU receives a collision detection signal sent by the front occupant classification sensor RH if an accident occurs.
DTC B1786 is also output when the front seat assembly RH is subjected to a strong impact, even if an actual accident does not occur.
However, when the occupant classification ECU outputs a collision detection signal, even if the vehicle is not in a collision, DTC B1786 can be cleared by "zero point calibration" and "sensitivity check".
Therefore, if DTC B1786 is output, first perform "zero point calibration" and "sensitivity check".

DTC No.	DTC Detection Condition	Trouble Area
B1786	• Front seat assembly RH malfunction • Occupant classification ECU malfunction • Front occupant classification sensor RH sensed large load	• Occupant classification ECU • Front seat assembly RH (Front occupant classification sensor RH)

WIRING DIAGRAM

See page RS-269.

INSPECTION PROCEDURE

1 PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NG → **Go to step 4**

OK

2 PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 4**

OK

3 CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).

(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1786 is not output.
HINT:
Codes other than DTC B1786 may be output at this time, but they are not related to this check.

OK → **END**

NG

4	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-29 for power seat or SE-16 for manual seat).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NG → **Go to step 8**

OK

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 8**

OK

7	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1786 is not output.
HINT:
Codes other than DTC B1786 may be output at this time, but they are not related to this check.

OK → END

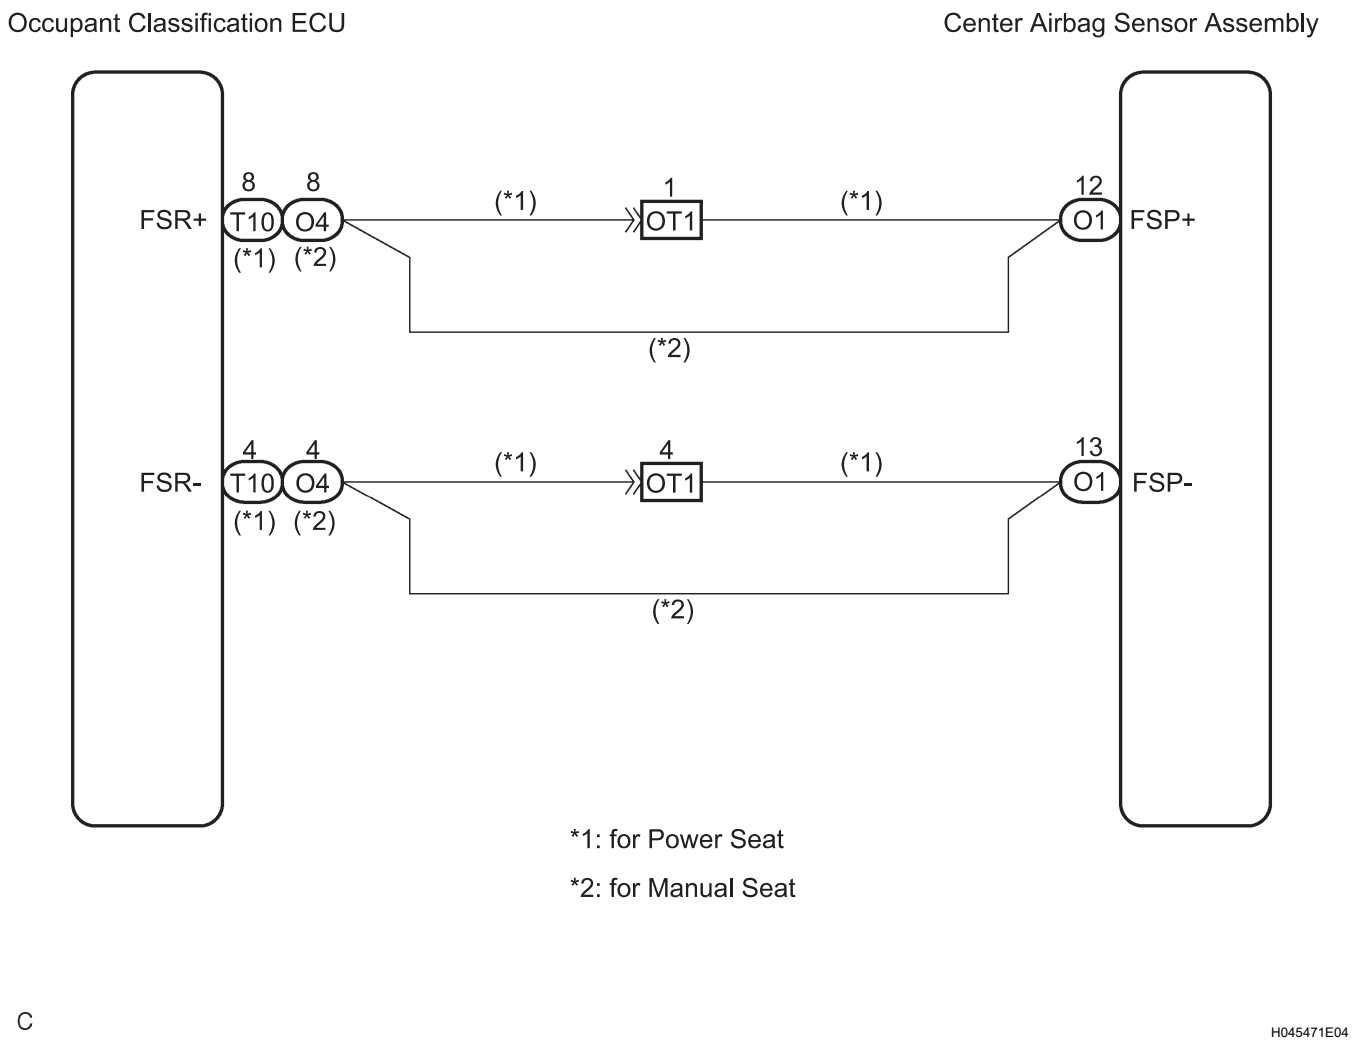
DTC	B1790	Center Airbag Sensor Assembly Communication Circuit Malfunction

DESCRIPTION

The center airbag sensor assembly communication circuit consists of the occupant classification ECU and the center airbag sensor assembly.
DTC B1790 is recorded when a malfunction is detected in the center airbag sensor assembly communication circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1790	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the center airbag sensor assembly communication circuit for 2 seconds. • Center airbag sensor assembly malfunction • Occupant classification ECU malfunction	• Occupant classification ECU • Center airbag sensor assembly • Floor wire No. 2 • Front seat wire RH (for Power seat)

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1790 is not output.
HINT:
Codes other than DTC B1790 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Check that the connectors are properly connected to the occupant classification ECU and the center airbag sensor assembly.
OK:
The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

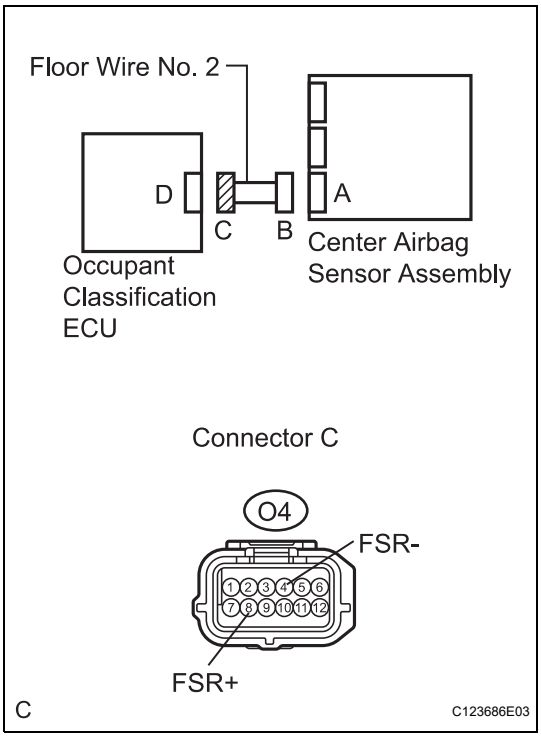
3	CHECK VEHICLE CONDITION

(a) Check the passenger seat type.
Result:
A:
for Manual seat
B:
for Power seat

B → Go to step 13

A

4	CHECK FLOOR WIRE NO. 2 (SHORT TO B+)



(a) Disconnect the connector from the center airbag sensor assembly and occupant classification ECU.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value (s) in the table below.

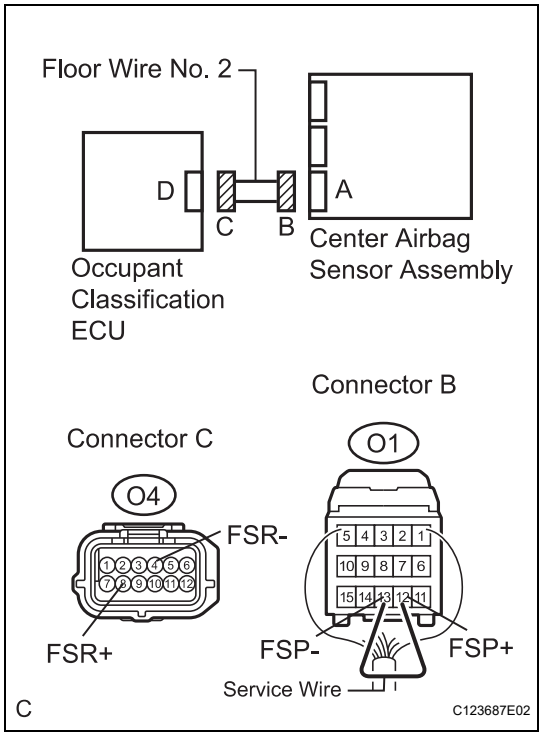
Standard voltage

Tester connection	Condition	Specified condition
O4-8 (FSR+) - Body ground	Power switch on (IG)	Below 1 V
O4-4 (FSR-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

5 CHECK FLOOR WIRE NO. 2 (OPEN)



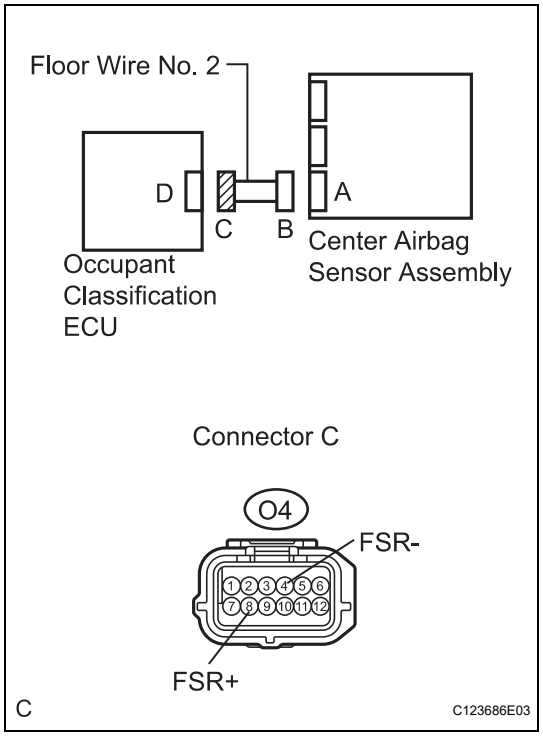
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Using a service wire, connect terminals 12 (FSP+) and 13 (FSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(d) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
O4-8 (FSR+) - O4-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

6 CHECK FLOOR WIRE NO. 2 (SHORT)



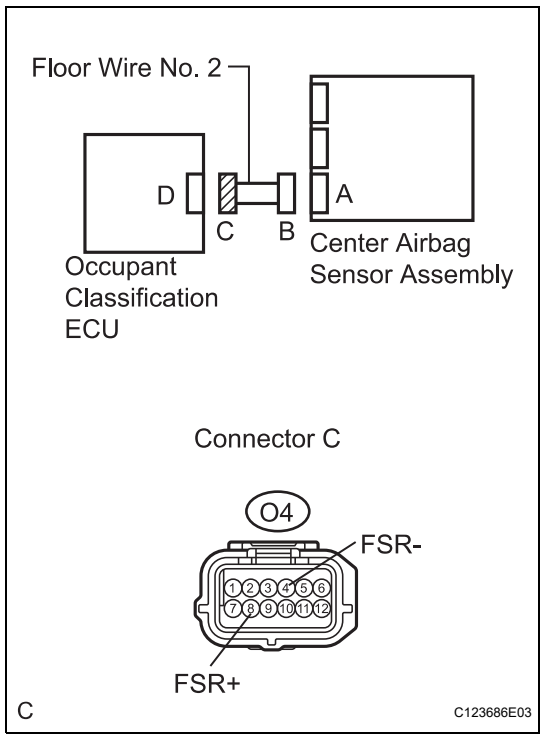
(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
O4-8 (FSR+) - O4-4 (FSR-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

7	CHECK FLOOR WIRE NO. 2 (SHORT TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
O4-8 (FSR+) - Body ground	Always	1 MΩ or Higher
O4-4 (FSR-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

8	RECHECK DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor assembly.
(b) Connect the intelligent tester to the DLC3.
(c) Connect the negative (-) terminal cable to the battery.
(d) Turn the power switch on (IG).
(e) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(f) Clear the DTCs stored in the center airbag sensor assembly (See page RS-248).
(g) Turn the power switch off.
(h) Turn the power switch on (IG).
(i) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-41).

OK:

DTC B1790 is not output.

HINT:

Codes other than DTC B1790 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-445).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

12	RECHECK DTC

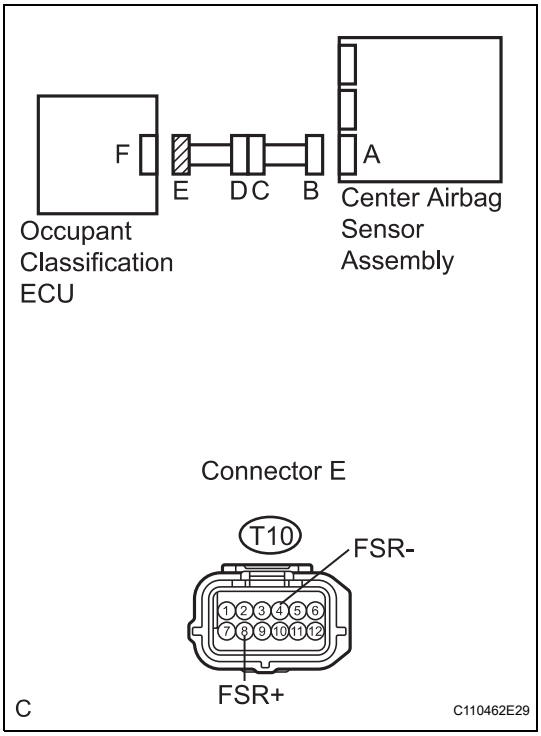
(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-248).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-41).
OK:
DTC B1790 is not output.
HINT:
Codes other than DTC B1790 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

OK

END

13 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (TO B+)



(a) Disconnect the connector from the center airbag sensor assembly and occupant classification ECU.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

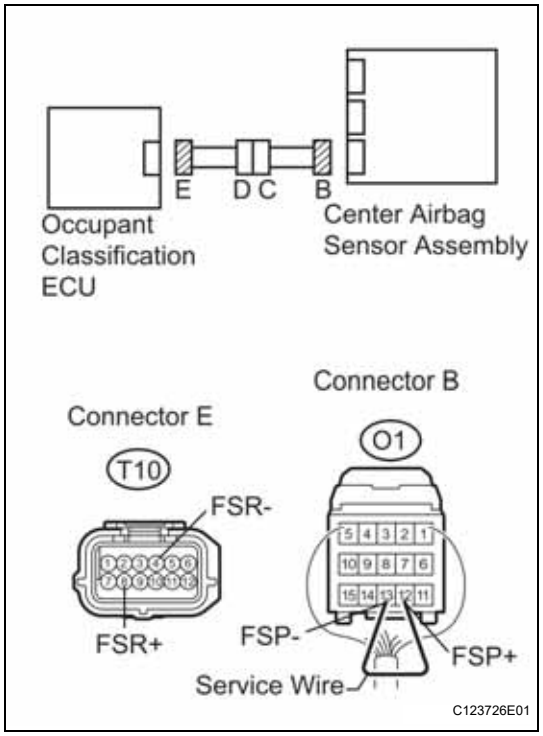
Standard voltage

Tester connection	Condition	Specified condition
T10-8 (FSR+) - Body ground	Power switch on (IG)	Below 1 V
T10-4 (FSR-) - Body ground	Power switch on (IG)	Below 1 V

NG → Go to step 22

OK

14 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (OPEN)



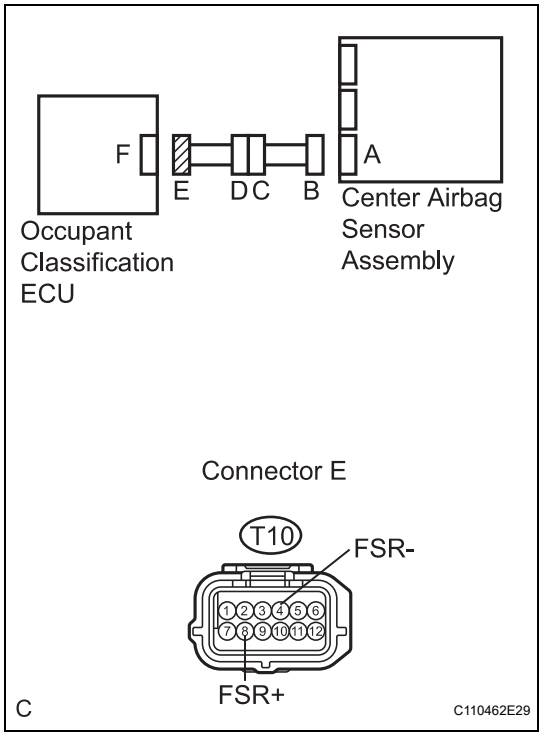
(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Using a service wire, connect terminals 12 (FSP+) and 13 (FSP-) of connector B.
NOTICE:
Do not forcibly insert a service wire into the terminals of the connector when connecting.
(d) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
T10-8 (FSR+) - T10-4 (FSR-)	Always	Below 1 Ω

NG → **Go to step 23**

OK

15 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (SHORT)



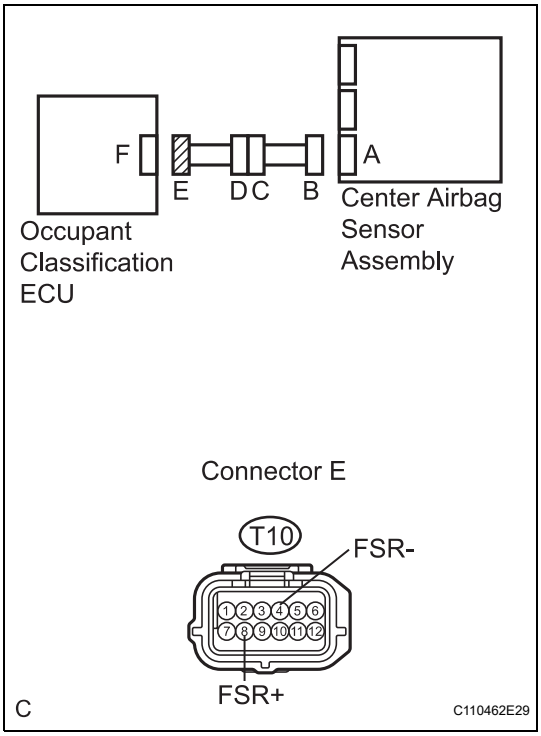
(a) Disconnect the service wire from connector B.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester connection	Condition	Specified condition
T10-8 (FSR+) - T10-4 (FSR-)	Always	1 MΩ or Higher

NG → **Go to step 24**

OK

16 CHECK OCCUPANT CLASSIFICATION SYSTEM CIRCUIT (TO GROUND)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
T10-8 (FSR+) - Body ground	Always	1 MΩ or Higher
T10-4 (FSR-) - Body ground	Always	1 MΩ or Higher

NG → **Go to step 25**

OK

17 RECHECK DTC

(a) Connect the connectors to the occupant classification ECU and the center airbag sensor assembly.
(b) Connect the intelligent tester to the DLC3.
(c) Connect the negative (-) terminal cable to the battery.
(d) Turn the power switch on (IG).
(e) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(f) Clear the DTCs stored in the center airbag sensor assembly (See page RS-248).
(g) Turn the power switch off.
(h) Turn the power switch on (IG).
(i) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-41).

OK:

DTC B1790 is not output.

HINT:

Codes other than DTC B1790 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

RS

18	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-445).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

19	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

20	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

21	RECHECK DTC

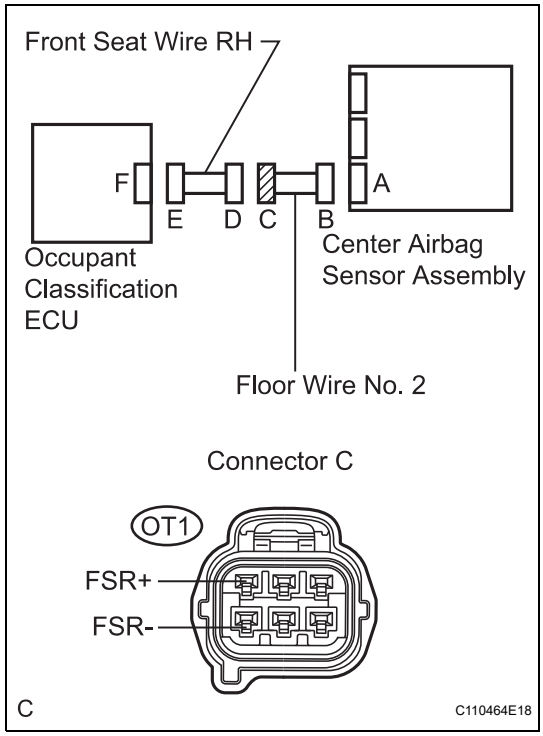
(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-248).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-41).
OK:
DTC B1790 is not output.
HINT:
Codes other than DTC B1790 may be output at this time, but they are not related to this check.

NG → REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)

OK

END

22 CHECK FLOOR WIRE NO. 2 (TO B+)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the front seat wire RH connector from the floor wire No. 2.
(d) Connect the negative (-) terminal cable to the battery, and wait for at least 2 seconds.
(e) Turn the power switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage

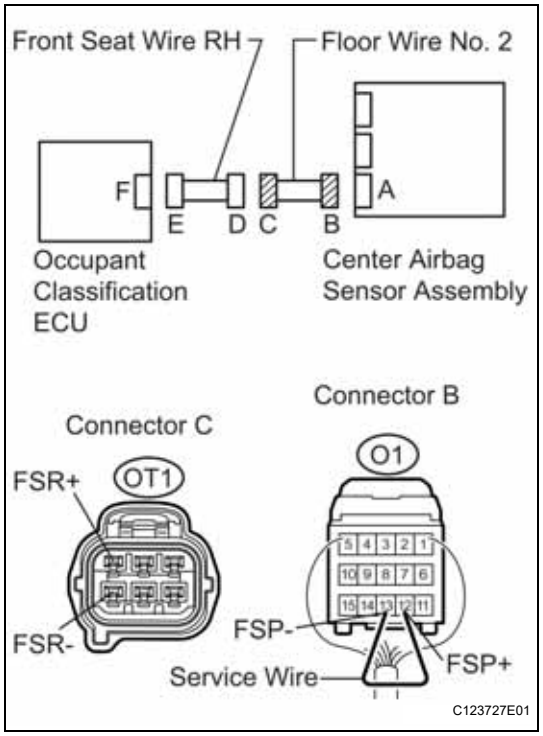
Tester connection	Condition	Specified condition
OT1-1 (FSR+) - Body ground	Power switch on (IG)	Below 1 V
OT1-4 (FSR-) - Body ground	Power switch on (IG)	Below 1 V

NG → REPAIR OR REPLACE FLOOR WIRE NO. 2

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

23	CHECK FLOOR WIRE NO. 2 (OPEN)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
HINT:
The service wire has already been inserted into connector B.

(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

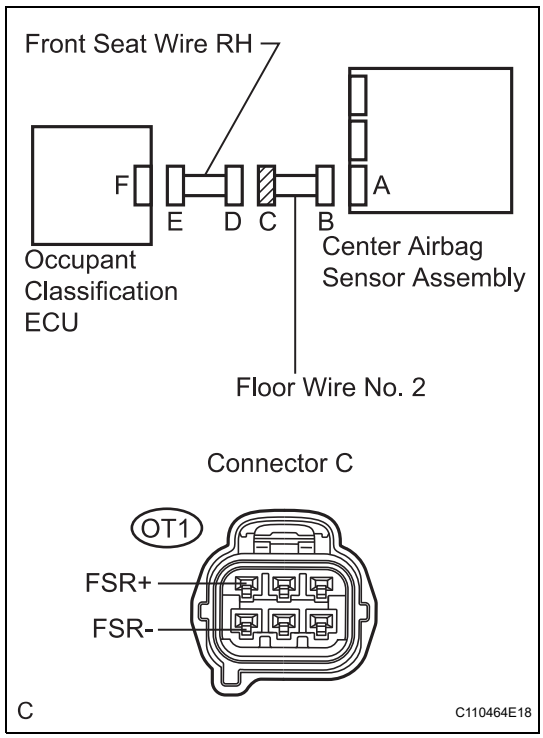
Tester connection	Condition	Specified condition
OT1-1 (FSR+) - OT1-4 (FSR-)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

24	CHECK FLOOR WIRE NO. 2 (SHORT)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

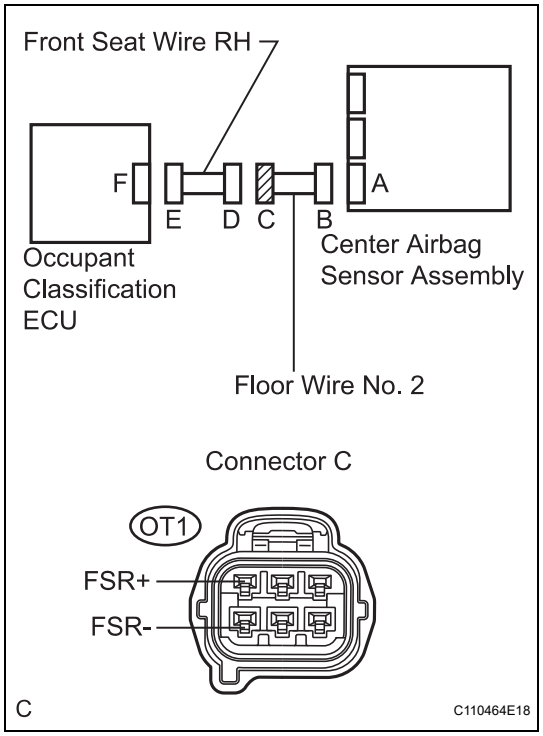
Tester connection	Condition	Specified condition
OT1-1 (FSR+) - OT1-4 (FSR-)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

25	CHECK FLOOR WIRE NO. 2 (TO GROUND)



(a) Disconnect the front seat wire RH connector from the floor wire No. 2.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester connection	Condition	Specified condition
OT1-1 (FSR+) - Body ground	Always	1 MΩ or Higher
OT1-4 (FSR-) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FLOOR WIRE NO. 2**

OK

REPAIR OR REPLACE FRONT SEAT WIRE RH

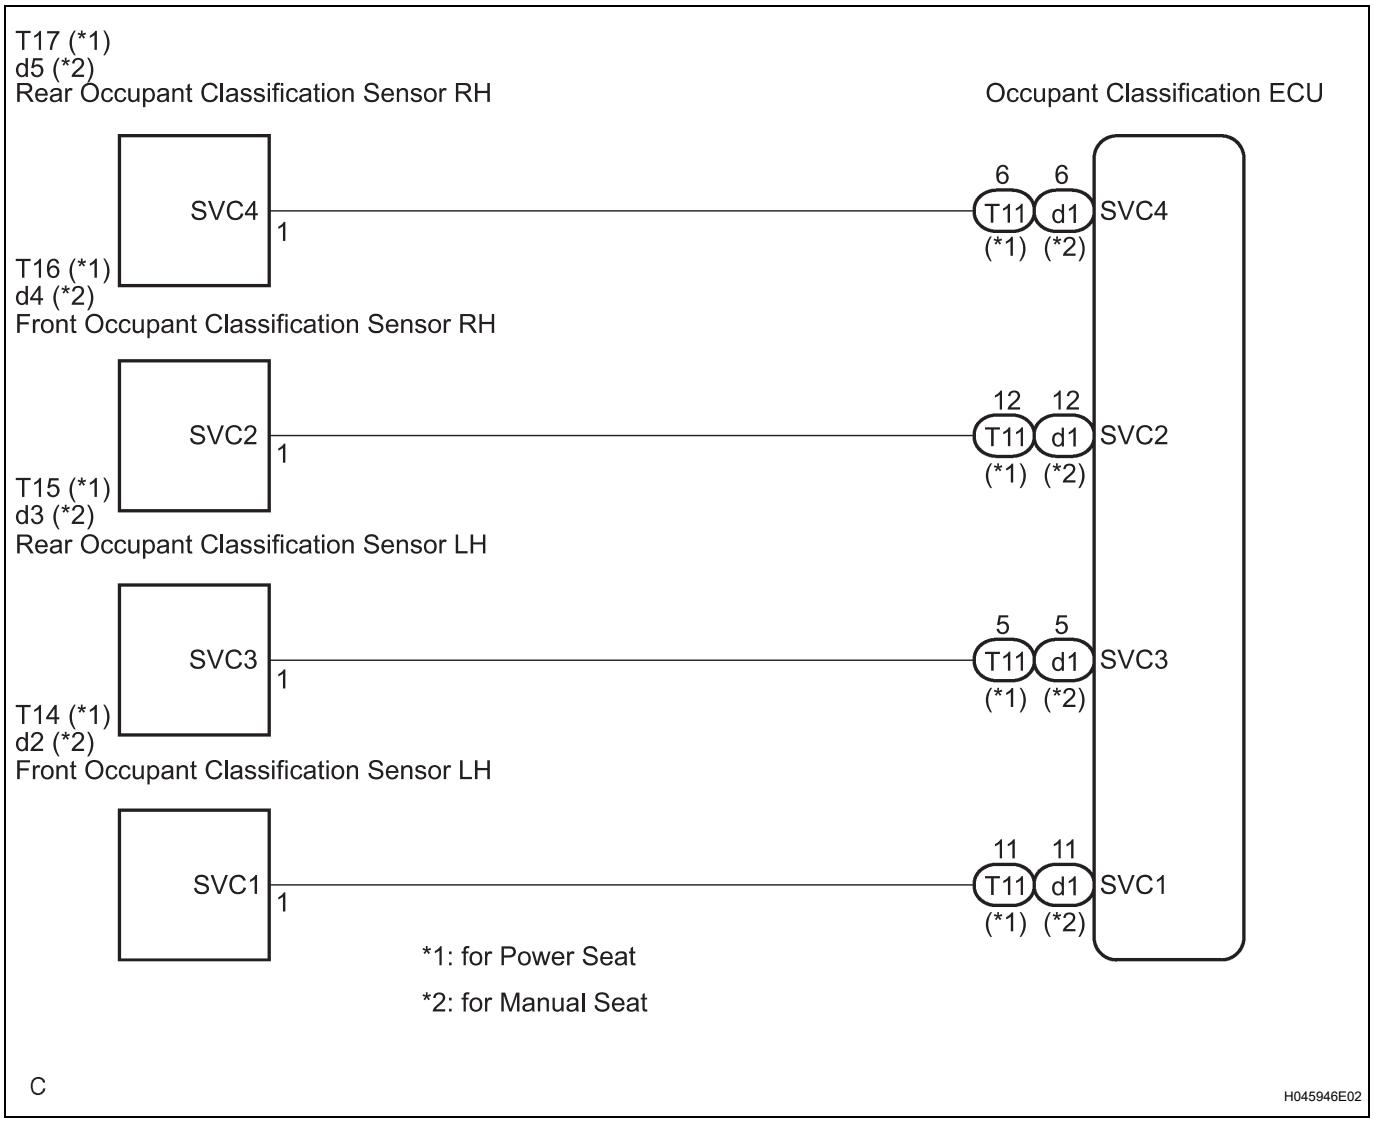
DTC	B1793	Occupant Classification Sensor Power Supply Circuit Malfunction

DESCRIPTION

The occupant classification sensor power supply circuit consists of the occupant classification ECU and the occupant classification sensors.
DTC B1793 is recorded when a malfunction is detected in the occupant classification sensor power supply circuit.

DTC No.	DTC Detecting Condition	Trouble Area
B1793	• The occupant classification ECU receives a line short circuit signal, an open circuit signal, a short circuit to ground signal or a short circuit to B+ signal in the occupant classification sensor power supply circuit for 2 seconds. • Occupant classification ECU malfunction	• Front seat assembly RH (Occupant classification sensors) • Front seat wire RH • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

HINT:

- If troubleshooting (wire harness inspection) is difficult to perform, remove the front passenger seat installation bolts to see the under surface of seat cushion.
- In the above case, hold the seat so that it does not fall down. Holding the seat for a long period of time may cause a problem, such as seat rail deformation. Hold the seat only as necessary.

1	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).

OK:

DTC B1793 is not output.

HINT:

Codes other than DTC B1793 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

2	CHECK CONNECTION OF CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Check that the connectors are properly connected to the occupant classification ECU and the occupant classification sensors.

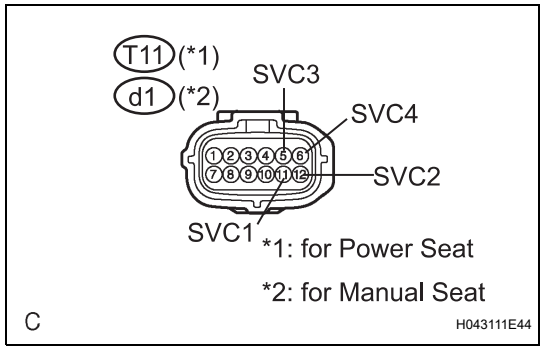
OK:

The connectors are properly connected.

NG → **CONNECT CONNECTORS PROPERLY, THEN GO TO STEP 1**

OK

3	CHECK FRONT SEAT WIRE RH (SHORT TO B+)



(a) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.

Standard voltage:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - Body ground	Power switch on (IG)	Below 1 V
T11-6 (SVC4) - Body ground	Power switch on (IG)	Below 1 V
T11-11 (SVC1) - Body ground	Power switch on (IG)	Below 1 V
T11-12 (SVC2) - Body ground	Power switch on (IG)	Below 1 V

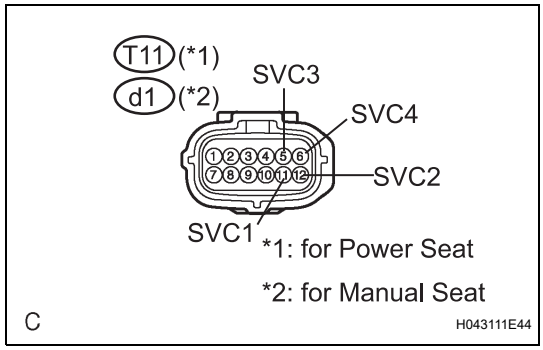
for Manual seat

Tester connection	Condition	Specified condition
d1-5 (SVC3) - Body ground	Power switch on (IG)	Below 1 V
d1-6 (SVC4) - Body ground	Power switch on (IG)	Below 1 V
d1-11 (SVC1) - Body ground	Power switch on (IG)	Below 1 V
d1-12 (SVC2) - Body ground	Power switch on (IG)	Below 1 V

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

4	CHECK FRONT SEAT WIRE RH (SHORT TO GROUND)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - Body ground	Always	1 MΩ or Higher
T11-6 (SVC4) - Body ground	Always	1 MΩ or Higher
T11-11 (SVC1) - Body ground	Always	1 MΩ or Higher

RS

Tester connection	Condition	Specified condition
T11-12 (SVC2) - Body ground	Always	1 MΩ or Higher

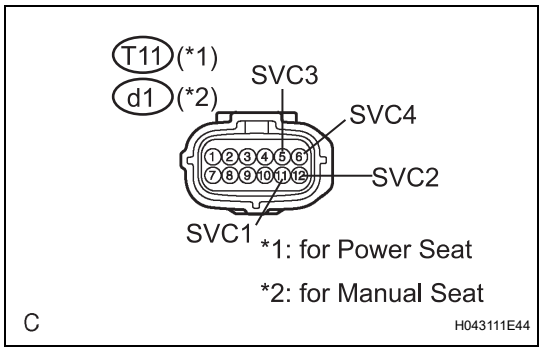
for Manual seat

Tester connection	Condition	Specified condition
d1-5 (SVC3) - Body ground	Always	1 MΩ or Higher
d1-6 (SVC4) - Body ground	Always	1 MΩ or Higher
d1-11 (SVC1) - Body ground	Always	1 MΩ or Higher
d1-12 (SVC2) - Body ground	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

5 CHECK FRONT SEAT WIRE RH (OPEN)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - T15-1 (SVC3)	Always	Below 1 Ω
T11-6 (SVC4) - T17-1 (SVC4)	Always	Below 1 Ω
T11-11 (SVC1) - T14-1 (SVC1)	Always	Below 1 Ω
T11-12 (SVC2) - T16-1 (SVC2)	Always	Below 1 Ω

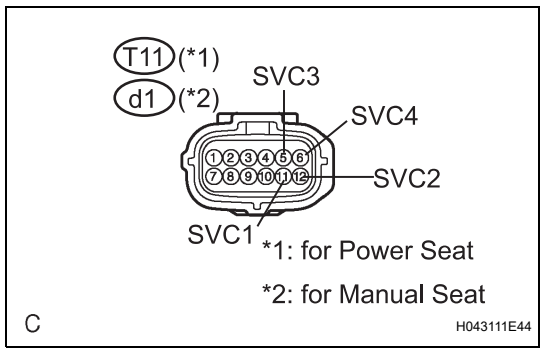
for Manual seat

Tester connection	Condition	Specified condition
d1-5 (SVC3) - d3-1 (SVC3)	Always	Below 1 Ω
d1-6 (SVC4) - d5-1 (SVC4)	Always	Below 1 Ω
d1-11 (SVC1) - d2-1 (SVC1)	Always	Below 1 Ω
d1-12 (SVC2) - d4-1 (SVC2)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

6	CHECK FRONT SEAT WIRE RH (SHORT)



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance:

for Power seat

Tester connection	Condition	Specified condition
T11-5 (SVC3) - T11-6 (SVC4)	Always	1 MΩ or Higher
T11-5 (SVC3) - T11-11 (SVC1)	Always	1 MΩ or Higher
T11-5 (SVC3) - T11-12 (SVC2)	Always	1 MΩ or Higher
T11-6 (SVC4) - T11-11 (SVC1)	Always	1 MΩ or Higher
T11-6 (SVC4) - T11-12 (SVC2)	Always	1 MΩ or Higher
T11-11 (SVC1) - T11-12 (SVC2)	Always	1 MΩ or Higher

for Manual seat

Tester connection	Condition	Specified condition
d1-5 (SVC3) - d1-6 (SVC4)	Always	1 MΩ or Higher
d1-5 (SVC3) - d1-11 (SVC1)	Always	1 MΩ or Higher
d1-5 (SVC3) - d1-12 (SVC2)	Always	1 MΩ or Higher
d1-6 (SVC4) - d1-11 (SVC1)	Always	1 MΩ or Higher
d1-6 (SVC4) - d1-12 (SVC2)	Always	1 MΩ or Higher
d1-11 (SVC1) - d1-12 (SVC2)	Always	1 MΩ or Higher

NG → **REPAIR OR REPLACE FRONT SEAT WIRE RH**

OK

7	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG).
(d) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(e) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG).
(h) Check the DTCs (See page RS-248).

OK:
DTC B1793 is not output.
HINT:
Codes other than DTC B1793 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

NG

8	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-248).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

9	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NG → **Go to step 12**

OK

10	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NG → **Go to step 12**

OK

11	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).

(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1793 is not output.
HINT:
Codes other than DTC B1793 may be output at this time, but they are related to this check.

OK → **END**

NG

12	REPLACE FRONT SEAT ASSEMBLY RH

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the front seat assembly RH (See page SE-29 for power seat or SE-16 for manual seat).

NEXT

13	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

14	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

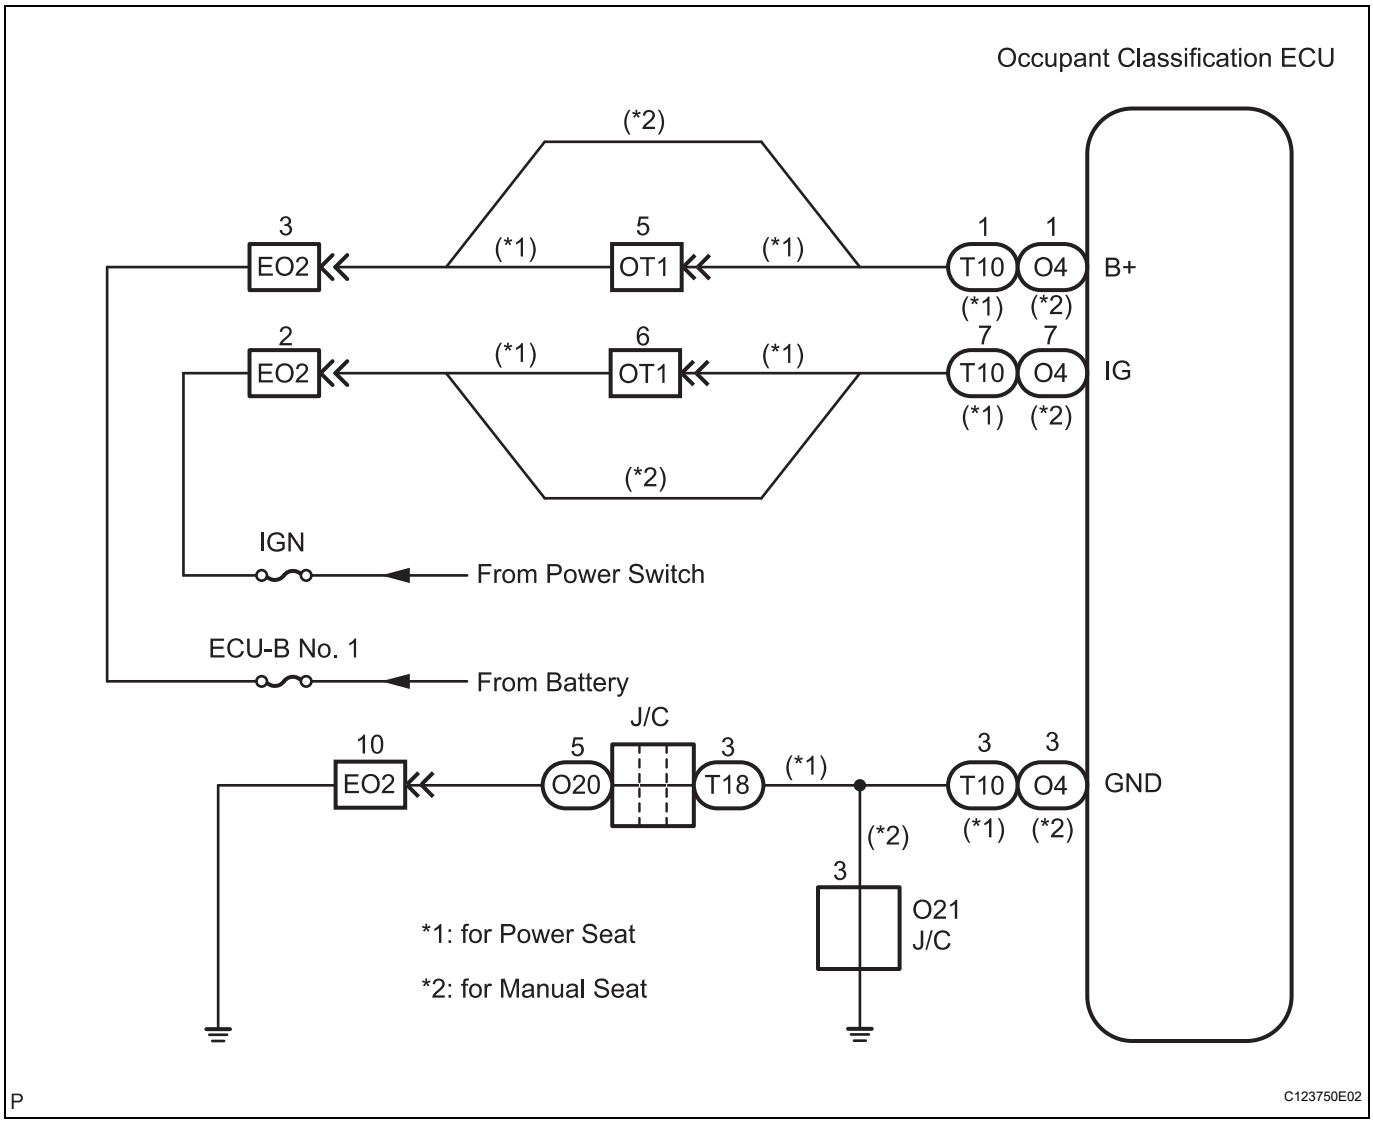
DTC	B1794	Open in Occupant Classification ECU Battery Positive Line

DESCRIPTION

This circuit consists of the occupant classification ECU and the power source circuit (battery, fuse, and wire harness).
DTC B1794 is recorded when a malfunction is detected in the occupant classification ECU or the power source circuit.
HINT:
If DTC B1794 is output after switching the power switch off-on (IG)-off 50 times in a row when a malfunction occurs in the power circuit for the occupant classification system, the DTC is output again.
This DTC is output when a malfunction is detected even after being cleared unless the normal system code is input.

DTC No.	DTC Detecting Condition	Trouble Area
B1794	• The power switch is turned from off to on (IG), hold if for 10 seconds or more, and back to off again 50 times in a row when a malfunction occurs in the circuit for the occupant classification system. • Occupant classification ECU malfunction	• Battery • ECU-B Fuse • Floor wire No. 2 • Front seat wire RH (for Power seat) • Occupant classification ECU

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK BATTERY

(a) Measure the voltage of the battery.
Standard voltage:
11 to 14 V

NG → **REPLACE BATTERY**

OK

2	CHECK FUSE

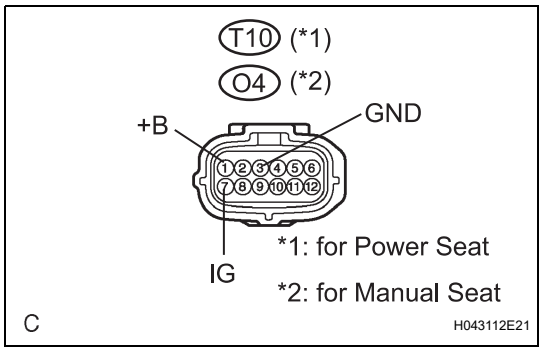
(a) Check the ECU-B fuse.
Standard resistance:
Below 1 Ω

RS

NG → REPLACE FUSE

OK

3 CHECK WIRE HARNESS (SOURCE VOLTAGE)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Disconnect the connector from the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the power switch on (IG).
(f) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage and resistance:

for Power seat

Tester connection	Condition	Specified condition
T10-1 (+B) - Body ground	Always	10 to 14 V
T10-3 (GND) - Body ground	Always	Below 1 Ω
T10-7 (IG) - Body ground	Power switch on (IG)	10 to 14 V

for Manual seat

Tester connection	Condition	Specified condition
O4-1 (+B) - Body ground	Always	10 to 14 V
O4-3 (GND) - Body ground	Always	Below 1 Ω
O4-7 (IG) - Body ground	Power switch on (IG)	10 to 14 V

NG → REPAIR OR REPLACE WIRE HARNESS

OK

4 CHECK DTC

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Connect the connector to the occupant classification ECU.
(d) Connect the intelligent tester to the DLC3.
(e) Connect the negative (-) terminal cable to the battery.
(f) Turn the power switch on (IG).
(g) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(h) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(i) Turn the power switch off.

(j) Turn the power switch on (IG), and wait for at least 10 seconds.
(k) Using the intelligent tester, check the DTCs of the occupant classification ECU (See page RS-248).
OK:
B1794 is not output.
HINT:
Codes other than DTC B1794 may be output at this time, but they are not related to this check.

NG → **USE SIMULATION METHOD TO CHECK (See page RS-245)**

OK

5	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery, and wait for at least 90 seconds.
(c) Replace the occupant classification ECU (See page RS-445).

NEXT

6	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform the "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

7	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform the "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1795	Occupant Classification ECU Malfunction

DESCRIPTION

DTC B1795 is recorded when a malfunction is detected in the occupant classification ECU.
Troubleshoot the DTC B1771 first when the DTC B1771 and B1795 are output simultaneously.

DTC No.	DTC Detecting Condition	Trouble Area
B1795	• Occupant classification ECU circuit malfunction • The occupant classification ECU receives a short circuit to ground signal in the passenger side buckle switch circuit for 2 seconds. • Occupant classification ECU malfunction	• Front seat wire RH (for Power seat) • Floor wire No. 2 • Front seat inner belt assembly RH (Passenger side buckle switch) • Occupant classification ECU

INSPECTION PROCEDURE

1 CHECK DTC

(a) Turn the power switch on (IG), and wait for at least 10 seconds.
(b) Check the DTCs (See page RS-248).
Result:
A:
DTC B1771 and B1795 are output.
B:
DTC B1795 is output.
HINT:
Codes other than DTC B1771 and B1795 may be output at this time, but they are not related to this check.

A → **GO TO DTC B1771 (See page RS-253)**

B

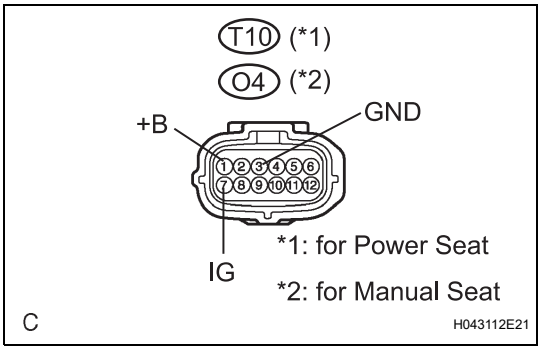
2 CHECK FUSE

(a) Check the ECU-B fuse.
Resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3	CHECK WIRE HARNESS (SOURCE VOLTAGE)



(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Disconnect the connector from the occupant classification ECU.
(d) Connect the negative (-) terminal cable to the battery.
(e) Turn the power switch on (IG).
(f) Measure the voltage according to the value(s) in the table below.

Standard voltage:
for Power seat

Tester connection	Condition	Specified condition
T10-1 (+B) - Body ground	Always	10 to 14 V
T10-7 (IG) - Body ground	Power switch on (IG)	10 to 14 V

for Manual seat

Tester connection	Condition	Specified condition
O4-1 (+B) - Body ground	Always	10 to 14 V
O4-7 (IG) - Body ground	Power switch on (IG)	10 to 14 V

(g) Turn the power switch off.
(h) Measure the resistance according to the value(s) in the table below.

Standard resistance:
for Power seat

Tester connection	Condition	Specified condition
T10-3 (GND) - Body ground	Always	Below 1 Ω

for Manual seat

Tester connection	Condition	Specified condition
O4-3 (GND) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE WIRE HARNESS**

OK

4	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-248).
HINT:
Perform the inspection using parts from a normal vehicle if possible.

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETED" is displayed.

NEXT

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

DTC	B1796	Sleep Operation Failure of Occupant Classification ECU

DESCRIPTION

During sleep mode, the occupant classification ECU reads the condition of each sensor while the power switch is off.
In this mode, if occupant classification ECU detects an internal malfunction, DTC B1796 is output.

DTC No.	DTC Detecting Condition	Trouble Area
B1796	• Occupant classification ECU malfunction	• Occupant classification ECU

INSPECTION PROCEDURE

1	CHECK DTC

(a) Turn the power switch on (IG).
(b) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(c) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(d) Turn the power switch off, and wait for at least 10 seconds.
(e) Turn the power switch on (IG).
(f) Check the DTCs (See page RS-248).
OK:
DTC B1796 is not output.
HINT:
Codes other than DTC B1796 may be output at this time, but they are not related to this check.

OK → **USE SIMULATION METHOD TO CHECK (See page RS-33)**

NG

2	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-445).

NEXT

3	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).

OK:
"COMPLETED" is displayed.

NEXT

4	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

END

Trouble in Passenger Airbag ON / OFF Indicator

DESCRIPTION

The occupant classification system detects the front passenger seat condition. It then informs a passenger of the front passenger airbag assembly and front seat side airbag assembly condition (activated/not activated) by the passenger airbag ON/OFF indicator.
HINT:
Approximately 6 seconds after the power switch is turned to the on (IG), the passenger airbag ON/OFF indicator will be ON/OFF depending on the conditions listed below.

Front passenger seat condition	ON Indicator	OFF Indicator
Adult is seated.	ON	OFF
Child is seated.	OFF	ON
Vacant	OFF	OFF
Occupant classification system failure	OFF	ON

INSPECTION PROCEDURE

1 CHECK SRS WARNING LIGHT

(a) Turn the power switch on (IG), and check the SRS warning light condition.
HINT:
If this trouble occurs, the SRS warning light is off. If the light is on, a DTC is output. Troubleshoot for the output DTC.
OK:
After the primary check period, SRS warning light goes off.
HINT:
The primary check period is approximately 6 seconds after the power switch is turned on (IG).

NG → **GO TO DTC CHART (See page RS-45)**

OK

2 PERFORM ZERO POINT CALIBRATION

(a) Turn the power switch off.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETE" is displayed.

NG → **Go to step 4**

OK

3	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

OK → END

NG

4	RETIGHTEN FRONT SEAT ASSEMBLY RH BOLT

(a) Turn the power switch off.
(b) Loosen the 4 installation bolts of the front seat assembly RH.
(c) Tighten the 4 installation bolts of the front seat assembly RH to the specified torque.
Torque: 37 N*m (377 kgf*cm, 27 ft.*lbf)

NEXT

5	PERFORM ZERO POINT CALIBRATION

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETE" is displayed.

NG → Go to step 7

OK

6	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

OK → END

NG

7	CHECK CONNECTORS

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.

(c) Check that the connectors are properly connected to the occupant classification ECU and the 4 occupant classification sensors.
OK:
The connectors are properly connected.
(d) Disconnect the connectors from the occupant classification ECU and the 4 occupant classification sensors.
(e) Check that the connectors are not damaged or deformed.
OK:
The connectors are normal.

NG → **REPAIR OR REPLACE CONNECTOR, THEN GO TO STEP 1**

OK

8	CHECK DTC

(a) Connect the connectors to the occupant classification ECU and the 4 occupant classification sensors.
(b) Connect the negative (-) terminal cable to the battery.
(c) Turn the power switch on (IG), and wait for at least 60 seconds.
(d) Clear the DTCs stored in the occupant classification ECU (See page RS-248).
(e) Clear the DTCs stored in the center airbag sensor assembly (See page RS-41).
(f) Turn the power switch off.
(g) Turn the power switch on (IG), and wait for at least 60 seconds.
(h) Check the DTCs (See page RS-248).
OK:
DTC is not output.

NG → **REPLACE CENTER AIRBAG SENSOR ASSEMBLY (See page RS-423)**

OK

9	REPLACE OCCUPANT CLASSIFICATION ECU

(a) Turn the power switch off.
(b) Disconnect the negative (-) terminal cable from the battery.
(c) Replace the occupant classification ECU (See page RS-445).

NEXT

10	PERFORM ZERO POINT CALIBRATION

(a) Connect the negative (-) terminal cable to the battery.

(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Using the intelligent tester, perform "zero point calibration" (See page RS-239).
OK:
"COMPLETE" is displayed.

NEXT

11	PERFORM SENSITIVITY CHECK

(a) Using the intelligent tester, perform "sensitivity check" (See page RS-239).
Standard value:
27 to 33 kg (59.52 to 72.75 lb)

NEXT

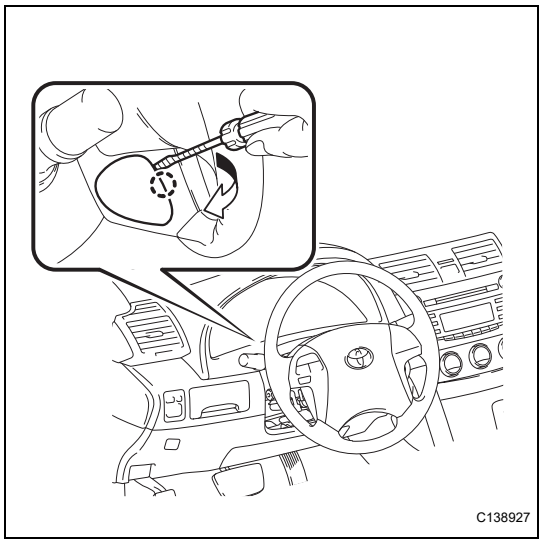
END

REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).

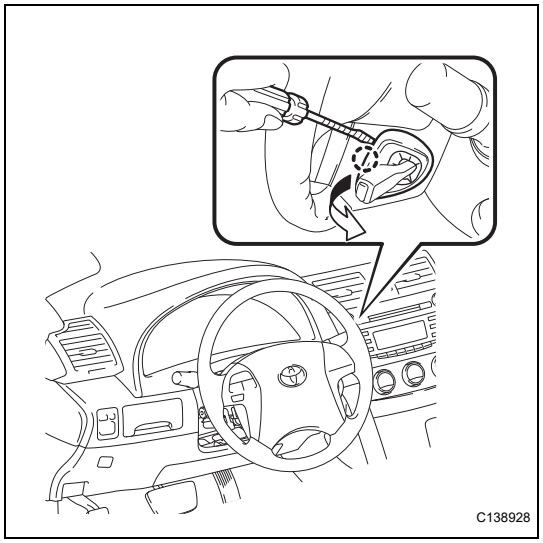
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

3. **REMOVE NO. 3 LOWER STEERING WHEEL COVER**
   (a) Using a screwdriver, disengage the claw and remove the No. 3 lower steering wheel cover.
   HINT:
   Tape up the screwdriver tip before use.

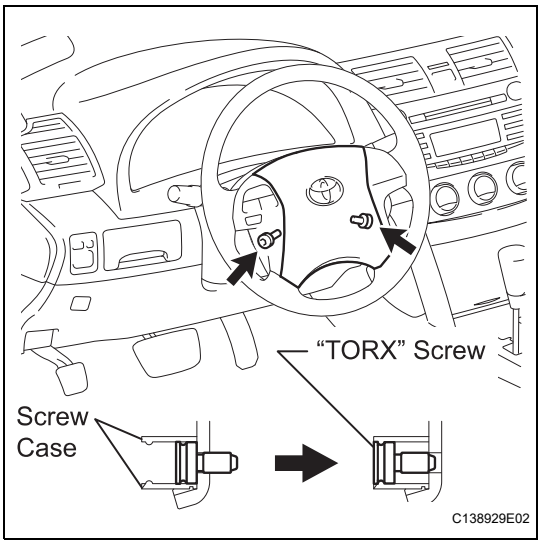


C138927

4. **REMOVE NO. 2 LOWER STEERING WHEEL COVER**
   (a) Using a screwdriver, disengage the claw and remove the No. 2 lower steering wheel cover.
   HINT:
   Tape up the screwdriver tip before use.

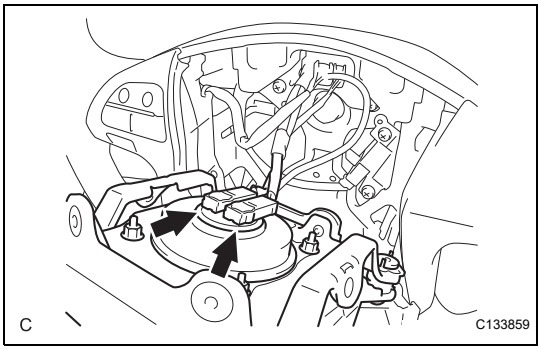


C138928



5. REMOVE STEERING PAD

(a) Using a "TORX" socket (T30), loosen the 2 "TORX" screws until the groove along the screw circumference catches on the screw case.



(b) Pull out the steering pad from the steering wheel assembly and support the steering pad with one hand.

NOTICE:
When removing the steering pad, do not pull the airbag wire harness.

(c) Disconnect the horn connector from the steering pad.

(d) Disconnect the 2 airbag connectors and remove the steering pad.

NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

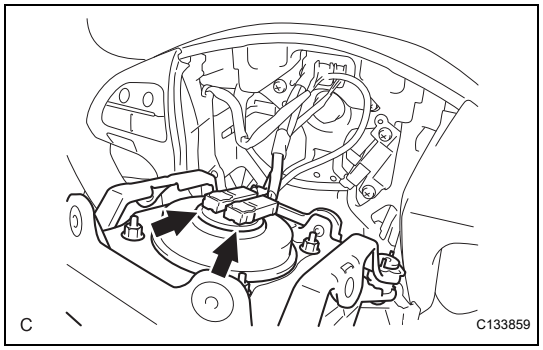
INSTALLATION

1. INSTALL STEERING PAD

(a) Check that the power switch is turned off.

(b) Check that the battery negative (-) terminal is disconnected.

CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



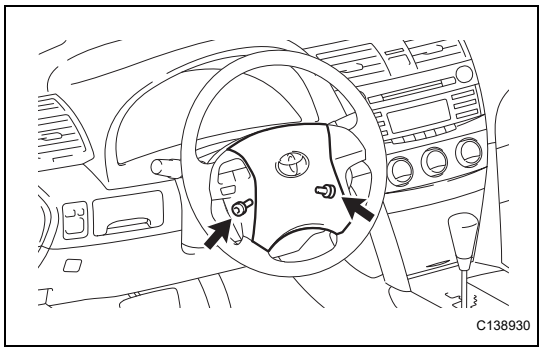
(c) Support the steering pad with one hand.

(d) Connect the 2 airbag connectors to the steering pad.

NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

(e) Connect the horn connector to the steering pad.

(f) Confirm that the circumference groove of the "TORX" screw fits in the screw case, and place the steering pad onto the steering wheel assembly.

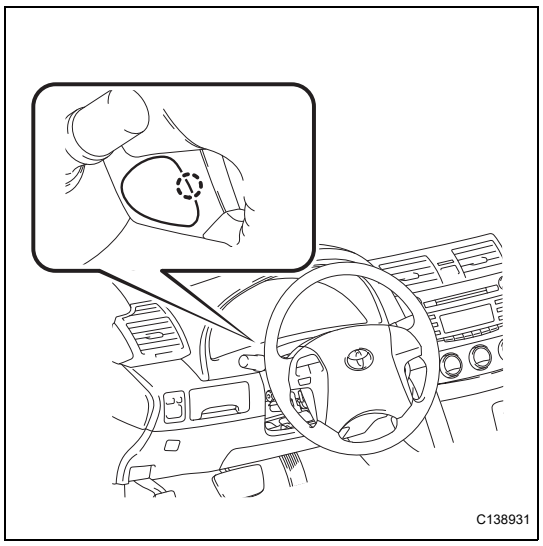


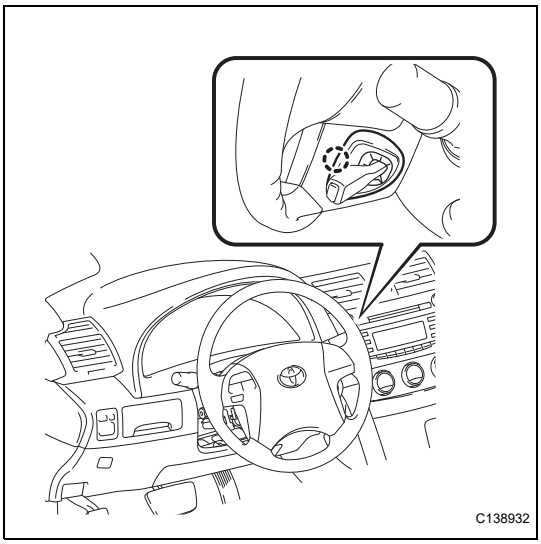
(g) Using a "TORX" socket (T30), tighten the 2 "TORX" screws.

Torque: 8.8 N*m (90 kgf*cm, 78 in.*lbf)

2. INSTALL NO. 3 LOWER STEERING WHEEL COVER

(a) Engage the claw and install the No. 3 lower steering wheel cover.





3. INSTALL NO. 2 LOWER STEERING WHEEL COVER

(a) Engage the claw and install the No. 2 lower steering wheel cover.

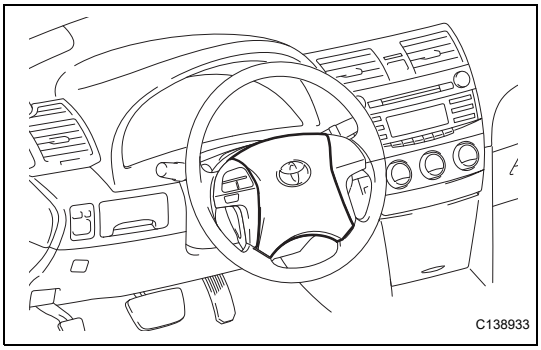
4. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

5. PERFORM INITIALIZATION

(a) Perform initialization (See page IN-43).

NOTICE:

Some systems need initialization after reconnecting the cable to the negative battery terminal.



6. INSPECT STEERING PAD

(a) With the steering pad installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the steering pad with a new one:

Cuts, minute cracks or marked discoloration on the steering pad top surface or in the grooved portion.

(b) Make sure that the horn sounds.

HINT:

If the horn does not sound, inspect the horn system (See page HO-3).

7. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-33).

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of the steering pad, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

- **Never dispose of a steering pad that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors where it will not be a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the steering pad.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

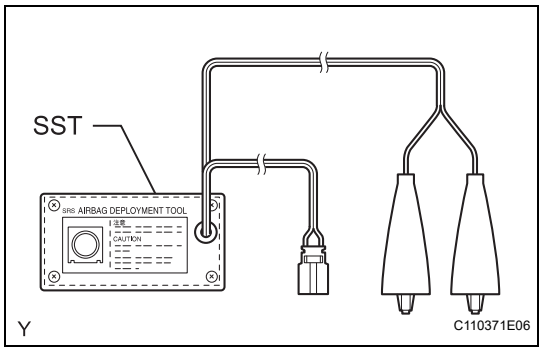
1. DISPOSE OF STEERING PAD (WHEN INSTALLED IN VEHICLE)

HINT:
Prepare a battery as the power source to deploy the airbag.

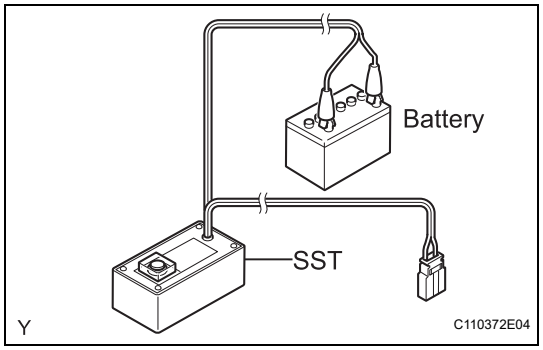
(a) Check the function of the SST.

SST 09082-00700

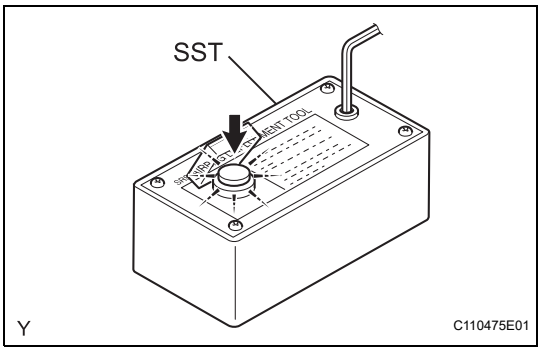
CAUTION:
When deploying the airbag, always use the specified SST:
SRS Airbag Deployment Tool



(1) Connect the SST to the battery.
Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.



RS

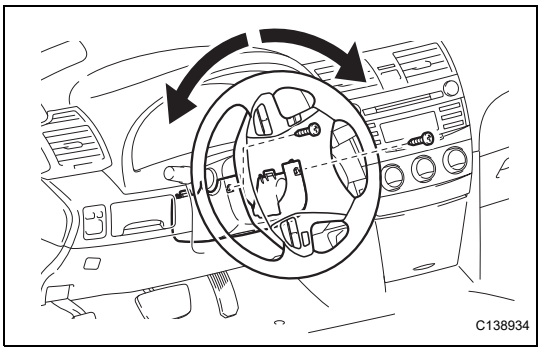


(2) Check the function of the SST.
Press the SST activation switch, and check that the LED of the SST activation switch comes on.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED comes on when the activation switch is not being pressed, SST malfunction is possible, so replace the SST with a new one.**

(3) Disconnect the SST from the battery.

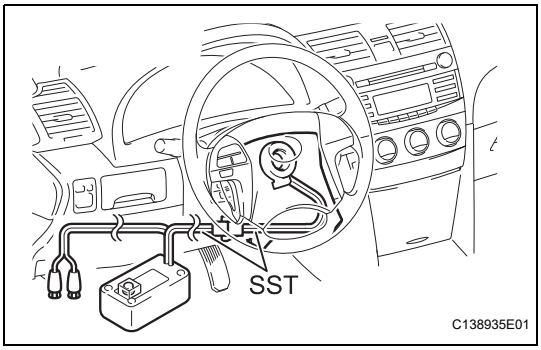
(b) Refer to PRECAUTION (See page RS-1).

(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

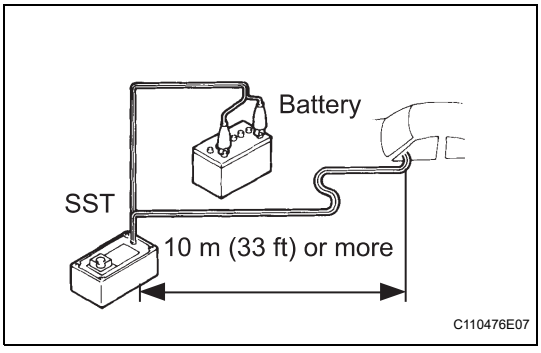


(d) Remove the steering column cover (lower).
(1) While turning the steering wheel assembly to the right and left, remove the 2 screws and steering column cover (lower).

(e) Install the SST.
CAUTION:
Check that there is no looseness in the steering wheel assembly and steering pad.
(1) Disconnect the airbag connector (yellow colored one) from the spiral cable.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.



(2) Connect the SST connector to the airbag connector of the spiral cable.
SST 09082-00700, 09082-00780
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.



(3) Move the SST at least 10 m (33 ft) away from the vehicle front side window.
(4) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
(5) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.

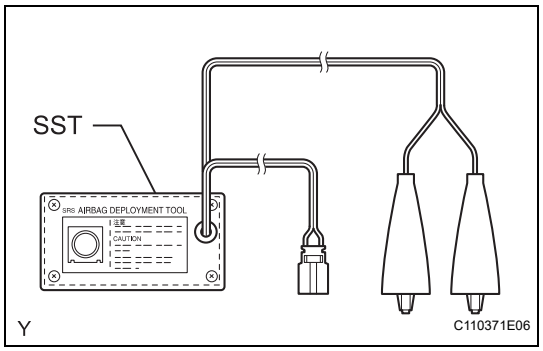
(f) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

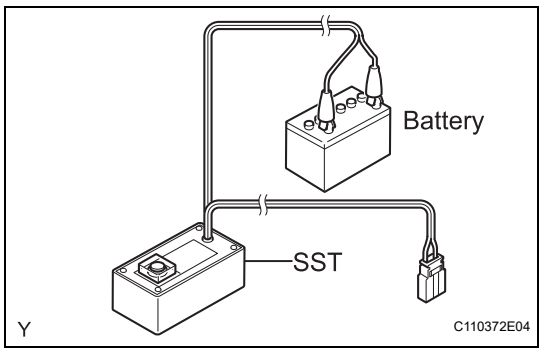
2. DISPOSE OF STEERING PAD (WHEN NOT INSTALLED IN VEHICLE)
NOTICE:
- **When disposing of the steering pad, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

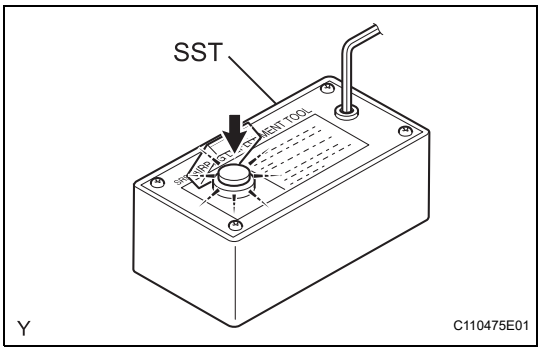
(a) Check the function of the SST.
SST 09082-00700
CAUTION:
When deploying the airbag, always use the specified SST:
SRS Airbag Deployment Tool



(1) Connect the SST to the battery.
Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.



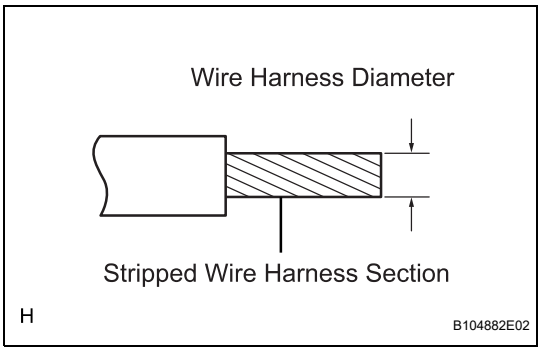
RS



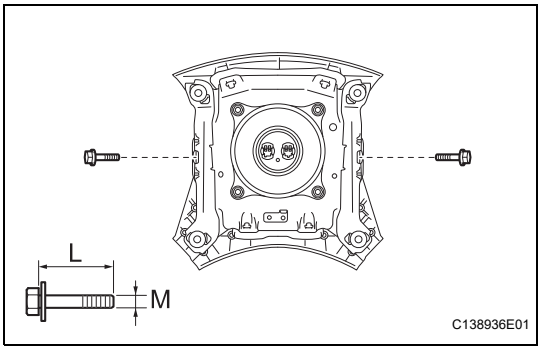
(2) Check the function of the SST.
Press the SST activation switch, and check that the LED of the SST activation switch comes on.
CAUTION:
- **Do not connect the SST connector (yellow colored one) to the airbag.**
- **If the LED comes on when the activation switch is not being pressed, SST malfunction is possible, so replace the SST with a new one.**

(3) Disconnect the SST from the battery.

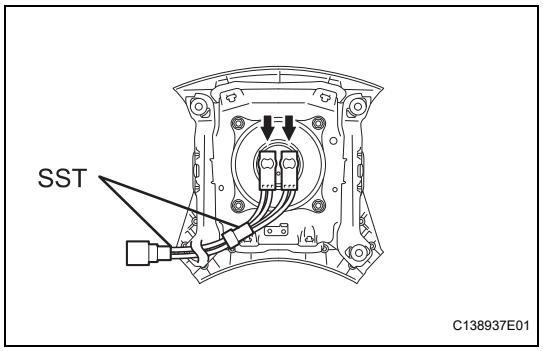
(b) Remove the steering pad (See page RS-344).
CAUTION:
- **When removing the steering pad, work must be started 90 seconds after the power switch is turned off and the negative (-) terminal cable is disconnected from the battery.**
- **When storing the steering pad, keep the airbag deployment side facing upward.**



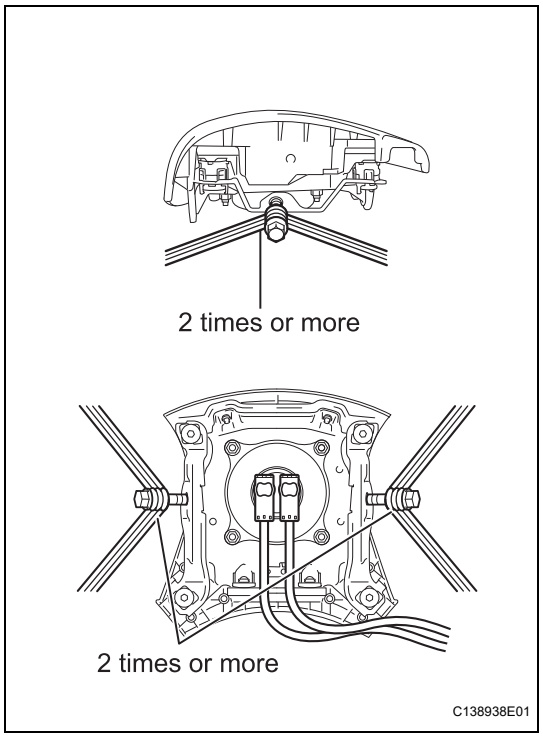
(c) Using a service-purpose wire harness for the vehicle, tie down the steering pad to the disc wheel.
Wire harness:
Stripped wire harness section
1.25 mm^2 or more (0.0019 $in.^2$ or more)
CAUTION:
If the wire harness is too thin or an alternative object is used to tie down the steering pad, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).
HINT:
To calculate the area of the stripped wire harness section:
Area = 3.14 x $(Diameter)^2$ divided by 4



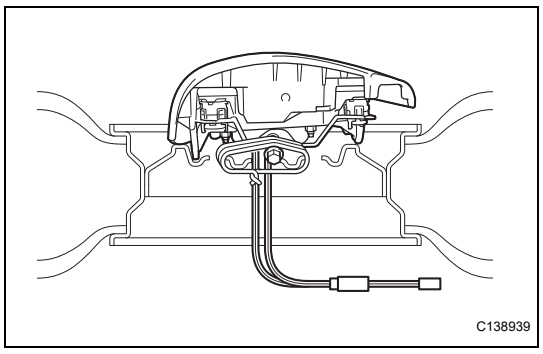
(1) Install the 2 bolts with washers into the 2 bolt holes on the steering pad.
Bolt:
L:
35.0 mm (1.378 in.)
M:
6.0 mm (0.236 in.)
Pitch:
1.0 mm (0.039 in.)
NOTICE:
- **Tighten the bolts by hand until they do not move.**
- **Do not tighten the bolts excessively.**



(2) After connecting the SST below to each other, connect them to the steering pad.
SST 09082-00802 (09082-10801, 09082-30801)

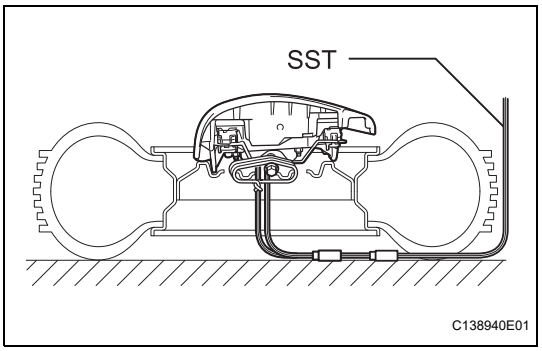


(3) Using 3 wire harnesses, wind wire harness at least 2 times each around each of the bolts installed on the left and right sides of the steering pad.
CAUTION:
- **Tightly wind the wire harness around the bolts so that there is no slack.**
- **Make sure that the wire harness is tight. If there is slack in the wire harness, the steering pad may become loose due to the shock when the airbag is deployed.**



(4) Face the airbag deployment side of the steering pad upward on top of a tire and wheel set. Separately tie the left and right sides of the steering pad to the disc wheel through the hub nut holes. Position the SST connector so that it hangs downward through the hub hole of the disc wheel.
CAUTION:
- **Make sure that the wire harness is tight. If there is slack in the wire harness, the steering pad may become loose due to the shock when the airbag is deployed.**
- **Always tie down the steering pad with the airbag deployment side facing upward.**

NOTICE:
The disc wheel will be damaged by the airbag deployment, so use an extra disc wheel.



