3. To install, reverse the removal procedure.

KNOCK SENSOR (KS)

Material

Item	Specification
Motorcraft Premium Gold Engine Coolant with Bittering Agent (US only)	WSS-M97B51-A1

VC-7-B (US); CVC-7-A (Canada); or equivalent (yellow color)	

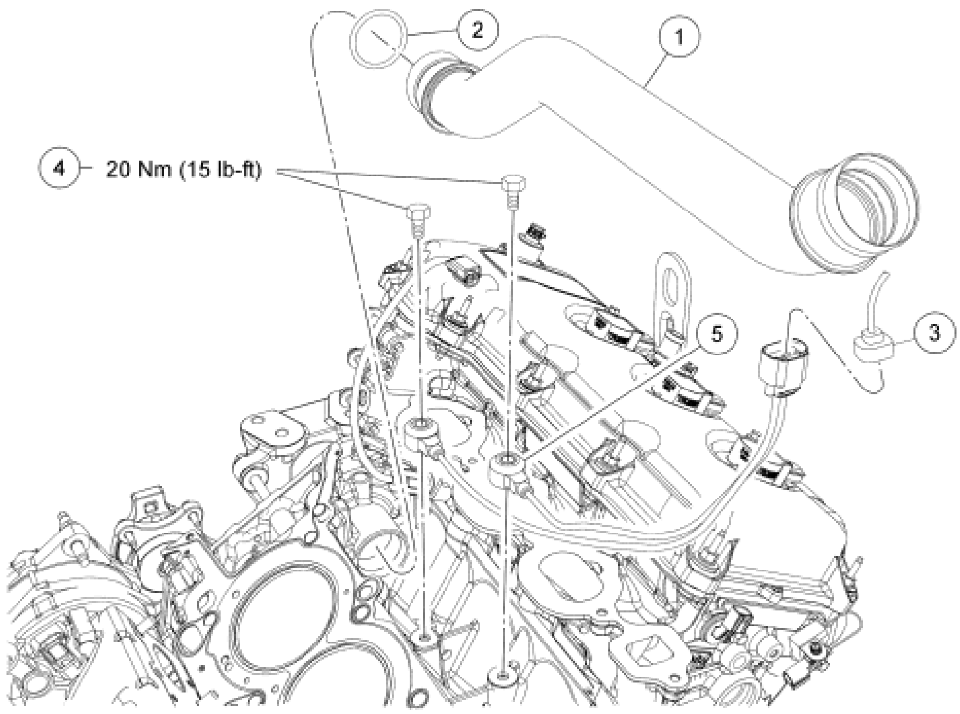

Fig. 11: Exploded View Of Knock Sensor (KS) With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	9N271	Coolant tube
2	8565	O-ring seal
3	14A464	Knock sensor (KS) electrical connector
4	W500310	KS bolts (2 required)
5	12A699	KS

REMOVAL AND INSTALLATION

1. Remove the thermostat housing. For additional information, refer to **ENGINE COOLING** article.
2. Remove the lower intake manifold. For additional information, refer to **ENGINE - 3.5L** article.
3. Remove the coolant tube.
   - Discard the O-ring seal.
4. Disconnect the knock sensor (KS) electrical connector.
5. Remove the 2 bolts and the KS.
   - To install, tighten to 20 Nm (15 lb-ft).
6. To install, reverse the removal procedure.

- Lubricate the new O-ring seal with clean engine coolant.

DESCRIPTION AND OPERATION

ENGINE EMISSION CONTROL

NOTE: **Do not permanently remove or render inoperative any part of the vehicle emission control system including related hardware. Failure to comply may violate applicable state and federal laws.**

The engine emission control system consists of the PCV system.

The PCV system consists of the:

- crankcase ventilation tube.
- PCV fitting.
- PCV valve.

The PCV system uses intake manifold vacuum to ventilate blow-by fumes from the crankcase and return the vapors to the intake manifold for combustion. The PCV valve varies the amount of blow-by gases returned to the intake manifold based on available engine vacuum. The PCV valve also prevents the entry of combustion backfiring into the crankcase.

Vehicle Emission Vacuum Routing

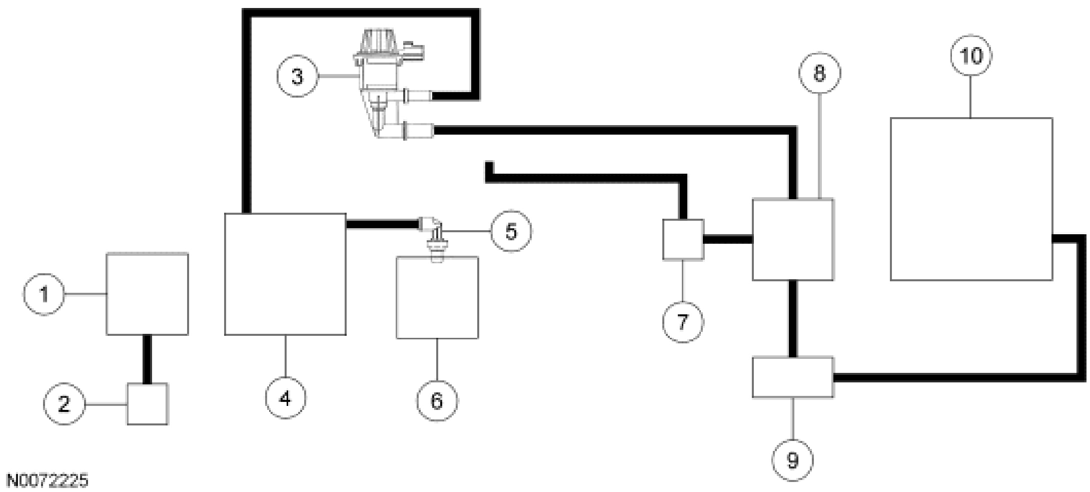

Fig. 1: Identifying Vehicle Emission Vacuum Routing
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	6A505	LH valve cover
2	9F805	Air cleaner outlet pipe
3	9G641	Evaporative emission (EVAP) canister purge valve
4	9S455	Upper intake manifold
5	6A666	PCV valve
6	6582	RH valve cover
7	9G676	EVAP canister vent solenoid and dust separator assembly
8	9E857	EVAP canister
9	-	Fuel tank pressure (FTP) sensor (part of 9S284)
10	9K007	Fuel tank

DIAGNOSTIC TESTS

ENGINE EMISSION CONTROL

REMOVAL AND INSTALLATION

POSITIVE CRANKCASE VENTILATION (PCV) SYSTEM COMPONENTS

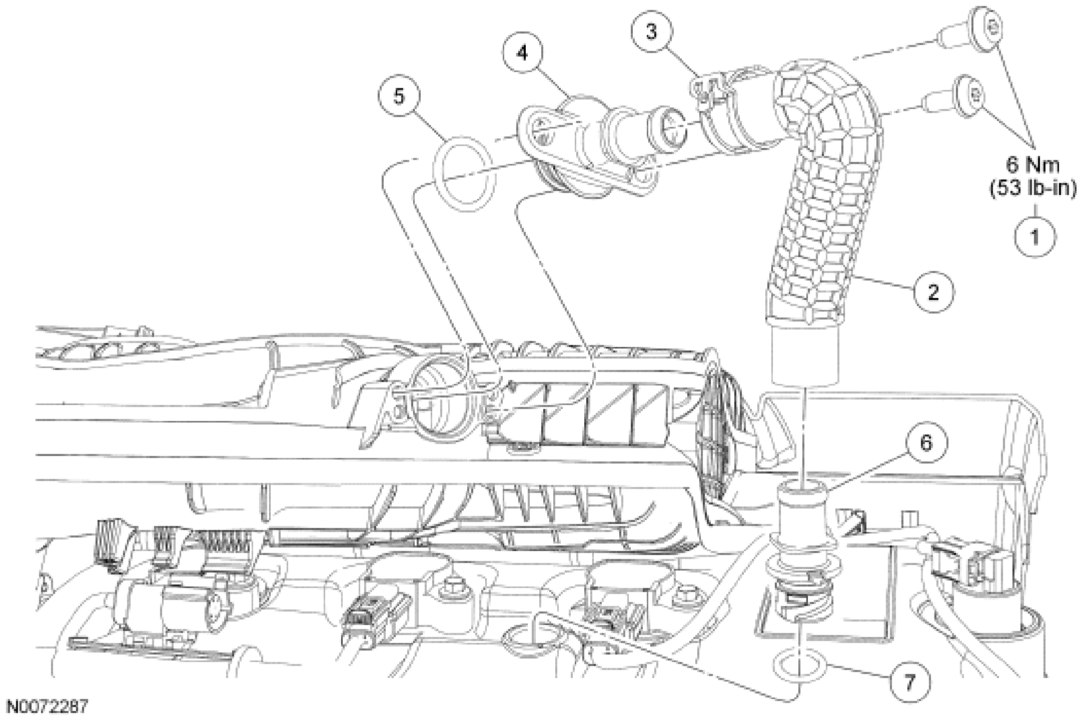

Fig. 2: Identifying Positive Crankcase Ventilation (PCV) System Components
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	PCV fitting screws (2 required)
2	6A664	Crankcase ventilation tube
3	-	Crankcase ventilation tube spring clamp (part of 6K817)
4	9F695	PCV fitting
5	9J469	PCV fitting O-ring seal
6	6A666	PCV valve
7	-	PCV valve O-ring seal (part of 6A666)

1. For additional information, refer to the procedures in this article.

POSITIVE CRANKCASE VENTILATION (PCV) VALVE

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

REMOVAL AND INSTALLATION

1. Disconnect the crankcase ventilation tube from the PCV valve.

CAUTION: A new positive crankcase ventilation (PCV) valve must be installed if removed from the valve cover. During removal, damage will occur to the locking mechanism on the PCV valve.

NOTE: To install, apply clean engine oil to the O-ring seal.

2. Rotate the PCV valve counterclockwise and remove from the valve cover.
    - Discard the PCV valve.
3. To install, reverse the removal procedure.

DESCRIPTION AND OPERATION

ENGINE

NOTE: When repairing engines, all parts must be contamination free. If contamination/foreign material is present when repairing an engine, premature engine failure may occur.

NOTE: Specifications show the expected minimum or maximum condition. Refer to the appropriate Engine article for the procedure.

NOTE: If a component fails to meet the specifications, it is necessary to refinish it or install a new component. Wear limits are provided as an aid to determine if the component can be refinished. A new component must be installed when any component fails to meet specifications and cannot be refinished.

NOTE: This service information contains information, steps and procedures that may not be specific to this engine.

This service information covers general procedures and diagnosis and testing of the engine system, except for exhaust emission control devices, which are covered in the **INTRODUCTION - GASOLINE ENGINES** article.

The engine incorporates the following features: Refer to the appropriate Engine article for the procedure.

- Crankcase ventilation or breather system
- Exhaust emission control system
- Evaporative Emission (EVAP) control system

Some engines incorporate a fail-safe cooling system. Refer to the appropriate Engine article for the procedure.

The engine, fuel system, ignition system, emissions system and exhaust system all affect exhaust emission levels and must be maintained according to the maintenance schedule. Refer to the scheduled Maintenance Guide.

Correct engine identification is required to order parts. Refer to the appropriate Engine article for the procedure.

For complete vehicle and engine identification codes, refer to **IDENTIFICATION CODES** article.

There are 2 diagnostic paths that can be followed depending on the type of engine concern. Carry out Inspection and Verification - Engine Performance or Inspection and Verification - NVH.

Inspection and Verification - Engine Performance

1. Verify the customer concern by operating the engine to duplicate the condition.

2. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

VISUAL INSPECTION CHART

Mechanical
• Engine coolant leaks • Engine oil leaks • Fuel leaks • Damaged or severely worn parts • Loose mounting bolts, studs and nuts

3. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

NOTE: The Vehicle Communication Module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
    - check the VCM connection to the vehicle.
    - check the scan tool connection to the VCM.
    - refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no power to the scan tool.
6. If the scan tool does not communicate with the vehicle:
    - verify the ignition key is in the ON position.
    - verify the scan tool operation with a known good vehicle.
    - refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
    - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
    - If the network test passes, retrieve and record continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the PCM.
9. If the DTCs retrieved are related to the concern, go to the DTC Chart, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **SYMPTOM CHART - ENGINE** table.

Inspection and Verification - NVH

1. NVH symptoms should be identified using the diagnostic tools and techniques that are available. For a

list of these techniques, tools, an explanation of their uses and a glossary of common terms, refer to **NOISE, VIBRATION AND HARSHNESS** article.

2. Verify the customer concern by operating the engine to duplicate the condition.
3. Check the engine oil level and check the oil for contamination. Low engine oil level or contaminated oil are a common cause of engine noise. If the oil is contaminated, the source of the contamination must be identified and repaired as necessary.
4. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

VISUAL INSPECTION CHART

Mechanical
• Loose mounting bolts, studs and nuts • Damaged or leaking powertrain mounts • Damaged or disconnected vacuum hoses • Obstruction of cooling fan • Obstruction of Front End Accessory Drive (FEAD) • Damaged or disconnected air intake components

5. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.

NOTE: Make sure to use the latest scan tool software release.

6. If the cause is not visually evident, connect the scan tool to the DLC.

NOTE: The VCM LED prove out confirms power and ground from the DLC are provided to the VCM.

7. If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no power to the scan tool.
8. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
9. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
   - If the network test passes, retrieve and record continuous memory DTCs.
10. Clear the continuous DTCs and carry out the self-test diagnostics for the PCM.

11. If the DTCs retrieved are related to the concern, go to the DTC Chart, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
12. If no DTCs related to the concern are retrieved, continue the inspection and verification if a noise concern is related to the engine. For vibration concerns and noise concerns such as powertrain mounts, air intake system and starter Go to **SYMPTOM CHART - NVH** table.

    In some cases, a noise may be a normal characteristic of that engine type. In other cases the noise may require further investigation. Comparing the noise to a similar year/model vehicle equipped with the same engine will aid in determining if the noise is normal or abnormal.

    Once a customer concern has been identified as an abnormal engine noise, it is critical to determine the location of the specific noise. Use the EngineEAR/ChassisEAR or stethoscope (the noise will always be louder closer to the noise source) to isolate the location of the noise to one of the following:

    - Fuel injector(s)
    - Upper end of engine
    - Lower end of engine
    - Front of engine
    - Rear of engine

    Fuel injector noise - A common source of an engine ticking noise can be related to the fuel injector(s). This is normal engine noise that can be verified by listening to another vehicle. If the injector noise is excessive or irregular, use the EngineEAR/ChassisEAR or stethoscope to isolate the noise to a specific fuel injector.

    Upper end engine noise - A common source of upper end engine noise (ticking, knocking or rattle) include the camshaft(s) and valve train. Upper end engine noise can be determined using the EngineEAR/ChassisEAR or stethoscope on the valve cover bolts. If the noise is loudest from the valve cover bolts, then the noise is upper end. The EngineEAR/ChassisEAR or stethoscope can be used to further isolate the noise to the specific cylinder bank and cylinder. Removal of the valve covers will be required to pinpoint the source of the noise.

    Lower end engine noise - A common source of lower end engine noise (ticking or knocking) include the crankshaft, connecting rod(s) and bearings. Lower end noises can be determined by using the oil pan or cylinder block lug bosses. If the noise is loudest from these areas, then the noise is lower end. If an engine noise is isolated to the lower end, some disassembly of the engine may be required to inspect for damage or wear.

    Front of engine noise - A common source of noise from the front of the engine (squeal, chirp, whine or hoot) is the Front End Accessory Drive (FEAD) components. To isolate FEAD noise, carry out the Engine Accessory Test, refer to **NOISE, VIBRATION AND HARSHNESS** article.

    Some other noises from the front of the engine (ticking, tapping or rattle) may be internal to the engine. Use the EngineEAR/ChassisEAR or stethoscope on the engine front cover to determine if the noise is internal to the engine. Removal of the engine front cover may be necessary to inspect internal engine components.

Rear of engine noise - A common source of noise from the rear of the engine (knocking) is the flywheel/flexplate. Inspection of the flywheel/flexplate will be necessary.

If equipped, the Rear End Accessory Drive (READ) can also be a source of noise from the rear of the engine (squeal or chirp). The READ consists of the coolant pump and belt.

Some engines have timing drive components at the rear of the engine and may be the source of noise (ticking, knocking or rattle). Use the EngineEAR/ChassisEAR or stethoscope on the rear of the engine if the noise is suspected to be internal to the engine. Some disassembly of the engine may be required to inspect for damage or wear.

13. After the noise is localized, note the characteristics of the noise, including type of noise, frequency and conditions when the noise occurs and Go to **SYMPTOM CHART - NVH** table.

Symptom Chart - Engine Performance

SYMPTOM CHART - ENGINE PERFORMANCE

Condition	Possible Sources	Action
• Difficult starting	• Inoperative or damaged ignition system • Air or vacuum leak • Inoperative or damaged fuel system • Inoperative or damaged starting system	• Refer to the appropriate Engine article for the procedure. REFER to the **Introduction - Gasoline Engines** article.
-	• Damaged charging system/battery	• REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article.
-	• Burnt valve	• INSTALL a new valve in the cylinder head. TEST the system for normal operation after the repair.
-	• Worn piston • Worn piston rings • Worn cylinder	• INSTALL a new short block. TEST the system for normal operation after the repair.
-	• Damaged head gasket	• INSTALL a new cylinder head gasket. TEST the system for normal operation after the repair.
-	• Inoperative or damaged cooling system	• REFER to **ENGINE COOLING** article.
-	• Fail-safe cooling invoked (if equipped)	• REFER to the **Introduction - Gasoline Engines** article.

• Poor idling	• Vacuum leaks	• Refer to the appropriate Engine article for the procedure. REFER to the **Introduction - Gasoline Engines** article.
-	• Inoperative or damaged ignition system	• REFER to **ENGINE IGNITION - 3.5L** article.
-	• Inoperative or damaged cooling system • Inoperative or damaged fuel system	• Refer to the appropriate Engine article for the procedure.
-	• Fail-safe cooling invoked (if equipped)	• REFER to the **Introduction - Gasoline Engines** article.
-	• Incorrect valve clearance	• ADJUST valve clearance. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
-	• Incorrect valve-to-valve seat contact	• INSTALL a new cylinder head. TEST the system for normal operation after the repair.
-	• Damaged head gasket	• INSTALL a new cylinder head gasket. TEST the system for normal operation after the repair.
• Engine runs rough	• Inoperative or damaged fuel system • Air or vacuum leaks • Inoperative or damaged cooling system • Inoperative or damaged ignition system	• Refer to the appropriate Engine article for the procedure.
-	• Fail-safe cooling invoked (if equipped)	• REFER to the **Introduction - Gasoline Engines** article.
-	• Burnt or sticking valve	• INSTALL a new valve in the cylinder head. TEST the system for normal operation after the repair.
-	• Weak or broken valve spring	• INSTALL a new valve spring. TEST the system for normal operation after the repair.
-	• Carbon accumulation in combustion chamber	• ELIMINATE carbon buildup. TEST the system for normal operation after the repair.
• Excessive oil	• Leaking oil	• REPAIR oil leakage. TEST the system for

consumption		normal operation after the repair.
-	• Inoperative PCV system	• REPAIR or INSTALL new components as necessary. TEST the system for normal operation after the repair.
-	• Incorrect oil	• CHANGE oil to correct specification.
-	• Worn valve stem seal	• INSTALL a new valve stem seal. TEST the system for normal operation after the repair.
-	• Worn valve stem or valve guide	• INSTALL a new cylinder head. TEST the system for normal operation after the repair.
-	• Sticking piston rings • Worn piston ring groove • Worn piston or cylinder	• INSTALL a new short block. TEST the system for normal operation after the repair.
• Oil in coolant	• Leaking head gasket • Leaking oil cooler (if equipped) • Damaged cylinder block • Damaged cylinder head	• INSPECT the engine components. INSTALL new engine components as necessary. Refer to the appropriate Engine article for the procedure. TEST the system for normal operation after the repair.
• Coolant in oil	• Leaking head gasket • Leaking oil cooler (if equipped) • Damaged cylinder block • Damaged cylinder head • Damaged coolant pump/seal/gasket	• INSPECT the engine components. INSTALL new engine components as necessary. Refer to the appropriate Engine article for the procedure. TEST the system for normal operation after the repair.
• Insufficient power	• Inoperative or damaged ignition system • Air intake system blockage • Lubrication system blockage • Inoperative or damaged fuel system	• Refer to the appropriate Engine article for the procedure. REFER to the **Introduction - Gasoline Engines** article.
-	• Oil level too high	• DRAIN oil to correct level. TEST the system

		for normal operation after the repair.
-	• Incorrect engine oil	• INSTALL correct specification engine oil. TEST the system for normal operation after the repair.
-	• Excessive accessory drive belt loading • Inoperative or damaged cooling system	• Refer to the appropriate Engine article for the procedure.
-	• Fail-safe cooling invoked (if equipped)	• REFER to the **Introduction - Gasoline Engines** article.
-	• Damaged or plugged exhaust system	• INSPECT exhaust system.
-	• Incorrect tire size	• REFER to **SUSPENSION SYSTEM - GENERAL INFORMATION** article.
-	• Dragging brakes	• REFER to **BRAKE SYSTEM - GENERAL INFORMATION** article.
-	• Slipping transmission	• REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article.
-	• Incorrect valve clearance	• ADJUST valve clearance. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
-	• Worn or damaged valve tappet	• INSTALL a new valve tappet. TEST the system for normal operation after the repair.
-	• Damaged valve guide • Compression leakage at valve seat • Seized valve stem	• INSTALL a new cylinder head assembly. TEST the system for normal operation after the repair.
-	• Weak or broken valve spring	• INSTALL a new valve spring. TEST the system for normal operation after the repair.
-	• Worn or damaged cam	• INSTALL a new camshaft. TEST the system for normal operation after the repair.
-	• Damaged head gasket	• INSTALL a new head gasket. TEST the system for normal operation after the repair.
-	• Cracked or distorted cylinder head	• INSTALL a new cylinder head assembly. TEST the system for normal operation after the repair.
-	• Damaged, worn or sticking piston ring(s)	• INSTALL a new short block. TEST the

	• Worn or damaged piston	system for normal operation after the repair.

Symptom Chart - NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to NOISE, VIBRATION AND HARSHNESS article. Since it is possible that any one of multiple systems may be the cause of the symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to NOISE, VIBRATION AND HARSHNESS article for the next likely system and continue diagnosis.

SYMPTOM CHART - NVH

Condition	Possible Sources	Action
• Drone type noise	• Powertrain mount(s)	• CARRY OUT the **Powertrain/Drivetrain Mount Neutralizing** procedure. TEST the system for normal operation after the repair.
• Drumming noise - occurs inside the vehicle during idle or high idle, hot or cold. Very low-frequency drumming is very RPM dependent	• Engine vibration excites the body resonances inducing interior noise	• CARRY OUT the **Powertrain/Drivetrain Mount Neutralizing** procedure. TEST the system for normal operation after the repair.
• Engine drumming noise - accompanied by vibration	• Powertrain mount(s)	• CARRY OUT the **Powertrain/Drivetrain Mount Neutralizing** procedure. TEST the system for normal operation after the repair.
• Rattle - occurs at idle or at light acceleration from a stop	• Powertrain mount(s)	• CHECK the powertrain mounts for damage. INSTALL new mounts as necessary. For engine, REFER to **ENGINE - 3.5L** article. For transaxle, REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article. TEST the system for normal operation after the repair.
• Whine/moan type noise - pitch increases or	• Powertrain mount(s)	• CHECK the powertrain mounts for damage. INSTALL new mounts as necessary. For engine, REFER to **ENGINE - 3.5L** article. For transaxle, REFER to

changes with vehicle speed		**AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article. TEST the system for normal operation after the repair.
• Clunk - occurs when shifting from PARK or between REVERSE and DRIVE	• Powertrain mount(s)	• CHECK the powertrain/drivetrain mounts for damage. INSTALL new mounts as necessary. For engine, REFER to **ENGINE - 3.5L** article. For transaxle, REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article. TEST the system for normal operation after the repair.
-	• Idle speed is too high	• CHECK for the correct idle speed.
• Accessory drive bearing hoot - occurs at idle or high idle in cold temperatures of approximately 4° C (40°F) or colder at the first start of the day	• Accessory drive idler or tensioner pulley bearing is experiencing stick/slip between ball bearings and the bearing race	• CARRY OUT the engine cold soak procedure. REFER to **NOISE, VIBRATION AND HARSHNESS** article. • PLACE the EngineEAR probe directly on the idler/tensioner center post or bolt to verify which bearing is making the noise. INSTALL new parts as necessary. REFER to **ACCESSORY DRIVE** article. TEST the system for normal operation after the repair.
• Accessory drive belt noise, squeal or chirping	• Defective/worn or incorrect accessory drive belt • Misaligned pulley(s) • Pulley runout • Damaged or worn accessory drive component or idler • Fluid contamination of the accessory drive belt or pulleys • Damaged or worn accessory drive belt tensioner • Damaged pulley grooves	• CARRY OUT the Engine Accessory Test. REFER to **NOISE, VIBRATION AND HARSHNESS** article. INSPECT components and INSTALL new parts as necessary. REFER to **ACCESSORY DRIVE** article. TEST the system for normal operation after the repair.
• Clunking noise	• Coolant pump has excessive end play or	• CHECK the coolant pump for excessive end play. INSPECT the coolant pump for imbalance with the drive belt off. INSTALL a new coolant pump as

	imbalance	necessary. REFER to **ENGINE COOLING** article. TEST the system for normal operation after the repair.
• Whine or moaning noise	• Air intake system	• CHECK the air cleaner and ducts for correct fit. INSPECT the air intake system for leaks or damage. REPAIR as necessary. TEST the system for normal operation after the repair.
• Whistling noise - normally accompanied with poor idle condition	• Air intake system	• CHECK the air intake ducts, air cleaner, throttle body and vacuum hoses for leaks and correct fit. REPAIR or ADJUST as necessary. TEST the system for normal operation after the repair.
• Hissing noise - occurs during idle or high idle that is apparent with the hood open	• Vacuum leak	• USE the Ultrasonic Leak Detector/EngineEAR to locate the source. SCAN the air intake system from the inlet to each cylinder intake port. DISCARD the leaking parts, and INSTALL a new component. TEST the system for normal operation after the repair.
-	• Vehicles with a plastic intake manifold	• Acceptable condition. Some plastic manifolds exhibit this noise, which is the effect of the plastic manifold.
• Grinding noise - occurs during engine cranking	• Incorrect starter motor mounting	• INSPECT the starter motor for correct mounting. REPAIR as necessary. REFER to **STARTING SYSTEM** article. TEST the system for normal operation after the repair.
-	• Starter motor	• CHECK the starter motor. INSTALL a new starter motor as necessary. REFER to **STARTING SYSTEM** article. TEST the system for normal operation after the repair.
-	• Incorrect starter motor drive engagement	• INSPECT the starter motor drive for wear or damage. INSTALL a new starter motor as necessary. REFER to **STARTING SYSTEM** article. TEST the system for normal operation after the repair. • INSPECT the flexplate for wear or damage. INSTALL a new flexplate as necessary. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
• Engine noise,		• CHECK for obvious signs of damage or

front of engine - knocking noise from lower front of engine	• Damaged or separated crankshaft pulley/damper	wobble during operation. INSTALL new as necessary. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
• Engine noise, front of engine - ticking, tapping or rattling noise from the front of the engine	• Timing drive components	• REMOVE the accessory drive belt. REFER to **ACCESSORY DRIVE** article. • USE the EngineEAR to isolate the noise to the engine front cover. • REMOVE the engine front cover and INSPECT the timing drive components. INSTALL new parts as necessary. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
• Engine noise, upper end - ticking noise near the fuel rail and intake manifold	• Fuel rail clip	• CHECK for loose or damaged fuel rail clip (s). REPAIR as necessary. TEST the system for normal operation after the repair.
-	• Fuel injector	• USE the EngineEAR to isolate the noisy injector(s). INSTALL a new injector(s) as necessary. REFER to **FUEL CHARGING AND CONTROLS - 3.5L** article. TEST the system for normal operation after the repair.
• Engine noise, upper end - occurs mostly with a warm engine at light/medium acceleration	• Worn or damaged spark plugs	• REMOVE the spark plugs. INSPECT and INSTALL new as necessary. REFER to **ENGINE IGNITION - 3.5L** article. TEST the system for normal operation after the repair.
-	• Carbon accumulation in combustion chamber	• Bore scope the cylinder. ELIMINATE carbon buildup. TEST the system for normal operation after the repair.
• Engine noise, upper end - rattling noise from the valve train. Worse when the engine is cold	• Low oil level	• CHECK the oil level. FILL as necessary.
-	• Thin or diluted oil	• INSPECT the oil for contamination. If the oil is contaminated, CHECK for the source. REPAIR as necessary. CHANGE the oil and filter. TEST the system for normal

		operation after the repair.
-	• Low oil pressure	• CARRY OUT an oil pressure test. If not within specifications, REMOVE the engine oil pan. REFER to **ENGINE - 3.5L** article. INSPECT for a blocked oil pick up tube. TEST the system for normal operation after the repair.
-	• Worn valve train components	• CARRY OUT the Valve Train Analysis Component Test. INSTALL new parts as necessary. TEST the system for normal operation after the repair.
-	• Worn valve guides	• CARRY OUT the Valve Guide Inner Diameter procedure.
-	• Excessive runout of the valve seats on the valve face	• CARRY OUT the Valve Seat Inspection procedure.
• Engine noise, upper end - pinging noise	• Gasoline octane too low	• VERIFY with customer the type of gasoline used. CORRECT as necessary. TEST the system for normal operation after the repair.
-	• Knock Sensor (KS) operation	• CHECK the KS. INSTALL a new KS as necessary. REFER to **ELECTRONIC ENGINE CONTROLS** article. TEST the system for normal operation after the repair.
-	• Incorrect spark timing	• CHECK the spark timing. REPAIR as necessary. TEST the system for normal operation after the repair.
-	• High operating temperature	• INSPECT the cooling system for leaks. CHECK the coolant level. REFILL as necessary. CHECK the coolant for the correct mix ratio. DRAIN and REFILL as needed. VERIFY the engine operating temperature is within specifications. REPAIR as necessary. TEST the system for normal operation after the repair.
-	• Spark plug	• CHECK the spark plugs. INSTALL new spark plugs as necessary. TEST the system for normal operation after the repair.
-	• Catalytic converter	• Acceptable noise.
• Engine noise, lower end - ticking or		• USE the EngineEAR to verify the oil pump as the source of the noise at low RPM.

knocking noise near the oil filter adapter	• Oil pump	REPAIR as necessary. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
• Engine noise, lower end - light knocking noise, also described as piston slap. Noise is most noticeable when the engine is cold with light to medium acceleration. The noise disappears as the engine warms	• Excessive clearance between the piston and the cylinder wall	• INSTALL a new short block. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
• Engine noise, lower end - light double knock or sharp rap sound. Occurs mostly with a warm engine at idle or low speeds in drive. Increases in relation to engine load. Associated with a poor lubrication history	• Excessive clearance between the piston and the piston pin	• INSTALL a new short block. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
• Engine noise, lower end - light knocking noise. The noise is most noticeable when the engine is warm. The noise tends to decrease when the vehicle is coasting or in NEUTRAL	• Excessive clearance between the connecting rod bearings and the crankshaft	• INSTALL a new short block. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
• Engine noise, lower end - deep knocking noise. The noise is most noticeable when the engine is	• Worn or damaged crankshaft main	• INSTALL a new short block. REFER to **ENGINE - 3.5L** article. TEST the system

warm, at lower RPM and under a light load and then at float	bearings	for normal operation after the repair.
• Engine noise, rear of engine - knocking noise at rear of engine	• Damaged flywheel/flexplate	• CARRY OUT the Flexplate Inspection procedure.
• Engine vibration - vibration felt at all times	• Excessive engine pulley runout	• CARRY OUT the Engine Accessory Test. REFER to **NOISE, VIBRATION AND HARSHNESS** article. INSTALL a new engine pulley as necessary. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
-	• Damaged or worn accessory component	• CARRY OUT the Engine Accessory Test. REPAIR or INSTALL a new component as necessary. TEST the system for normal operation after the repair.
• Engine vibration - at idle, a low-frequency vibration (5-20 Hz) or mild shake that is felt through the seat/floorpan	• Cylinder misfire	• Using the scan tool, CARRY OUT the cylinder power balance and the relative compression test. REPAIR as necessary. REFER to **ENGINE - 3.5L** article. TEST the system for normal operation after the repair.
-	• Engine or torque converter out of balance	• VERIFY the torque converter-to-crankshaft pilot clearance is correct. REPAIR as necessary. RE-INDEX the torque converter on the flexplate by 120 degrees for a 3-bolt converter or 180 degrees for a 4-bolt converter. REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article for the transaxle. TEST the system for normal operation after the repair.
• Engine vibration - is felt with increases and decreases in engine RPM	• Powertrain mount(s)	• CHECK the powertrain mounts for damage. INSTALL new mounts as necessary. For engine, REFER to **ENGINE - 3.5L** article. For the transaxle, REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article. TEST the system for normal operation after the repair.
-	• Engine or transmission	• INSPECT the powertrain/drivetrain for correct clearances. REPAIR as necessary.

	grounded to chassis	TEST the system for normal operation after the repair.
• Engine vibration - increases intensity as the engine RPM is increased	• Engine out-of-balance	• CARRY OUT the Neutral Engine Run-Up (NERU) Test. REFER to **NOISE, VIBRATION AND HARSHNESS** article. ROTATE the torque converter, 120 degrees for 3-bolt or 180 degrees for 4-bolt. INSPECT the torque converter pilot outer diameter-to-crankshaft pilot inner diameter. REPAIR as necessary. REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article. TEST the system for normal operation after the repair.
• Engine vibration - mostly at coast/neutral coast. Condition improves with vehicle acceleration	• Combustion instability	• CHECK the ignition system. INSTALL new components as necessary. REFER to **ENGINE IGNITION - 3.5L** article. TEST the system for normal operation after the repair.
• Engine vibration or shudder - occurs with light to medium acceleration above 56 km/h (35 mph)	• Worn or damaged spark plugs	• INSPECT the spark plugs for cracks, high resistance or broken insulators. INSTALL a new spark plug(s) as necessary. REFER to **ENGINE IGNITION - 3.5L** article. TEST the system for normal operation after the repair.
-	• Plugged fuel injector	• REPAIR or INSTALL a new injector as necessary. REFER to **FUEL CHARGING AND CONTROLS - 3.5L** article. TEST the system for normal operation after the repair.
-	• Contaminated fuel	• INSPECT the fuel for contamination. DRAIN the fuel system and refill. REFER to **FUEL SYSTEM - GENERAL INFORMATION** article.

Component Tests

The following component tests are used to diagnose engine concerns.

Engine Oil Leaks

NOTE:	**When diagnosing engine oil leaks, the source of the leak must be positively identified prior to repair. If the vehicle is driven extensively between adding the**

fluorescent additive and performing the leak test, fan air or wind can spread the leaking oil and make identifying the location of the leak difficult.

Prior to carrying out this procedure, clean the cylinder block, cylinder heads, valve covers, oil pan and flywheel with a suitable solvent to remove all traces of oil.

Engine Oil Leaks - Fluorescent Oil Additive Method

Use the 12 Volt Master UV Diagnostic Inspection Kit to carry out the following procedure for oil leak diagnosis.

1. Add 29.6 ml (1 oz) of gasoline engine oil dye to a minimum of 0.47L (1/2 qt) and a maximum of 0.95L (1 qt) engine oil and fill through the engine oil fill. Thoroughly premix the gasoline engine oil dye or it will not have enough time to reach the crankcase, oil galleries and seal surfaces during this particular 15 minute test. The additive must be mixed well with oil and added through the oil fill. Check the level on the oil level indicator to determine what amount of oil to premix. If it is in the middle of the crosshatch area or below the full mark, use 0.95L (1 qt). If it is at the full mark, use 0.47L (1/2 qt).
2. Run the engine for 15 minutes. Stop the engine and inspect all seal and gasket areas for leaks using the 12 Volt Master UV Diagnostic Inspection Kit. A clear bright yellow or orange area will identify the leak. For extremely small leaks, several hours may be required for the leak to appear.
3. At the end of test, make sure the oil level is within the upper and lower oil indicator marks. Remove oil as necessary if it registers above the full mark.

Leakage Points - Underhood

Examine the following areas for oil leakage:

- Valve cover gaskets
- Cylinder head gaskets
- Oil cooler, if equipped
- Oil filter adapter
- Engine front cover
- Oil filter adapter and filter body
- Oil level indicator tube connection
- Engine Oil Pressure (EOP) switch

Leakage Points - Under Engine, With Vehicle on Hoist

Examine the following areas for oil leakage:

- Oil pan gaskets
- Oil pan sealer
- Engine front cover gasket

- Crankshaft front seal
- Crankshaft rear oil seal
- Oil filter adapter and filter body
- Oil cooler, if equipped

Leakage Points - With Transmission and Flywheel Removed

Examine the following areas for oil leakage:

- Crankshaft rear oil seal
- Rear main bearing cap parting line
- Flexplate mounting bolt holes (with flexplate installed)
- Pipe plugs at the end of oil passages

Oil leaks at crimped seams in sheet metal parts and cracks in cast or stamped parts can be detected when using the dye method.

Compression Test

1. Make sure the oil in the crankcase is of the correct viscosity and at the correct level and that the battery is correctly charged. Operate the vehicle until the engine is at normal operating temperature. Turn the ignition switch to the OFF position, then remove all the spark plugs.
2. Set the throttle plates in the wide-open position.
3. Install a compression gauge such as the Compression Tester in the No. 1 cylinder.
4. Install an auxiliary starter switch in the starting circuit. With the ignition switch in the OFF position, and using the auxiliary starter switch, crank the engine a minimum of 5 compression strokes and record the highest reading. Note the approximate number of compression strokes necessary to obtain the highest reading.
5. Repeat the test on each cylinder, cranking the engine approximately the same number of compression strokes.

Compression Test - Test Results

The indicated compression pressures are considered within specification if the lowest reading cylinder is at least 75% of the highest reading. Refer to the COMPRESSION PRESSURE LIMIT CHART.

COMPRESSION PRESSURE LIMIT CHART

Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure	Maximum Pressure	Minimum Pressure
924 kPa (134 psi)	696 kPa (101 psi)	1,131 kPa (164 psi)	848 kPa (123 psi)	1,338 kPa (194 psi)	1,000 kPa (146 psi)	1,544 kPa (224 psi)	1,158 kPa (168 psi)
938 kPa (136 psi)	703 kPa (102 psi)	1,145 kPa (166 psi)	855 kPa (124 psi)	1,351 kPa (196 psi)	1,014 kPa (147 psi)	1,558 kPa (226 psi)	1,165 kPa (169 psi)

952 kPa (138 psi)	717 kPa (104 psi)	1,158 kPa (168 psi)	869 kPa (126 psi)	1,365 kPa (198 psi)	1,020 kPa (148 psi)	1,572 kPa (228 psi)	1,179 kPa (171 psi)
965 kPa (140 psi)	724 kPa (106 psi)	1,172 kPa (170 psi)	876 kPa (127 psi)	1,379 kPa (200 psi)	1,034 kPa (150 psi)	1,586 kPa (230 psi)	1,186 kPa (172 psi)
979 kPa (142 psi)	738 kPa (107 psi)	1,186 kPa (172 psi)	889 kPa (129 psi)	1,303 kPa (202 psi)	1,041 kPa (151 psi)	1,600 kPa (232 psi)	1,200 kPa (174 psi)
933 kPa (144 psi)	745 kPa (109 psi)	1,200 kPa (174 psi)	903 kPa (131 psi)	1,407 kPa (204 psi)	1,055 kPa (153 psi)	1,055 kPa (153 psi)	1,207 kPa (175 psi)
1,007 kPa (146 psi)	758 kPa (110 psi)	1,214 kPa (176 psi)	910 kPa (132 psi)	1,420 kPa (206 psi)	1,062 kPa (154 psi)	1,627 kPa (154 psi)	1,220 kPa (177 psi)
1,020 kPa (148 psi)	765 kPa (111 psi)	1,227 kPa (178 psi)	917 kPa (133 psi)	1,434 kPa (208 psi)	1,075 kPa (156 psi)	1,641 kPa (238 psi)	1,227 kPa (178 psi)
1,034 kPa (150 psi)	779 kPa (113 psi)	1,241 kPa (180 psi)	931 kPa (135 psi)	1,448 kPa (210 psi)	1,083 kPa (157 psi)	1,655 kPa (240 psi)	1,241 kPa (180 psi)
1,048 kPa (152 psi)	786 kPa (114 psi)	1,255 kPa (182 psi)	936 kPa (136 psi)	1,462 kPa (212 psi)	1,089 kPa (158 psi)	1,669 kPa (242 psi)	1,248 kPa (181 psi)
1,062 kPa (154 psi)	793 kPa (115 psi)	1,269 kPa (184 psi)	952 kPa (138 psi)	1,476 kPa (214 psi)	1,103 kPa (160 psi)	1,682 kPa (244 psi)	1,262 kPa (183 psi)
1,076 kPa (156 psi)	807 kPa (117 psi)	1,282 kPa (186 psi)	965 kPa (140 psi)	1,489 kPa (216 psi)	1,117 kPa (162 psi)	1,696 kPa (246 psi)	1,269 kPa (184 psi)
1,089 kPa (158 psi)	814 kPa (118 psi)	1,296 kPa (188 psi)	972 kPa (141 psi)	1,503 kPa (218 psi)	1,124 kPa (163 psi)	1,710 kPa (248 psi)	1,202 kPa (186 psi)
1,103 kPa (160 psi)	827 kPa (120 psi)	1,310 kPa (190 psi)	979 kPa (142 psi)	1,517 kPa (220 psi)	1,138 kPa (165 psi)	1,724 kPa (250 psi)	1,289 kPa (187 psi)
1,110 kPa (161 psi)	834 kPa (121 psi)	1,324 kPa (192 psi)	993 kPa (144 psi)	1,631 kPa (222 psi)	1,145 kPa (166 psi)	-	-

If one or more cylinders reads low, squirt approximately one tablespoon of engine oil meeting Ford specification on top of the pistons in the low-reading cylinders. Repeat the compression pressure check on these cylinders.

Compression Test - Interpreting Compression Readings

1. If compression improves considerably, piston rings are worn or damaged.
2. If compression does not improve, valves are sticking or not seating correctly.
3. If 2 adjacent cylinders indicate low compression pressures and squirting oil on each piston does not increase compression, the head gasket may be leaking between cylinders. Engine oil or coolant in cylinders could result from this condition.

   Use the Compression Pressure Limit Chart when checking cylinder compression so that the lowest reading is within 75% of the highest reading.

Cylinder Leakage Detection

When a cylinder produces a low reading, use of the Engine Cylinder Leak Detection/Air Pressurization Kit will be helpful in pinpointing the exact cause.

The leakage detector is inserted in the spark plug hole, the piston is brought up to Top Dead Center (TDC) on the compression stroke, and compressed air is admitted.

Once the combustion chamber is pressurized, a special gauge included in the kit will read the percentage of leakage. Leakage exceeding 20% is excessive.

While the air pressure is retained in the cylinder, listen for the hiss of escaping air. A leak at the intake valve will be heard in the Throttle Body (TB). A leak at the exhaust valve can be heard at the tailpipe. Leakage past the piston rings will be audible at the PCV connection. If air is passing through a blown head gasket to an adjacent cylinder, the noise will be evident at the spark plug hole of the cylinder into which the air is leaking. Cracks in the cylinder block or gasket leakage into the cooling system may be detected by a stream of bubbles in the radiator.

Excessive Engine Oil Consumption

Nearly all engines consume oil, which is essential for normal lubrication of the cylinder bore walls and pistons and rings. Determining the level of oil consumption may require testing by recording how much oil is being added over a given set of miles.

Customer driving habits greatly influence oil consumption. Mileage accumulated during towing or heavy loading generates extra heat. Frequent short trips, stop-and-go type traffic or extensive idling, prevent the engine from reaching normal operating temperature. This prevents component clearances from reaching specified operating ranges.

The following diagnostic procedure may be utilized to determine internal oil consumption. Make sure that the concern is related to internal oil consumption, and not external leakage, which also consumes oil. Verify there are no leaks before carrying out the test. Once verified, the rate of internal oil consumption can be tested.

A new engine may require extra oil in the early stages of operation. Internal piston-to-bore clearances and sealing characteristics improve as the engine breaks in. Engines are designed for close tolerances and do not require break-in oils or additives. Use the oil specified in the Owner's Literature. Ambient temperatures may determine the oil viscosity specification. Verify that the correct oil is being used for the vehicle in the geographic region in which it is driven.

Basic Pre-checks

1. For persistent complaints of oil consumption, interview the customer to determine the oil consumption characteristics. If possible, determine the brand and grade of oil currently in the oil pan. Look at the oil filter or oil-change station tags to determine if Ford-recommended maintenance schedules have been followed. Make sure that the oil has been changed at the specified mileage intervals. If vehicle mileage is past the first recommended drain interval, the OEM production filter should have been changed.
2. Ask how the most current mileage was accumulated. That is, determine whether the vehicle was driven under the following conditions:
   - Extended idling or curbside engine operation
   - Stop-and-go traffic or taxi operation

- Towing a trailer or vehicle loaded heavily
- Frequent short trips (engine not up to normal operating temperature)
- Excessive throttling or high engine-RPM driving

3. Verify that there are no external leaks. If necessary, review the diagnostic procedure under **ENGINE OIL LEAKS** in Diagnosis and Testing .
4. Inspect the crankcase ventilation system for:
   - disconnected hoses at the valve cover or TB.
   - loose or missing valve cover fill cap.
   - missing or incorrectly seated engine oil level indicator.
   - incorrect or dirty PCV valve.
   - a PCV valve grommet unseated in the valve cover (if so equipped).
5. Inspect for signs of sludge. Sludge affects PCV performance and can plug or restrict cylinder head drainback wells. It can also increase oil pressure by restricting passages and reducing the drainback capability of piston oil control rings. Sludge can result from either excessive water ingestion in the crankcase or operation at extremely high crankcase temperatures.
6. Inspect the air filter for dirt, sludge or damage. A hole in the filter element will allow unfiltered air to bypass into the air induction system. This can cause premature internal wear (engine dusting), allowing oil to escape past rings, pistons, valves and guides.
7. If the engine is hot or was recently shut down, wait at least 5 minutes to allow the oil to drain back. Ask the customer if this requirement has been followed. Adding oil without this wait period can cause an overfill condition, leading to excessive oil consumption and foaming, which may cause engine damage.
8. Make sure the oil level indicator (dipstick) is correctly and fully seated in the indicator tube. Remove the oil level indicator and record the oil level.

Detailed Pre-checks

1. Check the thermostat opening temperature to make sure that the cooling system is operating at the specified temperature. If it is low, internal engine parts are not running at specified internal operating clearances.
2. Verify the spark plugs are not oil saturated. Oil leaking into one or more cylinders will appear as an oil soaked condition on the plug. If a plug is saturated, a compression check may be necessary at the conclusion of the oil consumption test.

Oil Consumption Test

Once all of the previous conditions are met, carry out an oil consumption test.

1. Drain the engine oil and remove the oil filter. Install a new manufacturer-specified oil filter. Make sure the vehicle is positioned on a level surface. Refill the oil pan to a level **one liter (quart) less** than the specified fill level, using manufacturer-specified oil.
2. Run the engine for 3 minutes (if hot) or 10 minutes (if cold). Allow for a minimum 5-minute drainback period and then record the oil level shown on the oil level indicator. Place a mark on the backside of the oil level indicator noting the oil level location.

3. Add the final one liter (quart) to complete the normal oil fill. Restart the engine and allow it to idle for 2 minutes. Shut the engine down.
4. After a 5-minute drainback period, record the location of the oil level again. Mark the oil level indicator with the new oil level location. (Note: Both marks should be very close to the MIN-MAX upper and lower limits or the upper and lower holes on the oil level indicator. These marks will exactly measure the engine's use of oil, with a one quart differential between the new marks.) Demonstrate to the customer that the factory-calibrated marks on the oil level indicator are where the oil should fall after an oil change with the specified fill amount. Explain however, that this may vary slightly between MIN-MAX or the upper and lower holes on the oil level indicator.
5. Record the vehicle mileage.
6. Advise the customer that oil level indicator readings must be taken every 320 km (200 mi) or weekly, using the revised marks as drawn. Remind the customer that the engine needs a minimum 5-minute drainback for an accurate reading and that the oil level indicator must be firmly seated in the tube prior to taking the reading.
7. When the subsequent indicator readings demonstrate a full liter (quart) has been used, record the vehicle mileage. The mileage driven between the 2 readings should not be less than 2,414 km (1,500 mi). The drive cycle the vehicle has been operated under must be considered when making this calculation. It may be necessary to have the customer bring the vehicle in for a periodic oil level indicator reading to closely monitor oil usage.

Post Checks, Evaluation and Corrective Action

1. If test results indicate excessive oil consumption, carry out a cylinder compression test. The cylinder compression test should be carried out with a fully charged battery and all spark plugs removed. See the **COMPRESSION PRESSURE LIMIT CHART** for pressure range limits.
2. Compression should be consistent across all cylinders. Refer to **COMPRESSION TEST**. If compression tested within the specifications found in this service information, the excessive oil consumption may be due to wear on the valve guides, valves or valve seals.
3. A cylinder leak detection test can be carried out using an Engine Cylinder Leak Detection/Air Pressurization Kit. This can help identify valves, piston rings, or worn valve guides/valve stems, inoperative valve stem seals or other related areas as the source of oil consumption.

NOTE: **An oil-soaked appearance on the porcelain tips of the spark plugs also indicates excessive oil use. A typical engine with normal oil consumption will exhibit a light tan to brown appearance. See Spark Plug Analysis in this service information for details. A single or adjoining, multiple cylinder leak can be traced by viewing the tips.**

4. If an internal engine part is isolated as the root cause, determine if the repair will exceed cost limits and proceed with a repair strategy as required.
5. Once corrective action to engine is complete and verifying that all pre-check items were eliminated in the original diagnosis, repeat the Oil Consumption Test as described above and verify consumption results.

Intake Manifold Vacuum Test

Bring the engine to normal operating temperature. Connect the Vacuum/Pressure Tester to the intake manifold. Run the engine at the specified idle speed.

The vacuum gauge should read between 51-74 kPa (15-22 in-Hg) depending upon the engine condition and the altitude at which the test is conducted. Subtract 4.0193 kPa (1 in-Hg) from the specified reading for every 304.8 m (1,000 ft) of elevation above sea level.

The reading should be steady. If necessary, adjust the gauge damper control (where used) if the needle is fluttering rapidly. Adjust the damper until the needle moves easily without excessive flutter.

Intake Manifold Vacuum Test - Interpreting Vacuum Gauge Readings

A careful study of the vacuum gauge reading while the engine is idling will help pinpoint trouble areas. Always conduct other appropriate tests before arriving at a final diagnostic decision. Vacuum gauge readings, although helpful, must be interpreted carefully.

Most vacuum gauges have a normal band indicated on the gauge face.

The following are potential gauge readings. Some are normal; others should be investigated further.

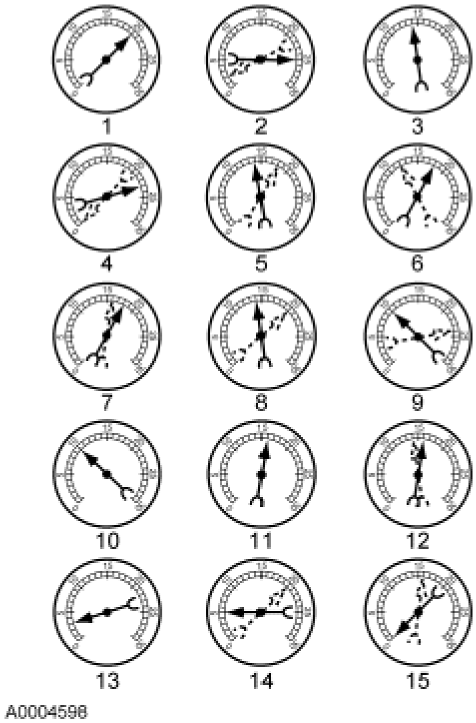

Fig. 1: Potential Vacuum Gauge Readings Chart
Courtesy of FORD MOTOR CO.

1. NORMAL READING: Needle between 51-74 kPa (15-22 in-Hg) and holding steady.
2. NORMAL READING DURING RAPID ACCELERATION AND DECELERATION: When the engine is rapidly accelerated (dotted needle), the needle will drop to a low reading (not to zero). When the

throttle is suddenly released, the needle will snap back up to a higher than normal figure.

3. NORMAL FOR HIGH-LIFT CAMSHAFT WITH LARGE OVERLAP: The needle will register as low as 51 kPa (15 in-Hg) but will be relatively steady. Some oscillation is normal.
4. WORN RINGS OR DILUTED OIL: When the engine is accelerated (dotted needle), the needle drops to 0 kPa (0 in-Hg). Upon deceleration, the needle runs slightly above 74 kPa (22 in-Hg).
5. STICKING VALVES: When the needle (dotted) remains steady at a normal vacuum but occasionally flicks (sharp, fast movement) down and back about 13 kPa (4 in-Hg), one or more valves may be sticking.
6. BURNED OR WARPED VALVES: A regular, evenly-spaced, downscale flicking of the needle indicates one or more burned or warped valves. Insufficient valve clearance will also cause this reaction.
7. POOR VALVE SEATING: A small but regular downscale flicking can mean one or more valves are not seating.
8. WORN VALVE GUIDES: When the needle oscillates over about a 13 kPa (4 in-Hg) range at idle speed, the valve guides could be worn. As engine speed increases, the needle will become steady if guides are responsible.
9. WEAK VALVE SPRINGS: When the needle oscillation becomes more violent as engine RPM is increased, weak valve springs are indicated. The reading at idle could be relatively steady.
10. LATE VALVE TIMING: A steady but low reading could be caused by late valve timing.
11. IGNITION TIMING RETARDING: Retarded ignition timing will produce a steady but somewhat low reading.
12. INSUFFICIENT SPARK PLUG GAP: When spark plugs are gapped too close, a regular, small pulsation of the needle can occur.
13. INTAKE LEAK: A low, steady reading can be caused by an intake manifold or throttle body gasket leak.
14. BLOWN HEAD GASKET: A regular drop of fair magnitude can be caused by a blown head gasket or warped cylinder head-to-cylinder block surface.
15. RESTRICTED EXHAUST SYSTEM: When the engine is first started and is idled, the reading may be normal, but as the engine RPM is increased, the back pressure caused by a clogged muffler, kinked tailpipe or other concerns will cause the needle to slowly drop to 0 kPa (0 in-Hg). The needle then may slowly rise. Excessive exhaust clogging will cause the needle to drop to a low point even if the engine is only idling.
16. When vacuum leaks are indicated, search out and correct the cause. Excess air leaking into the system will upset the fuel mixture and cause concerns such as rough idle, missing on acceleration or burned valves. If the leak exists in an accessory unit such as the power brake booster, the unit will not function correctly. Always fix vacuum leaks.

Oil Pressure Test

1. Disconnect and remove the oil pressure switch from the engine.
2. Connect the engine Oil Pressure Gauge to the oil pressure switch oil galley port.
3. Run the engine until normal operating temperature is reached.
4. Run the engine at the specified RPM and record the gauge reading.
5. The oil pressure should be within specifications; refer to the specification chart in the appropriate engine section.

6. If the pressure is not within specification, check the following possible sources:
   - Insufficient oil
   - Oil leakage
   - Worn or damaged oil pump
   - Oil pump screen cover and tube
   - Excessive main bearing clearance
   - Excessive connecting rod bearing clearance
   - Chain tensioner leak

Valve Train Analysis

The following component tests are used to diagnose valve train concerns.

Valve Train Analysis - Engine Off, Valve Cover Removed

Check for damaged or severely worn parts and correct assembly. Make sure correct parts are used with the static engine analysis as follows.

Valve Train Analysis - Camshafts and Valve Tappets

- Check for broken or damaged parts.
- Check for loose mounting bolts on camshaft caps.
- Check for worn or damaged valve tappets.

Valve Train Analysis - Valve Springs, Valve Tappets Removed

- Check for broken or damaged parts.

Valve Train Analysis - Valve Spring Retainer and Valve Spring Retainer Keys, Valve Tappets Removed

- Check for correct seating of the valve spring retainer key on the valve stem and in valve spring retainer.
- Check for correct seating on the valve stem.

Valve Train Analysis - Valves and Cylinder Head, Valve Tappets Removed

- Check for plugged oil drain-back holes.
- Check for worn or damaged valve tips.
- Check for missing or damaged valve stem seals or guide-mounted valve stem seal.
- Check for missing or worn valve spring seats.

Valve Train Analysis - Camshaft Lobe Lift

Check the lift of each camshaft lobe in consecutive order and make a note of the readings.

1. Remove the spark plugs. Refer to **ENGINE IGNITION - 3.5L** article.
2. Install the Dial Indicator Gauge with Holding Fixture so the rounded tip of the dial indicator is on top of the camshaft lobe and on the same plane as the valve tappet.
3. Rotate the crankshaft using a breaker bar and socket attached to the crankshaft pulley retainer bolt. Rotate the crankshaft until the base circle of the camshaft lobe is reached.

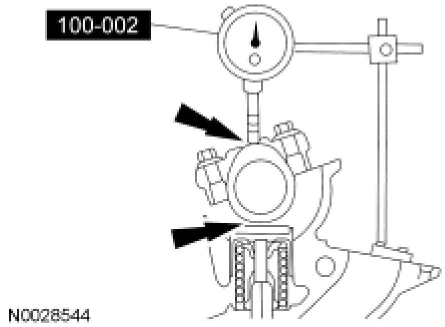

Fig. 2: Checking Camshaft Lobe Lift
Courtesy of FORD MOTOR CO.

4. Zero the dial indicator. Continue to rotate the crankshaft until the high-lift point of the camshaft lobe is in the fully-raised position (highest indicator reading).
5. To check the accuracy of the original dial indicator reading, continue to rotate crankshaft until the base circle is reached. The dial indicator reading should be zero. If zero reading is not obtained, repeat Steps 1 through 6.
6. If the lift on any lobe is below specified service limits, install a new camshaft and camshaft valve tappets.
7. Install the spark plugs. Refer to **ENGINE IGNITION - 3.5L** article.

GENERAL PROCEDURES

SPROCKETS

1. Inspect the sprockets for cracks and worn or chipped teeth.

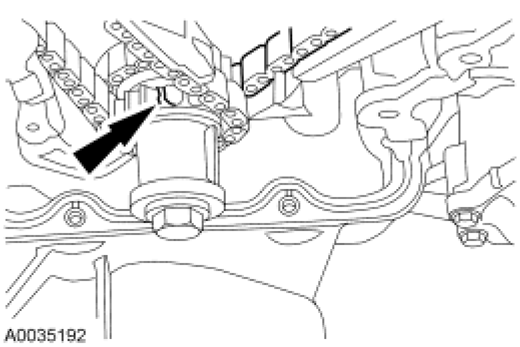

Fig. 3: Inspecting Sprockets For Damage
Courtesy of FORD MOTOR CO.

CAMSHAFT BEARING JOURNAL DIAMETER

NOTE: Refer to the appropriate service information for the specification.

1. Measure each camshaft journal diameter in 2 directions.

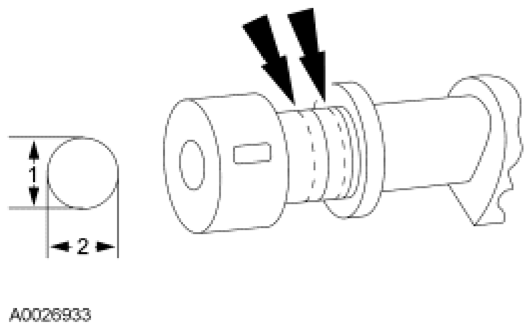

Fig. 4: Locating Areas For Measuring Camshaft Journal Diameter
Courtesy of FORD MOTOR CO.

CAMSHAFT JOURNAL TO BEARING CLEARANCE - OHC ENGINES

NOTE: Refer to the appropriate service information for the specification.

NOTE: The camshaft journals must meet specifications before checking camshaft journal clearance.

1. Measure each camshaft bearing in 2 directions.
   - Subtract the camshaft journal diameter from the camshaft bearing diameter.

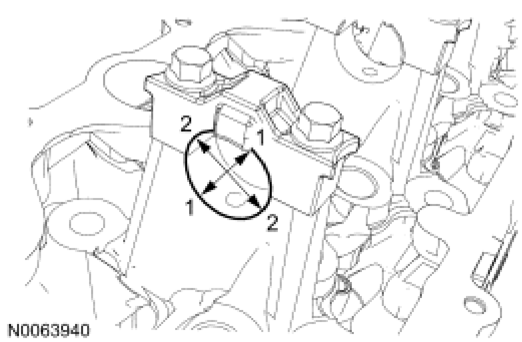

Fig. 5: Measuring Camshaft Bearing In 2 Directions
Courtesy of FORD MOTOR CO.

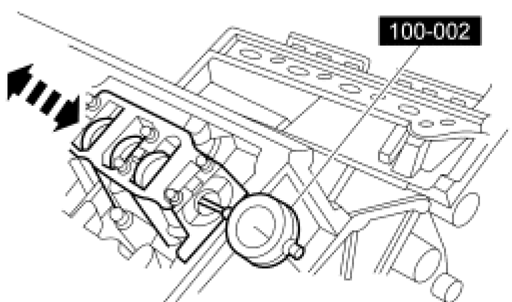
CAMSHAFT END PLAY - OHC ENGINES

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
 ST1214-A	Dial Indicator Gauge with Holding Fixture	100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate service information for the specification.

1. Using the Dial Indicator Gauge with Holding Fixture, measure the camshaft end play.
2. Position the camshaft to the rear of the cylinder head.
3. Zero the Dial Indicator Gauge.
4. Move the camshaft to the front of the cylinder head. Note and record the camshaft end play.
   - If camshaft end play exceeds specifications, install a new camshaft and recheck end play.
   - If camshaft end play exceeds specification after camshaft installation, install a new cylinder head.

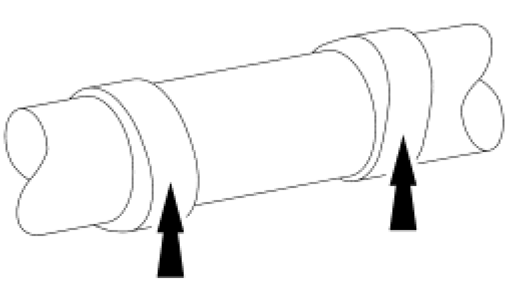


N0083449

Fig. 6: Recording Camshaft End Play
Courtesy of FORD MOTOR CO.

CAMSHAFT SURFACE INSPECTION

1. Inspect camshaft lobes for pitting or damage in the contact area. Minor pitting is acceptable outside the contact area.



A0021430

	Dial Indicator Gauge with Holding Fixture	100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate service information for the specification.

1. Install the Dial Indicator Gauge with Holding Fixture.
2. Position the crankshaft to the rear of the cylinder block.
3. Zero the Dial Indicator Gauge.
4. Move the crankshaft to the front of the cylinder block. Note and record the crankshaft end play.

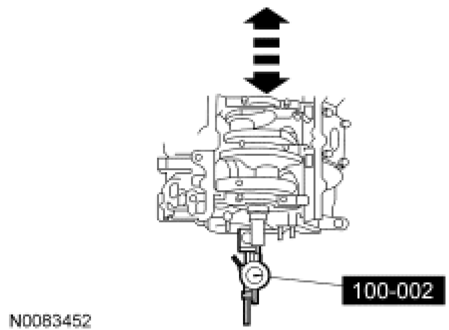

Fig. 10: Recording Crankshaft End Play
Courtesy of FORD MOTOR CO.

VALVE STEM DIAMETER

NOTE: Refer to the appropriate service information for the specification.

1. Measure the diameter of each intake and exhaust valve stem at the points shown in illustration. Verify the diameter is within specification.

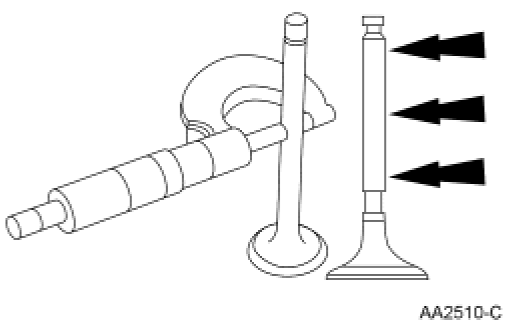

Fig. 11: Measuring Diameter Of Valve Stem
Courtesy of FORD MOTOR CO.

VALVE INSPECTION

1. Inspect the following valve areas:
    1. The end of the stem for grooves or scoring.
    2. The valve face and the edge for pits, grooves or scores.
    3. The valve head for signs of burning, erosion, warpage and cracking.
    4. The valve margin for wear.

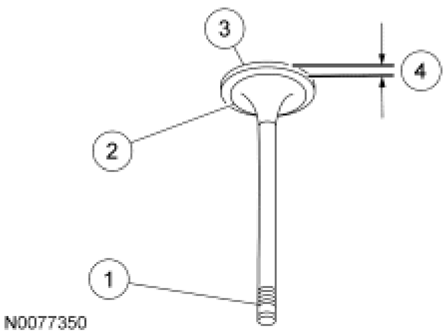

Fig. 12: Inspecting Valves
Courtesy of FORD MOTOR CO.

VALVE GUIDE INNER DIAMETER

NOTE: Refer to the appropriate service information for the specification.

NOTE: Valve guides tend to wear in an hourglass pattern. The ball gauge can be inserted into the combustion chamber side of the valve guide, if necessary.

1. Use a ball gauge to determine the inside diameter of the valve guides in 2 directions at the top, middle and bottom of the valve guide.

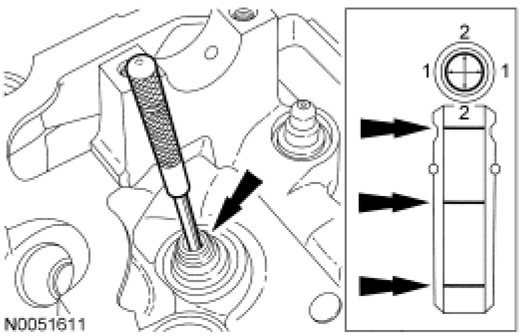

Fig. 13: Measuring Valve Guide Inner Diameter
Courtesy of FORD MOTOR CO.

2. Measure the ball gauge with a micrometer.

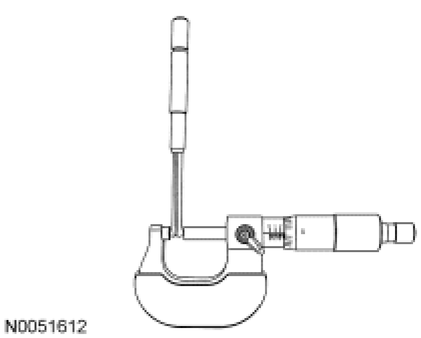

Fig. 14: Measuring Ball Gauge With Micrometer
Courtesy of FORD MOTOR CO.

3. If the valve guide is not within specifications, install a new cylinder head assembly.

VALVE STEM TO VALVE GUIDE CLEARANCE

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
	Clearance Gauge, Valve Guide	303-004 (TOOL-6505-E) or

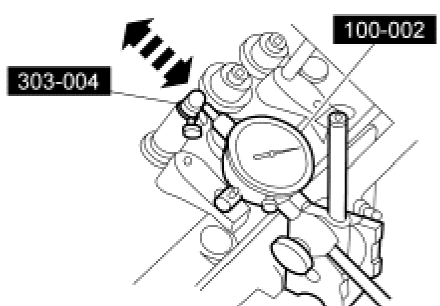
 ST1251-A		equivalent
 ST1214-A	Dial Indicator Gauge with Holding Fixture	100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate service information for the specification.

NOTE: The valve stem diameter must be within specifications before checking valve stem-to-valve guide clearance.

NOTE: If necessary, use a magnetic base.

1. Install a Valve Guide Clearance Gauge on the valve stem and install a Dial Indicator Gauge with Holding Fixture. Lower the valve until the clearance gauge contacts the upper surface of the valve guide.



N0083453

Fig. 15: Installing Valve Guide Clearance Gauge
Courtesy of FORD MOTOR CO.

2. Move the Valve Guide Clearance Gauge toward the Dial Indicator Gauge with Holding Fixture and zero the Dial Indicator Gauge. Move the Valve Guide Clearance Gauge away from the Dial Indicator Gauge with Holding Fixture and note the reading. The reading will be DOUBLE the valve stem-to-valve guide clearance.

VALVE SPRING INSTALLED LENGTH

NOTE: Refer to the appropriate service information for the specification.

1. Measure the installed length of each valve spring.

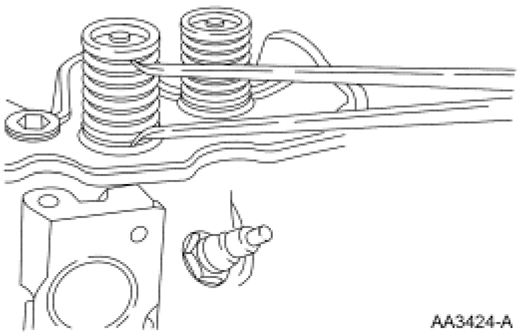


Fig. 16: Measuring Installed Length Of Valve Spring
Courtesy of FORD MOTOR CO.

VALVE SPRING FREE LENGTH

NOTE: Refer to the appropriate service information for the specification.

1. Measure the free length of each valve spring.

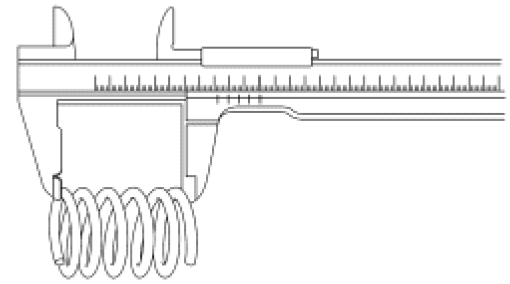

Fig. 17: Measuring Free Length Of Valve Spring
Courtesy of FORD MOTOR CO.

VALVE SPRING SQUARENESS

1. Measure the out-of-square on each valve spring.
   - Turn the valve spring and observe the space between the top of the valve spring and the square.

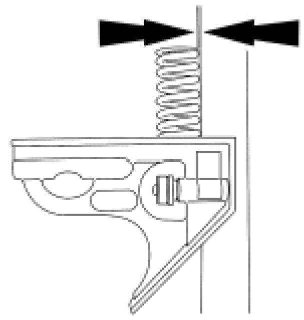

Fig. 18: Measuring Valve Spring Out-Of-Square
Courtesy of FORD MOTOR CO.

VALVE SPRING STRENGTH

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
 ST1278-A	Pressure Gauge, Valve/Clutch Spring	303-006 (TOOL-6513-DD) or equivalent

NOTE: Refer to the appropriate service information for the specification.

1. Use the Valve/Clutch Spring Pressure Gauge to check the valve spring for correct strength at the specified valve spring length.

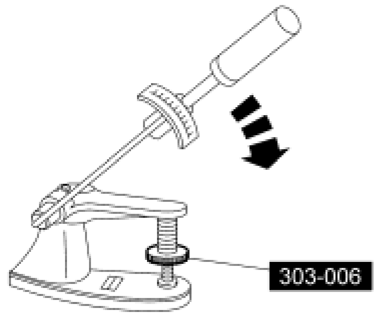

Fig. 19: Using Valve/Clutch Spring Pressure Gauge
Courtesy of FORD MOTOR CO.

VALVE SEAT INSPECTION

Valve and Seat Refacing Measurements

NOTE: Refer to the appropriate service information for the specification.

NOTE: After grinding valves or valve seats, check valve clearance.

1. Check the valve head and seat.
    - Check valve angles.
    - Check margin width.
    - Be sure margin width is within specification.

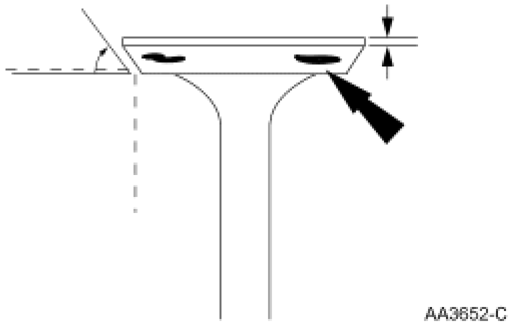

Fig. 20: Checking Valve Head And Seat
Courtesy of FORD MOTOR CO.

2. Inspect for abnormalities on the valve face and seat. Install a new cylinder head assembly if abnormalities are found.

VALVE SEAT WIDTH

NOTE: Refer to the appropriate service information for the specification.

1. Measure the valve seat width. If necessary, grind the valve seat to specification.
   - Measure the intake valve seat width.
   - Measure the exhaust valve seat width.
   - Recheck the valve spring installed length after the seats have been ground, and shim the valve springs as necessary to achieve the correct installed spring length.

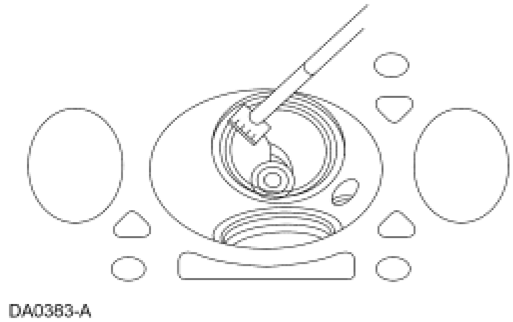

Fig. 21: Measuring Valve Seat Width
Courtesy of FORD MOTOR CO.

VALVE SEAT RUNOUT

NOTE: Refer to the appropriate service information for the specification.

1. Use a valve seat runout gauge to check valve seat runout.

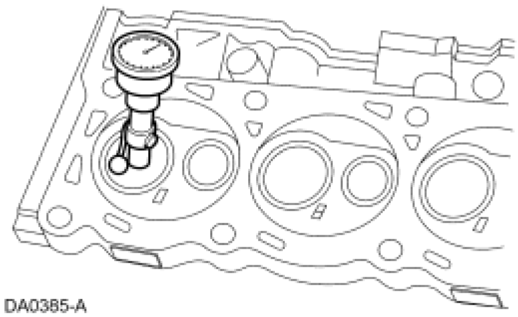

Fig. 22: Measuring Valve Seat Runout
Courtesy of FORD MOTOR CO.

FLEXPLATE INSPECTION

1. Inspect the flexplate for:
    1. any cracks.
    2. worn ring gear teeth.
    3. chipped or cracked ring gear teeth.

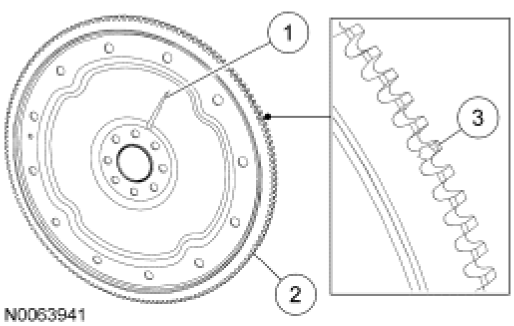

Fig. 23: Inspecting Flexplate
Courtesy of FORD MOTOR CO.

CYLINDER HEAD DISTORTION

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
 ST1271-A	Feeler Gauge Set	303-D027 (D81L-4201-A) or equivalent

NOTE: **Refer to the appropriate service information for the specification.**

NOTE: **Make sure all cylinder head surfaces are clear of any gasket material, silicone sealant, oil and coolant. The cylinder head surface must be clean and dry before running a flatness check.**

NOTE: **Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.**

1. Using a Straightedge and a Feeler Gauge Set, inspect the cylinder head for flatness in the sequence shown in illustration.

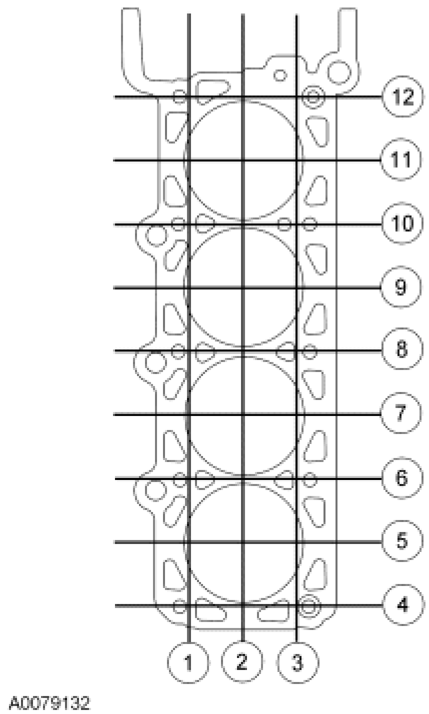

Fig. 24: Inspecting Cylinder Head For Flatness
Courtesy of FORD MOTOR CO.

CYLINDER BLOCK DISTORTION

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
	Feeler Gauge Set	303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate service information for the specification.

NOTE: Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.

1. Use a Straightedge and a Feeler Gauge Set to inspect the cylinder block for flatness.

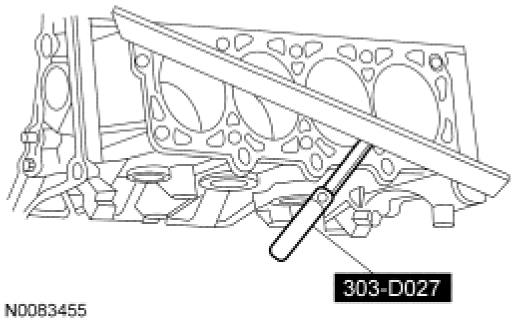

Fig. 25: Inspecting Cylinder Block For Flatness Using Straightedge & Feeler Gauge Set
Courtesy of FORD MOTOR CO.

EXHAUST MANIFOLD CLEANING AND INSPECTION

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
	Feeler Gauge Set	303-D027 (D81L-4201-A) or equivalent

1. Clean the exhaust manifold using a suitable solvent. Use a plastic scraping tool to clean the gasket sealing surfaces.

NOTE: New exhaust manifold gaskets, studs, nuts and/or bolts must be installed when an exhaust manifold is serviced.

NOTE: Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.

2. Using the Straightedge and a Feeler Gauge Set, check the exhaust manifold sealing surface for warpage. If the warpage is greater than 0.76 mm (0.0299 in), install a new exhaust manifold.

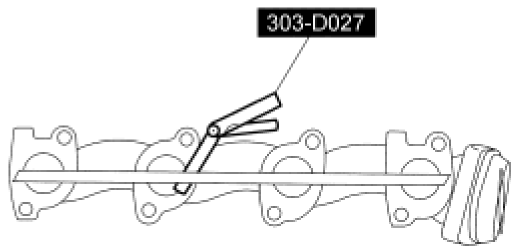

Fig. 26: Checking Exhaust Manifold Sealing Surface For Warpage
Courtesy of FORD MOTOR CO.

SPARK PLUG INSPECTION

1. Inspect the spark plug for a bridged gap.
   - Check for deposit build-up closing the gap between the electrodes. Deposits are caused by oil or carbon fouling.
   - Install a new spark plug.

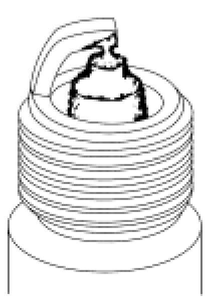

Fig. 27: Identifying Spark Plug With Bridged Gap
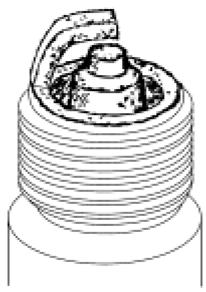
Courtesy of FORD MOTOR CO.

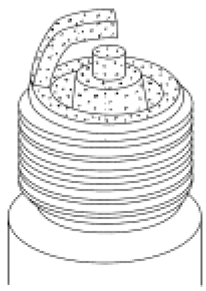
2. Check for oil fouling.
   - Check for wet, black deposits on the insulator shell bore electrodes, caused by excessive oil entering the combustion chamber through worn rings and pistons, excessive valve-to-guide clearance or worn or loose bearings.
   - Correct the oil leak concern.
   - Install a new spark plug.



AB0036-A

Fig. 28: Identifying Oil Fouled Spark Plug
Courtesy of FORD MOTOR CO.

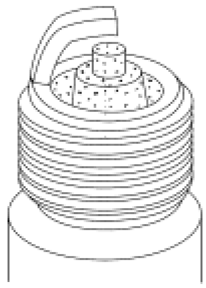
3. Inspect for carbon fouling. Look for black, dry, fluffy carbon deposits on the insulator tips, exposed shell surfaces and electrodes, caused by a spark plug with an incorrect heat range, dirty air cleaner, too rich a fuel mixture or excessive idling.
    - Install new spark plugs.



AB0040-A

Fig. 29: Identifying Spark Plug Carbon Fouling
Courtesy of FORD MOTOR CO.

4. Inspect for normal burning.
    - Check for light tan or gray deposits on the firing tip.



AB0039-A

Fig. 30: Identifying Normal Burning Spark Plug
Courtesy of FORD MOTOR CO.

5. Inspect for pre-ignition, identified by melted electrodes and a possibly damaged insulator. Metallic deposits on the insulator indicate engine damage. This may be caused by incorrect ignition timing, wrong type of fuel or the unauthorized installation of a heli-coil insert in place of the spark plug threads.
   - Install a new spark plug.

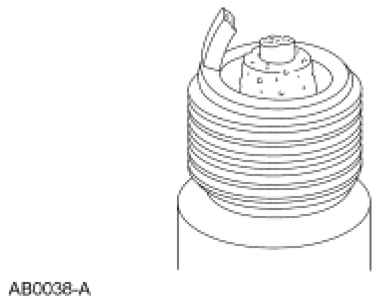


Fig. 31: Identifying Spark Plug With Pre-Ignition Condition
Courtesy of FORD MOTOR CO.

6. Inspect for overheating, identified by white or light gray spots and with a bluish-burnt appearance of electrodes. This is caused by engine overheating, wrong type of fuel, loose spark plugs, spark plugs with an incorrect heat range, low fuel pump pressure or incorrect ignition timing.
   - Install a new spark plug.

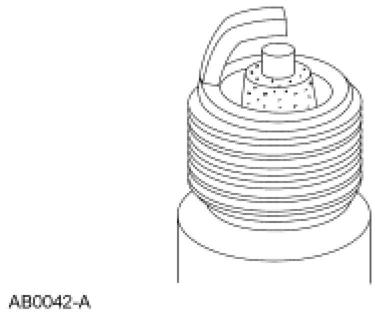

Fig. 32: Identifying Overheated Spark Plug
Courtesy of FORD MOTOR CO.

7. Inspect for fused deposits, identified by melted or spotty deposits resembling bubbles or blisters. These are caused by sudden acceleration.
   - Install new spark plugs.

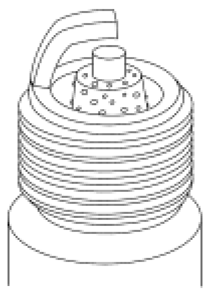

Fig. 33: Identifying Spark Plug With Fused Deposits
Courtesy of FORD MOTOR CO.

VALVE TAPPET INSPECTION

1. Inspect the valve tappet for damage, especially in the indicated areas. If any damage is evident, inspect the camshaft lobes and valves for damage. Install new components as necessary.

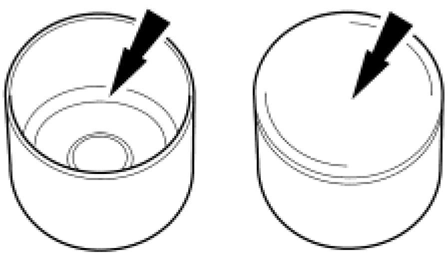

Fig. 34: Inspecting Valve Tappet
Courtesy of FORD MOTOR CO.

POWERTRAIN/DRIVETRAIN MOUNT NEUTRALIZING

NOTE: Refer to the appropriate service information and procedure for special instructions on loosening and tightening mount fasteners.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Loosen, but do not remove, the powertrain/drivetrain mount fasteners.
3. Lower the vehicle.

NOTE: Do not twist or strain the powertrain/drivetrain mounts or damage to the mounts may occur.

4. Start the vehicle and move it in forward 0.6-1.2 m (2-4 ft). Then move the vehicle in reverse the same distance.

5. Raise and support the vehicle.
6. Tighten the powertrain/drivetrain mount fasteners.
7. Lower the vehicle.
8. Test the system for normal operation.

[c] Tighten to 5 Nm (44 lb-in) plus an additional 180 degrees.

DESCRIPTION AND OPERATION

ENGINE

The 3.5L (4V) is a V-6 engine with the following features:

- Dual overhead camshafts
- Four valves per cylinder
- Sequential multi-port fuel injection Sequential Multi-Port Fuel Injection (SFI)
- An aluminum lower intake manifold and a composite upper intake manifold
- Aluminum cylinder heads
- An aluminum, 60-degree V-cylinder block
- Timing chain driven coolant pump
- Variable Camshaft Timing (VCT) system
- The electronic ignition system with 6 ignition coils

Identification

For quick identification, refer to the safety certification decal.

- The decal is located on the LH front door lock face panel.
- An engine identification label is also attached to the engine.
- The symbol code on the identification tag identifies each engine for determining parts usage; for instance, engine displacement in liters or cubic inch displacement and model year.

Exhaust Emission Control System

Operation and required maintenance of the exhaust emission control devices used on this engine is covered in the **Introduction - Gasoline Engines** article.

Induction System

The SFI provides the fuel/air mixture needed for combustion in the cylinders. The 6 solenoid-operated fuel injectors:

- are mounted between the fuel rail and the intake manifold.
- meter fuel into the air intake stream in accordance with engine demand.
- are positioned so that their tips direct fuel just ahead of the engine intake valves.

Valve Train

The valve train uses direct acting mechanical buckets (DAMB). The camshaft lobes are positioned directly above mechanical buckets which are positioned on top of the valves.

Variable Camshaft Timing (VCT) System

The VCT system changes intake camshaft timing dependent on engine speed, load and oil temperature. Oil pressure advances and retards camshaft timing to improve low-speed and high-speed engine performance, engine idle quality and exhaust emissions.

PCV System

All engines are equipped with a closed-type PCV system recycling the crankcase vapors to the upper intake manifold.

Lubrication System

The engine lubrication system is of the force-feed type in which oil is supplied under full pressure to the crankshaft, connecting rod bearings, timing chain tensioners and VCT solenoids. The flow of oil to the valve tappets and valve train is controlled by a restricting orifice located in the head gaskets.

Oil Pump

The lubrication system is designed to provide optimum oil flow to critical components of the engine through its entire operating range.

The heart of the system is a positive displacement internal gear oil pump.

Generically, this design is known as a gerotor pump, which operates as follows:

- The oil pump is mounted on the front face of the cylinder block.
- The inner rotor is piloted on the crankshaft post and is driven through flats on the crankshaft.
- System pressure is limited by an integral, internally-vented relief valve which directs the bypassed oil back to the inlet side of the oil pump.
- Oil pump displacement has been selected to provide adequate volume to make sure of correct oil pressure both at hot idle and maximum speed.
- The relief valve calibration protects the system from excessive pressure during high-viscosity conditions.
- The relief valve is designed to provide adequate connecting rod bearing lubrication under high-temperature and high-speed conditions.

Cooling System

The engine cooling system includes the following:

- Radiator
- Timing chain driven coolant pump
- Electric fan assembly(s)
- Degas bottle (aids in maintaining the correct volume of engine coolant)
- Coolant thermostat
- Coolant hoses

Engine Cylinder Identification

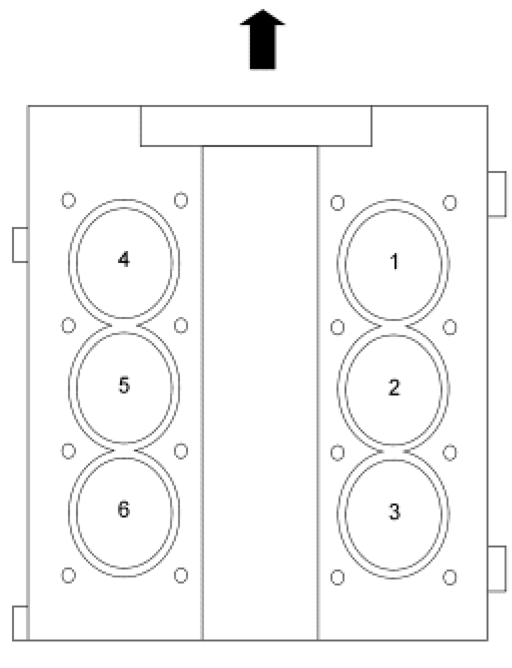

Fig. 1: Engine Cylinder Identification
Courtesy of FORD MOTOR CO.

DIAGNOSTIC TESTS

ENGINE

For basic engine mechanical concerns, refer to **ENGINE SYSTEM - GENERAL INFORMATION** article. For driveability concerns, refer to the **Introduction - Gasoline Engines** article.

GENERAL PROCEDURES

VALVE CLEARANCE CHECK

1. Remove the valve covers. For additional information, refer to **Valve Cover - LH** and **Valve Cover - RH**.

   NOTE: The valve clearance must be measured with the camshaft at base circle. The engine will have to be rotated with the crankshaft pulley bolt to bring each valve to base circle.

2. Use a feeler gauge to measure the clearance of each valve and record its location. A midrange clearance is the most desirable:
   - Intake: 0.15-0.25 mm (0.006-0.01 in)
   - Exhaust: 0.300-0.400 mm (0.0118-0.0157 in)

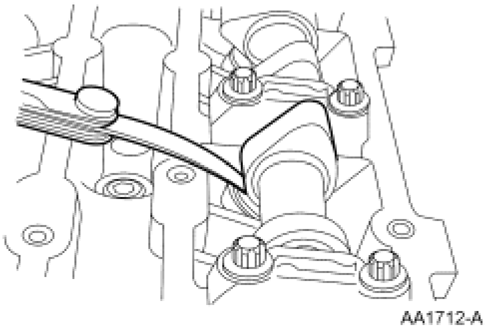

Fig. 2: Measuring Each Valve's Clearance Using A Feeler Gauge
Courtesy of FORD MOTOR CO.

NOTE:	**The number on the valve tappet reflects the thickness of the valve tappet. For example, a tappet with the number 3.310 has the thickness of 3.31 mm (0.13 in).**

3. If any of the valve clearances are out of specification, select new tappets using this formula: tappet thickness = measured clearance + the base tappet thickness - most desirable thickness.

   Select the tappets and mark the installation location.

4. If required, install the new selected valve tappets in the marked locations. For additional information, refer to **Valve Tappets**.

IN-VEHICLE SERVICING

UPPER INTAKE MANIFOLD

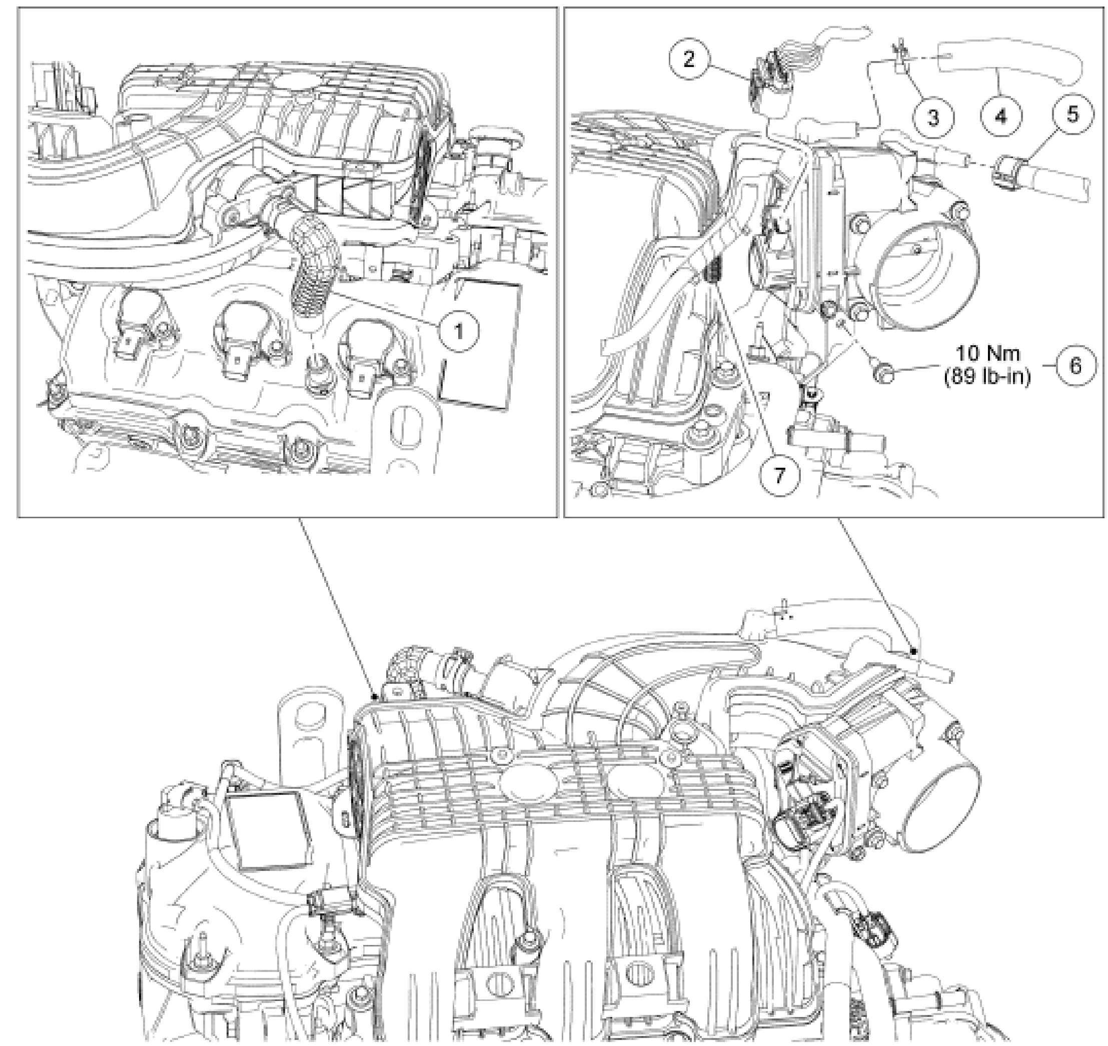

Fig. 3: Identifying Upper Intake Manifold With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	6K817	PCV hose
2	14A464	Throttle body (TB) electrical connector (part of 12C508)
3	CS16140	Brake booster-to-intake manifold vacuum hose clamp
4	6K817	Brake booster-to-intake manifold vacuum hose
5	9D661	Evaporative emissions (EVAP)-to-intake manifold tube
6	W503274	Upper intake manifold support bracket

		bolt
7	-	Engine control wiring harness retainer (part of 12C508)

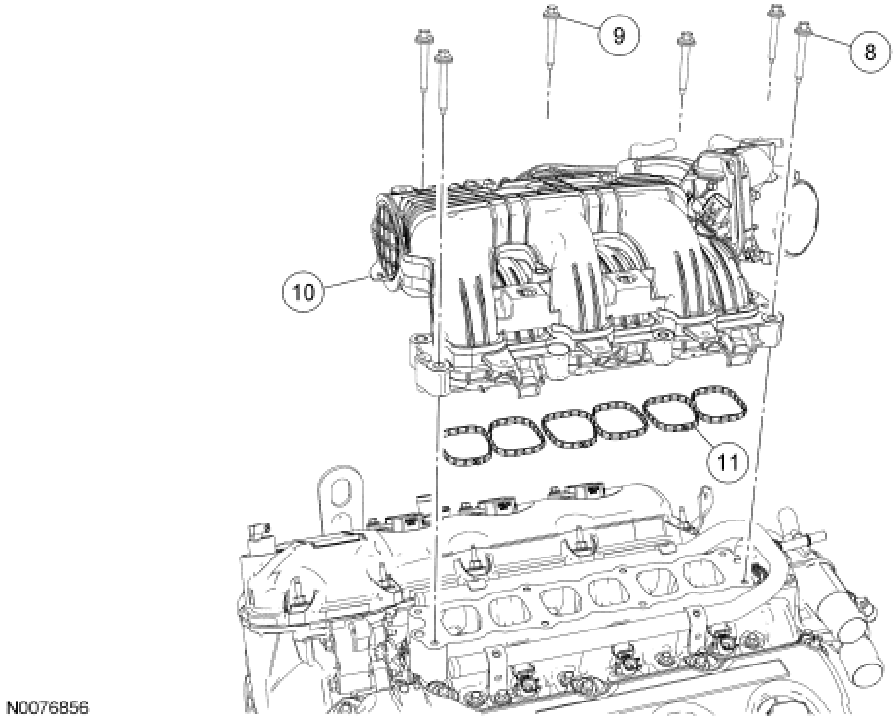

Fig. 4: Identifying Upper Intake Manifold
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
8	W503282	Upper intake manifold bolt (5 required)
9	W707083	Upper intake manifold bolt
10	9S455	Upper intake manifold
11	9H486	Upper intake manifold gasket (3 required)

REMOVAL

1. Remove the air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION & FILTERING** article.
2. Disconnect the throttle body (TB) electrical connector.
3. Disconnect the evaporative emissions (EVAP) tube from the intake manifold.
4. Disconnect the brake booster vacuum hose from the intake manifold.
5. Disconnect the PCV tube from the PCV valve.
6. Detach the wiring harness retainers from the upper intake manifold.

7. Remove the upper intake manifold support bracket bolt.
8. Remove the 6 bolts and remove the upper intake manifold.
    - Remove and discard the gaskets.
    - Clean and inspect all of the sealing surfaces of the upper and lower intake manifold.

INSTALLATION

1. Using new gaskets, install the upper intake manifold and the 6 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

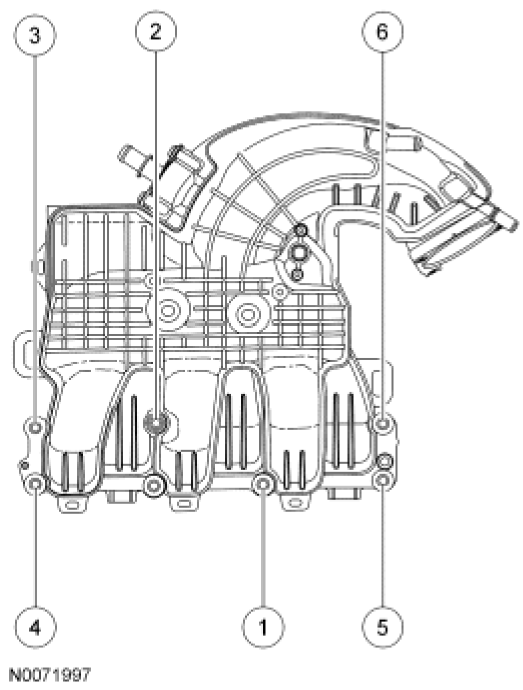

Fig. 5: Identifying Bolt Sequence
Courtesy of FORD MOTOR CO.

2. Install the upper intake manifold support bracket bolt.
    - Tighten to 10 Nm (89 lb-in).
3. Attach the wiring harness retainers to the upper intake manifold.
4. Connect the PCV tube to the PCV valve.
5. Connect the brake booster vacuum hose to the intake manifold.
6. Connect the EVAP tube to the intake manifold.
7. Connect the TB electrical connector.
8. Install the air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION & FILTERING** article.

LOWER INTAKE MANIFOLD

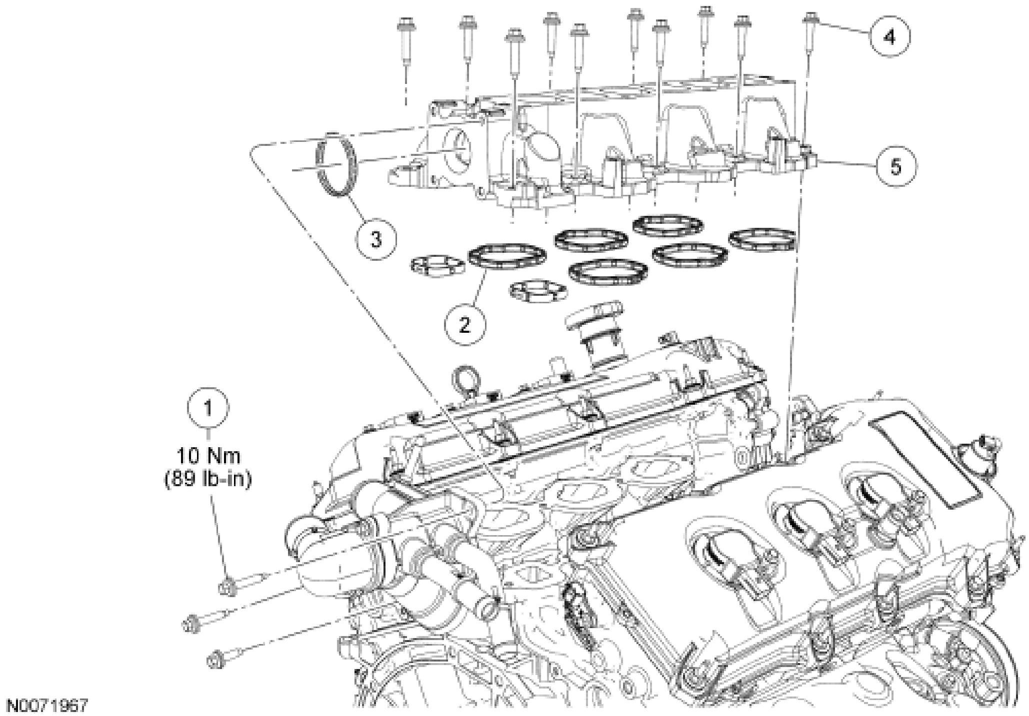

Fig. 6: Identifying Lower Intake Manifold With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W503279	Thermostat housing-to-lower intake manifold bolt (3 required)
2	9439	Lower intake manifold gasket (8 required)
3	8A571	Thermostat housing gasket
4	W503279	Lower intake manifold bolt (10 required)
5	9K461	Lower intake manifold

REMOVAL

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Drain the cooling system. For additional information, refer to **ENGINE COOLING** article.

3. Remove the fuel rail. For additional information, refer to **FUEL CHARGING & CONTROLS - 3.5L** article.
4. Remove the air cleaner assembly. For additional information, refer to **INTAKE AIR DISTRIBUTION & FILTERING** article.
5. Remove the 3 thermostat housing-to-lower intake manifold bolts.
6. Remove the 10 bolts and the lower intake manifold.
    - Remove and discard the intake manifold and thermostat housing gaskets.
    - Clean and inspect all sealing surfaces.

INSTALLATION

1. Using new intake manifold and thermostat housing gaskets, install the lower intake manifold and the 10 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

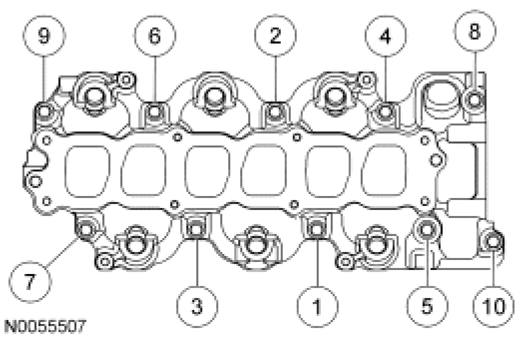

Fig. 7: Installing Lower Intake Manifold Bolts In Sequence
Courtesy of FORD MOTOR CO.

2. Install the 3 thermostat housing-to-lower intake manifold bolts.
    - Tighten to 10 Nm (89 lb-in).
3. Install the air cleaner assembly. For additional information, refer to **INTAKE AIR DISTRIBUTION & FILTERING** article.
4. Install the fuel rail. For additional information, refer to **FUEL CHARGING & CONTROLS - 3.5L** article.
5. Fill and bleed the cooling system. For additional information, refer to **ENGINE COOLING** article.

VALVE COVER - LH

Special Tools

Illustration	Tool Name	Tool Number
	Handle	205-153 (T80T-4000-W)

Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	6853	Crankcase vent tube
2	W700497	Engine control wiring harness retainer (part of 12C508)
3	14A464	LH variable camshaft timing (VCT) electrical connector (part of 12C508)

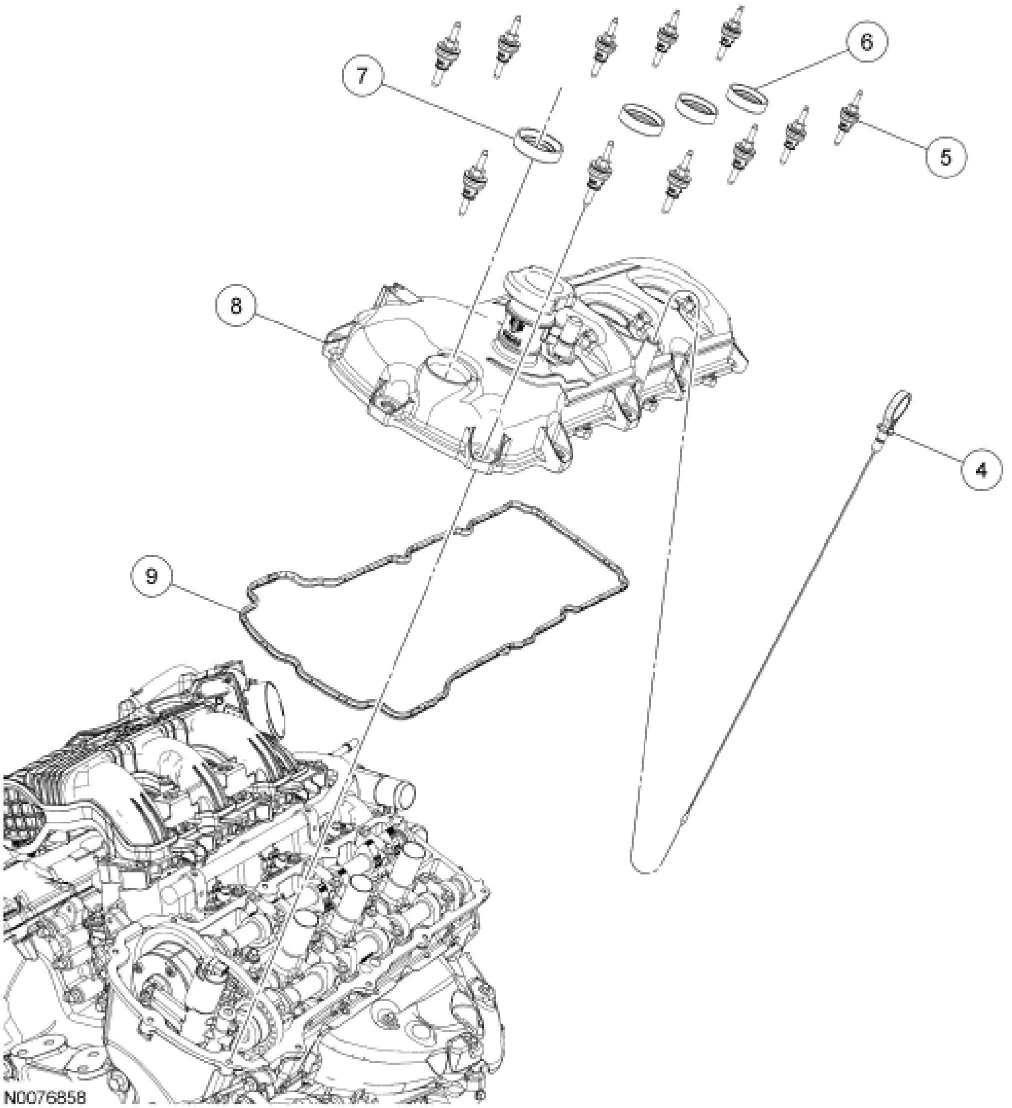

Fig. 9: Identifying Valve Cover Components - LH
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
4	6750	Oil level indicator
5	6C519	Valve cover stud bolt (11 required)
6	6C535	Spark plug tube seal (3 required)
7	6C535	VCT seal
8	6A505	LH valve cover
9	6A559	LH valve cover gasket

REMOVAL

CAUTION: During engine repair procedures, cleanliness is extremely important. Any

foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. Remove the crankcase vent tube.
2. Remove the LH ignition coils. For additional information, refer to **ENGINE IGNITION - 3.5L** article.
3. Remove the oil level indicator.
4. Disconnect the LH variable camshaft timing (VCT) solenoid electrical connector.
5. Detach all of the wiring harness retainers from the valve cover and the stud bolts.
6. Remove the 11 stud bolts and the LH valve cover.
   - Discard the gasket.

NOTE: VCT solenoid seal removal shown, spark plug tube seal removal similar.

7. Inspect the VCT solenoid seals and the spark plug tube seals. Remove any damaged seals.
   - Using the special tools, remove the seal(s).

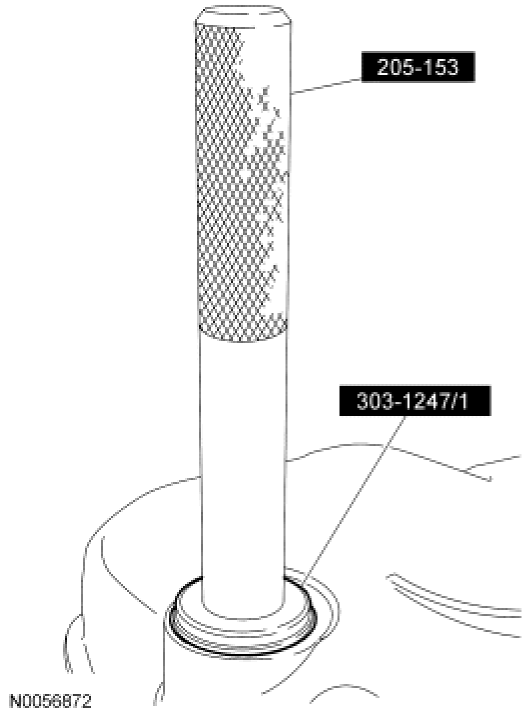

Fig. 10: Removing Seals Using Special Tools (205-153) & (303-1247/1)
Courtesy of FORD MOTOR CO.

8. Clean the valve cover, cylinder head and engine front cover sealing surfaces with metal surface cleaner.

INSTALLATION

NOTE: **Installation of new seals is only required if damaged seals were removed during disassembly of the engine.**

NOTE: **Spark plug tube seal installation shown, VCT seal installation similar.**

1. Using the special tools, install new VCT solenoid and/or spark plug tube seals.

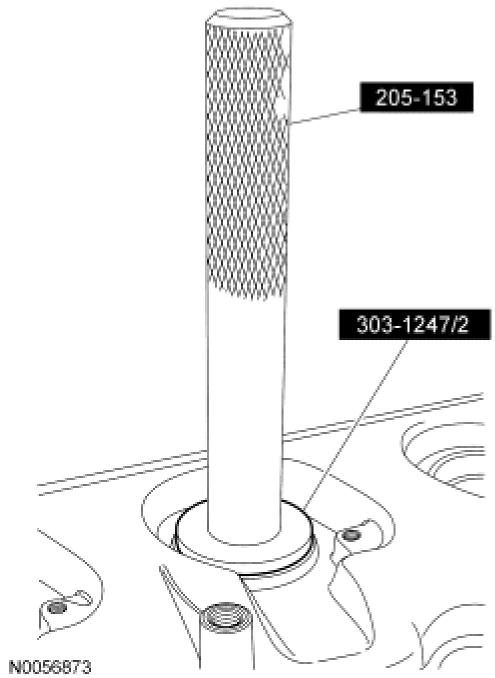

Fig. 11: Installing VCT Solenoid And/Or Spark Plug Tube Seals Using Special Tools (205-153) & (303-1247/2)
Courtesy of FORD MOTOR CO.

CAUTION: **Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.**

NOTE: **If the valve cover is not installed and the fasteners tightened within 4 minutes, the sealant must be removed and the sealing area cleaned. To clean the sealing area, use silicone gasket remover and metal surface prep. Failure to follow this procedure can cause future oil leakage.**

2. Apply an 8 mm (0.31 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover-to-LH cylinder head joints.

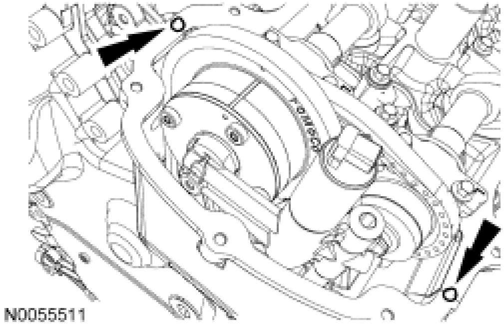

Fig. 12: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover-To-LH Cylinder Head Joints
Courtesy of FORD MOTOR CO.

3. Using a new gasket, install the LH valve cover and 11 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

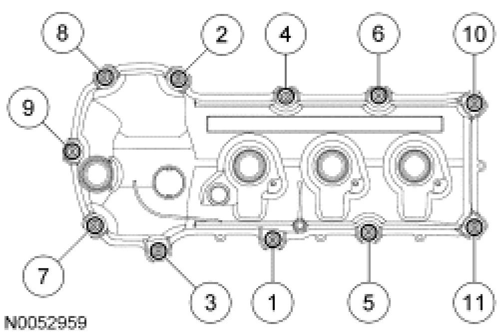

Fig. 13: Installing LH Valve Cover Stud Bolts In Sequence
Courtesy of FORD MOTOR CO.

4. Attach all of the wiring harness retainers to the valve cover and the stud bolts.
5. Connect the LH VCT solenoid electrical connector.
6. Install the oil level indicator.
7. Install the LH ignition coils. For additional information, refer to **ENGINE IGNITION - 3.5L** article.
8. Install the crankcase vent tube.

VALVE COVER - RH

7	6C519	Valve cover stud bolt (10 required)
8	6C520	Valve cover bolt
9	6C535	VCT seal
10	6C535	Spark plug tube seal (3 required)
11	6582	RH valve cover
12	6584	RH valve cover gasket

REMOVAL

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

1. Remove the RH ignition coils. For additional information, refer to **ENGINE IGNITION - 3.5L** article.
2. Disconnect the power steering pressure (PSP) switch electrical connector.
3. Disconnect the RH catalyst monitor sensor electrical connector and pin-type retainer.
4. Disconnect the RH heated oxygen sensor (HO2S) electrical connector.
5. Disconnect the RH variable camshaft timing (VCT) electrical connector.
6. Disconnect the 3 RH fuel injector electrical connectors.
7. Detach all of the wiring harness retainers from the RH valve cover and the stud bolts.
8. Remove the bolt, the 10 stud bolts and the RH valve cover.
   - Discard the gasket.

NOTE: VCT solenoid seal removal shown, spark plug tube seal removal similar.

9. Inspect the VCT solenoid seals and the spark plug tube seals. Remove any damaged seals.
   - Using the special tools, remove the seal(s).

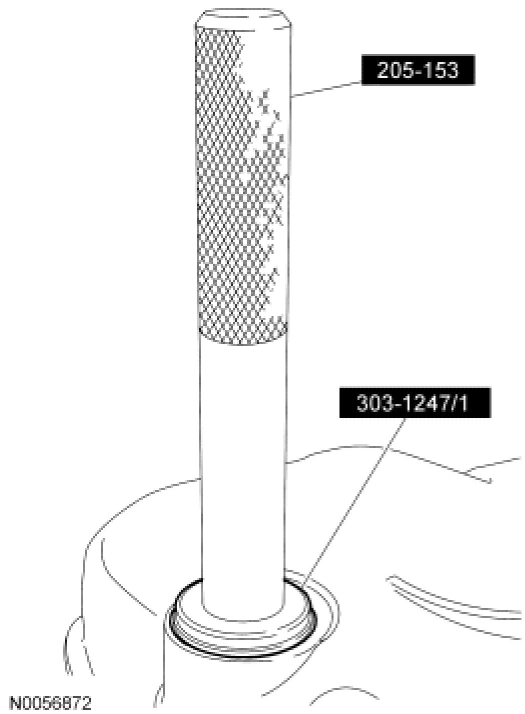

Fig. 16: Removing Seals Using Special Tools (205-153) & (303-1247/1)
Courtesy of FORD MOTOR CO.

10. Clean the valve cover, cylinder head and engine front cover sealing surfaces with metal surface cleaner.

INSTALLATION

NOTE: **Installation of new seals is only required if damaged seals were removed during disassembly of the engine.**

NOTE: **Spark plug tube seal installation shown, VCT seal installation similar.**

1. Using the special tools, install new VCT solenoid and/or spark plug tube seals.

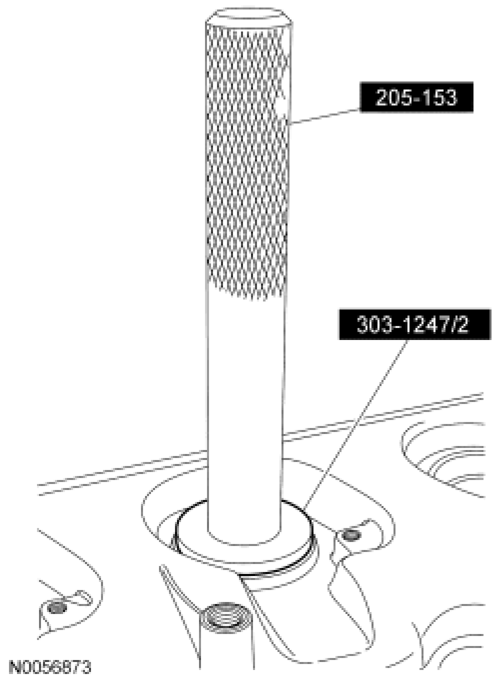

Fig. 17: Installing VCT Solenoid And/Or Spark Plug Tube Seals Using Special Tools (205-153) & (303-1247/2)
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: If the valve cover is not installed and the fasteners tightened within 4 minutes, the sealant must be removed and the sealing area cleaned. To clean the sealing area, use silicone gasket remover and metal surface prep. Failure to follow this procedure can cause future oil leakage.

2. Apply an 8 mm (0.31 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover-to-RH cylinder head joints.

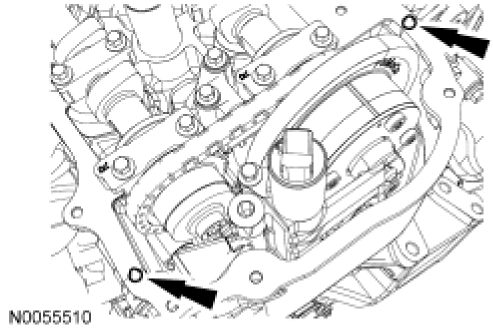

Fig. 18: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover-To-RH Cylinder Head Joints
Courtesy of FORD MOTOR CO.

3. Using a new gasket, install the RH valve cover, bolt and the 10 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

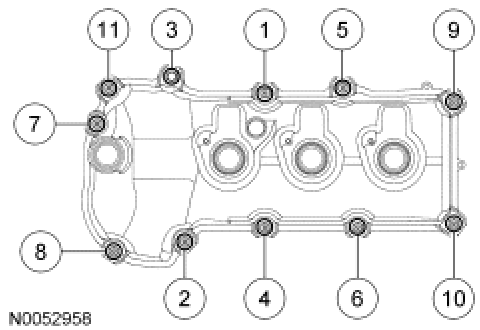

Fig. 19: Installing RH Valve Cover Stud Bolts In Sequence
Courtesy of FORD MOTOR CO.

4. Attach all of the wiring harness retainers to the valve cover and the stud bolts.
5. Connect the 3 RH fuel injector electrical connectors.
6. Connect the RH VCT electrical connector.
7. Connect the RH HO2S electrical connector.
8. Connect the RH catalyst monitor sensor electrical connector and pin-type retainer.
9. Connect the PSP switch electrical connector.
10. Install the RH ignition coils. For additional information, refer to **ENGINE IGNITION - 3.5L** article.

LOWER END COMPONENTS - EXPLODED VIEW, CRANKSHAFT PULLEY AND CRANKSHAFT FRONT SEAL

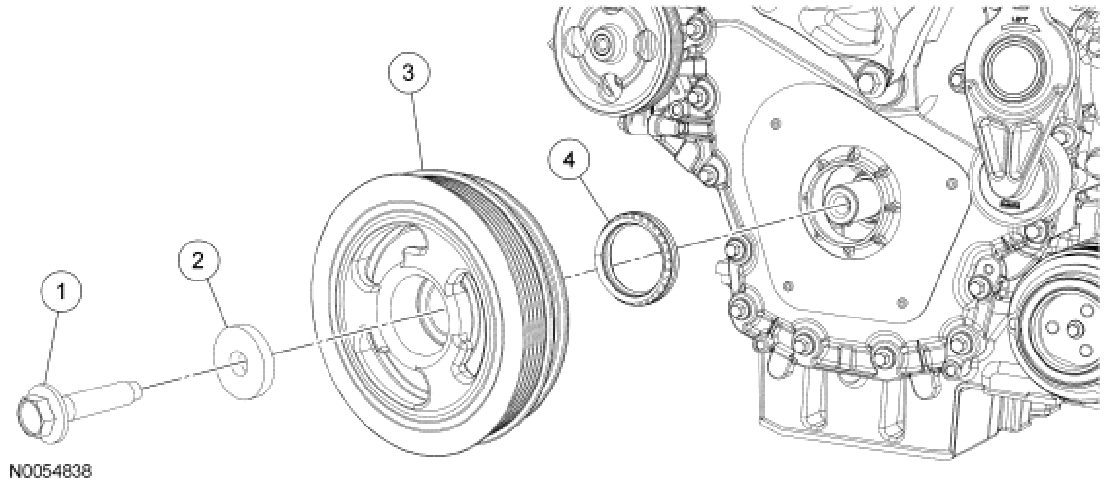

Fig. 20: Exploded View Of Crankshaft Pulley & Crankshaft Front Seal
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W701512	Crankshaft pulley bolt
2	N806165	Washer
3	6316	Crankshaft pulley
4	6700	Crankshaft front seal

1. For additional information, refer to the appropriate procedures in this service information.

CRANKSHAFT PULLEY

 ST1287-A	Replacer, Crankshaft Damper	303-102 (T74P-6316-B)
 ST1438-A	Strap Wrench	303-D055 (D85L-6000-A)

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12	WSS-M2C930-A

(Canada); or equivalent	

REMOVAL

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Remove the accessory drive belt and the power steering belt. For additional information, refer to **ACCESSORY DRIVE** article.
3. Using the special tool, remove the crankshaft bolt and washer.
    - Discard the bolt.

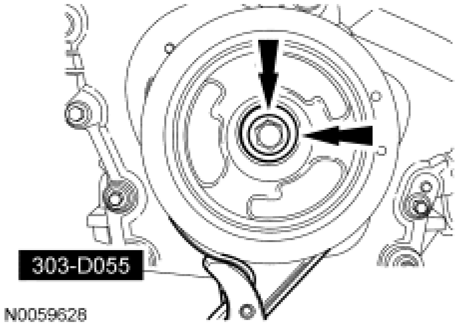

Fig. 21: Removing Crankshaft Bolt & Washer Using Special Tool (303-D055)
Courtesy of FORD MOTOR CO.

4. Using the special tool, remove the crankshaft pulley.

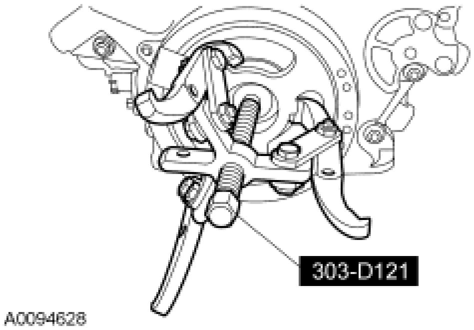

Fig. 22: Identifying Special Tools (303-D121) And Crankshaft Pulley
Courtesy of FORD MOTOR CO.

INSTALLATION

1. Lubricate the crankshaft front seal inner lip with clean engine oil.

NOTE: Lubricate the outside diameter sealing surfaces with clean engine oil.

2. Using the special tools, install the crankshaft pulley.

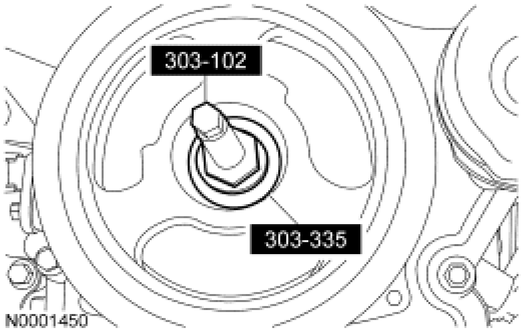

Fig. 23: Installing Crankshaft Pulley
Courtesy of FORD MOTOR CO.

3. Using the special tool, install the crankshaft pulley washer and new bolt and tighten in 4 stages.
    - Stage 1: Tighten to 120 Nm (89 lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 50 Nm (37 lb-ft).
    - Stage 4: Tighten an additional 90 degrees.

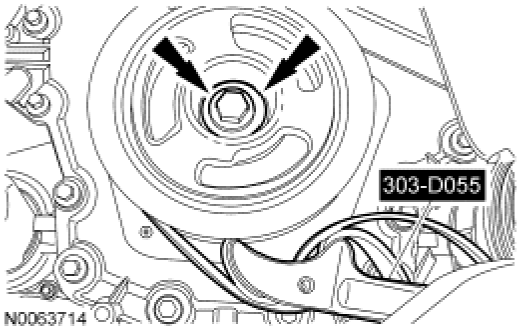

Fig. 24: Installing Crankshaft Pulley Washer & Bolt Using Special Tools (303-D055)

REMOVAL

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Remove the crankshaft pulley. For additional information, refer to **Crankshaft Pulley**.
3. Using the Oil Seal Remover, remove and discard the crankshaft front seal.
   - Clean all sealing surfaces with metal surface prep.

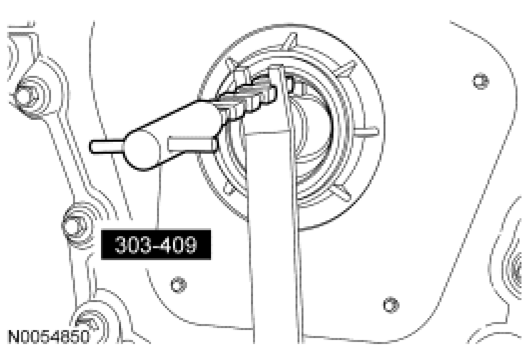

Fig. 25: Removing Crankshaft Front Seal Using Special Tool (303-409)
Courtesy of FORD MOTOR CO.

INSTALLATION

NOTE: **Apply clean engine oil to the crankshaft front seal bore in the engine front cover.**

1. Using the Front Crankshaft Seal Installer and Crankshaft Vibration Damper Installer, install a new crankshaft front seal.

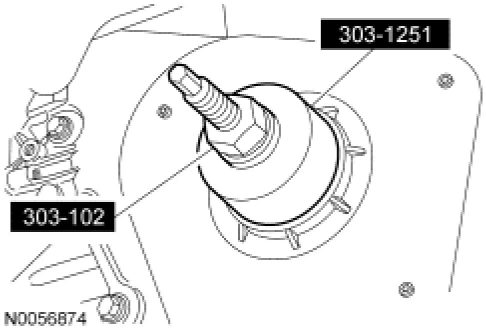

Fig. 26: Installing Crankshaft Front Seal Using Special Tools (303-102) & (303-1251)
Courtesy of FORD MOTOR CO.

2. Install the crankshaft pulley. For additional information, refer to **Crankshaft Pulley**.

LOWER END COMPONENTS - EXPLODED VIEW, FLEXPLATE AND CRANKSHAFT REAR SEAL

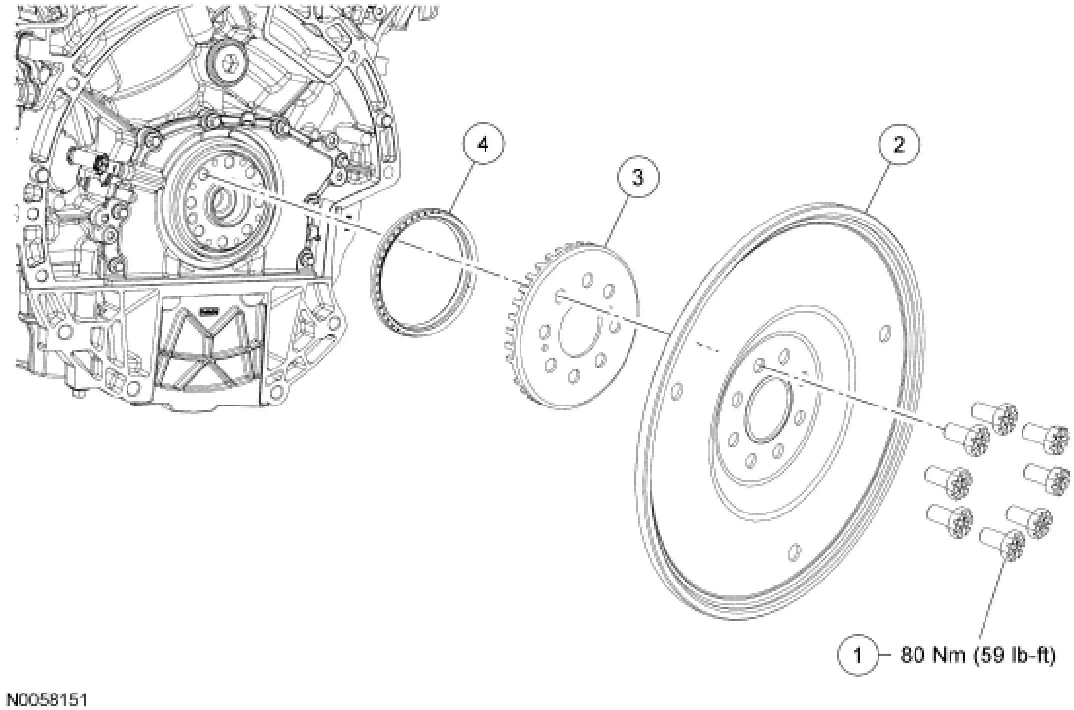

Fig. 27: Exploded View Of Flexplate & Crankshaft Rear Seal - Lower End Components With Torque Specification

Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W701559	Flexplate bolt (8 required)
2	6375	Flexplate
3	12A227	Crankshaft sensor ring
4	6701	Crankshaft rear seal

1. For additional information, refer to the appropriate procedures in this service information.

FLEXPLATE

REMOVAL AND INSTALLATION

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Remove the transaxle. For additional information, refer to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article.

NOTE: One of the 8 flexplate holes are offset so the flexplate can only be installed in one position.

3. Remove the bolts and the flexplate.
   - To install, tighten to 80 Nm (59 lb-ft).
4. To install, reverse the removal procedure.

CRANKSHAFT REAR SEAL

Special Tools

Silicone Gasket Remover ZC-30	-

REMOVAL

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, may cause engine failure.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Recover the A/C system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION & DIAGNOSTICS** article.
3. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING & CABLES** article.

4. Remove the accessory drive belt, tensioner and the power steering belt. For additional information, refer to **ACCESSORY DRIVE** article.
5. Using the special tool, remove the crankshaft bolt and washer.
    - Discard the bolt.

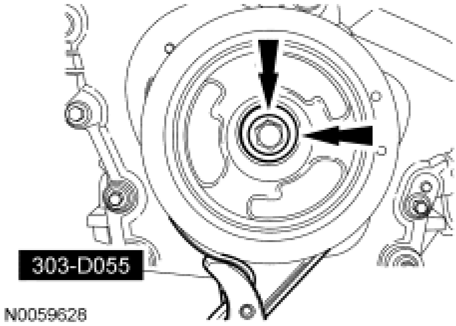

Fig. 31: Removing Crankshaft Bolt & Washer Using Special Tool (303-D055)
Courtesy of FORD MOTOR CO.

6. Using the special tool, remove the crankshaft pulley.

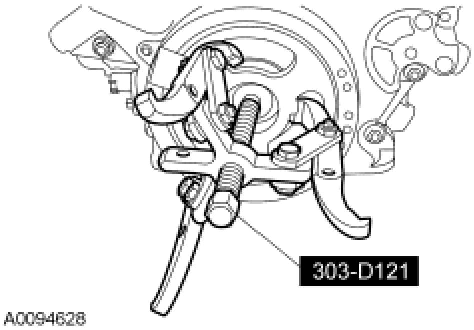

Fig. 32: Identifying Special Tools (303-D121) And Crankshaft Pulley
Courtesy of FORD MOTOR CO.

7. Using the special tool, remove and discard the crankshaft front seal.

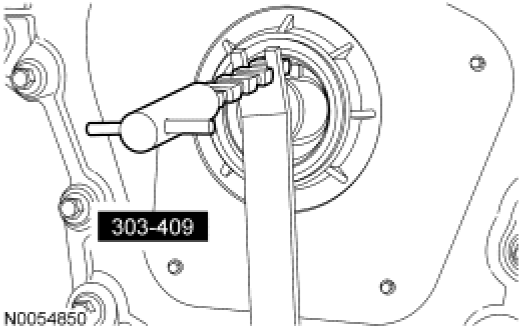

Fig. 33: Removing Crankshaft Front Seal Using Special Tool (303-409)

Courtesy of FORD MOTOR CO.

8. Loosen the exhaust flexible pipe clamp and disconnect the 2 exhaust hangers.

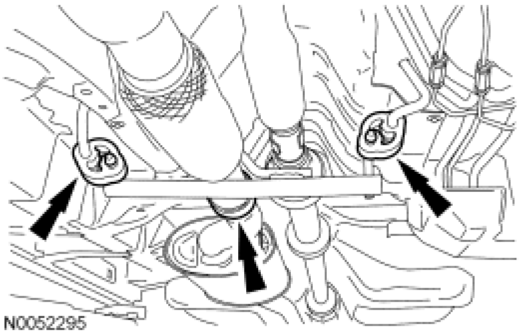

Fig. 34: Locating Exhaust Flexible Pipe Clamp & Exhaust Hangers
Courtesy of FORD MOTOR CO.

9. Remove the 4 nuts, the exhaust flexible pipe and the Y-pipe as an assembly.
    - Discard the nuts and the gasket.

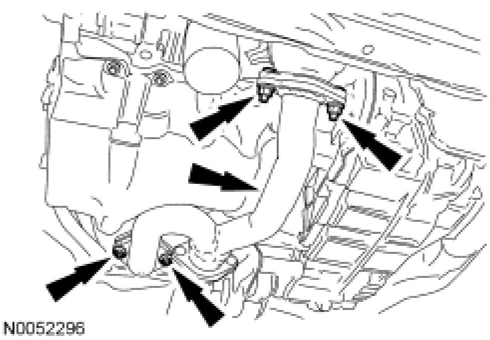

Fig. 35: Locating Exhaust Flexible Pipe, Y-Pipe & Nuts
Courtesy of FORD MOTOR CO.

10. Remove the 2 nuts and the roll restrictor heat shield.

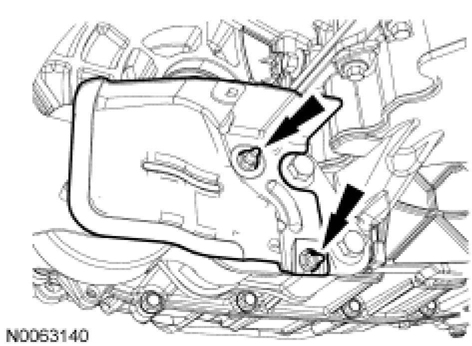

Fig. 36: Locating Roll Restrictor Heat Shield Nuts
Courtesy of FORD MOTOR CO.

11. Remove the roll restrictor through bolt and the 2 roll restrictor-to-transaxle bracket plate bolts.

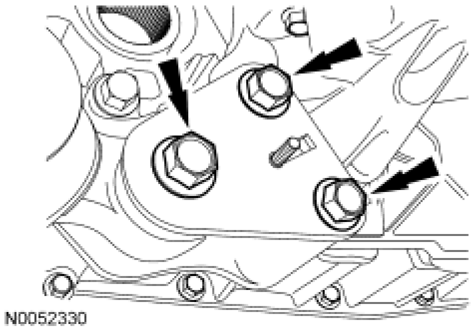

Fig. 37: Locating Roll Restrictor-To-Transaxle Bracket Plate Bolts
Courtesy of FORD MOTOR CO.

12. Loosen the roll restrictor-to-subframe through bolt.
    - Position the roll restrictor and transaxle bracket plate aside.

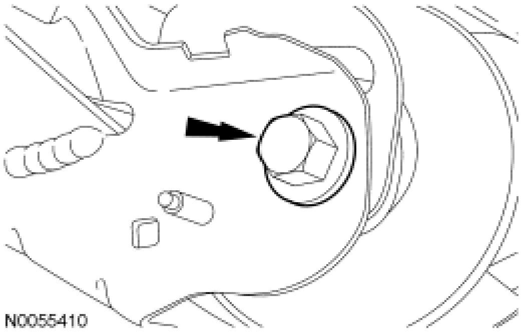

Fig. 38: Locating Roll Restrictor-To-Subframe Bolt
Courtesy of FORD MOTOR CO.

13. Remove the 3 bolts and the transaxle bracket.

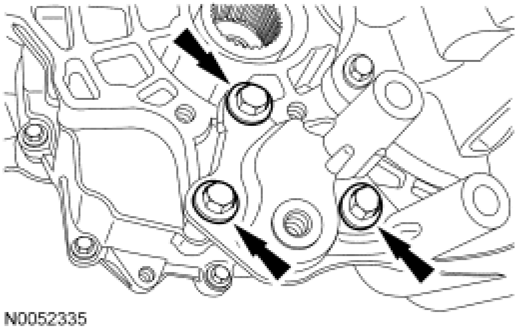

Fig. 39: Locating Transaxle Bracket Bolts
Courtesy of FORD MOTOR CO.

14. Remove and discard the RH front halfshaft nut.

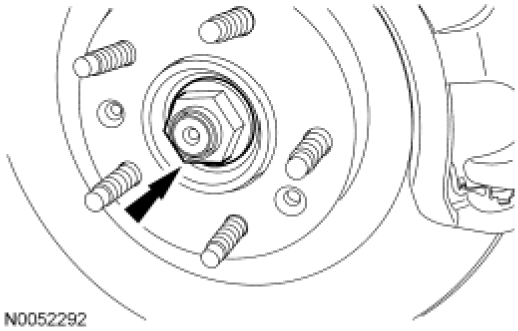

Fig. 40: Locating RH Front Halfshaft Nut
Courtesy of FORD MOTOR CO.

15. Remove the RH stabilizer link-to-lower control arm nut.

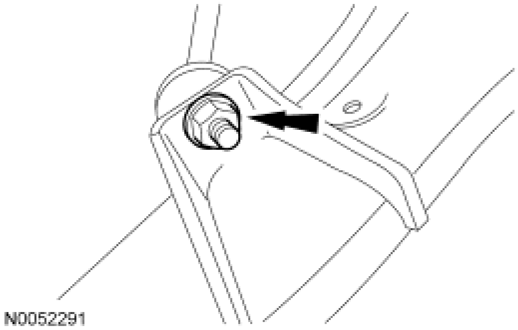

Fig. 41: Locating Stabilizer Bar Link Nut
Courtesy of FORD MOTOR CO.

16. Remove the RH lower control arm-to-knuckle pinch bolt.
    - Separate the lower control arm from the knuckle.

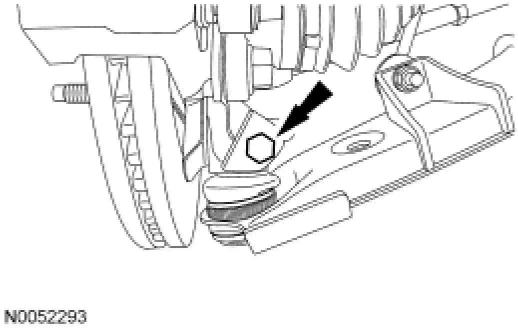

Fig. 42: Locating Ball Joint Pinch Bolt
Courtesy of FORD MOTOR CO.

17. Using the special tool, separate the RH halfshaft from the hub.

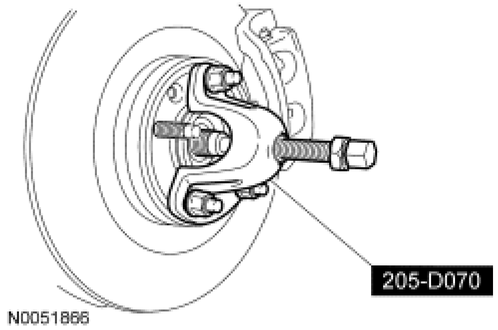

Fig. 43: Separating RH Halfshaft From Hub Using Special Tool (205-D070)
Courtesy of FORD MOTOR CO.

18. Using the special tools, separate the RH halfshaft from the intermediate shaft.
    - Remove the RH halfshaft.

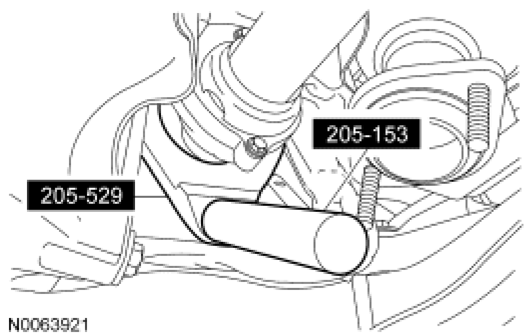

Fig. 44: Separating RH Halfshaft From Intermediate Shaft Using Special Tool (205-529) & (205-153)
Courtesy of FORD MOTOR CO.

19. Remove the drain plug and drain the engine oil.
    - Install the drain plug and tighten to 27 Nm (20 lb-ft).
20. If equipped, detach the engine block heater harness from the radiator support, the A/C suction tube and the engine wiring harness.

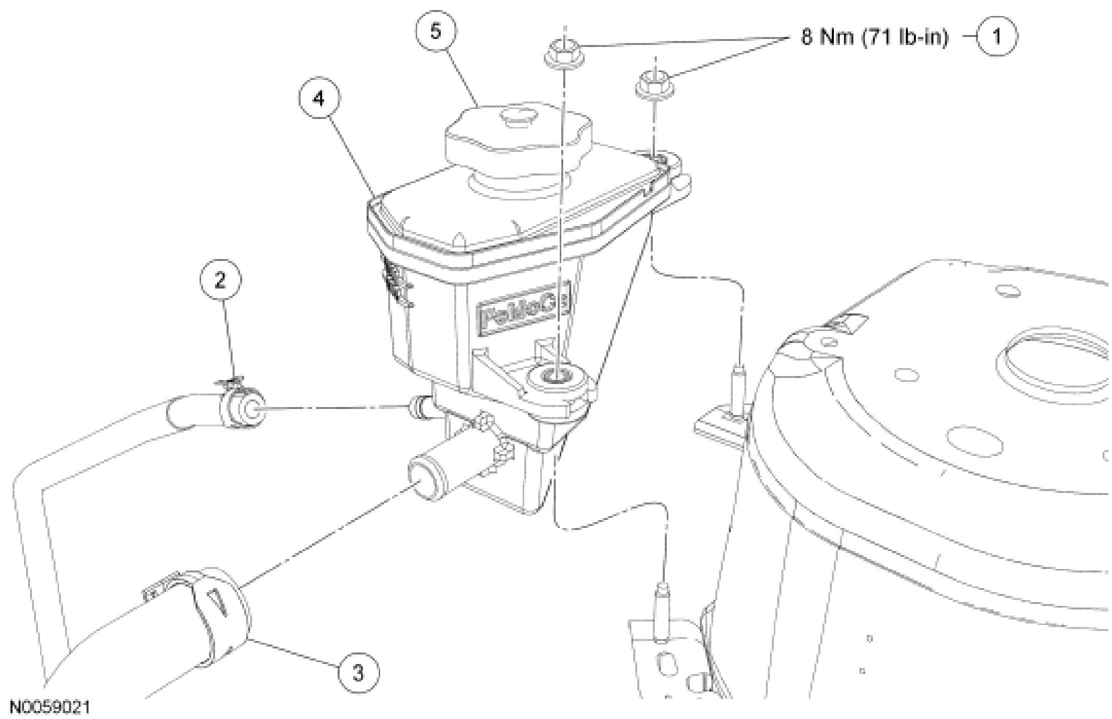

Fig. 45: Identifying Engine Block Heater Harness, Radiator Support, A/C Suction Tube & Engine Wiring Harness
Courtesy of FORD MOTOR CO.

21. Remove the engine air cleaner and air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION & FILTERING** article.
22. Remove the LH and RH valve covers. For additional information, refer to **Valve Cover - LH** and **Valve Cover - RH**.
23. Remove the safety clip from the A/C suction tube fitting.
    - Disconnect the A/C suction tube fitting and position the tube aside.

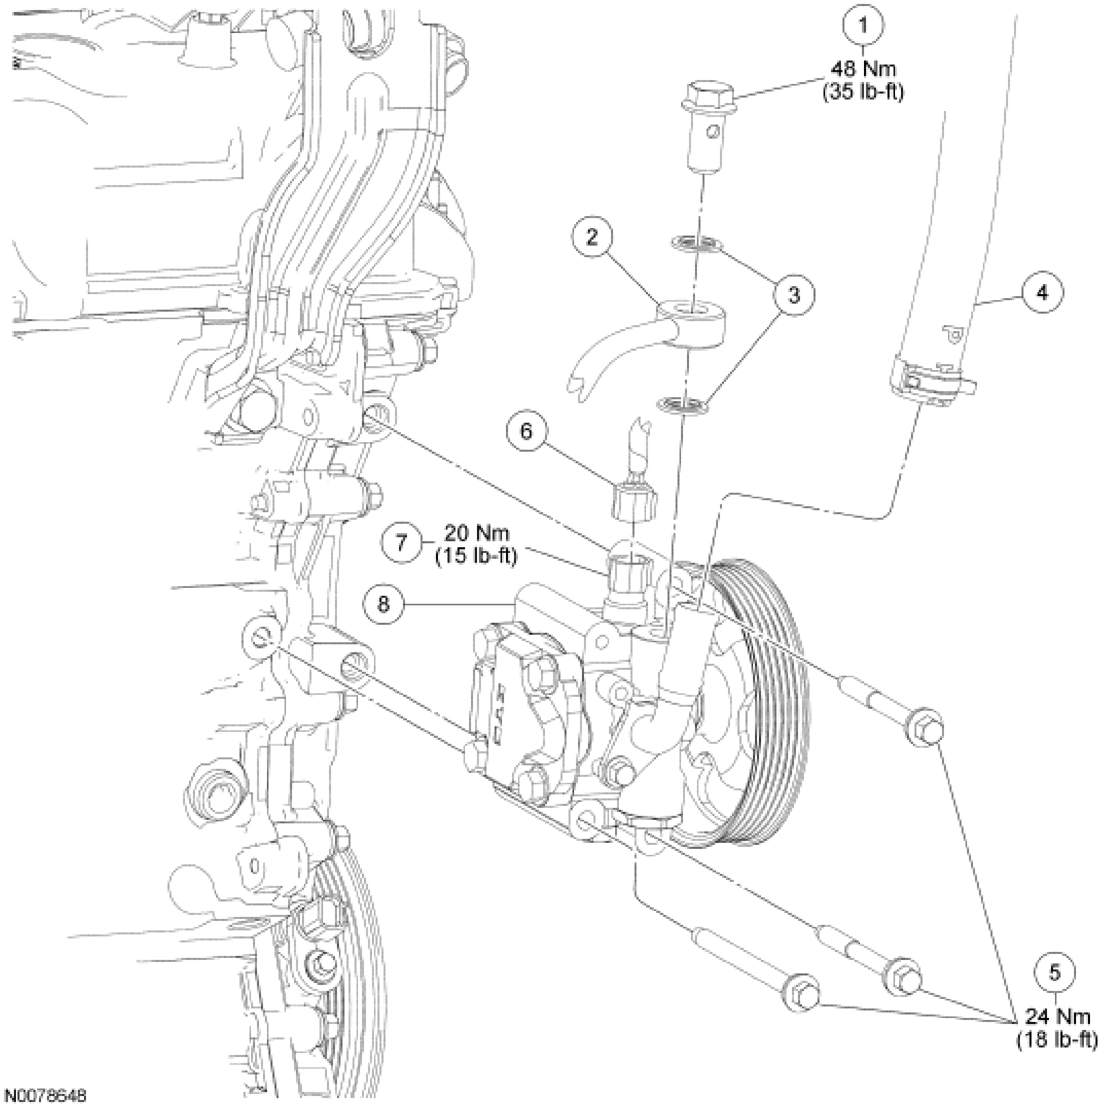

Fig. 46: Identifying Safety Clip On A/C Suction Tube Fitting
Courtesy of FORD MOTOR CO.

24. Remove the A/C pressure tube bracket bolt.

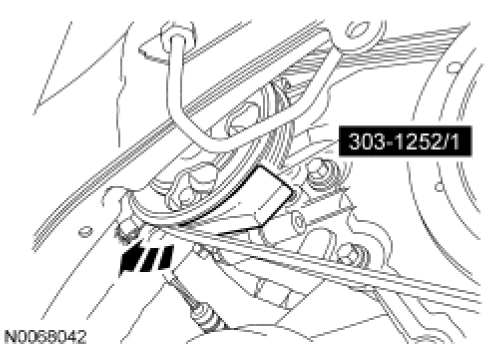

Fig. 47: Locating A/C Pressure Tube Bracket Bolt

Courtesy of FORD MOTOR CO.

25. Remove the nut and disconnect the A/C pressure tube fitting.
    - Discard the O-ring seal.
    - Position the A/C pressure tube aside.

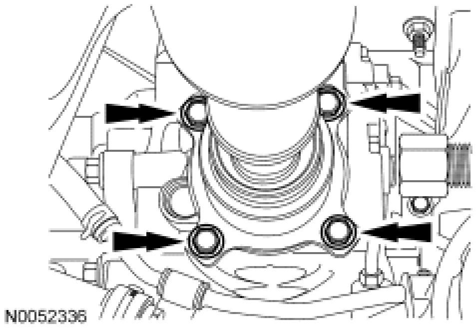

Fig. 48: Locating A/C Pressure Tube Fitting Nut
Courtesy of FORD MOTOR CO.

26. Disconnect the 2 engine wiring harness connectors.

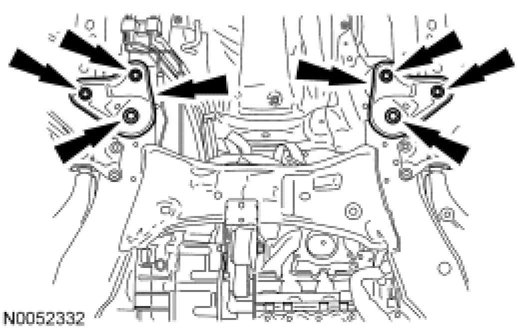

Fig. 49: Locating Engine Wiring Harness Connectors
Courtesy of FORD MOTOR CO.

27. Remove the bolt and the ground wire from the engine front cover.

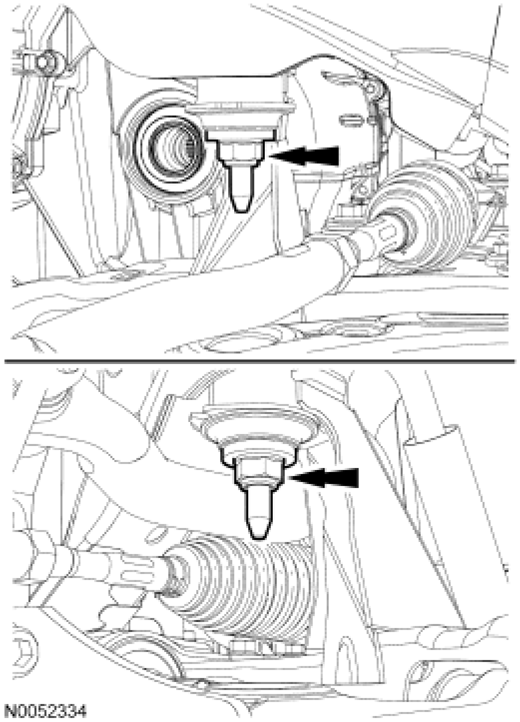

Fig. 50: Removing/Installing Bolt & Ground Wire From Engine Front Cover
Courtesy of FORD MOTOR CO.

28. Remove the nut, the ground wire and the radio interference capacitor wire from the engine front cover stud.

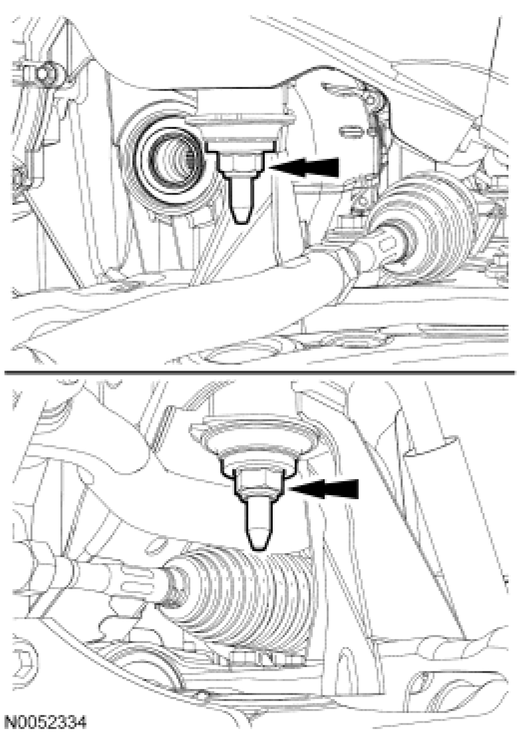

Fig. 51: Removing/installing Nut, Ground Wire & Radio Interference Capacitor Wire From Engine Front Cover Stud
Courtesy of FORD MOTOR CO.

29. Remove the nut, the ground wire and the radio interference capacitor from the cowl stud.

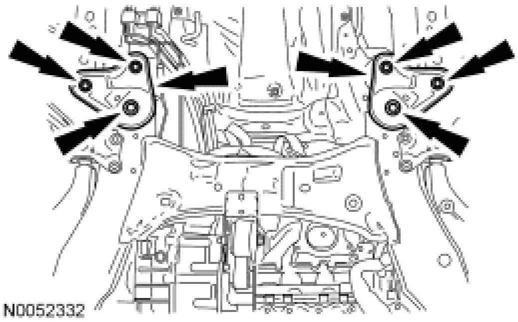

Fig. 52: Removing/Installing Nut, Ground Wire & Radio Interference Capacitor From Cowl Stud
Courtesy of FORD MOTOR CO.

30. Disconnect the purge valve electrical connector.

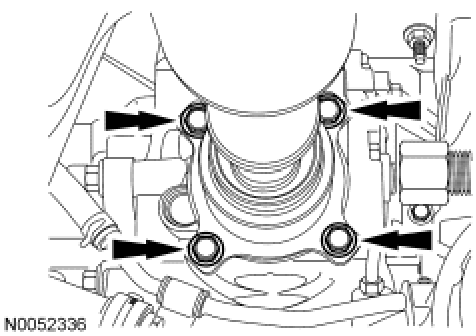

Fig. 53: Locating Purge Valve Electrical Connector
Courtesy of FORD MOTOR CO.

31. Disconnect the 3 PCM electrical connectors and position the wiring harness aside.

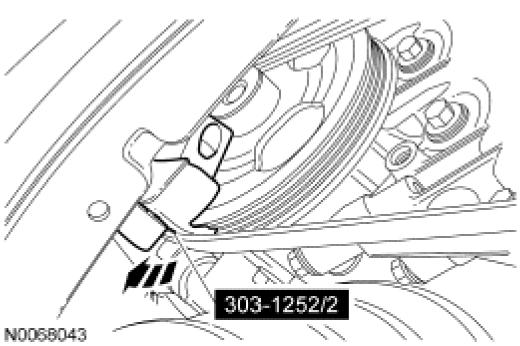

Fig. 54: Identifying PCM Electrical Connectors & Wiring Harness

Courtesy of FORD MOTOR CO.

32. Remove the 3 bolts and position the degas bottle aside.

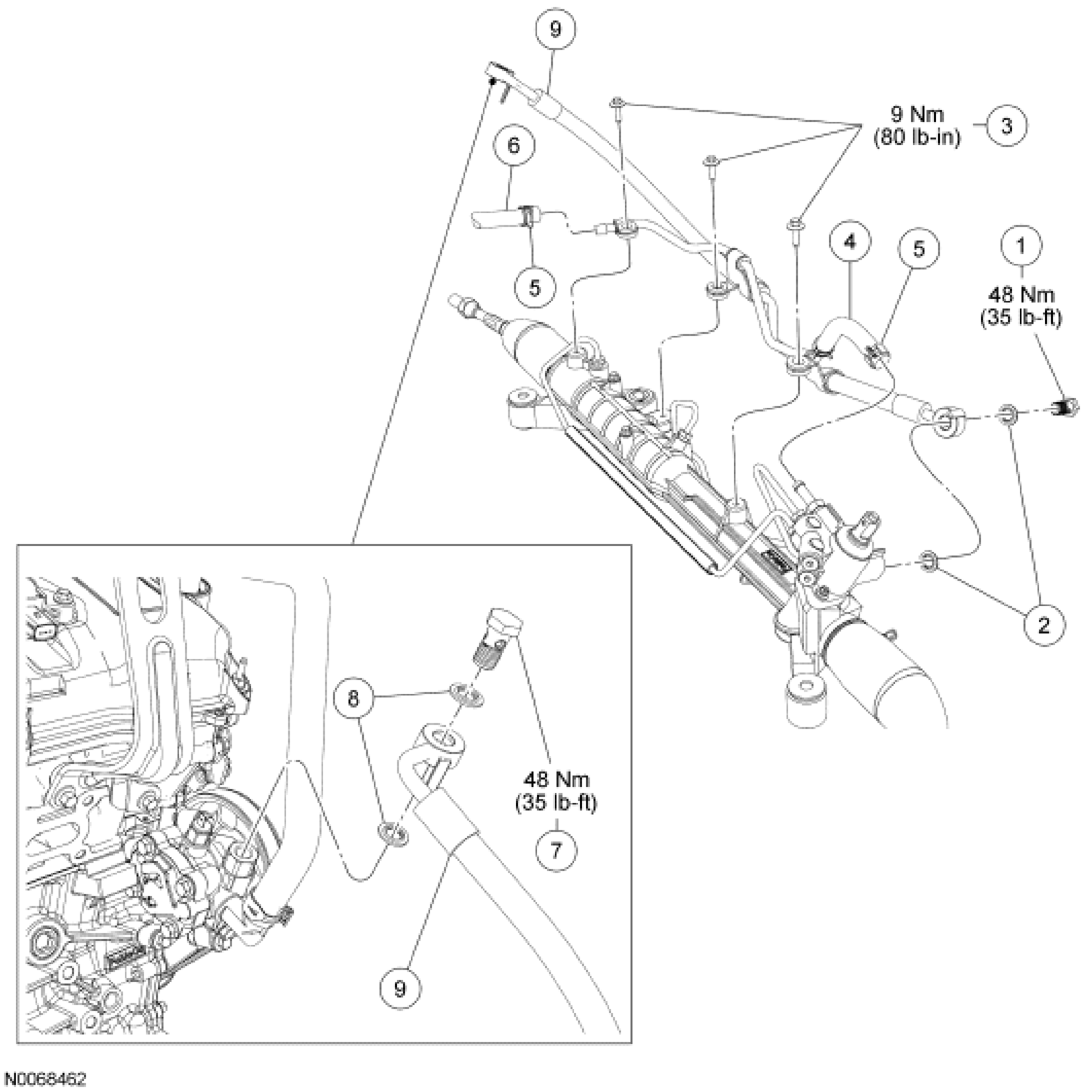

Fig. 55: Locating Coolant Reservoir Bolts
Courtesy of FORD MOTOR CO.

NOTE: **The area between the front of the engine and the body of the vehicle must be unobstructed in order to properly remove and install the engine front cover.**

33. Remove the 2 power steering reservoir nuts.
    - Support the power steering reservoir and hose away from the front of the engine with a length of mechanic's wire.

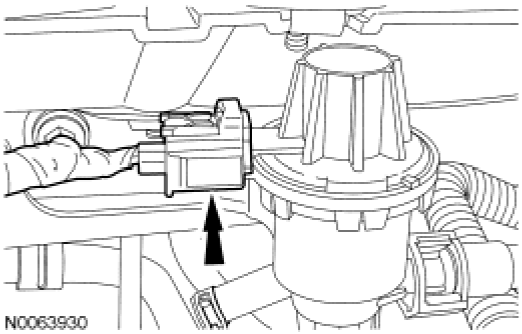

Fig. 56: Locating Power Steering Reservoir Nuts
Courtesy of FORD MOTOR CO.

34. Remove the 3 power steering pump bolts.
    - Support the power steering pump and hose away from the front of the engine with a length of mechanic's wire.

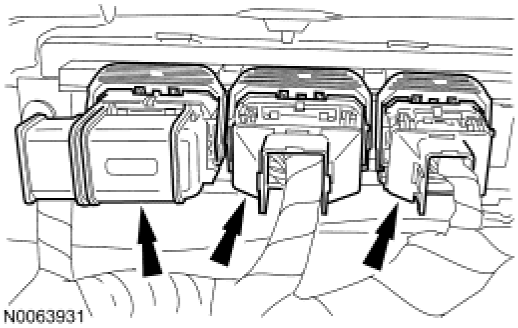

Fig. 57: Locating Power Steering Pump Bolts
Courtesy of FORD MOTOR CO.

NOTE: **LH shown, RH similar.**

35. Remove the bolts, the LH and the RH VCT solenoids.

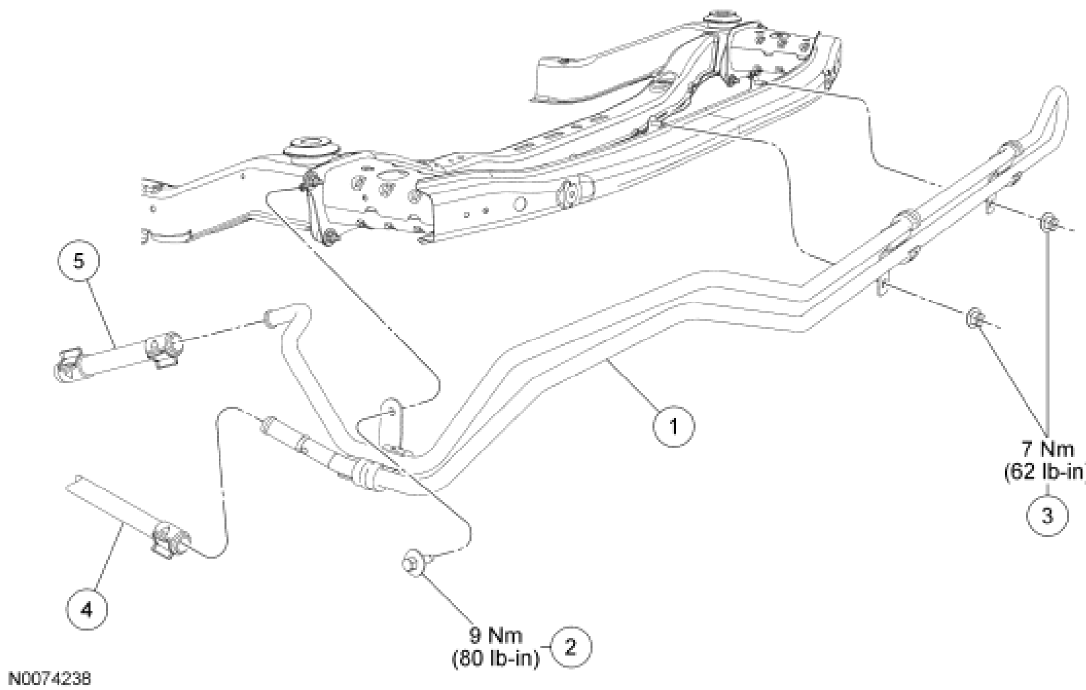

Fig. 58: Locating LH & RH VCT Solenoids Bolts
Courtesy of FORD MOTOR CO.

CAUTION: The special tool must be carefully aligned to the mounting bosses on the oil pan. Failure to follow these instructions may result in damage to the oil pan.

NOTE: The special tool and floor jack are used to raise and lower the engine to access the engine front cover and engine mount bracket fasteners.

36. Position a floor jack and the special tool under the oil pan.

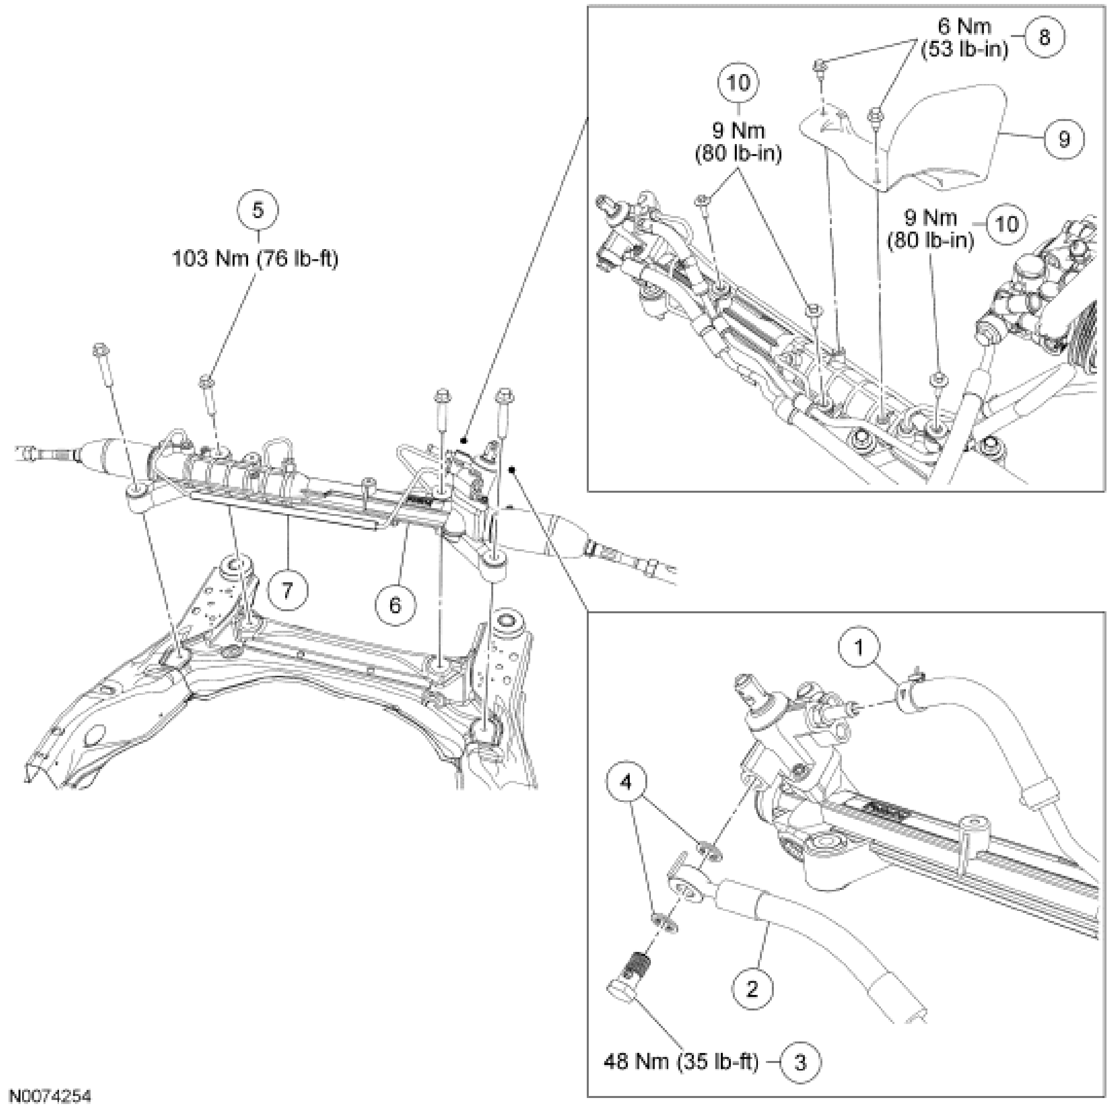

Fig. 59: Positioning Floor Jack & Special Tool (303-1295) Under Oil Pan
Courtesy of FORD MOTOR CO.

CAUTION: The transaxle through bolt must be loosened prior to removing the engine mount and lowering the front of the engine. Failure to follow these instructions may cause internal damage to the hydraulic transaxle mount and possible fluid leakage.

37. Loosen the transaxle mount through bolt.

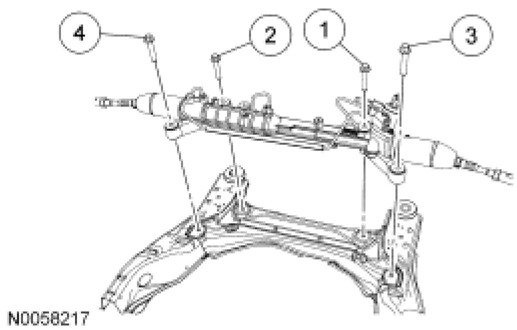

Fig. 60: Identifying Transaxle Mount Bolt
Courtesy of FORD MOTOR CO.

38. Remove the nut, bolt and engine mount brace.

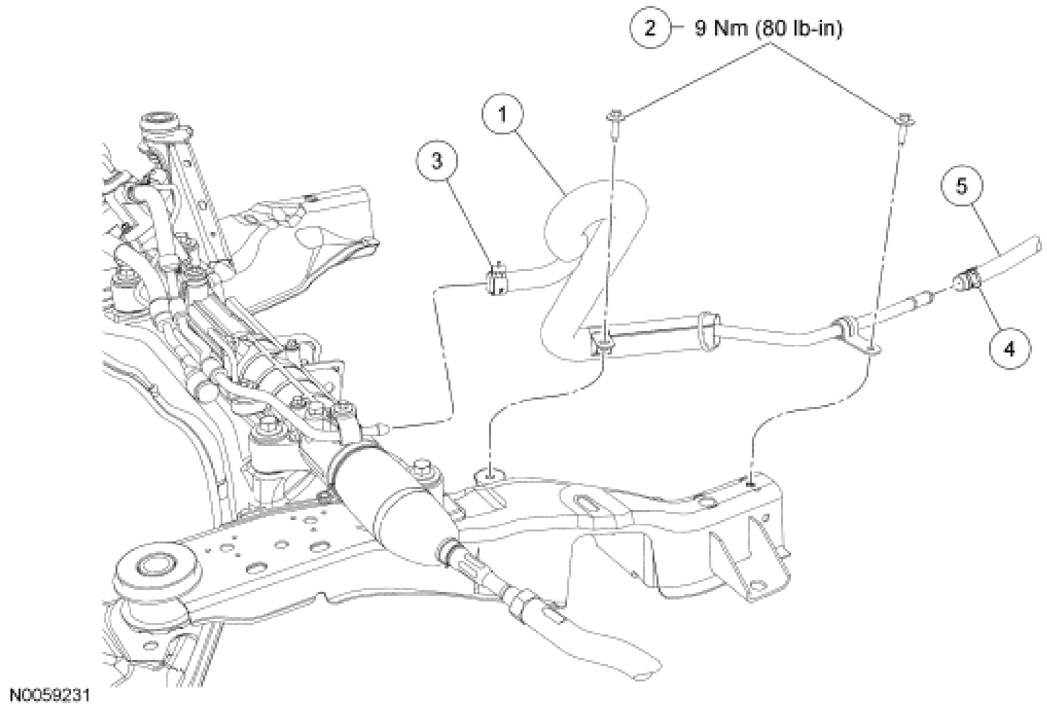

Fig. 61: Locating Nut, Bolt & Engine Mount Brace
Courtesy of FORD MOTOR CO.

39. Remove the 4 engine mount nuts.

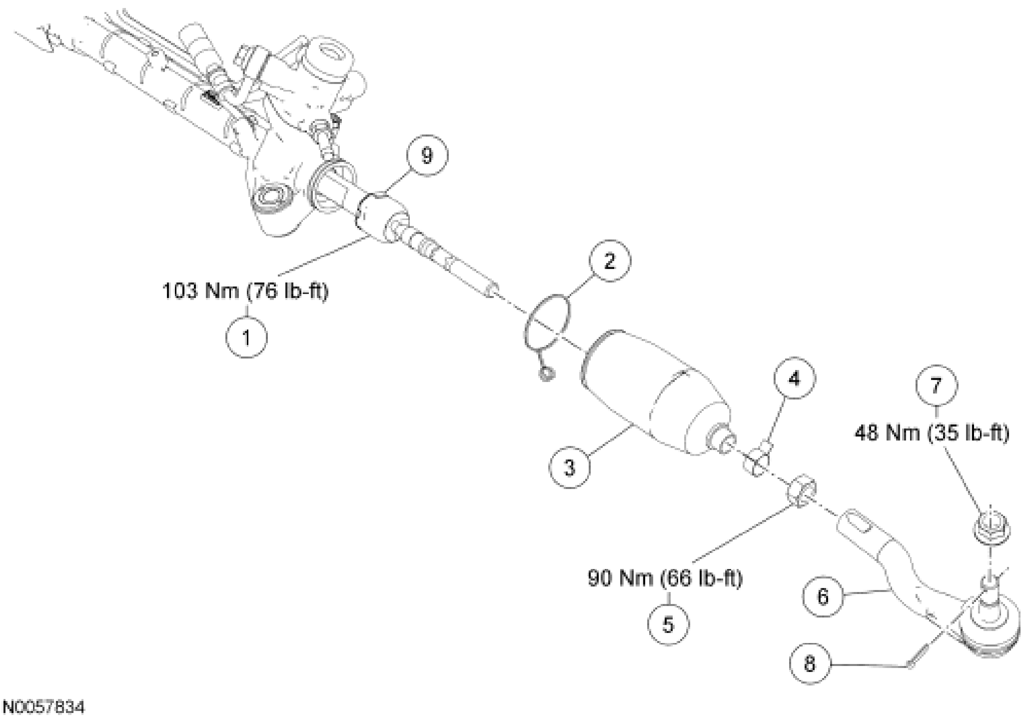

Fig. 62: Locating Engine Mount Nuts
Courtesy of FORD MOTOR CO.

40. Remove the 3 bolts and the engine mount.

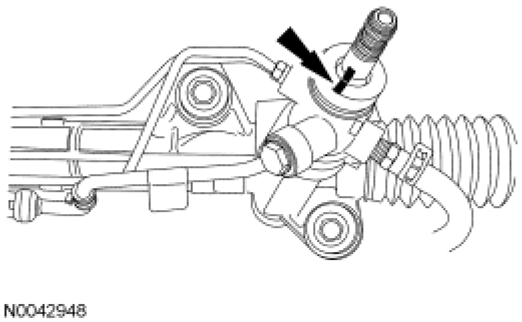

Fig. 63: Locating Engine Mount Bolts
Courtesy of FORD MOTOR CO.

41. Remove the 2 bolts and the engine mount bracket.

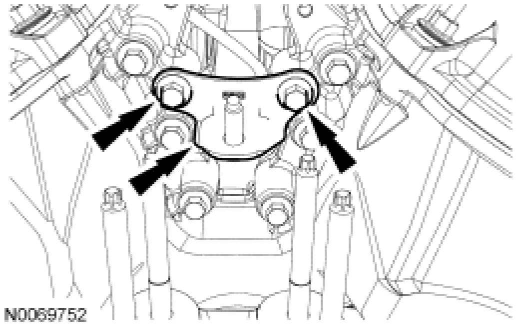

Fig. 64: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

42. Remove the 2 engine mount studs.

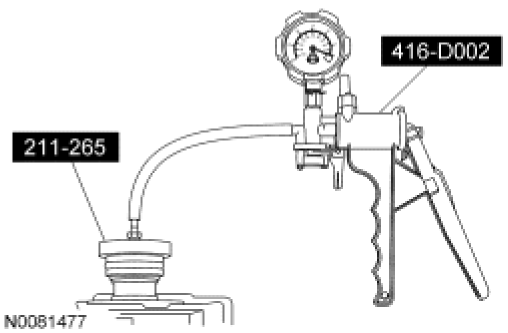

Fig. 65: Locating Engine Mount Studs
Courtesy of FORD MOTOR CO.

43. Remove the 2 upper engine mount bracket bolts.

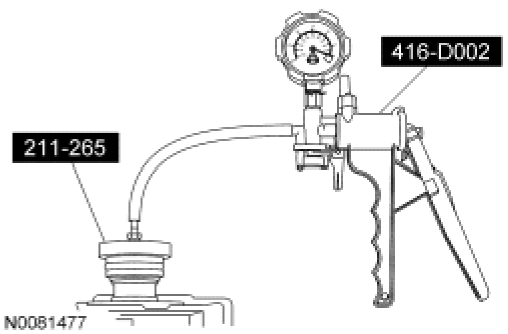

Fig. 66: Locating Upper Engine Mount Bracket Bolts
Courtesy of FORD MOTOR CO.

44. Lower the engine to access the lower engine mount bracket bolt.
45. Loosen the lower engine mount bracket bolt and remove the engine mount bracket and bolt as an assembly.

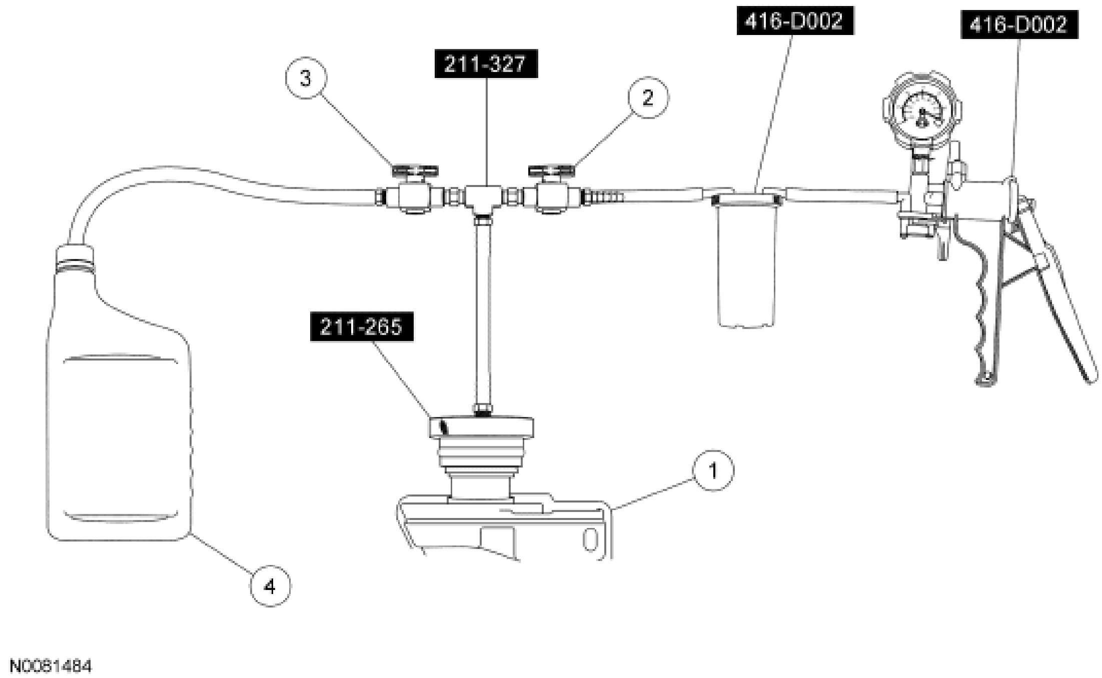

Fig. 67: Locating Lower Engine Mount Bracket Bolt
Courtesy of FORD MOTOR CO.

46. Remove the 22 engine front cover bolts.

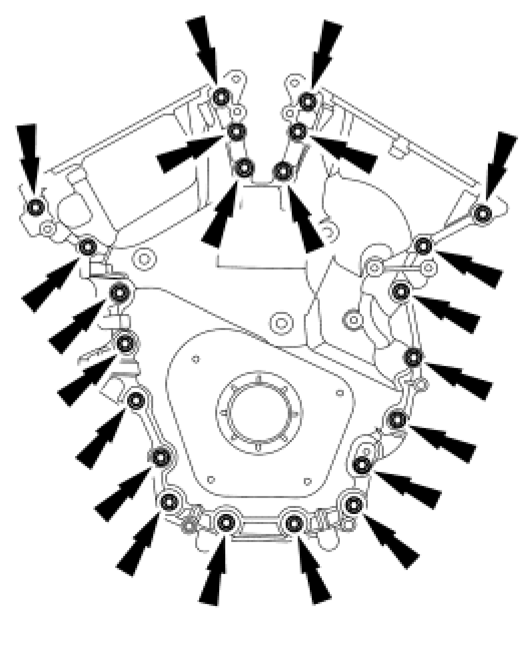

Fig. 68: Identifying Engine Front Cover Bolts

Courtesy of FORD MOTOR CO.

47. Install 6 of the engine front cover bolts (finger tight) into the 6 threaded holes in the engine front cover.
    - Tighten the bolts one turn at a time in a criss-cross pattern until the engine front cover-to-cylinder block seal is released.
        - Remove the engine front cover.

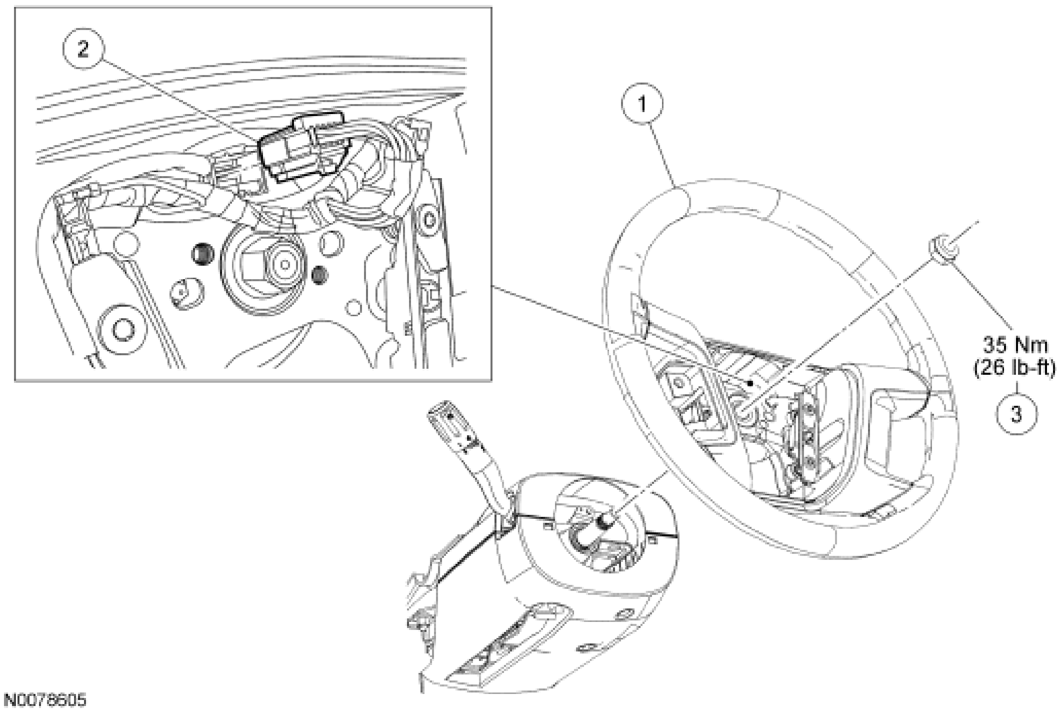

Fig. 69: Identifying Engine Front Cover Bolts
Courtesy of FORD MOTOR CO.

INSTALLATION

1. Raise the engine to the installed position.

CAUTION: Only use a 3M Roloc® Bristle Disk, (2-in white, part number 07528) to clean the engine front cover. Do not use metal scrapers, wire brushes or any other power abrasive disk to clean the crankshaft rear seal retainer plate. These tools cause scratches and gouges that make leak paths.

2. Clean the engine front cover using a 3M Roloc® Bristle Disk (2-in white, part number 07528) in a suitable tool turning at the recommended speed of 15,000 rpm.
    - Thoroughly wash the engine front cover to remove any foreign material, including any abrasive particles created during the cleaning process.

CAUTION: Place clean, lint-free shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages or the oil pan, may cause engine failure.

CAUTION: Do not use wire brushes, power abrasive discs or 3M Roloc® Bristle Disk (2-in white part number 07528) to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. They also cause contamination that will cause premature engine failure. Remove all traces of the gasket.

3. Clean the sealing surfaces of the cylinder heads, the cylinder block and the oil pan in the following sequence.
    1. Remove any large deposits of silicone or gasket material.
    2. Apply silicone gasket remover and allow to set for several minutes.
    3. Remove the silicone gasket remover. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
    4. Apply metal surface prep to remove any remaining traces of oil or coolant and to prepare the surfaces to bond. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.
    5. Make sure the 2 locating dowel pins are seated correctly in the cylinder block.
4. Install the special tools.

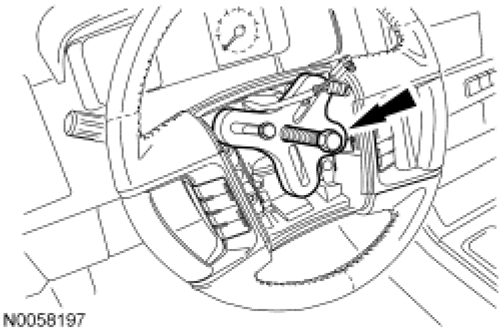

Fig. 70: Identifying Special Tool (307-399)
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: The engine front cover and bolts 17, 18, 19 and 20 must be installed within 4 minutes of the initial sealant application. The remainder of the engine front cover bolts and the engine mount bracket bolts must be installed and

tightened within 35 minutes of the initial sealant application. If the time limits are exceeded, the sealant must be removed, the sealing area cleaned and sealant reapplied. To clean the sealing area, use silicone gasket remover and metal surface prep. Failure to follow this procedure can cause future oil leakage.

5. Apply a 3.0 mm (0.11 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover sealing surfaces including the 3 engine mount bracket bosses.
    - Apply a 5.5 mm (0.21 in) bead of Motorcraft High Performance Engine RTV Silicone to the oil pan-to-cylinder block joint and the cylinder head-to-cylinder block joint areas of the engine front cover in 5 places as indicated.

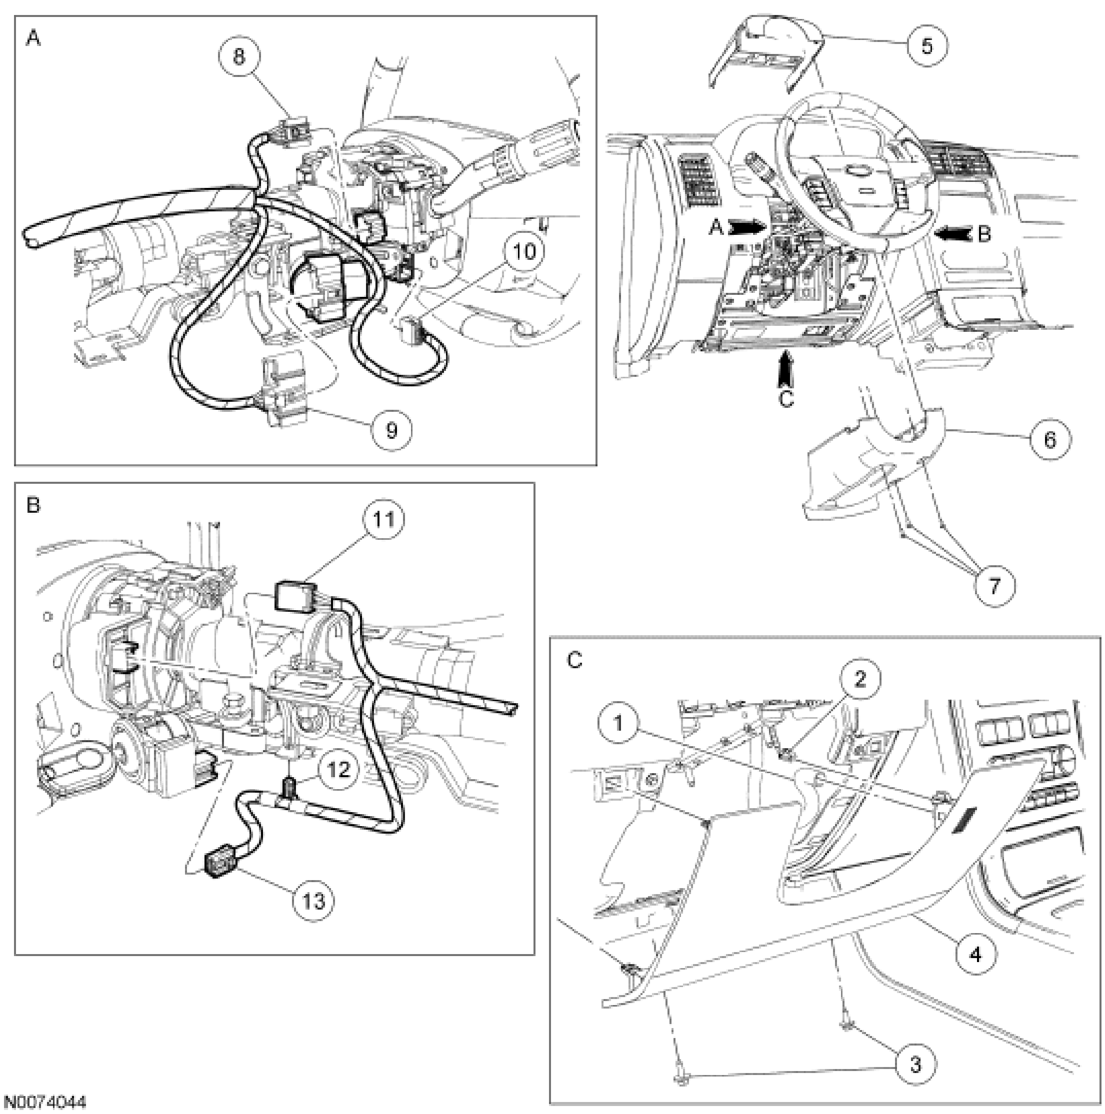

Fig. 71: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover Sealing Surfaces
Courtesy of FORD MOTOR CO.

NOTE: **Make sure the 2 locating dowel pins are seated correctly in the cylinder block.**

6. Install the engine front cover and bolts 17, 18, 19 and 20.
    - Tighten in sequence to 3 Nm (27 lb-in).

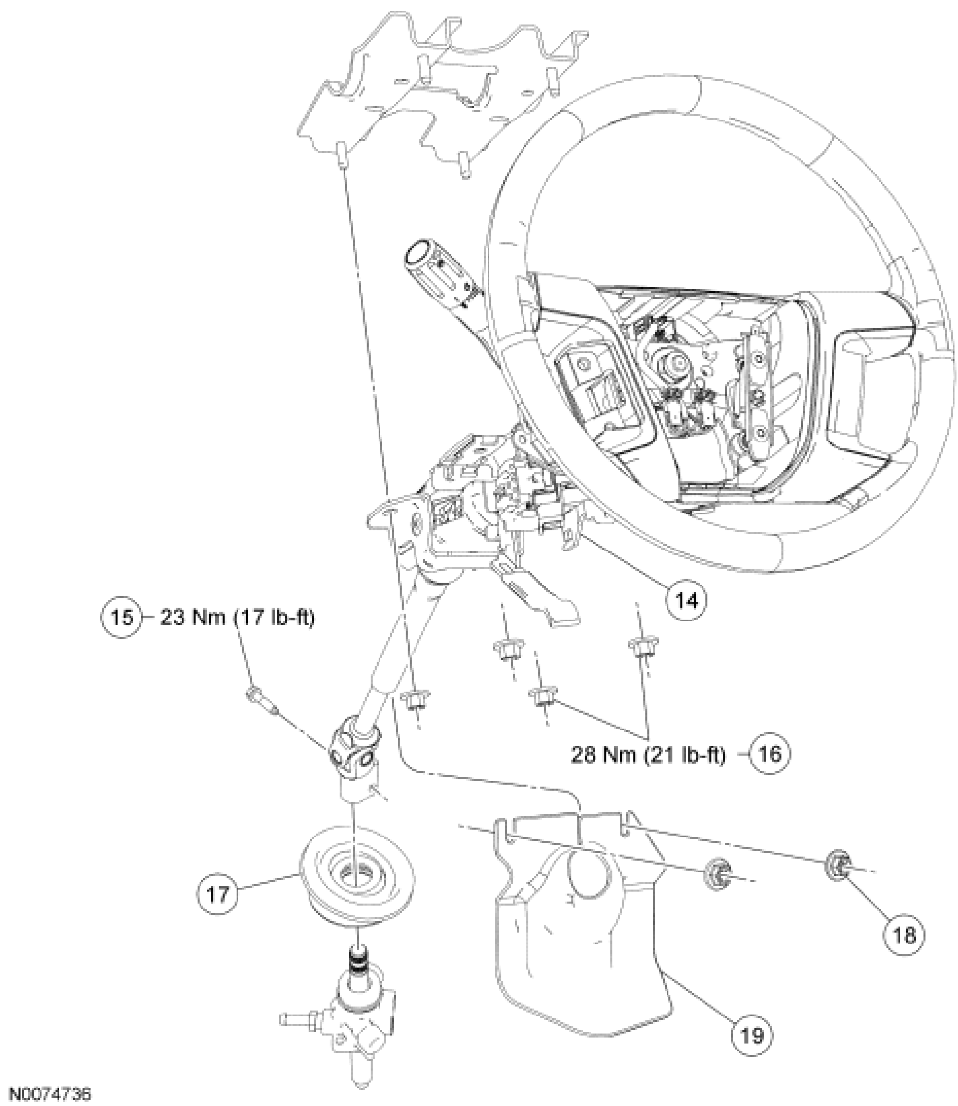

Fig. 72: Installing Engine Front Cover & Bolts In Sequence
Courtesy of FORD MOTOR CO.

7. Remove the special tools (alignment pins).

NOTE: **Do not tighten the bolt at this time.**

8. Lower the engine to allow installation of the engine mount bracket and lower bolt.

- Install the engine mount bracket and lower bolt as an assembly.

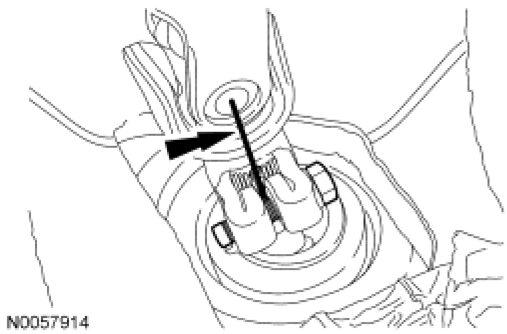

Fig. 73: Locating Lower Engine Mount Bracket Bolt
Courtesy of FORD MOTOR CO.

NOTE: Do not tighten the bolts at this time.

9. Raise the engine to the installed position.
   - Install the 2 upper engine mount bracket bolts.

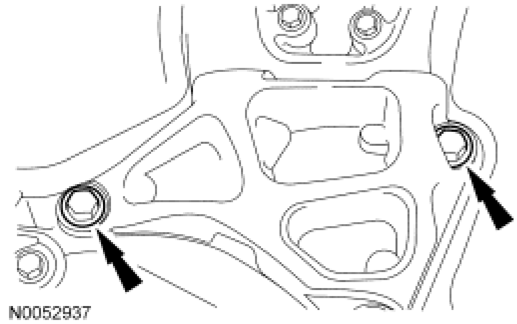

Fig. 74: Locating Upper Engine Mount Bracket Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Do not expose the Motorcraft High Performance Engine RTV Silicone to engine oil for at least 90 minutes after installing the engine front cover. Failure to follow this instruction may cause oil leakage.

10. Install the remaining engine front cover bolts. Tighten all of the engine front cover bolts and engine mount bracket bolts in the sequence shown in 2 stages:
    - Stage 1: Tighten bolts 1 thru 22 to 10 Nm (89 lb-in) and bolts 23, 24 and 25 to 15 Nm (11 lb-ft).
    - Stage 2: Tighten bolts 1 thru 22 to 24 Nm (18 lb-ft) and bolts 23, 24 and 25 to 75 Nm (55 lb-ft).

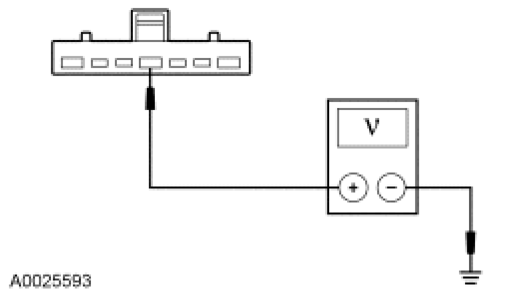

Fig. 75: Identifying Tightening Of Engine Front Cover Bolts & Engine Mount Bracket Bolts In Sequence
Courtesy of FORD MOTOR CO.

11. Install the 2 engine mount studs.
    - Tighten to 18 Nm (13 lb-ft).

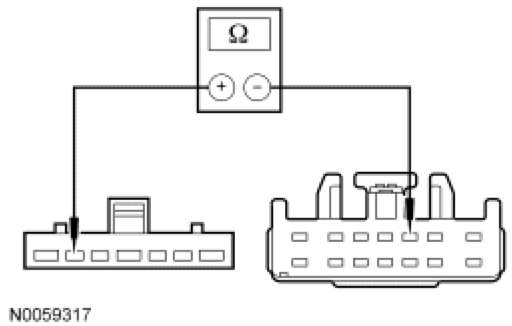

Fig. 76: Locating Engine Mount Studs
Courtesy of FORD MOTOR CO.

12. Install the engine mount bracket and the 2 bolts.
    - Tighten to 24 Nm (18 lb-ft).

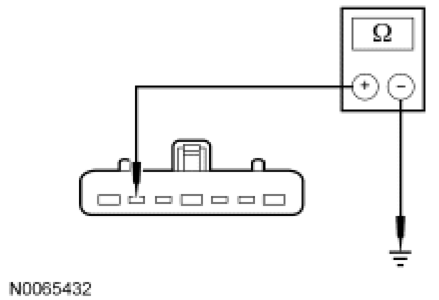

Fig. 77: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

13. Install the engine mount and the 3 bolts.

- Tighten to 90 Nm (66 lb-ft).

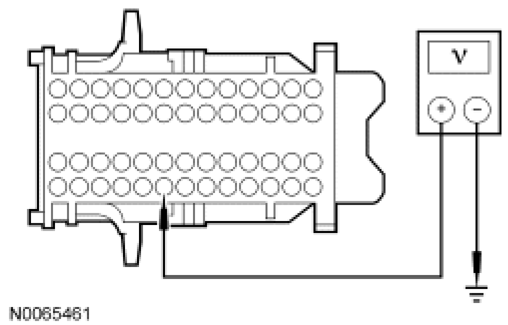

Fig. 78: Locating Engine Mount Bolts
Courtesy of FORD MOTOR CO.

14. Install the 4 engine mount nuts.
    - Tighten to 63 Nm (46 lb-ft).

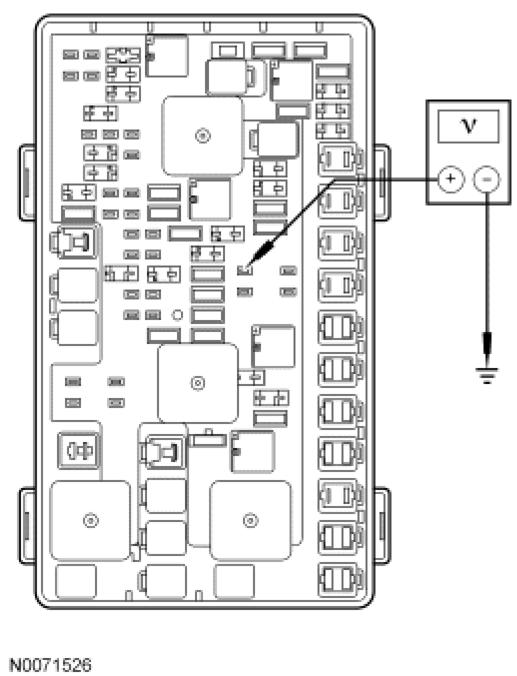

Fig. 79: Locating Engine Mount Nuts
Courtesy of FORD MOTOR CO.

15. Install the engine mount brace, nut and bolt.
    - Tighten to 20 Nm (15 lb-ft).

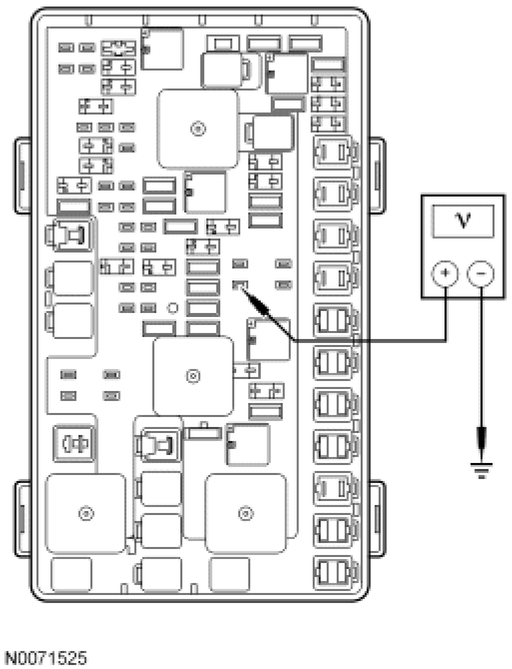

Fig. 80: Locating Nut, Bolt & Engine Mount Brace
Courtesy of FORD MOTOR CO.

16. Tighten the transaxle mount through bolt to 175 Nm (129 lb-ft).

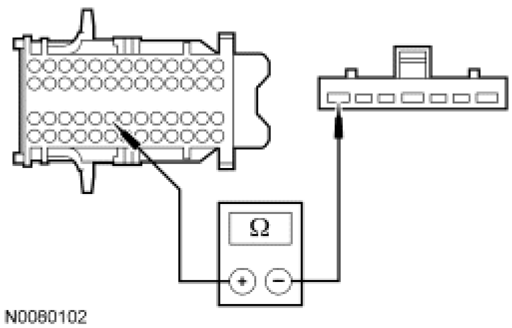

Fig. 81: Identifying Transaxle Mount Bolt
Courtesy of FORD MOTOR CO.

NOTE: LH shown, RH similar.

17. Install the LH and RH VCT solenoids and bolts.
    - Tighten to 10 Nm (89 lb-in).

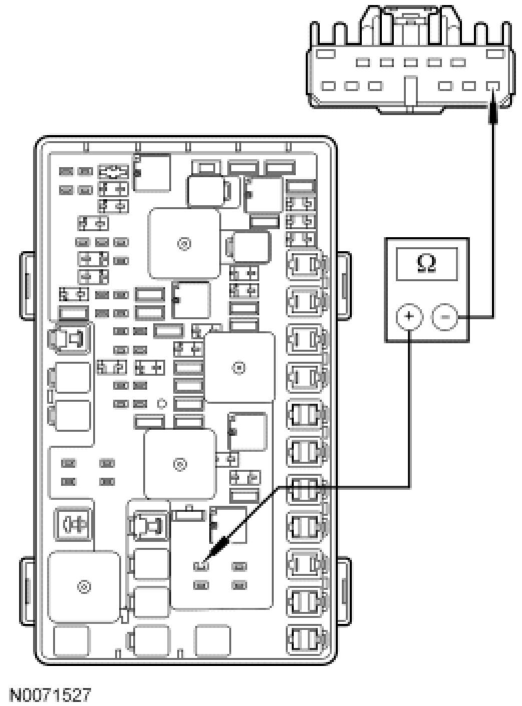

Fig. 82: Locating LH & RH VCT Solenoids Bolts
Courtesy of FORD MOTOR CO.

18. Install the power steering pump and the 3 bolts.
    - Tighten to 24 Nm (18 lb-ft).

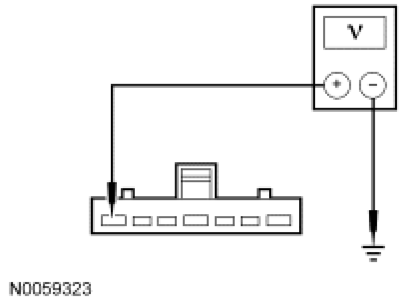

Fig. 83: Locating Power Steering Pump Bolts
Courtesy of FORD MOTOR CO.

19. Install the power steering reservoir and the 2 nuts.
    - Tighten to 8 Nm (71 lb-in).

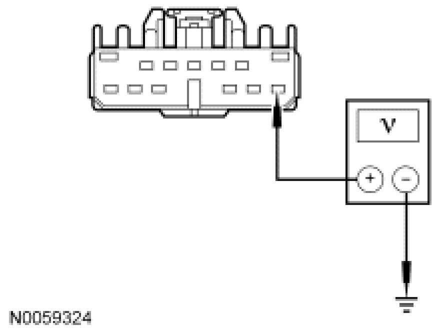

Fig. 84: Locating Power Steering Reservoir Nuts
Courtesy of FORD MOTOR CO.

20. Install the degas bottle and the 3 bolts.
    - Tighten to 9 Nm (80 lb-in).

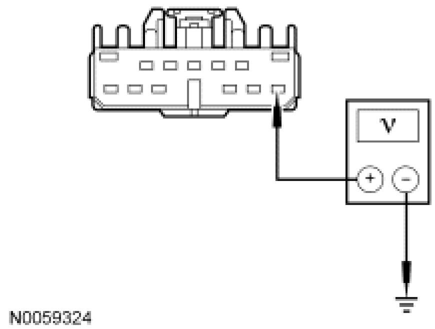

Fig. 85: Locating Coolant Reservoir Bolts
Courtesy of FORD MOTOR CO.

21. Connect the 3 PCM electrical connectors.

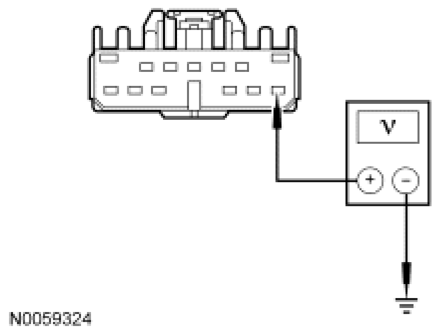

Fig. 86: Identifying PCM Electrical Connectors & Wiring Harness
Courtesy of FORD MOTOR CO.

22. Connect the purge valve electrical connector.

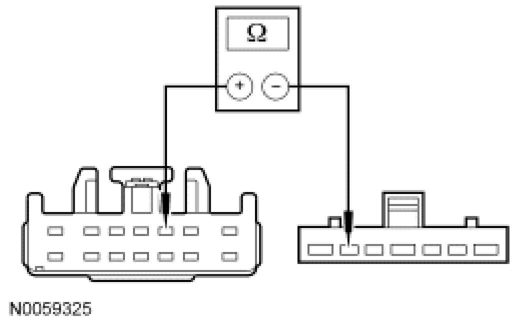

Fig. 87: Locating Purge Valve Electrical Connector
Courtesy of FORD MOTOR CO.

23. Install the radio interference capacitor, the ground wire and the nut to the cowl stud.
    - Tighten to 10 Nm (89 lb-in).

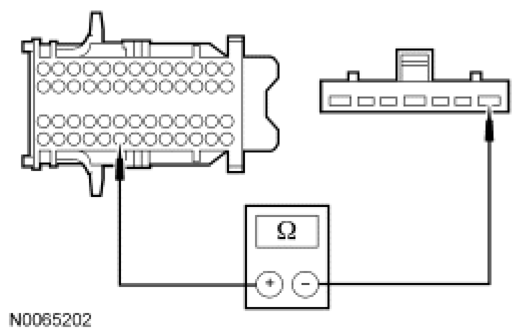

Fig. 88: Removing/Installing Nut, Ground Wire & Radio Interference Capacitor From Cowl Stud
Courtesy of FORD MOTOR CO.

24. Install the radio interference capacitor wire, the ground wire and the nut to the engine front cover stud.
    - Tighten to 10 Nm (89 lb-in).

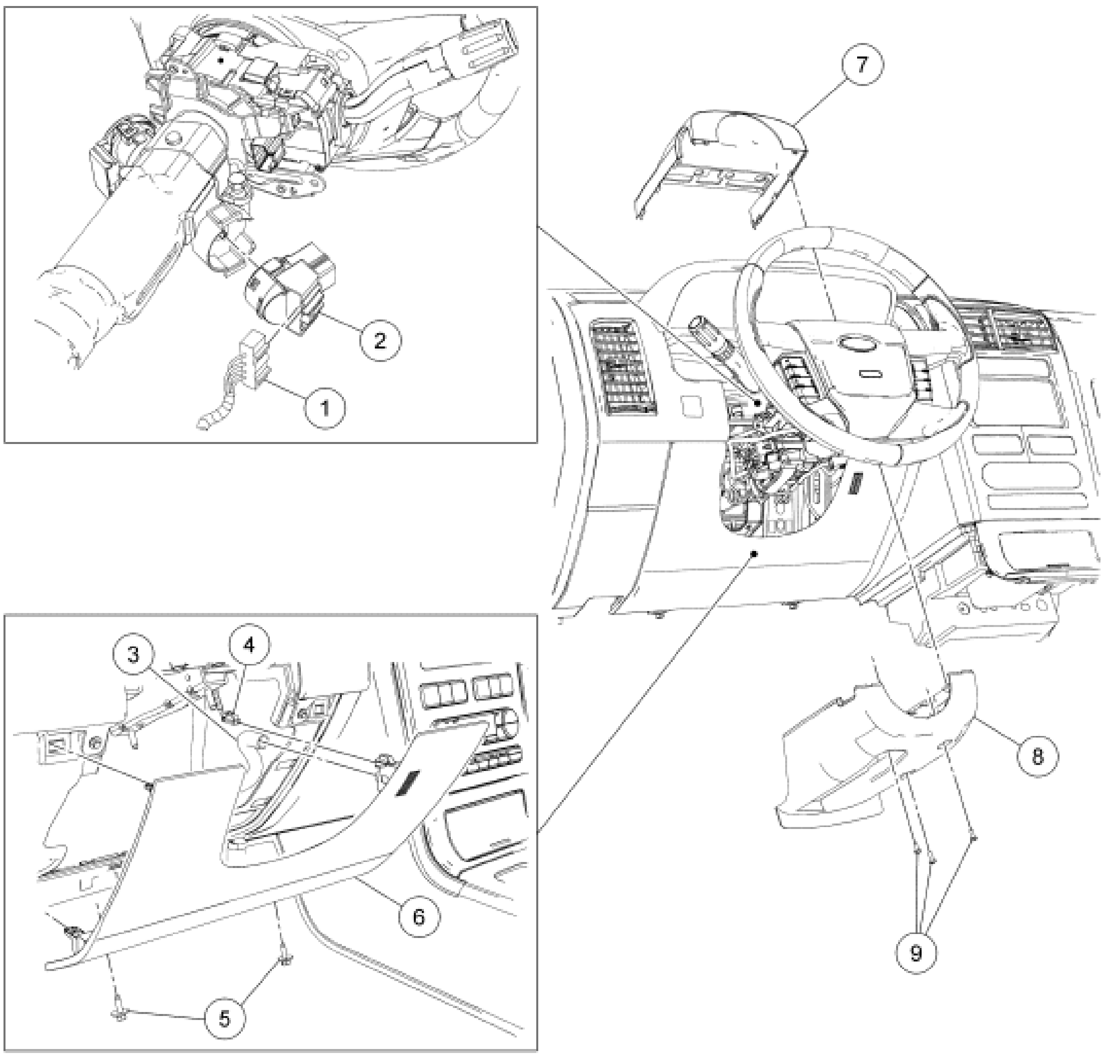

Fig. 89: Removing/installing Nut, Ground Wire & Radio Interference Capacitor Wire From Engine Front Cover Stud
Courtesy of FORD MOTOR CO.

25. Install the ground wire and bolt on the engine front cover.
    - Tighten to 10 Nm (89 lb-in).

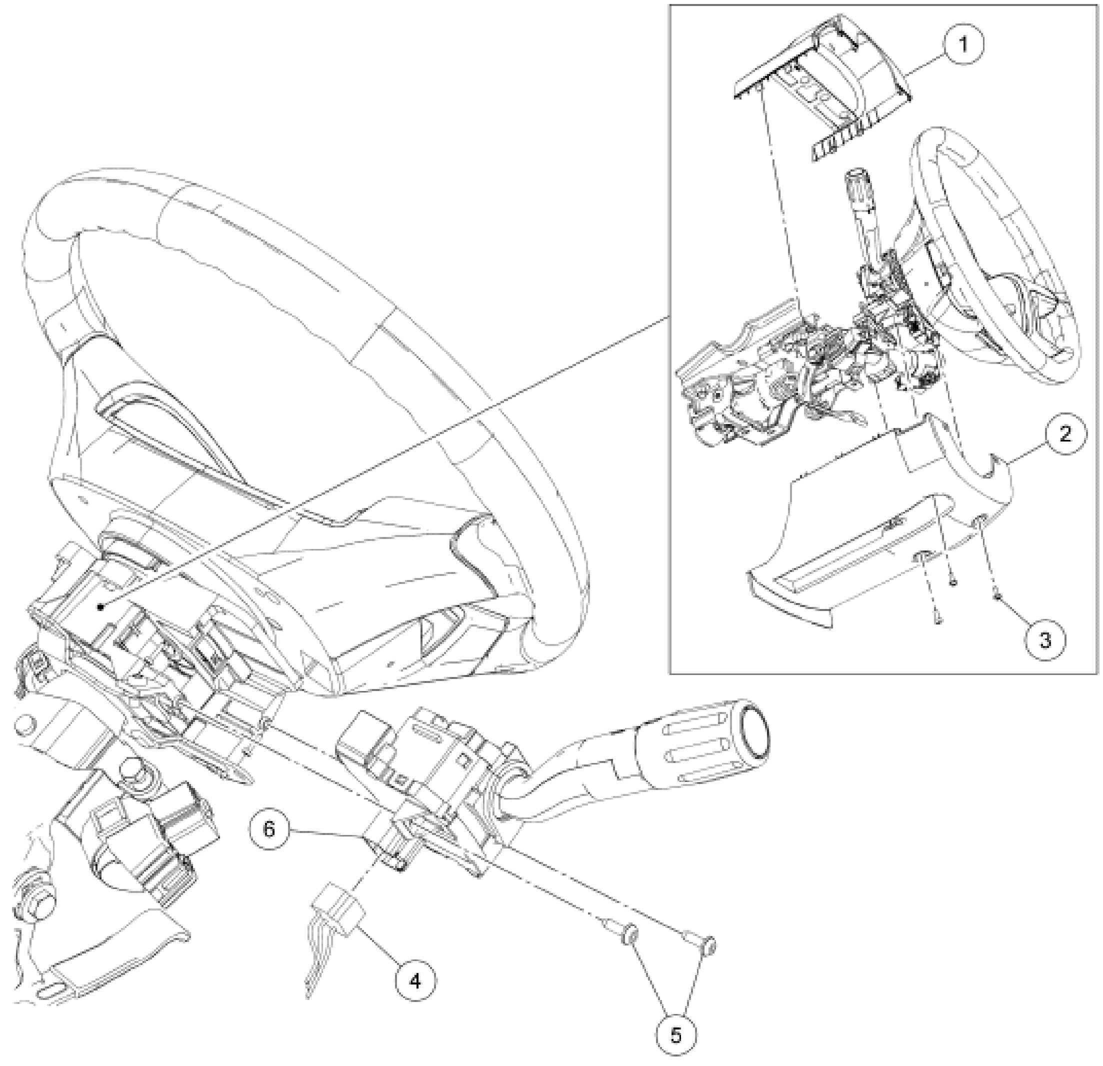

Fig. 90: Removing/Installing Bolt & Ground Wire From Engine Front Cover
Courtesy of FORD MOTOR CO.

26. Connect the 2 engine wiring harness connectors.

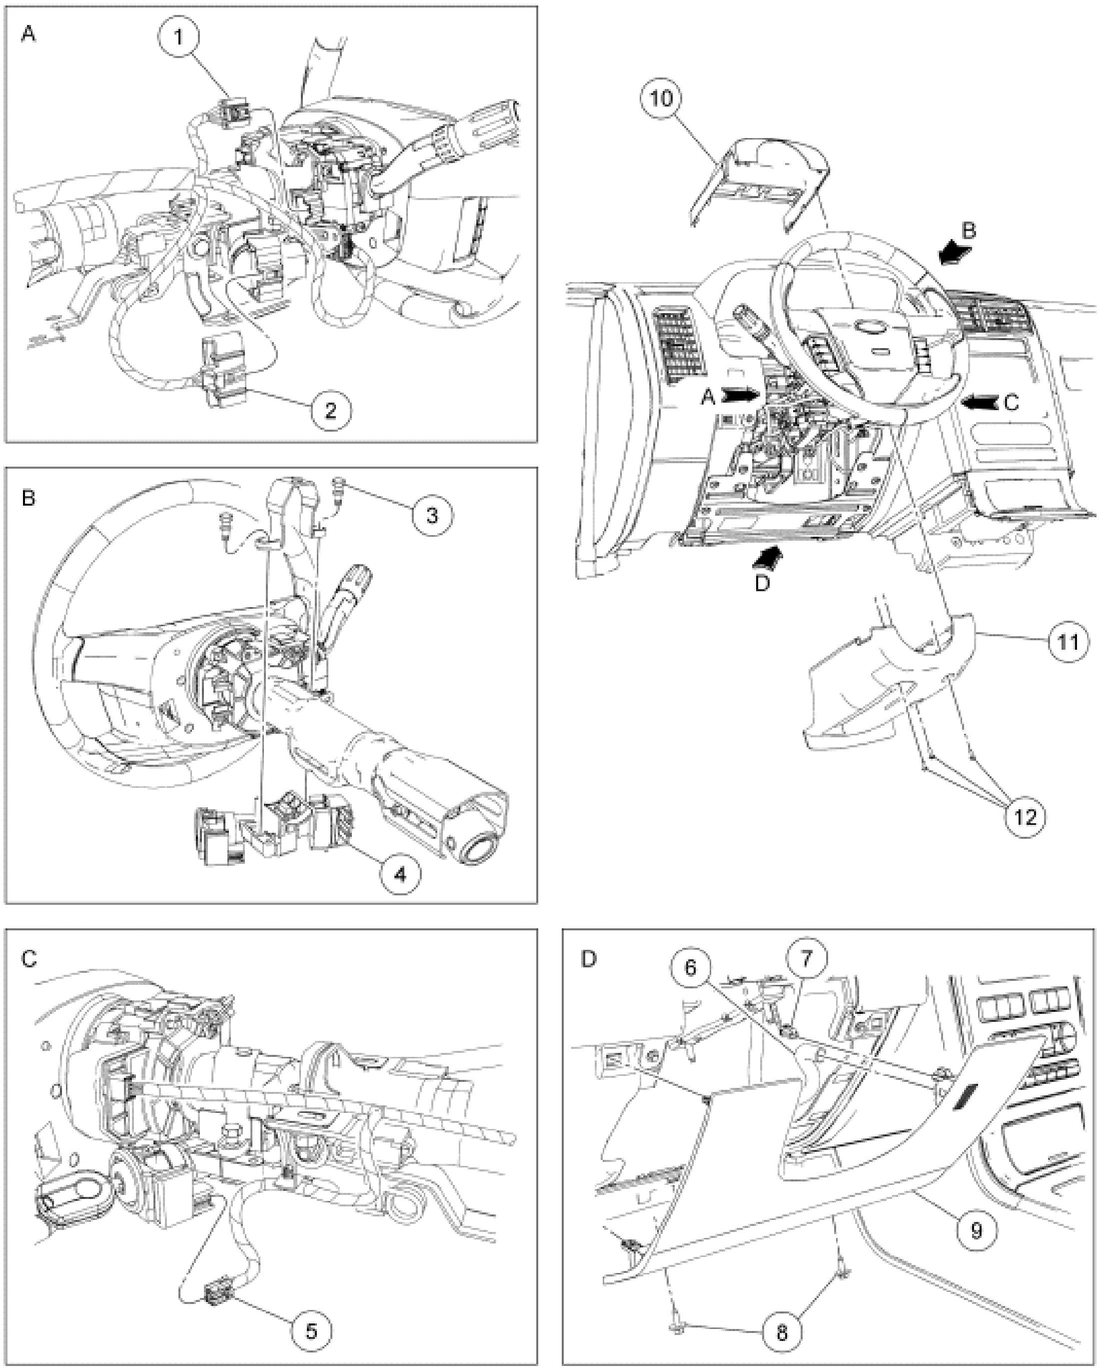

Fig. 91: Locating Engine Wiring Harness Connectors
Courtesy of FORD MOTOR CO.

27. Using a new O-ring seal, connect the A/C pressure tube fitting and install the nut.
    - Tighten to 8 Nm (71 lb-in).

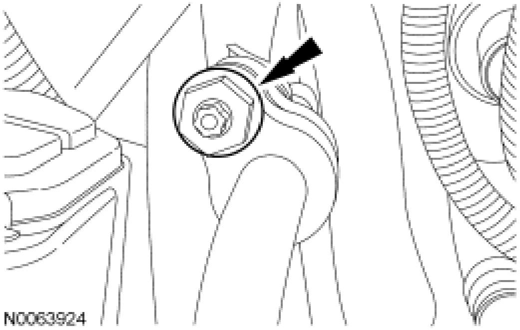

Fig. 92: Locating A/C Pressure Tube Fitting Nut
Courtesy of FORD MOTOR CO.

28. Install the A/C pressure tube bracket and bolt.
    - Tighten to 8 Nm (71 lb-in).

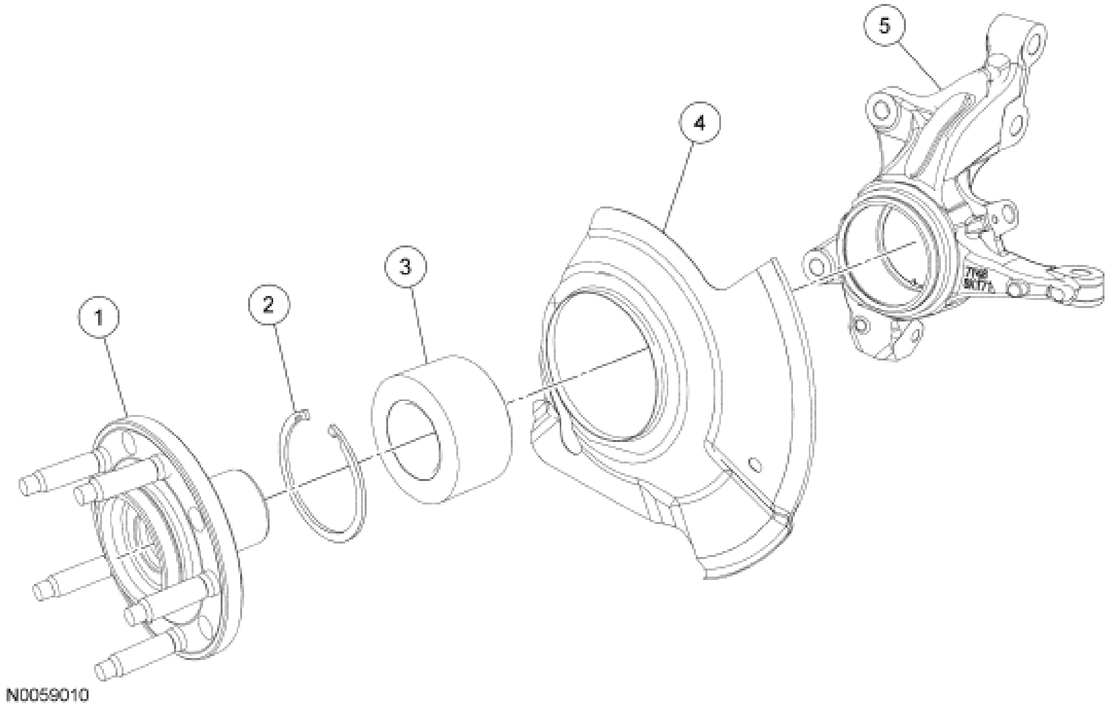

Fig. 93: Locating A/C Pressure Tube Bracket Bolt
Courtesy of FORD MOTOR CO.

29. Connect the A/C suction tube fitting.
    - Install the safety clip onto the fitting.

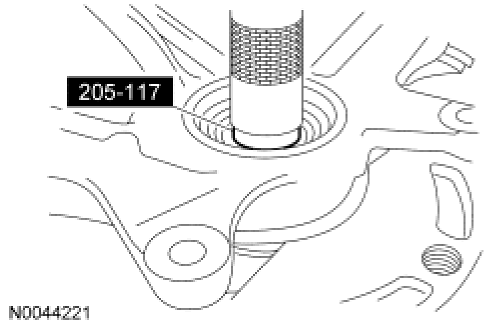

Fig. 94: Identifying Safety Clip On A/C Suction Tube Fitting
Courtesy of FORD MOTOR CO.

30. Install the LH and RH valve covers. For additional information, refer to **Valve Cover - LH** and **Valve Cover - RH**.
31. Install the engine air cleaner and air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION & FILTERING** article.
32. If equipped, attach the engine block heater harness to the radiator support, the A/C suction tube and the engine wiring harness.

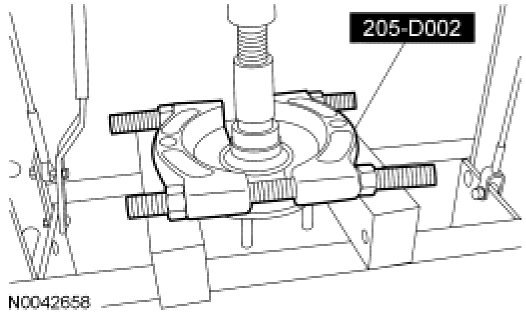

Fig. 95: Identifying Engine Block Heater Harness, Radiator Support, A/C Suction Tube & Engine Wiring Harness
Courtesy of FORD MOTOR CO.

33. Align the RH halfshaft splines with the intermediate shaft and push the halfshaft on until the circlip locks the shafts together.
    - Pull the inboard halfshaft outward to make sure the circlip is locked.

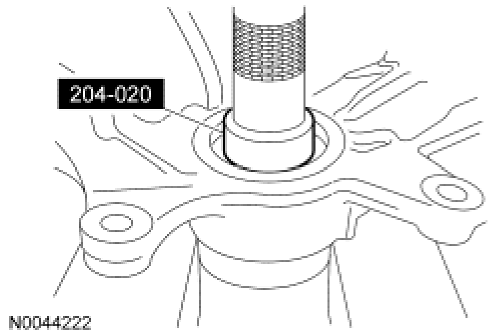

Fig. 96: Pushing Halfshaft On Until Circlip Locks Shafts Together
Courtesy of FORD MOTOR CO.

NOTE: Do not tighten the halfshaft nut at this time.

34. Install the RH halfshaft into the hub and install a new halfshaft nut.

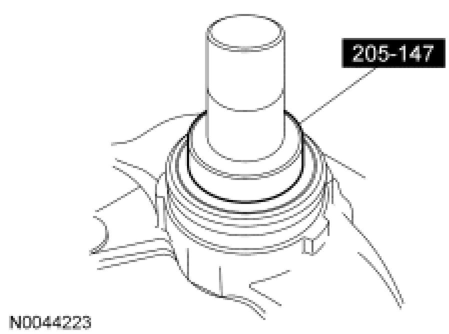

Fig. 97: Locating RH Front Halfshaft Nut
Courtesy of FORD MOTOR CO.

35. Install the RH lower ball joint into the steering knuckle and install the pinch bolt.
    - Tighten to 55 Nm (41 lb-ft).

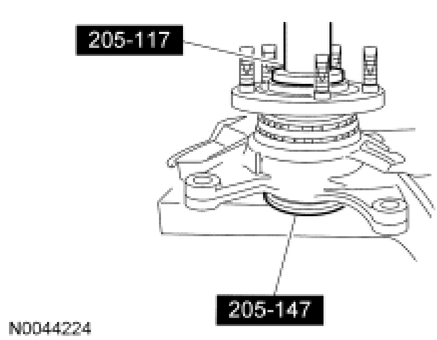

Fig. 98: Locating Ball Joint Pinch Bolt
Courtesy of FORD MOTOR CO.

36. Install the RH stabilizer bar link into the lower control arm and install the nut.

- Tighten to 90 Nm (66 lb-ft).

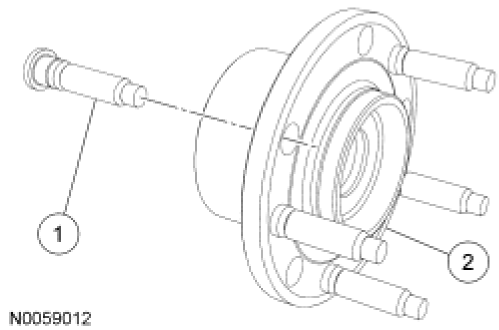

Fig. 99: Locating Stabilizer Bar Link Nut
Courtesy of FORD MOTOR CO.

NOTE: Apply the brake to keep the halfshaft from rotating.

37. Tighten the RH halfshaft nut to 350 Nm (258 lb-ft).

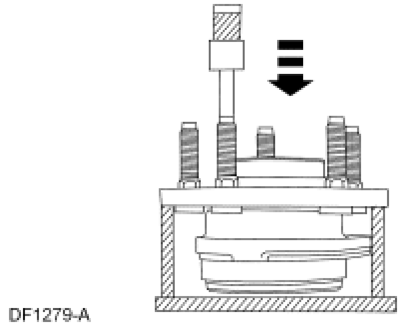

Fig. 100: Locating RH Front Halfshaft Nut
Courtesy of FORD MOTOR CO.

38. Install and the transaxle bracket and the 3 bolts.
    - Tighten to 90 Nm (66 lb-ft).

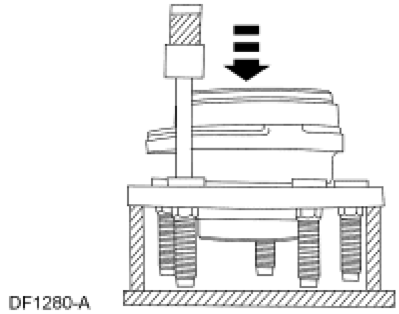

Fig. 101: Locating Transaxle Bracket Bolts

Courtesy of FORD MOTOR CO.

39. Position the roll restrictor and transaxle bracket plate and install the 3 bolts.
    - Tighten to 90 Nm (66 lb-ft).

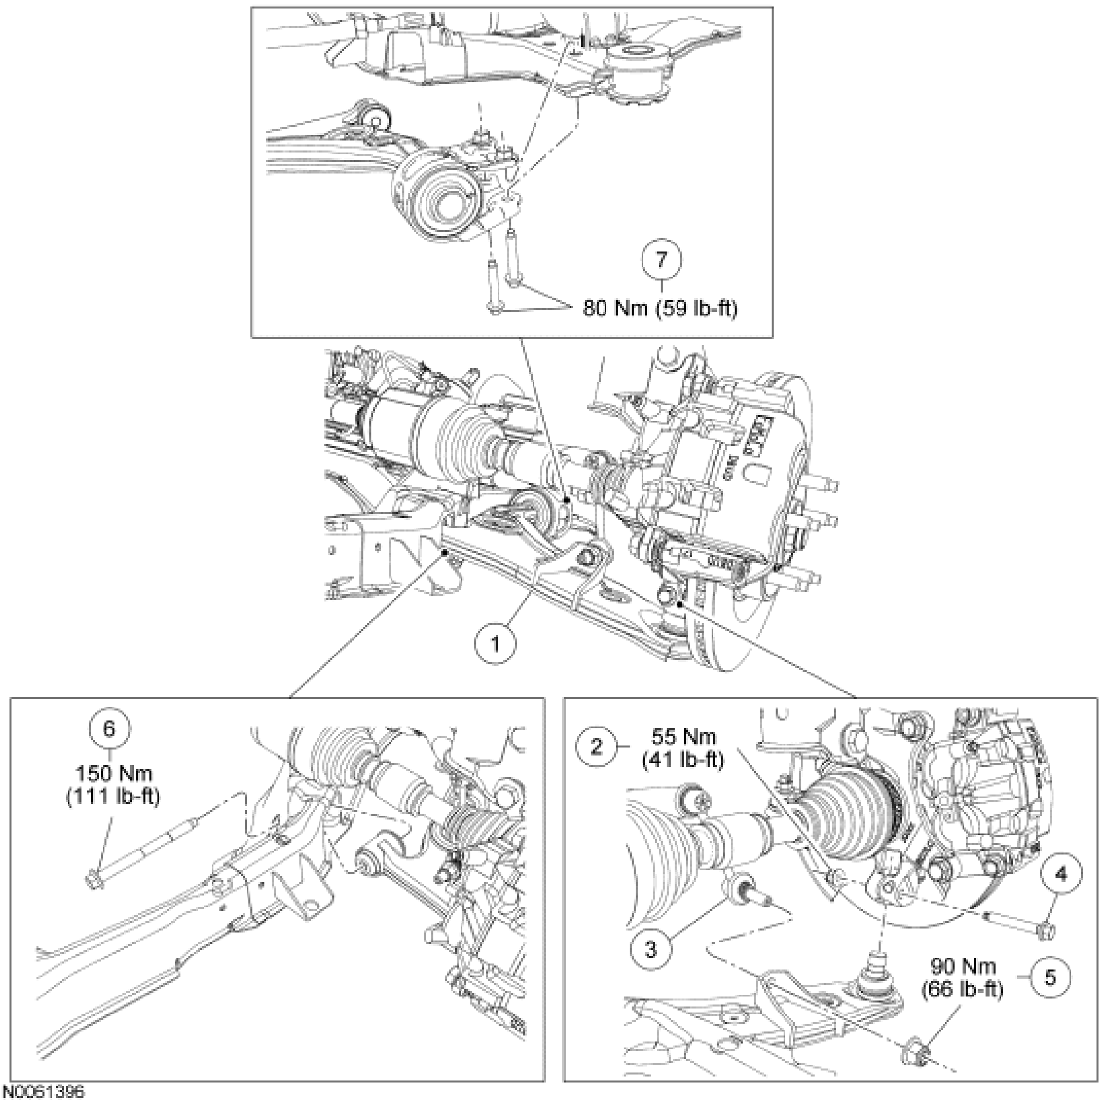

Fig. 102: Locating Roll Restrictor-To-Transaxle Bracket Plate Bolts
Courtesy of FORD MOTOR CO.

40. Tighten the engine roll restrictor-to-subframe through bolt to 103 Nm (76 lb-ft).

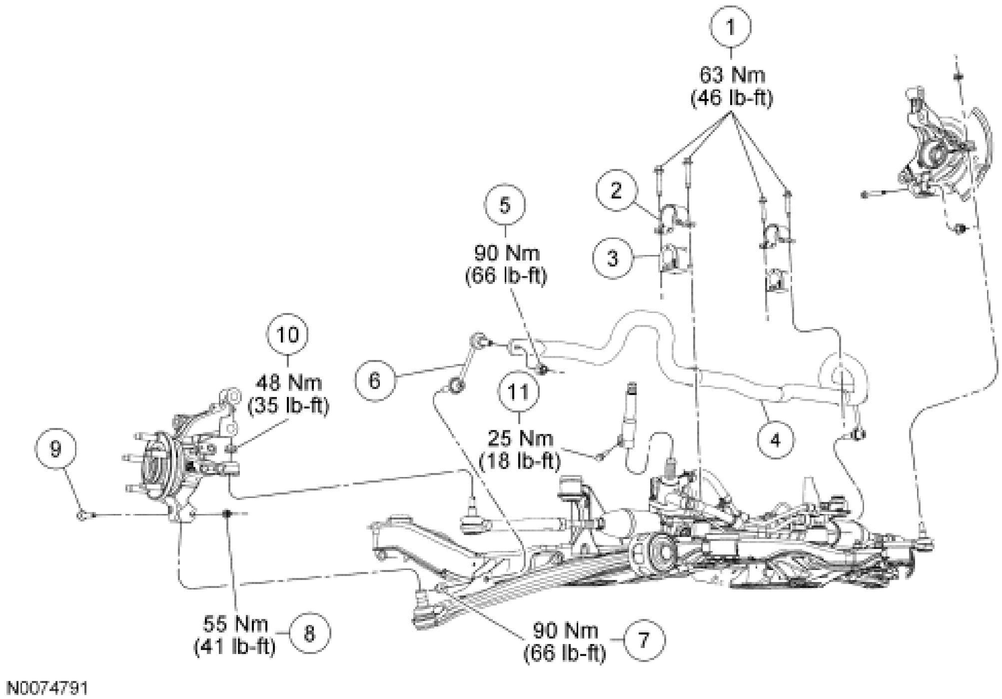

Fig. 103: Locating Roll Restrictor-To-Subframe Bolt
Courtesy of FORD MOTOR CO.

41. Install the roll restrictor heat shield and the 2 nuts.
    - Tighten to 11 Nm (8 lb-ft).

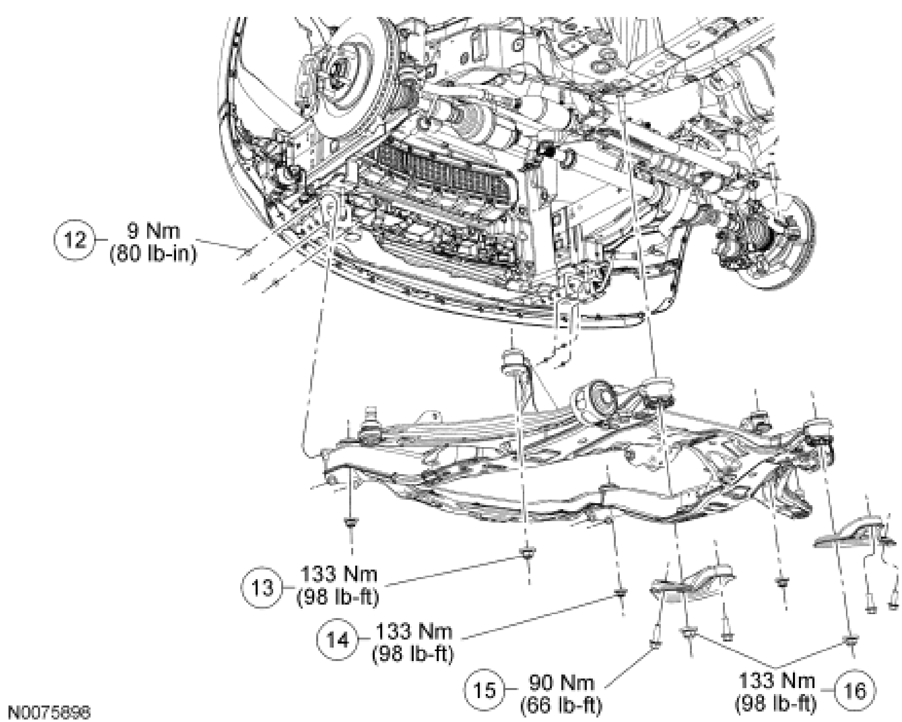

Fig. 104: Locating Roll Restrictor Heat Shield Nuts
Courtesy of FORD MOTOR CO.

42. Position the Y-pipe assembly in place and install the 4 nuts.
    - Tighten to 40 Nm (30 lb-ft).

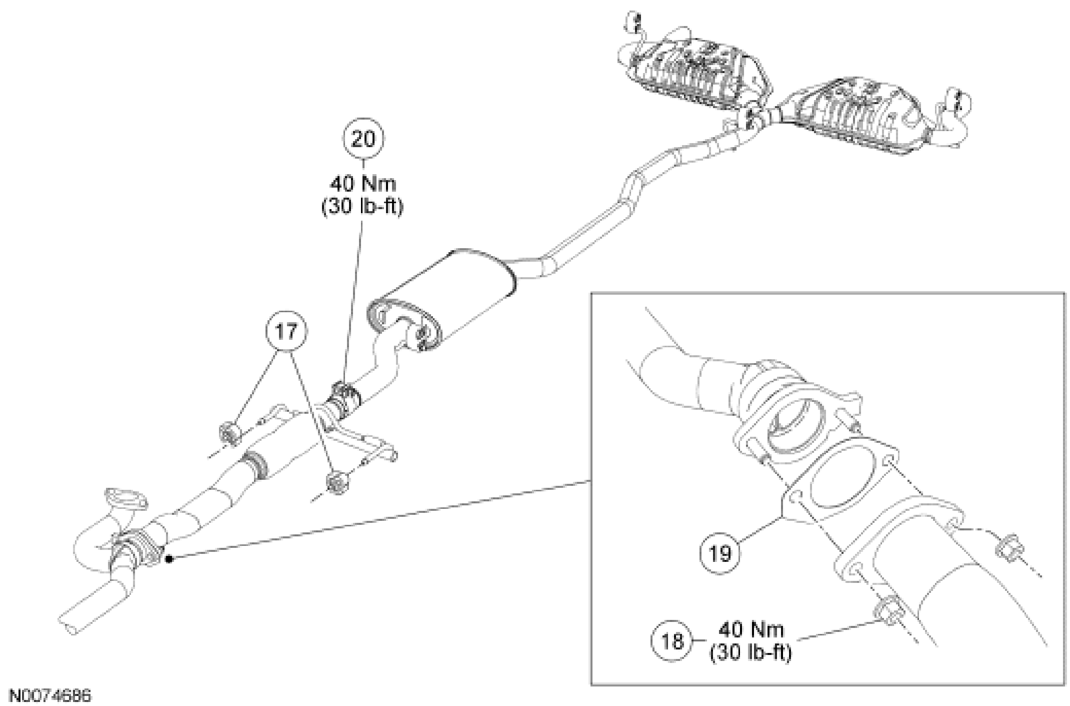

Fig. 105: Locating Exhaust Flexible Pipe, Y-Pipe & Nuts
Courtesy of FORD MOTOR CO.

43. Install the 2 exhaust hangers and tighten the exhaust clamp.
    - Tighten to 40 Nm (30 lb-ft).

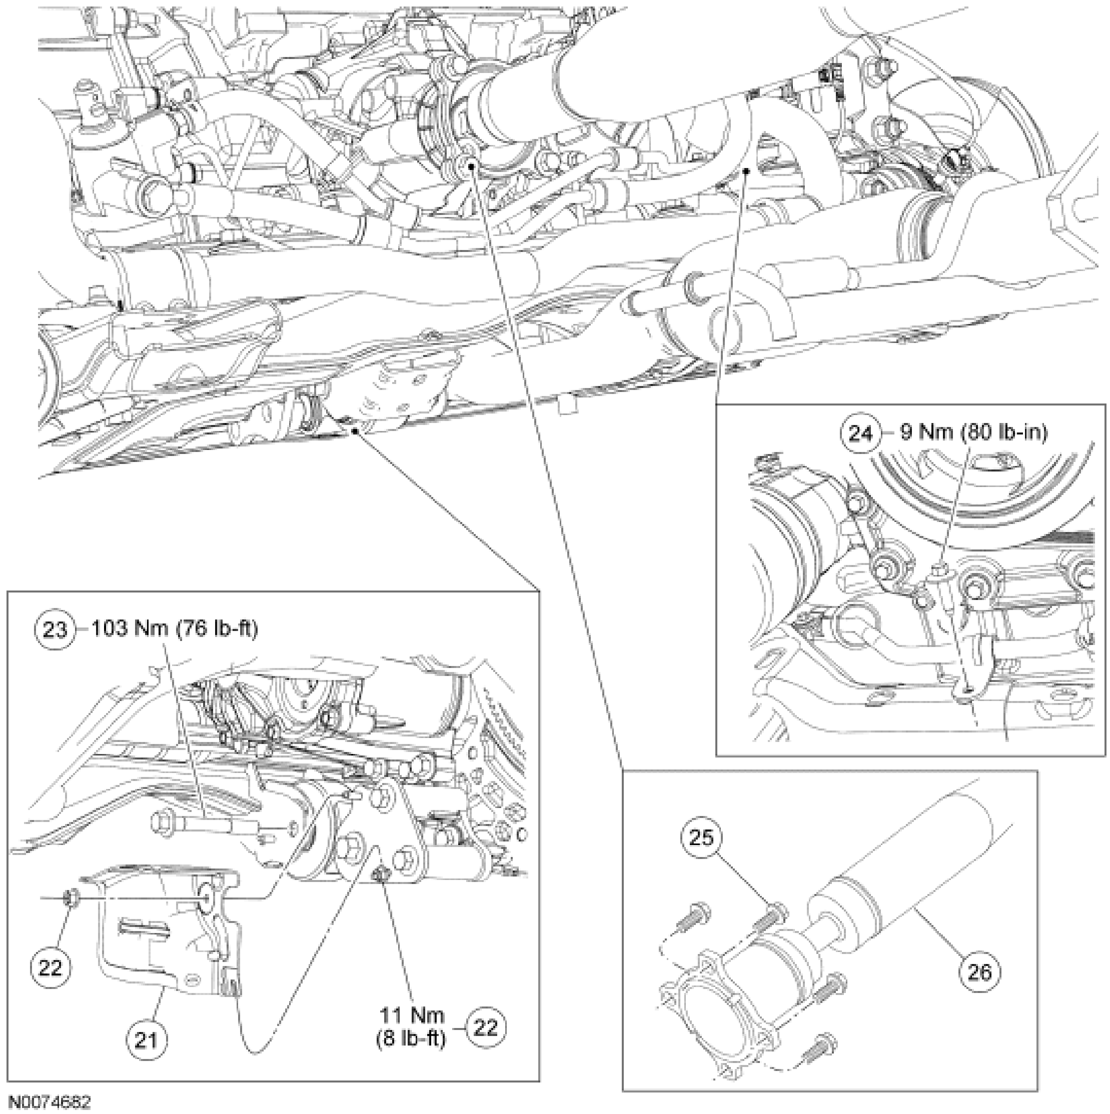

Fig. 106: Locating Exhaust Flexible Pipe Clamp & Exhaust Hangers
Courtesy of FORD MOTOR CO.

NOTE: Apply clean engine oil to the crankshaft front seal bore in the engine front cover.

44. Using the special tools, install a new crankshaft front seal.

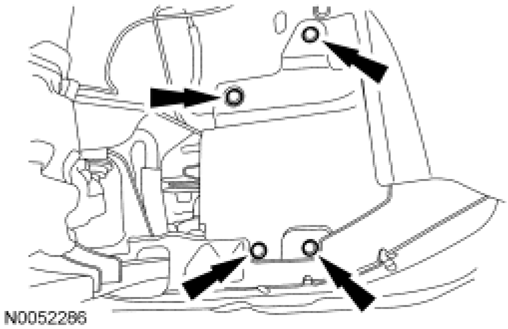

Fig. 107: Installing Crankshaft Front Seal Using Special Tools (303-102) & (303-1251)
Courtesy of FORD MOTOR CO.

NOTE: Lubricate the outside diameter sealing surfaces with clean engine oil.

45. Using the special tools, install the crankshaft pulley.

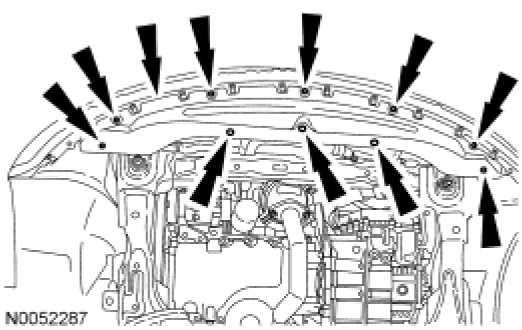

Fig. 108: Installing Crankshaft Pulley
Courtesy of FORD MOTOR CO.

46. Using the special tool, install the crankshaft pulley washer and new bolt and tighten in 4 stages.
    - Stage 1: Tighten to 120 Nm (89 lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 50 Nm (37 lb-ft).
    - Stage 4: Tighten an additional 90 degrees.

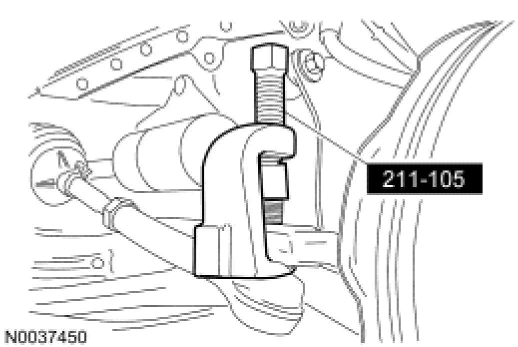

Fig. 109: Installing Crankshaft Pulley Washer & Bolt Using Special Tools (303-D055)
Courtesy of FORD MOTOR CO.

47. Install the accessory drive belt, tensioner and the power steering belt. For additional information, refer to **ACCESSORY DRIVE** article.

CAUTION: Do not expose the Motorcraft High Performance Engine RTV Silicone to engine oil for at least 90 minutes after installing the engine front cover. Failure to follow this instruction may cause oil leakage.

48. Fill the engine with clean engine oil.
49. Connect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING & CABLES** article.
50. Evacuate and recharge the A/C system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION & DIAGNOSTICS** article.

TIMING DRIVE COMPONENTS

Special Tools

Illustration	Tool Name	Tool Number
	Camshaft Alignment Tool	303-1248

REMOVAL

NOTE: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan may cause engine failure.

1. Remove the engine front cover. For additional information, refer to **Engine Front Cover**.
2. Rotate the crankshaft clockwise and align the timing marks on the variable camshaft timing (VCT) assemblies as shown.

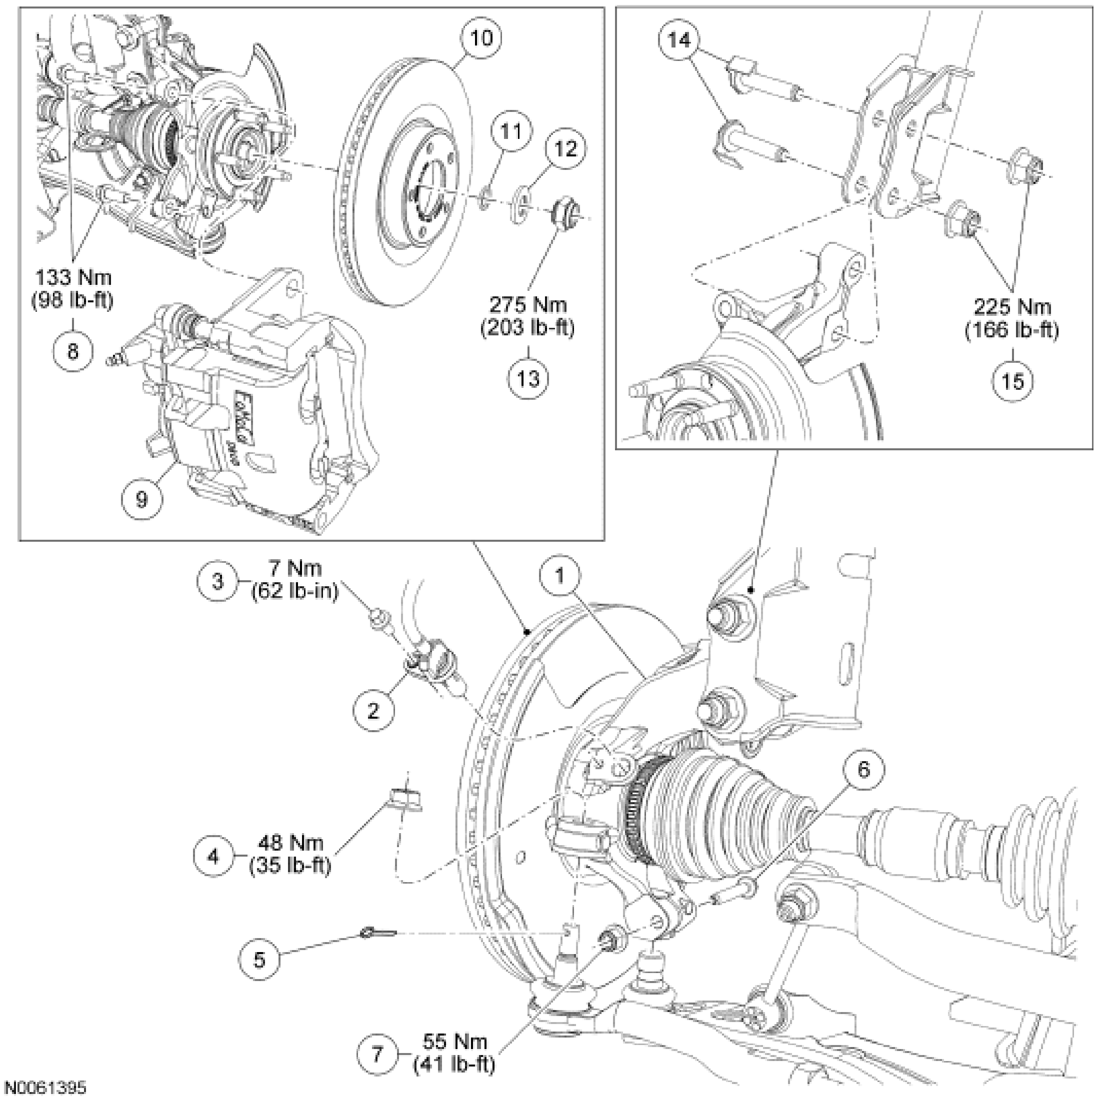

Fig. 110: Aligning Timing Marks On Variable Camshaft Timing (VCT) Assemblies
Courtesy of FORD MOTOR CO.

NOTE: The special tool will hold the camshafts in the top dead center (TDC) position.

3. Install the special tool onto the flats of the LH camshafts.

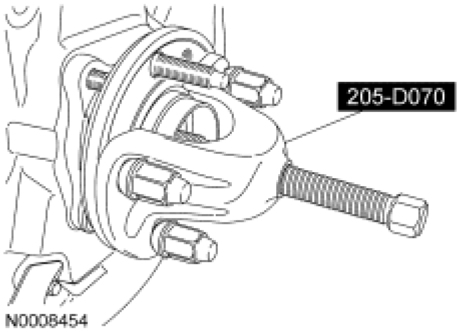

Fig. 111: Installing Special Tool (303-1248) Onto Flats Of LH Camshafts
Courtesy of FORD MOTOR CO.

NOTE: The special tool will hold the camshafts in the TDC position.

4. Install the special tool onto the flats of the RH camshafts.

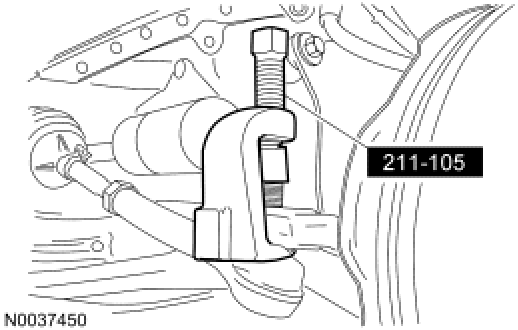

Fig. 112: Installing Special Tool (303-1248) Onto Flats Of RH Camshafts
Courtesy of FORD MOTOR CO.

5. Remove the 3 bolts and the RH VCT housing.

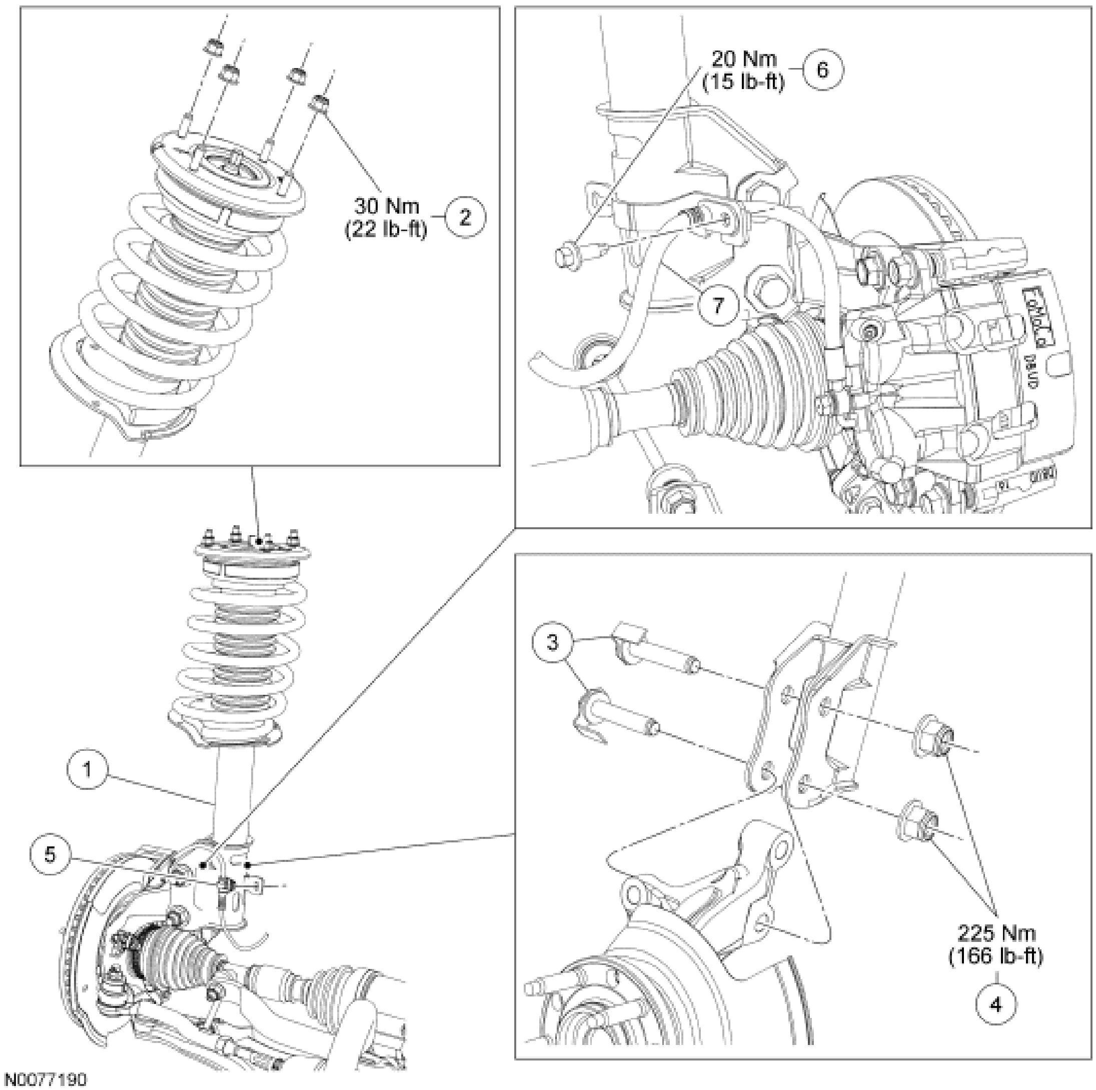

Fig. 113: Locating RH VCT Housing
Courtesy of FORD MOTOR CO.

6. Remove the 3 bolts and the LH VCT housing.

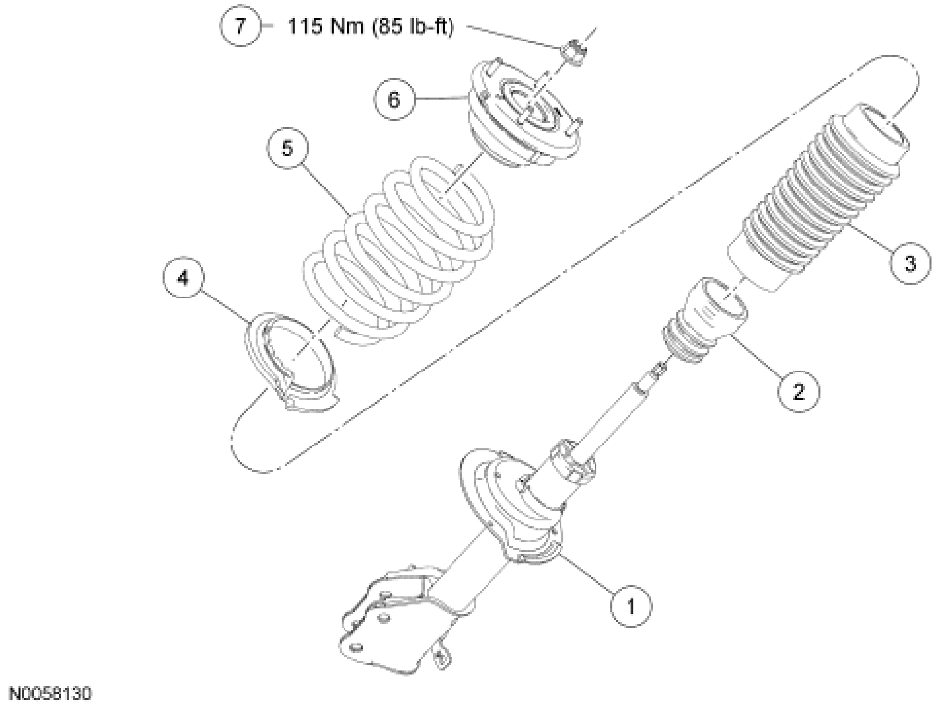

Fig. 114: Locating LH VCT Housing
Courtesy of FORD MOTOR CO.

7. Remove and discard the VCT housing seals.

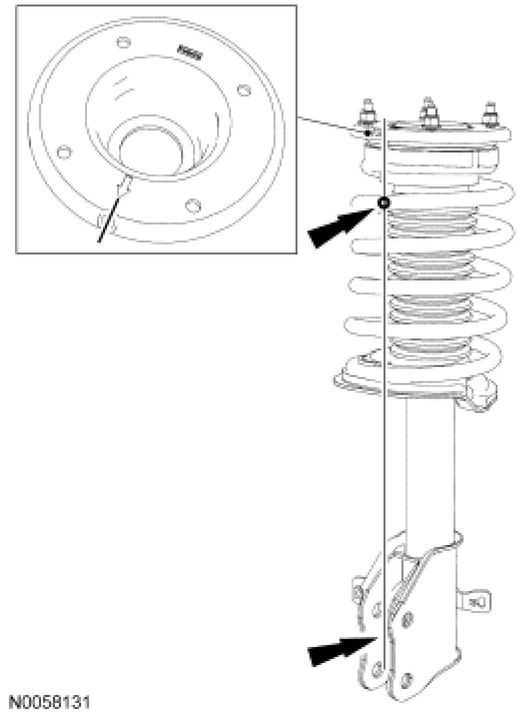

Fig. 115: Locating VCT Housing Seals

Courtesy of FORD MOTOR CO.

8. Remove the 2 bolts and the primary timing chain tensioner.

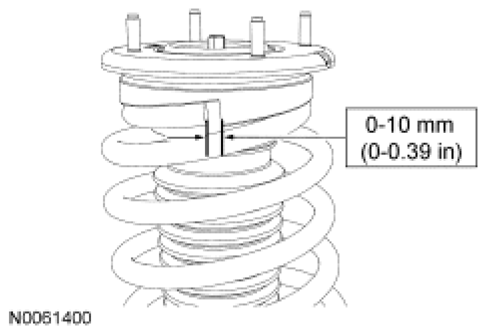

Fig. 116: Locating Primary Timing Chain Tensioner Bolts
Courtesy of FORD MOTOR CO.

9. Remove the primary timing chain tensioner arm.

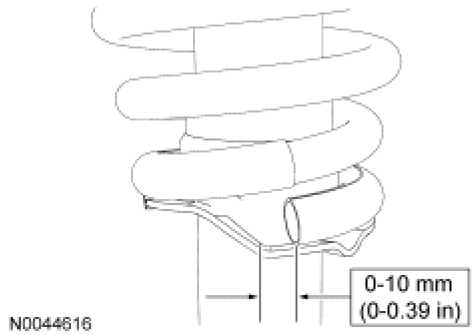

Fig. 117: Locating Primary Timing Chain Tensioner Arm
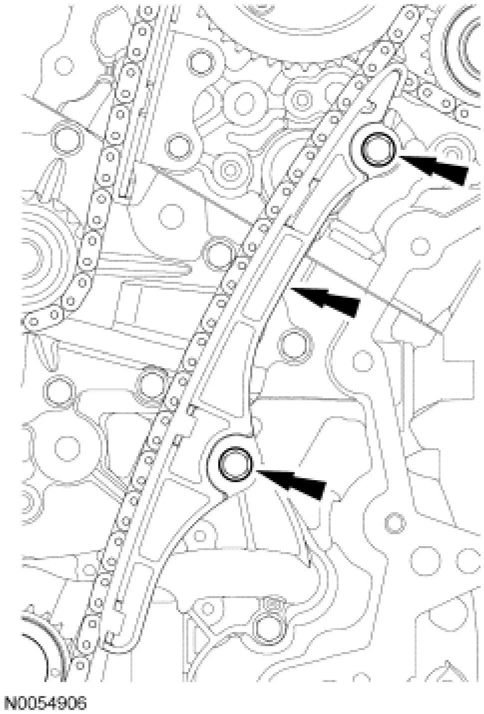
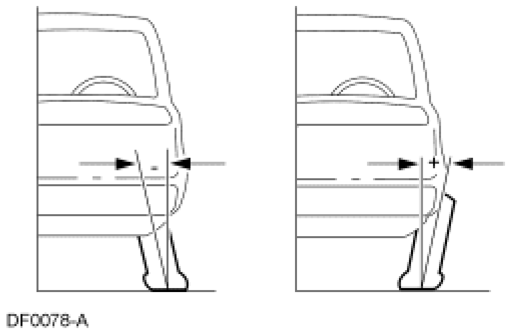
Courtesy of FORD MOTOR CO.

10. Remove the 2 bolts and the lower LH primary timing chain guide.



<u>Fig. 118: Locating Lower LH Primary Timing Chain Guide Bolts</u>
Courtesy of FORD MOTOR CO.

11. Remove the primary timing chain.



<u>Fig. 119: Locating Primary Timing Chain</u>
Courtesy of FORD MOTOR CO.

12. Remove the crankshaft timing chain sprocket.

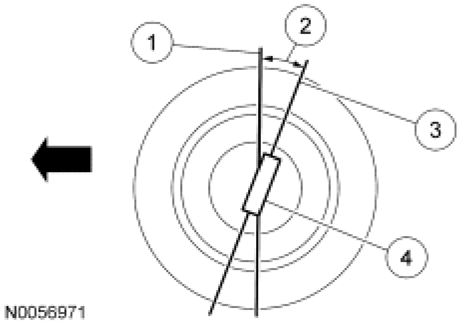


Fig. 120: Locating Crankshaft Timing Chain Sprocket
Courtesy of FORD MOTOR CO.

13. Remove the 2 bolts and the upper LH primary timing chain guide.

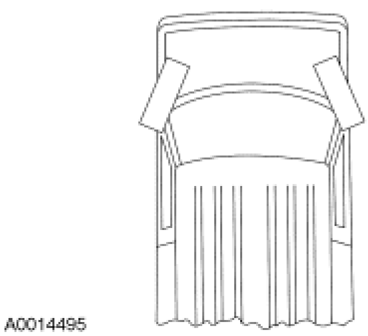

Fig. 121: Locating Upper LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

14. Compress the LH secondary timing chain tensioner and install a suitable lockpin to retain the tensioner in the collapsed position.

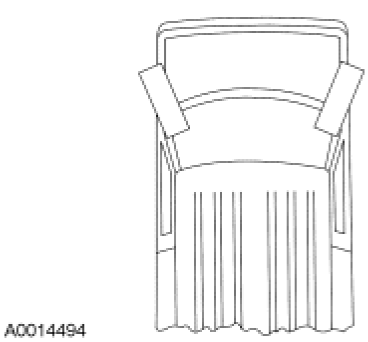

Fig. 122: Compressing LH Secondary Timing Chain Tensioner & Installing Suitable Lock Pin To Retain Tensioner In Collapsed Position
Courtesy of FORD MOTOR CO.

NOTE: **The VCT bolt and the exhaust camshaft bolt must be discarded and new ones installed. However, the exhaust camshaft washer is reusable.**

15. Remove and discard the LH VCT assembly bolt and the LH exhaust camshaft sprocket bolt.
    - Remove the LH VCT assembly, secondary timing chain and the LH exhaust camshaft sprocket as an assembly.

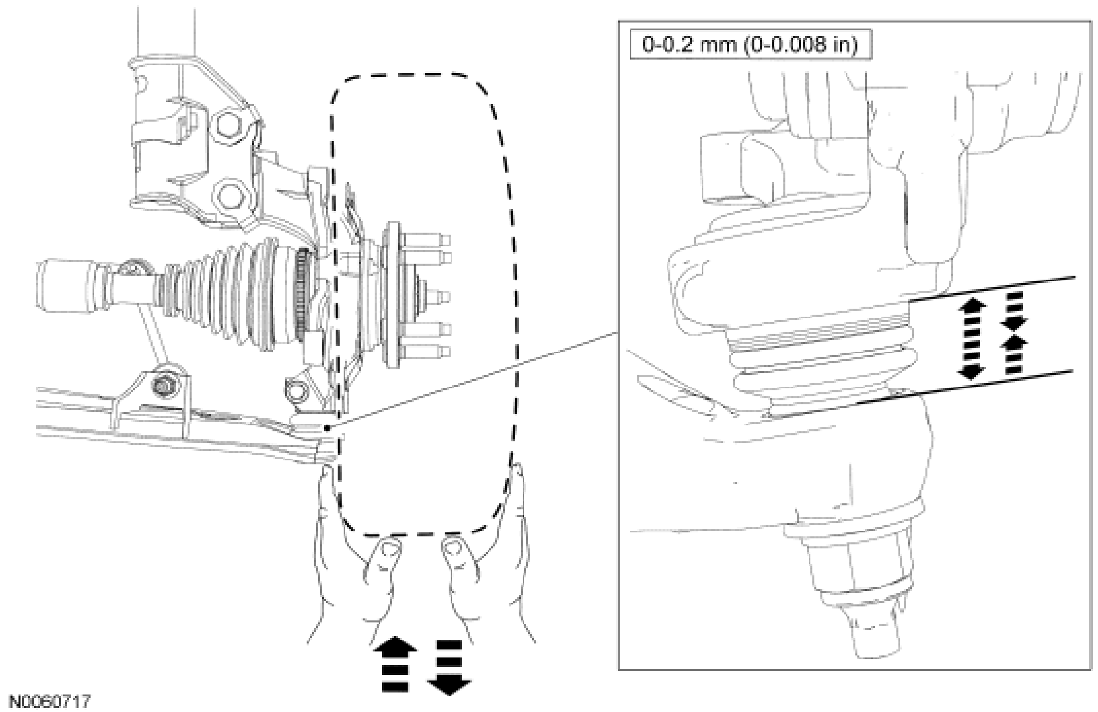

Fig. 123: Locating LH VCT Assembly Bolt & LH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

NOTE: **It is necessary to tilt the special tool toward the rear of the engine to access the rearmost secondary timing chain tensioner bolt.**

16. Remove the 2 bolts and the LH secondary timing chain tensioner.

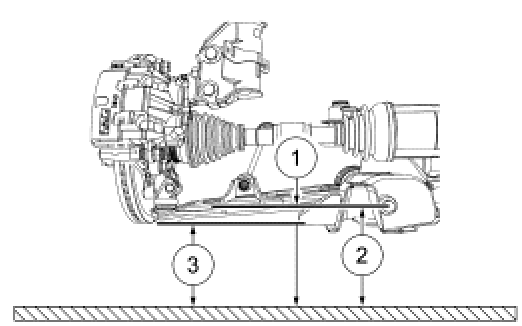

Fig. 124: Locating LH Secondary Timing Chain Tensioner Bolts
Courtesy of FORD MOTOR CO.

17. Compress the RH secondary timing chain tensioner and install a suitable lockpin to retain the tensioner in the collapsed position.

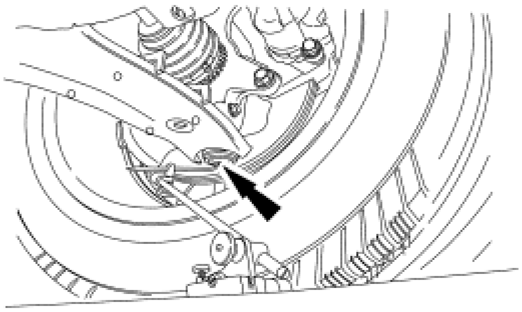

Fig. 125: Compressing RH Secondary Timing Chain Tensioner & Installing Suitable Lock Pin To Retain Tensioner In Collapsed Position
Courtesy of FORD MOTOR CO.

NOTE: The VCT bolt and the exhaust camshaft bolt must be discarded and new ones installed. However, the exhaust camshaft washer is reusable.

18. Remove and discard the RH VCT assembly bolt and the RH exhaust camshaft sprocket bolt.
    - Remove the RH VCT assembly, secondary timing chain and the RH exhaust camshaft sprocket as an assembly.

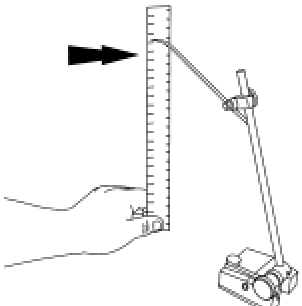

Fig. 126: Locating RH VCT Assembly Bolt & RH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

NOTE: It is necessary to tilt the special tool toward the rear of the engine to access the rearmost secondary timing chain tensioner bolt.

19. Remove the 2 bolts and the RH secondary timing chain tensioner.

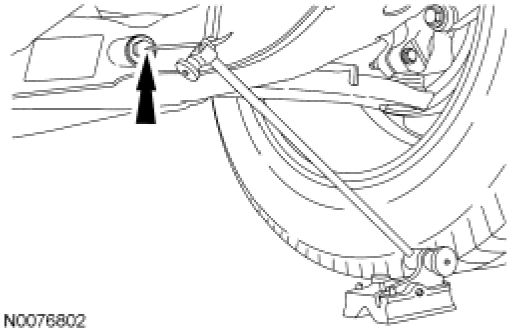

Fig. 127: Locating RH Secondary Timing Chain Tensioner Bolts
Courtesy of FORD MOTOR CO.

20. Remove the 2 bolts and the RH primary timing chain guide.

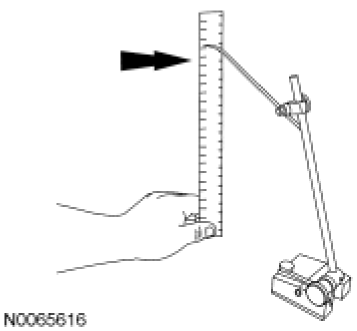

Fig. 128: Locating RH Primary Timing Chain Guide Lower Bolt
Courtesy of FORD MOTOR CO.

INSTALLATION

1. Install the RH primary timing chain guide and the 2 bolts.
   - Tighten to 10 Nm (89 lb-in).

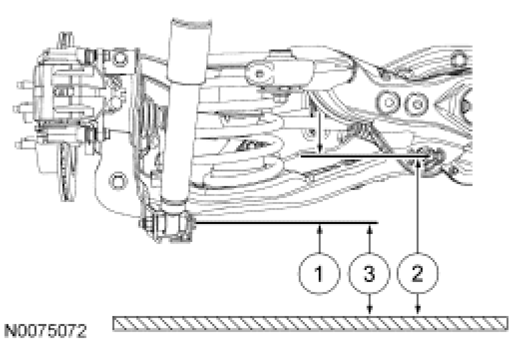

Fig. 129: Locating RH Primary Timing Chain Guide Lower Bolt
Courtesy of FORD MOTOR CO.

NOTE: It is necessary to tilt the special tool toward the rear of the engine to

access the rearmost secondary timing chain tensioner bolt.

2. Install the RH secondary timing chain tensioner and the 2 bolts.
   - Tighten to 10 Nm (89 lb-in).

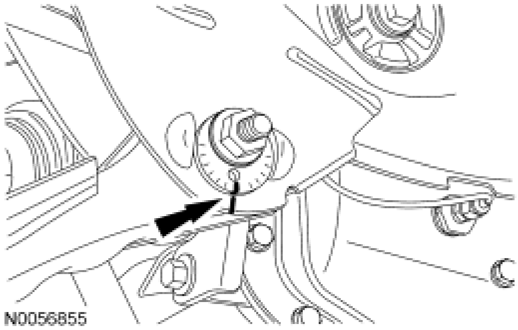

Fig. 130: Locating RH Secondary Timing Chain Tensioner Bolts
Courtesy of FORD MOTOR CO.

3. Assemble the RH VCT assembly, the RH exhaust camshaft sprocket and the RH secondary timing chain.
   - Align the colored links with the timing marks.

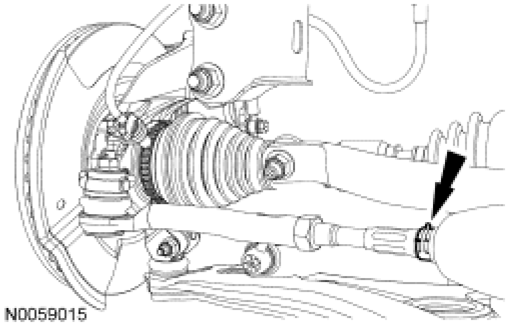

Fig. 131: Aligning RH Exhaust Camshaft Sprocket & RH Secondary Timing Chain Colored Links With Timing Marks
Courtesy of FORD MOTOR CO.

4. Position the RH secondary timing assembly onto the camshafts.

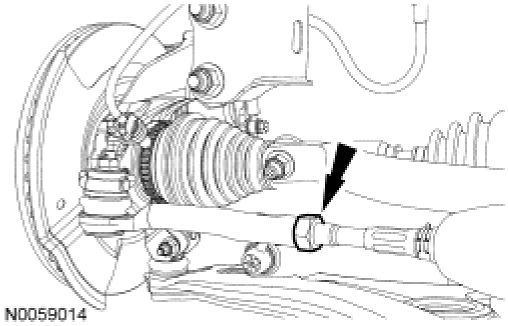

Fig. 132: Positioning RH Secondary Timing Assembly Onto Camshafts
Courtesy of FORD MOTOR CO.

5. Install the new VCT bolt and new exhaust camshaft bolt and the original washers. Tighten in 4 stages.
   - Stage 1: Tighten to 40 Nm (30 lb-ft).
   - Stage 2: Loosen one full turn.
   - Stage 3: Tighten to 10 Nm (89 lb-in).
   - Stage 4: Tighten 90 degrees.

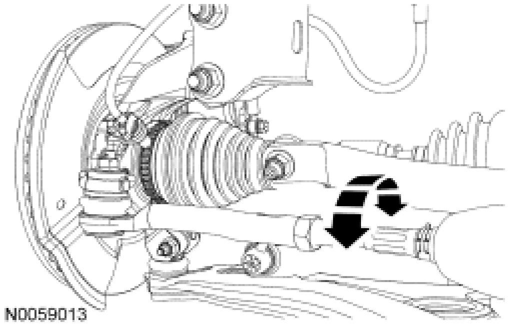

Fig. 133: Locating RH VCT Assembly Bolt & RH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

6. Remove the lockpin from the RH secondary timing chain tensioner.

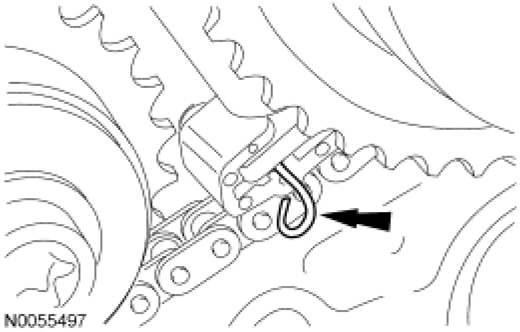

Fig. 134: Identifying Lock Pin On RH Secondary Timing Chain Tensioner
Courtesy of FORD MOTOR CO.

NOTE: **It is necessary to tilt the special tool toward the rear of the engine to access the rearmost secondary timing chain tensioner bolt.**

7. Install the LH secondary timing chain tensioner and the 2 bolts.
   - Tighten to 10 Nm (89 lb-in).

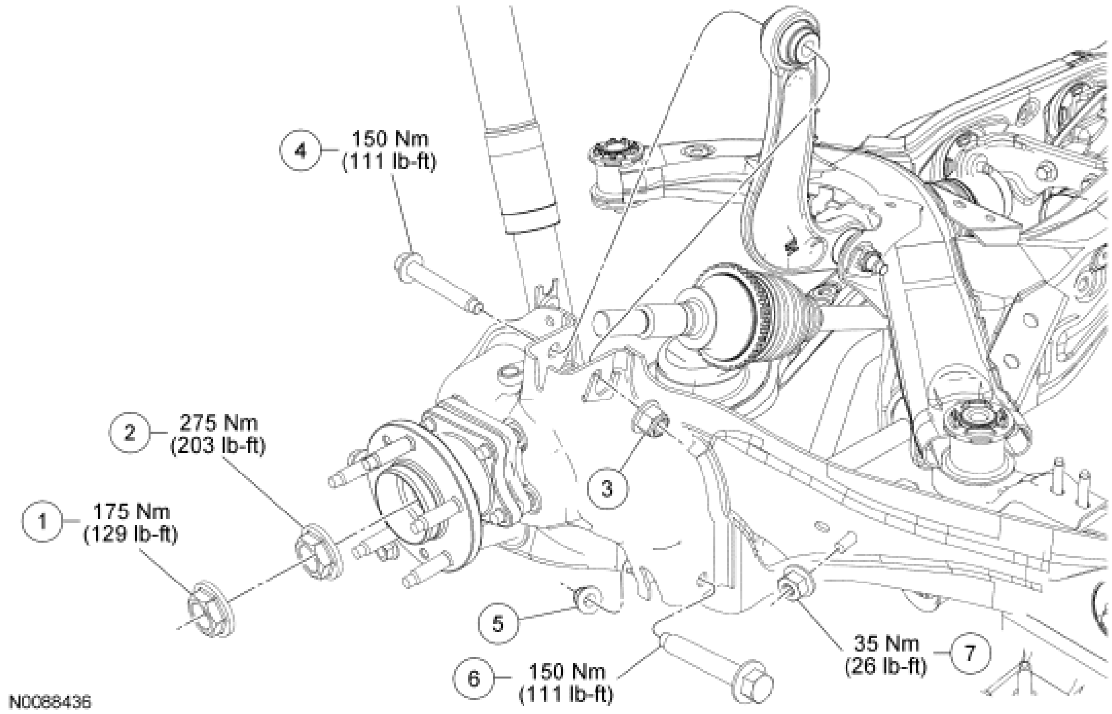

Fig. 135: Locating LH Secondary Timing Chain Tensioner Bolts
Courtesy of FORD MOTOR CO.

8. Assemble the LH VCT assembly, the LH exhaust camshaft sprocket and the LH secondary timing chain.
   - Align the colored links with the timing marks.

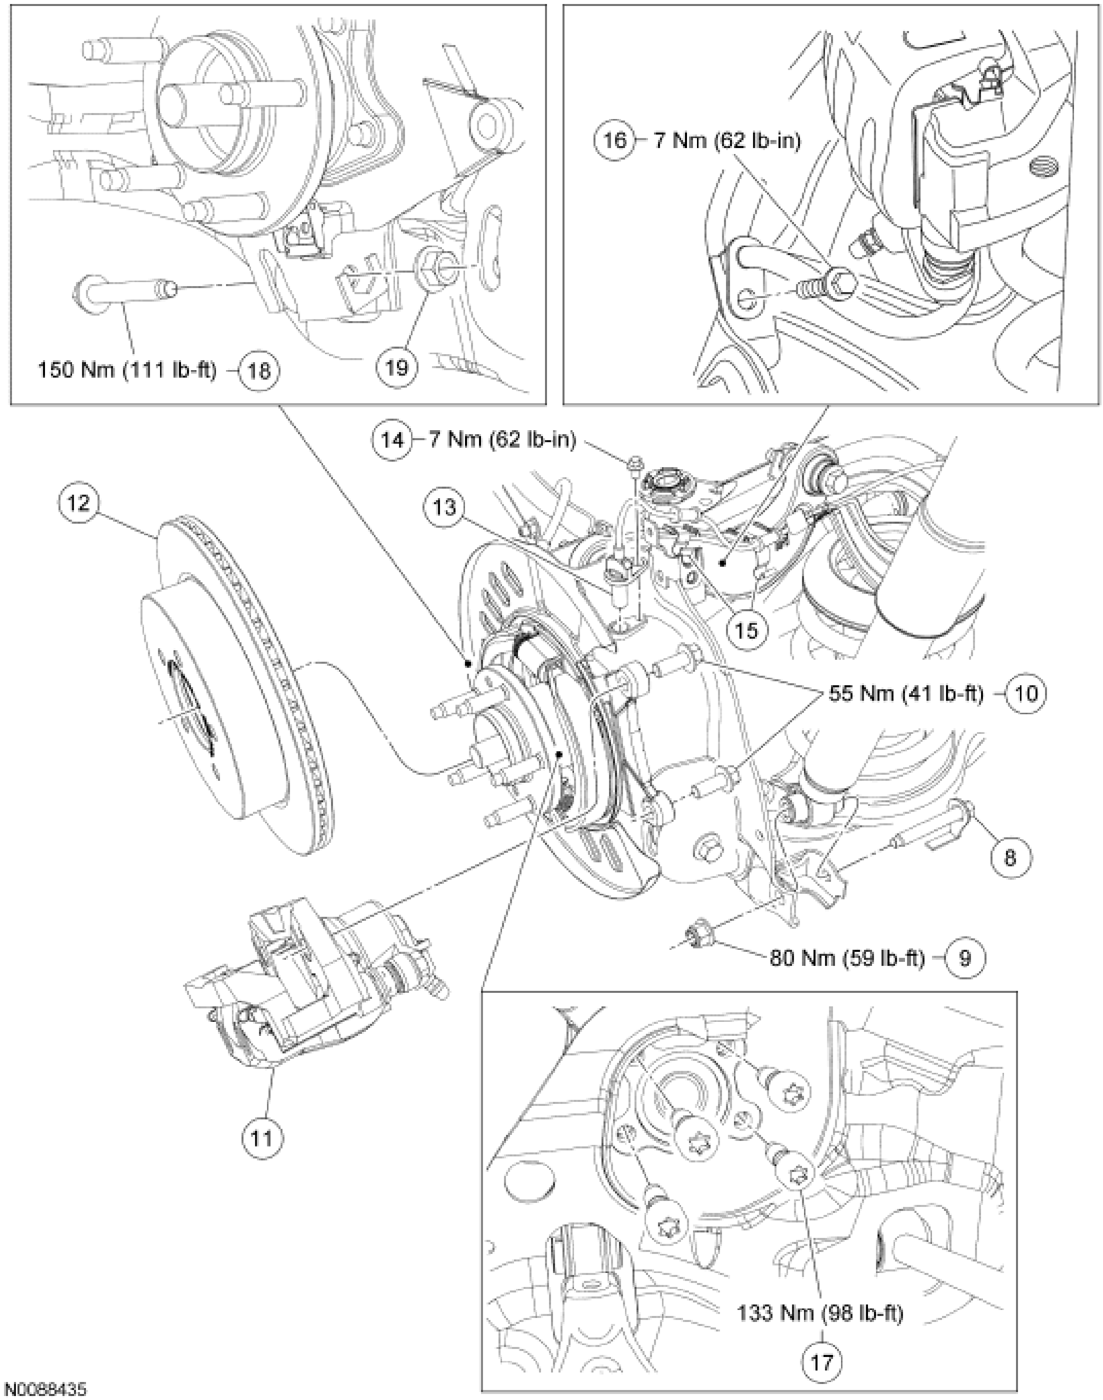

Fig. 136: Aligning LH Exhaust Camshaft Sprocket & LH Secondary Timing Chain Colored Links With Timing Marks
Courtesy of FORD MOTOR CO.

9. Position the LH secondary timing assembly onto the camshafts.

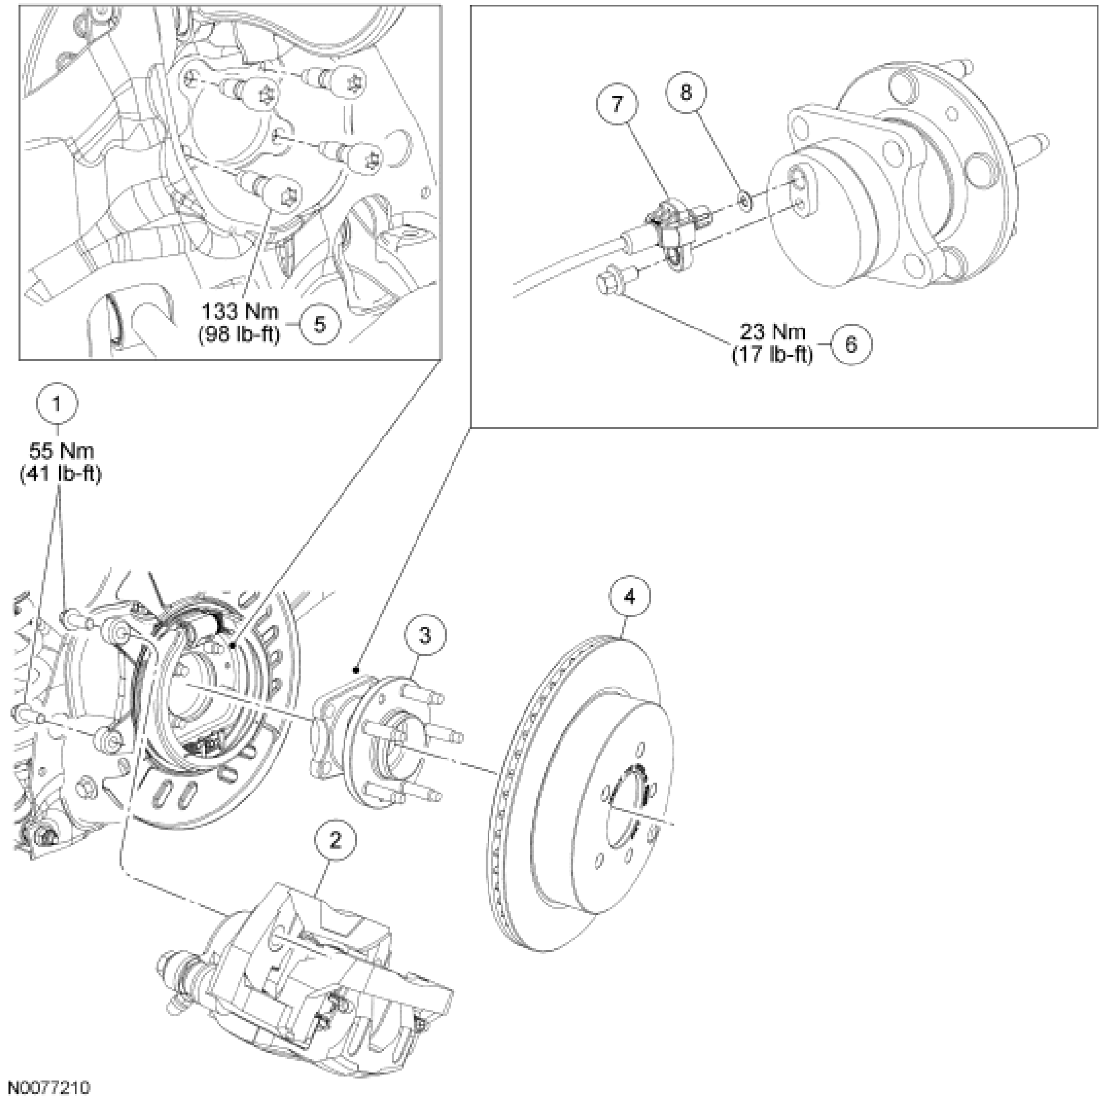

Fig. 137: Positioning LH Secondary Timing Assembly Onto Camshafts
Courtesy of FORD MOTOR CO.

10. Install the new VCT bolt and new exhaust camshaft bolt and the original washers. Tighten in 4 stages.
    - Stage 1: Tighten to 40 Nm (30 lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 10 Nm (89 lb-in).
    - Stage 4: Tighten 90 degrees.

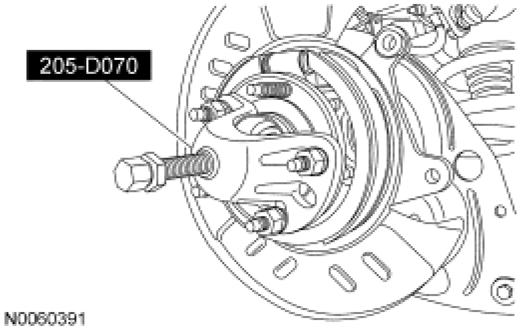

Fig. 138: Locating LH VCT Assembly Bolt & LH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

11. Remove the lockpin from the LH secondary timing chain tensioner.

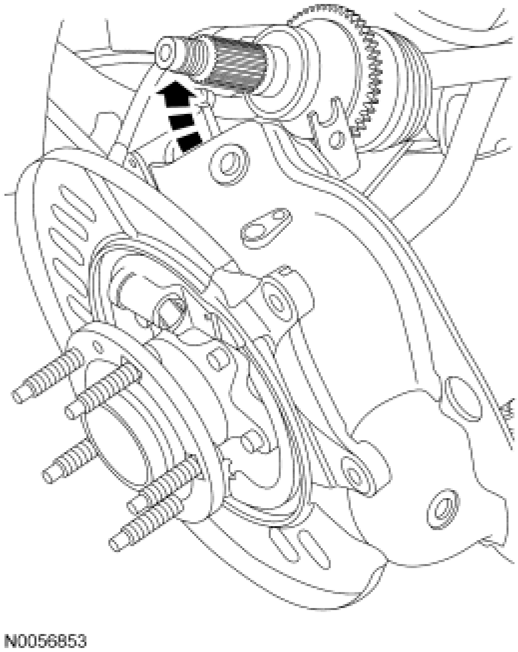

Fig. 139: Locating Lock Pin On LH Secondary Timing Chain Tensioner
Courtesy of FORD MOTOR CO.

12. Install the crankshaft timing chain sprocket.

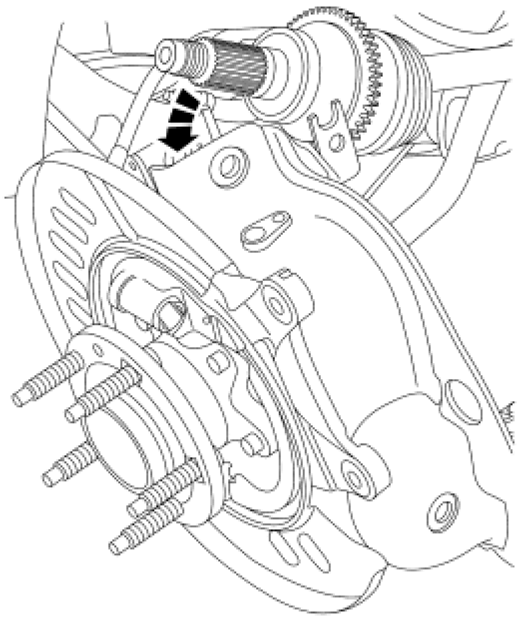

Fig. 140: Locating Crankshaft Timing Chain Sprocket
Courtesy of FORD MOTOR CO.

13. Install the primary timing chain with the colored links aligned with the timing marks on the VCT assemblies and the crankshaft sprocket.

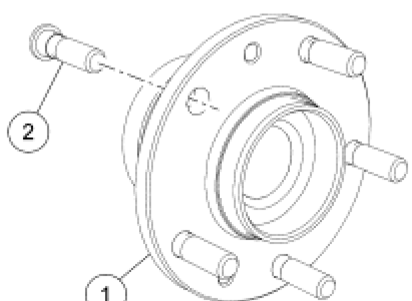

Fig. 141: Aligning Timing Marks On VCT Assemblies & Crankshaft Sprocket
Courtesy of FORD MOTOR CO.

14. Install the upper LH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

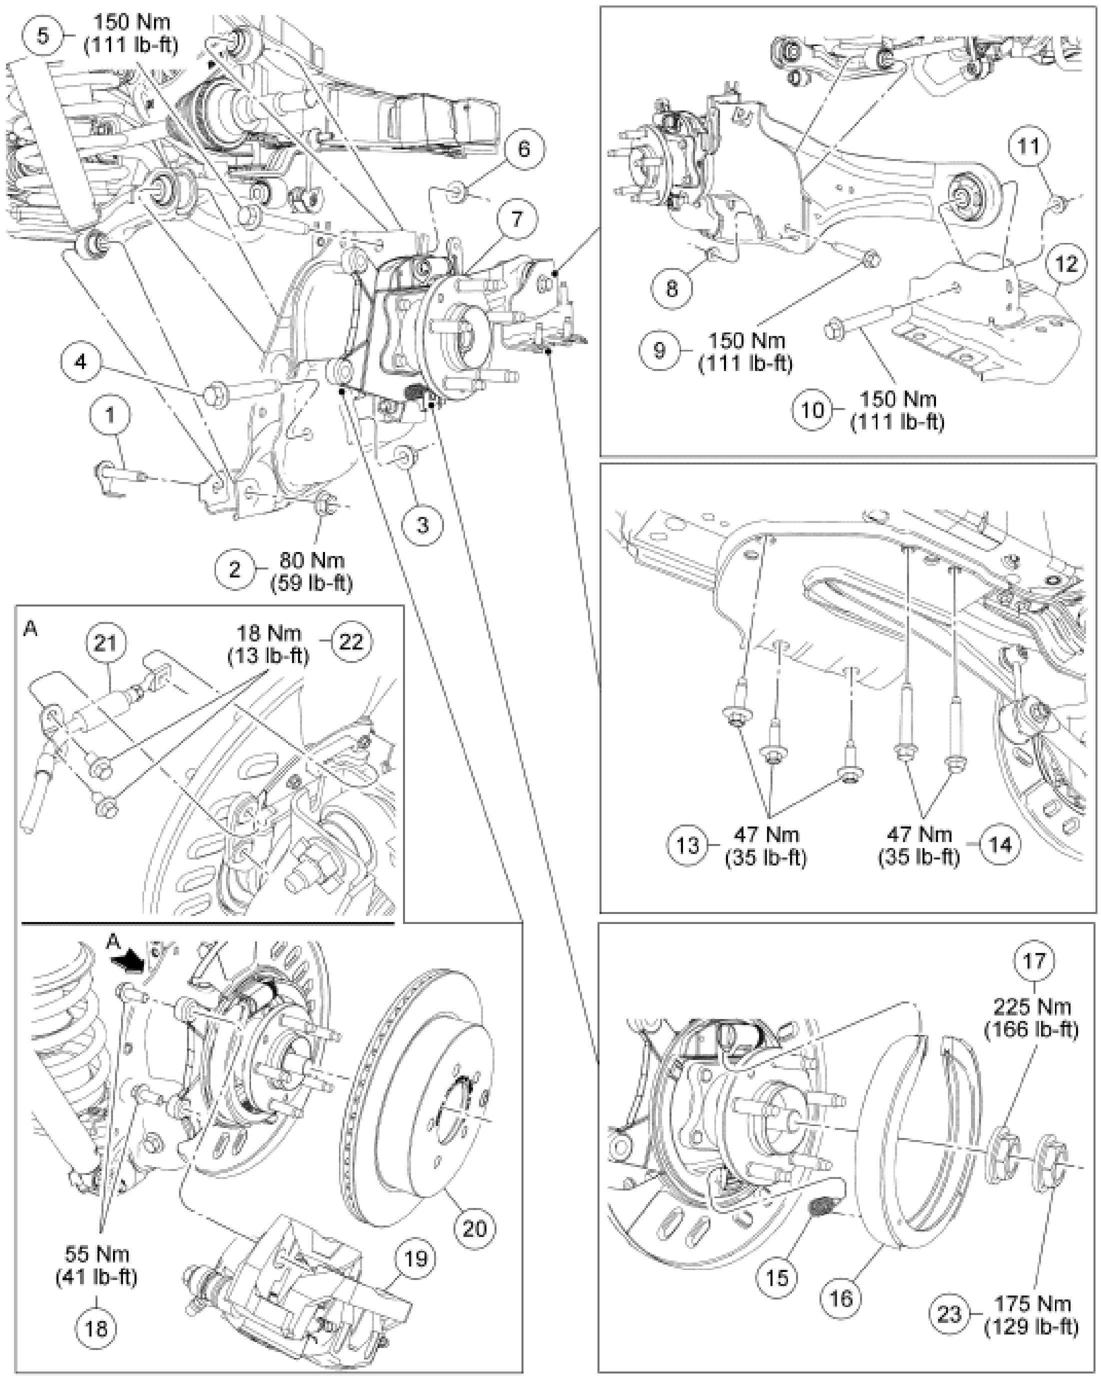

Fig. 142: Locating Upper LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

15. Install the lower LH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

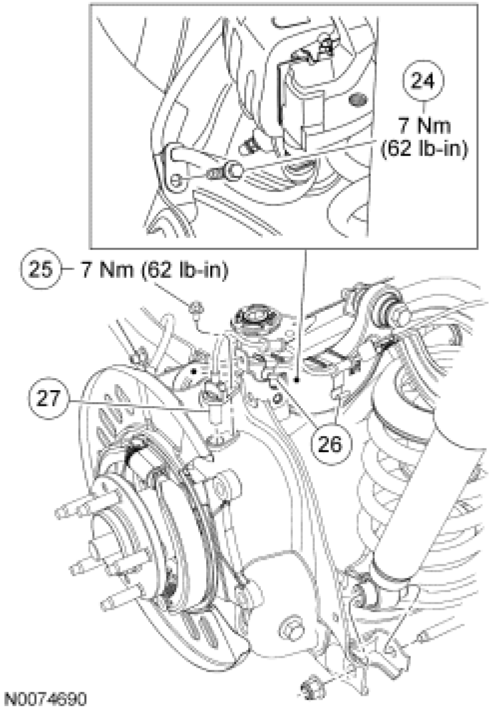

Fig. 143: Locating Lower LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

16. Install the primary timing chain tensioner arm.

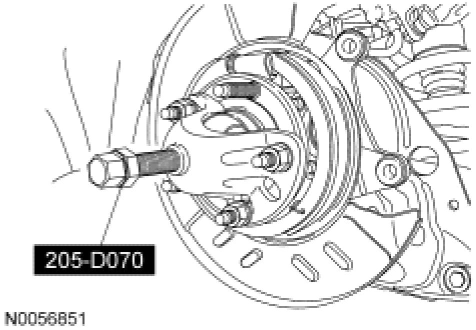

Fig. 144: Locating Primary Timing Chain Tensioner Arm
Courtesy of FORD MOTOR CO.

17. Reset the primary timing chain tensioner.
    - Rotate the lever counterclockwise.
    - Using a soft-jawed vise, compress the plunger.
    - Align the hole in the lever with the hole in the tensioner housing.
    - Install a suitable lockpin.

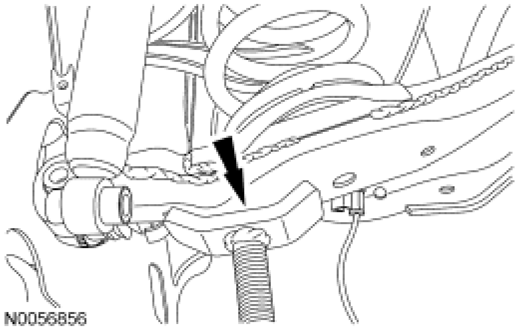

Fig. 145: Compressing Plunger Using A Soft-Jawed Vise
Courtesy of FORD MOTOR CO.

NOTE: It may be necessary to rotate the crankshaft slightly to remove slack from the timing chain and install the tensioner.

18. Install the primary tensioner and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).
    - Remove the lockpin.

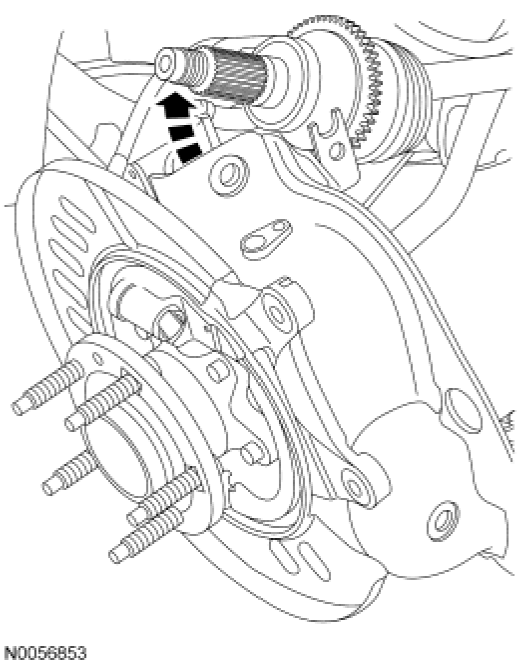

Fig. 146: Locating Primary Tensioner Bolts
Courtesy of FORD MOTOR CO.

19. As a post-check, verify correct alignment of all timing marks.

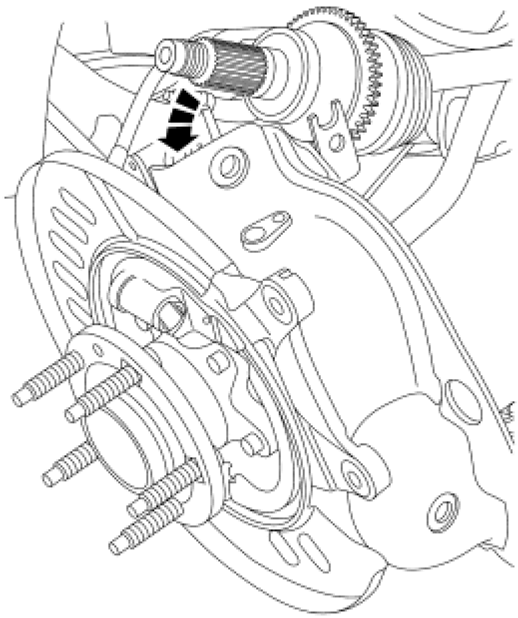

Fig. 147: Verifying Correct Alignment Of All Timing Marks
Courtesy of FORD MOTOR CO.

20. Install new VCT housing seals.

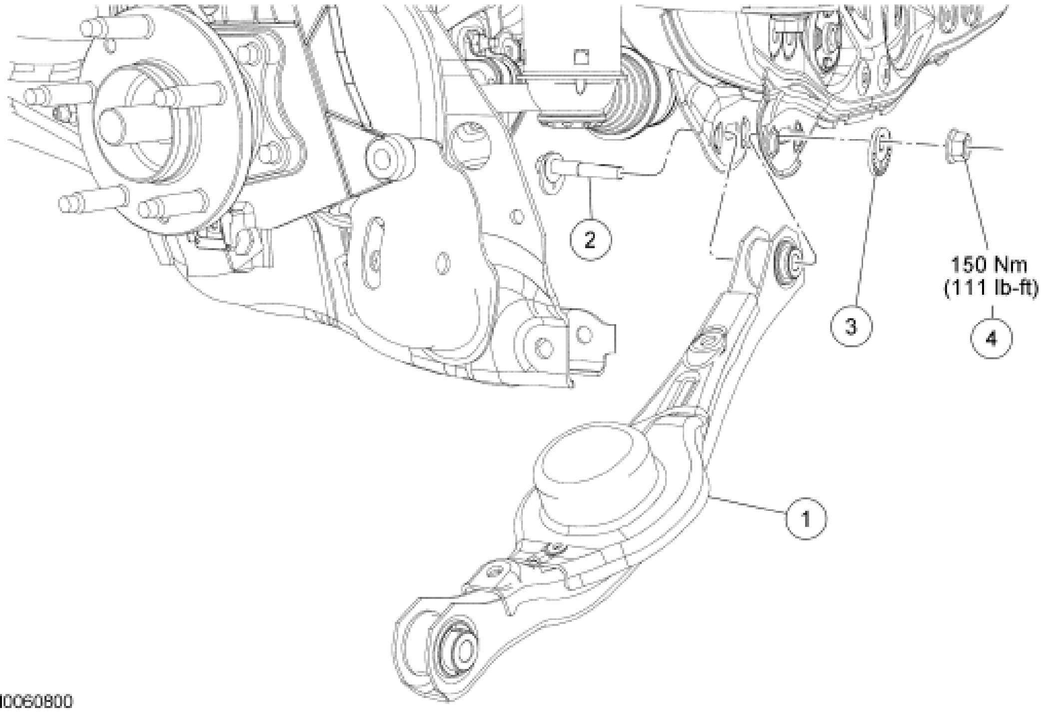

Fig. 148: Locating VCT Housing Seals

Courtesy of FORD MOTOR CO.

NOTE:	**Make sure the dowels on the variable camshaft timing (VCT) housing are fully engaged in the cylinder head prior to tightening the bolts. Failure to follow this process will result in severe engine damage.**

21. Install the LH VCT housing and the 3 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

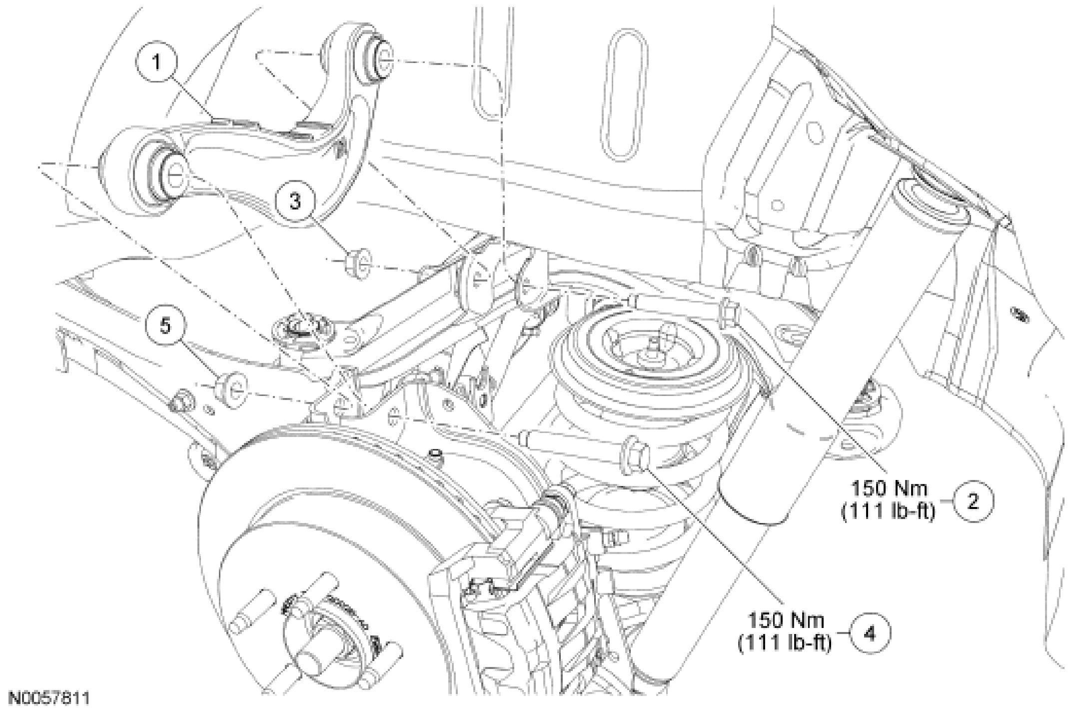

Fig. 149: Identifying LH VCT Housing Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

NOTE:	**Make sure the dowels on the variable camshaft timing (VCT) housing are fully engaged in the cylinder head prior to tightening the bolts. Failure to follow this process will result in severe engine damage.**

22. Install the RH VCT housing and the 3 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

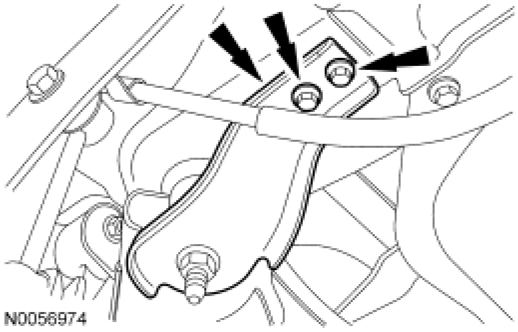

Fig. 150: Identifying RH VCT Housing Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

23. Install the engine front cover. For additional information, refer to **Engine Front Cover**.

OIL COOLER

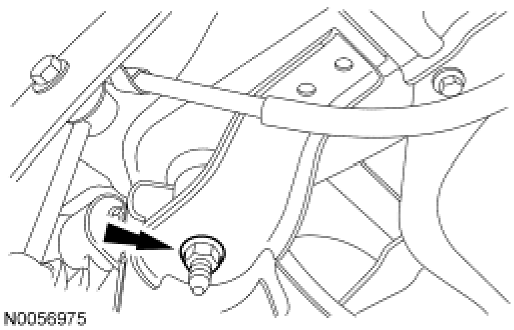

Fig. 151: Exploded View Of Oil Cooler With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W503277	Oil cooler bolt (6 required)
2	15161	Coolant hose clamp
3	8N021	Coolant hose
4	8B274	Coolant hose
5	15161	Coolant hose clamp
6	6A642	Oil cooler
7	6A636	Oil cooler gasket (2 required)

REMOVAL

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Drain the cooling system. For additional information, refer to **ENGINE COOLING** article.
3. Remove the LH catalytic converter. For additional information, refer to **EXHAUST SYSTEM** article.

4. Disconnect the 2 coolant hoses from the oil cooler.

CAUTION: If metal or aluminum material is present in the oil cooler, mechanical concerns exist. Failure to correct these concerns may cause engine failure. To diagnose mechanical concerns, refer to ENGINE SYSTEM - GENERAL INFORMATION article.

5. Remove the 6 bolts and the oil cooler.
   - Discard the gaskets.
   - Inspect the oil cooler.
   - Clean and inspect all sealing surfaces.

INSTALLATION

1. Using new gaskets, install the oil cooler and the 6 bolts.
   - Tighten to 10 Nm (89 lb-in).
2. Connect the 2 coolant hoses to the oil cooler.
3. Install the LH catalytic converter. For additional information, refer to **EXHAUST SYSTEM** article.
4. Fill and bleed the cooling system. For additional information, refer to **ENGINE COOLING** article.

OIL FILTER ADAPTER

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

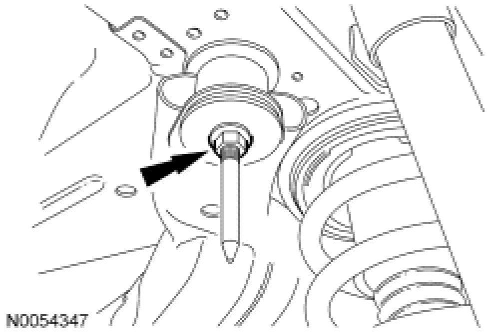

Fig. 152: Exploded View Of Engine With Oil Cooler With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description

1	6714	Engine oil filter
2	W708607	Oil filter adapter bolt
3	6895	Oil filter adapter bolt
4	6K649	O-ring seal
5	6881	Oil filter adapter
6	6A636	Oil filter adapter gasket

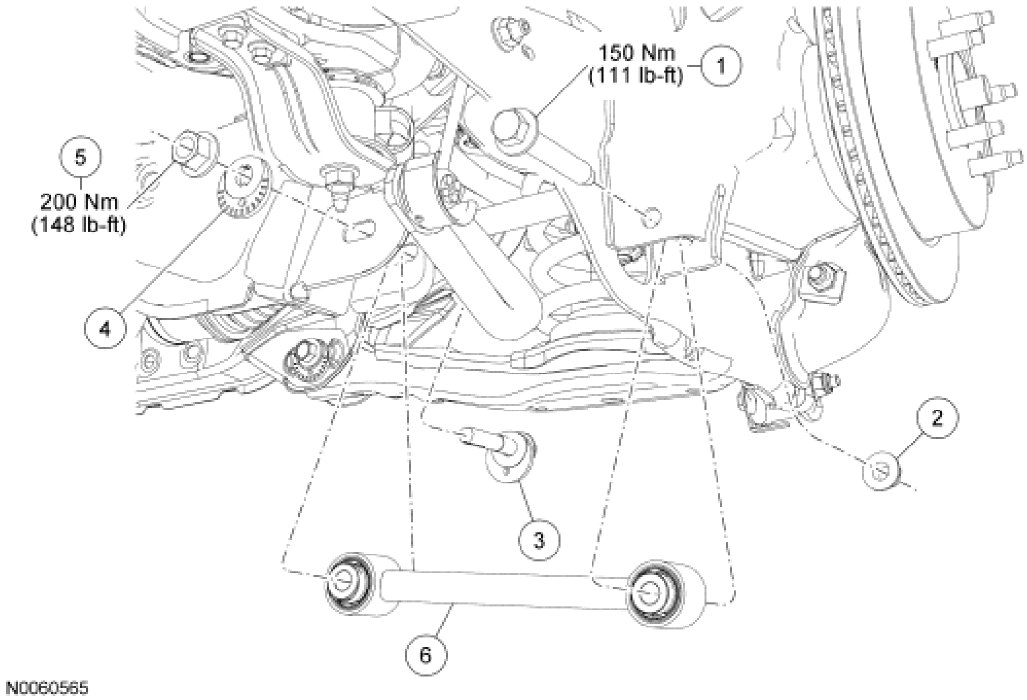

Fig. 153: Exploded View Of Oil Filter Adapter With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	6714	Engine oil filter
2	W708607	Oil filter adapter bolt
3	6895	Oil filter adapter bolt
4	6K649	O-ring seal
5	6881	Oil filter adapter
6	6A636	Oil filter adapter gasket

REMOVAL

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Remove and discard the engine oil filter.
3. If equipped, remove the engine oil cooler. For additional information, refer to **Oil Cooler**

4. Remove the 2 bolts and the oil filter adapter.
   - Discard the gasket and O-ring seal.
   - Clean and inspect all sealing surfaces.

INSTALLATION

1. Using a new gasket and O-ring seal, install the oil filter adapter.
   - Tighten the large bolt to 57 Nm (42 lb-ft).
   - Tighten the small bolt to 10 Nm (89 lb-in).

NOTE: Lubricate the engine oil filter gasket with clean engine oil prior to installing the oil filter.

2. Install a new engine oil filter.
   - Tighten to 5 Nm (44 lb-in) and then rotate an additional 180 degrees.
3. If equipped, install the engine oil cooler. For additional information, refer to **Oil Cooler**.

ENGINE OIL PRESSURE (EOP) SWITCH

Material

Item	Specification
Thread Sealant with PTFE TA-24	WSK-M2G350-A2

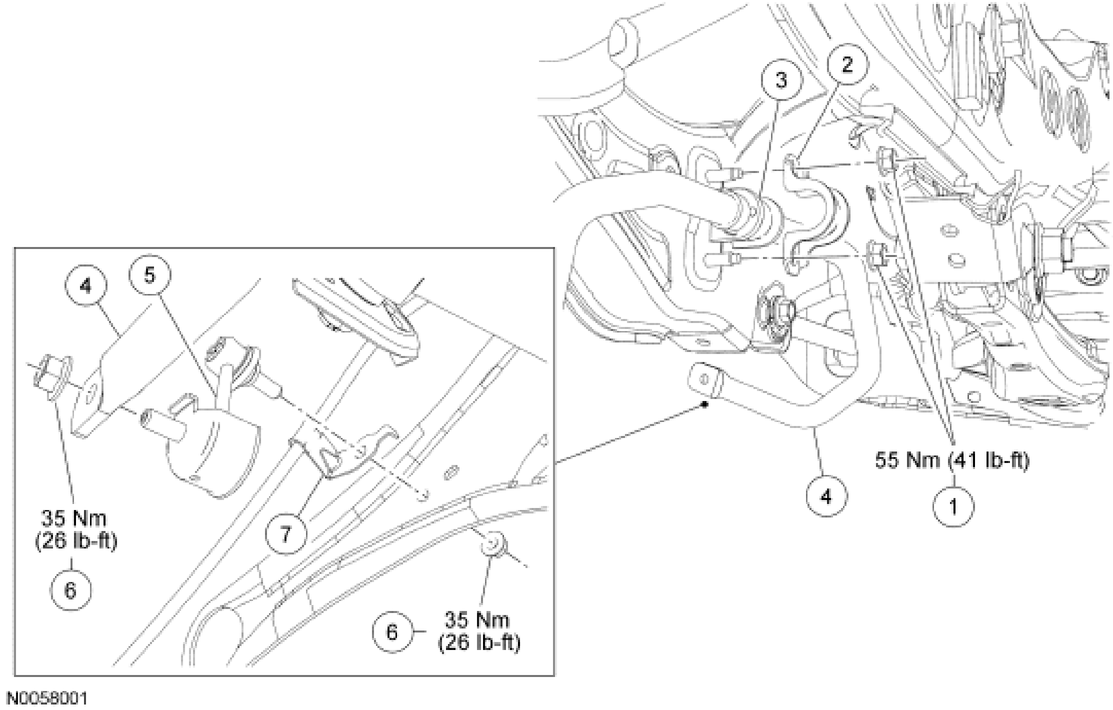

Fig. 154: Exploded View Of Engine Oil Pressure (EOP) Switch With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	14A464	Engine oil pressure (EOP) switch electrical connector (part of 12C508)
2	9278	EOP switch

REMOVAL AND INSTALLATION

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Remove the cooling fan assembly. For additional information, refer to **ACCESSORY DRIVE** article.
3. Disconnect the engine oil pressure (EOP) switch electrical connector.
4. Remove the EOP switch.
   - To install, tighten to 18 Nm (13 lb-ft).
5. To install, reverse the removal procedure.
   - Apply thread sealant with PTFE to the EOP switch threads prior to installation.

EXHAUST MANIFOLD - LH

Material

Item	Specification
Motorcraft Metal Surface Prep ZC-31	-

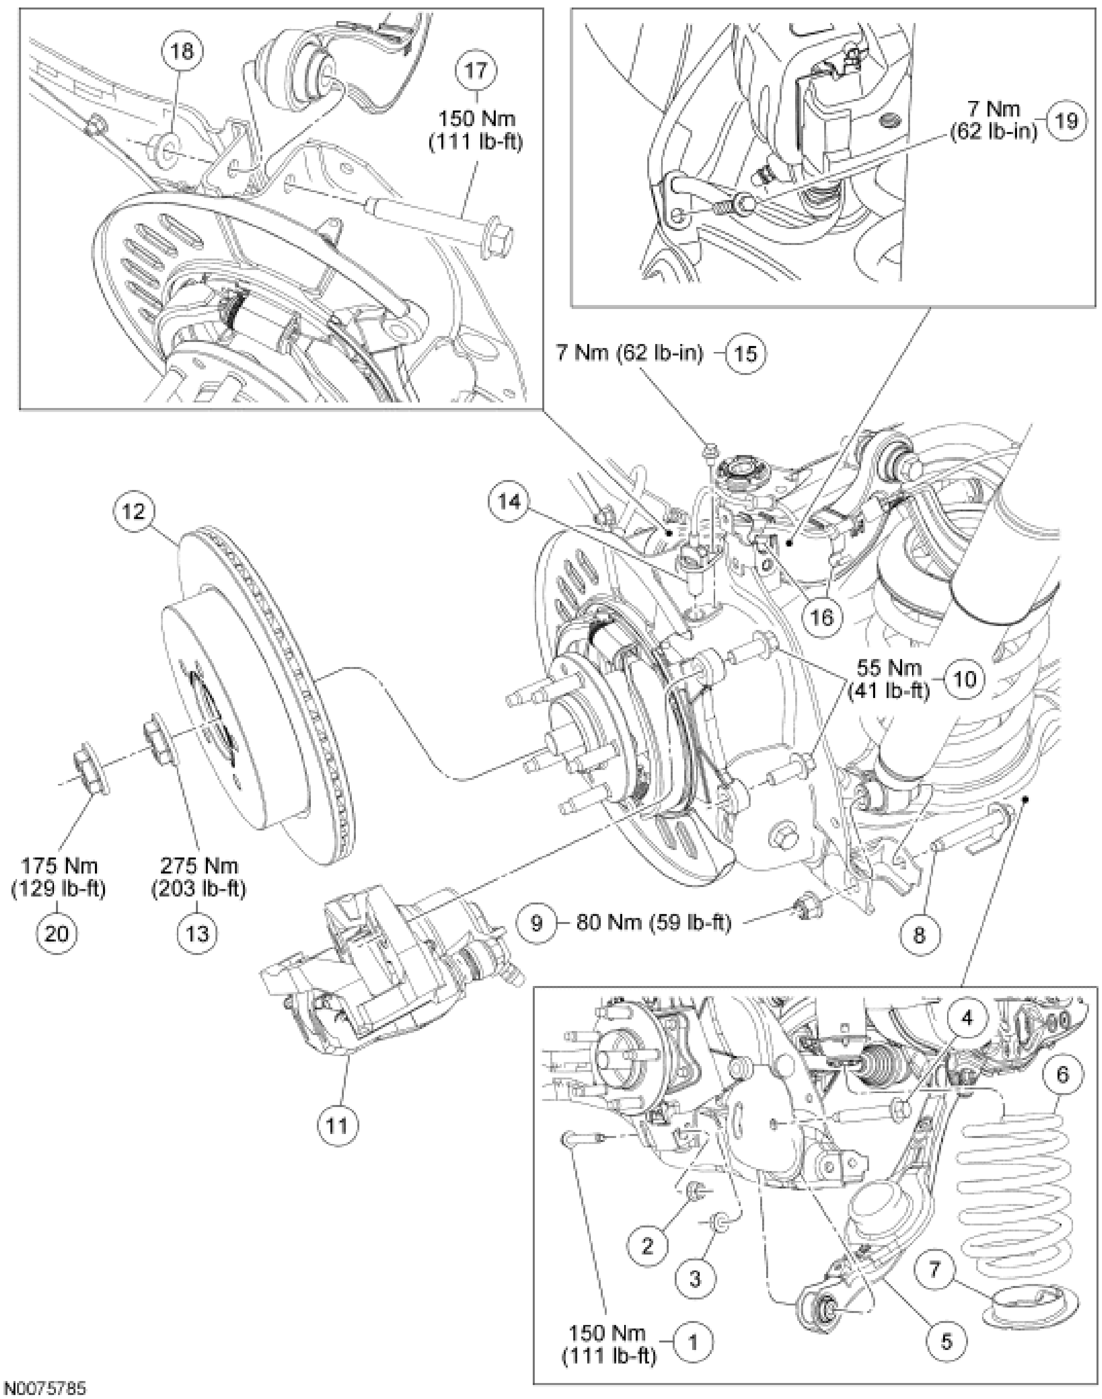

Fig. 155: Exploded View Of Exhaust Manifold With Torque Specifications - LH
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W713299	LH exhaust manifold heat shield bolt (3 required)
2	9Y427	LH exhaust manifold heat shield

3	W701706	LH exhaust manifold nut (6 required)
4	9431	LH exhaust manifold
5	9448	LH exhaust manifold gasket
6	W701732	LH exhaust manifold stud (6 required)

REMOVAL

1. Remove the LH catalytic converter. For additional information, refer to **EXHAUST SYSTEM** article.
2. Remove the LH heated oxygen sensor (HO2S). For additional information, refer to **ELECTRONIC ENGINE CONTROLS** article.
3. Remove the 3 bolts and the LH exhaust manifold heat shield.
4. Remove the 6 nuts and the LH exhaust manifold.
   - Discard the nuts and gasket.
5. Clean and inspect the LH exhaust manifold. For additional information, refer to **ENGINE SYSTEM - GENERAL INFORMATION** article.
6. Remove and discard the 6 LH exhaust manifold studs.

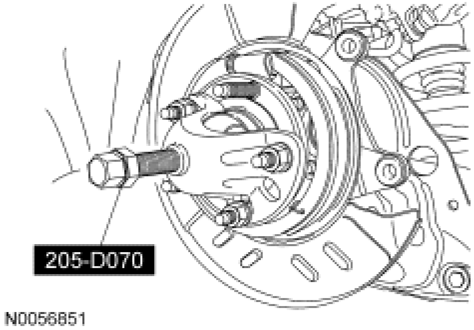

Fig. 156: Locating LH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

NOTE: **Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These may cause scratches and gouges resulting in leak paths. Use a plastic scraper to clean the sealing surfaces.**

7. Clean the exhaust manifold mating surface of the cylinder head with metal surface prep. Follow the directions on the packaging.

INSTALLATION

1. Install 6 new LH exhaust manifold studs.
   - Tighten to 12 Nm (9 lb-ft).

NOTE: **Failure to tighten the exhaust manifold nuts to specification a second time**

will cause the exhaust manifold to develop an exhaust leak.

2. Using a new gasket, install the LH exhaust manifold and 6 new nuts. Tighten in 2 stages in the sequence shown:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 20 Nm (15 lb-ft).

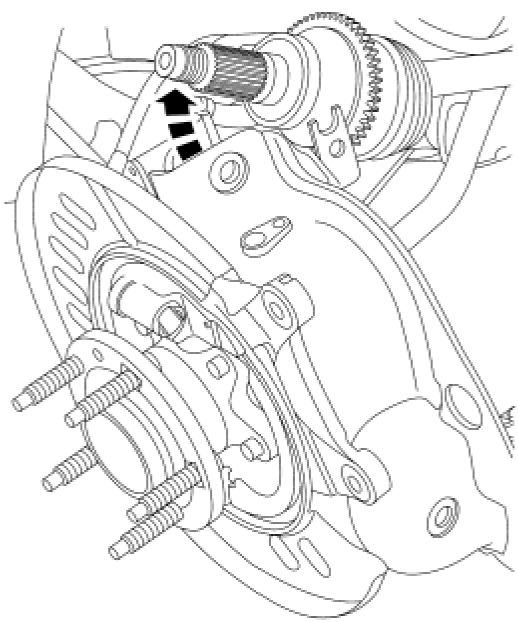

Fig. 157: Installing LH Exhaust Manifold Nuts In Sequence
Courtesy of FORD MOTOR CO.

3. Install the LH exhaust manifold heat shield and the 3 bolts.
    - Tighten to 14 Nm (10 lb-ft).
4. Install the LH HO2S. For additional information, refer to **ELECTRONIC ENGINE CONTROLS** article.
5. Install the LH catalytic converter. For additional information, refer to **EXHAUST SYSTEM** article.

EXHAUST MANIFOLD - RH

Material

Item	Specification
Motorcraft Metal Surface Prep ZC-31	-

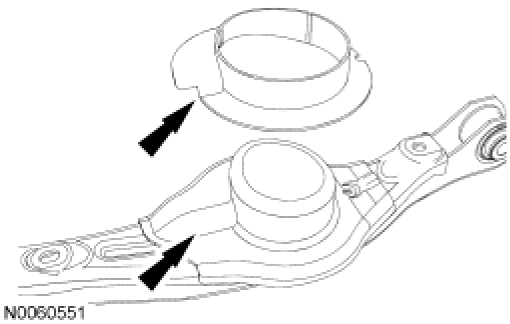

Fig. 158: Exploded View Of Exhaust Manifold - RH With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	14A464	RH heated oxygen sensor (HO2S) electrical connector
2	W701706	RH exhaust manifold nut (6 required)
3	9430	RH exhaust manifold
4	9448	RH exhaust manifold gasket
5	W701732	RH exhaust manifold stud (6 required)

REMOVAL

1. Remove the RH catalytic converter. For additional information, refer to **EXHAUST SYSTEM** article.
2. Disconnect the RH heated oxygen sensor (HO2S) electrical connector.
3. Remove the 6 nuts and the RH exhaust manifold.
   - Discard the nuts and gasket.
4. Clean and inspect the RH exhaust manifold. For additional information, refer to **ENGINE SYSTEM - GENERAL INFORMATION** article.
5. Remove and discard the 6 RH exhaust manifold studs.

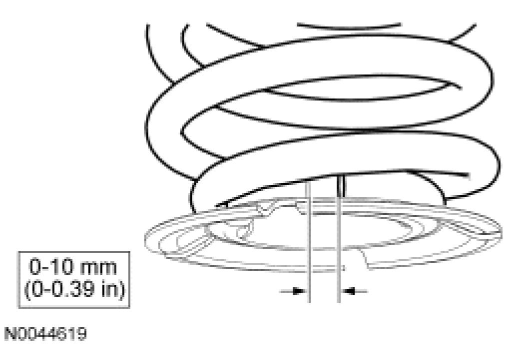

Fig. 159: Locating RH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

NOTE: Do not use metal scrapers, wire brushes, power abrasive discs or other

abrasive means to clean the sealing surfaces. These may cause scratches and gouges resulting in leak paths. Use a plastic scraper to clean the sealing surfaces.

6. Clean the exhaust manifold mating surface of the cylinder head with metal surface prep. Follow the directions on the packaging.

INSTALLATION

1. Install 6 new RH exhaust manifold studs.
    - Tighten to 12 Nm (9 lb-ft).

NOTE: Failure to tighten the exhaust manifold nuts to specification a second time will cause the exhaust manifold to develop an exhaust leak.

2. Using a new gasket, install the RH exhaust manifold and 6 new nuts. Tighten in 2 stages in the sequence shown:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 20 Nm (15 lb-ft).

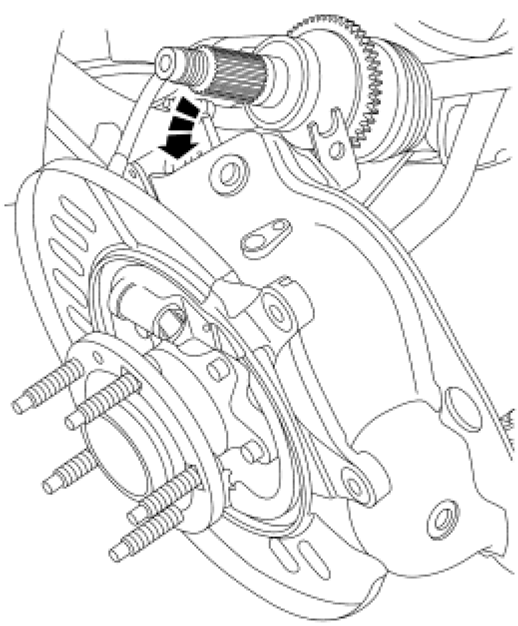

Fig. 160: Installing RH Exhaust Manifold Nuts In Sequence
Courtesy of FORD MOTOR CO.

3. Connect the RH HO2S electrical connector.
4. Install the RH catalytic converter. For additional information, refer to **EXHAUST SYSTEM** article.

ENGINE MOUNT

Special Tools

Illustration	Tool Name	Tool Number
 ST3034-A	Oil Pan Holding Fixture	303-1295

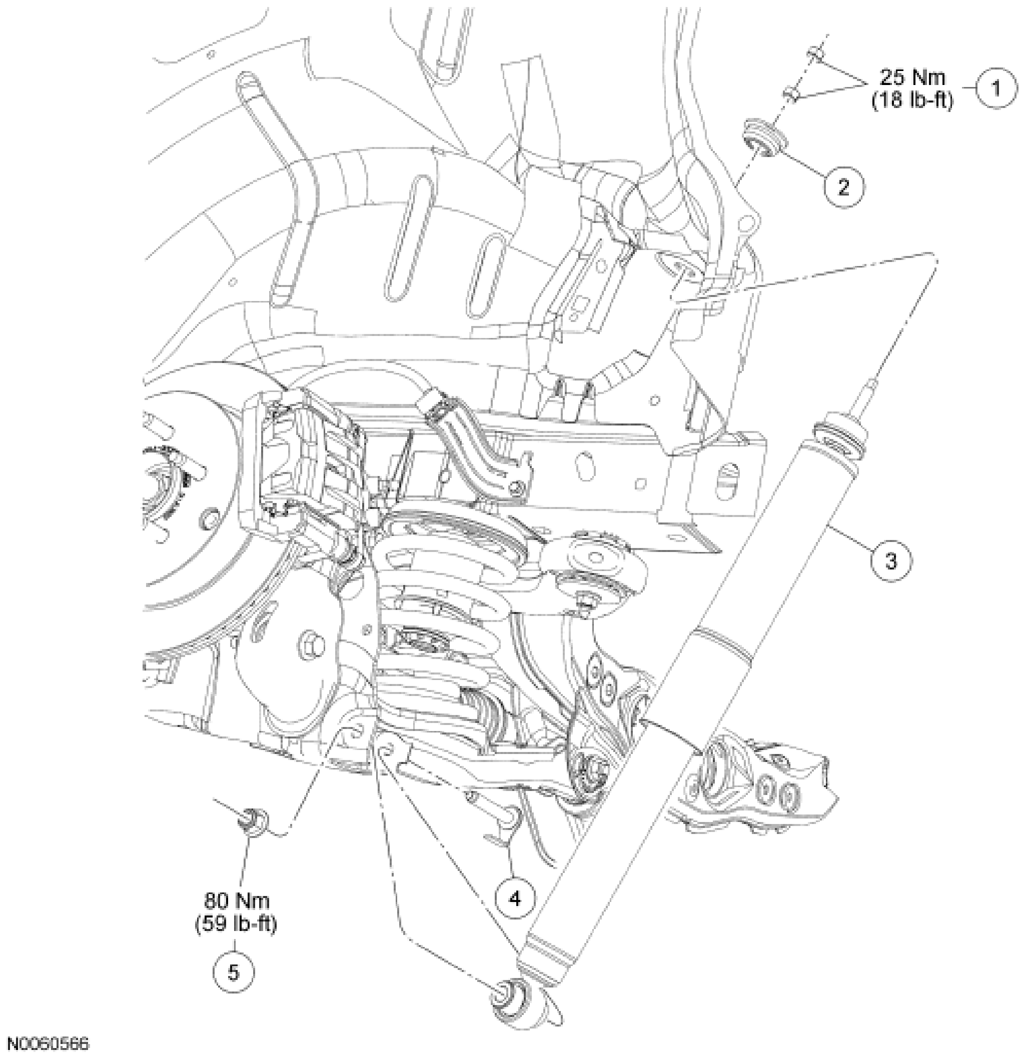

Fig. 161: Identifying Engine Mount Components With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description

1	W807658	Degas bottle-to-fender bolt (2 required)
2	W709603	Degas bottle-to-washer bottle bolt
3	8A080	Degas bottle
4	W520102	Engine mount brace nut
5	6K075	Engine mount brace
6	W712334	Engine mount-to-engine nut (4 required)
7	W712511	Engine mount brace bolt
8	W712507	Engine mount-to-frame bolt (3 required)
9	6F012	Engine mount

REMOVAL AND INSTALLATION

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.
2. Loosen the exhaust flexible pipe clamp and disconnect the 2 exhaust hangers.
   - To install, tighten to 40 Nm (30 lb-ft).

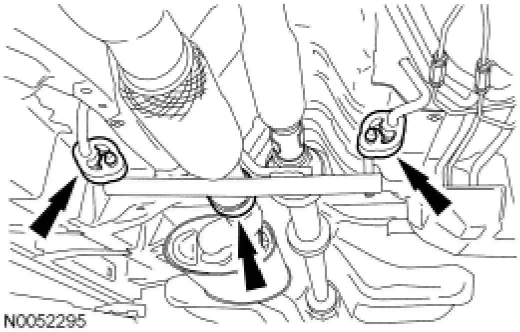

Fig. 162: Locating Exhaust Flexible Pipe Clamp & Exhaust Hangers
Courtesy of FORD MOTOR CO.

3. Remove the 4 nuts, the exhaust flexible pipe and the Y-pipe as an assembly.
   - Discard the nuts and the gasket.
   - To install, tighten to 40 Nm (30 lb-ft).

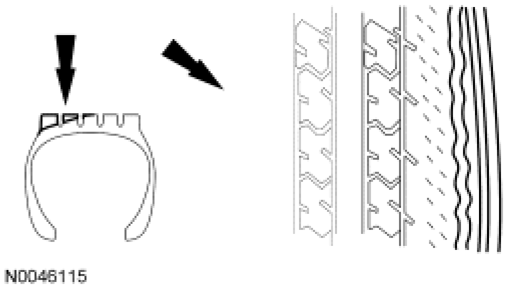

Fig. 163: Locating Exhaust Flexible Pipe, Y-Pipe & Nuts

Courtesy of FORD MOTOR CO.

4. Remove the 2 nuts and the roll restrictor heat shield.
    - To install, tighten to 11 Nm (8 lb-ft).

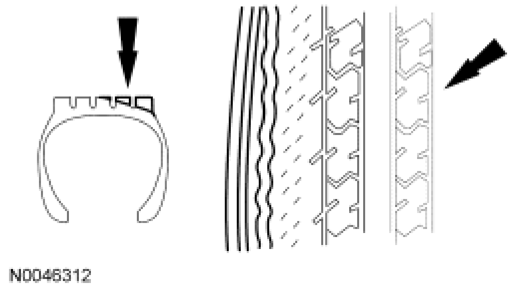

Fig. 164: Locating Roll Restrictor Heat Shield Nuts
Courtesy of FORD MOTOR CO.

5. Loosen the roll restrictor-to-subframe through bolt.
    - To install, tighten to 103 Nm (76 lb-ft).

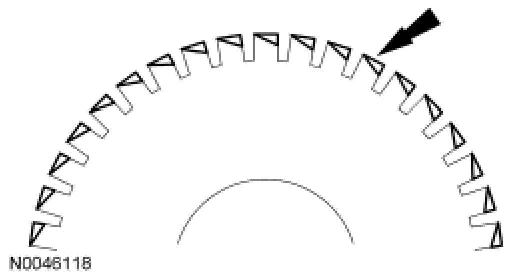

Fig. 165: Locating Roll Restrictor-To-Subframe Bolt
Courtesy of FORD MOTOR CO.

6. Remove the roll restrictor through bolt and the 2 roll restrictor-to-transaxle bracket plate bolts.
    - To install, tighten to 90 Nm (66 lb-ft).

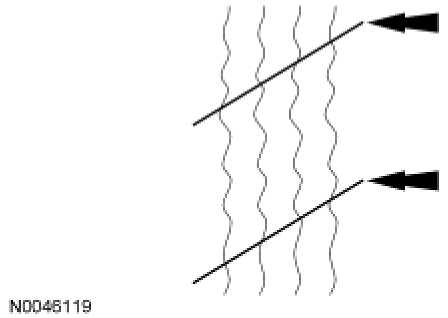

Fig. 166: Locating Roll Restrictor-To-Transaxle Bracket Plate Bolts
Courtesy of FORD MOTOR CO.

7. Remove the 3 bolts and the transaxle bracket.
    - To install, tighten to 90 Nm (66 lb-ft).

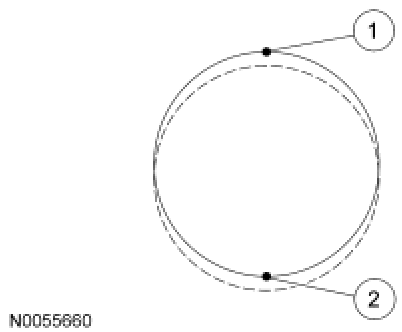

Fig. 167: Locating Transaxle Bracket Bolts
Courtesy of FORD MOTOR CO.

CAUTION: The special tool must be carefully aligned to the mounting bosses on the oil pan. Failure to follow these instructions may result in damage to the oil pan.

8. Position a floor jack and the special tool under the oil pan.

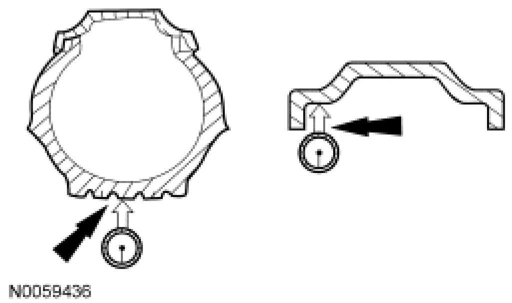

Fig. 168: Positioning Floor Jack & Special Tool (303-1295) Under Oil Pan
Courtesy of FORD MOTOR CO.

9. Remove the 3 bolts and position the engine coolant degas bottle aside.
    - To install, tighten to 9 Nm (80 lb-in).
10. Remove the nut, bolt and engine mount brace.
    - To install, tighten to 20 Nm (15 lb-ft).

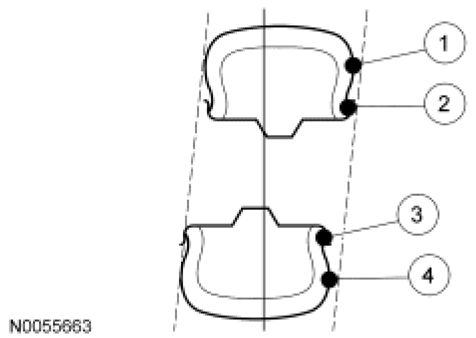

Fig. 169: Locating Nut, Bolt & Engine Mount Brace
Courtesy of FORD MOTOR CO.

11. Remove the 4 engine mount nuts.
    - To install, tighten to 63 Nm (46 lb-ft).

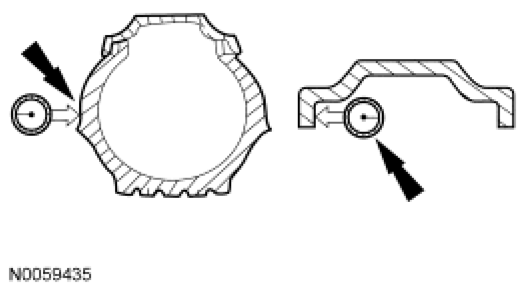

Fig. 170: Locating Engine Mount Nuts
Courtesy of FORD MOTOR CO.

12. Remove the 3 bolts and the engine mount.
    - To install, tighten to 90 Nm (66 lb-ft).

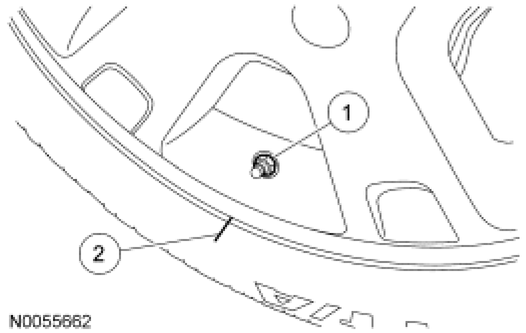

Fig. 171: Locating Engine Mount Bolts
Courtesy of FORD MOTOR CO.

13. To install, reverse the removal procedure.

OIL PUMP

Special Tools

Illustration	Tool Name	Tool Number
	Camshaft Alignment Tool	303-1248

REMOVAL

NOTE: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan may cause engine failure.

1. Remove the engine front cover. For additional information, refer to **Engine Front Cover**.
2. Rotate the crankshaft clockwise and align the timing marks on the variable camshaft timing (VCT) assemblies as shown.

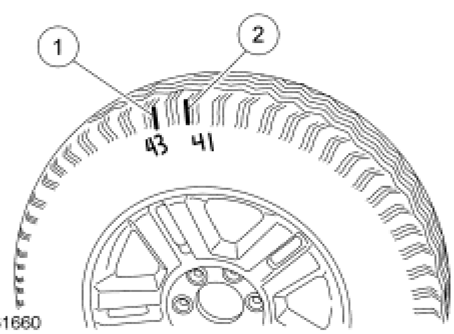

Fig. 172: Aligning Timing Marks On Variable Camshaft Timing (VCT) Assemblies
Courtesy of FORD MOTOR CO.

NOTE: The special tool will hold the camshafts in the top dead center (TDC) position.

3. Install the special tool onto the flats of the LH camshafts.

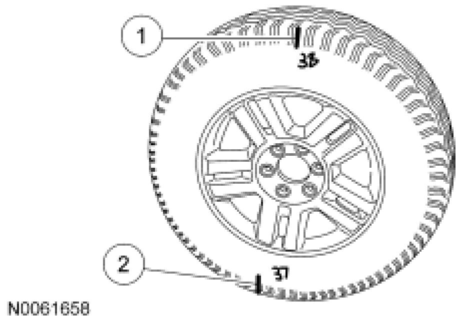

Fig. 173: Installing Special Tool (303-1248) Onto Flats Of LH Camshafts
Courtesy of FORD MOTOR CO.

NOTE: The special tool will hold the camshafts in the TDC position.

4. Install the special tool onto the flats of the RH camshafts.

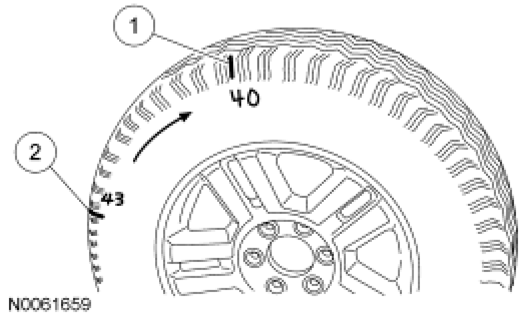

Fig. 174: Installing Special Tool (303-1248) Onto Flats Of RH Camshafts
Courtesy of FORD MOTOR CO.

5. Remove the 3 bolts and the RH VCT housing.

Table 1. Use Table to Adjust Tire Pressure Inside Garage for Colder Outside Temperature[1]

** Do Not Inflate Tire Higher than Maximum Pressure Stamped on Tire Sidewall. **

Table is based on a Garage Temperature of 70°F. Max Pressure Adjustment is 7 psi.

Outside Temperature (°F)	Tire Placard Pressure (PSI)

[1]When Outside (Ambient) Temperature is greater than 21°C (70°F), Inflate tires to placard pressure.

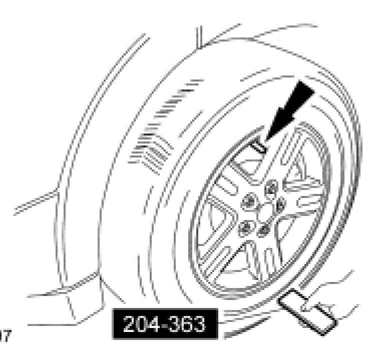
[1]Use the table to adjust tire pressure for P-metric and LT tires only.

[1]Do NOT use table for Commercial Truck Tires (i.e. 19.5 inch tires for F450 & F550). See F-Super Duty Service Manual for tire inflation procedure.

N0057700

Fig. 175: Locating RH VCT Housing
Courtesy of FORD MOTOR CO.

6. Remove the 3 bolts and the LH VCT housing.



N0037897

Fig. 176: Locating LH VCT Housing

Courtesy of FORD MOTOR CO.

7. Remove and discard the VCT housing seals.

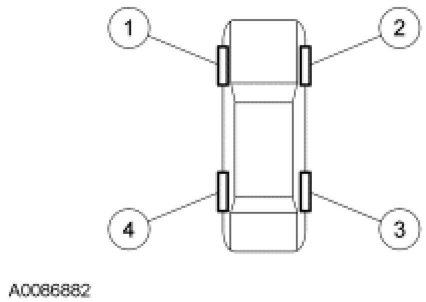


Fig. 177: Locating VCT Housing Seals
Courtesy of FORD MOTOR CO.

8. Remove the 2 bolts and the primary timing chain tensioner.

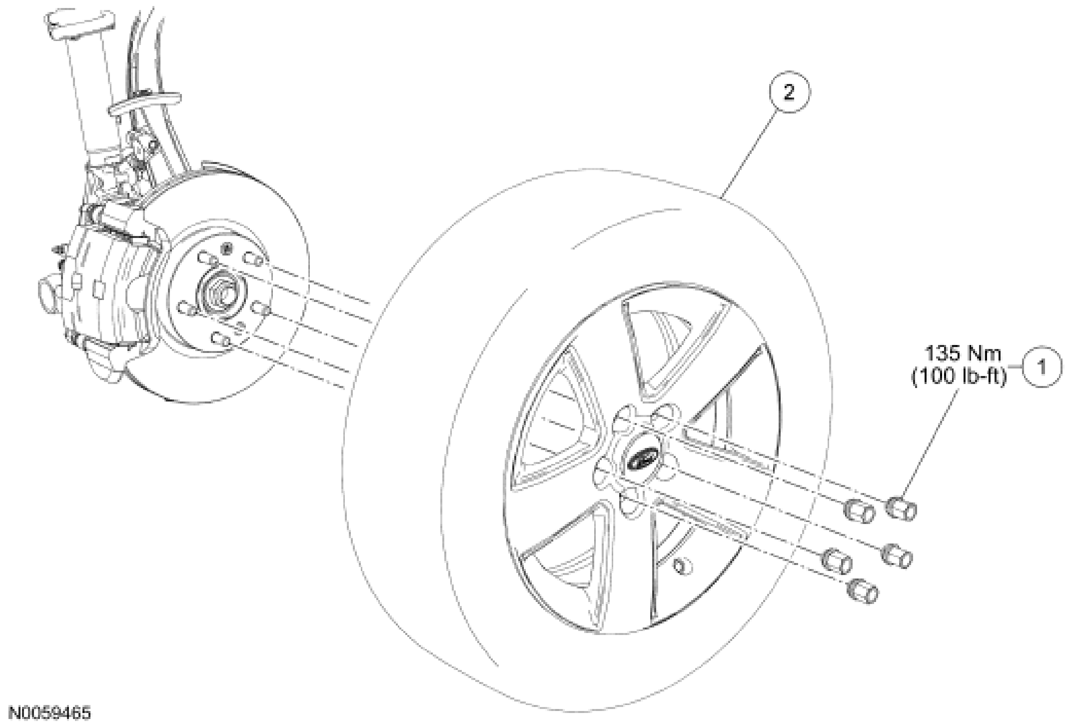

Fig. 178: Locating Primary Timing Chain Tensioner Bolts
Courtesy of FORD MOTOR CO.

9. Remove the primary timing chain tensioner arm.

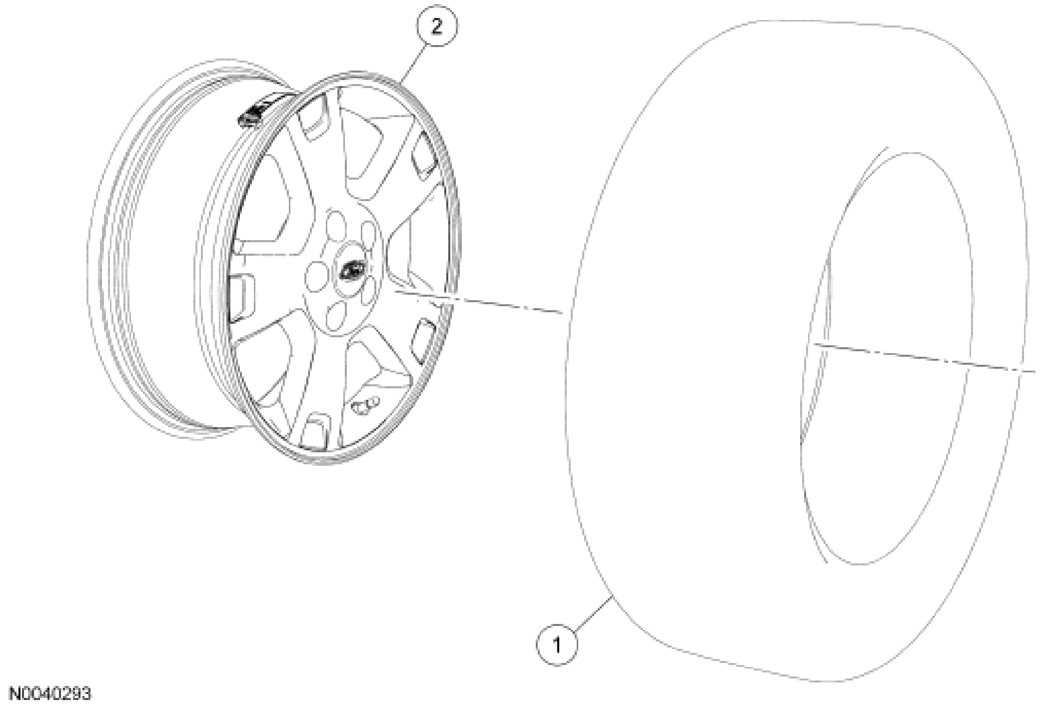

Fig. 179: Locating Primary Timing Chain Tensioner Arm
Courtesy of FORD MOTOR CO.

10. Remove the 2 bolts and the lower LH primary timing chain guide.

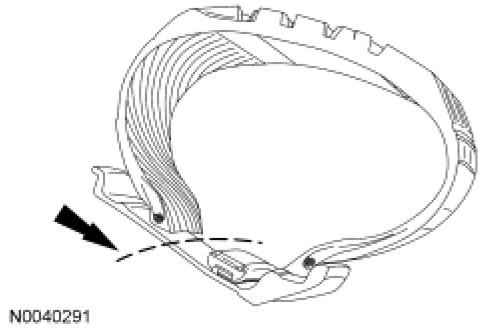

Fig. 180: Locating Lower LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

11. Remove the primary timing chain.

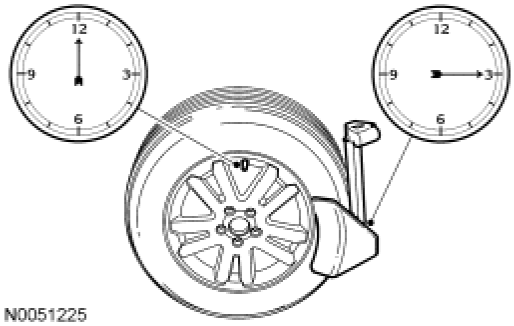

Fig. 181: Locating Primary Timing Chain
Courtesy of FORD MOTOR CO.

12. Remove the crankshaft timing chain sprocket.

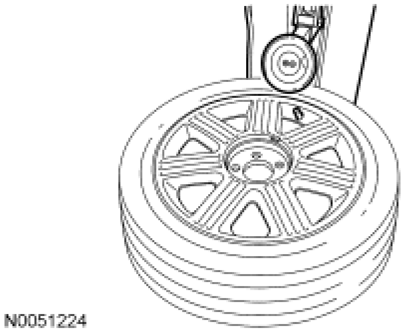

Fig. 182: Locating Crankshaft Timing Chain Sprocket
Courtesy of FORD MOTOR CO.

13. Remove the 2 oil pump screen and pickup tube bolts.

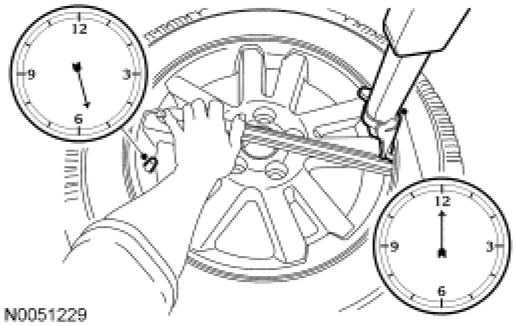

Fig. 183: Locating Oil Pump Screen & Pickup Tube Bolts & Rotating Oil Pump Clockwise
Courtesy of FORD MOTOR CO.

14. Remove the 3 oil pump bolts.
    - Rotate the oil pump clockwise and separate the oil pump from the oil pump screen and pickup tube.
    - Remove the oil pump.

- Discard the oil pump screen and pickup tube O-ring seal.

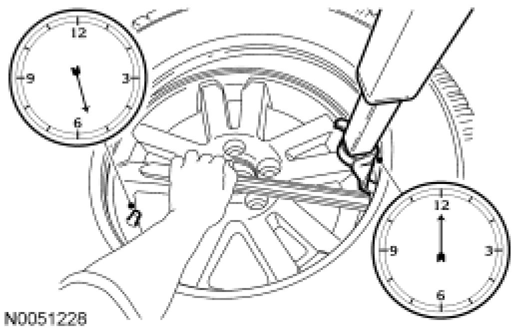

Fig. 184: Locating Oil Pump Bolts
Courtesy of FORD MOTOR CO.

INSTALLATION

NOTE: **Install a new oil pump screen and pickup tube O-ring seal prior to installing the oil pump.**

1. Position the oil pump onto the crankshaft and rotate counterclockwise to position the pump onto the oil pump screen and pickup tube.
    - Install the 3 bolts and tighten to 10 Nm (89 lb-in).

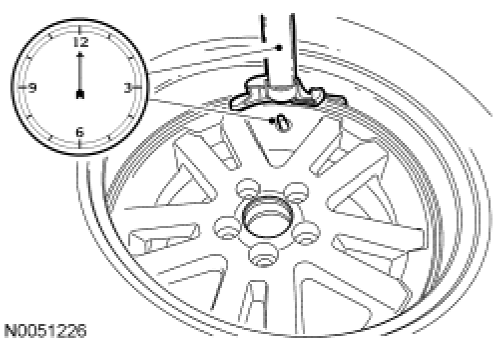

Fig. 185: Locating Oil Pump Screen & Pickup Tube Bolts & Rotating Oil Pump Counterclockwise
Courtesy of FORD MOTOR CO.

2. Install the 2 oil pump screen and pickup tube bolts.
    - Tighten to 10 Nm (89 lb-in).

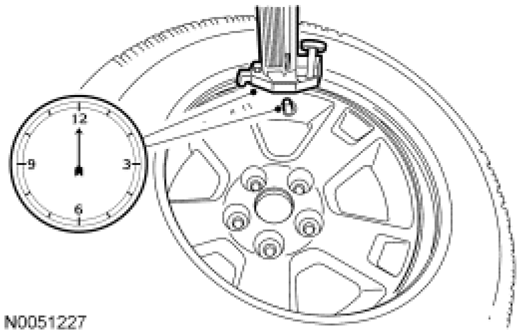

Fig. 186: Locating Oil Pump Screen & Pickup Tube Bolts & Rotating Oil Pump Clockwise
Courtesy of FORD MOTOR CO.

3. Install the crankshaft timing chain sprocket.

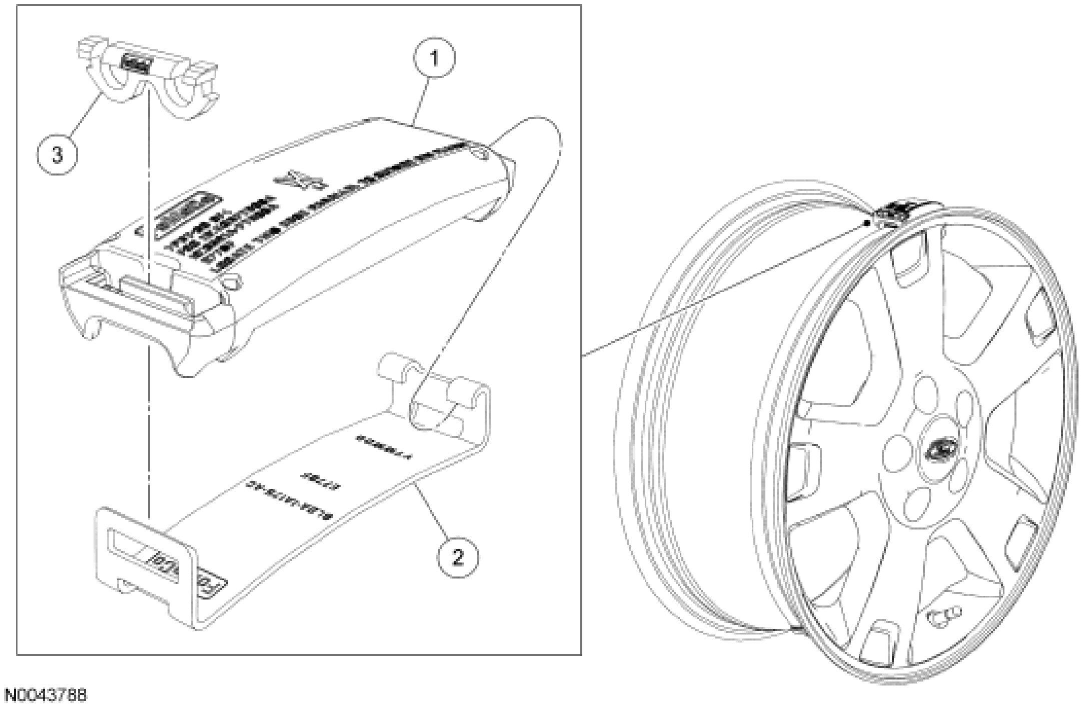

Fig. 187: Locating Crankshaft Timing Chain Sprocket
Courtesy of FORD MOTOR CO.

4. Install the primary timing chain with the colored links aligned with the timing marks on the VCT assemblies and the crankshaft sprocket.

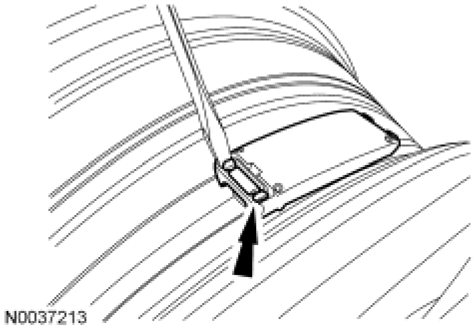

Fig. 188: Aligning Timing Marks On VCT Assemblies & Crankshaft Sprocket
Courtesy of FORD MOTOR CO.

5. Install the LH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

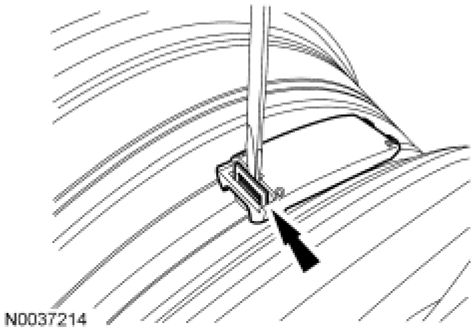

Fig. 189: Locating Lower LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

6. Install the primary timing chain tensioner arm.

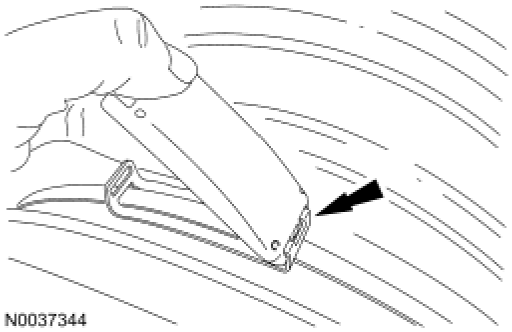

Fig. 190: Locating Primary Timing Chain Tensioner Arm
Courtesy of FORD MOTOR CO.

7. Reset the primary timing chain tensioner.
    - Rotate the lever counterclockwise.

- Using a soft-jawed vise, compress the plunger.
- Align the hole in the lever with the hole in the tensioner housing.
- Install a suitable lockpin.

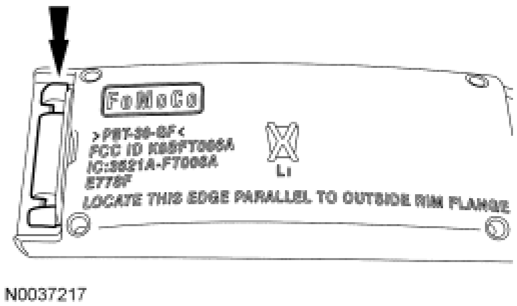

Fig. 191: Compressing Plunger Using A Soft-Jawed Vise
Courtesy of FORD MOTOR CO.

NOTE: It may be necessary to rotate the crankshaft slightly to remove slack from the timing chain and install the tensioner.

8. Install the primary tensioner and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).
    - Remove the lockpin.

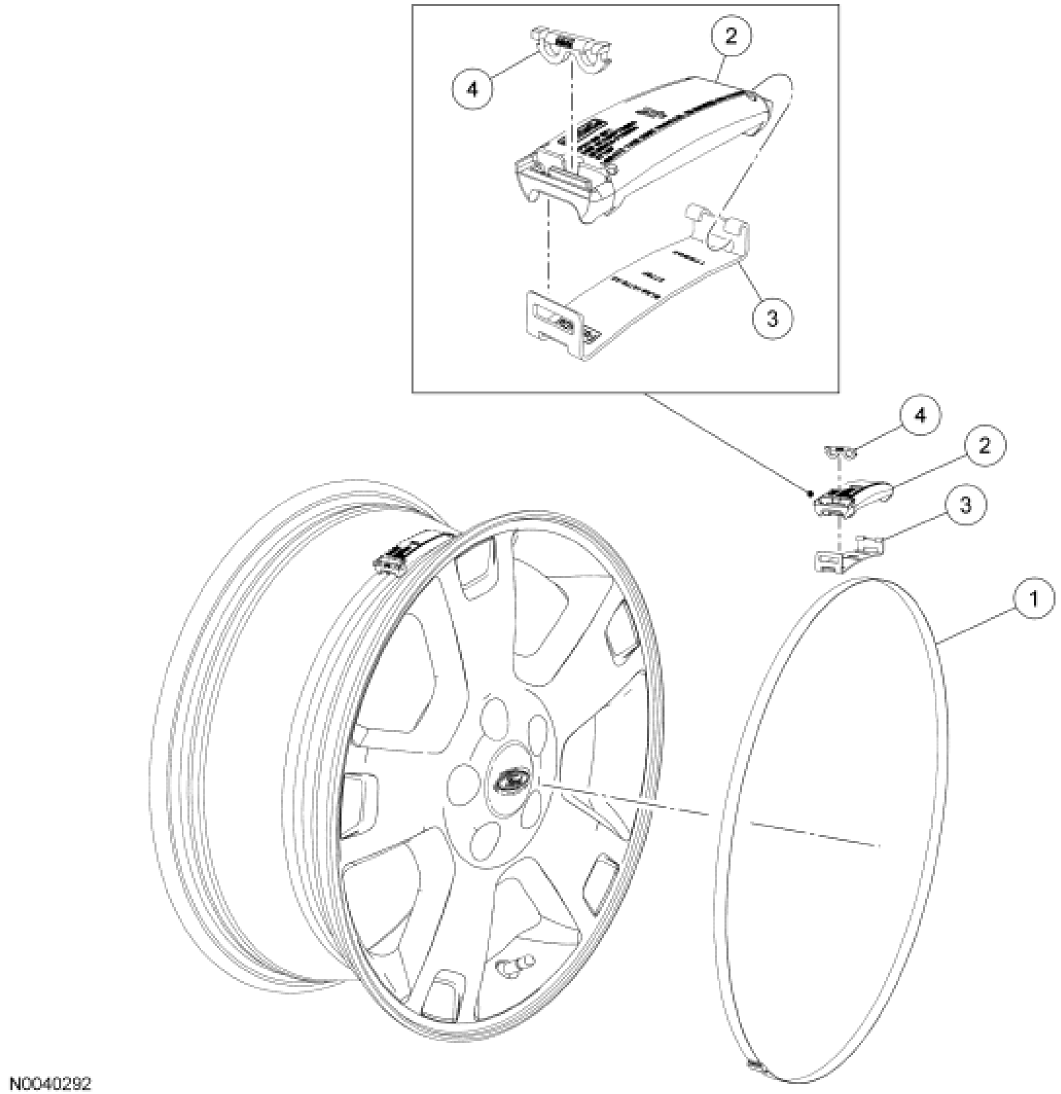

Fig. 192: Locating Primary Tensioner Bolts
Courtesy of FORD MOTOR CO.

9. As a post-check, verify correct alignment of all timing marks.

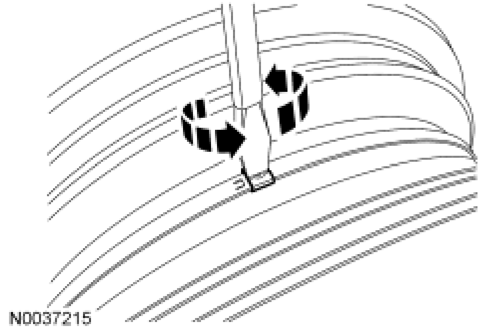

Fig. 193: Verifying Correct Alignment Of All Timing Marks

Courtesy of FORD MOTOR CO.

10. Install new VCT housing seals.

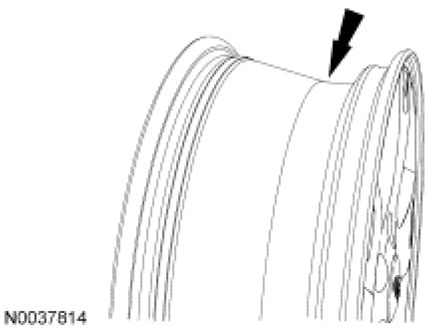

Fig. 194: Locating VCT Housing Seals
Courtesy of FORD MOTOR CO.

NOTE:	**Make sure the dowels on the variable camshaft timing (VCT) housing are fully engaged in the cylinder head prior to tightening the bolts. Failure to follow this process will result in severe engine damage.**

11. Install the LH VCT housing and the 3 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

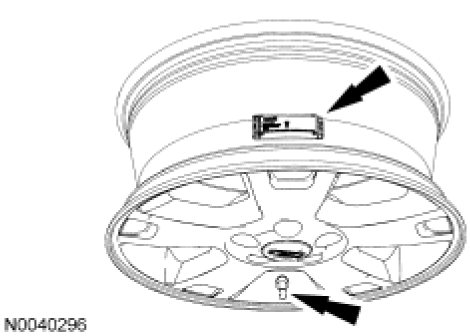

Fig. 195: Identifying LH VCT Housing Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

NOTE:	**Make sure the dowels on the variable camshaft timing (VCT) housing are fully engaged in the cylinder head prior to tightening the bolts. Failure to follow this process will result in severe engine damage.**

12. Install the RH VCT housing and the 3 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

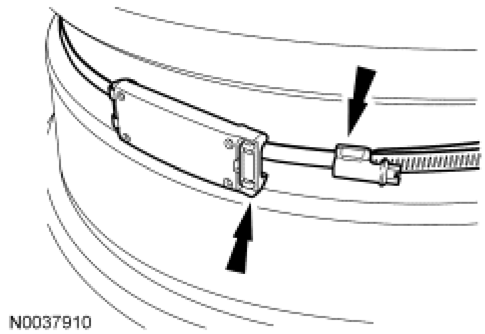

Fig. 196: Identifying RH VCT Housing Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

13. Install the engine front cover. For additional information, refer to **Engine Front Cover**.

14. Disconnect the upper evaporative emissions (EVAP) tube quick connect coupling from the purge valve. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

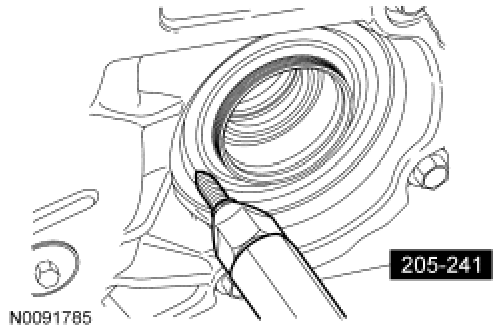

Fig. 202: Locating Upper Evaporative Emissions (EVAP) Tube Quick Connect Coupling
Courtesy of FORD MOTOR CO.

15. Disconnect the upper radiator hose, lower radiator hose and 2 heater hoses from the thermostat housing.

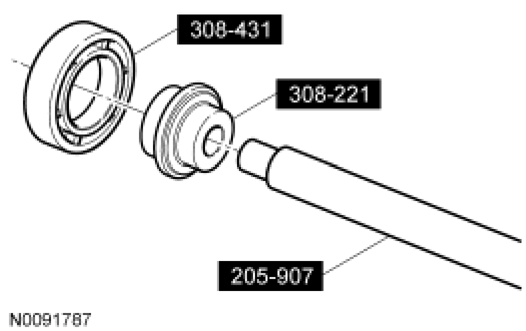

Fig. 203: Locating Upper Radiator Hose, Lower Radiator Hose & Heater Hoses
Courtesy of FORD MOTOR CO.

16. Detach the wiring harness retainer from the transaxle control cable bracket.

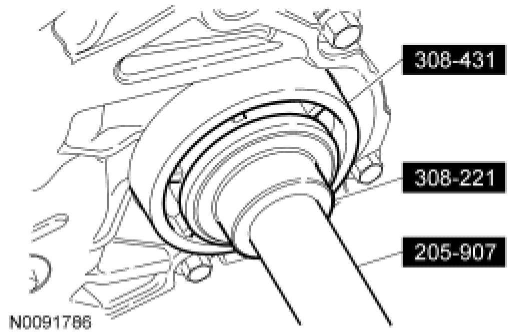

Fig. 204: Locating Wiring Harness Retainer From Transaxle Control Cable Bracket
Courtesy of FORD MOTOR CO.

17. Disconnect the transaxle control cable from the control lever.
    - Detach the control cable from the bracket.

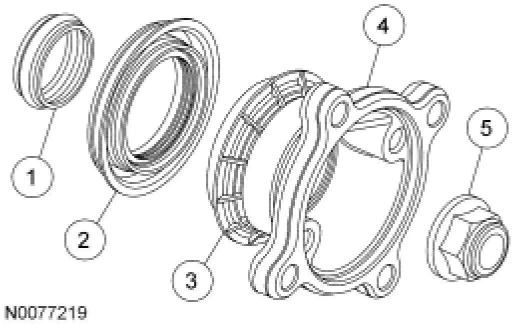

Fig. 205: Locating Transaxle Control Cable From Control Lever
Courtesy of FORD MOTOR CO.

18. Disconnect the transaxle control electrical connector.

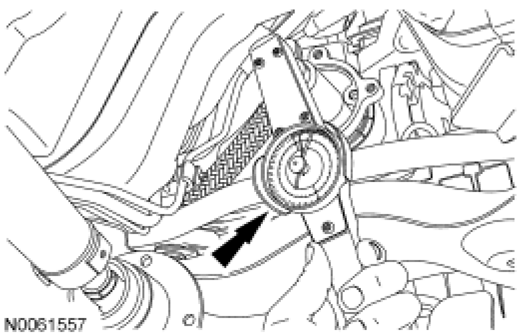

Fig. 206: Identifying Transaxle Control Electrical Connector
Courtesy of FORD MOTOR CO.

19. If equipped, detach the engine block heater harness retainers from the radiator support and the A/C suction tube.

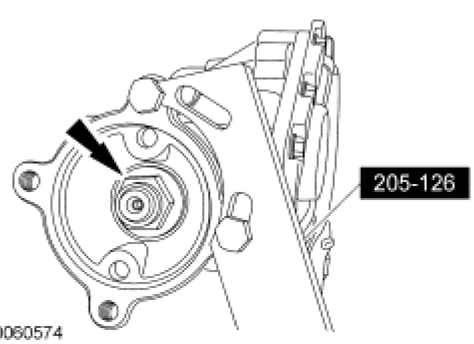

Fig. 207: Identifying Engine Block Heater Harness, Radiator Support, A/C Suction Tube & Engine Wiring Harness
Courtesy of FORD MOTOR CO.

20. Remove the nut and disconnect the A/C pressure tube fitting.
    - Discard the O-ring seal.

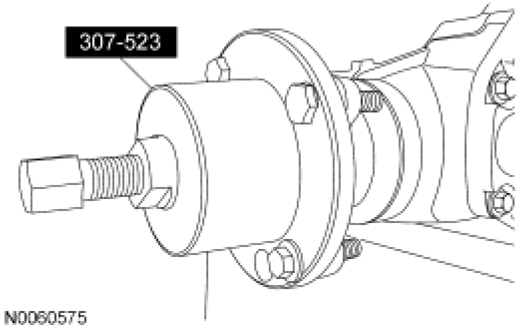

Fig. 208: Identifying A/C Pressure Tube Fitting Nut
Courtesy of FORD MOTOR CO.

21. Remove the safety clip from the A/C fitting.
    - Disconnect the A/C suction tube fitting.

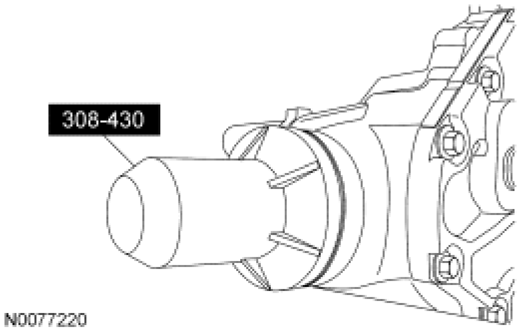

Fig. 209: Identifying Safety Clip On A/C Suction Tube Fitting
Courtesy of FORD MOTOR CO.

22. Disconnect the hose from the power steering reservoir.

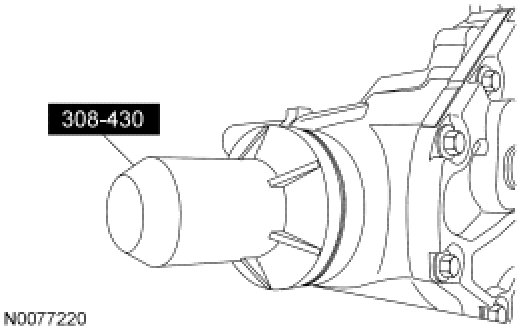

Fig. 210: Disconnecting Hose From Power Steering Reservoir
Courtesy of FORD MOTOR CO.

23. Disconnect the fuel supply tube. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

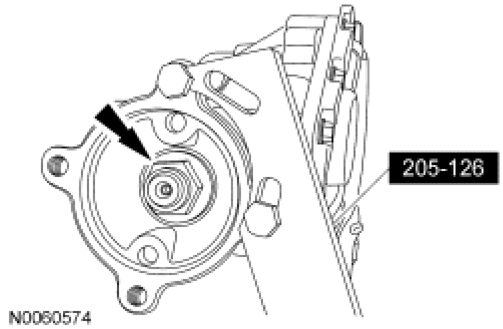

Fig. 211: Identifying Fuel Supply Tube
Courtesy of FORD MOTOR CO.

24. Disconnect the fuel hose routing clip from the transaxle stud and position the fuel hose aside.

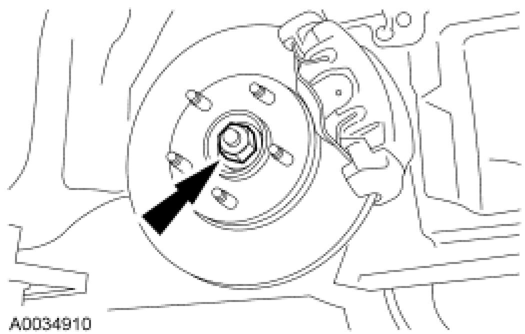

Fig. 212: Identifying Fuel Hose Routing Clip From Transaxle Stud
Courtesy of FORD MOTOR CO.

25. Disconnect the 2 engine wiring harness electrical connectors.
    - Detach the electrical connector from the LH valve cover.

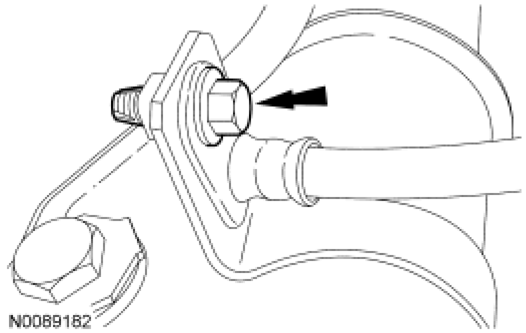

Fig. 213: Identifying Engine Wiring Harness Electrical Connectors
Courtesy of FORD MOTOR CO.

26. Remove the oil level indicator.

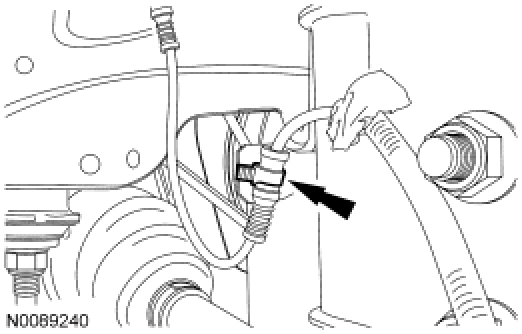

Fig. 214: Identifying Oil Level Indicator
Courtesy of FORD MOTOR CO.

27. Detach the wiring harness retainer from the RH valve cover stud bolt.

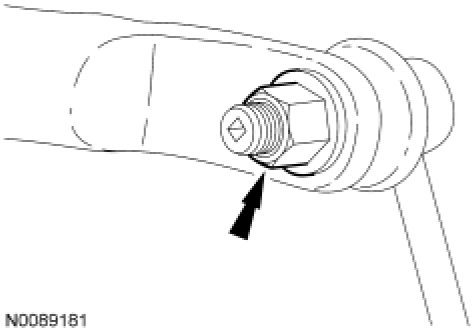

Fig. 215: Identifying Wiring Harness Retainer From RH Valve Cover Stud Bolt
Courtesy of FORD MOTOR CO.

28. Remove the bolt and the ground wire from the engine front cover.

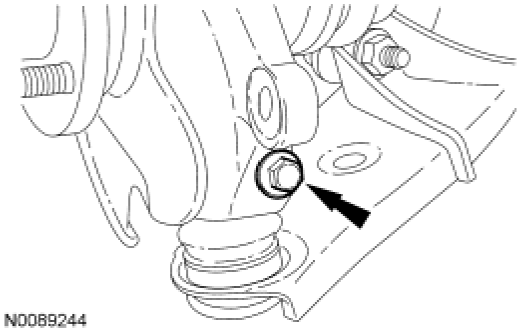

Fig. 216: Removing/Installing Bolt & Ground Wire From Engine Front Cover
Courtesy of FORD MOTOR CO.

29. Remove the nut, the ground wire and the radio interference capacitor wire from the engine front cover stud.

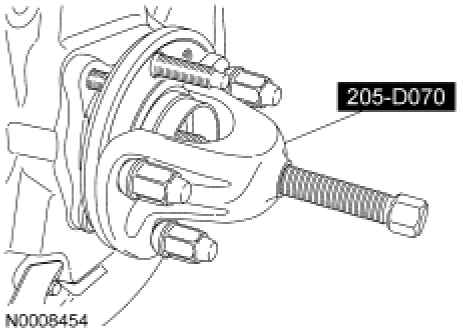

Fig. 217: Removing/installing Nut, Ground Wire & Radio Interference Capacitor Wire From Engine Front Cover Stud
Courtesy of FORD MOTOR CO.

30. Loosen the exhaust flexible pipe clamp and disconnect the 2 exhaust hangers.

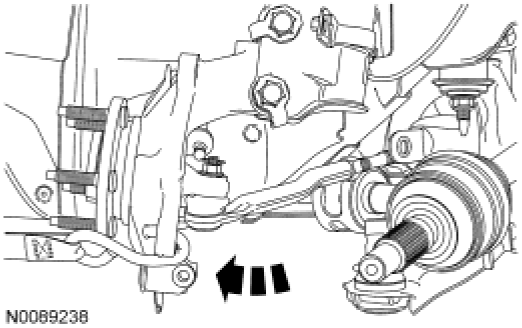

Fig. 218: Locating Exhaust Flexible Pipe Clamp & Exhaust Hangers
Courtesy of FORD MOTOR CO.

31. Remove the 4 nuts and the exhaust flexible pipe and Y-pipe as an assembly.
    - Discard the nuts and the gasket.

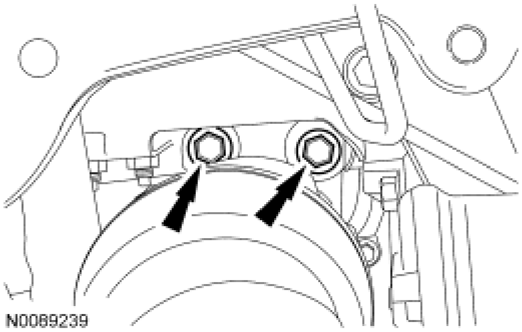

Fig. 219: Locating Exhaust Flexible Pipe, Y-Pipe & Nuts
Courtesy of FORD MOTOR CO.

32. Remove the 3 pin-type retainers, the 7 screws and the radiator splash shield.

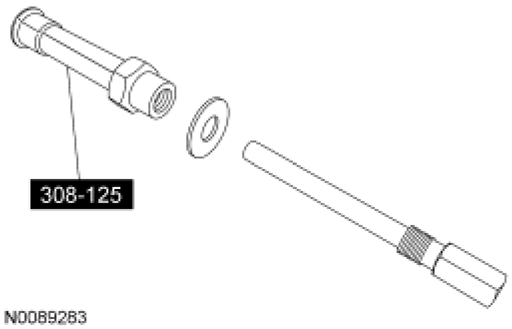

Fig. 220: Locating Push Pin Fasteners & Front Splash Shield Screws
Courtesy of FORD MOTOR CO.

33. Remove the LH inner splash shield. For additional information, refer to **FRONT END BODY PANELS** article.
34. Remove the 2 secondary latches from the transmission fluid cooler tubes.

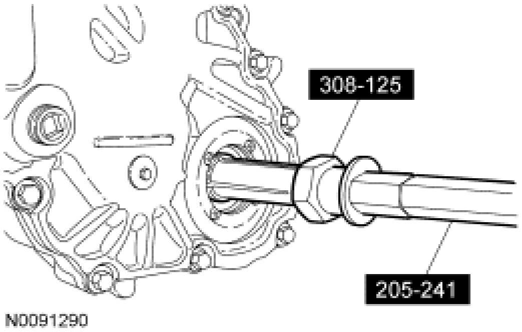

Fig. 221: Locating Secondary Latches On Transmission Fluid Cooler Tubes
Courtesy of FORD MOTOR CO.

35. Using the special tool, disconnect the transmission cooling tubes.

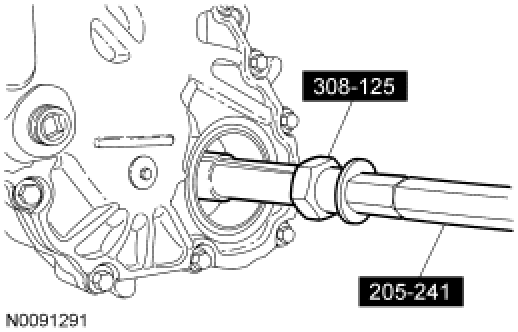

Fig. 222: Disconnecting Transmission Cooling Tubes Using Special Tool (307-569)
Courtesy of FORD MOTOR CO.

36. Remove the 4 oil pan-to-transaxle bolts.

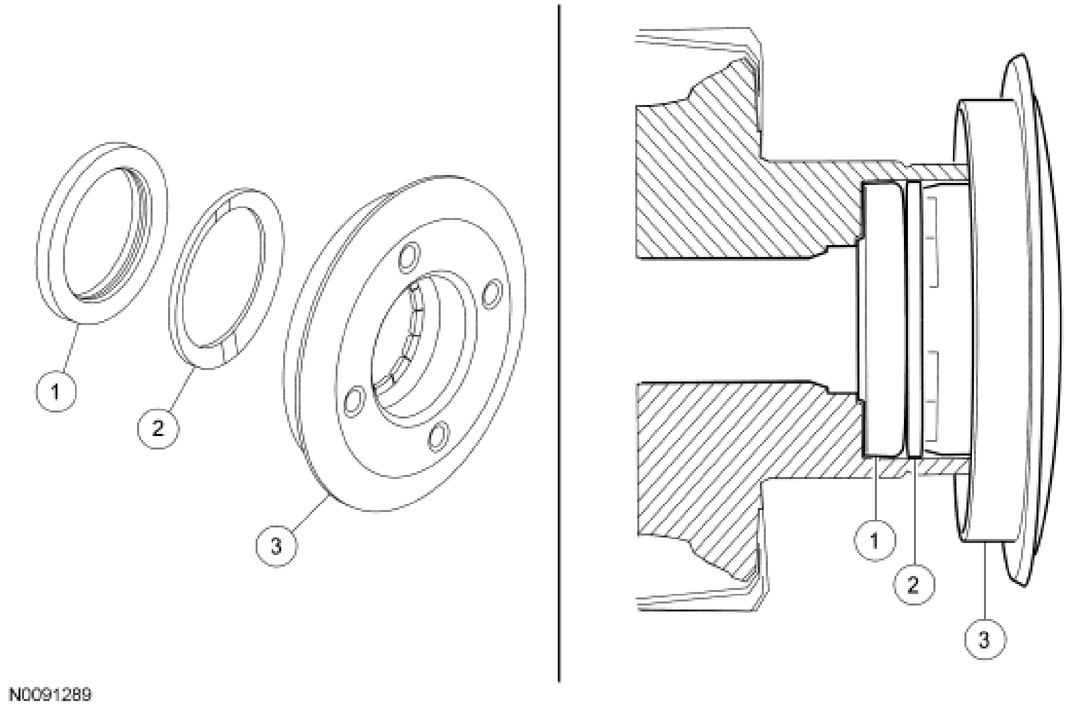

Fig. 223: Locating Oil Pan-To-Transaxle Bolts
Courtesy of FORD MOTOR CO.

37. Remove the 2 fasteners and the inspection cover.

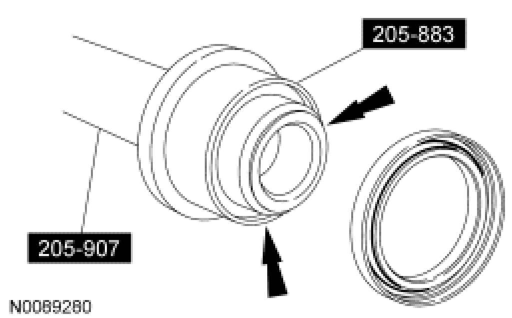

Fig. 224: Locating Oil Fasteners On Inspection Cover
Courtesy of FORD MOTOR CO.

38. Remove and discard the 3 torque converter bolts.

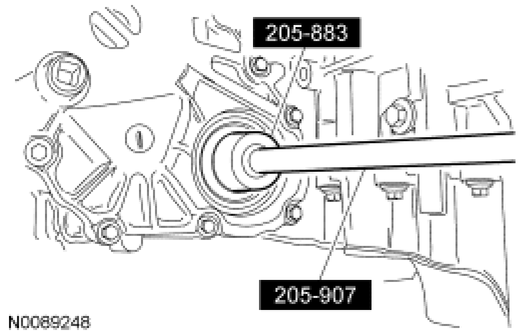

Fig. 225: Locating Torque Converter Bolts
Courtesy of FORD MOTOR CO.

39. Remove the drain plug and drain the engine oil.
    - Install the drain plug and tighten to 27 Nm (20 lb-ft).

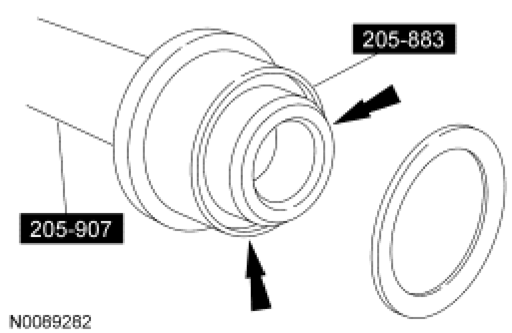

Fig. 226: Locating Drain Plug
Courtesy of FORD MOTOR CO.

40. Remove and discard the engine oil filter.

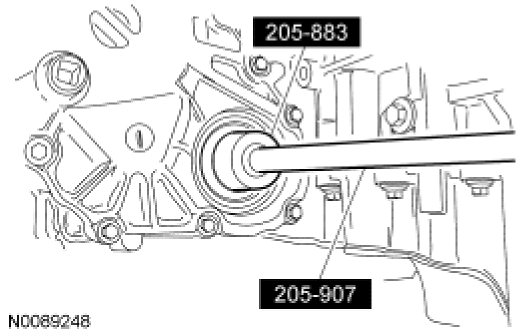

Fig. 227: Identifying Engine Oil Filter
Courtesy of FORD MOTOR CO.

41. Remove the power steering cooler bracket bolt from the RH side of the subframe.

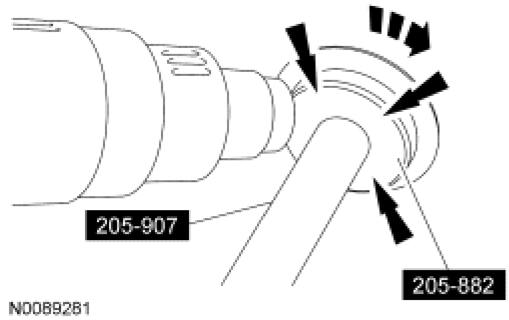

Fig. 228: Identifying Power Steering Cooler Bracket Bolt
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

NOTE: **Index-mark the driveshaft for installation.**

42. Remove the 4 bolts and support the driveshaft with a length of mechanic's wire.

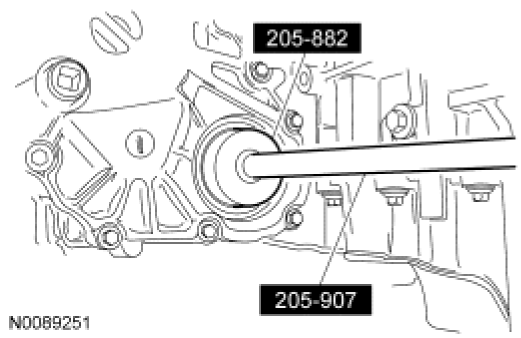

Fig. 229: Locating Driveshaft Aside Bolts
Courtesy of FORD MOTOR CO.

All vehicles

43. Remove and discard the RH front halfshaft nut.

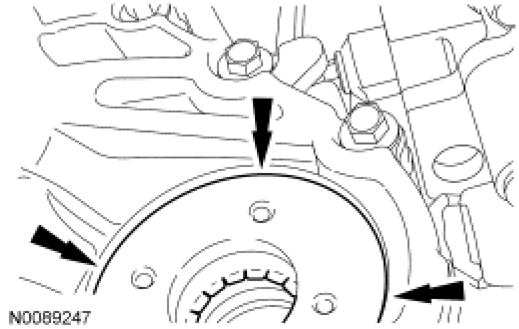

Fig. 230: Locating RH Front Halfshaft Nut

Courtesy of FORD MOTOR CO.

44. Remove the 2 nuts and the roll restrictor heat shield.

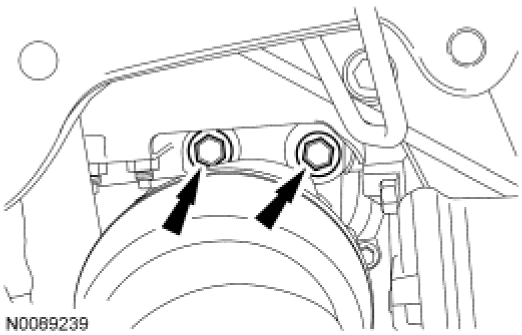

Fig. 231: Locating Roll Restrictor Heat Shield Nuts
Courtesy of FORD MOTOR CO.

45. Remove the engine roll restrictor-to-subframe through bolt.

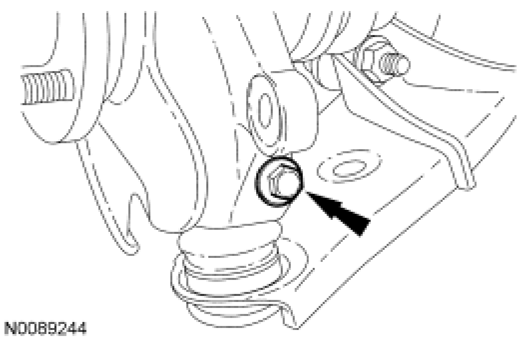

Fig. 232: Locating Roll Restrictor-To-Subframe Bolt
Courtesy of FORD MOTOR CO.

46. Remove and discard the power steering pressure (PSP) tube-to-pump banjo bolt and the 2 seals.

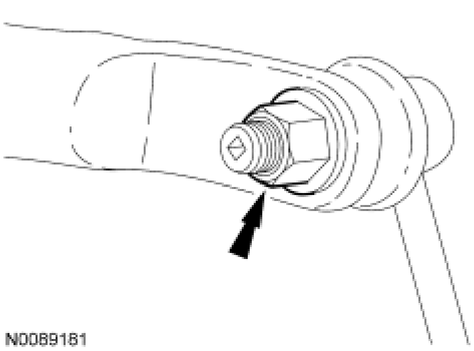

Fig. 233: Locating Power Steering Pressure (PSP) Tube-To-Pump Banjo Bolt & Seals
Courtesy of FORD MOTOR CO.

CAUTION: Do not allow the intermediate shaft to rotate while it is disconnected from the gear or damage to the clockspring can occur. If there is evidence that the intermediate shaft has rotated, the clockspring must be removed and recentered. For additional information, refer to SUPPLEMENTAL RESTRAINT SYSTEM article.

47. Remove and discard the steering intermediate shaft bolt.
    - Separate the steering intermediate shaft from the steering gear.

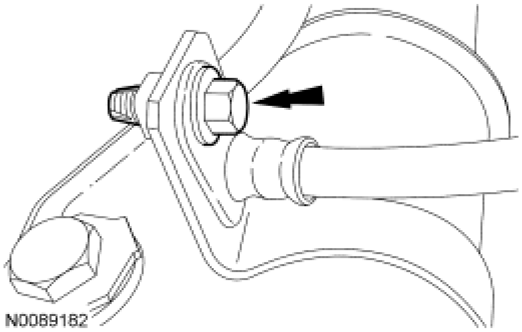

Fig. 234: Identifying Steering Intermediate Shaft Bolt
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

48. Remove and discard the cotter pins and tie-rod end nuts.
    - Using the special tool, separate the tie-rod ends from the wheel knuckles.

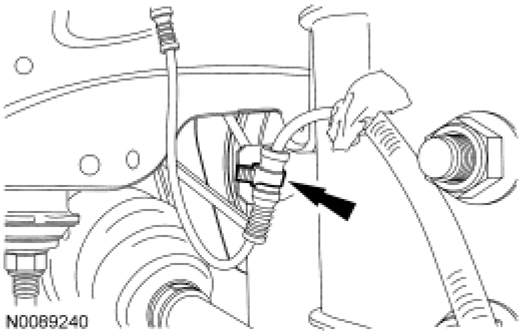

Fig. 235: Separating Tie-Rod Ends From Wheel Knuckles Using Special Tool (211-105)
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

49. Remove the 2 stabilizer link-to-lower control arm nuts and separate the stabilizer bar links from the lower control arms.

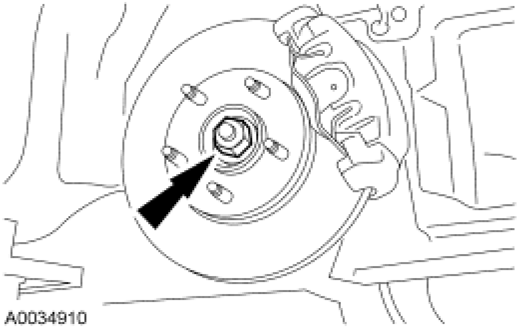

Fig. 236: Locating Stabilizer Bar Link Nut
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

50. Remove the lower control arm-to-knuckle pinch bolts and separate the lower control arms from the knuckles.

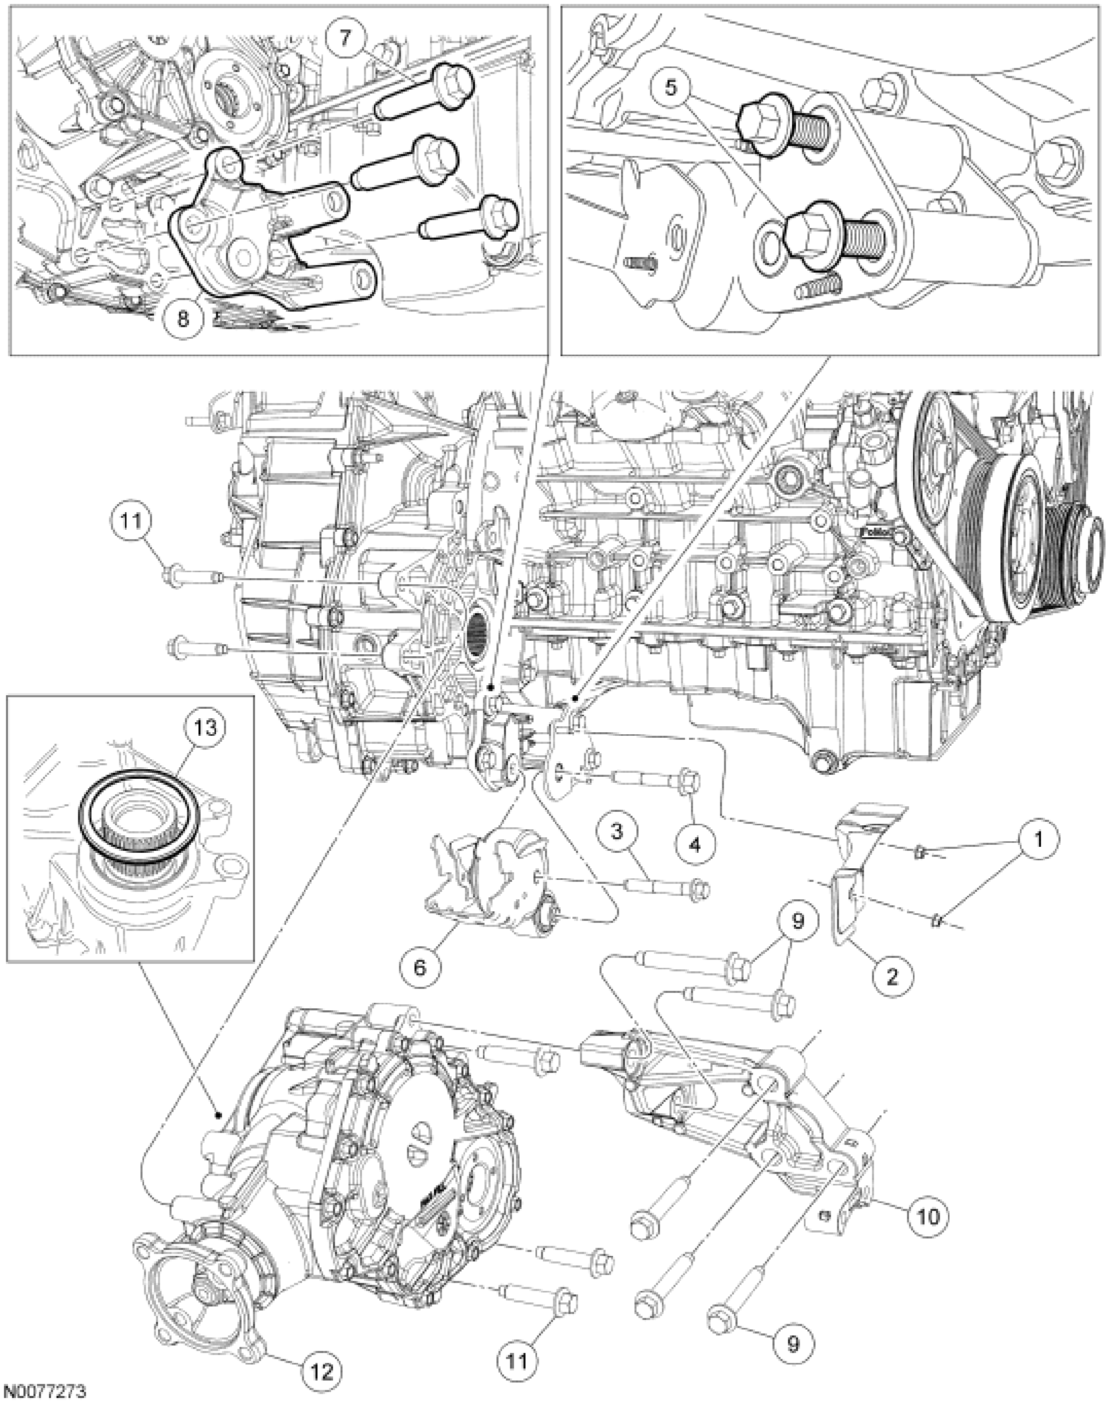

Fig. 237: Locating Ball Joint Pinch Bolt
Courtesy of FORD MOTOR CO.

51. Remove the 3 RH subframe-to-lower bumper nuts.

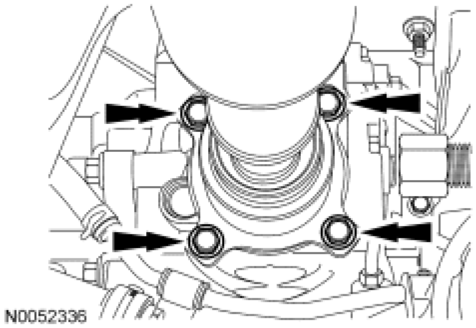

Fig. 238: Locating RH Subframe-To-Lower Bumper Nuts
Courtesy of FORD MOTOR CO.

52. Remove the 3 LH subframe-to-lower bumper nuts and separate the lower bumper from the subframe.

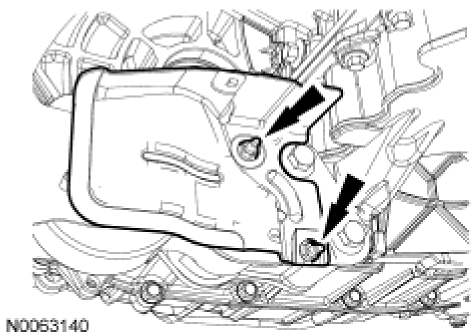

Fig. 239: Locating LH Subframe-To-Lower Bumper Nuts
Courtesy of FORD MOTOR CO.

53. Position the special tool under the subframe assembly.

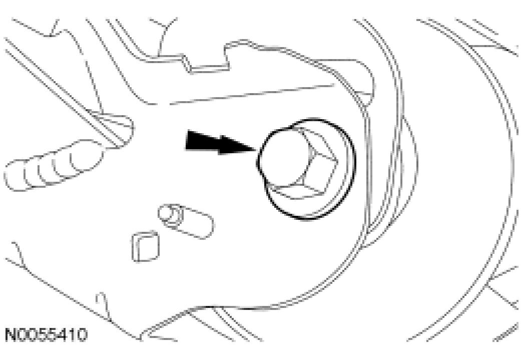

Fig. 240: Positioning Special Tool (014-00765) Under Subframe Assembly
Courtesy of FORD MOTOR CO.

54. Remove the 2 nuts, 4 bolts and the subframe support brackets.

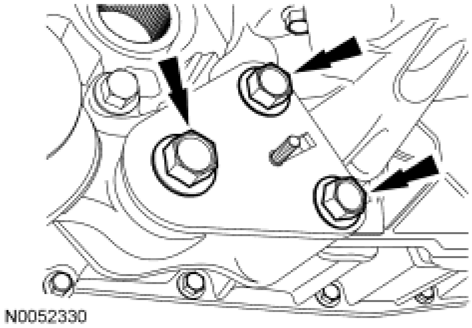

Fig. 241: Locating Subframe Support Brackets, Nuts & Bolts
Courtesy of FORD MOTOR CO.

55. Remove the 2 front subframe nuts.

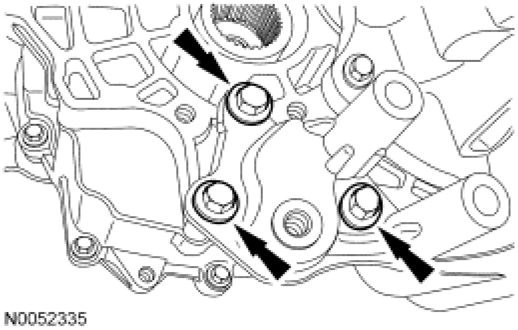

Fig. 242: Locating Front Subframe Nuts
Courtesy of FORD MOTOR CO.

56. Remove the 2 middle subframe nuts.

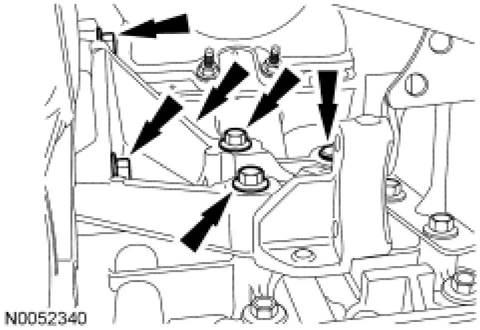

Fig. 243: Locating Middle Subframe Nuts
Courtesy of FORD MOTOR CO.

57. Using the special tool, lower the subframe assembly from the vehicle.

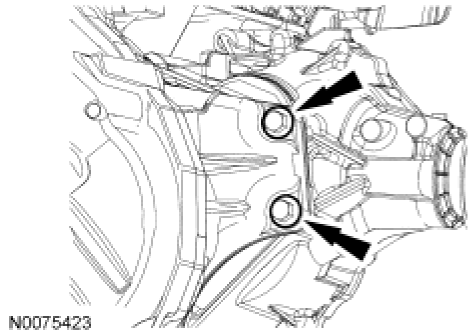

Fig. 244: Positioning Special Tool (014-00765) Under Subframe Assembly
Courtesy of FORD MOTOR CO.

58. If equipped, disconnect the oil cooler coolant hoses.

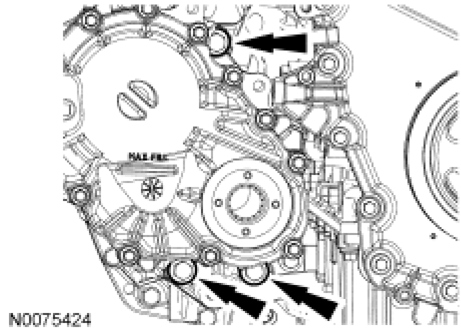

Fig. 245: Locating Oil Cooler Coolant Hoses
Courtesy of FORD MOTOR CO.

59. Using the special tools, separate the LH halfshaft from the transaxle and support the halfshaft with a length of mechanic's wire.

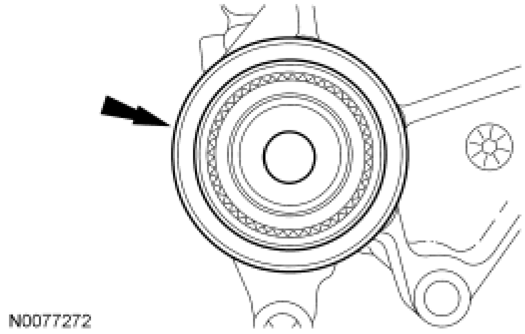

Fig. 246: Separating LH Halfshaft From Transaxle Using Special Tools (100-001), (205-243) & (205-290)
Courtesy of FORD MOTOR CO.

60. Remove the 2 RH catalytic converter support bracket bolts.

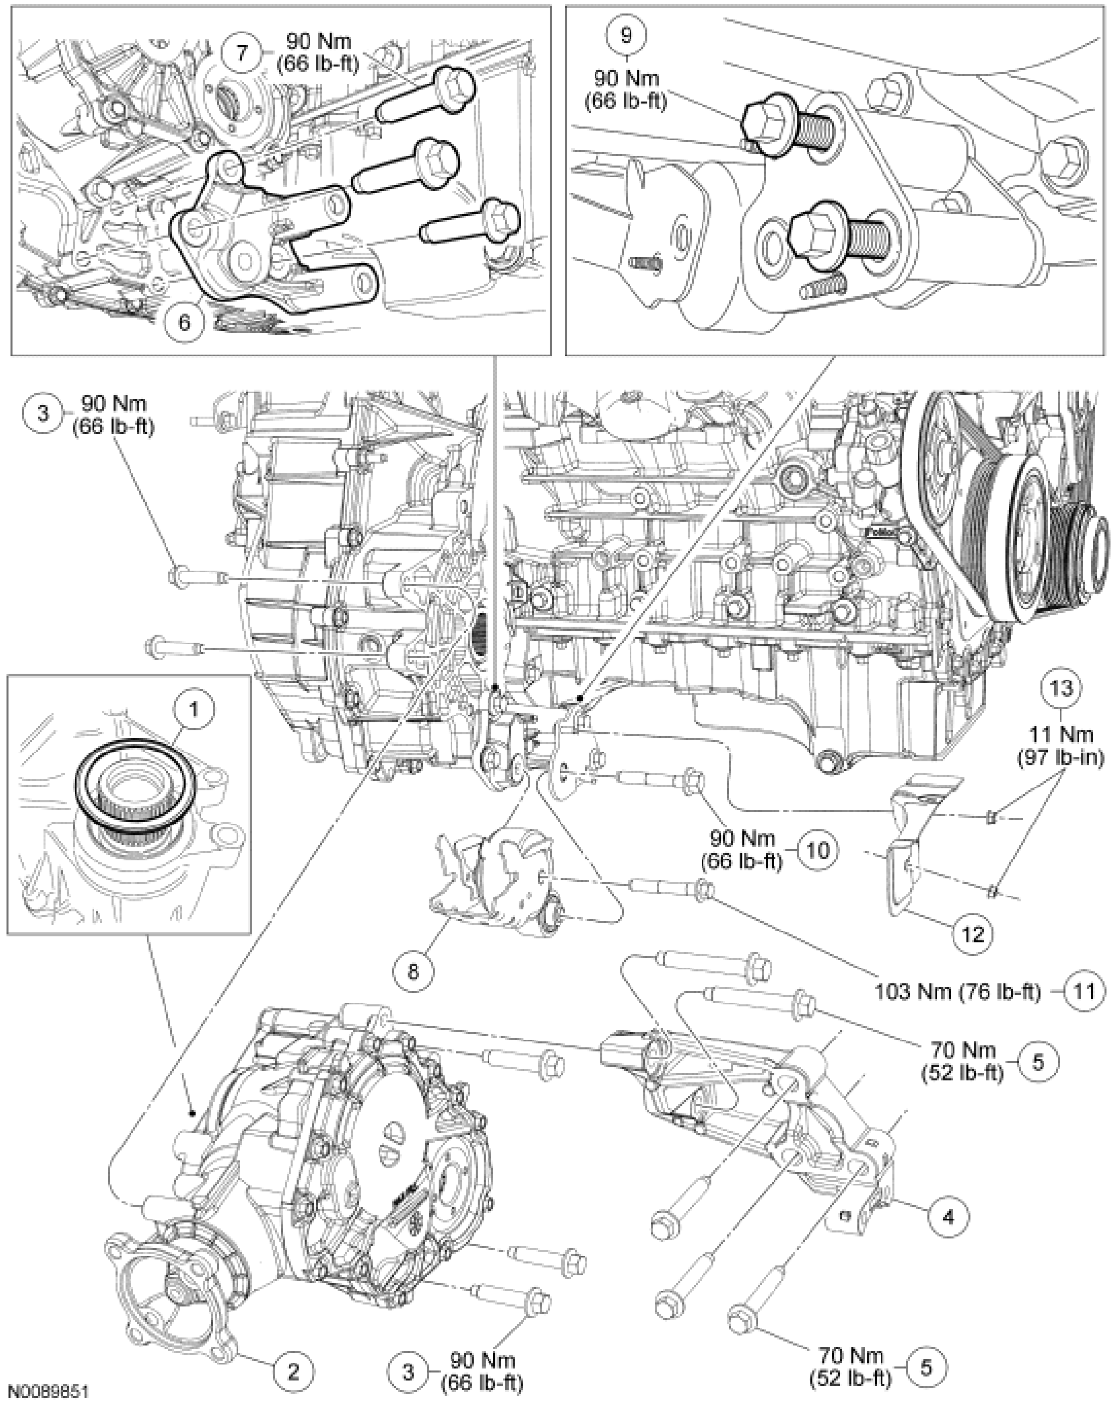

Fig. 247: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

61. Using the special tool, separate the RH halfshaft from the hub.

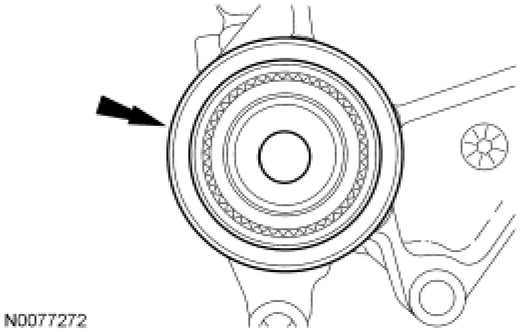

Fig. 248: Separating RH Halfshaft From Hub Using Special Tool (205-D070)
Courtesy of FORD MOTOR CO.

Front wheel drive (FWD) vehicles

62. Remove the bolt, the nut and the RH catalytic converter support bracket.

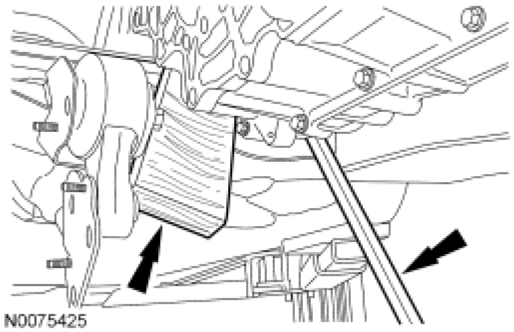

Fig. 249: Identifying RH Catalytic Converter Support Bracket & Bolts
Courtesy of FORD MOTOR CO.

63. Remove the 2 stud bolts and the RH halfshaft/intermediate shaft assembly.

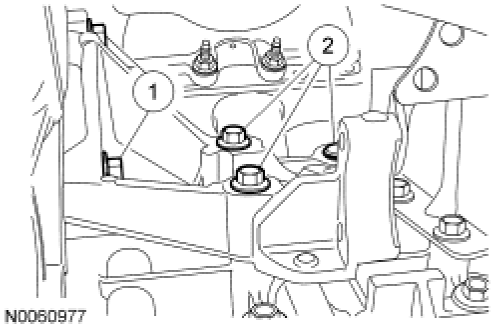

Fig. 250: Locating Stud Bolts & RH Halfshaft/Intermediate Shaft Assembly
Courtesy of FORD MOTOR CO.

AWD vehicles

64. Remove the 2 RH halfshaft bearing support bracket bolts and the RH halfshaft/intermediate shaft assembly.

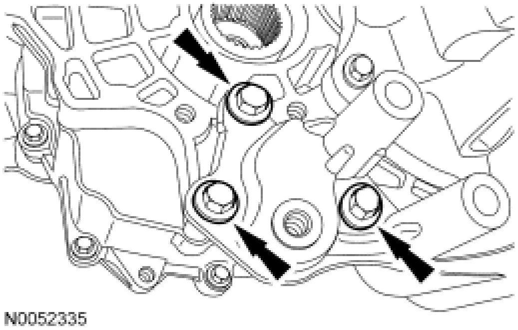

Fig. 251: Locating RH Halfshaft Bearing Support Bracket Bolts
Courtesy of FORD MOTOR CO.

65. Disconnect the RH catalyst monitor electrical connector.

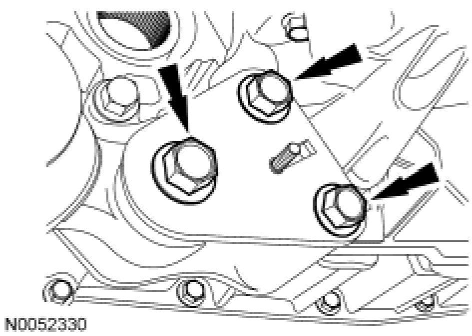

Fig. 252: Locating RH Catalyst Monitor Electrical Connector
Courtesy of FORD MOTOR CO.

66. Remove the 4 nuts and the RH catalytic converter.
    - Discard the gasket and the nuts.

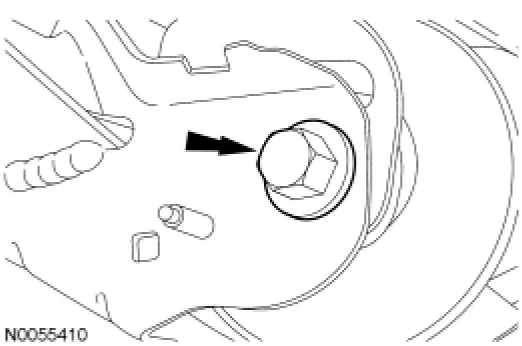

Fig. 253: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

67. Remove the 5 bolts and the power transfer unit (PTU) support bracket.

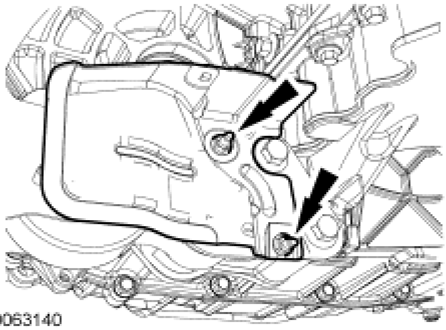

Fig. 254: Locating Power Transfer Unit (PTU) Support Bracket & Bolts
Courtesy of FORD MOTOR CO.

68. Remove the 5 bolts and the PTU.

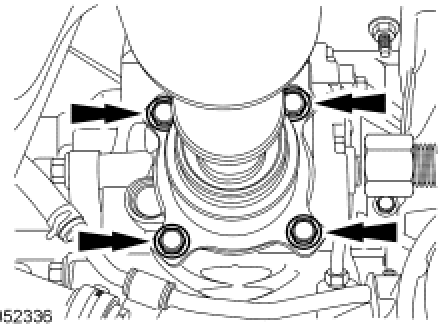

Fig. 255: Identifying PTU & Bolts
Courtesy of FORD MOTOR CO.

All vehicles

NOTE: **Position a block of wood under the transaxle.**

69. Install the special tools.

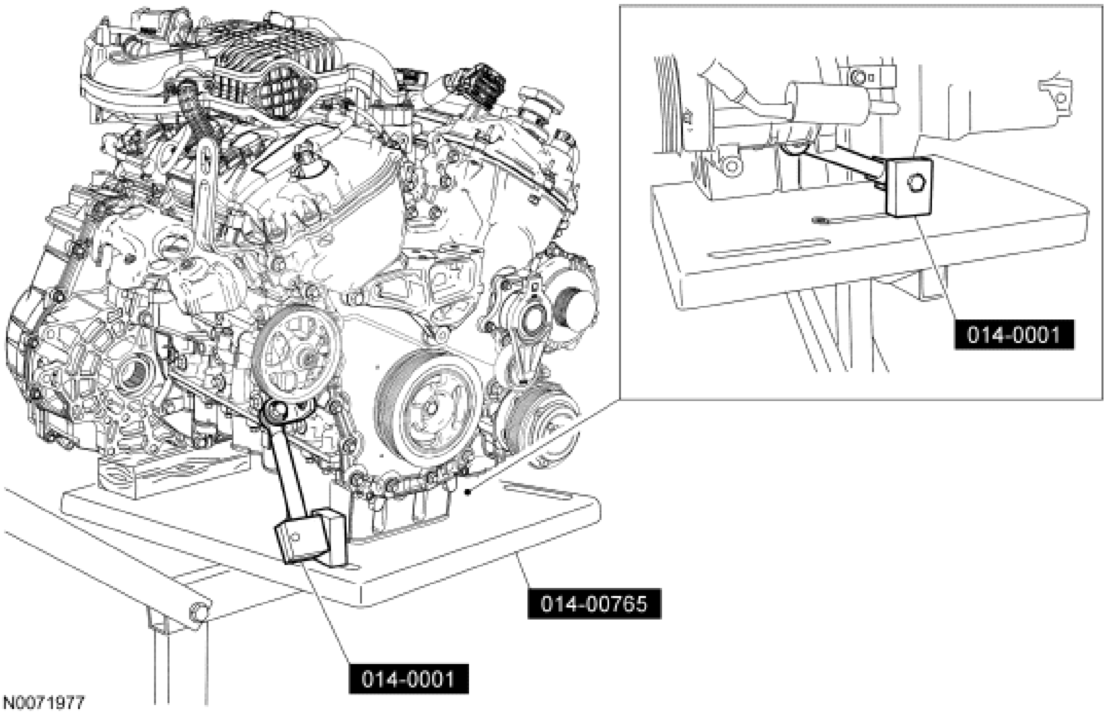

Fig. 256: Positioning A Block Of Wood Under Transaxle Using Special Tools (014-0001) & (014-00765)
Courtesy of FORD MOTOR CO.

70. Remove the transaxle support insulator through bolt and nut.

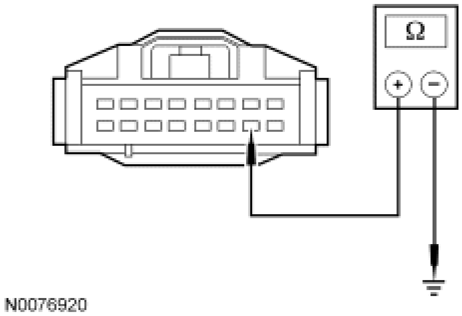

Fig. 257: Identifying Transaxle Support Insulator Bolt
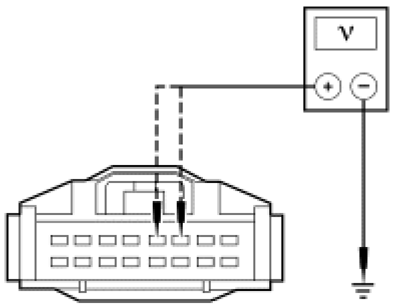
Courtesy of FORD MOTOR CO.

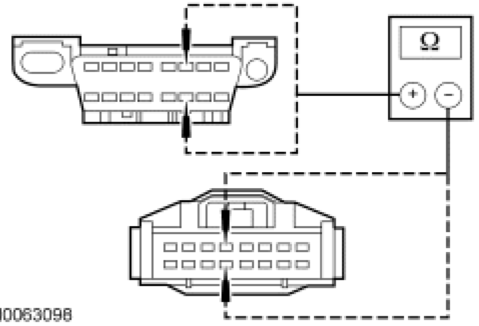
71. Remove the 3 nuts, the bolt and the transaxle support insulator bracket.



N0076919

Fig. 258: Identifying Transaxle Support Insulator Bracket, Nuts & Bolts
Courtesy of FORD MOTOR CO.

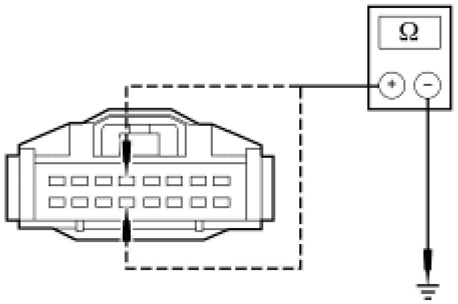
72. Remove the nut, bolt and engine mount brace.



N0063098

Fig. 259: Locating Nut, Bolt & Engine Mount Brace
Courtesy of FORD MOTOR CO.

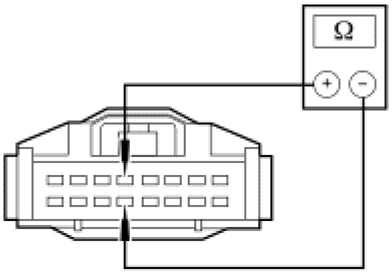
73. Remove the 4 engine mount nuts.



N0063097

Fig. 260: Locating Engine Mount Nuts
Courtesy of FORD MOTOR CO.

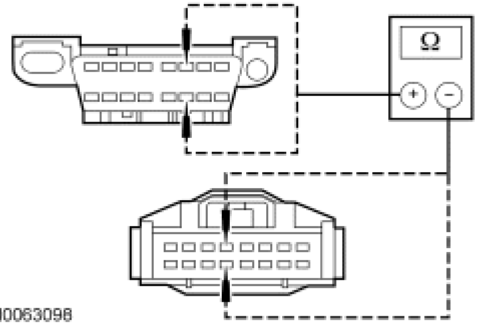
74. Remove the 3 bolts and the engine mount.



N0063099

Fig. 261: Locating Engine Mount Bolts
Courtesy of FORD MOTOR CO.

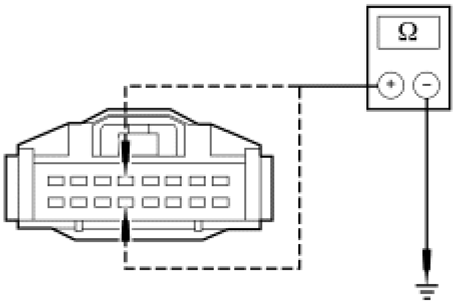
75. Lower the engine and transaxle assembly from the vehicle.
76. Position the starter cable boot back and remove the 2 nuts.
    - Detach the 2 wire terminals from the starter.



N0063098

Fig. 262: Identifying Wire Terminals From Starter
Courtesy of FORD MOTOR CO.

77. Disconnect the wiring harness retainer from the starter motor stud bolt.



N0063097

Fig. 263: Identifying Wiring Harness Retainer From Starter Motor Stud Bolt
Courtesy of FORD MOTOR CO.

78. Remove the bolt, stud bolt and the starter.

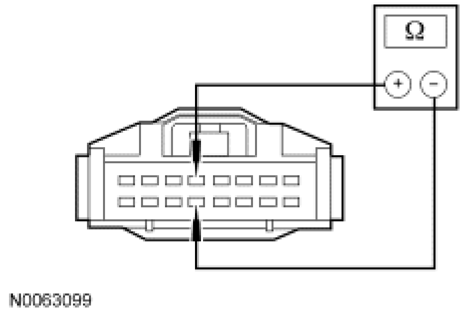


Fig. 264: Identifying Bolt, Stud Bolt & Starter
Courtesy of FORD MOTOR CO.

79. Install the special tool on the LH cylinder head.

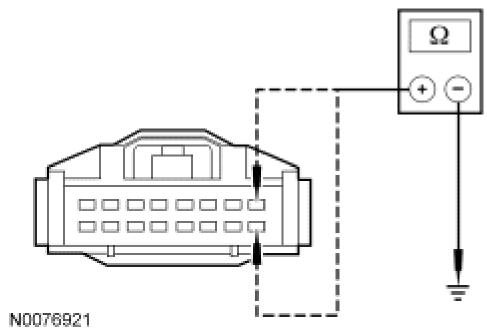

Fig. 265: Installing Special Tool (303-1245) On LH Cylinder Head
Courtesy of FORD MOTOR CO.

80. Using the special tools and a suitable engine crane, remove the engine and transaxle from the lift table.

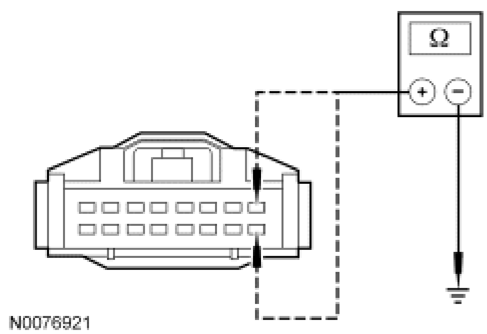

Fig. 266: Removing Engine & Transaxle From Lift Table Using Special Tools (303-D089, 014-00071) & Suitable Engine Crane
Courtesy of FORD MOTOR CO.

81. Remove the 2 engine-to-transaxle bolts.

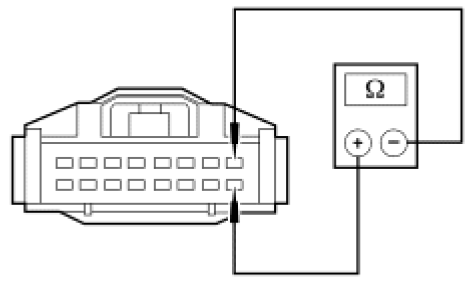

Fig. 267: Locating Engine-To-Transaxle Bolts
Courtesy of FORD MOTOR CO.

82. Remove the 5 transaxle-to-engine bolts.
    - Separate the transaxle from the engine.

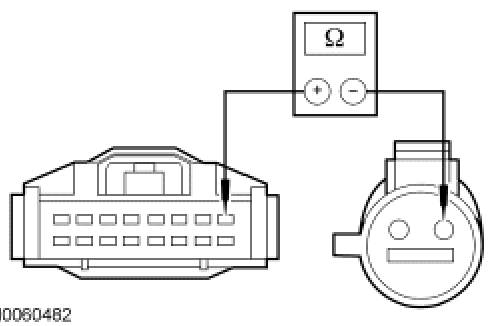

Fig. 268: Locating Transaxle-To-Engine Bolts
Courtesy of FORD MOTOR CO.

CAMSHAFT

Special Tools

Illustration	Tool Name	Tool Number
	3-Jaw Puller	303-D121
	Camshaft Alignment Tool	303-1248

 ST2935A	Disconnect Tool, Transmission Cooler Tube	307-569
 ST1326-A	Handle	205-153 (T80T-4000-W)
 ST1293-A	Powertrain Lift	014-00765
 ST2330-A	Remover, Front Hub	205-D070 (D93P-1175-B) or equivalent
 ST2939-A	Remover, Halfshaft (Extension)	205-243 (T89P-3415-A)
 ST2038-A	Remover, Halfshaft (Plate)	205-290 (T89P-3415-B)

Material

Item	Specification
Motorcraft Metal Surface Prep ZC-31-A	-
Silicone Gasket Remover ZC-30	-

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

All vehicles

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING & LIFTING** article.

2. Recover the A/C system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION & DIAGNOSTICS** article.
3. Release the fuel system pressure. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
4. Drain the engine cooling system. For additional information, refer to **ENGINE COOLING** article.
5. Remove the accessory drive belt and the power steering belt. For additional information, refer to **ACCESSORY DRIVE** article.
6. Disconnect the power steering cooler hose and drain the power steering fluid into a suitable drain pan.

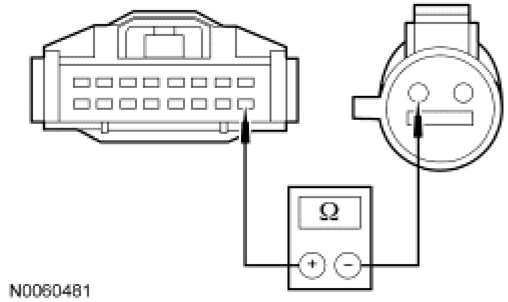

Fig. 269: Identifying Power Steering Cooler Hose
Courtesy of FORD MOTOR CO.

7. Remove the degas bottle. For additional information, refer to **ENGINE COOLING** article.
8. Remove the engine air cleaner and air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION & FILTERING** article.
9. Remove the battery tray. For additional information, refer to **BATTERY, MOUNTING & CABLES** article.
10. Disconnect the battery harness electrical connector.

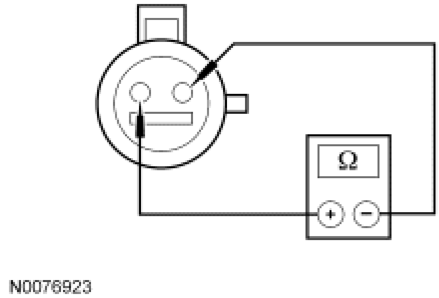

Fig. 270: Identifying Battery Harness Electrical Connector
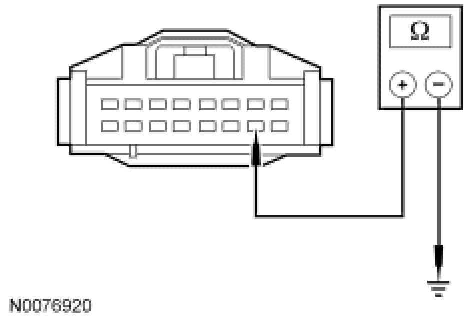
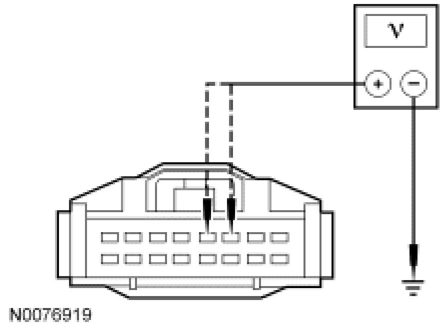
Courtesy of FORD MOTOR CO.

11. Remove the nut and disconnect the power feed from the battery terminal.



<u>Fig. 271: Locating Power Feed To Battery Terminal And Nut</u>
Courtesy of FORD MOTOR CO.

12. Remove the bolt and the ground wire.
    - Detach the 2 wiring harness retainers from the cowl.



<u>Fig. 272: Identifying Wiring Harness Retainers From Cowl</u>
Courtesy of FORD MOTOR CO.

13. Disconnect the vacuum hose from the upper intake manifold.

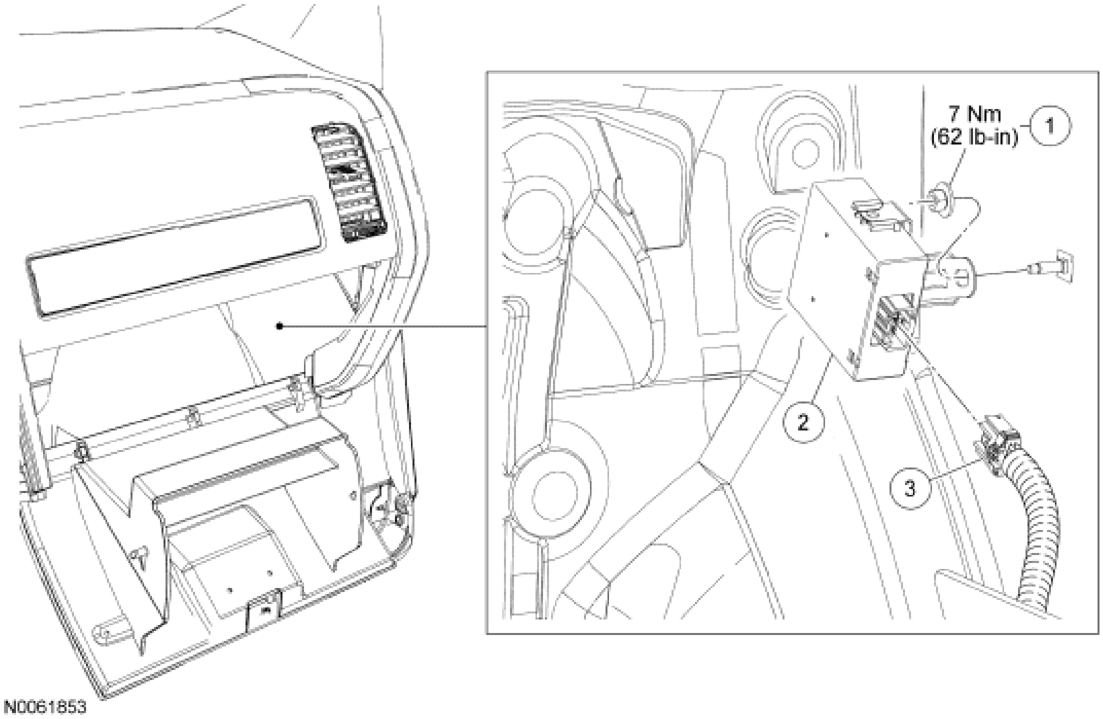


Fig. 273: Identifying Vacuum Hose From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

14. Disconnect the upper evaporative emissions (EVAP) tube quick connect coupling from the purge valve. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

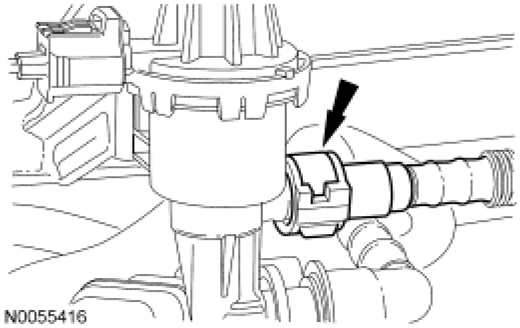

Fig. 274: Locating Upper Evaporative Emissions (EVAP) Tube Quick Connect Coupling
Courtesy of FORD MOTOR CO.

15. Disconnect the upper radiator hose, lower radiator hose and 2 heater hoses from the thermostat housing.

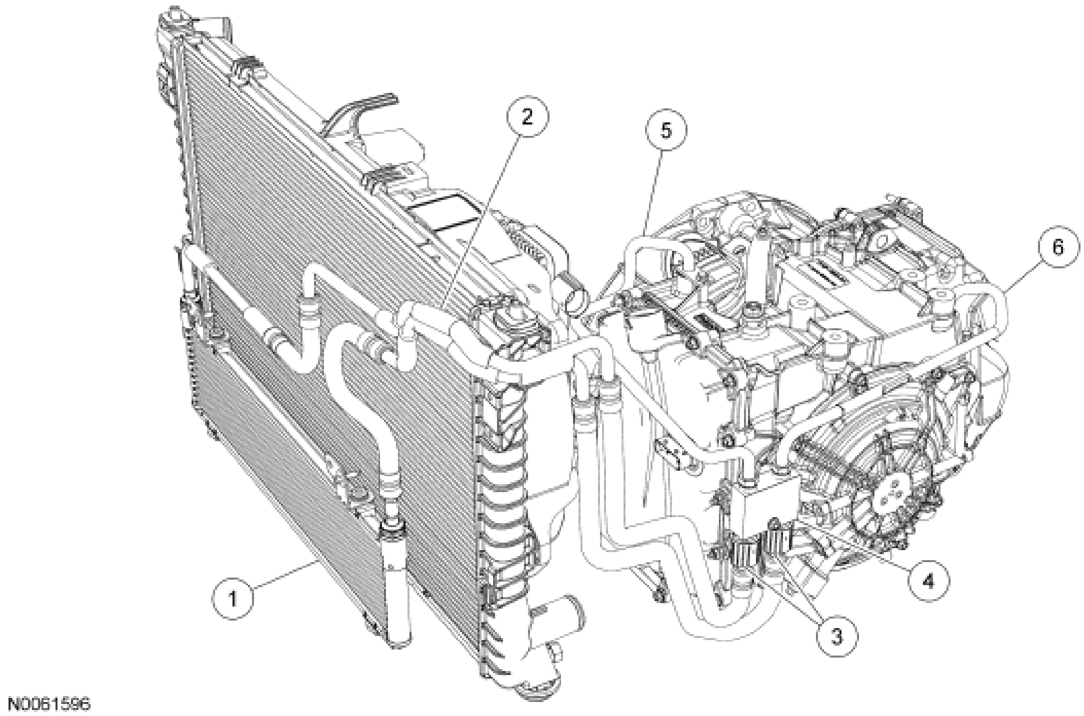

Fig. 275: Locating Upper Radiator Hose, Lower Radiator Hose & Heater Hoses
Courtesy of FORD MOTOR CO.

16. Detach the wiring harness retainer from the transaxle control cable bracket.

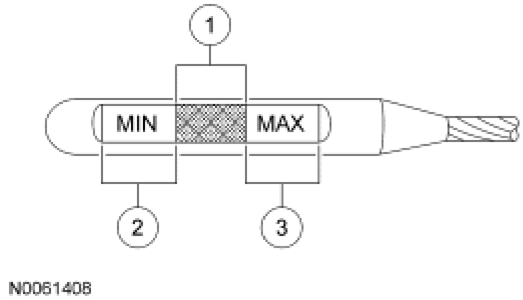

Fig. 276: Locating Wiring Harness Retainer From Transaxle Control Cable Bracket
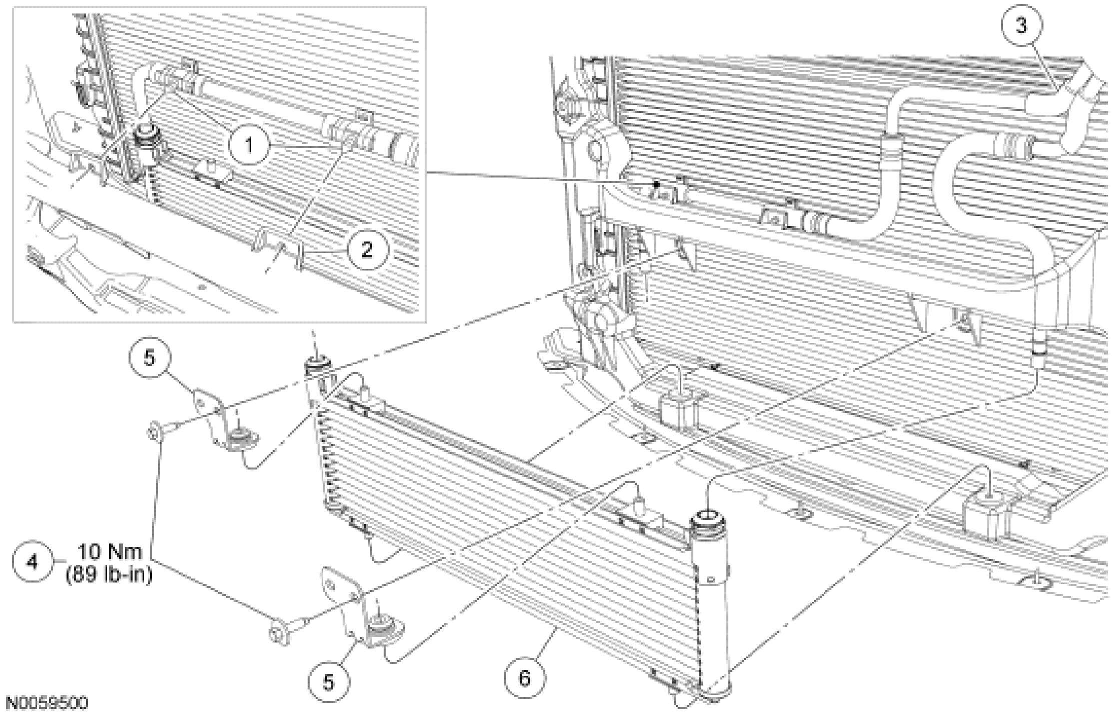
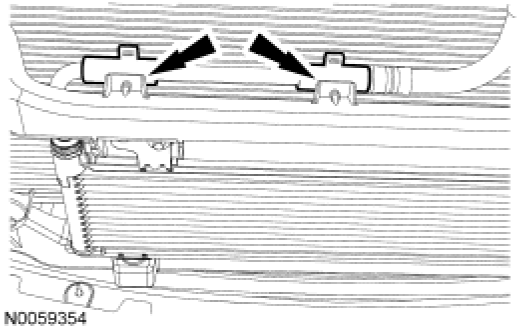
Courtesy of FORD MOTOR CO.

17. Disconnect the transaxle control cable from the control lever.
    - Detach the control cable from the bracket.



<u>Fig. 277: Locating Transaxle Control Cable From Control Lever</u>
Courtesy of FORD MOTOR CO.

18. Disconnect the transaxle control electrical connector.



<u>Fig. 278: Identifying Transaxle Control Electrical Connector</u>
Courtesy of FORD MOTOR CO.

19. If equipped, detach the engine block heater harness retainers from the radiator support and the A/C suction tube.

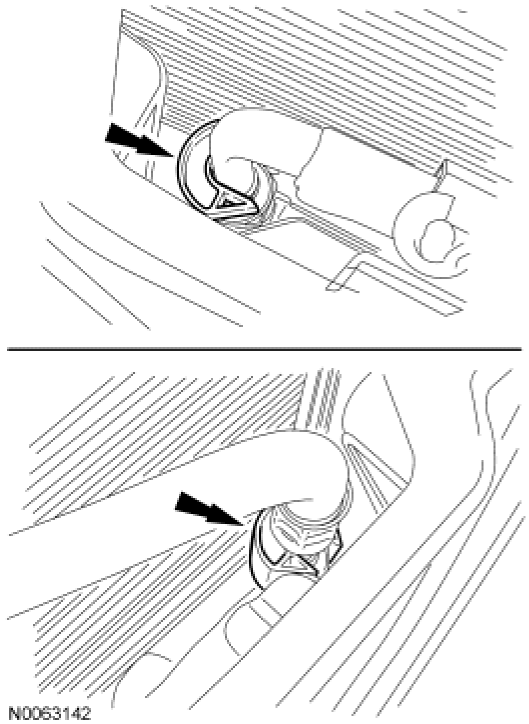


Fig. 279: Identifying Engine Block Heater Harness, Radiator Support, A/C Suction Tube & Engine Wiring Harness
Courtesy of FORD MOTOR CO.

20. Remove the nut and disconnect the A/C pressure tube fitting.
    - Discard the O-ring seal.

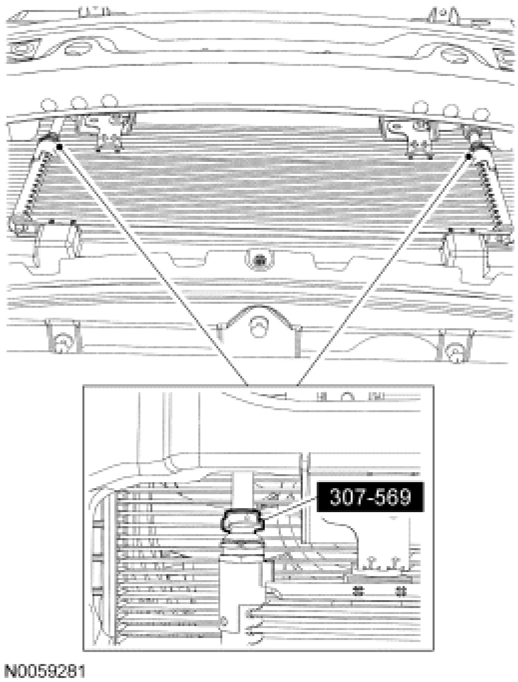

Fig. 280: Identifying A/C Pressure Tube Fitting Nut
Courtesy of FORD MOTOR CO.

21. Remove the safety clip from the A/C fitting.
    - Disconnect the A/C suction tube fitting.

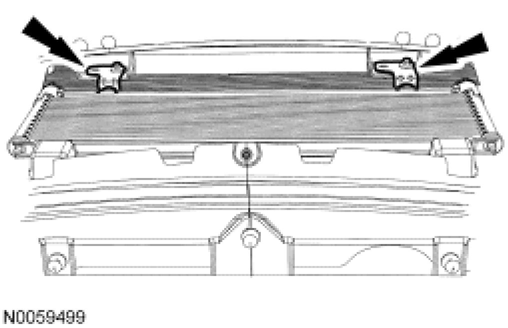

Fig. 281: Identifying Safety Clip On A/C Suction Tube Fitting
Courtesy of FORD MOTOR CO.

22. Disconnect the hose from the power steering reservoir.

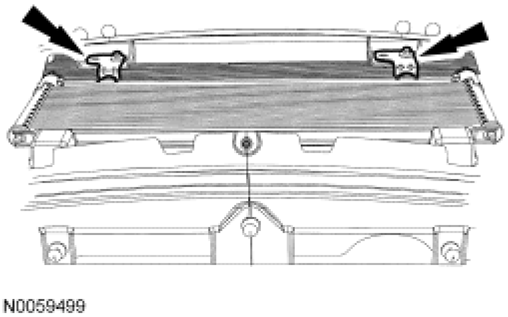

Fig. 282: Disconnecting Hose From Power Steering Reservoir
Courtesy of FORD MOTOR CO.

23. Disconnect the fuel supply tube. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

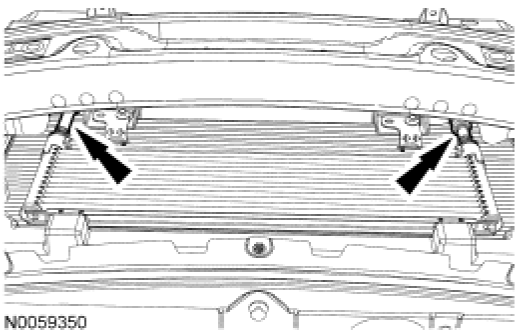

Fig. 283: Identifying Fuel Supply Tube
Courtesy of FORD MOTOR CO.

24. Disconnect the fuel hose routing clip from the transaxle stud and position the fuel hose aside.

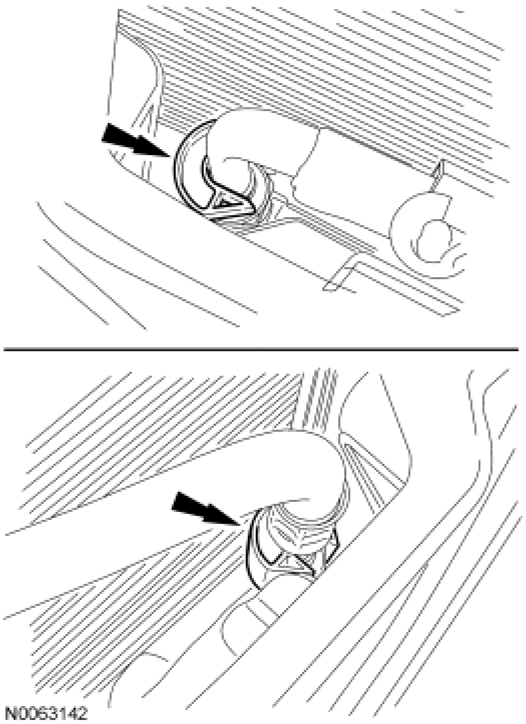

Fig. 284: Identifying Fuel Hose Routing Clip From Transaxle Stud
Courtesy of FORD MOTOR CO.

25. Disconnect the 2 engine wiring harness electrical connectors.
    - Detach the electrical connector from the LH valve cover.

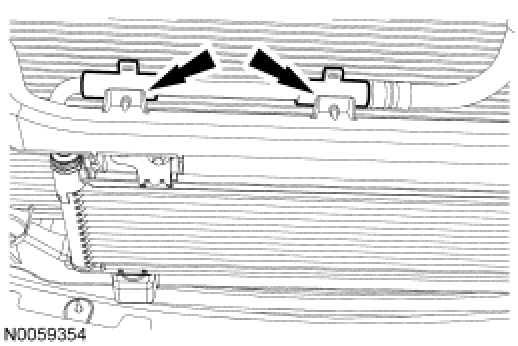

Fig. 285: Identifying Engine Wiring Harness Electrical Connectors
Courtesy of FORD MOTOR CO.

26. Remove the oil level indicator.

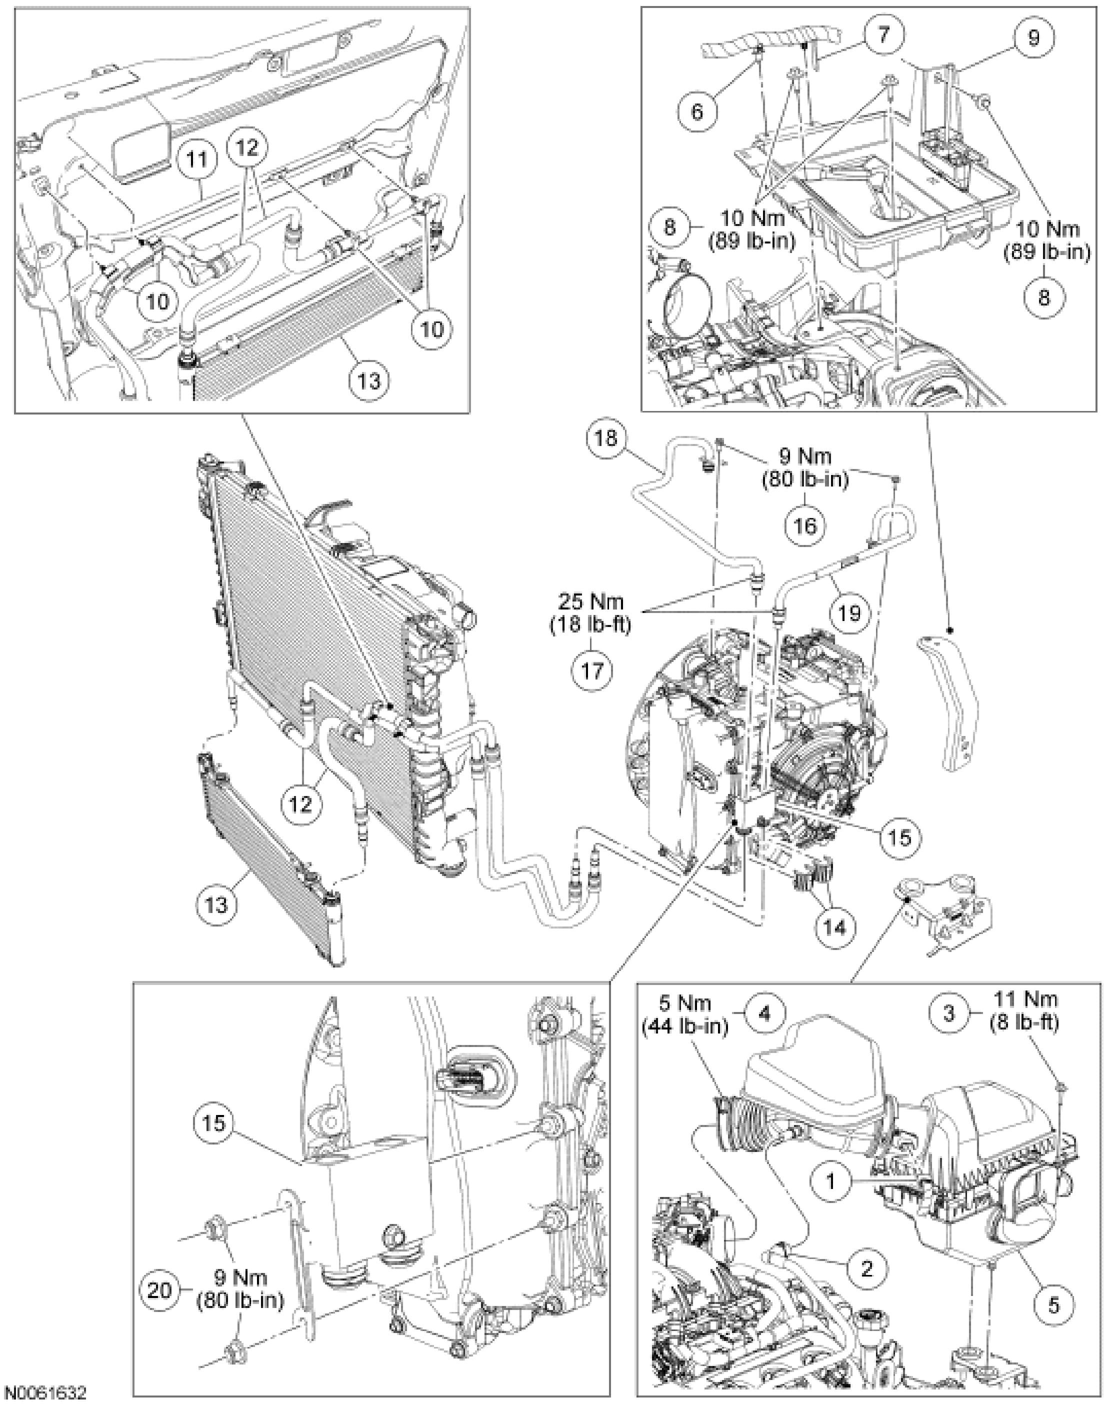

Fig. 286: Identifying Oil Level Indicator
Courtesy of FORD MOTOR CO.

27. Detach the wiring harness retainer from the RH valve cover stud bolt.

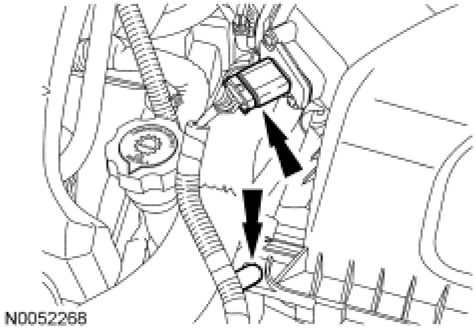

Fig. 287: Identifying Wiring Harness Retainer From RH Valve Cover Stud Bolt
Courtesy of FORD MOTOR CO.

28. Remove the bolt and the ground wire from the engine front cover.

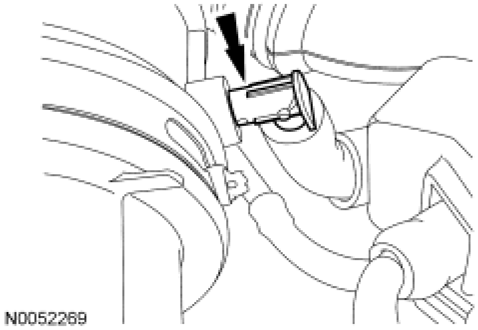

Fig. 288: Removing/Installing Bolt & Ground Wire From Engine Front Cover
Courtesy of FORD MOTOR CO.

29. Remove the nut, the ground wire and the radio interference capacitor wire from the engine front cover stud.

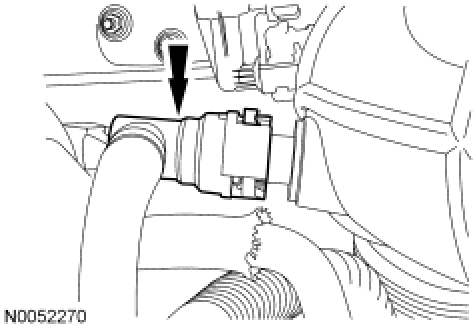

Fig. 289: Removing/installing Nut, Ground Wire & Radio Interference Capacitor Wire From Engine Front Cover Stud
Courtesy of FORD MOTOR CO.

30. Loosen the exhaust flexible pipe clamp and disconnect the 2 exhaust hangers.

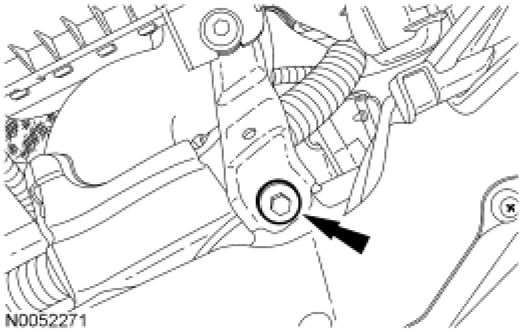

Fig. 290: Locating Exhaust Flexible Pipe Clamp & Exhaust Hangers
Courtesy of FORD MOTOR CO.

31. Remove the 4 nuts and the exhaust flexible pipe and Y-pipe as an assembly.
    - Discard the nuts and the gasket.

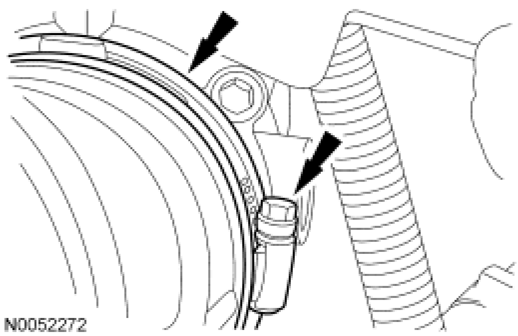

Fig. 291: Locating Exhaust Flexible Pipe, Y-Pipe & Nuts
Courtesy of FORD MOTOR CO.

32. Remove the 3 pin-type retainers, the 7 screws and the radiator splash shield.

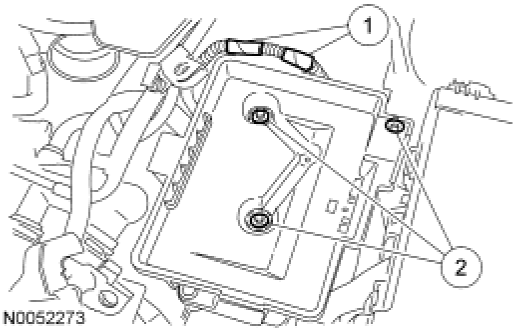

Fig. 292: Locating Push Pin Fasteners & Front Splash Shield Screws
Courtesy of FORD MOTOR CO.

33. Remove the LH inner splash shield. For additional information, refer to **FRONT END BODY PANELS** article.
34. Remove the 2 secondary latches from the transmission fluid cooler tubes.

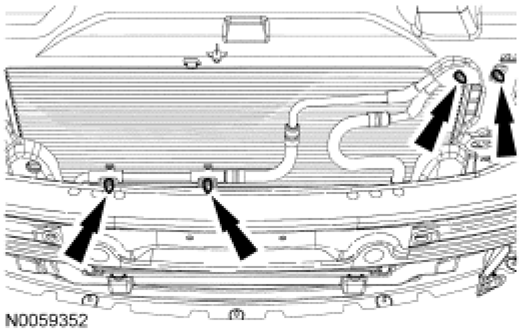

Fig. 293: Locating Secondary Latches On Transmission Fluid Cooler Tubes
Courtesy of FORD MOTOR CO.

35. Using the special tool, disconnect the transmission cooling tubes.

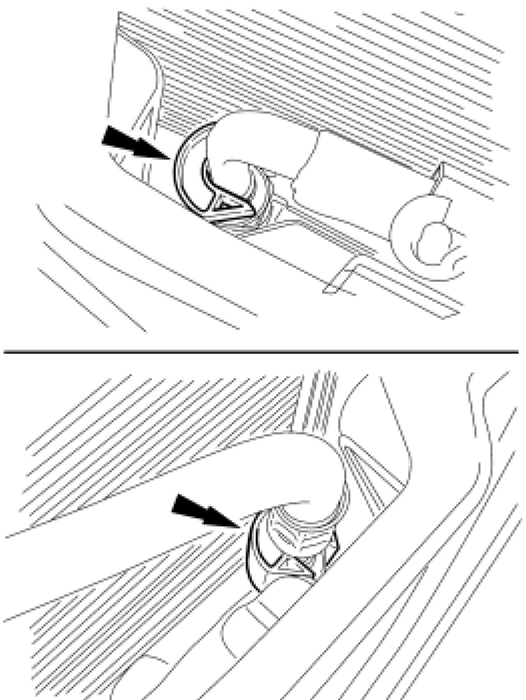

Fig. 294: Disconnecting Transmission Cooling Tubes Using Special Tool (307-569)
Courtesy of FORD MOTOR CO.

36. Remove the drain plug and drain the engine oil.
    - Install the drain plug and tighten to 27 Nm (20 lb-ft).

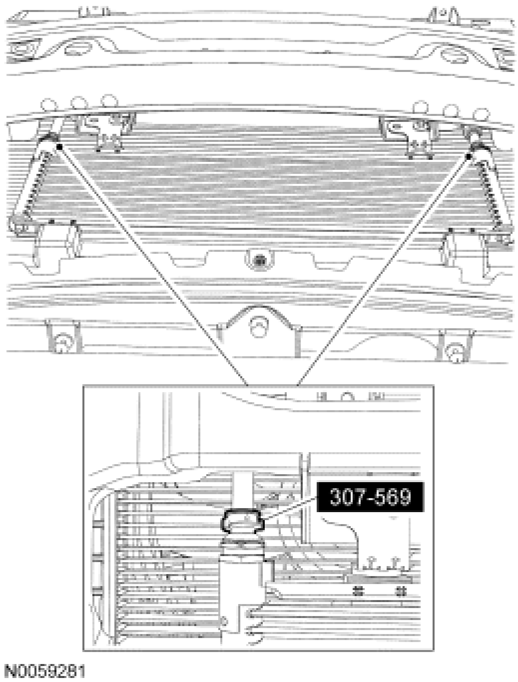

Fig. 295: Locating Drain Plug
Courtesy of FORD MOTOR CO.

37. Remove and discard the engine oil filter.

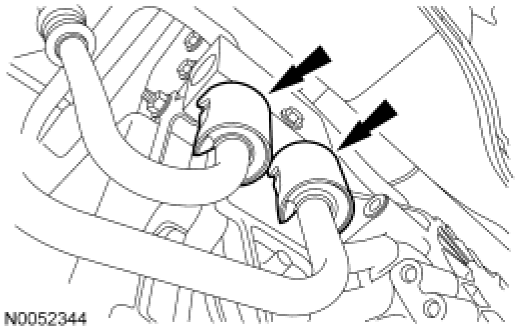

Fig. 296: Identifying Engine Oil Filter
Courtesy of FORD MOTOR CO.

38. Remove the power steering cooler bracket bolt from the RH side of the subframe.

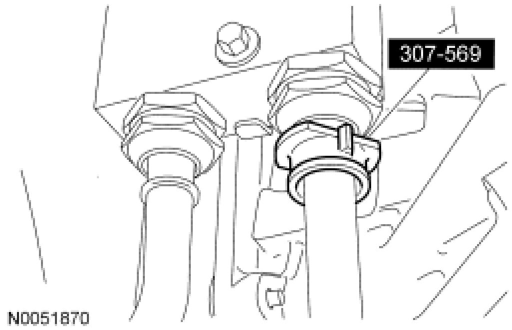

Fig. 297: Identifying Power Steering Cooler Bracket Bolt
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

NOTE: **Index-mark the driveshaft for installation.**

39. Remove the 4 bolts and support the driveshaft with a length of mechanic's wire.

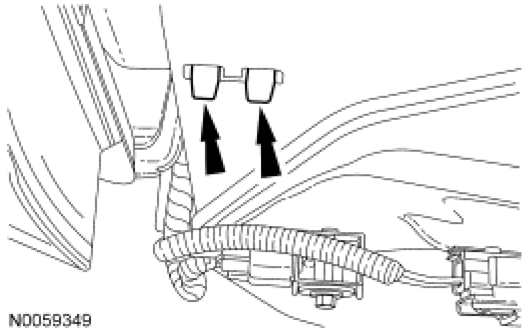

Fig. 298: Locating Driveshaft Aside Bolts
Courtesy of FORD MOTOR CO.

All vehicles

40. Remove and discard the RH front halfshaft nut.

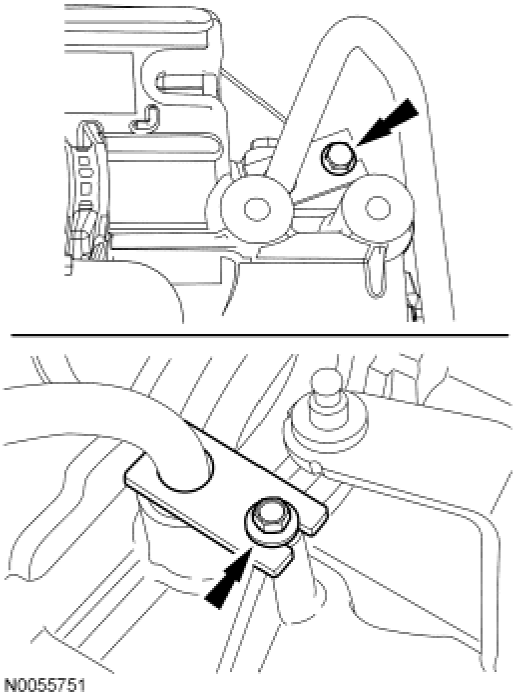

Fig. 299: Locating RH Front Halfshaft Nut
Courtesy of FORD MOTOR CO.

41. Remove the 2 nuts and the roll restrictor heat shield.

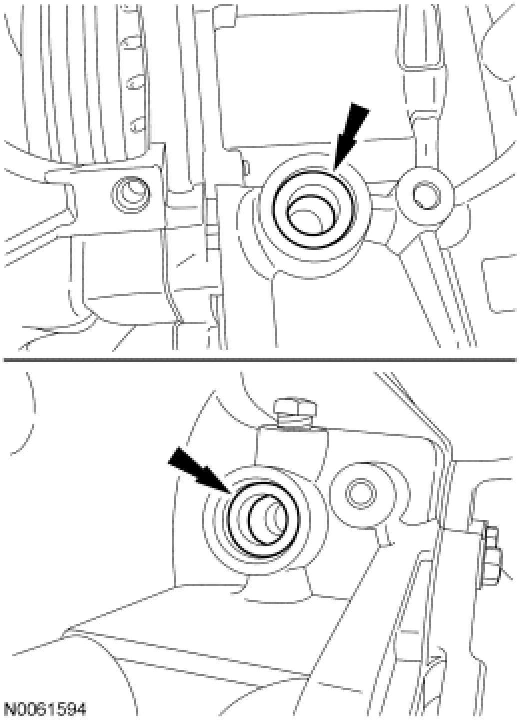

Fig. 300: Locating Roll Restrictor Heat Shield Nuts

Courtesy of FORD MOTOR CO.

42. Remove the engine roll restrictor-to-subframe through bolt.

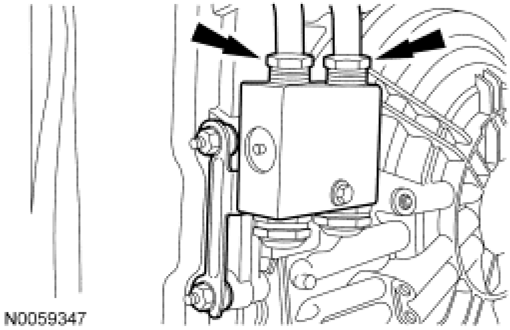

Fig. 301: Locating Roll Restrictor-To-Subframe Bolt
Courtesy of FORD MOTOR CO.

43. Remove and discard the power steering pressure (PSP) tube-to-pump banjo bolt and the 2 seals.

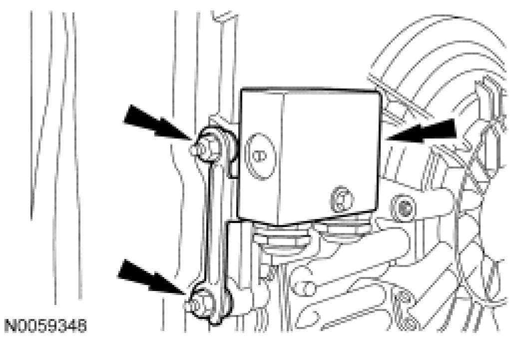

Fig. 302: Locating Power Steering Pressure (PSP) Tube-To-Pump Banjo Bolt & Seals
Courtesy of FORD MOTOR CO.

CAUTION: Do not allow the intermediate shaft to rotate while it is disconnected from the gear or damage to the clockspring can occur. If there is evidence that the intermediate shaft has rotated, the clockspring must be removed and recentered. For additional information, refer to SUPPLEMENTAL RESTRAINT SYSTEM article.

44. Remove and discard the steering intermediate shaft bolt.
    - Separate the steering intermediate shaft from the steering gear.

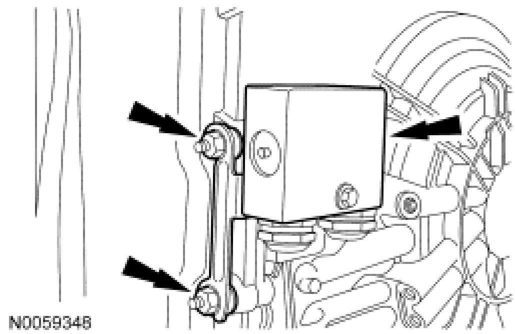

Fig. 303: Identifying Steering Intermediate Shaft Bolt
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

45. Remove and discard the cotter pins and tie-rod end nuts.
    - Using the special tool, separate the tie-rod ends from the wheel knuckles.

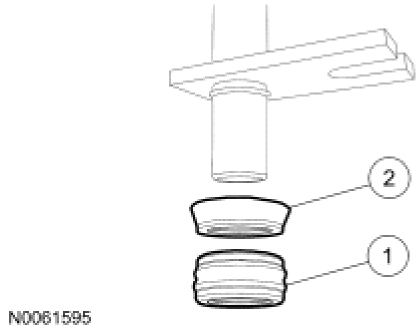

Fig. 304: Separating Tie-Rod Ends From Wheel Knuckles Using Special Tool (211-105)
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

46. Remove the 2 stabilizer link-to-lower control arm nuts and separate the stabilizer bar links from the lower control arms.

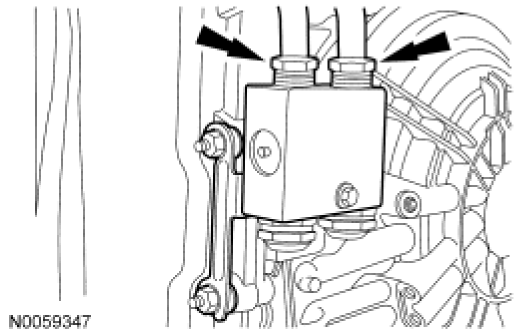

Fig. 305: Locating Stabilizer Bar Link Nut
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

47. Remove the lower control arm-to-knuckle pinch bolts and separate the lower control arms from the knuckles.

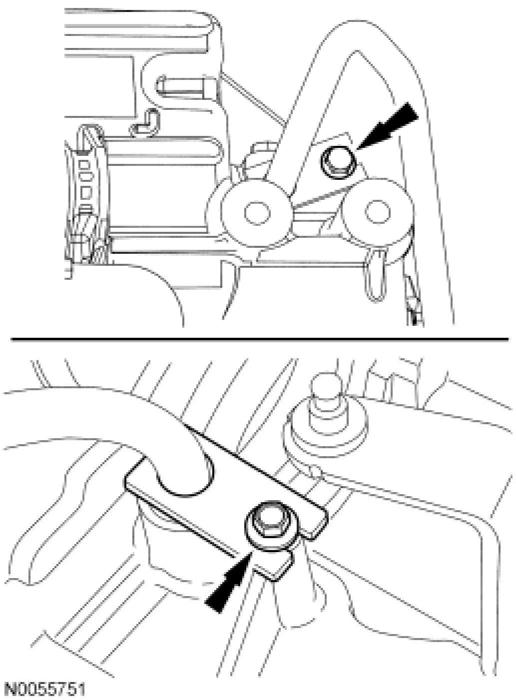

Fig. 306: Locating Ball Joint Pinch Bolt
Courtesy of FORD MOTOR CO.

48. Remove the 3 RH subframe-to-lower bumper nuts.

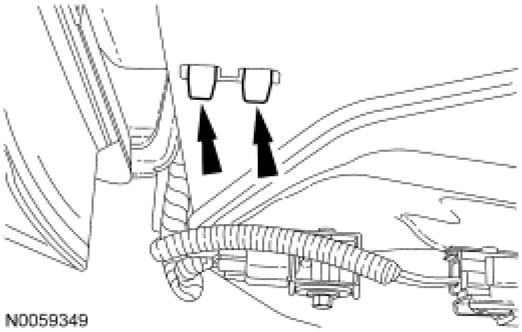

Fig. 307: Locating RH Subframe-To-Lower Bumper Nuts
Courtesy of FORD MOTOR CO.

49. Remove the 3 LH subframe-to-lower bumper nuts and separate the lower bumper from the subframe.

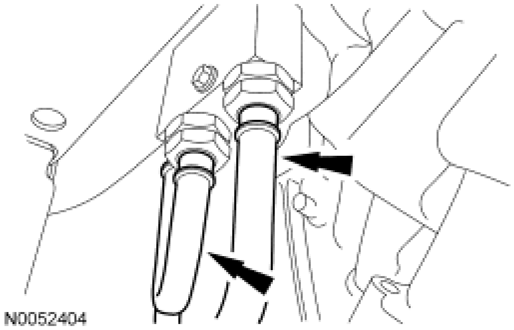

Fig. 308: Locating LH Subframe-To-Lower Bumper Nuts
Courtesy of FORD MOTOR CO.

50. Position the special tool under the subframe assembly.

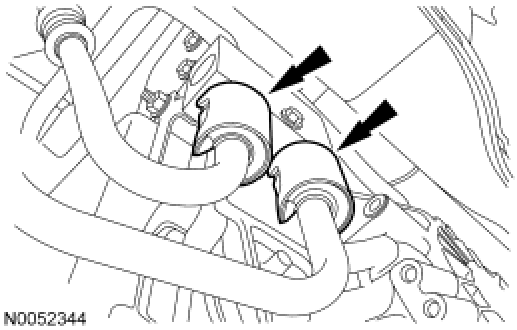

Fig. 309: Positioning Special Tool (014-00765) Under Subframe Assembly
Courtesy of FORD MOTOR CO.

51. Remove the 2 nuts, 4 bolts and the subframe support brackets.

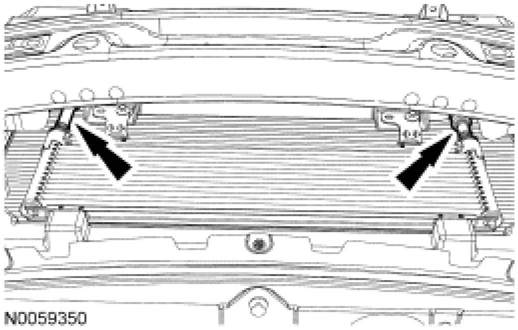

Fig. 310: Locating Subframe Support Brackets, Nuts & Bolts
Courtesy of FORD MOTOR CO.

52. Remove the 2 front subframe nuts.

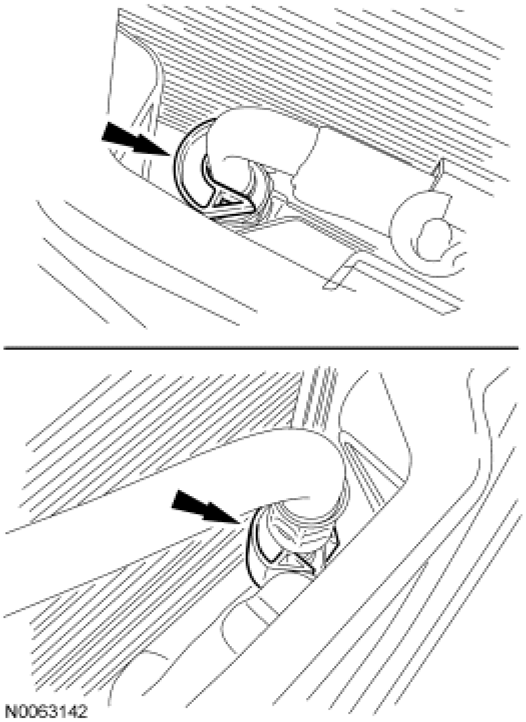

Fig. 311: Locating Front Subframe Nuts
Courtesy of FORD MOTOR CO.

53. Remove the 2 middle subframe nuts.

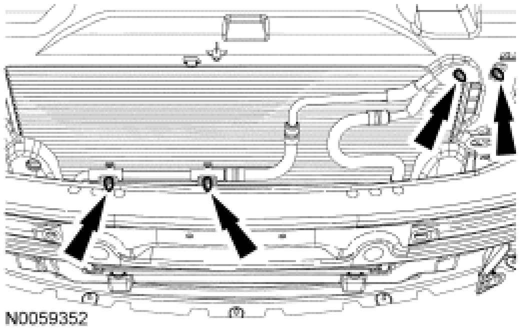

Fig. 312: Locating Middle Subframe Nuts
Courtesy of FORD MOTOR CO.

54. Using the special tool, lower the subframe assembly from the vehicle.

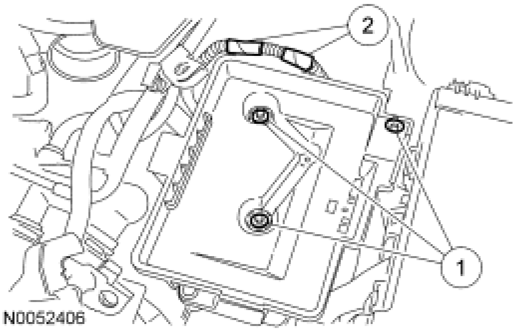

Fig. 313: Positioning Special Tool (014-00765) Under Subframe Assembly
Courtesy of FORD MOTOR CO.

55. If equipped, disconnect the oil cooler coolant hoses.

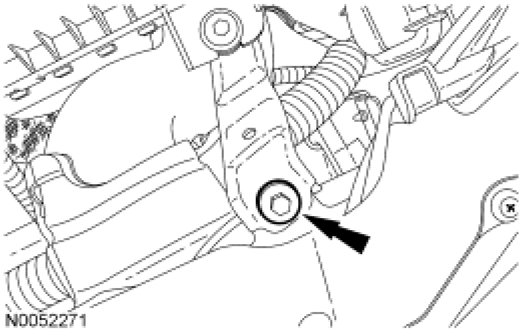

Fig. 314: Locating Oil Cooler Coolant Hoses
Courtesy of FORD MOTOR CO.

56. Using the special tools, separate the LH halfshaft from the transaxle and support the halfshaft with a length of mechanic's wire.

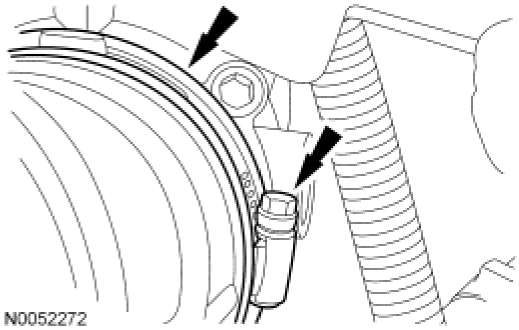

Fig. 315: Separating LH Halfshaft From Transaxle Using Special Tools (100-001), (205-243) & (205-290)
Courtesy of FORD MOTOR CO.

57. Using the special tool, separate the RH halfshaft from the hub.

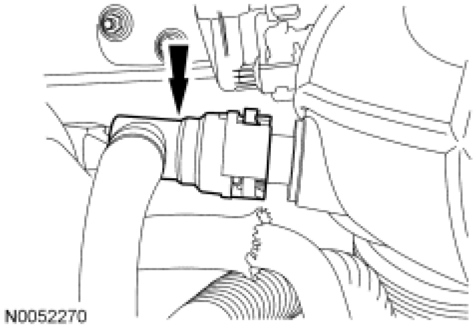

Fig. 316: Separating RH Halfshaft From Hub Using Special Tool (205-D070)
Courtesy of FORD MOTOR CO.

Front wheel drive (FWD) vehicles

58. Remove the 2 RH catalytic converter support bracket bolts.

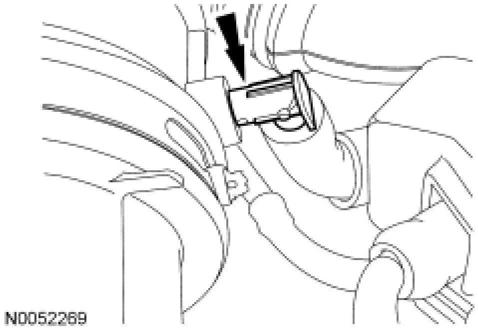

Fig. 317: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

59. Remove the bolt, the nut and the RH catalytic converter support bracket.

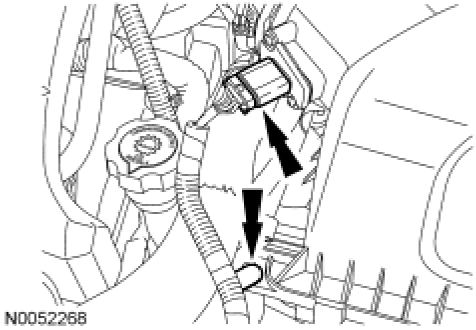

Fig. 318: Identifying RH Catalytic Converter Support Bracket & Bolts
Courtesy of FORD MOTOR CO.

60. Remove the 2 stud bolts and the RH halfshaft/intermediate shaft assembly.

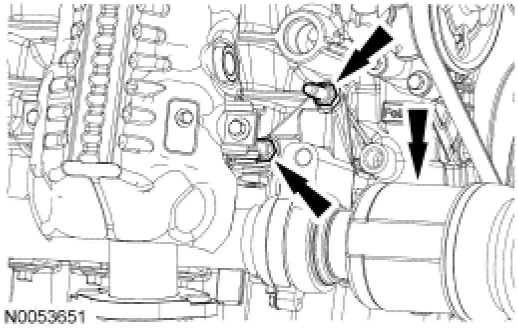

Fig. 319: Locating Stud Bolts & RH Halfshaft/Intermediate Shaft Assembly
Courtesy of FORD MOTOR CO.

AWD vehicles

61. Remove the 2 RH halfshaft bearing support bracket bolts and the RH halfshaft/intermediate shaft assembly.

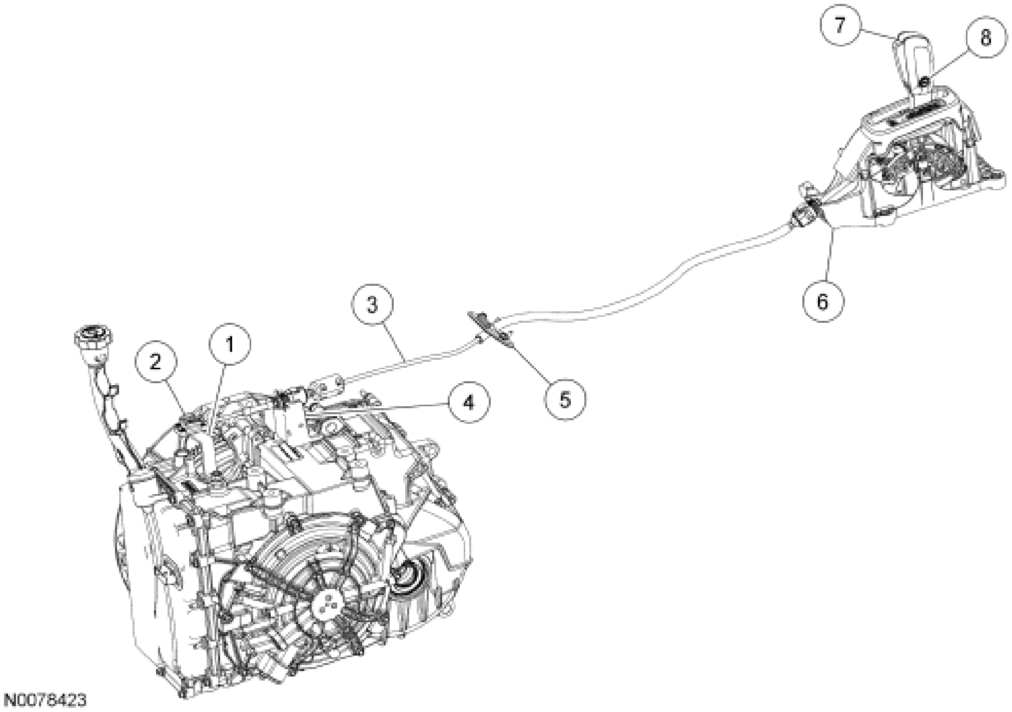

Fig. 320: Locating RH Halfshaft Bearing Support Bracket Bolts
Courtesy of FORD MOTOR CO.

All vehicles

NOTE: Position a block of wood under the transaxle.

62. Install the special tools.

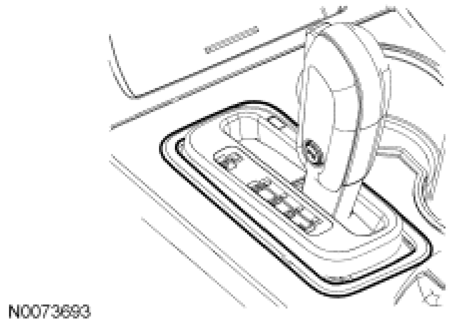

Fig. 321: Positioning A Block Of Wood Under Transaxle Using Special Tools (014-0001) & (014-00765)
Courtesy of FORD MOTOR CO.

63. Remove the transaxle support insulator through bolt and nut.

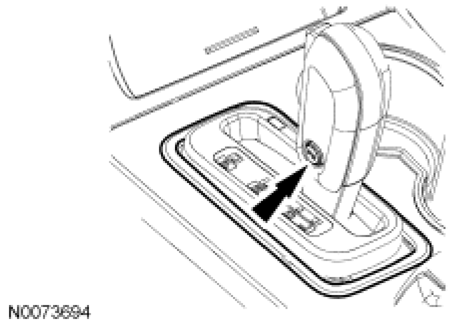

Fig. 322: Identifying Transaxle Support Insulator Bolt
Courtesy of FORD MOTOR CO.

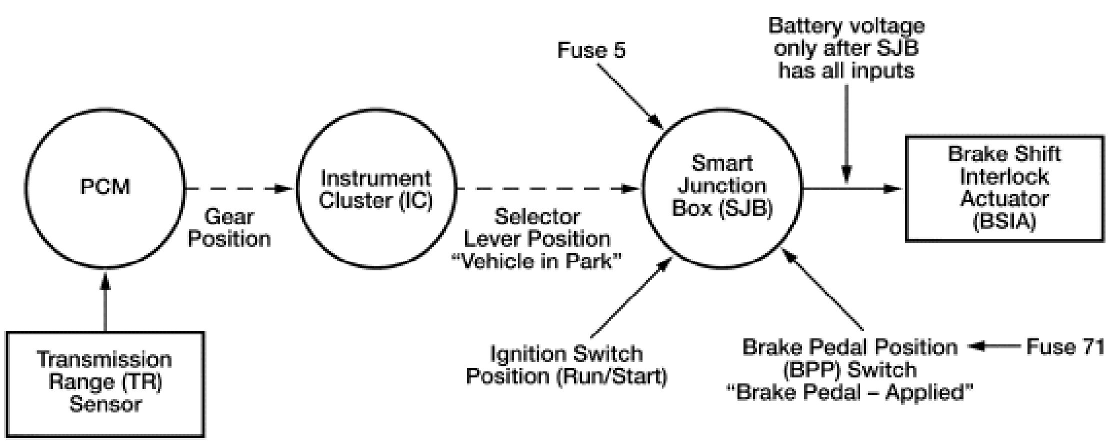
64. Remove the 3 nuts, the bolt and the transaxle support insulator bracket.

MANUAL LEVER POSITION	TRANSAXLE GEAR OPERATION	DESCRIPTION
P	Park	Forward or reverse gears available. Final drive is held to the transaxle case.
R	Reverse	Transaxle allows reverse only.
N	Neutral	Forward or reverse gears not available. Final drive moves freely.
D	1⇆2⇆3⇆4⇆5⇆6	6 forward gears are available. Gears are dependent on vehicle speed and throttle position with coast braking.
D (O/D cancelled)	1⇆2⇆3⇆4⇆5←6	1st through 5th gears are available. Transaxle shifts to 5th gear if button is pressed when the transaxle is in 6th gear. Transaxle provides engine braking.
L	1←2←3←4←5←6	1st gear hold with engine braking, the transaxle downshifts to 1st gear when L is selected above a calibrated speed under minimum to moderate accelerator pedal position.

N0080201

Fig. 323: Identifying Transaxle Support Insulator Bracket, Nuts & Bolts
Courtesy of FORD MOTOR CO.

65. Remove the nut, bolt and engine mount brace.



N0083447

Fig. 324: Locating Nut, Bolt & Engine Mount Brace
Courtesy of FORD MOTOR CO.

66. Remove the 4 engine mount nuts.

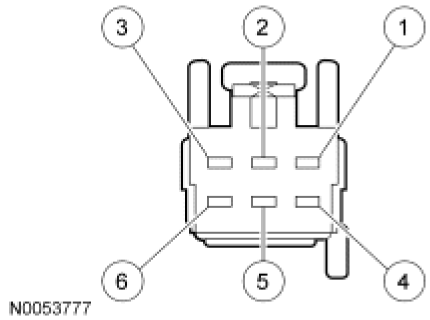


Fig. 325: Locating Engine Mount Nuts
Courtesy of FORD MOTOR CO.

67. Remove the 3 bolts and the engine mount.

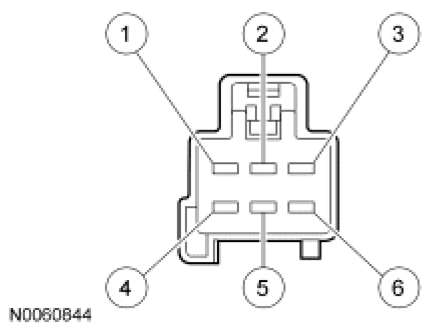

Fig. 326: Locating Engine Mount Bolts
Courtesy of FORD MOTOR CO.

68. Lower the engine and transaxle assembly from the vehicle.
69. If equipped, detach the engine block heater wiring harness retainers and position the harness aside.
70. Disconnect the PCV hose from the PCV valve.

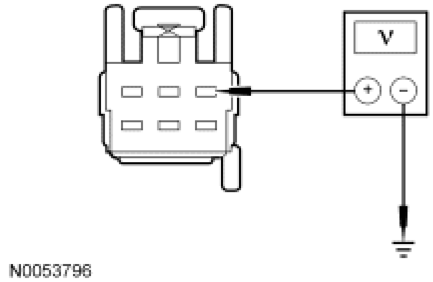

Fig. 327: Identifying PCV Hose
Courtesy of FORD MOTOR CO.

71. Disconnect the throttle body (TB) electrical connector.

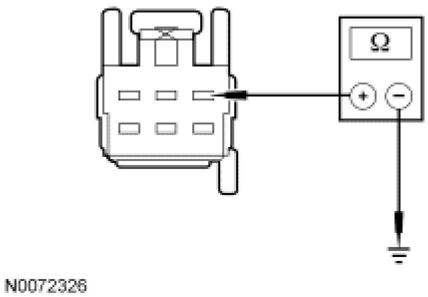

Fig. 328: Locating Throttle Body Electrical Connector
Courtesy of FORD MOTOR CO.

72. Detach the wiring harness retainers from the upper intake manifold.

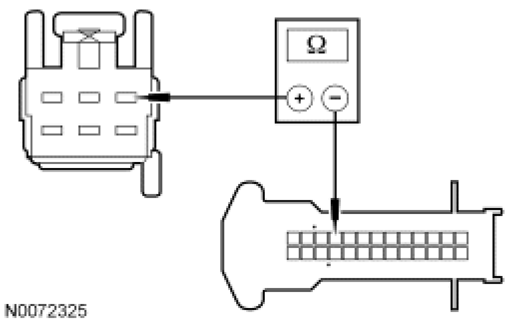

Fig. 329: Locating Wiring Harness Retainers From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

73. Remove the upper intake manifold support bracket bolt.

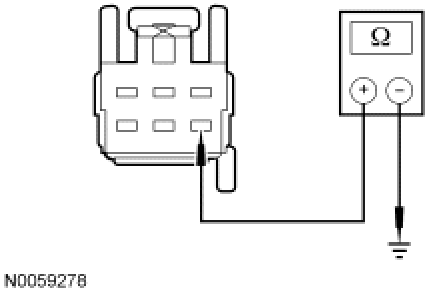

Fig. 330: Locating Upper Intake Manifold Support Bracket Bolt
Courtesy of FORD MOTOR CO.

74. Remove the 6 bolts and the upper intake manifold in the following sequence.
    - Discard the gaskets.

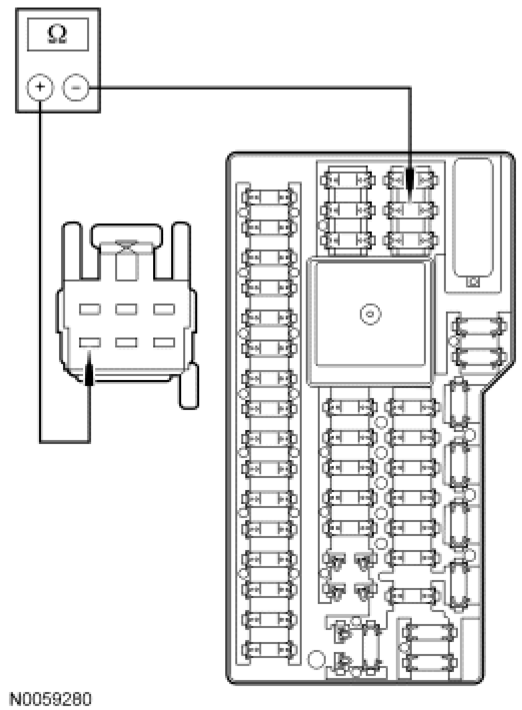

Fig. 331: Identifying Bolt Sequence
Courtesy of FORD MOTOR CO.

75. Disconnect the RH catalyst monitor electrical connector.

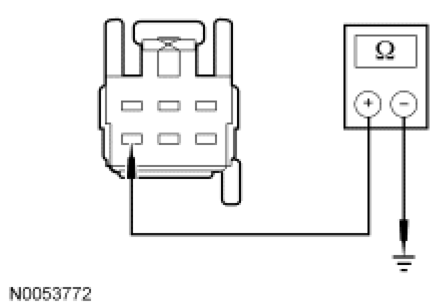

Fig. 332: Locating RH Catalyst Monitor Electrical Connector
Courtesy of FORD MOTOR CO.

76. Disconnect the PSP switch electrical connector.

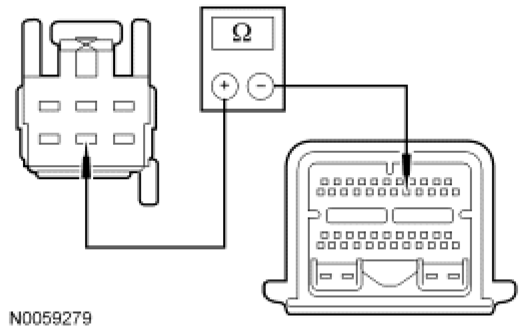

Fig. 333: Locating PSP Switch Electrical Connector
Courtesy of FORD MOTOR CO.

77. Disconnect the RH variable camshaft timing (VCT) solenoid electrical connector.

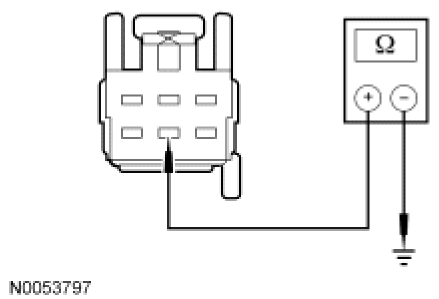

Fig. 334: Locating RH Variable Camshaft Timing (VCT) Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

78. Disconnect the 3 RH coil-on-plug electrical connectors.

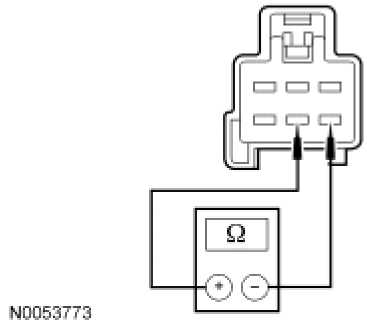

Fig. 335: Locating RH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

79. Detach all of the wiring harness retainers from the RH valve cover and stud bolts.
80. Disconnect the LH VCT solenoid electrical connector.

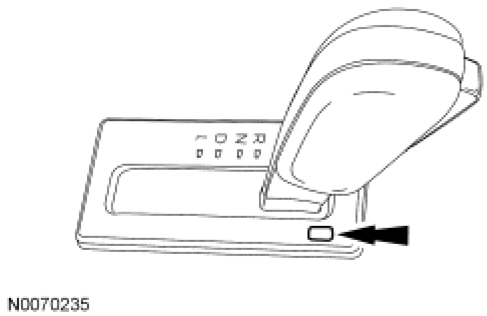

Fig. 336: Locating LH VCT Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

81. Disconnect the 3 LH coil-on-plug electrical connectors.

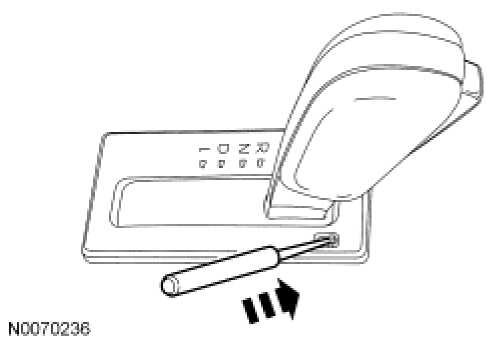

Fig. 337: Locating LH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

82. Detach all of the wiring harness retainers from the LH valve cover and stud bolts.

NOTE: LH shown, RH similar.

83. Remove the 6 bolts and the 6 coil-on-plugs.

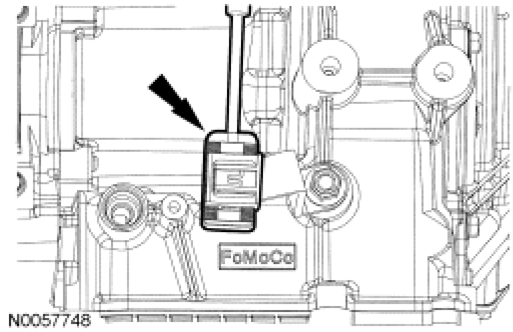

Fig. 338: Locating Coil-On-Plugs & Bolts
Courtesy of FORD MOTOR CO.

84. Remove the 11 stud bolts and the LH valve cover.
    - Discard the gasket.

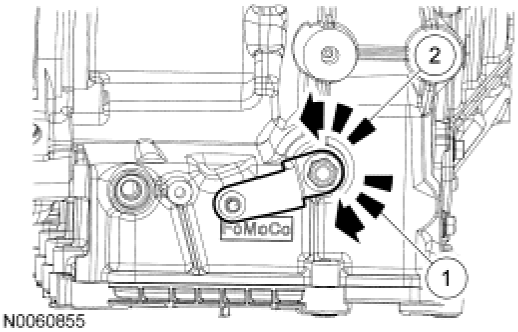

Fig. 339: Locating LH Valve Cover Stud Bolts
Courtesy of FORD MOTOR CO.

85. Remove the bolt, the 10 stud bolts and the RH valve cover.
    - Discard the gasket.

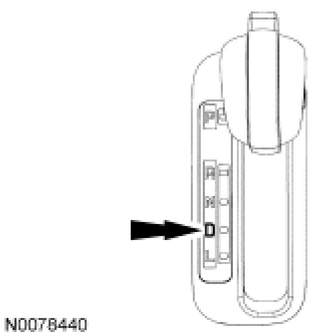

Fig. 340: Locating RH Valve Cover Stud Bolts
Courtesy of FORD MOTOR CO.

NOTE: VCT solenoid seal removal shown, spark plug tube seal removal similar.

86. Inspect the VCT solenoid seals and the spark plug tube seals. Install new seals if damaged.
    - Using the special tools, remove the seal(s).

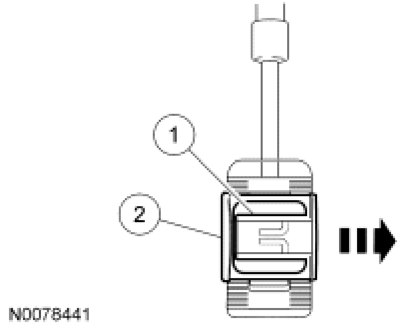

Fig. 341: Removing Seals Using Special Tools (205-153) & (303-1247/1)
Courtesy of FORD MOTOR CO.

87. Remove the 3 bolts and the power steering pump.

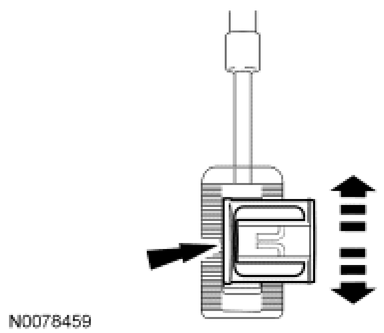

Fig. 342: Locating Power Steering Pump Bolts
Courtesy of FORD MOTOR CO.

88. Remove the 3 bolts and the accessory drive belt tensioner.

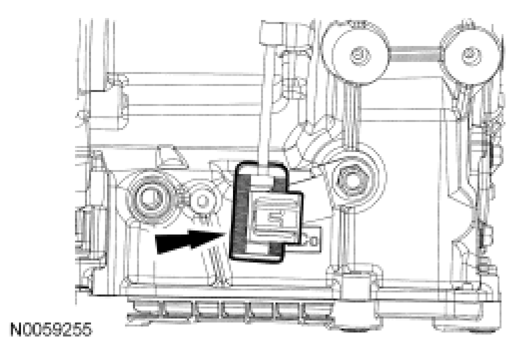

Fig. 343: Locating Accessory Drive Belt Tensioner Bolts
Courtesy of FORD MOTOR CO.

89. Using the special tool, remove the crankshaft bolt and washer.
    - Discard the bolt.

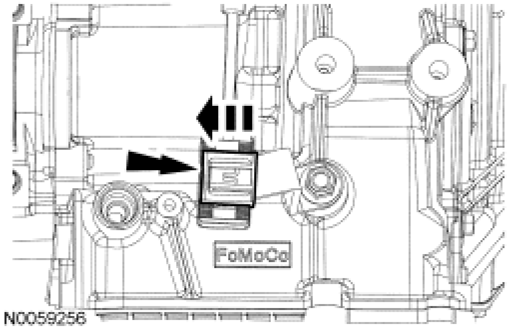

Fig. 344: Removing Crankshaft Bolt & Washer Using Special Tool (303-D055)
Courtesy of FORD MOTOR CO.

90. Using the special tool, remove the crankshaft pulley.

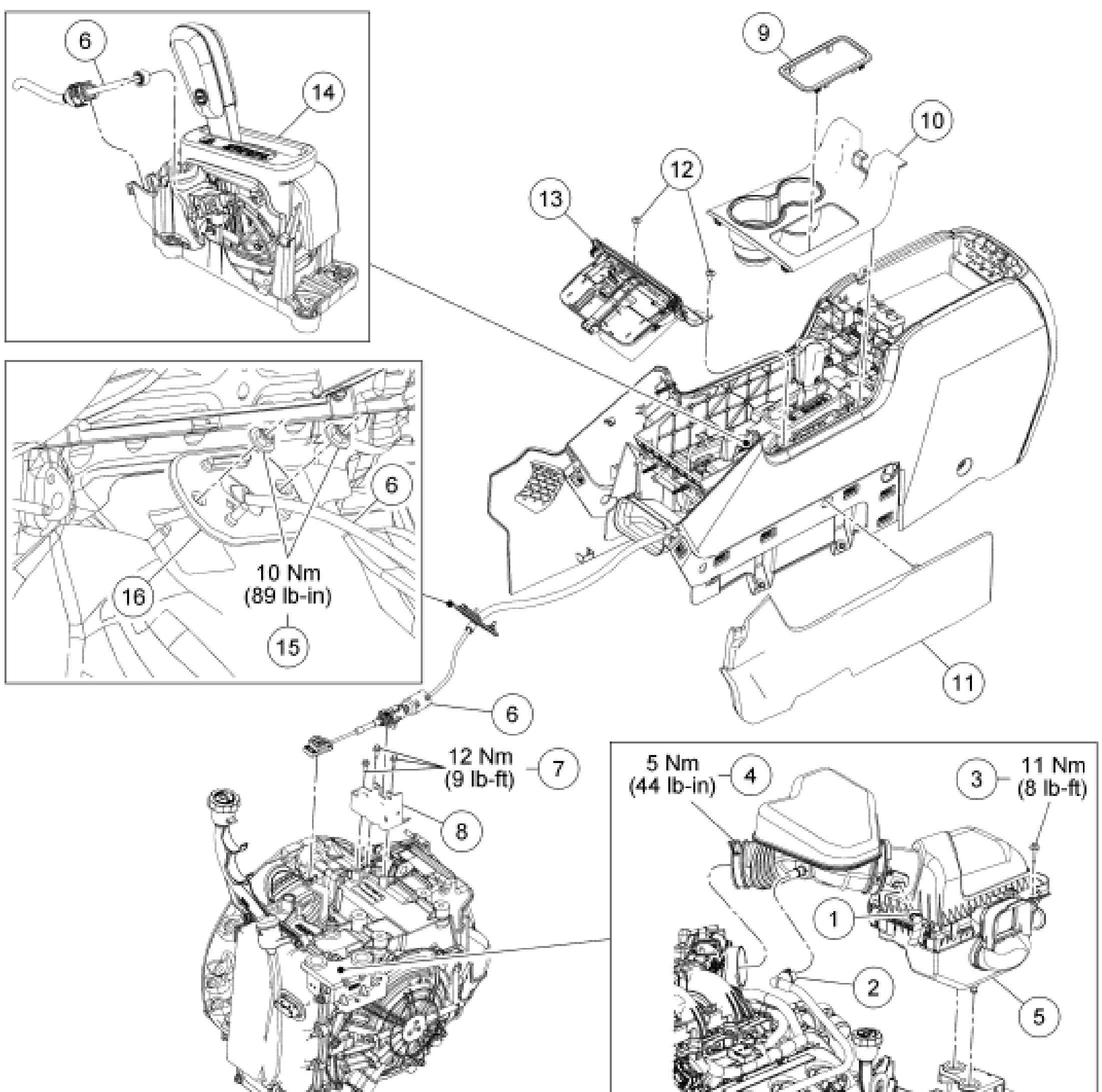

Fig. 345: Identifying Special Tools (303-D121) And Crankshaft Pulley

Courtesy of FORD MOTOR CO.

91. Using the special tool, remove and discard the crankshaft front seal.

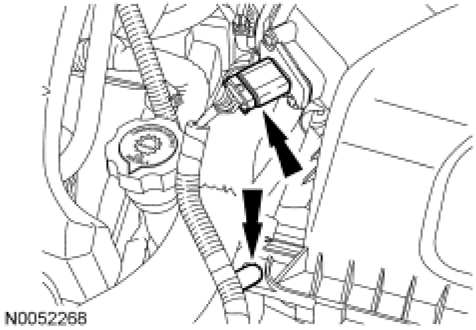

Fig. 346: Removing Crankshaft Front Seal Using Special Tool (303-409)
Courtesy of FORD MOTOR CO.

92. Remove the 2 bolts and the engine mount bracket.

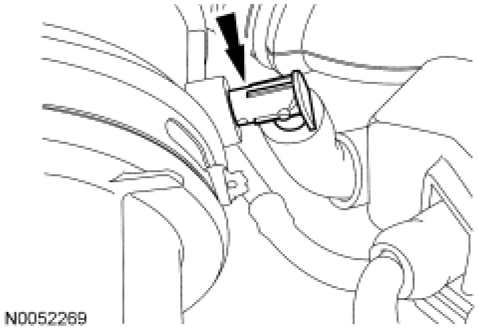

Fig. 347: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

93. Remove the 2 engine mount studs.

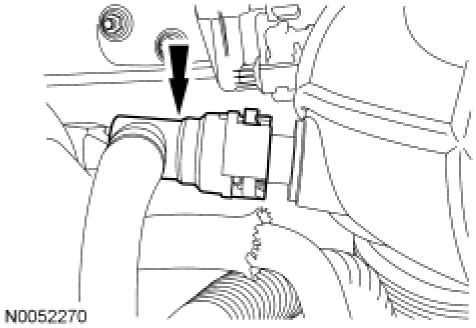

Fig. 348: Locating Engine Mount Studs
Courtesy of FORD MOTOR CO.

94. Remove the 3 bolts and the engine mount bracket.

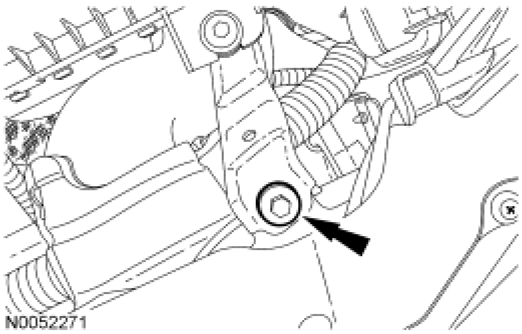

Fig. 349: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

95. Remove the 22 engine front cover bolts.

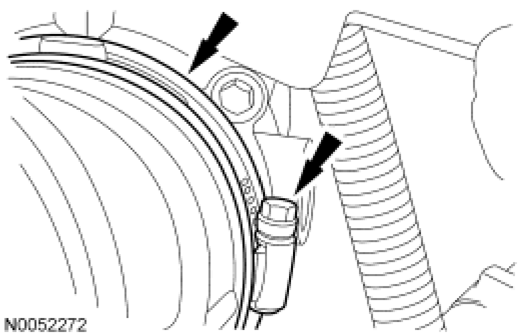

Fig. 350: Identifying Engine Front Cover Bolts
Courtesy of FORD MOTOR CO.

96. Install 6 of the engine front cover bolts (finger tight) into the 6 threaded holes in the engine front cover.
    - Tighten the bolts one turn at a time in a criss-cross pattern until the engine front cover-to-cylinder block seal is released.
        - Remove the engine front cover.

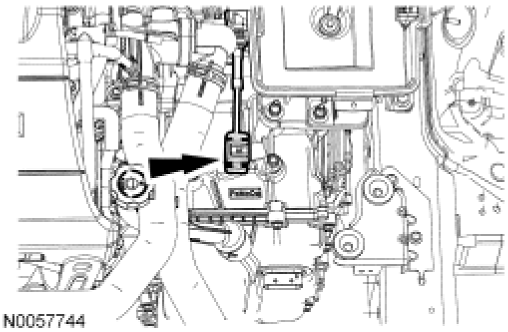

Fig. 351: Identifying Engine Front Cover Bolts

Courtesy of FORD MOTOR CO.

CAUTION: **Only use a 3M Roloc® Bristle Disk (2-in white, part number 07528) to clean the engine front cover. Do not use metal scrapers, wire brushes or any other power abrasive disk to clean the engine front cover. These tools cause scratches and gouges that make leak paths.**

97. Clean the engine front cover using a 3M Roloc® Bristle Disk (2-in white, part number 07528) in a suitable tool turning at the recommended speed of 15,000 rpm.
    - Thoroughly wash the engine front cover to remove any foreign material, including any abrasive particles created during the cleaning process.

CAUTION: **Place clean, lint-free shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages or the oil pan, may cause engine failure.**

CAUTION: **Do not use wire brushes, power abrasive discs or 3M Roloc® Bristle Disk (2-in white part number 07528) to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. They also cause contamination that will cause premature engine failure. Remove all traces of the gasket.**

98. Clean the sealing surfaces of the cylinder block in the following sequence.
    1. Remove any large deposits of silicone or gasket material.
    2. Apply silicone gasket remover and allow to set for several minutes.
    3. Remove the silicone gasket remover. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
    4. Apply metal surface prep to remove any remaining traces of oil or coolant and to prepare the surfaces to bond. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.
    5. Make sure the 2 locating dowel pins are seated correctly in the cylinder block.
99. Rotate the crankshaft clockwise and align the timing marks on the variable camshaft timing (VCT) assemblies as shown.

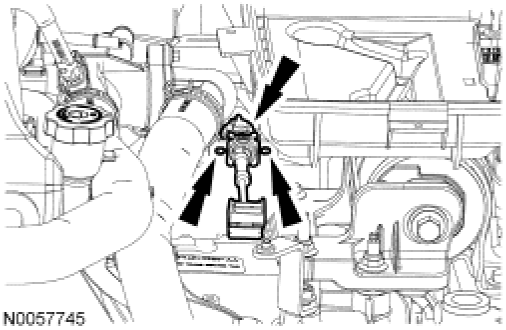

Fig. 352: Aligning Timing Marks On Variable Camshaft Timing (VCT) Assemblies
Courtesy of FORD MOTOR CO.

NOTE:	**The special tool will hold the camshafts in the top dead center (TDC) position.**

100. Install the special tool onto the flats of the LH camshafts.

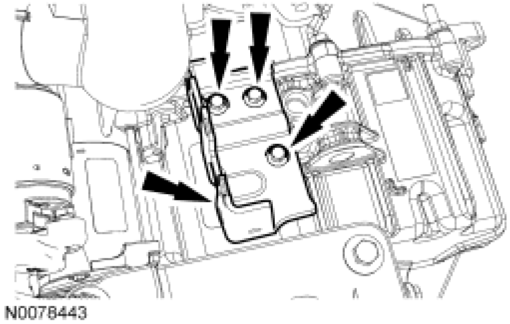

Fig. 353: Installing Special Tool (303-1248) Onto Flats Of LH Camshafts
Courtesy of FORD MOTOR CO.

NOTE:	**The special tool will hold the camshafts in the TDC position.**

101. Install the special tool onto the flats of the RH camshafts.

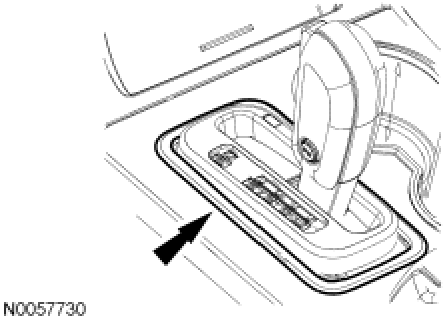

Fig. 354: Installing Special Tool (303-1248) Onto Flats Of RH Camshafts
Courtesy of FORD MOTOR CO.

102. Remove the 3 bolts and the RH VCT housing.

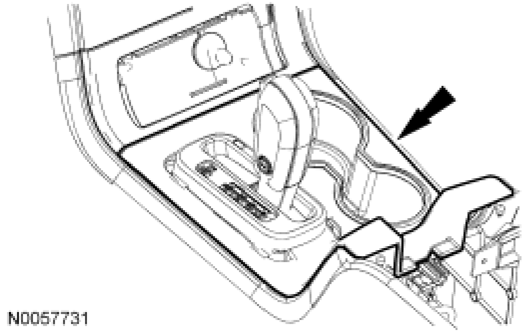

Fig. 355: Locating RH VCT Housing
Courtesy of FORD MOTOR CO.

103. Remove the 3 bolts and the LH VCT housing.

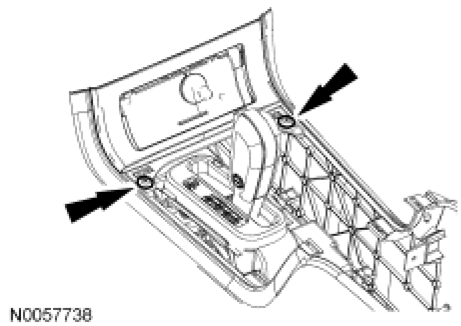

Fig. 356: Locating LH VCT Housing
Courtesy of FORD MOTOR CO.

104. Remove and discard the VCT housing seals.

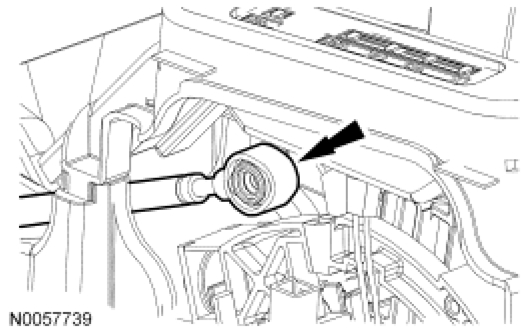

Fig. 357: Locating VCT Housing Seals
Courtesy of FORD MOTOR CO.

105. Remove the 2 bolts and the primary timing chain tensioner.

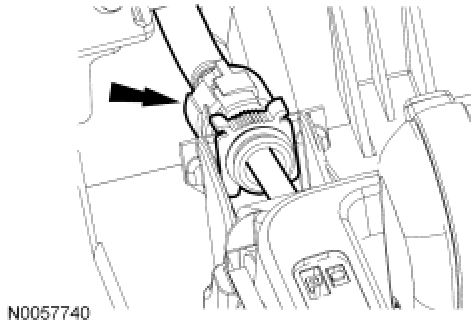

Fig. 358: Locating Primary Timing Chain Tensioner Bolts
Courtesy of FORD MOTOR CO.

106. Remove the primary timing chain tensioner arm.

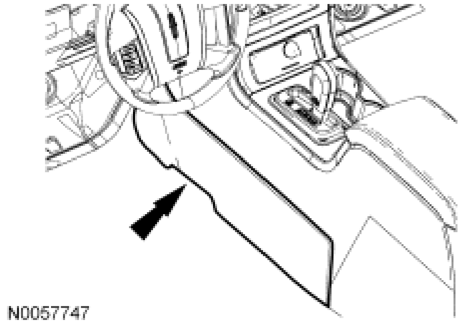

Fig. 359: Locating Primary Timing Chain Tensioner Arm
Courtesy of FORD MOTOR CO.

107. Remove the 2 bolts and the lower LH primary timing chain guide.

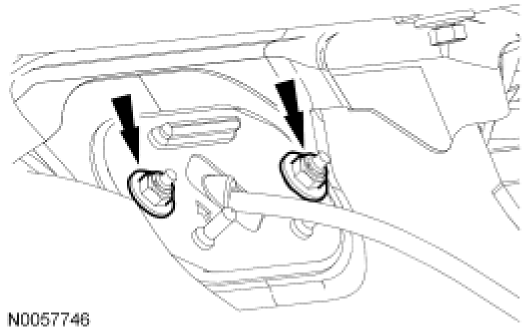

Fig. 360: Locating Lower LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

108. Remove the primary timing chain.

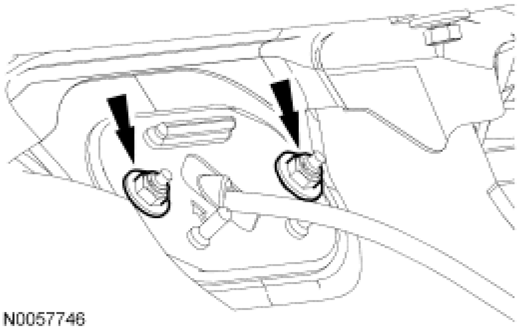

Fig. 361: Locating Primary Timing Chain
Courtesy of FORD MOTOR CO.

LH camshafts

109. Compress the LH secondary timing chain tensioner and install a suitable lockpin to retain the tensioner in the collapsed position.

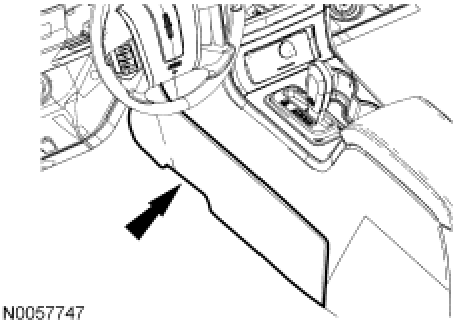

Fig. 362: Compressing LH Secondary Timing Chain Tensioner & Installing Suitable Lock Pin To Retain Tensioner In Collapsed Position
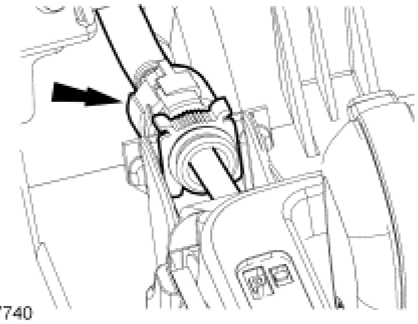
Courtesy of FORD MOTOR CO.

NOTE: **The VCT bolt and the exhaust camshaft bolt must be discarded and new ones installed. However, the exhaust camshaft washer is reusable.**

110. Remove and discard the LH VCT assembly bolt and the LH exhaust camshaft sprocket bolt.
    - Remove the LH VCT assembly, secondary timing chain and the LH exhaust camshaft sprocket as an assembly.

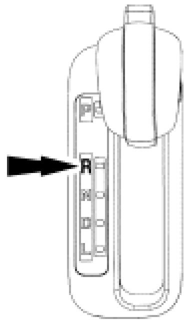


N0057740

Fig. 363: Locating LH VCT Assembly Bolt & LH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

NOTE: When the special tool is removed, valve spring pressure will rotate the LH camshafts approximately 3 degrees to a neutral position.

111. Remove the special tool from the LH camshafts.

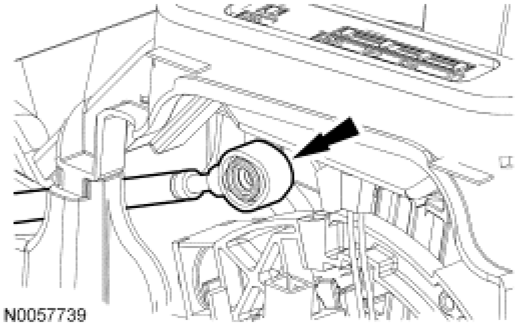


N0078444

Fig. 364: Removing Special Tool (303-1248) From LH Camshafts
Courtesy of FORD MOTOR CO.

CAUTION: The camshafts must remain in the neutral position during removal or engine damage may occur.

112. Verify the LH camshafts are in the neutral position.



N0057739

Fig. 365: Verifying LH Camshafts Are In Neutral Position
Courtesy of FORD MOTOR CO.

NOTE: Cylinder head camshaft bearing caps are numbered to verify that they are assembled in their original positions.

113. Remove the bolts and the LH camshaft bearing caps.
    - Remove the LH camshafts.

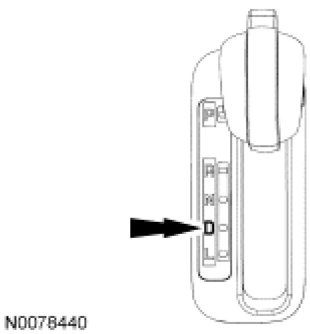


Fig. 366: Identifying LH Camshafts Bolts
Courtesy of FORD MOTOR CO.

RH camshafts

114. Compress the RH secondary timing chain tensioner and install a suitable lockpin to retain the tensioner in the collapsed position.

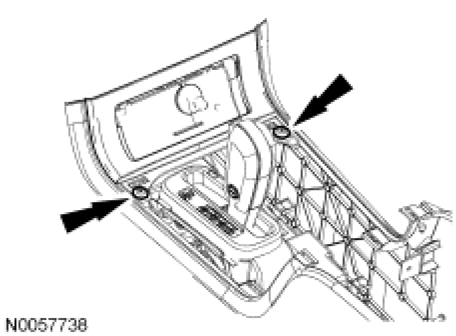

Fig. 367: Compressing RH Secondary Timing Chain Tensioner & Installing Suitable Lock Pin To Retain Tensioner In Collapsed Position
Courtesy of FORD MOTOR CO.

NOTE: The VCT bolt and the exhaust camshaft bolt must be discarded and new ones installed. However, the exhaust camshaft washer is reusable.

115. Remove and discard the RH VCT assembly bolt and the RH exhaust camshaft sprocket bolt.
    - Remove the RH VCT assembly, secondary timing chain and the RH exhaust camshaft sprocket as

an assembly.

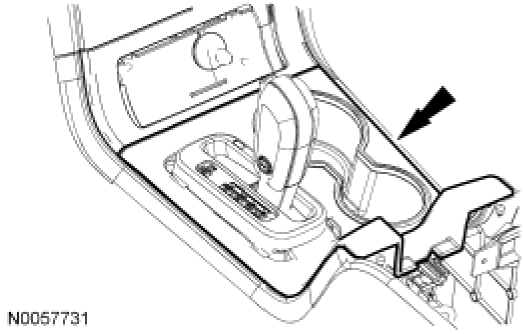

Fig. 368: Locating RH VCT Assembly Bolt & RH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

116. Remove the special tool from the RH camshafts.

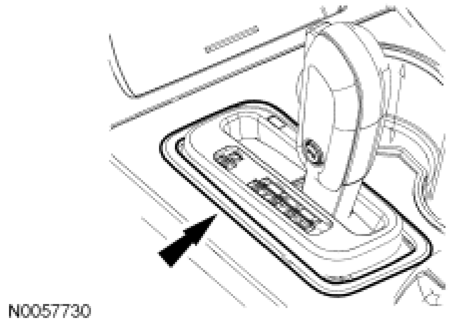

Fig. 369: Removing Special Tool (303-1248) From RH Camshafts
Courtesy of FORD MOTOR CO.

CAUTION: The camshafts must remain in the neutral position during removal or engine damage may occur.

117. Rotate the RH camshafts counterclockwise to the neutral position.

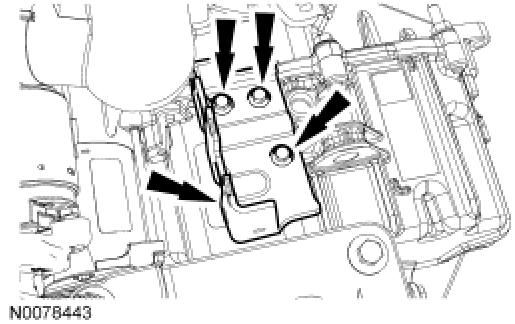

Fig. 370: Rotating RH Camshafts Counterclockwise To Neutral Position

Courtesy of FORD MOTOR CO.

NOTE: Cylinder head camshaft bearing caps are numbered to verify that they are assembled in their original positions.

118. Remove the bolts and the RH camshaft bearing caps.
   - Remove the RH camshafts.

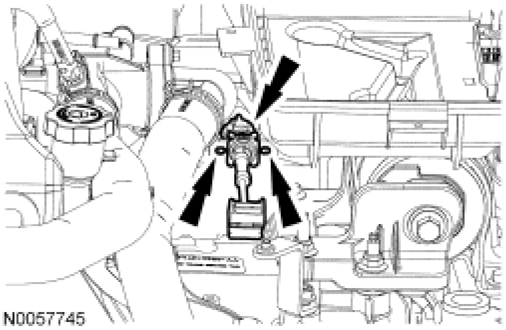

Fig. 371: Identifying RH Camshafts Bolts
Courtesy of FORD MOTOR CO.

VALVE TAPPETS

NOTE: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, may cause engine failure.

1. Depending on the valve tappets being serviced, remove the LH and/or the RH camshafts. For additional information, refer to **Camshaft**.

NOTE: If the components are to be reinstalled, they must be installed in the same positions. Mark the components for installation into their original locations.

2. Remove the valve tappets from the cylinder head.

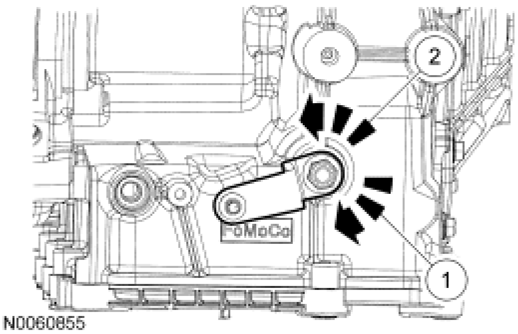

Fig. 372: Identifying Valve Tappets From Cylinder Head
Courtesy of FORD MOTOR CO.

VALVE SPRING, RETAINER AND SEAL

Special Tools

Illustration	Tool Name	Tool Number
	Compressor, Valve Spring	303-300 (T87C-6565-A)
	Compressor, Valve Spring	303-350 (T89P-6565-A)
	Compressor, Valve Spring	303-1249

NOTE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, may cause engine failure.**

1. Remove the valve tappets from the cylinder being serviced. For additional information, refer to **Valve Tappets**.
2. Rotate the crankshaft until the piston for the valve being serviced is at the top of its stroke.

NOTE: **If air pressure has forced the piston to the bottom of the cylinder, any loss of air pressure will allow the valve to fall into the cylinder. If air pressure**

must be removed, support the valve prior to removal or engine damage may occur.

NOTE: **If the components are to be reinstalled, they must be installed in the same positions. Mark the components for installation into their original locations.**

NOTE: **If a valve drops into the cylinder, remove the cylinder head. For additional information, refer to Cylinder Head - RH or Cylinder Head - LH in this service information.**

3. Pressurize the cylinder using compressed air.
4. Using the Valve Spring Compressors, remove the keys, retainer and spring.

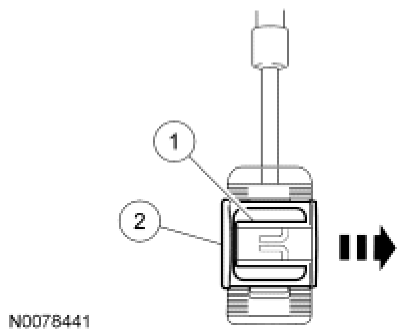

Fig. 373: Removing Keys, Retainer & Spring Using Special Tools (303-1249, 303-350, 303-300)
Courtesy of FORD MOTOR CO.

5. Remove and discard the valve stem seal.

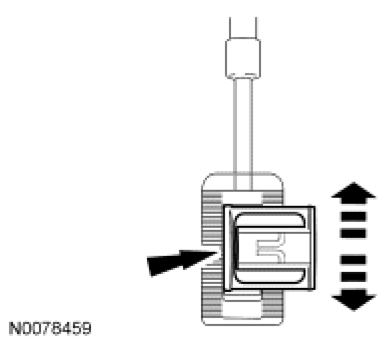

Fig. 374: Identifying Valve Stem Seal
Courtesy of FORD MOTOR CO.

CYLINDER HEAD - RH

Material

Item	Specification

Motorcraft Metal Surface Prep ZC-31-A	-
Silicone Gasket Remover ZC-30	-

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

All vehicles

1. Remove the RH camshafts. For additional information, refer to **Camshaft**.
2. If equipped, remove the heat shield and disconnect the block heater electrical connector.
   - Remove the block heater wiring harness from the engine.

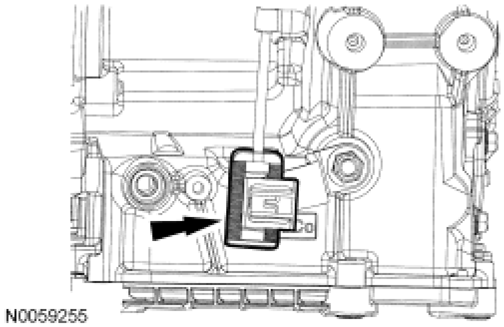

Fig. 375: Identifying Block Heater Wiring Harness
Courtesy of FORD MOTOR CO.

3. Disconnect the RH heated oxygen sensor (HO2S) electrical connector.

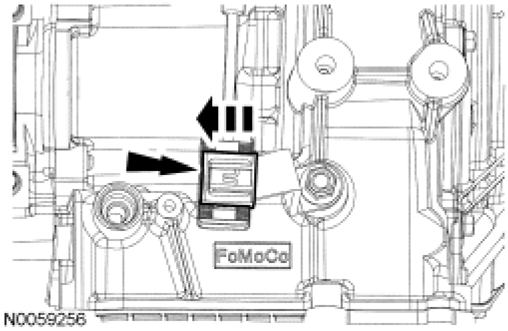

Fig. 376: Locating RH Heated Oxygen Sensor (HO2S) Electrical Connector
Courtesy of FORD MOTOR CO.

4. Disconnect the RH camshaft position (CMP) sensor electrical connector.

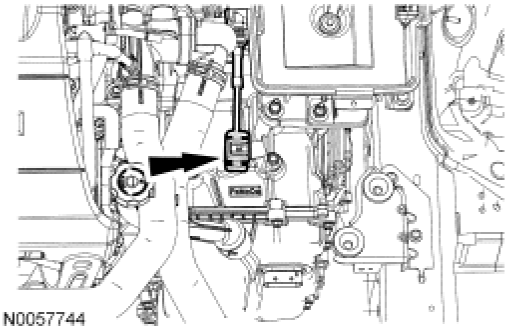

Fig. 377: Locating RH Camshaft Position (CMP) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

5. Remove the bolt and the ground cable from the RH cylinder.

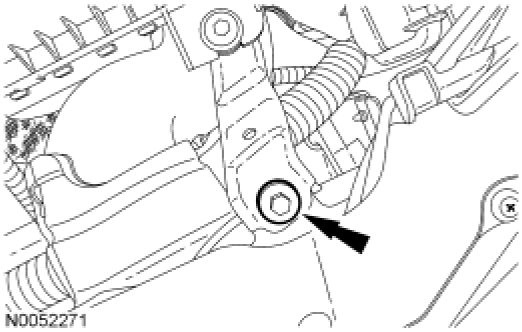

Fig. 378: Locating Ground Cable From RH Cylinder
Courtesy of FORD MOTOR CO.

6. Disconnect the 6 fuel injector electrical connectors (3 shown).

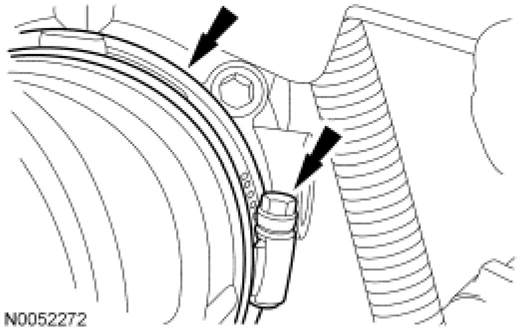

Fig. 379: Locating Fuel Injector Electrical Connectors
Courtesy of FORD MOTOR CO.

7. Disconnect the cylinder head temperature (CHT) sensor electrical connector.

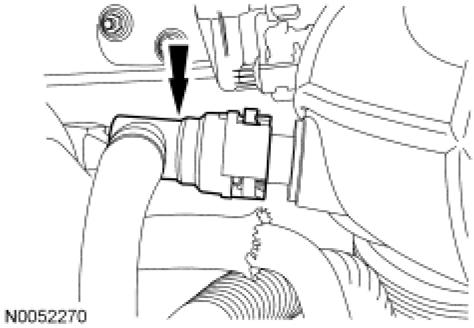

Fig. 380: Locating Cylinder Head Temperature (CHT) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

8. Disconnect the LH catalyst monitor sensor electrical connector.

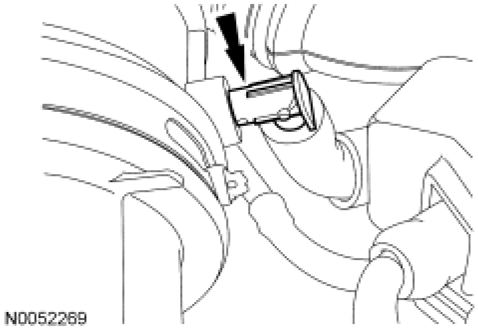

Fig. 381: Identifying LH Catalyst Monitor Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

9. Remove the 2 LH catalytic converter bracket bolts.

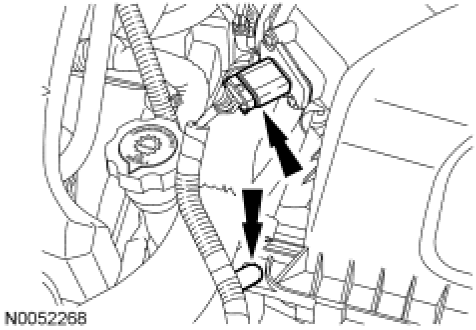

Fig. 382: Locating LH Catalytic Converter Bracket Bolts
Courtesy of FORD MOTOR CO.

10. Remove the 4 nuts (3 shown) and the LH catalytic converter.
    - Discard the nuts and the gasket.

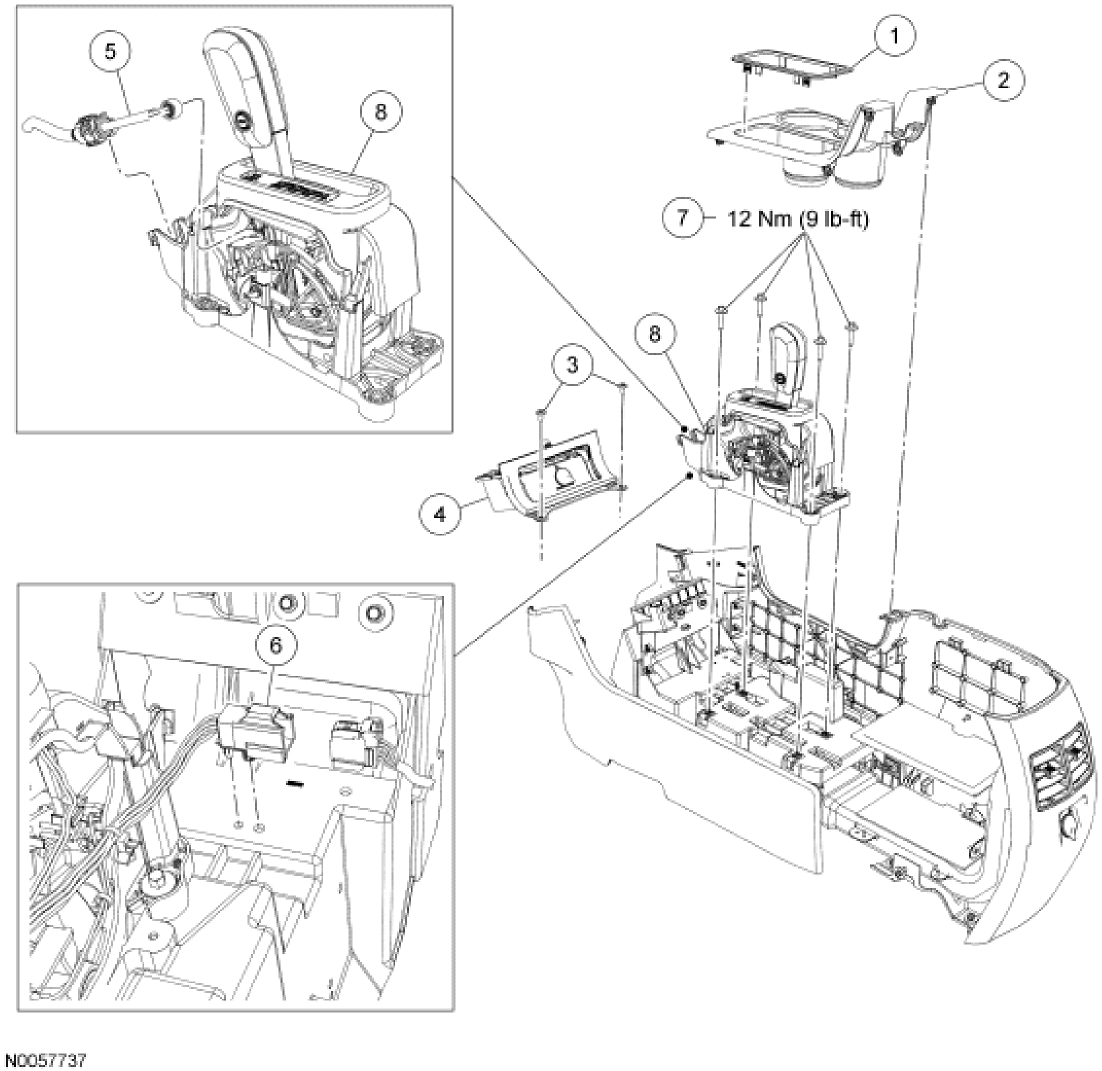

Fig. 383: Locating LH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

11. Remove the LH cylinder block drain plug.
    - Allow coolant to drain from the cylinder block.

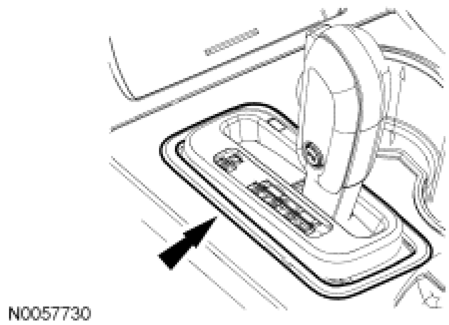

Fig. 384: Locating LH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

12. Remove the 2 RH catalytic converter bracket bolts.

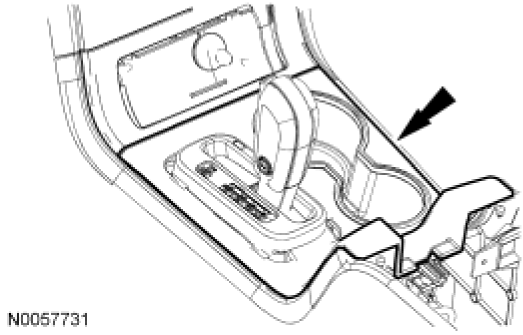

Fig. 385: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

All vehicles

13. Remove the 4 nuts and the RH catalytic converter.
    - Discard the nuts and the gasket.

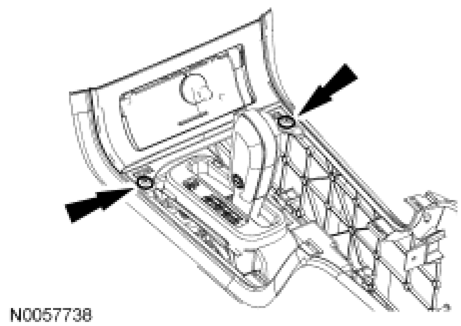

Fig. 386: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

14. Remove the RH cylinder block drain plug or, if equipped, the block heater.
    - Allow coolant to drain from the cylinder block.

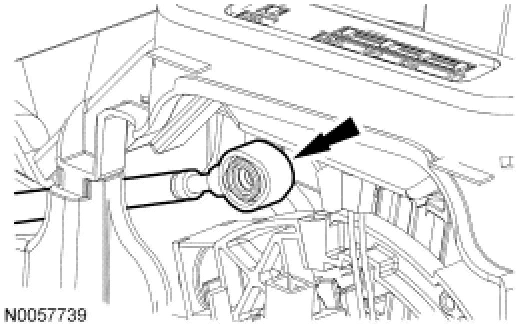

Fig. 387: Locating RH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

15. Remove the 3 bolts and the RH exhaust manifold heat shield.

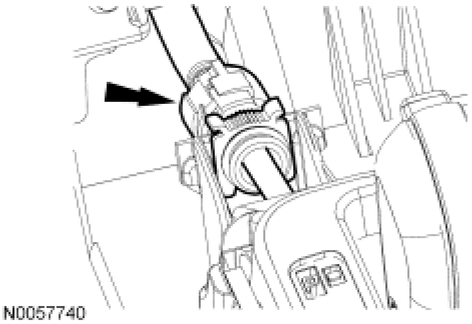

Fig. 388: Locating RH Exhaust Manifold Heat Shield & Nuts
Courtesy of FORD MOTOR CO.

16. Remove the 6 nuts and the RH exhaust manifold.
    - Discard the nuts and exhaust manifold gaskets.

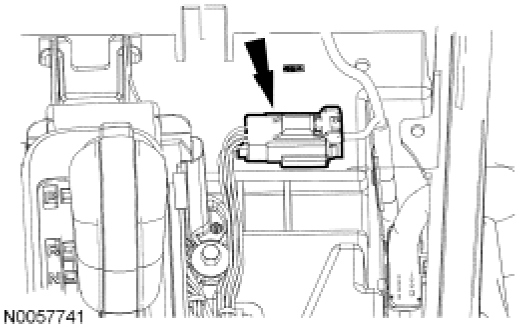

Fig. 389: Locating RH Exhaust Manifold & Nuts
Courtesy of FORD MOTOR CO.

17. Clean and inspect the RH exhaust manifold. For additional information, refer to **ENGINE SYSTEM - GENERAL INFORMATION** article.
18. Remove and discard the 6 RH exhaust manifold studs.

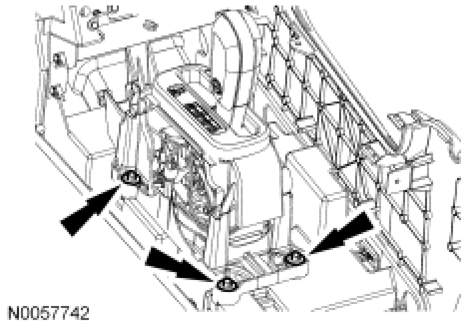

Fig. 390: Locating RH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

19. Remove the 2 bolts and the RH primary timing chain guide.

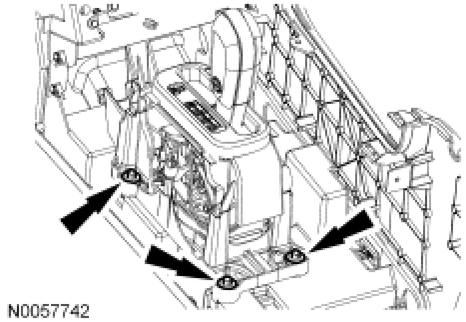

Fig. 391: Locating RH Primary Timing Chain Guide Lower Bolt
Courtesy of FORD MOTOR CO.

20. Remove the 2 bolts and the RH secondary timing chain tensioner.

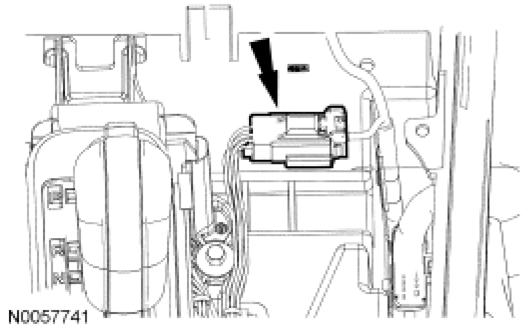

Fig. 392: Locating RH Secondary Timing Chain Tensioner & Bolts
Courtesy of FORD MOTOR CO.

21. Remove the 2 bolts and the engine lifting eye.

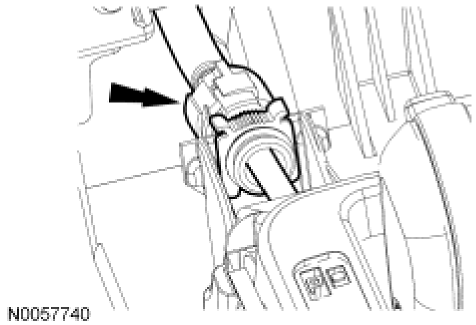

Fig. 393: Locating Engine Lifting Eye & Bolts
Courtesy of FORD MOTOR CO.

NOTE: Index-mark the location of the bracket on the cylinder head for installation.

22. Remove the bolt and the upper intake manifold bracket.

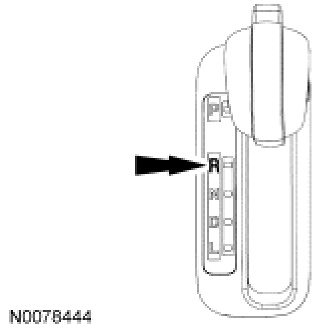

Fig. 394: Locating Upper Intake Manifold Bracket & Bolt
Courtesy of FORD MOTOR CO.

23. Remove the bolt and the RH CMP sensor.

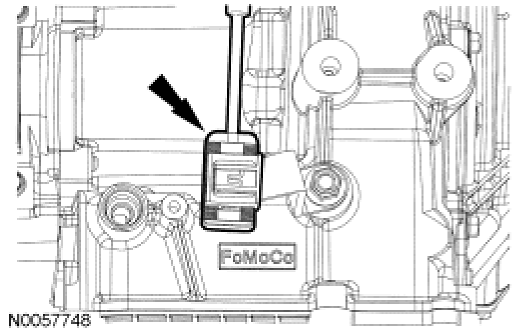

Fig. 395: Locating RH CMP Sensor & Bolt
Courtesy of FORD MOTOR CO.

24. Remove the 4 bolts and the fuel rail and injectors as an assembly.

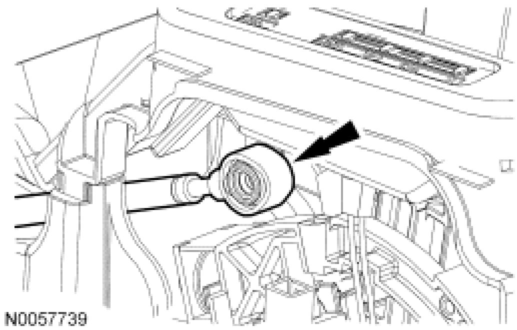

Fig. 396: 4 Bolts And Fuel Rail
Courtesy of FORD MOTOR CO.

25. Remove the 3 thermostat housing-to-lower intake manifold bolts.
    - Remove the thermostat housing and discard the gasket and O-ring seal.

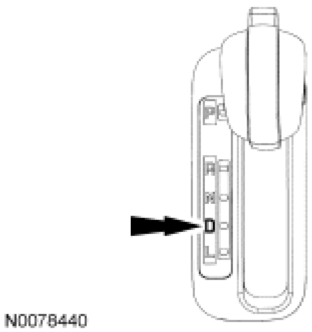

Fig. 397: Locating Thermostat Housing-To-Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

26. Remove the 10 bolts and the lower intake manifold.
    - Discard the gaskets.

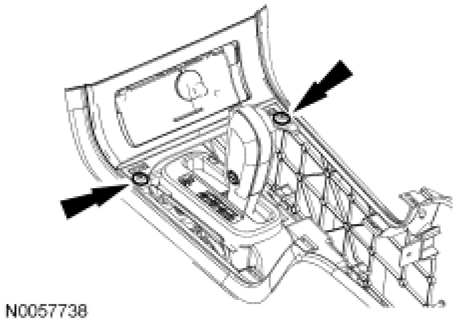

Fig. 398: Locating Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

27. Disconnect and remove the CHT sensor jumper harness.

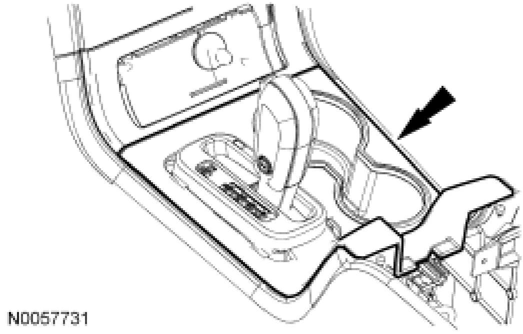

Fig. 399: Identifying CHT Sensor Jumper Harness
Courtesy of FORD MOTOR CO.

NOTE: If the components are to be reinstalled, they must be installed in the same positions. Mark the components for installation into their original locations.

28. Remove the valve tappets from the cylinder head.

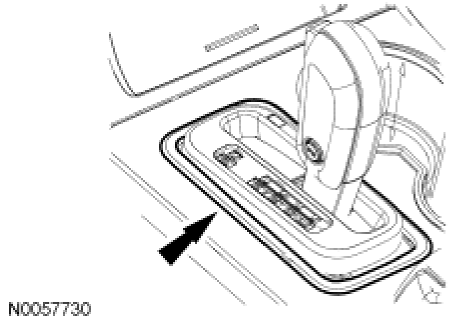

Fig. 400: Identifying Valve Tappets From Cylinder Head
Courtesy of FORD MOTOR CO.

29. Remove and discard the M6 bolt.

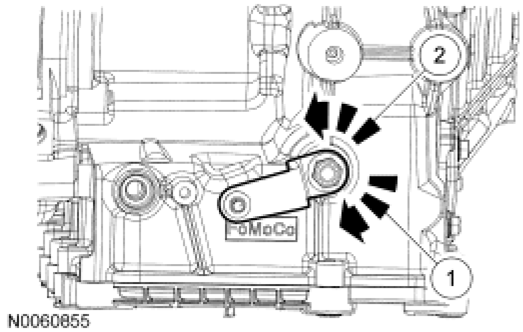

Fig. 401: Identifying M6 Bolt

Courtesy of FORD MOTOR CO.

CAUTION: Place clean shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages or the oil pan, may cause engine failure.

CAUTION: Aluminum surfaces are soft and can be scratched easily. Never place the cylinder head gasket surface, unprotected, on a bench surface.

NOTE: The cylinder head bolts must be discarded and new bolts must be installed. They are a tighten-to-yield designed and cannot be reused.

30. Remove and discard the 8 bolts from the cylinder head.
    - Remove the cylinder head.
    - Discard the cylinder head gasket.

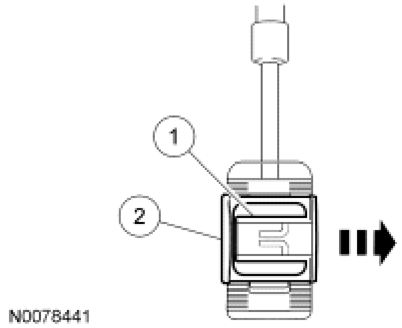

Fig. 402: Identifying Cylinder Head Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.

NOTE: Observe all warnings or cautions and follow all application directions contained on the packaging of the silicone gasket remover and the metal surface prep.

NOTE: If there is no residual gasket material present, metal surface prep can be used to clean and prepare the surfaces.

31. Clean the cylinder head-to-cylinder block mating surfaces of both the cylinder heads and the cylinder

block in the following sequence.

1. Remove any large deposits of silicone or gasket material with a plastic scraper.
2. Apply silicone gasket remover, following package directions, and allow to set for several minutes.
3. Remove the silicone gasket remover with a plastic scraper. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
4. Apply metal surface prep, following package directions, to remove any remaining traces of oil or coolant and to prepare the surfaces to bond with the new gasket. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.

32. Support the cylinder head on a bench with the head gasket side up.

NOTE: The straightedge used must be flat within 0.0051 mm (0.0002 in) per foot of tool length.

33. Inspect all areas of the deck face with a straightedge and feeler gauge. The cylinder head must not have depressions deeper than 0.0254 mm (0.001 in) across a 38.1 mm (1.5 in) square area, or scratches more than 0.0254 mm (0.001 in).

CYLINDER HEAD - LH

Material

Item	Specification
Motorcraft Metal Surface Prep ZC-31-A	-
Silicone Gasket Remover ZC-30	-

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

All vehicles

1. Remove the LH camshafts. For additional information, refer to **Camshaft**.
2. If equipped, remove the heat shield and disconnect the block heater electrical connector.
   - Remove the block heater wiring harness from the engine.

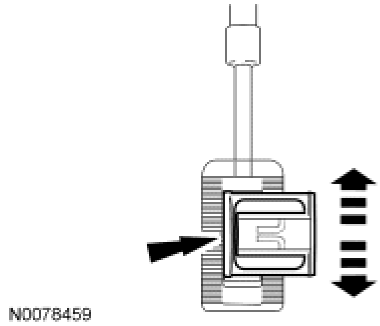

Fig. 403: Identifying Block Heater Wiring Harness

16. Remove the 2 LH catalytic converter bracket bolts.

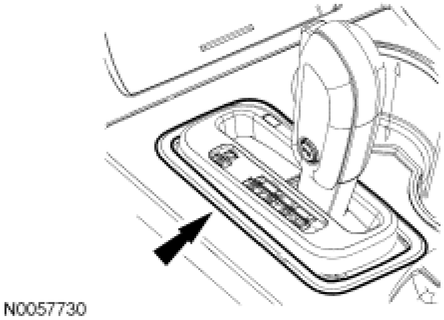

Fig. 417: Locating LH Catalytic Converter Bracket Bolts
Courtesy of FORD MOTOR CO.

17. Remove the 4 nuts (3 shown) and the LH catalytic converter.
    - Discard the nuts and the gasket.

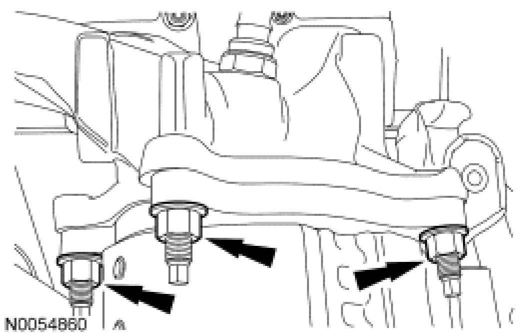

Fig. 418: Locating LH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

18. Remove the 3 bolts and the LH exhaust manifold heat shield.

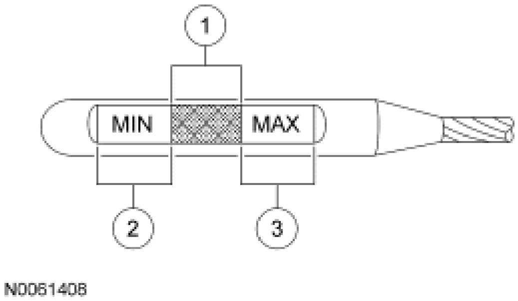

Fig. 419: Locating LH Exhaust Manifold Heat Shield & Nuts
Courtesy of FORD MOTOR CO.

19. Remove the 6 nuts and the LH exhaust manifold.
    - Discard the nuts and the exhaust manifold gasket.

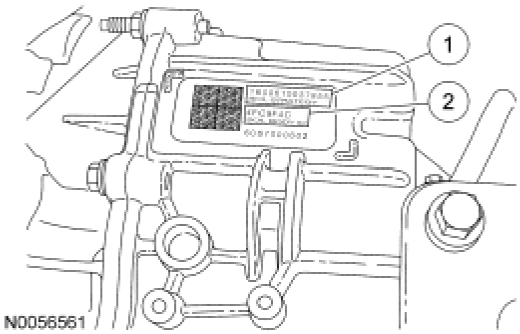

Fig. 420: Locating LH Exhaust Manifold Nuts
Courtesy of FORD MOTOR CO.

20. Clean and inspect the LH exhaust manifold. For additional information, refer to **ENGINE SYSTEM - GENERAL INFORMATION** article.
21. Remove and discard the 6 LH exhaust manifold studs.

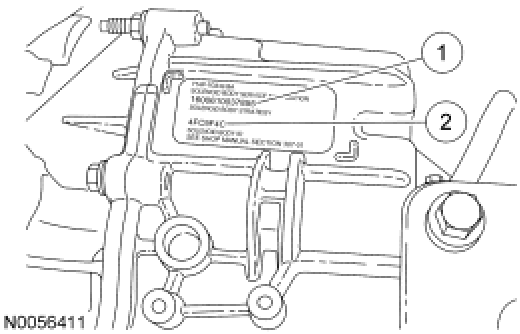

Fig. 421: Locating LH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

22. Remove the LH cylinder block drain plug.
    - Allow coolant to drain from the cylinder block.

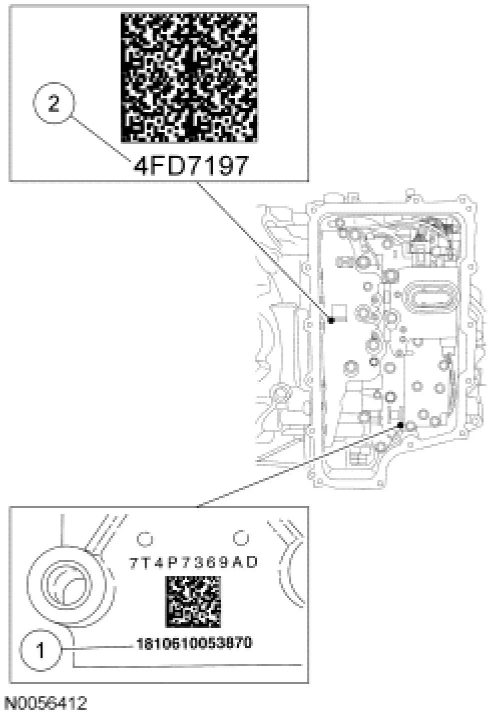

Fig. 422: Locating LH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

23. Remove the 2 RH catalytic converter bracket bolts.

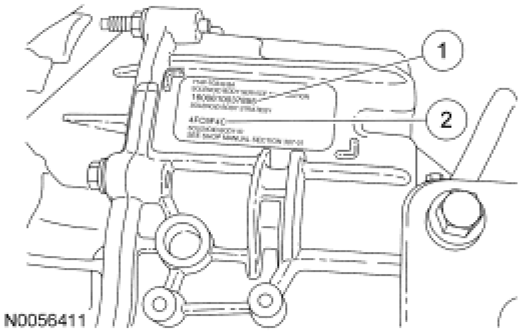

Fig. 423: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

All vehicles

24. Remove the 4 nuts and the RH catalytic converter.
    - Discard the nuts and the gasket.

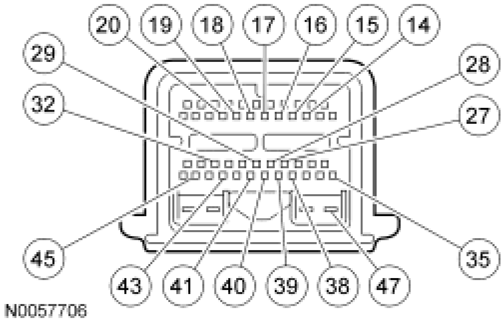

Fig. 424: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

25. Remove the RH cylinder block drain plug or, if equipped, the block heater.
    - Allow coolant to drain from the cylinder block.

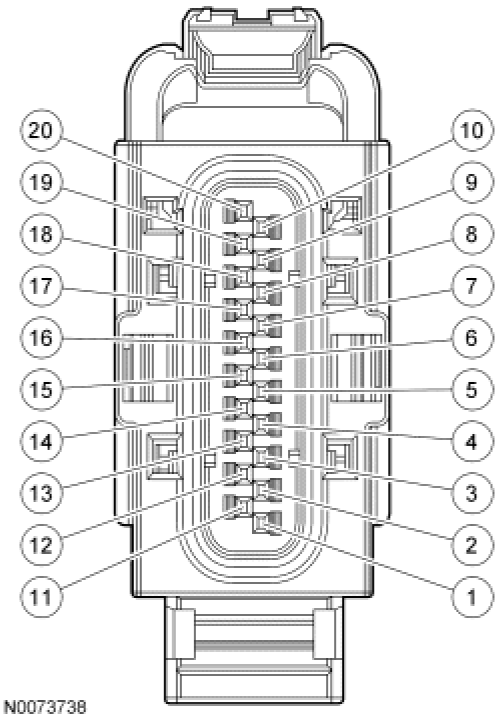

Fig. 425: Locating RH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

26. Remove the 4 bolts and the fuel rail and injectors as an assembly.

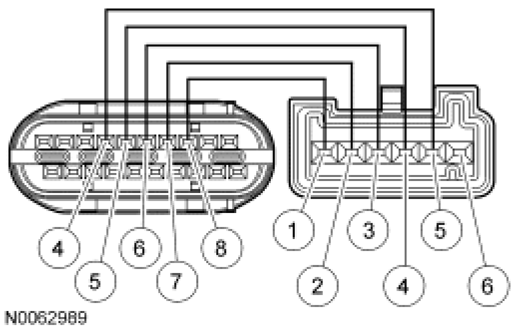

Fig. 426: Identifying 4 Bolts And Fuel Rail
Courtesy of FORD MOTOR CO.

27. Remove the 3 thermostat housing-to-lower intake manifold bolts.
    - Remove the thermostat housing and discard the gasket and O-ring seal.

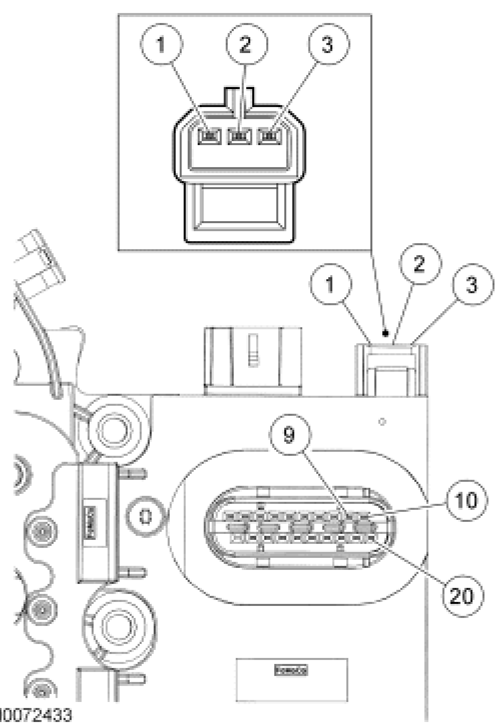

Fig. 427: Locating Thermostat Housing-To-Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

28. Remove the 10 bolts and the lower intake manifold.
    - Discard the gaskets.

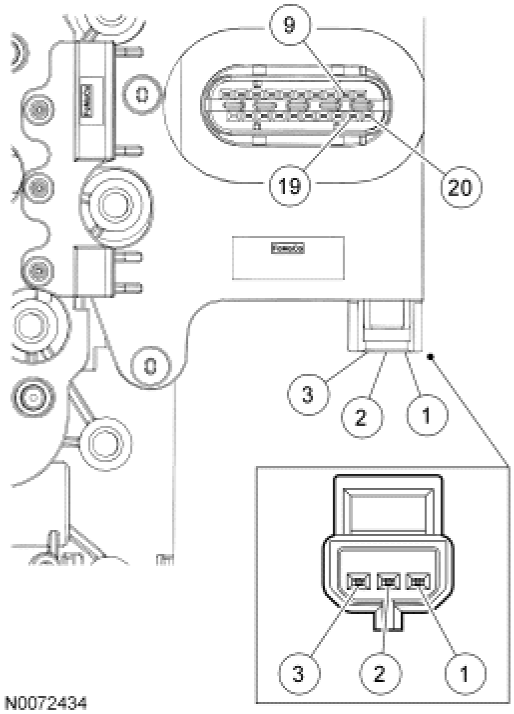

Fig. 428: Locating Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

29. Remove the bolt and the LH CMP sensor.

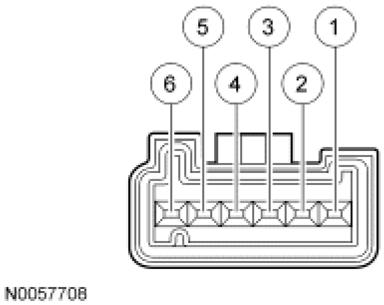

Fig. 429: Locating LH CMP Sensor & Bolt
Courtesy of FORD MOTOR CO.

30. Remove the 2 bolts and the upper LH primary timing chain guide.

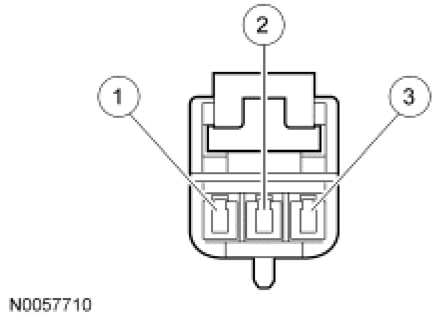

Fig. 430: Locating Upper LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

31. Remove the 2 bolts and the LH secondary timing chain tensioner.

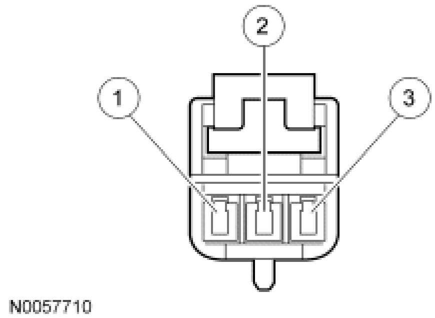

Fig. 431: Locating LH Secondary Timing Chain Tensioner & Bolt
Courtesy of FORD MOTOR CO.

NOTE:	**If the components are to be reinstalled, they must be installed in the same positions. Mark the components for installation into their original locations.**

32. Remove the valve tappets from the cylinder head.

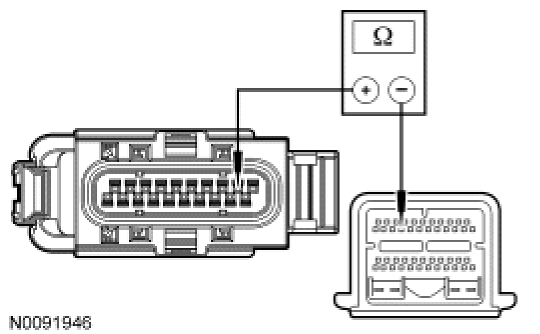

Fig. 432: Identifying Valve Tappets From Cylinder Head
Courtesy of FORD MOTOR CO.

33. Remove and discard the M6 bolt.

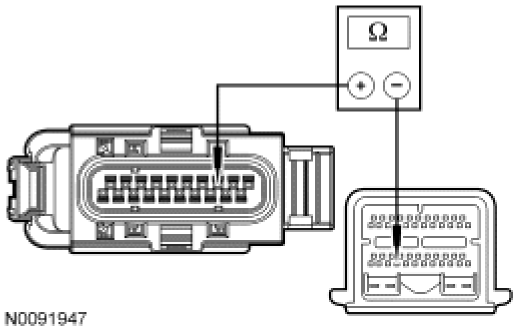

Fig. 433: Identifying M6 Bolt
Courtesy of FORD MOTOR CO.

CAUTION: Place clean shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages or the oil pan, may cause engine failure.

CAUTION: Aluminum surfaces are soft and can be scratched easily. Never place the cylinder head gasket surface, unprotected, on a bench surface.

NOTE: The cylinder head bolts must be discarded and new bolts must be installed. They are a tighten-to-yield designed and cannot be reused.

34. Remove and discard the 8 bolts from the cylinder head.
    - Remove the cylinder head.
    - Discard the cylinder head gasket.

Courtesy of FORD MOTOR CO.

7. Disconnect the throttle body (TB) electrical connector.

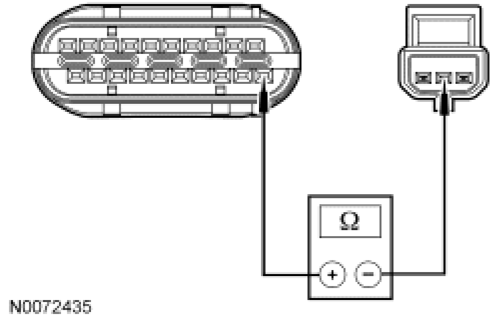

Fig. 439: Locating Throttle Body Electrical Connector
Courtesy of FORD MOTOR CO.

8. Detach the wiring harness retainers from the upper intake manifold.

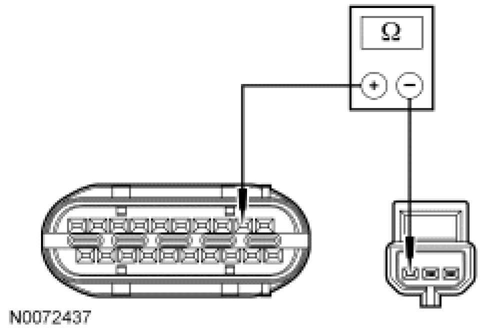

Fig. 440: Locating Wiring Harness Retainers From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

9. Remove the upper intake manifold support bracket bolt.

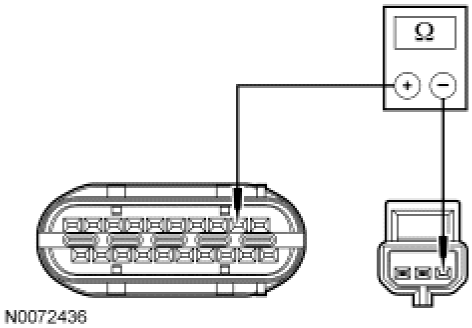

Fig. 441: Locating Upper Intake Manifold Support Bracket Bolt
Courtesy of FORD MOTOR CO.

10. Remove the 6 bolts and the upper intake manifold in the following sequence.
    - Discard the gaskets.

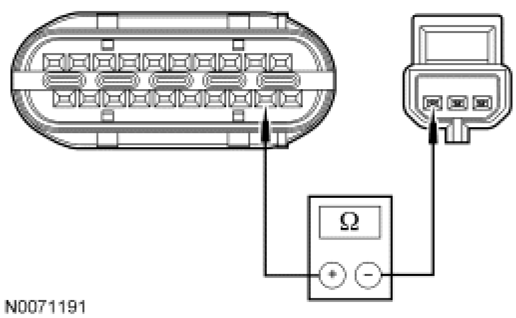

Fig. 442: Identifying Bolt Sequence
Courtesy of FORD MOTOR CO.

11. Disconnect the power steering pressure (PSP) switch electrical connector.

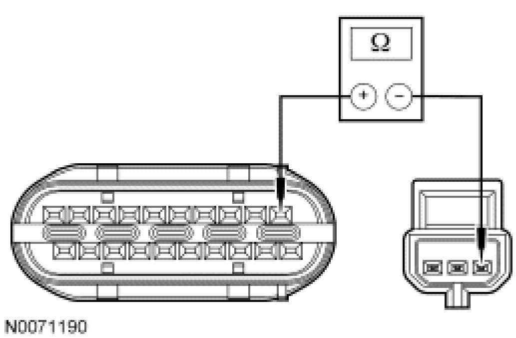

Fig. 443: Locating PSP Switch Electrical Connector
Courtesy of FORD MOTOR CO.

Front wheel drive (FWD) vehicles

12. Disconnect the RH catalyst monitor sensor electrical connector.

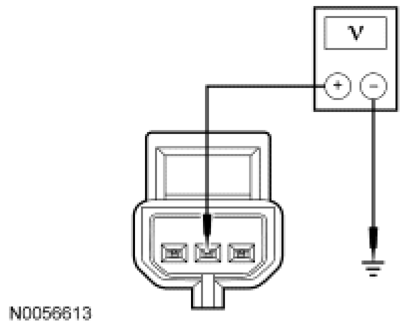

Fig. 444: Locating RH Catalyst Monitor Electrical Connector
Courtesy of FORD MOTOR CO.

All vehicles

13. Disconnect the RH variable camshaft timing (VCT) solenoid electrical connector.

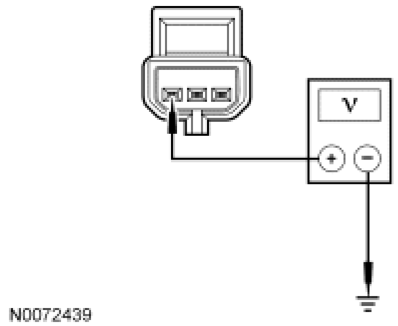

Fig. 445: Locating RH Variable Camshaft Timing (VCT) Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

14. Disconnect the 3 RH coil-on-plug electrical connectors.

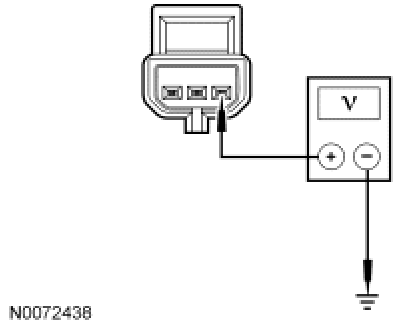

Fig. 446: Locating RH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

15. Detach all of the wiring harness retainers from the RH valve cover and stud bolts.
16. Disconnect the LH catalyst monitor sensor electrical connector.

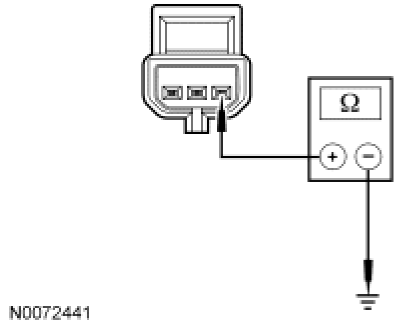

Fig. 447: Identifying LH Catalyst Monitor Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

17. Disconnect the LH VCT solenoid electrical connector.

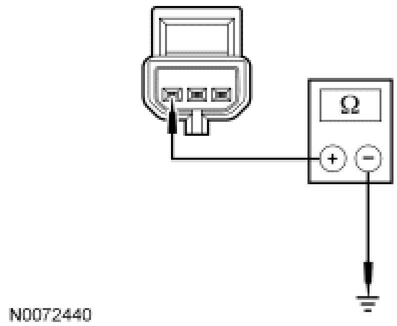

Fig. 448: Locating LH VCT Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

18. Disconnect the 3 LH coil-on-plug electrical connectors.

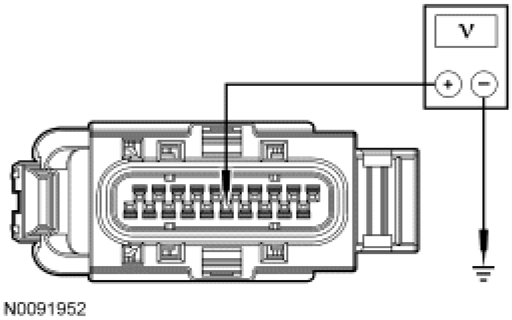

Fig. 449: Locating LH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

19. Detach all of the wiring harness retainers from the LH valve cover and stud bolts.

NOTE:	**The A/C compressor must remain bolted to the engine block prior to installing the oil pan.**

20. Remove the A/C compressor nut and stud.

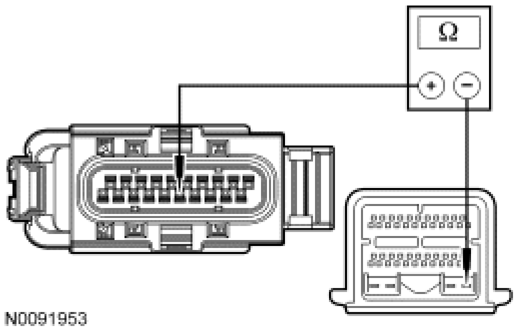

Fig. 450: Locating A/C Compressor Nut & Stud
Courtesy of FORD MOTOR CO.

21. Remove the 3 bolts and the power steering pump.

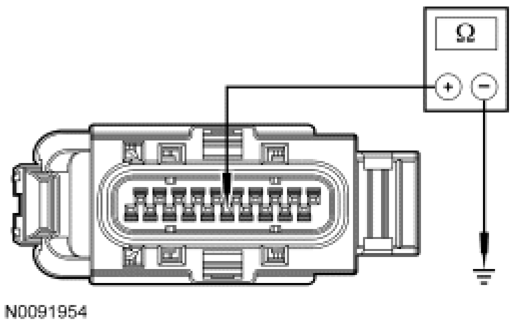

Fig. 451: Locating Power Steering Pump Bolts
Courtesy of FORD MOTOR CO.

22. Remove the 3 bolts and the accessory drive belt tensioner.

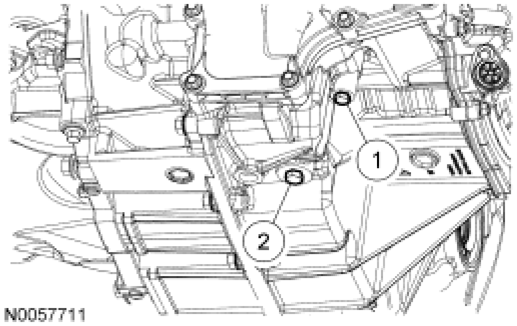

Fig. 452: Locating Accessory Drive Belt Tensioner Bolts
Courtesy of FORD MOTOR CO.

23. Remove the 4 nuts (3 shown) and the LH catalytic converter.
    - Discard the nuts and the gasket.

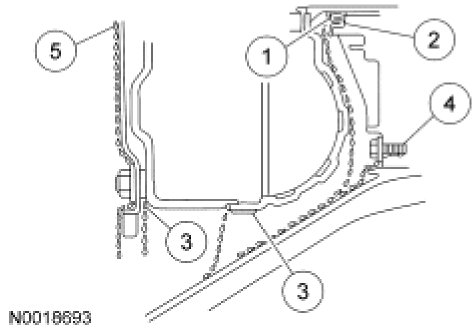

Fig. 453: Locating LH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

FWD vehicles

24. Remove the 4 nuts and the RH catalytic converter.
    - Discard the nuts and the gasket.

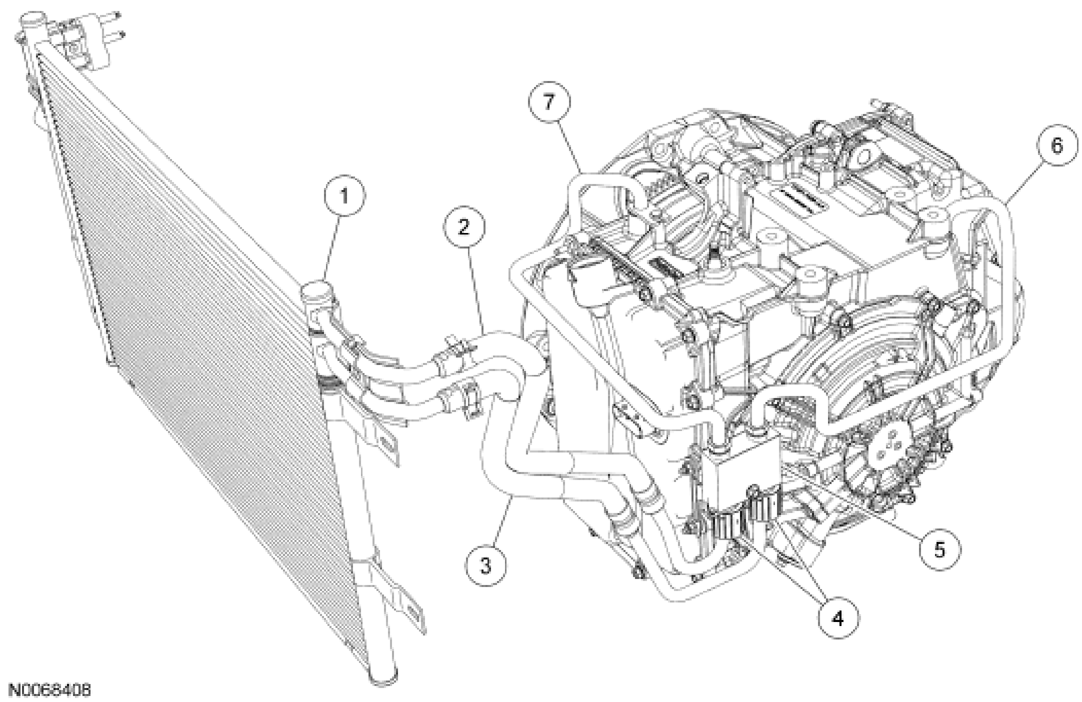

Fig. 454: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

All vehicles

25. Remove the RH cylinder block drain plug or, if equipped, the block heater.
    - Allow coolant to drain from the cylinder block.

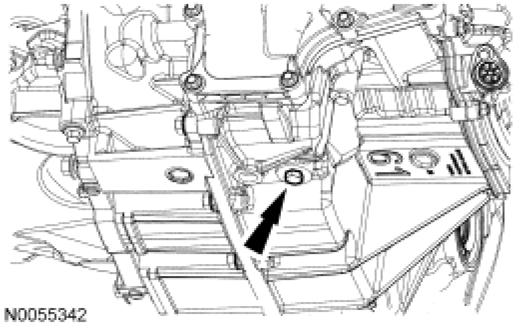

Fig. 455: Locating RH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

26. Remove the LH cylinder block drain plug.
    - Allow coolant to drain from the cylinder block.

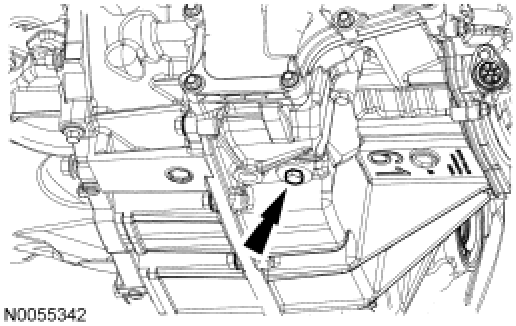

Fig. 456: Locating LH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

NOTE: LH shown, RH similar.

27. Remove the 6 bolts and the 6 coil-on-plugs.

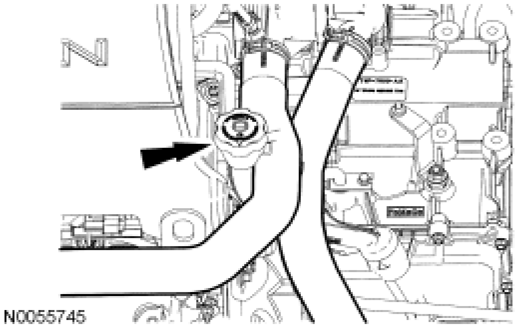

Fig. 457: Locating Coil-On-Plugs & Bolts
Courtesy of FORD MOTOR CO.

28. Remove the 11 stud bolts and the LH valve cover.

- Discard the gasket.

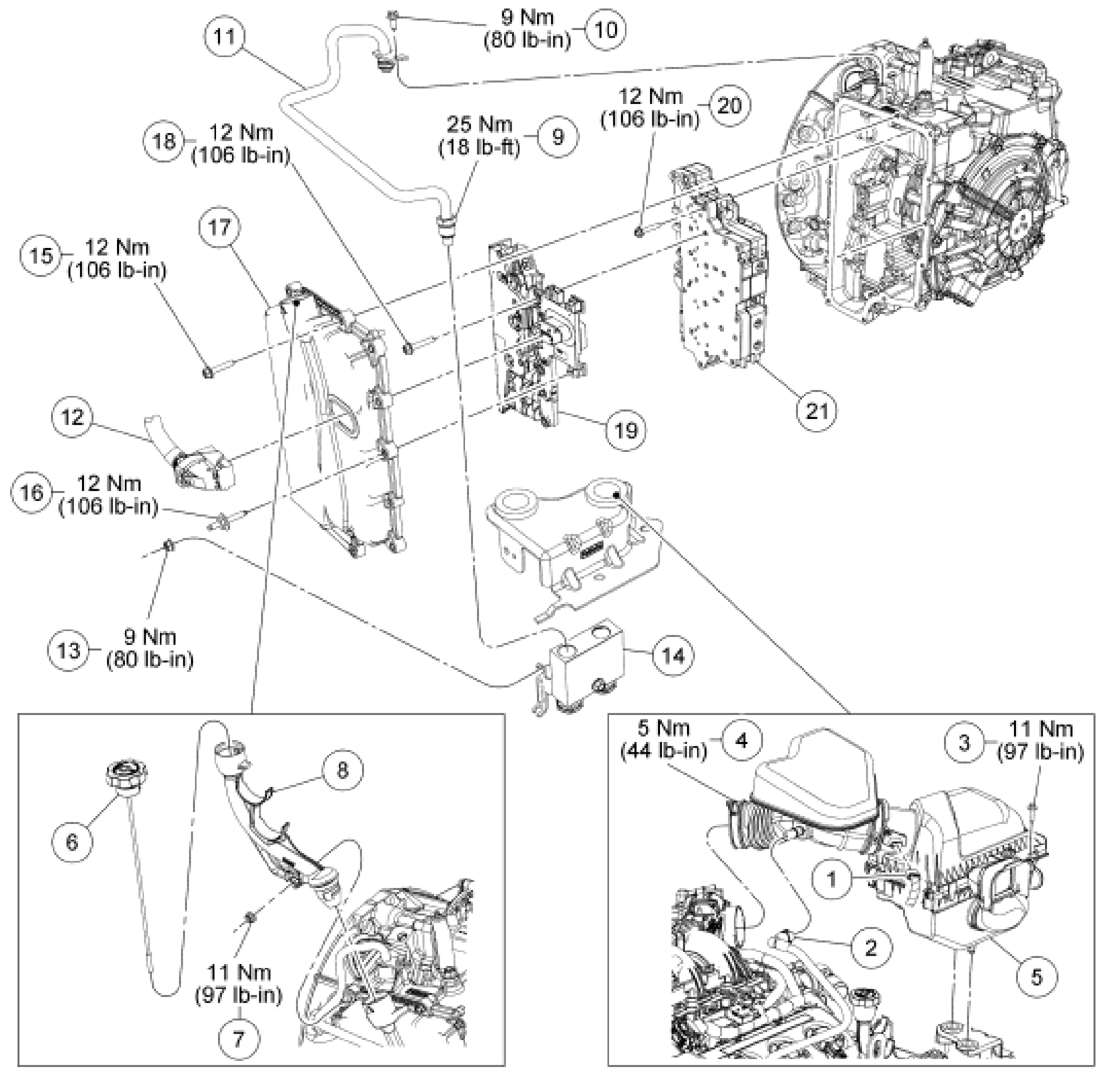

Fig. 458: Locating LH Valve Cover Stud Bolts
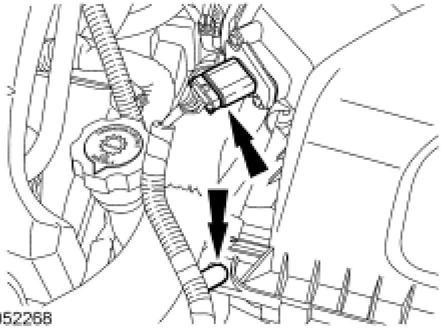
Courtesy of FORD MOTOR CO.

29. Remove the bolt, the 10 stud bolts and the RH valve cover.
    - Discard the gasket.

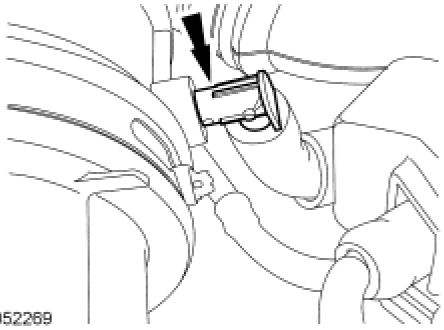


N0052268

Fig. 459: Locating RH Valve Cover Stud Bolts
Courtesy of FORD MOTOR CO.

NOTE: VCT solenoid seal removal shown, spark plug tube seal removal similar.

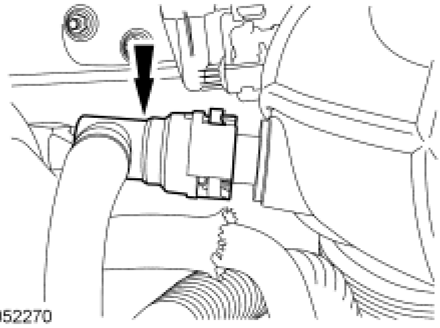
30. Inspect the VCT solenoid seals and the spark plug tube seals. Remove any damaged seals.
    - Using the special tools, remove the seal(s).



N0052269

Fig. 460: Removing Seals Using Special Tools (205-153) & (303-1247/1)
Courtesy of FORD MOTOR CO.

31. Using the special tool, remove the crankshaft bolt and washer.
    - Discard the bolt.



N0052270

Fig. 461: Removing Crankshaft Bolt & Washer Using Special Tool (303-D055)
Courtesy of FORD MOTOR CO.

32. Using the special tool, remove the crankshaft pulley.

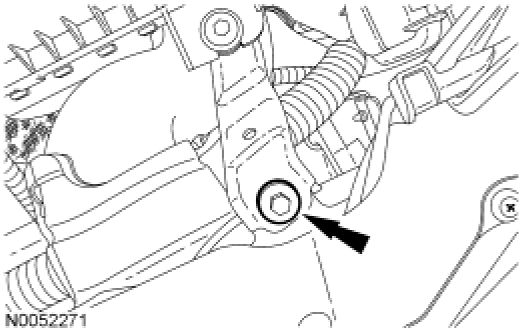


Fig. 462: Identifying Special Tools (303-D121) And Crankshaft Pulley
Courtesy of FORD MOTOR CO.

33. Using the special tool, remove and discard the crankshaft front seal.

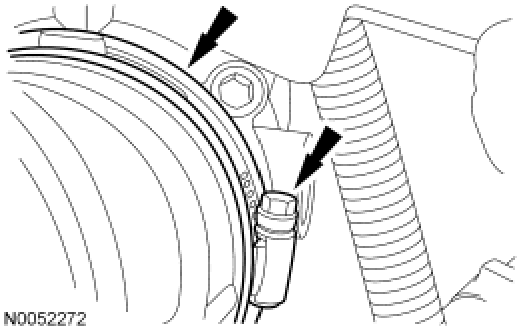

Fig. 463: Removing Crankshaft Front Seal Using Special Tool (303-409)
Courtesy of FORD MOTOR CO.

34. Remove the 2 bolts and the engine mount bracket.

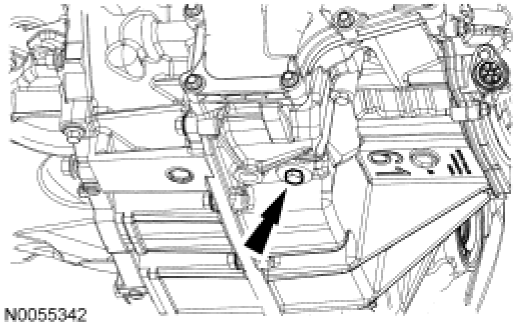

Fig. 464: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

35. Remove the 2 engine mount studs.

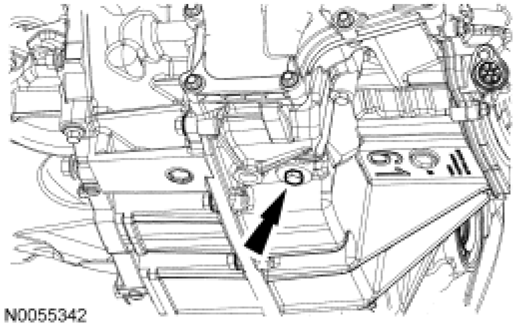

Fig. 465: Locating Engine Mount Studs
Courtesy of FORD MOTOR CO.

36. Remove the 3 bolts and the engine mount bracket.

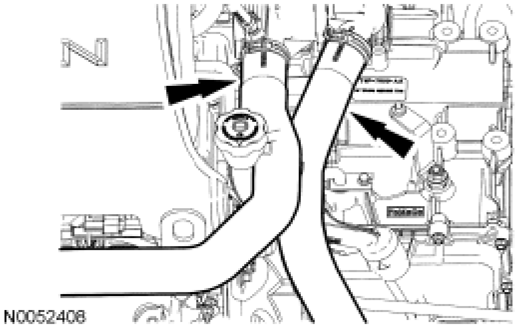

Fig. 466: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

37. Remove the 22 engine front cover bolts.

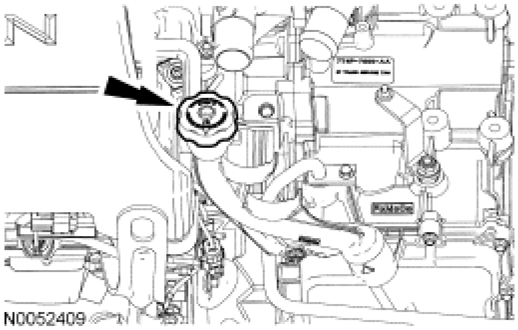

Fig. 467: Identifying Engine Front Cover Bolts
Courtesy of FORD MOTOR CO.

38. Install 6 of the engine front cover bolts (finger tight) into the 6 threaded holes in the engine front cover.
    - Tighten the bolts one turn at a time in a criss-cross pattern until the engine front cover-to-cylinder block seal is released.
        - Remove the engine front cover.

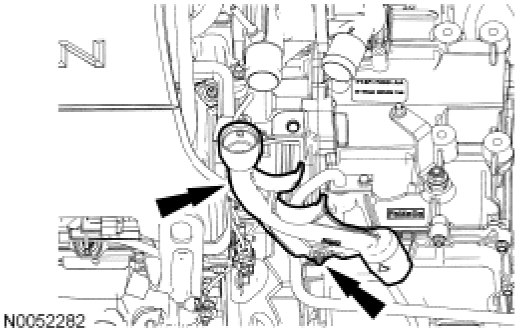

Fig. 468: Identifying Engine Front Cover Bolts
Courtesy of FORD MOTOR CO.

39. Remove the 16 oil pan bolts.

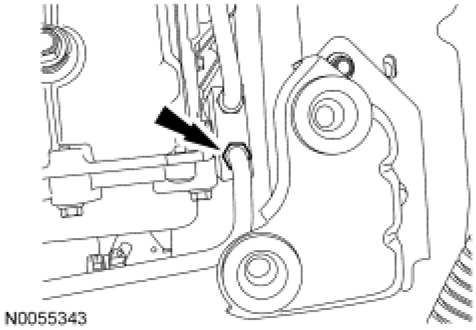

Fig. 469: Identifying Oil Pan Bolts
Courtesy of FORD MOTOR CO.

40. Install 2 of the oil pan bolts (finger tight) into the 2 threaded holes in the oil pan.
    - Alternately tighten the 2 bolts one turn at a time until the oil pan-to-cylinder block seal is released.
        - Remove the oil pan.

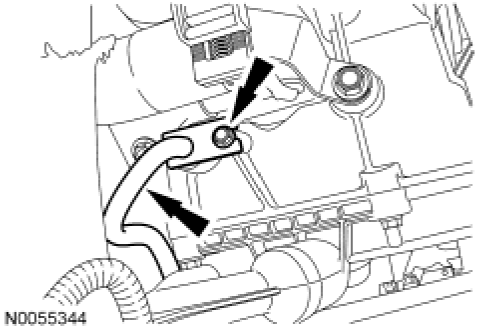

Fig. 470: Installing 2 Of Oil Pan Bolts (Finger Tight) Into 2 Threaded Holes In Oil Pan
Courtesy of FORD MOTOR CO.

CAUTION: Only use a 3M Roloc® Bristle Disk (2-in white, part number 07528) to

clean the engine front cover and oil pan. Do not use metal scrapers, wire brushes or any other power abrasive disk to clean the engine front cover. These tools cause scratches and gouges that make leak paths.

41. Clean the engine front cover and oil pan using a 3M Roloc® Bristle Disk (2-in white, part number 07528) in a suitable tool turning at the recommended speed of 15,000 rpm.
    - Thoroughly wash the engine front cover and oil pan to remove any foreign material, including any abrasive particles created during the cleaning process.

CAUTION: Place clean, lint-free shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages or the oil pan, may cause engine failure.

CAUTION: Do not use wire brushes, power abrasive discs or 3M Roloc® Bristle Disk (2-in white part number 07528) to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. They also cause contamination that will cause premature engine failure. Remove all traces of the gasket.

42. Clean the sealing surfaces of the cylinder block in the following sequence.
    1. Remove any large deposits of silicone or gasket material.
    2. Apply silicone gasket remover and allow to set for several minutes.
    3. Remove the silicone gasket remover. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
    4. Apply metal surface prep to remove any remaining traces of oil or coolant and to prepare the surfaces to bond. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.
    5. Make sure the 2 locating dowel pins are seated correctly in the cylinder block.

OIL PUMP SCREEN AND PICKUP TUBE

NOTE: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, may cause engine failure.

1. Remove the oil pan. For additional information, refer to **Oil Pan**.
2. Remove the 3 bolts and the oil pump screen and pickup tube.
    - Discard the O-ring seal.

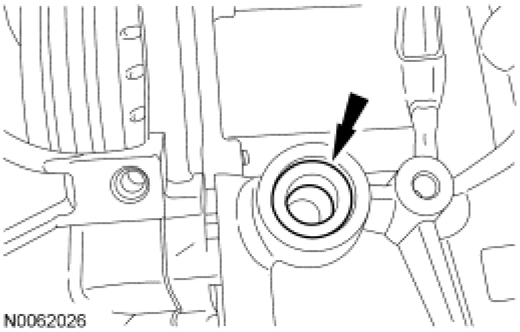

Fig. 471: Identifying Oil Pump Screen, Pickup Tube & Bolts
Courtesy of FORD MOTOR CO.

CRANKSHAFT REAR SEAL WITH RETAINER PLATE

Special Tools

Illustration	Tool Name	Tool Number
	Heavy Duty Floor Crane	014-00071 or equivalent
	Remover, Crankshaft Rear Oil Seal	303-519 (T95P-6701-EH)
	Slide Hammer	307-005 (T59L-100-B)
	Spreader Bar	303-D089 (D93P-6001-A3) or equivalent

Material

Item	Specification
Motorcraft Metal Surface Prep ZC-31-A	-
Silicone Gasket Remover	-

ZC-30	

NOTE: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, may cause engine failure.

NOTE: This procedure is for removal of the crankshaft rear seal and retainer plate and requires removal of the oil pan. If only removing the crankshaft rear seal, refer to Crankshaft Rear Seal.

1. Remove the oil pan. For additional information, refer to **Oil Pan**.
2. Using the Heavy Duty Floor Crane and Spreader Bar, remove the engine from the stand.

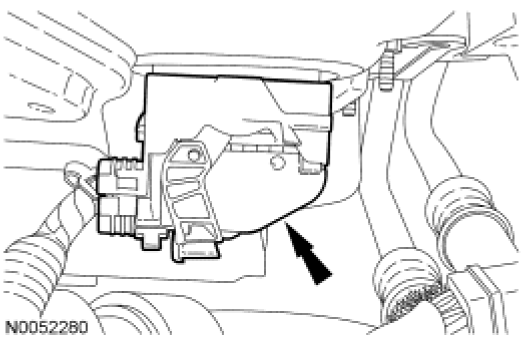

Fig. 472: Identifying Heavy Duty Floor Crane and Spreader Bar
Courtesy of FORD MOTOR CO.

3. Disconnect the Crankshaft Position (CKP) sensor electrical connector.

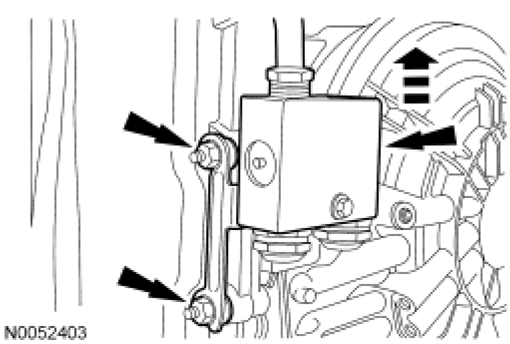

Fig. 473: Identifying Crankshaft Position (CKP) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

4. Remove the bolt and the CKP sensor.

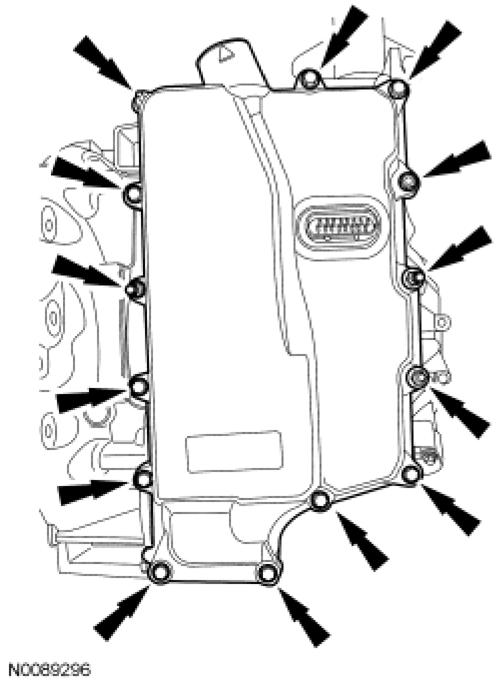

Fig. 474: Identifying CKP Sensor & Bolt
Courtesy of FORD MOTOR CO.

5. Using the Crankshaft Rear Oil Seal Remover and Slide Hammer, remove and discard the rear crankshaft seal.

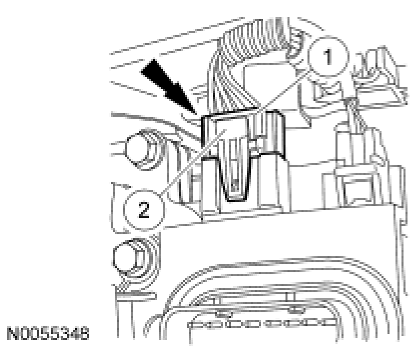

Fig. 475: Removing Crankshaft Rear Seal Using Special Tools (303-519) & (307-005)
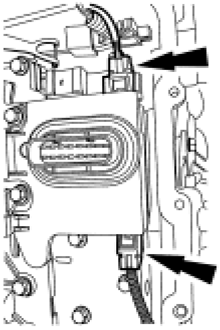
Courtesy of FORD MOTOR CO.

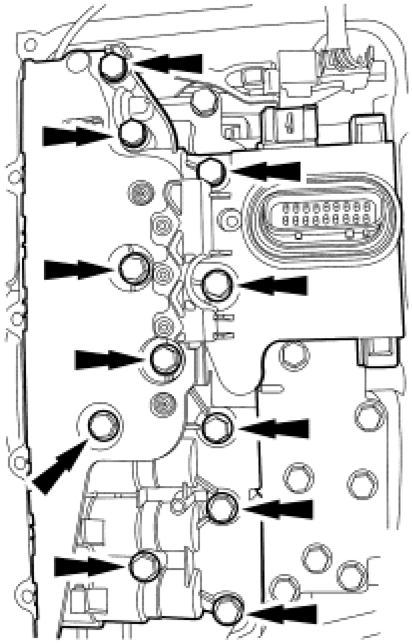
6. Remove the 8 crankshaft rear seal retainer bolts.



N0055349

Fig. 476: Locating Crankshaft Rear Seal Retainer Bolts
Courtesy of FORD MOTOR CO.

7. Install the 2 M6 oil pan bolts (finger tight) into the 2 threaded holes in the crankshaft rear seal retainer.
    - Alternately tighten the 2 bolts one turn at a time until the crankshaft rear seal retainer-to-cylinder block seal is released.
        - Remove the crankshaft rear seal retainer.



N0055350

Fig. 477: Identifying M6 Oil Pan Bolts
Courtesy of FORD MOTOR CO.

NOTE:	**Only use a 3M Roloc® Bristle Disk, (2-in white, part number 07528) to clean the crankshaft rear seal retainer plate. Do not use metal scrapers, wire brushes or any other power abrasive disk to clean the crankshaft rear seal retainer plate. These tools cause scratches and gouges that make leak paths.**

8. Clean the crankshaft rear seal retainer plate using a 3M Roloc® Bristle Disk, (2-in white, part number 07528) in a suitable tool turning at the recommended speed of 15,000 rpm.
    - Thoroughly wash the crankshaft rear seal retainer plate to remove any foreign material, including any abrasive particles created during the cleaning process.

NOTE: **Place clean, lint-free shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages or the oil pan, may cause engine failure.**

NOTE: **Do not use wire brushes, power abrasive discs or 3M Roloc® Bristle Disk (2-in white, part number 07528) to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. They also cause contamination that will cause premature engine failure. Remove all traces of the gasket.**

9. Clean the sealing surfaces of the cylinder block in the following sequence.
    1. Remove any large deposits of silicone or gasket material.
    2. Apply silicone gasket remover and allow to set for several minutes.
    3. Remove the silicone gasket remover. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
    4. Apply metal surface prep to remove any remaining traces of oil or coolant and to prepare the surfaces to bond. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.

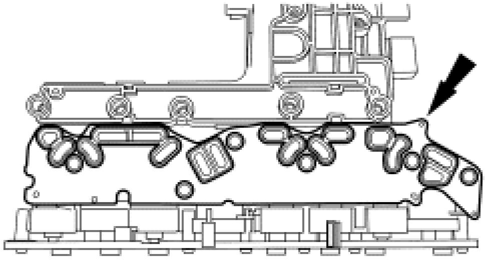
CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

NOTE: **For additional information, refer to the exploded view under the assembly procedure in this service information.**

All vehicles

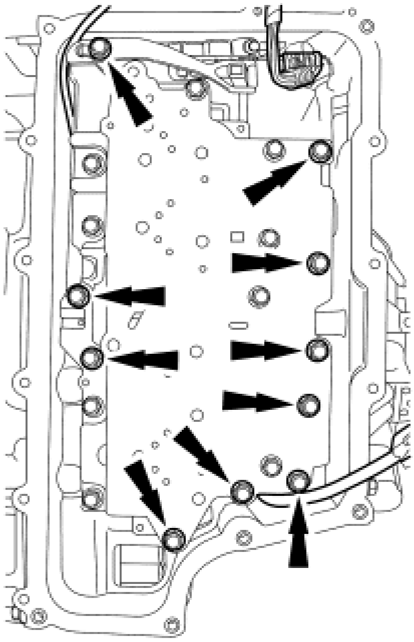
1. Remove the 8 bolts and the flexplate.



N0055016

Fig. 478: Identifying Flexplate & Bolts
Courtesy of FORD MOTOR CO.

2. Remove the crankshaft sensor ring.



N0057465

Fig. 479: Identifying Crankshaft Sensor Ring
Courtesy of FORD MOTOR CO.

3. Using the special tools, remove and discard the rear crankshaft seal.

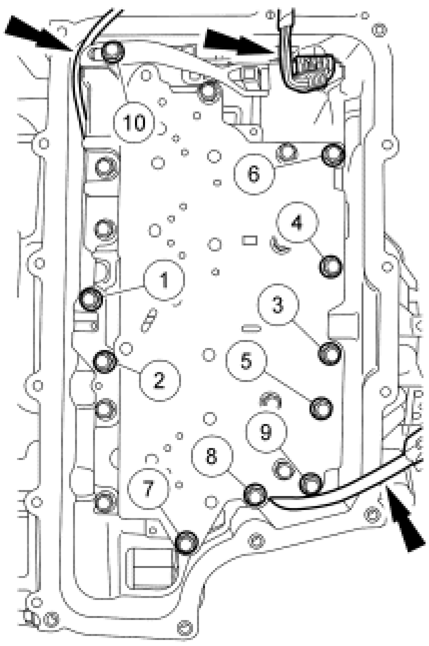


Fig. 480: Removing Crankshaft Rear Seal Using Special Tools (303-519) & (307-005)
Courtesy of FORD MOTOR CO.

CAUTION: Install the engine stand bolts into the cylinder block only. Do not install the bolts into the oil pan.

4. Mount the engine on a suitable engine stand.
5. If equipped, remove the heat shield and disconnect the block heater electrical connector.
   - Detach all of the engine block heater harness retainers and remove the harness.

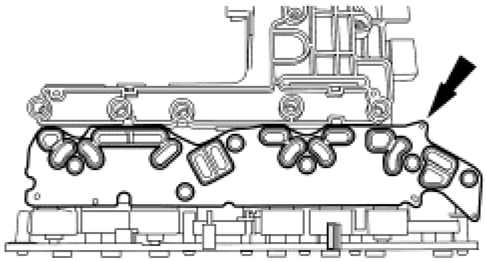

Fig. 481: Identifying Block Heater Wiring Harness
Courtesy of FORD MOTOR CO.

6. Disconnect the PCV hose from the PCV valve.

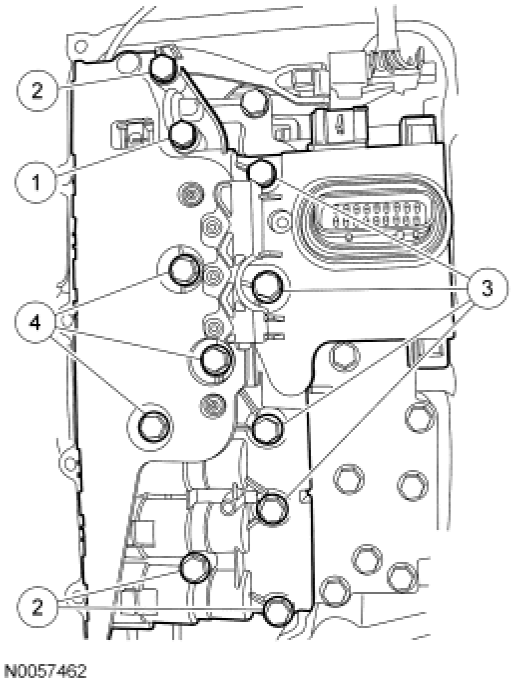

Fig. 482: Identifying PCV Hose
Courtesy of FORD MOTOR CO.

7. Disconnect the throttle body (TB) electrical connector.

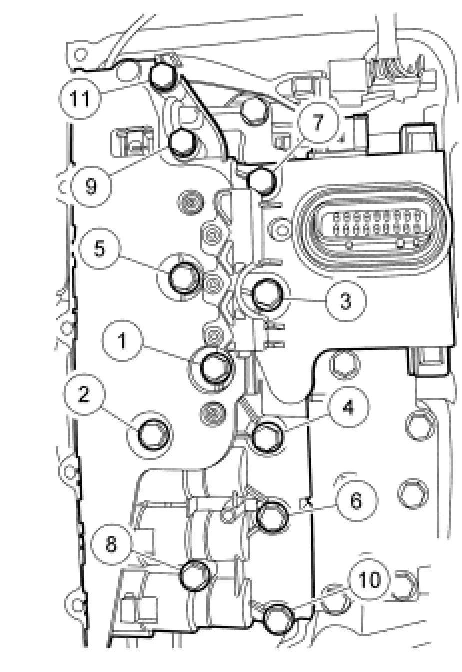

Fig. 483: Locating Throttle Body Electrical Connector

Courtesy of FORD MOTOR CO.

8. Detach the wiring harness retainers from the upper intake manifold.

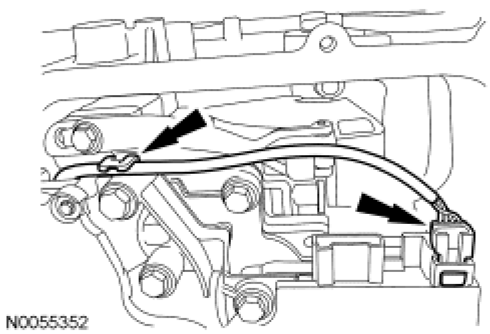

Fig. 484: Locating Wiring Harness Retainers From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

9. Remove the upper intake manifold support bracket bolt.

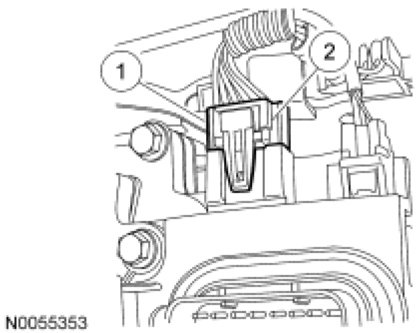

Fig. 485: Locating Upper Intake Manifold Support Bracket Bolt
Courtesy of FORD MOTOR CO.

10. Remove the 6 bolts and the upper intake manifold in the following sequence.
    - Discard the gaskets.

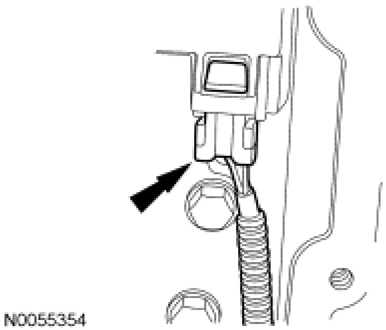

Fig. 486: Identifying Bolt Sequence
Courtesy of FORD MOTOR CO.

11. Disconnect the power steering pressure (PSP) switch electrical connector.

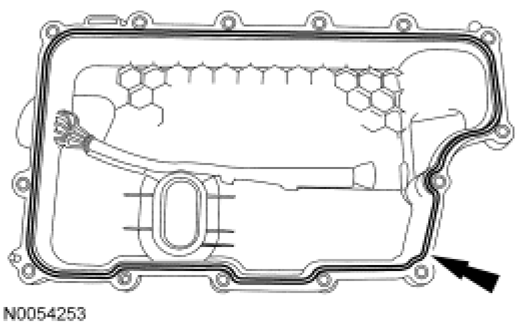

Fig. 487: Locating PSP Switch Electrical Connector
Courtesy of FORD MOTOR CO.

Front wheel drive (FWD) vehicles

12. Disconnect the RH catalyst monitor sensor electrical connector.

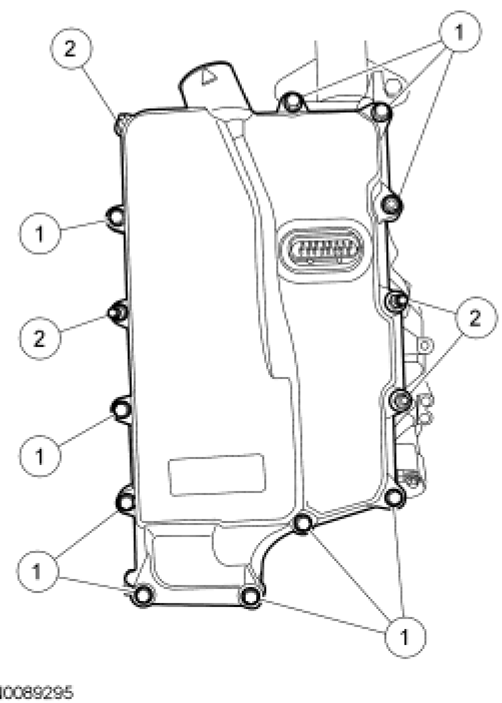

Fig. 488: Locating RH Catalyst Monitor Electrical Connector
Courtesy of FORD MOTOR CO.

All vehicles

13. Disconnect the RH heated oxygen sensor (HO2S) electrical connector.

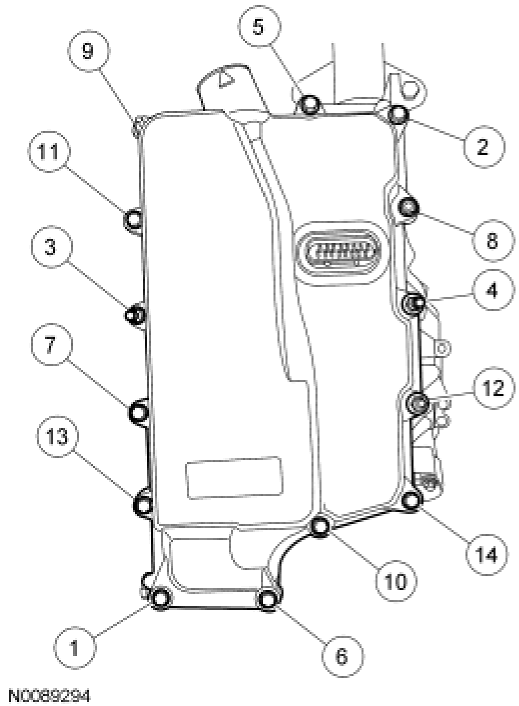

Fig. 489: Locating RH Heated Oxygen Sensor (HO2S) Electrical Connector
Courtesy of FORD MOTOR CO.

14. Disconnect the RH variable camshaft timing (VCT) solenoid electrical connector.

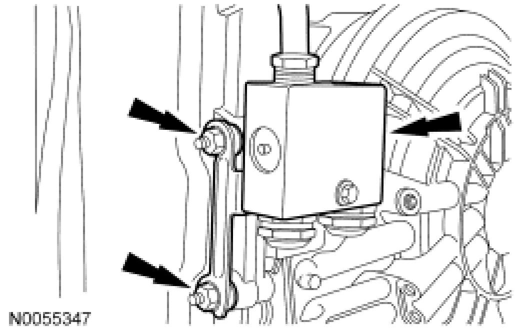

Fig. 490: Locating RH Variable Camshaft Timing (VCT) Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

15. Disconnect the 3 RH coil-on-plug electrical connectors.

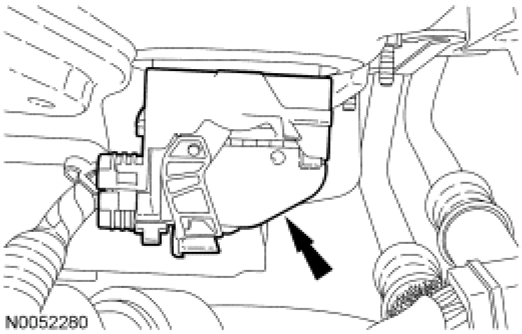

Fig. 491: Locating RH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

16. Detach all of the wiring harness retainers from the RH valve cover and stud bolts.
17. Disconnect the RH camshaft position (CMP) sensor electrical connector.

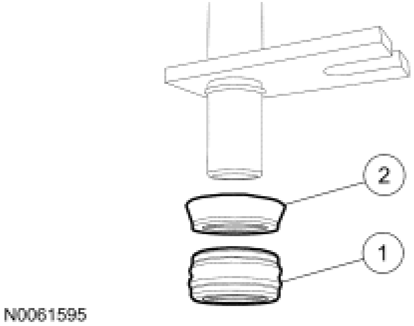

Fig. 492: Locating RH Camshaft Position (CMP) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

18. Disconnect the knock sensor (KS) electrical connector.

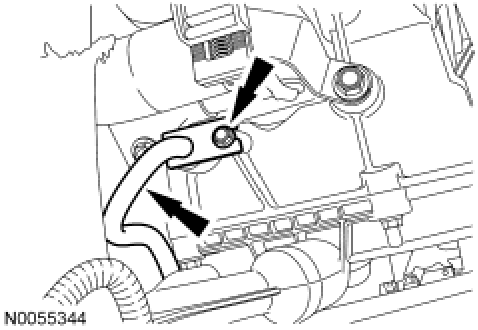

Fig. 493: Locating Knock Sensor (KS) Electrical Connector
Courtesy of FORD MOTOR CO.

19. Remove the bolt and the ground cable from the RH cylinder.

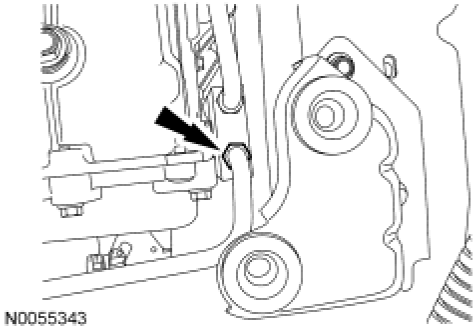

Fig. 494: Locating Ground Cable From RH Cylinder
Courtesy of FORD MOTOR CO.

20. Disconnect the 6 fuel injector electrical connectors (3 shown).

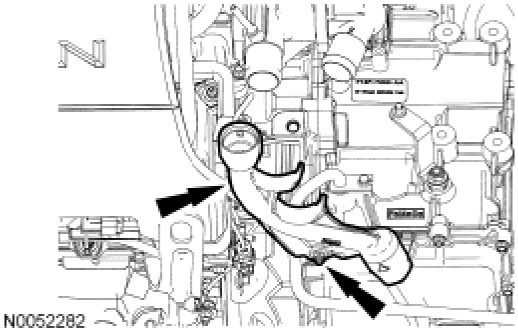

Fig. 495: Locating Fuel Injector Electrical Connectors
Courtesy of FORD MOTOR CO.

21. Disconnect the cylinder head temperature (CHT) sensor electrical connector.

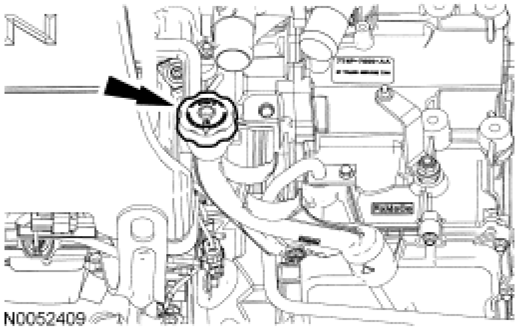

Fig. 496: Locating Cylinder Head Temperature (CHT) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

22. Disconnect the LH CMP sensor electrical connector.

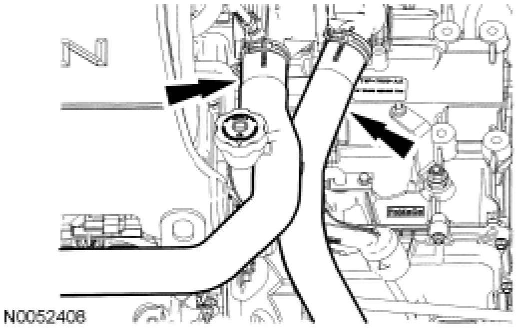

Fig. 497: Locating LH CMP Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

23. Disconnect the LH catalyst monitor sensor electrical connector.

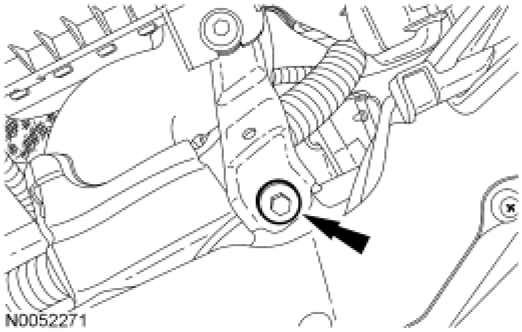

Fig. 498: Identifying LH Catalyst Monitor Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

24. Disconnect the LH HO2S electrical connector.

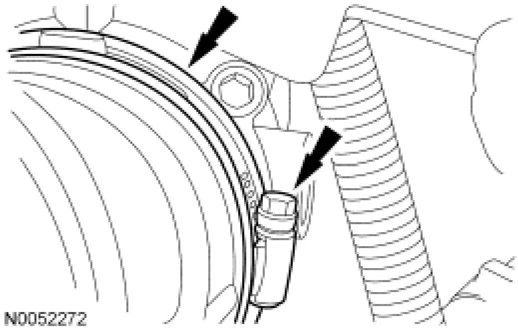

Fig. 499: Locating LH Heated Oxygen Sensor (HO2S) Electrical Connector
Courtesy of FORD MOTOR CO.

25. Disconnect the 3 LH coil-on-plug electrical connectors.

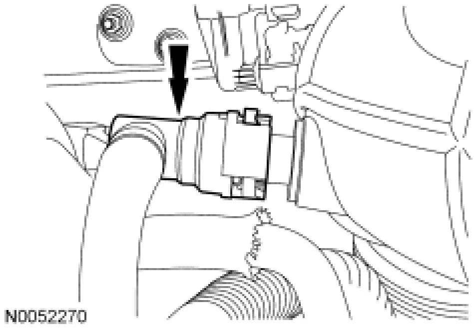

Fig. 500: Locating LH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

26. Disconnect the LH VCT solenoid electrical connector.

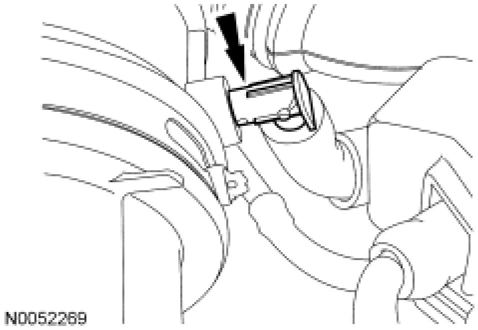

Fig. 501: Locating LH VCT Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

27. Detach all of the wiring harness retainers from the LH valve cover and stud bolts.
28. Remove the wiring harness retainer bolt from the rear of the LH cylinder head.

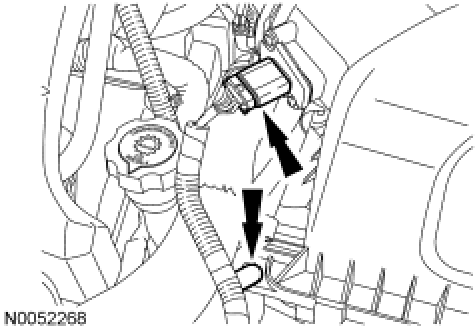

Fig. 502: Identifying Wiring Harness Retainer Bolt From Rear Of LH Cylinder Head
Courtesy of FORD MOTOR CO.

29. Remove the nut, the bolt and the heat shield.

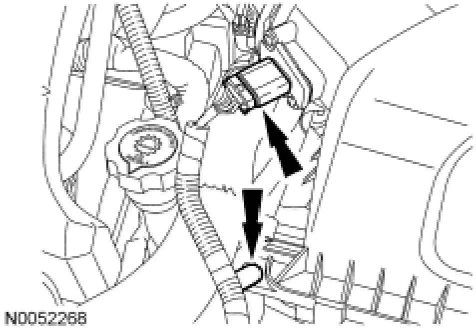

Fig. 503: Identifying Heat Shield, Nut & Bolt
Courtesy of FORD MOTOR CO.

30. Remove the wiring harness retainer stud bolt.

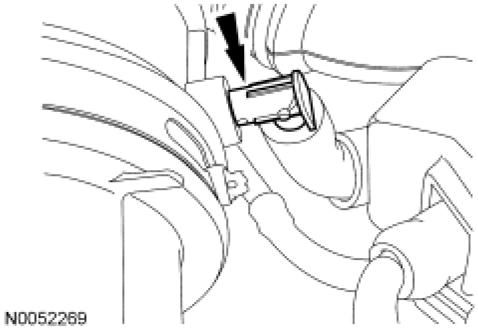

Fig. 504: Identifying Wiring Harness Retainer Stud Bolt
Courtesy of FORD MOTOR CO.

31. Remove the wiring harness grommet.

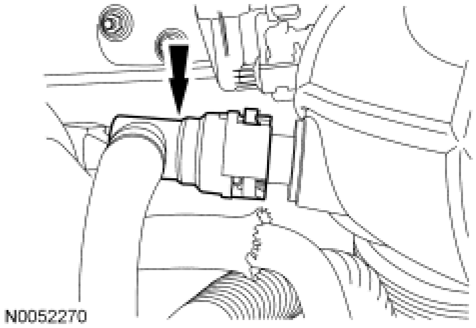

Fig. 505: Identifying Wiring Harness Grommet
Courtesy of FORD MOTOR CO.

32. Disconnect the crankshaft position (CKP) sensor electrical connector.

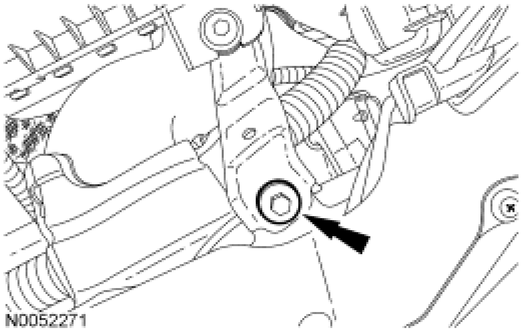

Fig. 506: Identifying Crankshaft Position (CKP) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

33. Disconnect the A/C compressor electrical connector.

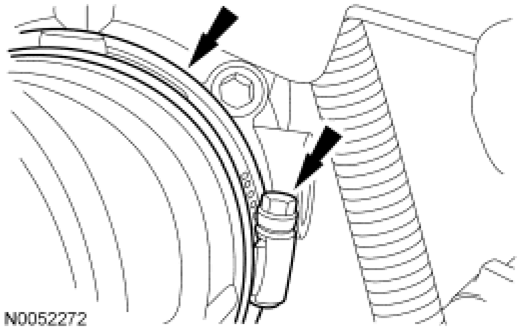

Fig. 507: Identifying A/C Compressor Electrical Connector
Courtesy of FORD MOTOR CO.

34. Remove the nut and disconnect the generator B+ cable.

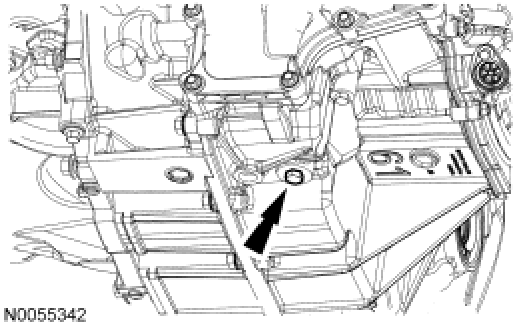

Fig. 508: Identifying Generator B+ Cable & Nut
Courtesy of FORD MOTOR CO.

35. Disconnect the generator electrical connector.

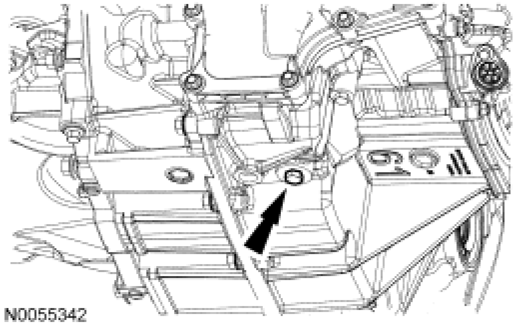

Fig. 509: Identifying Generator Electrical Connector
Courtesy of FORD MOTOR CO.

36. Detach the wiring harness retainer from the generator.

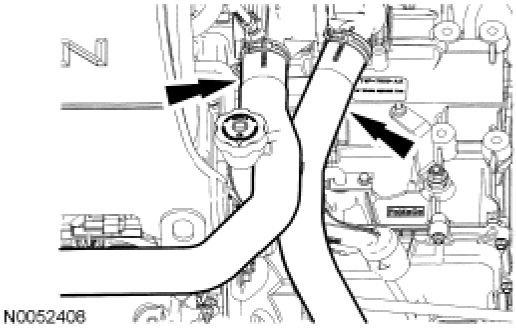

Fig. 510: Identifying Wiring Harness Retainer From Generator
Courtesy of FORD MOTOR CO.

37. Disconnect the engine oil pressure (EOP) switch electrical connector and the wiring harness pin-type retainer.
    - Remove the wiring harness from the engine.