(d) Install the SST.

CAUTION:

Place the disc wheel on level ground.

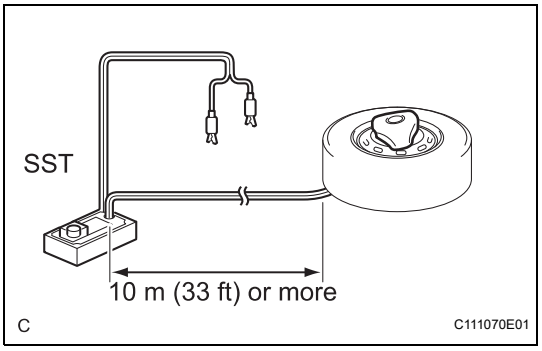
(1) Connect the SST connector.

SST 09082-00700

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the disc wheel.

(2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the disc wheel.



(e) Cover the steering pad (Using a cardboard box).

(1) Cover the steering pad with the cardboard box.

(2) Place weights on the cardboard box in 4 places totalling at least 190 N (19 kg, 43 lb).

Cardboard box size:

Must exceed the following dimensions

X:

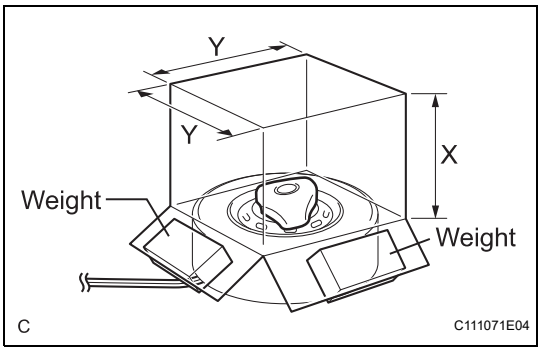
460 mm (18.11 in.)

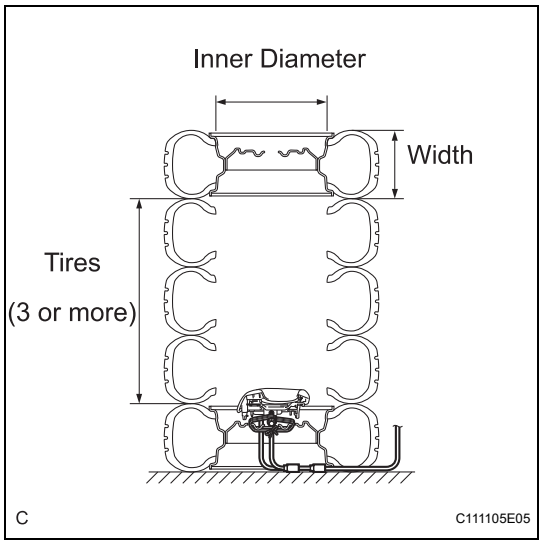
Y:

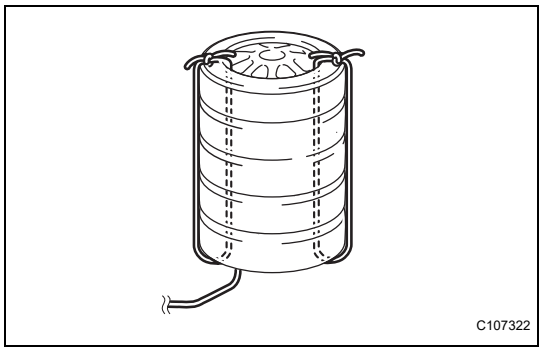
650 mm (25.59 in.)

NOTICE:

- **When dimension Y of the cardboard box exceeds the diameter of the disc wheel and tire that the steering pad is tied to, X should be the following size.**
  X = 460 mm (18.11 in.) + width of tire
- **If a cardboard box which is smaller than the specified size is used, the cardboard box will be broken by the shock from the airbag deployment.**







(f) Cover the steering pad (Using tires).

(1) Place at least 3 tires without disc wheels on the tire and disc wheel that the steering pad is tied to.

(2) Place the tire with a disc wheel on top of them.

Tire size:

Must exceed the following dimensions

Width:

185 mm (7.28 in.)

Inner diameter:

360 mm (14.17 in.)

CAUTION:

Do not use tires with disc wheels except for the top and bottom.

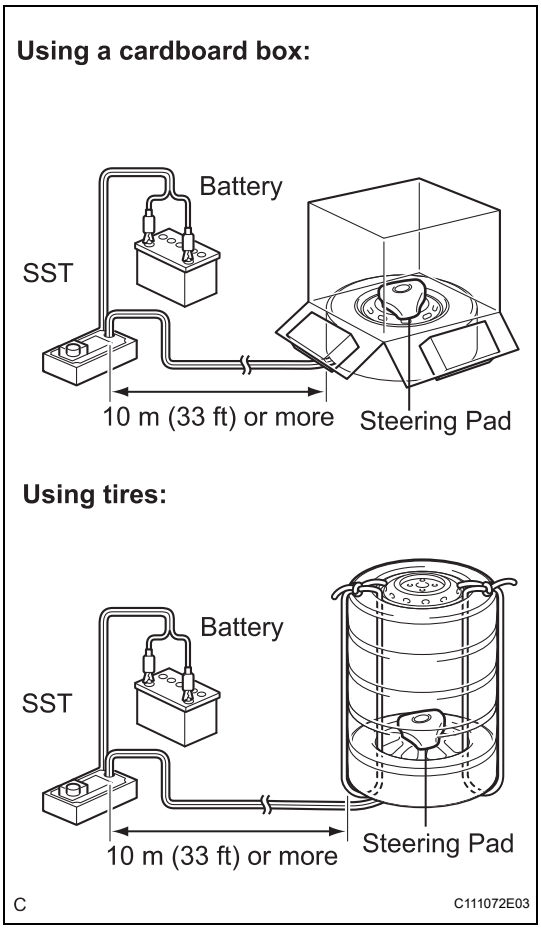
NOTICE:

- **The tires may be damaged by the airbag deployment, so use an extra tire.**
- **Do not place the SST connector under the tire because it could be damaged.**

(3) Tie the tires together with 2 wire harnesses.

CAUTION:

Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.



(g) Deploy the airbag.
(1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the disc wheel which the steering pad is tied to.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tire.
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

(h) Dispose of the steering pad.
CAUTION:
- **The steering pad becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a steering pad with a deployed airbag.**
- **Do not apply water, etc. to a steering pad with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

(1) Remove the steering pad from the disc wheel.
(2) Place the steering pad in a plastic bag, tie it tightly and dispose of it as other general part disposal.

INSPECTION

1. INSPECT SPIRAL CABLE

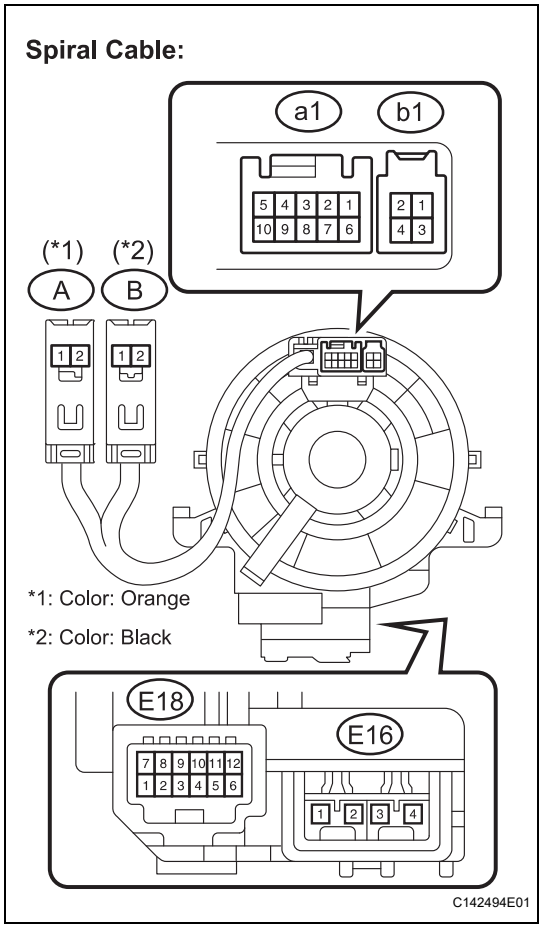
(a) If there are any defects as mentioned below, replace the spiral cable with a new one:
Scratches, cracks, dents or chips on the connector or the spiral cable.

(b) Inspect the spiral cable.

(1) Measure the resistance according to the value(s) in the table below.

NOTICE:
To avoid breakage of the spiral cable, do not turn the spiral cable more than necessary.

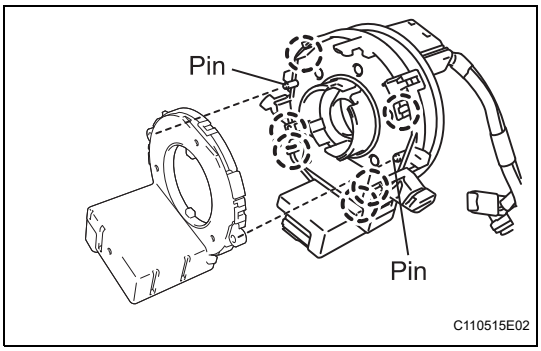
Standard resistance



Tester connection	Condition	Specified condition
a1-1 - b1-2	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-1 - E18-8 (HO)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-2 - E18-9 (EAC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-3 - E18-10 (AC1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-5 - E18-12 (IL+2)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-6 - b1-4	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-6 - E18-2 (ECC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-7 - E18-3 (+DP)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-8 - E18-4 (EAU)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-9 - E18-5 (AU2)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
a1-10 - E18-6 (AU1)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
b1-2 - E18-8 (HO)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

Tester connection	Condition	Specified condition
b1-3 - E18-1 (CCS)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
b1-4 - E18-2 (ECC)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
A-1 (D-) - E16-2 (D-)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
A-2 (D+) - E16-1 (D+)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
B-1 (D2-) - E16-3 (D2-)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	
B-2 (D2+) - E16-4 (D2+)	Center	Below 1 Ω
	2.5 rotations to the left	
	2.5 rotations to the right	

If the value is not within the specified range, replace the spiral cable.



INSTALLATION

1. INSTALL SPIRAL CABLE

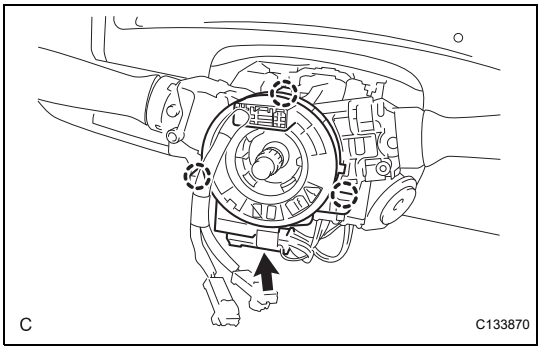
(a) Engage the 6 claws and and 2 pins, and install the spiral cable to the steering angle sensor.

2. INSTALL SPIRAL CABLE WITH STEERING ANGLE SENSOR

(a) Check that the front wheels are facing straight ahead.

(b) Set the turn signal switch to the neutral position.

NOTICE:
If it is not in the neutral position, the pin of the turn signal switch may be snapped.



(c) Engage the 3 claws and install the spiral cable with steering angle sensor.

NOTICE:
When replacing the spiral cable with a new one, remove the lock pin before installing the steering wheel assembly.

(d) Connect the connectors to the spiral cable with steering angle sensor.

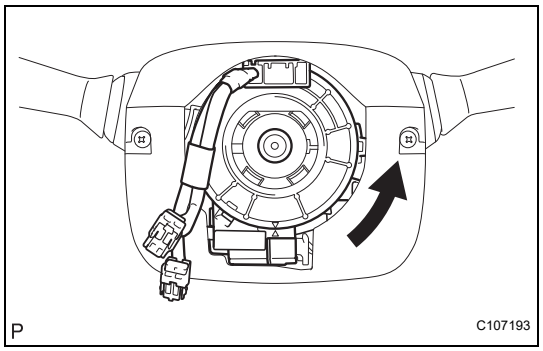
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

3. INSTALL STEERING COLUMN COVER (See page SR-41)

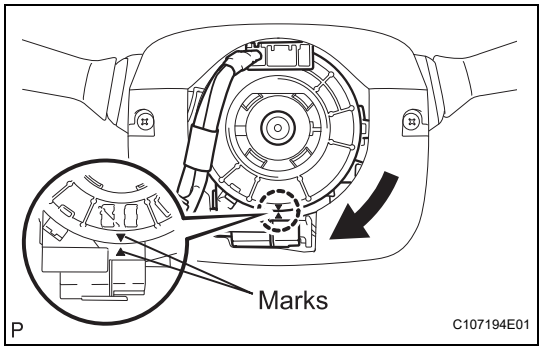
4. ADJUST SPIRAL CABLE

(a) Check that the power switch is turned off.

(b) Check that the battery negative (-) cable is disconnected.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



(c) Rotate the spiral cable counterclockwise slowly by hand until it feels firm.
NOTICE:
Do not turn the spiral cable by the airbag wire harness.

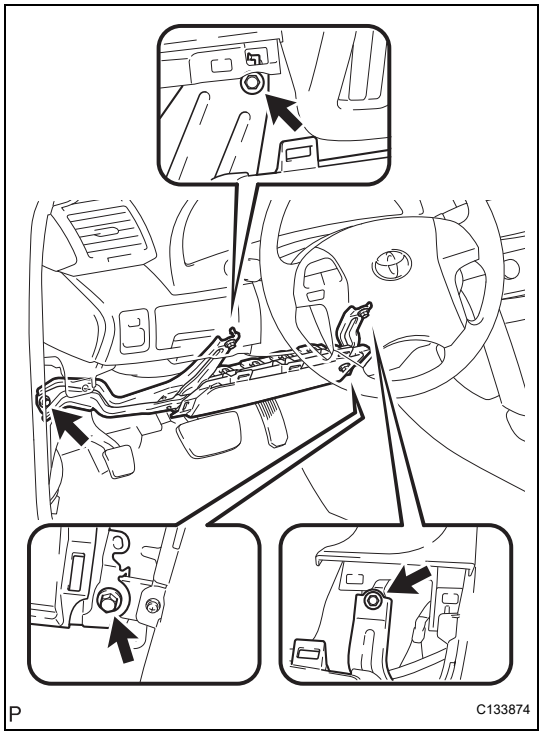


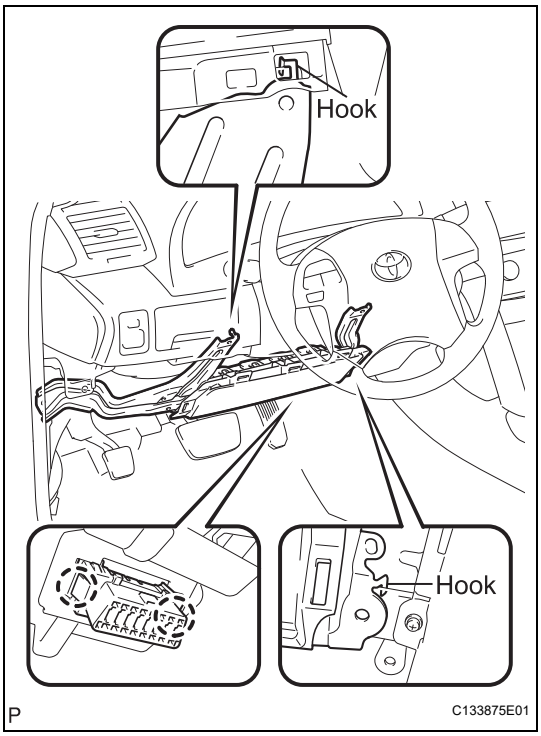
(d) Rotate the spiral cable clockwise approximately 2.5 turns to align the marks.
NOTICE:
Do not turn the spiral cable by the airbag wire harness.
HINT:
The spiral cable will rotate approximately 2.5 turns to both the left and right from the center.

5. **INSTALL STEERING WHEEL ASSEMBLY (See page SR-42)**
6. **INSPECT STEERING WHEEL CENTER POINT**
7. **INSTALL STEERING PAD (See page RS-346)**
8. **INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-347)**
9. **INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-347)**
10. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
11. **PERFORM INITIALIZATION**
    (a) Perform initialization (See page IN-43).
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal.
12. **INSPECT STEERING PAD (See page RS-347)**
13. **INSPECT SRS WARNING LIGHT**
    (a) Inspect the SRS warning light (See page RS-33).

REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
4. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
5. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**
6. **REMOVE DRIVER SIDE KNEE AIRBAG ASSEMBLY**
   (a) Remove the 4 bolts.
   (b) Disconnect the airbag connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.





(c) Disengage the 2 claws and remove the DLC3.
(d) Disengage the 2 hooks and remove the driver side knee airbag assembly.

INSTALLATION

1. **INSTALL DRIVER SIDE KNEE AIRBAG ASSEMBLY**
   (a) Check that the power switch is turned off.
   (b) Check that the battery negative (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
   (c) Temporarily install the driver side knee airbag assembly with the 2 hooks.
   (d) Engage the 2 claws and install the DLC3.

   (e) Install the driver side knee airbag assembly with the 4 bolts.
   Torque: 10 N*m (102 kgf*cm, 7 ft.*lbf)
   (f) Connect the driver side knee airbag connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.

2. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**

3. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**

4. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**

5. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**

6. **PERFORM INITIALIZATION**
   (a) Perform initialization (See page IN-43).
   NOTICE:
   Some systems need initialization after reconnecting the cable to the negative battery terminal.

RS

7. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-33).

DISPOSAL

HINT:
When scrapping a vehicle equipped with the SRS or disposing of the driver side knee airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

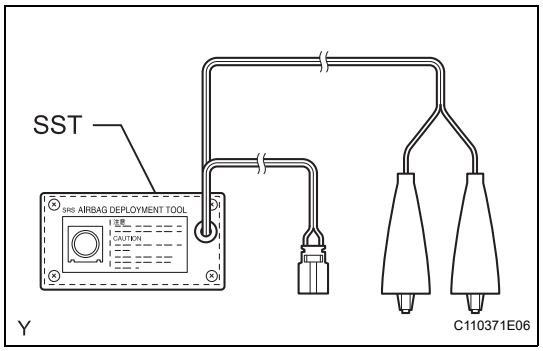
CAUTION:

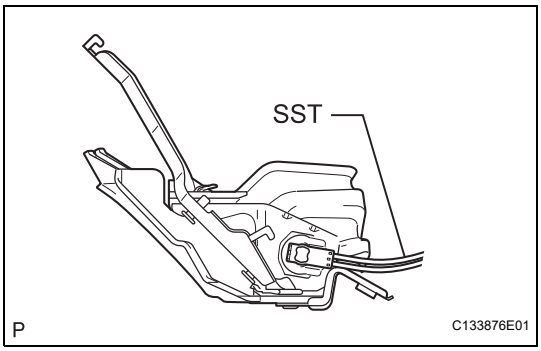
- **Never dispose of a driver side knee airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors where it will not be a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the driver side knee airbag assembly.**
- **The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a driver side knee airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

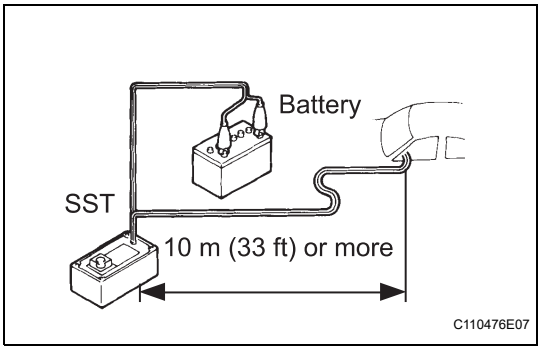
1. DISPOSE OF DRIVER SIDE KNEE AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of the SST (See page RS-348).
(b) Refer to PRECAUTION (See page RS-1).
(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
(d) Remove the driver side knee airbag assembly (See page RS-362).







(e) Install the SST.

(1) Connect the SST connector to the driver side knee airbag assembly.

SST 09082-00700, 09082-00770

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.

(2) Install the driver side knee airbag assembly (See page RS-363).

NOTICE:

Take care not to damage the SST wire harness.

(3) Move the SST at least 10 m (33 ft) away from the vehicle front side window.

(4) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a driver side knee airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

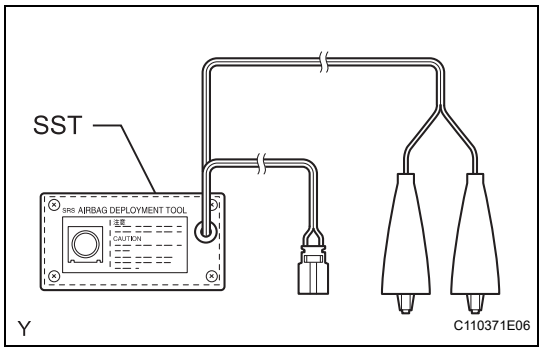
HINT:

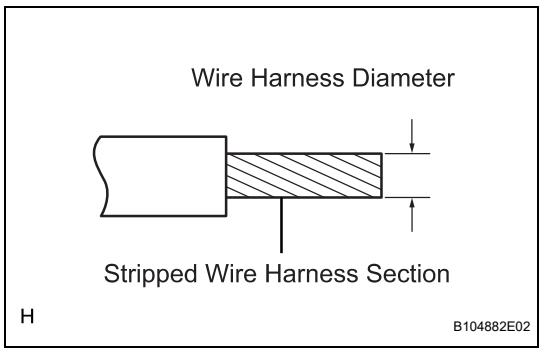
The airbag is deployed as the LED of the SST activation switch comes on.

2. DISPOSE OF DRIVER SIDE KNEE AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **When disposing of the driver side knee airbag assembly, never use the customer's vehicle to deploy the airbag.**



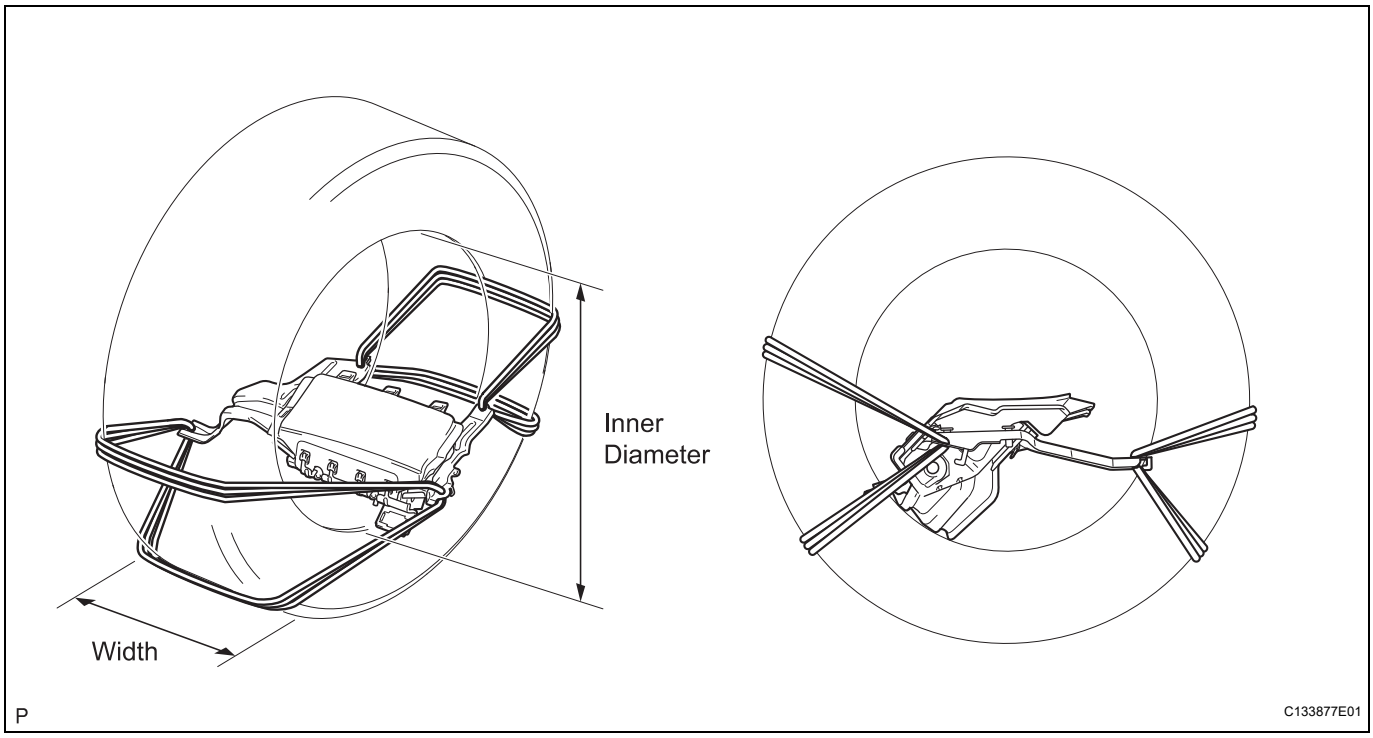


- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

(a) Check the function of the SST (See page RS-350).
(b) Remove the driver side knee airbag assembly (See page RS-362).
CAUTION:
- **When removing the driver side knee airbag assembly, work must be started 90 seconds after the power switch is turned off and the negative (-) terminal cable is disconnected from the battery.**
- **When storing the driver side knee airbag assembly, keep the airbag deployment side facing upward.**

(c) Using a service-purpose wire harness for the vehicle, tie down the driver side knee airbag assembly to the tire.
Wire harness:
Stripped wire harness section
1.25 mm^2 or more (0.0019 $in.^2$ or more)
CAUTION:
If the wire harness is too thin or an alternative object is used to tie down the driver side knee airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).
HINT:
To calculate the area of the stripped wire harness section:
Area = 3.14 x $(Diameter)^2$ divided by 4
(1) Position the driver side knee airbag assembly inside the tire with the airbag deployment side facing inside.
Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.17 in.)

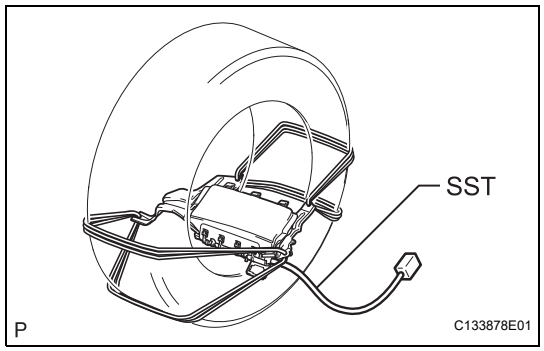


CAUTION:

- **Make sure that the wire harness is tight. If there is slack in the wire harness, the driver side knee airbag assembly may become loose due to the shock when the airbag is deployed.**
- **Always tie down the driver side knee airbag assembly with the airbag deployment side facing inside the tire.**

NOTICE:

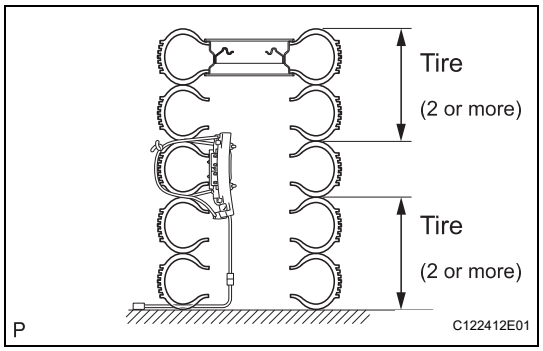
The tire may be damaged by the airbag deployment, so use an extra tire.

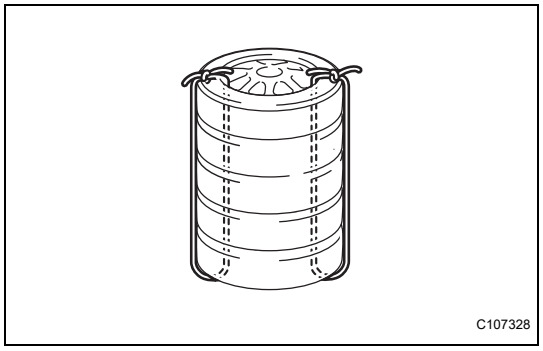


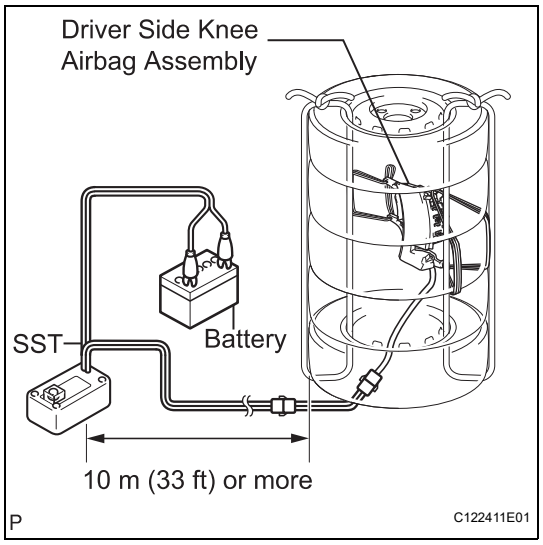
(d) Install the SST.

(1) Connect the SST connector to the driver side knee airbag assembly.

SST 09082-00770

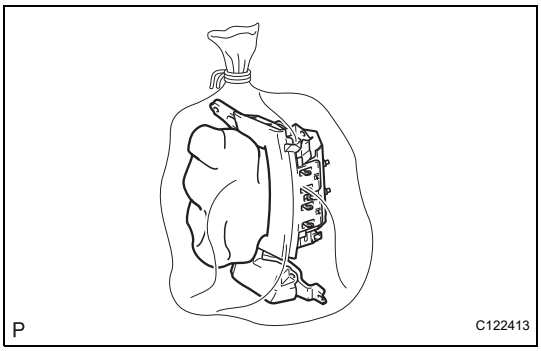






(e) Place the tires.
  (1) Place at least 2 tires under the tire which the driver side knee airbag assembly is tied to.
  (2) Place at least 2 tires over the tire which the driver side knee airbag assembly is tied to. The top tire should have the disc wheel installed.
  NOTICE:
  - **The tire may be damaged by the airbag deployment, so use an extra tire.**
  - **Do not place the SST connector under the tire because it could be damaged.**
  (3) Tie the tires together with 2 wire harnesses.
  CAUTION:
  Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.

(f) Install the SST.
  (1) Connect the SST connector.
  SST 09082-00700
  NOTICE:
  To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.
  (2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the tire.
(g) Deploy the airbag.
  (1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
  (2) Check that no one is within a 10 m (33 ft) radius of the tire which the driver side knee airbag assembly is tied to.
  (3) Press the SST activation switch and deploy the airbag.
  CAUTION:
  When deploying the airbag, make sure that no one is near the tire.
  HINT:
  The airbag is deployed as the LED of the SST activation switch comes on.



(h) Dispose of the driver side knee airbag assembly.
CAUTION:
- **The driver side knee airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a driver side knee airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a driver side knee airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

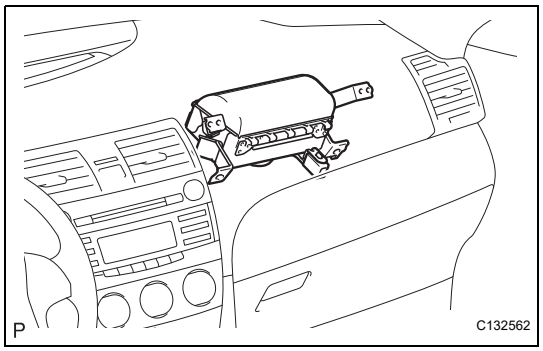
(1) Remove the driver side knee airbag assembly from the tire.
(2) Place the driver side knee airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

ON-VEHICLE INSPECTION

1. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (See page RS-33).

(b) With the front passenger airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the instrument panel with a new one:
Cuts, minute cracks or marked discoloration on the instrument panel around the front passenger airbag assembly.



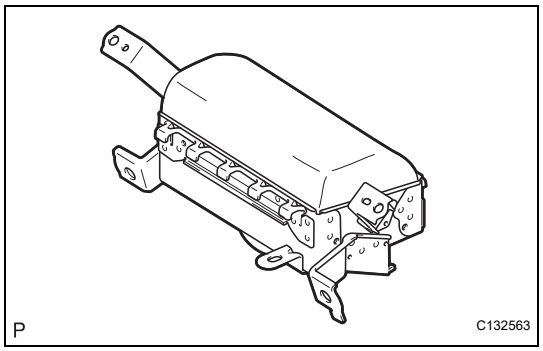
2. INSPECT FRONT PASSENGER AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (See page RS-33).

(b) With the front passenger airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front passenger airbag assembly, instrument panel or instrument panel reinforcement with a new one:

- Cuts, minute cracks or marked discoloration on the front passenger airbag assembly.
- Cracks or other damage to the connectors.
- Deformation or cracks on the instrument panel or instrument panel reinforcement.

CAUTION:
Be sure to follow the correct removal and installation procedures.

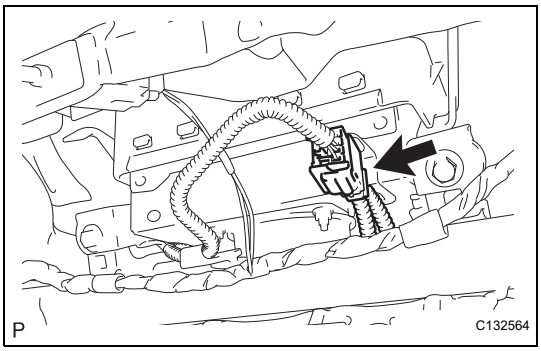


REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **ALIGN FRONT WHEELS FACING STRAIGHT AHEAD**
3. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
4. **REMOVE NO. 3 LOWER STEERING WHEEL COVER (See page RS-345)**
5. **REMOVE NO. 2 LOWER STEERING WHEEL COVER (See page RS-345)**
6. **REMOVE STEERING PAD (See page RS-345)**
7. **REMOVE STEERING WHEEL ASSEMBLY (See page SR-36)**
8. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
9. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
10. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**
11. **REMOVE STEERING COLUMN COVER (See page SR-36)**
12. **REMOVE TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-37)**
13. **REMOVE NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-12)**
14. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-12)**
15. **REMOVE INSTRUMENT CLUSTER FINISH PANEL (See page IP-13)**
16. **REMOVE COMBINATION METER ASSEMBLY (See page IP-13)**
17. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)**
18. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)**
19. **REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-13)**
20. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)**

21. REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)
22. REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
23. REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)
24. REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)
25. REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)
26. REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)
27. REMOVE INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-16)
28. REMOVE RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-136)
29. REMOVE NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-193)
30. REMOVE CONSOLE BOX POCKET (See page IP-17)
31. REMOVE CONSOLE BOX CARPET (See page IP-17)
32. REMOVE CONSOLE BOX ASSEMBLY (See page IP-17)
33. REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-18)
34. REMOVE NO. 1 CONSOLE BOX INSERT FRONT (See page IP-18)
35. REMOVE FRONT PILLAR GARNISH LH (See page IR-16)
36. REMOVE INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-18)
37. REMOVE INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-19)
38. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)
39. REMOVE FRONT PILLAR GARNISH RH (See page IR-16)
40. REMOVE INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-19)
41. REMOVE INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-19)
42. REMOVE FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-19)

43. REMOVE NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-20)

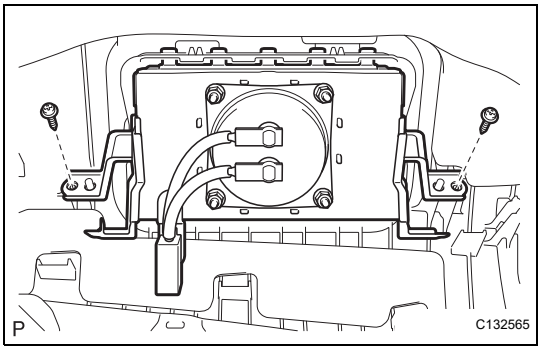


44. DISCONNECT INSTRUMENT PANEL WIRE ASSEMBLY

(a) Disconnect the connector.

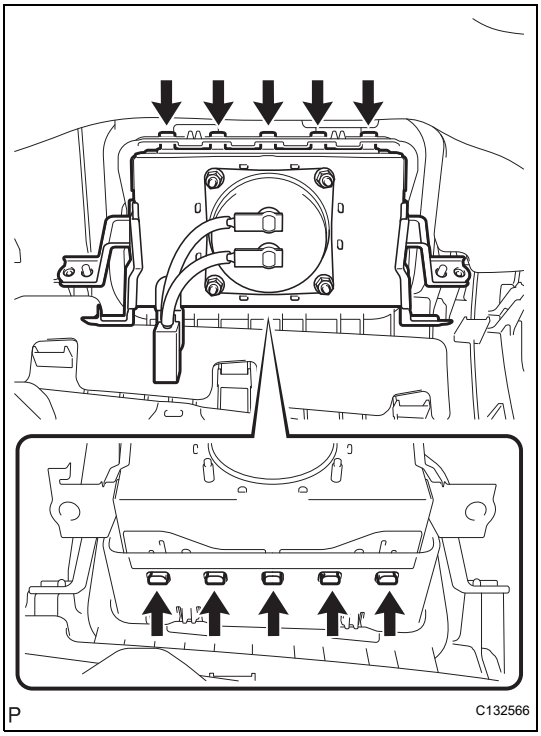
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

45. REMOVE INSTRUMENT PANEL SAFETY PAD ASSEMBLY (See page IP-20)

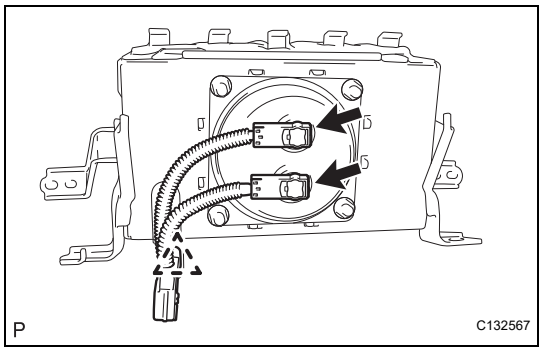


46. REMOVE FRONT PASSENGER AIRBAG ASSEMBLY

(a) Remove the 2 screws.



(b) Disengage the 10 hooks and remove the front passenger airbag assembly from the instrument panel.



47. REMOVE INSTRUMENT PANEL WIRE ASSEMBLY

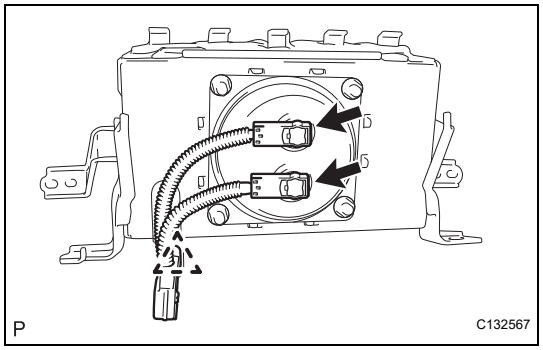
(a) Disconnect the 2 connectors.

(b) Remove the clamp and the instrument panel wire assembly from the front passenger airbag assembly.

NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.

INSTALLATION



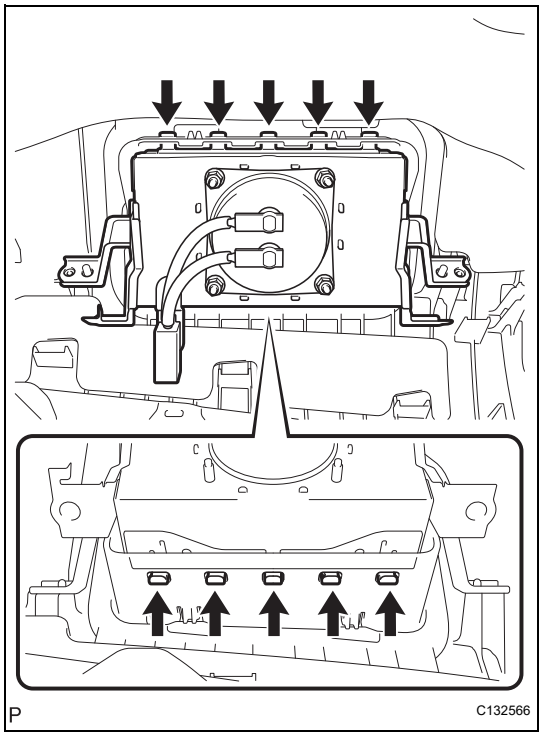
1. INSTALL INSTRUMENT PANEL WIRE ASSEMBLY

(a) Connect the 2 connectors.

(b) Install the clamp and the instrument panel wire assembly on the front passenger airbag assembly.

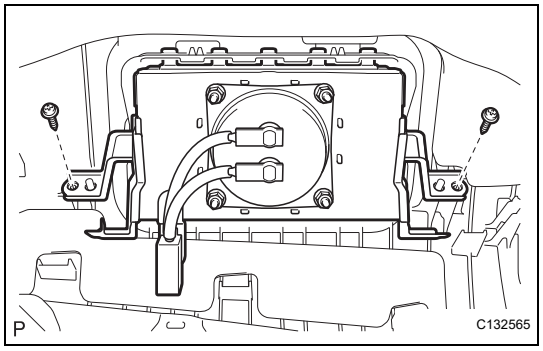
NOTICE:

When handling the airbag connector, take care not to damage the airbag wire harness.



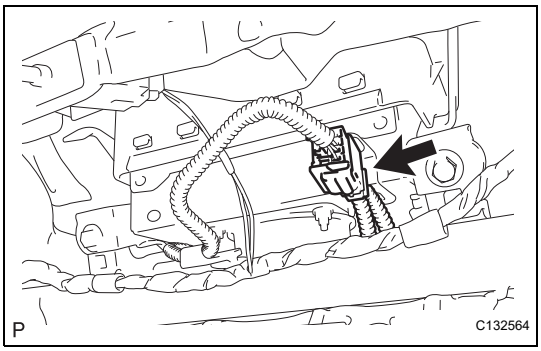
2. INSTALL FRONT PASSENGER AIRBAG ASSEMBLY

(a) Engage the 10 hooks and install the front passenger airbag assembly on the instrument panel.



(b) Install the 2 screws.

3. INSTALL INSTRUMENT PANEL SAFETY PAD ASSEMBLY (See page IP-25)



4. **CONNECT INSTRUMENT PANEL WIRE ASSEMBLY**
   (a) Connect the connector.
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.
5. **INSTALL NO. 1 DEFROSTER NOZZLE GARNISH (See page IP-28)**
6. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for LH Side) (See page AV-146)**
7. **INSTALL INSTRUMENT PANEL NO. 1 SPEAKER PANEL SUB-ASSEMBLY (See page IP-28)**
8. **INSTALL INSTRUMENT PANEL NO. 1 REGISTER ASSEMBLY (See page IP-28)**
9. **INSTALL FRONT PILLAR GARNISH LH (See page IR-38)**
10. **INSTALL FRONT NO. 2 SPEAKER ASSEMBLY (for RH Side) (See page IP-28)**
11. **INSTALL INSTRUMENT PANEL NO. 2 SPEAKER PANEL SUB-ASSEMBLY (See page IP-29)**
12. **INSTALL INSTRUMENT PANEL NO. 3 REGISTER ASSEMBLY (See page IP-29)**
13. **INSTALL FRONT PILLAR GARNISH RH (See page IR-39)**
14. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (See page IP-29)**
15. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-30)**
16. **INSTALL CONSOLE BOX ASSEMBLY (See page IP-30)**
17. **INSTALL CONSOLE BOX CARPET (See page IP-30)**
18. **INSTALL CONSOLE BOX POCKET (See page IP-30)**
19. **INSTALL RADIO RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/o Navigation System) (See page AV-137)**
20. **INSTALL NAVIGATION RECEIVER WITH HEATER CONTROL PANEL ASSEMBLY (w/ Navigation System) (See page NS-194)**
21. **INSTALL INSTRUMENT PANEL NO. 2 REGISTER ASSEMBLY (See page IP-31)**
22. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)**
23. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)**
24. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)**

25. INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
26. INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)
27. INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)
28. INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-33)
29. INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-33)
30. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)
31. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-42)
32. INSTALL COMBINATION METER ASSEMBLY (See page IP-33)
33. INSTALL INSTRUMENT CLUSTER FINISH PANEL (See page IP-34)
34. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL (See page IP-34)
35. INSTALL NO. 1 INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-34)
36. INSTALL TURN SIGNAL SWITCH ASSEMBLY WITH SPIRAL CABLE SUB-ASSEMBLY (See page SR-41)
37. ADJUST SPIRAL CABLE (See page RS-360)
38. INSTALL STEERING COLUMN COVER (See page SR-41)
39. INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)
40. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)
41. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)
42. INSTALL STEERING WHEEL ASSEMBLY (See page SR-42)
43. INSTALL STEERING PAD (See page RS-346)
44. INSTALL NO. 3 LOWER STEERING WHEEL COVER (See page RS-347)
45. INSTALL NO. 2 LOWER STEERING WHEEL COVER (See page RS-347)
46. CONNECT CABLE TO NEGATIVE BATTERY TERMINAL

47. PERFORM INITIALIZATION

(a) Perform initialization (See page IN-43).

NOTICE:
Some systems need initialization after reconnecting the cable to the negative battery terminal.

48. INSPECT STEERING PAD (See page RS-347)

49. INSPECT SRS WARNING LIGHT

(a) Inspect the SRS warning light (See page RS-33).

DISPOSAL

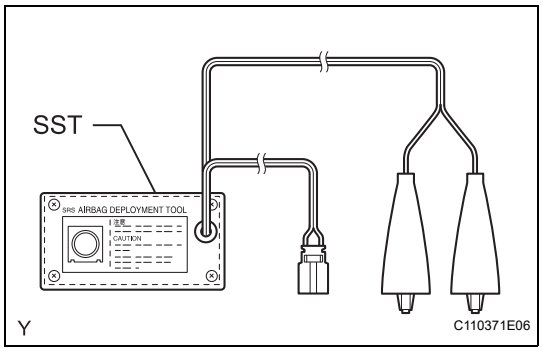
HINT:
When scrapping a vehicle equipped with the SRS or disposing of the front passenger airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of the TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

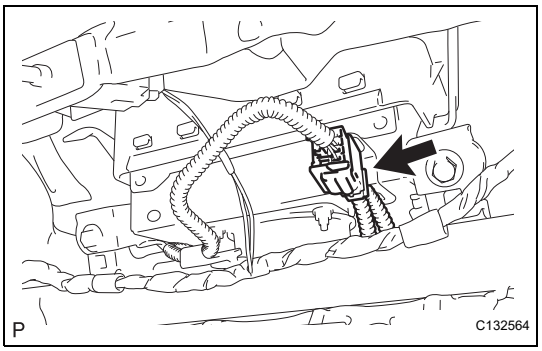
- **Never dispose of a front passenger airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors where it will not be a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the front passenger airbag assembly.**
- **The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

1. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

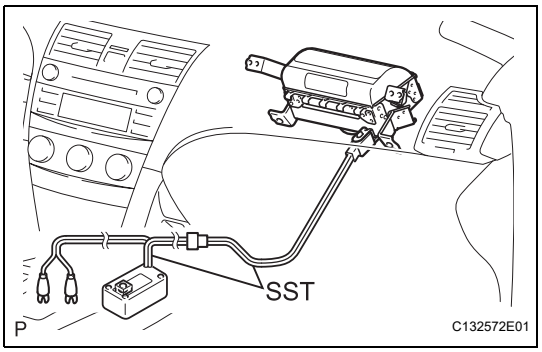
HINT:
Prepare a battery as the power source to deploy the airbag.



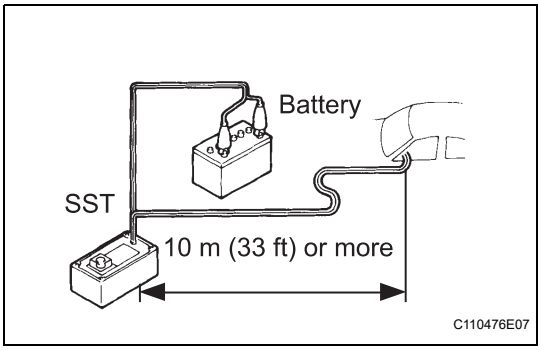
(a) Check the function of the SST (See page RS-348).
(b) Refer to PRECAUTION (See page RS-1).
(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
(d) Install the SST.
(1) Remove the lower instrument panel sub-assembly (See page IP-14).



(2) Disconnect the connector.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.



(3) Connect the SST connector to the instrument panel wire assembly.
SST 09082-00700, 09082-00780
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.



(4) Move the SST at least 10 m (33 ft) away from the vehicle front side window.
(5) Maintaining enough clearance for the SST wire harness in the front side window, close all doors and windows of the vehicle.
NOTICE:
Take care not to damage the SST wire harness.
(6) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the negative (-) terminal.

(e) Deploy the airbag.
(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.
(2) Press the SST activation switch and deploy the airbag.
CAUTION:
- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

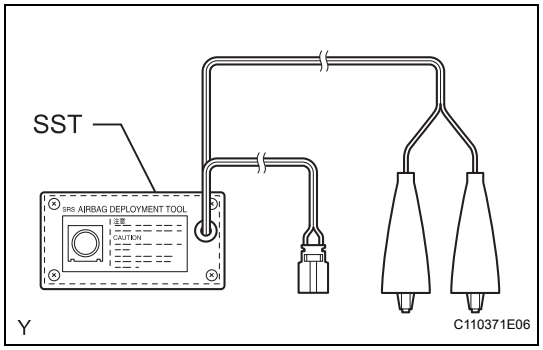
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.

2. DISPOSE OF FRONT PASSENGER AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **When disposing of the front passenger airbag assembly, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

HINT:
Prepare a battery as the power source to deploy the airbag.

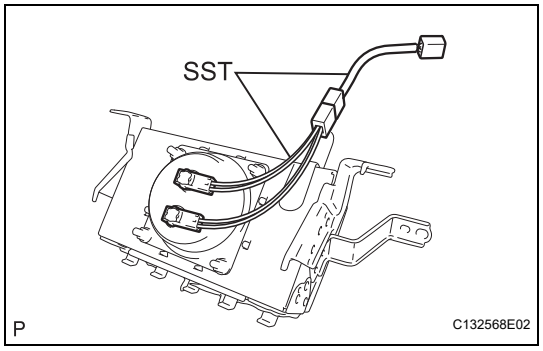


(a) Check the function of the SST (See page RS-350).

(b) Remove the front passenger airbag assembly (See page RS-379).

CAUTION:

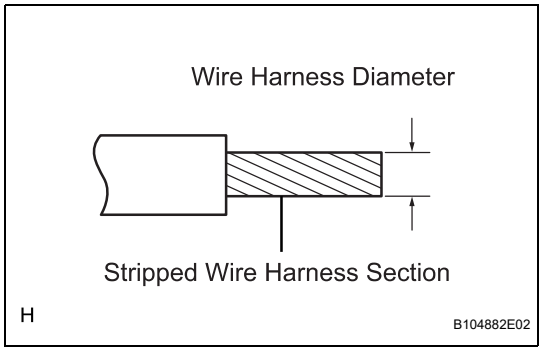
- **When removing the front passenger airbag assembly, work must be started 90 seconds after the power switch is turned off and the negative (-) terminal cable is disconnected from the battery.**
- **When storing the front passenger airbag assembly, keep the airbag deployment side facing upward.**



(c) Install the SST.

(1) After connecting the SST below to each other, connect them to the front passenger airbag assembly.

SST 09082-00802 (09082-10801, 09082-30801)



(d) Using a service-purpose wire harness for the vehicle, tie down the front passenger airbag assembly to the tire.

Wire harness:

Stripped wire harness section

1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:

If the wire harness is too thin or an alternative object is used to tie down the front passenger airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).

HINT:
To calculate the area of the stripped wire harness section:

RS

Area = 3.14 x (Diameter)^2 divided by 4

(1) Position the front passenger airbag assembly inside the tire with the airbag deployment side facing inside.

Tire size:

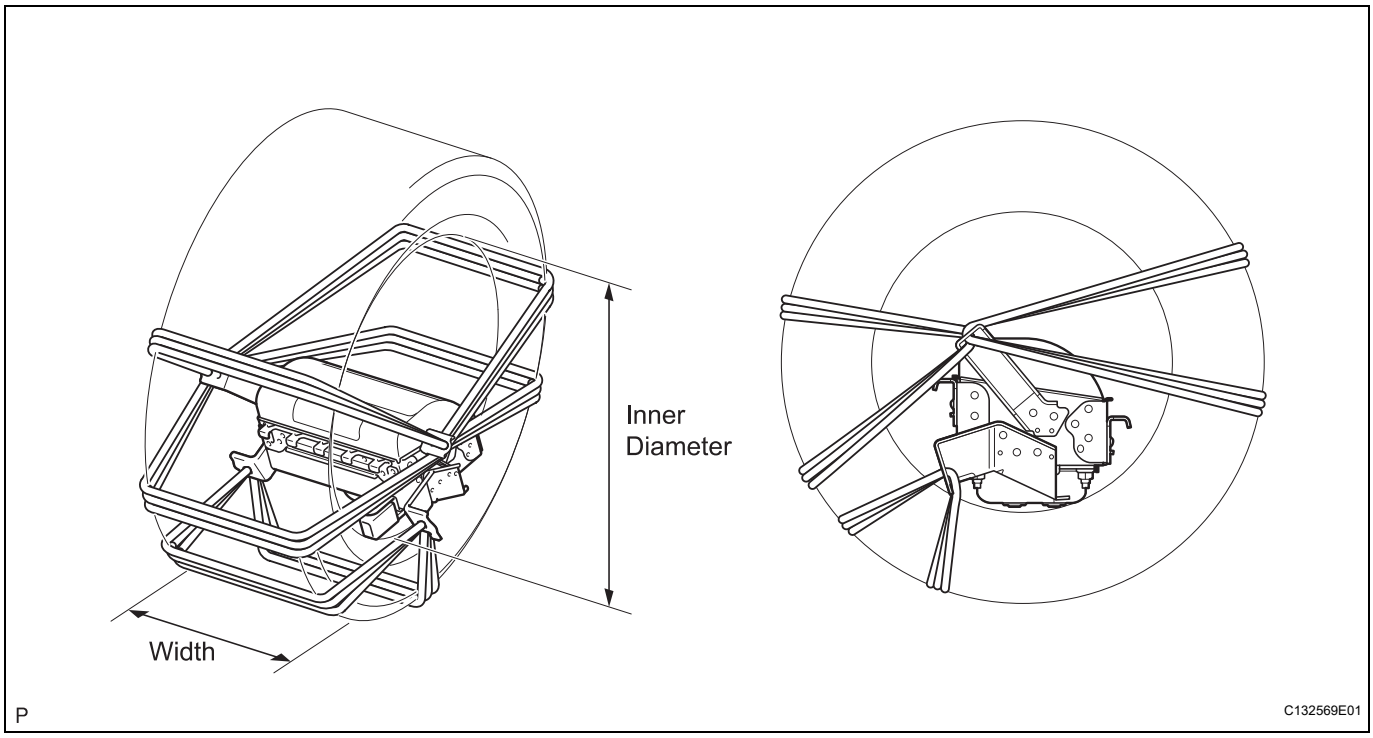
Must exceed the following dimensions

Width:

185 mm (7.28 in.)

Inner diameter:

360 mm (14.17 in.)

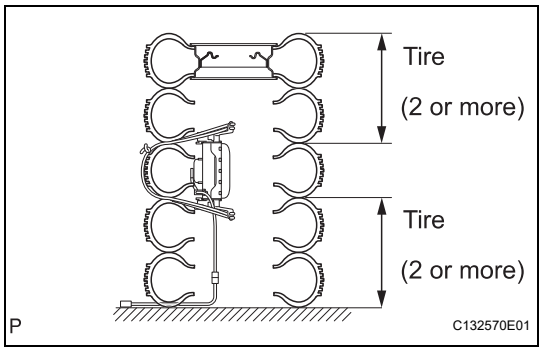


CAUTION:

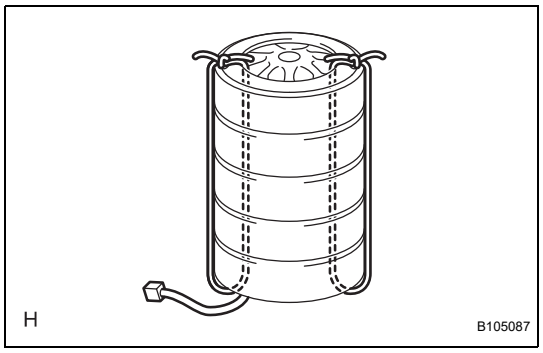
- **Make sure that the wire harness is tight. If there is slack in the wire harness, the front passenger airbag assembly may become loose due to the shock when the airbag is deployed.**
- **Always tie down the front passenger airbag assembly with the airbag deployment side facing inside the tire.**

NOTICE:

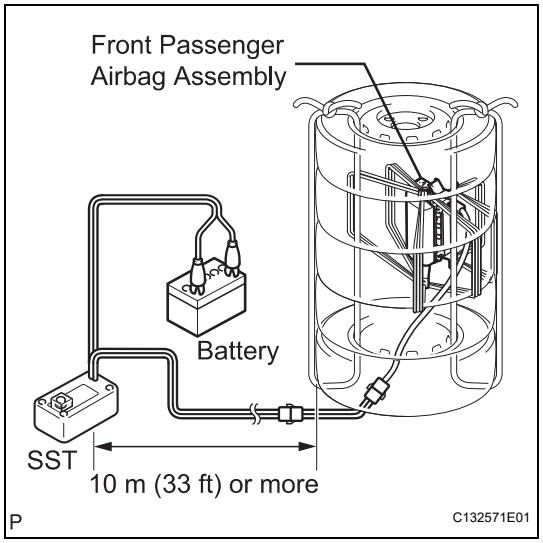
The tire will be marked by the airbag deployment, so use an extra tire.



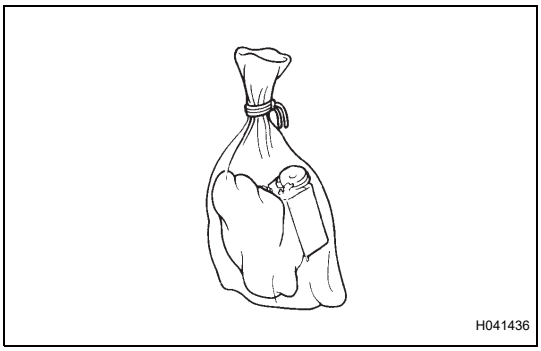
(e) Place the tires.
(1) Place at least 2 tires under the tire which the front passenger airbag assembly is tied to.
(2) Place at least 2 tires over the tire which the front passenger airbag assembly is tied to. The top tire should have a disc wheel installed.
NOTICE:
Do not place the SST connector under the tire because it could be damaged.



(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.



(f) Install the SST.
(1) Connect the SST connector.
SST 09082-00700
NOTICE:
To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.
(2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the tire.
(g) Deploy the airbag.
(1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
(2) Check that no one is within a 10 m (33 ft) radius of the tire which the front passenger airbag assembly is tied to.
(3) Press the SST activation switch and deploy the airbag.
CAUTION:
When deploying the airbag, make sure that no one is near the tire.
HINT:
The airbag is deployed as the LED of the SST activation switch comes on.



(h) Dispose of the front passenger airbag assembly.
CAUTION:
- **The front passenger airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a front passenger airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a front passenger airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

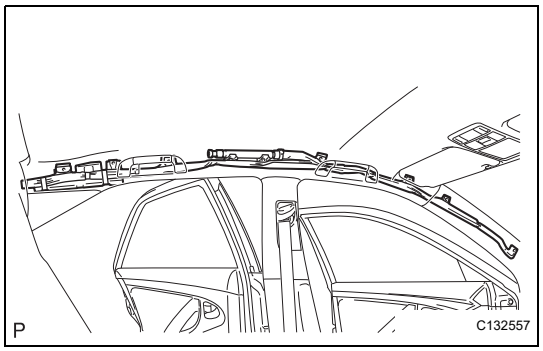
(1) Remove the front passenger airbag assembly from the tire.
(2) Place the front passenger airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

ON-VEHICLE INSPECTION

1. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)

(a) Perform a diagnostic system check (See page RS-33).

(b) With the curtain shield airbag assembly installed on the vehicle, perform a visual check. If there are any defects as mentioned below, replace the front pillar garnish or roof headlining assembly with a new one:
Cuts, minute cracks or marked discoloration on the front pillar garnish or roof headlining assembly around the curtain shield airbag assembly.

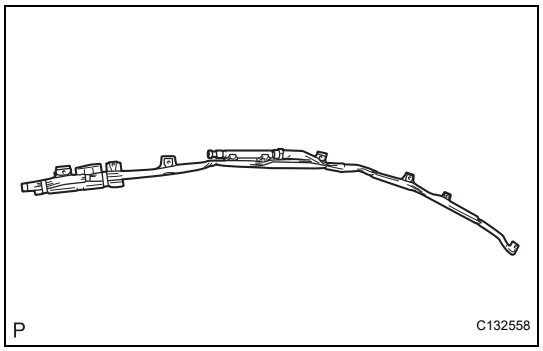


2. INSPECT CURTAIN SHIELD AIRBAG ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)

(a) Perform a diagnostic system check (See page RS-33).

(b) With the curtain shield airbag assembly removed from the vehicle, perform a visual check. If there are any defects as mentioned below, replace the curtain shield airbag assembly with a new one:
- Cuts, minute cracks or marked discoloration on the curtain shield airbag assembly.
- Cracks or other damage to the connectors.

CAUTION:
Be sure to follow the correct removal and installation procedures.



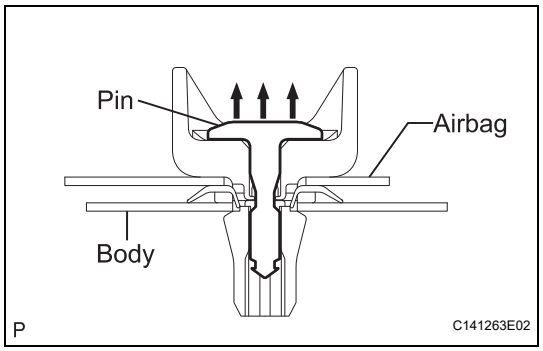
REMOVAL

HINT:
- Use the same procedure for the RH side and the LH side.
- The procedure listed below are for the LH side.

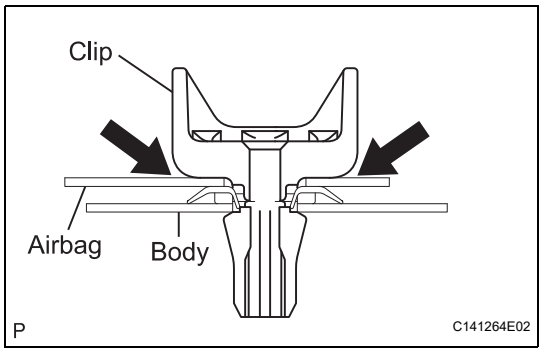
1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL (for Manual Seat)**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
4. **REMOVE SEAT TRACK COVER LH (for Power Seat) (See page SE-29)**
5. **REMOVE INNER SEAT TRACK BRACKET COVER LH (for Power Seat) (See page SE-29)**
6. **REMOVE FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-29)**
7. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
8. **REMOVE SEAT TRACK COVER RH (for Manual Seat) (See page SE-16)**
9. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page SE-16)**
10. **REMOVE FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page SE-16)**
11. **REMOVE FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
12. **REMOVE SEAT TRACK COVER RH (for Power Seat) (See page IR-12)**
13. **REMOVE INNER SEAT TRACK BRACKET COVER RH (for Power Seat) (See page IR-12)**
14. **REMOVE FRONT SEAT ASSEMBLY RH (for Power Seat) (See page IR-12)**
15. **REMOVE REAR DOOR SCUFF PLATE LH (See page IR-13)**
16. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP LH**
17. **REMOVE REAR DOOR SCUFF PLATE RH (See page IR-13)**
18. **REMOVE REAR DOOR OPENING TRIM WEATHERSTRIP RH**

19. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)
20. REMOVE REAR SEAT HEADREST ASSEMBLY (See page SE-44)
21. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
22. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)
23. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)
24. REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)
25. REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)
26. REMOVE REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-64)
27. REMOVE DOOR ASSIST GRIP COVER LH (See page ED-64)
28. REMOVE REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-65)
29. REMOVE REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-66)
30. REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)
31. REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)
32. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP LH
33. REMOVE LAP BELT OUTER ANCHOR COVER (for LH Side) (See page IR-14)
34. DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-14)
35. REMOVE LOWER CENTER PILLAR GARNISH LH (See page IR-14)
36. REMOVE UPPER CENTER PILLAR GARNISH LH (See page IR-15)
37. REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)
38. REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)
39. REMOVE FRONT DOOR OPENING TRIM WEATHERSTRIP RH
40. REMOVE LAP BELT OUTER ANCHOR COVER (for RH Side) (See page IR-15)

41. **DISCONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-15)**
42. **REMOVE LOWER CENTER PILLAR GARNISH RH (See page IR-15)**
43. **REMOVE UPPER CENTER PILLAR GARNISH RH (See page IR-15)**
44. **REMOVE ROOF SIDE INNER GARNISH LH (See page IR-15)**
45. **REMOVE ROOF SIDE INNER GARNISH RH (See page IR-15)**
46. **REMOVE FRONT PILLAR GARNISH LH (See page IR-16)**
47. **REMOVE FRONT PILLAR GARNISH RH (See page IR-16)**
48. **REMOVE ROOF CONSOLE BOX ASSEMBLY (See page IR-17)**
49. **REMOVE VISOR ASSEMBLY LH (See page IR-17)**
50. **REMOVE VISOR ASSEMBLY RH (See page IR-18)**
51. **REMOVE VISOR HOLDER (See page IR-18)**
52. **REMOVE FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-18)**
53. **REMOVE REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-18)**
54. **REMOVE NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof) (See page IR-19)**
55. **REMOVE SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-19)**
56. **REMOVE SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof) (See page IR-20)**
57. **REMOVE ROOF HEADLINING ASSEMBLY (w/o Sliding Roof) (See page IR-20)**
58. **REMOVE ROOF HEADLINING ASSEMBLY (w/ Sliding Roof) (See page IR-21)**
59. **REMOVE CURTAIN SHIELD AIRBAG ASSEMBLY**
    (a) Disconnect the connector.
    NOTICE:
    When handling the airbag connector, take care not to damage the airbag wire harness.

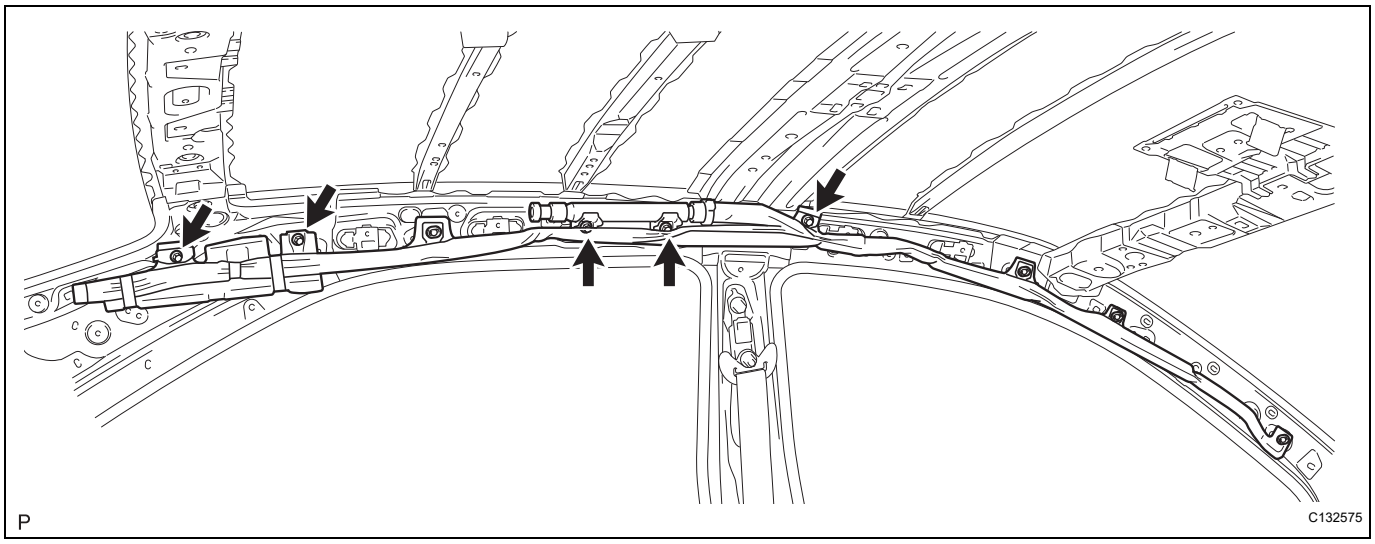


(b) Remove the 4 clips.
(1) Using a clip remover, remove the pin.



(2) Insert needle nose pliers in the position shown in the illustration.
(3) Catch the clip with the needle nose pliers, and remove the clip and curtain shield airbag assembly as a unit.

(c) Remove the 5 bolts and curtain shield airbag assembly.



(d) Remove the 4 clips and the 4 spacers from the curtain shield airbag assembly.

NOTICE:

Replace the clips and spacers with new ones even if they are not damaged.

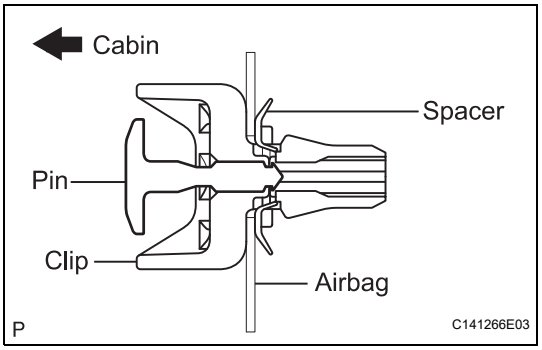
INSTALLATION

1. INSTALL CURTAIN SHIELD AIRBAG ASSEMBLY

(a) Check that the power switch is turned off.

(b) Check that the battery negative (-) cable is disconnected.

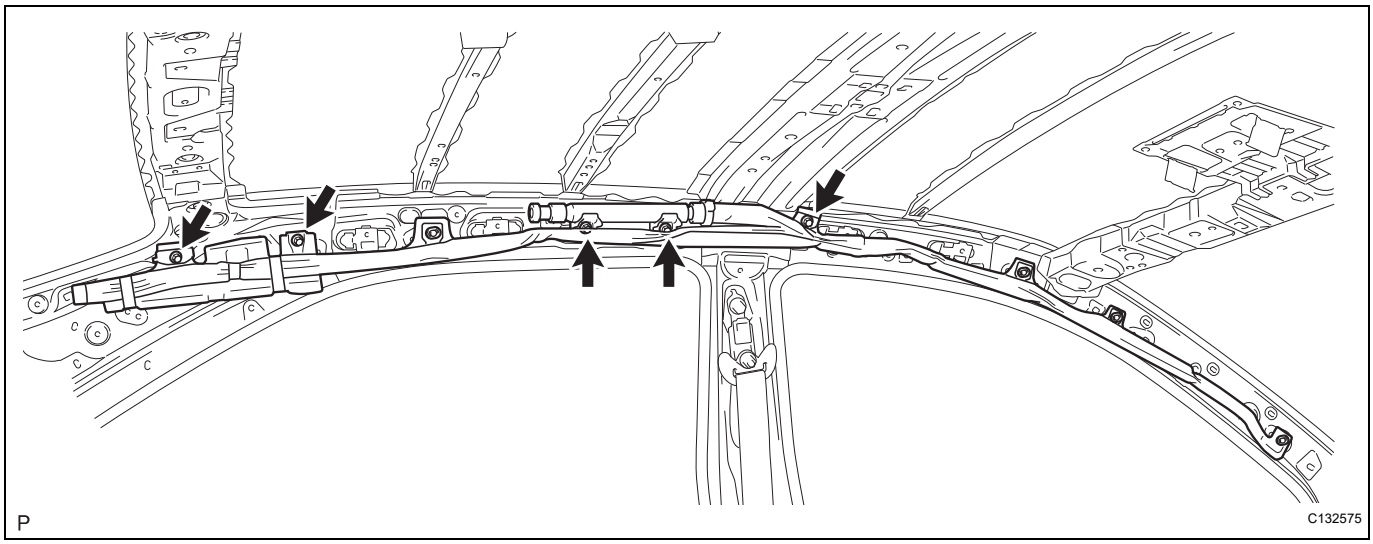
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.



(c) Install 4 new clips and 4 new spacers to the curtain shield airbag assembly as shown in the illustration.

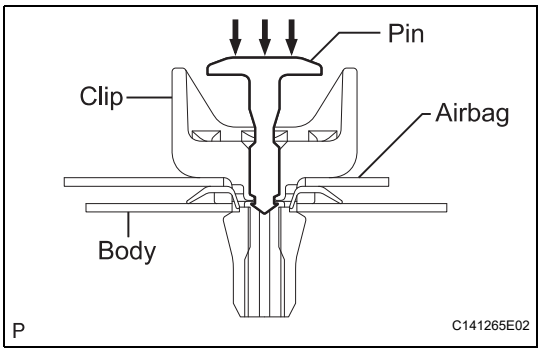
NOTICE:
- **Do not push the pin into the clip.**
- **Make sure that the clips are installed in the correct direction.**
- **Make sure that the spacers are not damaged, engaged securely, and installed in the correct direction.**

(d) Install the curtain shield airbag assembly with the 5 new bolts.



Torque: 11 N*m (112 kgf*cm, 8 ft.*lbf)

NOTICE:
Do not twist the curtain shield airbag assembly when installing it.



(e) Install the curtain shield airbag assembly to the body with the 4 clips as shown in the illustration.

NOTICE:
Securely push the pin in the clip.

(f) Mark the clips.

HINT:
Be sure to mark the clips to leave a record of replacement.

(g) Connect the connector.

NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

2. INSTALL ROOF HEADLINING ASSEMBLY (w/o Sliding Roof) (See page IR-33)
3. INSTALL ROOF HEADLINING ASSEMBLY (w/ Sliding Roof) (See page IR-34)
4. INSTALL SUN ROOF OPENING TRIM MOULDING (w/ Sliding Roof) (See page IR-35)
5. INSTALL SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-35)
6. INSTALL NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof) (See page IR-36)
7. INSTALL FRONT ASSIST GRIP SUB-ASSEMBLY (See page IR-36)
8. INSTALL REAR ASSIST GRIP SUB-ASSEMBLY (See page IR-37)
9. INSTALL VISOR HOLDER (See page IR-37)
10. INSTALL VISOR ASSEMBLY LH (See page IR-37)
11. INSTALL VISOR ASSEMBLY RH (See page IR-37)
12. INSTALL ROOF CONSOLE BOX ASSEMBLY (See page IR-38)
13. INSTALL FRONT PILLAR GARNISH LH (See page IR-38)
14. INSTALL FRONT PILLAR GARNISH RH (See page IR-39)
15. INSTALL ROOF SIDE INNER GARNISH LH (See page IR-39)
16. INSTALL ROOF SIDE INNER GARNISH RH (See page IR-39)
17. INSTALL UPPER CENTER PILLAR GARNISH LH (See page IR-40)
18. INSTALL LOWER CENTER PILLAR GARNISH LH (See page IR-40)
19. CONNECT FRONT SEAT OUTER BELT ASSEMBLY LH (See page IR-40)
20. INSTALL LAP BELT OUTER ANCHOR COVER (for LH Side) (See page IR-40)
21. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-41)
22. INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)
23. INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)
24. INSTALL UPPER CENTER PILLAR GARNISH RH (See page IR-41)

25. INSTALL LOWER CENTER PILLAR GARNISH RH (See page IR-41)
26. CONNECT FRONT SEAT OUTER BELT ASSEMBLY RH (See page IR-41)
27. INSTALL LAP BELT OUTER ANCHOR COVER (for RH Side) (See page IR-41)
28. INSTALL FRONT DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-42)
29. INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)
30. INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-42)
31. INSTALL REAR DOOR INNER GLASS WEATHERSTRIP LH (See page ED-80)
32. INSTALL REAR DOOR TRIM BOARD SUB-ASSEMBLY LH (See page ED-81)
33. INSTALL DOOR ASSIST GRIP COVER LH (See page ED-82)
34. INSTALL REAR DOOR INSIDE HANDLE BEZEL PLUG LH (See page ED-82)
35. INSTALL REAR SIDE SEATBACK ASSEMBLY LH (See page SE-54)
36. INSTALL REAR SIDE SEATBACK ASSEMBLY RH
37. INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)
38. INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)
39. INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)
40. INSTALL REAR CENTER SEAT HEADREST ASSEMBLY
41. INSTALL REAR SEAT HEADREST ASSEMBLY
42. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-43)
43. INSTALL REAR DOOR SCUFF PLATE LH (See page IR-43)
44. INSTALL REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-43)
45. INSTALL REAR DOOR SCUFF PLATE RH (See page IR-43)
46. INSTALL FRONT SEAT ASSEMBLY LH (for Power Seat) (See page SE-38)
47. INSTALL INNER SEAT TRACK BRACKET COVER LH (for Power Seat) (See page SE-39)

48. **INSTALL SEAT TRACK COVER LH (for Power Seat) (See page SE-39)**
49. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
50. **INSTALL FRONT SEAT ASSEMBLY RH (for Power Seat) (See page IR-44)**
51. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Power Seat) (See page IR-44)**
52. **INSTALL SEAT TRACK COVER RH (for Power Seat) (See page IR-44)**
53. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Power Seat)**
54. **INSTALL FRONT SEAT ASSEMBLY RH (for Manual Seat) (See page SE-23)**
55. **INSTALL INNER SEAT TRACK BRACKET COVER RH (for Manual Seat) (See page SE-24)**
56. **INSTALL SEAT TRACK COVER RH (for Manual Seat) (See page SE-24)**
57. **INSTALL FRONT SEAT HEADREST ASSEMBLY (for Manual Seat)**
58. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL (for Manual Seat)**
59. **PERFORM INITIALIZATION**
    (a) Perform initialization (See page IN-43).
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal.
60. **INSPECT SRS WARNING LIGHT**
    (a) Inspect the SRS warning light (See page RS-33).
61. **INSPECT SLIDE ADJUSTER LOCK (for Manual Seat)**
62. **INSPECT FRONT SEAT ASSEMBLY (for Power Seat) (See page SE-39)**

DISPOSAL

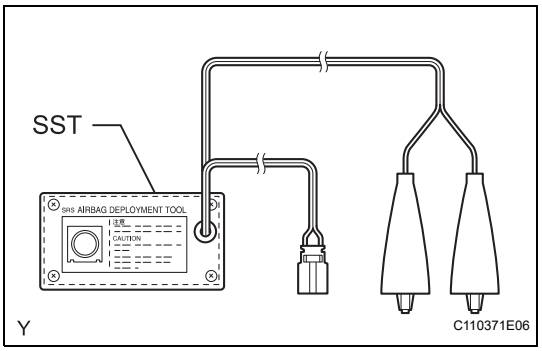
HINT:
When scrapping a vehicle equipped with the SRS or disposing of the curtain shield airbag assembly, be sure to deploy the airbag first in accordance with the procedure described below. If any abnormality occurs with the airbag deployment, contact the SERVICE DEPT. of TOYOTA MOTOR SALES, U.S.A., INC.

CAUTION:

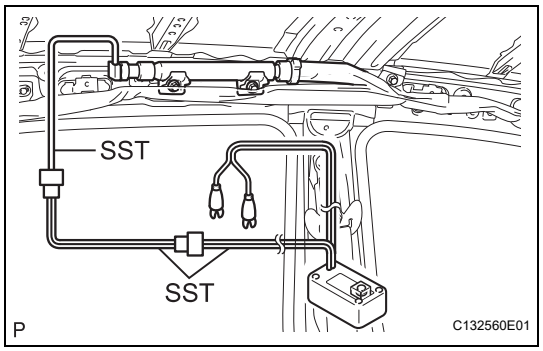
- **Never dispose of a curtain shield airbag assembly that has an undeployed airbag.**
- **The airbag produces an exploding sound when it is deployed, so perform the operation outdoors where it will not be a nuisance to nearby residents.**
- **When deploying the airbag, always use the specified SST (SRS Airbag Deployment Tool). Perform the operation in a place away from electrical noise.**
- **When deploying the airbag, perform the operation at least 10 m (33 ft) away from the curtain shield airbag assembly.**
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

1. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN INSTALLED IN VEHICLE)

HINT:
Prepare a battery as the power source to deploy the airbag.



(a) Check the function of the SST (See page RS-348).
(b) Refer to PRECAUTION (See page RS-1).
(c) Disconnect the cable from the negative battery terminal.
CAUTION:
Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
(d) Remove the roof headlining assembly (See page IR-12).
(e) Install the SST.
(1) Disconnect the connector from the curtain shield airbag assembly.
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

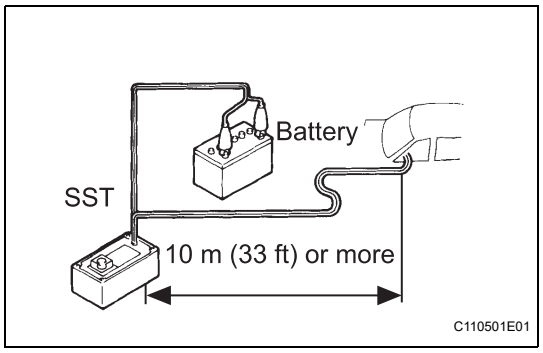


(2) After connecting the SST below to each other, connect them to the curtain shield airbag assembly.

SST 09082-00700, 09082-00802 (09082-10801, 09082-20801)

NOTICE:

To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock.



(3) Move the SST at least 10 m (33 ft) away from the vehicle rear side window.

(4) Maintaining enough clearance for the SST wire harness in the rear side window, close all doors and windows of the vehicle.

NOTICE:

Take care not to damage the SST wire harness.

(5) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.

(f) Deploy the airbag.

(1) Check that no one is inside the vehicle or within a 10 m (33 ft) radius of the vehicle.

(2) Press the SST activation switch and deploy the airbag.

CAUTION:

- **When deploying the airbag, make sure that no one is near the vehicle.**
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

HINT:

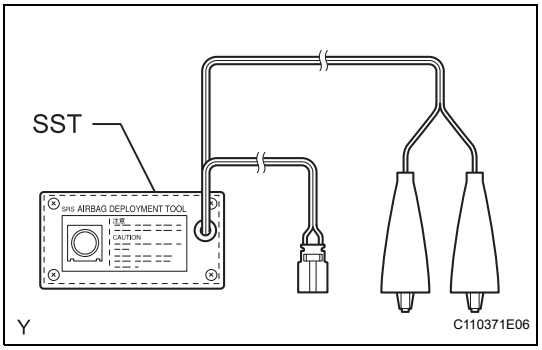
The airbag is deployed as the LED of the SST activation switch comes on.

2. DISPOSE OF CURTAIN SHIELD AIRBAG ASSEMBLY (WHEN NOT INSTALLED IN VEHICLE)

NOTICE:

- **When disposing of the curtain shield airbag assembly, never use the customer's vehicle to deploy the airbag.**
- **Be sure to follow the procedure detailed below when deploying the airbag.**

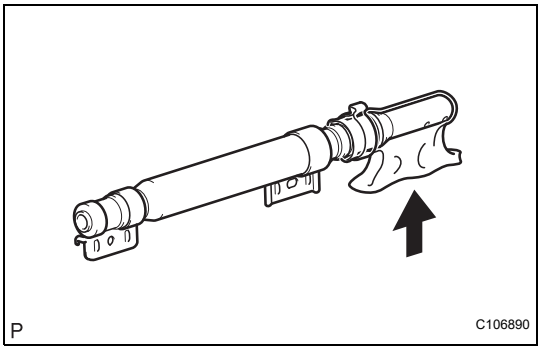
HINT:
Prepare a battery as the power source to deploy the airbag.



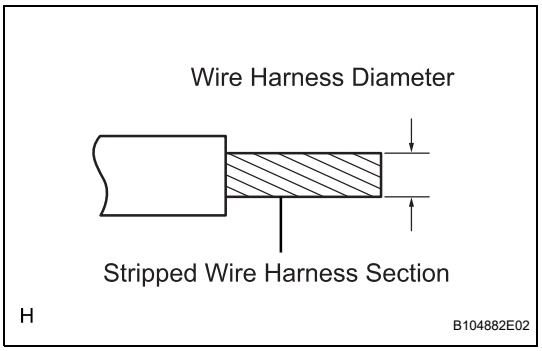
(a) Check the function of the SST (See page RS-350).

(b) Remove the curtain shield airbag assembly (See page RS-401).

CAUTION:
When removing the curtain shield airbag assembly, work must be started 90 seconds after the power switch is turned off and the negative (-) terminal cable is disconnected from the battery.



(c) Cut off the deployment section of the curtain shield airbag assembly.



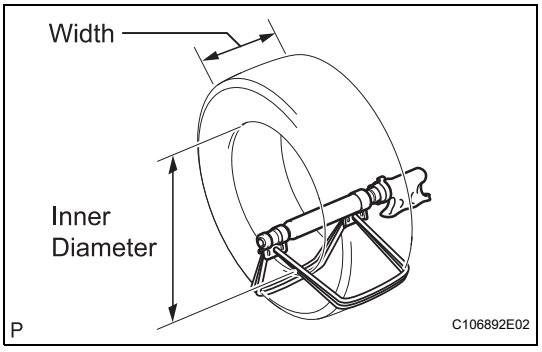
(d) Using a service-purpose wire harness for the vehicle, tie down the curtain shield airbag assembly to the tire.

Wire harness:
Stripped wire harness section
1.25 mm^2 or more (0.0019 $in.^2$ or more)

CAUTION:
If the wire harness is too thin or an alternative object is used to tie down the curtain shield airbag assembly, it may be snapped by the shock when the airbag is deployed. Always use a wire harness for vehicle use with an area of at least 1.25 mm^2 (0.0019 $in.^2$).

HINT:
To calculate the area of the stripped wire harness section:

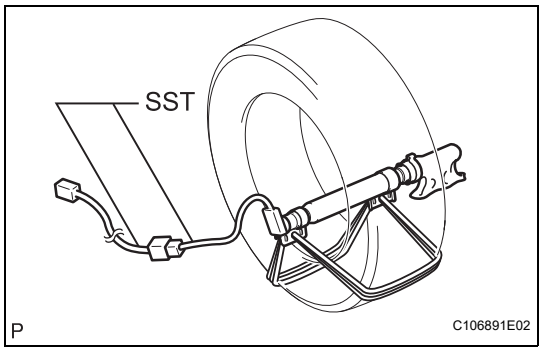
Area = 3.14 x $(Diameter)^2$ divided by 4



(1) Position the curtain shield airbag assembly inside the tire as shown in the illustration.

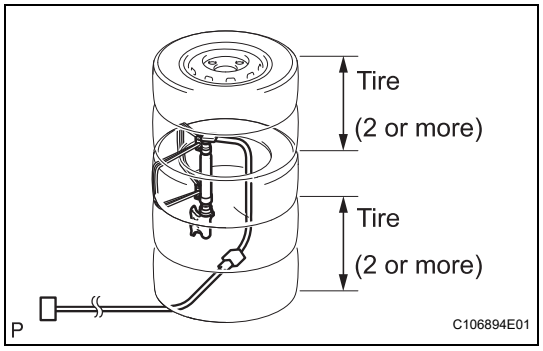
Tire size:
Must exceed the following dimensions
Width:
185 mm (7.28 in.)
Inner diameter:
360 mm (14.17 in.)

CAUTION:
Make sure that the wire harness is tight. If there is slack in the wire harness, the curtain shield airbag assembly may become loose due to the shock when the airbag is deployed.
NOTICE:
The tire will be marked by the airbag deployment, so use an extra tire.

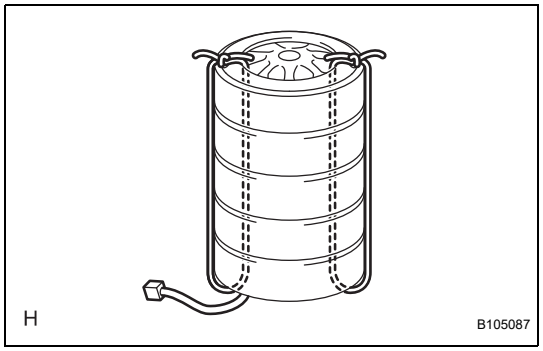


(e) Install the SST.
(1) After connecting the SST below to each other, connect them to the curtain shield airbag assembly.
SST 09082-00802 (09082-10801, 09082-20801)

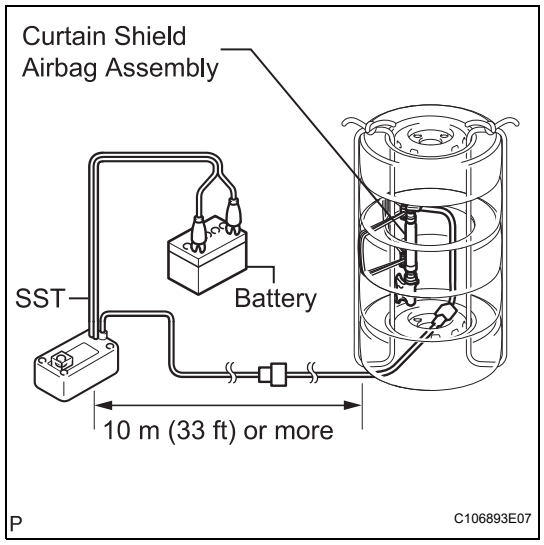
(f) Place the tires.
CAUTION:
Do not place the deployment direction of the curtain shield airbag assembly facing toward the ground.



(1) Place at least 2 tires under the tire which the curtain shield airbag assembly is tied to.
(2) Place at least 2 tires over the tire which the curtain shield airbag assembly is tied to. The top tire should have the disc wheel installed.
NOTICE:
Do not place the SST connector under the tire because it could be damaged.

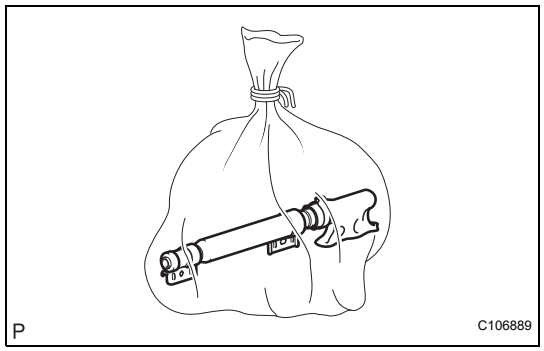


(3) Tie the tires together with 2 wire harnesses.
CAUTION:
Make sure that the wire harness is tight. Looseness in the wire harness results in the tires coming free due to the shock when the airbag is deployed.



(g) Install the SST.
  (1) Connect the SST connector.
  SST 09082-00700
  NOTICE:
  To avoid damaging the SST connector and wire harness, do not lock the secondary lock of the twin lock. Also, secure some slack for the SST wire harness inside the tire.
  (2) Move the SST at least 10 m (33 ft) away from the airbag tied down to the tire.

(h) Deploy the airbag.
  (1) Connect the red clip of the SST to the battery positive (+) terminal and the black clip of the SST to the battery negative (-) terminal.
  (2) Check that no one is within a 10 m (33 ft) radius of the tire which the curtain shield airbag assembly is tied to.
  (3) Press the SST activation switch and deploy the airbag.
  CAUTION:
  When deploying the airbag, make sure that no one is near the tire.
  HINT:
  The airbag is deployed as the LED of the SST activation switch comes on.



(i) Dispose of the curtain shield airbag assembly.
CAUTION:
- **The curtain shield airbag assembly becomes extremely hot when the airbag is deployed, so do not touch it for at least 30 minutes after deployment.**
- **Use gloves and safety glasses when handling a curtain shield airbag assembly with a deployed airbag.**
- **Do not apply water, etc. to a curtain shield airbag assembly with a deployed airbag.**
- **Always wash your hands with water after completing the operation.**

  (1) Remove the curtain shield airbag assembly from the tire.
  (2) Place the curtain shield airbag assembly in a plastic bag, tie it tightly and dispose of it as other general part disposal.

ON-VEHICLE INSPECTION

1. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE NOT INVOLVED IN COLLISION)**
   (a) Perform a diagnostic system check (See page RS-33).

2. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG HAS NOT DEPLOYED)**
   (a) Perform a diagnostic system check (See page RS-33).

3. **INSPECT CENTER AIRBAG SENSOR ASSEMBLY (VEHICLE INVOLVED IN COLLISION AND AIRBAG IS DEPLOYED)**
   (a) Replace the center airbag sensor assembly.
   CAUTION:
   Be sure to follow the correct removal and installation procedures.
   HINT:
   The center airbag sensor assembly should be replaced after any of the airbags has deployed, as it has been subjected to the impact.

REMOVAL

1. **PRECAUTION**
   CAUTION:
   Be sure to read "PRECAUTION" thoroughly before servicing (See page RS-1).
2. **DISCONNECT CABLE FROM NEGATIVE BATTERY TERMINAL**
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.
3. **REMOVE NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)**
4. **REMOVE NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-14)**
5. **REMOVE SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-14)**
6. **REMOVE FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-15)**
7. **REMOVE UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-15)**
8. **REMOVE FRONT DOOR SCUFF PLATE LH (See page IR-13)**
9. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-14)**
10. **REMOVE LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-11)**
11. **REMOVE FRONT DOOR SCUFF PLATE RH (See page IR-15)**
12. **REMOVE COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-15)**
13. **REMOVE INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-13)**
14. **REMOVE LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-14)**
15. **REMOVE CONSOLE BOX POCKET (See page IP-17)**
16. **REMOVE CONSOLE BOX CARPET (See page IP-17)**
17. **REMOVE CONSOLE BOX ASSEMBLY (See page IP-17)**
18. **REMOVE UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-16)**
19. **REMOVE NO. 1 CONSOLE BOX INSERT FRONT (See page IP-18)**
20. **REMOVE NO. 2 CONSOLE BOX INSERT FRONT (See page IP-18)**

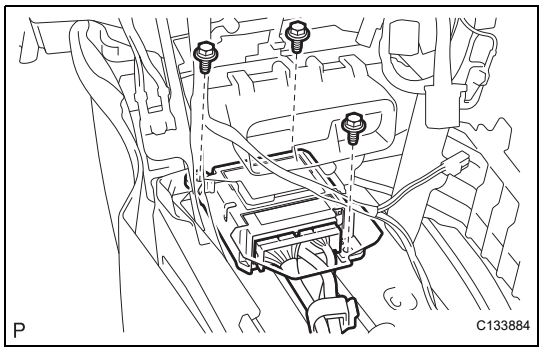
21. REMOVE NO. 1 CONSOLE BOX DUCT (See page AC-188)

22. REMOVE CENTER AIRBAG SENSOR ASSEMBLY

(a) Turn back the carpet.

(b) Disconnect the holder (with connectors).
NOTICE:
When handling the airbag connector, take care not to damage the airbag wire harness.

(c) Remove the 3 bolts and center airbag sensor assembly.



INSTALLATION

1. **INSTALL CENTER AIRBAG SENSOR ASSEMBLY**
   (a) Check that the power switch is turned off.
   (b) Check that the battery negative (-) cable is disconnected.
   CAUTION:
   Wait for 90 seconds after disconnecting the cable to prevent airbag deployment.

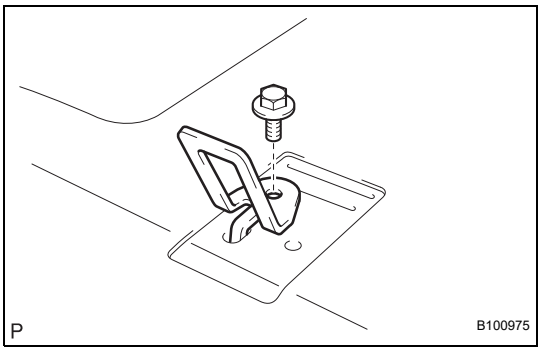
   (c) Install the center airbag sensor assembly with the 3 bolts.
   Torque: 17.5 N*m (179 kgf*cm, 13 ft.*lbf)
   NOTICE:
   - **If the center airbag sensor assembly has been dropped, or there are any cracks, dents or other defects in the case, bracket or connector, replace it with a new one.**
   - **When installing the center airbag sensor assembly, be careful that the SRS wiring does not interfere with other parts and that it is not pinched between other parts.**

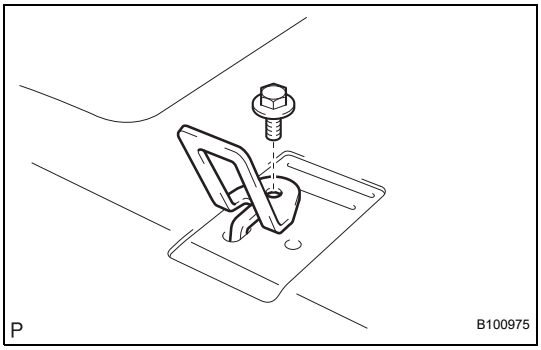
   (d) Check that there is no looseness in the installation parts of the center airbag sensor assembly.
   (e) Connect the holder (with connectors).
   NOTICE:
   When handling the airbag connector, take care not to damage the airbag wire harness.
   (f) Check that the water-proof sheet is properly set.
2. **INSTALL NO. 1 CONSOLE BOX DUCT (See page AC-204)**
3. **INSTALL NO. 2 CONSOLE BOX INSERT FRONT (See page IP-30)**
4. **INSTALL NO. 1 CONSOLE BOX INSERT FRONT (See page IP-29)**
5. **INSTALL UPPER CONSOLE PANEL SUB-ASSEMBLY (See page IP-31)**
6. **INSTALL CONSOLE BOX ASSEMBLY (See page IP-30)**
7. **INSTALL CONSOLE BOX CARPET (See page IP-30)**
8. **INSTALL CONSOLE BOX POCKET (See page IP-30)**
9. **INSTALL LOWER INSTRUMENT PANEL SUB-ASSEMBLY (See page IP-33)**
10. **INSTALL INSTRUMENT PANEL NO. 2 UNDER COVER SUB-ASSEMBLY (See page IP-33)**
11. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY RH (See page IR-42)**
12. **INSTALL FRONT DOOR SCUFF PLATE RH (See page IR-42)**

13. **INSTALL LOWER INSTRUMENT PANEL FINISH PANEL LH (See page IP-35)**
14. **INSTALL COWL SIDE TRIM SUB-ASSEMBLY LH (See page IR-41)**
15. **INSTALL FRONT DOOR SCUFF PLATE LH (See page IR-41)**
16. **INSTALL UPPER CONSOLE REAR PANEL SUB-ASSEMBLY (See page IP-31)**
17. **INSTALL FLOOR SHIFT POSITION INDICATOR HOUSING SUB-ASSEMBLY (See page IP-31)**
18. **INSTALL SHIFT LEVER KNOB SUB-ASSEMBLY (See page IP-32)**
19. **INSTALL NO. 2 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**
20. **INSTALL NO. 1 INSTRUMENT CLUSTER FINISH PANEL GARNISH (See page IP-32)**
21. **CONNECT CABLE TO NEGATIVE BATTERY TERMINAL**
22. **PERFORM INITIALIZATION**
    (a) Perform initialization (See page IN-43).
    NOTICE:
    Some systems need initialization after reconnecting the cable to the negative battery terminal.
23. **INSPECT SRS WARNING LIGHT**
    (a) Inspect the SRS warning light (See page RS-33).

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)
2. REMOVE REAR SEAT HEADREST ASSEMBLY
3. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
4. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)
5. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)
6. REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)
7. REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)
8. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-13)
9. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH
10. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-13)
11. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH
12. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-51)
13. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-33)
14. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-15)
15. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-15)
16. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-40)
17. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-41)
18. REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-33)
19. REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-33)
20. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-33)





21. **REMOVE CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET**
    (a) Remove the 3 bolts and the 3 child restraint seat tether anchor brackets.

INSTALLATION

1. **INSTALL CHILD RESTRAINT SEAT TETHER ANCHOR BRACKET**
    (a) Install the 3 child restraint seat tether anchor brackets with the 3 bolts.
    Torque: 21 N*m (214 kgf*cm, 16 ft.*lbf)
2. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-34)**
3. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-35)**
4. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-35)**
5. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-42)**
6. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-42)**
7. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-39)**
8. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-39)**
9. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-35)**
10. **INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-51)**
11. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH (See page IR-43)**
12. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-43)**
13. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH (See page IR-43)**
14. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-43)**
15. **INSTALL REAR SIDE SEATBACK ASSEMBLY LH (See page SE-54)**

16. **INSTALL REAR SIDE SEATBACK ASSEMBLY RH**
    HINT:
    Use the same procedure for the RH side and the LH side.
17. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**
18. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**
19. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
20. **INSTALL REAR SEAT HEADREST ASSEMBLY**
21. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**

DTC	B278A	Short to GND in Immobiliser System Power Source Circuit

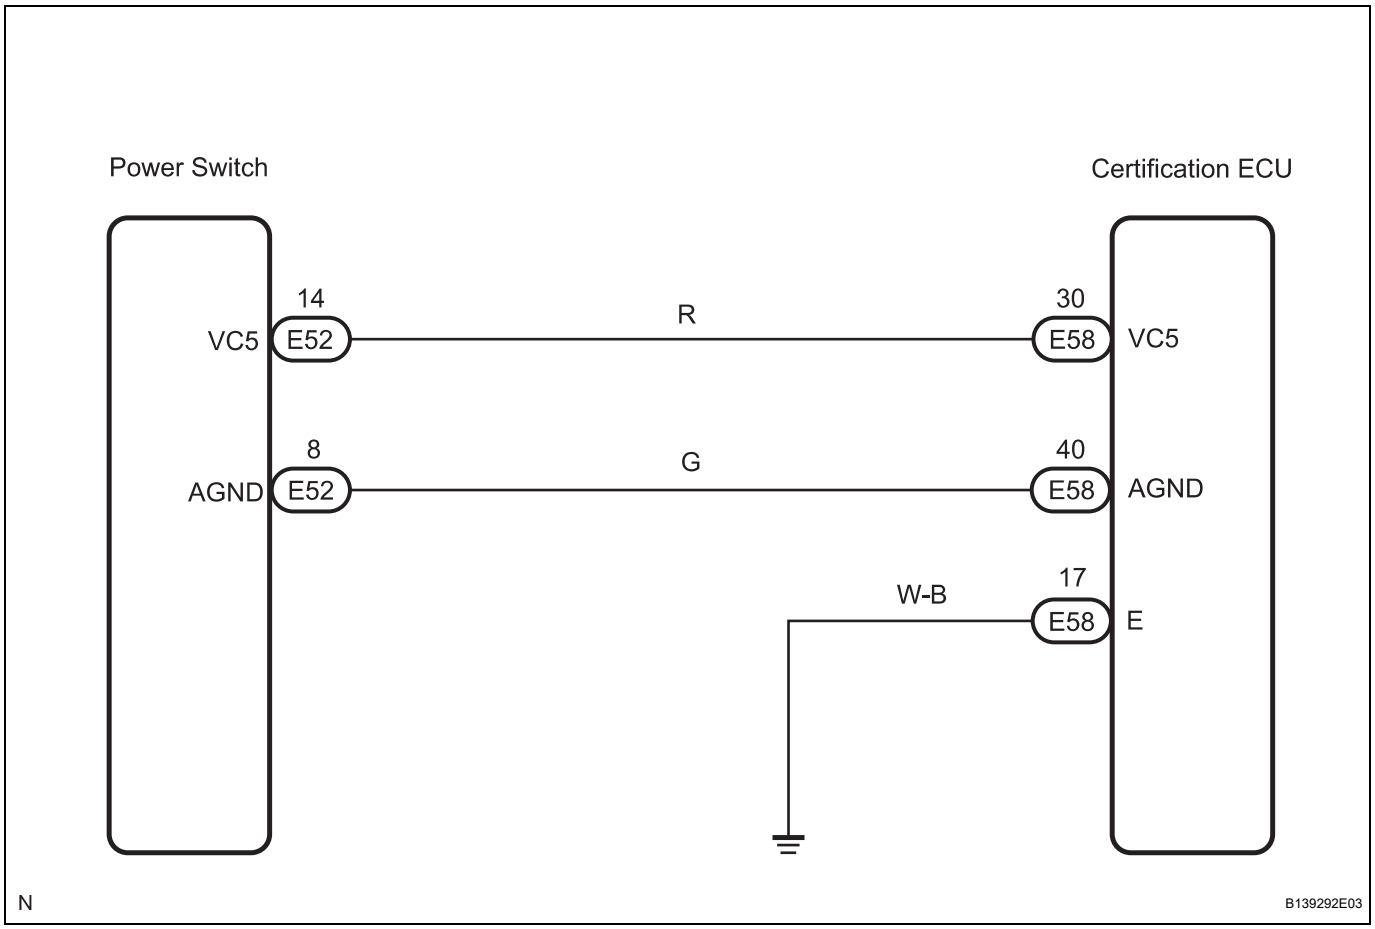
DESCRIPTION

This DTC is output when the power switch power source supply line is open or shorted.

DTC No.	DTC Detection Condition	Trouble Area
B278A	Power switch power source supply line is open or shorted	• Wire harness • Power switch • Certification ECU

EI

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

If the certification ECU is replaced, register the key and ECU communication ID (See page EI-9).

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-25).

(b) Recheck for DTCs (See page EI-25).

Result

Result	Proceed to
B278A output recurs	A
B278A output does not recur	B

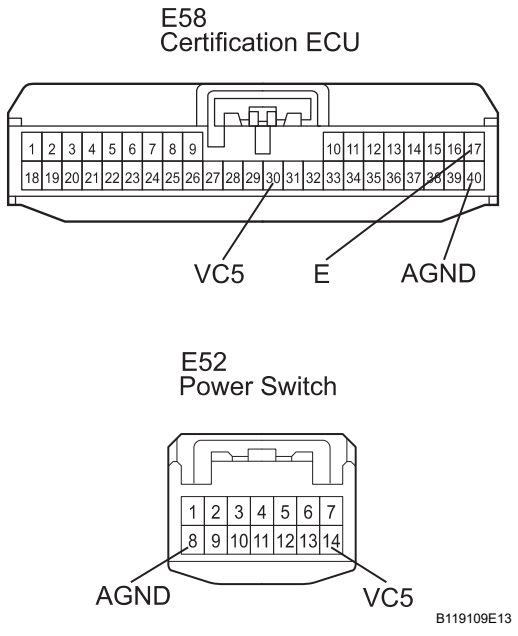
B → USE SIMULATION METHOD TO CHECK

A

2 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - POWER SWITCH)

EI

Wire Harness Side Connector Front View:



(a) Disconnect the E58 ECU and E52 switch connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

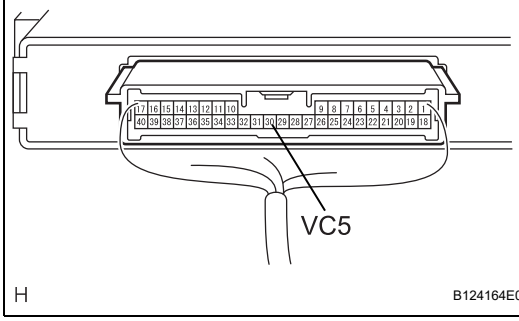
Tester Connection	Specified Condition
E58-30 (VC5) - E52-14 (VC5)	Below 1 Ω
E58-40 (AGND) - E52-8 (AGND)	
E58-30 (VC5) - Body ground	10 kΩ or higher
E58-40 (AGND) - Body ground	

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK HARNESS AND CONNECTOR (POWER SWITCH POWER SOURCE)

Wire Harness Side Connector Rear View:



(a) Reconnect the E58 ECU and E52 switch connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

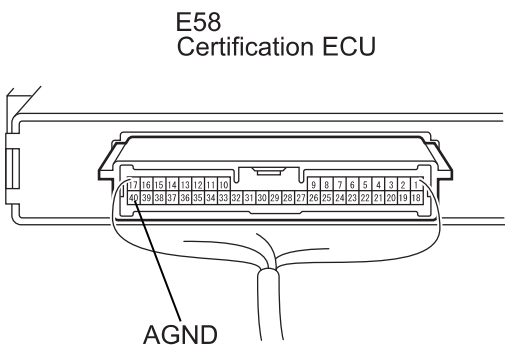
Tester Connection	Condition	Specified Condition
E58-30 (VC5) - Body ground	Key is not in cabin	Below 1 V
	Power switch pressed	4.6 to 5.4 V

NG → REPLACE CERTIFICATION ECU

OK

4	CHECK HARNESS AND CONNECTOR (POWER SWITCH BODY GROUND)

Wire Harness Side Connector Rear View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E58-40 (AGND) - Body ground	Below 1 Ω

EI

NG → **REPLACE CERTIFICATION ECU**

OK

REPLACE POWER SWITCH (See page ST-126)

DTC	B2790	ID BOX EEPROM Malfunction

DESCRIPTION

This DTC is output when the ID code box detects an internal malfunction.

DTC No.	DTC Detection Condition	Trouble Area
B2790	ID code box detects internal malfunction	ID code box

EI

INSPECTION PROCEDURE

NOTICE:

If the ID code box is replaced, register the key and ECU communication ID (See page EI-9).

1	REPLACE ID CODE BOX

NEXT

END

DTC	B2791	Communication Condition Failure between ECM

DESCRIPTION

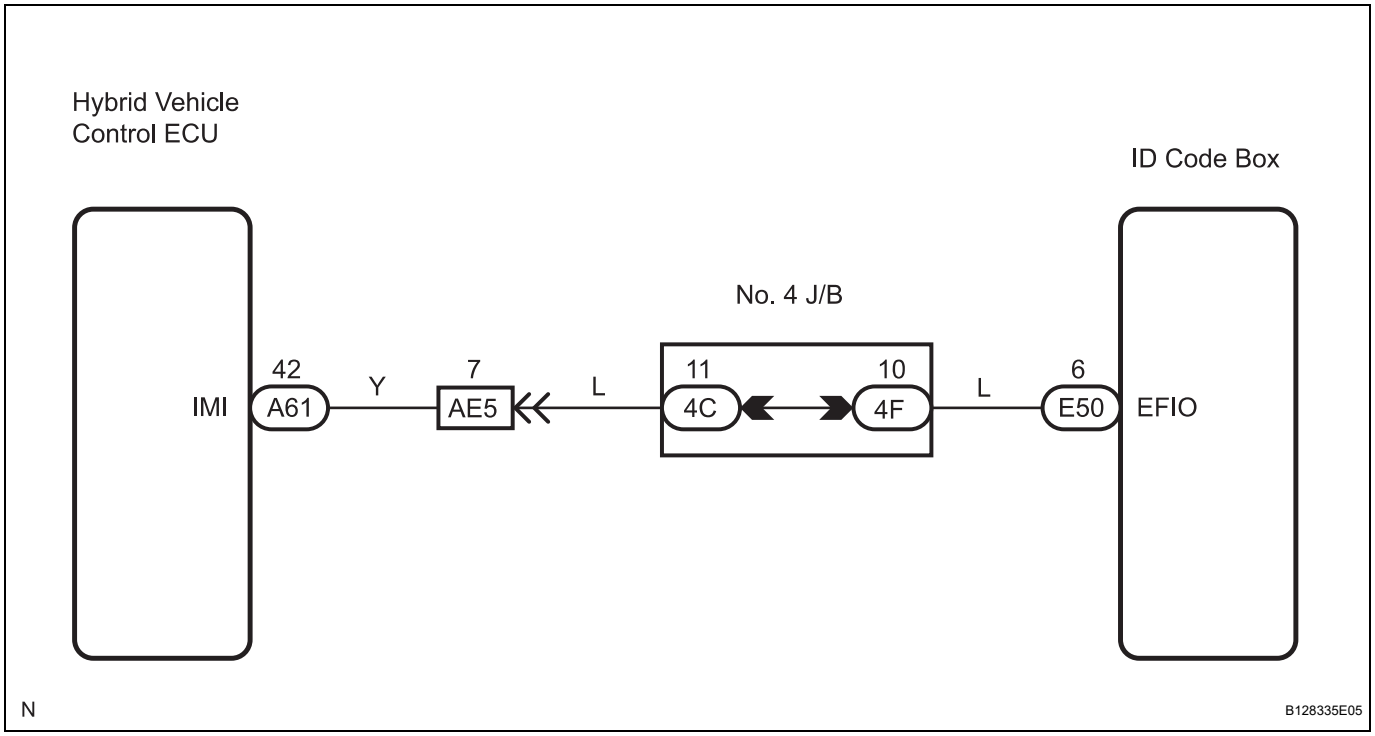
This DTC is output when the ID code box does not respond to a verification request signal from the hybrid vehicle control ECU.

HINT:

- If the power switch is turned off immediately after the hybrid control system starts, DTC B2791 will be detected. If DTC B2791 is cleared, this DTC will not recur because it does not indicate a malfunction.
- If this DTC B2791 is detected simultaneously with DTC B2799-542 or B2799-790, troubleshoot DTC B2799-542 or B2799-790 first.

DTC No.	DTC Detection Condition	Trouble Area
B2791	ID code box does not respond to a verification request signal from hybrid vehicle control ECU	-

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

If the engine can be started even when DTC B2791 is output, the ID code box can be considered normal. Be sure to recheck for DTCs after clearing the DTCs (See page EI-9).

1	CHECK HYBRID CONTROL SYSTEM

(a) Delete the DTCs (See page EI-25).

(b) Check that the hybrid control system starts.

Result

Result	Proceed to
Hybrid control system does not start	A

Result	Proceed to
Hybrid control system starts	B

HINT:
Perform this step when the is turned off immediately after the hybrid control system starts.

B → END

EI

A

2 CHECK DTC OUTPUT

(a) Recheck for DTCs (See page EI-25).
Result

Result	Proceed to
B2791 and other DTC output	A
No DTC output	B

HINT:
If the hybrid control system does not start, DTC B2791 will not be detected separately from other DTCs because DTC B2791 will be output together with other DTCs. Troubleshoot DTCs other than DTC B2791.

B → **GO TO SMART KEY SYSTEM (See page ST-10)**

A

REPAIR CIRCUITS INDICATED BY OUTPUT DTCS

DTC	B2799-542	Engine Immobiliser System Malfunction

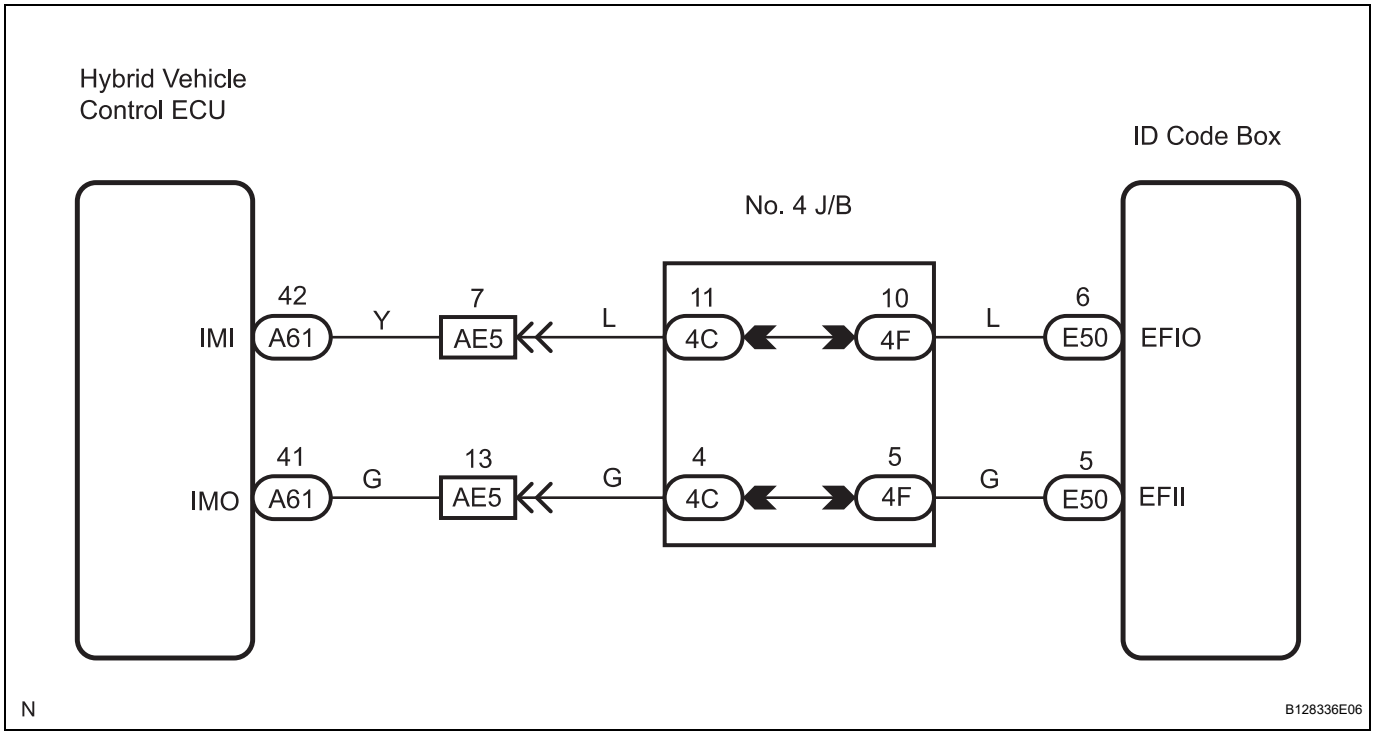
DTC	B2799-790	Engine Immobiliser System Malfunction

DESCRIPTION

This DTC is output when one of the following occurs: 1) the hybrid vehicle control ECU detects errors in its own communications with the ID code box; 2) the hybrid vehicle control ECU detects errors in the communication lines; or 3) the ECU communication ID between the ID code box and hybrid vehicle control ECU is different and an hybrid control system start is attempted. Before troubleshooting for this DTC, make sure no certification ECU DTCs are present. If present, troubleshoot the certification ECU DTCs first.

DTC No.	DTC Detection Condition	Trouble Area
B2799 - 542 E2799 - 790	One of following conditions is met: • Error in communication between hybrid vehicle control ECU and ID code box • Error in communication lines • Communication ID is different between ID code box and hybrid vehicle control ECU during communication	• Wire harness • Hybrid vehicle control ECU • ID code box

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

- **If the ID code box is replaced, register the key and ECU communication ID (See page EI-9).**
- **If the hybrid vehicle control ECU is replaced, register the ECU communication ID (See page EI-9).**

1	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-25).
(b) Recheck for DTCs (See page EI-25).
Result

Result	Proceed to
B2799 output recurs	A
B2799 output does not recur	B

B → USE SIMULATION METHOD TO CHECK

A

2	RE-REGISTER ECU COMMUNICATION ID

(a) Re-register the ECU communication ID (See page EI-9) between the ID code box and hybrid vehicle control ECU.

NEXT

3	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-25).
(b) Recheck for DTCs (See page EI-25).
Result

Result	Proceed to
B2799 output recurs	A
B2799 output does not recur	B

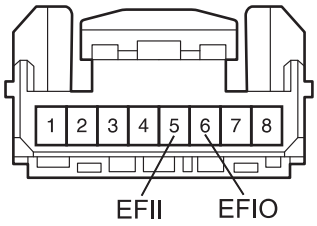
B → END

A

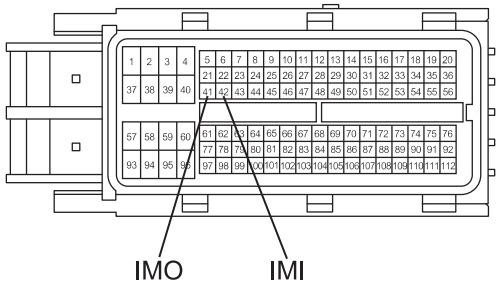
4	CHECK HARNESS AND CONNECTOR (ID CODE BOX - HYBRID VEHICLE CONTROL ECU)

Wire Harness Side Connector Front View:

E50
ID Code Box



A61
Hybrid Vehicle Control ECU



B139364E01

(a) Disconnect the E50 ID code box and A61 hybrid vehicle control ECU connectors.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E50-5 (EFII) - A61-41 (IMO)	Below 1 Ω
E50-6 (EFIO) - A61-42 (IMI)	
E50-5 (EFII) - Body ground	10 kΩ or higher
E50-6 (EFIO) - Body ground	

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

5	REPLACE HYBRID VEHICLE CONTROL ECU

(a) Replace the hybrid vehicle control ECU (See page HV-570).

NEXT

6	REGISTER ECU COMMUNICATION ID

(a) Register the ECU communication ID between the ID code box and hybrid vehicle control ECU (See page EI-9).

NEXT

7	CHECK DTC OUTPUT

(a) Delete the DTCs (See page EI-25).
(b) Recheck for DTCs (See page EI-25).

Result

Result	Proceed to
B2799 output recurs	A
B2799 output does not recur	B

B → END

EI

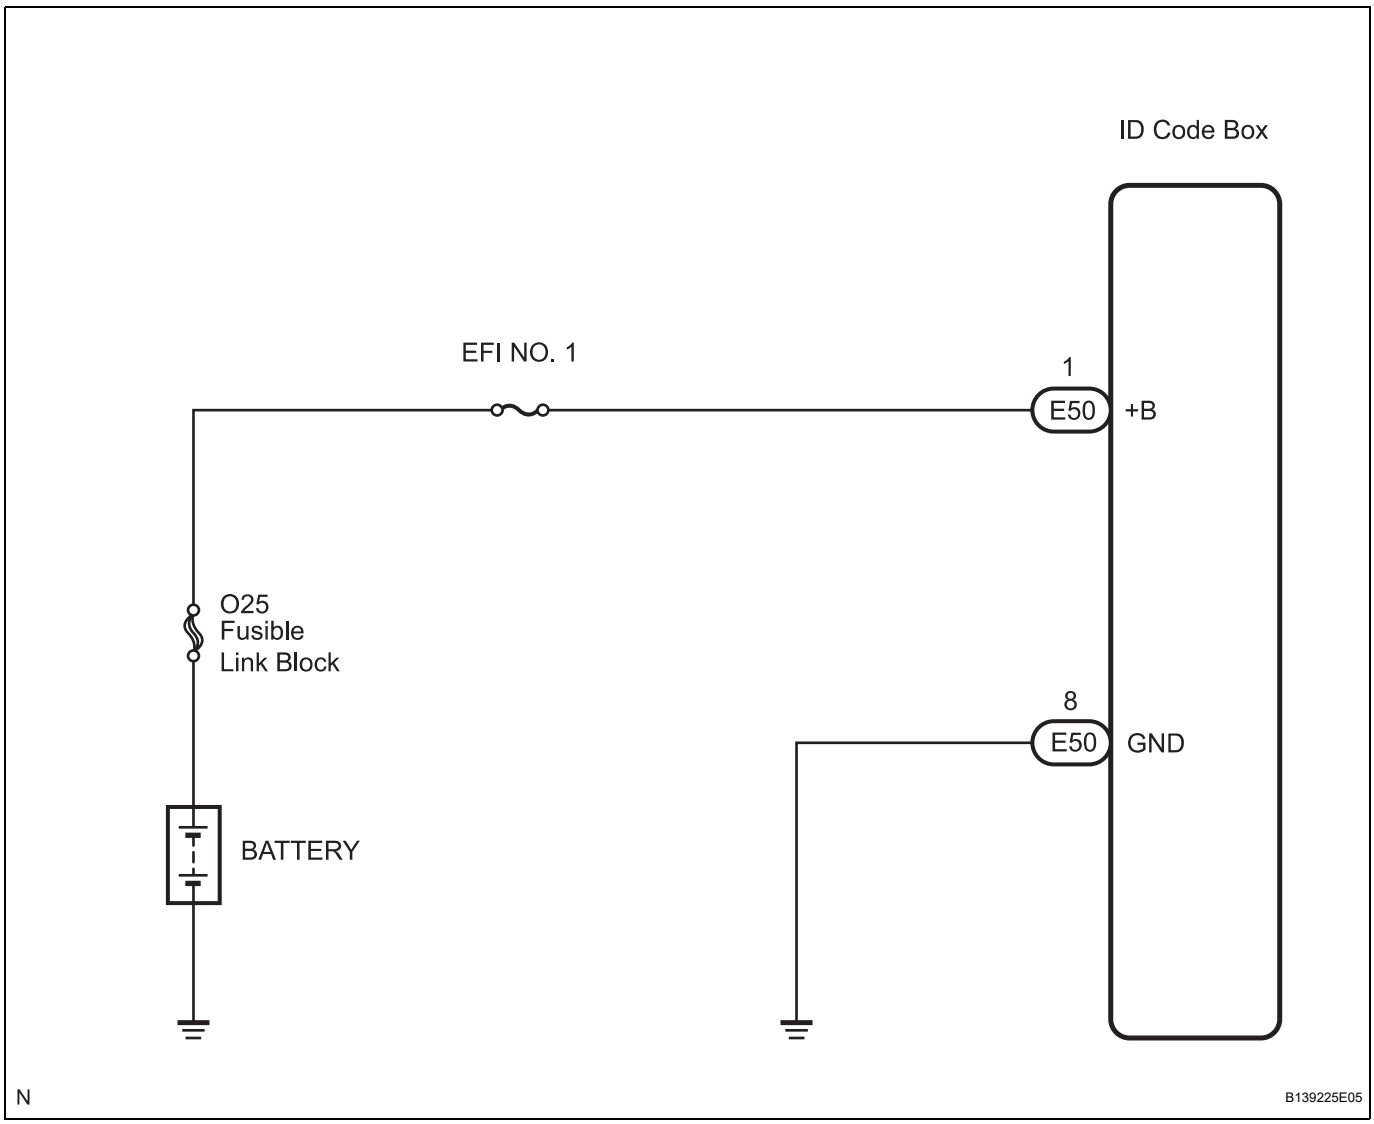
REPLACE ID CODE BOX

ID Code Box Power Source Circuit

DESCRIPTION

This circuit provides power to operate the ID code box.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

If the ID code box is replaced, register the key and ECU communication ID (See page EI-9).

1	**INSPECT FUSE (EFI NO. 1)**

(a) Remove the EFI No. 1 fuse from the No. 1 engine room R/B.

(b) Measure the resistance of the fuse.

Standard resistance:

Below 1 Ω

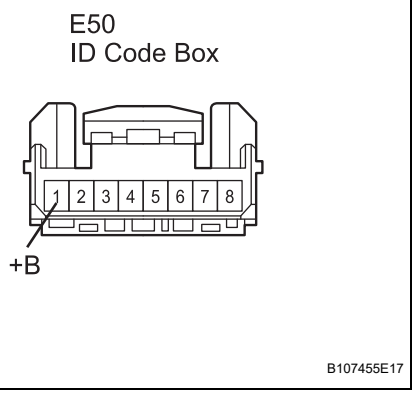
NG → REPLACE FUSE

OK

2 CHECK HARNESS AND CONNECTOR (ID CODE BOX - BATTERY)

EI

Wire Harness Side Connector Front View:



(a) Disconnect the E50 ID code box connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

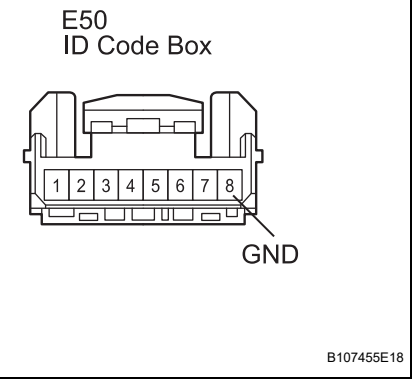
Tester Connection	Specified Condition
E50-1 (+B) - Body ground	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK HARNESS AND CONNECTOR (ID CODE BOX - BODY GROUND)

Wire Harness Side Connector Front View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E50-8 (GND) - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

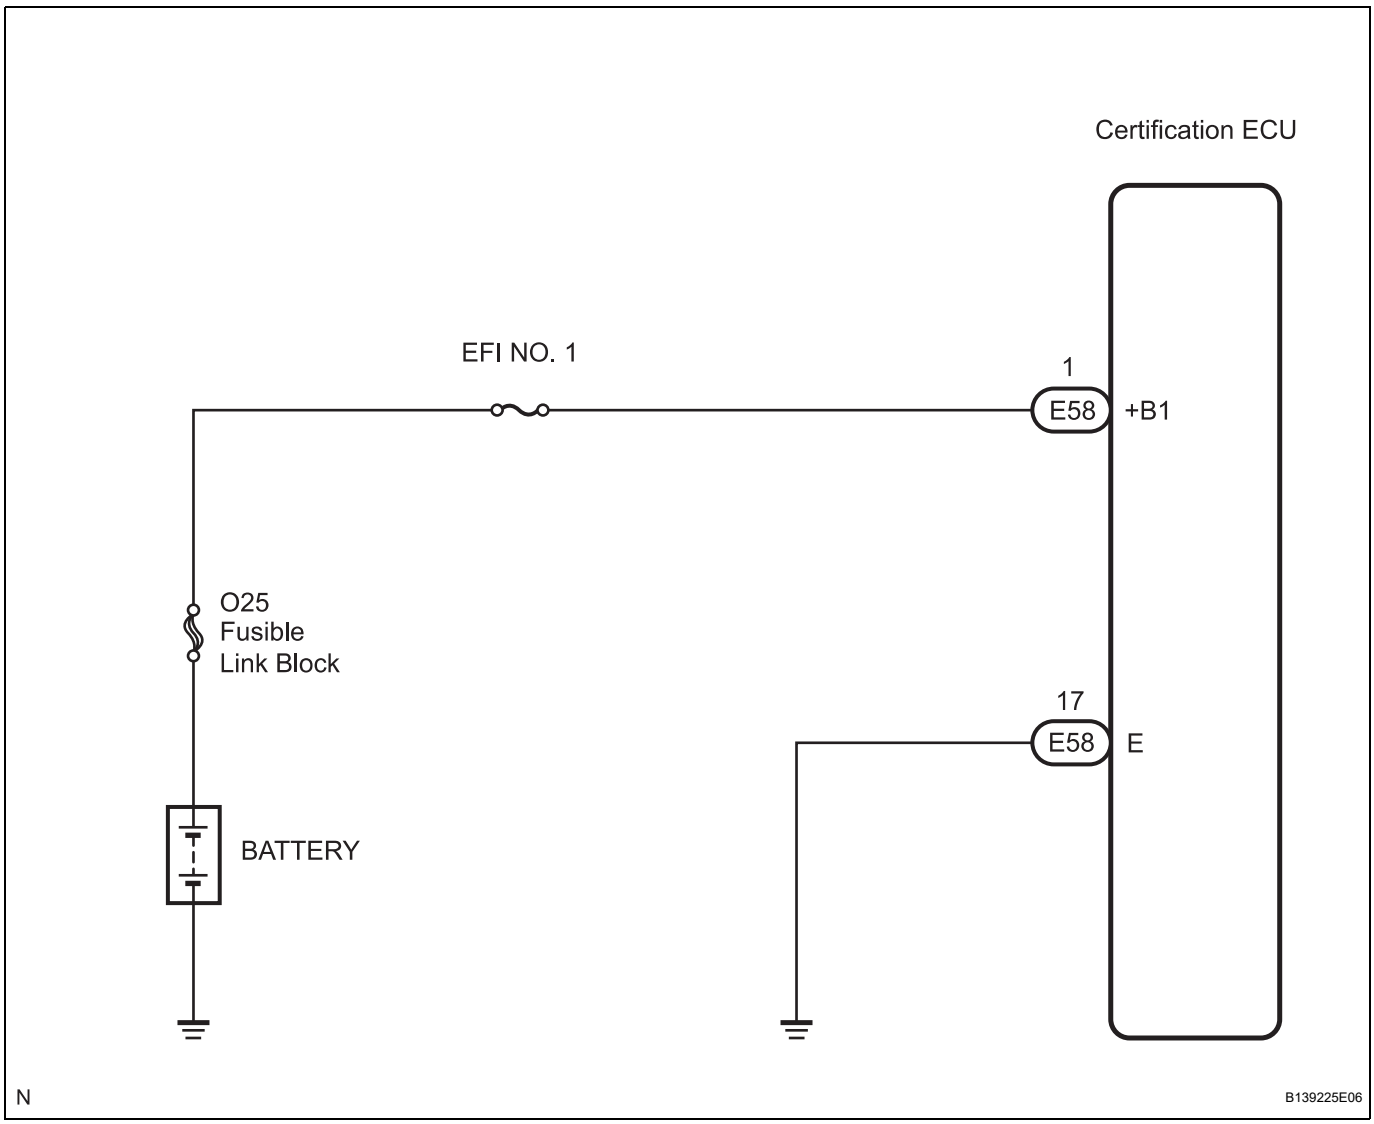
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page EI-16)

Certification ECU Power Source Circuit

DESCRIPTION

This circuit provides power to operate the certification ECU.

WIRING DIAGRAM



INSPECTION PROCEDURE

NOTICE:

If the certification ECU is replaced, register the key and ECU communication ID (See page EI-9).

1	**INSPECT FUSE (EFI NO. 1)**

(a) Remove the EFI No. 1 fuse from the No. 1 engine room R/B.

(b) Measure the resistance of the fuse.

Standard resistance:

Below 1 Ω

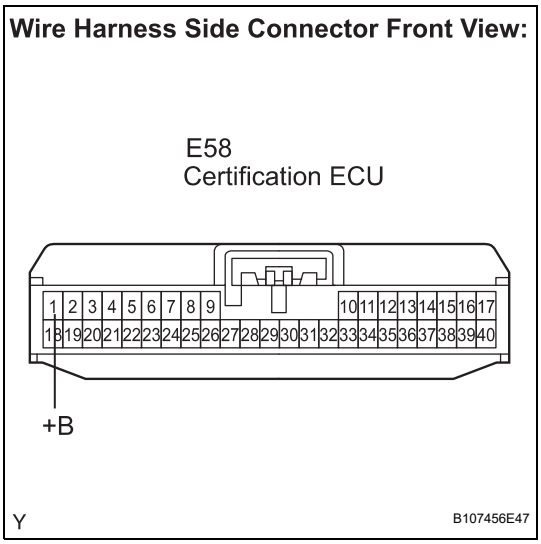
NG → REPLACE FUSE

OK

2 CHECK WIRE HARNESS (CERTIFICATION ECU - BATTERY)

EI

Wire Harness Side Connector Front View:



(a) Disconnect the E58 ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

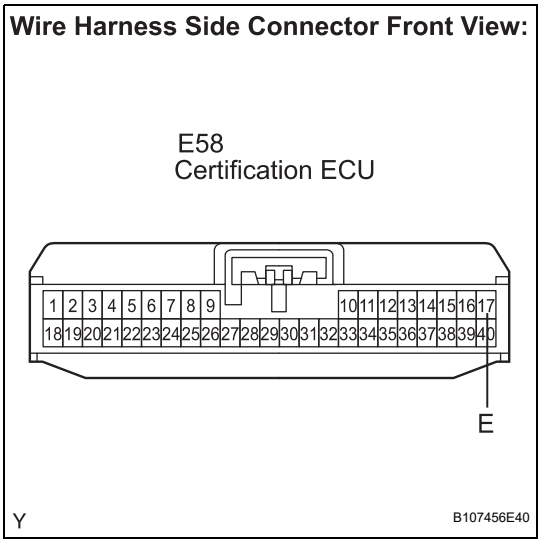
Tester Connection	Specified Condition
E58-1 (+B) - Body ground	10 to 14 V

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

3 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - BODY GROUND)

Wire Harness Side Connector Front View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Specified Condition
E58-17 (E) - Body ground	Below 1 Ω

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE (See page EI-16)

2AZ-FXE ENGINE CONTROL SYSTEM

SERVICE DATA

Camshaft timing oil control valve assembly		
Standard resistance	at 20°C (68°F)	6.9 to 7.9 Ω
Camshaft position sensor		
Standard resistance	1 (G+) - 2(G-)	835 to 1,400 Ω at Cold
	1 (G+) - 2(G-)	1,060 to 1,645 Ω at Hot
Crankshaft position sensor		
Standard resistance	Cold	985 to 1,600 Ω
	Hot	1,265 to 1,890 Ω
Throttle body assembly		
Standard resistance	at 20°C (68°F)	
	2 (M+) - 1 (M-)	0.3 to 100 Ω
E.F.I. engine coolant temperature sensor		
Standard resistance	Approx. 20°C (68°F)	2.32 to 2.59 kΩ
	Approx. 80°C (176°F)	0.310 to 0.326 kΩ
Knock sensor		
Standard resistance	at 20°C (68°F)	120 to 280 kΩ
Circuit opening relay (engine room R/B Unit D)		
Specified condition	1E-8 - 1E-12	Below 1 Ω
	1E-7 - 1E-13	10 kΩ or higher
	1E-7 - 1E-13	Below 1 Ω (when battery voltage is applied to terminals 1G-5 and 1H-9)
EFI relay (engine room R/B Unit D)		
Specified condition	1E-9 - 1E-10	Below 1 Ω
	1E-7 - 1E-12	10 kΩ or higher
	1E-7 - 1E-12	Below 1 Ω (when battery voltage is applied to terminals 1H-10 and 1H-2)

SERVICE DATA

Ignition timing	with Terminals TC and CG of DLC3 connected	8 to 12°BTC at idle (Transmission in neutral)
	with Terminals TC and CG of DLC3 disconnected	5 to 15°BTC at idle (Transmission in neutral)
Idle speed		950 to 1,050 rpm (Transmission in neutral)
Compression	Compression pressure	1.360 MPa (13.9 kgf/cm^2, 198 psi)
	Minimum pressure	0.98 MPa (10 kgf/cm^2, 142 psi)
	Difference between each cylinder	100 kPa (1.0 kgf/cm^2, 14 psi)
Valve clearance (cold)	Intake	0.19 to 0.29 mm (0.0075 to 0.0114 in.)
	Exhaust	0.38 to 0.48 mm (0.0150 to 0.0189 in.)
Balanceshaft		
Standard thrust clearance		0.050 to 0.090 mm (0.0020 to 0.0035 in.)
Maximum thrust clearance		0.09 mm (0.0035 in.)
Standard oil clearance		0.004 to 0.049 mm (0.0002 to 0.0019 in.)
Maximum oil clearance		0.049 mm (0.0019 in.)
Housing journal bore diameter	Mark 1	26.000 to 26.006 mm (1.0236 to 1.0239 in.)
	Mark 2	26.007 to 26.012 mm (1.0239 to 1.0241 in.)
	Mark 3	26.013 to 26.018 mm (1.0241 to 1.0243 in.)
Journal diameter	Mark 1	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
	Mark 2	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
	Mark 3	22.985 to 23.000 mm (0.9049 to 0.9055 in.)
	Standard bolt length	58.3 to 59.7 mm (2.295 to 2.350 in.)
	Maximum bolt length	60.3 mm (2.374 in.)
Bearing center wall thickness	Mark 1	1.486 to 1.489 mm (0.0585 to 0.0586 in.)
	Mark 2	1.490 to 1.492 mm (0.0586 to 0.0587 in.)
	Mark 3	1.493 to 1.495 mm (0.0587 to 0.0589 in.)
Oil pump drive sprocket	Minimum sprocket diameter (with chain)	48.2 mm (1.898 in.)
Oil pump drive shaft sprocket	Minimum sprocket diameter (with chain)	48.2 mm (1.898 in.)
Crankshaft timing sprocket	Minimum sprocket diameter (with chain)	51.6 mm (2.031 in.)
Chain tensioner slipper	Maximum wear	1.0 mm (0.039 in.)
Chain vibration damper No. 1	Maximum wear	1.0 mm (0.039 in.)
Chain tensioner plate	Maximum wear	0.5 mm (0.020 in.)
Cylinder head set bolt	Standard bolt length	141.3 to 142.7 mm (5.563 to 5.618 in.)
	Maximum bolt length	144.2 mm (5.677 in.)
Chain sub-assembly	Maximum chain elongation	114.5 mm (4.508 in.)
No. 2 Chain sub-assembly	Maximum chain elongation	102.2 mm (4.024 in.)
Camshaft timing gear assembly	Minimum gear or sprocket diameter (with chain)	97.3 mm (3.831 in.)
Camshaft timing sprocket	Minimum gear or sprocket diameter (with chain)	97.3 mm (3.831 in.)
Camshaft (Intake)		
Maximum circle runout		0.03 mm (0.0012 in.)
Standard cam lobe height		44.516 to 44.616 mm (1.7526 to 1.7565 in.)
Maximum cam lobe height		44.406 mm (1.7483 in.)
No. 1 journal diameter		35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Outer journal diameter		22.959 to 22.975 mm (0.9039 to 0.9045 in.)

Standard thrust clearance	Intake	0.040 to 0.095 mm (0.0016 to 0.0037 in.)
Maximum thrust clearance		0.110 mm (0.0043 in.)
Standard oil clearance	No. 1 journal bearing mark 1	0.007 to 0.038 mm (0.0003 to 0.0015 in.)
	No. 1 journal bearing mark 2	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
	No. 1 journal bearing mark 3	0.008 to 0.038 mm (0.0003 to 0.0015 in.)
	Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
Maximum oil clearance		0.070 mm (0.0028 in.)
Cylinder head journal bore diameter	Mark 1	40.000 to 40.008 mm (1.5748 to 1.5752 in.)
	Mark 2	40.009 to 40.017 mm (1.5752 to 1.5755 in.)
	Mark 3	40.018 to 40.025 mm (1.5755 to 1.5758 in.)
Standard bearing center wall thickness	Mark 1	2.000 to 2.004 mm (0.0787 to 0.0789 in.)
	Mark 2	2.005 to 2.008 mm (0.0789 to 0.0791 in.)
	Mark 3	2.009 to 2.012 mm (0.0791 to 0.0792 in.)
Camshaft journal diameter	Mark 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Mark 2	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Mark 3	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Camshaft No. 2 (Exhaust)		
Maximum circle runout		0.03 mm (0.0012 in.)
Standard cam lobe height		45.983 to 46.083 mm (1.8104 to 1.8143 in.)
Minimum cam lobe height		45.873 mm (1.8060 in.)
No. 1 journal diameter		35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Other journal diameter		22.959 to 22.975 mm (0.9039 to 0.9045 in.)
Standard thrust clearance	Exhaust	0.080 to 0.135 mm (0.0032 to 0.0053 in.)
Maximum thrust clearance		0.150 mm (0.0059 in.)
Standard oil clearance	No. 1 journal	0.015 to 0.054 mm (0.0006 to 0.0021 in.)
	Other journals	0.025 to 0.062 mm (0.0010 to 0.0024 in.)
Maximum oil clearance		0.100 mm (0.0039 in.)
Cylinder head journal bore diameter	Mark 1	40.000 to 40.008 mm (1.5748 to 1.5752 in.)
	Mark 2	40.009 to 40.017 mm (1.5752 to 1.5755 in.)
	Mark 3	40.018 to 40.025 mm (1.5755 to 1.5758 in.)
Standard bearing center wall thickness	Mark 1	2.000 to 2.004 mm (0.00787 to 0.0789 in.)
	Mark 2	2.005 to 2.008 mm (0.0789 to 0.0791 in.)
	Mark 3	2.009 to 2.012 mm (0.0791 to 0.0792 in.)
Camshaft journal diameter	Mark 1	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Mark 2	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
	Mark 3	35.971 to 35.985 mm (1.4162 to 1.4167 in.)
Intake manifold	Maximum warpage	0.20 mm (0.0079 in.)
Exhaust manifold	Maximum warpage	0.70 mm (0.0276 in.)
Cylinder head		
Maximum warpage	Cylinder block side	0.05 mm (0.0020 in.)
	Intake manifold side	0.08 mm (0.0031 in.)
	Exhaust manifold side	0.08 mm (0.0031 in.)
Inner compression spring	Free length	47.43 mm (1.867 in.)
	Maximum deviation	1.6 mm (0.063 in.)
Intake valve	Standard overall length	101.71 mm (4.0043 in.)
	Minimum overall length	101.21 mm (3.9846 in.)
	Valve stem diameter	5.470 to 5.485 mm (0.2154 to 0.2159 in.)
	Standard margin thickness	1.05 to 1.45 mm (0.0413 to 0.0571 in.)
	Minimum margin thickness	0.50 mm (0.0197 in.)

Exhaust valve	Standard overall length	101.15 mm (3.9823 in.)
	Minimum overall length	100.70 mm (3.9646 in.)
	Valve stem diameter	5.465 to 5.480 mm (0.2152 to 0.2157 in.)
	Standard margin thickness	1.20 to 1.60 mm (0.0472 to 0.0630 in.)
	Minimum margin thickness	0.50 mm (0.0197 in.)
Intake valve guide bush	Bush inside diameter	5.510 to 5.530 mm (0.2169 to 0.2177 in.)
	Standard bush oil clearance	0.025 to 0.060 mm (0.0010 to 0.0024 in.)
	Minimum bush oil clearance	0.080 mm (0.0031 in.)
Bush bore diameter	Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
	Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Protrusion height		9.6 to 10.0 mm (0.3779 to 0.3937 in.)
Standard oil clearance		0.025 to 0.060 mm (0.0010 to 0.0024 in.)
Exhaust valve guide bush	Bush inside diameter	5.510 to 5.530 mm (0.2169 to 0.2177 in.)
	Standard oil clearance	0.030 to 0.065 mm (0.0012 to 0.0026 in.)
	Minimum oil clearance	0.100 mm (0.0039 in.)
Bush bore diameter	Use STD	10.285 to 10.306 mm (0.4049 to 0.4057 in.)
	Use O/S 0.05	10.335 to 10.356 mm (0.4069 to 0.4077 in.)
Protrusion height		9.6 to 10.0 mm (0.3779 to 0.3937 in.)
Standard oil clearance		0.030 to 0.065 mm (0.0012 to 0.0026 in.)
Valve lifter	Lifter diameter	30.966 to 30.976 mm (1.2191 to 1.2195 in.)
	Lifter bore diameter	31.009 to 31.025 mm (1.2208 to 1.2215 in.)
	Standard oil clearance	0.033 to 0.059 mm (0.0013 to 0.0023 in.)
	Maximum oil clearance	0.070 mm (0.0028 in.)
Connecting rod		
Standard thrust clearance		0.160 to 0.362 mm (0.0063 to 0.0143 in.)
Maximum thrust clearance		0.362 mm (0.0143 in.)
Standard oil clearance		0.032 to 0.063 mm (0.0013 to 0.0025 in.)
Maximum oil clearance		0.063 mm (0.0025 in.)
Connecting rod bearing center wall thickness (Reference)	Mark 1	1.485 to 1.488 mm (0.0585 to 0.0586 in.)
	Mark 2	1.489 to 1.491 mm (0.0586 to 0.0587 in.)
	Mark 3	1.492 to 1.494 mm (0.0587 to 0.0588 in.)
Connecting rod small end bore diameter		22.005 to 22.014 mm (0.8663 to 0.8667 in.)
Connecting rod small end bore diameter (Reference)	Mark A	22.005 to 22.008 mm (0.8663 to 0.8665 in.)
	Mark B	22.009 to 22.011 mm (0.8665 to 0.8666 in.)
	Mark C	22.012 to 22.014 mm (0.8666 to 0.8667 in.)
Standard oil clearance		0.005 to 0.011 mm (0.0002 to 0.0004 in.)
Maximum oil clearance		0.011 mm (0.0004 in.)
Maximum rod out-of alignment per 100 mm (3.94 in.)		0.05 mm (0.0020 in.)
Maximum rod twist per 100 mm (3.94 in.)		0.15 mm (0.0059 in.)
Cylinder block	Maximum warpage	0.05 mm (0.0020 in.)
	Standard cylinder bore diameter	88.500 to 88.513 mm (3.4843 to 3.4847 in.)
	Maximum cylinder bore diameter	88.633 mm (3.4894 in.)
Piston		
Standard piston diameter		88.469 to 88.479 mm (3.4830 to 3.4834 in.)
Standard piston oil clearance		0.021 to 0.044 mm (0.0008 to 0.0017 in.)
Maximum piston oil clearance		0.10 mm (0.0039 in.)
Piston pin bore diameter		22.001 to 22.010 mm (0.8662 to 0.8665 in.)
Piston pin bore diameter (Reference)	Mark A	22.001 to 22.004 mm (0.8662 to 0.8663 in.)
	Mark B	22.005 to 22.007 mm (0.8663 to 0.8664 in.)
	Mark C	22.008 to 22.010 mm (0.8664 to 0.8665 in.)

Piston ring		
Ring groove clearance	No. 1 Ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
	No. 2 Ring	0.020 to 0.060 mm (0.0008 to 0.0024 in.)
	Oil Ring	0.020 to 0.070 mm (0.0008 to 0.0028 in.)
Standard end gap	No. 1 Ring	0.24 to 0.31 mm (0.0094 to 0.0122 in.)
	No. 2 Ring	0.33 to 0.43 mm (0.0130 to 0.0169 in.)

	Mark 3	54.993 to 54.994 mm (2.1651 to 2.1651 in.)
	Mark 4	54.991 to 54.992 mm (2.1650 to 2.1650 in.)
	Mark 5	54.988 to 54.990 mm (2.1649 to 2.1650 in.)
Standard main bearing center wall thickness (Reference)	Mark 1	1.993 to 1.996 mm (0.0785 to 0.0786 in.)
	Mark 2	1.997 to 1.999 mm (0.0786 to 0.0787 in.)
	Mark 3	2.000 to 2.002 mm (0.0787 to 0.0788 in.)
	Mark 4	2.003 to 2.005 mm (0.0789 to 0.0789 in.)
Maximum circle runout		0.03 mm (0.0012 in.)
Standard oil clearance		0.017 to 0.040 mm (0.0007 to 0.0016 in.)
Maximum oil clearance		0.060 mm (0.0024 in.)
Maximum main journal taper and out-of-round		0.003 mm (0.0001 in.)
Maximum crank pin taper and out-of round		0.003 mm (0.0001 in.)
Crank pin diameter		47.990 to 48.000 mm (1.8894 to 1.8898 in.)

Crankshaft bearing cap set bolt	Standard diameter	7.3 to 7.5 mm (0.287 to 0.295 in.)
	Minimum diameter	7.2 mm (0.284 in.)

2AZ-FXE FUEL

SERVICE DATA

Fuel pressure		304 to 343 kPa (3.1 to 3.5 kgf/cm^2, 44.1 to 49.7 psi)
Fuel pressure : at fuel pressure remains for 5 minutes after engine has stopped		147 kPa (1.5 kgf/cm^2, 21 psi) or more
Fuel injector		
Resistance	at 20°C (68°F)	11.6 to 12.4 Ω
Injection volume		76 to 92 cm^3 (4.6 to 5.6 cu in.) per 15 seconds
Difference between each injector		16 cm^3 (0.98 cu in.) or less
Fuel drop		1 drop or less per 12 minutes
Fuel pump		
Resistance	at 20°C (68°F)	0.2 to 3.0 Ω

TORQUE SPECIFICATIONS

2AZ-FXE COOLING

SERVICE DATA

THERMOSTAT

Condition	Specified Condition
Standard valve opening temperature	80 to 84 °C (176 to 183 °F)
Standard valve lift	10 mm (0.39 in.) or more at 95 °C (203 °F)

COOLING FAN MOTOR

Item	Condition	Specified Condition
Cooling fan motor	at 20°C (68 °F)	7.4 to 10.9 A
No. 2 cooling fan motor	at 20°C (68 °F)	7.4 to 10.9 A

COOLING FAN RELAY

Item	Tester Connection	Specified Condition
No. 1 fan relay	3 - 5	10 Ωor higher
	3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)
No. 2 fan relay	3 - 4	Below 1 Ω
	3 - 5	10 Ωor higher
	3 - 4	10 Ωor higher (when battery voltage is applied to terminals 1 and 2)
	3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)
No. 3 fan relay	3 - 5	10 Ωor higher
	3 - 5	Below 1 Ω (when battery voltage is applied to terminals 1 and 2)

RADIATOR

Item	Condition	Specified Condition
Radiator reservoir cap	For brand-new cap	93.3 to 122.7 kPa (0.95 to 1.25 kgf/cm^2, 13.5 to 17.8 psi)
	After using cap	78.5 kPa (0.8 kgf/cm^2, 11.4 psi)

TIRE AND WHEEL

SERVICE DATA

Cold tire inflation pressure

Tire size	Front	Rear
P215/60R16 94V	220 kPa (2.2 kgf/cm^2, 32 psi)	220 kPa (2.2 kgf/cm^2, 32 psi)

When driving under the above vehicle conditions at sustained high speeds above 160 km/h (100 mph), in countries where such speeds are permitted by law, inflate the front and rear tires to 240 kPa (2.4 kgf*cm^2, 35 psi) provided that it does not exceed the maximum cold tire inflation pressure molded on the tire sidewall.

Tire runout	1.4 mm (0.055 in.) or less
Imbalance after adjustment	8.0 g (0.018 lb) or less

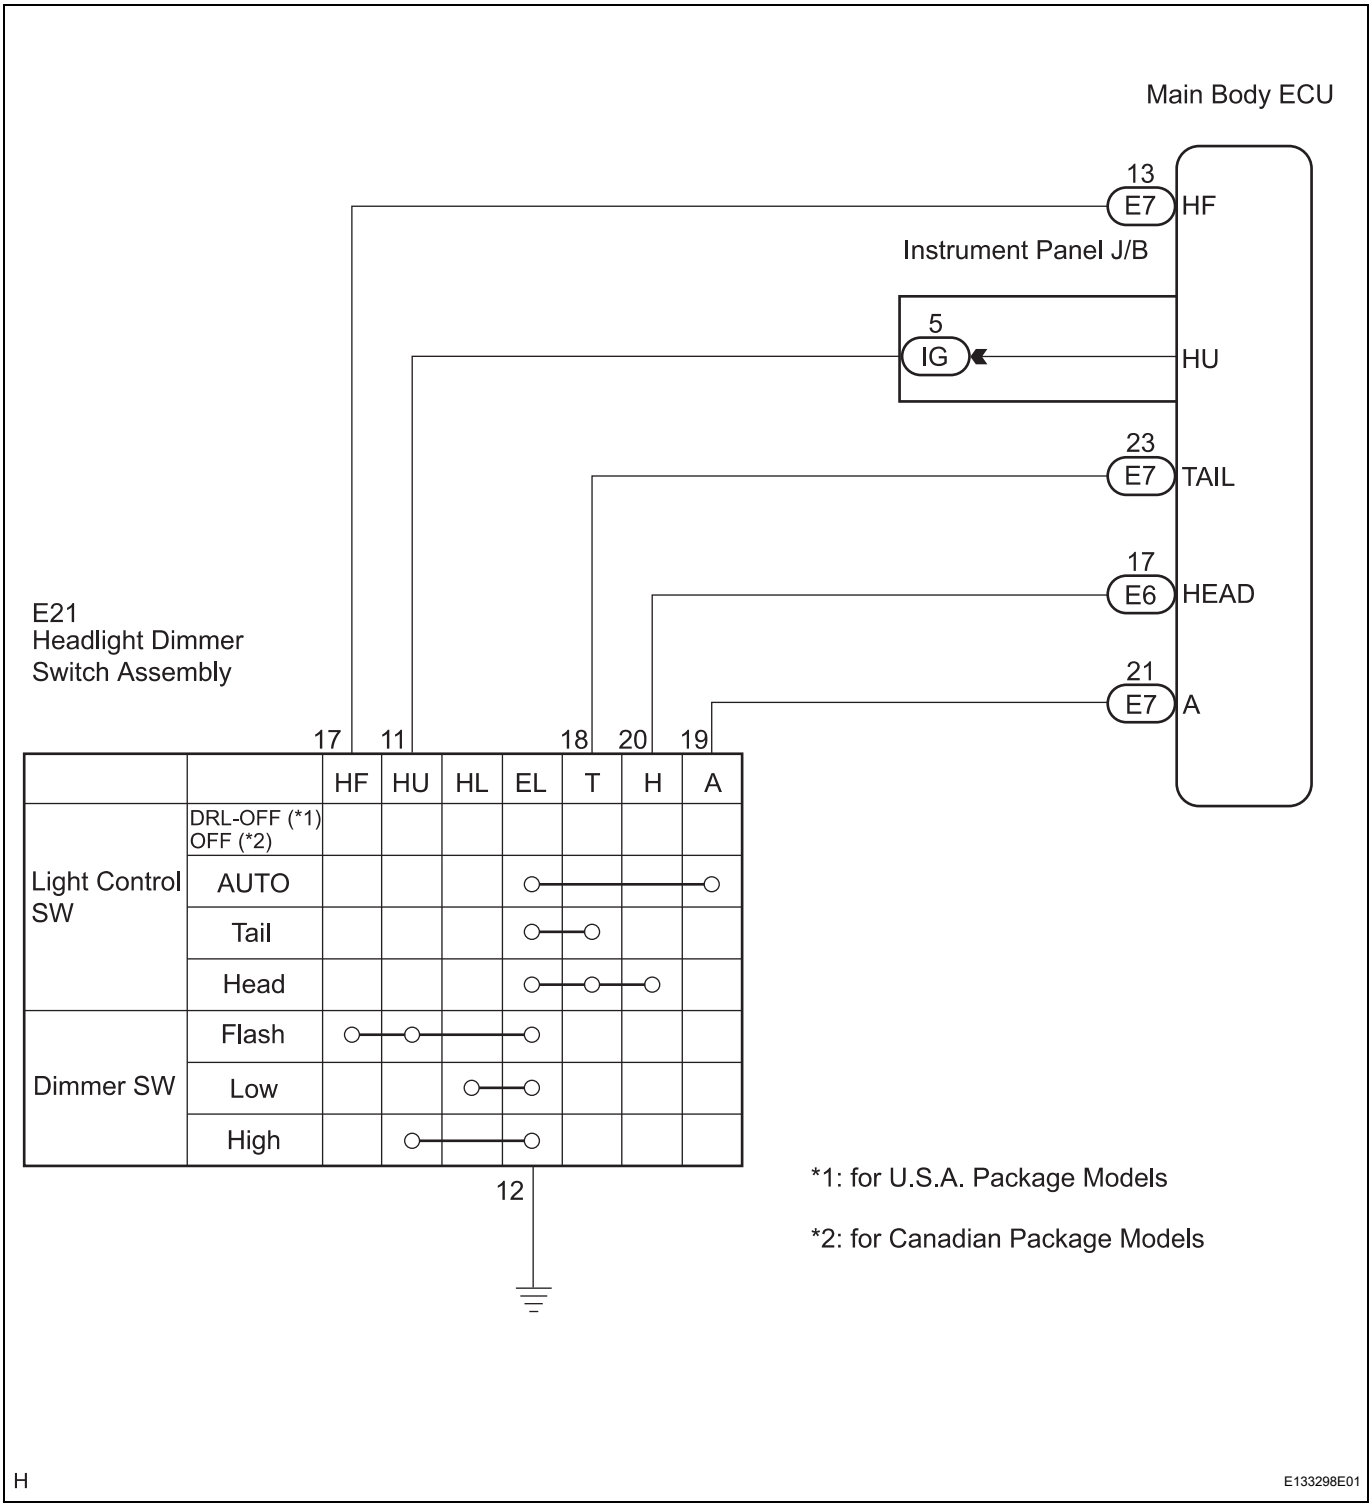
Light Control Switch Circuit

DESCRIPTION

This circuit detects the condition of the headlight dimmer switch assembly.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the items below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
DIMMER SW	Dimmer switch HIGH signal / ON or OFF	ON: Dimmer switch in HIGH or FLASH OFF: Dimmer switch in neither HIGH nor FLASH	-
HIGH FLASHER SW	Dimmer switch FLASH signal / ON or OFF	ON: Dimmer switch in FLASH OFF: Dimmer switch not in FLASH	-
AUTO LIGHT SW	Light control switch AUTO signal / ON or OFF	ON: Light control switch in AUTO OFF: Light control switch not in AUTO	-
HEAD LIGHT SW	Light control switch HEAD signal / ON or OFF	ON: Light control switch in HEAD OFF: Light control switch not in HEAD	-
TAIL LIGHT SW	Light control switch TAIL signal / ON or OFF	ON: Light control switch in TAIL or HEAD OFF: Light control switch in neither TAIL nor HEAD	-

OK:
Normal conditions listed above are displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2	INSPECT HEADLIGHT DIMMER SWITCH ASSEMBLY

(a) Inspect the headlight dimmer switch assembly (See page LI-96).
OK:
The headlight dimmer switch assembly is normal.