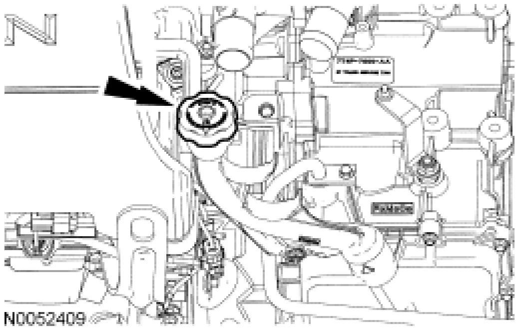

Fig. 511: Locating Engine Oil Pressure (EOP) Switch Electrical Connector & Wiring Harness Pin-Type Retainer
Courtesy of FORD MOTOR CO.

38. Remove the nut, 2 bolts and the A/C compressor.

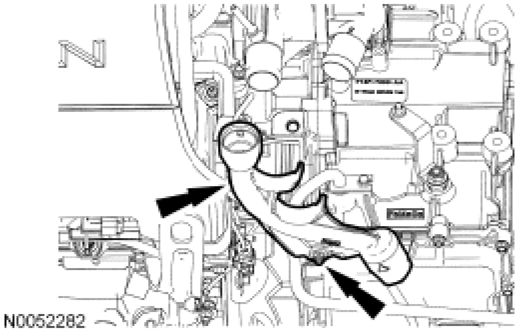

Fig. 512: Locating A/C Compressor, Bolts & Nuts
Courtesy of FORD MOTOR CO.

39. Remove the A/C compressor mounting stud from the oil pan.

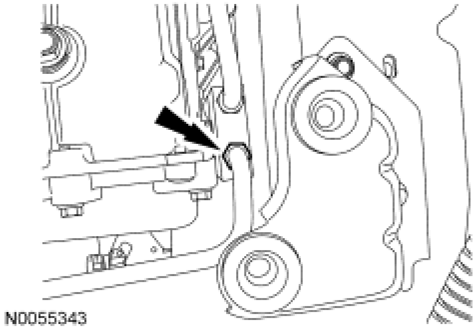

Fig. 513: Locating A/C Compressor Mounting Stud
Courtesy of FORD MOTOR CO.

40. Remove the nut, bolt and the generator.

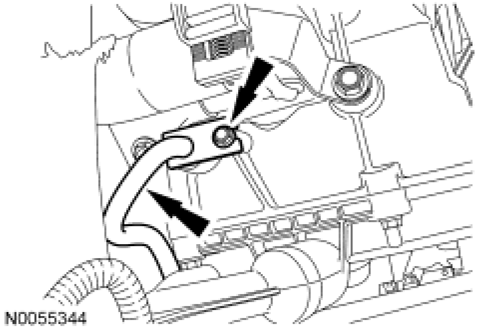

Fig. 514: Locating Generator, Bolts & Nuts
Courtesy of FORD MOTOR CO.

41. Remove the 3 bolts and the power steering pump.

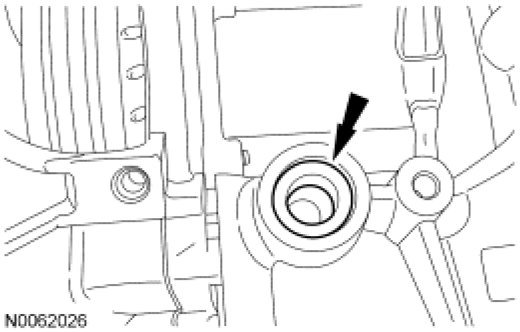

Fig. 515: Locating Power Steering Pump Bolts
Courtesy of FORD MOTOR CO.

42. Remove the 3 bolts and the accessory drive belt tensioner.

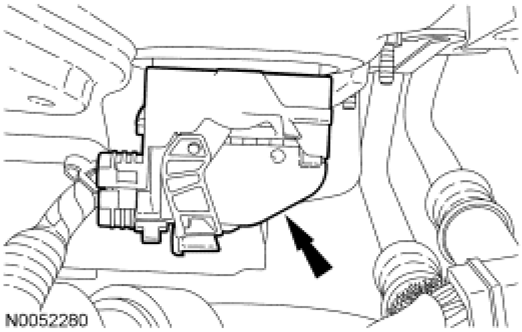

Fig. 516: Locating Accessory Drive Belt Tensioner Bolts
Courtesy of FORD MOTOR CO.

43. Remove the 4 nuts (3 shown) and the LH catalytic converter.
    - Discard the nuts and the gasket.

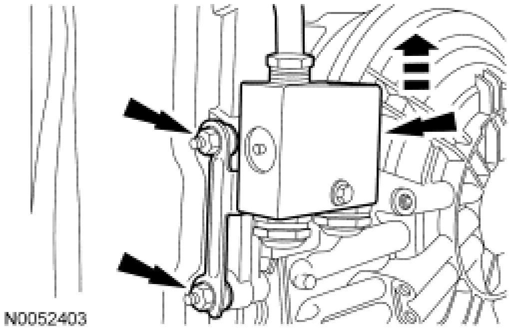

Fig. 517: Locating LH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

44. Remove the 3 bolts and the LH exhaust manifold heat shield.

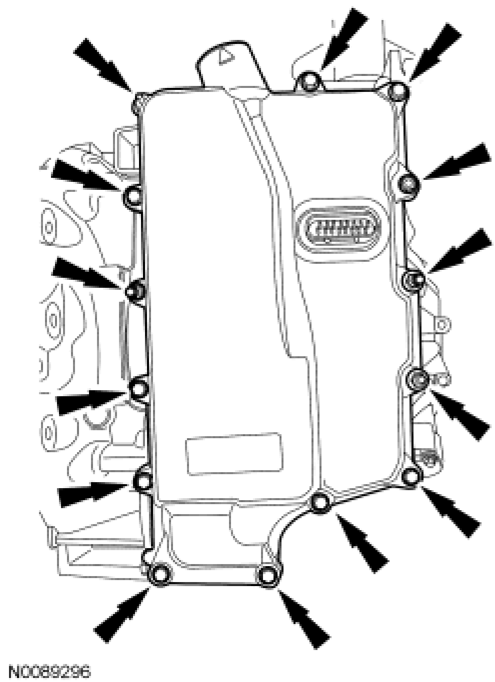

Fig. 518: Locating LH Exhaust Manifold Heat Shield & Nuts
Courtesy of FORD MOTOR CO.

45. Remove the 6 nuts and the LH exhaust manifold.
    - Discard the nuts and exhaust manifold gaskets.

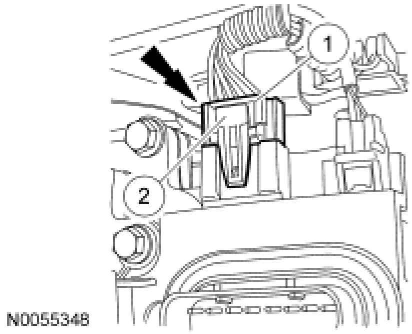

Fig. 519: Locating LH Exhaust Manifold Nuts
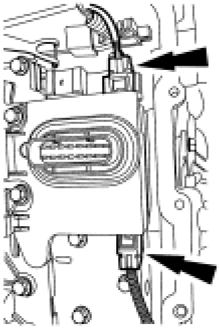
Courtesy of FORD MOTOR CO.

46. Clean and inspect the LH exhaust manifold. For additional information, refer to **ENGINE SYSTEM - GENERAL INFORMATION** article.
47. Remove and discard the 6 LH exhaust manifold studs.

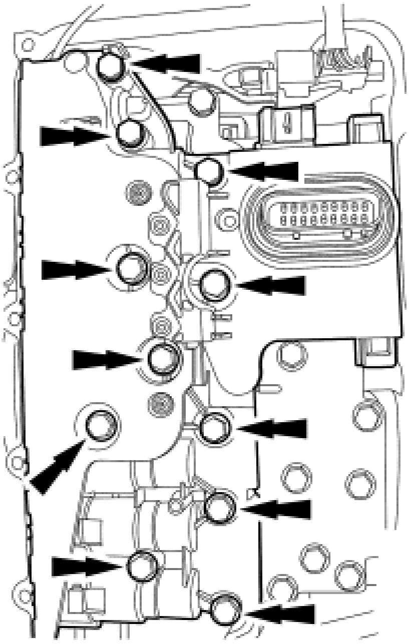


N0055349

Fig. 520: Locating LH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

FWD vehicles

48. Remove the 4 nuts and the RH catalytic converter.
    - Discard the nuts and the gasket.

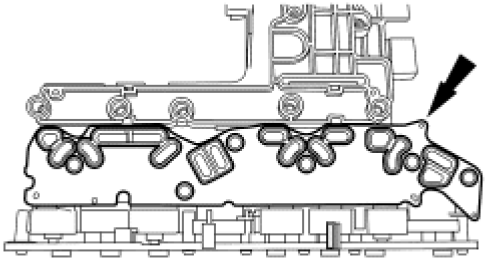


N0055350

Fig. 521: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

All vehicles

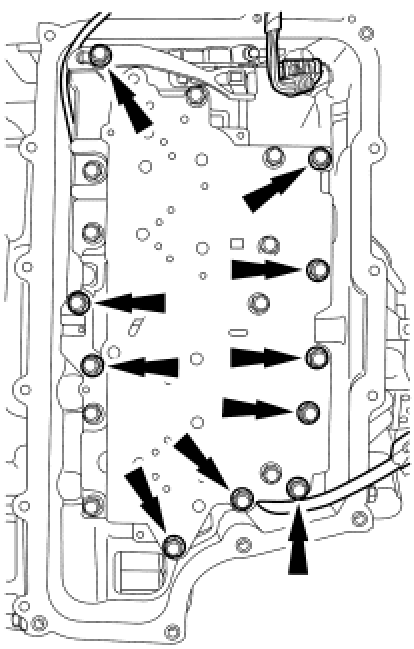
49. Remove the 3 bolts and the RH exhaust manifold heat shield.



N0055016

Fig. 522: Locating RH Exhaust Manifold Heat Shield & Nuts
Courtesy of FORD MOTOR CO.

50. Remove the 6 nuts and the RH exhaust manifold.
    - Discard the nuts and exhaust manifold gaskets.



N0057465

Fig. 523: Locating RH Exhaust Manifold & Nuts
Courtesy of FORD MOTOR CO.

51. Clean and inspect the RH exhaust manifold. For additional information, refer to **ENGINE SYSTEM - GENERAL INFORMATION** article.
52. Remove and discard the 6 RH exhaust manifold studs.

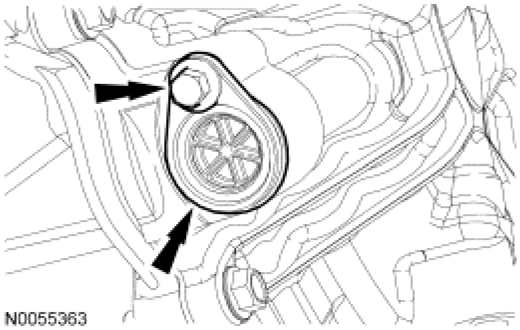


Fig. 524: Locating RH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

53. Remove the RH cylinder block drain plug or, if equipped, the block heater.
    - Allow coolant to drain from the cylinder block.

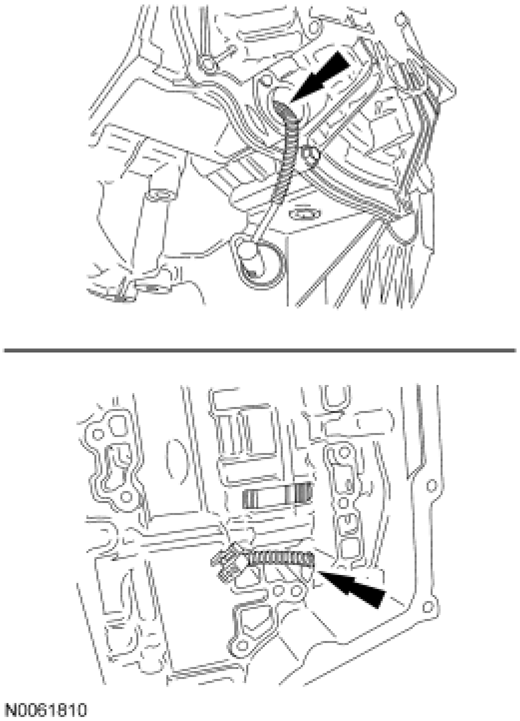

Fig. 525: Locating RH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

54. Remove the LH cylinder block drain plug.
    - Allow coolant to drain from the cylinder block.

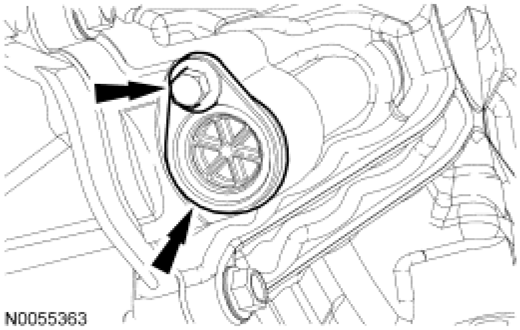

Fig. 526: Locating LH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

55. Remove the pin-type retainer and the cover.

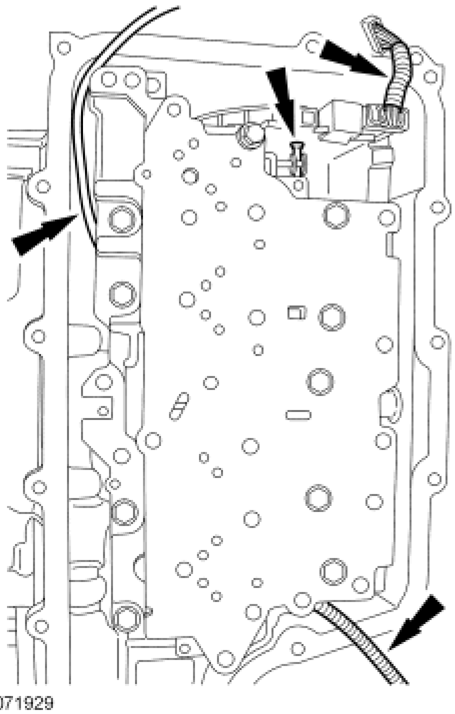

Fig. 527: Locating Pin-Type Retainer & Cover
Courtesy of FORD MOTOR CO.

56. Remove the 2 bolts and the engine lifting eye.

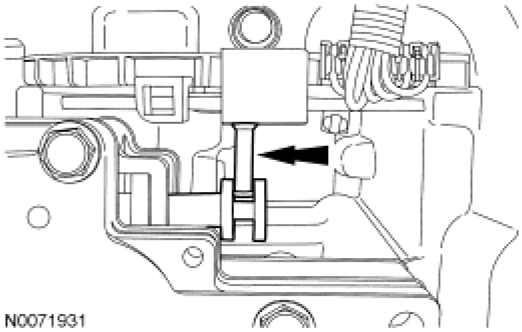

Fig. 528: Locating Engine Lifting Eye & Bolts
Courtesy of FORD MOTOR CO.

57. Remove the bolt and the upper intake manifold bracket.

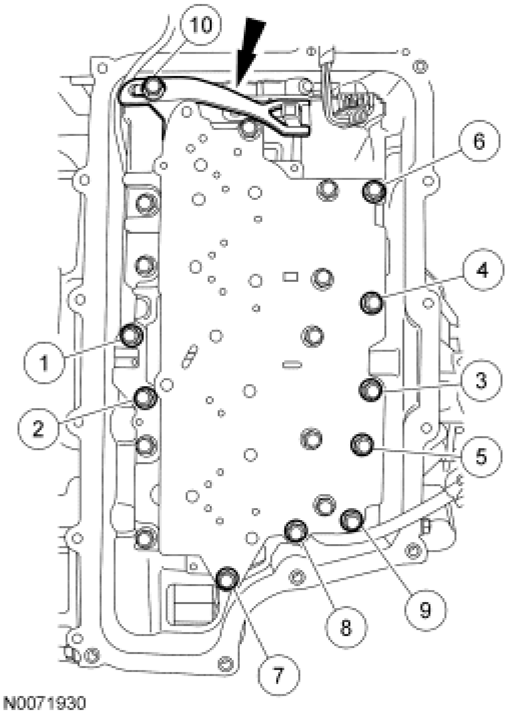

Fig. 529: Locating Upper Intake Manifold Bracket & Bolt
Courtesy of FORD MOTOR CO.

58. Remove the bolt and the RH CMP sensor.

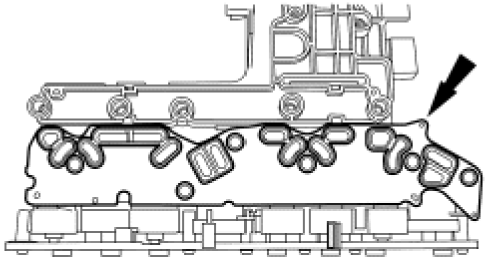

Fig. 530: Locating RH CMP Sensor & Bolt
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

59. Remove the 2 bolts and the catalytic converter bracket.

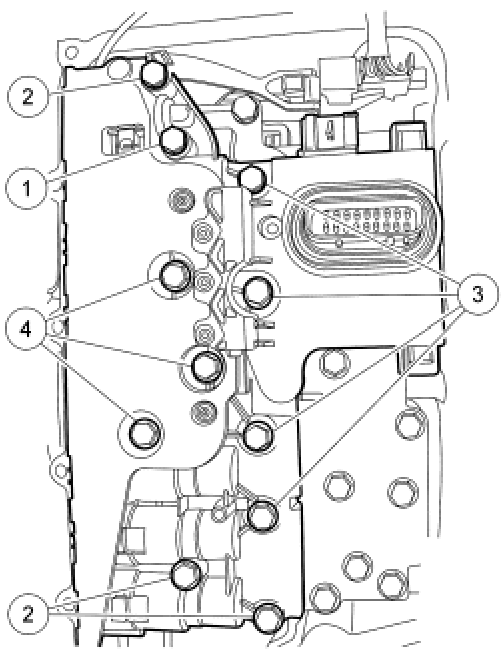

Fig. 531: Locating Catalytic Converter Bracket & Bolts
Courtesy of FORD MOTOR CO.

All vehicles

60. Remove the 4 bolts and the fuel rail and injectors as an assembly.

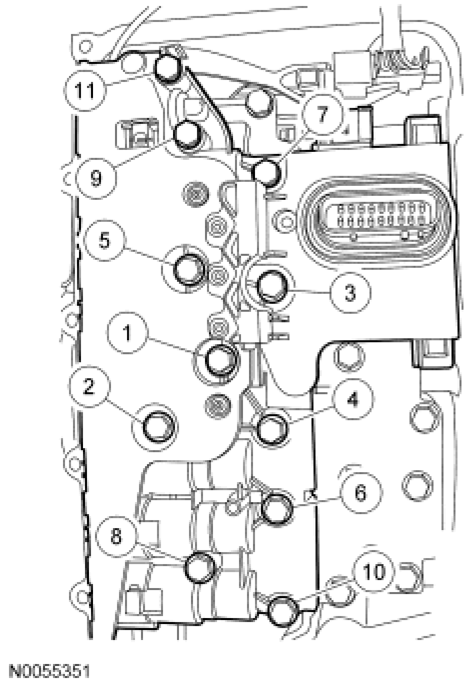

Fig. 532: Identifying 4 Bolts And Fuel Rail
Courtesy of FORD MOTOR CO.

61. Remove the 3 thermostat housing-to-lower intake manifold bolts.
    - Remove the thermostat housing and discard the gasket.

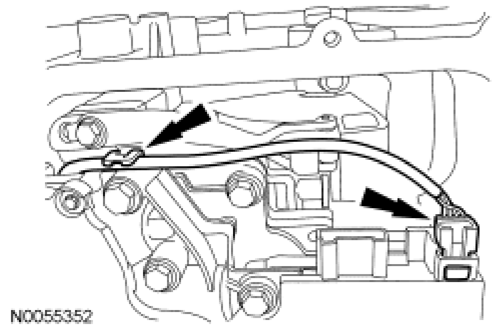

Fig. 533: Locating Thermostat Housing-To-Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

62. Remove the 10 bolts and the lower intake manifold.
    - Discard the gaskets.

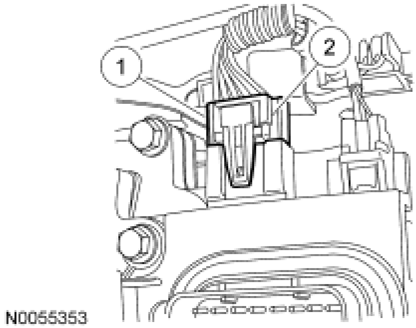

Fig. 534: Locating Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

63. Disconnect and remove the CHT sensor jumper harness.

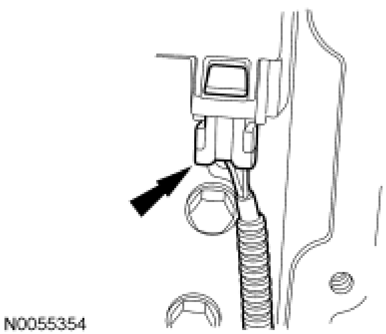

Fig. 535: Identifying CHT Sensor Jumper Harness
Courtesy of FORD MOTOR CO.

64. Remove the bolt and the LH CMP sensor.

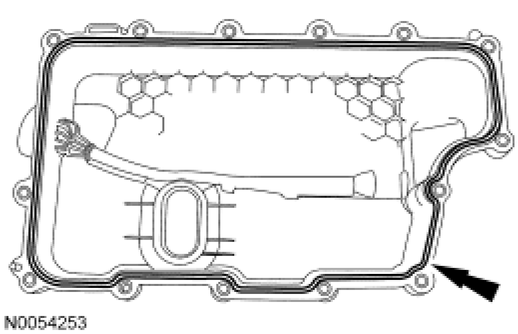

Fig. 536: Locating LH CMP Sensor & Bolt
Courtesy of FORD MOTOR CO.

65. Remove the bolt and the CKP sensor.

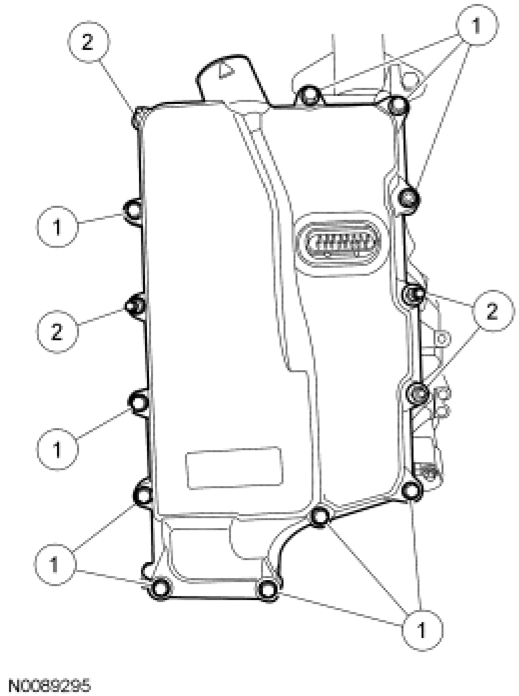

Fig. 537: Identifying CKP Sensor & Bolt
Courtesy of FORD MOTOR CO.

66. Remove the EOP switch.

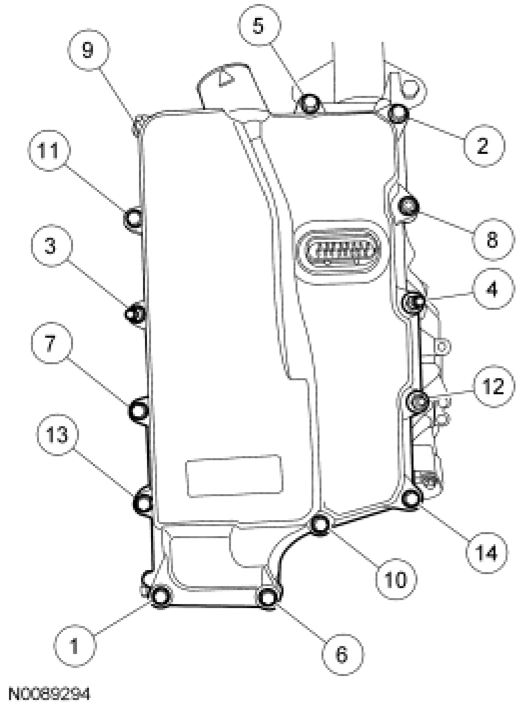

Fig. 538: Identifying EOP Switch

Courtesy of FORD MOTOR CO.

CAUTION: A new oil cooler must be installed or severe damage to the engine can occur.

67. If equipped, remove the 6 bolts and the oil cooler.
    - Discard the oil cooler and the gaskets.

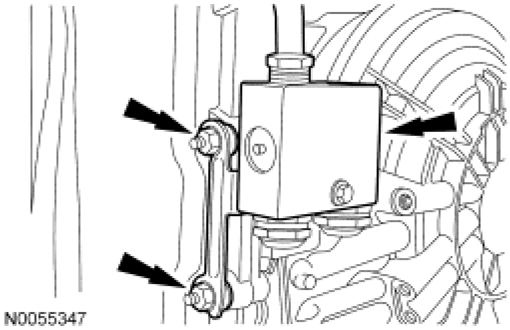

Fig. 539: Identifying Oil Cooler, Gaskets & Bolts
Courtesy of FORD MOTOR CO.

NOTE: Engine without oil cooler shown, engine with oil cooler similar.

68. Remove the 2 bolts and the oil filter adapter.
    - Discard the gasket and O-ring seal (on banjo bolt).

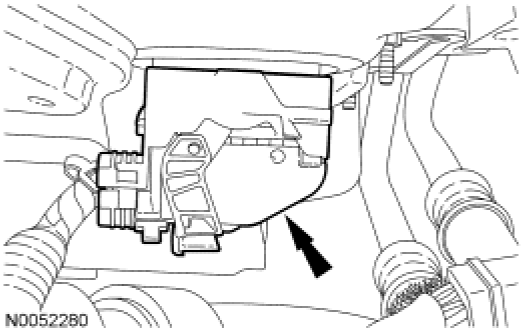

Fig. 540: Locating Oil Filter Adapter & Bolts
Courtesy of FORD MOTOR CO.

NOTE: LH shown, RH similar.

69. Remove the 6 bolts and the 6 coil-on-plugs.

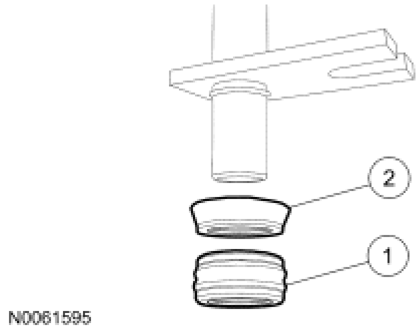

Fig. 541: Locating Coil-On-Plugs & Bolts
Courtesy of FORD MOTOR CO.

70. Remove the 11 stud bolts and the LH valve cover.
    - Discard the gasket.

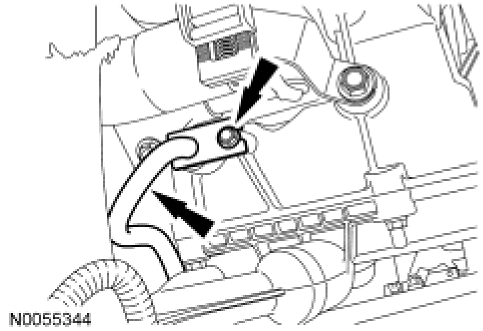

Fig. 542: Locating LH Valve Cover Stud Bolts
Courtesy of FORD MOTOR CO.

71. Remove the bolt, the 10 stud bolts and the RH valve cover.
    - Discard the gasket.

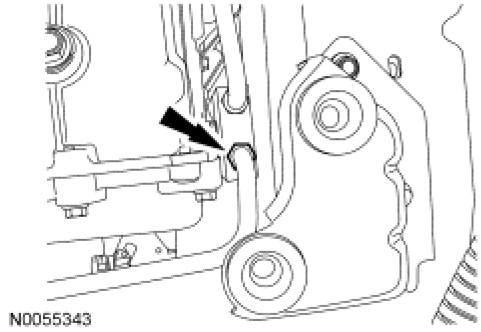

Fig. 543: Locating RH Valve Cover Stud Bolts
Courtesy of FORD MOTOR CO.

NOTE: VCT solenoid seal removal shown, spark plug tube seal similar.

72. Inspect the VCT solenoid seals and the spark plug tube seals. Remove any damaged seals.
    - Using the special tools, remove the seal(s).

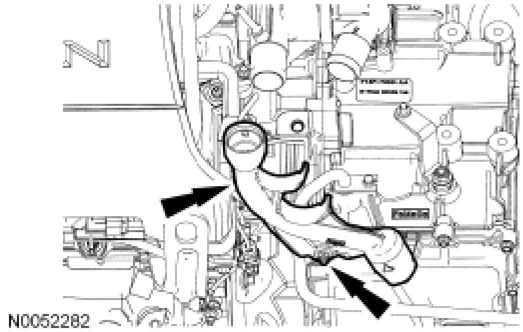

Fig. 544: Removing Seals Using Special Tools (205-153) & (303-1247/1)
Courtesy of FORD MOTOR CO.

73. Remove the crankshaft bolt and washer.
    - Discard the bolt.

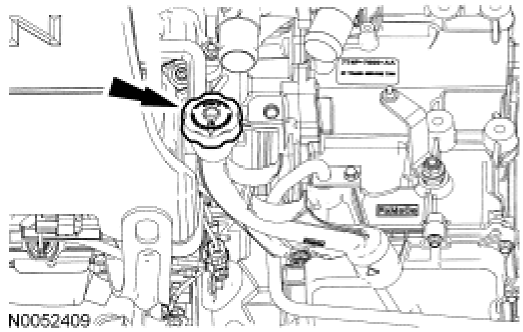

Fig. 545: Removing Crankshaft Bolt & Washer Using Special Tool (303-D055)
Courtesy of FORD MOTOR CO.

74. Using the special tool, remove the crankshaft pulley.

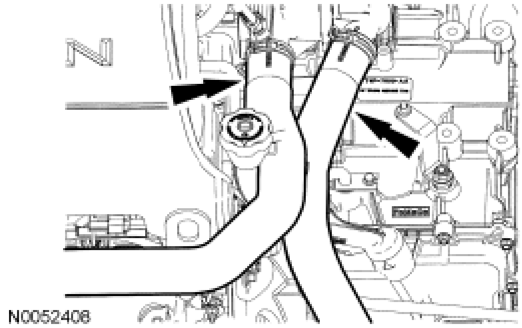

Fig. 546: Identifying Special Tools (303-D121) And Crankshaft Pulley
Courtesy of FORD MOTOR CO.

75. Using the special tool, remove and discard the crankshaft front seal.

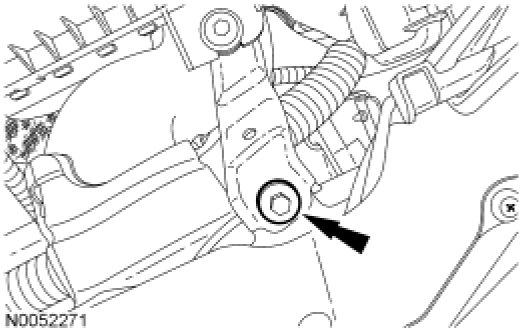

Fig. 547: Removing Crankshaft Front Seal Using Special Tool (303-409)
Courtesy of FORD MOTOR CO.

76. Remove the 2 bolts and the engine mount bracket.

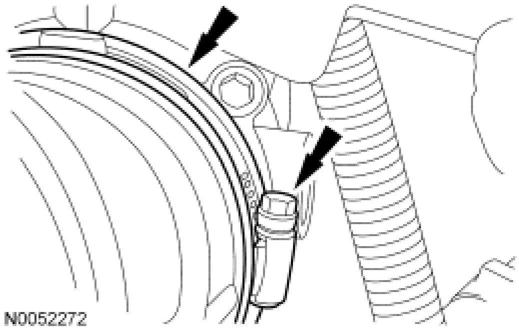

Fig. 548: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

77. Remove the 2 engine mount studs.

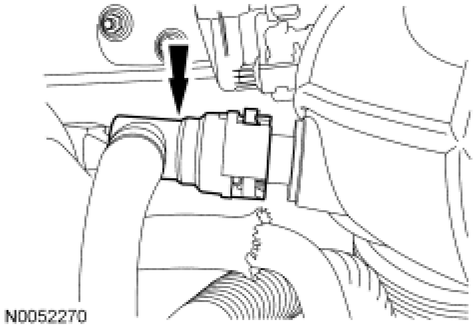

Fig. 549: Locating Engine Mount Studs
Courtesy of FORD MOTOR CO.

78. Remove the 3 bolts and the engine mount bracket.

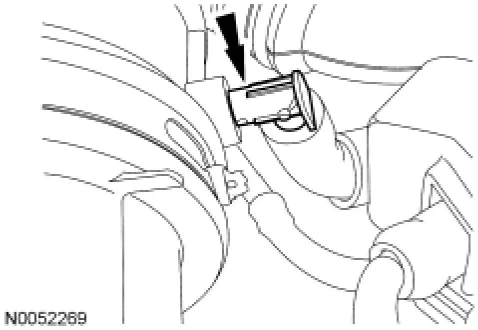

Fig. 550: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

79. Remove the 22 engine front cover bolts.

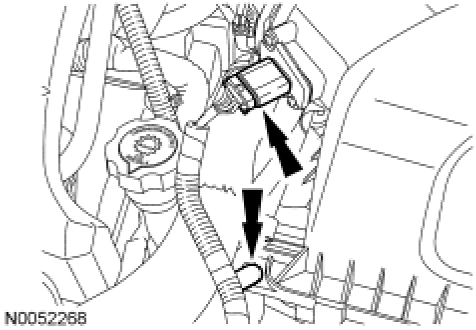

Fig. 551: Identifying Engine Front Cover Bolts
Courtesy of FORD MOTOR CO.

80. Install 6 of the engine front cover bolts (finger tight) into the 6 threaded holes in the engine front cover.
    - Tighten the bolts one turn at a time in a criss-cross pattern until the engine front cover-to-cylinder block seal is released.
        - Remove the engine front cover.

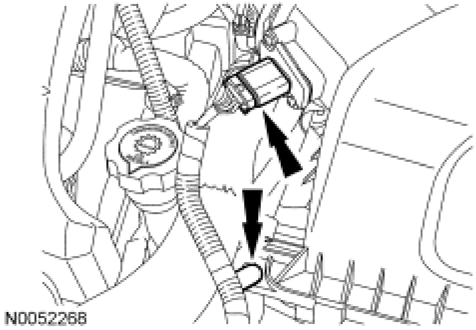

Fig. 552: Identifying Engine Front Cover Bolts
Courtesy of FORD MOTOR CO.

81. Rotate the crankshaft clockwise and align the timing marks on the VCT assemblies as shown.

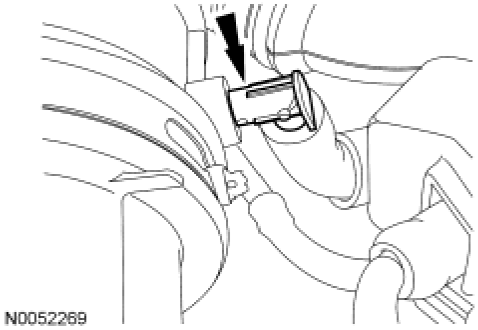

Fig. 553: Aligning Timing Marks On Variable Camshaft Timing (VCT) Assemblies
Courtesy of FORD MOTOR CO.

NOTE:	**The special tool will hold the camshafts in the top dead center (TDC) position.**

82. Install the special tool onto the flats of the LH camshafts.

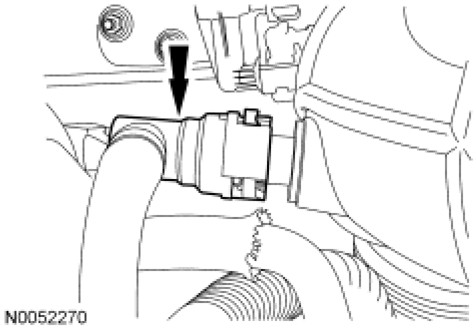

Fig. 554: Installing Special Tool (303-1248) Onto Flats Of LH Camshafts
Courtesy of FORD MOTOR CO.

NOTE:	**The special tool will hold the camshafts in the TDC position.**

83. Install the special tool onto the flats of the RH camshafts.

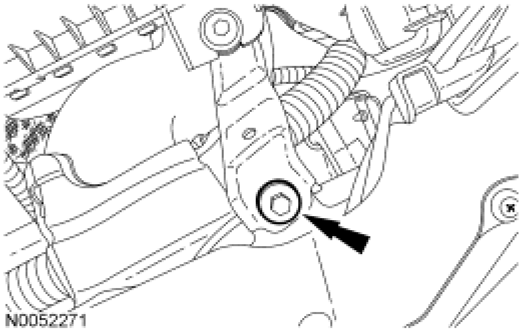

Fig. 555: Installing Special Tool (303-1248) Onto Flats Of RH Camshafts
Courtesy of FORD MOTOR CO.

84. Remove the 3 bolts and the RH VCT housing.

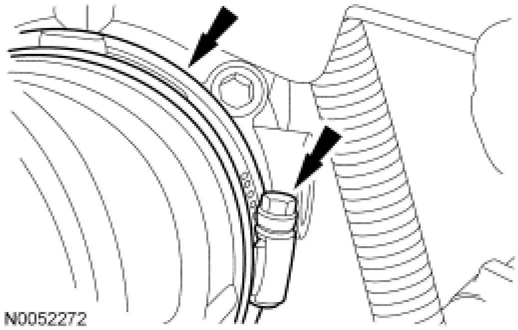

Fig. 556: Locating RH VCT Housing
Courtesy of FORD MOTOR CO.

85. Remove the 3 bolts and the LH VCT housing.

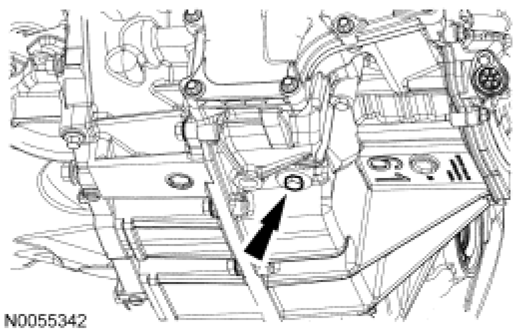

Fig. 557: Locating LH VCT Housing
Courtesy of FORD MOTOR CO.

86. Remove and discard the VCT housing seals.

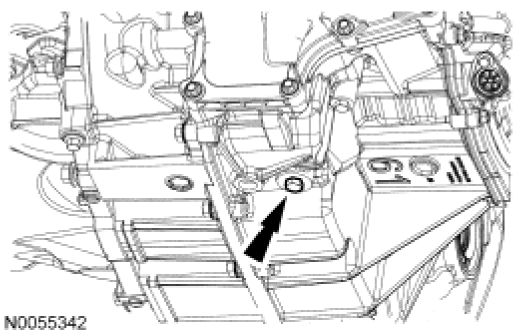

Fig. 558: Locating VCT Housing Seals
Courtesy of FORD MOTOR CO.

87. Remove the 2 bolts and the primary timing chain tensioner.

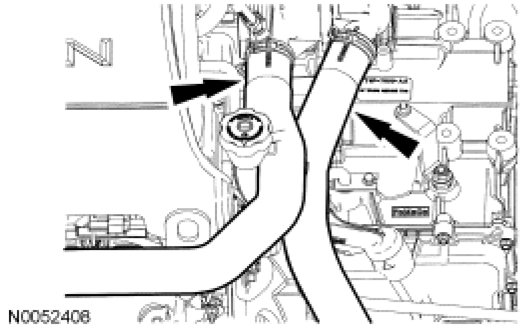

Fig. 559: Locating Primary Timing Chain Tensioner Bolts
Courtesy of FORD MOTOR CO.

88. Remove the primary timing chain tensioner arm.

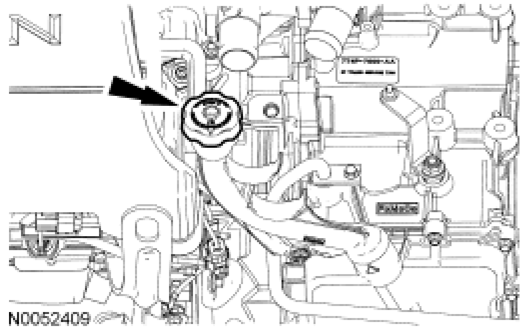

Fig. 560: Locating Primary Timing Chain Tensioner Arm
Courtesy of FORD MOTOR CO.

89. Remove the 2 bolts and the lower LH primary timing chain guide.

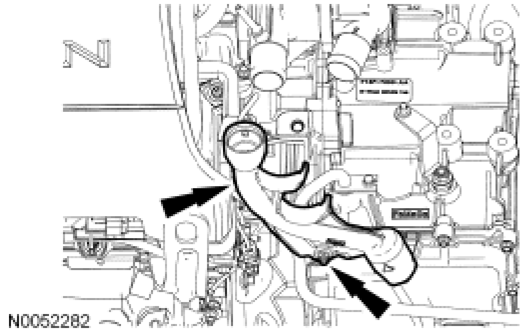

Fig. 561: Locating Lower LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

90. Remove the primary timing chain.

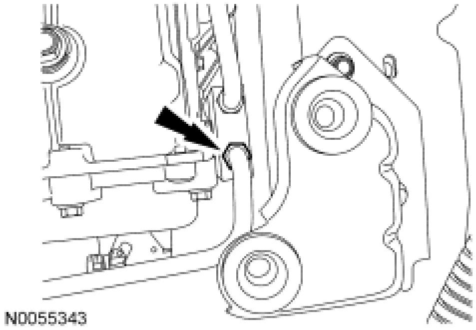

Fig. 562: Locating Primary Timing Chain
Courtesy of FORD MOTOR CO.

91. Remove the crankshaft timing chain sprocket.

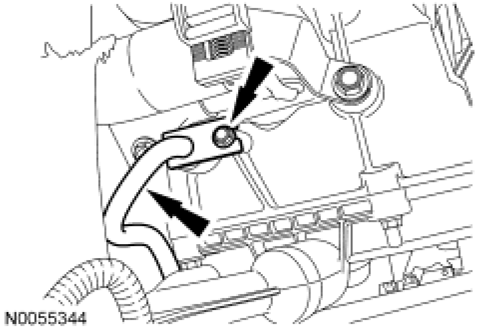

Fig. 563: Locating Crankshaft Timing Chain Sprocket
Courtesy of FORD MOTOR CO.

92. Remove the 2 bolts and the upper LH primary timing chain guide.

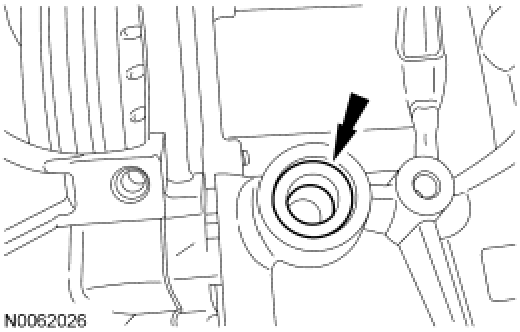

Fig. 564: Locating Upper LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

93. Compress the LH secondary timing chain tensioner and install a suitable lockpin to retain the tensioner in the collapsed position.

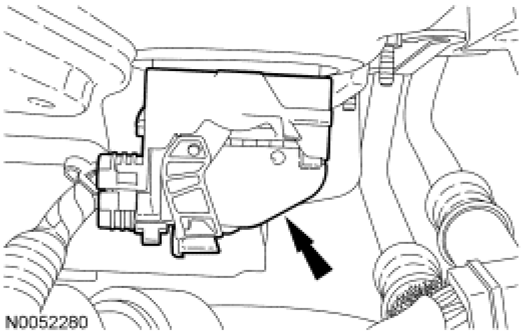

Fig. 565: Compressing LH Secondary Timing Chain Tensioner & Installing Suitable Lock Pin To Retain Tensioner In Collapsed Position
Courtesy of FORD MOTOR CO.

NOTE: **The VCT bolt and the exhaust camshaft bolt must be discarded and new ones installed. However, the exhaust camshaft washer is reusable.**

94. Remove and discard the LH VCT assembly bolt and the LH exhaust camshaft sprocket bolt.
    - Remove the LH VCT assembly, secondary timing chain and the LH exhaust camshaft sprocket as an assembly.

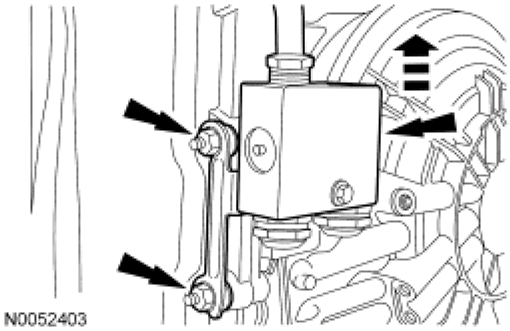

Fig. 566: Locating LH VCT Assembly Bolt & LH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

NOTE: **When the special tool is removed, valve spring pressure will rotate the LH camshafts approximately 3 degrees to a neutral position.**

95. Remove the special tool from the LH camshafts.

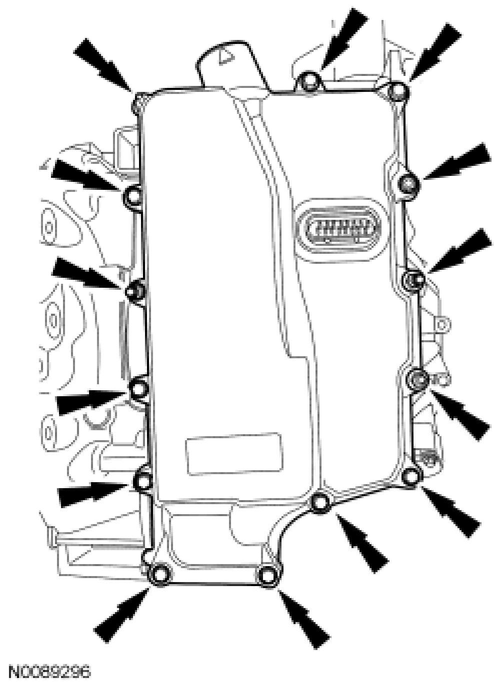

Fig. 567: Removing Special Tool (303-1248) From LH Camshafts
Courtesy of FORD MOTOR CO.

CAUTION: The camshafts must remain in the neutral position during removal or engine damage may occur.

96. Verify the LH camshafts are in the neutral position.

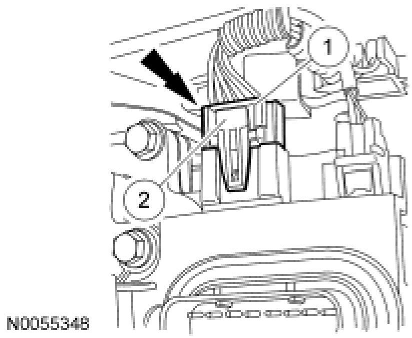

Fig. 568: Verifying LH Camshafts Are In Neutral Position
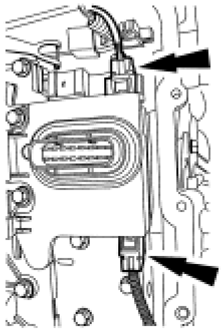
Courtesy of FORD MOTOR CO.

97. Remove the 2 bolts and the LH secondary timing chain tensioner.

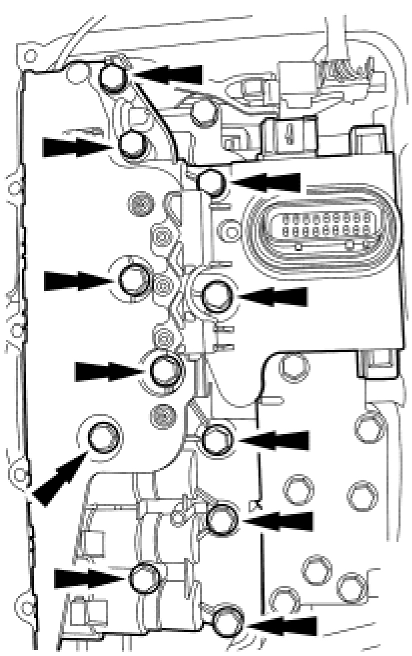


N0055349

Fig. 569: Locating LH Secondary Timing Chain Tensioner & Bolt
Courtesy of FORD MOTOR CO.

CAUTION: Cylinder head camshaft bearing caps are numbered to verify that they are assembled in their original positions. If not reassembled in their original position, severe engine damage may occur.

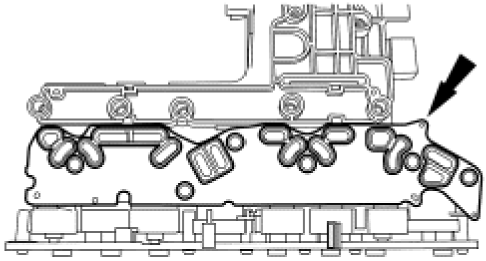
98. Remove the bolts and the LH camshaft bearing caps.
    - Remove the LH camshafts.



N0055350

Fig. 570: Identifying LH Camshafts Bolts
Courtesy of FORD MOTOR CO.

99. Compress the RH secondary timing chain tensioner and install a suitable lockpin to retain the tensioner in the collapsed position.

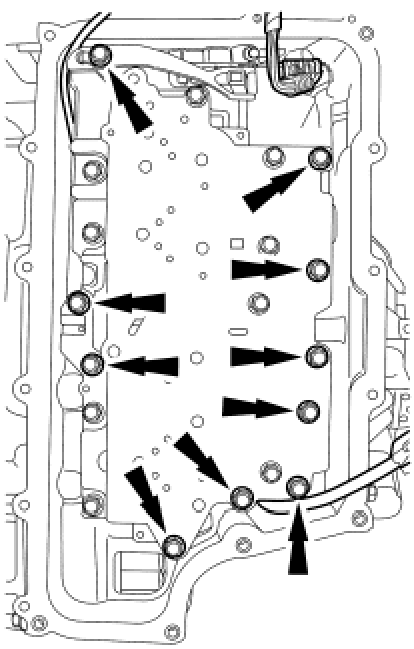


N0055016

Fig. 571: Compressing RH Secondary Timing Chain Tensioner & Installing Suitable Lock Pin To Retain Tensioner In Collapsed Position
Courtesy of FORD MOTOR CO.

NOTE: The VCT bolt and the exhaust camshaft bolt must be discarded and new ones installed. However, the exhaust camshaft washer is reusable.

100. Remove and discard the RH VCT assembly bolt and the RH exhaust camshaft sprocket bolt.
    - Remove the RH VCT assembly, secondary timing chain and the RH exhaust camshaft sprocket as an assembly.



N0057465

Fig. 572: Locating RH VCT Assembly Bolt & RH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

101. Remove the special tool from the RH camshafts.

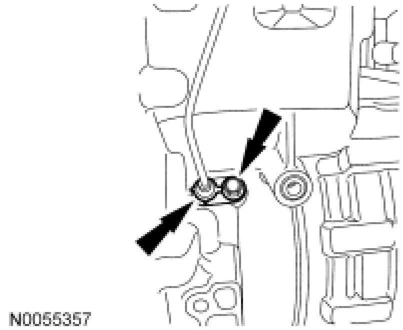


Fig. 573: Removing Special Tool (303-1248) From RH Camshafts
Courtesy of FORD MOTOR CO.

CAUTION: The camshafts must remain in the neutral position during removal or engine damage may occur.

102. Rotate the RH camshafts counterclockwise to the neutral position.

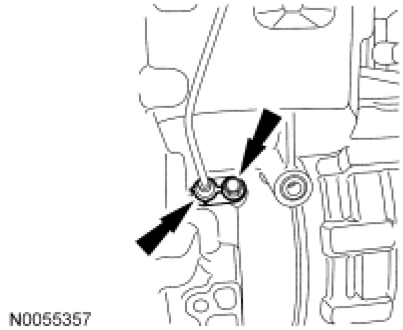

Fig. 574: Rotating RH Camshafts Counterclockwise To Neutral Position
Courtesy of FORD MOTOR CO.

103. Remove the 2 bolts and the RH secondary timing chain tensioner.

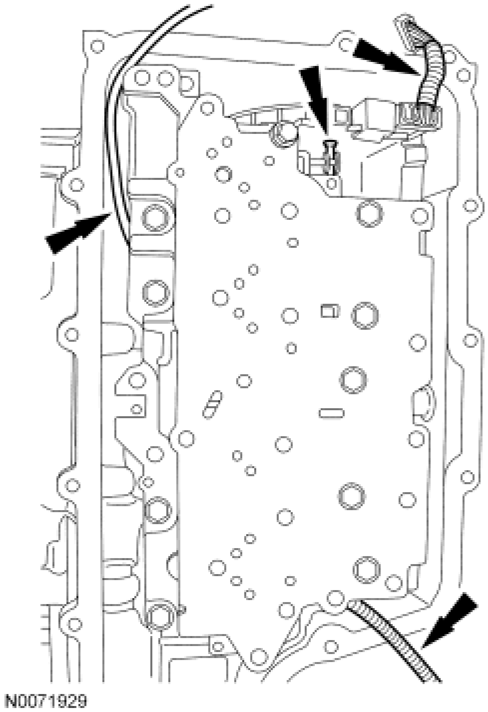

Fig. 575: Locating RH Secondary Timing Chain Tensioner & Bolts
Courtesy of FORD MOTOR CO.

104. Remove the 2 bolts and the RH primary timing chain guide.

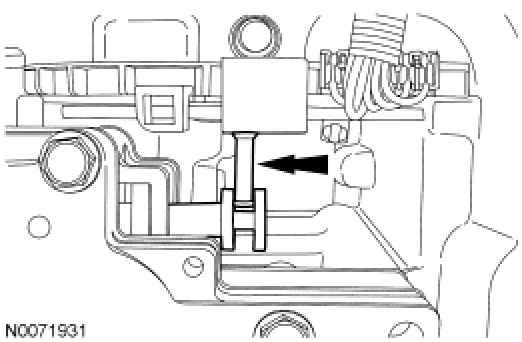

Fig. 576: Locating RH Primary Timing Chain Guide Lower Bolt
Courtesy of FORD MOTOR CO.

CAUTION: Cylinder head camshaft bearing caps are numbered to verify that they are assembled in their original positions. If not reassembled in their original position, severe engine damage may occur.

105. Remove the bolts and the RH camshaft bearing caps.
    - Remove the RH camshafts.

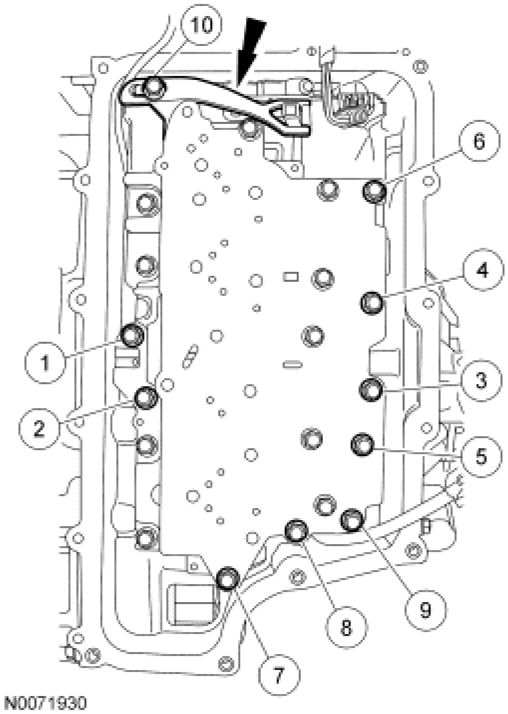

Fig. 577: Identifying RH Camshafts Bolts
Courtesy of FORD MOTOR CO.

NOTE: **If the components are to be reinstalled, they must be installed in the same positions. Mark the components for installation into their original locations.**

NOTE: **LH shown, RH similar.**

106. Remove the valve tappets from the cylinder heads.

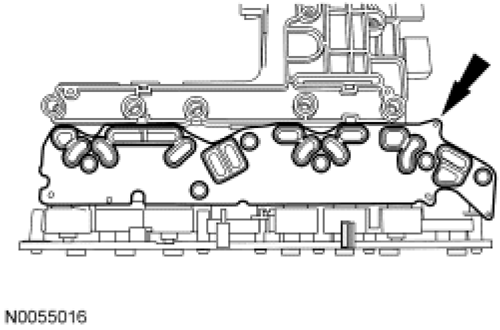

Fig. 578: Identifying Valve Tappets From Cylinder Head
Courtesy of FORD MOTOR CO.

NOTE: **LH shown, RH similar.**

107. Remove and discard the M6 bolt from each cylinder head.

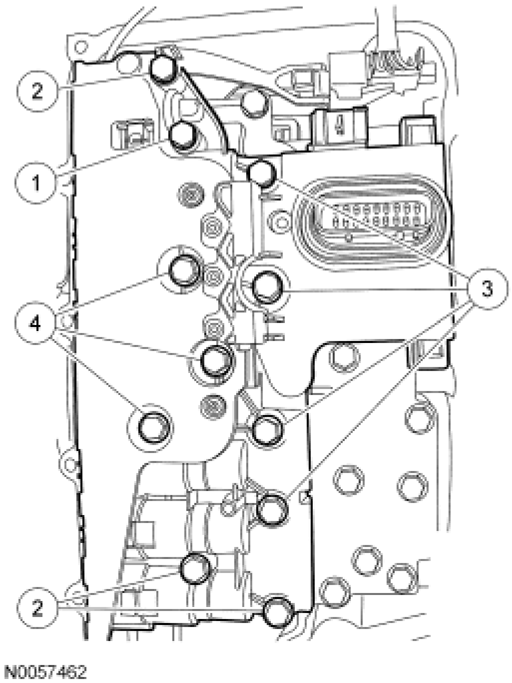

Fig. 579: Identifying M6 Bolt
Courtesy of FORD MOTOR CO.

CAUTION: Place clean, lint-free shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into the engine. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages or the oil pan, may cause engine failure.

CAUTION: Aluminum surfaces are soft and can be scratched easily. Never place the cylinder head gasket surface, unprotected, on a bench surface.

NOTE: The cylinder head bolts must be discarded and new bolts must be installed. They are tighten-to-yield designed and cannot be reused.

NOTE: LH shown, RH similar.

108. Remove and discard the 8 bolts from each cylinder head.
- Remove the cylinder heads.
- Discard the cylinder head gaskets.

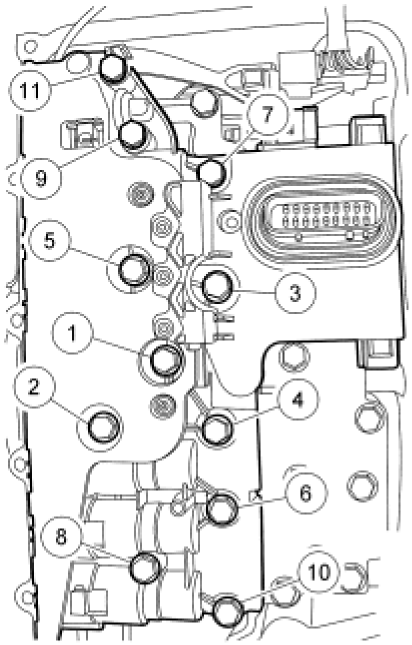

Fig. 580: Identifying Cylinder Head Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.

NOTE: Observe all warnings or cautions and follow all application directions contained on the packaging of the silicone gasket remover and the metal surface prep.

NOTE: If there is no residual gasket material present, metal surface prep can be used to clean and prepare the surfaces.

109. Clean the cylinder head-to-cylinder block mating surfaces of both the cylinder heads and the cylinder block in the following sequence.
    1. Remove any large deposits of silicone or gasket material with a plastic scraper.
    2. Apply silicone gasket remover, following package directions, and allow to set for several minutes.
    3. Remove the silicone gasket remover with a plastic scraper. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
    4. Apply metal surface prep, following package directions, to remove any remaining traces of oil or coolant and to prepare the surfaces to bond with the new gasket. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.

5. Make sure the 2 locating dowel pins are seated correctly in the cylinder block.

110. Support the cylinder heads on a bench with the head gasket side up.

NOTE: The straightedge used must be flat within 0.0051 mm (0.0002 in) per foot of tool length.

111. Inspect all areas of the deck face with a straightedge and feeler gauge. The cylinder heads must not have depressions deeper than 0.0254 mm (0.001 in) across a 38.1 mm (1.5 in) square area, or scratches more than 0.0254 mm (0.001 in).
112. Remove the coolant tube.
    - Remove and discard the O-ring seals.

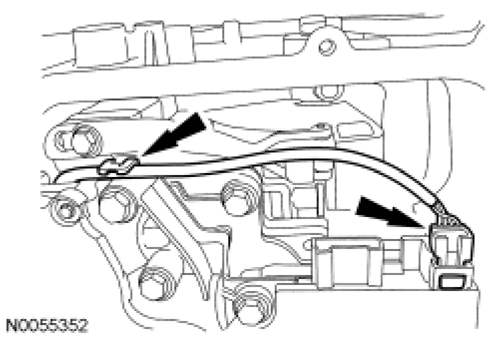

Fig. 581: Identifying Coolant Tube
Courtesy of FORD MOTOR CO.

113. Remove the 2 bolts and the KS.

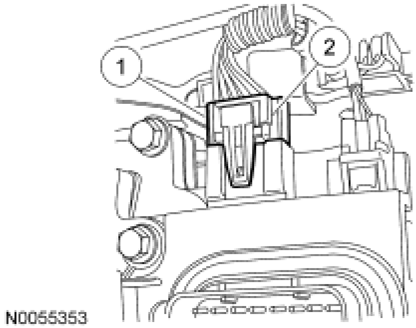

Fig. 582: Locating Knock Sensor (KS) Bolts
Courtesy of FORD MOTOR CO.

114. Remove the 8 bolts and the coolant pump.

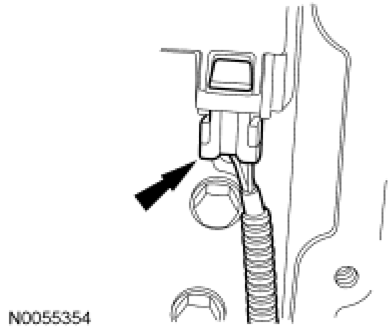

Fig. 583: Locating Coolant Pump Bolts
Courtesy of FORD MOTOR CO.

115. Remove the 16 oil pan bolts.

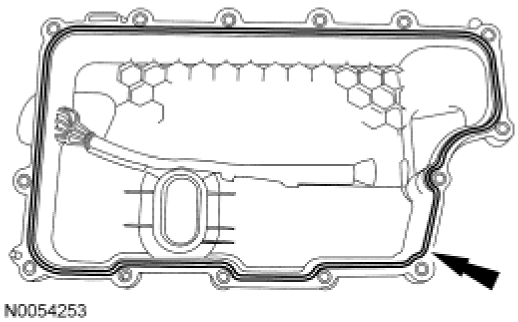

Fig. 584: Identifying Oil Pan Bolts
Courtesy of FORD MOTOR CO.

116. Install 2 of the oil pan bolts (finger tight) into the 2 threaded holes in the oil pan.
    - Alternately tighten the 2 bolts one turn at a time until the oil pan-to-cylinder block seal is released.
        - Remove the oil pan.

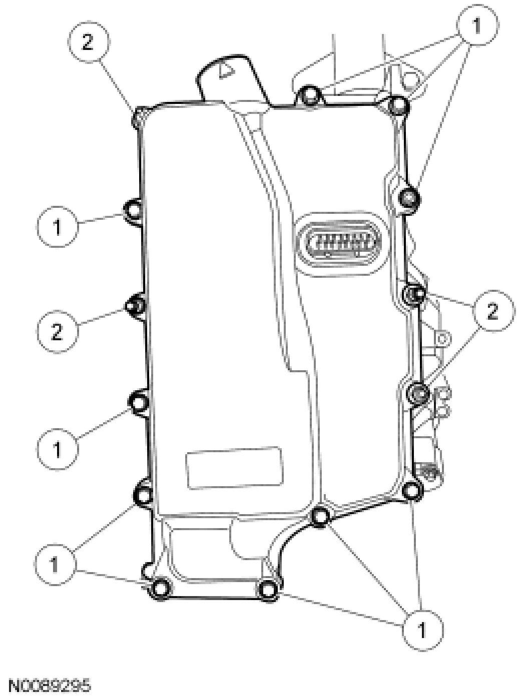

Fig. 585: Installing 2 Of Oil Pan Bolts (Finger Tight) Into 2 Threaded Holes In Oil Pan
Courtesy of FORD MOTOR CO.

117. Remove the 3 bolts and the oil pump screen and pickup tube.
    - Discard the O-ring seal.

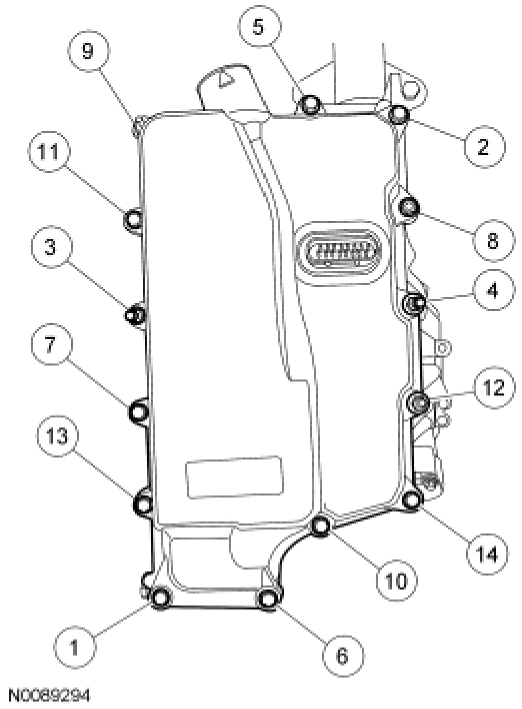

Fig. 586: Identifying Oil Pump Screen, Pickup Tube & Bolts
Courtesy of FORD MOTOR CO.

118. Remove the 3 bolts and the oil pump.

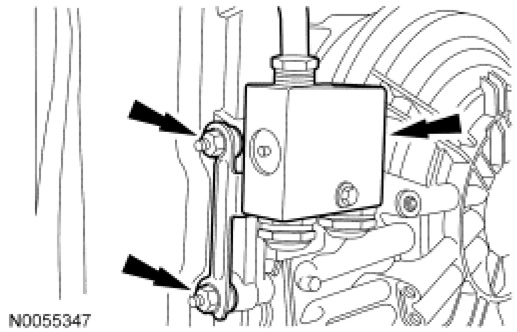

Fig. 587: Identifying Oil Pump & Bolts
Courtesy of FORD MOTOR CO.

119. Remove the 8 crankshaft rear seal retainer bolts.

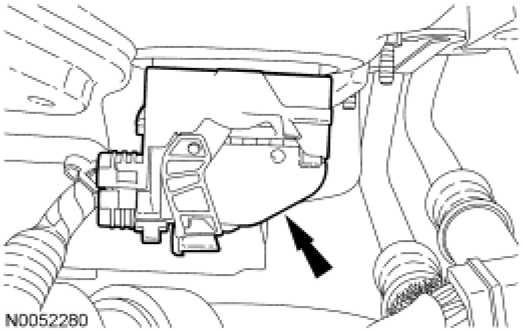

Fig. 588: Locating Crankshaft Rear Seal Retainer Bolts
Courtesy of FORD MOTOR CO.

120. Install the 2 M6 oil pan bolts (finger tight) into the 2 threaded holes in the crankshaft rear seal retainer.
    - Alternately tighten the 2 bolts one turn at a time until the crankshaft rear seal retainer-to-cylinder block seal is released.
        - Remove the crankshaft rear seal retainer.

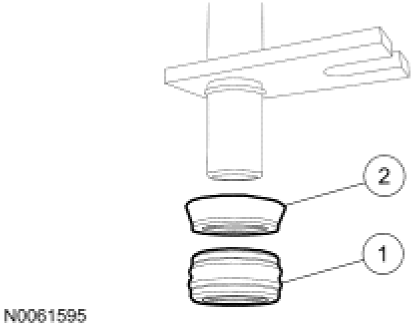

Fig. 589: Identifying M6 Oil Pan Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Only use a 3M Roloc® Bristle Disk, (2-in white, part number 07528) to clean the engine front cover, oil pan and crankshaft rear seal retainer plate. Do not use metal scrapers, wire brushes or any other power abrasive disk to clean the engine front cover, oil pan and crankshaft rear seal retainer plate. These tools cause scratches and gouges that make leak paths.

121. Clean the engine front cover, oil pan and crankshaft rear seal retainer plate using a 3M Roloc® Bristle Disk, (2 inch, white, part number 07528) in a suitable tool turning at the recommended speed of 15,000 rpm.
    - Thoroughly wash the engine front cover, oil pan and crankshaft rear seal retainer plate to remove any foreign material, including any abrasive particles created during the cleaning process.

CAUTION: Place clean, lint-free shop towels over exposed engine cavities. Carefully remove the towels so foreign material is not dropped into

the engine. Any foreign material (including any material created while cleaning gasket surfaces) that enters the oil passages or the oil pan, may cause engine failure.

CAUTION: Do not use wire brushes, power abrasive discs or 3M Roloc® Bristle Disk (2-in white part number 07528) to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. They also cause contamination that will cause premature engine failure. Remove all traces of the gasket.

122. Clean the sealing surfaces of the cylinder block in the following sequence.
    1. Remove any large deposits of silicone or gasket material.
    2. Apply silicone gasket remover and allow to set for several minutes.
    3. Remove the silicone gasket remover. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
    4. Apply metal surface prep to remove any remaining traces of oil or coolant and to prepare the surfaces to bond. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.
    5. Make sure the 2 locating dowel pins are seated correctly in the cylinder block.

DISASSEMBLY AND ASSEMBLY OF SUBASSEMBLIES

CYLINDER HEAD

Special Tools

Illustration	Tool Name	Tool Number
	Compressor, Valve Spring	303-300 (T87C-6565-A)

7	6A517	Exhaust valve stem seal (6 required)
8	6513	Exhaust valve spring (6 required)
9	6514	Exhaust valve spring retainer (6 required)
10	6518	Exhaust valve spring retainer key (12 required)
11	6G004	Cylinder Head Temperature (CHT) sensor

DISASSEMBLY

All cylinder heads

NOTE:	If the components are to be reinstalled, they must be installed in the same positions. Mark the components for installation into their original locations.

1. Using the Valve Spring Compressors, remove the keys, retainer and spring.

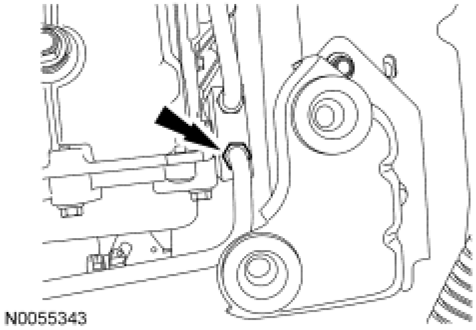

Fig. 591: Removing Keys, Retainer & Spring Using Special Tools (303-1249, 303-350, 303-300)
Courtesy of FORD MOTOR CO.

2. Remove the valve from the cylinder head.
3. Remove and discard the valve stem seal.
4. Repeat the above steps for each valve.

RH cylinder head

5. Remove and discard the Cylinder Head Temperature (CHT) sensor.

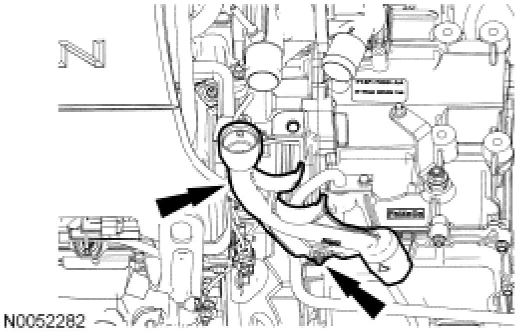

Fig. 592: Identifying Cylinder Head Temperature (CHT) Sensor
Courtesy of FORD MOTOR CO.

ASSEMBLY

All cylinder heads

NOTE:	Lubricate the valve stem seal with clean engine oil prior to installation.

1. Using the Valve Stem Oil Seal Installer, install a new valve stem seal.

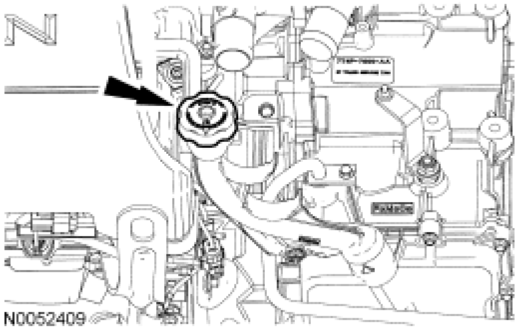

Fig. 593: Installing New Valve Stem Seal Using Special Tool (303-470)
Courtesy of FORD MOTOR CO.

2. Install the valve.
3. Using the Valve Spring Compressors, install the valve spring, retainer and key.

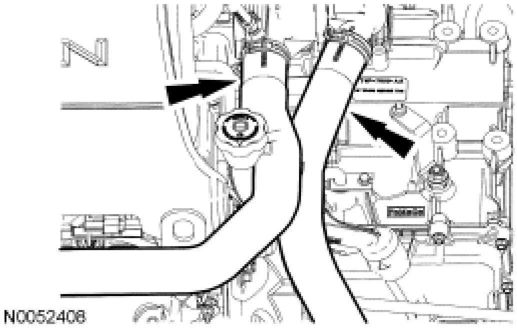

Fig. 594: Removing Keys, Retainer & Spring Using Special Tools (303-1249, 303-350, 303-300)
Courtesy of FORD MOTOR CO.

4. Repeat the above steps for each valve.

   RH cylinder head

5. Install a new CHT sensor.
   - Tighten to 10 Nm (89 lb-in).

18	6582	RH valve cover
19	12A375	Coil-on-plug (6 required)
20	6C270	RH secondary timing chain tensioner

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

All vehicles

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: The crankshaft rear seal retainer must be installed and the bolts tightened within 4 minutes of sealant application.

1. Apply a 3 mm (0.11 in) bead of Motorcraft High Performance Engine RTV Silicone to the sealing surface of the crankshaft rear seal retainer.

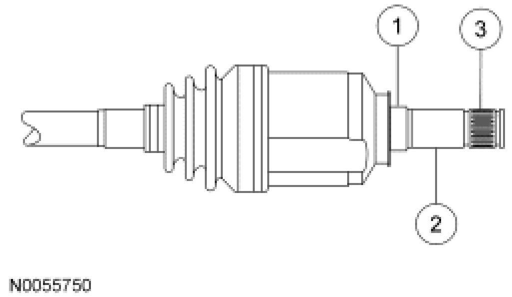

Fig. 600: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Sealing Surface Of Crankshaft Rear Seal Retainer
Courtesy of FORD MOTOR CO.

2. Install the crankshaft rear seal retainer and the 8 bolts.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).

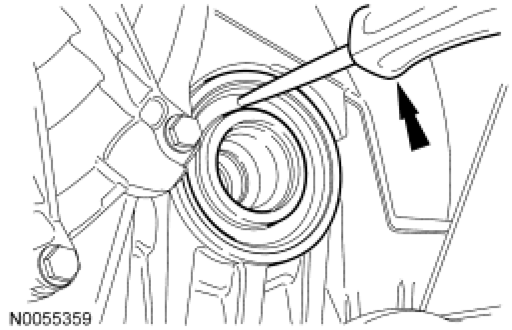

Fig. 601: Installing Crankshaft Rear Seal Retainer Bolts In Sequence
Courtesy of FORD MOTOR CO.

3. Install the oil pump and the 3 bolts.
   - Tighten to 10 Nm (89 lb-in).

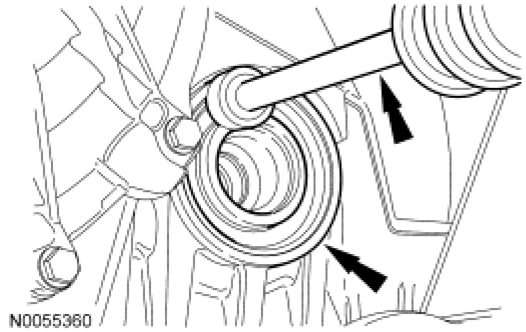

Fig. 602: Identifying Oil Pump & Bolts
Courtesy of FORD MOTOR CO.

4. Using a new O-ring seal, install the oil pump screen and pickup tube and the 3 bolts.

- Tighten to 10 Nm (89 lb-in).

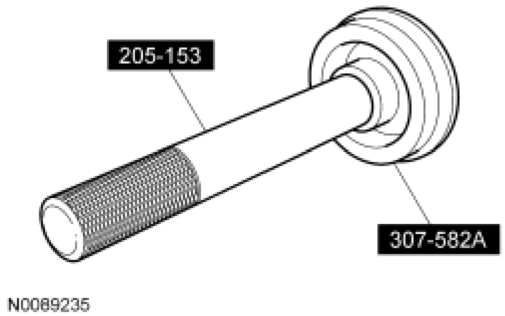

Fig. 603: Identifying Oil Pump Screen, Pickup Tube & Bolts
Courtesy of FORD MOTOR CO.

NOTE: The A/C compressor must be installed on the cylinder block and the 2 bolts tightened prior to installing the oil pan.

5. Install the A/C compressor and the 2 bolts.
   - Tighten to 25 Nm (18 lb-ft).

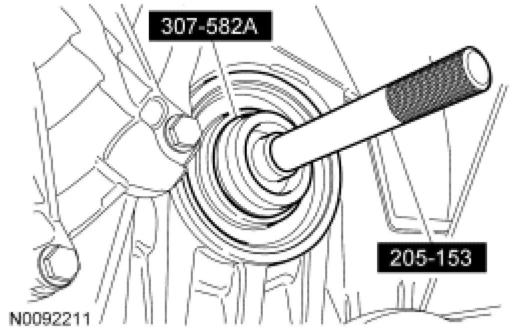

Fig. 604: Identifying A/C Compressor Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: The oil pan and the 4 specified bolts must be installed and the oil pan aligned to the cylinder block and A/C compressor within 4 minutes of sealant application. Final tightening of the oil pan bolts must be carried out within 60 minutes of sealant application.

6. Apply a 3 mm (0.11 in) bead of Motorcraft High Performance Engine RTV Silicone to the sealing surface of the oil pan.

- Apply a 5.5 mm (0.21 in) bead of Motorcraft High Performance Engine RTV Silicone to the 2 crankshaft seal retainer plate-to-cylinder block joint areas on the sealing surface of the oil pan.

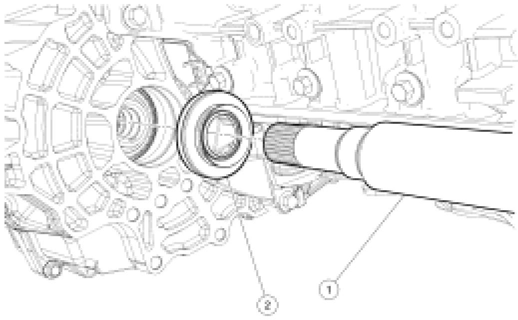

Fig. 605: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Crankshaft Seal Retainer Plate-To-Cylinder Block
Courtesy of FORD MOTOR CO.

NOTE: The oil pan and the 4 specified bolts must be installed within 4 minutes of the start of sealant application.

7. Install the oil pan and bolts 10, 11, 13 and 14.
    - Tighten the bolts in the sequence shown to 3 Nm (27 lb-in).
    - Loosen the bolts 180 degrees.

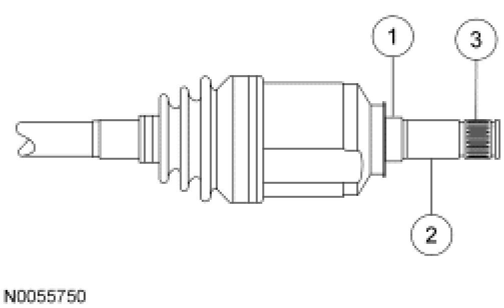

Fig. 606: Installing Oil Pan Bolts 10, 11, 13 & 14 In Sequence
Courtesy of FORD MOTOR CO.

8. Align the oil pan to the cylinder block and the A/C compressor.
    - Position the oil pan so the mounting boss is against the A/C compressor and using a straightedge, align the oil pan flush with the rear of the cylinder block at the 2 areas shown.

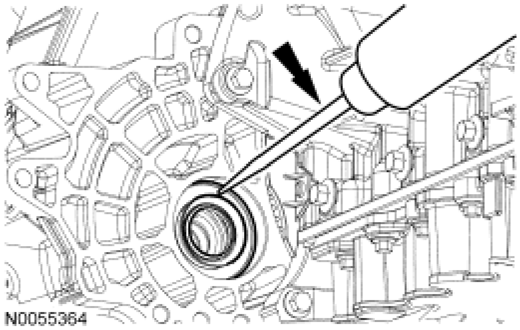

Fig. 607: Aligning Oil Pan Flush With Rear Of Cylinder Block
Courtesy of FORD MOTOR CO.

9. Tighten bolts 10, 11, 13 and 14 in the sequence shown, to 3 Nm (27 lb-in).

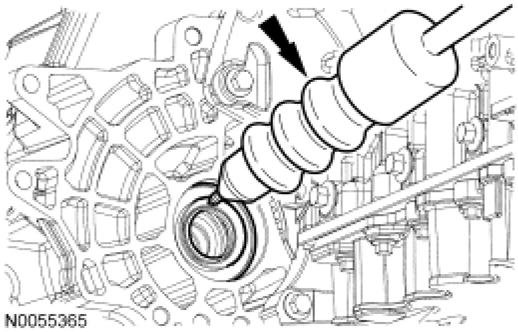

Fig. 608: Installing Oil Pan Bolts 10, 11, 13 & 14 In Sequence
Courtesy of FORD MOTOR CO.

10. Install the remaining oil pan bolts. Tighten all the oil pan bolts in the sequence shown.
    - Tighten the large bolts (1-14) to 24 Nm (18 lb-ft).
    - Tighten the small bolts (15 and 16) to 10 Nm (89 lb-in).

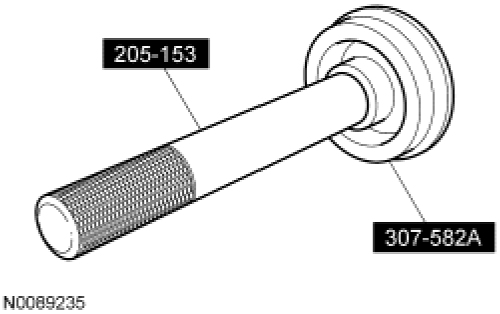

Fig. 609: Installing Remaining Oil Pan Bolts In Sequence
Courtesy of FORD MOTOR CO.

11. Install the A/C compressor mounting stud and nut.

- Tighten the stud to 9 Nm (80 lb-in) and the nut to 25 Nm (18 lb-ft).

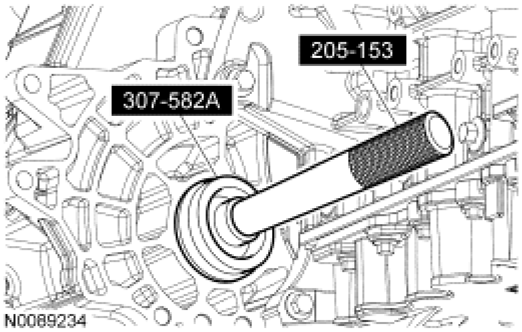

Fig. 610: Locating A/C Compressor Nut & Stud
Courtesy of FORD MOTOR CO.

12. Install the coolant pump and the 8 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

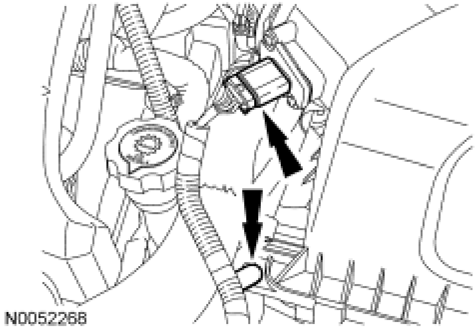

Fig. 611: Identifying Coolant Pump Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

13. Install the knock sensor (KS) and the 2 bolts.
    - Tighten to 20 Nm (15 lb-ft).

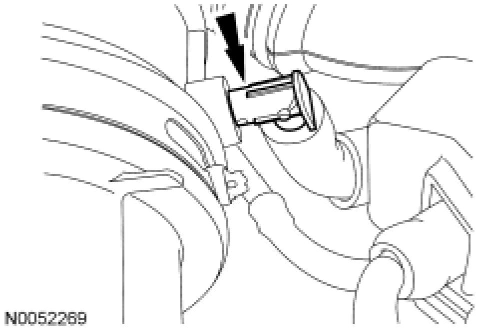

Fig. 612: Locating Knock Sensor (KS) Bolts
Courtesy of FORD MOTOR CO.

NOTE: Apply clean engine coolant to the O-ring seals prior to installation.

14. Using new O-ring seals, install the coolant tube.

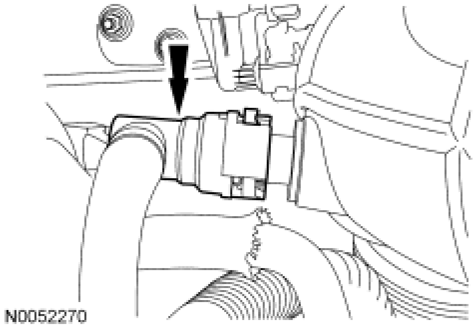

Fig. 613: Identifying Coolant Tube
Courtesy of FORD MOTOR CO.

15. Install a new gasket, the RH cylinder head and 8 new bolts. Tighten in the sequence shown in 5 stages:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 35 Nm (26 lb-ft).
    - Stage 3: Tighten 90 degrees.
    - Stage 4: Tighten 90 degrees.
    - Stage 5: Tighten 90 degrees.

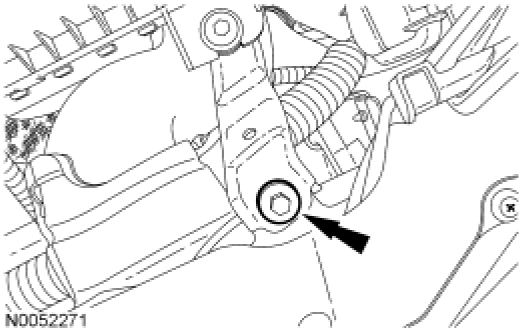

Fig. 614: Installing RH Cylinder Head Bolts In Sequence
Courtesy of FORD MOTOR CO.

16. Install the bolt.
    - Tighten to 10 Nm (89 lb-in).

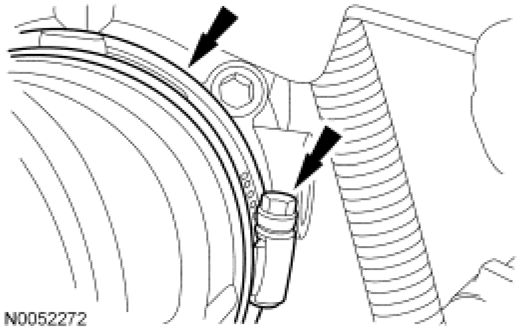

Fig. 615: Identifying M6 Bolt
Courtesy of FORD MOTOR CO.

17. Install a new gasket, the LH cylinder head and 8 new bolts. Tighten in the sequence shown in 5 stages:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 35 Nm (26 lb-ft).
    - Stage 3: Tighten 90 degrees.
    - Stage 4: Tighten 90 degrees.
    - Stage 5: Tighten 90 degrees.

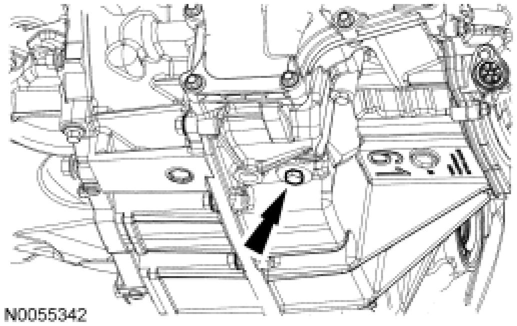

Fig. 616: Installing LH Cylinder Head Bolts In Sequence
Courtesy of FORD MOTOR CO.

18. Install the bolt.
    - Tighten to 10 Nm (89 lb-in).

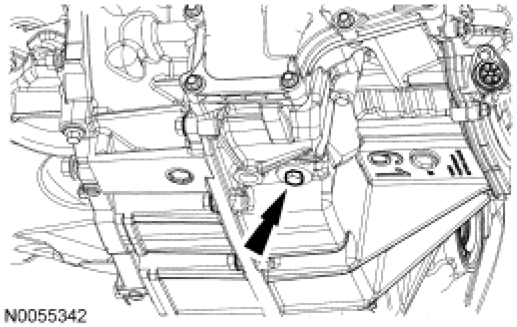

Fig. 617: Identifying M6 Bolt
Courtesy of FORD MOTOR CO.

CAUTION: The crankshaft must remain in the freewheeling position (crankshaft dowel pin at 9 o'clock) until after the camshafts are installed and the valve clearance is checked/adjusted. Do not turn the crankshaft until instructed to do so. Failure to follow this process will result in severe engine damage.

19. Position the crankshaft dowel pin in the 9 o'clock position.

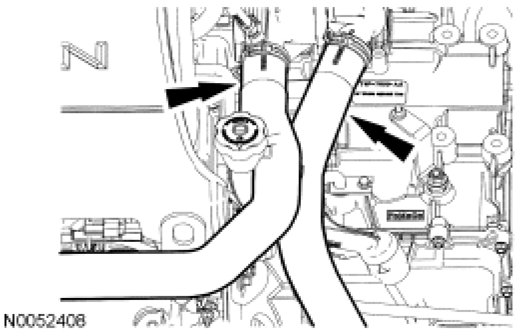

Fig. 618: Positioning Crankshaft Dowel Pin In 9 O'clock Position
Courtesy of FORD MOTOR CO.

NOTE: The valve tappets must be installed in their original positions.

NOTE: Coat the valve tappets with clean engine oil prior to installation.

NOTE: LH shown, RH similar.

20. Install the valve tappets.

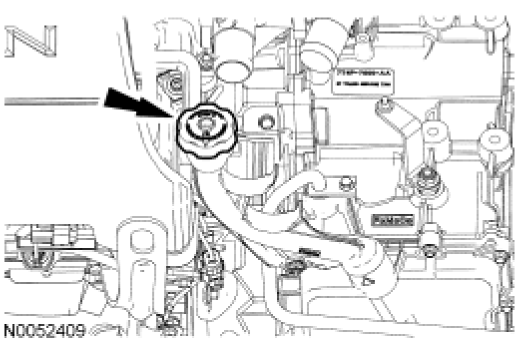

Fig. 619: Identifying Valve Tappets From Cylinder Head
Courtesy of FORD MOTOR CO.

CAUTION: The camshafts must remain in the neutral position during installation or engine damage may occur.

NOTE: Coat the camshafts with clean engine oil prior to installation.

21. Position the camshafts onto the RH cylinder head in the neutral position as shown.

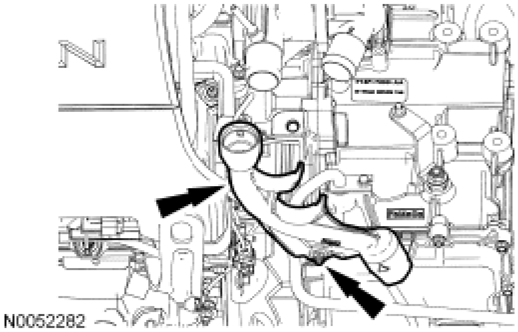

Fig. 620: Positioning Camshafts Onto RH Cylinder Head In Neutral Position
Courtesy of FORD MOTOR CO.

CAUTION: Cylinder head camshaft bearing caps are numbered to verify that they are assembled in their original positions. If not reassembled in their original positions, severe engine damage may occur.

22. Install the 8 camshaft caps and the 16 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

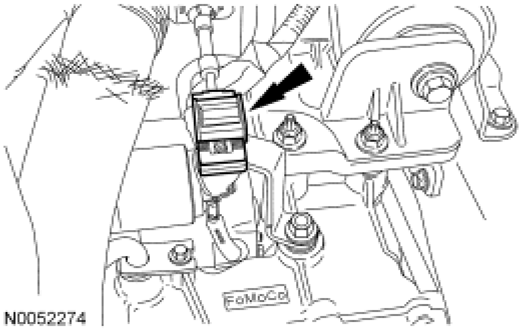

Fig. 621: Installing Camshaft Caps & Bolts In Sequence
Courtesy of FORD MOTOR CO.

CAUTION: The camshafts must remain in the neutral position during installation or engine damage may occur.

NOTE: Coat the camshafts with clean engine oil prior to installation.

23. Position the camshafts onto the LH cylinder head in the neutral position as shown.

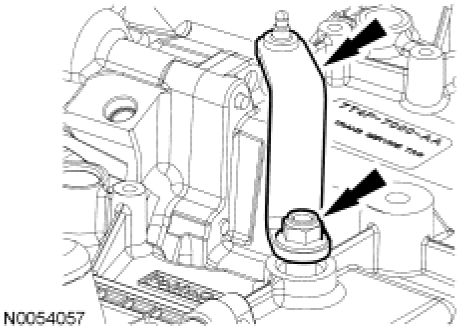

Fig. 622: Positioning Camshafts Onto LH Cylinder Head In Neutral Position
Courtesy of FORD MOTOR CO.

CAUTION: Cylinder head camshaft bearing caps are numbered to verify that they are assembled in their original positions. If not reassembled in their original positions, severe engine damage may occur.

24. Install the 8 camshaft caps and the 16 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

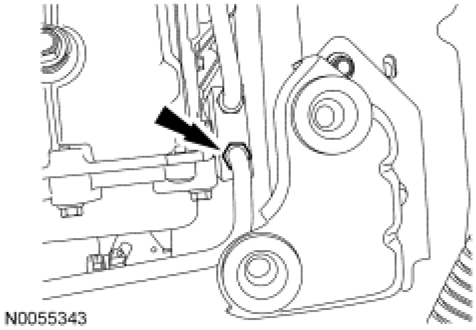

Fig. 623: Installing Camshaft Caps & Bolts In Sequence
Courtesy of FORD MOTOR CO.

CAUTION: If any components are installed new, the engine valve clearance must be checked/adjusted or engine damage may occur.

NOTE: Use a camshaft sprocket bolt to turn the camshafts.

25. Using a feeler gauge, confirm that the valve tappet clearances are within specification. For additional information, refer to **Valve Clearance Check**.

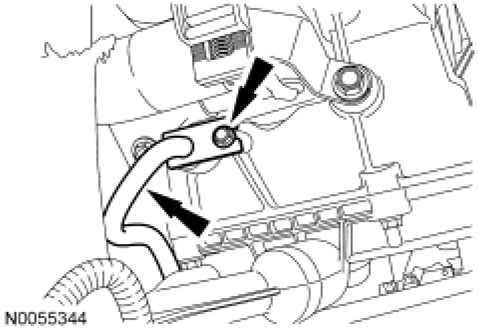

Fig. 624: Measuring Valve Clearance
Courtesy of FORD MOTOR CO.

26. Install the RH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

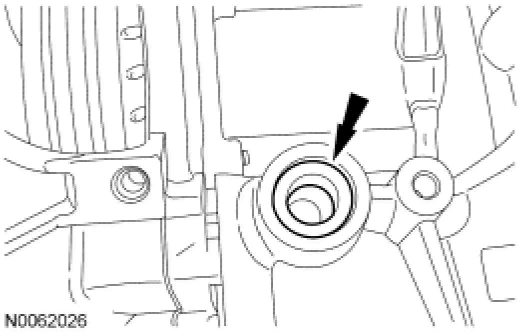

Fig. 625: Locating RH Primary Timing Chain Guide Lower Bolt
Courtesy of FORD MOTOR CO.

27. Install the RH secondary timing chain tensioner and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

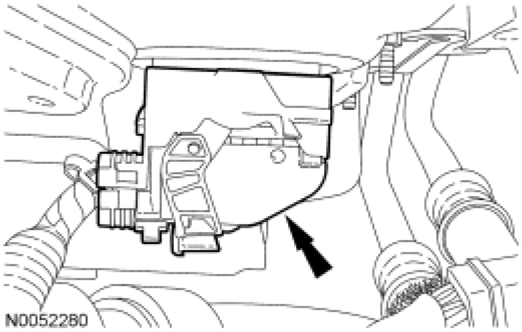

Fig. 626: Locating RH Secondary Timing Chain Tensioner & Bolts
Courtesy of FORD MOTOR CO.

NOTE: Use a camshaft sprocket bolt to turn the camshafts.

28. Rotate the RH camshafts to the top dead center position and install the special tool on the flats of the camshafts.

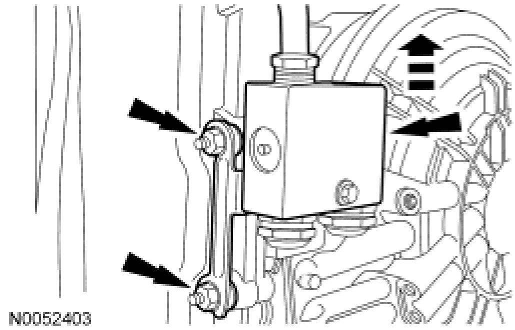

Fig. 627: Installing Special Tool (303-1248) On Flats Of Camshafts
Courtesy of FORD MOTOR CO.

29. Assemble the RH variable camshaft timing (VCT) assembly, the RH exhaust camshaft sprocket and the RH secondary timing chain.
    - Align the colored links with the timing marks.

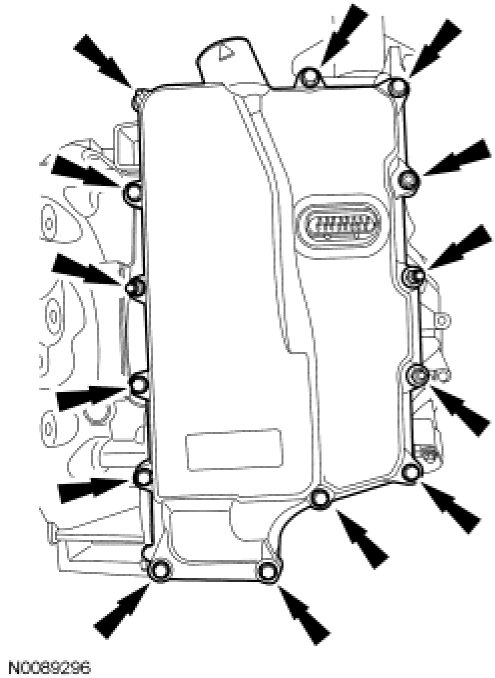

Fig. 628: Aligning RH Exhaust Camshaft Sprocket & RH Secondary Timing Chain Colored Links With Timing Marks
Courtesy of FORD MOTOR CO.

30. Position the RH secondary timing assembly onto the camshafts.

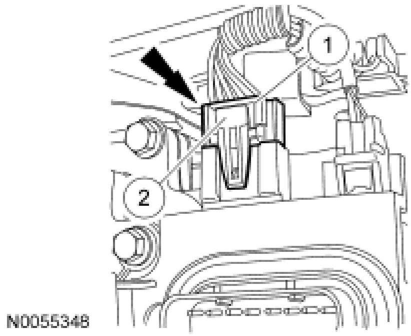

Fig. 629: Positioning RH Secondary Timing Assembly Onto Camshafts
Courtesy of FORD MOTOR CO.

31. Install 2 new bolts and the original washer. Tighten in 4 stages.
    - Stage 1: Tighten to 40 Nm (30 lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 10 Nm (89 lb-in).
    - Stage 4: Tighten 90 degrees.

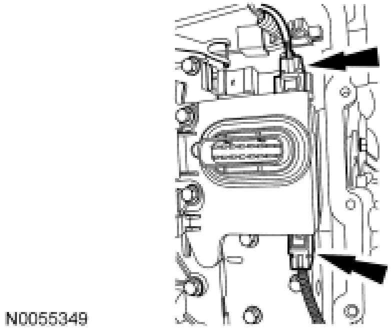

Fig. 630: Locating RH VCT Assembly Bolt & RH Exhaust Camshaft Sprocket Bolt
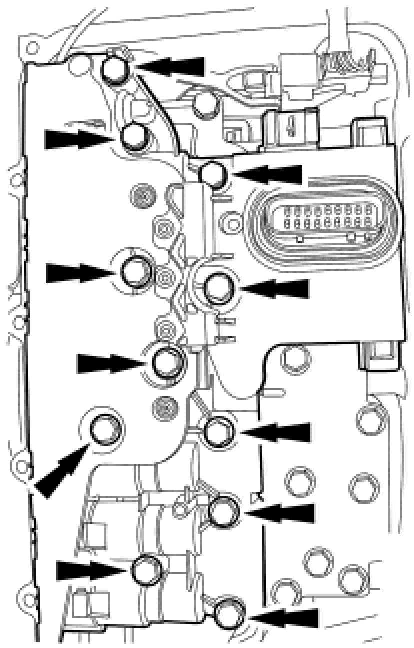
Courtesy of FORD MOTOR CO.

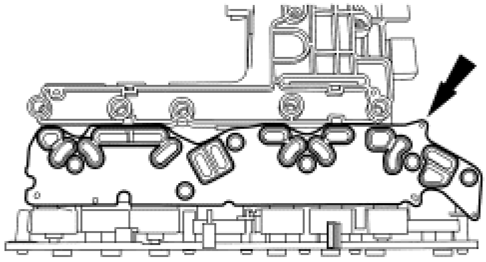
32. Remove the lockpin from the RH secondary timing chain tensioner.



N0055350

Fig. 631: Identifying Lock Pin On RH Secondary Timing Chain Tensioner
Courtesy of FORD MOTOR CO.

33. Install the LH secondary timing chain tensioner and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

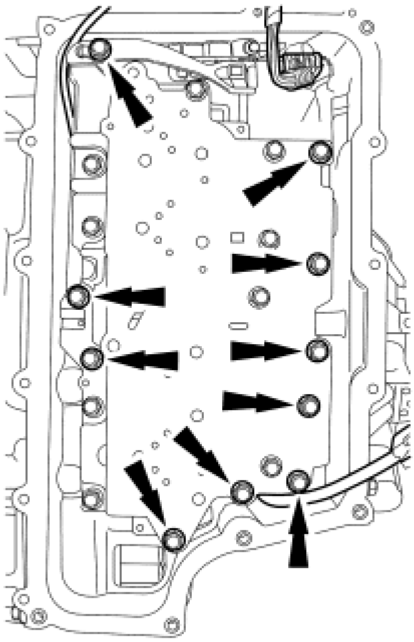


N0055016

Fig. 632: Locating LH Secondary Timing Chain Tensioner & Bolt
Courtesy of FORD MOTOR CO.

NOTE: Use a camshaft sprocket bolt to turn the camshafts.

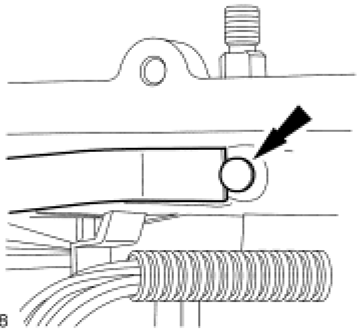
34. Rotate the LH camshafts to the top dead center position and install the special tool on the flats of the camshafts.



N0057465

Fig. 633: Installing Special Tool (303-1248) On Flats Of Camshafts
Courtesy of FORD MOTOR CO.

35. Assemble the LH VCT assembly, the LH exhaust camshaft sprocket and the LH secondary timing chain.
    - Align the colored links with the timing marks.



N0057728

Fig. 634: Aligning LH Exhaust Camshaft Sprocket & LH Secondary Timing Chain Colored Links With Timing Marks
Courtesy of FORD MOTOR CO.

36. Position the LH secondary timing assembly onto the camshafts.

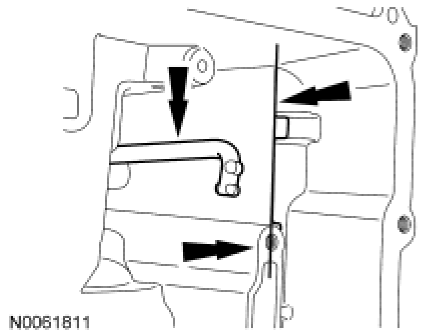


Fig. 635: Positioning LH Secondary Timing Assembly Onto Camshafts
Courtesy of FORD MOTOR CO.

37. Install 2 new bolts and the original washer. Tighten in 4 stages.
    - Stage 1: Tighten to 40 Nm (30 lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 10 Nm (89 lb-in).
    - Stage 4: Tighten 90 degrees.

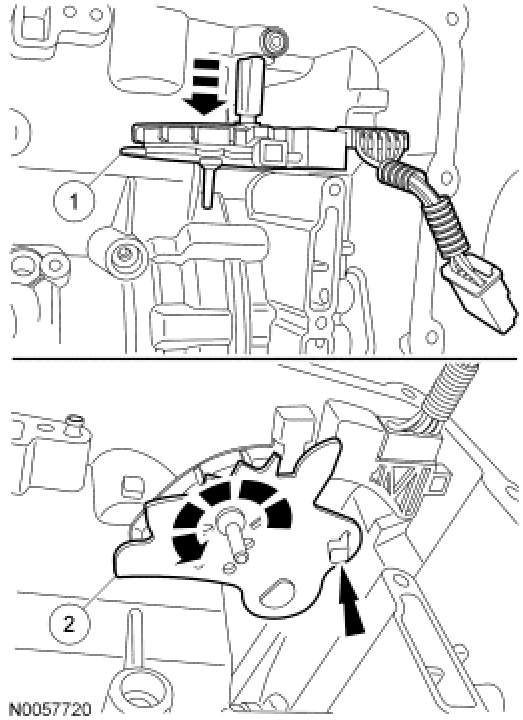

Fig. 636: Locating LH VCT Assembly Bolt & LH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

38. Remove the lockpin from the LH secondary timing chain tensioner.

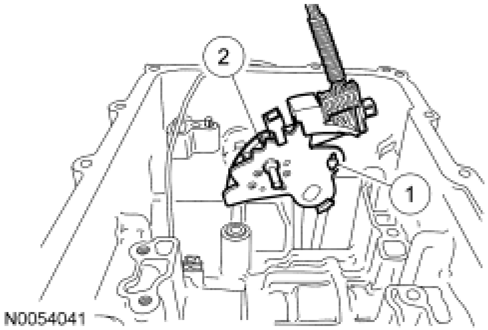

Fig. 637: Locating Lock Pin On LH Secondary Timing Chain Tensioner
Courtesy of FORD MOTOR CO.

39. Rotate the crankshaft clockwise 60 degrees to the top dead center position (crankshaft dowel pin at 11 o'clock).

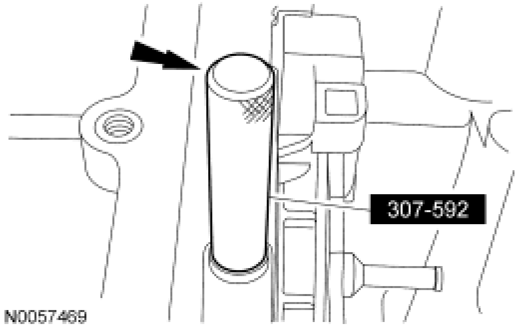

Fig. 638: Identifying Crankshaft Dowel Pin
Courtesy of FORD MOTOR CO.

40. Install the crankshaft timing chain sprocket.

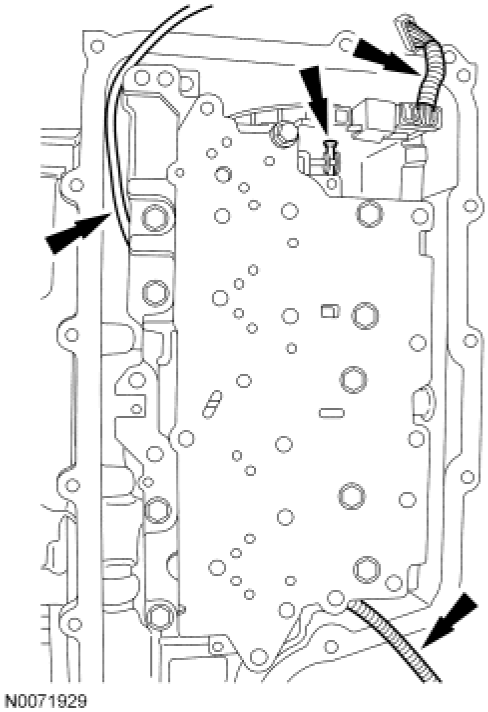

Fig. 639: Locating Crankshaft Timing Chain Sprocket
Courtesy of FORD MOTOR CO.

41. Install the primary timing chain with the colored links aligned with the timing marks on the VCT assemblies and the crankshaft sprocket.

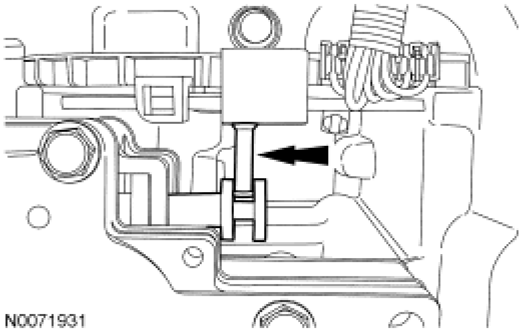

Fig. 640: Aligning Timing Marks On VCT Assemblies & Crankshaft Sprocket
Courtesy of FORD MOTOR CO.

42. Install the upper LH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

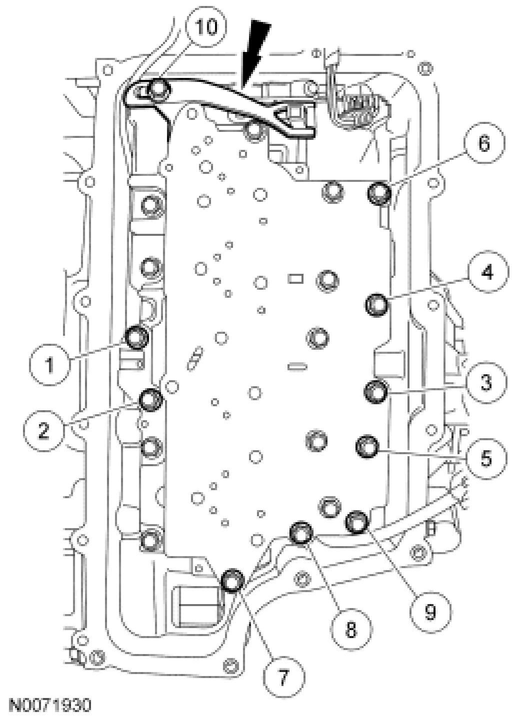

Fig. 641: Locating Upper LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

43. Install the lower LH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

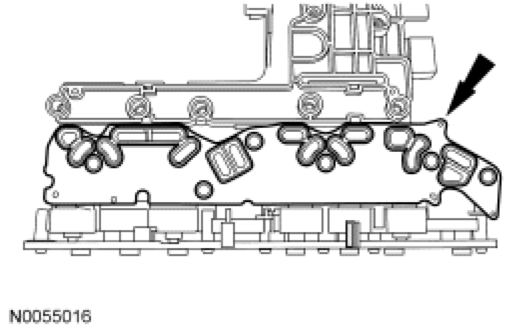

Fig. 642: Locating Lower LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

44. Install the primary timing chain tensioner arm.

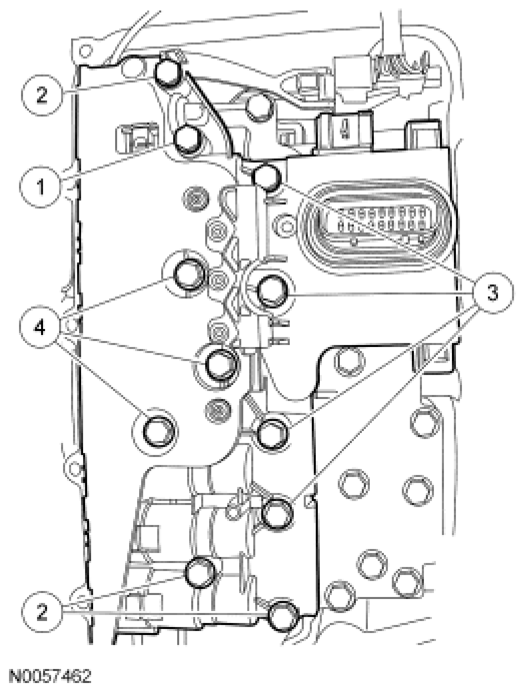

Fig. 643: Locating Primary Timing Chain Tensioner Arm
Courtesy of FORD MOTOR CO.

45. Reset the primary timing chain tensioner.
    - Rotate the lever counterclockwise.
    - Using a soft-jawed vise, compress the plunger.
    - Align the hole in the lever with the hole in the tensioner housing.
    - Install a suitable lockpin.

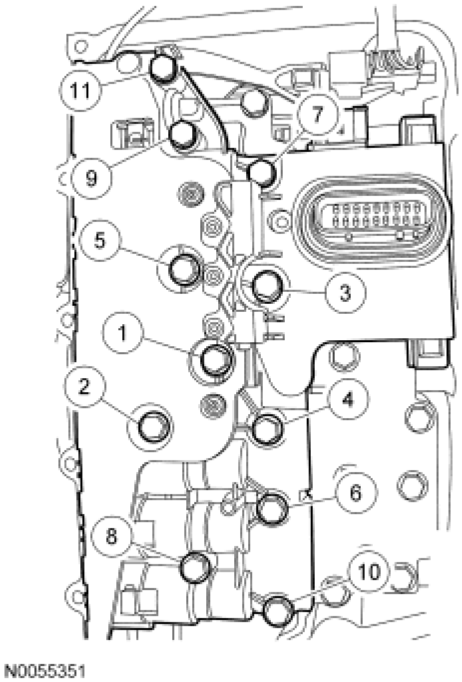

Fig. 644: Compressing Plunger Using A Soft-Jawed Vise
Courtesy of FORD MOTOR CO.

NOTE: It may be necessary to rotate the crankshaft slightly to remove slack from the timing chain and install the tensioner.

46. Install the primary tensioner and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).
    - Remove the lockpin.

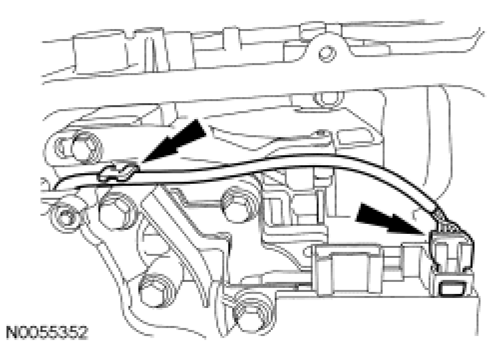

Fig. 645: Locating Primary Tensioner Bolts
Courtesy of FORD MOTOR CO.

47. As a post-check, verify correct alignment of all timing marks.

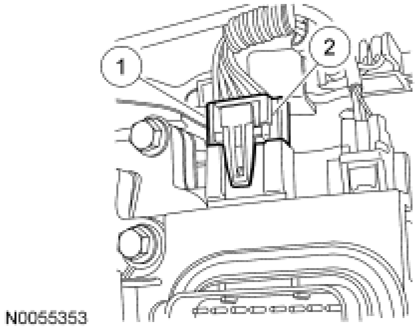

Fig. 646: Verifying Correct Alignment Of All Timing Marks
Courtesy of FORD MOTOR CO.

48. Install new VCT housing seals.

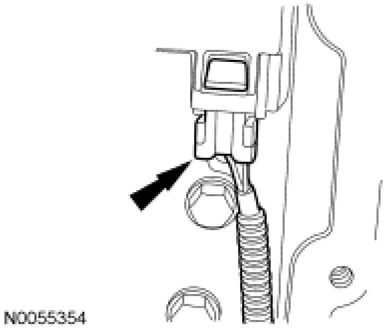

Fig. 647: Locating VCT Housing Seals
Courtesy of FORD MOTOR CO.

CAUTION: Make sure the dowels on the variable camshaft timing (VCT) housing are fully engaged in the cylinder head prior to tightening the bolts. Failure to follow this process will result in severe engine damage.

49. Install the LH VCT housing and the 3 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

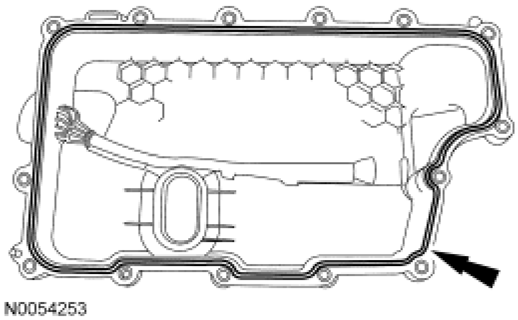

Fig. 648: Identifying LH VCT Housing Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

CAUTION: Make sure the dowels on the variable camshaft timing (VCT) housing are fully engaged in the cylinder head prior to tightening the bolts. Failure to follow this process will result in severe engine damage.

50. Install the RH VCT housing and the 3 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

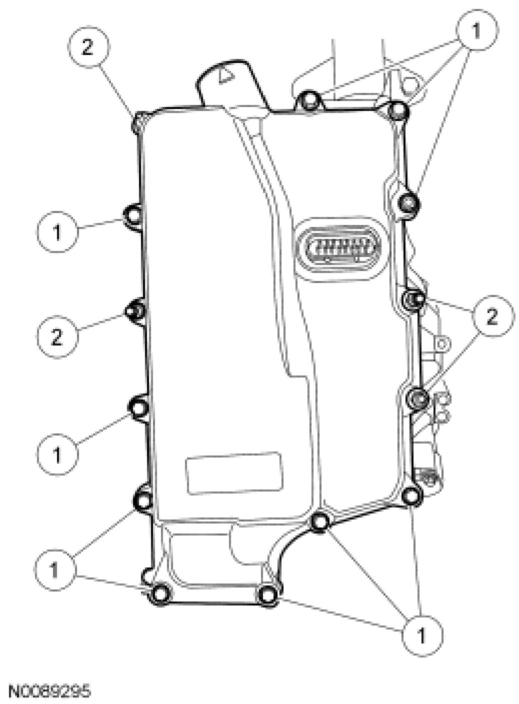

Fig. 649: Identifying RH VCT Housing Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

51. Install the special tools.

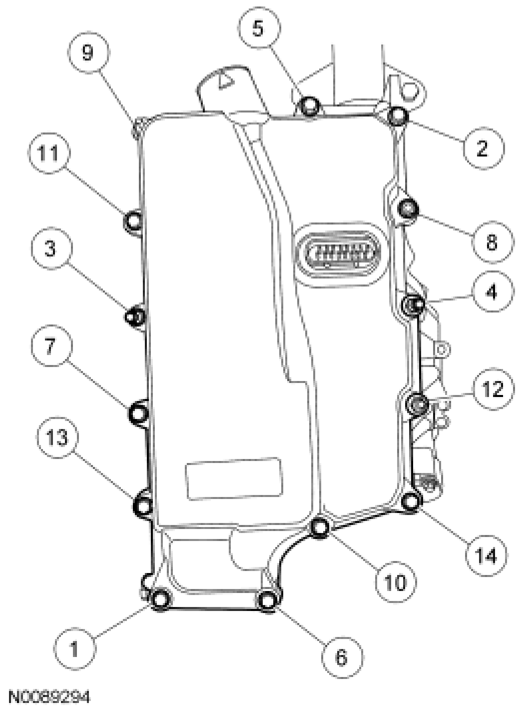

Fig. 650: Identifying Special Tool (307-399)
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: The engine front cover and bolts 17, 18, 19 and 20 must be installed within 4 minutes of the initial sealant application. The remainder of the engine front cover bolts and the engine mount bracket bolts must be installed and tightened within 35 minutes of the initial sealant application. If the time limits are exceeded, the sealant must be removed, the sealing area cleaned and sealant reapplied. To clean the sealing area, use silicone gasket remover and metal surface prep. Follow the directions on the packaging. Failure to follow this procedure can cause future oil leakage.

52. Apply a 3.0 mm (0.11 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover sealing surfaces including the 3 engine mount bracket bosses.
    - Apply a 5.5 mm (0.21 in) bead of Motorcraft High Performance Engine RTV Silicone to the oil pan-to-cylinder block joint and the cylinder head-to-cylinder block joint areas of the engine front cover in 5 places as indicated.

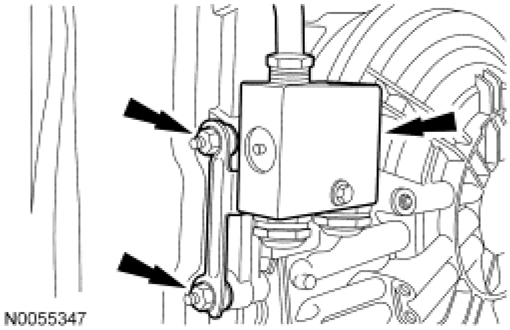

Fig. 651: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover Sealing Surfaces
Courtesy of FORD MOTOR CO.

NOTE: **Make sure the 2 locating dowel pins are seated correctly in the cylinder block.**

53. Install the engine front cover and bolts 17, 18, 19 and 20.
    - Tighten in sequence to 3 Nm (27 lb-in).

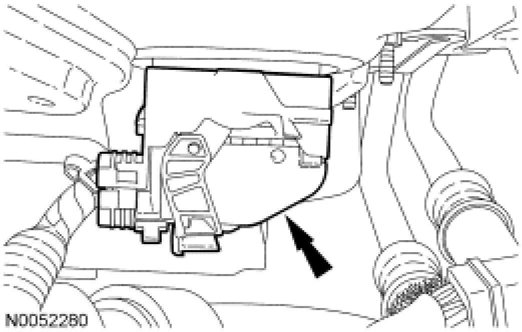

Fig. 652: Installing Engine Front Cover & Bolts In Sequence
Courtesy of FORD MOTOR CO.

54. Remove the special tools (alignment pins).

NOTE: **Do not tighten the bolts at this time.**

55. Install the engine mount bracket and the 3 bolts.

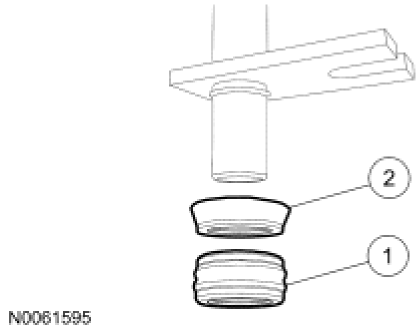

Fig. 653: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Do not expose the Motorcraft High Performance Engine RTV Silicone to engine oil for at least 90 minutes after installing the engine front cover. Failure to follow this instruction may cause oil leakage.

56. Install the remaining engine front cover bolts. Tighten all of the engine front cover bolts and engine mount bracket bolts in the sequence shown in 2 stages:
    - Stage 1: Tighten bolts 1 thru 22 to 10 Nm (89 lb-in) and bolts 23, 24 and 25 to 15 Nm (11 lb-ft).
    - Stage 2: Tighten bolts 1 thru 22 to 24 Nm (18 lb-ft) and bolts 23, 24 and 25 to 75 Nm (55 lb-ft).

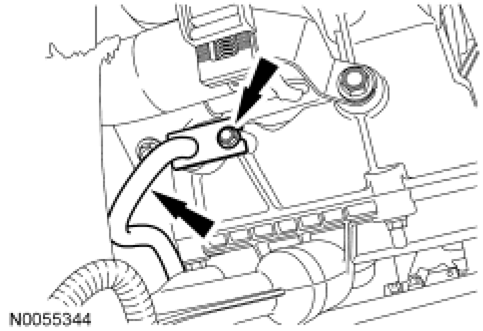

Fig. 654: Identifying Tightening Of Engine Front Cover Bolts & Engine Mount Bracket Bolts In Sequence
Courtesy of FORD MOTOR CO.

57. Install the 2 engine mount studs.
    - Tighten to 18 Nm (13 lb-ft).

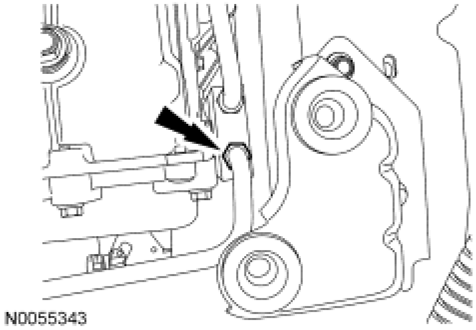

Fig. 655: Locating Engine Mount Studs
Courtesy of FORD MOTOR CO.

58. Install the engine mount bracket and the 2 bolts.
    - Tighten to 24 Nm (18 lb-ft).

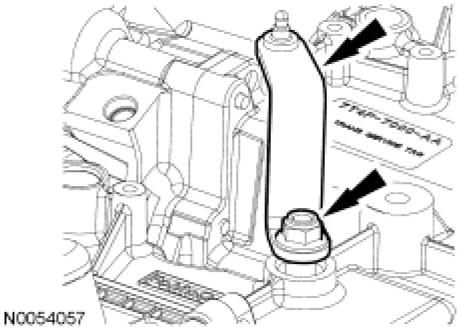

Fig. 656: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

NOTE:	**Apply clean engine oil to the crankshaft front seal bore in the engine front cover.**

59. Using the special tools, install a new crankshaft front seal.

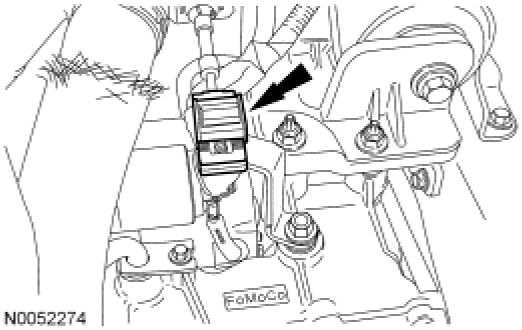

Fig. 657: Installing Crankshaft Front Seal Using Special Tools (303-102) & (303-1251)
Courtesy of FORD MOTOR CO.

NOTE: Lubricate the outside diameter sealing surfaces with clean engine oil.

60. Using the special tools, install the crankshaft pulley.

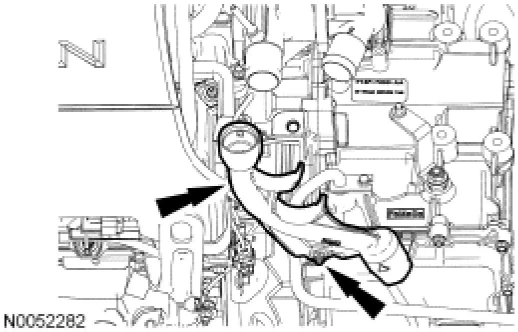

Fig. 658: Installing Crankshaft Pulley
Courtesy of FORD MOTOR CO.

61. Using the special tool, install the crankshaft pulley washer and new bolt and tighten in 4 stages.
    - Stage 1: Tighten to 120 Nm (89 (lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 50 Nm (37 lb-ft).
    - Stage 4: Tighten an additional 90 degrees.

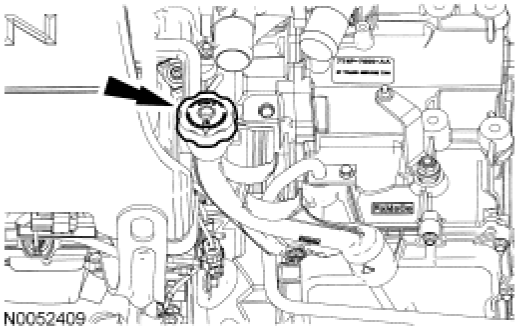

Fig. 659: Installing Crankshaft Pulley Washer & Bolt Using Special Tools (303-D055)
Courtesy of FORD MOTOR CO.

NOTE: Installation of new seals is only required if damaged seals were removed during disassembly of the engine.

NOTE: Spark plug tube seal installation shown, VCT seal installation similar.

62. Using the special tools, install new VCT solenoid and/or spark plug tube seals.

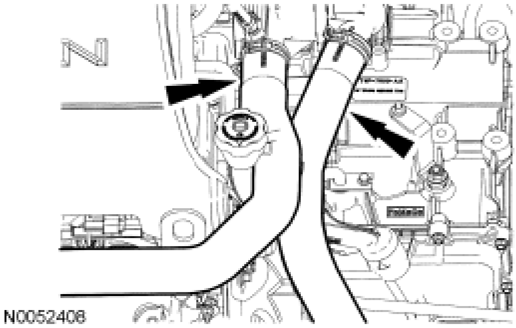

Fig. 660: Installing VCT Solenoid And/Or Spark Plug Tube Seals Using Special Tools (205-153) & (303-1247/2)
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: If the valve cover is not installed and the fasteners tightened within 4 minutes, the sealant must be removed and the sealing area cleaned. To clean the sealing area, use silicone gasket remover and metal surface prep. Follow the directions on the packaging. Failure to follow this procedure can cause future oil leakage.

63. Apply a 8 mm (0.31 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover-to-RH cylinder head joints.

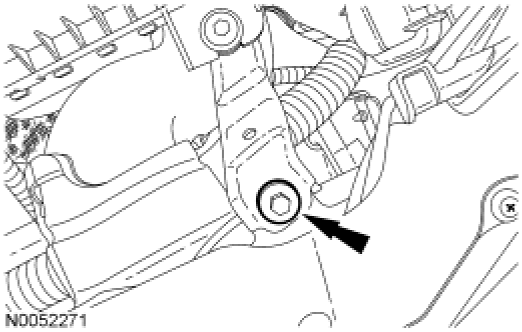

Fig. 661: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover-To-RH Cylinder Head Joints
Courtesy of FORD MOTOR CO.

64. Using a new gasket, install the RH valve cover, bolt and the 10 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

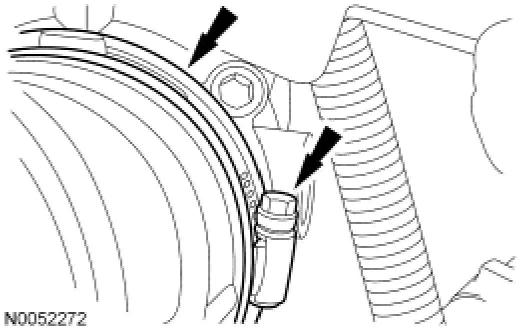

Fig. 662: Installing RH Valve Cover Stud Bolts In Sequence
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: If the valve cover is not installed and the fasteners tightened within 4 minutes, the sealant must be removed and the sealing area cleaned. To clean the sealing area, use silicone gasket remover and metal surface prep. Follow the directions on the packaging. Failure to follow this procedure can cause future oil leakage.

65. Apply a 8 mm (0.31 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover-to-LH cylinder head joints.

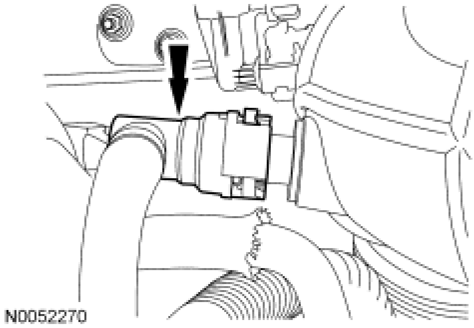

Fig. 663: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover-To-LH Cylinder Head Joints
Courtesy of FORD MOTOR CO.

66. Using a new gasket, install the LH valve cover and 11 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

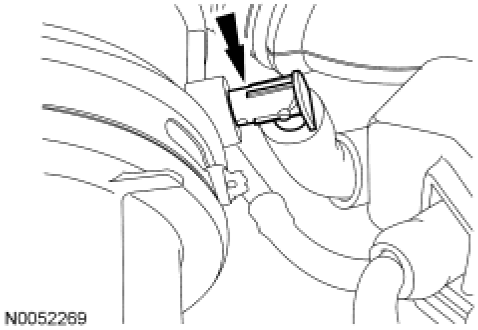

Fig. 664: Installing LH Valve Cover Stud Bolts In Sequence
Courtesy of FORD MOTOR CO.

NOTE: LH shown, RH similar.

67. Install the 6 coil-on-plug assemblies and the 6 bolts.
    - Tighten to 7 Nm (62 lb-in).

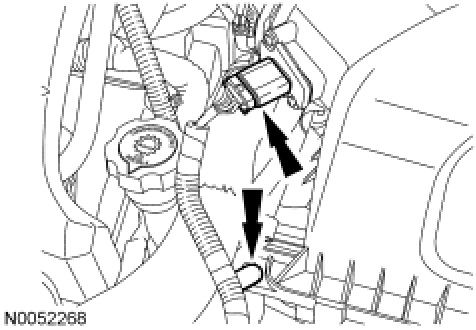

Fig. 665: Locating Coil-On-Plugs & Bolts
Courtesy of FORD MOTOR CO.

NOTE: Engine without oil cooler shown, engine with oil cooler similar.

68. Using a new gasket and O-ring seal, install the oil filter adapter and the 2 bolts.
    - Tighten the large bolt to 57 Nm (42 lb-ft).
    - Tighten the small bolt to 10 Nm (89 lb-in).

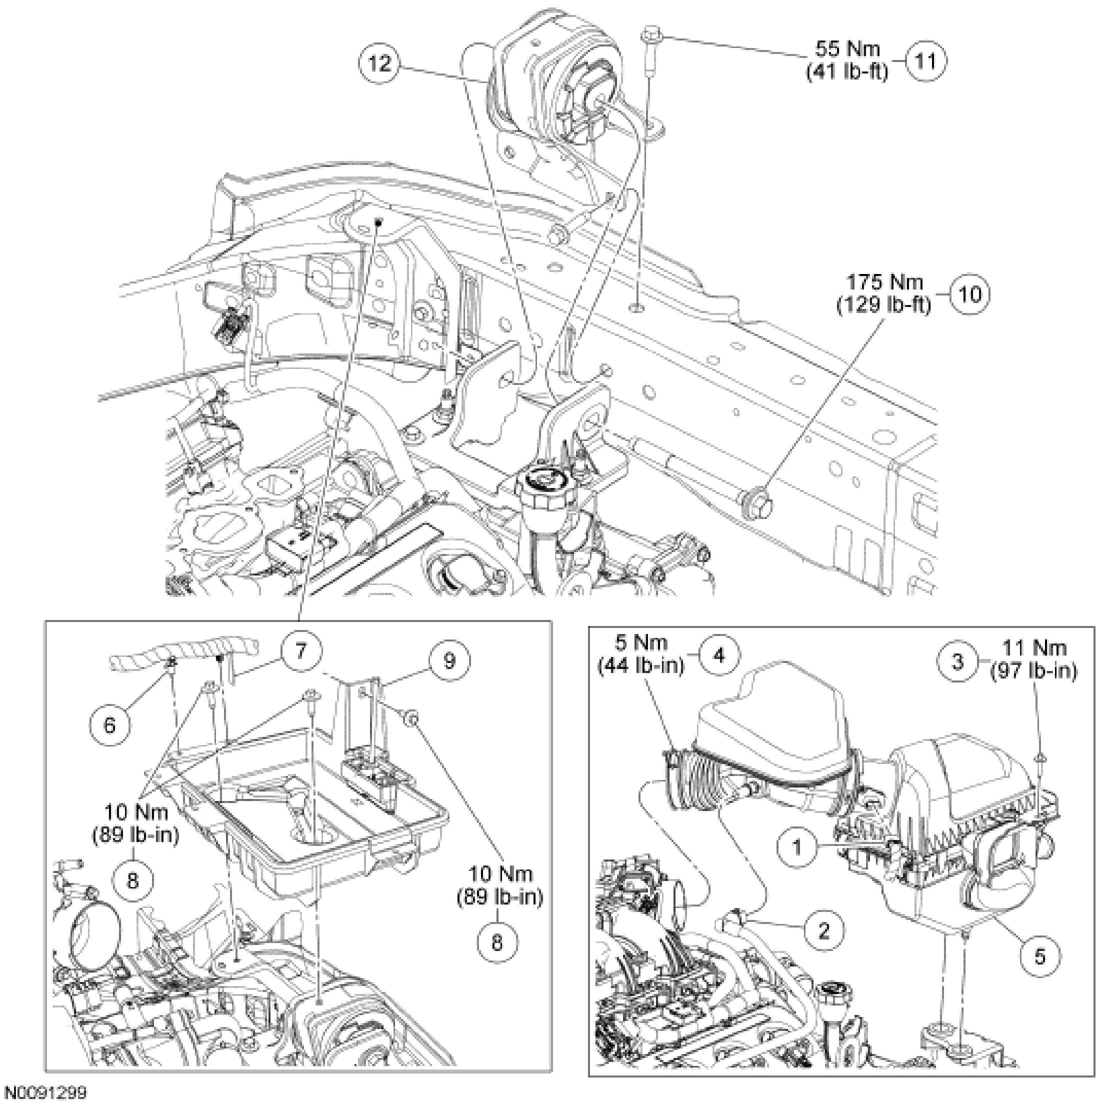

Fig. 666: Locating Oil Filter Adapter & Bolts
Courtesy of FORD MOTOR CO.

CAUTION: A new oil cooler must be installed or severe damage to the engine may occur.

69. If equipped, install a new oil cooler, new gaskets and the 6 bolts.
    - Tighten to 10 Nm (89 lb-in).

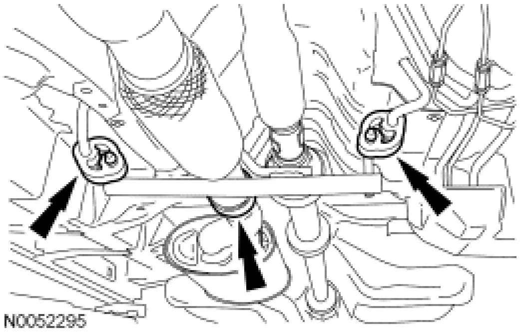

Fig. 667: Identifying Oil Cooler, Gaskets & Bolts
Courtesy of FORD MOTOR CO.

NOTE: **Apply thread sealant with PTFE to the engine oil pressure (EOP) switch threads.**

70. Install the EOP switch.
    - Tighten to 18 Nm (13 lb-ft).

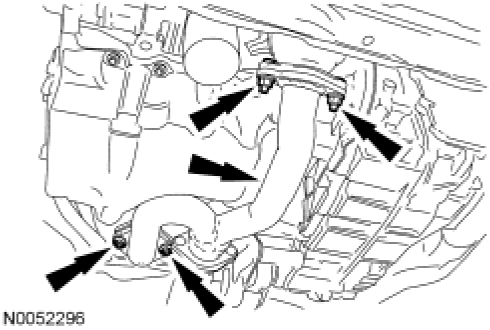

Fig. 668: Identifying EOP Switch
Courtesy of FORD MOTOR CO.

71. Install the crankshaft position (CKP) sensor and install the bolt.
    - Tighten to 10 Nm (89 lb-in).

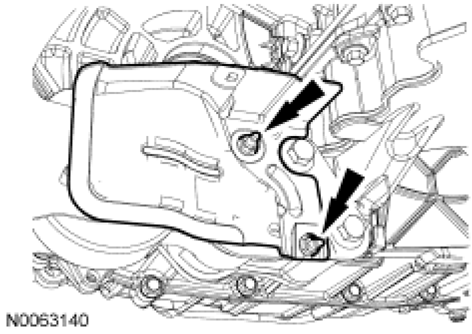

Fig. 669: Identifying CKP Sensor & Bolt

Courtesy of FORD MOTOR CO.

72. Install LH camshaft position (CMP) sensor and the bolt.
    - Tighten to 10 Nm (89 lb-in).

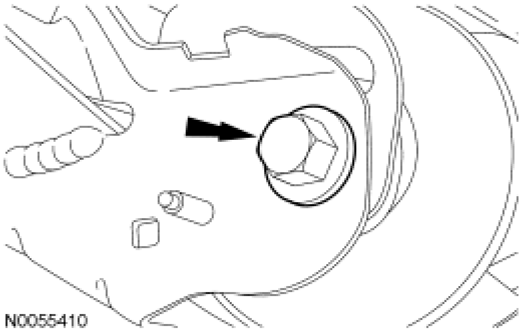

Fig. 670: Locating LH CMP Sensor & Bolt
Courtesy of FORD MOTOR CO.

73. Install and connect the cylinder head temperature (CHT) sensor jumper harness.

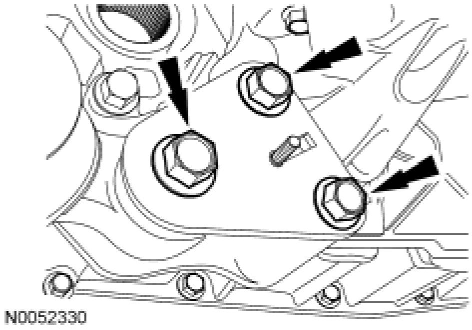

Fig. 671: Identifying CHT Sensor Jumper Harness
Courtesy of FORD MOTOR CO.

74. Using new gaskets, install the lower intake manifold and the 10 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

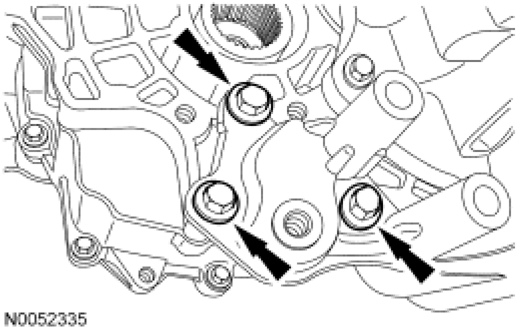

Fig. 672: Installing Lower Intake Manifold Bolts In Sequence

Courtesy of FORD MOTOR CO.

75. Using a new gasket, install the thermostat housing and the 3 bolts.
    - Tighten to 10 Nm (89 lb-in).

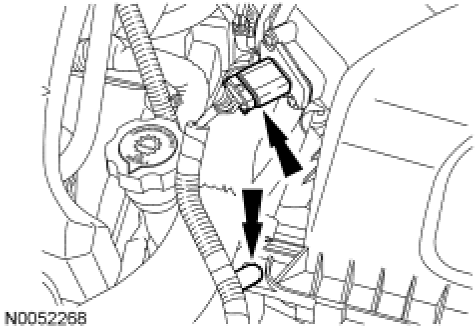

Fig. 673: Locating Thermostat Housing-To-Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Use O-ring seals that are made of special fuel-resistant material. The use of ordinary O-rings can cause the fuel system to leak. Do not reuse the O-ring seals.

NOTE: The upper and lower O-ring seals are not interchangeable.

76. Install new fuel injector O-ring seals.
    - Remove the retaining clips and separate the fuel injectors from the fuel rail.
    - Remove and discard the O-ring seals.
    - Install new O-ring seals and lubricate with clean engine oil.
    - Install the fuel injectors and the retaining clips onto the fuel rail.

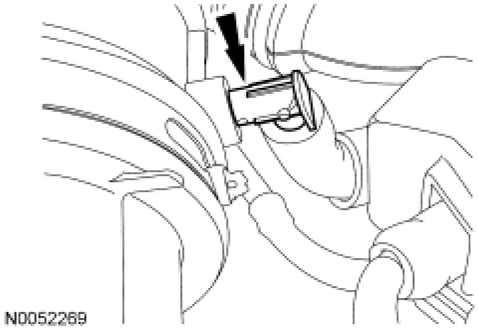

Fig. 674: Identifying Fuel Injector O-Ring Seals
Courtesy of FORD MOTOR CO.

77. Install the fuel rail and injectors as an assembly and install the 4 bolts.
    - Tighten to 10 Nm (89 lb-in).

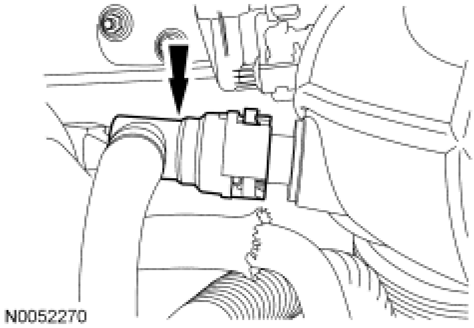

Fig. 675: Identifying Fuel Rail And Injectors
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

78. Install the catalytic converter bracket and the 2 bolts.
    - Tighten to 48 Nm (35 lb-ft).

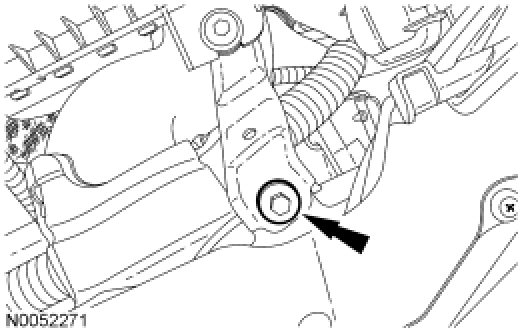

Fig. 676: Locating Catalytic Converter Bracket & Bolts
Courtesy of FORD MOTOR CO.

All vehicles

79. Install the RH CMP sensor and the bolt.
    - Tighten to 10 Nm (89 lb-in).

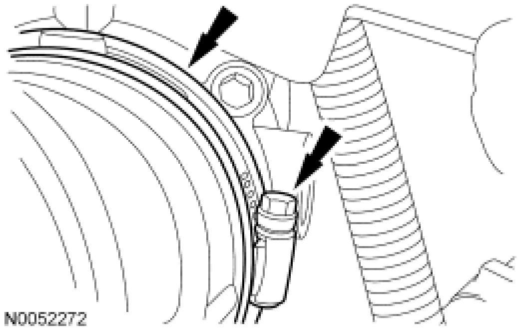

Fig. 677: Locating RH CMP Sensor & Bolt

Courtesy of FORD MOTOR CO.

80. Install the engine lifting eye and the 2 bolts.
    - Tighten to 24 Nm (18 lb-ft).

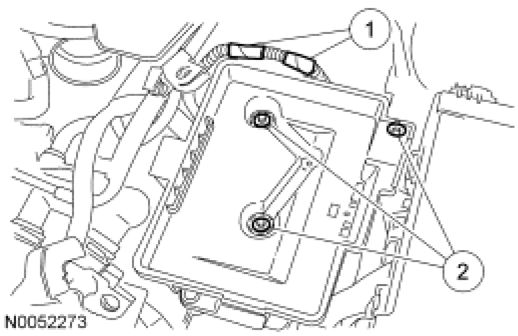

Fig. 678: Locating Engine Lifting Eye & Bolts
Courtesy of FORD MOTOR CO.

81. Install the cover and the pin-type retainer.

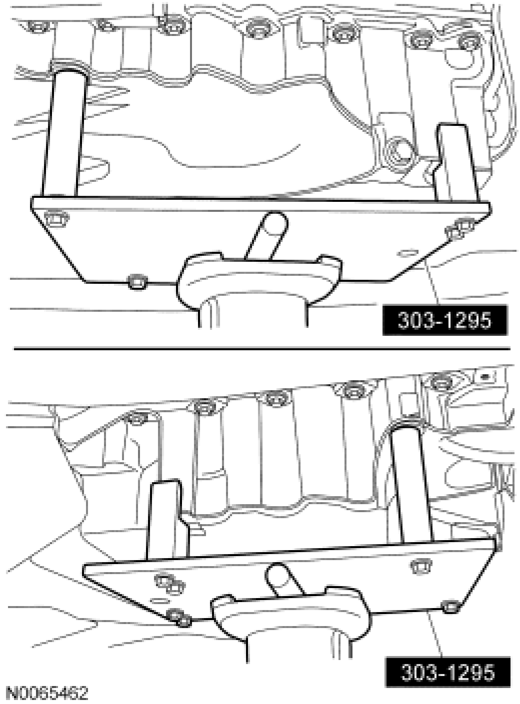

Fig. 679: Locating Pin-Type Retainer & Cover
Courtesy of FORD MOTOR CO.

82. Install the LH cylinder block drain plug.
    - Tighten to 20 Nm (15 lb-ft) plus an additional 180 degrees.

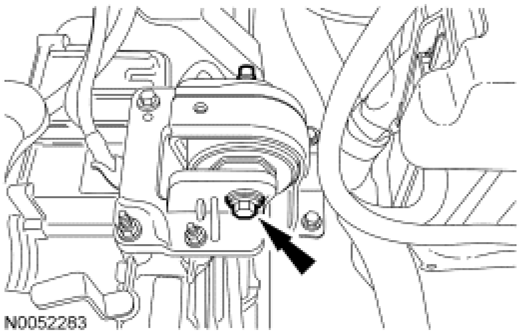

Fig. 680: Locating LH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

83. Install the RH cylinder block drain plug or, if equipped, the block heater.
    - Tighten to 40 Nm (30 lb-ft).

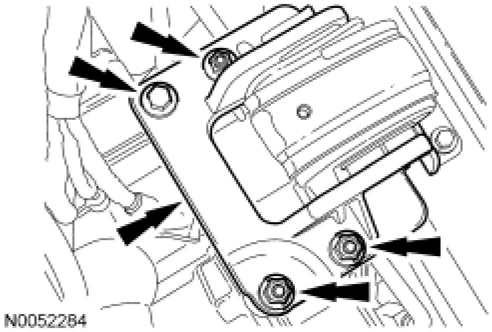

Fig. 681: Locating RH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

84. Install 6 new RH exhaust manifold studs.
    - Tighten to 12 Nm (9 lb-ft).

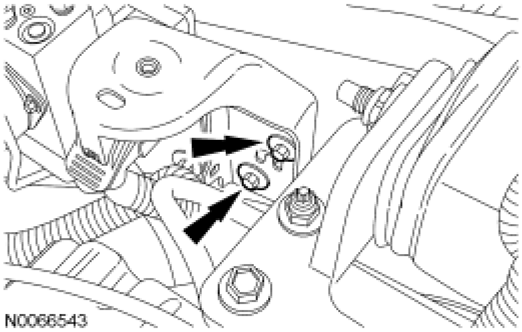

Fig. 682: Locating RH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

CAUTION: Failure to tighten the exhaust manifold nuts to specification a second

time will cause the exhaust manifold to develop an exhaust leak.

85. Using a new gasket, install the RH exhaust manifold and 6 new nuts. Tighten in 2 stages in the sequence shown:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 20 Nm (15 lb-ft).

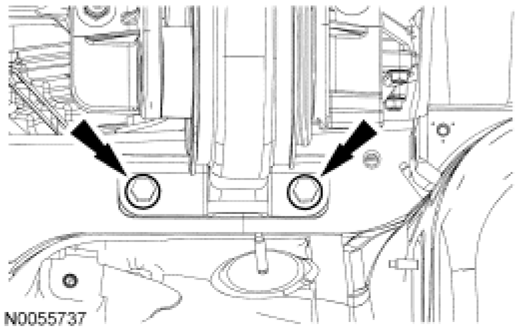

Fig. 683: Installing RH Exhaust Manifold Nuts In Sequence
Courtesy of FORD MOTOR CO.

Front wheel drive (FWD) vehicles

86. Install the RH exhaust manifold heat shield and the 3 bolts.
    - Tighten to 14 Nm (10 lb-ft).

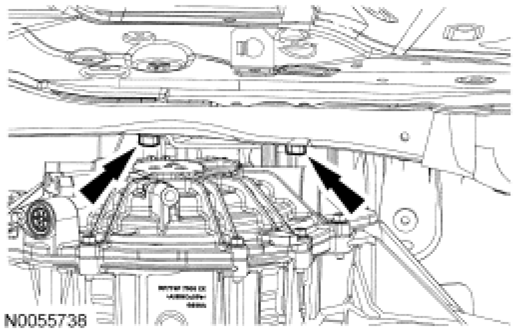

Fig. 684: Locating RH Exhaust Manifold Heat Shield & Nuts
Courtesy of FORD MOTOR CO.

87. Using a new gasket, install the RH catalytic converter and the 4 new nuts.
    - Tighten to 40 Nm (30 lb-ft).

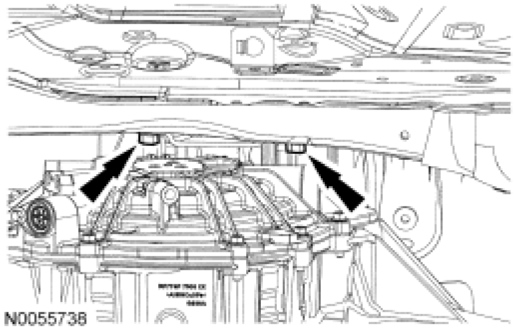

Fig. 685: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

All vehicles

88. Install 6 new LH exhaust manifold studs.
    - Tighten to 12 Nm (9 lb-ft).

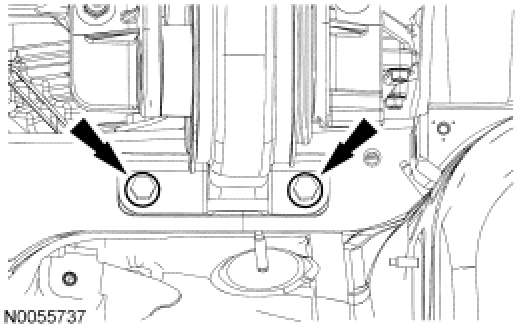

Fig. 686: Locating LH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

CAUTION: Failure to tighten the exhaust manifold nuts to specification a second time will cause the exhaust manifold to develop an exhaust leak.

89. Using a new gasket, install the LH exhaust manifold and 6 new nuts. Tighten in 2 stages in the sequence shown:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 20 Nm (15 lb-ft).

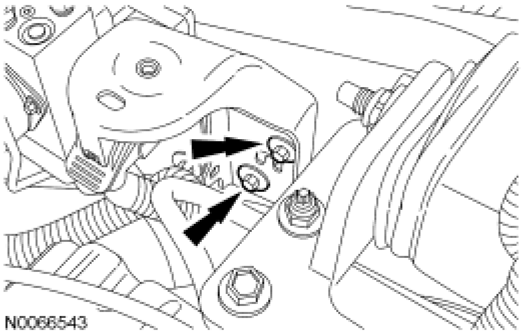

Fig. 687: Installing LH Exhaust Manifold Nuts In Sequence
Courtesy of FORD MOTOR CO.

90. Install the LH exhaust manifold heat shield and the 3 bolts.
    - Tighten to 14 Nm (10 lb-ft).

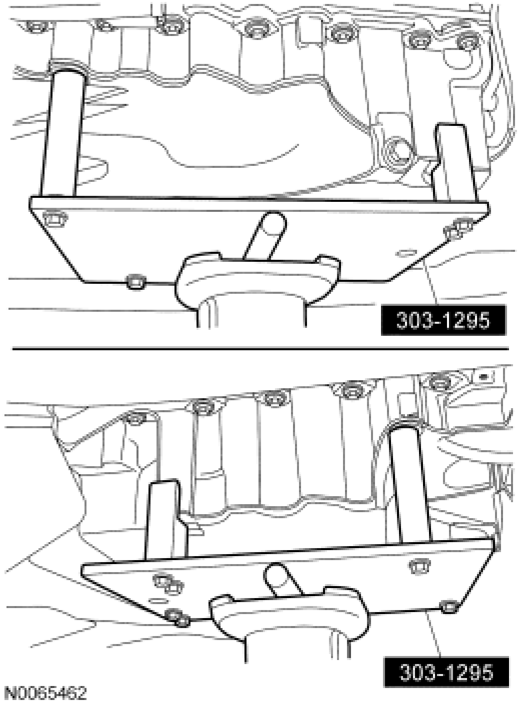

Fig. 688: Locating LH Exhaust Manifold Heat Shield & Nuts
Courtesy of FORD MOTOR CO.

91. Using a new gasket, install the LH catalytic converter and 4 new nuts (3 shown).
    - Tighten to 40 Nm (30 lb-ft).

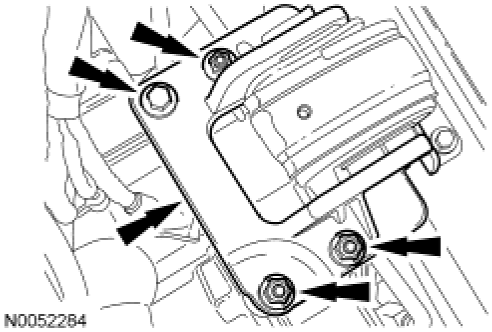

Fig. 689: Locating LH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

92. Install the accessory drive belt tensioner and the 3 bolts.
    - Tighten to 11 Nm (8 lb-ft).

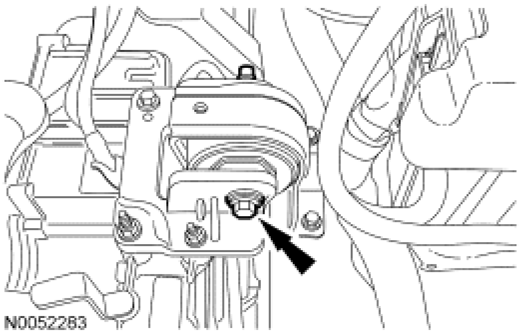

Fig. 690: Locating Accessory Drive Belt Tensioner Bolts
Courtesy of FORD MOTOR CO.

93. Install the power steering pump and the 3 bolts.
    - Tighten to 24 Nm (18 lb-ft).

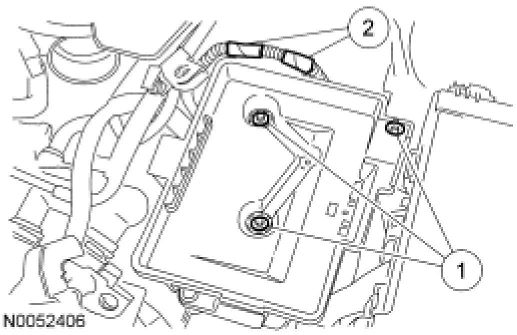

Fig. 691: Locating Power Steering Pump Bolts
Courtesy of FORD MOTOR CO.

94. Install the generator, the bolt and the nut.

- Tighten to 47 Nm (35 lb-ft).

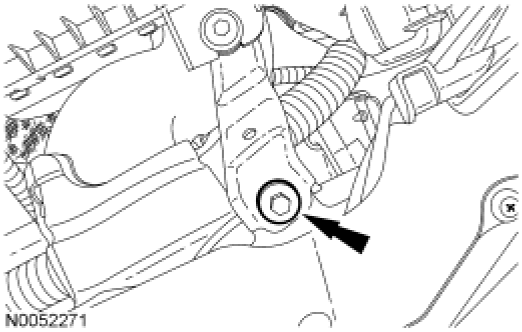

Fig. 692: Locating Generator, Bolts & Nuts
Courtesy of FORD MOTOR CO.

95. Position the wiring harness onto the engine.
96. Connect the EOP switch electrical connector and the wiring harness pin-type retainer.

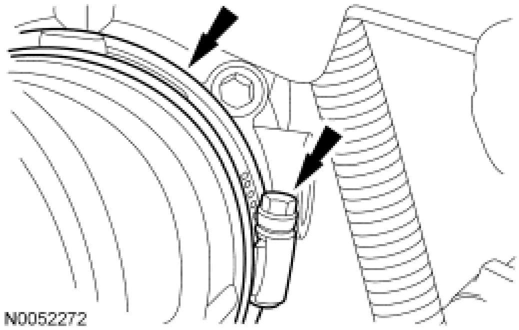

Fig. 693: Locating Engine Oil Pressure (EOP) Switch Electrical Connector & Wiring Harness Pin-Type Retainer
Courtesy of FORD MOTOR CO.

97. Attach the wiring harness retainer to the generator.

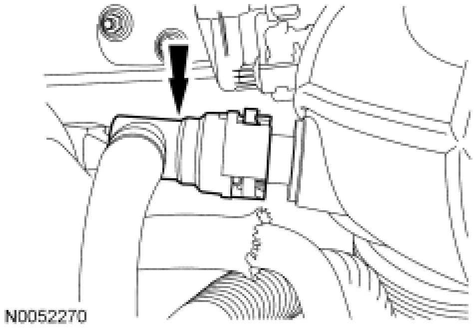

Fig. 694: Identifying Wiring Harness Retainer From Generator
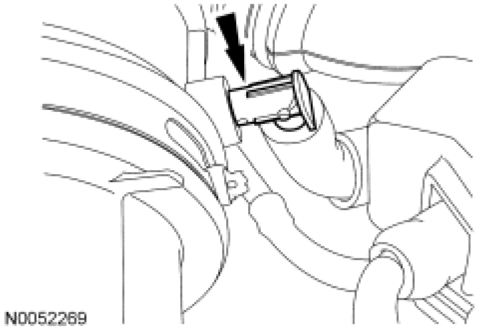
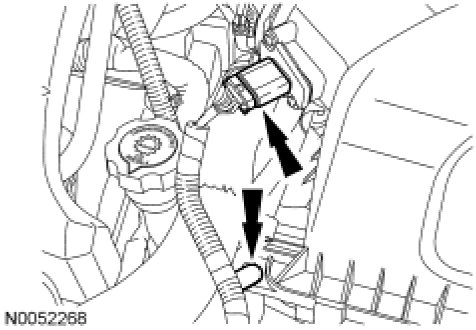
Courtesy of FORD MOTOR CO.

98. Connect the generator electrical connector.



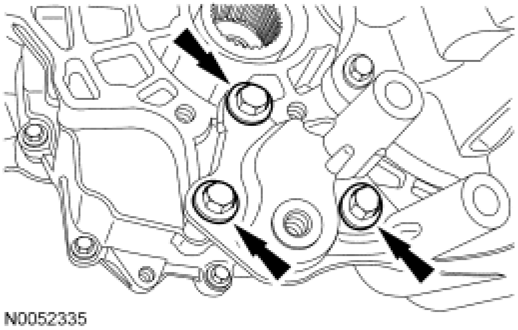
<u>Fig. 695: Identifying Generator Electrical Connector</u>
Courtesy of FORD MOTOR CO.

99. Connect the generator B+ cable and install the nut.
    - Tighten to 6 Nm (53 lb-in).



<u>Fig. 696: Identifying Generator B+ Cable & Nut</u>
Courtesy of FORD MOTOR CO.

100. Connect the A/C compressor electrical connector.



<u>Fig. 697: Identifying A/C Compressor Electrical Connector</u>
Courtesy of FORD MOTOR CO.

101. Connect the CKP sensor electrical connector.

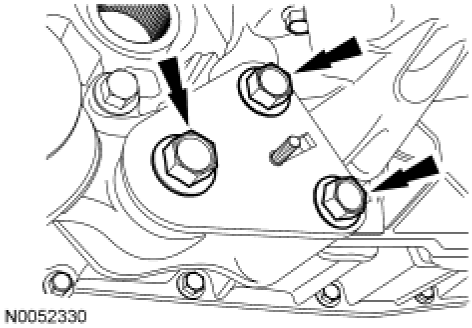


Fig. 698: Identifying Crankshaft Position (CKP) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

102. Install the wiring harness grommet.

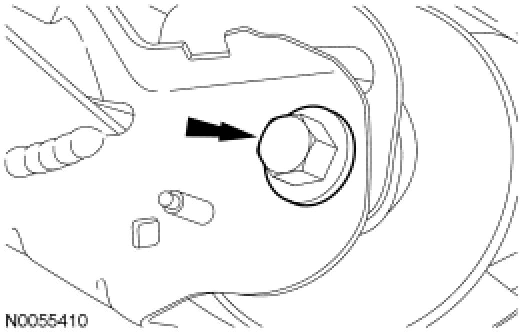

Fig. 699: Identifying Wiring Harness Grommet
Courtesy of FORD MOTOR CO.

103. Install the wiring harness retainer stud bolt.
   - Tighten to 10 Nm (89 lb-in).

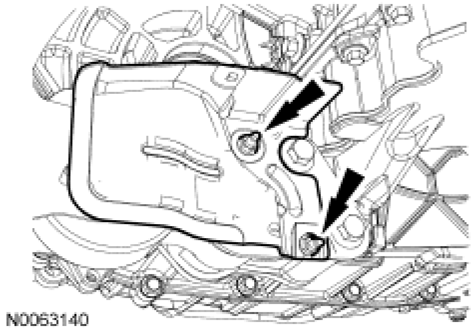

Fig. 700: Identifying Wiring Harness Retainer Stud Bolt
Courtesy of FORD MOTOR CO.

104. Install the heat shield, the nut and the bolt.
   - Tighten to 10 Nm (89 lb-in).

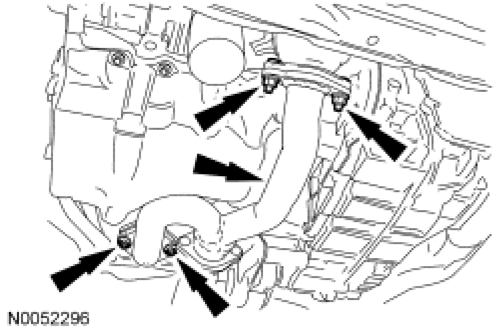

Fig. 701: Identifying Heat Shield, Nut & Bolt
Courtesy of FORD MOTOR CO.

105. Install the wiring harness retainer bolt on the rear of the LH cylinder head.
    - Tighten to 10 Nm (89 lb-in).

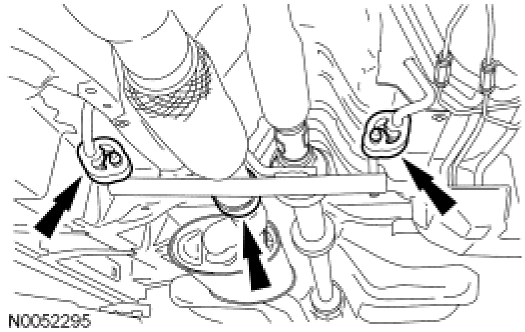

Fig. 702: Identifying Wiring Harness Retainer Bolt From Rear Of LH Cylinder Head
Courtesy of FORD MOTOR CO.

106. Attach all of the wiring harness retainers to the LH valve cover and stud bolts.
107. Connect the LH camshaft VCT solenoid electrical connector.

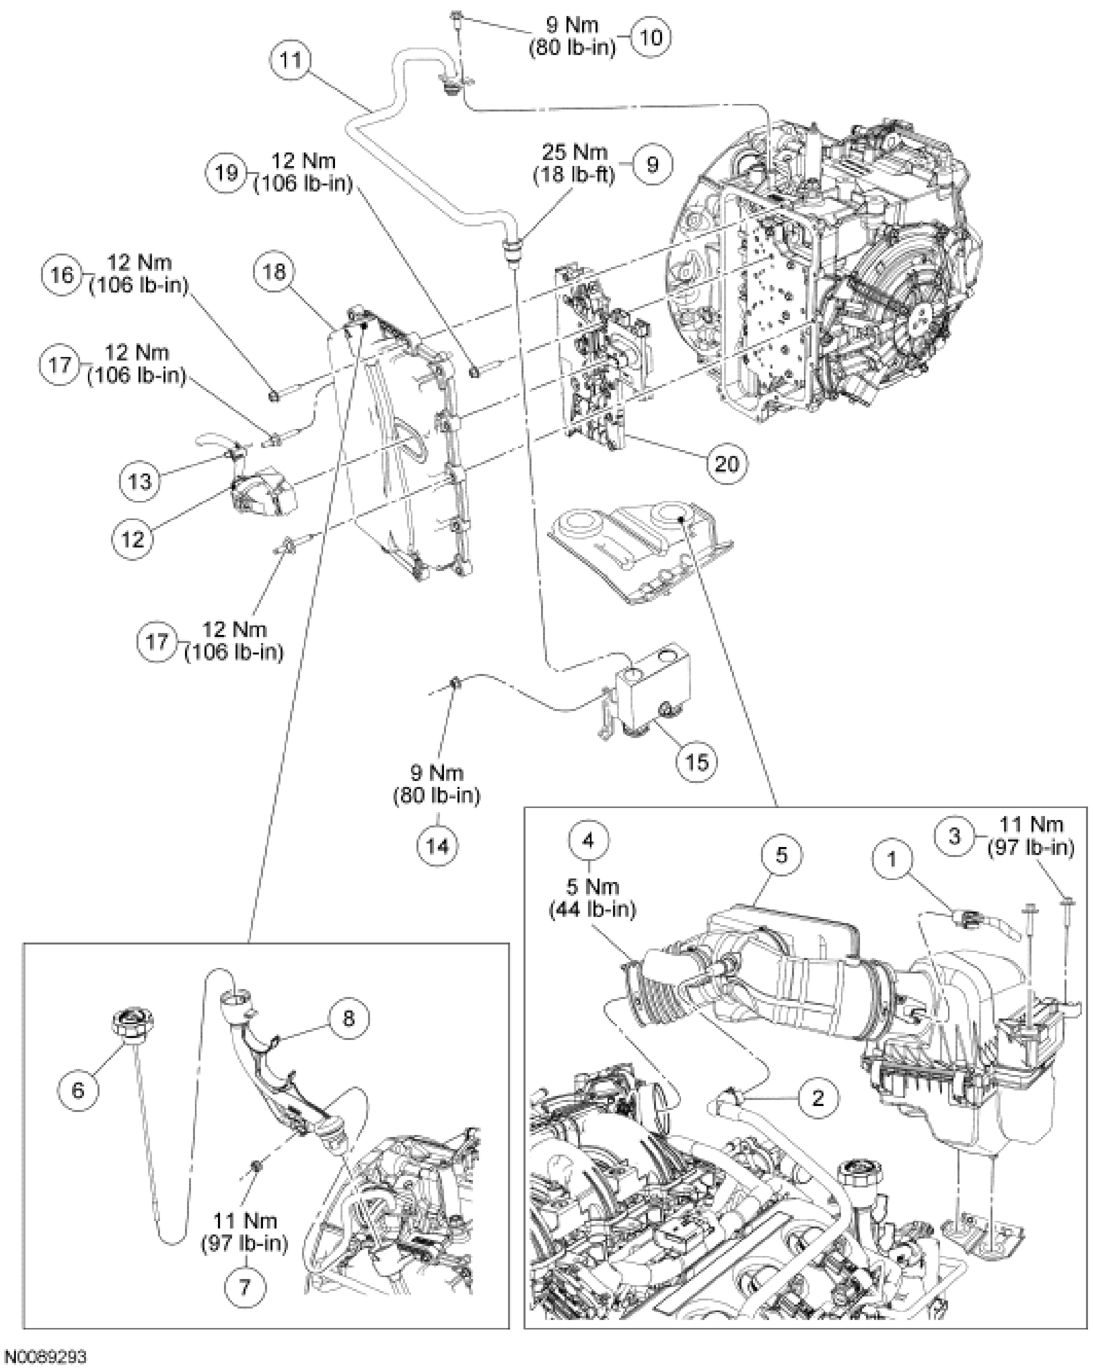

Fig. 703: Locating LH VCT Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

108. Connect the 3 LH coil-on-plug electrical connectors.

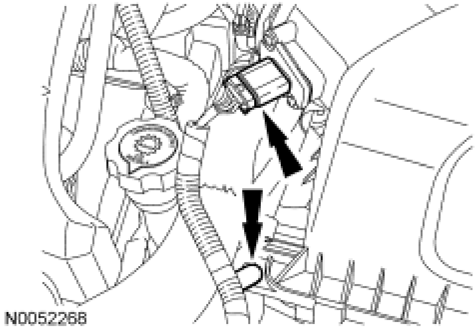

Fig. 704: Locating LH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

109. Connect the LH heated oxygen sensor (HO2S) electrical connector.

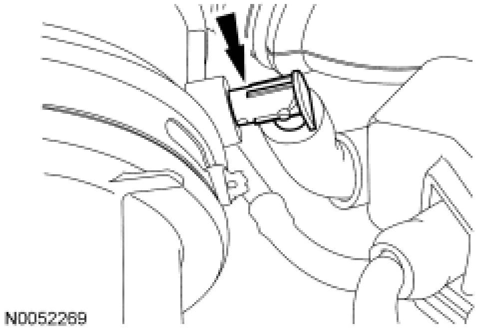

Fig. 705: Locating LH Heated Oxygen Sensor (HO2S) Electrical Connector
Courtesy of FORD MOTOR CO.

110. Connect the LH catalyst monitor sensor electrical connector.

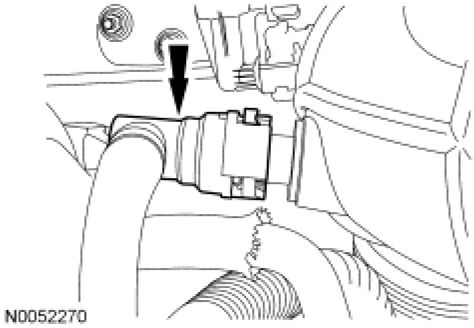

Fig. 706: Identifying LH Catalyst Monitor Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

111. Connect the LH CMP sensor electrical connector.

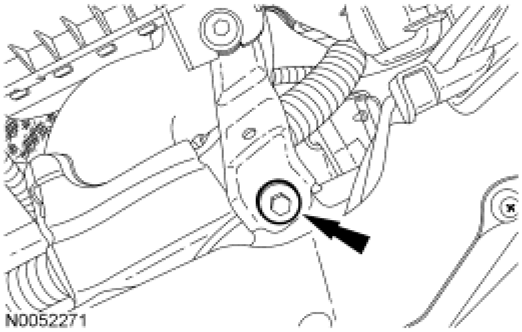

Fig. 707: Locating LH CMP Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

112. Connect the CHT sensor electrical connector.

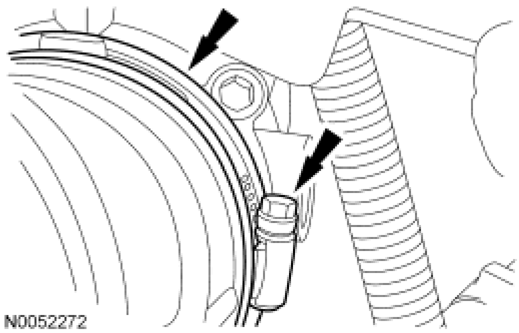

Fig. 708: Locating Cylinder Head Temperature (CHT) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

113. Connect the 6 fuel injector electrical connectors (3 shown).

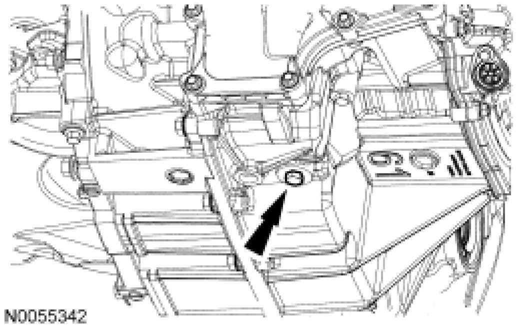

Fig. 709: Locating Fuel Injector Electrical Connectors
Courtesy of FORD MOTOR CO.

114. Install the ground cable and the bolt.
    - Tighten to 10 Nm (89 lb-in).

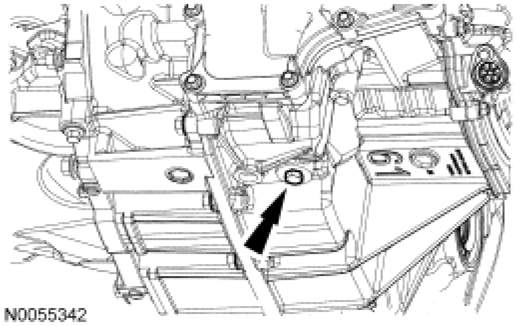

Fig. 710: Locating Ground Cable From RH Cylinder
Courtesy of FORD MOTOR CO.

115. Connect the KS electrical connector.

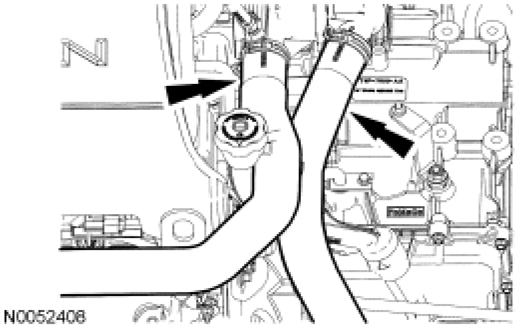

Fig. 711: Locating Knock Sensor (KS) Electrical Connector
Courtesy of FORD MOTOR CO.

116. Connect the RH CMP sensor electrical connector.

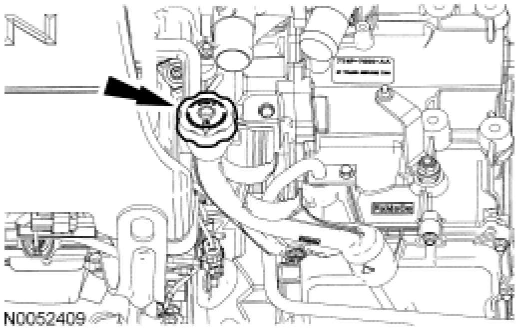

Fig. 712: Locating RH Camshaft Position (CMP) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

117. Attach all of the wiring harness retainers to the RH valve cover and stud bolts.
118. Connect the 3 RH coil-on-plug electrical connectors.

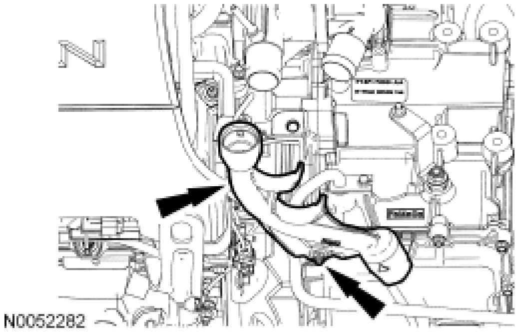

Fig. 713: Locating RH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

119. Connect the RH VCT solenoid electrical connector.

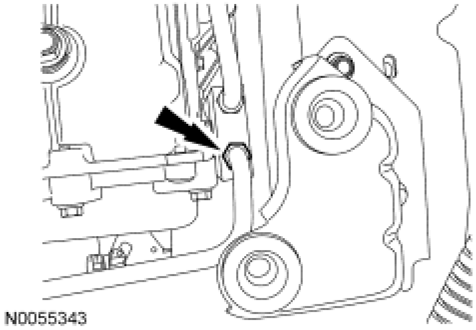

Fig. 714: Locating RH Variable Camshaft Timing (VCT) Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

FWD vehicles

120. Connect the RH catalyst monitor sensor electrical connector.

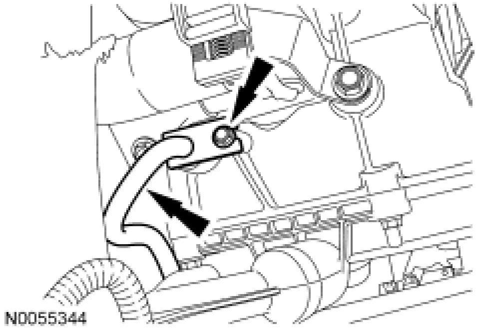

Fig. 715: Locating RH Catalyst Monitor Electrical Connector
Courtesy of FORD MOTOR CO.

All vehicles

121. Connect the power steering pressure (PSP) switch electrical connector.

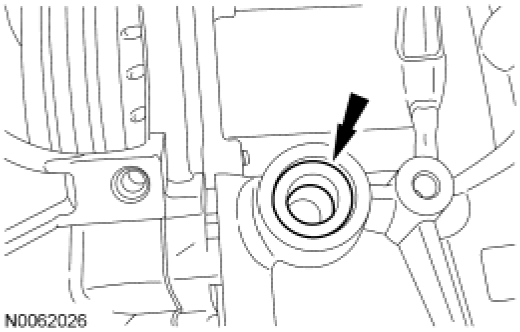

Fig. 716: Locating PSP Switch Electrical Connector
Courtesy of FORD MOTOR CO.

122. Using a new gasket, install the upper intake manifold and the 6 bolts.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).

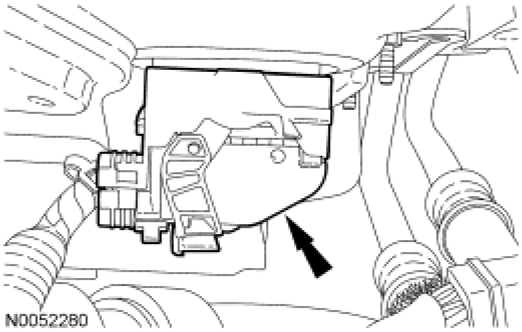

Fig. 717: Identifying Bolt Sequence
Courtesy of FORD MOTOR CO.

123. Install the upper intake manifold support bracket and the 2 bolts (1 shown).
   - Tighten to 10 Nm (89 lb-in).

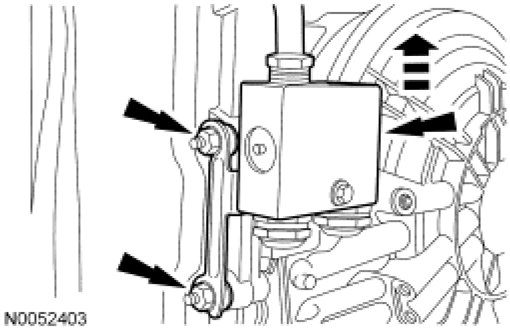

Fig. 718: Identifying Upper Intake Manifold Support Bracket & Bolt
Courtesy of FORD MOTOR CO.

124. Connect the RH HO2S electrical connector.

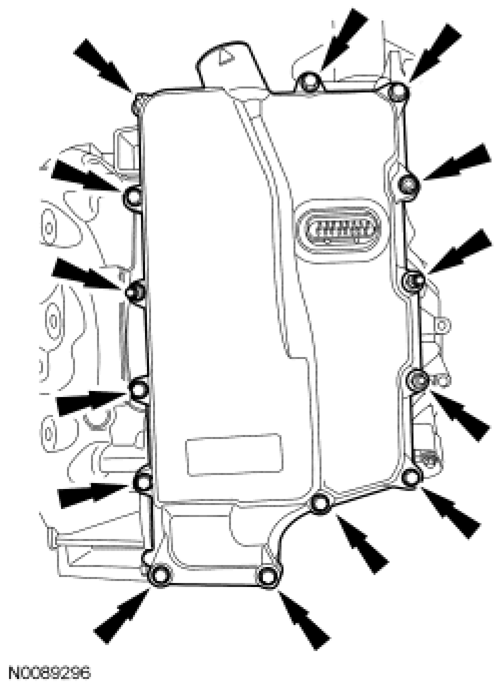

Fig. 719: Locating RH Heated Oxygen Sensor (HO2S) Electrical Connector
Courtesy of FORD MOTOR CO.

125. Attach the wiring harness retainers to the upper intake manifold.

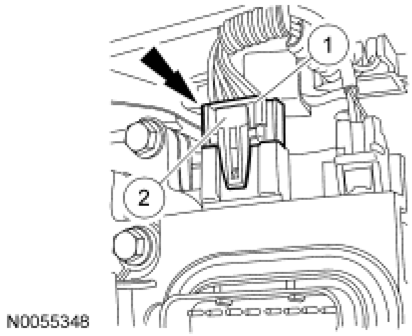

Fig. 720: Locating Wiring Harness Retainers From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

126. Connect the throttle body (TB) electrical connector.

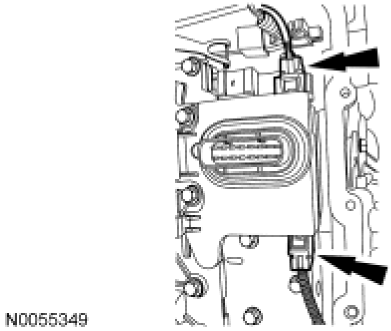

Fig. 721: Locating Throttle Body Electrical Connector
Courtesy of FORD MOTOR CO.

127. Connect the PCV hose to the PCV valve.

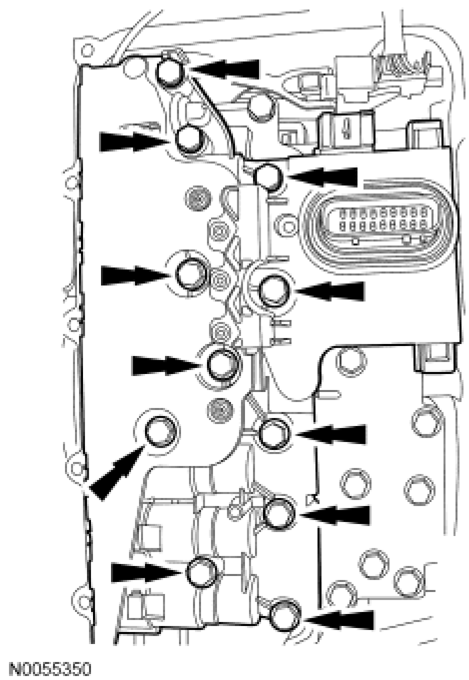

Fig. 722: Identifying PCV Hose
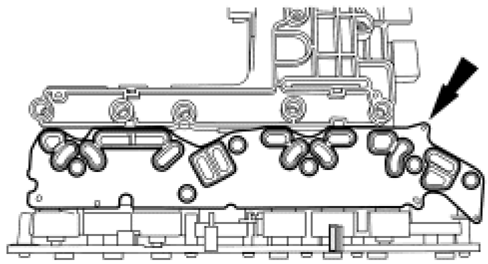
Courtesy of FORD MOTOR CO.

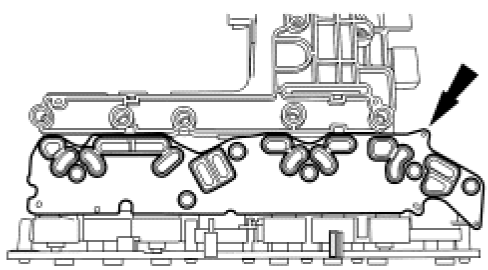
128. If equipped, position the block heater wiring harness onto the engine and attach all of the harness retainers.
129. If equipped, connect the block heater electrical connector and install the heat shield.



N0055016

Fig. 723: Identifying Block Heater Wiring Harness
Courtesy of FORD MOTOR CO.

130. Install the special tool on the LH cylinder head.



N0055016

Fig. 724: Installing Special Tool (303-1245) On LH Cylinder Head
Courtesy of FORD MOTOR CO.

131. Using the special tools, remove the engine from the stand.

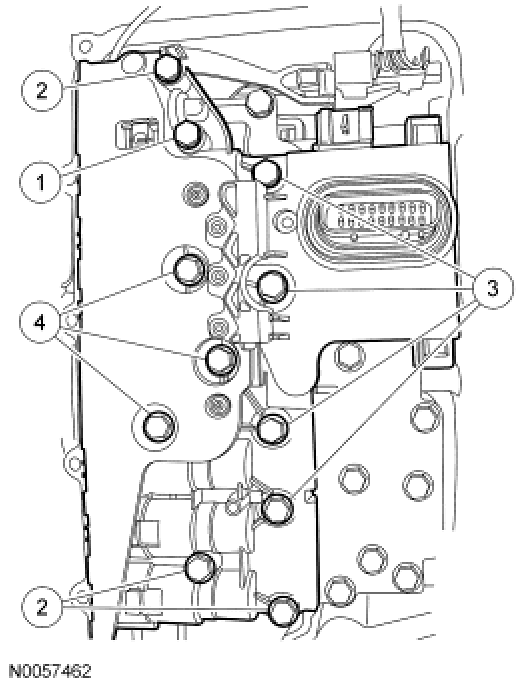


Fig. 725: Removing Engine & Transaxle From Lift Table Using Special Tools (303-D089, 014-00071) & Suitable Engine Crane
Courtesy of FORD MOTOR CO.

NOTE: Lubricate the seal lips and bore with clean engine oil prior to installation.

132. Position the special tool onto the end of the crankshaft and slide a new crankshaft rear seal onto the tool.

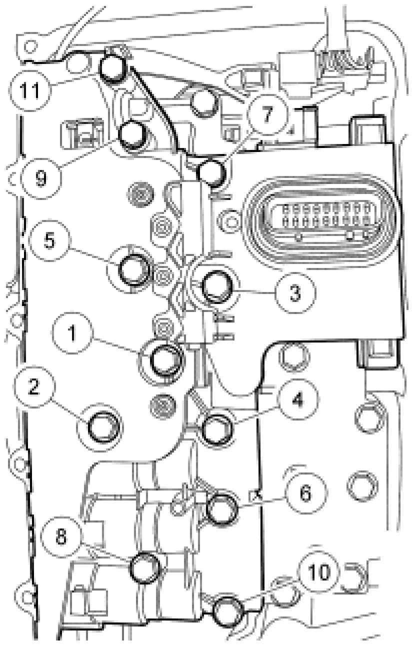

Fig. 726: Positioning Special Tool (303-1250) Onto End Of Crankshaft
Courtesy of FORD MOTOR CO.

133. Using the special tools, install the new crankshaft rear seal.

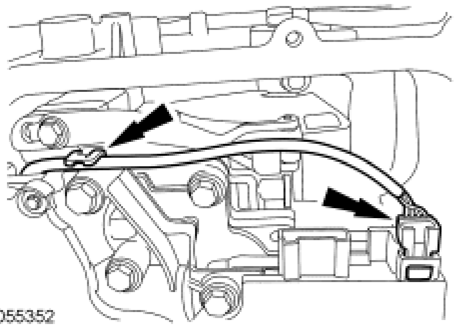

Fig. 727: Installing New Crankshaft Rear Seal Using Special Tools (303-1250) & (205-153)
Courtesy of FORD MOTOR CO.

134. Install the crankshaft sensor ring.

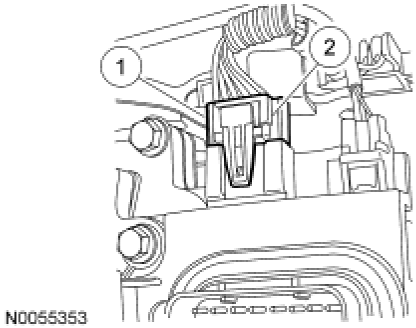

Fig. 728: Identifying Crankshaft Sensor Ring
Courtesy of FORD MOTOR CO.

135. Install the flexplate and the 8 bolts.
    - Tighten to 80 Nm (59 lb-ft).

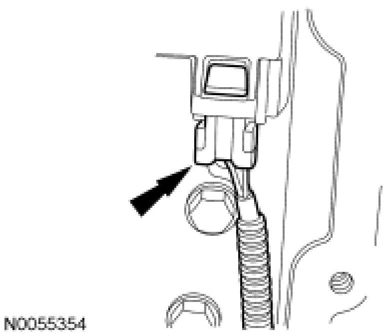

Fig. 729: Identifying Flexplate & Bolts
Courtesy of FORD MOTOR CO.

INSTALLATION

ENGINE

Special Tools

Illustration	Tool Name	Tool Number
	Heavy Duty Floor Crane	014-00071 or equivalent
	Powertrain Lift	014-00765

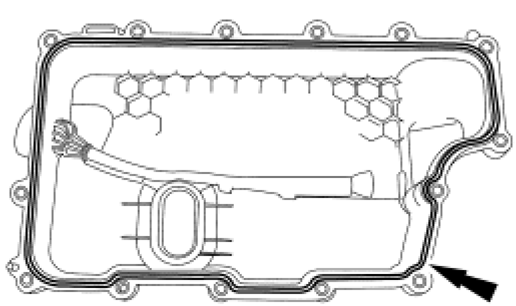
Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

All vehicles

1. Align the transaxle to the engine.
2. Install the 5 transaxle-to-engine bolts.
    - Tighten to 48 Nm (35 lb-ft).



N0054253

Fig. 730: Locating Transaxle-To-Engine Bolts
Courtesy of FORD MOTOR CO.

3. Install the 2 engine-to-transaxle bolts.
    - Tighten to 48 Nm (35 lb-ft).

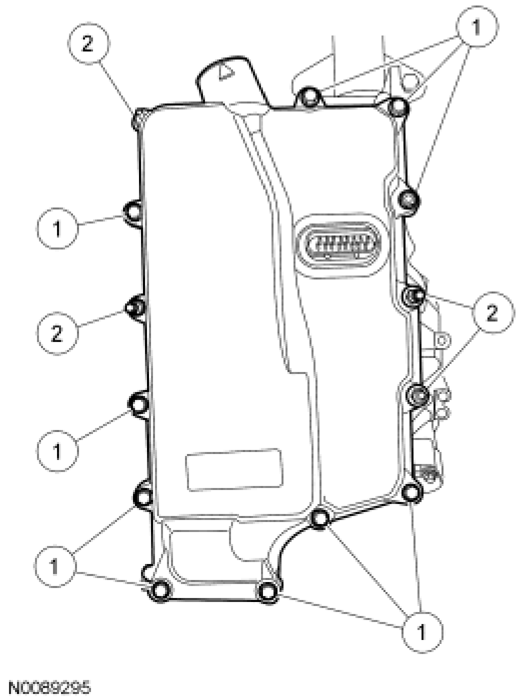


Fig. 731: Locating Engine-To-Transaxle Bolts
Courtesy of FORD MOTOR CO.

4. Using the special tools, position the engine and transaxle onto the lift table.

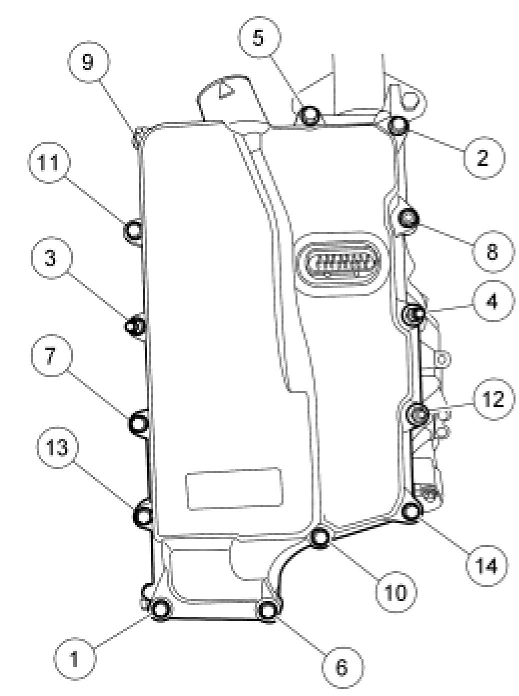

Fig. 732: Removing Engine & Transaxle From Lift Table Using Special Tools (303-D089, 014-

00071) & Suitable Engine Crane
Courtesy of FORD MOTOR CO.

NOTE: Position a block of wood under the transaxle.

5. Install the special tools.

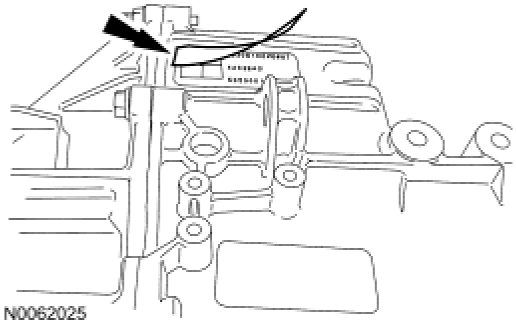

Fig. 733: Positioning A Block Of Wood Under Transaxle Using Special Tools (014-0001) & (014-00765)
Courtesy of FORD MOTOR CO.

6. Install the starter, the bolt and the stud bolt.
   - Tighten to 27 Nm (20 lb-ft).

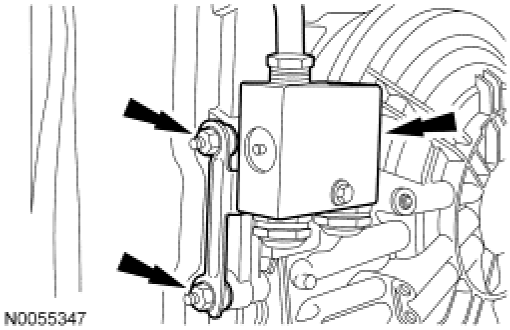

Fig. 734: Identifying Bolt, Stud Bolt & Starter
Courtesy of FORD MOTOR CO.

7. Connect the wiring harness retainer to the starter stud bolt.

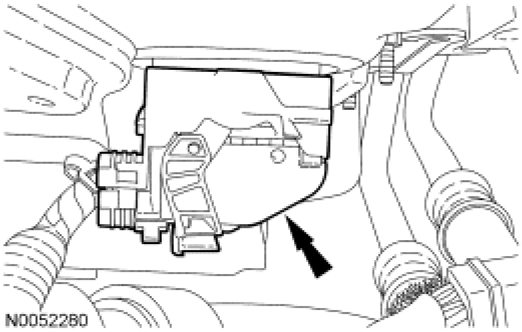

Fig. 735: Identifying Wiring Harness Retainer From Starter Motor Stud Bolt
Courtesy of FORD MOTOR CO.

8. Attach the starter motor wire terminals and install the 2 nuts.
   1. Tighten to 12 Nm (9 lb-ft).
   2. Tighten to 5 Nm (44 lb-in).
      - Position the starter terminal boot over the starter terminal.

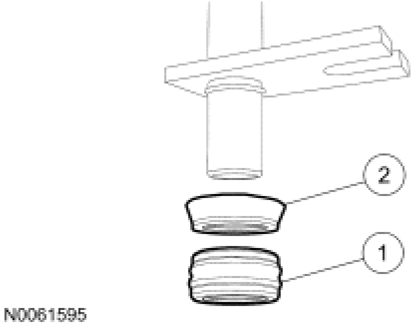

Fig. 736: Identifying Starter Motor Wire Terminals & Nuts
Courtesy of FORD MOTOR CO.

9. Raise the engine and transaxle assembly into the vehicle.
10. Install the engine mount and the 3 bolts.
    - Tighten to 90 Nm (66 lb-ft).

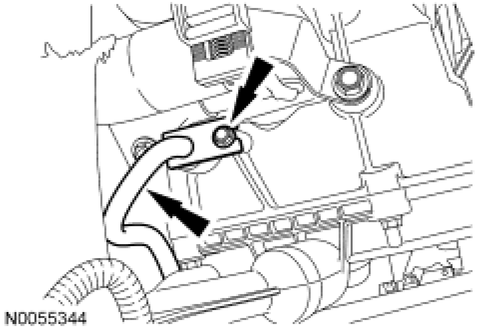

Fig. 737: Locating Engine Mount Bolts

Courtesy of FORD MOTOR CO.

11. Install the 4 engine mount nuts.
    - Tighten to 63 Nm (46 lb-ft).

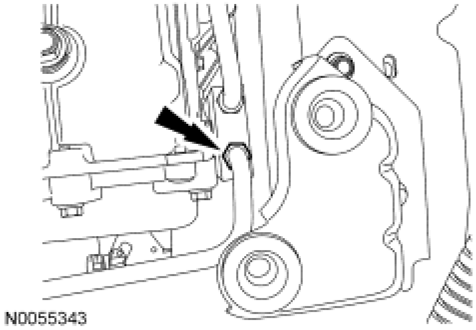

Fig. 738: Locating Engine Mount Nuts
Courtesy of FORD MOTOR CO.

12. Install the engine mount brace, the nut and the bolt.
    - Tighten to 20 Nm (15 lb-ft).

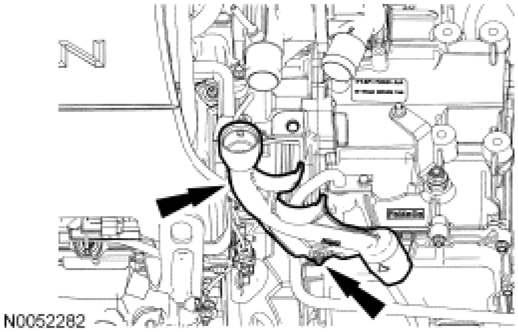

Fig. 739: Locating Nut, Bolt & Engine Mount Brace
Courtesy of FORD MOTOR CO.

13. Install the transaxle support insulator bracket, the 3 nuts and the bolt.
    - Tighten to 63 Nm (46 lb-ft).

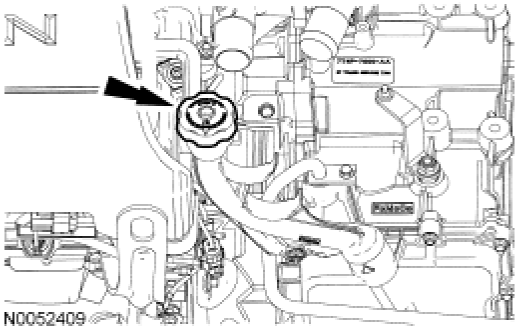

Fig. 740: Identifying Transaxle Support Insulator Bracket, Nuts & Bolts
Courtesy of FORD MOTOR CO.

14. Install the transaxle support insulator through bolt and nut.
    - Tighten to 175 Nm (129 lb-ft).

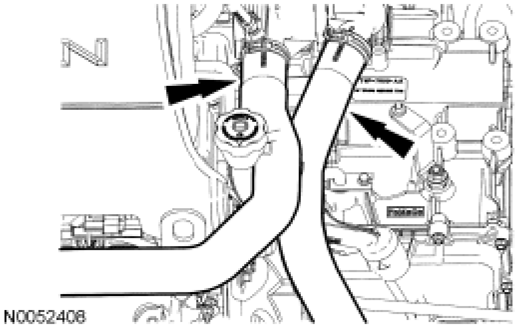

Fig. 741: Identifying Transaxle Support Insulator Bolt
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

15. Position the power transfer unit (PTU) in place and install the 5 bolts.
    - Tighten to 90 Nm (66 lb-ft).

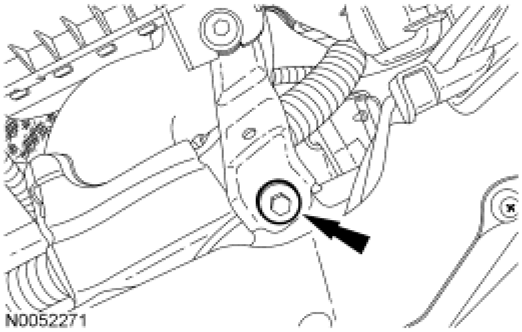

Fig. 742: Identifying PTU & Bolts
Courtesy of FORD MOTOR CO.

16. Position the PTU support bracket in place and install the 5 bolts.
    - Tighten to 70 Nm (52 lb-ft).

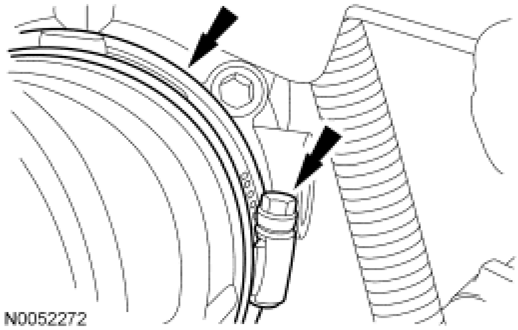

Fig. 743: Locating Power Transfer Unit (PTU) Support Bracket & Bolts
Courtesy of FORD MOTOR CO.

NOTE: Do not tighten the 4 catalytic converter nuts at this time.

17. Using a new gasket, install the RH catalytic converter and 4 new nuts.

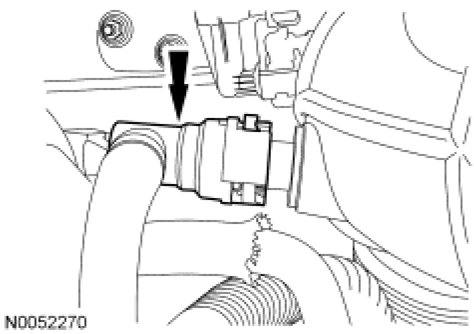

Fig. 744: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

18. Install the 2 catalytic converter-to-bracket bolts.
    - Tighten the 4 catalytic converter nuts to 40 Nm (30 lb-ft).
    - Tighten the 2 catalytic converter-to-bracket bolts to 20 Nm (15 lb-ft).

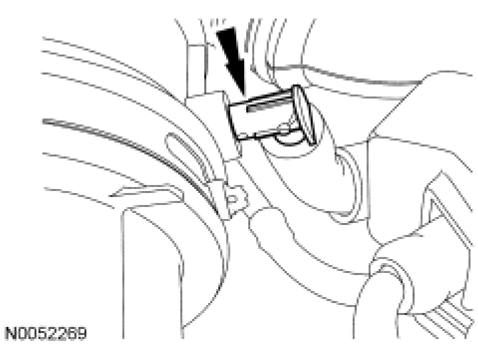

Fig. 745: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

19. Connect the RH catalyst monitor electrical connector.

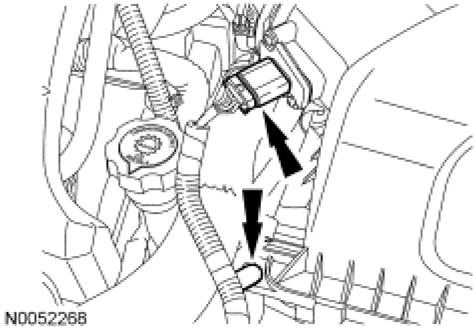

Fig. 746: Locating RH Catalyst Monitor Electrical Connector
Courtesy of FORD MOTOR CO.

NOTE: A new PTU seal must be installed whenever the intermediate shaft is removed.

20. Install a new PTU seal. For additional information, refer to **TRANSFER CASE - POWER TRANSFER UNIT (PTU)** article.

NOTE: Prior to installation of the halfshaft, inspect the halfshaft sealing surface for wear or damage and install new, if necessary.

21. Position the RH halfshaft/intermediate shaft assembly in the PTU and in the steering knuckle and install the 2 bolts.
    - Tighten to 40 Nm (30 lb-ft).

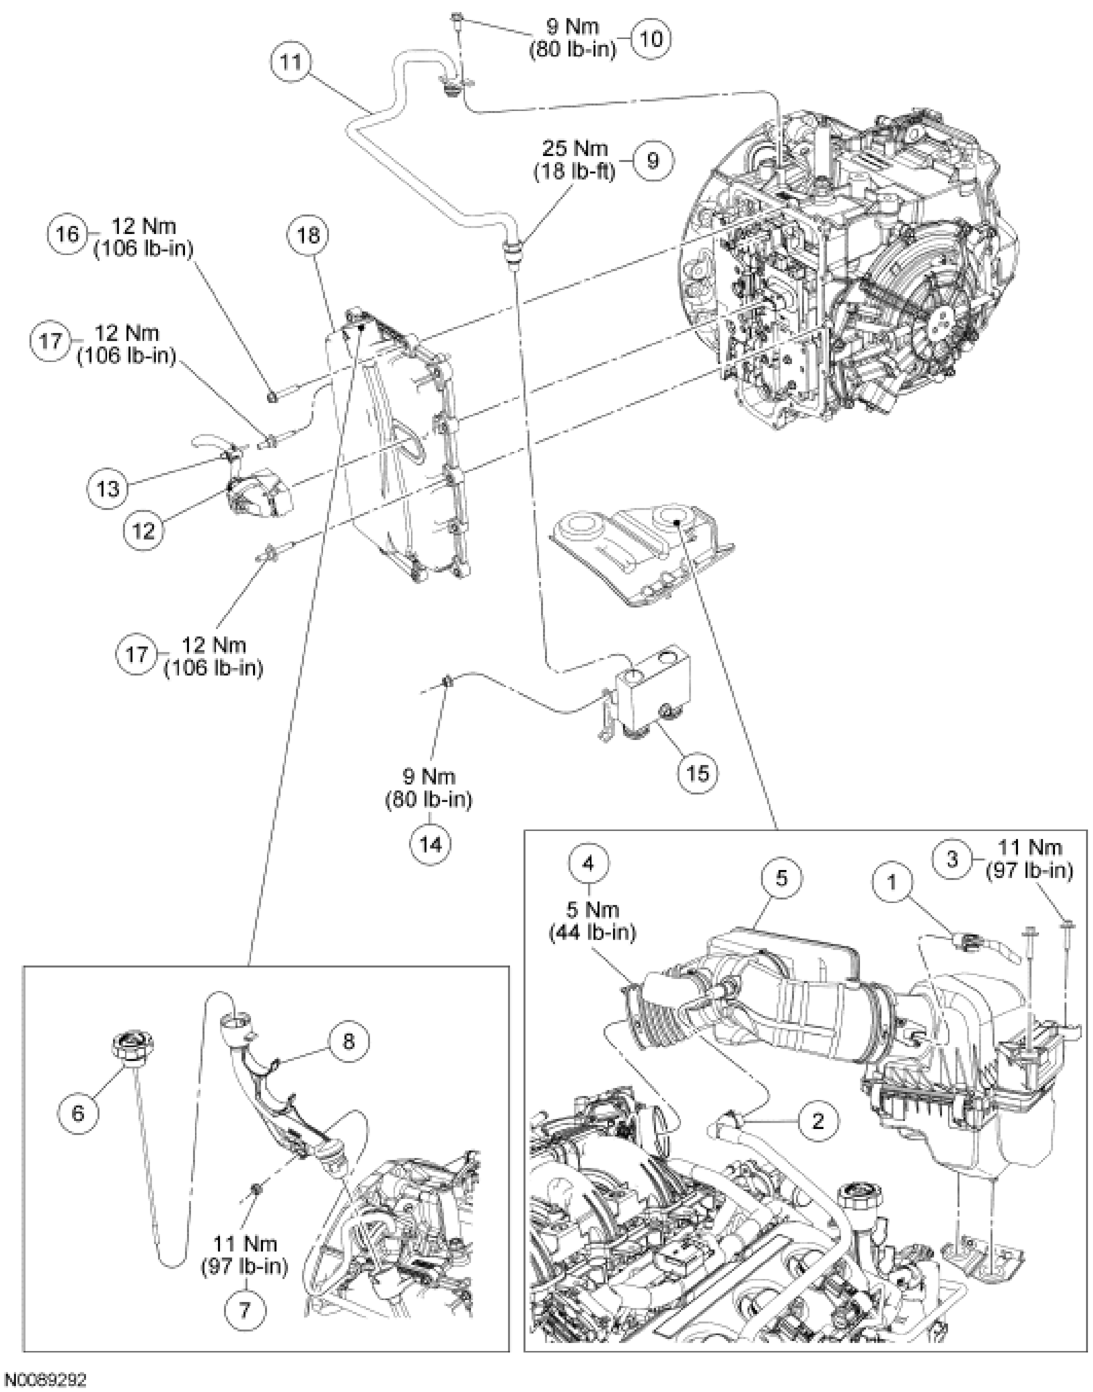

Fig. 747: Locating RH Halfshaft Bearing Support Bracket Bolts
Courtesy of FORD MOTOR CO.

Front wheel drive (FWD) vehicles

NOTE: **Prior to installation of the halfshaft, inspect the halfshaft sealing surface for wear or damage and install new if necessary.**

22. Position the RH halfshaft/intermediate shaft assembly in the transaxle and in the steering knuckle and install the 2 stud bolts.
    - Tighten to 55 Nm (41 lb-ft).

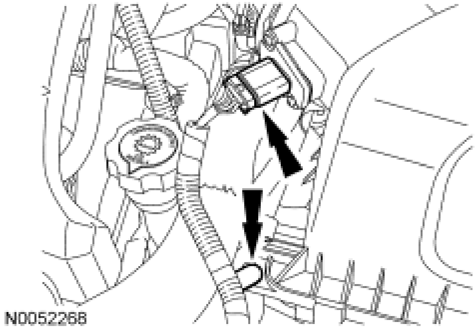

Fig. 748: Locating Stud Bolts & RH Halfshaft/Intermediate Shaft Assembly
Courtesy of FORD MOTOR CO.

NOTE: Do not tighten the 2 catalytic converter support bracket bolts at this time.

23. Install the converter support bracket and the 2 bolts.

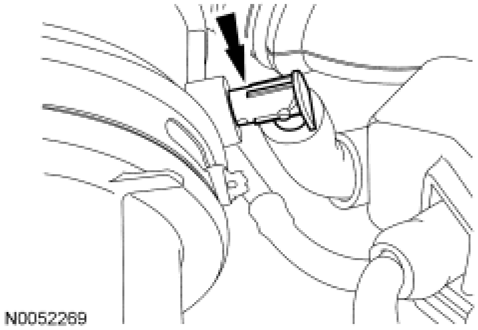

Fig. 749: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

24. Install the catalytic converter bracket bolt and the nut.
    1. Tighten the nut to 40 Nm (30 lb-ft).
    2. Tighten the bolt to 55 Nm (41 lb-ft).

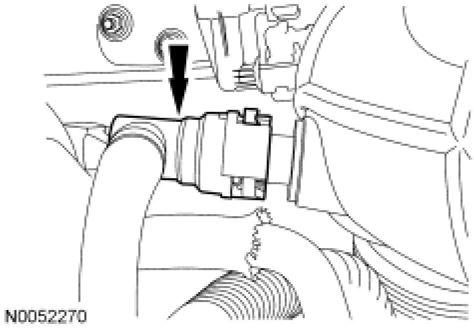

Fig. 750: Locating Catalytic Converter Bracket Bolt & Nut
Courtesy of FORD MOTOR CO.

25. Tighten the 2 RH catalytic converter support bracket bolts to 20 Nm (15 lb-ft).

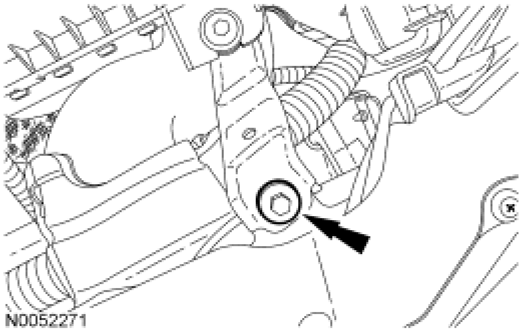

Fig. 751: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

All vehicles

NOTE:	**Prior to installation of the halfshaft, inspect the halfshaft sealing surface for wear or damage and install new, if necessary.**

26. Install the LH halfshaft into the transaxle.

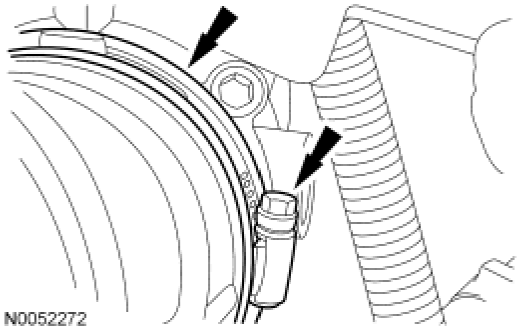

Fig. 752: Identifying LH Halfshaft
Courtesy of FORD MOTOR CO.

27. If equipped, connect the oil cooler coolant hoses.

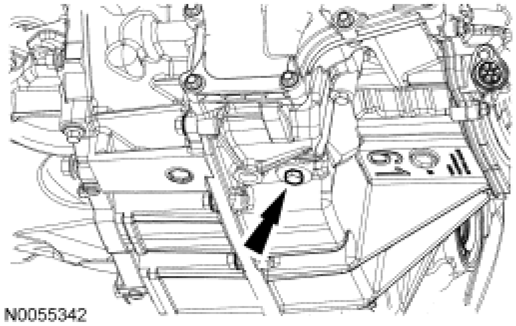

Fig. 753: Locating Oil Cooler Coolant Hoses
Courtesy of FORD MOTOR CO.

28. Using the special tool, raise the subframe into the installed position.

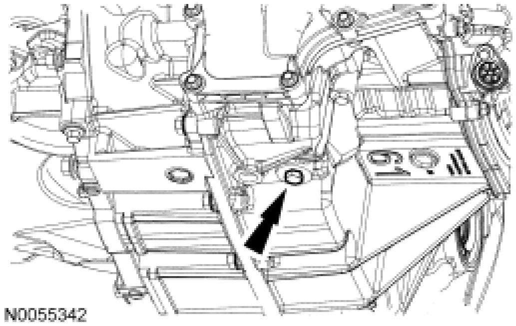

Fig. 754: Positioning Special Tool (014-00765) Under Subframe Assembly
Courtesy of FORD MOTOR CO.

29. Install the 2 middle subframe nuts.
    - Tighten to 133 Nm (98 lb-ft).

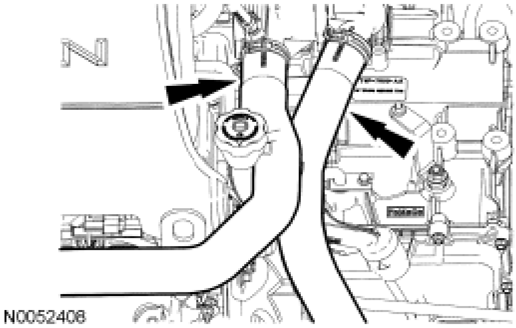

Fig. 755: Locating Middle Subframe Nuts
Courtesy of FORD MOTOR CO.

30. Install the 2 front subframe nuts.

- Tighten to 133 Nm (98 lb-ft).

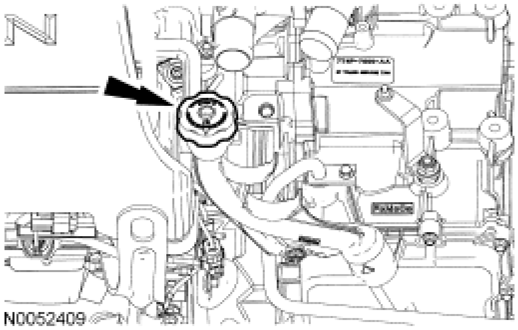

Fig. 756: Locating Front Subframe Nuts
Courtesy of FORD MOTOR CO.

31. Position the subframe support brackets in place and loosely install the 4 bolts.

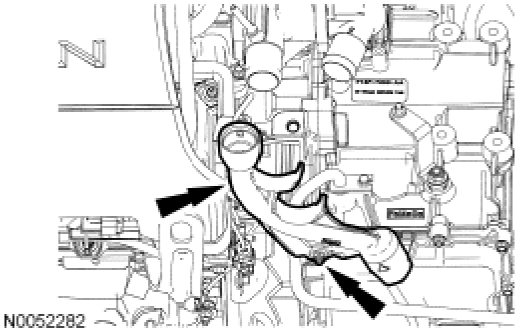

Fig. 757: Locating Subframe Support Brackets And Bolts
Courtesy of FORD MOTOR CO.

32. Install the 2 rear subframe bracket nuts.
    - Tighten to 133 Nm (98 lb-ft).

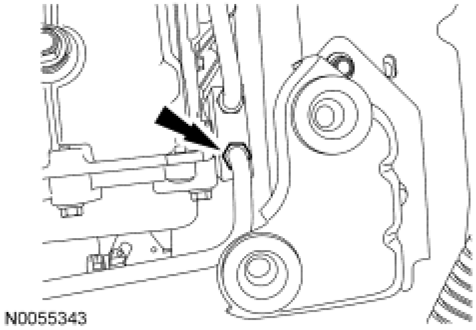

Fig. 758: Locating Rear Subframe Nuts
Courtesy of FORD MOTOR CO.

33. Tighten the 4 subframe support bracket bolts.

- Tighten to 90 Nm (66 lb-ft).

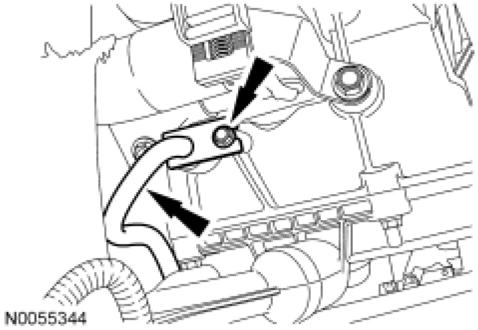

Fig. 759: Locating Subframe Support Brackets And Bolts
Courtesy of FORD MOTOR CO.

34. Position the lower bumper on the subframe and install the 3 LH nuts.
    - Tighten to 9 Nm (80 lb-in).

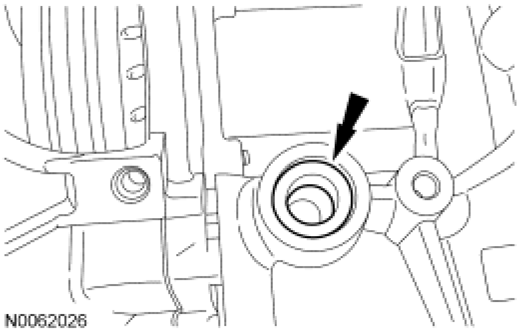

Fig. 760: Locating LH Subframe-To-Lower Bumper Nuts
Courtesy of FORD MOTOR CO.

35. Install the 3 RH lower bumper-to-subframe nuts.
    - Tighten to 9 Nm (80 lb-in).

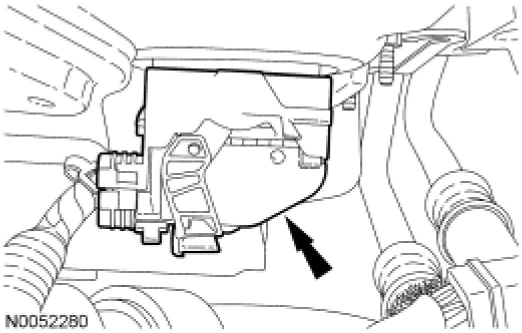

Fig. 761: Locating RH Subframe-To-Lower Bumper Nuts
Courtesy of FORD MOTOR CO.

NOTE: **RH side shown, LH side similar.**

36. Install the ball joints in the steering knuckles and install the pinch bolts.
    - Tighten to 55 Nm (41 lb-ft).

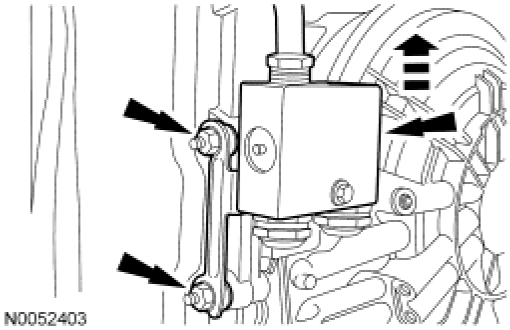

Fig. 762: Locating Ball Joint Pinch Bolt
Courtesy of FORD MOTOR CO.

NOTE: **RH side shown, LH side similar.**

37. Position the stabilizer bar links in the lower control arms and install the nuts.
    - Tighten to 90 Nm (66 lb-ft).

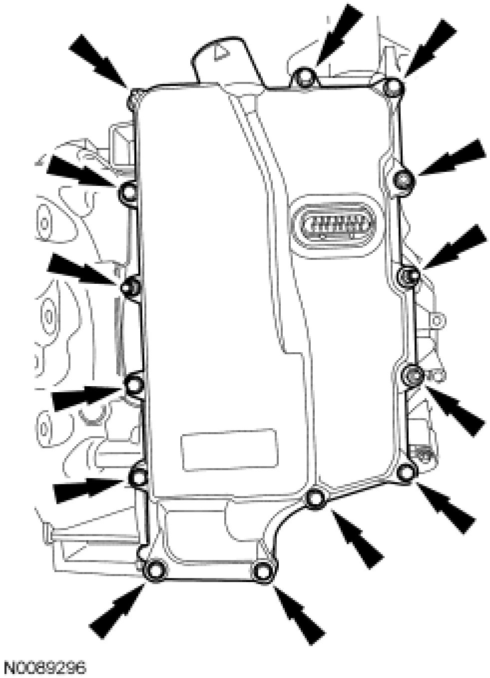

Fig. 763: Locating Stabilizer Bar Link Nut
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

38. Install the tie-rod ends and nuts.
    - Tighten to 48 Nm (35 lb-ft).
    - Install new cotter pins.

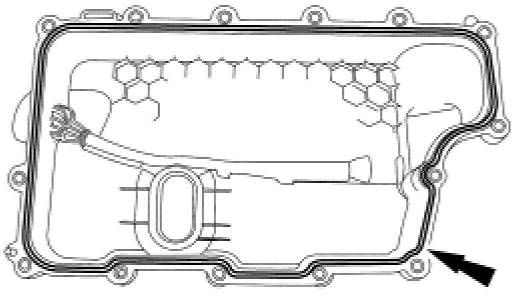

Fig. 764: Locating Tie-Rod Ends Nuts And Cotter Pin
Courtesy of FORD MOTOR CO.

CAUTION: Do not allow the intermediate shaft to rotate while it is disconnected from the gear or damage to the clockspring can occur. If there is evidence that the intermediate shaft has rotated, the clockspring must be removed and recentered. For additional information, refer to SUPPLEMENTAL RESTRAINT SYSTEM article.

39. Install the intermediate shaft onto the steering gear and install a new bolt.
    - Tighten to 23 Nm (17 lb-ft).

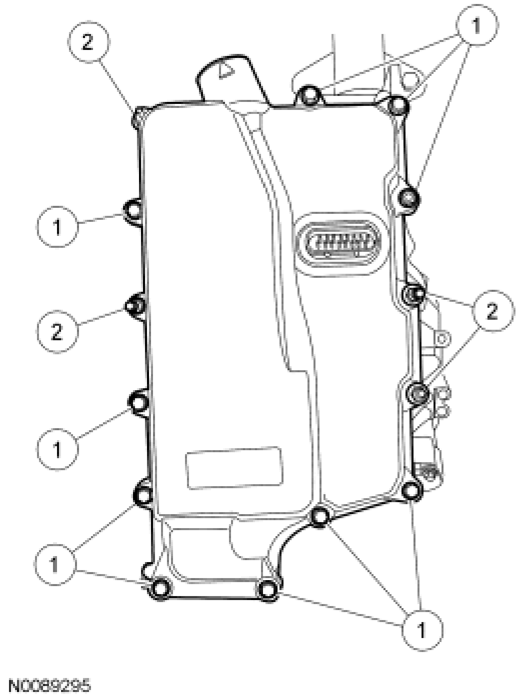

Fig. 765: Identifying Steering Intermediate Shaft Bolt
Courtesy of FORD MOTOR CO.

40. Using a new banjo bolt and 2 new seals, install the power steering pressure (PSP) tube.
    - Tighten to 48 Nm (35 lb-ft).

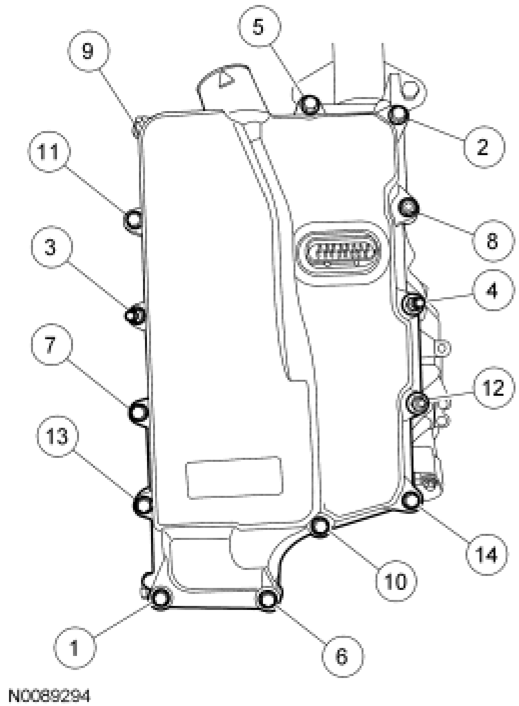

Fig. 766: Locating Power Steering Pressure (PSP) Tube-To-Pump Banjo Bolt & Seals
Courtesy of FORD MOTOR CO.

41. Install the engine roll restrictor-to-subframe through bolt.
    - Tighten to 103 Nm (76 lb-ft).

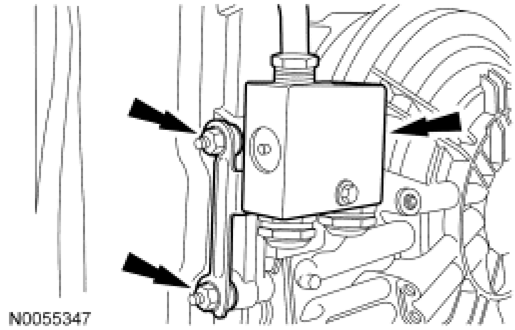

Fig. 767: Locating Roll Restrictor-To-Subframe Bolt
Courtesy of FORD MOTOR CO.

42. Install the roll restrictor heat shield and the 2 nuts.
    - Tighten to 11 Nm (8 lb-ft).

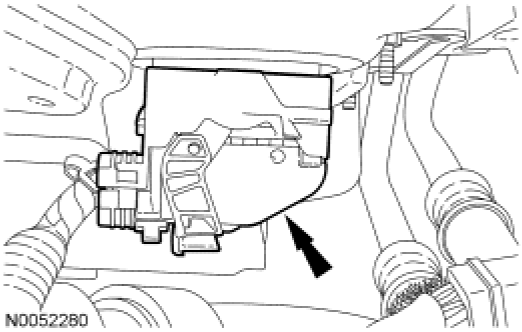

Fig. 768: Locating Roll Restrictor Heat Shield Nuts
Courtesy of FORD MOTOR CO.

NOTE: Apply the brake to keep the halfshaft from rotating.

43. Install a new RH front halfshaft nut.
    - Tighten to 350 Nm (258 lb-ft).

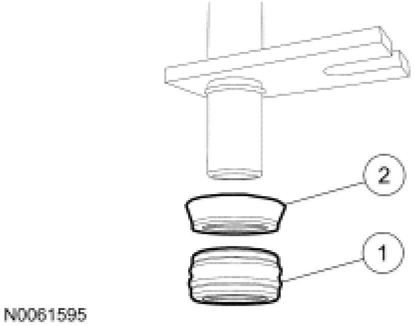

Fig. 769: Locating RH Front Halfshaft Nut
Courtesy of FORD MOTOR CO.

AWD vehicles

44. Line up the index marks on the rear driveshaft to the index marks on the PTU flange made during removal and install the 4 bolts.
    - Tighten to 70 Nm (52 lb-ft).

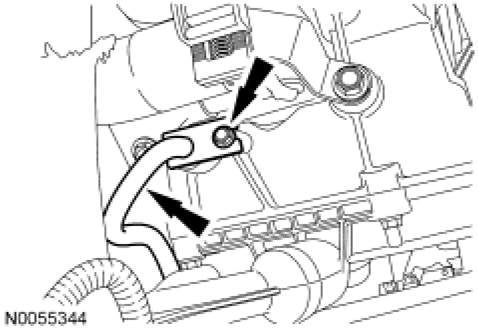

Fig. 770: Locating Driveshaft Aside Bolts
Courtesy of FORD MOTOR CO.

All vehicles

45. Install the power steering cooler bracket bolt to the RH side of the subframe.
    - Tighten to 9 Nm (80 lb-in).

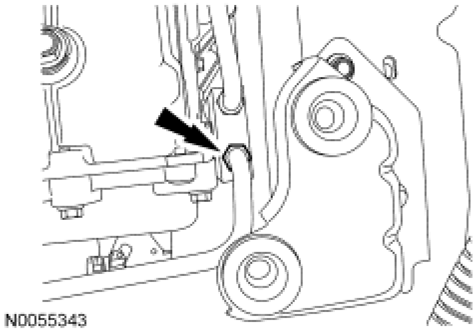

Fig. 771: Identifying Power Steering Cooler Bracket Bolt
Courtesy of FORD MOTOR CO.

46. Connect the power steering cooler hose.

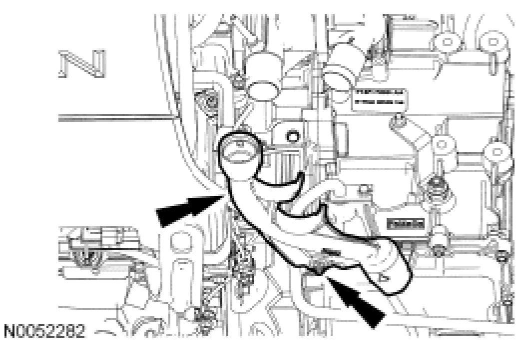

Fig. 772: Identifying Power Steering Cooler Hose
Courtesy of FORD MOTOR CO.

NOTE: Lubricate the engine oil filter gasket with clean engine oil prior to installing the oil filter.

47. Install a new engine oil filter.
    - Tighten to 5 Nm (44 lb-in) and then rotate an additional 180 degrees.

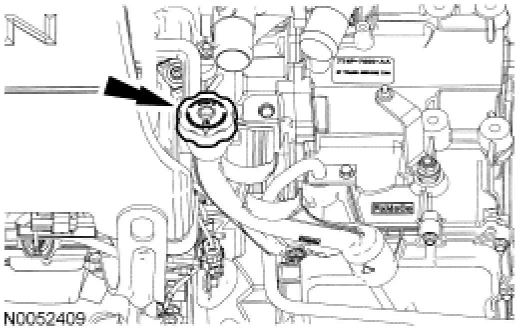

Fig. 773: Identifying Engine Oil Filter
Courtesy of FORD MOTOR CO.

48. Install the 3 new torque converter bolts.
    - Tighten to 55 Nm (41 lb-ft).

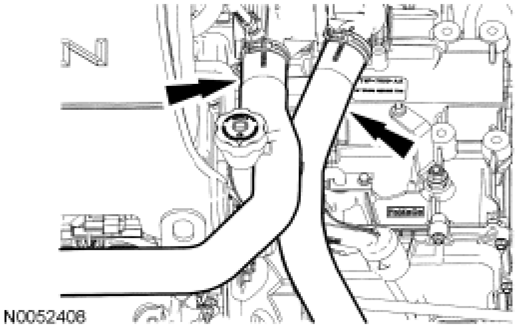

Fig. 774: Locating Torque Converter Bolts
Courtesy of FORD MOTOR CO.

49. Install the inspection cover and the 2 fasteners.

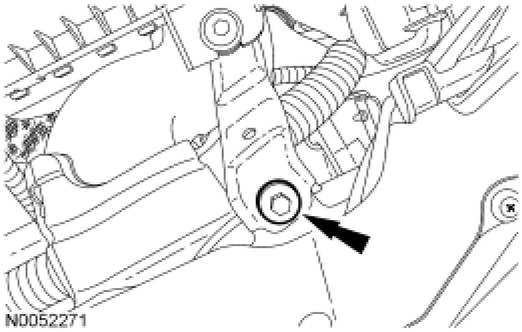

Fig. 775: Locating Oil Fasteners On Inspection Cover
Courtesy of FORD MOTOR CO.

50. Install the 4 oil pan-to-transaxle bolts.
    - Tighten to 48 Nm (35 lb-ft).

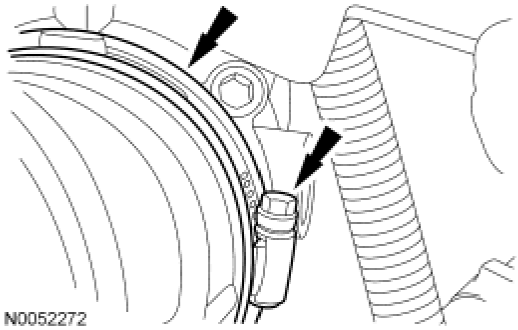

Fig. 776: Locating Oil Pan-To-Transaxle Bolts
Courtesy of FORD MOTOR CO.

51. Connect the 2 transmission fluid cooler tubes.

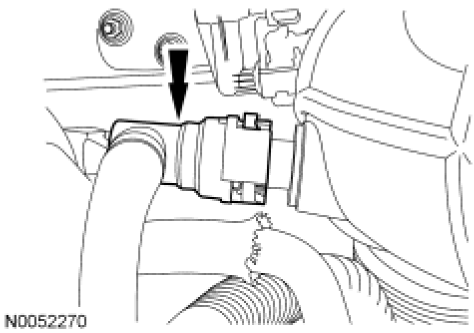

Fig. 777: Locating Transmission Fluid Cooler Tubes
Courtesy of FORD MOTOR CO.

52. Install the 2 secondary latches onto the transmission fluid cooler tubes.

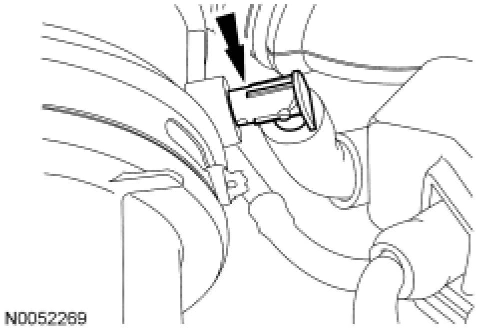

Fig. 778: Locating Secondary Latches On Transmission Fluid Cooler Tubes
Courtesy of FORD MOTOR CO.

53. Install the LH inner splash shield. For additional information, refer to **FRONT END BODY PANELS** article.
54. Install the radiator splash shield, the 3 pin-type retainers and the 7 screws.

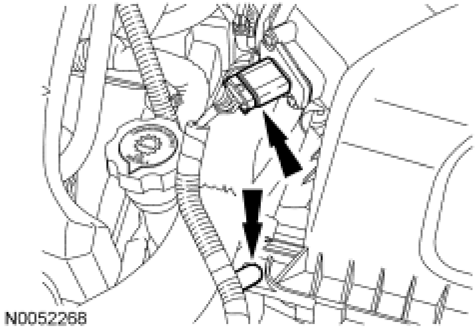

Fig. 779: Locating Push Pin Fasteners & Front Splash Shield Screws
Courtesy of FORD MOTOR CO.

55. Using a new gasket, install the Y-pipe and exhaust flexible pipe assembly and 4 new nuts.
    - Tighten to 40 Nm (30 lb-ft).

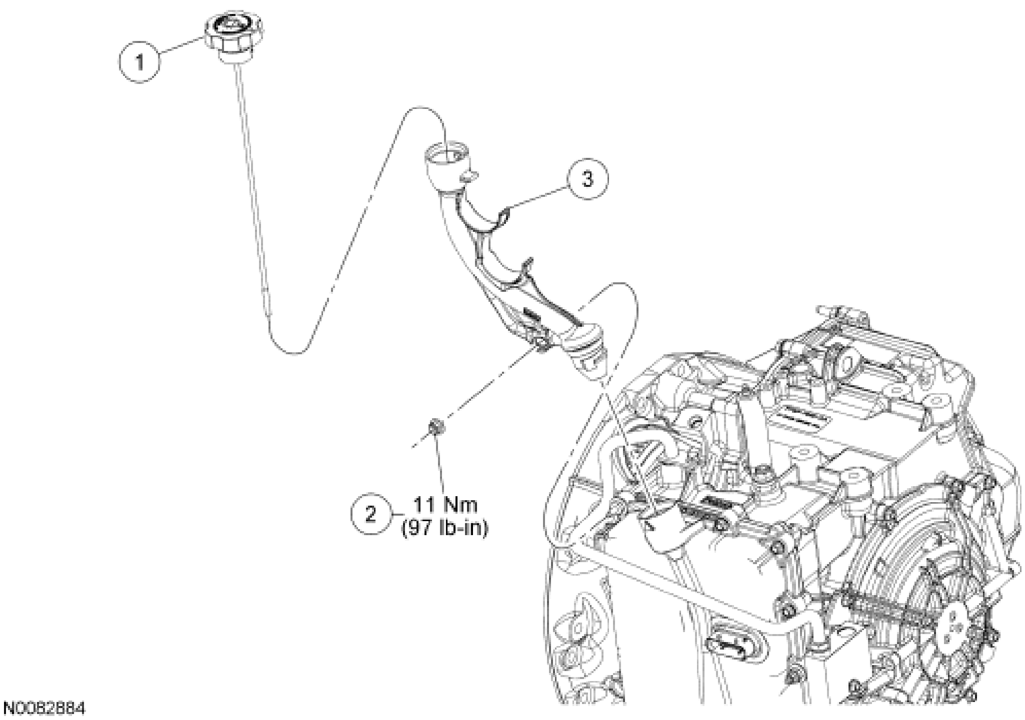

Fig. 780: Locating Exhaust Flexible Pipe, Y-Pipe & Nuts
Courtesy of FORD MOTOR CO.

56. Install the 2 exhaust hangers and tighten the exhaust clamp.
    - Tighten to 40 Nm (30 lb-ft).

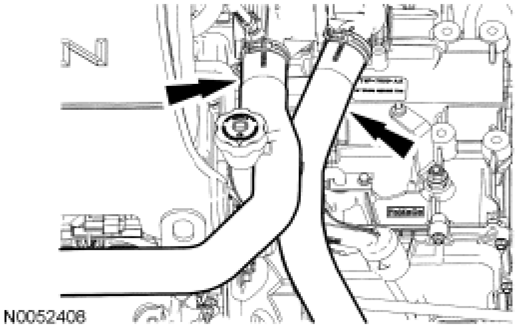

Fig. 781: Locating Exhaust Flexible Pipe Clamp & Exhaust Hangers
Courtesy of FORD MOTOR CO.

57. Install the ground wire, the radio interference capacitor wire and the nut to the engine front cover stud.
    - Tighten to 10 Nm (89 lb-in).

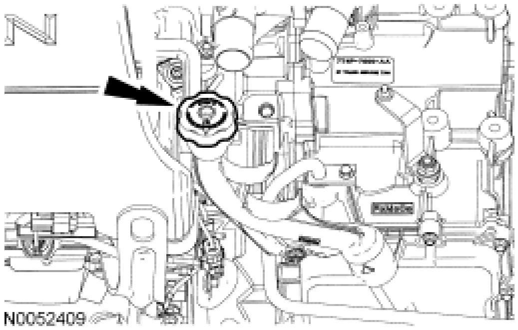

Fig. 782: Removing/installing Nut, Ground Wire & Radio Interference Capacitor Wire From Engine Front Cover Stud
Courtesy of FORD MOTOR CO.

58. Install the ground wire and bolt to the engine front cover.
    - Tighten to 10 Nm (89 lb-in).

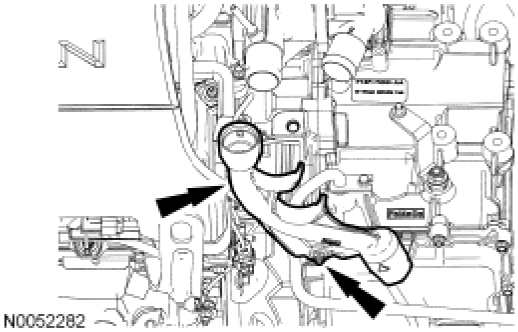

Fig. 783: Removing/Installing Bolt & Ground Wire From Engine Front Cover
Courtesy of FORD MOTOR CO.

59. Attach the wiring harness retainer to the RH valve cover stud bolt.

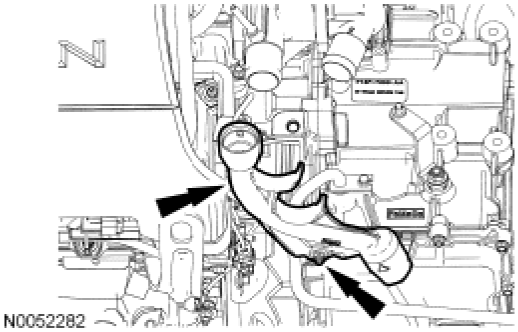

Fig. 784: Identifying Wiring Harness Retainer From RH Valve Cover Stud Bolt
Courtesy of FORD MOTOR CO.

60. Install the oil level indicator.

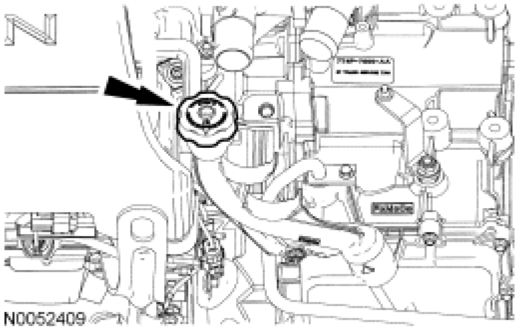

Fig. 785: Identifying Oil Level Indicator
Courtesy of FORD MOTOR CO.

61. Connect the 2 engine wiring harness electrical connectors.
    - Attach the electrical connector to the LH valve cover.

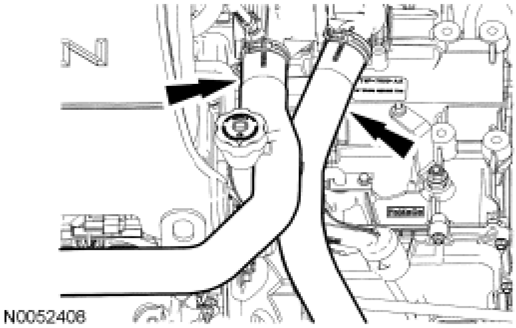

Fig. 786: Identifying Engine Wiring Harness Electrical Connectors
Courtesy of FORD MOTOR CO.

62. Connect the fuel hose routing clip to the transaxle stud.

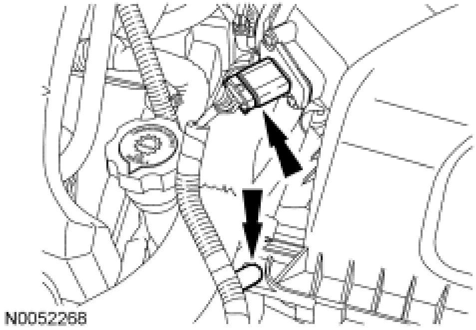

Fig. 787: Identifying Fuel Hose Routing Clip From Transaxle Stud
Courtesy of FORD MOTOR CO.

63. Connect the fuel supply tube. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

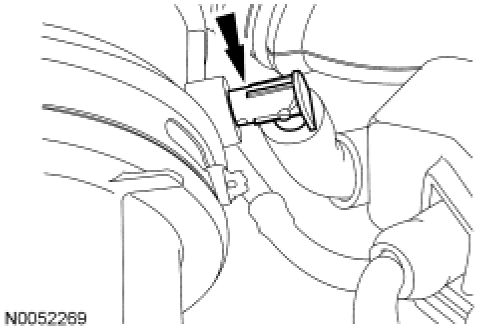

Fig. 788: Identifying Fuel Supply Tube
Courtesy of FORD MOTOR CO.

64. Connect the hose to the power steering reservoir.

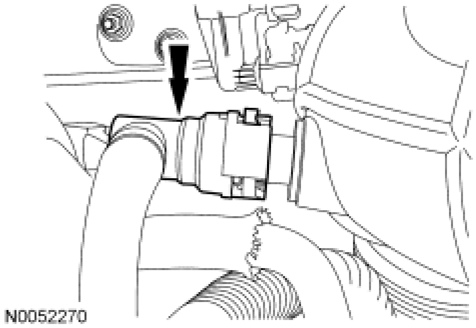

Fig. 789: Disconnecting Hose From Power Steering Reservoir
Courtesy of FORD MOTOR CO.

65. Connect the A/C suction tube fitting.
    - Install the safety clip onto the A/C fitting.

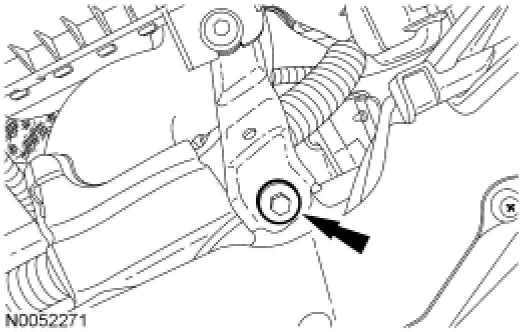

Fig. 790: Identifying Safety Clip On A/C Suction Tube Fitting
Courtesy of FORD MOTOR CO.

66. Using a new O-ring seal, connect the A/C tube fitting and install the nut.
    - Tighten to 8 Nm (71 lb-in).

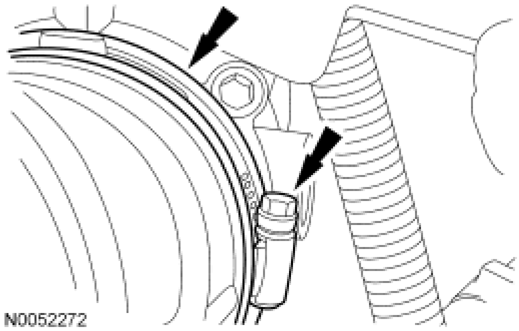

Fig. 791: Identifying A/C Pressure Tube Fitting Nut
Courtesy of FORD MOTOR CO.

67. If equipped, attach the engine block heater harness retainers to the radiator support and the A/C suction tube.

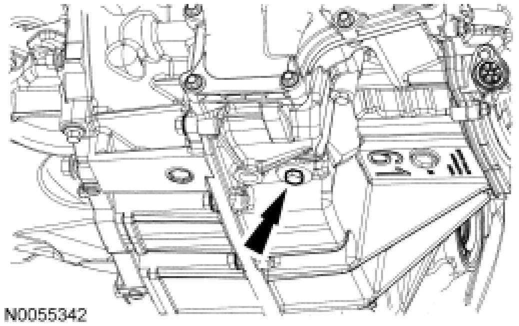

Fig. 792: Identifying Engine Block Heater Harness, Radiator Support, A/C Suction Tube & Engine Wiring Harness
Courtesy of FORD MOTOR CO.

68. Connect the transaxle control electrical connector.

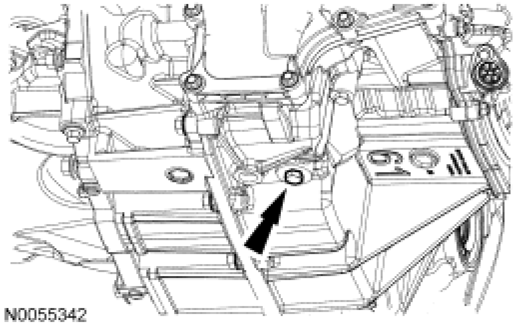

Fig. 793: Identifying Transaxle Control Electrical Connector
Courtesy of FORD MOTOR CO.

69. Attach the control cable to the bracket.
    - Connect the transaxle control cable to the control lever.

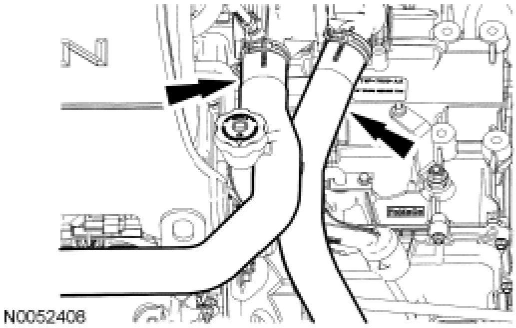

Fig. 794: Locating Transaxle Control Cable From Control Lever
Courtesy of FORD MOTOR CO.

70. Attach the wiring harness retainer to the transaxle control cable bracket.

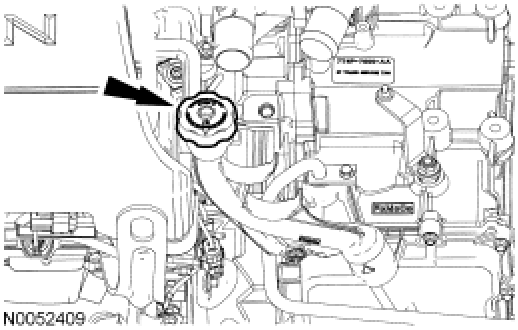

Fig. 795: Locating Wiring Harness Retainer From Transaxle Control Cable Bracket
Courtesy of FORD MOTOR CO.

71. Connect the upper radiator hose, lower radiator hose and 2 heater hoses to the thermostat housing.

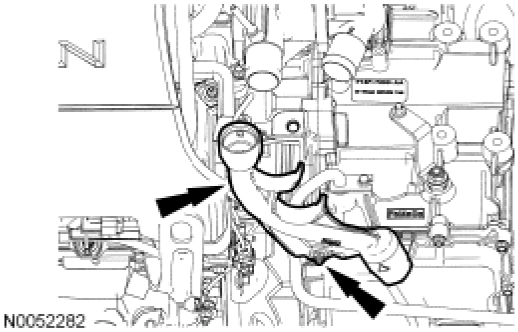

Fig. 796: Locating Upper Radiator Hose, Lower Radiator Hose & Heater Hoses
Courtesy of FORD MOTOR CO.

72. Connect the upper evaporative emissions (EVAP) tube quick connect coupling to the purge valve. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

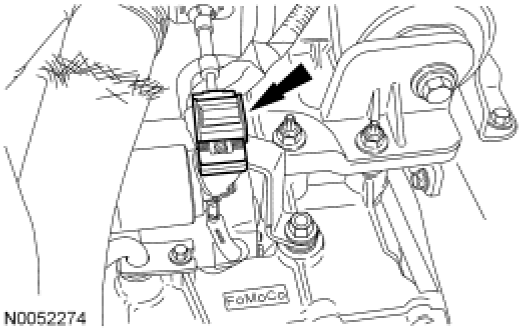

Fig. 797: Locating Upper Evaporative Emissions (EVAP) Tube Quick Connect Coupling
Courtesy of FORD MOTOR CO.

73. Connect the vacuum hose to the upper intake manifold.

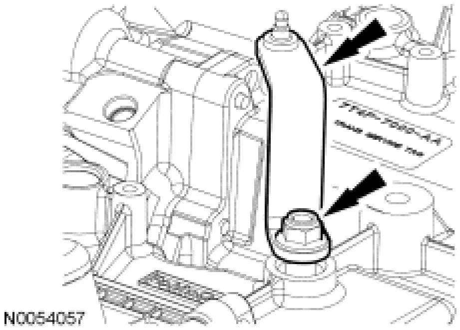

Fig. 798: Identifying Vacuum Hose From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

74. Install the ground wire and the bolt.
    - Tighten to 10 Nm (89 lb-in).
    - Attach the 2 wiring harness retainers to the cowl.

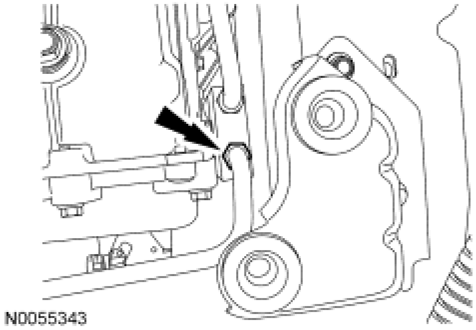

Fig. 799: Identifying Wiring Harness Retainers From Cowl
Courtesy of FORD MOTOR CO.

75. Connect the power feed to the battery terminal and install the nut.
    - Tighten to 8 Nm (71 lb-in).

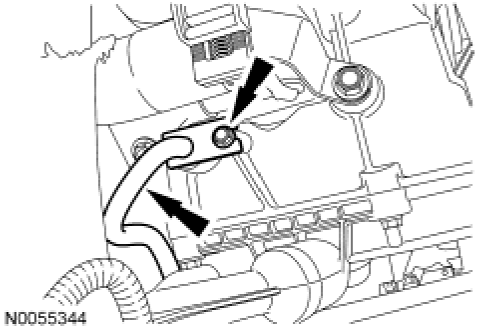

Fig. 800: Locating Power Feed To Battery Terminal And Nut
Courtesy of FORD MOTOR CO.

76. Connect the battery harness electrical connector.

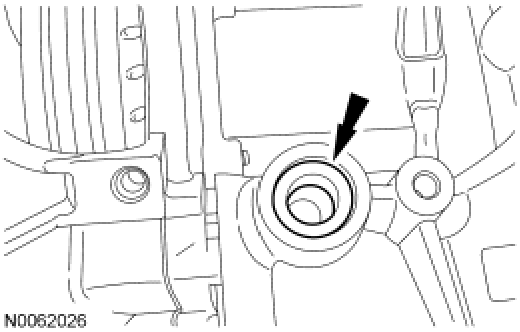

Fig. 801: Identifying Battery Harness Electrical Connector
Courtesy of FORD MOTOR CO.

77. Install the battery tray. For additional information, refer to **BATTERY, MOUNTING & CABLES** article.
78. Install the engine air cleaner and the air cleaner outlet pipe. For additional information, refer to **INTAKE**

AIR DISTRIBUTION & FILTERING article.

79. Install the degas bottle. For additional information, refer to **ENGINE COOLING** article.
80. Install the accessory drive belt and the power steering belt. For additional information, refer to **ACCESSORY DRIVE** article.
81. Fill the engine with clean engine oil.
82. Fill and bleed the cooling system. For additional information, refer to **ENGINE COOLING** article.
83. Fill the power steering system. For additional information, refer to **STEERING SYSTEM - GENERAL INFORMATION** article.
84. Recharge the air conditioning system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION & DIAGNOSTICS** article.

CAMSHAFT

Special Tools

Illustration	Tool Name	Tool Number
 ST2433-A	Alignment Pins	307-399
 ST2979-A	Camshaft Alignment Tool	303-1248
 ST1326-A	Handle	205-153 (T80T-4000-W)
 ST2981-A	Installer, Crankshaft Front Seal	303-1251
 ST1287-A	Installer, Crankshaft Vibration Damper	303-102 (T74P-6316-B)

 ST2296-A	Installer, Front Cover Oil Seal	303-335
 ST2983-A	Installer, Seal	303-1247/2
 ST1293-A	Powertrain Lift	014-00765
 ST1436-A	Strap Wrench	303-D055 (D85L-6000-A)

Material

Item	Specification
Motorcraft High Performance Engine RTV Silicone TA-357	WSE-M4G323-A6
Motorcraft Metal Surface Prep ZC-31-A	-
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A
Silicone Gasket Remover ZC-30	-

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

CAUTION: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can**

cause engine failure.

All camshafts

CAUTION: The crankshaft must remain in the freewheeling position (crankshaft dowel pin at 9 o'clock) until after the camshafts are installed and the valve clearance is checked/adjusted. Do not turn the crankshaft until instructed to do so. Failure to follow this process will result in severe engine damage.

1. Rotate the crankshaft counterclockwise until the crankshaft dowel pin is in the 9 o'clock position.

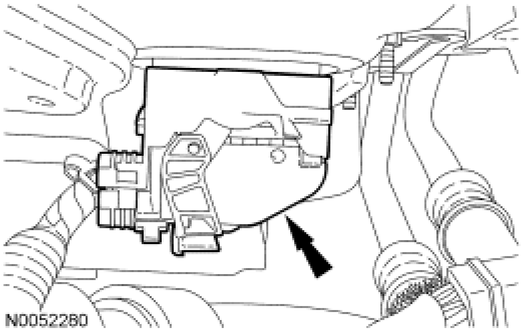

Fig. 802: Rotating Crankshaft Counterclockwise Until Crankshaft Dowel Pin Is In 9 O'clock Position
Courtesy of FORD MOTOR CO.

LH camshafts

CAUTION: The camshafts must remain in the neutral position during installation or engine damage may occur.

NOTE: Coat the camshafts with clean engine oil prior to installation.

2. Position the camshafts onto the LH cylinder head in the neutral position as shown.

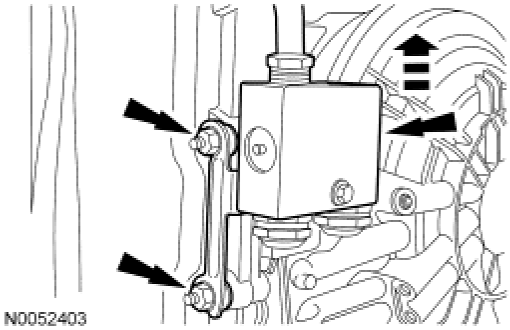

Fig. 803: Verifying LH Camshafts Are In Neutral Position
Courtesy of FORD MOTOR CO.

CAUTION: Cylinder head camshaft bearing caps are numbered to verify that they are assembled in their original positions. If not reassembled in their original positions, severe engine damage may occur.

3. Install the 8 camshaft caps and the 16 bolts.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).

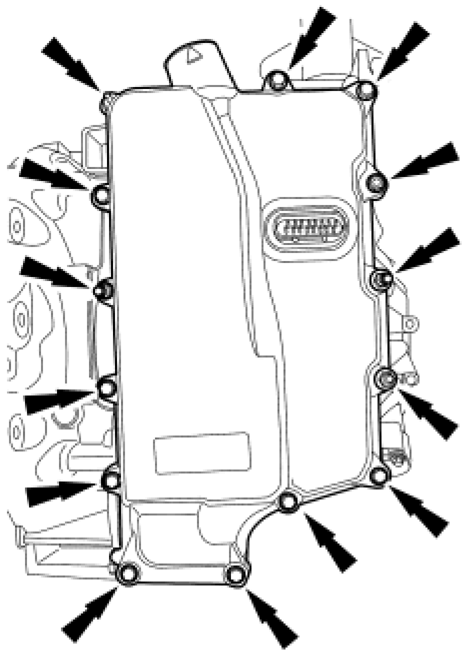

Fig. 804: Installing Camshaft Caps & Bolts In Sequence
Courtesy of FORD MOTOR CO.

RH camshafts

CAUTION: The camshafts must remain in the neutral position during installation or engine damage may occur.

NOTE: Coat the camshafts with clean engine oil prior to installation.

4. Position the camshafts onto the RH cylinder head in the neutral position as shown.

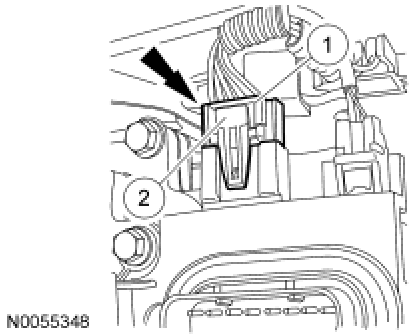

Fig. 805: Positioning Camshafts Onto RH Cylinder Head In Neutral Position
Courtesy of FORD MOTOR CO.

CAUTION: Cylinder head camshaft bearing caps are numbered to verify that they are assembled in their original positions. If not reassembled in their original positions, severe engine damage may occur.

5. Install the 8 camshaft caps and the 16 bolts.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).

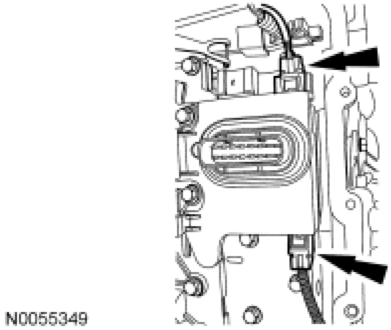

Fig. 806: Installing Camshaft Caps & Bolts In Sequence
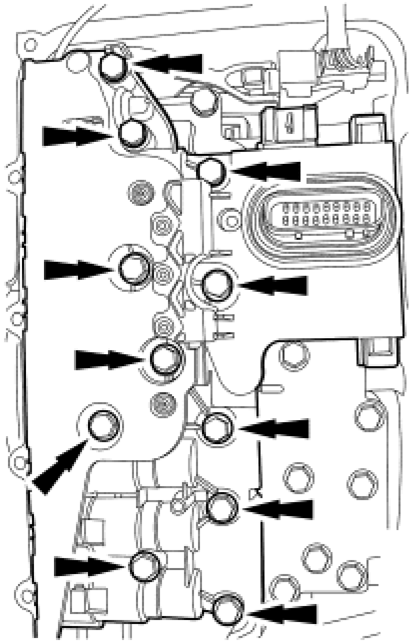
Courtesy of FORD MOTOR CO.

All camshafts

CAUTION: If any components are installed new, the engine valve clearance must be checked/adjusted or engine damage may occur.

NOTE: Use a camshaft sprocket bolt to turn the camshafts.

6. Using a feeler gauge, confirm that the valve tappet clearances are within specification. If valve tappet clearances are not within specification, the clearance must be adjusted by installing new valve tappet(s) of the correct size. For additional information, refer to **Valve Clearance Check**.



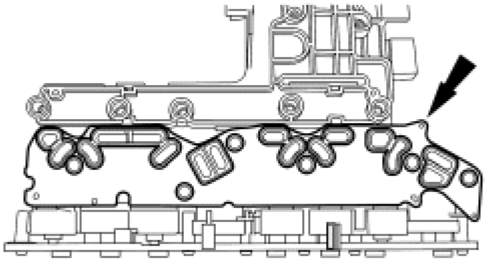
N0055350

Fig. 807: Measuring Valve Clearance
Courtesy of FORD MOTOR CO.

LH camshafts

NOTE: Use a camshaft sprocket bolt to turn the camshafts.

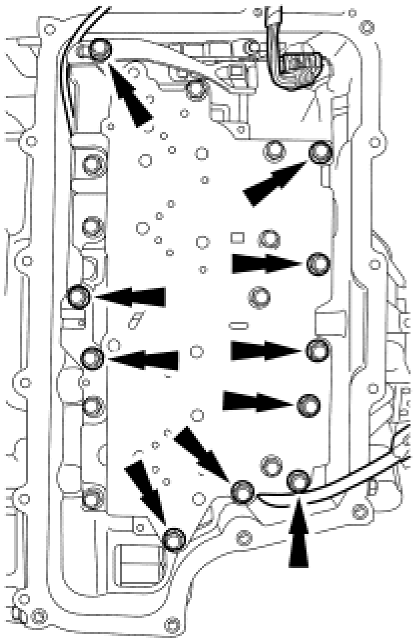
7. Rotate the LH camshafts to the top dead center position and install the special tool on the flats of the camshafts.



N0055016

Fig. 808: Installing Special Tool (303-1248) On Flats Of Camshafts
Courtesy of FORD MOTOR CO.

8. Assemble the LH variable camshaft timing (VCT) assembly, the LH exhaust camshaft sprocket and the LH secondary timing chain.
   - Align the colored links with the timing marks.



N0057465

Fig. 809: Aligning LH Exhaust Camshaft Sprocket & LH Secondary Timing Chain Colored Links With Timing Marks
Courtesy of FORD MOTOR CO.

9. Position the LH secondary timing assembly onto the camshafts.

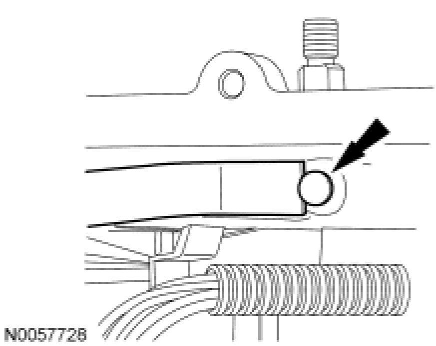


Fig. 810: Positioning LH Secondary Timing Assembly Onto Camshafts
Courtesy of FORD MOTOR CO.

10. Install 2 new bolts and the original washer. Tighten in 4 stages.
    - Stage 1: Tighten to 40 Nm (30 lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 10 Nm (89 lb-in).
    - Stage 4: Tighten 90 degrees.

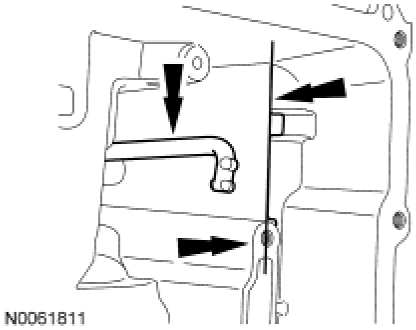

Fig. 811: Locating LH VCT Assembly Bolt & LH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

11. Remove the lockpin from the LH secondary timing chain tensioner.

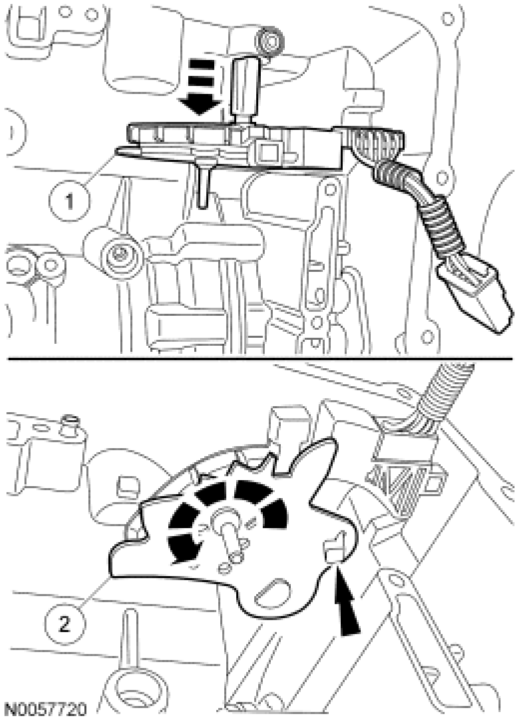

Fig. 812: Locating Lock Pin On LH Secondary Timing Chain Tensioner
Courtesy of FORD MOTOR CO.

RH camshafts

NOTE: Use a camshaft sprocket bolt to turn the camshafts.

12. Rotate the RH camshafts to the top dead center position and install the special tool on the flats of the camshafts.

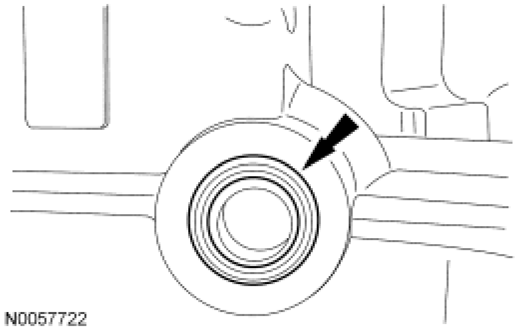

Fig. 813: Installing Special Tool (303-1248) On Flats Of Camshafts
Courtesy of FORD MOTOR CO.

13. Assemble the RH VCT assembly, the RH exhaust camshaft sprocket and the RH secondary timing chain.
    - Align the colored links with the timing marks.

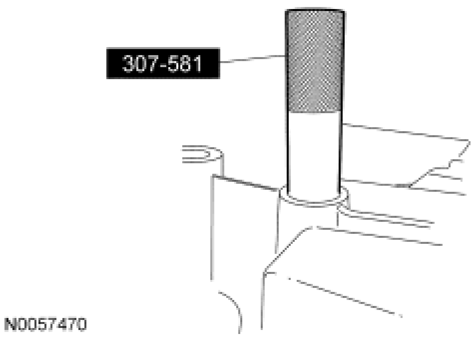

Fig. 814: Aligning RH Exhaust Camshaft Sprocket & RH Secondary Timing Chain Colored Links With Timing Marks
Courtesy of FORD MOTOR CO.

14. Position the RH secondary timing assembly onto the camshafts.

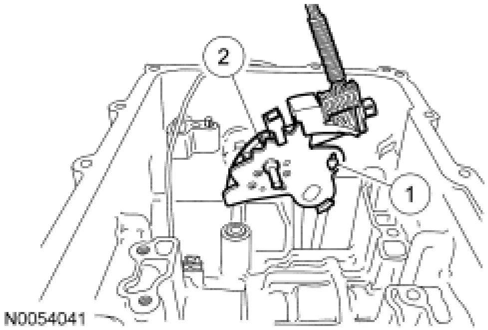

Fig. 815: Positioning RH Secondary Timing Assembly Onto Camshafts
Courtesy of FORD MOTOR CO.

15. Install 2 new bolts and the original washer. Tighten in 4 stages.
    - Stage 1: Tighten to 40 Nm (30 lb-ft).

- Stage 2: Loosen one full turn.
- Stage 3: Tighten to 10 Nm (89 lb-in).
- Stage 4: Tighten 90 degrees.

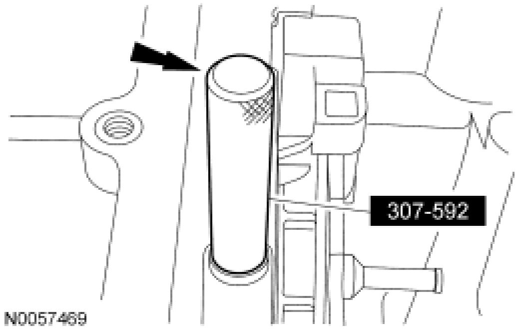

Fig. 816: Locating RH VCT Assembly Bolt & RH Exhaust Camshaft Sprocket Bolt
Courtesy of FORD MOTOR CO.

16. Remove the lockpin from the RH secondary timing chain tensioner.

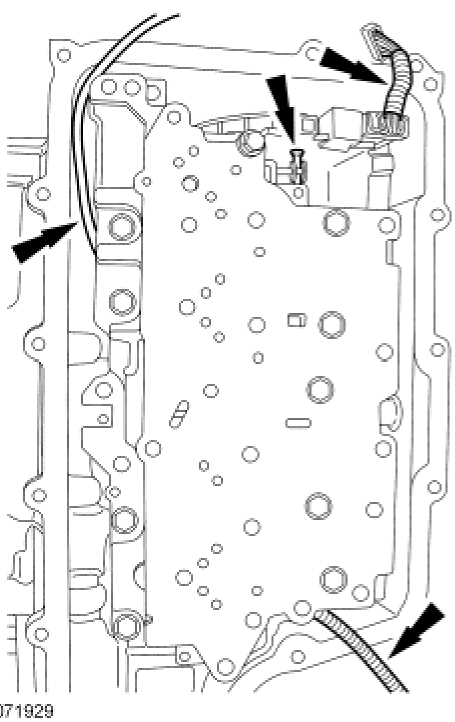

Fig. 817: Identifying Lock Pin On RH Secondary Timing Chain Tensioner
Courtesy of FORD MOTOR CO.

All camshafts

17. Rotate the crankshaft clockwise 60 degrees to the top dead center position (crankshaft dowel pin at 11 o'clock).

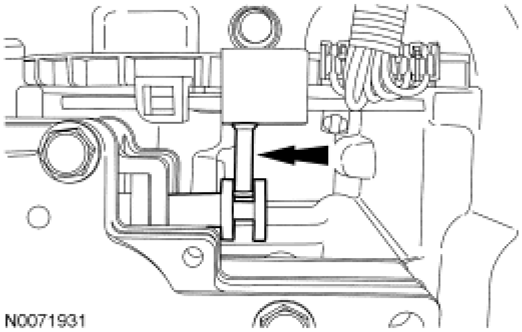

Fig. 818: Identifying Crankshaft Dowel Pin At 11 O'clock
Courtesy of FORD MOTOR CO.

18. Install the primary timing chain with the colored links aligned with the timing marks on the VCT assemblies and the crankshaft sprocket.

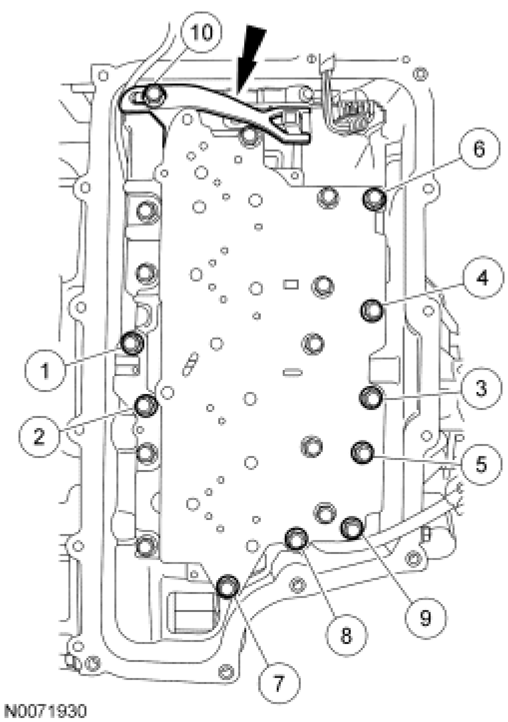

Fig. 819: Aligning Timing Marks On VCT Assemblies & Crankshaft Sprocket
Courtesy of FORD MOTOR CO.

19. Install the lower LH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

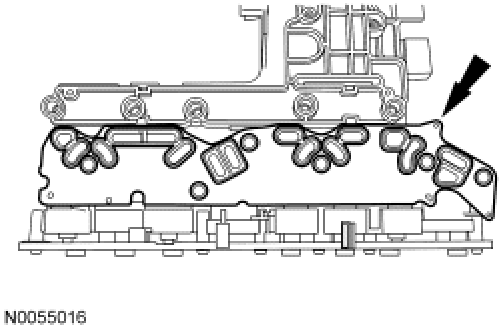

Fig. 820: Locating Lower LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

20. Install the primary timing chain tensioner arm.

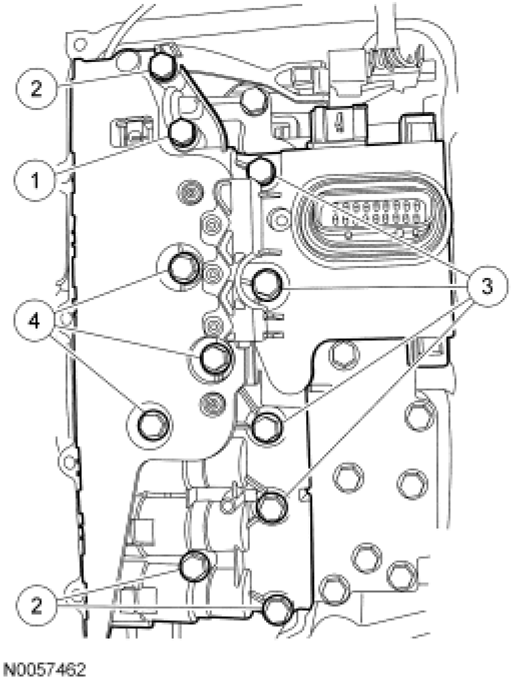

Fig. 821: Locating Primary Timing Chain Tensioner Arm
Courtesy of FORD MOTOR CO.

21. Reset the primary timing chain tensioner.
    - Rotate the lever counterclockwise.
    - Using a soft-jawed vise, compress the plunger.
    - Align the hole in the lever with the hole in the tensioner housing.
    - Install a suitable lockpin.

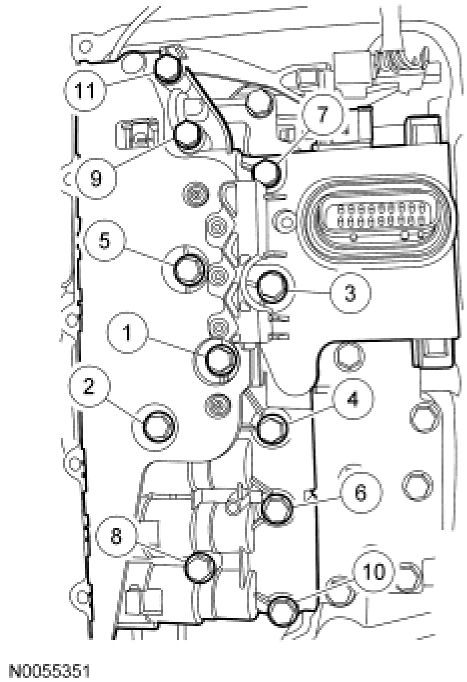

Fig. 822: Compressing Plunger Using A Soft-Jawed Vise
Courtesy of FORD MOTOR CO.

NOTE: **It may be necessary to rotate the crankshaft slightly to remove slack from the timing chain and install the tensioner.**

22. Install the primary tensioner and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).
    - Remove the lockpin.

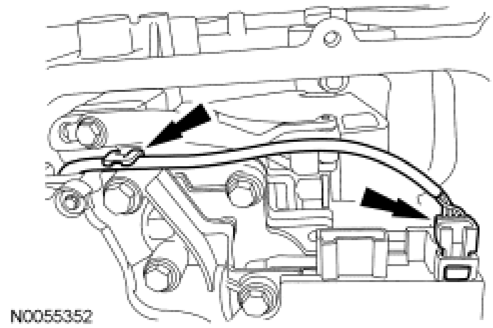

Fig. 823: Locating Primary Tensioner Bolts
Courtesy of FORD MOTOR CO.

23. As a post-check, verify correct alignment of all timing marks.

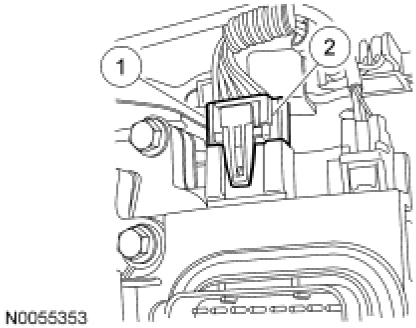

Fig. 824: Verifying Correct Alignment Of All Timing Marks
Courtesy of FORD MOTOR CO.

24. Install new VCT housing seals.

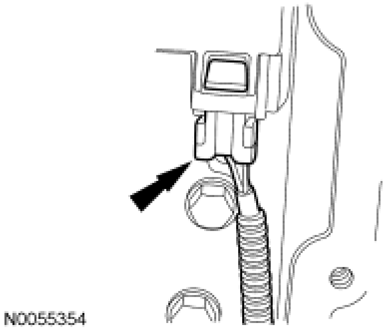

Fig. 825: Locating VCT Housing Seals
Courtesy of FORD MOTOR CO.

CAUTION: Make sure the dowels on the variable camshaft timing (VCT) housing are fully engaged in the cylinder head prior to tightening the bolts. Failure to follow this process will result in severe engine damage.

25. Install the LH VCT housing and the 3 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

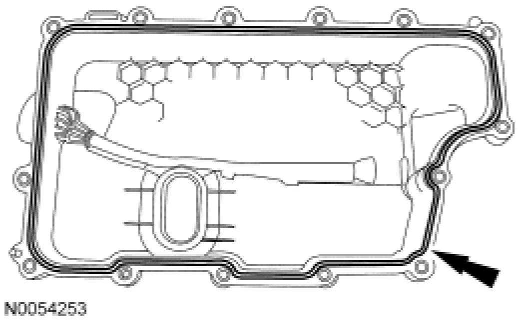

Fig. 826: Identifying LH VCT Housing Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

CAUTION: Make sure the dowels on the variable camshaft timing (VCT) housing are fully engaged in the cylinder head prior to tightening the bolts. Failure to follow this process will result in severe engine damage.

26. Install the RH VCT housing and the 3 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

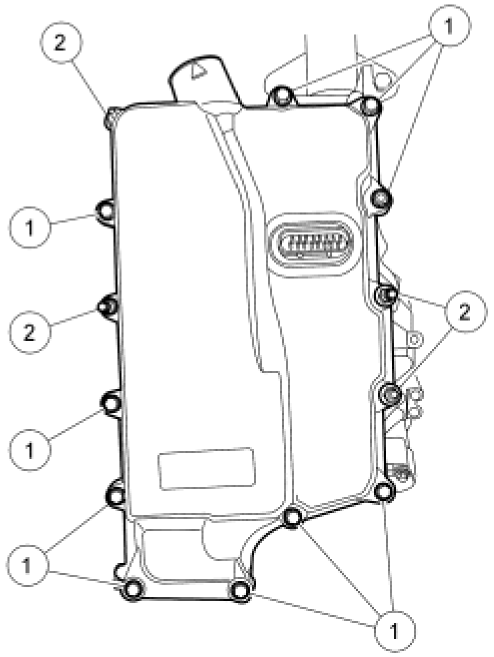

Fig. 827: Identifying RH VCT Housing Bolts Tightening Sequence
Courtesy of FORD MOTOR CO.

27. Install the special tools.

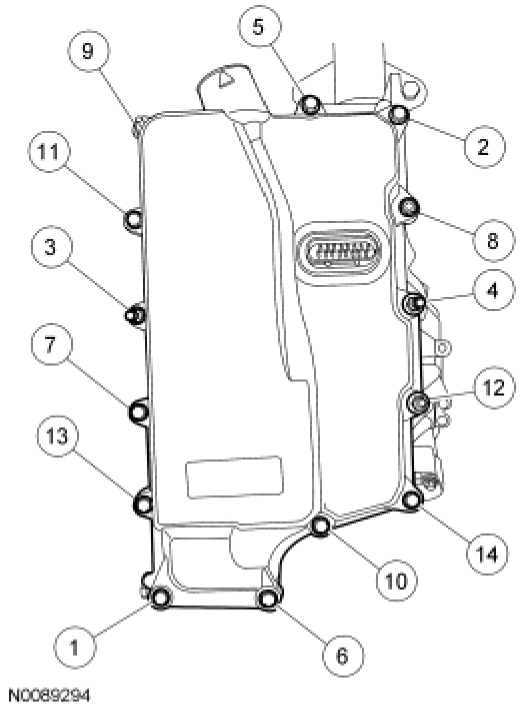

Fig. 828: Identifying Special Tool (307-399)
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: The engine front cover and bolts 17, 18, 19 and 20 must be installed within 4 minutes of the initial sealant application. The remainder of the engine front cover bolts and the engine mount bracket bolts must be installed and tightened within 35 minutes of the initial sealant application. If the time limits are exceeded, the sealant must be removed, the sealing area cleaned and sealant reapplied. To clean the sealing area, use silicone gasket remover and metal surface prep. Follow the directions on the packaging. Failure to follow this procedure can cause future oil leakage.

28. Apply a 3.0 mm (0.11 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover sealing surfaces including the 3 engine mount bracket bosses.
    - Apply a 5.5 mm (0.21 in) bead of Motorcraft High Performance Engine RTV Silicone to the oil pan-to-cylinder block joint and the cylinder head-to-cylinder block joint areas of the engine front cover in 5 places as indicated.

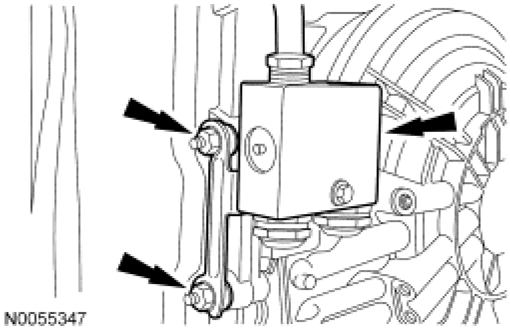

Fig. 829: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover Sealing Surfaces
Courtesy of FORD MOTOR CO.

NOTE: **Make sure the 2 locating dowel pins are seated correctly in the cylinder block.**

29. Install the engine front cover and bolts 17, 18, 19 and 20.
    - Tighten in sequence to 3 Nm (27 lb-in).

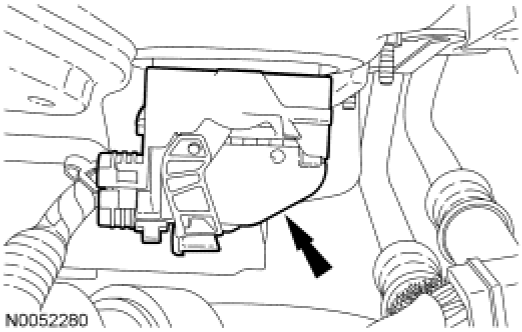

Fig. 830: Installing Engine Front Cover & Bolts In Sequence
Courtesy of FORD MOTOR CO.

30. Remove the special tools (alignment pins).

NOTE: **Do not tighten the bolts at this time.**

31. Install the engine mount bracket and the 3 bolts.

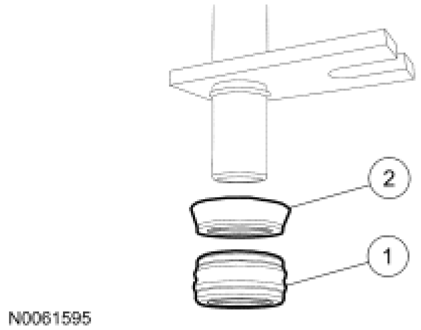

Fig. 831: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Do not expose the Motorcraft High Performance Engine RTV Silicone to engine oil for at least 90 minutes after installing the engine front cover. Failure to follow this instruction may cause oil leakage.

32. Install the remaining engine front cover bolts. Tighten all of the engine front cover bolts and engine mount bracket bolts in the sequence shown in 2 stages:
    - Stage 1: Tighten bolts 1 thru 22 to 10 Nm (89 lb-in) and bolts 23, 24 and 25 to 15 Nm (11 lb-ft).
    - Stage 2: Tighten bolts 1 thru 22 to 24 Nm (18 lb-ft) and bolts 23, 24 and 25 to 75 Nm (55 lb-ft).

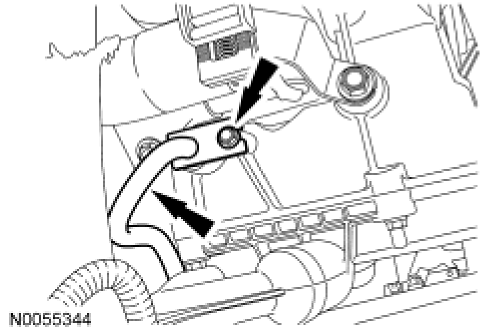

Fig. 832: Identifying Tightening Of Engine Front Cover Bolts & Engine Mount Bracket Bolts In Sequence
Courtesy of FORD MOTOR CO.

33. Install the 2 engine mount studs.
    - Tighten to 18 Nm (13 lb-ft).

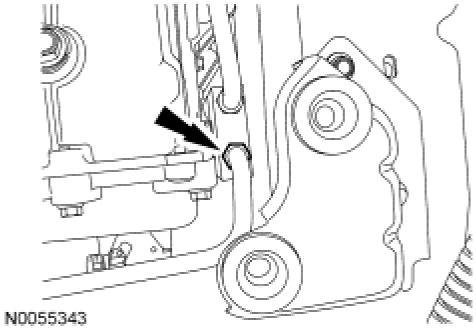

Fig. 833: Locating Engine Mount Studs
Courtesy of FORD MOTOR CO.

34. Install the engine mount bracket and the 2 bolts.
    - Tighten to 24 Nm (18 lb-ft).

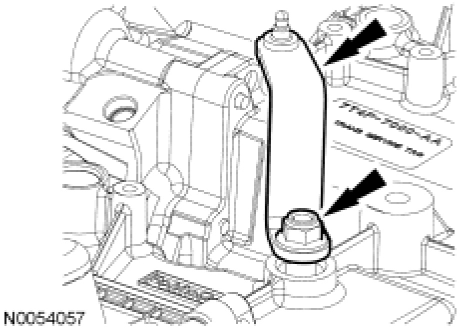

Fig. 834: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

NOTE: Apply clean engine oil to the crankshaft front seal bore in the engine front cover.

35. Using the special tools, install a new crankshaft front seal.

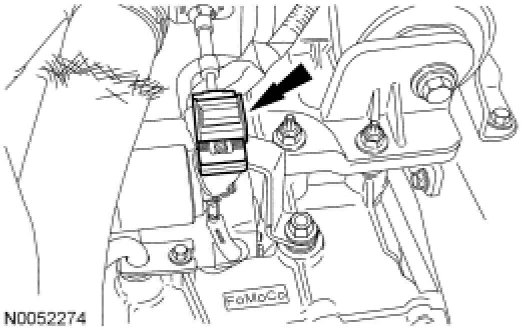

Fig. 835: Installing Crankshaft Front Seal Using Special Tools (303-102) & (303-1251)
Courtesy of FORD MOTOR CO.

NOTE: Lubricate the outside diameter sealing surfaces with clean engine oil.

36. Using the special tools, install the crankshaft pulley.

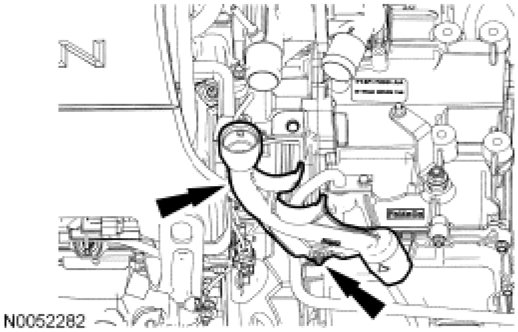

Fig. 836: Installing Crankshaft Pulley
Courtesy of FORD MOTOR CO.

37. Using the special tool, install the crankshaft pulley washer and new bolt and tighten in 4 stages.
    - Stage 1: Tighten to 120 Nm (89 lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 50 Nm (37 lb-ft).
    - Stage 4: Tighten an additional 90 degrees.

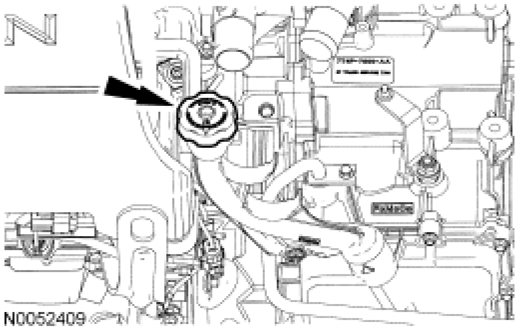

Fig. 837: Installing Crankshaft Pulley Washer & Bolt Using Special Tools (303-D055)
Courtesy of FORD MOTOR CO.

38. Install the accessory drive belt tensioner and the 3 bolts.
    - Tighten to 11 Nm (8 lb-ft).

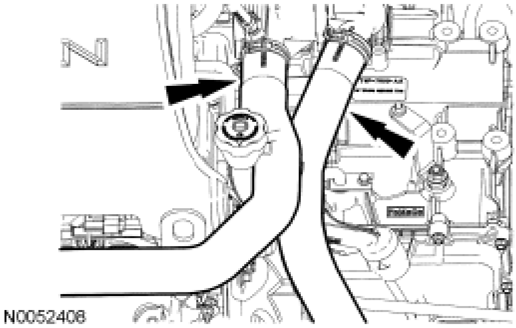

Fig. 838: Locating Accessory Drive Belt Tensioner Bolts
Courtesy of FORD MOTOR CO.

39. Install the power steering pump and the 3 bolts.
    - Tighten to 24 Nm (18 lb-ft).

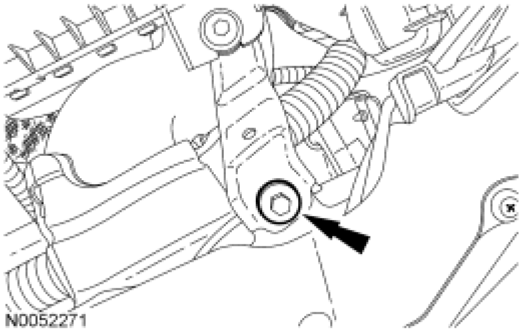

Fig. 839: Locating Power Steering Pump Bolts
Courtesy of FORD MOTOR CO.

NOTE: **Installation of new seals is only required if damaged seals were removed during disassembly of the engine.**

NOTE: **Spark plug tube seal installation shown, VCT seal installation similar.**

40. Using the special tools, install new VCT solenoid and/or spark plug tube seals.

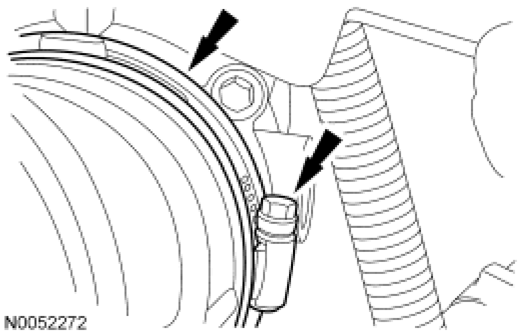

Fig. 840: Installing VCT Solenoid And/Or Spark Plug Tube Seals Using Special Tools (205-153) & (303-1247/2)
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: If the valve cover is not installed and the fasteners tightened within 4 minutes, the sealant must be removed and the sealing area cleaned. To clean the sealing area, use silicone gasket remover and metal surface prep. Follow the directions on the packaging. Failure to follow this procedure can cause future oil leakage.

41. Apply a 8 mm (0.31 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover-to-RH cylinder head joints.

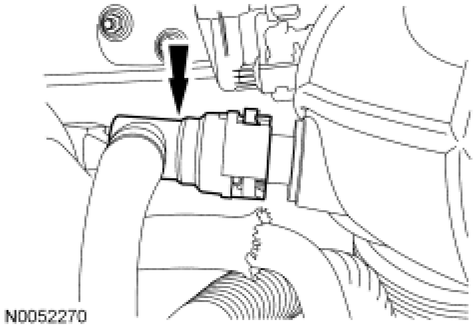

Fig. 841: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover-To-RH Cylinder Head Joints
Courtesy of FORD MOTOR CO.

42. Using a new gasket, install the RH valve cover, bolt and the 10 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

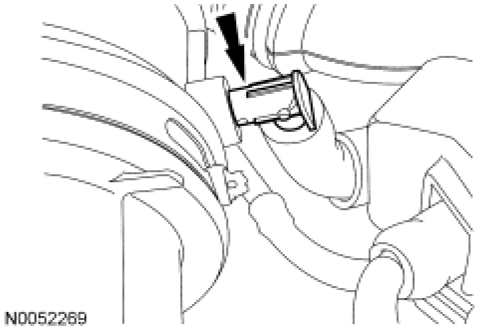

Fig. 842: Installing RH Valve Cover Stud Bolts In Sequence
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: If the valve cover is not installed and the fasteners tightened within 4 minutes, the sealant must be removed and the sealing area cleaned. To clean the sealing area, use silicone gasket remover and metal surface prep. Follow the directions on the packaging. Failure to follow this procedure can cause future oil leakage.

43. Apply a 8 mm (0.31 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover-to-LH cylinder head joints.

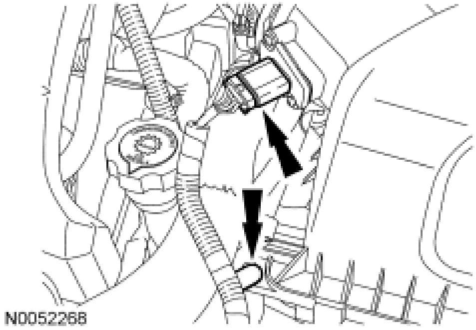

Fig. 843: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover-To-LH Cylinder Head Joints
Courtesy of FORD MOTOR CO.

44. Using a new gasket, install the LH valve cover and 11 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

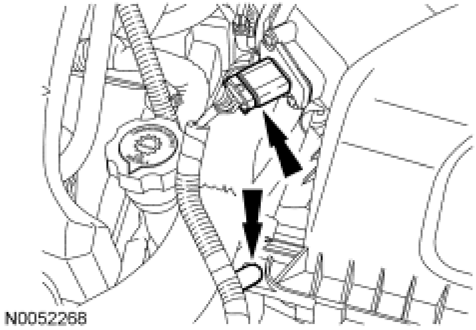

Fig. 844: Installing LH Valve Cover Stud Bolts In Sequence
Courtesy of FORD MOTOR CO.

NOTE: LH shown, RH similar.

45. Install the 6 coil-on-plug assemblies and the 6 bolts.

- Tighten to 7 Nm (62 lb-in).

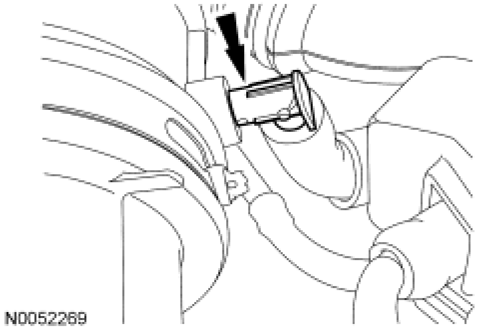

Fig. 845: Locating Coil-On-Plugs & Bolts
Courtesy of FORD MOTOR CO.

46. Attach all of the wiring harness retainers to the LH valve cover and stud bolts.
47. Connect the 3 LH coil-on-plug electrical connectors.

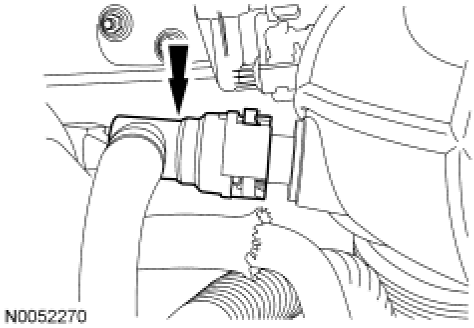

Fig. 846: Locating LH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

48. Connect the LH camshaft VCT solenoid electrical connector.

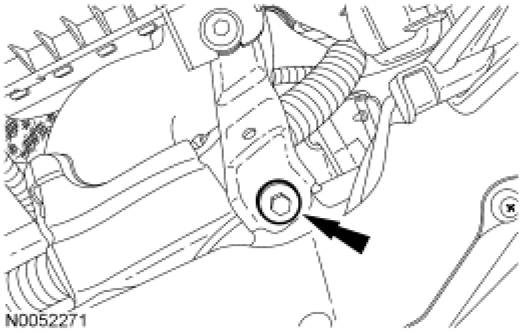

Fig. 847: Locating LH VCT Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

49. Attach all of the wiring harness retainers to the RH valve cover and stud bolts.

50. Connect the 3 RH coil-on-plug electrical connectors.

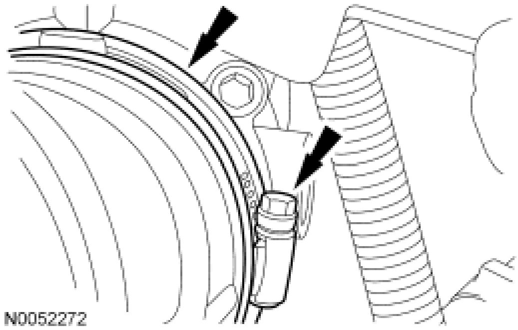

Fig. 848: Locating RH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

51. Connect the RH VCT solenoid electrical connector.

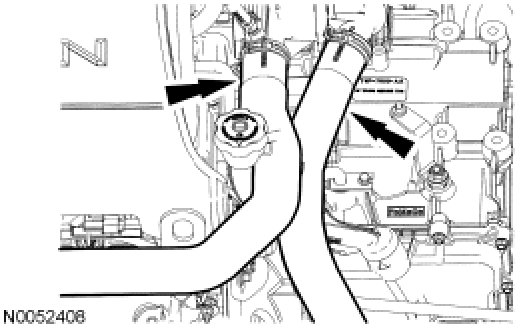

Fig. 849: Locating RH Variable Camshaft Timing (VCT) Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

52. Connect the power steering pressure (PSP) switch electrical connector.

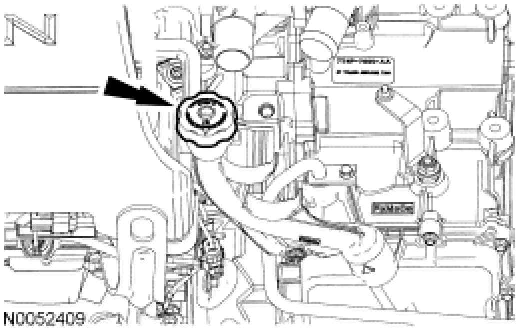

Fig. 850: Locating PSP Switch Electrical Connector
Courtesy of FORD MOTOR CO.

53. Connect the RH catalyst monitor sensor electrical connector.

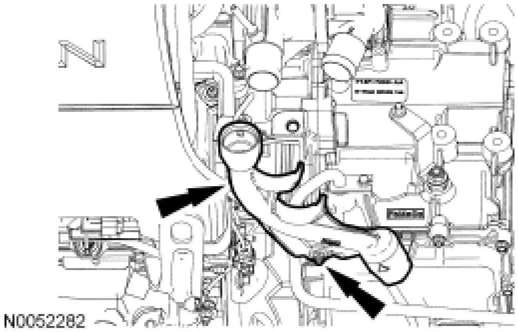

Fig. 851: Locating RH Catalyst Monitor Electrical Connector
Courtesy of FORD MOTOR CO.

54. Using new gaskets, install the upper intake manifold and the 6 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

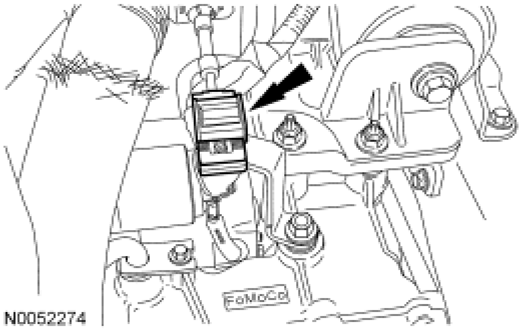

Fig. 852: Identifying Bolt Sequence
Courtesy of FORD MOTOR CO.

55. Install the upper intake manifold support bracket bolt.
    - Tighten to 10 Nm (89 lb-in).

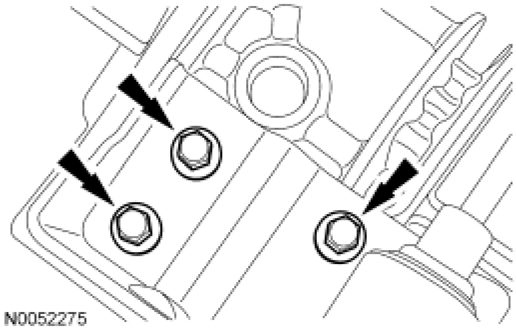

Fig. 853: Locating Upper Intake Manifold Support Bracket Bolt
Courtesy of FORD MOTOR CO.

56. Attach the wiring harness retainers to the upper intake manifold.

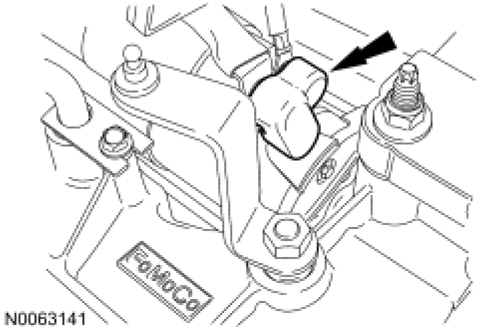

Fig. 854: Locating Wiring Harness Retainers From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

57. Connect the throttle body (TB) electrical connector.

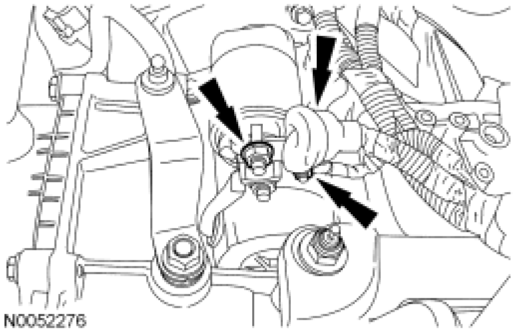

Fig. 855: Locating Throttle Body Electrical Connector
Courtesy of FORD MOTOR CO.

58. Connect the PCV hose to the PCV valve.

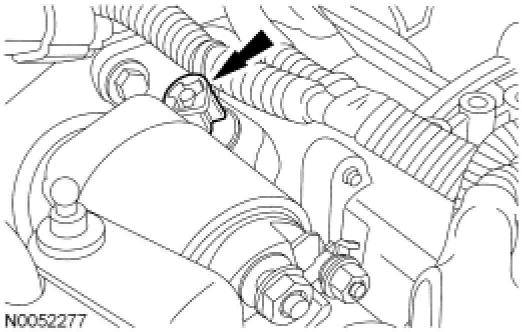

Fig. 856: Identifying PCV Hose
Courtesy of FORD MOTOR CO.

59. If equipped, attach the engine block heater wiring harness retainers.
60. Raise the engine and transaxle assembly into the vehicle.
61. Install the engine mount and the 3 bolts.

- Tighten to 90 Nm (66 lb-ft).

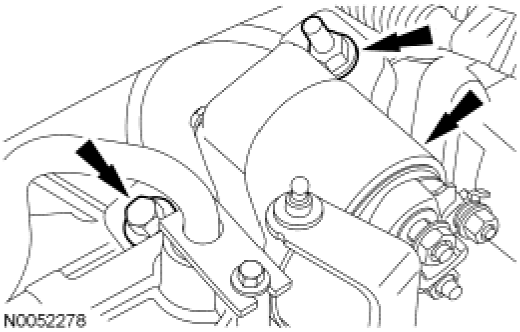

Fig. 857: Locating Engine Mount Bolts
Courtesy of FORD MOTOR CO.

62. Install the 4 engine mount nuts.
    - Tighten to 63 Nm (46 lb-ft).

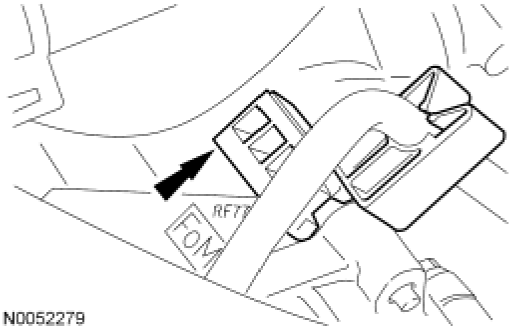

Fig. 858: Locating Engine Mount Nuts
Courtesy of FORD MOTOR CO.

63. Install the engine mount brace, the nut and the bolt.
    - Tighten to 20 Nm (15 lb-ft).

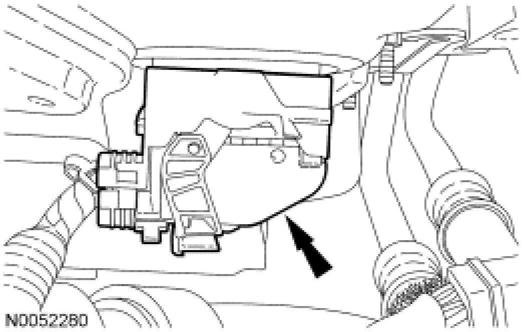

Fig. 859: Locating Nut, Bolt & Engine Mount Brace
Courtesy of FORD MOTOR CO.

64. Install the transaxle support insulator bracket, the 3 nuts and the bolt.
    - Tighten to 63 Nm (46 lb-ft).

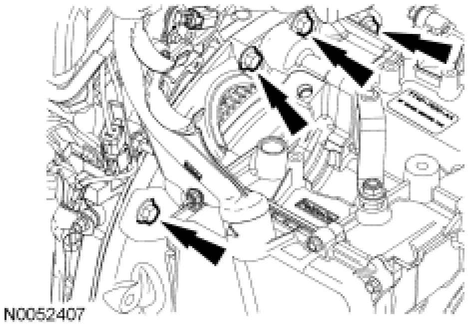

Fig. 860: Identifying Transaxle Support Insulator Bracket, Nuts & Bolts
Courtesy of FORD MOTOR CO.

65. Install the transaxle support insulator through bolt and nut.
    - Tighten to 175 Nm (129 lb-ft).

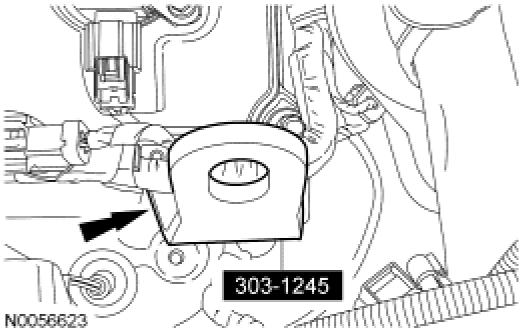

Fig. 861: Identifying Transaxle Support Insulator Bolt
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

NOTE: A new powertrain transfer unit (PTU) seal must be installed whenever the intermediate shaft is removed.

66. Install a new PTU seal. For additional information, refer to **TRANSFER CASE - POWER TRANSFER UNIT (PTU)** article.

NOTE: Prior to installation of the halfshaft, inspect the halfshaft sealing surface for wear or damage and install new, if necessary.

67. Position the RH halfshaft/intermediate shaft assembly in the PTU and in the steering knuckle and install the 2 bolts.

- Tighten to 40 Nm (30 lb-ft).

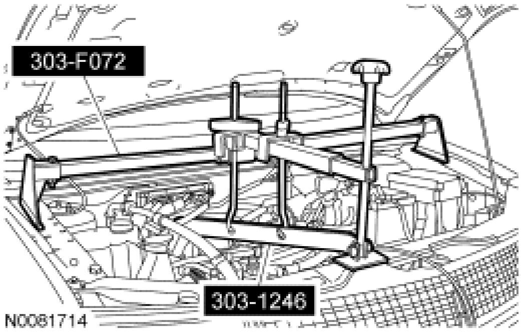

Fig. 862: Locating RH Halfshaft Bearing Support Bracket Bolts
Courtesy of FORD MOTOR CO.

Front wheel drive (FWD) vehicles

NOTE:	**Prior to installation of the halfshaft, inspect the halfshaft sealing surface for wear or damage and install new if necessary.**

68. Position the RH halfshaft/intermediate shaft assembly in the transaxle and in the steering knuckle and install the 2 stud bolts.
    - Tighten to 55 Nm (41 lb-ft).

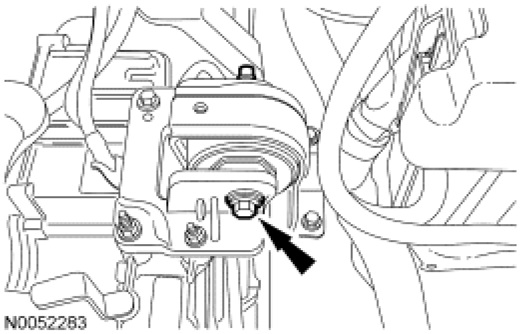

Fig. 863: Locating Stud Bolts & RH Halfshaft/Intermediate Shaft Assembly
Courtesy of FORD MOTOR CO.

NOTE:	**Do not tighten the 2 catalytic converter support bracket bolts at this time.**

69. Install the converter support bracket and the 2 bolts.

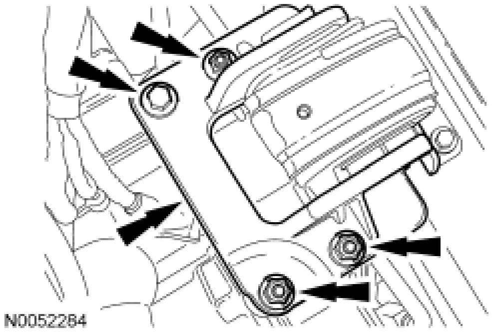

Fig. 864: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

70. Install the catalytic converter bracket bolt and the nut.
    1. Tighten the nut to 40 Nm (30 lb-ft).
    2. Tighten the bolt to 55 Nm (41 lb-ft).

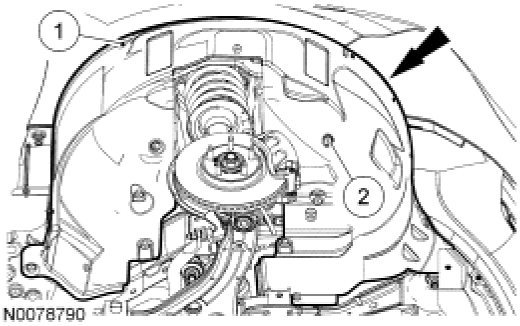

Fig. 865: Locating Catalytic Converter Bracket Bolt & Nut
Courtesy of FORD MOTOR CO.

71. Tighten the 2 RH catalytic converter support bracket bolts to 20 Nm (15 lb-ft).

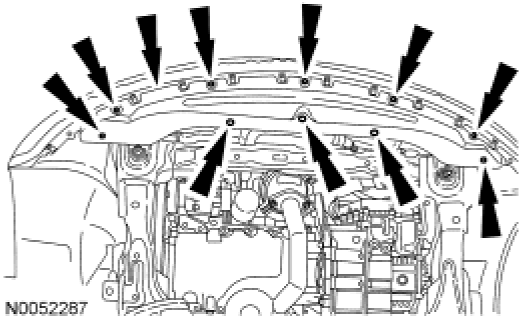

Fig. 866: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

All vehicles

NOTE: **Prior to installation of the halfshaft, inspect the halfshaft sealing surface for wear or damage and install new, if necessary.**

72. Install the LH halfshaft into the transaxle.

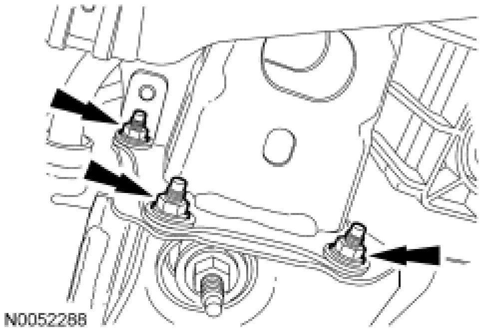

Fig. 867: Identifying LH Halfshaft
Courtesy of FORD MOTOR CO.

73. If equipped, connect the oil cooler coolant hoses.

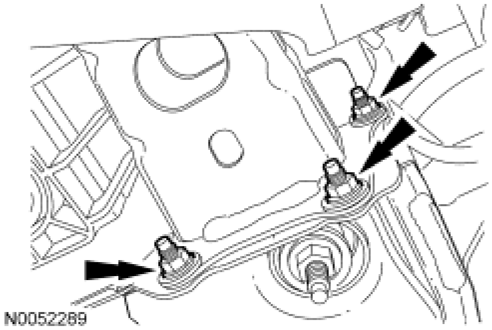

Fig. 868: Locating Oil Cooler Coolant Hoses
Courtesy of FORD MOTOR CO.

74. Using the special tool, raise the subframe into the installed position.

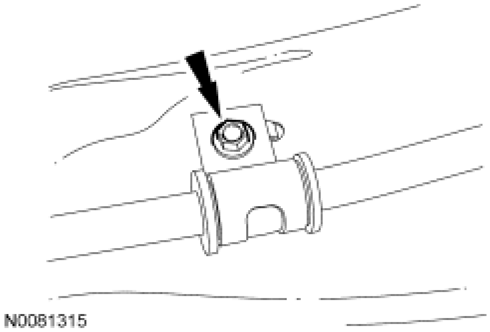

Fig. 869: Positioning Special Tool (014-00765) Under Subframe Assembly
Courtesy of FORD MOTOR CO.

75. Install the 2 middle subframe nuts.
    - Tighten to 133 Nm (98 lb-ft).

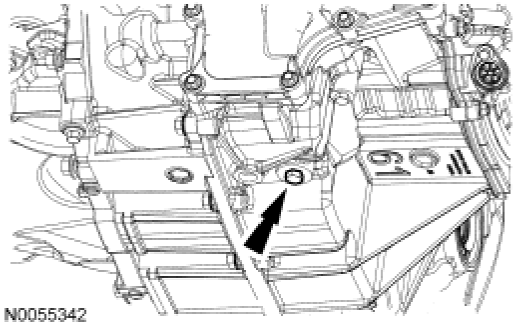

Fig. 870: Locating Middle Subframe Nuts
Courtesy of FORD MOTOR CO.

76. Install the 2 front subframe nuts.
    - Tighten to 133 Nm (98 lb-ft).

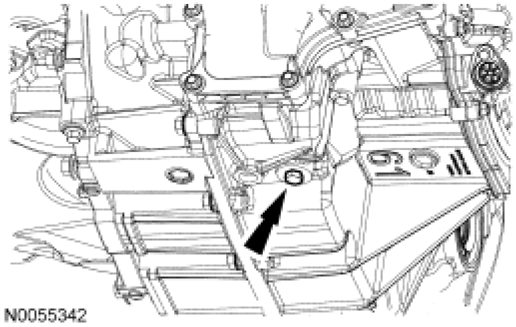

Fig. 871: Locating Front Subframe Nuts
Courtesy of FORD MOTOR CO.

77. Position the subframe support brackets in place and loosely install the 4 bolts.

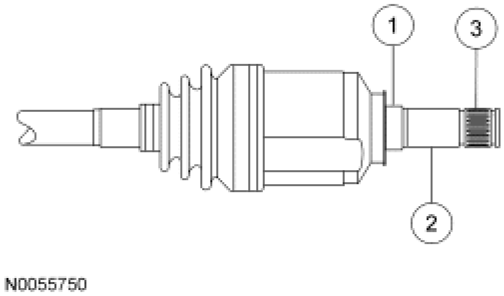

Fig. 872: Locating Subframe Support Brackets And Bolts
Courtesy of FORD MOTOR CO.

78. Install the 2 rear subframe bracket nuts.
    - Tighten to 133 Nm (98 lb-ft).

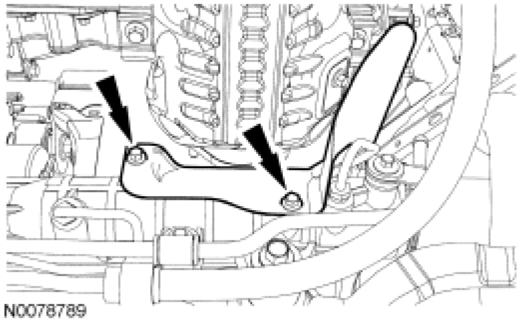

Fig. 873: Locating Rear Subframe Nuts
Courtesy of FORD MOTOR CO.

79. Tighten the 4 subframe support bracket bolts.
    - Tighten to 90 Nm (66 lb-ft).

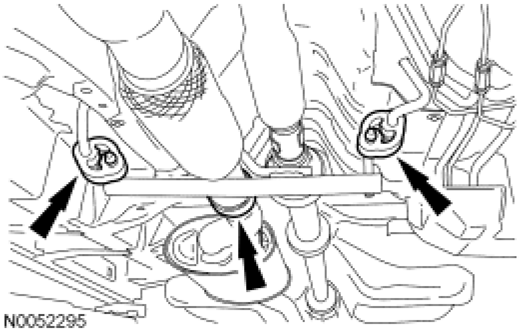

Fig. 874: Locating Subframe Support Brackets And Bolts
Courtesy of FORD MOTOR CO.

80. Position the lower bumper on the subframe and install the 3 LH nuts.
    - Tighten to 9 Nm (80 lb-in).

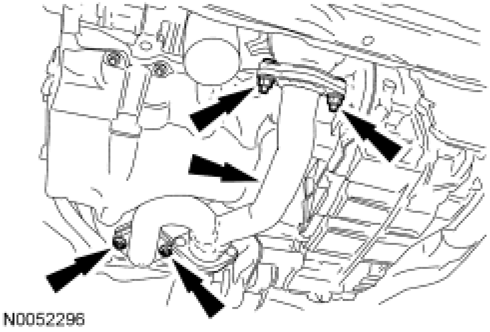

Fig. 875: Locating LH Subframe-To-Lower Bumper Nuts

Courtesy of FORD MOTOR CO.

81. Install the 3 RH lower bumper-to-subframe nuts.
    - Tighten to 9 Nm (80 lb-in).

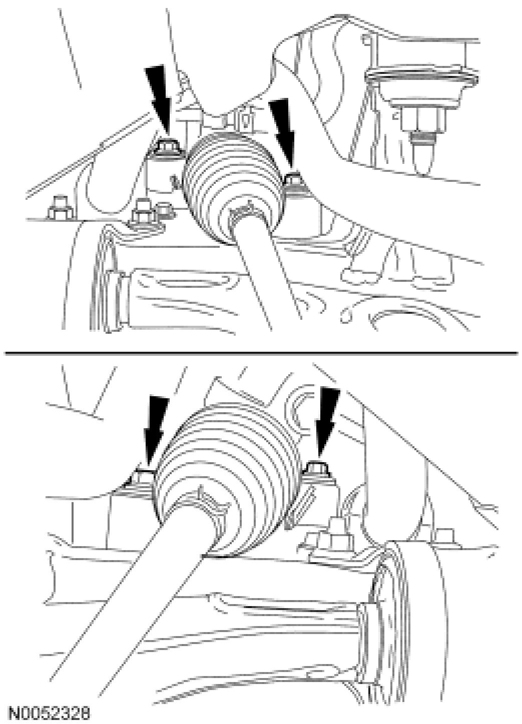

Fig. 876: Locating RH Subframe-To-Lower Bumper Nuts
Courtesy of FORD MOTOR CO.

NOTE: RH side shown, LH side similar.

82. Install the ball joints in the steering knuckles and install the pinch bolts.
    - Tighten to 55 Nm (41 lb-ft).

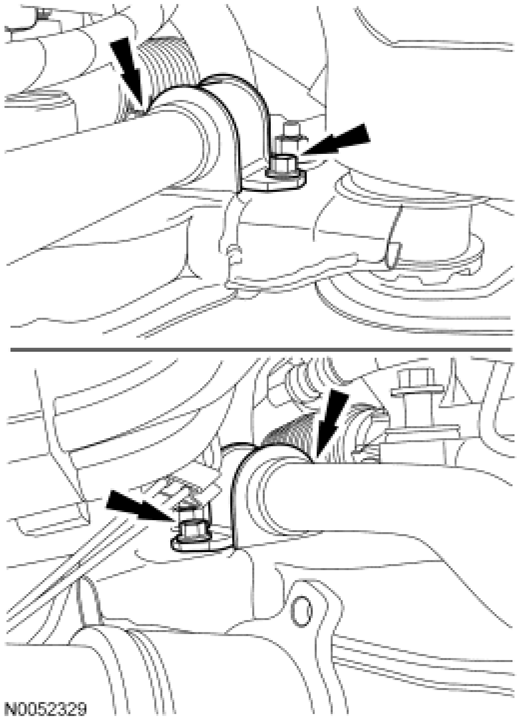

Fig. 877: Locating Ball Joint Pinch Bolt
Courtesy of FORD MOTOR CO.

NOTE: RH side shown, LH side similar.

83. Position the stabilizer bar links in the lower control arms and install the nuts.
    - Tighten to 90 Nm (66 lb-ft).

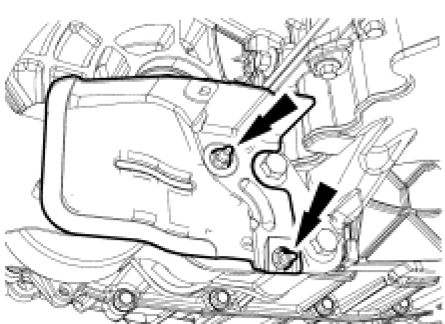

Fig. 878: Locating Stabilizer Bar Link Nut
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

84. Install the tie-rod ends and nuts.
    - Tighten to 48 Nm (35 lb-ft).

- Install new cotter pins.

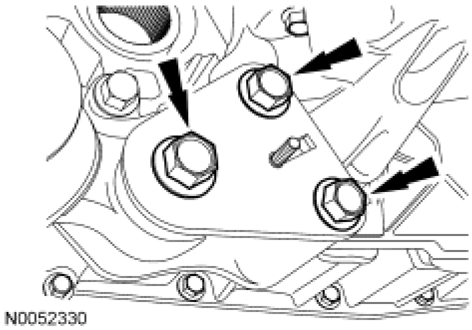

Fig. 879: Locating Tie-Rod Ends Nuts And Cotter Pin
Courtesy of FORD MOTOR CO.

CAUTION: Do not allow the intermediate shaft to rotate while it is disconnected from the gear or damage to the clockspring can occur. If there is evidence that the intermediate shaft has rotated, the clockspring must be removed and recentered. For additional information, refer to SUPPLEMENTAL RESTRAINT SYSTEM article.

85. Install the intermediate shaft onto the steering gear and install a new bolt.
    - Tighten to 23 Nm (17 lb-ft).

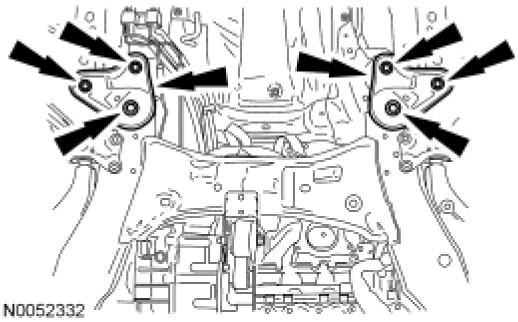

Fig. 880: Identifying Steering Intermediate Shaft Bolt
Courtesy of FORD MOTOR CO.

86. Using a new banjo bolt and 2 new seals, install the PSP tube.
    - Tighten to 48 Nm (35 lb-ft).

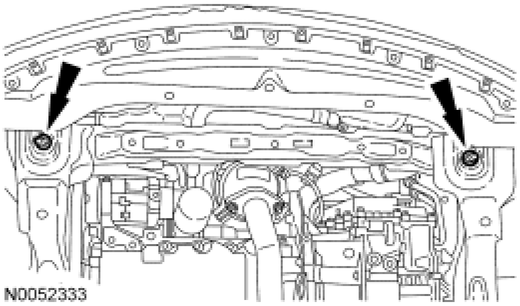

Fig. 881: Locating Power Steering Pressure (PSP) Tube-To-Pump Banjo Bolt & Seals
Courtesy of FORD MOTOR CO.

87. Install the engine roll restrictor-to-subframe through bolt.
    - Tighten to 103 Nm (76 lb-ft).

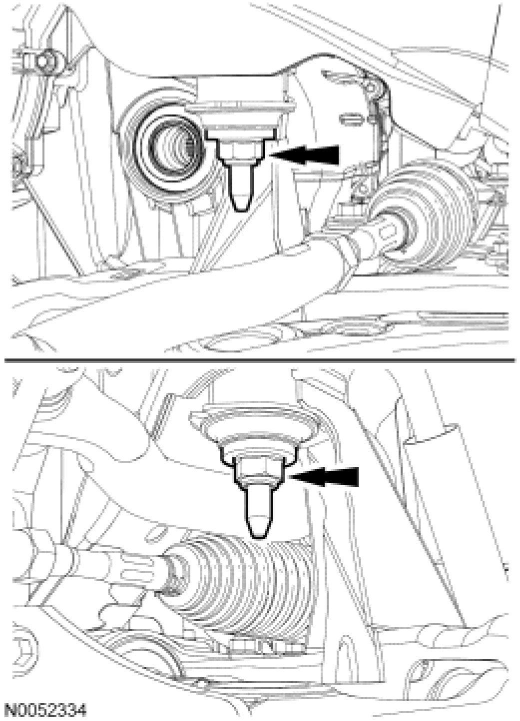

Fig. 882: Locating Roll Restrictor-To-Subframe Bolt
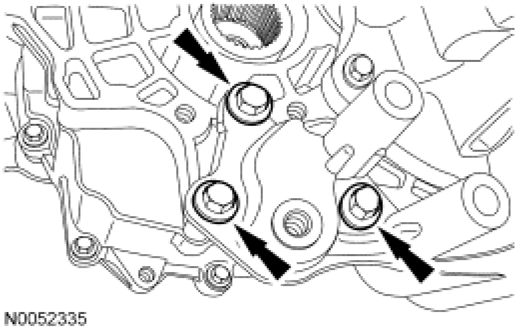
Courtesy of FORD MOTOR CO.

88. Install the roll restrictor heat shield and the 2 nuts.
    - Tighten to 11 Nm (8 lb-ft).

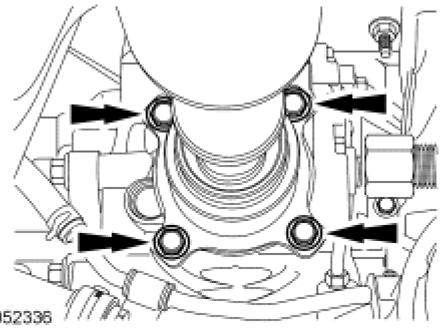


N0052335

Fig. 883: Locating Roll Restrictor Heat Shield Nuts
Courtesy of FORD MOTOR CO.

NOTE: Apply the brake to keep the halfshaft from rotating.

89. Install a new RH front halfshaft nut.
    - Tighten to 350 Nm (258 lb-ft).

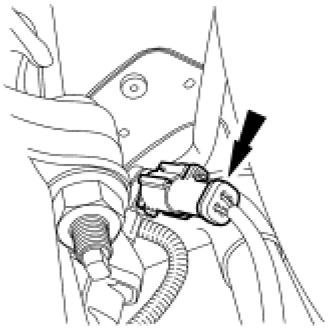


N0052336

Fig. 884: Locating RH Front Halfshaft Nut
Courtesy of FORD MOTOR CO.

AWD vehicles

90. Line up the index marks on the rear driveshaft to the index marks on the PTU flange made during removal and install the 4 bolts.
    - Tighten to 70 Nm (52 lb-ft).



N0052337

Fig. 885: Locating Driveshaft Aside Bolts
Courtesy of FORD MOTOR CO.

All vehicles

91. Install the power steering cooler bracket bolt to the RH side of the subframe.
    - Tighten to 9 Nm (80 lb-in).

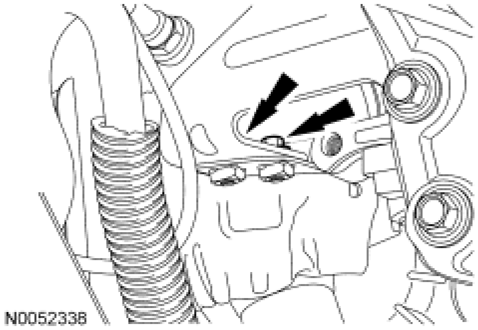


Fig. 886: Identifying Power Steering Cooler Bracket Bolt
Courtesy of FORD MOTOR CO.

92. Connect the power steering cooler hose.

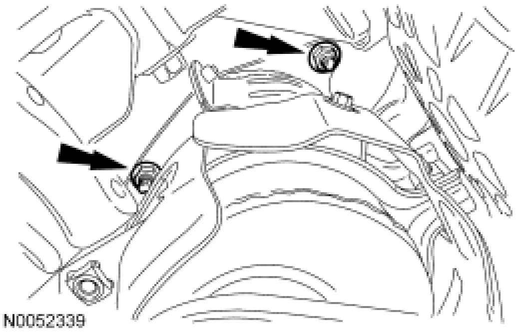

Fig. 887: Identifying Power Steering Cooler Hose
Courtesy of FORD MOTOR CO.

NOTE: Lubricate the engine oil filter gasket with clean engine oil prior to installing the oil filter.

93. Install a new engine oil filter.
    - Tighten to 5 Nm (44 lb-in) and then rotate an additional 180 degrees.

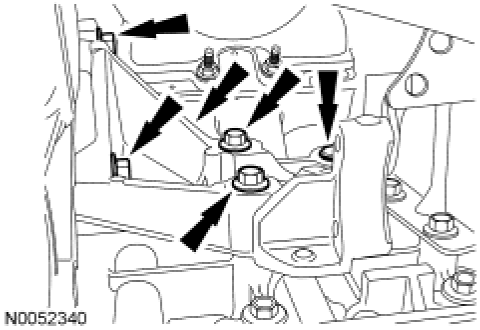

Fig. 888: Identifying Engine Oil Filter
Courtesy of FORD MOTOR CO.

94. Connect the 2 transmission fluid cooler tubes.

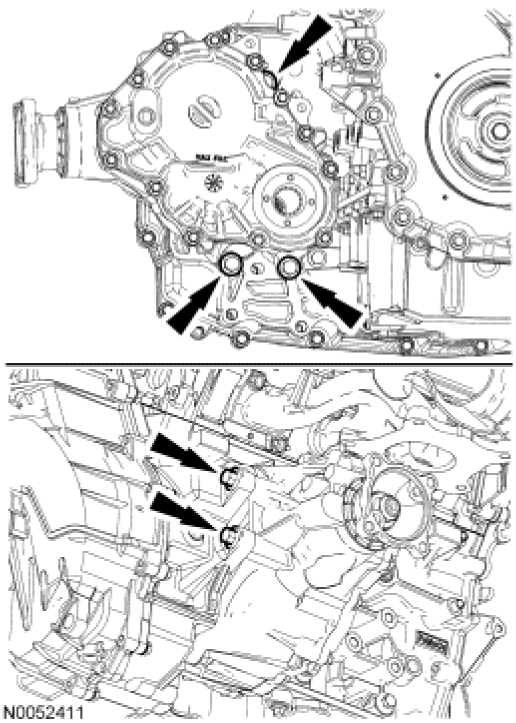

Fig. 889: Locating Transmission Fluid Cooler Tubes
Courtesy of FORD MOTOR CO.

95. Install the 2 secondary latches onto the transmission fluid cooler tubes.

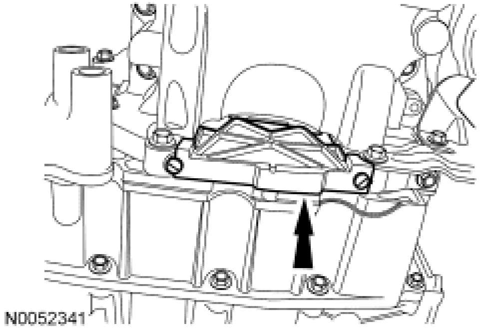

Fig. 890: Locating Secondary Latches On Transmission Fluid Cooler Tubes
Courtesy of FORD MOTOR CO.

96. Install the LH inner splash shield. For additional information, refer to **FRONT END BODY PANELS** article.
97. Install the radiator splash shield, the 3 pin-type retainers and the 7 screws.

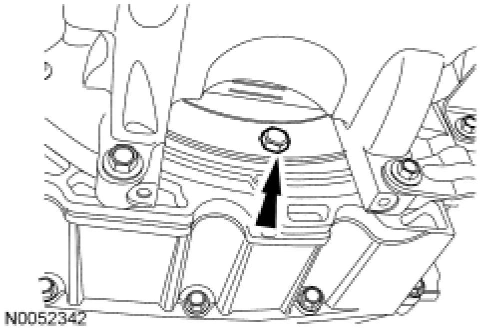

Fig. 891: Locating Push Pin Fasteners & Front Splash Shield Screws
Courtesy of FORD MOTOR CO.

98. Using a new gasket, install the Y-pipe and exhaust flexible pipe assembly and 4 new nuts.
    - Tighten to 40 Nm (30 lb-ft).

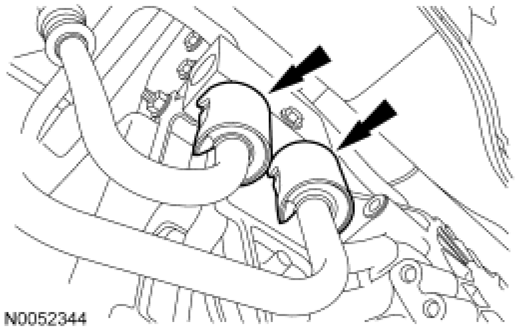

Fig. 892: Locating Exhaust Flexible Pipe, Y-Pipe & Nuts
Courtesy of FORD MOTOR CO.

99. Install the 2 exhaust hangers and tighten the exhaust clamp.

- Tighten to 40 Nm (30 lb-ft).

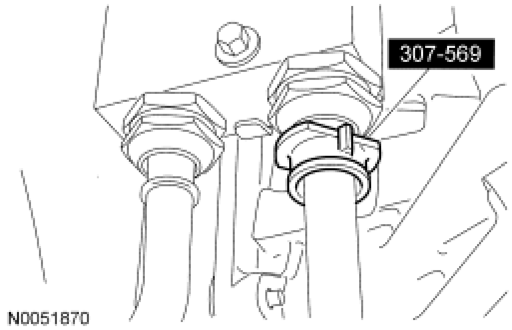

Fig. 893: Locating Exhaust Flexible Pipe Clamp & Exhaust Hangers
Courtesy of FORD MOTOR CO.

100. Install the ground wire, the radio interference capacitor wire and the nut to the engine front cover stud.
    - Tighten to 10 Nm (89 lb-in).

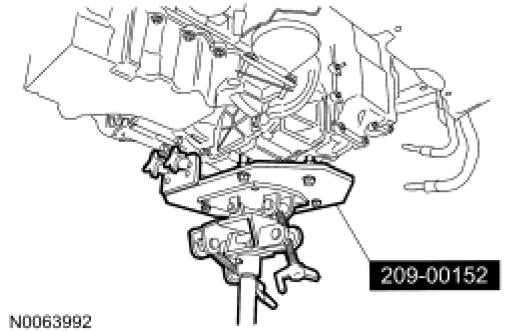

Fig. 894: Removing/installing Nut, Ground Wire & Radio Interference Capacitor Wire From Engine Front Cover Stud
Courtesy of FORD MOTOR CO.

101. Install the ground wire and bolt to the engine front cover.
    - Tighten to 10 Nm (89 lb-in).

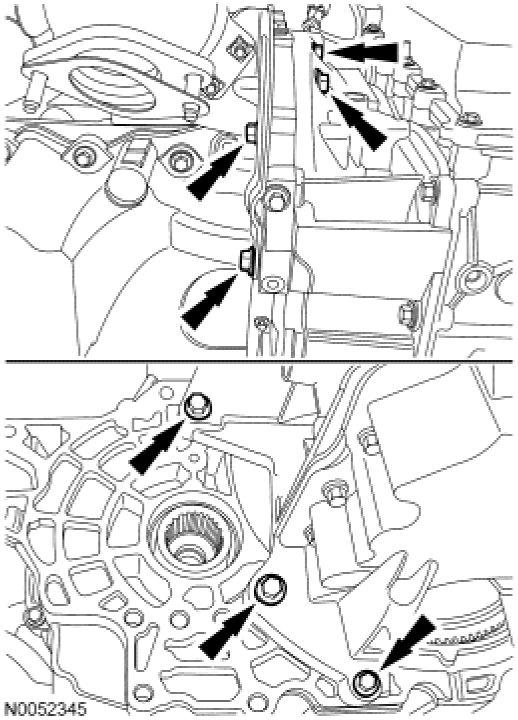

Fig. 895: Removing/Installing Bolt & Ground Wire From Engine Front Cover
Courtesy of FORD MOTOR CO.

102. Attach the wiring harness retainer to the RH valve cover stud bolt.

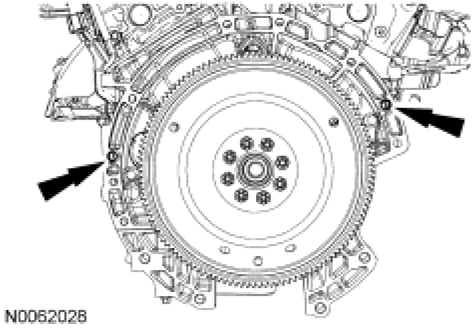

Fig. 896: Identifying Wiring Harness Retainer From RH Valve Cover Stud Bolt
Courtesy of FORD MOTOR CO.

103. Install the oil level indicator.

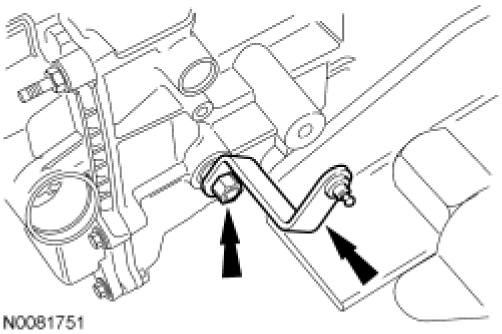

Fig. 897: Identifying Oil Level Indicator
Courtesy of FORD MOTOR CO.

104. Connect the 2 engine wiring harness electrical connectors.
    - Attach the electrical connector to the LH valve cover.

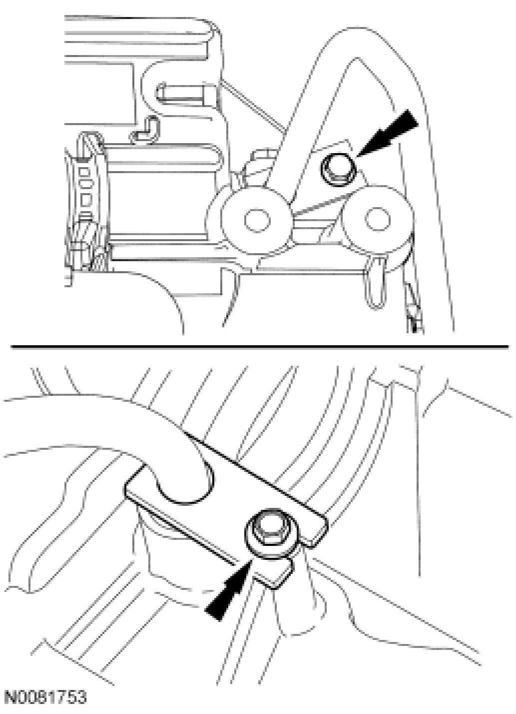

Fig. 898: Identifying Engine Wiring Harness Electrical Connectors
Courtesy of FORD MOTOR CO.

105. Connect the fuel hose routing clip to the transaxle stud.

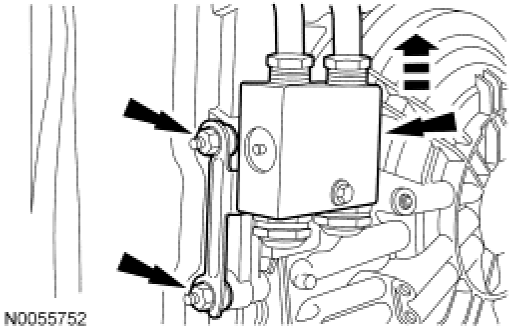

Fig. 899: Identifying Fuel Hose Routing Clip From Transaxle Stud
Courtesy of FORD MOTOR CO.

106. Connect the fuel supply tube. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

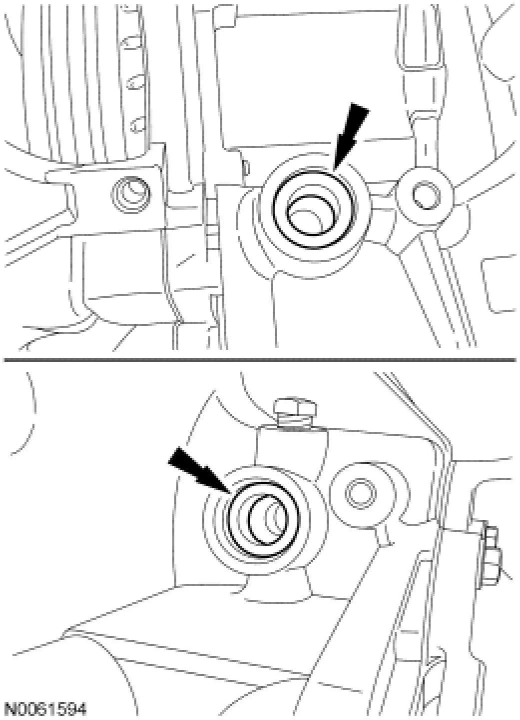

Fig. 900: Identifying Fuel Supply Tube
Courtesy of FORD MOTOR CO.

107. Connect the hose to the power steering reservoir.

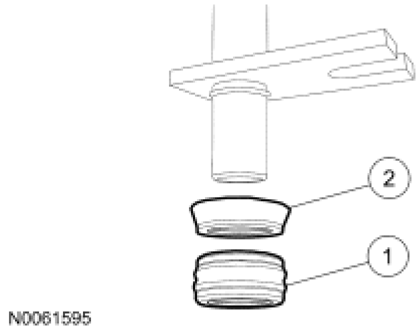

Fig. 901: Disconnecting Hose From Power Steering Reservoir
Courtesy of FORD MOTOR CO.

108. Connect the A/C suction tube fitting.
    - Install the safety clip onto the A/C fitting.

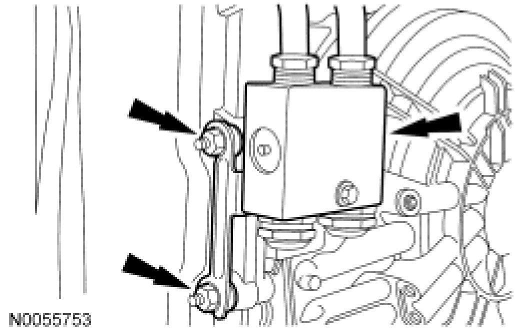

Fig. 902: Identifying Safety Clip On A/C Suction Tube Fitting
Courtesy of FORD MOTOR CO.

109. Using a new O-ring seal, connect the A/C pressure tube fitting and install the nut.
    - Tighten to 8 Nm (71 lb-in).

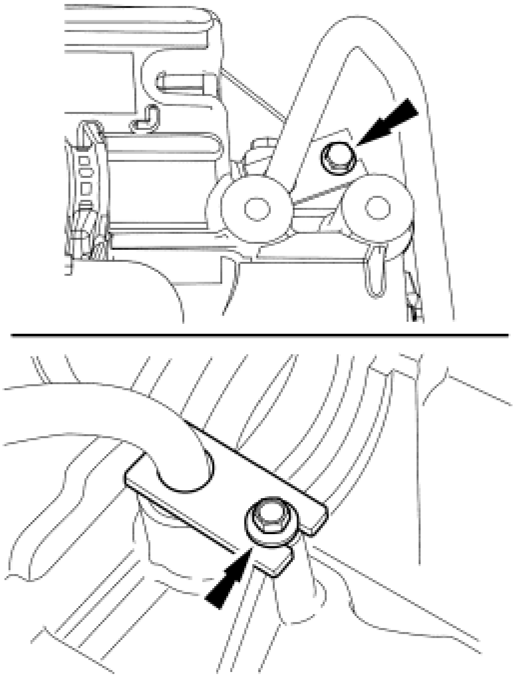

Fig. 903: Identifying A/C Pressure Tube Fitting Nut
Courtesy of FORD MOTOR CO.

110. If equipped, attach the engine block heater harness retainers from to the radiator support and the A/C suction tube.

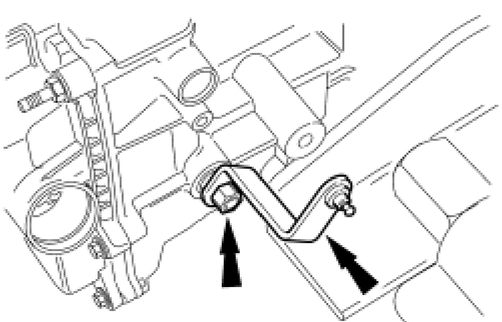

Fig. 904: Identifying Engine Block Heater Harness, Radiator Support, A/C Suction Tube & Engine Wiring Harness
Courtesy of FORD MOTOR CO.

111. Connect the transaxle control electrical connector.

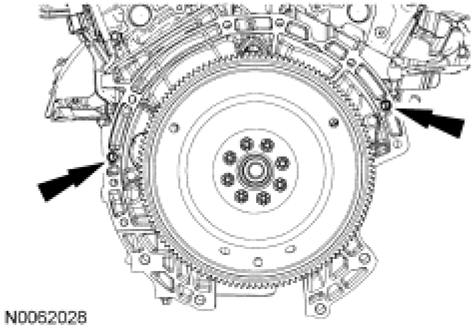

Fig. 905: Identifying Transaxle Control Electrical Connector
Courtesy of FORD MOTOR CO.

112. Attach the control cable to the bracket.
    - Connect the transaxle control cable to the control lever.

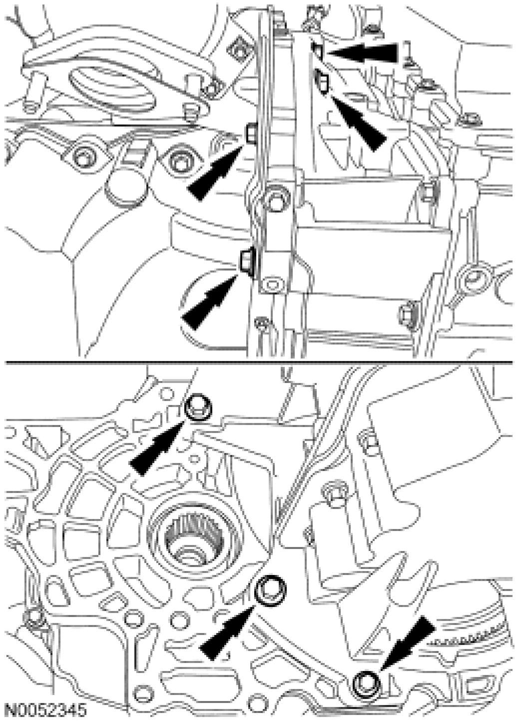

Fig. 906: Locating Transaxle Control Cable From Control Lever
Courtesy of FORD MOTOR CO.

113. Attach the wiring harness retainer to the transaxle control cable bracket.

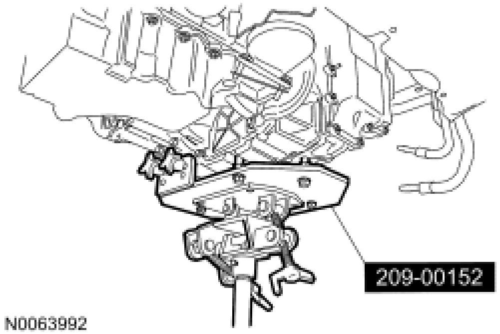

Fig. 907: Locating Wiring Harness Retainer From Transaxle Control Cable Bracket
Courtesy of FORD MOTOR CO.

114. Connect the upper radiator hose, lower radiator hose and 2 heater hoses to the thermostat housing.

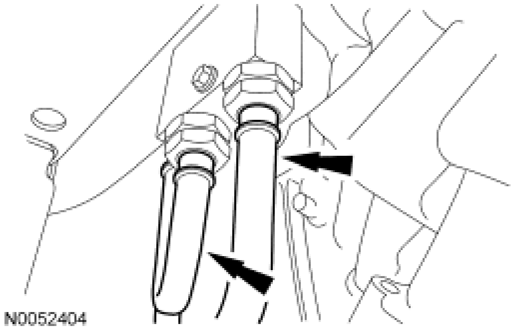

Fig. 908: Locating Upper Radiator Hose, Lower Radiator Hose & Heater Hoses
Courtesy of FORD MOTOR CO.

115. Connect the upper evaporative emissions (EVAP) tube quick connect coupling. to the purge valve. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

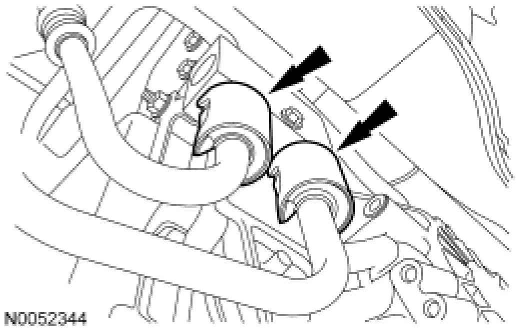

Fig. 909: Locating Upper Evaporative Emissions (EVAP) Tube Quick Connect Coupling
Courtesy of FORD MOTOR CO.

116. Connect the vacuum hose to the upper intake manifold.

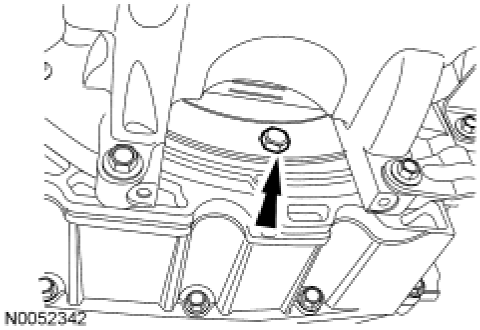

Fig. 910: Identifying Vacuum Hose From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

117. Install the ground wire and the bolt.
    - Tighten to 10 Nm (89 lb-in).
    - Attach the 2 wiring harness retainers to the cowl.

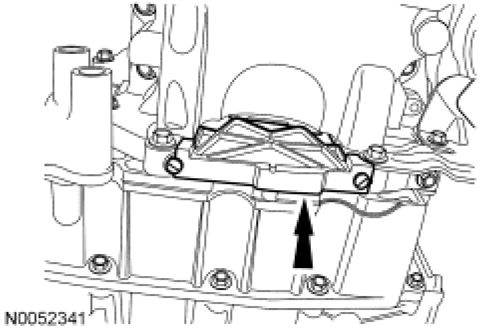

Fig. 911: Identifying Wiring Harness Retainers From Cowl
Courtesy of FORD MOTOR CO.

118. Connect the power feed to the battery terminal and install the nut.
    - Tighten to 8 Nm (71 lb-in).

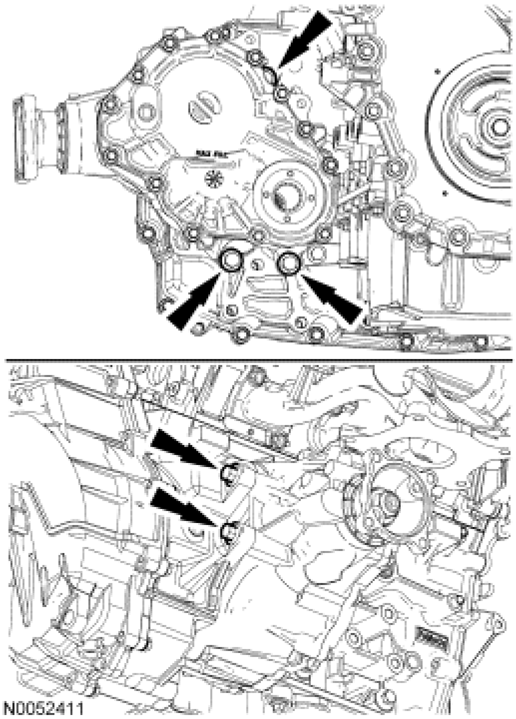

Fig. 912: Locating Power Feed To Battery Terminal And Nut
Courtesy of FORD MOTOR CO.

119. Connect the battery harness electrical connector.

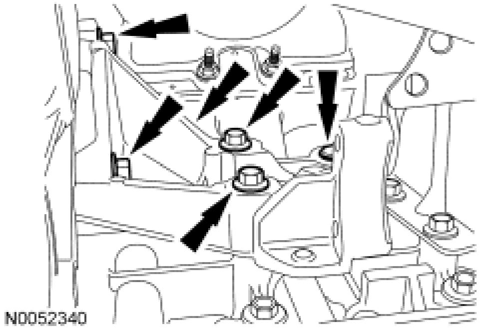

Fig. 913: Identifying Battery Harness Electrical Connector
Courtesy of FORD MOTOR CO.

120. Install the battery tray. For additional information, refer to **BATTERY, MOUNTING & CABLES** article.
121. Install the engine air cleaner and the air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION & FILTERING** article.
122. Install the degas bottle. For additional information, refer to **ENGINE COOLING** article.
123. Install the accessory drive belt and the power steering belt. For additional information, refer to **ACCESSORY DRIVE** article.

CAUTION: Do not expose the Motorcraft High Performance Engine RTV Silicone to engine oil for at least 90 minutes after installing the engine front cover. Failure to follow this instruction may cause oil leakage.

124. Fill the engine with clean engine oil.
125. Fill and bleed the cooling system. For additional information, refer to **ENGINE COOLING** article.
126. Fill the power steering system. For additional information, refer to **STEERING SYSTEM - GENERAL INFORMATION** article.
127. Recharge the A/C system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION & DIAGNOSTICS** article.

VALVE TAPPETS

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

NOTE: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, may cause engine failure.

NOTE: The valve tappets must be installed in their original positions.

NOTE: Coat the valve tappets with clean engine oil prior to installation.

1. Install the valve tappets.

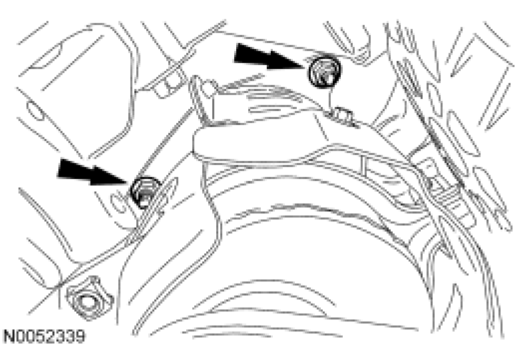

Fig. 914: Identifying Valve Tappets From Cylinder Head
Courtesy of FORD MOTOR CO.

2. Depending on the valve tappets being serviced, install the LH and/or the RH camshafts. For additional information, refer to **Camshaft**.

VALVE SPRING, RETAINER AND SEAL

Special Tools

Illustration	Tool Name	Tool Number
	Compressor, Valve Spring	303-300 (T87C-6565-A)
	Compressor, Valve Spring	303-350 (T89P-6565-A)
	Compressor, Valve Spring	303-1249
	Installer, Valve Stem Oil Seal	303-470 (T94P-6510-CH)

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

NOTE: Lubricate the valve stem seal with clean engine oil prior to installation.

1. Using the Valve Stem Oil Seal Installer, install a new valve stem seal.

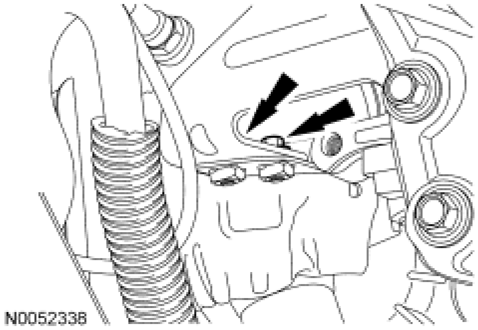

Fig. 915: Installing New Valve Stem Seal Using Special Tool (303-470)
Courtesy of FORD MOTOR CO.

2. Using the Valve Spring Compressors, install the valve spring, retainer and key.

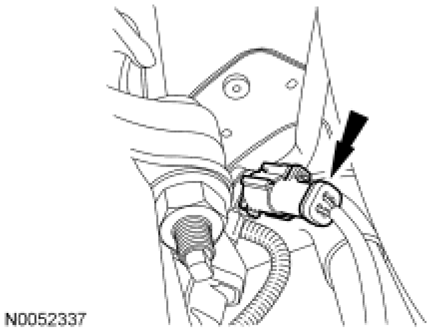

Fig. 916: Removing Keys, Retainer & Spring Using Special Tools (303-1249, 303-350, 303-300)
Courtesy of FORD MOTOR CO.

3. Install the valve tappets. For additional information, refer to **Valve Tappets**.

CYLINDER HEAD - RH

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

All vehicles

1. Install a new gasket, the RH cylinder head and 8 new bolts. Tighten in the sequence shown in 5 stages:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 35 Nm (26 lb-ft).
    - Stage 3: Tighten 90 degrees.
    - Stage 4: Tighten 90 degrees.
    - Stage 5: Tighten 90 degrees.

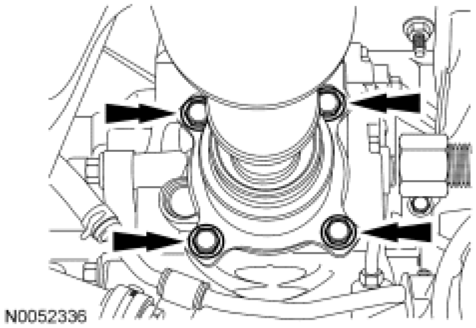

Fig. 917: Installing RH Cylinder Head Bolts In Sequence
Courtesy of FORD MOTOR CO.

2. Install the bolt.
    - Tighten to 10 Nm (89 lb-in).

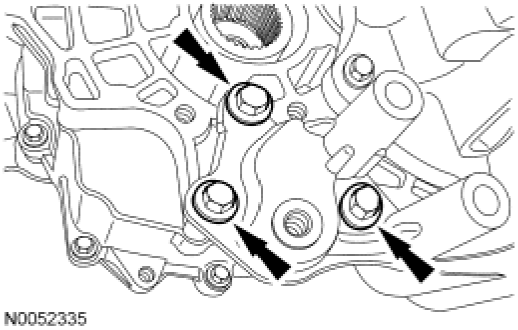

Fig. 918: Identifying M6 Bolt
Courtesy of FORD MOTOR CO.

NOTE: The valve tappets must be installed in their original positions.

NOTE: Coat the valve tappets with clean engine oil prior to installation.

3. Install the valve tappets.

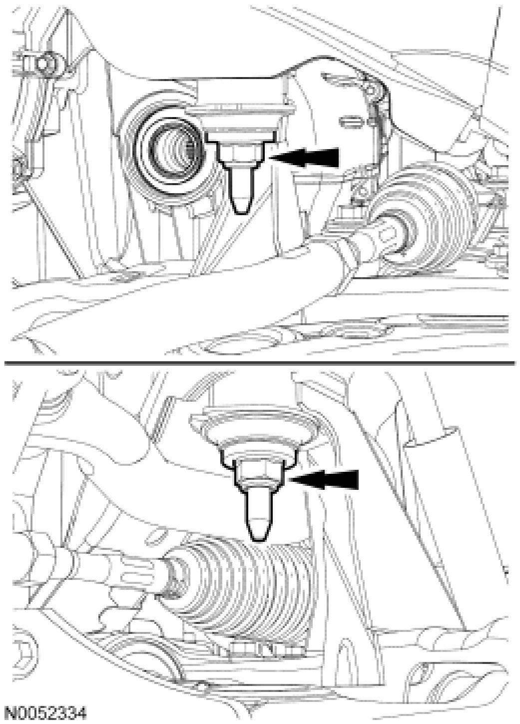

Fig. 919: Identifying Valve Tappets From Cylinder Head
Courtesy of FORD MOTOR CO.

4. Install and connect the cylinder head temperature (CHT) sensor jumper harness.

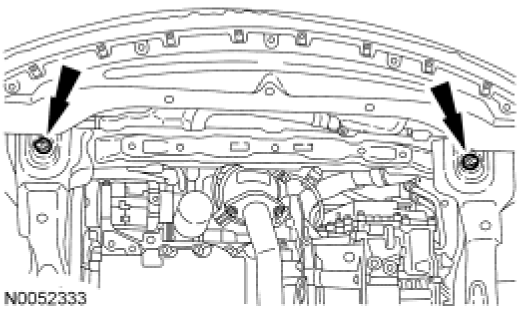

Fig. 920: Identifying CHT Sensor Jumper Harness
Courtesy of FORD MOTOR CO.

5. Using new gaskets, install the lower intake manifold and the 10 bolts.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).

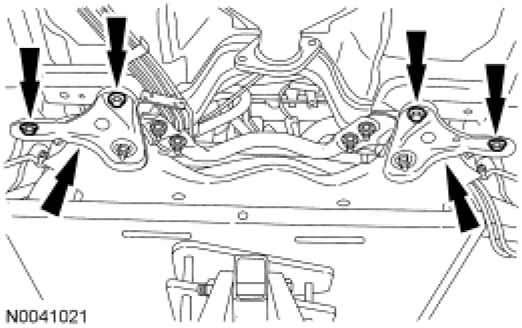

Fig. 921: Installing Lower Intake Manifold Bolts In Sequence
Courtesy of FORD MOTOR CO.

6. Using a new gasket and O-ring seal, install the thermostat housing and the 3 bolts.
   - Tighten to 10 Nm (89 lb-in).

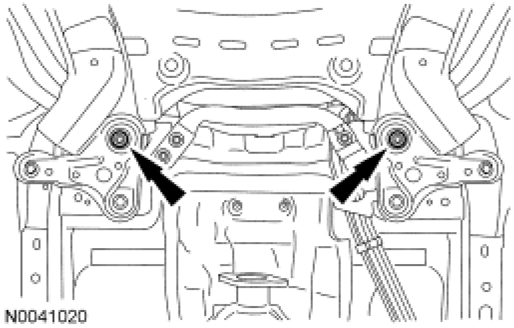

Fig. 922: Locating Thermostat Housing-To-Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Use O-ring seals that are made of special fuel-resistant material. The use of ordinary O-rings can cause the fuel system to leak. Do not reuse the O-ring seals.

NOTE: The upper and lower O-ring seals are not interchangeable.

7. Install new fuel injector O-ring seals.
   - Remove the retaining clips and separate the fuel injectors from the fuel rail.
   - Remove and discard the O-ring seals.
   - Install new O-ring seals and lubricate with clean engine oil.
   - Install the fuel injectors and the retaining clips onto the fuel rail.

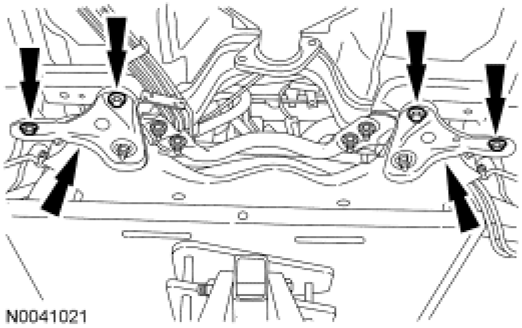

Fig. 923: Identifying Fuel Injector O-Ring Seals
Courtesy of FORD MOTOR CO.

8. Install the fuel rail and injectors as an assembly and install the 4 bolts.
    - Tighten to 10 Nm (89 lb-in).

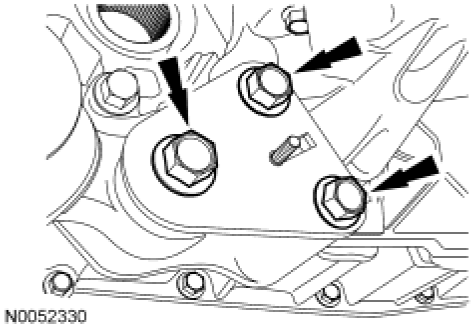

Fig. 924: Identifying Fuel Rail And Injectors
Courtesy of FORD MOTOR CO.

9. Install the RH camshaft position (CMP) sensor and the bolt.
    - Tighten to 10 Nm (89 lb-in).

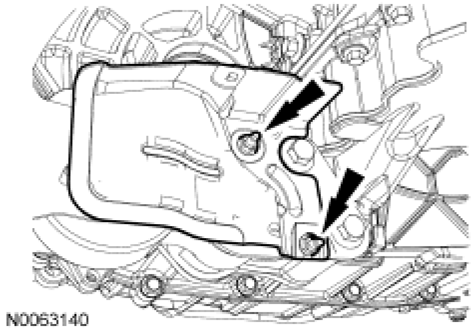

Fig. 925: Locating RH CMP Sensor & Bolt
Courtesy of FORD MOTOR CO.

NOTE: **Align the bracket with the index mark made during removal.**

10. Install the upper intake manifold bracket and the bolt.
    - Tighten to 10 Nm (89 lb-in).

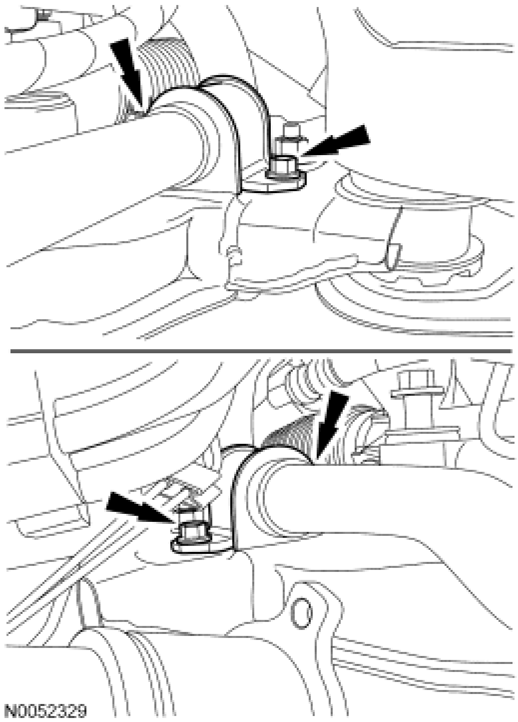

Fig. 926: Locating Upper Intake Manifold Bracket & Bolt
Courtesy of FORD MOTOR CO.

11. Install the engine lifting eye and the 2 bolts.
    - Tighten to 24 Nm (18 lb-ft).

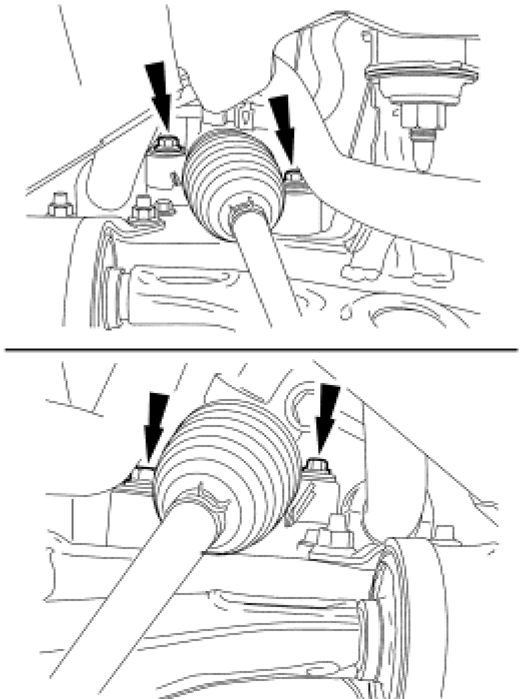

Fig. 927: Locating Engine Lifting Eye & Bolts
Courtesy of FORD MOTOR CO.

12. Install the RH secondary timing chain tensioner and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

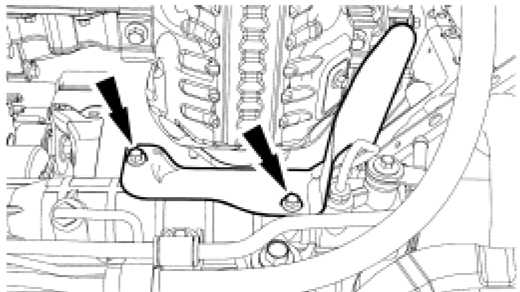

Fig. 928: Locating RH Secondary Timing Chain Tensioner & Bolts
Courtesy of FORD MOTOR CO.

13. Install the RH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

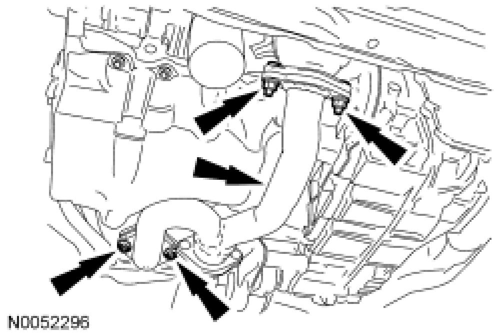

Fig. 929: Locating RH Primary Timing Chain Guide Lower Bolt
Courtesy of FORD MOTOR CO.

14. Install 6 new RH exhaust manifold studs.
    - Tighten to 12 Nm (9 lb-ft).

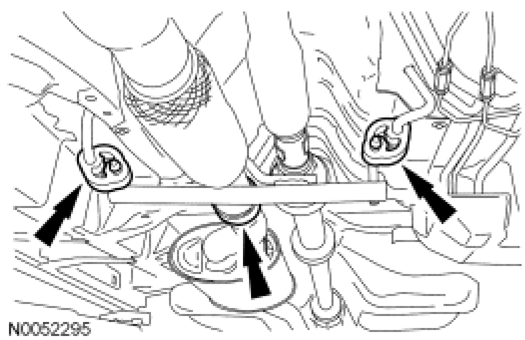

Fig. 930: Locating RH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

CAUTION: Failure to tighten the exhaust manifold nuts to specification a second time will cause the exhaust manifold to develop an exhaust leak.

15. Using a new gasket, install the RH exhaust manifold and 6 new nuts. Tighten in 2 stages in the sequence shown:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 20 Nm (15 lb-ft).

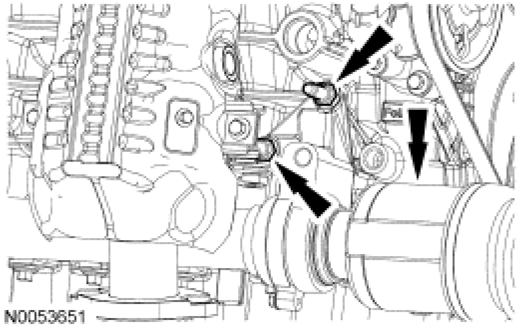

Fig. 931: Installing RH Exhaust Manifold Nuts In Sequence
Courtesy of FORD MOTOR CO.

16. Install the RH exhaust manifold heat shield and the 3 bolts.
    - Tighten to 14 Nm (10 lb-ft).

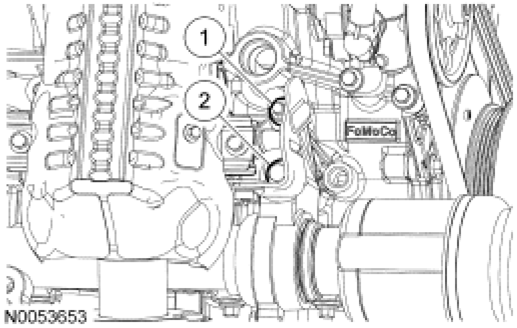

Fig. 932: Locating RH Exhaust Manifold Heat Shield & Nuts
Courtesy of FORD MOTOR CO.

17. Install the RH cylinder block drain plug or, if equipped, the block heater.
    - Tighten to 40 Nm (30 lb-ft).

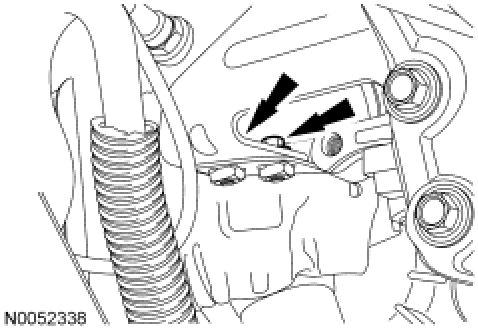

Fig. 933: Locating RH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

NOTE:	**Do not tighten the 4 catalytic converter nuts at this time.**

18. Using a new gasket, install the RH catalytic converter and 4 new nuts.

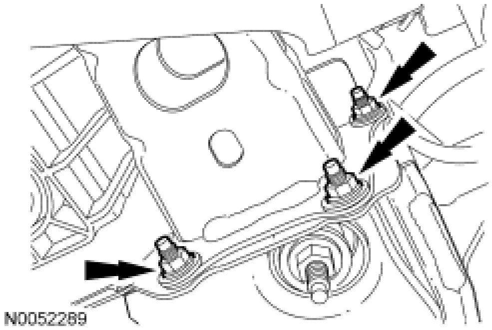

Fig. 934: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

19. Install the 2 RH catalytic converter bracket bolts.
    - Tighten the 4 catalytic converter nuts to 40 Nm (30 lb-ft).
    - Tighten the 2 catalytic converter bracket bolts to 20 Nm (15 lb-ft).

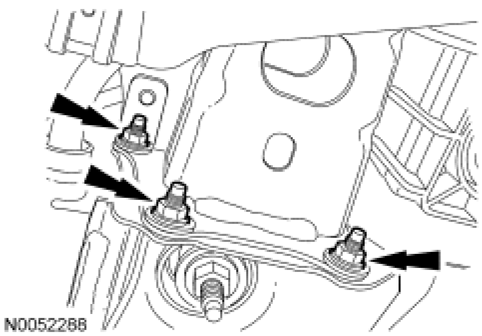

Fig. 935: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

All vehicles

20. Install the LH cylinder block drain plug.
    - Tighten to 20 Nm (15 lb-ft) plus an additional 180 degrees.

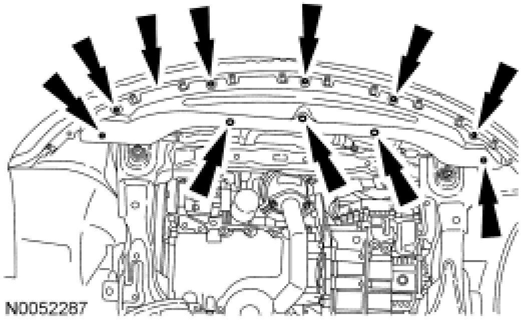

Fig. 936: Locating LH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

21. Using a new gasket, install the LH catalytic converter and 4 new nuts (3 shown).
    - Tighten to 40 Nm (30 lb-ft).

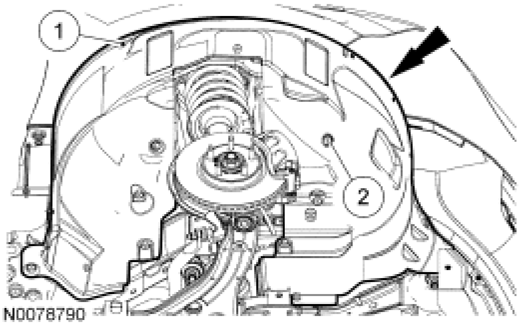

Fig. 937: Locating LH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

22. Install the 2 LH catalytic converter bracket bolts.
    - Tighten to 20 Nm (15 lb-ft).

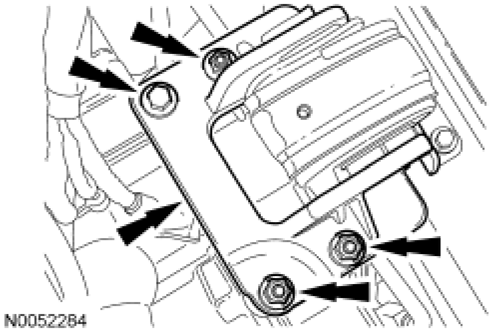

Fig. 938: Locating LH Catalytic Converter Bracket Bolts
Courtesy of FORD MOTOR CO.

23. Connect the LH catalyst monitor sensor electrical connector.

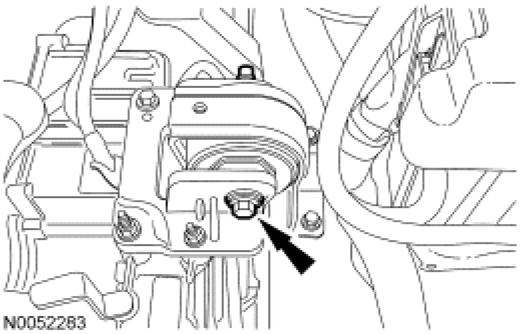

Fig. 939: Identifying LH Catalyst Monitor Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

24. Connect the CHT sensor electrical connector.

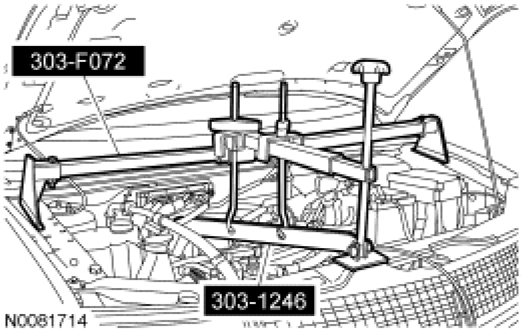

Fig. 940: Locating Cylinder Head Temperature (CHT) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

25. Connect the 6 fuel injector electrical connectors (3 shown).

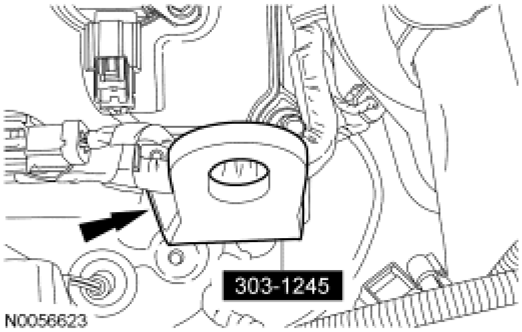

Fig. 941: Locating Fuel Injector Electrical Connectors
Courtesy of FORD MOTOR CO.

26. Install the ground cable and the bolt.
    - Tighten to 10 Nm (89 lb-in).

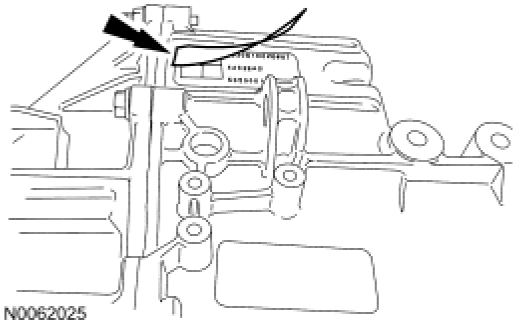

Fig. 942: Locating Ground Cable From RH Cylinder
Courtesy of FORD MOTOR CO.

27. Connect the RH CMP sensor electrical connector.

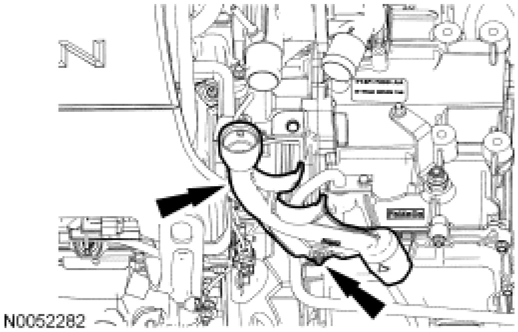

Fig. 943: Locating RH Camshaft Position (CMP) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

28. Connect the RH heated oxygen sensor (HO2S) electrical connector.

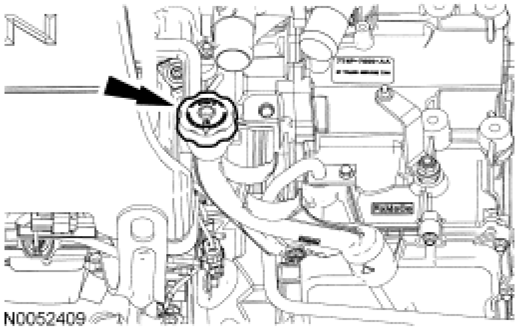

Fig. 944: Locating RH Heated Oxygen Sensor (HO2S) Electrical Connector
Courtesy of FORD MOTOR CO.

29. If equipped, install the block heater wiring harness onto the engine.
    - Connect the block heater electrical connector and install the heat shield.

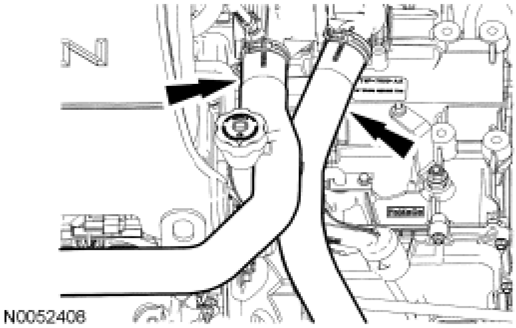

Fig. 945: Identifying Block Heater Wiring Harness
Courtesy of FORD MOTOR CO.

30. Install the RH camshafts. For additional information, refer to **Camshaft**.

CYLINDER HEAD - LH

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

All vehicles

1. Install a new gasket, the LH cylinder head and 8 new bolts. Tighten in the sequence shown in 5 stages:
   - Stage 1: Tighten to 20 Nm (15 lb-ft).
   - Stage 2: Tighten to 35 Nm (26 lb-ft).
   - Stage 3: Tighten 90 degrees.
   - Stage 4: Tighten 90 degrees.
   - Stage 5: Tighten 90 degrees.

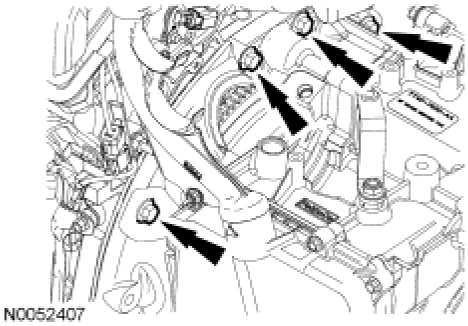

Fig. 946: Installing LH Cylinder Head Bolts In Sequence
Courtesy of FORD MOTOR CO.

2. Install the bolt.
   - Tighten to 10 Nm (89 lb-in).

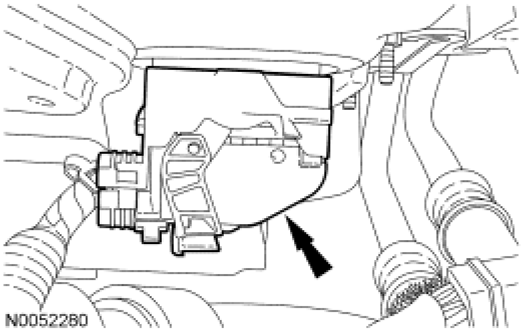

Fig. 947: Identifying M6 Bolt
Courtesy of FORD MOTOR CO.

NOTE:	**The valve tappets must be installed in their original positions.**

NOTE:	**Coat the valve tappets with clean engine oil prior to installation.**

3. Install the valve tappets.

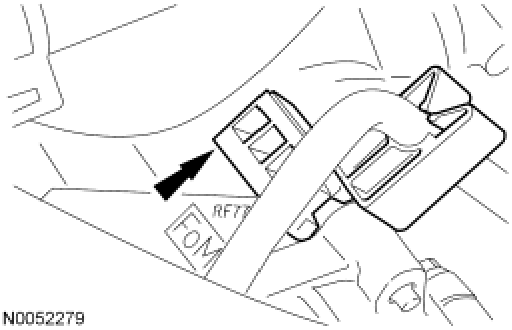

Fig. 948: Identifying Valve Tappets From Cylinder Head

Courtesy of FORD MOTOR CO.

4. Install the LH secondary timing chain tensioner and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

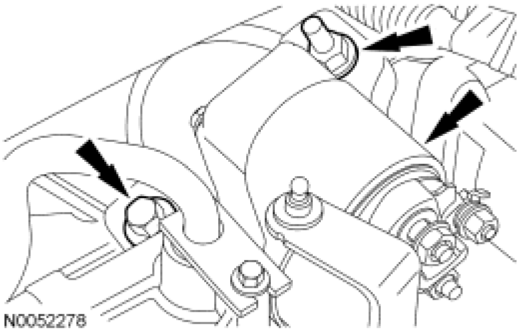

Fig. 949: Locating LH Secondary Timing Chain Tensioner & Bolt
Courtesy of FORD MOTOR CO.

5. Install the upper LH primary timing chain guide and the 2 bolts.
    - Tighten to 10 Nm (89 lb-in).

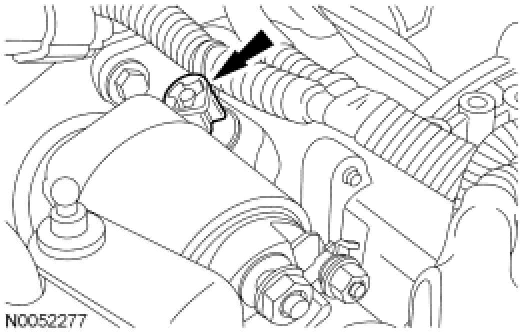

Fig. 950: Locating Upper LH Primary Timing Chain Guide Bolts
Courtesy of FORD MOTOR CO.

6. Install LH camshaft position (CMP) sensor and the bolt.
    - Tighten to 10 Nm (89 lb-in).

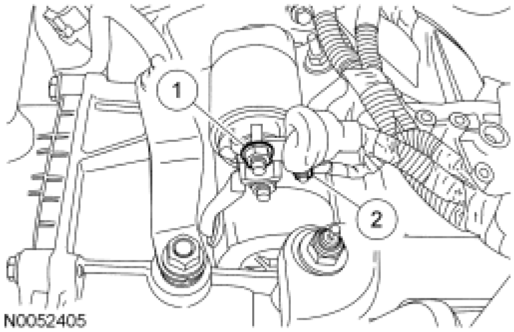

Fig. 951: Locating LH CMP Sensor & Bolt
Courtesy of FORD MOTOR CO.

7. Using new gaskets, install the lower intake manifold and the 10 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

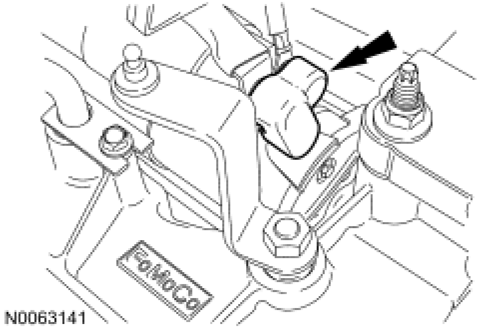

Fig. 952: Installing Lower Intake Manifold Bolts In Sequence
Courtesy of FORD MOTOR CO.

8. Using a new gasket and O-ring seal, install the thermostat housing and the 3 bolts.
    - Tighten to 10 Nm (89 lb-in).

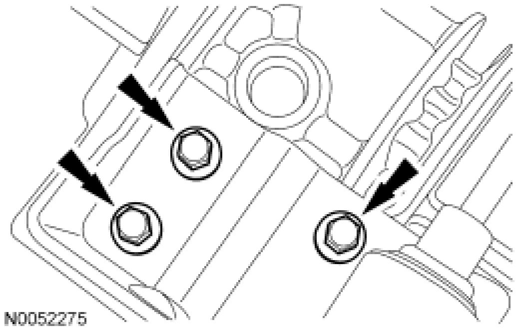

Fig. 953: Locating Thermostat Housing-To-Lower Intake Manifold Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Use O-ring seals that are made of special fuel-resistant material. The use of ordinary O-rings can cause the fuel system to leak. Do not reuse the O-ring seals.

NOTE: The upper and lower O-ring seals are not interchangeable.

9. Install new fuel injector O-ring seals.
    - Remove the retaining clips and separate the fuel injectors from the fuel rail.
    - Remove and discard the O-ring seals.
    - Install new O-ring seals and lubricate with clean engine oil.

- Install the fuel injectors and the retaining clips onto the fuel rail.

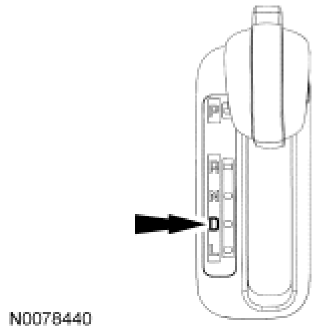

Fig. 954: Identifying Fuel Injector O-Ring Seals
Courtesy of FORD MOTOR CO.

10. Install the fuel rail and injectors as an assembly and install the 4 bolts.
    - Tighten to 10 Nm (89 lb-in).

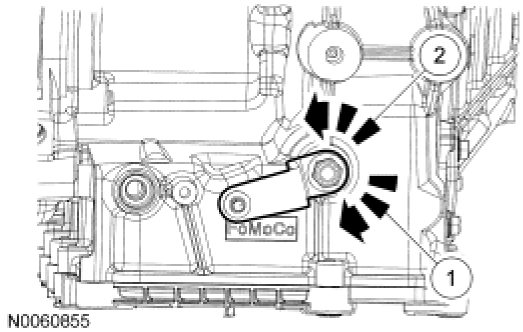

Fig. 955: Identifying Fuel Rail And Injectors
Courtesy of FORD MOTOR CO.

11. Install the RH cylinder block drain plug or, if equipped, the block heater.
    - Tighten to 40 Nm (30 lb-ft).

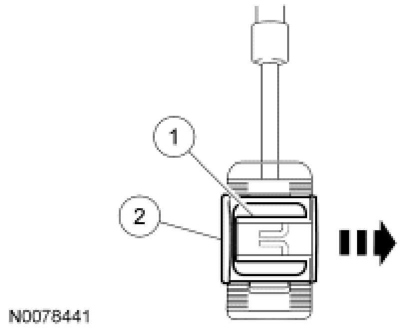

Fig. 956: Locating RH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

12. Using a new gasket, install the RH catalytic converter and 4 new nuts.
    - Tighten to 40 Nm (30 lb-ft).

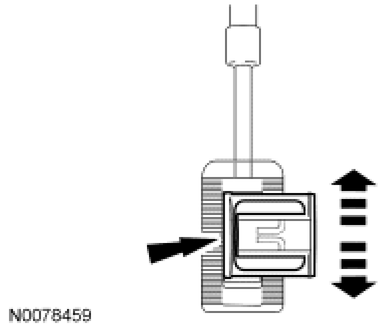

Fig. 957: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

13. Install the 2 RH catalytic converter bracket bolts.
    - Tighten the 4 catalytic converter nuts to 40 Nm (30 lb-ft).
    - Tighten the 2 catalytic converter brackets to 20 Nm (15 lb-ft).

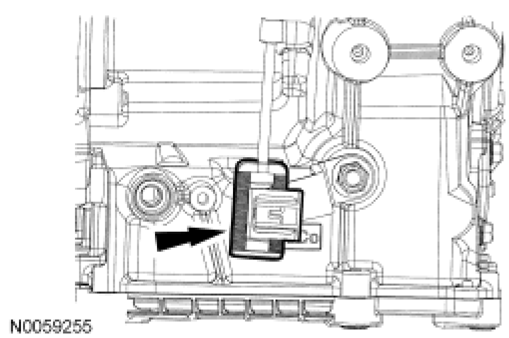

Fig. 958: Identifying RH Catalytic Converter Support Bracket Bolts
Courtesy of FORD MOTOR CO.

All vehicles

14. Install the LH cylinder block drain plug.
    - Tighten to 20 Nm (15 lb-ft) plus an additional 180 degrees.

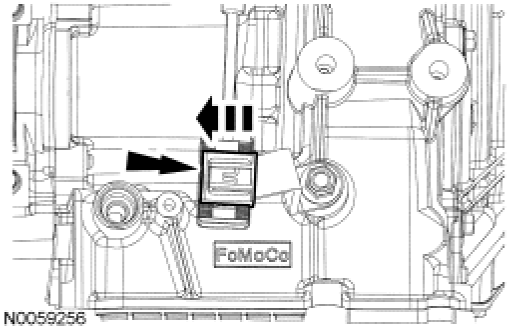

Fig. 959: Locating LH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

15. Install 6 new LH exhaust manifold studs.
    - Tighten to 12 Nm (9 lb-ft).

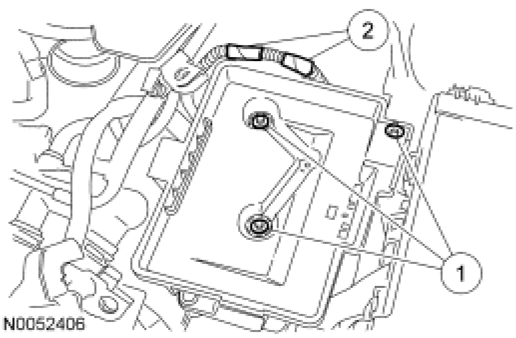

Fig. 960: Locating LH Exhaust Manifold Studs
Courtesy of FORD MOTOR CO.

CAUTION: Failure to tighten the exhaust manifold nuts to specification a second time will cause the exhaust manifold to develop an exhaust leak.

16. Using a new gasket, install the LH exhaust manifold and 6 new nuts. Tighten in 2 stages in the sequence shown:
    - Stage 1: Tighten to 20 Nm (15 lb-ft).
    - Stage 2: Tighten to 20 Nm (15 lb-ft).

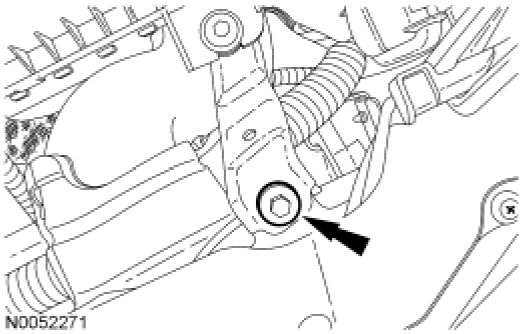

Fig. 961: Installing LH Exhaust Manifold Nuts In Sequence
Courtesy of FORD MOTOR CO.

17. Install the LH exhaust manifold heat shield and the 3 bolts.
    - Tighten to 14 Nm (10 lb-ft).

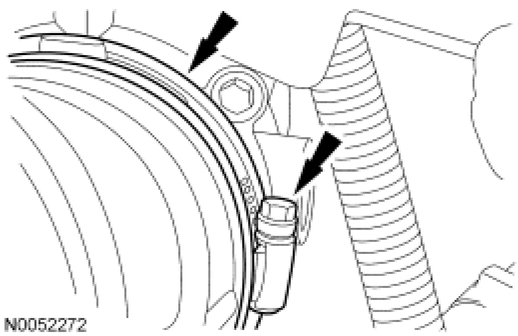

Fig. 962: Locating LH Exhaust Manifold Heat Shield & Nuts
Courtesy of FORD MOTOR CO.

18. Using a new gasket, install the LH catalytic converter and 4 new nuts (3 shown).
    - Tighten to 40 Nm (30 lb-ft).

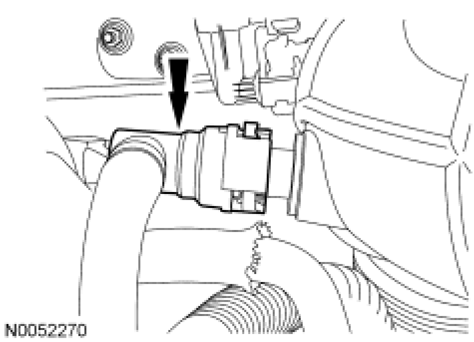

Fig. 963: Locating LH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

19. Install the 2 LH catalytic converter bracket bolts.

- Tighten to 20 Nm (15 lb-ft).

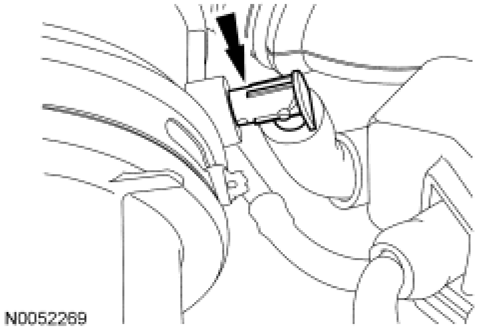

Fig. 964: Locating LH Catalytic Converter Bracket Bolts
Courtesy of FORD MOTOR CO.

20. Install the generator, the bolt and the nut.
    - Tighten to 47 Nm (35 lb-ft).

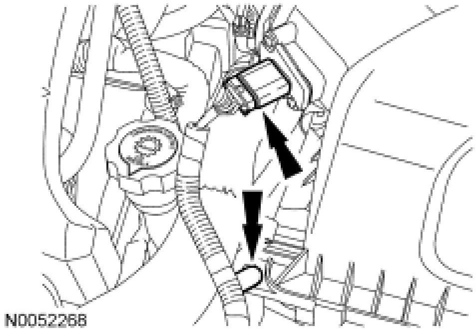

Fig. 965: Locating Generator, Bolts & Nuts
Courtesy of FORD MOTOR CO.

21. Install the A/C compressor, the nut and the 2 bolts.
    - Tighten to 25 Nm (18 lb-ft).

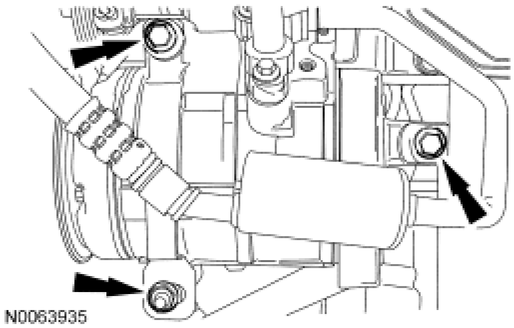

Fig. 966: Locating A/C Compressor, Bolts & Nuts
Courtesy of FORD MOTOR CO.

22. Connect the engine oil pressure (EOP) switch electrical connector and the wiring harness pin-type retainer.

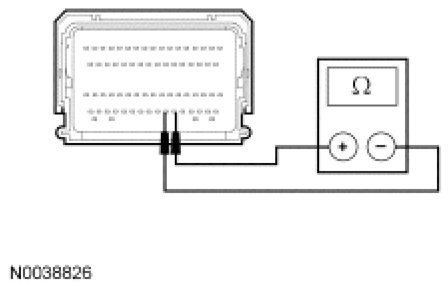

Fig. 967: Locating Engine Oil Pressure (EOP) Switch Electrical Connector & Wiring Harness Pin-Type Retainer
Courtesy of FORD MOTOR CO.

23. Attach the wiring harness retainer to the generator.

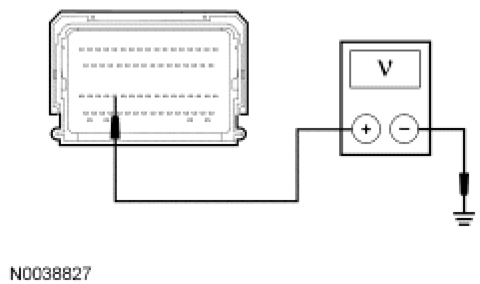

Fig. 968: Identifying Wiring Harness Retainer From Generator
Courtesy of FORD MOTOR CO.

24. Connect the generator electrical connector.

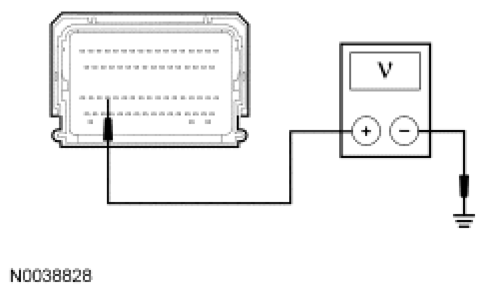

Fig. 969: Identifying Generator Electrical Connector
Courtesy of FORD MOTOR CO.

25. Connect the generator B+ cable and install the nut.
    - Tighten to 6 Nm (53 lb-in).

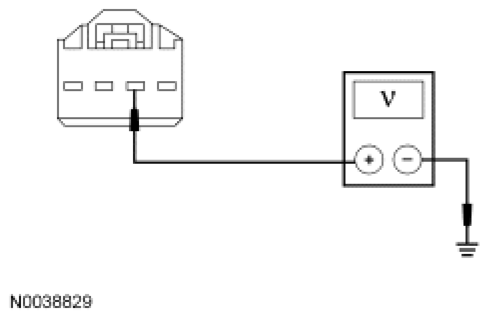

Fig. 970: Identifying Generator B+ Cable & Nut
Courtesy of FORD MOTOR CO.

26. Connect the A/C compressor electrical connector.

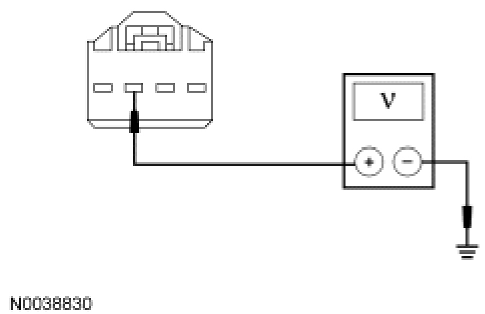

Fig. 971: Identifying A/C Compressor Electrical Connector
Courtesy of FORD MOTOR CO.

27. Install the wiring harness retainer bolt on the rear of the LH cylinder head.
    - Tighten to 10 Nm (89 lb-in).

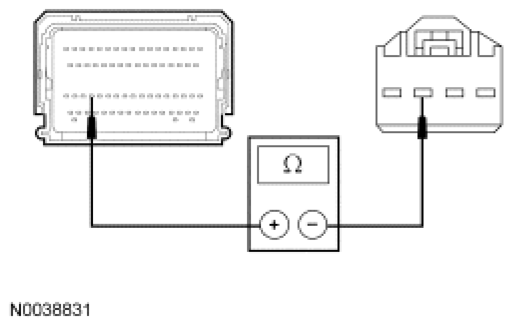

Fig. 972: Identifying Wiring Harness Retainer Bolt From Rear Of LH Cylinder Head
Courtesy of FORD MOTOR CO.

28. Connect the LH catalyst monitor sensor electrical connector.

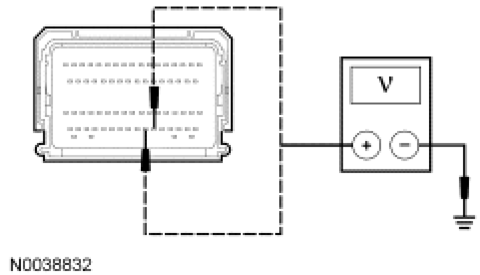

Fig. 973: Identifying LH Catalyst Monitor Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

29. Connect the LH HO2S electrical connector.

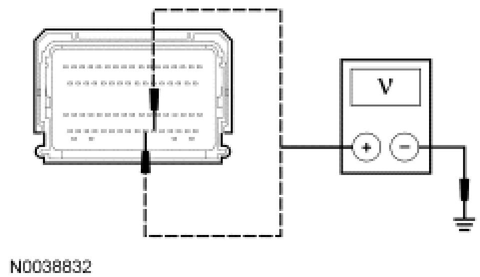

Fig. 974: Locating LH Heated Oxygen Sensor (HO2S) Electrical Connector
Courtesy of FORD MOTOR CO.

30. Connect the LH CMP sensor electrical connector.

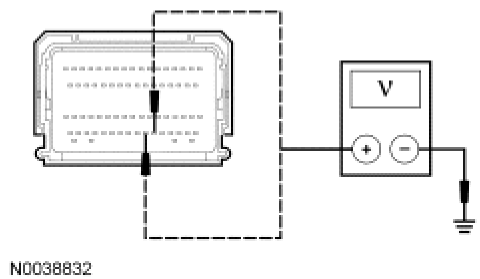

Fig. 975: Locating LH CMP Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

31. Connect the CHT sensor electrical connector.

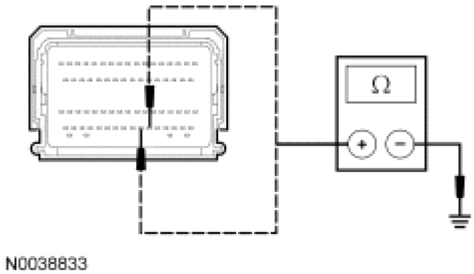

Fig. 976: Locating Cylinder Head Temperature (CHT) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

32. Connect the 6 fuel injector electrical connectors (3 shown).

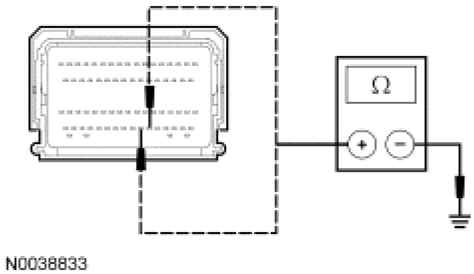

Fig. 977: Locating Fuel Injector Electrical Connectors
Courtesy of FORD MOTOR CO.

33. If equipped, install the block heater wiring harness onto the engine.
    - Connect the block heater electrical connector and install the heat shield.

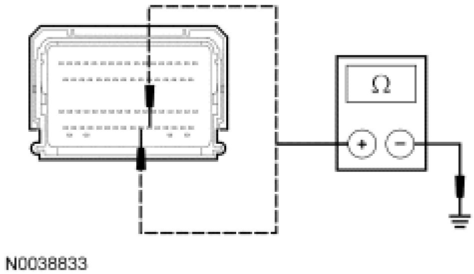

Fig. 978: Identifying Block Heater Wiring Harness
Courtesy of FORD MOTOR CO.

34. Install the LH camshafts. For additional information, refer to **Camshaft**.

OIL PAN

Special Tools

Illustration	Tool Name	Tool Number

Material

Item	Specification
Motorcraft High Performance Engine RTV Silicone TA-357	WSE-M4G323-A6
Motorcraft Metal Surface Prep ZC-31-A	-
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A
Silicone Gasket Remover ZC-30	-

CAUTION: During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

All vehicles

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: The oil pan and the 4 specified bolts must be installed and the oil pan aligned to the cylinder block and A/C compressor within 4 minutes of sealant application. Final tightening of the oil pan bolts must be carried out within 60 minutes of sealant application.

1. Apply a 3 mm (0.11 in) bead of Motorcraft High Performance Engine RTV Silicone to the sealing surface of the oil pan.

- Apply a 5.5 mm (0.21 in) bead of Motorcraft High Performance Engine RTV Silicone to the 2 crankshaft seal retainer plate-to-cylinder block joint areas on the sealing surface of the oil pan.

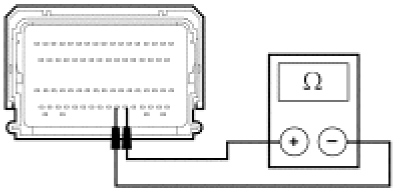

Fig. 979: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Crankshaft Seal Retainer Plate-To-Cylinder Block
Courtesy of FORD MOTOR CO.

NOTE: The oil pan and the 4 specified bolts must be installed within 4 minutes of the start of sealant application.

2. Install the oil pan and bolts 10, 11, 13 and 14.
   - Tighten the bolts in the sequence shown to 3 Nm (27 lb-in).
   - Loosen the bolts 180 degrees.

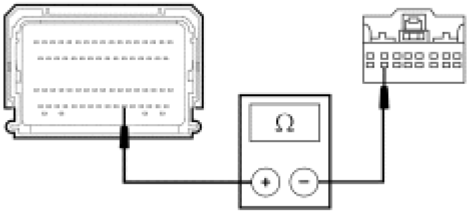

Fig. 980: Installing Oil Pan Bolts 10, 11, 13 & 14 In Sequence
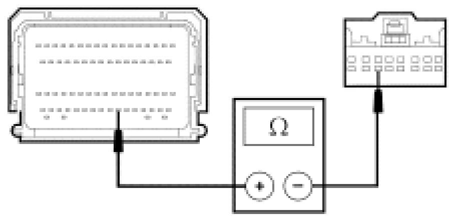
Courtesy of FORD MOTOR CO.

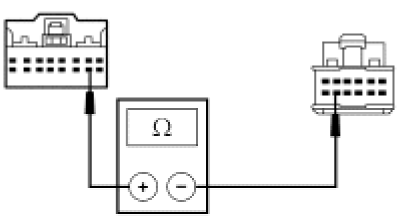
3. Align the oil pan to the cylinder block and the A/C compressor.
   - Position the oil pan so the mounting boss is against the A/C compressor and using a straightedge, align the oil pan flush with the rear of the cylinder block at the 2 areas shown.



N0075560

Fig. 981: Aligning Oil Pan Flush With Rear Of Cylinder Block
Courtesy of FORD MOTOR CO.

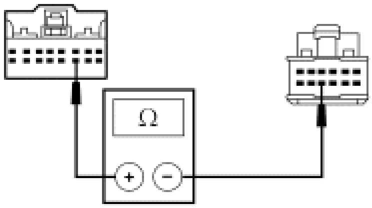
4. Tighten bolts 10, 11, 13 and 14 in the sequence shown, to 3 Nm (27 lb-in).



N0075562

Fig. 982: Installing Oil Pan Bolts 10, 11, 13 & 14 In Sequence
Courtesy of FORD MOTOR CO.

5. Install the remaining oil pan bolts. Tighten all the oil pan bolts in the sequence shown.
   - Tighten the large bolts (1-14) to 20 Nm (15 lb-ft).
   - Tighten the small bolts (15 and 16) to 10 Nm (89 lb-in).



N0075563

Fig. 983: Installing Remaining Oil Pan Bolts In Sequence
Courtesy of FORD MOTOR CO.

6. Install the A/C compressor mounting stud and nut.

- Tighten the stud to 9 Nm (80 lb-in) and the nut to 25 Nm (18 lb-ft).

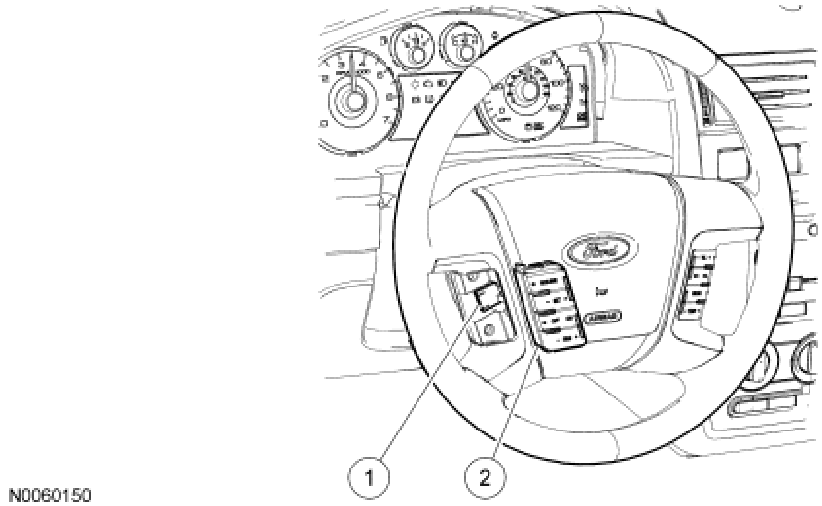


Fig. 984: Locating A/C Compressor Nut & Stud
Courtesy of FORD MOTOR CO.

7. Install the special tools.

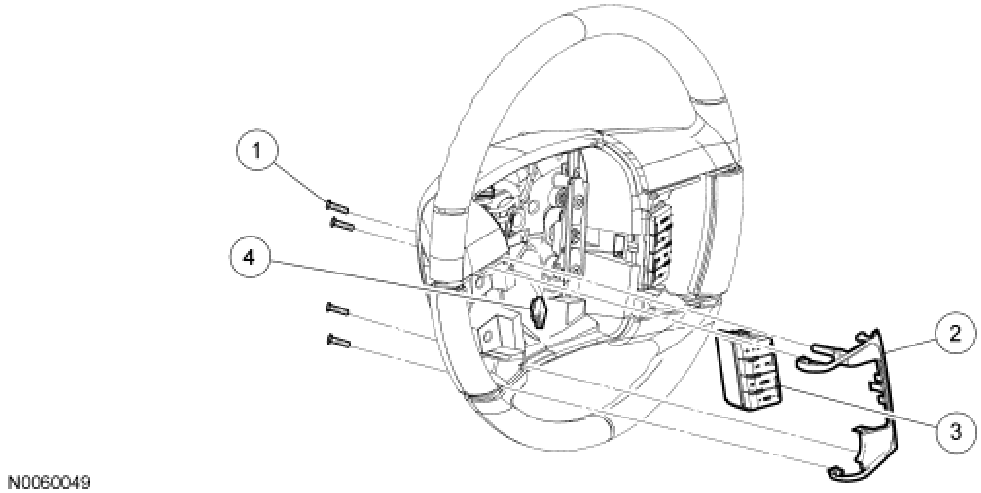

Fig. 985: Identifying Special Tool (307-399)
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: The engine front cover and bolts 17, 18, 19 and 20 must be installed within 4 minutes of the initial sealant application. The remainder of the engine front cover bolts and the engine mount bracket bolts must be installed and

tightened within 35 minutes of the initial sealant application. If the time limits are exceeded, the sealant must be removed, the sealing area cleaned and sealant reapplied. To clean the sealing area, use silicone gasket remover and metal surface prep. Failure to follow this procedure can cause future oil leakage.

8. Apply a 3.0 mm (0.11 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover sealing surfaces including the 3 engine mount bracket bosses.
   - Apply a 5.5 mm (0.21 in) bead of Motorcraft High Performance Engine RTV Silicone to the oil pan-to-cylinder block joint and the cylinder head-to-cylinder block joint areas of the engine front cover in 5 places as indicated.

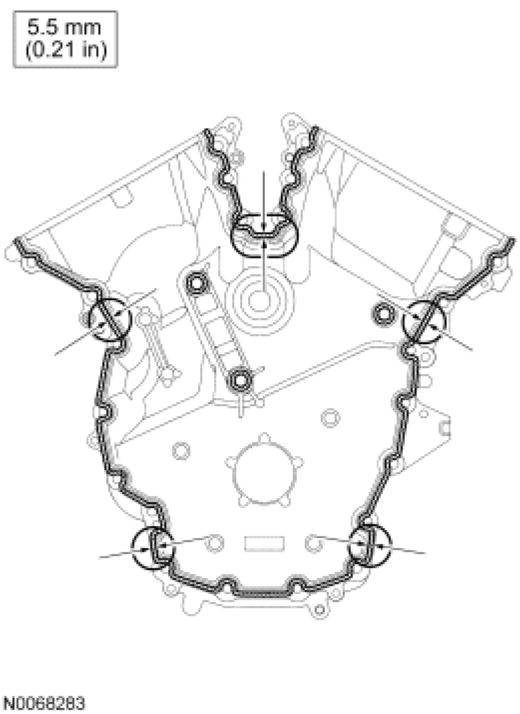

Fig. 986: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover Sealing Surfaces
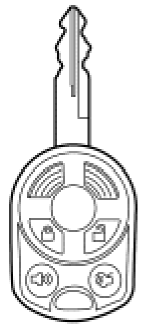
Courtesy of FORD MOTOR CO.

NOTE: **Make sure the 2 locating dowel pins are seated correctly in the cylinder block.**

9. Install the engine front cover and bolts 17, 18, 19 and 20.
   - Tighten in sequence to 3 Nm (27 lb-in).



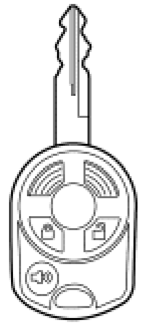
N0060211

Fig. 987: Installing Engine Front Cover & Bolts In Sequence
Courtesy of FORD MOTOR CO.

10. Remove the special tools (alignment pins).

NOTE: Do not tighten the bolt at this time.

11. Install the engine mount bracket and the 3 bolts.



N0061198

Fig. 988: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

CAUTION: Do not expose the Motorcraft High Performance Engine RTV Silicone to engine oil for at least 90 minutes after installing the engine front cover. Failure to follow this instruction may cause oil leakage.

12. Install the remaining engine front cover bolts. Tighten all of the engine front cover bolts and engine mount bracket bolts in the sequence shown in 2 stages:
    - Stage 1: Tighten bolts 1 thru 22 to 10 Nm (89 lb-in) and bolts 23, 24 and 25 to 15 Nm (11 lb-ft).
    - Stage 2: Tighten bolts 1 thru 22 to 24 Nm (18 lb-ft) and bolts 23, 24 and 25 to 75 Nm (55 lb-ft).

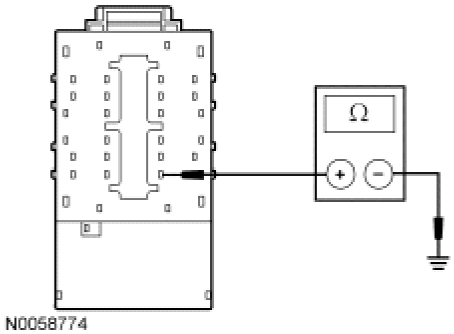


Fig. 989: Identifying Tightening Of Engine Front Cover Bolts & Engine Mount Bracket Bolts In Sequence
Courtesy of FORD MOTOR CO.

13. Install the 2 engine mount studs.
    - Tighten to 18 Nm (13 lb-ft).

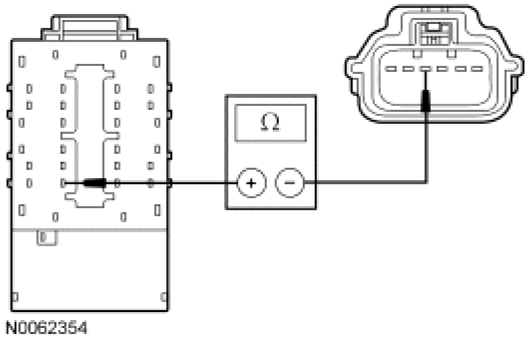

Fig. 990: Locating Engine Mount Studs
Courtesy of FORD MOTOR CO.

14. Install the engine mount bracket and the 2 bolts.
    - Tighten to 24 Nm (18 lb-ft).

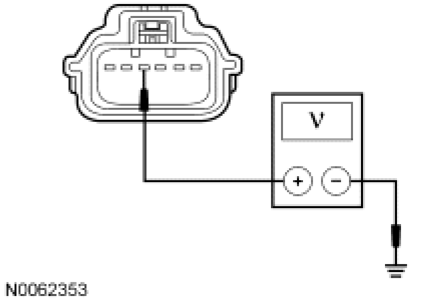

Fig. 991: Locating Engine Mount Bracket & Bolts
Courtesy of FORD MOTOR CO.

NOTE: Apply clean engine oil to the crankshaft front seal bore in the engine front cover.

15. Using the special tools, install a new crankshaft front seal.

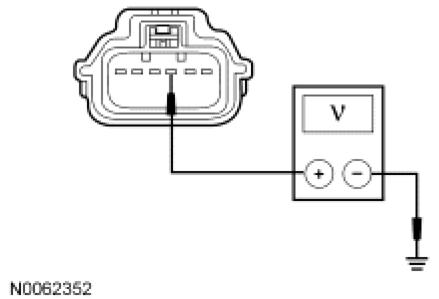

Fig. 992: Installing Crankshaft Front Seal Using Special Tools (303-102) & (303-1251)
Courtesy of FORD MOTOR CO.

NOTE: Lubricate the outside diameter sealing surfaces with clean engine oil.

16. Using the special tools, install the crankshaft pulley.

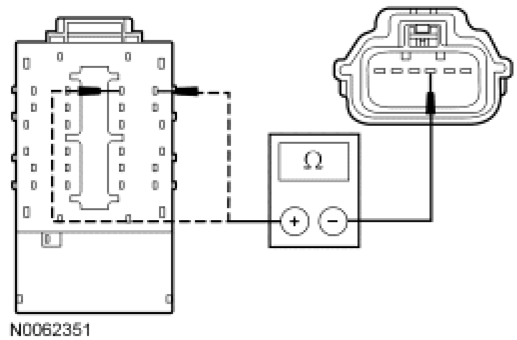

Fig. 993: Installing Crankshaft Pulley
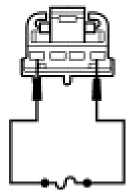
Courtesy of FORD MOTOR CO.

17. Using the special tool, install the crankshaft pulley washer and new bolt and tighten in 4 stages.
    - Stage 1: Tighten to 120 Nm (89 (lb-ft).
    - Stage 2: Loosen one full turn.
    - Stage 3: Tighten to 50 Nm (37 lb-ft).
    - Stage 4: Tighten an additional 90 degrees.



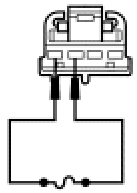
N0062349

Fig. 994: Installing Crankshaft Pulley Washer & Bolt Using Special Tools (303-D055)
Courtesy of FORD MOTOR CO.

NOTE: **Installation of new seals is only required if damaged seals were removed during disassembly of the engine.**

NOTE: **Spark plug tube seal installation shown, variable camshaft timing (VCT) seal installation similar.**

18. Using the special tools, install new VCT solenoid and/or spark plug tube seals.



N0072908

Fig. 995: Installing VCT Solenoid And/Or Spark Plug Tube Seals Using Special Tools (205-153) & (303-1247/2)
Courtesy of FORD MOTOR CO.

CAUTION: **Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.**

NOTE: **If the valve cover is not installed and the fasteners tightened within 4 minutes, the sealant must be removed and the sealing area cleaned. To clean the sealing area, use silicone gasket remover and metal surface prep. Failure to follow this procedure can cause future oil leakage.**

19. Apply a 8 mm (0.31 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover-to-RH cylinder head joints.

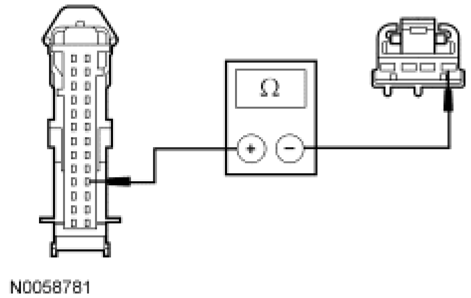


Fig. 996: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover-To-RH Cylinder Head Joints
Courtesy of FORD MOTOR CO.

20. Using a new gasket, install the RH valve cover, bolt and the 10 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

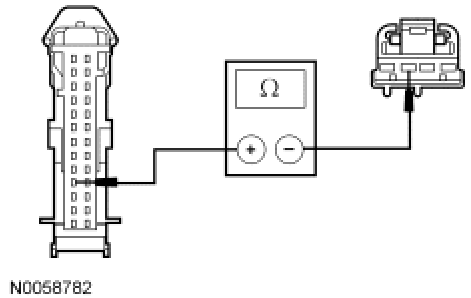

Fig. 997: Installing RH Valve Cover Stud Bolts In Sequence
Courtesy of FORD MOTOR CO.

CAUTION: Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.

NOTE: If the valve cover is not installed and the fasteners tightened within 4 minutes, the sealant must be removed and the sealing area cleaned. To clean the sealing area, use silicone gasket remover and metal surface prep. Failure to follow this procedure can cause future oil leakage.

21. Apply a 8 mm (0.31 in) bead of Motorcraft High Performance Engine RTV Silicone to the engine front cover-to-LH cylinder head joints.

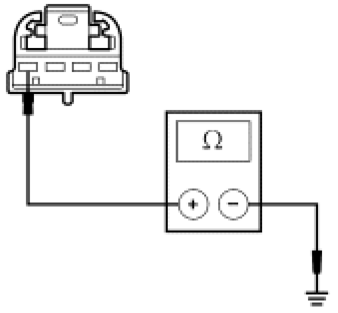

Fig. 998: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Engine Front Cover-To-LH Cylinder Head Joints
Courtesy of FORD MOTOR CO.

22. Using a new gasket, install the LH valve cover and 11 stud bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

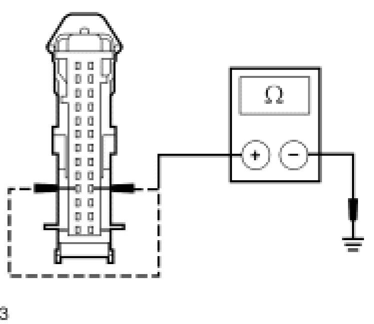

Fig. 999: Installing LH Valve Cover Stud Bolts In Sequence
Courtesy of FORD MOTOR CO.

NOTE: LH shown, RH similar.

23. Install the 6 coil-on-plug assemblies and the 6 bolts.
    - Tighten to 7 Nm (62 lb-in).

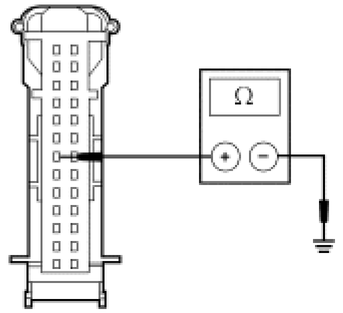

Fig. 1000: Locating Coil-On-Plugs & Bolts
Courtesy of FORD MOTOR CO.

24. Install the LH cylinder block drain plug.
    - Tighten to 20 Nm (15 lb-ft) plus an additional 180 degrees.

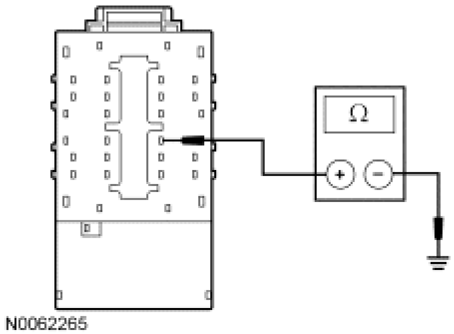

Fig. 1001: Locating LH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

25. Install the RH cylinder block drain plug or, if equipped, the block heater.
    - Tighten to 40 Nm (30 lb-ft).

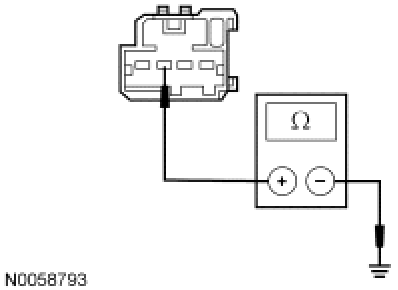

Fig. 1002: Locating RH Cylinder Block Drain Plug
Courtesy of FORD MOTOR CO.

Front wheel drive (FWD) vehicles

26. Using a new gasket, install the RH catalytic converter and 4 new nuts.
    - Tighten to 40 Nm (30 lb-ft).

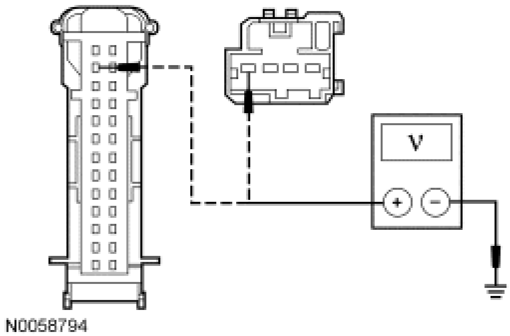

Fig. 1003: Locating RH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

All vehicles

27. Using a new gasket, install the LH catalytic converter and 4 new nuts (3 shown).
    - Tighten to 40 Nm (30 lb-ft).

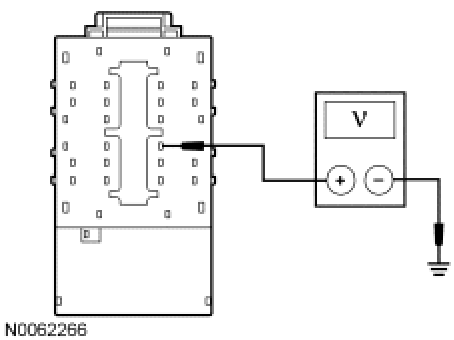

Fig. 1004: Locating LH Catalytic Converter Nuts
Courtesy of FORD MOTOR CO.

28. Install the accessory drive belt tensioner and the 3 bolts.
    - Tighten to 11 Nm (8 lb-ft).

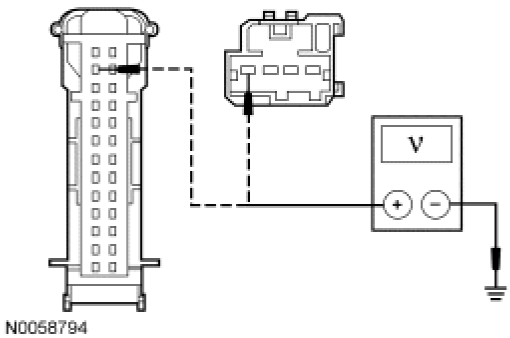

Fig. 1005: Locating Accessory Drive Belt Tensioner Bolts
Courtesy of FORD MOTOR CO.

29. Install the power steering pump and the 3 bolts.
    - Tighten to 24 Nm (18 lb-ft).

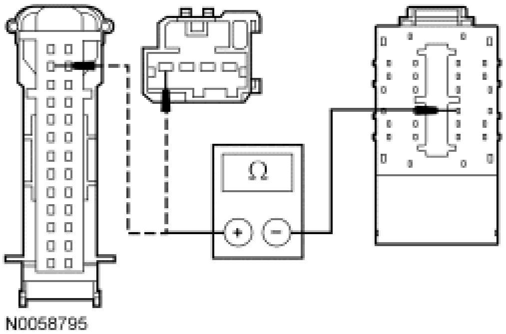

Fig. 1006: Locating Power Steering Pump Bolts
Courtesy of FORD MOTOR CO.

30. Attach all of the wiring harness retainers to the LH valve cover and stud bolts.
31. Connect the 3 LH coil-on-plug electrical connectors.

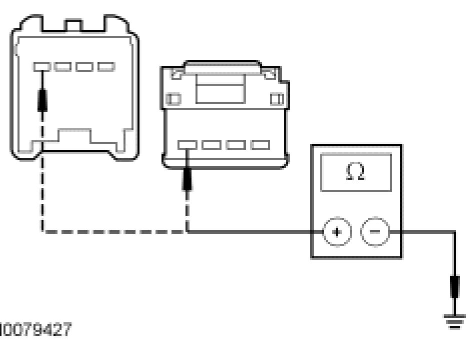

Fig. 1007: Locating LH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

32. Connect the LH camshaft VCT solenoid electrical connector.

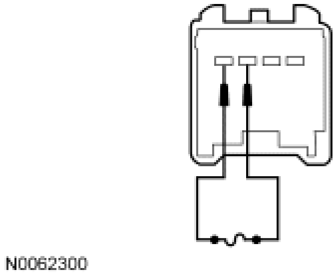

Fig. 1008: Locating LH VCT Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

33. Connect the LH catalyst monitor sensor electrical connector.

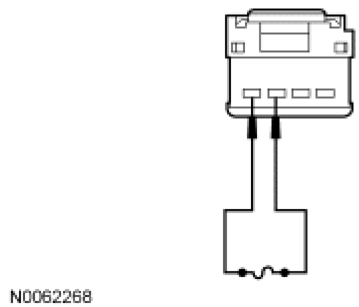

Fig. 1009: Identifying LH Catalyst Monitor Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

34. Attach all of the wiring harness retainers to the RH valve cover and stud bolts.
35. Connect the 3 RH coil-on-plug electrical connectors.

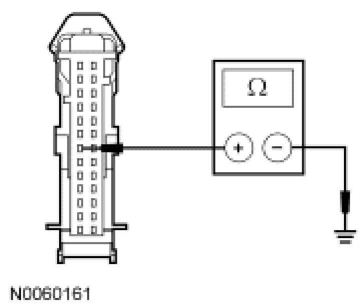

Fig. 1010: Locating RH Coil-On-Plug Electrical Connectors
Courtesy of FORD MOTOR CO.

36. Connect the RH VCT solenoid electrical connector.

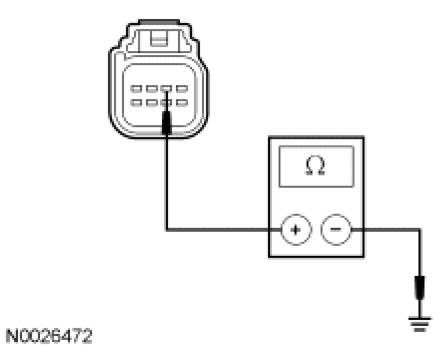

Fig. 1011: Locating RH Variable Camshaft Timing (VCT) Solenoid Electrical Connector
Courtesy of FORD MOTOR CO.

FWD vehicles

37. Connect the RH catalyst monitor sensor electrical connector.

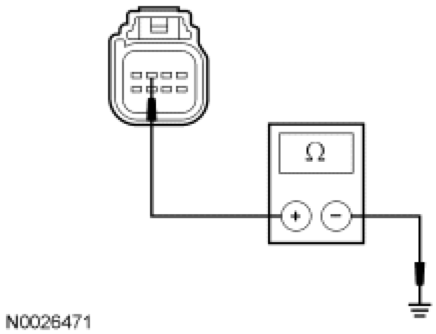

Fig. 1012: Locating RH Catalyst Monitor Electrical Connector
Courtesy of FORD MOTOR CO.

All vehicles

38. Connect the power steering pressure (PSP) switch electrical connector.

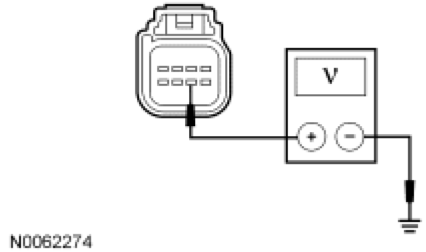

Fig. 1013: Locating PSP Switch Electrical Connector
Courtesy of FORD MOTOR CO.

39. Using new gaskets, install the upper intake manifold and the 6 bolts.
    - Tighten in the sequence shown to 10 Nm (89 lb-in).

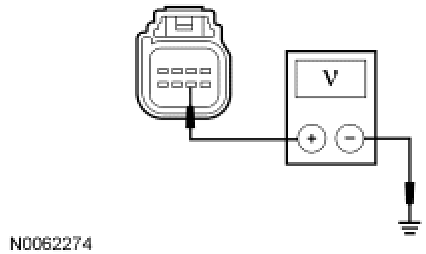

Fig. 1014: Identifying Bolt Sequence
Courtesy of FORD MOTOR CO.

40. Install the upper intake manifold support bracket bolt.
    - Tighten to 10 Nm (89 lb-in).

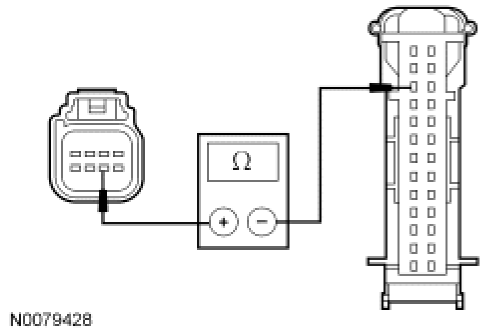

Fig. 1015: Locating Upper Intake Manifold Support Bracket Bolt
Courtesy of FORD MOTOR CO.

41. Attach the wiring harness retainers to the upper intake manifold.

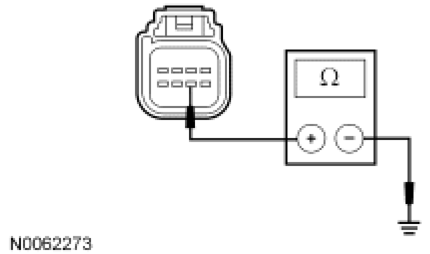

Fig. 1016: Locating Wiring Harness Retainers From Upper Intake Manifold
Courtesy of FORD MOTOR CO.

42. Connect the throttle body (TB) electrical connector.

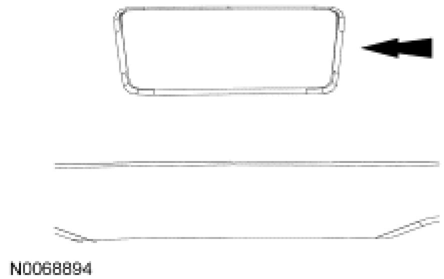

Fig. 1017: Locating Throttle Body Electrical Connector
Courtesy of FORD MOTOR CO.

43. Connect the PCV hose to the PCV valve.

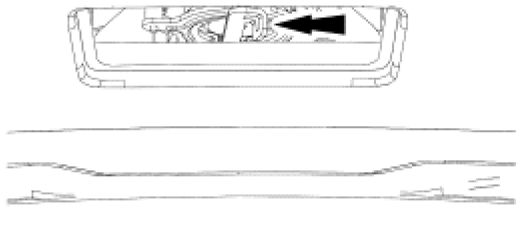

Fig. 1018: Identifying PCV Hose
Courtesy of FORD MOTOR CO.

44. If equipped, position the engine block heater harness on the engine and attach all of the harness retainers.
    - Connect the engine block heater electrical connector and install the heat shield.

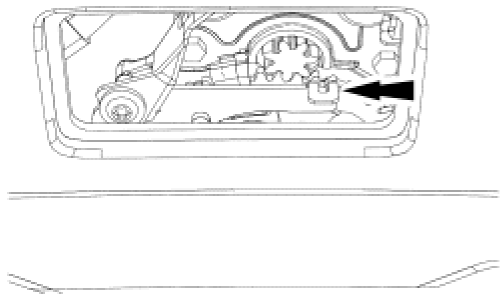

Fig. 1019: Identifying Block Heater Wiring Harness
Courtesy of FORD MOTOR CO.

45. Using the special tools, remove the engine from the stand.

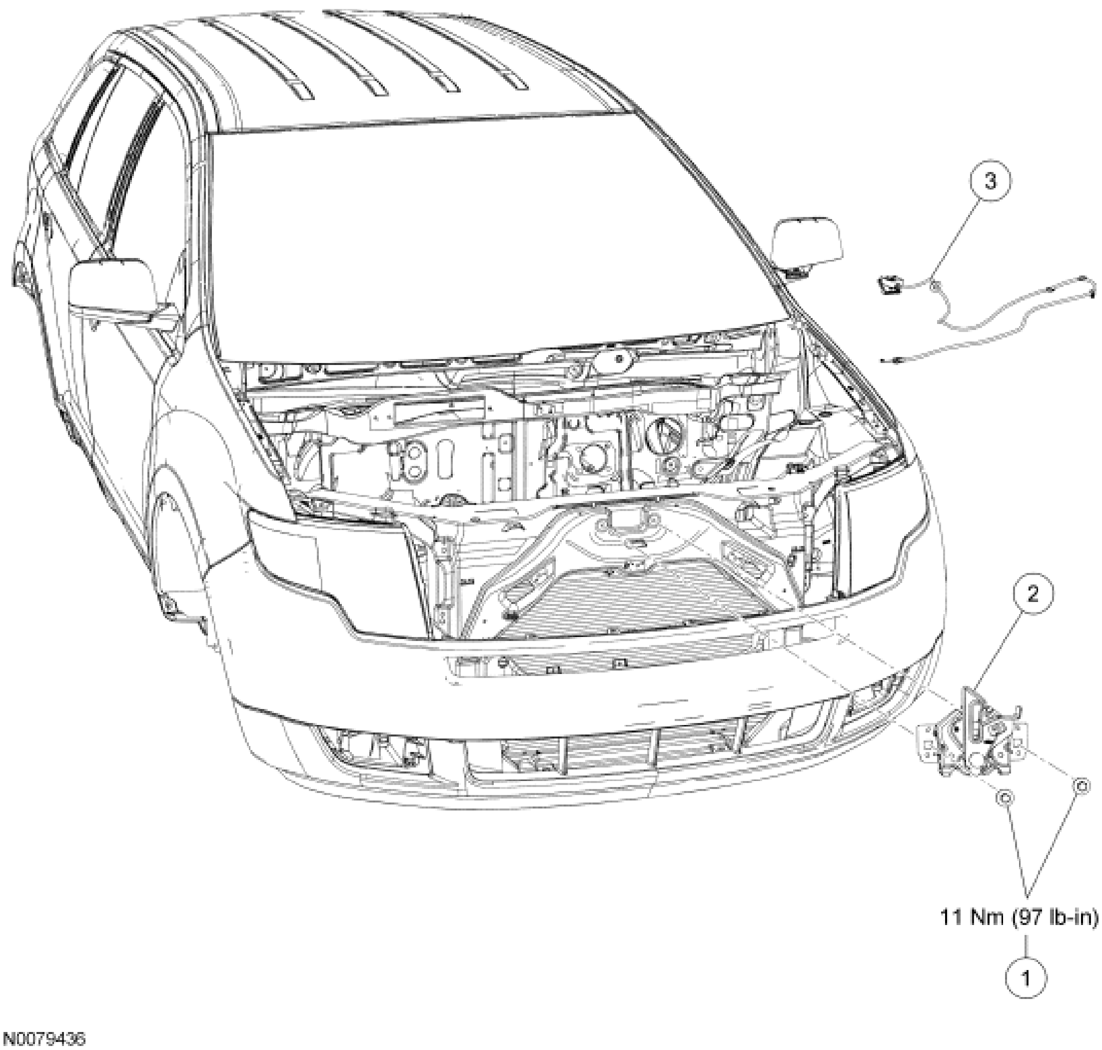

Fig. 1020: Removing Engine & Transaxle From Lift Table Using Special Tools (303-D089, 014-00071) & Suitable Engine Crane
Courtesy of FORD MOTOR CO.

46. Install the crankshaft sensor ring.

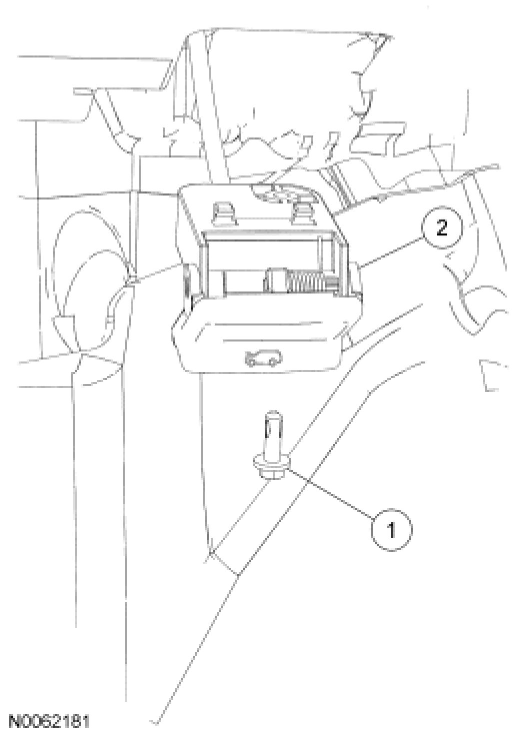

Fig. 1021: Identifying Crankshaft Sensor Ring
Courtesy of FORD MOTOR CO.

47. Install the flexplate and the 8 bolts.
    - Tighten to 80 Nm (59 lb-ft).

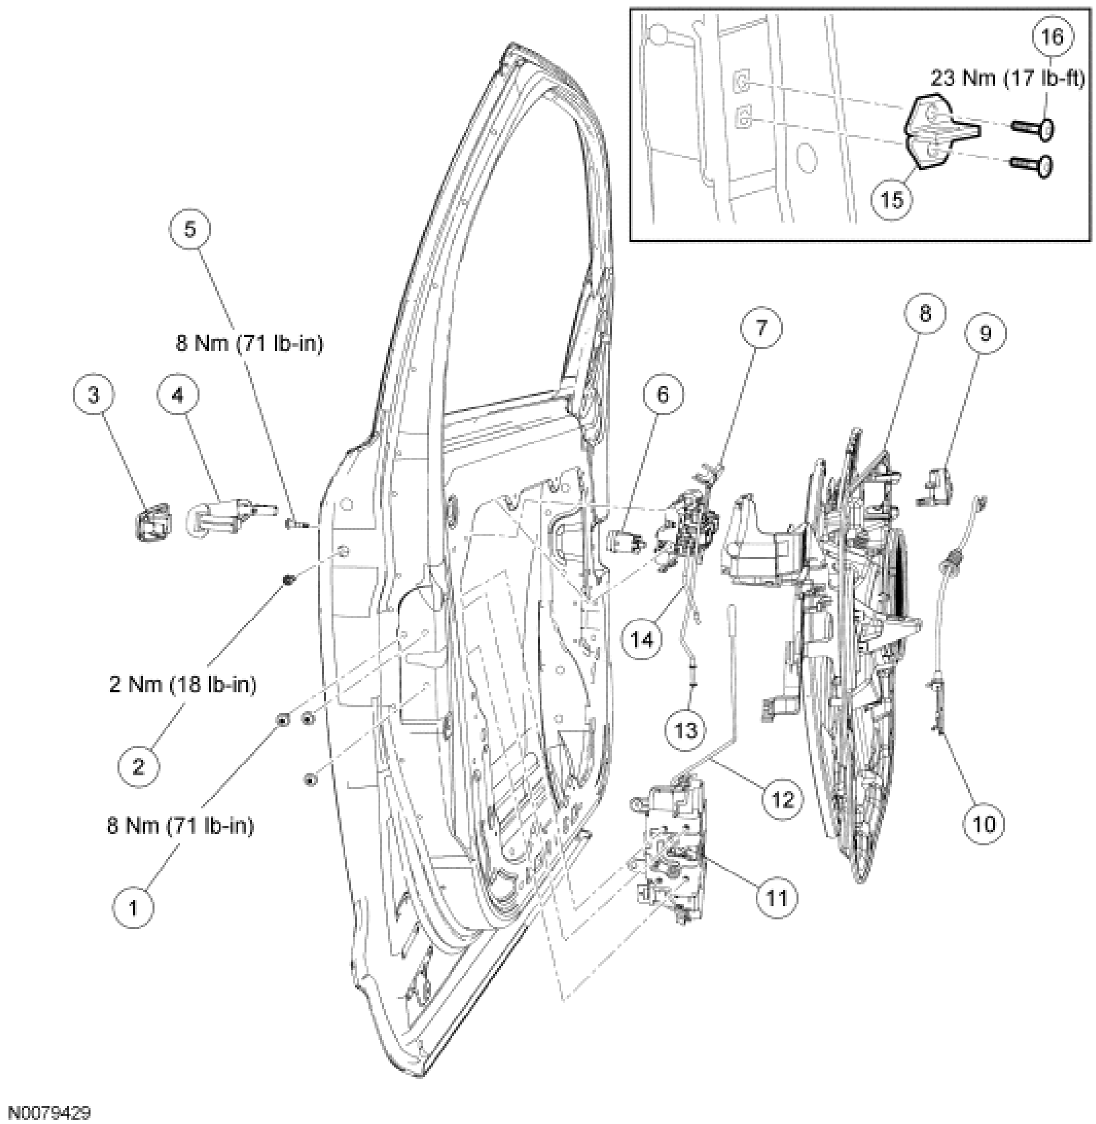

Fig. 1022: Identifying Flexplate & Bolts
Courtesy of FORD MOTOR CO.

48. Install the engine in the vehicle. For additional information, refer to **Engine**.

OIL PUMP SCREEN AND PICKUP TUBE

NOTE:	**During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.**

1. Using a new O-ring seal, install the oil pump screen and pickup tube and the 3 bolts.
   - Tighten to 10 Nm (89 lb-in).

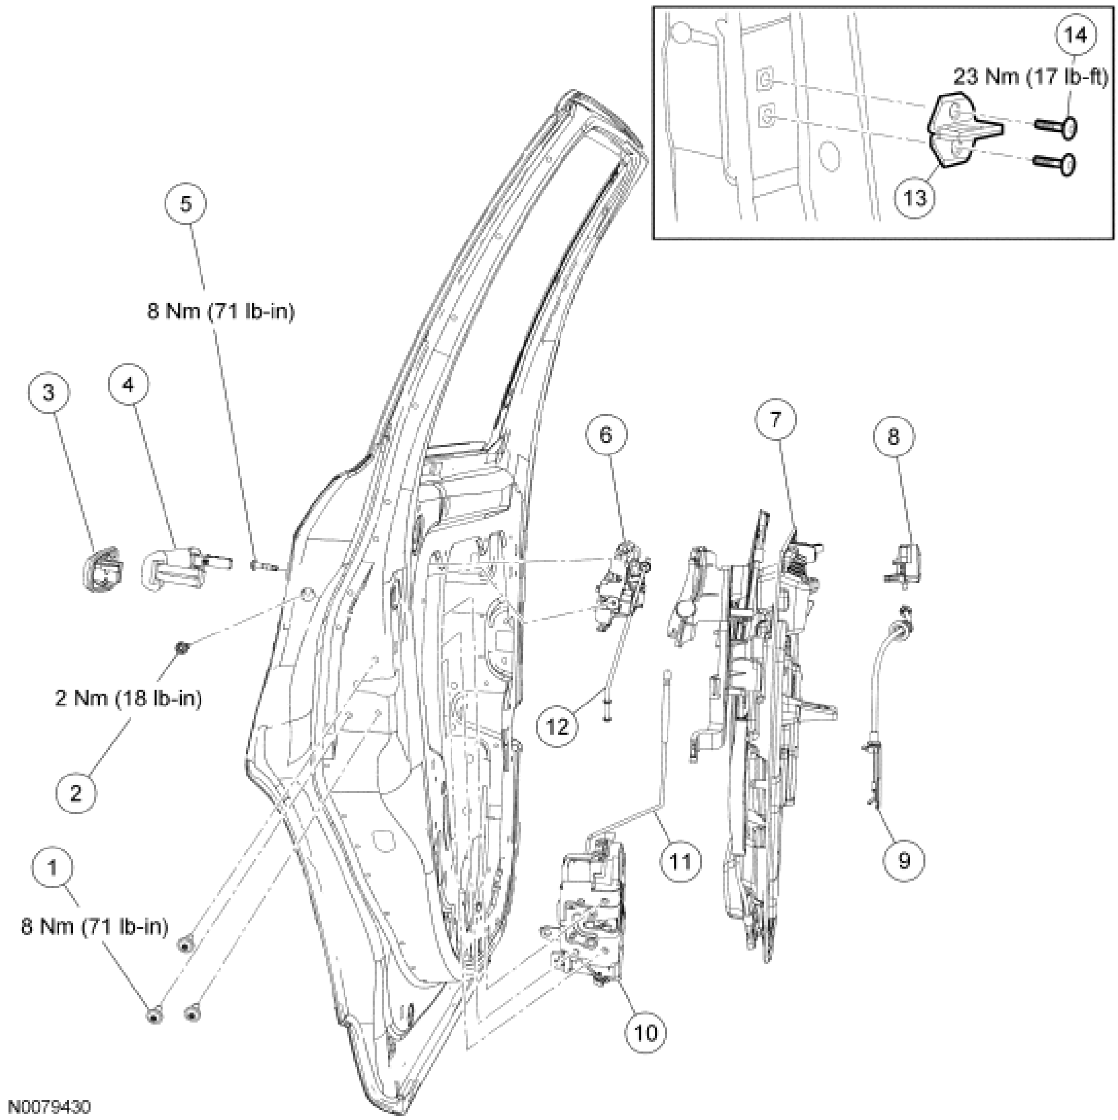

Fig. 1023: Identifying Oil Pump Screen, Pickup Tube & Bolts
Courtesy of FORD MOTOR CO.

2. Install the oil pan. For additional information, refer to **Oil Pan**.

CRANKSHAFT REAR SEAL WITH RETAINER PLATE

Special Tools

Illustration	Tool Name	Tool Number

 ST1602-A	Spreader Bar	303-D089 (D93P-6001-A3) or equivalent

Material

Item	Specification
Motorcraft High Performance Engine RTV Silicone TA-357	WSE-M4G323-A6
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

NOTE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces that enters the oil passages, coolant passages or the oil pan, can cause engine failure.**

NOTE: **Failure to use Motorcraft High Performance Engine RTV Silicone may cause the engine oil to foam excessively and result in serious engine damage.**

NOTE: **The crankshaft rear seal retainer must be installed and the bolts tightened within 4 minutes of sealant application.**

1. Apply a 3 mm (0.11 in) bead of Motorcraft High Performance Engine RTV Silicone to the sealing surface of the crankshaft rear seal retainer.

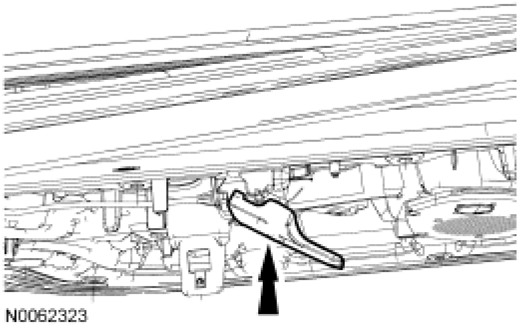

Fig. 1024: Applying Bead Of Motorcraft High Performance Engine RTV Silicone To Sealing Surface Of Crankshaft Rear Seal Retainer
Courtesy of FORD MOTOR CO.

2. Install the rear seal retainer and the 8 bolts in the sequence shown.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).

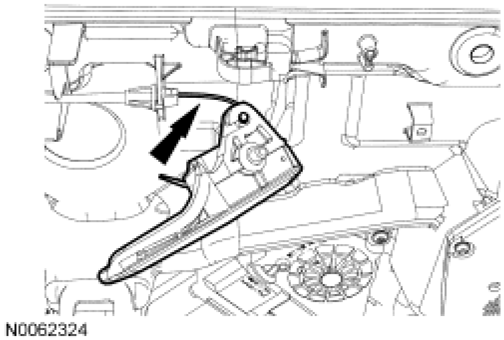

Fig. 1025: Installing Crankshaft Rear Seal Retainer Bolts In Sequence
Courtesy of FORD MOTOR CO.

NOTE: Lubricate the seal lips and bore with clean engine oil prior to installation.

3. Position the Rear Main Seal Installer onto the end of the crankshaft and slide a new crankshaft rear seal onto the tool.

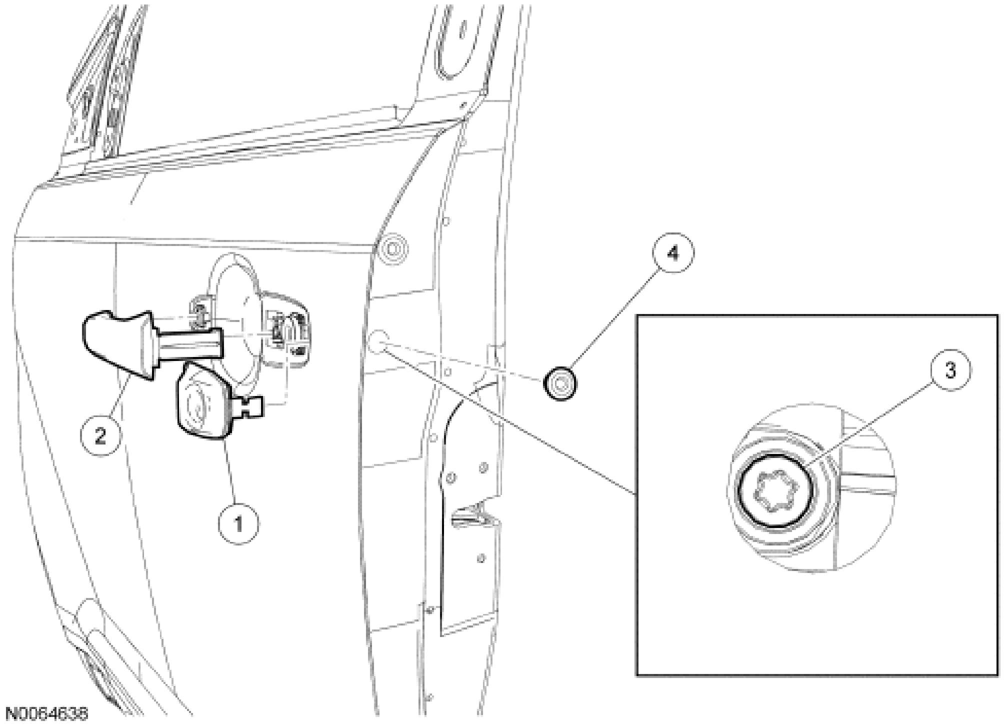

Fig. 1026: Positioning Special Tool (303-1250) Onto End Of Crankshaft
Courtesy of FORD MOTOR CO.

4. Using the Rear Main Seal Installer and Handle, install the new crankshaft rear seal.

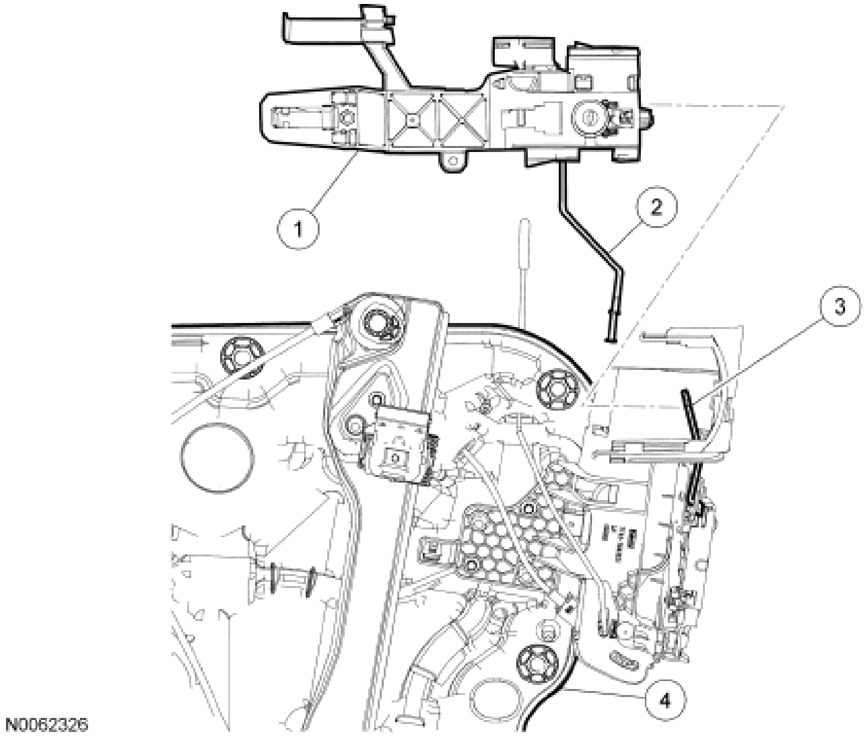

Fig. 1027: Installing New Crankshaft Rear Seal Using Special Tools (303-1250) & (205-153)
Courtesy of FORD MOTOR CO.

5. Install the Crankshaft Position (CKP) sensor and install the bolt.
   - Tighten to 10 Nm (89 lb-in).

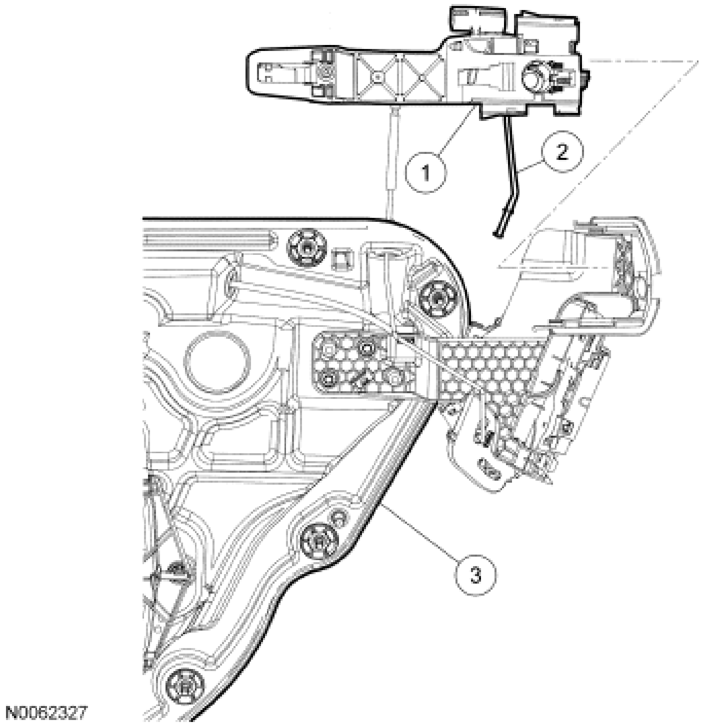

Fig. 1028: Identifying CKP Sensor & Bolt
Courtesy of FORD MOTOR CO.

6. Connect the CKP sensor electrical connector.

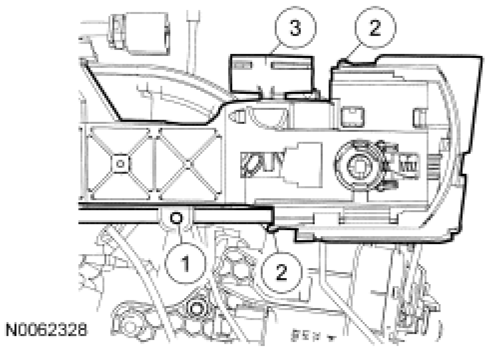

Fig. 1029: Identifying Crankshaft Position (CKP) Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

7. Using the Heavy Duty Floor Crane and Spreader Bar, install the engine onto the stand.

8. Install the oil pan. For additional information, refer to **Oil Pan**.

2008 ACCESSORIES & BODY, CAB

Information and Entertainment Systems - Edge & MKX

SPECIFICATIONS

TORQUE SPECIFICATIONS

Description	Nm	lb-in
AM/FM antenna base bolt	7	62
AM/FM antenna cable bolt	12	106
Satellite radio antenna bolt	7	62
Satellite digital audio receiver system (SDARS) module nuts	7	62
Subwoofer amplifier screws	5	44
Subwoofer speaker bolts	7	62

DESCRIPTION AND OPERATION

INFORMATION AND ENTERTAINMENT SYSTEM

Audio Line-Up

The following audio systems are available:

- Base
  - AM/FM single CD with MP3
  - 4 speakers
- Premium - Edge
  - AM/FM 6-CD changer with MP3
  - 4 speakers
- Audiophile
  - AM/FM 6-CD changer with MP3
  - Four 2-way speakers and a subwoofer (9 speakers total)
- Premium - MKX
  - AM/FM 6-CD changer with MP3
  - 6 speakers in 6 locations (includes separate tweeter speakers)
- THX® sound
  - AM/FM 6-CD changer with MP3
  - 12 speakers in 10 locations
  - Audio digital signal processing (DSP) module (located behind the subwoofer)
  - Also available with navigation audio system
- Navigation

    - Navigation audio control module (ACM)
    - Voice-activation (includes microphone in the inside rear view mirror)
    - Available with Premium (MKX), Audiophile (Edge), or THX® sound system (MKX)

All audio systems include the following features:

- Speed sensitive volume
- Accessory delay
- MP3 capability
- Audio input jack

The following options are also available:

- Satellite audio system
    - Available with all audio systems
- DVD entertainment system
    - Available with all audio systems
    - Not available on vehicles with panoramic roof
- SYNC
    - Optional on Edge, standard on MKX
- Steering wheel controls
    - Standard on all audio systems except base
    - Unique steering wheel controls for vehicles with the SYNC system

Antenna

The antenna system consists of the antenna and the antenna cable. The antenna cable connects the ACM to the antenna, located on the front of the roof.

Audio Input Jack - Vehicles Without The SYNC System

The audio input jack is used to connect a portable MP3 device to the vehicle. When connected, the audio files from the MP3 player can be broadcast through the vehicle speakers.

Satellite Audio System

The satellite audio system provides satellite-broadcast audio. The satellite antenna is mounted on the rear spoiler. The satellite audio system consists of the following components:

- Satellite digital audio receiver system (SDARS) module (located behind the liftgate scuff plate trim panel)
- Satellite radio antenna
- Satellite radio antenna cable

DVD Entertainment System

The DVD entertainment system is available on all vehicles except the base Edge and vehicles equipped with a panoramic roof. The DVD entertainment system includes the following:

- Rear entertainment module (RETM)
- A/V ports for connecting a gaming system
- 2 wireless headphones
- A remote control

THX® Audio System

The THX® audio system provides theatre quality sound inside the vehicle. The THX® audio system is only available for the MKX, and includes the following components:

- DSP module
- Front center imaging speaker (also referred to as the instrument panel speaker)
- 2 mid-woofers in the front doors
- 2 tweeter speakers in the front doors
- 2 co-axial speakers in the rear doors
- 2 rear mid-tweeters in the D-pillars
- A subwoofer

Navigation System

The navigation system audibly and visually guides the user to a selected destination. The system uses a global positioning system (GPS) antenna, a vehicle speed input, and other sensor information to accurately establish the vehicle position. The ACM provides the visual and audible instructions of the maneuvers required to arrive at the pre-entered destination.

The only external component of the navigation system is the GPS antenna, located in the instrument panel.

SYNC System

The SYNC system is comprised of the following:

- Accessory protocol interface module (APIM), located underneath the floor console
- SYNC-specific steering wheel controls
- Microphone located in the rear view mirror
- Universal serial bus (USB) port, located in the center console
- Audio input jack, located in the center console

The SYNC system is a hands-free communications and entertainment system that allows the following interactions:

- Send and receive phone calls via a Bluetooth®-enabled phone
- Send and receive text messages via a Bluetooth®-enabled phone
- Connect media devices (such as an iPod® or USB device) in order to play audio files
- Play media files via a Bluetooth®-enabled audio device

Not all features will be available with every phone.

For additional information on audio system operation, including the SYNC system, refer to the Owner's Literature.

DIAGNOSTIC TESTS

INFORMATION AND ENTERTAINMENT SYSTEM

Special Tools

Illustration	Tool Name	Tool Number
 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent
 ST3051-A	Universal Serial Bus (USB) Male-A To Male-A Cable	CCMUSB2-AM-AM-10

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

Audio Control Module (ACM)

The audio system can be operated while the key is in RUN or ACC. The accessory delay feature allows the audio system to be operated for a preset period of time after the key is turned to OFF and a front door has not been opened. The audio control module (ACM) sends AC voltage audio signals to the speakers or to the amplifier, depending on vehicle configuration. The ACM can produce its own DTCs, which can be communicated to the scan tool through the medium speed controller area network (MS-CAN), or can be retrieved through the ACM self-test by simultaneously pressing presets 3 and 6. The ACM communicates via the MS-CAN.

THX® Audio System

The THX® audio system provides theatre quality sound in the vehicle. Audio signals are sent to the audio digital signal processing (DSP) module, which processes the audio signals and sends them to the 13 speakers: 4 door speakers, 2 tweeter speakers, 3 front/center speakers, 2 rear/center speakers, and 2 subwoofer speakers. The DSP module communicates via the MS-CAN.

Navigation

The navigation module is integrated in the ACM and controls the operation and the interface between the user, the vehicle subsystems, and the external components. The navigation ACM communicates via the MS-CAN and can be diagnosed with a scan tool.

The vehicle navigation system guides the user to a pre-entered destination. A map DVD stored in the navigation ACM is used for calculating the vehicle course. The ACM display audibly and visually instructs the user of the maneuvers required to arrive at the destination entered.

A voice recognition system allows the user to interface with the system without using the touch screen. A microphone located in the interior rear view mirror provides a direct input to the navigation ACM.

In order to calculate initial vehicle position, the global positioning system (GPS) antenna is used to track several available satellites simultaneously.

The wheel pulse signal and transmission gear selected signal are received by the navigation ACM through the MS-CAN. These signals are used to increase the accuracy of the displayed course.

Satellite Audio

The satellite audio system consists of a satellite digital audio receiver system (SDARS) module, a satellite radio antenna, and an antenna cable. The satellite radio antenna receives digital audio signals and sends them to the SDARS module, where the signals are converted to analog and sent to the ACM, the rear entertainment module (RETM) (if equipped with a DVD entertainment system), or the accessory protocol interface module (APIM) (if equipped with the SYNC system). The SDARS module communicates via the MS-CAN.

SYNC System

The SYNC system allows interaction with several types of customer devices, including mobile phones and media devices. The system is comprised of the APIM, a microphone (located in the interior rear view mirror), the universal serial bus (USB) cable and port, and the audio input jack. The APIM contains an on-board Bluetooth® chipset, which enables certain wireless devices to interact with the system.

The APIM consists of 2 internal modules: the consumer interface processor (CIP) and the vehicle interface processor (VIP). The modules are not replaceable individually, but can be flashed independently, if required.

The CIP interfaces with all of the inputs to the APIM. The CIP contains an analog-to-digital- to-analog converter, as well as the Bluetooth® chipset. Any consumer-available application upgrades that are available are loaded directly to the CIP through the USB port.

The VIP provides an interface between the CIP and the vehicle. The main functions of the VIP are controlling the APIM power management and translating both inbound and outbound signals over the controller area network (CAN).

The APIM can receive inputs from the following audio sources:

- USB port
- Audio input jack
- SDARS module
- Bluetooth®

The USB port can be used for connecting a media device (such as an iPod®) with the device's available cable, or for directly plugging in a portable mass storage device (such as a "thumb drive"). When playing media files stored on a mass storage device, the SYNC system will only play files that do not have digital rights management (DRM) protection. The USB port can also be used for uploading vehicle application upgrades.

The USB port is powered by the APIM, so no external power source is needed to power a device plugged into the USB port.

The audio input jack can be used for connecting a media device (such as an iPod®) utilizing a 1/8-inch audio jack. When a device is connected through the audio input jack, only the speaker volume can be controlled by the ACM. All other functions (such as seek, fast forward, pause, etc.) must be carried out on the device itself.

If the vehicle is equipped with satellite audio, the audio signals from the SDARS module are sent to the APIM, rather than directly to the ACM. The APIM then relays the satellite audio signals to the ACM, or to the RETM if the vehicle is equipped with a DVD entertainment system. The RETM then relays the signals to the ACM.

The Bluetooth® interface can accommodate both Bluetooth®-enabled mobile phones and Bluetooth®-enabled media devices. Any Bluetooth® device used with the SYNC system must first be paired with the system before it is operational.

Bluetooth® is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth® signal is a maximum of 32 feet.

Only one Bluetooth® phone and one Bluetooth® device can be connected to the system at any one time. If an additional device of either type is paired with the system and made active, the APIM will disconnect any active connection and establish a connection with the new device.

It is important to understand that not all mobile phones will have the same level of features when interacting with the SYNC system. For a list of compatible phones, .

In addition to audio information, metadata may also be sent to the APIM from a device plugged into the USB port. Metadata consists of such information as artist, album title, song title, and genre. The metadata is used by the APIM to create indexes that can be used to sort for particular music, based on customer preference. Not all USB devices will send metadata to the APIM; also, no metadata is transferred when a device is connected through the audio input jack. When a new media device is connected to the SYNC system, the APIM will automatically index the information. This may take up to several minutes (depending on the amount of data on the device), and is considered normal operation. When a device that was previously connected to the SYNC system is reconnected, the APIM will update the index (rather than creating a new one), which reduces the amount of time needed to create the index.

The APIM receives both stereo and mono sound inputs, and can also transmit both stereo and mono sound. The mono function is used to receive the microphone input, and to send sound to the ACM for voice prompts, the text-to-speech (TTS) feature, ring tones, and any audio received through a connected mobile phone. The TTS feature speaks information so that it does not have to be read from the display.

The APIM communicates via the MS-CAN.

Voice Recognition For Vehicles With Navigation And The SYNC System

When a vehicle is equipped with both the navigation system and the SYNC system, the interaction between the audio system components is unique for voice recognition.

Both the navigation ACM and the APIM utilize voice-recognition, but in order for the modules to determine which one should be acknowledging the voice command, the voice command set is different. This allows the modules to identify the intended source when the VOICE button is pressed. The VOICE (an icon of someone speaking), MEDIA, and PHONE (an icon of a phone and an up-and-down arrow) buttons are wired to the navigation ACM, rather than to the APIM (as they are in non-navigation audio systems).

When the audio system enters voice recognition mode, the ACM sends a CAN message to the APIM to enter voice recognition mode. The microphone is wired directly to the APIM, which relays the microphone input to the ACM through dedicated wiring. Control of the voice functions is given to whichever module is indicated by the first voice command.

Steering Wheel Controls

The steering wheel controls consist of a series of resistors. Each steering wheel control switch function corresponds with a specific resistance value within the switch. When a switch is pressed, the ACM (or the APIM) monitors the change in reference voltage to determine the requested function.

Audio Input Jack - Vehicles Without The SYNC System

The audio input jack allows for a portable MP3 player to be connected to the vehicle audio system. When a portable MP3 player is connected, audio from the MP3 player can be played through the vehicle speakers.

Antenna - AM/FM

The roof-mounted antenna receives both AM and FM radio waves. The audio signals are then sent to the ACM through the antenna cable. An antenna module is integral to the roof-mounted antenna base.

Subwoofer

The Audiophile subwoofer is powered by its own amplifier. The subwoofer in the THX® system is powered by the THX® amplifier. The enable/clip detection circuit carries out 2 functions: to turn the amplifier on, and to indicate to the ACM when the subwoofer output distortion signal reaches a damaging level. The ACM then clips the audio output signal to prevent damage to the subwoofer.

DVD Entertainment System

When a video disc is inserted into the RETM and the PLAY button is pressed, an image is displayed on the screen and a stereo signal is transmitted to the ACM. The DVD entertainment system allows for single/dual-play mode. The RETM communicates via the MS-CAN.

Single-Play Mode

In single-play mode, any audio input routed through the RETM is broadcast through all of the vehicle speakers. These audio inputs include the RETM, satellite audio, SYNC audio, and peripheral gaming devices plugged into the RETM.

Dual-Play Mode (All Audio Systems Except THX®)

In dual-play mode, the ACM continues to control the output to the front speakers, while the RETM mutes the audio to the rear speakers. The RETM continues to broadcast the rear audio source to the headphones. When the headphones are set to channel A, all audio sources can be accessed. When the headphones are set to channel B, only the DVD audio and auxiliary audio sources (such as a gaming system) can be sent to the headphones.

Dual-Play Mode (THX®)

In dual-play mode, the DSP module continues to play the front audio source over the front speakers while muting the rear speakers. The RETM continues to broadcast the rear audio source to the headphones. When the headphones are set to channel A, all audio sources can be accessed. When the headphones are set to channel B, only the DVD audio and auxiliary audio sources (such as a gaming system) can be sent to the headphones.

Noise Suppression Equipment

The radio frequency suppression equipment reduces interference transmitted through the speakers by the engine ignition and electrical systems. When installing any new radio suppression equipment components, make sure that a good contact is made at all connections.

Audio Signals

Audio signal flow varies greatly depending on vehicle content.

Stereo signals contain left and right channel information, and are used for most audio signals.

A mono signal is used for the microphone input to the APIM. The mono signal is also used for the voice prompts, the TTS feature, ring tones, and any audio received through a connected mobile phone. These audio signals are output from the APIM to the ACM. The mono and stereo outputs from the APIM utilize separate circuits.

A digital signal is used to transmit data from a media device connected through the USB port to the APIM. The APIM then converts the signal to analog and relays the signal to the ACM.

A wireless signal is used to broadcast audio signals from a Bluetooth® device to the APIM. As with a digital signal sent through the USB port, the APIM converts the wireless audio signal to analog and relays it to the ACM.

Network Communication

The following audio system components communicate via the medium speed controller area network (MS-CAN):

- Audio control module (ACM)
- Navigation ACM
- Satellite digital audio receiver system (SDARS) module
- Rear entertainment module (RETM)
- Audio digital signal processing (DSP) module
- Accessory protocol interface module (APIM)

The following messages are utilized by the audio system:

Message	Transmitting Module	Receiving Module (s)	Audio System Function
Ignition Switch Position	Smart junction box (SJB)	ACM RETM DSP module APIM	Indicates ignition switch position for power-up/shut-down.
Illumination Dimmer Level	SJB	ACM RETM	Controls the backlight intensity, based on the position of the dimmer switch.
Transmission Selector (PRNDL) Range	Instrument cluster (IC)	ACM	For the navigation system, this signal is used for more accurate navigation

			tracking.
Accessory Delay Status	SJB	ACM RETM APIM	When active, this signal allows the audio component to be operated after the vehicle is shut off and a door has not been opened.
Volume Cutback	Parking aid module (PAM)	ACM	When active, this signal causes the ACM to reduce the audio output when the parking aid tone is active.
Vehicle Speed	IC	ACM DSP module	Used by the ACM (or DSP module) for the speed-compensated volume function.
Navigation Radio Rolling Wheel Count	IC	ACM	For the navigation system, this signal is used for more accurate navigation tracking.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical
• Audio control module (ACM) • Antenna • Rear entertainment module (RETM) • Steering wheel controls • Audio input jack • Universal serial bus (USB) port • Speaker(s) • Noise suppression equipment	• Smart junction box (SJB) fuse(s): ○ 3 (15A) (RETM, accessory protocol interface module [APIM]) ○ 18 (20A) (audio digital signal processing [DSP] module) ○ 28 (5A) (ACM hot in START) ○ 38 (20A) (subwoofer or DSP module) ○ 39 (20A) (ACM) ○ 41 (15A) (delayed

	accessory)

3. If the fault is visually evident, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.

NOTE: Do not press any buttons on the ACM while the ACM is carrying out the self-test.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
   - If the network test passes, retrieve and record the continuous memory DTCs.
8. Carry out the self-test diagnostics for the ACM.
9. If the DTCs retrieved are related to the concern, go to DTC Charts.
10. If no DTCs related to the concern are retrieved, go to the Speaker Walk-Around Test, the Audio Control Module (ACM) Self-Diagnostic Mode, or the Satellite Audio Bezel Diagnostic Test.

Speaker Walk-Around Test

NOTE: To enter the speaker walk-around test or ACM self-diagnostic mode, the ACM must be on and in radio tuner (AM/FM) mode.

1. To enter the speaker walk-around test, simultaneously press the ACM preset buttons 3 and 6.
2. The speaker walk-around test stops at each speaker and applies sound to each speaker for about 1 to 2 seconds. Each speaker is tested and displayed on the ACM in the following sequence:

- Except THX®: RF, LF, LR, RR, SUBWOOFER.
- THX®: CSA FRONT, TWEETER LF, TWEETER RF, CENTER REAR, SPEAKER LF, SPEAKER RF, SPEAKER LR, SUBWOOFER, SPEAKER RR.

3. To exit the speaker walk-around test, turn the key to OFF, turn the ACM off, press preset button 1 for diagnostics (ACMs without navigation), or press "End Test" (navigation ACM).

Audio Control Module (ACM) Self-Diagnostic Mode - All ACMs Without Navigation

NOTE: To enter the ACM self-diagnostic mode, the ACM must be turned on and in radio tuner (AM/FM) mode.

1. To enter the following tests, press the desired preset button while in the speaker walk-around test or while in the ACM self-diagnostic mode.
2. The self-diagnostic mode has the following functions available:
    - Preset button 1 = On-Demand Self-Test. This button runs the on-demand self-test.
        - Pressing the MENU DOWN button allows scrolling of any DTCs found during the test while in this menu.
    - Preset button 2 = Display Continuous DTCs. This button enables viewing of any continuous DTCs that have been logged.
        - Pressing the MENU UP button allows scrolling of any DTCs while in this menu.
        - While continuous DTCs are being displayed, pressing the EJECT button will clear all present DTCs.
    - Preset button 3 = Signal Strength Test. This button displays the signal strength.
    - Preset button 4 = Software Version Display. This button displays the ACM software version.
        - Pressing the MENU UP button allows scrolling of all audio subsystem software versions while in this menu.
    - Preset button 5 = Display Test. This test illuminates all the display segments for 5 seconds, then turns all segments off.
    - Preset button 6 = Configuration Status. This button enables ACM configuration status.
        - Pressing the MENU button displays the ACM part number while in this menu.
3. To exit the self-diagnostic mode, turn the ACM off or turn the key OFF.
4. If the concern remains and the fault is not detected, go to **Symptom Chart - Audio System** to continue diagnostics.

Audio Control Module (ACM) Self-Diagnostic Mode - Navigation ACM

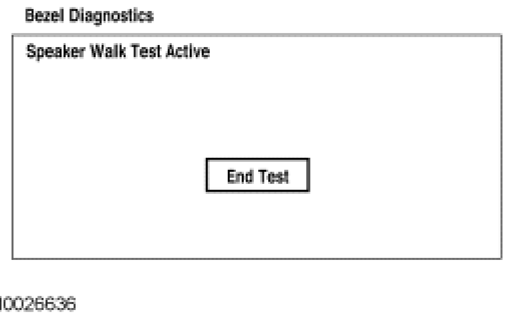

Fig. 1: Bezel Diagnostics Screen Display - Speaker Walk Test Active
Courtesy of FORD MOTOR CO.

1. To enter the self-diagnostic mode, press "End Test" during the speaker walk-around test.

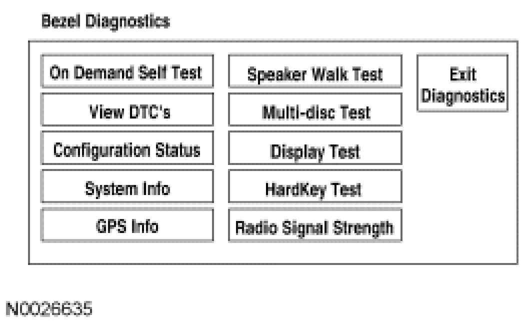

Fig. 2: Bezel Diagnostics Screen Display - On-Screen Buttons
Courtesy of FORD MOTOR CO.

2. The following diagnostic modes are available using the on-screen buttons:
   - On Demand Self Test - provides internal self-test diagnostics and displays all the DTCs resulting from the self-test.
   - View DTC's - provides a list of all the DTCs currently stored in memory.
   - Configuration Status" - displays the current unit configuration.
   - System Info - provides the navigation module part number and software information.
   - GPS Info - provides satellite information and vehicle current information.
   - Speaker Walk Test - carries out a speaker walk-around test.
   - Multi-disc Test - carries out a test of the CD player mechanism.
   - Display Test - allows the screen colors to be checked, and allows individual touch sectors of the display screen to be tested.
   - Hardkey Test - checks the operation of any ACM button.
   - Radio Signal Strength - carries out a test of the AM/FM antenna signal.
   - Exit Diagnostics - exists bezel diagnostics and returns to the previous function.
3. To exit the self-diagnostic mode, turn the ACM off, turn the key to OFF, or press "Exit Diagnostics".
4. If the concern remains and the fault is not detected, go to **Symptom Chart - Navigation System**.

Satellite Audio Bezel Diagnostic Test

NOTE: To enter the satellite audio bezel diagnostic test, the ACM must be on and in SAT mode.

1. To enter the satellite audio bezel diagnostic test, simultaneously press and hold the AUX button and preset button 2 (except navigation), or the SOUND button and preset button 1 (navigation).
2. Upon entering the self-test, the ACM produces 2 continuously alternating tones of different pitch, one for the right channel, then one for the left.
3. The test continues by displaying any DTCs currently present. If no DTCs are present, NO DTCS will be displayed. If there are DTCs present, the ACM will auto-scroll through the list of active DTCs.
4. Historical DTCs can be viewed by pressing the AUX button and preset button 2 (except navigation), or the SOUND button and preset button 1 (navigation) simultaneously while in the active DTC mode.
   - If any DTCs are present, pressing the AUX button and preset button 2 (except navigation), or the SOUND button and preset button 1 (navigation) will prompt CLEAR DTCS? on the ACM.
   - To clear historical DTCs, press preset buttons 1, 2, and 3 consecutively within 4 seconds.
   - To exit historical DTCs (with or without clearing DTCs), press the AUX button and preset button 2 (except navigation), or the SOUND button and preset button 1 (navigation) simultaneously.
5. If no historical DTCs are present, pressing the AUX button and preset button 2 (except navigation), or the SOUND button and preset button 1 (navigation) simultaneously while in active DTC mode will display the DLP software version.
6. To exit the satellite audio bezel diagnostic test, press the AUX button and preset button 2 (except navigation), or the SOUND button and preset button 1 (navigation) simultaneously while the DLP software version is displayed, or turn the ACM off.
7. If the concern remains and the fault is not detected, go to **Symptom Chart - Audio System**.

DTC Charts

NOTE: For all U-codes listed in this chart, if no related symptoms are observed, disregard the DTC.

NOTE: For all U-codes listed in this chart, if DTC B1318 is present, diagnose it before diagnosing the U-code DTC.

AUDIO CONTROL MODULE (ACM) DTC CHART

DTC	Description	Action
B1117	Audio Steering Wheel Button Stuck	VERIFY that no steering wheel control buttons are stuck and that no steering wheel control button is pressed during the self-test. If no concern is found, go to **Pinpoint Test F** .
		NOTE: **This DTC applies to the navigation DVD mechanism, not the DVD entertainment system.**

B1119 (Navigation only)	Audio Disc DVD Player Thermal Shutdown	The audio control module (ACM) was over temperature. Navigation operation will resume after the ACM cools. This is normal operation. CLEAR the DTCs.
B1136 (Navigation only)	Audio Steering Wheel Switch #2 Circuit Failure	Go to **Pinpoint Test F** .
B1140 (Navigation only)	Map Disk Invalid	REMOVE the map DVD and CLEAN it. INSPECT for scratches, fingerprints, or damage, and REPAIR as necessary. VERIFY a valid map DVD is being used. If no concern is found, INSERT a known good map DVD. REPEAT the self-test. • If the system operates correctly, the concern was caused by a damaged or invalid map DVD. • If DTC B1140 is retrieved again, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.
B1154	Subwoofer #1 Short to Ground	Go to **Pinpoint Test E** .
B1155	Subwoofer #1 Short to Battery	Go to **Pinpoint Test E** .
B1158	Subwoofer #2 Not Connected	Go to **Pinpoint Test E** .
B1318	Battery Voltage Low	CLEAR the DTCs. TEST the charging system. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. • If the charging system is OK, the DTC was set by a previous low voltage condition. No concern is found at this time. • If the charging system is not OK, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article to diagnose the low battery voltage condition.
B1342	ECU is Faulted	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.
B2103	Antenna Not Connected	Go to **Pinpoint Test A** .
B2204 (Navigation only)	GPS Antenna Connection Open or Short	Go to **Pinpoint Test M** .
B2274	Phone Transceiver Active Circuit Failure	DISREGARD the DTC. CLEAR the DTCs.
	Audio Reverse Aid Mute	

B2384	Input Ckt. Failure	DISREGARD the DTC. CLEAR the DTCs.
B2404	Audio Steering Wheel Switch Circuit Failure	Go to **Pinpoint Test F** .
B2405	Audio Disc CD Player Thermal Shutdown Fault	The ACM was over temperature. Audio operation will resume after the ACM cools. This is normal operation. CLEAR the DTCs.
B2406	Audio Disc CD Player Internal Fault	**NOTE:** **DTC B1342 will also be set.** CLEAR the DTCs. REPEAT the self-test. If DTC B2406 is retrieved again, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.
B2477	Module Configuration Failure	REFER to **MODULE CONFIGURATION** article.
B2633 (Navigation only)	Driver-Front Microphone Circuit Failure	Go to **Pinpoint Test R** .
B2656	DVD (Digital Versatile Disk) Error	**NOTE:** **DTC B1342 will also be set.** **NOTE:** **This DTC refers to the navigation DVD mechanism, not the DVD entertainment system.** CLEAR the DTCs. REPEAT the self-test. If DTC B2656 is retrieved again, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.
B2913 (Audiophile only)	Audio Subwoofer Not Connected	Go to **Pinpoint Test E** .
B2924	Audio Button Stuck	**NOTE:** **For the navigation ACM, the hardkey test can be used to isolate a stuck button.** VERIFY no ACM buttons are stuck and that no ACM button is pressed during the self-test. CLEAR the DTCs. REPEAT the self-test. If DTC B2924 is retrieved again, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.
B2965	Audio System Speaker Circuit Fault	Go to **Pinpoint Test B** .
C1992	Vehicle Speed Circuit Failure	DISREGARD the DTC. CLEAR the DTCs.

P0182	Reverse Input Circuit	DISREGARD the DTC. CLEAR the DTCs.
U0140	Lost Communication With Body Control Module (GEM)	If a backlighting concern is present, REFER to **INSTRUMENT CLUSTER AND PANEL ILLUMINATION** article. If the accessory delay does not function correctly, REFER to **WIPERS AND WASHERS** article.
U0155	Lost Communication With Instrument Panel Cluster (IC) Control Module	If the speed sensitive volume does not operate correctly, go to **Pinpoint Test Y** . If the navigation is inaccurate, go to **Pinpoint Test P** .
U0159	Lost Communication With Parking Assist Control Module (PAM)	Go to **Pinpoint Test Q** .
U0193	Lost Communication With Digital Audio Control Module (SDARS)	For vehicles without a DVD entertainment system, go to **Pinpoint Test H** . For vehicles with a DVD entertainment system, go to **Pinpoint Test I** .
U0196	Lost Communication With Entertainment Control Module - Rear (AUX)	CARRY OUT the network test using the scan tool. • If the scan tool communicates with the rear entertainment module (RETM), go to **Symptom Chart - Audio System** to diagnose the observed symptom. • If the scan tool does not communicate with the RETM, REFER to **MODULE COMMUNICATIONS NETWORK** article.
U0197	Lost Communication With Telephone Control Module	Go to **Pinpoint Test S** .
U0238	Lost Communication With Digital Audio Control module "D" (DSP)	CARRY OUT the network test using the scan tool. • If the scan tool communicates with the audio digital signal processing (DSP) module, go to **Symptom Chart - Audio System** to diagnose the observed symptom. • If the scan tool does not communicate with the DSP module, REFER to **MODULE COMMUNICATIONS NETWORK** article.
U0249	Lost Communication With Entertainment Control Module - Rear "B" (RCU)	DISREGARD the DTC. CLEAR the DTCs.
U2050	No Application Present	REFER to **MODULE CONFIGURATION** article.
U2051	One or More Calibration Files Missing/Corrupt	REFER to **MODULE CONFIGURATION** article.
U2473	Unexpected Vehicle Speed (VSS)	Go to **Pinpoint Test P** .

NOTE: **For all U-codes listed in this chart, if no related symptoms are observed, disregard the DTC.**

NOTE: **For all U-codes listed in this chart, if DTC B1318 is present, diagnose it before diagnosing the U-code DTC.**

AUDIO DIGITAL SIGNAL PROCESSING (DSP) MODULE DTC CHART

DTC	Description	Action
B1158	Subwoofer #2 Not Connected	Go to **Pinpoint Test C** .
B1317	Battery Voltage High	CLEAR the DTCs. TEST the charging system. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. • If the charging system is OK, the DTC was set by a previous over-charge condition. No concern is found at this time. • If the charging system is not OK, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article to diagnose the over-charging condition.
B1318	Battery Voltage Low	CLEAR the DTCs. TEST the charging system. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. • If the charging system is OK, the DTC was set by a previous low voltage condition. No concern is found at this time. • If the charging system is not OK, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article to diagnose the low battery voltage condition.
B1342	ECU is Faulted	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new audio digital signal processing (DSP) module. REFER to **Audio Digital Signal Processing (DSP) Module**. TEST the system for normal operation.
B2477	Module Configuration Failure	REFER to **MODULE CONFIGURATION** article.
B2913	Audio Subwoofer Not Connected	Go to **Pinpoint Test C** .
B2925	Subwoofer Speaker Short Circuit	If the symptom is no audio from all speakers, go to **Pinpoint Test D** . If the symptom is no audio from the subwoofer, go to **Pinpoint Test C** .
		NOTE:

B292A	Subwoofer #2 Speaker Short Circuit	**Despite the DTC description, this DTC applies to the THX® amplifier clip/enable circuit, not the subwoofer.** Go to **Pinpoint Test D** .
B2965	Audio System Speaker Circuit Fault	If the symptom is no audio from all speakers, go to **Pinpoint Test D** . If the symptom is no audio from one or more (but not all) speakers, go to **Pinpoint Test C** .
C1992	Vehicle Speed Circuit Failure	DISREGARD the DTC. CLEAR the DTCs.
U0155	Lost Communication With Instrument Panel Cluster (IC) Control Module	CARRY OUT the network test using the scan tool. • If the scan tool communicates with the IC, go to **Symptom Chart - Audio System** to diagnose the observed symptom. • If the scan tool does not communicate with the IC, REFER to **MODULE COMMUNICATIONS NETWORK** article.
U0184	Lost Communication With Radio (ACM)	CARRY OUT the network test using the scan tool. • If the scan tool communicates with the ACM, go to **Symptom Chart - Audio System** to diagnose the observed symptom. • If the scan tool does not communicate with the ACM, REFER to **MODULE COMMUNICATIONS NETWORK** article.
U0196	Lost Communication With Entertainment Control Module - Rear (AUX)	CARRY OUT the network test using the scan tool. • If the scan tool communicates with the rear entertainment module (RETM), go to **Symptom Chart - Audio System** to diagnose the observed symptom. • If the scan tool does not communicate with the RETM, REFER to **MODULE COMMUNICATIONS NETWORK** article.
U2050	No Application Present	REFER to **MODULE CONFIGURATION** article.
U2051	One or More Calibration Files Missing/Corrupt	REFER to **MODULE CONFIGURATION** article.

NOTE: **For all U-codes listed in this chart, if no related symptoms are observed, disregard the DTC.**

NOTE: **For all U-codes listed in this chart, if DTC B1318 is present, diagnose it before diagnosing the U-code DTC.**

SATELLITE DIGITAL AUDIO RECEIVER SYSTEM (SDARS) MODULE DTC CHART

DTC	Description	Action
B1031	SDARS Satellite Antenna Open	Go to **Pinpoint Test J** .
B1032	SDARS Satellite Antenna Short	Go to **Pinpoint Test J** .
B1318	Battery Voltage Low	CLEAR the DTCs. TEST the charging system. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. • If the charging system is OK, the DTC was set by a previous low voltage condition. No concern is found at this time. • If the charging system is not OK, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article to diagnosis the low battery voltage condition.
B1342	ECU is Faulted	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new satellite digital audio receiver system (SDARS) module. REFER to **Satellite Digital Audio Receiver System (SDARS) Module**. TEST the system for normal operation.
B2477	Module Configuration Failure	REFER to **MODULE CONFIGURATION** article.
U0184	Lost Communication With Radio (ACM)	For vehicles without a DVD entertainment system, go to **Pinpoint Test H** . For vehicles with a DVD entertainment system, go to **Pinpoint Test I** .
U0196	Lost Communication With Entertainment Control Module - Rear (AUX)	Go to **Pinpoint Test I** .
U0197	Lost Communication With Telephone Control Module	For vehicles without a DVD entertainment system, go to **Pinpoint Test H** . For vehicles with a DVD entertainment system, go to **Pinpoint Test I** .
U0249	Lost Communication With Entertainment Control Module - Rear "B" (RCU)	DISREGARD the DTC. CLEAR the DTCs.
U0255	Lost Communication With Front Controls Interface Module	DISREGARD the DTC. CLEAR the DTCs.
U0256	Lost Communication With Front Display Interface Module	DISREGARD the DTC. CLEAR the DTCs.
U2050	No Application Present	REFER to **MODULE CONFIGURATION** article.

NOTE: **For all U-codes listed in this chart, if no related symptoms are observed, disregard the DTC.**

NOTE: **For all U-codes listed in this chart, if DTC B1318 is present, diagnose it before diagnosing the U-code DTC.**

REAR ENTERTAINMENT MODULE (RETM) DTC CHART

DTC	Description	Action
B1119	Audio Disc DVD Player Thermal Shutdown	The rear entertainment module (RETM) was over-temperature. Operation will resume once the RETM has cooled. This is normal operation. CLEAR the DTCs.
B111F	LCD Thermal Shutdown	The LCD screen was over-temperature. Operation will resume after the LCD screen cools. This is normal operation. CLEAR the DTCs.
B1317	Battery Voltage High	CLEAR the DTCs. TEST the charging system. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. • If the charging system is OK, the DTC was set by a previous over-charge condition. No concern is found at this time. • If the charging system is not OK, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article to diagnosis the overcharging condition.
B1318	Battery Voltage Low	CLEAR the DTCs. TEST the charging system. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. • If the charging system is OK, the DTC was set by a previous low voltage condition. No concern is found at this time. • If the charging system is not OK, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article to diagnosis the low battery voltage condition.
B1342	ECU is Faulted	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new RETM. REFER to **Rear Entertainment Module (RETM)**. TEST the system for normal operation.
B2477	Module Configuration Failure	REFER to **MODULE CONFIGURATION** article.
B2656	DVD (Digital Versatile Disk) Error	CLEAR the DTCs. REPEAT the self-test. If DTC B2656 is retrieved again, INSTALL a new RETM. REFER to **Rear Entertainment Module (RETM)**. TEST the system for normal operation.
B2924	Audio Button Stuck	VERIFY no RETM buttons are stuck and that no RETM button is pressed during the self-test. CLEAR the DTCs. REPEAT the self-test. If DTC B2924 is retrieved again,

		INSTALL a new RETM. REFER to Rear Entertainment Module (RETM). TEST the system for normal operation.
U0140	Lost Communication With Body Control Module (GEM)	If a backlighting concern is present, REFER to **INSTRUMENT CLUSTER AND PANEL ILLUMINATION** article. If the accessory delay does not function correctly, REFER to **WIPERS AND WASHERS** article.
U0184	Lost Communication With Radio (ACM)	CARRY OUT the network test using the scan tool. • If the scan tool communicates with the ACM, go to **Symptom Chart - Audio System** to diagnose the observed symptom. • If the scan tool does not communicate with the ACM, REFER to **MODULE COMMUNICATIONS NETWORK** article.
U0193	Lost Communication With Digital Audio Control Module (SDARS)	Go to **Pinpoint Test I** .
U2050	No Application Present	REFER to **MODULE CONFIGURATION** article.

NOTE: For all U-codes listed in this chart, if no related symptoms are observed, disregard the DTC.

NOTE: For all U-codes listed in this chart, if DTC B1318 is present, diagnose it before diagnosing the U-code DTC.

ACCESSORY PROTOCOL INTERFACE MODULE (APIM) DTC CHART

DTC	Description	Action
B1038	Microphone Input Circuit Failure	Go to **Pinpoint Test W** .
B1117	Audio Steering Wheel Button Stuck	Go to **Pinpoint Test F** .
B1136	Audio Steering Wheel Switch #2 Circuit Failure	Go to **Pinpoint Test F** .
B1317	Battery Voltage High	CLEAR the DTCs. TEST the charging system. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. • If the charging system is OK, the DTC was set by a previous high voltage condition. No concern is found at this time. • If the charging system is not OK, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article to diagnosis the over-charging condition.

B1318	Battery Voltage Low	CLEAR the DTCs. TEST the charging system. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. • If the charging system is OK, the DTC was set by a previous low voltage condition. No concern is found at this time. • If the charging system is not OK, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article to diagnosis the low battery voltage condition.
B1342	ECU is Faulted	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new accessory protocol interface module (APIM). REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.
B2477	Module Configuration Failure	REFER to **MODULE CONFIGURATION** article.
U0184	Lost Communication With Radio (ACM)	Go to **Pinpoint Test S** .
U0196	Lost Communication With Entertainment Control Module - Rear (AUX)	Go to **Pinpoint Test S** .
U0249	Lost Communication With Entertainment Control Module - Rear "B" (RCU)	DISREGARD the DTC. CLEAR the DTCs.
U0255	Lost Communication With Front Controls Interface Module	DISREGARD the DTC. CLEAR the DTCs.
U0256	Lost Communication With Front Display Interface Module	DISREGARD the DTC. CLEAR the DTCs.
U2050	No Application Present	REFER to **MODULE CONFIGURATION** article.
U261C	USB #1 Device Error	Go to **Pinpoint Test U** .

Symptom Chart

Symptom Chart - Audio System

Condition	Possible Sources	Action
• No communication with the audio control module (ACM)	• Fuse • Wiring, terminals or connectors • ACM	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• No communication with the audio digital signal processing (DSP) module	• Fuse • Wiring, terminals or connectors	• REFER to **MODULE COMMUNICATIONS NETWORK** article.

	• DSP module	
• No communication with the satellite digital audio receiver system (SDARS) module	• Fuse • Wiring, terminals or connectors • SDARS module	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• No communication with the rear entertainment module (RETM)	• Fuse • Wiring, terminals or connectors • RETM	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• No communication with the accessory protocol interface module (APIM)	• Fuse • Wiring, terminals or connectors • APIM	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• The satellite audio is inoperative/does not operate correctly - vehicles without DVD entertainment	• Wiring, terminals or connectors • APIM (if equipped) • SDARS module • ACM	• Go to **Pinpoint Test H** .
• The satellite audio is inoperative/does not operate correctly - vehicles with DVD entertainment	• Wiring, terminals or connectors • RETM • APIM (if equipped) • SDARS module • ACM	• Go to **Pinpoint Test I** .
• The ACM display is blank, but the ACM operates	• ACM	• INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.
• The ACM backlighting does not operate correctly	• Backlighting system concern • Wiring, terminals or connectors • ACM	• REFER to **INSTRUMENT CLUSTER AND PANEL ILLUMINATION** article.
• The RETM backlighting does not operate correctly	• Backlighting system concern • Wiring, terminals or connectors • RETM	• REFER to **INSTRUMENT CLUSTER AND PANEL ILLUMINATION** article.

• The CD player is inoperative/does not operate correctly	• CD
	• ACM
		• INSPECT the CD for scratches, fingerprints, a loose paper label, incorrect format, or damage. INSERT a known good CD and TEST the system.
		  ◦ If the system operates correctly, the concern was caused by a damaged CD.
		  ◦ If the system does not operate correctly, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

• Poor reception - AM/FM	• Wiring, terminals or connectors • Antenna • Antenna cable • Charging system • Ignition system • Noise suppression equipment • ACM	• Go to **Pinpoint Test A** .
• Continuous seek/scan in AM/FM	• RDS/PTY function setting • Antenna • Antenna cable • Noise suppression equipment • Antenna module • ACM	• Go to **Pinpoint Test A** .
• Poor reception - satellite audio	• Obstructions to the line of sight • Satellite radio antenna • Satellite radio antenna cable • SDARS module	• Go to **Pinpoint Test J** .
• No sound while in satellite	• Satellite radio antenna • Satellite radio	• Go to **Pinpoint Test J** .

radio mode	antenna cable • SDARS module	
• Poor quality/distorted/no sound from one or more speakers (not all speakers) - all audio systems except THX®	• Wiring, terminals or connectors • Speaker • RETM (if equipped) • ACM	• Go to **Pinpoint Test B** .
• Poor quality/distorted/no sound from one or more speakers (not all speakers) - THX® audio system	• Fuse • Wiring, terminals or connectors • Speaker • Subwoofer • DSP module • ACM	• Go to **Pinpoint Test C** .

• Poor quality/distorted/no sound from all speakers - all audio systems except THX®	• Wiring, terminals or connectors
	• ACM
		NOTE:
		If DTC B2965 is set in the ACM, the cause of the concern is a short to ground or short to voltage in the circuitry to an individual speaker. Go to Pinpoint Test B .
		• With the key in any position except START, MEASURE the voltage between the ACM C290a-15, circuit CBP13 (GY/BN), harness side and ground.
		  ◦ If any voltage is present, REPAIR the circuit. TEST the system for normal operation.
		  ◦ If no voltage is present, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

• Poor quality/distorted/no sound while in SYNC mode	• Wiring, terminals or connectors • APIM • ACM	• Go to **Pinpoint Test X** .
	• Fuse	

• Poor quality/distorted/no sound from all speakers - THX® audio system	• Wiring, terminals or connectors • DSP module • ACM	• Go to **Pinpoint Test D** .
• The subwoofer is inoperative/does not operate correctly - Audiophile	• Fuse • Wiring, terminals or connectors • Subwoofer • ACM	• Go to **Pinpoint Test E** .
• The subwoofer is inoperative/does not operate correctly - THX® audio system	• Fuse • Wiring, terminals or connectors • Speaker • DSP module • ACM	• Go to **Pinpoint Test C** .
• The video system is inoperative/does not operate correctly	• Damaged DVD • RETM setting • RETM	• Go to **Pinpoint Test K** .
• The video system is inoperative/does not operate correctly - no audio	• Wiring, terminals or connectors • RETM • ACM	• Go to **Pinpoint Test K** .
• No auxiliary headphone audio - all audio systems except THX®	• Headphones • RETM	• INSTALL a set of known good headphones and OPERATE the audio system in radio tuner (AM/FM) dual-play mode. ◦ If the system operates correctly, the concern was caused by inoperative headphones. ◦ If the system does not operate correctly, INSTALL a new RETM. REFER to **Rear Entertainment Module (RETM)**. TEST the system for normal operation.
• No auxiliary headphone audio - THX®	• Wiring, terminals or connectors • Headphones • RETM	• Go to **Pinpoint Test L** .

• The video system remote control does not function correctly	• Remote control batteries • Video system concern	• INSTALL new batteries in the remote control. TEST the system for normal operation. If the concern is still present, CONTACT an authorized audio repair facility for further diagnostic test procedures.
• The steering wheel controls are inoperative/do not operate correctly	• Wiring, terminals or connectors • Clockspring • Steering wheel controls • ACM • APIM (if equipped)	• Go to **Pinpoint Test F** .
• The speed sensitive volume does not operate correctly	• Instrument cluster (IC) • ACM	• Go to **Pinpoint Test Y**
• The audio input jack is inoperative/does not operate correctly	• Wiring, terminals or connectors • Audio input jack • ACM • APIM (if equipped)	• Go to **Pinpoint Test J** .
• The audio does not reduce when the parking aid tone sounds	• Parking aid system concern • ACM	• Go to **Pinpoint Test Q** .
• Voice recognition is inoperative/does not operate correctly - vehicles without the SYNC system	• Fuse • Wiring, terminals or connectors • Microphone (part of interior rear view mirror) • Steering wheel controls • ACM	• Go to **Pinpoint Test R** .
• Voice recognition is inoperative/does not operate correctly - vehicles with the SYNC system	• Fuse • Wiring, terminals or connectors • Microphone (part of interior rear view mirror) • Steering wheel	• Go to **Pinpoint Test W** .

	controls • ACM (if equipped with navigation) • APIM	

Symptom Chart - Navigation

Condition	Possible Sources	Action
• No global positioning system (GPS) antenna signal	• GPS antenna • ACM	• Go to **Pinpoint Test M** .
• Navigation screen only displays Dearborn, Michigan	• GPS antenna	• Go to **Pinpoint Test M** .
• The position cursor is inaccurate	• GPS antenna • Vehicle speed sensor (VSS) signal concern • ACM	• Go to **Pinpoint Test P** .
• The audible switch feedback is inoperative	• Audible switch feedback setting • ACM	• Go to **Pinpoint Test N** .

• Unable to read map disc	• Map DVD
	• ACM
		• REMOVE the map DVD and CLEAN it. INSPECT for scratches, fingerprints, or damage, and REPAIR as necessary. VERIFY a valid map DVD is being used. If no concern is found, INSERT a known good map DVD. TEST the system.
		  ◦ If the system operates correctly, the concern was caused by a damaged or inoperable map DVD.
		  ◦ If the system does not operate correctly, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.
		• INSPECT the instrument panel center trim panel for

• The screen does not open/close	• Trim panel interference • ACM	interference with the navigation screen, and REPAIR as necessary. If no interference is found, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.
• The voice guidance is inoperative/does not operate correctly	• Incorrect system setting • Wiring, terminals or connectors (THX® only) • DSP module (THX® only) • ACM	• Go to **Pinpoint Test O** .

• The display screen is inoperative	• Wiring, terminals or connectors
	• ACM
		• VERIFY the operation of the AM/FM audio.
		  ◦ If the AM/FM audio system does not operate correctly, go to **Symptom Chart - Audio System**.
		  ◦ If the AM/FM audio system operates correctly, INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

• Voice recognition is inoperative/does not operate correctly - vehicles without the SYNC system	• Fuse • Wiring, terminals or connectors • Microphone (part of interior rear view mirror) • Steering wheel controls • ACM	• Go to **Pinpoint Test R** .
• Voice recognition is	• Fuse • Wiring, terminals or connectors • Microphone (part of interior rear view	

inoperative/does not operate correctly - vehicles with the SYNC system	mirror) • Steering wheel controls • ACM (if equipped with navigation) • APIM	• Go to **Pinpoint Test W** .

Symptom Chart - SYNC System

Condition	Possible Sources	Action
• The SYNC system is completely inoperative	• Audio system concern • Communication network concern • Customer error • Customer device • APIM	• Go to **Pinpoint Test S** .
• Unable to pair Bluetooth® device	• Incompatible Bluetooth® device • Customer error • Customer Bluetooth® device • APIM	• Go to **Pinpoint Test T** .
• An individual Bluetooth® device feature is inoperative	• Customer device compatibility	**NOTE:** **If a Bluetooth® device is able to pair with the SYNC system, there are no concerns with the APIM.** • INSTRUCT the customer to review the interoperability list on the . Not all phone features are available through SYNC. This is normal operation.
• The universal serial bus (USB) port is inoperative/does not operate correctly	• Customer USB device • USB cable and port • APIM	• Go to **Pinpoint Test U** .
• The steering wheel controls are inoperative/do not operate correctly	• Wiring, terminals or connectors • Steering wheel controls • ACM	• Go to **Pinpoint Test F** .

	• APIM	
• The audio input jack is inoperative/does not operate correctly	• Wiring, terminals or connectors • Audio input jack • Audio control module (ACM) • APIM	• Go to **Pinpoint Test G** .
• The SYNC system audible prompts are inoperative/do not operate correctly	• Wiring, terminals or connectors • Customer setting • ACM • APIM	**NOTE:** **The audible prompts include the text-to-speech (TTS) feature, voice prompts, and ring tones.** • Go to **Pinpoint Test V** .
• During a phone call, no incoming audio is heard in the vehicle	• Wiring, terminals or connectors • Customer setting • ACM • APIM	• Go to **Pinpoint Test V** .
• Voice recognition is inoperative/does not operate correctly	• Fuse • Wiring, terminals or connectors • Microphone (part of interior rear view mirror) • Steering wheel controls • ACM (if equipped with navigation) • APIM	• Go to **Pinpoint Test W** .
• During a phone call, no outgoing audio is heard on the outside device	• Fuse • Wiring, terminals or connectors • Microphone (part of interior rear view mirror) • APIM	• Go to **Pinpoint Test W** .

Pinpoint Tests

Pinpoint Test A: Poor Reception - AM/FM

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and

connector information.

Normal Operation

The antenna receives AM and FM radio waves. The antenna module is integral with the roof-mounted antenna and receives voltage from the audio control module (ACM) through circuit CME44 (YE/GN).

The noise suppression equipment reduces engine ignition and electrical systems interference transmitted through the speakers.

- DTC B2103 (Antenna Not Connected) - sets during the on-demand self-test when the signal strength is less than the configured minimum value. The ACM must be tuned to AM during the self-test for this DTC to set. Also, the DTC will not set when the ACM self-diagnostic mode is run.

This pinpoint test is intended to diagnose the following:

- RDS/PTY function setting
- Wiring, terminals or connectors
- Antenna
- Antenna cable
- Charging system
- Ignition system
- Noise suppression equipment
- ACM

PINPOINT TEST A: POOR RECEPTION - AM/FM

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 VERIFY THE RDS/PTY SETTING

- Verify the RDS/PTY function is set to ALL.
  - For non-navigation audio systems, press MENU repeatedly until RBDS (ON/OFF) appears on the display, then press the TUNE UP or TUNE DOWN button until ALL is displayed.
  - For navigation audio system, while in FM mode, press SHOW OPTIONS, make sure RDS is active, then press SET PTY and select ALL.
- Press the SEEK DOWN or SEEK UP button to scan for a good channel.
- **Is a good channel found?**

  YES : The system is operating correctly at this time. The cause of the concern was that no channel in the selected category was found.

  NO : Go to A2.

A2 CHECK THE AUDIO SYSTEM RECEPTION

- Check the ACM reception with the engine running, and with the engine off.
- **Does the poor reception only occur with the engine running?**

  YES : Go to A3.

  NO : Go to A6.

A3 CHECK THE NOISE SUPPRESSION EQUIPMENT

- Check all required noise suppression equipment and the radio frequency interference suppression bond for security, cleanliness, and metal-to-metal contact.
- **Are the connections clean, secure, and in metal-to-metal contact?**

  YES : Go to A4.

  NO : CLEAN and SECURE the antenna connections, or INSTALL new noise suppression equipment as needed. TEST the system for normal operation.

A4 CHECK THE GENERATOR

- Key in OFF position.
- Check the generator by disconnecting the wiring harness from the voltage regulator.
- Start the engine.
- Operate the audio system in radio tuner (AM/FM) mode.
- **Is the reception OK?**

  YES : INSTALL a new generator. REFER to **GENERATOR AND REGULATOR** article. TEST the system for normal operation.

  NO : Go to A5.

A5 CHECK THE IGNITION CIRCUITS

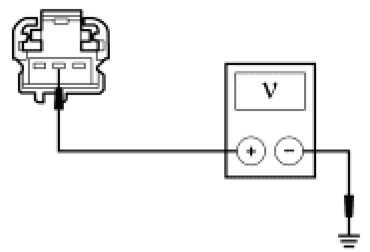
- Key in OFF position.
- Connect the wiring harness to the voltage regulator.
- Check the ignition circuits for correct routing, grounding, and integrity of the connections.
- **Are the ignition components OK?**

  YES : USE a jumper cable to ground various parts of the vehicle to the frame (for example: engine, fenders, quarter panels, stone deflectors, air cleaner, body sheet metal). When the noise is eliminated, PROVIDE a permanent ground where necessary. TEST the system for normal operation.

  NO : REPAIR the ignition system as necessary. TEST the system for normal operation.

A6 CHECK CIRCUIT CME44 (YE/GN) FOR VOLTAGE

- Key in OFF position.
- Disconnect: Antenna C2086
- Operate the audio system in radio tuner (AM/FM) mode.



N0064556

Fig. 3: Measuring Voltage Between Antenna C2086-2, Circuit CME44 (YE/GN), Harness Side & Ground
Courtesy of FORD MOTOR CO.

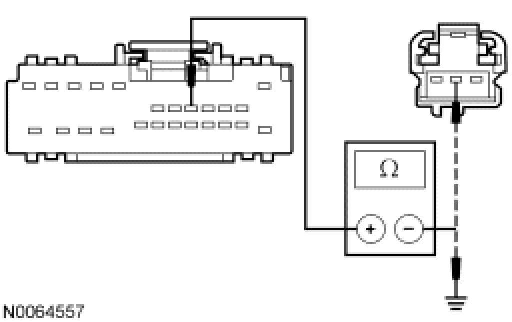
- Measure the voltage between the antenna C2086-2, circuit CME44 (YE/GN), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to A8.

  NO : Go to A7.

A7 CHECK CIRCUIT CME44 (YE/GN) FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Disconnect: ACM C240a



N0064557

Fig. 4: Measuring Resistance Between Audio Unit C240A-5, Circuit CME44 (YE/GN) & Antenna C2086-2
Courtesy of FORD MOTOR CO.

- Measure the resistance between the ACM C240a-5, circuit CME44 (YE/GN), harness side and the antenna C2086-2, circuit CME44 (YE/GN), harness side; and between the ACM C240a-5, circuit CME44 (YE/GN), harness side and ground.
- **Is the resistance less than 5 ohms between the ACM and the antenna, and greater than 10,000 ohms between the ACM and ground?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

A8 CHECK THE ANTENNA COAXIAL CABLE

- Key in OFF position.
- Disconnect: Antenna Coaxial Cable (At ACM)
- Measure the resistance of the antenna coaxial cable between the antenna and the ACM.
- **Is the resistance less than 2 ohms?**

  YES : Go to A9.

  NO : INSTALL a new antenna cable. REFER to **Antenna Cable - AM/FM**. CLEAR the DTCs. REPEAT the self-test.

A9 ISOLATE THE ANTENNA

- Connect: Antenna Coaxial Cable (At ACM)
- Substitute the antenna for a known good antenna.
- Operate the audio system in radio tuner (AM/FM) mode.
- **Is the reception OK?**

  YES : INSTALL a new antenna. REFER to **Antenna - AM/FM**. CLEAR the DTCs. REPEAT the self-test.

  NO : INSTALL the original antenna. Go to A10.

A10 SUBSTITUTE THE ANTENNA CABLE

- Key in OFF position.
- Substitute a known good AM/FM antenna cable.
- Operate the audio system in radio tuner (AM/FM) mode.
- **Is the reception OK?**

  YES : INSTALL a new antenna cable. REFER to **Antenna Cable - AM/FM**. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to A11.

A11 CHECK THE ACM FOR CORRECT OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: Poor Quality/Distorted/No Sound From One Or More Speakers (Not All Speakers) -

Except THX® Audio System

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The audio control module (ACM) directs audio signals to the front door speakers and to the rear entertainment module (RETM) (if equipped) in the form of a fluctuating AC voltage. The tweeter speakers (if equipped) are wired in series with the front door speakers. The rear door speakers receive audio signals through the RETM (if equipped) or directly from the ACM.

If the vehicle is equipped with the DVD entertainment system, the RETM mutes the speaker output to the rear speakers when the audio system is in dual-play mode. Make sure the audio system is in single-play mode before diagnosing a symptom of no sound to the rear speakers.

For the navigation system, if the voice guidance setting is set to zero rather than to off, it may appear that the front speakers intermittently produce no sound. Make sure the voice guidance setting is not set to zero before addressing a concern with the front speakers.

- DTC B2965 (Audio System Speaker Circuit Fault) - sets when an open, a short to ground, or a short to voltage is detected on the front or rear door speaker circuits. The ACM checks for faults once every 500ms during normal operation, or for any duration during the ACM self-test. The following should also be noted:
    - The Audiophile ACM does not check for opens in the front door speakers.
    - The navigation ACM does not check for opens.

For some ACMs, a short to ground or short to voltage in the circuitry to one of the speakers will cause all speakers to lose sound due to the built-in overload protection feature of the ACM. In this case, DTC B2965 will set in the ACM, and this pinpoint test should be followed to isolate the damaged circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Speaker
- RETM (if equipped)
- ACM

PINPOINT TEST B: POOR QUALITY/DISTORTED/NO SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS) - EXCEPT THX® AUDIO SYSTEM

NOTE:	**Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

B1 ISOLATE THE SUSPECT SPEAKER

NOTE: Make sure the audio system is in single-play mode before beginning this pinpoint test, or the results will not be accurate.

- Key in ON position.
- Carry out the speaker walk-around test.
- **Is the concern with a high-mounted tweeter speaker only?**

  YES : Go to B13.

  NO : Go to B2.

B2 CHECK THE SPEAKER CIRCUITS FOR VOLTAGE

- Key in OFF position.
- Disconnect: Suspect Speaker
- Operate the audio system in radio tuner (AM/FM) mode.
- Measure the AC voltage between the suspect speaker pin 1 and pin 2, harness side as follows:

Suspect Speaker	Connector-Pin/Circuit	Connector-Pin/Circuit
LH front	C536-1 or C570a-1 VME07 (WH)	C536-2 or C570a-2 RME07 (WH/BN)
RH front	C628-1 or C612a-1 VME10 (WH/VT)	C628-2 or C612a-2 RME10 (WH/OG)
LH rear	C702-1 VME09 (WH/GN)	C702-2 RME09 (BN/YE)
RH rear	C802-1 VME12 (BN/WH)	C802-2 RME12 (BN/BU)

- **Is a fluctuating AC voltage present?**

  YES : INSTALL a new speaker for the suspect speaker. REFER to **Door Speaker**. CLEAR any DTCs present. TEST the system for normal operation.

  NO : For a front speaker concern, go to B11.

  For a rear speaker concern, go to B3.

B3 VERIFY THE PRESENCE OF A DVD ENTERTAINMENT SYSTEM

- Key in OFF position.
- Check for the presence of a DVD entertainment system.
- **Is the vehicle equipped with a DVD entertainment system?**

YES : Go to B6.

NO : Go to B4.

B4 CHECK THE REAR SPEAKER CIRCUITS FOR A SHORT TO VOLTAGE

- Disconnect: ACM C240a
- Key in ON position.
- Measure the voltage between the suspect speaker pins, harness side and ground as follows:

Suspect Speaker	Connector-Pin	Circuit
LH rear	C702-1	VME09 (WH/GN)
	C702-2	RME09 (BN/YE)
RH rear	C802-1	VME12 (BN/WH)
	C802-2	RME12 (BN/BU)

- **Is any voltage present?**

YES : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

NO : Go to B5.

B5 CHECK THE REAR SPEAKER CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the suspect speaker, harness side and the ACM, harness side; and between the suspect speaker, harness side and ground as follows:

Suspect Speaker	Speaker Connector-Pin	ACM Connector-Pin	Circuit
LH rear	C702-1	C240a-9	VME09 (WH/GN)
	C702-2	C240a-22	RME09 (BN/YE)
RH rear	C802-1	C240a-10	VME12 (BN/WH)
	C802-2	C240a-23	RME12 (BN/BU)

- **Is the resistance less than 5 ohms between the suspect speaker and the ACM, and greater than 10,000 ohms between the suspect speaker and ground?**

YES : Go to B17.

NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

B6 CHECK THE ACM OUTPUT SIGNALS

- Disconnect: RETM C949
- Operate the audio system in radio tuner (AM/FM) mode.
- Measure the AC voltage between the RETM pins, harness side as follows:

Suspect Speaker	Connector-Pin/Circuit	Connector-Pin/Circuit
LH rear	C949-27 VME09 (WH/GN)	C949-28 RME09 (BN/YE)
RH rear	C949-11 VME12 (BN/WH)	C949-12 RME12 (BN/BU)

- **Is a fluctuating AC voltage present?**

  YES : Go to B9.

  NO : Go to B7.

B7 CHECK THE ACM OUTPUT CIRCUITS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240a
- Key in ON position.
- Measure the voltage between the RETM, harness side and ground as follows:

Suspect Speaker	Connector-Pin	Circuit
LH rear	C949-27	VME09 (WH/GN)
	C949-28	RME09 (BN/YE)
RH rear	C949-11	VME12 (BN/WH)
	C949-12	RME12 (BN/BU)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to B8.

B8 CHECK THE ACM OUTPUT CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the ACM and the RETM, harness side; and between the ACM, harness side and ground as follows:

Suspect Speaker	ACM Connector-Pin	RETM Connector-Pin	Circuit
LH rear	C240a-9	C949-27	VME09 (WH/GN)
	C240a-22	C949-28	RME09 (BN/YE)
RH rear	C240a-10	C949-11	VME12 (BN/WH)
	C240a-23	C949-12	RME12 (BN/BU)

- **Is the resistance less than 5 ohms between the ACM and the RETM, and greater than 10,000 ohms between the ACM and ground?**

  YES : Go to B17.

  NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

B9 CHECK THE RETM OUTPUT CIRCUITS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: Suspect Speaker
- Key in ON position.
- Measure the voltage between the suspect speaker, harness side and ground as follows:

Suspect Speaker	Connector-Pin	Circuit
LH rear	C702-1	VME09 (WH/GN)
	C702-2	RME09 (BN/YE)
RH rear	C802-1	VME12 (BN/WH)
	C802-2	RME12 (BN/BU)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to B10.

B10 CHECK THE RETM OUTPUT CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the suspect speaker, harness side and the RETM, harness side; and between the suspect speaker, harness side and ground as follows:

Suspect Speaker	Speaker Connector-Pin	RETM Connector-Pin	Circuit
LH rear	C949-30	C702-1	VME09 (WH/GN)
	C949-29	C702-2	RME09 (BN/YE)
RH rear	C949-14	C802-1	VME12 (BN/WH)
	C949-13	C802-2	RME12 (BN/BU)

- **Is the resistance less than 5 ohms between the suspect speaker and the RETM, and greater than 10,000 ohms between the suspect speaker and ground?**

  YES : Go to B18.

  NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

B11 CHECK THE FRONT SPEAKER CIRCUITS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240a
- Key in ON position.
- Measure the voltage between the suspect speaker, harness side and ground as follows:

Suspect Speaker	Connector-Pin/Circuit	Connector-Pin/Circuit
LH front	C536-1 or C570a-1	VME07 (WH)
	C536-2 or C570a-2	RME07 (WH/BN)
RH front	C628-1 or C612a-1	VME10 (WH/VT)
	C628-2 or C612a-2	RME10 (WH/OG)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

NO : Go to B12.

B12 CHECK THE FRONT SPEAKER CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the ACM, harness side and the suspect speaker, harness side; and between the ACM, harness side and ground as follows:

Suspect Speaker	ACM Connector-Pin	Speaker Connector-Pin	Circuit
LH front	C240a-8	C536-1 or C570a-1	VME07 (WH)
	C240a-21	C536-2 or C570a-2	RME07 (WH/BN)
RH front	C240a-11	C628-1 or C612a-1	VME10 (WH/VT)
	C240a-12	C628-2 or C612a-2	RME10 (WH/OG)

- **Is the resistance less than 5 ohms between the ACM and the suspect speaker, and greater than 10,000 ohms between the ACM and ground?**

  YES : Go to B17.

  NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

B13 CHECK FOR VOLTAGE TO THE SUSPECT TWEETER SPEAKER

- Key in OFF position.
- Disconnect: Suspect Tweeter Speaker
- Operate the audio system in radio tuner (AM/FM) mode.
- Measure the AC voltage between the suspect tweeter speaker pin 1 and pin 2, harness side as follows:

Suspect Speaker	Connector-Pin/Circuit	Connector-Pin/Circuit
LH tweeter	C569-1 VME08 (GN/OG)	C569-2 RME08 (GY/OG)
RH tweeter	C613-1 VME11 (VT/OG)	C613-2 RME11 (YE/OG)

- **Is a fluctuating AC voltage present?**

  YES : INSTALL a new speaker for the suspect tweeter speaker. REFER to **Door Speaker**. TEST the system for normal operation.

NO : Go to B14.

B14 CHECK THE TWEETER SPEAKER CIRCUITS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: LF Speaker C570b or RF Speaker C612b
- Key in ON position.
- Measure the voltage between the suspect tweeter speaker, harness side and ground as follows:

Suspect Tweeter Speaker	Tweeter Speaker Connector-Pin	Circuit
LH tweeter	C569-1	VME08 (GN/OG)
	C569-2	RME08 (GY/OG)
RH tweeter	C613-1	VME11 (VT/OG)
	C613-2	RME11 (YE/OG)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to B15.

B15 CHECK THE TWEETER SPEAKER CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the suspect tweeter speaker, harness side and the respective door speaker, harness side; and between the suspect tweeter speaker, harness side and ground as follows:

Suspect Tweeter Speaker	Tweeter Speaker Connector-Pin	Door Speaker Connector-Pin	Circuit
LH tweeter	C569-1	C570b-1	VME08 (GN/OG)
	C569-2	C570b-2	RME08 (GY/OG)
RH tweeter	C613-1	C612b-1	VME11 (VT/OG)
	C613-2	C612b-2	RME11 (YE/OG)

- **Is the resistance less than 5 ohms between the suspect tweeter speaker and the door speaker,**

and greater than 10,000 ohms between the suspect tweeter speaker and ground?

YES : Go to B16.

NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

B16 ISOLATE THE DOOR SPEAKER

- Connect: Suspect Tweeter Speaker
- Install a known good door speaker for the door with the suspect tweeter speaker.
- Operate the audio system in radio tuner (AM/FM) mode.
- **Does the tweeter speaker operate correctly?**

YES : INSTALL a new door speaker. REFER to **Door Speaker**. TEST the system for normal operation.

NO : INSTALL a new tweeter speaker. REFER to **Door Speaker**. TEST the system for normal operation.

B17 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Connect: All Disconnected Connectors
- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

B18 CHECK FOR CORRECT RETM OPERATION

- Key in OFF position.
- Connect: All Disconnected Connectors
- Disconnect the RETM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the RETM connector and make sure it seats correctly.
- Operate the system and determine if the concern is still present.

- **Is the concern still present?**

  YES : INSTALL a new RETM. REFER to **Rear Entertainment Module (RETM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: Poor Quality/Distorted/No Sound From One Or More Speakers (Not All Speakers) - THX® Audio System

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The audio control module (ACM) directs the audio signals to the audio digital signal processing (DSP) module, which processes the audio signals and sends them to the speakers. Each speaker has a signal and return circuit.

DTC Description	Fault Set Conditions
B1158 - Subwoofer #2 Not Connected	May set when an open is detected in the subwoofer circuit.
B2913 - Audio Subwoofer Not Connected	May set when an open is detected in the subwoofer circuit.
B2925 - Subwoofer Speaker Short Circuit	Sets when a short to ground is detected in the subwoofer circuit.
B2965 - Audio System Speaker Circuit Fault	May set when an open or a short to ground is detected in the front door or rear door speaker circuits, or in the subwoofer.

The following should also be noted:

- The ACM does not set DTC B2965 when the vehicle is equipped with the THX® audio system. Only the DSP module can set this DTC.
- This DTC may not set due to a fault in the circuitry to the rear tweeters.
- An open or short to ground in the rear tweeter circuitry may cause both rear tweeters to lose sound.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Speaker
- Subwoofer
- DSP module
- ACM

PINPOINT TEST C: POOR QUALITY/DISTORTED/NO SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS) - THX® AUDIO SYSTEM

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

C1 CHECK THE AUDIO SIGNALS TO THE SUSPECT SPEAKER

- Key in OFF position.
- Disconnect: Suspect Speaker
- Operate the audio system in radio tuner (AM/FM) mode.
- Measure the AC voltage between the suspect speaker pins, harness side as follows:

Suspect Speaker	Speaker Connector-Pin/Circuit	Speaker Connector-Pin/Circuit
LR door	C702-1 VME09 (WH/GN)	C702-2 RME09 (BN/YE)
LF door	C536-1 VME28 (BN/VT)	C536-2 RME28 (BN/GN)
LH tweeter	C569-1 VME07 (WH)	C569-2 RME07 (WH/BN)
LH front imaging	C2359-1 VME07 (WH)	C2359-4 RME07 (WH/BN)
Center front imaging	C2359-2 VME06 (GN)	C2359-5 RME06 (GY/YE)
RH front imaging	C2359-3 VME10 (WH/VT)	C2359-6 RME10 (WH/OG)
RH tweeter	C613-1 VME11 (VT/OG)	C613-2 RME11 (WH/OG)
RF door	C628-1 VME29 (GN/WH)	C628-2 RME29 (BU/WH)
RR door	C802-1 VME12 (BN/WH)	C802-2 RME12 (BN/BU)
Subwoofer 1	C4212-1 VME01	C4212-2 RME01

	(GN/VT)	(GY)
Subwoofer 2	C4212-3 VME02 (VT)	C4212-4 RME02 (YE)
LH rear center imaging	C4337-1 VME30 (GN/BN)	C4337-2 RME30 (VT/BN)
RH rear center imaging	C4438-1 VME30 (GN/BN)	C4438-2 RME30 (VT/BN)

- **Is a fluctuating AC voltage present?**

  YES : INSTALL a new speaker for the suspect speaker. REFER to **Door Speaker**, **Instrument Panel Speaker**, or **Subwoofer Speaker** . CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to C2.

C2 CHECK THE CIRCUITS TO THE SUSPECT SPEAKER FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: DSP Module C4348b or C4348c
- Key in ON position.
- Measure the voltage between the suspect speaker, harness side and ground as follows:

Suspect Speaker	Speaker Connector-Pin	Circuit
LR door	C702-1	VME09 (WH/GN)
	C702-2	RME09 (BN/YE)
LF door	C536-1	VME28 (BN/VT)
	C536-2	RME28 (BN/GN)
LH tweeter	C569-1	VME07 (WH)
	C569-2	RME07 (WH/BN)
LH front imaging	C2359-1	VME07 (WH)
	C2359-4	RME07 (WH/BN)
Center front	C2359-2	VME06 (GN)

imaging		
	C2359-5	RME06 (GY/YE)
RH front imaging	C2359-3	VME10 (WH/VT)
	C2359-6	RME10 (WH/OG)
RH tweeter	C613-1	VME11 (VT/OG)
	C613-2	RME11 (WH/OG)
RF door	C628-1	VME29 (GN/WH)
	C628-2	RME29 (BU/WH)
RR door	C802-1	VME12 (BN/WH)
	C802-2	RME12 (BN/BU)
Subwoofer 1	C4212-1	VME01 (GN/VT)
	C4212-2	RME01 (GY)
Subwoofer 2	C4212-3	VME02 (VT)
	C4212-4	RME02 (YE)
LH rear center imaging	C4337-1	VME30 (GN/BN)
	C4337-2	RME30 (VT/BN)
RH rear center imaging	C4338-1	VME30 (GN/BN)
	C4338-2	RME30 (VT/BN)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to C3.

C3 CHECK THE CIRCUITS TO THE SUSPECT SPEAKER FOR AN OPEN OR SHORT TO GROUND

- Measure the resistance between the suspect speaker, harness side and the DSP module, harness side; and between the suspect speaker, harness side and ground as follows:

Suspect Speaker	Speaker Connector- Pin	DSP Module Connector-Pin	Circuit
LR door	C702-1 C702-2	C4348c-7 C4348c-6	VME09 (WH/GN) RME09 (BN/YE)
LF door	C536-1 C536-2	C4348c-3 C4348c-2	VME28 (BN/VT) RME28 (BN/GN)
LH tweeter	C569-1 C569-2	C4348b-9 C4348b-10	VME08 (GN/OG) RME08 (GY/OG)
LH front imaging	C2359-1 C2359-4	C4348b-2 C4348b-1	VME07 (WH) RME07 (WH/BN)
Center front imaging	C2359-2 C2359-5	C4348b-4 C4348b-3	VME06 (GN) RME06 (GY/YE)
RH front imaging	C2359-3 C2359-6	C4348b-6 C4348b-5	VME10 (WH/VT) RME10 (WH/OG)
RH tweeter	C613-1 C613-2	C4348b-11 C4348b-12	VME11 (VT/OG) RME11 (YE/OG)
RF door	C628-1 C628-2	C4348c-5 C4348c-4	VME29 (GN/WH) RME29 (BU/WH)
RR door	C802-1 C802-2	C4348c-18 C4348c-19	VME12 (BN/WH) RME12 (BN/BU)
Subwoofer 1	C4212-1 C4212-2	C4348c-14 C4348c-15	VME01 (GN/VT) RME01 (GY)
Subwoofer 2	C4212-3 C4212-4	C4348c-16 C4348c-17	VME02 (VT) RME02 (YE)
LH rear center imaging	C4337-1 C4337-2	C4348b-13 C4348b-14	VME30 (GN/BN) RME30 (VT/BN)
RH rear center imaging	C4338-1 C4338-2	C4348b-13 C4348b-14	VME30 (GN/BN) RME30 (VT/BN)

- **Is the resistance less than 5 ohms between the suspect speaker and the DSP module, and greater than 10,000 ohms between the suspect speaker and ground?**

  YES : Go to C4.

  NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

C4 ISOLATE THE SUSPECT SPEAKER

- Key in OFF position.
- Connect: DSP Module C4348b and C4348c

- Substitute a known good speaker for the suspect speaker.
- Operate the audio system in radio tuner (AM/FM) mode.
- **Is the concern still present?**

  YES : Go to C5.

  NO : INSTALL a new speaker for the suspect speaker. REFER to **Door Speaker**, **Instrument Panel Speaker**, or **Subwoofer Speaker** . CLEAR any DTCs present. TEST the system for normal operation.

C5 CHECK FOR CORRECT DSP MODULE OPERATION

- Key in OFF position.
- Connect: All Disconnected Connectors
- Disconnect all the DSP module connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the DSP module connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new DSP module. REFER to **Audio Digital Signal Processing (DSP) Module**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: Poor Quality/Distorted/No Sound From All Speakers - THX® Audio System

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The THX® amplifier receives voltage through circuits SBP38 (BN/RD) and SBP18 (YE/RD), and ground through circuit GD148 (BK/YE).

Left and right channel audio signals are sent from the audio control module (ACM) to the audio digital signal processing (DSP) module through circuits VME07 (WH), RME07 (WH/BN), VME10 (WH/VT), and RME10 (WH/OG). If there is a fault on one of these circuits, the audio quality will be reduced by approximately 25% for all speakers.

To enable the DSP module, the ACM sends voltage through the enable/clip circuit SME23 (VT/RD). The circuit acts as both an output (to enable the amplifier) and an input (to detect an amplifier overload condition). A variable resistor in the DSP module modifies the voltage signal from the ACM. In the event of an overload, the ACM clips the audio output signal to the amplifier (heard as distortion), in order to prevent damage to the amplifier and speakers.

The clip/enable status is based on the following voltages, as detected by the ACM:

- Less than 0.4 volts: amplifier disabled
- Between 3.8 and 6.7 volts: amplifier enabled
- Greater than 8.5 volts: amplifier clipped

NOTE: Despite their names, DTCs B2925 and B292A apply to the DSP module clip/enable circuit, not to the subwoofer.

- DTC B2925 (Subwoofer Speaker Short Circuit) - sets with DTCs B2965 and B292A when a short to ground is detected in circuit SME23 (VT/RD).
- DTC B292A (Subwoofer #2 Speaker Short Circuit) - sets when an open or short to ground is detected in circuit SME23 (VT/RD). If an open is detected, DTC B2965 will also be set. If a short to ground is detected, DTCs B2965 and B2925 will also be set.
- DTC B2965 (Audio System Speaker Circuit Fault) - sets when an open or short to ground is detected in circuit SME23 (VT/RD).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- DSP module
- ACM

PINPOINT TEST D: POOR QUALITY/DISTORTED/NO SOUND FROM ALL SPEAKERS - THX® AUDIO SYSTEM

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

D1 CHECK THE DSP MODULE DTCs

- Carry out the DSP module continuous and on-demand self-tests.
- **Is DTC B292A present?**

  YES : Go to D5.

  NO : Go to D2.

D2 CHECK CIRCUITS SBP18 (YE/RD) AND SBP38 (BN/RD) FOR VOLTAGE

- Key in OFF position.
- Disconnect: DSP Module C4348c
- Measure the voltage between the DSP module, harness side and ground as follows:

Connector-Pin	Circuit
C4348c-9	SBP38 (BN/RD)
C4348c-10	SBP38 (BN/RD)
C4348c-11	SBP18 (YE/RD)
C4348c-12	SBP18 (YE/RD)

- **Are the voltages greater than 10 volts?**

  YES : Go to D3.

  NO : VERIFY the smart junction box (SJB) fuse 38 (20A) or fuse 18 (20A) is OK. If OK, REPAIR the circuit in question. TEST the system for normal operation. If not OK, REFER to appropriate SYSTEM WIRING DIAGRAMS article to identify the possible sources of the circuit short.

D3 CHECK CIRCUIT GD148 (BK/YE) FOR AN OPEN

- Measure the resistance between the DSP module, harness side and ground as follows:

Connector-Pin	Circuit
C4348c-22	GD148 (BK/YE)
C4348c-23	GD148 (BK/YE)
C4348c-24	GD148 (BK/YE)

- **Are the resistances less than 5 ohms?**

  YES : Go to D4.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

D4 CHECK CIRCUIT SME23 (VT/RD) FOR VOLTAGE

- Connect: DSP Module C4348c
- Disconnect: DSP Module C4348a
- Operate the audio system in radio tuner (AM/FM) mode.

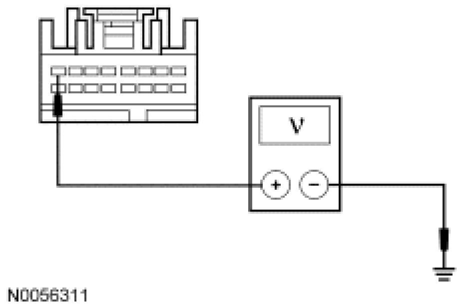


Fig. 5: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the DSP moduleC4348a-8, circuit SME23 (VT/RD), harness side and ground.
- **Is the voltage between 3.8 and 6.7 volts?**

  YES : Go to D6.

  NO : Go to D5.

D5 CHECK CIRCUIT SME23 (VT/RD) FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Disconnect: ACM C240c

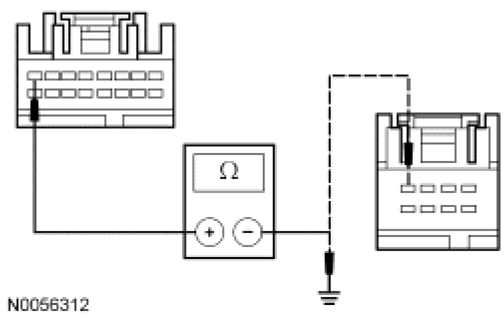

Fig. 6: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the DSP module C4384a-8, circuit SME23 (VT/RD), harness side and the ACM C240c-4, circuit SME23 (VT/RD), harness side; and between the DSP module C4384a-8, circuit SME23 (VT/RD), harness side and ground.
- **Is the resistance less than 5 ohms between the DSP module and the ACM, and greater than 10,000 ohms between the DSP module and ground?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : REPAIR the circuit. CLEAR and DTCs present. TEST the system for normal operation.

D6 CHECK THE AUDIO SIGNALS TO THE DSP MODULE

- Operate the audio system in radio tuner (AM/FM) mode.
- Measure the AC voltage between the audio circuits at the DSP module as follows:

Connector-Pin	Circuit
C4348a-1 C4348a-2	VME07 (WH) RME07 (WH/BN)
C4348a-3 C4348a-4	VME10 (WH/VT) RME10 (WH/OG)

- **Is a fluctuating AC voltage present?**

  YES : Go to D10.

  NO : Go to D7.

D7 CHECK THE AUDIO CIRCUITS TO THE DSP MODULE FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240a
- Key in ON position.
- Measure the voltage between the DSP module, harness side and ground as follows:

Connector-Pin	Circuit
C4348a-1	VME07 (WH)
C4348a-2	RME07 (WH/BN)
C4348a-3	VME10 (WH/VT)
C4348a-4	RME10 (WH/OG)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to D8.

D8 CHECK THE AUDIO CIRCUITS TO THE DSP MODULE FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the DSP module, harness side and the ACM, harness side; and

between the DSP module, harness side and ground as follows:

DSP Module Connector-Pin	ACM Connector-Pin	Circuit
C4348a-1	C240a-8	VME07 (WH)
C4348a-2	C240a-21	RME07 (WH/BN)
C4348a-3	C240a-11	VME10 (WH/VT)
C4348a-4	C240a-12	RME10 (WH/OG)

- **Is the resistance less than 5 ohms between the DSP module and the ACM, and greater than 10,000 ohms between the DSP module and ground?**

  YES : Go to D9.

  NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

D9 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Connect: All Disconnected Connectors
- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. CLEAR any DSP module DTCs present. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR any DSP module DTCs present.

D10 CHECK FOR CORRECT DSP MODULE OPERATION

- Key in OFF position.
- Connect: All Disconnected Connectors
- Disconnect all the DSP module connectors.
- Check for:
  - corrosion

    - damaged pins
    - pushed-out pins
- Connect the DSP module connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new DSP module. REFER to **Audio Digital Signal Processing (DSP) Module**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test E: The Subwoofer Is Inoperative/Does Not Operate Correctly - Audiophile

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The subwoofer amplifier receives voltage through circuit SBP38 (BN/RD) and ground through circuit GD148 (BK/YE). The subwoofer speakers and subwoofer amplifier are integral to the enclosure and cannot be repaired individually.

To enable the subwoofer amplifier, the audio control module (ACM) sends voltage through the enable/clip circuit SME23 (VT/RD). The circuit acts as both an output (to enable the amplifier) and an input (to detect an amplifier overload condition). A variable resistor in the subwoofer amplifier modifies the voltage signal from the ACM. In the event of an overload, the ACM clips the audio output signal to the amplifier (heard as distortion), in order to prevent damage to the amplifier and speakers.

The clip/enable status is based on the following voltages, as detected by the ACM:

- Less than 0.4 volts: amplifier disabled
- Between 3.8 and 6.7 volts: amplifier enabled
- Greater than 8.5 volts: amplifier clipped

An open in circuit SME23 (VT/RD) will cause the subwoofer to produce no sound, because the enable signal will not reach the subwoofer amplifier. A short to ground or short to voltage can cause severe distortion to be heard in the subwoofer.

- DTC B1154 (Subwoofer #1 Short to Ground) - sets when a short to ground is detected on circuit RME22 (GN/WH) or circuit VME22 (VT/GN). This DTC only sets during the on-demand self-test.
- DTC B1155 (Subwoofer #1 Short to Battery) - sets when a short to voltage is detected on circuit RME22 (GN/WH) or circuit VME22 (VT/GN). This DTC only sets during the on-demand self-test.
- DTC B2913 (Audio Subwoofer Not Connected) - sets when the ACM does not detect the subwoofer through circuit SME23 (VT/RD) during the subwoofer connection test (part of the ACM self-test).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Subwoofer
- ACM

PINPOINT TEST E: THE SUBWOOFER IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - AUDIOPHILE

NOTE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

E1 CHECK CIRCUIT SBP38 (BN/RD) FOR VOLTAGE

- Key in OFF position.
- Disconnect: Subwoofer C4208

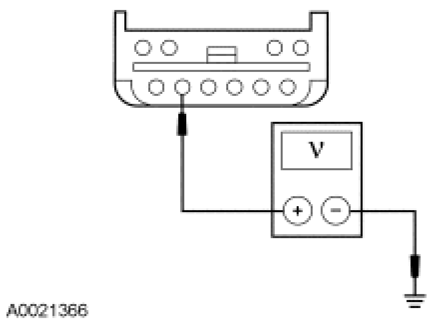

Fig. 7: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the subwoofer C4208-5, circuit SBP38 (BN/RD), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to E2.

  NO : VERIFY the smart junction box (SJB) fuse 38 (20A) is OK. If OK, REPAIR the circuit. CLEAR any DTCs present. TEST the system for normal operation. If not OK, REFER to appropriate SYSTEM WIRING DIAGRAMS article to identify the possible sources of the circuit short.

E2 CHECK CIRCUIT GD148 (BK/YE) FOR AN OPEN

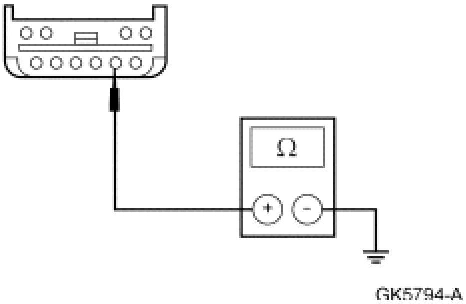

Fig. 8: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the subwoofer C4208-2, circuit GD148 (BK/YE), harness side and ground.
- **Is the resistance less than 5 ohms?**

YES : Go to E3.

NO : REPAIR the circuit. CLEAR any DTCs present. TEST the system for normal operation.

E3 CHECK CIRCUIT SME23 (VT/RD) FOR VOLTAGE

- Operate the audio system in radio tuner (AM/FM) mode.

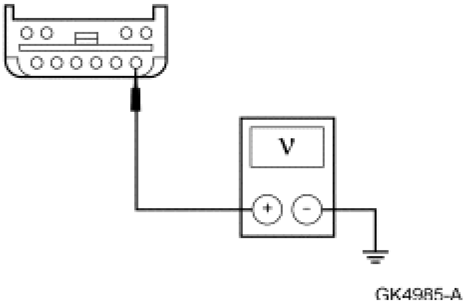

Fig. 9: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the subwoofer C4208-1, circuit SME23 (VT/RD), harness side and ground.
- **Is the voltage between 3.8 and 6.7 volts?**

YES : Go to E6.

NO : Go to E4.

E4 CHECK CIRCUIT SME23 (VT/RD) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240c
- Key in ON position.

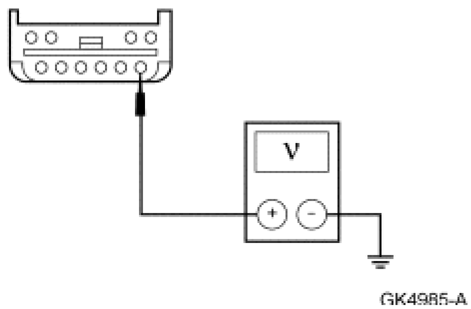

Fig. 10: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the subwoofer C4208-1, circuit SME23 (VT/RD), harness side and ground.
- **Is any voltage present?**

YES : Go to E5.

NO : REPAIR the circuit. CLEAR any DTCs present. TEST the system for normal operation.

E5 CHECK CIRCUIT SME23 (VT/RD) FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.

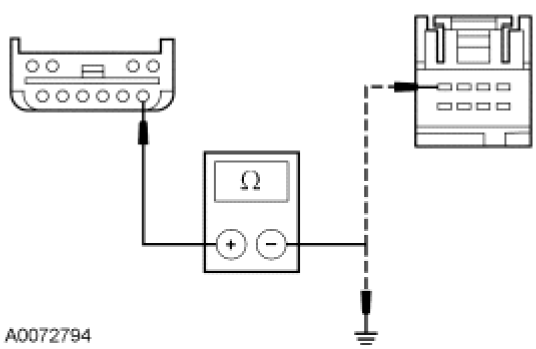

Fig. 11: Checking Circuit For Open Or Short To Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the subwoofer C4208-1, circuit SME23 (VT/RD), harness side and the ACM C240c-4, circuit SME23 (VT/RD), harness side; and between the subwoofer C4208-1, circuit SME23 (VT/RD), harness side and ground.
- **Is the resistance less than 5 ohms between the subwoofer and the ACM, and greater than 10,000 ohms between the subwoofer and ground?**

YES : Go to E9.

NO : REPAIR the circuit. CLEAR any DTCs present. TEST the system for normal operation.

E6 CHECK THE AUDIO SIGNAL TO THE SUBWOOFER

- Key in OFF position.
- Disconnect: Subwoofer C4208
- Operate the audio system in radio tuner (AM/FM) mode.

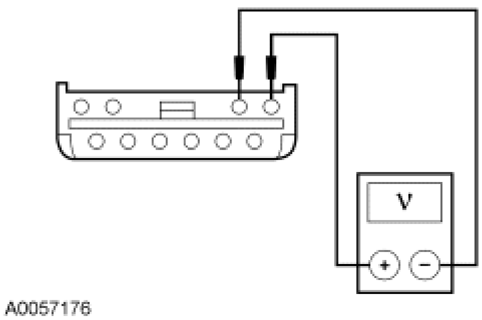

Fig. 12: Checking Audio Signal
Courtesy of FORD MOTOR CO.

- Measure the AC voltage between the subwoofer C4208-7, circuit VME22 (VT/GN), harness side and the subwoofer C4208-8, circuit RME22 (GN/WH), harness side.
- **Is a fluctuating AC voltage present?**

  YES : INSTALL a new subwoofer. REFER to **Subwoofer Speaker**. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to E7.

E7 CHECK THE AUDIO CIRCUITS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240c
- Key in ON position.

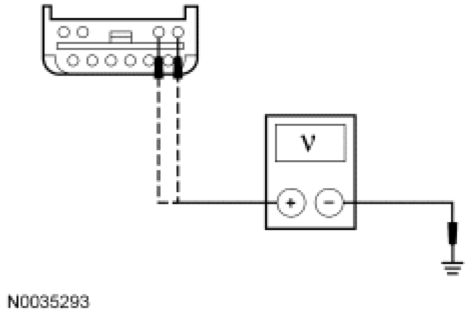

Fig. 13: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the subwoofer C4208-7, circuit VME22 (VT/GN), harness side and ground; and between the subwoofer C4208-8, circuit RME22 (GN/WH), harness side and ground.
- **Is any voltage present?**

  YES : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to E8.

E8 CHECK THE AUDIO CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the subwoofer, harness side and the ACM, harness side; and between the subwoofer, harness side and ground as follows:

Subwoofer Connector-Pin	ACM Connector-Pin	Circuit
C4208-7	C240c-1	VME22 (VT/GN)
C4208-8	C240c-2	RME22 (GN/WH)

- **Is the resistance less than 5 ohms between the subwoofer and the ACM, and greater than 10,000 ohms between the subwoofer and ground?**

  YES : Go to E9.

  NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

E9 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Connect: All Disconnected Connectors
- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test F: The Steering Wheel Controls Are Inoperative/Do Not Operate Correctly

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

There are 4 different steering wheel controls configurations:

- Non-navigation, without the SYNC system
  - VOL-, VOL+, SEEK-, SEEK+, MEDIA
- Non-navigation, with the SYNC system
  - VOL-, VOL+, SEEK-, SEEK+, VOICE, MEDIA, PHONE, OK
- Navigation, without the SYNC system
  - VOL-, VOL+, SEEK-, SEEK+, VOICE, MEDIA
- Navigation, with the SYNC system
  - VOL-, VOL+, SEEK-, SEEK+, VOICE, MEDIA, PHONE

The VOL-, VOL+, SEEK+, SEEK-, and MEDIA buttons are always wired to the audio control module (ACM). Voltage is sent from the ACM to the steering wheel controls through circuit VME14 (GY/YE), and the ACM grounds the reference voltage through circuit RME24 (BU/WH).

For vehicles equipped with navigation, but not the SYNC system, the VOICE button is wired to the ACM.

For vehicles equipped with the SYNC system, the VOICE (an icon of someone speaking), PHONE (an icon of a phone with an up and down arrow), and OK buttons are wired directly to the accessory protocol interface module (APIM) unless the vehicle is equipped with navigation, in which case there is no OK button, and the VOICE and PHONE buttons are wired to the ACM. Voltage is sent from the APIM (or ACM if equipped with navigation) to the steering wheel controls through circuit VME54 (BU/OG), and the APIM (or ACM if equipped with navigation) grounds the reference voltage through circuit RME54 (WH/VT).

When a switch is pressed, the voltage is routed through a specific resistor value for each function. The ACM (or APIM) then uses this reference voltage to determine which control input function has been selected.

- DTC B1117 (Audio Steering Wheel Button Stuck) - set by the ACM or the APIM (depending on vehicle configuration) when a steering wheel control button is detected as active for greater than 120 seconds during normal operation, or for any duration during the self-test.
- DTC B1136 (Audio Steering Wheel Switch #2 Circuit Failure) - set by the ACM or the APIM (depending on vehicle configuration) when the reference voltage to the steering wheel controls is out-of-range. This can be caused by a number of different failures on the steering wheel controls circuit, except for a short to ground in circuit RME54 (WH/VT). This DTC only applies to the VOICE, PHONE, and OK buttons.
- DTC B2404 (Audio Steering Wheel Switch Circuit Fault) - set by the ACM when the reference voltage to the steering wheel controls is out-of-range. This can be caused by a number of different failures on the steering wheel controls circuit, except for a short to ground in circuit RME24 (BU/WH). This DTC only applies to the VOL-, VOL+, SEEK+, SEEK-, and MEDIA buttons.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Clockspring
- Steering wheel controls
- ACM

- APIM (if equipped)

PINPOINT TEST F: THE STEERING WHEEL CONTROLS ARE INOPERATIVE/DO NOT OPERATE CORRECTLY

F1 DETERMINE THE INOPERATIVE STEERING WHEEL CONTROLS

- Determine which steering wheel controls are inoperative by pressing each steering wheel control button individually while operating the audio system in various modes (AM/FM, SYNC, etc.).
- **Is the concern with the VOL-, VOL+, SEEK-, SEEK+, or MEDIA button?**

  YES : Go to F2.

  NO : Go to F3.

F2 MONITOR THE STEERING WHEEL CONTROL PIDs (EXCEPT NAVIGATION/SYNC SWITCHES)

- Enter the following diagnostic mode on the diagnostic tool: ACM DataLogger
- Monitor the steering wheel controls PIDs while pressing each steering wheel controls button as follows:

Steering Wheel Control Button	PID
VOL-	VOL_DN
VOL+	VOL_UP
SEEK-	SEEK_DN
SEEK+	SEEK_UP
MEDIA	MODE_SW

- **Do the PID values agree with the switch positions?**

  YES : Go to F8.

  NO : If only one PID value is incorrect or the PID value always reads one particular switch position, INSTALL new steering wheel controls. REFER to **Steering Wheel Controls**. CLEAR any DTCs present. TEST the system for normal operation.

  Otherwise, go to F3.

F3 MONITOR THE STEERING WHEEL CONTROL PIDs (NAVIGATION/SYNC SWITCHES)

- Enter the following diagnostic mode on the diagnostic tool: ACM DataLogger (With Navigation) or APIM DataLogger (Without Navigation)
- Monitor the steering wheel controls PIDs while pressing each steering wheel controls button as follows:

Steering	

Wheel Controls Button	PID
VOICE	VOICE_SW
PHONE	PHONE_SW
OK (without navigation only)	OK_SW

- **Do the PID values agree with the switch positions?**

  YES : For vehicles with navigation, go to F8.

  For vehicles without navigation, go to F9.

  NO : If only one PID value is incorrect or the PID value always reads one particular switch position, INSTALL new steering wheel controls. REFER to **Steering Wheel Controls**. CLEAR any DTCs present. TEST the system for normal operation.

  Otherwise, go to F4.

F4 CHECK THE REFERENCE VOLTAGE CIRCUIT TO THE CLOCKSPRING FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: Clockspring C218a
- Disconnect: ACM C240a or APIM C3342
- Key in ON position.

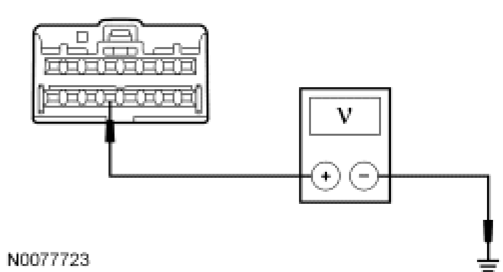

Fig. 14: Measuring Voltage Between Clockspring C218A-13, Circuit VME14 (GY/YE)
Courtesy of FORD MOTOR CO.

- For a concern with the VOL-, VOL+, SEEK-, SEEK+, or MEDIA buttons, measure the voltage between the clockspring C218a-13, circuit VME14 (GY/YE), harness side and ground.

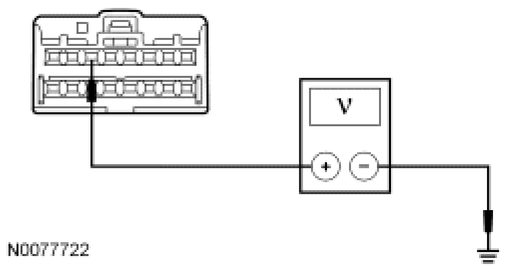

Fig. 15: Measuring Voltage Between Clockspring C218A-6, Circuit VME54 (BU/OG)
Courtesy of FORD MOTOR CO.

- For a concern with the VOICE, PHONE (or SEND), or OK (or END) buttons, measure the voltage between the clockspring C218a-6, circuit VME54 (BU/OG), harness side and ground.
- **Is any voltage present?**

  YES : REPAIR the circuit. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to F5.

F5 CHECK THE CIRCUITS TO THE CLOCKSPRING FOR AN OPEN OR SHORT TO GROUND

NOTE: Circuits RME14 (BU/WH) and RME54 (WH/VT) do not need to be checked for a short to ground.

- Key in OFF position.
- For a concern with the VOL-, VOL+, SEEK-, SEEK+, or MEDIA buttons, measure the resistance between the ACM, harness side and the clockspring, harness side; and between the ACM, harness side and ground as follows:

ACM Connector-Pin	Clockspring Connector-Pin	Circuit
C240a-18	C218a-13	VME14 (GY/YE)
C240a-19	C218a-12	RME24 (BU/WH)

- For a concern with the VOICE, PHONE, or OK buttons, measure the resistance between the ACM (with navigation) or APIM (with the SYNC system, without navigation), harness side and the clockspring, harness side; and between the ACM (with navigation) or APIM (with the SYNC system, without navigation), harness side and ground as follows:

ACM or APIM Connector-	Clockspring Connector-	Circuit

Pin	Pin	
C240a-17 or C3342-14	C218a-6	VME54 (BU/OG)
C240a-16 or C3342-15	C218a-4	RME54 (WH/VT)

- **Is the resistance less than 5 ohms between the ACM (or APIM) and the clockspring, and greater than 10,000 ohms between the ACM (or APIM) and ground?**

  YES : Go to F6.

  NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

F6 CHECK THE REFERENCE VOLTAGE CIRCUIT TO THE STEERING WHEEL CONTROLS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: Clockspring C218b
- Disconnect: Steering Wheel Controls C2999
- Key in ON position.
- For a concern with the VOL-, VOL+, SEEK-, SEEK+, or MEDIA buttons, measure the voltage between the clockspring C218b-10, circuit VME14 (GY/YE), harness side and ground.
- For a concern with the VOICE, PHONE, or OK buttons, measure the voltage between the clockspring C218b-3, circuit VME54 (BU/OG), harness side and ground.
- **Is any voltage present?**

  YES : REPAIR the circuit. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to F7.

F7 CHECK THE CIRCUITS TO THE STEERING WHEEL CONTROLS FOR AN OPEN OR SHORT TO GROUND

NOTE: Circuits RME14 (BU/WH) and RME54 (WH/VT) do not need to be checked for a short to ground.

- Key in OFF position.
- For a concern with the VOL-, VOL+, SEEK-, SEEK+, or MEDIA buttons, measure the resistance between the clockspring, harness side and the steering wheel controls, harness side; and between the clockspring, harness side and ground as follows:

Clockspring Connector-Pin	Steering Wheel Controls Connector-Pin	Circuit

C218b-10	C2999-2	VME14 (GY/YE)
C218b-11	C2999-4	RME24 (BU/WH)

- For a concern with the VOICE, PHONE, or OK buttons, measure the resistance between the clockspring, harness side and the steering wheel controls, harness side; and between the clockspring, harness side and ground as follows:

Clockspring Connector-Pin	Steering Wheel Controls Connector-Pin	Circuit
C218b-3	C2999-6	VME54 (BU/OG)
C218b-5	C2999-7	RME54 (WH/VT)

- **Is the resistance less than 5 ohms between the clockspring and the steering wheel controls, and greater than 10,000 ohms between the clockspring and ground?**

  YES : INSTALL a new clockspring. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. CLEAR the DTCs. REPEAT the self-test.

  NO : REPAIR the circuit in question. CLEAR any DTCs present. TEST the system for normal operation.

F8 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Connect: All Disconnected Connectors
- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

F9 CHECK FOR CORRECT APIM OPERATION

- Key in OFF position.

- Disconnect the APIM connector.
- Check for:
    - corrosion
    - damaged pins
    - pushed-out pints
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test G: The Audio Input Jack Is Inoperative/Does Not Operate Correctly

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation - Vehicles Without the SYNC System

Audio signals are sent from the audio input jack to the audio control module (ACM). There are no external power or ground circuits to the audio input jack.

Vehicles With The SYNC System

Audio signals are sent from the audio input jack to the accessory protocol interface module (APIM). The signals are then sent to the ACM. There are no external power or ground circuits to the audio input jack.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Audio input jack
- ACM
- APIM (if equipped)

PINPOINT TEST G: THE AUDIO INPUT JACK IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

NOTE:	**Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Before carrying out this pinpoint test, make sure the MP3 device is operating correctly.

G1 CHECK THE AUDIO INPUT JACK AUDIO

- Connect: Known Good MP3 Device (to Audio Input Jack)
- Using the known good MP3 device, attempt to play a file using the audio input jack.
- **Does the file play correctly?**

  YES : The system is operating correctly at this time. The concern may be with the customer device.

  NO : Go to G2.

G2 DETERMINE THE VEHICLE CONTENT

- Determine if the vehicle is equipped with the SYNC system.
- **Is the vehicle equipped with the SYNC system?**

  YES : Go to G3.

  NO : Go to G4.

G3 CHECK THE APIM AUDIO OUTPUT

- Attempt to play an audio file using either the universal serial bus (USB) port or a Bluetooth® device.
- **Is the audio output OK for devices connected through the USB port or Bluetooth®?**

  YES : Go to G4.

  NO : Go to **Pinpoint Test S** .

G4 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: Audio Input Jack C3312
- Disconnect: ACM C240b or APIM C3342 (if equipped)
- Key in ON position.
- Measure the voltage between the audio input jack, harness side and ground as follows:

Connector-Pin	Circuit
C3312-1	VME46 (BU/GN)
C3312-2	RME46 (WH/GN)
C3312-3	RME45 (YE/GN)
C3312-4	VME45 (BU)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

NO : Go to G5.

G5 CHECK THE AUDIO INPUT JACK CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the audio input jack, harness side and the ACM (or APIM, if equipped), harness side; and between the audio input jack, harness side and ground as follows:

Audio Input Jack Connector-Pin	ACM or APIM Connector-Pin	Circuit
C3312-1	C240b-6 or C3342-47	VME46 (BU/GN)
C3312-2	C240b-14 or C3342-48	RME46 (WH/GN)
C3312-3	C240b-8 or C3342-46	RME45 (YE/GN)
C3312-4	C240b-7 or C3342-45	VME45 (BU)

- **Is the resistance less than 5 ohms between the audio input jack and the ACM (or APIM), and greater than 10,000 ohms between the audio input jack and ground?**

  YES : Go to G6.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

G6 SUBSTITUTE THE AUDIO INPUT JACK

- Install a known good audio input jack.
- Operate the audio system using a device plugged into the audio input jack.
- **Does the system operate correctly?**

  YES : INSTALL a new audio input jack. REFER to **Audio Input Jack**. TEST the system for normal operation.

  NO : INSTALL the original audio input jack. For vehicles without the SYNC system, go to G7.

  For vehicles with the SYNC system, go to G8.

G7 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins

- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

G8 CHECK FOR CORRECT APIM OPERATION

- Key in OFF position.
- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pints
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test H: The Satellite Audio Is Inoperative/Does Not Operate Correctly - Vehicles Without DVD Entertainment

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The satellite digital audio receiver system (SDARS) module receives voltage through circuit CBP13 (GY/BN) and ground through circuit GD148 (BK/YE). Digital signals are received by the satellite radio antenna and sent to the SDARS module, which converts the signals to analog and send them to either the audio control module (ACM) or the accessory protocol interface module (APIM) (if equipped).

If there is an open in the satellite antenna circuit, there will be no satellite audio. The ACM display will indicate a satellite antenna concern (the method varies according to the type of ACM) when the audio system is operated in satellite radio mode. To diagnose an open in the satellite antenna circuit, go to **Pinpoint Test J** .

The SDARS module transmits left and right channel audio signals. When there is a fault on any of these circuits, the audio quality is reduced. If the circuits for a specific channel are shorted together, loss of audio on that entire channel will occur. This can be detected by using the SDARS module tones test.

- DTC U0184 (Lost Communication With Radio [ACM]) - set by the SDARS module when certain medium speed controller area network (MS-CAN) messages are missing from the ACM.
- DTC U0193 (Lost Communication With Digital Audio Control Module [SDARS]) - set by the ACM when certain MS-CAN messages are missing from the SDARS module.
- DTC U0197 (Lost Communication With Telephone Control Module) - set by the SDARS module when certain MS-CAN messages are missing from the APIM.

This pinpoint test is intended to diagnose the following:

- Subscription status
- Wiring, terminals or connectors
- SDARS module
- APIM (if equipped)
- ACM

PINPOINT TEST H: THE SATELLITE AUDIO IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - VEHICLES WITHOUT DVD ENTERTAINMENT

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

H1 VERIFY AN ACTIVE SUBSCRIPTION

- Operate the audio system in satellite radio mode and observe the display.
- **Does the display read CALL SIRIUS?**

  YES : The subscription has expired. INFORM the customer to contact Sirius to re-activate the subscription.

  NO : If the display indicates a satellite antenna fault, go to **Pinpoint Test J** .

  Otherwise, go to H2.

H2 CHECK FOR NON-NETWORK DTCs

- Carry out the SDARS module self-test using the scan tool.
- **Are any non-network DTCs present?**

  YES : For DTC B1031 or DTC B1032, go to **Pinpoint Test J** .

  For all other DTCs, REFER to DTC Charts in this service information.

  NO : Go to H3.

H3 CHECK FOR COMMUNICATION WITH THE ACM AND APIM

- Carry out the network test using the scan tool.

- **Does the scan tool communicate with the ACM and the APIM (if equipped)?**

  YES : Go to H4.

  NO : REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose no communication with the ACM or APIM.

H4 CHECK FOR LOST COMMUNICATION DTCs

- Key in ON position.
- Using the scan tool, clear any ACM and SDARS module continuous DTCs.
- Key in OFF position.
- Key in ON position.
- Wait at least 10 seconds.
- Retrieve the ACM and SDARS module continuous DTCs.
- **Is DTC U0184 (SDARS module), U0193 (ACM), or U0197 (SDARS module, if equipped with the SYNC system) present?**

  YES : For DTC U0184, go to H13.

  For DTC U0193, go to H11.

  For DTC U0197, go to H12.

  NO : Go to H5.

H5 CHECK THE SATELLITE AUDIO OUTPUT

- Enter the following diagnostic mode on the diagnostic tool: SDARS Module Tones Test
- Carry out the SDARS module tones test.
- **Are alternating LH/RH tones audible?**

  YES : Go to H11.

  NO : If the vehicle is equipped with the SYNC system, go to H6.

  Otherwise, go to H9.

H6 CHECK THE OPERATION OF THE SYNC SYSTEM AUDIO

- Operate the audio system in radio tuner (AM/FM) mode.
- Connect: Known Good MP3 Device (To Audio Input Jack)
- Using the ACM buttons, press AUX until "SYNC LINE IN" appears on the display (except navigation), or press MEDIA, select "USER DEVICE", and press "SOURCE" repeatedly until "LINE IN" appears (navigation).
- Using the known good device, attempt to play a file through the audio input jack.
- **Does the SYNC system audio operate correctly?**

  YES : Go to H7.

  NO : Go to **Pinpoint Test S** .

H7 CHECK THE AUDIO CIRCUITS TO THE APIM FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: APIM C3342
- Disconnect: SDARS Module C4344
- Key in ON position.
- Measure the voltage between the SDARS module, harness side and ground as follows:

Connector-Pin	Circuit
C4344-5	VME41 (GN/OG)
C4344-6	VME42 (VT/BN)
C4344-11	RME41 (BU/BN)
C4344-12	RME42 (YE/BU)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to H8.

H8 CHECK THE AUDIO CIRCUITS TO THE APIM FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the APIM, harness side and the SDARS module, harness side; and between the APIM, harness side and ground as follows:

APIM Connector-Pin	SDARS Module Connector-Pin	Circuit
C3342-10	C4344-5	VME41 (GN/OG)
C3342-7	C4344-6	VME42 (VT/BN)
C3342-11	C4344-11	RME41 (BU/BN)
C3342-8	C4344-12	RME42 (YE/BU)

- **Is the resistance less than 5 ohms between the APIM and the SDARS module, and greater than 10,000 ohms between the APIM and ground?**

  YES : Go to H11.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

H9 CHECK THE AUDIO CIRCUITS TO THE ACM FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240b
- Disconnect: SDARS Module C4344
- Key in ON position.
- Measure the voltage between the ACM, harness side and ground as follows:

Connector-Pin	Circuit
C240b-1	VME52 (BU)
C240b-2	RME52 (GY/OG)
C240b-9	VME53 (VT/GN)
C240b-10	RME53 (BN/WH)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to H10.

H10 CHECK THE AUDIO CIRCUITS FROM THE SDARS MODULE FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the SDARS module, harness side and the ACM, harness side; and between the SDARS module, harness side and ground as follows:

SDARS Module Connector-Pin/Circuit	ACM Connector-Pin/Circuit
C4344-5 VME41 (GN/OG)	C240b-1 VME52 (BU)
C4344-6 VME42 (VT/BN)	C240b-9 RME52 (GY/OG)
C4344-11 RME41 (BU/BN)	C240b-2 VME53 (VT/GN)
C4344-12 RME42	C240b-10 RME53

(YE/BU)	(BN/WH)

- **Is the resistance less than 5 ohms between the SDARS module and the ACM, and greater than 10,000 ohms between the SDARS module and ground?**

  YES : Go to H11.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

H11 ISOLATE THE SDARS MODULE

- Key in OFF position.
- Connect: ACM C240b
- Connect: APIM C3342 (If Equipped)
- Install a new SDARS module. Refer to **Satellite Digital Audio Receiver System (SDARS) Module**.
- Operate the audio system in satellite radio mode.
- **Does the system operate correctly?**

  YES : The concern was caused by an inoperative SDARS module. The system is operating correctly at this time.

  NO : If equipped with the SYNC system, go to H12.

  Otherwise, go to H13.

H12 CHECK FOR CORRECT APIM OPERATION

- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation. If the concern is still present, go to H13.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

H13 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Disconnect all the ACM connectors.
- Check for:
  - corrosion

    - damaged pins
    - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test I: The Satellite Audio Is Inoperative/Does Not Operate Correctly - Vehicles With DVD Entertainment

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The satellite digital audio receiver system (SDARS) module receives voltage through circuit CBP13 (GY/BN) and ground through circuit GD148 (BK/YE). Digital signals are received by the satellite radio antenna and sent to the SDARS module, which converts the signals to analog and sends them to either the rear entertainment module (RETM), or the accessory protocol interface module (APIM) (if equipped).

The satellite audio signals utilize separate circuitry from the remaining audio signals. This allows the audio control module (ACM) to distinguish between satellite audio and SYNC or DVD audio, in order to provide for more dual-play options.

If there is an open in the satellite antenna circuit, there will be no satellite audio. The ACM display will indicate a satellite antenna concern (the method varies according to the type of ACM) when the audio system is operated in satellite radio mode. To diagnose an open in the satellite antenna circuit, go to **Pinpoint Test J** .

Circuits VME41 (GN/OG), RME41 (BU/BN), VME42 (VT/BN), and RME42 (YE/BU) transmit left and right channel audio signals. When there is a fault on any of these circuits, the audio quality is reduced. If the circuits for a specific channel are shorted together, loss of audio on that entire channel will occur. This can be detected by using the SDARS module tones test.

DTC Description	Fault Set Conditions
U0184 - Lost Communication With Radio (ACM)	Set by the SDARS module when certain medium speed controller area network (MS-CAN) messages are missing from the ACM.
U0193 - Lost Communication With Digital Audio Control Module (SDARS)	Set by the ACM or the RETM when certain MS-CAN messages are missing from the SDARS module.
U0196 - Lost Communication With Entertainment Control	Set by the SDARS module when certain

Module - Rear (AUX)	MS-CAN messages are missing from the RETM.
U0197 - Lost Communication With Telephone Control Module	Set by the SDARS module when certain MS-CAN messages are missing from the APIM.

This pinpoint test is intended to diagnose the following:

- Subscription status
- Wiring, terminals or connectors
- SDARS module
- RETM
- APIM (if equipped)
- ACM

PINPOINT TEST I: THE SATELLITE AUDIO IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - VEHICLES WITH DVD ENTERTAINMENT

NOTE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

I1 VERIFY AN ACTIVE SUBSCRIPTION

- Operate the audio system in satellite radio mode and observe the display.
- **Does the display read CALL SIRIUS?**

  YES : The subscription has expired. INFORM the customer to contact Sirius to re-activate the subscription.

  NO : If the display indicates a satellite antenna fault, go to **Pinpoint Test J** .

  Otherwise, go to I2.

I2 CHECK FOR NON-NETWORK DTCs

- Carry out the SDARS module self-test using the scan tool.
- **Are any non-network DTCs present?**

  YES : For DTC B1031 or DTC B1032, go to **Pinpoint Test J** .

  For all other DTCs, REFER to DTC Charts in this service information.

  NO : Go to I3.

I3 CHECK FOR COMMUNICATION WITH THE ACM AND APIM

- Carry out the network test using the scan tool.
- **Does the scan tool communicate with the ACM, the RETM, and the APIM (if equipped)?**

  YES : Go to I4.

NO : REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose no communication with the ACM or APIM.

I4 CHECK FOR LOST COMMUNICATION DTCs

- Key in ON position.
- Using the scan tool, clear any ACM and SDARS module continuous DTCs.
- Key in OFF position.
- Key in ON position.
- Wait at least 10 seconds.
- Retrieve the ACM and SDARS module continuous DTCs.
- **Is DTC U0184 (SDARS module), U0193 (ACM), U0196 (SDARS module), or U0197 (SDARS module, if equipped with the SYNC system) present?**

  YES : For DTC U0184, go to I16.

  For DTC U0193, go to I13.

  For DTC U0197, go to I14.

  For DTC U0196, go to I15.

  NO : Go to I5.

I5 CHECK THE SATELLITE AUDIO OUTPUT

- Enter the following diagnostic mode on the diagnostic tool: SDARS Module Tones Test
- Carry out the SDARS module tones test.
- **Are alternating LH/RH tones audible?**

  YES : Go to I13.

  NO : Go to I6.

I6 CHECK THE OPERATION OF THE DVD AUDIO

- Insert a known good DVD, and operate the audio system in DVD mode.
- Observe the audio output from the DVD.
- **Does the DVD audio operate correctly?**

  YES : If the vehicle is equipped with the SYNC system, go to I7.

  Otherwise, go to I11.

  NO : Go to **Symptom Chart - Audio System** to diagnose the observed symptom.

I7 CHECK THE AUDIO CIRCUITS TO THE APIM FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: SDARS Module C4344
- Disconnect: APIM C3342
- Key in ON position.

- Measure the voltage between the SDARS module, harness side and ground as follows:

Connector-Pin	Circuit
C4344-5	VME41 (GN/OG)
C4344-6	VME42 (VT/BN)
C4344-11	RME41 (BU/BN)
C4344-12	RME42 (YE/BU)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to I8.

I8 CHECK THE AUDIO CIRCUITS TO THE APIM FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the SDARS module, harness side and the APIM, harness side; and between the SDARS module, harness side and ground as follows:

SDARS Module Connector-Pin	APIM Connector-Pin	Circuit
C4344-5	C3342-10	VME41 (GN/OG)
C4344-6	C3342-7	VME42 (VT/BN)
C4344-11	C3342-11	RME41 (BU/BN)
C4344-12	C3342-8	RME42 (YE/BU)

- **Is the resistance less than 5 ohms between the SDARS module and the APIM, and greater than 10,000 ohms between the SDARS module and ground?**

  YES : Go to I9.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

I9 CHECK THE AUDIO CIRCUITS FROM THE APIM TO THE RETM FOR A SHORT TO VOLTAGE

- Disconnect: RETM C949
- Key in ON position.

- Measure the voltage between the RETM, harness side and ground as follows:

Connector-Pin	Circuit
C949-5	VME41 (GN/OG)
C949-6	RME41 (BU/BN)
C949-21	VME42 (VT/BN)
C949-22	RME42 (YE/BU)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to I10.

I10 CHECK THE AUDIO CIRCUITS FROM THE APIM TO THE RETM FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the APIM, harness side and the RETM, harness side; and between the APIM, harness side and ground as follows:

APIM Connector-Pin	RETM Connector-Pin	Circuit
C3342-40	C949-5	VME41 (GN/OG)
C3342-41	C949-6	RME41 (BU/BN)
C3342-42	C949-21	VME42 (VT/BN)
C3342-43	C949-22	RME42 (YE/BU)

- **Is the resistance less than 5 ohms between the APIM and the RETM, and greater than 10,000 ohms between the APIM and ground?**

  YES : Go to I13.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

I11 CHECK THE AUDIO CIRCUITS FROM THE SDARS MODULE FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: SDARS Module C4344

- Disconnect: RETM C949
- Key in ON position.
- Measure the voltage between the SDARS module, harness side and ground as follows:

Connector-Pin	Circuit
C4344-5	VME41 (GN/OG)
C4344-6	VME42 (VT/BN)
C4344-11	RME41 (BU/BN)
C4344-12	RME42 (YE/BU)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to I12.

I12 CHECK THE AUDIO CIRCUITS FROM THE SDARS MODULE FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the SDARS module, harness side and the RETM, harness side; and between the SDARS module, harness side and ground as follows:

SDARS Module Connector-Pin	RETM Connector-Pin	Circuit
C4344-5	C949-5	VME41 (GN/OG)
C4344-6	C949-21	VME42 (VT/BN)
C4344-11	C949-6	RME41 (BU/BN)
C4344-12	C949-22	RME42 (YE/BU)

- **Is the resistance less than 5 ohms between the SDARS module and the RETM, and greater than 10,000 ohms between the SDARS module and ground?**

  YES : Go to I13.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

I13 ISOLATE THE SDARS MODULE

- Key in OFF position.
- Connect: RETM C949
- Connect: APIM C3342 (If Equipped)
- Install a new SDARS module. Refer to **Satellite Digital Audio Receiver System (SDARS) Module**.
- Operate the audio system in satellite radio mode.
- **Does the system operate correctly?**

  YES : The concern was caused by an inoperative SDARS module. The system is operating correctly at this time.

  NO : If equipped with the SYNC system, go to I14.

  Otherwise, go to I15.

I14 CHECK FOR CORRECT APIM OPERATION

- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation. If the concern is still present, go to I15.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

I15 CHECK FOR CORRECT RETM OPERATION

- Disconnect the RETM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the RETM connector and make sure it seats correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new RETM. REFER to **Rear Entertainment Module (RETM)**. TEST the system for normal operation. If the concern is still present, go to I16.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose

or corroded connector.

I16 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test J: Poor Reception/No Sound - Satellite Audio

Normal Operation

Digital signals are received by the satellite radio antenna and sent to the satellite digital audio receiver system (SDARS) module, which then converts the signals and provides analog audio signals to the audio control module (ACM), the accessory protocol interface module (APIM), or to the rear entertainment module (RETM), depending on vehicle configuration.

A short to ground typically has no effect on the antenna signal. However, an open in the antenna circuit will result in no sound from the satellite radio system. A short to voltage in the antenna circuit can have varying effects on the system.

- DTC B1031 (SDARS Satellite Antenna Open) - sets when an open or high resistance is detected in the satellite antenna circuit. This DTC can be either continuous or on-demand.
- DTC B1032 (SDARS Satellite Antenna Short) - sets when a short to ground or short to voltage is detected in the satellite antenna circuit. This DTC can be either continuous or on-demand.

This pinpoint test is intended to diagnose the following:

- Obstructions to the line of sight
- Satellite radio antenna cable
- Satellite radio antenna
- SDARS module

PINPOINT TEST J: POOR RECEPTION/NO SOUND - SATELLITE AUDIO

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

J1 CHECK THE OPERATION OF THE SATELLITE AUDIO SYSTEM

- Drive the vehicle to an open location, free of obstacles.
- Operate the audio system in satellite audio mode.
- **Is the reception OK?**

  YES : The system is OK at this time. ADVISE the customer that the satellite signal can be affected by obstructions to the satellite radio antenna line of sight.

  NO : Go to J2.

J2 CHECK FOR A SATELLITE ANTENNA FAULT MESSAGE

- Operate the audio system in satellite audio mode and observe the ACM display.
- **Does the ACM display indicate a satellite radio antenna fault?**

  YES : Go to J3.

  NO : For vehicles without a DVD entertainment system, go to **Pinpoint Test H** .

  For vehicles with a DVD entertainment system, go to **Pinpoint Test I** .

J3 CHECK THE SATELLITE RADIO ANTENNA CABLE

- Key in OFF position.
- Disconnect: Satellite Radio Antenna Connection (At SDARS Module)
- Disconnect: Satellite Radio Antenna Connection (At Satellite Radio Antenna)
- Measure the resistance of the satellite radio antenna cable between the SDARS module and the satellite radio antenna connection.
- **Is the resistance less than 1 ohm?**

  YES : Go to J4.

  NO : INSTALL a new satellite radio antenna cable. REFER to **Antenna Cable - Satellite Radio**. CLEAR any DTCs present. TEST the system for normal operation.

J4 SUBSTITUTE THE SATELLITE RADIO ANTENNA

- Install a known good satellite radio antenna.
- Operate the audio system in satellite audio mode.
- **Is the reception OK?**

  YES : INSTALL a new satellite radio antenna. REFER to **Antenna - Satellite Radio**. CLEAR any DTCs present. TEST the system for normal operation.

  NO : Go to J5.

J5 CHECK FOR CORRECT SDARS MODULE OPERATION

- Key in OFF position.
- Disconnect the SDARS module connector.
- Check for:
  - corrosion
  - damaged pins

    - pushed-out pins
  - Connect the SDARS module connector and make sure it seats correctly.
  - Operate the system and determine if the concern is still present.
  - **Is the concern still present?**

    YES : INSTALL a new SDARS module. REFER to **Satellite Digital Audio Receiver System (SDARS) Module**. TEST the system for normal operation.

    NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test K: The Video System Is Inoperative/Does Not Operate Correctly

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The rear entertainment module (RETM) routes audio signals to the audio control module (ACM). In single-play mode, the ACM plays the DVD audio on all speakers. In dual-play mode, the audio to the rear speakers is muted and the RETM continues to control the rear audio source to the headphones.

If the vehicle is equipped with satellite audio and/or the SYNC system, the audio signals from these sources are routed through the RETM to the ACM. This allows for single-play and dual-play to include these audio sources.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- RETM
- ACM

PINPOINT TEST K: THE VIDEO SYSTEM IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: Before diagnosing the RETM, make sure a known good DVD is installed.

K1 IDENTIFY THE SYMPTOM

  - Operate the audio system in DVD single-play mode and observe the DVD audio.
  - **Does the DVD audio operate correctly?**

    YES : Go to K2.

    NO : If the vehicle is equipped with satellite audio or the SYNC system, go to K3.

    Otherwise, go to K4.

K2 CHECK THE OPERATION OF THE DVD VIDEO

- Operate the audio system in DVD single-play mode.
- **Does the DVD video operate correctly?**

  YES : The system is operating correctly at this time. The concern was caused by an incorrect system setting. INFORM the customer that pressing the power button or the VIDEO button while a DVD is playing can cause the display to go blank.

  NO : Go to K6.

K3 CHECK THE RETM AUDIO PASS-THROUGH

- Operate the audio system in satellite audio or SYNC mode.
- **Does the satellite audio (or SYNC) audio operate correctly?**

  YES : Go to K6.

  NO : Go to K4.

K4 CHECK THE AUDIO CIRCUITS TO THE ACM FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240b
- Disconnect: RETM C949
- Key in ON position.
- Measure the voltage between the ACM, harness side and ground as follows:

Connector-Pin	Circuit
C240b-1	VME17 (GN)
C240b-2	RME17 (GY)
C240b-9	VME18 (VT)
C240b-10	RME18 (YE)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to K5.

K5 CHECK THE AUDIO CIRCUITS TO THE ACM FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the ACM, harness side and the RETM, harness side; and between the ACM, harness side and ground as follows:

ACM Connector-	RETM Connector-	Circuit

Pin	Pin	
C240b-1	C949-10	VME17 (GN)
C240b-2	C949-9	RME17 (GY)
C240b-9	C949-26	VME18 (VT)
C240b-10	C949-25	RME18 (YE)

- **Is the resistance less than 5 ohms between the ACM and the RETM, and greater than 10,000 ohms between the ACM and ground?**

  YES : Go to K6.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

K6 CHECK FOR CORRECT RETM OPERATION

- Disconnect all the RETM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the RETM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new RETM. REFER to **Rear Entertainment Module (RETM)**. TEST the system for normal operation. If the concern is still present, Go to K7

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

K7 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose

or corroded connector.

Pinpoint Test L: No Auxiliary Headphone Audio - THX®

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The audio control module (ACM) receives audio input from the rear entertainment module (RETM). The audio signals are then routed to the audio digital signal processing (DSP) module. In dual-play mode, the rear speaker audio is muted and the RETM controls the rear audio source to the headphones.

It is important to note that if the vehicle is equipped with the SYNC system, the headphones must be set to channel A in order to listen to SYNC media. Channel B only allows audio from the RETM, which can be either DVD audio or audio from a peripheral device plugged into the RETM.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Headphones
- RETM

PINPOINT TEST L: NO AUXILIARY HEADPHONE AUDIO - THX®

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: Before diagnosing this condition, make sure the headphone batteries are OK.

L1 CHECK THE OPERATION OF THE BASE AUDIO SYSTEM

- Operate the audio system in radio tuner (AM/FM) mode.
- **Does the audio system operate correctly?**

  YES : Go to L2.

  NO : Go to **Symptom Chart - Audio System**.

L2 CHECK THE ACM OUTPUT TO THE RETM

- Key in OFF position.
- Disconnect: RETM C949

NOTE: Make sure the headphones are set to "Radio" as their audio source.

- Operate the audio system in radio tuner (AM/FM) dual-play mode.
- Measure the AC voltage between the RETM pins, harness side as follows:

Connector-Pin/Circuit	Connector-Pin/Circuit
C949-11 VME12 (BN/WH)	C949-12 RME12 (BN/BU)
C949-27 VME09 (WH/GN)	C949-28 RME09 (BN/YE)

- **Is a fluctuating AC voltage present?**

  YES : Go to L5.

  NO : Go to L3.

L3 CHECK THE AUDIO CIRCUITS FROM THE ACM FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240a
- Key in ON position.
- Measure the voltage between the ACM, harness side and ground as follows:

Connector-Pin	Circuit
C240a-9	VME09 (WH/GN)
C240a-10	VME12 (BN/WH)
C240a-22	RME09 (BN/YE)
C240a-23	RME12 (BN/BU)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to L4.

L4 CHECK THE AUDIO CIRCUITS FROM THE ACM FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the ACM, harness side and the RETM, harness side; and between the ACM, harness side and ground as follows:

ACM Connector-Pin	RETM Connector-Pin	Circuit
		VME09

C240a-9	C949-27	(WH/GN)
C240a-10	C949-11	VME12 (BN/WH)
C240a-22	C949-28	RME09 (BN/YE)
C240a-23	C949-12	RME12 (BN/BU)

- **Is the resistance less than 5 ohms between the ACM and the RETM, and greater than 10,000 ohms between the ACM and ground?**

  YES : Go to L5.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

L5 ISOLATE THE HEADPHONES

- Connect: ACM C240a
- Connect: RETM C949
- Install a set of known good headphones.

NOTE: Make sure the headphones are set to "Radio" as their audio source.

- Operate the audio system in radio tuner (AM/FM) dual-play mode and listen through the headphones.
- **Do the headphones operate correctly?**

  YES : The concern was caused by inoperative headphones. The system is OK at this time.

  NO : Go to L6.

L6 CHECK FOR CORRECT RETM OPERATION

- Key in OFF position.
- Disconnect the RETM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the RETM connector and make sure it seats correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new RETM. REFER to **Rear Entertainment Module (RETM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test M: No Global Positioning System (GPS) Antenna Signal

Normal Operation

The global positioning system (GPS) antenna provides information from the GPS satellite system to the GPS receiver in the navigation module (part of the navigation audio control module [ACM]). This information is used to calculate vehicle position and direction of travel.

- DTC B2204 (GPS Antenna Connection Open or Short) - sets when an open or short to ground is detected in the GPS antenna circuit.

This pinpoint test is intended to diagnose the following:

- GPS antenna
- ACM

PINPOINT TEST M: NO GLOBAL POSITIONING SYSTEM (GPS) ANTENNA SIGNAL

M1 CHECK THE OPERATION OF THE NAVIGATION SYSTEM

- Move the vehicle outside of any enclosed structure to an area that is unobstructed by trees, tall buildings, and bridges.

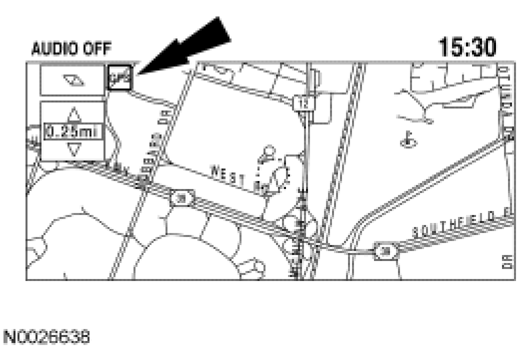

Fig. 16: Checking Operation Of Navigation System
Courtesy of FORD MOTOR CO.

- Operate the audio system in navigation mode.
- **Does the GPS icon appear, then disappear?**

  YES : The system is operating correctly at this time. NOTIFY the customer that obstructions to the line of sight may affect the GPS antenna.

  NO : Go to M2.

M2 CHECK THE ACM DTCs

- Retrieve the ACM continuous and on-demand DTCs.
- **Is DTC B2204 recorded?**

  YES : Go to M4.

  NO : Go to M3.

M3 CHECK THE GPS ANTENNA MOUNTING

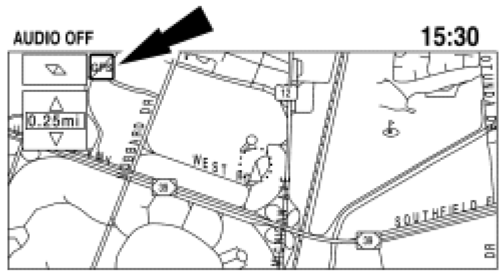
- Verify the GPS antenna is installed correctly and no aftermarket equipment is obstructing the antenna.
- **Is the GPS antenna mounted correctly?**

  YES : Go to M4.

  NO : Correctly INSTALL the GPS antenna. REFER to **Global Positioning System (GPS) Antenna**. TEST the system for normal operation.

M4 SUBSTITUTE THE GPS ANTENNA

- Install a known good GPS antenna.
- Move the vehicle outside of any enclosed structure to an area that is unobstructed by trees, tall buildings, and bridges.



N0026638

Fig. 17: Checking Operation Of Navigation System
Courtesy of FORD MOTOR CO.

- Operate the audio system in navigation mode.
- **Does the GPS icon appear, then disappear?**

  YES : INSTALL a new GPS antenna. REFER to **Global Positioning System (GPS) Antenna**. CLEAR any DTCs present. TEST the system for normal operation.

  NO : INSTALL the original GPS antenna. Go to M5.

M5 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test N: The Audible Switch Feedback Is Inoperative

Normal Operation

The audible switch feedback settings are controlled by the audio control module (ACM). The audible switch feedback can be set to ALL, TOUCH SCREEN, or NONE, depending on user preference.

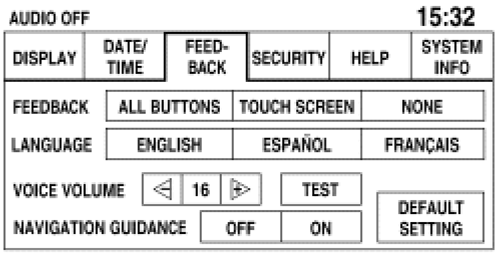
This pinpoint test is intended to diagnose the following:

- Audible switch feedback setting
- ACM

PINPOINT TEST N: THE AUDIBLE SWITCH FEEDBACK IS INOPERATIVE

N1 CHECK THE SWITCH DISPLAY

- Turn the ACM on.
- Press the MENU button.



N0026637

Fig. 18: Checking Switch Display
Courtesy of FORD MOTOR CO.

- Select the FEEDBACK tab.
- **Is NONE highlighted on the audible feedback settings?**

  YES : SELECT "ALL BUTTONS". TEST the system for normal operation.

  NO : Go to N2.

N2 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.

- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test O: The Voice Guidance Is Inoperative/Does Not Operate Correctly

Normal Operation

The voice guidance settings are controlled by the audio control module (ACM). The voice guidance volume can be adjusted or turned off depending on user preference.

For the THX® audio system, the ACM sends the voice guidance signal to the audio digital signal processing (DSP) module through circuits VME22 (VT/GN) and RME22 (GN/WH).

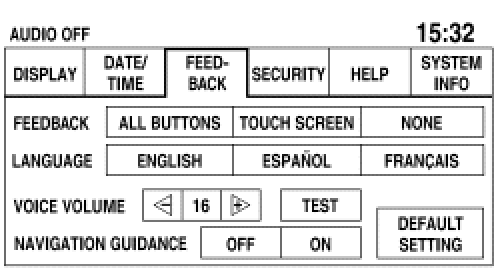
This pinpoint test is intended to diagnose the following:

- Incorrect system setting
- Wiring, terminals or connectors (THX® only)
- DSP module (if equipped)
- ACM

PINPOINT TEST O: THE VOICE GUIDANCE IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

O1 CHECK THE VOICE GUIDANCE SETTINGS

- Operate the audio system in navigation mode.
- Press the MENU button.



N0026637

Fig. 19: Checking Switch Display
Courtesy of FORD MOTOR CO.

- Select the FEEDBACK tab.
- Select DEFAULT SETTING.

- Verify the operation of the voice guidance.
- **Does the voice guidance operate correctly?**

  YES : The system is operating correctly at this time. The concern was caused by a customer-selected setting.

  NO : If the vehicle is equipped with THX® audio, go to O2.

  Otherwise, go to O4.

O2 CHECK THE VOICE SIGNAL CIRCUITS TO THE DSP MODULE FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240c
- Disconnect: DSP Module C4348a
- Key in ON position.

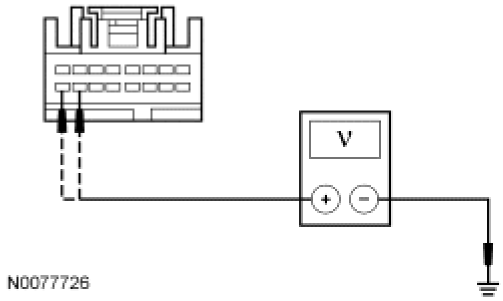


Fig. 20: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the DSP module C4348a-15, circuit VME22 (VT/GN), harness side and ground; and between the DSP module C4348a-16, circuit RME22 (GN/WH), harness side and ground.
- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to O3.

O3 CHECK THE VOICE SIGNAL CIRCUITS TO THE DSP MODULE FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the DSP module and the ACM, harness side; and between the DSP module, harness side and ground as follows:

DSP Module Connector-	ACM Connector-Pin	Circuit

Pin		
C4348a-15	C240c-1	VME22 (VT/GN)
C4348a-16	C240c-2	RME22 (GN/WH)

- **Is the resistance less than 5 ohms between the DSP module and the ACM, and greater than 10,000 ohms between the DSP module and ground?**

  YES : Go to O5.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

O4 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

O5 CHECK FOR CORRECT DSP MODULE OPERATION

- Key in OFF position.
- Disconnect all the DSP module connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the DSP module connectors and make sure they seat correctly.
- Operate the system and determine if the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new DSP module. REFER to **Audio Digital Signal Processing (DSP) Module**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test P: The Position Cursor Is Inaccurate

Normal Operation

The primary source of vehicle location for the navigation system is the audio control module (ACM) receiving the position signal through the global positioning system (GPS) antenna.

In addition, the ACM receives the wheel pulse signal from the instrument cluster (IC), which gateways the signal from the ABS module. This secondary signal is used to calculate vehicle position when the GPS signal is lost. It also supports the adaptive learning function of the ACM, whereby the ACM can compensate for long-term differences between the GPS signal location, and the actual distance traveled by the vehicle.

- DTC B2204 (GPS Antenna Connection Open or Short) - sets when an open, short to ground, or short to voltage is detected in the GPS antenna circuit. If DTC B2204 is present, go to **Pinpoint Test M** .
- DTC U0155 (Lost Communication With Instrument Panel Cluster [IC] Control Module) - sets when the ACM is missing messages from the IC for greater than 5 seconds. For this symptom, the message in question is the wheel pulse data message.
- DTC U2473 (Unexpected Vehicle Speed [VSS]) - sets when the calculated vehicle distance traveled based on the wheel pulse signal does not agree with the GPS antenna location. To do this, the ACM compares the wheel pulse signal during a 4-second range and compares it with the change in GPS antenna location. If the ACM finds that the variation is greater than 0.5% after carrying out this check 4 times, it sets DTC U2473. When DTC U2473 is set, the adaptive learn function is disabled. This DTC is also set when the navigation rolling wheel count signal is missing for greater than 2 seconds with the key in RUN.

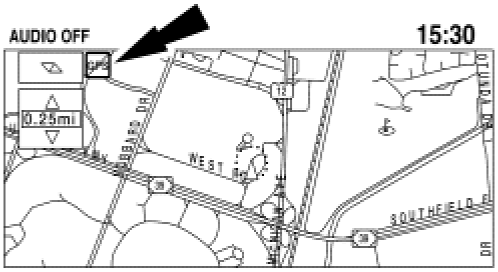
This pinpoint test is intended to diagnose the following:

- VSS signal concern
- ACM

PINPOINT TEST P: THE POSITION CURSOR IS INACCURATE

P1 CHECK THE OPERATION OF THE NAVIGATION SYSTEM

- Move the vehicle outside of any enclosed structure to an area that is unobstructed by trees, tall buildings, and bridges.



N0026638

Fig. 21: Checking Operation Of Navigation System
Courtesy of FORD MOTOR CO.

- Operate the audio system in navigation mode.
- **Does the GPS icon appear, then disappear?**

  YES : Go to P2.

  NO : Go to **Pinpoint Test M** .

P2 CHECK THE ACM DTCs

- Retrieve the continuous DTCs from the ACM self-test.
- **Is DTC U2473 or U0155 present?**

  YES : Go to P3.

  NO : Go to **Pinpoint Test M** .

P3 CHECK FOR COMMUNICATION WITH THE IC

- Carry out the network test using the scan tool.
- **Does the scan tool communicate with the IC?**

  YES : Go to P4.

  NO : REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose no communication with the IC.

P4 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test Q: The Audio Does Not Reduce When The Parking Aid Tone Sounds

Normal Operation

The parking aid module (PAM) sends the volume cutback message to the audio control module (ACM) via the medium speed controller area network (MS-CAN). When the ACM receives this message, it reduces the speaker output so that the parking aid tone can be heard more clearly.

- DTC U0159 (Lost Communication With Parking Assist Control Module [PAM]) - sets when the volume cutback message is missing for greater than 5 seconds. When the message is missing, the ACM defaults to no volume cutback when the parking aid tone is sounding.

This pinpoint test is intended to diagnose the following:

- Parking aid system concern
- ACM

PINPOINT TEST Q: THE AUDIO DOES NOT REDUCE WHEN THE PARKING AID TONE SOUNDS

Q1 CHECK THE ACM CONFIGURATION

- Apply the parking brake.
- Place an object behind the vehicle within the range of the parking aid sensors. Refer to **PARKING AID** article.
- Key in ON position.
- Place the transmission in REVERSE (R).
- Enter the following diagnostic mode on the diagnostic tool: ACM DataLogger
- Monitor the RPA_STAT (Parking Aid Input Status) PID while the parking aid tone is sounding.
- **Does the RPA_STAT PID read "Enabled" while the parking aid tone is sounding?**

  YES : Go to Q2.

  NO : REFER to **PARKING AID** article to continue diagnosis of the parking aid system.

Q2 CHECK FOR COMMUNICATION WITH THE PAM

- Carry out the network test using the scan tool.
- **Does the scan tool communicate with the PAM?**

  YES : Go to Q3.

  NO : REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose no communication with the PAM.

Q3 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test R: Voice Recognition Is Inoperative/Does Not Operate Correctly - Vehicles Without The

SYNC System

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

When the VOICE switch is pressed, it changes the reference voltage from the audio control module (ACM) on circuit VMN54 (BU/OG), and the ACM enters voice recognition mode. A microphone located in the interior rear view mirror receives the voice command and sends a signal to the ACM through circuits VMM13 (YE/GN) and RMM13 (BU). Power to the interior rear view mirror is provided through circuit CBP41 (BU). Ground is provided through circuit GD133 (BK).

The microphone test is available through the integrated diagnostic system (IDS). Running this test causes the ACM to produce a test tone. If the system is operating correctly, the microphone detects the tone and produces a signal to the ACM indicating the tone was heard.

- DTC B2633 (Driver-Front Microphone Circuit Failure) - set by the ACM during the microphone test when the ACM does not receive an adequate signal from the microphone when the test tone is sounded.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Steering wheel controls
- Microphone (part of the interior rear view mirror)
- ACM

PINPOINT TEST R: VOICE RECOGNITION IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - VEHICLES WITHOUT THE SYNC SYSTEM

NOTE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

R1 CHECK THE OPERATION OF THE STEERING WHEEL CONTROLS

- Operate the audio system in radio tuner (AM/FM) mode.
- Press the VOICE button on the steering wheel controls.
- **Does the audio system enter voice recognition mode?**

  YES : Go to R2.

  NO : Go to **Pinpoint Test F** \ to diagnose the steering wheel controls system.

R2 CHECK CIRCUIT CBP41 (BU) FOR VOLTAGE

- Key in OFF position.
- Disconnect: Interior Rear View Mirror C911

- Key in ON position.

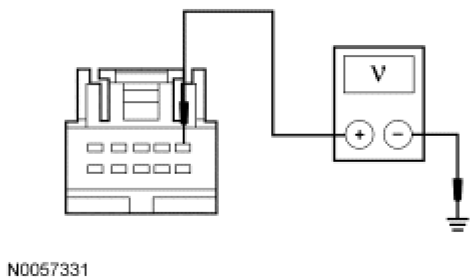


Fig. 22: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the interior rear view mirror C911-1, circuit CBP41 (BU), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to R3.

  NO : VERIFY the smart junction box (SJB) fuse 41 (15A) is OK. If OK, REPAIR the circuit. TEST the system for normal operation. If not OK, REFER to appropriate SYSTEM WIRING DIAGRAMS article to identify the possible sources of the circuit short.

R3 CHECK CIRCUIT GD133 (BK) FOR AN OPEN

- Key in OFF position.

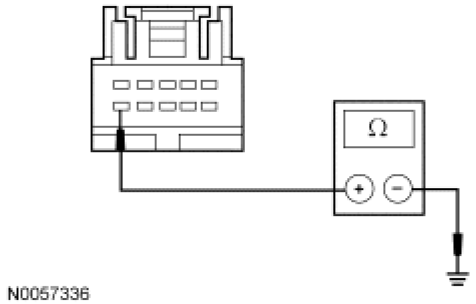

Fig. 23: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the interior rear view mirror C911-10, circuit GD133 (BK), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to R4.

  NO : REPAIR the circuit. TEST the system for normal operation.

R4 CHECK THE MICROPHONE CIRCUITS FOR A SHORT TO VOLTAGE

- Disconnect: ACM C240b
- Key in ON position.

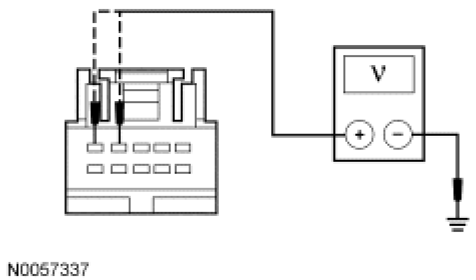

Fig. 24: Checking Circuits For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the interior rear view mirror C911-4, circuit VMM13 (YE/GN), harness side and ground; and between the interior rear view mirror C911-5, circuit RMM13 (BU), harness side and ground.
- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to R5.

R5 CHECK THE MICROPHONE CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the inside rear view mirror, harness side and the ACM, harness side; and between the interior rear view mirror, harness side and ground as follows:

Interior Rear View Mirror Connector-Pin/Circuit	ACM Connector-Pin/Circuit
C911-4 VMM13 (YE/GN)	C240b-11 VMN01 (BU/BN)
C911-5 RMM13 (BU)	C240b-12 RMN01 (GN)

- **Is the resistance less than 5 ohms between the interior rear view mirror and the ACM, and greater than 10,000 ohms between the interior rear view mirror and ground?**

  YES : Go to R6.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

R6 ISOLATE THE INTERIOR REAR VIEW MIRROR

- Connect: ACM C240b
- Install a new interior rear view mirror. Refer to **REAR VIEW MIRRORS** article.
- Operate the audio system in radio tuner (AM/FM) mode.
- Press the VOICE button on the steering wheel controls, and attempt several voice commands.
- **Does the voice recognition operate correctly?**

  YES : The fault was caused by an inoperative inside rear view mirror. The system is now operating correctly.

  NO : Go to R7.

R7 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test S: The SYNC System Is Completely Inoperative

Normal Operation

The accessory protocol interface module (APIM) receives voltage at all times from circuit SBP03 (BU/RD), and ground through circuit GD148 (BK/YE). The wake-up signal is sent to the APIM by the audio control module (ACM) via the medium speed controller area network (MS-CAN).

- DTC U0184 (Lost Communication With Radio [ACM]) - set by the APIM when it is missing messages from the ACM over the MS-CAN for greater than 5 seconds.
- DTC U0196 (Lost Communication With Entertainment Control Module - Rear [AUX]) - set by the APIM when it is missing messages from the rear entertainment module (RETM) over the MS-CAN for greater than 5 seconds.
- DTC U0197 (Lost Communication With Telephone Control Module) - set by the ACM when it is missing messages from the APIM over the MS-CAN for greater than 5 seconds.

This pinpoint test is intended to diagnose the following:

- Audio system concern

- Communication network concern
- Customer error
- Customer device
- APIM
- ACM

PINPOINT TEST S: THE SYNC SYSTEM IS COMPLETELY INOPERATIVE

NOTE:	**Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

S1 CHECK THE AUDIO SYSTEM OPERATION

- Press the AUX button repeatedly until "SYNC LINE IN" appears on the display (except navigation), or look for the presence of the "USER DEVICE" tab (navigation).
- **Is "SYNC LINE IN" available when pressing the AUX button (except navigation), or is the "USER DEVICE" tab present (navigation)?**

  YES : Go to S2.

  NO : Go to S3.

S2 CHECK THE SYNC SYSTEM OPERATION

- Connect: Known Good MP3 Device (To Audio Input Jack)

NOTE:	**Make sure no universal serial bus (USB) device is plugged-in, and no Bluetooth® device is active for this step.**

- Using the ACM buttons, press AUX until "SYNC LINE IN" appears on the display (except navigation), or press MEDIA, select "USER DEVICE", and press "SOURCE" repeatedly until "LINE IN" appears (navigation).
- Using the known good MP3 device, attempt to play a file using the audio input jack.
- Disconnect: Known Good MP3 Device (From Audio Input Jack)
- Connect: Known Good USB Device (To USB Port)
- Using the ACM buttons, press AUX until "SYNC USB" appears on the display (except navigation), or press MEDIA, select "USER DEVICE", and press "SOURCE" repeatedly until "USB" appears (navigation).

NOTE:	**If a USB mass storage device is used to play the audio files, the SYNC system will only play audio files that do not have digital rights management (DRM) protection.**

- Using a known good MP3 device or a mass storage device, attempt to play a file using the USB port.
- Disconnect: Known Good USB Device (From USB Port)

- Using a known good Bluetooth® device capable of streaming audio, attempt to pair to the APIM using Bluetooth®, and attempt to play an audio file using Bluetooth® connection. Refer to the Owner's Literature.
- **Do all of the SYNC inputs function correctly?**

  YES : The SYNC system is operating correctly. REVIEW the system operation with the customer. If the customer device still does not operate correctly, the fault is with the customer device.

  NO : If only some of the inputs are inoperative, go to **Symptom Chart - SYNC System** to diagnose the observed symptom.

  If all inputs have poor quality/distorted sound, go to **Pinpoint Test U** .

S3 CHECK FOR SCAN TOOL COMMUNICATION

- Carry out the network test using the scan tool.
- **Does the APIM pass the network test?**

  YES : Go to S4.

  NO : REFER to **MODULE COMMUNICATIONS NETWORK** article.

S4 CHECK FOR CORRECT APIM OPERATION

- Key in OFF position.
- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pints
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test T: Unable To Pair Bluetooth® Device

Normal Operation

When a new Bluetooth® device is added, the accessory protocol interface module (APIM) and the Bluetooth® device must be paired together. Most Bluetooth® devices will pair with the SYNC system, although functionality will vary. To determine if a Bluetooth® device is supported, retrieve the consumer interface processor (CIP) software level using the **Accessory Protocol Interface Module (APIM) Software Level Check** , and verify the customer device is on the compatibility list for the current CIP software level.

Pairing a Bluetooth® device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC system generates a unique personal identification number (PIN) that must be entered on the Bluetooth® device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For additional information on the pairing process, refer to the Owner's Literature.

This pinpoint test is intended to diagnose the following:

- Incompatible Bluetooth® device
- Customer error
- Customer Bluetooth® device
- APIM

PINPOINT TEST T: UNABLE TO PAIR BLUETOOTH® DEVICE

T1 CHECK THE BLUETOOTH® CONNECTION

NOTE: Carrying out a Master Reset will return all preference settings to the factory defaults, erase all the phone book and call histories and delete any devices paired with the SYNC system.

NOTE: Refer to www.syncmyride.com for a list of compatible devices.

- Using a known good Bluetooth® device, attempt to pair to the SYNC system using Bluetooth®. Refer to the Owner's Literature.
- Enter the following diagnostic mode on the diagnostic tool: APIM DataLogger
- Monitor the BT_PAIR (Bluetooth® device paired) and BT_CONN (Bluetooth® device connected) PIDs.
- **Do the BT_PAIR and BT_CONN PIDs both read "Yes"?**

  YES : The SYNC system is operating correctly at this time. CARRY OUT a SYNC system Master Reset.

  For vehicles without navigation, PRESS the "PHONE" button on the steering wheel controls, SCROLL until "SYSTEM SETTINGS" displays on the screen, PRESS "OK", SCROLL until "ADVANCED" displays on the screen, PRESS "OK", SCROLL until "MASTER RESET" displays on the screen, and PRESS "OK" twice.

  For vehicles with navigation, PRESS "PHONE" on the ACM display, SELECT the "SETTINGS" tab, PRESS "ADVANCED", SELECT "Master Reset", and PRESS "YES".

  REVIEW the pairing process with the customer. If the customer device still does not pair, the fault is with the customer device.

  NO : Go to T2.

T2 CHECK FOR CORRECT APIM OPERATION

- Key in OFF position.
- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pints
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test U: The Universal Serial Bus (USB) Port Is Inoperative/Does Not Operate Correctly

Normal Operation

The universal serial bus (USB) port is connected to the accessory protocol interface module (APIM) through the USB cable. The USB port can be used for mass storage devices, or for connecting a media device.

If supported by the user device, the USB can provide charging. Because of this feature, when a USB device is plugged into the USB port, the SYNC system does not automatically switch to the device.

The USB cable and port are not serviceable separately.

- DTC U261C (USB #1 Device Error) - sets when the APIM detects an over-current or over-temperature condition in the USB circuit. This can be caused by a fault in the USB cable or port, or by the customer USB device.

This pinpoint test is intended to diagnose the following:

- Customer USB device
- USB cable and port
- APIM

PINPOINT TEST U: THE UNIVERSAL SERIAL BUS (USB) PORT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

U1 CHECK THE USB CONNECTION

- Connect: Known Good USB Device (To USB Port)

- Using the ACM buttons, press AUX until "SYNC USB" appears on the display (except navigation), or press AUX until "SYNC USB" appears on the display (except navigation), or press MEDIA, select "USER DEVICE", and press "SOURCE" repeatedly until "USB" appears (navigation)

NOTE: **If a USB mass storage device is used to play the audio files, SYNC will only play audio files that do not have digital rights management (DRM) protection.**

- Using a known good MP3 device or a mass storage device, attempt to play a file using the USB port.
- **Does the known good device successfully play an audio file using the USB connection?**

  YES : The SYNC system is operating correctly. REVIEW the operation of the USB port with the customer. If the customer device still does not operate correctly, the fault is with the customer device.

  NO : Go to U2.

U2 INSPECT THE USB CABLE

- Key in OFF position.
- Disconnect: USB Cable (At APIM)
- Inspect the USB cable for damage.
- Connect: USB Cable (At APIM)
- Key in ON position.
- Using the ACM buttons, press AUX until "SYNC USB" appears on the display (except navigation), or press AUX until "SYNC USB" appears on the display (except navigation), or press MEDIA, select "USER DEVICE", and press "SOURCE" repeatedly until "USB" appears (navigation).
- Using a known good MP3 device or a mass storage device, attempt to play a file using the USB port.
- **Does the known good device successfully play an audio file using the USB connection?**

  YES : The concern was caused by the USB connection not being seated correctly. The system is now operating correctly.

  NO : Go to U3.

U3 ISOLATE THE USB CABLE AND PORT

- Disconnect: Known Good USB Device (From USB Port)
- Install a new USB cable and port. Refer to **Universal Serial Bus (USB) Cable and Port**.
- Connect: Known Good USB Device (To USB Port)
- Using the ACM buttons, press AUX until "SYNC USB" appears on the display (except navigation), or press AUX until "SYNC USB" appears on the display (except navigation), or press MEDIA, select "USER DEVICE", and press "SOURCE" repeatedly until "USB" appears (navigation).
- Using a known good MP3 device or a mass storage device, attempt to play a file using the USB port.
- **Does the known good device successfully play an audio file using the USB connection?**

  YES : The concern was caused by an inoperative USB cable. The system is now operating correctly.

NO : Go to U4.

U4 CHECK FOR CORRECT APIM OPERATION

- Key in OFF position.
- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pints
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test V: The SYNC System Audible Prompts Are Inoperative/Do Not Operate Correctly

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The text-to-speech (TTS) and voice prompt features speak certain text information and interaction requests in order to minimize driver distraction by having to look at the audio control module (ACM) while driving. The ring tone alerts the driver to an incoming call.

Audible prompts can range from a simple tone to more elaborate spoken text, based on the customer setting. When interaction mode is set to standard, detailed guidance is provided. When interaction mode is set to advanced, most prompts are tones only and minimal audible guidance is provided. Refer to the Owner's Literature for further information on voice interaction.

The audio signals for the TTS and voice prompt features, the ring tones, and audio from the outside device during a phone call, are sent from a accessory protocol interface module (APIM) to the ACM through circuits VMN14 (WH/VT) and RMN14 (GY/BN).

This pinpoint test is intended to diagnose the following:

- Customer setting
- Wiring, terminals or connectors
- ACM

- APIM

PINPOINT TEST V: THE SYNC SYSTEM AUDIBLE PROMPTS ARE INOPERATIVE/DO NOT OPERATE CORRECTLY

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

V1 CHECK THE AUDIBLE PROMPT SETTING

- Operate the audio system in SYNC mode.
- Verify the audible prompts are enabled. Refer to "SYNC Voice Recognition Feature" in the Owner's Literature.
- Press the VOICE button on the steering wheel controls and observe the SYNC voice prompt.
- **Does the SYNC system produce a voice prompt correctly?**

  YES : The concern was caused by a customer setting. ADVISE the customer on the operation of the TTS feature.

  NO : Go to V2.

V2 CHECK THE AUDIBLE PROMPT CIRCUITS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240b
- Disconnect: APIM C3342
- Key in ON position.

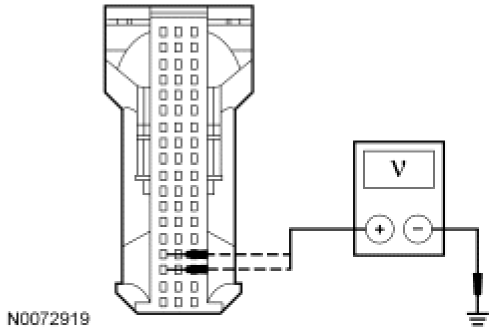

Fig. 25: Checking Audible Prompt Circuits For A Short To Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the APIM C3342-3, circuit VMN14 (WH/VT), harness side and ground; and between the APIM C3342-4, circuit RMN14 (GY/BN), harness side and ground.
- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to V3.

V3 CHECK THE AUDIBLE PROMPT CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the APIM, harness side and the ACM, harness side; and between the APIM, harness side and ground as follows:

APIM Connector-Pin	ACM Connector-Pin	Circuit
C3342-3	C240b-4	VMN14 (WH/VT)
C3342-4	C240b-5	RMN14 (GY/BN)

- **Is the resistance less than 5 ohms between the APIM and the ACM, and greater than 10,000 ohms between the APIM and ground?**

  YES : Go to V4.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

V4 CHECK FOR A VOLTAGE SIGNAL FROM THE APIM

- Connect: ACM C240b
- Connect: APIM C3342
- Operate the audio system in SYNC mode, and verify the audible prompts are enabled. Refer to "Voice Prompts" in the Owner's Literature.
- While pressing the VOICE button repeatedly, measure the AC voltage by backprobing between the ACM C240b-4, circuit VMN14 (WH/VT), harness side and the ACM C240b-5, circuit RMN14 (GY/BN), harness side.
- **Is an AC voltage produced each time the VOICE button is pressed?**

  YES : Go to V5.

  NO : Go to V6.

V5 CHECK FOR CORRECT ACM OPERATION

- Key in OFF position.
- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose

or corroded connector.

V6 CHECK FOR CORRECT APIM OPERATION

- Key in OFF position.
- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test W: Voice Recognition Is Inoperative/Does Not Operate Correctly - Vehicles With The SYNC System

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

When the VOICE button (represented by an icon of someone speaking) is pressed, it changes the reference voltage on circuit VMN54 (BU/OG), and the audio system enters voice recognition mode. If the vehicle is equipped with navigation, the VOICE switch is wired to the audio control module (ACM). If the vehicle is not equipped with navigation, the VOICE switch is wired to the accessory protocol interface module (APIM). A microphone located in the interior rear view mirror receives the voice command and sends a signal to the APIM through circuits VMM13 (YE/GN) and RMM13 (BU). Power to the interior rear view mirror is provided through circuit CBP41 (BU). Ground is provided through circuit GD133 (BK). The microphone is also used to detect outgoing audio during a phone call.

The microphone test (with navigation only) is available through the scan tool. Running this test causes the ACM to produce a test tone. If the system is operating correctly, the microphone detects the tone and produces a signal to the ACM indicating the tone was heard.

If the vehicle is equipped with navigation, the APIM receives the microphone input, and also broadcasts it to the ACM through circuits VMN01 (BU/BN) and RMN01 (GN). This allows voice commands specific to the navigation system to be handled directly by the ACM. The first voice commands spoken determine which system handles the voice commands.

- DTC B1038 (Microphone Input Circuit Failure) - set by the APIM during the on-demand self-test if the

APIM does not detect the microphone.

- DTC B2633 (Driver-Front Microphone Circuit Failure) - set by the ACM during the microphone test when the ACM does not receive an adequate signal from the microphone when the test tone is sounded.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Steering wheel controls
- Microphone (part of the interior rear view mirror)
- ACM (if equipped with navigation)
- APIM

PINPOINT TEST W: VOICE RECOGNITION IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - VEHICLES WITH THE SYNC SYSTEM

NOTE:	**Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

W1 VERIFY THE OPERATION OF THE STEERING WHEEL CONTROLS

- Operate the audio system in radio tuner (AM/FM) mode.
- Press the VOICE button on the steering wheel controls.
- **Does the audio system enter voice recognition mode?**

  YES : Go to W2.

  NO : Go to **Pinpoint Test F** to diagnose the steering wheel controls system.

W2 CHECK THE OPERATION OF THE VOICE RECOGNITION

- Press the VOICE button on the steering wheel controls.
- Wait for the SYNC system to acknowledge the VOICE button being pressed.
- While still in voice recognition mode, speak the command "PHONE", and observe the audio system.
- **Does the SYNC system acknowledge the command "PHONE"?**

  YES : If the vehicle is equipped with navigation, go to W3.

  Otherwise, the system is operating correctly at this time. ADVISE the customer on the correct operation of the voice recognition system.

  NO : Go to W6.

W3 CHECK THE MICROPHONE SIGNAL TO THE ACM

- Key in OFF position.
- Disconnect: ACM C240b

NOTE: ACM C240a must remain connected for this step to produce accurate results.

- Operate the audio system in radio tuner (AM/FM) mode.
- Press the VOICE button on the steering wheel controls.

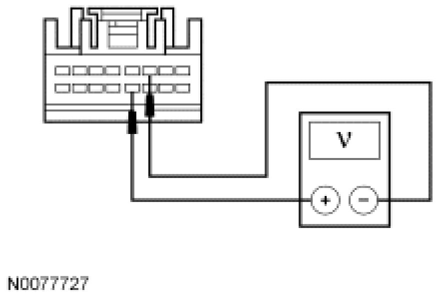

Fig. 26: Checking Microphone Signal To ACM
Courtesy of FORD MOTOR CO.

- While speaking a command, measure the AC voltage between the ACM C240b-11, circuit VMN01 (BU/BN), harness side and the ACM C240b-12, circuit RMN01 (GN), harness side.
- **Is a fluctuating AC voltage present?**

  YES : Go to W12.

  NO : Go to W4.

W4 CHECK THE MICROPHONE CIRCUITS TO THE ACM FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: APIM C3342
- Key in ON position.

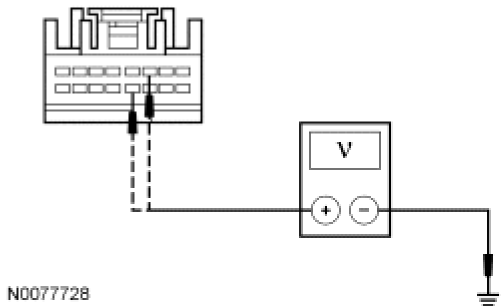

Fig. 27: Checking Microphone Circuits To ACM For A Short To Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the ACM C240b-11, circuit VMN01 (BU/BN), harness side and ground; and between the ACM C240b-12, circuit RMN01 (GN), harness side and ground.

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to W5.

W5 CHECK THE MICROPHONE CIRCUITS TO THE ACM FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the ACM, harness side and the APIM, harness side; and between the ACM, harness side and ground as follows:

ACM Connector-Pin	APIM Connector-Pin	Circuit
C240b-11	C3342-12	VMN01 (BU/BN)
C240b-12	C3342-13	RMN01 (BU)

- **Is the resistance less than 5 ohms between the ACM and the APIM, and greater than 10,000 ohms between the ACM and ground?**

  YES : Go to W11.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

W6 CHECK CIRCUIT CBP41 (BU) FOR VOLTAGE

- Key in OFF position.
- Disconnect: Interior Rear View Mirror C9012
- Key in ON position.

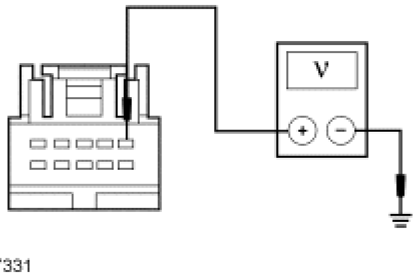

Fig. 28: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the interior rear view mirror C9012-1, circuit CBP41 (BU), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to W7.

NO : VERIFY the smart junction box (SJB) fuse 41 (15A) is OK. If OK, REPAIR the circuit. TEST the system for normal operation. If not OK, REFER to appropriate SYSTEM WIRING DIAGRAMS article to identify the possible sources of the circuit short.

W7 CHECK CIRCUIT GD133 (BK) FOR AN OPEN

- Key in OFF position.

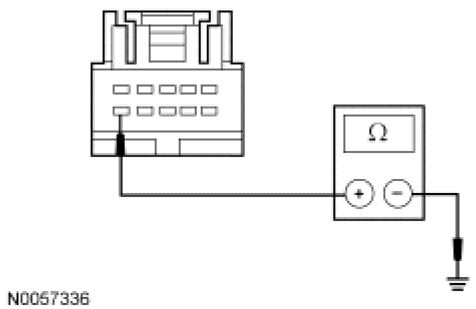

Fig. 29: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the interior rear view mirror C9012-10, circuit GD133 (BK), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to W8.

  NO : REPAIR the circuit. TEST the system for normal operation.

W8 CHECK THE MICROPHONE CIRCUITS FOR A SHORT TO VOLTAGE

- Disconnect: APIM C3342
- Key in ON position.

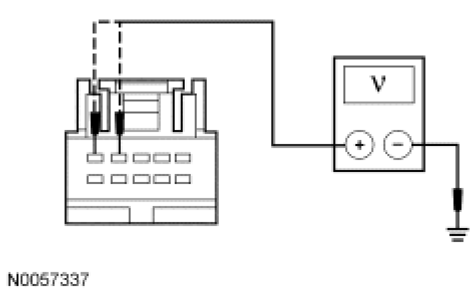

Fig. 30: Checking Circuits For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the interior rear view mirror C9012-4, circuit VMM13 (YE/GN), harness side and ground; and between the interior rear view mirror C9012-5, circuit RMM13 (BU), harness side and ground.
- **Is any voltage present?**

YES : REPAIR the circuit in question. TEST the system for normal operation.

NO : Go to W9.

W9 CHECK THE MICROPHONE CIRCUITS FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the inside rear view mirror, harness side and the APIM, harness side; and between the interior rear view mirror, harness side and ground as follows:

Interior Rear View Mirror Connector-Pin	APIM Connector-Pin	Circuit
C9012-4	C3342-5	VMM13 (YE/GN)
C9012-5	C3342-6	RMM13 (BU)

- **Is the resistance less than 5 ohms between the interior rear view mirror and the APIM, and greater than 10,000 ohms between the interior rear view mirror and ground?**

YES : Go to W10.

NO : REPAIR the circuit in question. TEST the system for normal operation.

W10 ISOLATE THE INTERIOR REAR VIEW MIRROR

- Connect: APIM C3342
- Install a new interior rear view mirror. Refer to **REAR VIEW MIRRORS** article.
- Operate the audio system in SYNC mode.
- Press the VOICE button on the steering wheel controls, and attempt several voice commands.
- **Does the voice recognition operate correctly?**

YES : The fault was caused by an inoperative inside rear view mirror. The system is now operating correctly.

NO : Go to W11.

W11 CHECK FOR CORRECT APIM OPERATION

- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.

NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

W12 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test X: Poor Quality/Distorted/No Sound While In SYNC Mode

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The accessory protocol interface module (APIM) sends left and right channel analog audio signals through circuits VME52 (BU), RME52 (GY/OG), VME53 (VT/GN), and RME53 (BN/WH). If the vehicle is equipped with a DVD entertainment system, these audio signals are sent to the rear entertainment module (RETM), then to the audio control module (ACM). In vehicles without a DVD entertainment system, the audio signals are sent directly to the ACM.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- RETM (if equipped)
- ACM
- APIM

PINPOINT TEST X: POOR QUALITY/DISTORTED/NO SOUND WHILE IN SYNC MODE

NOTE:	**Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

X1 VERIFY THE OPERATION OF THE SYNC AUDIO SOURCES

- Connect: Known Good MP3 Device (To Audio Input Jack)

NOTE: Make sure no universal serial bus (USB) device is plugged-in, and no Bluetooth® device is active for this step.

- Using the ACM buttons, press AUX until "SYNC LINE IN" appears on the display (except navigation), or press MEDIA, select "USER DEVICE", and press "SOURCE" repeatedly until "LINE IN" appears (navigation).
- Using a known good MP3 device, attempt to play a file using the audio input jack, and listen to the audio output.
- Disconnect: Known Good MP3 Device (From Audio Input Jack)
- Connect: Known Good USB Device (To USB Port)
- Using the ACM buttons, press AUX until "SYNC USB" appears on the display (except navigation), or press MEDIA, select "USER DEVICE", and press "SOURCE" repeatedly until "USB" appears (navigation).

NOTE: If a USB mass storage device is used to play the audio files, SYNC will only play audio files that do not have digital rights management (DRM) protection.

- Using a known good MP3 device or a mass storage device, attempt to play a file using the USB port.
- Disconnect: Known Good USB Device (From USB Port)
- Using a known good Bluetooth® device capable of streaming audio, attempt to pair to the APIM using Bluetooth®, and attempt to play an audio file using the Bluetooth® connection. Refer to the Owner's Literature.
- **Is there poor quality/distorted/no sound from each SYNC audio source?**

  YES : If the vehicle is equipped with a DVD entertainment system, go to X2.

  Otherwise, go to X3.

  NO : If the concern is only with some of the audio sources, go to **Symptom Chart - SYNC System** to diagnose the observed symptom.

  If all audio sources operate correctly, the concern is with the customer device.

X2 CHECK THE OPERATION OF THE DVD AUDIO

NOTE: Make sure a known good DVD is inserted in the RETM before carrying out this step.

- Operate the audio system in DVD mode.

- Observe the audio output.
- **Is there poor quality/distorted sound while in DVD mode?**

  YES : Go to **Pinpoint Test K** .

  NO : Go to X3.

X3 CHECK THE CIRCUITS FROM THE APIM FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: ACM C240b (Without DVD Entertainment)
- Disconnect: RETM C949 (With DVD Entertainment)
- Disconnect: APIM C3342
- Measure the voltage between the APIM pins, harness side as follows:

Connector-Pin	Circuit
C3342-23	VME53 (VT/GN)
C3342-24	RME53 (BN/WH)
C3342-25	VME52 (BU)
C3342-26	RME52 (GY/OG)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to X4.

X4 CHECK THE CIRCUITS FROM THE APIM FOR AN OPEN OR SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the APIM, harness side, and the ACM or RETM (if equipped with DVD entertainment), harness side; and between the APIM, harness side and ground as follows:

APIM Connector-Pin/Circuit	ACM or RETM Connector-Pin/Circuit	Circuit
C3342-23 VME53 (VT/GN)	C240b-9 or C949-20	VME53 (VT/GN)
C3342-23 RME53 (BN/WH)	C240b-10 or C949-19	RME53 (BN/WH)
C3342-23	C240b-1 or	VME52

VME52 (BU)	C949-4	(BU)
C3342-23 RME52 (GN/OG)	C240b-2 or C949-3	RME52 (GN/OG)

- **Is the resistance less than 5 ohms between the APIM and the ACM (or RETM), and greater than 10,000 ohms between the APIM and ground?**

  YES : REPAIR the circuit in question. TEST the system for normal operation.

  NO : Go to X5.

X5 CHECK FOR CORRECT APIM OPERATION

- Connect: All Disconnected Connectors
- Disconnect the APIM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the APIM connector and make sure it seats correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation. If the concern is still present and the vehicle is equipped with a DVD entertainment system, go to X6. If the concern is still present and the vehicle is not equipped with a DVD entertainment system, go to X7.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

X6 CHECK FOR CORRECT RETM OPERATION

- Disconnect the RETM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the RETM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new RETM. REFER to **Rear Entertainment Module (RETM)**. TEST the system for normal operation. If the concern is still present, go to X7.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

X7 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test Y: The Speed Sensitive Volume Does Not Operate Correctly

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Audio System/Navigation for schematic and connector information.

Normal Operation

The speed sensitive volume function adjusts the volume based on the vehicle speed sensor (VSS) signal from the instrument cluster (IC). The IC does not generate the VSS signal; it gateways the signal from the PCM.

For vehicles without THX® sound, the audio control module (ACM) receives the VSS signal from the IC. For vehicles with THX® sound, the audio digital signal processing (DSP) module receives the VSS signal from the IC and controls the speed sensitive volume based on the ACM setting.

- DTC U0155 (Lost Communication With Instrument Panel Cluster Control [IC] Module) - sets when the VSS signal is lost for greater than 5 seconds. When the signal is lost, the ACM turns the speed sensitive volume feature off. The smart junction box (SJB) and HVAC module also receive this signal, and should demonstrate symptoms if the VSS signal is lost. If no symptoms are present, this DTC can be ignored, as it may have been set by a low battery voltage condition.
- DTC U0184 (Lost Communication With Radio [ACM]) - set by the DSP module when expected medium speed controller area network (MS-CAN) messages are missing from the ACM lost for greater than 5 seconds. This includes the speed sensitive volume setting. If the speed sensitive volume setting message is missing, the DSP module turns the speed sensitive volume feature off.

This pinpoint test is intended to diagnose the following:

- Speed sensitive volume setting
- VSS signal concern
- ACM

PINPOINT TEST Y: THE SPEED SENSITIVE VOLUME DOES NOT OPERATE CORRECTLY

NOTE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Y1 CHECK THE SPEEDOMETER OPERATION

- Drive the vehicle and observe the speedometer.
- **Does the speedometer operate correctly?**

  YES : Go to Y2.

  NO : REFER to **INSTRUMENT CLUSTER (IC), MESSAGE CENTER, AND WARNING CHIMES** article to diagnose the inoperative speedometer.

Y2 CHECK THE SPEED SENSITIVE VOLUME SETTING

- Turn the speed sensitive volume off.
  - For vehicles without navigation, press MENU until the speed sensitive volume prompt is reached, then press TUNE DOWN until the feature is turned off.
  - For vehicles with navigation, press SOUND, select the SCV tab, and turn the feature off.
- Operate the audio system in radio tuner (AM/FM) mode.
- Drive the vehicle at various speeds and observe the speaker volume.
- Set the speed sensitive volume to maximum compensation.
  - For vehicles without navigation, press MENU until the speed sensitive volume prompt is reached, then press TUNE UP until the feature is set to setting "7".
  - For vehicles with navigation, press SOUND, select the SCV tab, then press "7".
- Operate the audio system in radio tuner (AM/FM) mode.
- Drive the vehicle at various speeds and observe the speaker volume.
- **Does the volume remain constant with the speed sensitive volume turned off, and increase and decrease with vehicle speed with the speed sensitive volume set to maximum?**

  YES : The system is operating correctly at this time. ADVISE the customer on the correct operation of the speed sensitive volume feature.

  NO : Go to Y3.

Y3 CHECK FOR DTC U0155 (ACM) OR U0184 (DSP)

- Key in ON position.
- Using the scan tool, clear any ACM and DSP module continuous DTCs.
- Key in OFF position.
- Key in ON position.
- Wait at least 10 seconds.
- Retrieve the ACM and DSP module continuous DTCs.
- **Is DTC U0155 (ACM) or U0184 (DSP) present?**

  YES : Go to Y4.

  NO : If the vehicle is equipped with THX® sound, go to Y5.

Otherwise, go to Y6.

Y4 CHECK FOR COMMUNICATION WITH THE ACM AND INSTRUMENT CLUSTER (IC)

- Carry out the network test using the scan tool.
- **Does the scan tool communicate with the ACM and the IC?**

  YES : If the vehicle is equipped with THX® sound, go to Y5.

  Otherwise, go to Y6.

  NO : REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose no communication with the ACM or IC.

Y5 CHECK FOR CORRECT DSP MODULE OPERATION

- Disconnect all the DSP module connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the DSP module connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new APIM. REFER to **Accessory Protocol Interface Module (APIM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Y6 CHECK FOR CORRECT ACM OPERATION

- Disconnect all the ACM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the ACM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new ACM. REFER to **Audio Control Module (ACM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

GENERAL PROCEDURES

AUDIO UNIT PART NUMBER RETRIEVAL

Audio Systems Without Navigation

NOTE: The terms "Audio Control Module (ACM)" and "audio unit" refer to the same component.

1. Turn the ACM on.
2. Press and hold preset buttons 3 and 6 for 3 seconds. The speaker walk-around test will begin.
3. Before the speaker walk-around test is complete, press preset button 6.

   NOTE: This step will cause the ACM to auto-scroll through configuration 1, configuration 2, EEPROM number, and ACM part number.

4. Press the TUNE UP button.

   NOTE: Step 4 may need to be repeated until the ACM part number can be recorded.

5. Record the ACM part number.
6. Turn the ACM off.

Navigation Audio System

1. Turn the ACM on.
2. Press and hold preset buttons 3 and 6 for 3 seconds. The speaker walk-around test will begin.
3. Before the speaker walk-around test is complete, press END TEST on the display screen.
4. Select SYSTEM INFO from the menu.
5. Record the ACM part number.
6. Turn the ACM off.