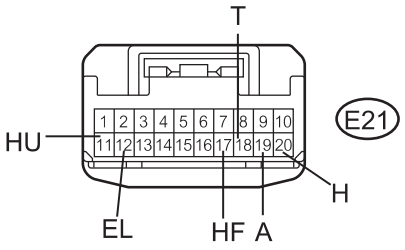
NG → **REPLACE HEADLIGHT DIMMER SWITCH ASSEMBLY**

OK

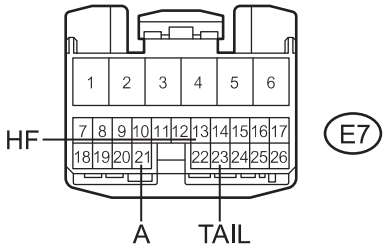
3	CHECK HARNESS AND CONNECTOR (INSTRUMENT PANEL J/B ASSEMBLY - SWITCH ASSEMBLY)

Wire Harness Side:

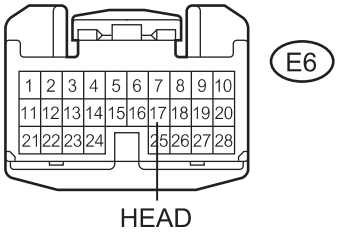
Headlight Dimmer Switch Assembly



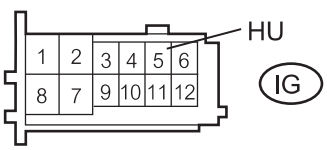
Main Body ECU



Main Body ECU



Instrument Panel J/B Assembly



H

E121507E08

(a) Disconnect the E21 headlight dimmer switch assembly connector.
(b) Disconnect the E6 and E7 main body ECU connectors.
(c) Disconnect the IG instrument panel J/B connector.
(d) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
E21-11 (HU) - IG-5 (HU)	Always	Below 1 Ω
E21-17 (HF) - E7-13 (HF)	Always	Below 1 Ω
E21-18 (T) - E7-23 (TAIL)	Always	Below 1 Ω
E21-19 (A) - E7-21 (A)	Always	Below 1 Ω
E21-20 (H) - E6-17 (HEAD)	Always	Below 1 Ω
E21-11 (HU) - Body ground	Always	10 kΩ or higher
E21-17 (HF) - Body ground	Always	10 kΩ or higher
E21-18 (T) - Body ground	Always	10 kΩ or higher
E21-19 (A) - Body ground	Always	10 kΩ or higher
E21-20 (H) - Body ground	Always	10 kΩ or higher
E21-12 (EL) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

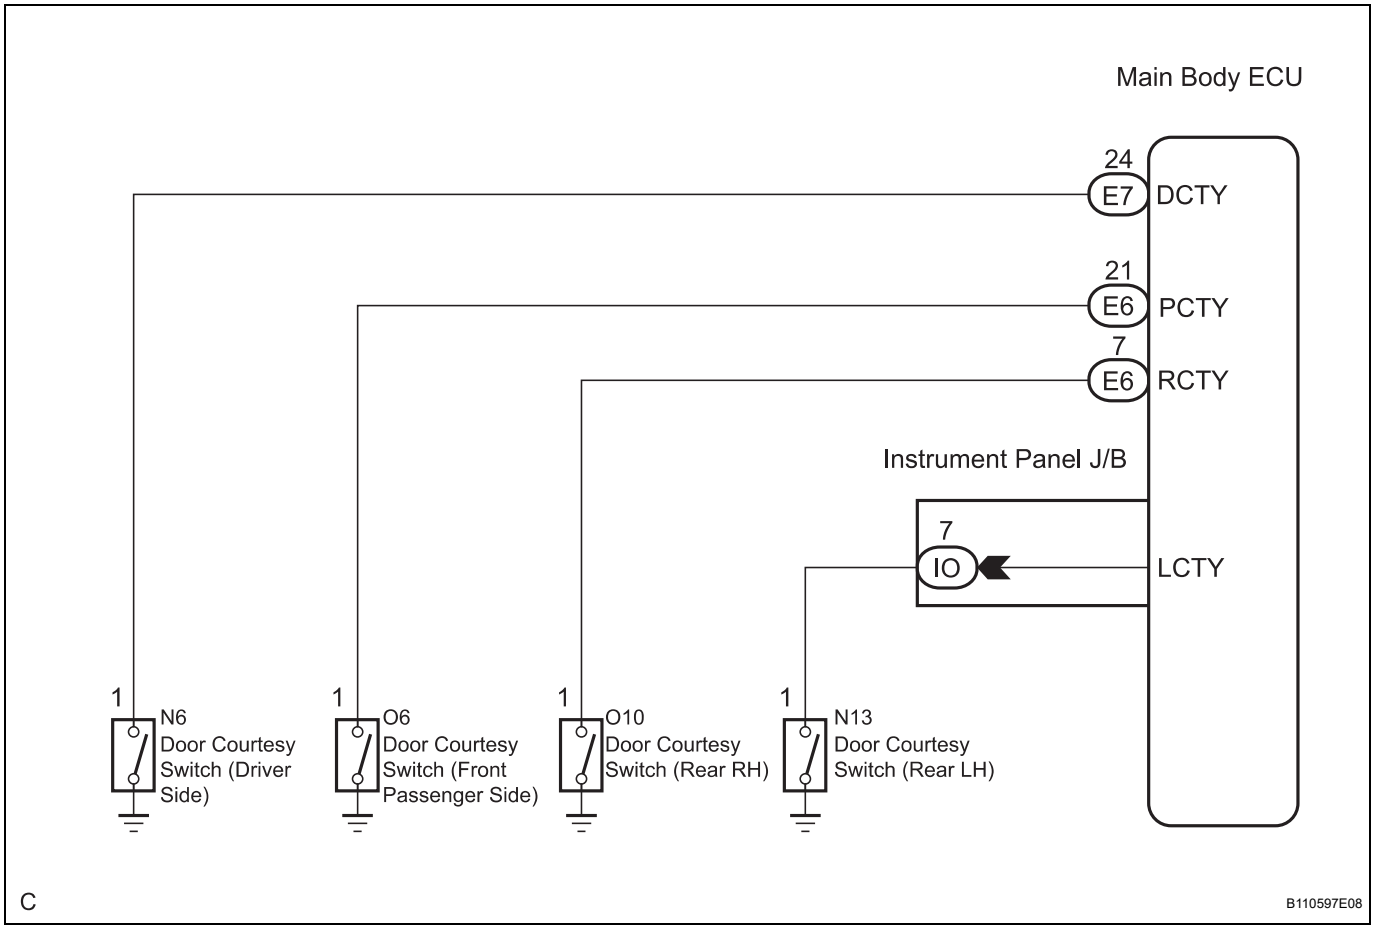
REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

Door Courtesy Switch Circuit

DESCRIPTION

The main body ECU detects the condition of the door courtesy switches.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the items below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D DOR CTY SW	Driver side door courtesy switch signal / ON or OFF	ON: Driver side door is open OFF: Driver side door is closed	-
P DOR CTY SW	Passenger side door courtesy switch signal / ON or OFF	ON: Passenger side door is open OFF: Passenger side door is closed	-
RR DOR CTY SW	Rear right door courtesy switch signal / ON or OFF	ON: Rear right door is open OFF: Rear right door is closed	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
RL DOR CTY SW	Rear left door courtesy switch signal / ON or OFF	ON: Rear left door is open OFF: Rear left door is closed	-

OK:
Normal conditions listed above are displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

LI

2 INSPECT DOOR COURTESY SWITCH

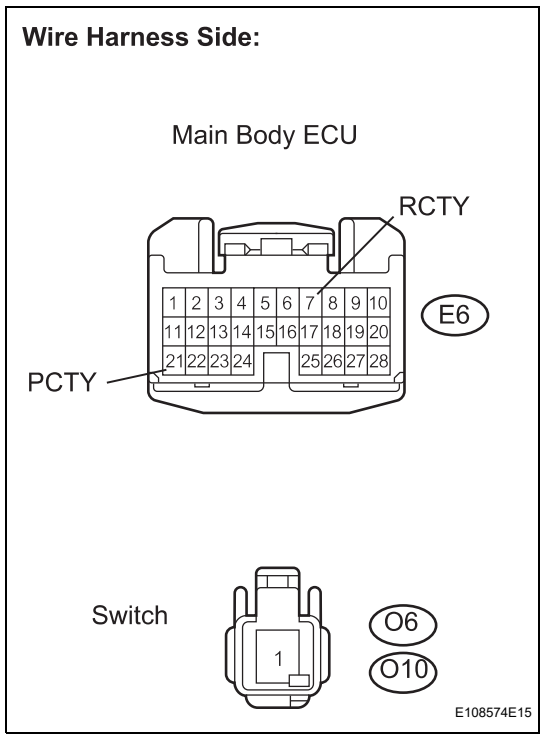
(a) Inspect the front door courtesy switch (See page LI-105).
(b) Inspect the rear door courtesy switch (See page LI-107).

OK:
Door courtesy switches are normal.

NG → **REPLACE DOOR COURTESY SWITCH**

OK

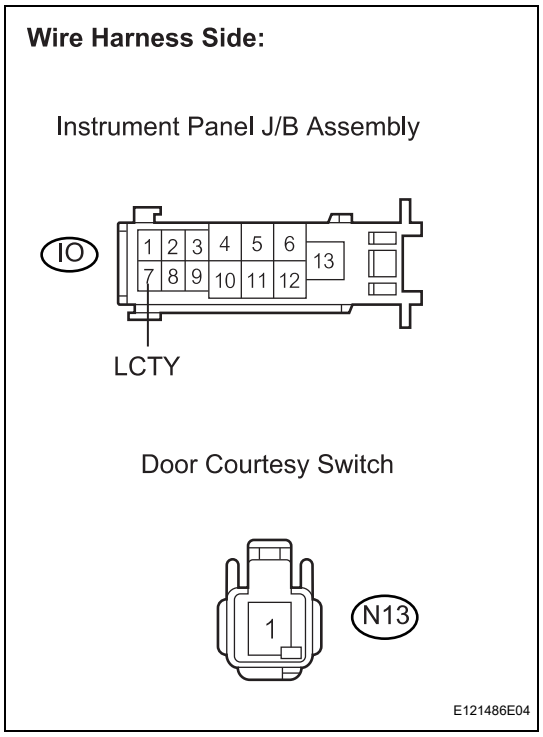
3 CHECK HARNESS AND CONNECTOR (MAIN BODY ECU - DOOR COURTESY SWITCH)



(a) Check the harness and connector between the main body ECU and door courtesy switches (passenger side and rear RH).
(1) Disconnect the E6 main body ECU connector.
(2) Disconnect the O6 and O10 switch connectors.
(3) Measure the resistance according to the value(s) in the table below.

Standard resistance

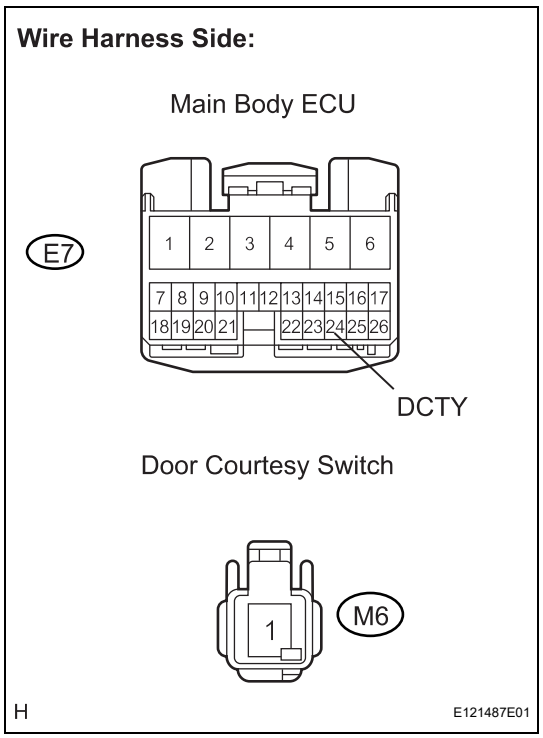
Tester Connection	Condition	Specified Condition
E6-7 (RCTY) - O10-1 (Rear RH)	Always	Below 1 Ω
E6-21 (PCTY) - O6-1 (Front passenger side)	Always	Below 1 Ω
O10-1 (Rear RH) - Body ground	Always	10 kΩ or higher
O6-1 (Front passenger side) - Body ground	Always	10 kΩ or higher



(b) Check the harness and connector between the instrument panel J/B assembly and rear LH door courtesy switch.
(1) Disconnect the IO instrument panel J/B assembly connector.
(2) Disconnect the N13 switch connector.
(3) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
IO-7 (LCTY) - N13-1 (Rear LH)	Always	Below 1 Ω
IO-7 (LCTY) - Body ground	Always	10 kΩ or higher

LI



(c) Check the harness and connector between the main body ECU and driver side door courtesy switch.
(1) Disconnect the E7 main body ECU connector.
(2) Disconnect the M6 switch connector.
(3) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
E7-24 (DCTY) - M6-1 (Driver side)	Always	Below 1 Ω
E7-24 (DCTY) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

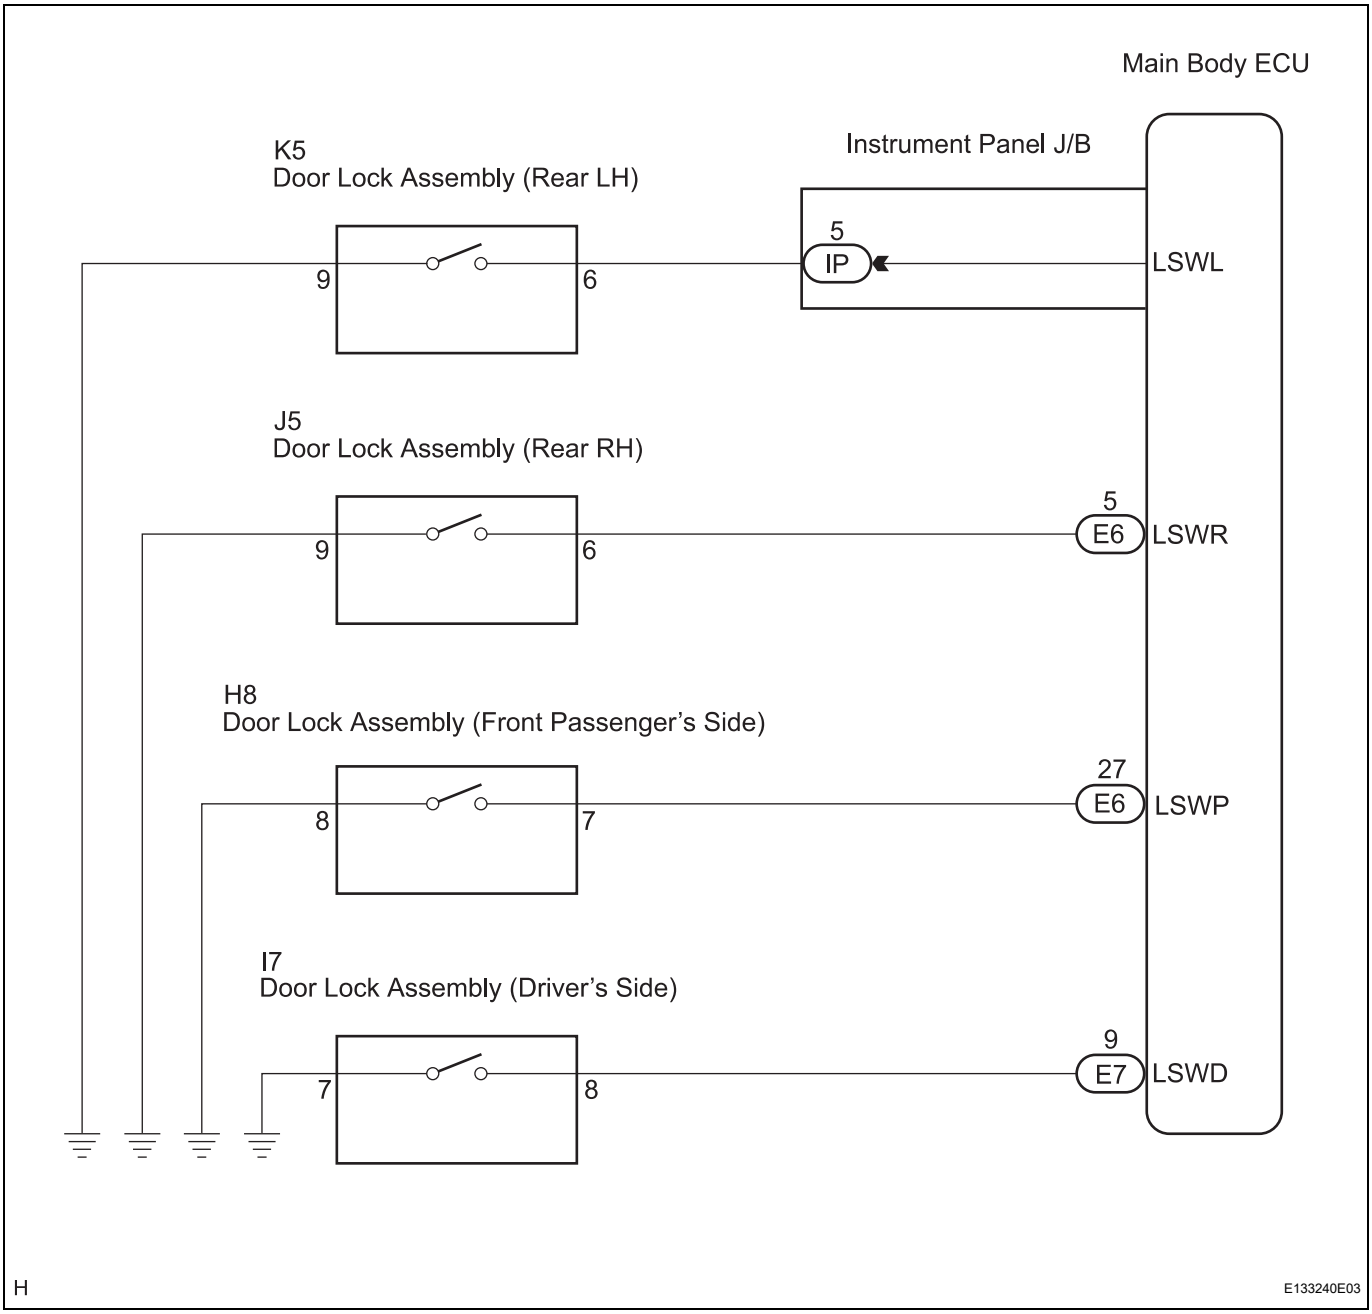
REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

Door LOCK Position Circuit

DESCRIPTION

The main body ECU receives each door lock position switch signal to control the illuminated entry system.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.

(c) Select the items below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
D LOCK POS SW	Driver side door lock position switch signal / ON or OFF	ON: Driver side door is unlocked OFF: Driver side door is locked	-
P LOCK POS SW	Passenger side door lock position switch signal / ON or OFF	ON: Passenger side door is unlocked OFF: Passenger side door is locked	-
RR LOCK POS SW	Rear right door lock position switch signal / ON or OFF	ON: Rear right door is unlocked OFF: Rear right door is locked	-
RL LOCK POS SW	Rear left door lock position switch signal / ON or OFF	ON: Rear left door is unlocked OFF: Rear left door is locked	-

OK:

Normal conditions listed above are displayed.

NG → **GO TO POWER DOOR LOCK CONTROL SYSTEM**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

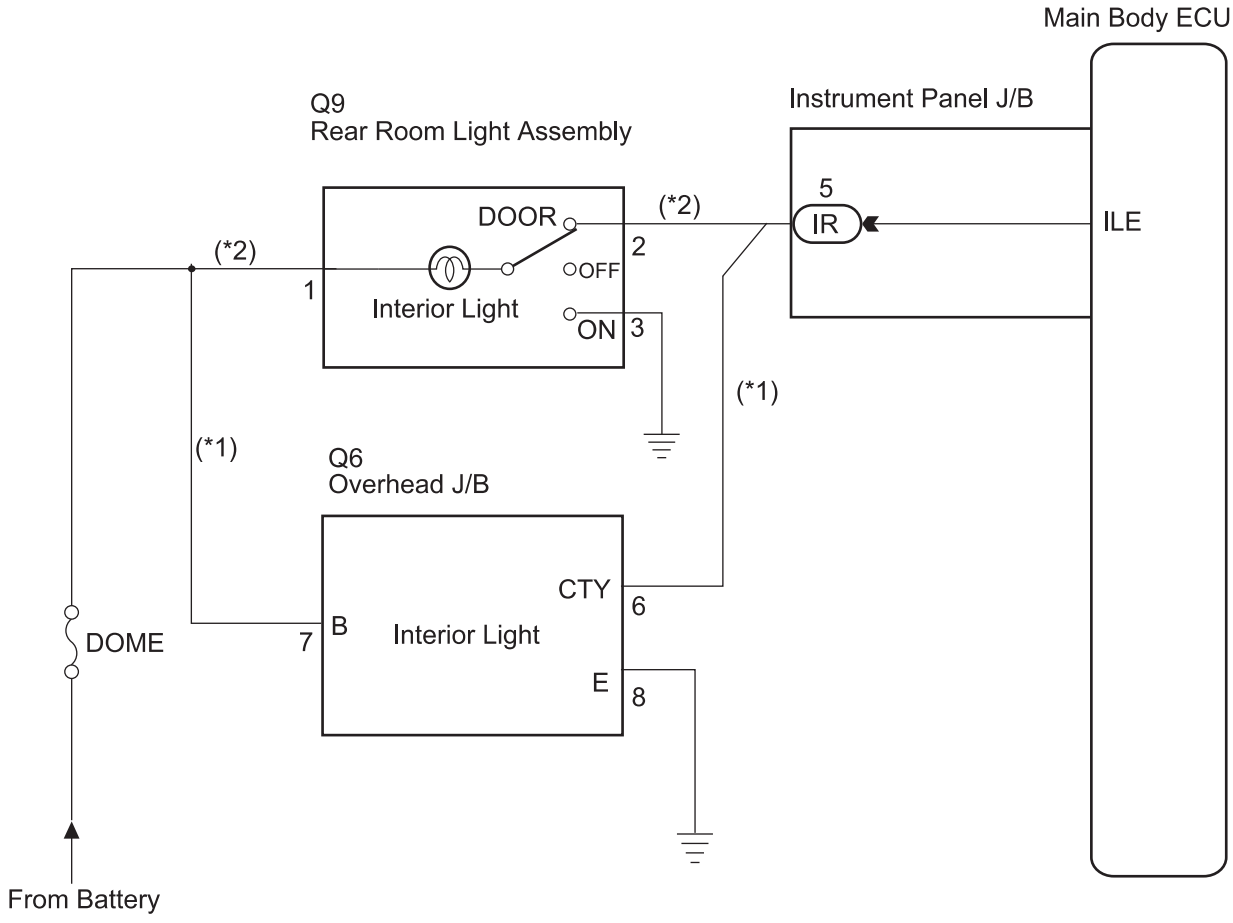
Interior Light Circuit

DESCRIPTION

The interior light is controlled by the main body ECU. The operation and condition of this control are described below.

Operation	Condition
Fade in	When any of the following conditions is met, the interior light will fade in. • Any door is opened. • Any door is unlocked when the power switch is off and all doors are closed. • Power switch is turned from on (ACC) to off when all doors are closed.
Fade out immediately	When either of the following conditions is met, the interior light will fade out. • Power switch is turned from off to on (ACC or IG) when all doors are closed. • All doors are locked when the power switch is off.
Illuminate for approximately 15 seconds, and then fade out	All doors are closed when the power switch is off.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST USING INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn intelligent tester main switch on.

(c) Select the item(s) below in the ACTIVE TEST, and check the operation.

MAIN BODY (MAIN BODY ECU):

Tester Display	Test Part	Control Range	Diagnostic Note
INTERIOR LAMP	Interior light (Interior light switch in DOOR position and all doors are closed).	ON / OFF	-

OK:
The interior light illuminates.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

LI

NG

2 CHECK VEHICLE CONDITION

(a) Check the vehicle condition.

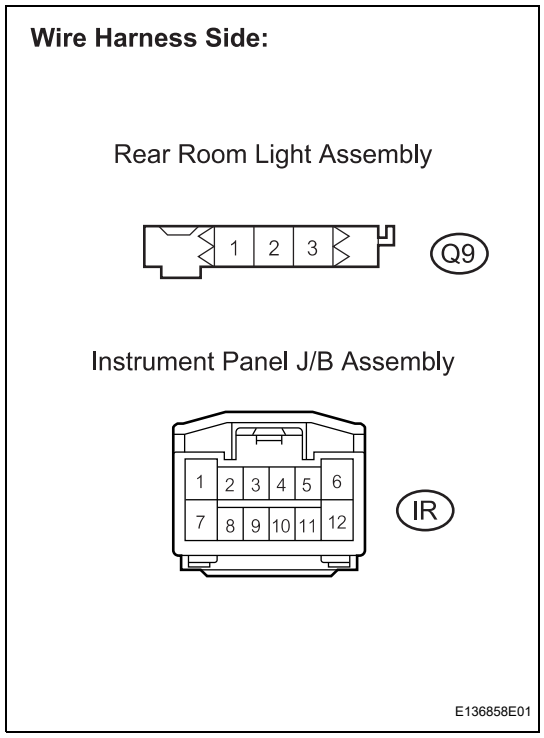
Result

Condition	Proceed to
without Sliding Roof	**A**
with Sliding Roof	**B**

B → **Go to step 4**

A

3 CHECK HARNESS AND CONNECTOR (LIGHT - BATTERY AND INSTRUMENT PANEL J/B ASSEMBLY)



(a) Disconnect the Q9 rear room light assembly connector.
(b) Disconnect the IR instrument panel J/B assembly connector.
(c) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
Q9-1 - Body ground	**Always**	**10 to 14 V**

Standard resistance

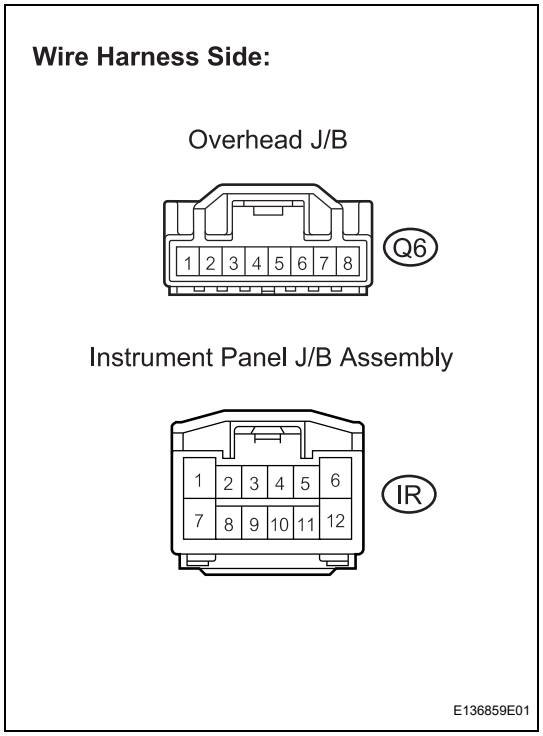
Tester Connection	Condition	Specified Condition
IR-5 - Q9-2	**Always**	**Below 1 Ω**
IR-5 - Body ground	**Always**	**10 kΩ or higher**

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

4	CHECK HARNESS AND CONNECTOR (LIGHT - BATTERY AND INSTRUMENT PANEL J/B ASSEMBLY)



(a) Disconnect the Q6 overhead J/B connector.
(b) Disconnect the IR instrument panel J/B assembly connector.
(c) Measure the voltage and resistance according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
Q6-7 - Body ground	Always	10 to 14 V

Standard resistance

Tester Connection	Condition	Specified Condition
IR-5 - Q6-6	Always	Below 1 Ω
IR-5 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

Power Switch Illumination Circuit

DESCRIPTION

The power switch illumination is controlled by the main body ECU. The operation and condition of this control are described below.

Operation	Condition
Fade in	When any of the following conditions is met, the power switch illumination will fade in. • Any door is opened. • Any door is unlocked when the power switch is off and all doors are closed. • Power switch is turned from on (ACC) to off when all doors are closed.
Fade out immediately	When either of the following conditions is met, the power switch illumination will fade out. • Power switch is turned from off to on (ACC or IG) when all doors are closed. • All doors are locked when the power switch is off.
Illuminate for approximately 15 seconds, and then fade out	All doors are closed when the power switch is off.

WIRING DIAGRAM

INSPECTION PROCEDURE

1 **PERFORM ACTIVE TEST USING INTELLIGENT TESTER**

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Turn the intelligent tester main switch on.
(d) Select the item(s) below in the ACTIVE TEST, and check the operation.

MAIN BODY (MAIN BODY ECU):

Tester Display	Test Part	Control Range	Diagnostic Note
LIGHTING IND	Power switch illumination	ON / OFF	-

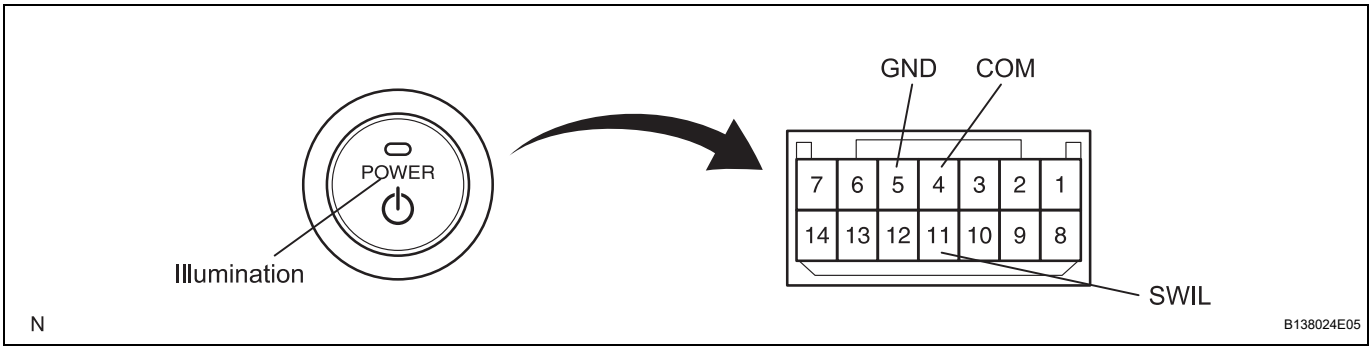
OK:
The power switch illumination comes on.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 **INSPECT POWER SWITCH**

(a) Remove the power switch.



(b) Apply the battery voltage to the power switch.
(c) Check that the illumination comes on.
OK

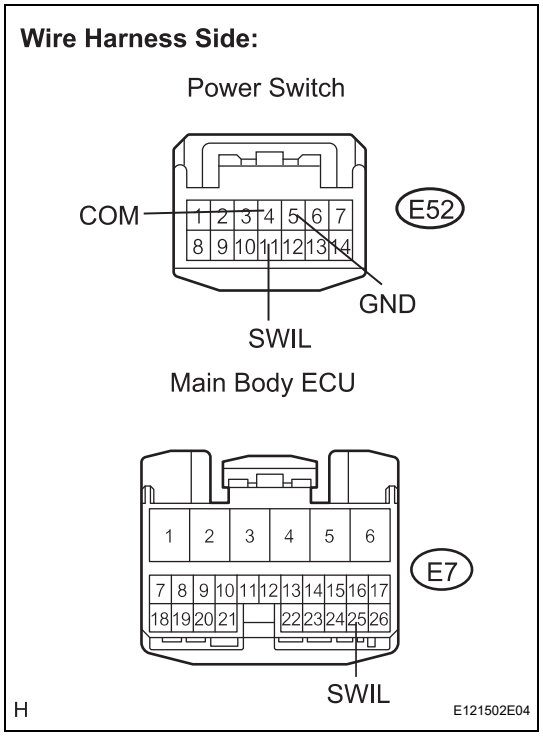
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 11 (SWIL) Battery negative (-) → Terminal 5 (GND) or 4 (COM)	Power switch illumination comes on

NG → **REPLACE POWER SWITCH**

OK

LI

3 CHECK HARNESS AND CONNECTOR



(a) Disconnect the E7 main body ECU connector.
(b) Disconnect the E52 power switch connector.
(c) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Condition	Specified Condition
E52-11 (SWIL) - E7- 25 (SWIL)	Always	Below 1 Ω
E52-4 (COM) or E52-5 (GND) - Body ground	Always	Below 1 Ω
E7-25 (SWIL) - Body ground	Always	Below 10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

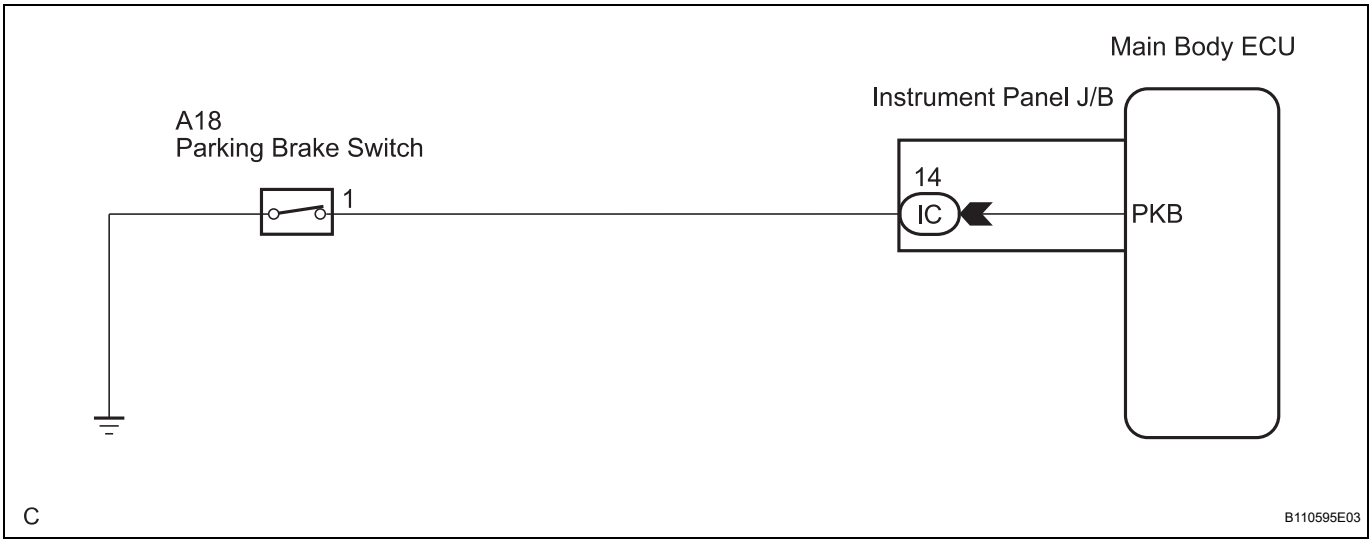
REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

Parking Brake Switch Circuit

DESCRIPTION

The main body ECU receives a parking brake switch signal to control the daytime running light system.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the DATA LIST, and read the display on the intelligent tester.

MAIN BODY (MAIN BODY ECU):

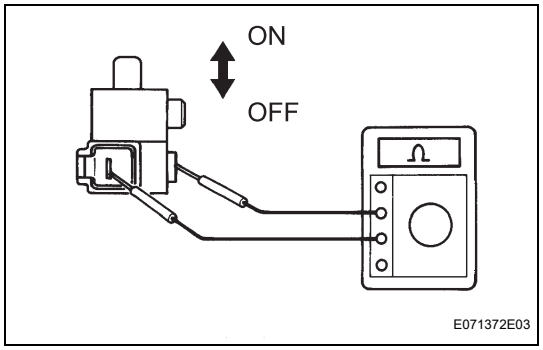
Item	Measurement Item/ Display (Range)	Normal Condition	Diagnostic Note
PARKING BRAKE SW	Parking brake SW signal / ON or OFF	ON: Parking brake switch is ON OFF: Parking brake switch is OFF	-

OK:
Normal conditions listed above are displayed.

OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

2 INSPECT PARKING BRAKE SWITCH ASSEMBLY



(a) Remove the parking brake switch assembly.
(b) Measure the resistance according to the value(s) in the table below.

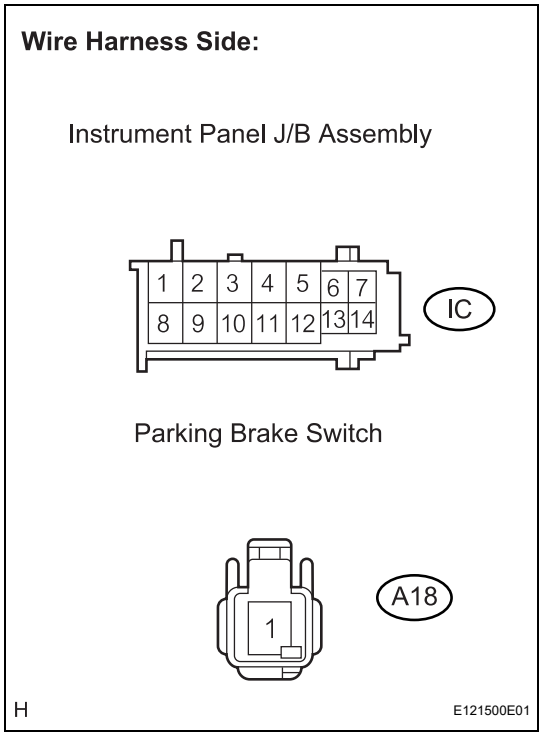
Standard resistance

Tester Connection	Condition	Specified Condition
1 - Switch body	Shaft is pushed in	10 kΩ or higher
1 - Switch body	Shaft is not pushed in	Below 1 Ω

NG → **REPLACE PARKING BRAKE SWITCH ASSEMBLY**

OK

3 CHECK HARNESS AND CONNECTOR (SWITCH - INSTRUMENT PANEL J/B ASSEMBLY)



(a) Disconnect the IC instrument panel J/B assembly connector.
(b) Disconnect the A18 switch connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
IC-14 - A18-1	Always	Below 1 Ω
IC-14 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

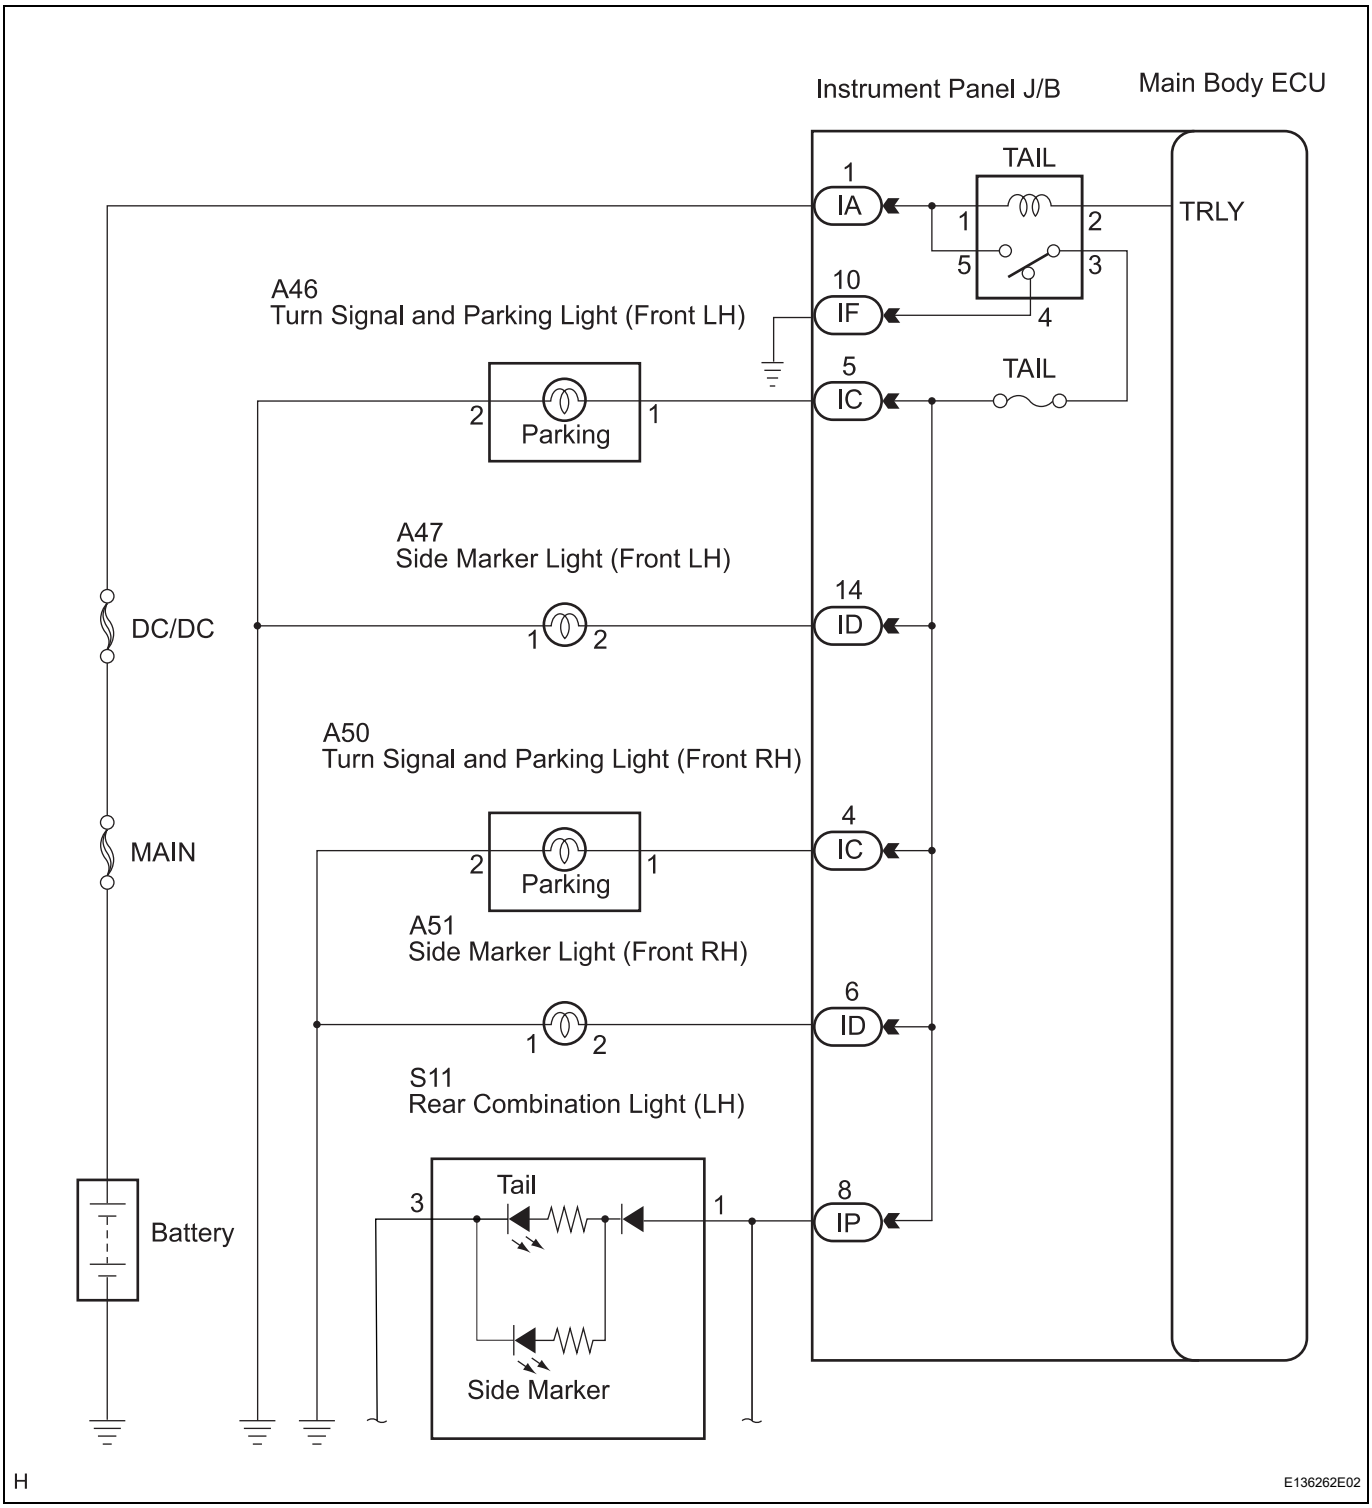
LI

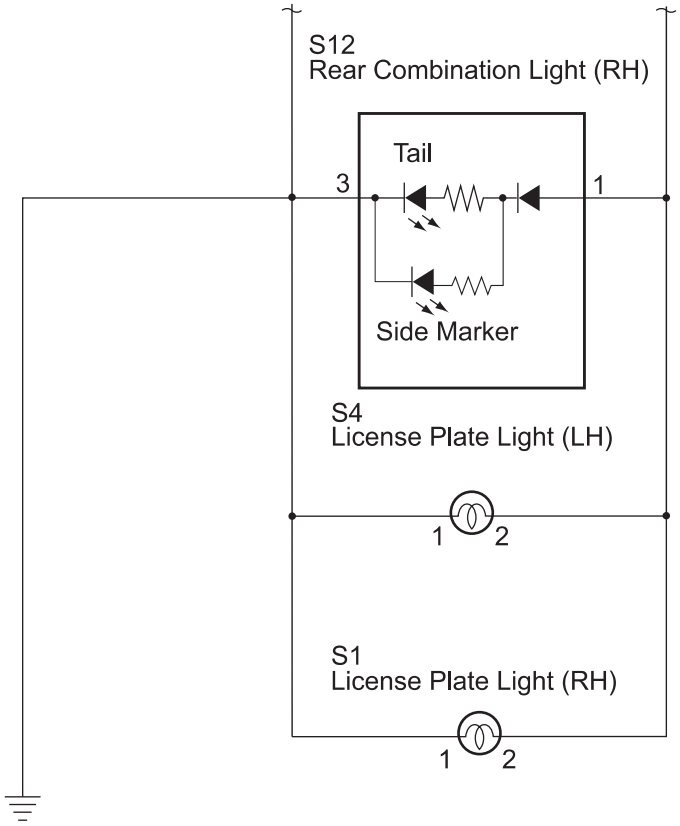
Taillight Relay Circuit

DESCRIPTION

The main body ECU receives a light control switch TAIL signal from the headlight dimmer switch assembly, and turns the taillight relay on.

WIRING DIAGRAM





H

E136263E01

INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST BY INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the ACTIVE TEST and then check that the relay operates.

MAIN BODY (MAIN BODY ECU):

Item	Test Details	Diagnostic Note
TAIL LIGHT	Taillight relay ON / OFF	-

OK:

The taillight relay operates. (Taillights illuminate.)

OK	PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

NG

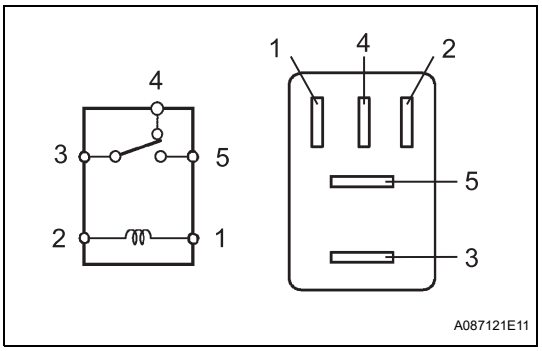
2	INSPECT FUSE (TAIL)

(a) Remove the TAIL fuse from the instrument panel J/B assembly.
(b) Measure the resistance of the fuse.
Standard resistance:
Below 1 Ω

NG → **REPLACE FUSE**

OK

3	INSPECT TAILLIGHT RELAY



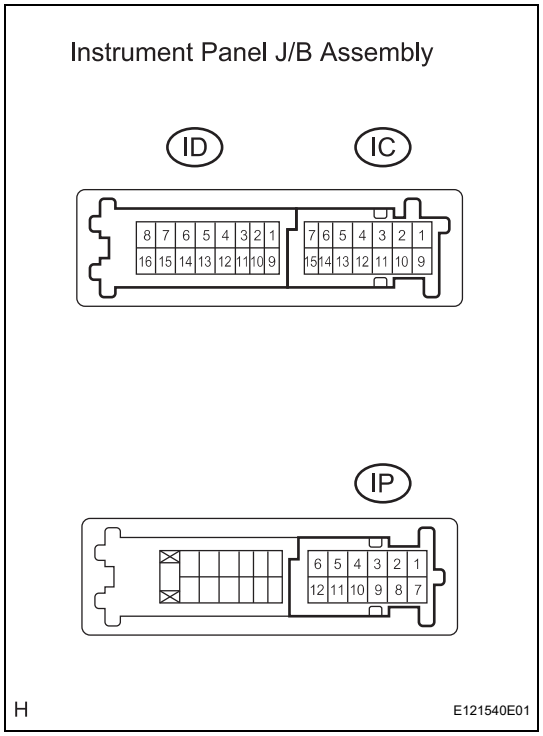
(a) Remove the taillight relay from the instrument panel J/B assembly.
(b) Measure the resistance according to the value(s) in the table below.
Standard resistance

Tester Connection	Specified Condition
3 - 5	10 kΩ or higher
	Below 1 Ω (When battery voltage is applied to terminals 1 and 2)
3 - 4	Below 1 Ω
	10 kΩ or higher (When battery voltage is applied to terminals 1 and 2)

NG → **REPLACE TAILLIGHT RELAY**

OK

4 INSPECT INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY



(a) Measure the voltage according to the value(s) in the table below.

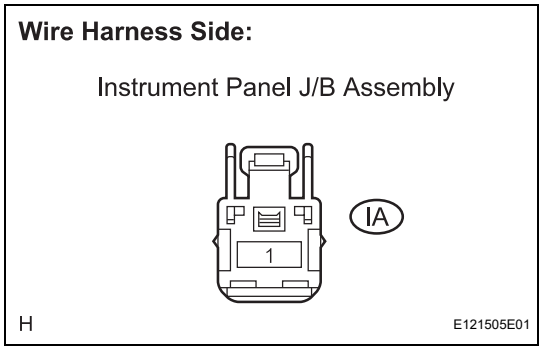
Standard voltage

Tester Connection	Condition	Specified Condition
IC-4 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
IC-5 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
ID-6 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
ID-14 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V
IP-8 - Body ground	Light control switch OFF → TAIL	Below 1 V → 10 to 14 V

OK → **REPAIR OR REPLACE HARNESS OR CONNECTOR (INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY - BODY GROUND)**

NG

5 CHECK HARNESS AND CONNECTOR (BATTERY - INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY)



(a) Disconnect the IA instrument panel J/B assembly connector.

(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Tester Connection	Condition	Specified Condition
IA-1 - Body ground	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

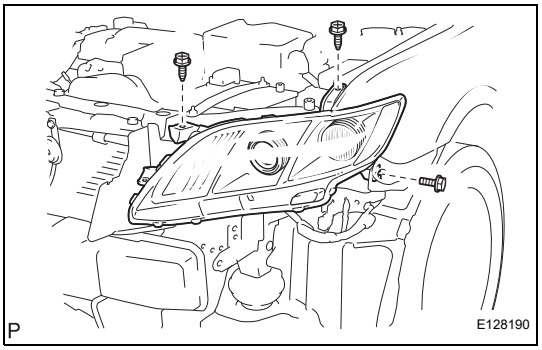
REPLACE INSTRUMENT PANEL JUNCTION BLOCK ASSEMBLY

LI

REMOVAL

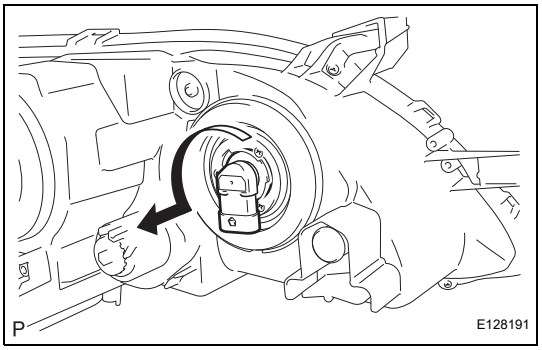
1. **REMOVE FRONT BUMPER ASSEMBLY (See page ET-3)**

2. **REMOVE HEADLIGHT ASSEMBLY**
   (a) Remove the bolt and 2 screws.
   (b) Disconnect the connectors and remove the headlight assembly.

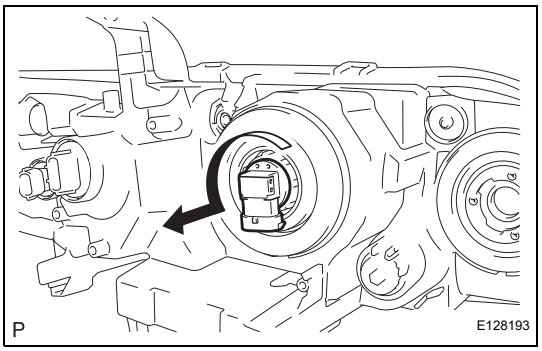


DISASSEMBLY

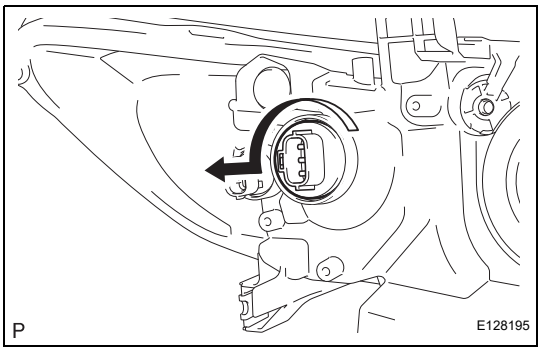
1. **REMOVE NO. 1 HEADLIGHT BULB**
   (a) Remove the No. 1 headlight bulb as shown in the illustration.

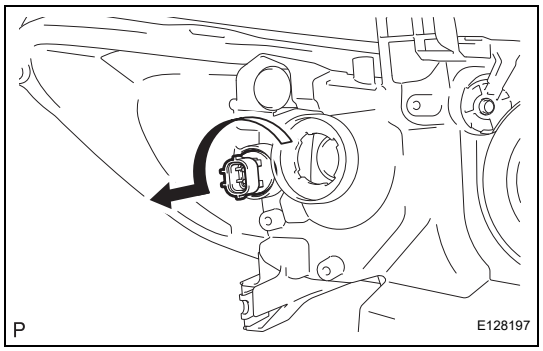


2. **REMOVE NO. 2 HEADLIGHT BULB**
   (a) Remove the No. 2 headlight bulb as shown in the illustration.



3. **REMOVE FRONT TURN SIGNAL LIGHT BULB**
   (a) Turn the front turn signal light bulb and the front turn signal light socket in the direction indicated by the arrow and remove them as a unit.
   (b) Remove the front turn signal light bulb from the front turn signal light socket.





4. REMOVE FRONT SIDE MARKER LIGHT BULB

(a) Turn the front side marker light bulb and the front side marker light socket in the direction indicated by the arrow and remove them as a unit.

(b) Remove the front side marker light bulb from the front side marker light socket.

LI

ADJUSTMENT

HINT:
It is possible that a bulb is incorrectly installed, affecting headlight aim. Bulb installation should be considered prior to performing the adjustment procedure.

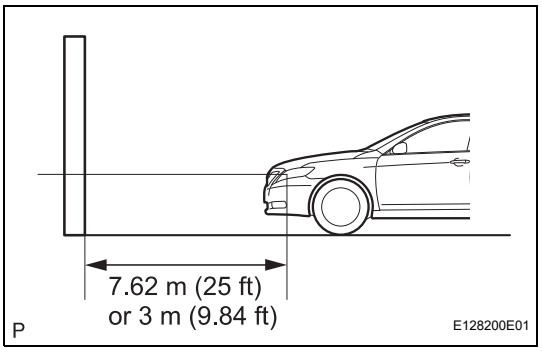
1. VEHICLE PREPARATION FOR HEADLIGHT AIM ADJUSTMENT

(a) Prepare the vehicle according to the following conditions:
- Ensure there is no damage or deformation to the body around the headlights.
- Fill the fuel tank.
- Make sure that the oil is filled to the specified level.
- Make sure that the coolant is filled to the specified level.
- Inflate the tires to the appropriate pressure.
- Unload the trunk and vehicle, ensuring that the spare tire, tools, and jack are in their original positions.
- Sit a person of average weight (68 kg, 150 lb) in the driver's seat.

2. PREPARATION FOR HEADLIGHT AIMING (Using a headlight aim test machine)

(a) Adjust the headlight aim in accordance with the headlight aim test machine instructions.

3. PREPARATION FOR HEADLIGHT AIMING (Using a Screen)



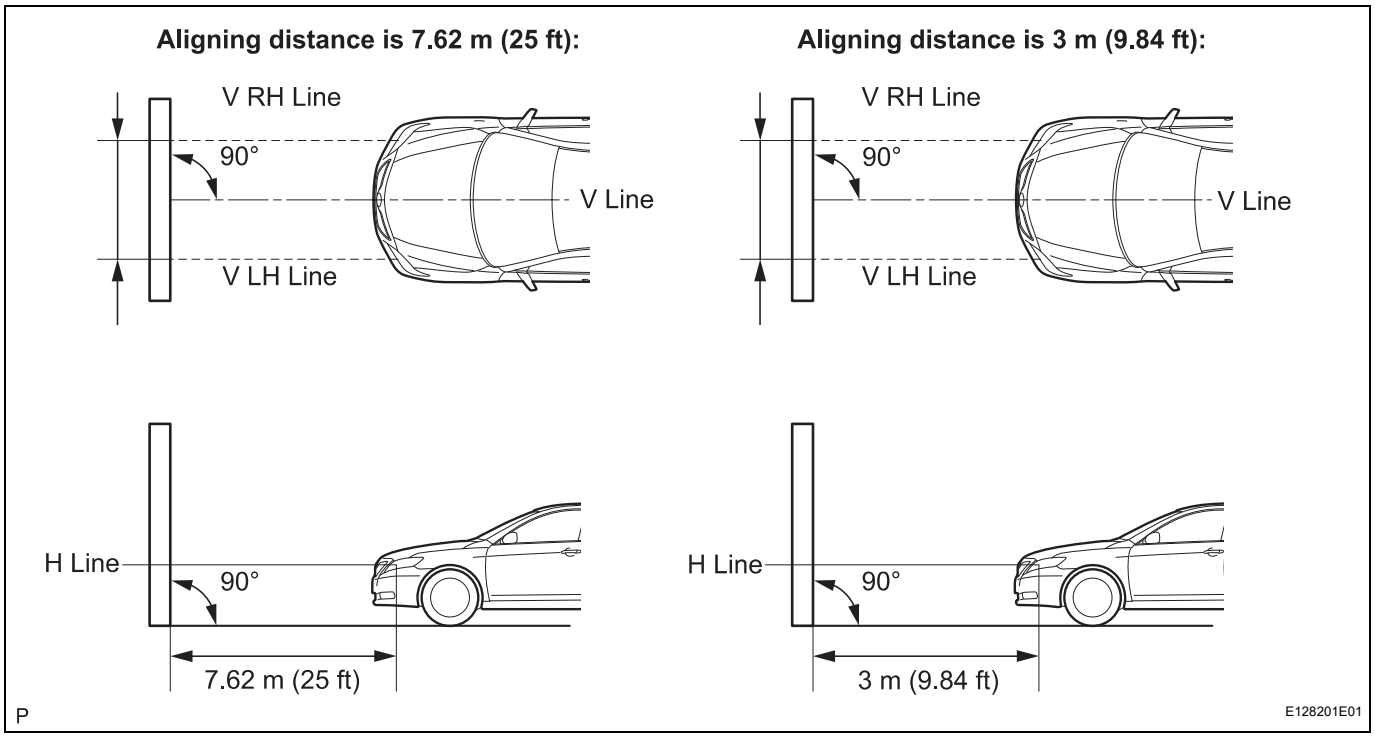
(a) Prepare the vehicle:
- Place the vehicle in a location that is dark enough to clearly observe the cutoff line. The cutoff line is a distinct line, below which light from the headlights can be observed and above which it cannot.
- Place the vehicle at a 90° angle to the wall.
- Create a 7.62 m (25 ft) distance between the vehicle (headlight bulb center) and the wall.
- Make sure that the vehicle is on a level surface.
- Bounce the vehicle up and down to settle the suspension.

NOTICE:
A distance of 7.62 m (25 ft) between the vehicle (headlight bulb center) and the wall is necessary for proper aim adjustment. If sufficient space is not available, secure a distance of exactly 3 m (9.84 ft) to allow for checking and adjustment of headlight aim. (The size of the target zone will change with the distance, so follow the instructions in the illustration.)

(b) Prepare a piece of thick white paper (approximately 2 m (6.6 ft) (height) x 4 m (13.1 ft) (width)) to use as a screen.

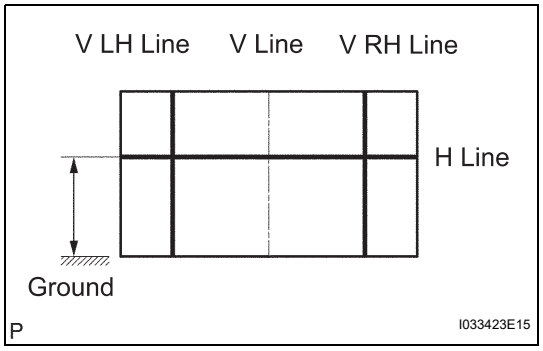
(c) Draw a vertical line down the center of the screen (V line).

(d) Set the screen as shown in the illustration.



HINT:

- Stand the screen perpendicular to the ground.
- Align the V line on the screen with the center of the vehicle.



(e) Draw base lines (H, V LH, and V RH lines) on the screen as shown in the illustration.

HINT:

- The base lines differ for "low-beam inspection" and "high-beam inspection".
- Mark the headlight bulb center marks on the screen. If the center mark cannot be observed on the headlight, use the center of the headlight bulb or the manufacturer's name marked on the headlight as the center mark.

(1) H Line (Headlight height):
Draw a horizontal line across the screen so that it passes through the center marks. The H line should be at the same height as the headlight bulb center marks of the low-beam headlights.

(2) V LH Line, V RH Line (Center mark position of left-hand (LH) and right-hand (RH) headlights):
Draw two vertical lines so that they intersect the H line at each center mark (aligned with the center of the low-beam headlight bulbs).

4. HEADLIGHT AIMING INSPECTION

(a) Cover the headlight or disconnect the connector of the headlight on the opposite side to prevent light from the headlight that is not being inspected from affecting the headlight aiming inspection.

NOTICE:

Do not keep the headlight covered for more than 3 minutes. The headlight lens is made of synthetic resin, which may melt or be damaged due to excessive heat.

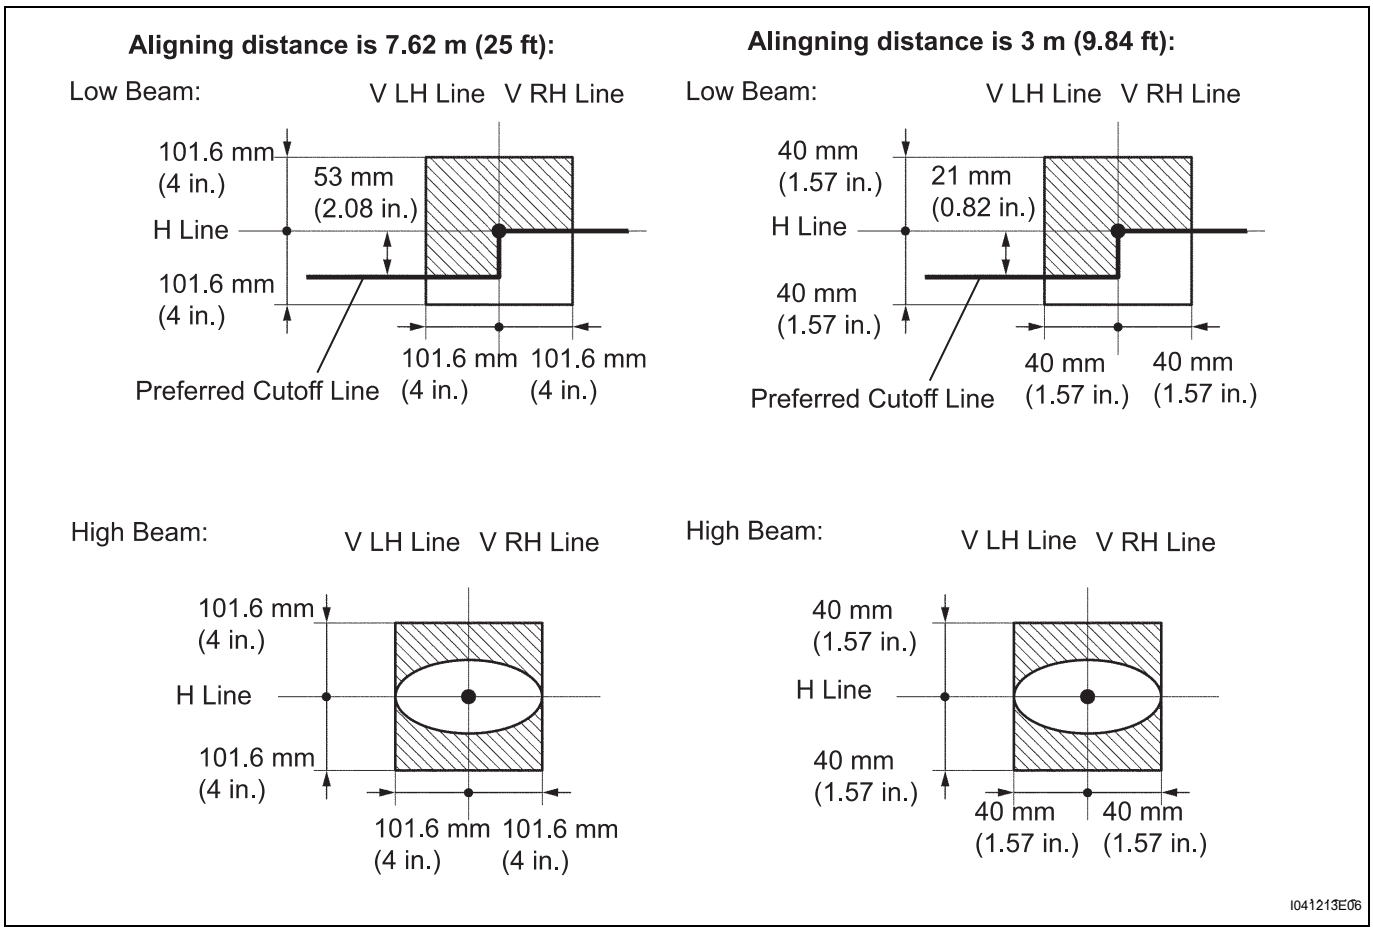
HINT:

When checking the aim of the high-beam, cover the low-beam or disconnect the connector.

(b) Start the engine.

(c) Replacement text:

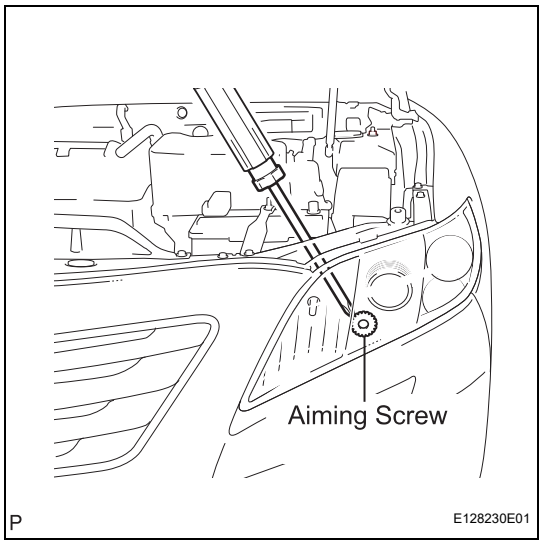
Turn on the headlight and check if the cutoff line matches the preferred cutoff line in the following illustration.



HINT:

- Since the low-beam light and the high-beam light are a unit, if the aim on the low beam is correct, the high beam should also be correct. However, check both beams just to make sure.

- If the alignment distance is 7.62 m (25 ft):
  The cutoff line should be within 101.6 mm (4 in.) above or below the H line as well as 101.6 mm (4 in.) left or right of the V line with low-beam (SAE J599).
- If the alignment distance is 3 m (9.84 ft):
  The low beam cutoff line should be within 40 mm (1.57 in.) above or below the H line as well as 40 mm (1.57 in.) left or right of the V line (SAE J599).
- If the alignment distance is 7.62 m (25 ft):
  The high beam center of intensity should be within 101.6 mm (4 in.) above or below the H line as well as 101.6 mm (4 in.) left or right of the V line (SAE J599).
- If the alignment distance is 3 m (9.84 ft):
  The high beam center of intensity should be within 40 mm (1.57 in.) above or below the H line as well as 40 mm (1.57 in.) left or right of the V line (SAE J599).
- If the alignment distance is 7.62 m (25 ft):
  The low beam cutoff line should be 53 mm (2.08 in.) below the H line (preferred cutoff line target).
- If the alignment distance is 3 m (9.84 ft):
  The low beam cutoff line should be 21 mm (0.82 in.) below the H line (preferred cutoff line target).



5. HEADLIGHT AIMING ADJUSTMENT

(a) Adjust the aim vertically:
Adjust the headlight aim into the specified range by turning aiming screw with a screwdriver.

NOTICE:

The final turn of the aiming screw should be made in the clockwise direction. If the screw is tightened excessively, loosen it and then retighten it, so that the final turn of the screw is in the clockwise direction.

HINT:

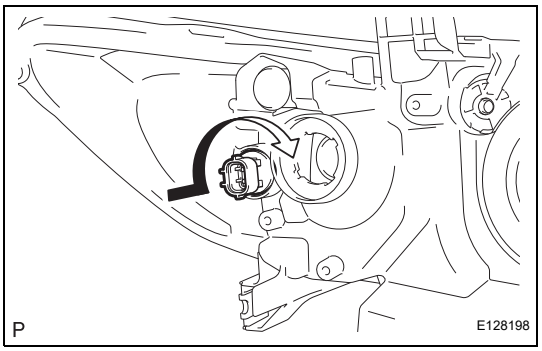
- Since the low-beam light and high-beam light are a unit, if the aim on the low beam is correct, the high beam should also be correct. If it is not possible to correctly adjust headlight aim, check bulb, headlight unit, and headlight unit reflector installation.
- The headlight aim moves up when turning the aiming screw clockwise, and moves down when turning the aiming screw counterclockwise.

REASSEMBLY

1. INSTALL FRONT SIDE MARKER LIGHT BULB

(a) Install the front side marker light bulb to the front side marker light socket.

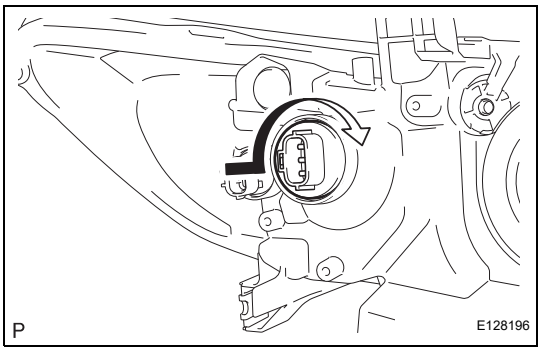
(b) Turn the front side marker light bulb and front side marker light socket in the direction indicated by the arrow and install them as a unit.



2. INSTALL FRONT TURN SIGNAL LIGHT BULB

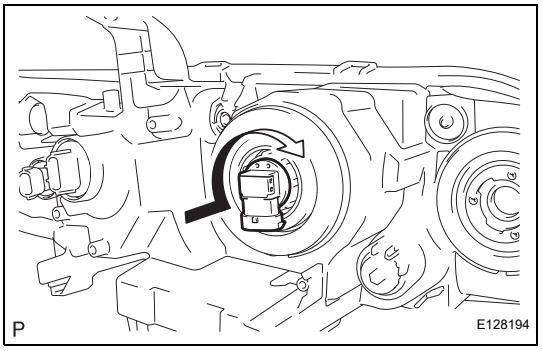
(a) Install the front turn signal light bulb to the front turn signal light socket.

(b) Turn the front turn signal light bulb and front turn signal light socket in the direction indicated by the arrow and install them as a unit.



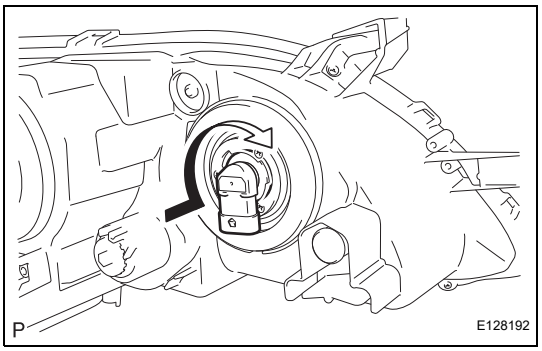
3. INSTALL NO. 2 HEADLIGHT BULB

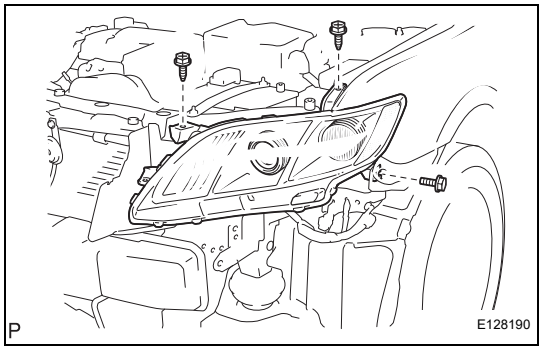
(a) Install the No. 2 headlight bulb as shown in the illustration.



4. INSTALL NO. 1 HEADLIGHT BULB

(a) Install the No. 1 headlight bulb as shown in the illustration.





INSTALLATION

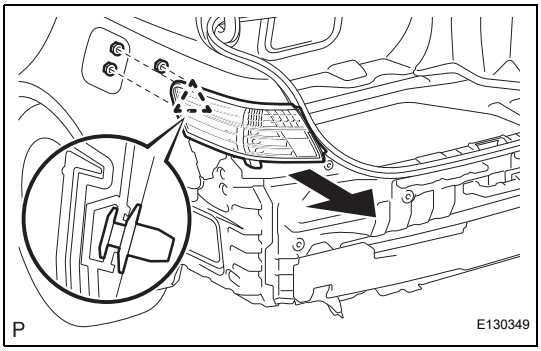
1. **INSTALL HEADLIGHT ASSEMBLY**
   (a) Connect the connectors.
   (b) Install the headlight assembly with the bolt and 2 screws.
   Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)
2. **INSTALL FRONT BUMPER ASSEMBLY (See page ET-9)**
3. **VEHICLE PREPARATION FOR HEADLIGHT AIM ADJUSTMENT (See page LI-60)**
4. **PREPARATION FOR HEADLIGHT AIMING (Using a headlight aim test machine) (See page LI-61)**
5. **PREPARATION FOR HEADLIGHT AIMING (Using a screen) (See page LI-61)**
6. **HEADLIGHT AIMING INSPECTION (See page LI-63)**
7. **HEADLIGHT AIMING ADJUSTMENT (See page LI-64)**

LI

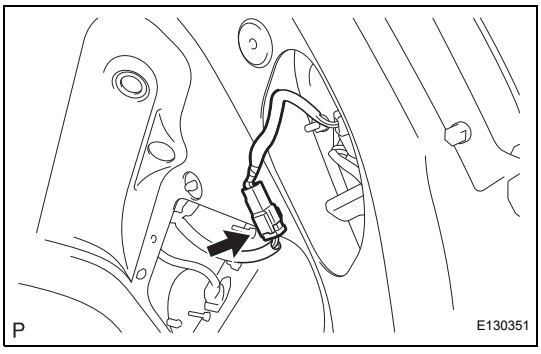
REMOVAL

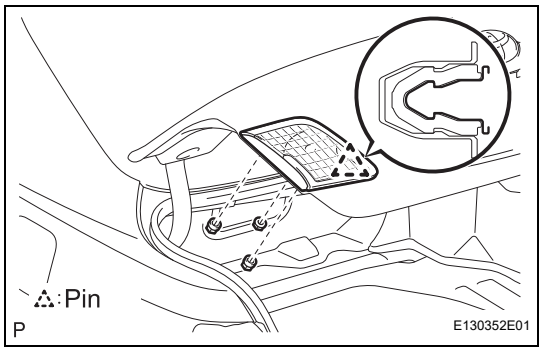
1. **REMOVE REAR BUMPER ASSEMBLY (See page ET-12)**
2. **REMOVE LUGGAGE COMPARTMENT FLOOR MAT**
3. **REMOVE SPARE WHEEL COVER CLAMP**
4. **REMOVE SPARE WHEEL COVER ASSEMBLY**
5. **REMOVE NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-97)**
6. **REMOVE REAR FLOOR FINISH PLATE (See page ED-97)**
7. **REMOVE REAR COMBINATION LIGHT ASSEMBLY**
   (a) Disconnect the connector and clamp.