SATELLITE RADIO RECEIVER ELECTRONIC SERIAL NUMBER (ESN) RETRIEVAL

Audio Systems Without Navigation

1. Operate the audio system in satellite radio mode.
2. Press and hold the AUX button and preset button 1, simultaneously.
   - The satellite radio receiver Electronic Serial Number (ESN) will be displayed on the screen.
3. Record the satellite radio receiver ESN.
4. Turn the audio system off.

Audio Systems With Navigation

1. Turn the audio system on.
2. Press the MENU button.
3. Select the SYSTEM INFO tab.

NOTE: The satellite radio receiver ESN is shown on the lower left corner of the screen with the text "SR ESN:".

4. Record the satellite radio receiver ESN.
5. Turn the audio system off.

ACCESSORY PROTOCOL INTERFACE MODULE (APIM) SOFTWARE LEVEL CHECK

Special Tools

Illustration	Tool Name	Tool Number
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST3051-A	Universal Serial Bus (USB) Male-A to Male-A Cable	CCMUSB2-AM-AM-10 or equivalent

1. Turn the Audio Control Module (ACM) on.
2. Connect the scan tool to the Data Link Connector (DLC).
3. Connect one end of the Universal Serial Bus (USB) male-A to male-A cable to the scan tool.
4. Connect the other end of the USB male-A to male-A cable to the vehicle USB port.
5. From the technician service publication website, run On-Line Automotive Service Information System (OASIS) using Quick Start or by manually entering the Vehicle Identification Number (VIN).
6. From the OASIS tab, select the "Sync/APIM" bullet.
7. Select the "Read APIM" button to verify the current Accessory Protocol Interface Module (APIM) software level.
    - The display shows both the Vehicle Interface Processor (VIP) and Consumer Interface Processor (CIP) software levels.
8. The scan tool displays the following information:
    - Last Recorded State - Hardware
        - VIN: vehicle identification number associated with the current APIM
        - Installed date: date the APIM was installed

- Radio: currently identified ACM in the vehicle
- HW Part No.: APIM hardware part number
- Un-installed date: date (if any) the APIM was uninstalled
- S/N: APIM serial number

- Last Recorded State - Software
    - Date/Time: date and time of last recorded software installation
    - VIP: VIP software that was installed at that time
    - CIP: CIP software that was installed at that time
    - Description: a description of the content of the software revision
- History - Software
    - Date/Time: date and time of any recorded software installation
    - VIP: VIP software that was installed at that time
    - CIP: CIP software that was installed at that time
    - Description: a description of the content of the software revision
- Available Software for Programming
    - Select: allows the software package to be selected
    - Lineage: the original software release, if the software available is a revision
    - VIP: VIP software level that is available with the selection
    - CIP: CIP software level that is available with the selection
    - Description: a description of the content of the software revision

9. Click a CIP software level to view the device compatibility list associated with the CIP software level, if desired.
10. To exit the APIM software level check, disconnect the scan tool from the DLC and the USB port, or exit the OASIS screen.

REMOVAL AND INSTALLATION

AUDIO DIGITAL SIGNAL PROCESSING (DSP) MODULE

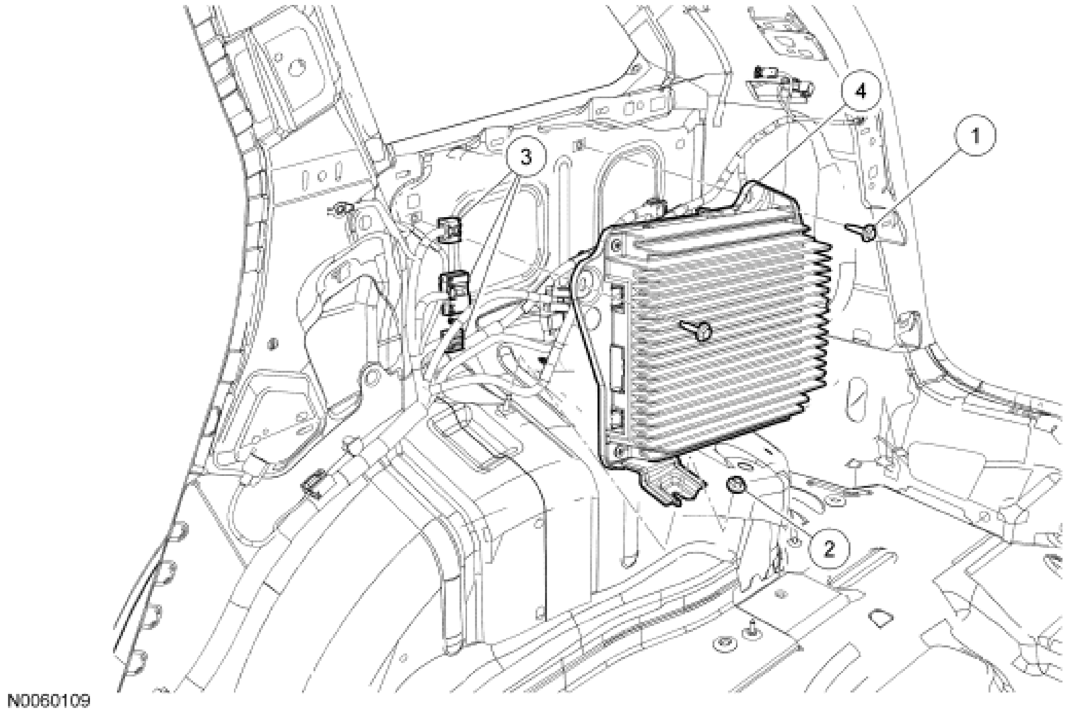

Fig. 31: Exploded View Of Audio Amplifier - THX(R)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W505425-S	Audio digital signal processing (DSP) module screws (2 required)
2	N811309-S	Audio DSP module nut
3	-	Audio DSP module electrical connectors (part of 14A005)
4	18A849	Audio DSP module

REMOVAL AND INSTALLATION

NOTE: Module configuration is only required if a new audio digital signal processing (DSP) module is being installed.

1. Upload the audio DSP module configuration information to the scan tool. For additional information, refer to Programmable Module Installation (PMI) in **MODULE CONFIGURATION** article.
2. Remove the subwoofer speaker. For additional information, refer to **Subwoofer Speaker**.
3. Disconnect the audio DSP module electrical connectors.
4. Remove the 2 screws, the nut, and the audio DSP module.
5. To install, reverse the removal procedure.
   - Download the configuration information to the audio DSP module. For additional information, refer to PMI in **MODULE CONFIGURATION** article.

AUDIO INPUT JACK

NOTE: **Vehicle equipped with SYNC shown, others similar.**

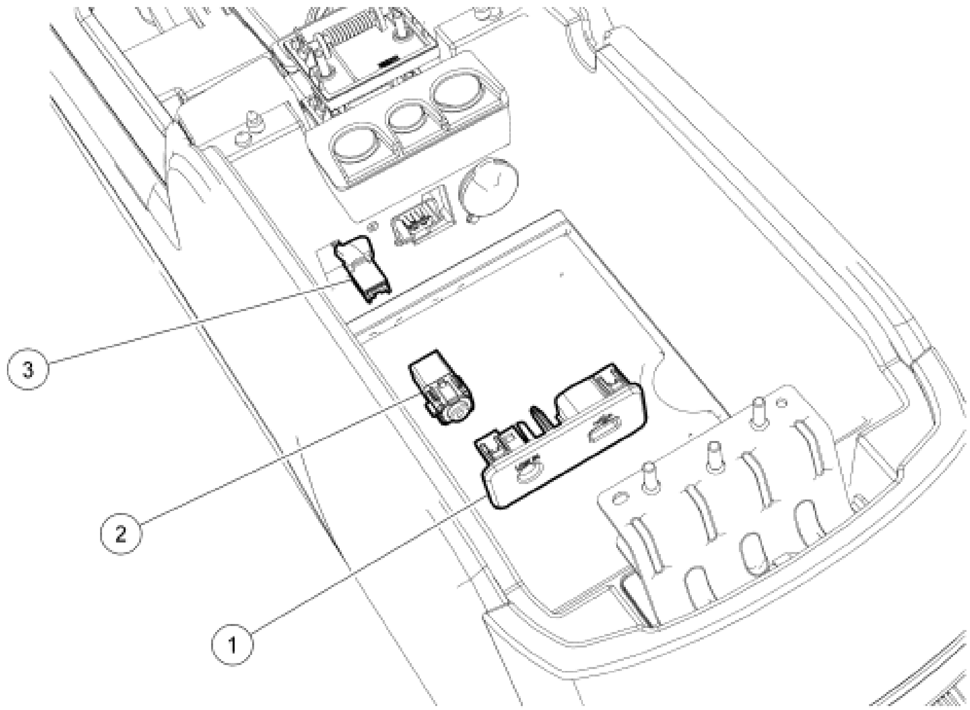

Fig. 32: Identifying Audio Input Jack Connectors
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Audio input jack bezel (part of 78045A06)
2	19A164	Audio input jack
3	-	Audio input jack electrical connector (part of 14B079)

REMOVAL AND INSTALLATION

1. Using a suitable tool, pry the audio input jack bezel out from the floor console storage bin.
   - Disconnect the universal serial bus (USB) connector, if equipped.
2. Disconnect the audio input jack electrical connector.
3. Release the tabs and remove the audio input jack.

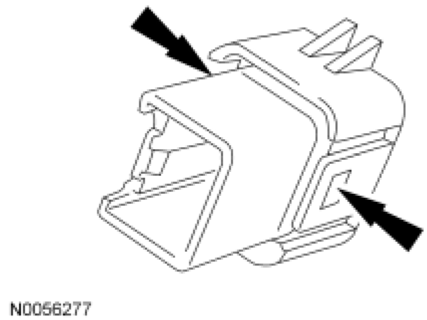

Fig. 33: Identifying Tabs On Audio Input Jack
Courtesy of FORD MOTOR CO.

4. To install, reverse the removal procedure.

AUDIO CONTROL MODULE (ACM)

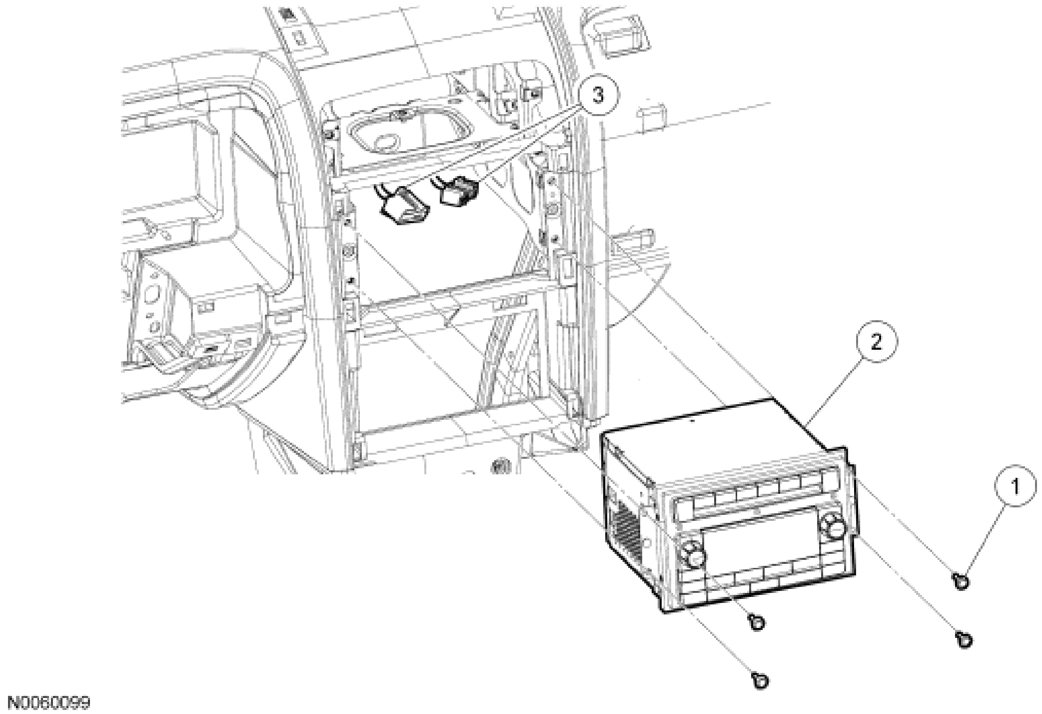

Fig. 34: Exploded View Of Audio Unit
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W707628	Audio control module (ACM) screws (4 required)
2	18C815	ACM
3	-	ACM electrical connectors (part of 14401 or 18812)

REMOVAL AND INSTALLATION

NOTE: **It is not necessary to remove the audio control module (ACM) to retrieve the part number. For additional information, refer to Audio Unit Part Number Retrieval.**

NOTE: **Module configuration is only required if a new ACM is being installed.**

1. Upload the ACM configuration information to the scan tool. For additional information, refer to **MODULE CONFIGURATION** article.
2. Remove the instrument panel center finish panel. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
3. Remove the 4 screws and the ACM.
   - Disconnect the electrical connectors and the antenna cable.
4. To install, reverse the removal procedure.
   - Download the configuration information to the ACM. For additional information, refer to **MODULE CONFIGURATION** article.

SATELLITE DIGITAL AUDIO RECEIVER SYSTEM (SDARS) MODULE

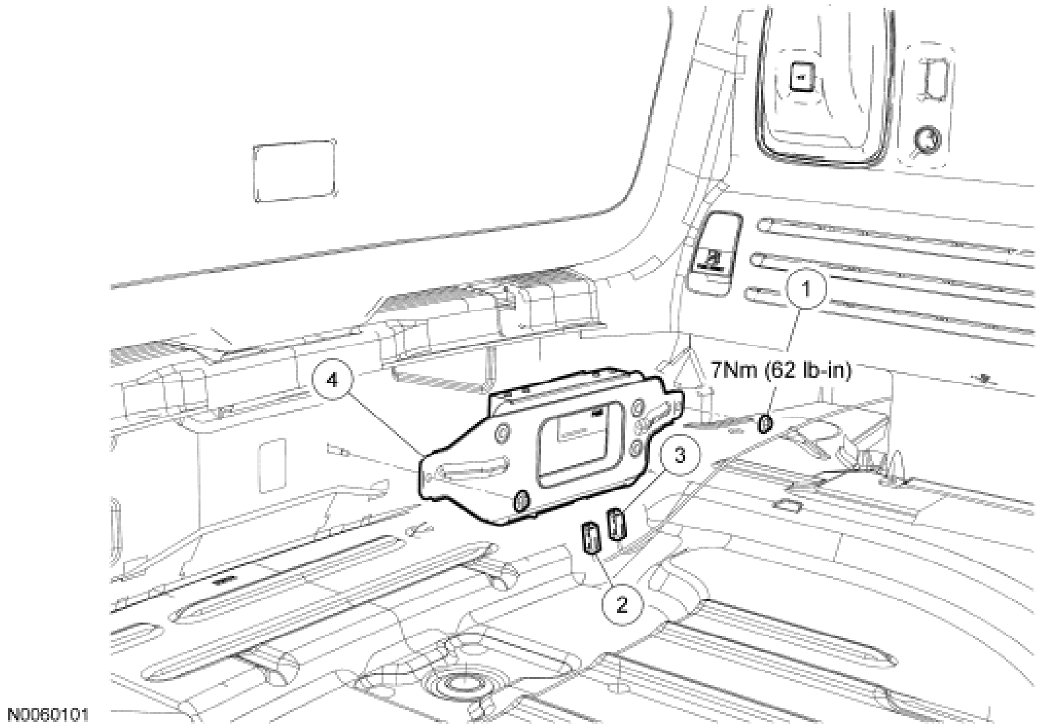

Fig. 35: Exploded View Of Satellite Radio Receiver With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description

1	W707293-S	Satellite digital audio receiver system (SDARS) module nuts (2 required)
2	19A397	Satellite radio antenna connector
3	-	SDARS module electrical connector (part of 14A005)
4	18C960	SDARS module

REMOVAL AND INSTALLATION

NOTE: Module configuration is only required if a new satellite digital audio receiver (SDARS) module is being installed.

1. Upload the SDARS module configuration information to the scan tool. For additional information, refer to Programmable Module Installation (PMI) in **MODULE CONFIGURATION** article.
2. Remove the liftgate scuff plate. For additional information, refer to Interior Trim - Exploded View in **INTERIOR TRIM AND ORNAMENTATION** article.
3. Remove the 2 nuts and the SDARS module.
   - Disconnect the satellite radio antenna connector and the electrical connector.
   - To install, tighten the nuts to 7 Nm (62 lb-in).
4. To install, reverse the removal procedure.
   - Download the configuration information to the SDARS module. For additional information, refer to PMI in **MODULE CONFIGURATION** article.

STEERING WHEEL CONTROLS

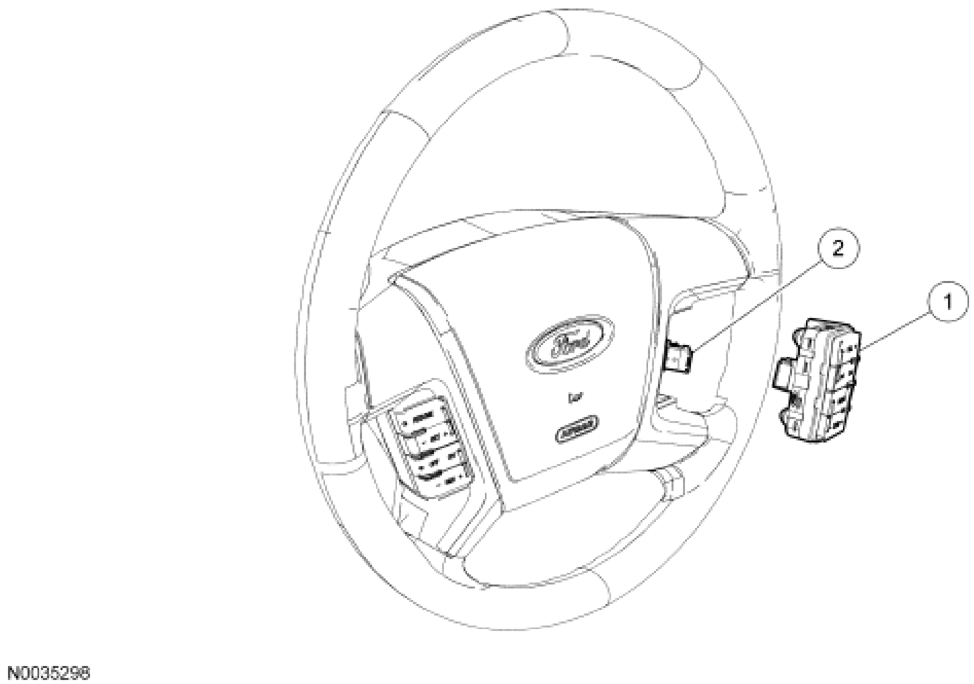

Fig. 36: Exploded View Of Steering Wheel Controls - Edge
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	9C888	Steering wheel controls
2	-	Steering wheel controls electrical connector (part of 14A411)

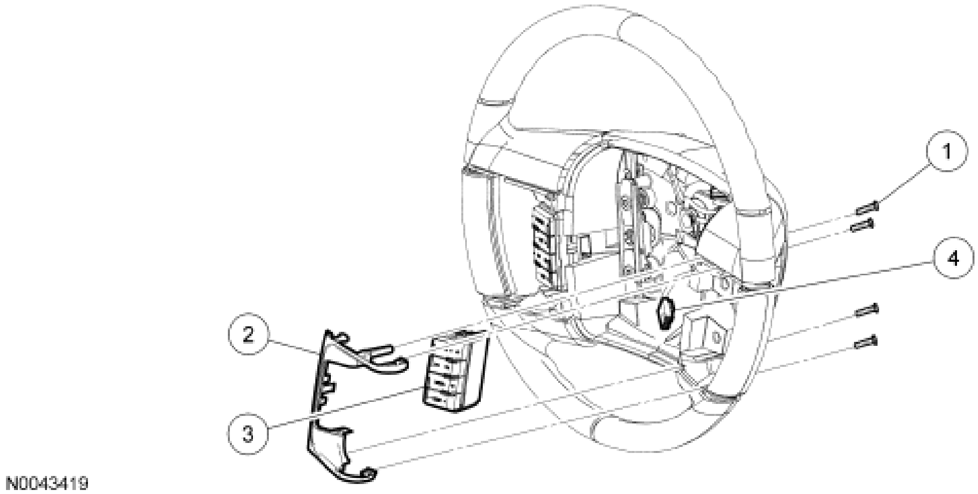

Fig. 37: Exploded View Of Steering Wheel Controls - MKX
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Steering wheel controls bezel screws (4 required)
2	-	Steering wheel controls bezel
3	9C888	Steering wheel controls
4	-	Steering wheel controls electrical connector (part of 14A411)

REMOVAL AND INSTALLATION

MKX

1. Remove the driver air bag module. For additional information, refer to **SUPPLEMENTAL RESTRAINT SYSTEM** article.
2. Remove the 4 screws and the steering wheel controls bezel.

   All vehicles

3. Remove the steering wheel controls by pulling the switch toward the rear of the vehicle.
   - Disconnect the electrical connector.
4. To install, reverse the removal procedure.

ANTENNA - AM/FM

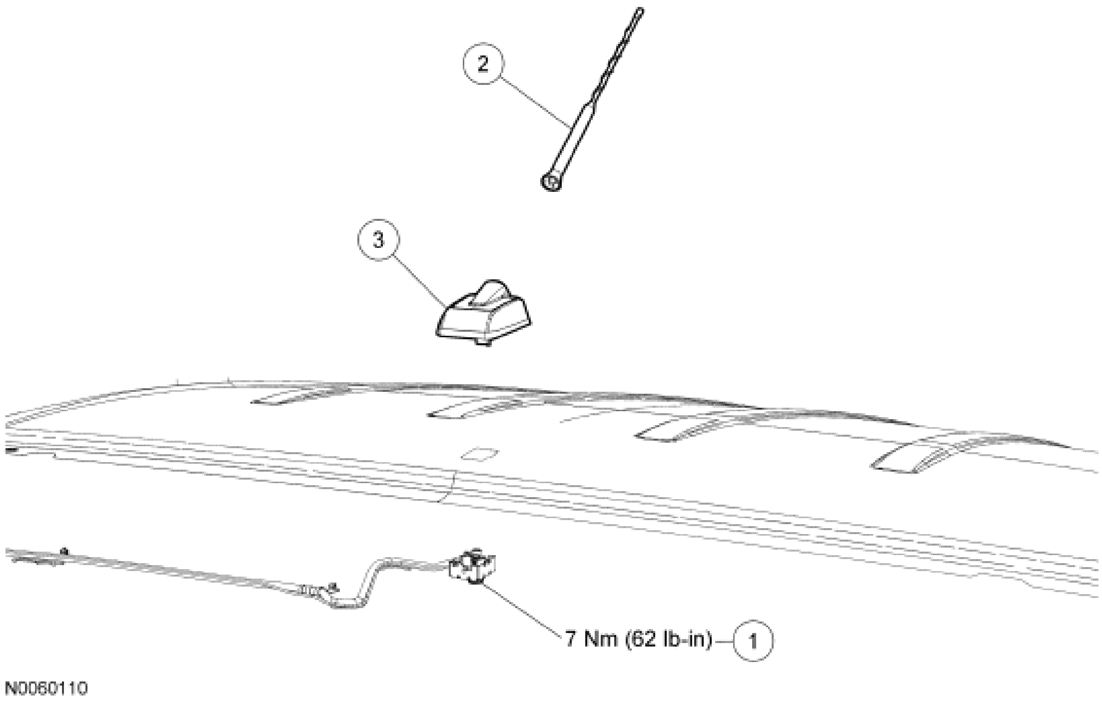

Fig. 38: Exploded View Of AM/FM Antenna With Torque Specifications

Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	AM/FM antenna base bolt (part of 18812)
2	18813	AM/FM antenna mast
3	18936	AM/FM antenna

REMOVAL AND INSTALLATION

1. Remove the AM/FM antenna mast, if desired.
2. Remove the dome lamp. For additional information, refer to **INTERIOR LIGHTING** article.
3. Loosen the AM/FM antenna base bolt.
   - To install, tighten to 7 Nm (62 lb-in).
4. Remove the AM/FM antenna.
5. To install, reverse the removal procedure.

ANTENNA - SATELLITE RADIO

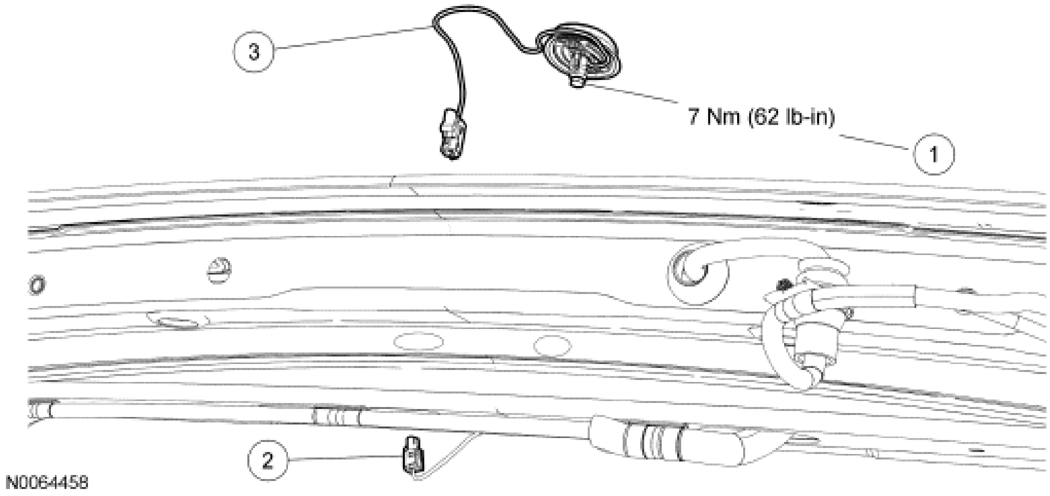

Fig. 39: Exploded View Of Satellite Radio Antenna With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Satellite radio antenna cable bolt (part of 18812)
2	-	Satellite radio antenna cable electrical connector (part of 19A397)
3	10E893	Satellite radio antenna

REMOVAL AND INSTALLATION

1. Remove the spoiler. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.
   - Disconnect the satellite radio antenna electrical connector.
2. Loosen the satellite radio antenna cable bolt.
   - To install, tighten to 7 Nm (62 lb-in).
3. Remove the satellite radio antenna.
4. To install, reverse the removal procedure.

ANTENNA CABLE - AM/FM

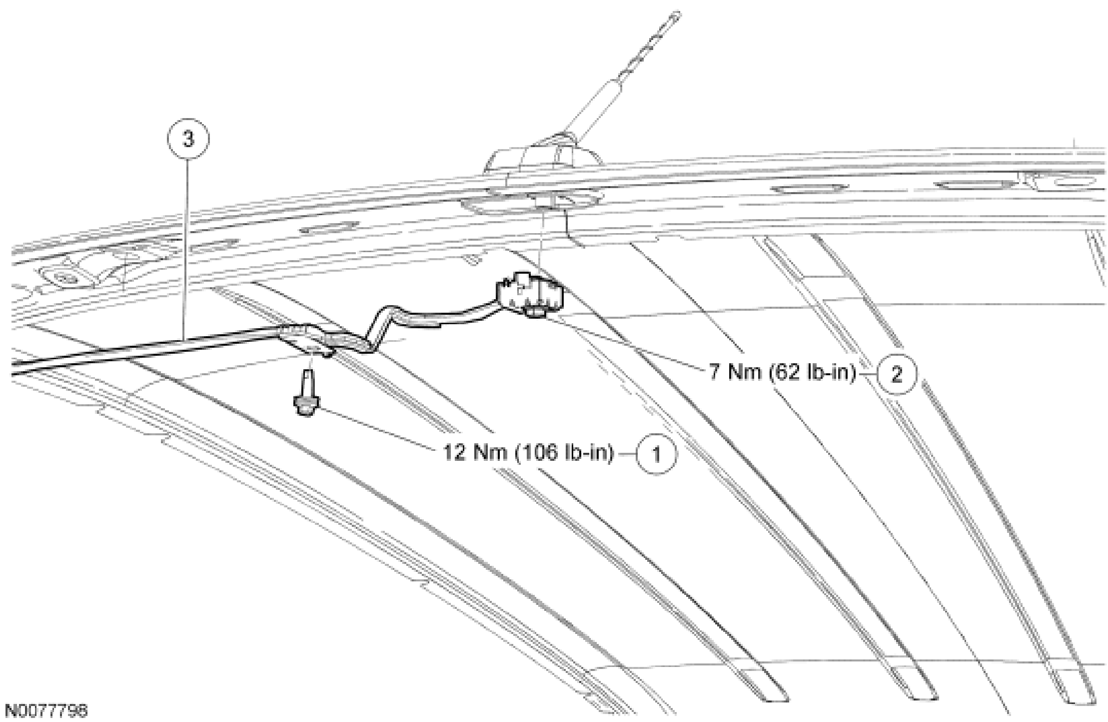

Fig. 40: Antenna Cable-to-Antenna With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	AM/FM antenna cable bolt
2	-	AM/FM antenna base bolt (part of 18812)
3	18812	Upper AM/FM antenna cable

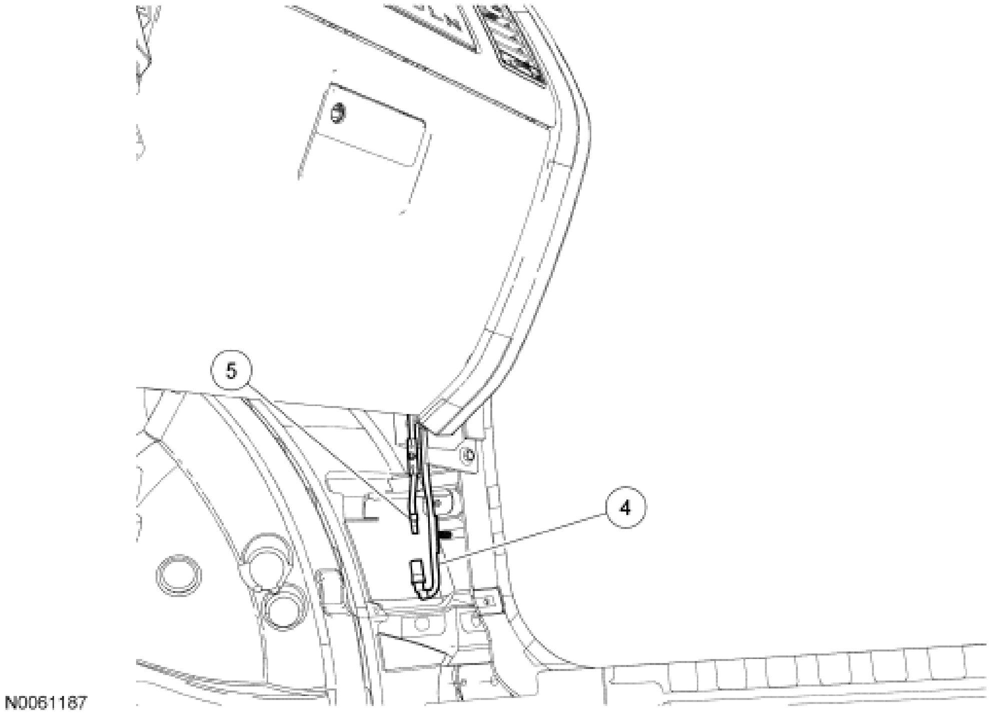

Fig. 41: Upper Antenna Cable-to-Lower Antenna Cable
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
4	18812	Upper AM/FM antenna cable
5	18812	Lower AM/FM antenna cable

REMOVAL AND INSTALLATION

Lower antenna cable

1. Remove the audio control module (ACM). For additional information, refer to **Audio Control Module (ACM)**.

   Upper antenna cable

2. Remove the RH A-pillar trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.
3. Remove the interior dome lamp. For additional information, refer to **INTERIOR LIGHTING** article.
4. Loosen the AM/FM antenna base bolt and disconnect the antenna cable from the antenna.
   - To install, tighten to 7 Nm (62 lb-in).
5. Remove the RH sun visor. For additional information, refer to Headliner in **INTERIOR TRIM AND ORNAMENTATION** article.

NOTE: Lower the headliner, as necessary.

6. Remove the AM/FM antenna cable bolt and the antenna cable.
   - To install, tighten the bolt to 12 Nm (106 lb-in).

Both antenna cables

7. Remove the RH front door scuff plate. For additional information, refer to Interior Trim - Exploded View in **INTERIOR TRIM AND ORNAMENTATION** article.
8. Disconnect the upper antenna cable from the lower antenna cable.
9. Release the pin-type retainers and remove the antenna cable.
10. To install, reverse the removal procedure.

ANTENNA CABLE - SATELLITE RADIO

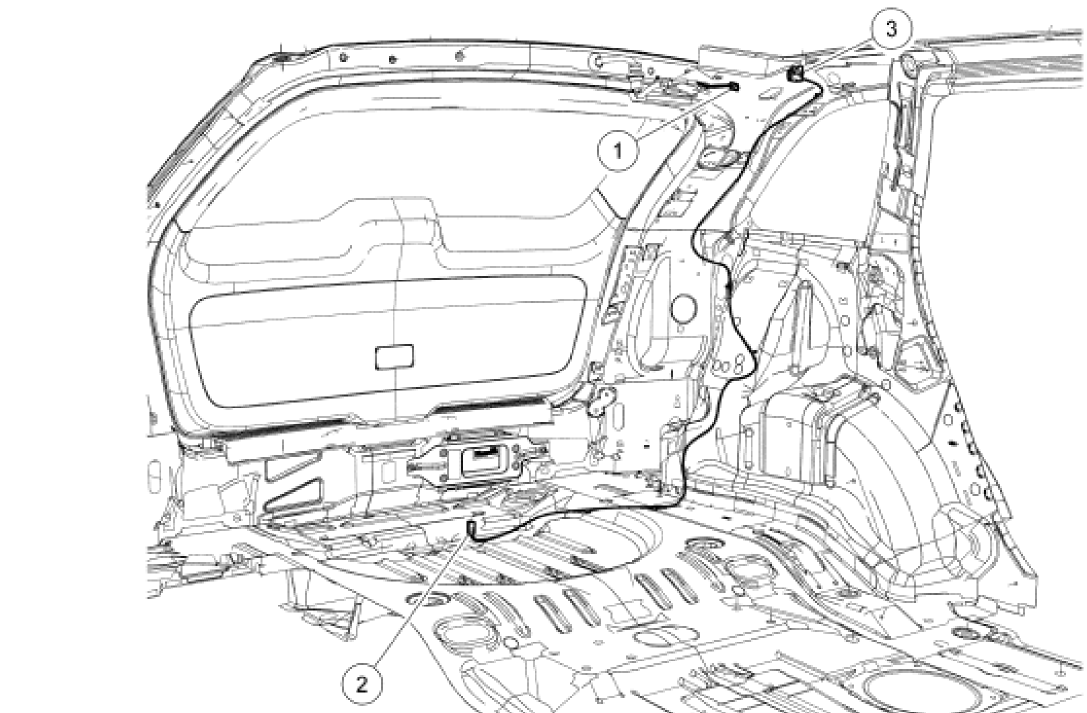

Fig. 42: Exploded View Of Satellite Radio Antenna Cable
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Satellite radio antenna cable-to-satellite radio antenna electrical connector (part of 19A397)
2	-	Satellite radio antenna cable-to-satellite digital audio receiver system (SDARS)

		module electrical connector (part of 19A397)
3	19A397	Satellite radio antenna cable

REMOVAL AND INSTALLATION

1. Remove the LH quarter trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.
2. Remove the D-pillar trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.
3. Remove the liftgate scuff plate. For additional information, refer to Interior Trim - Exploded View in **INTERIOR TRIM AND ORNAMENTATION** article.
4. Disconnect the satellite radio antenna cable from the satellite digital audio receiver system (SDARS) module.
5. Disconnect the satellite radio antenna cable from the satellite radio antenna, and remove the cable.
6. To install, reverse the removal procedure.

DOOR SPEAKER

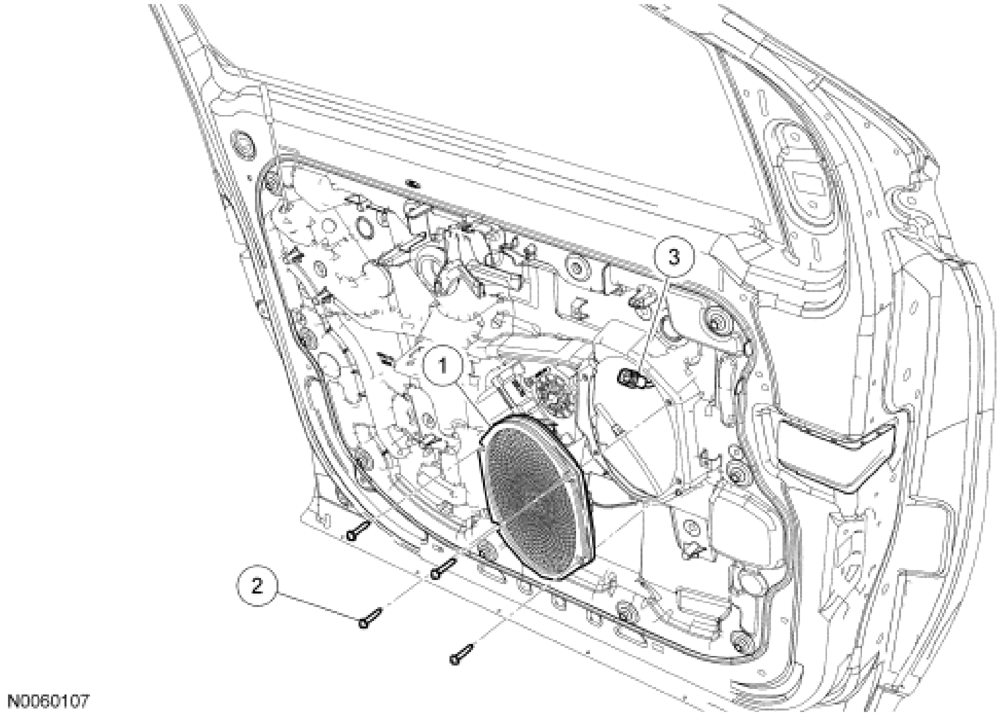

Fig. 43: Front or Rear Door
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	18808	Door speaker

2	973791	Door speaker screws (4 required)
3	-	Door speaker electrical connector(s) (part of door harness)

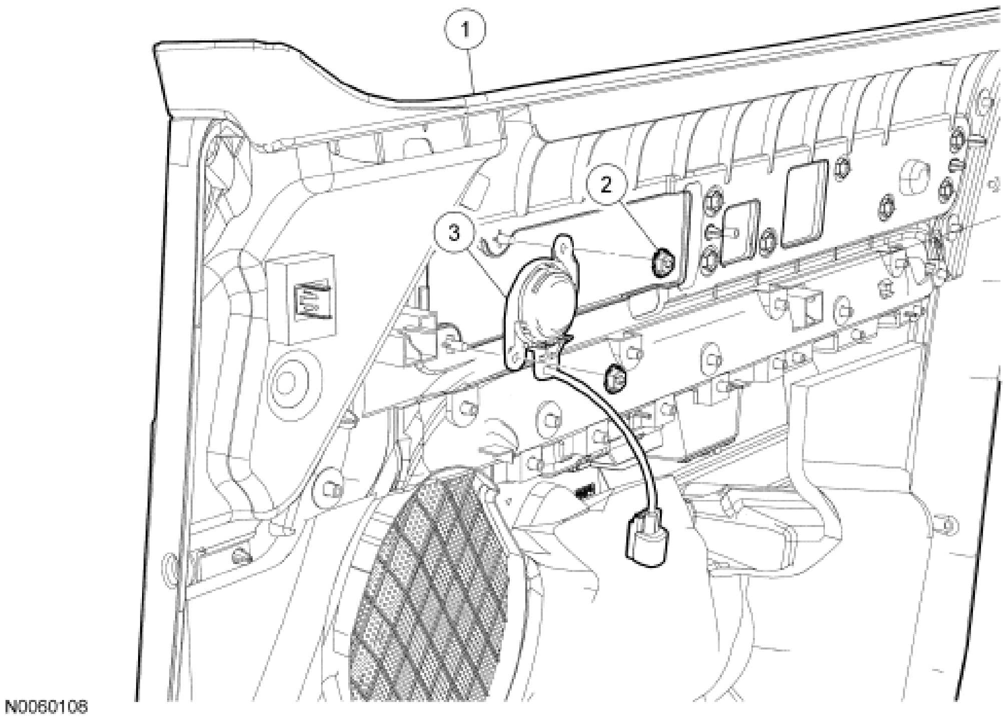

Fig. 44: Front Door Tweeter
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Door trim panel
2	W706675-S	Front door tweeter speaker nuts (2 required)
3	19B170	Front door tweeter speaker

REMOVAL AND INSTALLATION

All speakers

1. Remove the door trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.

   Front door tweeter speaker

2. Remove the 2 screws and the front door tweeter speaker from the door trim panel.

   Front or rear door speaker

3. Remove the 4 screws and the door speaker.
   - Disconnect the electrical connector(s).

   All speakers

4. To install, reverse the removal procedure.

INSTRUMENT PANEL SPEAKER

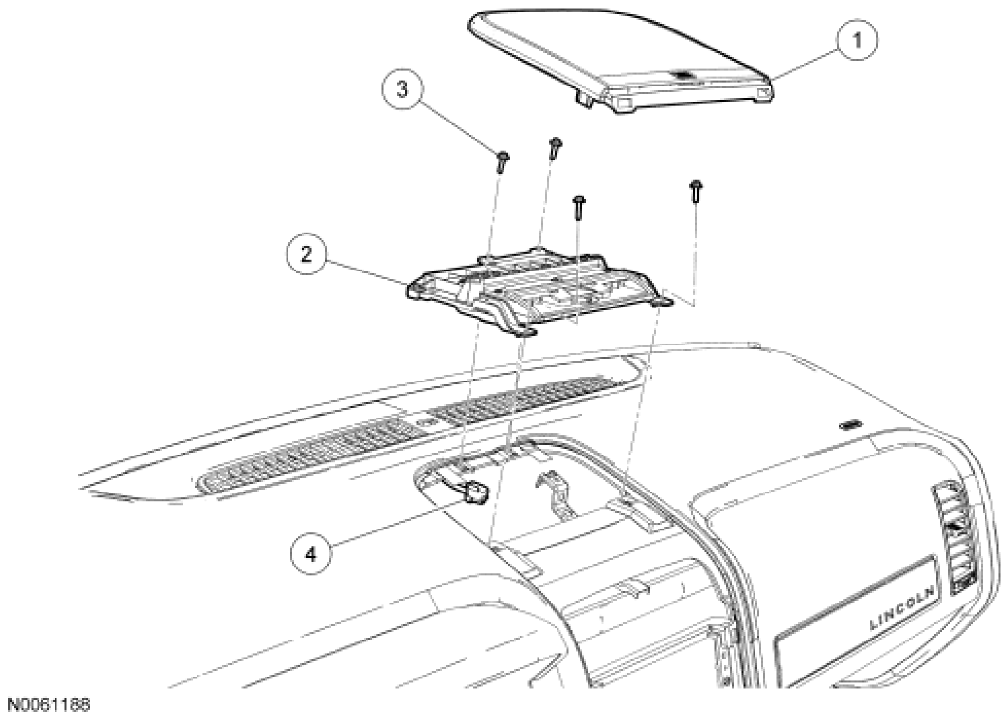

Fig. 45: Exploded View Of Instrument Panel Speaker
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	78044A92	Instrument panel speaker cover
2	18808	Instrument panel speaker
3	-	Instrument panel speaker electrical connector (part of 14401)
4	W707628-S	Instrument panel speaker screws (4 required)

REMOVAL AND INSTALLATION

1. Remove the center instrument panel finish panel. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
2. Remove the instrument panel speaker cover.

3. Remove the 4 screws and the instrument panel speaker.
   - Disconnect the electrical connector.
4. To install, reverse the removal procedure.

SUBWOOFER SPEAKER

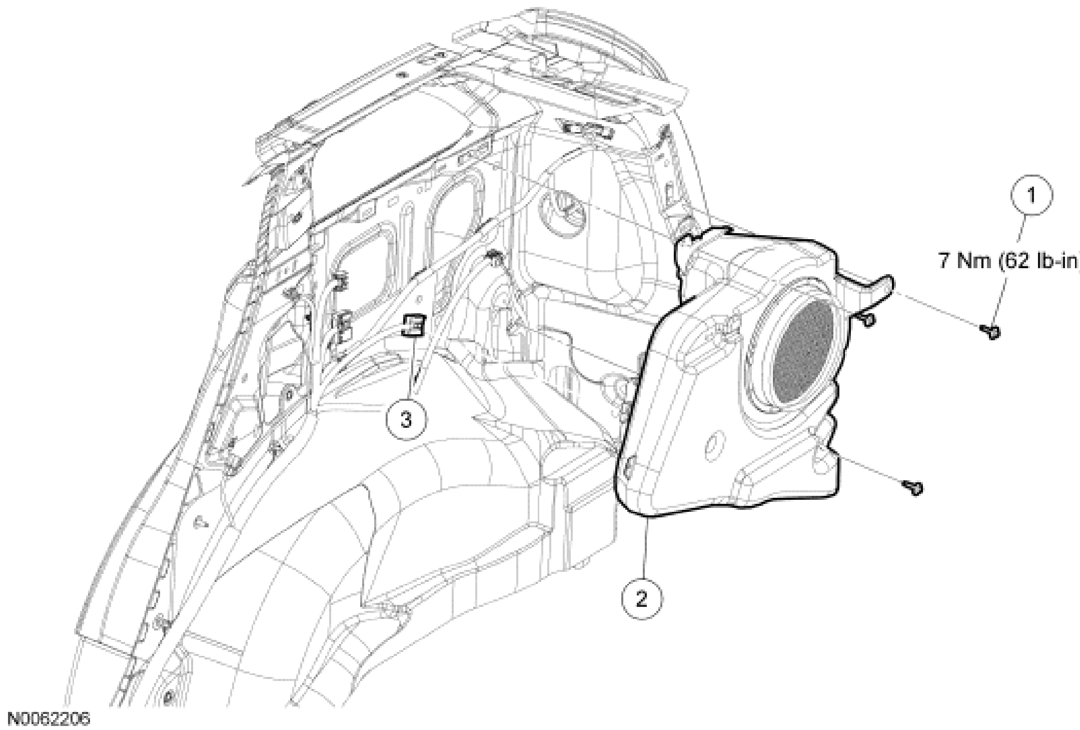

Fig. 46: Exploded View Of Subwoofer Speaker With Torque Specification - Edge
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W505425-S	Subwoofer speaker bolts (3 required)
2	18C804	Subwoofer speaker
3	-	Subwoofer speaker electrical connector (part of 14A005)

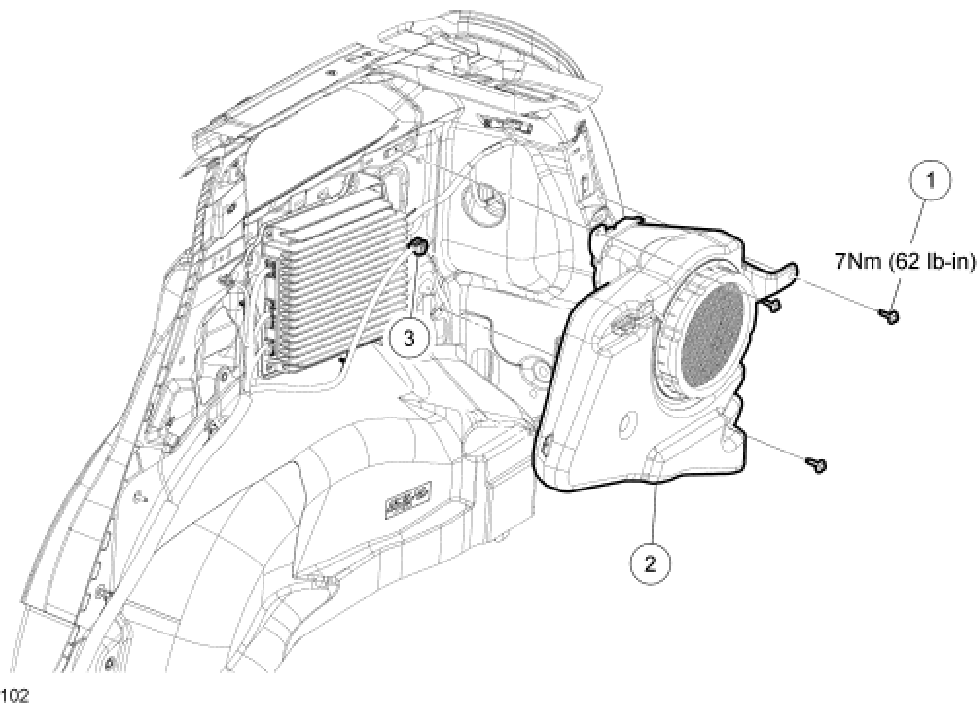

Fig. 47: Exploded View Of Subwoofer Speaker With Torque Specification - MKX
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W505425-S	Subwoofer speaker bolts (3 required)
2	18808	Subwoofer speaker
3	-	Subwoofer speaker electrical connector (part of 14A005)

REMOVAL AND INSTALLATION

1. Remove the quarter panel trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.
2. Remove the 3 bolts and the subwoofer speaker.
   - Disconnect the electrical connector.
   - To install, tighten the bolts to 7 Nm (62 lb-in).
3. To install, reverse the removal procedure.

REAR ENTERTAINMENT MODULE (RETM)

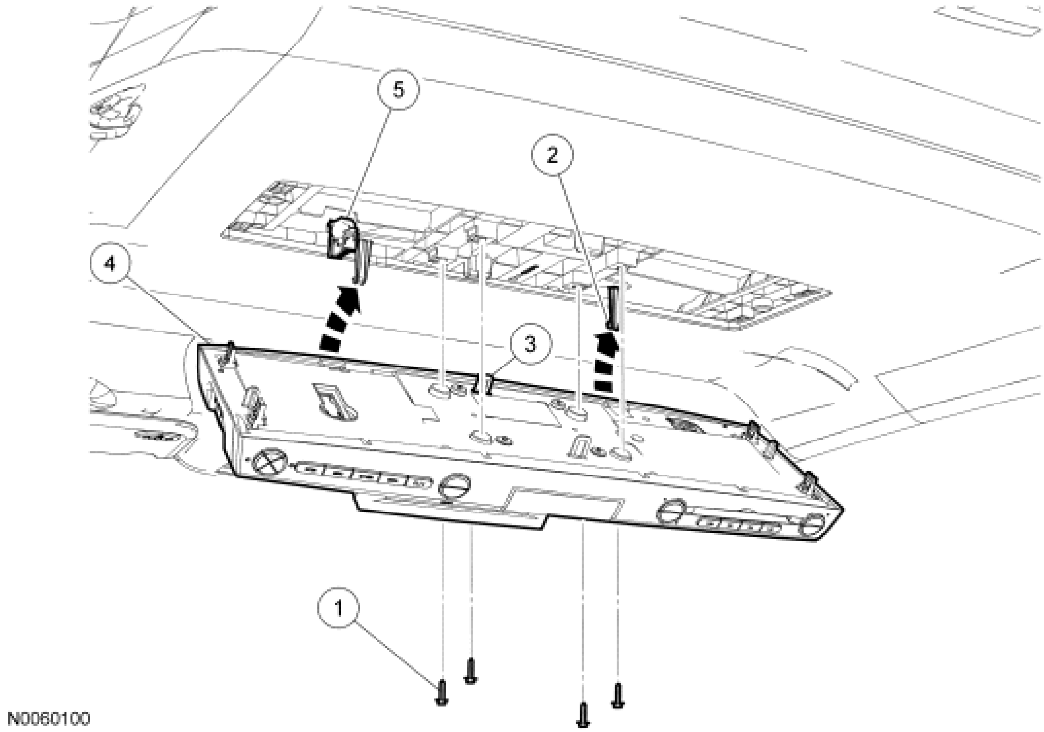

Fig. 48: Exploded View Of Digital Versatile Disc (DVD) Player
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W704875-S	Rear entertainment module (RETM) screws (4 required)
2	-	J-hook (part of 10E957)
3	-	U-hook (part of 10E947)
4	10E947	RETM
5	-	RETM electrical connector (part of 15A657)

REMOVAL

NOTE: Programmable module installation (PMI) only needs to be carried out if the rear entertainment module (RETM) is being replaced.

1. Upload the RETM configuration to the scan tool. For additional information, refer to **MODULE CONFIGURATION** article.

NOTE: Open the display to access the screws.

2. Remove the 4 screws.
3. Remove the RETM.

- Pull down on the sides of the RETM to disengage the clips from the bracket.
- Using a suitable tool, push the rear most U-hook forward and release the U-hooks.
- Hang the RETM on the J-hooks and disconnect the electrical connector.
- Remove the RETM from the J-hooks.

INSTALLATION

1. Hang the RETM on the J-hooks.
2. Connect the electrical connector.
3. Remove the RETM from the J-hooks.

NOTE: Tilt the RETM, as necessary, to align it correctly.

4. Align the left side guide pin with the left side locating hole.
5. Lift up the right side of the RETM and engage the U-hooks.
6. Install the 4 screws.
7. Push on the left and right sides of the RETM to engage the clips.
8. Download the RETM configuration from the scan tool. For additional information, refer to **MODULE CONFIGURATION** article.

GLOBAL POSITIONING SYSTEM (GPS) ANTENNA

NOTE: The view is shown from the back side of the instrument panel; however, the instrument panel does not have to be removed to carry out this procedure.

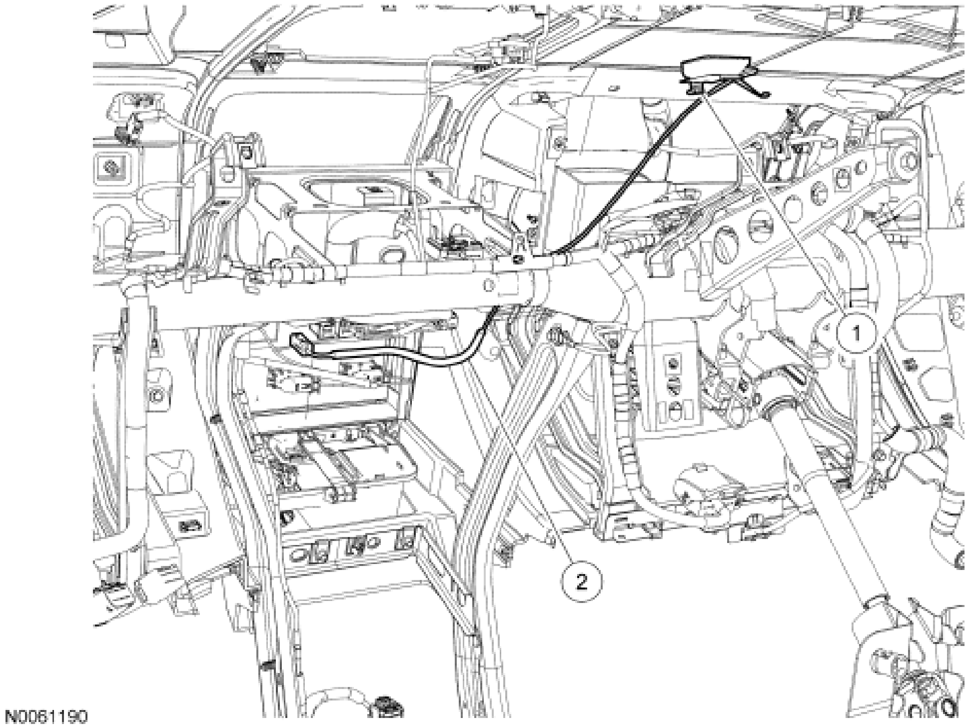

Fig. 49: Exploded View Of Global Positioning System (GPS) Antenna
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Global positioning system (GPS) antenna clip (part of 10E893)
2	10E893	GPS antenna

REMOVAL AND INSTALLATION

MKX

1. Remove the instrument cluster (IC). For additional information, refer to **INSTRUMENT CLUSTER (IC), MESSAGE CENTER, AND WARNING CHIMES** article.

   All vehicles

2. Remove the audio control module (ACM). For additional information, refer to **Audio Control Module (ACM)**.

   NOTE: **For vehicles without THX® audio, the vehicle will have an upper storage bin, rather than an instrument panel speaker.**

3. Remove the instrument panel speaker. For additional information, refer to **Instrument Panel Speaker**.
4. Release the clip and remove the global positioning system (GPS) antenna.

5. To install, reverse the removal procedure.

ACCESSORY PROTOCOL INTERFACE MODULE (APIM)

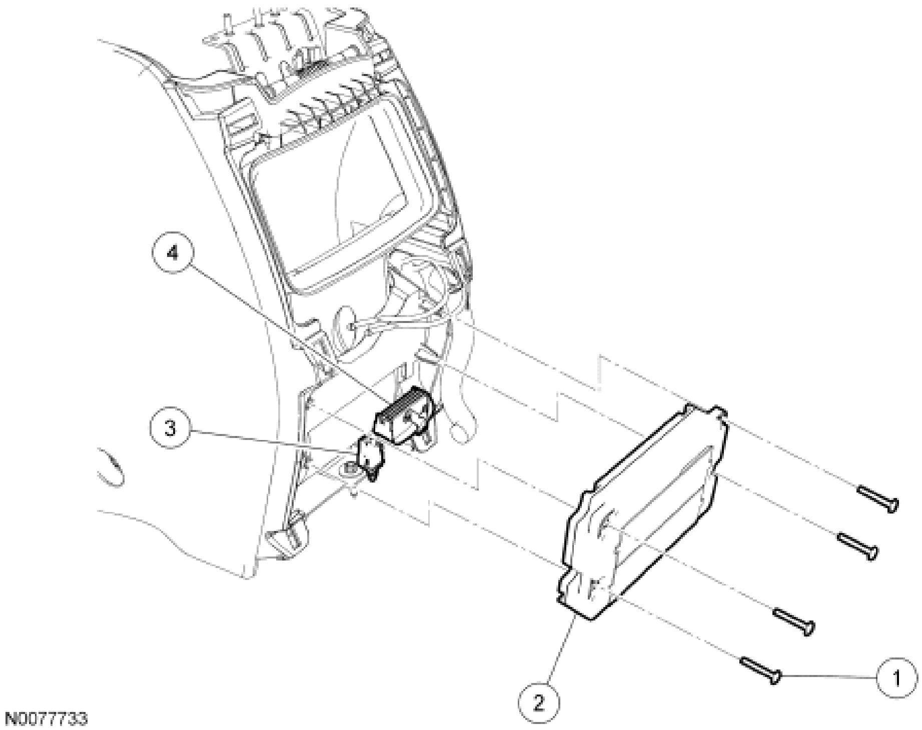

Fig. 50: Identifying Accessory Protocol Interface Module (APIM)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Accessory protocol interface module (APIM) screws (4 required) (part of 78045A06)
2	14D212	APIM
3	14D202	Universal serial bus (USB) cable
4	-	APIM electrical connector (part of 14B079)

REMOVAL AND INSTALLATION

NOTE: Accessory protocol interface module (APIM) reprogramming is only necessary if a new module is being installed.

1. Verify the current APIM software and hardware level. For additional information, refer to Accessory Protocol Interface Module (APIM) Reprogramming in **MODULE CONFIGURATION** article.
2. Remove the floor console rear trim panel by pulling straight back to disengage the clips.

3. Disconnect the universal serial bus (USB) cable and the electrical connector.
4. Remove the 4 screws and the APIM.
5. To install, reverse the removal procedure.
    - Reprogram the APIM. For additional information, refer to **MODULE CONFIGURATION** article.

UNIVERSAL SERIAL BUS (USB) CABLE AND PORT

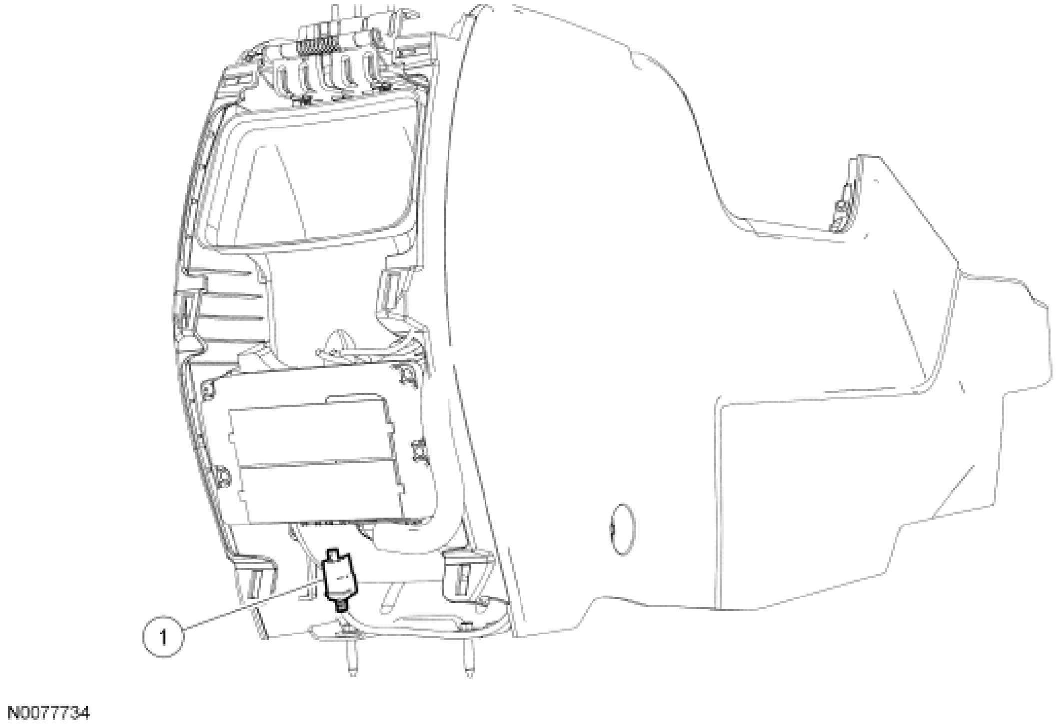

Fig. 51: Universal Serial Bus (USB) Cable-To-Accessory Protocol Interface Module (APIM)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Universal Serial Bus (USB) cable-to-Accessory Protocol Interface Module (APIM) connector (part of 14D202)

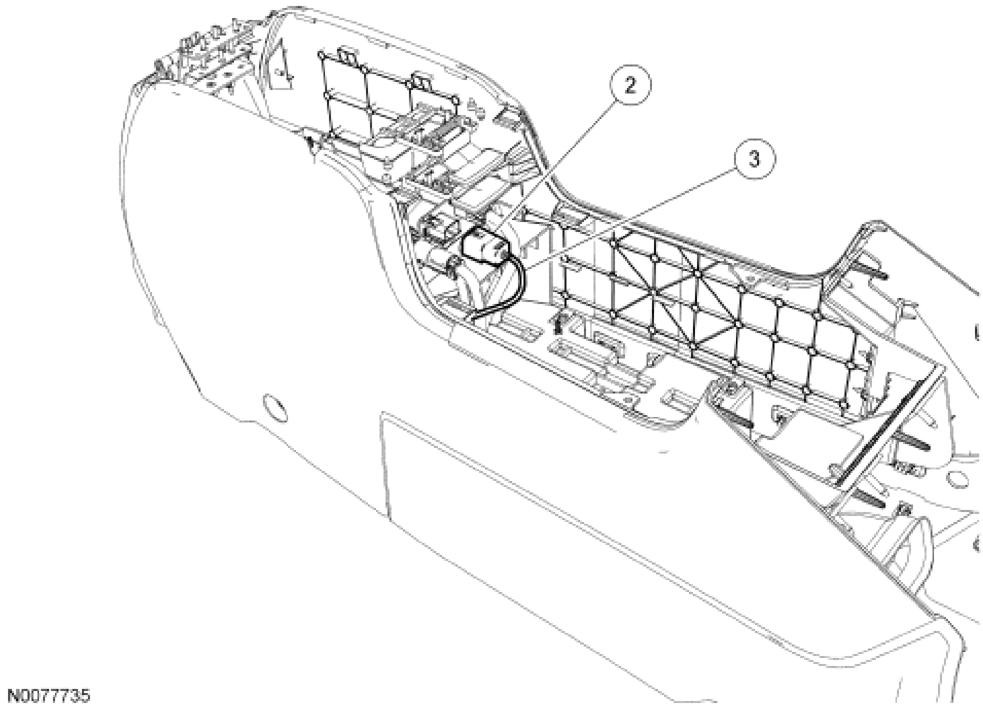

Fig. 52: Universal Serial Bus (USB)-To-Accessory Protocol Interface Module (APIM)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
2	-	USB cable-to-bezel connector
3	14D202	USB cable and port

REMOVAL AND INSTALLATION

1. Remove the floor console. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
2. Remove the floor console rear trim panel by pulling straight rearward to disengage the clips.
3. Disconnect the Universal Serial Bus (USB) cable-to-Accessory Protocol Interface Module (APIM) connector.
4. Disconnect the USB cable-to-bezel connector.
   - Disengage the push-pin near the connection.
5. Disconnect the USB cable-to-bezel connector.
6. Remove the 3 screws holding the front of the RH panel to the floor console.

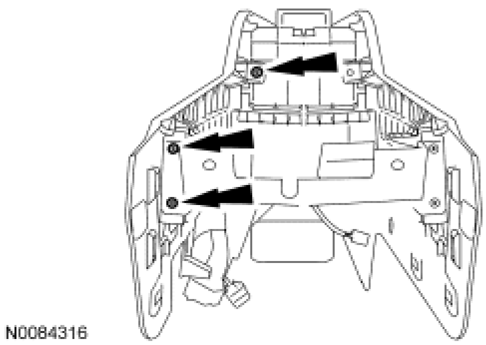

Fig. 53: Identifying Screws
Courtesy of FORD MOTOR CO.

7. Remove the 2 screws and the APIM and bracket as an assembly.
   - Disconnect the electrical connector.

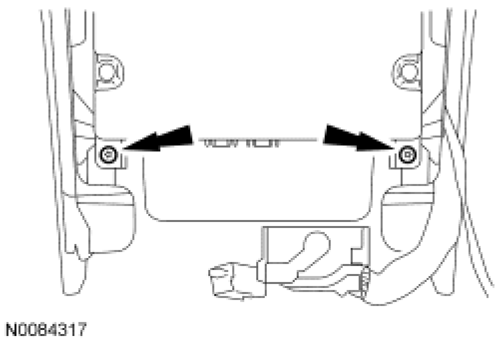

Fig. 54: Identifying Screws
Courtesy of FORD MOTOR CO.

8. Remove the screw holding the upper rear of the RH panel to the floor console.

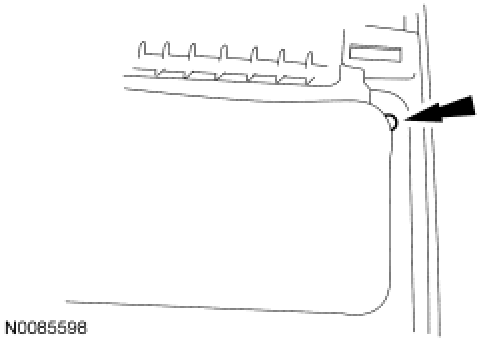

Fig. 55: Identifying Screws
Courtesy of FORD MOTOR CO.

9. Remove the screw holding the lower rear of the RH panel to the floor console.

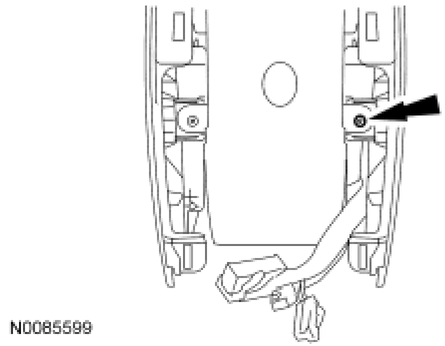

Fig. 56: Identifying Screws
Courtesy of FORD MOTOR CO.

10. Remove the RH panel from the floor console by sliding it upward to disengage the clips.
11. Disengage the push-pins and remove the USB cable and port.

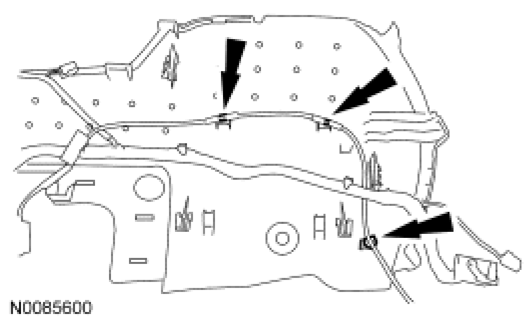

Fig. 57: Identifying push-pins
Courtesy of FORD MOTOR CO.

12. To install, reverse the removal procedure.

2008 ENGINE PERFORMANCE

Evaporative Emissions - Edge & MKX

SPECIFICATIONS

TORQUE SPECIFICATIONS

Description	Nm	lb-ft	lb-in
Evaporative emission (EVAP) canister bolts	9	-	80
EVAP shield bolts	9	-	80
Fuel tank bolts	25	18	-
Fuel tank bracket bolts	25	18	-

DESCRIPTION AND OPERATION

EVAPORATIVE EMISSIONS

NOTE: The vehicle emission vacuum routing diagrams are contained in the Description and Operation subsection of the Engine Emissions Control part. Refer to ENGINE EMISSION CONTROL article.

The evaporative emission (EVAP) system consists of the:

- EVAP canister purge valve.
- EVAP canister.
- EVAP canister vent solenoid (includes the dust separator).
- fuel vapor tube assembly (includes the fuel tank pressure [FTP] sensor).
- fuel tank filler cap.

The EVAP system:

- prevents hydrocarbon emissions from reaching the atmosphere.
- stores fuel vapors in the EVAP canisters, that are generated during vehicle operation or hot soak, until they can be consumed by the engine during normal engine operation.
- routes the stored fuel vapors to the engine during engine operation.
- is controlled by the PCM which, using various sensor inputs, calculates the desired amount of purge flow. The PCM regulates the purge flow, induced by the application of intake manifold vacuum, by varying the duty cycle applied to the vapor tube.

The fuel vapors are routed:

- from the fuel tank through the vapor vent valve (internal to the tank).
- to the EVAP canisters through a vapor tube.

- from the EVAP canister to the engine when the EVAP canister purge valve is opened by the PCM.

The FTP sensor (part of fuel vapor tube assembly):

- monitors the pressure levels in the fuel tank.
- communicates the pressure reading to the PCM during the OBD II leak test.

The fuel vapor tube assembly:

- is located midway under the vehicle along the LH frame rail.
- is used to route the flow of fuel vapors entering the EVAP system.

The EVAP canister:

- is located on the underside of the vehicle directly below the driver seat.
- contains activated carbon.
- stores fuel vapors.

The fuel tank filler cap:

- is sealed against the fuel tank filler pipe and does not relieve system pressure.

The EVAP canister vent solenoid:

- is normally open.
- seals the EVAP system for the inspection and maintenance (I/M 240) test and OBD II leak and pressure tests.
- is mounted to the EVAP canister bracket.

The EVAP canister purge valve:

- is normally closed.
- regulates the purging of the EVAP canister.
- is controlled by the PCM.
- is repaired as a separate item.
- is mounted to the cowl on a bracket.

The EVAP dust separator:

- is attached to the EVAP canister vent solenoid mounted on the EVAP canister bracket.
- prevents suspended dust and dirt particles from entering the EVAP system.
- is repaired as an assembly with the EVAP canister vent solenoid.

The EVAP system monitor:

- is a self-test strategy within the PCM which tests the integrity of the EVAP system.
- monitors the EVAP system for leaks.
- monitors electronic EVAP components for irrationally high or low voltages.
- monitors for correct EVAP system operation.
- uses negative and positive leak test methods to test and activate the EVAP system.

The engine ON EVAP leak-check monitor:

- is executed by the individual components of the enhanced EVAP system. Intake manifold vacuum is utilized to reach a target vacuum on the EVAP system. The FTP sensor is used by the engine ON EVAP leak-check monitor to determine if the target vacuum necessary to carry out the leak-check on the EVAP system has been reached. Once target vacuum on the EVAP system is achieved, the change in EVAP system vacuum over a calibrated period of time determines if a leak exists.

The Engine Off Natural Vacuum (EONV) EVAP leak-check monitor is executed:

- once the engine ON EVAP leak-check monitor is completed and the key is turned OFF. The EONV EVAP leak-check monitor determines if a leak is present when the naturally occurring change in the fuel tank pressure or vacuum does not exceed a calibrated limit during a calibrated amount of time. A separate, low-power consuming microprocessor in the PCM manages the EONV leak-check. The engine OFF EVAP leak-check monitor is executed by the individual components of the enhanced EVAP system.

DIAGNOSTIC TESTS

EVAPORATIVE EMISSIONS

Refer to the **Introduction - Gasoline Engines** article.

GENERAL PROCEDURES

EVAPORATIVE EMISSION SYSTEM LEAK TEST

Special Tools

Illustration	Tool Name	Tool Number
 ST2617-A	VACUTEC Smoke Machine Fuel Evaporative Emission System Tester	218-0002 or equivalent
	Vehicle Communication Module (VCM) and Integrated Diagnostic	software with appropriate

 ST1137-A	System (IDS)	hardware, or equivalent scan tool

Phase 1 - Leak Verification

1. Run the EVAP Test with the scan tool.

NOTE: Some small leaks may not be detected using the EVAP Test. If the system has passed the test but a leak is still suspected, then proceed to Phase 2.

2. If the Evaporative Emission (EVAP) system failed the EVAP Test, then proceed to Phase 2.

Phase 2 - System Leak Check

1. Disconnect the upper vapor tube-to-EVAP canister purge valve quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
2. Connect the VACUTEC Smoke Machine Fuel Evaporative Emission System Tester to the upper EVAP canister purge valve fitting. For additional information, refer to the manufacturer's instructions.

NOTE: The battery ground cable was previously disconnected in the vapor tube quick connect coupling procedure.

3. Connect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.

NOTE: In the scan tool, the EVAP canister purge valve is referred to as the EVAP vapor management valve.

4. Open the EVAP canister purge valve with the scan tool.
5. Close the canister vent solenoid with the scan tool.
6. Carefully turn the fuel tank filler cap counterclockwise until the thread disengages and position aside.

NOTE: If smoke does not exit the fuel tank filler pipe neck area after the system is pressurized, open the canister vent solenoid with the scan tool to allow the air to purge. Once smoke is seen at the canister vent solenoid, close the canister vent solenoid with the scan tool.

7. Introduce smoke from the VACUTEC Smoke Machine Fuel Evaporative Emission System Tester into the EVAP system and verify that smoke is exiting the fuel tank filler pipe neck area. For additional information, refer to the manufacturer's instructions.
8. Install the fuel tank filler cap once smoke is observed exiting the fuel tank filler pipe neck area.

9. Continue to enter smoke into the system for 60 seconds to obtain pressure.
10. Press and release the remote start button in intervals of 15 seconds ON and 15 seconds OFF while checking for exiting smoke.
11. Use the halogen light provided with the VACUTEC Smoke Machine Fuel Evaporative Emission System Tester to follow the EVAP system path and look for smoke exiting at the source of the leak(s).
12. Repair any leaks as necessary.
13. Repeat the leak test until the system passes.

REMOVAL AND INSTALLATION

EVAPORATIVE EMISSION CANISTER PURGE VALVE

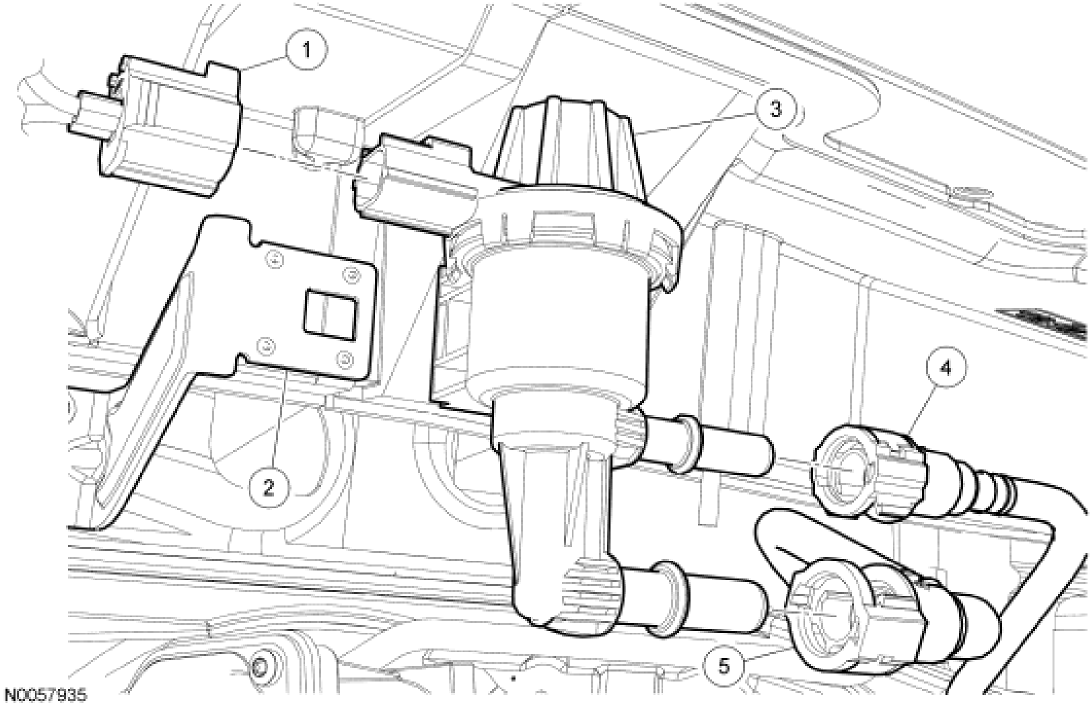

Fig. 1: Exploded View Of Evaporative Emission Canister Purge Valve
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	14A464	Evaporative emission (EVAP) canister purge valve electrical connector
2	9F931	EVAP canister purge valve bracket
3	9G641	EVAP canister purge valve
4	-	EVAP canister purge valve vapor tube quick connect coupling (part of 9G271)
5	-	EVAP canister purge valve vapor tube quick connect coupling (part of 9D661)

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

1. Disconnect the evaporative emission (EVAP) canister purge valve electrical connector.
2. Disconnect the 2 EVAP canister purge valve vapor tube quick connect couplings. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
3. Depress the tab and remove the EVAP canister purge valve from the bracket.

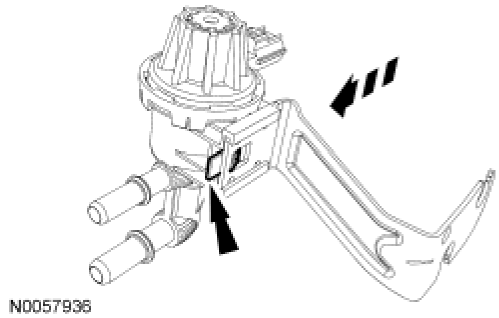

Fig. 2: Depressing Tab & Removing EVAP Canister Purge Valve From Bracket
Courtesy of FORD MOTOR CO.

4. To install, reverse the removal procedure.
   - Carry out the Evaporative Emission System Leak Test. For additional information, refer to **Evaporative Emission System Leak Test**.

EVAPORATIVE EMISSION CANISTER

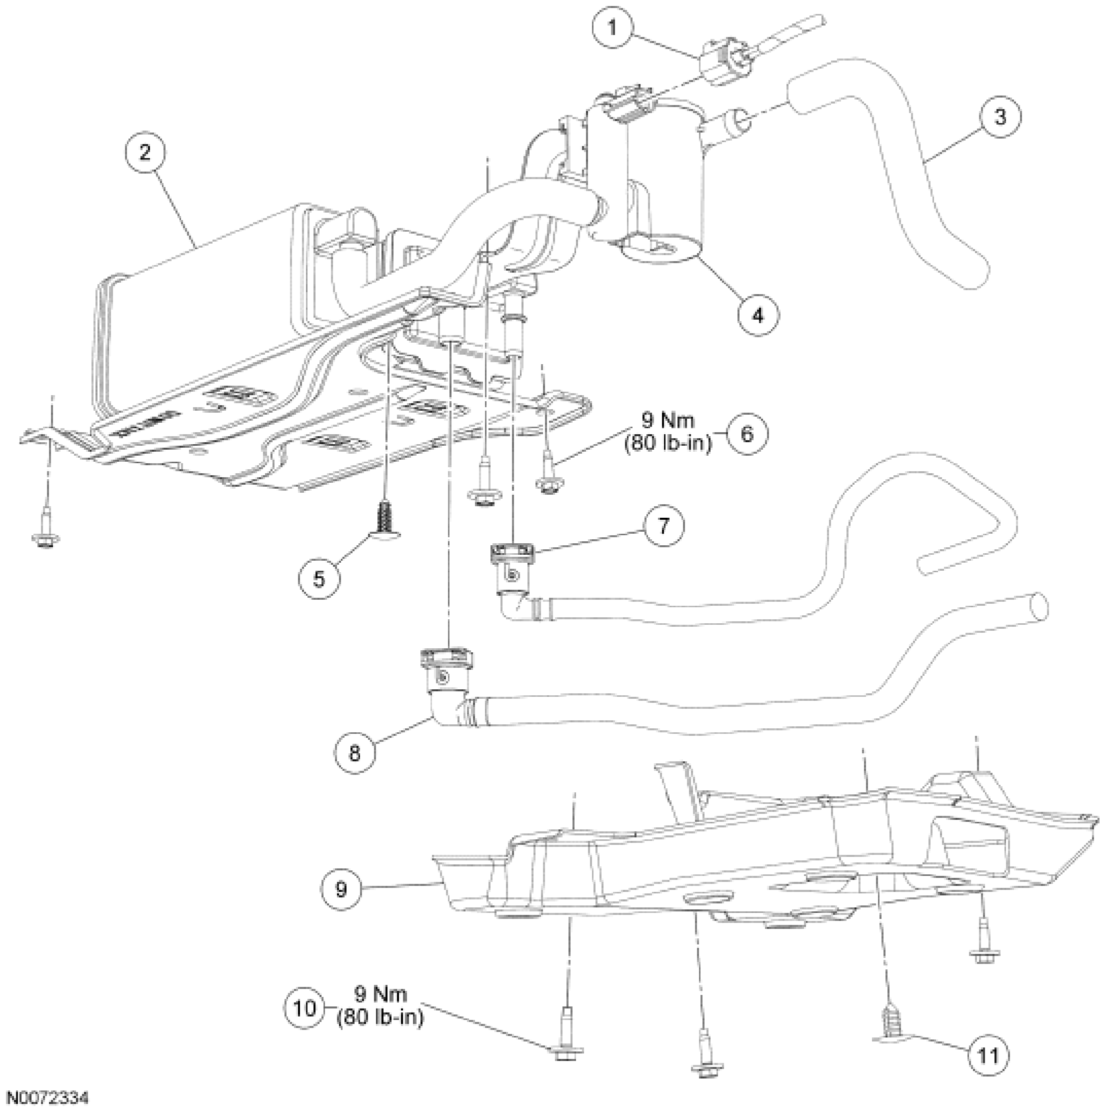

Fig. 3: Exploded View Of Evaporative Emission Canister With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	14A464	Evaporative emission (EVAP) canister vent solenoid electrical connector
2	9E857	EVAP canister
3	-	Fuel vapor tube (part of 9E857)
4	9G676	EVAP canister vent solenoid/dust separator
5	W705681	EVAP canister pin-type retainer
6	W710330	EVAP canister bolt (3 required)
7	-	Fuel vapor tube-to-EVAP canister quick connect coupling (part of 9S284)
8	-	Fuel vapor tube assembly-to-EVAP canister quick connect coupling

		(part of 9S284)
9	9H296	EVAP shield
10	W710330	EVAP shield bolt (3 required)
11	W705681	EVAP shield pin-type retainer

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

NOTE: Correct placement of the hoist arm to the frame lifting point is essential for the removal and installation of the evaporative emission (EVAP) canister.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Remove the 3 bolts, pin-type retainer and the EVAP shield.
   - To install, tighten to 9 Nm (80 lb-in).
4. Disconnect the EVAP canister vent solenoid electrical connector.
5. Disconnect the fuel vapor tube-to-EVAP canister quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
6. Disconnect the fuel vapor tube assembly-to-EVAP canister quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
7. Disconnect the fuel vapor tube to the dust separator.
8. Remove the 3 EVAP canister bolts.
   - To install, tighten to 9 Nm (80 lb-in).
9. Release the pin-type retainer and remove the EVAP canister.

NOTE: When installing the EVAP canister, insert the alignment tab into the body first, then install the pin-type retainer and 3 bolts.

10. To install, reverse the removal procedure.
    - Carry out the Evaporative Emission System Leak Test. For additional information, refer to

Evaporative Emission System Leak Test.

EVAPORATIVE EMISSION CANISTER VENT SOLENOID

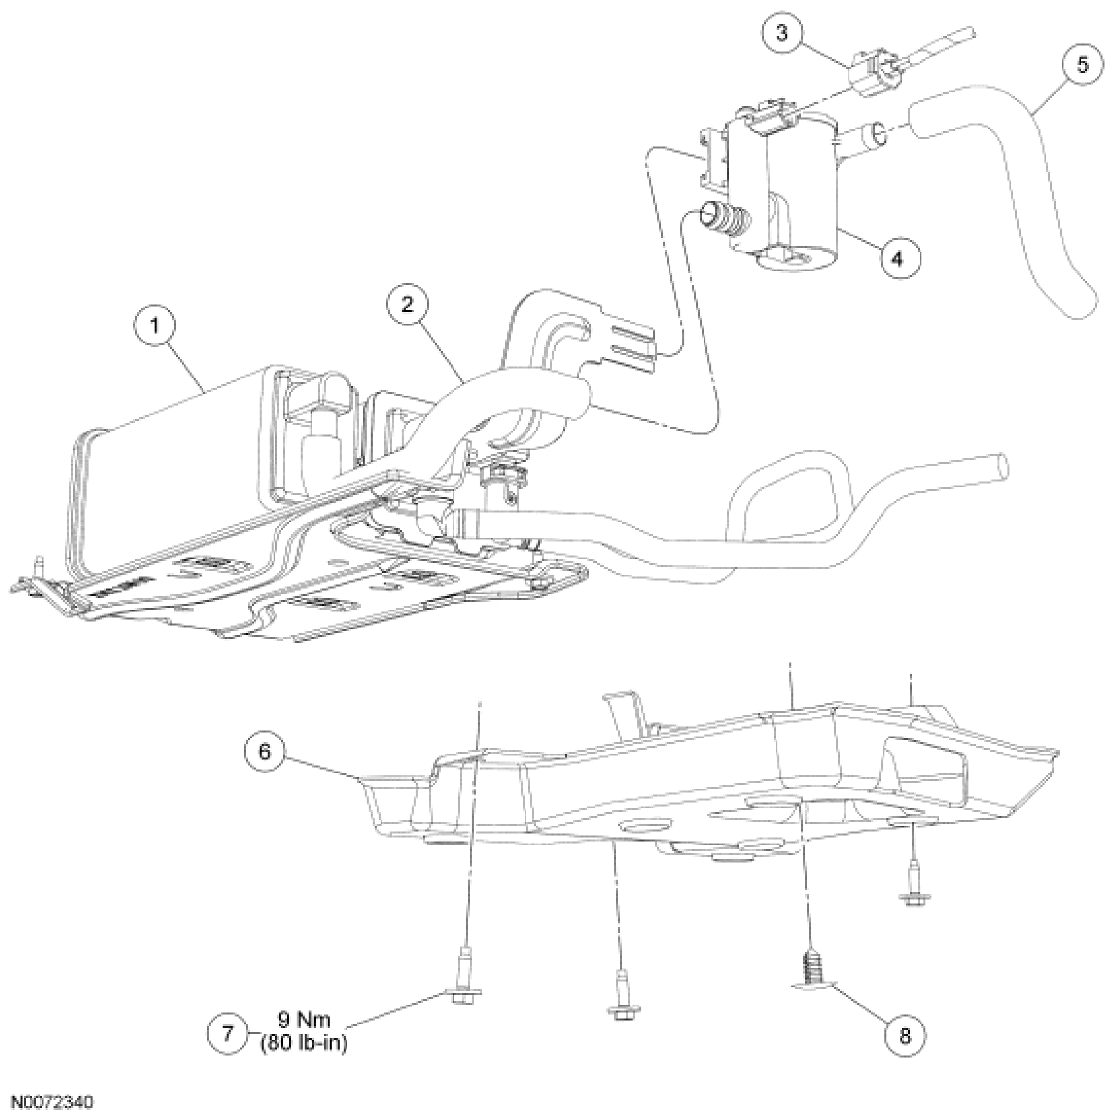

Fig. 4: Exploded View Of Evaporative Emission Canister Vent Solenoid With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	9E857	Evaporative emission (EVAP) canister
2	-	Fuel vapor tube (part of 9E857)
3	14A464	EVAP canister vent solenoid electrical connector
4	9G676	EVAP canister vent solenoid/dust separator

5	-	Fuel vapor tube (part of 9E857)
6	9H296	EVAP shield
7	W710330	EVAP shield bolt (3 required)
8	W705681	EVAP shield pin-type retainer

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Always disconnect the battery ground cable at the battery when working on an evaporative emission (EVAP) system or fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

NOTE: The evaporative emission (EVAP) canister vent solenoid and the dust separator are serviced as an assembly.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Remove the 3 bolts, pin-type retainer and the EVAP shield.
   - To install, tighten to 9 Nm (80 lb-in).
4. Disconnect the EVAP canister vent solenoid electrical connector.
5. Disconnect the 2 fuel vapor tubes from the EVAP canister vent solenoid/dust separator.
6. Depress the tab and remove the EVAP canister vent solenoid/dust separator from the EVAP canister bracket.
7. To install, reverse the removal procedure.
   - Carry out the Evaporative Emission System Leak Test. For additional information, refer to **Evaporative Emission System Leak Test**.

FUEL VAPOR TUBE ASSEMBLY

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable**

mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Disconnect the fuel tank pressure (FTP) sensor electrical connector.
3. Remove the 3 bolts, pin-type retainer and the evaporative emission (EVAP) shield.
   - To install, tighten to 9 Nm (80 lb-in).
4. Disconnect the fuel vapor tube assembly-to-EVAP canister quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
5. Disconnect the fuel vapor tube assembly-to-fuel tank quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
6. Position a suitable lifting device under the fuel tank.
7. Remove the 2 fuel tank bracket bolts and the 4 fuel tank bolts and partially lower the fuel tank.
   - To install, tighten to 25 Nm (18 lb-ft).
8. Release the 4 fuel tube bundle retainer clips and remove the fuel vapor tube assembly.
9. To install, reverse the removal procedure.
   - Carry out the Evaporative Emission System Leak Test. For additional information, refer to **Evaporative Emission System Leak Test**.

Universal joint (U-joint) flange bolts	70	52

DESCRIPTION AND OPERATION

EXHAUST SYSTEM

The exhaust system consists of:

- an exhaust flexible pipe.
- two muffler assemblies.
- one resonator assembly.
- muffler brackets with isolators bolted to the body.
- an exhaust Y-pipe.
- a catalyst monitor sensor mounted to each catalytic converter.
- a LH and RH catalytic converter.

The exhaust system provides an exit for exhaust gases and reduces engine noise by passing exhaust gases through the catalytic converters, a muffler assembly and resonator. Rubber exhaust hanger isolators attach the exhaust system to the mounting hooks.

Catalytic Converter

The catalytic converter plays a major role in the emission control system. The catalytic converter operates as a gas reactor. Its catalytic function is to speed the heat-producing chemical reaction of components in the exhaust gases in order to reduce air pollutants.

The catalyst material inside the catalytic converter consists of a ceramic substrate.

Precautions

CAUTION: Do not use leaded fuel in a vehicle equipped with a catalytic converter. In a vehicle that is continually misfueled, the lead in the fuel will be deposited in the catalytic converter and completely blanket the catalyst. Lead reacts with platinum to "poison" the catalyst. Continuous use of leaded fuel can destroy the catalyst and render the catalytic converter useless.

CAUTION: The addition of lead to the catalytic converter can also solidify the catalyst, causing excessive back pressure in the exhaust system and possibly causing engine damage.

CAUTION: Extremely high temperatures of 1,100°C (2,012°F) or above due to misfiring or an over-rich fuel/air mixture will cause the ceramic substrate to sinter or burn, destroying the catalytic converter. Do not continue to operate the vehicle if the engine is misfiring, there is a power loss, or other unusual operating conditions, such as engine overheating and backfiring.

The catalytic converter is designed to provide a long life. No maintenance is necessary for the catalytic converter.

Sound Insulators and Shields

Sound insulators and shields, attached to the underbody, protect the vehicle from exhaust system heat and should be inspected at regular intervals to make sure they are not dented or out of position. If a sound insulator and shield is damaged or shows evidence of deterioration, it should be replaced. The sound insulators and shields for the muffler, muffler pipe, resonator and catalytic converter pipe are installed separately.

DIAGNOSTIC TESTS

EXHAUST SYSTEM

Special Tools

Illustration	Tool Name	Tool Number
 ST2311-A	Electronic Vibration Analyzer or equivalent	100-F027 (014-00344)

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect the components of the exhaust system and related controls that may affect exhaust gas quality or loss of power.
3. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

VISUAL INSPECTION CHART

Mechanical
• Exhaust pipe pinched or crushed • Damaged muffler • Broken or damaged exhaust hanger brackets • Damaged catalytic converter • Cracked exhaust manifold • Loose or damaged heat shields

4. Verify that the exhaust system is installed correctly, with clamps correctly located and tightened to specification.
5. If the fault is not visually evident, determine the symptom. Go to **Symptom Chart - Exhaust System** or Go to **Symptom Chart - Noise, Vibration and Harshness (NVH)**.

Symptom Chart - Exhaust System

Symptom Chart - Exhaust System

Condition	Possible Sources	Action
• Vehicle has low or no power - vehicle performance complaint	• Exhaust pipe pinched or crushed • Damaged catalytic converter • Loose obstruction in exhaust	• INSPECT the exhaust components for damage. REPAIR or INSTALL new components as necessary. TEST the system for normal operation. If the concern is still present, REFER to the **Introduction - Gasoline Engines** article.
	• Restricted exhaust (possible frozen condensate in muffler)	• CHECK drain holes for debris. PARK the vehicle inside to thaw. TEST the vehicle for normal operation. If the concern is still present, REFER to the **Introduction - Gasoline Engines** article.

• Burning smell - usually occurs at idle, with possible traces of smoke	• Foreign material caught in exhaust system • Missing heat shields	• INSPECT the exhaust system for debris or missing heat shields. REPAIR or INSTALL new components as necessary. TEST the system for normal operation after the repair.
• Odor - described as a sulfur or rotten egg smell	• Catalytic converter • Excessive sulfur content in fuel	• At times, a slight sulfur smell is normal for catalytic converters. The cause is the sulfur content in the gasoline being used. ADVISE the customer no repair is required.
	• Rich fuel conditions • Misfire conditions	• REFER to the **Introduction - Gasoline Engines** article.
• Visible rust on surface of exhaust pipes	• Catalytic converter/exhaust system	• Surface rust is a characteristic of materials used on exhaust systems. Exposure to heat or road salt may result in surface rust. INSPECT for perforations. If there are no perforations, the condition is normal.

Symptom Chart - Noise, Vibration and Harshness (NVH)

NOTE: Noise, vibration and harshness (NVH) symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to NOISE, VIBRATION AND HARSHNESS article. Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to NOISE, VIBRATION AND HARSHNESS article for the next likely system and continue diagnosis.

Symptom Chart - Noise, Vibration and Harshness (NVH)

Condition	Possible Sources	Action
		• INSPECT the exhaust system for loose or missing heat shields or foreign material trapped between the heat

• Rattle, squeaks or buzz type noise - from the bottom of the vehicle	• Loose or damaged heat shield	shields and the exhaust system components. If any heat shields are loose, INSTALL worm gear clamp 7L5Z-5A231-AA and tighten to 7 Nm (62 lb-in). If the heat shields are missing, INSTALL new heat shields or exhaust system components as necessary. If a rattle, noise or buzz condition persists, INSTALL a new heat shield or component as necessary. TEST the system for normal operation after the repair.
	• Loose or damaged exhaust isolators	• VERIFY that the exhaust isolators are correctly installed. INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary. TEST the system for normal operation after the repair.
	• Damaged exhaust isolator hanger bracket	• INSPECT the exhaust system components for damage or broken hangers. INSTALL new components as necessary. CHECK for loose or damaged exhaust hanger brackets or fasteners. TIGHTEN the bolts to specification or INSTALL new components as necessary. TEST the system for normal operation after the repair.
	• Loose or damaged catalytic converter or muffler	• MOVE the exhaust system to simulate the bouncing action of the vehicle, checking for exhaust-to-body contact while moving the exhaust system. Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler, then the catalytic converter. DETERMINE if there are loose or broken baffles in the

	• Exhaust grounded to chassis	muffler or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary. TEST the system for normal operation after the repair. • INSPECT for signs of exhaust components-to-body contact. If necessary, CARRY OUT the **Exhaust System Alignment**.
• Drone or clunk type noise - from the bottom of the vehicle	• Loose or damaged exhaust isolators • Exhaust grounded to chassis	• INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary. TEST the system for normal operation after the repair. • INSPECT for signs of exhaust components-to-body contact. If necessary, CARRY OUT the **Exhaust System Alignment**.
• Whistles, boom, hum or ticking type noise - noise tends to change as the engine warms. The noises are often accompanied by exhaust fumes	• Exhaust system leak	• INSPECT the entire exhaust system for leaks. CHECK for punctures, loose or damaged clamps/fasteners, gaskets, sensors or broken welds. EXAMINE the chassis for grayish-white or black exhaust soot, which indicates exhaust leakage at that point. To magnify a small leak, have an assistant hold a rag over the tailpipe outlet while listening for a leak. REPAIR or INSTALL new components as necessary. TEST the system for normal operation after the repair.
		• MOVE the exhaust system to simulate the bouncing action of the vehicle, checking for exhaust-to-body contact while moving the exhaust system.

	• Catalytic converter	Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler and the catalytic converter. DETERMINE if there are loose or broken baffles in the muffler, or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary. TEST the system for normal operation after the repair.
	• Exhaust muffler/resonator drain hole enlarged due to corrosion	• CONFIRM the drain holes are the noise source. INSTALL new components as necessary. TEST the system for normal operation after the repair.
• Hissing or rushing noise - high frequency sound. Vehicle performance is unaffected	• Exhaust system. Exhaust flow through pipes	• CHECK the exhaust system for leaks. Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler and the catalytic converter. Determine if there are loose or broken baffles in the muffler, or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary. TEST the system for normal operation after the repair.
• Pinging noise - occurs when exhaust system is hot, engine turned off	• Catalytic converter/exhaust system	• Cool down pinging is a result of the exhaust system expanding and contracting during heating and cooling. This is a normal condition.
• Vibration - occurs at idle and at low speeds. Also accompanied by a clunk or buzz type noise	• Loose or damaged exhaust isolator	• INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary. TEST the system for normal operation after the repair.

	• Loose or damaged exhaust isolator hanger brackets	• INSPECT the exhaust isolator hanger brackets for wear or damage. INSTALL or REPAIR as necessary. TEST the system for normal operation after the repair.
	• Damper broken or out of position	• CHECK for the correct damper orientation . RELOCATE to the correct position and tighten the nuts to specification. INSPECT for missing or damaged damper. INSTALL new components as necessary. TEST the system for normal operation after the repair.
	• Exhaust system grounded to chassis	• CARRY OUT the **Exhaust System Alignment**.
• Engine drumming noise - normally accompanied by vibration	• Damaged or misaligned exhaust system	• INSPECT the exhaust system for loose or damaged fasteners, Torca® clamps, or isolators. CARRY OUT the **Exhaust System Alignment**.
• Sputter type noise - noise worse when cold, lessens or disappears when the vehicle is at operating temperature	• Damaged or worn exhaust system	• INSPECT the exhaust system for leaks or damage. REPAIR as necessary. TEST the system for normal operation after the repair.
• Thumping noise - from the bottom of the vehicle, worse at acceleration	• Misaligned exhaust system	• CHECK the exhaust system to chassis clearance. CHECK the exhaust system isolators for damage. REPAIR as necessary. TEST the system for normal operation after the repair.
• Engine vibration - is felt with increases and decreases in engine RPM	• Strain on exhaust system isolators	• CARRY OUT the **Exhaust System Alignment**. REPAIR as necessary. TEST the system for normal operation after the repair.
• Drumming noise - occurs inside the vehicle during idle or high idle, hot or cold.	• Exhaust system vibration excites the body resonances	• Go to **Pinpoint Test A** .

Very low-frequency drumming is very RPM dependent	inducing interior noise	

Pinpoint Test

PINPOINT TEST A: DRUMMING NOISE

A1 CHECK THE EXHAUST SYSTEM

- Key in START position.
- Increase the engine RPM until the noise is the loudest. Note the engine RPM.
- Key in OFF position.

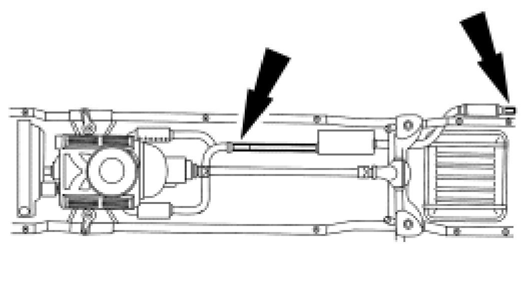

Fig. 1: Exhaust System
Courtesy of FORD MOTOR CO.

- Add approximately 9 kg (20 lb) of weight to the exhaust system. First place the weight at the tail pipe and test, then at the front pipe.
- Key in START position.
- Increase the engine RPM and listen for the drumming noise. Note the engine RPM if the noise occurs.
- Key in OFF position.
- Using a vibration analyzer (VA), determine the amount of vibration that occurs with the drumming noise.
- **Is the noise/vibration reduced or eliminated, or does the noise/vibration occur at a different RPM?**

  YES : REFER to **Exhaust System Alignment**. TEST the system for normal operation.

  NO : CONDUCT a diagnosis on other suspect systems. REFER to **NOISE, VIBRATION AND HARSHNESS** article.

GENERAL PROCEDURES

EXHAUST SYSTEM ALIGNMENT

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Loosen all fasteners joining the exhaust system components.
3. Beginning at the front of the vehicle, align the exhaust system to establish the maximum clearance. Make sure all fit pipes are pushed all the way into the preceding pipe and the notches are correctly lined up with the tabs.
4. Beginning at the front of the vehicle, tighten all fasteners and clamps to specification. For additional information, refer to **SPECIFICATIONS**.
5. Start the engine and check the exhaust system for leaks.

TORCA® CLAMP

1. Remove the nut from the Torca® clamp.
2. Grind the spot weld from the Torca® clamp and remove the clamp.
3. Clean the uneven surface area and position a Torca® clamp.

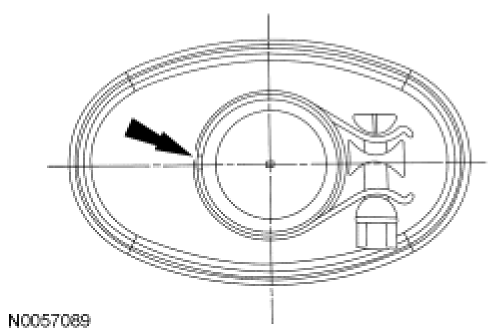

Fig. 2: Locating Uneven Surface Area
Courtesy of FORD MOTOR CO.

NOTE: Make sure the clamp position is no more than 27.5 mm (1.08 in) or less than 25.5 mm (1 in) from the inlet of the resonator pipe.

4. Make sure the back of the slot is covered by the clamp and the button is fully seated inside the notch.

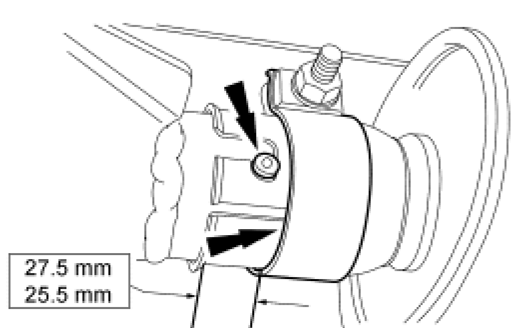

Fig. 3: Making Sure Back Of Slot Is Covered By Clamp & Button Is Fully Seated Inside Notch

With Specifications
Courtesy of FORD MOTOR CO.

NOTE: Do not tighten the clamp until the exhaust system has been aligned.

5. Tighten the Torca® clamp.
    - Tighten to 47 Nm (35 lb-ft).

REMOVAL AND INSTALLATION

1. For additional information, refer to the appropriate procedure.

CATALYTIC CONVERTER - LH

REMOVAL AND INSTALLATION

NOTE: Always install new fasteners and gaskets. Clean flange faces prior to new gasket installation to make sure of correct sealing.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Disconnect the catalyst monitor sensor electrical connector.
3. Remove the exhaust Y-pipe. For additional information, refer to **Exhaust Y-Pipe**.
4. Remove the 2 catalytic converter support bracket-to-transmission bolts.
   - To install, tighten to 48 Nm (35 lb-ft).
5. Remove the 4 nuts and the LH catalytic converter.
   - Discard the nuts and gasket.
   - To install, tighten to 40 Nm (30 lb-ft).
6. To install, reverse the removal procedure.
   - Install a new gasket and nuts.

CATALYTIC CONVERTER - RH

All vehicles

NOTE: If necessary, the catalytic converter heat shield can be serviced separately.

NOTE: Always install new fasteners and gaskets. Clean flange faces prior to new gasket installation to make sure of correct sealing.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Remove the catalyst monitor sensor. For additional information, refer to **ELECTRONIC ENGINE CONTROLS** article.
3. Remove the exhaust Y-pipe. For additional information, refer to **Exhaust Y-Pipe**.

All wheel drive (AWD) vehicles

NOTE: Index-mark the driveshaft for installation.

4. Remove and discard the 4 U-joint flange bolts and separate the front driveshaft and secure it with a length of mechanic's wire.
    - To install, tighten to 70 Nm (52 lb-ft).
5. Remove the intermediate shaft. For additional information, refer to **FRONT DRIVE HALFSHAFTS** article.
6. Remove the 2 catalytic converter support bracket-to-engine block bolts.
    - To install, tighten to 40 Nm (30 lb-ft).

All vehicles

7. Remove the 2 bolts and the power steering rack shield.
    - To install, tighten to 15 Nm (11 lb-ft).

Front wheel drive (FWD) vehicles

8. Remove the catalytic converter support bracket-to-engine block bolt and nut.
    - To install, tighten to 40 Nm (30 lb-ft).

All vehicles

9. Remove the 2 nuts and the roll restrictor shield.
    - To install, tighten to 11 Nm (8 lb-ft).
10. Remove the roll restrictor bolt and rotate the engine forward.
    - To install, tighten to 90 Nm (66 lb-ft).

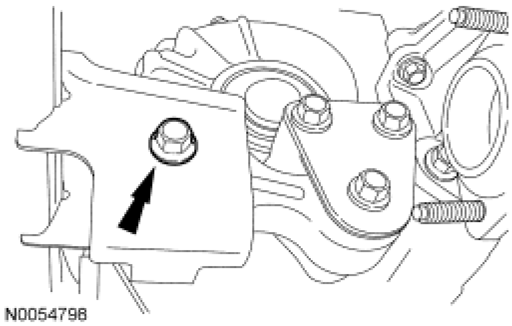

Fig. 7: Locating Roll Restrictor Bolt
Courtesy of FORD MOTOR CO.

11. Remove the 2 bracket-to-RH catalytic converter bolts.
    - To install, tighten to 20 Nm (15 lb-ft).
12. Remove the 4 nuts and the RH catalytic converter.
    - Discard the 4 RH catalytic converter nuts and gasket.
    - To install, tighten to 40 Nm (30 lb-ft).
13. To install, reverse the removal procedure.
    - Install a new gasket, nuts and studs.

EXHAUST FLEXIBLE PIPE

REMOVAL AND INSTALLATION

CAUTION: Do not excessively bend, twist or allow the exhaust to hang from the flexible pipe or damage to the exhaust system may occur.

NOTE: Always install new fasteners and gaskets. Clean flange faces prior to new gasket installation to make sure of correct sealing.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Remove and discard the 2 exhaust flexible pipe-to-exhaust Y-pipe nuts.
    - Discard the gasket.
    - To install, tighten to 40 Nm (30 lb-ft).
3. Remove the Torca® clamp. For additional information, refer to **Torca® Clamp**.
4. Separate the 2 exhaust flexible pipe isolators and remove the exhaust flexible pipe.
5. To install, reverse the removal procedure.
    - Install a new gasket and nuts.
6. Start the engine and check for exhaust leaks.

EXHAUST Y-PIPE

REMOVAL AND INSTALLATION

CAUTION: Do not excessively bend, twist or allow the exhaust to hang from the flexible pipe or damage to the exhaust system may occur.

NOTE: Always install new fasteners and gaskets. Clean flange faces prior to new gasket installation to make sure of correct sealing.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Remove and discard the 4 exhaust Y-pipe-to-LH and RH catalytic converter nuts.
   - Discard the gaskets.
   - To install, tighten to 40 Nm (30 lb-ft).
3. Remove and discard the exhaust Y-pipe-to-exhaust flexible pipe nuts and remove the exhaust Y-pipe.
   - Discard the gasket.
   - To install, tighten to 40 Nm (30 lb-ft).
4. To install, reverse the removal procedure.
   - Install new gaskets and nuts.
5. Start the engine and check for exhaust leaks.

MUFFLER AND TAILPIPE

REMOVAL AND INSTALLATION

NOTE: Do not use oil or grease-based lubricants on the isolators. They may cause deterioration of the rubber.

NOTE: Oil or grease-based lubricants on the isolators may cause the exhaust hanger isolator to separate from the exhaust hanger bracket during vehicle operation.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Support the muffler and tailpipe with a suitable jackstand.

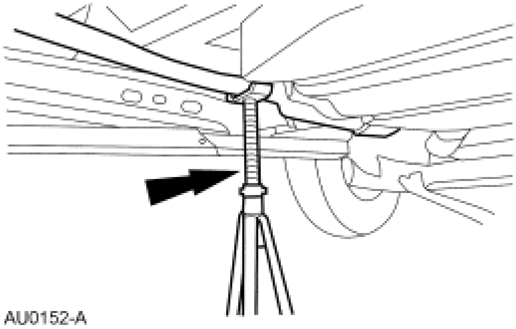

Fig. 8: Supporting Muffler & Tailpipe With A Suitable Jackstand
Courtesy of FORD MOTOR CO.

3. Remove the Torca® clamp. For additional information, refer to **Torca® Clamp**.

NOTE: Do not damage or tear the isolators during removal.

4. Using soapy water, separate the 4 muffler and tailpipe isolators from the vehicle.
5. Separate the muffler and tailpipe from the exhaust flexible pipe and remove the muffler and tailpipe.
6. To install, reverse the removal procedure.
   - Inspect and replace any isolators damaged or torn during the removal process.
7. Start the engine and check for exhaust leaks.

2008 ACCESSORIES & BODY, CAB

Exterior Lighting - Edge & MKX

SPECIFICATIONS

TORQUE SPECIFICATIONS

Description	Nm	lb-in
Headlamp assembly bolts	4	35
Liftgate lamp assembly nuts	6	53
Rear lamp screws	3	27

DESCRIPTION AND OPERATION

EXTERIOR LIGHTING

NOTE: **If equipped, the perimeter lighting feature can be enabled or disabled. When enabled, the exterior lamps are illuminated when the UNLOCK button is pressed on the remote keyless entry (RKE) transmitter. Refer to HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS article.**

NOTE: **The smart junction box (SJB) is also known as the generic electronic module (GEM).**

Battery Saver

NOTE: **Time-out is 1 minute if the vehicle has less than 80 km (50 miles).**

The battery saver is internal to the SJB and provides automatic shut-off of the headlamps and parking lamps after 10 minutes in order to save battery voltage. A timer is started when the ignition switch is turned to the OFF position with the headlamp switch in the HEADLAMPS ON position, or the headlamp switch is placed in the HEADLAMPS ON position with the ignition switch off. When the time-out period has elapsed, the voltage is automatically shut off to the lamps by the battery saver.

The battery saver does **not** control the parking lamps if the headlamp switch is in the PARKING LAMPS ON position.

Headlamps

The headlamp system is a quad-beam pattern system. It consists of replaceable low and high beam bulbs. The headlamp assembly has the park/turn indicator lamp integrated into the headlamp assembly. The SJB supplies voltage to the headlamps when demanded.

NOTE: **Some vehicles are equipped with the adaptive headlighting option. Refer to**

Adaptive Headlighting .

If the headlamps are on when the ignition switch is turned off, the battery saver feature turns off the headlamps after 10 minutes have elapsed.

Autolamps

The autolamp system provides light sensitive automatic on/off control of the exterior lamps. The autolamp system keeps the exterior lamps on for a pre-selected period of time after the ignition switch is turned to the OFF position (20 seconds is the factory default setting). The pre-selected time lapse is adjustable up to approximately 3 minutes.

Headlamps On With Wipers On Feature

On vehicles equipped with autolamps, there is also a feature called the headlamps on with wipers on feature. If the headlamp switch is in the AUTOLAMPS ON position and the front wipers are on for more than 10 seconds (except during a mist wipe or while the wipers are on to clear washer fluid during a wash condition), the exterior lamps are turned on. The exterior lamps are turned off when the ignition switch is changed to the OFF or ACC position, the headlamp switch is placed in the OFF position, or the front wipers are off for more than 30 seconds. The exception to this is when the exterior lights are on because of darkness determined by the light sensor.

For the headlamps on with wipers on feature, refer to **WIPERS AND WASHERS** article.

Stoplamps

The stoplamp switch is located on the brake pedal assembly. The stoplamps are supplied voltage when the brake pedal is applied.

Turn Signal/Hazard Lamps

The front turn signal lamps are located within the headlamp assemblies. The rear lamps share functionality with the stoplamps. When the multifunction switch is placed in the LH or RH TURN positions, the SJB routes voltage to the LH or RH turn signal lamps. The SJB then cycles the voltage on and off approximately 80 times per minute. If a front or rear turn bulb is inoperative, the SJB cycles the voltage on and off approximately 160 times per minute.

The hazard switch is located on the center instrument panel finish panel. When the hazard switch is pressed, the SJB supplies voltage to all the turn lamps. The SJB cycles the voltage on and off approximately 80 times per minute.

Parking Lamps

The SJB supplies voltage to the parking lamps when demanded. The parking lamp system includes the following:

- Front parking lamps

- Front side marker lamps
- Rear parking lamps
- Rear side marker lamps
- License plate lamps
- Liftgate lamp assembly (MKX only)

Fog Lamps

The fog lamp switch is integrated into the headlamp switch. When the fog lamp switch is engaged, the SJB provides ground for the fog lamp relay coil (integrated into the SJB), which then energizes and routes voltage to the fog lamps. The fog lamps can be turned on when the ignition switch is in the RUN or ACC position, the parking lamps are on, and the high beam headlamps are off.

Reversing Lamps

When the transmission is placed in REVERSE (R), the PCM provides ground for the reversing lamp relay coil. The reversing lamps receive voltage when the reversing lamp relay is energized. The reversing lamps are located within the rear lamp assemblies.

For MKX, the reversing lamps are LEDs integrated into the rear lamp assemblies.

Trailer Tow

When the vehicle's rear stop/turn or parking lamps are illuminated, voltage is also supplied to a corresponding trailer tow relay (coil side) located in the battery junction box (BJB).

Adaptive Headlighting

Vehicles equipped with adaptive front lighting have a module (located on the bottom of the LH headlamp assembly) to control the left/right aiming of the headlamp bulbs. Depending on the inputs received (steering wheel angle and vehicle speed for example), the adaptive front lighting module can change the angle at which the headlamps are aimed (left or right) to improve nighttime visibility around curves.

There are sensors and motors within each headlamp that the module uses to control the angle of the headlamp beams and are not repaired separately.

Daytime Running Lamps (DRL)

The SJB can be configured to turn the DRL on for this vehicle. Refer to **MODULE CONFIGURATION** article for additional information on this programmable parameter.

The DRL system operates the low beam headlamps at a reduced intensity.

The SJB supplies pulse-width modulated (PWM) voltage to illuminate the low beam headlamps at a reduced intensity when the following conditions are met:

- The ignition switch is in the RUN position.
- The headlamps have not been turned on by the autolamp system or the headlamp switch.
- The transmission is not in PARK (P).

DIAGNOSTIC TESTS

HEADLAMPS

Special Tools

Illustration	Tool Name	Tool Number
 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

Exterior Lighting

The SJB monitors the headlamp switch position by sending voltage reference signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is routed to ground.

If the SJB does not detect any of the inputs to the headlamp switch are active (routed to ground) for 5 seconds, the SJB turns on the exterior lights and keeps them on for 10 minutes after the ignition switch is turned off (or 10 minutes from the time the SJB does not detect any headlamp switch input if the ignition switch was already off). Additionally, if the SJB detects multiple circuits short to ground, the SJB implements a planned strategy depending on the multiple inputs received.

If either of these situations occur, the SJB should **NOT** be ruled immediately as being at fault. This is normal behavior of the SJB design as it has detected a fault with the inputs from the headlamp switch.

High Beam and Flash-to-Pass

The SJB also monitors the multifunction switch for a flash-to-pass or high beam request. There are 2 voltage reference circuits which monitor this. When the multifunction switch is in the FLASH-TO-PASS or HIGH BEAM position, the voltage signal is routed to ground.

NOTE: The flash-to-pass feature does not require any input from the headlamp switch.

When the SJB receives an input requesting the headlamps on, the SJB supplies voltage to the low beams. If the low beams are on and the SJB receives a request for high beams (or just a flash-to-pass request), the SJB energizes an internal relay which routes voltage to the headlamps.

Field-Effect Transistor (FET) Protection

The SJB utilizes a FET protective circuit strategy for many of its outputs (for example, the headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault is detected. A continuous DTC is stored at that time of the fault. The circuit then resets after a customer demand of the function (switching the component on, battery saver being energized). When an excessive circuit load occurs several times, the module shuts down the output until a repair procedure is carried out. At the same time, the continuous DTC that was stored on the first failure, does not clear by a command to clear the continuous DTCs. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful on-demand self-test proves that the fault has been repaired. After the on-demand self-test has successfully completed (no on-demand DTCs present), the continuous DTC clears and the circuit function returns.

Each circuit has 3 predefined levels of short circuit tolerance established in the module based on each circuits' capability. When the first or second level is reached, the continuous DTC associated with the circuit sets along with DTC B106E. These DTCs may be cleared using the Clear DTC operation on the scan tool as long as the fault itself has been corrected. If any of the circuits are shorted past the third level, then DTCs B106F and B1342 set along with the associated continuous DTC. This DTC cannot be cleared and the module must be replaced.

The SJB FET protected output circuits for the headlamp system are for the LH low beam output and the RH low beam output circuits.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical
	• Smart junction box

• Headlamp switch • Multifunction switch • Headlamp assembly	(SJB) fuse(s): ◦ 7 (10A) (LH low beam) ◦ 8 (10A) (RH low beam) ◦ 23 (15A) (high beams) • Bulb(s) • Bulb holder(s) • Wiring, terminals or connectors • SJB

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

NOTE: Make sure the multifunction switch is in the LOW BEAM position.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

DTC Charts

SMART JUNCTION BOX (SJB) DTC CHART

DTC	Description	Action
B1472	Lamp Headlamp Input Circuit Short to Ground	Go to **Pinpoint Test D** .
B1510	Flash To Pass Switch Circuit Short to Ground	Go to **Pinpoint Test D** .
B1696	Autolamp On Circuit Short To Ground	Go to **Pinpoint Test D** .
B2008	Wipers On Signal Circuit Short to Ground	Go to **Pinpoint Test D** .
B2A22	Headlamp Off Circuit Open	ADDRESS any other DTCs first. Go to **Pinpoint Test D** .
B2A23	High Beam Input Circuit Short to Ground	Go to **Pinpoint Test D** .
B2A2E	Right Front Lamp Low Beam Circuit Open	If the low beam is inoperative, go to **Pinpoint Test B** . If the low beam is always on, go to **Pinpoint Test D** .
B2A2F	Right Front Lamp Low Beam Circuit Short to Ground	Go to **Pinpoint Test B** .
B2A30	Left Front Lamp Low Beam Circuit Open	If the low beam is inoperative, go to **Pinpoint Test B** . If the low beam is always on, go to **Pinpoint Test D** .
B2A31	Left Front Lamp Low Beam Circuit Short to Ground	Go to **Pinpoint Test B** .
All other DTCs	-	REFER to **MULTIFUNCTION ELECTRONIC MODULES** article.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• No communication with the smart junction box (SJB)	• Fuse • Wiring, terminals or connectors • SJB	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
	NOTE:	

• Both low beams are inoperative	**Due to varying wattage ratings and resulting current draw, certain aftermarket headlamp bulbs may cause the SJB to shut down the short circuit protection, resulting in the low beams becoming inoperative.** • Incorrect bulbs	• VERIFY that the bulbs meet Ford specifications. If the bulbs do not meet Ford specifications, INSTALL the correct bulbs. RUN the on-demand self-test (required to clear certain DTCs and reset the SJB). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

	• SJB	• CHECK for recorded SJB DTCs.
		  • If DTCs are present, REFER to DTC Charts in this service information.
		  • If no DTCs are present, INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

• Both high beams are inoperative	• Fuse • Wiring, terminals or connectors • Joint connector • Multifunction switch • SJB	• Go to **Pinpoint Test A** .
• One low beam headlamp is inoperative	• Fuse • Wiring, terminals or connectors • Joint connector • Headlamp assembly (MKX) • SJB	• Go to **Pinpoint Test B** .
• One high beam headlamp is inoperative	• Wiring, terminals or connectors • Joint connector • Headlamp assembly (MKX)	• Go to **Pinpoint Test C** .

• The headlamp(s) are on continuously	• Wiring, terminals or connectors • Joint connector • Headlamp switch • Multifunction switch • Windshield wiper motor • SJB	• Go to **Pinpoint Test D** .
• The flash-to-pass feature is inoperative	• Wiring, terminals or connectors • Multifunction switch • SJB	• Go to **Pinpoint Test E** .

Pinpoint Tests

Pinpoint Test A: Both High Beams Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Headlamps/Autolamps for schematic and connector information.

Normal Operation

When the headlamp switch is placed in the HEADLAMPS ON position, the smart junction box (SJB) monitors the high beam request circuit from the multifunction switch through circuit CLF17 (WH/OG). When the multifunction switch is placed in the HIGH BEAM position, the signal is routed to ground through circuit GD116 (BK/VT) (which routes through a joint connector). The SJB then energizes the high beam relay (integrated into the SJB) which supplies voltage to the headlamps through circuit CLF08 (YE/VT).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Joint connector
- Multifunction switch
- SJB

PINPOINT TEST A: BOTH HIGH BEAMS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 CHECK THE HIGH BEAM INDICATOR

- Key in ON position.
- Place the headlamp switch in the HEADLAMPS ON position.
- Place the multifunction switch in the HIGH BEAM position.
- **Does the high beam indicator illuminate?**

  YES : Go to A6.

  NO : Go to A2.

A2 CHECK THE MULTIFUNCTION SWITCH

- Place the headlamp switch in the OFF position.
- Key in OFF position.
- Disconnect: Multifunction Switch C202

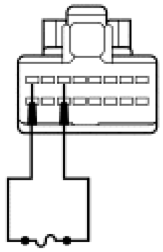

Fig. 1: Connecting Fused Jumper Wire
Courtesy of FORD MOTOR CO.

- Connect a fused (5A) jumper wire between the multifunction switch C202-6, circuit CLF17 (WH/OG), harness side and the multifunction switch C202-8, circuit GD116 (BK/VT), harness side.
- Place the headlamp switch in the HEADLAMPS ON position.
- **Do the high beams illuminate?**

  YES : REMOVE the jumper wire. INSTALL a new multifunction switch. REFER to **STEERING COLUMN SWITCHES** article. TEST the system for normal operation.

  NO : REMOVE the jumper wire. Go to A3.

A3 CHECK CIRCUIT GD116 (BK/VT) FOR CONTINUITY TO GROUND

NOTE: **The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.**

- Place the headlamp switch in the OFF position.

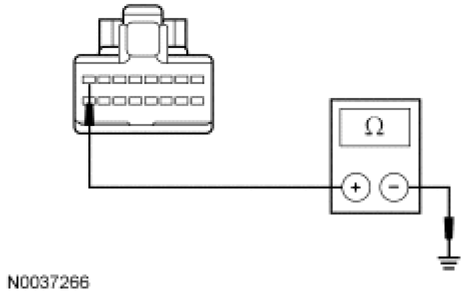

Fig. 2: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the multifunction switch C202-8, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to A5.

  NO : Go to A4.

A4 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN

- Disconnect: Joint Connector 6 C2365

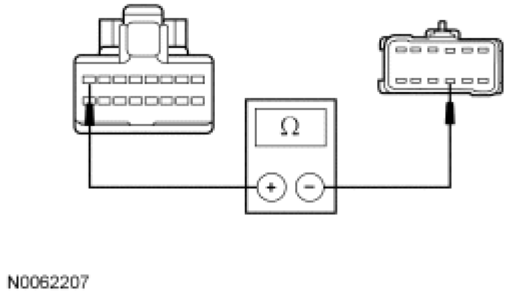

Fig. 3: Measuring Resistance Between Multifunction Switch C202-8, Circuit GD116 (BK/VT) & Joint Connector 6 C2365-D
Courtesy of FORD MOTOR CO.

- Measure the resistance between the multifunction switch C202-8, circuit GD116 (BK/VT), harness side and the joint connector 6 C2365-D, circuit GD116 (BK/VT), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

A5 CHECK CIRCUIT CLF17 (WH/OG) FOR AN OPEN

- Disconnect: SJB C2280b

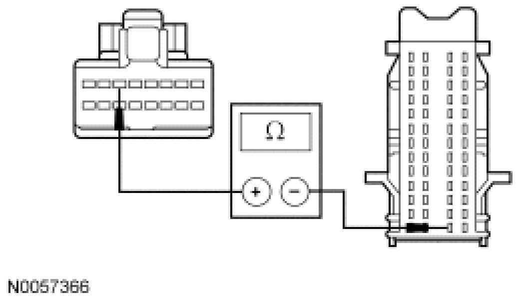

Fig. 4: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the multifunction switch C202-6, circuit CLF17 (WH/OG), harness side and the SJB C2280b-27, circuit CLF17 (WH/OG), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to A7.

  NO : REPAIR the circuit. TEST the system for normal operation.

A6 CHECK CIRCUIT CLF08 (YE/VT) FOR AN OPEN

- Disconnect: SJB C2280e

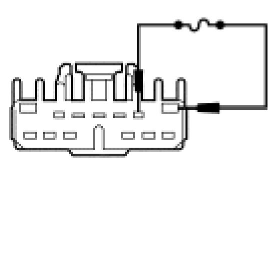

Fig. 5: Connecting Fused Jumper Wire
Courtesy of FORD MOTOR CO.

- Connect a fused (20A) jumper wire between the SJB C2280e-1, circuit CBB53 (GY/BN), harness side and the SJB C2280e-2, circuit CLF08 (YE/VT), harness side.
- Key in ON position.
- **Do the high beams illuminate?**

  YES : VERIFY the SJB fuse 23 (15A) is OK. If OK, go to A7.

  NO : REPAIR the circuit. TEST the system for normal operation.

A7 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion

- damaged pins
- pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: One Low Beam Headlamp Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Headlamps/Autolamps for schematic and connector information.

Normal Operation

When the smart junction box (SJB) detects the headlamp switch in the HEADLAMPS ON position and the multifunction switch in the LOW BEAM position, the SJB provides voltage through circuits CLF04 (BN/BU) and CLF05 (BU/GN) to the LH and RH low beam headlamps, respectively. Ground is supplied on circuit GD123 (BK/GY) for RH headlamp. Ground for the LH headlamp is routed through a joint connector through circuit GD120 (BK/GN).

DTC Description	Fault Trigger Conditions
B2A2E - Right Front Lamp Low Beam Circuit Open	An on-demand DTC that sets when the SJB detects an open in the RH low beam output circuit.
B2A2F - Right Front Lamp Low Beam Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground in the RH low beam output circuit.
B2A30 - Left Front Lamp Low Beam Circuit Open	An on-demand DTC that sets when the SJB detects an open in the LH low beam output circuit.
B2A31 - Left Front Lamp Low Beam Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground in the LH low beam output circuit.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Joint connector
- Headlamp assembly (MKX)
- SJB

PINPOINT TEST B: ONE LOW BEAM HEADLAMP IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: Due to varying wattage ratings and resulting current draw, certain aftermarket headlamp bulbs may cause the SJB to shut down the short circuit protection, resulting in the low beams becoming inoperative. Verify that the bulbs meet Ford specifications. If the bulbs do not meet Ford specifications, install the correct bulbs. Run the on-demand self-test (required to clear certain DTCs and reset the SJB). Correct any unresolved DTCs. Clear all DTCs. Test the system for normal operation.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

B1 USE THE RECORDED DTCs FROM THE SJB SELF-TEST

- Check the recorded results from the SJB self-test.
- **Is DTCs B2A2F or B2A31 recorded?**

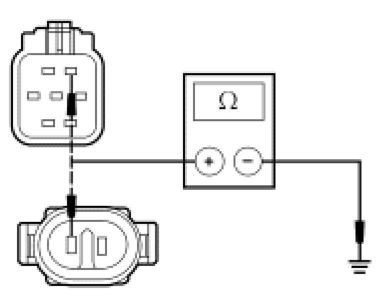
YES : For MKX, go to B7.

For Edge, go to B8.

NO : Go to B2.

B2 CHECK THE HEADLAMP GROUND CIRCUIT FOR CONTINUITY TO GROUND

- Key in OFF position.
- Disconnect: Inoperative Headlamp



N0062208

Fig. 6: Measuring Resistance Between Inoperative Headlamp, Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the inoperative headlamp, harness side and ground as follows:

Connector-	

Pin	Circuit
Edge	
LH low beam C1111-A	GD120 (BK/GN)
RH low beam C1112-A	GD123 (BK/GY)
MKX	
LH headlamp C1021a-2	GD120 (BK/GN)
RH headlamp C1041a-2	GD123 (BK/GY)

- **Is the resistance less than 5 ohms?**

  YES :

  For MKX, go to B5.

  For Edge, VERIFY the SJB fuse 7 (10A) (LH low beam) or fuse 8 (10A) (RH low beam) is OK. If OK Go to B6.

  NO : For RH headlamp, REPAIR circuit GD123 (BK/GY) for an open. CLEAR the DTCs. REPEAT the self-test.

  For LH headlamp, go to B3.

B3 CHECK CIRCUIT GD120 (BK/GN) FOR AN OPEN (JOINT CONNECTOR TO GROUND)

- Disconnect: Joint Connector 7 C2200

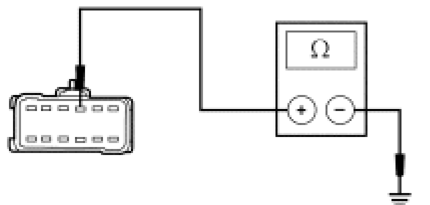


Fig. 7: Measuring Resistance Between Joint Connector 7 C2200-J, Circuit GD120 (BK/GN) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the joint connector 7 C2200-J, circuit GD120 (BK/GN), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to B4.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

B4 CHECK CIRCUIT GD120 (BK/GN) FOR AN OPEN (HEADLAMP TO JOINT CONNECTOR)

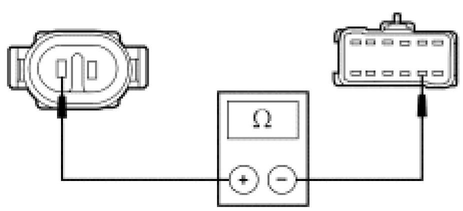

Fig. 8: Measuring Resistance Between LH Low Beam C1111-A, Circuit GD120 (BK/GN) & Joint Connector 7 C2200-E
Courtesy of FORD MOTOR CO.

- For Edge, measure the resistance between the LH low beam C1111-A, circuit GD120 (BK/GN), harness side and the joint connector 7 C2200-E, circuit GD120 (BK/GN), harness side.

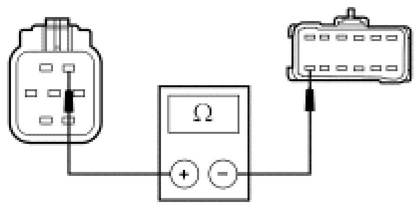

Fig. 9: Measuring Resistance Between LH Headlamp C1021A-2, Circuit GD120 (BK/GN) & Joint Connector 7 C2200-A
Courtesy of FORD MOTOR CO.

- For MKX, measure the resistance between the LH headlamp C1021a-2, circuit GD120 (BK/GN), harness side and the joint connector 7 C2200-A, circuit GD120 (BK/GN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. CLEAR the DTCs. REPEAT the self-test.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

B5 CHECK THE SJB HEADLAMP VOLTAGE SUPPLY CIRCUIT FOR VOLTAGE

- Place the headlamp switch in the HEADLAMPS ON position.

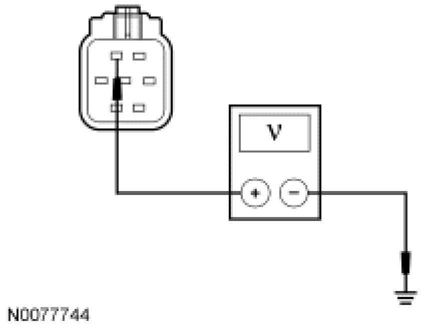

Fig. 10: Measuring Voltage Between Inoperative Headlamp, Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the inoperative headlamp, harness side and ground as follows:

Connector-Pin	Circuit
LH headlamp C1021a-1	CLF04 (BN/BU)
RH headlamp C1041a-1	CLF05 (BU/GN)

- **Is the voltage greater than 10 volts?**

  YES : REPAIR or INSTALL a new headlamp assembly. REFER to **Headlamp Assembly**. CLEAR the DTCs. REPEAT the self-test.

  NO : VERIFY the SJB fuse 7 (10A) (LH low beam) or fuse 8 (10A) (RH low beam) is OK. If OK, go to B6.

B6 CHECK THE SJB HEADLAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Place the headlamp switch in the OFF position.
- Disconnect: SJB C2280e
- Measure the resistance between the inoperative headlamp, harness side and the SJB as follows:

Headlamp Connector-Pin	SJB Connector-Pin	Circuit
Edge		
LH low beam C1111-B	SJB C2280e-13	CLF04 (BN/BU)
RH low		

beam C1112-B	SJB C2280e-4	CLF05 (BU/GN)
MKX		
LH headlamp C1021a-1	SJB C2280e-13	CLF04 (BN/BU)
RH headlamp C1041a-1	SJB C2280e-4	CLF05 (BU/GN)

- **Is the resistance less than 5 ohms?**

  YES : Go to B9.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

B7 CHECK THE HEADLAMP ASSEMBLY

- Key in OFF position.
- Disconnect: Inoperative Headlamp
- Key in ON position.
- Repeat the SJB on-demand self-test.
- **Is DTC B2A2F or B2A31 retrieved again?**

  YES : Go to B8.

  NO : INSTALL a new headlamp assembly. REFER to **Headlamp Assembly**. TEST the system for normal operation.

B8 CHECK CIRCUIT CLF04 (BN/BU) (LH HEADLAMP) OR CIRCUIT CLF05 (BU/GN) (RH HEADLAMP) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280e
- Disconnect: Inoperative Headlamp

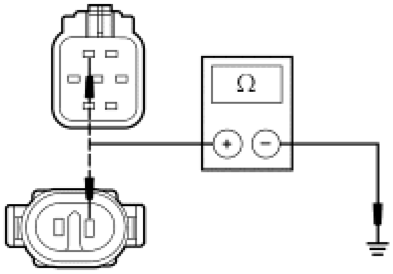

Fig. 11: Measuring Resistance Between Inoperative Headlamp, Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the inoperative headlamp, harness side and ground as follows:

Connector-Pin	Circuit
Edge	
LH low beam C1111-B	CLF04 (BN/BU)
RH low beam C1112-B	CLF05 (BU/GN)
MKX	
LH headlamp C1021a-1	CLF04 (BN/BU)
RH headlamp C1041a-1	CLF05 (BU/GN)

- **Is the resistance greater than 10,000 ohms?**

  YES : Go to B9.

  NO : REPAIR the circuit in question. RUN the on-demand self-test (required to clear certain DTCs). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

B9 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test C: One High Beam Headlamp Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Headlamps/Autolamps for schematic and connector information.

Normal Operation

When the smart junction box (SJB) detects the headlamp switch in the HEADLAMPS ON position and the multifunction switch in the HIGH BEAM position, the SJB energizes an internal relay. When the relay is energized, the relay routes voltage through circuit CLF08 (YE/VT) to the high beams. Ground is supplied on circuit GD123 (BK/GY) for the RH headlamp. Ground for the LH headlamp is routed through a joint connector through circuit GD120 (BK/GN).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Joint connector
- Headlamp assembly (MKX)

PINPOINT TEST C: ONE HIGH BEAM HEADLAMP IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

C1 CHECK THE LOW BEAM OPERATION

- Check the operation of the low beams.
- **Do the low beams operate correctly?**

  YES : Go to C2.

  NO : Go to **Pinpoint Test B** .

C2 CHECK FOR CONTINUITY TO GROUND

- Key in OFF position.
- Disconnect: Inoperative Headlamp

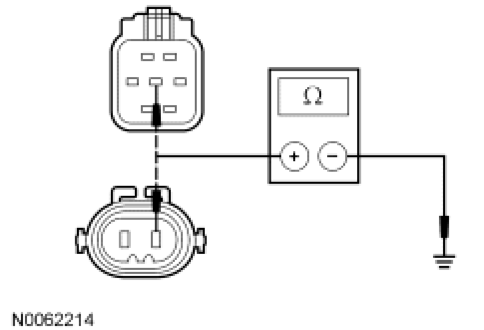

Fig. 12: Measuring Resistance Between Inoperative Lamp, Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the inoperative lamp, harness side and ground as follows:

Inoperative Lamp	Connector-Pin	Circuit
Edge		
LH high beam	C1020-A	GD120 (BK/GN)
RH high beam	C1040-A	GD123 (BK/GY)
MKX		
LH headlamp	C1021a-4	GD120 (BK/GN)
RH headlamp	C1041a-4	GD123 (BK/GY)

- **Is the resistance less than 5 ohms?**

  YES : For Edge, REPAIR circuit CLF08 (YE/VT) for an open. TEST the system for normal operation.

  For MKX, go to C4.

  NO : For the RH headlamp, REPAIR circuit GD123 (BK/GY) for an open. TEST the system for normal operation.

  For the LH headlamp, go to C3.

C3 CHECK CIRCUIT GD120 (BK/GN) FOR AN OPEN (HEADLAMP TO JOINT CONNECTOR)

- Disconnect: Joint Connector 7 C2200

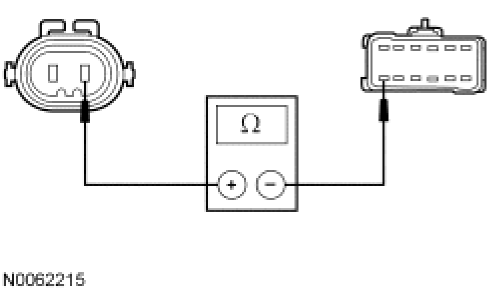

Fig. 13: Measuring Resistance Between LH High Beam C1020-A, Circuit GD120 (BK/GN) & Joint Connector 7 C2200-A
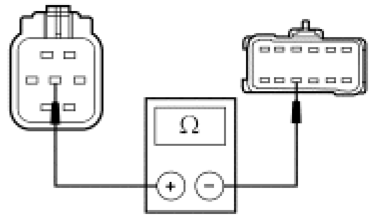
Courtesy of FORD MOTOR CO.

- For Edge, measure the resistance between the LH high beam C1020-A, circuit GD120 (BK/GN), harness side and the joint connector 7 C2200-A, circuit GD120 (BK/GN), harness side.



N0062216

Fig. 14: Measuring Resistance Between LH High headlamp C1021A-4, Circuit GD120 (BK/GN) & Joint Connector 7 C2200-C
Courtesy of FORD MOTOR CO.

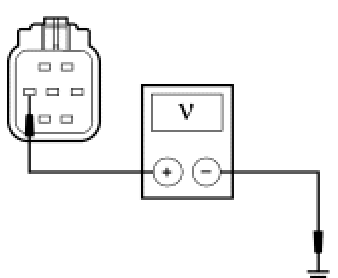
- For MKX, measure the resistance between the LH headlamp C1021a-4, circuit GD120 (BK/GN), harness side and the joint connector 7 C2200-C, circuit GD120 (BK/GN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

C4 CHECK CIRCUIT CLF08 (YE/VT) FOR AN OPEN

- Place the headlamp switch in the HEADLAMPS ON position.
- Place the multifunction switch in the HIGH BEAM position.



N0077746

Fig. 15: Measuring Voltage Between Inoperative Lamp, Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the inoperative lamp, harness side and ground as follows:

Inoperative Lamp	Connector-Pin	Circuit
LH headlamp	C1021a-3	CLF08 (YE/VT)
RH headlamp	C1041a-3	CLF08 (YE/VT)

- **Is the voltage greater than 10 volts?**

  YES : REPAIR or INSTALL a new headlamp assembly. REFER to **Headlamp Assembly**. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test D: The Headlamp(s) Are On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Headlamps/Autolamps for schematic and connector information.

Normal Operation - Low Beams

The smart junction box (SJB) sends reference signals to the headlamp switch through circuits CLF19 (VT/GN) (AUTOLAMPS), CLF23 (WH/VT) (OFF), CLS34 (GY) (PARKING LAMPS) and CLF18 (BU/WH) (HEADLAMPS). At any given time, the headlamp switch routes one of the input circuits to ground through joint connector 6 through circuit GD116 (BK/VT).

When the SJB detects the headlamp switch in the HEADLAMPS ON position and the multifunction switch in the LOW BEAM position, the SJB provides voltage through circuits CLF04 (BN/BU) and CLF05 (BU/GN) to the LH and RH low beam headlamps, respectively.

On vehicles equipped with autolamps, the SJB also monitors input from the windshield wiper motor through circuit CRW01 (WH) for the headlamps on with wipers on feature.

High Beams

The SJB sends a reference signal to the multifunction switch through circuits CLF27 (GN/BN) and CLF17 (WH/OG). When the multifunction switch is placed in the FLASH-TO-PASS or HIGH BEAM position, the voltage signal is routed to ground. When the SJB detects a request for flash-to-pass or high beams (when the low beams are on), the SJB energizes the high beam relay (integrated into the SJB), which routes voltage through circuit CLF08 (YE/VT) to the headlamps.

DTC Description	Fault Trigger Conditions
B1472 - Lamp Headlamp Input Circuit Short to Ground	An on-demand DTC that sets when the SJB detects the headlamps on input circuit is short to ground.
B1510 - Flash To Pass Switch Circuit Short to Ground	An on-demand DTC that sets when the SJB detects the flash-to-pass request input circuit is short to ground.
B1696 - Autolamp On Circuit Short To Ground	An on-demand DTC that sets when the SJB detects the autolamps on request input circuit is short to ground.
B2008 - Wipers On Signal Circuit Short to Ground	An on-demand DTC that sets when the SJB detects the wipers on input circuit is short to ground.
B2A22 - Headlamp Off Circuit Open	An on-demand DTC that sets when the SJB detects the headlamp switch off input circuit open.

B2A23 - High Beam Input Circuit Short to Ground	An on-demand DTC that sets when the SJB detects a short to ground on the high beam request input circuit.
B2A2E - Right Front Lamp Low Beam Circuit Open	An on-demand DTC that sets when the SJB detects the RH low beam output circuit shorted to voltage.
B2A30 - Left Front Lamp Low Beam Circuit Open	An on-demand DTC that sets when the SJB detects the LH low beam output circuit shorted to voltage.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Joint connector
- Headlamp switch
- Multifunction switch
- Windshield wiper motor
- SJB

PINPOINT TEST D: THE HEADLAMP(S) ARE ON CONTINUOUSLY

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

D1 VERIFY THE HEADLAMP OPERATION

- Key in ON position.
- **Are the high beam headlamps illuminated?**

  YES : Go to D13.

  NO : Go to D2.

D2 CHECK THE SJB HEADLAMP SWITCH PIDs

- Enter the following diagnostic mode on the diagnostic tool: SJB Data Logger

  NOTE: Make sure the headlamp switch is lined up in the correct position when monitoring the PIDs.

- Monitor the SJB headlamp switch PIDs (HD_LMP_S2 and HEAD_L) while moving the headlamp switch through all positions. Refer to the following chart.

Headlamp Switch Position	HD_LMP_S2 Expected Value	HEAD_L Expected Value

Autolamps	AUTOLAMP	OFF
OFF	-	OFF
Parklamps	-	-
Headlamp	-	HEADLAMP

- **Do the headlamp switch positions agree with the PIDs?**

  YES : Go to D9.

  NO : Go to D3.

D3 CHECK THE HEADLAMP SWITCH

- Key in OFF position.
- Disconnect: Headlamp Switch C205
- Carry out the headlamp switch component test. Refer to appropriate COMPONENT TESTING article.
- **Is the headlamp switch OK?**

  YES : Go to D4.

  NO : INSTALL a new headlamp switch. REFER to **Headlamp Switch**. CLEAR the DTCs. REPEAT the self-test.

D4 CHECK FOR CONTINUITY TO GROUND FROM THE HEADLAMP SWITCH

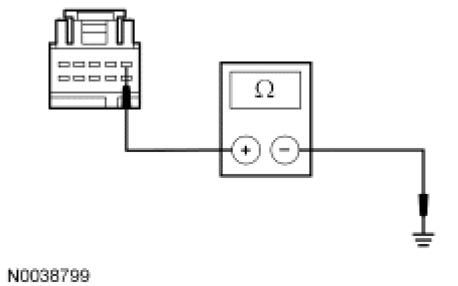


Fig. 16: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

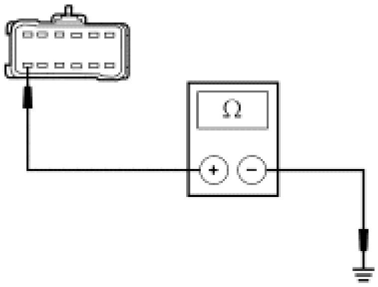
- Measure the resistance between the headlamp switch C205-1, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to D7.

  NO : Go to D5.

D5 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN (JOINT CONNECTOR TO GROUND)

- Disconnect: Joint Connector 6 C2365



N0062217

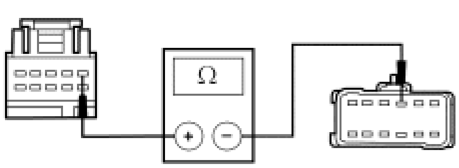
Fig. 17: Measuring Resistance Between Joint Connector 6 C2365-A, Circuit GD116 (BK/VT) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the joint connector 6 C2365-A, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to D6.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D6 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN (HEADLAMP SWITCH TO JOINT CONNECTOR)



N0062218

Fig. 18: Measuring Resistance Between Headlamp Switch C205-1, Circuit GD116 (BK/VT) & Joint Connector 6 C2365-J
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch C205-1, circuit GD116 (BK/VT), harness side and joint connector 6 C2365-J, circuit GD116 (BK/VT), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. CLEAR the DTCs. REPEAT the self-test.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D7 CHECK THE HEADLAMP SWITCH INPUT CIRCUITS FOR A SHORT TO GROUND

- Disconnect: SJB C2280b

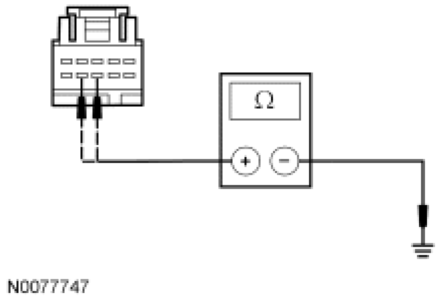


Fig. 19: Measuring Resistance Between Headlamp Switch, Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch, harness side and ground as follows:

Connector-Pin	Circuit
C205-9 (if equipped with autolamps)	CLF19 (VT/GN)
C205-8	CLF18 (BU/WH)

- **Are the resistances greater than 10,000 ohms?**

  YES : Go to D8.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

D8 CHECK THE HEADLAMP SWITCH INPUT CIRCUITS FOR AN OPEN

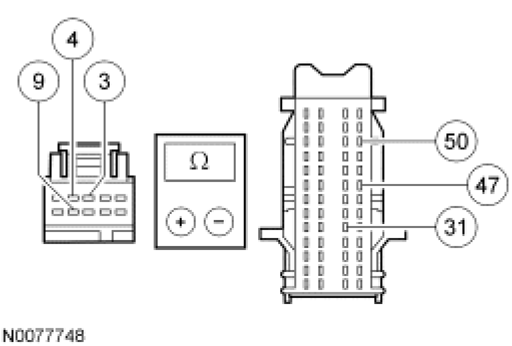

Fig. 20: Measuring Resistance Between Headlamp Switch, Harness Side & SJB
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch, harness side and the SJB, harness side as follows:

Headlamp Switch Connector-Pin	SJB Connector-Pin	Circuit
C205-9 (if equipped with autolamps)	C2280b-50	CLF19 (VT/GN)
C205-4	C2280b-47	CLF23 (WH/VT)
C205-3	C2280b-31	CLS34 (GY)

- **Are the resistances less than 5 ohms?**

  YES : Go to D16.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

D9 CHECK FOR SJB DTC B2008

- Check the recorded results from the SJB self-test.
- **Is DTC B2008 present?**

  YES : Go to D10.

  NO : Go to D12.

D10 CHECK THE WINDSHIELD WIPER MOTOR

- Key in OFF position.
- Disconnect: Windshield Wiper Motor C1552
- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB Self-Test
- Repeat the SJB self-test.
- **Is DTC B2008 still present?**

  YES : Go to D11.

  NO : INSTALL a new windshield wiper motor. REFER to **WIPERS AND WASHERS** article. TEST the system for normal operation.

D11 CHECK CIRCUIT CRW01 (WH) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280f

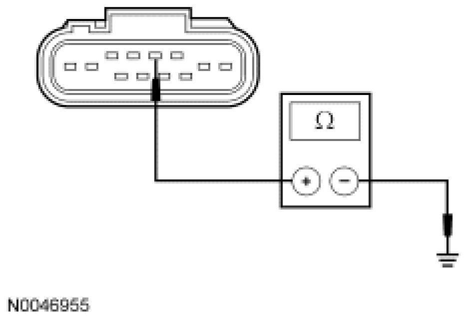

Fig. 21: Checking Circuit For Short To Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the windshield wiper motor C1552-2, circuit CRW01 (WH), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to D16.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

D12 CHECK THE SJB OUTPUT

- Disconnect: SJB C2280e
- **Does the LH or RH headlamp continue to illuminate?**

  YES : REPAIR circuit CLF04 (BN/BU) (LH headlamp) or circuit CLF05 (BU/GN) (RH headlamp) for a short to voltage as necessary. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to D16.

D13 CHECK CIRCUIT CLF08 (YE/VT) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: SJB C2280e
- Key in ON position.
- **Do the high beams continue to illuminate?**

  YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to D14.

D14 CHECK THE MULTIFUNCTION SWITCH

- Key in OFF position.
- Connect: SJB C2280e
- Disconnect: Multifunction Switch C202
- Key in ON position.
- **Do the high beams continue to illuminate?**

  YES : Go to D15.

  NO : INSTALL a new multifunction switch. REFER to <u>**STEERING COLUMN SWITCHES**</u> article. CLEAR the DTCs. REPEAT the self-test.

D15 CHECK CIRCUIT CLF17 (WH/OG) (HIGH BEAM) OR CIRCUIT CLF27 (GN/BN)

(FLASH-TO-PASS) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280b

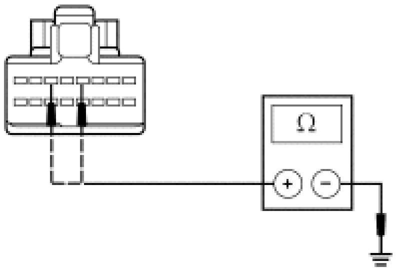

Fig. 22: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the multifunction switch C202-6, circuit CLF17 (WH/OG), harness side and ground; and between the multifunction switch C202-4, circuit CLF27 (GN/BN), harness side and ground.
- **Are the resistances greater than 10,000 ohms?**

  YES : Go to D16.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

D16 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test E: The Flash-To-Pass Feature Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Headlamps/Autolamps for schematic and connector information.

Normal Operation

The smart junction box (SJB) sends a reference signal to the multifunction switch through circuit CLF27 (GN/BN). When the multifunction switch is placed in the FLASH-TO-PASS position, the voltage signal is routed to ground. When the SJB detects a request for the flash-to-pass, the SJB provides voltage to the high beam headlamps.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Multifunction switch
- SJB

PINPOINT TEST E: THE FLASH-TO-PASS FEATURE IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

E1 VERIFY THE HIGH BEAM HEADLAMP OPERATION

- Key in ON position.
- Place the headlamp switch in the HEADLAMPS ON position.
- Place the multifunction switch in the HIGH BEAM position while observing the headlamps.
- **Do the high beam headlamps illuminate?**

  YES : Go to E2.

  NO : Go to **Pinpoint Test A** .

E2 CHECK THE MULTIFUNCTION SWITCH

- Key in OFF position.
- Disconnect: Multifunction Switch C202

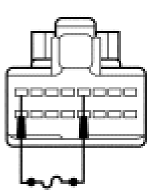

Fig. 23: Checking Multifunction Switch
Courtesy of FORD MOTOR CO.

- Connect a fused (5A) jumper wire between the multifunction switch C202-4, circuit CLF27 (GN/BN), harness side and the multifunction switch C202-8, circuit GD116 (BK/VT), harness side.
- **Do the high beams illuminate?**

YES : REMOVE the jumper wire. INSTALL a new multifunction switch. REFER to **STEERING COLUMN SWITCHES** article. TEST the system for normal operation.

NO : REMOVE the jumper wire. Go to E3.

E3 CHECK CIRCUIT CLF27 (GN/BN) FOR AN OPEN

- Disconnect: SJB C2280b

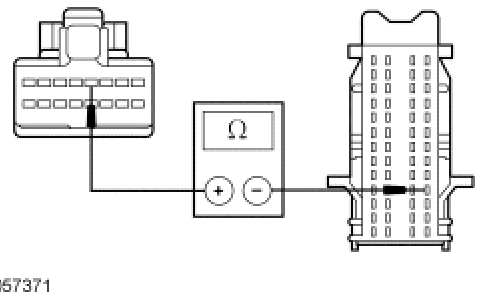

Fig. 24: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the multifunction switch C202-4, circuit CLF27 (GN/BN), harness side and the SJB C2280b-43, circuit CLF27 (GN/BN), harness side.
- **Is the resistance less than 5 ohms?**

YES : Go to E4.

NO : REPAIR the circuit. TEST the system for normal operation.

E4 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

AUTOLAMPS

Special Tools

Illustration	Tool Name	Tool Number

 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

NOTE: For the perimeter lighting feature, refer to HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS article.

NOTE: For the headlamps on with the wipers on feature, refer to WIPERS AND WASHERS article.

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

Exterior Lighting

The SJB monitors the headlamp switch position by sending voltage reference signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is routed to ground.

If the SJB does not detect any of the inputs to the headlamp switch are active (routed to ground) for 5 seconds, the SJB turns on the exterior lights and keeps them on for 10 minutes after the ignition switch is turned off (or 10 minutes from the time the SJB does not detect any headlamp switch input if the ignition switch was already off). Additionally, if the SJB detects multiple circuits short to ground, the SJB implements a planned strategy depending on the multiple inputs received.

If either of these situations occur, the SJB should **NOT** be ruled immediately as being at fault. This is normal behavior of the SJB design as it has detected a fault with the inputs from the headlamp switch.

Autolamps Feature

The SJB monitors the light sensor with a voltage reference signal. The light sensor input to the SJB varies with the ambient light conditions.

When the SJB receives an input from the headlamp switch indicating a request for the autolamps, the SJB monitors the light sensor for the ambient light condition. If the SJB determines the ambient light level is dark, the SJB supplies voltage to the exterior lamps.

If the ignition switch is already in the RUN position and the vehicle enters a dark/lighted area (such as when entering/exiting a non-lighted tunnel during the daytime), the transition from light to dark (or dark to light) needs to last 15 seconds before the SJB turns the exterior lamps on or off. This strategy is to prevent the exterior lamps from unnecessarily flashing on and off.

The SJB does react quicker under extreme light conditions. If the SJB has detected a very dark condition, the exterior lamps are turned on after 1.5 seconds. If the SJB has detected a very high ambient light level, the exterior lamps are turned off after 4 seconds.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical
• Headlamp switch	• Wiring, terminals or connectors • Light sensor • Smart junction box (SJB)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: **Make sure the headlamp switch is in the OFF position.**

NOTE: **Make sure the multifunction switch is in the LOW BEAM position.**

NOTE: **Make sure to use the latest scan tool software release.**

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: **The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.**

5. If the scan tool does not communicate with the VCM:

- Check the VCM connection to the vehicle.
- Check the scan tool connection to the VCM.
- Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.

6. If the scan tool does not communicate with the vehicle:
    - Verify the ignition key is in the ON position.
    - Verify the scan tool operation with a known good vehicle.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
    - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
    - If the network test passes, retrieve and record the continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

DTC Charts

SMART JUNCTION BOX (SJB) DTC CHART

DTC	Description	Action
B1472	Lamp Headlamp Input Circuit Short to Ground	Go to **Pinpoint Test G** .

• The autolamps are on continuously	• Wiring, terminals or connectors • Joint connector • Light sensor • Headlamp switch • Windshield wiper motor • SJB	• Go to **Pinpoint Test G** .

Pinpoint Tests

Pinpoint Test F: The Autolamps Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Headlamps/Autolamps for schematic and connector information.

Normal Operation

When the smart junction box (SJB) detects the headlamp switch in the AUTOLAMPS ON position, the SJB monitors the light sensor input. The light sensor determines the amount of light based on the input received from the ambient lighting conditions. When the ambient light level has reached a point (determined by the internal programming of the SJB), the SJB provides voltage to the headlamps, parking and license plate lamps.

This pinpoint test is intended to diagnose the following:

- Light sensor
- SJB

PINPOINT TEST F: THE AUTOLAMPS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

F1 CHECK THE MANUAL HEADLAMP OPERATION

- Place the headlamp switch in the HEADLAMPS ON position.
- **Do the headlamps operate correctly?**

  YES : Go to F2.

NO : REFER to **Headlamps**.

F2 CHECK FOR VOLTAGE TO THE LIGHT SENSOR

- Key in OFF position.
- Disconnect: Light Sensor C286 or C287
- Key in ON position.
- Place the headlamp switch in the AUTOLAMPS ON position.

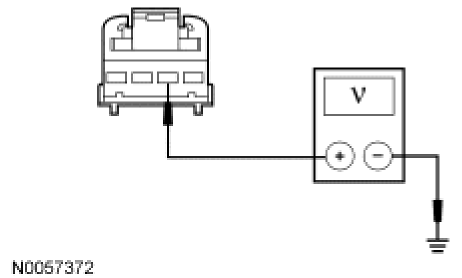

Fig. 25: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- For vehicles with EATC, measure the voltage between the light sensor C286-2, circuit VLF14 (BU/BN), harness side and ground.

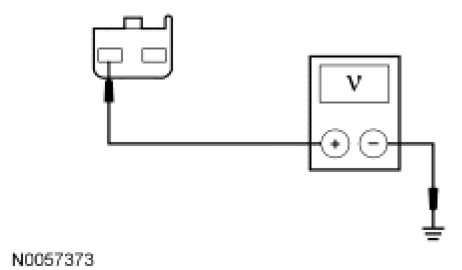

Fig. 26: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- For vehicles with manual temperature control, measure the voltage between the light sensor C287a-A, circuit VLF14 (BU/BN), harness side and ground.
- **Is the voltage approximately 5 volts?**

  YES : INSTALL a new light sensor. REFER to **Light Sensor**. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to F3.

F3 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.

- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test G: The Autolamps Are On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Headlamps/Autolamps for schematic and connector information.

Normal Operation

The smart junction box (SJB) sends a reference voltage signal to the headlamp switch through circuit CLF19 (VT/GN) and a reference voltage signal to the light sensor through circuit VLF14 (BU/BN). Ground for the light sensor is provided by circuit GD115 (BK/GY).

When the headlamp switch is placed in the AUTOLAMPS ON position, the voltage signal is routed to ground. When the SJB detects the headlamp switch in the AUTOLAMPS ON position, the SJB monitors the light sensor input. The light sensor determines the amount of light based on the input received from the ambient lighting conditions. When the ambient light level has reached a point (determined by the internal programming of the SJB), the SJB provides voltage to the headlamps, parking and license plate lamps.

DTC Description	Fault Trigger Conditions
B1472 - Lamp Headlamp Input Circuit Short to Ground	An on-demand DTC that sets when the SJB detects the headlamps on input circuit is shorted to ground.
B1696 - Autolamp On Circuit Short To Ground	An on-demand DTC that sets when the SJB detects the autolamps on input circuit shorted to ground.
B1791 - Autolamp Sensor Input Circuit Open	An on-demand DTC that sets when the SJB detects an open on the light sensor input circuit.
B1793 - Autolamp Sensor Input Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground on the light sensor input circuit.
B2008 - Wipers On Signal Circuit Short to Ground	A n on-demand DTC that sets when the SJB detects the wipers on input circuit is short to ground.
	An on-demand DTC that sets when the SJB detects

B2A22 - Headlamp Off Circuit Open	the headlamp switch off circuit open.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Joint connector
- Light sensor
- Headlamp switch
- Windshield wiper motor
- SJB

PINPOINT TEST G: THE AUTOLAMPS ARE ON CONTINUOUSLY

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

G1 USE THE RECORDED DTCs FROM THE SJB SELF-TEST

- Check the recorded results from the SJB self-test.
- **Was DTC B2008, B1791 or B1793 recorded?**

  YES : For DTC B2008, go to G10.

  For DTC B1791, go to G12.

  For DTC B1793, go to G16.

  NO : Go to G2.

G2 CHECK THE SJB HEADLAMP SWITCH PIDs

- Enter the following diagnostic mode on the diagnostic tool: SJB Data Logger

NOTE: Make sure the headlamp switch is lined up in the correct position when monitoring the PIDs.

- Monitor the SJB headlamp switch PIDs (HD_LMP_S2 and HEAD_L) while moving the headlamp switch through all positions. Refer to the following chart.

Headlamp Switch Position	HD_LMP_S2 Expected Value	HEAD_L Expected Value
Autolamps	AUTOLAMP	OFF

OFF	-	OFF
PARKING LAMPS	-	-
HEADLAMPS	-	HEADLAMP

- **Do the headlamp switch positions agree with the PIDs?**

  YES : Go to G9.

  NO : Go to G3.

G3 CHECK THE HEADLAMP SWITCH

- Key in OFF position.
- Disconnect: Headlamp Switch C205
- Carry out the headlamp switch component test. Refer to appropriate COMPONENT TESTING article.
- **Is the headlamp switch OK?**

  YES : Go to G4.

  NO : INSTALL a new headlamp switch. REFER to **Headlamp Switch**. CLEAR the DTCs. REPEAT the self-test.

G4 CHECK FOR CONTINUITY TO GROUND FROM THE HEADLAMP SWITCH

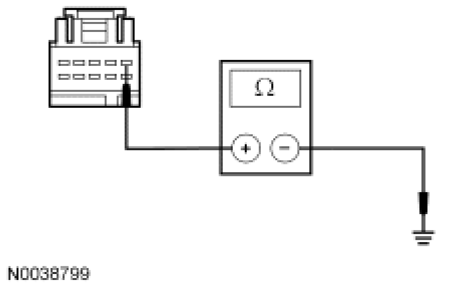

Fig. 27: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

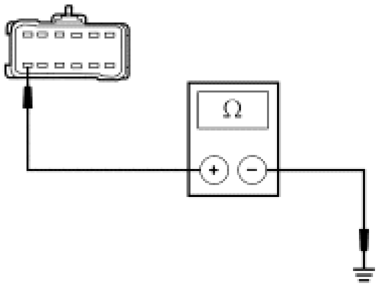
- Measure the resistance between the headlamp switch C205-1, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to G7.

  NO : Go to G5.

G5 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN (JOINT CONNECTOR TO GROUND)

- Disconnect: Joint Connector 6 C2365



N0062217

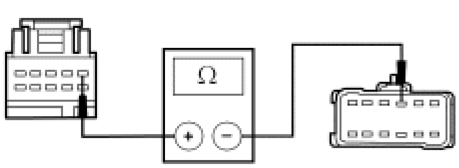
Fig. 28: Measuring Resistance Between Joint Connector 6 C2365-A, Circuit GD116 (BK/VT) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the joint connector 6 C2365-A, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to G6.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G6 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN (HEADLAMP SWITCH TO JOINT CONNECTOR)



N0062218

Fig. 29: Measuring Resistance Between Headlamp Switch C205-1, Circuit GD116 (BK/VT) & Joint Connector 6 C2365-J
Courtesy of FORD MOTOR CO.

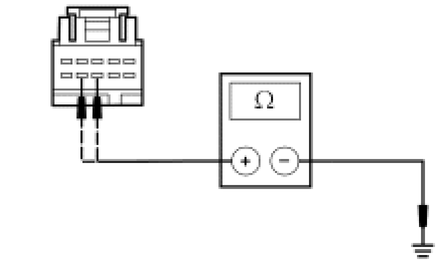
- Measure the resistance between the headlamp switch C205-1, circuit GD116 (BK/VT), harness side and joint connector 6 C2365-J, circuit GD116 (BK/VT), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. CLEAR the DTCs. REPEAT the self-test.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G7 CHECK THE HEADLAMP SWITCH INPUT CIRCUITS FOR A SHORT TO GROUND

- Disconnect: SJB C2280b



N0077747

Fig. 30: Measuring Resistance Between Headlamp Switch, Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch, harness side and ground as follows:

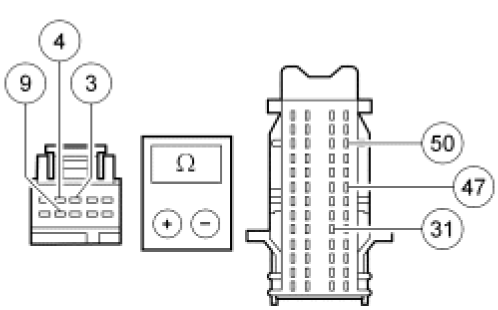
Connector-Pin	Circuit
C205-9	CLF19 (VT/GN)
C205-8	CLF18 (BU/WH)

- **Are the resistances greater than 10,000 ohms?**

  YES : Go to G8.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

G8 CHECK THE HEADLAMP SWITCH INPUT CIRCUITS FOR AN OPEN



N0077748

Fig. 31: Measuring Resistance Between Headlamp Switch, Harness Side & SJB
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch, harness side and the SJB, harness side as follows:

Headlamp Switch	SJB Connector-	Circuit

Connector-Pin	Pin	
C205-9	C2280b-50	CLF19 (VT/GN)
C205-4	C2280b-47	CLF23 (WH/VT)
C205-3	C2280b-31	CLS34 (GY)

- **Are the resistances less than 5 ohms?**

  YES : Go to G18.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

G9 CHECK FOR VOLTAGE TO THE LIGHT SENSOR

- Key in OFF position.
- Disconnect: Light Sensor C286 or C287
- Key in ON position.
- Place the headlamp switch in the AUTOLAMPS ON position.

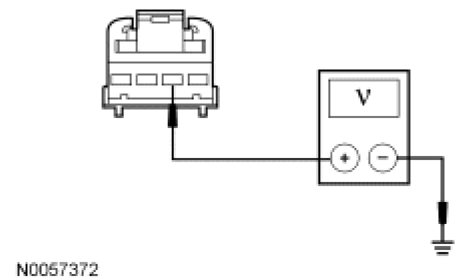


Fig. 32: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- For vehicles with EATC, measure the voltage between the light sensor C286-2, circuit VLF14 (BU/BN), harness side and ground.

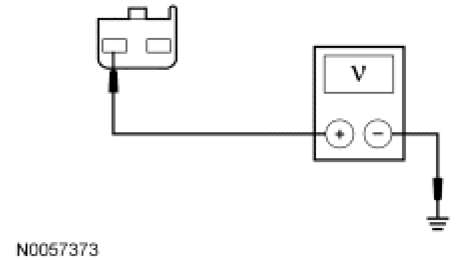

Fig. 33: Checking Circuit For Voltage

Courtesy of FORD MOTOR CO.

- For vehicles with manual temperature control, measure the voltage between the light sensor C287a-A, circuit VLF14 (BU/BN), harness side and ground.
- **Is the voltage approximately 5 volts?**

  YES : INSTALL a new light sensor. REFER to **Light Sensor**. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to G18.

G10 CHECK THE WINDSHIELD WIPER MOTOR

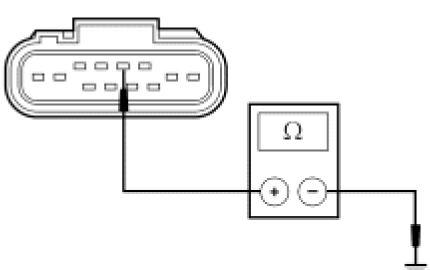
- Disconnect: Windshield Wiper Motor C1552
- Enter the following diagnostic mode on the diagnostic tool: SJB Self-Test
- Repeat the SJB self-test.
- **Is DTC B2008 still present?**

  YES : Go to G11.

  NO : INSTALL a new windshield wiper motor. REFER to **WIPERS AND WASHERS** article. TEST the system for normal operation.

G11 CHECK CIRCUIT CRW01 (WH) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280f



N0046955

Fig. 34: Checking Circuit For Short To Ground
Courtesy of FORD MOTOR CO.

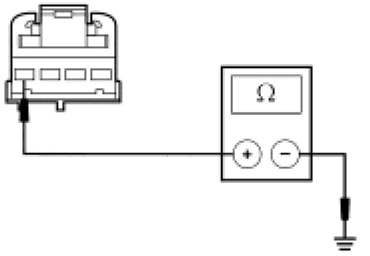
- Measure the resistance between the windshield wiper motor C1552-2, circuit CRW01 (WH), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to G18.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G12 CHECK CIRCUIT GD115 (BK/GY) FOR AN OPEN

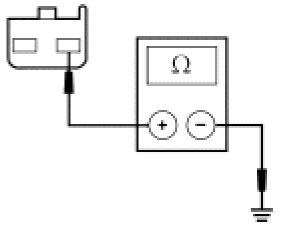
- Key in OFF position.
- Disconnect: Light Sensor C286 or C287



N0038803

Fig. 35: Measuring Resistance
Courtesy of FORD MOTOR CO.

- On vehicles with EATC, measure the resistance between the light sensor C286-4, circuit GD115 (BK/GY), harness side and ground.



N0057377

Fig. 36: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

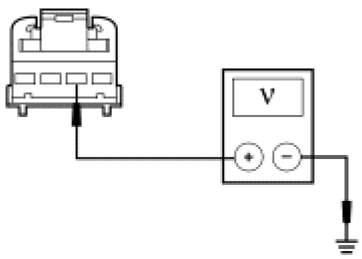
- On vehicles with manual climate control, measure the resistance between the light sensor C287-B, circuit GD115 (BK/GY), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to G13.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G13 CHECK CIRCUIT VLF14 (BU/BN) FOR A SHORT TO VOLTAGE

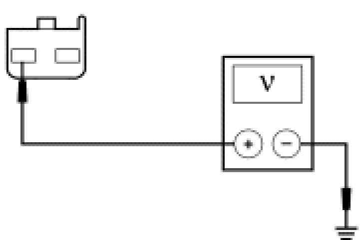
- Disconnect: SJB C2280b
- Key in ON position.



N0057372

Fig. 37: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- On vehicles with EATC, measure the voltage between the light sensor C286-2, circuit VLF14 (BU/BN), harness side and ground.



N0057373

Fig. 38: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- On vehicles with manual climate control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.
- **Is any voltage present?**

  YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to G14.

G14 CHECK CIRCUIT VLF14 (BU/BN) FOR AN OPEN

- Key in OFF position.

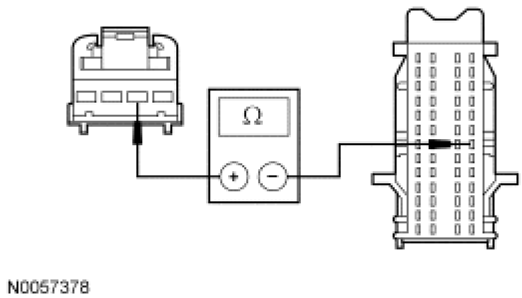


Fig. 39: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

- On vehicles with EATC, measure the resistance between the light sensor C286-2, circuit VLF14 (BU/BN), harness side and the SJB C2280b-46, circuit VLF14 (BU/BN), harness side.

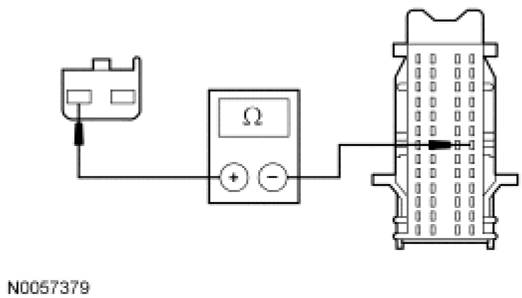

Fig. 40: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

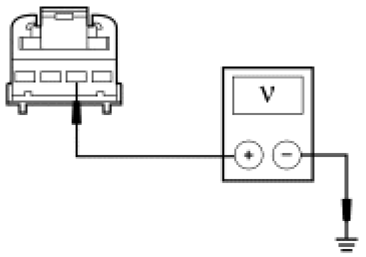
- On vehicles with manual climate control, measure the resistance between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and the SJB C2280b-46, circuit VLF14 (BU/BN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to G15.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G15 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC B1791)

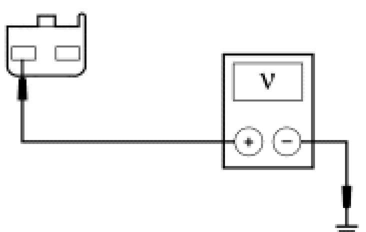
- Connect: SJB C2280b
- Key in ON position.
- Place the headlamp switch in the AUTOLAMPS ON position.



N0057372

Fig. 41: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- On vehicles with EATC, measure the voltage between the light sensor C286-2, circuit VLF14 (BU/BN), harness side and ground.



N0057373

Fig. 42: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

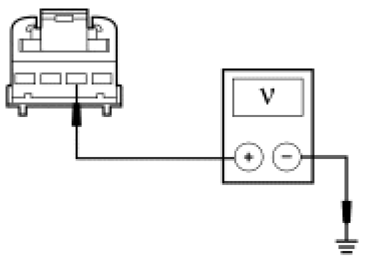
- On vehicles with manual climate control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.
- **Is the voltage approximately 5 volts?**

  YES : INSTALL a new light sensor. REFER to **Light Sensor**. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to G18.

G16 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC B1793)

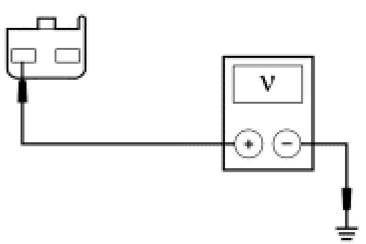
- Disconnect: Light Sensor C286 or C287
- Key in ON position.
- Place the headlamp switch in the AUTOLAMPS ON position.



N0057372

Fig. 43: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- On vehicles with EATC, measure the voltage between the light sensor C286-2, circuit VLF14 (BU/BN), harness side and ground.



N0057373

Fig. 44: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- On vehicles with manual temperature control, measure the voltage between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.
- **Is the voltage approximately 5 volts?**

  YES : INSTALL a new light sensor. REFER to **Light Sensor**. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to G17.

G17 CHECK CIRCUIT VLF14 (BU/BN) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280b

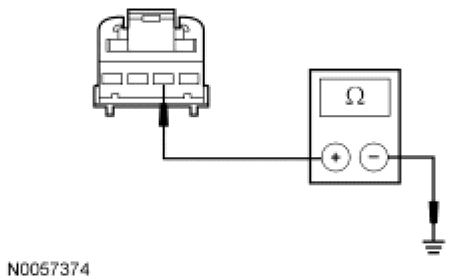


Fig. 45: Checking Circuit For Short To Ground
Courtesy of FORD MOTOR CO.

- On vehicles with EATC, measure the resistance between the light sensor C286-2, circuit VLF14 (BU/BN), harness side and ground.

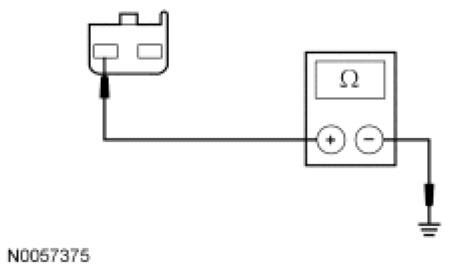

Fig. 46: Checking Circuit For Short To Ground
Courtesy of FORD MOTOR CO.

- On vehicles with manual temperature control, measure the resistance between the light sensor C287-A, circuit VLF14 (BU/BN), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to G18.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

G18 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES**

article. TEST the system for normal operation.

NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

STOPLAMPS

Special Tools

Illustration	Tool Name	Tool Number
 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The SJB monitors the input from the stoplamp switch. When the brake pedal is applied, voltage is routed to the SJB and the high mounted stoplamp. The SJB then supplies voltage to the stoplamps.

Field-Effect Transistor (FET) Protection

The SJB utilizes a FET protective circuit strategy for many of its outputs (for example, the headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault is detected. A continuous DTC is stored at that time of the fault. The circuit then resets after a customer demand of the function (switching the component on, battery saver being energized). When an excessive circuit load occurs several times, the module shuts down the output until a repair procedure is carried out. At the same time, the continuous DTC that was stored on the first failure, does not clear by a command to clear the continuous DTCs. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful on-demand self-test proves that the fault has been repaired. After the on-demand self-test has successfully completed (no on-demand DTCs present), the continuous DTC clears and the circuit function returns.

Each circuit has 3 predefined levels of short circuit tolerance established in the module based on each circuits' capability. When the first or second level is reached, the continuous DTC associated with the circuit sets along with DTC B106E. These DTCs may be cleared using the Clear DTC operation on the scan tool as long as the fault itself has been corrected. If any of the circuits are shorted past the third level, then DTCs B106F and B1342 set along with the associated continuous DTC. This DTC cannot be cleared and the module must be replaced.

The SJB FET protected output circuits for the stoplamp system are for the LH rear stop/turn lamp output and the RH rear stop/turn lamp output circuits.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical
• Stoplamp switch	• Battery junction box (BJB) fuse 71 (10A) (stoplamp switch) • Smart junction box (SJB) fuse 6 (20A) (rear stoplamps) • Bulb(s) • Bulb holder(s) • Wiring, terminals or connectors • SJB

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

NOTE: Make sure the multifunction switch is in the LOW BEAM position.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
   - If the network test passes, retrieve and record the continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

Pinpoint Tests

Pinpoint Test H: All The Stoplamps Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

The stoplamp switch is supplied voltage through circuit SBB71 (WH/RD) from the battery junction box (BJB). When the brake pedal is applied, the stoplamp switch routes voltage to the smart junction box (SJB) and the high mounted stoplamp through circuit CCB08 (VT/WH).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Stoplamp switch

PINPOINT TEST H: ALL THE STOPLAMPS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

H1 CHECK CIRCUIT SBB71 (WH/RD) FOR AN OPEN

- Key in OFF position.
- Disconnect: Stoplamp Switch C2064

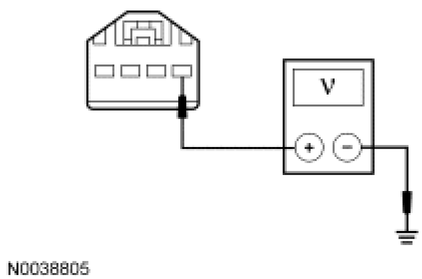

Fig. 47: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the stoplamp switch C2064-1, circuit SBB71 (WH/RD), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to H2.

  NO : VERIFY the BJB fuse 71 (10A) is OK. If OK, REPAIR the circuit. TEST the system for normal operation.

H2 CHECK THE STOPLAMP SWITCH

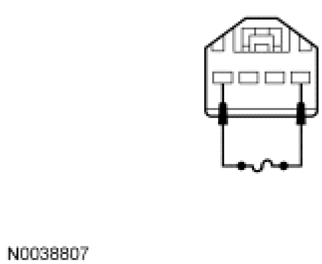

Fig. 48: Checking Stoplamp Switch
Courtesy of FORD MOTOR CO.

- Connect a fused (5A) jumper wire between the stoplamp switch C2064-1, circuit SBB71 (WH/RD), harness side and the stoplamp switch C2064-4, circuit CCB08 (VT/WH), harness side.
- **Are the stoplamps illuminated?**

  YES : INSTALL a new stoplamp switch. REFER to **Stoplamp Switch**. TEST the system for normal operation.

  NO : REPAIR circuit CCB08 (VT/WH) for an open. TEST the system for normal operation.

Pinpoint Test I: One Or More Stoplamps Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

When the brake pedal is applied, the stoplamp switch routes voltage to the smart junction box (SJB) and the high mounted stoplamp through circuit CCB08 (VT/WH).

When the SJB detects the brake pedal is applied, the SJB provides voltage to the LH and RH rear stoplamps through circuits CLS18 (GY/BN) and CLS19 (VT/OG), respectively.

Ground for the LH and RH rear stoplamps is provided through circuits GD149 (BK/GY) and GD151 (BK/GN), respectively. Ground for the high mounted stoplamp is provided through circuit GD149 (BK/GY).

DTC Description	Fault Trigger Conditions
B2044 - Left Rear Stop Lamp Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground on the LH rear stop/turn lamp voltage supply circuit.
B2045 - Left Rear Stop Lamp Circuit Open	An on-demand DTC that sets when the SJB detects an open on the LH rear stop/turn lamp voltage supply circuit.
B2046 - Right Rear Stop Lamp Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground on the RH rear stop/turn lamp voltage supply circuit.
B2047 - Right Rear Stop Lamp Circuit Open	An on-demand DTC that sets when the SJB detects an open on the RH rear stop/turn lamp voltage supply circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Bulb holder
- High mounted stoplamp
- SJB

PINPOINT TEST I: ONE OR MORE STOPLAMPS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

I1 DETERMINE THE INOPERATIVE STOPLAMP

- Key in OFF position.
- Apply the brake pedal and observe the stoplamps.
- **Is the high mounted stoplamp illuminated?**

  YES : Go to I4.

  NO : Go to I2.

I2 CHECK CIRCUIT GD149 (BK/GY) FOR AN OPEN

- Disconnect: High Mounted Stoplamp C904

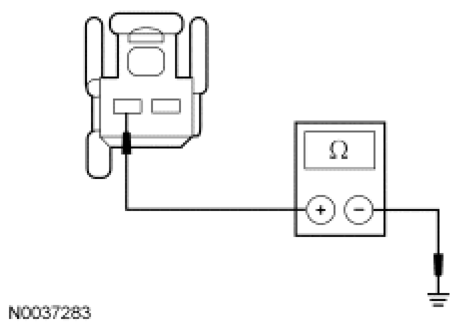

Fig. 49: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the high mounted stoplamp C904-2, circuit GD149 (BK/GY), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to I3.

  NO : REPAIR the circuit. TEST the system for normal operation.

I3 CHECK CIRCUIT CCB08 (VT/WH) FOR AN OPEN (TO HIGH MOUNTED STOPLAMP)

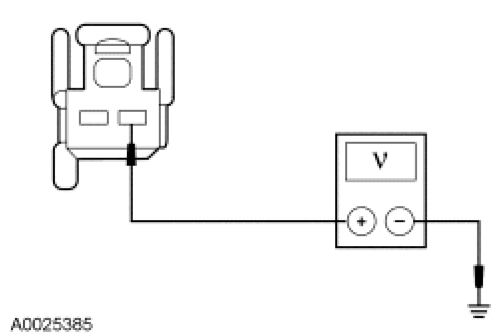

Fig. 50: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- While applying the brake pedal, measure the voltage between the high mounted stoplamp C904-1, circuit CCB08 (VT/WH), harness side and ground.

- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new high mounted stoplamp. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

I4 USE THE RECORDED DTCs FROM THE SJB SELF-TEST

- Check the recorded results from the SJB on-demand self-test.
- **Are any DTCs present?**

  YES : For DTCs B2044 or B2046, go to I6.

  For DTCs B2045 or B2047, go to I8.

  NO : Go to I5.

I5 CHECK CIRCUIT CCB08 (VT/WH) FOR AN OPEN (TO SJB)

- Disconnect: SJB C2280b

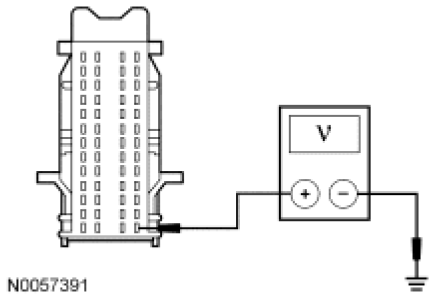

Fig. 51: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- While applying the brake pedal, measure the voltage between the SJB C2280b-40, circuit CCB08 (VT/WH), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to I11.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

I6 CHECK THE BULB HOLDER

- Disconnect: LH Rear Lamp C412 (DTC B2044)
- Disconnect: RH Rear Lamp C415 (DTC B2046)
- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB Self-Test
- Repeat the SJB on-demand self-test.
- **Is on-demand DTC B2044 or B2046 retrieved again?**

  YES : Go to I7.

  NO : INSTALL a new bulb holder. CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

I7 CHECK CIRCUIT CLS18 (GY/BN) OR CIRCUIT CLS19 (VT/OG) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280d

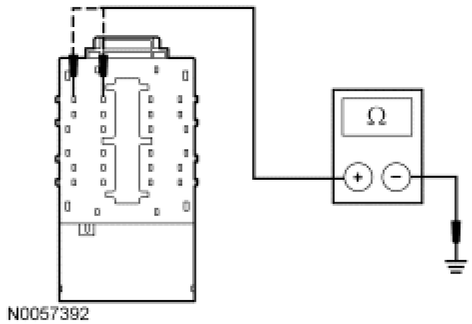

Fig. 52: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the SJB C2280d-25, circuit CLS18 (GY/BN), harness side and ground; or between the SJB C2280d-26, circuit CLS19 (VT/OG), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to I11.

  NO : REPAIR the circuit in question. RUN the on-demand self-test (required to clear certain DTCs). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

I8 CHECK CIRCUIT GD149 (BK/GY) (LH STOPLAMP) OR CIRCUIT GD151 (BK/GN) (RH STOPLAMP) FOR AN OPEN

- Disconnect: Inoperative Rear Lamp

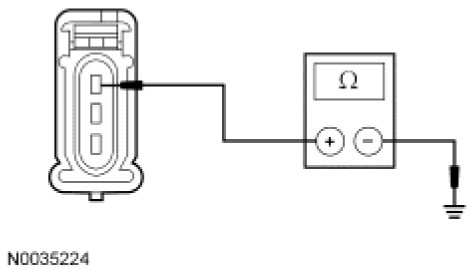

Fig. 53: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the LH rear lamp C412-1, circuit GD149 (BK/GY), harness side and ground; or between the RH rear lamp C415-1, circuit GD151 (BK/GN), harness side and ground.

- **Is the resistance less than 5 ohms?**

  YES : Go to I9.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

I9 CHECK FOR VOLTAGE TO THE BULB HOLDER

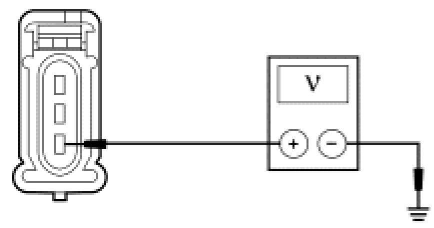

Fig. 54: Measuring Voltage Between LH Rear Lamp C412-3 & C415-3, Circuit CLS18 (GY/BN) & CLS19 (VT/OG)
Courtesy of FORD MOTOR CO.

- While applying the brake pedal, measure the voltage between the LH rear lamp C412-3, circuit CLS18 (GY/BN), harness side and ground; or between the RH rear lamp C415-3, circuit CLS19 (VT/OG), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new bulb holder. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to I10.

I10 CHECK THE CIRCUIT CLS18 (GY/BN) OR CIRCUIT CLS19 (VT/OG) FOR AN OPEN

- Disconnect: SJB C2280d

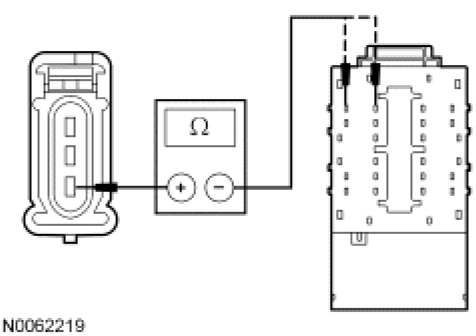

Fig. 55: Measuring Resistance Between LH Rear Lamp C412-3, Circuit CLS18 (GY/BN) & SJB C2280D-25
Courtesy of FORD MOTOR CO.

- Measure the resistance between the LH rear lamp C412-3, circuit CLS18 (GY/BN), harness side and the SJB C2280d-25, circuit CLS18 (GY/BN), harness side; or between the RH rear lamp C415-3, circuit CLS19 (VT/OG), harness side and the SJB C2280d-26, circuit CLS19 (VT/OG), harness side.

- **Is the resistance less than 5 ohms?**

  YES : Go to I11.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

I11 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test J: The Stoplamps Are On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

When the brake pedal is applied, the stoplamp switch routes voltage to the smart junction box (SJB), the high mounted stoplamp and the PCM through circuit CCB08 (VT/WH). When the SJB detects the brake pedal applied, the SJB provides voltage to the LH and RH rear stoplamps through circuits CLS18 (GY/BN) and CLS19 (VT/OG), respectively. If equipped with trailer tow, voltage is also supplied to the respective trailer tow stop/turn relay.

- DTC B1485 (Brake Pedal Input Short to Battery) - is an on-demand DTC that sets when the SJB detects a short to voltage from the stoplamp switch input circuit.
- DTC B2045 (Left Rear Stop Lamp Circuit Open) - is an on-demand DTC that sets when the SJB detects a short to voltage on the LH rear stop/turn lamp voltage supply circuit.
- DTC B2047 (Right Rear Stop Lamp Circuit Open) - is an on-demand DTC that sets when the SJB detects a short to voltage on the RH rear stop/turn lamp voltage supply circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Stoplamp switch
- PCM
- SJB

PINPOINT TEST J: THE STOPLAMPS ARE ON CONTINUOUSLY

J1 DETERMINE IF ALL THE STOPLAMPS ARE ILLUMINATED

- Key in OFF position.
- Observe the stoplamps with the brake pedal released.
- **Are all of the stoplamps illuminated?**

  YES : Go to J3.

  NO : Go to J2.

J2 CHECK THE STOPLAMPS VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Disconnect: SJB C2280d
- **Do the stoplamps continue to illuminate?**

  YES : If the LH rear lamp continues to illuminate, REPAIR circuit CLS18 (GY/BN). CLEAR the DTCs. REPEAT the self-test.

  If the RH rear lamp continues to illuminate, REPAIR circuit CLS19 (VT/OG). CLEAR the DTCs. REPEAT the self-test.

  NO : Go to J7.

J3 CHECK THE STOPLAMP SWITCH

- Disconnect: Stoplamp Switch C2064
- **Do the stoplamps continue to illuminate?**

  YES : Go to J4.

  NO : INSTALL a new stoplamp switch. REFER to **Stoplamp Switch**. CLEAR the DTCs. REPEAT the self-test.

J4 CHECK THE PCM

- Disconnect: PCM C175b
- **Do the stoplamps continue to illuminate?**

  YES : Go to J5.

  NO : Go to J6.

J5 CHECK CIRCUIT CCB08 (VT/WH) FOR A SHORT TO VOLTAGE

- Disconnect: SJB C2280b
- **Does the high mounted stoplamp continue to illuminate?**

  YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to J7.

J6 CHECK FOR CORRECT PCM OPERATION

- Disconnect all the PCM connectors.
- Check for:
  - corrosion
  - damaged pins

  - pushed-out pins
- Connect all the PCM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new PCM. REFER to **ELECTRONIC ENGINE CONTROLS** article. CLEAR the DTCs. REPEAT the self-test.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

J7 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

TURN SIGNAL AND HAZARD LAMPS

Special Tools

Illustration	Tool Name	Tool Number
 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
	Flex Probe Kit	105-R025C or equivalent

 ST2574-A		

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The SJB monitors the multifunction switch position by sending multiple voltage reference signals to the multifunction switch. When the multifunction switch is in the LH or RH TURN positions, or the hazard lamp switch is pressed, that input signal is routed to ground.

When the SJB receives a request for a turn signal or hazard lamps, the SJB supplies voltage to the appropriate turn lamps.

The timed on/off cycle is determined by the SJB and is set to flash approximately 80 times per minute if both the front and rear turn lamps operate correctly. If an individual turn signal lamp is inoperative, the SJB flashes the remaining turn lamp approximately 160 times per minute.

The timed on/off cycle for the hazard lamps is set to flash approximately 80 times per minute.

Field-Effect Transistor (FET) Protection

The SJB utilizes a FET protective circuit strategy for many of its outputs (for example, the headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault is detected. A continuous DTC is stored at that time of the fault. The circuit then resets after a customer demand of the function (switching the component on, battery saver being energized). When an excessive circuit load occurs several times, the module shuts down the output until a repair procedure is carried out. At the same time, the continuous DTC that was stored on the first failure, does not clear by a command to clear the continuous DTCs. The module does not allow this code to be cleared or the circuit restored to normal operation until a successful on-demand self-test proves that the fault has been repaired. After the on-demand self-test has successfully completed (no on-demand DTCs present), the continuous DTC clears and the circuit function returns.

Each circuit has 3 predefined levels of short circuit tolerance established in the module based on each circuits' capability. When the first or second level is reached, the continuous DTC associated with the circuit sets along with DTC B106E. These DTCs may be cleared using the Clear DTC operation on the scan tool as long as the fault itself has been corrected. If any of the circuits are shorted past the third level, then DTCs B106F and B1342 set along with the associated continuous DTC. This DTC cannot be cleared and the module must be replaced.

The SJB FET protected output circuits for the turn lamp system are for the LH front turn lamp output and the RH front turn lamp output circuits. The rear turn lamps utilize the stoplamp circuitry and are also protected. For information regarding the rear stoplamps, refer to **Stoplamps**.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical
• Multifunction switch • Hazard flasher lamp switch	• Bulb(s) • Wiring, terminals or connectors • Smart junction box (SJB)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

NOTE: Make sure the multifunction switch is in the LOW BEAM position.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.

- If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

Pinpoint Tests

Pinpoint Test K: The Turn Signal Lamps Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

The smart junction box (SJB) sends reference signals to the multifunction switch through circuit CLS39 (VT/WH) (LH turn input) and circuit CLS41 (GY/YE) (RH turn input). When the multifunction switch is switched to the LH or RH TURN positions, the voltage signal is routed to ground. When the SJB detects the multifunction switch in the LH or RH TURN position, the SJB sends voltage to the appropriate turn lamps.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Multifunction switch
- SJB

PINPOINT TEST K: THE TURN SIGNAL LAMPS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

K1 CHECK FOR CORRECT HIGH BEAM OPERATION

- Place the headlamp switch in the HEADLAMPS ON position.

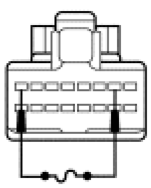
- Place the multifunction switch in the HIGH BEAM position while observing the high beam headlamps.
- **Do the high beams operate correctly?**

  YES : PLACE the headlamp switch in the OFF position. Go to K2.

  NO : REFER to **Headlamps**.

K2 CHECK THE MULTIFUNCTION SWITCH

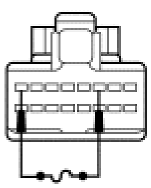
- Key in OFF position.
- Disconnect: Multifunction Switch C202



N0069012

Fig. 56: Connecting Fused (5A) Jumper Wire Between Multifunction Switch C202-2 & C202-8, CLS39 (VT/WH) & GD116 (BK/VT)
Courtesy of FORD MOTOR CO.

- For an inoperative LH turn signal, connect a fused (5A) jumper wire between the multifunction switch C202-2, circuit CLS39 (VT/WH), harness side and the multifunction switch C202-8, circuit GD116 (BK/VT), harness side.



N0069013

Fig. 57: Connecting Fused (5A) Jumper Wire Between Multifunction Switch C202-3, CLS41 (GY/YE) & GD116 (BK/VT)
Courtesy of FORD MOTOR CO.

- For an inoperative RH turn signal, connect a fused (5A) jumper wire between the multifunction switch C202-3, circuit CLS41 (GY/YE), harness side and the multifunction switch C202-3, circuit GD116 (BK/VT), harness side.
- Key in ON position.

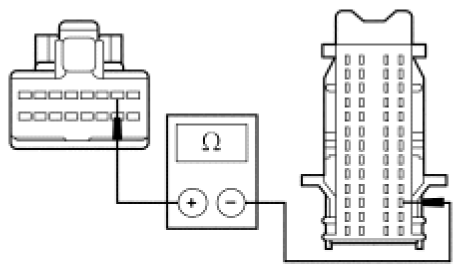
- **Do the turn signals in question flash on and off?**

  YES : REMOVE the jumper wire. INSTALL a new multifunction switch. REFER to **STEERING COLUMN SWITCHES** article. TEST the system for normal operation.

  NO : REMOVE the jumper wire. Go to K3.

K3 CHECK CIRCUIT CLS39 (VT/WH) (LH TURN SIGNAL) OR CLS41 (GY/YE) (RH TURN SIGNAL) FOR AN OPEN

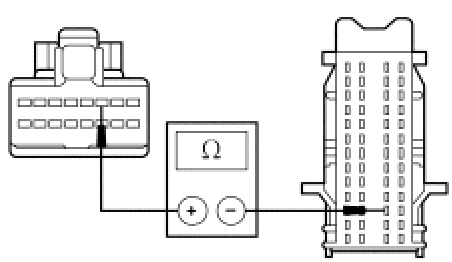
- Disconnect: SJB C2280b



N0072831

Fig. 58: Measuring Resistance Between Multifunction Switch C202-2, Circuit CLS39 (VT/WH) & SJB C2280B-42
Courtesy of FORD MOTOR CO.

- For an inoperative LH turn signal, measure the resistance between the multifunction switch C202-2, circuit CLS39 (VT/WH), harness side and the SJB C2280b-42, circuit CLS39 (VT/WH), harness side.



N0072832

Fig. 59: Measuring Resistance Between Multifunction Switch C202-3, Circuit CLS41 (GY/YE) & SJB C2280B-29
Courtesy of FORD MOTOR CO.

- For an inoperative RH turn signal, measure the resistance between the multifunction switch C202-3, circuit CLS41 (GY/YE), harness side and the SJB C2280b-29, circuit CLS41 (GY/YE), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to K4.

NO : REPAIR the circuit in question. TEST the system for normal operation.

K4 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test L: The Turn Signal Lamps Are Always On

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

The smart junction box (SJB) sends reference signals to the multifunction switch through circuits CLS39 (VT/WH) (LH turn input) and CLS41 (GY/YE) (RH turn input). When the multifunction switch is switched to the LH or RH TURN positions, the voltage signal is routed to ground. When the SJB detects the multifunction switch in the LH or RH TURN position, the SJB sends voltage to the appropriate turn lamps.

- DTC B2281 (Right Turn Switch Short to Ground) - is an on-demand DTC that sets when the SJB detects the RH turn signal switch input is short to ground.
- DTC B2282 (Left Turn Switch Short to Ground) - is an on-demand DTC that sets when the SJB detects the LH turn signal switch input is short to ground.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Multifunction switch
- SJB

PINPOINT TEST L: THE TURN SIGNAL LAMPS ARE ALWAYS ON

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

L1 CHECK THE MULTIFUNCTION SWITCH

- Key in OFF position.
- Disconnect: Multifunction Switch C202
- Key in ON position.
- **Do the turn lamps continue to flash on and off?**

  YES : Go to L2.

  NO : INSTALL a new multifunction switch. REFER to **STEERING COLUMN SWITCHES** article. CLEAR the DTCs. REPEAT the self-test.

L2 CHECK CIRCUIT CLS39 (VT/WH) (LH TURN SIGNAL) OR CIRCUIT CLS41 (GY/YE) (RH TURN SIGNAL) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280b

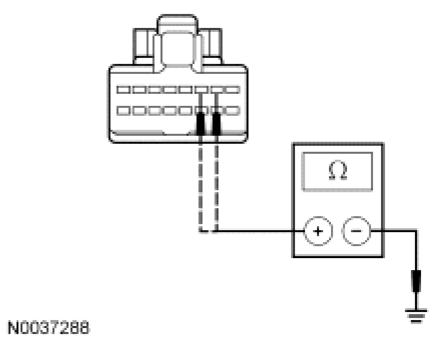


Fig. 60: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the multifunction switch C202-2 (LH turn lamps), circuit CLS39 (VT/WH), harness side and ground; or between the multifunction switch C202-3 (RH turn lamps), circuit CLS41 (GY/YE), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to L3.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

L3 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR any DTCs. REPEAT the self-test.

Pinpoint Test M: One Turn Signal/Hazard Lamp Is Inoperative/Always On

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

When the smart junction box (SJB) detects the multifunction switch in the LH TURN position, the SJB provides voltage through circuit CLS21 (BU/GN) to the LH front turn lamp. When the SJB detects the multifunction switch in the RH TURN position, the SJB provides voltage through circuit CLS25 (YE/VT) to the RH front turn lamp. Circuits GD123 (BK/GY) and GD120 (BK/GN) provide ground for the LH and RH front turn lamps, respectively. The rear turn lamps are controlled utilizing the rear stoplamp circuitry.

DTC Description	Fault Trigger Conditions
B2A27 - Right Front Turn Lamp Circuit Open	An on-demand DTC that sets when the SJB detects an open or short to voltage on the RH front turn lamp voltage supply circuit.
B2A28 - Right Front Turn Lamp Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground on the RH front turn lamp voltage supply circuit.
B2A29 - Left Front Turn Lamp Circuit Open	An on-demand DTC that sets when the SJB detects an open or short to voltage on the LH front turn lamp voltage supply circuit.
B2A2A - Left Front Turn Lamp Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground on the LH front turn lamp voltage supply circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Joint connector
- Bulb holder (Edge)
- Headlamp assembly (MKX)
- SJB

PINPOINT TEST M: ONE TURN SIGNAL/HAZARD LAMP IS INOPERATIVE/ALWAYS ON

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

M1 CHECK THE STOPLAMPS

- Apply and release the brake pedal while observing the stoplamps.
- **Do the stoplamps operate correctly?**

  YES : Go to M2.

  NO : REFER to **Stoplamps**.

M2 DETERMINE IF A TURN LAMP IS ALWAYS ON

- Key in ON position.
- Monitor the turn lamps.
- **Is either front turn lamp always on?**

  YES : Go to M3.

  NO : Go to M4.

M3 CHECK CIRCUIT CLS21 (BU/GN) (LH TURN) OR CIRCUIT CLS25 (YE/VT) (RH TURN) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: SJB C2280f
- Key in ON position.
- **Does the front turn lamp in question continue to illuminate?**

  YES : For the LH front turn lamp, REPAIR circuit CLS21 (BU/GN). CLEAR the DTCs. REPEAT the self-test.

  For the RH front turn lamp, REPAIR circuit CLS25 (YE/VT). CLEAR the DTCs. REPEAT the self-test.

  NO : Go to M11.

M4 USE THE RECORDED DTCs FROM THE SJB SELF-TEST

- Check the recorded results from the SJB on-demand self-test.
- **Was DTC B2A28 or B2A2A present?**

  YES : Go to M5.

  NO : Go to M7.

M5 CHECK THE BULB HOLDER FOR A SHORT TO GROUND

- Disconnect: Inoperative Front Turn Lamp
- Enter the following diagnostic mode on the diagnostic tool: SJB Self-Test
- Repeat the SJB on-demand self-test.
- **Is DTC B2A28 or B2A2A still present?**

  YES : Go to M6.

  NO : INSTALL a new bulb holder. TEST the system for normal operation.

M6 CHECK CIRCUIT CLS21 (BU/GN) (DTC B2A2A) OR CIRCUIT CLS25 (YE/VT) (DTC B2A28) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280f

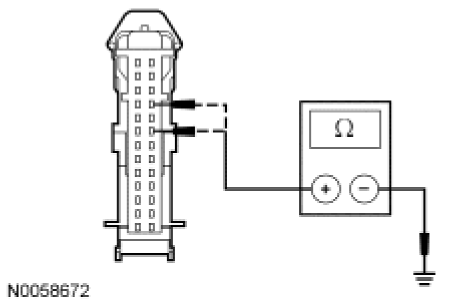

Fig. 61: Checking Circuits For Short To Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the SJB C2280f-21 (DTC B2A2A), circuit CLS21 (BU/GN), harness side and ground; or between the SJB C2280f-23 (DTC B2A28), circuit CLS25 (YE/VT), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to M11.

  NO : REPAIR the circuit in question. RUN the on-demand self-test (required to clear certain DTCs). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

M7 CHECK THE GROUND CIRCUIT FOR AN OPEN

NOTE:	**Make sure the headlamps operate correctly before continuing with diagnostics for the turn lamps.**

- Key in OFF position.
- Disconnect: Inoperative Turn Lamp

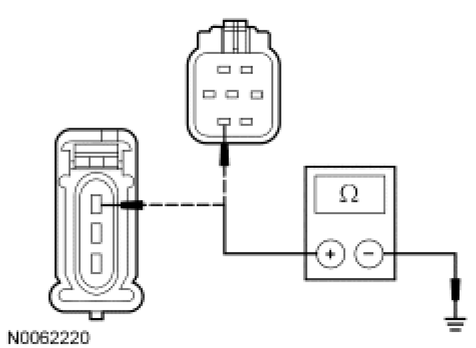

Fig. 62: Measuring Resistance Between Inoperative Turn Lamp, Harness Side & Ground

Courtesy of FORD MOTOR CO.

- Measure the resistance between the inoperative turn lamp, harness side and ground as follows

Inoperative Turn Lamp	Connector-Pin	Circuit
Edge		
LH front	C1023-1	GD123 (BK/GY)
RH front	C1043-1	GD120 (BK/GN)
MKX		
LH front headlamp	C1021a-6	GD123 (BK/GY)
RH front headlamp	C1041a-6	GD123 (BK/GY)

- **Is the resistance less than 5 ohms?**

YES : Go to M9.

NO : For MKX, REPAIR the ground circuit in question for an open. CLEAR the DTCs. REPEAT the self-test.

For Edge LH front turn lamp, REPAIR circuit GD123 (BK/GY) for an open. CLEAR the DTCs. REPEAT the self-test.

For the Edge RH front turn lamp, go to M8.

M8 CHECK CIRCUIT GD120 (BK/GN) FOR AN OPEN

- Disconnect: Joint Connector 7 C2200

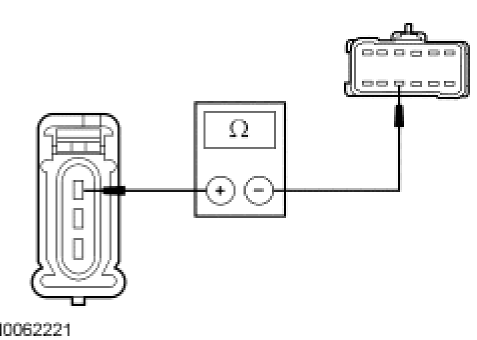

Fig. 63: Measuring Resistance Between RH Front Turn Lamp C1043-1, Circuit GD120 (BK/GN) & Joint Connector 7 C2200-C
Courtesy of FORD MOTOR CO.

- Measure the resistance between the RH front turn lamp C1043-1, circuit GD120 (BK/GN), harness side and the joint connector 7 C2200-C, circuit GD120 (BK/GN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. CLEAR the DTCs. REPEAT the self-test.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

M9 CHECK FOR VOLTAGE TO THE TURN LAMP

- Connect: SJB C2280e
- Turn the hazard lamps on.

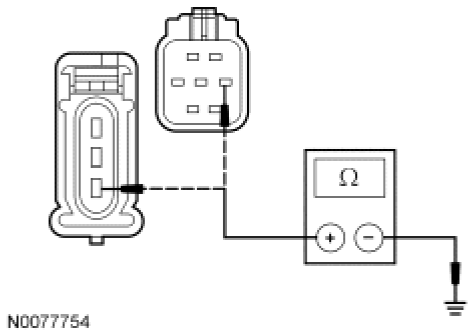

Fig. 64: Measuring Resistance Between Inoperative Turn Lamp, Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the inoperative turn lamp, harness side and ground as follows:

Inoperative Turn Lamp Connector-Pin	Circuit
Edge	
LH front C1023-3	CLS21 (BU/GN)
RH front C1043-3	CLS25 (YE/VT)
MKX	
LH front headlamp C1021a-5	CLS21 (BU/GN)
RH front headlamp C1041a-5	CLS25 (YE/VT)

- **Does the voltage alternate from 0 volts to greater than 10 volts?**

  YES : For Edge, INSTALL a new bulb holder. CLEAR the DTCs. REPEAT the self-test.

For MKX, REPAIR or INSTALL a new headlamp. REFER to **Headlamp Assembly**. CLEAR the DTCs. REPEAT the self-test.

NO : Go to M10.

M10 CHECK CIRCUIT CLS21 (BU/GN) (LH TURN) OR CIRCUIT CLS25 (YE/VT) (RH TURN) FOR AN OPEN

- Disconnect: SJB C2280f

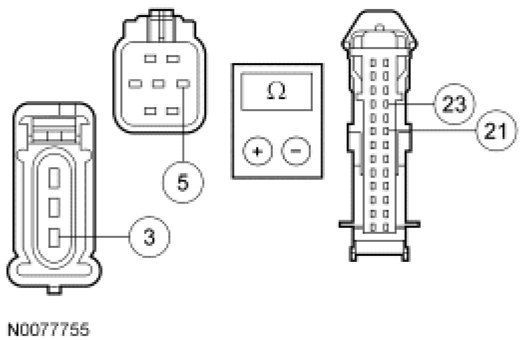

Fig. 65: Measuring Resistance Between Inoperative Turn Lamp, Harness Side & SJB
Courtesy of FORD MOTOR CO.

- Measure the resistance between the inoperative turn lamp, harness side and the SJB, harness side as follows:

Inoperative Turn Lamp Connector-Pin	SJB Connector-Pin	Circuit
Edge		
LH front C1023-3	C2280f-21	CLS21 (BU/GN)
RH front C1043-3	C2280f-23	CLS25 (YE/VT)
MKX		
LH front headlamp C1021a-5	C2280f-21	CLS21 (BU/GN)
RH front headlamp C1041a-5	C2280f-23	CLS25 (YE/VT)

- **Is the resistance less than 5 ohms?**

YES : Go to M11.

NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test

M11 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test N: The Hazard Lamps Are Inoperative/Always On

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Turn Signal/Stop/Hazard Lamps for schematic and connector information.

Normal Operation

The smart junction box (SJB) sends a voltage reference signal to the hazard lamp switch through circuit CLS32 (BN/YE). The hazard flasher lamp switch is a momentary contact switch. When the hazard flasher lamp switch is engaged, the voltage signal is routed to ground through circuit GD116 (BK/VT). When the SJB detects a request for the hazard lamps, the SJB provides on/off voltage to all the turn lamps.

- DTC B2071 (Hazard Switch Signal Short to Ground) - is an on-demand DTC that sets when the SJB detects a short to ground from the hazard flasher lamp switch input circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Joint connector
- Hazard flasher lamp switch
- SJB

PINPOINT TEST N: THE HAZARD LAMPS ARE INOPERATIVE/ALWAYS ON

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when

checking ground circuits for continuity to ground.

N1 CHECK THE RECORDED DTCs FROM THE SJB SELF-TEST

- Check the recorded DTCs from the SJB self-test.
- **Is DTC B2071 present?**

  YES : Go to N2.

  NO : Go to N4.

N2 CHECK THE HAZARD FLASHER LAMP SWITCH

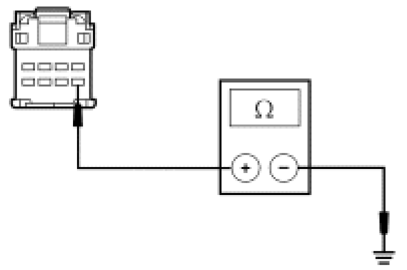
- Disconnect: Hazard Flasher Lamp Switch C2355
- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB Self-Test
- Repeat the SJB self-test.
- **Is DTC B2071 still present?**

  YES : Go to N3.

  NO : INSTALL a new hazard flasher lamp switch. REFER to **Hazard Flasher Lamp Switch**. CLEAR the DTCs. REPEAT the self-test.

N3 CHECK CIRCUIT CLS32 (BN/YE) FOR A SHORT TO GROUND

- Disconnect: SJB C2280b



N0062225

Fig. 66: Measuring Resistance Between Hazard Flasher Lamp Switch C2355-5, Circuit CLS32 (BN/YE) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the hazard flasher lamp switch C2355-5, circuit CLS32 (BN/YE), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to N8.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

N4 CHECK CIRCUIT GD116 (BK/VT) FOR CONTINUITY TO GROUND

NOTE:	**Make sure the headlamps operate correctly before continuing with diagnostics for the hazard lamps.**

- Key in OFF position.
- Disconnect: Hazard Flasher Lamp Switch C2355

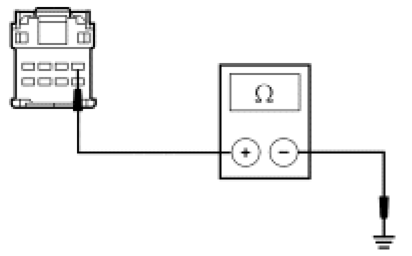


Fig. 67: Measuring Resistance Between Hazard Flasher Lamp Switch C2355-1, Circuit GD116 (BK/VT) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the hazard flasher lamp switch C2355-1, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to N6.

  NO : Go to N5.

N5 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN

NOTE: **Make sure the headlamps operate correctly before continuing with diagnostics for the hazard lamps.**

- Key in OFF position.
- Disconnect: Joint Connector 6 C2365

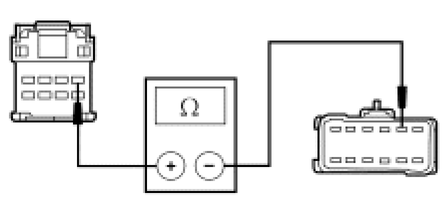

Fig. 68: Measuring Resistance Between Hazard Flasher Lamp Switch C2355-1, GD116 (BK/VT) & Joint Connector 6 C2365-H
Courtesy of FORD MOTOR CO.

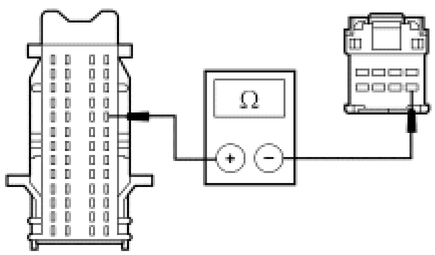
- Measure the resistance between the hazard flasher lamp switch C2355-1, circuit GD116 (BK/VT), harness side and the joint connector 6 C2365-H, circuit GD116 (BK/VT), harness side.

- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. CLEAR the DTCs. REPEAT the self-test.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

N6 CHECK CIRCUIT CLS32 (BN/YE) FOR AN OPEN



N0062226

Fig. 69: Measuring Resistance Between SJB C2280B-48, Circuit CLS32 (BN/YE) & Hazard Flasher Lamp Switch C2355-5
Courtesy of FORD MOTOR CO.

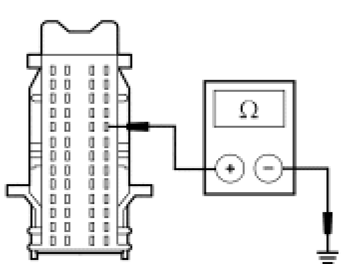
- Measure the resistance between the SJB C2280b-48, circuit CLS32 (BN/YE), harness side and the hazard flasher lamp switch C2355-5, circuit CLS32 (BN/YE), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to N7.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

N7 CHECK THE HAZARD FLASHER LAMP SWITCH

- Connect: Hazard Flasher Lamp Switch C2355



N0058676

Fig. 70: Checking Hazard Flasher Lamp Switch
Courtesy of FORD MOTOR CO.

- While pressing and releasing the hazard flasher lamp switch, measure the resistance between the SJB C2280b-48, circuit CLS32 (BN/YE), harness side and ground.
- **Is the resistance less than 5 ohms with the switch pressed and greater than 10,000 ohms with the switch released?**

YES : Go to N8.

NO : INSTALL a new hazard flasher lamp switch. REFER to **Hazard Flasher Lamp Switch**. CLEAR the DTCs. REPEAT the self-test.

N8 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

PARKING, REAR AND LICENSE PLATE LAMPS

Special Tools

Illustration	Tool Name	Tool Number
 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The SJB monitors the headlamp switch position by sending voltage reference signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is routed to ground.

If the SJB does not detect any of the inputs to the headlamp switch are active (routed to ground) for 5 seconds, the SJB turns on the exterior lights and keeps them on for 10 minutes after the ignition switch is turned off (or 10 minutes from the time the SJB does not detect any headlamp switch input if the ignition switch was already off). Additionally, if the SJB detects multiple circuits short to ground, the SJB implements a planned strategy depending on the multiple inputs received.

If either of these situations occur, the SJB should **NOT** be ruled immediately as being at fault. This is normal behavior of the SJB design as it has detected a fault with the inputs from the headlamp switch.

When the SJB receives an input from the headlamp switch indicating a request for the parking lamps, the SJB energizes the parking lamp relay (internal to the SJB), which supplies voltage to the exterior lamps.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical
• Headlamp switch	• Smart junction box (SJB) fuse 22 (15A) • Bulb(s) • Bulb holder(s) • Wiring, terminals or connectors • SJB

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

NOTE: Make sure the multifunction switch is in the LOW BEAM position.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
    - Check the VCM connection to the vehicle.
    - Check the scan tool connection to the VCM.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
    - Verify the ignition key is in the ON position.
    - Verify the scan tool operation with a known good vehicle.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
    - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
    - If the network test passes, retrieve and record the continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

DTC Charts

SMART JUNCTION BOX (SJB) DTC CHART

DTC	Description	Action
B1578	Lamp Park Input Circuit Short to Ground	Go to **Pinpoint Test P** .
All other DTCs	-	REFER to **MULTIFUNCTION ELECTRONIC MODULES** article.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• No communication with the smart junction box (SJB)	• Fuse • Wiring, terminals or connectors • SJB	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• One or more parking, rear	• Fuse • Wiring, terminals or connectors • Bulb Holder	

or license plate lamps is inoperative	• Liftgate lamp • Liftgate release handle • Headlamp assembly • SJB	• Go to **Pinpoint Test O** .
• The parking, rear or license plate lamps are on continuously	• Wiring, terminals or connectors • Headlamp switch • SJB	• Go to **Pinpoint Test P** .

Pinpoint Tests

Pinpoint Test O: One Or More Parking, Rear or License Plate Lamps Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Parking, Rear and License Lamps for schematic and connector information.

Normal Operation

When the headlamp switch is placed in the PARKING LAMPS ON position, the smart junction box (SJB) provides a ground for the parking lamp relay coil (integrated into the SJB). When the parking lamp relay is energized, voltage is routed through circuit CLS30 (VT/WH) to the rear and front parking lamps. Ground is provided to the rear parking, liftgate and license plate lamps through circuit GD149 (BK/GY) or circuit GD151 (BK/GN). Ground is provided to the front parking and side marker lamps through circuit GD120 (BK/GN) or circuit GD123 (BK/GY).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Bulb Holder
- Liftgate lamp
- Liftgate release handle
- Headlamp assembly
- SJB

PINPOINT TEST O: ONE OR MORE PARKING, REAR OR LICENSE PLATE LAMPS IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: **The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.**

O1 DETERMINE IF ALL THE PARKING LAMPS ARE INOPERATIVE

- Key in OFF position.
- Place the headlamp switch to the PARKING LAMPS ON position.
- **Are all the parking lamps inoperative?**

YES : PLACE the headlamp switch in the OFF position. VERIFY the SJB fuse 22 (15A) is OK. If OK, go to O6.

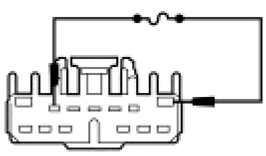
NO : If all the front parking lamps are inoperative, go to O2.

If all the rear parking and license plate lamps are inoperative, go to O3.

For all others, go to O4.

O2 CHECK CIRCUIT CLS30 (VT/WH) FOR AN OPEN (FRONT LAMPS)

- Disconnect: SJB C2280e



N0058677

Fig. 71: Connecting Fused Jumper Wire
Courtesy of FORD MOTOR CO.

- Connect a fused (5A) jumper wire between the SJB C2280e-1, circuit CBB53 (GY/BN), harness side and the SJB C2280e-6, circuit CLS30 (VT/WH), harness side.
- Key in ON position.
- **Do the front parking lamps illuminate?**

YES : REMOVE the jumper wire. Go to O6.

NO : REMOVE the jumper wire. REPAIR the circuit. TEST the system for normal operation.

O3 CHECK CIRCUIT CLS30 (VT/WH) FOR AN OPEN (REAR LAMPS)

- Disconnect: SJB C2280d

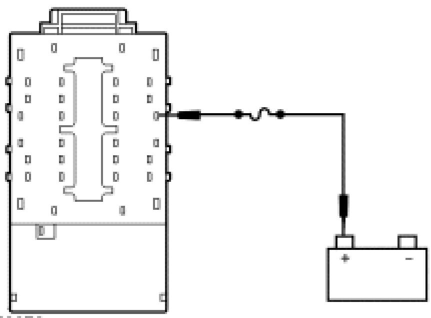


Fig. 72: Connecting Fused Jumper Wire
Courtesy of FORD MOTOR CO.

- Connect a fused (5A) jumper wire between the positive battery terminal and the SJB C2280d-20, circuit CLS30 (VT/WH), harness side.
- **Do the rear parking lamps illuminate?**

  YES : REMOVE the jumper wire. Go to O6.

  NO : REMOVE the jumper wire. REPAIR the circuit. TEST the system for normal operation.

O4 CHECK THE PARKING LAMP GROUND CIRCUIT FOR AN OPEN

NOTE: If a front parking lamp is inoperative, make sure the front turn signal operates correctly before continuing diagnostics for the front parking lamp.

- Disconnect: Inoperative Lamp
- Measure the resistance between the inoperative lamp, harness side and ground as follows:

EDGE

Inoperative Lamp	Connector-Pin	Circuit
LH front	C1023-1	GD123 (BK/GY)
RH front	C1043-1	GD120 (BK/GN)
LH rear	C412-1	GD149 (BK/GY)
RH rear	C415-1	GD151 (BK/GN)
LH rear side marker	C4136-1	GD149 (BK/GY)
RH rear side marker	C4138-1	GD151 (BK/GN)
Liftgate release		GD149

handle (license plate lamps)	C4353-2	(BK/GY)

MKX

Inoperative Lamp	Connector-Pin	Circuit
LH front (headlamp)	C1021a-6	GD123 (BK/GY)
RH front (headlamp)	C1041a-6	GD123 (BK/GY)
LH front side marker	C151-2	GD120 (BK/GN)
RH front side marker	C161-2	GD123 (BK/GY)
LH rear	C412-1	GD149 (BK/GY)
RH rear	C415-1	GD151 (BK/GN)
Liftgate (rear applique)	C4352-2	GD149 (BK/GY)
LH rear side marker	C4355-2	GD149 (BK/GY)
RH rear side marker	C4356-2	GD149 (BK/GY)
LH license plate	C452-2	GD149 (BK/GY)
RH license plate	C462-2	GD149 (BK/GY)

- **Is the resistance less than 5 ohms?**

  YES : Go to O5.

  NO : REPAIR the ground circuit in question. TEST the system for normal operation.

O5 CHECK CIRCUIT CLS30 (VT/WH) FOR AN OPEN

- Place the headlamp switch in the PARKING LAMPS ON position.
- Measure the voltage between the inoperative lamp, harness side and ground as follows:

EDGE

Inoperative Lamp	Connector-Pin	Circuit

- **Is the voltage greater than 10 volts?**

YES : REPAIR or INSTALL a new bulb holder or component in question. REFER to **Headlamp Assembly**, **Rear Lamp Assembly - Liftgate**, or **HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS** article for the liftgate release handle. TEST the system for normal operation.

NO : REPAIR the circuit. TEST the system for normal operation.

O6 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test P: The Parking, Rear Or License Plate Lamps Are On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Parking, Rear and License Lamps for schematic and connector information.

Normal Operation

The smart junction box (SJB) monitors the parking lamp request input from the headlamp switch through circuit CLS34 (GY). The SJB provides a ground for the parking lamp relay coil (integrated into the SJB) when a request for the parking lamps is received. When the parking lamp relay is energized, voltage is routed through circuit CLS30 (VT/WH) to the rear and front parking lamps.

- DTC B1578 (Lamp Park Input Circuit Short to Ground) - is an on-demand DTC that sets when the SJB detects a short to ground in the parking lamps on input circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Headlamp switch
- SJB

PINPOINT TEST P: THE PARKING, REAR OR LICENSE PLATE LAMPS ARE ON CONTINUOUSLY

P1 USE THE RECORDED DTCs FROM THE SJB SELF-TEST

- Check the recorded results from the SJB self-test.
- **Was DTC B1578 recorded?**

  YES : Go to P2.

  NO : Go to P4.

P2 CHECK THE HEADLAMP SWITCH

- Key in OFF position.
- Disconnect: Headlamp Switch C205
- Carry out the headlamp switch component test. Refer to appropriate COMPONENT TESTING article.
- **Is the headlamp switch OK?**

  YES : Go to P3.

  NO : INSTALL a new headlamp switch. REFER to **Headlamp Switch**. CLEAR the DTCs. REPEAT the self-test.

P3 CHECK CIRCUIT CLS34 (GY) FOR A SHORT TO GROUND

- Disconnect: SJB C2280b

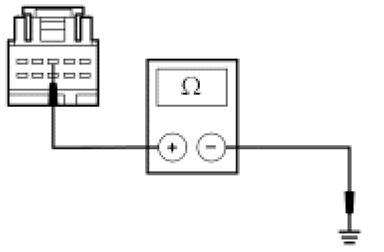

Fig. 73: Checking Circuit For A Short To Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch C205-3, circuit CLS34 (GY), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to P6.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

P4 CHECK CIRCUIT CLS30 (VT/WH) FOR A SHORT TO VOLTAGE (TO REAR LAMPS)

- Key in OFF position.
- Disconnect: SJB C2280d
- Key in ON position.
- **Do the rear parking lamps continue to illuminate?**

  YES : REPAIR the circuit. TEST the system for normal operation.

  NO : Go to P5.

P5 CHECK CIRCUIT CLS30 (VT/WH) FOR A SHORT TO VOLTAGE (TO FRONT LAMPS)

- Key in OFF position.
- Disconnect: SJB C2280e
- Key in ON position.
- **Do the front parking lamps continue to illuminate?**

  YES : REPAIR the circuit. TEST the system for normal operation.

  NO : Go to P6.

P6 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

FOG LAMPS

Special Tools

Illustration	Tool Name	Tool Number
 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The SJB monitors the headlamp switch position by sending a voltage reference signal to the headlamp switch. When the fog lamp switch (part of the headlamp switch) is engaged, the voltage reference signal is routed to ground.

The fog lamps can be turned on when the following conditions are met:

- The ignition switch is in the RUN or START position.
- The low beam headlamps or the parking lamps are on.
- The high beams are off.

When the SJB receives an input from the headlamp switch indicating a request for the fog lamps, the SJB provides voltage to the fog lamp relay. When the fog lamp relay is energized, voltage is routed to the fog lamps.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

VISUAL INSPECTION CHART

Electrical
• Smart junction box (SJB) fuse 21 (15A) • Wiring, terminals or connectors • Bulb(s) • Headlamp switch • SJB

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

NOTE: Make sure the multifunction switch is in the LOW BEAM position.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power

and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
    - Check the VCM connection to the vehicle.
    - Check the scan tool connection to the VCM.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
    - Verify the ignition key is in the ON position.
    - Verify the scan tool operation with a known good vehicle.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
    - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
    - If the network test passes, retrieve and record the continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

DTC Charts

Pinpoint Tests

Pinpoint Test Q: Both Fog Lamps Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Fog Lamps for schematic and connector information.

Normal Operation

The smart junction box (SJB) sends a voltage reference signal to the headlamp switch through circuit CLF21 (GY/VT) to monitor the fog lamp request. When the fog lamp switch is engaged, the voltage signal is routed to ground.

When the SJB detects the fog lamps on request, the SJB provides ground to the fog lamp relay coil (integrated into the SJB). When the fog lamp relay is energized, voltage is routed through circuit CLF12 (BN/YE) to the fog lamps.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Headlamp switch
- SJB

PINPOINT TEST Q: BOTH FOG LAMPS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

Q1 CHECK THE SJB FOG LAMP SWITCH PID

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB Data Logger
- Monitor the SJB fog lamp PID (FOG SW) while engaging the fog lamp switch.
- **Does the PID indicate the fog lamp switch is on?**

  YES : Go to Q4.

  NO : Go to Q2.

Q2 CHECK THE HEADLAMP SWITCH

- Key in OFF position.
- Disconnect: Headlamp Switch C205
- Carry out the headlamp switch component test. Refer to appropriate COMPONENT TESTING article.
- **Is the headlamp switch OK?**

  YES : Go to Q3.

  NO : INSTALL a new headlamp switch. REFER to **Headlamp Switch**. TEST the system for normal operation.

Q3 CHECK CIRCUIT CLF21 (GY/VT) FOR AN OPEN

- Disconnect: SJB C2280b

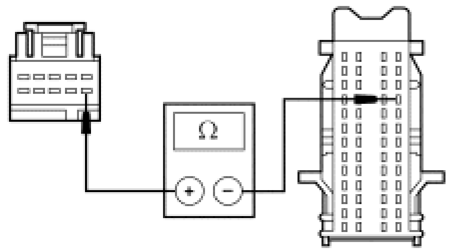

Fig. 74: Measuring Resistance Between Headlamp Switch C205-6, Circuit CLF21 (GY/VT) & SJB C2280B-49
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch C205-6, circuit CLF21 (GY/VT), harness side and the SJB C2280b-49, circuit CLF21 (GY/VT), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to Q5.

  NO : REPAIR the circuit. TEST the system for normal operation.

Q4 CHECK CIRCUIT CLF12 (BN/YE) FOR AN OPEN

- Key in OFF position.
- Disconnect: SJB C2280e

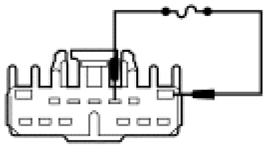

Fig. 75: Connecting Fused Jumper Wire
Courtesy of FORD MOTOR CO.

- Connect a fused (15A) jumper wire between the SJB C2280e-1, circuit CBB53 (GY/BN), harness side and the SJB C2280e-3, circuit CLF12 (BN/YE), harness side.
- Key in ON position.
- **Do the fog lamps illuminate?**

  YES : REMOVE the jumper wire. VERIFY the SJB fuse 21 (15A) is OK. If OK, go to Q5.

  NO : REPAIR the circuit. TEST the system for normal operation.

Q5 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test R: An Individual Fog Lamp Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Fog Lamps for schematic and connector information.

Normal Operation

When the fog lamp relay is energized, voltage is routed through circuit CLF12 (BN/YE) to the fog lamps. Ground is provided on circuits GD120 (BK/GN) and GD123 (BK/GY) to the LH and RH fog lamps, respectively.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Joint connector

PINPOINT TEST R: AN INDIVIDUAL FOG LAMP IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

NOTE: Verify that the headlamps operate correctly before proceeding with this pinpoint test.

R1 CHECK THE GROUND CIRCUIT FOR CONTINUITY

- Key in OFF position.
- Disconnect: Inoperative Fog Lamp

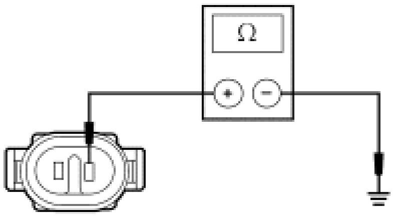

Fig. 76: Measuring Resistance Between LH Fog Lamp C152-B & C162-B, Circuit GD120 (BK/GN) & GD123 (BK/GY)
Courtesy of FORD MOTOR CO.

- Measure the resistance between the LH fog lamp C152-B, circuit GD120 (BK/GN), harness side and ground; or between the RH fog lamp C162-B, circuit GD123 (BK/GY), harness side and ground.
- **Is the resistance less than 5 ohms?**

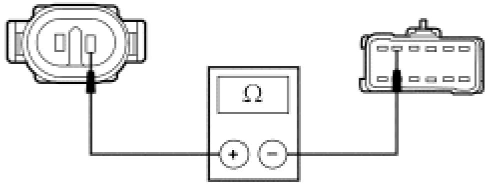
  YES : REPAIR circuit CLF12 (BN/YE) for an open. TEST the system for normal operation.

  NO : For the RH fog lamp, REPAIR circuit GD123 (BK/GY) for an open. TEST the system for normal operation.

  For the LH fog lamp, go to R2.

R2 CHECK CIRCUIT GD120 (BK/GN) FOR AN OPEN

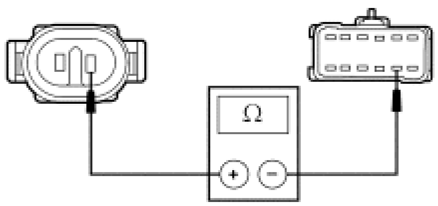
- Disconnect: Joint Connector 7 C2200



N0062228

Fig. 77: Measuring Resistance Between LH Fog Lamp C152-B, Circuit GD120 (BK/GN) & Joint Connector 7 C2200-K
Courtesy of FORD MOTOR CO.

- For Edge, measure the resistance between the LH fog lamp C152-B, circuit GD120 (BK/GN), harness side and the joint connector 7 C2200-K, circuit GD120 (BK/GN), harness side and ground.



N0062229

Fig. 78: Measuring Resistance Between LH Fog Lamp C152-B, Circuit GD120 (BK/GN) & Joint Connector 7 C2200-E
Courtesy of FORD MOTOR CO.

- For MKX, measure the resistance between the LH fog lamp C152-B, circuit GD120 (BK/GN), harness side and the joint connector 7 C2200-E, circuit GD120 (BK/GN), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test S: The Fog Lamps Are On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Fog Lamps for schematic and connector information.

Normal Operation

The smart junction box (SJB) sends a voltage reference signal to the headlamp switch through circuit CLF21 (GY/VT) to monitor the fog lamp request. When the fog lamp switch is engaged, the voltage signal is routed to ground.

When the SJB detects the fog lamps on request, the SJB provides ground to the fog lamp relay coil (integrated into the SJB). When the fog lamp relay is energized, voltage is routed through circuit CLF12 (BN/YE) to the fog lamps, and on a separate output, circuit CLF12 (BN/YE) to the headlamp switch for the fog lamps on indicator.

- DTC B2254 (Front Fog Lamp Switch Failure) - is an on-demand DTC that sets when the SJB detects a short to ground on the fog lamp on input circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Headlamp switch
- SJB

PINPOINT TEST S: THE FOG LAMPS ARE ON CONTINUOUSLY

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

S1 CHECK FOR RECORDED SJB DTCs

- Check the recorded results from the SJB self-test.
- **Is DTC B2254 present?**

  YES : Go to S2.

  NO : Go to S4.

S2 CHECK THE HEADLAMP SWITCH

- Key in OFF position.
- Disconnect: Headlamp Switch C205
- Carry out the headlamp switch component test. Refer to appropriate COMPONENT TESTING article
- **Is the headlamp switch OK?**

  YES : Go to S3.

  NO : INSTALL a new headlamp switch. REFER to **Headlamp Switch**. CLEAR the DTCs. REPEAT the self-test.

S3 CHECK CIRCUIT CLF21 (GY/VT) FOR A SHORT TO GROUND

- Disconnect: SJB C2280b

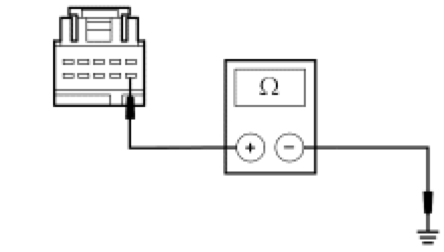


Fig. 79: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch C205-6, circuit CLF21 (GY/VT), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to S6.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

S4 CHECK CIRCUIT CLF12 (BN/YE) FOR A SHORT TO VOLTAGE (TO HEADLAMP SWITCH)

- Key in OFF position.
- Disconnect: SJB C2280a
- Key in ON position.
- **Do the fog lamps continue to illuminate?**

  YES : Go to S5.

  NO : REPAIR the circuit. TEST the system for normal operation.

S5 CHECK CIRCUIT CLF12 (BN/YE) FOR A SHORT TO VOLTAGE (TO THE FOG LAMPS)

- Key in OFF position.
- Disconnect: SJB C2280e
- Key in ON position.
- **Do the fog lamps continue to illuminate?**

  YES : REPAIR the circuit. TEST the system for normal operation.

  NO : Go to S6.

S6 CHECK FOR CORRECT SJB OPERATION

- Key in OFF position.
- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.

- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR any DTCs. REPEAT the self-test.

Pinpoint Test T: The Fog Lamps On Indicator Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Fog Lamps for schematic and connector information.

Normal Operation

When the smart junction box (SJB) detects the fog lamps on request, the SJB provides ground to the fog lamp relay coil (integrated into the SJB). When the fog lamp relay is energized, voltage is routed through circuit CLF12 (BN/YE) to the fog lamps, and on a separate output, circuit CLF12 (BN/YE) to the headlamp switch for the fog lamps on indicator.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Headlamp switch
- SJB

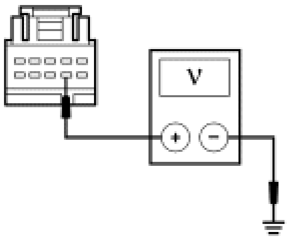
PINPOINT TEST T: THE FOG LAMPS ON INDICATOR IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

T1 CHECK THE HEADLAMP SWITCH

NOTE: Make sure the headlamp switch is in the OFF position.

- Key in OFF position.
- Disconnect: Headlamp Switch C205
- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB DataLogger
- Select the SJB fog lamps (FOG_LMP) active command. Command the fog lamps on.



N0062231

Fig. 80: Measuring Voltage Between Headlamp Switch C205-7, Circuit CLF12 (BN/YE) & Ground
Courtesy of FORD MOTOR CO.

NOTE: Make sure the fog lamps are illuminated when taking a reading.

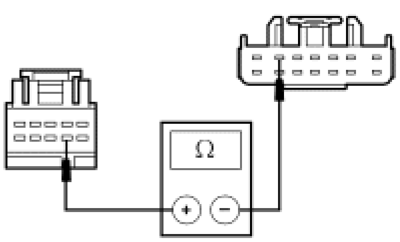
- Measure the voltage between the headlamp switch C205-7, circuit CLF12 (BN/YE), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new headlamp switch. REFER to **Headlamp Switch**. TEST the system for normal operation.

  NO : Go to T2.

T2 CHECK CIRCUIT CLF12 (BN/YE) FOR AN OPEN

- Key in OFF position.
- Disconnect: SJB C2280a



N0062232

Fig. 81: Measuring Resistance Between Headlamp Switch C205-7, Circuit CLF12 (BN/YE) & SJB C2280A-6
Courtesy of FORD MOTOR CO.

- Measure the resistance between the headlamp switch C205-7, circuit CLF12 (BN/YE), harness side and the SJB C2280a-6, circuit CLF12 (BN/YE), harness side.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to T3.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

T3 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR any DTCs. REPEAT the self-test.

REVERSING LAMPS

Special Tools

Illustration	Tool Name	Tool Number
 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

The transaxle is hardwired to the PCM which monitors the transmission gear status. When the PCM detects the transaxle is in REVERSE (R), the PCM provides ground for the reversing lamps relay coil. When the reversing lamps relay is energized, voltage is routed to the reversing lamps.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

VISUAL INSPECTION CHART

Electrical
• Battery junction box (BJB) fuse 44 (10A) • Bulb(s) • Bulb holder(s) • Wiring, terminals or connectors • PCM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: **Make sure to use the latest scan tool software release.**

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: **The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.**

5. If the scan tool does not communicate with the VCM:
   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
   - If the network test passes, retrieve and record the continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the PCM.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

DTC Charts

Pinpoint Tests

Pinpoint Test U: The Reversing Lamps Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Fuse and Relay Information for schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Reversing Lamps for schematic and connector information.

Normal Operation

The PCM monitors the transaxle gear status. When the PCM detects the transaxle in REVERSE (R), the PCM provides ground for the reversing lamps relay coil through circuit CLS28 (BU/WH). Voltage is supplied from the battery junction box (BJB) to the coil and the switched side of the reversing lamps relay. When the reversing lamps relay is energized, voltage is routed to the reversing lamps through circuit CLS10 (GN/BN).

- DTC P1910 (Reverse Lamp Control Circuit/Open) - sets when the PCM detects no voltage on the reversing lamp relay coil ground control circuit (if the coil voltage supply circuit or the coil ground control circuit is open).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Reversing lamps relay
- BJB
- PCM

PINPOINT TEST U: THE REVERSING LAMPS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

U1 CHECK FOR PCM TRANSMISSION RANGE (TR) SENSOR DTCs FROM THE SELF-TEST

- Review the DTCs from the PCM KOEO self-test.
- **Are any TR sensor DTCs present?**

  YES : REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article.

  NO : Go to U2.

U2 CHECK THE REVERSING LAMPS RELAY

- Key in OFF position.
- Disconnect: Reversing Lamps Relay
- Key in ON position.
- Substitute a known good relay and recheck the reversing lamps operation.
- **Do the reversing lamps operate correctly?**

  YES : REMOVE the known good relay. INSTALL a new reversing lamps relay. TEST the system for normal operation.

  NO : REMOVE the known good relay. Go to U3.

U3 CHECK THE BJB

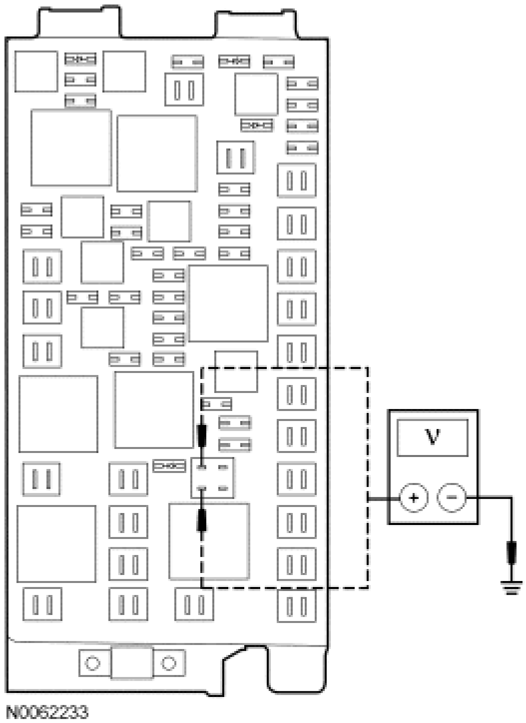

Fig. 82: Measuring Voltage Between Reversing Lamps Relay Pin 5, BJB Face Side & Reversing Lamps Relay Pin 1
Courtesy of FORD MOTOR CO.

- Measure the voltage between the reversing lamps relay pin 5, BJB face side and ground; and between the reversing lamps relay pin 1, BJB face side and ground.
- **Are the voltages greater than 10 volts?**

  YES : Go to U4.

  NO : INSTALL a new BJB. TEST the system for normal operation.

U4 CHECK CIRCUIT CLS10 (GN/BN) FOR AN OPEN

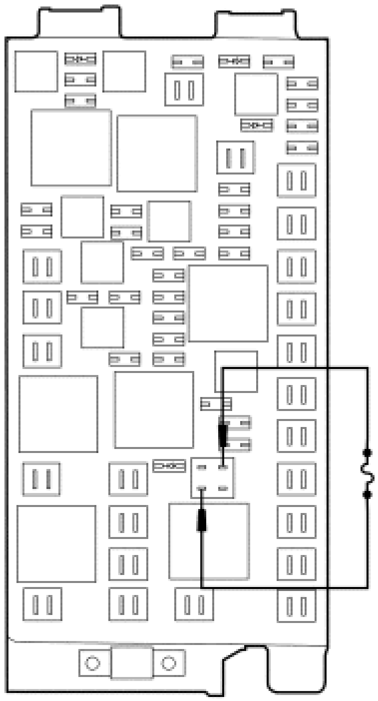

Fig. 83: Connecting Voltage Between Reversing Lamps Relay Pin 5, BJB Face Side & Reversing Lamps Relay Pin 3
Courtesy of FORD MOTOR CO.

- Connect a fused (5A) jumper wire between the reversing lamps relay pin 5, BJB face side and the reversing lamps relay pin 3, circuit CLS10 (GN/BN), BJB face side.
- **Do the reversing lamps illuminate?**

  YES : REMOVE the jumper wire. Go to U5.

  NO : VERIFY the BJB fuse 44 (10A) is OK. If OK, REPAIR the circuit. TEST the system for normal operation.

U5 CHECK CIRCUIT CLS28 (BU/WH) FOR A SHORT TO VOLTAGE

- Disconnect: PCM C175t
- Key in ON position.

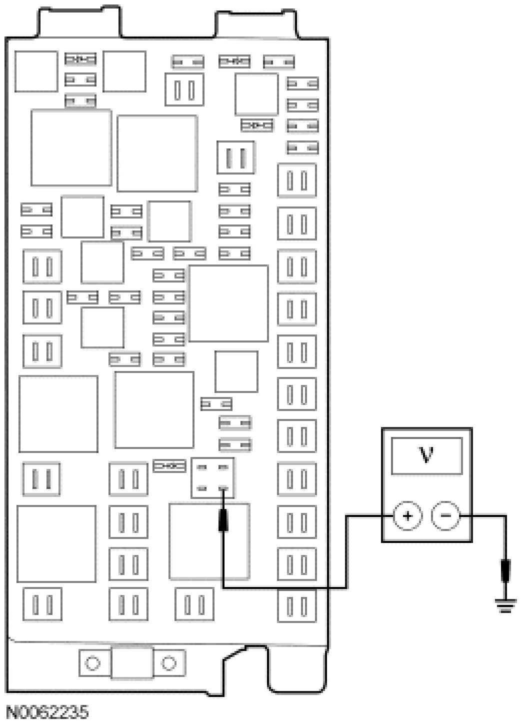

Fig. 84: Measuring Voltage Between Reversing Lamps Relay Pin 2, Circuit CLS28 (BU/WH), BJB Face Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the reversing lamps relay pin 2, circuit CLS28 (BU/WH), BJB face side and ground.
- **Is any voltage present?**

  YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to U6.

U6 CHECK CIRCUITS CLS28 (BU/WH) FOR AN OPEN

- Key in OFF position.
- Connect: Reversing Lamps Relay

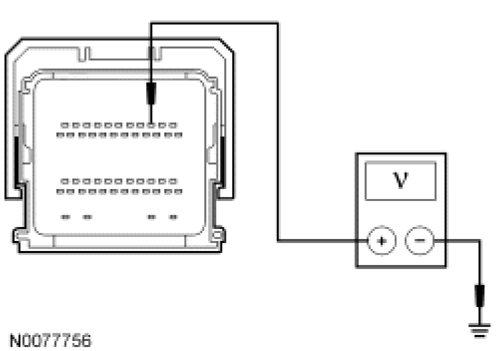

Fig. 85: Measuring Voltage Between PCM C175T-3, Circuit CLS28 (BU/WH), Harness Side & Ground

Courtesy of FORD MOTOR CO.

- Measure the voltage between the PCM C175t-3, circuit CLS28 (BU/WH), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to U7.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

U7 CHECK FOR CORRECT PCM OPERATION

- Disconnect all the PCM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the PCM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new PCM. REFER to **ELECTRONIC ENGINE CONTROLS** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR any DTCs. REPEAT the self-test.

Pinpoint Test V: The Individual Reversing Lamp Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Reversing Lamps for schematic and connector information.

When the reversing lamps relay is energized, voltage is routed to the reversing lamps through circuit CLS10 (GN/BN). The LH and RH reversing lamps are provided ground through circuits GD149 (BK/GY) and GD151 (BK/GN), respectively.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Bulb holder
- Rear lamp assembly

PINPOINT TEST V: THE INDIVIDUAL REVERSING LAMP IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

V1 CHECK CIRCUIT GD149 (BK/GY) OR CIRCUIT GD151 (BK/GN) FOR AN OPEN

- Key in OFF position.
- Disconnect: Inoperative Reversing Lamp

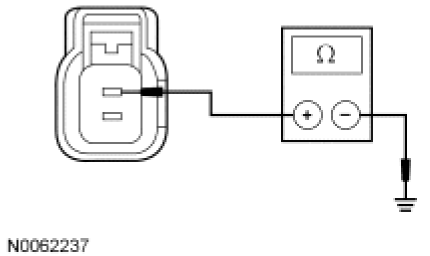

Fig. 86: Measuring Resistance Between LH Reversing Lamp C451-1 & C461-1, Circuit GD149 (BK/GY) & GD151 (BK/GN)
Courtesy of FORD MOTOR CO.

- For Edge, measure the resistance between the LH reversing lamp C451-1, circuit GD149 (BK/GY), harness side and ground, or between the RH reversing lamp C461-1, circuit GD151 (BK/GN), harness side and ground.

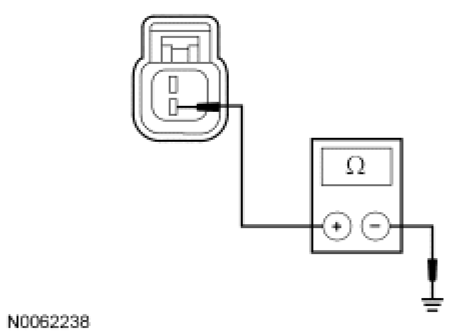

Fig. 87: Measuring Resistance Between LH Reversing Lamp C487-2 & C488-2, Circuit GD149 (BK/GY) & GD151 (BK/GN)
Courtesy of FORD MOTOR CO.

- For MKX, measure the resistance between the LH reversing lamp C487-2, circuit GD149 (BK/GY), harness side and ground, or between the RH reversing lamp C488-2, circuit GD151 (BK/GN), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to V2.

  NO : REPAIR the ground circuit in question. TEST the system for normal operation.

V2 CHECK CIRCUIT CLS10 (GN/BN) FOR AN OPEN

- Apply the parking brake.
- Select REVERSE.

- Key in ON position.

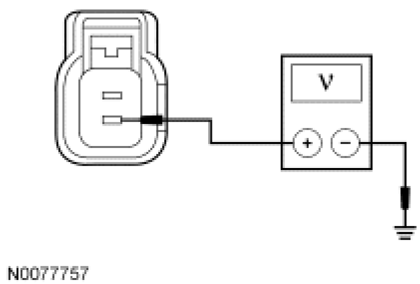

Fig. 88: Measuring Voltage Between LH Reversing Lamp C451-2, Circuit CLS10 (GN/BN) & RH Reversing Lamp C461-2
Courtesy of FORD MOTOR CO.

- For Edge, measure the voltage between the LH reversing lamp C451-2, circuit CLS10 (GN/BN), harness side and ground, or between the RH reversing lamp C461-2, circuit CLS10 (GN/BN), harness side and ground.

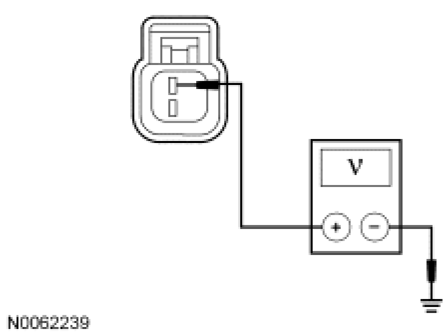

Fig. 89: Measuring Voltage Between LH Reversing Lamp C487-1, Circuit CLS10 (GN/BN) & RH Reversing Lamp C488-1
Courtesy of FORD MOTOR CO.

- For MKX, measure the voltage between the LH reversing lamp C487-1, circuit CLS10 (GN/BN), harness side and ground, or between the RH reversing lamp C488-1, circuit CLS10 (GN/BN), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new bulb holder or rear lamp assembly. REFER to **Rear Lamp Assembly**. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test W: The Reversing Lamps Are On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Reversing Lamps for schematic and connector information.

Normal Operation

The PCM monitors the transaxle gear status. When the PCM detects the transaxle in REVERSE (R), the PCM provides ground for the reversing lamps relay coil through circuit CLS28 (BU/WH). Voltage is supplied from the battery junction box (BJB) to the coil and the switched side of the reversing lamps relay. When the reversing lamps relay is energized, voltage is routed to the reversing lamps through circuit CLS10 (GN/BN).

- DTC P1910 (Reverse Lamp Control Circuit/Open) - sets when the PCM detects no voltage on the reversing lamp relay coil ground control circuit (if the coil ground control circuit is short to ground).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Reversing lamps relay
- Auto-dimming interior mirror
- PCM

PINPOINT TEST W: THE REVERSING LAMPS ARE ON CONTINUOUSLY

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

W1 CHECK FOR PCM TRANSMISSION RANGE (TR) SENSOR DTCs FROM THE SELF-TEST

- Review the DTCs from the PCM KOEO self-test.
- **Are any TR sensor DTCs present?**

  YES : REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article.

  NO : Go to W2.

W2 CHECK THE REVERSING LAMPS RELAY OUTPUT

- Key in OFF position.
- Disconnect: Reversing Lamps Relay
- Key in ON position.
- **Do the reversing lamps continue to illuminate?**

  YES : Go to W3.

  NO : Go to W4.

W3 CHECK CIRCUIT CLS10 (GN/BN) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: Auto-Dimming Interior Mirror C911 or C9012
- Key in ON position.
- **Do the reversing lamps continue to illuminate?**

  YES : INSTALL a new auto-dimming interior mirror. REFER to **REAR VIEW MIRRORS**

article. TEST the system for normal operation.

NO : REPAIR the circuit. TEST the system for normal operation.

W4 CHECK THE REVERSING LAMPS RELAY

- Key in OFF position.
- Substitute a known good relay.
- Key in ON position.
- **Do the reversing lamps continue to illuminate?**

  YES : REMOVE the known good relay. Go to W5.

  NO : REMOVE the known good relay. INSTALL a new reversing lamps relay. TEST the system for normal operation.

W5 CHECK CIRCUIT CLS28 (BU/WH) FOR A SHORT TO GROUND

- Key in OFF position.
- Connect: Reversing Lamps Relay
- Disconnect: PCM C175t
- Key in ON position.
- **Do the reversing lamps continue to illuminate?**

  YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to W6.

W6 CHECK FOR CORRECT PCM OPERATION

- Disconnect the PCM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the PCM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new PCM. REFER to **ELECTRONIC ENGINE CONTROLS** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR any DTCs. REPEAT the self-test.

TRAILER LAMPS

Special Tools

Illustration	Tool Name	Tool Number
	73III Automotive Meter	105-R0057 or equivalent

		
	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

The trailer lamps are supplied power by the trailer tow park lamp relay, the LH trailer tow stop/turn relay and the RH trailer tow stop/turn relay. They are energized to correspond with the exterior lighting functions of the vehicle. A common ground is provided to the trailer tow connector for the trailer lamps.

Inspection and Verification

1. Verify the customer concern.
2. Verify the exterior lighting system of the vehicle is operating correctly. If not, refer to the appropriate pinpoint test in this service information.
3. Visually inspect for obvious signs of electrical damage.

VISUAL INSPECTION CHART

Electrical
• Battery junction box (BJB) fuse(s): ○ 9 (20A) (trailer tow parking lamps) ○ 24 (15A) (trailer tow LH stop/turn relay) ○ 46 (15A) (trailer tow RH stop/turn relay) • Wiring, terminals or connectors • Trailer tow stop/turn relays • Trailer tow parking lamp relay • Trailer

4. If the concern is not visually evident, verify the symptom. Go to **Symptom Chart**.

Symptom Chart

Symptom Chart

Pinpoint Tests

Pinpoint Test X: The Trailer Lamps Are Inoperative - All

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Trailer/Camper Adapter for schematic and connector information.

Normal Operation

The trailer tow connector receives ground through circuit RAT08 (WH)/GD149 (BK/GY) for all of the trailer lamps.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Trailer

PINPOINT TEST X: THE TRAILER LAMPS ARE INOPERATIVE - ALL

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

X1 CHECK CIRCUIT RAT08 (WH)/GD149 (BK/GY) FOR AN OPEN

- Disconnect: Trailer Tow C439

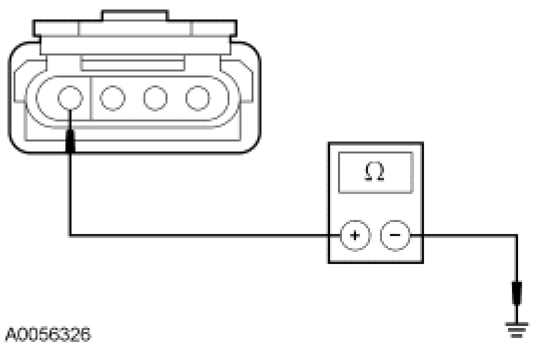

Fig. 90: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the trailer tow C439-4, circuit RAT08 (WH), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.

  NO : REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test Y: The Individual Trailer Lamp Is Inoperative - Trailer Stop/Turn Lamp

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Fuse and Relay Information for schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Trailer/Camper Adapter for schematic and connector information.

Normal Operation

The battery junction box (BJB) fuse 24 (15A) supplies voltage to the LH trailer tow stop/turn relay and BJB fuse 46 (15A) supplies voltage to the RH trailer tow stop/turn relay. The trailer tow stop/turn relay coils are grounded through circuit GD120 (BK/GN).

The trailer tow LH stop/turn relay coil receives voltage from circuit CLS18 (GY/BN) when the vehicle LH rear stoplamp is illuminated. When the trailer tow LH stop/turn relay is energized, voltage is routed to the trailer tow connector through circuit CAT06 (YE).

The trailer tow RH stop/turn relay coil receives voltage through circuit CLS19 (VT/OG) when the vehicle RH rear stoplamp is illuminated. When the trailer tow RH stop/turn relay is energized, voltage is routed to the trailer tow connector through circuit CAT09 (GN).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Joint connector
- Trailer tow stop/turn relay
- BJB
- Trailer

PINPOINT TEST Y: THE INDIVIDUAL TRAILER LAMP IS INOPERATIVE - TRAILER STOP/TURN LAMP

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

Y1 CHECK CIRCUIT CAT06 (YE) OR CIRCUIT CAT09 (GN) FOR VOLTAGE

- Key in OFF position.

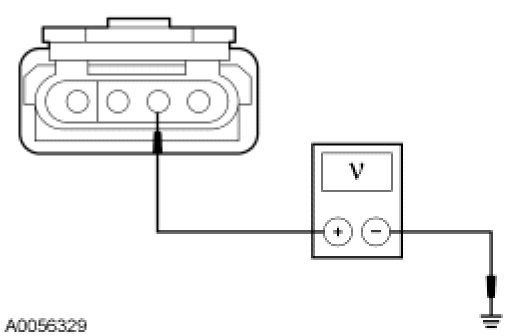

Fig. 91: Measuring Voltage Between Trailer Tow C439-2, Circuit CAT06 (YE), Harness Side & Ground
Courtesy of FORD MOTOR CO.

- For the LH trailer turn/stoplamp, while applying the brake pedal, measure the voltage between the trailer tow C439-2, circuit CAT06 (YE), harness side and ground.

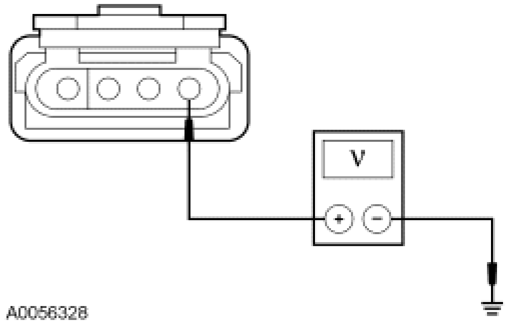

Fig. 92: Measuring Voltage Between Trailer Tow C439-1, Circuit CAT09 (GN), Harness Side & Ground
Courtesy of FORD MOTOR CO.

- For the RH trailer turn/stoplamp, while applying the brake pedal, measure the voltage between the trailer tow C439-1, circuit CAT09 (GN), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.

  NO : Go to Y2.

Y2 CHECK THE TRAILER TOW STOP/TURN RELAY

- Disconnect: Suspect Trailer Tow Stop/Turn Relay
- Substitute a known good relay.

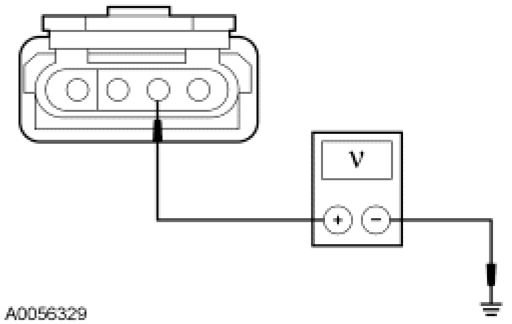

Fig. 93: Measuring Voltage Between Trailer Tow C439-2, Circuit CAT06 (YE), Harness Side & Ground
Courtesy of FORD MOTOR CO.

- For the LH trailer turn/stoplamp, while applying the brake pedal, measure the voltage between the trailer tow C439-2, circuit CAT06 (YE), harness side and ground.

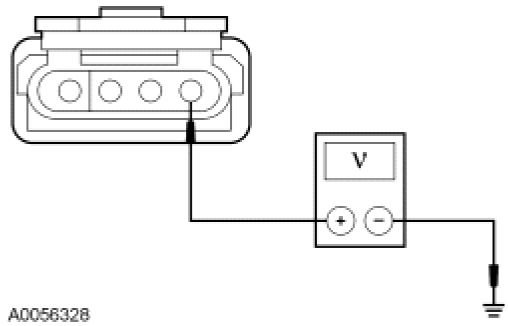

Fig. 94: Measuring Voltage Between Trailer Tow C439-1, Circuit CAT09 (GN), Harness Side & Ground
Courtesy of FORD MOTOR CO.

- For the RH trailer turn/stoplamp, while applying the brake pedal, measure the voltage between the trailer tow C439-1, circuit CAT09 (GN), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : REMOVE the known good relay. INSTALL a new trailer tow stop/turn relay. TEST the system for normal operation.

  NO : REMOVE the known good relay. Go to Y3.

Y3 CHECK CIRCUIT CLS18 (GY/BN) OR CIRCUIT CLS19 (VT/OG) FOR AN OPEN

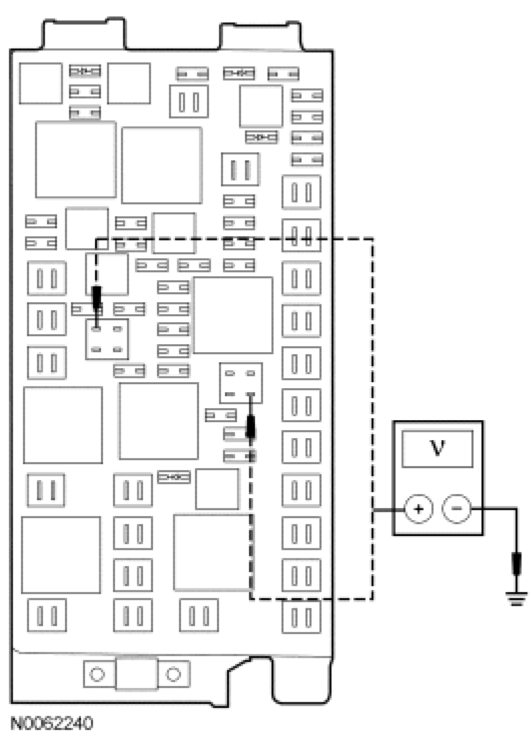

Fig. 95: Measuring Voltage Between Trailer Tow LH Stop/Turn Relay Pin 1 & Pin 2, CLS18 (GY/BN) & CLS19 (VT/OG)
Courtesy of FORD MOTOR CO.

- While applying the brake pedal, measure the voltage between the trailer tow LH stop/turn relay pin 1, circuit CLS18 (GY/BN), BJB face side and ground; or between the trailer tow RH stop/turn relay pin 2, circuit CLS19 (VT/OG), BJB face side and ground.
- **Is the voltage greater than 10 volts?**

YES : Go to Y4.

NO : REPAIR the circuit in question. TEST the system for normal operation.

Y4 CHECK THE BJB

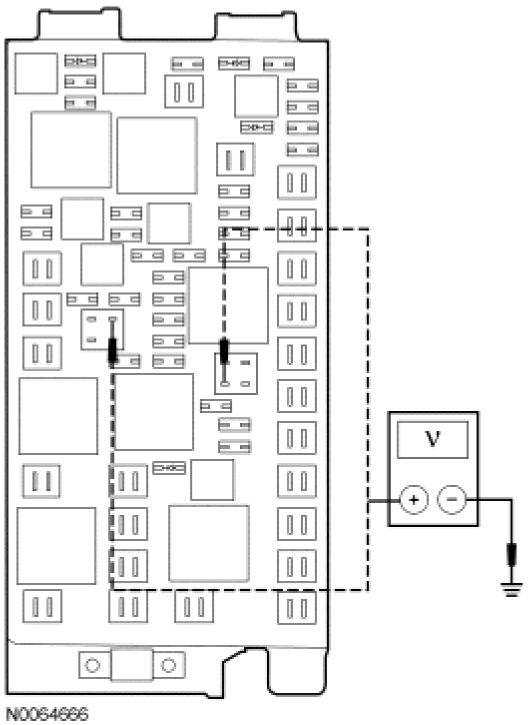

Fig. 96: Measuring Voltage Between Trailer Tow LH Stop/Turn Relay Pin 3, BJB Face Side & RH Stop/Turn Relay Pin 5,
Courtesy of FORD MOTOR CO.

- Measure the voltage between the trailer tow LH stop/turn relay pin 3, BJB face side and ground; or between the trailer tow RH stop/turn relay pin 5, BJB face side and ground.
- **Is the voltage greater than 10 volts?**

YES : Go to Y5.

NO : VERIFY the BJB fuse 24 (15A) (LH stop/turn relay) or fuse 46 (15A) (RH stop/turn relay) is OK. If OK, INSTALL a new BJB. TEST the system for normal operation.

Y5 CHECK CIRCUIT GD120 (BK/GN) FOR CONTINUITY TO GROUND

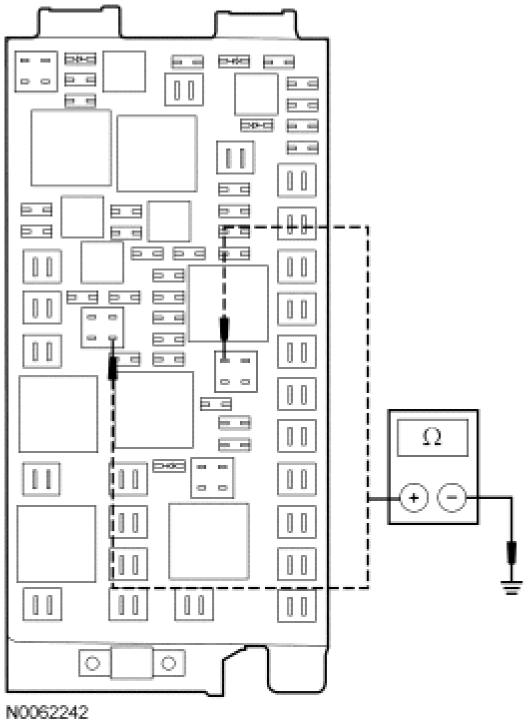

Fig. 97: Measuring Resistance Between Trailer Tow LH Turn Relay Pin 2, Circuit GD120 (BK/GN) & RH Turn Relay Pin 1
Courtesy of FORD MOTOR CO.

- Measure the resistance between the trailer tow LH turn relay pin 2, circuit GD120 (BK/GN), BJB face side and ground; or between the trailer tow RH turn relay pin 1, circuit GD120 (BK/GN), BJB face side and ground.
- **Is the resistance less than 5 ohms?**

  YES : REPAIR circuit CAT06 (YE) (LH trailer stop/turn) or circuit CAT09 (GN) (RH trailer stop/turn) for an open. TEST the system for normal operation.

  NO : Go to Y6.

Y6 CHECK CIRCUIT GD120 (BK/GN) FOR AN OPEN

- Disconnect: Joint Connector 7 C2200

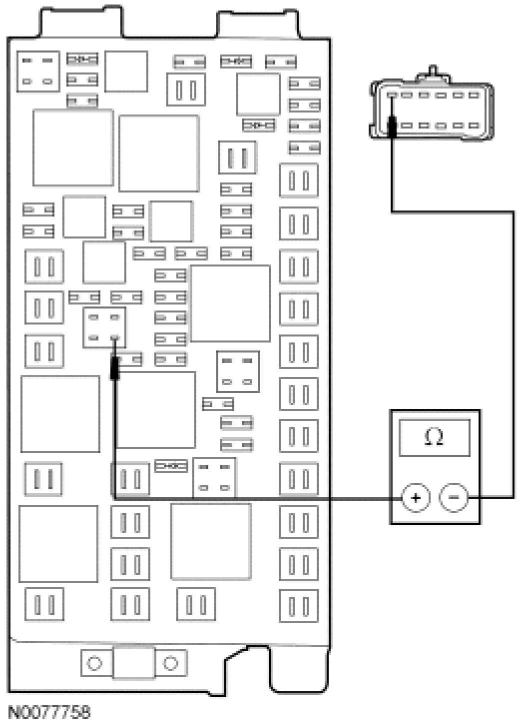

Fig. 98: Measuring Resistance Between Trailer Tow LH Stop/Turn Relay Pin 2, GD120 (BK/GN) & Joint Connector 7 C2200-M
Courtesy of FORD MOTOR CO.

- For the LH trailer turn, measure the resistance between the trailer tow LH stop/turn relay pin 2, circuit GD120 (BK/GN), BJB face side and the joint connector 7 C2200-M, circuit GD120 (BK/GN), harness side.

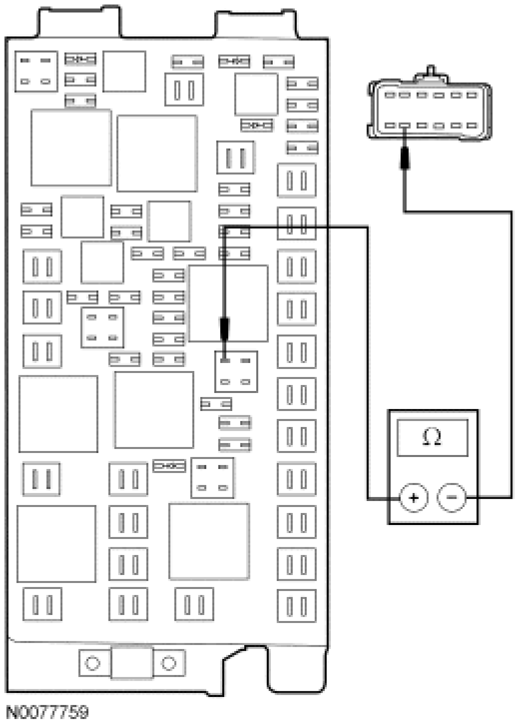

Fig. 99: Measuring Resistance Between Trailer Tow RH Stop/Turn Relay Pin 1, GD120 (BK/GN) & Joint Connector 7 C2200-B
Courtesy of FORD MOTOR CO.

- For the RH trailer turn, measure the resistance between the trailer tow RH stop/turn relay pin 1, circuit GD120 (BK/GN), BJB face side and the joint connector 7 C2200-B, circuit GD120 (BK/GN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test Z: The Trailer Lamps Are Inoperative - Trailer Parking Lamps

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Fuse and Relay Information for schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Trailer/Camper Adapter for schematic and connector information.

Normal Operation

The trailer tow parking lamp relay coil receives voltage through circuit CLS30 (VT/WH) when the vehicle parking lamps are illuminated. The trailer tow parking lamp relay coil is grounded through circuit GD120 (BK/GN). The battery junction box (BJB) fuse 9 (20A) supplies voltage to the trailer tow parking lamp relay switch side. When the trailer tow parking lamp relay is energized, the voltage is routed to the trailer tow connector through circuit CAT11 (BN).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Joint connector
- Trailer tow parking lamp relay
- BJB
- Trailer

PINPOINT TEST Z: THE TRAILER LAMPS ARE INOPERATIVE - TRAILER PARKING LAMPS

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: The battery ground cable must be disconnected for accurate test results when checking ground circuits for continuity to ground.

Z1 CHECK CIRCUIT CAT11 (BN) FOR VOLTAGE

- Key in OFF position.
- Place the headlamp switch in the PARKING LAMPS ON position.

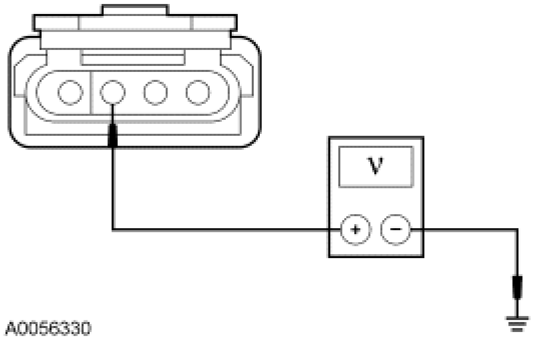

Fig. 100: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the trailer tow C439-3, circuit CAT11 (BN), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.

  NO : Go to Z2.

Z2 CHECK THE TRAILER TOW PARKING LAMP RELAY

- Place the headlamp switch in the OFF position.

- Disconnect: Trailer Tow Parking Lamp Relay
- Substitute a known good relay.
- Place the headlamp switch in the PARKING LAMPS ON position.

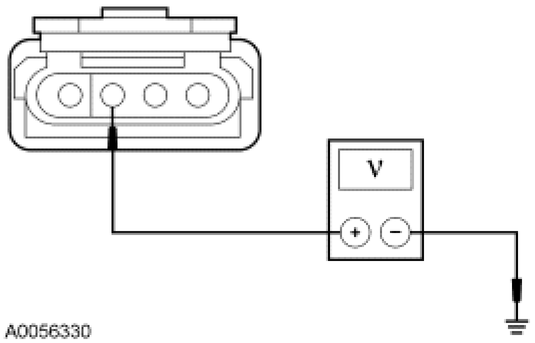

Fig. 101: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the trailer tow C439-3, circuit CAT11 (BN), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : REMOVE the known good relay. Go to Z3.

  NO : REMOVE the known good relay. INSTALL a new trailer tow parking lamp relay. TEST the system for normal operation.

Z3 CHECK CIRCUIT CLS30 (VT/WH) FOR AN OPEN

NOTE: Make sure the parking lamps are still on.

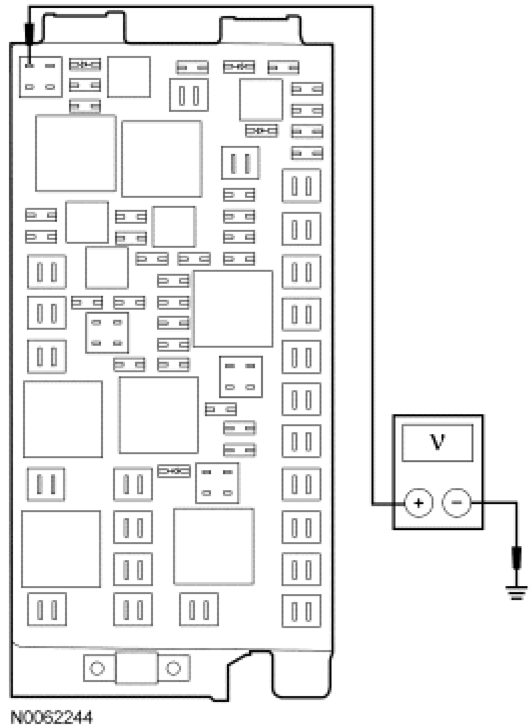

Fig. 102: Measuring Voltage Between Trailer Tow Parking Lamp Relay Pin 1, Circuit CLS30 (VT/WH) & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the trailer tow parking lamp relay pin 1, circuit CLS30 (VT/WH), BJB face side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to Z4.

  NO : REPAIR the circuit. TEST the system for normal operation.

Z4 CHECK THE BJB

- Place the headlamp switch in the OFF position.

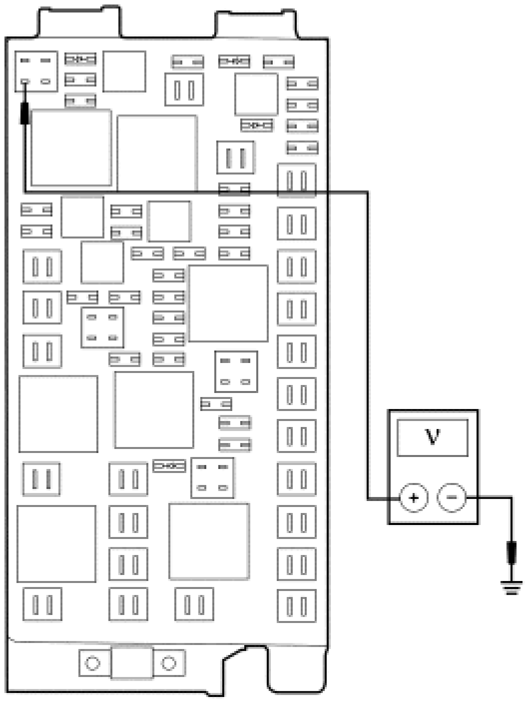

Fig. 103: Measuring Voltage Between Trailer Tow Parking Lamp Relay Pin 5, BJB Face Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the trailer tow parking lamp relay pin 5, BJB face side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to Z5.

  NO : VERIFY the BJB fuse 9 (20A) is OK. If OK, INSTALL a new BJB. TEST the system for normal operation.

Z5 CHECK CIRCUIT GD120 (BK/GN) FOR CONTINUITY TO GROUND

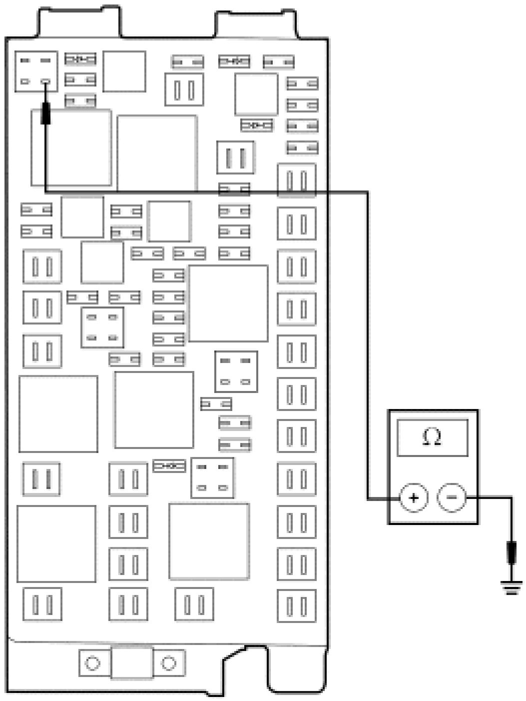

Fig. 104: Measuring Resistance Between Trailer Tow Parking Lamp Relay Pin 2, Circuit GD120 (BK/GN) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the trailer tow parking lamp relay pin 2, circuit GD120 (BK/GN), BJB face side and ground.
- **Is the resistance less than 5 ohms?**

  YES : REPAIR circuit CAT11 (BN) for an open. TEST the system for normal operation.

  NO : Go to Z6.

Z6 CHECK CIRCUIT GD120 (BK/GN) FOR AN OPEN

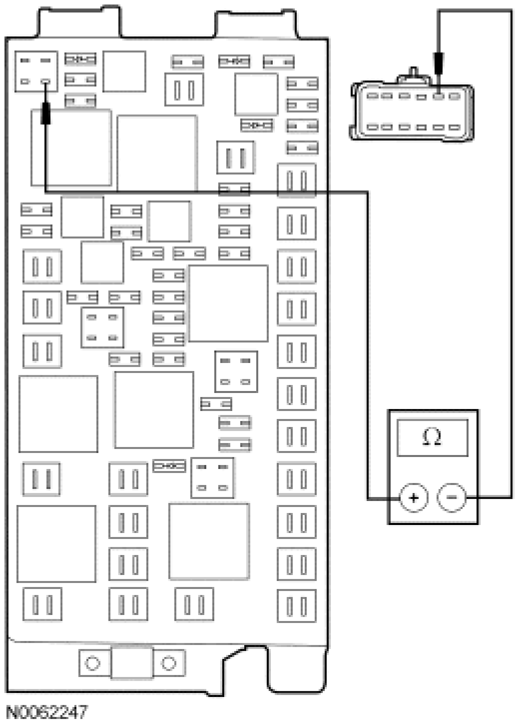

Fig. 105: Measuring Resistance Between Trailer Tow Parking Lamp Relay Pin 2, GD120 (BK/GN) & Joint Connector 7 C2200-H
Courtesy of FORD MOTOR CO.

- Measure the resistance between the trailer tow parking lamp relay pin 2, circuit GD120 (BK/GN), BJB face side and the joint connector 7 C2200-H, circuit GD120 (BK/GN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new joint connector. TEST the system for normal operation.

  NO : REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test AA: The Trailer Lamps Are On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Trailer/Camper Adapter for schematic and connector information.

Normal Operation - Trailer Tow Stop/Turn Lamp

The trailer tow LH stop/turn relay coil receives voltage through circuit CLS18 (GY/BN) when the vehicle LH rear stoplamp is illuminated. When the trailer tow LH stop/turn relay is energized, voltage is routed to the trailer tow connector through circuit CAT06 (YE).

The trailer tow RH stop/turn relay coil receives voltage through circuit CLS19 (VT/OG) when the vehicle RH rear stoplamp is illuminated. When the trailer tow RH stop/turn relay is energized, voltage is routed to the trailer tow connector through circuit CAT09 (GN).

Trailer Tow Parking

The trailer tow parking lamp relay coil receives voltage through circuit CLS30 (VT/WH) when the vehicle parking lamps are illuminated. When the trailer tow parking lamp relay is energized, voltage is routed to the trailer tow connector through circuit CAT11 (BN).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Trailer tow relay
- Trailer

PINPOINT TEST AA: THE TRAILER LAMPS ARE ON CONTINUOUSLY

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

AA1 CHECK FOR VOLTAGE AT THE TRAILER TOW CONNECTOR

- Key in ON position.
- Measure the voltage the between trailer tow connector, harness side and ground as follows:

Connector-Pin	Circuit
C439-2	CAT06 (YE)
C439-1	CAT09 (GN)
C439-3	CAT11 (BN)

- **Is any voltage present?**

  YES : Go to AA2.

  NO : The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.

AA2 CHECK THE SUSPECT RELAY

- Key in OFF position.
- Disconnect: Suspect Trailer Tow Relay
- Measure the voltage the between trailer tow connector, harness side and ground as follows:

Connector-Pin	Circuit
C439-2	CAT06

	(YE)
C439-1	CAT09 (GN)
C439-3	CAT11 (BN)

- **Is any voltage present?**

  YES : REPAIR circuit CAT06 (YE) (LH turn), circuit CAT09 (GN) (RH turn), or circuit CAT11 (BN) (parking lamps) for a short to voltage. TEST the system for normal operation.

  NO : INSTALL a new trailer tow relay in question. TEST the system for normal operation.

ADAPTIVE HEADLIGHTING

Special Tools

Illustration	Tool Name	Tool Number
	73III Automotive Meter	105-R0057 or equivalent
	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The headlamp control module (HCM) receives information from the communication network such as vehicle speed, steering wheel angle and headlamps on status. Based on the information received, the HCM determines if the headlamps need to be angled left or right as well as the degree of angle.

The HCM does not operate the adaptive headlamps until the vehicle speed is above 5 km/h (3 mph).

When the ignition is placed in the RUN/START position, the HCM runs an initialization check to determine the straight-ahead position of the headlamps. The lamps track left to right, then back to center to signify that the system is operating correctly.

If the HCM does not receive the required information over the communication network or determines that there is a fault with the circuitry to the sensors or control motors, it defaults the headlamps to the straight-ahead position and sets DTC(s).

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical
• Headlamp assembly	• Battery junction box (BJB) fuse 51 (5A) • Wiring, terminals or connectors • Headlamp control module (HCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure the headlamp switch is in the OFF position.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.

7. Carry out the network test.
    - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
    - If the network test passes, retrieve and record the continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the HCM.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

DTC Charts

HEADLAMP CONTROL MODULE (HCM) DTC CHART

DTC	Description	Action
B1342	ECU Is Faulted	INSTALL a new HCM. REFER to **Headlamp Control Module (HCM)**. TEST the system for normal operation.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action

• No communication with the adaptive front lighting module	• Fuse • Wiring, terminals or connectors • Headlamp control module (HCM)	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• The adaptive front lighting is inoperative/does not operate correctly	• Wiring, terminals or connectors • Headlamp assembly • HCM	• Go to **Pinpoint Test AF** .

Pinpoint Tests

Pinpoint Test AB: DTC U0100 - Lost Communication With ECM/PCM

Normal Operation

The headlamp control module (HCM) receives vehicle speed information from the PCM. If the HCM does not receive communication from the PCM, DTC U0100 is set.

This pinpoint test is intended to diagnose the following:

- HCM
- PCM

PINPOINT TEST AB: DTC U0100 - LOST COMMUNICATION WITH ECM/PCM

AB1 REPEAT THE ON-DEMAND SELF-TEST

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: HCM Self-Test
- Clear the DTCs and repeat the HCM on-demand self-test.
- **Is DTC U0100 retrieved again?**

  YES : Go to AB2.

  NO : The vehicle is operating correctly at this time. The HCM may have temporarily lost communication with the PCM.

AB2 CHECK OTHER MODULES FOR DTC U0100

- Enter the following diagnostic mode on the diagnostic tool: Instrument Cluster (IC) Self-Test
- Carry out the on-demand self-test for other modules on the high speed controller area network (HS-CAN). The IC, ABS module and restraints control module (RCM), for example, communicate on the HS-CAN.
- **Is DTC U0100 retrieved from any other module?**

  YES : Go to AB3.

NO : Go to AB4.

AB3 CHECK FOR CORRECT PCM OPERATION

- Disconnect all the PCM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the PCM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new PCM. REFER to **ELECTRONIC ENGINE CONTROLS** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

AB4 CHECK FOR CORRECT HCM OPERATION

- Disconnect the HCM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the HCM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new HCM. REFER to **Headlamp Control Module (HCM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test AC: DTC U0126 - Lost Communication With Steering Wheel Angle Sensor Module

Normal Operation

The headlamp control module (HCM) receives steering wheel angle information from the steering angle sensor module (SASM). If the HCM does not receive communication from the SASM, DTC U0126 is set.

This pinpoint test is intended to diagnose the following:

- HCM
- SASM

PINPOINT TEST AC: DTC U0126 - LOST COMMUNICATION WITH STEERING WHEEL ANGLE

SENSOR MODULE

AC1 REPEAT THE ON-DEMAND SELF-TEST

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: HCM Self-Test
- Clear the DTCs and repeat the HCM on-demand self-test.
- **Is DTC U0126 retrieved again?**

  YES : Go to AC2.

  NO : The vehicle is operating correctly at this time. The HCM may have temporarily lost communication with the SASM.

AC2 CHECK THE ABS MODULE FOR DTC U0126

- Enter the following diagnostic mode on the diagnostic tool: ABS Module Self-Test
- Carry out the on-demand self-test for the ABS module.
- **Is DTC U0126 retrieved?**

  YES : REFER to **MODULE COMMUNICATIONS NETWORK** article.

  NO : Go to AC3.

AC3 CHECK FOR CORRECT HCM OPERATION

- Disconnect the HCM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the HCM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new HCM. REFER to **Headlamp Control Module (HCM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test AD: DTC U0155 - Lost Communication With Instrument Panel Cluster (IC) Control Module

Normal Operation

The smart junction box (SJB) communicates the headlamps on status to the instrument cluster (IC) over the medium speed controller area network (MS-CAN). The IC acts as a gateway module and relays the information through the high speed controller area network (HS-CAN). The headlamp control module (HCM) receives headlamps on status information from the IC gateway. If the HCM does not receive communication from the IC, DTC U0155 is set.

This pinpoint test is intended to diagnose the following:

- HCM
- IC

PINPOINT TEST AD: DTC U0155 - LOST COMMUNICATION WITH INSTRUMENT PANEL CLUSTER (IC) CONTROL MODULE

AD1 REPEAT THE ON-DEMAND SELF-TEST

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: HCM Self-Test
- Clear the DTCs and repeat the HCM on-demand self-test.
- **Is DTC U0155 retrieved again?**

  YES : Go to AD2.

  NO : The vehicle is operating correctly at this time. The HCM may have temporarily lost communication with the PCM.

AD2 CHECK OTHER MODULES FOR DTC U0155

- Enter the following diagnostic mode on the diagnostic tool: ABS Module Self-Test
- Carry out the on-demand self-test for other modules on the HS-CAN. The PCM, ABS module and restraints control module (RCM), for example, communicate on the HS-CAN.
- **Is DTC U0155 retrieved from any other module?**

  YES : REFER to **MODULE COMMUNICATIONS NETWORK** article.

  NO : Go to AD3.

AD3 CHECK FOR CORRECT HCM OPERATION

- Disconnect the HCM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the HCM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new HCM. REFER to **Headlamp Control Module (HCM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test AE: DTC C1278 - Steering Wheel Angle 1 and 2 Signal Faulted

Normal Operation

The headlamp control module (HCM) receives steering wheel angle information from the steering angle sensor module (SASM). If the HCM receives faulty steering wheel angle data from the SASM, DTC C1278 is set.

This pinpoint test is intended to diagnose the following:

- HCM
- SASM

PINPOINT TEST AE: DTC C1278 - STEERING WHEEL ANGLE 1 AND 2 SIGNAL FAULTED

AE1 REPEAT THE ON-DEMAND SELF-TEST

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: HCM Self-Test
- Clear the DTCs and repeat the HCM on-demand self-test.
- **Is DTC C1278 retrieved again?**

  YES : Go to AE2.

  NO : The vehicle is operating correctly at this time. The HCM may have temporarily received incorrect data from the steering wheel angle sensor module.

AE2 CHECK THE ABS MODULE FOR DTC C1278

- Carry out the on-demand self-test for the ABS module.
- **Is DTC C1278 retrieved?**

  YES : Go to AE3.

  NO : Go to AE4.

AE3 CHECK FOR CORRECT SASM OPERATION

- Disconnect the SASM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the SASM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SASM. REFER to Steering Wheel Rotation Sensor in **VEHICLE DYNAMIC SYSTEMS** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

AE4 CHECK FOR CORRECT HCM OPERATION

- Disconnect the HCM connector.
- Check for:
  - corrosion

    - damaged pins
    - pushed-out pins
- Connect the HCM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new HCM. REFER to **Headlamp Control Module (HCM)**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test AF: The Adaptive Front Lighting Is Inoperative/Does Not Operate Correctly

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Headlamps/Autolamps for schematic and connector information.

Normal Operation

The headlamp control module (HCM) receives information from the high speed controller area network (HS-CAN), such as steering wheel angle, vehicle speed, and headlamps on status. Based on the information received, the HCM determines what angle (left to right of straight ahead) the headlamps should be.

The HCM does not operate the adaptive headlamps until the headlamps are on and the vehicle speed is above 5 km/h (3 mph). Depending on vehicle speed and steering wheel angle, the HCM determines and positions the headlamps at an angle to improve visibility while the vehicle is in a turn. At low and high vehicle speeds (8 km/h [5 mph] and 97 km/h [60 mph] for example), the angle of the headlamps is changed minimally. At vehicle speeds of 32-40 km/h (20-25 mph), the headlamp angle change is greater.

The HCM monitors the position of the headlamps and controls the motors, which changes the angle of the headlamps.

DTC Description	Fault Trigger Conditions
B2609 - ECU Output to Left Headlamp Stepper Motor Circuit Failure	A continuous and on-demand DTC that sets when the HCM detects a failure from the LH headlamp stepper motor or circuitry.
B2612 - ECU Output to Right Headlamp Stepper Motor Circuit Failure	A continuous and on-demand DTC that sets when the HCM detects a failure from the RH headlamp stepper motor or circuitry.
B100B - Left Headlamp Swivel Control Failure	A continuous and on-demand DTC that sets when the HCM detects a failure from the LH headlamp position sensor or circuitry.
B100C - Right Headlamp Swivel Control Failure	A continuous and on-demand DTC that sets when the HCM detects a failure from the RH headlamp position sensor or circuitry.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Headlamp assembly
- HCM

PINPOINT TEST AF: THE ADAPTIVE FRONT LIGHTING IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

NOTE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

AF1 CHECK THE RECORDED DTCs FROM THE HCM SELF-TEST

- Check the recorded results from the HCM self-test.
- **Are any DTCs recorded?**

  YES : For DTC B2612 or B100C, go to AF3.

  For DTC B2609 or B100B, go to AF11.

  For all other DTCs, REFER to DTC Charts in this service information.

  NO : Go to AF2.

AF2 ACTIVE COMMAND THE HEADLAMP ANGLE

- Key in ON position.
- Turn the headlamps on.
- Select the HCM headlamp angle control (BEAM_CTRL_LFT, BEAM_CTRL_RGT) active commands. Command the headlamps to the full left and full right positions while observing the headlamp beam patterns on a wall.
- **Do the headlamps move left and right?**

  YES : Go to AF10.

  NO : Go to AF11.

AF3 CHECK THE CIRCUITRY BETWEEN THE LH AND RH HEADLAMPS FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: LH Headlamp C1021b and RH Headlamp C1041b
- Key in ON position.
- Measure the voltage between the LH headlamp, harness side and ground as follows:

Connector-Pin	Circuit
C1021b-1	CLF46 (YE/GY)

C1021b-2	CLF45 (VT/GY)
C1021b-4	LLF43 (GN/VT)
C1021b-5	LLF44 (BU/GY)
C1021b-7	CLF48 (GN/BN)
C1021b-8	CLF47 (BU/GN)
C1021b-10	RLF45 (GY/VT)

- **Is any voltage present?**

  YES : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to AF4.

AF4 CHECK THE CIRCUITRY BETWEEN THE LH AND RH HEADLAMPS FOR A SHORT TO GROUND

- Key in OFF position.
- Measure the resistance between the LH headlamp, harness side and ground as follows:

Connector-Pin	Circuit
C1021b-1	CLF46 (YE/GY)
C1021b-2	CLF45 (VT/GY)
C1021b-4	LLF43 (GN/VT)
C1021b-5	LLF44 (BU/GY)
C1021b-7	CLF48 (GN/BN)
C1021b-8	CLF47 (BU/GN)
C1021b-10	RLF45 (GY/VT)

- **Are the resistances greater than 10,000 ohms?**

  YES : Go to AF5.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

AF5 CHECK THE CIRCUITRY BETWEEN THE LH AND RH HEADLAMPS FOR AN OPEN

- Measure the resistance between the LH headlamp, harness side and RH headlamp, harness side:

LH Headlamp Connector-Pin	RH Headlamp Connector-Pin	Circuit
C1021b-1	C1041b-3	CLF46 (YE/GY)
C1021b-2	C1041b-2	CLF45 (VT/GY)
C1021b-4	C1041b-4	LLF43 (GN/VT)
C1021b-5	C1041b-5	LLF44 (BU/GY)
C1021b-7	C1041b-9	CLF48 (GN/BN)
C1021b-8	C1041b-8	CLF47 (BU/GN)
C1021b-10	C1041b-10	RLF45 (GY/VT)

- **Are the resistances less than 5 ohms?**

  YES : Go to AF6.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

AF6 CHECK FOR SHORTED TOGETHER CIRCUITS BETWEEN THE LH AND RH HEADLAMPS

- Measure the resistance between each circuit on the LH headlamp, harness side as follows:

Connector-Pin Circuit	Connector-Pin Circuit
C1021b-1 CLF46 (YE/GY)	C1021b-2 CLF45 (VT/GY) C1021b-4 LLF43 (GN/VT) C1021b-5 LLF44 (BU/GY) C1021b-7 CLF48 (GN/BN) C1021b-8 CLF47

	(BU/GN) C1021b-10 RLF45 (GY/VT)
C1021b-2 CLF45 (VT/GY)	C1021b-4 LLF43 (GN/VT) C1021b-5 LLF44 (BU/GY) C1021b-7 CLF48 (GN/BN) C1021b-8 CLF47 (BU/GN) C1021b-10 RLF45 (GY/VT)
C1021b-4 LLF43 (GN/VT)	C1021b-5 LLF44 (BU/GY) C1021b-7 CLF48 (GN/BN) C1021b-8 CLF47 (BU/GN) C1021b-10 RLF45 (GY/VT)
C1021b-5 LLF44 (BU/GY)	C1021b-7 CLF48 (GN/BN) C1021b-8 CLF47 (BU/GN) C1021b-10 RLF45 (GY/VT)
C1021b-7 CLF48 (GN/BN)	C1021b-8 CLF47 (BU/GN) C1021b-10 RLF45 (GY/VT)
C1021b-8	C1021b-10

CLF47 (BU/GN)	RLF45 (GY/VT)

- **Are the resistances greater than 10,000 ohms between each circuit?**

  YES : Go to AF7.

  NO : REPAIR the circuits in question. CLEAR the DTCs. REPEAT the self-test.

AF7 CHECK THE RH STEPPER MOTOR CIRCUITS FOR AN OPEN

- Remove the LH headlamp. Refer to **Headlamp Assembly**.
- Disconnect: HCM

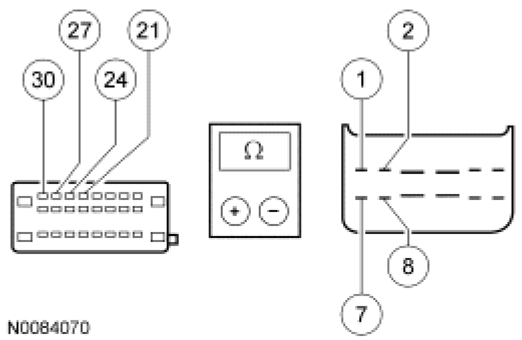

Fig. 106: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the HCM, harness side and the LH headlamp, component side as follows:

HCM Connector	LH Headlamp Connector	Circuit
Pin 21	Pin 1	CLF46
Pin 30	Pin 2	CLF45
Pin 24	Pin 7	CLF48
Pin 27	Pin 8	CLF47

- **Are the resistances less than 5 ohms?**

  YES : Go to AF8.

  NO : REPAIR or INSTALL a new LH headlamp. REFER to **Headlamp Assembly**. CLEAR the DTCs. REPEAT the self-test.

AF8 CHECK THE RH SENSOR CIRCUITS FOR AN OPEN

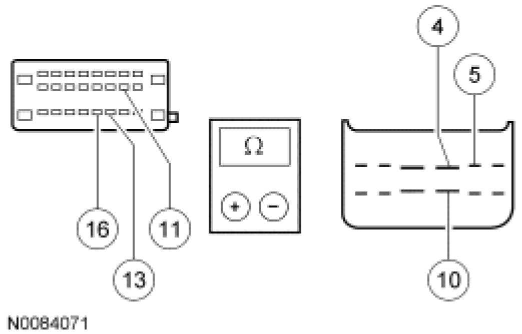

Fig. 107: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the HCM, harness side and the LH headlamp, component side as follows:

HCM Connector	LH Headlamp Connector	Circuit
Pin 13	Pin 4	LLF43
Pin 11	Pin 5	LLF44
Pin 16	Pin 10	RLF45

- **Are the resistances less than 5 ohms?**

  YES : Go to AF9.

  NO : REPAIR or INSTALL a new LH headlamp. REFER to **Headlamp Assembly**. CLEAR the DTCs. REPEAT the self-test.

AF9 CHECK FOR CORRECT HCM OPERATION (RH HEADLAMP DTCs)

- Disconnect the HCM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the HCM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new HCM. REFER to **Headlamp Control Module (HCM)**. TEST the system for normal operation.

  If the concern remains, REINSTALL the original HCM. INSTALL a new RH headlamp. REFER to **Headlamp Assembly**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose

or corroded connector.

AF10 CHECK THE STEERING WHEEL ROTATION SENSOR FOR CORRECT INSTALLATION

NOTE: If the PID indicates that the steering wheel rotation sensor is out of synchronization by 360 degrees, this is an indication that the steering column shaft was disconnected and the steering wheel was rotated one full turn prior to reconnecting it. The clockspring may be damaged and should be checked for correct installation.

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: Steering Angle Sensor Module (SASM) DataLogger
- Visually inspect the front wheels and make sure they are aligned to the straight-ahead position.

  NOTE: The PID could read +360 degrees or -360 degrees. The PID should indicate 0 when the wheels are in the straight-ahead position.

- Monitor the SASM steering wheel angle (SWA_SEN) PID.
- **Does the PID indicate the steering wheel at approximately 0 degrees?**

  YES : Go to AF11.

  NO : REMOVE and correctly INSTALL the steering wheel rotation sensor. REFER to **VEHICLE DYNAMIC SYSTEMS** article. MAKE SURE the clockspring is also correctly indexed. TEST the system for normal operation.

AF11 CHECK FOR CORRECT HCM OPERATION (LH HEADLAMP DTCs)

- Disconnect the HCM connector.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect the HCM connector and make sure it seats correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new HCM. REFER to **Headlamp Control Module (HCM)**. TEST the system for normal operation.

  If the concern remains, INSTALL a new LH headlamp. REFER to **Headlamp Assembly**. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

DAYTIME RUNNING LAMPS (DRL)

Special Tools

Illustration	Tool Name	Tool Number
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

NOTE: When installing a new SJB, it must be configured for this feature, if originally equipped. Refer to MODULE CONFIGURATION article.

The SJB controls the daytime running lamps (DRL) by using various inputs to determine whether or not the DRL should be illuminated. These inputs include:

- Ignition switch position
- Headlamp switch position
- Headlamps on or off
- Transaxle gear selection

When the DRL is active, the SJB provides a pulse-width modulated (PWM) voltage to the low beam headlamps. This illuminates the headlamps at a reduced intensity.

The SJB can be configured to turn the DRL on for this vehicle. Refer to **MODULE CONFIGURATION** article for additional information on this programmable parameter.

Inspection and Verification

1. Verify the customer concern.
2. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

   NOTE: Make sure the headlamp switch is in the OFF position.

   NOTE: Make sure the multifunction switch is not in the HIGH BEAM position.

   NOTE: Make sure to use the latest scan tool software release.

3. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

4. If the scan tool does not communicate with the VCM:
    - Check the VCM connection to the vehicle.
    - Check the scan tool connection to the VCM.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
5. If the scan tool does not communicate with the vehicle:
    - Verify the ignition key is in the ON position.
    - Verify the scan tool operation with a known good vehicle.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
6. Carry out the network test.
    - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
    - If the network test passes, retrieve and record the continuous memory DTCs.
7. Check the smart junction box (SJB) and make sure the daytime running lamps (DRL) configuration is enabled.
8. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The daytime running lamps (DRL) are inoperative	• Exterior lighting system input/output • Smart junction box (SJB) configuration • Ignition switch input • Transaxle gear input • SJB	• Go to **Pinpoint Test AG** .

Pinpoint Tests

Pinpoint Test AG: The Daytime Running Lamps (DRL) Are Inoperative

Normal Operation

When the ignition switch is in the RUN position, the headlamps are not on (from the autolamp system or manual control from the headlamp switch), the transaxle is not in PARK (P), the smart junction switch (SJB) provides a pulse-width modulated (PWM) voltage to the low beam headlamps. This illuminates the headlamps at a reduced intensity.

This pinpoint test is intended to diagnose the following:

- Exterior lighting system input/output
- SJB configuration
- Ignition switch input
- Transaxle gear input
- SJB

PINPOINT TEST AG: THE DAYTIME RUNNING LAMPS (DRL) ARE INOPERATIVE

AG1 VERIFY THE DRL OPERATION

- Place the gear selector lever in any gear other than PARK (P).
- **Are the DRL illuminated?**

  YES : The system is operating correctly. INFORM the customer of the conditions required for the DRL to operate correctly.

  NO : Go to AG2.

AG2 CHECK THE OPERATION OF THE HEADLAMPS

- Place the headlamp switch in the HEADLAMPS ON position and observe the headlamps.
- **Do the headlamps operate correctly?**

  YES : Go to AG3.

  NO : REFER to **Headlamps**.

AG3 CHECK THE IGNITION SWITCH INPUT

- Place the headlamp switch in the OFF position.
- Enter the following diagnostic mode on the diagnostic tool: SJB DataLogger
- Monitor the SJB ignition switch PID (IGN SW) while cycling the ignition switch through all positions.
- **Does the PID agree with the ignition switch positions?**

  YES : Go to AG4.

  NO : REFER to **STEERING COLUMN SWITCHES** article to diagnose the input from the ignition switch.

AG4 CHECK THE TRANSAXLE GEAR INPUT

- Enter the following diagnostic mode on the diagnostic tool: PCM DataLogger
- Monitor the PCM transmission gear status PID (TR) while placing the gear selector lever through all positions.
- **Does the PID agree with the gear selection?**

  YES : Go to AG5.

NO : REFER to **AUTOMATIC TRANSAXLE/TRANSMISSION - 6F50** article to diagnose the transmission range input.

AG5 CHECK SJB FOR DRL CONFIGURATION

- Enter the following diagnostic mode on the diagnostic tool: SJB Module Programming
- Check the SJB configuration and make sure the DRL feature is enabled.
- **Is the SJB DRL configuration enabled?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : ENABLE the DRL configuration. TEST the system for normal operation.

GENERAL PROCEDURES

HEADLAMP ADJUSTMENT

Special Tools

Illustration	Tool Name	Tool Number
 ST3041-A	Vision 100 Headlamp Aimer	196-00005 or equivalent

Headlamp Aiming

1. The headlamp aiming procedure depends on what type of beam pattern the headlamp is equipped with. Vehicles may come equipped with VOL or VOR headlamps. To identify the headlamp beam pattern, look on the headlamp lens. Molded in small letters on the headlamp lens is one of the following:
   - VOL and SAE
   - VOR and SAE
2. Once the headlamp beam pattern is identified, aim the headlamps using one of the following methods as applicable.
   - Photometric aimers can aim VOL- and VOR- headlamps. This is the preferred method of headlamp aiming.
   - Visual or screen method aiming can be used to aim VOL- and VOR- headlamps.
   - Mechanical aimers cannot be used with VOR- or VOL-type headlamps. Aerodynamic lamps that can be aimed mechanically have 3 nibs molded into the lens of the lamp.

Photometric Aiming

1. For the photometric aiming procedure, refer to the appropriate photometric headlamp aimer instruction manual.

Screen Method Aiming

All headlamp types

NOTE: Horizontal aim is not necessary for VOL or VOR headlamps.

NOTE: Consult your state vehicle inspection manual for recommended tolerance ranges for visual aiming.

NOTE: The sight shield may need to be positioned or removed for access to the adjusters.

1. Before starting headlamp adjustment:
    - check the tire inflation.
    - check that no other load is in the vehicle other than a half tank of fuel.
    - check that the headlamps are clean.
    - check for correct headlamp operation.
    - check that the vehicle is on level ground.
    - if the vehicle is equipped with air suspension, make sure that the switch is on.

    NOTE: The vertical wall or screen must be a minimum of 2.4-m (8-ft) wide.

2. Park the vehicle on a level surface approximately 7.6-m (25-ft) from the vertical wall or screen directly in front of it.

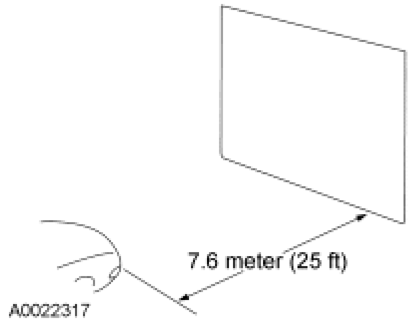

Fig. 108: Identifying Distance Between Vehicle And Vertical Wall Or Screen
Courtesy of FORD MOTOR CO.

NOTE: The center of the lamp is marked either on the lens (circle, crosshair or other mark) or on the bulb shield internal to the lamp (crosshair or other mark).

3. Mark a horizontal reference line on the vertical wall or screen.
    1. Measure the center of the headlamp height to ground and record the measurement.

2. Make a 2.4-meter (8-ft) horizontal mark (using masking tape) on the vertical wall or screen at the same distance from the ground as previously recorded.

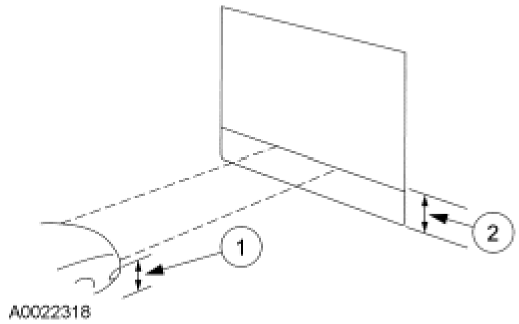

Fig. 109: Aiming Headlights
Courtesy of FORD MOTOR CO.

NOTE: This procedure should be done in a dark environment to effectively see the headlamp beam pattern.

4. Turn on the low beam headlamps to illuminate the wall or screen and open the hood.
5. On the wall or screen, locate the high intensity area of the beam pattern.

VOR-type headlamps

NOTE: The appearance of the VOR beam pattern may vary between vehicles.

6. Identify at the top edge of this high intensity area a distinct horizontal cutoff in the beam pattern. If the top edge of this cutoff is not even with the horizontal reference line, the headlamp beam needs to be adjusted using the headlamp adjusting screw.

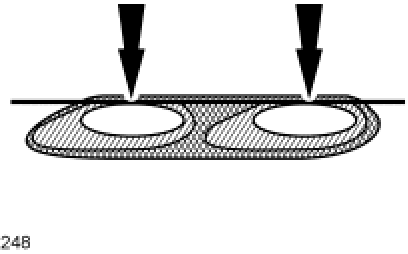

Fig. 110: Identifying High Intensity Area (VOR Type Headlamps)
Courtesy of FORD MOTOR CO.

VOL-type headlamps

7. For VOL-type headlamps, there is a distinct cutoff in the left portion of the beam pattern. The edge of this

cutoff should be positioned 50.2 mm (2 in) below the horizontal reference line. Adjust the headlamp as necessary using the headlamp adjusting screw.

1. Horizontal reference line.
2. Top edge of the beam pattern.
3. High intensity zone.

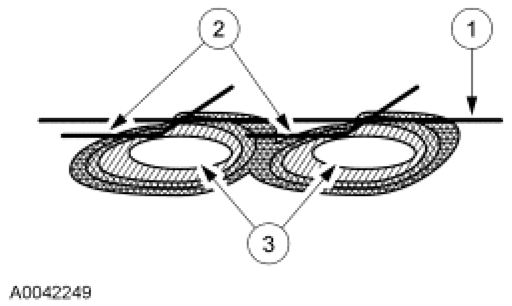

Fig. 111: Identifying VOL-Type Headlamps Beam Pattern
Courtesy of FORD MOTOR CO.

FRONT FOG LAMP ADJUSTMENT

NOTE: Horizontal aim is not required for this vehicle and is not adjustable. Consult your state vehicle inspection center for recommended tolerance ranges for visual aiming.

1. Before starting the fog lamp assembly adjustment:
   - check the tire inflation.
   - make sure there are no other loads in the vehicle other than a half tank of fuel.
   - make sure the vehicle is on level ground.
   - make sure the fog lamps and headlamps are clean.
   - make sure the headlamps are operating and are correctly aimed.

NOTE: The vertical wall screen must be a minimum of 2.4-m (8-ft) wide.

2. Park the vehicle on a level surface approximately 7.6 m (25 ft) from the vertical wall or screen directly in front of it.

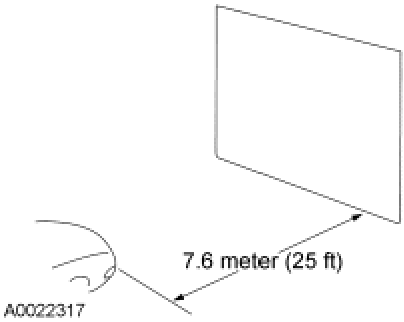

Fig. 112: Identifying Distance Between Vehicle And Vertical Wall Or Screen
Courtesy of FORD MOTOR CO.

3. The correct visual aim for the fog lamps is with the top edge of the high-intensity zone 10 cm (4 in) below the horizontal center of the fog lamps.

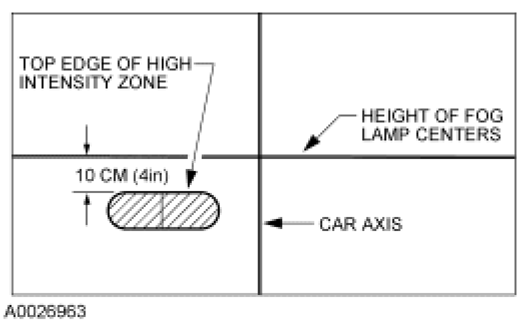

Fig. 113: Identifying Correct Visual Aim For Fog Lamps
Courtesy of FORD MOTOR CO.

AUTOLAMPS TIME DELAY ADJUSTMENT

NOTE: **The time delay can be programmed through the instrument cluster message center using the message center buttons (if equipped) or using the following steps.**

NOTE: **Steps 2 through 5 must be carried out within a 10-second period.**

1. Start with the ignition switch off and the headlamp switch in the AUTOLAMPS ON position.
2. Place the headlamp switch in the OFF position.
3. Place the ignition switch in the RUN position.
4. Place the ignition switch in the OFF position.
5. Place the headlamp switch in the AUTOLAMPS ON position. The exterior lamps turn on at this point.
6. Wait the desired amount of time and place the headlamp switch in the OFF position (maximum of 3 minutes). The exterior lamps turn off and the autolamp time delay is now set.

REMOVAL AND INSTALLATION

HEADLAMP ASSEMBLY

NOTE: Edge shown, MKX similar.

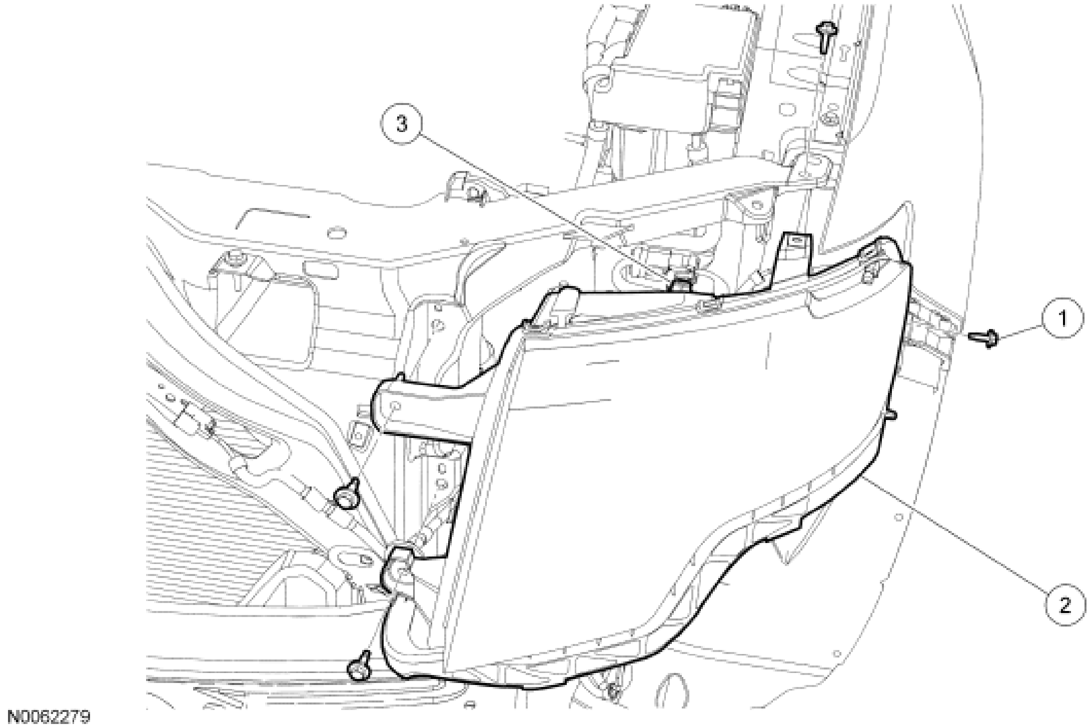

Fig. 114: Identifying Headlamp Assembly
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W711676	Headlamp assembly bolts (4 required)
2	13005/13006	Headlamp assembly (LH/RH)
3	-	Headlamp electrical connectors (part of 14290)

REMOVAL AND INSTALLATION

NOTE: Make sure the headlamp switch and the ignition switch are in the OFF position.

1. Remove the front bumper cover. For additional information, refer to **BUMPERS** article.
2. Remove the 4 bolts and the headlamp assembly.
   - Disconnect the electrical connectors.
3. To install, reverse the removal procedure.

HEADLAMP BULB

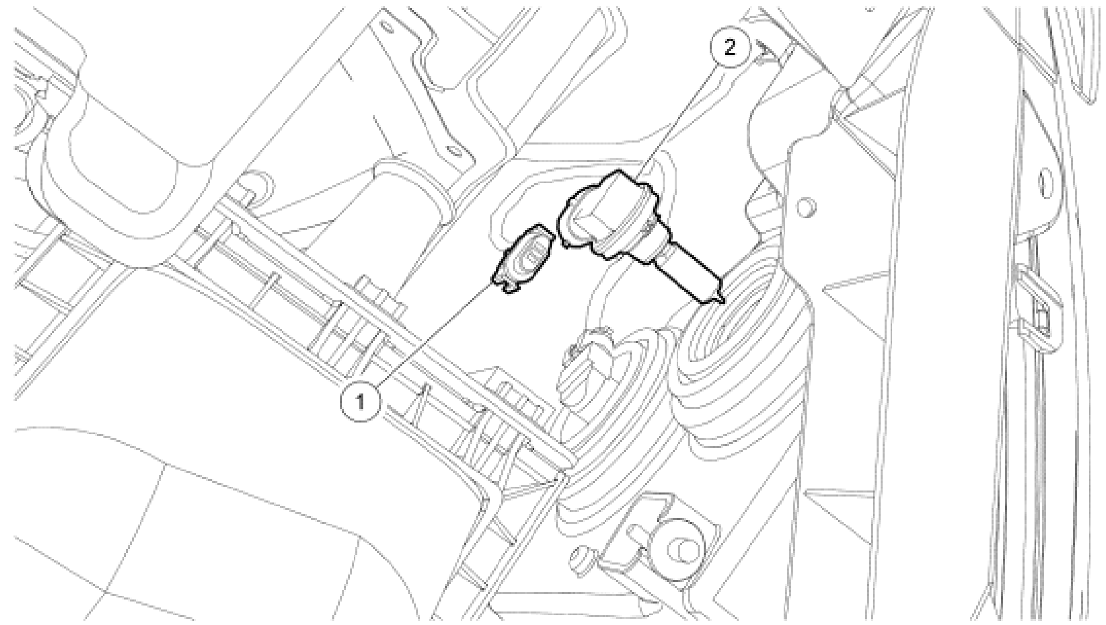

Fig. 115: Exploded View Of Headlamp Bulb Edge Low Beam
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Headlamp bulb electrical connector (part of 14290)
2	13N021	Headlamp bulb

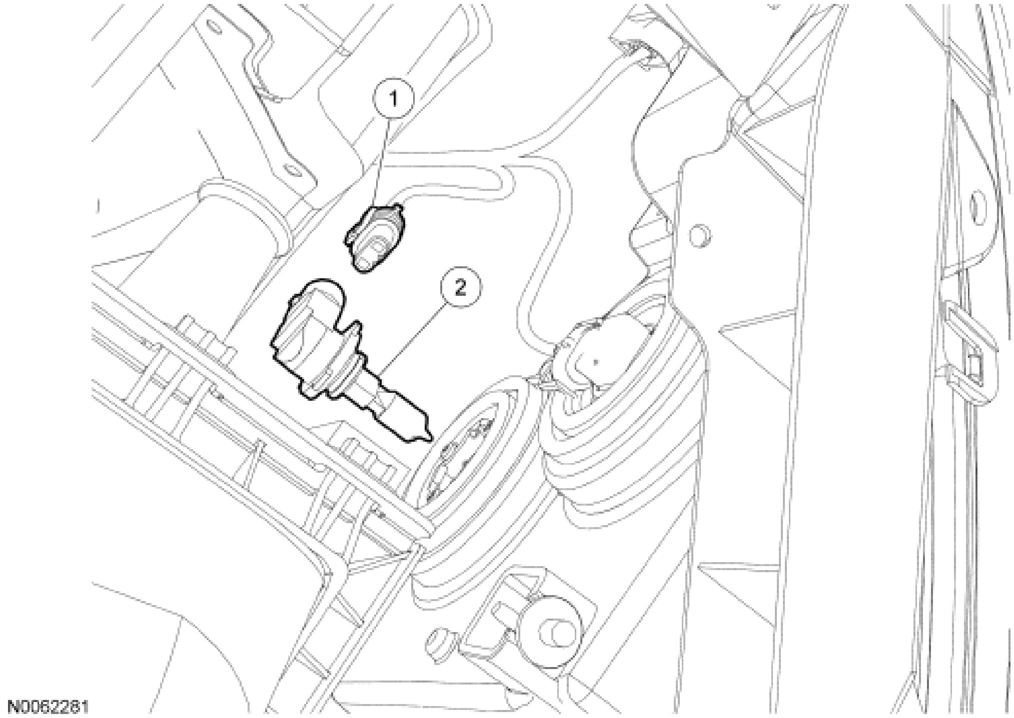

Fig. 116: Identifying Edge High Beam
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Headlamp bulb electrical connector (part of 14290)
2	13N021	Headlamp bulb

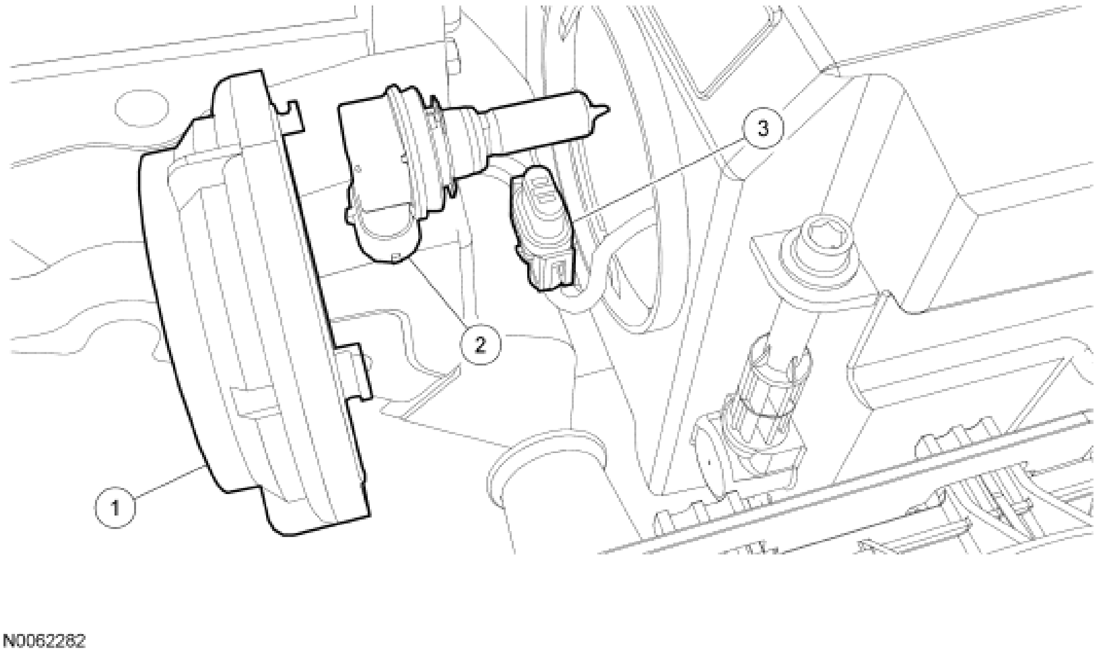

Fig. 117: Identifying MKX Low Beam
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Headlamp bulb access cover (part of 13005/13006)
2	13N021	Headlamp bulb
3	-	Headlamp bulb electrical connector (part of 13005/13006)

NOTE: The air cleaner assembly is shown removed for clarity.

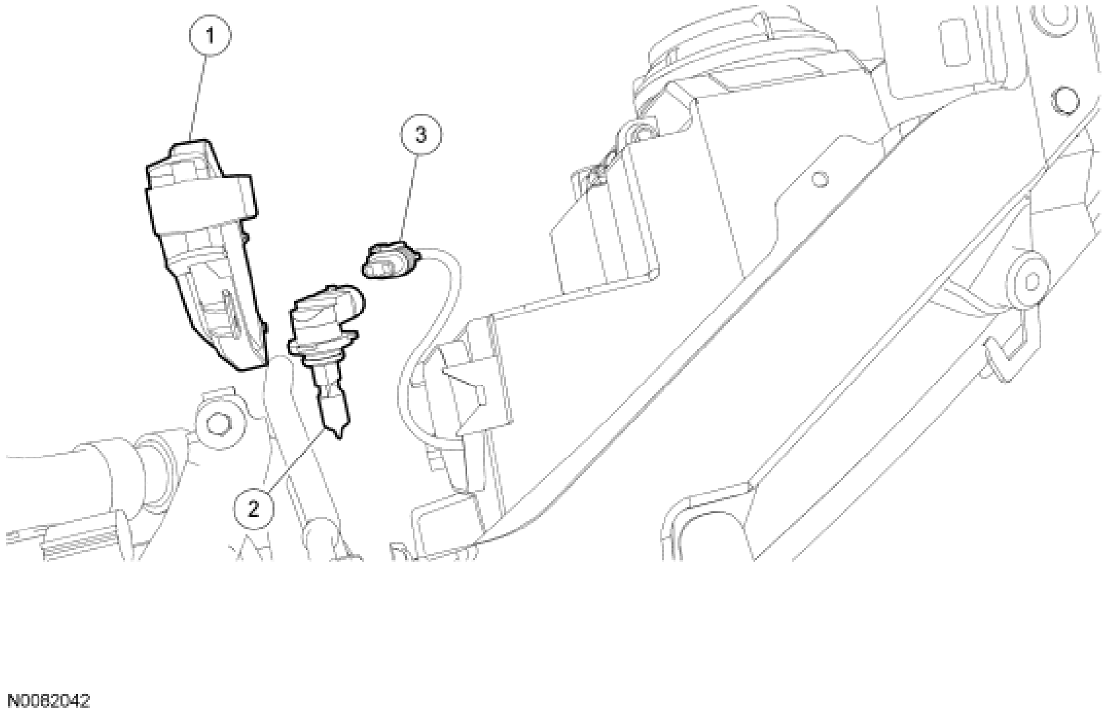

Fig. 118: Identifying MKX High Beam
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Headlamp bulb access cover (part of 13005/13006)
2	13N021	Headlamp bulb
3	-	Headlamp bulb electrical connector (part of 13005/13006)

REMOVAL AND INSTALLATION

WARNING: **The bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.**

NOTE: **The headlamp bulb should not be removed from the headlamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect headlamp bulb performance. Contaminants may enter the headlamp where they can settle on the lens and reflector. Never turn on the headlamps with the bulb removed from the headlamp.**

NOTE: **Make sure the headlamp switch and the ignition switch are in the OFF position.**

MKX

1. Remove the headlamp bulb access cover.

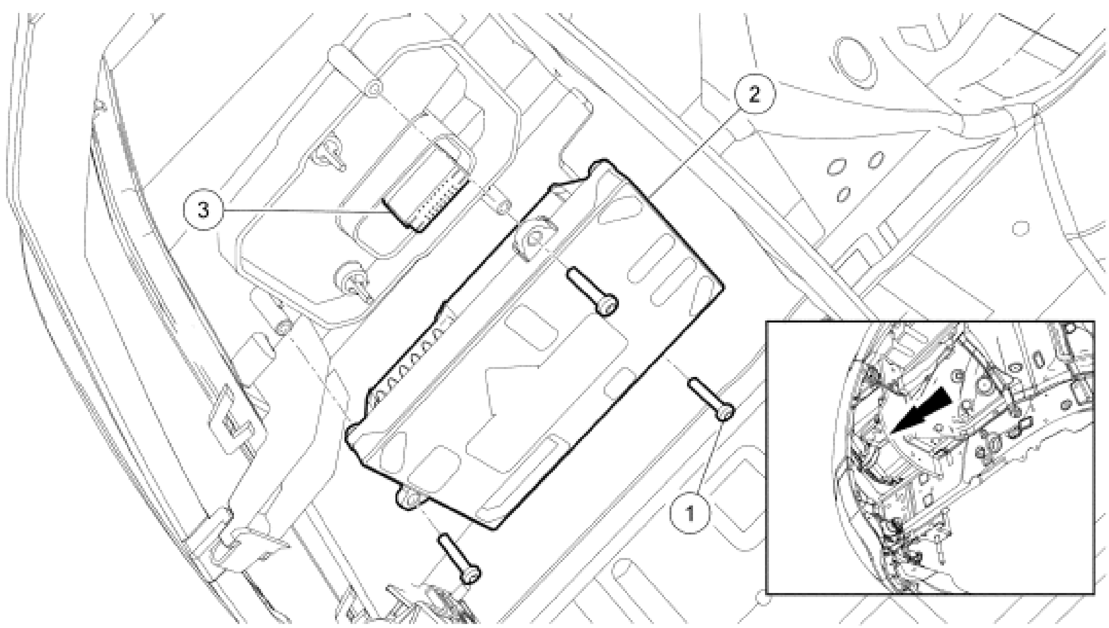
   All vehicles

   NOTE: **To remove, rotate the headlamp bulb approximately 1/8 turn counterclockwise.**

2. Remove the headlamp bulb.
   - Disconnect the electrical connector.
3. To install, reverse the removal procedure.

HEADLAMP CONTROL MODULE (HCM)

NOTE: **The headlamp control module (HCM) can be accessed from under the vehicle.**



N0062284

Fig. 119: Exploded View Of Headlamp Control Module (HCM)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Headlamp control module (HCM) screws (3 required) (part of 13005)
2	13C148	HCM

3	-	HCM electrical connector (part of 13005)

REMOVAL AND INSTALLATION

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Remove the 2 screws and position the fender splash shield aside.

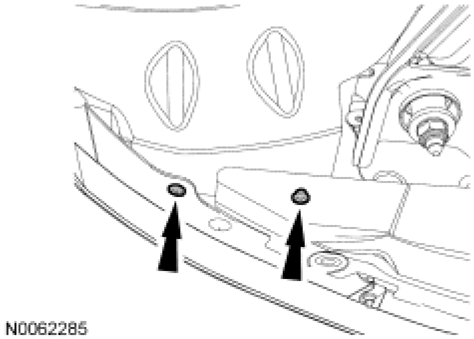


Fig. 120: Locating Screws On Fender Splash Shield
Courtesy of FORD MOTOR CO.

3. Remove the 3 screws and the HCM.
   - Disconnect the electrical connector.
4. To install, reverse the removal procedure.

FOG LAMP

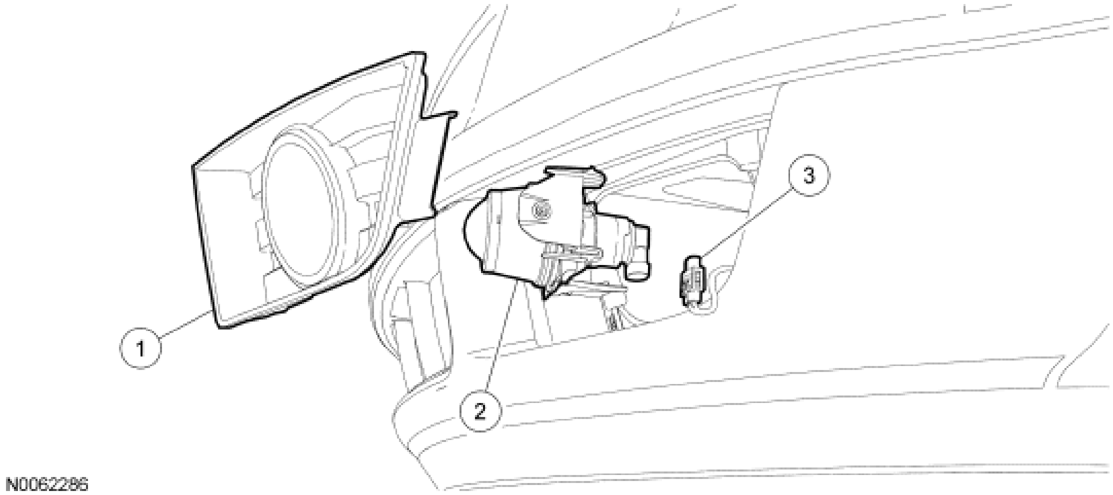

Fig. 121: Exploded View Of Fog Lamp
Courtesy of FORD MOTOR CO.

Item	Part Number	Description

1	17E811	Fog lamp bezel
2	15K200	Fog lamp
3	-	Fog lamp electrical connector (part of 14290)

REMOVAL AND INSTALLATION

NOTE: Make sure the headlamp switch and the ignition switch are in the OFF position.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Remove the 2 screws and position the fender splash shield aside.

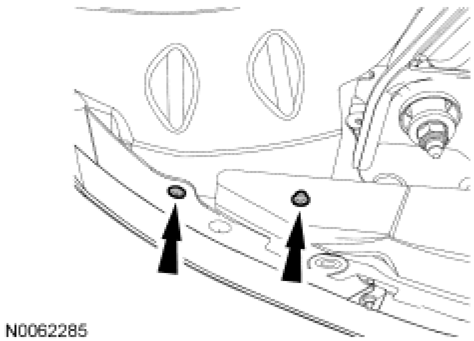

Fig. 122: Locating Screws On Fender Splash Shield
Courtesy of FORD MOTOR CO.

3. Release the tabs and remove the fog lamp bezel.
4. Release the locking tabs and remove the fog lamp.
    - Disconnect the electrical connector.
5. To install, reverse the removal procedure.

FOG LAMP BULB

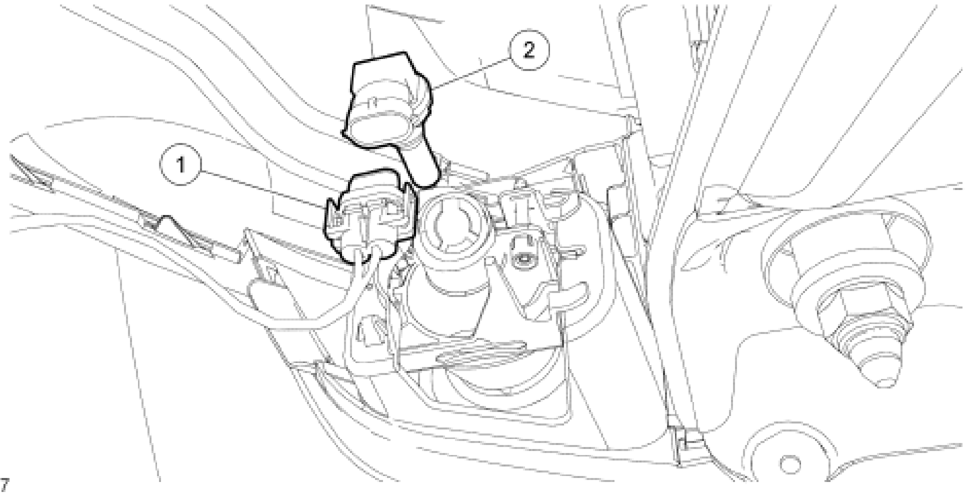

Fig. 123: Exploded View Of Fog Lamp Bulb
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Fog lamp electrical connector (part of 14290)
2	13N021	Fog lamp bulb

REMOVAL AND INSTALLATION

WARNING: **The bulb contains gas under pressure. The bulb may shatter if the glass envelope is scratched or if the bulb is dropped. Handle the bulb only by its base. Avoid touching the glass envelope. Failure to follow these instructions may result in personal injury.**

NOTE: The fog lamp bulb should not be removed from the fog lamp until just before a new bulb is installed. Removing the bulb for an extended period of time may affect fog lamp bulb performance. Contaminants may enter the fog lamp where they can settle on the lens and reflector. Never turn on the fog lamps with the bulb removed.

NOTE: Make sure the headlamp switch and the ignition switch are in the OFF position.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Remove the 2 screws and position the fender splash shield aside.

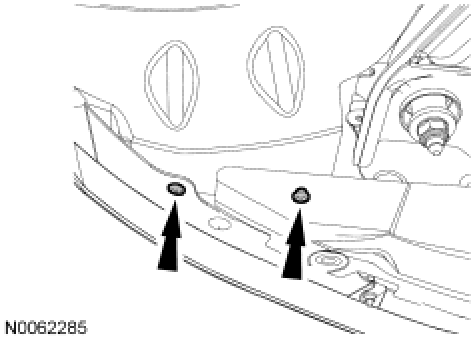

Fig. 124: Locating Screws On Fender Splash Shield
Courtesy of FORD MOTOR CO.

3. Disconnect the electrical connector and remove the fog lamp bulb.
4. To install, reverse the removal procedure.

PARKING LAMP BULB - FRONT

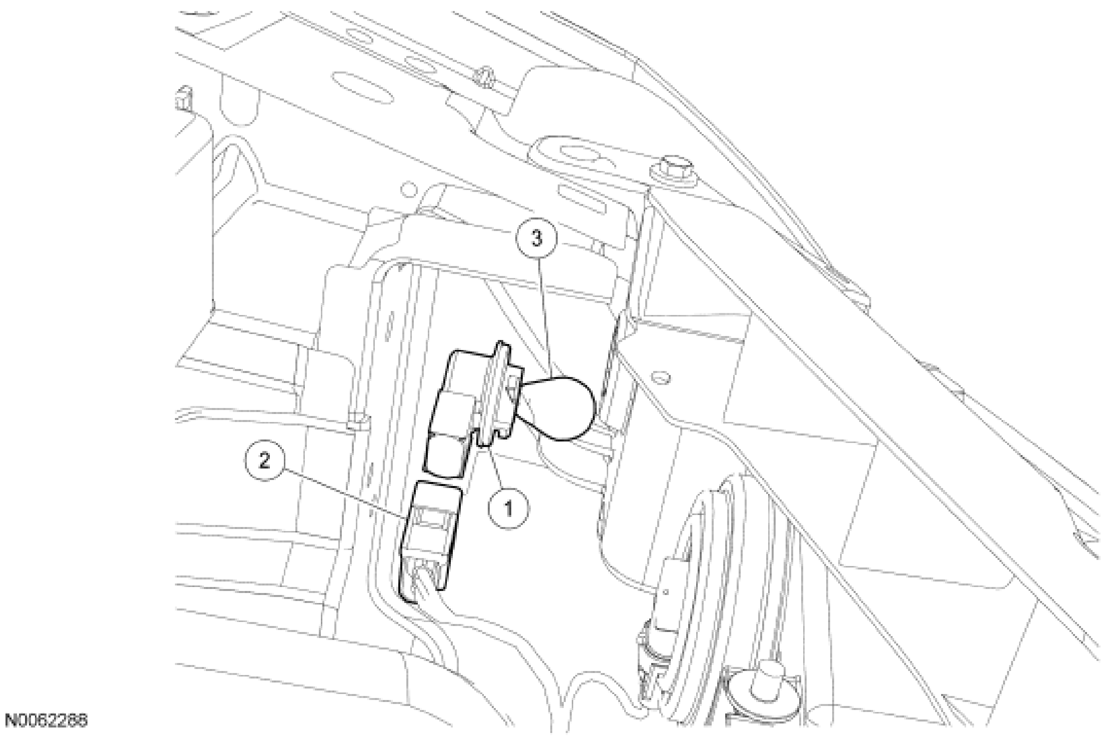

Fig. 125: Exploded View Of Front Parking Lamp Bulb - Edge
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	13411	Front parking lamp bulb holder
2	-	Front parking lamp electrical connector (part of 14290)

3	13466	Front parking lamp bulb

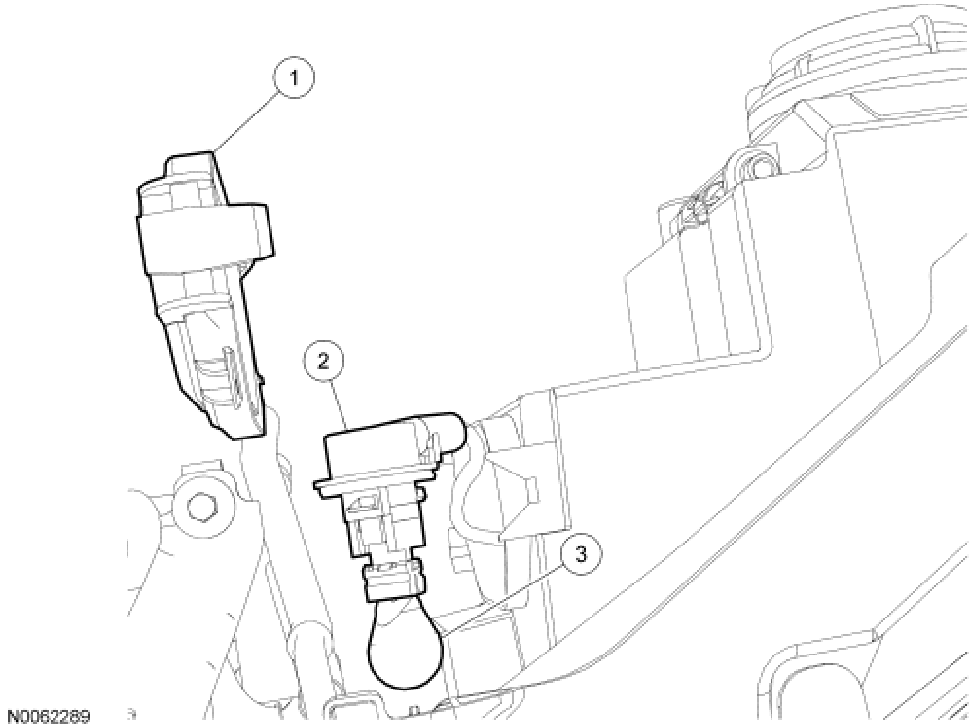

Fig. 126: Exploded View Of Front Parking Lamp Bulb - MKX
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Headlamp bulb access cover (part of 13005/13006)
2	-	Front parking lamp electrical connector (part of 13005/13006)
3	13466	Front parking lamp bulb

REMOVAL AND INSTALLATION

MKX

1. Remove the headlamp bulb access cover.

   All vehicles

2. Remove the front parking lamp holder from the headlamp assembly.
   - Remove the front parking lamp bulb.
3. To install, reverse the removal procedure.

SIDE MARKER LAMP - FRONT

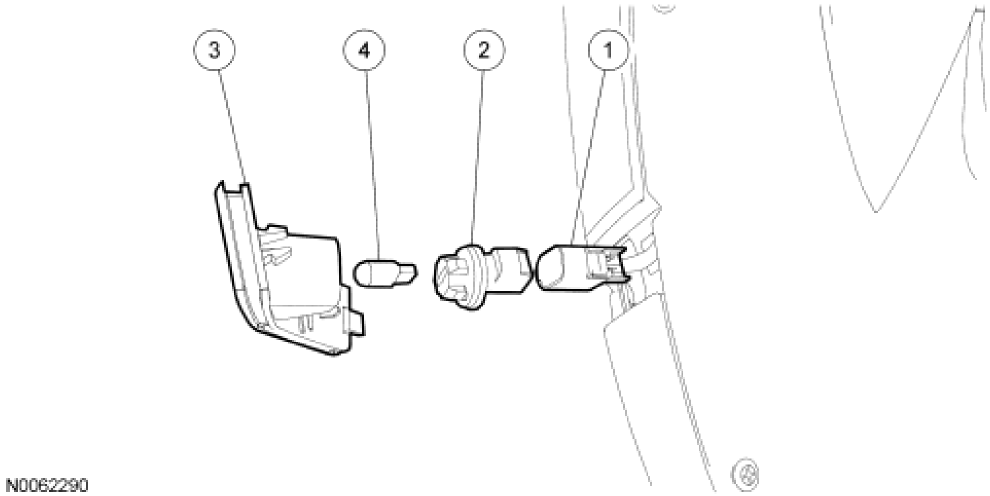

Fig. 127: Exploded View Of Front Side Marker Lamp
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Side marker lamp electrical connector (part of 14290)
2	-	Side marker bulb holder
3	13200/13201	Side marker lamp (LH/RH)
4	-	Side marker bulb

REMOVAL AND INSTALLATION

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Remove the 2 screws and position the fender splash shield aside.

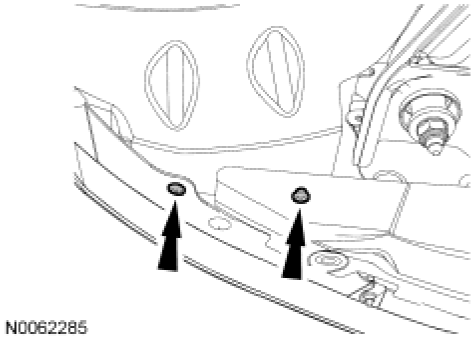

Fig. 128: Locating Screws On Fender Splash Shield
Courtesy of FORD MOTOR CO.

3. Release the tabs and remove the side marker lamp.
   - Disconnect the electrical connector.

4. To install, reverse the removal procedure.

LIGHT SENSOR

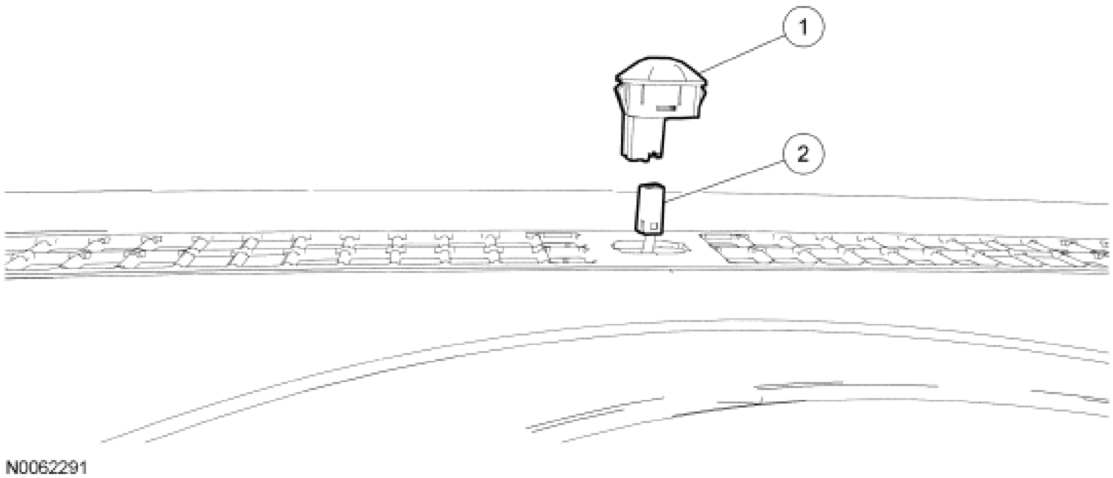

Fig. 129: Exploded View Of Light Sensor
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	13A018	Light sensor
2	-	Light sensor electrical connector (part of 14401)

REMOVAL AND INSTALLATION

1. Using a suitable tool, remove the light sensor.
   - Disconnect the electrical connector.
2. To install, reverse the removal procedure.

STOPLAMP SWITCH

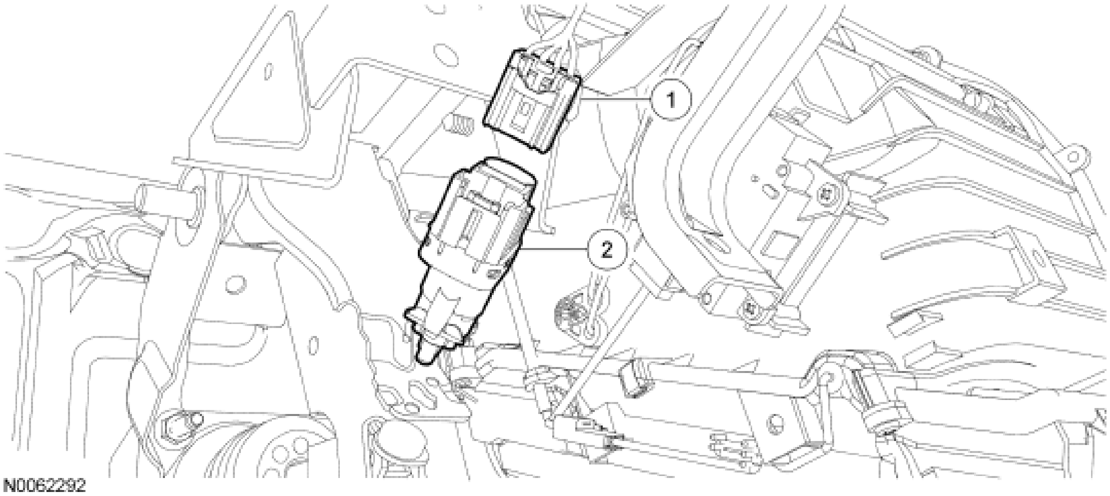

Fig. 130: Exploded View Of Stoplamp Switch
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Stoplamp switch electrical connector (part of 14290)
2	9G854	Stoplamp switch

REMOVAL

1. Disconnect the stoplamp switch electrical connector.

NOTE: The stoplamp switch will be difficult to remove if the switch plunger is not depressed. A slight rearward force should be adequate to depress the plunger.

2. With a light force (approximately 1-4 N [1-3 lb]), pull rearward on the brake pedal, rotate the stoplamp switch 45 degrees clockwise and remove the stoplamp switch.

INSTALLATION

CAUTION: It is very important to not press, pull or touch the brake pedal assembly during the installation of the stoplamp switch. Failure to follow these instructions may damage the stoplamp switch.

1. Without movement to the brake pedal assembly, install the stoplamp switch and rotate 45 degrees counterclockwise.
2. Connect the stoplamp switch electrical connector.

HEADLAMP SWITCH

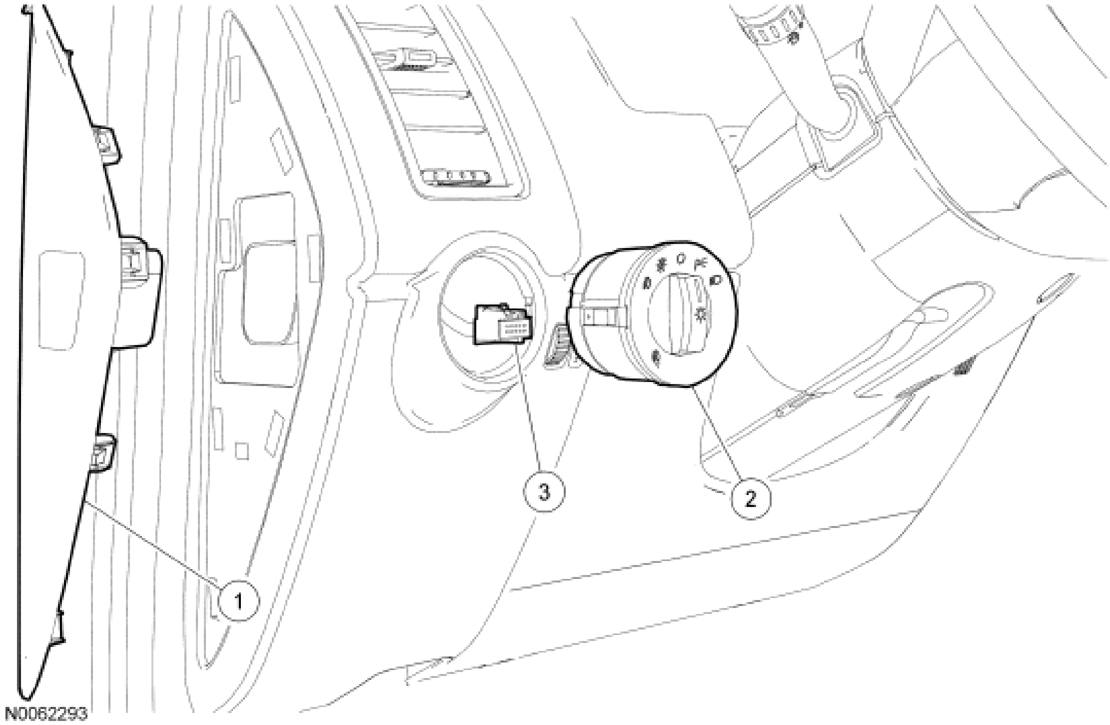

Fig. 131: Exploded View Of Headlamp Switch
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	7804481	Instrument panel side finish panel
2	11654	Headlamp switch
3	-	Headlamp switch electrical connector (part of 14401)

REMOVAL AND INSTALLATION

1. Remove the instrument panel side finish panel.

NOTE: The headlamp switch is removed by pushing from behind.

2. Release the tabs and remove the headlamp switch.
   - Disconnect the electrical connector.
3. To install, reverse the removal procedure.

HAZARD FLASHER LAMP SWITCH

NOTE: Edge shown, MKX similar.

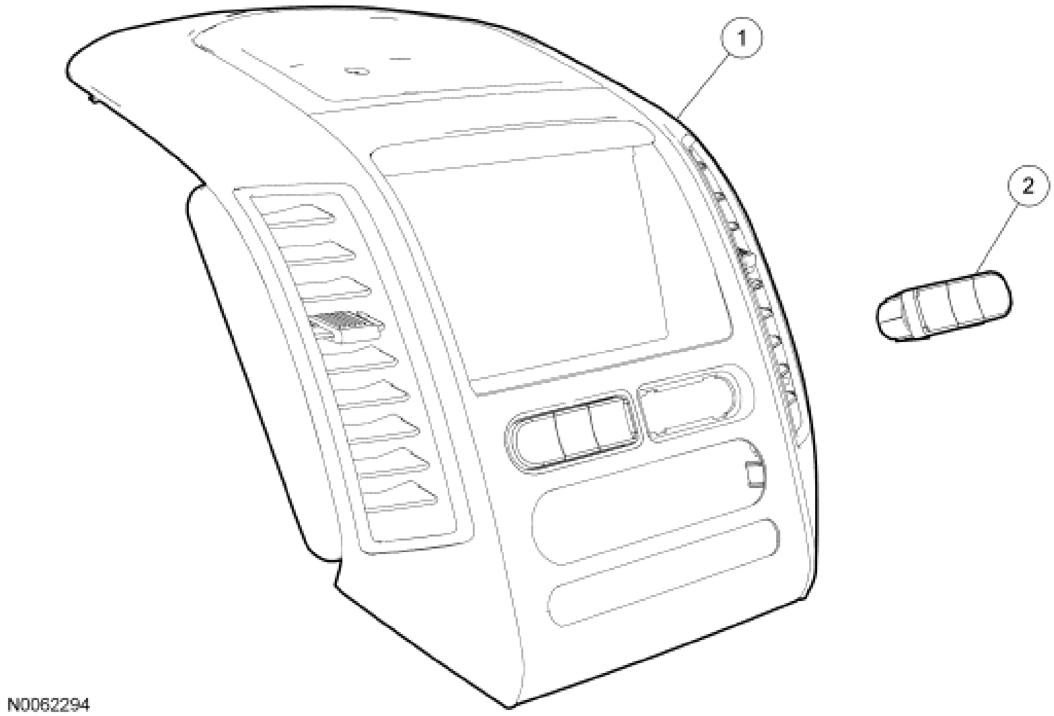

Fig. 132: Exploded View Of Hazard Flasher Lamp Switch
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	78044D70	Instrument panel center finish panel
2	13D733	Hazard flasher lamp switch

REMOVAL AND INSTALLATION

1. Remove the instrument panel center finish panel. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
2. Release the tabs and remove the hazard flasher lamp switch.
3. To install, reverse the removal procedure.

PUDDLE LAMP

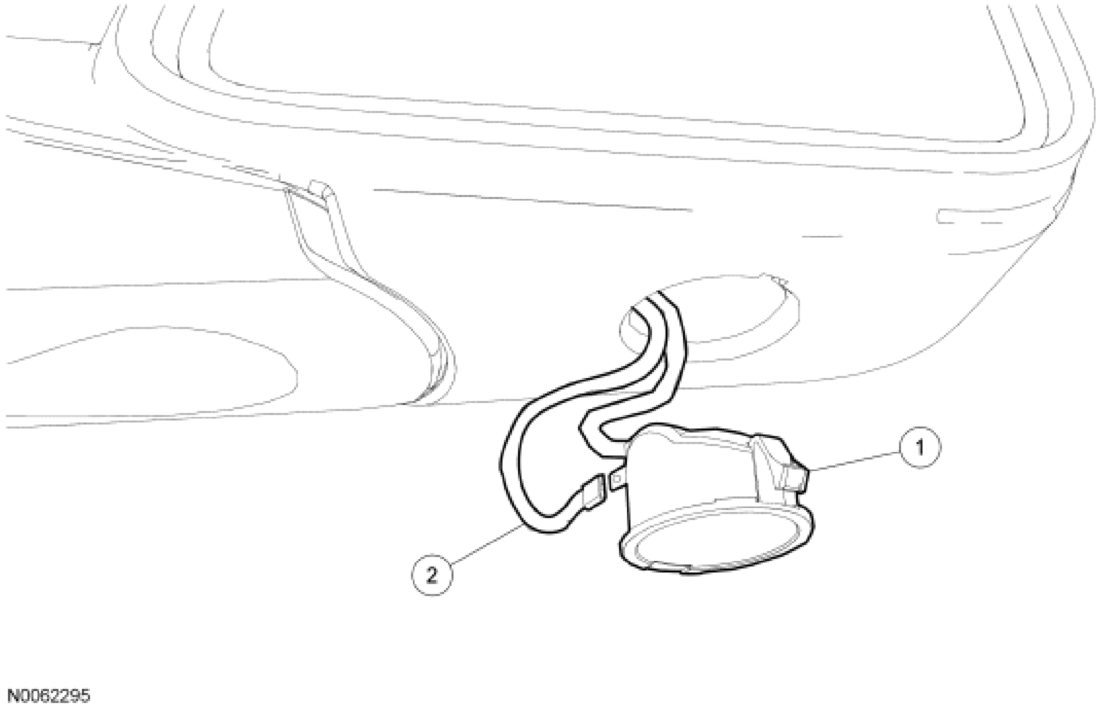

Fig. 133: Exploded View Of Puddle Lamp
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	13B375	Puddle lamp
2	-	Puddle lamp electrical connector (part of 17683)

REMOVAL AND INSTALLATION

1. Release the tab to remove the puddle lamp from the mirror housing.
   - Disconnect the electrical connector.

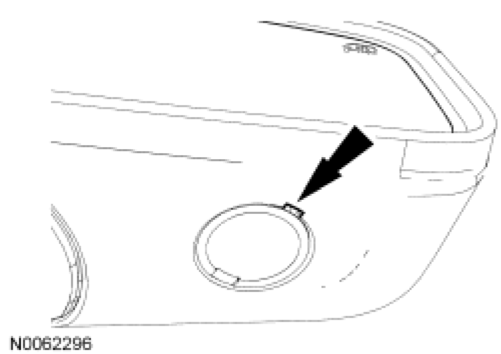

Fig. 134: Locating Puddle Lamp
Courtesy of FORD MOTOR CO.

NOTE: An audible click can be heard when the puddle lamp is fully seated.

2. To install, reverse the removal procedure.

REAR LAMP ASSEMBLY

NOTE: Edge shown, MKX similar.

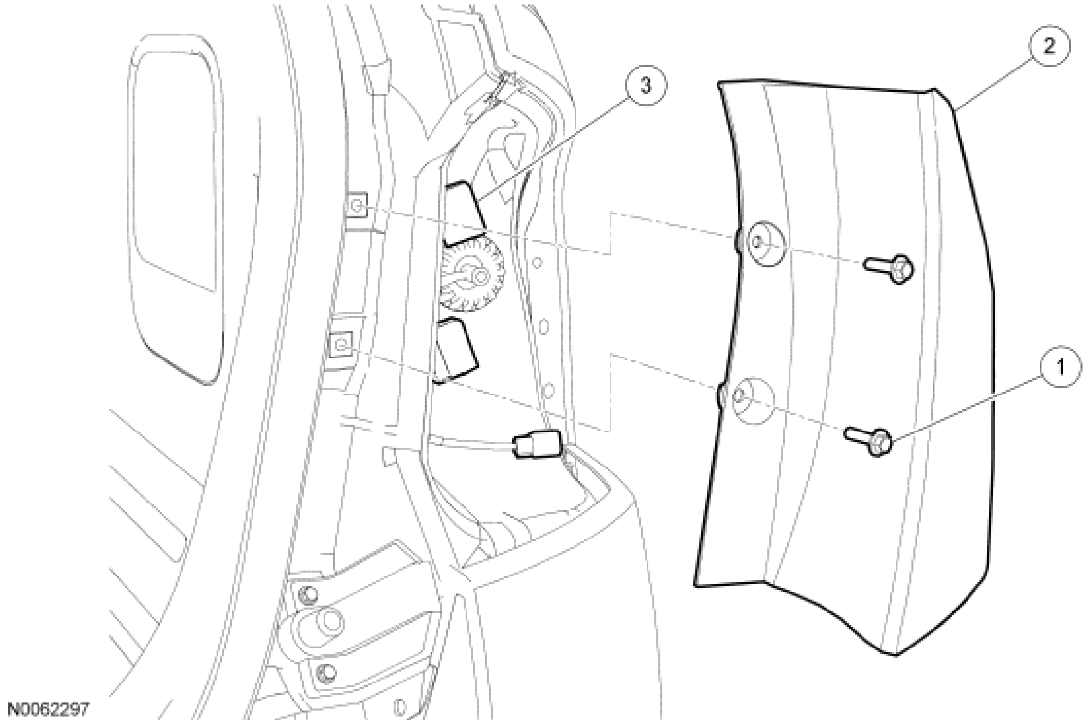

Fig. 135: Exploded View Of Rear Lamp Assembly
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W712801	Rear lamp assembly screws (2 required)
2	13A505/13A504	Rear lamp assembly (LH/RH)
3	-	Rear lamp assembly electrical connectors (part of 14A005)

REMOVAL AND INSTALLATION

NOTE: The rear lamp assembly is held in place by snap-type retainers. The lamp should be pulled straight and rearward to remove.

1. Remove the 2 screws and the rear lamp assembly.
   - Disconnect the electrical connectors.

2. To install, reverse the removal procedure.
   - An audible click should be heard when the rear lamp assembly is fully seated to the quarter panel.

REAR LAMP ASSEMBLY - LIFTGATE

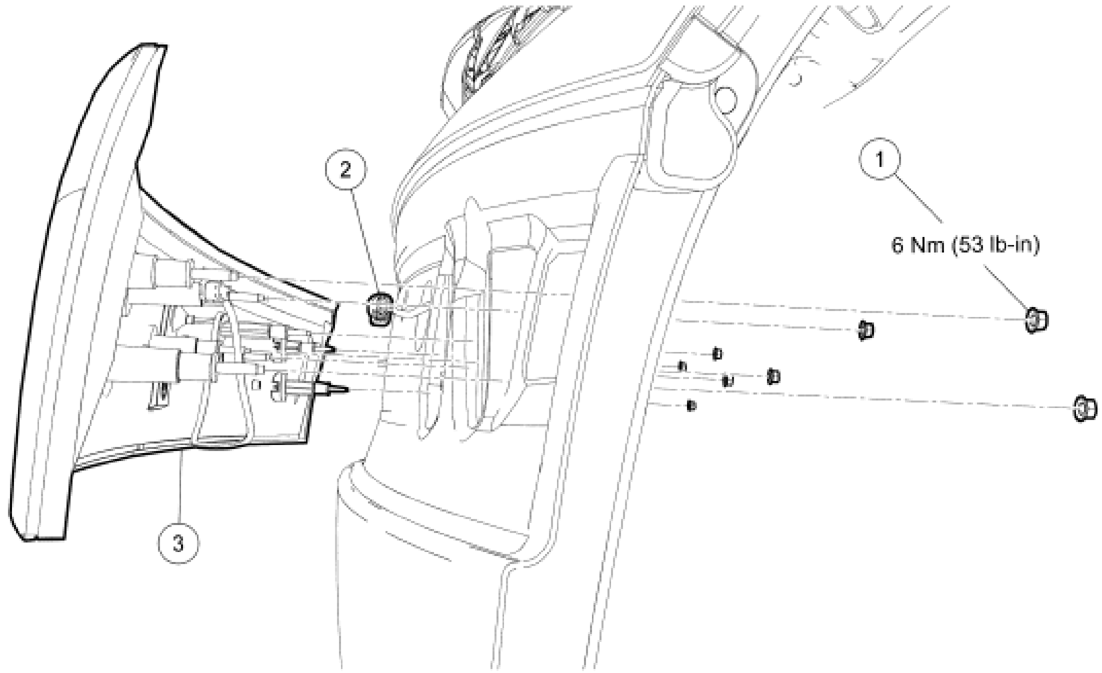

Fig. 136: Identifying Rear Lamp Assembly With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W704141	Liftgate lamp nuts (8 required)
2	-	Liftgate lamp electrical connector (part of 14A583)
3	13A565	Liftgate lamp

REMOVAL AND INSTALLATION

1. Remove the luggage trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.
2. Disconnect the liftgate lamp electrical connector.
3. Remove the 8 nuts and the liftgate lamp.
   - To install, tighten to 6 Nm (53 lb-in).
4. To install, reverse the removal procedure.

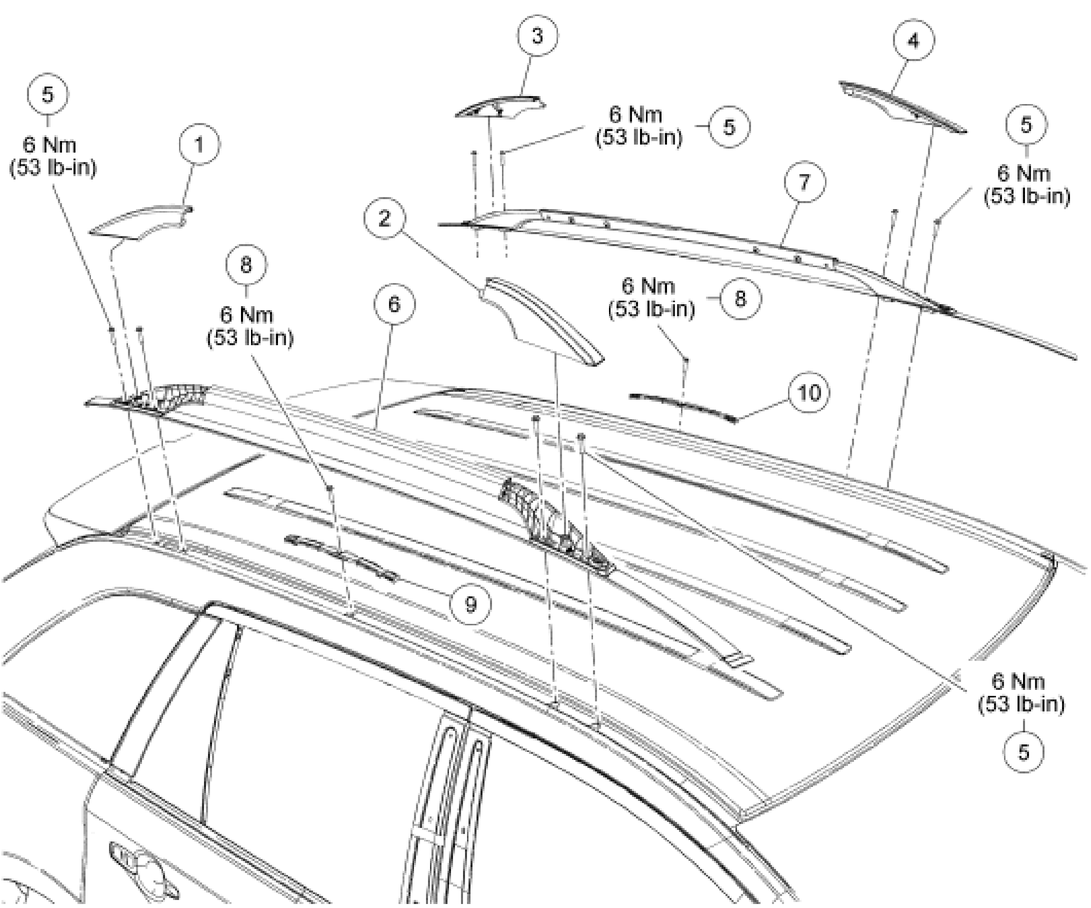
2	W505003-S	Isolator-to-radiator grill reinforcement screw (3 required)
3	17E898	Isolator
4	N800488-S	Radiator grille reinforcement-to-radiator grille nut (12 required)
5	8A164	Radiator grill reinforcement
6	16A912	Radiator grille
7	-	Emblem retainer
8	8B262	Emblem
9	17D957	Bumper cover

REMOVAL AND INSTALLATION

1. Remove the front bumper cover. For additional information, refer to **BUMPERS** article.
2. Remove the isolator-to-bumper cover bolts.
3. Remove the isolator-to-radiator grille reinforcement screws.
4. Remove the isolator.
    - Release the isolator from the clips on the bumper cover.
5. Remove the radiator grille and radiator grille reinforcement.
    - Release the radiator grille reinforcement from the clips on the bumper cover.
6. Remove the radiator grille-to-radiator grille reinforcement nuts and remove the radiator grille.
7. To install, reverse the removal procedure.

ROOF RACK



N0060501

Fig. 3: Exploded View Of Roof Rack With Torque Specifications

10	02684	Roof rack retainer (LH)

NOTE: LH shown, RH similar.

1. Remove the rear roof rack bolt cover.
   - Lift upward on the rear of the bolt cover and then pull rearward.

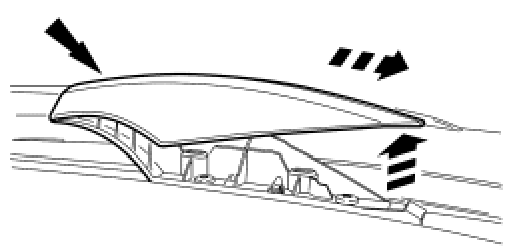

Fig. 4: Lifting Upward On Rear Of Bolt Cover & Pulling Rearward
Courtesy of FORD MOTOR CO.

2. Remove the front roof rack bolt cover.
   - Lift upward on the front of the bolt cover and then pull forward.

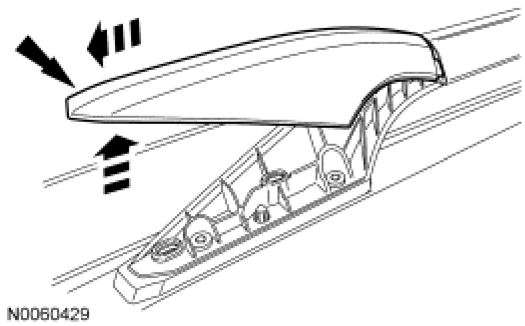

Fig. 5: Lifting Upward On Front Of Bolt Cover & Pulling Rearward
Courtesy of FORD MOTOR CO.

3. Remove the 2 front roof rack bolts.
   - To install, tighten to 6 N.m (53 lb-in).

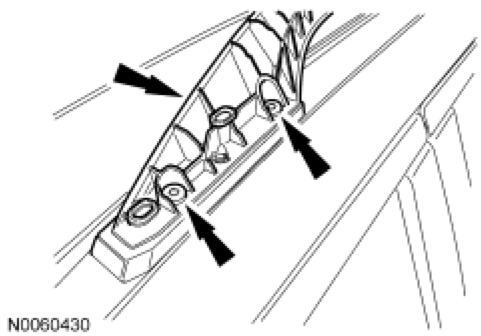

Fig. 6: Identifying Front Roof Rack Bolts
Courtesy of FORD MOTOR CO.

4. Remove the 2 rear roof rack bolts.
   - To install, tighten to 6 N.m (53 lb-in).

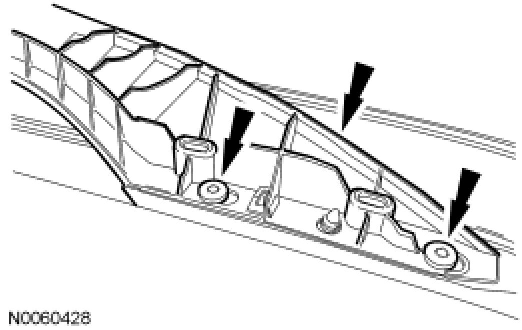

Fig. 7: Identifying Rear Roof Rack Bolts
Courtesy of FORD MOTOR CO.

NOTE: The roof rack side rail has a tab located at the front of the ditch moulding

and it is installed under the windshield moulding. When installing the roof rack side rail, start at the front of the vehicle and work toward the rear.

5. Remove the roof rack side rail.
   - Start at the rear of the roof rack side rail working toward the front of the vehicle.

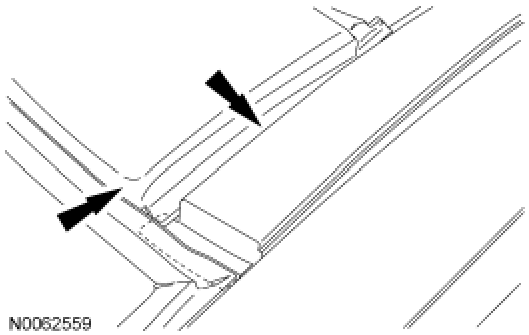

Fig. 8: Identifying Roof Rack Side Rail
Courtesy of FORD MOTOR CO.

6. To install, reverse the removal procedure.
   - The 4 roof rack bolts are installed in a specific order starting with the front bolt and working toward the rear of the vehicle. The bolts must be installed in that order to make sure the roof rack side rail is correctly aligned.

SPOILER

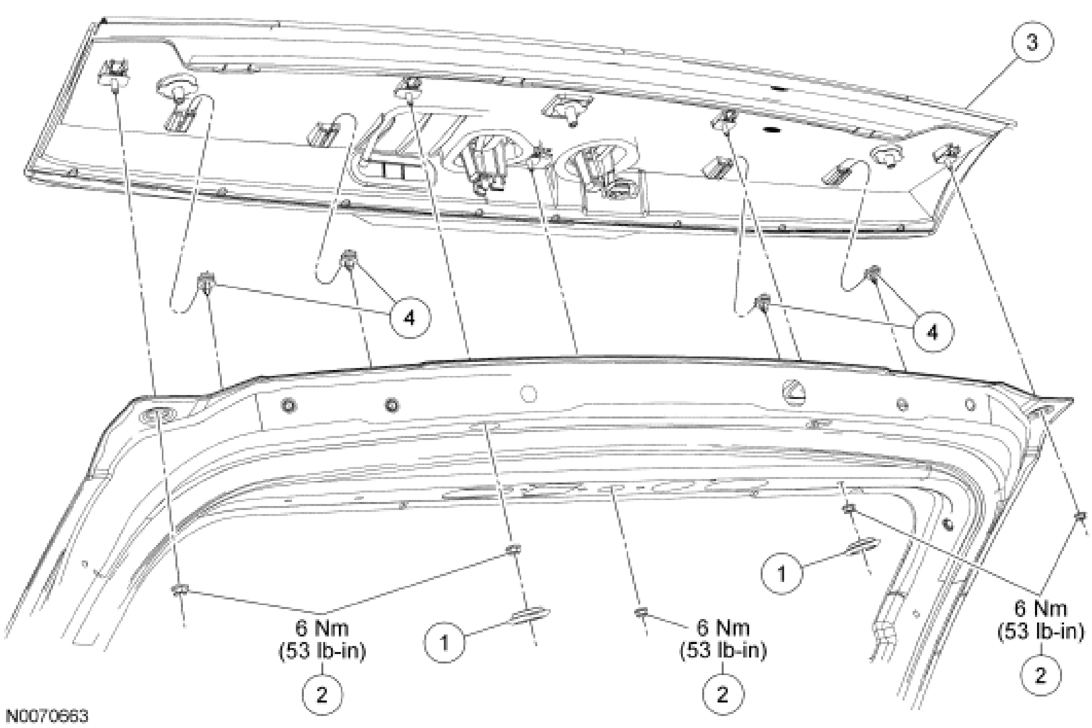

Fig. 9: Exploded View Of Spoiler With Torque Specifications

Item	Part Number	Description
1	W651016-S	Spoiler nut covers (2 required)
2	W621926-S	Spoiler nuts (5 required)
3	010807	Spoiler
4	7841602	Spoiler retainers (4 required)

1. Remove the liftgate trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.
2. Disconnect the electrical connector and the rear windshield washer hose from the rear spoiler.

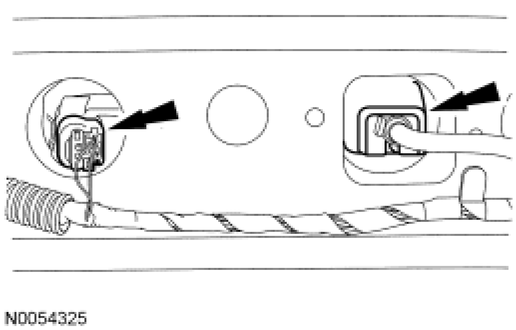

Fig. 10: Identifying Electrical Connector & Rear Windshield Washer Hose
Courtesy of FORD MOTOR CO.

3. Remove the 5 rear spoiler nuts.
    - Remove the 2 nut covers.
    - Remove the 5 nuts.
    - To install, tighten to 6 Nm (53 lb-in).

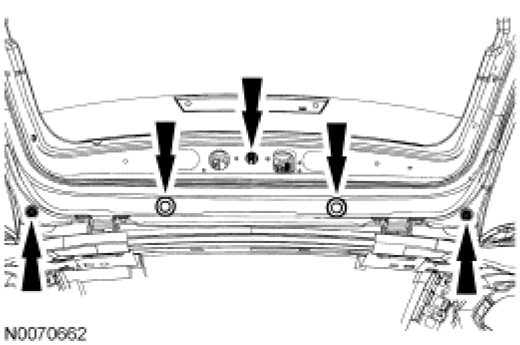

Fig. 11: Locating Rear Spoiler Nuts
Courtesy of FORD MOTOR CO.

4. Place a piece of tape on the liftgate to protect the paint.

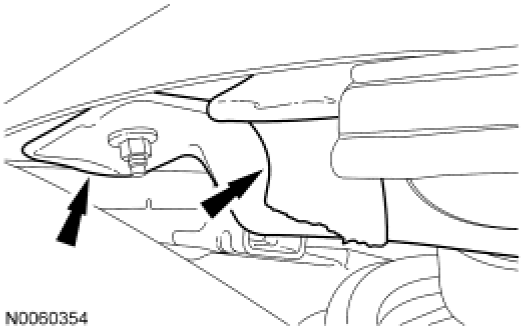

Fig. 12: Placing A Piece Of Tape On Liftgate To Protect Paint
Courtesy of FORD MOTOR CO.

NOTE: **There are 4 pin-type retainers on the bottom of the spoiler. When removing the spoiler it is difficult to access the retainers to release them from the liftgate. It may be necessary to pry upward on the rear spoiler to release it from the retainers. Do not pry on the window.**

5. Remove the rear spoiler.
   - Place a pry bar between the liftgate and the spoiler.

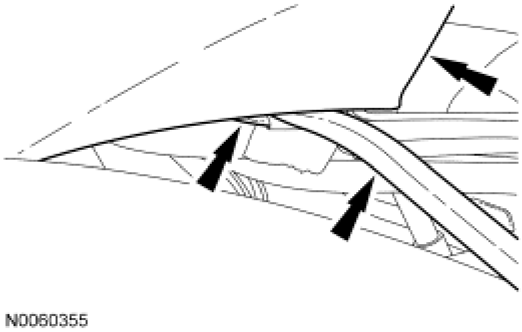

Fig. 13: Placing A Pry Bar Between Liftgate & Spoiler
Courtesy of FORD MOTOR CO.

6. To install, reverse the removal procedure.
   - Replace any retainers broken during removal.

ROCKER PANEL MOULDING

NOTE: **RH shown, LH similar.**

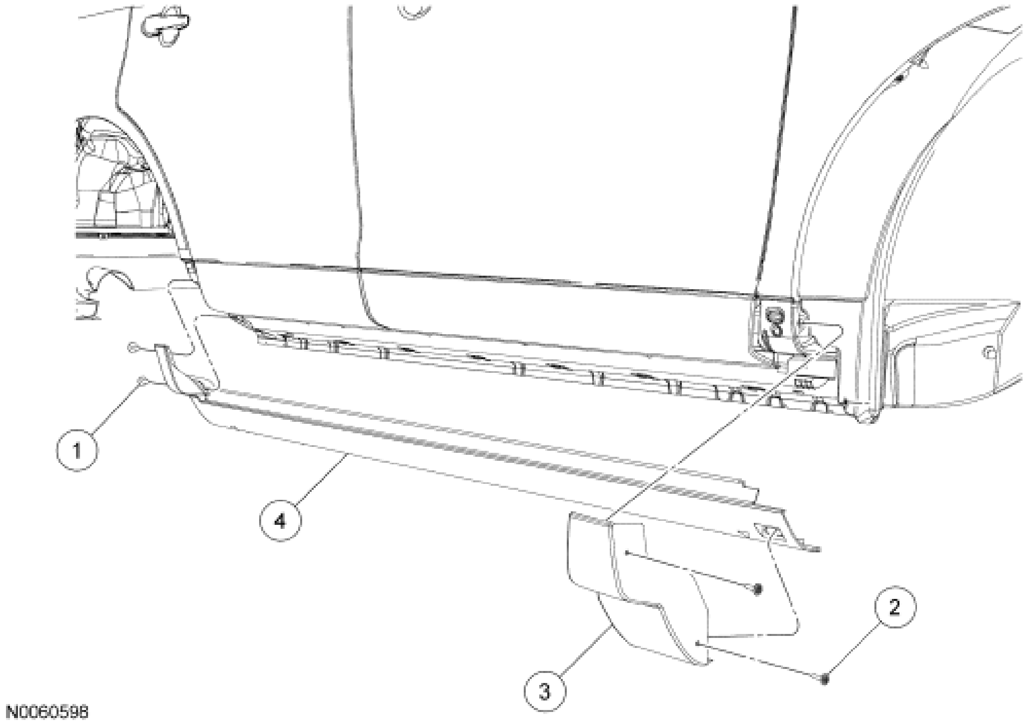

Fig. 14: Exploded View Of Rocker Panel Moulding
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W706805-S	Rocker panel moulding rear screw (2 required)
2	W706805-S	Rocker panel moulding cap front screw (2 required)
3	7810154 RH/ 7810155 LH	Rocker panel moulding cap
4	78101A04 RH/ 78101A05 LH	Rocker panel moulding

1. Remove the rocker panel moulding front cap.
   - Remove the 2 screws.
   - Remove the front cap.

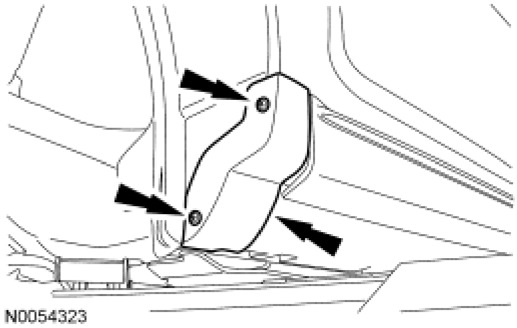

Fig. 15: Identifying Rocker Panel Molding End Cap & Screws
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

2. Remove the 2 screws from the rocker panel moulding inside the rear wheelhouse.

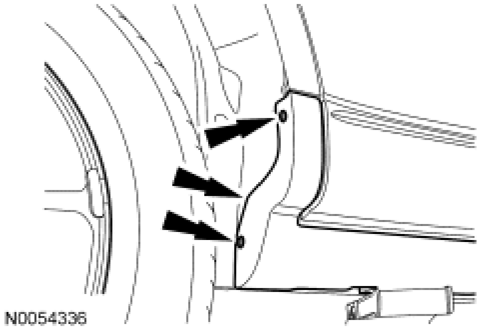

Fig. 16: Identifying Screws From Rocker Panel Moulding Inside Rear Wheelhouse
Courtesy of FORD MOTOR CO.

3. Open the front and rear doors.
4. Release the retainers on the bottom of the rocker panel moulding.

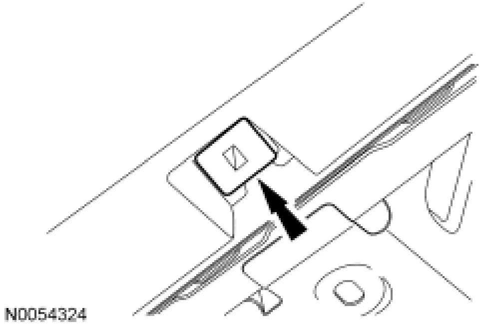

Fig. 17: Identifying Retainers On Bottom Of Rocker Panel Moulding
Courtesy of FORD MOTOR CO.

5. Pull outward to release the rocker panel moulding from the body, starting from the front of the vehicle moving rearward.
6. To install, reverse the removal procedure.

DESCRIPTION AND OPERATION

FRONT DISC BRAKE

The front brake disc system consists of the following components:

- Brake caliper anchor plate
- Brake caliper
- Brake disc
- Brake disc shield

- Brake flexible hose

When mechanical force is applied by the driver to the brake pedal, the force is converted into hydraulic pressure by the master cylinder. The hydraulic force is directed to the disc brake calipers and transferred to the brake pads. The brake pads are then forced against the brake friction surfaces by the brake caliper pistons. The friction of the brake pads on the brake disc causes the slowing of wheel rotation and the vehicle.

DIAGNOSTIC TESTS

FRONT DISC BRAKE

Refer to **BRAKE SYSTEM - GENERAL INFORMATION** article.

REMOVAL AND INSTALLATION

BRAKE PADS

Material

Item	Specification
High Performance DOT 3 Motor Vehicle Brake Fluid PM-1-C (US); CPM-1-C (Canada)	WSS-M6C62-A or WSS-M6C65-A1

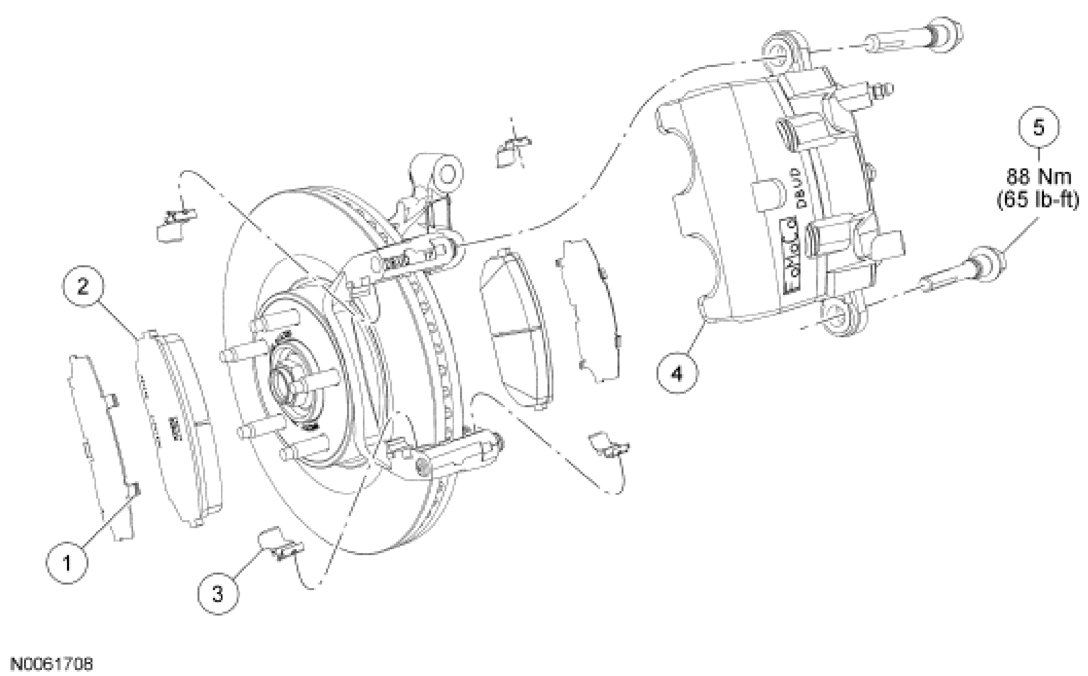

Fig. 1: Exploded View Of Brake Pads With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Stainless steel shim (2 required) (part of 2001)
2	2001	Brake pad (2 required)
3	-	Brake pad slide (4 required) (part of 2001)
4	2B120 RH/ 2B121 LH	Brake caliper
5	2C150	Brake caliper guide pin bolt (2 required)

REMOVAL

WARNING: **Do not use any fluid other than clean brake fluid meeting manufacturer's specification. Additionally, do not use brake fluid that has been previously drained. Following these instructions will help prevent system contamination, brake component damage and the risk of serious personal injury.**

WARNING: **Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Always install new brake shoes or pads at both ends of an axle to reduce the possibility of brakes pulling vehicle to one side. Failure to follow this instruction may result in uneven braking and serious personal injury.**

CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

1. Check the brake fluid level in the brake master cylinder reservoir.
   - If required, remove the fluid until the brake master cylinder reservoir is 1/2 full.
2. Remove the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.

   CAUTION: Do not pry in the caliper sight hole to retract the pistons as this can damage the pistons and boots.

   CAUTION: Do not allow the brake caliper to hang from the brake hose or damage to the hose can occur.

3. Remove the 2 brake caliper guide pin bolts and position the caliper aside.
   - Support the caliper using mechanic's wire.

4. Remove the brake pads, brake pad shims and stainless steel shims.
   - Inspect the brake pads and shims for wear or contamination.
5. Remove the brake pad slides.

INSTALLATION

CAUTION: Protect the caliper pistons and boots when pushing the caliper piston into the caliper piston bores or damage to components may occur.

CAUTION: Make sure that the caliper guide pin boots are fully seated or damage to the caliper guide pin boots can occur.

1. If installing new brake pads, using a suitable tool and a worn brake, compress the disc brake caliper pistons into the caliper.

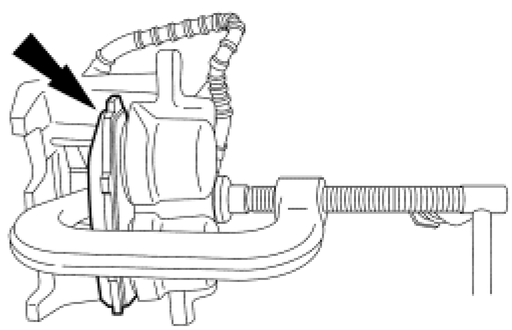

Fig. 2: Compressing Brake Caliper Pistons Into Caliper
Courtesy of FORD MOTOR CO.

2. Install the brake pad slides.
3. Apply a thin coating of the supplied grease to the shims and the shim contact area of the brake pads.
4. Install the stainless steel shims to the brake pads.

NOTE: The guide pin bolts are different sizes. The longer/bigger bolt is the upper guide pin bolt.

5. Position the brake caliper and install the 2 guide pin bolts.
   - Tighten to 88 Nm (65 lb-ft).
6. Install the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
7. Fill the brake master cylinder reservoir with clean, specified brake fluid.
   - Apply brakes several times to verify correct brake operation.

BRAKE CALIPER

Material

Item	Specification
High Performance DOT 3 Motor Vehicle Brake Fluid PM-1-C (US); CPM-1-C (Canada)	WSS-M6C62-A or WSS-M6C65-A1

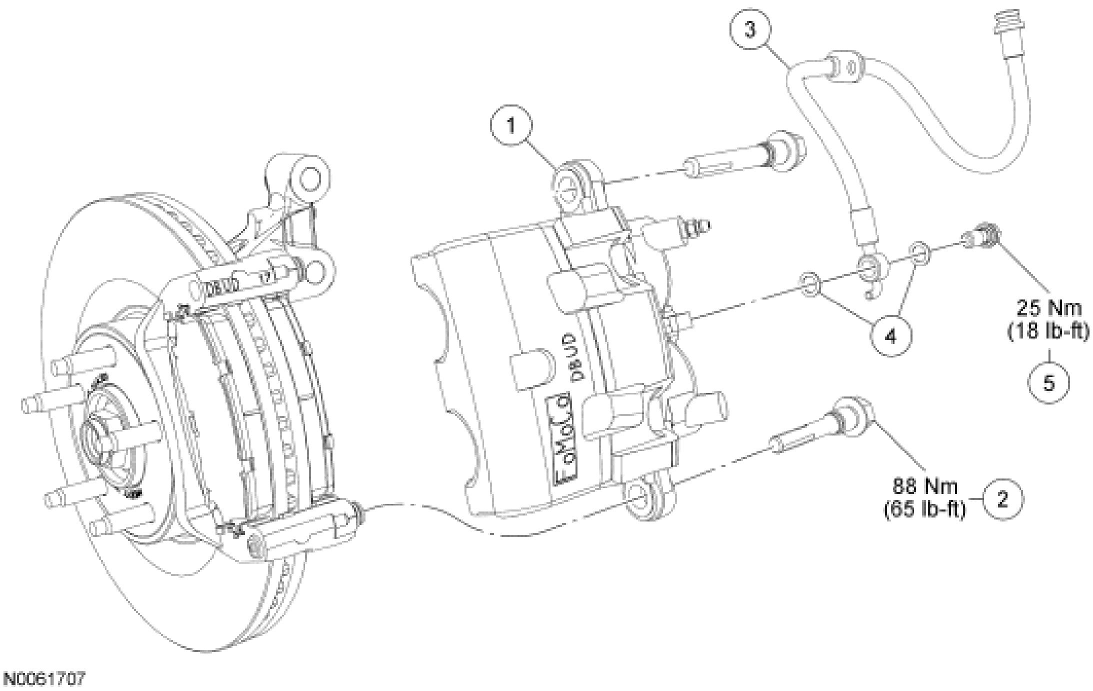

Fig. 3: Exploded View Of Brake Caliper With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	2B120 RH/ 2B121 LH	Brake caliper
2	2C150	Brake caliper guide bolt (2 required)
3	2078 RH/ 2B557 LH	Front brake hose
4	W711784	Copper washers (2 required)
5	2M085	Brake caliper flow bolt

REMOVAL AND INSTALLATION

WARNING: **Do not use any fluid other than clean brake fluid meeting manufacturer's specification. Additionally, do not use brake fluid that has been previously drained. Following these instructions will help prevent system contamination, brake component damage and the risk of serious personal injury.**

WARNING: Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.

CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

1. Remove the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
2. Remove the brake caliper flow bolt and position the hose aside.
   - Discard the 2 copper washers.
   - To install, tighten to 25 Nm (18 lb-ft).
   - Install new copper washers.

NOTE: The guide pin bolts are different sizes. The longer/bigger bolt is the upper guide pin bolt.

3. Remove the 2 brake caliper guide pin bolts.
   - To install, tighten to 88 Nm (65 lb-ft).
4. Remove the brake caliper.

NOTE: During installation, make sure that the brake caliper hose is not twisted.

5. To install, reverse the removal procedure.
   - Bleed the brake system. For additional information, refer to **BRAKE SYSTEM - GENERAL INFORMATION** article.

BRAKE CALIPER ANCHOR PLATE

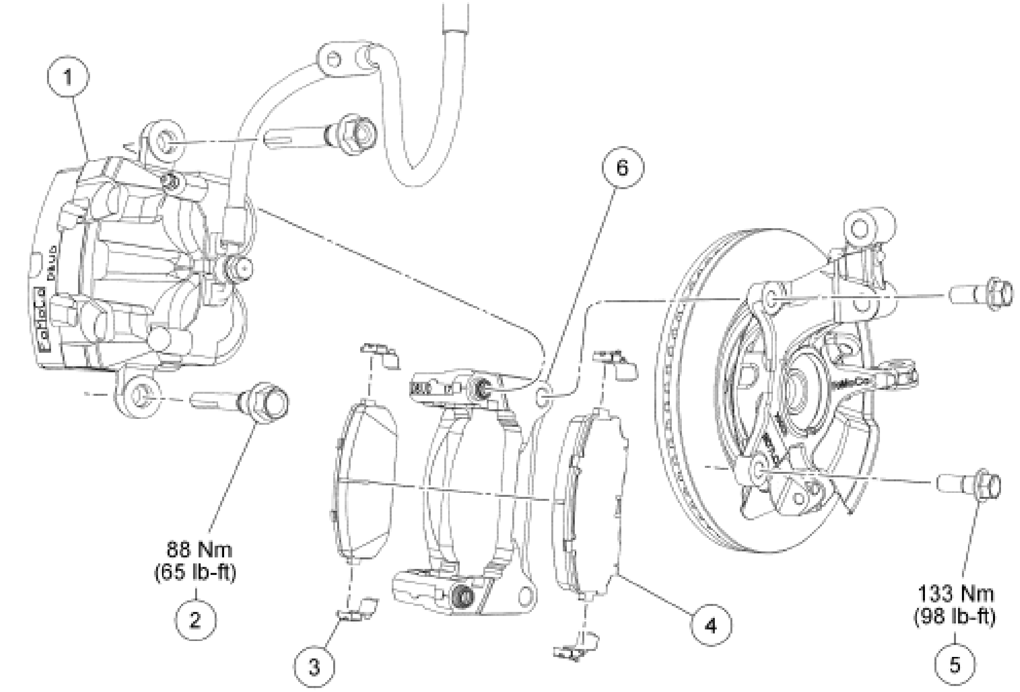

Fig. 4: Exploded View Of Brake Caliper Anchor Plate With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	2B120 RH/ 2B121 LH	Brake caliper
2	2C150	Brake caliper guide pin bolt (2 required)
3	-	Brake pad slide (4 required) (part of 2001)
4	2001	Brake pad (2 required)
5	2248	Brake caliper anchor plate bolt (2 required)
6	2B292 RH/ 2B293 LH	Brake caliper anchor plate

REMOVAL AND INSTALLATION

1. Check the brake fluid level in the brake master cylinder reservoir.
    - If required, remove the fluid until the brake master cylinder reservoir is 1/2 full.
2. Remove the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.

CAUTION: Do not pry in the caliper sight hole to retract the pistons as this can damage the pistons and boots.

CAUTION: Do not allow the brake caliper to hang from the brake hose or damage to the hose can occur.

3. Remove the 2 brake caliper guide pin bolts and position the caliper aside.
    - Support the caliper using mechanic's wire.
    - To install, tighten to 88 Nm (65 lb-ft).
4. Remove the brake pads, brake pad shims and stainless steel shims.
5. Remove the brake pad slides.
6. Remove the 2 brake caliper anchor plate bolts and the anchor plate.
    - To install, tighten to 133 Nm (98 lb-ft).
7. To install, reverse the removal procedure.
    - Apply brakes several times to verify correct brake operation.

BRAKE DISC

Material

Item	Specification
High Temperature Nickel Anti-Seize Lubricant XL-2 (US); CXG-2-B (Canada)	ESE-M12A4-A
Metal Brake Parts Cleaner PM-4-A or PM-4-B (US); CPM-4 (Canada)	-

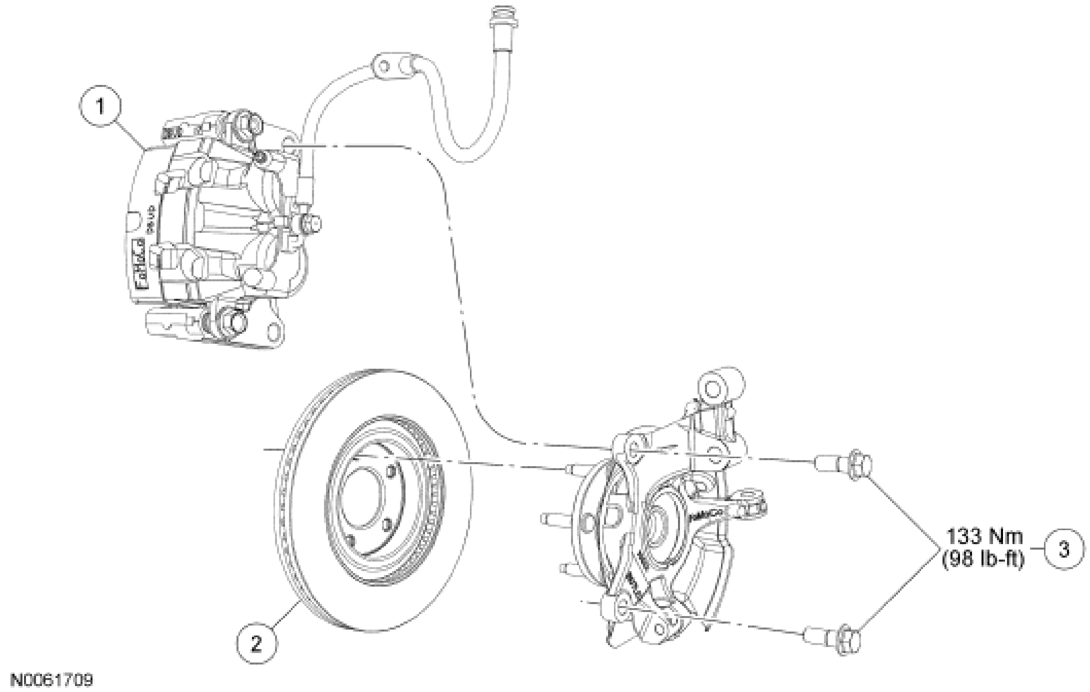

Fig. 5: Exploded View Of Brake Disc With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Brake caliper and anchor plate assembly
2	1032	Brake disc
3	2248	Brake caliper anchor plate bolts (2 required)

REMOVAL

1. Remove the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.

CAUTION: Do not allow the brake caliper and anchor plate assembly to hang from the brake hose or damage to the hose can occur.

2. Remove the brake caliper anchor plate bolts and position the brake caliper and anchor plate assembly aside.
   - Support the caliper and anchor plate assembly using mechanic's wire.
3. Remove the brake disc.

INSTALLATION

1. Clean and dry the brake disc-to-wheel hub mounting surface and apply a thin coat of anti-seize where indicated.

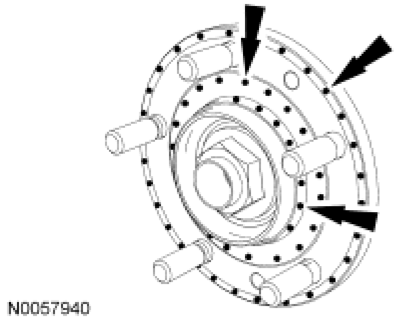

Fig. 6: Locating Brake Disc Screws
Courtesy of FORD MOTOR CO.

NOTE: Make sure the brake disc is clean and free of any foreign material.

2. Install the brake disc.
3. Position the brake caliper and anchor plate assembly and install the brake caliper anchor plate bolts.
   - Tighten to 133 Nm (98 lb-ft).
4. Install the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
   - Apply brakes several times to verify correct brake operation.

BRAKE DISC SHIELD

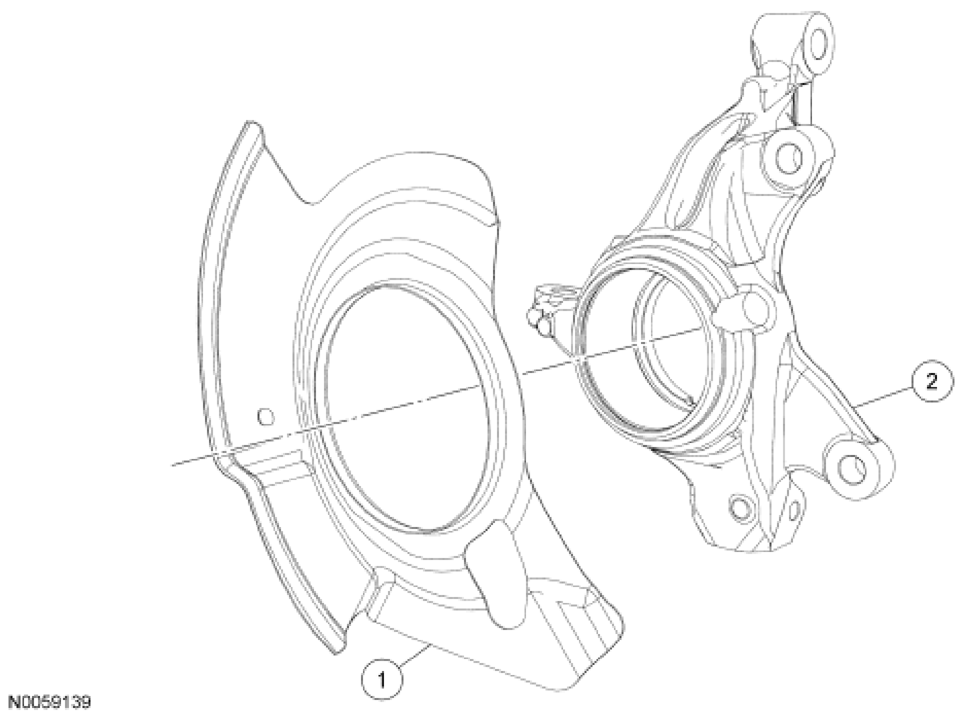

Fig. 7: Exploded View Of Brake Disc Shield
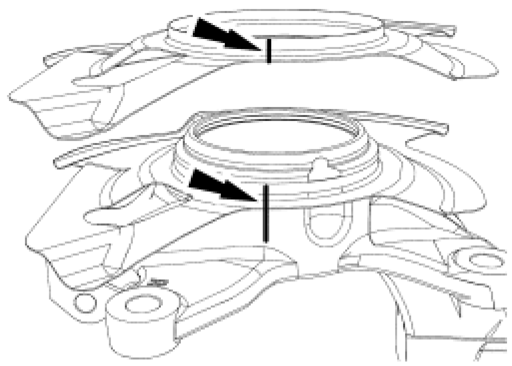
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	2K005 LH/ 2K004 RH	Brake disc shield
2	3K186 LH/ 3K185 RH	Wheel knuckle

REMOVAL

1. Remove the wheel bearing and wheel hub. For additional information, refer to **FRONT SUSPENSION** article.
2. Index-mark the brake disc shield to the wheel knuckle, then align the new brake disc shield to the existing shield and transfer the index mark.



N0059140

Fig. 8: Locating Index-Mark On Brake Disc Shield
Courtesy of FORD MOTOR CO.

3. Cut the brake disc shield and remove it from the wheel knuckle.

INSTALLATION

1. Position the brake disc shield onto the wheel knuckle.
2. Align the index marks and install the brake disc shield onto the wheel knuckle.
3. Install the wheel bearing and wheel hub. For additional information, refer to **FRONT SUSPENSION** article.

BRAKE FLEXIBLE HOSE

Item	Part Number	Description
1	2K573	Brake caliper flow bolt
2	W711784	Copper washers (2 required)
3	-	Brake tube fitting (part of 2263 RH/2264 LH)
4	2B223	Brake flexible hose retaining clip
5	W708004	Brake flexible hose bracket bolt
6	2078	Brake flexible hose

REMOVAL AND INSTALLATION

WARNING: **Do not use any fluid other than clean brake fluid meeting manufacturer's specification. Additionally, do not use brake fluid that has been previously drained. Following these instructions will help prevent system contamination, brake component damage and the risk of serious personal injury.**

WARNING: **Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure**

to follow these instructions may result in serious personal injury.

CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

1. Remove the brake caliper flow bolt and discard the 2 copper washers.
    - To install, tighten to 25 Nm (18 lb-ft).
    - Install new copper washers.
2. Disconnect the brake tube fitting from the brake flexible hose.
    - To install, tighten to 17 Nm (13 lb-ft).
3. Remove the brake flexible hose retaining clip.
4. Remove the brake flexible hose bracket bolt and the brake flexible hose.
    - To install, tighten to 20 Nm (15 lb-ft).
5. To install, reverse the removal procedure.
    - Bleed the brake system. For additional information, refer to **BRAKE SYSTEM - GENERAL INFORMATION** article.

FENDER

REMOVAL AND INSTALLATION

1. Remove the 2 screws and the rocker panel moulding end cap.

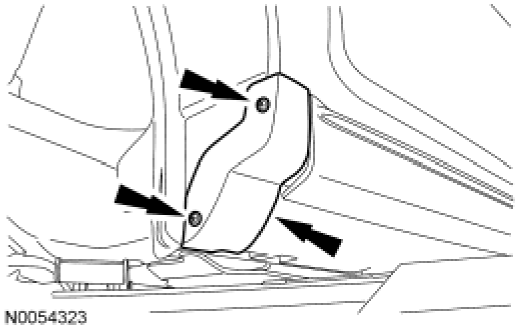

Fig. 2: Identifying Rocker Panel Molding End Cap & Screws
Courtesy of FORD MOTOR CO.

2. Remove the front fender splash shield. For additional information, refer to **Fender Splash Shield**.
3. Remove the lower fender bolt.
   - To install, tighten to 9 N.m (80 lb-in).

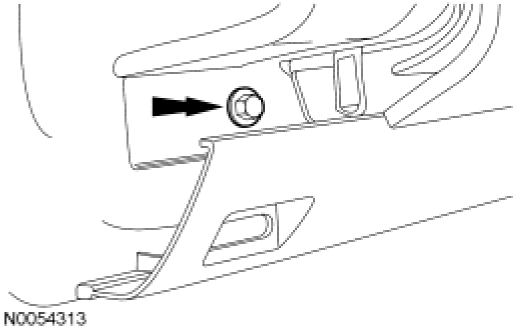

Fig. 3: Locating Lower Fender Bolt
Courtesy of FORD MOTOR CO.

4. Remove the nut from the stud inside the fender well.
   - To install, tighten to 9 N.m (80 lb-in).

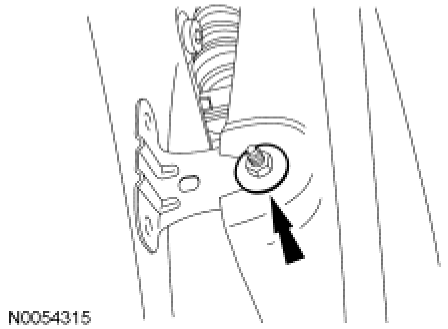

Fig. 4: Identifying Stud Inside Fender Well
Courtesy of FORD MOTOR CO.

CAUTION: The front bumper cover may be damaged if pulled outward too far while trying to access the bolts.

5. Remove the front fender bolts.
    - Remove the front bumper cover corner.
    - Remove the bolts.
        - To install, tighten to 9 N.m (80 lb-in).

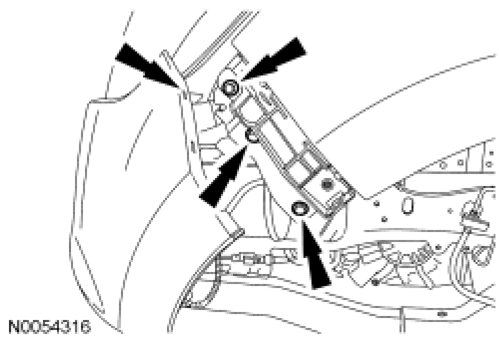

Fig. 5: Locating Front Bumper Cover Corner & Bolts
Courtesy of FORD MOTOR CO.

6. Remove the upper rear fender bolt cover.

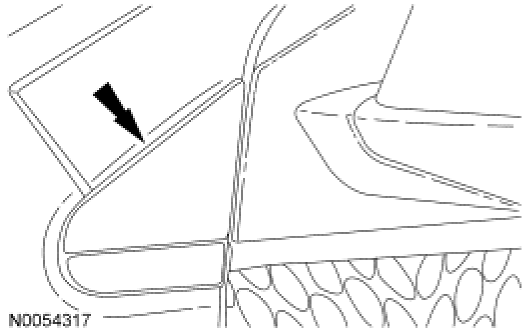

Fig. 6: Locating Upper Rear Fender Bolt Cover
Courtesy of FORD MOTOR CO.

7. Remove the upper rear fender bolt.
    - To install, tighten to 9 N.m (80 lb-in).

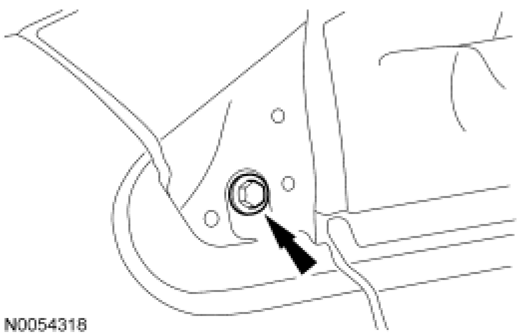

Fig. 7: Locating Upper Rear Fender Bolt
Courtesy of FORD MOTOR CO.

8. Remove the 2 upper fender bolts.
    - To install, tighten to 9 N.m (80 lb-in).

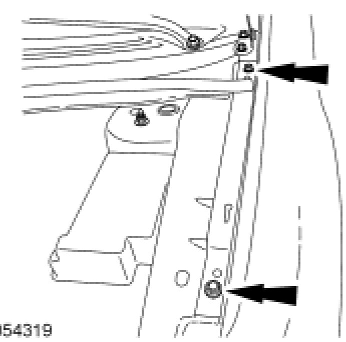

Fig. 8: Locating Upper Fender Bolts
Courtesy of FORD MOTOR CO.

9. Remove the fender cowl bolt.
    - Position the cowl cover aside.
    - Remove the bolt.
        - To install, tighten to 9 N.m (80 lb-in).

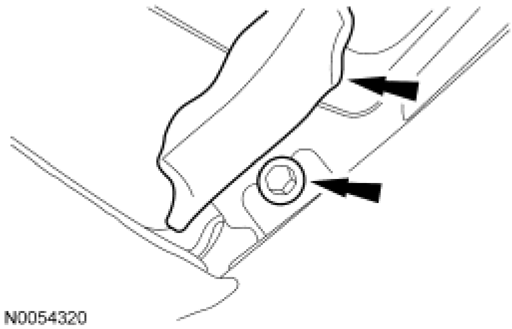

Fig. 9: Locating Fender Cowl Bolt
Courtesy of FORD MOTOR CO.

10. Remove the front fender.
11. To install, reverse the removal procedure.
    - If necessary, transfer parts.

FENDER SPLASH SHIELD

REMOVAL AND INSTALLATION

1. Remove the fender splash shield screws.
2. Remove the fender splash shield pin-type retainers.
3. To install, reverse the removal procedure.

COWL PANEL GRILLE

15	02106	Lower cowl panel

Upper and lower cowl grille panel

NOTE: The upper cowl panel grille must be removed before the lower cowl panel grille can be removed.

1. Remove the LH and RH wiper pivot arms. For additional information, refer to **WIPERS AND WASHERS** article.

   Upper cowl panel grille

2. Remove the RH cowl side outer panel.
3. Remove the LH cowl side outer panel.
4. Remove the 2 scrivets from the RH upper cowl panel grille.
5. Remove the 2 bolts from the RH upper cowl grille panel and remove the RH upper cowl grille panel.
   - To install, tighten to 6 N.m (53 lb-in).
6. Remove the 2 scrivets from the LH upper cowl grille panel.
7. Remove the 2 bolts from the LH upper cowl grille panel and remove the LH upper cowl grille panel.
   - To install, tighten to 6 N.m (53 lb-in).

   Lower cowl panel grille

8. Remove the wiper arm and wiper pivot shaft assembly.
   - Disconnect the electrical connector.
   - Remove the 2 bolts.
     - To install, tighten to 7 N.m (62 lb-in).
9. Remove the 2 bolts from the upper left lower cowl grille panel extension and remove the panel.
   - To install, tighten to 6 N.m (53 lb-in).
10. Remove the 4 bolts from the upper right lower cowl panel extension and remove the panel.
    - To install, tighten to 6 N.m (53 lb-in).
11. Disconnect the wiring harness from the retainer on the left front of the lower cowl grille panel.

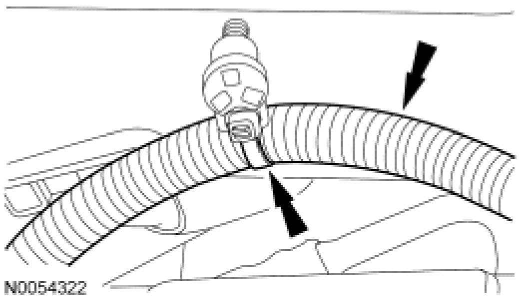

Fig. 11: Identifying Wiring Harness From Retainer
Courtesy of FORD MOTOR CO.

12. Disconnect the electrical connectors from the PCM.

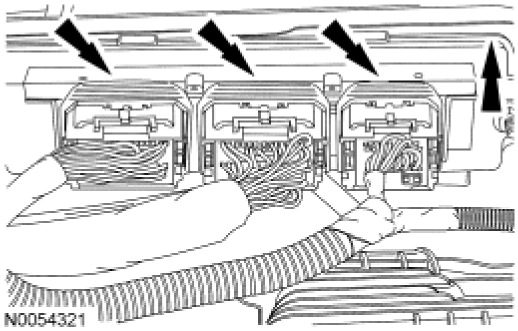

Fig. 12: Identifying Electrical Connectors From PCM
Courtesy of FORD MOTOR CO.

13. Remove the evaporative purge valve and bracket from the center of the lower cowl panel grille and set aside.
14. Remove the 5 bolts and 3 nuts from inside the lower cowl grille panel.
    - To install, tighten to 9 N.m (80 lb-in).
15. Remove the bolt from the lower cowl panel-to-front of dash.
    - To install, tighten to 20 N.m (15 lb-ft).
16. Remove the lower cowl grille panel and PCM from the vehicle.

Upper and lower cowl grille panel

CAUTION: Incorrect installation of the lower/upper cowl panel grille may cause damage to the windshield. Make sure the cowl panel grille clips are located under the windshield prior to installation.

17. To install, reverse the removal procedure.
    - Transfer the components as necessary.
    - Adjust the pivot arms. For additional information, refer to **WIPERS AND WASHERS** article.

DESCRIPTION AND OPERATION

FRONT SUSPENSION

The front suspension consists of the following components:

- Wheel bearings
- Wheel hubs

- Wheel studs
- Lower arms
- Stabilizer bar
- Stabilizer bar brackets
- Stabilizer bar bushings
- Stabilizer bar links
- Shock absorber and spring assemblies
- Wheel knuckles

The front suspension system incorporates a strut assembly that takes the place of the upper arm and ball joint. The strut carries out the function of a shock absorber and is encompassed by a coil spring. The strut and spring assembly supports the weight of the vehicle and is also the pivot point for the steering spindle. This system uses a lower control arm and ball joint for the lower (unloaded) pivot point of the steering wheel knuckle. The stabilizer bar and links are included to control lean/sway during turns.

DIAGNOSTIC TESTS

FRONT SUSPENSION

Refer to **SUSPENSION SYSTEM - GENERAL INFORMATION** article.

REMOVAL AND INSTALLATION

WHEEL BEARING AND WHEEL HUB

Special Tools

Illustration	Tool Name	Tool Number
 ST1895-A	Pinion Bearing Cone Remover	205-D002 (D79L-4621-A) or equivalent
 ST2446-A	Installer, Wheel Hub Bearing Cup	205-147
 ST2446-A	Remover/Installer, Wheel Hub Cup	204-020

	Stop Plate	205-117

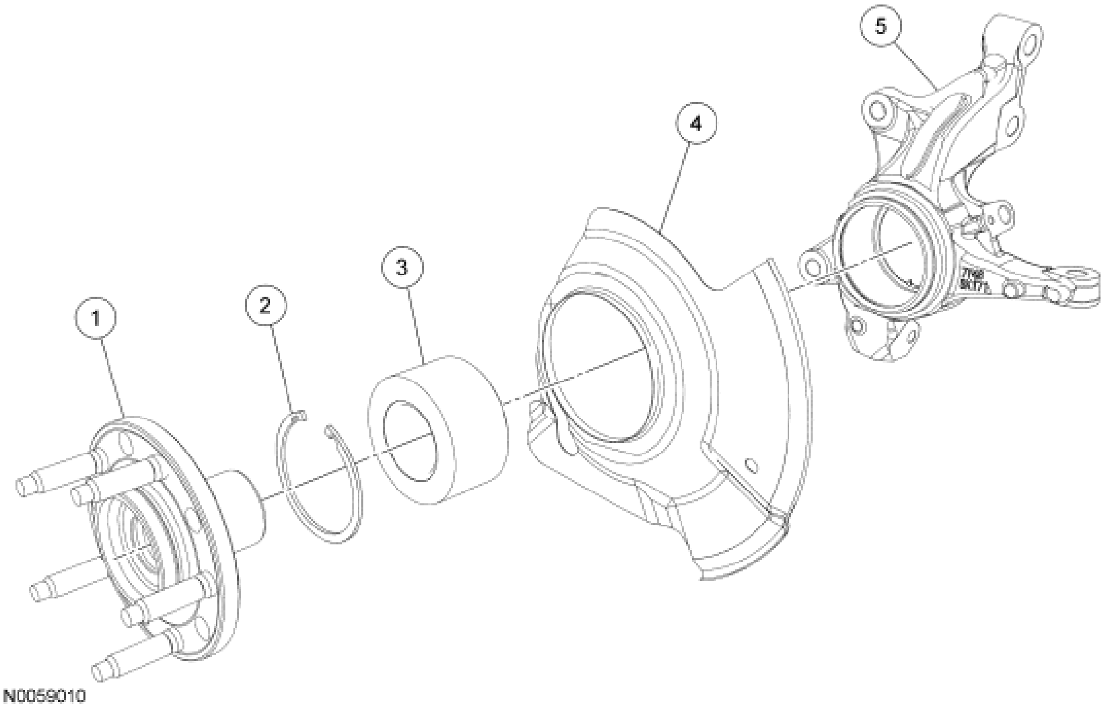

Fig. 1: Exploded View Of Wheel Bearing & Wheel Hub
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	1104	Wheel hub
2	3B625	Snap ring
3	1215	Wheel bearing
4	2K005 LH/ 2K004 RH	Brake disc shield
5	3K171 LH/ 3K170 RH	Wheel knuckle

REMOVAL

NOTE: If removing the wheel hub, the wheel bearing must be replaced.

1. Remove the wheel knuckle. For additional information, refer to **Wheel Knuckle**.
2. Using the special tool, press the wheel hub from the wheel bearing.

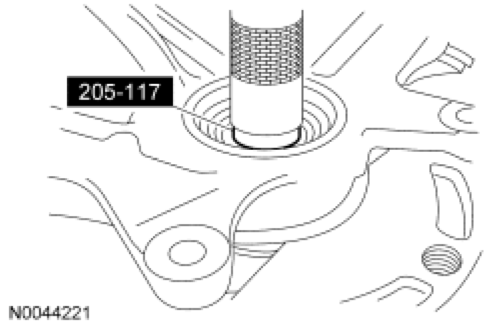

Fig. 2: Pressing Wheel Hub From Wheel Bearing Using Special Tool (205-117)
Courtesy of FORD MOTOR CO.

NOTE: **This step may not be necessary if the inner wheel bearing race remains in the wheel knuckle after removing the wheel hub.**

3. Using the special tool, press the inner wheel bearing race from the wheel hub.

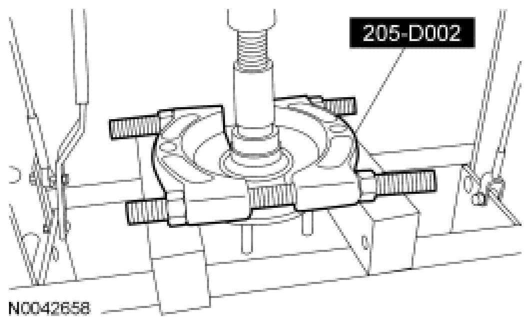

Fig. 3: Pressing Inner Wheel Bearing Race From Wheel Hub Using Special Tool (205-D002)
Courtesy of FORD MOTOR CO.

4. Remove the snap ring.
5. Using the special tool, press the outer wheel bearing race from the wheel knuckle.

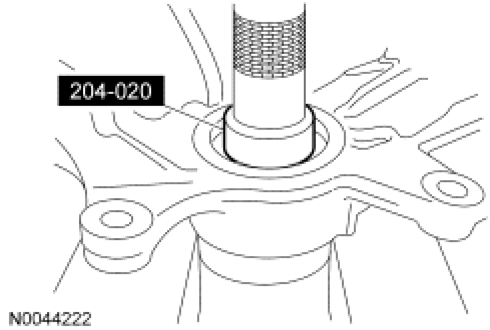

Fig. 4: Pressing Outer Wheel Bearing Race From Wheel Knuckle Using Special Tool (204-020)
Courtesy of FORD MOTOR CO.

INSTALLATION

1. Using the special tool, press the wheel bearing into the wheel knuckle.

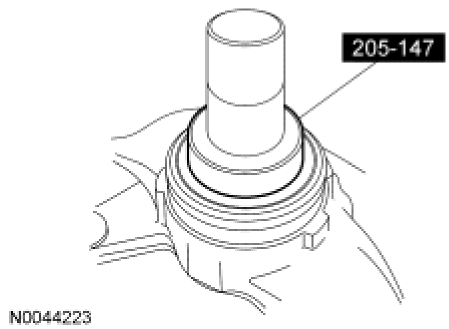

Fig. 5: Pressing Wheel Bearing Into Wheel Knuckle Using Special Tool (205-147)
Courtesy of FORD MOTOR CO.

2. Install the snap ring.
3. Using the special tools, press the wheel hub into the wheel bearing.

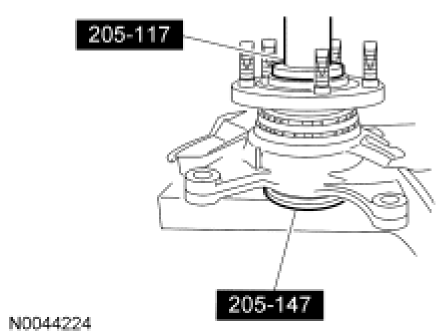

Fig. 6: Pressing Wheel Hub Into Wheel Bearing Using Special Tools (205-117) & (205-147)
Courtesy of FORD MOTOR CO.

4. Install the wheel knuckle. For additional information, refer to **Wheel Knuckle**.

WHEEL STUDS

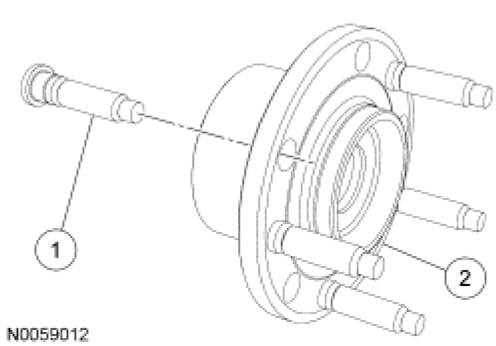

Fig. 7: Exploded View Of Wheel Studs
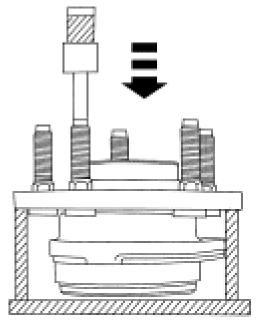
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	1107	Wheel stud
2	1104	Wheel hub

REMOVAL

1. Remove the wheel bearing and wheel hub. For additional information, refer to **Wheel Bearing and Wheel Hub**.
2. Using a press, remove the wheel stud from the wheel bearing and hub assembly.

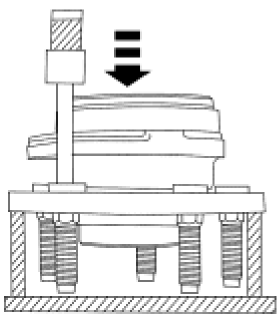


DF1279-A

Fig. 8: Removing Wheel Stud From Wheel Bearing & Hub Assembly
Courtesy of FORD MOTOR CO.

INSTALLATION

1. Position the new wheel stud in the wheel hub, aligning the serrations in the wheel hub flange made by the original wheel stud.
2. Using a press, install a new wheel stud.



DF1280-A

Fig. 9: Installing New Wheel Stud Using A Press
Courtesy of FORD MOTOR CO.

3. Install the wheel bearing and wheel hub. For additional information, refer to **Wheel Bearing and Wheel**

Hub.

LOWER ARM

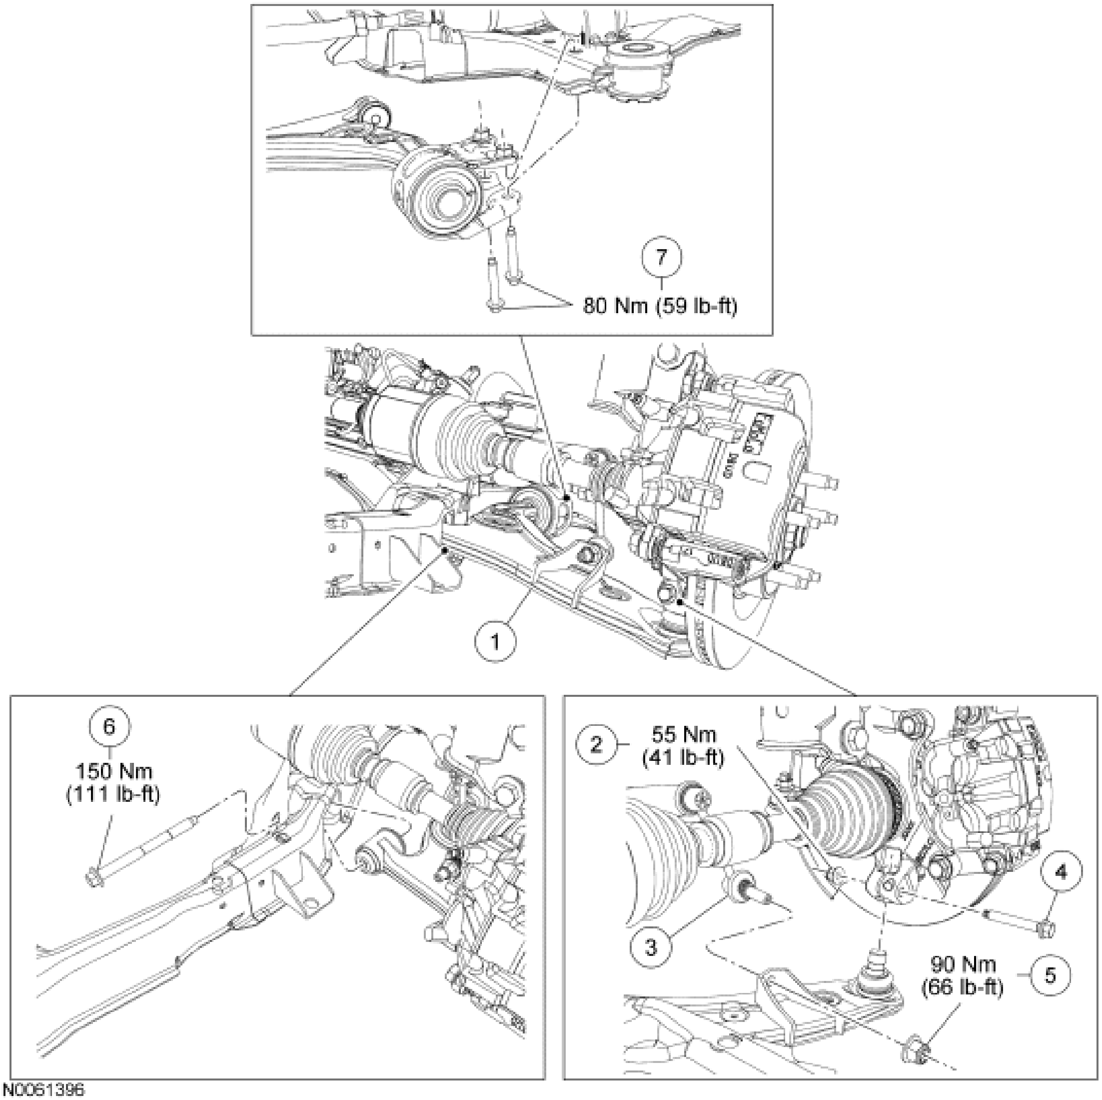


Fig. 10: Exploded View Of Lower Arm Components With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	3A423 RH/ 3A424 LH	Lower arm
2	W520213	Lower ball joint nut
3	3B438	Stabilizer bar link
4	W712481	Lower ball joint bolt
5	W520214	Stabilizer bar link nut
6	W712734	Lower arm-to-frame forward bolt

7	W712850	Lower arm-to-frame rearward bolts (2 required)

REMOVAL

CAUTION: Suspension fasteners are critical parts because they affect performance of vital components and systems and their failure may result in major service expense. New parts must be installed with the same part numbers or equivalent part, if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure correct retention of these parts.

1. Remove the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
2. Remove and discard the stabilizer bar link lower nut.
3. Remove and discard the lower ball joint nut and bolt.
4. Remove the lower arm-to-frame forward bolt and spacer.
   - Discard the bolt.
5. Remove the 2 lower arm-to-frame rearward bolts and the lower arm.
   - Discard the 2 bolts.

INSTALLATION

NOTE: Do not tighten the bolt at this time.

1. Position the lower arm and loosely install the 2 lower arm-to-frame rearward bolts.

NOTE: Do not tighten the bolts at this time.

2. Loosely install the lower arm-to-frame forward bolt and spacer.
3. Install the lower arm ball joint bolt and nut.
   - Tighten to 55 Nm (41 lb-ft).
4. Install the stabilizer bar link lower nut.
   - Tighten to 90 Nm (66 lb-ft).
5. Install the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
6. With the weight of the vehicle resting on the wheels and tires, tighten the lower arm-to-frame forward bolts to 150 Nm (111 lb-ft).
7. With the weight of the vehicle resting on the wheels and tires, tighten the 2 lower arm-to-frame rearward bolts to 80 Nm (59 lb-ft).
8. Check and, if necessary, align the front end. For additional information, refer to **WHEELS AND TIRES** article.

STABILIZER BAR AND LINK

22	W700101	Roll restrictor heat shield nuts (2 required)
23	W711843	Roll restrictor-to-subframe bolt
24	W711787	Power steering cooler hose bracket bolt
25	W711918	Driveshaft bolts (4 required)
26	4K357	Driveshaft assembly

REMOVAL AND INSTALLATION

CAUTION: Suspension fasteners are critical parts because they affect performance of vital components and systems and their failure may result in major service expense. New parts must be installed with the same part numbers or equivalent part, if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure correct retention of these parts.

NOTE: If replacing only the stabilizer bar bushings, proceed to Step 23 of this procedure.

All vehicles

1. Remove the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
2. Remove the lower steering shaft coupler bolt and disconnect the coupler from the steering gear.
   - To install, tighten to 25 Nm (18 lb-ft).
3. Index-mark the relationship of the front subframe to the underbody at the mounting locations.
4. Remove the 4 pin-type retainers and the RH fender splash shield.

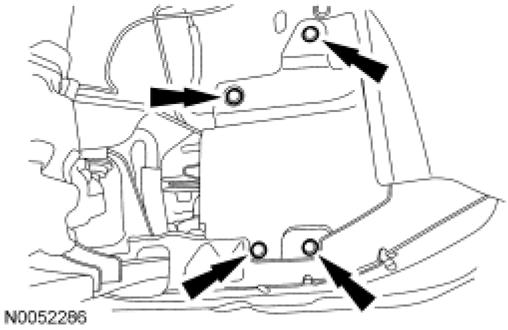

Fig. 15: Locating Pin-Type Retainers On RH Fender Splash Shield
Courtesy of FORD MOTOR CO.

5. Remove the 3 pushpin fasteners, the 7 screws and the front splash shield.

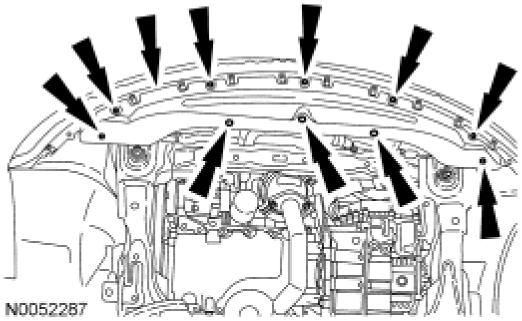

Fig. 16: Locating Push Pin Fasteners & Front Splash Shield Screws
Courtesy of FORD MOTOR CO.

6. Remove the 3 RH front lower bumper-to-subframe nuts.
   - To install, tighten to 9 Nm (80 lb-in).
7. Remove the 3 LH front lower bumper-to-subframe nuts and separate the lower bumper from the subframe.
   - To install, tighten to 9 Nm (80 lb-in).
8. Remove the power steering fluid cooler hose bracket bolt.
   - To install, tighten to 9 Nm (80 lb-in).
9. Loosen the Y-pipe clamp and disconnect the 2 exhaust hangers.
   - To install, tighten to 40 Nm (30 lb-ft).
10. Remove the 2 nuts and separate the flex pipe from the Y-pipe assembly.
    - To install, tighten to 40 Nm (30 lb-ft).

All wheel drive (AWD) vehicles

11. Index-mark the driveshaft, remove the 4 bolts and position the driveshaft aside.
    - To install, tighten to 70 Nm (52 lb-ft).

All vehicles

NOTE: Use the holding feature to prevent the ball stud from turning while removing or installing the stabilizer bar link nuts.

12. Remove the stabilizer link upper and lower nuts and the stabilizer links.
    - Discard the nuts.
    - To install, tighten to 90 Nm (66 lb-ft).
13. Remove the 2 outer tie-rod end nuts.
    - To install, tighten to 48 Nm (35 lb-ft).
14. Using the special tool, separate the outer tie-rod ends from the wheel knuckles.

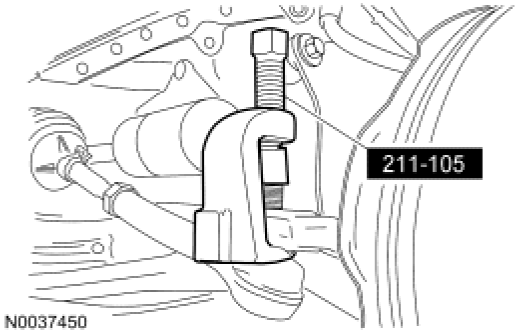

Fig. 17: Separating Tie-Rod Ends From Wheel Knuckles Using Special Tool (211-105)
Courtesy of FORD MOTOR CO.

NOTE: RH shown, LH similar.

15. Remove the 2 lower ball joint bolts and nuts and separate the lower ball joints from the wheel knuckles.
    - Discard the bolts and nuts.
    - To install, tighten to 55 Nm (41 lb-ft).
16. Remove the upper nut, loosen the lower nut and remove the engine roll restrictor heat shield.
    - To install, tighten to 11 Nm (8 lb-ft).
17. Remove the engine roll restrictor-to-subframe bolt.
    - To install, tighten to 103 Nm (76 lb-ft).
18. Using a suitable jack, support the subframe.
    - Support the subframe in the center rear area of the subframe.

NOTE: During installation, the subframe brackets are loosely installed with the support bracket bolts. Align the index marks made in Step 2, then tighten the rear subframe nuts prior to tightening the support bracket bolts.

19. Remove the 2 nuts, 4 bolts and the subframe support brackets.
    - Discard the nuts and bolts.
    - To install, tighten the nuts to 133 Nm (98 lb-ft).
    - To install, tighten the bolts to 90 Nm (66 lb-ft).
20. Remove and discard the 4 subframe nuts.
    - To install, tighten to 133 Nm (98 lb-ft).
21. Using the jack, lower the subframe approximately 76.2 mm (3 in).
22. Remove the 4 bolts, 2 stabilizer bar brackets and bushings.
    - Discard the bolts.
    - To install, tighten to 63 Nm (46 lb-ft).
23. Remove the stabilizer bar.
24. To install, reverse the removal procedure.
25. Check and, if necessary, align the front end. For additional information, refer to **SUSPENSION SYSTEM - GENERAL INFORMATION** article.

WHEEL KNUCKLE

Special Tools

Illustration	Tool Name	Tool Number
	Remover, Front Hub	205-D070 (D93P-1175-B) or equivalent

 ST1408-A	Remover, Tie-Rod End	211-105 (T85M-3395-A)

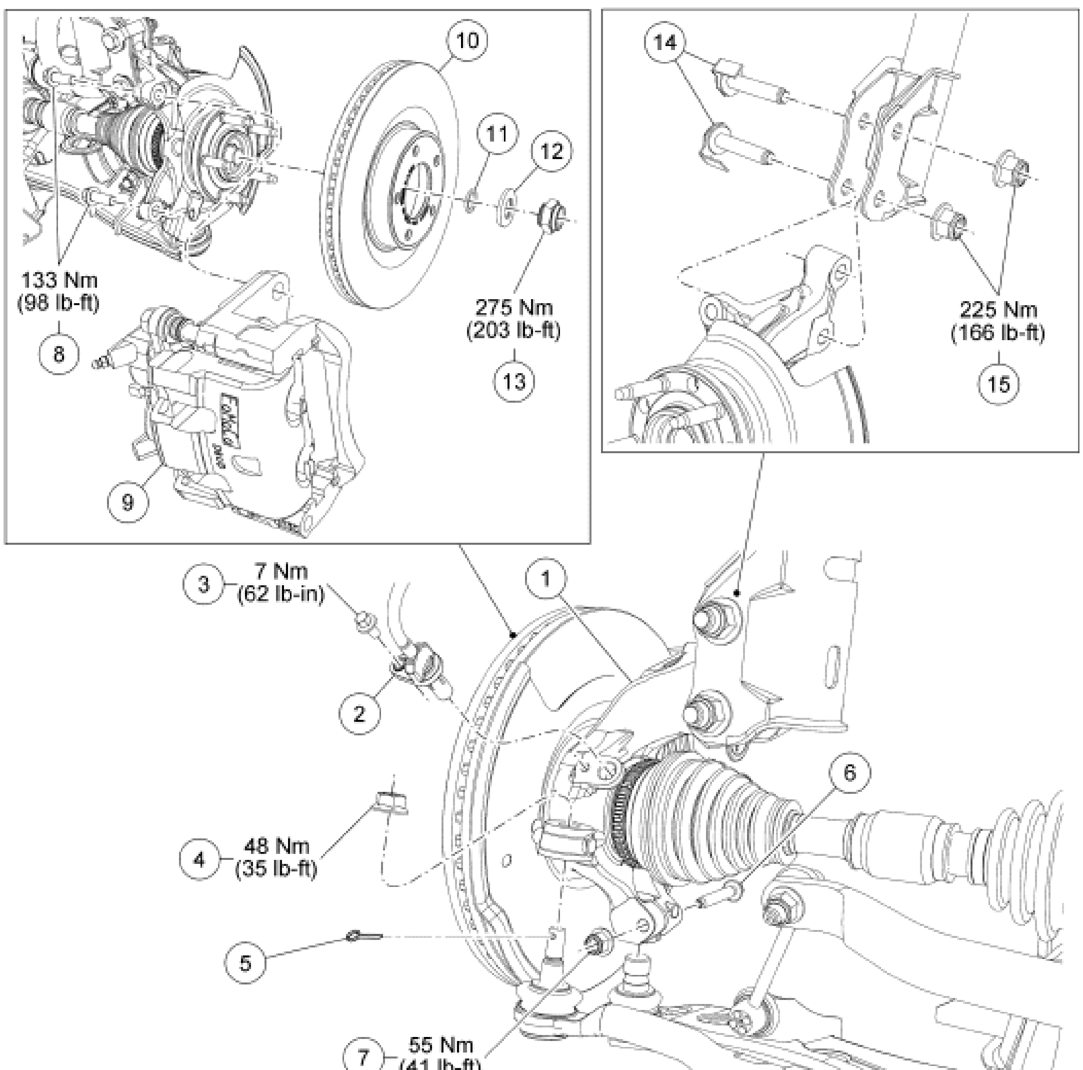

Fig. 18: Exploded View Of Wheel Knuckle With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	3K171 LH/ 3K170 RH	Wheel knuckle
2	2C204 RH/ 2C205 LH	Wheel speed sensor
3	W500222	Wheel speed sensor bolt
4	W711889	Tie-rod end nut

5	3K176	Tie-rod end cotter pin
6	W520216	Lower ball joint bolt
7	W712981	Lower ball joint nut
8	2248	Brake caliper anchor plate bolts (2 required)
9	-	Brake caliper and anchor plate assembly
10	1032	Brake disc
11	-	Halfshaft hub seal
12	-	Halfshaft hub washer
13	3N404	Halfshaft nut
14	W713856	Lower shock absorber flag bolts (2 required)
15	W520216	Lower shock absorber nuts (2 required)

REMOVAL

CAUTION: Suspension fasteners are critical parts because they affect performance of vital components and systems and their failure may result in major service expense. New parts must be installed with the same part numbers or equivalent part, if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure correct retention of these parts.

1. Remove the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.

NOTE: Apply the brake to keep the halfshaft from rotating.

2. Remove the halfshaft nut, halfshaft hub seal and halfshaft washer.
   - Discard the nut, seal and washer.
3. Remove the wheel speed sensor bolt and position the wheel speed sensor aside.

CAUTION: Do not allow the caliper and anchor plate assembly to hang from the brake hose or damage to the hose can occur.

4. Remove the 2 bolts and position the caliper and anchor plate assembly aside.
   - Support the caliper and anchor plate assembly using mechanic's wire.
5. Remove the brake disc.
6. Using the special tool, separate the halfshaft from the wheel hub.

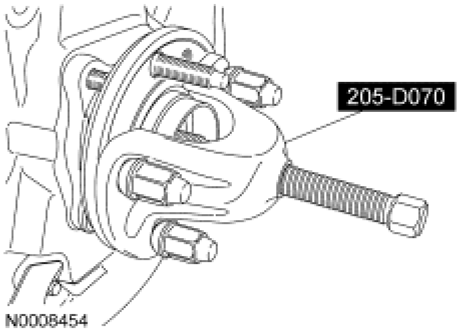

Fig. 19: Pressing Halfshaft From Wheel Bearing & Hub
Courtesy of FORD MOTOR CO.

7. Remove and discard the tie-rod end cotter pin and nut.

CAUTION: Do not use a hammer to separate the tie-rod end from the wheel knuckle or damage to the wheel knuckle can result.

8. Using the special tool, separate the tie-rod end from the wheel knuckle.

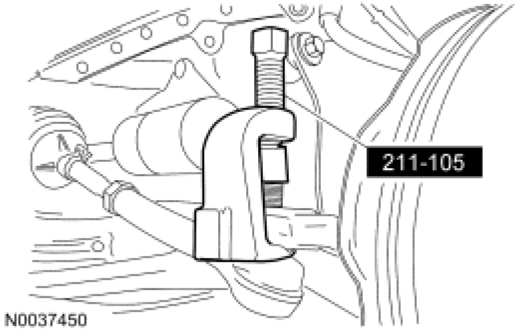

Fig. 20: Separating Tie-Rod Ends From Wheel Knuckles Using Special Tool (211-105)
Courtesy of FORD MOTOR CO.

9. Remove the shock absorber lower nuts and flag bolts.
   - Discard the nuts and flag bolts.
10. Remove the lower ball joint bolt, nut and the wheel knuckle.
   - Discard the bolt and nut.

INSTALLATION

1. Position the wheel knuckle and install the lower ball joint bolt and nut.
   - Tighten the nut to 55 Nm (41 lb-ft).
2. Install the shock absorber lower nuts and flag bolts.
   - Tighten to 225 Nm (166 lb-ft).
3. Position the tie-rod end and install the nut and cotter pin.

- Tighten to 48 Nm (35 lb-ft).

4. Position the wheel speed sensor and install the bolt.
    - Tighten to 7 Nm (62 lb-in).
5. Install the brake disc.
6. Position the brake caliper and anchor plate assembly and install the 2 bolts.
    - Tighten to 133 Nm (98 lb-ft).
7. Using a suitable installation tool, install the halfshaft into the wheel hub.

CAUTION: Do not tighten the halfshaft nut with the vehicle on the ground. The nut must be tightened to specification before the vehicle is lowered onto the wheels. Wheel bearing damage will occur if the wheel bearing is loaded with the weight of the vehicle applied.

NOTE: Apply the brake to keep the halfshaft from rotating.

8. Install the halfshaft hub seal, washer and nut.
    - Tighten to 275 Nm (203 lb-ft).
9. Install the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
10. Check and, if necessary, align the front end. For additional information, refer to **SUSPENSION SYSTEM - GENERAL INFORMATION** article.

SHOCK ABSORBER AND SPRING ASSEMBLY

7	2078	Brake flexible hose

REMOVAL AND INSTALLATION

CAUTION: Suspension fasteners are critical parts because they affect performance of vital components and systems and their failure may result in major service expense. New parts must be installed with the same part numbers or equivalent part, if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure correct retention of these parts.

1. Remove and discard the 4 shock absorber upper mount nuts.
   - To install, tighten to 30 Nm (22 lb-ft).
2. Remove the wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
3. Remove the brake flexible hose bracket bolt and disconnect the hose from the shock absorber.
   - To install, tighten to 20 Nm (15 lb-ft).
4. Disconnect the wheel speed sensor harness from the shock absorber bracket.
5. Remove the shock absorber lower nuts, flag bolts and the shock absorber and spring assembly.
   - Discard the nuts and flag bolts.
   - To install, tighten to 225 Nm (166 lb-ft).
6. To install, reverse the removal procedure.
7. Check and, if necessary, align the front end. For additional information, refer to **SUSPENSION SYSTEM - GENERAL INFORMATION** article.

DISASSEMBLY AND ASSEMBLY

SHOCK ABSORBER AND SPRING ASSEMBLY

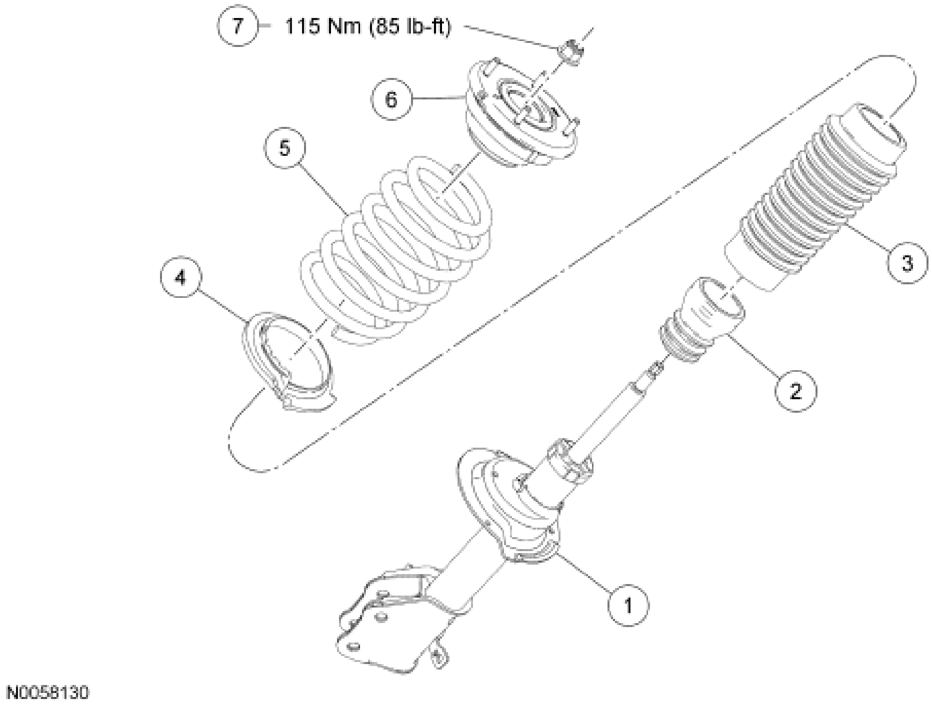

Fig. 22: Exploded View Of Shock Absorber & Spring Assembly With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	18K001 LH/ 18045 RH	Shock absorber
2	18061	Jounce bumper
3	3K036	Dust boot
4	5A307	Spring lower seat
5	5310	Spring
6	18183	Spring upper mount and seat
7	W520215	Shock absorber rod nut

DISASSEMBLY

WARNING: **Do not apply heat or flame to the shock absorber or strut tube. The shock absorber and strut tube are gas pressurized and could explode if heated. Failure to follow this instruction may result in serious personal injury.**

WARNING: **Keep all body parts clear of shock absorbers or strut rods. Shock absorbers or struts can extend unassisted. Failure to follow this instruction may result in serious personal injury.**

WARNING: **The coil spring is under extreme load. Care must be taken at all times when removing or installing a loaded spring. Failure to follow this**

instruction may result in serious personal injury.

WARNING: **Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

CAUTION: The coil spring is coated with long-term corrosion protective paint. Do not damage the paint during component servicing or spring failure may result.

CAUTION: Suspension fasteners are critical parts because they affect performance of vital components and systems and their failure may result in major service expense. New parts must be installed with the same part numbers or equivalent part, if replacement is necessary. Do not use a replacement part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure correct retention of these parts.

1. Remove the shock absorber and spring assembly. For additional information, refer to **Shock Absorber and Spring Assembly**.

   WARNING: **Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

2. Position the shock and spring assembly in a suitable spring compressor.
3. Compress the spring enough to relieve the tension on the shock and spring assembly.

   CAUTION: Do not use an impact wrench on the shock absorber rod nut or damage to the shock absorber may occur.

   NOTE: Use the holding feature to prevent the shock absorber rod from turning while removing the nut.

4. While holding the shock absorber rod, remove and discard the rod nut.
5. Remove the shock absorber assembly and spring lower seat.
6. Remove the dust boot and jounce bumper.
7. Remove the shock absorber upper mount and spring upper seat.
8. Carefully release the tension on the spring compressor and remove the spring.

ASSEMBLY

1. Install the lower spring seat, jounce bumper and dust boot onto the shock absorber.
2. Position the shock and spring assembly in a suitable spring compressor.
3. Install the spring, shock absorber upper mount and spring upper seat.

4. Align the arrow on the upper mount perpendicular to the center of the shock absorber lower mount.

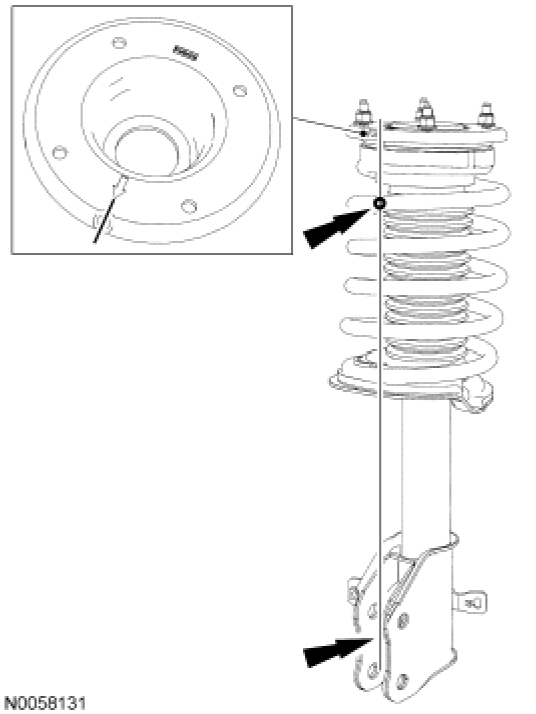

Fig. 23: Aligning Arrow On Upper Mount Perpendicular To Center Of Shock Absorber Lower Mount
Courtesy of FORD MOTOR CO.

5. Compress the spring enough to relieve the tension on the shock and spring assembly.
6. Position the end of spring within 0-10 mm (0-0.39 in) of the upper spring mount.

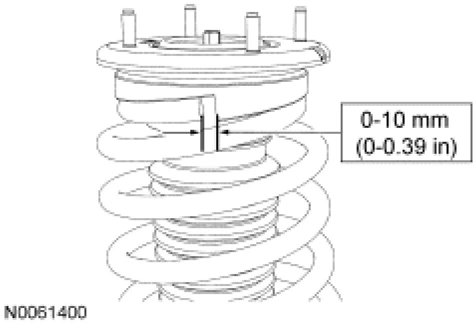

Fig. 24: Positioning End Of Spring With Specifications
Courtesy of FORD MOTOR CO.

NOTE:	**Before tightening the shock absorber rod nut, position the end of the spring within 0-10 mm (0-0.39 in) of the step on the lower spring mount.**

NOTE: **Use the holding feature to prevent the shock absorber rod from turning while installing the nut.**

7. Install the shock absorber rod nut.
   - Tighten to 115 Nm (85 lb-ft).

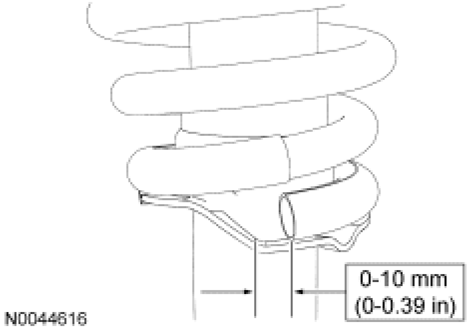

Fig. 25: Positioning End Of Spring Step With Specifications
Courtesy of FORD MOTOR CO.

8. Release the tension on the shock and spring assembly.
9. Install the shock absorber and spring assembly. For additional information, refer to **Shock Absorber and Spring Assembly**.

Description	Nm	lb-in
Fuel rail bolts	10	89
Throttle Body (TB) bolts	10	89

DESCRIPTION AND OPERATION

FUEL CHARGING AND CONTROLS

Sequential Multi-Port Fuel Injection (SFI)

The fuel charging and controls system consists of the:

- Throttle Body (TB).
- fuel injectors.
- fuel rail.

The fuel charging and controls system is:

- a Sequential Multi-Port Fuel Injection (SFI) system.
- pulse-width modulated.
- Mass Air Flow (MAF) controlled.

Fuel is metered into each intake port in a sequential firing order. Fuel injectors pulse to follow engine firing order, in accordance with engine demand, on a tuned intake manifold.

The basic fuel requirement of the engine is determined from the data supplied to the PCM by the MAF sensor, which measures the amount of air being drawn into the engine.

The various sensors detect any changes in the operating conditions and send signals to the PCM. This permits the PCM to control the opening duration (pulse width) of the fuel injectors and maintain optimum exhaust emission control and engine performance for all operating conditions.

Throttle Body (TB)

The TB:

- controls air supply to the intake manifold by electronically positioning the throttle plate.
- is not adjustable.

Fuel Injectors

The fuel injectors:

- are electronically operated by the PCM.
- atomize the fuel as the fuel is delivered.
- each have an internal solenoid that opens a needle valve, which injects fuel into the intake port in the cylinder head.
- are deposit resistant.

Fuel Rail

The fuel rail:

- receives fuel from the fuel supply tube.
- delivers fuel to the fuel injectors.

DIAGNOSTIC TESTS

FUEL CHARGING AND CONTROLS

Refer to the **Introduction - Gasoline Engines** article.

REMOVAL AND INSTALLATION

THROTTLE BODY

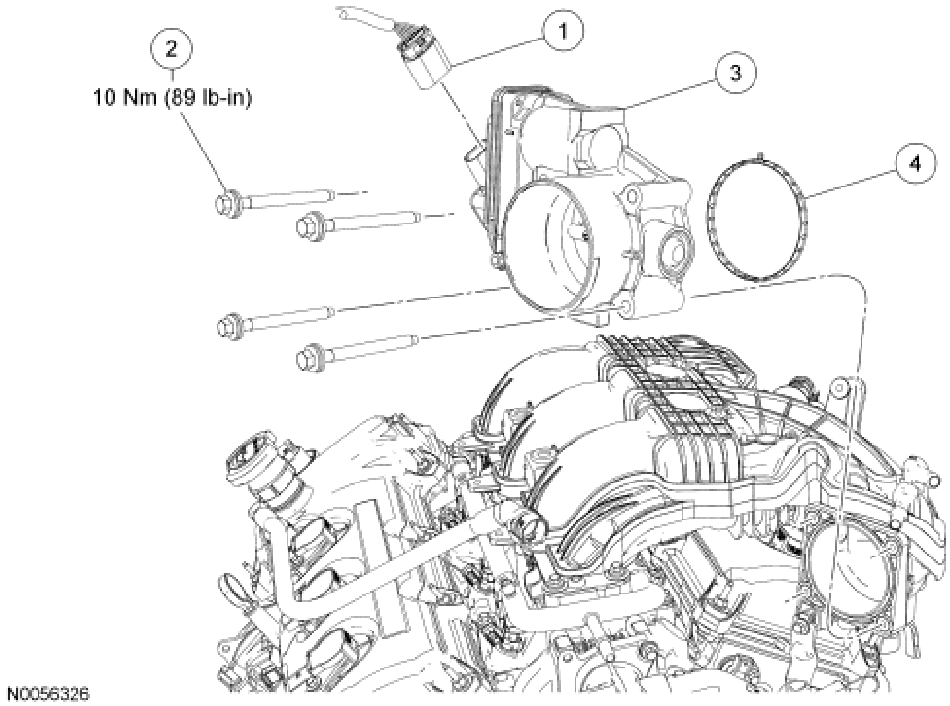

Fig. 1: Exploded View Of Throttle Body With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	14A464	Electronic throttle control electrical connector (part of 12B637)
2	W503285	Throttle body (TB) bolt (4 required)
3	9E926	TB
4	9E936	TB gasket

REMOVAL AND INSTALLATION

CAUTION: The throttle body (TB) must be removed from the vehicle to be cleaned. Do not hold the throttle plate open with any object that could scratch the bore or plate while servicing or cleaning the TB.

1. Remove the air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION AND FILTERING** article.
2. Disconnect the electronic throttle control electrical connector.
3. Remove the 4 bolts and the throttle body (TB).
   - Discard the TB gasket.
   - To install, tighten to 10 Nm (89 lb-in).

NOTE: Install a new TB gasket.

4. To install, reverse the removal procedure.

FUEL RAIL AND FUEL INJECTOR - EXPLODED VIEW

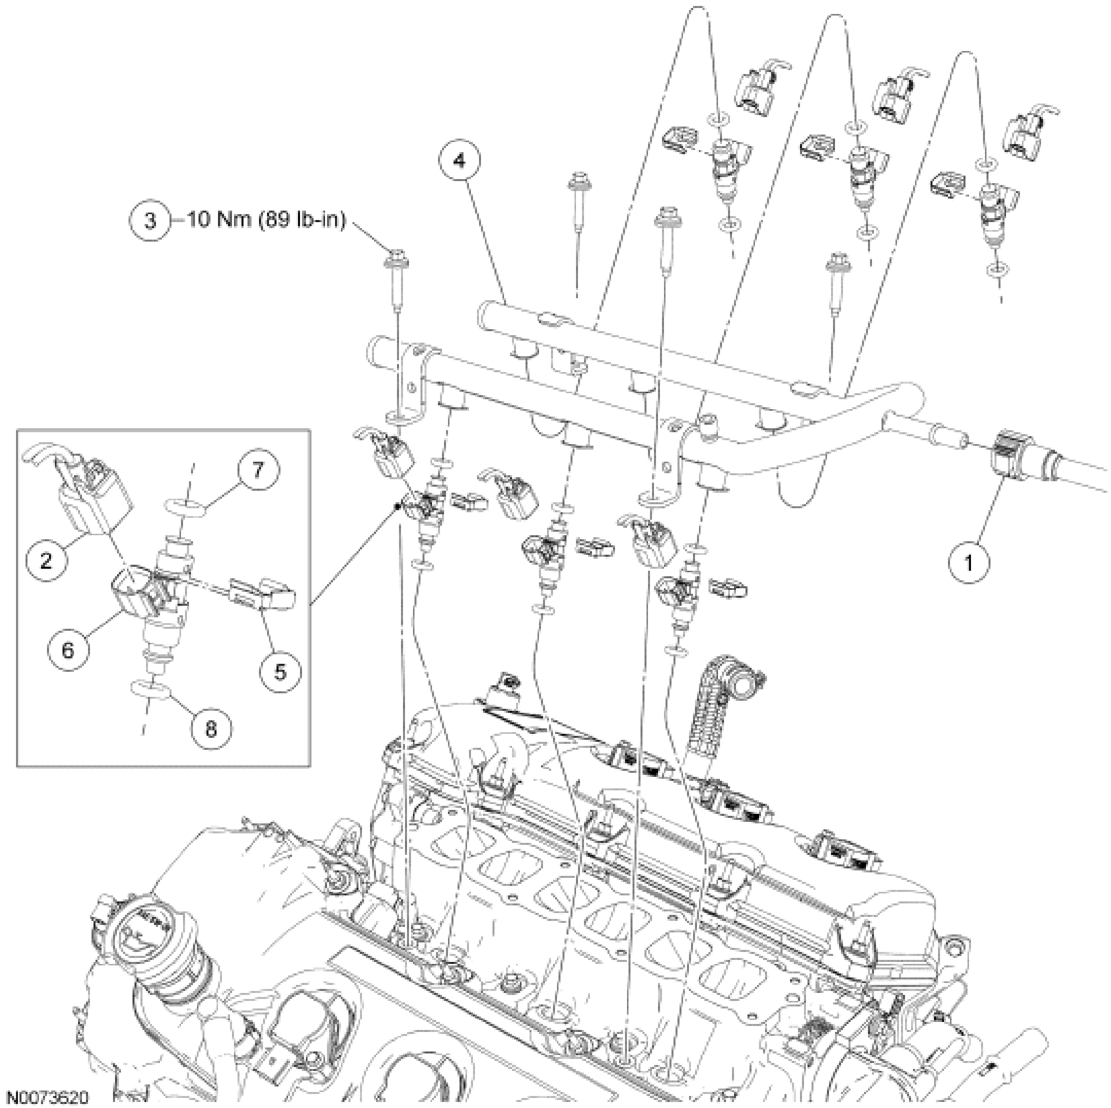

Fig. 2: Exploded View Of Fuel Rail & Fuel Injector With Torque Specification

FUEL RAIL

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (in Canada Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12) or equivalent	WSS-M2C930-A

REMOVAL

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

1. Disconnect the battery ground cable. For additional information refer to **BATTERY, MOUNTING AND CABLES** article.
2. Release the fuel system pressure. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
3. Remove the upper intake manifold. For additional information, refer to **ENGINE - 3.5L** article.
4. Disconnect the fuel tube-to-fuel rail quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
5. Disconnect the 6 fuel injector electrical connectors.
6. Remove the 4 fuel rail bolts.
7. Remove the fuel rail and injectors as an assembly.
8. Remove the 6 fuel injector clips and the 6 fuel injectors.

- Remove and discard the 12 fuel injector O-ring seals.

INSTALLATION

CAUTION: Use O-ring seals that are made of special fuel-resistant material. The use of ordinary O-rings seals can cause the fuel system to leak. Do not reuse the O-ring seals.

NOTE: The upper and lower O-ring seals are not interchangeable.

NOTE: Install new fuel injector O-ring seals and lubricate them with clean engine oil.

1. Install the 6 fuel injectors and the 6 fuel injector clips into the fuel rail.
2. Install the fuel rail and fuel injectors as an assembly.
3. Install the 4 fuel rail bolts.
   - Tighten to 10 Nm (89 lb-in).
4. Connect the 6 fuel injector electrical connectors.
5. Connect the fuel tube-to-fuel rail quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
6. Install the upper intake manifold. For additional information, refer to **ENGINE - 3.5L** article.
7. Connect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.

DESCRIPTION AND OPERATION

FUEL SYSTEM

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.

The fuel system consists of:

- a mechanical returnless fuel system.
- a fuel rail.
- a multi-port fuel injection (MFI) system.
- an all wheel drive (AWD) saddle-type or front wheel drive (FWD) L-shaped fuel tank.
- fuel, vapor and brake tubes in an integrated bundle assembly.
- a fuel tank filler pipe assembly, which cannot be modified in any way.
- a 1/4 turn-type fuel tank filler cap.
- an inertia fuel shutoff (IFS) switch.
- a separate fuel level sensor assembly on AWD saddle-type fuel tank.
- a fuel pump (FP) module containing:
  - the electric FP module, which provides pressurized fuel to the fuel rail.
  - a serviceable fuel level sender.
  - a check valve, which maintains system pressure after the FP module is shut off.
  - a pressure relief valve for overpressure protection in the event of restricted fuel flow.
  - an in-tank fuel filter providing filtration to protect the fuel injectors from foreign material.

The FP module is controlled by the PCM. Electrical power to the FP is provided through the IFS switch located under the left rear quarter trim panel.

The engines are equipped with sequential MFI injection.

The fuel pressure is regulated to a constant pressure by a fuel pressure regulator.

DIAGNOSTIC TESTS

FUEL SYSTEM

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
 ST2311-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	-

Principles of Operation

NOTE: The following procedure diagnoses a slow to fill concern only. For all other concerns, refer to the INTRODUCTION - GASOLINE ENGINES article.

The fuel tank filler pipe assembly is used to refuel the vehicle. The fuel tank filler pipe flapper valve prevents spitback of fuel during and after refueling. The fuel tank stores the fuel. The fuel tank contains a fuel pump (FP) module. The FP module consists of a fuel level sender and a FP. The fuel level sender sends a signal to the fuel gauge informing the driver of how much fuel is in the fuel tank. The FP provides fuel to the fuel tubes which supply the fuel rail.

During refueling, the fuel tank vents to the atmosphere through the vent and filler pipes, on vehicles without on-board refueling vapor recovery (ORVR) systems. In vehicles equipped with ORVR, the fuel tank and filler pipe are designed so that when the vehicle is being refueled, fuel vapors in the fuel tank travel to the evaporative emission (EVAP) canister, which absorbs the fuel vapors and vents the pressure from the fuel tank during refueling.

Inspection and Verification

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.

1. Verify the customer's concern by refueling the vehicle and observe the fuel fill rate.
2. Inspect to determine if any of the following mechanical concerns apply.

VISUAL INSPECTION CHART

Mechanical
• Bent, kinked or damaged fuel tank filler pipe • Bent, kinked or damaged fuel tank filler pipe vent tube (if equipped) • Incorrect routing of the fuel tank filler pipe

- Incorrect routing of the fuel tank filler pipe vent tube (if equipped)
- Incorrect position of fuel tank filler pipe clamps
- Incorrect position of fuel tank filler pipe vent tube clamps (if equipped)
- Fuel tank mounted vapor tubes bent or damaged
- Evaporative emission (EVAP) system tubes or hoses bent or damaged
- Accident damage to the fuel tank
- Accident damage to the vehicle effecting the fuel tank filler pipe-to-body connection
- Unauthorized modifications and/or alterations to the vehicle
- EVAP system fresh air tube plugged (dirt, spider webbing)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure to use the latest scan tool software release.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
   - If the network test passes, retrieve and record continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the EVAP system.
9. If the DTCs retrieved are related to the concern, go to **EVAPORATIVE EMISSION SYSTEM DTC**

CHART. For PCM related DTCs, refer to the **INTRODUCTION - GASOLINE ENGINES** article. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.

10. If no DTCs related to the concern are retrieved, go to **SYMPTOM CHART**.

EVAPORATIVE EMISSION SYSTEM DTC CHART

DTC	Description	Action
P0446	Evaporative Emission System Vent Control Circuit	Go to **PINPOINT TEST A**.
P0451	Evaporative Emission System Pressure Sensor/Switch Range/Performance	Go to **PINPOINT TEST A**.
P0452	Evaporative Emission System Pressure Sensor/Switch Low	Go to **PINPOINT TEST A**.
P0453	Evaporative Emission System Pressure Sensor/Switch High	Go to **PINPOINT TEST A**.

Symptom Chart

SYMPTOM CHART

Condition	Possible Sources	Action
• Slow to fill	• Fuel tank filler pipe • Fuel tank filler pipe vent tube, if equipped • Evaporative emission (EVAP) system • Fuel tank filler pipe flapper valve (part of the fuel tank filler pipe assembly) • Fuel level vent valve, if equipped (part of the fuel tank)	• Go to **PINPOINT TEST A**.
• All other fuel system concerns	• Fuel system components	• REFER to the **INTRODUCTION - GASOLINE ENGINES** article.

Pinpoint Test A

Pinpoint Test A: Slow to Fill

Normal Operation

Under normal operation, fuel should flow at a steady rate through the fuel tank filler pipe into the fuel tank. As fuel enters the fuel tank, air is vented through the filler pipe or the on-board refueling vapor recovery (ORVR) system.

This pinpoint test is intended to diagnose the following:

- Fuel tank filler pipe vent tube, if equipped
- Fuel tank filler pipe
- Evaporative emission (EVAP) system
- Fuel tank filler pipe flapper valve (part of the fuel tank filler pipe assembly)
- Fuel level vent valve, if equipped (part of the fuel tank)

PINPOINT TEST A: SLOW TO FILL

A1 CARRY OUT INSPECTION AND VERIFICATION

- Carry out inspection and verification.
- **Was the cause of the concern found?**

  YES : REPAIR or INSTALL new components to correct the concern.

  NO : Go to A2.

A2 CHECK THE SYSTEM FOR ANY EVAP DTCs

- Connect the scan tool.
- Check the system for any of the following EVAP DTCs: P0446, P0451, P0452, P0453, P0454, P1443, P1450, P1451 and P260F.
- **Are any of these DTCs present?**

  YES : REFER to **INTRODUCTION - GASOLINE ENGINES** article to diagnosis the EVAP system.

  NO : Go to A3.

A3 MONITOR THE FUEL TANK PRESSURE (FTP) WHILE FILLING THE FUEL TANK

- Monitor the FTP reference value while filling the fuel tank. Refer to **INTRODUCTION - GASOLINE ENGINES** article.
- **Is FTP within specification?**

  YES : Go to A5.

  NO : Go to A4.

A4 MONITOR THE FTP WHILE FILLING THE FUEL TANK WITH THE EVAP SYSTEM DISCONNECTED

- Disconnect the fuel tank-to-EVAP canister quick connect coupling at the EVAP canister.
- Monitor the FTP reference value while filling the fuel tank. Refer to **INTRODUCTION -**

GASOLINE ENGINES article.

- **Is FTP within specification?**

  YES : INSPECT the EVAP system for blockage or restrictions. REPAIR the blockage or restriction. If the blockage or restriction cannot be repaired, INSTALL new EVAP system components.

  NO : Go to A5.

A5 CHECK THE FUEL TANK FILLER PIPE ASSEMBLY FOR BLOCKAGE OR RESTRICTION

- Remove the fuel tank filler pipe assembly. Refer to **FUEL TANK AND LINES** article.
- Inspect the fuel tank filler pipe and fuel tank filler pipe vent tube (if equipped) for a blockage or restriction.
- **Is the fuel tank filler pipe or fuel tank filler pipe vent tube (if equipped) blocked or restricted?**

  YES : If possible, REPAIR the blockage or restriction. If the blockage or restriction cannot be repaired, INSTALL a new fuel tank filler pipe or fuel tank filler pipe vent tube.

  NO : INSTALL a new fuel tank. REFER to **FUEL TANK AND LINES** article.

GENERAL PROCEDURES

FUEL SYSTEM PRESSURE RELEASE

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

1. Remove the LH rear quarter trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.

NOTE: **The inertia fuel shutoff (IFS) switch is located behind a shield and requires the use of a small screwdriver to release the electrical connector.**

2. Disconnect the IFS switch electrical connector.

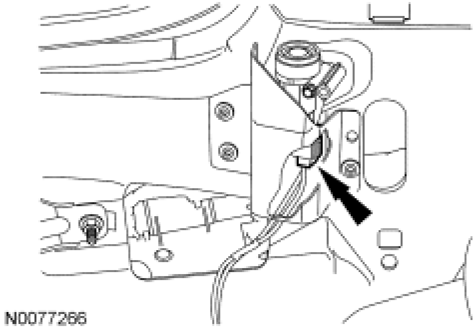

Fig. 1: Identifying IFS Switch Electrical Connector
Courtesy of FORD MOTOR CO.

3. Start the engine and allow to idle until the engine stalls.
4. After the engine stalls, crank the engine for approximately 5 seconds to make sure the fuel injection supply manifold pressure has been released.
5. Turn the ignition switch to the OFF position.
6. When the fuel system service is complete, connect the IFS switch electrical connector.

NOTE: **It may take more than one key cycle to pressurize the fuel system. Cycle the ignition key and wait 3 seconds to pressurize the fuel system. Check for leaks prior to starting the engine.**

7. Start the vehicle and check the fuel system for leaks.

FUEL SYSTEM PRESSURE TEST

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
	Fuel Pressure Test Kit	310-D009 (D95L-7211A)
	Adapter, Fuel Pressure Test	310-180

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type**

when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

WARNING: **When working on or near the evaporative emission (EVAP) system, disconnect the battery ground cable from the battery. The EVAP system contains fuel vapor and condensed fuel vapor, so an electrical spark may cause a fire or explosion. Failure to follow this instruction may result in serious personal injury.**

1. Release the fuel system pressure. For additional information, refer to **FUEL SYSTEM PRESSURE RELEASE**.
2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Remove the air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION AND FILTERING** article.
4. Disconnect the fuel tube-to-fuel rail quick connect coupling. For additional information, refer to **QUICK CONNECT COUPLING**.
5. Install the Fuel Pressure Test Adapter and the Fuel Pressure Test Kit between the fuel tube and the fuel rail.

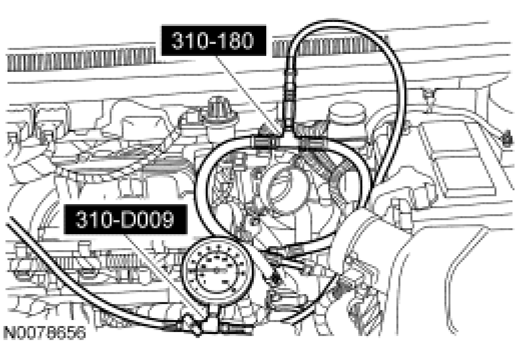

Fig. 2: Identifying Fuel Pressure Test Adapter Fuel Pressure Test Kit
Courtesy of FORD MOTOR CO.

NOTE: The air cleaner outlet pipe must be installed prior to completing the fuel system pressure test.

6. Install the air cleaner outlet pipe. For additional information, refer to **INTAKE AIR DISTRIBUTION AND FILTERING** article.

NOTE: The inertia fuel shutoff (IFS) switch electrical connector was previously disconnected to release the fuel system pressure and must be reconnected to test the fuel system pressure.

7. Connect the IFS switch electrical connector.
8. Connect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.

NOTE: Carry out a key ON engine OFF (KOEO) visual inspection for fuel leaks prior to the Fuel System Pressure Test.

NOTE: After completing the fuel system pressure test, open the drain valve on the special tool and release any residual fuel into a suitable container prior to removing the tool.

9. Test the fuel system pressure to make sure it is within the specified range. For additional information, refer to **SPECIFICATIONS**.

FUEL TANK DRAINING

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
 ST2803-A	Fuel Storage Tanker	164-R3202 or equivalent

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: **When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.**

All vehicles

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Release the fuel system pressure. For additional information, refer to **FUEL SYSTEM PRESSURE RELEASE**.
3. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
4. Release the fuel tank filler cap and position it aside.
5. Insert a suitable fuel drain tube into the fuel tank filler pipe until it enters the fuel tank.

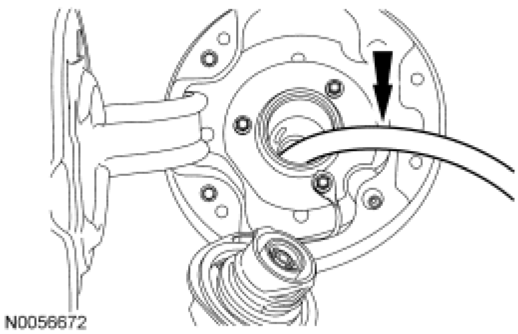

Fig. 3: Inserting Suitable Fuel Drain Tube Into Fuel Tank Filler Pipe
Courtesy of FORD MOTOR CO.

6. Attach the fuel storage tanker to the fuel drain tube and drain as much fuel as possible from the fuel tank.

All wheel drive (AWD) vehicles

7. Remove the rear seats. For additional information, refer to **SEATING** article.
8. Remove the 4 bolts and the fuel level sensor access cover.

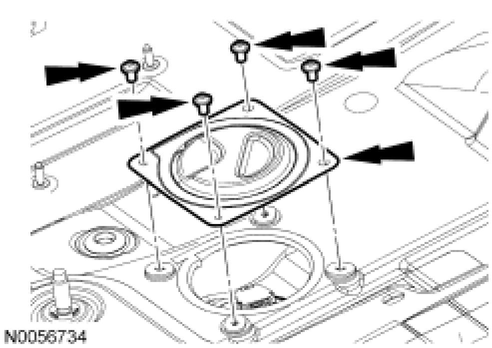

Fig. 4: Identifying Fuel Level Sensor Access Cover & Bolts
Courtesy of FORD MOTOR CO.

NOTE: **Clean the fuel level sensor connection, flange surface and the immediate surrounding area of any dirt or foreign material.**

9. Disconnect the fuel level sensor electrical connector.

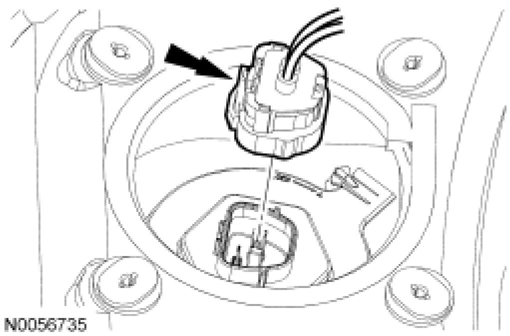

Fig. 5: Identifying Fuel Level Sensor Electrical Connector
Courtesy of FORD MOTOR CO.

NOTE: **Place absorbent pads in the general work area in case of fuel spillage.**

10. Release the lock tab, and using a suitable tool, rotate the fuel level sensor counterclockwise approximately 1/4 turn, lift and position aside.

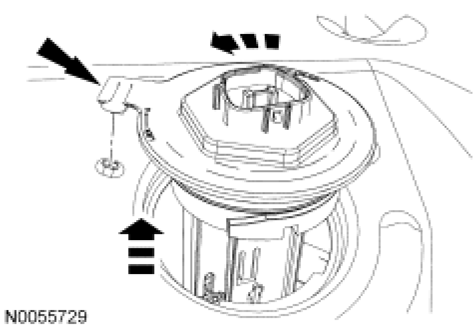

Fig. 6: Rotating Fuel Level Sensor Counterclockwise Approximately 1/4 Turn & Lift Upward
Courtesy of FORD MOTOR CO.

11. Using the special tool and a suitable fuel drain tube, drain the remaining fuel through the fuel level sensor aperture.

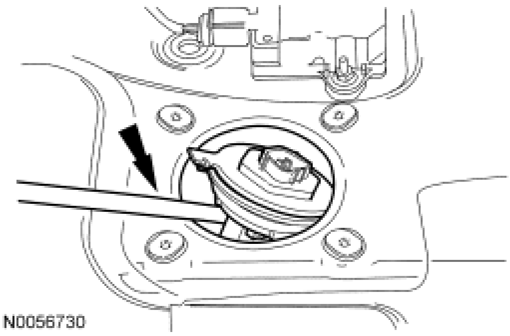

Fig. 7: Draining Remaining Fuel Through Fuel Level Sensor Aperture

Disconnect - Type I

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system**

components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.

WARNING: **When working on or near the evaporative emission (EVAP) system, disconnect the battery ground cable from the battery. The EVAP system contains fuel vapor and condensed fuel vapor, so an electrical spark may cause a fire or explosion. Failure to follow this instruction may result in serious personal injury.**

CAUTION: When reusing liquid or vapor tube connectors, make sure to use compressed air to remove any foreign material from the connector retaining clip area before separating from the tube or damage to the tube or connector retaining clip can occur. Apply clean engine oil to the end of the tube before inserting the tube into the connector.

CAUTION: Fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is essential that absolute cleanliness is observed when working with these components or component damage can occur. Always install plugs to any open orifices or tubes.

CAUTION: Do not use any tools. The use of tools may cause a deformity in the clip components which may cause fuel leaks.

1. If servicing a liquid fuel tube quick connect coupling, release the fuel system pressure. For additional information, refer to **FUEL SYSTEM PRESSURE RELEASE**.
2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Depress the locking tab and release the quick connect coupling from the tube.

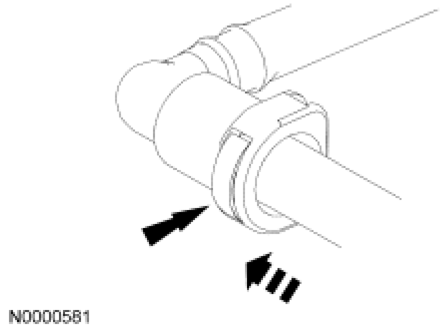

Fig. 8: Locating Fuel Tube Quick Connect Coupling Button
Courtesy of FORD MOTOR CO.

Connect - Type I

NOTE: **Make sure the fuel tube clicks into place when installing the quick connect coupling onto the tube.**

1. Install the quick connect coupling onto the tube until it is fully seated.

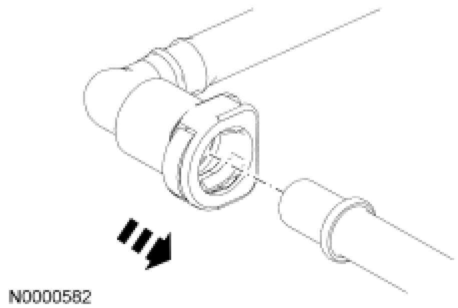

Fig. 9: Installing Quick Connect Coupling Onto Tube
Courtesy of FORD MOTOR CO.

2. Pull on the quick connect coupling and the tube to make sure it is securely fastened.
3. Connect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.

Disconnect - Type II

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

WARNING: **When working on or near the evaporative emission (EVAP) system, disconnect the battery ground cable from the battery. The EVAP system contains fuel vapor and condensed fuel vapor, so an electrical spark may cause a fire or explosion. Failure to follow this instruction may result in**

serious personal injury.

CAUTION: When reusing liquid or vapor tube connectors, make sure to use compressed air to remove any foreign material from the connector retaining clip area before separating from the tube or damage to the tube or connector retaining clip can occur. Apply clean engine oil to the end of the tube before inserting the tube into the connector.

CAUTION: Fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is essential that absolute cleanliness is observed when working with these components or component damage can occur. Always install plugs to any open orifices or tubes.

CAUTION: Do not use any tools. The use of tools may cause a deformity in the clip components which may cause fuel leaks.

1. If servicing a liquid fuel tube quick connect coupling, release the fuel system pressure. For additional information, refer to **FUEL SYSTEM PRESSURE RELEASE**.
2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Release the quick connect coupling primary locking tab.

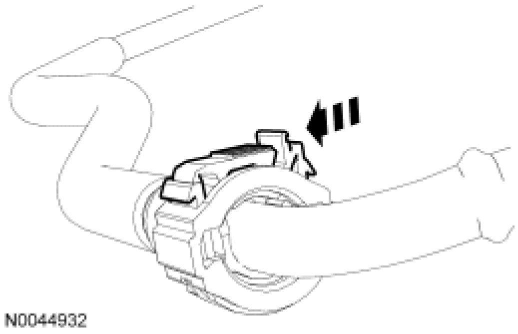

Fig. 10: Releasing Quick Connect Coupling Lock Tab
Courtesy of FORD MOTOR CO.

4. Rotate the primary locking tab to the fully opened position and squeeze the secondary locking tabs to release the locking mechanism.

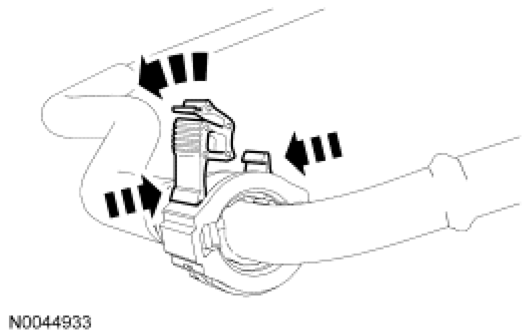

Fig. 11: Releasing Locking Mechanism
Courtesy of FORD MOTOR CO.

5. Push the locking mechanism outward and release the tube.

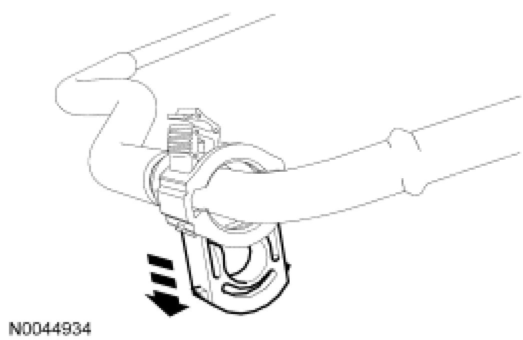

Fig. 12: Pushing Locking Mechanism Outward And Releasing Fuel Supply Tube
Courtesy of FORD MOTOR CO.

6. Remove the quick connect coupling from the tube.

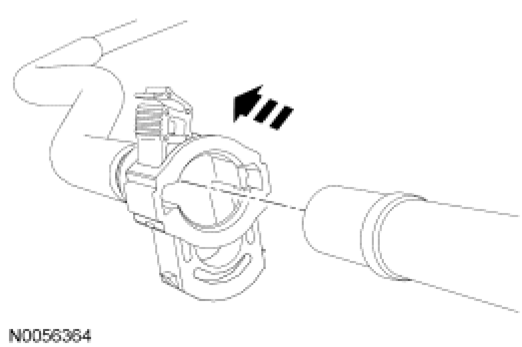

Fig. 13: Removing Quick Connect Coupling From Tube
Courtesy of FORD MOTOR CO.

Connect - Type II

1. Install the quick connect coupling onto the tube until it is fully seated.

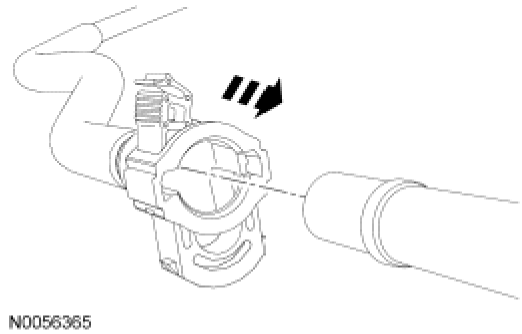

Fig. 14: Installing Quick Connect Coupling Onto Tube
Courtesy of FORD MOTOR CO.

NOTE: **Make sure the fuel tube clicks into place when installing the quick connect coupling onto the tube.**

2. Depress the locking mechanism until it is flush with the quick connect coupling housing and is fully seated onto the tube.

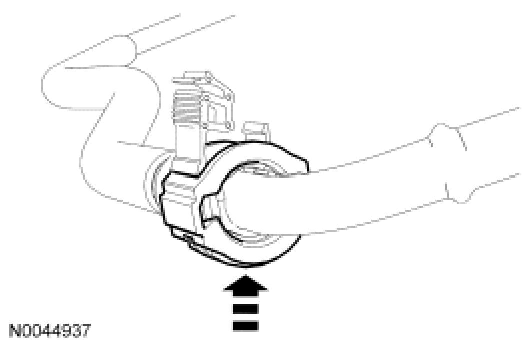

Fig. 15: Depressing Retainer Clip
Courtesy of FORD MOTOR CO.

3. Rotate the primary locking tab on the retainer clip to the closed position.

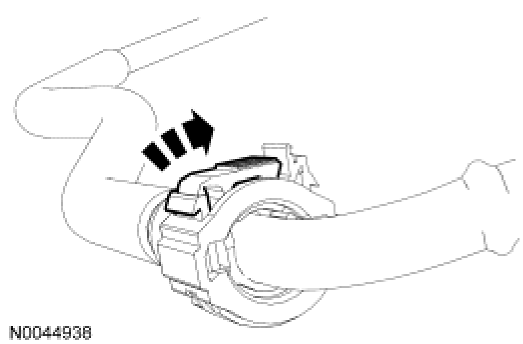

Fig. 16: Rotating Primary Locking Tab On Retainer Clip To Closed Position
Courtesy of FORD MOTOR CO.

4. Pull on the quick connect coupling and the tube to make sure it is securely fastened.
5. Connect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.

Disconnect - Type III

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

WARNING: **When working on or near the evaporative emission (EVAP) system, disconnect the battery ground cable from the battery. The EVAP system contains fuel vapor and condensed fuel vapor, so an electrical spark may cause a fire or explosion. Failure to follow this instruction may result in serious personal injury.**

CAUTION: When reusing liquid or vapor tube connectors, make sure to use compressed air to remove any foreign material from the connector retaining clip area before separating from the tube or damage to the tube or connector retaining clip can occur. Apply clean engine oil to the end of the tube before inserting the tube into the connector.

CAUTION: Fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is essential that absolute cleanliness is observed when working with these components or component damage can occur. Always install plugs to any open orifices or tubes.

CAUTION: Do not use any tools. The use of tools may cause a deformity in the clip components which may cause fuel leaks.

1. If servicing a liquid fuel tube quick connect coupling, release the fuel system pressure. For additional

information, refer to **FUEL SYSTEM PRESSURE RELEASE**.

2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Squeeze the quick connect coupling retainer locking tabs to release the locking mechanism.

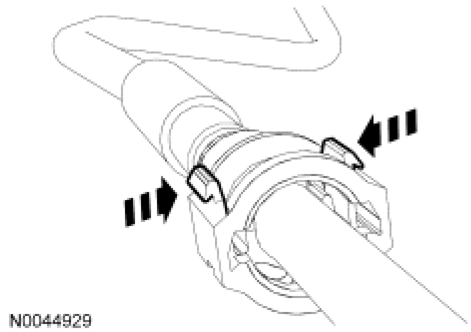

Fig. 17: Releasing Locking Mechanism
Courtesy of FORD MOTOR CO.

4. Push the locking mechanism outward to release the tube.

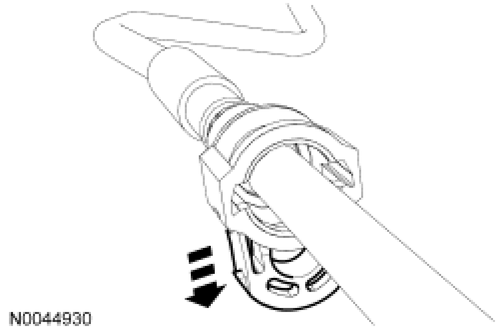

Fig. 18: Pushing Locking Mechanism Outward To Releasing Tube

BATTERY JUNCTION BOX COMPONENTS LEGEND

Fuse/Relay Location	Fuse Amp Rating	Battery Junction Box Description
Mega	100	
F1	-	Not used
F3	-	Not used
F5	60[1]	Cooling fan module - without trailer tow
	40[1]	Cooling fan module - with trailer tow
F6	40[1]	Cooling fan module - with trailer tow
F7	30[1]	Heated seat module, left rear
F8	10[2]	Generator
F9	20[2]	Trailer tow park lamp relay
F12	-	Not used
F15	40[1]	Anti-lock Brake System (ABS) module
F16	30[1]	Dual Climate controlled Seat Module (DCSM). Heated seat module passenger side front
F17	20[1]	Power point, instrument panel - Edge, Power point, console 1 - MKX
F18	20[1]	Roof opening panel motor assembly
F21	7.5[2]	EVAP canister vent control solenoid. Powertrain Control Module (PCM)
F23	-	Not used
F24	10[2]	Trailer tow left stop/turn lamp relay
F27	10[2]	Rear seat release relay
F28	15[2]	Heated mirror relay
F30	15[2]	Powertrain Control Module (PCM)
F31	10[2]	Not Used
F32	10[2]	Brake Pedal Position (BPP) switch. Mass Air Flow/Intake Air Temperature (MAF/IAT) sensor. EVAP canister purge valve. Variable Camshaft Timing (VCT valves. Heated oxygen sensors
F33	15[2]	Coil on Plugs, Ignition transformer capacitors - early production
F34	-	Not used
F35	10[2]	A/C clutch relay
F36	-	Not used
F39	40[1]	Rear window defrost grid
F40	-	Not used
F41	30[1]	Starter relay
F44	10[2]	Auto-dimming interior mirror, Reversing lamps
F45	-	Not used
F46	10[2]	Trailer tow right stop/turn lamp relay

F49	10[2]	Powertrain Control Module (PCM)
F50	10[2]	Anti-lock Brake System (ABS) module, ABS test connector
F51	5[2]	Headlamp, left-with adaptive headlamps
F52	5[2]	Fuel pump relay
F53	30[1]	Smart Junction Box (SJB) - F29, F30, F31, F32, F33, F34, F35, F36, F37, F46
F57	40[1]	Anti-lock Brake System (ABS) module, ABS test connector
F58	30[1]	Smart wiper module
F59	30[1]	Liftgate/Trunk Module (LTM)
F50	30[1]	Driver Seat Module (DSM) - with memory, Power seat switch, left - without memory
F61	30[1]	Power seat switch, right
F62	-	Not used
F63	40[1]	Blower motor relay
F64	20[1]	Power point console 2
F65	20[1]	Power point console, rear
F66	20[1]	Power point, cargo area
F67	-	Not used
F68	15[2]	Fuel pump relay
F69	-	Not used
F70	-	Not used
F71	10[2]	Brake Pedal Position (BPP) switch
F72	-	Not used

DESCRIPTION AND OPERATION

FUEL TANK AND LINES

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related**

component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

WARNING: **When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.**

The fuel system consists of:

- an all wheel drive (AWD) saddle-type or front wheel drive (FWD) L-shaped fuel tank.
- fuel, vapor and brake tubes in an integrated bundle assembly.
- quick connect fuel and vapor tube couplings.
- a fuel tank filler pipe assembly, which cannot be modified in any way, that also contains a restrictor plate to permit only unleaded fuel to be pumped into the tank.
- a 1/4 turn-type fuel tank filler cap.
- an inertia fuel shutoff (IFS) switch.
- a mechanical returnless fuel system.
- a separate fuel level sensor assembly on AWD saddle-type fuel tank.
- a fuel pump (FP) module containing:
  - the electric FP module which provides pressurized fuel to the engine.
  - a serviceable fuel level sender.
  - a check valve which maintains system pressure after the pump is shut off.
  - a pressure relief for overpressure protection in the event of restricted airflow.
  - a fuel filter providing filtration to protect the fuel injectors from foreign material.

The FP module is controlled by the PCM. Electrical power to the FP module is provided through the IFS switch located under the LH rear quarter trim panel.

DIAGNOSTIC TESTS

FUEL TANK AND LINES

Refer to the **Introduction - Gasoline Engines** article.

REMOVAL AND INSTALLATION

FUEL TANK AND FILLER PIPE - EXPLODED VIEW

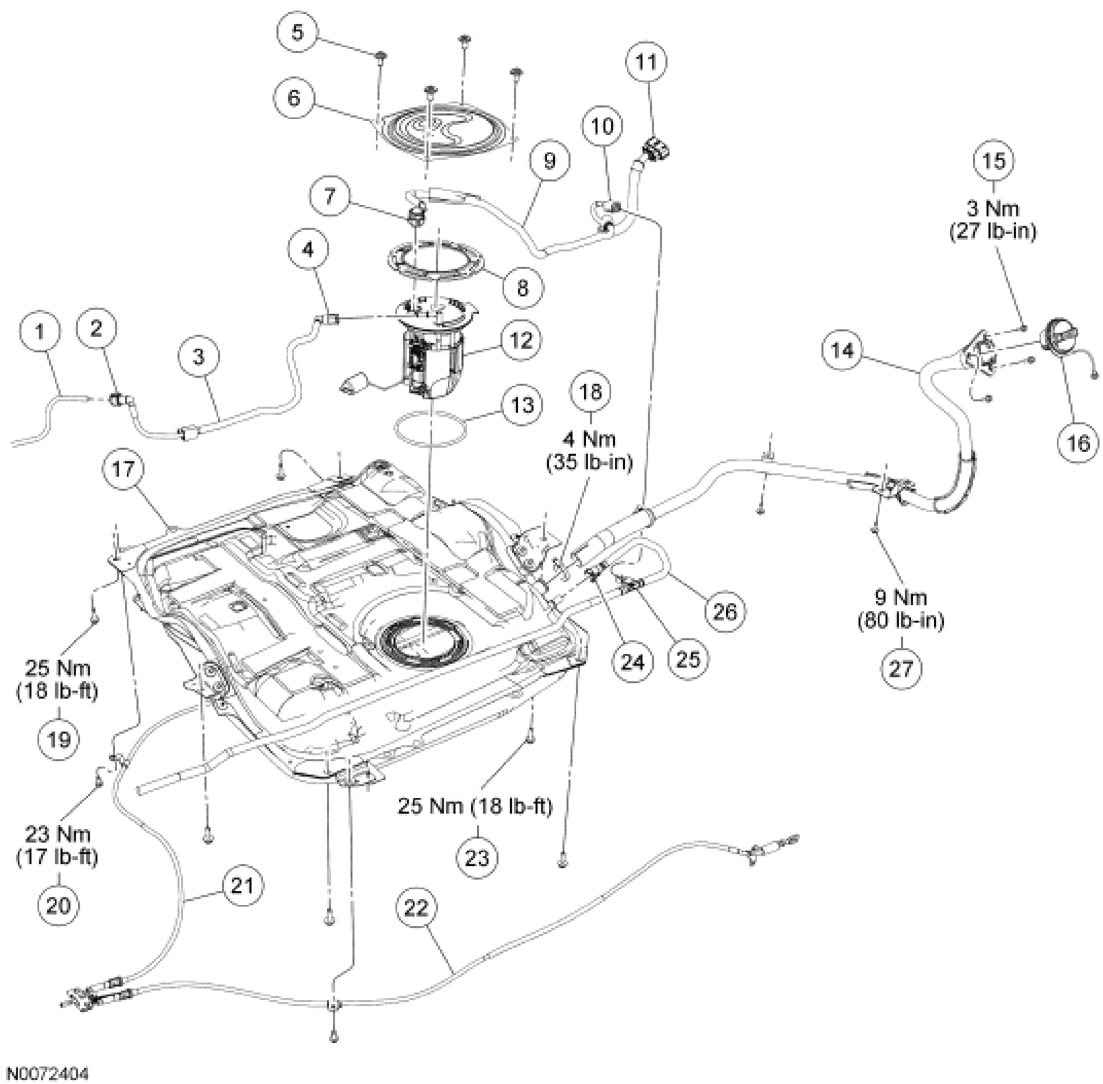

Fig. 1: Exploded View Of Fuel Tank & Filler Pipe With Torque Specifications - Front Wheel Drive (FWD) Vehicle

32	9S284	Fuel vapor tube assembly
33	W710330	Fuel tank filler pipe bracket bolt (2 required)

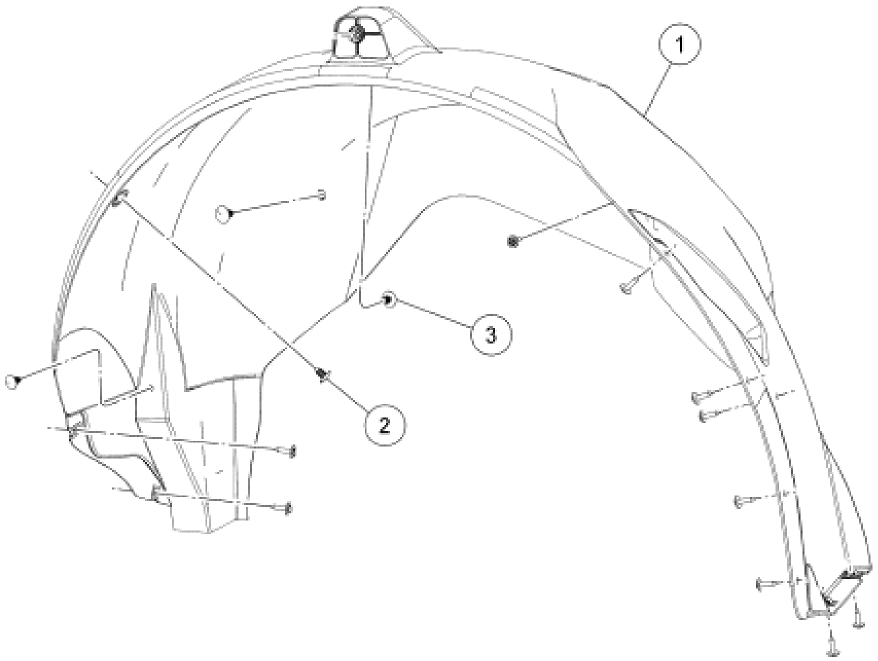

Fig. 3: Exploded View Of Fuel Tank & Filler Pipe - All Vehicles
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	LH rear splash shield
2	W712196	Splash shield pin-type retainer (4 required)
3	W706805	Splash shield screw (10 required)

1. For additional information, refer to the appropriate procedure.

FUEL TANK

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

WARNING: **Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.**

WARNING: **When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.**

All vehicles

1. Drain the fuel tank. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

   All wheel drive (AWD) vehicles

2. Remove the muffler and tailpipe. For additional information, refer to **EXHAUST SYSTEM** article.
3. Remove the driveshaft. For additional information, refer to **DRIVESHAFT** article.

   All vehicles

4. Install a suitable lifting device under the fuel tank.
5. Disconnect the fuel tank wiring harness electrical connector.
6. Disconnect the fuel tank pressure (FTP) sensor electrical connector.
7. Disconnect the fuel vapor tube assembly-to-fuel tank quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
8. Release the clamp and disconnect the fuel tank filler pipe hose from the fuel tank.
   - To install, tighten to 4 Nm (35 lb-in).
9. Disconnect the fuel tank jumper tube-to-fuel tube quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
10. Remove the 2 parking brake cable bracket bolts and position cables aside.
    - To install, tighten to 23 Nm (17 lb-ft).

CAUTION: Remove all bolts prior to lowering the fuel tank. Fuel tank damage can occur if all of the bolts are not removed.

11. Remove the 2 fuel tank bracket bolts and the 4 fuel tank bolts.
    - To install, tighten to 25 Nm (18 lb-ft).

NOTE: All wheel drive (AWD) vehicles require the fuel tank to be positioned forward, past the rear differential unit (RDU), then lowered.

12. Completely lower and remove the fuel tank.
13. To install, reverse the removal procedure.

FUEL TANK FILLER PIPE

Special Tools

Illustration	Tool Name	Tool Number
 ST1134A	Fuel Storage Tanker	164-R3202 or equivalent

REMOVAL AND INSTALLATION

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Release the fuel tank filler cap and position aside.
4. Insert a suitable fuel drain tube into the fuel tank filler pipe until it enters the fuel tank.

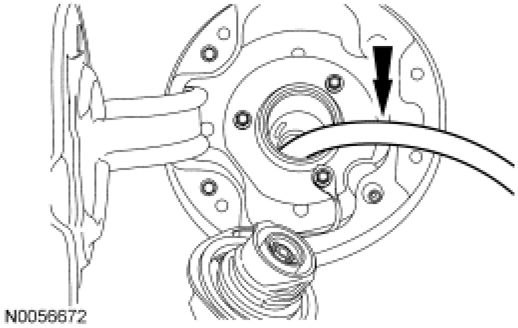

Fig. 4: Inserting Suitable Fuel Drain Tube Into Fuel Tank Filler Pipe
Courtesy of FORD MOTOR CO.

NOTE: If the fuel tank is completely full, this step will lower the fuel level below the fuel tank inlet.

5. Attach the fuel storage tanker to the fuel drain tube and drain approximately 1/8 of the fuel from the tank.
6. Remove the 3 fuel tank filler pipe flange retaining screws.
   - To install, tighten to 3 Nm (27 lb-in).
7. Remove the LH rear wheel and tire. For additional information, refer to **WHEELS AND TIRES** article.
8. Remove the 10 screws, 4 pin-type retainers and the LH rear splash shield.
9. Release the clamp and disconnect the fuel tank filler pipe from the fuel tank.
   - To install, tighten to 4 Nm (35 lb-in).
10. Remove the 2 fuel tank filler pipe bracket bolts.
    - To install, tighten to 9 Nm (80 lb-in).
11. Remove the fuel tank filler pipe from the vehicle.
12. To install, reverse the removal procedure.

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

NOTE: **The fuel pump (FP) module has a serviceable fuel level sender. For additional information, refer to Fuel Level Sender.**

All vehicles

1. Release the fuel system pressure. For additional information, refer to **FUEL SYSTEM - GENERAL**

INFORMATION article.

2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Release the fuel tank filler cap and position aside.
4. Insert a suitable fuel drain tube into the fuel tank filler pipe until it enters the fuel tank.

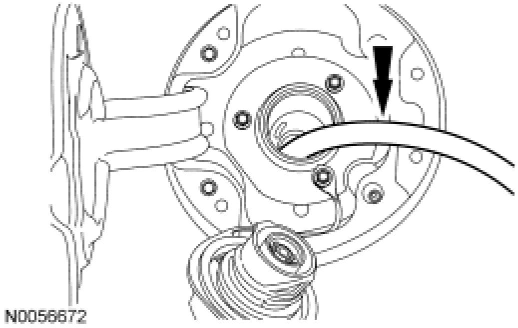

Fig. 5: Inserting Suitable Fuel Drain Tube Into Fuel Tank Filler Pipe
Courtesy of FORD MOTOR CO.

NOTE: If the fuel tank is completely full, this step will lower the fuel level below the FP module mounting flange.

5. Attach the fuel storage tanker to the fuel drain tube and drain approximately 1/8 of the fuel from the tank.
6. Remove the rear seat. For additional information, refer to **SEATING** article.
7. Remove the 4 bolts and the FP module access cover.

NOTE: Clean the FP module connection, coupling, flange surface and the immediate surrounding area of any dirt or foreign material.

8. Disconnect the FP module electrical connector.
9. Disconnect the fuel tank jumper tube-to-FP module quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

NOTE: Place absorbent pads on the floor pan in the immediate area in case of fuel spills. Carefully remove the FP module from the vehicle to avoid fuel spillage inside the vehicle.

10. Using the special tool, remove the FP module lock ring.

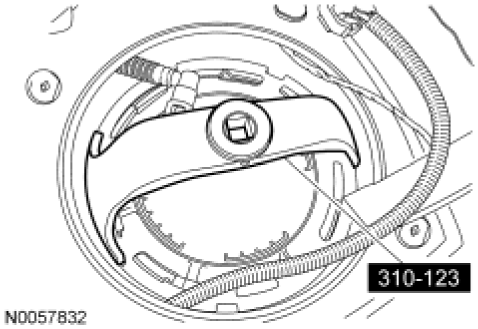

Fig. 6: Removing FP Module Lock Ring Using Special Tool (310-123)
Courtesy of FORD MOTOR CO.

All wheel drive (AWD) vehicles

CAUTION: The fuel pump (FP) module must be handled carefully to avoid damage to the FP module and/or float arm.

11. Carefully lift the FP module out of the fuel tank enough to access and disconnect the internal fuel tube-to-FP module quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

All vehicles

NOTE: The FP module will have residual fuel remaining internally, drain into a suitable container.

12. Completely remove the FP module from the fuel tank.

NOTE: Inspect the mating surfaces of the FP module flange and the fuel tank O-ring seal contact surfaces. Do not polish or adjust the O-ring seal contact area of the fuel tank flange or the fuel tank. Install a new FP module or fuel tank if the O-ring seal contact area is bent, scratched or corroded.

NOTE: Make sure to install a new FP module O-ring seal. Install a new lock ring if it is bent, damaged or corroded.

NOTE: To install, apply clean engine oil to the O-ring seal.

13. Remove the FP module O-ring seal.

NOTE: Make sure the alignment tab on the FP module and the fuel tank meet before tightening the FP module lock ring.

14. To install, reverse the removal procedure.

FUEL LEVEL SENSOR

Special Tools

Illustration	Tool Name	Tool Number
 ST1134A	Fuel Storage Tanker	164-R3202 or equivalent

Material

Item	Specification
Motorcraft SAE 5W-20 Premium Synthetic Blend Motor Oil XO-5W20-QSP (US); Motorcraft SAE 5W-20 Super Premium Motor Oil CXO-5W20-LSP12 (Canada); or equivalent	WSS-M2C930-A

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.**

WARNING: **When working on or near the evaporative emission (EVAP) system, disconnect the battery ground cable from the battery. The EVAP system contains fuel vapor and condensed fuel vapor, so an electrical spark may cause a fire or explosion. Failure to follow this instruction may result in serious personal injury.**

1. Release the fuel system pressure. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
2. Disconnect the battery ground cable. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Release the fuel tank filler cap and position aside.
4. Insert a suitable fuel drain tube into the fuel tank filler pipe until it enters the fuel tank.

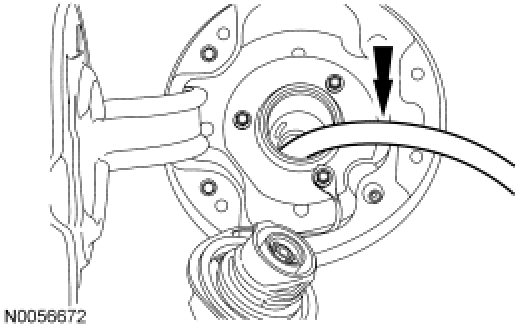

Fig. 7: Inserting Suitable Fuel Drain Tube Into Fuel Tank Filler Pipe
Courtesy of FORD MOTOR CO.

NOTE: **If the fuel tank is completely full, this step will lower the fuel level below the fuel level sensor mounting flange.**

5. Attach the fuel storage tanker to the fuel drain tube and drain approximately 1/8 of the fuel from the tank.
6. Remove the rear seat. For additional information, refer to **SEATING** article.
7. Remove the 4 bolts and the fuel level sensor access cover.

NOTE: **Clean the fuel level sensor connection, flange surface and the immediate surrounding area of any dirt or foreign material.**

8. Disconnect the fuel level sensor electrical connector.

NOTE: **Place absorbent pads in the general work area in case of fuel spillage.**

9. Release the lock tab, and using a suitable tool, rotate the fuel level sensor counterclockwise approximately 1/4 turn and lift upward.

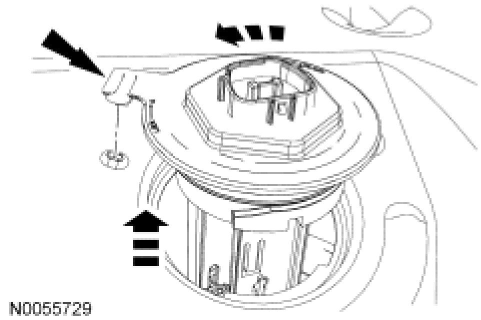

Fig. 8: Rotating Fuel Level Sensor Counterclockwise Approximately 1/4 Turn & Lift Upward
Courtesy of FORD MOTOR CO.

CAUTION: The fuel level sensor must be handled carefully to avoid damage to the float arm.

CAUTION: Carefully remove the fuel level sensor from the fuel tank to avoid fuel spillage inside the vehicle.

10. Carefully lift and remove the fuel level sensor from the fuel tank.

NOTE: Inspect the mating surfaces of the fuel level sensor flange and the fuel tank O-ring seal contact surfaces. Do not polish or adjust the O-ring seal contact area of the fuel tank flange or the fuel tank. Install a new fuel level sensor or fuel tank if the O-ring seal contact area is bent, scratched or corroded.

NOTE: To install, apply clean engine oil to the O-ring seal.

NOTE: Upon installation, correctly seat and press down firmly on the fuel level sensor, rotate it clockwise until the lock arrow on the sensor aligns with the notch on the tank. Torque should not exceed 15 Nm (11 lb-ft).

11. To install, reverse the removal procedure.

FUEL LEVEL SENDER

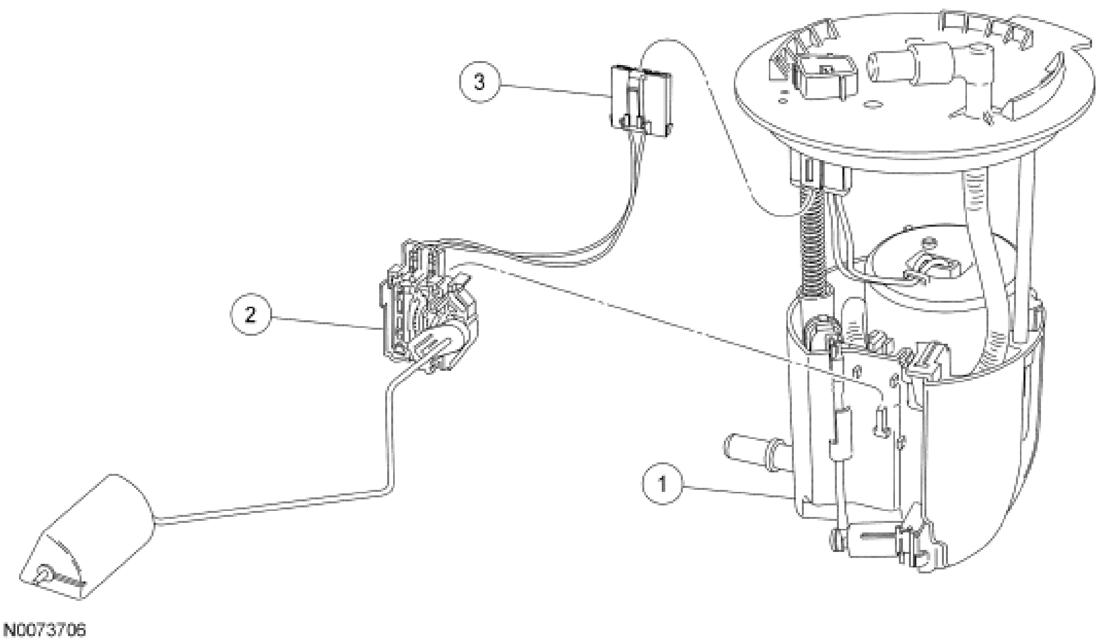

Fig. 9: Exploded View Of Fuel Level Sender
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	9H307	Fuel pump (FP) module
2	9A299	Fuel level sender
3	-	Fuel level sender electrical connector (part of 9A299)

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

1. Remove the fuel pump (FP) module. For additional information, refer to **Fuel Pump Module**.
2. Disconnect the fuel level sender electrical connector.

3. Depress the lock tab and slide the fuel level sender upwards and remove.

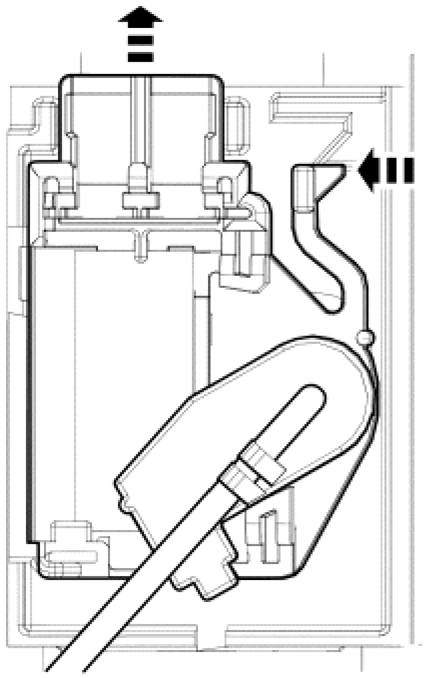

Fig. 10: Depressing Lock Tab & Sliding Fuel Level Sender Upwards
Courtesy of FORD MOTOR CO.

4. To install, reverse the removal procedure.

FUEL LINES

REMOVAL AND INSTALLATION

WARNING: **Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

WARNING: **Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.**

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
2. Release the fuel system pressure. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
3. Disconnect the fuel supply tube-to-fuel rail quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
4. Disconnect the fuel supply tube-to-fuel tube quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
5. Release the retainer clip and remove the fuel supply tube.

6. Remove the 3 bolts, pin-type retainer and the evaporative emission (EVAP) shield.
   - To install, tighten to 9 Nm (80 lb-in).
7. Disconnect the fresh air tube-to-fuel vapor vent tube quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
8. Release the retainer clip and remove the fuel vapor vent tube.
9. Disconnect the fuel vapor tube-to-EVAP canister purge valve quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
10. Remove the 2 nuts and the 2 bundle retainer clips.
    - To install, tighten to 9 Nm (80 lb-in).
11. Disconnect the fuel vapor tube-to-EVAP canister quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
12. Disconnect the fuel vapor tube from the dust separator.
13. Disconnect the fuel tank jumper tube-to-fuel tube quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
14. Release the 3 bundle retainer clips and remove the fuel tube, fuel vapor tube and the fresh air tube.
15. Disconnect the fuel tank jumper tube-to-fuel pump (FP) module quick connect coupling. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.
16. Release the retainer clip and remove the fuel tank jumper tube.
17. To install, reverse the removal procedure.

INERTIA FUEL SHUTOFF (IFS) SWITCH

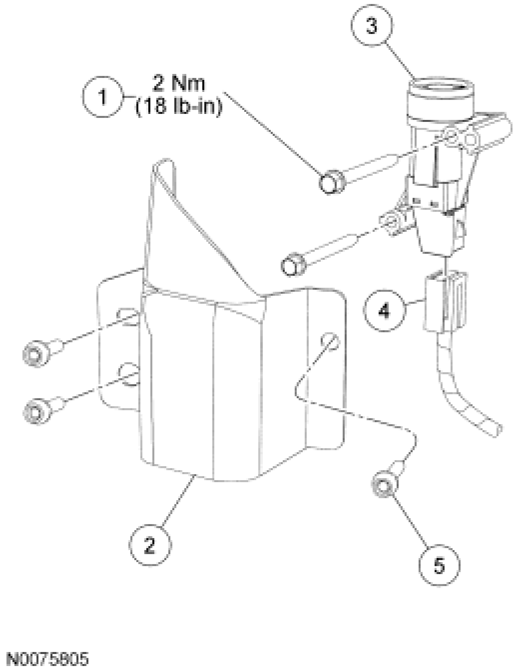

Fig. 12: Exploded View Of Inertia Fuel Shutoff (IFS) Switch With Torque Specification

Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W504169	Inertia fuel shutoff (IFS) switch bolt (2 required)
2	-	IFS switch shield
3	9341	IFS switch
4	14489A	IFS switch electrical connector
5	-	IFS switch shield rivet (3 required)

REMOVAL AND INSTALLATION

1. Remove the LH rear quarter trim panel. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** article.
2. Remove the 3 rivets and the inertia fuel shutoff (IFS) switch shield.
3. Disconnect the IFS switch electrical connector.

CAUTION: Do not overtighten the fasteners or damage to the switch will occur.

4. Remove the 2 bolts and the IFS switch.
    - To install, tighten to 2 Nm (18 lb-in).
5. To install, reverse the removal procedure.

2008 ACCESSORIES & BODY, CAB

Horn - Edge & MKX

SPECIFICATIONS

TORQUE SPECIFICATIONS

Description	Nm	lb-in
Horn bolt	10	89

DESCRIPTION AND OPERATION

HORN

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The horn system consists of the following components:

- Horn switches (part of the steering wheel)
- Clockspring
- Horn relay (part of the SJB)
- Horn

For removal and installation of the steering wheel, refer to **STEERING COLUMN** article.

For removal and installation of the SJB, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.

Horn Location

The horn is mounted on the side of the RH wheel well under the front fender splash shield.

DIAGNOSTIC TESTS

HORN

Special Tools

Illustration	Tool Name	Tool Number
 ST1137-A	73III Automotive Meter	105-R0057 or equivalent

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The SJB supplies the control and switched voltage to the horn relay (part of the SJB). When the horn switches (part of the steering wheel) are pressed, ground is supplied through the clockspring to the horn relay. The horn relay is then energized, directing voltage to the horn and enabling the horn to sound.

The horn switch is comprised of 2 sets of contacts separated by springs. The lower set is connected to ground and the upper set is connected to the horn signal circuit. When the driver air bag module is pressed, it pushes down on the upper set of contacts, collapsing the springs and allowing the contacts to touch. When the contacts touch, it completes the circuit.

When the vehicle security system is armed, the SJB provides a momentary ground to the horn relay control side to indicate the system is armed, and an on and off ground when an intrusion is detected or the panic alarm is activated.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical
• Horn • Steering wheel switch harness • Horn switches (part of the steering wheel)	• Smart junction box (SJB) fuse 24 (20A) • Wiring, terminals or connectors • Clockspring • SJB

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure to use the latest scan tool release software.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the vehicle.
6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
   - If the scan tool responds with no communication with one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
   - If the network test passes, retrieve and record the continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **Symptom Chart**.

Symptom Chart

Symptom Chart

Condition	Possible Sources	Action
• The horn is inoperative	• Fuse • Wiring, terminals or connectors • Horn • Clockspring • Steering wheel switch harness • Horn switches (part of the steering wheel)	• Go to **Pinpoint Test A** .

	• Smart junction box (SJB)	
• The horn is always on	• Wiring, terminals or connectors • Clockspring • Steering wheel switch harness • Horn switches (part of the steering wheel) • SJB	• Go to **Pinpoint Test B** .

Pinpoint Tests

Pinpoint Test A: The Horn Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article , Horn/Cigar Lighter for schematic and connector information.

Normal Operation

The smart junction box (SJB) supplies the switched and control voltage to the horn relay (part of the SJB). When the horn switches (part of the steering wheel) are pressed, the switches are grounded to the steering wheel through circuit GD165 (BK), and the clockspring to the instrument panel cross-car beam through circuit GD116 (BK/VT). Ground is then supplied to the horn relay through circuit CRH02 (BU/WH), energizing the horn relay. The horn relay then sends voltage to the horn through circuit CRH04 (VT/GN), enabling the horn to sound. Ground for the horn is supplied through circuit GD123 (BK/GY).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Horn
- Clockspring
- Steering wheel switch harness
- Horn switches (part of the steering wheel)
- SJB

PINPOINT TEST A: THE HORN IS INOPERATIVE

> **CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

A1 CHECK THE SJB OUTPUT

- Key in ON position.

- Enter the following diagnostic mode on the diagnostic tool: SJB DataLogger
- Select the SJB PID (HORN). Active command the horn on and then off.
- **Does the horn sound when commanded on?**

  YES : Go to A2.

  NO : Go to A7.

A2 CHECK CIRCUIT GD165 (BK) FOR AN OPEN

- Key in OFF position.
- Remove the driver air bag module. Refer to **SUPPLEMENTAL RESTRAINT SYSTEM** article.
- Disconnect: Clockspring C218b

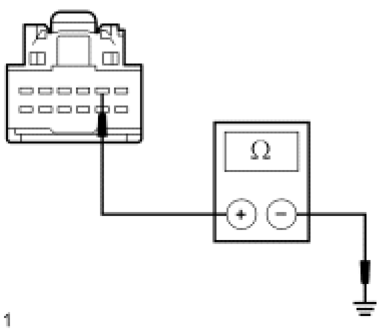

Fig. 1: Checking Circuit GD165 (BK) For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218b-2, circuit GD165 (BK), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to A3.

  NO : REPAIR the circuit. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

A3 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN

- Disconnect: Clockspring C218a

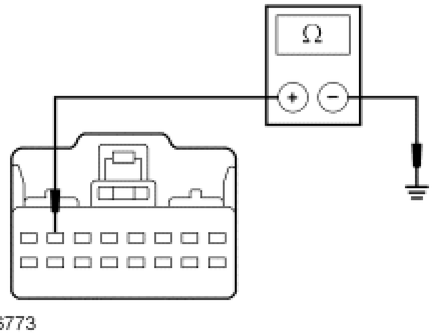

Fig. 2: Checking Circuit GD116 (BK/VT) For Open
Courtesy of FORD MOTOR CO.

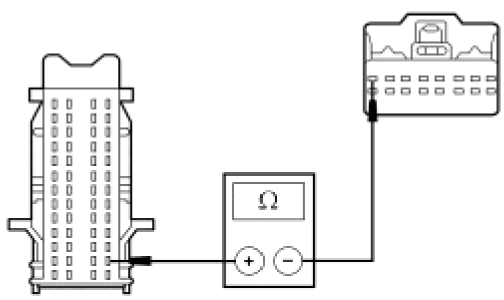
- Measure the resistance between the clockspring C218a-7, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to A4.

  NO : REPAIR the circuit. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

A4 CHECK CIRCUIT CRH02 (BU/WH) FOR AN OPEN

- Disconnect: SJB C2280b



N0060018

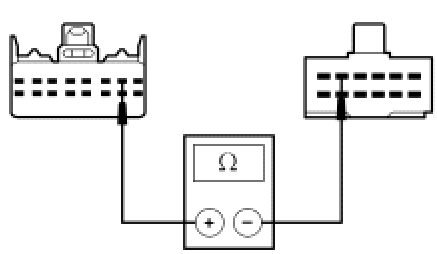
Fig. 3: Checking Circuit CRH02 (BU/WH) For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218a-8, circuit CRH02 (BU/WH), harness side and the SJB C2280b-41, circuit CRH02 (BU/WH), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to A5.

  NO : REPAIR the circuit. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

A5 CHECK THE CLOCKSPRING FOR AN OPEN



N0075736

Fig. 4: Checking Clockspring For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218a pin 7, component side and the clockspring C218b pin 2, component side.

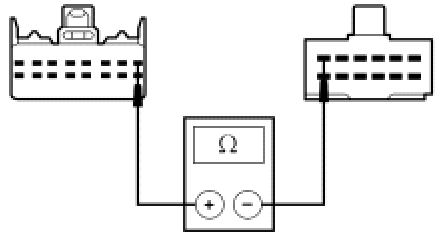


Fig. 5: Checking Clockspring For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218a pin 8, component side and the clockspring C218b pin 1, component side.
- **Are the resistances less than 5 ohms?**

  YES : Go to A6.

  NO : INSTALL a new clockspring. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

A6 CHECK THE STEERING WHEEL SWITCH HARNESS FOR AN OPEN

- Disconnect: Horn Switch C2996 and C2997

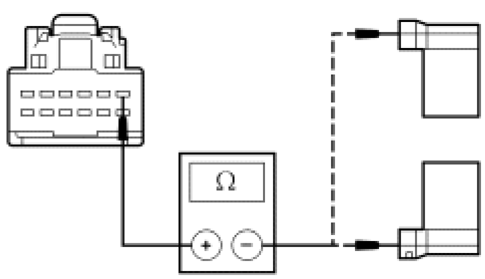

Fig. 6: Checking Steering Wheel Switch Harness For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218b-1, circuit CRH02 (BU/WH), harness side and the horn switch C2996-1, circuit CRH02 (BU/WH), harness side; and between the clockspring C218b-1, circuit CRH02 (BU/WH), harness side and the horn switch C2997-1, circuit CRH02 (BU/WH), harness side.
- **Are the resistances less than 5 ohms?**

  YES : INSTALL a new steering wheel. REFER to **STEERING COLUMN** article. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

  NO : REPAIR the circuit. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

A7 CHECK CIRCUIT GD123 (BK/GY) FOR AN OPEN

- Key in OFF position.
- Disconnect: Horn C131

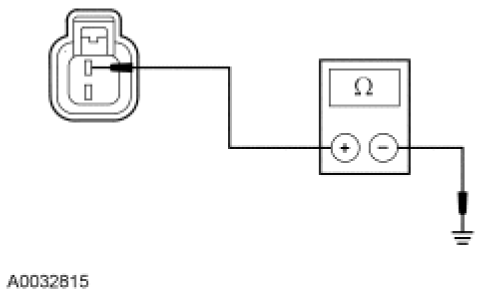

Fig. 7: Checking Circuit GD123 (BK/GY) For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the horn C131-1, circuit GD123 (BK/GY), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to A8.

  NO : REPAIR the circuit. TEST the system for normal operation.

A8 CHECK CIRCUIT CRH04 (VT/GN) FOR VOLTAGE

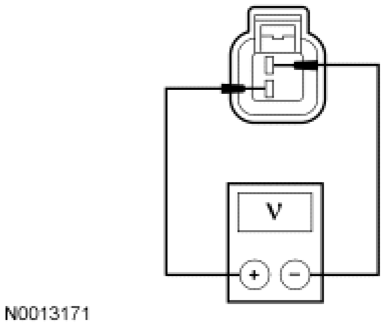

Fig. 8: Checking Circuit CRH04 (VT/GN) For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between the horn C131-2, circuit CRH04 (VT/GN), harness side, and the horn C131-1, circuit GD123 (BK/GY), harness side, while pressing the horn switch.
- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new horn. REFER to **Horn**. TEST the system for normal operation.

  NO : VERIFY the SJB fuse 24 (20A) is OK. If OK, go to A9.

A9 CHECK CIRCUIT CRH04 (VT/GN) FOR AN OPEN

- Disconnect: SJB C2280e

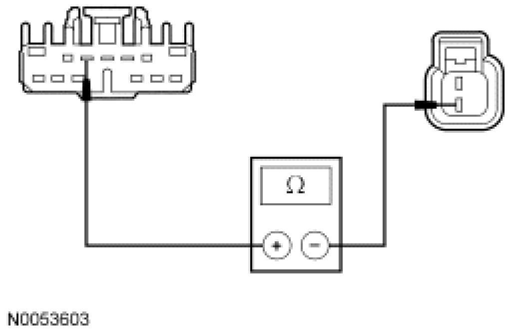

Fig. 9: Checking Circuit CRH04 (VT/GN) For Open
Courtesy of FORD MOTOR CO.

- Measure the resistance between the SJB C2280e-5 , circuit CRH04 (VT/GN), harness side, and the horn C131-2, circuit CRH04 (VT/GN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to A10.

  NO : REPAIR the circuit. TEST the system for normal operation.

A10 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: The Horn Is Always On

Refer to appropriate SYSTEM WIRING DIAGRAMS article , Horn/Cigar Lighter for schematic and connector information.

Normal Operation

The smart junction box (SJB) supplies the switched and control voltage to the horn relay (part of the SJB). When the horn switches (part of the steering wheel) are pressed, the switches are grounded to the steering wheel, and the clockspring to the instrument panel cross-car beam. Ground is then supplied to the horn relay through circuit CRH02 (BU/WH), energizing the horn relay. The horn relay then sends voltage to the horn through circuit CRH04 (VT/GN), enabling the horn to sound.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Clockspring
- Steering wheel switch harness
- Horn switches (part of the steering wheel)
- SJB

PINPOINT TEST B: THE HORN IS ALWAYS ON

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 CHECK CIRCUIT CRH04 (VT/GN) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: SJB C2280e
- Key in ON position.
- **Does the horn continue to sound?**

  YES : REPAIR the circuit. TEST the system for normal operation.

  NO : Go to B2.

B2 CHECK THE HORN SWITCH INPUT

- Key in OFF position.
- Disconnect: SJB C2280b
- Connect: SJB C2280e
- **Does the horn sound continuously?**

  YES : Go to B6.

  NO : Go to B3.

B3 CHECK CIRCUIT CRH02 (BU/WH) FOR A SHORT TO GROUND

- Depower the supplemental restraint system (SRS). Refer to **SUPPLEMENTAL RESTRAINT SYSTEM** article.
- Disconnect: Clockspring C218a

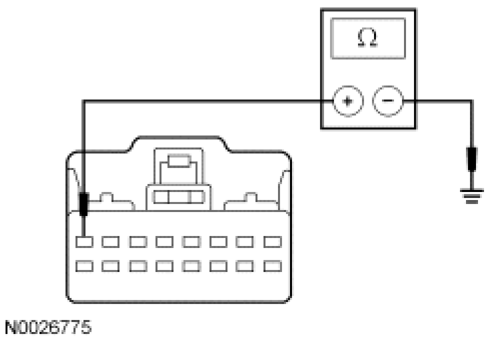

Fig. 10: Checking Circuit CRH02 (BU/WH) For Short To Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218a-8, circuit CRH02 (BU/WH), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to B4.

  NO : REPAIR the circuit. REPOWER the SRS. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

B4 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Remove the driver air bag module. Refer to **SUPPLEMENTAL RESTRAINT SYSTEM** article.
- Connect: Clockspring C218a
- Disconnect: Clockspring C218b

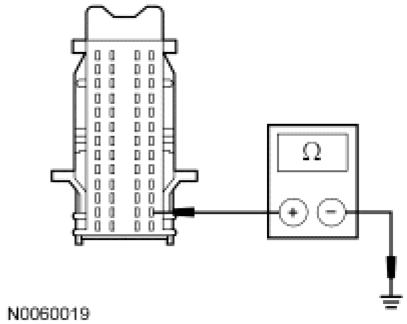

Fig. 11: Checking Clockspring For Short To Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the SJB C2280b-41, circuit CRH02 (BU/WH), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to B5.

  NO : INSTALL a new clockspring. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

B5 CHECK THE STEERING WHEEL SWITCH HARNESS FOR A SHORT TO GROUND

- Disconnect: Horn Switch C2996 and C2997

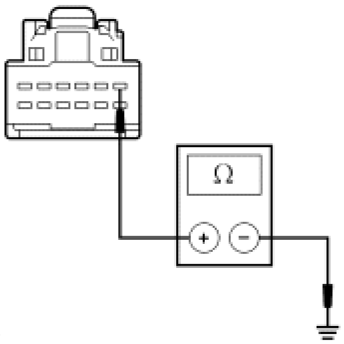

Fig. 12: Checking Steering Wheel Switch Harness For Short To Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring 218b-1, circuit CRH02 (BU/WH), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : INSTALL a new steering wheel. REFER to **STEERING COLUMN** article. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

  NO : REPAIR the circuit. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

B6 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

REMOVAL AND INSTALLATION

HORN

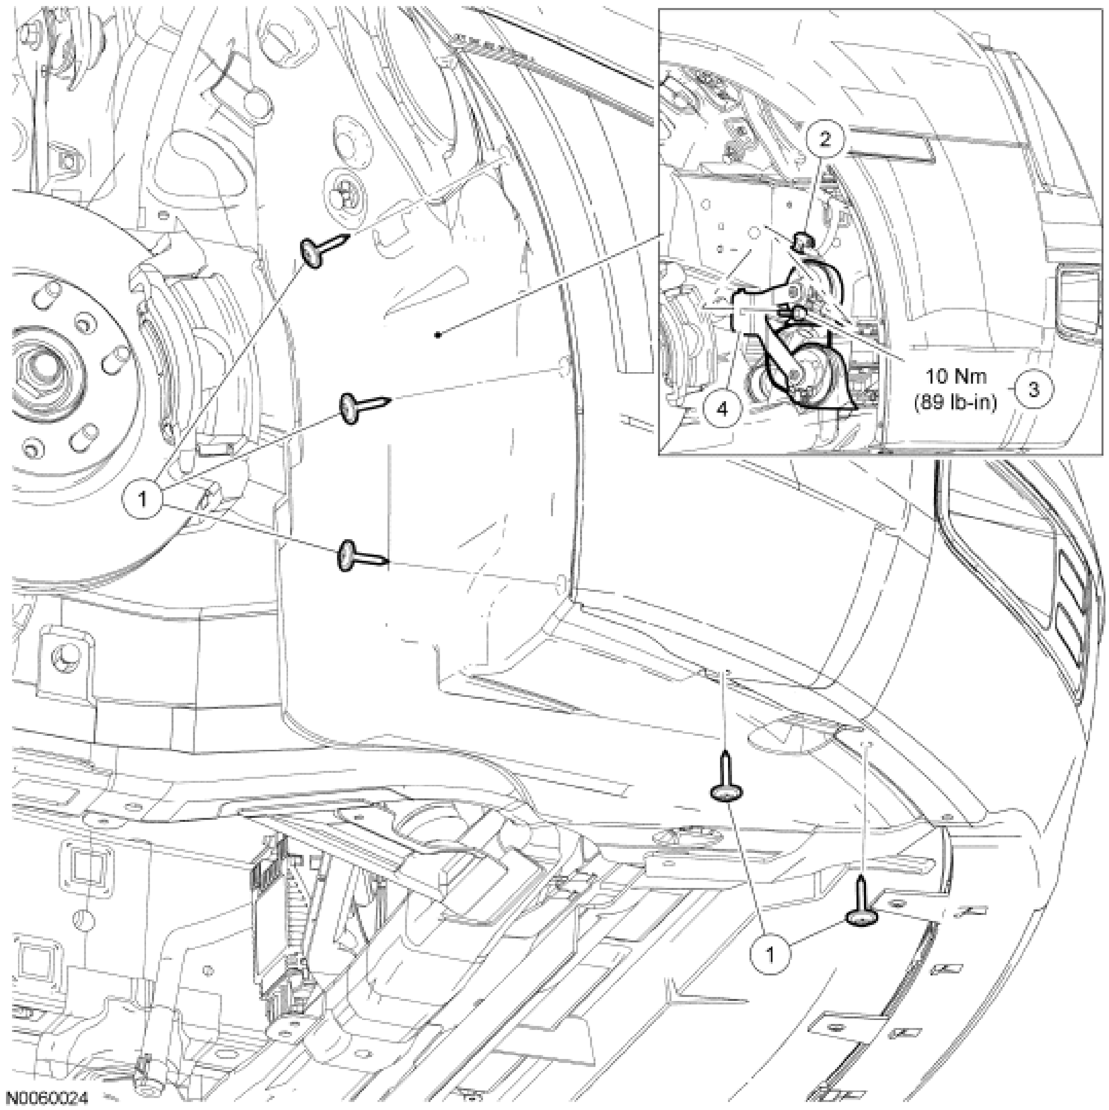

Fig. 13: Exploded View Of Horn Components (With Torque Specifications)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W706805	Front fender splash shield screws (RH) (5 required)
2	-	Horn electrical connector (part of 14290)
3	W605784	Horn bolt
4	13832	Horn

REMOVAL AND INSTALLATION

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.

2. Remove the 5 RH front fender splash shield screws.
   - Pull the RH front fender splash shield downward to access the horn.
3. Disconnect the electrical connector.
4. Remove the bolt and the horn.
   - To install, tighten to 10 Nm (89 lb-in).
5. To install, reverse the removal procedure.

DESCRIPTION AND OPERATION

CLIMATE CONTROL SYSTEM

Climate Control System

WARNING: **Take the following precautions when repairing an air conditioning system containing R-134a:**

- **Always wear safety goggles.**
- **Avoid contact with liquid refrigerant R-134a. R-134a vaporizes at approximately -25°C (-13°F) under atmospheric pressure and will freeze skin tissue.**
- **Never allow refrigerant R-134a gas to escape in quantity in an occupied space. It will displace the oxygen needed to support life.**
- **Never use a torch in an atmosphere containing R-134a gas. R-134a is non-toxic at all normal conditions, but it decomposes when exposed to high temperatures such as a torch flame. During decomposition it releases irritating and toxic gasses (as described in the MSDS sheet from the manufacturer). Decomposition products are hydrofluoric acid, carbon dioxide and water.**

Failure to follow these instructions may result in serious personal injury.

CAUTION: To avoid damaging the vehicle or air conditioning (A/C) components, the following precautions must be observed.

- **The A/C refrigerant of all vehicles must be identified and analyzed prior to refrigerant charging. Failure to do so can contaminate the shop bulk refrigerant and other vehicles.**
- **Do not add R-12 refrigerant to an A/C system that requires the use of R-134a refrigerant. These 2 types of refrigerant must never be mixed. Doing so can damage the A/C system.**
- **Charge the A/C system with R-134a refrigerant gas while the engine is running only at the low-pressure side, to prevent refrigerant slugging from damaging the A/C compressor.**
- **Use only R-134a refrigerant. Due to environmental concerns, when the A/C system is drained, the refrigerant must be collected using refrigerant recovery/recycling equipment. Federal, State/Provincial and/or local laws REQUIRE that R-134a be recovered into appropriate recovery equipment and the process be conducted by qualified technicians who have been certified by an approved organization, such as ASE, MACS, HRAI, etc. Use of a recovery machine dedicated to R-134a is necessary to reduce the possibility of oil and refrigerant incompatibility concerns. Refer to the instructions provided by the equipment manufacturer when removing refrigerant from or charging the A/C system.**
- **Refrigerant R-134a must not be mixed with air for leak testing or used with air for any other purpose above atmospheric pressure. R-134a is combustible when mixed with high concentrations of air and higher pressures.**

- **A number of manufacturers are producing refrigerant products that are described as direct substitutes for refrigerant R-134a. The use of any unauthorized substitute refrigerant can severely damage the A/C components. If repair is required, use only new or recycled refrigerant R-134a.**

CAUTION: To avoid contamination of the air conditioning (A/C) system, the following precautions must be observed.

- **Never open or loosen a connection before recovering the refrigerant.**
- **When loosening a connection, if any residual pressure is evident, allow it to leak out before opening the fitting.**
- **Evacuate a system that has been opened to install a new component or one that has discharged through leakage before charging.**
- **Seal open fittings with a cap or plug immediately after disconnecting a component from the system.**
- **Clean the outside of the fittings thoroughly before disconnecting a component from the system.**
- **Do not remove the sealing caps from a new component until ready to install.**
- **Refrigerant oil will absorb moisture from the atmosphere if left uncapped. Do not open an oil container until ready to use and install the cap immediately after using. Store the oil in a clean, moisture-free container.**
- **Install a new O-ring seal before connecting an open fitting. Coat the fitting and O-ring seal with PAG oil before connecting.**
- **When installing a refrigerant line, avoid sharp bends. Position the line away from the exhaust or any sharp edges that can chafe the line.**
- **Tighten threaded fittings only to specifications. The steel and aluminum fittings used in the refrigerant system will not tolerate overtightening.**
- **When disconnecting a fitting, use a wrench on both halves of the fitting to prevent twisting of the refrigerant lines or tubes.**
- **Do not open a refrigerant system or uncap a new component unless it is as close as possible to room temperature. This will prevent condensation from forming inside a component that is cooler than the surrounding air.**

The electronic manual temperature control (EMTC) system heats or cools the vehicle depending on the HVAC module - EMTC control panel selection.

- The HVAC module - EMTC control panel selections determine heating or cooling, air distribution and

enables blower motor operation.
- The temperature control setting determines the air temperature.
- The blower motor switch varies the blower motor speed.
- During A/C operation the system also reduces the relative humidity of the air.

The dual automatic temperature control (DATC) system maintains the selected vehicle interior temperature by heating and/or cooling the air.

- During A/C operation the system also reduces the relative humidity of the air.
- The driver may override the automatic mode of operation.
- The temperature control setting determines the air temperature.
- The blower motor control override buttons vary the blower motor speed.
- The driver side and passenger side temperature settings can be individually controlled.

The system consists of the following components:

- A/C compressor
- A/C compressor clutch assembly
- A/C condenser core with A/C receiver/drier
- A/C evaporator core
- Connecting refrigerant lines
- Thermostatic expansion valve (TXV)
- A/C pressure transducer
- Heater core and evaporator core housing
- HVAC module - EMTC or HVAC module - DATC
- Blower switch (EMTC systems)
- Temperature blend door actuators
- Floor/defrost/panel door actuator
- Air inlet door actuator
- Blower motor resistor or speed control module
- Blower motor
- Ambient temperature sensor
- In-vehicle temperature sensor
- Solar radiation sensor
- Evaporator temperature sensor

External Temperature Display

The external temperature is displayed when the EXT button is pressed. While the actual external temperature can vary continuously, the value that is displayed will update at a specific rate depending on whether or not the engine is "hot" and whether or not the vehicle is moving.

When the external temperature is rising, the display will update slowly. Updates (when the actual external temperature is higher than currently displayed value) will be limited to 0.6°C (1°F) every 20 seconds while the vehicle is moving at 40 kph (25 mph) or greater for more than 90 seconds or 0.6°C (1°F) every 20 minutes if the vehicle is not moving at this speed. This is to prevent the heat from the engine compartment from affecting the accuracy of the display.

When the external temperature is dropping, the display will update quickly.

Updates (when the actual external temperature is lower than currently displayed value) will only be limited to 0.6°C (1°F) every 2 seconds (regardless of vehicle speed). Consequently, the display will essentially follow the drop experienced by the external temperature thermistor.

Climate Control System Operation

Electronic Manual Temperature Control (EMTC) System

The electronic manual temperature control (EMTC) system operation is determined by the settings on the HVAC module - EMTC. The EMTC system is composed of the HVAC module - EMTC, blower motor resistor, mode door actuator, air inlet door actuator and temperature blend door actuator to control the various functions.

The blower motor switch:

- sets the blower motor speed.
- directs the blower motor path to ground through the blower motor resistor to allow blower motor operation in LO, MED LO and MED HI.
- directs the blower motor path directly to ground, bypassing the blower motor resistor to allow blower motor operation in HI.

The A/C request button:

- can command the A/C compressor ON (when the function selector switch is in PANEL, FLOOR/PANEL, FLOOR/DEFROST and FLOOR) when the A/C request switch is pressed. Indicator illuminates when A/C request switch is toggled ON.
- is inoperative in MAX A/C, OFF and DEFROST.
- indicator illuminates when the function selector switch is in MAX A/C and cannot be toggled.
- indicator does not illuminate in OFF and cannot be toggled.
- indicator does not illuminate in DEFROST but can be toggled ON or OFF. The A/C compressor will operate regardless of indicator status if the outside air temperature is above 6°C (43°F).
- is serviced only with the climate control module.

The function selector knob:

- selects airflow direction.

The air recirculation button:

- selects either recirculated or outside air source.
- recirculates air in any mode except DEFROST, if requested.
- is disabled in MAX A/C or OFF mode where recirculated air only is used.
- is disabled in DEFROST mode where outside air only is used.
- is serviced only with the climate control module.

The temperature selector knob:

- selects full warm and full cool as well as blended outlet temperatures.

The HVAC module - EMTC also includes:

- a rear window DEFROST button. Refer to **GLASS, FRAMES & MECHANISMS** article.

Dual Automatic Temperature Control (DATC) System

The dual automatic temperature control (DATC) system operation is determined by the settings on the HVAC module - DATC. The DATC system automatically maintains a selected temperature for vehicle interior comfort. The DATC system is composed of the HVAC module - DATC, blower motor speed control, mode door actuator, air inlet door actuator, temperature blend door actuator, in-vehicle temperature sensor, ambient temperature sensor, evaporator temperature sensor and solar radiation sensor to control the various functions.

The HVAC module - DATC will display outside air temperature when the EXT button is pressed.

When the HVAC module - DATC is set to AUTO:

- the air distribution direction, blower motor speed and A/C compressor operation are automatically controlled based on the temperature(s) selected.

The HVAC module - DATC manual override settings:

- allow the air distribution direction to be manually selected.
- allow the blower motor speed to be manually selected.
- allow RECIRCULATION mode to be manually selected in all modes except DEFROST. The A/C request can be cancelled by pressing the A/C request switch, turning the indicator OFF.
- allow A/C compressor operation to be manually selected except in DEFROST.

The HVAC module - DATC also includes:

- a rear window DEFROST button. Refer to **GLASS, FRAMES & MECHANISMS** article.
- heated/cooled seat controls. Refer to **SEATING** article.

System Airflow Description - Electronic Manual Temperature Control (EMTC) System

Max A/C

When MAX A/C is selected:

- the air inlet door actuator closes off outside air and admits only recirculated air.
- the recirc button is disabled and the indicator is illuminated.
- the floor/defrost/panel door directs airflow to the instrument panel A/C registers.
- blended air temperature is available.
- the A/C request button is illuminated and will be disabled.
- the blower motor is ON.

PANEL

When PANEL is selected:

- the recirc request button is enabled. If the recirc request button is selected (indicator ON), the air inlet door actuator closes off outside air from entering the passenger compartment. If the recirc request button is not selected (indicator OFF), the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the instrument panel A/C registers.
- blended air temperature is available.
- the A/C request button is enabled. The A/C compressor will operate and the indicator will illuminate if the A/C request button is selected.
- the blower motor is ON.

PANEL/FLOOR

When PANEL/FLOOR is selected:

- the recirc request button is enabled. If the recirc request button is selected (indicator ON), the air inlet door actuator closes off outside air from entering the passenger compartment. If the recirc request button is not selected (indicator OFF), the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the floor duct and the instrument panel A/C registers. A small amount of airflow from the side window demisters and defrost duct will be present.
- blended air temperature is available.
- the A/C request button is enabled. The A/C compressor will operate and the indicator will illuminate if the A/C request button is selected.
- the blower motor is ON.

OFF

When OFF is selected:

- the recirc request button is disabled.
- the air inlet door actuator closes off outside air and admits only recirculated air.
- the A/C request button is disabled.
- the blower motor is OFF.

FLOOR

When FLOOR is selected:

- the recirc request button is enabled. If the recirc request button is selected (indicator ON), the air inlet door actuator closes off outside air from entering the passenger compartment. If the recirc request button is not selected (indicator OFF), the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the floor duct. A small amount of airflow from the defroster duct and side window demisters will be present.
- blended air temperature is available.
- the A/C request button is enabled. The A/C compressor will operate and the indicator will illuminate if the A/C request button is selected.
- the blower motor is ON.

FLOOR/DEFROST

When FLOOR/DEFROST is selected:

- the recirc request button is enabled. If the recirc request button is selected (indicator ON), the air inlet door actuator closes off outside air from entering the passenger compartment. If the recirc request button is not selected (indicator OFF), the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the floor duct, the defroster duct and the side window demisters.
- blended air temperature is available.
- the A/C request button will toggle the indicator on and off. To reduce fogging, the A/C compressor will operate automatically, regardless of indicator status.
- the blower motor is ON.

DEFROST

When DEFROST is selected:

- the air inlet door actuator opens, admitting only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the defroster duct and side window demisters. A small amount of airflow from the floor duct will be present.
- blended air temperature is available.

- to reduce fogging, the A/C compressor will operate automatically, regardless of indicator status.
- the blower motor is ON.

System Airflow Description - Dual Automatic Temperature Control (DATC) System

AUTO

When AUTO is selected:

- the temperature control setting is manually set to the desired setting.
- the air inlet door actuator is automatically controlled by the HVAC module - DATC, based on the temperature setting.
- the mode door actuators are automatically controlled by the HVAC module - DATC based on the temperature setting.
- the A/C compressor is automatically controlled by the HVAC module - DATC based on the temperature setting.
- the blower motor is ON. The blower motor speed is automatically controlled by the HVAC module - DATC based on the temperature setting, but can be manually overridden.

OFF

When OFF is selected:

- the air inlet door actuator closes off outside air and admits only recirculated air.
- the A/C request button is disabled.
- the blower motor is OFF.

PANEL

When PANEL is selected:

- the recirc request button is enabled. If the recirc request button is selected (indicator ON), the air inlet door actuator closes off outside air from entering the passenger compartment. If the recirc request button is not selected (indicator OFF), the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the instrument panel A/C registers.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C request button (indicator ON), can the airflow temperature be cooled below the outside air temperature.
- the A/C request button is enabled. The A/C compressor will operate and the indicator will illuminate if the A/C request button is selected.
- the blower motor is ON.

PANEL/FLOOR

When PANEL/FLOOR is selected:

- the recirc request button is enabled. If the recirc request button is selected (indicator ON), the air inlet door actuator closes off outside air from entering the passenger compartment. If the recirc request button is not selected (indicator OFF), the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the floor duct and the instrument panel A/C registers. A small amount of airflow from the side window demisters and defrost duct will be present.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C request button (indicator ON), can the airflow temperature be cooled below the outside air temperature.
- the A/C request button is enabled. The A/C compressor will operate and the indicator will illuminate if the A/C request button is selected.
- the blower motor is ON.

FLOOR

When FLOOR is selected:

- the recirc request button is enabled. If the recirc request button is selected (indicator ON), the air inlet door actuator closes off outside air from entering the passenger compartment. If the recirc request button is not selected (indicator OFF), the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the floor duct. A small amount of airflow from the defroster duct and side window demisters will be present.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C request button (indicator ON), can the airflow temperature be cooled below the outside air temperature.
- the A/C request button is enabled. The A/C compressor will operate and the indicator will illuminate if the A/C request button is selected.
- the blower motor is ON.

FLOOR/DEFROST

When FLOOR/DEFROST is selected:

- the recirc request button is enabled. If the recirc request button is selected (indicator ON), the air inlet door actuator closes off outside air from entering the passenger compartment. If the recirc request button is not selected (indicator OFF), the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the floor duct, the defroster duct and the side window demisters.
- blended air temperature is available.
- the A/C request button is enabled. The A/C compressor will operate automatically and the indicator will

illuminate if the A/C request button is selected.

- the blower motor is ON.

DEFROST

When DEFROST is selected:

- the recirc request button and indicator is disabled. Regardless of button and indicator status, the air inlet door actuator admits only outside air into the passenger compartment.
- the floor/defrost/panel door directs airflow to the defroster duct and side window demisters. A small amount of airflow from the floor duct will be present.
- blended air temperature is available.
- to reduce fogging, the A/C compressor will operate automatically, regardless of indicator status.
- the blower motor is ON.

Principles of Operation

There are 4 main principles involved with the basic theory of operation:

- Heat transfer
- Latent heat of vaporization
- Relative humidity
- Effects of pressure

Heat Transfer

If 2 substances of different temperature are placed near each other, the heat in the warmer substance will transfer to the colder substance.

Latent Heat of Vaporization

When a liquid boils (converts to gas) it absorbs heat without raising the temperature of the resulting gas. When the gas condenses (converts back to a liquid), it gives off heat without lowering the temperature of the resulting liquid.

Relative Humidity

The amount of moisture (water vapor content) that the air can hold is directly related to the air temperature. The more heat there is in the air, the more moisture the air can hold. The lower the moisture content in the air, the more comfortable it is. Removing the moisture from the air lowers its relative humidity and improves personal comfort.

Effects of Pressure on Boiling or Condensation

As the pressure is increased on a liquid, the temperature at which the liquid boils (converts to gas) also increases. Conversely, when the pressure on a liquid is reduced, its boiling point is also reduced. When in the gas state, an increase in pressure causes an increase in temperature, while a decrease in pressure will decrease the temperature of the gas.

Compressor Anti-Slugging Strategy (CASS)

Liquid refrigerant may accumulate in the A/C compressor under certain conditions. To alleviate damage to the A/C compressor, the compressor anti-slugging strategy (CASS) is utilized.

CASS is initiated only under specific conditions:

- Ignition is OFF for more than 8 hours
- Ambient temperature is above -4°C (25°F)
- Battery voltage is above 8.5 volts during engine cranking

When these conditions are present, the PCM will activate the A/C control relay prior to cranking of the engine. The A/C control relay engages the A/C compressor for approximately 4-15 A/C compressor revolutions or a maximum of 2 seconds (depending upon vehicle application), allowing the liquid refrigerant to be pushed from the A/C compressor. CASS is initiated by the PCM regardless of the HVAC - EMTC or the HVAC - DATC system settings.

The Refrigerant Cycle

During stabilized conditions (A/C system shutdown), the refrigerant pressures are equal throughout the system. When the A/C compressor is in operation it increases pressure on the refrigerant vapor, raising its temperature. The high-pressure and high-temperature vapor is then released into the top of the A/C condenser core.

The A/C condenser, being close to ambient temperature, causes the refrigerant vapor to condense into a liquid when heat is removed from the refrigerant by ambient air passing over the fins and tubing. The now liquid refrigerant, still at high pressure, exits from the bottom of the A/C condenser and enters the inlet side of the A/C receiver/drier. The receiver/drier is designed to remove moisture from the refrigerant.

The outlet of the receiver/drier is connected to the thermostatic expansion valve (TXV). The TXV provides the orifice which is the restriction in the refrigerant system and separates the high and low pressure sides of the A/C system. As the liquid refrigerant passes across this restriction, its pressure and boiling point are reduced.

The liquid refrigerant is now at its lowest pressure and temperature. As it passes through the A/C evaporator, it absorbs heat from the airflow passing over the plate/fin sections of the A/C evaporator. This addition of heat causes the refrigerant to boil (convert to gas). The now cooler air can no longer support the same humidity level of the warmer air and this excess moisture condenses on the exterior of the evaporator coils and fins and drains outside the vehicle.

The refrigerant cycle is now repeated with the A/C compressor again increasing the pressure and temperature of the refrigerant.

A thermistor which monitors the temperature of the air that has passed through the evaporator core controls A/C clutch cycling. If the temperature of the evaporator core discharge air is low enough to cause the condensed water vapor to freeze, the A/C clutch is disengaged by the vehicle PCM.

The high-side line pressure is also monitored so that A/C compressor operation will be interrupted if the system pressure becomes too high or is determined to be too low (low charge condition).

The A/C compressor thermal protection switch will interrupt compressor operation if the compressor housing exceeds temperature limits.

The A/C compressor relief valve will open and vent refrigerant to relieve unusually high system pressure.

Inspection and Verification

1. Verify the customer's concern by operating the climate control system to duplicate the condition.
2. Inspect to determine if one of the following mechanical or electrical concerns apply:

VISUAL INSPECTION CHART

Mechanical	Electrical

• Loose, missing or damaged A/C compressor drive belt
• Loose or disconnected A/C clutch
• Broken or binding door/actuator
• Broken or leaking refrigerant lines
• Obstructed in-vehicle temperature sensor
• Disconnected in-vehicle temperature aspirator hose
	• Smart junction box (SJB) fuse(s):
	  ○ 15 (10A)
	  ○ 37 (10A)
	  ○ 45 (5A)
	  ○ 66 (40A)
	• Battery junction box (BJB) fuse 35 (10A)
	• Blower motor inoperative
	• A/C compressor inoperative
	• Circuitry open/shorted
	• Disconnected electrical connectors

	• Cooling fan inoperative

3. As pinpoint tests and measurements are being carried out, be sure to inspect for any disconnected, loose-fitting or incorrectly installed component, module and in-line electrical connectors and pins.
4. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.

NOTE: Make sure to use the latest scan tool software release.

5. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM.

6. If the scan tool does not communicate with the VCM:
   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM.
   - refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
7. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM, HVAC module - dual automatic temperature control (DATC).
8. Carry out the network test.
   - If the scan tool responds with no communication from one or more modules, refer to **MODULE COMMUNICATIONS NETWORK** article.
   - If the network test passes, retrieve and record continuous memory DTCs.
9. Clear the continuous DTCs and carry out the self-test diagnostics for the HVAC module - DATC.

NOTE: Some PCM DTCs may inhibit A/C operation. If any PCM DTCs are retrieved, diagnose those first. Refer to Introduction - Gasoline Engines article.

10. If the HVAC module - DATC DTCs retrieved are related to the concern, go to the **HVAC MODULE - DUAL AUTOMATIC TEMPERATURE CONTROL DTC CHART**. If the PCM DTCs retrieved are related to the concern, go to the **Introduction - Gasoline Engines** article. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
11. If no DTCs related to the concern are retrieved, go to **Symptom Chart - Climate Control System**.

HVAC Module - Dual Automatic Temperature Control (DATC) - Diagnostic Methods

The dual automatic temperature control (DATC) system must be diagnosed by first retrieving any DTCs, if present.

- An on-demand (hard fault) DTC indicates that the fault is currently present. An on-demand DTC suggests a wiring fault, disconnected connector or component failure.
- A continuous (intermittent) DTC alone (corresponding on-demand DTC is not present) indicates that the fault is an intermittent condition and may not be currently present. A continuous only DTC suggests a poor wiring connection, loose pin or terminal or intermittent component failure.

On-demand (hard fault) or continuous (intermittent fault) DTCs can be retrieved using a scan tool. If using a scan tool, refer to the scan tool operating manual.

On-demand DTCs can also be retrieved by carrying out the Dual Automatic Temperature Control Module On-Demand Self Test. To retrieve and/or clear continuous DTCs, carry out the HVAC Module - Dual Automatic Temperature Control (DATC) - Retrieve Continuous DTCs procedure. Always carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test before retrieving continuous DTCs.

If no DTCs are present, go to **Symptom Chart - Climate Control System** or Go to **Symptom Chart - Noise, Vibration and Harshness (NVH)** for the appropriate diagnostic action.

HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test

The HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test will retrieve on-demand (hard fault) DTCs only, it will not retrieve continuous DTCs. Continuous DTCs can be cleared when exiting the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test. Make sure to retrieve continuous DTCs by carrying out the HVAC Module - Dual Automatic Temperature Control (DATC) - Retrieve Continuous DTCs procedure before clearing any continuous DTCs.

- The HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test will not detect concerns associated with data link messages like engine coolant temperature or vehicle speed signals. A scan tool must be used to retrieve these concerns.
- The HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test will detect concerns in the system control functions and will display on-demand (hard fault) DTCs for concerns that are present during the self-test. The vehicle interior temperature should be between 4°C-38°C (40°F-100°F) when carrying out the self-test. If the temperatures are not within the specified ranges, false DTCs may be displayed.
- The self-test can be initiated after cycling the ignition switch from OFF to ON. Normal operation of the climate control system stops when the self-test is activated.
- To enter the self-test, press the OFF and DEFROST buttons simultaneously and release, then press the AUTO button within 2 seconds. The display will show a flashing "----" for a maximum of 20 seconds, after which "8888" will be displayed if there are no on-demand DTCs present. If DTCs are present, the HVAC module - DATC will display the on-demand DTCs. Record all DTCs displayed.
- If any DTCs appear during the self-test, carry out the diagnostic procedure. Refer to the **HVAC MODULE - DUAL AUTOMATIC TEMPERATURE CONTROL DTC CHART** and follow the ACTION for each DTC given.
- If a condition exists, but no DTCs appear during the self-test, go to **Symptom Chart - Climate Control System** condition: The DATC System is Inoperative, Intermittent or Incorrect Operation.
- Always exit the self-test before powering the system down (system turned OFF).

- Continuous DTCs will be deleted after 80 ignition switch ON cycles after the intermittent fault occurs.

HVAC Module - Dual Automatic Temperature Control (DATC) - Retrieve Continuous DTCs

The HVAC module - DATC will retrieve only continuous (intermittent) DTCs when carrying out this procedure.

- Retrieval of continuous DTCs can be initiated after cycling the ignition switch from OFF to ON. Normal operation of the climate control system stops when retrieving continuous DTCs.
- To retrieve continuous DTCs, press the OFF and DEFROST buttons simultaneously and release, then press the RECIRC button within 2 seconds. The display will show a flashing "----" for a maximum of 20 seconds, after which "8888" will be displayed if there are no continuous DTCs present. If DTCs are present, the HVAC module - DATC will display the continuous DTCs present. Record all DTCs displayed.
- If any DTCs appear, carry out the diagnostic procedure. Refer to the **HVAC MODULE - DUAL AUTOMATIC TEMPERATURE CONTROL DTC CHART** and follow the ACTION for each DTC given.
- If a condition exists but no DTCs appear, go to **Symptom Chart - Climate Control System** condition: The Dual Automatic Temperature Control (DATC) System is Inoperative, Intermittent or Incorrect Operation.
- To exit and **retain** all continuous DTCs, press any button **except** DEFROST. The HVAC module - DATC will exit the retrieved continuous DTCs mode and retain all continuous DTCs.
- To exit and **clear** all continuous DTCs, press the DEFROST button. The HVAC module - DATC will exit the retrieve continuous DTCs mode and all continuous DTCs will be cleared.
- Always exit the procedure before powering the system down (system turned OFF).
- Continuous DTCs will be deleted after 80 ignition switch ON cycles after the intermittent fault occurs.

HVAC Module Cold Boot Process

The purpose of the cold boot process is to allow the HVAC module to reinitialize. To carry out the cold boot process, follow the steps below.

NOTE: HVAC module - DATC only.

1. Clear the DTCs.
2. Turn the ignition switch to the OFF position.
3. Disconnect the HVAC module electrical connectors.
4. Inspect module connectors for:
   - corrosion.
   - pushed-out connectors.
   - incorrectly seated connector.
5. Wait one minute.

6. Connect the HVAC module electrical connectors.
7. Turn the ignition switch to the ON position.
8. Select any position except OFF on the HVAC module.

   The HVAC module will now initialize.

HVAC Module - Dual Automatic Temperature Control (DATC) DTC Chart

NOTE: Some PCM DTCs may inhibit A/C operation. If any PCM DTCs are retrieved, diagnose those first. Refer to the Introduction - Gasoline Engines article.

HVAC MODULE - DUAL AUTOMATIC TEMPERATURE CONTROL DTC CHART

DTC	Description	Action to Take
B1251	Air Temperature Internal Sensor Circuit Open	Go to **Pinpoint Test A** .
B1253	Air Temperature Internal Sensor Circuit Short to Ground	Go to **Pinpoint Test A** .
B1255	Air Temperature External Sensor Circuit Open	Go to **Pinpoint Test B** .
B1257	Air Temperature External Sensor Circuit Short to Ground	Go to **Pinpoint Test B** .
B1317	Battery Voltage High	CLEAR the DTCs. REPEAT the self-test. If the DTC returns and the DTC is not present in other modules, MEASURE the voltage between ground and: HVAC module - dual automatic temperature control (DATC) C228a-12, circuit CBP37 (WH) and HVAC module - DATC C228a-13, circuit SBP15 (WH/RD). • If the voltage is less than 16 volts, INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. • If the voltage is greater than 16 volts, INSTALL a new HVAC module - DATC. REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article. If the DTC returns and the DTC is present in other modules, REFER to **CHARGING SYSTEM - GENERAL INFORMATION** article.
B1318	Battery Voltage Low	Go to **Pinpoint Test G** .
B1342	ECU is Faulted	CLEAR the DTCs. REPEAT the self-test. If the DTC returns, INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article.

B1947	Climate Control A/C Post Evaporator Sensor Circuit Short to Ground	Go to **Pinpoint Test D** .
B2014	Climate Control A/C Post Evaporator Sensor Open Circuit	Go to **Pinpoint Test D** .
B226C	Left Blend Door Motor Stall	Go to **Pinpoint Test F** .
B226D	Right Blend Door Motor Stall	Go to **Pinpoint Test F** .
B226E	Mode Blend Door Motor Stall	Go to **Pinpoint Test F** .
B2426	Passenger Solar Radiation Sensor Circuit Open	Go to **Pinpoint Test C** .
B2427	Passenger Solar Radiation Sensor Circuit Short to Ground	Go to **Pinpoint Test C** .
B2795	Driver Solar Radiation Sensor Circuit Short to Ground	Go to **Pinpoint Test C** .
B2796	Driver Solar Radiation Sensor Circuit Open	Go to **Pinpoint Test C** .
B295A	Driver Blend Door Potentiometer Feedback Circuit Open	Go to **Pinpoint Test F** .
B295B	Driver Blend Door Potentiometer Feedback Circuit Short to Ground	Go to **Pinpoint Test F** .
B295C	Passenger Blend Door Potentiometer Feedback Circuit Open	Go to **Pinpoint Test F** .
B295D	Passenger Blend Door Potentiometer Feedback Circuit Short to Ground	Go to **Pinpoint Test F** .
B295E	Mode Door Potentiometer Feedback Circuit Open	Go to **Pinpoint Test F** .
B295F	Mode Door Potentiometer Feedback Circuit Short to Ground	Go to **Pinpoint Test F** .
U0073	Control Module Communication Bus A Off	CLEAR the DTCs. REPEAT the self-test. If the DTC returns, REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose the network concern.
U0140	Lost Communication With Body Control Module (GEM)	CLEAR The DTCs. REPEAT the self-test. If the DTC returns, REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose the lost communication with the smart junction box (SJB).
U0155	Lost Communication With Instrument Panel Cluster Control Module	CLEAR The DTCs. REPEAT the self-test. If the DTC returns, REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose the lost communication with the instrument panel cluster.

U0246	Lost Communication With Seat Control Module (DCSM)	CLEAR The DTCs. REPEAT the self-test. If the DTC returns, REFER to **MODULE COMMUNICATIONS NETWORK** article to diagnose the lost communication with the heated seat module.
U2050	No Application Present	REFLASH the HVAC module - DATC. REFER to **MODULE CONFIGURATION** article. If the DTC returns, INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article.
U2051	One or More Calibration Files Missing/Corrupt	REFLASH the HVAC module - DATC. REFER to **MODULE CONFIGURATION** article. If the DTC returns, INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article.

Symptom Chart - Climate Control System

Symptom Chart - Climate Control System

Condition	Possible Sources	Action
• No communication with the HVAC module - dual automatic temperature control (DATC)	• Fuse(s) • Circuitry open • HVAC module - DATC communication network	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• Air inlet door is inoperative	• Circuitry open/shorted • HVAC module - DATC • HVAC module - electronic manual temperature control (EMTC) • Air inlet door actuator/linkage	• Go to **Pinpoint Test E** .
• Incorrect/erratic direction of airflow from outlets	• Circuitry short/open • Door actuator • Defrost/panel/floor door actuator/linkage • LH or RH blend door actuator/linkage • HVAC module - EMTC or HVAC module - DATC	• Go to **Pinpoint Test F** .
• The temperature control is inoperative/does not operate correctly	• Circuitry open/shorted • Door actuator • LH or RH blend door actuator/linkage	• Go to **Pinpoint Test F** .

	• HVAC module - EMTC or HVAC module - DATC	
• The DATC system is inoperative, intermittent or incorrect operation	• Fuse(s) • Circuitry open	• Go to **Pinpoint Test H** .
• Insufficient, erratic or no heat	• Low engine coolant level • Engine overheating • Plugged or partially plugged heater core • Temperature blend door is binding or stuck • Temperature blend door actuator • Heater hose is kinked or binding	• Go to **Pinpoint Test I** .
• The air conditioning (A/C) is inoperative/does not operate correctly	• Open fuse • Circuitry short/open • PCM • HVAC module - EMTC or HVAC module - DATC • A/C compressor • A/C control relay • A/C evaporator temperature sensor • A/C pressure transducer • Battery junction box (BJB)	• Go to **Pinpoint Test J** .
• The air conditioning (A/C) is always on	• Circuitry shorted • PCM • HVAC module - EMTC or HVAC module - DATC • A/C compressor • A/C control relay • A/C evaporator temperature sensor • A/C pressure transducer	• Go to **Pinpoint Test K** .
• The blower motor is	• Fuse(s) • Circuitry open • A/C blower motor switch	

inoperative - EMTC	• Blower motor relay • A/C blower motor • HVAC module - EMTC	• Go to **Pinpoint Test L** .
• The blower motor does not operate correctly - EMTC	• Circuitry open/shorted • A/C blower motor resistor • A/C blower motor switch	• Go to **Pinpoint Test M** .
• The blower motor is inoperative - DATC	• Fuse(s) • Circuitry open/shorted • Blower motor relay • A/C blower motor • HVAC module - DATC • Blower motor speed control	• Go to **Pinpoint Test N** .
• The blower motor does not operate correctly - DATC	• Circuitry open/shorted • Blower motor speed control • HVAC module - DATC • A/C blower motor relay	• Go to **Pinpoint Test O** .
• The dual temperature control is inoperative/does not operate correctly	• Temperature blend door/actuator broken/binding • HVAC module - DATC • Low A/C refrigerant charge	• CHECK that the A/C system pressure is above 290 kPa (42 psi). If the pressure is below 290 kPa (42 psi), REFER to **Fluorescent Dye Leak Detection**. CHECK the temperature blend doors/actuators for a binding or broken condition. If no condition is found, INSTALL a new HVAC module - DATC.
• The temperature set point does not repeat after turning the ignition switch OFF	• Open fuse • Circuitry short/open • HVAC module - DATC	• CHECK circuit SBP15 (WH/RD) for a short or open and repair as necessary. If OK, INSTALL a new HVAC module - DATC.
• The temperature display will not switch between Celsius and Fahrenheit	• HVAC module - DATC • Instrument cluster module	• If the instrument cluster does not switch between English and Metric, REFER to **INSTRUMENT CLUSTER & PANEL ILLUMINATION** article. • If only the HVAC module - DATC does not switch between

		English and Metric, INSTALL a new HVAC module - DATC.
• Inaccurate external temperature display	• HVAC module - DATC • Ambient temperature sensor	• REFER to Description and Operation of the External Temperature Display. If the external temperature display is not operating as described and no DTC is present, CARRY OUT the ambient temperature sensor component test in this service information. If the sensor tests OK, CARRY OUT the HVAC Module Cold Boot Process. If the condition returns, INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

Symptom Chart - Noise, Vibration and Harshness (NVH)

NOTE: **Noise, vibration and harshness (NVH) symptoms will be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to NOISE, VIBRATION & HARSHNESS article. Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to NOISE, VIBRATION AND HARSHNESS article for the next likely system and continue diagnosis.**

Symptom Chart - Noise, Vibration and Harshness (NVH)

Condition	Possible Sources	Action
• Noisy A/C compressor clutch	• A/C compressor clutch air gap	• INSTALL a new A/C compressor. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

Pinpoint Tests

Pinpoint Test A: DTC B1251 or B1253 - Air Temperature Internal Sensor Circuit Open or Short to Ground

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the in-vehicle air temperature sensor receives a ground from the HVAC module - dual automatic temperature control (DATC) through circuit RH111 (GY/BU). A 5-volt reference voltage is supplied to the in-vehicle air temperature sensor from the HVAC module - DATC through circuit VH414 (GN/BU).

- DTC B1251 Air Temperature Internal Sensor Circuit Open - The module senses no voltage drop on the sensor reference voltage circuit, indicating an open circuit.
- DTC B1253 Air Temperature Internal Sensor Circuit Short to Ground - The module senses excessive voltage drop on the sensor reference voltage circuit, indicating a short directly to ground.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- In-vehicle air temperature sensor
- HVAC module - DATC

PINPOINT TEST A: DTC B1251 OR B1253 - AIR TEMPERATURE INTERNAL SENSOR CIRCUIT OPEN OR SHORT TO GROUND

A1 CHECK THE SENSOR RESISTANCE

- Key in OFF position.
- Disconnect: In-Vehicle Temperature Sensor C233
- Carry out the In-Vehicle Temperature Sensor component test in this service information.
- **Does the in-vehicle temperature sensor test OK?**

  YES : Go to A2.

  NO : INSTALL a new in-car temperature sensor. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

A2 CHECK THE HVAC MODULE - DATC SENSOR OUTPUT VOLTAGE

- Key in ON position.
- Press the AUTO button.

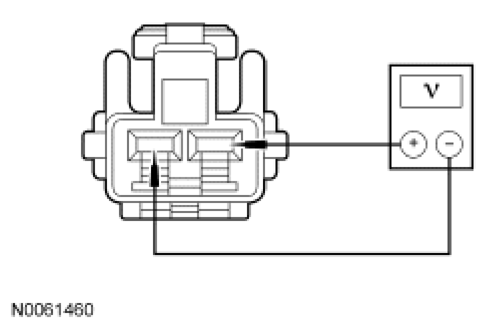

Fig. 2: Measuring Voltage Between In-Vehicle Temperature Sensor C233-2 & C233-1, Circuit VH414 (GN/BU) & RH111 (GY/BU)

Courtesy of FORD MOTOR CO.

- Measure the voltage between in-vehicle temperature sensor C233-2, circuit VH414 (GN/BU), harness side and C233-1, circuit RH111 (GY/BU), harness side.
- **Is the voltage between 4.7 and 5.1 volts?**

  YES : INSTALL a new in-vehicle sensor. CLEAR the DTCs. REPEAT the self-test. If code returns, go to A7.

  NO : If diagnosing DTC B1251, go to A3.

  If diagnosing DTC B1253, go to A5.

A3 CHECK CIRCUIT VH414 (GN/BU) FOR AN OPEN

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a

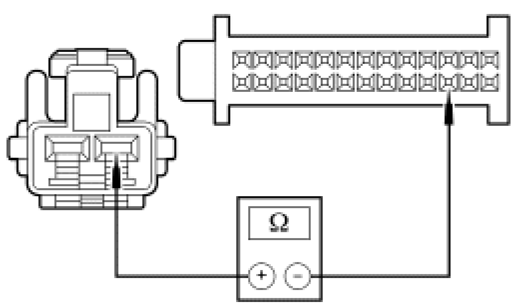

Fig. 3: Measuring Resistance Between EATC Module C228A-3, Circuit VH414 (GN/BU) & In-Vehicle Temperature Sensor C233-2
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-3, circuit VH414 (GN/BU), harness side and in-vehicle temperature sensor C233-2, circuit VH414 (GN/BU), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to A4.

  NO : REPAIR circuit VH414 (GN/BU) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

A4 CHECK CIRCUIT RH111 (GY/BU) FOR AN OPEN

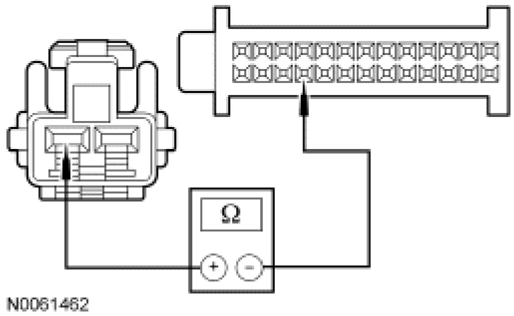

Fig. 4: Measuring Resistance Between EATC Module C228A-10, Circuit RH111 (GY/BU) & In-Vehicle Temperature Sensor C233-1
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-10, circuit RH111 (GY/BU), harness side and in-vehicle temperature sensor C233-1, circuit RH111 (GY/BU), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to A7.

  NO : REPAIR circuit RH111 (GY/BU) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

A5 CHECK CIRCUIT VH414 (GN/BU) FOR A SHORT TO CIRCUIT RH111 (GY/BU)

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a

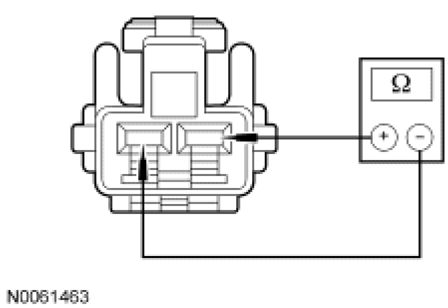

Fig. 5: Measuring Resistance Between In-Vehicle Temperature Sensor C233-2 & C233-1, Circuit VH414 (GN/BU) & RH111 (GY/BU)
Courtesy of FORD MOTOR CO.

- Measure the resistance between in-vehicle temperature sensor C233-2, circuit VH414 (GN/BU), harness side and C233-1, circuit RH111 (GY/BU), harness side.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to A6.

  NO : REPAIR circuit VH414 (GN/BU) for a short to circuit RH111 (GY/BU). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

A6 CHECK CIRCUIT VH414 (GN/BU) FOR A SHORT TO GROUND

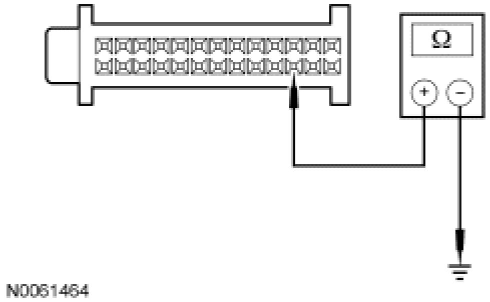

Fig. 6: Measuring Resistance Between EATC Module C228A-3, Circuit VH414 (GN/BU) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-3, circuit VH414 (GN/BU), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to A7.

  NO : REPAIR circuit VH414 (GN/BU) for a short to ground. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

A7 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.
- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test B: DTC B1255 or B1257 - Air Temperature External Sensor Circuit Open or Short to Ground

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the ambient air temperature sensor receives a ground from the HVAC module - dual automatic temperature control (DATC) through circuit RH111 (GY/BU). A 5-volt reference voltage is supplied to the ambient air temperature sensor from the HVAC module - DATC through circuit VH407 (YE/GN).

- DTC B1255 Air Temperature External Sensor Circuit Open - The module senses no voltage drop on the sensor reference voltage circuit, indicating an open circuit.

- DTC B1257 Air Temperature External Sensor Circuit Short To Ground - The module senses excessive voltage drop on the sensor reference voltage circuit, indicating a short directly to ground.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Ambient air temperature sensor
- HVAC module - DATC

PINPOINT TEST B: DTC B1255 OR B1257 - AIR TEMPERATURE EXTERNAL SENSOR CIRCUIT OPEN OR SHORT TO GROUND

B1 CHECK THE SENSOR RESISTANCE

- Key in OFF position.
- Disconnect: Ambient Temperature Sensor C198
- Carry out the Ambient Temperature Sensor component test in this service information.
- **Does the ambient temperature sensor test OK?**

  YES : Go to B2.

  NO : INSTALL a new ambient temperature sensor. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

B2 CHECK THE HVAC - DATC SENSOR OUTPUT VOLTAGE

- Key in ON position.
- Press the AUTO button.

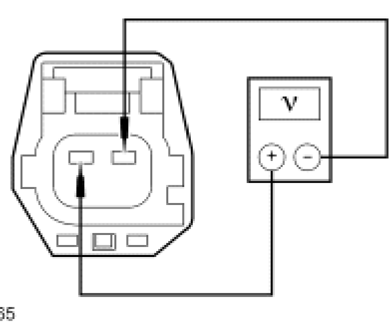

Fig. 7: Measuring Voltage Between Ambient Temperature Sensor C198-2 & C198-1, Circuit VH407 (YE/GN) & RH111 (GY/BU)
Courtesy of FORD MOTOR CO.

- Measure the voltage between ambient temperature sensor C198-2, circuit VH407 (YE/GN), harness side and C198-1, circuit RH111 (GY/BU), harness side.
- **Is the voltage between 4.7 and 5.1 volts?**

  YES : INSTALL a new ambient sensor. CLEAR the DTCs. REPEAT the self-test. If code returns, go to B7.

NO : If diagnosing DTC B1255, go to B3.

If diagnosing DTC B1257, go to B5.

B3 CHECK CIRCUIT VH407 (YE/GN) FOR AN OPEN

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a

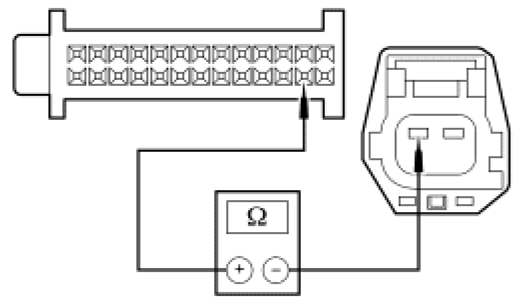

Fig. 8: Measuring Resistance Between EATC Module C228A-2, Circuit VH407 (YE/GN) & Ambient Temperature Sensor C198-2
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-2, circuit VH407 (YE/GN), harness side and ambient temperature sensor C198-2, circuit VH407 (YE/GN), harness side.
- **Is the resistance less than 5 ohms?**

YES : Go to B4.

NO : REPAIR circuit VH407 (YE/GN) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

B4 CHECK CIRCUIT RH111 (GY/BU) FOR AN OPEN

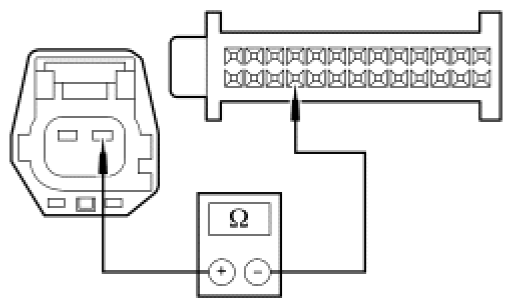

Fig. 9: Measuring Resistance Between EATC Module C228A-10, Circuit RH111 (GY/BU) & Ambient Temperature Sensor C198-1
Courtesy of FORD MOTOR CO.

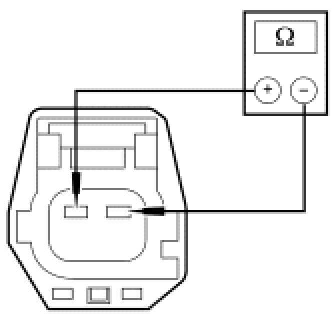
- Measure the resistance between HVAC module - DATC C228a-10, circuit RH111 (GY/BU), harness side and ambient temperature sensor C198-1, circuit RH111 (GY/BU), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to B7.

  NO : REPAIR circuit RH111 (GY/BU) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

B5 CHECK CIRCUIT VH407 (YE/GN) FOR A SHORT TO CIRCUIT RH111 (GY/BU)

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a



N0061468

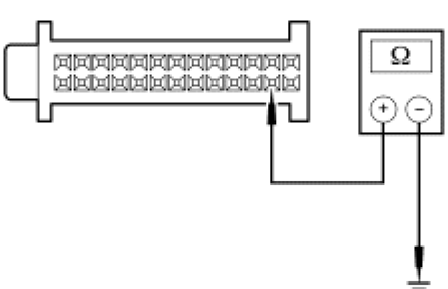
Fig. 10: Measuring Resistance Between Ambient Temperature Sensor C198-2 & C198-1, Circuit VH407 (YE/GN) & RH111 (GY/BU)
Courtesy of FORD MOTOR CO.

- Measure the resistance between ambient temperature sensor C198-2, circuit VH407 (YE/GN), harness side and C198-1, circuit RH111 (GY/BU), harness side.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to B6.

  NO : REPAIR circuit VH407 (YE/GN) for a short to circuit RH111 (GY/BU). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

B6 CHECK CIRCUIT VH407 (YE/GN) FOR A SHORT TO GROUND



N0061469

Fig. 11: Measuring Resistance Between EATC Module C228A-2, Circuit VH407 (YE/GN) & Ground

Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-2, circuit VH407 (YE/GN), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to B7.

  NO : REPAIR circuit VH407 (YE/GN) for a short to ground. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

B7 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.
- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test C: DTC B2426, B2427, B2795 or B2796 - Solar Radiation Sensor Circuit Open or Short to Ground

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the solar radiation sensor receives a ground through circuit GD115 (BK/GY). A 5-volt reference voltage is supplied to the solar radiation sensor from the HVAC module - dual automatic temperature control (DATC) through circuit VH417 (YE/OG) (LH) and circuit VH416 (VT/GY) (RH).

DTC	Description	Fault Trigger Conditions
B2426	Passenger Solar Radiation Sensor Circuit Open	The module senses no voltage drop on the sensor reference voltage circuit, indicating an open circuit.
B2427	Passenger Solar Radiation Sensor Circuit Short to Ground	The module senses excessive voltage drop on the sensor reference voltage circuit, indicating a short directly to ground.
B2795	Driver Solar Radiation Sensor Circuit Short to Ground	The module senses no voltage drop on the sensor reference voltage circuit, indicating an open circuit.
		The module senses excessive voltage

B2796	Driver Solar Radiation Sensor Circuit Open	drop on the sensor reference voltage circuit, indicating a short directly to ground.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Solar radiation sensor
- HVAC module - DATC

PINPOINT TEST C: DTC B2426, DTC B2427, DTC B2795 OR DTC B2796 - A/C SOLAR RADIATION SENSOR OPEN CIRCUIT OR SHORT TO GROUND

C1 CHECK THE SOLAR RADIATION SENSOR RESISTANCE

- Key in OFF position.
- Disconnect: Solar Radiation Sensor C286

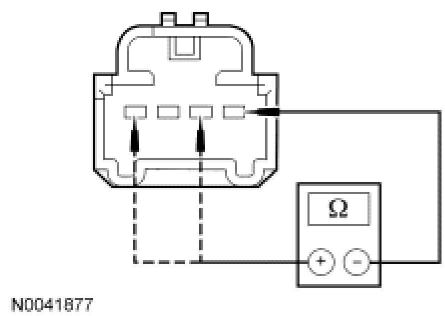


Fig. 12: Checking Sensor Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between the solar radiation sensor terminals 1 and 4 and terminals 3 and 4.
- **Is continuity present and the resistance greater than 0 ohm?**

  YES : Go to C2.

  NO : INSTALL a new solar radiation sensor. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

C2 CHECK THE SOLAR RADIATION SENSOR REFERENCE VOLTAGE

- Key in ON position.
- Press the AUTO button.

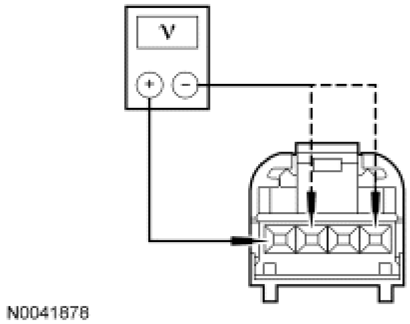

Fig. 13: Checking Circuit For Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between solar radiation sensor C286-4, circuit GD115 (BK/GY), harness side and:
  - **DTC B2426 or B2427** , C286-1, circuit VH416 (VT/GY), harness side.
  - **DTC B2795 or B2796** , C286-3, circuit VH417 (YE/OG), harness side.
- **Are the voltages between 4.7 and 5.1 volts?**

  YES : Go to C6.

  NO : If diagnosing DTC B2426 or B2796, go to C3.

  If diagnosing DTC B2427 or B2795, go to C5.

C3 CHECK CIRCUIT GD115 (BK/GY) FOR AN OPEN

- Key in OFF position.

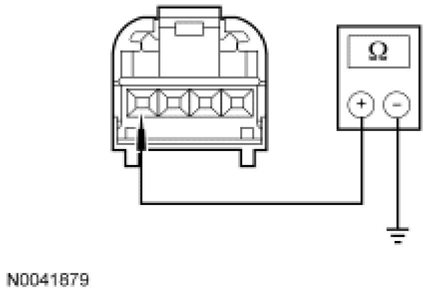

Fig. 14: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between solar radiation sensor C286-4, circuit GD115 (BK/GY), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to C4.

  NO : REPAIR circuit GD115 (BK/GY) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

C4 CHECK CIRCUIT VH417 (YE/OG) OR VH416 (VT/GY) FOR AN OPEN

- Disconnect: HVAC Module - DATC C228a

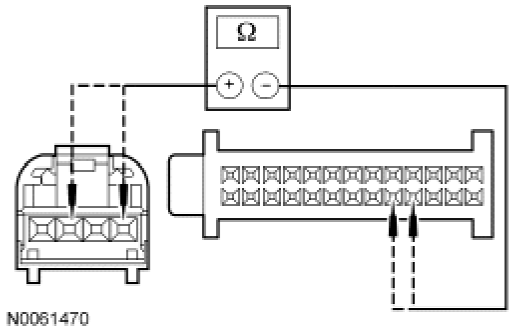

Fig. 15: Measuring Resistance Between EATC Module C228A-4 & C228A-5, Circuit VH416 (VT/GY) & VH417 (YE/OG)
Courtesy of FORD MOTOR CO.

- Measure the resistance between:
  - **DTC B2426** , HVAC module - DATC C228a-4, circuit VH416 (VT/GY), harness side and solar radiation sensor C286-1, circuit VH416 (VT/GY), harness side.
  - **DTC B2796** , HVAC module - DATC C228a-5, circuit VH417 (YE/OG), harness side and solar radiation sensor C286-3, circuit VH417 (YE/OG), harness side.
- **Are the resistances less than 5 ohms?**

  YES : Go to C6.

  NO : REPAIR circuit VH417 (YE/OG) or VH416 (VT/GY) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

C5 CHECK CIRCUIT VH417 (YE/OG) OR VH416 (VT/GY) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a

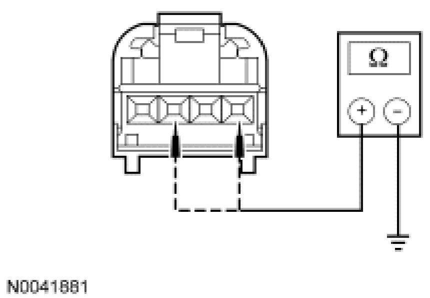

Fig. 16: Checking Circuits For Short To Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between ground and:

    - **DTC B2427** , solar radiation sensor C286-1, circuit VH416 (VT/GY), harness side.
    - **DTC B2795** , solar radiation sensor C286-3, circuit VH417 (YE/OG), harness side.
- **Are the resistances greater than 10,000 ohms?**

  YES : Go to C6.

  NO : REPAIR circuit VH417 (YE/OG) or VH416 (VT/GY) for a short to ground. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

C6 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.
- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test D: DTC B1947 or B2014 - Climate Control A/C Post Evaporator Sensor Circuit Open or Short to Ground

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the evaporator temperature sensor receives a ground from the HVAC module - dual automatic temperature control (DATC) through circuit RH111 (GY/BU)/(BK). A 5-volt reference voltage is supplied to the evaporator discharge air temperature sensor from the HVAC module - DATC through circuit VH406 (VT/BN)/(LG/BK).

- DTC B1947 Climate Control A/C Post Evaporator Sensor Circuit Short To Ground - The module senses excessive voltage drop on the sensor reference voltage circuit, indicating a short directly to ground.
- DTC B2014 Climate Control A/C Post Evaporator Sensor Open Circuit - The module senses no voltage drop on the sensor reference voltage circuit, indicating an open circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Evaporator temperature sensor
- HVAC module - electronic manual temperature control (EMTC) or HVAC module - DATC

PINPOINT TEST D: DTC B1947 OR DTC B2014 - CLIMATE CONTROL A/C POST EVAPORATOR

SENSOR CIRCUIT OPEN OR SHORT TO GROUND

NOTE: The evaporator temperature sensor cannot be installed independently of the heater core and evaporator core housing.

D1 CHECK THE SENSOR RESISTANCE

- Key in OFF position.
- Disconnect: Evaporator Temperature Sensor C296
- Carry out the evaporator temperature sensor component test in this service information.
- **Is the resistance within the specified values for the temperatures?**

  YES : Go to D2.

  NO : INSTALL a new heater core and evaporator core housing. REFER to **CLIMATE CONTROL** article. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

D2 CHECK THE HVAC MODULE - DATC SENSOR OUTPUT VOLTAGE

- Key in ON position.
- Press the AUTO button.

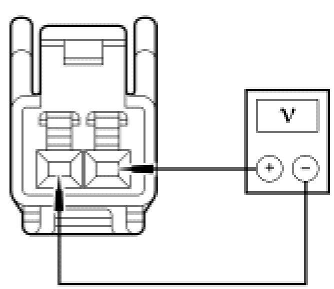

Fig. 17: Measuring Voltage Between Evaporator Temperature Sensor C296-2, Circuit (LG/BK) & C296-1, Circuit (BK)
Courtesy of FORD MOTOR CO.

- Measure the voltage between evaporator temperature sensor C296-2, circuit (LG/BK), harness side and C296-1, circuit (BK), harness side.
- **Is the voltage between 4.7 and 5.1 volts?**

  YES : Go to D7.

  NO : If diagnosing DTC B2826, go to D3.

  If diagnosing DTC B2827, go to D5.

D3 CHECK CIRCUIT VH406 (VT/BN)/(LG/BK) FOR AN OPEN

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a

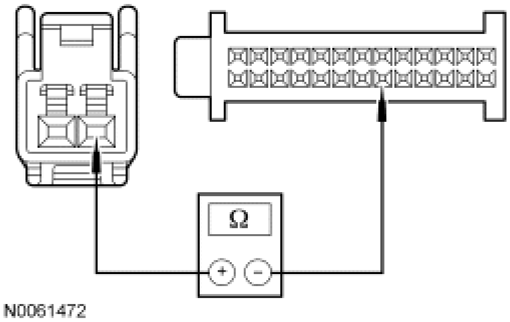

Fig. 18: Measuring Resistance Between EATC Module C228A-6 & C296-2, Circuit VH406 (VT/BN) & (LG/BK)
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-6, circuit VH406 (VT/BN), harness side and evaporator temperature sensor C296-2, circuit (LG/BK), harness side.
- **Is the resistance less than 5 ohms?**

YES : Go to D4.

NO : REPAIR circuit VH406 (VT/BN)/(LG/BK) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

D4 CHECK CIRCUIT RH111 (GY/BU)/(BK) FOR AN OPEN

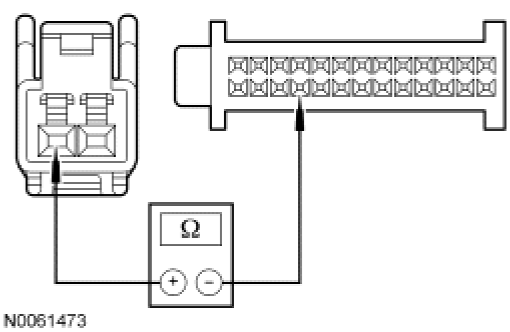

Fig. 19: Measuring Resistance Between EATC Module C228A-10 & C296-1, Circuit RH111 (GY/BU) & Circuit (BK)
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-10, circuit RH111 (GY/BU), harness side and evaporator temperature sensor C296-1, circuit (BK), harness side.
- **Is the resistance less than 5 ohms?**

YES : Go to D7.

NO : REPAIR circuit RH111 (GY/BU)/(BK) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

D5 CHECK CIRCUIT VH406 (VT/BN)/(LG/BK) FOR A SHORT TO CIRCUIT RH111 (GY/BU)/(BK)

- Key in OFF position.

- Disconnect: HVAC Module - DATC C228a

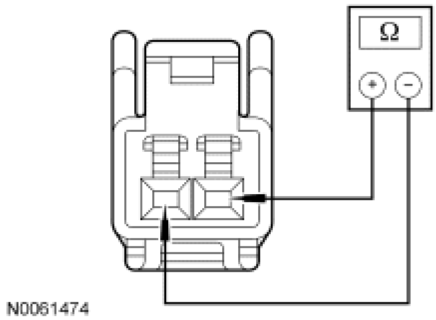

Fig. 20: Measuring Resistance Between Evaporator Temperature Sensor C296-2 & C296-1, Circuit (LG/BK) & Circuit (BK)
Courtesy of FORD MOTOR CO.

- Measure the resistance between evaporator temperature sensor C296-2, circuit (LG/BK), harness side and C296-1, circuit (BK), harness side.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to D6.

  NO : REPAIR circuit VH406 (VT/BN)/(LG/BK) for a short to circuit RH111 (GY/BU)/(BK). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

D6 CHECK CIRCUIT VH406 (VT/BN)/(LG/BK) FOR A SHORT TO GROUND

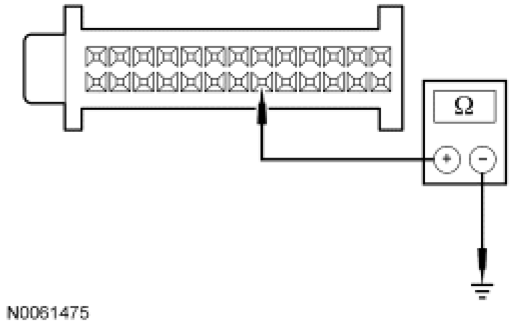

Fig. 21: Measuring Resistance Between EATC Module C228A-6, Circuit VH406 (VT/BN) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-6, circuit VH406 (VT/BN), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to D7.

  NO : REPAIR circuit VH406 (VT/BN)/(LG/BK) for a short to ground. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

D7 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.
- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. If the concern returns, INSTALL a new heater core and evaporator core housing. REFER to **CLIMATE CONTROL** article. CLEAR the DTCs. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test E: Air Inlet Door is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Manual Climate Control System for schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the HVAC module - electronic manual temperature control (EMTC) or HVAC module - dual automatic temperature control (DATC) supplies ground to the air inlet door actuator motor through circuit CH208 (GN/OG)/(GN) to rotate the air inlet door actuator 180 degrees to the outside air position, or circuit CH207 (BU/GY)/(BN) to rotate the air inlet door actuator 180 degrees to the recirculated air position. Ignition voltage is supplied to the air inlet door actuator through circuit CBP37 (WH)/(GY).

This pinpoint test is intended to diagnose the following:

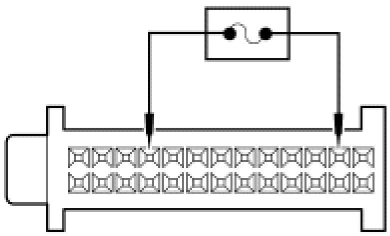
- Wiring, terminals or connectors
- Air inlet door actuator
- HVAC module - DATC
- HVAC module - EMTC
- Stuck or damaged linkage or door

PINPOINT TEST E: AIR INLET DOOR IS INOPERATIVE

E1 CHECK THE DOOR ACTUATOR OPERATION

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a or HVAC Module - EMTC C2357a
- Remove the door actuator and disengage the actuator driveshaft from the actuator door.

- Mark the door actuator driveshaft position.
- Key in ON position.

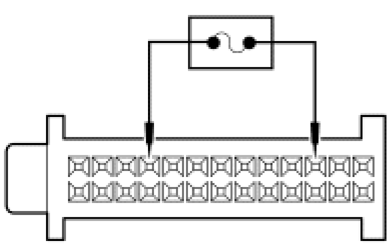


N0061476

Fig. 22: Connecting Fused Jumper Wire Between EATC C228A-23 & C2357A-15, Circuit GD115 (BK/GY) & CH207 (BU/GY)
Courtesy of FORD MOTOR CO.

NOTE: This step positions the actuator for the following steps.

- Connect a fused jumper wire between HVAC module - DATC C228a-23 or HVAC module - EMTC C2357a-23, circuit GD115 (BK/GY), harness side and HVAC module - DATC C228a-15 or HVAC module - EMTC C2357a-15, circuit CH207 (BU/GY), harness side.
- Remove the fused jumper wire.



N0061477

Fig. 23: Connecting Fused Jumper Wire Between EATC C228A-23 & C2357A-16, Circuit GD115 (BK/GY) & CH208 (GN/OG)
Courtesy of FORD MOTOR CO.

- Connect a second fused jumper wire between: HVAC module - DATC C228a-23 or HVAC module - EMTC C2357a-23, circuit GD115 (BK/GY), harness side and HVAC module - DATC C228a-16 or HVAC module - EMTC C2357a-16, circuit CH208 (GN/OG), harness side.
- Remove the fused jumper wire.

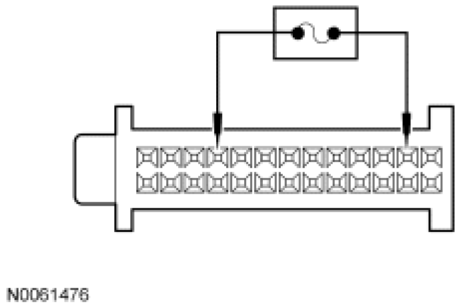


Fig. 24: Connecting Fused Jumper Wire Between EATC C228A-23 & C2357A-15, Circuit GD115 (BK/GY) & CH207 (BU/GY)
Courtesy of FORD MOTOR CO.

- Connect a fused jumper wire between HVAC module - DATC C228a-23 or HVAC module - EMTC C2357a-23, circuit GD115 (BK/GY), harness side and HVAC module - DATC C228a-15 or HVAC module - EMTC C2357a-15, circuit CH207 (BU/GY), harness side.
- **Does the actuator motor rotate 180 degrees in the previous steps (360 degrees total)?**

  YES : INSPECT for binding or broken linkage. If no condition is found, go to E7.

  NO : Go to E2.

E2 CHECK THE ACTUATOR MOTOR FOR VOLTAGE

- Key in OFF position.
- Disconnect: Air Inlet Door Actuator C2363
- Key in ON position.

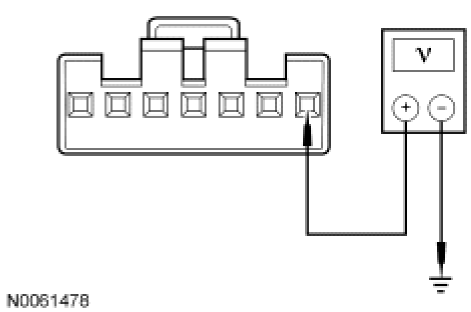

Fig. 25: Measuring Voltage Between Ground & Air Inlet Door Actuator C2363-7, Circuit (GY)
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and air inlet door actuator C2363-7, circuit (GY), harness side.
- **Is any voltage present?**

  YES : REPAIR circuit CBP37 (WH)/(GY) for an open. TEST the system for normal operation.

  NO : Go to E3.

E3 CHECK THE ACTUATOR MOTOR DRIVE CIRCUITS FOR AN OPEN

- Key in OFF position.

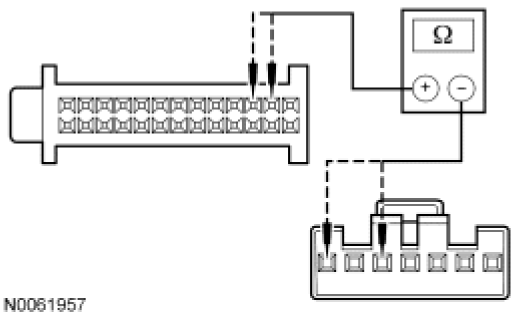

Fig. 26: Measuring Resistance Between EATC C228A-15 & C228A-16, Circuit CH207 (BU/GY) & CH208 (GN/OG)
Courtesy of FORD MOTOR CO.

- Measure the resistance between:
  - HVAC module - DATC C228a-15 or HVAC module - EMTC C2357a-15, circuit CH207 (BU/GY), harness side and air inlet door actuator C2363-1, circuit (BN), harness side.
  - HVAC module - DATC C228a-16 or HVAC module - EMTC C2357a-16, circuit CH208 (GN/OG), harness side and air inlet door actuator C2363-3, circuit (GN), harness side.
- **Are the resistances less than 5 ohms?**

  YES : Go to E4.

  NO : REPAIR circuit CH207 (BU/GY)/(BN) or CH208 (GN/OG)/(GN) for an open. TEST the system for normal operation.

E4 CHECK THE ACTUATOR MOTOR DRIVE CIRCUITS FOR A SHORT TO GROUND

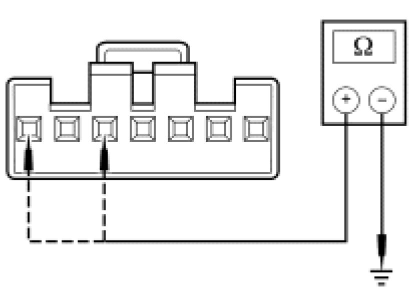

Fig. 27: Measuring Resistance Between Ground And Air Inlet Door Actuator C2363-1 & C2363-3, Circuit (BN)
Courtesy of FORD MOTOR CO.

- Measure the resistance between ground and:
  - air inlet door actuator C2363-1, circuit (BN), harness side.
  - air inlet door actuator C2363-3, circuit (GN), harness side.

- **Are the resistances greater than 10,000 ohms?**

  YES : Go to E5.

  NO : REPAIR circuit CH207 (BU/GY)/(BN) or CH208 (GN/OG)/(GN) for a short to ground. TEST the system for normal operation.

E5 CHECK THE ACTUATOR MOTOR DRIVE CIRCUITS FOR A SHORT TOGETHER

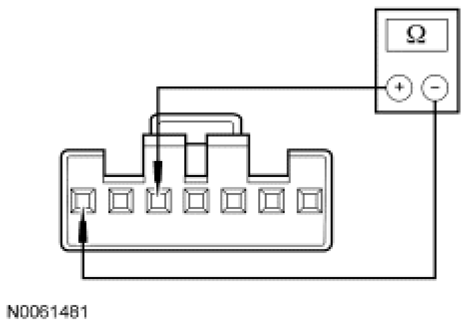

Fig. 28: Measuring Resistance Between Air Inlet Door Actuator C2363-1 & C2363-3, Circuit (BN)
Courtesy of FORD MOTOR CO.

- Measure the resistance between air inlet door actuator C2363-1, circuit (BN), harness side and air inlet door actuator C2363-3, circuit (GN), harness side.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to E6.

  NO : REPAIR circuits CH207 (BU/GY)/(BN) and CH208 (GN/OG)/(GN) for a short together. TEST the system for normal operation.

E6 CHECK THE ACTUATOR CONNECTION

NOTE: DATC systems only.

- Clear the DTCs.
- Disconnect the actuator connector.
- Check for:
  - corrosion.
  - pushed-out connectors.
  - incorrectly seated connector.
- Connect and correctly seat the actuator connector.
- Carry out the HVAC Module Cold Boot Process.

NOTE: DATC systems only.

- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self

Test.

- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new actuator. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs.

E7 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.

NOTE: DATC systems only.

- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC or HVAC module - EMTC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test F: Incorrect/Erratic Direction of Airflow From Outlet(s)

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Manual Climate Control System for schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, to rotate the blend door actuator, the HVAC module - electronic manual temperature control (EMTC) or HVAC module - dual automatic temperature control (DATC) supplies voltage to the actuator motors through the door actuator clockwise circuits, and supplies ground through the door actuator counterclockwise circuits. To reverse the actuator rotation, the HVAC module - EMTC or HVAC module - DATC reverses the voltage and ground circuits.

The actuator feedback resistors are supplied a ground from the HVAC module - EMTC or HVAC module - DATC by the door actuator return circuits and a 5-volt reference voltage on the door actuator reference circuits. The HVAC module - EMTC or HVAC module - DATC reads the voltage on the blend door actuator feedback circuits to determine the door actuator position, by the position of the actuator feedback resistor wiper arm.

Door Actuator Clockwise Circuits

- (HVAC module - EMTC) Blend - CH233 (VT/BN)/(OG/BK)
- (HVAC module - DATC) LH Blend - CH238 (YE/OG)/(RD/YE)
- (HVAC module - DATC) RH Blend - CH213 (BN/GN)/(VT)
- Defrost/Panel/Floor - CH228 (YE/GN)/(GY/BK)

Door Actuator Counterclockwise Circuits

- (HVAC module - EMTC) Blend - CH234 (YE/GN)/(VT)
- (HVAC module - DATC) LH Blend - CH239 (BU/WH)/(WH)
- (HVAC module - DATC) RH Blend - CH212 (BU/OG)/(OG/BK)
- Defrost/Panel/Floor - CH229 (WH/BU)/(BU)

Door Actuator Return Circuits

- (HVAC module - EMTC) Blend - RH111 (GY/BU)/(BK)
- (HVAC module - DATC) LH Blend - RH111 (GY/BU)/(BK)
- (HVAC module - DATC) RH Blend - RH111 (GY/BU)/(BK)
- Defrost/Panel/Floor - RH111 (GY/BU)/(BK)

Door Actuator Reference Circuits

- (HVAC module - EMTC) Blend - LH111 (BN/WH)/(OG)
- (HVAC module - DATC) LH Blend - LH111 (BN/WH)/(OG)
- (HVAC module - DATC) RH Blend - LH111 (BN/WH)/(OG)
- Defrost/Panel/Floor - LH111 (BN/WH)/(OG)

Door Actuator Feedback Circuits

- (HVAC module - EMTC) Blend - VH439 (GY/VT)/(RD)
- (HVAC module - DATC) LH Blend - VH440 (BU/BN)/(YE)
- (HVAC module - DATC) RH Blend - VH441 (WH/BN)/(RD)
- Defrost/Panel/Floor - VH436 (YE/VT)/(BU/RD)

DTC	Description	Fault Trigger Conditions
B226C	Left Blend Door Motor Stall	The module senses no change in actuator feedback voltage when the actuator motor has been energized.
B226D	Right Blend Door Motor Stall	The module senses no change in actuator feedback voltage when the actuator motor has been energized.
B226E	Mode Blend Door Motor Stall	The module senses no change in actuator feedback voltage when the

		actuator motor has been energized.
B295A	Driver Blend Door Potentiometer Feedback Circuit Open	The module senses no voltage drop on the actuator feedback circuit, indicating an open or short to voltage.
B295B	Driver Blend Door Potentiometer Feedback Circuit short to ground	The module senses excessive voltage drop on the actuator feedback circuit, indicating a short directly to ground.
B295C	Passenger Blend Door Potentiometer Feedback Circuit Open	The module senses no voltage drop on the actuator feedback circuit, indicating an open or short to voltage.
B295D	Passenger Blend Door Potentiometer Feedback Circuit short to ground	The module senses excessive voltage drop on the actuator feedback circuit, indicating a short directly to ground.
B295E	Mode Door Potentiometer Feedback Circuit Open	The module senses no voltage drop on the actuator feedback circuit, indicating an open or short to voltage.
B295F	Mode Door Potentiometer Feedback Circuit short to ground	The module senses excessive voltage drop on the actuator feedback circuit, indicating a short directly to ground.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Defrost/panel/floor mode door actuator
- LH blend door actuator
- RH blend door actuator
- HVAC module - DATC
- HVAC module - EMTC
- Stuck or bound linkage or door

PINPOINT TEST F: INCORRECT/ERRATIC DIRECTION OF AIRFLOW FROM OUTLET(S)

F1 CHECK THE AIRFLOW

- Key in ON position.
- Check the air discharge temperature in full COOL and full WARM and airflow in the all modes.
- **Is the air discharge temperature and airflow correct in each setting?**

  YES : The system is operating normally.

NO : For DATC systems:

DTC B226C, go to F2.

DTC B226D, go to F3.

DTC B226E, go to F4.

DTC B295A, B295C or B295E, go to F9.

DTC B295B, B295D or B295F, go to F11.

If the RECIRC button does not change the air inlet door position, go to **Pinpoint Test E** .

For EMTC systems:

If the airflow is incorrect, follow diagnostics for defrost/panel/floor door actuator. Go to F2.

If the temperature control is inoperative/does not operate correctly, follow diagnostics for the LH blend door actuator. Go to F2.

If the MAX A/C selection does not change the air inlet door position, go to **Pinpoint Test E** .

F2 CHECK THE LH BLEND DOOR ACTUATOR OPERATION

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a or HVAC Module - EMTC C2357a

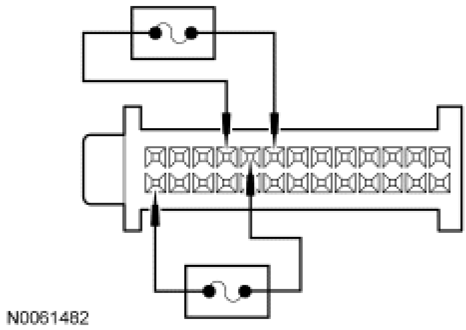

Fig. 29: Connect A Fused Jumper Wire For 5 Seconds Between EATC Module C228A-13, Circuit SBP15 (WH/RD)
Courtesy of FORD MOTOR CO.

NOTE: This step positions the actuator for the following steps.

- Connect a fused jumper wire for 5 seconds between:
  - HVAC module - DATC C228a-13 or HVAC module - EMTC C2357a-13, circuit SBP15

(WH/RD), harness side and HVAC module - DATC C228a-22, circuit CH238 (YE/OG), harness side or HVAC module - EMTC C2357a-22, circuit CH233 (VT/BN), harness side.
- HVAC module - DATC C228a-23 or HVAC module - EMTC C2357a-23, circuit GD115 (BK/GY), harness side and HVAC module - DATC C228a-21, circuit CH239 (BU/WH), harness side or HVAC module - EMTC C2357a-21, circuit CH234 (YE/GN), harness side.

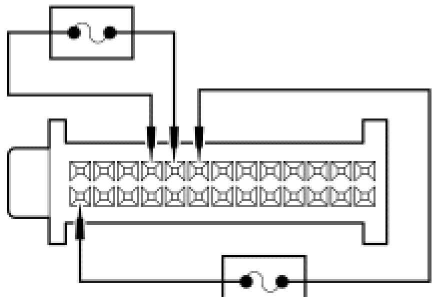

Fig. 30: Connect A Fused Jumper Wire For 5 Seconds Between EATC Module C228A-13, Circuit SBP15 (WH/RD)
Courtesy of FORD MOTOR CO.

- Connect a fused jumper wire for 5 seconds between:
  - HVAC module - DATC C228a-13 or HVAC module - EMTC C2357a-13, circuit SBP15 (WH/RD), harness side and HVAC module - DATC C228a-21, circuit CH239 (BU/WH), harness side or HVAC module - EMTC C2357a-21, circuit CH234 (YE/GN), harness side.
  - HVAC module - DATC C228a-23 or HVAC module - EMTC C2357a-23, circuit GD115 (BK/GY), harness side and HVAC module - DATC C228a-22, circuit CH238 (YE/OG), harness side or HVAC module - EMTC C2357a-22, circuit CH233 (VT/BN), harness side.

Courtesy of FORD MOTOR CO.

- Connect a fused jumper wire for 5 seconds between:
  - HVAC module - DATC C228a-13 or HVAC module - EMTC C2357a-13, circuit SBP15 (WH/RD), harness side and HVAC module - DATC C228a-22, circuit CH238 (YE/OG), harness side or HVAC module - EMTC C2357a-22, circuit CH233 (VT/BN), harness side.

- HVAC module - DATC C228a-23 or HVAC module - EMTC C2357a-23, circuit GD115 (BK/GY), harness side and HVAC module - DATC C228a-21, circuit CH239 (BU/WH), harness side or HVAC module - EMTC C2357a-21, circuit CH234 (YE/GN), harness side.

- **Does the actuator motor move at least 90 degrees in the clockwise and counterclockwise direction in the previous steps?**

  YES : DATC systems, INSPECT for binding or broken linkage. If no condition is found, CARRY OUT the actuator component test in this service information. If the actuator tests OK, go to F14.

  EMTC systems, INSPECT for binding or broken linkage. If no condition is found, CARRY OUT the actuator component test in this service information. If the actuator tests OK, go to F9.

  NO : Go to F5.

F3 CHECK THE RH BLEND DOOR ACTUATOR OPERATION

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a
- Disconnect: HVAC Module - DATC C228b

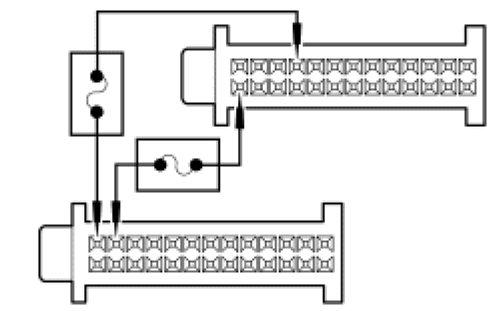

Fig. 32: Connect A Fused Jumper Wire For 5 Seconds Between EATC Module C228A-13, Circuit SBP15 (WH/RD)

Courtesy of FORD MOTOR CO.

- Connect a fused jumper wire for 5 seconds between:
  - HVAC module - DATC C228a-13 or HVAC module - EMTC C2357a-13, circuit SBP15 (WH/RD), harness side and HVAC module - DATC C228a-19 or HVAC module - EMTC C2357a-19, circuit CH229 (WH/BU), harness side.

- HVAC module - DATC C228a-23 or HVAC module - EMTC C2357a-23, circuit GD115 (BK/GY), harness side and HVAC module - DATC C228a-20 or HVAC module - EMTC C2357a-20, circuit CH228 (YE/GY), harness side.

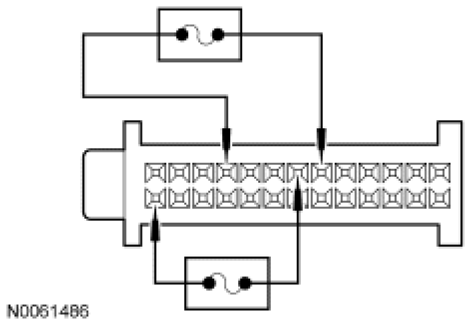

Fig. 37: Connect A Fused Jumper Wire For 5 Seconds Between EATC Module C228A-13, Circuit SBP15 (WH/RD)
Courtesy of FORD MOTOR CO.

- Connect a fused jumper wire for 5 seconds between:
    - HVAC module - DATC C228a-13 or HVAC module - EMTC C2357a-13, circuit SBP15 (WH/RD), harness side and HVAC module - DATC C228a-20 or HVAC module - EMTC C2357a-20, circuit CH228 (YE/GY), harness side.
    - HVAC module - DATC C228a-23 or HVAC module - EMTC C2357a-23, circuit GD115 (BK/GY), harness side and HVAC module - DATC C228a-19 or HVAC module - EMTC C2357a-19, circuit CH229 (WH/BU), harness side.
- **Does the actuator motor move at least 90 degrees in the clockwise and counterclockwise direction in previous steps?**

  YES : DATC systems, INSPECT for binding or broken linkage. If no condition is found, CARRY OUT the actuator component test in this service information. If the actuator tests OK, go to F14.

  EMTC systems, INSPECT for binding or broken linkage. If no condition is found, CARRY OUT the actuator component test in this service information. If the actuator tests OK, go to F9.

  NO : Go to F5.

F5 CHECK THE ACTUATOR MOTOR DRIVE CIRCUITS FOR AN OPEN

- Disconnect: For DTC B226C or LH Blend Door Actuator, LH Blend Door Actuator C2091
- Disconnect: For DTC B226D, RH Blend Door Actuator C2092
- Disconnect: For DTC B226E or Defrost/Panel/Floor Door Actuator, LH Defrost/Panel/Floor Door Actuator C2278

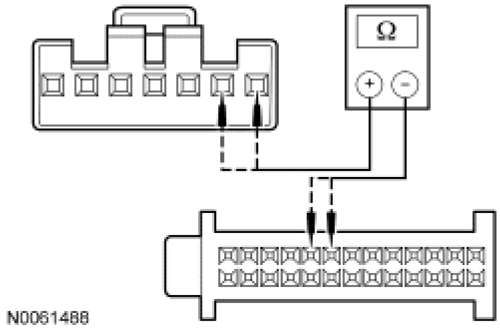

Fig. 38: Measuring Resistance Between EMTC Module C2357A-22 & C2357A-21, Circuit CH233 (VT/BN) & CH234 (YE/GN)
Courtesy of FORD MOTOR CO.

NOTE: **For DTC B226C or blend door actuator.**

- Measure the resistance between:
  - HVAC module - EMTC C2357a-22, circuit CH233 (VT/BN), harness side and blend door actuator C2091-7, circuit (OG/BK), harness side.
  - HVAC module - EMTC C2357a-21, circuit CH234 (YE/GN), harness side and blend door actuator C2091-6, circuit (VT), harness side.
  - HVAC module - DATC C228a-22, circuit CH238 (YE/OG), harness side and LH blend door actuator C2091-7, circuit (RD/YE), harness side.
  - HVAC module - DATC C228a-21, circuit CH239 (BU/WH), harness side and LH blend door actuator C2091-6, circuit (WH), harness side.

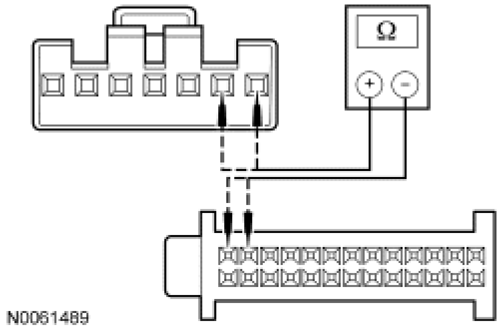

Fig. 39: Measuring Resistance Between EMTC Module C228B-25 & C228B-26, Circuit CH213 (BN/GN) & CH212 (BU/OG)
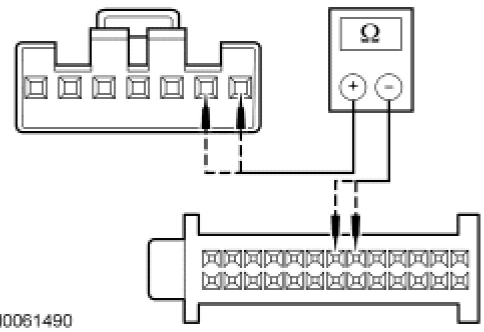
Courtesy of FORD MOTOR CO.

NOTE: **For DTC B226D.**

- Measure the resistance between:
  - HVAC module - DATC C228b-26, circuit CH212 (BU/OG), harness side and RH blend door actuator C2092-6, circuit (VT), harness side.

- HVAC module - DATC C228b-25, circuit CH213 (BN/GN), harness side and RH blend door actuator C2092-7, circuit (OG/BK), harness side.



N0061490

Fig. 40: Measuring Resistance Between EMTC Module C228a-20 & C228a-19, Circuit CH228 (YE/GY) & CH229 (WH/BU)
Courtesy of FORD MOTOR CO.

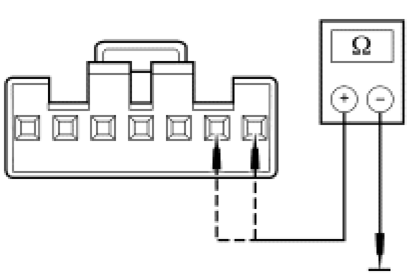
NOTE: For DTC B226E or defrost/panel/floor door actuator.

- Measure the resistance between:
  - HVAC module - DATC C228a-20 or HVAC module - EMTC C2357a-20, circuit CH228 (YE/GY), harness side and defrost/panel/floor door actuator C2278-7, circuit (GY/BK), harness side.
  - HVAC module - DATC C228a-19 or HVAC module - EMTC C2357a-19, circuit CH229 (WH/BU), harness side and defrost/panel/floor door actuator C2278-6, circuit (BU), harness side.
- **Are the resistances less than 5 ohms?**

  YES : Go to F6.

  NO : REPAIR the circuit(s) for an open. TEST the system for normal operation.

F6 CHECK THE ACTUATOR MOTOR DRIVE CIRCUITS FOR A SHORT TO GROUND



N0061491

Fig. 41: Measuring Resistance Between Ground (EMTC) Blend Door Actuator C2091-7 & C2091-6, Circuit (OG/BK) & Circuit (VT)
Courtesy of FORD MOTOR CO.

- Measure the resistance between ground and:
  - (EMTC) Blend door actuator C2091-7, circuit (OG/BK), harness side.
  - (EMTC) Blend door actuator C2091-6, circuit (VT), harness side.
  - **DTC B226C** , LH blend door actuator C2091-7, circuit (RD/YE), harness side.
  - **DTC B226C** , LH blend door actuator C2091-6, circuit (WH), harness side.
  - **DTC B226D** , RH blend door actuator C2092-6, circuit (VT), harness side.
  - **DTC B226D** , RH blend door actuator C2092-7, circuit (OG/BK), harness side.
  - **DTC B226E** or defrost/panel/floor door actuator, defrost/panel/floor door actuator C2278-7, circuit (GY/BK), harness side.
  - **DTC B226E** or defrost/panel/floor door actuator, defrost/panel/floor door actuator C2278-6, circuit (BU), harness side.
- **Are the resistances greater than 10,000 ohms?**

  YES : Go to F7.

  NO : REPAIR the circuit(s) for a short to ground. TEST the system for normal operation.

F7 CHECK THE ACTUATOR MOTOR DRIVE CIRCUITS FOR A SHORT TO VOLTAGE

- Key in ON position.

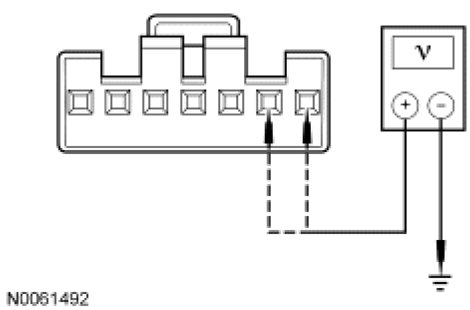


Fig. 42: Measuring Voltage Between Ground (EMTC) Blend Door Actuator C2091-7 & C2091-6, Circuit (OG/BK) & Circuit (VT)
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and:
  - (EMTC) Blend door actuator C2091-7, circuit (OG/BK), harness side.
  - (EMTC) Blend door actuator C2091-6, circuit (VT), harness side.
  - **DTC B226C** , LH blend door actuator C2091-7, circuit (RD/YE), harness side.
  - **DTC B226C** , LH blend door actuator C2091-6, circuit (WH), harness side.
  - **DTC B226D** , RH blend door actuator C2092-6, circuit (VT), harness side.
  - **DTC B226D** , RH blend door actuator C2092-7, circuit (OG/BK), harness side.
  - **DTC B226E** or defrost/panel/floor door actuator, defrost/panel/floor door actuator C2278-7, circuit (GY/BK), harness side.
  - **DTC B226E** or defrost/panel/floor door actuator, defrost/panel/floor door actuator C2278-6,

circuit (BU), harness side.

- **Is any voltage present?**

  YES : REPAIR the circuit(s) for a short to power. TEST the system for normal operation.

  NO : Go to F8.

F8 CHECK THE ACTUATOR MOTOR DRIVE CIRCUITS FOR A SHORT TOGETHER

- Key in OFF position.

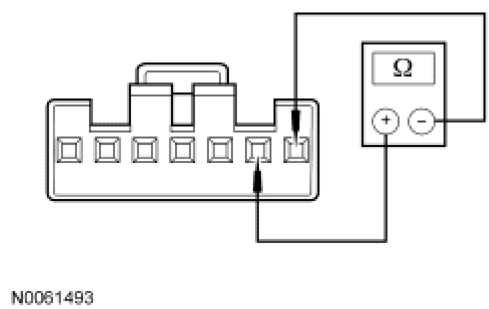

Fig. 43: Measuring Resistance Between (EMTC) LH Blend Door Actuator C2091-7, Circuit (OG/BK) & Circuit (RD/YE)
Courtesy of FORD MOTOR CO.

- Measure the resistance between:
  - (EMTC) For LH blend door actuator, LH blend door actuator C2091-7, circuit/ (OG/BK), harness side and LH blend door actuator C2091-6, circuit (VT), harness side.
  - **DTC B226C** or LH blend door actuator, LH blend door actuator C2091-7, circuit (RD/YE), harness side and LH blend door actuator C2091-6, circuit (WH), harness side.
  - **DTC B226D** , RH blend door actuator C2092-6, circuit (VT), harness side and RH blend door actuator C2092-7, circuit (OG/BK), harness side.
  - **DTC B226E** or defrost/panel/floor door actuator, defrost/panel/floor door actuator C2278-7, circuit (GY/BK), harness side and defrost/panel/floor door actuator C2278-6, circuit (BU), harness side.
- **Is the resistance greater than 10,000 ohms?**

  YES : CARRY OUT the actuator component test in this service information. If the actuator tests OK, go to F13.

  NO : REPAIR circuit(s) for a short together. TEST the system for normal operation.

F9 CHECK THE ACTUATOR FEEDBACK CIRCUITS FOR AN OPEN

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a or HVAC Module - EMTC C2357a
- Disconnect: DATC Systems Only, HVAC Module - DATC C228b
- Disconnect: LH Blend Door Actuator C2091
- Disconnect: DATC Systems Only, RH Blend Door Actuator C2092
- Disconnect: Defrost/Panel/Floor Door Actuator C2278

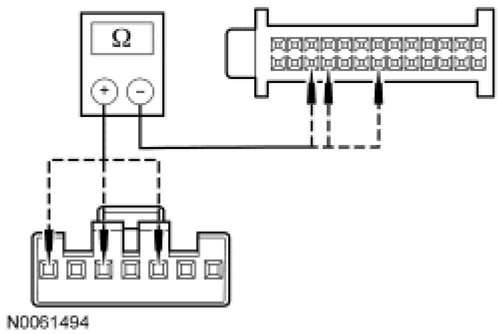

Fig. 44: Measuring Resistance Between EMTC Module C2357A-11 & C2357A-10, Circuit LH111 (BN/WH) & RH111 (GY/BU)
Courtesy of FORD MOTOR CO.

NOTE:	**For DTC B295A (DATC) or blend door actuator (EMTC).**

- Measure the resistance between:
  - HVAC module - EMTC C2357a-11, circuit LH111 (BN/WH), harness side and blend door actuator C2091-3, circuit (OG), harness side.
  - HVAC module - EMTC C2357a-10, circuit RH111 (GY/BU), harness side and blend door actuator C2091-1, circuit (BK), harness side.
  - HVAC module - EMTC C2357a-7, circuit VH439 (GY/VT), harness side and blend door actuator C2091-5, circuit (RD), harness side.
  - HVAC module - DATC C228a-11, circuit LH111 (BN/WH), harness side and LH blend door actuator C2091-3, circuit (OG), harness side.
  - HVAC module - DATC C228a-10, circuit RH111 (GY/BU), harness side and LH blend door actuator C2091-1, circuit (BK), harness side.
  - HVAC module - DATC C228a-7, circuit VH440 (BU/BN), harness side and LH blend door actuator C2091-5, circuit (YE), harness side.

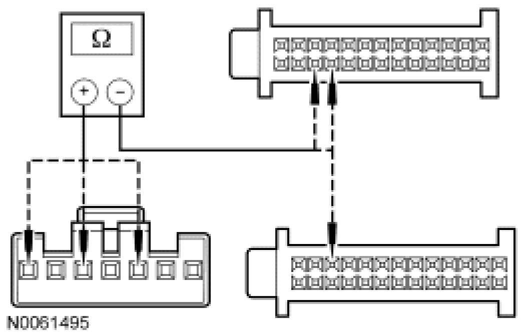

Fig. 45: Measuring Resistance Between RH Blend Door Actuator C2092-3, C2092-1 & C2092-5
Courtesy of FORD MOTOR CO.

NOTE:	**For DTC B295C.**

- Measure the resistance between:
  - HVAC module - DATC C228a-11 circuit LH111 (BN/WH), harness side and RH blend door actuator C2092-3, circuit (OG), harness side.
  - HVAC module - DATC C228a-10 circuit RH111 (GY/BU), harness side and RH blend door actuator C2092-1, circuit (BK), harness side.
  - HVAC module - DATC C228b-24 circuit VH441 (WH/BN), harness side and RH blend door actuator C2092-5, circuit (RD), harness side.

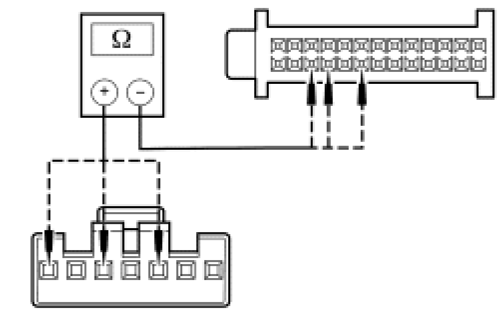

Fig. 46: Measuring Resistance Between Defrost/Panel/Floor Door Actuator C2278-3, C2278-1 & C2278-5
Courtesy of FORD MOTOR CO.

NOTE: For DTC B295E or defrost/panel/floor door actuator.

- Measure the resistance between:
  - HVAC module - DATC C228a-11 or HVAC module - EMTC C2357a-11, circuit LH111 (BN/WH), harness side and defrost/panel/floor door actuator C2278-3, circuit (OG), harness side.
  - HVAC module - DATC C228a-10 or HVAC module - EMTC C2357a-10, circuit RH111 (GY/BU), harness side and defrost/panel/floor door actuator C2278-1, circuit (BK), harness side.
  - HVAC module - DATC C228a-8 or HVAC module - EMTC C2357a-8, circuit VH436 (YE/VT), harness side and defrost/panel/floor door actuator C2278-5, circuit (BU/RD), harness side.
- **Are the resistances less than 5 ohms?**

  YES : Go to F10.

  NO : REPAIR circuit(s) for an open. TEST the system for normal operation.

F10 CHECK THE ACTUATOR FEEDBACK CIRCUITS FOR A SHORT TO VOLTAGE

- Key in ON position.

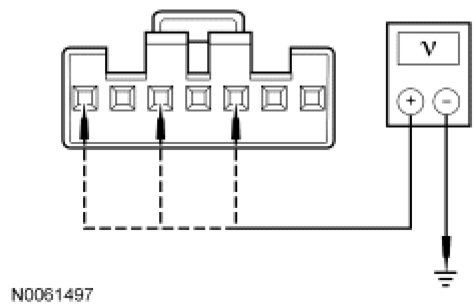

Fig. 47: Measuring Voltage Between (EMTC) Blend Door Actuator C2091-3, C2091-1 & C2091-5
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and:
  - (EMTC) Blend door actuator C2091-3, circuit (OG), harness side.
  - (EMTC) Blend door actuator C2091-1, circuit (BK), harness side.
  - (EMTC) Blend door actuator C2091-5, circuit (RD), harness side.
  - (EMTC) Defrost/panel/floor door actuator C2092-5, circuit (BU/RD), harness side.
  - **DTC B295A** , LH blend door actuator C2091-5, circuit (YE), harness side.
  - **DTC B295C** , RH blend door actuator C2092-5, circuit (RD), harness side.
  - **DTC B295E** defrost/panel/floor door actuator C2278-5, circuit (BU/RD), harness side.
- **Is any voltage present?**

  YES : REPAIR circuit(s) for a short to voltage. TEST the system for normal operation.