   (b) Remove the 3 nuts.
   (c) Disengage the clip and remove the rear combination light assembly.



8. **REMOVE LUGGAGE COMPARTMENT DOOR COVER (See page ET-50)**
9. **REMOVE REAR LIGHT ASSEMBLY**
   (a) Disconnect the connector.



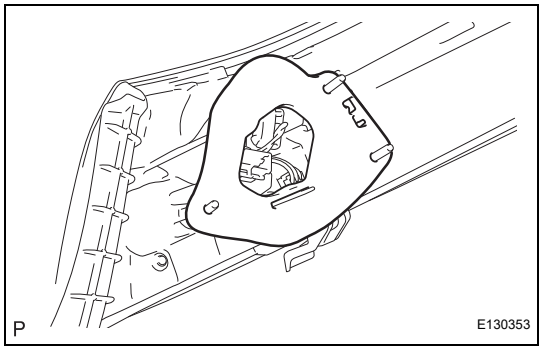


(b) Remove the 3 nuts.
(c) Disengage the pin and remove the rear light assembly.

DISASSEMBLY

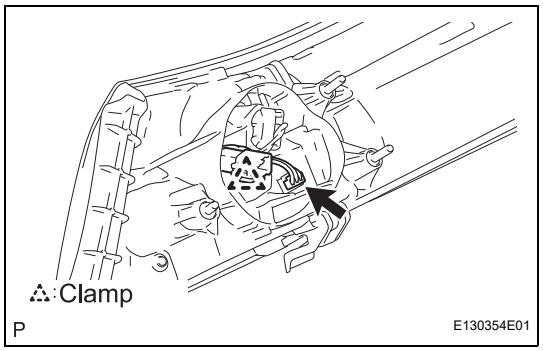
1. REMOVE REAR COMBINATION LIGHT GASKET

(a) Remove the rear combination light gasket.
NOTICE:
- **Be sure to remove the all traces of the old gasket from the body.**
- **Do not reuse the removed gasket. Be sure to install a new rear combination light gasket to prevent water ingress.**

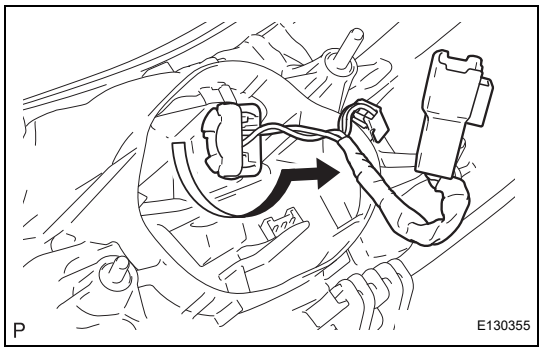


2. REMOVE REAR TURN SIGNAL LIGHT BULB

(a) Disconnect the connector and clamp.

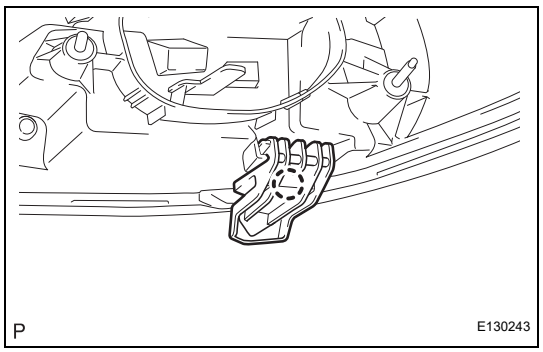


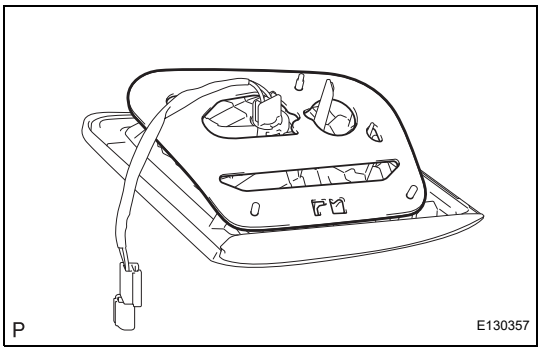
(b) Turn the rear turn signal light bulb and the rear combination light socket and wire in the direction indicated by the arrow and disconnect them as a unit.
(c) Remove the rear turn signal light bulb from the rear combination light socket and wire.



3. REMOVE REAR BUMPER RETAINER UPPER

(a) Disengage the claw and remove the rear bumper retainer upper.



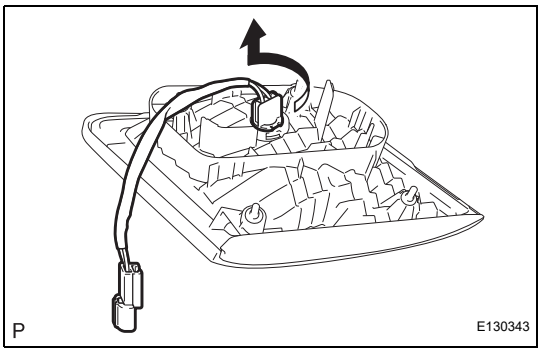


4. REMOVE REAR LIGHT GASKET

(a) Remove the rear light gasket.

NOTICE:

- **Be sure to remove all traces of the old gasket from the body.**
- **Do not reuse the removed gasket. Be sure to install a new rear light gasket to prevent water ingress.**



5. REMOVE BACK UP LIGHT BULB

(a) Turn the back up light bulb and the rear light socket and wire in the direction indicated by the arrow and remove them as a unit.

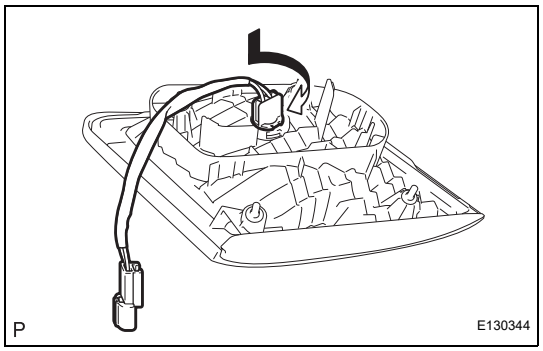
(b) Remove the back up light bulb from the rear light socket and wire.

REASSEMBLY

1. INSTALL BACK UP LIGHT BULB

(a) Install the back up light bulb to the rear light socket and wire.

(b) Turn the back up light bulb and rear light socket and wire in the direction indicated by the arrow and install them as a unit.

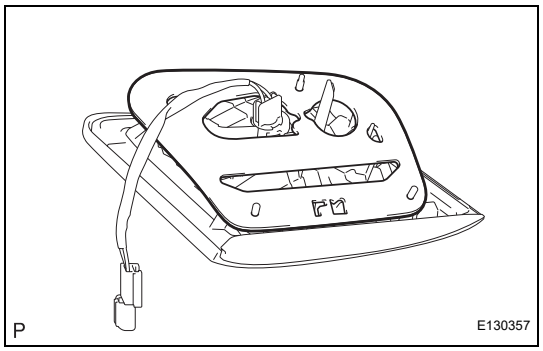


2. INSTALL REAR LIGHT GASKET

(a) Install a new rear light gasket.

NOTICE:

- **Be sure to remove all traces of the old gasket from the body.**
- **Do not reuse the removed gasket. Be sure to install a new rear light gasket to prevent water ingress.**

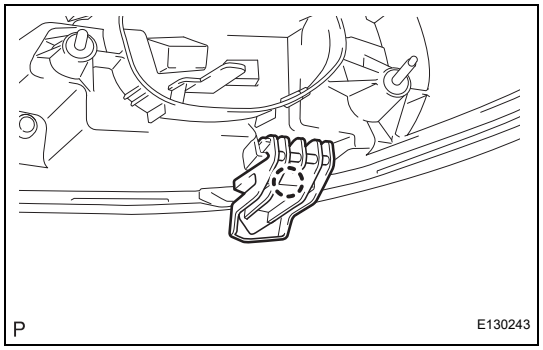


3. INSTALL REAR BUMPER RETAINER UPPER

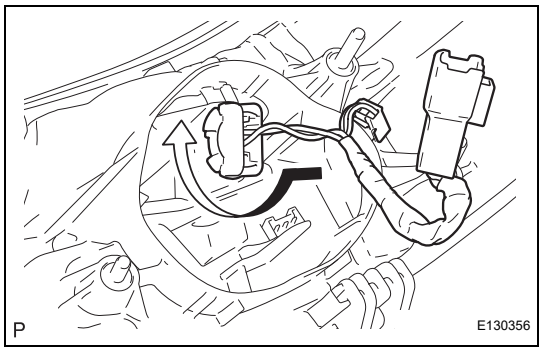
(a) Engage the claw and install the rear bumper retainer upper.

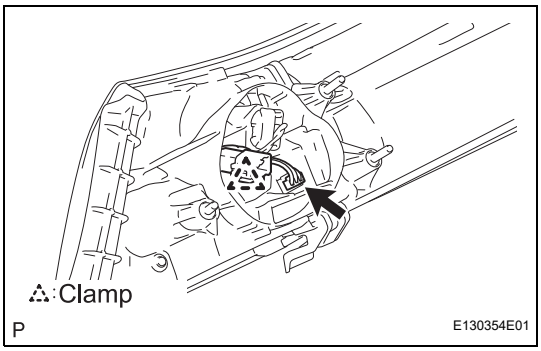
4. INSTALL REAR TURN SIGNAL LIGHT BULB

(a) Install the rear turn signal light bulb to the rear combination light socket and wire.



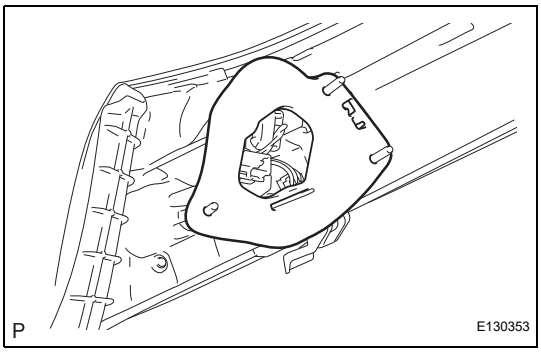
(b) Turn the rear turn signal light bulb and rear combination light socket and wire in the direction indicated by the arrow and install them as a unit.





(c) Connect the connector and clamp.

LI

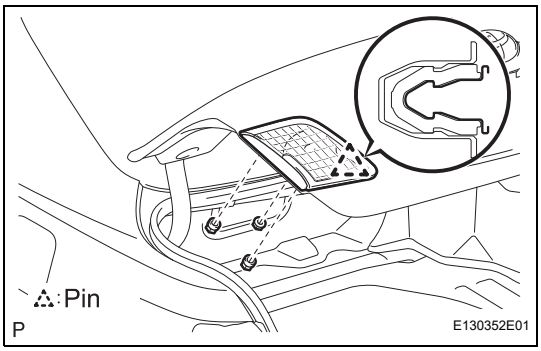


5. INSTALL REAR COMBINATION LIGHT GASKET

(a) Install a new rear combination light gasket.

NOTICE:

- **Be sure to remove all traces of the old gasket from the body.**
- **Do not reuse the removed gasket. Be sure to install a new rear combination light gasket to prevent water ingress.**



INSTALLATION

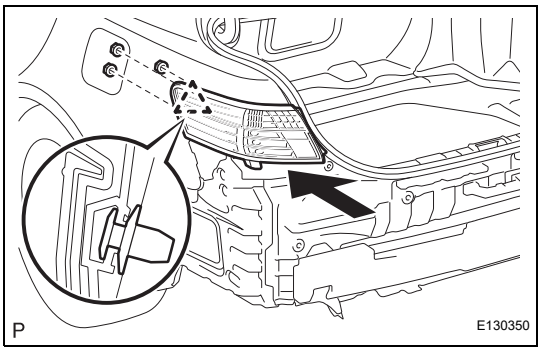
1. INSTALL REAR LIGHT ASSEMBLY

(a) Engage the pin and install the rear light assembly.

(b) Install the 3 nuts.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)

2. INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-53)

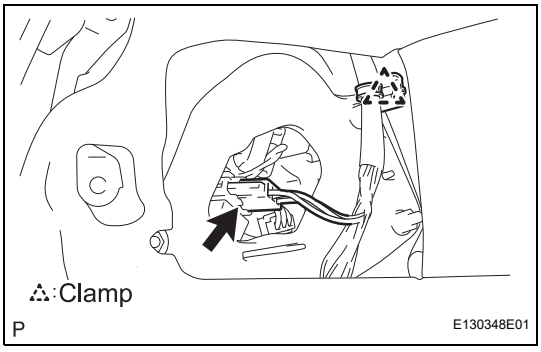


3. INSTALL REAR COMBINATION LIGHT ASSEMBLY

(a) Engage the clip and install the rear combination light assembly.

(b) Install the 3 nuts.

Torque: 5.4 N*m (55 kgf*cm, 48 in.*lbf)



(c) Connect the connector and clamp.

4. INSTALL REAR FLOOR FINISH PLATE (See page ED-103)

5. INSTALL NO. 1 LUGGAGE COMPARTMENT TRIM HOOK (See page ED-103)

6. INSTALL SPARE WHEEL COVER ASSEMBLY

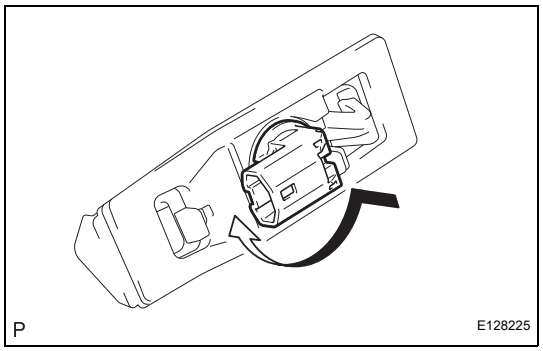
7. INSTALL SPARE WHEEL COVER CLAMP

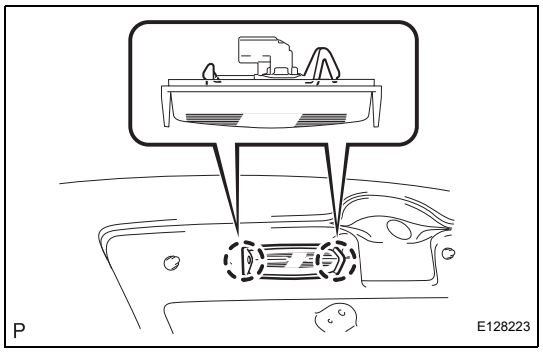
8. INSTALL LUGGAGE COMPARTMENT FLOOR MAT

9. **INSTALL REAR BUMPER ASSEMBLY (See page ET-16)**

REASSEMBLY

1. **INSTALL LICENSE PLATE LIGHT BULB**
   (a) Install the license plate light bulb to the license plate light socket.
   (b) Turn the license plate light bulb and the license plate light socket in the direction indicated by the arrow and install them as a unit.



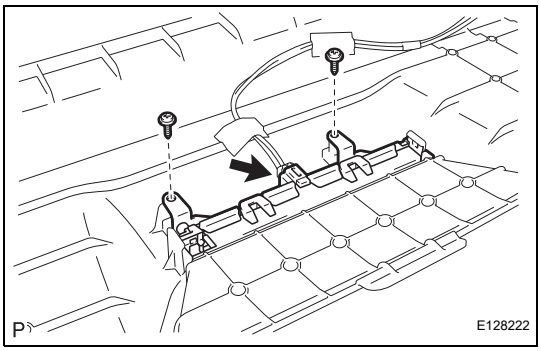


INSTALLATION

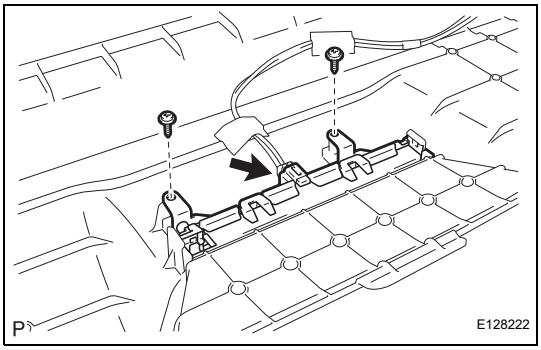
1. **INSTALL LICENSE PLATE LIGHT ASSEMBLY**
   (a) Engage the 2 claws to install the license plate light assembly.
   (b) Connect the connector.
2. **INSTALL LUGGAGE COMPARTMENT DOOR OUTSIDE GARNISH (See page ET-52)**
3. **INSTALL LUGGAGE COMPARTMENT DOOR LOCK CYLINDER ASSEMBLY (See page ED-87)**
4. **INSTALL LUGGAGE DOOR OPENING SWITCH ASSEMBLY (See page DL-193)**
5. **INSTALL LUGGAGE COMPARTMENT DOOR COVER (See page ET-53)**

REMOVAL

1. REMOVE REAR SEAT CUSHION ASSEMBLY (See page SE-44)
2. REMOVE REAR SEAT HEADREST ASSEMBLY
3. REMOVE REAR CENTER SEAT HEADREST ASSEMBLY
4. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-44)
5. REMOVE SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-44)
6. REMOVE REAR SIDE SEATBACK ASSEMBLY LH (See page SE-45)
7. REMOVE REAR SIDE SEATBACK ASSEMBLY RH (See page SE-45)
8. REMOVE REAR DOOR SCUFF PLATE LH (See page IR-13)
9. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH
10. REMOVE REAR DOOR SCUFF PLATE RH (See page IR-13)
11. DISCONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH
12. REMOVE CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-51)
13. DISCONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-33)
14. REMOVE ROOF SIDE INNER GARNISH LH (See page IR-15)
15. REMOVE ROOF SIDE INNER GARNISH RH (See page IR-15)
16. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-40)
17. DISCONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-41)
18. REMOVE REAR SEAT SHOULDER BELT COVER (See page SB-33)
19. REMOVE REAR SEAT SHOULDER BELT HOLE COVER (See page SB-33)
20. REMOVE PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-33)



21. **REMOVE CENTER STOP LIGHT SET**
    (a) Disconnect the connector.
    (b) Remove the 2 screws and the center stop light set.



INSTALLATION

1. **INSTALL CENTER STOP LIGHT SET**
    (a) Connect the connector.
    (b) Install the center stop light set with the 2 screws.
    Torque: 1.6 N*m (16 kgf*cm, 14 in.*lbf)
2. **INSTALL PACKAGE TRAY TRIM PANEL ASSEMBLY (See page SB-34)**
3. **INSTALL REAR SEAT SHOULDER BELT HOLE COVER (See page SB-35)**
4. **INSTALL REAR SEAT SHOULDER BELT COVER (See page SB-35)**
5. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for LH Side) (See page SB-42)**
6. **CONNECT REAR SEAT OUTER BELT ASSEMBLY (for RH Side) (See page SB-42)**
7. **INSTALL ROOF SIDE INNER GARNISH LH (See page IR-39)**
8. **INSTALL ROOF SIDE INNER GARNISH RH (See page IR-39)**
9. **CONNECT REAR SEAT INNER WITH CENTER BELT ASSEMBLY LH (See page SB-35)**
10. **INSTALL CHILD RESTRAINT SEAT ANCHOR BRACKET SUB-ASSEMBLY LH (See page SB-51)**
11. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP LH**
12. **INSTALL REAR DOOR SCUFF PLATE LH (See page IR-41)**
13. **CONNECT REAR DOOR OPENING TRIM WEATHERSTRIP RH**
14. **INSTALL REAR DOOR SCUFF PLATE RH (See page IR-43)**
15. **INSTALL REAR SIDE SEATBACK ASSEMBLY LH (See page SE-54)**
16. **INSTALL REAR SIDE SEATBACK ASSEMBLY RH**
17. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY LH (See page SE-54)**

18. **INSTALL SEPARATE TYPE REAR SEATBACK ASSEMBLY RH (See page SE-54)**
19. **INSTALL REAR CENTER SEAT HEADREST ASSEMBLY**
20. **INSTALL REAR SEAT HEADREST ASSEMBLY**
21. **INSTALL REAR SEAT CUSHION ASSEMBLY (See page SE-55)**

INSTALLATION

1. **INSTALL ROOF CONSOLE BOX ASSEMBLY (See page IR-38)**

INSTALLATION

1. **INSTALL NO. 1 ROOM LIGHT ASSEMBLY (w/o Sliding Roof) (See page IR-36)**
2. **INSTALL SPOT LIGHT ASSEMBLY (w/ Sliding Roof) (See page IR-35)**

INSTALLATION

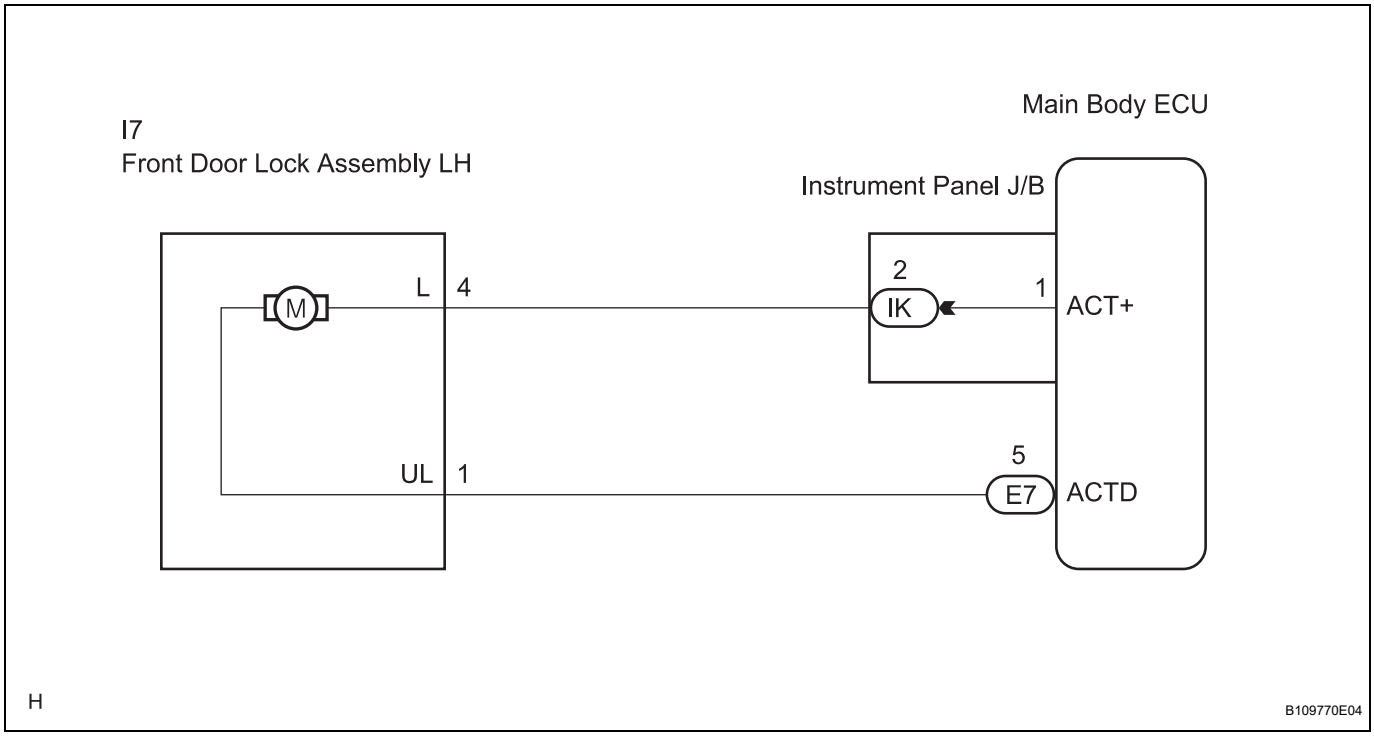
1. **INSTALL DOOR COURTESY LIGHT ASSEMBLY (See page ED-42)**

Driver Side Door Lock Motor Circuit

DESCRIPTION

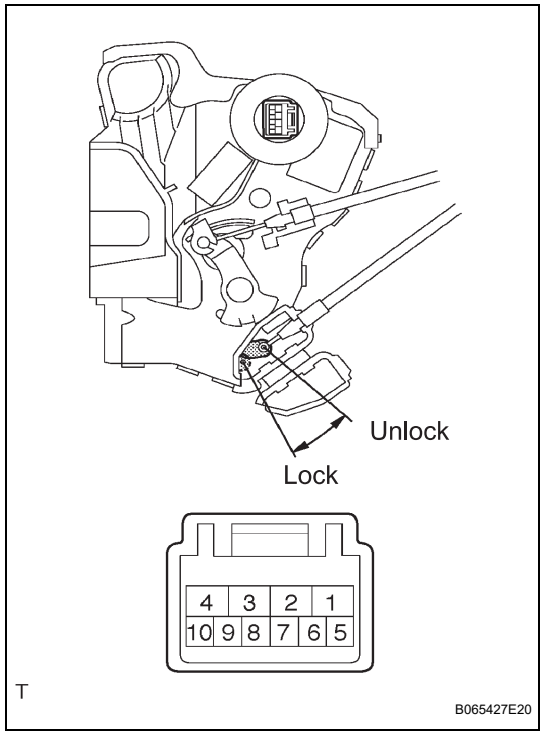
The driver's door lock motor is built into the driver's door lock assembly.
The main body ECU controls the driver's door lock motor to lock/unlock the driver's door. This ECU applies current from terminal ACT+ to terminal ACTD to operate the motor to lock the door. It reverses the direction of the current flow to operate the motor to unlock the door.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR LOCK MOTOR)**



(a) Remove the front door lock assembly LH.
(b) Apply battery voltage and check operation of the door lock motor.
OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock

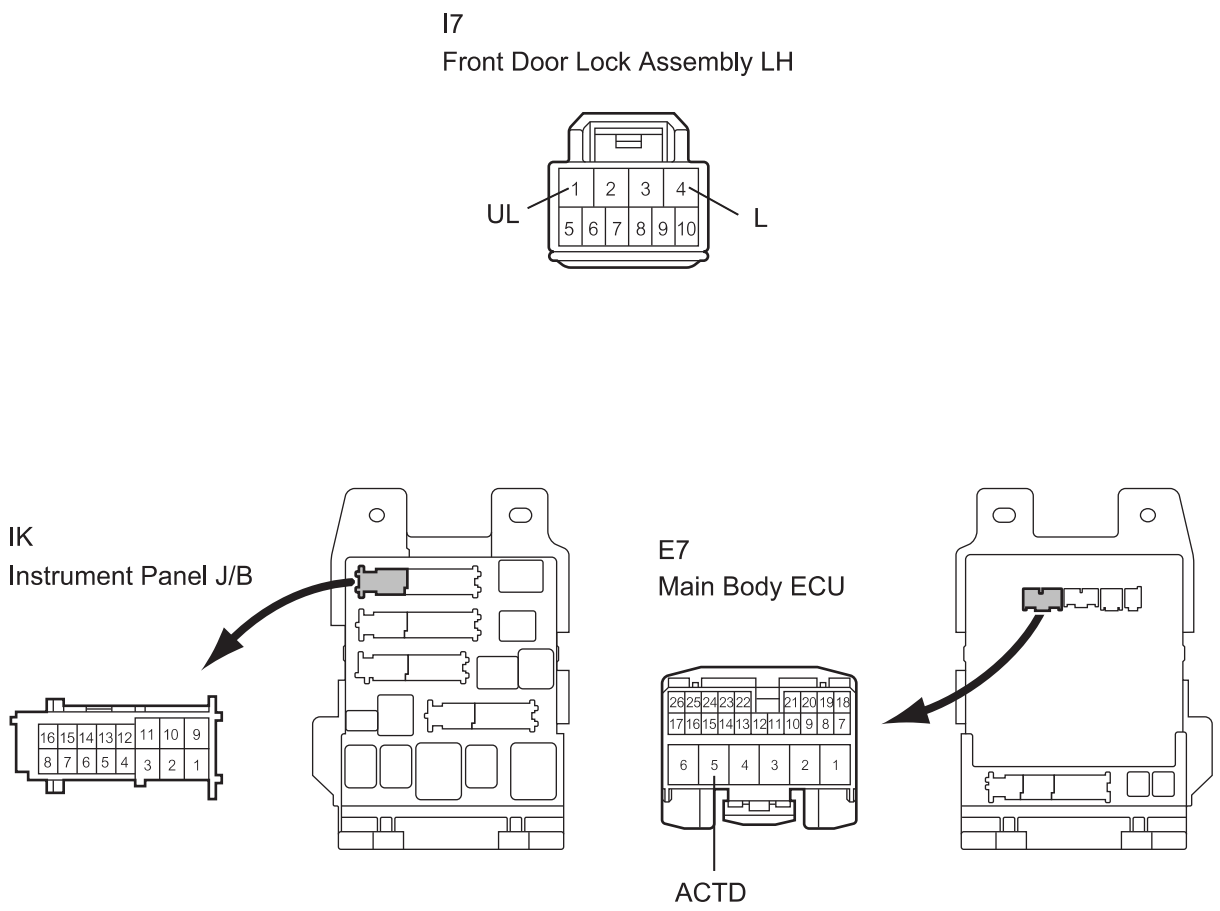
NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

OK

2	**CHECK WIRE HARNESS (FRONT DOOR LOCK - MAIN BODY ECU (INSTRUMENT PANEL J/B))**

(a) Disconnect the front door lock assembly LH connector.

Wire Harness Side:



(b) Disconnect the ECU (instrument panel J/B) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
I7-4 (L) - IK-2	Always	Below 1 Ω
I7-1 (UL) - E7-5 (ACTD)	Always	Below 1 Ω
IK-2 - Body ground	Always	10 kΩ or higher
E7-5 (ACTD) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

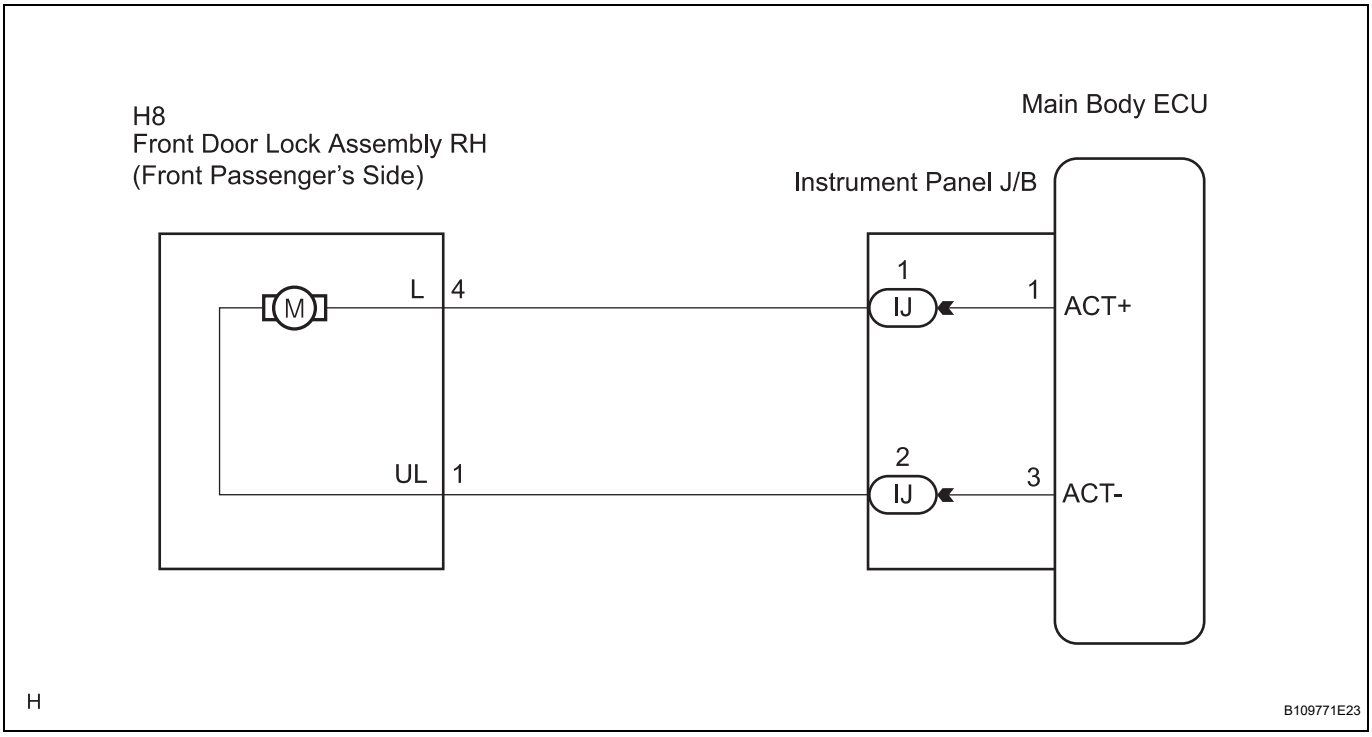
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Front Passenger Side Door Lock Motor Circuit

DESCRIPTION

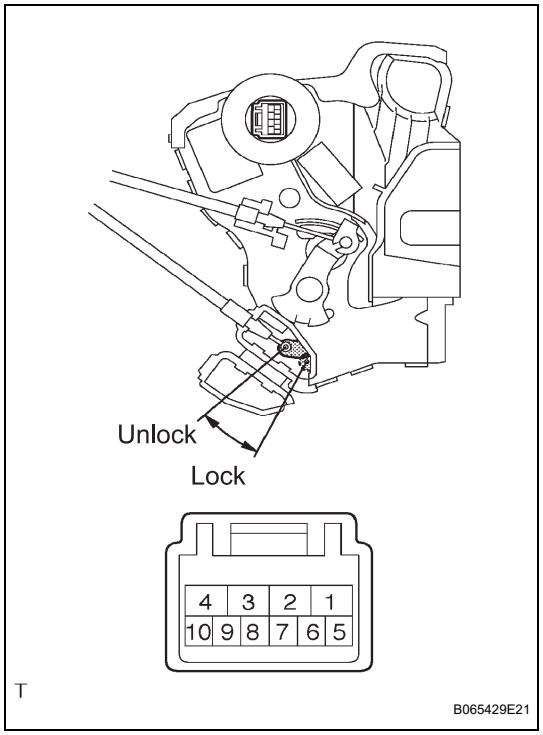
The front passenger door lock motor is built into the front passenger door lock assembly.
The main body ECU controls the front passenger door lock motor to lock/unlock the front passenger door. This ECU applies current from terminal ACT+ to terminal ACT- to operate the motor to lock the door. It reverses the direction of the current flow to operate the motor to unlock the door.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	**INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR LOCK MOTOR)**



(a) Remove the front door lock assembly RH.
(b) Apply battery voltage and check operation of the door lock motor.
OK

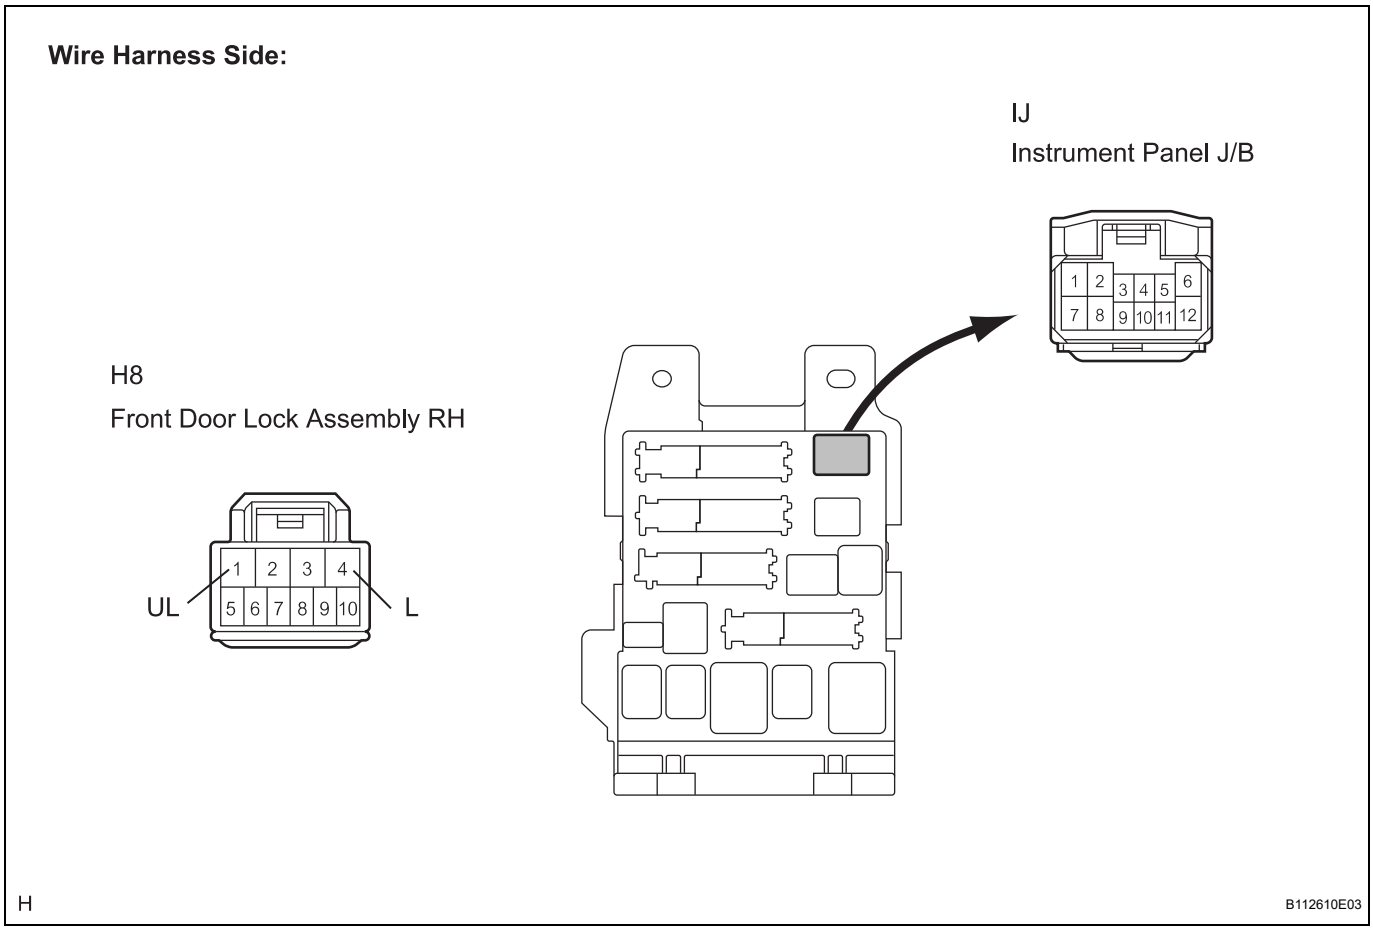
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock

NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

OK

2	**CHECK WIRE HARNESS (FRONT DOOR LOCK - MAIN BODY ECU (INSTRUMENT PANEL J/B))**

(a) Disconnect the front door lock assembly RH connector.



(b) Disconnect the ECU (instrument panel J/B) connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
H8-4 (L) - IJ-1	Always	Below 1 Ω
H8-1 (UL) - IJ-2	Always	Below 1 Ω
IJ-1 - Body ground	Always	10 kΩ or higher
IJ-2 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

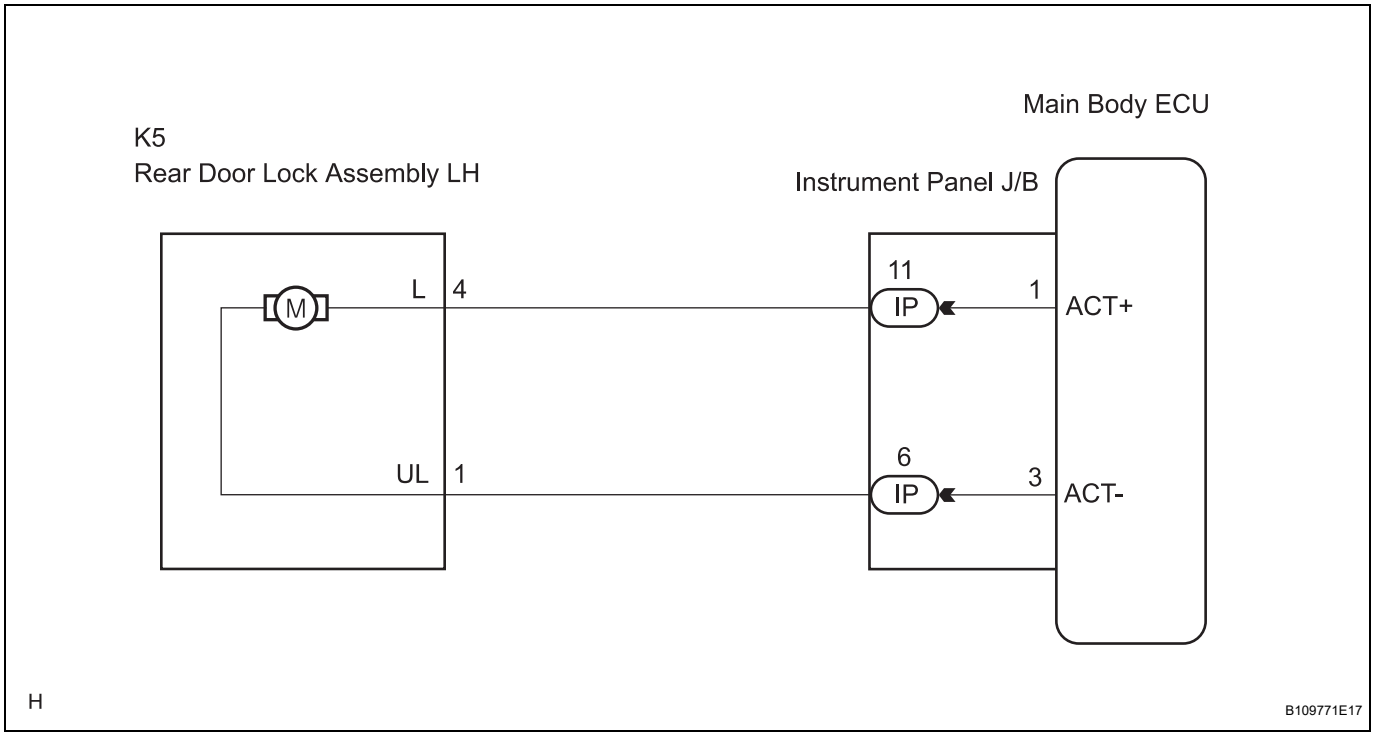
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Rear Door Lock Motor LH Circuit

DESCRIPTION

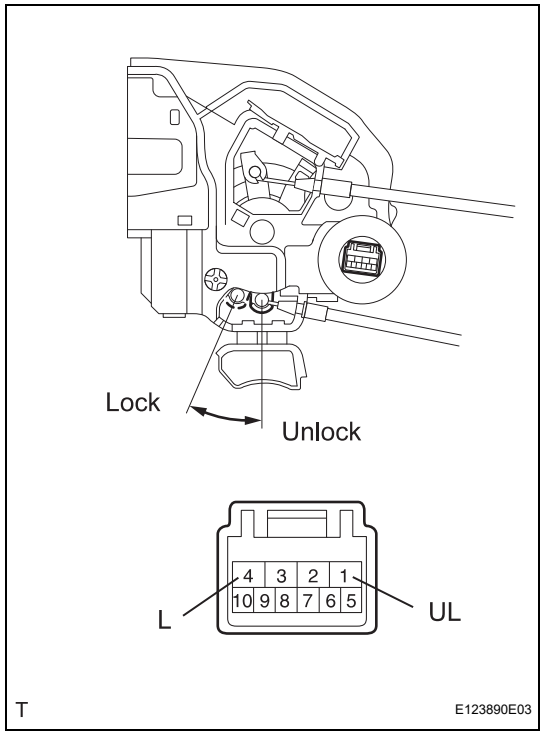
The rear left door lock motor is built into the rear left door lock assembly.
The main body ECU controls the rear left door lock motor to lock/unlock the rear left door. This ECU applies current from terminal ACT+ to terminal ACT- to operate the motor to lock the door. It reverses the direction of the current flow to operate the motor to unlock the door.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT REAR DOOR LOCK ASSEMBLY



(a) Remove the rear door lock assembly LH.
(b) Apply battery voltage and check operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock

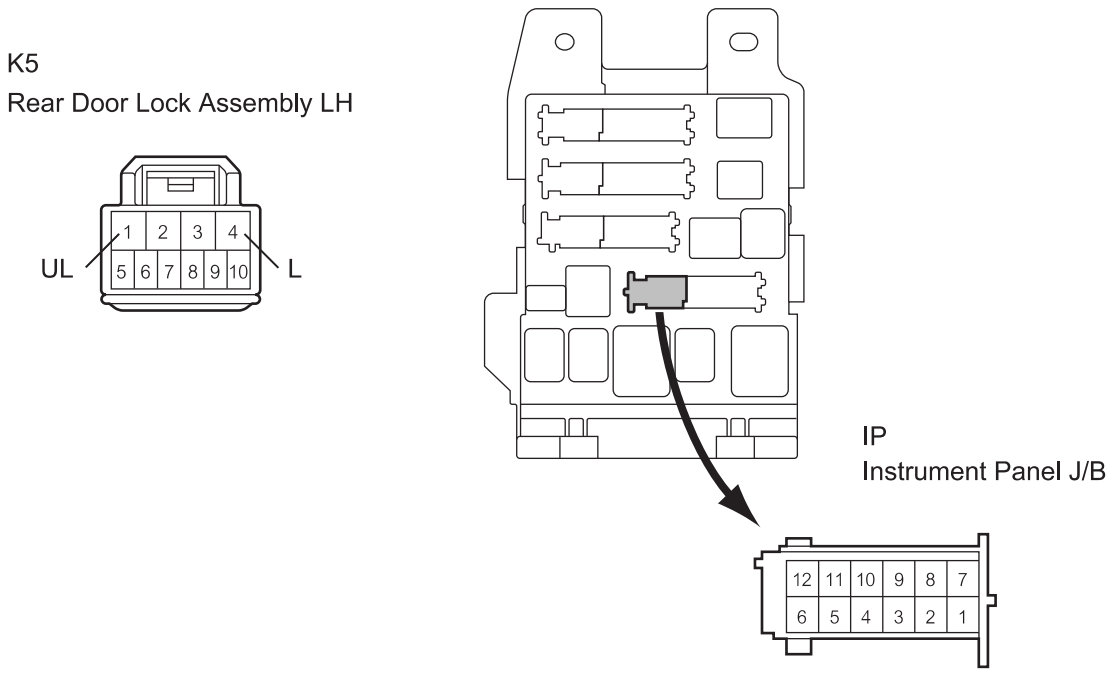
NG → **REPLACE REAR DOOR LOCK ASSEMBLY**

OK

2	CHECK WIRE HARNESS (REAR DOOR LOCK - MAIN BODY ECU (INSTRUMENT PANEL J/B))

(a) Disconnect the rear door lock assembly LH connector.

Wire Harness Side:



(b) Disconnect the ECU (instrument panel J/B) connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
K5-4 (L) - IP-11	Always	Below 1 Ω
K5-1 (UL) - IP-6	Always	Below 1 Ω
IP-11 - Body ground	Always	10 kΩ or higher
IP-6 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

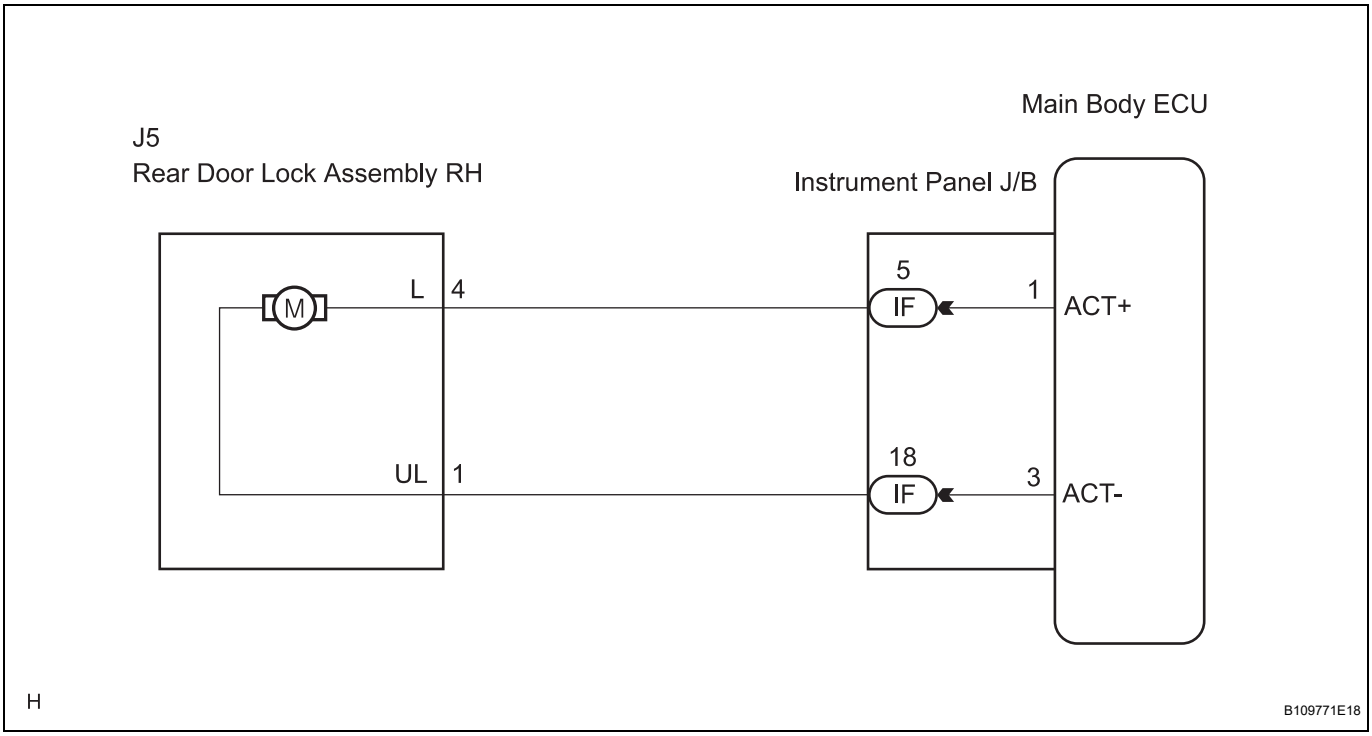
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Rear Door Lock Motor RH Circuit

DESCRIPTION

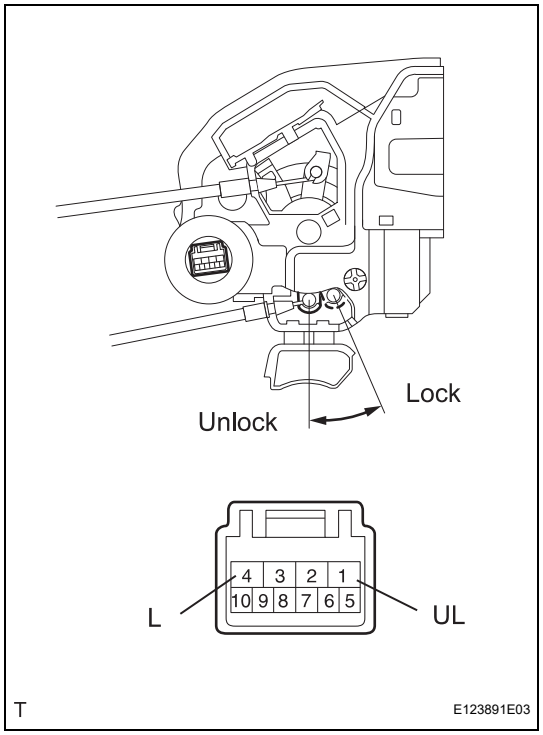
The rear right door lock motor is built into the rear right door lock assembly.
The main body ECU controls the rear right door lock motor to lock/unlock the rear right door. This ECU applies current from terminal ACT+ to terminal ACT- to operate the motor to lock the door. It reverses the direction of the current flow to operate the motor to unlock the door.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT REAR DOOR LOCK ASSEMBLY



(a) Remove the rear door lock assembly RH.
(b) Apply battery voltage and check operation of the door lock motor.
OK

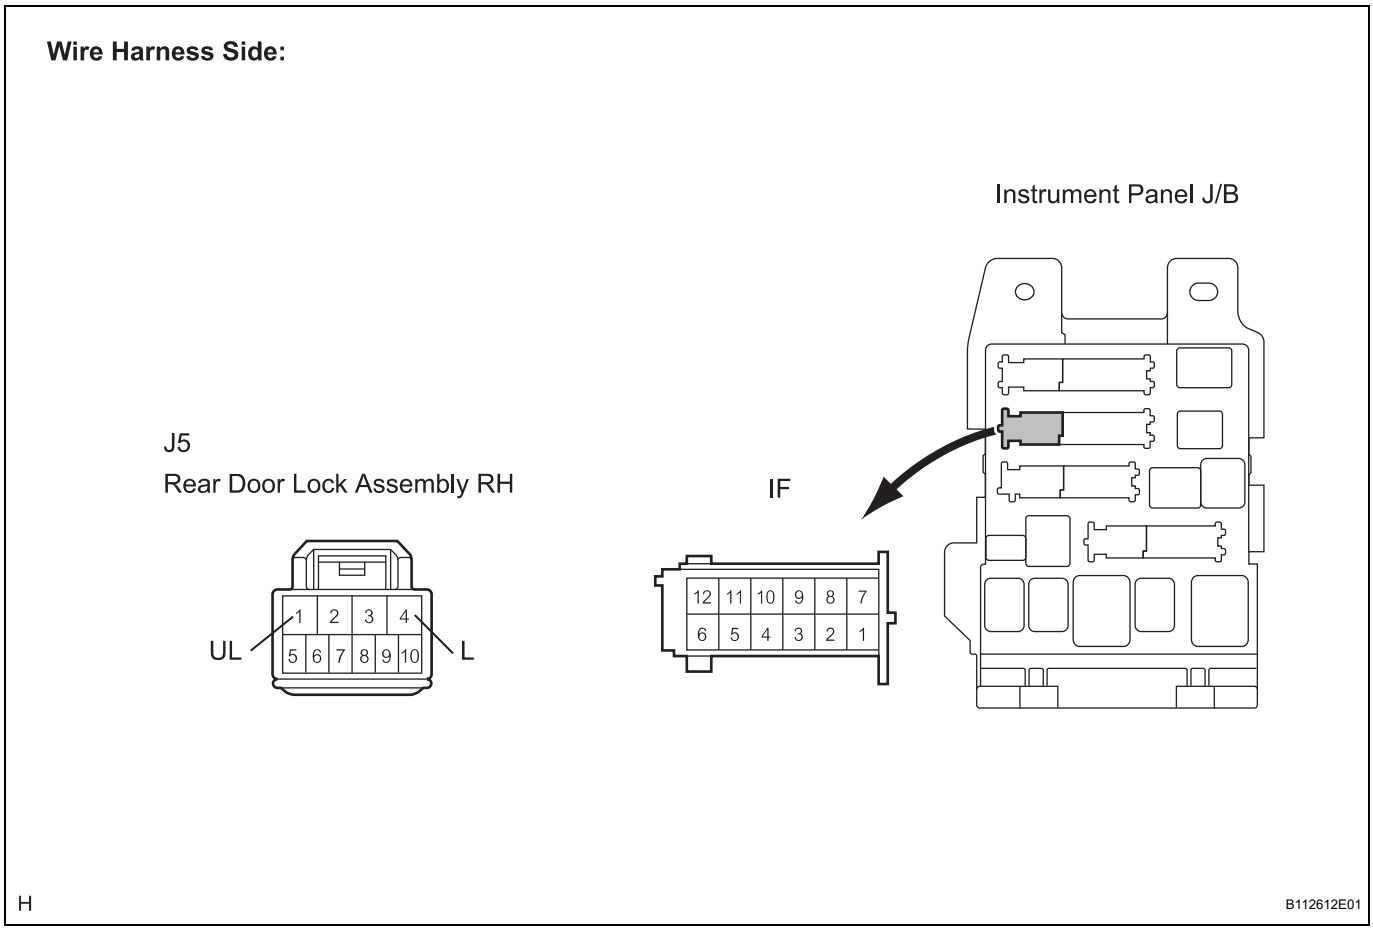
Measurement Condition	Specified Condition
Battery positive (+) → Terminal 4 Battery negative (-) → Terminal 1	Lock
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 4	Unlock

NG → **REPLACE REAR DOOR LOCK ASSEMBLY**

OK

2	CHECK WIRE HARNESS (REAR DOOR LOCK - MAIN BODY ECU (INSTRUMENT PANEL J/B))

(a) Disconnect the rear door lock assembly RH connector.



(b) Disconnect the ECU (instrument panel J/B) connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
J5-4 (L) - IF-5	Always	Below 1 Ω
J5-1 (UL) - IF-18	Always	Below 1 Ω
IF-5 - Body ground	Always	10 kΩ or higher
IF-18 - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

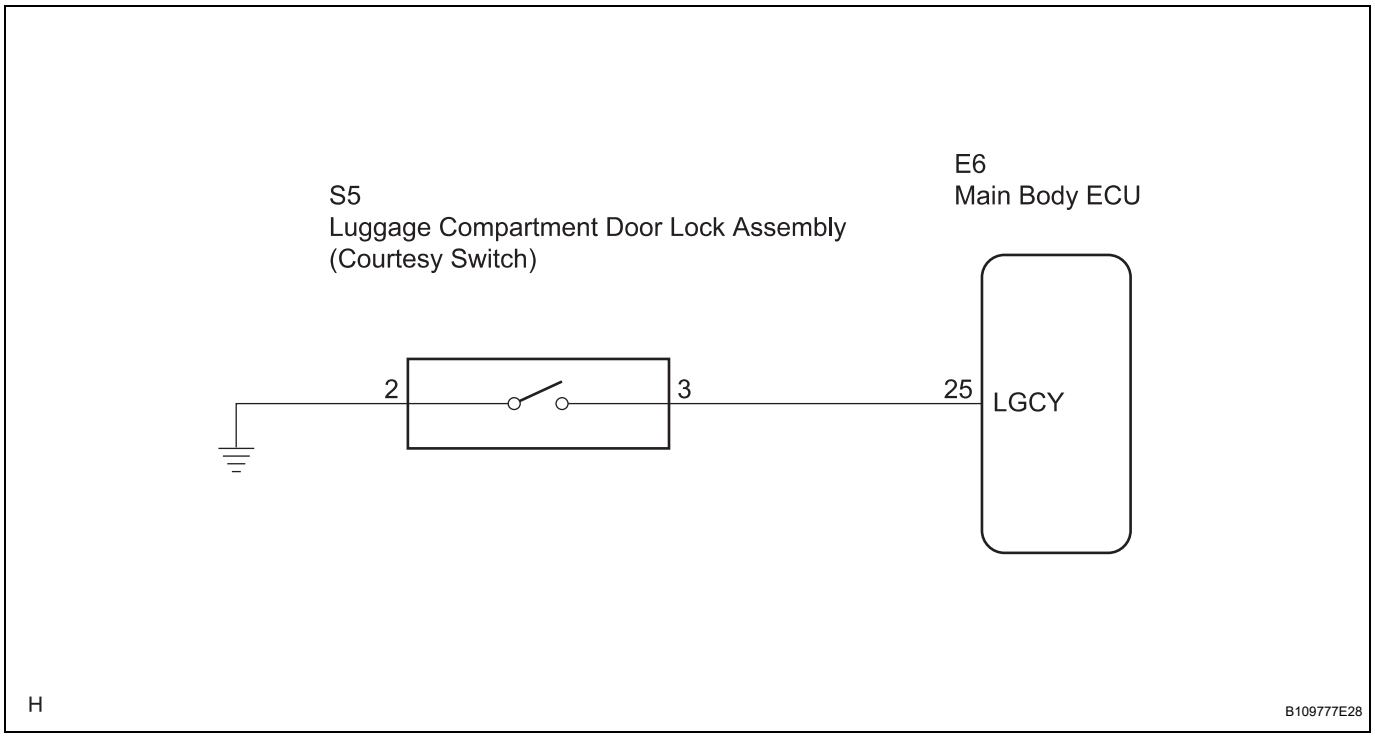
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Luggage Compartment Door Courtesy Switch Circuit

DESCRIPTION

The door courtesy switch turns on when the door is open and turns off when the door is closed.
The main body ECU detects the condition of the door courtesy switch.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST (DOOR COURTESY SWITCH)

(a) Check the DATA LIST for proper functioning of the door courtesy switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
LUGG COURTSY SW	Luggage compartment door courtesy light switch signal / ON or OFF	ON: Luggage compartment door is OPEN OFF: Luggage compartment door is CLOSED	-

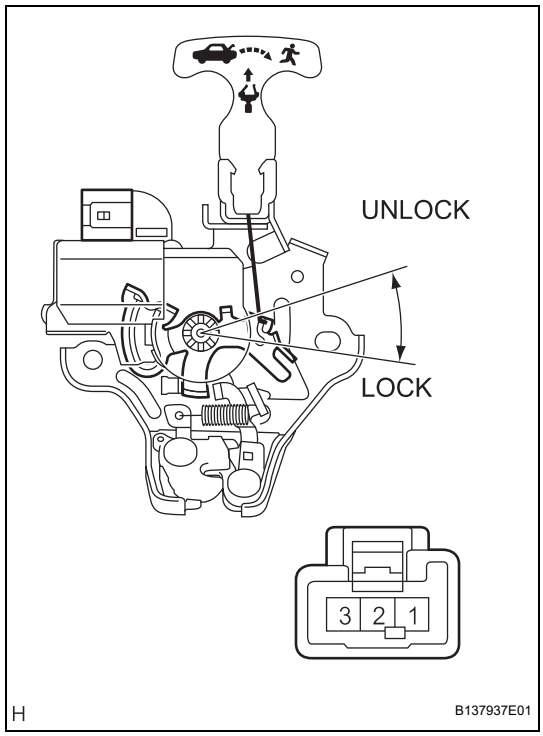
OK:
"ON" (door is open) and "OFF" (door is closed) appear on the screen.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2	**INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (DOOR COURTESY SWITCH)**



(a) Remove the luggage compartment door lock.
(b) Measure the resistance between the specified terminals of the switch.

Standard resistance

Tester Connection	Condition	Specified Condition
2 - 3	UNLOCK	Below 1 Ω
2 - 3	LOCK	10 kΩ or higher

NG → **REPLACE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**

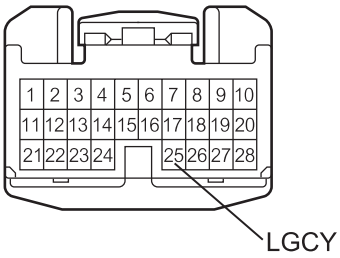
OK

DL

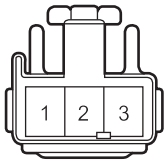
3	CHECK WIRE HARNESS (LUGGAGE COMPARTMENT DOOR LOCK - MAIN BODY ECU)

Wire Harness Side:

E6 Main Body ECU



S5 Luggage Compartment Door Lock Assembly (Door Courtesy Switch)



H

B137940E01

(a) Disconnect the ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
S5-3 - E6-25 (LGCY)	Always	Below 1 Ω
S5-3 - Body ground	Always	10 kΩ or higher
S5-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

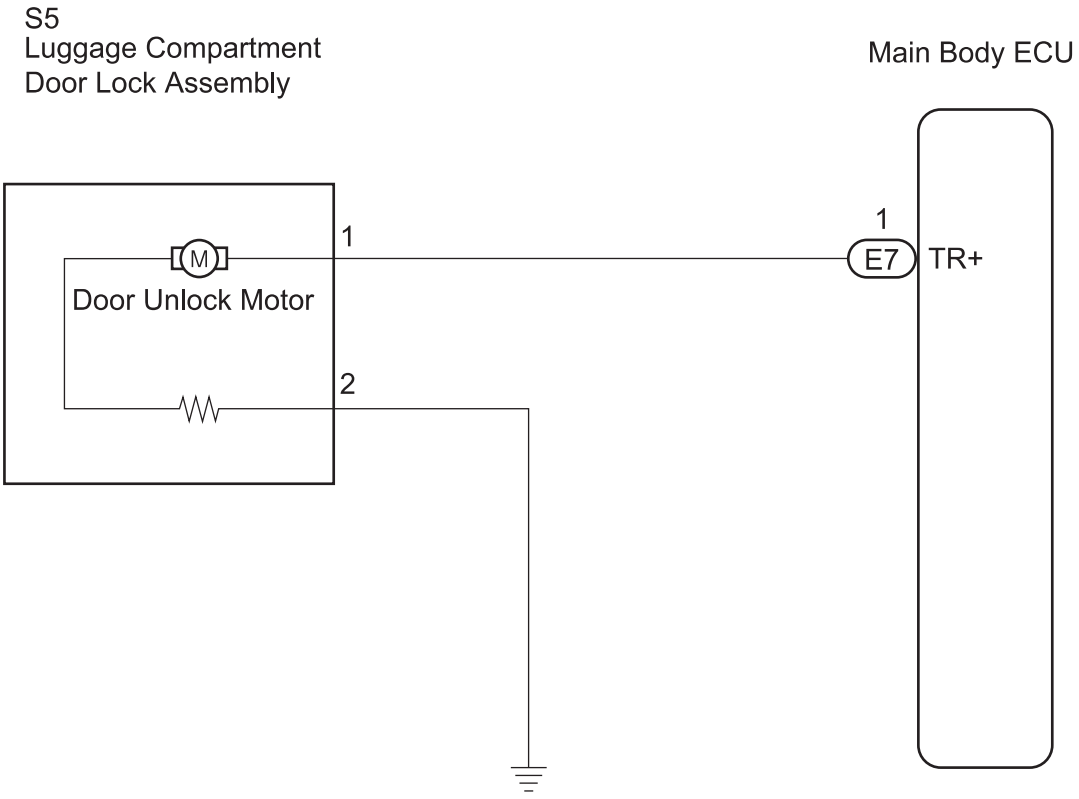
DL

Luggage Compartment Door Lock Circuit

DESCRIPTION

The luggage compartment door unlock motor is built into the luggage compartment door lock assembly. The main body ECU receives a luggage compartment door unlock signal from the luggage compartment door lock cylinder or electrical key switch and operates the door unlock motor.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	PERFORM ACTIVE TEST (LUGGAGE COMPARTMENT DOOR)

(a) Select the ACTIVE TEST, use the intelligent tester to generate a control command, and then check that the door lock operates.

MAIN BODY:

Item	Test Details	Diagnostic Note
TRUNK/BDOR OPEN	Operate luggage compartment door unlock motor UNLOCK	-

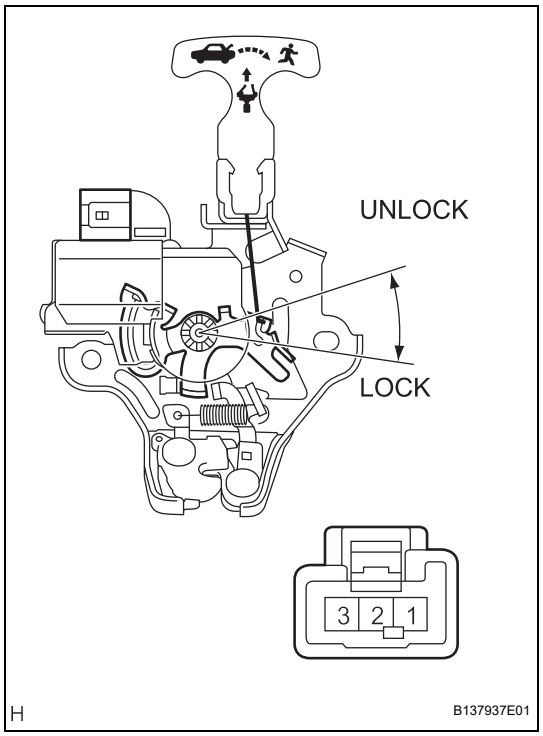
OK:
Door lock is locked/unlocked.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY (DOOR LOCK MOTOR)



(a) Remove the luggage compartment door lock assembly.
(b) Apply battery voltage and check operation of the door lock motor.

OK

Measurement Condition	Specified Condition
Battery positive (+) → Terminal 1 Battery negative (-) → Terminal 2	Unlock

NG → **REPLACE LUGGAGE COMPARTMENT DOOR LOCK ASSEMBLY**

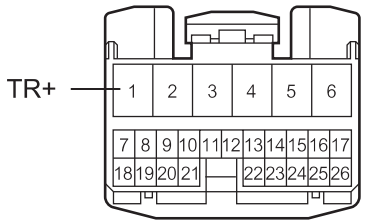
OK

DL

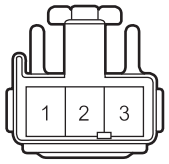
3	CHECK WIRE HARNESS (LUGGAGE COMPARTMENT DOOR LOCK - MAIN BODY ECU)

Wire Harness Side:

E7 Main Body ECU



S5 Luggage Compartment Door Lock Assembly



H

B137938E01

(a) Disconnect the ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E7-1 (TR+) - S5-1	Always	Below 1 Ω
S5-1 - Body ground	Always	10 kΩ or higher
S5-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

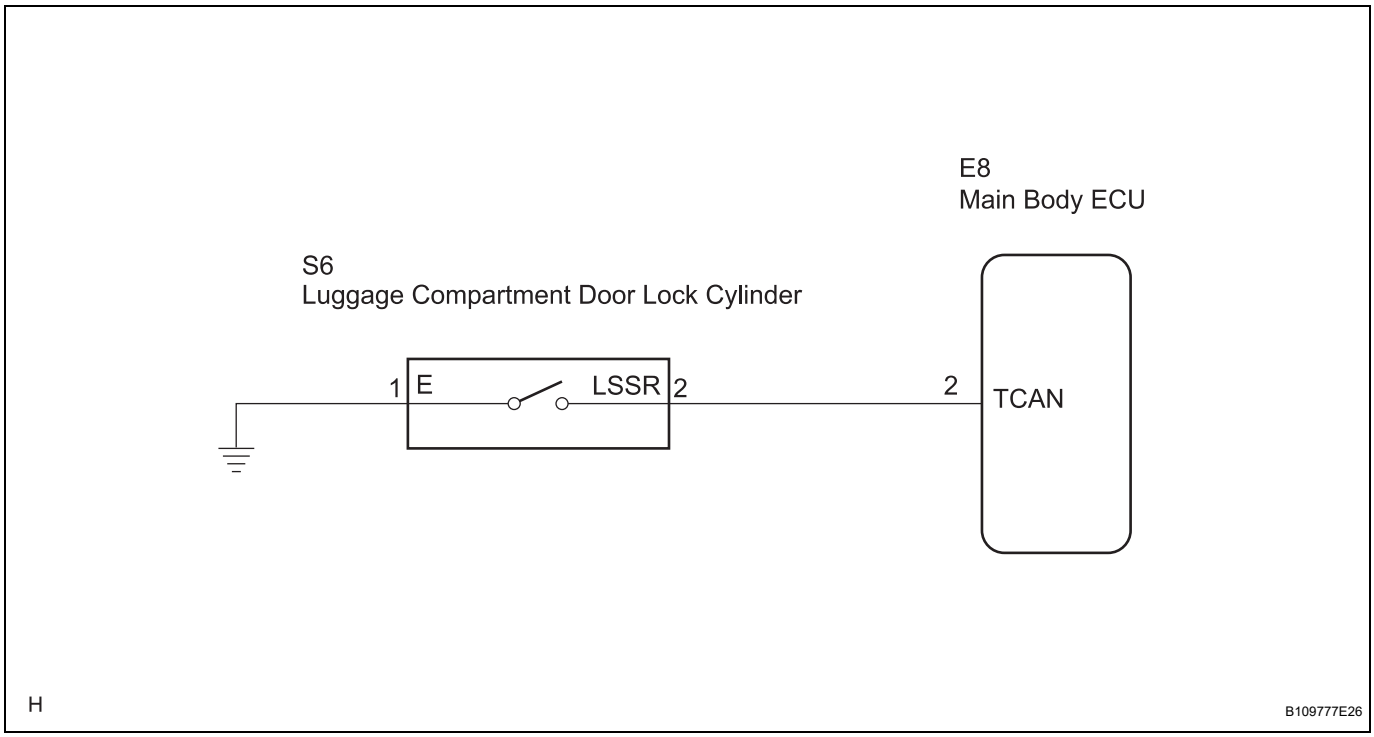
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Luggage Compartment Door Key Cylinder Switch Circuit

DESCRIPTION

When the luggage compartment door lock cylinder is turned to CANCEL the door by key, there is continuity between terminal TCAN of the main body ECU and body ground.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG) and turn the intelligent tester main switch on.
(c) Select the item below in the "DATA LIST" and read the display on the intelligent tester.

MAIN BODY:

Item	Measurement Item/Display (Range)	Normal Condition	Diagnostic Note
TRUNK KEY UNLK	Luggage compartment door key cylinder switch/ON or OFF	ON: Mechanical key inserted and turned to CANCEL position OFF: Mechanical key inserted and turned to except CANCEL position	-

OK:

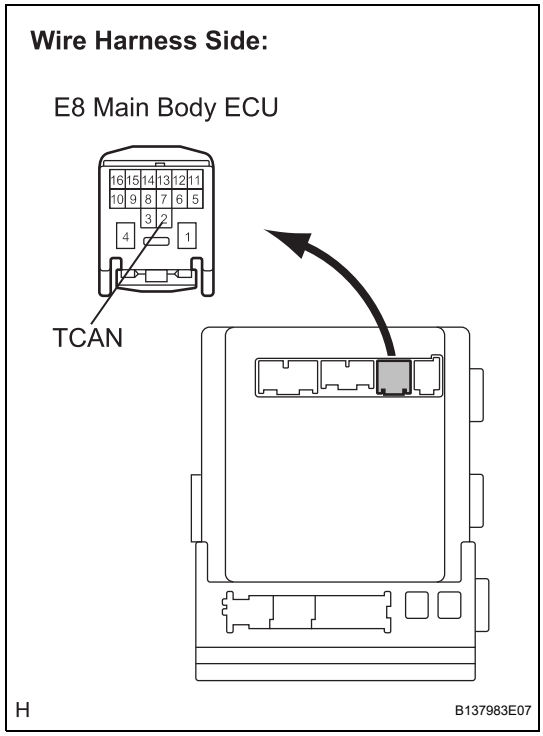
When the mechanical key is operated, the display changes as shown above.

NG	Go to step 2

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2 INSPECT MAIN BODY ECU (TCAN TERMINAL)



(a) Turn the power switch off.
(b) Disconnect the ECU connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

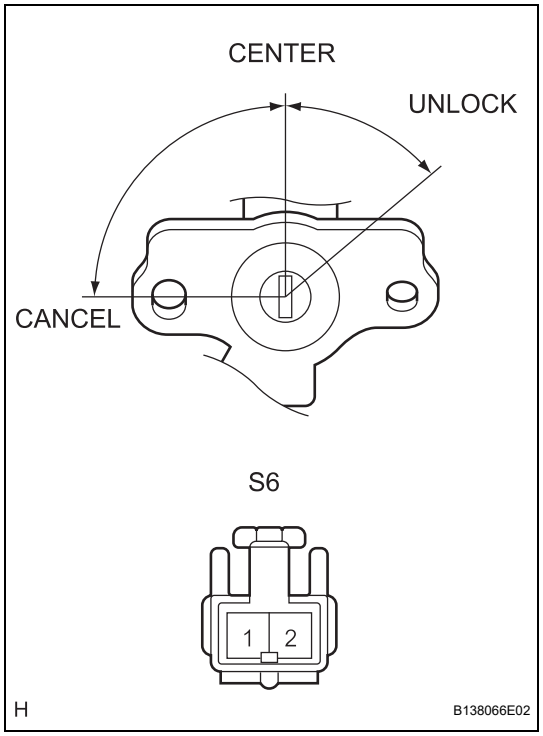
Tester Connection	Condition	Specified Condition
E8-2 (TCAN) - Body ground	Luggage compartment door lock cylinder CENTER	10 kΩ or higher
E8-2 (TCAN) - Body ground	Luggage compartment door lock cylinder CANCEL	Below 1 Ω
E8-2 (TCAN) - Body ground	Luggage compartment door lock cylinder UNLOCK	10 kΩ or higher

NG → **Go to step 3**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

3	INSPECT LUGGAGE COMPARTMENT DOOR LOCK CYLINDER



(a) Disconnect the luggage compartment door lock cylinder connector.