  NO : DATC systems, go to F12.

  EMTC systems, go to F11.

F11 CHECK THE ACTUATOR FEEDBACK CIRCUITS FOR A SHORT TO GROUND

- Key in OFF position.

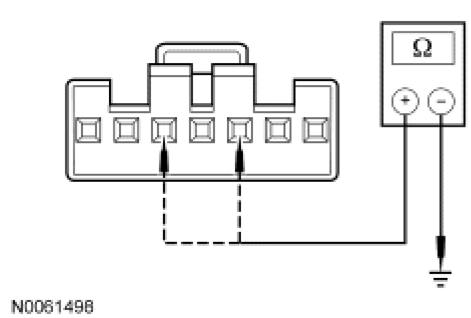

Fig. 48: Measuring Resistance Between (EMTC) Blend Door Actuator C2091-3, C2091-1 & C2091-5
Courtesy of FORD MOTOR CO.

- Measure the resistance between ground and:
  - (EMTC) Blend door actuator C2091-3, circuit (OG), harness side.
  - (EMTC) Blend door actuator C2091-5, circuit (RD), harness side.
  - (EMTC) Defrost/panel/floor door actuator C2092-5, circuit (BU/RD), harness side.
  - **DTC B295A** , LH blend door actuator C2091-5, circuit (YE), harness side.
  - **DTC B295C** , RH blend door actuator C2092-5, circuit (RD), harness side.
  - **DTC B295E** defrost/panel/floor door actuator C2278-5, circuit (BU/RD), harness side.
- **Are the resistances greater than 10,000 ohms?**

  YES : Go to F12.

  NO : REPAIR circuit(s) for a short to ground. TEST the system for normal operation.

F12 CHECK THE ACTUATOR FEEDBACK CIRCUITS FOR A SHORT TOGETHER

- Key in OFF position.

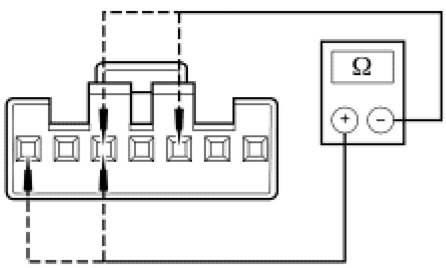

Fig. 49: Measuring Resistance Between (EMTC) Blend Door Actuator C2091-3 & C2091-5, Blend Door Actuator C2091-1
Courtesy of FORD MOTOR CO.

- Measure the resistance between:
  - (EMTC) Blend door actuator C2091-3, circuit (OG), harness side and blend door actuator C2091-1, circuit (BK), harness side.
  - (EMTC) Blend door actuator C2091-5, circuit (RD), harness side and blend door actuator C2091-1, circuit (BK), harness side.
  - (EMTC) Blend door actuator C2091-5, circuit (RD), harness side and blend door actuator C2091-3, circuit (OG), harness side.
  - (EMTC) Defrost/panel/floor door actuator C2278-5, circuit (BU/RD), harness side and defrost/panel/floor door actuator C2278-1, circuit (BK), harness side.
  - (EMTC) Defrost/panel/floor door actuator C2278-5, circuit (BU/RD), harness side and defrost/panel/floor door actuator C2278-3, circuit (OG), harness side.
  - **DTC B295A** , LH blend door actuator C2091-5, circuit (YE), harness side and LH blend door actuator C2091-1, circuit (BK), harness side.
  - **DTC B295A** , LH blend door actuator C2091-5, circuit/ (YE), harness side and LH blend door actuator C2091-3, circuit (OG), harness side.

- **DTC B295C** , RH blend door actuator C2092-5, circuit (RD), harness side and RH blend door actuator C2092-1, circuit (OG), harness side.
- **DTC B295C** , RH blend door actuator C2092-5, circuit (RD), harness side and RH blend door actuator C2092-3, circuit (BK), harness side.
- **DTC B295E** , defrost/panel/floor door actuator C2278-5, circuit (BU/RD), harness side and defrost/panel/floor door actuator C2278-1, circuit (BK), harness side.
- **DTC B295E** or defrost/panel/floor door actuator, defrost/panel/floor door actuator C2278-5, circuit (BU/RD), harness side and defrost/panel/floor door actuator C2278-3, circuit (OG), harness side.

- **Are the resistances greater than 10,000 ohms?**

  YES : Go to F14.

  NO : REPAIR circuit(s) for a short together. TEST the system for normal operation.

F13 CHECK THE ACTUATOR CONNECTION

NOTE: DATC systems only.

- Clear the DTCs.
- Disconnect the actuator connector.
- Check for:
  - corrosion.
  - pushed-out connectors.
  - incorrectly seated connector.
- Connect and correctly seat the actuator connector.
- Carry out the HVAC Module Cold Boot Process.

NOTE: DATC systems only.

- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new actuator. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs.

F14 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.

NOTE: DATC systems only.

- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC or HVAC module - EMTC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test G: DTC: B1318 - Battery Voltage Low

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the HVAC module - dual automatic temperature control (DATC) receives a ground through circuit GD115 (BK/GY). The HVAC module - DATC is supplied constant battery voltage through circuit SBP15 (WH/RD) and ignition switched voltage through circuit CBP37 (WH).

This pinpoint test is intended to diagnose the following:

- Fuse(s)
- Wiring, terminals or connectors
- HVAC module - DATC

PINPOINT TEST G: DTC: B1318 - BATTERY VOLTAGE LOW

G1 CHECK CIRCUIT GD115 (BK/GY) FOR AN OPEN

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a

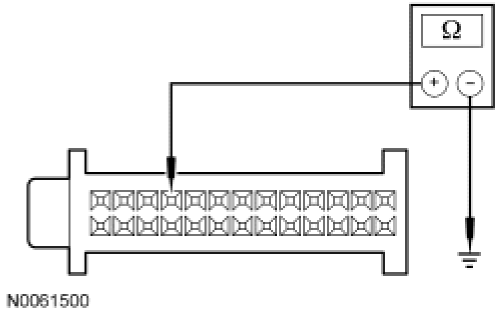

Fig. 50: Measuring Resistance Between EATC Module C228A-23, Circuit GD115 (BK/GY) & Ground

Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-23, circuit GD115 (BK/GY), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to G2.

  NO : REPAIR circuit GD115 (BK/GY). CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

G2 CHECK CIRCUITS SBP15 (WH/RD) AND CBP37 (WH) FOR AN OPEN

- Key in ON position.

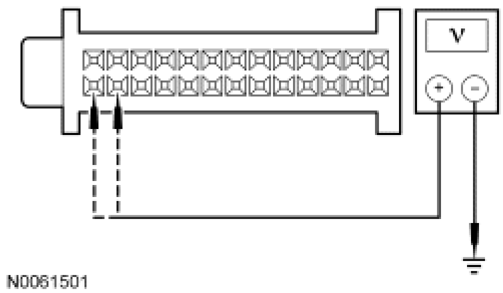

Fig. 51: Measuring Voltage Between EATC Module C228A-13 & C228A-12, Circuit SBP15 (WH/RD) & CBP37 (WH)
Courtesy of FORD MOTOR CO.

- Measure the voltage between HVAC module - DATC C228a-13, circuit SBP15 (WH/RD), harness side, HVAC module - DATC C228a-12, circuit CBP37 (WH), harness side and ground.
- **Are the voltages greater than 10 volts?**

  YES : Go to **MODULE COMMUNICATIONS NETWORK** article to diagnose the network concern.

  NO : VERIFY smart junction box (SJB) fuses 15 (10A) and 37 (10A) are OK. If OK, REPAIR circuit SBP15 (WH/RD) or CBP37 (WH) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test H: The DATC System is Inoperative, Intermittent or Incorrect Operation

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the HVAC module - dual automatic temperature control (DATC) receives a ground through circuit GD115 (BK/GY). The HVAC module - DATC is supplied constant battery voltage through circuit SBP15 (WH/RD) and ignition switched voltage through circuit CBP37 (WH).

NOTE: For a complete explanation of the DATC system functions, refer to Description and Operation in this service information.

This pinpoint test is intended to diagnose the following:

- Fuse(s)
- Wiring, terminals or connectors
- HVAC module - DATC

PINPOINT TEST H: THE DATC SYSTEM IS INOPERATIVE, INTERMITTENT OR INCORRECT OPERATION

H1 VERIFY AUTOMATIC OPERATION

- Key in ON position.
- With the engine running, press the AUTO button.
- **Does the indicator above the AUTO button illuminate and the selected temperature for both the driver and passenger appear in the display window?**

  YES : Go to H2.

  NO : Go to H11.

H2 CARRY OUT THE HVAC MODULE - DATC SELF-TEST

- Key in ON position.
- Carry out the HVAC Module - Dual Automatic Temperature Control Module (DATC) Self-Test in this service information. Record the DTCs displayed, if any.
- **Were any DTCs displayed as a result of the self-test?**

  YES : REFER to the **HVAC MODULE - DUAL AUTOMATIC TEMPERATURE CONTROL DTC CHART**. CARRY OUT the necessary diagnosis and REPAIR as required.

  NO : Go to H3.

H3 CHECK THE VACUUM FLUORESCENT DISPLAY

- Exit the self-test. Refer to the HVAC Module - Dual Automatic Temperature Control Module (DATC) Self-Test in this service information. Observe the button indicators and function symbols displayed on the vacuum fluorescent display while changing the temperature, blower speed and functions.
- **Are the display and indicators correct and complete without any missing elements?**

  YES : Go to H4.

  NO : Go to H14.

H4 CHECK THE BLOWER MANUAL OVERRIDE OPERATION

- Press the blower motor speed override control fully up and fully down.
- **Does the blower motor speed increase from low speed to high and high speed to low?**

  YES : Go to H5.

  NO : If the blower motor is inoperative, go to **Pinpoint Test N** .

If the blower motor does not operate correctly, go to **Pinpoint Test O** .

H5 VERIFY THE DEFROST OVERRIDE OPERATION

- Press the override button for defrost operation.
- **Is outside air being discharged from the windshield defroster nozzle and the side window demisters?**

YES : Go to H6.

NO : Go to **Pinpoint Test F** .

H6 VERIFY THE FLOOR OVERRIDE OPERATION

- Press the mode override button until floor mode is indicated.
- **Is outside air being discharged from the floor duct?**

YES : Go to H7.

NO : Go to **Pinpoint Test E** .

H7 VERIFY THE PANEL OVERRIDE OPERATION

- Press the mode override button until panel mode is indicated.
- **Is outside air being discharged from the instrument panel registers?**

YES : Go to H8.

NO : Go to **Pinpoint Test F** .

H8 VERIFY THAT THE A/C CLUTCH DOES NOT ENGAGE IN THE PANEL MODE

- In panel operation and with the A/C OFF, listen for the compressor clutch to engage.
- **Does the A/C clutch engage with the PANEL override button pressed?**

YES : Go to **Pinpoint Test K** .

NO : Go to H9.

H9 VERIFY A/C CLUTCH ENGAGEMENT IN THE A/C MODE

- Make sure the ambient air temperature is above 6°C (43°F).
- Press the override button for A/C operation.
- **Does the A/C clutch engage when the A/C override button is pressed?**

YES : Go to H10.

NO : Go to **Pinpoint Test J** .

H10 VERIFY THE RECIRC OVERRIDE OPERATION

- While in PANEL mode, press the RECIRC override button.
- **Is recirculated air being discharged from the instrument panel registers?**

YES : The test is complete. The system is functioning normally.

NO : Go to **Pinpoint Test E** .

H11 CHECK THE HVAC MODULE - DATC MODULE FUNCTIONS

- Press each function button and observe the display.
- **Does the HVAC module - DATC carry out and display any functions?**

YES : Go to H14.

NO : Go to H12.

H12 CHECK CIRCUIT GD115 (BK/GY) FOR AN OPEN

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a

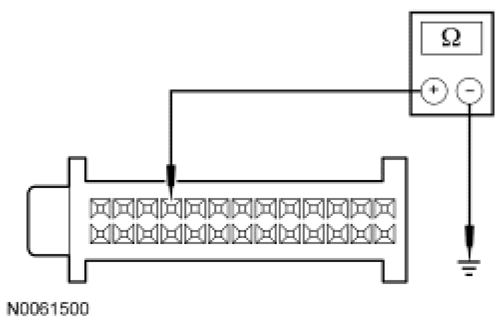

Fig. 52: Measuring Resistance Between EATC Module C228A-23, Circuit GD115 (BK/GY) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - DATC C228a-23, circuit GD115 (BK/GY), harness side and ground.
- **Is the resistance less than 5 ohms?**

YES : Go to H13.

NO : REPAIR circuit GD115 (BK/GY). TEST the system for normal operation.

H13 CHECK CIRCUITS SBP15 (WH/RD) AND CBP37 (WH) FOR AN OPEN

- Key in ON position.

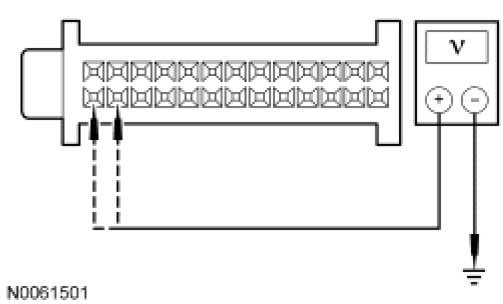

Fig. 53: Measuring Voltage Between EATC Module C228A-13 & C228A-12, Circuit SBP15 (WH/RD) & CBP37 (WH)
Courtesy of FORD MOTOR CO.

- Measure the voltage between HVAC module - DATC C228a-13, circuit SBP15 (WH/RD), harness side, HVAC module - DATC C228a-12, circuit CBP37 (WH), harness side and ground.
- **Are the voltages greater than 10 volts?**

YES : Go to H14.

NO : VERIFY smart junction box (SJB) fuses 15 (10A) and 37 (10A) are OK. If OK, REPAIR circuit SBP15 (WH/RD) or CBP37 (WH) for an open. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

H14 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.
- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

YES : INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test I: Insufficient, Erratic or No Heat

Normal Operation

Under normal operation, warm coolant flows from the engine through the heater core and back to the engine.

This pinpoint test is intended to diagnose the following:

- Plugged heater core
- Coolant level
- Temperature blend door

PINPOINT TEST I: INSUFFICIENT, ERRATIC OR NO HEAT

I1 CHECK FOR CORRECT ENGINE COOLANT LEVEL

- Check the engine coolant level when hot and cold.
- **Is the engine coolant at the correct level (hot/cold) as indicated on the engine coolant recovery reservoir?**

YES : Go to I3.

NO : Go to I2.

I2 CHECK THE ENGINE COOLING SYSTEM FOR LEAKS

- Pressure test the cooling system for leaks. Refer to **ENGINE COOLING** article.
- **Does the engine cooling system leak?**

YES : REPAIR the engine coolant leak. TEST the system for normal operation.

NO : Go to I3.

I3 CHECK FOR COOLANT FLOW TO THE HEATER CORE

- Run the engine until it reaches normal operation temperature. Select the FLOOR position on the control assembly. Set the temperature control to full warm and the blower to the lowest setting.

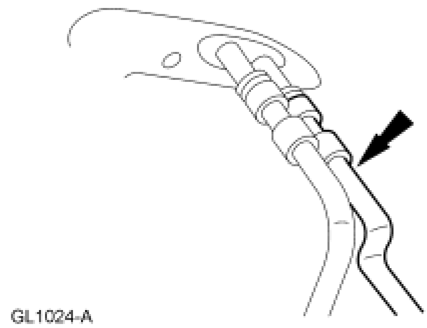

Fig. 54: Checking Coolant Flow To Heater Core
Courtesy of FORD MOTOR CO.

- Using a suitable thermo-couple temperature measuring device, check the heater core inlet hose to see if it is hot.
- **Is the heater core inlet hose hot?**

  YES : Go to I4.

  NO : REFER to **ENGINE COOLING** article to check cooling system function.

I4 CHECK FOR A PLUGGED OR RESTRICTED HEATER CORE

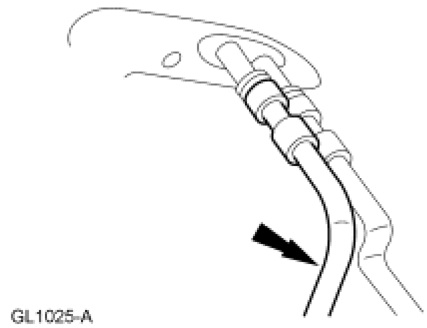

Fig. 55: Check Plugged Or Restricted Heater Core
Courtesy of FORD MOTOR CO.

- Using a suitable thermo-couple temperature measuring device, measure the heater core outlet hose temperature.
- **Is the heater core outlet hose temperature similar to the inlet hose temperature (within approximately 6-17°C [10-30°F])?**

  YES : Go to **Pinpoint Test F** and diagnose for a blend door actuator.

  NO : INSTALL a new heater core. TEST the system for normal operation.

Pinpoint Test J: The Air Conditioning (A/C) is Inoperative/Does Not Operate Correctly

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Manual Climate Control System for schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, when A/C is requested, in the dual automatic temperature control (DATC) system, a message is sent over the medium-speed controller area network (MS-CAN) bus to the instrument cluster, then from the instrument cluster through the high-speed controller area network (HS-CAN) bus to the PCM; or in electronic manual temperature control (EMTC) systems, voltage is sent to the instrument cluster through circuit CH434 (GY/YE), then a message is sent from the instrument cluster through the HS-CAN bus to the PCM.

Ignition voltage is provided to the A/C clutch relay switch. When the PCM energizes the relay, ignition voltage is supplied to the A/C clutch through circuit CH401 (VT/WH). Ground is supplied for the A/C clutch through circuit GD120 (BK/GN).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- PCM
- HVAC module - DATC
- HVAC module - EMTC
- A/C evaporator discharge temperature sensor
- A/C pressure transducer
- A/C compressor
- A/C control relay
- Battery junction box (BJB)

PINPOINT TEST J: THE AIR CONDITIONING (A/C) IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

CAUTION: It is important to install relays in their correct position in the battery junction box (BJB). Installing a relay incorrectly may cause wiring shorts or damage to modules. While carrying out diagnostics on BJB relays, have only one BJB relay removed at a time. Failure to follow these instructions may result in damage to the vehicle circuitry or to control modules.

NOTE: Some PCM DTCs may inhibit A/C operation. If any PCM DTCs are retrieved, diagnose those first. Refer to Introduction - Gasoline Engines article.

NOTE: When disconnecting and reconnecting the pressure transducer electrical

connector, make sure that the connector-locking device is in place and that the locking device and connector are correctly and fully seated.

NOTE: **Before carrying out the following test, check that the A/C system pressure is above 290 kPa (42 psi). If the pressure is below 290 kPa (42 psi), refer to Fluorescent Dye Leak Detection.**

J1 CHECK THE A/C PRESSURE SENSOR (ACP_PSI) PCM PID

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: ACP_PSI PCM PID
- With the manifold gauge set connected, compare the pressure readings of the manifold gauge set and the ACP_PSI PID.
- **Are the pressure values of the manifold gauge set and the ACP_PSI PID similar?**

  YES : Go to J2.

  NO : INSTALL a new A/C pressure transducer. TEST the system for normal operation.

J2 CHECK THE POST EVAPORATOR TEMPERATURE SENSOR INPUT (PEVAP_TMP) HVAC PID

- Allow the vehicle exterior and interior to stabilize to an ambient temperature above 16°C (60°F).
- Enter the following diagnostic mode on the diagnostic tool: PEVAP_TMP HVAC PID
- **Does the PEVAP_TMP HVAC PID read similar to the ambient temperature?**

  YES : DATC systems, go to J3.

  EMTC systems, go to J4.

  NO : CARRY OUT the A/C evaporator discharge temperature sensor component test in this service information. If the sensor tests OK, go to J13. If the sensor does not test OK, INSTALL a new heater core and evaporator core housing. REFER to **CLIMATE CONTROL** article. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

J3 CHECK THE AIR CONDITIONING SWITCH STATUS (CC_AC) HVAC PID WITH THE A/C ON

- Enter the following diagnostic mode on the diagnostic tool: CC_AC HVAC PID
- Press the PANEL and A/C manual override buttons on the HVAC module - DATC.
- **Does the CC_AC HVAC PID read ON?**

  YES : Go to J5.

  NO : Go to J13.

J4 CHECK THE HVAC MODULE - EMTC A/C SIGNAL WITH THE A/C ON

- Key in OFF position.
- Disconnect: Instrument Cluster C220
- Key in ON position.
- Select PANEL mode and press the A/C button on the HVAC module - EMTC.

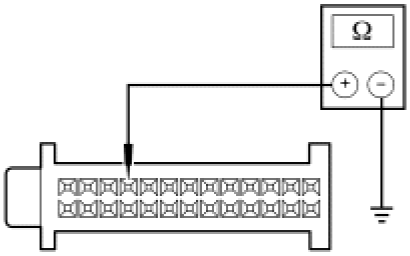

Fig. 56: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between instrument cluster C220-23, circuit CH434 (GY/YE), harness side and ground.
- **Is the resistance less than 30 ohms?**

  YES : Go to J5.

  NO : Go to J7.

J5 CHECK THE AIR CONDITIONING COMPRESSOR CYCLING SWITCH (ACCS) PCM PID WITH THE A/C ON

- Key in OFF position.

NOTE: EMTC systems only.

- Connect: Instrument Cluster C220

NOTE: EMTC systems only.

- Key in ON position.

NOTE: EMTC systems only.

- Enter the following diagnostic mode on the diagnostic tool: ACCS PCM PID
- With the engine running, press the PANEL and A/C manual override buttons on the HVAC module - DATC or select MAX A/C on the HVAC module - EMTC.
- **Does the ACCS PCM PID read ON?**

  YES : Go to J6.

  NO : Go to J14.

J6 CHECK THE AIR CONDITIONING CLUTCH (WAC/ACCR) PCM PID WITH THE A/C ON

- Enter the following diagnostic mode on the diagnostic tool: WAC/ACCR PCM PID
- **Does the WAC/ACCR PCM PID read ON?**

  YES : Go to J9.

NO : Go to J14.

J7 CHECK CIRCUIT CH434 (GY/YE) FOR AN OPEN

- Key in OFF position.
- Disconnect: HVAC Module - EMTC C2357a

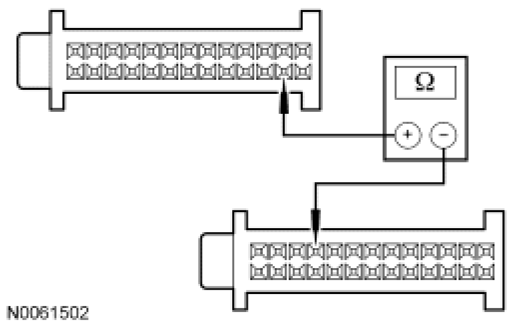

Fig. 57: Measuring Resistance Between EMTC Module C2357A-2, Circuit CH434 (GY/YE) & IC C220-23
Courtesy of FORD MOTOR CO.

- Measure the resistance between HVAC module - EMTC C2357a-2, circuit CH434 (GY/YE), harness side and IC C220-23, circuit CH434 (GY/YE), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to J8.

  NO : REPAIR circuit CH434 (GY/YE) for an open. TEST the system for normal operation.

J8 CHECK CIRCUIT CH434 (GY/YE) FOR A SHORT TO VOLTAGE

- Key in ON position.

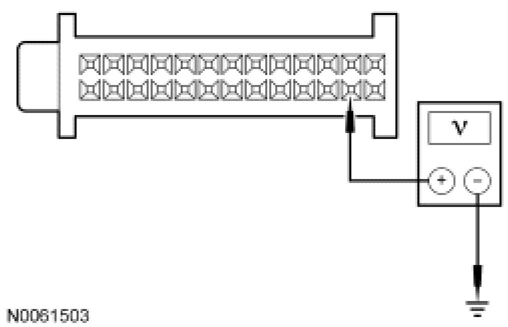

Fig. 58: Measuring Voltage Between EMTC Module C2357A-2, Circuit CH434 (GY/YE) & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between HVAC module - EMTC C2357a-2, circuit CH434 (GY/YE), harness side and ground.
- **Is the voltage greater than 10 volts?**

YES : Go to J14.

NO : REPAIR circuit CH434 (GY/YE) for a short to voltage. TEST the system for normal operation.

J9 CHECK THE VOLTAGE AT THE A/C COMPRESSOR CLUTCH FIELD COIL

- Key in OFF position.
- Disconnect: A/C Compressor Clutch Field Coil C100
- Key in ON position.
- With the engine running, press the PANEL and A/C manual override buttons on the HVAC module - DATC or select MAX A/C on the HVAC module - EMTC.

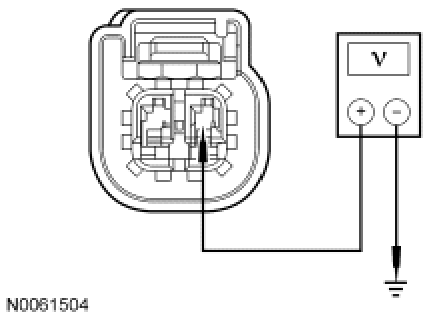

Fig. 59: Measuring Voltage Between A/C Compressor Clutch Field Coil C100-1, Circuit CH401 (VT/WH) & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between A/C compressor clutch field coil C100-1, circuit CH401 (VT/WH), harness side and ground.
- **Is the voltage greater than 10 volts?**

YES : Go to J10.

NO : CARRY OUT the A/C Control Relay Component Test. Refer to appropriate COMPONENT TESTING article. If the relay tests OK, go to J11.

J10 CHECK THE GROUND AT THE A/C COMPRESSOR CLUTCH FIELD COIL

- Key in OFF position.

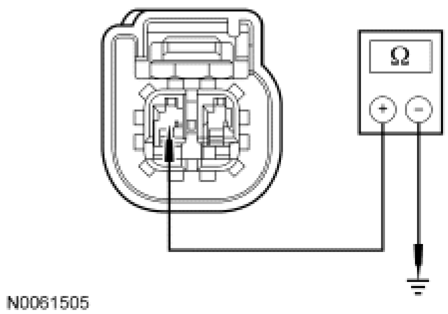

Fig. 60: Measuring Resistance Between A/C Compressor Clutch Field Coil C100-2, Circuit

GD120 (BK/GN) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between A/C compressor clutch field coil C100-2, circuit GD120 (BK/GN), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new A/C compressor. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : REPAIR circuit GD120 (BK/GN) for an open. TEST the system for normal operation.

J11 CHECK THE RELAY SWITCH FOR VOLTAGE

- Key in OFF position.
- Disconnect: A/C Clutch Relay
- Key in ON position.

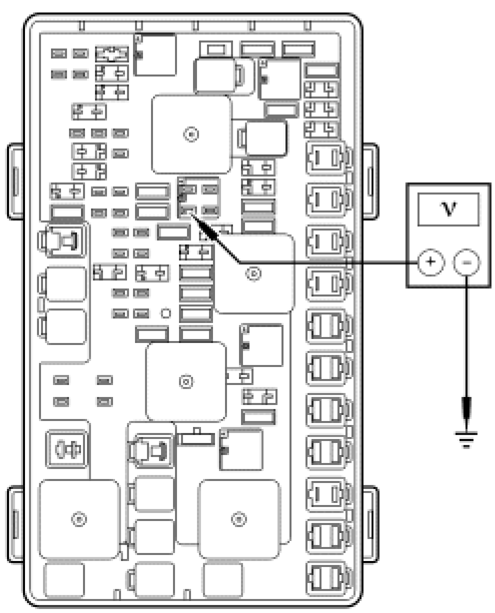

Fig. 61: Measuring Voltage Between A/C Clutch Relay Socket & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between A/C clutch relay socket and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to J12.

  NO : VERIFY BJB fuse 35 (10A) is OK. If OK, INSTALL a new BJB. TEST the system for normal operation.

J12 CHECK CIRCUIT CH401 (VT/WH) FOR AN OPEN

- Key in OFF position.

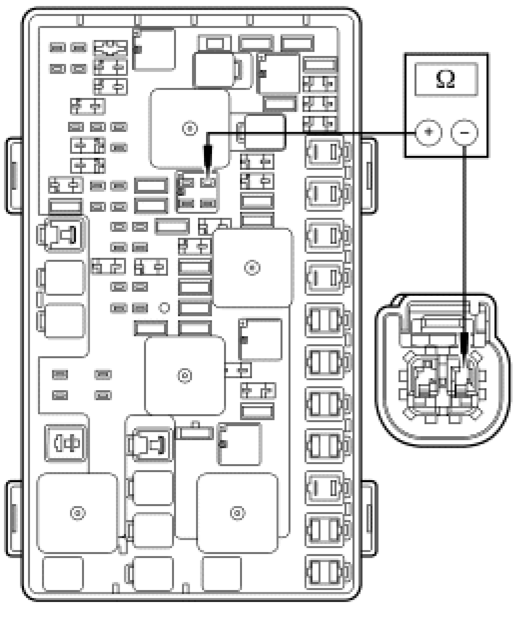

Fig. 62: Measuring Resistance Between A/C Clutch Relay Socket, Circuit CH401 (VT/WH) & A/C Compressor Clutch Field Coil C100-1
Courtesy of FORD MOTOR CO.

- Measure the resistance between A/C clutch relay socket, circuit CH401 (VT/WH) and A/C compressor clutch field coil C100-1, circuit CH401 (VT/WH), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to J14.

  NO : REPAIR circuit CH401 (VT/WH) for an open. TEST the system for normal operation.

J13 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.

NOTE: DATC systems only.

- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC or HVAC module - EMTC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose

or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

J14 CHECK THE PCM MODULE CONNECTION

- Check the DTCs.
- Disconnect all the PCM connectors.
- Check for:
    - corrosion.
    - pushed-out pins.
    - incorrectly seated connector.
- Connect and correctly seat all the PCM connectors.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new PCM. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been cause by a loose or corroded connector.

Pinpoint Test K: The Air Conditioning (A/C) is Always On

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Manual Climate Control System for schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, when A/C is requested, in the dual automatic temperature control (DATC) system, a message is sent over the medium-speed controller area network (MS-CAN) bus to the instrument cluster, then from the instrument cluster through the high-speed controller area network (HS-CAN) bus to the PCM; or in electronic manual temperature control (EMTC) systems, voltage is sent to the instrument cluster through circuit CH434 (GY/YE), then a message is sent from the instrument cluster through the HS-CAN bus to the PCM.

Ignition voltage is provided to the A/C clutch relay switch. When the PCM energizes the relay, ignition voltage is supplied to the A/C clutch through circuit CH401 (VT/WH). Ground is supplied for the A/C clutch through circuit GD120 (BK/GN).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- PCM
- HVAC module - DATC
- HVAC module - EMTC
- A/C evaporator discharge temperature sensor

- A/C pressure transducer
- A/C control relay
- A/C compressor

PINPOINT TEST K: THE AIR CONDITIONING (A/C) IS ALWAYS ON

NOTE: When disconnecting and reconnecting the pressure transducer electrical connector, make sure that the connector-locking device is in place and that the locking device and connector are correctly and fully seated.

K1 CHECK THE A/C PRESSURE SENSOR (ACP_PSI) PCM PID

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: A/C Pressure PCM PID
- With the manifold gauge set connected, compare the pressure readings of the manifold gauge set and the ACP_PSI PID.
- **Are the pressure values of the manifold gauge set and the ACP_PSI PCM PID similar?**

  YES : Go to K2.

  NO : INSTALL a new A/C pressure transducer. TEST the system for normal operation.

K2 CHECK THE POST EVAPORATOR TEMPERATURE SENSOR INPUT (PEVAP_TMP) HVAC PID

- Allow the vehicle exterior and interior to stabilize to an ambient temperature above 16°C (60°F).
- Enter the following diagnostic mode on the diagnostic tool: PEVAP_TMP HVAC PID
- **Does the PEVAP_TMP HVAC PID read similar to the ambient temperature?**

  YES : Go to K3.

  NO : CARRY OUT the A/C evaporator discharge temperature sensor component test in this service information. If the sensor tests OK, go to K11. If the sensor does not test OK, INSTALL a new heater core and evaporator core housing. REFER to **CLIMATE CONTROL** article. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

K3 CHECK THE AIR CONDITIONING COMPRESSOR CYCLING SWITCH (ACCS) PCM PID WITH THE A/C OFF

- Enter the following diagnostic mode on the diagnostic tool: ACCS PCM PID
- **Does the ACCS PCM PID read ON?**

  YES : DATC systems, go to K4.

  EMTC systems, go to K5.

  NO : Go to K7.

K4 CHECK THE AIR CONDITIONING SWITCH STATUS (CC_AC) HVAC PID WITH THE A/C OFF

- Enter the following diagnostic mode on the diagnostic tool: CC_AC HVAC PID
- **Does the CC_AC HVAC PID read ON?**

YES : Go to K10.

NO : Go to K11.

K5 CHECK HVAC - EMTC A/C REQUEST OUTPUT

- Key in OFF position.
- Disconnect: Instrument Cluster (IC) C220
- Key in ON position.
- Select the OFF position on the HVAC module - EMTC.

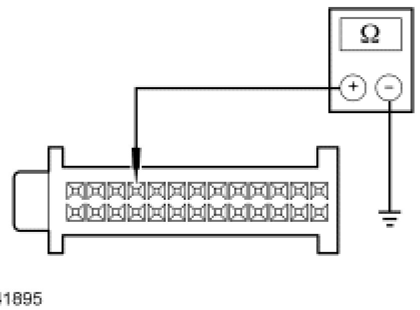

Fig. 63: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between IC C220-23, circuit CH434 (GY/YE), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

YES : Go to K11.

NO : Go to K6.

K6 CHECK CIRCUIT CH434 (GY/YE) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: HVAC Module - EMTC C2357a

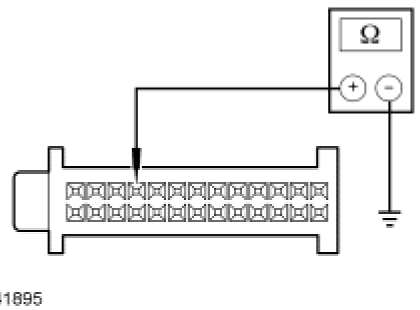

Fig. 64: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between IC C220-23, circuit CH434 (GY/YE), harness side and ground.

- **Is the resistance greater than 10,000 ohms?**

  YES : Go to K10.

  NO : REPAIR circuit CH434 (GY/YE) for a short to ground. TEST the system for normal operation.

K7 CHECK THE AIR CONDITIONING CLUTCH (WAC_ACCR) PCM PID WITH THE A/C OFF

- Enter the following diagnostic mode on the diagnostic tool: WAC_ACCR PCM PID
- **Does the WAC_ACCR PCM PID read ON?**

  YES : REFER to **Introduction - Gasoline Engines** article.

  NO : Go to K8.

K8 CHECK FOR VOLTAGE TO THE A/C COMPRESSOR CLUTCH FIELD COIL

- Key in OFF position.
- Disconnect: A/C Compressor Clutch Field Coil C100
- Key in ON position.
- Select the OFF position on the HVAC module - EMTC.

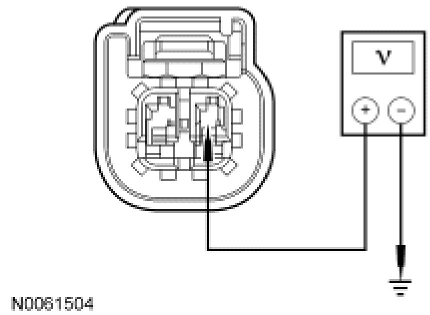

Fig. 65: Measuring Voltage Between A/C Compressor Clutch Field Coil C100-1, Circuit CH401 (VT/WH) & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between A/C compressor clutch field coil C100-1, circuit CH401 (VT/WH), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to K9.

  NO : INSTALL a new A/C compressor. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

K9 CHECK CIRCUIT CH401 (VT/WH) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: A/C Clutch Relay
- Key in ON position.

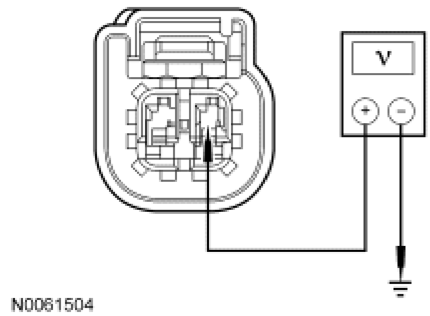

Fig. 66: Measuring Voltage Between A/C Compressor Clutch Field Coil C100-1, Circuit CH401 (VT/WH) & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between A/C compressor clutch field coil C100-1, circuit CH401 (VT/WH), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : REPAIR circuit CH401 (VT/WH) for a short to voltage. TEST the system for normal operation.

  NO : INSTALL a new A/C clutch relay. Check the A/C clutch diode. INSTALL a new diode if necessary. TEST the system for normal operation.

K10 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.

NOTE: DATC systems only.

- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC or HVAC module - EMTC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

K11 CHECK THE PCM CONNECTION

- Clear the DTCs.
- Disconnect all the PCM connectors.
- Check for:
  - corrosion.
  - pushed-out pins.
  - incorrectly seated connector.

- Connect and correctly seat all the PCM connectors.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new PCM. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test L: The Blower Motor is Inoperative - EMTC

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Manual Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the blower motor relay coil receives ignition voltage through circuit CBP45 (YE). The coil receives ground from the HVAC module - electronic manual temperature control (EMTC) through circuit CH123 (VT/GN) if any function selector position but OFF is selected. Voltage is supplied to the relay switch contact through circuit CH402 (YE/GN). When the relay coil is energized, voltage is delivered to the blower motor through circuit CH402 (YE/GN)/(BK). Ground for the blower motor is provided through circuit CH430 (VT/OG)/(BK/RD) from the blower resistor or the blower switch (HI). The blower resistor and blower switch are grounded through circuit GD116 (BK/VT).

This pinpoint test is intended to diagnose the following:

- Fuse(s)
- Wiring, terminals or connectors
- HVAC module - EMTC
- Blower motor
- Blower motor relay
- Blower motor switch

PINPOINT TEST L: THE BLOWER MOTOR IS INOPERATIVE - EMTC

CAUTION: It is important to install relays in their correct position in the battery junction box (BJB). Installing a relay incorrectly may cause wiring shorts or damage to modules. While carrying out diagnostics on BJB relays, have only one BJB relay removed at a time. Failure to follow these instructions may result in damage to the vehicle circuitry or to control modules.

L1 CHECK CIRCUIT (BK/RD) FOR GROUND

- Key in OFF position.
- Disconnect: Blower Motor C288
- Turn the function selector switch to the PANEL position.

- Turn the blower motor switch to the HI position.

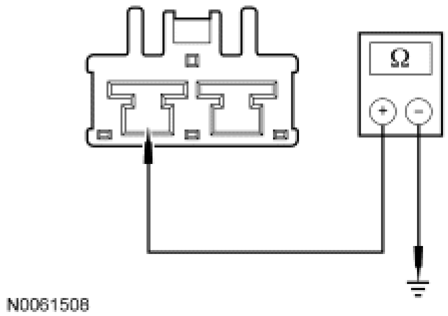

Fig. 67: Measuring Resistance Between A/C Blower Motor C288-2, Circuit (BK/RD) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between A/C blower motor C288-1, circuit (BK/RD), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to L4.

  NO : Go to L2.

L2 CHECK CIRCUIT CH430 (VT/OG)/(BK/RD) FOR AN OPEN

- Disconnect: Blower Motor Switch C2357b

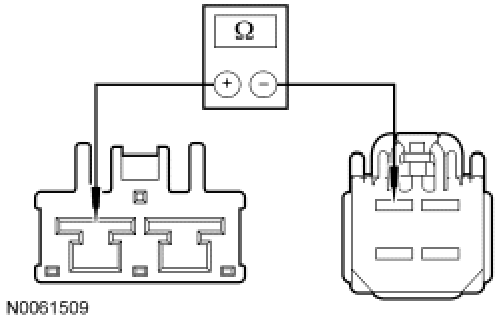

Fig. 68: Measuring Resistance
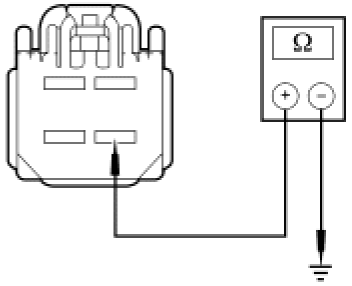
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor switch C2357b-2, circuit CH430 (VT/OG), harness side and blower motor C288-1, circuit (BK/RD), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to L3.

  NO : REPAIR circuit CH430 (VT/OG)/(BK/RD) for an open. TEST the system for normal operation.

L3 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN



N0061510

Fig. 69: Measuring Resistance Between Blower Motor Switch C2357B-3, Circuit GD116 (BK/VT) & Ground
Courtesy of FORD MOTOR CO.

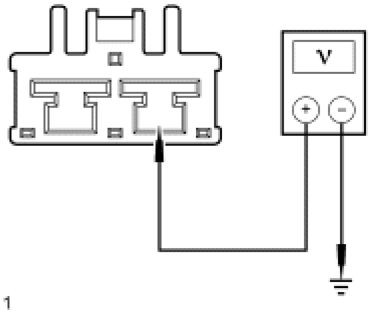
- Measure the resistance between blower motor switch C2357b-3, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new blower motor switch. TEST the system for normal operation.

  NO : REPAIR circuit GD116 (BK/VT) for an open. TEST the system for normal operation.

L4 CHECK A/C BLOWER MOTOR CIRCUIT (BK) FOR VOLTAGE

- Key in ON position.



N0061511

Fig. 70: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between A/C blower motor connector C288-1, circuit (BK), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new blower motor. TEST the system for normal operation.

  NO : Go to L5.

L5 CHECK CIRCUIT CH402 (YE/GN)/(BK) FOR AN OPEN

- Key in OFF position.
- Disconnect: Blower Motor Relay

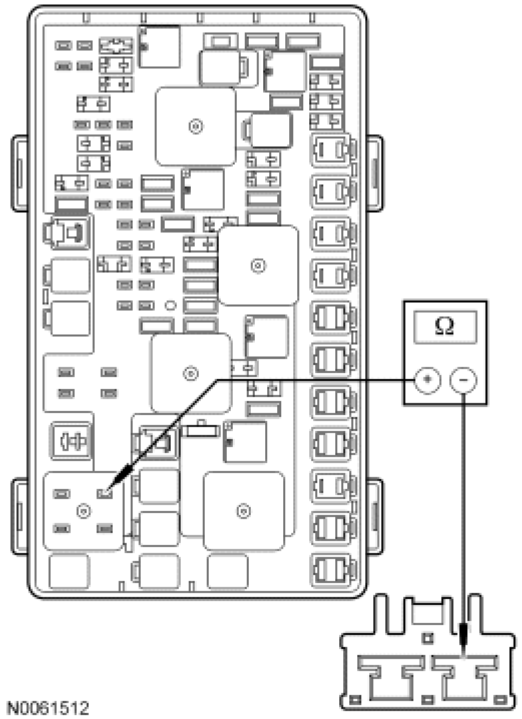


Fig. 71: Measuring Resistance Between Blower Motor Relay Socket, Circuit CH402 (YE/GN) & Blower Motor C288-1
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor relay socket, circuit CH402 (YE/GN) and blower motor C288-1, circuit (BK), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to L6.

  NO : REPAIR circuit CH402 (YE/GN)/(BK) for an open. TEST the system for normal operation.

L6 CHECK THE BLOWER MOTOR RELAY

- Connect: Blower Motor C288
- Key in ON position.

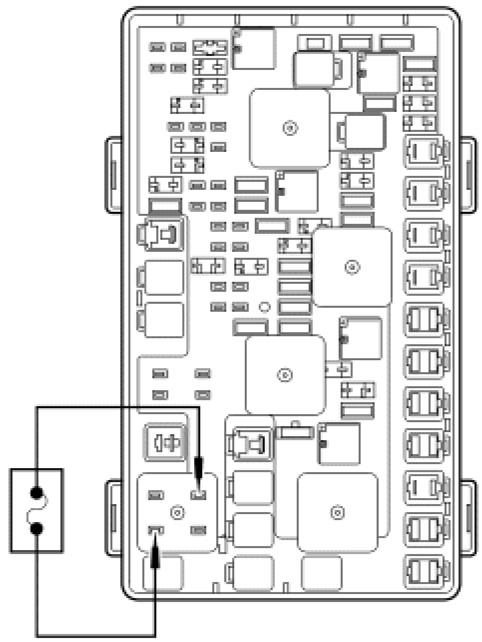

Fig. 72: Connecting Fused Jumper Lead Between Blower Motor Relay Socket, Circuit CH402 (YE/GN)
Courtesy of FORD MOTOR CO.

- Connect a fused jumper lead between blower motor relay socket, circuit CH402 (YE/GN) and circuit CH402 (YE/GN).
- **Does the blower motor operate?**

  YES : Go to L7.

  NO : VERIFY battery junction box (BJB) fuse 66 (40A) is OK. If OK, REPAIR circuit CH402 (YE/GN) for an open. TEST the system for normal operation.

L7 CHECK THE RELAY COIL SUPPLY VOLTAGE

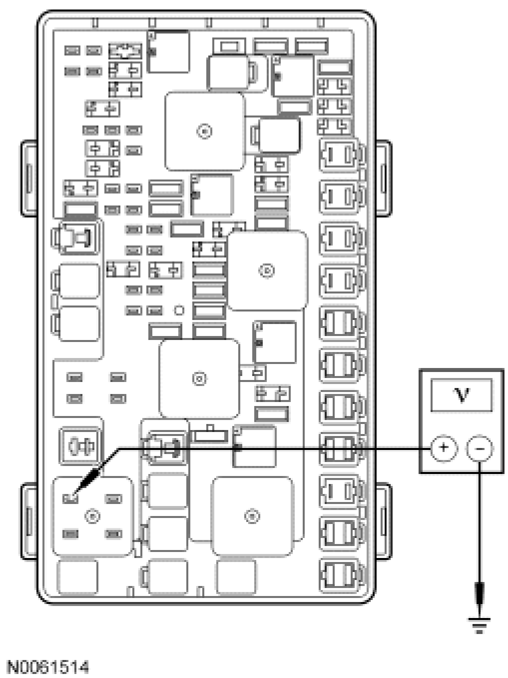

Fig. 73: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between blower motor relay socket, circuit CBP45 (YE) and ground.
- **Is the voltage greater than 10 volts?**

  YES : Go to L8.

  NO : VERIFY smart junction box (SJB) fuse 45 (5A) is OK. If OK, REPAIR circuit CBP45 (YE) for an open. TEST the system for normal operation.

L8 CHECK THE BLOWER MOTOR RELAY

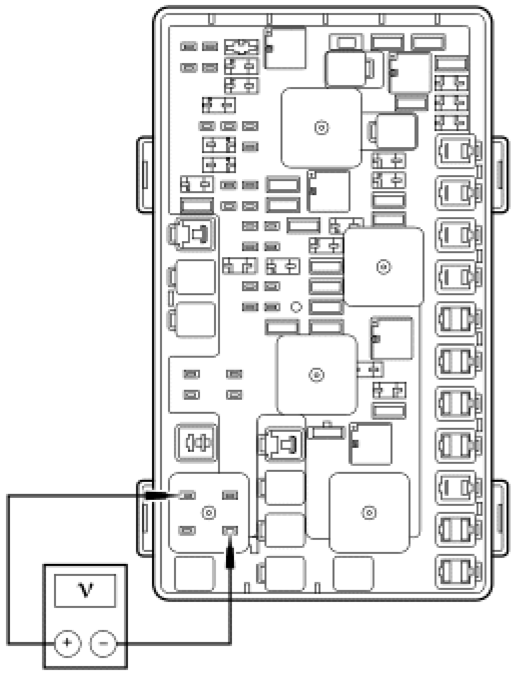

Fig. 74: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between blower motor relay socket, circuit CH123 (VT/GN) and circuit CBP45 (YE).
- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new blower motor relay. TEST the system for normal operation.

  NO : Go to L9.

L9 CHECK CIRCUIT CH123 (VT/GN) FOR AN OPEN

- Key in OFF position.
- Disconnect: HVAC - Module EMTC C2357a

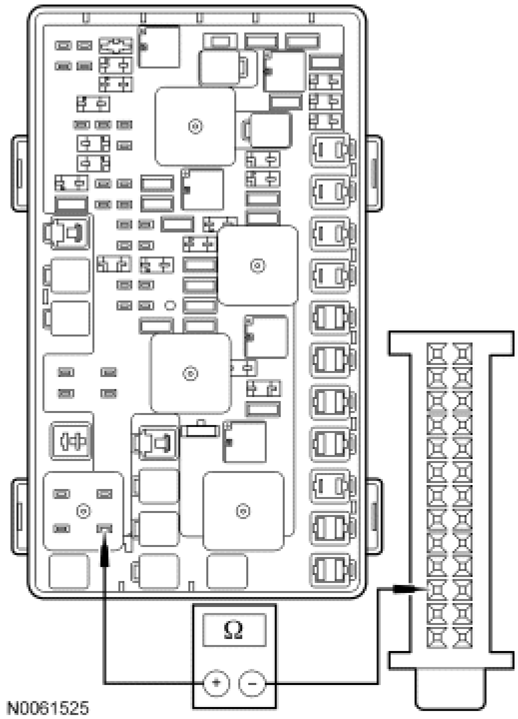

Fig. 75: Measuring Resistance Between & Blower Motor Relay Socket, Circuit CH123 (VT/GN) EATC Module C228A-24
Courtesy of FORD MOTOR CO.

- Measure the resistance between and blower motor relay socket, circuit CH123 (VT/GN) HVAC module - EMTC C2357a-24, circuit CH123 (VT/GN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to L10.

  NO : REPAIR circuit CH123 (VT/GN) for an open. TEST the system for normal operation.

L10 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - EMTC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test M: The Blower Motor Does Not Operate Correctly - EMTC

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Manual Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the blower motor is provided a ground from the blower resistor through circuit CH430 (VT/OG)/(BK/RD). The resistor gets a ground from circuit GD116 (BK/VT) in the lowest blower setting. In MED-LO and MED-HI the resistor gets a ground from the blower motor switch through circuit CH428 (GN/WH)/(RD) or CH429 (GY/BN)/(BN), depending on selected speed. In HI, the blower motor is grounded directly through the blower motor switch from circuit CH430 (VT/OG)/(BK/RD) to circuit GD116 (BK/VT). The blower switch receives its ground from circuit GD116 (BK/VT)/(GN).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Blower motor resistor
- Blower motor switch

PINPOINT TEST M: THE BLOWER MOTOR DOES NOT OPERATE CORRECTLY - EMTC

M1 CHECK THE BLOWER MOTOR OPERATION

- Key in ON position.
- Turn the function selector switch to the PANEL position.
- Select all blower speed positions.
- **Does the blower motor operate in any position?**

  YES : If the blower motor does not operate in HI, go to M2.

  If the blower motor does not operate in MED-HI, go to M3.

  If the blower motor does not operate in MED-LO, go to M4.

  If the blower motor does not operate in LO, go to M5.

  For all other symptoms, go to M8.

  NO : Go to **Pinpoint Test L** .

M2 CHECK CIRCUIT CH430 (VT/OG)/(BK/RD) FOR AN OPEN

- Key in OFF position.
- Disconnect: Blower Motor Switch C2357b
- Disconnect: Blower Motor C288
- Disconnect: Blower Motor Resistor C2185

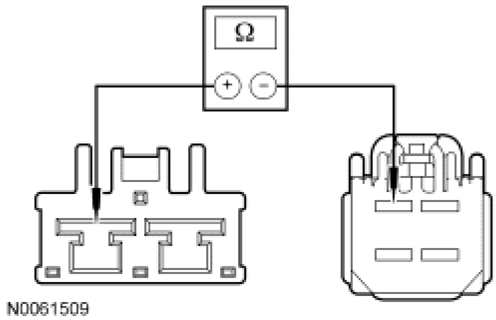

Fig. 76: Measuring Resistance
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor switch C2357b-2, circuit CH430 (VT/OG), harness side and blower motor C288-1, circuit (BK/RD), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to M6.

  NO : REPAIR circuit CH430 (VT/OG)/(BK/RD) for an open. TEST the system for normal operation.

M3 CHECK CIRCUIT CH429 (GY/BN)/(BN) FOR AN OPEN

- Key in OFF position.
- Disconnect: Blower Motor Switch C2357b
- Disconnect: Blower Motor Resistor C2185

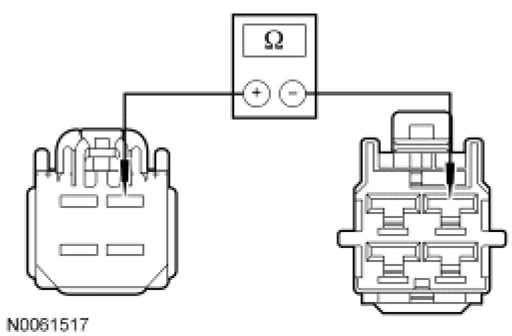

Fig. 77: Measuring Resistance Between Blower Motor Switch C2357B-1 & C2185-2, Circuit CH429 (GY/BN) & Circuit (BN)
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor switch C2357b-1, circuit CH429 (GY/BN), harness side and blower motor resistor C2185-2, circuit (BN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to M6.

  NO : REPAIR circuit CH429 (GY/BN)/(BN) for an open. TEST the system for normal operation.

M4 CHECK CIRCUIT CH428 (GN/WH)/(RD) FOR AN OPEN

- Key in OFF position.
- Disconnect: Blower Motor Switch C2357b
- Disconnect: Blower Motor Resistor C2185

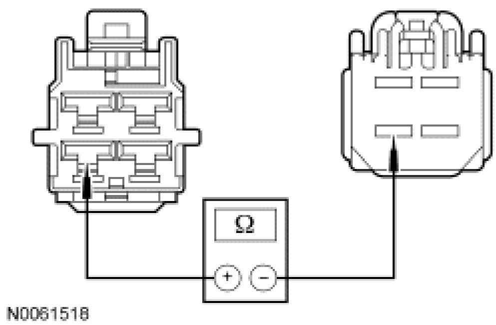

Fig. 78: Measuring Resistance Between Blower Motor Switch C2357B-4 & C2185-3, Circuit CH428 (GN/WH) & Circuit (RD)
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor switch C2357b-4, circuit CH428 (GN/WH), harness side and blower motor resistor C2185-3, circuit (RD), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to M6.

  NO : REPAIR circuit CH428 (GN/WH)/(RD) for an open. TEST the system for normal operation.

M5 CHECK BLOWER MOTOR RESISTOR GROUND CIRCUIT GD116 (BK/VT)/(GN) FOR AN OPEN

- Key in OFF position.
- Disconnect: Blower Motor Resistor C2185

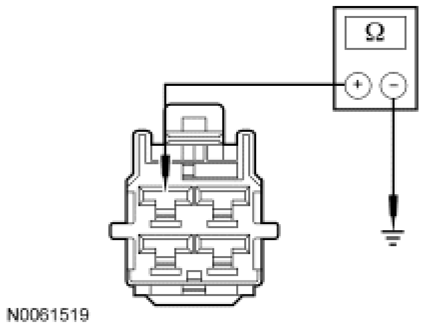

Fig. 79: Measuring Resistance Between Blower Motor Resistor C2185-1, Circuit GD116 (BK/VT)/(GN) & Ground
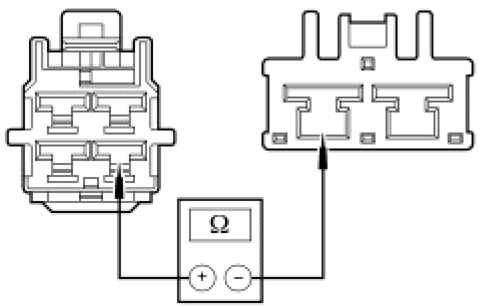
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor resistor C2185-1, circuit GD116 (BK/VT)/(GN), harness side and ground.
- **Is the resistance less than 5 ohms?**

YES : Go to M6.

NO : REPAIR circuit GD116 (BK/VT)/(GN) for an open. TEST the system for normal operation.

M6 CHECK BLOWER MOTOR RESISTOR CIRCUIT (BK/RD) FOR AN OPEN



N0061520

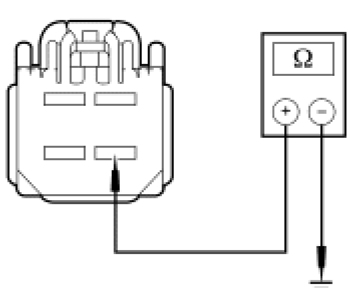
Fig. 80: Measuring Resistance Between Blower Motor Resistor C2185-4, Circuit (BK/RD) & Blower Motor C288-2
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor resistor C2185-4, circuit (BK/RD), harness side and blower motor C288-1, circuit (BK/RD), harness side.
- **Is the resistance less than 5 ohms?**

YES : CARRY OUT the blower motor resistor component test in this service information. If the resistor tests OK, go to M7.

NO : REPAIR circuit (BK/RD) for an open. TEST the system for normal operation.

M7 CHECK BLOWER MOTOR SWITCH CIRCUIT GD116 (BK/VT) FOR AN OPEN



N0061510

Fig. 81: Measuring Resistance Between Blower Motor Switch C2357B-3, Circuit GD116 (BK/VT) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor switch C2357b-3, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

YES : INSTALL a new blower motor switch. TEST the system for normal operation.

NO : REPAIR circuit GD116 (BK/VT) for an open. TEST the system for normal operation.

M8 CHECK CIRCUITS CH430 (VT/OG)/(BK/RD), CH428 (GN/WH)/(RD) AND CH429 (GY/BN)/(BN) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: Blower Motor C288
- Disconnect: Blower Motor Switch C2357b
- Disconnect: Blower Motor Resistor C2185
- Place the blower switch in the lowest setting.

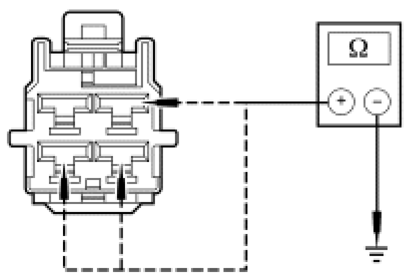


Fig. 82: Measuring Resistance Between Ground & Blower Motor Resistor, C2185-3, C2185-2 & C2185-4
Courtesy of FORD MOTOR CO.

- Measure the resistance between ground and blower motor resistor:
  - C2185-3, circuit (RD), harness side.
  - C2185-2, circuit (BN), harness side.
  - C2185-4, circuit (BK/RD), harness side.
- **Are the resistances greater than 10,000 ohms?**

  YES : Go to M9.

  NO : REPAIR the affected circuit. TEST the system for normal operation.

M9 CHECK THE BLOWER MOTOR CIRCUITS FOR SHORTS TOGETHER

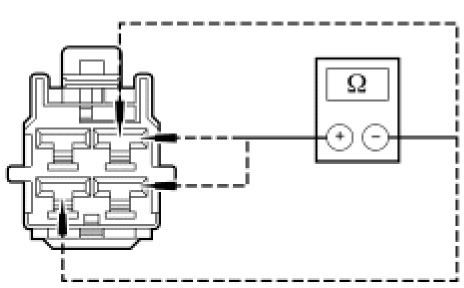

Fig. 83: Measuring Resistance Between Blower Motor Resistor C2185-2, C2185-4 & C2185-4
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor resistor:
  - C2185-3, circuit (RD), harness side and C2185-2, circuit (BN), harness side.
  - C2185-3, circuit (RD), harness side and C2185-4, circuit (BK/RD), harness side.
  - C2185-2, circuit (BN), harness side and C2185-4, circuit (BK/RD), harness side.
- **Are the resistances greater than 10,000 ohms?**

  YES : INSTALL a new blower motor switch. TEST the system for normal operation.

  NO : REPAIR the affected circuits. TEST the system for normal operation.

Pinpoint Test N: The Blower Motor is Inoperative - DATC

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the blower motor relay coil receives a ground from the HVAC module - dual automatic temperature control (DATC) through circuit CH123 (VT/GN). The coil receives ignition voltage through circuit CBP45 (YE). Voltage is supplied to the relay switch contact through circuit CH402 (YE/GN). When the relay coil is energized, voltage is delivered to the blower motor control module through circuit CH402 (YE/GN)/(BK). Ground for the blower motor speed control is provided by circuit GD116 (BK/VT)/(BK/RD). The HVAC module - DATC provides a blower target speed signal to the blower motor speed control through circuit VH101 (WH/VT)/(RD) to control the blower speed. The actual blower speed signal is provided to the HVAC module - DATC through circuit CH102 (YE/BU)/(BN) from the blower motor speed control. Ground for the motor is provided through circuit (BU) from the blower motor speed control.

This pinpoint test is intended to diagnose the following:

- Fuse(s)
- Wiring, terminals or connectors
- Blower motor relay
- Blower motor speed control
- HVAC module - DATC
- Blower motor

PINPOINT TEST N: THE BLOWER MOTOR IS INOPERATIVE - DATC

CAUTION: It is important to install relays in their correct position in the battery junction box (BJB). Installing a relay incorrectly may cause wiring shorts or damage to modules. While carrying out diagnostics on BJB relays, have only one BJB relay removed at a time. Failure to follow these instructions may result in damage to the vehicle circuitry or to control modules.

N1 VERIFY THE BLOWER MOTOR OPERATION

- Key in ON position.
- Press the PANEL button on the HVAC module - DATC. Adjust the blower motor setting to LO and then to HI.
- **Is the blower motor inoperative in all settings?**

  YES : Go to N2.

  NO : Go to **Pinpoint Test O** .

N2 CHECK THE BLOWER MOTOR SPEED TARGET POSITION (BLWR_T#) HVAC PID

- Enter the following diagnostic mode on the diagnostic tool: BLWR_T# HVAC PID
- Observe the BLWR_T# HVAC PID while increasing and decreasing the blower speed.
- **Does the BLWR_T# HVAC PID reading change in all speeds between 0% and 100%?**

  YES : Go to N3.

  NO : Go to N16.

N3 CHECK FOR VOLTAGE TO THE BLOWER MOTOR

- Key in OFF position.
- Disconnect: Blower Motor C288
- Key in ON position.

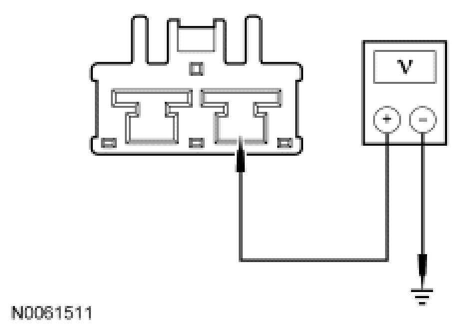

Fig. 84: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and blower motor C288-2, circuit (BK), harness side.
- **Is the voltage greater than 10 volts?**

  YES : Go to N9.

  NO : CARRY OUT the blower motor relay component test. Refer to appropriate COMPONENT TESTING article. If the relay tests OK, go to N4.

N4 CHECK THE RELAY SWITCH POWER CIRCUIT FOR AN OPEN

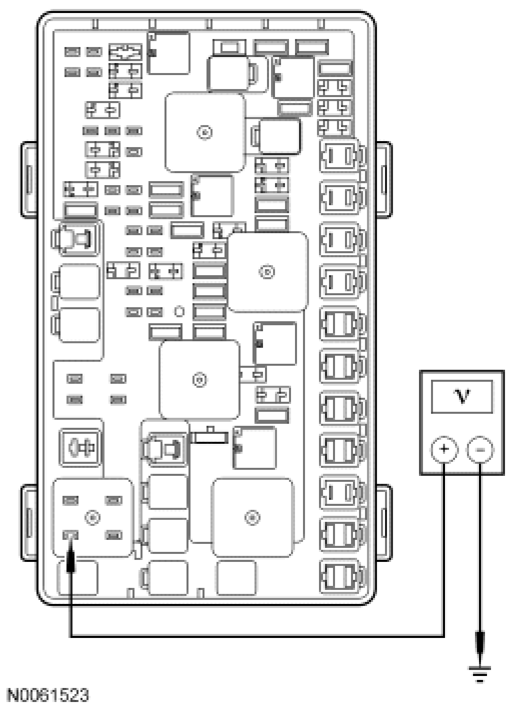

Fig. 85: Measuring Voltage Between Ground & Blower Motor Relay Socket, Circuit CH402 (YE/GN)
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and blower motor relay socket, circuit CH402 (YE/GN).
- **Is the voltage greater than 10 volts?**

  YES : Go to N5.

  NO : VERIFY battery junction box (BJB) fuse 66 (40A) is OK. If OK, REPAIR circuit CH402 (YE/GN) for an open. TEST the system for normal operation.

N5 CHECK THE RELAY COIL SUPPLY VOLTAGE

- Key in OFF position.
- Disconnect: Blower Motor Relay
- Key in ON position.

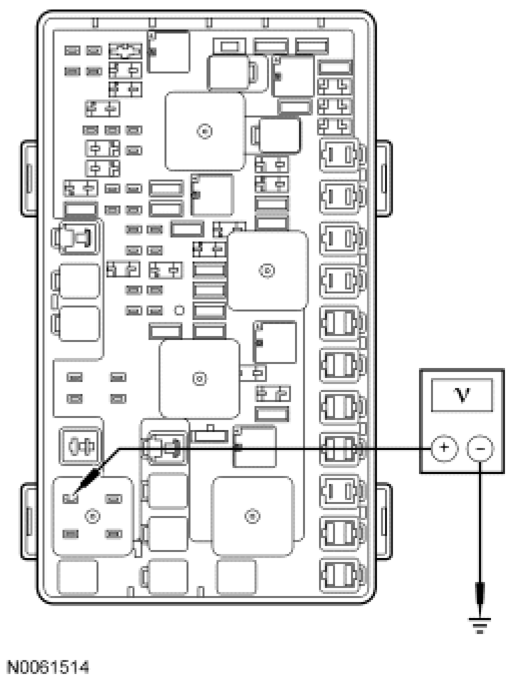

Fig. 86: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and blower motor relay socket, circuit CBP45 (YE).
- **Is the voltage greater than 10 volts?**

  YES : Go to N6.

  NO : VERIFY smart junction box (SJB) fuse 45 (5A) is OK. If OK, REPAIR circuit CBP45 (YE) for an open. TEST the system for normal operation.

N6 CHECK THE HVAC - DATC MODULE OUTPUT

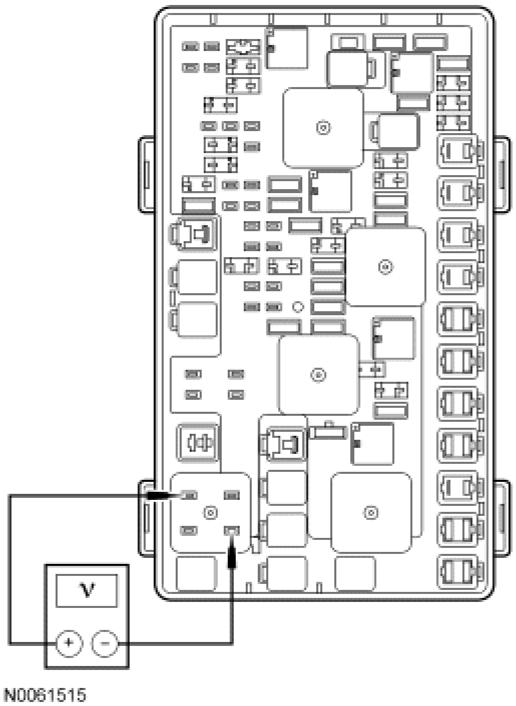

Fig. 87: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between blower motor relay socket, circuit CBP45 (YE) and blower motor relay socket, circuit CH123 (VT/GN).
- **Is the voltage greater than 10 volts?**

  YES : REPAIR circuit CH402 (YE/GN)/(BK) for an open. TEST the system for normal operation.

  NO : Go to N7.

N7 CHECK CIRCUIT CH123 (VT/GN) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a
- Key in ON position.

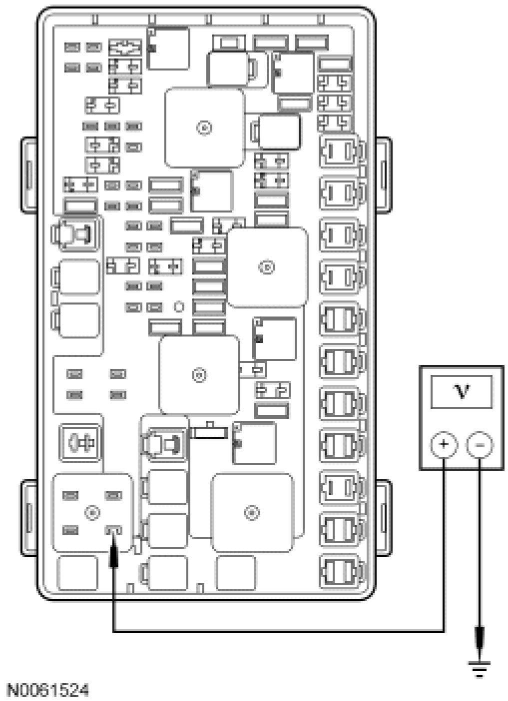

Fig. 88: Measuring Voltage Between Ground & Blower Motor Relay Socket, Circuit CH123 (VT/GN) & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and blower motor relay socket, circuit CH123 (VT/GN) and ground.
- **Is any voltage present?**

  YES : REPAIR circuit CH123 (VT/GN) for a short to voltage. TEST the system for normal operation.

  NO : Go to N8.

N8 CHECK CIRCUIT CH123 (VT/GN) FOR AN OPEN

- Key in OFF position.

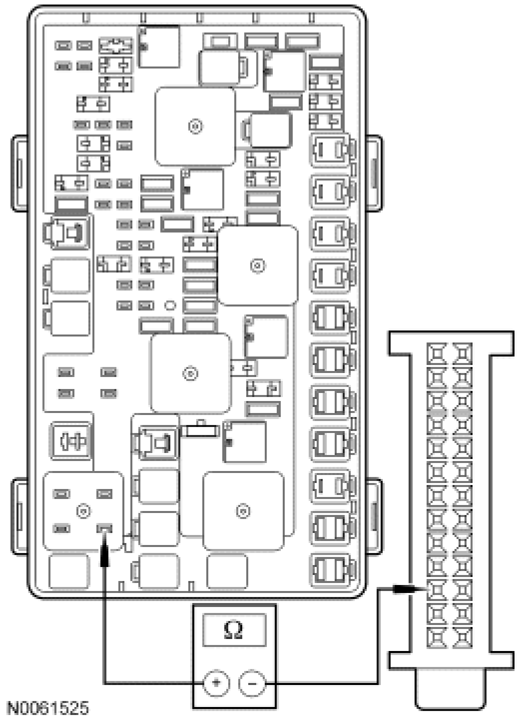

Fig. 89: Measuring Resistance Between & Blower Motor Relay Socket, Circuit CH123 (VT/GN) EATC Module C228A-24
Courtesy of FORD MOTOR CO.

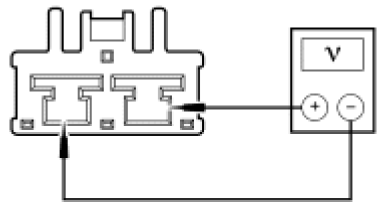
- Measure the resistance between and blower motor relay socket, circuit CH123 (VT/GN) HVAC module - DATC C228a-24, circuit CH123 (VT/GN), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to N16.

  NO : REPAIR circuit CH123 (VT/GN) for an open. TEST the system for normal operation.

N9 CHECK FOR GROUND TO THE BLOWER MOTOR

- Key in OFF position.
- Disconnect: Blower Motor C288
- Key in ON position.
- Select the highest blower speed setting.



N0061602

Fig. 90: Measuring Voltage Between Blower Motor C288-1 & C288-2, Circuit (BK) & Circuit (BU)
Courtesy of FORD MOTOR CO.

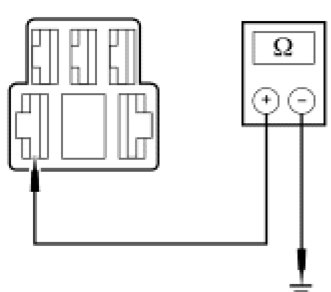
- Measure the voltage between blower motor C288-2, circuit (BK), harness side and blower motor C288-1, circuit (BU), harness side.
- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new blower motor. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : Go to N10.

N10 CHECK CIRCUIT GD116 (BK/VT)/(BK/RD) FOR AN OPEN

- Key in OFF position.
- Disconnect: Blower Motor Speed Control C271



N0061526

Fig. 91: Measuring Resistance Between Blower Motor Speed Control Module C271-4, Circuit (BK/RD) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor speed control C271-4, circuit (BK/RD), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to N11.

  NO : REPAIR circuit GD116 (BK/VT)/(BK/RD) for an open. TEST the system for normal operation.

N11 CHECK CIRCUITS VH101 (WH/VT)/(RD) AND CH102 (YE/BU)/(BN) FOR A SHORT TO

GROUND

- Disconnect: HVAC Module - DATC C228b

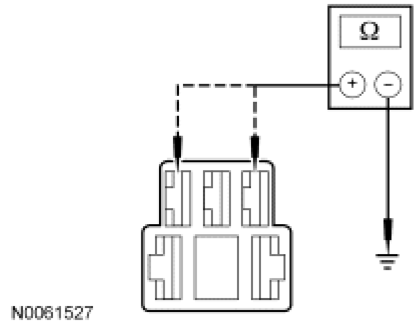


Fig. 92: Measuring Resistance Between Blower Motor Speed Control Module C271-1 & C271-3
Courtesy of FORD MOTOR CO.

- Measure the resistance between ground and:
  - blower motor speed control C271-1, circuit (RD), harness side.
  - blower motor speed control C271-3, circuit (BN), harness side.
- **Are the resistances greater than 10,000 ohms?**

  YES : Go to N12.

  NO : REPAIR circuit VH101 (WH/VT)/(RD) or CH102 (YE/BU)/(BN) for a short to ground. TEST the system for normal operation.

N12 CHECK CIRCUITS (BU), VH101 (WH/VT)/(RD) AND CH102 (YE/BU)/(BN) FOR A SHORT TO VOLTAGE

- Key in ON position.

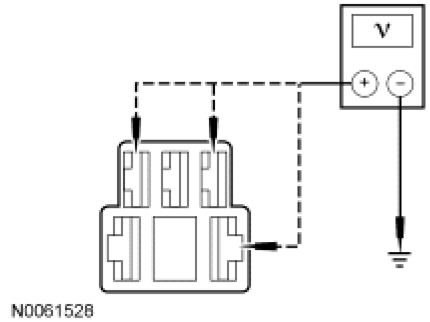

Fig. 93: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and:
  - blower motor speed control C271-1, circuit (RD), harness side.
  - blower motor speed control C271-3, circuit (BN), harness side.

- blower motor speed control C271-5, circuit (BU), harness side.

- **Is any voltage present?**

  YES : REPAIR circuit VH101 (WH/VT)/(RD), CH102 (YE/BU)/(BN) or (BU) for a short to voltage. TEST the system for normal operation.

  NO : Go to N13.

N13 CHECK CIRCUITS VH101 (WH/VT)/(RD) AND CH102 (YE/BU)/(BN) FOR A SHORT TOGETHER

- Key in OFF position.

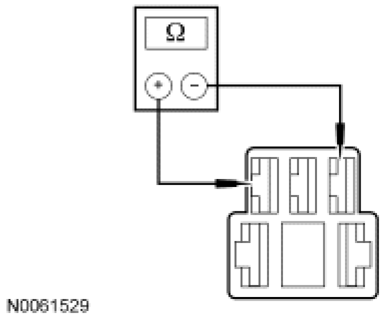

Fig. 94: Measuring Resistance Between Blower Motor Speed Control Module C271-1 & C271-3, Circuit (RD) & Circuit (BN)
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor speed control C271-1, circuit (RD), harness side and blower motor speed control module C271-3, circuit (BN), harness side.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to N14.

  NO : REPAIR circuit VH101 (WH/VT)/(RD) or CH102 (YE/BU)/(BN) for a short together. TEST the system for normal operation.

N14 CHECK CIRCUIT (BU) FOR AN OPEN

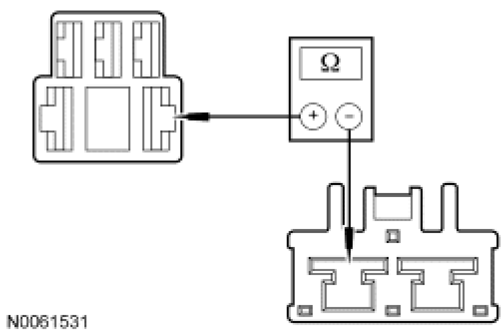

Fig. 95: Measuring Resistance Between Blower Motor C288-2 & C271-5, Circuit (BU)
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor C288-1, circuit (BU), harness side and blower motor speed control C271-5, circuit (BU), harness side.

- **Is the resistance less than 5 ohms?**

  YES : Go to N15.

  NO : REPAIR circuit (BU) for an open. TEST the system for normal operation.

N15 CHECK CIRCUITS VH101 (WH/VT)/(RD) AND CH102 (YE/BU)/(BN) FOR AN OPEN

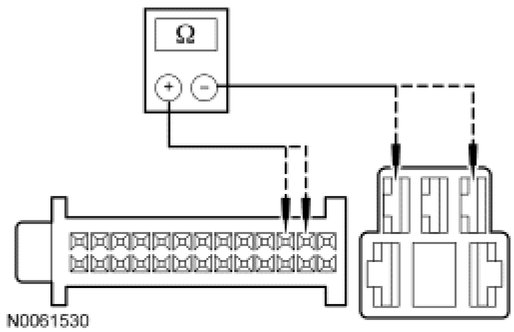

Fig. 96: Measuring Resistance Between Blower Motor Speed Control Module C271-1 & C271-3, EATC Module C228B-16 & C228B-15
Courtesy of FORD MOTOR CO.

- Measure the resistance between:
  - blower motor speed control C271-1, circuit (RD), harness side and HVAC module - DATC C228b-16, circuit VH101 (WH/VT), harness side.
  - blower motor speed control C271-3, circuit (BN), harness side and HVAC module - DATC C228b-15, circuit CH102 (YE/BU), harness side.
- **Are the resistances less than 5 ohms?**

  YES : INSTALL a new blower motor speed control. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation. If the condition returns, INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : REPAIR circuit VH101 (WH/VT)/(RD) or CH102 (YE/BU)/(BN) for an open. TEST the system for normal operation.

N16 CHECK THE MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.
- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Pinpoint Test O: The Blower Motor Does Not Operate Correctly - DATC

Refer to appropriate SYSTEM WIRING DIAGRAMS article, Automatic Climate Control System for schematic and connector information.

Normal Operation

Under normal operation, the blower motor relay coil receives a ground from the HVAC module - dual automatic temperature control (DATC) through circuit CH123 (VT/GN). The coil receives ignition voltage through circuit CBP45 (YE). Voltage is supplied to the relay switch contact through circuit CH402 (YE/GN)/(BK). When the relay coil is energized, voltage is delivered to the blower motor speed control through circuit CH402 (YE/GN)/(BK). Ground for the blower motor speed control is provided by circuit GD116 (BK/VT)/(BK/RD). The HVAC module - DATC provides a blower target speed signal to the blower motor speed control through circuit VH101 (WH/VT)/(RD) to control the blower speed. The actual blower speed signal is provided to the HVAC module - DATC through circuit CH102 (YE/BU)/(BN) from the blower motor speed control. Ground for the motor is provided through circuit (BU) from the blower motor speed control.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Blower motor speed control
- Blower motor relay
- HVAC module - DATC

PINPOINT TEST O: THE BLOWER MOTOR DOES NOT OPERATE CORRECTLY - HVAC - DATC

> **CAUTION: It is important to install relays in their correct position in the battery junction box (BJB). Installing a relay incorrectly may cause wiring shorts or damage to modules. While carrying out diagnostics on BJB relays, have only one BJB relay removed at a time. Failure to follow these instructions may result in damage to the vehicle circuitry or to control modules.**

O1 VERIFY THE BLOWER MOTOR OPERATION

- Key in ON position.
- Press the panel button on the HVAC module - DATC. Adjust the blower motor setting to LO and then to HI.
- **Does the blower motor operate at any setting?**

  YES : Go to O2.

  NO : Go to **Pinpoint Test N** .

O2 CHECK THE BLOWER MOTOR SPEED TARGET POSITION (BLWR_T#) HVAC PID

- Enter the following diagnostic mode on the diagnostic tool: BLWR_T# HVAC PID
- Observe the BLWR_T# HVAC PID while increasing and decreasing the blower speed.
- **Does the BLWR_T# HVAC PID reading change in all speeds between 0% and 100%?**

YES : If the blower motor is always on, CARRY OUT the blower motor relay component test. Refer to appropriate COMPONENT TESTING article. If the relay tests OK, go to O7.

All other symptoms, go to O3.

NO : Go to O9.

O3 CHECK CIRCUITS (BU), VH101 (WH/VT)/(RD) AND CH102 (YE/BU)/(BN) FOR A SHORT TO VOLTAGE

- Disconnect: HVAC Module - DATC C228a
- Disconnect: Blower Motor Speed Control C271
- Disconnect: Blower Motor C288
- Key in ON position.

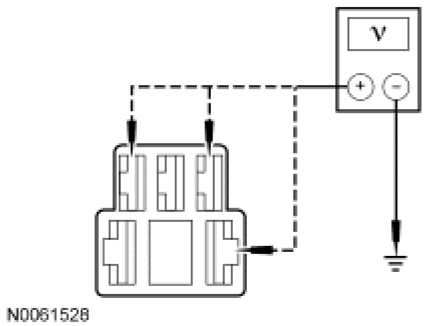

Fig. 97: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and:
  - blower motor speed control C271-1, circuit (RD), harness side.
  - blower motor speed control C271-3, circuit (BN), harness side.
  - blower motor speed control C271-5, circuit (BU), harness side.
- **Is any voltage present?**

  YES : REPAIR circuit VH101 (WH/VT)/(RD), CH102 (YE/BU)/(BN) or (BU) for a short to voltage. TEST the system for normal operation.

  NO : Go to O4.

O4 CHECK CIRCUITS (BU) AND CH102 (YE/BU)/(BN) FOR A SHORT TO GROUND

- Key in OFF position.

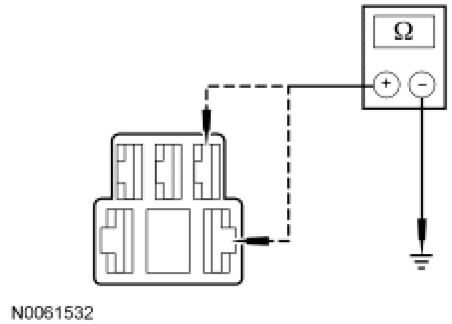

Fig. 98: Measuring Resistance Between Blower Motor Speed Control Module C271-5 & C271-3
Courtesy of FORD MOTOR CO.

- Measure the resistance between ground and:
  - blower motor speed control C271-5, circuit (BU), harness side.
  - blower motor speed control C271-3, circuit (BN), harness side.
- **Are the resistances greater than 10,000 ohms?**

  YES : Go to O5.

  NO : REPAIR circuit (BU) or CH102 (YE/BU)/(BN) for a short to ground. TEST the system for normal operation.

O5 CHECK CIRCUITS VH101 (WH/VT)/(RD) AND CH102 (YE/BU)/(BN) FOR A SHORT TOGETHER

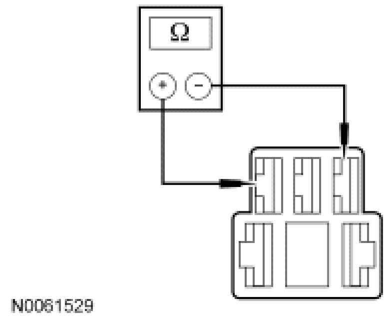

Fig. 99: Measuring Resistance Between Blower Motor Speed Control Module C271-1 & C271-3, Circuit (RD) & Circuit (BN)
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor speed control C271-1, circuit (RD), harness side and blower motor speed control C271-3, circuit (BN), harness side.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to O6.

  NO : REPAIR circuit VH101 (WH/VT)/(RD) or CH102 (YE/BU)/(BN) for a short together. TEST the system for normal operation.

O6 CHECK CIRCUIT CH102 (YE/BU)/(BN) FOR AN OPEN

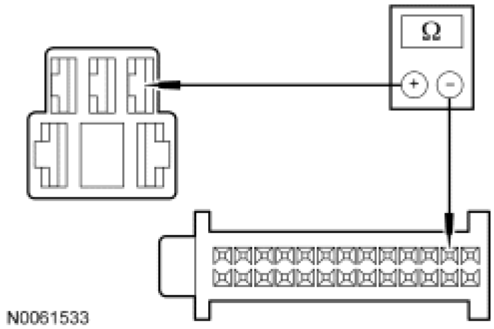

Fig. 100: Measuring Resistance Between Blower Motor Speed Control Module C271-3 & C228B-15, Circuit (BN) & CH102 (YE/BU)
Courtesy of FORD MOTOR CO.

- Measure the resistance between blower motor speed control C271-3, circuit (BN), harness side and HVAC module - DATC C228b-15, circuit CH102 (YE/BU), harness side.
- **Are the resistances less than 5 ohms?**

  YES : INSTALL a new blower motor speed control. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation. If the condition returns, INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

  NO : REPAIR circuit CH102 (YE/BU)/(BN) for an open. TEST the system for normal operation.

O7 CHECK CIRCUIT CH402 (YE/GN)/(BK) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: Blower Motor Relay
- Disconnect: Blower Motor C288
- Key in ON position.

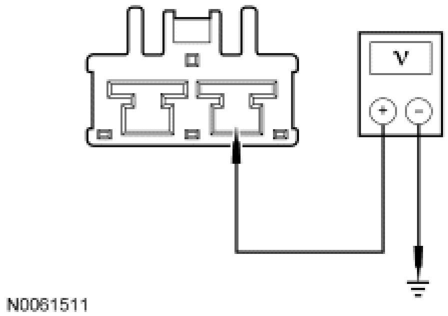

Fig. 101: Measuring Voltage
Courtesy of FORD MOTOR CO.

- Measure the voltage between ground and blower motor C288-2, circuit (BK), harness side.
- **Is any voltage present?**

  YES : REPAIR circuit CH402 (YE/GN)/(BK) for a short to voltage. TEST the system for normal operation.

NO : Go to O8.

O8 CHECK CIRCUIT CH123 (VT/GN) FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: HVAC Module - DATC C228a

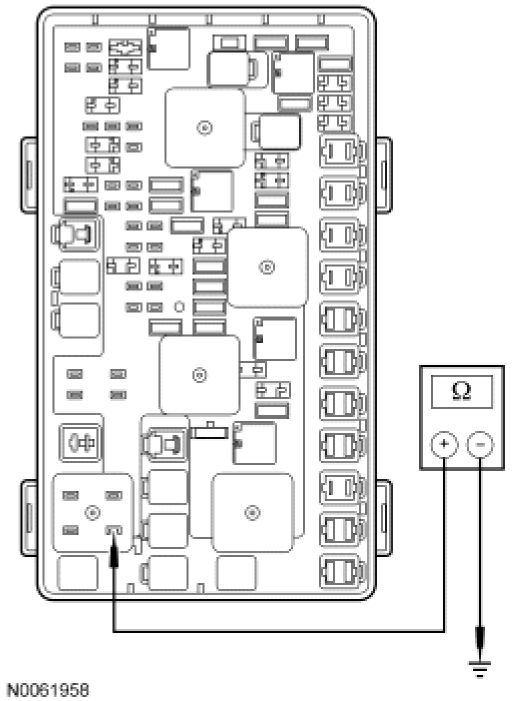

Fig. 102: Measuring Resistance Between Ground & Blower Motor Relay Socket, Circuit CH123 (VT/GN) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between ground and blower motor relay socket, circuit CH123 (VT/GN) and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to O9.

  NO : REPAIR circuit CH123 (VT/GN) for a short to ground. TEST the system for normal operation.

O9 CHECK MODULE CONNECTION

- Carry out the HVAC Module Cold Boot Process.
- Carry out the HVAC Module - Dual Automatic Temperature Control (DATC) On-Demand Self Test.
- Operate the system.
- **Does the concern return?**

  YES : INSTALL a new HVAC module - DATC. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation.

NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Component Tests

Temperature Sensor - Evaporator Discharge

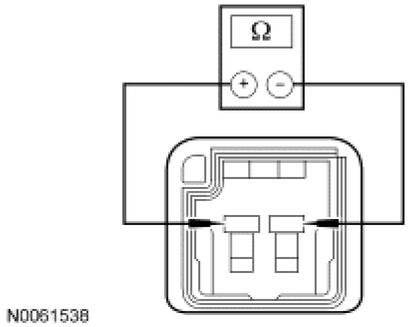

Fig. 103: Temperature Sensor - Evaporator Discharge
Courtesy of FORD MOTOR CO.

Ambient Temperature	Approximate Resistance
-10°C (14°F)	8,255 ohms
-5°C (23°F)	6,298 ohms
0°C (32°F)	4,852 ohms
5°C (41°F)	3,773 ohms
10°C (50°F)	2,961 ohms
15°C (59°F)	2,343 ohms
20°C (68°F)	1,869 ohms
25°C (77°F)	1,502 ohms
30°C (86°F)	1,216 ohms
35°C (95°F)	991 ohms
40°C (104°F)	813 ohms
45°C (113°F)	671 ohms
50°C (122°F)	557 ohms
55°C (131°F)	466 ohms
60°C (140°F)	391 ohms

In-Vehicle Temperature Sensor

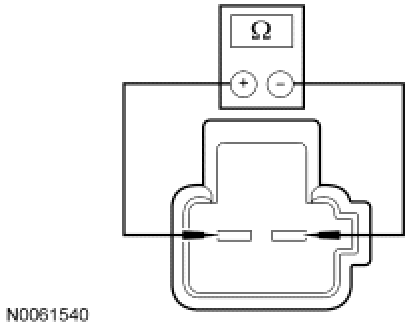

Fig. 104: In-Vehicle Temperature Sensor
Courtesy of FORD MOTOR CO.

Ambient Temperature	Approximate Resistance
-10°C (14°F)	9,683 ohms
-5°C (23°F)	7,345 ohms
0°C (32°F)	5,628 ohms
5°C (41°F)	4,354 ohms
10°C (50°F)	3,399 ohms
15°C (59°F)	2,677 ohms
20°C (68°F)	2,125 ohms
25°C (77°F)	1,700 ohms
30°C (86°F)	1,370 ohms
35°C (95°F)	1,112 ohms
40°C (104°F)	909 ohms
45°C (113°F)	747 ohms
50°C (122°F)	618 ohms
55°C (131°F)	514 ohms
60°C (140°F)	430 ohms

Ambient Temperature Sensor

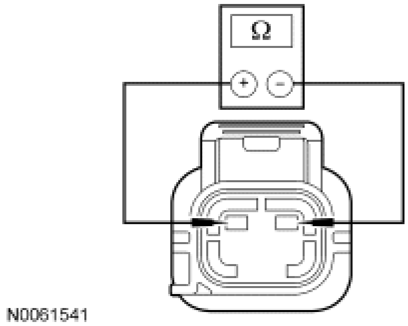

Fig. 105: Ambient Temperature Sensor
Courtesy of FORD MOTOR CO.

Ambient Temperature	Approximate Resistance
-50°C (-58°F)	19,336 ohms
-40°C (-40°F)	10,732 ohms
-30°C (-22°F)	6,177 ohms
-20°C (-4°F)	3,672 ohms
-10°C (14°F)	2,248 ohms
0°C (32°F)	1,413 ohms
10°C (50°F)	915 ohms
20°C (68°F)	608 ohms
25°C (77°F)	500 ohms
30°C (86°F)	413 ohms
40°C (104°F)	287 ohms
50°C (122°F)	203 ohms
60°C (140°F)	147 ohms
70°C (158°F)	108 ohms
80°C (176°F)	80 ohms
90°C (194°F)	61 ohms
100°C (212°F)	47 ohms
110°C (231°F)	36 ohms
120°C (248°F)	28 ohms

Defrost/Panel/Floor Door and Blend Door Mode Actuator

Blower Motor Switch Position	Continuity Between Pins
LOW	None
MED-LO	3 and 4
MED-HI	3 and 1
HI	3 and 2

Heater Core

NOTE: **Testing of returned heater cores reveals that a large percentage of heater cores are good and did not require the installation of a new heater core. If a heater core leak is suspected, the heater core must be tested by following the plugged heater core component test before the heater core**

pressure test. Carry out a system inspection by checking the heater system thoroughly as follows:

1. Inspect for evidence of coolant leakage at the heater hose to heater core attachments. A coolant leak in the heater hose could follow the heater core tube to the heater core and appear as a leak in the heater core.

NOTE: Spring-type clamps are installed as original equipment. Installation and overtightening of non-specified clamps can cause leakage at the heater hose connection and damage the heater core.

2. Check the integrity of the heater hose clamps.

Heater Core - Plugged

1. Check to see that the engine coolant is at the correct level.
2. Start the engine and turn on the heater.
3. When the engine coolant reaches operating temperature, feel the heater core inlet and outlet hoses to see if they are hot.
4. If the outlet only is not hot:
   - the heater core may have an air pocket.
   - the heater core may be plugged.
5. If the inlet only is not hot:
   - the thermostat may not be working correctly.

Heater Core - Pressure Test

Use the Pressure Test Kit to carry out the pressure test.

NOTE: Due to space limitations, a bench test may be necessary for pressure testing.

1. Drain the coolant from the cooling system.
2. Disconnect the heater hoses from the heater core.
3. Install a short piece of heater hose, approximately 101 mm (4 in) long on each heater core tube.
4. Fill the heater core and heater hoses with water and install the 2 plugs BT-7422-B and the adapter BT-7422-A from the Pressure Test Kit. Secure the heater hoses, plug and adapter with hose clamps.

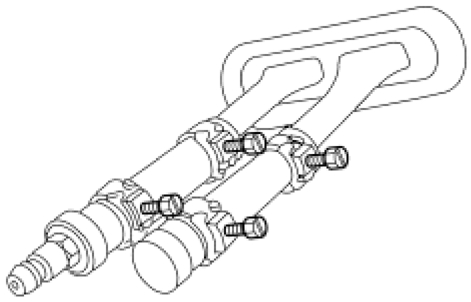

Fig. 109: Heater Core With Adapter & Plug
Courtesy of FORD MOTOR CO.

5. Attach the pump and gauge assembly from the Pressure Test Kit to the adapter.
6. Close the bleed valve at the base of the gauge. Pump 138 kPa (20 psi) of air pressure into the heater core.
7. Observe the pressure gauge for a minimum of 3 minutes.
8. If the pressure drops, check the heater hose connections to the core tubes for leaks. If the heater hoses do not leak, remove the heater core from the vehicle and carry out the bench test.

Heater Core - Bench Test

1. Remove the heater core from the vehicle.
2. Drain all of the coolant from the heater core.
3. Connect the 101 mm (4 in) test heater hoses with plug and adapter to the core tubes. Then connect the Pressure Test Kit to the adapter.
4. Apply 138 kPa (20 psi) of air pressure to the heater core. Submerge the heater core in water.
5. If a leak is observed, install a new heater core.

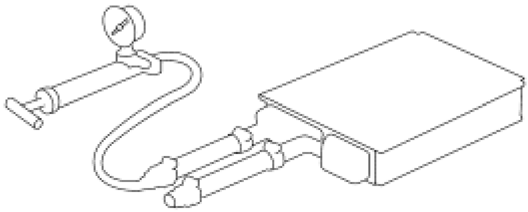

Fig. 110: Bench Testing Heater Core
Courtesy of FORD MOTOR CO.

Evaporator/Condenser Core - On-Vehicle Leak Test

1. Recover the refrigerant. Refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.

NOTE: For evaporator core testing only.

2. Remove the thermostatic expansion valve (TXV) from the evaporator core.

NOTE: For condenser core testing only.

3. Disconnect the condenser-to-evaporator line spring lock coupling and the compressor-to-condenser discharge line middle fitting.

NOTE: For evaporator core testing only.

4. Connect the appropriate test fitting to the evaporator core TXV connection.

NOTE: For condenser core testing only.

5. Connect the appropriate test fittings to the condenser-to-evaporator line spring lock coupling, condenser side and the compressor-to-condenser discharge line middle fitting, condenser side.

NOTE: The automatic shut-off valves on some gauge set hoses do not open when connected to the test fittings. If available, use hoses without shut-off valves. If hoses with shut-off valves are used, make sure the valve opens when attached to the test fittings or install an adapter that will activate the valve. The test is not valid if the shut-off valve does not open.

6. Connect the red and blue hoses from the R-134a Manifold Gauge Set to the test fittings on the evaporator core or condenser core. Connect the yellow hose to a known good vacuum pump.
7. Open both gauge set valves and start the vacuum pump. Allow the vacuum pump to operate for a minimum of 45 minutes after the gauge set low pressure gauge indicates 101 kPa (30 in-Hg). The 45-minute evacuation is necessary to remove any refrigerant from oil left in the evaporator core or condenser core. If the refrigerant is not completely removed from the oil, outgassing will degrade the vacuum and appear as a refrigerant leak.
8. If the low pressure gauge reading will not drop to 101 kPa (30 in-Hg) when the valves on the gauge and manifold set are open and the vacuum pump is operating, close the gauge set valves and observe the low pressure gauge. If the pressure rises rapidly to zero, a large leak is indicated. Recheck the test fitting connections and gauge set connections before installing a new evaporator core or condenser core.
9. After evacuating for 45 minutes, close the gauge set valves and stop the vacuum pump. Observe the low pressure gauge; it should remain at the 101 kPa (30 in-Hg) mark.
   - If the low pressure gauge reading rises 34 or more kPa (10 or more in-Hg) of vacuum from the 101 kPa (30 in-Hg) position in 10 minutes, a leak is indicated.
   - If a very small leak is suspected, wait 30 minutes and observe the vacuum gauge.
   - If a small amount of vacuum is lost, operate the vacuum pump with gauge valves open for an additional 30 minutes to remove any remaining refrigerant from the oil in the evaporator core or condenser core. Then recheck for loss of vacuum.

- If a very small leak is suspected, allow the system to sit overnight with vacuum applied and check for vacuum loss.

NOTE: For evaporator core testing only.

10. If the evaporator core does leak, as verified by the above procedure, install a new evaporator core.

NOTE: For condenser core testing only.

11. If the test indicates a leak, as verified by the above procedure, inspect and install new O-rings at the condenser line fittings as necessary. Retest the system. If the test again indicates a leak, install a new condenser core.

A/C Compressor - External Leak Test

1. Disconnect the evaporator outlet line spring lock coupling and the compressor-to-condenser discharge line middle fitting.
2. Connect the appropriate test fittings to the evaporator outlet line spring lock coupling, compressor side and the compressor-to-condenser discharge line middle fitting, compressor side.
3. Connect the high and low pressure lines of a manifold gauge set or a refrigerant recovery/recycling station such as the R-134a A/C service center to the corresponding fittings on the A/C Pressure Test Adapter.
4. Attach the center hose of a manifold gauge set to a refrigerant container standing in an upright position.
5. Open the low pressure gauge valve, the high pressure gauge valve and the valve on the refrigerant container to allow the refrigerant vapor to flow into the A/C compressor.
6. Using the Refrigerant Leak Detector, check for external compressor leaks.
7. If an external leak is found, inspect and install new as necessary the O-rings at the compressor line fittings. Retest the system. If the test again indicates a leak, install a new compressor.
8. When the leak test is complete, recover the refrigerant from the compressor.

GENERAL PROCEDURES

REFRIGERANT SYSTEM TESTS

Special Tools

Illustration	Tool Name	Tool Number
	R-134a Refrigerant Center	176-00002 or equivalent

 ST2739A	R-134a Refrigerant Center	023-00174 or equivalent
 ST2670-A	R-134a Manifold Gauge Set	023-00047 or equivalent

Procedure 1 - Ambient Temperature at or Below 38°C (100°F)

NOTE: **The system performance can be evaluated and diagnosed by analysis of the compressor suction and discharge pressures. The following procedure is used to determine if the system is operating at normal pressures.**

NOTE: **The procedure varies depending on the ambient (shop) temperature. If the ambient temperature is 38°C (100°F) or lower, follow Procedure 1. If the ambient temperature is over 38°C (100°F), follow Procedure 2.**

NOTE: **If the A/C compressor cycles at any time during this test, refer to the diagnostic table.**

1. Drive the vehicle or run the engine until it reaches normal operating temperature.
2. Connect a manifold gauge set or refrigerant service center with high-pressure and low-pressure gauges to the refrigerant system.
3. Set the climate controls.
    - If equipped with manual climate control, set the A/C controls for normal A/C-PANEL mode, full COOL temperature, FRESH air, HI blower. If the vehicle has a fresh air/recirc button, set it to FRESH. If the vehicle has an A/C switch or compressor on switch, set it to A/C ON.
    - If equipped with electronic automatic temperature control (EATC), set temperature to 15°C (60°F) (lowest possible temp setting) with the dual function disabled (if equipped). Manually set blower on HI. If the vehicle has a fresh air/recirc button, set it to FRESH. If the vehicle has an A/C switch or compressor on switch, set it to A/C ON.
4. Open all vehicle windows and leave the hood open for the test. Open the rear doors.
5. Confirm the compressor clutch is engaged and the engine cooling fan(s) are operating or engaged. Allow the vehicle to idle until the suction (low-side) and discharge (high-side) pressures are stable or fluctuate in a range that repeats.
6. Record the ambient (shop) temperature.
7. Record the discharge pressure. If the pressure is fluctuating, record the average value.
8. Determine if the discharge pressure falls within the normal operating limits using the Normal Refrigerant

Discharge Pressures chart.

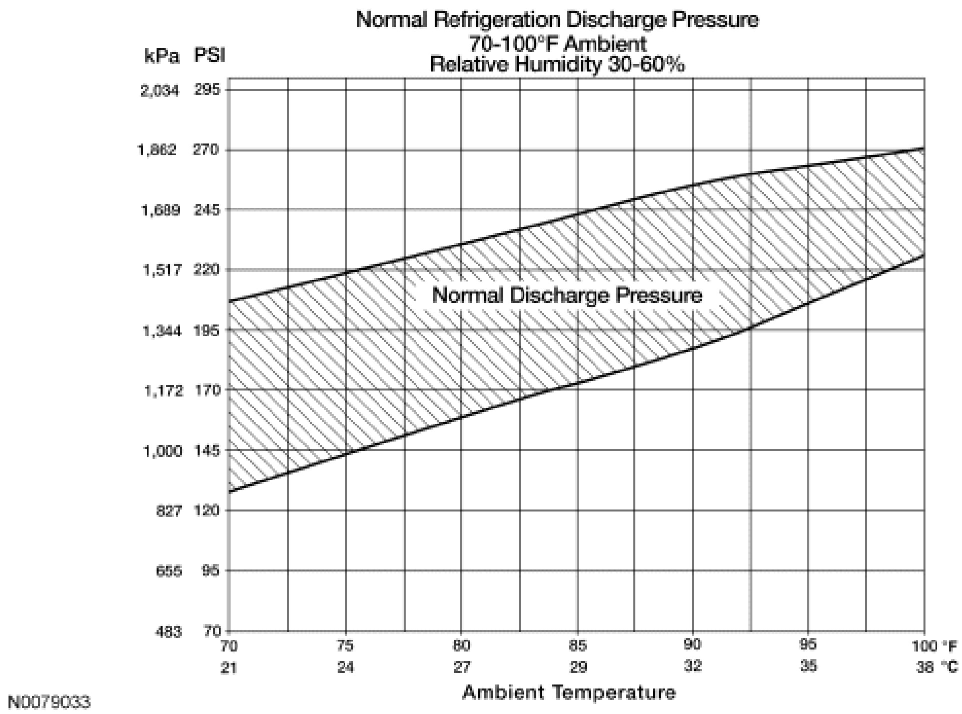

Fig. 111: Normal Refrigerant Discharge Pressures Chart - Relative Humidity 30-60%
Courtesy of FORD MOTOR CO.

9. Record the suction pressure. If the pressure is fluctuating, record the average value.
10. Determine if the suction pressure falls between normal operating limits using the Normal Refrigerant Suction Pressures chart.

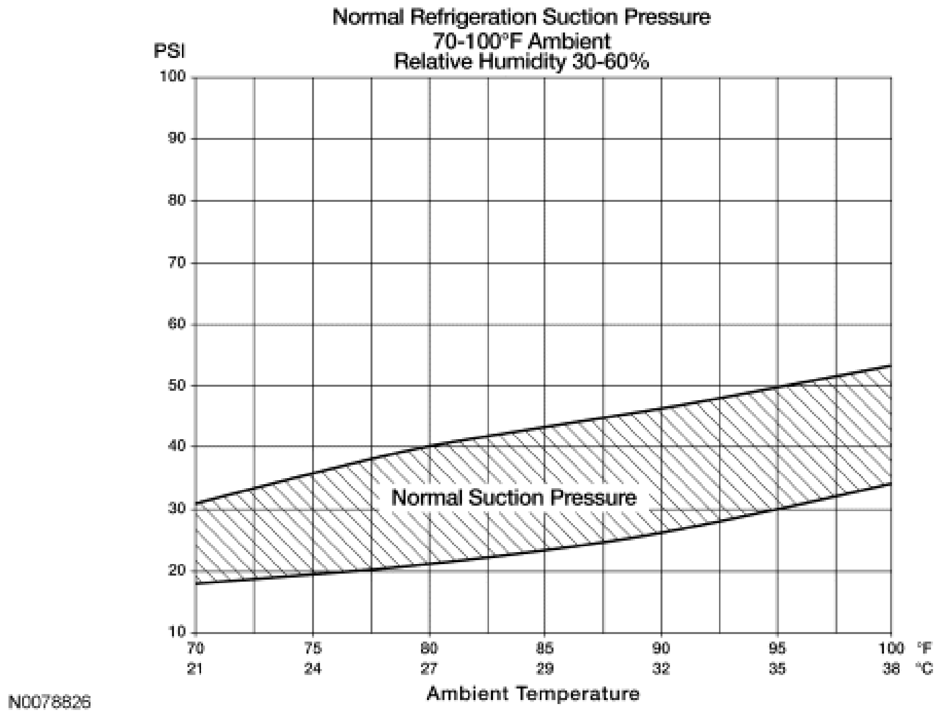

Fig. 112: Normal Refrigerant Suction Pressures Chart - Relative Humidity 30-60%
Courtesy of FORD MOTOR CO.

11. Proceed to the diagnostic table.

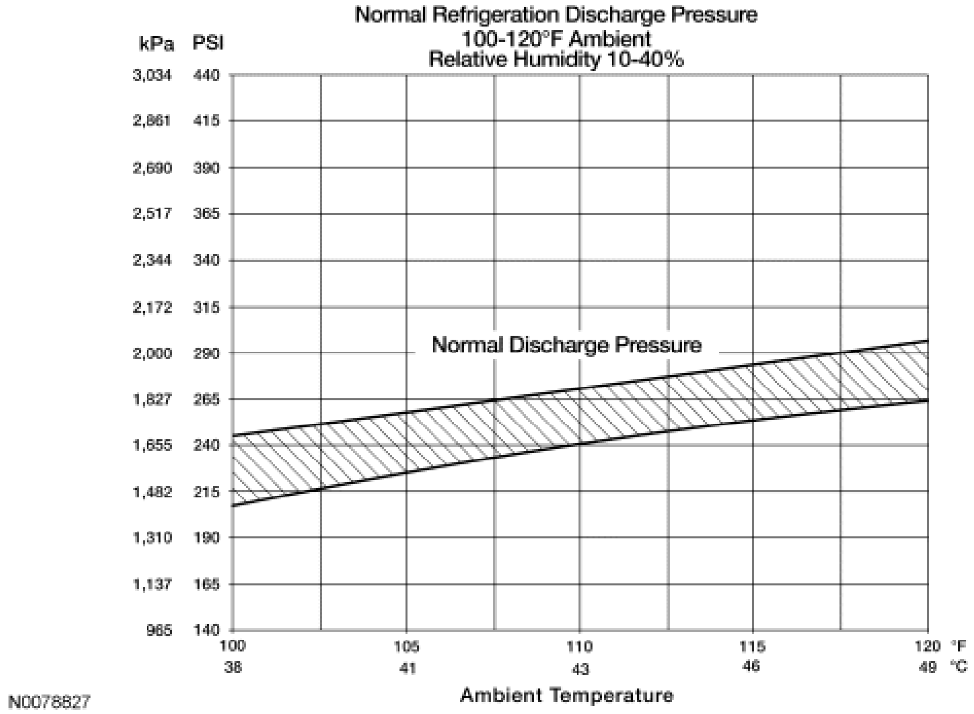
Procedure 2 - Ambient Temperature Above 38°C (100°F)

NOTE: **The system performance can be evaluated and diagnosed by analysis of the compressor suction and discharge pressures. The following procedure is used to determine if the system is operating at normal pressures.**

NOTE: **The procedure varies depending on the ambient (shop) temperature. If the ambient temperature is 38°C (100°F) or lower, follow Procedure 1. If the ambient temperature is over 38°C (100°F), follow Procedure 2.**

1. Drive the vehicle or run the engine until it reaches normal operating temperature.
2. Connect a manifold gauge set or refrigerant service center with high-pressure and low-pressure gauges to the refrigerant system.
3. Set the climate controls.
    - If equipped with manual climate control, set the A/C controls for normal A/C-PANEL mode, full COOL temperature, FRESH air, MED LO blower. If the vehicle has a fresh air/recirc button, set it to FRESH. If the vehicle has an A/C switch or compressor on switch, set it to A/C ON.
    - If equipped with EATC, set temperature to 15°C (60°F) (lowest possible temp setting). Manually set blower to MED LO (3 to 4 bars). If the vehicle has a fresh air/recirc button, set it to FRESH. If the vehicle has an A/C switch or compressor on switch, set it to A/C ON.

4. Open all vehicle windows and leave the hood open for the test. Open the rear hatch and/or rear doors (if equipped).
5. Confirm the compressor clutch is engaged and the engine cooling fan(s) are operating or engaged. Allow the vehicle to idle until the suction (low-side) and discharge (high-side) pressures are stable or fluctuate in a range that repeats.
6. Record the ambient (shop) temperature.
7. Record the discharge pressure. If the pressure is fluctuating, record the average value.
8. Determine if the discharge pressure falls within the normal operating limits using the Normal Refrigerant Discharge Pressures chart.



<u>Fig. 113: Normal Refrigerant Discharge Pressures Chart - Relative Humidity 10-40%</u>
Courtesy of FORD MOTOR CO.

9. Record the suction pressure. If the pressure is fluctuating, record the average value.
10. Determine if the suction pressure falls between normal operating limits using the Normal Refrigerant Suction Pressures chart.

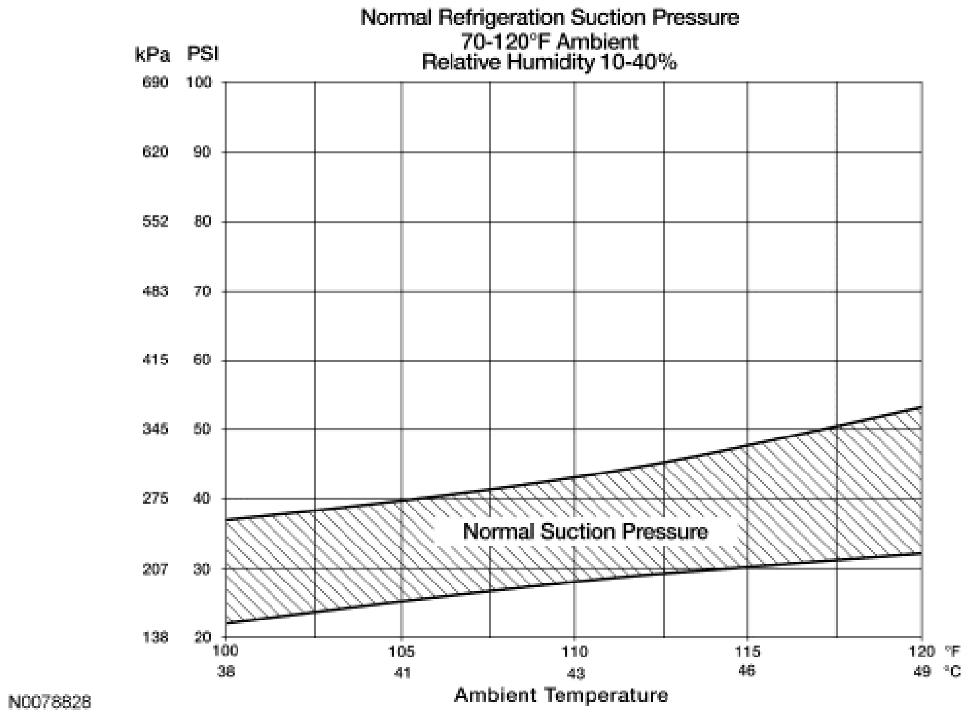


Fig. 114: Normal Refrigerant Suction Pressures Chart - Relative Humidity 10-40%
Courtesy of FORD MOTOR CO.

11. Proceed to the diagnostic table.

Diagnostic Table

NOTE: The following table is used to guide diagnosis of the refrigerant system if operating pressures are outside normal limits.

1. Refer to the chart below.

High (Discharge) Pressure	Low (Suction) Pressure	Component - Causes
High or Clutch Cycling	High	Condenser - inadequate airflow.
High	Normal to High	Engine - overheating.
Normal to High	Normal	Refrigerant overcharge - air in refrigerant.
		A/C suction

Normal to Low	Normal to High	line - partially restricted or plugged[a] .
Normal to Low	Low or Clutch Cycling	Low refrigerant charge, A/C suction line - partially restricted or plugged[b] A/C cycling switch - sticking closed (if equipped).
Erratic Operation or Compressor Not Running		Evaporator discharge air temperature sensor or A/C pressure transducer - poor connection at A/C clutch connector. A/C electrical circuit erratic - see A/C Electrical Circuit Wiring Diagram. Refer to appropriate SYSTEM WIRING DIAGRAMS article.
Normal to Low	High	Compressor - low performance.

Additional Possible Cause Components Associated With

Inadequate Compressor Operation
• Compressor Drive Belt - loose • Compressor Clutch - slipping • Clutch Coil Open - shorted, or loose mounting • Control Assembly Switch - dirty contacts or sticking open • Clutch Wiring Circuit - high resistance, open or blown fuse • Compressor Operation Interrupted by Engine Computer
Additional Possible Cause Components Associated With a Damaged Compressor
• Incorrect Clutch Air-gap • Refrigerant Leaks

[a] Low pressure reading will be normal to high if pressure is taken at accumulator and if restriction is downstream of service access valve.

[b] Low pressure reading will be low if pressure is taken near the compressor and restriction is upstream of service access valve.

FLUORESCENT DYE LEAK DETECTION

Special Tools

Illustration	Tool Name	Tool Number

 ST2649-A	R-134a Loop/Add On Injector Kit-Set	219-00069 or equivalent
 ST2670-A	R-134a Manifold Gauge Set	023-00047 or equivalent
 ST2739A	R-134a Refrigerant Center	023-00174 or equivalent
 ST2738-A	R-134a Refrigerant Center	176-00002 or equivalent

Fluorescent Dye Detection

NOTE: Ford Motor Company vehicles are produced with R-134a fluorescent dye installed in the refrigerant system from the factory. The location of leaks can be pinpointed by the bright yellow-green glow of the fluorescent dye under a UV lamp. Since more than one leak can exist, make sure to inspect each component, line and fitting in the refrigerant system for a leak.

1. Check for leaks using a Rotunda-approved UV lamp.
   - Inspect all components, lines and fittings of the refrigerant system.
2. If a leak is found, recover the refrigerant. For additional information, refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.
3. Repair the refrigerant system leak(s).
4. Evacuate and charge the refrigerant system. For additional information, refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.
5. After the leak(s) is/are repaired, remove any traces of fluorescent dye with a general purpose oil solvent.
6. Verify the repair by running the vehicle for a short period of time and rechecking the area of the leak with a Rotunda-approved UV lamp.

Fluorescent Dye Injection - Using an R-134a Refrigerant Management Center and Dye/Lubricant Injector

NOTE: **Fluorescent refrigerant system dye is added to the refrigerant system at the factory to assist in refrigerant system leak diagnosis using a Rotunda-approved ultraviolet blacklight. It is not necessary to add additional dye to the refrigerant system before diagnosing leaks, even if a significant amount of refrigerant has been removed from the system. Additional refrigerant system dye should only be added if more than 50% of the refrigerant system lubricant capacity has been lost due to a fitting separation, hose rupture or other damage.**

NOTE: **Before using the dye/lubricant injector from the R-134a Loop/Add On Injector Kit-Set for the first time, refer to the manufacturer's instructions on evacuation of any non-condensable gases from the hoses.**

NOTE: **Only connect the dye/lubricant injector when fluorescent dye is to be injected. The injector has a one-way check valve that will prevent refrigerant system recovery and evacuation.**

NOTE: **Refrigerant system pressure should be between 413-551 kPa (60-80 psi) at 24°C (75°F) with the engine off.**

1. Connect an R-134a Refrigerant Center or a R-134a Manifold Gauge Set to the refrigerant system service port valves.

   NOTE: **The dye/lubricant injector is included as part of the 219-00069 R-134a Loop/Add On Injector Kit-Set.**

2. Verify that the valves on the dye/lubricant injector are closed.

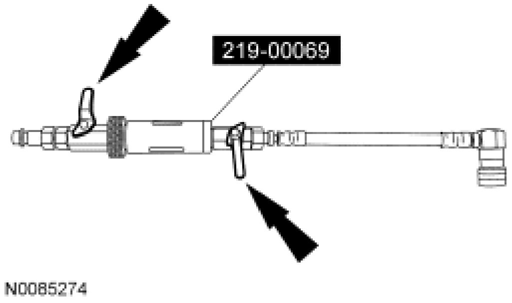

Fig. 115: Verifying Valves On Dye/Lubricant Injector Are Closed
Courtesy of FORD MOTOR CO.

3. Fill the fluorescent dye injector reservoir with 7 ml (0.25 oz) of fluorescent dye.

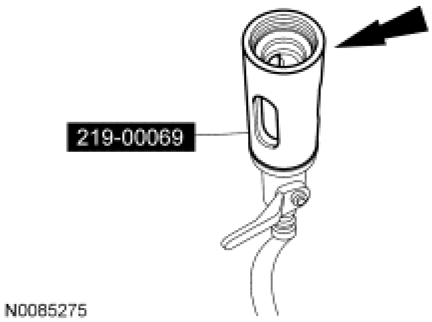

Fig. 116: Filling Fluorescent Dye Injector Reservoir With 7 ml (0.25 oz.) Of Fluorescent Dye
Courtesy of FORD MOTOR CO.

4. Install the dye/lubricant injector between the low-pressure service gauge port valve and the R-134a Refrigerant Center or R-134a Manifold Gauge Set.
5. Open all valves and inject the fluorescent dye into the refrigerant system.
6. When fluorescent dye injection is complete, close all valves.
7. Recover the refrigerant from the dye/lubricant injector.
8. Remove the dye/lubricant injector from the low-pressure service gauge port valve and the R-134a Refrigerant Center or R-134a Manifold Gauge Set.

Fluorescent Dye Injection - Using an R-134a Loop/Add On Injector Kit-Set

NOTE: **Fluorescent refrigerant system dye is added to the refrigerant system at the factory to assist in refrigerant system leak diagnosis using a Rotunda-approved ultraviolet blacklight. It is not necessary to add additional dye to the refrigerant system before diagnosing leaks, even if a significant amount of refrigerant has been removed from the system. Additional refrigerant system dye should only be added if more than 50% of the refrigerant system lubricant capacity has been lost due to a fitting separation, hose rupture or other damage.**

NOTE: **Before using the R-134a Loop/Add On Injector Kit-Set for the first time, refer to the equipment manufacturer's instructions on evacuation of non-condensable gases from the hoses.**

NOTE: **Refrigerant system pressure should be between 413-551 kPa (60-80 psi) at 24°C (75°F).**

1. Verify that the valves on the deluxe injector loop kit are closed.

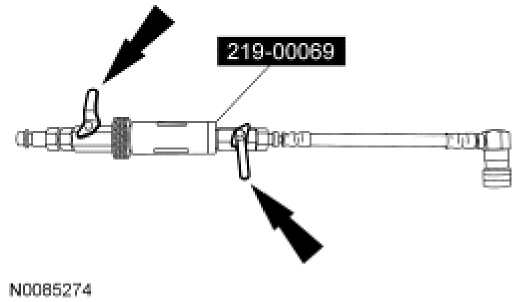

Fig. 117: Verifying Valves On Dye/Lubricant Injector Are Closed
Courtesy of FORD MOTOR CO.

2. Fill the R-134a Loop/Add On Injector Kit-Set reservoir with 7 ml (0.25 oz) of fluorescent dye.

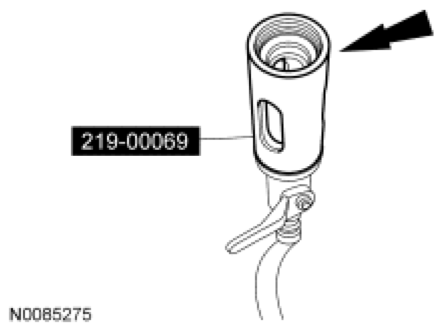

Fig. 118: Filling Fluorescent Dye Injector Reservoir With 7 ml (0.25 oz.) Of Fluorescent Dye
Courtesy of FORD MOTOR CO.

3. Install the R-134a Loop/Add On Injector Kit-Set between the high-pressure and low-pressure service gauge port valves.

NOTE: **Make sure all tools and hoses are clear of the engine cooling fan and drive belt before starting the engine.**

4. Start the engine.
5. Open the high-pressure service valve.

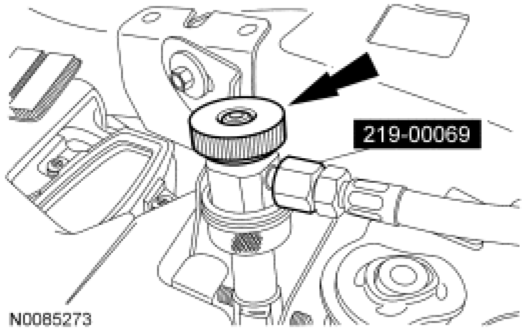

Fig. 119: Installing R-134A Loop/Add On Injector Kit-Set Between High-Pressure & Low-Pressure Service Gauge Port Valves
Courtesy of FORD MOTOR CO.

6. Open all valves and inject the fluorescent dye into the refrigerant system.

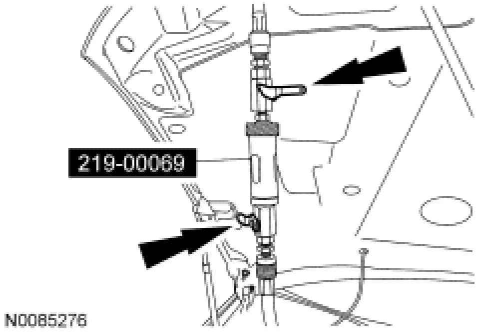

Fig. 120: Opening All Valves & Inject Fluorescent Dye Into Refrigerant System
Courtesy of FORD MOTOR CO.

7. Close the high-pressure service valve to allow the pressure inside the R-134a Loop/Add On Injector Kit-Set to equalize with the suction side of the refrigerant system.

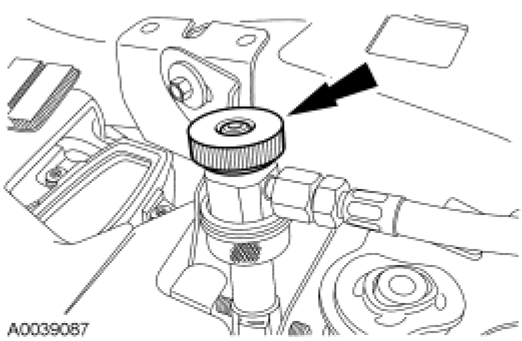

Fig. 121: Identifying High-Pressure Service Valve
Courtesy of FORD MOTOR CO.

NOTE: **Close the valves on the R-134a Loop/Add On Injector Kit-Set while the A/C compressor is operating.**

8. Close the valves on the R-134a Loop/Add On Injector Kit-Set.

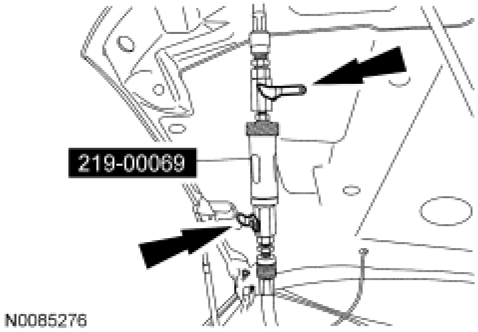

Fig. 122: Closing Valves On R-134A Loop/Add On Injector Kit-Set
Courtesy of FORD MOTOR CO.

NOTE: **Leave all valves on the R-134a Loop/Add On Injector Kit-Set closed when not in use.**

9. Disconnect the high-pressure and low-pressure service valves and remove the R-134a Loop/Add On Injector Kit-Set from the vehicle.

ELECTRONIC LEAK DETECTION

Special Tools

Illustration	Tool Name	Tool Number
 ST3072-A	Heated Pentode Halogen Leak Detector	023-00178 or equivalent

NOTE: **Good ventilation is necessary in the area where electronic A/C leak testing is to be carried out. If the surrounding air is contaminated with refrigerant gas, the Heated Pentode Halogen Leak Detector will indicate this gas all the time. Odors from other chemicals such as antifreeze, diesel fuel, disc brake cleaner or other cleaning solvents can cause the same problem. Using a fan to ventilate the area to be tested before proceeding with the leak detection procedure is helpful in removing small traces of contamination from the air, but the fan should be turned off during actual testing.**

NOTE: **R-134a is heavier than air, and will tend to move downward from the source of the leak if present. It is possible that a leak may not be detected if the leak detector tip is held above the leaking fitting, line or component. Always be sure to thoroughly leak test below the fitting, line or component for the presence of R-134a as well as leak testing above and around.**

NOTE: **The system pressure should be between 413-551 kPa (60-80 psi) at 24°C**

(75°F) with the engine off.

1. Leak test the refrigerant system using the leak detector. Follow the instructions included with the leak detector for handling and operation techniques.

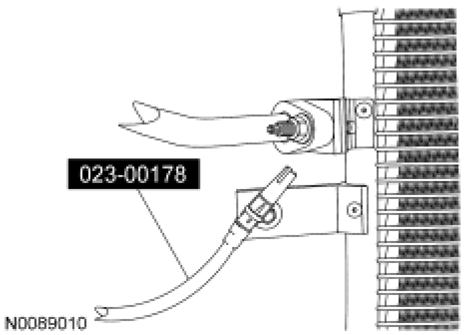

Fig. 123: Leak Test Refrigerant System Using Leak Detector
Courtesy of FORD MOTOR CO.

2. If a leak is found, recover the refrigerant. For additional information, refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.
   - Repair the system.
   - Test the system for normal operation.

AIR CONDITIONING (A/C) SYSTEM RECOVERY, EVACUATION AND CHARGING

Special Tools

 ST3081-A	R-134a Refrigerant Management Machine (SAE J-2788 Compliant)	199-00067 or equivalent
 ST3080-A	R-134a Refrigerant Management Machine (SAE J-2788 Compliant)	265-00012 or equivalent

Material

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

Refrigerant System Recovery

NOTE: **An air conditioning (A/C) refrigerant analyzer must be used before the recovery of any vehicle's A/C refrigerant. Failure to do so puts the shop's bulk refrigerant at risk of contamination. If the vehicle's A/C refrigerant is contaminated, refer the customer to the service facility that carried out the last A/C service. If the customer wishes to pay the additional cost, use the A/C recovery equipment that is designated for recovering contaminated A/C refrigerant. All contaminated A/C refrigerant must be disposed of as hazardous waste. For all equipment, follow the equipment manufacturer procedures and instructions.**

NOTE: **Ford Motor Company recommends use of an R-134a Refrigerant Management Machine to carry out recovery. If an R-134a Refrigerant Management Machine is not available, refrigerant system recovery may be accomplished using a separate recovery station.**

NOTE: **Leaks in refrigerant system service equipment, hoses or gauges can cause a**

leak in vacuum that may be misinterpreted as a problem with the vehicle's refrigerant system. It is necessary to leak-test all refrigerant system service equipment, hoses and gauges on a weekly basis to verify that no leaks are present.

1. Prior to recovering, the purity of the refrigerant must be verified. For additional information, refer to **Refrigerant Identification Testing**.
2. Connect an R-134a Refrigerant Management Machine to the low- and high-pressure service gauge port valves following the operating instructions provided by the equipment manufacturer.
3. Recover the refrigerant from the system following the operating instructions provided by the equipment manufacturer. Note the amount of oil removed during the refrigerant recovery (if any). Add that same amount back into the system once repairs are complete.
4. Once the R-134a Refrigerant Center has recovered the refrigerant, switch OFF the power supply.
5. Allow the system to set for about 2 minutes, and observe the system vacuum reading. If the vacuum is not lost, disconnect the recovery equipment.
6. If the system does lose vacuum, repeat Steps 3 through 5 until the vacuum level remains stable for 2 minutes.
7. Carry out the required repairs.

Refrigerant System Evacuation Using an R-134a Refrigerant Management Machine

NOTE: **Ford Motor Company recommends use of an R-134a Refrigerant Management Machine to carry out recovery, evacuation and charging of the refrigerant system. If an R-134a Refrigerant Management Machine is not available, evacuation may be accomplished using a separate Vacuum Pump and R-134a Manifold Gauge Set.**

NOTE: **Leaks in refrigerant system service equipment, hoses or gauges can cause a leak in vacuum that may be misinterpreted as a problem with the vehicle's refrigerant system. It is necessary to leak-test all refrigerant system service equipment, hoses and gauges on a weekly basis to verify that no leaks are present.**

1. Connect an R-134a Refrigerant Management Machine to the low- and high-pressure service gauge port valves following the operating instructions provided by the equipment manufacturer.
2. Evacuate the system until the low-pressure gauge reads at least 99.4 kPa (29.5 in-Hg) of vacuum and as close to 101.1 kPa (30 in-Hg) as possible. Continue to operate the Vacuum Pump for a minimum of 45 minutes.
3. Turn OFF the Vacuum Pump. Observe the low-pressure gauge for 5 minutes to make sure that the system vacuum is held. If vacuum is not held for 5 minutes, leak test the system, repair the leak and evacuate the system again.

Refrigerant System Evacuation Using an R-134a Manifold Gauge Set

NOTE: Ford Motor Company recommends use of an R-134a Refrigerant Management Machine to carry out evacuation of the refrigerant system. If an R-134a Refrigerant Management Machine is not available, refrigerant system evacuation may be accomplished using a separate Vacuum Pump and R-134a Manifold Gauge Set.

NOTE: Leaks in refrigerant system service equipment, hoses or gauges can cause a leak in vacuum that may be misinterpreted as a problem with the vehicle's refrigerant system. It is necessary to leak-test all refrigerant system service equipment, hoses and gauges on a weekly basis to verify that no leaks are present.

1. Connect the R-134a Manifold Gauge Set to the low-side and high-side service gauge port valves.
2. Connect the center (yellow) hose from the R-134a Manifold Gauge Set to the suction port on the Vacuum Pump.
3. Open all valves on the R-134a Manifold Gauge Set and both service gauge port valves.
4. Turn on the Vacuum Pump and evacuate the system until the low-pressure gauge reads at least 99.4 kPa (29.5 in-Hg) of vacuum and as close to 101.1 kPa (30 in-Hg) as possible. Continue to operate the Vacuum Pump for a minimum of 45 minutes.
5. Close the high-side and low-side valves on the R-134a Manifold Gauge Set (not the service gauge port valves) and turn OFF the Vacuum Pump.
6. Observe the low-pressure gauge for 5 minutes to make sure that the system vacuum is held. If vacuum is not held for 5 minutes, leak test the system, repair the leak and evacuate the system again.

Refrigerant System Charging Using an R-134a Refrigerant Management Machine

NOTE: Ford Motor Company recommends use of an R-134a Refrigerant Management Machine to carry out charging of the refrigerant system. If an R-134a Refrigerant Management Machine is not available, refrigerant system charging may be accomplished using a separate Automatic Refrigerant Charging Meter and R-134a Manifold Gauge Set.

NOTE: Leaks in refrigerant system service equipment, hoses or gauges can cause a leak that may be misinterpreted as a problem with the vehicle's refrigerant system. It is necessary to leak-test all refrigerant system service equipment, hoses and gauges on a weekly basis to verify that no leaks are present.

1. Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **Refrigerant Oil Adding**.
2. Connect an R-134a Refrigerant Management Machine to the low-side and high-side service gauge port valves following the operating instructions provided by the equipment manufacturer.
3. Set the refrigerant charge amount, and charge the refrigerant system following the instructions provided by the equipment manufacturer.

Refrigerant System Charging Using an R-134a Manifold Gauge Set and Automatic Refrigerant Charging Motor

NOTE: Ford Motor Company recommends use of an R-134a Refrigerant Management Machine to carry out charging of the refrigerant system. If an R-134a Refrigerant Management Machine is not available, refrigerant system charging may be accomplished using a separate Automatic Refrigerant Charging Meter and R-134a Manifold Gauge Set.

NOTE: Leaks in refrigerant system service equipment, hoses or gauges can cause a leak that may be misinterpreted as a problem with the vehicle's refrigerant system. It is necessary to leak-test all refrigerant system service equipment, hoses and gauges on a weekly basis to verify that no leaks are present.

1. Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **Refrigerant Oil Adding**.
2. Assemble the R-134a Manifold Gauge Set, Automatic Refrigerant Charging Meter and R-134a supply tank following the Automatic Refrigerant Charging Meter operating instructions.
3. Charge the refrigerant system following the Automatic Refrigerant Charging Meter operating instructions.
4. If the refrigerant flow stops before the refrigerant charge is complete, start the engine, select MAX A/C operation and allow the refrigerant charge to complete.

AIR CONDITIONING (A/C) SYSTEM FLUSHING

Special Tools

Illustration	Tool Name	Tool Number
 ST2626-A	A/C Flush Adapter Kit	219-00074 or equivalent
 ST2469-A	A/C Flush and Purge Fitting Kit	219-00024 or equivalent
 ST2466-A	A/C Flush and Purge Machine	219-00022 (part of 219-00023) or equivalent

Material

Item	Specification
A/C System Flushing Solvent YN-23	-
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

WARNING: **Take the following precautions when repairing an air conditioning system containing R-134a:**

- **Always wear safety goggles.**
- **Avoid contact with liquid refrigerant R-134a. R-134a vaporizes at approximately -25°C (-13°F) under atmospheric pressure and will freeze skin tissue.**
- **Never allow refrigerant R-134a gas to escape in quantity in an occupied space. It will displace the oxygen needed to support life.**
- **Never use a torch in an atmosphere containing R-134a gas. R-134a is non-toxic at all normal conditions, but it decomposes when exposed to high temperatures such as a torch flame. During decomposition it releases irritating and toxic gasses (as described in the MSDS sheet from the manufacturer). Decomposition products are hydrofluoric acid, carbon dioxide and water.**

Failure to follow these instructions may result in serious personal injury.

CAUTION: An air conditioning (A/C) refrigerant analyzer must be used before the recovery of any vehicle's A/C refrigerant. Failure to do so puts the shop's bulk refrigerant at risk of contamination. If the vehicle's A/C refrigerant is contaminated, refer the customer to the service facility that carried out the last A/C service. If the customer wishes to pay the additional cost, use the A/C recovery equipment that is designated for recovering contaminated A/C refrigerant. All contaminated A/C refrigerant must be disposed of as hazardous waste. For all equipment, follow the equipment manufacturer procedures and instructions.

CAUTION: Receiver/drier desiccant bag, thermostatic expansion valve (TXV), and hoses with mufflers should be removed when flushing the air conditioning (A/C) system. Internal plumbing of these devices makes it impossible to correctly remove any residual-flushing agent. These components are typically discarded after A/C system contamination. Hoses without mufflers can normally be reused unless they are clogged with foreign material. The 3.785L (1 gal) of A/C System Flushing Solvent YN-23 and FL1-A filter used in A/C Flush and Purge Machine 219-00022 are intended for use on one vehicle only. They may be used to flush both the A/C condenser core and the A/C evaporator core on an individual vehicle, but under no circumstances should they be used on more than one vehicle.

CAUTION: Only the A/C Flush and Purge Machine 219-00022 and A/C Systems Flushing Solvent, is approved for use on Ford vehicles. No other flushing device or solvent is approved for flushing heat exchangers (air conditioning [A/C] condenser, A/C evaporator). Use of any other flusher or solvent may cause damage to the A/C system and the flushing unit.

NOTE: Prior to using the A/C Flush and Purge Machine 219-00022 for the first time, review the operating instructions.

NOTE: Ford Motor Company has approved a procedure to provide technicians with a non-CFC method of flushing contaminated A/C system heat exchangers. The procedure allows the specific components to be cleaned and flushed. The types of contamination flushed include particle matter that results from A/C compressor or desiccant failure and gummy residue that can form when refrigerant oil is overheated during A/C compressor seizure. The flushing process is a 2-step procedure that involves the use of an A/C Flush and Purge Machine 219-00022 to:

- **circulate the flushing solvent through the heat exchanger in the reverse direction of normal refrigerant flow (back-flushing). Particulate matter picked up during flushing is filtered from the returning solvent before the solvent is returned to the reservoir for continued circulation.**
- **remove the flushing solvent from the heat exchanger. In this step of the procedure, pressurized air 621-862 kPa (90-125 psi) is used to push and evaporate any remaining flush solvent from the heat exchanger.**

1. Remove the desiccant bag. For additional information, refer to **CLIMATE CONTROL** article.
2. Disconnect the compressor-to-condenser discharge line middle fitting and remove the condenser-side condenser-to-evaporator line.
3. Disconnect the condenser-to-evaporator line spring lock coupling.
4. Remove the condenser-to-evaporator line bracket bolt and remove the condenser side condenser-to-evaporator line.
5. With the condenser and lines out of the vehicle, reconnect the A/C lines to the condenser inlet and outlet fittings.
6. Connect the A/C Flush and Purge Machine to the A/C line fittings using the correct adapters from the A/C Flush and Purge Fitting Kit.

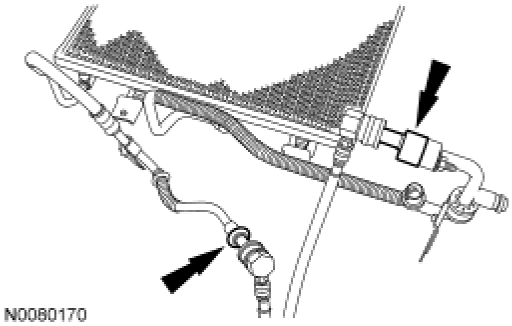

Fig. 124: Identifying A/C line fittings
Courtesy of FORD MOTOR CO.

NOTE: The condenser core must be flushed with the desiccant bag removed. Do not install a new desiccant bag at this time.

7. With the desiccant bag removed, reinstall the receiver/drier plug into the condenser core.
8. Flush the condenser core for a minimum of 30 minutes.
9. Turn the A/C Flush and Purge machine to the PURGE mode and run for a minimum of 20 minutes.
10. Disconnect the A/C Flush and Purge machine and adapters from the condenser core.
11. Disconnect the A/C lines from the condenser core.
12. Install the condenser-to-evaporator line and the condenser-to-evaporator line bracket bolt.
13. Connect the condenser-to-evaporator line spring lock coupling.
14. Install the compressor-to-condenser discharge line and connect the compressor-to-condenser discharge line middle fitting.
15. Remove the receiver/drier plug.

NOTE: Do not charge the refrigerant system after the condenser core is installed.

16. Install a new desiccant bag and reinstall the condenser core. For additional information, refer to **CLIMATE CONTROL** article.
17. Remove the front thermostatic expansion valve (TXV). For additional information, refer to **CLIMATE CONTROL** article.
18. Connect the A/C Flush and Purge Machine to the evaporator core fitting using the correct adapter from the A/C Flush Adapter Kit.
19. Flush the evaporator core for a minimum of 20 minutes.
20. Turn the A/C Flush and Purge Machine to the PURGE mode and run for a minimum of 20 minutes.
21. Disconnect the A/C Flush and Purge Machine and adapter from the evaporator core fitting.
22. Install a new front TXV. For additional information, refer to **CLIMATE CONTROL** article.

NOTE: It is necessary to evacuate the refrigerant system for a minimum of one hour to evaporate any trace amounts of flush solvent that may remain in

the system.

23. Evacuate the refrigerant system for one hour. For additional information, refer to**Air Conditioning (A/C) System Recovery, Evacuation and Charging**.
24. If a new A/C compressor is not to be installed, lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **Refrigerant Oil Adding**.
25. If a new A/C compressor is not to be installed, evacuate, leak test and charge the refrigerant system. For additional information, refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.

REFRIGERANT SYSTEM FILTERING FOLLOWING AIR CONDITIONING (A/C) COMPRESSOR INSTALLATION

Special Tools

Illustration	Tool Name	Tool Number
 ST2469-A	A/C Flush and Purge Fitting Kit	219-00024 or equivalent

CAUTION: On vehicles being serviced for an internal compressor or desiccant failure, a new thermostatic expansion valve (TXV) and any hoses containing mufflers must be installed prior to filtering the air conditioning (A/C) system. Internal plumbing of these devices makes it impossible to correctly remove any foreign material/debris. These components are typically discarded after A/C system contamination. Hoses without mufflers can normally be reused unless they are clogged with foreign material. The F8VZ-19E773-AB filter is intended for use on one vehicle only.

1. Remove the desiccant bag. For additional information, refer to **CLIMATE CONTROL** article.

NOTE: The refrigerant system must be filtered with the desiccant bag removed. Do not install a new desiccant bag at this time.

2. With the desiccant bag removed, reinstall the receiver/drier plug into the condenser core.

NOTE: Do not install the front bumper cover or evacuate and charge the refrigerant system at this time.

3. Install the condenser core back into the vehicle. For additional information, refer to **CLIMATE CONTROL** article.
4. Disconnect the condenser-to-evaporator line spring lock coupling.

- Discard the O-ring seals.

NOTE: Use flexible refrigerant hose of 17,238 kPa (2,500 psi) burst rating.

NOTE: Orient the filter inlet toward the A/C condenser core.

5. Using the correct adapters from the A/C Flush and Purge Fitting Kit and suitable A/C service hoses, install the pancake filter between the two halves of the condenser-to-evaporator line spring lock coupling.
6. Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **Refrigerant Oil Adding**.
7. Evacuate and charge the refrigerant system. For additional information, refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.
8. Provide adequate airflow to the front of the vehicle (with a fan, if necessary). Start the engine and allow it to idle briefly. Select A/C operation and set the blower speed to HI. Verify that the A/C is operating correctly.
9. Gradually bring the engine up to 1,200 RPM by running it at lower RPM for short periods (first at 800 RPM, then at 1,000 RPM). Set the engine at 1,200 RPM and run it for one hour with the A/C system operating.
10. Stop the engine.
11. Recover the refrigerant. For additional information, refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.
12. Remove the pancake filter, hoses and adapters from the vehicle.
13. Install new O-ring seals and connect the condenser-to-evaporator line spring lock coupling.
14. Remove the condenser core. For additional information, refer to **CLIMATE CONTROL** article.
15. Remove the receiver/drier plug and install a new desiccant bag.

NOTE: Lubricate the receiver/drier plug O-ring seal using residual PAG oil from inside the integrated receiver/drier.

16. Install the new receiver/drier plug included in the desiccant bag service kit.
17. Install the condenser core. For additional information, refer to **CLIMATE CONTROL** article.
18. Evacuate, leak test and charge the refrigerant system. For additional information refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.

REFRIGERANT OIL ADDING

Special Tools

Illustration	Tool Name	Tool Number
	Dye/Lubricant Injector	164-R0775

 ST2740A		
 ST2737-A	Add-On Module Kit	219-00069

Material

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

Refrigerant Oil Adding

CAUTION: During normal air conditioning (A/C) operation, oil is circulated through the system with the refrigerant, and a small amount is retained in each component. If certain components of the system are removed, some of the refrigerant oil will go with the component. To maintain the original total oil charge, it is necessary to compensate for the oil lost by adding oil to the system with the new part.

1. Refer to the chart below for refrigerant oil adding amounts and methods of installation.

Component	PAG Oil Amount	Method of Adding
A/C Compressor	See heading below	Add directly to A/C compressor before installation
Receiver/Drier Desiccant Cartridge	60 ml (2 fl oz) added to the amount collected during refrigerant recovery	Inject to low-side service port during system charging

Evaporator Core	45 ml (1.5 fl oz) added to the amount collected during refrigerant recovery	Add directly to evaporator core inlet tube or inject to low-side service port during system charging
Condenser Core	60 ml (2 fl oz) added to the amount collected during refrigerant recovery	Add directly to condenser core inlet or inject to low-side service port during system charging
Evaporator Core Orifice or Thermostatic Expansion Valve	The amount collected during refrigerant recovery	Inject to low-side service port during system charging
A/C Pressure Relief Valve	60 ml (2 fl oz) added to the amount collected during refrigerant recovery	Inject to low-side service port during system charging
Refrigerant Hose/Line	60 ml (2 fl oz) added to the amount collected during refrigerant recovery[a]	Inject to low-side service port during system charging
	60 ml (2	

O-ring Leak Repair	fl oz) added to the amount collected during refrigerant recovery[b]	Inject to low-side service port during system charging
Service Port Leak Repair	60 ml (2 fl oz) added to the amount collected during refrigerant recovery	Inject to low-side service port during system charging

[a] If an excessive amount of refrigerant oil is lost due to a hose rupture/separation or other damage, the total system refrigerant oil capacity must be added.

[b] The amount specified may be used for one or multiple O-ring leak repairs. Do not multiply the refrigerant oil amount by the number of O-ring leaks being repaired.

Refrigerant Oil Adding for New A/C Compressor Installation

NOTE: The service A/C compressor for this vehicle is shipped from the factory with PAG oil installed. The refrigerant oil adding procedure specified for this vehicle must be followed to avoid installing excessive PAG oil in the refrigerant system.

1. Rotate the new A/C compressor shaft 8 to 10 revolutions while collecting the PAG oil in a clean measuring cup.
2. Rotate the oil A/C compressor shaft 8 to 10 revolutions while collecting the PAG oil in a separate clean measuring cup.
3. Remove enough PAG oil from the new compressor measuring cup to make the remaining amount of oil in the cup match the amount remove from the oil A/C compressor.
4. Add the PAG oil from the new A/C compressor measuring cup to the suction side of the A/C compressor.

Oil Injection Using a Dye/Lubricant Injector

NOTE: If fluorescent leak detection dye is also to be added during A/C charging, the dye may be added to the dye/lubricant injector along with the refrigerant oil.

1. Evacuate the refrigerant system. For additional information, refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.

2. Assemble the dye/lubricant injector using the correct adapters to match the amount of refrigerant compressor oil to be injected.
3. Verify that all the valves on the dye/lubricant injector are closed.

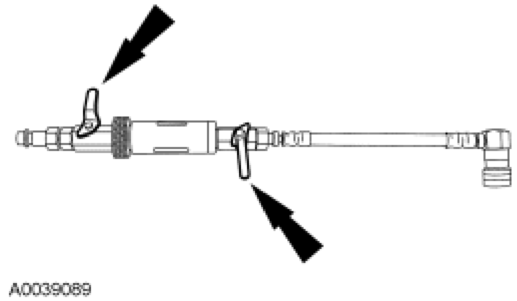

Fig. 125: Identifying Valves On Fluorescent Dye/Lubricant Injector
Courtesy of FORD MOTOR CO.

4. Fill the dye/lubricant injector with the correct amount of new refrigerant compressor oil.

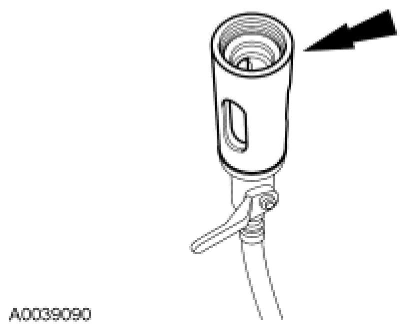

Fig. 126: Identifying Deluxe Injector Loop Kit Reservoir
Courtesy of FORD MOTOR CO.

5. Install the dye/lubricant injector between the low-side service gauge port valve and the refrigerant service station or manifold gauge set.
6. Open all valves and charge the refrigerant system. For additional information, refer to **Air Conditioning (A/C) System Recovery, Evacuation and Charging**.

REFRIGERANT IDENTIFICATION TESTING

Special Tools

Illustration	Tool Name	Tool Number
	Refrigerant Identifier with Air-Radiator	198-00003 or equivalent

 ST1457-A		

Refrigerant Identification

NOTE: A Refrigerant Identifier with Air-Radiator must be used to identify gas samples taken directly from the refrigeration system or storage containers prior to recovering or charging the refrigerant system.

1. Follow the instructions included with the Refrigerant Identifier with Air-Radiator to obtain the sample for testing.
2. The Refrigerant Identifier with Air-Radiator will display one of the following:
   - If the purity level of R-134a is 98% or greater by weight, the green PASS LED will light. The weight concentrations of R-134a, R-12, R-22, hydrocarbons and air will be displayed on the digital display.
   - If refrigerant R-134a does not meet the 98% purity level, the red FAIL LED will light and an alarm will sound alerting the user of potential hazards. The weight concentrations of R-134a, R-12, R-22 and hydrocarbons will be displayed on the digital display.
   - If hydrocarbon concentrations are 2% or greater by weight, the red FAIL LED will light, "Hydrocarbon High" will be displayed on the digital display, and an alarm will sound alerting the user of potential hazards. The weight concentrations of R-134a, R-12, R-22 and hydrocarbons will also be displayed on the digital display.
3. The percentage of air contained in the sample will be displayed if the R-134a content is 98% or greater. The scan tool eliminates the effect of air when determining the refrigerant sample content because air is not considered a contaminant, although air can affect A/C system performance. When the scan tool has determined that a refrigerant source is pure (R-134a is 98% or greater by weight) and air concentration levels are 2% or greater by weight, the scan tool will prompt the user if an air purge is desired.
4. If contaminated refrigerant is detected, repeat the refrigerant identification test to verify that the refrigerant is indeed contaminated.

Contaminated Refrigerant Handling

NOTE: If contaminated refrigerant is detected, DO NOT recover the refrigerant into R-134a recovery/recycling equipment. Recovery of contaminated refrigerant will contaminate the recovered refrigerant supply and may damage the recovery/recycling equipment.

NOTE: A new suction accumulator or receiver/drier must be installed as directed by the A/C system flushing procedure.

1. Recover the contaminated refrigerant using suitable recovery-only equipment designed for capturing and

storing contaminated refrigerant only.

- If this equipment is not available, contact an A/C service facility in the area with the correct equipment to carry out this service.

2. Determine and correct the cause of the customers initial concern.
3. Flush the A/C system.
4. Dispose of the contaminated refrigerant in accordance with all federal, state and local regulations.

DESCRIPTION AND OPERATION

AIR CONDITIONING

The refrigerant system components include the following:

- A/C compressor and clutch assembly
- A/C condenser core
- A/C evaporator core
- Receiver/drier desiccant bag
- Connecting refrigerant lines
- Thermostatic expansion valve (TXV)

The refrigerant system incorporates an A/C compressor controlled by the PCM through an A/C clutch relay. The HVAC module sends an A/C request signal to the instrument cluster, which relays the request to the PCM. An evaporator temperature sensor is used to cycle the A/C compressor off when the evaporator core temperature falls below an acceptable temperature.

The HVAC module will send an A/C request signal to the instrument cluster if the following conditions are met:

- A mode which requires A/C operation has been manually selected by the driver or automatically selected by the HVAC module in AUTO mode.
- The A/C evaporator temperature sensor is reading an acceptable evaporator core temperature.

When an A/C request is received, the A/C compressor clutch will only be engaged by the PCM through the A/C clutch relay if all of the following conditions are met:

- The engine has been running for more than 5 seconds.
- Engine speed is above 425 RPM and below 5,800 RPM.
- The A/C pressure transducer is reading an acceptable pressure in the high side of the refrigerant system.
- The engine coolant temperature is not excessively high.
- The PCM has not detected a wide open throttle (WOT) condition.

An A/C pressure relief valve is installed in the A/C compressor to protect the refrigerant system against excessively high refrigerant pressures.

Refrigerant flow into the evaporator core is metered by a TXV.

A/C Compressor and Clutch Assembly

NOTE: A/C compressor components are not serviced separately. The A/C compressor is serviced only as an assembly.

The A/C compressor has the following characteristics:

- A non-serviceable shaft seal.
- A pressure relief valve is installed in the rear of the compressor to protect the refrigerant system against excessively high refrigerant pressures.
- The A/C compressor uses PAG oil or equivalent. This oil contains special additives required for the A/C

compressor.

- The A/C compressor oil may have some slightly dark-colored streaks while maintaining normal oil viscosity. This is normal for this A/C compressor because of break-in wear that can discolor the oil.
- Use the oil matching procedure specified for this vehicle when installing a new A/C compressor.

When battery voltage is applied to the A/C compressor clutch field coil, the clutch disc and hub assembly is drawn toward the A/C clutch pulley. The magnetic force locks the clutch plate and hub assembly and the A/C clutch pulley together as one unit, causing the compressor shaft to rotate. When battery voltage is removed from the A/C compressor clutch field coil, springs in the clutch plate and hub assembly move the clutch plate away from the A/C clutch pulley.

A/C Condenser

NOTE:	**The A/C condenser for this vehicle is produced from the factory with a receiver/drier desiccant bag installed in the integrated receiver/drier. This receiver/drier desiccant bag may become contaminated with moisture if the A/C condenser is not installed for an extended period of time. Since it cannot be determined how much time has elapsed between production and installation of the unit as a service part, the receiver/drier desiccant bag must be removed and replaced with the separate receiver/drier desiccant bag, which is supplied together with the A/C condenser service part kit.**

The A/C condenser is an aluminum fin-and-tube design heat exchanger located in front of the vehicle radiator. It cools compressed refrigerant gas by allowing air to pass over fins and tubes to extract heat and by condensing gas to liquid refrigerant as it is cooled.

The receiver/drier is incorporated onto the LH side of the A/C condenser. The receiver/drier desiccant bag is a separate component and can be separately removed and installed with the A/C condenser removed from the vehicle.

Evaporator Core

The evaporator core is an aluminum plate/fin type and is located in the heater core and evaporator core housing. A mixture of liquid refrigerant and oil enters the bottom of the evaporator core through the evaporator core inlet tube and continues out of the evaporator core through the evaporator core outlet tube as a vapor. During A/C compressor operation, airflow from the blower motor is cooled and dehumidified as it flows through the evaporator core fins.

Thermostatic Expansion Valve (TXV)

The thermostatic expansion valve (TXV) is located at the evaporator core inlet and outlet tubes at the center rear of the engine compartment. The TXV provides a restriction to the flow of refrigerant from the high-pressure side of the refrigerant system and separates the low-pressure and high-pressure sides of the refrigerant system. Refrigerant entering and exiting the evaporator core passes through the TXV through 2 separate flow paths. An internal temperature sensing bulb senses the temperature of the refrigerant flowing out of the evaporator core and adjusts an internal pin-type valve to meter the refrigerant flow into the evaporator core. The internal pin-type valve decreases the amount of refrigerant entering the evaporator core at lower temperatures and increases the amount of refrigerant entering the evaporator core at higher temperatures.

Receiver/Drier

NOTE: Installation of a new receiver/drier desiccant bag is not required when repairing the A/C system, except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier desiccant bag. Damage to the receiver/drier desiccant bag includes physical damage to the receiver/drier desiccant bag or moisture contamination. Moisture contamination results only from a complete loss of refrigerant and equalization of the refrigerant system pressure with atmospheric pressure for a period longer than one hour. If even a slight amount of positive refrigerant pressure is present in the system before repairs are carried out, the receiver/drier desiccant bag should not be replaced.

The receiver/drier is integral to the A/C condenser. It stores high-pressure liquid refrigerant after it leaves the condenser core. A receiver/drier desiccant bag installed inside the receiver/drier removes any retained moisture from the refrigerant. The receiver/drier desiccant bag is a separate component and can be separately removed and installed with the A/C condenser removed from the vehicle.

Evaporator Temperature Sensor

The evaporator temperature sensor contains a thermistor which receives a reference voltage from the HVAC module. The thermistor then varies the resistance to the reference voltage based on the evaporator fin temperature. The resulting voltage is returned to the HVAC module where it is interpreted as an evaporator fin temperature reading.

The HVAC module maintains evaporator core temperature and prevents icing of the evaporator core. It does this by switching off the A/C request signal to the instrument cluster when the evaporator temperature sensor reading falls below acceptable levels, and by switching on the A/C request when the evaporator temperature rises above acceptable levels.

The evaporator temperature sensor electrical connector is located outside of the heater core and evaporator core housing near the accelerator pedal, with the sensor pigtail leading into the housing to the sensor probe which is inserted between the evaporator core fins.

The evaporator temperature sensor is not available as a separate component. To install a new evaporator temperature sensor, a new heater core and evaporator core housing must be installed.

A/C Pressure Transducer

The A/C pressure transducer monitors the compressor discharge pressure and communicates with the PCM. The PCM will interrupt A/C compressor operation in the event that the A/C pressure transducer indicates high system discharge pressures. It is also used to sense low charge conditions. If the pressure is below a predetermined value for a given ambient temperature, the PCM will not allow the clutch to engage. It is not necessary to recover the refrigerant before removing the A/C pressure transducer.

Service Gauge Port Valves

The high-pressure service gauge port valve is located on the compressor-to-condenser discharge line.

The low-pressure service gauge port valve is located on the compressor suction line.

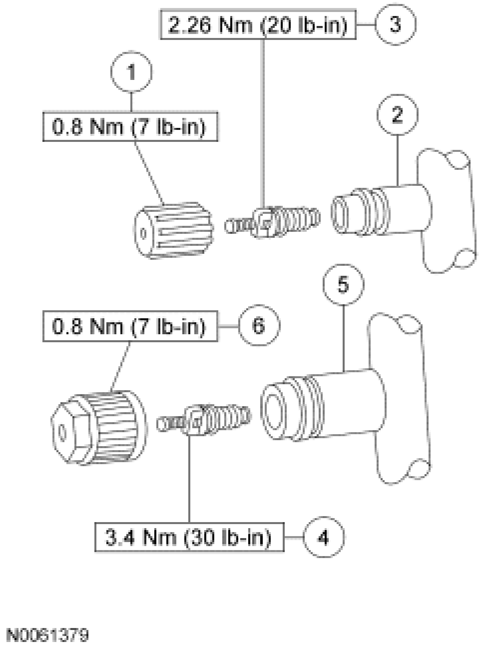

Fig. 1: Exploded View Of Service Gauge Port Valves With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	19D702	Low-pressure service gauge port valve cap
2	-	Low-pressure service gauge port valve
3	19D701	Low-pressure Schrader-type valve
4	19D701	High-pressure Schrader-type valve
5	-	High-pressure service gauge port valve
6	19D702	High-pressure service gauge port valve cap

The fitting is an integral part of the refrigerant line or component.

- Special couplings are required for both the high-side and low-side service gauge ports.
- A very small amount of leakage will always be detectable around the Schrader-type valve with the service gauge port valve cap removed, and is considered normal. A new Schrader-type valve core can be installed if the seal leaks excessively.

- The service gauge port valve caps are used as primary seals in the refrigerant system to prevent leakage through the Schrader-type valves from reaching the atmosphere. Always install and tighten the A/C service gauge port valve caps to the correct torque after they are removed.

Refrigerant System Dye

A fluorescent refrigerant system dye "wafer" is added to the receiver/drier desiccant bag to assist in refrigerant system leak diagnosis using a Rotunda-approved ultraviolet blacklight. This fluorescent dye "wafer" will dissolve after about 30 minutes of continued A/C operation. It is not necessary to add additional dye to the refrigerant system before diagnosing leaks, even if a significant amount of refrigerant has been removed from the system. Additional refrigerant system dye should only be added if more than 50% of the refrigerant system lubricant capacity has been lost due to a fitting separation or hose rupture. Refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.

AIR DISTRIBUTION AND FILTERING

Air Distribution

There are 2 sources of air available to the air distribution system:

- Outside air
- Recirculated air

Recirculated air is always used when the climate control assembly is set to the MAX A/C mode on vehicles equipped with electronic manual temperature control (EMTC) and can be selected in any mode except DEFROST. Vehicles equipped with dual-zone electronic automatic temperature control (EATC) use recirculated air only when the RECIRC function is selected in any mode other than DEFROST, or when required by the HVAC module in the AUTOMATIC mode.

RECIRC is a timed function when selected while operating in FLOOR or FLOOR/DEFROST mode, and will automatically default back to fresh air inlet in 5 minutes if operating with A/C ON at an ambient temperature below 10°C (50°F). When operating with A/C OFF, the RECIRC function will always default back to fresh air inlet in 5 minutes regardless of ambient temperature.

Air distribution within the vehicle is determined by the airflow mode selected, or by the dual-zone EATC system in the AUTOMATIC mode. The air distribution mode on vehicles equipped with dual-zone EATC can be overridden by the driver if desired. Airflow mode control doors are used to direct airflow within the heater core and evaporator core housing. Electric mode door actuators are used to position these airflow mode doors.

Vehicles equipped with dual-zone EATC use 2 separate temperature blend doors. This allows individual temperature settings to be selected for the RH and LH air outlets. The airflow mode doors are not partitioned for separate RH and LH airflow positions. Therefore, the airflow mode will always remain similar for the RH and LH sides of the vehicle regardless of the temperatures selected.

Air enters the passenger compartment from the following outlets:

- Instrument panel registers

- Floor duct outlets
- Windshield defroster
- Side window demisters
- Rear footwell duct
- Center console registers

Passenger compartment air is exhausted from the vehicle through open windows or body air vents.

Cabin Air Filter

A cabin air filter is available as standard equipment on dual-zone EATC vehicles. EMTC vehicles are not equipped from the factory with a cabin air filter, but are equipped with a screen in place of the filter to prevent any large foreign material from entering the heater core and evaporator core housing. The cabin air filter or screen can be accessed by removing the glove compartment and removing the cabin air filter access cover.

A cabin air filter can be installed as a dealer accessory on vehicles not originally equipped with a filter, but only a screen or a filter should be installed, never both.

CONTROL COMPONENTS

Electronic Manual Temperature Control (EMTC)

The electronic manual temperature control (EMTC) components are used to select the following:

- Air inlet source (outside or recirculated)
- Blower motor speed
- Discharge air temperature (temperature blend)
- Discharge air location (defrost, panel, floor)
- A/C compressor operation

Control System Inputs

The EMTC system has 2 system control inputs.

HVAC Module

The HVAC module integrates the temperature control, airflow mode selection, A/C request button, recirculated air request button and rear defog switch into a single unit.

The temperature control selector setting determines air temperature. Movement of the temperature display from COOL (blue) to WARM (red) causes a corresponding movement of the temperature blend door and determines the discharge air temperature that the air distribution system will maintain. The temperature control selector is an integral part of the HVAC module and cannot be installed separately. The temperature selector knob is removable and can be separately replaced.

The airflow mode setting determines air discharge location. Movement of the airflow mode selector causes a corresponding movement of the airflow mode doors and determines the air discharge location. The airflow mode selector is an integral part of the HVAC module and cannot be installed separately. The airflow mode selector knob is removable and can be separately replaced.

The A/C request button determines A/C compressor operation, except when the airflow mode selector is in the OFF, MAX A/C or DEFROST mode. The A/C request button is an integral part of the HVAC module and cannot be installed separately.

The recirculated air request button can select recirculated air in any mode except DEFROST, and fresh air in any mode except MAX A/C or OFF. The recirculated air request button is an integral part of the HVAC module and cannot be installed separately.

The rear defog button signals activation of the heated backlight. The rear defog button is an integral part of the HVAC module and cannot be installed separately.

Blower Motor Switch

The blower motor switch is mounted in the HVAC module and controls blower motor speed by adding or bypassing resistors in the blower motor resistor in all modes except OFF. The blower motor switch knob is removable and can be separately replaced.

Control System Outputs

The EMTC system has 4 system outputs.

Blower Motor Resistor

The blower motor switch varies the blower motor ground circuit resistance by adding or bypassing series resistance in the blower motor resistor. Increased resistance will lower the blower motor speed, and lowered resistance will increase blower motor speed. When the blower motor is in the HI position, the blower motor resistor is bypassed.

The blower motor resistor is located on the heater core and evaporator core housing.

Temperature Blend Door Actuator

The temperature blend door actuator moves the temperature blend door on command from the HVAC module.

The temperature blend door actuator contains a reversible electric motor and a potentiometer. The potentiometer circuit consists of a 5-volt reference signal connected to one end of a variable resistor, and a signal ground connected to the other. A signal return circuit is connected to a contact wiper, which is driven along the variable resistor by the actuator shaft. The signal returned to the HVAC module from the contact wiper indicates the position of the temperature blend door. The HVAC module drives the actuator motor in whichever direction is necessary to make the actuator contact wiper voltage agree with the expected HVAC module contact wiper voltage value.

Airflow Mode Door Actuator

The airflow mode door actuator uses a cam and lever assembly to position the airflow mode doors on command from the HVAC module. The mode door actuator contains a reversible electric motor and potentiometer. The potentiometer allows the HVAC module to monitor the position of the airflow mode doors. The potentiometer circuit consists of a 5-volt reference signal connected to one end of a variable resistor, and a signal ground connected to the other. A signal return circuit is connected to a contact wiper, which is driven along the variable resistor by the actuator shaft. The signal returned to the HVAC module from the contact wiper indicates the position of the airflow mode doors.

Air Inlet Mode Door Actuator

The air inlet mode door actuator moves the air inlet door between the fresh and RECIRC positions on command from the HVAC module. The air inlet mode door actuator is driven to, and will automatically stop at, the full RECIRC or full fresh air inlet position and does not require a potentiometer circuit to monitor its position.

Electronic Automatic Temperature Control (EATC)

The dual-zone electronic automatic temperature control HVAC module analyzes input from the following major sources:

- Temperature, airflow mode, blower, A/C and RECIRC selection (made by the vehicle occupants)
- In-vehicle temperature sensor
- Ambient temperature sensor
- Solar radiation sensor
- Evaporator temperature sensor
- Vehicle speed
- Engine coolant temperature

Using these inputs, the dual-zone HVAC module determines the correct conditions for the following outputs:

- A/C compressor operation
- Blower speed
- Temperature blend door position
- Airflow mode door position
- Air inlet door position

Control System Inputs

The dual-zone EATC system has 4 control system inputs.

HVAC Module

The HVAC module provides an interface for the vehicle occupants to control the climate control system, or automatically controls the climate control system in the AUTO mode. The HVAC module has a vacuum fluorescent display for displaying set temperature, airflow direction, blower speed and DTCs. An on-board diagnostic (OBD) feature is incorporated to supply the technician with DTCs. These DTCs help direct the technician to the inoperative component.

In-Vehicle Temperature Sensor

The in-vehicle temperature sensor contains a thermistor, which measures the in-vehicle air temperature and sends that reading to the HVAC module. An aspirator hose is connected between the heater core and evaporator core housing and the in-vehicle temperature sensor. The aspirator hose uses airflow through the heater core and evaporator core housing to create a venturi-type suction to draw in-vehicle air through the in-vehicle temperature sensor (across the thermistor).

Solar Radiation Sensor (Sunload Sensor)

The solar radiation sensor supplies information to the HVAC module indicating sunload.

Ambient Temperature Sensor

The ambient temperature sensor signal is received by the HVAC module and indicates the outside air temperature. The ambient temperature sensor is located in front of the radiator on the radiator support bolster.

The ambient temperature sensor signal is not the sole factor considered by the HVAC module for the outside air temperature display. Therefore, the ambient temperature PID monitored with a scan tool may not exactly match the HVAC module display. For information regarding the HVAC module outside air temperature display, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.

Control System Outputs

The EATC system has 4 control system outputs.

Blower Motor Speed Control

The blower motor speed control controls the blower motor speed by converting low power signals from the HVAC module to a high current, variable ground feed for the blower motor. A delay function is used to provide a gradual increase or decrease in blower motor speed under all conditions.

Temperature Blend Door Actuators

The dual-zone EATC system uses 2 temperature blend door actuators to control 2 separate temperature blend doors. The temperature blend doors independently vary the LH side and RH side temperature settings, as desired. The temperature blend door actuators each contain a reversible electric motor and a potentiometer. The potentiometer circuit consists of a 5-volt reference signal connected to one end of a variable resistor, and a signal ground connected to the other. A signal return circuit is connected to a contact wiper, which is driven along the variable resistor by the actuator shaft. The signal returned to the HVAC module from the contact wiper indicates the position of the temperature blend door. The HVAC module drives the actuator motor in whichever direction is necessary to make the actuator contact wiper voltage agree with the expected HVAC module contact wiper voltage value.

Airflow Mode Door Actuator

The airflow mode door actuator uses a cam and lever assembly to position the airflow mode doors on command from the HVAC module. The mode door actuator contains a reversible electric motor and potentiometer. The potentiometer allows the HVAC module to monitor the position of the airflow mode doors. The potentiometer circuit consists of a 5-volt reference signal connected to one end of a variable resistor, and a signal ground connected to the other. A signal return circuit is connected to a contact wiper, which is driven along the variable resistor by the actuator shaft. The signal returned to the HVAC module from the contact wiper indicates the position of the airflow mode doors.

Air Inlet Mode Door Actuator

The air inlet mode door actuator moves the air inlet door between the fresh and RECIRC positions on command from the HVAC module. The air inlet mode door actuator is driven to, and will automatically stop at, the full RECIRC or full fresh air inlet position and does not require a potentiometer circuit to monitor its position.

HEATING AND VENTILATION

The heating and ventilation system has the following features:

- Controls the temperature and, during A/C operation, reduces the relative humidity of the air inside the vehicle.
- Delivers heated or cooled air to maintain the vehicle interior temperature and comfort level.
- Cooling or heating can be adjusted to maintain the desired temperature.
- Uses a reheat method to provide conditioned air to the passenger compartment.
- All airflow from the blower motor passes through the A/C evaporator core.
- Temperature blending is controlled by the temperature blend door(s), which regulate(s) the amount of air that flows through and around the heater core, where it is then mixed and distributed.

Heater Core

The heater core consists of fins and tubes arranged to extract heat from the engine coolant and transfer the heat to air passing through the heater core.

Blower Motor

The blower motor pulls air from the air inlet and forces it into the heater core and evaporator core housing where it is mixed and distributed.

Heater Core and Evaporator Core Housing

The heater core and evaporator core housing directs airflow from the blower motor through the evaporator core and heater core. All airflow from the blower motor passes through the evaporator core. The airflow is then directed through or around the heater core by the temperature blend door(s). Vehicles equipped with dual-zone electronic automatic temperature control (EATC) use a partitioned heater core and evaporator core housing with 2 electric actuator-positioned temperature blend doors. This allows for separate temperatures to be selected for the driver and passenger sides of the passenger compartment. Manual systems use a single electric actuator-positioned temperature blend door to direct airflow through or around the heater core.

REMOVAL AND INSTALLATION

AIR CONDITIONING (A/C) COMPRESSOR

MATERIAL

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

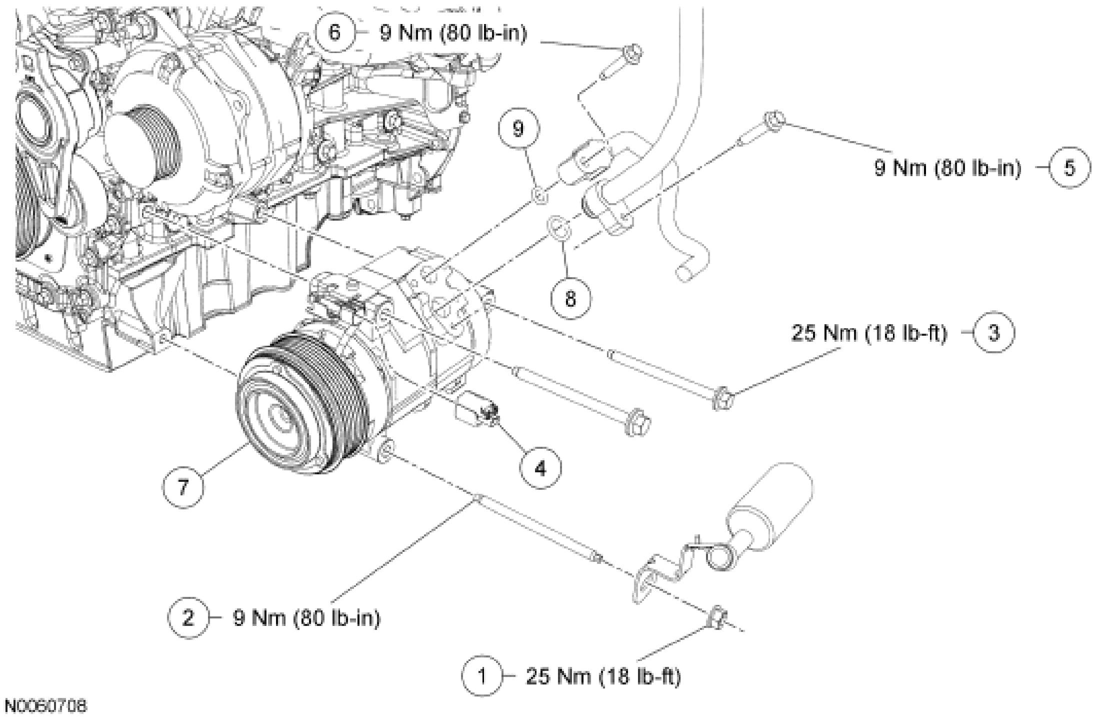

Fig. 2: Exploded View Of Air Conditioning (A/C) Compressor With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W520413	A/C compressor nut
2	W712610	A/C compressor stud
3	W712611	A/C compressor bolt (2 required)
4	12B637	Clutch field coil electrical connector
5	W500215	A/C compressor suction fitting bolt
6	W500215	A/C compressor discharge fitting bolt
7	19703	A/C compressor
8	19E889	Compressor suction fitting O-ring seal

9	19E889	Compressor discharge fitting O-ring seal

REMOVAL

CAUTION: If installing a new air conditioning (A/C) compressor due to an internal failure of the old unit, you must carry out the following procedures to remove contamination from the A/C system.

- **If A/C flushing equipment is available, carry out flushing of the A/C system prior to installing a new A/C compressor. For additional information, refer to CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS article.**
- **If A/C flushing equipment is not available, carry out filtering of the A/C system after a new A/C compressor has been installed. For additional information, refer to CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS article.**
- **Install a new thermostatic expansion valve (TXV), as directed by the A/C flushing or filtering procedure.**
- **Install a new receiver/drier desiccant bag as directed by the A/C flushing or filtering procedure.**

NOTE: The O-ring seals used on this vehicle are not interchangeable with all similarly sized O-ring seals used on other Ford products. Use only the O-ring seals specified for this vehicle in the Ford master parts catalog.

NOTE: Installation of a new receiver/drier desiccant bag is not required when repairing the A/C system, except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier desiccant bag. Damage to the receiver/drier desiccant bag includes physical damage to the receiver/drier desiccant bag or moisture contamination. Moisture contamination results only from a complete loss of refrigerant and equalization of the refrigerant system pressure with atmospheric pressure for a period longer than one hour. If even a slight amount of positive refrigerant pressure is present in the system before repairs are carried out, the receiver/drier desiccant bag should not be replaced.

1. If flushing of the A/C system has not been carried out, recover the refrigerant. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
2. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
3. Remove the drive belt from the A/C compressor pulley.
4. Remove the RH fender splash shield. For additional information, refer to **FRONT END BODY PANELS** article.

5. Remove the A/C compressor nut and stud.
6. Remove the lower A/C compressor bolt.
7. Disconnect the field coil electrical connector.
8. Remove the upper A/C compressor bolt and reposition the A/C compressor to allow access to the compressor discharge and suction fittings.
9. Remove the A/C compressor suction fitting bolt and disconnect the fitting.
   - Discard the O-ring seal.
10. Remove the A/C compressor discharge fitting bolt and disconnect the fitting.
    - Discard the O-ring seal.
11. Remove the A/C compressor.

INSTALLATION

NOTE: The service A/C compressor for this vehicle is shipped from the factory with PAG oil installed. The refrigerant oil adding procedure specified for this vehicle must be followed to avoid installing excessive PAG oil in the refrigerant system.

1. If filtering of the A/C system is not to be carried out, lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
2. Connect the A/C compressor discharge fitting and install the A/C compressor discharge fitting bolt.
   - Install a new O-ring seal lubricated in clean PAG oil.
   - Tighten to 9 N.m (80 lb-in).
3. Connect the A/C compressor suction fitting and install the A/C compressor suction fitting bolt.
   - Install a new O-ring seal lubricated in clean PAG oil.
   - Tighten to 9 N.m (80 lb-in).
4. Install, but do not tighten the upper A/C compressor bolt.
5. Install, but do not tighten the lower A/C compressor bolt.
6. Install the A/C compressor stud.
   - Tighten to 9 N.m (80 lb-in).
7. Position the compressor-to-condenser discharge line and install, but do not tighten the A/C compressor nut.
8. Tighten the A/C compressor bolts and nut in the sequence shown in illustration.
   - Tighten to 25 N.m (18 lb-ft).

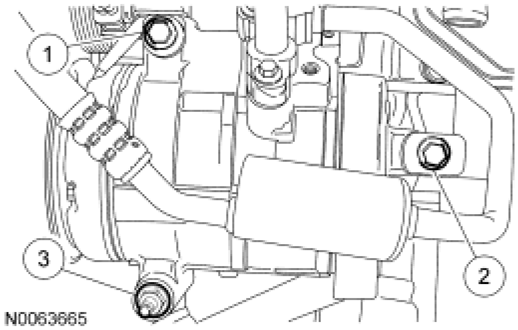

Fig. 3: Tightening A/C Compressor Bolts & Nut In Sequence
Courtesy of FORD MOTOR CO.

9. Connect the field coil electrical connector.
10. Install the RH fender splash shield. For additional information, refer to **FRONT END BODY PANELS** article.
11. Install the drive belt.
12. If filtering of the A/C system is not to be carried out, evacuate, leak test and charge the refrigerant system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.

AIR INLET DUCT

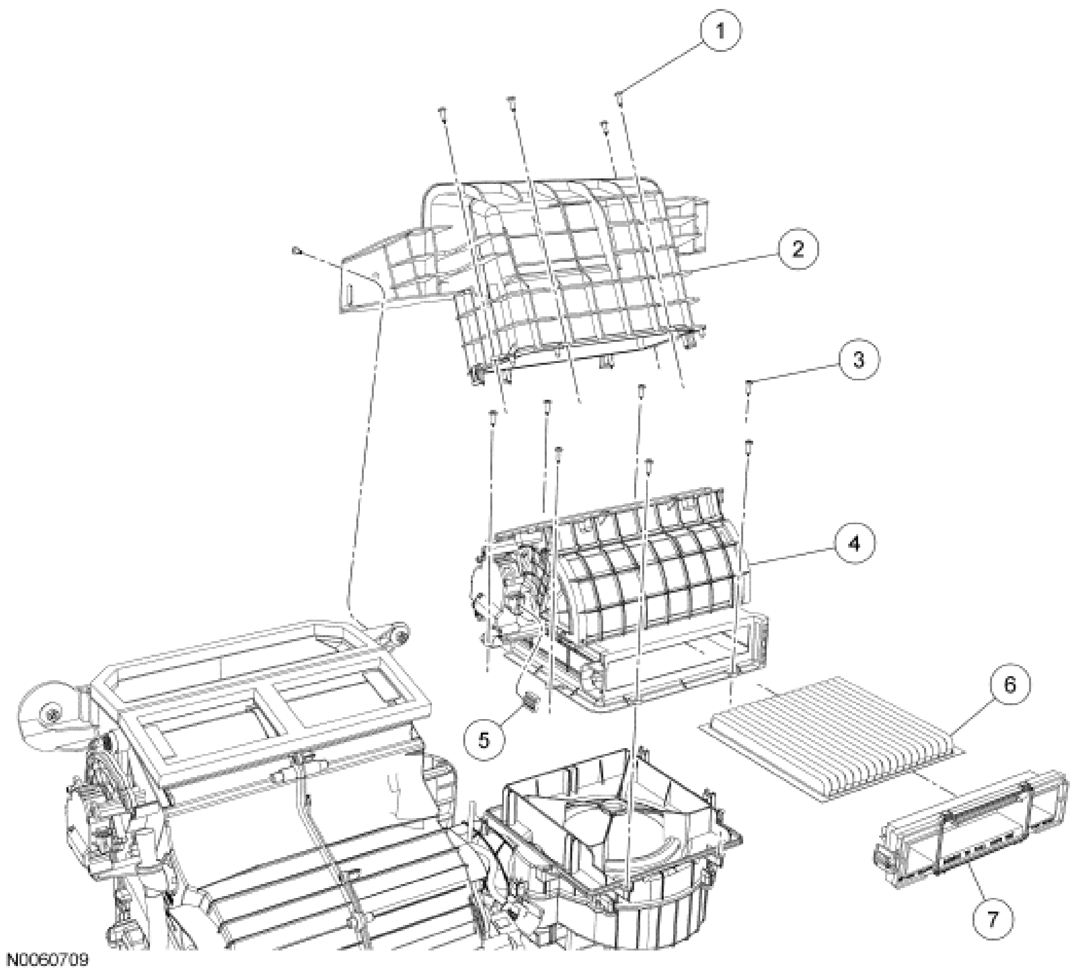

Fig. 4: Exploded View Of Air Inlet Duct
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Fresh air inlet duct screw (5 required)
2	-	Fresh air inlet duct (part of 19B555)
3	-	Air inlet duct screw (7 required)
4	-	Air inlet duct (part of 19B555)
5	19C603	Air inlet mode door actuator electrical connector
6	19N619	Cabin air filter
7	19B735	Cabin air filter cover

REMOVAL AND INSTALLATION

1. Remove the heater core and evaporator core housing. For additional information, refer to **HEATER CORE AND EVAPORATOR CORE HOUSING**.
2. Disconnect the air inlet mode door actuator electrical connector.
3. Remove the cabin air filter cover and the cabin air filter (if equipped) or air inlet screen (if equipped).
4. Remove the 5 fresh air inlet duct screws.
5. Detach the 4 fresh air inlet duct clips and remove the fresh air inlet duct.
6. Remove the 7 air inlet duct screws.
7. Remove the air inlet duct.
8. To install, reverse the removal procedure.

AMBIENT AIR TEMPERATURE SENSOR

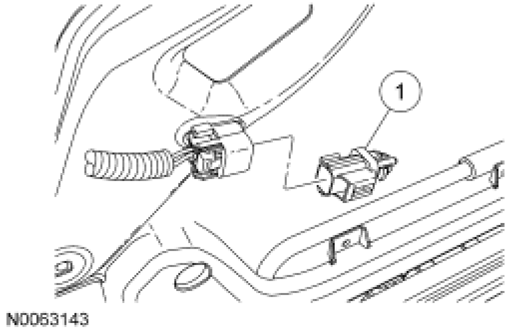

Fig. 5: Identifying Ambient Air Temperature Sensor
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	12A647	Ambient air temperature sensor

REMOVAL AND INSTALLATION

1. Remove the front bumper cover. For additional information, refer to **BUMPERS** article.
2. Disconnect the ambient air temperature sensor electrical connector and remove the ambient air temperature sensor.
3. To install, reverse the removal procedure.

BLOWER MOTOR

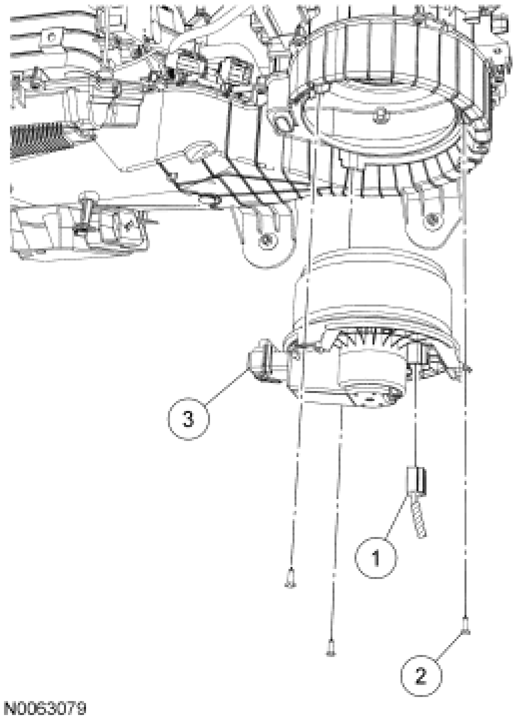

Fig. 6: Exploded View Of Blower Motor
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	19C603	Blower motor electrical connector
2	-	Blower motor screw (3 required)
3	19805	Blower motor

REMOVAL AND INSTALLATION

1. Remove the RH lower instrument panel insulator.
2. Disconnect the blower motor electrical connector.
3. Remove the 3 blower motor screws.
4. Remove the blower motor.
5. To install, reverse the removal procedure.

BLOWER MOTOR RESISTOR

REMOVAL AND INSTALLATION

1. For additional information, refer to **BLOWER MOTOR SPEED CONTROL**.

BLOWER MOTOR SPEED CONTROL

NOTE: Blower motor speed control shown in illustration, blower motor resistor similar.

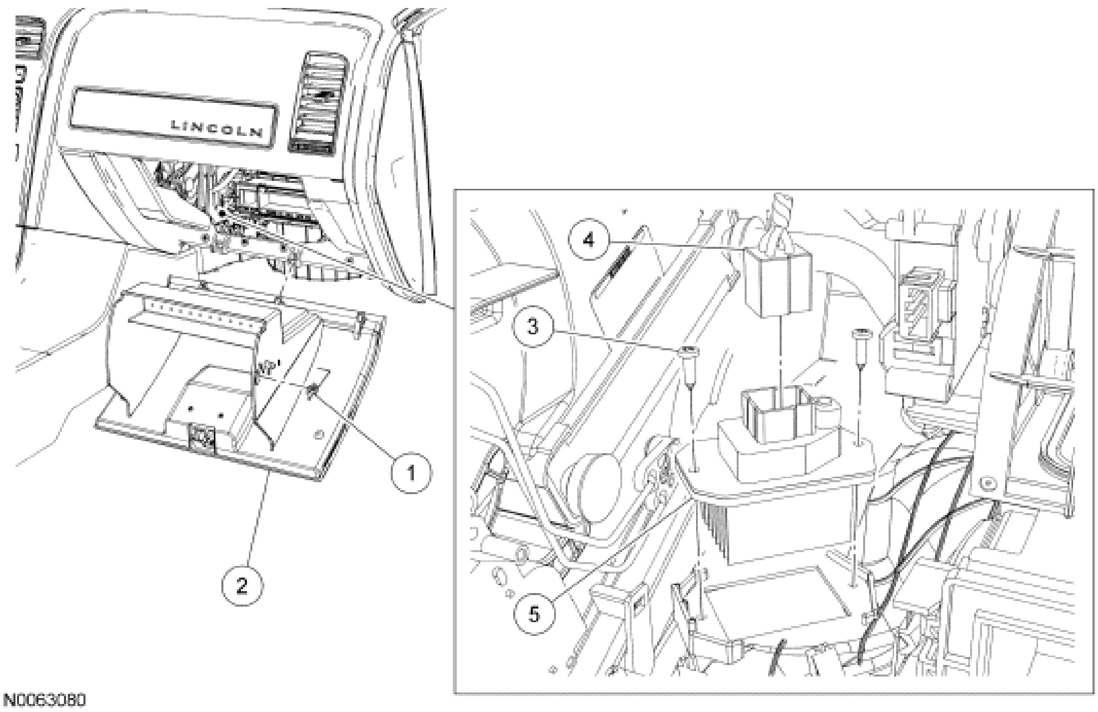

Fig. 7: Identifying Blower Motor Speed Control
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	7806200	Glove compartment damper
2	7806024	Glove compartment
3	-	Blower motor speed control screw (2 required)
4	19C603	Blower motor speed control electrical connector
5	19E624	Blower motor speed control (dual-zone electronic automatic temperature control [EATC] vehicles)
5	19A706	Blower motor resistor (electronic manual temperature control [EMTC] vehicles)

REMOVAL AND INSTALLATION

1. Detach the glove compartment damper from the glove compartment.
2. Remove the glove compartment.
3. Disconnect the blower motor speed control electrical connector.
4. Remove the 2 blower motor speed control screws.

5. Remove the blower motor speed control.
6. To install, reverse the removal procedure.

BLOWER MOTOR SWITCH

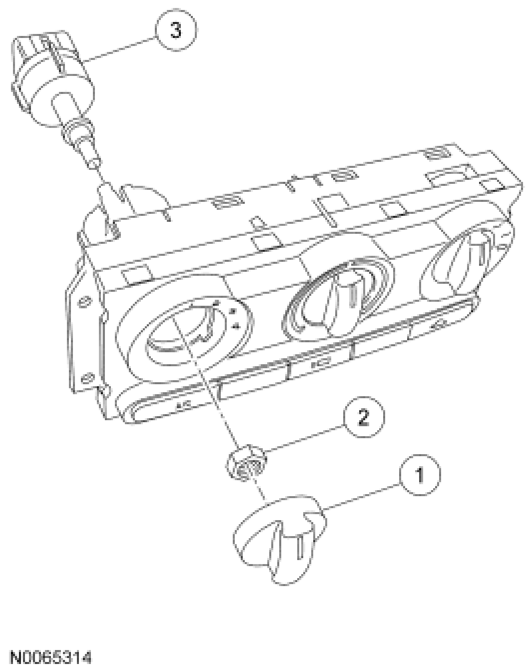

Fig. 8: Exploded View Of Blower Motor Switch
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	18519	Blower motor switch knob
2	-	Blower motor switch nut (part of 18578)
3	18578	Blower motor switch

REMOVAL AND INSTALLATION

1. Remove the climate control module. For additional information, refer to **HEATING VENTILATION AIR CONDITIONING (HVAC) MODULE - EDGE**.
2. Pull to remove the blower motor switch knob.
3. Remove the blower motor switch nut.

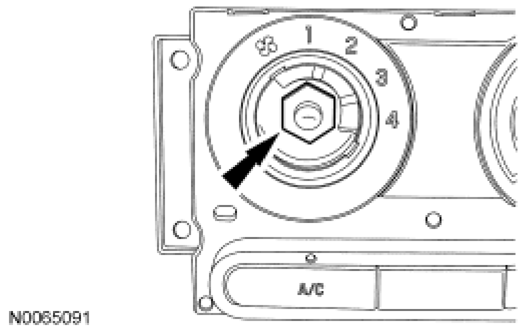

Fig. 9: Identifying Blower Motor Switch Knob
Courtesy of FORD MOTOR CO.

4. Release the 2 retaining tabs with the index finger on each hand, while depressing the blower motor switch shaft with the thumbs to remove the blower motor switch.

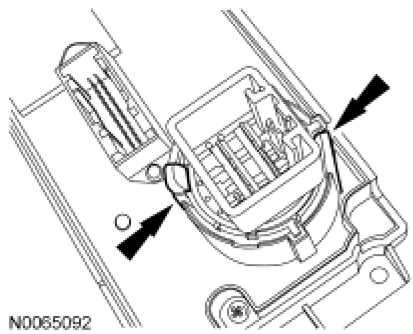

Fig. 10: Identifying Blower Motor Switch Shaft
Courtesy of FORD MOTOR CO.

5. To install, reverse the removal procedure.

COMPRESSOR TO CONDENSER DISCHARGE LINE

MATERIAL

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

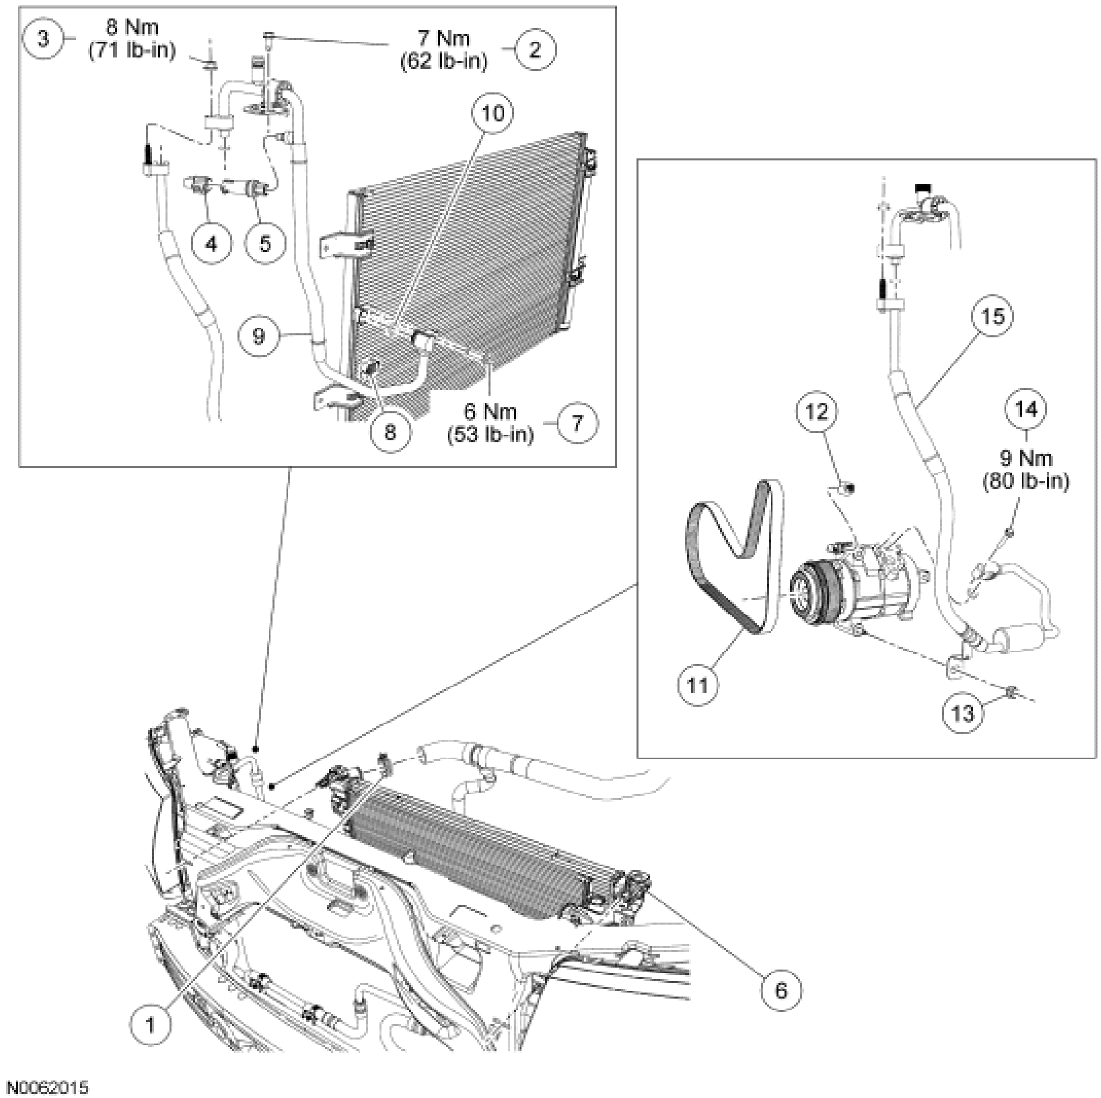

Fig. 11: Identifying Compressor To Condenser Discharge Line With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Upper radiator hose clamp
2	W707400	Compressor-to-condenser discharge line bracket bolt
3	W520413	Compressor-to-condenser discharge line fitting nut
4	12B637	A/C pressure transducer electrical connector
5	19D594	A/C pressure transducer
6	8A193	Radiator bracket
7	W500215	Condenser inlet fitting bolt

8	W704005	Compressor-to-condenser discharge line-to-radiator clip
9	19972	Compressor-to-condenser discharge line (condenser side)
10	19E889	O-ring seal (3 required)
11	8620	Accessory drive belt
12	12A581	Clutch field coil electrical connector
13	W520413	Compressor-to-condenser discharge line bracket nut
14	W500215	A/C compressor discharge fitting bolt
15	19972	Compressor-to-condenser discharge line (compressor side)

REMOVAL AND INSTALLATION

NOTE: **The O-ring seals used on this vehicle are not interchangeable with all similarly sized O-ring seals used on other Ford products. Use only the O-ring seals specified for this vehicle in the Ford master parts catalog.**

NOTE: **The compressor-to-condenser discharge line consists of 2 separately serviceable lines. If only one line is to be removed, only carry out the steps qualified for that line.**

Both compressor-to-condenser discharge lines

1. Recover the refrigerant. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
2. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
3. Remove the compressor-to-condenser discharge line fitting nut and disconnect the fitting.
   - Discard the O-ring seal.
   - To install, tighten to 8 N.m (71 lb-in).

   Condenser side compressor-to-condenser discharge line

4. Remove the front bumper cover. For additional information, refer to **BUMPERS** article.
5. Drain the engine coolant. For additional information, refer to **ENGINE COOLING** article.
6. Release the upper radiator hose clamp and disconnect the upper radiator hose from the radiator.
7. Remove the engine cooling fan. For additional information, refer to **ENGINE COOLING** article.
8. Remove the compressor-to-condenser discharge line bracket bolt.
   - To install, tighten to 7 N.m (62 lb-in).
9. Disconnect the A/C pressure transducer electrical connector.

10. Detach the 2 radiator brackets from the core support and position the radiator rearward.
11. Remove the condenser inlet fitting bolt and disconnect the fitting.
    - Discard the O-ring seal.
    - To install, tighten to 6 N.m (53 lb-in).
12. Detach the compressor-to-condenser discharge line-to-radiator clip.
13. Remove the condenser side compressor-to-condenser discharge line.

Compressor side compressor-to-condenser discharge line

14. Remove the drive belt from the A/C compressor pulley.
15. Remove the RH inner fender splash shield.
16. Disconnect the clutch field coil electrical connector.
17. Remove the compressor-to-condenser discharge line bracket nut.
18. Remove the A/C compressor discharge fitting bolt and disconnect the fitting.
    - Discard the O-ring seal.
    - To install, tighten to 9 N.m (80 lb-in).
19. Remove the compressor-to-condenser discharge line.

Both compressor-to-condenser discharge lines

20. To install, reverse the removal procedure.
    - Install new O-ring seals lubricated in clean PAG oil.
    - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
21. Evacuate, leak test and charge the refrigerant system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.

CONDENSER CORE

MATERIAL

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

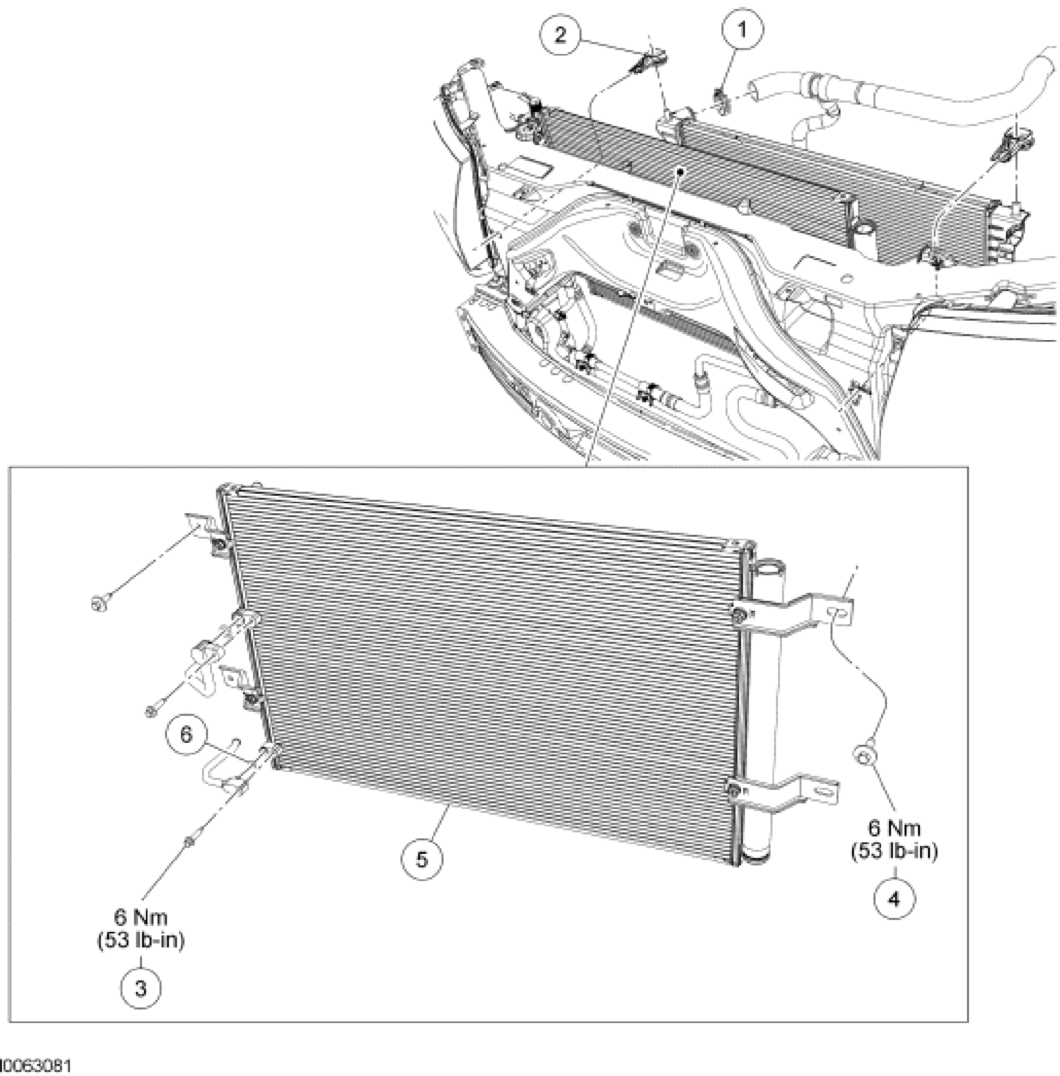

Fig. 12: Exploded View Of Condenser Core With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Upper radiator hose clamp
2	8A193	Radiator bracket (2 required)
3	W500215	Condenser fitting bolt (2 required)
4	W704652	Condenser bolt (2 required)
5	19710	Condenser core
6	19E889	O-ring seal (2 required)

REMOVAL AND INSTALLATION

NOTE: The A/C condenser for this vehicle is produced from the factory with a

receiver/drier desiccant bag installed in the integrated receiver/drier. This receiver/drier desiccant bag may become contaminated with moisture if the A/C condenser is not installed for an extended period of time. Since it cannot be determined how much time has elapsed between production and installation of the unit as a service part, the receiver/drier desiccant bag must be removed and replaced with the separate receiver/drier desiccant bag, which is supplied together with the A/C condenser service part kit. For additional information, refer to DESICCANT BAG.

NOTE: **The O-ring seals used on this vehicle are not interchangeable with all similarly sized O-ring seals used on other Ford products. Use only the O-ring seals specified for this vehicle in the Ford master parts catalog.**

1. Recover the refrigerant. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
2. With the vehicle in NEUTRAL position it on a hoist. For additional information, refer to **JACKING AND LIFTING** article.
3. Drain the engine coolant. For additional information, refer to **ENGINE COOLING** article.
4. Remove the front bumper cover. For additional information, refer to **BUMPERS** article.
5. Remove the cooling fan. For additional information, refer to **ENGINE COOLING** article.
6. Release the upper radiator hose clamp at the radiator and disconnect the hose.
7. Release the 2 radiator bracket clips from the radiator support and position the radiator rearward.
8. Release the 2 condenser lines from the clips at the radiator.
9. Remove the condenser outlet and inlet fitting bolts and disconnect the fittings.
   - Discard the O-ring seals.
   - To install, tighten to 6 N.m (53 lb-in).
10. Remove the 2 condenser bolts.
    - To install, tighten to 6 N.m (53 lb-in).

NOTE: **The condenser core must be removed from above the vehicle.**

11. Remove the condenser core.
12. To install, reverse the removal procedure.
    - Install new O-ring seals lubricated in clean PAG oil.
    - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
13. Fill the engine cooling system. For additional information, refer to **ENGINE COOLING** article.
14. Evacuate, leak test and charge the refrigerant system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.

DESICCANT BAG

MATERIAL

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

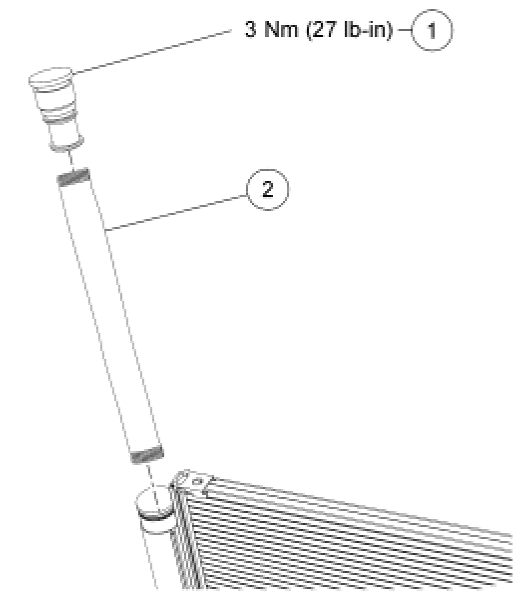

Fig. 13: Exploded View Of Desiccant Bag With Torque Specification
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Receiver/drier plug (part of 19E989 kit)
2	19C836	Receiver/drier desiccant bag

REMOVAL AND INSTALLATION

NOTE: **Installation of a new receiver/drier desiccant bag is not required when repairing the A/C system, except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier desiccant bag. Damage to the receiver/drier desiccant bag includes physical damage to the receiver/drier desiccant bag or moisture contamination. Moisture contamination results only from a complete loss of refrigerant and equalization of the refrigerant system pressure with atmospheric pressure for a period longer than one hour. If even a slight amount of positive refrigerant pressure is present in the system before repairs are carried out, the receiver/drier desiccant bag should not be replaced.**

1. Remove the A/C condenser core. For additional information, refer to **CONDENSER CORE**.
2. Remove the receiver/drier plug.
    - To install, tighten to 3 N.m (27 lb-in).
3. Using a suitable tool. Grasp and remove the receiver/drier desiccant bag.
4. To install, reverse the removal procedure.
    - Lubricate the O-ring seal on the new receiver/drier plug with clean PAG oil.

EVAPORATOR OUTLET LINE

MATERIAL

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

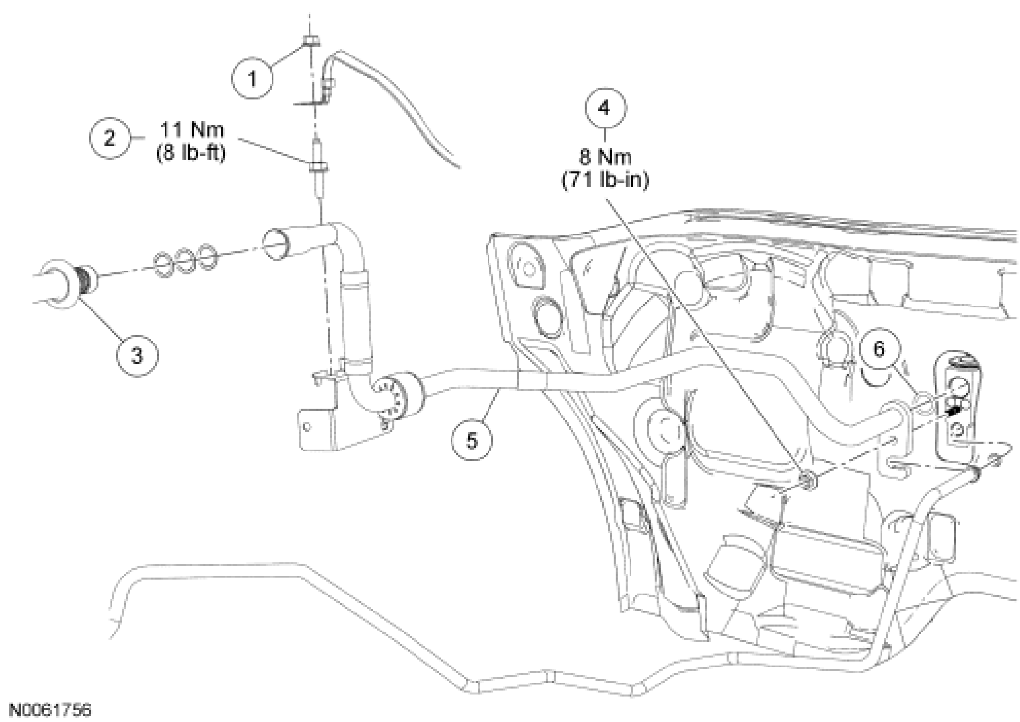

Fig. 14: Exploded View Of Evaporator Outlet Line With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W520413	Ground strap nut
2	N806925	Evaporator outlet line bracket stud bolt
3	-	Evaporator outlet line spring lock coupling (part of 19835)
4	W707142	Thermostatic expansion valve (TXV)

		fitting nut
5	19835	Evaporator outlet line
6	19E889	O-ring seal (5 required)

REMOVAL AND INSTALLATION

NOTE: The O-ring seals used on this vehicle are not interchangeable with all similarly sized O-ring seals used on other Ford products. Use only the O-ring seals specified for this vehicle in the Ford master parts catalog.

NOTE: Installation of a new receiver/drier desiccant bag is not required when repairing the A/C system, except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier desiccant bag. Damage to the receiver/drier desiccant bag includes physical damage to the receiver/drier desiccant bag or moisture contamination. Moisture contamination results only from a complete loss of refrigerant and equalization of the refrigerant system pressure with atmospheric pressure for a period longer than one hour. If even a slight amount of positive refrigerant pressure is present in the system before repairs are carried out, the receiver/drier desiccant bag should not be replaced.

1. Recover the refrigerant. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
2. Remove the ground strap nut at the RH shock tower.
3. Remove the evaporator outlet line bracket stud bolt.
   - To install, tighten to 11 N.m (8 lb-ft).
4. Disconnect the evaporator outlet line spring lock coupling.
   - Discard the O-ring seals.
5. Remove the thermostatic expansion valve (TXV) fitting nut and disconnect the fitting.
   - Discard the O-ring seals.
   - To install, tighten to 8 N.m (71 lb-in).
6. Remove the evaporator outlet line.
7. To install, reverse the removal procedure.
   - Install new O-ring seals lubricated in clean PAG oil.
   - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
8. Evacuate, leak test and charge the refrigerant system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.

FOOTWELL DUCT - REAR

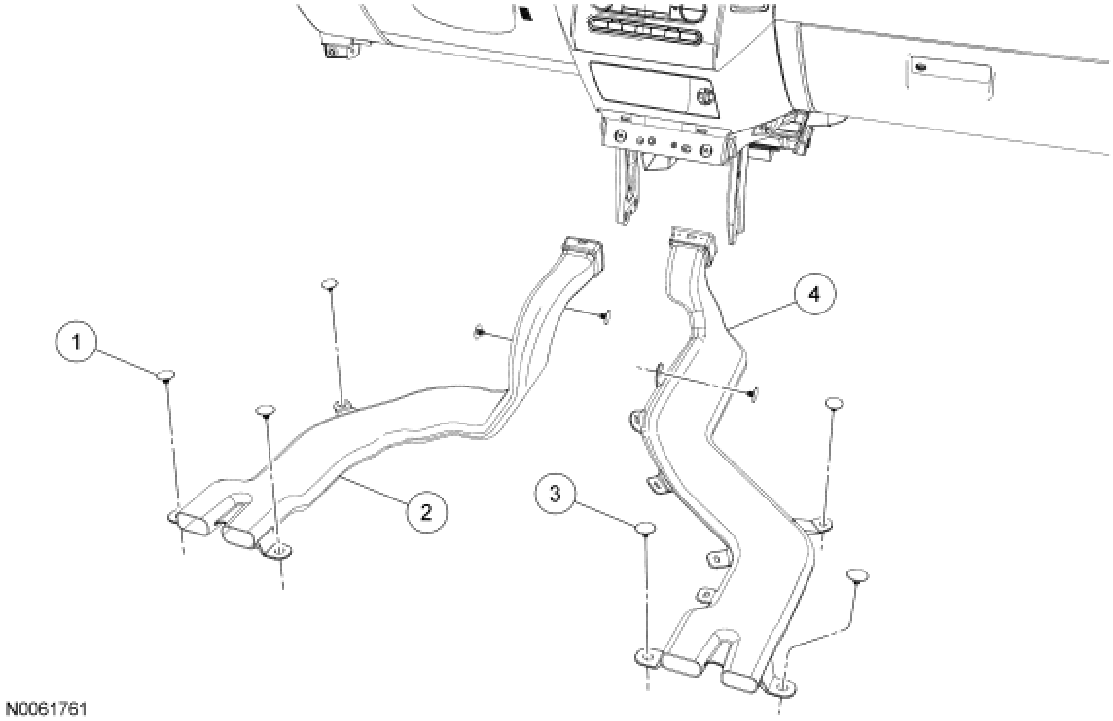

Fig. 15: Exploded View Of Rear Footwell Duct
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	N806113	LH rear footwell duct pin-type retainer (5 required)
2	18C420	LH rear footwell duct
3	N806113	RH rear footwell duct pin-type retainer (4 required)
4	18C420	RH rear footwell duct

REMOVAL AND INSTALLATION

LH rear footwell duct only

1. Remove the LH front seat. For additional information, refer to **SEATING** article.
2. Remove the floor console. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
3. Remove the LH front door sill plate.
4. Remove the driver floor carpet pin-type retainers and position the carpet away from the LH rear footwell duct.
5. Remove the 5 LH rear footwell duct pin-type retainers.
6. Remove the 7 floor console support bracket bolts.

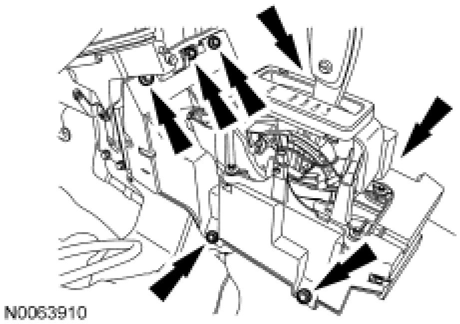

Fig. 16: Identifying Floor Console Support Bracket Bolts
Courtesy of FORD MOTOR CO.

NOTE: **The floor console support bracket will have to be repositioned to remove the LH rear footwell duct.**

7. Remove the LH rear footwell duct.

RH rear footwell duct only

8. Remove the RH floor console side finish panel.
9. Remove the RH front seat. For additional information, refer to **SEATING** article.
10. Remove the RH front door sill plate.
11. Remove the passenger front floor carpet pin-type retainers and position the carpet away from the RH rear footwell duct.
12. Remove the 5 RH rear footwell duct pin-type retainers.
13. Remove the RH rear footwell duct.

Both rear footwell ducts

14. To install, reverse the removal procedure.

HEATER CORE

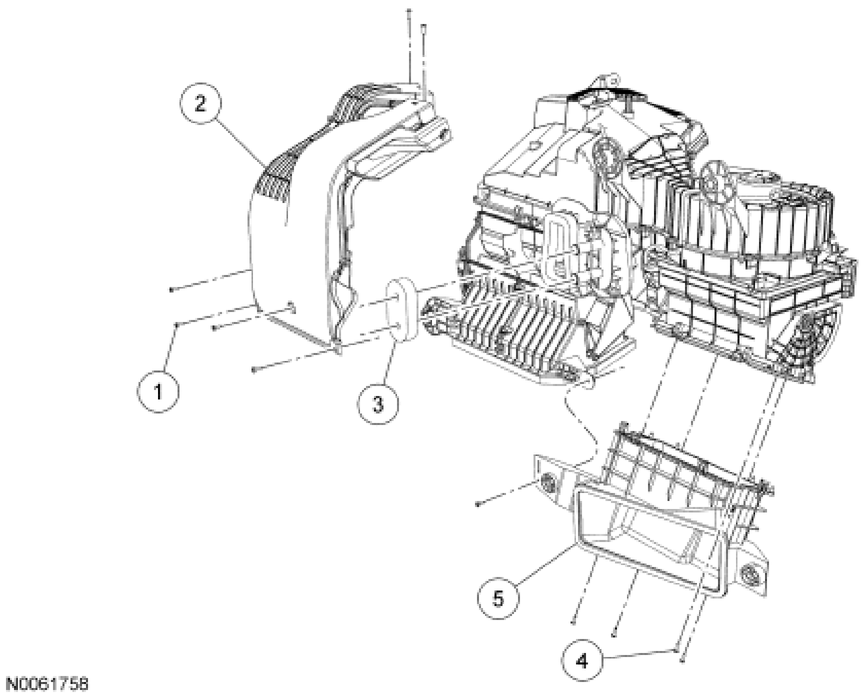

Fig. 17: Exploded View Of Heater Core (1 Of 2)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Floor duct screw (6 required)
2	-	Floor duct (part of 19B555)
3	-	Dash panel seal (part of 18529 kit)
4	-	Fresh air inlet duct screw (5 required)
5	-	Fresh air inlet duct (part of 19B555)

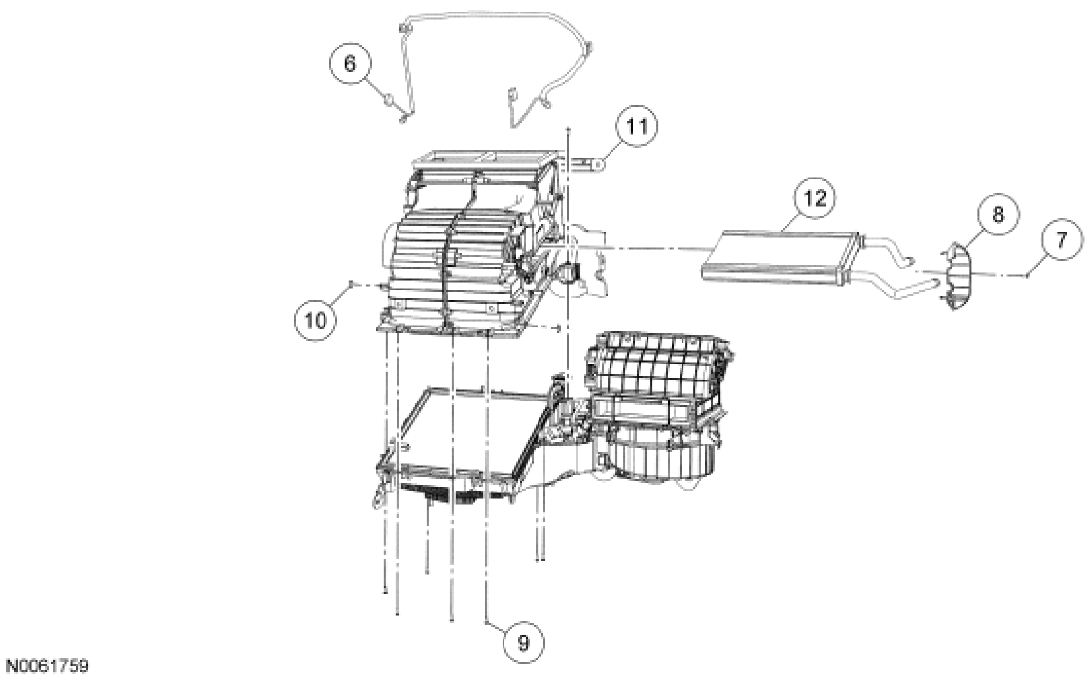

Fig. 18: Exploded View Of Heater Core (2 Of 2)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
6	19C603	Plenum chamber wire harness
7	-	Heater core tube bracket screw
8	-	Heater core tube bracket (part of 19B555)
9	-	Plenum chamber screw (8 required)
10	-	Plenum chamber clip (2 required)
11	-	Plenum chamber
12	18476	Heater core

REMOVAL AND INSTALLATION

NOTE: **If a heater core leak is suspected, the heater core must be pressure leak tested before it is removed from the vehicle. For additional information, refer to CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS article.**

1. Remove the heater core and evaporator core housing. For additional information, refer to **HEATER CORE AND EVAPORATOR CORE HOUSING**.
2. Remove the 6 floor duct screws and the floor duct.
3. Remove the heater core tube dash panel seal.
4. Remove the heater tube bracket screw and the heater tube bracket.

5. Remove the 5 fresh air inlet duct screws and the fresh air inlet duct.
6. Disconnect the wire harness from the plenum chamber.
7. Remove the 7 lower facing plenum chamber screws.
8. Orient the heater core and evaporator core housing with the plenum chamber upright.
9. Remove the upper facing plenum chamber screw.
10. Remove the 2 plenum chamber clips and remove the plenum chamber being careful not to allow the evaporator core to become dislodged from the installed position.

CAUTION: Do not handle the heater core by the inlet and/or outlet tube to remove. Handling the heater core by the tubes may damage the joints and lead to failure of the heater core.

11. Remove the heater core in the following sequence.
    1. Grasp the heater core by the core-side of the heater tube connections and partially remove it from the plenum chamber.
    2. Grasp the heater core by the top of the core and remove it from the plenum chamber.

NOTE: It is not necessary to carry out this step if the evaporator core has not become dislodged from the installed position during this procedure.

12. If the evaporator core has been moved at any point during heater core removal, remove the evaporator core, verify that the drain seal is installed in the correct position and install the evaporator core in the correct position.

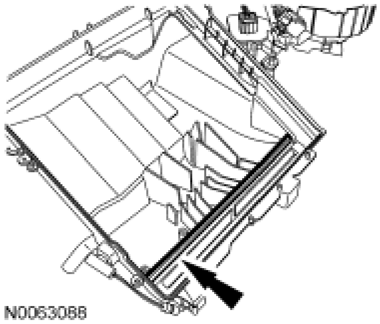

Fig. 19: Identifying Heater Core
Courtesy of FORD MOTOR CO.

13. To install, reverse the removal procedure.

HEATER CORE AND EVAPORATOR CORE HOUSING

MATERIAL

Item	Specification
PAG Refrigerant Compressor Oil (R-134a Systems)	WSH-M1C231-B

YN-12-D

Item	Part Number	Description
1	N806113	LH rear footwell duct pin-type retainer (5 required)
2	18C420	LH rear footwell duct
3	N806113	RH rear footwell duct front pin-type retainer (2 required)
4	19728	Evaporator drain tube

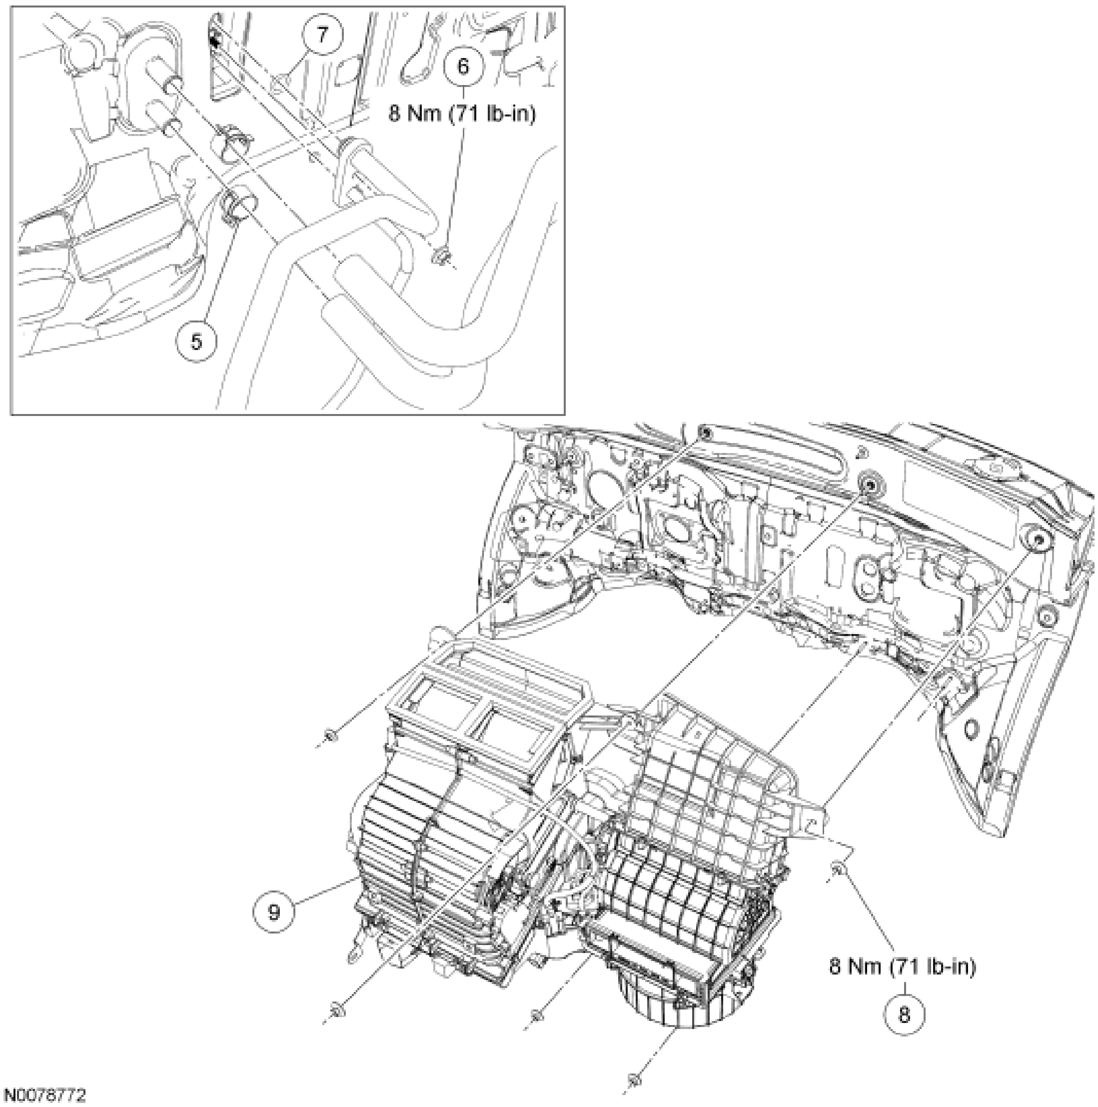

Fig. 21: Identifying Heater Core And Evaporator Core Housing With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
5	W525859	Heater hose clamp (2 required)
6	W707142	Thermostatic expansion valve (TXV) fitting nut
7	19E889	O-ring seal (2 required)
8	W709450	Heater core and evaporator core housing nut (5 required)
9	19B555	Heater core and evaporator core housing

REMOVAL AND INSTALLATION

NOTE: **Installation of a new receiver/drier desiccant bag is not required when repairing the A/C system, except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier desiccant bag. Damage to the receiver/drier desiccant bag includes physical damage to the receiver/drier desiccant bag or moisture contamination. Moisture contamination results only from a complete loss of refrigerant and equalization of the refrigerant system pressure with atmospheric pressure for a period longer than one hour. If even a slight amount of positive refrigerant pressure is present in the system before repairs are carried out, the receiver/drier desiccant bag should not be replaced.**

NOTE: **The O-ring seals used on this vehicle are not interchangeable with all similarly sized O-ring seals used on other Ford products. Use only the O-ring seals specified for this vehicle in the Ford master parts catalog.**

1. Recover the refrigerant. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
2. Drain the engine coolant. For additional information, refer to **ENGINE COOLING** article.
3. Remove the instrument panel. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
4. Remove the 3 driver side carpet pin-type retainers and position the driver side front carpet aside.
5. Remove the 4 LH rear footwell duct pin-type retainers and the LH rear footwell duct.
6. Remove the 2 passenger front carpet pin-type retainers and position the passenger front carpet aside enough to access the 2 front pin-type retainers on the RH rear footwell duct.
7. Remove the 2 front pin-type retainers on the RH rear footwell duct and detach the RH rear footwell duct from the heater core and evaporator core housing.
8. Release the 2 heater hose clamps at the heater core and disconnect the heater hoses.
9. Remove the thermostatic expansion valve (TXV) fitting nut and detach the A/C lines from the TXV.
    - Discard the O-ring seals.
    - To install, tighten to 8 N.m (71 lb-in).

    CAUTION: **The retaining clips on the plastic evaporator drain tube elbow will break if the elbow is removed from inside the vehicle. If the evaporator drain tube elbow must be removed, the retaining clips must be detached from below the vehicle. If the plastic evaporator drain tube elbow does not need to be removed, only detach the evaporator drain tube from the elbow.**

10. Disconnect the evaporator drain tube from the elbow at the floorpan.
11. Remove the 5 heater core and evaporator core housing nuts.
    - To install, tighten to 8 N.m (71 lb-in).
12. Remove the heater core and evaporator core housing.

13. To install, reverse the removal procedure.
    - Install new O-ring seals lubricated in clean PAG oil.
    - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
14. Fill the engine coolant level. For additional information, refer to **ENGINE COOLING** article.
15. Evacuate, leak test and charge the refrigerant system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.

HEATING VENTILATION AIR CONDITIONING (HVAC) MODULE - EDGE

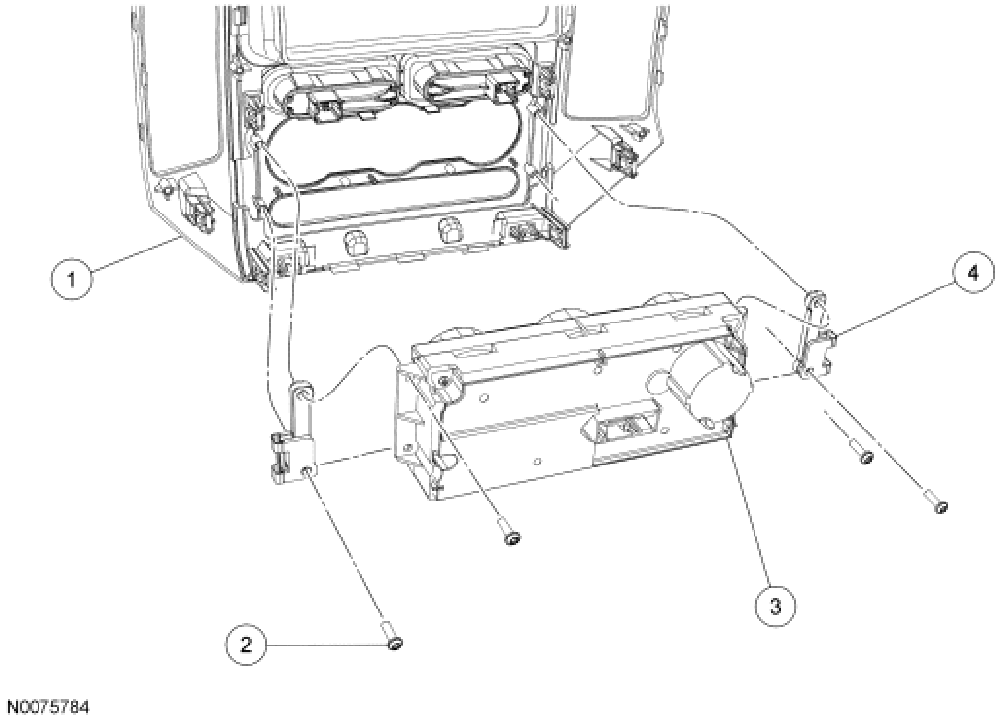

Fig. 22: Exploded View Of Climate Control Module - Edge
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	04302	Upper center instrument panel finish panel
2	W505945	HVAC module screw (4 required)
3	19980	HVAC module
4	78042K50	HVAC module spacer (2 required)

REMOVAL AND INSTALLATION

1. Using a suitable tool, gently pry out the upper center instrument panel finish panel to disengage the clips

and remove the panel.

- Disconnect the electrical connectors.

2. Remove the 4 HVAC module screws.
3. Remove the HVAC module.

NOTE: Be sure the HVAC module spacers are correctly positioned before installing the HVAC module.

4. To install, reverse the removal procedure.

HEATING VENTILATION AIR CONDITIONING (HVAC) MODULE - MKX

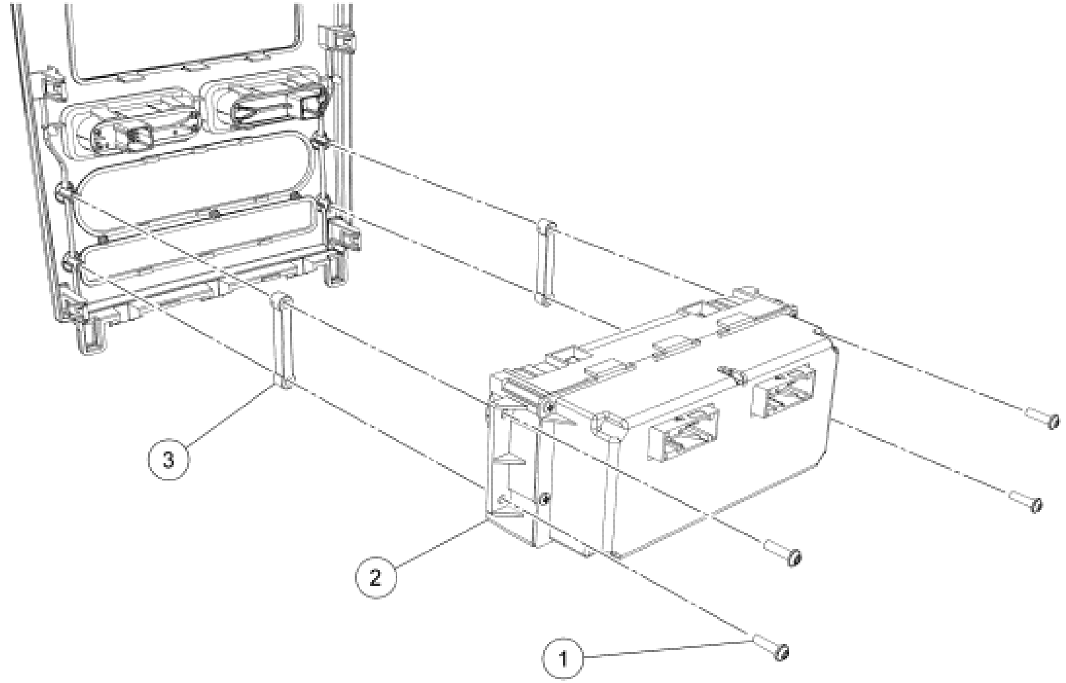

Fig. 23: Exploded View Of Climate Control Module - MKX
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W505945	HVAC module screw (4 required)
2	19980	HVAC module
3	78042K50	HVAC module spacer (2 required)

REMOVAL AND INSTALLATION

1. Remove the center instrument panel finish panel. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.

2. Remove the 4 HVAC module screws.
3. Remove the HVAC module.

NOTE: Be sure the HVAC module spacers are correctly positioned before installing the HVAC module.

4. To install, reverse the removal procedure.

IN-VEHICLE TEMPERATURE SENSOR

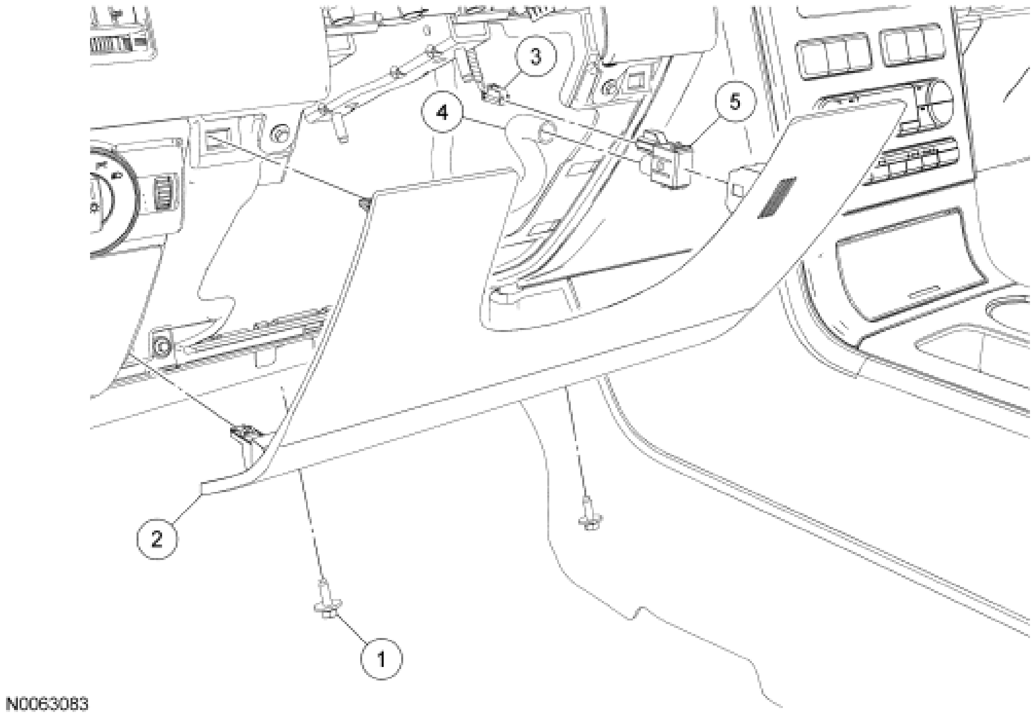

Fig. 24: Exploded View Of In-Vehicle Temperature Sensor
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W708268	Lower steering column opening cover bolt (2 required)
2	7804459	Lower steering column opening cover
3	14401	In-vehicle temperature sensor electrical connector
4	-	In-vehicle temperature hose and venturi assembly (part of 19C734 kit)
5	19C734	In-vehicle temperature sensor

REMOVAL AND INSTALLATION

1. Remove the 2 lower steering column opening cover bolts.
2. Detach the lower steering column opening cover.
3. Disconnect the in-vehicle temperature sensor aspirator hose.
4. Disconnect the in-vehicle temperature sensor electrical connector.
5. Release the 2 in-vehicle temperature sensor clips and remove the in-vehicle temperature sensor.

NOTE: **The in-vehicle temperature sensor hose and venturi assembly can be accessed from below the driver side of the instrument panel.**

6. Remove the in-vehicle temperature sensor hose and venturi assembly.
7. To install, reverse the removal procedure.

MODE DOOR ACTUATOR - AIR INLET DOOR

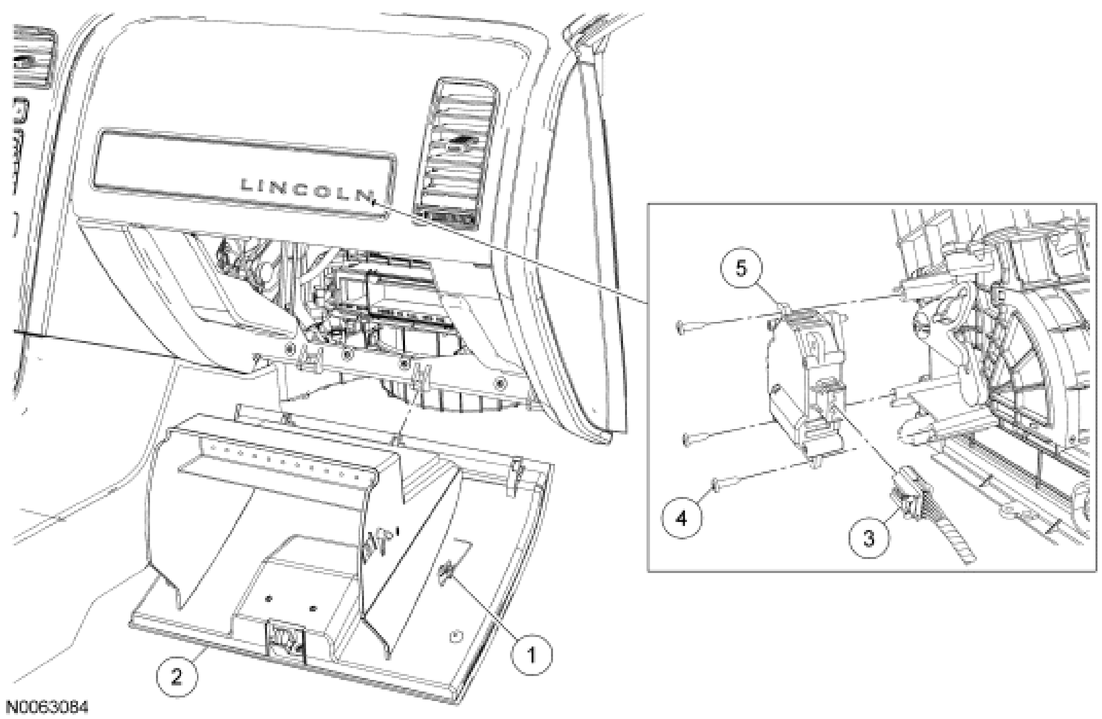

Fig. 25: Air Inlet Mode Door Actuator
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	7806200	Glove compartment damper
2	7806024	Glove compartment
3	19C603	Air inlet mode door actuator electrical connector
4	-	Air inlet mode door actuator screw (2

		required)
5	19E616	Air inlet mode door actuator

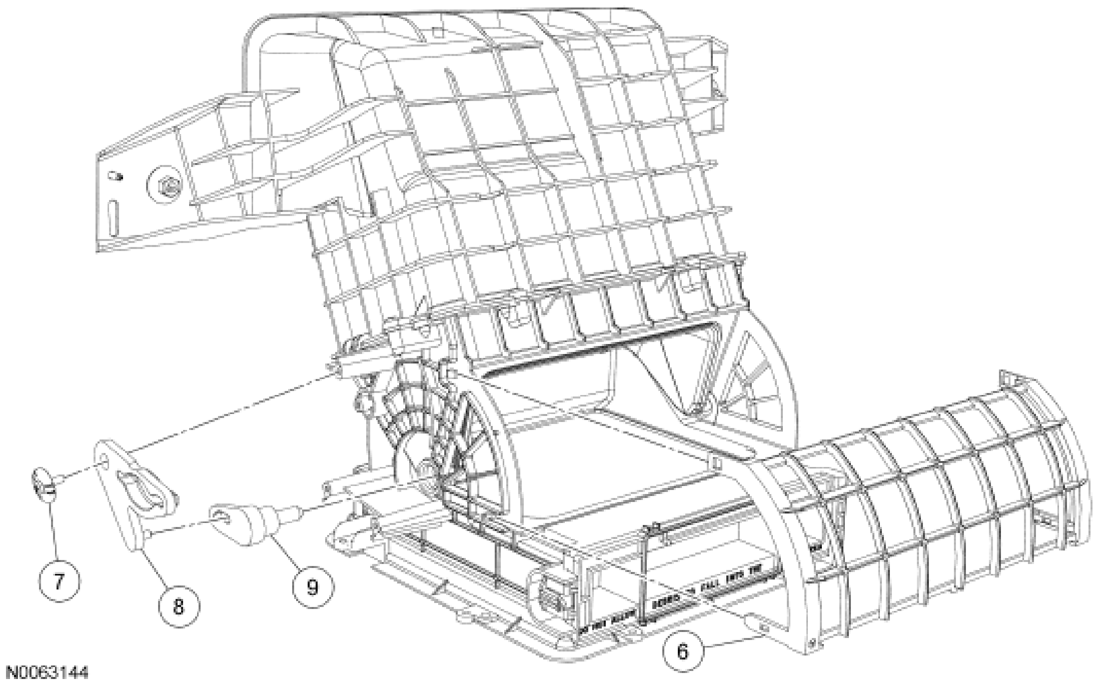

Fig. 26: Air Inlet Mode Door Actuator Linkage
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
6	-	Air inlet duct grille (part of 19B555)
7	-	Air inlet mode door intermediate lever screw (part of 19E616 kit)
8	-	Air inlet mode door intermediate lever (part of 19E616 kit)
9	-	Air inlet mode door lever (part of 19E616 kit)

REMOVAL AND INSTALLATION

NOTE: **It is not required to install the new air inlet door linkage parts included in the air inlet mode door actuator service part kit if only the mode door actuator requires replacement and the linkage parts are not broken or binding.**

Air inlet mode door actuator and linkage

1. Disconnect the glove compartment damper from the glove compartment.

2. Remove the glove compartment.
3. Remove the 3 air inlet mode door actuator screws.
4. Disconnect the air inlet mode door actuator electrical connector.
5. Remove the air inlet mode door actuator.
6. Manually operate and inspect the air inlet mode door and air inlet mode door linkage for incorrect placement or damage.

Air inlet mode door linkage only

7. Remove the air inlet mode door intermediate lever screw.
8. Remove the air inlet mode door intermediate lever.
9. Working through the air inlet duct grille opening, depress the clip and detach the air inlet mode door lever from the air inlet mode door.

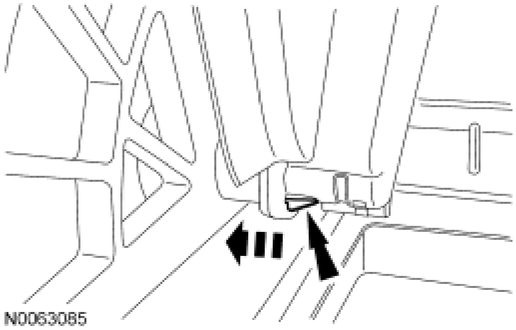

Fig. 27: Depressing Clip & Detaching Air Inlet Mode Door Lever From Air Inlet Mode Door
Courtesy of FORD MOTOR CO.

Air inlet mode door actuator and linkage

NOTE:	**The air inlet mode door must be fully seated in the correct position during installation. If the air inlet mode door is not fully seated, excessive noise will result when the climate control system is operated.**

10. To install, reverse the removal procedure.

MODE DOOR ACTUATOR - DEFROST/PANEL/FLOOR DOOR

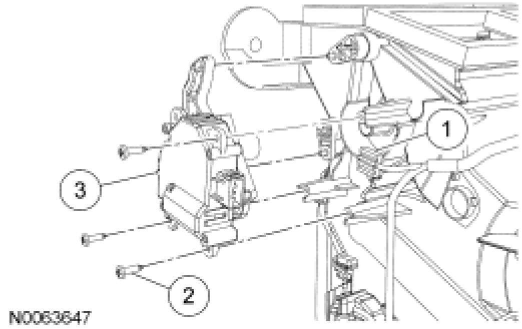

Fig. 28: Exploded View Of Mode Door Actuator - Defrost/Panel/Floor Door
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	19C603	Defrost/panel/floor mode door actuator electrical connector
2	-	Defrost/panel/floor mode door actuator screw (3 required)
3	19C772	Defrost/panel/floor mode door actuator

REMOVAL AND INSTALLATION

NOTE: The defrost/panel/floor mode door actuator can be accessed from below the driver side of the instrument panel.

NOTE: It is not required to install the new defrost/panel/floor mode door linkage parts included in the defrost/panel/floor mode door actuator service part kit if only the mode door actuator requires replacement and the linkage parts are not broken or binding.

Mode door actuator and linkage

1. Remove the 3 defrost/panel/floor mode door actuator screws.
2. Disconnect the defrost/panel/floor mode door actuator electrical connector.
3. Remove the defrost/panel/floor mode door actuator.
4. Manually operate, and inspect the defrost/panel/floor mode door linkage for incorrect placement or damage.

   Mode door actuator linkage only

5. Remove the mode door linkage.
   1. Depress the tab and remove the panel door lever.
   2. Remove the floor/defrost door intermediate lever screw and floor/defrost door intermediate lever.
   3. Pull straight outward to remove the floor/defrost door lever.

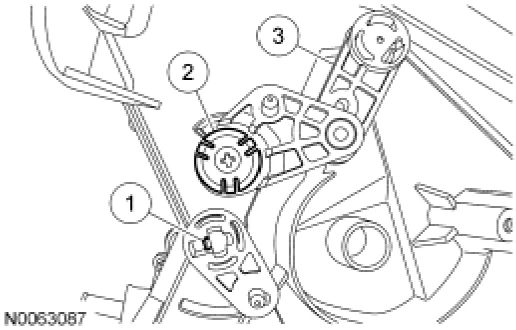

Fig. 29: Identifying Floor/Defrost Door Intermediate Lever
Courtesy of FORD MOTOR CO.

Mode door actuator and linkage

NOTE:	**When installing the mode door actuator, make sure that the panel door lever and floor/defrost intermediate lever are correctly aligned with the mode door actuator cam.**

6. To install, reverse the removal procedure.

REGISTER - CENTER, EDGE

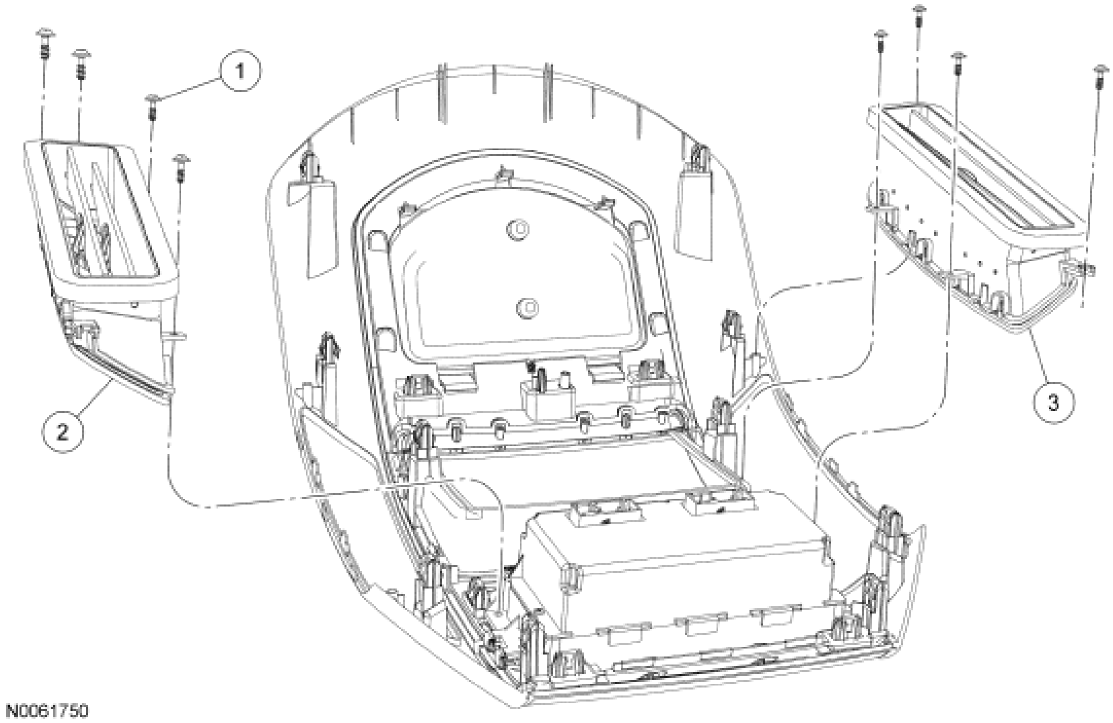

Fig. 30: Exploded View Of Register - Center, Edge
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Center register screw (8 required)
2	19893	RH center register
3	19893	LH center register

REMOVAL AND INSTALLATION

1. Remove the center instrument panel finish panel. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
2. Remove the 8 center register screws.
3. Remove the center registers.
4. To install, reverse the removal procedure.

REGISTER - CENTER, MKX

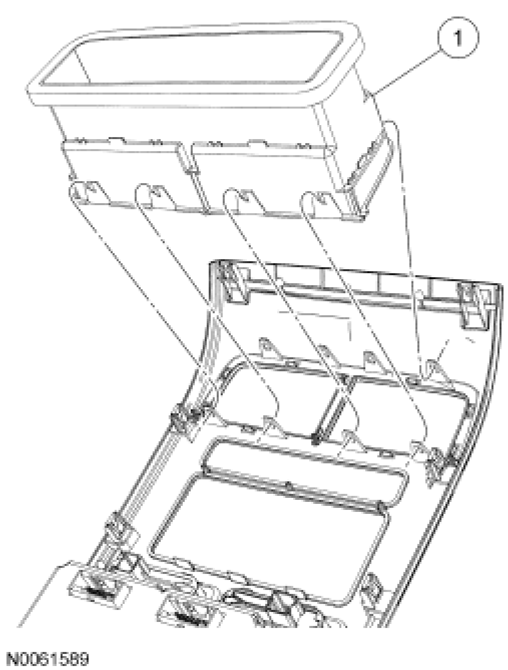

Fig. 31: Exploded View Of Register - Center, MKX
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	19893	Center register

REMOVAL AND INSTALLATION

1. Remove the center instrument panel finish panel. For additional information, refer to **INSTRUMENT**

PANEL AND CONSOLE article.

2. Release the 8 center register clips and remove the center register assembly.
3. To install, reverse the removal procedure.

REGISTER - DRIVER AND PASSENGER SIDE, EDGE

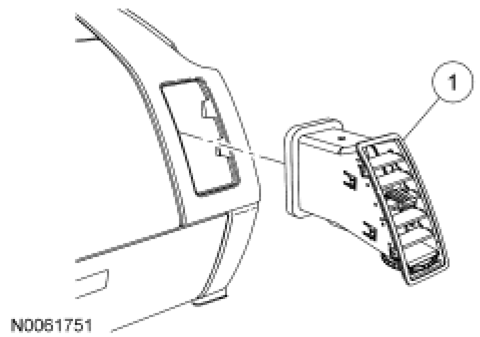

Fig. 32: Exploded View Of Register - Driver and Passenger Side, Edge
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	19893	Register

REMOVAL AND INSTALLATION

NOTE: **Passenger side register shown in illustration, driver side similar.**

CAUTION: **Do not pry on the outer register trim bezel. The clips on the outer register trim bezel break if pried on to remove the register.**

1. Working through the register vein openings, insert a suitable hook shaped pick behind each of the 4 register clips while gently pulling the register rearward with the hook to disengage the clip.
2. Remove the driver or passenger side instrument panel register.
3. To install, reverse the removal procedure.

REGISTER - DRIVER SIDE, MKX

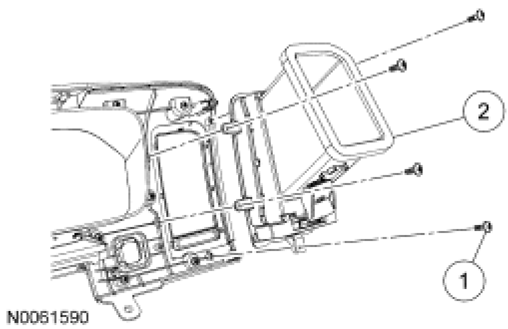

Fig. 33: Exploded View Of Register - Driver Side, MKX
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W701679	Driver side register screw (4 required)
2	19893	Driver side register

REMOVAL AND INSTALLATION

1. Remove the instrument cluster finish panel. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
2. Remove the 4 driver side register screws and the driver side register.
3. To install, reverse the removal procedure.

REGISTER - PASSENGER SIDE, MKX

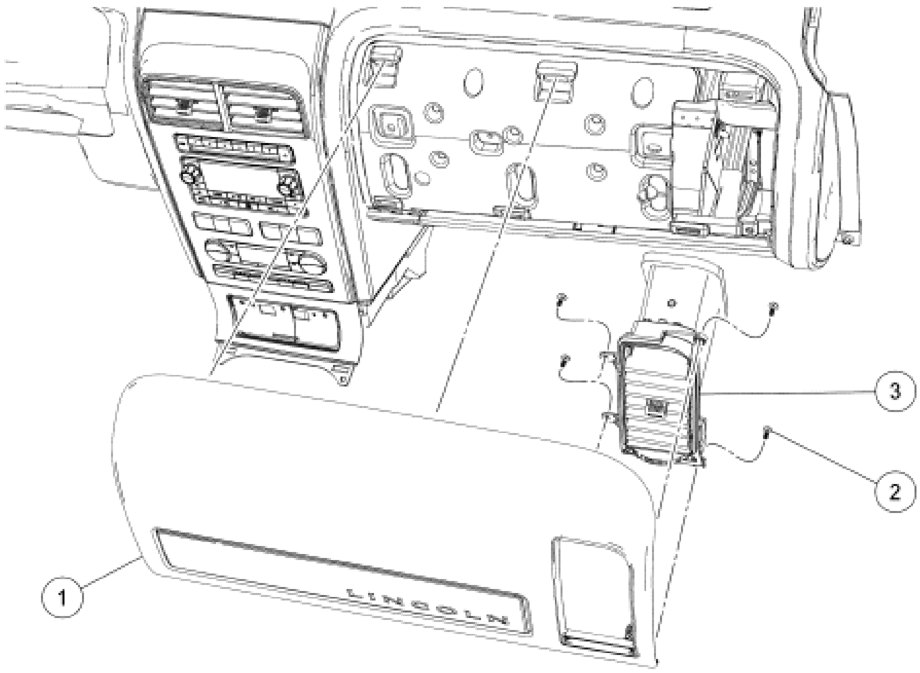

Fig. 34: Exploded View Of Register - Passenger Side, MKX
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	7804338	RH instrument panel finish panel
2	W701679	Passenger side register screw (4 required)
3	19893	Passenger side register

REMOVAL AND INSTALLATION

1. Disengage the 6 clips and remove the RH instrument panel finish panel.
2. Remove the 4 passenger side register screws and the passenger side register.
3. To install, reverse the removal procedure.

TEMPERATURE BLEND DOOR ACTUATOR - LH

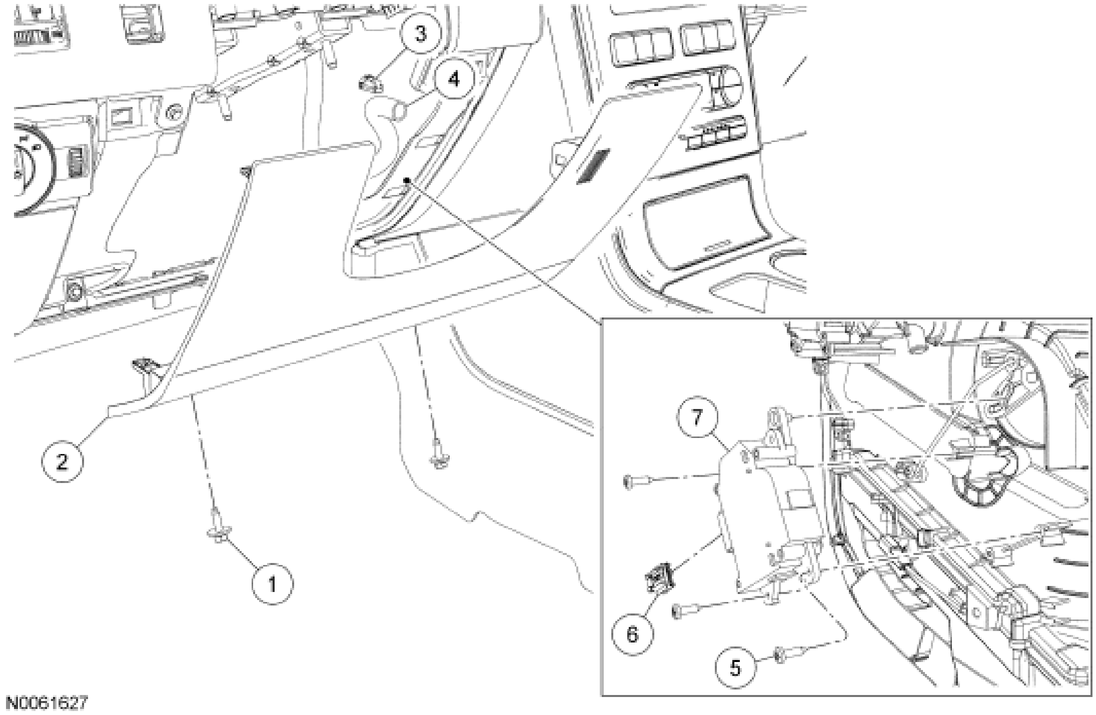

Fig. 35: Exploded View Of Temperature Blend Door Actuator - LH
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W708268	Lower steering column opening cover bolt (2 required)
2	7804459	Lower steering column opening cover
3	14401	In-vehicle temperature sensor electrical connector
4	19C739	In-vehicle temperature sensor aspirator hose
5	-	LH temperature blend door actuator screw (3 required)
6	19C603	LH temperature blend door actuator electrical connector
7	19E616	LH temperature blend door actuator

REMOVAL AND INSTALLATION

NOTE: **It is not required to install the new LH temperature blend door linkage parts included in the LH temperature blend door actuator service part kit if only the temperature blend door actuator requires replacement and the linkage parts are not broken or binding.**

LH temperature blend door actuator and linkage

1. Remove the 2 lower steering column opening cover bolts.
2. Detach the lower steering column opening cover.
3. Disconnect the in-vehicle temperature sensor aspirator hose and electrical connector.
4. Position the instrument panel wire harness away from the LH temperature blend door actuator.
5. Remove the 3 LH temperature blend door actuator screws.
6. Disconnect the LH temperature blend door actuator electrical connector.
7. Remove the LH temperature blend door actuator.
8. Manually operate, and inspect the LH temperature blend door linkage for incorrect placement, binding or damage.

   LH temperature blend door linkage only

9. Detach the 2 retaining tabs and remove the LH temperature blend door linkage.

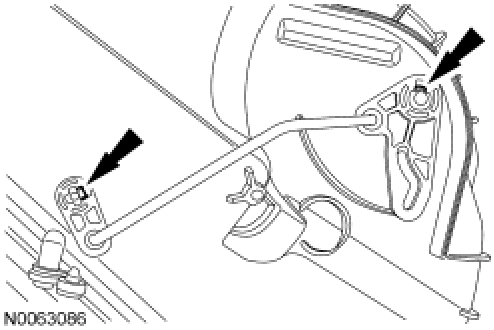

Fig. 36: Locating Retaining Tabs
Courtesy of FORD MOTOR CO.

LH temperature blend door actuator and linkage

10. To install, reverse the removal procedure.

TEMPERATURE BLEND DOOR ACTUATOR - RH, DUAL-ZONE EATC

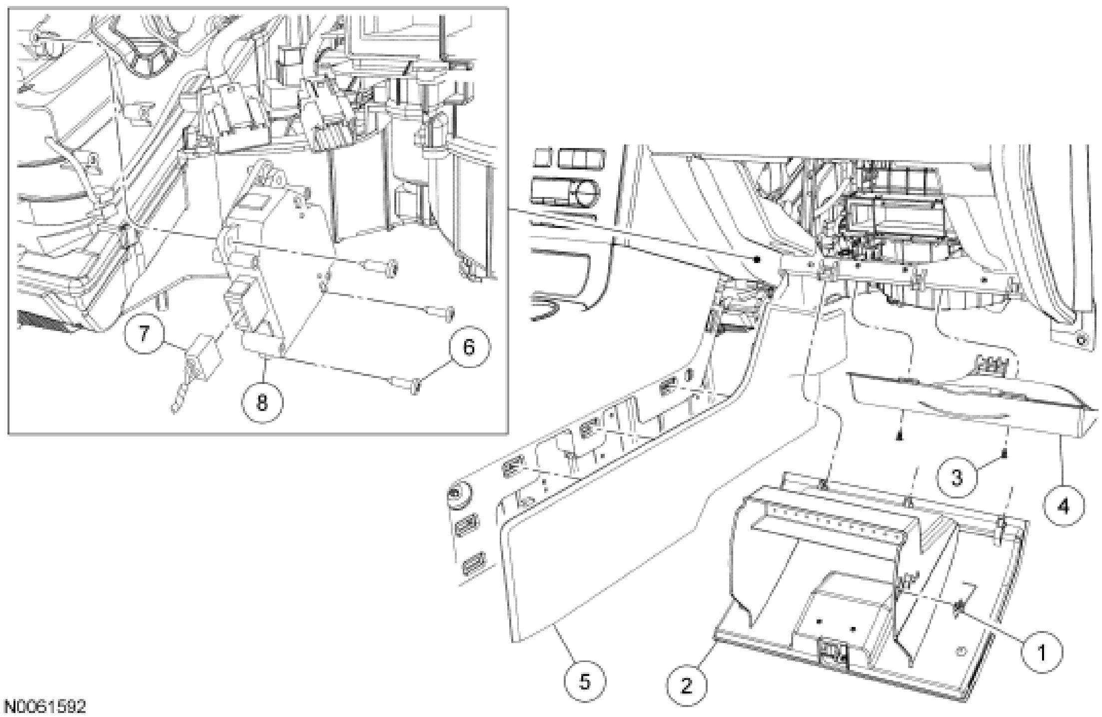

Fig. 37: Exploded View Of Temperature Blend Door Actuator - RH, Dual-Zone EATC
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	7806200	Glove compartment damper
2	7806024	Glove compartment
3	-	RH lower instrument panel insulator pin-type retainer (2 required)
4	-	RH lower instrument panel insulator
5	7804608	RH lower floor console trim panel
6	-	RH temperature blend door actuator screw (3 required)
7	19C603	RH temperature blend door actuator electrical connector
8	19E616	RH temperature blend door actuator

REMOVAL AND INSTALLATION

NOTE: **It is not required to install the new RH temperature blend door linkage parts included in the RH temperature blend door actuator service part kit if only the temperature blend door actuator requires replacement and the linkage parts are not broken or binding.**

RH temperature blend door actuator and linkage

1. Disconnect the glove compartment damper from the glove compartment.
2. Remove the glove compartment.
3. Remove the RH lower instrument panel insulator.
4. Remove the RH lower floor console trim panel.
5. Remove the 3 RH temperature blend door actuator screws.
6. Disconnect the RH temperature blend door actuator electrical connector.
7. Remove the RH temperature blend door actuator.
8. Manually operate, and inspect the RH temperature blend door linkage for incorrect placement, binding or damage.

   RH temperature blend door actuator linkage only

9. Detach the 2 retaining tabs and remove the RH temperature blend door linkage.

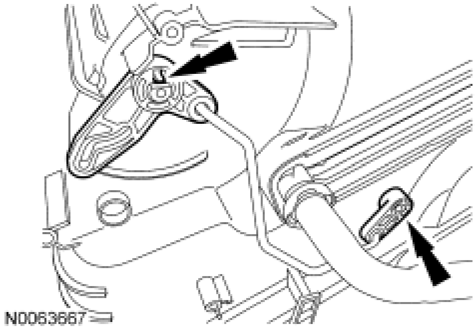

Fig. 38: Locating Retaining Tabs

All vehicles

10. To install, reverse the removal procedure.

THERMOSTATIC EXPANSION VALVE

MATERIAL

Item	**Specification**
PAG Refrigerant Compressor Oil (R-134a Systems) YN-12-D	WSH-M1C231-B

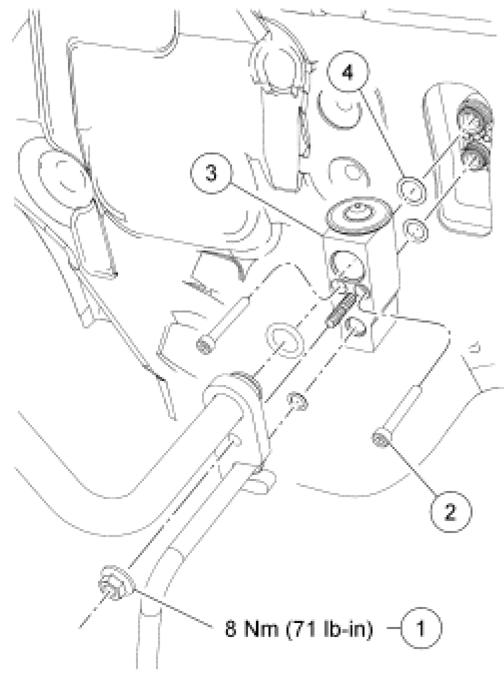

Fig. 39:
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W707142	Thermostatic expansion valve (TXV) fitting nut
2	-	TXV bolt (2 required) (part of 19849 service kit)
3	19849	TXV
4	19E889	O-ring seal (4 required)

REMOVAL AND INSTALLATION

NOTE: **Installation of a new receiver/drier desiccant bag is not required when repairing the A/C system, except when there is physical evidence of contamination from a failed A/C compressor or damage to the receiver/drier desiccant bag. Damage to the receiver/drier desiccant bag includes physical damage to the receiver/drier desiccant bag or moisture contamination. Moisture contamination results only from a complete loss of refrigerant and equalization of the refrigerant system pressure with atmospheric pressure for a period longer than one hour. If even a slight amount of positive refrigerant pressure is present in the system before repairs are carried out, the receiver/drier desiccant bag should not be replaced.**

NOTE: **The O-ring seals used on this vehicle are not interchangeable with all similarly**

sized O-ring seals used on other Ford products. Use only the O-ring seals specified for this vehicle in the Ford master parts catalog.

1. Recover the refrigerant. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
2. Remove the thermostatic expansion valve (TXV) fitting nut and disconnect the fitting.
    - Discard the O-ring seals.
    - To install, tighten to 8 N.m (71 lb-in).
3. Remove the 2 TXV bolts.
4. Remove the TXV.
    - Discard the O-ring seals.
5. To install, reverse the removal procedure.
    - Install new O-ring seals lubricated in clean PAG oil.
    - Lubricate the refrigerant system with the correct amount of clean PAG oil. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.
6. Evacuate, leak test and charge the refrigerant system. For additional information, refer to **CLIMATE CONTROL SYSTEM - GENERAL INFORMATION AND DIAGNOSTICS** article.

2008 BRAKES

Hydraulic Brake Actuation - Edge & MKX

SPECIFICATIONS

Material

Item	Specification	Fill Capacity
High Performance DOT 3 Motor Vehicle Brake Fluid PM-1-C (US); CPM-1-C (Canada)	WSS-M6C62-A or WSS-M6C65-A1	803-821 ml (1.697-1.735 pt)

TORQUE SPECIFICATIONS

Description	Nm	lb-ft
Brake master cylinder nuts	25	18
Brake pedal bracket nuts	22	16
Master cylinder brake tube fittings	28	21

DESCRIPTION AND OPERATION

HYDRAULIC BRAKE ACTUATION

The hydraulic brake actuation system consists of the following components:

- Brake master cylinder
- Brake fluid reservoir
- Brake pedal and bracket assembly
- Brake tubes and hoses
- Hydraulic control unit (HCU)

Hydraulic Brake Actuation - The brake pedal is connected to the power brake booster, which is connected to the brake master cylinder. When the brake pedal is pressed, brake fluid is forced from the master cylinder through the steel tubing and flexible hoses to the front disc brake calipers and the rear disc brake calipers. The front disc brake caliper pistons are forced outward against the brake pads, which contact the braking surface of the brake discs. The brake fluid calipers are pressurized by the master cylinder, forcing the disc brake caliper pistons outward against the brake pads. The brake pads press against the braking surface on the brake discs. When the brake pedal is released, the pressure is relieved, returning the brake caliper pistons and the brake pads to the at-rest position.

The dual brake system is split front and rear with the front wheel brakes comprising one circuit and the rear wheel brakes the other circuit.

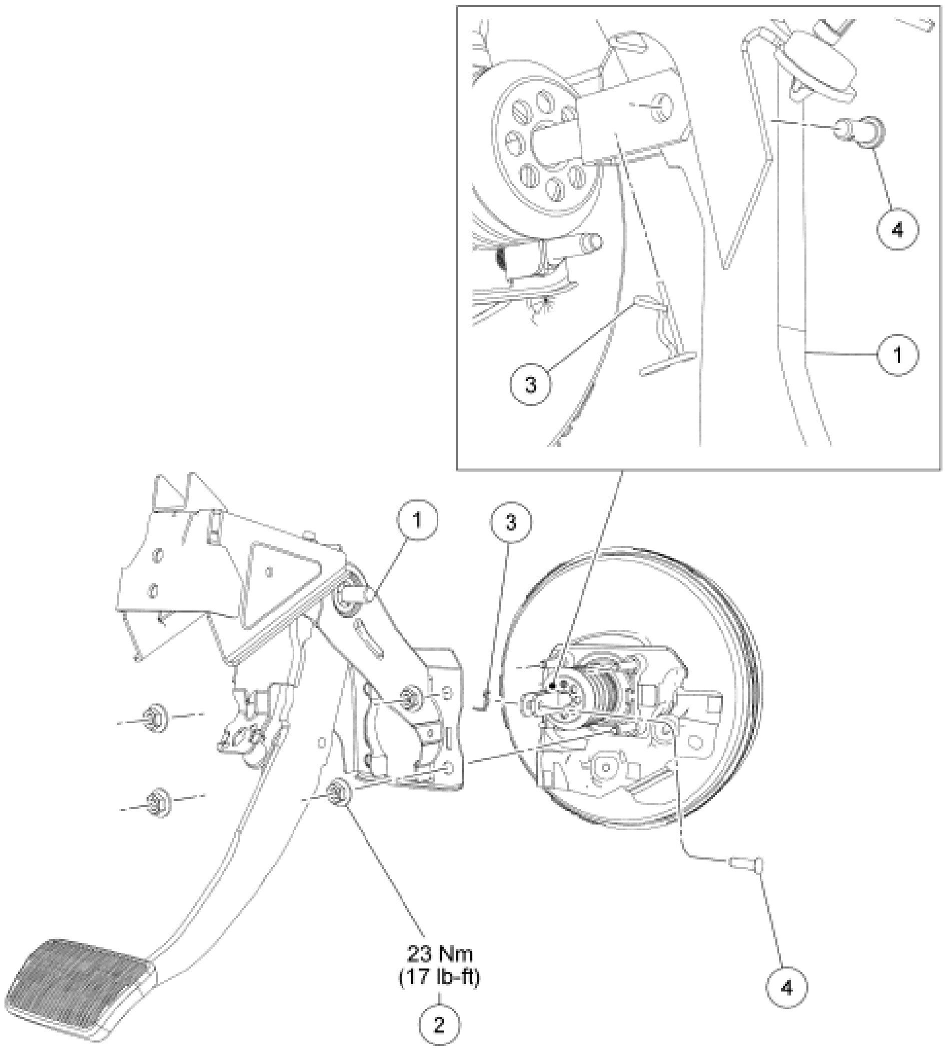
DIAGNOSTIC TESTS

HYDRAULIC BRAKE ACTUATION

Refer to **BRAKE SYSTEM - GENERAL INFORMATION** article.

REMOVAL AND INSTALLATION

BRAKE PEDAL AND BRACKET



N0076975

Fig. 1: Identifying Brake Pedal and Bracket
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	2455	Brake pedal and bracket
2	W707144	Brake pedal bracket nut (4 required)

3	7B096	Brake booster push rod pin clip
4	2N513	Brake booster push rod pin

CAUTION: Do not remove or loosen the fasteners that hold the 2 brake pedal bracket halves together. Failure to follow these instructions may result in damage to the brake pedal bracket.

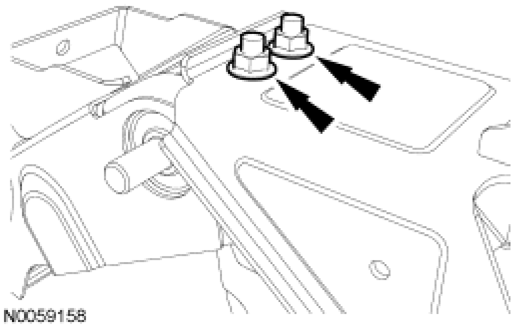


Fig. 2: Locating Fasteners On Brake Pedal Bracket Halves

REMOVAL AND INSTALLATION

CAUTION: Do not service the brake pedal or brake booster without first removing the stoplamp switch and speed control deactivator switch. These switches must be removed with the brake pedal in the at-rest position. Switch plungers must be compressed for the switch to rotate in the bracket. Attempting to remove the switch when the plunger is extended (during pedal apply) will result in damage to the switch.

1. Remove the stoplamp switch. For additional information, refer to **EXTERIOR LIGHTING** article.
2. Remove the instrument panel. For additional information, refer to **INSTRUMENT PANEL AND CONSOLE** article.
3. Remove the brake booster push rod pin clip and pin, then disconnect the push rod from the brake pedal arm.
4. Remove the 4 brake pedal bracket nuts.
   - To install, tighten to 22 Nm (16 lb-ft).
5. Lift the brake pedal and bracket off of the hangers and remove the brake pedal and bracket.

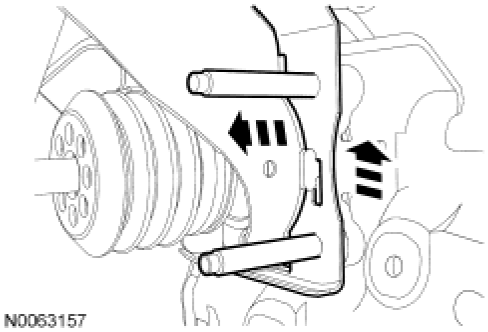

Fig. 3: Lifting Brake Pedal & Bracket Off Of Hangers & Removing Brake Pedal & Bracket
Courtesy of FORD MOTOR CO.

CAUTION: Do not press, pull or otherwise move the brake pedal while installing the stoplamp switch or the speed control deactivator switch. These switches must be installed with the booster push rod attached to the brake pedal and with the brake pedal in the at-rest position. Installing these switches with the brake pedal in any other position will result in incorrect adjustment and may damage the switches.

6. To install, reverse the removal procedure.
    - Apply brakes several times to verify correct brake operation.

BRAKE MASTER CYLINDER

Material

Item	Specification
High Performance DOT 3 Motor Vehicle Brake Fluid PM-1-C (US); CPM-1-C (Canada)	WSS-M6C62-A or WSS-M6C65-A1

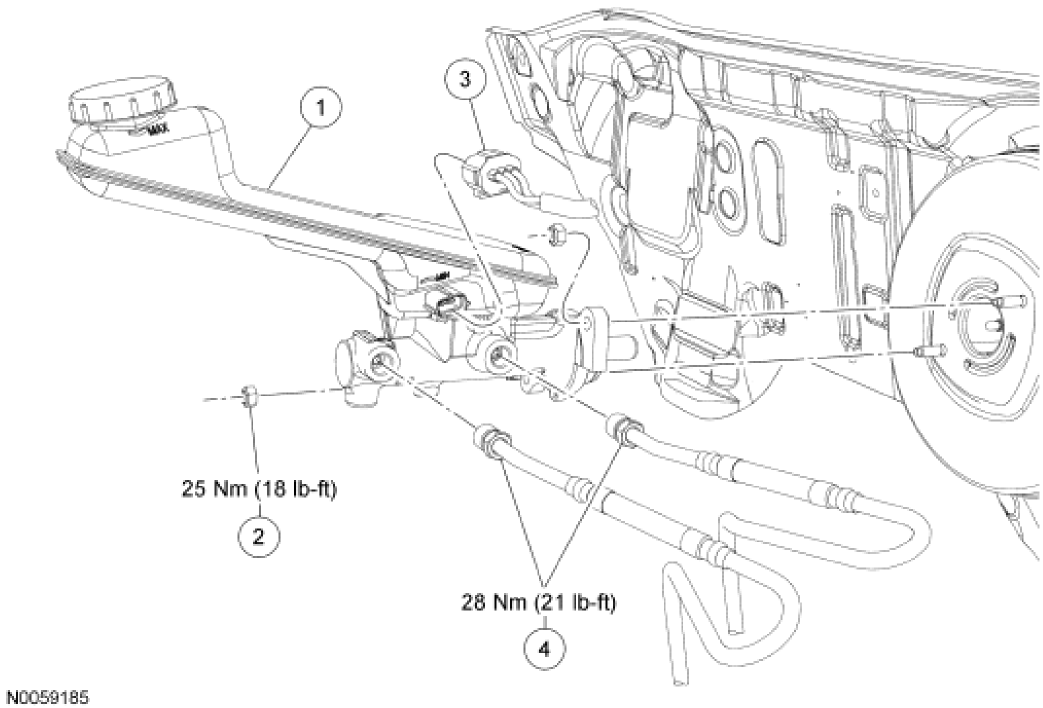

Fig. 4: Exploded View Of Brake Master Cylinder With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	2B195	Brake master cylinder and reservoir assembly
2	W520011	Brake master cylinder nut (2 required)
3	-	Brake fluid level switch electrical connector (part of 14A290)
4	2A335 RH/ 2286 LH	Master cylinder brake tube fittings

REMOVAL AND INSTALLATION

WARNING: **Do not use any fluid other than clean brake fluid meeting manufacturer's specification. Additionally, do not use brake fluid that has been previously drained. Following these instructions will help prevent system contamination, brake component damage and the risk of serious personal injury.**

WARNING: **Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.**

CAUTION: Brake fluid is harmful to painted and plastic surfaces. If brake fluid is spilled onto a painted or plastic surface, immediately wash it with water.

1. Remove the air cleaner and air cleaner outlet tube. For additional information, refer to **INTAKE AIR DISTRIBUTION AND FILTERING** article.
2. Remove the battery and battery tray. For additional information, refer to **BATTERY, MOUNTING AND CABLES** article.
3. Disconnect the brake fluid level switch electrical connector.
4. Using a suitable suction device, remove the brake fluid from the brake master cylinder reservoir.
5. Disconnect the master cylinder brake tube fittings, plug the brake tubes and the brake master cylinder ports.
    - To install, tighten to 28 Nm (21 lb-ft).
6. Remove the 2 brake master cylinder nuts.
    - To install, tighten to 25 Nm (18 lb-ft).
7. Remove the brake master cylinder and reservoir.
8. To install, reverse the removal procedure.
    - Bleed the master cylinder and brake system. For additional information, refer to **BRAKE SYSTEM - GENERAL INFORMATION** article.

2008 ENGINE

Engine Ignition - 3.5L - Edge & MKX

SPECIFICATIONS

MATERIAL SPECIFICATIONS

Item	Specification	Fill Capacity
Silicone Brake Caliper Grease and Dielectric Compound XG-3-A	ESE-M1C171-A	-

GENERAL SPECIFICATIONS

Item	Specification
Engine Ignition	
Spark plug	AYFS-22FM
Spark plug gap	1.29-1.45 mm (0.051-0.057 in)

TORQUE SPECIFICATIONS

Description	Nm	lb-in
Ignition coil-on-plug bolts	7	62
Spark plugs	15	133

DESCRIPTION AND OPERATION

ENGINE IGNITION

The Electronic Ignition (EI) system is a coil-on-plug ignition system. The coil-on-plug ignition system consists of:

- Camshaft Position (CMP) sensors.
- a Crankshaft Position (CKP) sensor.
- ignition coil-on-plugs.
- spark plugs.

The CMP sensors:

- are variable reluctance sensors.
- are mounted in the rear of the cylinder head.
- are triggered by a 3-plus-1 timing wheel on each intake camshaft.
- provides camshaft rotational location information to the PCM.

The CKP sensor:

- is a variable reluctance sensor.
- is triggered by a 36-minus-1 tooth trigger wheel mounted on the crankshaft, at the rear of the engine.
- provides base timing and crankshaft speed (RPM) to the PCM.

The ignition coil-on-plugs:

- change low voltage signals from the PCM to high voltage pulses.
- produce the high voltage pulses to the spark plugs.
- are connected directly to each spark plug.
- have replaceable coil seals.

The spark plugs:

- change high voltage pulses into a spark which ignites the fuel and air mixture.
- originally equipped on the vehicle have a platinum-enhanced fine wire electrode for long life.

DIAGNOSTIC TESTS

ENGINE IGNITION

Refer to the **Introduction - Gasoline Engines** article.

REMOVAL AND INSTALLATION

ENGINE IGNITION COMPONENTS - EXPLODED VIEW

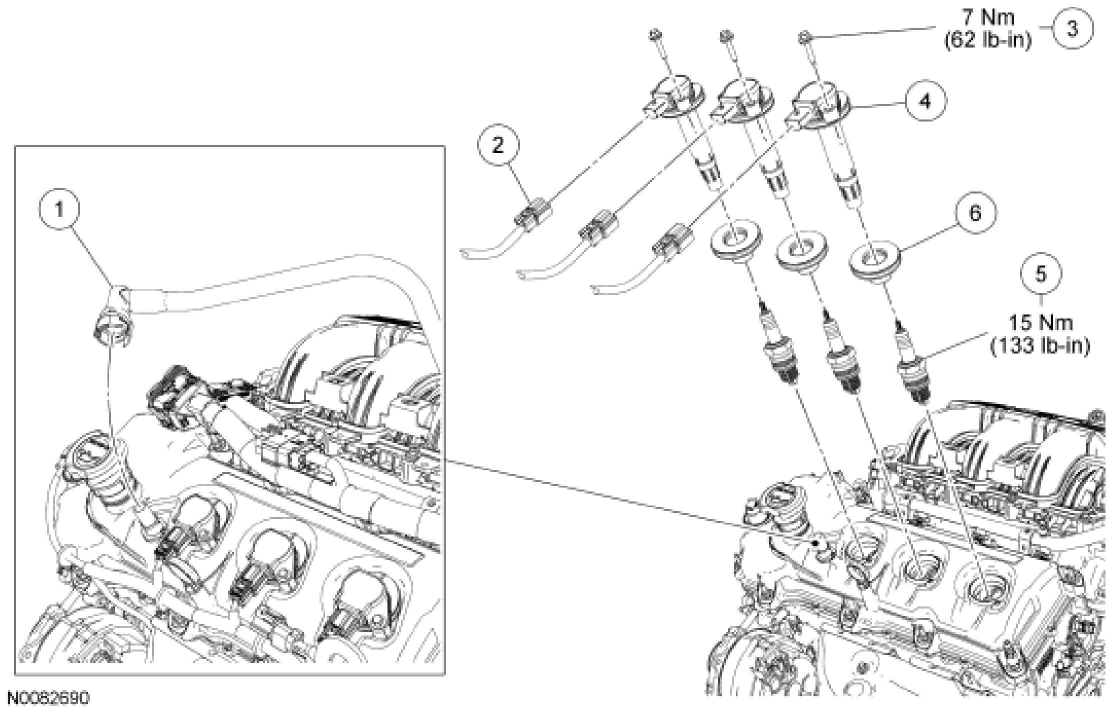

Fig. 1: Identifying LH Side Engine Ignition Components (With Torque Specifications)
Courtesy of FORD MOTOR CO.

Item	Part Number	Description

IGNITION COIL-ON-PLUG

Material

Item	Specification
Silicone Brake Caliper Grease and Dielectric Compound XG-3-A	ESE-M1C171-A

REMOVAL AND INSTALLATION

LH side

1. Disconnect the crankcase vent tube quick connect coupling from the valve cover fitting and position aside. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

   RH side

   NOTE: The upper intake manifold must be removed to access the RH ignition coil-on-plugs.

2. Remove the upper intake manifold. For additional information, refer to **ENGINE - 3.5L** article.

   Both sides

3. Disconnect the 6 ignition coil-on-plug electrical connectors.

   NOTE: When removing the ignition coil-on-plugs, a slight twisting motion will break the seal and ease removal.

4. Remove the 6 bolts and the 6 ignition coil-on-plugs.
   - To install, tighten to 7 Nm (62 lb-in).
5. Inspect the coil seals for rips, nicks or tears. Remove and discard any damaged coil seals.
   - To install, slide the new coil seal onto the coil until it is fully seated at the top of the coil.

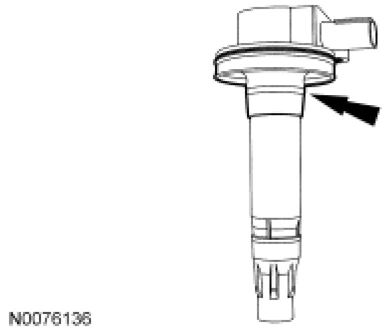

Fig. 3: Identifying Coil Seal On Coil
Courtesy of FORD MOTOR CO.

6. To install, reverse the removal procedure.
   - Apply a small amount of dielectric grease to the inside of the ignition coil-on-plug boots before attaching to the spark plugs.

SPARK PLUGS

Material

Item	Specification
Silicone Brake Caliper Grease and Dielectric	

Compound XG-3-A	ESE-M1C171-A

REMOVAL

LH side

1. Disconnect the crankcase vent tube quick connect coupling from the valve cover fitting and position aside. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

   RH side

   NOTE: **The upper intake manifold must be removed to access the RH spark plugs only.**

2. Remove the upper intake manifold. For additional information, refer to **ENGINE - 3.5L** article.

   Both sides

3. Disconnect the 6 ignition coil-on-plug electrical connectors.

   NOTE: **When removing the ignition coil-on-plugs, a slight twisting motion will break the seal and ease removal.**

4. Remove the 6 bolts and the 6 ignition coil-on-plugs.

   CAUTION: **Only use hand tools when removing or installing the spark plugs or damage can occur to the cylinder head or spark plug.**

   NOTE: **Use compressed air to remove any foreign material in the spark plug well before removing the spark plugs.**

5. Remove the 6 spark plugs.

INSTALLATION

Both sides

1. Inspect the 6 spark plugs.

Item	Part Number	Description
1	-	Deposits bridging spark plug gap

2	-	Wet black deposits (oil fouling)
3	-	Dry black deposits (carbon fouling)
4	-	Normal spark plug
5	-	Pre-ignition
6	-	Overheating
7	-	Fused spot deposits

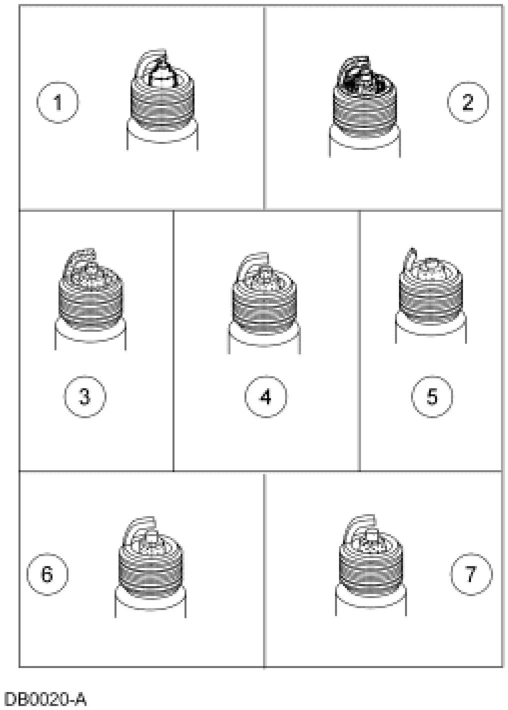

Fig. 4: Identifying Spark Plugs Condition
Courtesy of FORD MOTOR CO.

2. Adjust the spark plug gap as necessary.

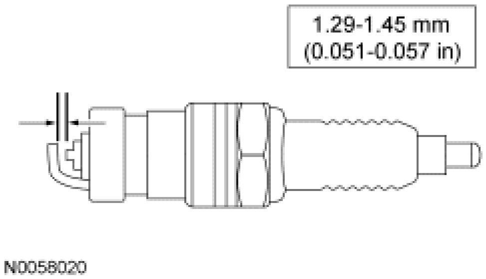

Fig. 5: Identifying Spark Plug Gap (With Specifications)
Courtesy of FORD MOTOR CO.

CAUTION: Only use hand tools when removing or installing the spark plugs, or damage can occur to the cylinder head or spark plug.

3. Install the 6 spark plugs.
   - Tighten to 15 Nm (11 lb-ft).

NOTE: Apply a small amount of dielectric grease to the inside of the ignition coil-on-plug boots before attaching to the spark plugs.

4. Install the 6 ignition coil-on-plugs and the 6 bolts.
   - Tighten to 7 Nm (62 lb-in).
5. Connect the 6 ignition coil-on-plug electrical connectors.

RH side

6. Install the upper intake manifold. For additional information, refer to **ENGINE - 3.5L** article.

LH side

7. Position and connect the crankcase vent tube quick connect coupling to the valve cover fitting. For additional information, refer to **FUEL SYSTEM - GENERAL INFORMATION** article.

2008 ACCESSORIES & BODY, CAB

Instrument Cluster And Panel Illumination - Edge & MKX

DESCRIPTION AND OPERATION

INSTRUMENT CLUSTER AND PANEL ILLUMINATION

The instrument cluster (IC) and panel illumination is used to provide backlighting to the dimmable and non-dimmable switches and control components.

For Edge vehicles equipped with autolamps, if the exterior lamps are activated during daytime sunload conditions, the message center illumination remains at full intensity and does not dim from the instrument panel dimmer switch during this condition. If the vehicle travels under a bridge or a tunnel, the low level of ambient light causes the illumination level of the message center to change to the level set by the instrument panel dimmer switch. The message center illumination changes back to full intensity when the intense ambient light is restored.

For MKX vehicles equipped with autolamps, if the exterior lamps are activated during daytime sunload conditions, the message center, audio control module (ACM), heating ventilation air conditioning (HVAC) module and switch illumination remain at full intensity and do not dim from the instrument panel dimmer switch during this condition. If the vehicle travels under a bridge or a tunnel, the low level of ambient light causes the illumination level of the message center, ACM, HVAC module and switch to change to the level set by the instrument panel dimmer switch. The message center, ACM, HVAC module and switch illumination change back to full intensity when the intense ambient light is restored.

Dimmable Backlighting

NOTE:	**If the battery is disconnected or discharged, the instrument panel dimmer switch requires re-calibration. Rotate the instrument panel dimmer switch from the full dim position to the dome ON position. This will make sure that all displays are visible under all lighting conditions.**

The dimmable switches and components are illuminated when the headlamp switch is in either the PARKING LAMPS ON or HEADLAMPS ON position. The level of intensity is adjustable by rotating the instrument panel dimmer switch either up to increase intensity or down to decrease intensity.

The dimmable switches and components consist of:

- HVAC module - EATC (if equipped)
- HVAC module - EMTC (if equipped)
- Floor shifter
- Heated driver seat switch (if equipped)
- Heated passenger seat switch (if equipped)
- LH rear heated seat switch (if equipped)

- RH rear heated seat switch (if equipped)
- Message center switch (if equipped)
- Memory set switch (MKX)
- Window adjust switches (MKX)
- Door lock control switches (MKX)
- Headlamp switch
- Instrument panel dimmer switch
- IC
- Speed control switches
- Steering wheel audio control switches
- Hazard/passenger air bag disable/traction control switch
- Audio control module (ACM)
- Power liftgate release switch
- Roof opening panel switch (if equipped)
- Rear entertainment module (RETM) (if equipped)

Non-Dimmable Backlighting

The non-dimmable (fixed) lighting switches and components are illuminated when the delayed accessory relay is energized. The non-dimmable switches and components are illuminated at full lamp intensity.

The non-dimmable lighting switches and components consist of:

- Door lock control switches (Edge)
- Window adjust switches (Edge)

DIAGNOSTIC TESTS

INSTRUMENT CLUSTER AND PANEL ILLUMINATION

SPECIAL TOOLS

Illustration	Tool Name	Tool Number
	73III Automotive Meter	105-R0057 or equivalent
	Vehicle Communications Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent	-

 ST2834-A	scan tool	
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

Dimmable Backlighting

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

When the parking lamps are on, the SJB monitors the input from the instrument panel dimmer switch. The SJB sends a pulse-width modulated (PWM) voltage to the dimmable components and switches based on input received from the instrument panel dimmer switch.

The SJB also sends a message over the network to the audio control module (ACM), the rear entertainment module (RETM), the HVAC module - EATC, and the instrument cluster (IC) to indicate the backlighting intensity level. If the receiving module receives invalid backlighting data from the SJB for 5 seconds or less, the receiving module defaults the backlighting to the last setting.

If the receiving module does not receive the backlighting status message from the SJB or if the data received is deemed invalid for more than 5 seconds, the receiving module sets DTC U0140 in continuous memory (except the HVAC module - EATC) and defaults the backlighting to full intensity.

Fixed Backlighting

For Edge, when the accessory delay relay is energized, switched voltage is supplied to the window control and door lock switches.

The MKX is not equipped with any fixed backlighting components.

Field-Effect Transistor (FET) Protection

The SJB utilizes a FET protective circuit strategy for many of its outputs (for example, the LED backlighting output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault is detected. A continuous DTC is stored at that time for the fault. The circuit will then reset after a customer demand of the function (switching the component on, battery saver being energized). When an excessive circuit load occurs several times, the module shuts down the output until a repair procedure is carried out. At the same time, the continuous DTC that was stored on the first failure will not clear by a command to clear the continuous DTCs. The module will not allow this code to be cleared or the circuit restored to normal until a successful on-demand self-test proves that the fault has been repaired. After the on-demand self-test has successfully completed (no on-demand DTCs present), the continuous DTC will have been cleared and the circuit function will return.

Each circuit has 3 predefined levels of short circuit tolerance established in the module based on each circuits' capability. When the first or second level is reached, the continuous DTC associated with the circuit sets along with DTC B106E. These DTCs may be cleared using the Clear DTC operation on the scan tool as long as the fault itself has been corrected. If any of the circuits are shorted past the third level, then DTCs B106F and B1342 set along with the associated continuous DTC. These DTCs cannot be cleared and the module must be replaced.

The SJB FET protected output circuits for the instrument panel illumination system are for the white lighting (MKX) and LED backlighting (Edge) output circuits.

Instrument Panel Dimmer Switch Calibration

If the battery is disconnected or discharged, the instrument panel dimmer switch requires re-calibration. Rotate the instrument panel dimmer switch from the full dim position to the dome ON position. This will make sure that all displays are visible under all lighting conditions.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

VISUAL INSPECTION CHART

Electrical

• Smart junction box (SJB) fuse(s):
  ○ 10 (15A) (dimmable illumination)
  ○ 41 (15A) (non-dimmable illumination)
• Wiring, terminals or connectors
• Illuminated components
• SJB

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure to use the latest scan tool release software.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power

and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
    - Check the VCM connection to the vehicle.
    - Check the scan tool connection to the VCM.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
    - Verify the ignition key is in the ON position.
    - Verify the scan tool operation with a known good vehicle.
    - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.
    - If the scan tool responds with no communication with the SJB, refer to **MODULE COMMUNICATIONS NETWORK** article.
    - If the network test passes, retrieve and record the continuous memory DTCs.
8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB.
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **SYMPTOM CHART** table.

DTC Charts

SMART JUNCTION BOX (SJB) DTC CHART

DTC	Description	Action
B2212	Panel Dim Switch Out of Range	Go to **Pinpoint Test C** .
B2A32	LED Backlighting Output Circuit Open	If the backlighting components are inoperative, go to **Pinpoint Test A** . If the backlighting components are always on, go to **Pinpoint Test B** .
B2A33	LED Backlighting Output Circuit Short to Ground	Go to **Pinpoint Test A** .
B29B7	White Lighting Output Circuit Open	If the backlighting components are inoperative, go to **Pinpoint Test A** . If the backlighting components are always on, go to **Pinpoint Test B** .
B29B8	White Lighting Output Circuit Short to Ground	Go to **Pinpoint Test A** .
All other DTCs	-	REFER to **MULTIFUNCTION ELECTRONIC MODULES** article.

Symptom Chart

SYMPTOM CHART

Condition	Possible Sources	Action
• No communication with the smart junction box (SJB)	• Fuse(s) • Wiring, terminals or connectors • SJB	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• The control illumination is inoperative - all hardwired illumination	• Fuse • Wiring, terminals or connectors • SJB	• Go to **Pinpoint Test a** .
• The control illumination is always on - all hardwired illumination	• Wiring, terminals or connectors • SJB	• Go to **Pinpoint Test B** .
• All instrument panel illumination does not dim	• Wiring, terminals or connectors • Instrument panel dimmer switch • SJB	• Go to **Pinpoint Test C** .
• The steering wheel control illumination is inoperative	• Wiring, terminals or connectors • Steering wheel control switch(es) • Steering wheel control switch harness • Clockspring	• Go to **Pinpoint Test D** .

• The window control switch illumination is inoperative	• Wiring, terminals or connectors
	• Window control switch
		• For MKX, go to **Pinpoint Test E** .
		• For Edge, CHECK the operation of the power windows.
		    ◦ If the power windows operate correctly, INSTALL a new window control switch. REFER to **GLASS, FRAMES AND MECHANISMS** article. TEST the system for normal operation.
		    ◦ If the power windows do not operate correctly, REFER to **GLASS, FRAMES AND MECHANISMS** article.
		• CARRY OUT the network test.

• All network-controlled illumination does not dim	• Medium speed controller area network (MS-CAN) • SJB	• If the scan tool responds with no communication to any module on the MS-CAN, REFER to **MODULE COMMUNICATIONS NETWORK** article. • If the scan tool communicates with the modules on the MS-CAN, INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

• The instrument cluster (IC) illumination is inoperative	• IC	• CHECK the audio control module (ACM) illumination for correct operation.
		  • If the ACM illumination operates correctly, INSTALL a new IC. REFER to **INSTRUMENT CLUSTER (IC), MESSAGE CENTER, AND WARNING CHIMES** article. TEST the system for normal operation.
		  • If the ACM illumination does not operate correctly, REFER to **MODULE COMMUNICATIONS NETWORK** article to continue diagnosis of the communications network.

• The audio control module (ACM) illumination is inoperative	• ACM	• CHECK the IC illumination for correct operation.
		  • If the IC illumination operates correctly, REMOVE the ACM. REFER to **INFORMATION AND ENTERTAINMENT SYSTEMS** article. SEND it to an authorized repair facility. TEST the system for normal operation after the repair.
		  • If the IC illumination does not operate correctly, REFER to **MODULE COMMUNICATIONS NETWORK** article to continue

		diagnosis of the communications network.
• The rear entertainment module (RETM) illumination is inoperative	• RETM	• REMOVE the RETM. REFER to **INFORMATION AND ENTERTAINMENT SYSTEMS** article. SEND it to an authorized repair facility. TEST the system for normal operation.
• The HVAC module - EATC illumination is inoperative	• HVAC module	• CHECK the IC illumination for correct operation. ◦ If the IC illumination operates correctly, INSTALL a new HVAC module. REFER to **CLIMATE CONTROL** article. TEST the system for normal operation. ◦ If the IC illumination does not operate correctly, REFER to **MODULE COMMUNICATIONS NETWORK** article to continue diagnosis of the communications network.
• The individual component illumination is inoperative	• Wiring, terminals or connectors • Floor shifter • LH rear heated seat switch (if equipped) • RH rear heated seat switch (if equipped) • Manual temperature control (if equipped) • Message center switch (if equipped) • Memory set switch (MKX) • Window adjust switches (MKX) • Headlamp switch • Hazard/passenger air bag disable/traction control switch (if equipped)	• Go to **Pinpoint Test E** .

	• Door lock control switches • Power liftgate release switch • Roof opening panel switch (if equipped)	

Pinpoint Tests

Pinpoint Test A: The Control Illumination Is Inoperative - All Hardwired Illumination

Refer to appropriate SYSTEM WIRING DIAGRAM article for Cluster and Panel Illumination schematic and connector information.

Normal Operation

Based on input received from the instrument panel dimmer switch, the smart junction box (SJB) sends a pulse-width modulated (PWM) voltage to the hardwired dimmable illumination sources through circuit VLN37 (BU/WH) (MKX) or circuit VLN04 (VT/GY) (Edge).

DTC Description	Fault Trigger Conditions
B2A32 - LED Backlighting Output Circuit Open	An on-demand DTC that sets when the SJB detects an open on the LED backlighting output circuit.
B2A33 - LED Backlighting Output Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground on the LED backlighting output circuit. This DTC also sets when fuse 10 (15A) has failed or is removed.
B29B7 - White Lighting Output Circuit Open	An on-demand DTC that sets when the SJB detects an open on the white lighting output circuit.
B29B8 - White Lighting Output Circuit Short to Ground	A continuous and on-demand DTC that sets when the SJB detects a short to ground on the white lighting output circuit. This DTC also sets when fuse 10 (15A) has failed or is removed.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- SJB

PINPOINT TEST A: THE CONTROL ILLUMINATION IS INOPERATIVE - ALL HARDWIRED ILLUMINATION

A1 CHECK FOR RECORDED SJB DTCs FROM THE ON-DEMAND SELF-TEST

- Use the recorded results from the SJB self-test.
- **Are any DTCs recorded?**

  YES : For DTC B2A33, B2A32, B29B7 or B29B8, go to A3.

  NO : Go to A2.

A2 CHECK THE INSTRUMENT PANEL DIMMER SWITCH

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB DataLogger
- Monitor the SJB PID (DIM_SW_3) while rotating the instrument panel dimmer switch from the lowest setting to the highest setting.
- **Does the PID indicate the switch is operating correctly?**

  YES : Go to A4.

  NO : INSTALL a new instrument panel dimmer switch. REFER to **INSTRUMENT PANEL DIMMER SWITCH**. TEST the system for normal operation.

A3 CHECK CIRCUIT VLN37 (BU/WH) OR CIRCUIT VLN04 (VT/GY) FOR AN OPEN

- Key in OFF position.
- Disconnect: SJB C2280b

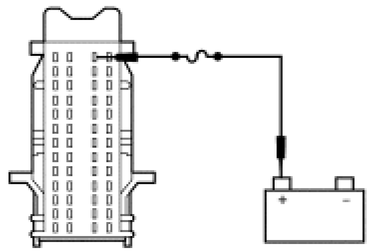

Fig. 1: Connecting Fused (5A) Jumper Wire Between SJB C2280B-39, Circuit VLN04 (VT/GY) & Battery Positive
Courtesy of FORD MOTOR CO.

NOTE: **If the jumper wire fails, repair circuit VLN04 (VT/GY) for a short to ground.**

- For Edge, connect a fused (5A) jumper wire between the SJB C2280b-39, circuit VLN04 (VT/GY) and battery positive.

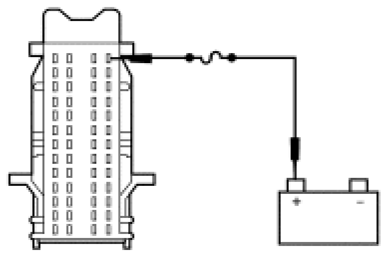

Fig. 2: Connecting Fused (5A) Jumper Wire Between SJB C2280B-52, Circuit VLN37 (BU/WH) & Battery Positive
Courtesy of FORD MOTOR CO.

NOTE: **If the jumper wire fails, repair circuit VLN37 (BU/WH) for a short to ground.**

- For MKX, connect a fused (5A) jumper wire between the SJB C2280b-52, circuit VLN37 (BU/WH) and battery positive.
- **Do the backlighting components illuminate?**

  YES : REMOVE the jumper wire. Go to A4.

  NO : REMOVE the jumper wire. VERIFY the BJB fuse 10 (15A) is OK. REPAIR the circuit in question for a short to ground. RUN the on-demand self-test (required to clear certain DTCs). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

A4 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. RUN the on-demand self-test (required to clear certain DTCs). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

Pinpoint Test B: The Control Illumination Is Always On - All Hardwired Illumination

Refer to appropriate SYSTEM WIRING DIAGRAM article for Cluster and Panel Illumination schematic and connector information.

Normal Operation

The smart junction box (SJB) supplies a pulse-width modulated (PWM) voltage signal to the dimmable illumination sources on circuit VLN04 (VT/GY) (Edge) and VLN37 (BU/WH) (MKX).

- DTC B2A32 (LED Backlighting Output Circuit Open) - is an on-demand DTC that sets when the SJB detects a short to voltage on the LED backlighting output circuit.
- DTC B29B7 (White Lighting Output Circuit Open) - is an on-demand DTC that sets when the SJB detects a short to voltage on the white lighting output circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- SJB

PINPOINT TEST B: THE CONTROL ILLUMINATION IS ALWAYS ON - ALL HARDWIRED ILLUMINATION

B1 CHECK THE EXTERIOR LIGHTING

- Key in OFF position.
- Place the headlamp switch in the OFF position.
- Observe the exterior lighting components.
- Key in ON position.
- **Are any exterior lighting components illuminated?**

  YES : REFER to **EXTERIOR LIGHTING** article.

  NO : Go to B2.

B2 CHECK CIRCUITS VLN04 (VT/GY) (EDGE) AND VLN37 (BU/WH) (MKX) FOR A SHORT TO VOLTAGE

- Disconnect: SJB C2280b
- Key in ON position.
- **Do the dimmable backlighted components continue to illuminate?**

  YES : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to B3.

B3 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.

- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test C: All Instrument Panel Illumination Does Not Dim

Refer to appropriate SYSTEM WIRING DIAGRAM article for Cluster and Panel Illumination schematic and connector information.

Normal Operation

The smart junction box (SJB) monitors the input from the instrument panel dimmer switch by sending a voltage reference signal through circuit VLN18 (BU/WH) to the instrument panel dimmer switch. The return signal is sent through circuit CLN27 (WH/BN) back to the SJB. Based on the input from the instrument panel dimmer switch, the SJB sends a pulse-width modulated (PWM) voltage signal to the dimmable illumination sources. If the SJB detects a concern with the circuitry to the instrument panel dimmer switch, the SJB defaults the backlighting to a full intensity level.

The SJB also sends a message over the network to the audio control module (ACM), the rear entertainment module (RETM), the HVAC module - EATC, and the instrument cluster (IC) to indicate the backlighting intensity level. If the receiving module receives invalid backlighting data from the SJB for 5 seconds or less, the receiving module defaults the backlighting to the last setting.

If the receiving module does not receive the backlighting status message from the SJB or if the data received is deemed invalid for more than 5 seconds, the receiving module sets DTC U0140 in continuous memory (except the climate control module) and defaults the backlighting to full intensity.

- DTC B2212 (Panel Dim Switch Out Of Range) - is an on-demand DTC that sets when the SJB detects an out of range condition on the dimmer input switch circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals, or connectors
- Instrument panel dimmer switch
- SJB

PINPOINT TEST C: ALL INSTRUMENT PANEL ILLUMINATION DOES NOT DIM

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: Calibrate the instrument panel dimmer switch by rotating the dimmer switch from the full dim position to the dome ON position before continuing

diagnostics.

C1 CHECK THE EXTERIOR LIGHTING OPERATION

- Place the headlamp switch in each of its positions while observing the exterior lamps.
- **Do the exterior lamps operate correctly?**

  YES : Go to C2.

  NO : REFER to **EXTERIOR LIGHTING** article.

C2 CHECK THE RECORDED RESULTS FROM BOTH CONTINUOUS AND ON-DEMAND SELF-TESTS

- Check for recorded DTCs from the continuous and on-demand self-tests.
- **Are any DTCs present?**

  YES : If DTC B2212 is retrieved, go to C4.

  For all other DTCs, REFER to **MULTIFUNCTION ELECTRONIC MODULES** article.

  NO : Go to C3.

C3 CHECK THE INSTRUMENT PANEL DIMMER SWITCH INPUT

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB DataLogger
- Monitor the SJB PID (DIM_SW_3) while rotating the instrument panel dimmer switch from the lowest setting to the highest setting.
- **Does the PID indicate the switch is operating correctly?**

  YES : Go to C9.

  NO : INSTALL a new instrument panel dimmer switch. REFER to **INSTRUMENT PANEL DIMMER SWITCH**.

C4 CHECK CIRCUIT CLN27 (WH/BN) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: SJB C2280b
- Disconnect: Instrument Panel Dimmer Switch C2298
- Key in ON position.

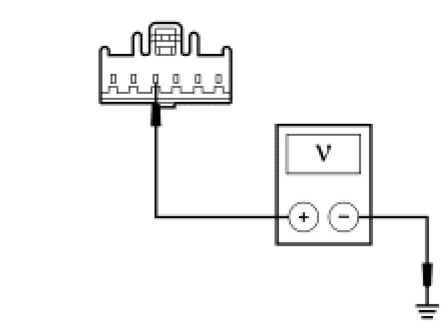

Fig. 3: Measuring Voltage Between Instrument Panel Dimmer Switch C2298-4, Circuit

CLN27 (WH/BN) & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the instrument panel dimmer switch C2298-4, circuit CLN27 (WH/BN), harness side and ground.
- **Is any voltage indicated?**

YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

NO : Go to C5.

C5 CHECK CIRCUIT VLN18 (BU/WH) FOR A SHORT TO VOLTAGE

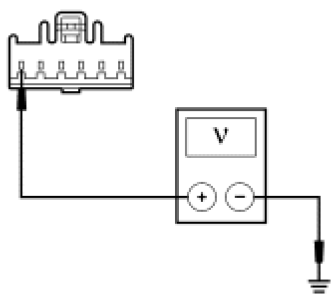

Fig. 4: Measuring Voltage Between Instrument Panel Dimmer Switch C2298-6, Circuit VLN18 (BU/WH) & Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the instrument panel dimmer switch C2298-6, circuit VLN18 (BU/WH), harness side and ground.
- **Is any voltage indicated?**

YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

NO : Go to C6.

C6 CHECK CIRCUIT CLN27 (WH/BN) FOR AN OPEN OR A SHORT TO GROUND

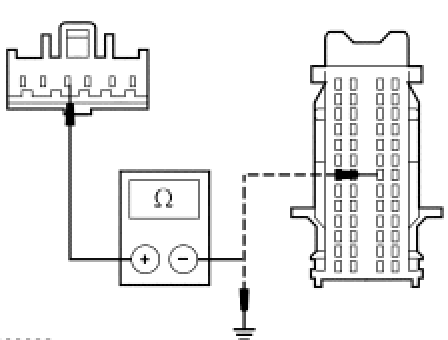

Fig. 5: Measuring Resistance Between Instrument Panel Dimmer Switch C2298-4, Circuit CLN27 (WH/BN) & SJB C2280B-33
Courtesy of FORD MOTOR CO.

- Measure the resistance between the instrument panel dimmer switch C2298-4, circuit CLN27 (WH/BN), harness side and the SJB C2280b-33, circuit CLN27 (WH/BN), harness side; and between the instrument panel dimmer switch C2298-4, circuit CLN27 (WH/BN), harness side and ground.
- **Is the resistance less than 5 ohms between the instrument panel dimmer switch and the SJB, and greater than 10,000 ohms between the instrument panel dimmer switch and ground?**

  YES : Go to C7.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C7 CHECK CIRCUIT VLN18 (BU/WH) FOR AN OPEN OR A SHORT TO GROUND

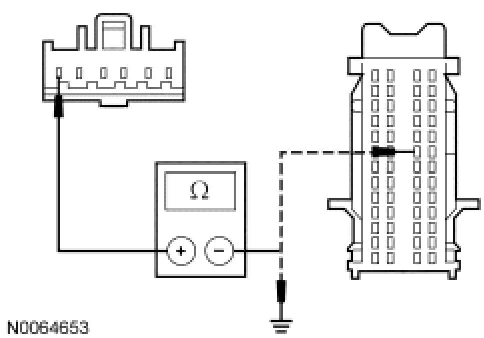

Fig. 6: Measuring Resistance Between Instrument Panel Dimmer Switch C2298-6, Circuit VLN18 (BU/WH) & SJB C2280B-34
Courtesy of FORD MOTOR CO.

- Measure the resistance between the instrument panel dimmer switch C2298-6, circuit VLN18 (BU/WH), harness side and the SJB C2280b-34, circuit VLN18 (BU/WH), harness side; and between the instrument panel dimmer switch C2298-6, circuit VLN18 (BU/WH), harness side and ground.
- **Is the resistance less than 5 ohms between the instrument panel dimmer switch and the SJB, and greater than 10,000 ohms between the instrument panel dimmer switch and ground?**

  YES : Go to C8.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C8 CHECK THE INSTRUMENT PANEL DIMMER SWITCH

- Carry out the component test for the instrument panel dimmer switch. Refer to COMPONENT TESTING.
- **Is the instrument panel dimmer switch OK?**

  YES : Go to C9.

  NO : INSTALL a new instrument panel dimmer switch. REFER to **INSTRUMENT PANEL DIMMER SWITCH**. TEST the system for normal operation.

C9 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion

        - damaged pins
        - pushed-out pins
    - Connect all the SJB connectors and make sure they seat correctly.
    - Operate the system and verify the concern is still present.
    - **Is the concern still present?**

      YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

      NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: The Steering Wheel Control Illumination Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAM article for Cluster and Panel Illumination schematic and connector information.

Normal Operation

The smart junction box (SJB) sends a pulse width modulated (PWM) voltage to the steering wheel controls through circuit VLN04 (VT/GY) (Edge) or circuit VLN37 (BU/WH) (MKX) to the clockspring. The voltage passes through the clockspring to the steering wheel control switches. Ground to the clockspring is supplied through circuit GD116 (BK/VT).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Steering wheel control switch(es)
- Steering wheel control switch harness
- Clockspring

PINPOINT TEST D: THE STEERING WHEEL CONTROL ILLUMINATION IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

D1 CHECK THE OTHER DIMMABLE LIGHTING SWITCHES

- Key in OFF position.
- Place the headlamp switch in the PARKING LAMPS ON position.
- Rotate the instrument panel dimmer switch to the full illumination position and observe other dimmable switches (door lock switches, hazard lamp switch, headlamp switch for example).
- **Are all the dimmable switches inoperative?**

  YES : Go to **Pinpoint Test A** .

  NO : Go to D2.

D2 CHECK CIRCUIT VLN04 (VT/GY) (EDGE) OR CIRCUIT VLN37 (BU/WH) (MKX) FOR AN OPEN

- Place the headlamp switch in the OFF position.
- Depower the supplemental restraint system (SRS). Refer to **SUPPLEMENTAL RESTRAINT SYSTEM** article.
- Disconnect: Clockspring C218a
- Connect the battery ground cable.
- Place the headlamp switch in the PARKING LAMPS ON position.
- Rotate the instrument panel dimmer switch to the full illumination position.

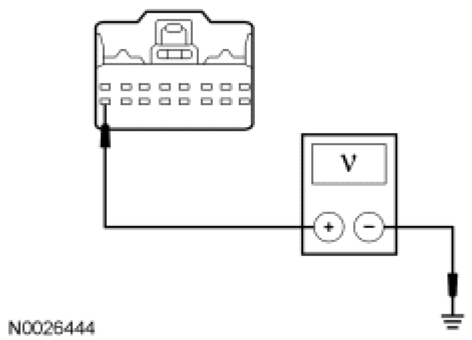

Fig. 7: Measuring Voltage Between Clockspring C218A-16, Circuit VLN04 (VT/GY) (Edge) Or Circuit VLN37 (BU/WH) (MKX)
Courtesy of FORD MOTOR CO.

- Measure the voltage between the clockspring C218a-16, circuit VLN04 (VT/GY) (Edge) or circuit VLN37 (BU/WH) (MKX), harness side and ground.
- **Is the voltage greater than 10 volts?**

  YES : TURN the parking lamps off. Go to D3.

  NO : REPAIR the circuit. REPOWER the SRS. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

D3 CHECK CIRCUIT GD116 (BK/VT) FOR AN OPEN

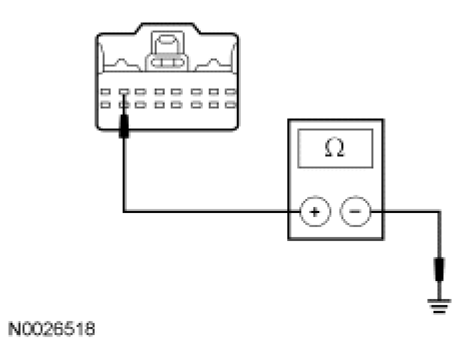

Fig. 8: Measuring Resistance Between Clockspring C218A-7, Circuit GD116 (BK/VT) & Ground
Courtesy of FORD MOTOR CO.

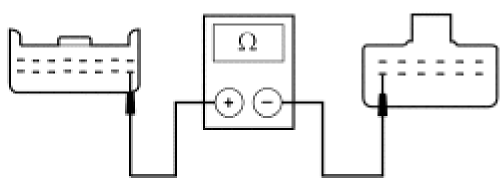
- Measure the resistance between the clockspring C218a-7, circuit GD116 (BK/VT), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to D4.

  NO : REPAIR the circuit. REPOWER the SRS. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

D4 CHECK THE CLOCKSPRING FOR AN OPEN

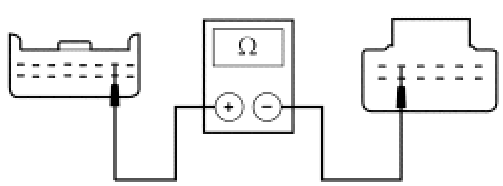
- Remove the driver air bag module. Refer to **SUPPLEMENTAL RESTRAINT SYSTEM** article.
- Disconnect: Upper Clockspring Connector C218b



N0069076

Fig. 9: Measuring Resistance Between Clockspring C218A Pin 16 And Upper Clockspring C218B Pin 7
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218a pin 16, component side and the upper clockspring C218b pin 7, component side.