(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
S6-1 - S6-2	Luggage compartment door lock cylinder CENTER	10 kΩ or higher
S6-1 - S6-2	Luggage compartment door lock cylinder CANCEL	Below 1 Ω
S6-1 - S6-2	Luggage compartment door lock cylinder UNLOCK	10 kΩ or higher

DL

NG → **REPLACE LUGGAGE COMPARTMENT DOOR LOCK CYLINDER**

OK

REPAIR OR REPLACE HARNESS OR CONNECTOR (MAIN BODY ECU, BODY GROUND - DOOR LOCK CYLINDER)

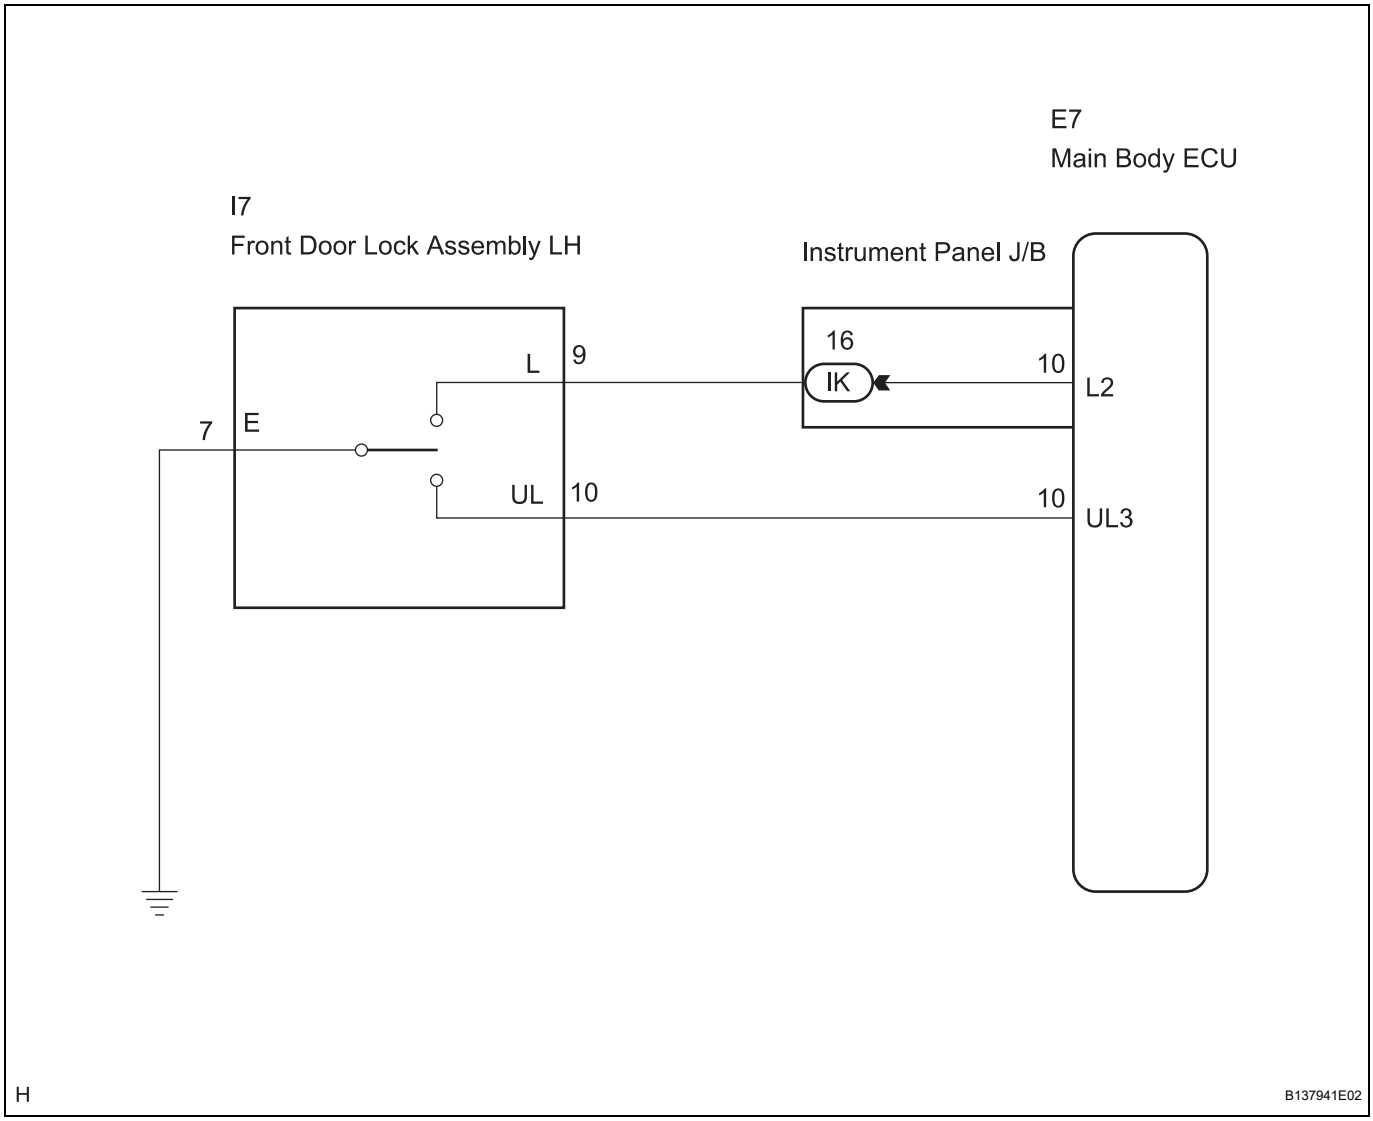
Driver Side Door Key Lock and Unlock Switch Circuit

DESCRIPTION

The driver's door key lock and unlock switch is built into the driver's door lock assembly.
When the driver's door key cylinder is turned to lock all the doors by key, there is continuity between terminals L and E of the key lock and unlock switch. When the cylinder is turned to unlock the door(s), there is continuity between terminals UL and E.
Terminals L2 and UL3 of the main body ECU are connected to the door lock assembly, and door lock/unlock request signals (by key) are input to the main body ECU.
The main body ECU constantly applies voltage to terminal L of the driver's door lock assembly via terminal L2. When the driver's door key cylinder is turned to lock all the doors by key, current flows from terminal L2 to terminal L.
The main body ECU also applies constant voltage to terminal UL of the door lock assembly via terminal UL3. When the door key cylinder is turned in the direction to unlock the door(s) by key, current flows from terminal UL3 to terminal UL.

DL

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF DATA LIST

(a) Check the DATA LIST to ensure proper function of the door unlock detection switch.

MAIN BODY:

Item	Measurement Item / Display (Range)	Normal Condition	Diagnostic Note
DOR KEY SW-LOCK	Driver door lock/unlock switch lock signal (key-linked lock switch) /ON or OFF	ON: Driver side door key cylinder is turned to LOCK OFF: Driver side door key cylinder is not turned to LOCK	-
DOR KEY SW-ULCK	Driver door lock/unlock switch unlock signal (key-linked unlock switch) /ON or OFF	ON: Driver side door key cylinder is turned to UNLOCK OFF: Driver side door key cylinder is not turned to UNLOCK	-

OK:

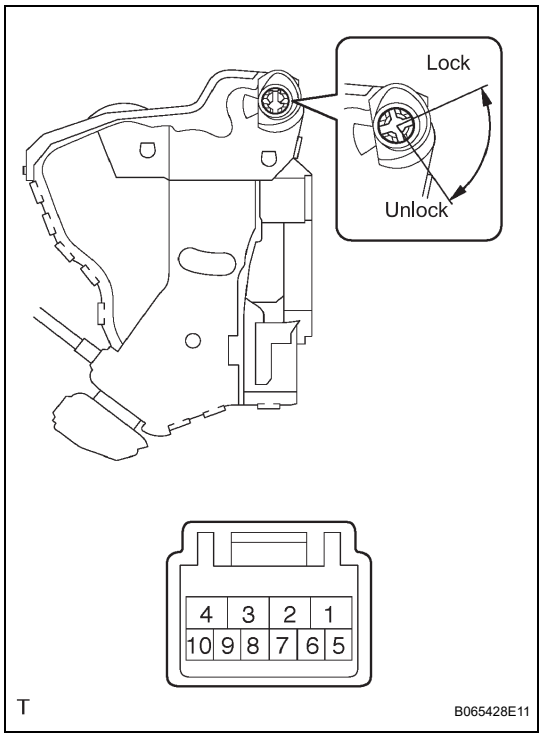
The display is as specified in the normal condition column.

NG → **Go to step 2**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

2	INSPECT FRONT DOOR LOCK ASSEMBLY (DOOR KEY LOCK AND UNLOCK SWITCH)



(a) Remove the front door lock assembly LH.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
7 - 9	ON (Door lock set to LOCK)	Below 1 Ω
7 - 9 7 - 10	OFF (Free)	10 kΩ or higher
7 - 10	ON (Door lock set to UNLOCK)	Below 1 Ω

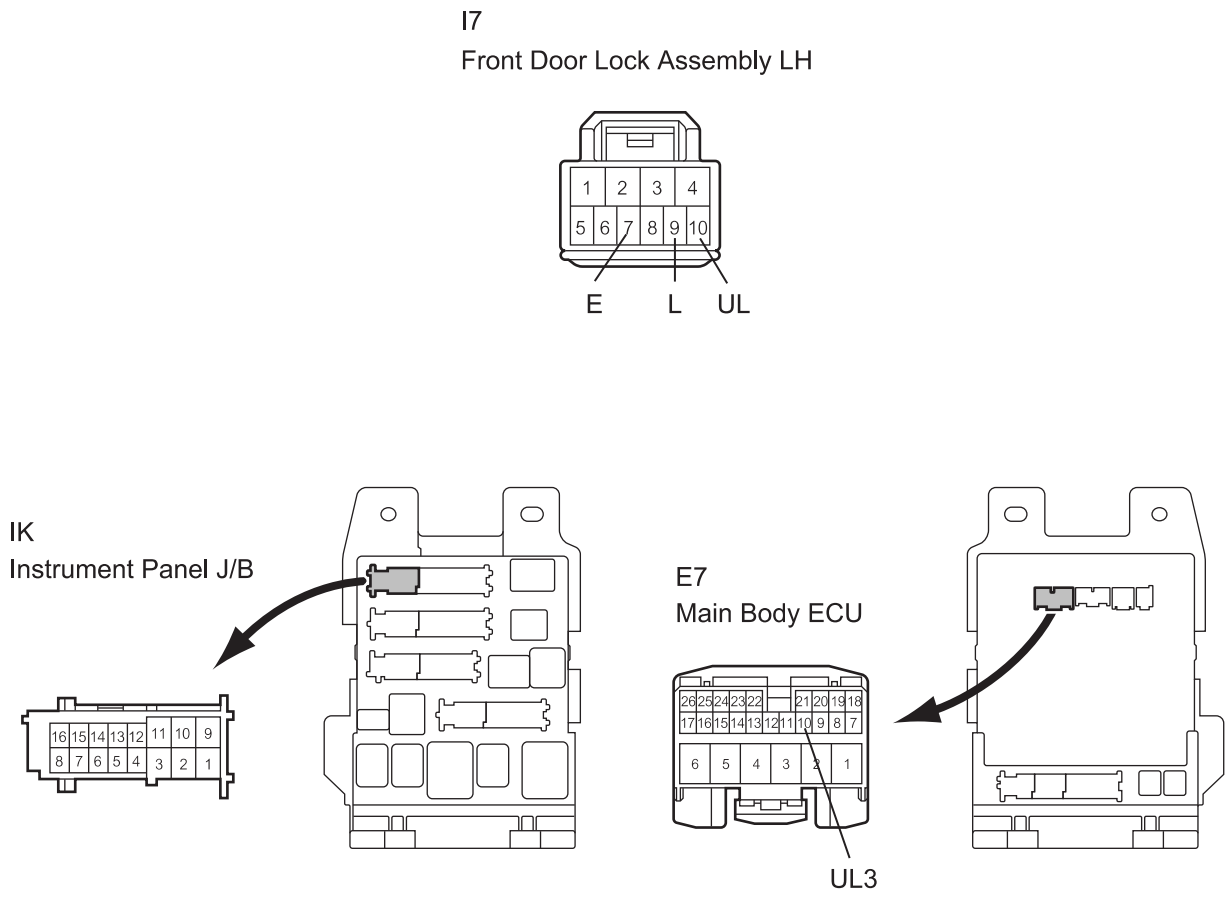
NG → **REPLACE FRONT DOOR LOCK ASSEMBLY**

OK

3	CHECK WIRE HARNESS (FRONT DOOR LOCK ASSEMBLY - MAIN BODY ECU)

(a) Disconnect the front door lock assembly LH connector.

Wire Harness Side:



H

B112609E03

(b) Disconnect the main body ECU connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
I7-9 (L) - IK-16	Always	Below 1 Ω
I7-10 (UL) - E7-10 (UL3)	Always	Below 1 Ω
I7-7 (E) - Body ground	Always	Below 1 Ω
I7-9 (L) - Body ground	Always	10 kΩ or higher
I7-10 (UL) - Body ground	Always	10 kΩ or higher

NG	REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

REPLACE MAIN BODY ECU

Door Control Switch Circuit

DESCRIPTION

When the lock side of the door control switch is pressed, continuity is established between terminal 2 (driver side) or 4 (passenger side) and terminal 1 (driver side) or 3 (passenger side) of the switch. When the unlock side of the switch is pressed, continuity is established between terminal 9 (driver side) or 2 (passenger side) and terminal 1 (driver side) or 3 (passenger side).
Terminals L1 and UL1 of the main body ECU are connected to the door control switch and door lock/unlock request signals (by door control switch operation) are input to the ECU.
The main body ECU constantly applies voltage to terminal 2 (driver side) or 4 (passenger side) of the door control switch via terminal L1. When the door control switch is operated to lock all doors, current flows from terminal L1 to terminal 2 (driver side) or 4 (passenger side). The main body ECU determines that this is door lock request signal input.
The main body ECU also applies constant voltage to terminal 9 (driver side) or 2 (passenger side) of the door control switch via terminal UL1. When the door control switch is operated to unlock the doors, current flows from terminal UL1 to terminal 9 (driver side) or 2 (passenger side). The main body ECU determines that this is door unlock request signal input.

DL

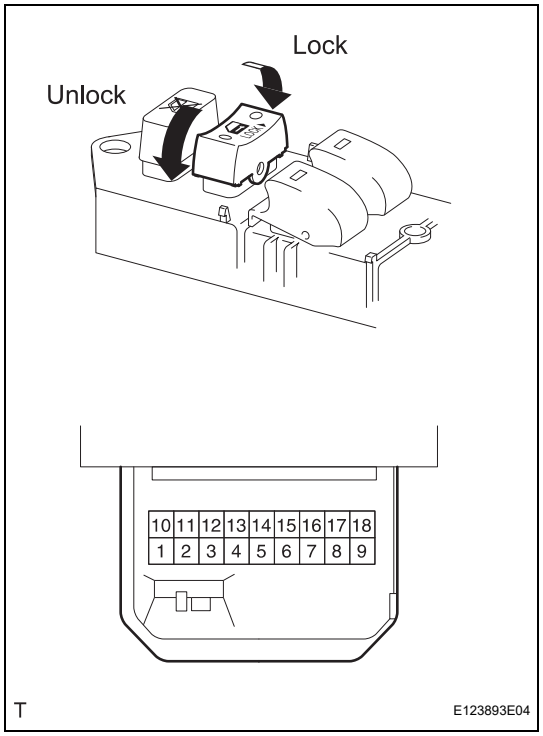
INSPECTION PROCEDURE

1	INSPECT DOOR CONTROL SWITCH ASSEMBLY

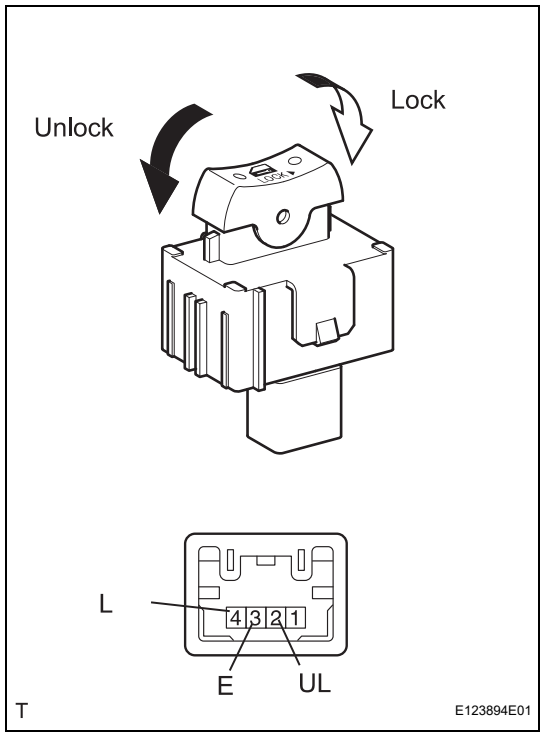


T

E123893E04

(a) Inspect driver side.
  (1) Remove the master switch.
  (2) Measure the resistance of the door control switch.
  Standard resistance

Tester Connection	Switch Condition	Specified Condition
2 - 1	Lock	Below 1 Ω
2 - 1	OFF (Free)	10 kΩ or higher
9 - 1	Unlock	Below 1 Ω
9 - 1	OFF (Free)	10 kΩ or higher



(b) Inspect passenger side.
(1) Remove the door control switch assembly.
(2) Measure the resistance according to the value(s) in the table below.

Standard resistance

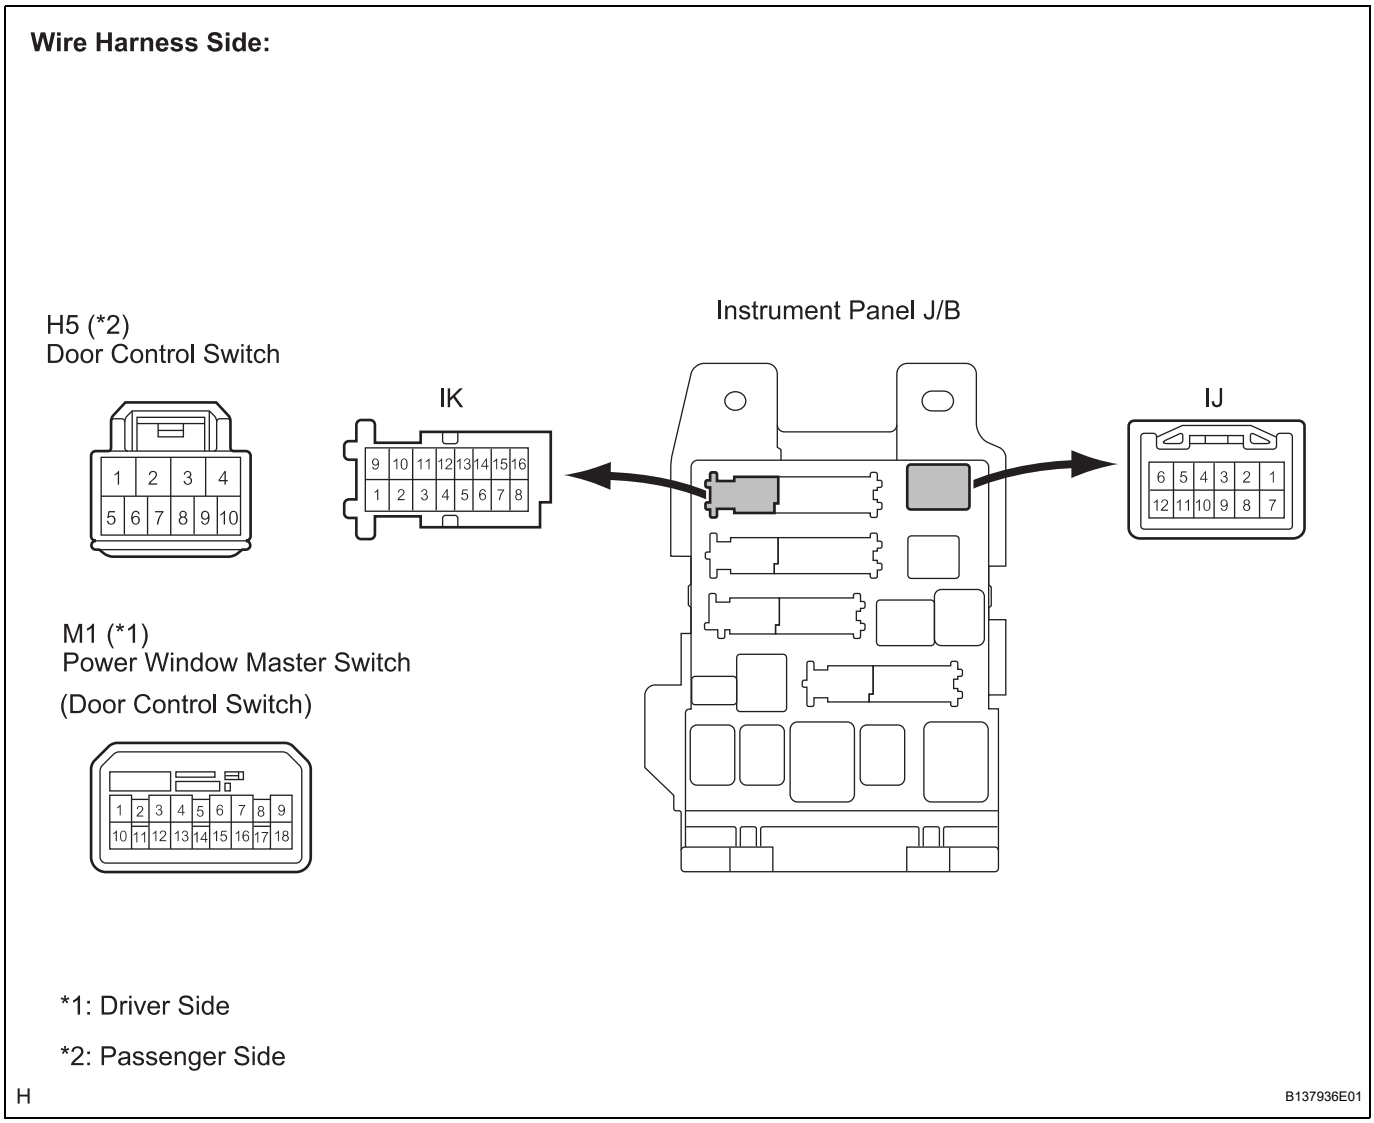
Tester Connection	Switch Condition	Specified Condition
4 - 3	Lock	Below 1 Ω
4 - 3 2 - 3	OFF (Free)	10 kΩ or higher
2 - 3	Unlock	Below 1 Ω

NG → **REPLACE DOOR CONTROL SWITCH OR MASTER SWITCH**

OK

2	**CHECK WIRE HARNESS (DOOR CONTROL SWITCH - MAIN BODY ECU (INSTRUMENT PANEL J/B))**

(a) Disconnect the door control switch connector.



(b) Disconnect the ECU (instrument panel J/B) connector.

(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection	Condition	Specified Condition
*1 M1-2 - IK-15	Always	Below 1 Ω
*1 M1-9 - IK-12	Always	Below 1 Ω
*1 M1-1 - Body ground	Always	Below 1 Ω
*1 IK-15 - Body ground	Always	10 kΩ or higher
*1 IK-12 - Body ground	Always	10 kΩ or higher
*2 H5-4 - IJ-3	Always	Below 1 Ω
*2 H5-2 - IJ-4	Always	Below 1 Ω

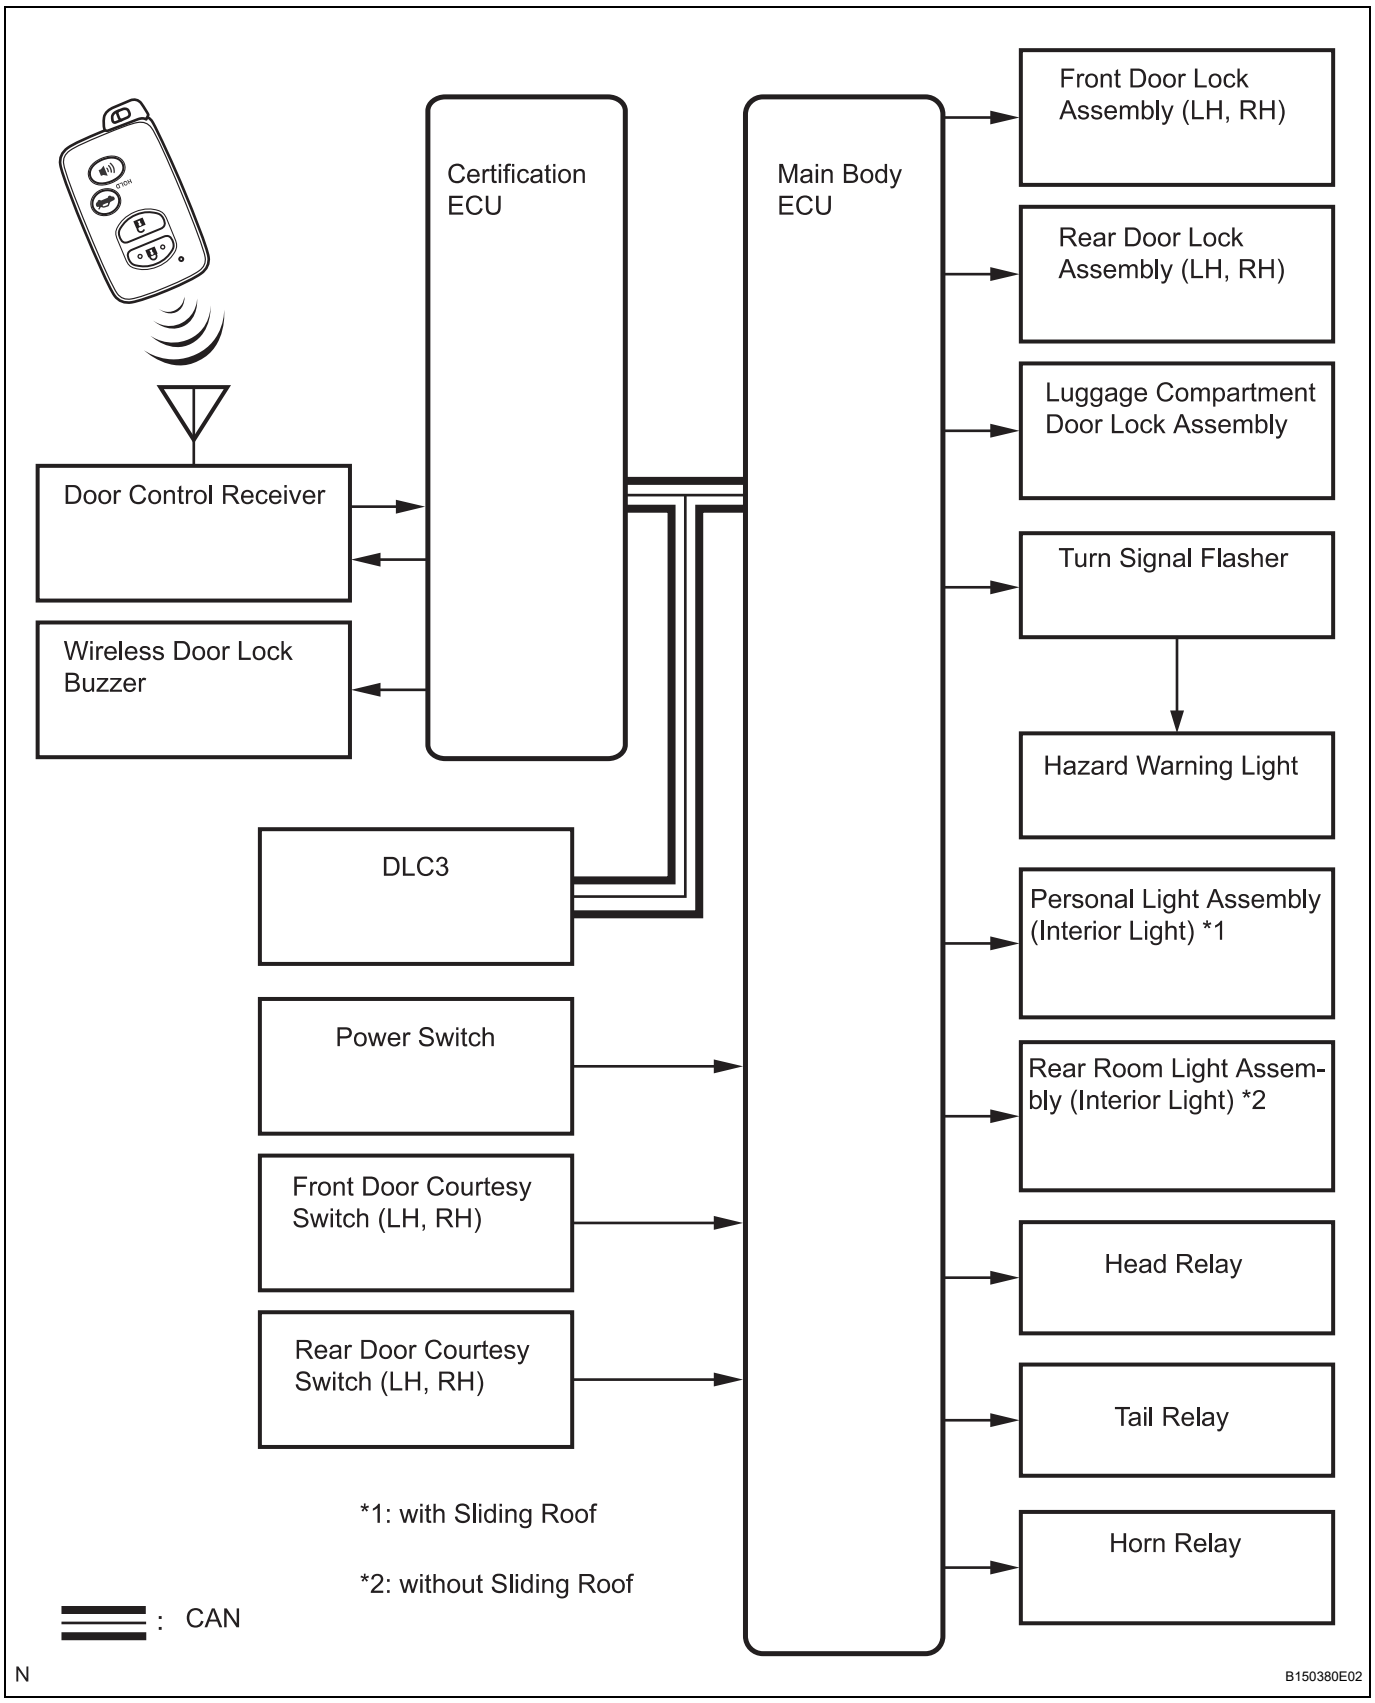
SYSTEM DIAGRAM



Transmitting ECU (Transmitter)	Receiving ECU (Receiver)	Signal	Line
Certification ECU	Main body ECU	Wireless door lock signal	CAN

SYSTEM DESCRIPTION

1. WIRELESS DOOR LOCK CONTROL SYSTEM

The wireless door lock control system functions to lock and unlock all the doors from a distance. The system is controlled by a hand-held transmitter which sends radio waves to the door control receiver. The certification ECU performs an ID code identification process and engages the door lock control.

2. FUNCTION OF MAIN COMPONENTS

Component	Function
Door control transmitter	• Has LOCK, UNLOCK, LUGGAGE OPEN, and PANIC switches. • Transmits weak radio waves (recognition codes and function codes) to the door control receiver.
Door control receiver	Receives weak radio waves from the door control transmitter and sends them to the certification ECU.
• Front door courtesy light switch • Rear door courtesy light switch • Luggage compartment door courtesy light switch	Turns on when a door is opened and turns off when it is closed. Outputs door status codes (open or closed) to the main body ECU.
Door lock position switch	Transmits the door lock positions of each door to the main body ECU.
Wireless door lock buzzer	Emits beep (answer back) when doors are locked or unlocked, or luggage compartment door is opened by wireless operation.
Certification ECU	Sends wireless door lock control signals in response to the code data from the door control receiver and signals from each ECU.

3. SYSTEM FUNCTION

The door control transmitter has the LOCK, UNLOCK, LUGGAGE OPEN, and PANIC switches. Operating these switches activates each function.

The wireless door lock control system has the following functions:

HINT:

The default settings of the following functions are ON. Part of these functions can be customized (See page DL-71).

Function	Operation
All door lock	Pressing the LOCK switch locks all doors.
All door unlock (2-step unlock)	Pressing the UNLOCK switch twice within 3 seconds unlocks all the doors after the driver's door is unlocked.
Automatic lock	If none of the doors is opened within 60 seconds after they are unlocked by the wireless door lock control, all the doors will lock again automatically.
Luggage compartment door open	Pressing the LUGGAGE OPEN switch of the transmitter opens the luggage compartment door.
Answer back	• When the doors are locked by wireless operation, the hazard warning lights flash once and the wireless door lock buzzer sounds once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice and the wireless door lock buzzer sounds twice. • When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.
Panic alarm	Pressing the PANIC switch of the transmitter for longer than about 0.8 seconds causes the following alarms to activate: • Sounds the horn and security horn. • Flashes the hazard lights, headlights, and taillights. • Illuminates the front interior light (when the switch is in the DOOR position). While the panic alarm is operating, pressing any switch of the transmitter cancels the alarm operation.

Function	Operation
Door ajar warning	The buzzer sounds when LOCK is pressed when any of the doors are ajar. When all the doors are closed or when UNLOCK is pressed, the buzzer will stop after it sounds for 10 seconds continuously.
Illuminated entry	When all the doors are locked, pressing the UNLOCK switch causes the interior light to come on simultaneously with the unlock operation.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:
The wireless door lock control system troubleshooting procedures are based on the premise that the power door lock control system is operating normally. Check the power door lock control system first before troubleshooting the wireless door lock control system.
Use this procedure to troubleshoot the wireless door lock control system.

OPERATION CHECK

1. FUNCTIONS AND OPERATING CONDITIONS

(a) The wireless door LOCK/UNLOCK function:
This wireless door lock control function operates only when the following 4 conditions are met:
(1) There is no wireless transmitter in the cabin.
(2) All the doors are closed.
(3) The power door lock system is functioning normally.
(4) The function is not disabled by customization.
HINT:
The UNLOCK function operates even when any of the doors are open.

(b) The wireless transmitter operational range differs depending on the situation.
(1) The operational range differs depending on the user, the way the transmitter is held, and the location.
(2) In certain areas, the operational range will be reduced due to the vehicle body shape and the influence of the surrounding environment.
(3) Since the transmitter uses weak radio waves, the operational range may be reduced or the transmitter may not function if interference or stronger radio waves occur in the area where the transmitter is used.
(4) When the battery is low, the operational range is reduced and/or the transmitter may not function.
HINT:
If the transmitter has been left in a place that is exposed to direct sunlight, such as on the instrument panel, the battery may be weakened or other problems may occur.

2. CHECK WIRELESS DOOR LOCK CONTROL FUNCTIONS

HINT:
- The switches built into the door control transmitter send radio waves to the door lock control receiver.
- The operational range must be taken into account during checks.

(a) Establish conditions that allow the wireless control function to be operated successfully.
(b) Check these basic functions.
(1) Check that all the doors lock when the LOCK switch is pressed.
(2) Check that the driver's door unlocks when the UNLOCK switch is pressed once, and all doors unlock when pressed twice within 3 seconds.
(c) Check the automatic lock function.
(1) Check that if the driver's door or all doors are unlocked with the UNLOCK switch and none of the doors are opened or locked within approximately 60 seconds, the doors automatically re-lock.

(2) Check that if the driver's door or all doors are unlocked with the UNLOCK switch and a door is opened or locked within approximately 60 seconds, the automatic lock function does not operate.

(d) Check the interior light ON function.
HINT:
Turn the interior light switch to the DOOR position before the check.
(1) Check that the interior light comes on simultaneously with the unlocking operation when the UNLOCK switch has been pressed.
(2) Check that the interior light goes off in approximately 15 seconds if none of the doors is opened after the unlocking operation.

(e) Check the answer back function.
(1) When the doors are locked by wireless operation, the hazard warning lights flash once and the wireless door lock buzzer sounds once.
(2) When the doors are unlocked by wireless operation, the hazard warning lights flash twice and the wireless door lock buzzer sounds twice.
(3) When the luggage compartment door is opened by wireless operation, the wireless door lock buzzer sounds.

(f) Check the switch operation fail-safe function.
(1) Check that the doors cannot be locked by operating a switch while the wireless transmitter is in the cabin.
(2) Check that the doors cannot be locked or unlocked by operating a switch on the unregistered transmitter, and that the doors are locked and unlocked by operating a switch on the registered transmitter.

(g) Check the chattering prevention function.
(1) Check that the corresponding operation occurs only once, and does not repeat itself while the switch is kept pressed. Check that the corresponding operation is carried out when the switch is operated repeatedly at 1-second intervals.

(h) Check the luggage compartment door opener function.
(1) Check that the luggage compartment door opens when the LUGGAGE OPEN switch is held down for 0.6 seconds or more.

(i) Check the door ajar warning function.
(1) Check that the wireless door lock buzzer sounds for approximately 10 seconds when the LOCK switch is pressed with any of the doors ajar or open.

(j) Check the panic alarm function.
(1) Check that the following alarms operate when the PANIC switch is pressed longer than about 0.8 seconds:
- The vehicle horns and security horn sounds.
- The hazard warning lights, head lights and taillights flash.
- The interior light illuminates (when the switch is in the DOOR position).

(2) Check that during the panic alarm is operating, pressing any switch of transmitter cancels the alarm operation.

CUSTOMIZE PARAMETERS

HINT:
The following items can be customized.
NOTICE:

- **When the customer requests a change in a function, first make sure that customization of the function(s) is possible.**
- **Be sure to record the current settings before customizing.**
- **When troubleshooting a function, first make sure that the function is not set to OFF.**

1. PERFORM CUSTOMIZATION

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on(IG).
(c) Enter the following menus: CUSTOMIZE / INDIVIDUAL CHANGE / WIRELESS D LOCK.

WIRELESS DOOR LOCK CONTROL SYSTEM

Display (item)	Default	Function	Setting
TRUNK LID OPER (Wireless trunk opener function setting)	0.8 s PR ON	This function changes operation method of transmitter to open luggage compartment door. • 1 TIME: Push once • 2 TIMES: Push twice • 0.8 s PR: Push and hold for 0.8 seconds • OFF: Does not operate	1 TIME/2 TIMES/0.8 s PR/ OFF
WIRELESS OPER (Wireless door lock control function)	ON	Function that turns wireless door lock function ON/OFF	ON/OFF
HAZARD ANS BACK (Hazard answer-back for wireless door lock control)	ON	• When the doors are locked by wireless operation, the hazard warning lights flash once. • When the doors are unlocked by wireless operation, the hazard warning lights flash twice.	ON/OFF
OPEN DOOR WARN (Door ajar warning)	ON	The buzzer sounds when LOCK is pressed when any of the doors are ajar.	ON/OFF
AUTO LOCK DELAY (Auto lock time)	60 s	This function regulates the interval between unlocking and automatic relocking of doors.	30 s/60 s
UNLOCK /2OPER (Wireless unlock operated twice)	ON	This function unlocks the driver's door when the UNLOCK switch is pressed once, and unlocks all doors when pressed twice within 3 seconds. If set to OFF, pressing UNLOCK once unlocks all doors.	ON/OFF
ALARM FUNCTION (Panic function)	ON	This function operates the theft deterrent system when PANIC is pressed and held for 0.8 seconds.	ON/OFF
WIRLS BUZZ RESP (Wireless buzzer answer-back)	ON	Wireless door lock buzzer response/ON or OFF	ON/OFF

PROBLEM SYMPTOMS TABLE

If a normal system code is displayed during the DTC check, but the problem still occurs, check the circuits for each problem symptom in the order given in the table below and proceed to the relevant troubleshooting page.

HINT:

- The following is the troubleshooting procedure for the wireless door lock control of a vehicle without the smart key system.
- For the troubleshooting procedure for the wireless door lock control of a vehicle with the smart key system, refer to the wireless door lock control system (without Smart Key System).
- Inspect the fuse and relay before investigating the suspected areas shown in the table below.
- Inspect each malfunction circuit in numerical order for its corresponding symptom.

WIRELESS DOOR LOCK CONTROL SYSTEM:

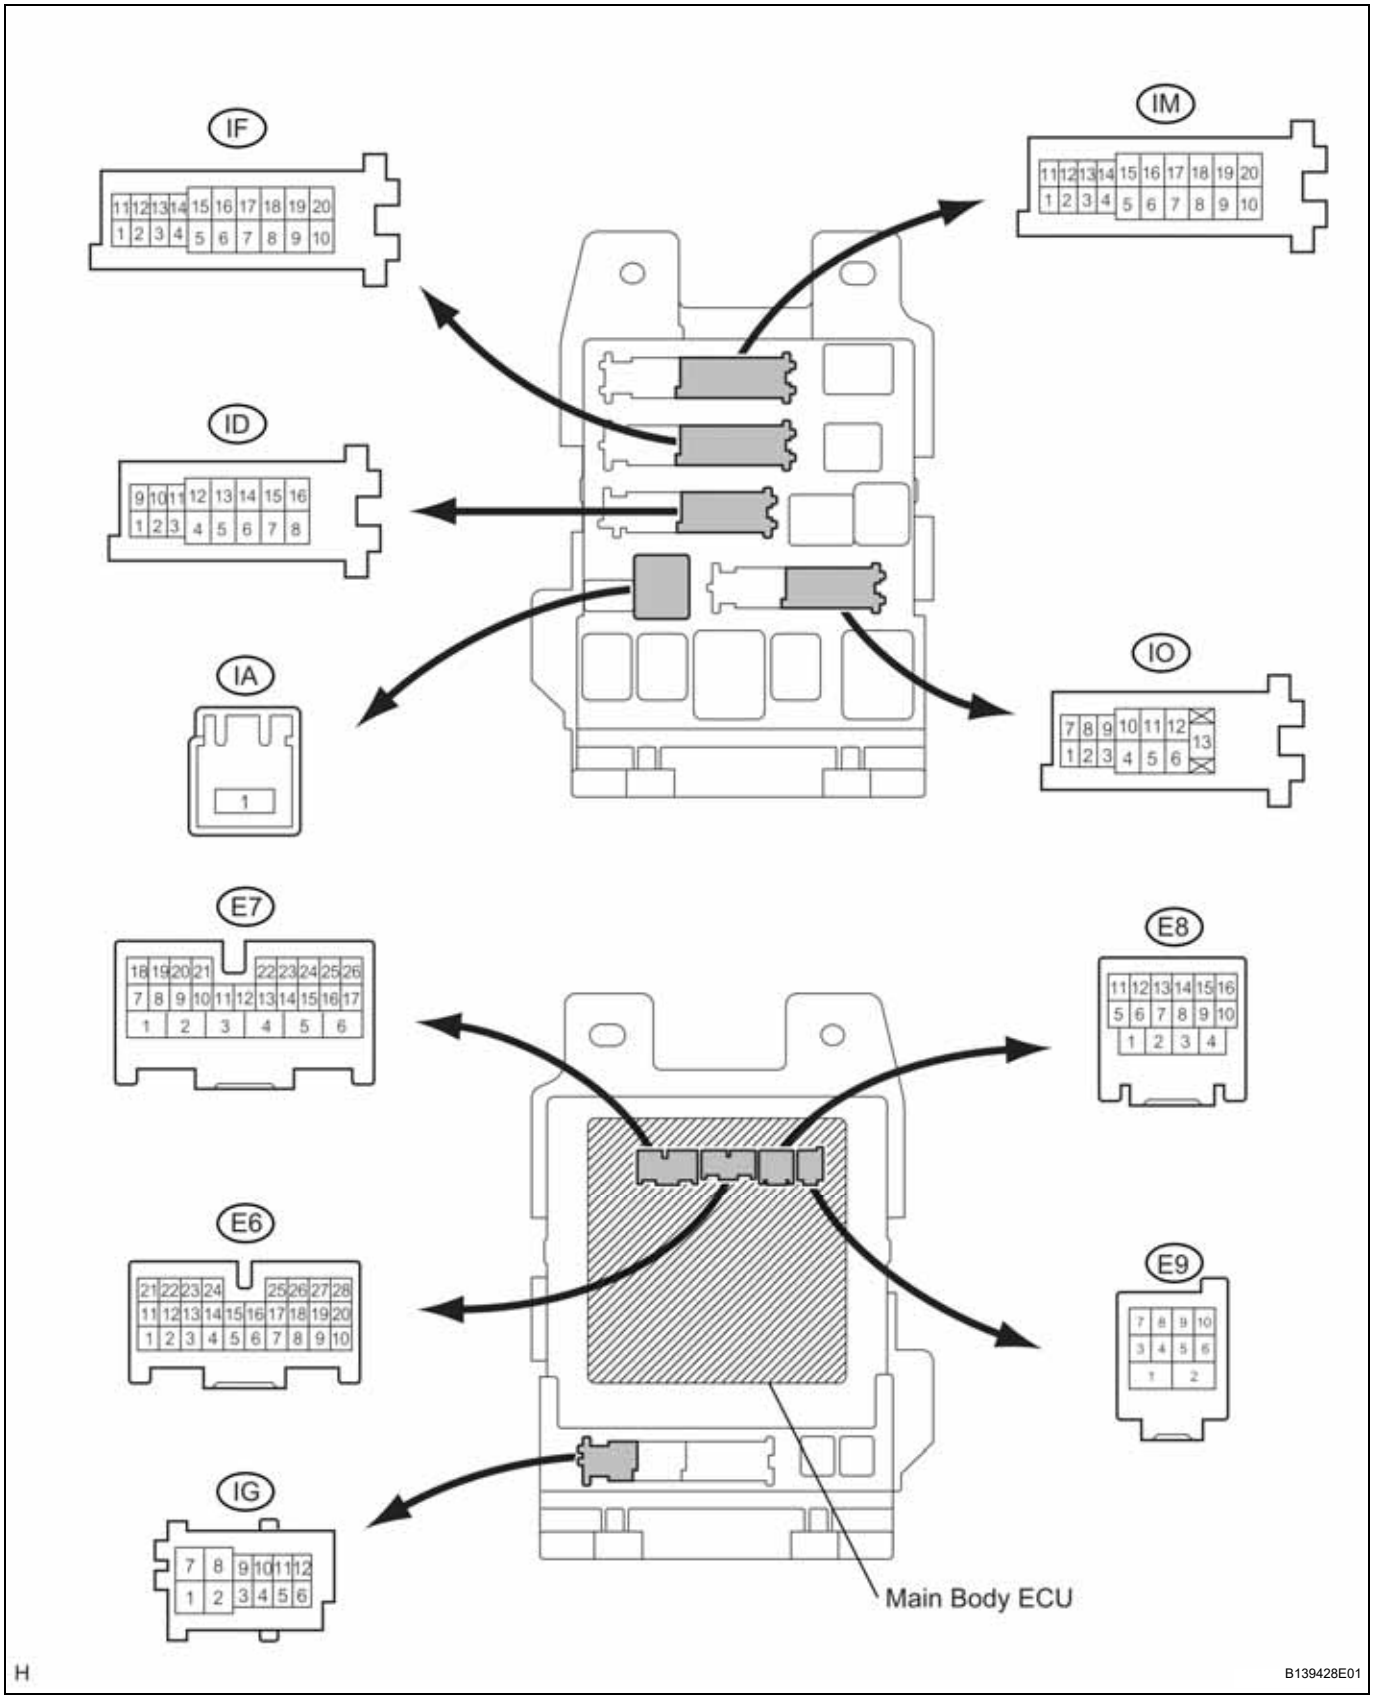
Symptom	Suspected Area	See page
The wireless door lock control system does not operate.	1. Perform the operation check	DL-68
	2. Check if the CAN communication DTC is output	CA-22
	3. Door control transmitter	DL-168
	4. Door courtesy switch circuit	LI-41
	5. Luggage compartment door courtesy switch	DL-43
	6. Power source circuit	DL-86
	7. Replace the door control receiver	-
	8. Replace the certification ECU	-
	9. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The automatic lock function does not operate normally.	1. Perform the operation check	DL-68
	2. Door courtesy switch circuit	LI-41
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The illuminated entry function only does not operate.	1. Perform the operation check	DL-68
	2. Lighting system	LI-12
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The answer back function does not operate (Wireless door lock buzzer).	1. Perform the operation check	DL-68
	2. Wireless door lock buzzer circuit	DL-83
	3. Replace the certification ECU	-
	4. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The answer back function does not operate (Hazard warning light).	1. Perform the operation check	DL-68
	2. Wire harness	-
	3. Turn signal flasher assembly	LI-113
	4. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-

Symptom	Suspected Area	See page
The door ajar warning function only does not operate.	1. Perform the operation check	DL-68
	2. Door courtesy switch circuit	LI-41
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function only does not operate.	1. Perform the operation check	DL-68
	2. Door control transmitter	DL-168
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function does not operate (Vehicle horn).	1. Perform the operation check	DL-68
	2. Horn system	HO-3
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function does not operate (Hazard warning light).	1. Perform the operation check	DL-68
	2. Wire harness	-
	3. Turn signal flasher assembly	LI-113
	4. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-
The panic alarm function does not operate (Headlight or taillight).	1. Perform the operation check	DL-68
	2. Lighting system	LI-12
	3. If the symptom still occurs after the above areas have been inspected and proved to be normal, replace the main body ECU (Instrument panel J/B)	-

TERMINALS OF ECU

1. CHECK MAIN BODY ECU (INSTRUMENT PANEL J/B)

(a) Disconnect the main body ECU (instrument panel J/B) connectors.



(b) Measure the resistance and voltage between each terminal of the wire harness side connectors and body ground.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RCTY (E6-7) - Body ground	GR - Body ground	Rear courtesy light switch RH input	Rear door RH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
PCTY (E6-21) - Body ground	Y - Body ground	Passenger side courtesy light switch input	Passenger side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
LGCY (E6-25) - Body ground	W - Body ground	Luggage compartment door courtesy light switch input	Luggage compartment door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
DCTY (E7-24) - Body ground	L - Body ground	Driver side door courtesy light switch input	Driver side door CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω
ACC (IA-1) - Body ground	B - Body ground	Ignition power supply (ACC signal)	Power switch on (ACC) → off	10 to 14 V → Below 1 V
IG (IA-1) - Body ground	B - Body ground	Ignition power supply (IG signal)	Power switch on (IG) → off	10 to 14 V → Below 1 V
BATB (IA-1) - Body ground	B - Body ground	+B (power battery system) power supply	Always	10 to 14 V
ALTB (ID-16) - Body ground	W - Body ground	+B (power system alternator system) power supply	Always	10 to 14 V
GND1 (IF-10) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
GND2 (IM-9) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
LCTY (IO-7) - Body ground	LG - Body ground	Rear courtesy light switch LH input	Rear door LH CLOSED (OFF) → OPEN (ON)	10 kΩ or higher → Below 1 Ω

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the main body ECU (instrument panel J/B) connectors.

(d) Measure the voltage between each terminal of the wire harness side connectors and body ground.

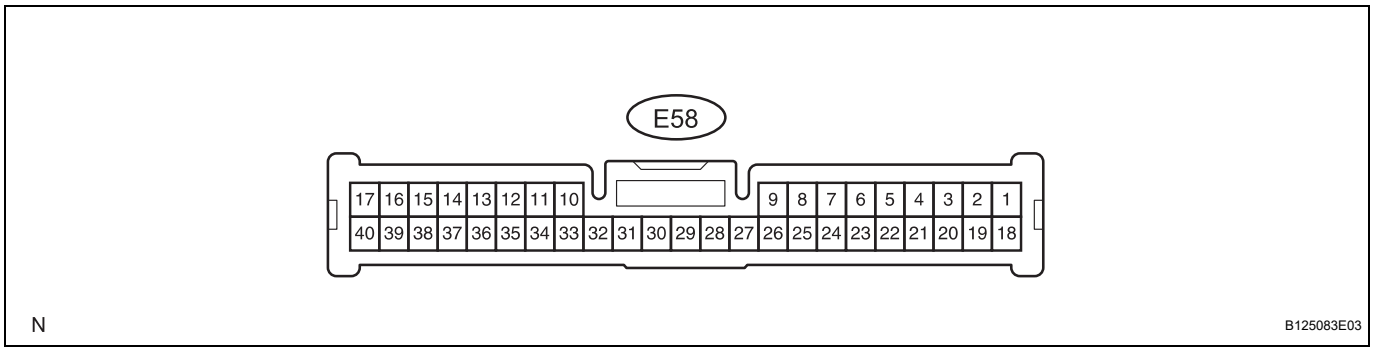
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
TR+ (E7-1) - Body ground	B - Body ground	Luggage compartment door opener motor input	Luggage compartment door CLOSED (LOCKED) → OPEN (UNLOCKED)	Below 1 V → 10 to 14 V*1
HAZ (E8-4) - Body ground	W - Body ground	Turn signal flasher relay signal	Any transmitter switch is pressed → not pressed	Below 1 V → 10 to 14 V*2

HINT:

- *1: When operating the motor.
- *2: When operating the answer back function.

2. CHECK CERTIFICATION ECU ASSEMBLY

(a) Disconnect the E58 ECU connector.



(b) Measure the voltage and resistance of the wire harness side connector.

DL

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E58-1) - E (E58-17)	W - W-B	Battery power supply	Always	10 to 14 V
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
IG (E58-18) - E (E58-17)	LG - W-B	IG power supply	Power switch on (IG)	10 to 14 V
IG (E58-18) - E (E58-17)	LG - W-B	IG power supply	Power switch off	Below 1 V

If the result is not as specified, there may be a malfunction on the wire harness side.

(c) Reconnect the E58 ECU connector.

(d) Measure the voltage according to the values(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
BZR (E58-21) - Body ground	O - Body ground	Wireless door lock buzzer	Wireless door lock buzzer OFF → ON	0 V → Pulse generation
RC0 (E58-29) - E (E58-17)	G - W-B	Door control receiver power supply	Power switch off, all doors closed and transmitter switch not pressed	Below 1 V
RC0 (E58-29) - E (E58-17)	G - W-B	Door control receiver power supply	Power switch off, all doors closed and transmitter switch pressed	4.6 to 5.4 V
RDA (E58-38) - E (E58-17)	Y - W-B	Door control receiver output signal	Power switch off, all doors closed and transmitter switch not pressed	10 to 14 V
RDA (E58-38) - E (E58-17)	Y - W-B	Door control receiver output signal	Power switch off, all doors closed and transmitter switch pressed	Pulse generation

If the result is not as specified, the ECU may have a malfunction.

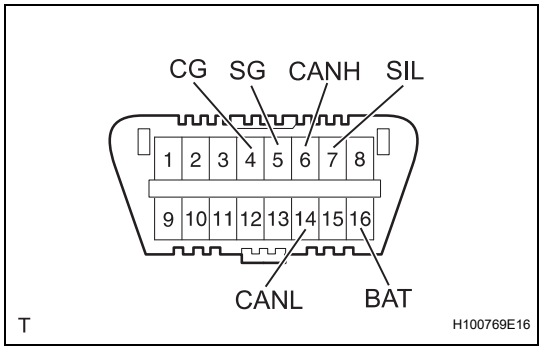
DIAGNOSIS SYSTEM

1. DESCRIPTION

The main body ECU stores trouble codes when trouble occurs on the vehicle.
The diagnostic system allows for reading of the trouble codes from the DLC3.
Use the intelligent tester to check and solve the problem.

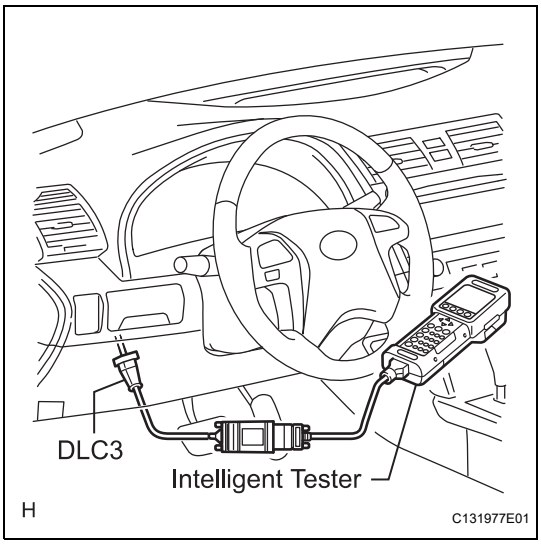
2. CHECK DLC3

(a) The main body ECU uses ISO 15765-4 for communication protocol. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



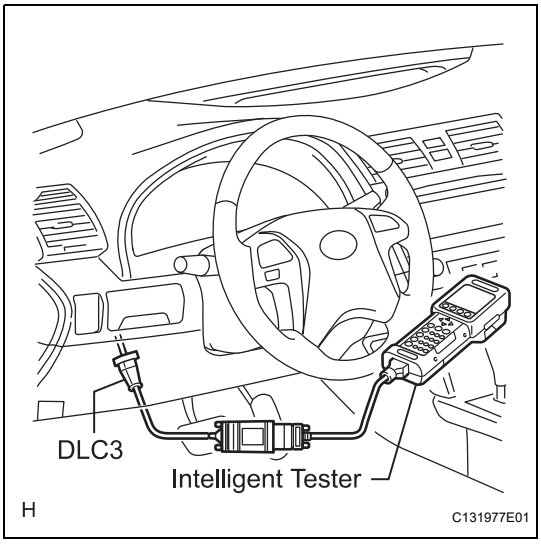
Symbols (Terminal No.)	Terminal Description	Condition	Specified condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch off*	54 to 69 Ω
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch off*	200 Ω or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch off*	200 Ω or higher
CANH (6) - BAT (16)	HIGH-level CAN bus line	Power switch off*	6 kΩ or higher
CANL (14) - BAT (16)	LOW-level CAN bus line	Power switch off*	6 kΩ or higher

NOTICE:
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.



(b) Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the power switch on (READY) and attempt to use the intelligent tester. If the screen displays a communication error message, a problem exists in the vehicle or in the tester.
- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 on the original vehicle.
- If communication is still impossible when the tester is connected to another vehicle, the problem is probably in the tester itself. Consult the Service Department listed in the tester's instruction manual.

DL



DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (READY).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CURRENT CODES.
(d) Read DTC's by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (READY).
(c) Enter the following menu items: DIAGNOSIS / ENHANCED OBD II / DTC INFO / CLEAR CODES.
(d) Erase the DTC's by following the directions on the tester screen.

HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. DATA LIST

HINT:

Using the intelligent tester DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST early in troubleshooting is one way to shorten diagnostic time.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (READY).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / MAIN BODY or SMART / DATA LIST / DIAG&CUSTOMIZE.
(d) Read the DATA LIST according to the display on the tester.

MAIN BODY (Main body ECU):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
WIRELESS OPER	Wireless door lock control function / ON or OFF	ON: Operating OFF: Not operating	-
HAZARD ANS BACK	Hazard answer-back of wireless / ON or OFF	ON: Operating OFF: Not operating	-
OPEN DOOR WARN	Open door warning / ON or OFF	ON: Operating OFF: Not operating	-
AUTO LOCK DELAY	Automatic lock time / 60 s or 30 s	60 s: 60 seconds 30 s: 30 seconds	-
UNLOCK /2OPER	2 time operation of wireless unlock / ON or OFF	ON: All doors unlock when UNLOCK is pressed twice OFF: All doors unlock when UNLOCK is pressed once	-
WIRLS BUZZ RESP	Wireless door lock buzzer response / ON or OFF	ON: Operating OFF: Not operating	-
TRUNK LID OPER	Luggage compartment door open function type / 1 TIME/2 TIMES/0.8 s PR/OFF	1 TIME: Luggage compartment door opens when LUGGAGE OPEN switch is pressed once 2 TIMES: Luggage compartment door opens when LUGGAGE OPEN switch is pressed twice 0.8 s PR: Luggage compartment door opens when LUGGAGE OPEN switch is pressed and held down for 0.8 seconds OFF: Not operating	-

SMART (Certification ECU):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
ALARM FUNCTION	Panic function / ON or OFF	ON: Operating OFF: Not operating	-

2. ACTIVE TEST

HINT:

Performing the intelligent tester ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to shorten the diagnostic time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester (with CAN VIM) to the DLC3.
(b) Turn the power switch on (READY).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / MAIN BODY or SMART / ACTIVE TEST.

(d) Perform the ACTIVE TEST according to the display on the tester.

MAIN BODY (Main body ECU):

Tester Display	Test Part	Control Range	Diagnostic Note
HAZARD	Turns the turn signal flasher relay	ON/OFF	Observe headlight and rear combination light for correct operation
VEHICLE HORN	Vehicle horn	ON/OFF	-
TRUNK/BDOR OPEN	Turns luggage compartment door opener motor	ON/OFF	Observe luggage compartment door

SMART (Certification ECU):

Tester Display	Test Part	Control Range	Diagnostic Note
WIRELESS BUZZER	Wireless door lock buzzer	ON/OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If a trouble code is indicated during the DTC check, check the circuit listed for that code in the table below. Then proceed to the appropriate page.

WIRELESS DOOR LOCK CONTROL SYSTEM:

DTC Code	Detection Item	Trouble Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	1. Door control receiver 2. Wire harness 3. Certification ECU	DL-80

DTC	B1242	Wireless Door Lock Tuner Circuit Malfunction

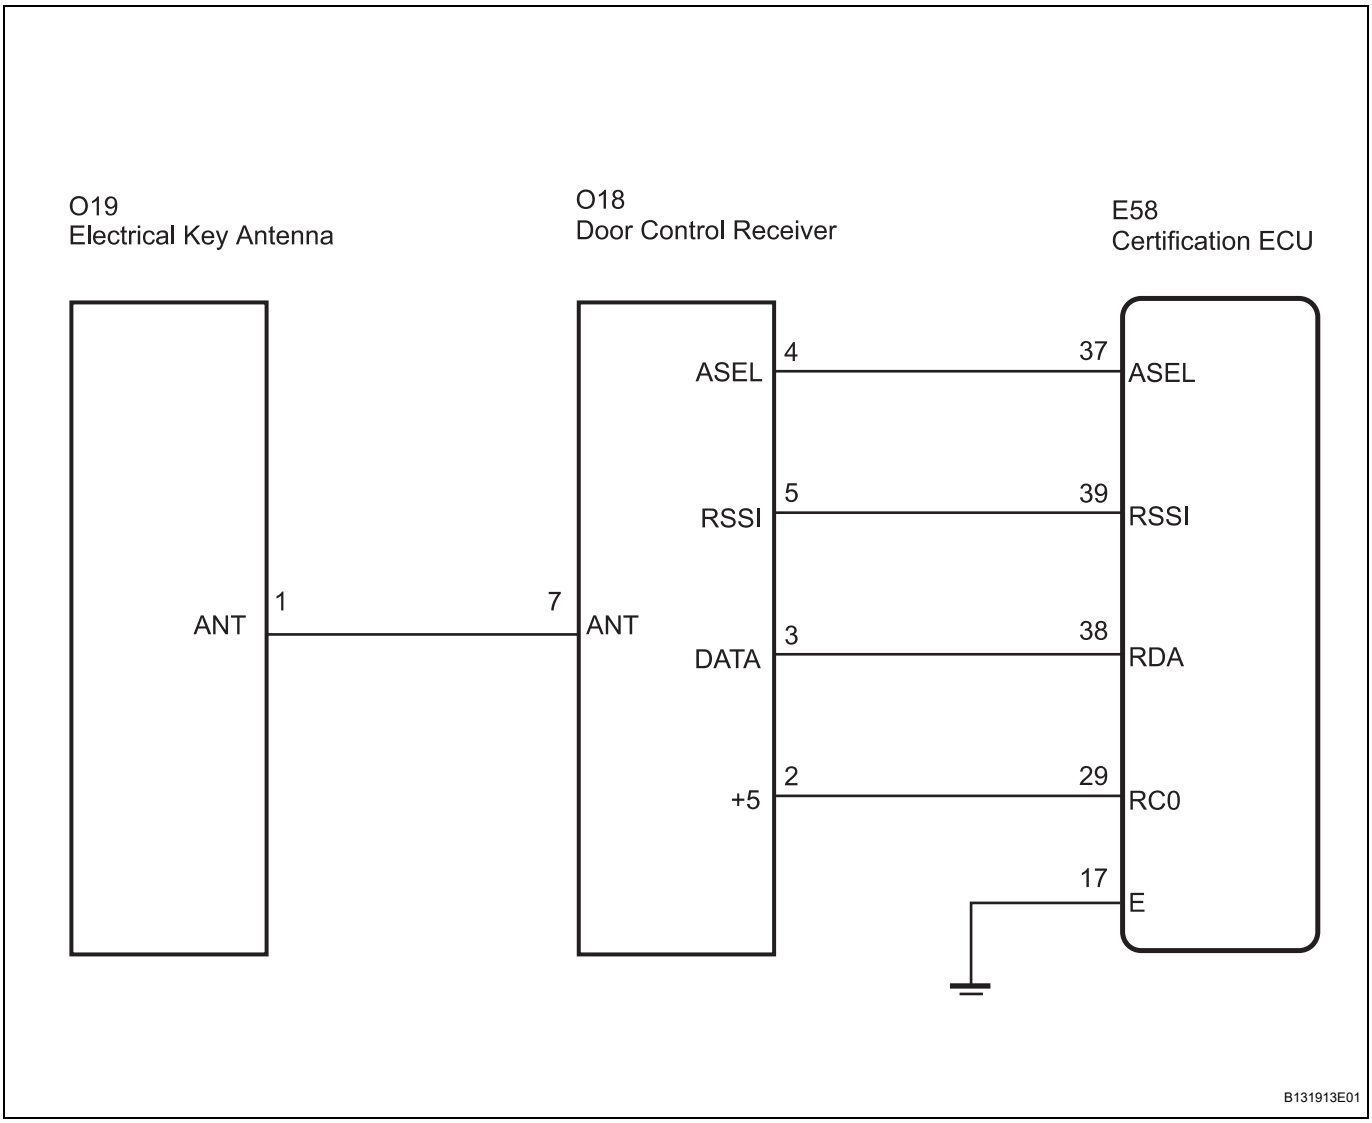
DESCRIPTION

- The electrical key antenna is used to receive electric waves relating to the entry functions of the smart access system with push-button start. The certification ECU decodes the requested smart access system with push-button start operation by identifying a key code based on electric waves received via the electrical key antenna and the door control receiver.
- The door control receiver receives a signal from the wireless door control transmitter and sends signals to the main body ECU through the certification ECU.
- The certification ECU then sends a command to each ECU according to the requested operation. (e.g. If door lock operation is requested, the ECU sends a door lock command to the main body ECU.)

DTC No.	DTC Detection Condition	Trouble Area
B1242	The certification ECU detects that there is a short in the circuit between terminals RSSI, or between terminals DATA and RDA.	• Door Control Receiver • Wire harness • Certification ECU

DL

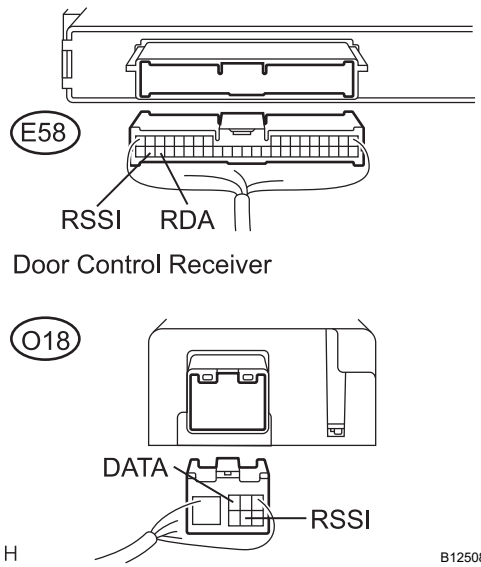
WIRING DIAGRAM



INSPECTION PROCEDURE

1 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)

Connector Wire Harness View:



(a) Disconnect the E58 certification ECU connector and O18 door control receiver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

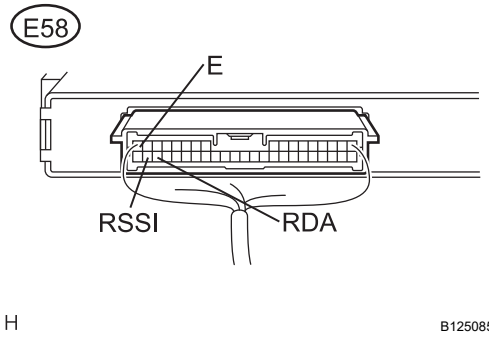
Symbol (Tester Connection)	Condition	Specified Condition
RSSI (E58-39) - RSSI (O18-5)	Always	Below 1 Ω
RDA (E58-38) - DATA (O18-3)	Always	Below 1 Ω
RSSI (E58-39) - RDA (E58-38)	Always	10 kΩ or higher
RSSI (E58-39) - Body ground	Always	10 kΩ or higher
RDA (E58-38) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2 INSPECT CERTIFICATION ECU

Connector Wire Harness View:



(a) Reconnect the E58 ECU connector.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage

Symbol (Tester Connection)	Condition	Specified Condition
RSSI (E58-39) - E (E58-17)	Power switch OFF, all doors closed, the electrical key is not in the actuation area	Below 1 V
	Power switch OFF, all doors closed, the electrical key is in the actuation area	4.6 to 5.4 V
RDA (E58-38) - E (E58-17)	Power switch OFF, all doors closed and transmitter switch not pressed	Below 1 V
	Power switch OFF, all doors closed and transmitter switch pressed	4.6 to 5.4 V

NG → **REPLACE CERTIFICATION ECU**

OK

3	REPLACE DOOR CONTROL RECEIVER

(a) Replace the door control receiver with a normal one.
(b) Perform the registration procedure.
OK:
The system returns to normal operation.

NG → **REPLACE CERTIFICATION ECU**

OK

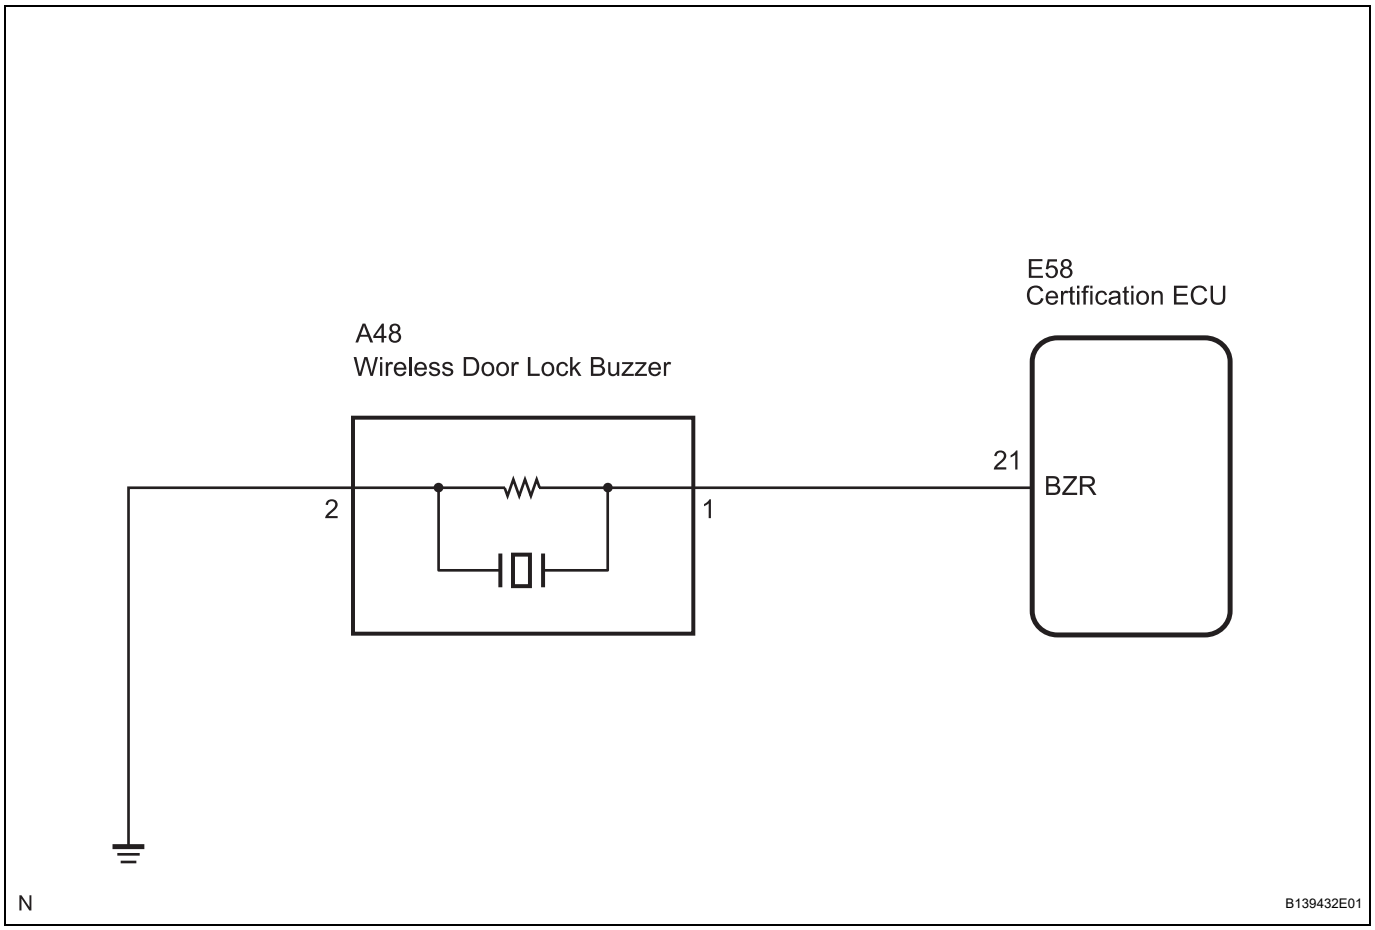
DL **END**

Wireless Door Lock Buzzer Circuit

DESCRIPTION

The certification ECU activates the wireless door lock buzzer when detecting a lock/unlock signal from the door control transmitter.

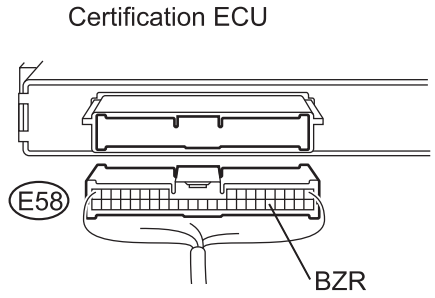
WIRING DIAGRAM



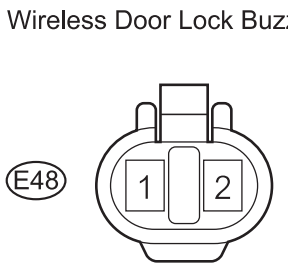
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - WIRELESS DOOR LOCK BUZZER - BODY GROUND)

Connector Wire Harness View:



Wire Harness Side Connector Front View:



B150399E02

(a) Disconnect the E58 certification ECU connector and A48 wireless door lock buzzer connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

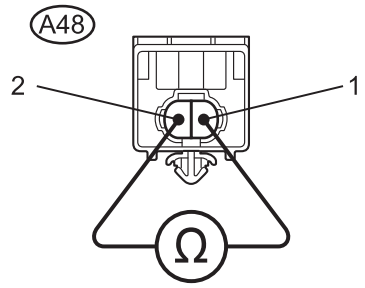
Symbol (Tester Connection)	Condition	Specified Condition
BZR (E58-21) - A48-1	Always	Below 1 Ω
BZR (E58-21) - Body ground	Always	10 kΩ or higher
A48-2 - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT WIRELESS DOOR LOCK BUZZER

Wireless Door Lock Buzzer:



N B144393E01

(a) Measure the resistance according to the value(s) in the table below.
HINT:
The buzzer activation circuit is built into the ECU, not into the buzzer itself. When battery voltage is applied directly to the buzzer, the buzzer will not sound.

Standard resistance

Tester Connection	Condition	Specified Condition
A48-1 - A48-2	Always	Approx. 1 kΩ

NG → **REPLACE WIRELESS DOOR LOCK BUZZER**

OK

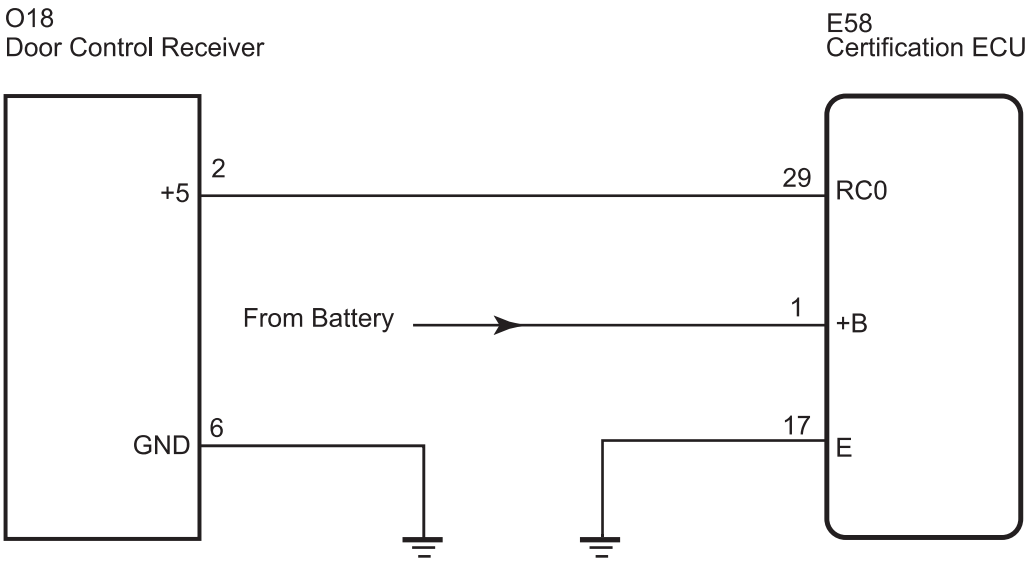
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Power Source Circuit

DESCRIPTION

The certification ECU provides power for the door control receiver operation.

WIRING DIAGRAM

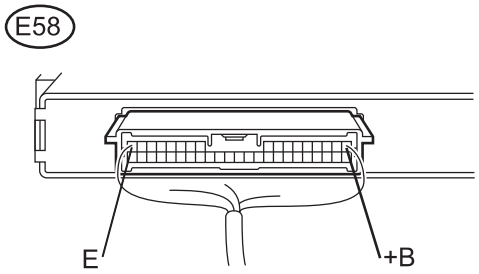


INSPECTION PROCEDURE

1	INSPECT CERTIFICATION ECU (+B TERMINAL)

Connector Wire Harness View:

Certification ECU



(a) Measure the voltage according to the value(s) in the table below.

Standard voltage

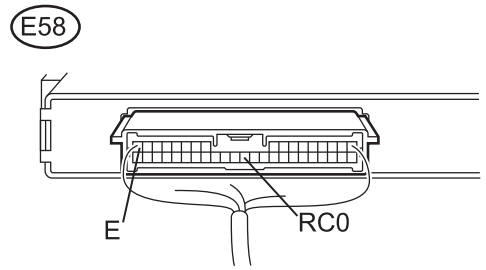
Symbol (Tester Connection)	Condition	Specified Condition
+B (E58-1) - E (E58-17)	Always	10 to 14 V

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	INSPECT CERTIFICATION ECU (RC0 TERMINAL)

Connector Wire Harness View:



(a) Measure the voltage according to value(s) in the table below.

Standard voltage

Symbol (Tester Connection)	Condition	Specified Condition
RC0 (E58-29) - E (E58-17)	Power switch off, all doors closed and transmitter switch not pressed	Below 1 V
	Power switch off, all doors closed and transmitter switch pressed	4.6 to 5.4 V

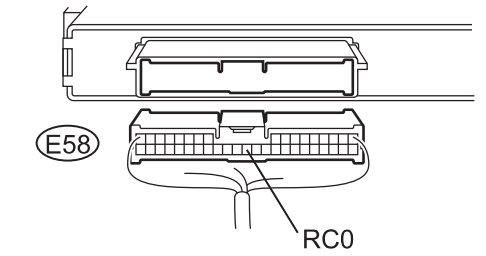
DL

OK → **Go to step 4**

NG

3	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - BATTERY - BODY GROUND)

Connector Wire Harness Side:



(a) Disconnect the E58 certification ECU connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

Standard resistance

Symbol (Tester Connection)	Condition	Specified Condition
RC0 (E58-29) - Body ground	Always	Below 1 V
	Always	10 kΩ or higher

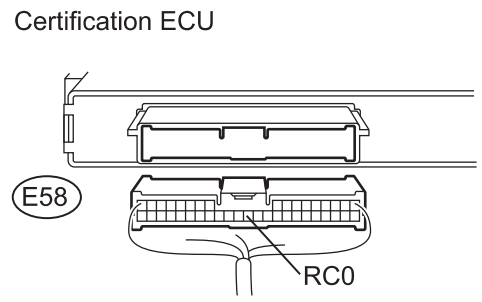
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

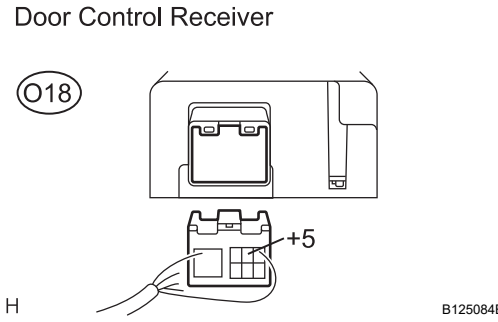
OK

REPLACE CERTIFICATION ECU

4	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)

Connector Wire Harness View:





(a) Disconnect the O18 door control receiver connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

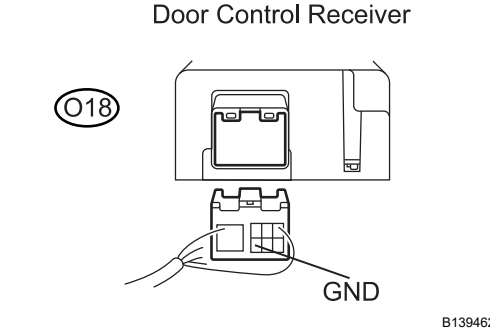
Symbol (Tester Connection)	Condition	Specified Condition
RC0 (E58-29) - +5 (O18-2)	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

5	CHECK HARNESS AND CONNECTOR (BODY GROUND)

Connector Wire Harness View:



(a) Measure the resistance according to the value(s) in the table below.

Standard resistance

Symbol (Tester Connection)	Condition	Specified Condition
GND (O18-6) - Body ground	Always	Below 1 Ω

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

Transmitting ECU (Transmitter)	Receiving ECU	Signals	Communication method
Main body ECU	Certification ECU	Shift position P signal	LIN
		HV control system on (READY) status signal	
		ACC relay operating status signal	
		IG relay operating status signal	
Main body ECU	Steering lock ECU	Steering lock relay power supply status signal	LIN
Steering lock ECU	• Certification ECU • Main body ECU	Steering lock catching malfunction signal	LIN
		Push button start malfunction signal	

SYSTEM DESCRIPTION

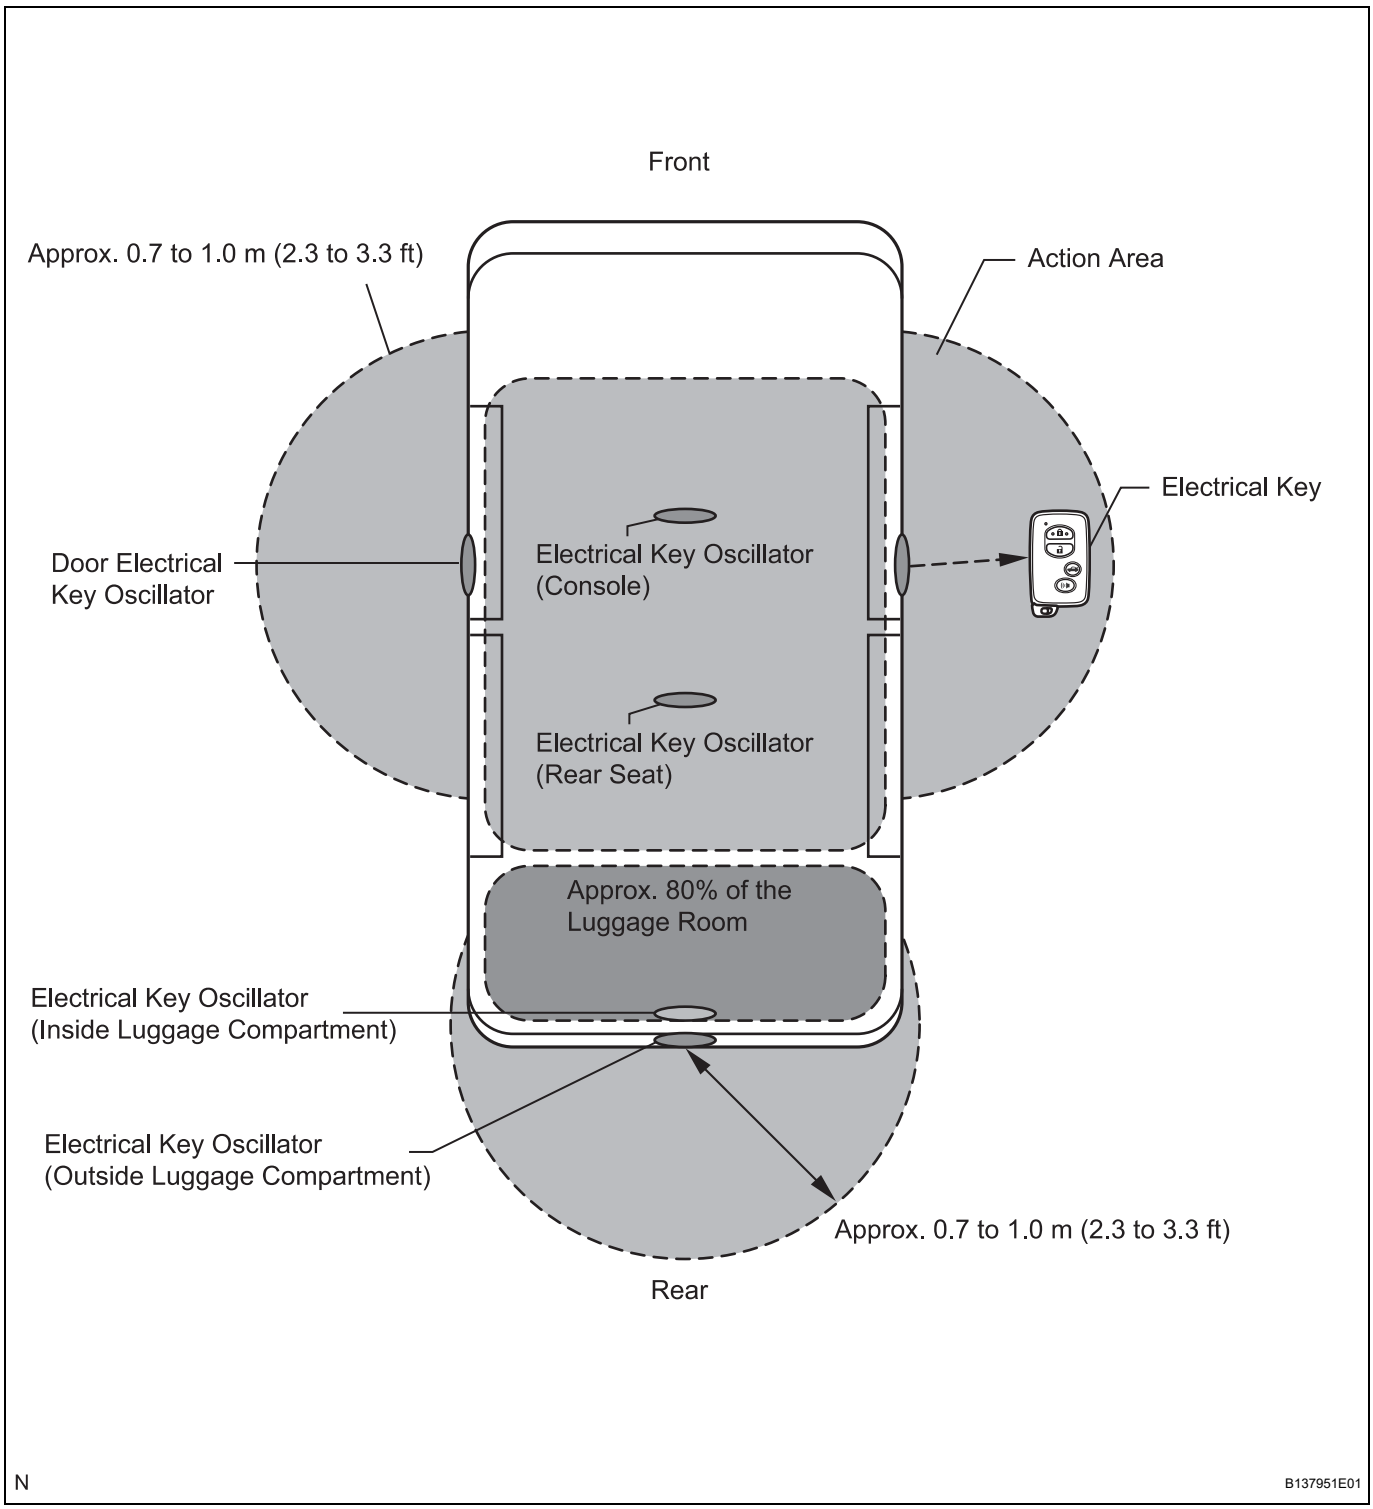
CAUTION:
If using a pacemaker, be sure to read the manual of the pacemaker before using the electrical key because the radio waves of the electrical key may affect the pacemaker.

1. SMART KEY SYSTEM DESCRIPTION

(a) In addition to conventional mechanical key and wireless door lock control functions, the smart key system enables door locking/unlocking, steering lock releasing, and luggage compartment door opening without operating the electrical key. The only requirement is that the electrical key is in the user's possession.

- This system is controlled by the certification ECU. When the certification ECU detects the presence of an electrical key in one of the detection areas, it identifies and checks the ID code, and outputs operation signals to the related ECU in accordance with their functions.
- The detection areas are formed by 6 oscillators (2 door oscillators, 2 luggage compartment oscillators, and 2 cabin oscillators).

2. DETECTION AREA



(a) Precautions for the entire system:
- Be sure to carry the electrical key during inspection of the smart key system.
- As weak radio waves are used to detect the electrical key, the electrical key detection area may decrease, or the electrical key may not be detected correctly in the following situations:
  (a) The electrical key battery is depleted.

(b) Any facilities that generate strong radio waves, such as a TV tower, power plant, broadcast station, or gas station, are located near the inspection site.
(c) A wireless device, such as a cellular phone, is carried with the electrical key.
(d) The electrical key is in contact with or covered with metal.
(e) Another wireless door lock control function is operated near the vehicle.
(f) The electrical key is located near a device that generates high voltage or noise.

- The electrical key may be difficult to operate for a reason relating to the vehicle body shape.
- The electrical key may not be detected correctly if it is around the vehicle's windows, the door handle, or the center of the bumper even when it is in the detection area outside the vehicle.
- The electrical key may not be detected correctly if it is on the instrument panel, auxiliary box of the driver's side instrument panel, rear package tray, floor, or in the glove box even when it is in the detection area inside the vehicle.
- The HV control system cannot be on (READY) even when the electrical key is in the detection area inside the luggage compartment.
- The electrical key may not operate if the electrical key is not held properly.
- The smart key system does not operate in the following conditions:
  (a) The smart key system is canceled.
  (b) The electrical key battery is completely depleted (the indicator does not blink when pushing any of the buttons on the electrical key).

3. FUNCTION OF MAIN COMPONENTS

Component	Function
Electrical Key	Consists of mechanical key, transmitter for wireless door lock control, and transceiver for smart key system
Certification ECU	Controls smart key system in accordance with signals from each oscillator, various switches, ECUs, and electrical key • Judges and certifies ID code from entry door control receiver • Transmits Power immobiliser unset signal to ID code box • Transmits steering unlock signals to steering lock ECU
Main Body ECU (Instrument Panel J/B)	Controls push button start function in accordance with signals from various switches, ECUs, and combination meter • Transmits electrical key verification request signal to certification ECU in accordance with power switch signal, and turns relays ON and OFF • Receives request signal from certification ECU and actuates door lock motor to unlock or lock door • Transmits each door condition signal to certification ECU
ID Code ECU	Receives steering unlock or Power immobiliser unset signals from certification ECU, certifies them, and transmits unset signals to steering lock ECU or HV control ECU
Outside Door Handle (driver and front passenger doors) (touch sensor)	Detects that person touches inside of outside handle

Component	Function
Outside Door Handle (driver and front passenger doors) (lock switch)	Transmits door lock request signals to certification ECU
Door Electrical Key Oscillator (driver and passenger doors)	Receives request signal from certification ECU, and forms detection area around front door
Indoor Electrical Key Oscillator (console and rear seat)	Receives request signal from certification ECU, and forms detection area in vehicle interior
Luggage Compartment Electrical Key Oscillator (inner)	Receives request signal from certification ECU, and forms detection area in luggage compartment
Luggage Compartment Electrical Key Oscillator (outer)	Receives request signal from certification ECU, and forms detection area around luggage compartment door
Door Control Receiver	• Receives ID code from electrical key in detection area and transmits it to certification ECU • Receives ID code from electrical key in luggage compartment and transmits it to certification ECU
Electrical Key Antenna	Receives ID code from electrical key and transmits it to entry door control receiver
Luggage Compartment Opener Switch	Transmits luggage compartment door open request signal to certification ECU
Stop Light Switch	Outputs state of brake pedal to main body ECU
Wireless Door Lock Buzzer • Combination Meter – Multi-information Display – Buzzer	When certification ECU detects human errors such as those below, it warns driver by sounding wireless door lock buzzer, displaying information and sounding a buzzer in combination meter in accordance with request signal from ECU Example: • Electrical key is taken out of vehicle • Driver leaves vehicle while Power is still running • Driver leaves vehicle while shift lever is in any position other than P

DL

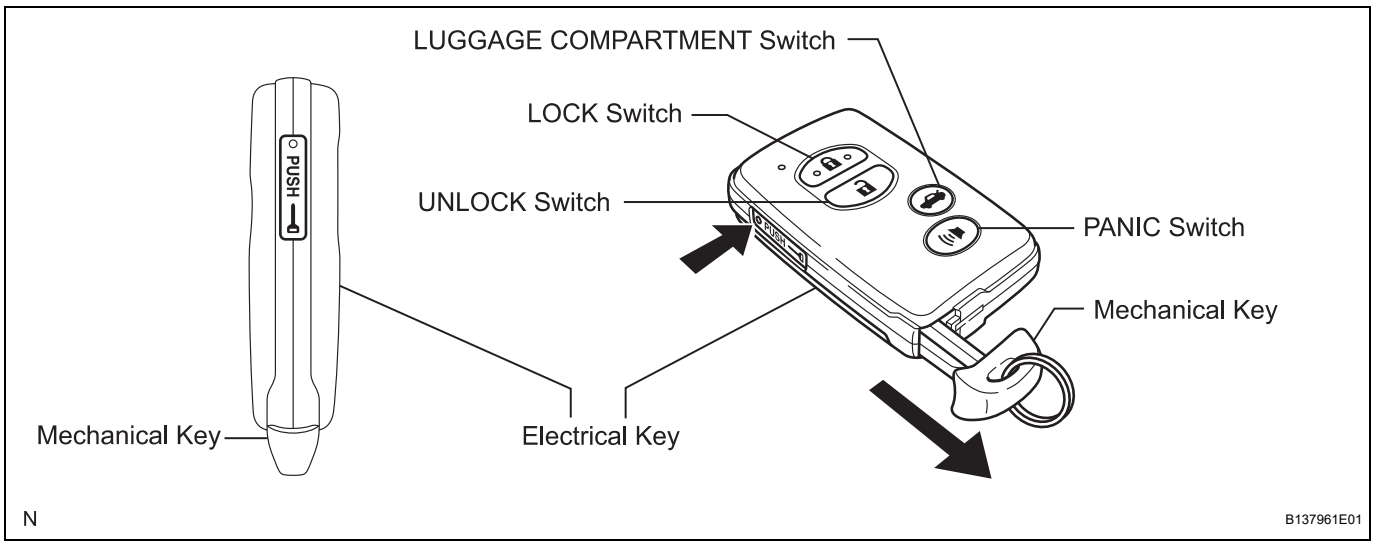
4. CONSTRUCTION AND OPERATION

(a) Electrical Key

The electrical key consists of a mechanical key, a transmitter for the wireless door lock control, and a transceiver for the smart key system.

- The transceiver for the smart key system receives signals from the oscillators and sends the ID code to the tuner.
- The transmitter for the wireless door lock control has a LOCK switch, UNLOCK switch, LUGGAGE COMPARTMENT switch, and PANIC switch.
- This mechanical key works for the driver door, luggage compartment door, and glove box, but cannot start the HV control system.

A total of 7 electrical keys can be registered.



(b) Oscillator (front door oscillator, front and rear oscillator, luggage compartment inner oscillator, luggage compartment outer oscillator)
Each oscillator transmits the request signal received from the certification ECU, and forms an electrical key detection area to detect the presence of an electrical key. The detection area formed by front door oscillator and luggage compartment outer oscillator is approximately 0.7 to 1.0 m (2.3 to 3.3 ft) from the outside handle of front door or the center of the rear bumper.

- The detection area of front door oscillator is formed by transmitting a request signal every 0.25 seconds while the power switch is off and each door is locked. In this way, it detects the proximity of an electrical key. During entry lock, the detection area is formed with the lock switch on.
- The detection area of the luggage compartment outer oscillator is formed when the power luggage door open switch is on.
- The detection area of the indoor oscillator (front and rear) is formed when the driver door is opened or closed entry luggage compartment open, electrical key lock-in prevention, while HV control system is on (READY), when a warning is activated, or when the lock switch is on.
- The detection area of the luggage compartment inner oscillator is formed when the luggage compartment door is closed, entry luggage compartment open, electrical key lock-in prevention the luggage compartment open switch is pressed.

5. ENTRY FUNCTION OPERATION

(a) The smart key system has the following functions:

Function	Outline
Mechanical Key	Operation is same as conventional mechanical key.
Wireless Door Lock Control	This function remotely locks and unlocks all doors or luggage compartment. Operation is same as wireless door lock control system. However, receiver in certification ECU uses entry door control receiver to control locking and unlocking.
Entry Illumination	When person carrying electrical key enters detection area, door will enter unlock standby mode and front map light will illuminate.
Entry Unlock	When electrical key is located in detection area of door oscillator, door will unlock by touching inside of outside door handle.
Entry Unlock Mode Switching (See page DL-118)	Changes doors that can be unlocked with entry unlock function between 2 modes. • Driver door mode • All door mode
Entry Lock	When electrical key is located in detection area of door oscillator and power switch is off, door can be locked by pressing lock switch on outside door handle.
Entry Luggage Compartment Open	When electrical key is in detection area of luggage compartment outer oscillator, luggage compartment opens by pressing luggage compartment open switch.
Window Close	With the electrical key in the actuation area of any door oscillators, all open windows are closed when the lock switch on the door outside handle is pressed for 3 seconds or more.
Electrical Key Lock-in Prevention	• Prevents confinement of electrical key if door is locked using outside door handle while electrical key is still inside vehicle. • If all doors are locked and luggage compartment door is closed while electrical key is still in luggage compartment, warning buzzer sounds. If luggage compartment open switch is operated, luggage compartment door can be opened.
Warning	When any of situations below occur, smart key system causes certification ECU to sound buzzer in combination meter and wireless door lock buzzer, and display information in order to alert driver. • Exit warning if shift lever position is not P and power source mode is not off. • Exit warning if shift lever position is P and power source mode is not off. • Warning if occupant leaves with electrical key. • Warning if power switch is operated while electrical key is outside actuation area. • Warning if entry lock is operated while electrical key is inside cabin. • Warning if electrical key battery is weak. • The electrical key is left in the vehicle. • A door is ajar. • The electrical key is left in the luggage compartment. • Steering lock does not release. • The steering lock mechanism is malfunctioning. • The main body ECU is malfunctioning. • An Power start method is displayed.
Battery Saving	If electrical key is constantly located within actuation area of door oscillator, system maintains periodic communication with electrical key. Therefore, if vehicle remains parked in that state for a long time, electrical key battery and vehicle battery could be drained.
Key Cancel (See page DL-118)	Following electrical key functions can be cancelled by performing certain operations: • Entry Unlock/Lock • Entry Luggage Compartment Open • Electrical key Lock-in Prevention • Warning
Electrical Key Code Registration	The total number of electrical keys that can be registered is seven. Enables the registration (writing and storing) of transmitter recognition codes in the EEPROM that is contained in the certification ECU.

6. **WIRELESS DOOR LOCK AND UNLOCK AND LUGGAGE COMPARTMENT OPEN FUNCTION**
Push the LOCK/UNLOCK/PANIC/LUGGAGE COMPARTMENT switch on the electrical key to operate each function. For details, (See page DL-68).

7. **ENTRY UNLOCK FUNCTION**
   (a) The detection area is formed by communication between a door oscillator and door control receiver when the door is locked in order to detect access of the person carrying the electrical key.
   (b) When the person carrying the electrical key enters the detection area around the vehicle, the matching of the ID codes for a door oscillator and electrical key will automatically be performed. After the matching is completed, the door will enter unlock standby mode.
   (c) In unlock standby mode, the antenna built into the outside handle starts sensing. If the outside handle is held (the back side of the handle is touched), the door unlock operation will be performed. At this time, the hazard warning light blinks twice and the wireless door lock buzzer sounds twice.
   (d) If any of the doors are not opened after a door unlock operation, all doors will automatically lock after 60 seconds.

8. **ENTRY LOCK FUNCTION**
   (a) After leaving the vehicle carrying the electrical key, push the lock switch on the outside handle when all the doors are closed.
   (b) The certification ECU determines whether the electrical key is located inside or outside of the cabin based on the information from a door oscillator and room oscillator. Then matching of the ID codes is performed.
   (c) When the matching result shows that the ID codes of the electrical key and indoor antenna do not match and the ID codes of the electrical key and door oscillator match, the door lock function will operate. At this time, the hazard warning lights blink once and the wireless door lock buzzer sounds once.
   (d) If the electrical key is located inside of the cabin, the door lock function will not operate and the alarm buzzer (beep sound) will sound for 2 seconds.

9. **ENTRY LUGGAGE COMPARTMENT OPEN FUNCTION**
Stand in front of the luggage compartment with the electrical key and push the power luggage compartment opener switch to start the matching of the ID codes for the electrical key oscillator (outside luggage compartment). If the ID codes match, luggage compartment door open operation will be performed.

10. PREVENTION OF ELECTRICAL KEY CONFINEMENT FUNCTION

(a) If you attempt to lock the door through keyless operation (move the lock knob to the lock position and then close the door) with the electrical key in the cabin, the system determines that the electrical key is located in the cabin and unlocks the door.

(b) If the luggage compartment is closed with the electrical key in it, the alarm will sound and the luggage compartment can be opened only when all the doors are locked in order to prevent electrical key confinement in the vehicle.

11. ENTRY ILLUMINATION FUNCTION

When a person carrying the electrical key enters the detection area, the door will enter unlock standby mode and the front map light will illuminate.

HINT:

The entry illumination function operates when the electrical key enters the vehicle exterior detection area from out of the detection area. If the electrical key remains in the detection area for 3 seconds or more, the illumination function does not operate.

12. WARNING FUNCTION

(a) General

When any of the situations below occur, the smart key system causes the certification ECU to sound the buzzer in the combination meter and the wireless door lock buzzer, and illuminate the combination meter's multi-information display in order to alert the driver.

Warning Function Operation Condition	Situation
Exit warning if shift lever position is not P and power source mode is not off.	A
Exit warning if shift lever position is P and power source mode is not off.	B
Warning if occupant leaves with electrical key.	C
Warning if power switch is operated while electrical key is outside detection area.	D
Warning if entry lock is operated while electrical key is inside cabin.	E
Warning if electrical key battery is weak.	F
The electrical key is left in the vehicle.	G
A door is ajar.	H
The electrical key is left in the luggage compartment.	I
Steering lock does not release.	J
The steering lock mechanism is malfunctioning.	K
The main body ECU is malfunctioning.	L
An Power start method is displayed.	M

(b) Situation A

There are 2 patterns for situation A.

Pattern 1: In situation A, the door is opened and the user tries to leave the vehicle.

Pattern 2: Then the user holds the electrical key and tries to move away from the vehicle.

In these situations, the following control is performed:

- Pattern 1

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Shift lever position is not P • Power switch is not off • Driver side door is opened • Vehicle speed is 5 km/h (3.1 mph)
Combination Meter • Buzzer	Warning: Continuous sound Warning is stopped when one of following conditions is met: • Power switch is off • Shift lever position is P • Driver side door is opened • Vehicle speed is above 5 km/h (3.1 mph)
Combination Meter • Multi-information Display	Warning: Information below is displayed alternately on combination meter: • "SHIFT TO P RANGE" Warning is stopped when one of following conditions is met: • Power switch is off • Shift lever position is P • Driver side door is opened • Vehicle speed is above 5 km/h (3.1 mph)
Wireless Door Lock Buzzer	-

- Pattern 2

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Shift lever position is not P • Power switch is not off • Driver side door is opened and closed • Vehicle speed is 0 km/h (0 mph) • Electrical key is not in cabin or luggage compartment
Combination Meter • Buzzer	Warning: Continuous sound Warning is stopped when one of following conditions is met: • Power switch is off • Shift lever position is P • Electrical key is in cabin or luggage compartment • Vehicle speed is above 0 km/h (0 mph)
Combination Meter • Multi-information Display	Warning: Information below is displayed alternately on combination meter: • "SHIFT TO P RANGE" • "KEY IS NOT DETECTED" "Key is not detected" warning is stopped when either of following conditions is met: • Power switch is off • Electrical key is in cabin "Shift to P range" warning is stopped when one or following conditions is met: • Power switch is off • Vehicle speed is above 0 km/h (0 mph) • Shift lever position is P

DL

Possible Effects without Warning	Sudden vehicle start, vehicle theft, vehicle roll-away
Wireless Door Lock Buzzer	Warning: Continuous sound Warning is stopped when one of following conditions is met: • Power switch is off • Shift lever position is P • Electrical key is in cabin or luggage compartment • Vehicle speed is above 0 km/h (0 mph)

(c) Situation B

There are 2 patterns for situation B.

Pattern 1: In situation B, the door is opened and the user tries to leave the vehicle.

Then the user holds the electrical key and tries to move away from the vehicle.

Pattern 2: Then the user tries to use the entry lock and presses the lock switch.

In these situations, the following control is performed:

• Pattern 1

Possible Effects without Warning	Vehicle theft, Power cannot be restarted
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Shift lever position is P • Power switch is not off • Driver side door is opened and closed • Electrical key is not in cabin or luggage compartment
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Multi-information Display	Warning: Information below is displayed on combination meter: • "KEY IS NOT DETECTED" Warning is stopped when either of following conditions is met: • Power switch is off • Electrical key is in cabin or luggage compartment
Wireless Door Lock Buzzer	Warning: Sounds 3 times Warning is stopped when either of following conditions is met: • Power switch is off • Electrical key is in cabin or luggage compartment

• Pattern 2

Possible Effects without Warning	Vehicle theft
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Shift lever position is P • Power switch is not off • All doors are closed • Lock switch is "ON" • Electrical key is not in cabin or luggage compartment
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	-
Wireless Door Lock Buzzer	Warning: Sounds for 2 seconds

(d) Situation C
In this situation, the following control is performed:

Possible Effects without Warning	Power cannot be restarted
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Power switch is not off • Door other than driver side door is opened and closed • Vehicle speed is 0 km/h (0 mph) • Electrical key is not in cabin or luggage compartment
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Multi-information Display	Warning: Information below is displayed on combination meter: • "KEY IS NOT DETECTED" Warning is stopped when one of following conditions is met: • Power switch is off • Vehicle speed is above 0 km/h (0 mph) • Electrical key is in cabin or luggage compartment
Wireless Door Lock Buzzer	Warning: Sounds 3 times Warning is stopped when one of following conditions is met: • Power switch is off • Vehicle speed is above 0 km/h (0 mph) • Electrical key is in cabin or luggage compartment

(e) Situation D
In this situation, the following control is performed:

Possible Effects without Warning	Confuses the user
Warning Condition	Certification ECU gives warning when both following conditions are satisfied: • Power switch is not off • Electrical key is not in cabin
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Multi-information Display	Warning: Information below is displayed on combination meter for 8 seconds (disappears after 8 seconds): • "KEY IS NOT DETECTED"
Wireless Door Lock Buzzer	-

(f) Situation E
In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Power switch is off • All doors are closed • Lock switch is "ON" • Electrical key is in cabin or luggage compartment
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	-
Wireless Door Lock Buzzer	Warning: Sounds for 2 seconds

(g) Situation F
In this situation, the following control is performed:

Possible Effects without Warning	Smart key system does not function
Warning Condition	Certification ECU gives warning when all following conditions are satisfied: • Power switch is turned off after being left on (IG) for over 20 minutes • Electrical key battery voltage is low • Electrical key is in cabin or luggage compartment
Combination Meter • Buzzer	Warning: Sounds once
Combination Meter • Multi-information Display	Information below is displayed on combination meter: • "LOW KEY BATTERY"
Wireless Door Lock Buzzer	-

(h) Situation: G
There are two patterns for situation G:
Pattern 1: When the driver's door is open, the driver changes the power source mode to ACC and attempts to leave the vehicle.
Pattern 2: When the driver's door is open, the driver changes the power source mode from ON to OFF and attempts to leave the vehicle. In these situations, the following control is performed:
• Pattern 1. and Pattern 2.

Possible Effects without Warning	Vehicle theft
Warning Condition	The warning is activated when one of the following conditions is met: • Power switch is on (ACC) and the driver door is opened • Power switch is off, the steering is unlocked, and the driver door is opened
Combination Meter • Buzzer	Continues to sound at short and even intervals
Combination Meter • Multi-information Display	-
Wireless Door Lock Buzzer	-
Power Switch Indicator Light	-
Warning Stop Condition	Warning is stopped when one of the following conditions is met: • Power switch is not off • Driver side door is closed • Power switch is off and the steering is locked

(i) Situation: H
The lock switch on the door outside handle is pressed to perform entry lock with a door open.
In this situation, the following control is performed:

Possible Effects without Warning	Vehicle theft
Warning Condition	The warning is activated when all of the following conditions are met: • Power switch is off • Any doors are opened • Entry lock button on the outer door handle is operated
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	-
Wireless Door Lock Buzzer	Warning: Continuous sound
Power Switch Indicator Light	-

Possible Effects without Warning	Vehicle theft
Warning Stop Condition	Warning is stopped when one of the following conditions is met: • Power switch is off • All doors are closed • Wireless door lock remote function is unlocked • Entry unlock is operated • 10 seconds have elapsed since the wireless door lock buzzer was activated

(j) Situation: I
The luggage compartment door is closed with the electrical key left in the luggage compartment.
In this situation, the following control is performed:

Possible Effects without Warning	Key Confinement
Warning Condition	The warning is activated when all of the following conditions are met: • Vehicle speed is 5 mph (3.1 km/h) • All doors are closed • Entry luggage compartment open function is available
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	-
Wireless Door Lock Buzzer	Sounds for 2 seconds
Warning Stop Condition	The luggage compartment is opened using the entry luggage compartment open function and the electrical key is removed from the luggage compartment

(k) Situation: J
Steering lock cannot be released. In this situation, the following control is performed.:

Possible Effects without Warning	Steering usability function
Warning Condition	The steering lock cannot be released, thus the HV control system is prevented from on (READY)
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	Warning Information below is displayed alternately on combination meter: Displayed for 15 seconds (and then automatically turned off) "S/T IS NOT UNLOCED"
Wireless Door Lock Buzzer	-
Power Switch Indicator Light	The green indicator blinks at 1-second intervals (goes off automatically in 15 seconds)
Warning Stop Condition	The power switch is pressed while the steering wheel is turned left and right, and the steering lock successfully disengages

(l) Situation: K
A malfunction of the steering lock ECU is detected.
In this situation, the following control is performed:

Possible Effects without Warning	Malfunction detection
Warning Condition	A malfunction of the steering lock ECU is detected
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	Warning: Information below is displayed alternately on combination meter: "CHECK S/T OFF"
Combination Meter • Master Warning Light	Flash
Wireless Door Lock Buzzer	-
Power Switch Indicator Light	The amber indicator blinks at 2-second intervals

Possible Effects without Warning	Malfunction detection
Warning Stop Condition	The steering lock ECU returns to normal

(m) Situation: L
A malfunction of the main body ECU is detected.
In this situation, the following control is performed:

Possible Effects without Warning	Malfunction detection
Warning Condition	A malfunction in the main body ECU is detected
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	-
Combination Meter • Master Warning Light	-
Wireless Door Lock Buzzer	-
Power Switch Indicator Light	The amber indicator blinks at 2-second intervals
Warning Stop Condition	The main body ECU returns to normal

(n) Situation: M
A warning message appears on the meter when the driver does not follow the proper procedure to start the vehicle.
In this situation, the following control is performed:

Possible Effects without Warning	Usability function
Warning Condition	The warning is activated when all of the following conditions are met: • Power source is in a mode other than "ON" • Any doors are closed and opened • The power source is changed from OFF to ACC more than once with the Power off and brake pedal not depressed
Combination Meter • Buzzer	-
Combination Meter • Multi-information Display	Warning • Information below is displayed alternately on combination meter: "WHEN STARTING THE Power DEPRESS THE BRAKE PEDAL"
Combination Meter • Master Warning Light	-
Wireless Door Lock Buzzer	-
Power Switch Indicator Light	-
Warning Stop Condition	The warning is stopped when one of the following conditions is met: • 10 seconds have elapsed since a warning message was displayed • The Power switch is pushed with the brake pedal depressed

13. BATTERY SAVING

(a) Vehicle Battery Saving Function
In the smart key system, signals are emitted outside of the vehicle at a prescribed interval (0.25 seconds) when the doors are locked. Therefore, the vehicle battery could be drained if the vehicle remains parked for a long time. For this reason, the controls listed below are carried out:

Condition	Control
Both conditions below are met for 5 days: • Electrical key is not in detection area • Touch sensor or lock switch operation is not performed	Signal transmission interval is extended from 0.25 to 0.75 seconds
Both conditions below are met for 14 days: • Electrical key is not in detection area • Touch sensor or lock switch operation is not performed	Automatically deactivates the smart key system

Reinstatement Conditions
- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the electrical key and pushes a lock switch on an outside door handle.
- A door is locked or unlocked by the mechanical key.

(b) Electrical Key Battery and Vehicle Battery Saving Function

In the smart key system, if the electrical key is constantly located within the vehicle exterior detection area of the doors, the system maintains periodic communication with the electrical key. Therefore, if the vehicle remains parked in that state for a long time, the electrical key battery and the vehicle battery could be drained. For this reason, if this state continues longer than 10 minutes, the smart key system automatically becomes deactivated.

Reinstatement Conditions
- A wireless door lock control signal (lock, unlock) is input and the ID code matches.
- A user carries the electrical key and pushes a lock switch on an outside door handle.
- A door is locked or unlocked by the mechanical key.

HOW TO PROCEED WITH TROUBLESHOOTING

HINT:

- Use the following procedures to troubleshoot the smart key system.
- The intelligent tester can be used in steps 4, 5 and 7.
- When troubleshooting the smart key system using the intelligent tester with the power switch off, connect the intelligent tester to the vehicle and repeat turning any of the courtesy light switches on and off until communication between the tester and the vehicle begins (the interval between ON and OFF should be less than 1.5 sec.).

1	VEHICLE BROUGHT TO WORKSHOP

NEXT

2	CUSTOMER PROBLEM ANALYSIS CHECK

HINT:

- In troubleshooting, confirm that the problem symptoms have been accurately identified. Preconceptions should be discarded in order to make an accurate judgment. To clearly understand what the problem symptoms are, it is extremely important to ask the customer about the problem and the conditions at the time the malfunction occurred.
- Gather as much information as possible for reference. Past problems that seem unrelated may also help in some cases.
- The following 5 items are important points in the problem analysis:

What	Vehicle model, system name
When	Date, time, occurrence frequency
Where	Road conditions
Under what conditions?	Running conditions, driving conditions, weather conditions
How did it happen?	Problem symptoms

NEXT

3	INSPECT BATTERY VOLTAGE

Standard voltage:
11 to 14 V

If the voltage is below 11 V, recharge or replace the battery before proceeding to the next step.

NEXT

CUSTOMIZE PARAMETERS

1. CUSTOMIZING FUNCTION WITH INTELLIGENT TESTER

HINT:

The items in the table below can be customized.

NOTICE:

- **When the customer requests a change in a function, first make sure that the function can be customized.**
- **Be sure to make a note of the current setting before customizing.**
- **When troubleshooting a function, first make sure that the function is set to the default setting.**

SMART:

Display (Item)	Default	Contents	Setting
PARK WAIT TIME (Wait time to permit opening door after locking)	2.5s	Function that sets waiting time to permit opening door after door is locked with entry lock function.	0.5s / 1.5s / 2.5s / 5.0s
SMART UNLOCK	D_DOOR	Function that switches the entry unlock detection area.	ALL / D_DOOR
IGNITION AREA (SMART ignition available area)	ALL	Function to choose the available area for electrical key to start HV control system and cancel the steering lock.	FRONT / ALL
SMART TRUNK (Luggage compartment opening operation)	ON	Function to open a luggage compartment when the driver has the electrical key and presses the luggage open button.	ON / OFF

WIRELESS DOOR LOCK:

Display (Item)	Default	Contents	Setting
ALARM FUNCTION (Panic function)	ON	Function to operate the theft deterrent system by keeping pressing the lock button of the transmitter for 2.5 seconds. If there is a panic button, press the panic button instead of the lock button.	ON / OFF

WARNING:

Display (Item)	Default	Contents	Setting
KEY LOW-BATT WRN	ON	Function to set a warning function for the time when a key battery becomes weak.	ON / OFF

2. CUSTOMIZING FUNCTION WITHOUT INTELLIGENT TESTER (Entry Unlock Mode Switching Function)

(a) To change the vehicle to entry unlock mode switching function, make sure the vehicle power is off and simultaneously press and hold the electrical key's LOCK switch and another electrical key switch for 4.5 seconds.

When the switches are pressed and held for 4.5 seconds, the entry door unlock mode changes in the following order: driver door mode, all door mode.

NOTICE:

After pressing and holding the switches for 4.5 seconds, wait 4.5 seconds before performing the same procedure again.

- Driver door unlock mode:
  When the driver door's touch sensor is touched, only the driver door unlocks. When another touch sensor is touched, all doors unlock.

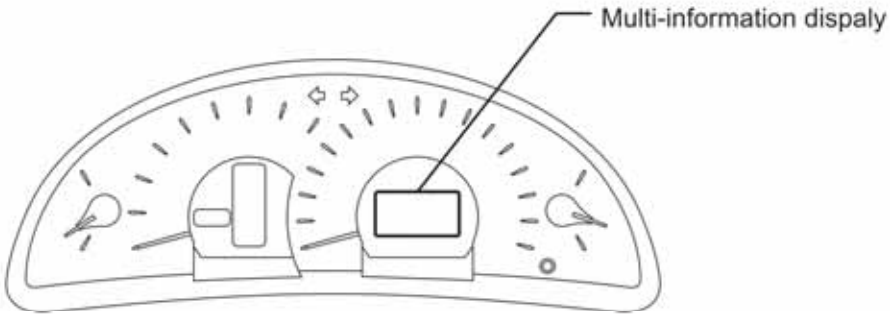
- All door unlock mode:
  When the touch sensor is touched, all doors unlock.

(b) The certification ECU receives this signal from the door control receiver and changes the smart key system to the entry unlock mode.

(c) The certification ECU sounds the buzzers of the wireless door lock buzzer and combination meter to inform the user that the mode has been switched.

DL

Mode	Wireless Door Lock Buzzer	Combination Meter		
		Multi-information Display		Buzzer
Driver Door (Default)	ON / OFF — Sounds 3 times	Displayed for 5 sec.	Passenger, rear LH and RH door "open" indication	Sounds once
All Doors (Customized)	ON / OFF — Sounds 2 times	Displayed for 5 sec.	All door "open" indication	Sounds once



N

B137954E01

HINT:
The function only changes the entry unlock mode of the smart key system. It does not switch the unlocking of the wireless door lock control.

3. CUSTOMIZING FUNCTION WITHOUT INTELLIGENT TESTER (Electrical Key Cancel)

The electrical key cancel operation disables the following functions:

- Entry Ignition (HV control system is on (READY))
- Entry Unlock/Lock
- Entry Luggage Compartment Open
- Electrical Key Lock-in Prevention
- Warning
- Memory Call

The operation procedures are as follows:

Precondition:

Power switch off, driver side door closed and unlocked.

(a) Unlock the driver side door once with the UNLOCK switch of the electrical key.

(b) Open the driver door within 5 seconds.

(c) Unlock the driver side door twice with the UNLOCK switch of the electrical key within 5 seconds.

(d) Repeat open → close twice for the driver door within 30 seconds, and open again.
(Driver door: Open → Close → Open → Close → Open)

(e) Unlock the driver side door twice with the UNLOCK switch of the electrical key within 5 seconds.

(f) Repeat open → close once for the driver door within 30 seconds, and open again.
(Driver door: Open → Close → Open)

(g) Close the driver door within 5 seconds.
When electrical key cancel is activated, the wireless door lock buzzer sounds twice.
To return to the original condition, perform the procedures again. When the original condition is returned, the wireless door lock buzzer sounds once.

PROBLEM SYMPTOMS TABLE

HINT:

- Use the table below to help determine the cause of the problem symptoms. The potential causes of the symptoms are listed in order of probability in the "Suspected area" column of the table. Check each symptom by checking the suspected areas in the order they are listed. Replace parts as necessary.
- Inspect the fuses and relays related to this system before inspecting the suspected areas below.

SMART KEY SYSTEM:

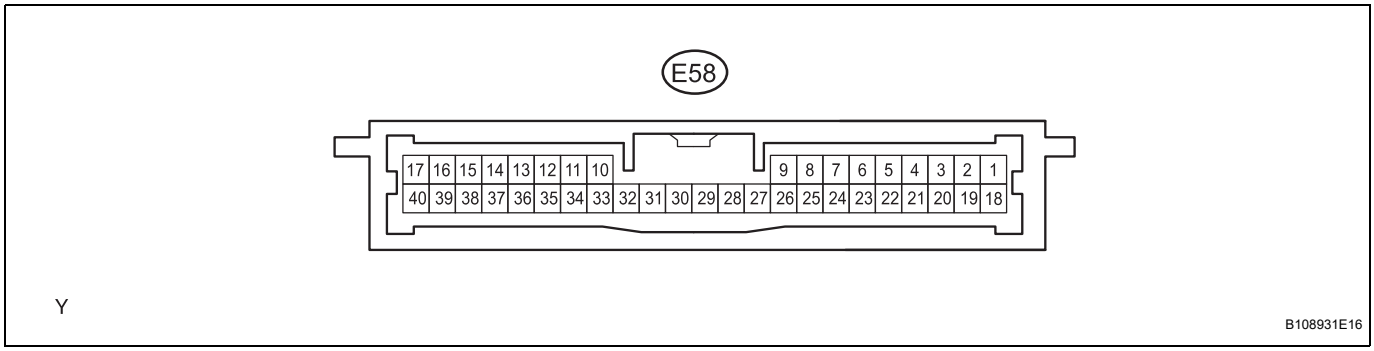
Symptom	Suspected Area	See page
Entry lock/unlock does not operate.	1. Check for DTCs in the smart key system (Starting function).	ST-23
	2. Refer to PROBLEM SYMPTOMS TABLE of the power door lock control system ("All doors cannot be locked/unlocked simultaneously by neither door control switch nor door key cylinder").	DL-11
	3. Courtesy light switch circuit	LI-41
	4. Lock position switch circuit	-
	- Driver door	DL-19
	- Front passenger door	DL-22
	- Rear passenger door LH	DL-25
	- Rear passenger door RH	DL-28
	5. Entry lock switch circuit	DL-147
	6. Touch sensor circuit	DL-151
	7. Antenna circuit	DL-154
	8. Refer to "ID code matching inside the cabin cannot be performed".	-
	9. Door oscillator circuit	DL-142
	10. Replace the main body ECU.	-
	11. Replace the certification ECU.	-
Luggage compartment does not open (when the electrical key is outside the vehicle).	1. Check for DTCs in the smart key system (Starting function).	ST-23
	2. Check if any function is cancelled due to customization.	DL-118
	3. Operate the luggage compartment opener switch on the electrical key to check the wireless function.	DL-68
	4. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("The wireless door lock control system does not operate").	DL-71
	5. Check operation of the cabin oscillator in active test.	DL-130
	6. Luggage oscillator circuit	DL-156
	7. Luggage compartment opener switch circuit	DL-162
	8. Replace the main body ECU.	-
	9. Replace the certification ECU.	-
All entry function does not operate.	1. Registration of the key.	EI-9
	2. Certification ECU power source circuit	DL-164
	3. Replace certification ECU.	-

Symptom	Suspected Area	See page
Function to prevent electrical key confinement in the luggage compartment does not operate. (The luggage compartment does not open.)	1. Check for DTCs in the smart key system (Starting function).	ST-23
	2. Power door lock control system	DL-11
	3. Courtesy light switch circuit	LI-41
	4. Lock position switch circuit	-
	- Driver door	DL-19
	- Front passenger door	DL-22
	- Rear passenger door LH	DL-25
	- Rear passenger door RH	DL-28
	5. Check if any function is not cancelled due to customization.	DL-118
	6. Operate the LOCK/UNLOCK switch on the key to check the wireless function.	DL-68
	7. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("The wireless door lock control system does not operate").	DL-71
	8. Check operation of the cabin oscillator in active test.	DL-130
	9. Luggage oscillator circuit	DL-156
	10. Replace the main body ECU.	-
	11. Replace the certification ECU.	-
Function to prevent electrical key confinement in the luggage compartment does not operate. (The alarm does not sound.)	1. Check if the function to prevent electrical key confinement in the luggage compartment operates.	DL-133
	2. Check if answer back is performed when the wireless door lock is operated.	DL-68
	3. Replace the certification ECU.	-
The outside alarm of the answer back and entry systems does not sound.	1. Check if the function to prevent electrical key confinement in the luggage compartment operates.	DL-133
	2. Check that "WIRELESS BUZZER" and "HAZARD" in the ACTIVE TEST of the main body ECU are YES. (If it is NO, go to wireless door lock control system.)	DL-130
	3. Wireless door lock tuner circuit (DTC B1242)	DL-138
	4. Replace the certification ECU.	-
The inside alarm of the entry system does not sound.	1. Operate the LOCK/UNLOCK switch on the electrical key to check the wireless function.	DL-68
	2. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("Wireless door lock function").	DL-71
	3. Check if the electrical key reminder buzzer sounds.	DL-133
	4. Replace the certification ECU.	-
ID code matching inside the cabin cannot be performed.	1. Check if any function is cancelled due to customization.	DL-118
	2. Operate the LOCK/UNLOCK switch on the key to check the wireless function.	DL-68
	3. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("The wireless door lock control system does not operate").	DL-71
	4. Check the cabin oscillator operation in the active test.	DL-130
	5. Room oscillator circuit	DL-159
	6. Luggage oscillator circuit	DL-156
	7. Replace the certification ECU.	-

Symptom	Suspected Area	See page
ID code matching outside the cabin cannot be performed.	1. Check if any function is cancelled due to customization.	DL-118
	2. Operate the LOCK/UNLOCK switch on the electrical key to check the wireless function.	DL-68
	3. Refer to PROBLEM SYMPTOMS TABLE of the wireless door lock control system ("The wireless door lock control system does not operate").	DL-71
	4. Check operation of each door oscillator in active test.	DL-130
	5. Door oscillator circuit	DL-142
	6. Normal	-
Key reminder buzzer does not sound.	1. Perform ACTIVE TEST for the combination meter.	DL-130
	2. Check "COURTESY SW" in the DATA LIST of the door control system.	DL-17
	3. Check the key reminder buzzer when the power switch is on (ACC) and the drivers door is opened.	-
	4. Check if the steering wheel is locked when all power supplies are OFF and the drivers door is opened.	-
	5. Refer to PROBLEM SYMPTOMS TABLE of the steering lock system ("Steering wheel cannot be locked").	SR-10
	6. Check that the "LCK BAR STUCK" item in the DATA LIST of the certification ECU displays OK.	DL-130
	7. Replace the steering lock ECU.	-
	8. Replace the certification ECU.	-

TERMINALS OF ECU

1. CHECK CERTIFICATION ECU



(a) Disconnect the E58 ECU connector.
(b) Measure the voltage and resistance according to the value(s) in the table below.

DL

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
+B (E58-1) - Body ground	W - Body ground	+B power supply	Always	10 to 14 V
IG (E58-18) - Body ground	LG - Body ground	Ignition power supply	Power switch off	Below 1 V
IG (E58-18) - Body ground	LG - Body ground	Ignition power supply	Power switch on (IG)	10 to 14 V
E (E58-17) - Body ground	W-B - Body ground	Ground	Always	Below 1 Ω
ACC (E58-19) - Body ground	L - Body ground	ACC power supply	Power switch off	Below 1 V
ACC (E58-19) - Body ground	L - Body ground	ACC power supply	Power switch on (ACC)	10 to 14 V
TSW1 (E58-3) - Body ground	GR - Body ground	Entry lock switch signal	Front lock switch LH not pushed	10 kΩ or higher
TSW1 (E58-3) - Body ground	GR - Body ground	Entry lock switch signal	Front lock switch LH pushed	Below 1 Ω
TSW2 (E58-4) - Body ground	L - Body ground	Entry lock switch signal	Front lock switch RH not pushed	10 kΩ or higher
TSW2 (E58-4) - Body ground	L - Body ground	Entry lock switch signal	Front lock switch RH pushed	Below 1 Ω
LIN (E58-10) - Body ground	O - Body ground	LIN line	Always	10 kΩ or higher
CANH (E58-27) - Body ground	B - Body ground	CAN line	Always	10 kΩ or higher
CANL (E58-28) - Body ground	W - Body ground	CAN line	Always	10 kΩ or higher
AGND (E58-40) - Body ground	G - Body ground	Ground	Always	Below 1 Ω
TSW5 (E58-7) - Body ground	G - Body ground	Luggage compartment opener switch signal	Opener switch OFF	10 kΩ or higher
TSW5 (E58-7) - Body ground	G - Body ground	Luggage compartment opener switch signal	Opener switch ON	Below 1 Ω

If the result is not as specified, the wire harness side may have a malfunction.
(c) Reconnect the E58 ECU connector.
(d) Measure the voltage according to the value(s) in the table below.

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CLG1 (E58-33) - CG1B (E58-34)	LG - L	Door electrical key oscillator (front LH) sensor signal	All doors closed, all doors locked and power switch off	Alternating between 5 V and below 1 V
CLG1 (E58-33) - CG1B (E58-34)	LG - L	Door electrical key oscillator (front LH) sensor signal	Door unlocked or door open	Below 1 V
SEN1 (E58-22) - E (E58-17)	B - W-B	Touch sensor detection signal	Outside door handle touched	Below 1 V

Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
SEN1 (E58-22) - E (E58-17)	B - W-B	Touch sensor detection signal	Outside door handle not touched	10 to 14 V
SEL1 (E58-5) - E (E58-17)	V - W-B	Touch sensor activation control signal	Move the key more than 5 m (16.4 ft) away from the front door LH	10 to 14 V
SEL1 (E58-5) - E (E58-17)	V - W-B	Touch sensor activation control signal	Bring key to the outside handle	Below 1 V
CLG2 (E58-35) - CG2B (E58-36)	GR - BR	Door electrical key oscillator (front RH) sensor signal	All doors closed, all doors locked and power switch off	Alternating between 5 V and below 1 V
CLG2 (E58-35) - CG2B (E58-36)	GR - BR	Door electrical key oscillator (front RH) sensor signal	Door unlocked or door open	Below 1 V
SEN2 (E58-23) - E (E58-17)	O - W-B	Touch sensor detection signal	Outside door handle touched	Below 1 V
SEN2 (E58-23) - E (E58-17)	O - W-B	Touch sensor detection signal	Outside door handle not touched	10 to 14 V
SEL2 (E58-6) - E (E58-17)	P - W-B	Touch sensor activation control signal	Move the key more than 5 m (16.4 ft) away from the front door RH	10 to 14 V
SEL2 (E58-6) - E (E58-17)	P - W-B	Touch sensor activation control signal	Bring key to the outside handle	Below 1 V
CLG5 (E58-11) - CG5B (E58-12)	R - W	Indoor electrical key oscillator (front) sensor signal	Within 30 seconds driver side door opened and closed, power switch off	Alternating between 5 V and below 1 V
CLG5 (E58-11) - CG5B (E58-12)	R - W	Indoor electrical key oscillator (front) sensor signal	Power switch on (IG)	Below 1 V
CLG6 (E58-13) - CG6B (E58-14)	Y - B	Indoor electrical key oscillator (rear) sensor signal	Within 30 seconds after driver side door opened and closed, power switch off	Alternating between 5 V and below 1 V
CLG6 (E58-13) - CG6B (E58-14)	Y - B	Indoor electrical key oscillator (rear) sensor signal	Power switch on (IG)	Below 1 V
CLG7 (E58-15) - CG7B (E58-16)	R - W	Luggage electrical key oscillator (inner) sensor signal	Luggage compartment door opening switch ON	Alternating between 5 V and below 1 V
CLG7 (E58-15) - CG7B (E58-16)	R - W	Luggage electrical key oscillator (inner) sensor signal	Luggage compartment door opening switch OFF	Below 1 V
CLG8 (E58-31) - CG8B (E58-32)	V - P	Luggage electrical key oscillator (outer) sensor signal	Luggage compartment door opening switch ON	Alternating between 5 V and below 1 V
CLG8 (E58-31) - CG8B (E58-32)	V - P	Luggage electrical key oscillator (outer) sensor signal	Luggage compartment door opening switch OFF	Below 1 V
RC0 (E58-29) - E (E58-17)	G - W-B	Entry door control receiver power source	Power switch off, all doors closed and electrical key switch on	4.5 to 5.5 V
RC0 (E58-29) - E (E58-17)	G - W-B	Entry door control receiver power source	Power switch off, all doors closed and electrical key switch off	Below 1 V
RSSI (E58-39) - E (E58-17)	R - W-B	Entry door control receiver electric wave existence signal	Power switch off, all doors closed, the electrical key is not in the action area	10 to 14 V
RSSI (E58-39) - E (E58-17)	R - W-B	Entry door control receiver electric wave existence signal	Power switch off, all doors closed, the electrical key is in the action area	Below 1 V

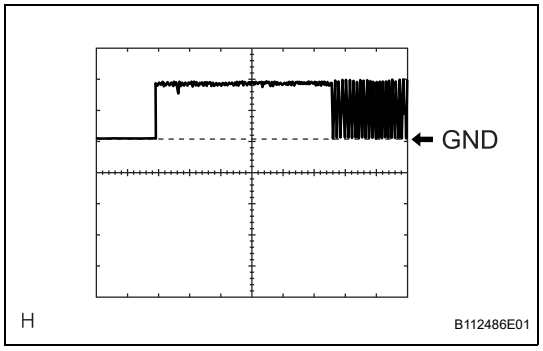
Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
RDA (E58-38) - E (E58-17)	Y - W-B	Entry door control receiver data input signal	Power switch off, all doors closed and electrical key switch off	10 to 14 V (Pulse generation)
RDA (E58-38) - E (E58-17)	Y - W-B	Entry door control receiver data input signal	Power switch off, all doors closed and electrical key switch on	Pulse generation
RDA (E58-38) - Body ground	Y - Body ground	Tuner input signal	Power switch off, all doors closed, the electrical key is not in the action area	10 to 14 V (Pulse generation)
RDA (E58-38) - Body ground	Y - Body ground	Tuner input signal	The electrical key is in the action area.	Pulse generation
ASEL (E58-37) - Body ground	V - Body ground	Cabin / luggage receiver select signal	Power switch off, luggage compartment door closed and the electrical key is in the luggage action area	4.6 to 6 V
ASEL (E58-37) - Body ground	V - Body ground	Cabin / luggage receiver select signal	Power switch off, luggage compartment door open	Below 1 V
VC5 (E58-30) - Body ground	R - Body ground	Transponder key amplifier power supply	Electrical key is not in the cabin.	Below 1 V
VC5 (E58-30) - Body ground	R - Body ground	Transponder key amplifier power supply	Have the electrical key outside the cabin and open the driver's door.	4.6 to 5.4 V
TXCT (E58-8) - Body ground	GR - Body ground	Transponder key amplifier output signal	Electrical key is not in the cabin.	Below 1 V
TXCT (E58-8) - Body ground	GR - Body ground	Transponder key amplifier output signal	• Have the electrical key outside the cabin and open the driver's door. • Hold the electrical key close to the power switch with the brake pedal depressed.	Pulse generation (see waveform 1)
CODE (E58-9) - Body ground	W - Body ground	Transponder key amplifier communication signal	Electrical key is not in the cabin.	Below 1 V
CODE (E58-9) - Body ground	W - Body ground	Transponder key amplifier communication signal	Have the electrical key outside the cabin and open the driver's door.	Pulse generation (see waveform 2)
BZR (E58-21) - Body ground	O - Body ground	Wireless door lock buzzer signal	Wireless door lock buzzer OFF	Below 1 V
BZR (E58-21) - Body ground	O - Body ground	Wireless door lock buzzer signal	Wireless door lock buzzer ON	Pulse generation

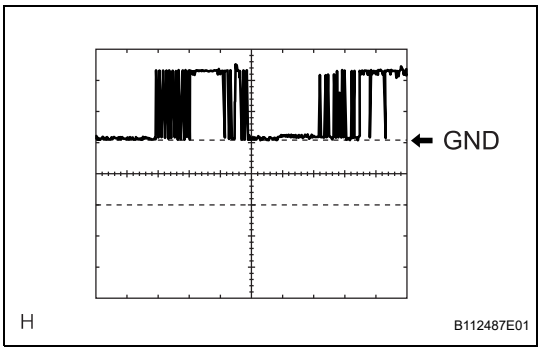
If the result is not as specified, the ECU may have a malfunction.

(e) Inspect using an oscilloscope.

Waveform 1 (Reference):

Terminal	TXCT - Body ground
Tool Setting	2 V/DIV., 10 ms./DIV.
Condition	Have the electrical key outside the cabin and open the driver's door.





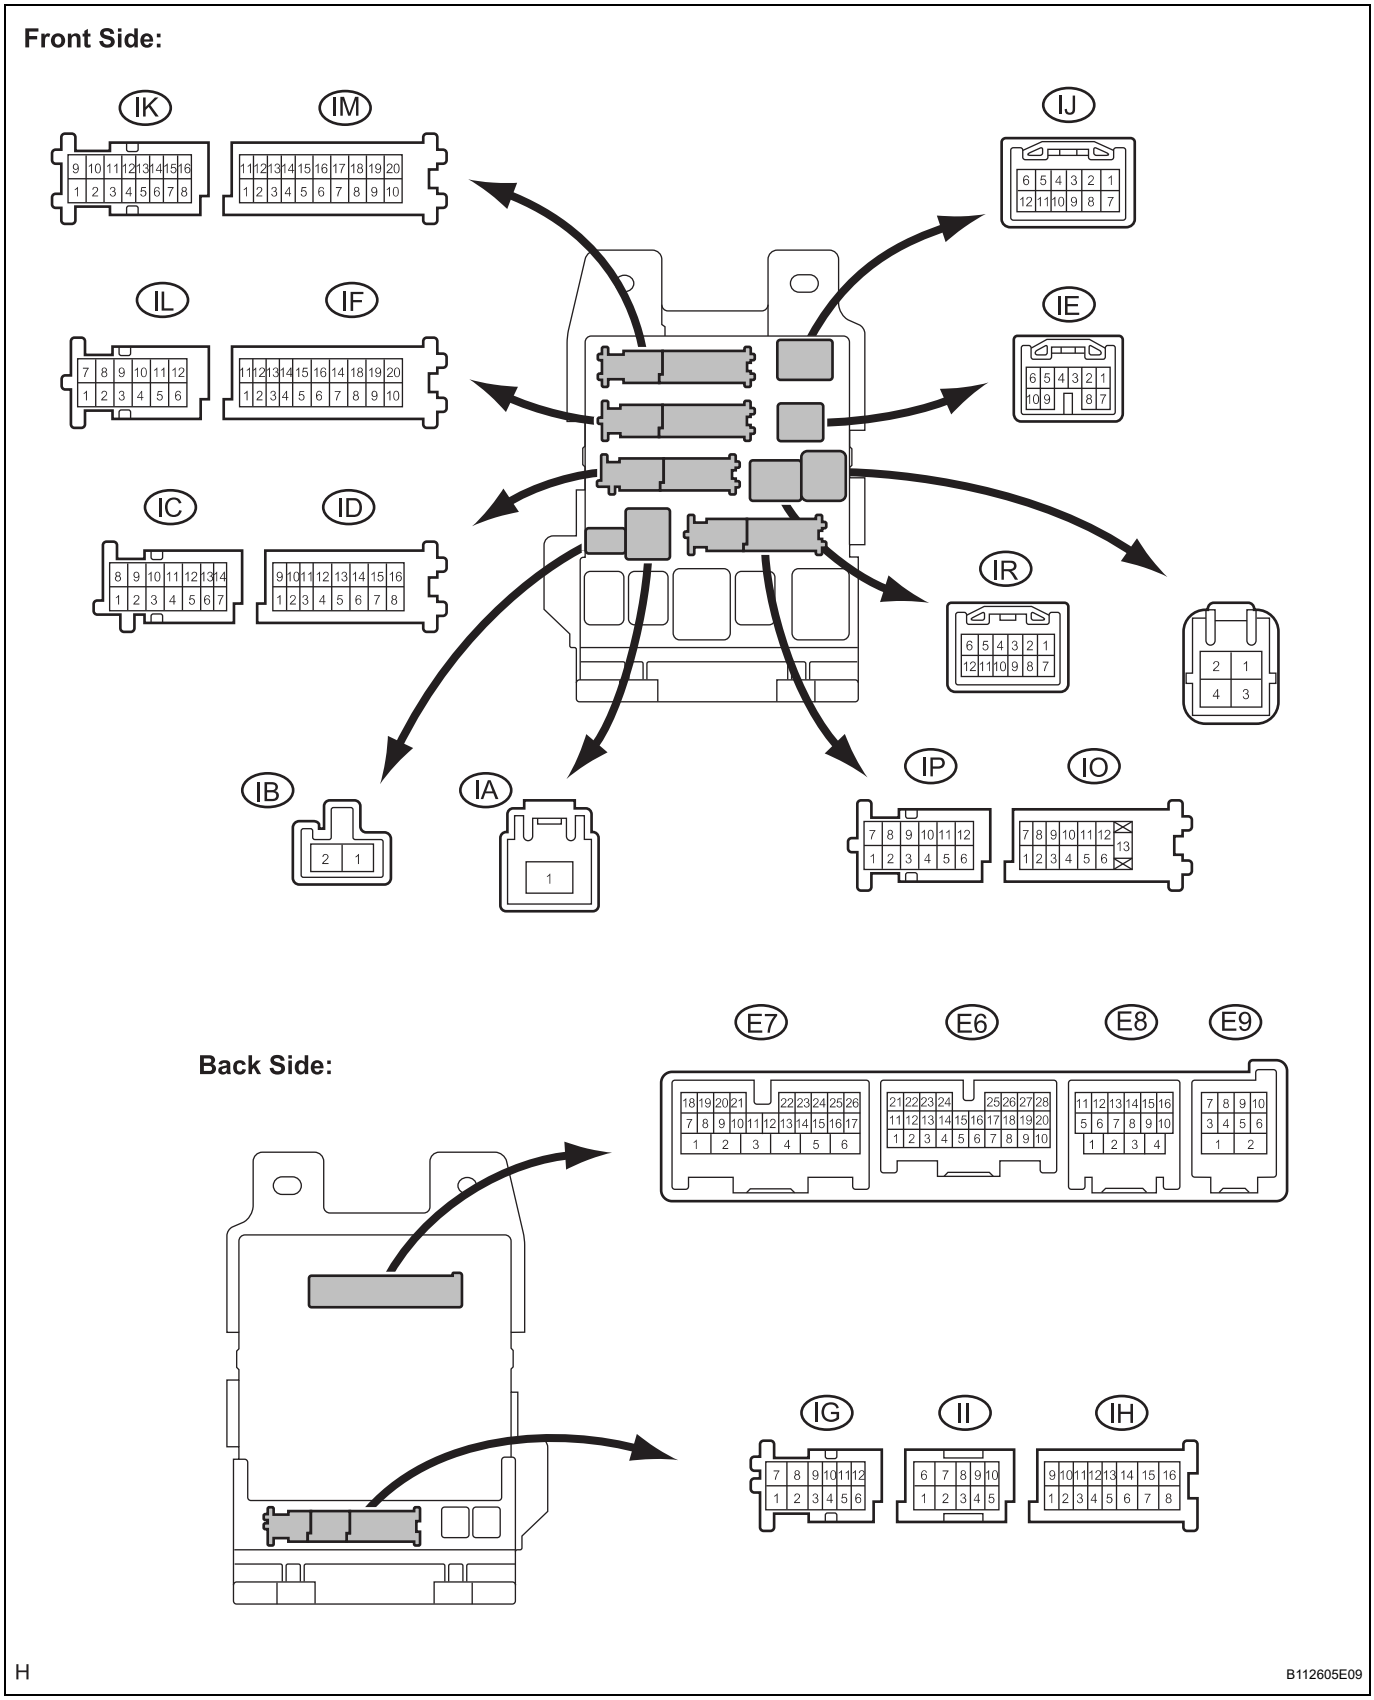
(f) Inspect using an oscilloscope.

Waveform 2 (Reference):

Terminal	CODE - Body ground
Tool Setting	2 V/DIV., 20 ms./DIV.
Condition	• Have the electrical key outside the cabin and open the driver's door. • Hold the electrical key close to the power switch with the brake pedal depressed.

2. MAIN BODY ECU (INSTRUMENT PANEL JUNCTION BLOCK)

(a) Measure the voltage and resistance according to the value(s) in the table below.



Symbols (Terminal No.)	Wiring Color	Terminal Description	Condition	Specified Condition
CANN (E8-15) - Body ground	W - Body ground	CAN Line	Always	10 kΩ or higher
CANP (E8-16) - Body ground	B - Body ground	CAN Line	Always	10 kΩ or higher
STP (IL-7) - Body ground	L - Body ground	Stop light switch signal	Brake pedal depressed	10 to 14 V
STP (IL-7) - Body ground	L - Body ground	Stop light switch signal	Brake pedal depressed	Below 1 V

If the result is not as specified, the junction block may have a malfunction.

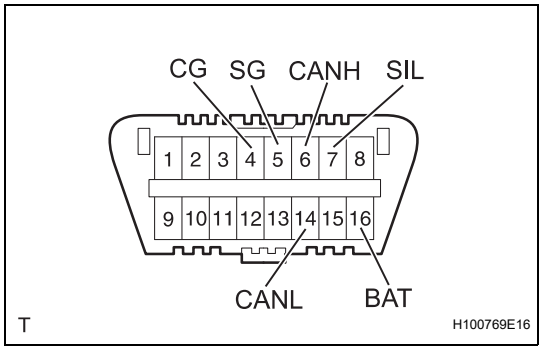
DIAGNOSIS SYSTEM

1. DESCRIPTION

(a) Smart key system data and the Diagnostic Trouble Codes (DTCs) can be read from the Data Link Connector 3 (DLC3) of the vehicle. When the system seems to be malfunctioning, use the intelligent tester to check for malfunctions and perform repairs.

2. CHECK DLC3

The ECU uses ISO 15765-4 for communication. The terminal arrangement of the DLC3 complies with SAE J1962 and matches the ISO 15765-4 format.



Symbols (Terminal No.)	Terminal Description	Condition	Specified Condition
SIL (7) - SG (5)	Bus "+" line	During transmission	Pulse generation
CG (4) - Body ground	Chassis ground	Always	Below 1 Ω
SG (5) - Body ground	Signal ground	Always	Below 1 Ω
BAT (16) - Body ground	Battery positive	Always	11 to 14 V
CANH (6) - CANL (14)	CAN bus line	Power switch OFF*	54 to 69 Ω
CANH (6) - Battery positive (+)	HIGH-level CAN bus line	Power switch OFF*	6 kΩ or higher
CANH (6) - CG (4)	HIGH-level CAN bus line	Power switch OFF*	200 Ω or higher
CANL (14) - Battery positive (+)	LOW-level CAN bus line	Power switch OFF*	6 kΩ or higher
CANL (14) - CG (4)	LOW-level CAN bus line	Power switch OFF*	200 Ω or higher

NOTICE:

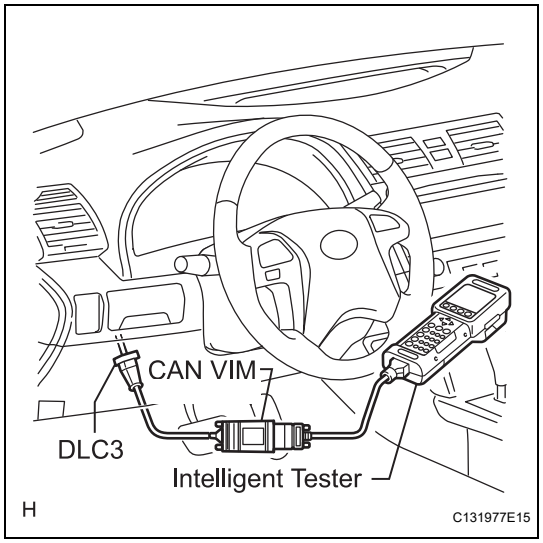
***: Before measuring the resistance, leave the vehicle as is for at least 1 minute and do not operate the power switch, any other switches or the doors.**

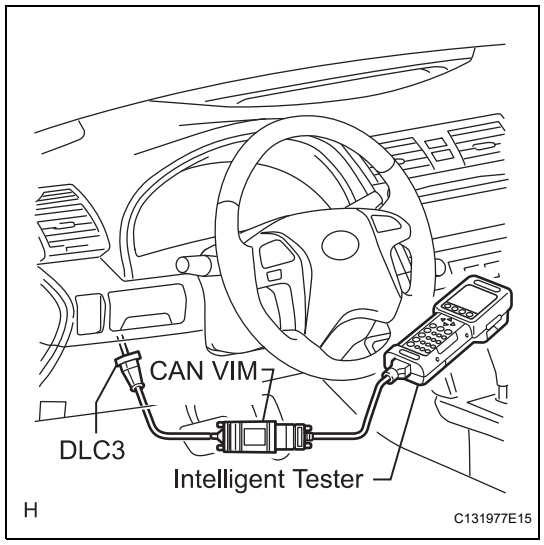
If the result is not as specified, the DLC3 may have a malfunction. Repair or replace the harness and connector.

HINT:

Connect the cable of the intelligent tester (with CAN VIM) to the DLC3, turn the power switch on (IG) and attempt to use the tester. If the display indicates that a communication error has occurred, there is a problem either with the vehicle or with the tester.

- If communication is normal when the tester is connected to another vehicle, inspect the DLC3 of the original vehicle.
- If communication is still not possible when the tester is connected to another vehicle, the problem may be in the tester itself. Consult the Service Department listed in the tester's instruction manual.





DTC CHECK / CLEAR

1. CHECK DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / OBD/ MOBD / DTC INFO / CURRENT CODES.
(d) Read the DTC by following the prompts on the tester screen.
HINT:
Refer to the intelligent tester operator's manual for further details.

2. CLEAR DTC

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menu items: DIAGNOSIS / OBD/ MOBD / DTC INFO / CLEAR CODES.
(d) Erase the DTC by following the directions on the tester screen.

HINT:
Refer to the intelligent tester operator's manual for further details.

DATA LIST / ACTIVE TEST

1. READ DATA LIST

HINT:

Using the intelligent tester's DATA LIST allows switch, sensor, actuator and other item values to be read without removing any parts. Reading the DATA LIST relay in troubleshooting is one way to save time.

(a) Connect the intelligent tester to the DLC3.

(b) Turn the power switch on (IG). When the intelligent tester cannot be turned on due to a malfunction or other problem, refer to "precautions when using the intelligent tester" (See page DL-89).

(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / DATA LIST.

(d) Read the DATA LIST according to the display on the tester.

SMART KEY (Certification ECU):

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
D TOUCH SENSOR	Driver side door touch sensor / ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
P TOUCH SENSOR	Front passenger side door touch sensor / ON or OFF	ON: Sensor is touched OFF: Sensor is not touched	-
D TRIGGER SW	Driver side door lock switch / ON or OFF	ON: Switch is touched OFF: Switch is not touched	-
P TRIGGER SW	Front passenger side door lock switch / ON or OFF	ON: Switch is touched OFF: Switch is not touched	-
TR/B-DOOR UNLK	Luggage compartment door unlock switch / ON or OFF	ON: Switch is pushed OFF: Switch is not pushed	-
IG SW	Power switch / ON or OFF	ON: Power switch is on (IG) OFF: Power switch is off	-
ACC SW	Power switch / ON or OFF	ON: Power switch is on (ACC) OFF: Power switch is off	-
P/S 10-MIN	Power save counter - 10 minutes / Min: 0; Max: 255	Power save counter after door LOCK/UNLOCK-10 minutes	-
P/S 5-DAY	Power save counter - 5 days / Min: 0; Max: 255	Power save counter after door LOCK/UNLOCK-5 days	-
P/S 14-DAY	Power save counter - 14 days / Min: 0; Max: 255	Power save counter after door LOCK/UNLOCK-14 days	-
UNMATCH V-ID	Unmatched vehicle-ID / YES or NO	YES: Key ID matches vehicle NO: Key ID does not match vehicle	-
NO RESPONSE	No response / YES or NO	YES: Response from key NO: No response from key	-
UNMATCH FORMAT	Unmatched response code and format / YES or NO	YES: Key ID code matches NO: Key ID code does not match	-
LOW BATTERY	Key low battery / YES or NO	YES: Key battery voltage drops NO: Key battery voltage is normal	-
WRONG CODE	ID code difference / YES or NO	YES: Key ID code matches NO: Key ID code does not match	-
WRONG C CODE	Challenge code difference (Response) / YES or NO	YES: Key ID code matches NO: Key ID code does not match	-
WRONG ID CODE	ID code difference / YES or NO	YES: Key ID code matches NO: Key ID code does not match	-
WRONG ROL CODE	Rolling code difference / YES or NO	YES: Key rolling code matches NO: Key rolling code does not match	-

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
DOOR UNLOCK MOD	Door unlock mode / ALL, D_DOOR	Mode status is displayed	-
FUNCTION CANCEL	Entry door lock function cancel / ON or OFF	Mode status is displayed	-
MASTER KEY	Master key / MATCH or NO MATCH	MATCH: Key code is sent NO MATCH: Unmatched key code	-
SUB KEY	Sub key / MATCH or NO MATCH	MATCH: Key code is sent NO MATCH: Unmatched key code	-
BCC	Transponder chip data / OK or NG	OK: Correct data sensing NG: Incorrect data sensing	-
STATUS	Transponder chip data / OK or NG	OK: Data OK NG: Data error	-
ENCRYPT CODE	Transponder chip data / OK or NG	OK: Data OK NG: Data error	-
SERIAL NUMBER	Transponder chip data / OK or NG	OK: Data OK NG: Data error	-
FRAME	Transponder chip data / OK or NG	OK: Data OK NG: Data error	-
RESPONSE	Transponder chip data / OK or NG	OK: With no response NG: With a response	-
#CODE	Diagnostic trouble code / Min.: 0, Max.: 255	-	-
IGNITION AREA	Entry available area / FRONT or ALL	Customization status is displayed	-
PARK WAIT TIME	Parking wait time / 0.5s, 1.5s, 2.5s, 5.0s	Customization status is displayed	-
TRUNK OPEN MODE	Luggage compartment door open mode with vehicle locked / ON or OFF	Customization status is displayed	-
KEY LO-BATT WRN	Key low battery warning / ON or OFF	Customization status is displayed	-

MAIN BODY:

Tester Display	Measurement Item/Range	Normal Condition	Diagnostic Note
LUGG COURTESY SW	Luggage compartment door courtesy light switch signal / ON or OFF	ON: Luggage compartment door open OFF: Luggage compartment door closed	-
D DOR CTY SW	Driver side door courtesy light switch signal / ON or OFF	ON: Driver side door open OFF: Driver side door closed	-
P DOR CTY SW	Front passenger side door courtesy light switch signal / ON or OFF	ON: Front passenger side door open OFF: Front passenger side door closed	-
RL DOR CTY SW	Rear door courtesy light switch LH signal / ON or OFF	ON: Rear door open OFF: Rear door closed	-
RR DOR CTY SW	Rear door courtesy light switch RH signal / ON or OFF	ON: Rear door open OFF: Rear door closed	-
TRUNK KEY UNLOCK	Luggage compartment door lock/ unlock switch / ON or OFF	ON: Luggage compartment door lock switch is pushed OFF: Luggage compartment door lock switch is not pushed	-
IG SW	Power switch / ON or OFF	ON: Power switch is on (IG) OFF: Power switch is off	-

2. PERFORM ACTIVE TEST

HINT:

Performing the intelligent tester's ACTIVE TEST allows relay, VSV, actuator and other items to be operated without removing any parts. Performing the ACTIVE TEST early in troubleshooting is one way to save time. The DATA LIST can be displayed during the ACTIVE TEST.

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).
(c) Enter the following menus: DIAGNOSIS / OBD/ MOBD / ACTIVE TEST.
(d) Perform the ACTIVE TEST according to the display on the tester.

SMART KEY (Certification ECU):

Tester Display	Test Part	Control Range	Diagnostic Note
OVERHEAD TUNER	Door control receiver	ON / OFF	-
IN LUG TUNER	Luggage receiver	ON / OFF	-
D TRANSMITTER	Driver side electrical key oscillator	ON / OFF	-
P TRANSMITTER	Front passenger side electrical key oscillator	ON / OFF	-
FR TRANSMITTER	Indoor electrical key oscillator (console)	ON / OFF	-
RR TRANSMITTER	Indoor electrical key oscillator (rear seat)	ON / OFF	-
IN_BDR TRNSMTTR	Luggage compartment door inner oscillator	ON / OFF	-
BDOOR TRNSMTTR	Luggage compartment door outer oscillator	ON / OFF	-
D SELECT SIG	Driver side select	ON / OFF	-
P SELECT SIG	Front passenger side select	ON / OFF	-
WIRELESS BUZZER	Wireless buzzer	ON / OFF	-

MAIN BODY:

Tester Display	Test Part	Control Range	Diagnostic Note
TRNK/BDOR OPEN	Luggage compartment door open signal	ON / OFF	-
HAZARD	Hazard warning light	ON / OFF	-

DIAGNOSTIC TROUBLE CODE CHART

HINT:
If a trouble code is indicated during the DTC check, check the circuit listed for that code in the table below. Then proceed to the appropriate page.

Power door lock control system:

DTC Code	Detection Item	Trouble Area	See page
B1242	Wireless Door Lock Tuner Circuit Malfunction	1. Electrical key antenna 2. Door control receiver 3. Wire harness 4. Certification ECU	DL-138

ON-VEHICLE INSPECTION

1. SMART KEY SYSTEM OPERATION INSPECTION

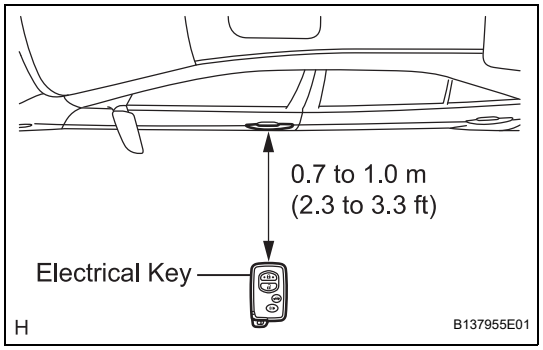
HINT:

Refer to PROBLEM SYMPTOMS TABLE if the results of the following checks are not normal (See page DL-121).

(a) Check the entry unlock function.

(1) Use the wireless lock operation to lock the doors. With the electrical key in your possession, touch a door's outside handle (touch sensor) and check that the door unlocks.

(b) Check the entry unlock operation's detection area.



(1) Step 1: Hold the electrical key at the same height as the door's outside handle (approximately 0.8 m (2.6 ft)). Pay attention to the direction of the electrical key in the illustration.

(2) Step 2: When the electrical key is brought within 0.7 to 1.0 m (2.3 to 3.3 ft) of the vehicle, check that the system enters unlock standby mode.

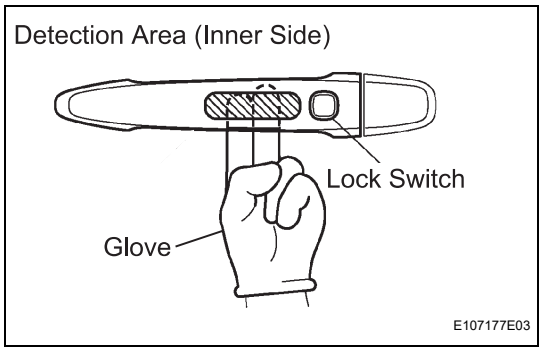
HINT:

Unlock standby mode is signified by the electrical key's red LED illuminating.

(3) Step 3: After the system enters unlock standby mode, touch the outside handle's sensor within 3 seconds. Check that the door unlocks.

NOTICE:

The electrical key cannot communicate with the system within a 0.2 m (0.6 ft) radius of each outside handle.



(4) Step 4: Repeat steps 2 and 3 for the remaining doors.

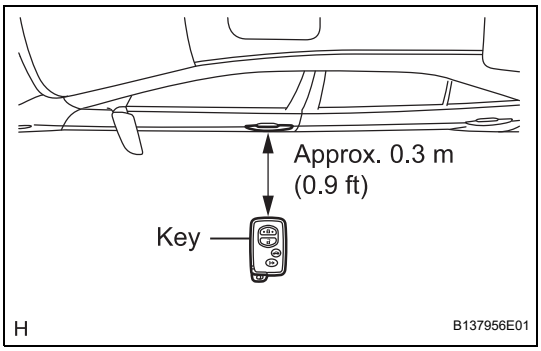
(5) Step 5: Inspect the door electrical key oscillator's response sensitivity. Wear protective gloves, set the system to unlock standby mode, and check that touching the inner side of the outside handle (the highlighted area in the illustration) with your finger causes the door to unlock.

NOTICE:

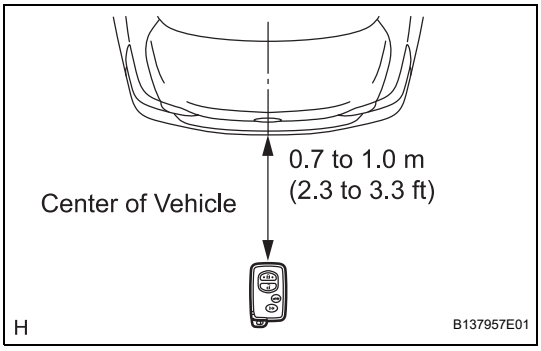
When touching the highlighted area, tapping too quickly or having extended contact may not trigger the sensor. In such a case, the door will not unlock.

(6) Step 6: Repeat step 5 for the remaining doors.

DL



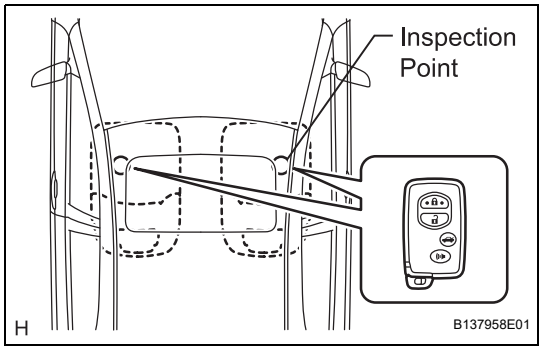
(c) Check the entry lock function.
  (1) Step 1: Close all of the vehicle's doors. With the electrical key in your possession outside the vehicle, check that pressing the lock switch locks the doors.
  (2) Step 2: Inspect the entry lock operation's detection area and the indoor electrical key antenna for wave leaks. Hold the electrical key at a height of 1 m (3.3 ft) (0.1 m (0.3 ft) above the lower edge of the window frame. Pay attention to the direction and position of the electrical key in the illustration. When the electrical key is approximately 0.3 m (0.9 ft) from the vehicle and the lock switch is pressed, check that the all doors lock and the warning buzzer (for when the electrical key is forgotten) does not sound. If the warning buzzer sounds, the indoor electrical key antenna may have a wave leak.
  HINT:
  Do not press the lock switch with the same hand that is holding the electrical key because the electrical key cannot communicate with the system within a 0.2 m (0.6 ft) radius of the outside handle. The doors will not lock.
  (3) Step 3: Repeat steps 1 and 2 for the remaining doors.



(d) Check the entry luggage compartment door open function.
  (1) Close the luggage compartment door. With the electrical key in your possession, check that pressing the power luggage door open switch opens the luggage compartment door.
  (2) Inspect the entry luggage compartment door open operation's detection area. Hold the electrical key at the same height as the power luggage door open switch (approximately 0.8 m (2.6 ft)) and align the key with the center of the rear of the vehicle. Pay attention to the direction of the electrical key shown in the illustration. When the electrical key is brought within 0.7 to 1.0 m (2.3 to 3.3 ft) of the vehicle, check that pressing the power luggage door open switch opens the luggage compartment door.

(e) Check the entry ignition function (HV control system is on (READY)).
  (1) When the HV control system is off:
  With the electrical key in your possession and the brake pedal depressed and the shift position is P, check that pressing the power switch releases the steering wheel lock and the HV control system is on (READY).

HINT:
The HV control system can be on (READY) only when the power switch indicator illuminates in green.

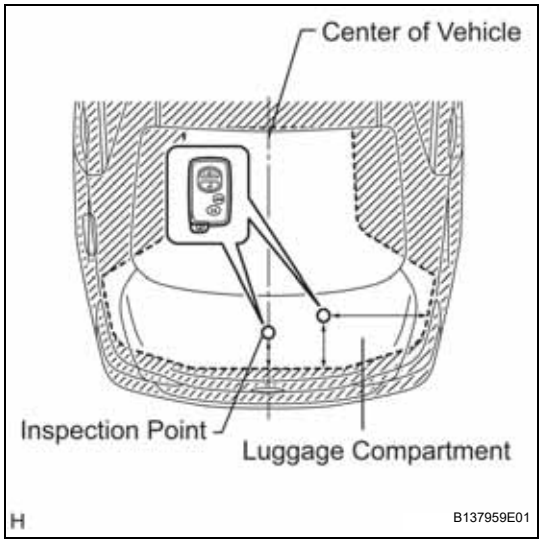


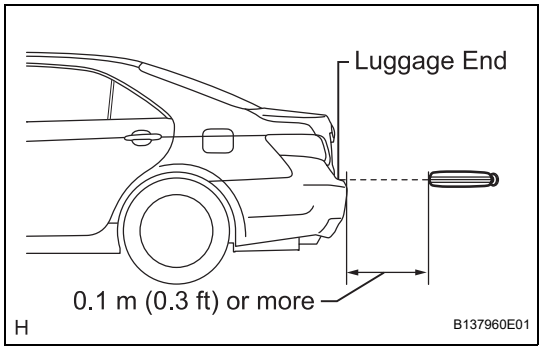
(2) When the HV control system is on (READY): With the electrical key in your possession and vehicle stopped, check that pressing the power switch stops the engine.
HINT:
The shift position must be P to stop the HV control system.

(3) Inspect the entry ignition (HV control system on (READY)) operation's detection area. Pay attention to the direction of the electrical key in the illustration. When the electrical key is in either of the 2 inspection points in the illustration, check that the HV control system can be on (READY).
NOTICE:
The engine cannot be started when the electrical key is on the instrument panel, rear package tray, or in the glove box.

(f) Check the electrical key lock-in prevention function.

(1) Place the electrical key in the luggage compartment with all doors locked. Check that: 1) closing the luggage compartment door triggers the electrical key's wireless buzzer (which lasts approximately 2 seconds), and 2) pressing the power luggage door open switch opens the luggage compartment door.





(2) Inspect the electrical key lock-in prevention's detection area. Pay attention to the direction of the electrical key shown in the illustration. When the electrical key is in either of the 2 inspection points in the illustration, check that: 1) closing the luggage compartment door sounds the electrical key's wireless buzzer, and 2) pressing the power luggage door open switch opens the luggage compartment door.
NOTICE:
If the electrical key is inside a metal storage item, such as a metal briefcase or metal box, the electrical key will not be detected by the system.

(3) Inspect the electrical key lock-in prevention's detection area and the entry door control receiver for wave leaks. Hold the electrical key at the same height as the lower edge of the luggage compartment door and align the key with the center of the rear of the vehicle. Pay attention to the direction and position of the electrical key shown in the illustration. When the electrical key is over 0.1 m (0.3 ft) from the vehicle's rear bumper, check that the electrical key's wireless buzzer does not sound.
If the warning buzzer sounds, the entry door control receiver may have a wave leak.

(g) Check the electrical key cancel function.
(1) While the power switch is on (IG), check that the power luggage door open switch, entry ignition, electrical key lock-in prevention and warning are the only switch in the smart key system that can be operated.
(2) While the electrical key cancel function (smart key system cancel function) is ON, check that all functions in the smart key system cannot be operated.

(h) Check the answer-back function (hazard warning light flashing and buzzer sounding).

Entry Operation	Hazard Warning Light	Buzzer
Entry Door Lock	Flashes once	Sounds once
Entry Door Unlock	Flashes twice	Sounds twice
Entry Luggage Compartment Door Open	Does not flash	Does not sound

(i) Check that the electrical key reminder warning buzzer sounds.
(1) Carry the electrical key in the vehicle and close the driver side door. Then turn the power switch off or on (ACC).
(2) Open the driver side door and check that the buzzer sounds intermittently.

(j) Check that the electrical key reminder warning buzzer stops.
(1) When the buzzer is sounding, check that the buzzer stops sounding if either of the following is performed:
- Close the driver side door (front door courtesy light switch is off).
- Turn the power switch on (IG, ACC) and lock the steering lock.

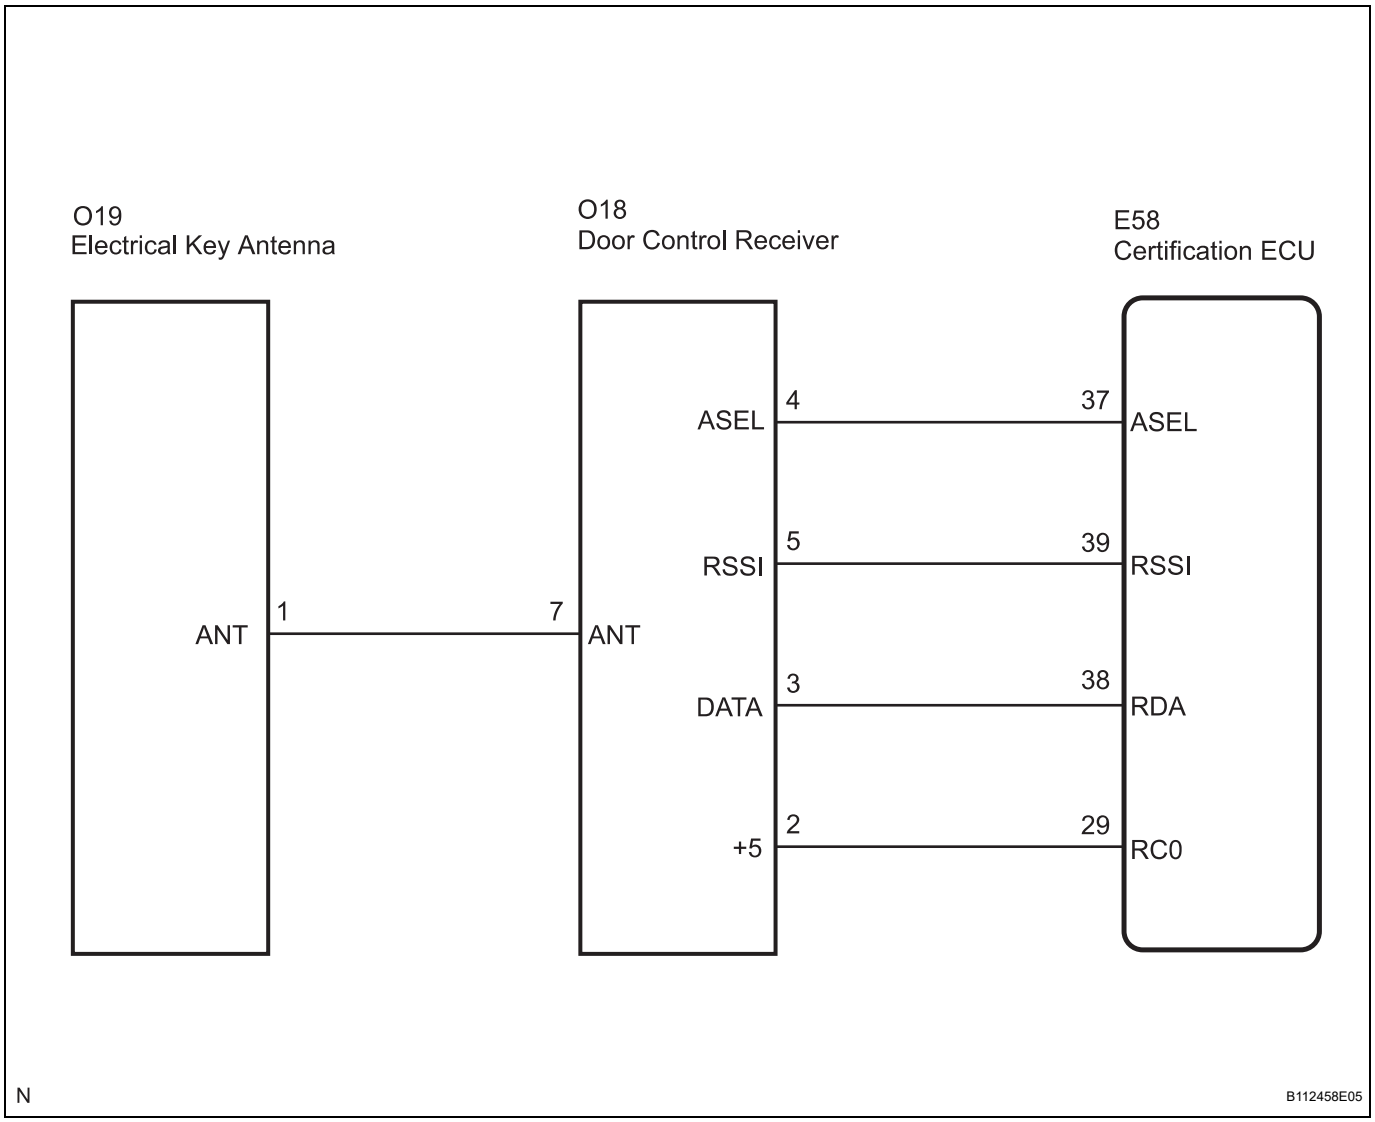
DTC	B1242	Wireless Door Lock Tuner Circuit Malfunction

DESCRIPTION

- The electrical key antenna and the door control receiver are used as antennas for the entry and wireless door lock functions of the smart key system.
- The certification ECU decodes the requested smart key system operation by identifying a key code based on electric waves received via the electrical key antenna and the door control receiver. The ECU then sends a command, according to the requested operation, to each ECU. (e.g. If door lock operation is requested, the ECU sends a door lock command to the main body ECU RH.)

DTC No.	DTC Detection Condition	Trouble Area
B1242	If the certification ECU detects that terminal RDA or RSSI is short-circuited, this DTC is stored.	• Electrical key antenna • Door control receiver • Wire harness • Certification ECU

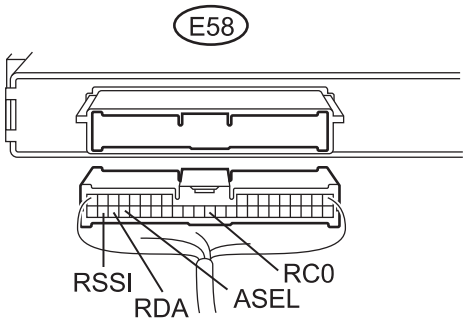
WIRING DIAGRAM



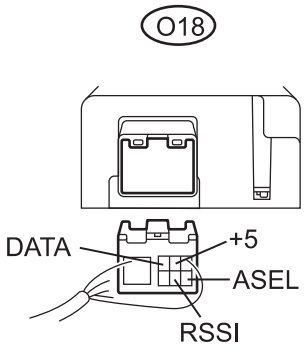
INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - DOOR CONTROL RECEIVER)

Certification ECU:



Door Control Receiver:



H

B112460E04

(a) Disconnect the E58 ECU connector.
(b) Disconnect the O18 receiver connector.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

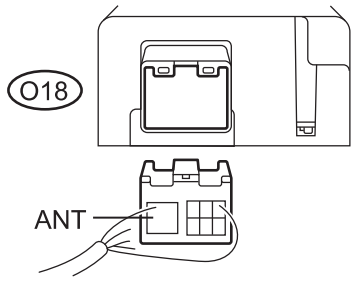
Tester Connection (Symbols)	Condition	Specified Condition
E58-37 (ASEL) - O18-4 (ASEL)	Always	Below 1 Ω
E58-39 (RSSI) - O18-5 (RSSI)	Always	Below 1 Ω
E58-38 (RDA) - O18-3 (DATA)	Always	Below 1 Ω
E58-29 (RC0) - O18-2 (+5)	Always	Below 1 Ω
E58-37 (ASEL) - Body ground	Always	10 kΩ or higher
E58-39 (RSSI) - Body ground	Always	10 kΩ or higher
E58-38 (RDA) - Body ground	Always	10 kΩ or higher
E58-29 (RC0) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

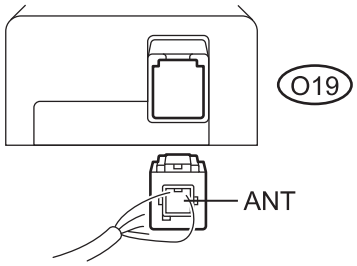
OK

2	CHECK HARNESS AND CONNECTOR (DOOR CONTROL RECEIVER - ELECTRICAL KEY ANTENNA)

Door Control Receiver:



Electrical Key Antenna:



H

B112462E03

(a) Disconnect the O19 antenna connector.
(b) Measure the resistance according to the value(s) in the table below.
HINT:
Perform the measurement with the O18 receiver connector disconnected.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
O18-7 (ANT) - O19-1 (ANT)	Always	Below 1 Ω
O18-7 (ANT) - Body ground	Always	10 kΩ or higher

DL

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK AND REPLACE DOOR CONTROL RECEIVER (RECONFIRM DTC)

(a) Replace the receiver.
(b) Clear the DTCs and repeat the procedure to recheck for DTCs (See page DL-130).

OK:

DTC is not output.

OK → **END (RECEIVER IS DEFECTIVE)**

NG

4	CHECK AND REPLACE ELECTRICAL KEY ANTENNA (RECONFIRM DTC)

(a) Replace the antenna.
(b) Clear the DTCs and repeat the procedure to recheck for DTCs (See page DL-130).
OK:
DTC is not output.

OK → **END (ANTENNA IS DEFECTIVE)**

NG

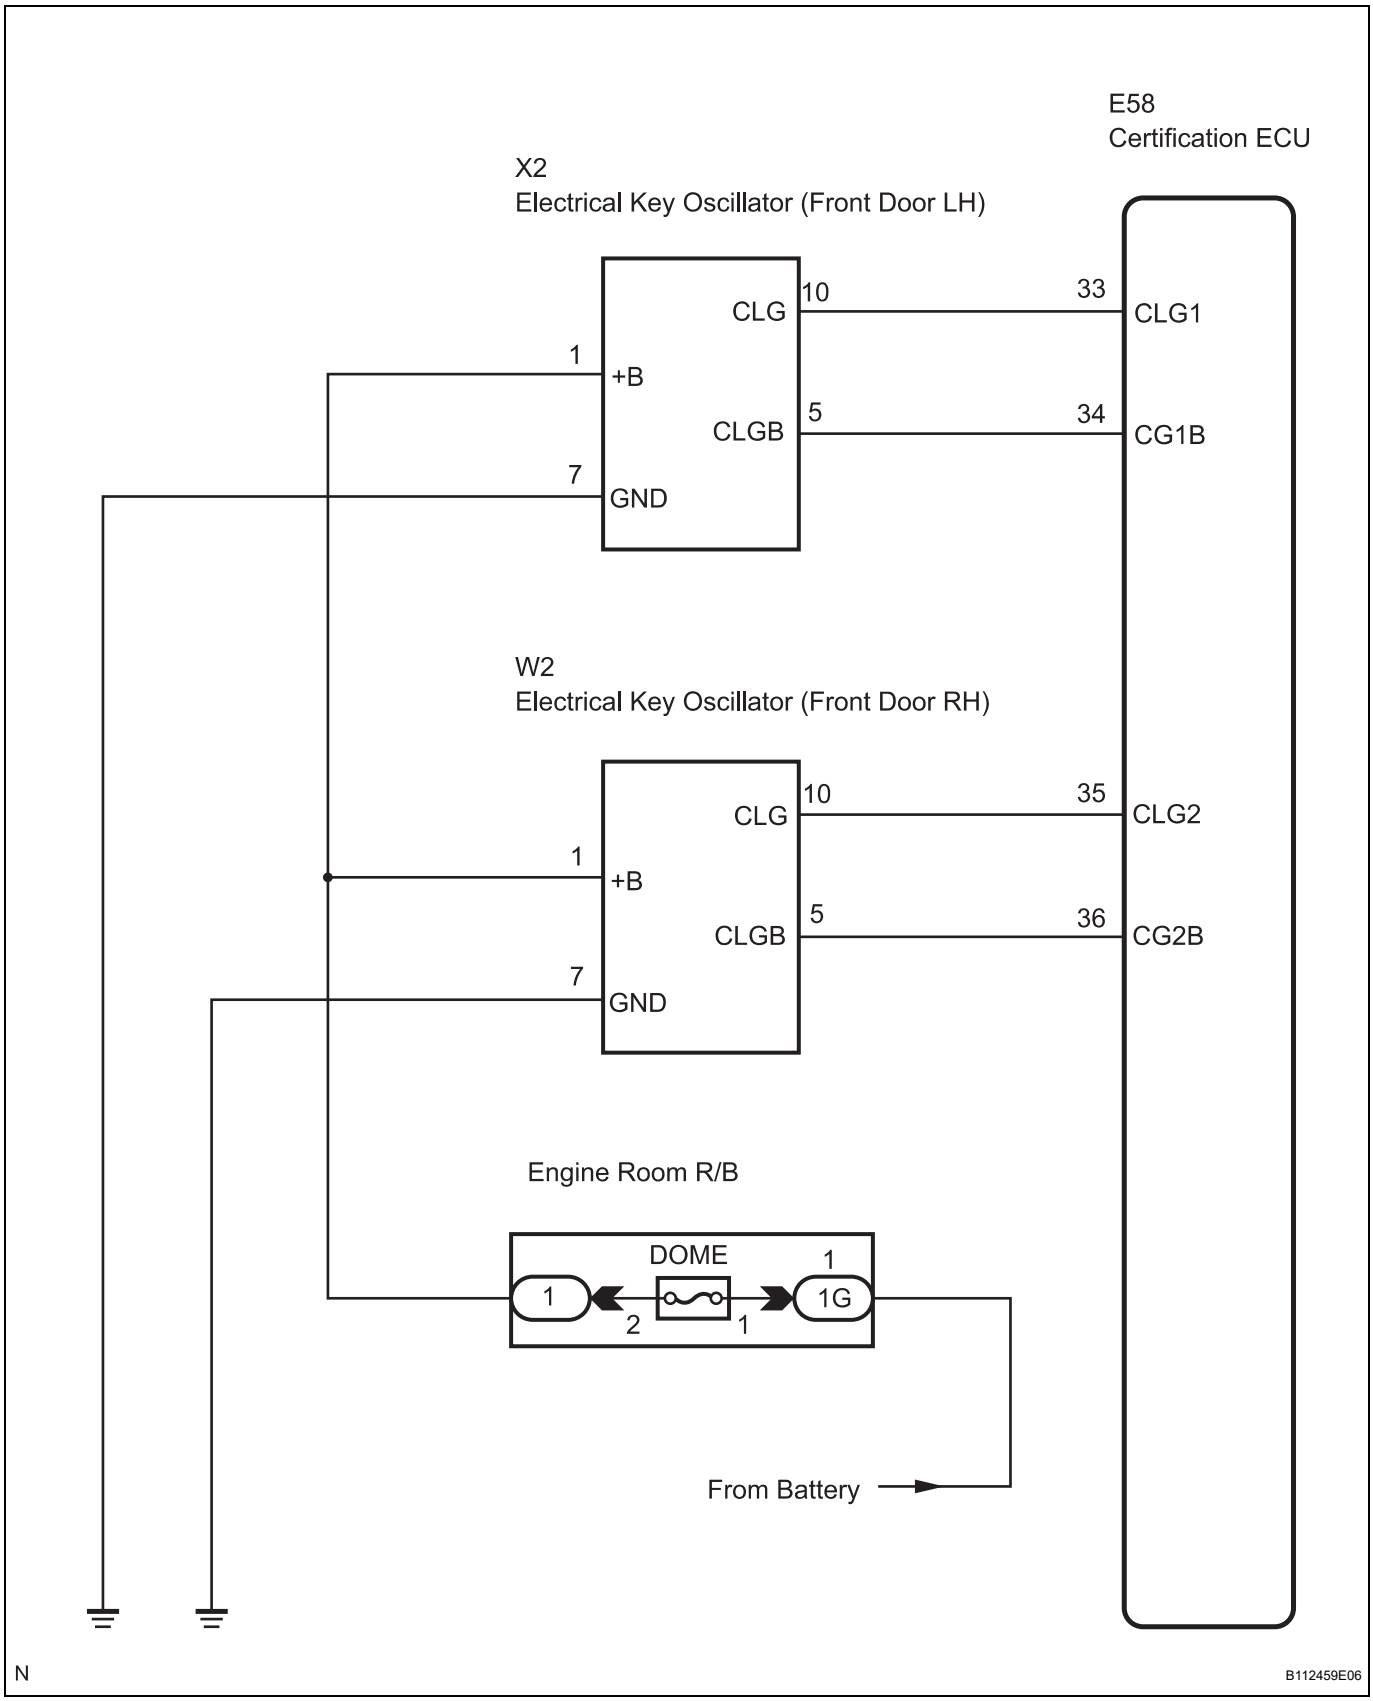
REPLACE CERTIFICATION ECU

Door Oscillator Circuit

DESCRIPTION

Door oscillators are built into each door. Each of them forms its own action area around its door and detects the presence of the electrical key.

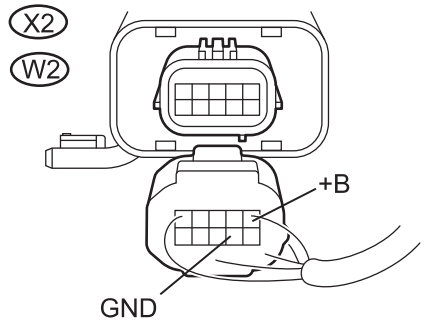
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT ELECTRICAL KEY OSCILLATOR

Door Oscillator:



H B112463E04

(a) Disconnect the oscillator connectors.
(b) Measure the voltage according to the value(s) in the table below.

Standard voltage:

Front LH side

Tester Connection (Symbols)	Condition	Specified Condition
X2-1 (+B) - X2-7 (GND)	Always	10 to 14 V

Front RH side

Tester Connection (Symbols)	Condition	Specified Condition
W2-1 (+B) - W2-7 (GND)	Always	10 to 14 V

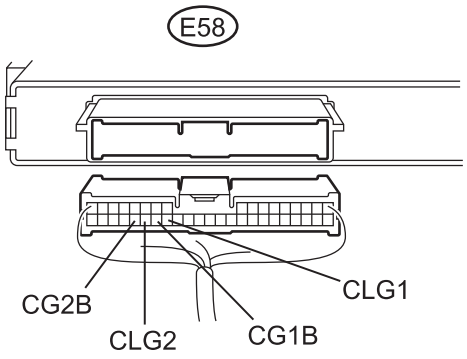
NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

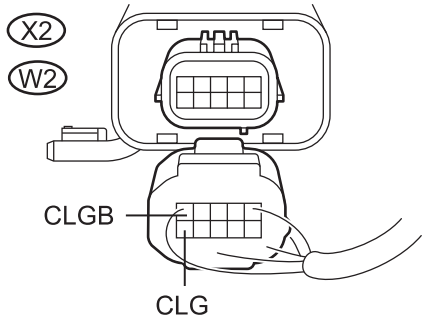
DL

2	CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - CERTIFICATION ECU)

Certification ECU:



Door Oscillator:



H

B112464E09

(a) Disconnect the E58 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-33 (CLG1) - X2-10 (CLG)	Always	Below 1 Ω
E58-34 (CG1B) - X2-5 (CLGB)	Always	Below 1 Ω
E58-35 (CLG2) - W2-10 (CLG)	Always	Below 1 Ω
E58-36 (CG2B) - W2-5 (CLGB)	Always	Below 1 Ω
E58-33 (CLG1) - Body ground	Always	10 kΩ or higher
E58-34 (CG1B) - Body ground	Always	10 kΩ or higher
E58-35 (CLG2) - Body ground	Always	10 kΩ or higher
E58-36 (CG2B) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR (CHECK OPERATION OF OSCILLATOR)

(a) Replace the door oscillator.
(b) Check that the entry LOCK/UNLOCK function operates normally.

OK:

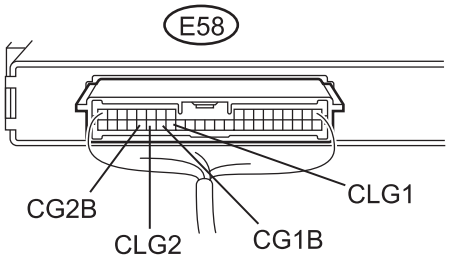
Entry LOCK/UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

4	PERFORM ACTIVE TEST BY INTELLIGENT TESTER (CERTIFICATION ECU OUTPUT SIGNAL)

Certification ECU:



(a) Reconnect the ECU and the oscillator connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Enter the following menus: DIAGNOSIS / OBD/MOBD / ACTIVE TEST.
(e) Following the display on the tester, select the "ACTIVE TEST".

SMART KEY (Certification ECU):

Item	Vehicle Condition/Test Details
D TRANSMITTER	Door Oscillator ON/OFF
P TRANSMITTER	Door Oscillator ON/OFF

(f) Measure the frequency according to the value(s) in the table below.

Standard

Tester Connection (Symbols)	Condition	Specified Condition
E58-33 (CLG1) - E58-34 (CG1B)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)
E58-35 (CLG2) - E58-36 (CG2B)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

NG → **REPLACE CERTIFICATION ECU**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

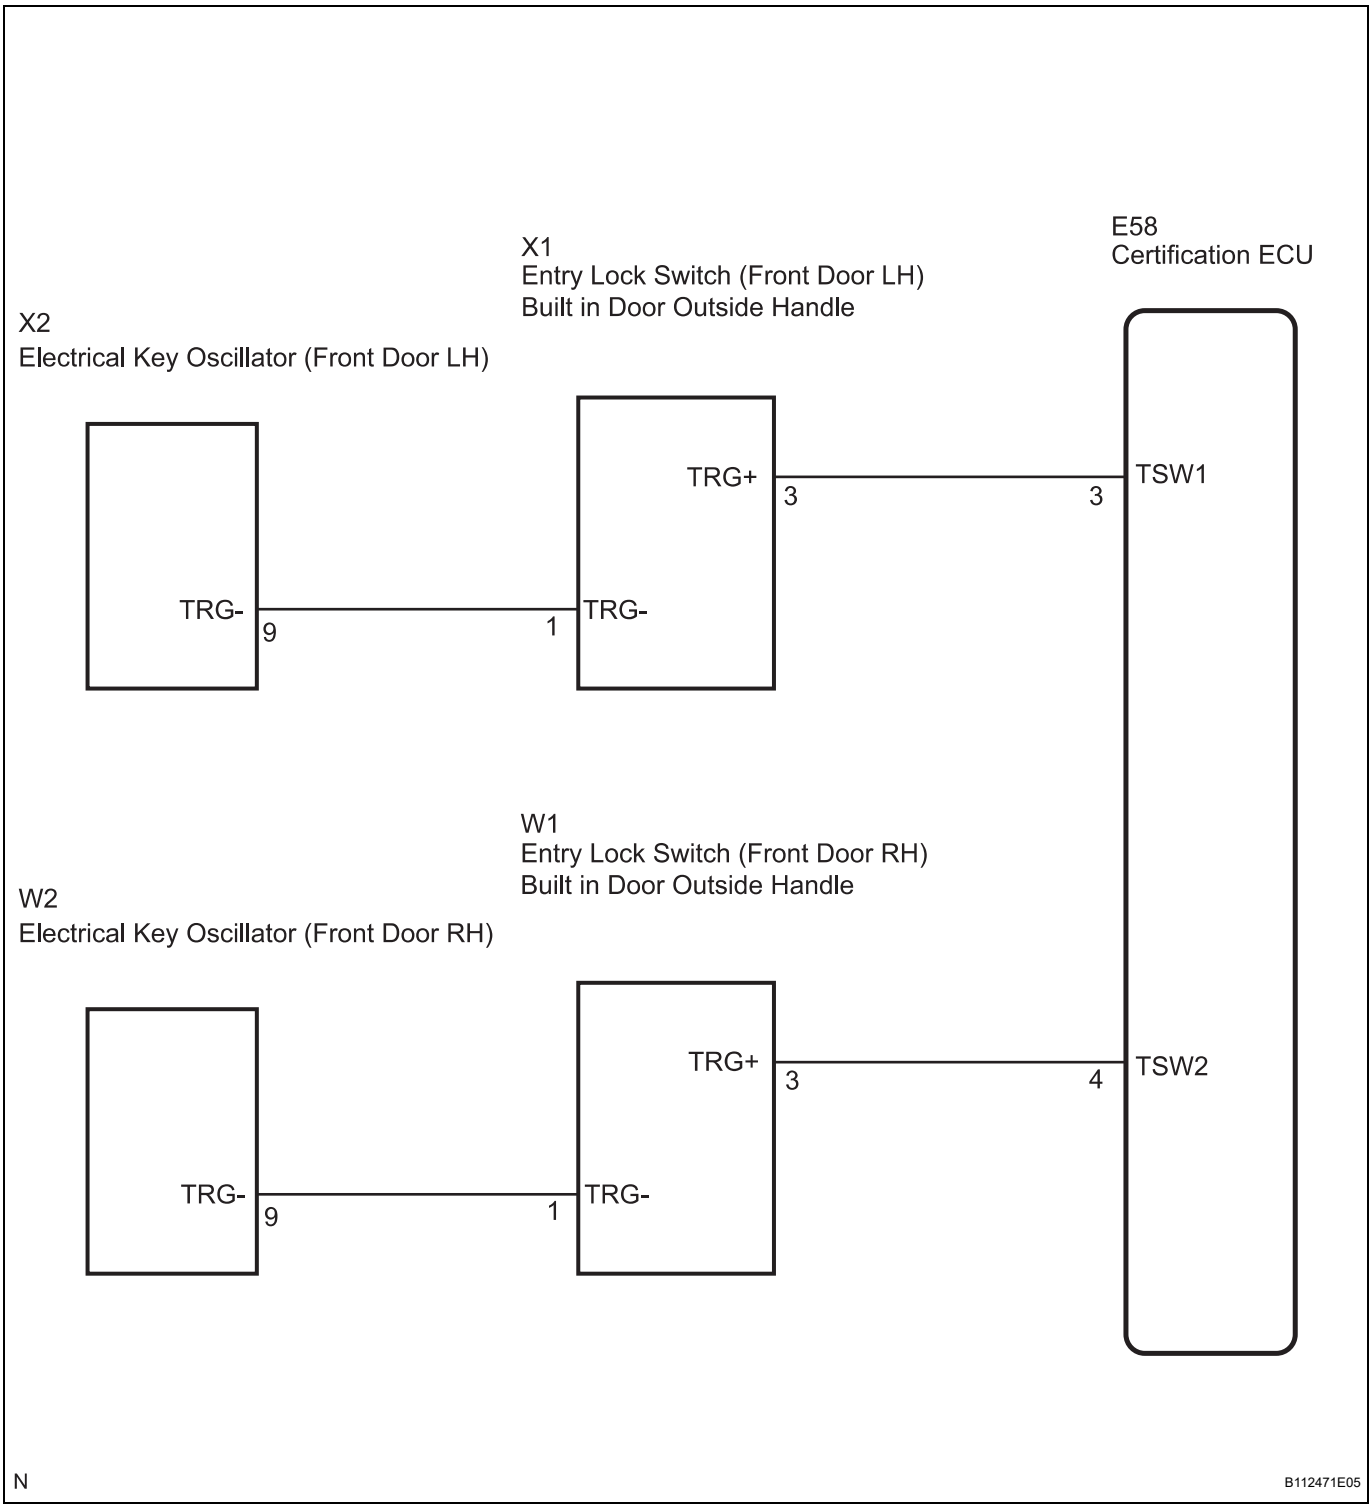
DL

Entry Lock Switch Circuit

DESCRIPTION

The entry lock switches (trigger switch) are built into the outside handles of the LH/RH door. The certification ECU detects the conditions of each lock switch.

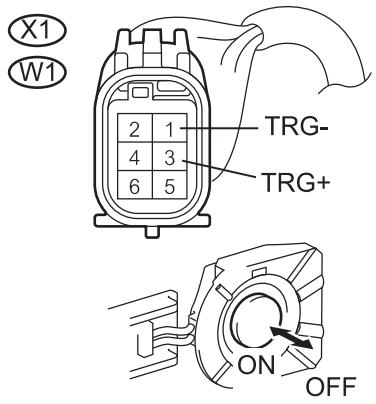
WIRING DIAGRAM



INSPECTION PROCEDURE

1	INSPECT ENTRY LOCK SWITCH

Lock Switch:



H B112465E09

(a) Remove the outside handle.
(b) Disconnect the connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
X1-1 (TRG-) - X1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
	Lock switch pushed	Below 1 Ω
W1-1 (TRG-) - W1-3 (TRG+)	Lock switch not pushed	10 kΩ or higher
	Lock switch pushed	Below 1 Ω

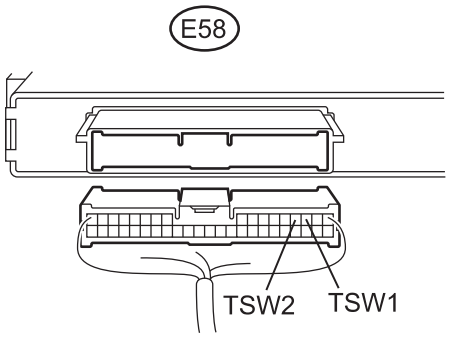
NG → **REPLACE OUTSIDE HANDLE ASSEMBLY**

OK

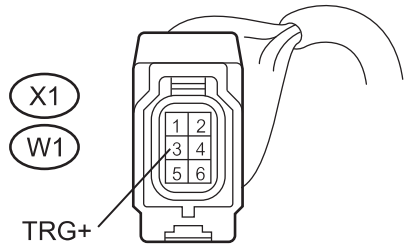
DL

2	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ENTRY LOCK SWITCH)

Certification ECU:



Lock Switch Wire Harness:



H

B138034E02

(a) Disconnect the E58 ECU connector.
(b) Measure the resistance according to the value(s) in the table below.

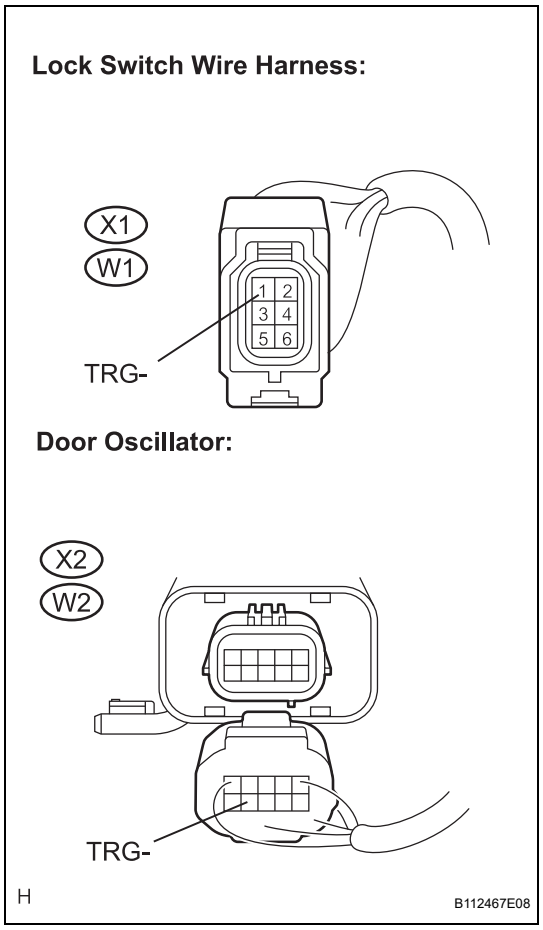
Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-3 (TSW1) - X1-3 (TRG+)	Always	Below 1 Ω
E58-4 (TSW2) - W1-3 (TRG+)	Always	Below 1 Ω
E58-3 (TSW1) - Body ground	Always	10 kΩ or higher
E58-4 (TSW2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - ENTRY LOCK SWITCH)



(a) Disconnect the door oscillator connector.
(b) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
X2-9 (TRG-) - X1-1 (TRG-)	Always	Below 1 Ω
W2-9 (TRG-) - W1-1 (TRG-)	Always	Below 1 Ω
X2-9 (TRG-) - Body ground	Always	10 kΩ or higher
W2-9 (TRG-) - Body ground	Always	10 kΩ or higher

DL

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

4	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR

(a) Replace the electrical key oscillator.
(b) Check that the entry LOCK/UNLOCK function operates normally.

OK:

Entry LOCK/UNLOCK function operates normally.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

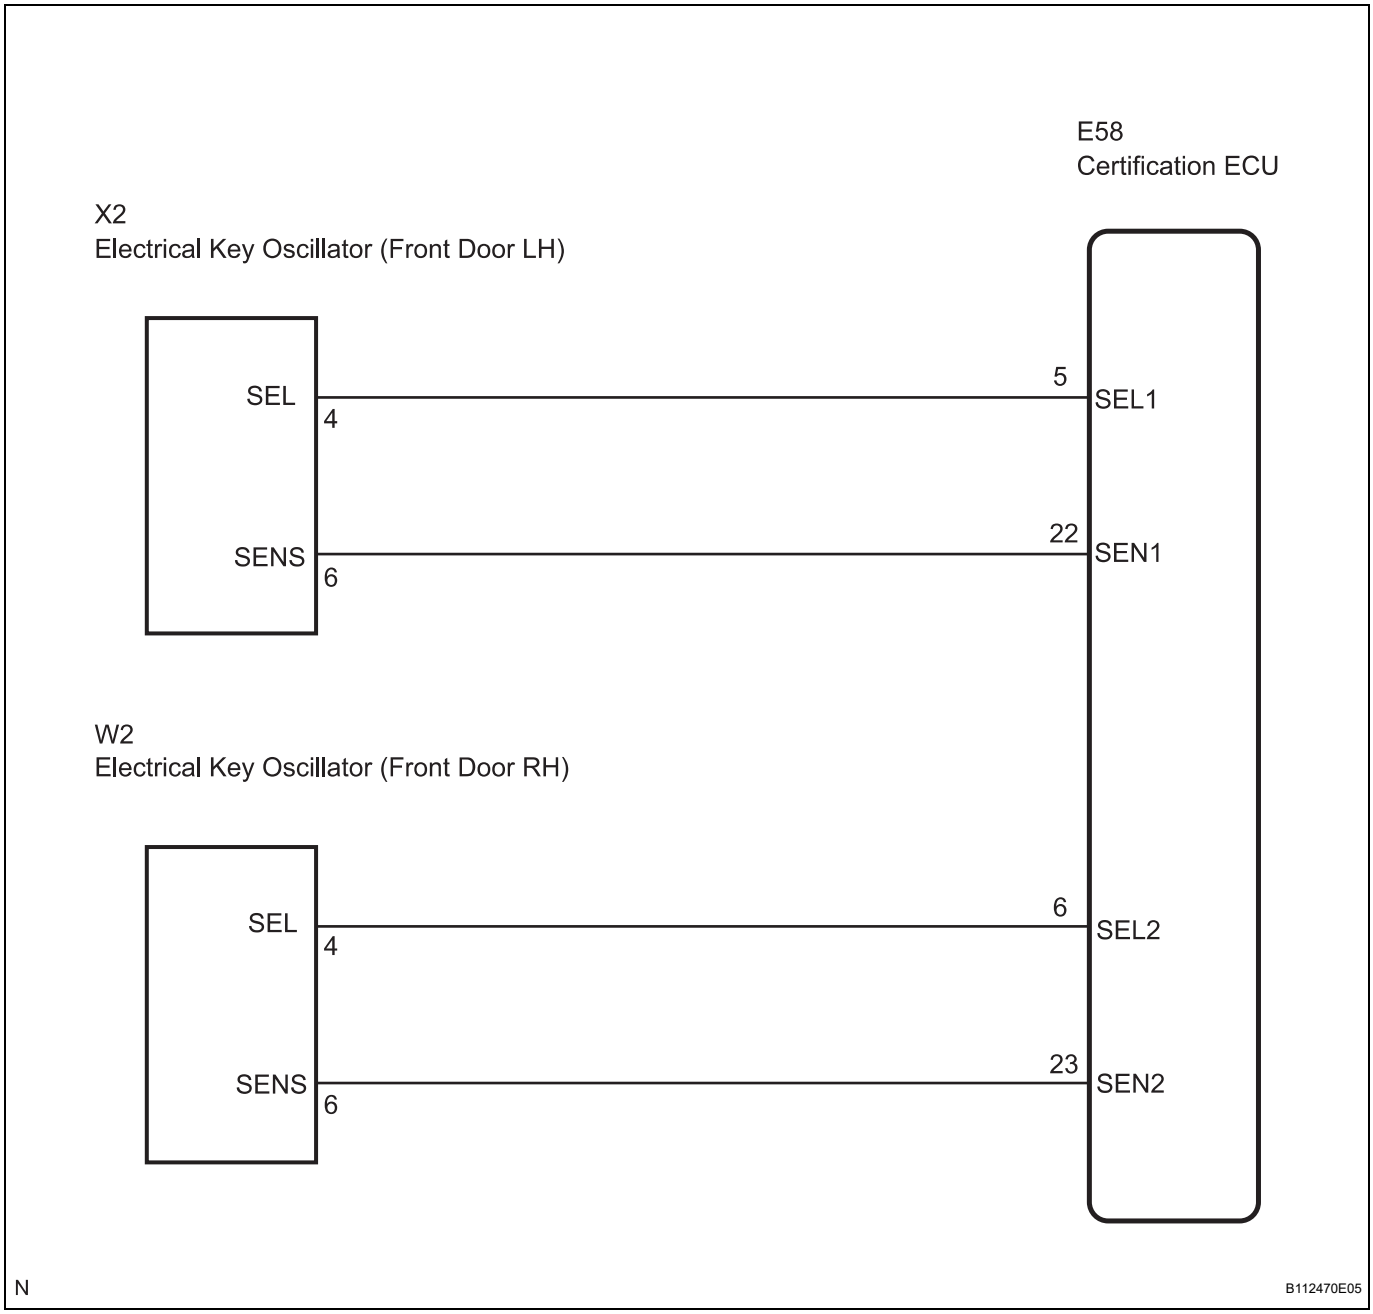
END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)

Touch Sensor Circuit

DESCRIPTION

This circuit receives a signal indicating whether a touch sensor signal is detected.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	READ VALUE OF INTELLIGENT TESTER

(a) Connect the intelligent tester to the DLC3.
(b) Turn the power switch on (IG).

(c) Following the display on the tester, select "DATA LIST".

SMART KEY (Certification ECU):

Item	Measurement Item/Range (Display)	Normal Condition	Diagnostic Note
D TOUCH SENSOR	Status of touch sensor front LH/ ON or OFF	ON: Touch sensor is touched OFF: Touch sensor is not touched	-
P TOUCH SENSOR	Status of touch sensor front RH/ ON or OFF	ON: Touch sensor is touched OFF: Touch sensor is not touched	-

OK:
"ON" (screen is touched) or "OFF" (screen is not touched) appears on the tester screen.

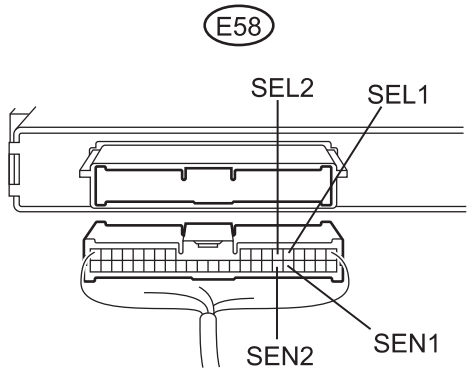
OK → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

NG

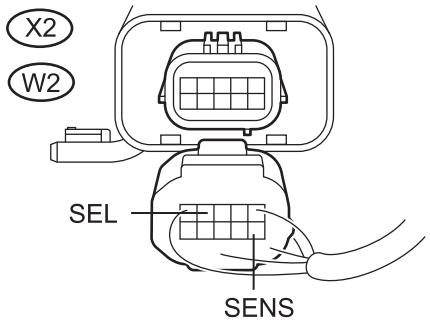
DL

2 CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ELECTRICAL KEY OSCILLATOR)

Certification ECU:



Door Oscillator:



H

B112464E10

(a) Disconnect the E58 ECU connector.
(b) Disconnect the oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-5 (SEL1) - X2-4 (SEL)	Always	Below 1 Ω
E58-22 (SEN1) - X2-6 (SENS)	Always	Below 1 Ω
E58-6 (SEL2) - W2-4 (SEL)	Always	Below 1 Ω
E58-23 (SEN2) - W2-6 (SENS)	Always	Below 1 Ω
E58-5 (SEL1) - Body ground	Always	10 kΩ or higher
E58-22 (SEN1) - Body ground	Always	10 kΩ or higher
E58-6 (SEL2) - Body ground	Always	10 kΩ or higher
E58-23 (SEN2) - Body ground	Always	10 kΩ or higher

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

3	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR (CHECK OPERATION OF OSCILLATOR)

(a) Replace the electrical key oscillator.
(b) Check that the entry UNLOCK function operates normally.
OK:
Entry UNLOCK function operates normally.

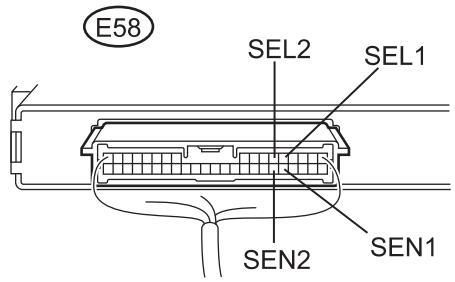
OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

DL

NG

4	INSPECT CERTIFICATION ECU

Certification ECU:



H B112461E23

(a) Reconnect the ECU and the oscillator connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Measure the voltage according to the value(s) in the table below.
Standard voltage

Tester Connection (Symbols)	Condition	Specified Condition
E58-5 (SEL1) - Body ground	Move the key more than 5 m (16.4 ft) away from the front door LH	10 to 14 V
E58-5 (SEL1) - Body ground	Bring key to the outside handle	Below 1 V
E58-6 (SEL2) - Body ground	Move the key more than 5 m (16.4 ft) away from the front door RH	10 to 14 V
E58-6 (SEL2) - Body ground	Bring key to the outside handle	Below 1 V
E58-22 (SEN1) - Body ground	Front door LH outside handle is not held (Bring the electrical key to the outside handle)	10 to 14 V
E58-22 (SEN1) - Body ground	Front door LH outside handle is held	Below 1 V
E58-23 (SEN2) - Body ground	Front door RH outside handle is not held (Bring the electrical key to the outside handle)	10 to 14 V
E58-23 (SEN2) - Body ground	Front door RH outside handle is held	Below 1 V

NG → **REPLACE CERTIFICATION ECU**

OK

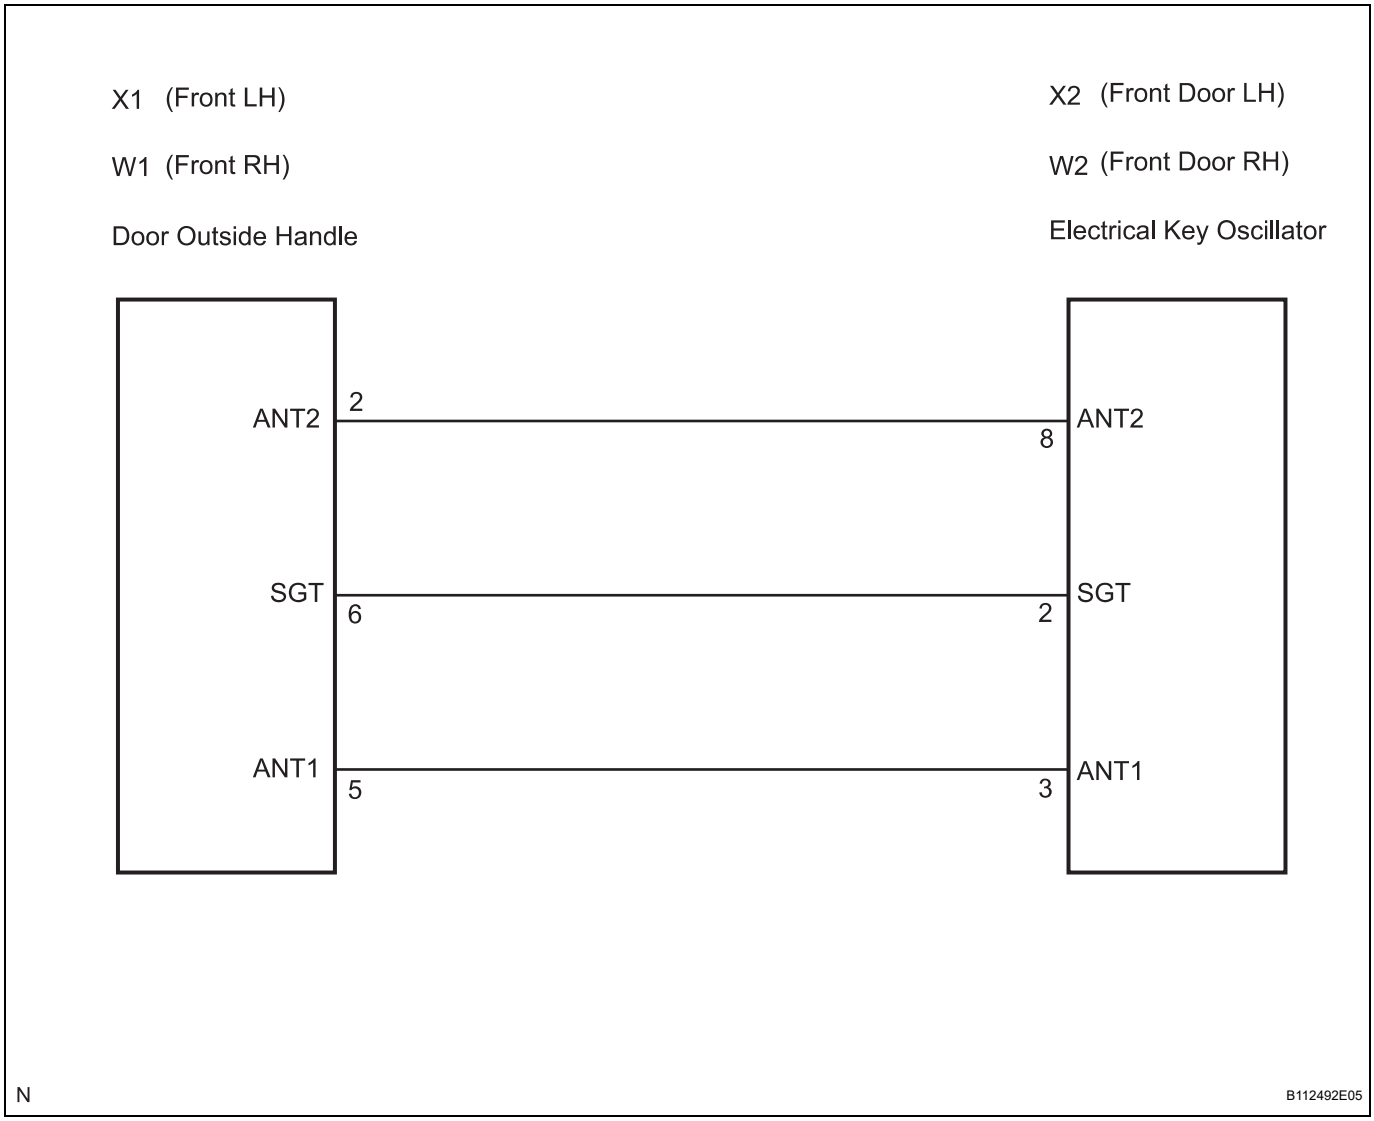
PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Antenna Circuit

DESCRIPTION

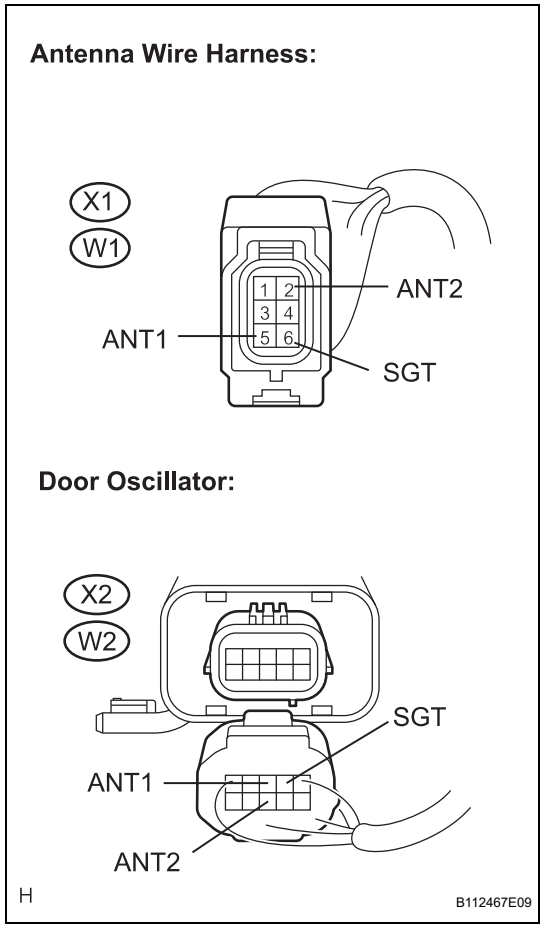
Terminals ANT1 and ANT2 of the antenna (door outside handle) detect if the electrical key is within the action area around the door outside handle.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (ELECTRICAL KEY OSCILLATOR - ANTENNA)



(a) Remove the outside handle.
(b) Disconnect the antenna and door oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
X1-2 (ANT2) - X2-8 (ANT2) (*1)	Always	Below 1 Ω
X1-6 (SGT) - X2-2 (SGT) (*1)	Always	Below 1 Ω
X1-5 (ANT1) - X2-3 (ANT1) (*1)	Always	Below 1 Ω
X1-2 (ANT2) - Body ground (*1)	Always	10 kΩ or higher
X1-6 (SGT) - Body ground (*1)	Always	10 kΩ or higher
X1-5 (ANT1) - Body ground (*1)	Always	10 kΩ or higher
W1-2 (ANT2) - W2-8 (ANT2) (*2)	Always	Below 1 Ω
W1-6 (SGT) - W2-2 (SGT) (*2)	Always	Below 1 Ω
W1-5 (ANT1) - W2-3 (ANT1) (*2)	Always	Below 1 Ω
W1-2 (ANT2) - Body ground (*2)	Always	10 kΩ or higher
W1-6 (SGT) - Body ground (*2)	Always	10 kΩ or higher
W1-5 (ANT1) - Body ground (*2)	Always	10 kΩ or higher

*1: Driver side
*2: Passenger side

NG → **REPAIR OR REPLACE HARNESS OR CONNECTOR**

OK

2	CHECK AND REPLACE DOOR OUTSIDE HANDLE

(a) Replace the door outside handle.
(b) Check that the entry LOCK/UNLOCK function operates normally.

OK:

Entry LOCK/UNLOCK function operates normally.

NG → **PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE**

OK

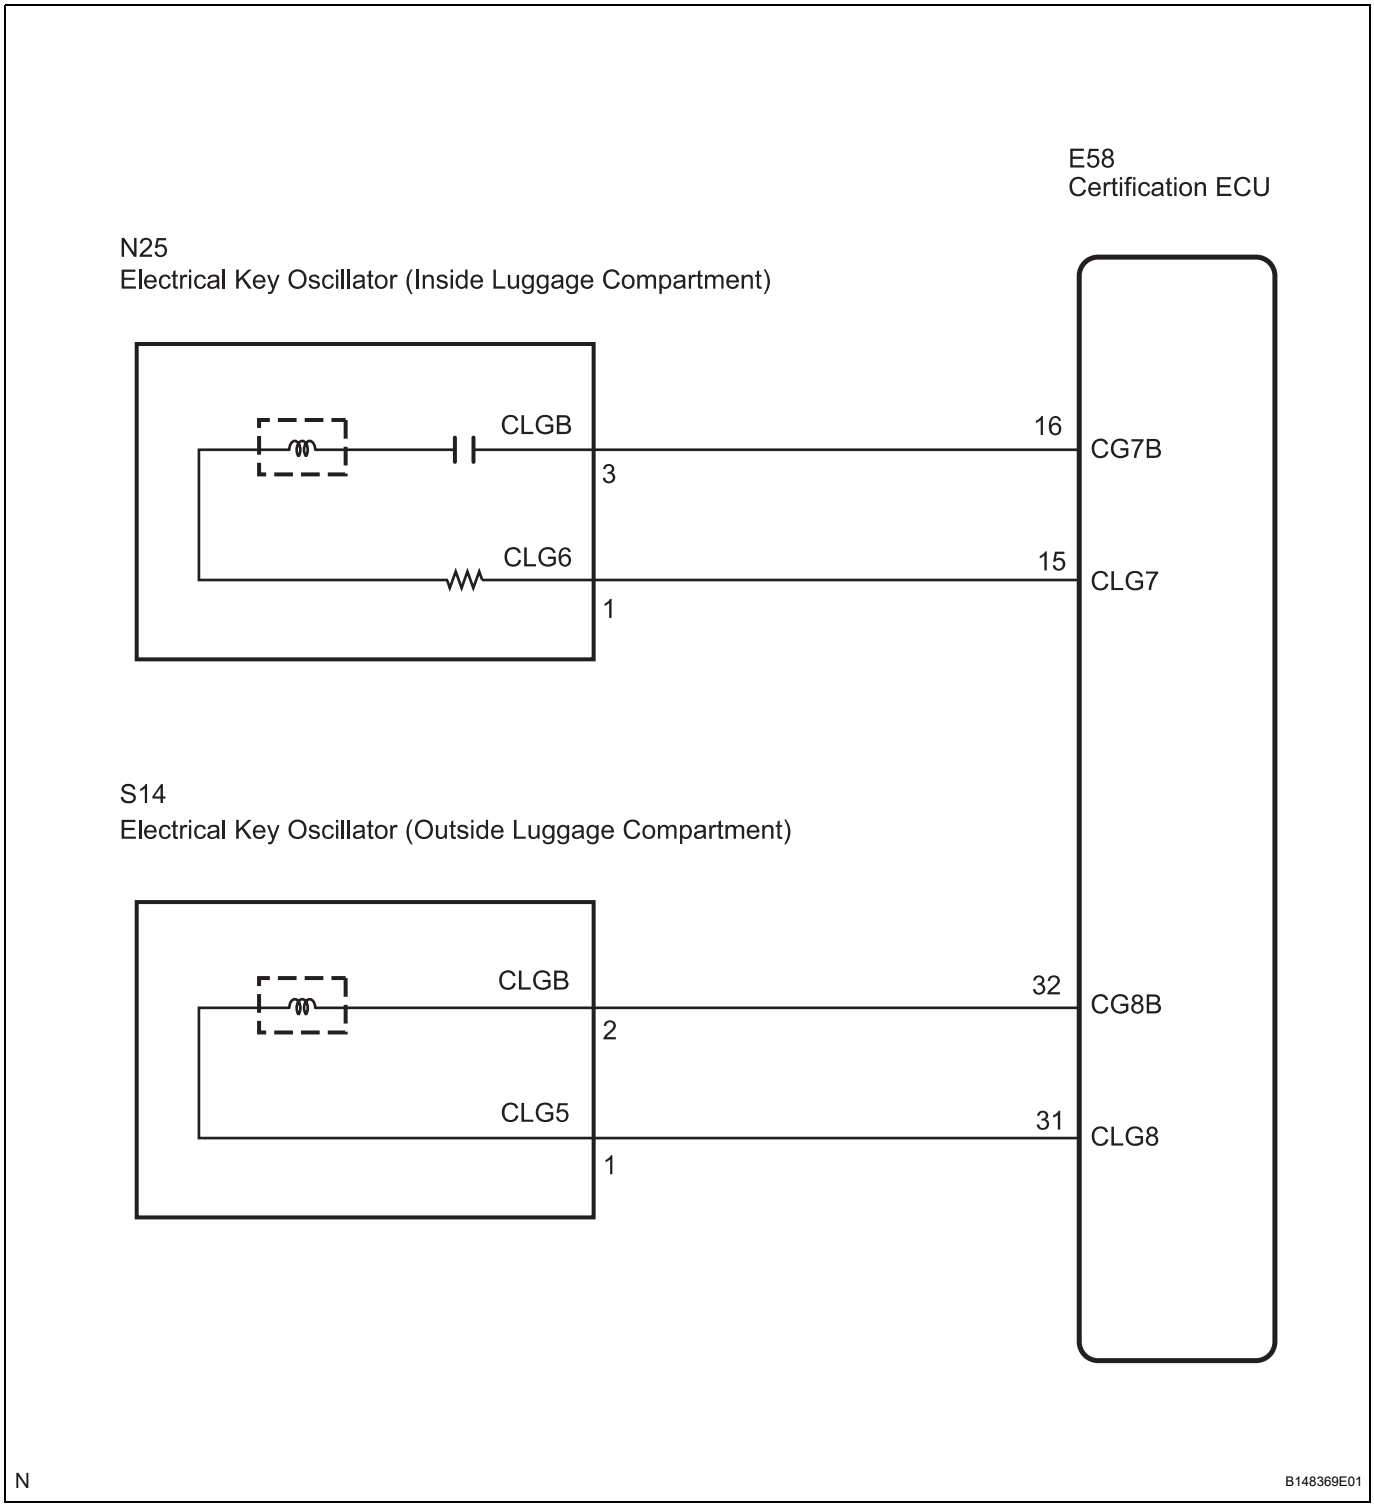
END (DOOR OUTSIDE HANDLE IS DEFECTIVE)

Luggage Oscillator Circuit

DESCRIPTION

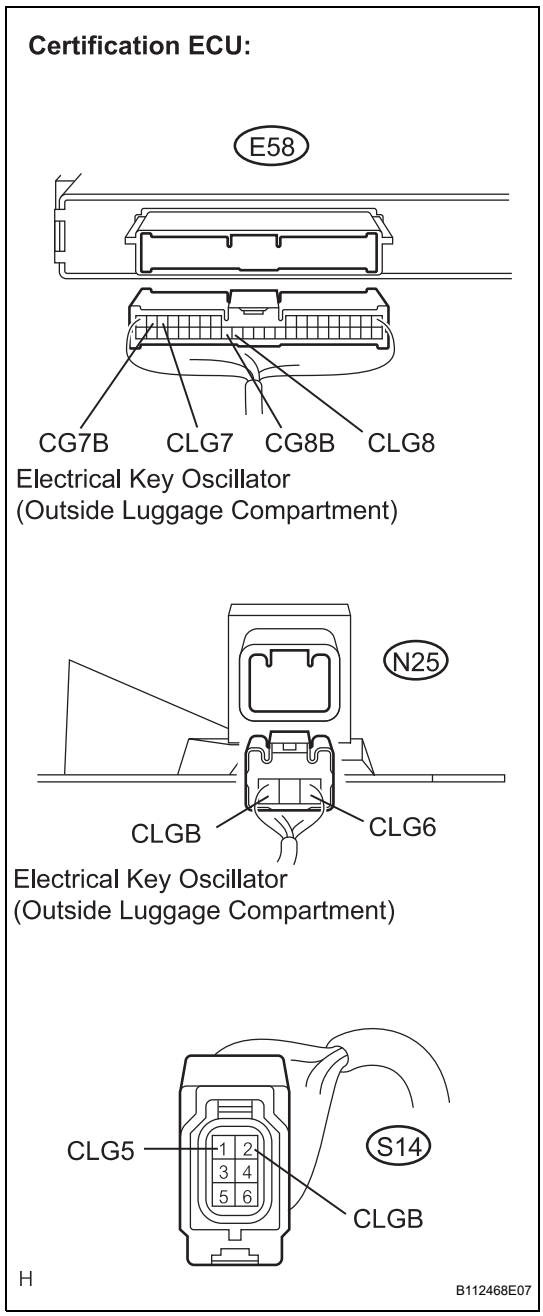
The certification ECU activates the inner and outer luggage compartment oscillators. The power is supplied from the certification ECU to both the inner and outer luggage compartment oscillators. The inner and outer luggage compartment oscillator circuits have the same wiring. If the entry luggage compartment function has a problem, check both the inner and outer luggage compartment oscillator circuits.

WIRING DIAGRAM



INSPECTION PROCEDURE

1	CHECK HARNESS AND CONNECTOR (CERTIFICATION ECU - ELECTRICAL KEY OSCILLATOR)



(a) Disconnect the E58 ECU connector.
(b) Disconnect the oscillator connectors.
(c) Measure the resistance according to the value(s) in the table below.

Standard resistance

Tester Connection (Symbols)	Condition	Specified Condition
E58-16 (CG7B) - N25-3 (CLGB)	Always	Below 1 Ω
E58-15 (CLG7) - N25-1 (CLG6)	Always	Below 1 Ω
E58-32 (CG8B) - S14-2 (CLGB)	Always	Below 1 Ω
E58-31 (CLG8) - S14-1 (CLG5)	Always	Below 1 Ω
E58-16 (CG7B) - Body ground	Always	10 kΩ or higher
E58-15 (CLG7) - Body ground	Always	10 kΩ or higher
E58-32 (CG8B) - Body ground	Always	10 kΩ or higher
E58-31 (CLG8) - Body ground	Always	10 kΩ or higher

NG → REPAIR OR REPLACE HARNESS OR CONNECTOR

OK

2	CHECK AND REPLACE ELECTRICAL KEY OSCILLATOR

(a) Replace the electrical key oscillator.
(b) Check that the luggage compartment door entry LOCK/UNLOCK function operates normally.

OK:

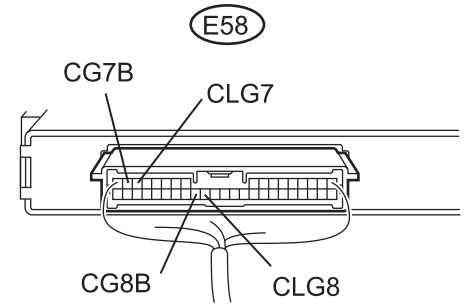
Luggage compartment door entry LOCK/UNLOCK function operates normally.

OK → **END (ELECTRICAL KEY OSCILLATOR IS DEFECTIVE)**

NG

3 PERFORM ACTIVE TEST BY INTELLIGENT TESTER

Certification ECU:



H B112461E24

(a) Reconnect the oscillator and the ECU connectors.
(b) Connect the intelligent tester to the DLC3.
(c) Turn the power switch on (IG).
(d) Following the display on the tester, select the "ACTIVE TEST".

SMART KEY (Certification ECU):

Item	Vehicle Condition/Test Details
IN-BDR TRNSMTTR	Electrical key oscillator (Luggage compartment inner) ON/OFF
BDOOR TRNSMTTR	Electrical key oscillator (Luggage compartment outer) ON/OFF

(e) Measure the frequency according to the value(s) in the table below.

Standard

Tester Connection (Symbols)	Condition	Specified Condition
E58-16 (CG7B) - E58-15 (CLG7)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)
E58-32 (CG8B) - E58-31 (CLG8)	During ACTIVE TEST	Frequency is generated (higher than 0 Hz)

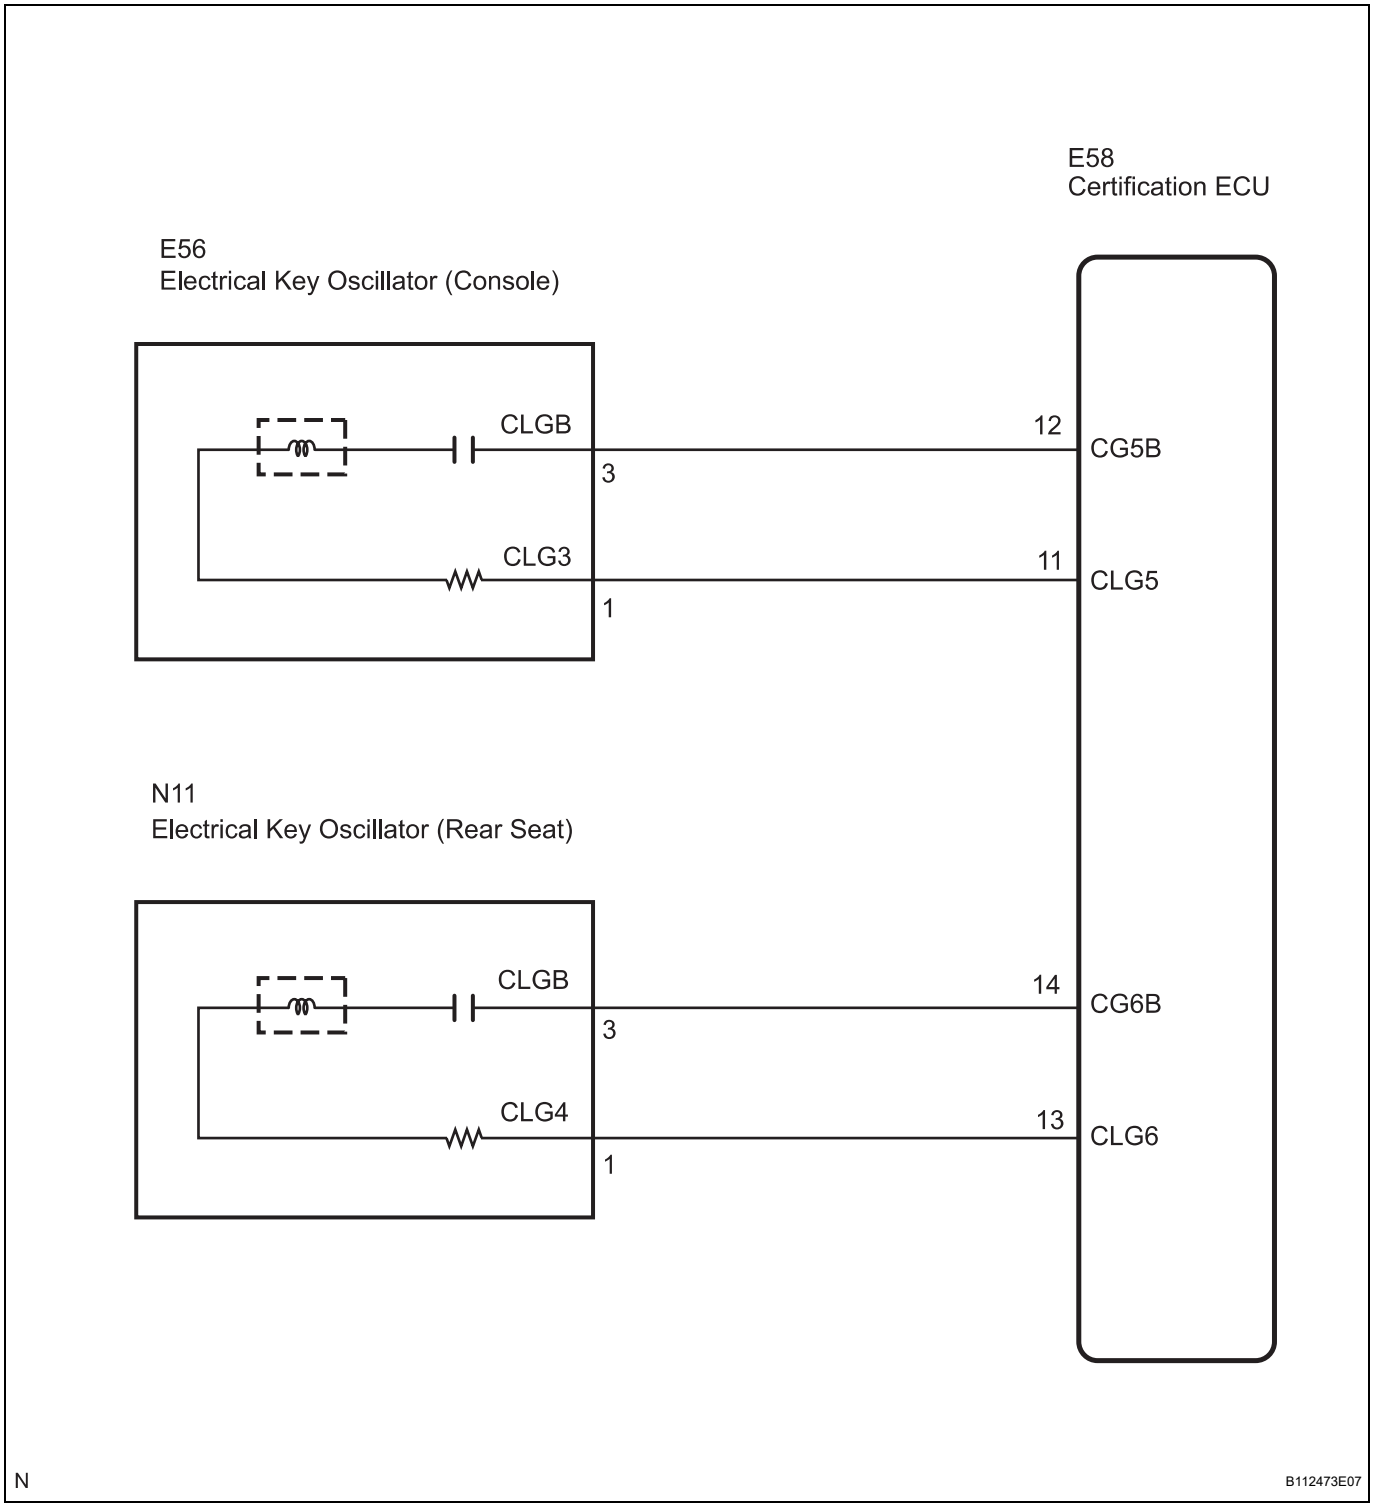
NG → **REPLACE CERTIFICATION ECU**

OK

PROCEED TO NEXT CIRCUIT INSPECTION SHOWN IN PROBLEM SYMPTOMS TABLE

Room Oscillator Circuit

DESCRIPTION

The certification ECU activates the front and rear cabin oscillators. The power is supplied from the certification ECU to both the front and rear cabin oscillators. The front and rear cabin oscillator circuits have the same wiring. If the smart key system does not operate properly inside the vehicle, check both the front and rear cabin oscillator circuits.


WIRING DIAGRAM