N0075735

Fig. 10: Measuring Resistance Between Clockspring C218A Pin 7 And Upper Clockspring C218B Pin 2
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218a pin 7, component side and the upper clockspring C218b pin 2, component side.
- **Are the resistances less than 5 ohms?**

  YES : Go to D5.

NO : INSTALL a new clockspring. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

D5 CHECK THE STEERING WHEEL HARNESS CIRCUIT VLN04 (VT/GY) (EDGE) OR CIRCUIT VLN37 (BU/WH) (MKX) FOR AN OPEN

- Disconnect: LH Steering Wheel Switches C2998
- Disconnect: RH Steering Wheel Switches C2999

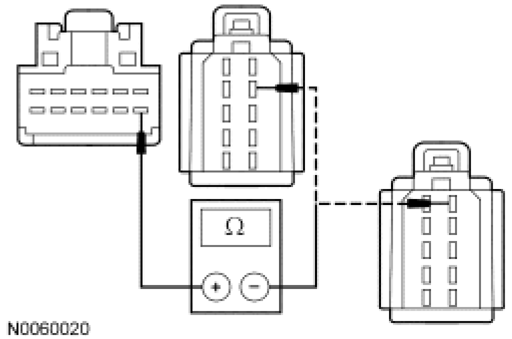


Fig. 11: Measuring Resistance Between Upper Clockspring Connector C218B-7, Circuit VLN04 (VT/GY) & LH Steering Wheel Switches C2998-2
Courtesy of FORD MOTOR CO.

- Measure the resistance between the upper clockspring connector C218b-7, circuit VLN04 (VT/GY), harness side and the LH steering wheel switches C2998-2, circuit VLN04 (VT/GY), harness side; and between the upper clockspring connector C218b-7, circuit VLN04 (VT/GY), harness side and the RH steering wheel switches C2999-1, circuit VLN04 (VT/GY), harness side.
- **Are the resistances less than 5 ohms?**

YES : Go to D6.

NO : REPAIR the circuit in question. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

D6 CHECK CIRCUIT GD165 (BK) FOR AN OPEN

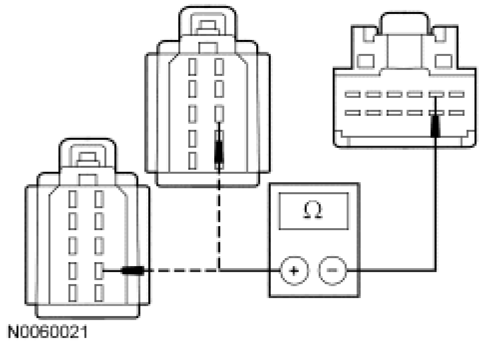

Fig. 12: Measuring Resistance Between Clockspring C218B-2, Circuit GD165 (BK) & LH Steering Wheel Switch C2998-4
Courtesy of FORD MOTOR CO.

- Measure the resistance between the clockspring C218b-2, circuit GD165 (BK), harness side, and the LH steering wheel switch C2998-4, circuit GD165 (BK), harness side; and between the clockspring C218b-2, circuit GD165 (BK), harness side, and the RH steering wheel switch C2999-3, circuit GD165 (BK), harness side.
- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new speed control switch or steering wheel controls as necessary. REFER to **SPEED CONTROL** article or **INFORMATION AND ENTERTAINMENT SYSTEMS** article. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

  NO : REPAIR the circuit. INSTALL the driver air bag module. REFER to **SUPPLEMENTAL RESTRAINT SYSTEM** article. TEST the system for normal operation.

Pinpoint Test E: The Individual Component Illumination Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAM article for Cluster and Panel Illumination schematic and connector information.

Normal Operation

The smart junction box (SJB) sends a pulse-width modulated (PWM) voltage to the dimmable components through circuit VLN04 (VT/GY) (Edge) or circuit VLN37 (BU/WH) (MKX). Ground is provided through circuits GD116 (BK/VT), GD126 (BK/WH) and GD139 (BK/YE).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Floor shifter
- LH rear heated seat switch (if equipped)
- RH rear heated seat switch (if equipped)
- Manual temperature control (if equipped)
- Message center switch (if equipped)
- Memory set switch (MKX)
- Window adjust switches (MKX)
- Door lock control switches
- Headlamp switch
- Hazard/passenger air bag disable/traction control switch (if equipped)
- Power liftgate release switch
- Roof opening panel switch (if equipped)

PINPOINT TEST E: THE INDIVIDUAL COMPONENT ILLUMINATION IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to

use the correct probe adapter(s) may damage the connector.

E1 CHECK THE VOLTAGE TO THE SINGLE ILLUMINATION SOURCE

- Key in OFF position.
- Disconnect: Inoperative Illumination Source
- Key in ON position.
- With the parking lamps on, rotate the instrument panel dimmer switch to the full illumination position.
- Measure the voltage between the inoperative illumination source, harness side and ground as follows:

EDGE

Component	Connector-Pin	Circuit
Floor shifter	C3245-3	VLN04 (VT/GY)
Manual climate control	C2357a-4	VLN04 (VT/GY)
Headlamp switch	C205-5	VLN04 (VT/GY)
Message center switch	C253-1	VLN04 (VT/GY)
Hazard/passenger air bag disable/traction control switch	C2355-6	VLN04 (VT/GY)
LH door lock control switch	C505-2	CBP41 (BU)
RH door lock control switch	C605-2	CBP41 (BU)
Power liftgate release switch	C2269-3	VLN04 (VT/GY)

MKX

Component	Connector-Pin	Circuit
Floor shifter	C3245-3	VLN37 (BU/WH)
Memory set switch	C503-3	VLN37 (BU/WH)
Headlamp switch	C205-5	VLN37 (BU/WH)
Message center	C253-1	VLN37

switch		(BU/WH)
Hazard/passenger air bag disable/traction control switch	C2355-6	VLN37 (BU/WH)
Power liftgate release switch	C2269-3	VLN37 (BU/WH)
Roof opening panel switch	C912-2	VLN37 (BU/WH)
LH front window control switch	C535a-6	VLN37 (BU/WH)
RH front window control switch	C648-1	VLN37 (BU/WH)
LH rear window control switch	C701-4	VLN37 (BU/WH)
RH rear window control switch	C801-4	VLN37 (BU/WH)
LH door lock control switch	C505-2	VLN37 (BU/WH)
RH door lock control switch	C605-2	VLN37 (BU/WH)
LH rear heated seat switch	C722-5	VLN37 (BU/WH)
RH rear heated seat switch	C822-5	VLN37 (BU/WH)

- **Is the voltage greater than 10 volts?**

  YES : For LH or RH rear window switches, INSTALL a new switch for the switch in question. REFER to **GLASS, FRAMES AND MECHANISMS** article.

  For all other components, go to E2.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

E2 CHECK ILLUMINATION SOURCE GROUND CIRCUIT FOR AN OPEN

- Key in OFF position.
- Measure the resistance between the inoperative illumination source, harness side and ground as follows:

EDGE

Component	Connector-Pin	Circuit
Floor shifter	C3245-4	GD140 (BK/GN)
Manual climate		GD115

control	C2357a-23	(BK/GY)
Headlamp switch	C205-10	GD116 (BK/VT)
Message center switch	C253-4	GD116 (BK/VT)
Hazard/passenger air bag disable/traction control switch	C2355-1	GD116 (BK/VT)
LH door lock control switch	C505-4	GD133 (BK)
RH door lock control switch	C605-4	GD140 (BK/GN)
Power liftgate release switch	C2269-2	GD116 (BK/VT)

RH rear heated seat		GD145

switch	C822-1	(BK/BU)

- **Is the resistance less than 5 ohms?**
  YES : INSTALL a new component in question. TEST the system for normal operation.
  NO : REPAIR the circuit. TEST the system for normal operation.

REMOVAL AND INSTALLATION

INSTRUMENT PANEL DIMMER SWITCH

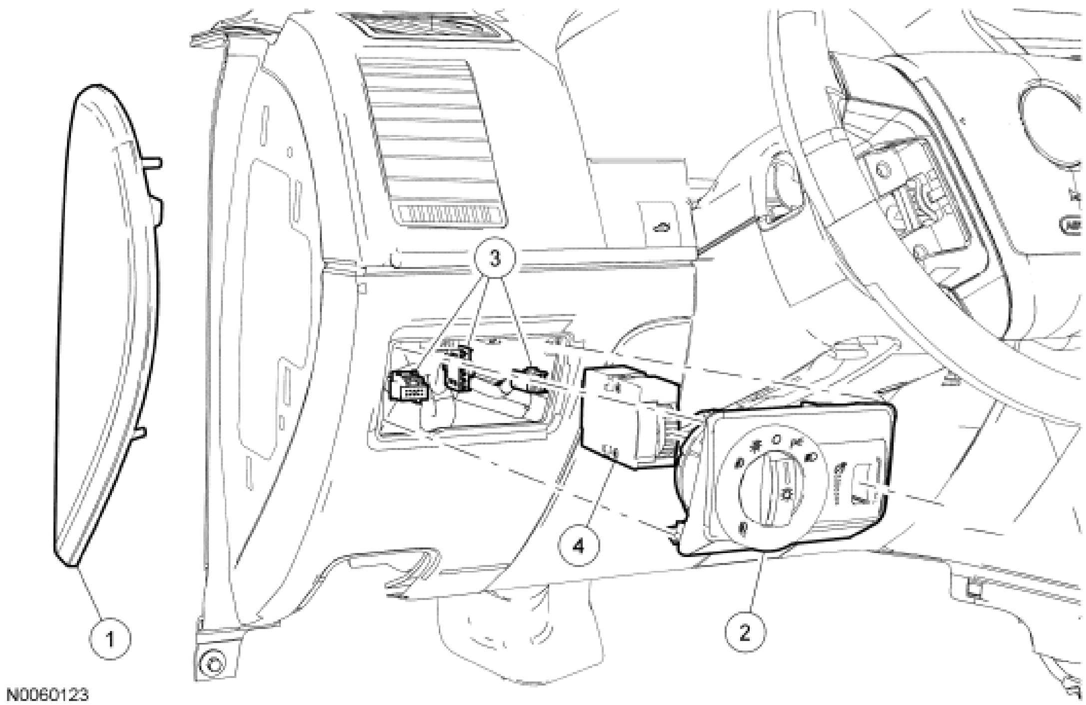

Fig. 13: Exploded View Of Instrument Panel Dimmer Switch
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	5404481	Instrument panel side finish panel
2	14K147	Headlamp switch assembly
3	-	Headlamp switch assembly electrical connectors (part of 14401)
4	11691	Instrument panel dimmer switch

REMOVAL AND INSTALLATION

1. Remove the instrument panel side finish panel.

NOTE: The switch is removed by pushing from behind.

2. Release the tabs and remove the headlamp switch assembly.
    - Disconnect the electrical connectors.
3. Release the 4 tabs and remove the instrument panel dimmer switch.

1. For additional information, refer to the appropriate procedure.

INSTRUMENT PANEL CENTER FINISH PANEL

REMOVAL AND INSTALLATION

All vehicles

1. Place the vehicle in NEUTRAL.

   MKX only

2. Remove the floor console trim ring.

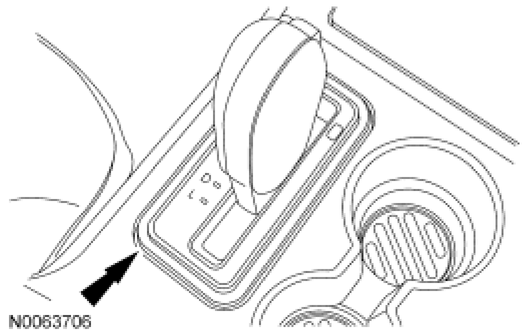

Fig. 5: Identifying Floor Console Trim Ring
Courtesy of FORD MOTOR CO.

All vehicles

3. Remove the floor console finish panel.
   - Open the storage compartment door.
   - Remove the console finish panel.

   MKX only

4. Remove the storage bin.

- Remove the 2 scrivets.
- Disconnect the power point electrical connector.

NOTE: The upper and lower center instrument panel finish panels are removed as one assembly.

5. Using a suitable tool, gently pry out the upper instrument panel center finish panel to disengage the clips.
    - Disconnect the electrical connectors.
6. Using a suitable tool, gently pry out the lower instrument panel center finish panel to disengage the clips.
    - Disconnect the electrical connectors.
7. Separate the upper instrument panel finish panel from the lower instrument panel finish panel.

    Edge only

    NOTE: The upper and lower instrument panel center finish panels are removed separately.

8. Using a suitable tool, gently pry out the upper instrument panel center finish panel to disengage the clips and remove the panel.
    - Disconnect the electrical connectors.
9. Using a suitable tool, gently pry out the lower instrument panel center finish panel to disengage the clips and remove the panel.
    - Disconnect the electrical connectors.

    All vehicles

10. To install, reverse the removal procedure.

INSTRUMENT CLUSTER FINISH PANEL

Edge only

1. Remove the upper instrument panel center finish panel.
    - Using a suitable tool, gently pry out the upper center finish panel to disengage the clips.
    - Remove the upper instrument panel center finish panel.
    - Disconnect the electrical connectors.

    All vehicles

2. Lower the steering column to the full down position.
3. Remove the steering column opening cover.
    - Remove the 2 steering column opening cover screws.

- Disengage the steering column opening cover from the retainers.
- Disconnect the electrical connector and tube, if equipped.

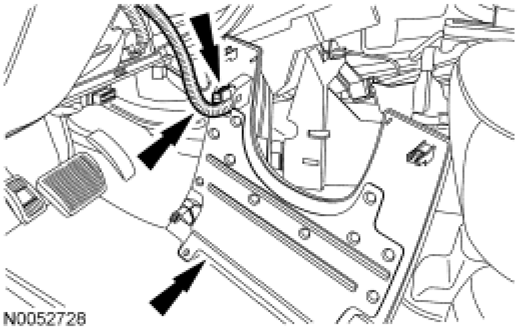

Fig. 6: Locating Electrical Connector, Tube & Steering Column Opening Cover
Courtesy of FORD MOTOR CO.

4. Remove the 2 cluster finish panel screws.

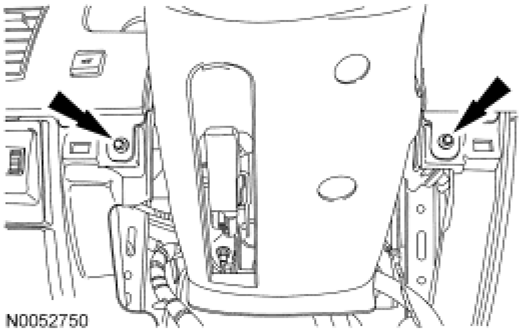

Fig. 7: Locating Cluster Finish Panel Screws
Courtesy of FORD MOTOR CO.

5. Disengage the instrument cluster finish panel from the retaining clips and remove the panel.
   - Disconnect the electrical connectors, if equipped.
6. To install, reverse the removal procedure.

INSTRUMENT PANEL

1. Remove the floor console. For additional information, refer to **Console - Floor**.
2. Depower the supplemental restraint system (SRS). For additional information, refer to **SUPPLEMENTAL RESTRAINT SYSTEM** .
3. Remove the weatherstripping from the front door openings near the instrument panel.
4. Remove the LH and RH instrument panel end trim panels.
5. Remove the LH and RH A-pillar trim panels. For additional information, refer to **INTERIOR TRIM AND ORNAMENTATION** .
6. Remove the LH and RH cowl panels.

7. Remove the steering column opening cover.
    - Remove the 2 steering column opening cover screws.
    - Disengage the steering column opening cover from the retaining clips.
    - Disconnect the electrical connector and hose, if equipped.

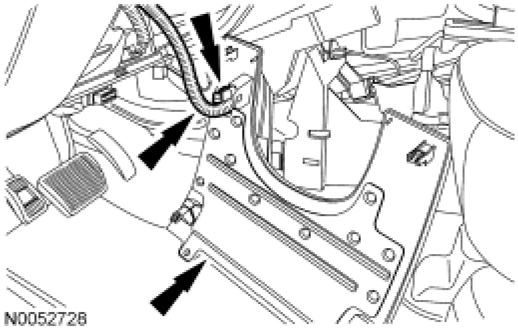

Fig. 8: Locating Electrical Connector, Tube & Steering Column Opening Cover
Courtesy of FORD MOTOR CO.

8. Remove the bolt and the hood opening handle.
    - Position the handle aside.

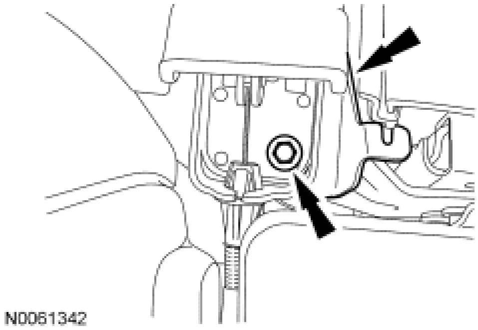

Fig. 9: Identifying Hood Opening Handle & Bolt
Courtesy of FORD MOTOR CO.

9. Disconnect the LH bulkhead electrical connector from under the steering column.

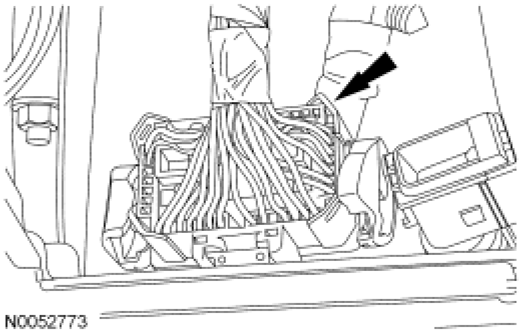

Fig. 10: Identifying LH Bulkhead Electrical Connector
Courtesy of FORD MOTOR CO.

10. Disconnect the RH bulkhead electrical connector from under the steering column.

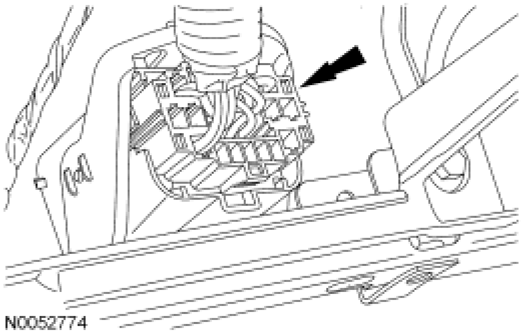

Fig. 11: Identifying RH Bulkhead Electrical Connector
Courtesy of FORD MOTOR CO.

11. Disconnect the 2 electrical connectors from the left cowl panel side.

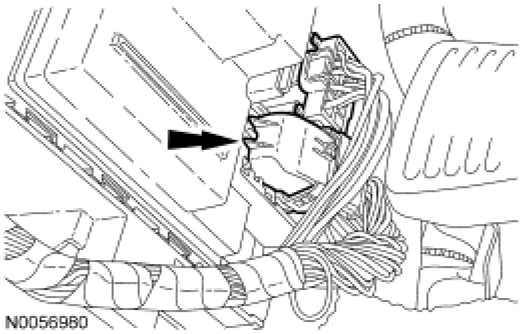

Fig. 12: Locating Electrical Connectors From Left Cowl Panel Side
Courtesy of FORD MOTOR CO.

12. Disconnect the electrical connectors and the antenna lead-in cable from the right cowl panel side.
    - Remove the harness from the retainers.

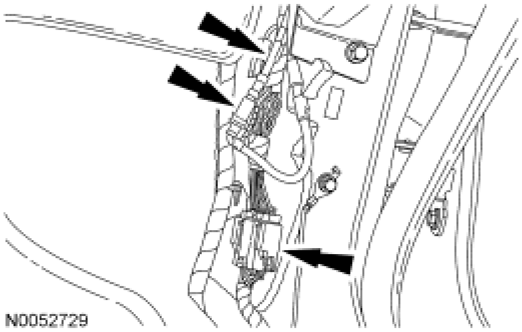

Fig. 13: Locating Electrical Connectors & Antenna Lead-In Cable From Right Cowl Panel Side

Courtesy of FORD MOTOR CO.

13. Disconnect the 2 A/C electrical connectors from inside the glove compartment.

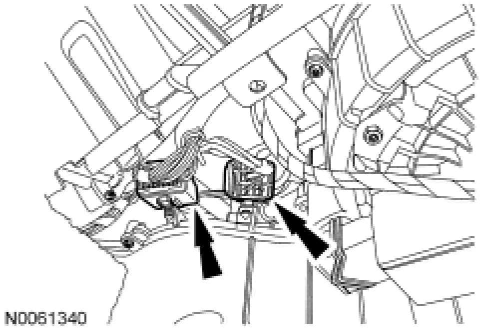

Fig. 14: Locating A/C Electrical Connectors From Inside Glove Compartment
Courtesy of FORD MOTOR CO.

14. Disconnect the electrical connector from the top of the heater core and evaporator core housing.

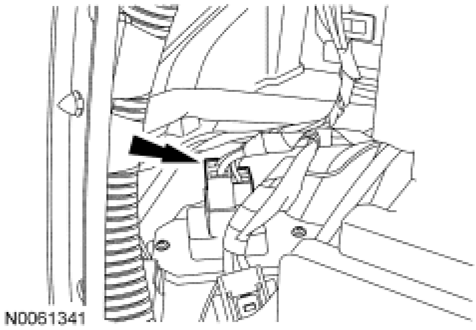

Fig. 15: Locating Blower Motor Resistor Or Blower Motor Speed Control Electrical Connector
Courtesy of FORD MOTOR CO.

15. Disconnect the selector lever cable from the ball stud on the selector lever.

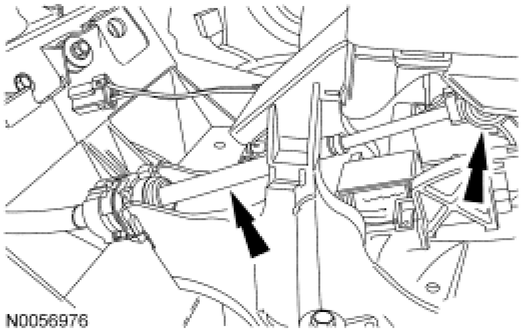

Fig. 16: Locating Shift Cable From Ball Stud On Shifter
Courtesy of FORD MOTOR CO.

16. Remove the selector lever cable from the retaining clips.

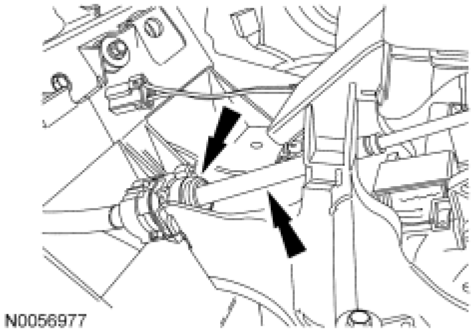

Fig. 17: Locating Shift Cable From Retaining Clips
Courtesy of FORD MOTOR CO.

17. Remove the 4 screws (2 each side) from the inner floor console support.

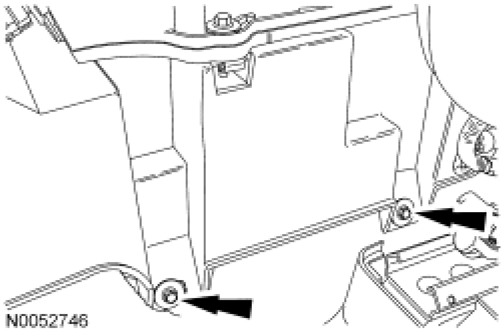

Fig. 18: Locating Screws From Inner Floor Console Support
Courtesy of FORD MOTOR CO.

18. Remove the screws from the front inner floor console support-to-instrument panel.

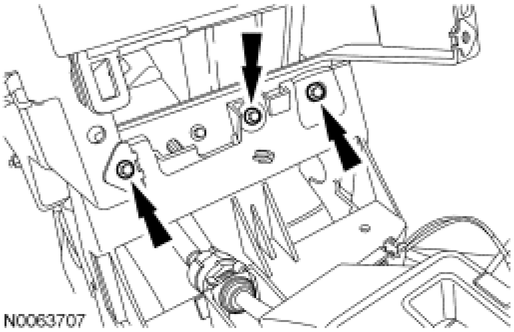

Fig. 19: Locating Screws From Front Inner Floor Console Support-To-Instrument Panel
Courtesy of FORD MOTOR CO.

19. Disconnect the electrical connectors from the front inner floor console.

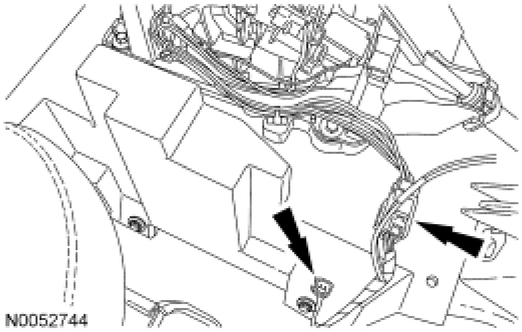

Fig. 20: Locating Electrical Connectors From Front Inner Floor Console
Courtesy of FORD MOTOR CO.

20. Remove the inner floor console support.
21. Disconnect the small restraints control module (RCM) electrical connector.

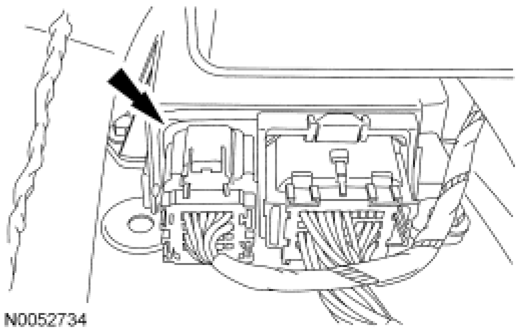

Fig. 21: Locating Restraints Control Module (RCM) Small Electrical Connector
Courtesy of FORD MOTOR CO.

22. Remove the LH pushpin retainer and position the carpet aside.

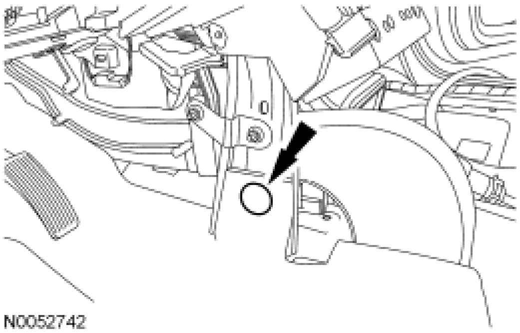

Fig. 22: Locating LH Push Pin Retainer & Position Carpet Aside
Courtesy of FORD MOTOR CO.

23. Remove the LH pushpin retainer from the instrument panel-to-A/C duct.

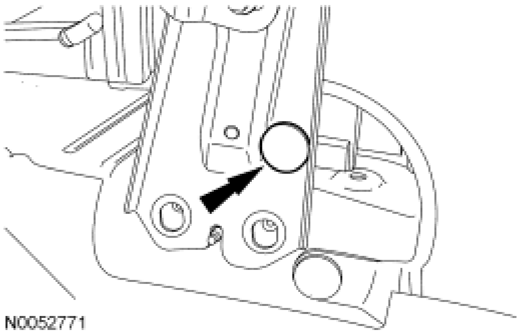

Fig. 23: Locating LH Push Pin Retainer From Instrument Panel-To-A/C Duct
Courtesy of FORD MOTOR CO.

24. Remove the 2 LH instrument panel-to-floor bolts.
    - To install, tighten to 22 N.m (16 lb-ft).
25. Remove the RH pushpin retainer and position the carpet aside.

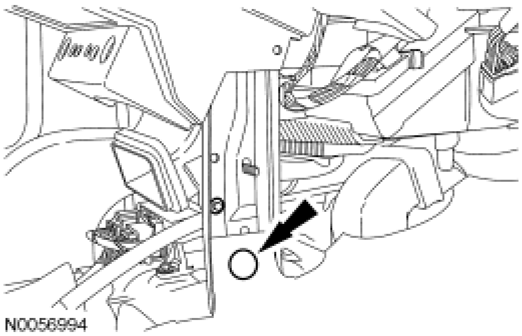

Fig. 24: Locating LH Instrument Panel-To-Floor Bolts
Courtesy of FORD MOTOR CO.

26. Remove the screw from the RH instrument panel brace-to-A/C duct.

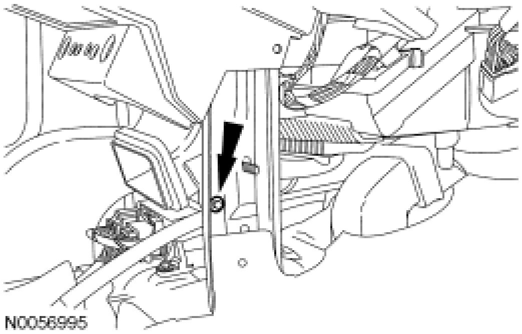

Fig. 25: Locating Screw From RH Instrument Panel Brace-To-A/C Duct
Courtesy of FORD MOTOR CO.

27. Remove the RH instrument panel-to-floor bolt.

- To install, tighten to 22 N.m (16 lb-ft).

28. Remove the 2 nuts and the LH instrument panel brace-to-A/C duct.

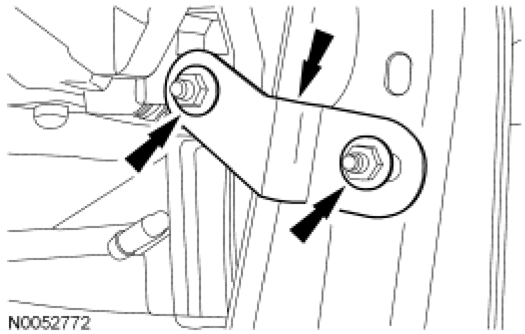

Fig. 26: Locating LH Instrument Panel Brace-To-A/C Duct Nuts
Courtesy of FORD MOTOR CO.

29. Remove and discard the steering column pinch bolt.
    - To install, use a new steering column pinch bolt and tighten to 23 Nm (17 lb-ft).
30. Rotate the steering wheel until the front wheels are in the straight-ahead position.
    - Remove the ignition key.

CAUTION: Do not allow the steering column shaft to rotate while the intermediate shaft is disconnected or damage to the clockspring may result. If there is evidence that the shaft has rotated, the clockspring must be removed and recentered. For additional information, refer to SUPPLEMENTAL RESTRAINT SYSTEM .

31. Detach the steering column shaft from the intermediate shaft.
32. Remove the upper cowl panel grille. For additional information, refer to **FRONT END BODY PANELS** .
33. Remove the bolt from the front of dash.
    - To install, tighten to 20 N.m (15 lb-ft).

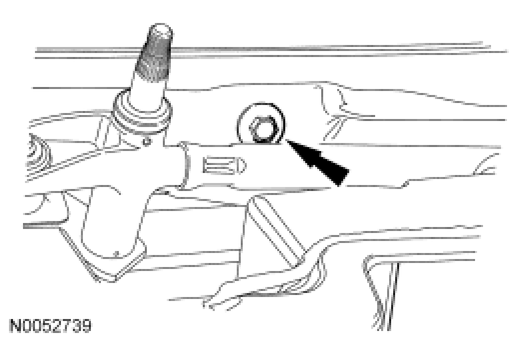

Fig. 27: Locating Bolt From Front Of Dash
Courtesy of FORD MOTOR CO.

34. Remove the driver seat. For additional information, refer to **SEATING** .

NOTE: The Torx head bolt is not completely removed. The bolt is pulled outward far enough to allow for clearance when removing the instrument panel.

35. Remove the Torx head bolt from inside the LH door.
    - To install, tighten to 30 N.m (22 lb-ft).

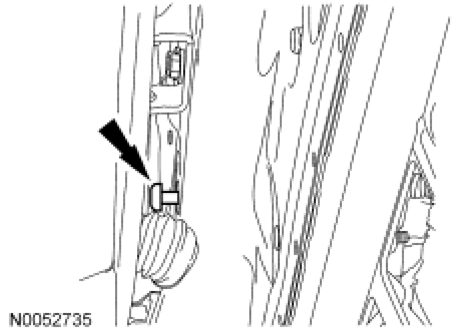

Fig. 28: Locating Torx(R) Head Bolt From Inside LH Door
Courtesy of FORD MOTOR CO.

36. Remove the 2 LH instrument panel bolts from inside the LH door.
    - To install, tighten to 20 N.m (15 lb-ft).

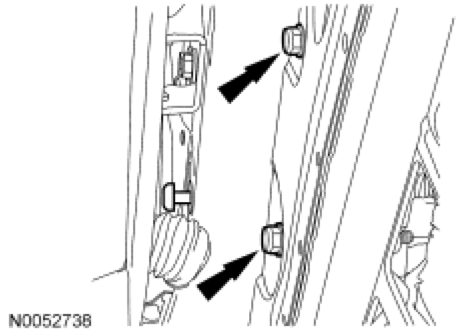

Fig. 29: Locating Bolts From Inside LH Door
Courtesy of FORD MOTOR CO.

37. Remove the 2 instrument panel-to-steering column bracket bolts from the bracket under the steering column.
    - To install, tighten to 22 N.m (16 lb-ft).

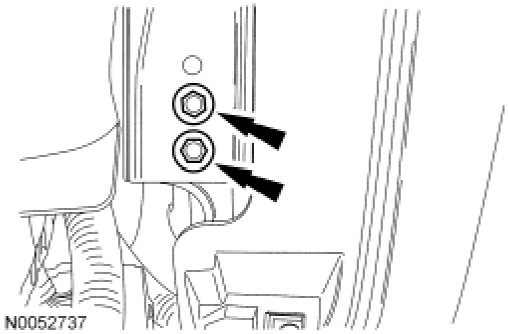

Fig. 30: Identifying Bolts From Bracket Under Steering Column
Courtesy of FORD MOTOR CO.

38. Remove the LH instrument panel-to-body bolt.
    - To install, tighten to 7 N.m (62 lb-in).

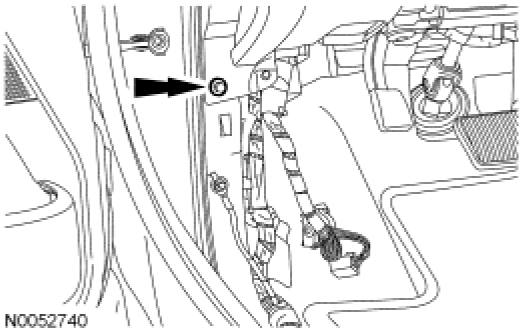

Fig. 31: Identifying LH Instrument Panel-To-Body Bolt
Courtesy of FORD MOTOR CO.

39. Remove the bolt from the RH instrument panel.
    - To install, tighten to 22 N.m (16 lb-ft).

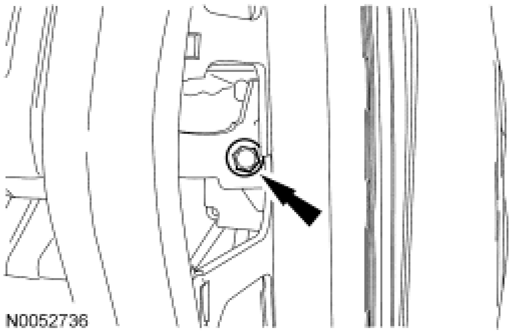

Fig. 32: Locating Bolt From RH Instrument Panel Cowl Side Panel
Courtesy of FORD MOTOR CO.

40. Remove the RH instrument panel-to-body bolt.

- To install, tighten to 7 N.m (62 lb-in).

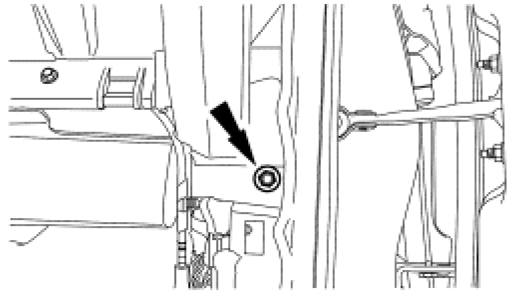

Fig. 33: Identifying RH Instrument Panel-To-Body Bolt
Courtesy of FORD MOTOR CO.

41. Remove the bolt and the hood opening handle.
    - Position the handle aside.

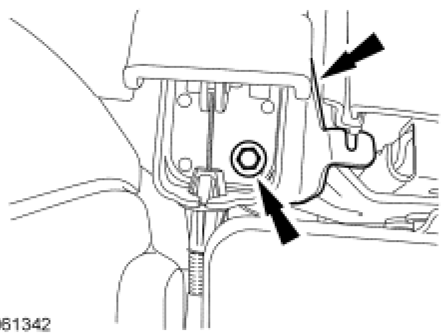

Fig. 34: Identifying Hood Opening Handle & Bolt
Courtesy of FORD MOTOR CO.

CAUTION: To avoid damage to the instrument panel, this next step requires the help of an assistant.

42. Remove the instrument panel.
43. To install, reverse the removal procedure.

POWER POINT

Special Tools

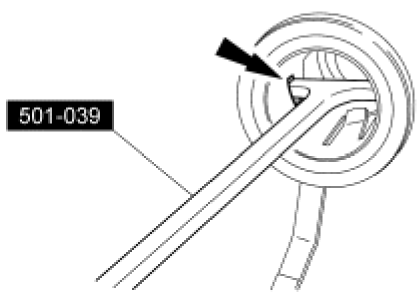
Illustration	Tool Name	Tool Number
	Remover, Power Point Socket	501-039 or equivalent

 ST3024-A		

REMOVAL

NOTE: Power point cover may differ depending on location.

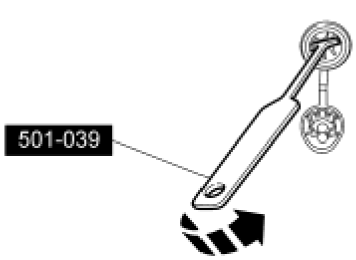
1. Open the power point cover.
2. Install the Power Point Socket Remover in one of the power point socket slots.



N0061767

Fig. 35: Installing Special Tool In Power Point Socket Slot
Courtesy of FORD MOTOR CO.

3. Position the Power Point Socket Remover so that it engages in the adjacent slot.



N0061768

Fig. 36: Positioning Special Tool To Engage In Adjacent Slot
Courtesy of FORD MOTOR CO.

4. Using the Power Point Socket Remover, pull the power point socket out of the retainer.

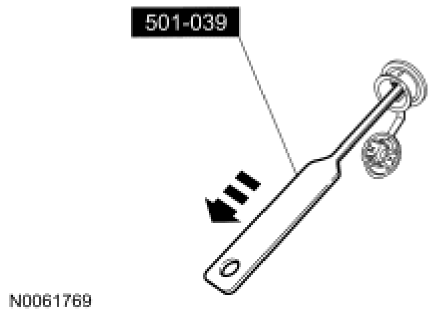


Fig. 37: Pulling Power Point Socket Out Of Retainer
Courtesy of FORD MOTOR CO.

5. Disconnect the electrical connector.

INSTALLATION

1. Connect the electrical connector.
2. Slide the power point socket into the retainer.

CONSOLE - FLOOR

7	W706862	Floor console rear bolt (2 required)
8	045A36	Floor console

All vehicles

1. Position the selector lever to NEUTRAL.

NOTE: The seats must be in the full raised position to access the bolts.

2. Position the seats forward and remove the 2 floor console rear bolts.
   - To install, tighten to 6 N.m (53 lb-in).
3. Remove the 2 floor console side panels.

NOTE: The seats must be in the full raised position to access the bolts.

4. Position the seats rearward and remove the 2 floor console side panels and 2 floor console center bolts.
   - To install, tighten to 6 N.m (53 lb-in).
5. Remove the floor console finish panel.

MKX only

6. Remove the storage bin.
   - Remove the 2 scrivets.
   - Disconnect the power point electrical connector.
7. Remove the 2 floor console front side bolts.
   - To install, tighten to 6 N.m (53 lb-in).

All vehicles

8. Remove the 2 floor console-to-instrument panel bolts.
   - To install, tighten to 6 N.m (53 lb-in).
9. Disconnect the floor console electrical connector from the lower right front wiring harness.
10. Remove the floor console.
11. To install, reverse the removal procedure.

CONSOLE - OVERHEAD

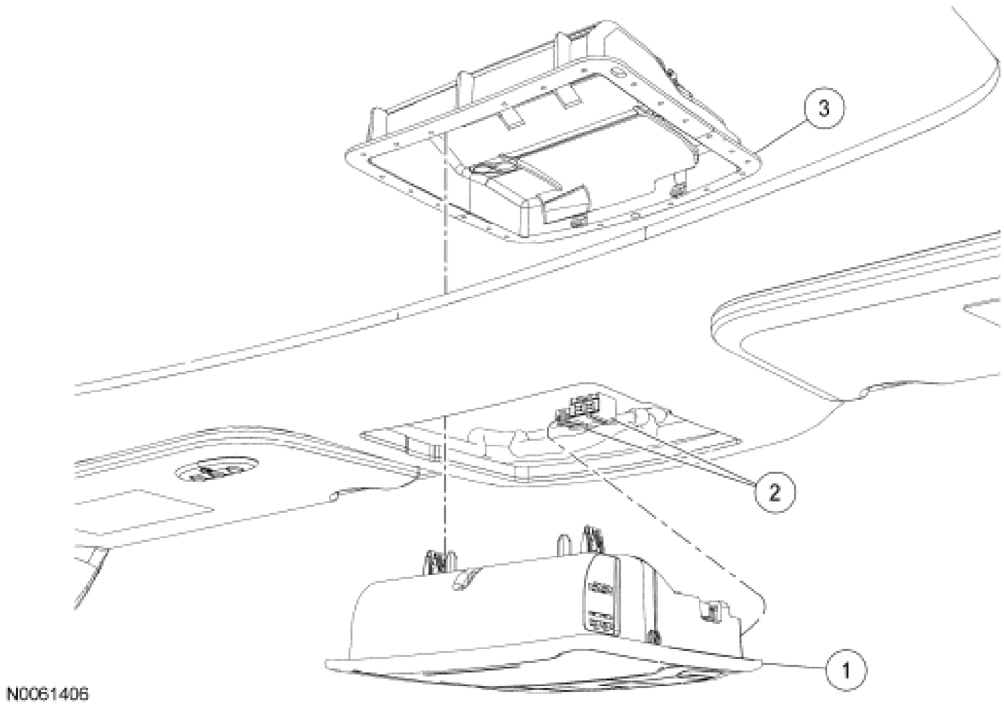

Fig. 40: Exploded View Of Overhead Console
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	519A70	Overhead console
2	-	Overhead console electrical connectors
3	519K22	Overhead console bracket

1. Remove the overhead console.
    - Pull downward on the overhead console.
    - Disconnect the electrical connectors.
2. To install, reverse the removal procedure.

2008 ENGINE PERFORMANCE

Intake Air Distribution and Filtering - Edge & MKX

SPECIFICATIONS

TORQUE SPECIFICATIONS

Description	Nm	lb-in
Air cleaner bolt	9	80
Air cleaner outlet pipe-to-air cleaner cover clamp	5	44
Air cleaner outlet pipe-to-throttle body (TB) clamp	5	44

DESCRIPTION AND OPERATION

INTAKE AIR DISTRIBUTION AND FILTERING

The air intake system consists of the:

- air cleaner inlet.
- air cleaner element.
- mass air flow (MAF) sensor.
- air cleaner outlet pipe.

The air intake system:

- cleans intake air with a replaceable, dry-type air cleaner element.
- measures airflow and air temperature with the MAF sensor.

DIAGNOSTIC TESTS

INTAKE AIR DISTRIBUTION AND FILTERING

Refer to the **Introduction - Gasoline Engines** article.

REMOVAL AND INSTALLATION

INTAKE AIR SYSTEM COMPONENTS - EXPLODED VIEW

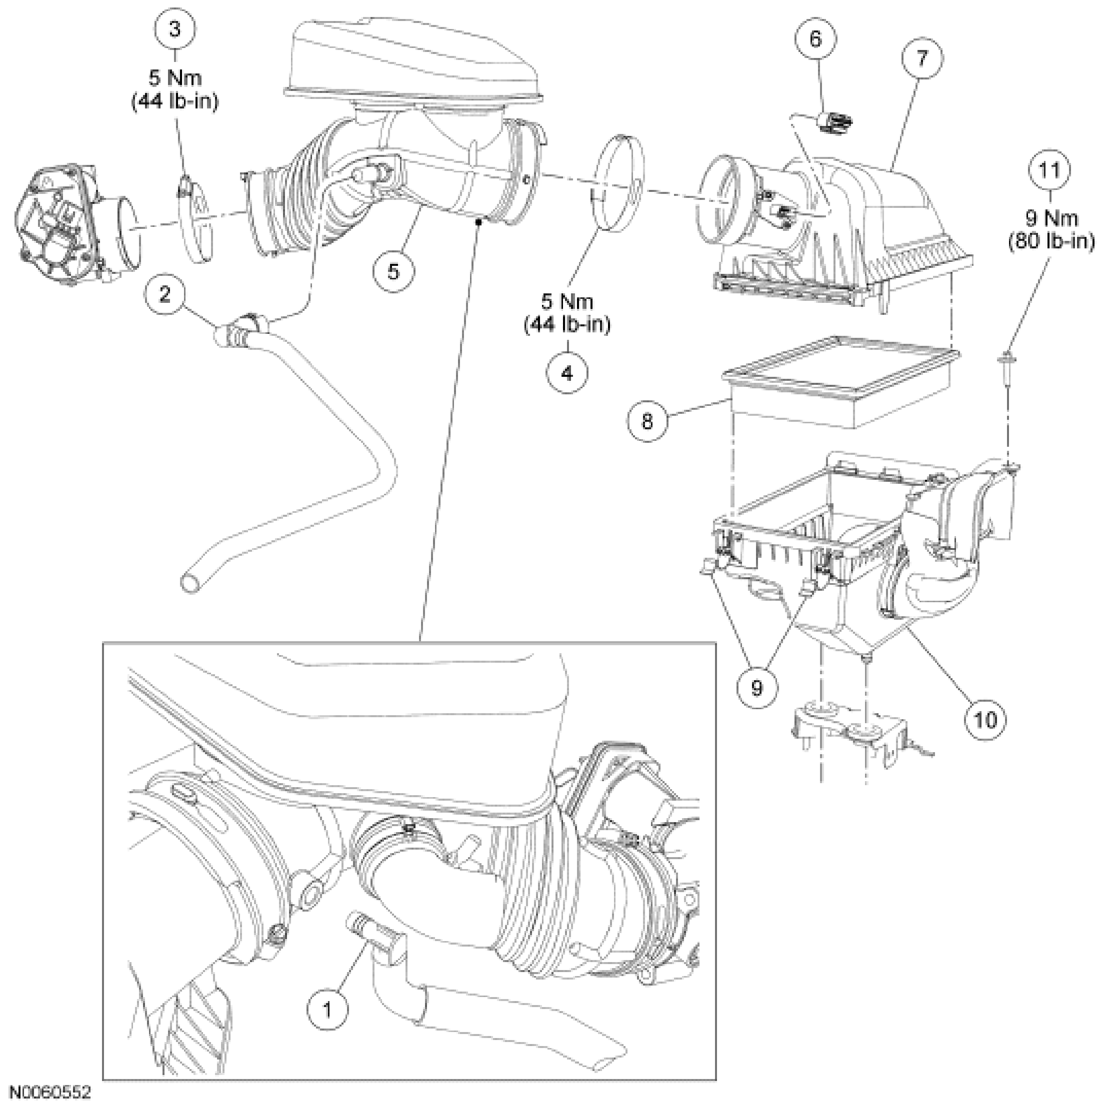

Fig. 1: Exploded View Of Intake Air System Components With Torque Specifications
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	9Y432	Vacuum tube
2	6758	Crankcase vent tube
3	9C632	Air cleaner outlet pipe-to-throttle body (TB) clamp
4	9C632	Air cleaner outlet pipe-to-air cleaner cover clamp
5	9F805	Air cleaner outlet pipe
6	14A464	Mass air flow (MAF) sensor electrical connector
7	9661	Air cleaner cover

8	9601	Air cleaner element
9	9628	Air cleaner tray assembly-to-air cleaner cover clamps
10	9A600	Air cleaner tray assembly
11	N606678	Air cleaner bolt

1. For additional information, refer to the procedures in this article.

AIR CLEANER

REMOVAL AND INSTALLATION

1. Disconnect the mass air flow (MAF) sensor electrical connector.
2. Loosen the clamp and disconnect the air cleaner outlet pipe from the air cleaner.
   - To install, tighten to 5 Nm (44 lb-in).
3. Remove the air cleaner bolt.
   - To install, tighten to 9 Nm (80 lb-in).

NOTE: No tools are needed to remove the air cleaner assembly. Removal should be carried out using hands only.

4. Separate the 2 air cleaner feet from the rubber grommets and remove the air cleaner assembly.

NOTE: Make sure that the 2 air cleaner feet are seated into the rubber grommets under the air cleaner assembly.

NOTE: The air cleaner outlet pipe should be securely sealed to prevent unmetered air from entering the engine.

5. To install, reverse the removal procedure.

AIR CLEANER OUTLET PIPE

REMOVAL AND INSTALLATION

1. Disconnect the crankcase vent tube and vacuum tube from the air cleaner outlet pipe.
2. Loosen the air cleaner outlet pipe-to-air cleaner cover clamp.
   - To install, tighten to 5 Nm (44 lb-in).
3. Loosen the air cleaner outlet pipe-to-throttle body clamp.
   - Remove the air cleaner outlet pipe.
   - To install, tighten to 5 Nm (44 lb-in).

NOTE: **The air cleaner outlet pipe should be securely sealed to prevent unmetered air from entering the engine.**

4. To install, reverse the removal procedure.

Interior Lighting - Edge & MKX

DESCRIPTION AND OPERATION

INTERIOR LIGHTING

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The interior lighting system consists of the following components:

- SJB
- Liftgate/trunk module (LTM) (if equipped)
- Dimmer control switch
- Interior/map lamps
- Puddle lamps
- Cargo lamp
- Vanity mirror lamps
- Door ajar switches

The interior lighting system consists of 2 subsystems:

- Courtesy lamps
- Demand lamps

The courtesy lamps are controlled by the SJB. The SJB supplies voltage to the courtesy lamps. The courtesy lamp subsystem consists of the interior dome lamps, the overhead console lamps, the cargo lamp, and the puddle lamps (if equipped).

The SJB supplies voltage to the demand lamps. The demand lamps subsystem consists of the front map lamps, and the left and right vanity mirror lamps.

The SJB supplies power to the interior lighting system. The SJB and the LTM (if equipped) set DTCs if certain circuit failures exist with the interior lighting system.

DIAGNOSTIC TESTS

INTERIOR LIGHTING

SPECIAL TOOLS

Illustration	Tool Name	Tool Number

 ST1137-A	73III Automotive Meter	105-R0057 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool	-
 ST2574-A	Flex Probe Kit	105-R025C or equivalent

Principles of Operation

NOTE: The smart junction box (SJB) is also known as the generic electronic module (GEM).

The SJB supplies voltage to the interior lighting system. The interior lighting system illuminates the courtesy lamps to enhance visibility of the interior while a vehicle door is open or ajar, and the vehicle speed is less than 15 km/h (9 mph) or 5 km/h (3 mph) for puddle lamps. The SJB controls all interior lighting functions and timing by monitoring inputs from the door ajar switches, instrument panel dimmer switch and vehicle speed.

Interior Lighting Delay

The interior lighting delay feature provides temporary illumination of the courtesy lamps after the doors are opened and then closed. The interior lighting delay feature keeps the courtesy lamps on for a period of 25 seconds after all the doors are closed. If during the 25-second delay time, the SJB detects that the ignition has been turned out of OFF, or if the vehicle is locked using the remote keyless entry (RKE) transmitter or the keypad, the courtesy lamp illumination is discontinued.

Illuminated Entry

The illuminated entry requests the courtesy lamps to be illuminated (when the ignition is off) and either the RKE transmitter UNLOCK button is pressed, or the vehicle is unlocked using the keypad. The illuminated entry requests the courtesy lamps off after 25 seconds have elapsed, the ignition is switched out of off, the RKE transmitter LOCK button is pressed, or the vehicle is locked using the keypad or door lock cylinder.

Illuminated Exit

The illuminated exit requests the courtesy lamps to be illuminated for 25 seconds when all doors are closed and the ignition key is removed from the ignition lock cylinder. The illuminated exit requests the courtesy lamps to be deactivated when the ignition key is inserted into the ignition lock cylinder, 25 seconds have elapsed or a door or liftgate is opened.

Theater Lighting

The theater lighting option ramps-up the courtesy lamps over 0.7 second when courtesy lamp activation is requested. The theater lighting feature ramps-down the courtesy lamps over 1.7 seconds when interior lighting deactivation is requested by any feature other than the panic alarm or battery saver.

Interior Lamp Arbitrator

The SJB chooses between the interior lighting, interior mode, interior lighting delay, illuminated entry, illuminated exit and battery saver to determine which feature has precedence of activating and deactivating the interior lamps.

The features are prioritized as follows:

- Perimeter alarm/panic alarm
- Demand lighting
- Battery saver
- Interior lighting
- Interior light delay
- Illuminated entry
- Illuminated exit

Battery Saver

The SJB provides automatic shut-off of the demand lamps (cargo lamp, vanity lamps, map lamps and cargo lamp) and courtesy lamps after a time-out period in order to save battery voltage. A timer in the SJB is started when the ignition is turned to the OFF position, and all the doors, the liftgate and the liftgate glass are closed. When the time-out period for the lamps has elapsed, the voltage is automatically shut off to the lamps by the SJB. While the SJB has voltage disabled, if the ignition is turned to any position other than OFF, any door becomes ajar, or the UNLOCK button of the RKE transmitter is pressed, a valid keypad code is entered, an unlock request from the cylinder is received, or the dome lamp switch is turned on, the SJB restores voltage and starts the timer again.

NOTE: Time-out is 1 minute if the vehicle has less than 80 km (50 miles).

The battery saver time-outs are as follows:

- Courtesy lamps = 10 minutes
- Demand lamps = 10 minutes

Field-Effect Transistor (FET) Protection

The SJB utilizes a FET protective circuit strategy for many of its outputs (for example, the headlamp output circuit). Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault is detected. A continuous DTC is stored at that time of the fault. The circuit then resets after an ignition cycle or customer demand of the function (switching the component on, 30-minute battery saver being energized). When an excessive circuit load occurs several times, the module shuts down the output until a repair procedure is carried out. At the same time, the continuous DTC that was stored on the first failure cannot be cleared by a command to clear the continuous DTCs. The module does not allow this code to be cleared or the circuit restored to normal until a successful on-demand self-test proves that the fault has been repaired. After the on-demand self-test has successfully completed (no on-demand DTCs present), the continuous DTC clears and the circuit function returns.

Each circuit has 3 predefined levels of short circuit tolerance established in the module based on each circuits' capability. When the first or second level is reached, the continuous DTC associated with the circuit sets along with DTC B106E. These DTCs may be cleared using the Clear DTC operation on the scan tool as long as the fault itself has been corrected. If any of the circuits are shorted past the third level, then DTCs B106F and B1342 set along with the associated continuous DTC. This DTC cannot be cleared and a new module must be installed.

The SJB FET protected output circuits for the interior lighting system are for the puddle lamps and courtesy lamp output circuits.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

VISUAL INSPECTION CHART

Mechanical	Electrical

- Courtesy lamps - Map lamps - Cargo lamp - Vanity lamps	- Smart junction box (SJB) fuse(s): 9 (15A) 10 (15A) 25 (10A) - Wiring, terminals or connectors - Ajar switch(es) (integral to latch) - Courtesy lamp(s) - Map lamp(s) - Puddle lamp(s) - Cargo lamp - Vanity lamp(s) - Overhead console - Instrument panel dimmer switch - SJB

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

NOTE: Make sure to use the latest scan tool release software.

4. If the cause is not visually evident, connect the scan tool to the data link connector (DLC).

NOTE: The vehicle communication module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM.

5. If the scan tool does not communicate with the VCM:
   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article, No Power To The Scan Tool, to diagnose no communication with the scan tool.
6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to **MODULE COMMUNICATIONS NETWORK** article to diagnose no response from the PCM.
7. Carry out the network test.

- If the scan tool responds with no communication with the SJB, refer to **MODULE COMMUNICATIONS NETWORK** article.
- If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB and the liftgate/trunk module (LTM) (if equipped).
9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to **MULTIFUNCTION ELECTRONIC MODULES** article.
10. If no DTCs related to the concern are retrieved, go to **SYMPTOM CHART**.

DTC Charts

SMART JUNCTION BOX (SJB) DTC CHART

DTC	Description	Action
B1320	Driver Door Ajar Circuit Open	Go to **Pinpoint Test C** .
B1328	Passenger Door Ajar Circuit Open	Go to **Pinpoint Test C** .
B1336	Door Ajar RR Circuit Open	Go to **Pinpoint Test C** .
B1572	Door Ajar LR Circuit Open	Go to **Pinpoint Test C** .
B1688	Lamp Dome Input Circuit Short to Ground	Go to **Pinpoint Test C** .
B2077	Liftgate Ajar Sw Circuit Failure	Go to **Pinpoint Test C** .
B2A35	Interior Lighting Output Circuit Open	If the courtesy lamps are inoperative, go to **Pinpoint Test A** . If the courtesy lamps stay on continuously, go to **Pinpoint Test C** .
B2A36	Interior Lighting Output Circuit Short to Ground	Go to **Pinpoint Test A** .
B2A39	Puddle Lamp Output Circuit Open	If the puddle lamps are inoperative, go to **Pinpoint Test I** . If the puddle lamps are always on, go to **Pinpoint Test J** .
B2A3A	Puddle Lamp Output Circuit Short to Ground	Go to **Pinpoint Test I** .
All other DTCs	-	REFER to **MULTIFUNCTION ELECTRONIC MODULES** article.

LIFTGATE/TRUNK MODULE (LTM) DTC CHART

DTC	Description	Action
B2718	Liftgate/Decklid Ajar Output Short to Battery	Go to **Pinpoint Test C** .
B2721	Liftgate/Decklid Ajar Output Short to	If interior lamps are inoperative, go to **Pinpoint Test L** .

	Ground or Open	If interior lamps are always on, go to **Pinpoint Test C** .
All other DTCs	-	REFER to **MULTIFUNCTION ELECTRONIC MODULES** article.

Symptom Chart

SYMPTOM CHART

Condition	Possible Sources	Action
• No communication with the smart junction box (SJB)	• Wiring, terminals or connectors • SJB	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• No communication with the liftgate/trunk module (LTM)	• Wiring, terminals or connectors • LTM	• REFER to **MODULE COMMUNICATIONS NETWORK** article.
• The courtesy lamps flash on and off	• The SJB is not configured correctly.	• CONFIGURE the SJB. REFER to **MODULE CONFIGURATION** article. TEST the system for normal operation.
• The courtesy lamps are inoperative	• Fuse • Wiring, terminals or connectors • SJB	• Go to **Pinpoint Test A** .
• An individual courtesy lamp is inoperative	• Wiring, terminals or connectors • Interior lamp	• Go to **Pinpoint Test B** .
• The courtesy lamps stay on continuously	• Wiring, terminals or connectors • Door ajar switch • Liftgate ajar switch • Instrument panel dimmer switch • LTM • SJB	• Go to **Pinpoint Test C** .
• The courtesy lamps do not turn on with one door open	• Wiring, terminals or connectors • Door ajar switch • SJB	• Go to **Pinpoint Test D** .
• The demand lamps are	• Fuse • Wiring, terminals	

inoperative	or connectors • SJB	• Go to **Pinpoint Test E** .
• An individual demand lamp is inoperative	• Wiring, terminals or connectors • Interior lamp	• Go to **Pinpoint Test F** .
• The illuminated entry is inoperative when using the remote keyless entry (RKE) transmitter	• RKE system • SJB	• Go to **Pinpoint Test G** .
• The battery saver does not deactivate after time-out	• Wiring, terminals or connectors • SJB	• Go to **Pinpoint Test H** .
• The puddle lamp(s) are inoperative	• Fuse • Wiring, terminals or connectors • Exterior mirror • SJB	• Go to **Pinpoint Test I** .
• The puddle lamps stay on continuously	• Wiring, terminals or connectors • SJB	• Go to **Pinpoint Test J** .
• The courtesy lamps are inoperative - from the instrument panel dimmer switch	• Wiring, terminals or connectors • Instrument panel dimmer switch • SJB	• Go to **Pinpoint Test K** .
• The courtesy lamps do not turn on with the liftgate open	• Wiring, terminals or connectors • Liftgate ajar switch • LTM • SJB	• Go to **Pinpoint Test L** .

Pinpoint Tests

Pinpoint Test A: The Courtesy Lamps Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Normal Operation

Power is supplied to the courtesy lamps through the smart junction box (SJB) fuse 9 (15A), and SJB fuse 25

(10A) for the demand lamps. When any door is opened, the ajar switch opens, signaling the SJB. The SJB monitors the ajar circuits, and based on the ajar status, the SJB supplies voltage to the courtesy lamps on circuit VLN33 (GY/VT). Ground is supplied through circuit GD133 (BK) for the courtesy lamps, and circuit GD126 (BK/WH) for the cargo lamp.

- DTC B2A35 (Interior Lighting Output Circuit Open) - is an on-demand DTC that sets when the SJB detects an open from the interior lighting circuit.
- DTC B2A36 (Interior Lighting Output Circuit Short to Ground) - is a continuous and on-demand DTC that sets when the SJB detects a short to ground from the interior lighting circuit.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- SJB

PINPOINT TEST A: THE COURTESY LAMPS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 CHECK THE SJB DTCs FROM BOTH THE CONTINUOUS AND THE ON-DEMAND SELF-TESTS

- Use the recorded results from the SJB continuous and on-demand self-test.
- **Are any SJB DTCs recorded?**

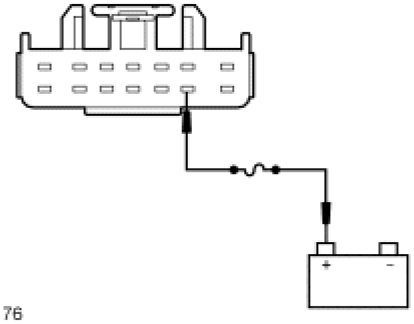
  YES : For DTC B2A35 or B2A36, go to A2 .

  For all other DTCs, REFER to DTC Charts in this service information.

  NO : Go to A3.

A2 CHECK CIRCUIT VLN33 (GY/VT) FOR AN OPEN

- Key in OFF position.
- Disconnect: SJB C2280a



N0056176

Fig. 1: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

NOTE: If the jumper wire fails, repair circuit VLN33 for a short to ground.

- Connect a fused (10A) jumper wire between the SJB C2280a-9, circuit VLN33 (GY/VT), harness side and battery positive.
- **Do the courtesy lamps illuminate?**

  YES : VERIFY the SJB fuse 9 (15A) is OK. If OK, go to A3 .

  NO : REPAIR the circuit. RUN the on-demand self-test (required to clear certain DTCs). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

A3 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: An Individual Courtesy Lamp Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Normal Operation

The smart junction box (SJB) provides voltage to the courtesy lamps on circuit VLN33 (GY/VT). The courtesy lamps are grounded through circuit GD133 (BK). The cargo lamp is also on the courtesy lamp circuit. Circuit VLN33 (GY/VT) provides voltage to the cargo lamp, and is grounded through circuit GD126 (BK/WH).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Interior lamp

PINPOINT TEST B: AN INDIVIDUAL COURTESY LAMP IS INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 CHECK THE INTERIOR LAMP

- Key in OFF position.
- Disconnect: Suspect Interior Lamp
- Open the driver door.
- Measure the voltage between the suspect interior lamp connector, harness side as follows:

Location	Connector-Pin/ Circuit	Connector-Pin/ Circuit
Overhead console	C930-2 VLN33 (GY/VT)	C930-1 GD133 (BK)
Rear interior lamp	C923-1 VLN33 (GY/VT)	C923-2 GD133 (BK)
Cargo lamp	C926-1 VLN33 (GY/VT)	C926-2 GD126 (BK/WH)

- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new interior lamp for the lamp in question. REFER to **Interior Lamp**. TEST the system for normal operation.

  NO : Go to B2.

B2 CHECK CIRCUIT VLN33 (GY/VT) FOR VOLTAGE

- Measure the voltage between the suspect interior lamp, harness side and ground as follows:

Location	Connector-Pin	Circuit
Overhead console	C930-2	VLN33 (GY/VT)
Rear interior lamp	C923-1	VLN33 (GY/VT)
Cargo lamp	C926-2	VLN33 (GY/VT)

- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new interior lamp for the lamp in question. REFER to **Interior Lamp**. TEST the system for normal operation.

NO : REPAIR circuit VLN33 (GY/VT) for the lamp in question. TEST the system for normal operation.

Pinpoint Test C: The Courtesy Lamps Stay On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Power Liftgate schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Remote Keyless Entry and Alarm schematic and connector information.

Normal Operation

When any door or the liftgate is opened, the ajar switch (or the liftgate/trunk module [LTM], if equipped) opens the circuit to the smart junction box (SJB). The SJB monitors the ajar circuits, and based on the ajar status, supplies voltage to the courtesy lamps on circuit VLN33 (GY/VT).

DTC Description	Fault Trigger Conditions
B1320 - Driver Door Ajar Circuit Open	An on-demand DTC that sets when the SJB detects an open from the LH front door ajar circuit.
B1328 - Passenger Door Ajar Circuit Open	An on-demand DTC that sets when the SJB detects an open from the RH front door ajar circuit.
B1336 - Door Ajar RR Circuit Open	An on-demand DTC that sets when the SJB detects an open from the RH rear door ajar circuit.
B1572 - Door Ajar LR Circuit Open	An on-demand DTC that sets when the SJB detects an open from the LH rear door ajar circuit.
B1688 - Lamp Dome Input Circuit Short To Ground	An on-demand DTC that sets when the SJB detects a short to ground from the instrument panel dimmer switch circuit.
B2077 - Liftgate Ajar Sw Circuit Failure	An on-demand DTC that sets when the SJB detects an open from the liftgate ajar circuit.
B2A35 - Interior Lighting Output Circuit Open	An on-demand DTC that sets when the SJB detects a short to voltage from the courtesy lamp output circuit.
B2718 - Liftgate/Decklid Ajar Output Short to Battery	An continuous and on-demand DTC that sets when the LTM detects a short to voltage from the liftgate ajar input circuit

	to the SJB.
B2721 - Liftgate/Decklid Ajar Output Short to Ground or Open	An continuous and on-demand DTC that sets when the LTM detects an open from the liftgate ajar input circuit to the SJB.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door ajar switch
- Liftgate ajar switch
- Instrument panel dimmer switch
- LTM
- SJB

PINPOINT TEST C: THE COURTESY LAMPS STAY ON CONTINUOUSLY

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

C1 CHECK THE SJB DTCs FROM BOTH THE CONTINUOUS AND THE ON-DEMAND SELF-TESTS

- Use the recorded results from the SJB continuous and the on-demand self-test.
- **Are any SJB DTCs recorded?**

  YES : For DTC B1320, B1328, B1336, or B1572, go to C2.

  For DTC B1688, go to C5.

  For DTC B2A35, go to C7.

  For DTC B2077 (manual liftgate), go to C8.

  For DTC B2077 (power liftgate), go to C12.

  NO : If equipped with a power liftgate, go to C11.

  If equipped with a manual liftgate, go to C14.

C2 CHECK THE DOOR AJAR GROUND CIRCUITS FOR AN OPEN

- Key in OFF position.
- Disconnect: Suspect Ajar Switch

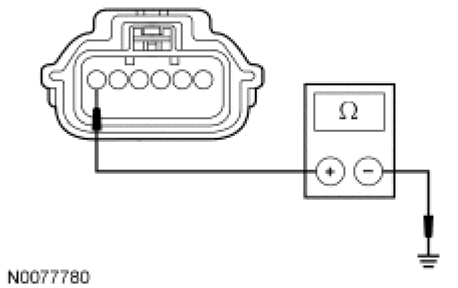


Fig. 2: Measuring Resistance Between Suspect Door Ajar Switch And Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the suspect ajar switch connector, harness side and ground as follows:

Location	Connector-Pin	Circuit
LF	C525-6	GD133 (BK)
RF	C603-6	GD140 (BK/GN)
LR	C704-6	GD126 (BK/WH)
RR	C804-6	GD145 (BK/BU)

- **Is the resistance less than 5 ohms?**

  YES : Go to C3.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

C3 CHECK THE DOOR AJAR SWITCH OPERATION

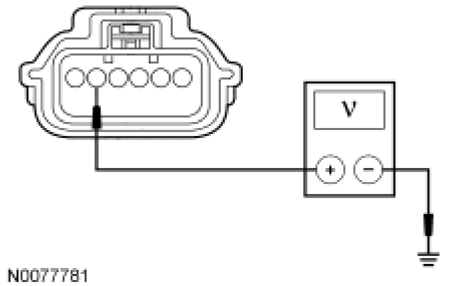

Fig. 3: Measuring Voltage Between Suspect Door Ajar Switch And Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the suspect door ajar switch, harness side and ground as follows:

Location	Connector-Pin	Circuit
LF	C525-5	CPL26 (GN/VT)
RF	C603-5	CPL31 (WH)
LR	C704-5	CPL36 (GN)
RR	C804-5	CPL39 (YE)

- **Is the voltage greater than 10 volts?**

  YES : INSTALL a new door latch for the switch in question. REFER to **HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS** article. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to C4.

C4 CHECK THE DOOR AJAR SWITCH CIRCUIT FOR AN OPEN

- Disconnect: SJB C2280c
- Measure the resistance between the suspect door ajar switch, harness side and the SJB, harness side as follows:

Location	SJB Connector-Pin	Suspect Door Ajar Switch Connector-Pin	Circuit
LF	C2280c-14	C525-5	CPL26 (GN/VT)
RF	C2280c-2	C603-5	CPL31 (WH)
LR	C2280c-3	C704-5	CPL36 (GN)
RR	C2280c-15	C804-5	CPL39 (YE)

- **Is the resistance less than 5 ohms?**

  YES : Go to C14.

  NO : REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.

C5 CHECK THE INSTRUMENT PANEL DIMMER SWITCH

- Key in OFF position.
- Disconnect: Instrument Panel Dimmer Switch C2298
- **Are the courtesy lamps still illuminated?**

  YES : Go to C6.

NO : INSTALL a new instrument panel dimmer switch. REFER to **INSTRUMENT CLUSTER AND PANEL ILLUMINATION** article. CLEAR the DTCs. REPEAT the self-test.

C6 CHECK CIRCUIT CLN28 (GN/BU) FOR A SHORT TO GROUND

- Disconnect: SJB C2280b

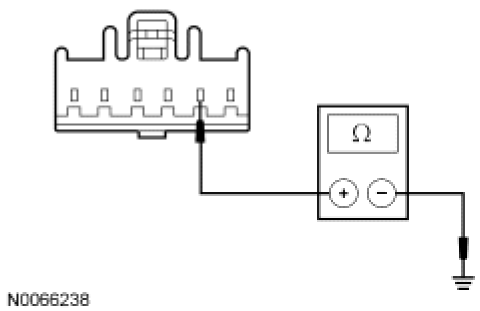

Fig. 4: Measuring Resistance Between Dimmer Switch C2298-2 Circuit CLN28 (GN/BU) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the instrument panel dimmer switch C2298-2 circuit CLN28 (GN/BU), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to C14.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C7 CHECK CIRCUIT VLN33 (GY/VT) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: SJB C2280a
- Key in ON position.
- Observe the courtesy lamps.
- **Are the courtesy lamps still illuminated?**

  YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to C14.

C8 CHECK CIRCUIT GD149 (BK/GY) FOR AN OPEN (MANUAL LIFTGATE)

- Key in OFF position.
- Disconnect: Liftgate Latch C479

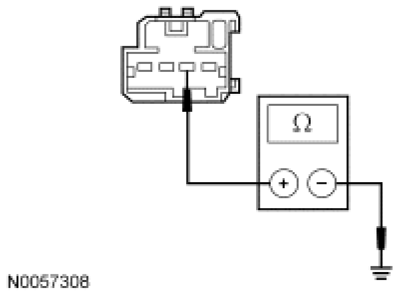

Fig. 5: Measuring Resistance Between Liftgate Latch C479-3, Circuit GD149 (BK/GY) & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the liftgate latch C479-3, circuit GD149 (BK/GY), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : Go to C9.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C9 CHECK THE LIFTGATE AJAR SWITCH OPERATION (MANUAL LIFTGATE)

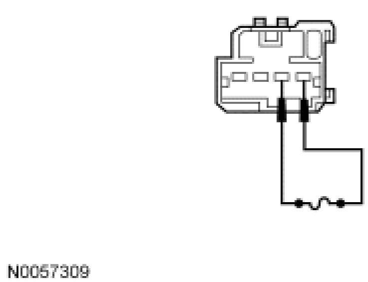

Fig. 6: Connecting Fused Jumper Wire
Courtesy of FORD MOTOR CO.

- Connect a (5A) jumper wire between the liftgate latch C479-4, circuit CPL60 (BN/YE), harness side and the liftgate latch C479-3, circuit GD149 (BK/GY), harness side.
- **Do the courtesy lamps turn off?**

  YES : REMOVE the jumper wire. INSTALL a new manual liftgate latch. REFER to **HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS** article. CLEAR the DTCs. REPEAT the self-test.

  NO : LEAVE the jumper wire connected. Go to C10.

C10 CHECK CIRCUIT CPL60 (BN/YE) FOR AN OPEN (MANUAL LIFTGATE)

- Disconnect: SJB C2280c

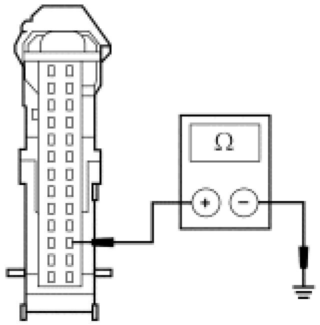

Fig. 7: Measuring Resistance Between SJB C2280C-16, Circuit CPL60 (BN/YE), Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the SJB C2280c-16, circuit CPL60 (BN/YE), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : REMOVE the jumper wire. Go to C14.

  NO : REMOVE the jumper wire. REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C11 CHECK THE LTM DTCs FROM BOTH THE CONTINUOUS AND THE ON-DEMAND SELF-TESTS

- Use the recorded results from the LTM continuous and the on-demand self-test.
- **Are any LTM DTCs recorded?**

  YES : For DTCs B2718 or B2721, go to C12.

  For all other DTCs, REFER to **MULTIFUNCTION ELECTRONIC MODULES** article.

  NO : Go to C14.

C12 CHECK THE LTM

- Key in OFF position.
- Disconnect: LTM C4174b

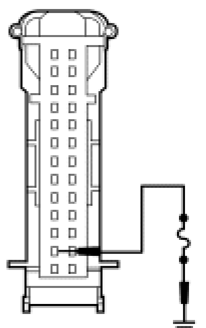

Fig. 8: Connecting Fused Jumper Wire
Courtesy of FORD MOTOR CO.

NOTE: If the fuse fails, repair the circuit for a short to voltage.

- Connect a fused (5A) jumper wire between the LTM C4174b-2, circuit CPL60 (BN/YE), harness side and ground.
- **Do the courtesy lamps turn off?**

  YES : REMOVE the jumper wire. Go to C15.

  NO : LEAVE the jumper wire connected. Go to C13.

C13 CHECK CIRCUIT CPL60 (BN/YE) FOR AN OPEN

- Disconnect: SJB C2280c

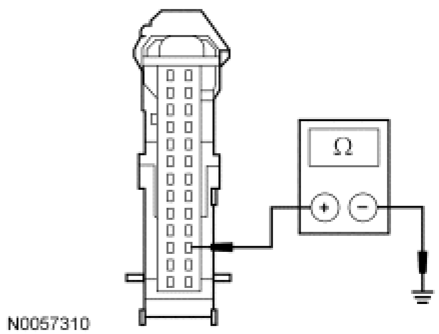

Fig. 9: Measuring Resistance Between SJB C2280C-16, Circuit CPL60 (BN/YE), Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the SJB C2280c-16, circuit CPL60 (BN/YE), harness side and ground.
- **Is the resistance less than 5 ohms?**

  YES : REMOVE the jumper wire. Go to C14.

  NO : REMOVE the jumper wire. REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

C14 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

C15 CHECK FOR CORRECT LTM OPERATION

- Disconnect all the LTM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the LTM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new LTM. REFER to **BODY CLOSURES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test D: The Courtesy Lamps Do Not Turn On With One Door Open

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Remote Keyless Entry and Alarm schematic and connector information.

Normal Operation

When any door is opened, the ajar switch opens the circuit to the smart junction box (SJB). The SJB monitors the ajar circuits, and based on the ajar status, supplies voltage to the courtesy lamps on circuit VLN33 (GY/VT).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door ajar switch
- SJB

PINPOINT TEST D: THE COURTESY LAMPS DO NOT TURN ON WITH ONE DOOR OPEN

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

D1 CHECK THE DOOR AJAR PIDs

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB DataLogger
- Check the SJB door ajar switch PIDs (D_DR_SW, P_DR_SW, LRDR_SW, and RRDR_SW) while opening and closing all the doors.
- **Do all the door ajar switch PID values agree with the door positions?**

YES : Go to D4.

NO : Go to D2.

D2 CHECK THE AJAR SWITCH OPERATION

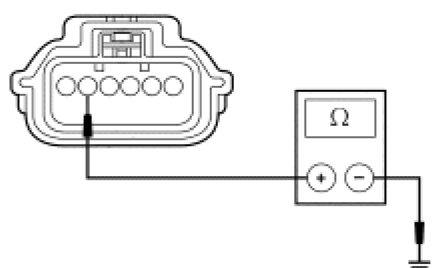
- Disconnect: Suspect Ajar Switch
- **Do the courtesy lamps illuminate?**

YES : INSTALL a new door latch for the ajar switch in question. REFER to **HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS** article. TEST the system for normal operation.

NO : Go to D3.

D3 CHECK THE AJAR SWITCH CIRCUIT FOR A SHORT TO GROUND

- Key in OFF position.
- Disconnect: SJB C2280c



N0077782

Fig. 10: Measuring Resistance Between Suspect Door Ajar Switch And Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the suspect ajar switch, harness side and ground as follows:

Location	Connector-Pin	Circuit
LF	C525-5	CPL26 (GN/VT)
RF	C603-5	CPL31 (WH)
LR	C704-5	CPL36 (GN)
RR	C804-5	CPL39 (YE)

- **Is the resistance greater than 10,000 ohms?**

YES : Go to D4.

NO : REPAIR the circuit in question. TEST the system for normal operation.

D4 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors

- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test E: The Demand Lamps Are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Normal Operation

The smart junction box (SJB) supplies voltage to the demand lamps on circuit CLN09 (YE/GN). The demand lamps are grounded through circuit GD133 (BK).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- SJB

PINPOINT TEST E: THE DEMAND LAMPS ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

E1 CHECK THE OPERATION OF THE COURTESY LAMPS

- Open the driver door.
- **Do the courtesy lamps illuminate?**

  YES : Go to E2.

  NO : Go to **Pinpoint Test A** .

E2 CHECK CIRCUIT CLN09 (YE/GN) FOR AN OPEN

- Key in OFF position.
- Disconnect: SJB C2280d

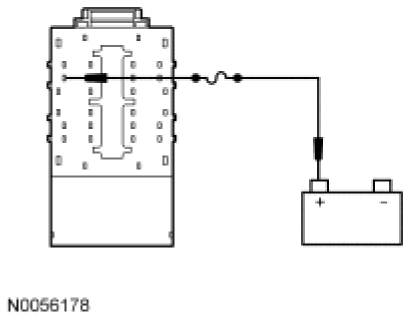


Fig. 11: Checking Circuit For Open
Courtesy of FORD MOTOR CO.

NOTE: If the fuse fails, repair circuit CLN09 (YE/GN) for a short to ground.

- Connect a fused (10A) jumper wire between the SJB C2280d-21, circuit CLN09 (YE/GN), harness side and battery positive.
- **Do the demand lamps illuminate when switched on?**

  YES : VERIFY the SJB fuse 25 (10A) is OK. If OK, go to E3.

  NO : REPAIR the circuit. TEST the system for normal operation.

E3 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test F: An Individual Demand Lamp Is Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Normal Operation

The smart junction box (SJB) supplies voltage to the demand lamps on circuit CLN09 (YE/GN). The demand lamps are grounded through circuit GD133 (BK).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Interior lamp

PINPOINT TEST F: AN INDIVIDUAL DEMAND LAMP IS INOPERATIVE

> **CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

F1 CHECK CIRCUIT CLN09 (YE/GN) FOR AN OPEN

- Key in OFF position.
- Disconnect: Suspect Demand Lamp
- Key in ON position.
- Measure the voltage between the suspect demand lamp, harness side and ground as follows:

Location	Connector-Pin	Circuit
RH vanity mirror lamp	C906-1	CLN09 (YE/GN)
LH vanity mirror lamp	C907-1	CLN09 (YE/GN)
Overhead console	C930-3	CLN09 (YE/GN)
Rear interior lamp	C923-3	CLN09 (YE/GN)

- **Is the voltage greater than 10 volts?**

  YES : Go to F2.

  NO : REPAIR the circuit. TEST the system for normal operation.

F2 CHECK THE GROUND CIRCUIT FOR AN OPEN

- Measure the resistance between the suspect demand lamp, harness side and ground as follows:

Location	Connector-Pin	Circuit
RH vanity mirror	C906-2	GD133 (BK)

lamp		
LH vanity mirror lamp	C907-2	GD133 (BK)
Overhead console	C930-1	GD133 (BK)
Rear interior lamp	C923-2	GD133 (BK)

- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new interior lamp for the lamp in question. REFER to **Interior Lamp**. TEST the system for normal operation.

  NO : REPAIR circuit GD133 (BK). TEST the system for normal operation.

Pinpoint Test G: The Illuminated Entry Is Inoperative When Using The Remote Keyless Entry (RKE) Transmitter

Normal Operation

The illuminated entry provides interior lighting whenever the smart junction box (SJB) receives a doors unlock request from the remote keyless entry (RKE) transmitter. The SJB provides voltage on circuit VLN33 (GY/VT) for the courtesy lamps.

This pinpoint test is intended to diagnose the following:

- RKE system
- SJB

PINPOINT TEST G: THE ILLUMINATED ENTRY IS INOPERATIVE WHEN USING THE REMOTE KEYLESS ENTRY (RKE) TRANSMITTER

G1 CHECK FOR CORRECT RKE OPERATION

- Using the RKE transmitter, lock and unlock the doors.
- **Do the doors lock and unlock?**

  YES : Go to G2.

  NO : REFER to **HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS** article to continue diagnosis of the RKE system.

G2 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion

    - damaged pins
    - pushed-out pins
  - Connect all the SJB connectors and make sure they seat correctly.
  - Operate the system and verify the concern is still present.
  - **Is the concern still present?**

    YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

    NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test H: The Battery Saver Does Not Deactivate After Time-Out

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Normal Operation

The smart junction box (SJB) provides a battery saver function. The battery saver function provides automatic shutoff of the interior lamps (courtesy lamps and demand lamps) after a predetermined time has elapsed in order to save battery power.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- SJB

PINPOINT TEST H: THE BATTERY SAVER DOES NOT DEACTIVATE AFTER TIME-OUT

H1 CHECK THE SJB IGNITION SWITCH PID

- Key in ON position.
- Enter the following diagnostic mode on the diagnostic tool: SJB DataLogger
- Monitor the SJB ignition switch PIDs (IGN_A_ECU, IGN_O_ECU, IGN_R_ECU and IGN_S_ECU) while rotating the ignition switch through all positions.
- **Do the ignition switch PIDs agree with the ignition switch positions?**

  YES : Go to H2.

  NO : REFER to **STEERING COLUMN SWITCHES** article.

H2 CHECK CIRCUIT CLN09 (YE/GN) FOR A SHORT TO VOLTAGE

- Key in OFF position.
- Disconnect: SJB C2280d
- Key in ON position.
- Operate the demand lamps.
- **Do the demand lamps illuminate?**

YES : REPAIR the circuit. TEST the system for normal operation.

NO : Go to H3.

H3 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test I: The Puddle Lamp(s) are Inoperative

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Normal Operation

The smart junction box (SJB) provides voltage to the puddle lamps through circuit CLN25 (VT). The puddle lamps have separate ground circuits. The LH exterior mirror is grounded through circuit GD133 (BK) and the RH exterior mirror is grounded through circuit GD140 (BK/GN).

- DTC B2A39 (Puddle Lamp Output Circuit Open) - is an on-demand DTC that sets when the SJB detects an open on the puddle lamp output circuit.
- DTC B2A3A (Puddle Lamp Output Circuit Short to Ground) - is a continuous and on-demand DTC that sets when the SJB detects a short to ground on the puddle lamp output circuit. This DTC also sets as a result when the SJB fuse 10 (15A) has failed or is removed.

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Exterior mirror
- SJB

PINPOINT TEST I: THE PUDDLE LAMP(S) ARE INOPERATIVE

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

I1 CHECK THE PUDDLE LAMP OPERATION

- Open any door and observe the puddle lamps.
- **Are both the puddle lamps inoperative?**

  YES : Go to I2.

  NO : Go to I3.

I2 CHECK CIRCUIT CLN25 (VT) FOR AN OPEN

- Key in OFF position.
- Disconnect: SJB C2280c

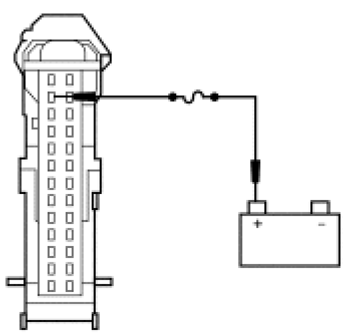

Fig. 12: Connecting Fused (10A) Jumper Wire Between SJB C2280C-12, Circuit CLN25 (VT) & Battery Positive
Courtesy of FORD MOTOR CO.

NOTE: If the fuse fails, repair circuit CLN25 (VT) for a short to ground.

- Connect a fused (10A) jumper wire between the SJB C2280c-12, circuit CLN25 (VT), harness side and battery positive.
- **Do the puddle lamps illuminate?**

  YES : REMOVE the jumper wire. Go to I5.

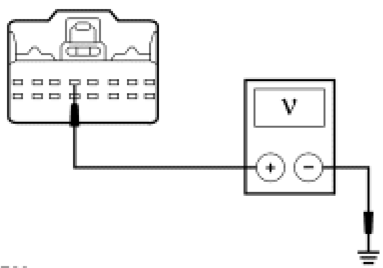
  NO : REMOVE the jumper wire. REPAIR the circuit. RUN the on-demand self-test (required to clear certain DTCs). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

I3 CHECK CIRCUIT CLN25 (VT) FOR AN OPEN

- Disconnect: Suspect Exterior Mirror

NOTE: The courtesy lamps must be active during this test.

- Open any door.



N0077783

Fig. 13: Measuring Voltage Between Suspect Exterior Mirror Connector, Harness Side And Ground
Courtesy of FORD MOTOR CO.

- Measure the voltage between the suspect exterior mirror connector, harness side and ground as follows:

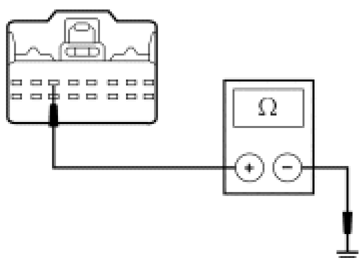
Location	Connector-Pin	Circuit
RH exterior mirror	C622-5	CLN25 (VT)
LH exterior mirror	C516-5	CLN25 (VT)

- **Is the voltage greater than 10 volts?**

  YES : Go to I4.

  NO : REPAIR the circuit. TEST the system for normal operation.

I4 CHECK THE GROUND CIRCUIT FOR AN OPEN



N0077784

Fig. 14: Measuring Resistance Between Suspect Exterior Mirror Connector, Harness Side And Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the suspect exterior mirror connector, harness side and ground as follows:

Location	Connector-Pin	Circuit
RH exterior mirror	C622-6	GD140 (BK/GN)
LH exterior mirror	C516-6	GD133 (BK)

- **Is the resistance less than 5 ohms?**

  YES : INSTALL a new exterior mirror in question. REFER to **REAR VIEW MIRRORS** article. TEST the system for normal operation.

  NO : REPAIR the circuit in question. TEST the system for normal operation.

I5 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. RUN the on-demand self-test (required to clear certain DTCs). CORRECT any unresolved DTCs. CLEAR all DTCs. TEST the system for normal operation.

Pinpoint Test J: The Puddle Lamps Stay On Continuously

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Normal Operation

The smart junction box (SJB) provides voltage to the puddle lamps through circuit CLN25 (VT). The puddle lamps have separate ground circuits. The LH exterior mirror is grounded through circuit GD133 (BK) and the RH exterior mirror is grounded through circuit GD140 (BK/GN).

- DTC B2A39 (Puddle Lamp Output Circuit Open) - is an on-demand DTC that sets when the SJB detects a short to voltage on the puddle lamp output circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- SJB

PINPOINT TEST J: THE PUDDLE LAMPS STAY ON CONTINUOUSLY

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

J1 CHECK CIRCUIT CLN25 (VT) FOR A SHORT TO VOLTAGE

- Disconnect: SJB C2280c
- **Do the puddle lamps continue to illuminate?**

  YES : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

  NO : Go to J2.

J2 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test K: The Courtesy Lamps Are Inoperative From The Instrument Panel Dimmer Switch

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Interior Lamps schematic and connector information.

Normal Operation

The smart junction box (SJB) monitors the instrument panel dimmer switch status on circuit CLN28 (GN/BU) to determine if the courtesy lamps are requested. Based on the instrument panel dimmer switch status, the SJB supplies voltage to the courtesy lamps through circuit VLN33 (GY/VT).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Instrument panel dimmer switch
- SJB

PINPOINT TEST K: THE COURTESY LAMPS ARE INOPERATIVE FROM THE INSTRUMENT PANEL DIMMER SWITCH

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

K1 CHECK THE DIMMABLE BACKLIGHTING DTCs

- Key in ON position.
- Use the recorded results from the SJB continuous and on-demand self-test.
- **Are any DTCs recorded?**

  YES : REFER to **MULTIFUNCTION ELECTRONIC MODULES** article.

  NO : Go to K2.

K2 CHECK THE INSTRUMENT PANEL DIMMER SWITCH

- Key in OFF position.
- Disconnect: Instrument Panel Dimmer Switch C2298

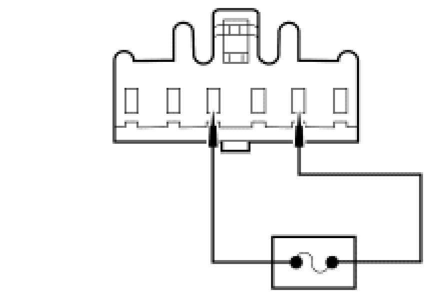


Fig. 15: Checking Dimmer Control Switch
Courtesy of FORD MOTOR CO.

- Connect a fused (5A) jumper wire between the instrument panel dimmer switch C2298-2, circuit CLN28 (GN/BU), harness side and the instrument panel dimmer switch C2298-4, circuit CLN27 (WH/BN), harness side.
- **Do the courtesy lamps illuminate?**

  YES : REMOVE the jumper wire. INSTALL a new instrument panel dimmer switch. REFER to **INSTRUMENT CLUSTER AND PANEL ILLUMINATION** article. TEST the system for normal operation.

  NO : REMOVE the jumper wire. Go to K3.

K3 CHECK CIRCUIT CLN28 (GN/BU) FOR AN OPEN

- Disconnect: SJB C2280b

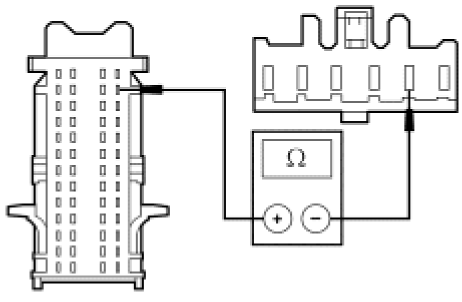

Fig. 16: Measuring Resistance Between SJB C2280B-51, Circuit CLN28 (GN/BU) & Dimmer Switch C2298-2
Courtesy of FORD MOTOR CO.

- Measure the resistance between the SJB C2280b-51, circuit CLN28 (GN/BU), harness side and the instrument panel dimmer switch C2298-2, circuit CLN28 (GN/BU), harness side.
- **Is the resistance less than 5 ohms?**

  YES : Go to K4.

  NO : REPAIR the circuit. TEST the system for normal operation.

K4 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test L: The Courtesy Lamps Do Not Turn On With the Liftgate Open

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Power Liftgate schematic and connector information.

Refer to appropriate SYSTEM WIRING DIAGRAMS article for Remote Keyless Entry and Alarm schematic and connector information.

Normal Operation

When the liftgate is opened, the ajar switch (or liftgate/trunk module (LTM), if equipped) opens the circuit to the smart junction box (SJB). The SJB monitors the ajar circuit, and based on the ajar status, supplies voltage to the courtesy lamps on circuit VLN33 (GY/VT).

- DTC B2721 (Liftgate/Decklid Ajar Output Short to Ground or Open) - is a continuous and on-demand DTC that sets when the LTM detects a short to ground from the SJB, or liftgate ajar circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Liftgate ajar switch
- LTM
- SJB

PINPOINT TEST L: THE COURTESY LAMPS DO NOT TURN ON WITH THE LIFTGATE OPEN

CAUTION: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

L1 CHECK THE LTM OR THE LIFTGATE LATCH

- Key in OFF position.
- Disconnect: LTM C4174b or Liftgate Latch C479
- **Do the courtesy lamps illuminate?**

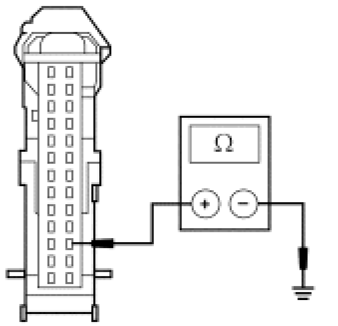
  YES : If equipped with a power liftgate, go to L4.

  If equipped with a manual liftgate, INSTALL a new manual liftgate latch. REFER to **HANDLES, LOCKS, LATCHES AND ENTRY SYSTEMS** article. TEST the system for normal operation.

  NO : Go to L2.

L2 CHECK CIRCUIT CPL60 (BN/YE) FOR A SHORT TO GROUND

- Disconnect: SJB C2280c



N0057310

Fig. 17: Measuring Resistance Between SJB C2280C-16, Circuit CPL60 (BN/YE), Harness Side & Ground
Courtesy of FORD MOTOR CO.

- Measure the resistance between the SJB C2280c-16, circuit CPL60 (BN/YE), harness side and ground.
- **Is the resistance greater than 10,000 ohms?**

  YES : Go to L3.

  NO : REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

L3 CHECK FOR CORRECT SJB OPERATION

- Disconnect all the SJB connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the SJB connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new SJB. REFER to **MULTIFUNCTION ELECTRONIC MODULES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

L4 CHECK FOR CORRECT LTM OPERATION

- Disconnect all the LTM connectors.
- Check for:
  - corrosion
  - damaged pins
  - pushed-out pins
- Connect all the LTM connectors and make sure they seat correctly.
- Operate the system and verify the concern is still present.
- **Is the concern still present?**

  YES : INSTALL a new LTM. REFER to **BODY CLOSURES** article. TEST the system for normal operation.

  NO : The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

REMOVAL AND INSTALLATION

INTERIOR LAMP

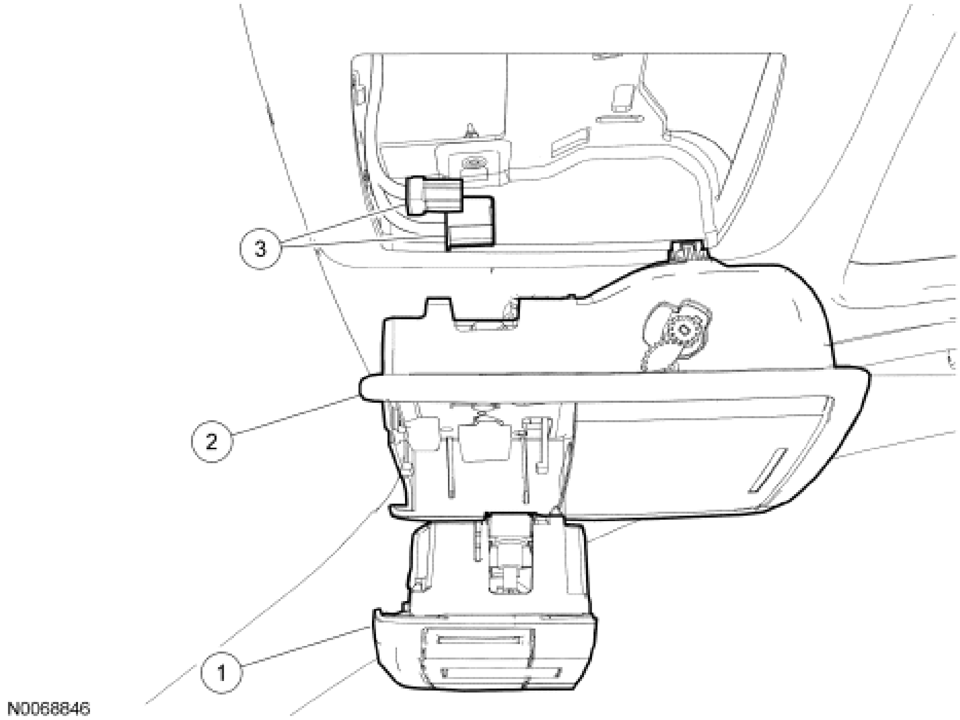


Fig. 18: Identifying Front Interior Lamp With Overhead Console
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	13776	Lamp assembly
2	54519A70	Overhead console
3	-	Overhead console electrical connectors (part of 17K745)

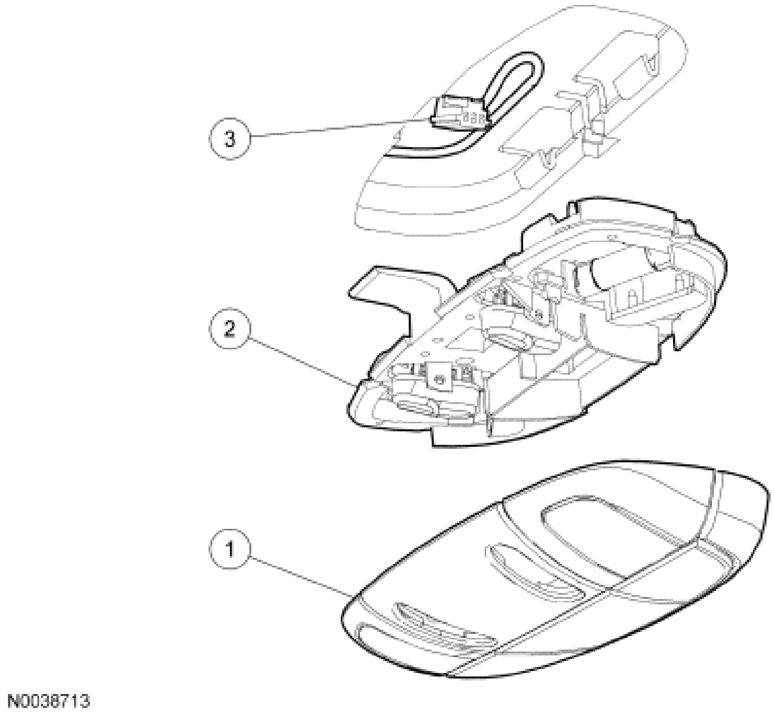

Fig. 19: Exploded View Of Rear Interior Lamp
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	13783	Interior lamp lens
2	13776	Interior lamp
3	-	Interior lamp electrical connector (part of 14334)

REMOVAL AND INSTALLATION

Front

NOTE: Do not pull down on the front of the overhead console.

1. Pull down on the rear of the overhead console to remove the overhead console from the retaining clips.
   - Disconnect the electrical connectors.
2. Release the 4 retaining clips and remove the lamp assembly from the overhead console.

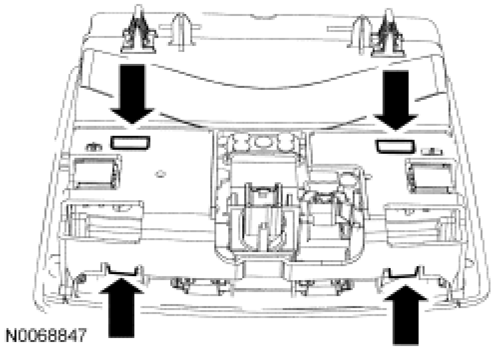

Fig. 20: Locating Retaining Clips On Lamp Assembly From Overhead Console
Courtesy of FORD MOTOR CO.

3. Release the 6 retaining clips and remove the lens from the lamp assembly.

NOTE: The bulbs can be pushed out from the backside of the lamp assembly.

- Replace the bulb(s) as necessary.

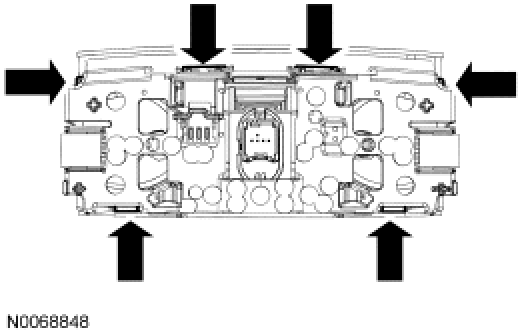

Fig. 21: Locating Retaining Clips On Lens From Lamp Assembly
Courtesy of FORD MOTOR CO.

REAR

4. Remove the interior lamp lens.

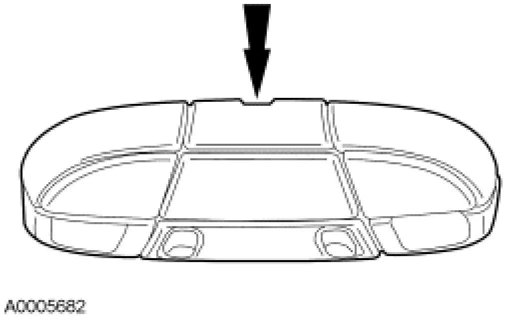

Fig. 22: Identifying Rear Interior Lamp Lens
Courtesy of FORD MOTOR CO.

5. Release the 2 retaining clips (through the access holes) and remove the interior lamp.
   - Disconnect the electrical connector.

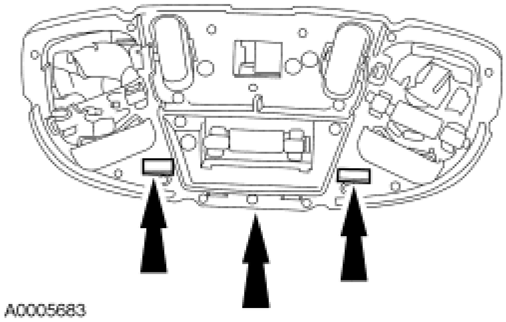

Fig. 23: Locating Electrical Connector Retaining Clips
Courtesy of FORD MOTOR CO.

Any interior lamps

6. To install, reverse the removal procedure.

1. For additional information, refer to the appropriate procedure.

A-PILLAR TRIM PANEL

REMOVAL

1. Position the door opening weatherstrip aside.

CAUTION: The LH and RH A-pillar trim panels are attached to the A-pillar with a safety tether. During a side air curtain deployment, the A-pillar trim panel tether helps prevent the trim panel from striking the occupant. The tether must be detached from the A-pillar trim panel before the A-pillar trim panel can be removed. Failure to detach the tether will result in damage to the tether or the A-pillar trim panel.

2. Gently pull the upper A-pillar trim panel toward the center of the vehicle to release the A-pillar trim panel retaining clips.

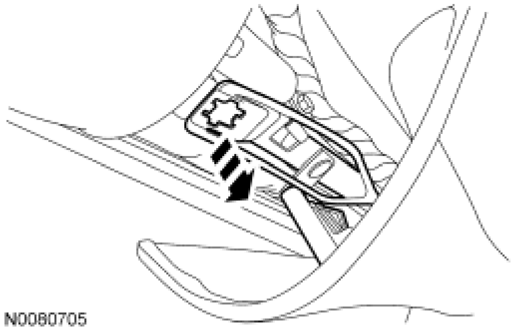

Fig. 2: Pulling A-pillar Trim Panel
Courtesy of FORD MOTOR CO.

NOTE: The A-pillar trim panel tether is removed from the A-pillar for clarity.

3. Remove the A-pillar trim panel tether from the A-pillar trim panel.
   - Carefully route the A-pillar trim panel tether end through the hole in the A-pillar trim panel.

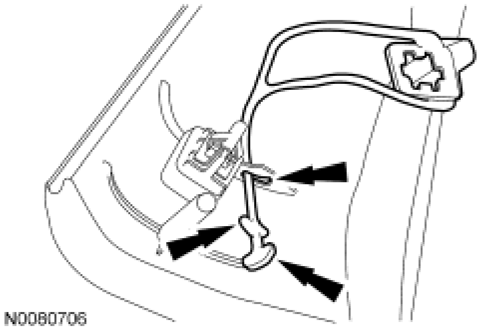

Fig. 3: Identifying A-pillar Trim Panel Tether
Courtesy of FORD MOTOR CO.

4. Remove the A-pillar trim panel.

INSTALLATION

1. Install the lower A-pillar trim panel in the instrument panel.

WARNING: A new A-pillar trim panel tether must be installed if the tether is damaged or does not fasten correctly. During a side air curtain deployment the A-pillar trim panel tether helps prevent the trim from striking the occupant. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

2. Carefully route the A-pillar trim panel tether end through the hole in the A-pillar trim panel.
3. Install the A-pillar trim panel onto the A-pillar.
4. Install the door opening weatherstrip.

B-PILLAR TRIM PANEL

REMOVAL AND INSTALLATION

1. Position the front seats in the full forward position.

NOTE: Inspect the safety belt D-ring cover for damage. If the safety belt D-ring cover does not remain in place, install a new cover.

2. Remove the safety belt D-ring cover and remove the safety belt bolt.
    - To install, tighten to 54 N.m (40 lb-ft).

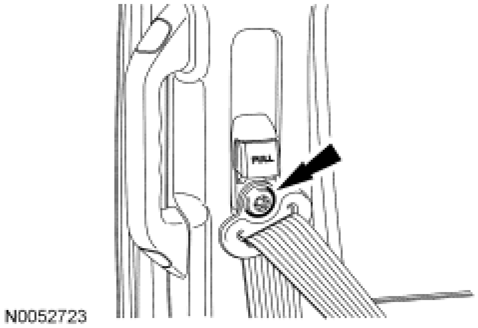

Fig. 4: Locating Safety Belt Bolt
Courtesy of FORD MOTOR CO.

3. Remove the front door scuff plate trim panel.
4. Remove the rear door scuff plate trim panel.
5. Remove the lower B-pillar trim panel.
6. Position the front and rear door weatherstrips aside.
7. Remove the upper B-pillar trim panel assist handle, if equipped.
    - Remove the bolt covers.
    - Remove the bolts.
        - To install, tighten to 9 N.m (80 lb-in).

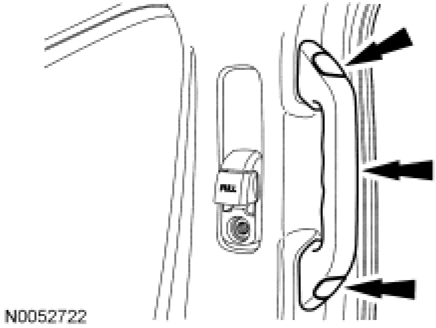

Fig. 5: Identifying Upper B-Pillar Trim Panel Assist Handle & Bolt Covers
Courtesy of FORD MOTOR CO.

8. Remove the B-pillar trim panel.
    - Remove the screw cover.
    - Remove the screw.
        - To install, tighten to 9 N.m (80 lb-in).
9. To install, reverse the removal procedure.

C-PILLAR TRIM PANEL

REMOVAL AND INSTALLATION

NOTE: Inspect the safety belt D-ring cover for damage. If the safety belt D-ring cover does not remain in place, install a new cover.

1. Remove the safety belt D-ring cover and remove the safety belt bolt.
   - To install, tighten to 54 N.m (40 lb-ft).
2. Remove the screw cover.
3. Remove the screw.
   - To install, tighten to 9 N.m (80 lb-in).
4. Position the quarter trim panel aside to allow C-pillar trim panel removal.
5. Remove the C-pillar trim panel.
   - Pull outward and downward to remove the panel.
6. To install, reverse the removal procedure.

D-PILLAR TRIM PANEL

1. Remove the quarter trim panel. For additional information, refer to **Quarter Trim Panel**.
2. Remove the D-pillar trim panel.
   - Disengage the trim panel from the retainers.
   - Disconnect the speaker wire connector from the trim panel, if equipped.

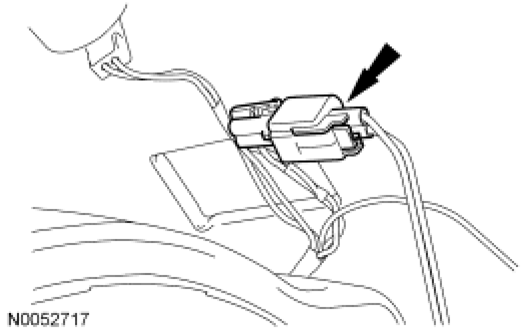

Fig. 6: Identifying Speaker Wire Connector
Courtesy of FORD MOTOR CO.

3. To install, reverse the removal procedure.

QUARTER TRIM PANEL

LH side with power liftgate

1. Remove the cover and the switch from the LH quarter trim panel.

- Disconnect the electrical connector.

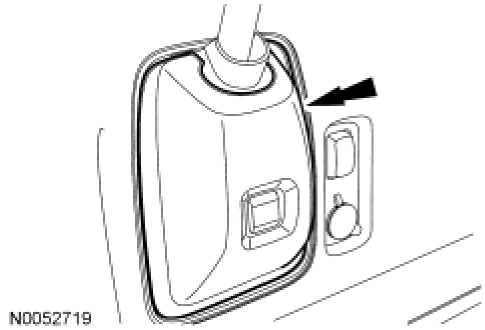

Fig. 7: Identifying LH Quarter Trim Panel
Courtesy of FORD MOTOR CO.

2. Remove the power liftgate rod-to-liftgate cover and nut.
   - To install, tighten to 11 N.m (8 lb-ft).

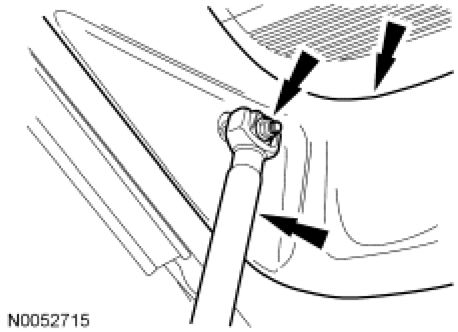

Fig. 8: Identifying Strut From Liftgate
Courtesy of FORD MOTOR CO.

All vehicles

3. Remove the rear cargo load area.
   - Remove the foam blocks from the spare tire well.

NOTE: Inspect the safety belt lower anchor bolt cover for damage. If the safety belt lower anchor bolt cover does not remain in place, install a new cover.

4. Remove the safety belt lower anchor bolt cover and remove the safety belt lower anchor bolt.
   - To install, tighten to 54 N.m (40 lb-ft).

NOTE: Make sure the pushpin retainers are removed with the quarter trim panel.

5. Remove the RH or LH quarter trim panel.

- Disconnect the electrical connectors, if equipped.

6. To install, reverse the removal procedure.

DOOR TRIM PANEL - FRONT

NOTE: **MKX shown, Edge similar.**

NOTE: **RH door shown, LH door similar.**

Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Front door handle bezel screw cover
2	W712934	Front door handle bezel screw
3	22620 RH/ 22621 LH	Front door handle bezel
4	22670	Front door window control switch bezel screw cover (MKX only)
5	W503904	Front door window control switch bezel screw
6	14524 RH/ 14525 LH	Front door window control switch bezel
7	17D720 RH/ 17D721 LH	Front door trim sail panel
8	W708412	Front door trim panel screw (6 required)

9	23942 RH/ 23943 LH	Front door trim panel

REMOVAL AND INSTALLATION

All vehicles

1. Remove the front door handle bezel.
   - Remove the screw cover.
   - Remove the screw.
   - Remove the front door handle bezel.
     - Disconnect the electrical connectors, if equipped.

   MKX only

2. Remove the screw cover.

   All vehicles

3. Remove the screw.
4. Remove the 6 front door trim panel screws.
5. Disengage the bottom of the door trim panel from the door.
   - Pull outward to disengage the push nuts from the retainers.
6. Lift the top of the door trim panel edge upward and out of the beltline molding.
7. Pull the lock rod through the lock rod grommet.
8. Remove the front door trim panel.
   - Disconnect the electrical connectors.
9. To install, reverse the removal procedure.

DOOR TRIM PANEL - REAR

NOTE: MKX shown, Edge similar.

NOTE: RH door shown, LH door similar.

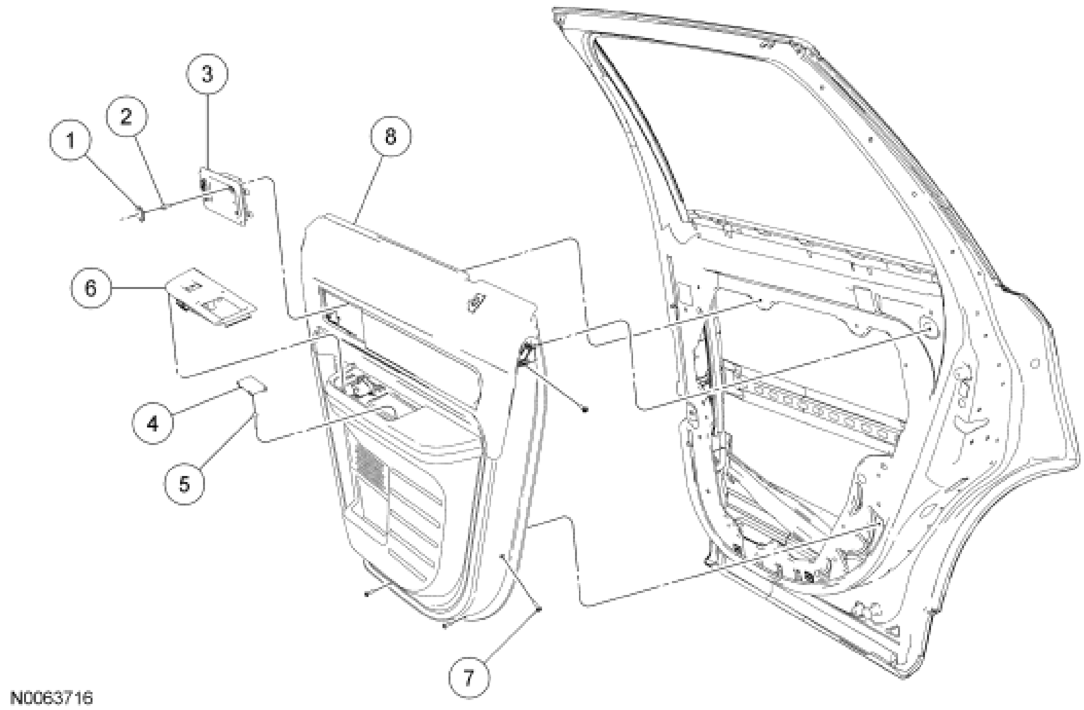

Fig. 10: Exploded View Of Rear Door Trim Panel
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	-	Rear door handle bezel screw cover
2	W712934	Rear door handle bezel screw
3	22620 RH/ 22621 LH	Rear door handle bezel
4	22670	Rear door trim pull handle cup screw cover (MKX only)
5	W503904	Rear door trim pull handle cup screw
6	14524 RH/ 14525 LH	Rear door trim window control switch bezel
7	W708412	Rear door trim panel screw (6 required)
8	27406 RH/ 27407 LH	Rear door trim panel

REMOVAL AND INSTALLATION

All vehicles

1. Remove the rear door handle bezel.
    - Remove the screw cover.
    - Remove the screw.
    - Remove the rear door handle bezel.
        - Disconnect the electrical connector, if equipped.

MKX only

2. Remove the screw cover.

All vehicles

3. Remove the screw.
4. Remove the 6 trim panel screws.
5. Disengage the bottom of the door trim panel from the door.
    - Pull outward to disengage the push nuts from the retainers.
6. Lift the top of the door trim panel edge upward and out of the beltline molding.
7. Pull the lock rod through the lock rod grommet.
8. Remove the rear door trim panel.
    - Disconnect the electrical connectors.
9. To install, reverse the removal procedure.

LIFTGATE TRIM PANEL

NOTE: **Non-powered liftgate shown, powered liftgate similar.**

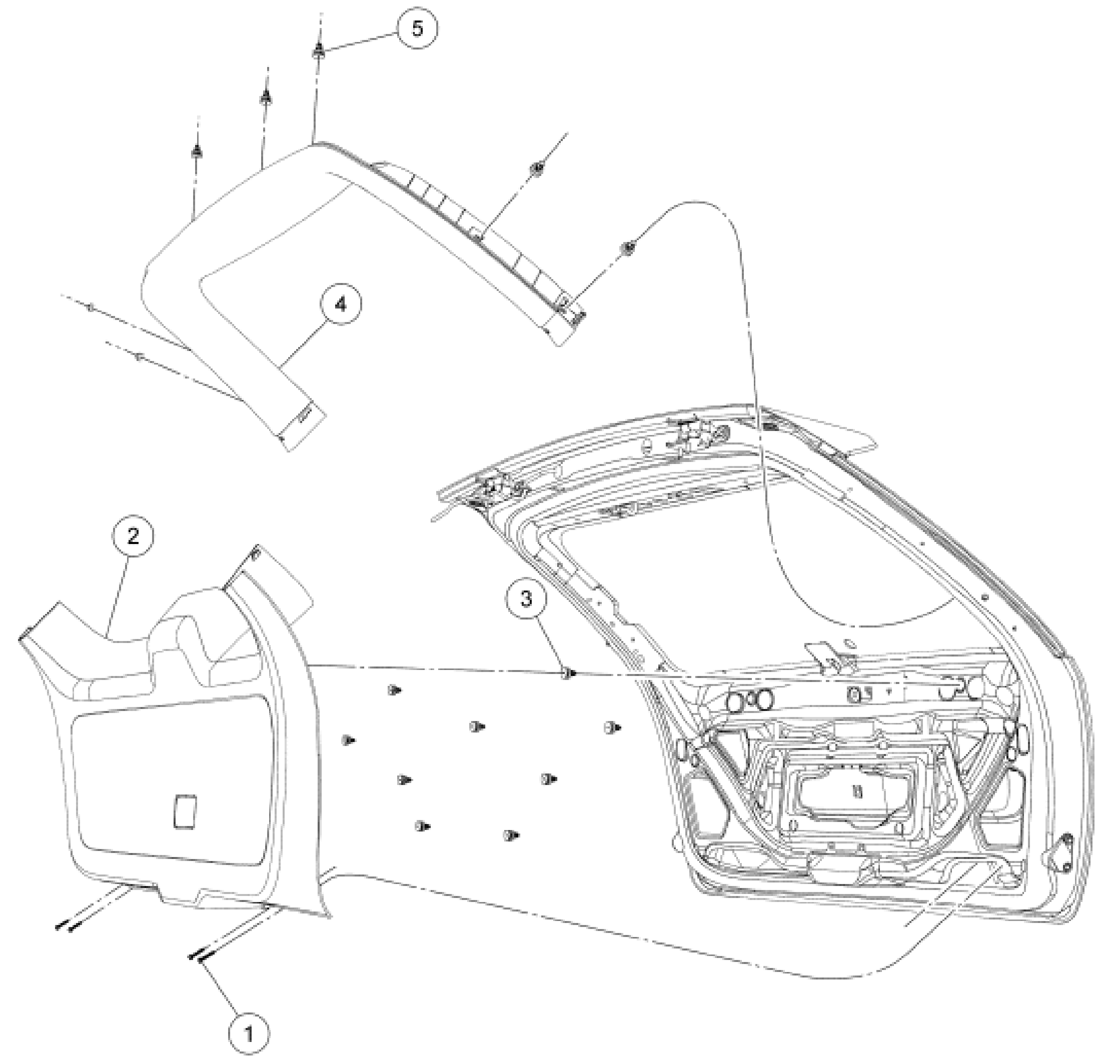

Fig. 11: Identifying Liftgate Trim Panel
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W711043	Liftgate lower trim panel screw (4 required)
2	46404	Liftgate lower trim panel
3	W711043	Liftgate lower trim panel retainer (11 required)
4	42410	Liftgate upper trim panel
5	W711043	Liftgate upper trim panel retainer (7 required)

1. Remove the power liftgate rod-to-liftgate cover and nut, if equipped.

- To install, tighten to 11 N.m (8 lb-ft).

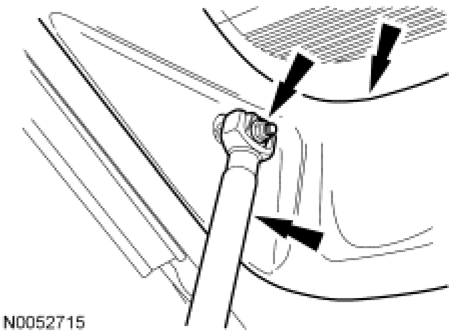

Fig. 12: Identifying Strut From Liftgate
Courtesy of FORD MOTOR CO.

NOTE: The back of the liftgate trim panel is shown indicating the location of the liftgate trim panel retainers.

2. Remove the liftgate lower trim panel.
    - Remove the 4 liftgate lower trim panel screws.
    - Pull outward on the liftgate lower trim panel to release the liftgate lower trim panel retainers.

Fig. 13: Identifying Liftgate Lower Trim Panel Retainers
Courtesy of FORD MOTOR CO.

3. Remove the liftgate upper trim panel.
4. To install, reverse the removal procedure.

POWER POINT

Special Tools

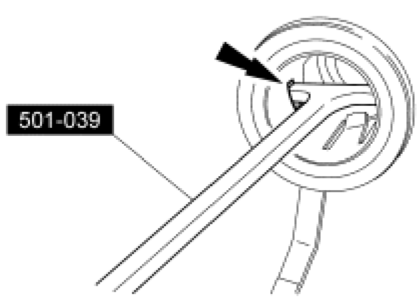
Illustration	Tool Name	Tool Number
	Remover, Power Point Socket	501-039 or equivalent

 ST3024-A		

REMOVAL

NOTE: Power point cover may differ depending on location.

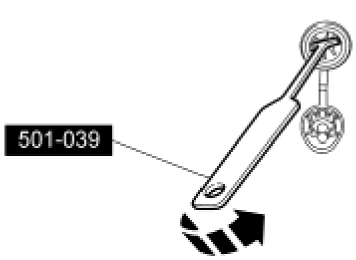
1. Open the power point cover.
2. Install the Power Point Socket Remover in one of the power point socket slots.



N0061767

Fig. 14: Installing Special Tool In Power Point Socket Slot
Courtesy of FORD MOTOR CO.

3. Position the Power Point Socket Remover so that it engages in the adjacent slot.



N0061768

Fig. 15: Positioning Special Tool To Engage In Adjacent Slot
Courtesy of FORD MOTOR CO.

4. Using the Power Point Socket Remover, pull the power point socket out of the retainer.

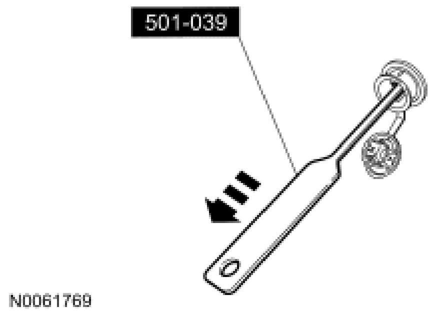


Fig. 16: Pulling Power Point Socket Out Of Retainer
Courtesy of FORD MOTOR CO.

5. Disconnect the electrical connector.

INSTALLATION

1. Connect the electrical connector.
2. Slide the power point socket into the retainer.

HEADLINER

NOTE: **Headliner with roof opening panel shown, headliner without roof opening panel similar.**

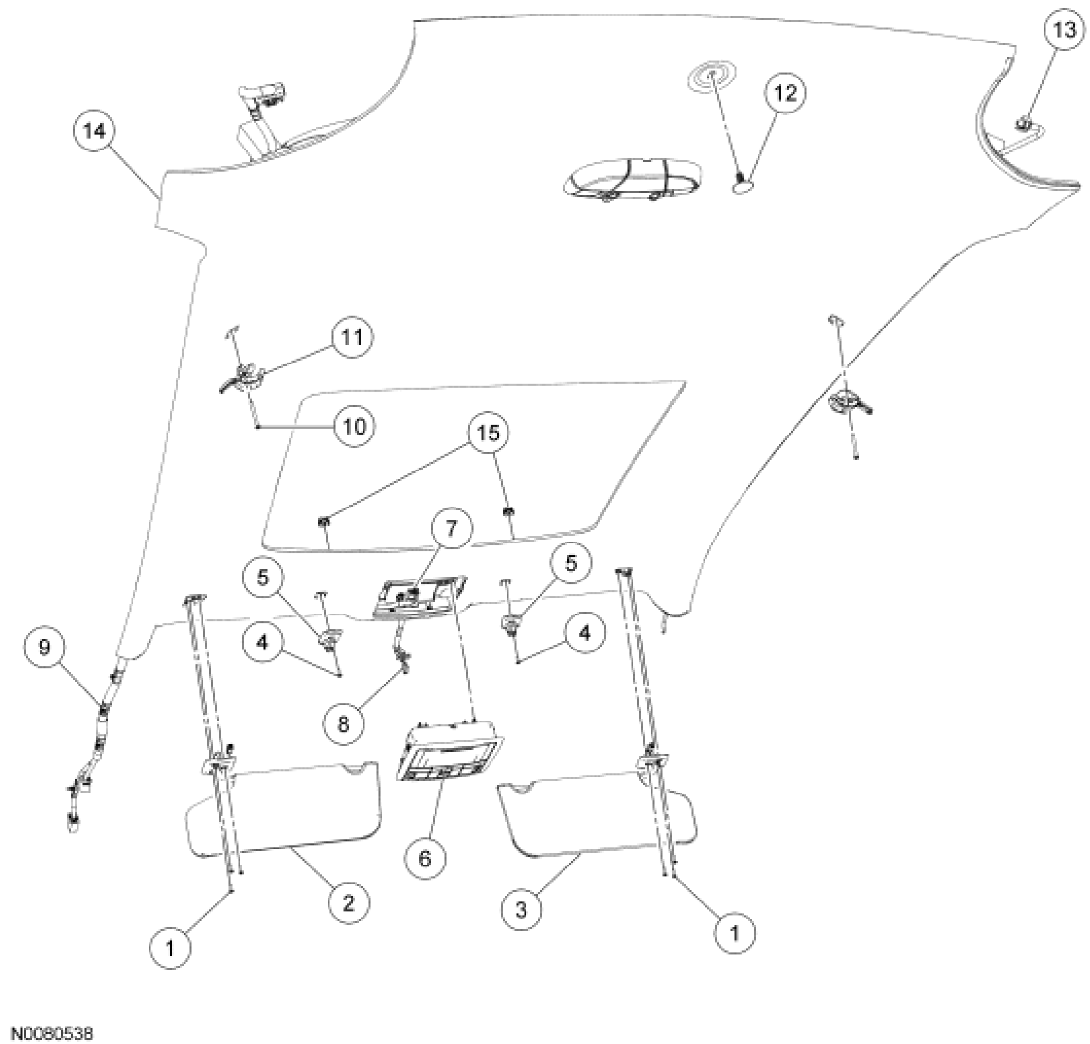

Fig. 17: Identifying Headliner With Roof Opening Panel
Courtesy of FORD MOTOR CO.

Item	Part Number	Description
1	W504242	Sun visor screws (6 required)
2	04101	LH sun visor
3	04100	RH sun visor
4	W504242	Sun visor arm clip screws (2 required)
5	04132	Sun visor arm clips
6	519A58	Overhead console
7	-	Overhead console electrical connector
8	-	Rear view mirror electrical connector
9	14334	Headliner wiring harness
10	W504349	Garment hanger screw

11	29024	Garment hanger
12	W708761	Headliner pushpin retainer
13	17409	Headliner washer fluid hose
14	51944	Headliner
15	-	Headliner magnets

REMOVAL

1. If equipped, remove the rear entertainment module (RETM). For additional information, refer to **INFORMATION & ENTERTAINMENT SYSTEMS** article.
2. Remove the LH and RH A-pillar trim panels. For additional information, refer to **A-Pillar Trim Panel**.
3. Remove the LH and RH B-pillar trim panels. For additional information, refer to **B-Pillar Trim Panel**.
4. Remove the LH and RH C-pillar trim panels. For additional information, refer to **C-Pillar Trim Panel**.
5. Remove the LH and RH D-pillar trim panels. For additional information, refer to **D-Pillar Trim Panel**.
6. Remove the LH and RH quarter trim panels. For additional information, refer to **Quarter Trim Panel**.
7. If equipped, remove the power liftgate rod from the power liftgate motor assembly.
   - Squeeze the clip as shown to release and pull the power liftgate rod assembly upward.

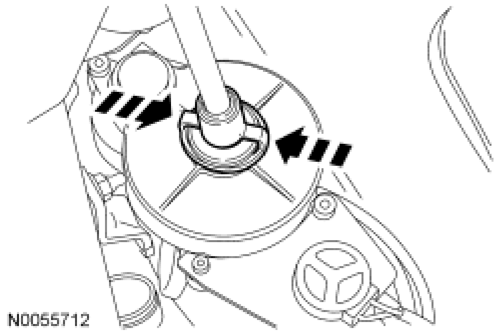

Fig. 18: Squeezing Clip To Release & Position Rod Assembly Upward
Courtesy of FORD MOTOR CO.

8. If equipped, disconnect the electrical connectors from the interior rear view mirror and compass.
9. Disconnect the electrical connectors from the wiring harness on the LH A-pillar and remove the harness from the A-pillar.

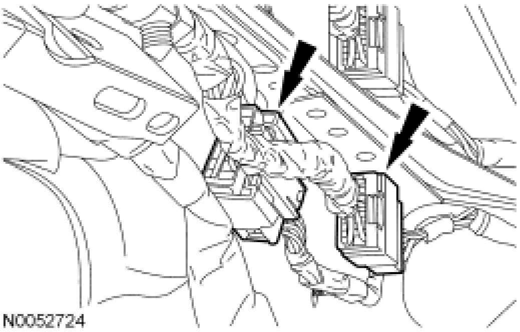

Fig. 19: Identifying Electrical Connectors From Wiring Harness On LH A-Pillar
Courtesy of FORD MOTOR CO.

10. Remove the overhead console, if equipped. For additional information, refer to **INSTRUMENT PANEL & CONSOLE** article.
11. Position the front and rear door weatherstrips aside.
12. Remove the LH and RH sun visors.
    - Remove the LH and RH sun visor screws.
    - If equipped, disconnect the electrical connector.
13. Disconnect the rear washer fluid hose connector on the RH A-pillar.

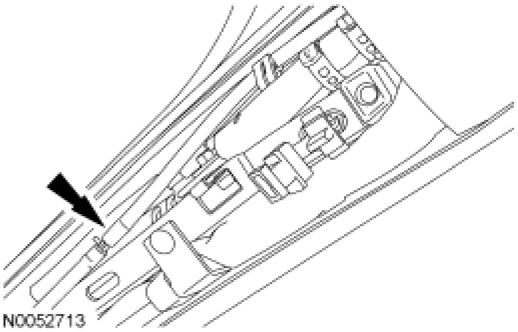

Fig. 20: Locating Rear Washer Fluid Hose Connector On RH A-Pillar
Courtesy of FORD MOTOR CO.

14. Remove the LH and RH garment hangers.
    - Remove the LH and RH garment hanger screws.
15. Position the liftgate weatherstrip aside.
16. Disconnect the rear washer fluid hose connector on the RH D-pillar.

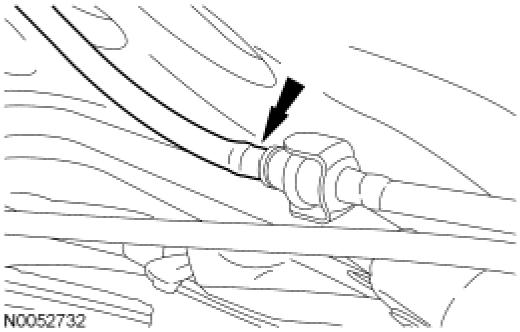

Fig. 21: Locating Rear Washer Fluid Hose Routing
Courtesy of FORD MOTOR CO.

17. Remove the headliner rear pushpin.
18. Lower the headliner and disconnect the electrical connectors on the LH D-pillar.

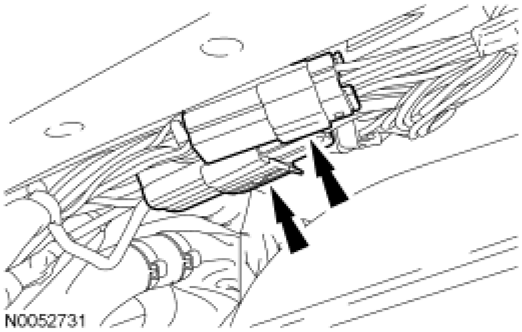

Fig. 22: Identifying Electrical Connectors On LH D-Pillar
Courtesy of FORD MOTOR CO.

CAUTION: To avoid damaging the headliner, an assistant is required for this step.

19. Remove the headliner through the liftgate opening.

INSTALLATION

Installing a new headliner

1. Using a suitable marking tool, mark the new headliner with the routing and exit points of the wire harness from the original headliner.
2. Carefully remove the wire harness from the original headliner.

CAUTION: Make sure not to damage the wire harness when cutting the excess adhesive from the wire harness.

3. Cut and remove any excessive adhesive from the wire harness.

CAUTION: Make sure to provide enough length to the wire harness connector ends when positioning the wire harness onto the headliner. Otherwise, the wire harness connector ends will not be able to be connected when the headliner is installed into the vehicle.

NOTE: Headliner with RETM opening shown, all other headliners similar.

4. Position the wire harness onto the new headliner and apply tape to temporarily attach the wire harness onto the headliner.

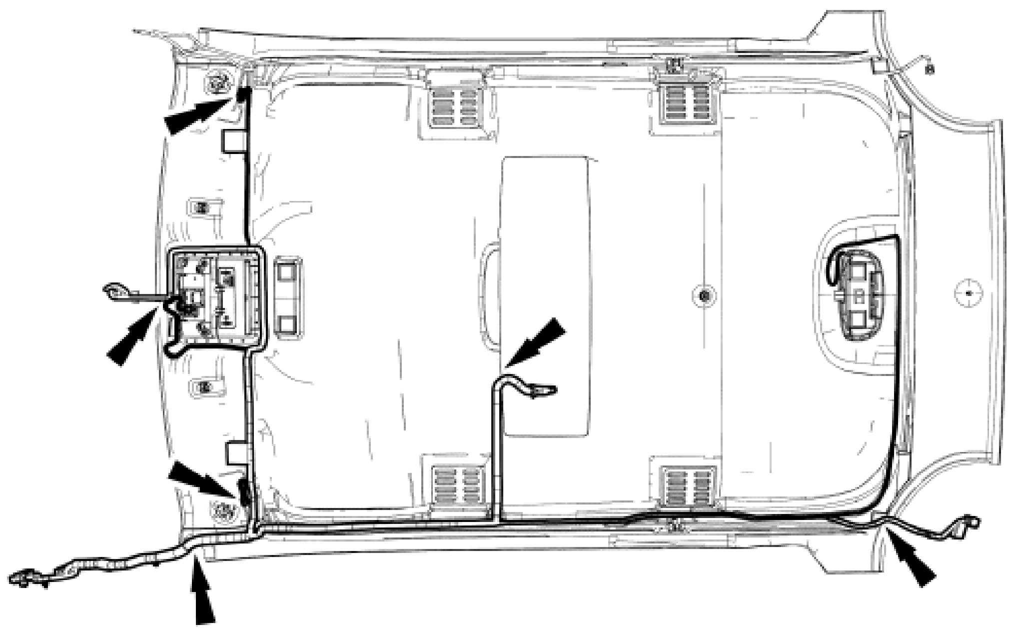

Fig. 23: Identifying Wire Harness
Courtesy of FORD MOTOR CO.

NOTE: The 3M Duramix 4747 Super Fast Adhesive will set in 22 seconds. Continually make sure that the wire harness is routed correctly when applying the adhesive.

NOTE: Apply adhesive to the entire length of the wire harness when fastening the wire harness to the headliner. Otherwise, the wire harness can loosen from the headliner and a vibration or rattle can occur.

5. Obtain 3M Duramix 4747 Super Fast Adhesive commercially and apply onto the headliner and wire harness.

6. Transfer parts as needed.

All headliners

CAUTION: To avoid damaging the headliner, an assistant is required for this step.

7. Install the headliner through the liftgate opening.
8. Connect the electrical connectors on the LH D-pillar.

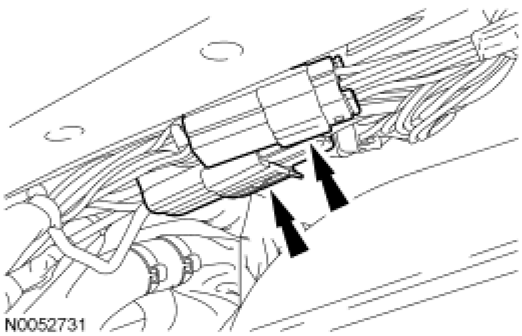

Fig. 24: Identifying Electrical Connectors On LH D-Pillar
Courtesy of FORD MOTOR CO.

9. Install the headliner rear pushpin.
10. Connect the rear washer fluid hose connector on the RH D-pillar.

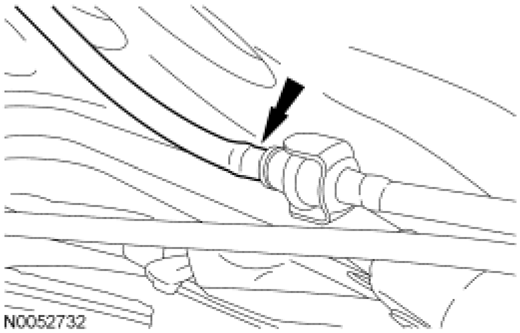

Fig. 25: Locating Rear Washer Fluid Hose Routing
Courtesy of FORD MOTOR CO.

11. Install the liftgate weatherstrip.
12. Install the LH and RH garment hangers.
    - Install and tighten the LH and RH garment hanger screws.
13. Connect the rear washer fluid hose connector on the RH A-pillar.

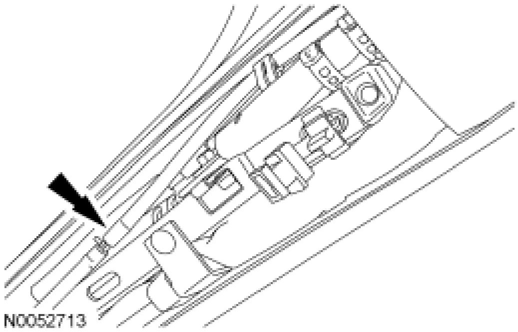

Fig. 26: Locating Rear Washer Fluid Hose Connector On RH A-Pillar
Courtesy of FORD MOTOR CO.

14. Install the LH and RH sun visors in the following sequence.
    1. If equipped, connect the electrical connector.
    2. Install and tighten the LH and RH sun visor screws.
15. Install the front and rear door weatherstrips.
16. If equipped, install the overhead console. For additional information, refer to **INSTRUMENT PANEL & CONSOLE** article.
17. Connect the electrical connectors on the LH A-pillar and attach the wire harness onto the A-pillar.

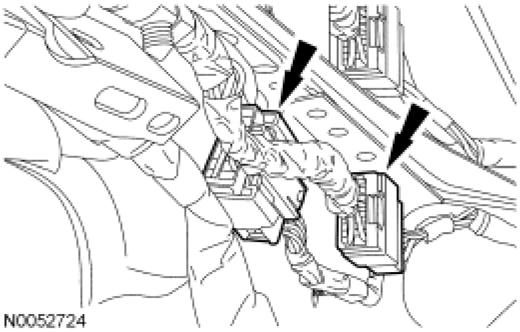

Fig. 27: Identifying Electrical Connectors From Wiring Harness On LH A-Pillar
Courtesy of FORD MOTOR CO.

18. If equipped, connect the electrical connectors to the interior rear view mirror and compass.
19. If equipped, install the power liftgate rod.
20. Install the LH and RH quarter trim panels. For additional information, refer to **Quarter Trim Panel**.
21. Install the LH and RH D-pillar trim panels. For additional information, refer to **D-Pillar Trim Panel**.
22. Install the LH and RH C-pillar trim panels. For additional information, refer to **C-Pillar Trim Panel**.
23. Install the LH and RH B-pillar trim panels. For additional information, refer to **B-Pillar Trim Panel**.
24. Install the LH and RH A-pillar trim panels. For additional information, refer to **A-Pillar Trim Panel**.
25. If equipped, install the RETM. For additional information, refer to **INFORMATION & ENTERTAINMENT SYSTEMS** article.

CALIFORNIA Proposition 65 Warning

WARNING: Engine exhaust, some of its constituents, and certain vehicle components contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. In addition, certain fluids contained in vehicles and certain products of component wear contain or emit chemicals known to the State of California to cause cancer and birth defects or other reproductive harm.

PERCHLORATE MATERIAL

Certain components of this vehicle such as airbag modules, seat belt pretensioners, and button cell batteries may contain Perchlorate Material – Special handling may apply for service or vehicle end of life disposal. See www.dtsc.ca.gov/hazardouswaste/perchlorate.

CONGRATULATIONS

Congratulations on acquiring your new Lincoln. Please take the time to get well acquainted with your vehicle by reading this handbook. The more you know and understand about your vehicle, the greater the safety and pleasure you will derive from driving it.

For more information on Ford Motor Company and its products visit the following website:

- In the United States: www.ford.com
- In Canada: www.ford.ca
- In Mexico: www.ford.com.mx
- In Australia: www.ford.com.au

Additional owner information is given in separate publications.

This *Owner's Guide* describes every option and model variant available and therefore some of the items covered may not apply to your particular vehicle. Furthermore, due to printing cycles it may describe options before they are generally available.

Remember to pass on the *Owner's Guide* when reselling the vehicle. It is an integral part of the vehicle.

Fuel pump shut-off switch: In the event of an accident the safety switch will automatically cut off the fuel supply to the engine. The switch can also be activated through sudden vibration (e.g. collision when parking). To reset the switch, refer to the *Fuel pump shut-off switch* in the *Roadside Emergencies* chapter.

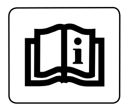
SAFETY AND ENVIRONMENT PROTECTION

Warning symbols in this guide

How can you reduce the risk of personal injury to yourself or others? In this guide, answers to such questions are contained in comments highlighted by the warning triangle symbol. These comments should be read and observed.

Warning symbols on your vehicle

When you see this symbol, it is imperative that you consult the relevant section of this guide before touching or attempting adjustment of any kind.



Protecting the environment

We must all play our part in protecting the environment. Correct vehicle usage and the authorized disposal of waste, cleaning and lubrication materials are significant steps towards this aim. Information in this respect is highlighted in this guide with the tree symbol.

BREAKING-IN YOUR VEHICLE

Your vehicle does not need an extensive break-in. Try not to drive continuously at the same speed for the first 1,000 miles (1,600 km) of new vehicle operation. Vary your speed frequently in order to give the moving parts a chance to break in.

Drive your new vehicle at least 1,000 miles (1,600 km) before towing a trailer. For more detailed information about towing a trailer, refer to *Trailer towing* in the *Tires, Wheels and Loading* chapter.

Do not add friction modifier compounds or special break-in oils since these additives may prevent piston ring seating. See *Engine oil* in the *Maintenance and Specifications* chapter for more information on oil usage.

SPECIAL NOTICES

New Vehicle Limited Warranty

For a detailed description of what is covered and what is not covered by your vehicle's New Vehicle Limited Warranty, refer to the *Warranty Guide* that is provided to you along with your *Owner's Guide.*

Special instructions

For your added safety, your vehicle is fitted with sophisticated electronic controls.

> ⚠ Please read the section *Airbag supplemental restraint system (SRS)* in the *Seating and Safety Restraints* chapter. Failure to follow the specific warnings and instructions could result in personal injury.

> ⚠ Front seat mounted rear-facing child or infant seats should **NEVER** be placed in front of an active passenger airbag.

Service Data Recording

Service data recorders in your vehicle are capable of collecting and storing diagnostic information about your vehicle. This potentially includes information about the performance or status of various systems and modules in the vehicle, such as engine, throttle, steering or brake systems. In order to properly diagnose and service your vehicle, Ford Motor Company, Ford of Canada, and service and repair facilities may access vehicle diagnostic information through a direct connection to your vehicle when diagnosing or servicing your vehicle.

Event Data Recording

Other modules in your vehicle — event data recorders — are capable of collecting and storing data during a crash or near crash event. The recorded information may assist in the investigation of such an event. The modules may record information about both the vehicle and the occupants, potentially including information such as:

- how various systems in your vehicle were operating;
- whether or not the driver and passenger seatbelts were buckled;
- how far (if at all) the driver was depressing the accelerator and/or the brake pedal;
- how fast the vehicle was traveling; and
- where the driver was positioning the steering wheel.

To access this information, special equipment must be directly connected to the recording modules. Ford Motor Company and Ford of Canada do not access event data recorder information without obtaining consent, unless pursuant to court order or where required by law enforcement, other government authorities or other third parties acting with lawful authority. Other parties may seek to access the information independently of Ford Motor Company and Ford of Canada.

Cell phone use

The use of Mobile Communications Equipment has become increasingly important in the conduct of business and personal affairs. However, drivers must not compromise their own or others' safety when using such equipment. Mobile Communications can enhance personal safety and security when appropriately used, particularly in emergency situations. Safety must be paramount when using mobile communications equipment to avoid negating these benefits.

Mobile Communication Equipment includes, but is not limited to cellular phones, pagers, portable email devices, in-vehicle communications systems, telematics devices and portable two-way radios.

Driving while distracted can result in loss of vehicle control, accident and injury. Ford strongly recommends that drivers use extreme caution when using any device that may take their focus off the road. The drivers primary responsibility is the safe operation of their vehicle. Only use cell phones and other devices not essential to the driving task when it is safe to do so.

Export unique (Non–United States/Canada) vehicle specific information

For your particular global region, your vehicle may be equipped with features and options that are different from the ones that are described in this *Owner's Guide.* A market unique supplement may be supplied that complements this book. By referring to the market unique supplement, if provided, you can properly identify those features, recommendations and specifications that are unique to your vehicle. This *Owner's Guide* is written primarily for the U.S. and Canadian Markets. Features or equipment listed as standard may be different on units built for Export. **Refer to this Owner's Guide for all other required information and warnings.**

These are some of the symbols you may see on your vehicle.

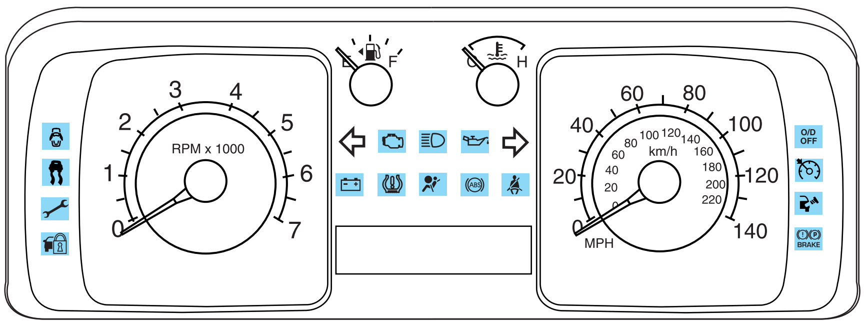
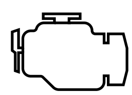
WARNING LIGHTS AND CHIMES



Warning lights and gauges can alert you to a vehicle condition that may become serious enough to cause extensive repairs. A warning light may illuminate when a problem exists with one of your vehicle's functions. Many lights will illuminate when you start your vehicle to make sure the bulbs work. If any light remains on after starting the vehicle, refer to the respective system warning light for additional information.

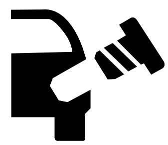


Service engine soon: The *Service engine soon* indicator light illuminates when the ignition is first turned to the ON position to check the bulb and to indicate whether the vehicle is ready for Inspection/Maintenance (I/M) testing. Normally, the ″Service engine soon″ light will stay on until the engine is cranked, then turn itself off if no malfunctions are present. However, if after 15 seconds the ″Service engine soon″ light blinks eight times, it means that the vehicle is not ready for I/M testing. See the *Readiness for Inspection/Maintenance (I/M) testing* in the *Maintenance and Specifications* chapter.

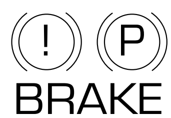
Solid illumination after the engine is started indicates the On Board Diagnostics System (OBD-II) has detected a malfunction. Refer to *On board diagnostics (OBD-II)* in the *Maintenance and Specifications* chapter. If the light is blinking, engine misfire is occurring which could damage your catalytic converter. Drive in a moderate fashion (avoid heavy acceleration and deceleration) and have your vehicle serviced immediately by your authorized dealer.

Under engine misfire conditions, excessive exhaust temperatures could damage the catalytic converter, the fuel system, interior floor coverings or other vehicle components, possibly causing a fire.

Powertrain malfunction/reduced power: Illuminates when a powertrain or a AWD fault has been detected. Contact your authorized dealer as soon as possible.

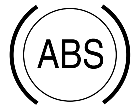


Check fuel cap: Illuminates when the fuel cap may not be properly installed. Continued driving with this light on may cause the Service engine soon warning light to come on, refer to *Fuel filler cap* in the *Maintenance and Specification* chapter.



Brake system warning light: To confirm the brake system warning light is functional, it will momentarily illuminate when the ignition is turned to the ON position when the engine is not running, or in a position between ON and START, or by applying the parking brake when the ignition is turned to the ON position. If the brake system warning light does not illuminate at this time, seek service immediately from your authorized dealer. Illumination after releasing the parking brake indicates low brake fluid level or a brake system malfunction and the brake system should be inspected immediately by your authorized dealer.

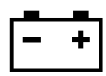
Driving a vehicle with the brake system warning light on is dangerous. A significant decrease in braking performance may occur. It will take you longer to stop the vehicle. Have the vehicle checked by your authorized dealer. Driving extended distances with the parking brake engaged can cause brake failure and the risk of personal injury.



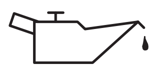
Anti-lock brake system: If the ABS light stays illuminated or continues to flash, a malfunction has been detected, have the system serviced immediately by your authorized dealer. Normal braking is still functional unless the brake warning light also is illuminated.

Airbag readiness: If this light fails to illuminate when the ignition is turned to ON, continues to flash or remains on, have the system serviced immediately by your authorized dealer. A chime will also sound when a malfunction in the supplemental restraint system has been detected.

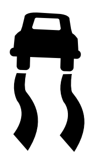
Safety belt: Reminds you to fasten your safety belt. A Belt-Minder® chime will also sound to remind you to fasten your safety belt. Refer to the *Seating and Safety Restraints* chapter to activate/deactivate the Belt-Minder® chime feature.



Charging system: Illuminates when the battery is not charging properly.

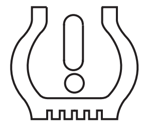


Engine oil pressure: Illuminates when the oil pressure falls below the normal range, refer to *Engine oil* in the *Maintenance and Specifications* chapter.

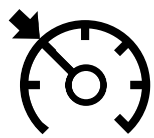


Traction Control™/AdvanceTrac® active: Illuminates when the Traction Control™ is active. If the light remains on, have the system serviced immediately, refer to the *Driving* chapter for more information.

Low tire pressure warning: Illuminates when your tire pressure is low. If the light remains ON at start up or while driving, the tire pressure should be checked. Refer to *Inflating your tires* in the *Tires, Wheels and Loading* chapter. When the ignition is first turned to ON, the light will illuminate for 3 seconds to ensure the bulb is working. If the light does not turn ON or begins to flash, have the system inspected by your authorized dealer. For more information on this system, refer to *Tire pressure monitoring system* in the *Tires, Wheels and Loading* chapter.



Speed control: Illuminates when the speed control is engaged. Turns off when the speed control system is disengaged.

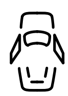


O/D off: Illuminates when the overdrive function of the transmission has been turned OFF, refer to the *Driving* chapter. If the light flashes steadily or does not illuminate, have the transmission serviced soon, or damage may occur.

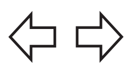
O/D
OFF

Anti-theft system: Flashes when the SecuriLock™ Passive Anti-theft System has been activated.

Door ajar: Illuminates when the ignition is in the ON position and any door is open.



Turn signal: Illuminates when the left or right turn signal or the hazard lights are turned on. If the indicators flash faster, check for a burned out bulb.



High beams: Illuminates when the high beam headlamps are turned on.

Key-in-ignition warning chime: Sounds when the key is left in the ignition in the OFF/LOCK or ACCESSORY position and the driver's door is opened.

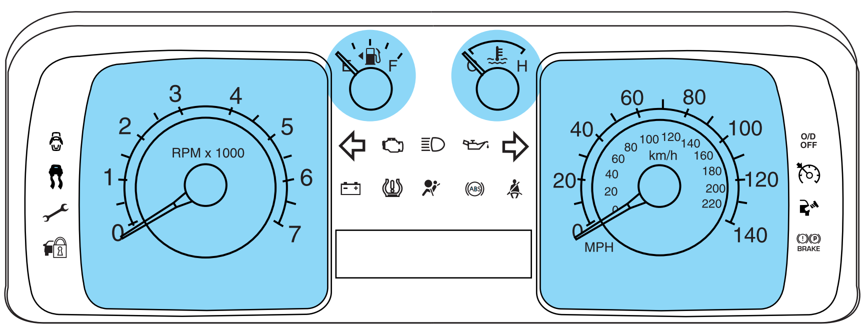
Headlamps on warning chime: Sounds when the headlamps or parking lamps are on, the ignition is off (the key is not in the ignition) and the driver's door is opened.

Parking brake ON chime: Sounds when the parking brake is left ON and the vehicle is driven. If the warning stays on after the park brake is off, contact your authorized dealer as soon as possible.

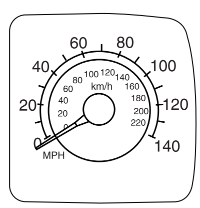
Message center activation chime: Sounds when some warning messages appear in the message center display for the first time.

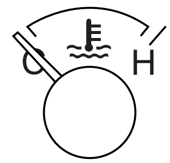
Overspeed chime (if equipped): Sounds when the vehicle speed reaches 75 mph (120 km/h) or higher.

GAUGES



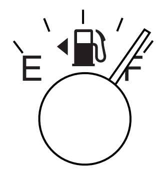
Speedometer: Indicates the current vehicle speed.





Engine coolant temperature gauge: Indicates engine coolant temperature. At normal operating temperature, the needle will be in the normal range (between "H" and "C"). **If it enters the red section, the engine is overheating. Stop the vehicle as soon as safely possible, switch off the engine and let the engine cool.**

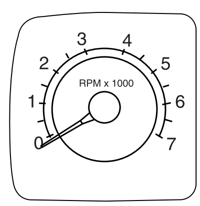
Never remove the coolant reservoir cap while the engine is running or hot.



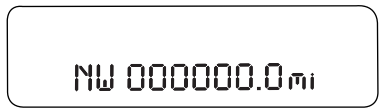
Fuel gauge: Indicates approximately how much fuel is left in the fuel tank (when the ignition is in the ON position). The fuel gauge may vary slightly when the vehicle is in motion or on a grade.

The FUEL icon and arrow indicates which side of the vehicle the fuel filler door is located.

Refer to *Filling the tank* in the *Maintenance and Specifications* chapter for more information.

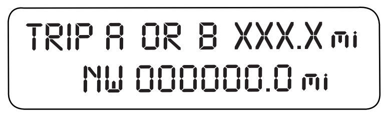


Tachometer: Indicates the engine speed in revolutions per minute. Driving with your tachometer pointer continuously at the top of the scale may damage the engine.



Odometer: Registers the total miles (kilometers) of the vehicle.

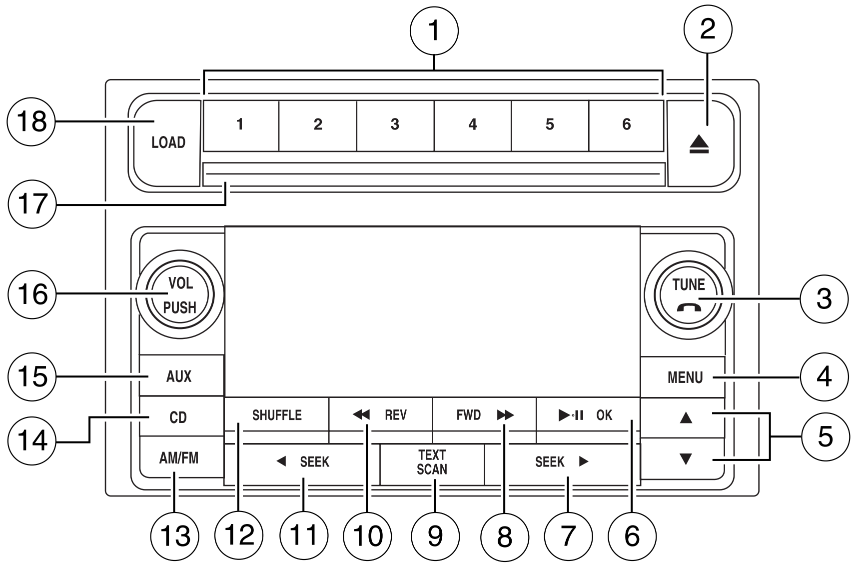
Refer to *Message center* in the *Driver Controls* chapter on how to switch the display from Metric to English.



Trip odometer: Registers the miles (kilometers) of individual journeys. Press and release the message center INFO button until “TRIP” appears in the display (this represents the trip mode). Press the control again to select Trip A and Trip B features. Press and hold the RESET button for two seconds to reset.

AUDIO SYSTEMS

AM/FM In-dash six CD/MP3 satellite compatible sound system

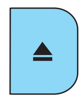


Accessory delay: Your vehicle is equipped with accessory delay. With this feature, the window controls, radio and moon roof (if equipped) may be used for up to ten minutes after the ignition is turned off or until either front door is opened.

THX: Your vehicle may be equipped with the THX® II certified premium audio system. This system creates optimal acoustic quality for all seating positions and road conditions. The system offers an advanced speaker system, amplifier, subwoofer and equalization.

1. **Memory presets:** To set a station: Select frequency band AM/FM1/FM2; tune to a station, press and hold a preset button until sound returns. PRESET SAVED will appear in the display. You may store up to 18 stations, six presets in AM, FM1 and FM2.

In satellite Radio mode (if equipped), there are 18 available presets, six each for SAT1, SAT2 and SAT3. To save satellite channels in your memory presets, tune to the desired channel then press and hold a preset control until sound returns.
Satellite radio is available only with a valid SIRIUS subscription. Check with your authorized dealer for availability.



2. ⏏ **(Eject):** Press to eject the current CD/MP3. To eject a specific CD/MP3, press ⏏ and the corresponding memory preset. Press and hold ⏏ to auto eject all discs in the system.

3. **TUNE / : In radio mode,** turn to go up/down the frequency band in individual increments.
In MP3 mode, with folder mode active, turn to advance to the next/previous MP3 folder.

In satellite radio mode (if equipped), press ◀ SEEK, SEEK ▶ to tune to the next/previous channel.
In CATEGORY MODE, press ▲ / ▼ to scroll through the list of available SIRIUS channel categories (Pop, Rock, News, etc.). Refer to *Category Mode* under *Menu* for further information.
Satellite radio is available only with a valid SIRIUS subscription. Check with your authorized dealer for availability.

(Phone): Your vehicle may be equipped with SYNC which has special phone features. Refer to the *SYNC supplement* for further information. If your vehicle is not equipped with SYNC, the display will read NO PHONE.

4. **MENU:** Press MENU repeatedly to scroll through the following modes:

Setting the clock: Press MENU until SET HOURS, SET MINUTES and SET AM/SET PM is displayed. Use ▲ /▼ to manually adjust. Press MENU again to disengage clock mode.

SATELLITE RADIO MENU (if equipped): Press MENU when satellite radio mode is active to access. Press OK to enter into the satellite radio menu. Press ▲ /▼ to cycle through the following options:

- **CATEGORY:** Press OK to enter category mode. Press ▲/▼ to scroll through the list of available SIRIUS channel Categories (Pop, Rock, News, etc.) Press OK when the desired category appears in the display. After a category is selected, press SEEK to search for that specific category of channels only (i.e. ROCK). You may also select CATEGORY ALL to seek all available SIRIUS categories and channels. Press OK to close and return to the main menu.
- **SAVE SONG:** Press OK to save the currently playing song in the system's memory. (If you try to save something other than a song, CANT SAVE will appear in the display.) When the chosen song is playing on any satellite radio channel, the system will alert you with an audible prompt. Press OK while SONG ALERT is in the display and the system will take you to the channel playing the desired song. You can save up to 20 songs. If you attempt to save a song when the system is full, the display will read REPLACE SONG? Press OK to access the saved songs and press ▲/▼ to cycle through the saved songs. When the song appears in the display that you would like to replace, press OK. SONG REPLACED will appear in the display.
- **DELETE SONG:** Press OK to delete a song from the system's memory. Press ▲/▼ to cycle through the saved songs. When the song appears in the display that you would like to delete, press OK. The song will appear in the display for confirmation. Press OK again and the display will read SONG DELETED. If you do not want to delete the currently listed song, press ▲/▼ to select either RETURN or CANCEL.
  Note: If there are no songs presently saved, the display will read NO SONGS.
- **DELETE ALL SONGS:** Press OK to delete all song's from the system's memory. The display will read ARE YOU SURE ? Press OK to confirm deletion of all saved songs and the display will read ALL DELETED.
  Note: If there are no songs presently saved, the display will read NO SONGS.
- **ENABLE ALERTS / DISABLE ALERTS:** Press OK to enable/disable the satellite alert status which alerts you when your selected songs are playing on a satellite radio channel. (The system default is disabled.) SONG ALERTS ENABLED/DISABLED will appear in the display. The menu listing will display the opposite state. For example, if you have chosen to enable the song alerts, the menu listing will read DISABLE as the alerts are currently on, so your other option is to turn them off.

Satellite radio is available only with a valid SIRIUS radio subscription. Check with your authorized dealer for availability.

RBDS ON/OFF: Press ▲/▼ to turn RBDS ON or OFF.

Program Type: If RBDS is ON, press ▲/▼ to find the desired program type, then use ◀ SEEK ▶ or SCAN to search for FM radio stations broadcasting the desired program type.

RBDS (Radio Broadcast Data System): Available in FM mode only. Allows you to search RBDS-equipped stations for certain categories of music or announcements. With RBDS ON, you may select from: Info (Information), Alert, Test, Religious, R&B, Classical, Jazz, Oldies, Country, Top 40, Soft and Rock as described under *Program Type* above. When the desired category appears in the display, press ◀ SEEK, SEEK ▶ to initiate the search. The system will cycle through the FM frequency band searching for stations broadcasting the selected category type. If the desired program type is not found after searching the frequency band three times, the search will stop. The announcement categories are as follows:

- **Alert**: Searches for RBDS stations actively broadcasting important messages relating to weather or government emergencies.
- **Test**: Searches for RBDS stations actively broadcasting a test message.

Autoset: Allows you to set the strongest local radio stations without losing your original manually set preset stations for AM/FM1/FM2. Use ▲/▼ to turn on/off.

When the six strongest stations are filled, the station stored in preset 1 will begin playing. If there are less than six strong stations, the system will store the last one in the remaining presets.

Bass: Press ▲/▼ to adjust the bass setting.

Treble: Press ▲/▼ to adjust the treble setting.

Balance: Press ▲/▼ to adjust the audio between the right and left speakers.

Fade: Press ▲/▼ to adjust the audio between the front and rear speakers.

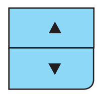
Speed sensitive volume: Radio volume automatically changes slightly with vehicle speed to compensate for road and wind noise. Use ▲/▼ to adjust. Recommended level is 1–3. Level 7 is the maximum setting.

Occupancy mode (if equipped): Use ▲/▼ to select and optimize sound for ALL SEATS, DRIVERS SEAT or REAR SEATS.

Compression: Available in CD mode, this feature brings soft and loud CD passages together for a more consistent listening level. Press MENU until compression status is displayed. Press ▲/▼ to turn the feature on/off.

SINGLE PLAY/DUAL PLAY (if equipped): If SINGLE PLAY is ON, press ▲/▼ for DUAL PLAY. For further information on Single Play/Dual Play, please refer to the *Family Entertainment DVD system* later in this chapter.

5. **Select:** These controls are used in Menu mode to select various settings/options.



6. **Play/Pause: In CD/MP3 mode,** press to pause the playing media. CDX PAUSE will appear in the display. Press again to return to the playing media.

OK: Use in various menu selections. Your vehicle may be equipped with SYNC which has special phone and media features. For further information, refer to the *SYNC supplement.*

7. **SEEK ▶ : In radio or CD/MP3 mode,** press to access the next strong station or track.

In satellite radio mode (if equipped), press SEEK ▶ to seek to the next channel. If a specific category is selected, (Jazz, Rock, News, etc.), press SEEK ▶ to seek to the next channel in the selected category. Press and hold SEEK ▶ to fast seek through the next channels.

In TEXT MODE, press SEEK ▶ to view the additional display text when “>” is active in the display.

In CATEGORY MODE, press ▲/▼ to select a category.

Satellite radio is available only with a valid SIRIUS subscription. Check with your authorized dealer for availability.

8. **FWD (Fast Forward):** Press FWD to manually advance in a CD/MP3 track.

9. **TEXT/SCAN: In radio mode,** when listening to a RBDS-equipped station, press and hold for a brief sampling of radio stations.

In CD/MP3 mode, press and release to view the track title, artist name or disc title. Press and hold for a brief sampling of all tracks on the current disc.

In satellite radio mode (if equipped), press and release to enter TEXT MODE and toggle between channel name/channel category and the current song title/artist.

In TEXT MODE, sometimes the display requires additional text to be displayed. When the “>” indicator is active, press SEEK ▶ to view the additional display text. When the “<” indicator is active, press ◀ SEEK to view the previous display text.

10. **REV (Reverse):** Press REV to manually reverse in a CD track.

11. ◀ **SEEK: In radio and CD/MP3 mode,** press to access the previous strong station or track.

In satellite radio mode (if equipped), press ◀ SEEK to seek to the previous channel. If a specific category is selected, (Jazz, Rock, News, etc.), press ◀ SEEK to seek to the previous channel in the selected category. Press and hold ◀ SEEK to fast seek through the previous channels.

In TEXT MODE press ◀ SEEK to view the previous display text when “<” is active in the display.

Satellite radio is available only with a valid SIRIUS subscription. Check with your authorized dealer for availability.

12. **SHUFFLE:** Press to play all tracks on the current disc in random order.

13. **AM/FM:** Press to select AM/FM1/FM2 frequency band.

14. **CD:** Press to enter CD mode. If a CD is already loaded into the system, CD play will begin where it ended last. If no CD is loaded, NO DISC will appear in the display.

CD units are designed to play commercially pressed 4.75 in (12 cm) audio compact discs only. Due to technical incompatibility, certain recordable and re-recordable compact discs may not function correctly when used in CD players. Dirty, warped or damaged CDs, irregular shaped CDs, CDs with a scratch protection film attached, and CDs with homemade paper (adhesive) labels should not be inserted into the CD player. The label may peel and cause the CD to become jammed. It is recommended that homemade CDs be identified with permanent felt tip marker rather than adhesive labels. Ballpoint pens may damage CDs. Please contact your authorized dealer for further information.

15. **AUX:** Press repeatedly to cycle through FES/DVD (if equipped), LINE IN (auxiliary audio mode), SAT1, SAT2 and SAT3 modes (satellite radio, if equipped) and SYNC (if equipped).

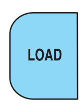
For location and further information on auxiliary audio mode, refer to *Auxiliary input jack* later in this chapter.
For further information on SYNC, refer to the *SYNC supplement.*
Satellite radio is available only with a valid SIRIUS radio subscription. Check with your authorized dealer for availability.

16. **ON/OFF/Volume:** Press to turn ON/OFF. Turn to increase/decrease volume.

If the volume is set above a certain level and the ignition is turned off, the volume will come back on at a “nominal” listening level when the ignition switch is turned back on.

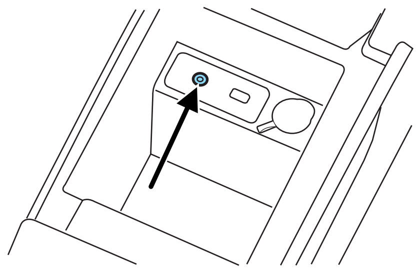
17. **CD slot:** Insert a CD/MP3 label side up.

18. **LOAD:** Press to load a CD/MP3. Press LOAD and a memory preset to load to a specific slot. Press and hold to autoload up to six CD/MP3s.



Auxiliary input jack (Line in)

Driving while distracted can result in loss of vehicle control, accident and injury. Ford strongly recommends that drivers use extreme caution when using any device that may take their focus off the road. The drivers primary responsibility is the safe operation of their vehicle. Only use cell phones and other devices not essential to the driving task when it is safe to do so.



Your vehicle is equipped with an Auxiliary Input Jack (AIJ). The Auxiliary Input Jack provides a way to connect your portable music player to the in-vehicle audio system. This allows the audio from a portable music player to be played through the vehicle speakers with high fidelity. To achieve optimal performance, please observe the following instructions when attaching your portable music device to the audio system.

Required equipment:

1. Any portable music player designed to be used with headphones
2. An audio extension cable with stereo male 1/8 in. (3.5 mm) connectors at each end

To play your portable music player using the auxiliary input jack:

1. Begin with the vehicle parked and the radio turned off.
2. Ensure that the battery in your portable music player is new or fully charged and that the device is turned off.
3. Attach one end of the audio extension cable to the headphone output of your player and the other end of the audio extension cable to the AIJ in your vehicle.
4. Turn the radio on, using either a tuned FM station or a CD loaded into the system. Adjust the volume to a comfortable listening level.
5. Turn the portable music player on and adjust the volume to 1/2 the volume.
6. Press AUX on the vehicle radio repeatedly until LINE IN appears in the display.

You should hear audio from your portable music player although it may be low.

7. Adjust the sound on your portable music player until it reaches the level of the FM station or CD by switching back and forth between the AUX and FM or CD controls.

Troubleshooting:

1. Do not connect the audio input jack to a line level output. Line level outputs are intended for connection to a home stereo and are not compatible with the AIJ. The AIJ will only work correctly with devices that have a headphone output with a volume control.

2. Do not set the portable music player's volume level higher than is necessary to match the volume of the CD or FM radio in your audio system as this will cause distortion and will reduce sound quality. Many portable music players have different output levels, so not all players should be set at the same levels. Some players will sound best at full volume and others will need to be set at a lower volume.

3. If the music sounds distorted at lower listening levels, turn the portable music player volume down. If the problems persists, replace or recharge the batteries in the portable music player.

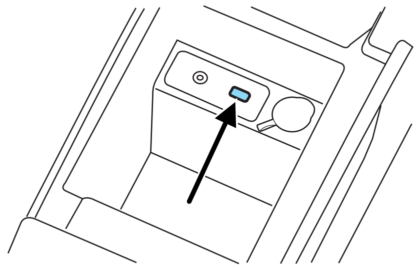
4. The portable music player must be controlled in the same way manner when it is used with headphones as the AIJ does not provide control (play, pause, etc.) over the attached portable music player.

5. For safety reasons, connecting or adjusting the settings on your portable music player should not be attempted while the vehicle is moving. Also, the portable music player should be stored in a secure location, such as the center console or the glove box, when the vehicle is in motion. The audio extension cable must be long enough to allow the portable music player to be safely stored while the vehicle is in motion.

USB port (if equipped)

Driving while distracted can result in loss of vehicle control, accident and injury. Ford strongly recommends that drivers use extreme caution when using any device that may take their focus off the road. The drivers primary responsibility is the safe operation of their vehicle. Only use cell phones and other devices not essential to the driving task when it is safe to do so.

Your vehicle may be equipped with a USB port inside your center console. This feature allows you to plug in media playing devices, memory sticks, and also to charge devices. For further information on this feature, refer to *Using your USB port* in the *SYNC supplement*.



GENERAL AUDIO INFORMATION

Radio frequencies:

AM and FM frequencies are established by the Federal Communications Commission (FCC) and the Canadian Radio and Telecommunications Commission (CRTC). Those frequencies are:

AM: 530, 540–1700, 1710 kHz

FM: 87.7, 87.9–107.7, 107.9 MHz

Radio reception factors:

There are three factors that can affect radio reception:

- Distance/strength: The further you travel from an FM station, the weaker the signal and the weaker the reception.
- Terrain: Hills, mountains, tall buildings, power lines, electric fences, traffic lights and thunderstorms can interfere with your reception.
- Station overload: When you pass a broadcast tower, a stronger signal may overtake a weaker one and play while the weak station frequency is displayed.

CD/CD player care

Do:

- Handle discs by their edges only. (Never touch the playing surface).
- Inspect discs before playing.
- Clean only with an approved CD cleaner.

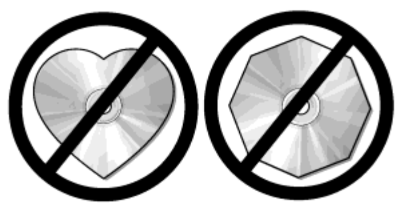
- Wipe discs from the center out.

Don't:

- Expose discs to direct sunlight or heat sources for extended periods of time.
- Clean using a circular motion.

CD units are designed to play commercially pressed 4.75 in (12 cm) audio compact discs only. Due to technical incompatibility, certain recordable and re-recordable compact discs may not function correctly when used in Ford CD players.

Do not use any irregular shaped CDs or discs with a scratch protection film attached.



CDs with homemade paper (adhesive) labels should not be inserted into the CD player as the label may peel and cause the CD to become jammed. It is recommended that homemade CDs be identified with permanent felt tip marker rather than adhesive labels. Ballpoint pens may damage CDs. Please contact your authorized dealer for further information.

Audio system warranty and service

Refer to the *Warranty Guide* for audio system warranty information. If service is necessary, see your dealer or qualified technician.

Satellite radio information (if equipped)

Satellite radio channels: SIRIUS broadcasts a variety of music, news, sports, weather, traffic and entertainment satellite radio channels. For more information and a complete list of SIRIUS satellite radio channels, visit www.sirius.com in the United States, www.sirius-canada.ca in Canada, or call SIRIUS at 1–888–539–7474.

Satellite radio reception factors: To receive the satellite signal, your vehicle has been equipped with a satellite radio antenna located on the roof of your vehicle. The vehicle roof provides the best location for an unobstructed, open view of the sky, a requirement of a satellite radio system. Like AM/FM, there are several factors that can affect satellite radio reception performance:

- Antenna obstructions: For optimal reception performance, keep the antenna clear of snow and ice build-up and keep luggage and other material as far away from the antenna as possible.
- Terrain: Hills, mountains, tall buildings, bridges, tunnels, freeway overpasses, parking garages, dense tree foliage and thunderstorms can interfere with your reception.
- Station overload: When you pass a ground based broadcast repeating tower, a stronger signal may overtake a weaker one and result in an audio mute.

Unlike AM/FM audible static, you will hear an audio mute when there is a satellite radio signal interference. Your radio display may display NO SIGNAL to indicate the interference.

SIRIUS satellite radio service: SIRIUS Satellite Radio is a subscription based satellite radio service that broadcasts music, sports, news and entertainment programming. A service fee is required in order to receive SIRIUS service. Vehicles that are equipped with a factory installed SIRIUS Satellite Radio system include:

- Hardware and limited subscription term, which begins on the date of sale or lease of the vehicle.
- Online media player providing access to all 65 SIRIUS music channels over the internet (U.S. customers only).

For information on extended subscription terms, contact SIRIUS at 1–888–539–7474.

Note: SIRIUS reserves the unrestricted right to change, rearrange, add or delete programming including canceling, moving or adding particular channels, and its prices, at any time, with or without notice to you. Ford Motor Company shall not be responsible for any such programming changes.

Satellite Radio Electronic Serial Number (ESN): This 12–digit Satellite Serial Number is needed to activate, modify or track your satellite radio account. You will need this number when communicating with SIRIUS. While in Satellite Radio mode, you can view this number on the radio display by pressing AUX and Preset 1 control simultaneously.

Radio Display	Condition	Action Required
ACQUIRING	Radio requires more than two seconds to produce audio for the selected channel.	No action required. This message should disappear shortly.
SAT FAULT	Internal module or system failure present.	If this message does not clear within a short period of time, or with an ignition key cycle, your receiver may have a fault. See your authorized dealer for service.
INVALID CHNL	Channel no longer available.	This previously available channel is no longer available. Tune to another channel. If the channel was one of your presets, you may choose another channel for that preset button.
UNSUBSCRIBED	Subscription not available for this channel.	Contact SIRIUS at 1–888–539–7474 to subscribe to the channel or tune to another channel.
NO TEXT	Artist information not available.	Artist information not available at this time on this channel. The system is working properly.

Radio Display	Condition	Action Required
NO TEXT	Song title information not available.	Song title information not available at this time on this channel. The system is working properly.
NO TEXT	Category information not available.	Category information not available at this time on this channel. The system is working properly.
NO SIGNAL	Loss of signal from the SIRIUS satellite or SIRIUS tower to the vehicle antenna.	You are in a location that is blocking the SIRIUS signal (i.e., tunnel, under an overpass, dense foliage, etc). The system is working properly. When you move into an open area, the signal should return.
UPDATING	Update of channel programming in progress.	No action required. The process may take up to three minutes.
CALL SIRIUS 1–888–539–7474	Satellite service has been deactivated by SIRIUS Satellite Radio.	Call SIRIUS at 1–888–539–7474 to re-activate or resolve subscription issues.

FAMILY ENTERTAINMENT DVD SYSTEM (IF EQUIPPED)

Driving while distracted can result in loss of vehicle control, accident and injury. Ford strongly recommends that drivers use extreme caution when using any device that may take their focus off the road. The drivers primary responsibility is the safe operation of their vehicle. Only use cell phones and other devices not essential to the driving task when it is safe to do so.

Your vehicle may be equipped with a Family Entertainment System (FES) which allows you to listen to audio CDs, MP3 discs, watch DVDs and to plug in and play a variety of standard video game systems. The DVD player is capable of playing standard DVDs, CDs, MP3s and is compatible with CD-R/W, CD-R and certain CD-ROM media.

Please review this material to become familiar with the FES features and controls as well as the very important safety information.

Quick start

Your Family Entertainment System includes a DVD system, two sets of wireless infrared (IR) headphones and a wireless infrared (IR) remote control.

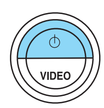
To play a DVD in the DVD system:

The DVD system can play DVD-Video, DVD-R, DVD-R/W discs as well as audio CDs and video CDs. To ensure proper disc operation, check the disc for finger prints, scratches and cleanliness. Clean with a soft cloth, wiping from center to edge.

1. Ensure that the vehicle ignition is in the RUN or ACCESSORY position.

2. Insert a DVD into the system, label-side up to turn on the system. It will load automatically.

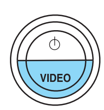
3. Press the power button on the DVD player, then press Play () to begin to play the disc.



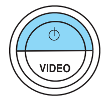
If a DVD is already loaded into the system, press PLAY on the DVD player.

Note: If sound can be heard, but no video is present, press VIDEO to select the video source (DVD or aux-inputs).

Press VIDEO to change the source displayed on the screen. Press repeatedly to cycle through: DVD-DISC, DVD-AUX, NON-DVD, OFF.



Press the power button to turn the system OFF. The indicator light will turn off indicating the system is off.



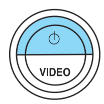
Note: The audio from the DVD system will play over all vehicle speakers and can be adjusted by the radio volume control.

To play a CD in the DVD system:

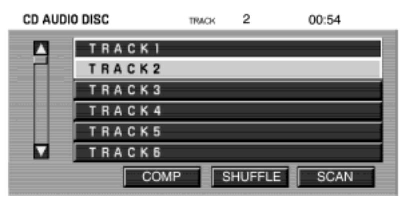
The DVD system can play audio CDs, CD-R and CD-R/W, CD-ROM and video CDs. To ensure proper disc operation, check the disc for finger prints and scratches. Clean the disc with a soft cloth, wiping from the center to the edge.

1. Ensure that the vehicle ignition is in the RUN or ACCESSORY position.

2. Insert a CD into the system, label-side up to turn on the DVD system. It will load and automatically begin to play. If there is already a CD in the system, press PLAY on the DVD player.



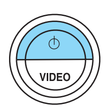
3. The disc will begin to play and the ’CD Audio Disc’ screen will display. From this screen, you can also select from COMPRESSION, SHUFFLE and SCAN features.



To play an MP3 disc in the DVD system:

1. Ensure that the vehicle ignition is in the RUN or ACCESSORY position.

2. Insert an MP3 disc into the system, label-side up to turn on the DVD system. It will load and automatically begin to play. If there is already a disc in the system, press PLAY on the DVD player.



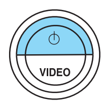
3. The disc will begin to play and the 'MP3 Audio Disc' screen will display and allow you to access the COMPRESSION, SHUFFLE, SCAN and FOLDER MODE features.

To play an auxiliary source through the DVD system

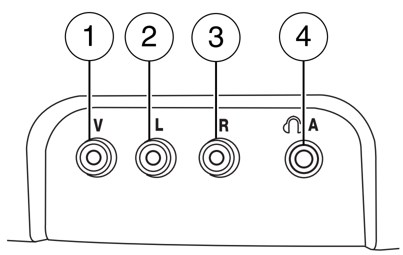
The DVD system can be used to connect and play auxiliary electronic devices such as game systems, personal camcorders, video cassette recorders, etc.

1. Ensure that the vehicle ignition is in the RUN or ACCESSORY position.

2. Press the power button to turn the DVD system on. The indicator light next to the power button will illuminate.



3. Connect an auxiliary audio/video source by connecting RCA cords (not included) to the RCA jacks on the left hand side of the system.



- Yellow (1) — video input
- White (2) — left channel audio input
- Red (3) — right channel audio input

4. Press MEDIA on the DVD system to change the media source to AUX.

5. Press VIDEO on the DVD system to change the video source to DVD-AUX. If your source is properly plugged in, it will appear on the LCD (Liquid Crystal Display) screen. If your auxiliary source does not have a video signal, or if the DVD system does not detect a video signal from the auxiliary source, the screen will remain black. If the video source is set to DVD-AUX, the display will automatically turn on if a video signal is detected.

To listen to audio over the headphones (Dual play mode):

1. You may listen to channels A and B over wired or wireless headphones. Refer to *Using the infrared wireless headphones* and *Using wired headphones* for further information.

- Black (4) — wired headphone output (wired headphones not included)

2. Press the headphone/speaker button on the DVD player or press the 2 and 4 memory presets on the audio system at the same time.

A green light will illuminate next to either the A or B Headphone Control Button to indicate which channel is active (able to be controlled).

3. Press MEDIA to change the audio source of the active channel (A or B). The audio source will be shown on the display. You may change the active channel by pressing the A or B headphone control button.

Note: Channel A can access any possible media source (AM, FM1, FM2, SAT (if equipped), CD, DVD, AUX). Channel B can only access DVD and AUX sources.

Note: Refer to *Single play/Dual play* for more information.

Using the infrared (IR) wireless headphones:

1. Press the power control on the earpiece to turn the headphones ON.

2. Select Channel A or B for each set of wireless headphones by using the A/B control on the ear piece.

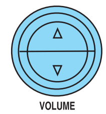
3. Adjust the headphone volume using the rotary dial on the earpiece.

Using wired headphones (not included):

Do not leave children unattended in the vehicle and do not let children operate the system while unsupervised. If wired headphones or auxiliary systems are used, children may become entangled in the cords and seriously injure themselves.

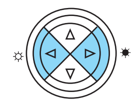
1. Connect the wired headphones in to the headphone jacks on either side of the DVD system. Each side is labeled A or B. Headphones plugged into jack A will listen to Channel A and headphones plugged into jack B will listen to Channel B.

2. Adjust the volume levels using the volume controls on the DVD system.

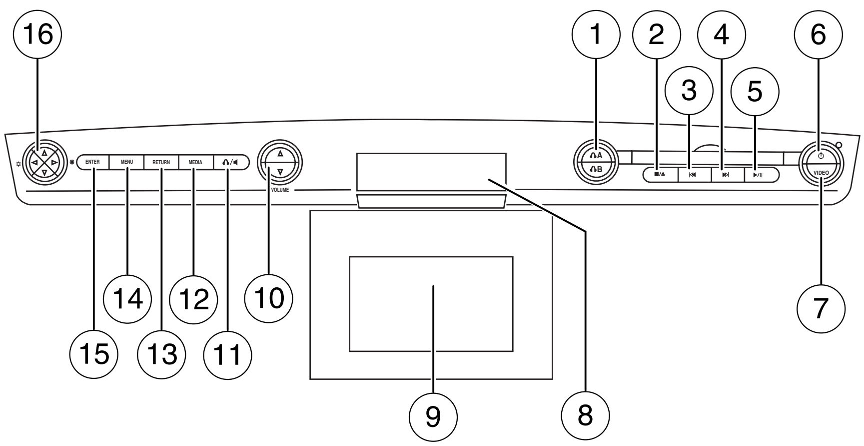


To adjust display brightness:

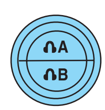
To decrease/increase the brightness level on the display screen, press the brightness control on the DVD system. A display will appear at the bottom of the screen indicating the brightness level. The brightness display will only appear when the menu is not displayed.



DVD player controls



1. **Headphone control A/B:** Press to select either the A or B headphone source. Then press MEDIA to select the desired playing media for that headset. When a headphone channel has been selected (A or B), selections will affect the source on that channel only.



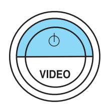
Note: Headphone A can access any possible media (AM, FM1, FM2, SAT (if equipped), CD, DVD, DVD-AUX). Headphone B can only access DVD and DVD-AUX.
For further information, refer to *Single play/Dual play* later in this section.

2. ■ / ⏏ (Stop/Eject): Press once to stop and press a second time to eject a disc from the DVD system.

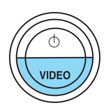
3. ⏮ (Reverse): Press and release for the previous chapter or track. Press and hold to reverse search a DVD, Video CD, or FES CD in DVD/CD mode.

4. ⏭ (Fast forward): Press and release for the next chapter or track. Press and hold to forward search a DVD, Video CD, or FES CD in DVD/CD mode.

5. ▶ / ❚❚ (Play/Pause): Press (Play) to select DVD mode (and to turn the DVD system on if it is off). If a disc is present, it will resume or begin to play. Press (Pause) while playing a disc to pause a DVD or CD.



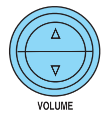
6. **On/Off:** Press to turn the DVD system On/Off.



7. **VIDEO:** Press repeatedly to cycle through the following video state options which will be indicated on the bottom right hand corner of the display: DVD DISC, DVD-AUX, NON-DVD and Off (no indicator). If you select the DVD-AUX video source, the display will turn off if there is no video signal detected. When a video signal is detected on the auxiliary video input, and the display is in the DVD-AUX video mode, the display will automatically turn on.

8. **Infrared (IR) Receiver & Transmitter:** System sensor which reads the signals from the remote control and sends audio signals to the infrared (IR) wireless headphones.

9. **LCD screen:** The eight inch diagonal screen rotates down to view and up into housing to store when not in use. Ensure that the screen is latched into the housing when being stored.



10. **Volume:** When in Single Play, press to increase (▲) or decrease (▼) the volume over all speakers. When in Dual Play, press to increase (▲) or decrease (▼) the volume for the wired headphones. (Wireless headphone volume is controlled with the rotary dial on the right ear piece.)

11. / (Headphones/Speakers): Press once for Dual Play (Headphone mode- the rear speakers are muted) and press again for Single Play (same media playing through all speakers). You can also press the 2 and 4 memory preset buttons on the audio system at the same time to perform the same function. For further interaction information, refer to *Single Play/Dual play.*

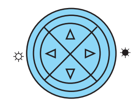
12. **MEDIA:** Press repeatedly to select from the various possible playing media sources (AM, FM1, FM2, SAT (if equipped), CD, DVD, DVD-AUX). The media will show in the status display on the top of the screen when in Dual Play mode. When in Single Play mode, the media source will be displayed on the radio.
Note: Channel A can access any possible media source (AM, FM1, FM2, SAT (if equipped), CD, DVD, DVD-AUX). Channel B can only access DVD and DVD-AUX sources.

13. **RETURN:** Press to return to the playing media or to resume playback.

14. **MENU:** When playing a DVD, press MENU once to enter the DVD disc menu (if available) and press twice to enter the system set-up menu. From the set-up menu, you may select from Angle, Aspect Ratio, Language, Subtitles, Disc resume, Compression, Restore Defaults and Back. For more detailed information, refer to *Menu mode.*

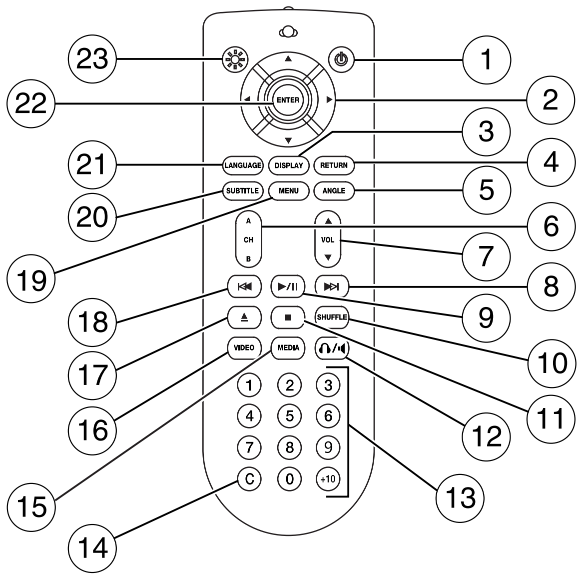
15. **ENTER:** Press to select/confirm the current selection.

16. **Cursor /Brightness controls:** Use the cursor controls to make various selections when in any menu. When not in a menu, and in DVD mode, press ◀ / ▶ to adjust the brightness. A display bar will appear at the bottom of the screen indicating the brightness levels.



Remote control

Unless otherwise stated, all operations can be carried out with the remote control. Always point the remote control directly at the player. Ensure that there are no obstructions between the remote and player.



1. **Power control:** Press to turn the FES (Family Entertainment System) ON/OFF.

2. **Cursor controls:** Use in various active menus to advance the cursor up/down/left/right. When not in a Menu, the left and right cursor controls decrease and increase the display brightness.

3. **DISPLAY:** Press to access the on-screen display of the FES functions and adjustments.

4. **RETURN:** Press to return to the previous menu screen.

5. **ANGLE** (DVD dependent): Press to select the angle to view the scene.

6. **Channel A/B:** Press to select either A or B headphones and then use the MEDIA control to select the desired playing media for the headphones.

7. **VOL (Volume):** When in Single Play, press to increase (▲) or decrease (▼) the volume over all speakers. When in Dual Play, press to increase (▲) or decrease (▼) the volume for the wired headphones. (Wireless headphone volume is controlled with the rotary dial on the right ear piece.)

8. **Fast Forward/Next:** In DVD mode, press and hold for a quick advance within the DVD. Press and release to advance to the next chapter. In CD/MP3 mode, press to access the next track.

9. **Play/Pause:** Press to play or pause a DVD.

10. **SHUFFLE:** Press to play all tracks on the current CD/MP3 disc in random order.

11. **STOP:** Press to stop the current DVD or CD/MP3.

12. / **Speaker/Headphone** (Single/Dual Play): Press to toggle between Single Play (same media playing through all speakers) and Dual Play (headphone mode — the rear speakers are muted). You can also press the 2 and 4 memory presets on the audio system at the same time to perform the same function.

13. **Keypad:** Use the numeric controls to enter in a specific CD/MP3 track or DVD chapter to be played.

14. **C (Cancel):** Press to cancel/clear the numeric input (i.e. chapter number).

15. **MEDIA:** Press to cycle through the possible media sources: AM, FM1, FM2, SAT (if equipped), CD, DVD, LINE IN (if equipped), DVD-AUX.
Channel B can only access DVD and AUX sources.

16. **VIDEO:** Press to cycle through video states: DVD-DISC, DVD-AUX, NON-DVD, Off.

17. **EJECT:** Press to eject a disc from the FES.

18. **Fast reverse/Previous:** When a DVD is playing, press and hold for a quick reverse within the DVD. Press and release for the previous chapter. Press PLAY to resume normal playback speed and volume.
In CD/MP3 mode, press to access the previous track.

19. **MENU:** Press to access the DVD disc menu for selections. Press MENU again when in the DVD disc menu to access the system set-up menu.

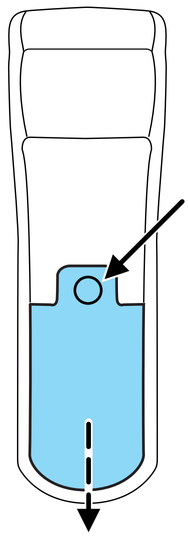
20. **SUBTITLE** (DVD dependent): Press to turn the subtitle feature ON or OFF.

21. **LANGUAGE** (DVD dependent): Press to select the desired language.

22. **ENTER:** Press to select the highlighted menu option.

23. **ILLUMINATION**: Press to illuminate the remote control and backlight all of the buttons.

Battery replacement



Batteries are supplied with the remote control unit. Since all batteries have a limited shelf life, replace them when the unit fails to control the DVD player.

Remove the screw and unlatch the battery cover to access the batteries.

The remote control unit uses two AAA batteries which are supplied with the unit.

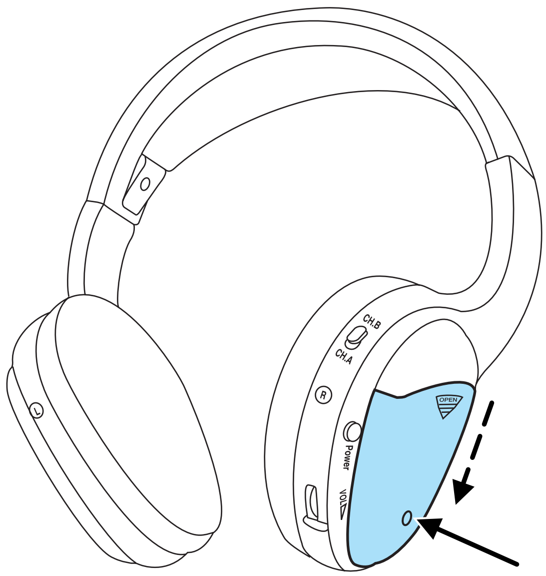
Headphones

Wireless headphones

The driver should never use the headphones while driving the vehicle. Using headphones may prevent the driver from hearing audible warnings such as horns or emergency sirens, which could result in a crash causing serious injury. Give your full attention to driving and to the road.

Your FES system is equipped with two sets of battery powered, infrared wireless headphones. Two AAA batteries are needed to operate the headphones. (Batteries are included.)

Additional infrared wireless headphones may be purchased for use with the system. Also, wired headphones may be purchased and plugged in where indicated on the left and right hand sides of the system. Refer to *Wired Headphones* below.



To install the batteries, remove the screw at the bottom of the cover. Then, lightly press down on top and slide the cover off.

When replacing the batteries, use two new batteries (alkaline recommended) and install them with the correct orientation as indicated in the battery housing.

To operate the headphones:

- Press POWER on the ear piece to turn on the headphones. A red indicator light will illuminate indicating the headphones are ON. Press POWER again to turn the headphones off.
- Adjust the headphones to comfortably fit your head using the headband adjustment.
- Select the desired audio source (Channel A or B) for each set of wireless headphones by using the A/B selection switch on the ear piece.
- Adjust the volume control to the desired listening level.

Ensure that the headphones are turned off when not in use. After approximately one minute of not being in use (no infrared signal is received), the wireless headphones will automatically turn off. They will also turn off after two hours of continuous use as a power save feature. If this happens, simply turn the headphones on again and continue use.

Wired headphones

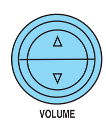
Do not leave children unattended in the vehicle and do not let children operate the system while unsupervised. If wired headphones or auxiliary systems are used, children may become entangled in the cords and seriously injure themselves.

The driver should never use the headphones while driving the vehicle. Using headphones may prevent the driver from hearing audible warnings such as horns or emergency sirens, which could result in a crash causing serious injury. Give your full attention to driving and to the road.

You may purchase wired headphones for your FES (Family Entertainment System). Plug them into the 3.5 mm headphone jack(s) located on the left and right sides of the system. (Channel A is located on the left side and Channel B is located on the right side.) These headphones will be active when in Dual Play mode.

To listen to the audio on wired headphones (not included), connect the wired headphones into the headphone jacks on the sides of the DVD system. The wired headphone jack for Channel A is located on the left side of the FES and is labeled A. Headphones plugged into this headphone jack will hear audio from the audio source selected to be the Channel A source. The wired headphone jack for Channel B is located on the right side of the FES and is labeled B. Headphones plugged into this headphone jack will hear audio from the audio source selected to be the Channel B source.

Adjust the headphone volume using the volume control on the DVD system.



Operation

Single play/Dual play

Your DVD and audio system work together with the infrared headphones and wired headphones (not included) to allow the rear seat passengers to listen to the radio (and other media sources) over the headphones. This enables the front and rear seat passengers to listen to a variety of sources a variety of ways.

Single Play: Single play consists of all occupants in the vehicle listening to the same playing media over the front and rear speakers. When the DVD system is on, and the same source is playing through the front and rear speakers, SINGLE PLAY will appear in the front radio display.

Dual Play: Dual play is when the rear seat passengers choose to listen to a different playing media than the front seat passengers. With the DVD and Rear Seat Controls turned ON, the rear seat passengers may choose to listen to the radio, CD, MP3, DVD, or DVD-AUX media sources over headphones while the front speakers play the chosen selection for the front audio system, they may listen to another over the headphones. DUAL PLAY will appear in the radio display.

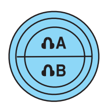
When both the front seat passengers and the rear seat passengers listen to the same audio source, SHARED MODE will appear on the radio.

Note: If the front seat passengers are listening to the radio, the rear seat passengers can also listen to the radio, however they will be limited to listening to the same radio channel.

Press / on the DVD player to listen to audio over the headphones.

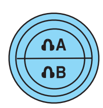
The headphone control will now be active and a green light next to the A or B headphone control buttons will illuminate. The system can output two different audio sources over the headphones. These are called Channel A and Channel B. Both Channel A and Channel B can be listened to on the wired headphones (not included) or on the infrared (IR) wireless headphones.

Press the Headphone Control button A to change the audio source for Channel A.



Press MEDIA to change the audio source for Channel A. This information will display on the DVD system screen.

Press the Headphone Control button B to change the audio source for Channel B.



Press MEDIA to change the audio source for Channel B. This information will display on the DVD system screen. Channel B can listen to either the DVD media or the DVD system auxiliary inputs (DVD-AUX).

Operation with an aftermarket audio system (Headphone only mode)

When the Family Entertainment System (FES) detects that the original radio supplied by Ford Motor Company has been removed from the vehicle, the Family Entertainment System will work in a state referred to as “Headphone Only Mode”.

While operating in Headphone Only Mode, the system will have limited functionality.

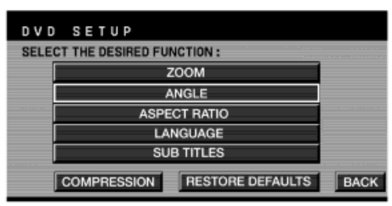
- The system will only output audio to the headphones. It will not be capable of providing audio to the speakers.
- The available sources in FES Headphone Only Mode are DVD-DISC and DVD-AUX, regardless of headphone channel (A or B).
- When a disc is inserted into the FES while in Headphone Only Mode, both headphone channels (A&B) will be connected to FES-DISC.

Menu mode

Press MENU once on the DVD system to access the DVD disc menu if available.

Press MENU twice to access the DVD set-up menu and the following features:

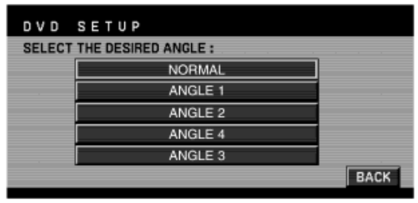
1. ZOOM
2. ANGLE
3. ASPECT RATIO
4. LANGUAGE
5. SUB TITLES



Angle mode

Select ANGLE to select various angles of view for the DVD.

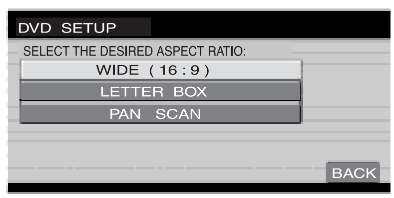
This is disc dependent — some DVD discs may have more viewing angles to select from. Once you have made your selection, press ENTER to confirm. The system default is Angle 1.



Aspect ratio

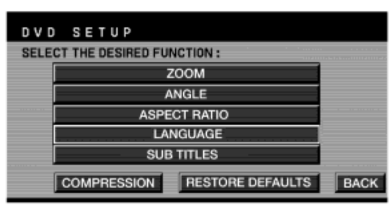
Select ASPECT RATIO to select the viewing size and shape of the video displayed on the LCD screen. This is disc dependent.

You can select from: WIDE, LETTER BOX or PAN SCAN. Once you have made your selection, press ENTER to confirm. The LCD screen display will immediately change to your selection after the system resumes playback of the DVD. The system default is WIDE (16:9).



Language

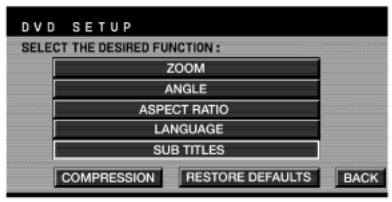
Select LANGUAGE to select the language you would like to use for audio output (English, Spanish, French). This is disc dependent.



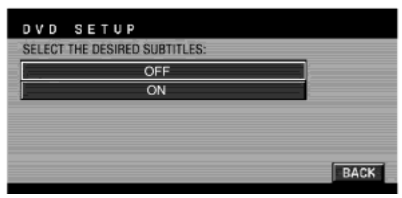
Once you have made your selection, press ENTER to confirm. The system default is English.

Subtitles

Select SUBTITLES to turn the subtitle option on or off. The system default is OFF.



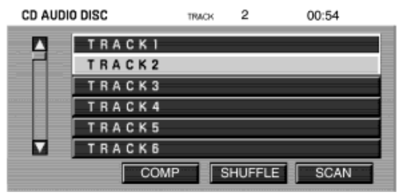
Once you have made your selection, press ENTER to confirm. This is disc dependent.



Audio CDs

To play audio CDs on your DVD system:

1. Ensure that the vehicle ignition is in the RUN or ACCESSORY position.
2. Ensure that the DVD system is ON.
3. Insert an audio CD into the DVD system, label side up.



4. The track and elapsed time will appear in the status bar. Use the DVD cursor controls on the bezel to highlight which track you would like to play. You can also use the cursor controls to highlight COMPRESSION, SHUFFLE or SCAN. Once you have highlighted the desired track or function, press ENTER on the DVD bezel to confirm your selection.

COMP (Compression): Compression brings soft and loud CD passages together for a more consistent listening level when in CD mode. Press to turn the feature ON/OFF

SHUFFLE: Press to hear all tracks on the current CD in random order. Press again to stop.

SCAN: Press for a brief sampling of all tracks on the current CD. Press again to stop.

Playing MP3 discs

To play an MP3 disc on your DVD system:

1. Ensure that the vehicle ignition is in the RUN or ACCESSORY position.

2. Ensure that the DVD system is ON.

3. Insert the MP3 disc into the DVD system, label side up.

4. The folder, track and elapsed time will appear in the status bar. The screen will list the Artist, Title, Album and File Name.

COMP (Compression): Compression brings soft and loud CD/MP3 passages together for a more consistent listening level when in CD mode. Press to turn the feature ON/OFF

SHUFFLE: Press to hear all tracks on the current MP3 folder in random order. Press again to stop.

SCAN: Press for a brief sampling of all tracks on the current MP3 folder. Press again to stop.

FOLDER LIST: Press access folder mode and to go to the previous/next folder in the MP3 disc.

MP3 disc quality factors

Several factors can effect disc playback quality:

- Disc capacity — Each disc contains about 650 MB of storage capacity. We do not recommend using high capacity discs containing 700MB of storage.
- Disc type — Some CD-RW discs may operate inconsistently and may cause an error message to appear. We recommend burning MP3 files onto CD-R discs.
- Disc finalization — The disc may be left open for the purpose of adding sessions to it at a later time, but be sure to close each session or the disc will not play.
- Bit rate — The player supports bit rates from 32–320 kbps, as well as variable bit rate MP3 files, but lower bit rates will have a noticeable effect on sound quality and are recommended only for speech or low fidelity music material. We recommend that you encode MP3 files using a high quality encoder.
- PC configuration — Encoding MP3 files requires intensive use of your computer's resources. Follow the PC configuration recommendations of the encoder software vendor. We recommend that you avoid running other software applications on your PC during MP3 encoding to avoid undesirable noise and distortion.

CD, MP3 and CD player care

- Handle discs by their edges only. Never touch the playing surface.
- Do not expose discs to direct sunlight or heat sources for extended periods of time.
- Do not insert more than one disc into the slot of the CD player (if equipped).
- Always store discs out of direct sunlight. Excessive heat may damage or warp discs.
- Use care when handling and playing CD-R and CD-RW discs, which are more susceptible to damage from heat, light and stress than are regular CDs.
- Always insert and remove a disc by holding the disc flat, with the playing surface facing down, in order to prevent damage to the disc or the player.
- Never insert any object other than a compact disc (CD) or digital versatile disc (DVD) into the player, as doing so may damage the player and may cause injury to you.

- Do not disassemble the player. The laser used in disc playback is extremely harmful to the eyes.

The FES DVD system is designed to play commercially pressed 12 cm (4.75 in) audio compact discs and digital versatile discs (DVD) only. Due to technical incompatibility, certain recordable and re-recordable compact discs may not function correctly when used in Ford CD and DVD players. Irregular shaped CDs or DVDs, CDs or DVDs with a scratch protection film attached, and CDs with homemade paper (adhesive) labels should not be inserted into the FES DVD system. The label may peel and cause the CD or DVD to become jammed. It is recommended that homemade CDs or DVDs be identified with permanent felt tip marker rather than adhesive labels. Ball point pens may damage CDs or DVDs. Please contact your authorized dealer for further information.

Playing a DVD

1. Ensure that the vehicle ignition is in the RUN or ACCESSORY position.

2. Ensure that the navigation system is on.

3. Insert a DVD label-side up into the system.

4. Use the DVD bezel controls to:

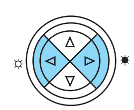
Press to play or pause a DVD.

Press to stop or eject a DVD.

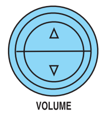
Press and release to go to the previous chapter. Press and hold for a fast reverse search.

Press and release to go to the next chapter. Press and hold for a fast forward search.

Press when not in menu mode to adjust brightness, or when in menu mode to navigate through the menu selections.



Press to adjust volume levels.



Slow play

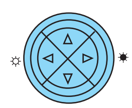
1. With a DVD playing, press pause.

2. Press and hold the reverse or advance button to enter into slow play mode. Once in slow play mode, press and release the reverse or advance button repeatedly to cycle through 1/4 and 1/2. These will display on the status bar on top of the screen as the screens cycle through at this rate.

Frame by frame

1. With a DVD playing, press pause.

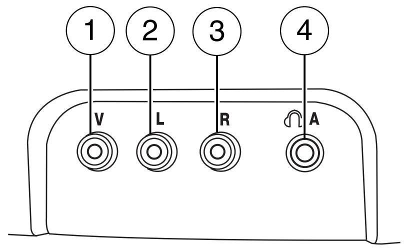
2. Press the right cursor button. The DVD will advance one frame. Each press of the right cursor button will advance the DVD video by one frame.



Headphone/auxiliary jacks

There are wired headphones (not included) and auxiliary jacks on the left and right side of your DVD system. They can be used to plug in wired headphones or to connect and play auxiliary electronic devices such as game systems, personal camcorders, video cassette recorders, etc.

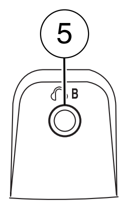
On the left side of the system is the Headphone A input jack. This headphone will listen to the media selected on the Channel A source. When you need to make any adjustments to the media, volume, etc, ensure that the Channel A source is highlighted. For more information, refer to *Headphone adjustments*.



Also located here are the various auxiliary jacks which can be used to plug in a VCR, camcorder, video games, etc. The specific jacks are as follows:

1. Yellow: video input
2. White: left channel audio input
3. Red: right channel audio input
4. Black: wired headphone jack (not included)

The B headphone jack (5) is located on the right side of the DVD system. Plug in wired headphones (not included) here.



Note: The B headphones can only access DVD and AUX modes. They cannot access radio sources.

Audio displays

Your DVD system interacts closely with the front audio system. Status messages will appear in the radio display showing the DVD status. Some possible radio display messages:

- SINGLE PLAY or DUAL PLAY
- DVD LOAD
- DVD MENU
- DVD STOP

Audio interaction

You can then also use the front audio controls to advance, reverse, play and pause a DVD. While a DVD is playing you may use the following controls on the front radio:

- SEEK: Press to advance to the previous (◀) or next (▶) DVD chapters.
- ▶ ❙❙ : Press to play a DVD or to pause the DVD.

When the radio displays “DVD MENU”, press PLAY on the radio (memory preset #6), to play the disc.

Parental control for the DVD system

Your Family Entertainment System (FES) allows you to have control over the rear seat controls in a few different ways. The DVD system is automatically activated when the vehicle ignition is ON, which allows the rear seat passengers to use the DVD system.

There are three levels of control of the FES buttons. The states are FULL (enabled), LOCAL or LOCKED (disabled). To change the level of control, press the memory preset controls 3 and 5 simultaneously on the front audio controls. The control level will cycle each time the buttons are pressed simultaneously. The three states are described as:

FULL (enabled): The FES has control over the primary (speaker) and secondary (headphone) audio sources.

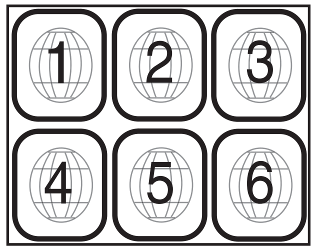
LOCAL: The FES has control over the secondary source (headphones) only. The radio will ignore button presses that affect the primary (speaker) audio source.

LOCKED (disabled): The FES buttons are locked and all FES button presses are ignored by the radio and the FES except for load and eject.

When the DVD system is ON, you can then press the memory preset controls 2 and 4 simultaneously to toggle between Single Play and Dual Play. In Single Play mode, all speakers listen to the same media. In Dual Play mode, rear seat passengers can use the infrared wireless, or wired (not included) headphones to listen to a different playing media than the front seat passengers.

General information

Note: DVDs are formatted by regions. US and Canada systems can only play region 1 DVDs and Mexico systems can only play region 4 DVDs. Systems sold in vehicles targeted for other parts of the world would have different regions. If a playback problem is encountered, please ensure that you are using a disc designed for your vehicle. The region coding can be found stamped on the disc or on the box, and can say 'region-1' or 'region 4', etc. They may also be marked by a numerical symbol.



Macrovision: This product incorporates copyright protection technology that is protected by method claims of certain U.S. patents and other intellectual property rights owned by Macrovision Corporation and other rights owners. Use of this copyright protection technology must be authorized by Macrovision Corporation, and is intended for home and other limited viewing uses only unless otherwise authorized by Macrovision Corporation. Reverse engineering or disassembly is prohibited.

MP3: Supply of this product only conveys a license for private, non-commercial use and does not convey a license nor imply any right to use this product in any commercial (i.e. revenue generating) real time broadcasting (terrestrial, satellite, cable and /or any other media) broadcasting/streaming via internet, intranets and/or other networks or in other electronic content distribution systems, such as pay-audio or audio-on-demand applications. An independent license for such use is required. For details, please visit http:// www.mp3licensing.com.

Safety information

Driving while distracted can result in loss of vehicle control, accident and injury. Ford strongly recommends that drivers use extreme caution when using any device that may take their focus off the road. The drivers primary responsibility is the safe operation of their vehicle. Only use cell phones and other devices not essential to the driving task when it is safe to do so.

Read all of the safety and operating instructions before operating the system and retain for future reference.

Do not attempt to service, repair or modify the Family Entertainment System (FES). See your dealer.

Do not insert foreign objects into the DVD compartment.

Do not leave children unattended in the vehicle and do not let children operate the system while unsupervised. If wired headphones or auxiliary systems are used, children may become entangled in the cords and seriously injure themselves.

The front glass on the liquid crystal display (LCD) flip-down screen may break when hit with a hard surface. If the glass breaks, do not touch the liquid crystalline material. In case of contact with skin, wash immediately with soap and water.

The driver should not attempt to operate any function of the DVD system while the vehicle is in motion. Give full attention to driving and to the road. Pull off the road in a safe place before inserting or extracting DVDs from the system. A remote control is included in the system to allow the rear seat occupants to operate the FES functions without distracting the driver.

Do not expose the liquid crystal display (LCD) flip-down screen to direct sunlight or intensive ultraviolet rays for extensive periods of time. Ultraviolet rays deteriorate the liquid crystal.

Be sure to review User Manuals for video games and video game equipment when used as auxiliary inputs for your Family Entertainment System (FES).

Do not operate video games or video equipment if the power cords and/or cables are broken, split or damaged. Carefully place cords and/or cables where they will not be stepped on or interfere with the operation of seats and/or compartments.

Disconnect video games and video equipment power cords and/or cables when not in use.

Avoid touching auxiliary input jacks with your fingers. Do not blow on them or allow them to get wet or dirty.

Do not clean any part of the DVD player with benzene, paint thinner or any other solvent.

Federal Communication Commission (FCC) Compliance

Changes or modifications not approved by Ford Lincoln-Mercury could void user's authority to operate the equipment. This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference and radio communications.

However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to consult the dealer or an experienced radio/TV technician for help.

Care and service of the DVD player

Environmental extremes

DVD players which are subjected to harsh environmental conditions may be damaged or perform at less than maximum capability. To avoid these outcomes, whenever possible avoid exposing your DVD player to:

- extremely hot or cold temperatures.
- direct sunlight.
- high humidity.
- a dusty environment.
- locations where strong magnetic fields are generated.

Temperature extremes

When the vehicle is parked under direct sunlight or in an extremely cold place for a long period of time, wait until the cabin temperature of the vehicle is at normal temperature before operating the system.

Humidity and moisture condensation

Moisture in the air will condense in the DVD player under extremely humid conditions or when moving from a cold place to a warm one. Moisture condensation may cause damage to the DVD and/or player. If moisture condensation occurs, do not insert a CD or DVD into the player. If one is already in the player, remove it. Turn the DVD player ON to dry the moisture before inserting a DVD. This could take an hour or more.

Foreign substances

Exercise care to prevent dirt and foreign objects from entering the DVD player compartment. Be especially careful not to spill liquids of any kind onto the media controls or into the system. If liquid is accidentally spilled onto the system, immediately turn the system OFF and consult a qualified service technician.

Cleaning the liquid crystal display (LCD) flip-down screen

Clean the display screen by applying a small amount of water or any ammonia-based household glass cleaner directly to a soft cloth. Rub the screen gently until the dust, dirt or fingerprints are removed. Do not spray the screen directly with water or glass cleaning solvents. Overspray from these fluids could drip down into the internal electronics of the screen and cause damage. Do not apply excessive pressure while cleaning the screen.

Cleaning DVD and CD discs

Inspect all discs for contamination before playing. If necessary, clean discs only with an approved DVD and CD cleaner and wipe from the center out to the edge. Do not use circular motion.

Compatibility with aftermarket audio systems (headphone only mode)

When the Family Entertainment System (FES) detects that the original radio supplied by Ford Motor Company has been removed from the vehicle, the FES will work in a state referred to as “Headphone Only Mode.” This mode allows the FES to operate as a standalone system, without interface to the radio.

While operating in Headphone Only Mode, the system will have limited functionality.

- The system will only output audio to the headphones. It will not be capable of providing audio to the speakers.
- The available sources in FES Headphone Only Mode are DVD-DISC and DVD-AUX, regardless of headphone channel (A or B).
- When a disc is inserted into the FES while in Headphone Only Mode, both headphone channels (A and B) will be connected to FES-DISC.

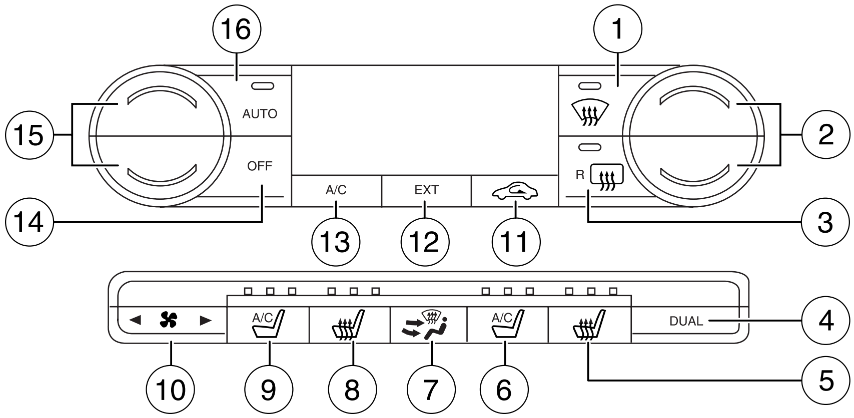
NAVIGATION SYSTEM (IF EQUIPPED)

Your vehicle may be equipped with a Navigation System. Refer to the *Navigation supplement* for further information.

SYNC (LATE AVAILABILITY — IF EQUIPPED)

Your vehicle may be equipped with SYNC, a hands-free communications and entertainment system with special phone and media features. For more information, please refer to the *SYNC supplement* or to the *SYNC* chapter in the *Navigation supplement* (if equipped).

DUAL AUTOMATIC TEMPERATURE CONTROL (DATC) SYSTEM WITH HEATED AND COOLED SEATS (IF EQUIPPED)



Temperature conversion: To switch between Fahrenheit and Celsius, refer to *Message center* in the *Driver Controls* chapter.

MAX A/C setting: In order to achieve maximum cooling performance, press , A/C, , and set the temperature to 60°F (16°C) and the highest blower setting.

1. **Defrost:** Distributes outside air through the windshield defroster vents and demister vents. Can be used to clear the windshield of fog and thin ice. The system will automatically provide outside air to reduce window fogging. To exit defrost, select another distribution mode.

2. **Passenger side temperature control:** Press to increase/decrease the temperature on the passenger side of the vehicle. Allows the passenger to choose and control a different temperature than the driver, if desired.

3. R **Rear defroster:** Press to activate/deactivate the rear window defroster. Refer to the *Rear window defroster* section in this chapter for more information.

4. **DUAL** zone selector: Press to engage/disengage separate passenger side temperature control.

5. **Passenger heated seat:** Press to control the passenger heated seat. Refer to *Heated and cooled seats* in the *Seating and Safety Restraints* chapter for more information.

6. **Passenger cooled seat:** Press to control the passenger cooled seat. Refer to *Heated and cooled seats* in the *Seating and Safety Restraints* chapter for more information.

7. **Manual override controls:** Allows you to manually select where airflow is distributed. Press to toggle through the air distribution modes listed below. The selected mode will illuminate in the display. To return to full automatic control, press AUTO.

: Distributes air through the windshield defroster vents, demister vents, floor vents and rear seat floor vents. The system will automatically provide outside air to reduce window fogging.

: Distributes air through the floor vents and rear seat floor vents. The system will automatically provide outside air to reduce window fogging. **Note:** You may notice a small amount of air flowing from the demister and defroster vents.

: Distributes air through the instrument panel vents, center console vents, floor vents and rear seat floor vents.

: Distributes air through the instrument panel vents and center console vents.

8. **Driver heated seat:** Press to control the driver heated seat. Refer to *Heated and cooled seats* in the *Seating and Safety Restraints* chapter for more information.

9. **Driver cooled seat:** Press to control the driver cooled seat. Refer to *Heated and cooled seats* in the *Seating and Safety Restraints* chapter for more information.

10. **Fan Speed:** Press to manually increase or decrease the fan speed. To return to automatic fan operation, press AUTO.

11. **Recirculated air:** Press to activate/deactivate air recirculation in the vehicle. Recirculated air may reduce the amount of time need to cool down the interior of the vehicle and may also help reduce undesired odors from reaching the interior of the vehicle. Recirculation can be engaged manually in any airflow selection except defrost. Recirculation may turn off automatically in some airflow modes to reduce fog potential.

12. **EXT:** Press to display outside temperature. Press again to display cabin temperature settings. **Note:** Exterior readings are more accurate when the vehicle is moving.

13. **A/C:** Press to activate/deactivate air conditioning. Use with recirculated air to improve cooling performance and efficiency. Engages automatically in AUTO, (defrost) and (floor/defrost).

14. **OFF:** Outside air is shut out and the fan will not operate.

15. **Driver side temperature control:** Press to increase/decrease the temperature on the driver side of the vehicle in dual zone or the temperature of both the driver and passenger sides in single zone.

16. **AUTO:** To engage automatic temperature control, press AUTO and select the desired temperature using the temperature control. The system will automatically determine fan speed, airflow distribution, A/C on or off, and outside or recirculated air, to heat or cool the vehicle to reach the desired temperature.

Operating tips

- To reduce fog build up on the windshield during humid weather, select (defrost) or (floor/defrost).
- To reduce humidity build up inside the vehicle, do not drive with the system OFF or with (recirculated air) engaged and A/C off.
- Do not put objects under the front seats that will interfere with the airflow to the back seats.
- Remove any snow, ice or leaves from the air intake area at the base of the windshield.
- To improve the A/C cool down, drive with the windows slightly open for 2-3 minutes after start up or until the vehicle has been “aired out.”

For maximum cooling performance in MAX A/C mode:

- **Automatic operation:**

1. Press AUTO for full automatic operation.
2. Do not override A/C or (recirculated air).
3. Set the temperature to 60°F (16°C).

- **Manual operation:**

1. Select or .
2. Select A/C and (recirculated air). Use (recirculated air) with A/C to provide colder airflow.
3. Set the temperature to 60°F (16°C).
4. Set highest fan setting initially, then adjust to maintain comfort.

To aid in side window defogging/demisting in cold weather:

1. Select .
2. Select A/C.
3. Adjust the temperature control to maintain comfort.

4. Set the fan speed to the highest setting.
5. Direct the outer instrument panel vents towards the side windows.

Do not place objects on top of the instrument panel as these objects may become projectiles in a collision or sudden stop.

REAR WINDOW DEFROSTER

The rear defroster control is located on the climate control panel and works to clear the rear window of fog and thin ice.

The ignition must be in the 3 (RUN) position to operate the rear window defroster.

Press the control to turn the rear window defroster on. An indicator light on the button will illuminate when active. The rear window defroster turns off automatically after 10 minutes or when the ignition is turned to the 1 (LOCK) or 2 (ACC) position. To manually turn off the rear window defroster at any time, press the control again.

If your vehicle is equipped with both rear defroster and heated mirrors, the same button will activate both.

Do not use razor blades or other sharp objects to clean the inside of the rear window or to remove decals from the inside of the rear window. This may cause damage to the heated grid lines and will not be covered by your warranty.

CABIN AIR FILTER

The cabin air filter element is designed to reduce the concentration of airborne particles such as dust, spores and pollen in the air being supplied to the interior of the vehicle. The presence of a particulate filter element provides the following benefits:

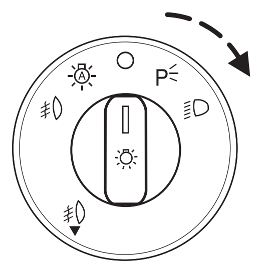
- Improves your driving comfort by reducing particle concentration.
- Improves the interior compartment cleanliness.
- Protects the climate control components from particle deposits.

Note: A cabin air filter must be installed at all times to prevent foreign objects from entering the system. Running the system without a filter in place could result in degradation or damage to the system.

The access door for the filter is located behind the glove box. For replacement intervals regarding the cabin air filter, see the *scheduled maintenance information*. For more information regarding your filter, see your authorized dealer.

HEADLAMP CONTROL

Rotate the headlamp control to the first position to turn on the parking lamps. Rotate to the second position to turn on the headlamps.



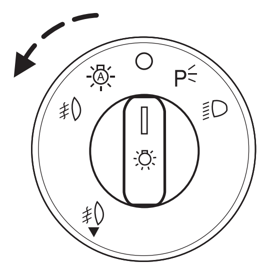
Adaptive headlamps (if equipped)

The headlamp beams move in the same direction as the steering wheel which provides more visability when driving around curves.

Note: The system has a power-up movement check feature. When the vehicle is started, the lamps track left to right, then back to center to alert the driver that the system is working properly.

Autolamp control

The autolamp system provides light sensitive automatic on-off control of the exterior lights normally controlled by the headlamp control.



The autolamp system also keeps the lights on for approximately 20 seconds or, if equipped with a message center, you can select a delay from 0–180 seconds, after the ignition switch is turned to OFF. See *Message Center (if equipped)* in the *Driver Controls* chapter.

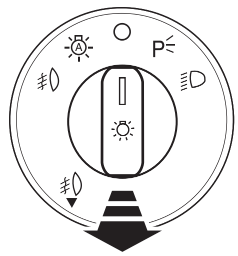
- To turn autolamps on, rotate the control counterclockwise.
- To turn autolamps off, rotate the control clockwise to OFF.

Note: Some vehicles may be equipped with a *headlamps on with windshield wipers feature.* If the windshield wipers are turned on (for a fixed period of time) the exterior lamps will turn on with headlamp control in the Autolamp position.

Fog lamp control

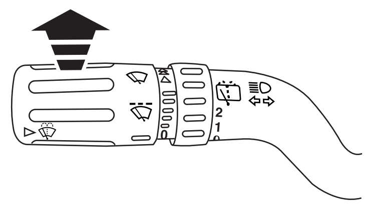
The headlamp control also operates the fog lamps. The fog lamps can be turned on when the headlamp control is in the , or positions and the high beams are not turned on.

Pull headlamp control towards you to turn fog lamps on. The fog lamp indicator light will illuminate.



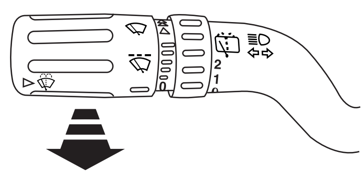
High beams

Push the lever toward the instrument panel to activate. Pull the lever towards you to deactivate.



Flash to pass

Pull toward you slightly to activate and release to deactivate.



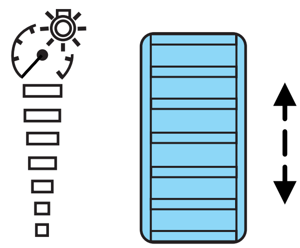
Daytime running lamps (DRL) (if equipped)

Turns the headlamps on at reduced intensity output. To activate:

- the ignition must be in the ON position and
- the headlamp control must be in the OFF or Parking lamps position.

Always remember to turn on your headlamps at dusk or during inclement weather. The Daytime Running Lamp (DRL) system does not activate the tail lamps and generally may not provide adequate lighting during these conditions. Failure to activate your headlamps under these conditions may result in a collision.

PANEL DIMMER CONTROL



Use to adjust the brightness of the instrument panel and all applicable switches in the vehicle during headlamp and parking lamp operation.

Move the control to the full upright position, past detent, to turn on the interior lamps.

Certain displays like the message center and the climate control unit do not change with the dimmer control till the dash-mounted sensor senses full night conditions.

Note: If the battery is disconnected, discharged, or a new battery is installed, the dimmer switch requires re-calibration. Rotate the dimmer switch from the full dim position to the full Dome/ON position to reset. This will ensure that your displays are visible under all lighting conditions.

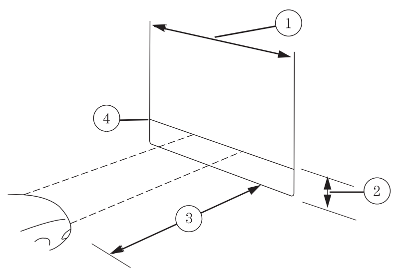
AIMING THE HEADLAMPS

The headlamps on your vehicle are properly aimed at the assembly plant.

If your vehicle has been in an accident the alignment of your headlamps should be checked by your authorized dealer.

Vertical aim adjustment

1. Park the vehicle directly in front of a wall or screen on a level surface, approximately 25 feet (7.6 meters) away.



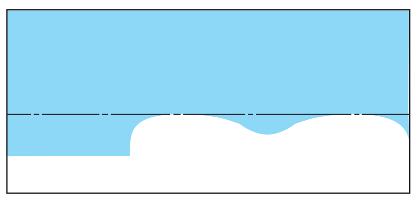
- (1) 8 feet (2.4 meters)
- (2) Center height of lamp to ground
- (3) 25 feet (7.6 meters)
- (4) Horizontal reference line

2. Measure the height of the headlamp bulb center from the ground and mark an 8 foot (2.5 meter) horizontal reference line on the vertical wall or screen at this height (a piece of masking tape works well).

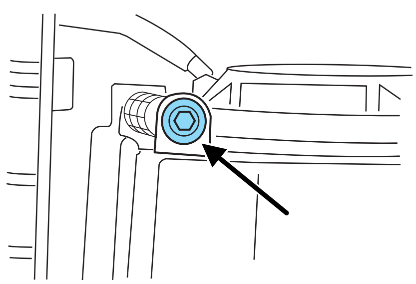
3. Turn on the low beam headlamps to illuminate the wall or screen and open the hood.

To see a clearer light pattern for adjusting, you may want to block the light from one headlamp while adjusting the other.

4. On the wall or screen you will observe an area of high intensity light. The top of the high intensity area should touch the horizontal reference line, if not, the beam will need to be adjusted using the next step.



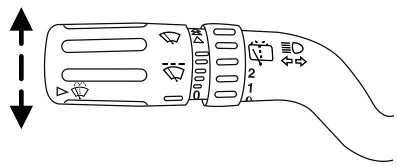
5. Locate the vertical adjuster on each headlamp. Using a Phillips #2 screwdriver, turn the adjuster either clockwise (to adjust down) or counterclockwise (to adjust up). The horizontal edge of the brighter light should touch the horizontal reference line.



6. Close the hood and turn off the lamps.

HORIZONTAL AIM IS NOT REQUIRED FOR THIS VEHICLE AND IS NON-ADJUSTABLE.

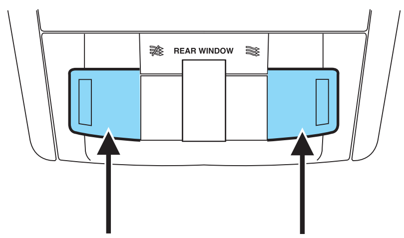
TURN SIGNAL CONTROL ⇦⇨



- Push down to activate the left turn signal.
- Push up to activate the right turn signal.

INTERIOR LAMPS

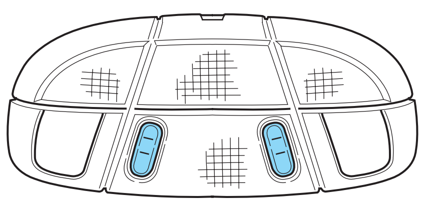
Front row map lamps (if equipped)



To turn on the map lamps, press the outer edge of the clear lens. The front row map lamp lights when:

- any door is opened.
- the instrument panel dimmer switch is rotated until the courtesy lamps come on.
- the remote entry controls are pressed and the ignition is OFF.

Map/dome lamp (if equipped)

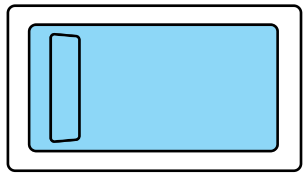


The dome lamp lights when:

- any door is opened,
- the instrument panel dimmer switch is rotated up until the courtesy lamps come on, and
- any of the remote entry controls are pressed and the ignition is OFF.

The map lamps are activated by pressing the controls on either side of the lens.

Rear courtesy lamp



Located in the rear cargo area, the courtesy lamp lights when:

- any door is opened.
- any of the remote entry controls are pressed and the ignition is OFF.

BULB REPLACEMENT

Headlamp Condensation

The headlamps are vented to equalize pressure. When moist air enters the headlamp(s) through the vents, there is a possibility that condensation can occur. This condensation is normal and will clear within 45 minutes of headlamp operation.

Using the right bulbs

Replacement bulbs are specified in the chart below. Headlamp bulbs must be marked with an authorized “D.O.T.” for North America and an “E” for Europe to ensure lamp performance, light brightness and pattern and safe visibility. The correct bulbs will not damage the lamp assembly or void the lamp assembly warranty and will provide quality bulb burn time.

Function	Number of bulbs	Trade number
Headlamp high beam	2	9005
Headlamp low beam	2	H11
Front sidemarker lamp	2	168
Front park/turn signal lamp	2	3157NAK (amber)
Rear sidemarker lamp	2	194
Stop/tail/turn lamp	2	4157 K
* Backup lamp	N/A	LED
License plate lamp	2	C5W
* High-mount brake lamp	N/A	LED

Function	Number of bulbs	Trade number
Fog lamp (if equipped)	2	H11
Front row map lamp	2	1600XB
Second row dome/reading lamp	3	1600XB
Rear courtesy lamp	1	1600XB
Visor vanity lamp - Slide on Rail system (SOR) (if equipped)	2	37
All replacement bulbs are clear in color except where noted.		
To replace all instrument panel lights - see your authorized dealer.		
* To replace these lamps - see your authorized dealer.		

Replacing the interior bulbs

Check the operation of all bulbs frequently.

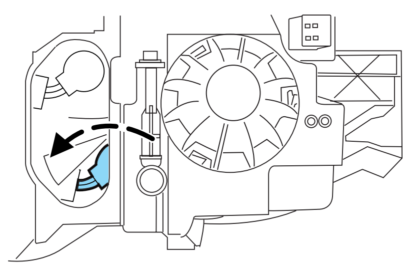
Replacing exterior bulbs

Check the operation of all the bulbs frequently.

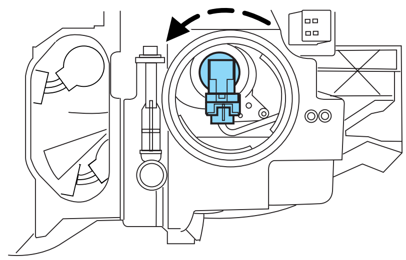
Replacing headlamp bulbs

1. Make sure that the headlamp control is in the OFF position.
2. Open the hood.
3. Reach over the front bolster.

Highbeam bulb



Lowbeam bulb

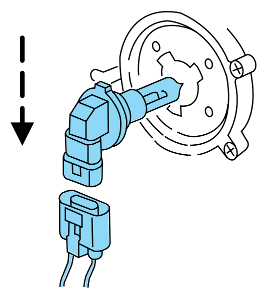


4. Remove the bulb cover. Note: The left side has a side access bulb cover instead of a back access bulb cover

5. Remove the bulb by turning it counterclockwise and then pulling it straight out.

6. Disconnect the electrical connector from the bulb.

7. Connect the electrical connector on the new bulb.



Handle a halogen headlamp bulb carefully and keep out of children's reach. Grasp the bulb only by its plastic base and do not touch the glass. The oil from your hand could cause the bulb to break the next time the headlamps are operated.

8. Insert the glass end of the new bulb into the headlamp assembly. When the grooves in the plastic base are aligned, turn the new bulb clockwise to install.

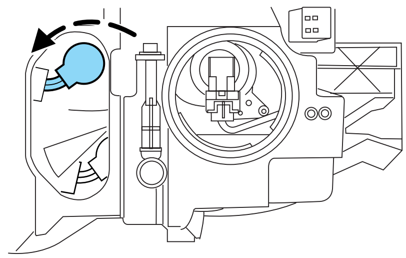
9. Install the bulb cover.

Replacing front parking lamp/turn signal bulbs

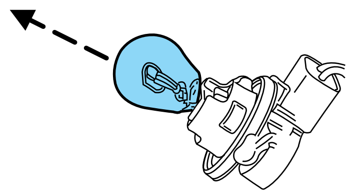
1. Make sure that the headlamp control is in the OFF position.

2. Open the hood.

3. Reach over the front bolster.

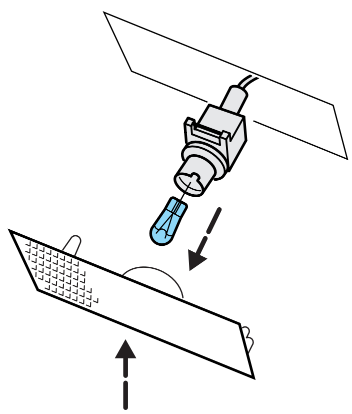


4. Remove the bulb cover.
5. Rotate the bulb socket counterclockwise and remove from the lamp assembly.



6. Carefully pull the bulb out of the socket and push in the new bulb.
7. Install the bulb socket into the lamp assembly and rotate clockwise.
8. Install the bulb cover.

Replacing front side marker bulbs



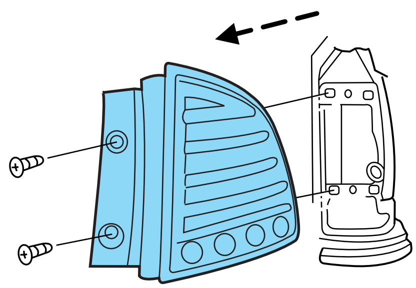
1. Make sure the headlamp control is in the OFF position.
2. Pry the lamp away from the vehicle at the rear of lamp at the wheel opening. (Rotate lamp from the wheel opening away from the vehicle), as the lamp separates from the vehicle, slide the lamp towards the wheel opening to disengage lamp
3. Rotate the lamp clockwise while holding the electrical connector in place with your other hand. After rotating the lamp 90 degrees clockwise, pull and disengage the wire harness and bulb from the lamp.
4. With the bulb exposed, carefully remove the bulb from the socket by grasping the bulb and pulling it away from the wire harness.

Replace with a new bulb, and reverse the removal steps to complete the process.

Replacing tail/stop/turn/sidemarker/backup lamp bulbs

The tail/stop/turn/sidemarker/backup lamp bulbs are located in the same portion of the tail lamp assembly, one just below the other. Follow the same steps to replace either bulb.

Note: Your vehicle is equipped with a backup lamp assembly containing integral multiple light emitting diodes (LED). See your authorized dealer for the replacement LED module.



1. Make sure the headlamp switch is in the OFF position and then open the liftgate to expose the lamp assembly bolts.

2. Remove the two bolts from the lamp assembly.

3. Carefully remove the lamp assembly away from the vehicle by pulling the assembly straight out to expose the bulb socket. DO NOT TIP THE LAMP ASSEMBLY SIDEWAYS.

4. Rotate the bulb socket counterclockwise and remove from lamp assembly.

5. Pull bulb straight out of socket and snap in the new bulb.

6. Install the bulb socket into the lamp assembly and rotate clockwise.

7. Carefully install the tail lamp assembly on the vehicle by securing the lamp assembly with two bolts.

Replacing supplemental liftgate lamp assembly

Your vehicle is equipped with a liftgate lamp assembly containing integral multiple light emitting diodes (LED). If one or more LEDs burn out, the complete lamp module has to be replaced. See your authorized dealer for the replacement LED module.

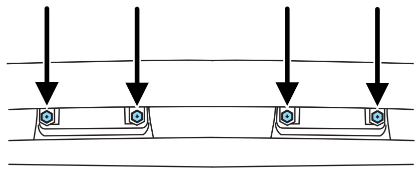
Replacing high-mount brake lamp bulbs

Your vehicle is equipped with an LED center high-mount stop lamp. It is designed to last the life of the vehicle. If replacement is required, see your authorized dealer.

Replacing license plate lamp bulbs

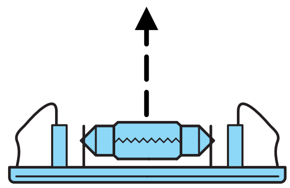
1. Make sure the headlamp switch is in the OFF position.

2. Remove the two screws and the license plate lamp assembly from the liftgate.



3. Carefully pull the bulb straight out from the lamp assembly.

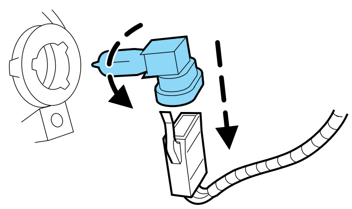
Install new bulb(s) in reverse order.



Replacing fog lamp bulbs

1. Make sure the fog lamp switch is in the OFF position.

2. From underneath the vehicle, remove the splash shield and rotate the harness/bulb assembly counterclockwise, to remove from the fog lamp.

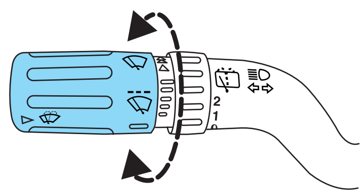


3. Carefully disconnect the bulb from the harness assembly via the two snap clips.

Install the new bulb in reverse order.

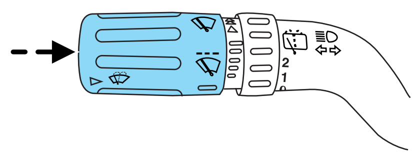
MULTI-FUNCTION LEVER

Windshield wiper: Rotate the end of the control away from you to increase the speed of the wipers; rotate towards you to decrease the speed of the wipers.



Speed dependent wipers: When the wiper control is on, the speed of the wipers will automatically adjust with the vehicle speed. The faster your vehicle is travelling the faster the wipers will go.

Windshield washer: Push the end of the stalk:



- briefly: causes a single swipe of the wipers without washer fluid.
- a quick push and hold: the wipers will swipe three times with washer fluid.
- a long push and hold: the wipers and washer fluid will be activated for up to ten seconds.

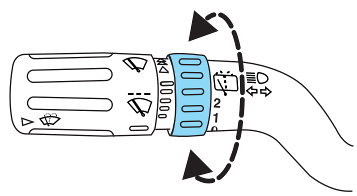
Courtesy wipe feature: One extra wipe will happen a few seconds after washing the front window to clear any water that is dripping down from the top of the windshield caused by the washing.

Note: Do not operate the washer when the washer reservoir is empty. This may cause the washer pump to overheat. Check the washer fluid level frequently. Do not operate the wipers when the windshield is dry. This may scratch the glass, damage the wiper blades and cause the wiper motor to burn out. Before operating the wiper on a dry windshield, always use the windshield washer. In freezing weather, be sure the wiper blades are not frozen to the windshield before operating the wipers.

Windshield wiper features (if equipped with Autolamp feature)

The exterior lamps will turn on with the ignition on, headlamp control in the Autolamp position and the windshield wipers are turned on (for a fixed period of time).

Rear window wiper/washer controls



For rear wiper operation, rotate the rear window wiper and washer control to the desired position. Select:

2 — Normal speed operation of rear wiper.

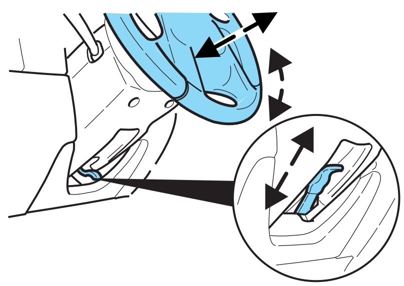
1 — Intermittent operation of rear wiper.

OFF — Rear wiper and washer off.

For rear wash cycle, rotate (and hold as desired) the rear wiper/washer control to either position.

From either position, the control will automatically return to the INT 2 or OFF position.

TILT/TELESCOPE STEERING WHEEL



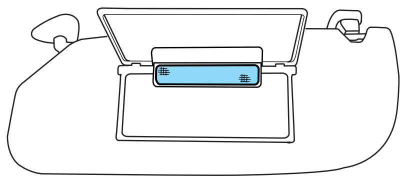
To adjust the steering wheel:

1. Pull the lever down to unlock the steering column.
2. While the lever is in the down position, move the steering wheel up or down and in or out until you find the desired position.
3. While holding the steering wheel in place, pull the lever up to its original position to lock the steering column.

Never adjust the steering wheel when the vehicle is moving.

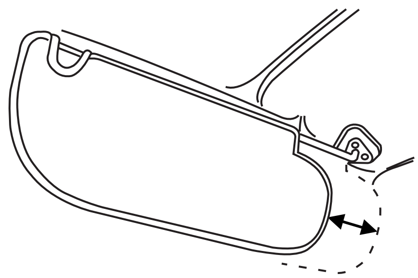
ILLUMINATED VISOR MIRROR

Lift the mirror cover to turn on the visor mirror lamp.



Slide on rod feature

The visor will slide back and forth on the rod for increased sunlight coverage. Rotate the visor towards the side window and extend it rearward for additional sunlight coverage.



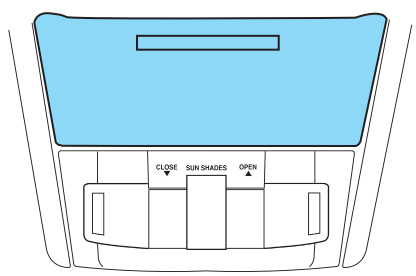
Note: To stow the visor back into the headliner, visor must be retracted before moving it back towards the windshield.

OVERHEAD CONSOLE

The appearance of your vehicle's overhead console will vary according to your option package.

Forward storage bin (if equipped)

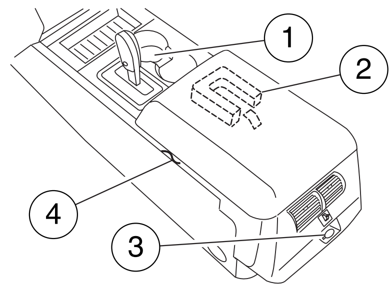
The storage compartment may be used to store a pair of sunglasses. Press the release area on the rear edge of the bin door to open the storage compartment. The door will open to full open position.



CENTER CONSOLE

Your vehicle may be equipped with a variety of console features. These include:

1. Cupholders
2. Tissue box holder (if equipped) (located on underside of console lid)
3. Rear power point
4. Utility compartment with a Secondary storage bin with coin holder slots (on hinges inside utility compartment), power point, AIJ (Audio Input Jack), and a Multi Position Bin Divider (2 positions vertical / 1 position horizontal)

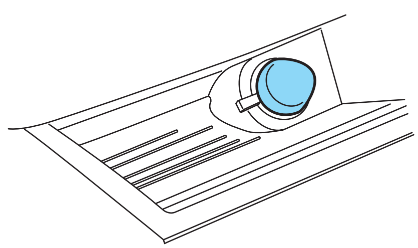


Use only soft cups in the cupholder. Hard objects can injure you in a collision.

AUXILIARY POWER POINT (12VDC)

Power outlets are designed for accessory plugs only. Do not insert any other object in the power outlet as this will damage the outlet and blow the fuse. Do not hang any type of accessory or accessory bracket from the plug. Improper use of the power outlet can cause damage not covered by your warranty.

The auxiliary power point is located on the instrument panel.



A second auxiliary power point is located in the center console utility compartment.

Do not use the power point for operating the cigarette lighter element (if equipped).

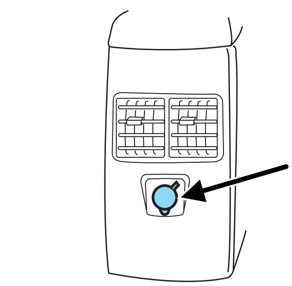
To prevent the fuse from being blown, do not use the power point(s) over the vehicle capacity of 12 VDC/180W. If the power point or cigar lighter socket is not working, a fuse may have blown. Refer to *Fuses and relays* in the *Roadside Emergencies* chapter for information on checking and replacing fuses.

To have full capacity usage of your power point, the engine is required to be running to avoid unintentional discharge of the battery. To prevent the battery from being discharged:

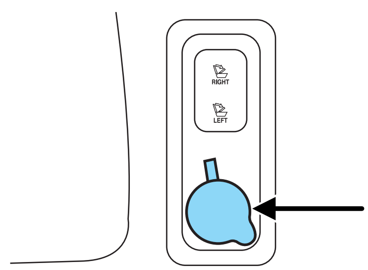
- do not use the power point longer than necessary when the engine is not running,
- do not leave battery chargers, video game adapters, computers and other devices plugged in overnight or when the vehicle is parked for extended periods.

Always keep the power point caps closed when not being used.

A third auxiliary power point is located on the rear side of the center console. The power point is accessible from the rear seats.



The rear auxiliary power point is located on the left rear quarter panel. The power point is accessible from the liftgate or behind the rear seat.



Cigar/Cigarette lighter (if equipped)

Do not plug optional electrical accessories into the cigarette lighter socket.

Do not hold the lighter in with your hand while it is heating, this will damage the lighter element and socket. The lighter will be released from its heating position when it is ready to be used.

Improper use of the lighter can cause damage not covered by your warranty.

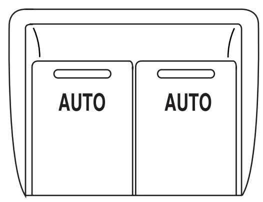
POWER WINDOWS

Do not leave children unattended in the vehicle and do not let children play with the power windows. They may seriously injure themselves.

When closing the power windows, you should verify they are free of obstructions and ensure that children and/or pets are not in the proximity of the window openings.

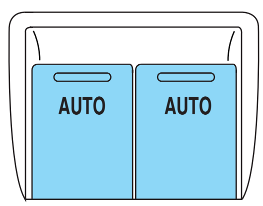
Press and pull the switches to open and close windows.

- Push down (to the first detent) and hold the switch to open.
- Pull up (to the first detent) and hold the switch to close.



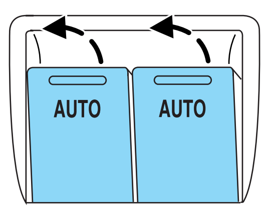
Express down (One Touch Down, Front windows only)

Allows the driver and passenger's window to open fully without holding the control down. Push the switch completely down to the second detent and release quickly. The window will open fully. Momentarily press the switch to any position to stop the window operation.



Express Up (One Touch Up, Front windows only)

Allows the driver and passenger's window to close fully without holding the control up. Pull the switch completely up to the second detent and release quickly. The window will close fully. Momentarily press the switch to any position to stop the window operation.



Note: Refer to the *Locks and Security* chapter for the *Opening front windows and panoramic roof* feature.

Bounce-Back

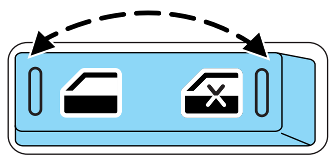
When the window is moving upward and an obstacle or a rough road condition interferes with the window’s movement, the window will automatically reverse direction and move down. This is known as “bounce-back”. If the ignition is turned OFF (without accessory delay being active) during bounce-back, the window will move down until the bounce back position is reached.

Security Override

If during a bounce-back condition, the switch is released to the neutral position, then held in the one touch up position within two seconds after the window reaches the bounce-back position, **the window will travel up with no bounce-back protection.** If the switch is released before the window reaches fully closed or the ignition is turned OFF (without accessory delay being active), the window will stop. Security override can be used if the window movement is restricted in some way, for example, if there is ice on the window or seals.

Window lock

The window lock feature allows only the driver and front passenger to operate the power windows.



To lock out all the window controls (except for the driver and front passenger) press the right side of the control. Press the left side to restore the window controls.

Accessory delay

With accessory delay, the audio system, power windows, and moon roof (if equipped) operate for up to ten minutes after the ignition switch is turned from the ON to the OFF position or until either front door is opened.

INTERIOR MIRROR

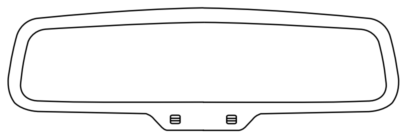
The interior rear view mirror has two pivot points on the support arm which lets you adjust the mirror UP or DOWN and from SIDE to SIDE.

Do not adjust the mirror while the vehicle is in motion.

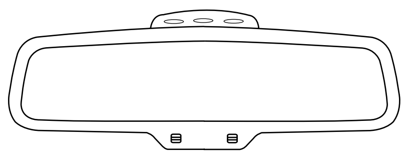
Automatic dimming interior rear view mirror

Your vehicle is equipped with an interior rear view mirror which has an auto-dimming function. The electronic day/night mirror will change from the normal (high reflective) state to the non-glare (darkened) state when bright lights (glare) reach the mirror. When the mirror detects bright light from behind the vehicle, it will automatically adjust (darken) to minimize glare.

Without voice activated Navigation System or SYNC



With voice activated Navigation System or SYNC



The mirror will automatically return to the normal state whenever the vehicle is placed in R (Reverse) to ensure a bright clear view when backing up.

Do not block the sensors on the front and back of the interior rear view mirror since this may impair proper mirror performance.

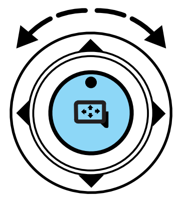
Do not clean the housing or glass of any mirror with harsh abrasives, fuel or other petroleum-based cleaning products.

EXTERIOR MIRRORS

Power side view mirrors 

Do not adjust the mirror while the vehicle is in motion.

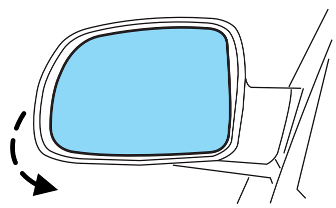
To adjust your mirrors:



1. Rotate the control clockwise to adjust the right mirror and rotate the control counterclockwise to adjust the left mirror.
2. Move the control in the direction you wish to tilt the mirror.
3. Return to the center position to lock mirrors in place.

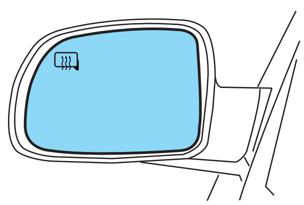
Fold-away mirrors

Pull the side mirrors in carefully when driving through a narrow space, like an automatic car wash.



Heated outside mirrors (if equipped)

Both mirrors are heated automatically to remove ice, mist and fog when the rear window defrost is activated.



Do not remove ice from the mirrors with a scraper or attempt to readjust the mirror glass if it is frozen in place. These actions could cause damage to the glass and mirrors.

SPEED CONTROL

With speed control set, you can maintain a set speed without keeping your foot on the accelerator pedal.

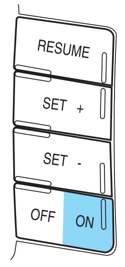
Do not use the speed control in heavy traffic or on roads that are winding, slippery or unpaved.

Setting speed control

The controls for using your speed control are located on the steering wheel for your convenience.

1. Press the ON control and release it.

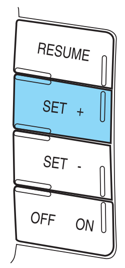
2. Accelerate to the desired speed.



3. Press the SET + control and release it.

4. Take your foot off the accelerator pedal.

5. The indicator light on the instrument cluster will turn on.



Note:

- Vehicle speed may vary momentarily when driving up and down a steep hill.
- If the vehicle speed increases above the set speed on a downhill, you may want to apply the brakes to reduce the speed.
- If the vehicle speed decreases more than 10 mph (16 km/h) below your set speed on an uphill, your speed control will disengage.

Disengaging speed control

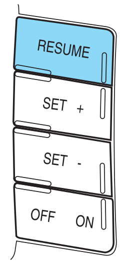
To disengage the speed control:

- Depress the brake pedal.

Disengaging the speed control will not erase previous set speed.

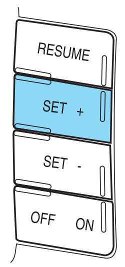
Resuming a set speed

Press the RESUME control and release it. This will automatically return the vehicle to the previously set speed.



Increasing speed while using speed control

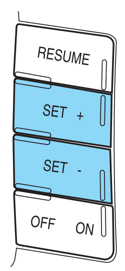
There are two ways to set a higher speed:



- Press and hold the SET + control until you get to the desired speed, then release the control. You can also use the SET + control to operate the Tap-Up function. Press and release this control to increase the vehicle set speed in small amounts by 1 mph (1.6 km/h).
- Use the accelerator pedal to get to the desired speed. When the vehicle reaches that speed press and release the SET + control.

Reducing speed while using speed control

There are two ways to reduce a set speed:



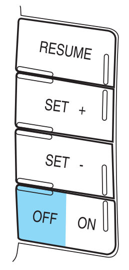
- Press and hold the SET - control until you get to the desired speed, then release the control. You can also use the SET - control to operate the Tap-Down function. Press and release this control to decrease the vehicle set speed in small amounts by 1 mph (1.6 km/h).
- Depress the brake pedal until the desired vehicle speed is reached and press the SET + control.

Turning off speed control

There are two ways to turn off the speed control:

- Depress the brake pedal. This will not erase your vehicle's previously set speed.
- Press the speed control OFF control.

Note: When you turn off the speed control or the ignition, your speed control set speed memory is erased.



STEERING WHEEL CONTROLS

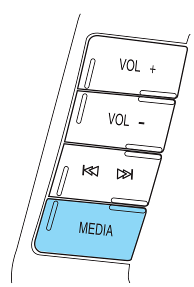
Driving while distracted can result in loss of vehicle control, accident and injury. Ford strongly recommends that drivers use extreme caution when using any device that may take their focus off the road. The drivers primary responsibility is the safe operation of their vehicle. Only use steering wheel controls and other devices not essential to the driving task when it is safe to do so.

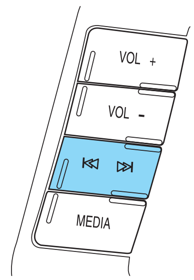
These controls allow you to operate some radio control features.

Radio control features

Press MEDIA to select:

- AM, FM1, FM2, or CD
- DVD/FES (if equipped)
- SAT1, SAT2 or SAT3 (Satellite Radio mode if equipped).
- LINE IN (Auxiliary input jack)





In Radio mode:

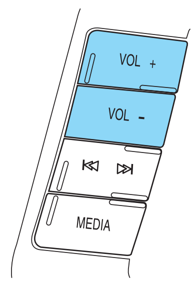
- Press ⏮ ⏭ to access the next/previous preset station.

In CD mode:

- Press ⏮ ⏭ to listen to the next track on the disc.

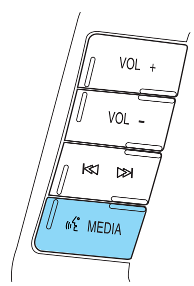
In Satellite radio mode (if equipped):

- Press ⏮ ⏭ to advance through preset channels.



In any mode:

- Press VOL + or - to adjust the volume.



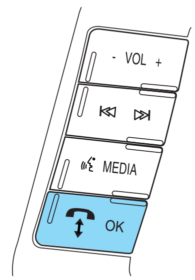
Navigation system hands free control features (if equipped)

Press and hold control briefly until the voice icon appears on the Navigation display to use the voice command feature.

Press to complete a voice command.

For further information on the Navigation system, refer to the *Navigation supplement.*

SYNC system hands free control feature (if equipped)



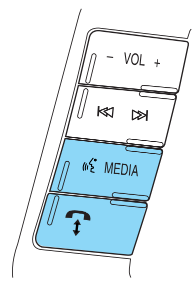
Press briefly to use the voice command feature. You will hear a tone and LISTENING will appear in the radio display. Press and hold to exit voice command.

Press to activate phone mode or answer a phone call. Press and hold to end call or exit phone mode.

Press OK to confirm your selection.

For further information on the SYNC system, refer to the *SYNC supplement*.

Navigation system/SYNC hands free control features (if equipped)



Press the control briefly until the voice icon appears on the Navigation display to use the voice command feature.

Press to activate phone mode or answer a phone call. Press and hold to exit phone mode or end call.

For further information on the Navigation system/SYNC system, refer to the *Navigation and SYNC supplements*.

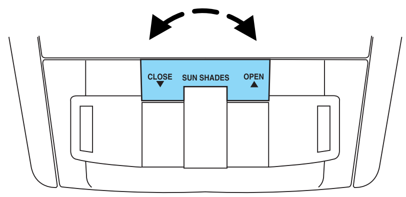
PANORAMIC VISTA ROOF™ AND POWER SUNSHADES (IF EQUIPPED)

The panoramic Vista Roof™ and power sunshade controls are located on the overhead console.

> Do not let children play with the panoramic Vista Roof™ and power sunshade or leave children unattended in the vehicle. They may seriously hurt themselves.

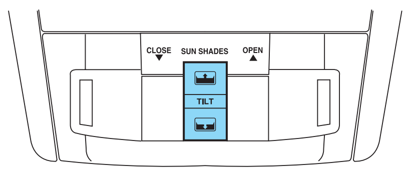
> When closing the panoramic Vista Roof™ and power sunshade, you should verify that it is free of obstructions and ensure that children and/or pets are not in the proximity of the panoramic Vista Roof™ and power sunshade opening.

Note: Do not attempt to move the panoramic power sunshades manually or sunshade damage or malfunction may occur. The sunshade track clips are designed to release the sunshade crossbar in order to prevent damage to the system. If this occurs the sunshade crossbar ends may just need to be slid back into position to regain proper function. See your authorized dealer for proper panoramic Vista Roof™ or sunshade operating, diagnostic or repair instructions.



To operate power sunshades: Press the OPEN portion of the control to open the sunshade. The front and rear sunshades open simultaneously. Press the CLOSE portion of the control until the sunshades stop at the "Express close" position. Firmly press and hold the control again to fully close the front and rear sunshades.

Note: Closing the sunshade will also close the panoramic Vista Roof™, if open.



To open the panoramic Vista Roof™: Press and hold to open manually. The panoramic Vista Roof™ is equipped with a one-touch open feature. Firmly press and release the rear control. The panoramic Vista Roof™ will open to the "comfort" position. Firmly press and release the control again to fully open. To stop the one-touch open feature press any control again.

Note: Opening the panoramic Vista Roof™ will also open the sunshades, if closed.

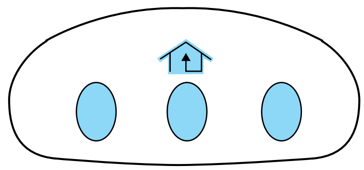
Note: The panoramic Vista Roof™ will open to the **"comfort"** position first before opening all the way. The "comfort" position helps to alleviate rumbling wind noise which may happen in the vehicle with the roof fully opened.

To close the panoramic Vista Roof™: Press and release the front control until the glass panel stops at the "Express close" position. Firmly press and hold the control again to fully close.

To vent the panoramic Vista Roof™: From the closed position, press and release the TILT control. To vent the panoramic Vista Roof™ from any position, press and hold the TILT control. To close, press and hold the front control.

Note: If the panoramic Vista Roof™ is excessively operated, the glass and shade motors will automatically go into a fail-safe jog mode (manual intermittent operation) to prevent overheating and/or damage to the motor. The motors will revert back to normal operation after a period of idle time.

HOMELINK® WIRELESS CONTROL SYSTEM (IF EQUIPPED)



The HomeLink® Wireless Control System, located on the driver's visor, provides a convenient way to replace up to three hand-held transmitters with a single built-in device. This feature will learn the radio frequency codes of most transmitters to operate garage doors, entry gate operators, security systems, entry door locks, and home or office lighting.

When programming your HomeLink® Wireless Control System to a garage door or gate, be sure that people and objects are out of the way to prevent potential injury or damage.

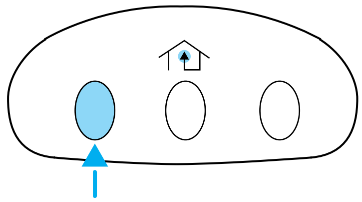
Do not use the HomeLink® Wireless Control System with any garage door opener that lacks safety stop and reverse features as required by U.S. federal safety standards (this includes any garage door opener model manufactured before April 1, 1982). A garage door which cannot detect an object, signaling the door to stop and reverse, does not meet current U.S. federal safety standards. For more information, contact HomeLink® at: **www.homelink.com** or **1–800–355–3515.**

Retain the original transmitter for use in other vehicles as well as for future programming procedures (i.e. new HomeLink® equipped vehicle purchase). It is also suggested that upon the sale of the vehicle, the programmed Homelink® buttons be erased for security purposes, refer to *Programming* in this section.

Programming

Do not program HomeLink® with the vehicle parked in the garage.

Note: Your vehicle may require the ignition switch to be turned to the ACC position for programming and/or operation of the HomeLink®. It is also recommended that a new battery be placed in the hand-held transmitter of the device being programmed to HomeLink® for quicker training and accurate transmission of the radio-frequency signal.



1. Position the end of your hand-held transmitter 1–3 inches (2–8 cm) away from the HomeLink® button you wish to program (located on your visor) while keeping the indicator light in view.

2. Simultaneously press and hold both the chosen HomeLink® and hand-held transmitter buttons until the HomeLink® indicator light changes from a slow to a rapidly blinking light. Now you may release both the HomeLink® and hand-held transmitter buttons.

Note: Some entry gates and garage door openers may require you to replace Step 2 with procedures noted in the "Gate Operator and Canadian Programming" in this section for Canadian residents.

3. Firmly **press, hold for five seconds and release** the programmed HomeLink® button up to two separate times to activate the door. If the door does not activate, press and hold the just-trained HomeLink® button and observe the indicator light.

- If the indicator light **stays on constantly, programming is complete** and your device should activate when the HomeLink® button is pressed and released.
- If the indicator light blinks **rapidly for two seconds and then turns to a constant light continue with "Programming" Steps 4 through 6** to complete programming of a rolling code equipped device (most commonly a garage door opener).

4. At the garage door opener receiver (motor-head unit) in the garage, locate the "learn" or "smart" button (usually near where the hanging antenna wire is attached to the unit).

5. Firmly press and release the "learn" or "smart" button. (The name and color of the button may vary by manufacturer.)

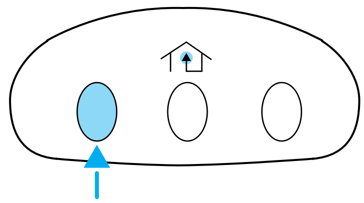
Note: There are 30 seconds in which to initiate Step 6.

6. Return to the vehicle and firmly **press, hold for two seconds and release** the programmed HomeLink® button. Repeat the **press/hold/release** sequence again and, depending on the brand of the garage door opener (or other rolling code equipped device), repeat this sequence a third time to complete the programming.

HomeLink® should now activate your rolling code equipped device. To program additional HomeLink® buttons begin with Step 1 in the "Programming" section. For questions or comments, please contact HomeLink® at **www.homelink.com** or **1–800–355–3515.**

Gate Operator & Canadian Programming

During programming, your hand-held transmitter may automatically stop transmitting — not allowing enough time for HomeLink® to accept the signal from the hand-held transmitter.



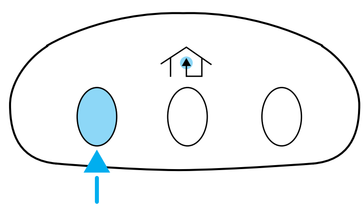
After completing Step 1 outlined in the *"Programming"* section, replace Step 2 with the following:

Note: If programming a garage door opener or gate operator, it is advised to unplug the device during the "cycling" process to prevent overheating.

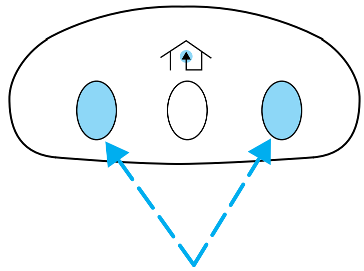
- Continue to press and hold the HomeLink® button (note Step 2 in the "Programming" section) while you press and release — **every two seconds** ("cycle") your hand-held transmitter until the frequency signal has been accepted by the HomeLink®. The indicator light will flash slowly and then rapidly after HomeLink® accepts the radio frequency signal.
- Proceed with Step 3 in the "Programming" section.

Operating the HomeLink® Wireless Control System

To operate, simply press and release the appropriate HomeLink® button. Activation will now occur for the trained product (garage door, gate operator, security system, entry door lock, or home or office lighting etc.). For convenience, the hand-held transmitter of the device may also be used at any time. In the event that there are still programming difficulties, contact HomeLink® at **www.homelink.com** or **1–800–355–3515.**



Erasing HomeLink® buttons



To erase the three programmed buttons (individual buttons cannot be erased):

- Press and hold the two outer HomeLink® buttons until the indicator light begins to flash-after 20 seconds. Release both buttons. Do not hold for longer that 30 seconds.

HomeLink® is now in the train (or learning) mode and can be programmed at any time beginning with Step 1 in the *"Programming"* section.

Reprogramming a single HomeLink® button

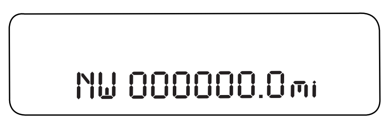
To program a device to HomeLink® using a HomeLink® button previously trained, follow these steps:

1. Press and hold the desired HomeLink® button. **Do NOT** release the button.

2. The indicator light will begin to flash after 20 seconds. Without releasing the HomeLink® button, follow Step 1 in the "Programming" section.

For questions or comments, contact HomeLink® at **www.homelink.com** or **1–800–355–3515.**

MESSAGE CENTER

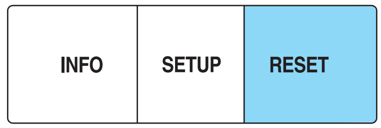


With the ignition in the RUN position, the message center, located on your instrument cluster, displays important vehicle information **through a constant monitor of vehicle systems.** You may select display features on the message center for a display of status. The system will also notify you of potential vehicle problems with a display of system warnings followed by a long indicator chime.

Selectable features

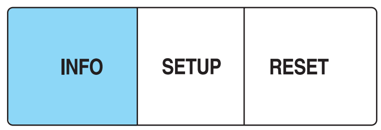
Reset

Press this control to select and reset functions shown in the INFO menu and SETUP menu.



Info menu

This control displays the following control displays:



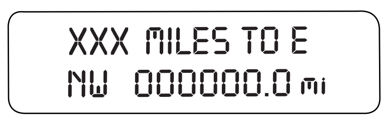
- Odometer
- Trip Odometer A or B
- Distance to Empty
- Average Fuel Economy
- Average Speed
- Compass
- Trip Elapsed Drive Time 1 or 2

Odometer/Trip odometer

Refer to *Gauges* in the *Instrument Cluster* chapter.

Distance to empty (DTE)

Selecting this function from the INFO menu estimates approximately how far you can drive with the fuel remaining in your tank under normal driving conditions.



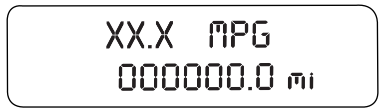
Remember to turn the ignition OFF when refueling to allow this feature to correctly detect the added fuel.

The DTE function will display LOW FUEL LEVEL when you have approximately 50 miles (80 km) to empty. If you RESET this warning message, this display will return within 10 minutes.

DTE is calculated using a running average fuel economy, which is based on your recent driving history of 500 miles (800 km). This value is not the same as the average fuel economy display. The running average fuel economy is reinitialized to a factory default value if the battery is disconnected.

Average fuel economy (AFE)

Select this function from the INFO menu to display your average fuel economy in miles/gallon or liters/100 km.



If you calculate your average fuel economy by dividing 100 miles traveled by gallons of fuel used (kilometers traveled by liters used), your figure may be different than displayed for the following reasons:

- Your vehicle was not perfectly level during fill-up
- Differences in the automatic shut-off points on the fuel pumps at service stations
- Variations in top-off procedure from one fill-up to another
- Rounding of the displayed values to the nearest 0.1 gallon (liter)

1. Drive the vehicle at least 5 miles (8 km) with the speed control system engaged to display a stabilized average.

2. Record the highway fuel economy for future reference.

It is important to press the RESET control (press and hold RESET for 2 seconds in order to reset the function) after setting the speed control to get accurate highway fuel economy readings.

For more information refer to *Fuel Information* in the *Maintenance and Specifications* chapter.

Average Speed

Select this function from the INFO menu to display AVERAGE SPEED and press the RESET control (press and hold RESET for 2 seconds in order to reset the function). Your average speed from that point will be displayed until RESET is pressed and held for two seconds again.

Compass display

The compass reading may be affected when you drive near large buildings, bridges, power lines and powerful broadcast antenna. Magnetic or metallic objects placed in, on or near the vehicle may also affect compass accuracy.

Usually, when something affects the compass readings, the compass will correct itself after a few days of operating your vehicle in normal conditions. If the compass still appears to be inaccurate, a manual calibration may be necessary. Refer to *Compass zone/calibration adjustment.*

Most geographic areas (zones) have a magnetic north compass point that varies slightly from the northerly direction on maps. This variation is four degrees between adjacent zones and will become noticeable as the vehicle crosses multiple zones. A correct zone setting will eliminate this error. Refer to *Compass zone/calibration adjustment*.

Compass zone/calibration adjustment

Perform this adjustment in an open area free from steel structures and high voltage lines.

For optimum calibration, turn off all electrical accessories (heater/air conditioning, wipers, etc.) and make sure all vehicle doors are shut.

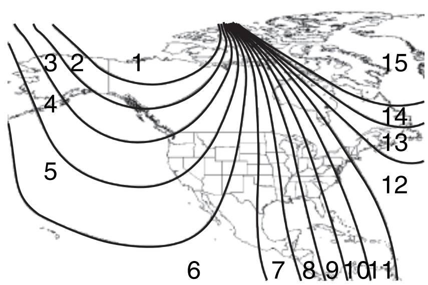
1. Turn ignition to the RUN position.

2. Start the engine.

3. Press the INFO button repeatedly until the Compass and Odometer are displayed. (Do not select Trip, DTE, or AFE. The top of the message center must be blank).

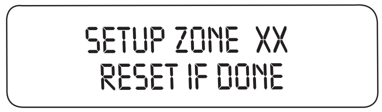
Note: If the compass displays ″CAL 000000.0 mi″ instead of heading information, the compass will need to be calibrated. Slowly drive the vehicle in a circle (less than 3 mph [5 km/h]) until the ″CAL″ indicator changes to display compass heading. This may take up to 3 circles to complete calibration.

4. Determine your magnetic zone by referring to the zone map.



5. Press and hold the RESET until the message center display changes to show the current zone setting.

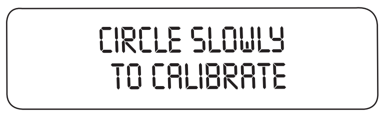
6. Release the RESET control, then slowly press RESET down again.



7. Press the SETUP control repeatedly until the correct zone setting for your geographic location is displayed on the message center. To exit the zone setting mode press and release the RESET control.

8. Press the RESET control to start the compass calibration function.

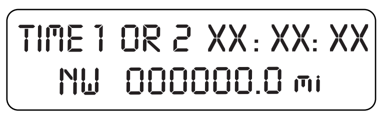
9. Slowly drive the vehicle in a circle (less than 3 mph [5 km/h]) until the CIRCLE SLOWLY TO CALIBRATE indicator changes to CALIBRATION COMPLETED. This will take up to three circles to complete calibration.



10. The compass is now calibrated.

Trip elapsed drive time

Select this function from the INFO menu to display a timer.

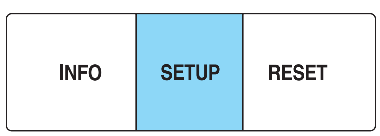


To operate the Trip Elapsed Drive Time perform the following:

1. Press and release RESET in order to start the timer.
2. Press and release RESET to pause the timer.
3. Press and hold RESET for 2 seconds in order to reset the timer.

Setup menu

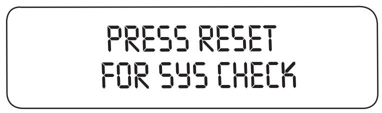
Press this control for the following displays:



- System Check
- Units (English/Metric)
- Autolamp
- Autolock
- Autounlock

- Power Liftgate (if equipped)
- Easy entry/exit seat (if equipped)
- Reverse sensing system (Park Assist) (if equipped)
- Language

System check



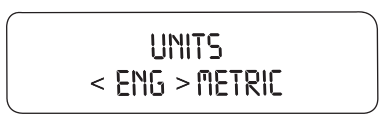
Selecting this function from the SETUP menu causes the message center to cycle through each of the systems being monitored. For each of the monitored systems, the message center will indicate either an OK message or a warning message for two to four seconds.

Pressing the RESET control cycles the message center through each of the systems being monitored.

The sequence of the system check report is as follows:

1. DOORS CLOSED
2. ENGINE TEMPERATURE
3. OIL PRESSURE
4. BRAKE FLUID LEVEL
5. WASHER FLUID LEVEL
6. FUEL LEVEL
7. DISTANCE TO EMPTY

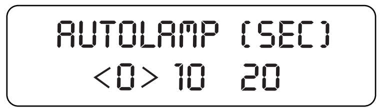
Units (English/Metric)



1. Select this function from the SETUP menu for the current units to be displayed.
2. Press the RESET control to change from English to Metric.

Autolamp delay

This feature keeps your headlights on for up to three minutes after the ignition is switched off.

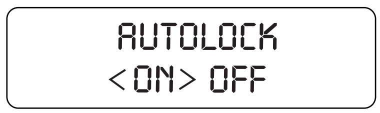


1. To disable/enable the autolamp delay feature, select this function from the SETUP control for the current display mode.

2. Press the RESET control to select the new Autolamp delay values of 0, 10, 20, 30, 60, 90, 120 or 180 seconds.

Autolock

This feature automatically locks all vehicle doors when the vehicle is shifted into any gear, putting the vehicle in motion.

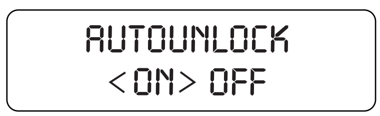


1. To disable/enable the autolock feature, select this function from the SETUP control for the current display mode.

2. Press the RESET control to turn the autolock ON or OFF.

Autounlock

This feature automatically unlocks all vehicle doors when the driver's door is opened within 10 minutes of the ignition being turned off.



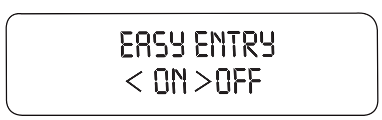
1. To disable/enable the autounlock feature, select this function from the SETUP MENU.

2. Press and hold the RESET control switch to turn the autounlock ON or OFF.

3. Press the RESET control switch for the next SETUP MENU item or wait for more than 4 seconds to return to the INFO MENU.

Easy entry/exit (if equipped)

This feature automatically moves the drivers seat backwards for easy exit from the vehicle.



1. To disable/enable the easy entry/exit seat feature, select this function from the SETUP control for the current display mode.

2. Press the RESET control to turn the easy entry/exit seat ON or OFF.

Power Liftgate (if equipped)

This feature allows users to open/close the rear liftgate at the touch of a button.

1. To disable/enable the power liftgate feature, select this function from the SETUP control for the current display mode.

POWER LIFTGATE
ON <OFF>

2. Press the RESET control to turn the power liftgate ON or OFF.

Reverse Sensing System (Park aid) (if equipped)

This feature sounds a warning tone to warn the driver of obstacles near the rear bumper, and functions only when R (Reverse) gear is selected.

1. To disable/enable the reverse sensing system feature, select this function from the SETUP menu or put the vehicle in R (Reverse).

REAR PARK AID
< ON > OFF

2. Press the RESET control to turn the rear park aid OFF or ON.

Language

1. Select this function from the SETUP menu for the current language to be displayed.

ENGLISH
RESET FOR NEW

2. Pressing the RESET control cycles the message center through each of the language choices.

FOR ENGLISH
HOLD RESET

Selectable languages are English, Spanish and French.

3. Press and hold the RESET control for 2 seconds to set the language choice.

SET TO
ENGLISH

System warnings

System warnings alert you to possible problems or malfunctions in your vehicle's operating systems.

In the event of a multiple warning situation, the message center will cycle the display to show all warnings by displaying each one for several seconds.

The message center will display the last selected feature if there are no more warning messages. This allows you to use the full functionality of the message center after you acknowledge the warning by pressing the RESET control and clearing the warning message.

Warning messages that have been reset are divided into three categories:

- They will not disappear until a condition is changed.
- They will reappear on the display ten minutes from the reset.
- They will not reappear until an ignition LOCK/OFF-ON cycle has been completed.

This acts as a reminder that these warning conditions still exist within the vehicle.

Warnings	Status
Driver door ajar	Warning cannot be reset (PLEASE CLOSE DOOR) will be displayed
Passenger door ajar	
Rear left door ajar	
Rear right door ajar	
Park brake engaged	RELEASE PARK BRAKE will be displayed
Low fuel level	Warning returns after 10 minutes
Check brake system	
Low brake fluid level	Warning returns after the ignition key is turned from LOCK/OFF to RUN
Liftgate ajar	
Low tire pressure	
Tire pressure monitor fault	
Tire pressure sensor fault	
Compass data error	
Integrated key programming status	Maximum number of Integrated Keys exceeded

DRIVER DOOR AJAR. Displayed when the driver's door is not completely closed.

PASSENGER DOOR AJAR. Displayed when the passenger side door is not completely closed.

REAR LEFT DOOR AJAR. Displayed when the rear left door is not completely closed.

REAR RIGHT DOOR AJAR. Displayed when the rear right door is not completely closed.

PARK BRAKE ENGAGED. Displayed when the manual park brake is set, the engine is running and the vehicle is driven more than 3 mph (5 km). If the warning stays on after the park brake is released, contact your authorized dealer as soon as possible.

LOW FUEL LEVEL. Displayed as an early reminder of a low fuel condition.

CHECK BRAKE SYSTEM. Displayed when the brake system needs servicing. If the warning stays on or continues to come on, contact your authorized dealer as soon as possible.

LOW BRAKE FLUID LEVEL. Indicates the brake fluid level is low and the brake system should be inspected immediately. Refer to *Brake fluid reservoir* in the *Maintenance and Specifications* chapter.

LIFTGATE AJAR. Displayed when the liftgate is not completely closed.

LOW TIRE PRESSURE. Displayed when one or more tires on your vehicle have low tire pressure. Refer to *Inflating your tires* in the *Tires, Wheels and Loading* chapter.

TIRE PRESSURE MONITOR FAULT. Displayed when the Tire Pressure Monitoring System is malfunctioning. If the warning stays on or continues to come on, have the system inspected by your authorized dealer.

TIRE PRESSURE SENSOR FAULT. Displayed when a tire pressure sensor is malfunctioning, or your spare tire is in use. For more information on how the system operates under these conditions, refer to *Tire pressure monitoring system* in the *Tires, Wheels and Loading* chapter. If the warning stays on or continues to come on, have the system inspected by your authorized dealer.

COMPASS DATA ERROR. Displayed when the compass is not operating properly. If the warning stays on or continues to come on, contact your authorized dealer as soon as possible.

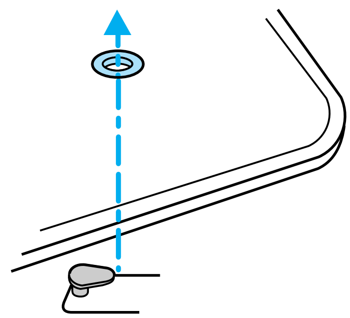
INTEGRATED KEY PROGRAMMING STATUS. Displayed when an attempt is made to program a fifth Integrated Key to the Remote Key Entry System. For more information on Integrated Key, refer to *Locks and Security* chapter in this manual.

POSITIVE RETENTION FLOOR MAT (IF EQUIPPED)

Do not install additional floor mats on top of the factory installed floor mats as they may interfere with the accelerator or the brake pedals.

To install floor mats that have a retention post:

Position the floor mat so that the eyelet is over the pointed end of the retention post and rotate forward to lock in. Make sure that the mat does not interfere with the operation of the accelerator or the brake pedal. To remove the floor mat, reverse the installation procedure.

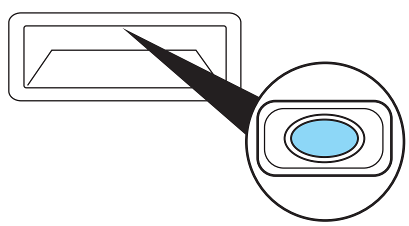


MANUAL LIFTGATE (IF EQUIPPED)

The liftgate cargo area is only intended for cargo, not for passengers. You can open and close the liftgate from outside the vehicle. It cannot be opened from inside the cargo area.

Note: In the event of a power failure, the latch can be accessed and released through the access panel in the liftgate trim.

To open, push the control button located above the liftgate outside handle to unlatch the liftgate, then pull on the outside handle to access the cargo area.



- Exercise care when opening or closing the liftgate in a garage or other enclosed area. The liftgate could be damaged against a garage door, low ceiling or wall.
- Do not hang anything (bike rack, etc.) from the spoiler/glass or liftgate. Doing so could cause serious damage to the liftgate and its components.
- Do not leave the liftgate open while driving. Doing so could cause serious damage to the liftgate and its components as well as allowing carbon monoxide to enter the vehicle.

Make sure that the liftgate is closed to prevent exhaust fumes from being drawn into the vehicle. This will also prevent passengers and cargo from falling out. If you must drive with the liftgate door open, keep the vehicle well ventilated so outside air comes into the vehicle.

Liftgate ajar signal

If the liftgate is not fully latched, you will receive a "LIFTGATE AJAR" message on the instrument panel. If you see this message, check the liftgate door to ensure it is fully latched.

POWER LIFTGATE (PLG) (IF EQUIPPED)

You can power open or close the liftgate with the following controls.

- instrument panel control button
- integrated keyhead transmitter button
- outside liftgate control button
- control button in the rear cargo area

Opening and Closing the power liftgate:

WARNING: Make sure all persons are clear of the power liftgate area before using the power liftgate control.

Keep keys out of reach of children. Do not allow children to play near an open or moving power liftgate.

The liftgate will only operate with the vehicle in P (Park).

When the liftgate is being power closed, a chime will sound three times as the liftgate begins to power close. A single chime indicates a problem with the close request, caused by:

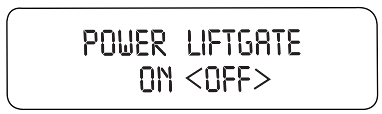
- the ignition is in Run and the transmission is not in Park
- or the Battery Voltage is below the minimum operating voltage
- or the vehicle speed is at or above 3 mph (5 kph)

A fast continuous chime during power closing indicates there is an excessive load on the liftgate (snow, bike rack, etc.) or a possible strut malfunction. If any excessive load is removed and you still have a faster chime, have the system serviced immediately by your authorized dealer.

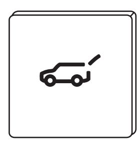
Do not attempt to manually force the liftgate to travel faster than the power system will permit. This will activate the obstacle detection feature.

Exercise care, when power opening or closing the liftgate in a garage or other enclosed area with a low ceiling or close to a wall/garage door. The liftgate could be damaged from the contact. Disable the power feature and operate the liftgate manually if necessary.

When power operating the liftgate at temperatures below 32° F (0° C), the liftgate may stop about 5 inches (12.7 cm) from the full open position. The liftgate can be fully opened by pushing it upward to the maximum open position.

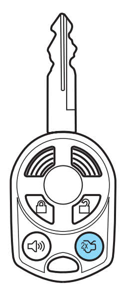


The Power Liftgate feature can be enabled or disabled using the Message Center. With the control in the OFF position, power operation is disabled from the liftgate handle button and from the rear cargo area button. The integrated keyhead transmitter and instrument panel switch will operate the liftgate regardless of the position state of the Message Center. Refer to the *Message Center* section in this chapter.



To power open or close the liftgate from the Instrument panel:

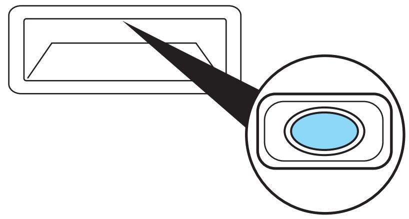
Press the button, located to the left of the steering column, once to power open or close the liftgate.



To power open or close the liftgate with the integrated keyhead transmitter:

Press 2x twice within 3 seconds to power open or close the liftgate. Refer to *Remote entry system* in the *Locks and Security* chapter.

To power open the liftgate with outside liftgate control button:

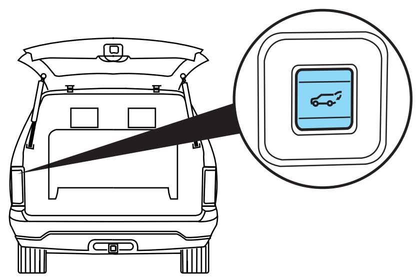


1. To open, unlock the liftgate with the integrated keyhead transmitter or power door unlock control.

2. Push the control button located above the liftgate outside handle to unlatch and power open the liftgate.

Note: For the best performance allow the power system to open the liftgate after pushing the control. Manually pushing or pulling the liftgate may activate the system's obstacle detection feature and stop the power system.

To power close the liftgate with the rear cargo area control button:



Press and release the control on the left rear quarter panel to close the liftgate.

Note: The rear cargo area control button is disabled when the liftgate is latched.

Warning, keep clear of the liftgate when activating the rear switch.

Note: The liftgate movement direction can be reversed with a second press of the instrument panel, or the rear cargo area control button, or a second double press of the integrated keyhead transmitter button.

To manually operate the liftgate:

1. Disable the liftgate power function. Refer to the *Message Center* in this chapter.

2. Open and close the liftgate as you would a standard liftgate. Refer to the *Manual liftgate* in this chapter.

Note: In case of operation in extreme cold -40° F (-40° C), or on extreme inclines, manual operation of the liftgate is suggested.

Obstacle detection:

The power liftgate system is equipped with an obstacle detection feature.

If the power liftgate is closing, the system will reverse to full open when it detects an obstacle. A chime will sound 3 times when an obstacle is detected as the liftgate begins to reopen. Once the obstacle is removed, the liftgate can be closed under power.

If the power liftgate is opening, the system will stop and a chime will sound 3 times when an obstacle is detected. Once the obstacle is removed, the liftgate can again be operated normally.

Resetting the power liftgate:

The power liftgate may not operate properly and may need to be reset if any of these conditions occur:

- a low voltage or dead battery or disconnected battery
- the liftgate has been left open or unlatched for more than six (6) hours

To reset the power liftgate:

1. Ensure the battery is properly connected and charged.

2. Manually close and fully latch the liftgate.

3. Power open the liftgate by using the integrated keyhead transmitter, or the instrument panel control button. The outside liftgate control button can also be used if the power liftgate is enabled in the Message Center.

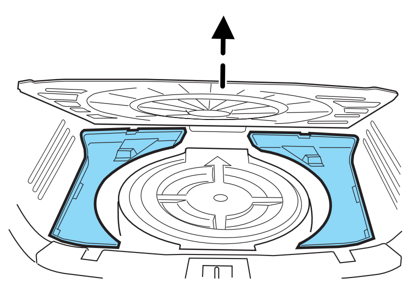
Note: If the battery is disconnected, discharged, or a new battery is installed, the power liftgate needs to be power opened to the full open position to reset the power liftgate positions.

CARGO MANAGEMENT SYSTEM (IF EQUIPPED)

The cargo management system consists of storage compartments located in the floor of the rear cargo area.

1. To open, lift the release handle and the lid.

2. To close, lower the lid.



LUGGAGE RACK (IF EQUIPPED)

The load **must be** placed directly on the luggage rack. The vehicle's roof panel **is not** designed to carry a load.

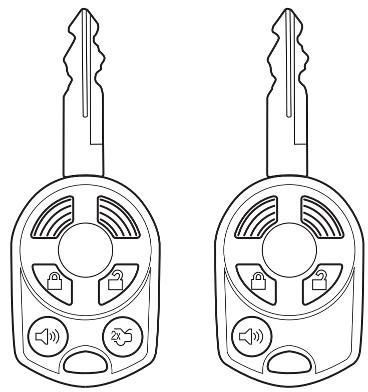
When loading the luggage rack, it is recommended to evenly distribute the load, as well as maintain a low center of gravity. Ensure that the load is securely fastened. The maximum load for the roof rack is 100 lb (44 kg).

Your fuel economy will decrease when you drive with items on the luggage rack. When the rack is loaded, check the tightness of the load before driving and at each refueling stop.

Loaded vehicles, with a higher center of gravity, may handle differently than unloaded vehicles. Extra precautions, such as slower speeds and increased stopping distance, should be taken when driving a heavily loaded vehicle.

KEYS

Your vehicle is equipped with two Integrated Keyhead Transmitters (IKTs). The IKT functions as both a programmed ignition key that operates all the locks and starts the vehicle, and a remote keyless entry transmitter. Vehicles with a power liftgate will have a four-button IKT while vehicles without a power liftgate will have a three-button IKT.



Your IKTs are programmed to your vehicle; using a non-programmed key will not permit your vehicle to start. If you lose your authorized dealer supplied IKTs, replacement IKTs are available through your authorized dealer. Standard SecuriLock™ keys without remote entry transmitter functionality can also be purchased from your authorized dealer if desired.

Always carry a spare key with you in case of an emergency.

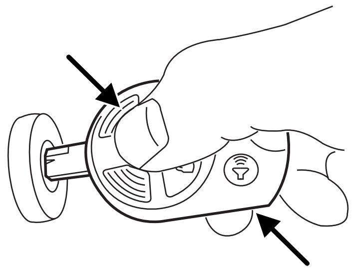
For more information regarding programming replacement IKTs, refer to the *SecuriLock™ passive anti-theft system* section later in this chapter.

Note: Your vehicle’s IKTs were issued with an adhesive security label on them that provides important vehicle key cut information. It is recommended that you maintain the label in a safe place for future reference, such as the inside front cover of this *Owner’s Guide*.

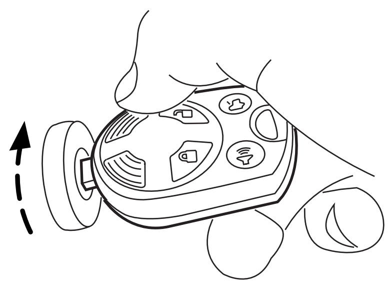
Recommended handling of the Integrated Keyhead Transmitter (IKT)

To avoid inadvertently activating the remote entry functions of your vehicle, it is recommended that the Integrated Keyhead Transmitter (IKT) be handled properly when starting and turning off your vehicle.

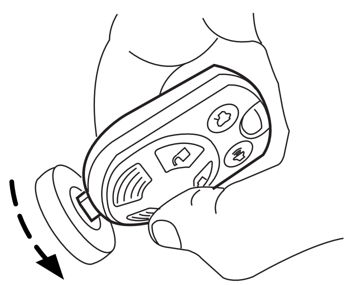
When inserting the IKT into the ignition cylinder, place your thumb on the center thumb rest of the IKT and forefinger on the logo badge on the opposite side.



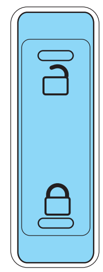
To gain more leverage when rotating the IKT in the ignition lock cylinder, you can readjust the location of your thumb to grasp the IKT on the outer edge next to the unlock control.



Likewise, when rotating the IKT to the 1 (LOCK) position in the ignition lock cylinder, the bottom edge of the IKT adjacent to the lock control can be utilized.



POWER DOOR LOCKS



- Press the control to unlock all doors.
- Press the control to lock all doors.

Smart locks

This feature helps to prevent you from locking yourself out of the vehicle if your key is still in the ignition.

When you open one of the front doors or the liftgate and you lock the vehicle with the power door lock control (on the driver or passenger door trim panel), all the doors will lock, then all doors will automatically unlock reminding you that your key is still in the ignition.

The vehicle can still be locked, with the key in the ignition, by locking the driver's door with a key, using the lock control on the remote entry transmitter portion of your Integrated Keyhead Transmitter, or locking the vehicle with the keyless entry keypad.

If both front doors and the liftgate are closed, the vehicle can be locked from any method, regardless of whether the key is in the ignition or not.

Autolock feature

The autolock feature will lock all the doors when:

- all the doors are closed,
- the ignition is in the 3 (RUN) position,
- you shift into any gear putting the vehicle in motion, and
- the vehicle attains a speed greater than 12 mph (20 km/h) for greater than 2 seconds.

The autolock feature repeats when:

- any door is opened then closed while the ignition is in the 3 (RUN) position and the vehicle speed is 9 mph (15 km/h) or lower, and
- the vehicle then attains a speed greater than 12 mph (20 km/h) for greater than 2 seconds.

Deactivating/activating autolock feature

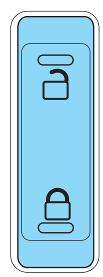
Your vehicle comes with the autolock features activated; there are four methods to enable/disable this feature:

- Through your authorized dealer,
- by using a power door unlock/lock procedure,
- using a keypad procedure (if equipped), or
- or by using the instrument cluster message center (if equipped). Refer to *Message center* in the *Driver Controls* chapter.

Note: The autolock feature can be activated/deactivated independently of the autounlock feature.

Power door lock switch autolock enable/disable procedure

Before starting, ensure the ignition is in the 1 (LOCK) position and all vehicle doors are closed. You must complete Steps 1–5 within 30 seconds or the procedure will have to be repeated. If the procedure needs to be repeated, wait a minimum of 30 seconds before beginning again.



1. Place the key in the ignition and turn the ignition to the 3 (RUN) position.

2. Press the power door unlock control on the door panel three times.

3. Turn the ignition from the 3 (RUN) position to the 1 (LOCK) position.

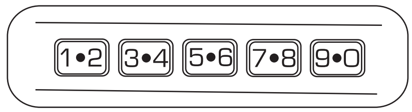
4. Press the power door unlock control on the door panel three times.

5. Turn the ignition back to the 3 (RUN) position. The horn will chirp one time to confirm programming mode has been entered and is active.

6. To enable/disable the autolock feature, press the unlock control, then press the lock control. The horn will chirp once if autolock was deactivated or twice (one short and one long chirp) if autolock was activated.

7. Turn the ignition to the 1 (LOCK) position. The horn will chirp once to confirm the procedure is complete.

Keyless entry key pad autolock enable/disable procedure



1. Turn the ignition to the 1 (LOCK) position.
2. Close all the doors.
3. Enter factory–set 5–digit entry code.
4. Press and hold the 3 • 4. While holding the 3 • 4 press the 7 • 8.
5. Release the 7 • 8.
6. Release the 3 • 4.

The user should receive a **horn chirp** to indicate the system has been disabled or a chirp followed by a honk to indicate the system has been enabled.

Autounlock feature

The autounlock feature will unlock all the doors when:

- the ignition is in the 3 (RUN) position, all the doors are closed, and the vehicle has been in motion at a speed greater than 12 mph (20 km/h);
- the vehicle has then come to a stop and the ignition is turned to the 1 (LOCK) or 2 (ACC) position; and
- the driver door is opened within 10 minutes of the ignition being transitioned to the 1 (LOCK) or 2 (ACC) position.

Note: The doors will not autounlock if the vehicle has been electronically locked before the driver door is opened.

Deactivating/activating autounlock feature

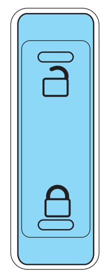
Your vehicle comes with the autounlock features activated; there are four methods to enable/disable this feature:

- Through your authorized dealer,
- by using a power door unlock/lock sequence,
- using a keypad procedure (if equipped), or
- or by using the instrument cluster message center (if equipped). Refer to *Message center* in the *Driver Controls* chapter.

Note: The autounlock feature can be activated/deactivated independently of the autolock feature.

Power door lock switch autounlock enable/disable procedure

Before starting, ensure the ignition is in the 1 (LOCK) position and all vehicle doors are closed. You must complete Steps 1–5 within 30 seconds or the procedure will have to be repeated. If the procedure needs to be repeated, wait a minimum of 30 seconds before beginning again.



1. Place the key in the ignition and turn the ignition to the 3 (RUN) position.

2. Press the power door unlock control on the door panel three times.

3. Turn the ignition from the 3 (RUN) position to the 1 (LOCK) position.

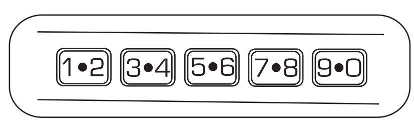
4. Press the power door unlock control on the door panel three times.

5. Turn the ignition back to the 3 (RUN) position. The horn will chirp one time to confirm programming mode has been entered and is active.

6. To enable/disable the autounlock feature, press the lock control, then press the unlock control. The horn will chirp once if autounlock was deactivated or twice (one short and one long chirp) if autounlock was activated.

7. Turn the ignition to the 1 (LOCK) position. The horn will chirp once to confirm the procedure is complete.

Keyless entry key pad autounlock enable/disable procedure



1. Turn the ignition to the 1 (LOCK) position.

2. Close all the doors.

3. Enter factory–set 5–digit entry code.

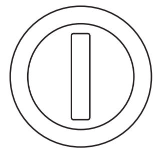
4. Press and hold the 3 • 4. While holding the 3 • 4, press and release the 7 • 8. While still holding the 3 • 4, press and release the 7 • 8 a second time.

5. Release the 3 • 4.

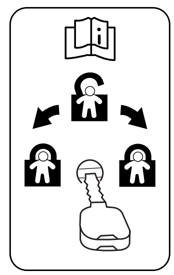
The user should receive a **horn chirp** to indicate the system has been disabled or a chirp followed by a honk to indicate the system has been enabled.

CHILDPROOF DOOR LOCKS

- When these locks are set, the rear doors cannot be opened from the inside.
- The rear doors can be opened from the outside when the doors are unlocked.



The childproof locks are located on rear edge of each rear door and must be set separately for each door. Setting the lock for one door will not automatically set the lock for both doors.



- Insert the key and turn to the lock position (key horizontal) to engage the childproof locks.
- Insert the key and turn to the unlock position (key vertical) to disengage the childproof locks.

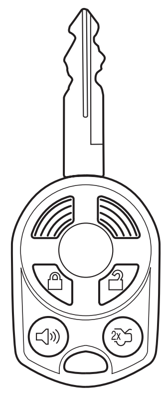
REMOTE ENTRY SYSTEM

The Integrated Keyhead Transmitter (IKT) complies with part 15 of the FCC rules and with RSS-210 of Industry Canada. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

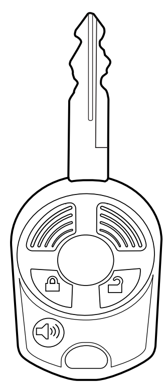
Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

There are 2 possible types of IKTs:

- Vehicles equipped with a power liftgate



- Vehicles not equipped with a power liftgate



The typical operating range for your IKT is approximately 33 feet (10 meters). A decrease in operating range could be caused by:

- weather conditions,
- nearby radio towers,
- structures around the vehicle, or
- other vehicles parked next to your vehicle.

The IKT allows you to:

- remotely unlock the vehicle doors.
- remotely lock all the vehicle doors.
- remotely open the power liftgate (if equipped).
- activate the personal alarm.
- arm and disarm the perimeter anti-theft system.
- operate the illuminated entry feature.

The remote entry lock/unlock feature operates in any ignition position except while the key is held in the 4 (START) position. The panic feature operates with the key in the 1 (LOCK) position.

If there are problems with the remote entry system, make sure to take **ALL Integrated Keyhead Transmitters** with you to the authorized dealer in order to aid in troubleshooting the problem.

Unlocking the doors/two stage unlock

1. Press and release to unlock the driver's door. **Note:** The interior lamps will illuminate.

2. Press and release again within three seconds to unlock all the doors.

The remote entry system activates the illuminated entry feature; this feature turns on the lamps for 25 seconds or until the ignition is turned to the 3 (RUN) position.

The inside lights will not turn off if:

- they have been turned on using the dimmer control or
- any door is open.

The battery saver feature will turn off the interior lamps 10 minutes after the ignition is turned to the 1 (LOCK) position.

Two stage unlocking may be disabled or re-enabled by simultaneously pressing the and controls on the IKT for four seconds (disabling two stage unlock allows all vehicle doors to unlock simultaneously). The turn lamps will flash twice to indicate that two-stage unlock was enabled or disabled.

Opening front windows and panoramic roof (if equipped)

Press and hold for more than two seconds in order to begin opening the two front windows and venting the panoramic roof (if equipped).

- The control can then be released and the windows and panoramic roof will complete the opening operation.
- If any other remote entry transmitter control is pressed during the opening operation, both windows and panoramic roof movement will stop.

Note: The ignition must be in the 1 (LOCK) position and the accessory delay feature must be not activated in order for this feature to operate.

Locking the doors

1. Press and release to lock all the doors. The turn lamps will flash.

2. Press and release again within three seconds to confirm that all the doors are closed. **Note:** The doors will lock again, the horn will chirp and the turn lamps will flash once if all the doors and liftgate are closed.

Note: If any door or the liftgate is not closed, or if the hood is not closed in vehicles equipped with the perimeter alarm feature, the horn will chirp twice and the lamps will not flash.

Opening the power liftgate (if equipped)

Press twice within 3 seconds to fully unlatch and open the liftgate.

> Make sure all persons are clear of the liftgate area before using power liftgate control.

In order to fully lower and latch the liftgate, press the control twice.

If the liftgate stops mid travel, it may have detected an obstacle, Check to ensure the liftgate swing zone is free from obstruction and reset the power assist by manually closing the liftgate. Normal operation can then be resumed.

> Make sure the liftgate is closed to prevent exhaust fumes from being drawn into the vehicle. This will also prevent passengers and cargo from falling out. If you must drive with the liftgate open, keep the vents open so outside air comes into the vehicle.

Car finder

Press twice within three seconds. The horn will chirp and the turn lamps will flash. It is recommended that this method be used to locate your vehicle, rather than using the panic alarm.

Sounding a panic alarm

Press to activate the alarm. The horn will sound and the turn lamps will flash for a maximum of 3 minutes. Press again or turn the ignition to the 3 (RUN) position to deactivate, or wait for the alarm to timeout in 3 minutes.

Note: The panic alarm will only operate when the ignition is in the 1 (LOCK) position.

Memory feature

The Integrated Keyhead Transmitter allows you to recall the memory seat/mirror feature.

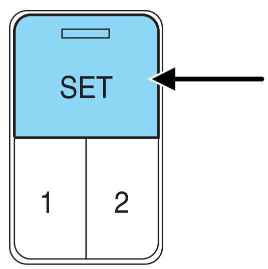
Press to automatically move the seat/mirrors to the desired memory position. **Note:** The seat will not travel to its final position if the key is not in the ignition and the easy entry feature is enabled.

Activating the memory feature

To activate this feature:

1. Position the seat and mirrors to the desired positions.

2. Press the SET control on the driver's door panel.



3. Within 5 five seconds, press the lock or unlock control on the Integrated keyhead Transmitter and then press the 1 or 2 control on the driver's door panel which you would like to associate with the seat and Driver 1 or Driver 2 positions.

4. Repeat this procedure for another Integrated Keyhead Transmitter if desired.

Deactivating the memory feature

To deactivate this feature:

1. Press the SET control on the driver's door panel.

2. Within five seconds, press the lock or unlock control on the Integrated Keyhead Transmitter which you would like to deactivate and then press the SET control on the driver's door panel again.

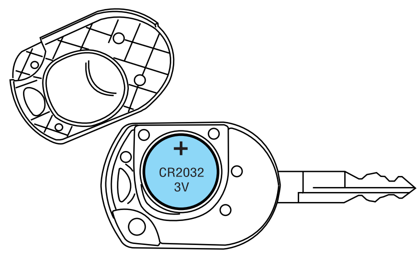
3. Repeat this procedure for another Integrated Keyhead Transmitter if desired.

Replacing the battery

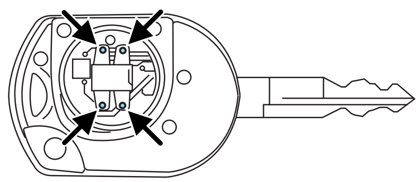
The Integrated Keyhead Transmitter uses one coin type three-volt lithium battery CR2032 or equivalent.

To replace the battery:

1. Twist a thin coin in the slot of the IKT near the key ring in order to remove the battery cover.



2. Do not wipe off any grease on the battery terminals on the back surface of the circuit board.



3. Remove the old battery. **Note:** Please refer to local regulations when disposing of transmitter batteries.

4. Insert the new battery. Refer to the instructions inside the IKT for the correct orientation of the battery. Press the battery down to ensure that the battery is fully seated in the battery housing cavity.

5. Snap the battery cover back onto the key.

Note: Replacement of the battery will **not** cause the IKT to become deprogrammed from your vehicle. The IKT should operate normally after battery replacement.

Replacing lost Integrated Keyhead Transmitters (IKTs)

If you would like to have your Integrated Keyhead Transmitters reprogrammed because you lost one, or would like to buy additional IKTs, you can either reprogram them yourself, or take **all IKTs** to your authorized dealer for reprogramming.

How to reprogram your Integrated Keyhead Transmitters (IKTs)

To program a new Integrated Keyhead Transmitter yourself, refer to *Programming spare keys* in the *SecuriLock™ passive anti-theft* section of this chapter. **Note:** At least two IKTs are required to perform this procedure yourself.

Illuminated entry

The interior lamps and puddle lamps (if equipped) illuminate when the Integrated Keyhead Transmitter or the keyless entry system keypad is used to unlock the door(s).

The illuminated entry system will turn off the interior lights if:

- the ignition is turned to the 3 (RUN) position, or
- the Integrated Keyhead Transmitter lock control is pressed, or
- the vehicle is locked using the keyless entry keypad, or
- after 25 seconds of illumination.

The inside lights will not turn off if:

- they have been turned on with the dimmer control, or
- any door is open.

Perimeter lamps illuminated entry

With the Integrated Keyhead Transmitter system, the following items will illuminate when the (unlock) control on the transmitter is pressed:

- Head lamps
- Park lamps
- Tail lamps

The lamps will automatically turn off:

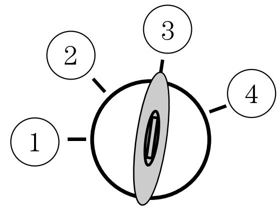
- if the ignition switch is turned to the 3 (RUN) position, or
- the Integrated Keyhead Transmitter lock control is pressed, or
- the vehicle is locked using the keyless entry keypad, or
- after 25 seconds of illumination.

Note: On some vehicles, the perimeter lamps illuminated entry feature will not activate in daylight conditions.

Deactivating/activating perimeter lamps illuminated entry

You may enable/disable this feature by having your vehicle serviced by your authorized dealer.

You may also perform the following power door lock sequence to enable/disable the perimeter lamps feature. **Note:** Before starting, ensure the ignition is in the 1 (LOCK) position and all vehicle doors are closed. You must complete Steps 1–5 within 30 seconds or the procedure will have to be repeated. If the procedure needs to be repeated, wait a minimum of 30 seconds before beginning again.



1. Place the key in the ignition and turn the ignition to the 3 (RUN) position.

2. Press the power door unlock control on the door panel three times.

3. Turn the ignition from the 3 (RUN) position to the 1 (LOCK) position.

4. Press the power door unlock control on the door panel three times.

5. Turn the ignition back to the 3 (RUN) position. The horn will chirp one time to confirm programming mode has been entered and is active.

6. Press the power door unlock control twice within 5 seconds. **Note:** The horn will chirp once to indicate the perimeter lighting feature has been deactivated. The horn will chirp once and honk once (one short and one long) to indicate the perimeter lighting feature has been activated.

7. Turn the ignition to the 1 (LOCK) position to exit the procedure. **Note:** The horn will chirp once to confirm the procedure is complete.

Illuminated exit

- When all vehicle doors are closed and the key is removed from the ignition, the interior dome lamps (and the exterior mirror puddle lamps, if equipped) will illuminate.

The lights will turn off if all the doors remain closed and

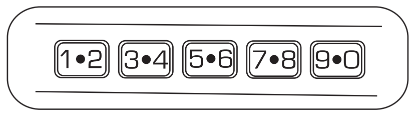
- 25 seconds elapse, or
- the key is inserted in the ignition.

Battery saver

The battery saver will shut off the interior lamps 10 minutes after the ignition has been turned to the 1 (LOCK) position.

- If the dome lamps were turned on using the panel dimmer control, the battery saver will shut them off 10 minutes after the ignition has been turned to the 1 (LOCK) position.
- If the courtesy lamps were turned on because one of the vehicle doors or the trunk was opened, the battery saver will shut off them off 10 minutes after the ignition has been turned to the 1 (LOCK) position.
- The battery saver will shut off the headlamps 10 minutes after the ignition has been turned to the 1 (LOCK) position.

KEYLESS ENTRY SYSTEM



You can use the keyless entry keypad to:

- lock or unlock the doors without using a key.
- recall memory seat/power mirrors positions.

The keypad can be operated with the factory set 5–digit entry code; this code is located on the owner's wallet card in the glove box and is available from your authorized dealer. You can also create up to three of your own 5–digit personal entry codes.

When pressing the controls on the keypad, press the middle of the controls to ensure a good activation.

Programming a personal entry code and keypad association to memory seats and mirrors

To create your own personal entry code:

1. Enter the factory set code.
2. Within five seconds press the 1 • 2 on the keypad.
3. Enter your personal 5-digit code. Each number must be entered within five seconds of each other.
4. To associate the entry code with a memory setting, enter a sixth digit to indicate which driver should be set in a memory recalled by the personal entry code:

- Pressing 1 • 2 recalls Driver 1 settings.
- Pressing 3 • 4 recalls Driver 2 settings.
- Pressing other keypad buttons or not pressing a keypad button as a sixth digit does not set a driver position and will not recall a memory setting. **Note:** The factory-set code cannot be associated with a memory setting.

5. The doors will lock then unlock to confirm that your personal keycode has been programmed to the module.

Tips:

- Do not set a code that uses five of the same number.
- Do not use five numbers in sequential order.
- The factory set code will work even if you have set your own personal code.

Erasing personal code

1. Enter the factory set 5–digit code.

2. Within five seconds, press the 1 • 2 on the keypad and release.

3. Press and hold the 1 • 2 for two seconds. This must be done within five seconds of completing Step 2.

All personal codes are now erased and only the factory set 5–digit code will work.

Anti-scan feature

If the wrong code has been entered 7 times (35 consecutive button presses), the keypad will go into an anti-scan mode. This mode disables the keypad for one minute and the keypad lamp will flash.

The anti-scan feature will turn off after:

- one minute of keypad inactivity.
- pressing the UNLOCK control on the remote entry transmitter portion of your Integrated Keyhead Transmitter.
- the ignition is turned to the 3 (RUN) position.

Unlocking and locking the doors using keyless entry

To unlock the driver's door, enter the factory set 5-digit code or your personal code. Each number must be pressed within five seconds of each other. The interior lamps will illuminate. **Note:** If the two-stage unlocking feature is disabled, all doors will unlock; for more information regarding two-stage unlocking, refer to the *Two stage unlocking* section earlier in this chapter.

To unlock all doors, enter the factory set code or your personal code, then press the 3 • 4 control within five seconds.

To lock all doors, press the 7 • 8 and the 9 • 0 at the same time (with the driver's door closed). You **do not** need to enter the keypad code first.

SECURILOCK™ PASSIVE ANTI-THEFT SYSTEM

SecuriLock™ passive anti-theft system is an engine immobilization system. This system is designed to help prevent the engine from being started unless a **coded Integrated Keyhead Transmitter (IKT) programmed to your vehicle** is used. The use of the wrong type of coded key may lead to a “no-start” condition.

Your vehicle comes with two coded Integrated Keyhead Transmitters; additional coded IKTs may be purchased from your authorized dealer. Standard SecuriLock™ keys without remote entry transmitter functionality can also be purchased from your authorized dealer if desired. The authorized dealer can program your spare IKTs to your vehicle or you can program the IKTs yourself. Refer to *Programming spare Integrated Keyhead Transmitters* for instructions on how to program the coded key.

Note: The SecuriLock™ passive anti-theft system is not compatible with non-Ford aftermarket remote start systems. Use of these systems may result in vehicle starting problems and a loss of security protection.

Note: Large metallic objects, electronic devices that are used to purchase gasoline or similar items, or a second coded key on the same key chain may cause vehicle starting issues. You need to prevent these objects from touching the coded IKT while starting the engine. These objects will not cause damage to the coded IKT, but may cause a momentary issue if they are too close to the IKT when starting the engine. If a problem occurs, turn the ignition off, remove all objects on the key chain away from the coded IKT and restart the engine.

Anti-theft indicator

The anti-theft indicator is located in the instrument panel cluster.

- When the ignition is in the 1 (LOCK) position, the indicator will flash once every 2 seconds to indicate the SecuriLock™ system is functioning as a theft deterrent.

- When the ignition is in the 3 (RUN) position, the indicator will glow for 3 seconds to indicate normal system functionality.

If a problem occurs with the SecuriLock™ system, the indicator will flash rapidly or glow steadily when the ignition is in the 3 (RUN) position. If this occurs, the vehicle will not start and should be taken to an authorized dealer for service.

Automatic arming

The vehicle is armed immediately after switching the ignition to the 1 (LOCK) position.

The theft indicator will flash every two seconds to act as a theft deterrent when the vehicle is armed.

Automatic disarming

The vehicle is disarmed immediately after the ignition is turned to the 3 (RUN) position.

The theft indicator will illuminate for three seconds and then go out. If the theft indicator stays on for an extended period of time or flashes rapidly, have the system serviced by your authorized dealer.

Replacement Integrated Keyless Transmitters (IKT) and coded keys

Note: Your vehicle comes equipped with two Integrated Keyhead Transmitters (IKTs). The IKT functions as both a programmed ignition key that operates all the locks and starts the vehicle, as well as a remote keyless entry transmitter. A maximum of eight coded keys can be programmed to your vehicle; only four of these eight keys can be IKTs with remote entry functionality.

If your IKTs or standard SecuriLock™ coded keys are lost or stolen and you don't have an extra coded key, you will need to have your vehicle towed to an authorized dealer. The key codes need to be erased from your vehicle and new coded keys will need to be programmed.

Replacing coded keys can be very costly. Store an extra programmed key away from the vehicle in a safe place to help prevent any inconveniences. Please visit an authorized dealer to purchase additional spare or replacement keys.

Programming spare keys

You can program your own Integrated Keyhead Transmitters or standard SecuriLock™ coded keys to your vehicle. This procedure will program both the engine immobilizer keycode and the remote entry transmitter portion of the IKT to your vehicle. **Note**: A maximum of eight coded keys can be programmed to your vehicle; only four of these eight can be IKTs with remote entry functionality.

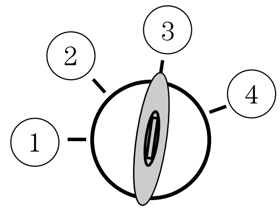
Tips:

- Only use Integrated Keyhead Transmitters (IKTs) or standard SecuriLock™ keys.
- You must have two previously programmed coded keys (keys that already operate your vehicle's engine) and the new unprogrammed key(s) readily accessible.

- If two previously programmed coded keys are not available, you must take your vehicle to your authorized dealer to have the spare key(s) programmed.

Please read and understand the entire procedure before you begin.

1. Insert the first previously programmed **coded key** into the ignition.



2. Turn the ignition from the 1 (LOCK) position to the 3 (RUN) position. Keep the ignition in the 3 (RUN) position for at least three seconds, but no more than 10 seconds.

3. Turn the ignition to the 1 (LOCK) position and remove the first **coded key** from the ignition.

4. Within ten seconds of turning the ignition to the 1 (LOCK) position, insert the second previously **coded key** into the ignition.

5. Turn the ignition from the 1 (LOCK) position to the 3 (RUN) position. Keep the ignition in the 3 (RUN) position for at least three seconds, but no more than 10 seconds.

6. Turn the ignition to the 1 (LOCK) position and remove the second previously programmed **coded key** from the ignition.

7. Within twenty seconds of turning the ignition to the 1 (LOCK) position and removing the previously programmed **coded key,** insert the new unprogrammed key (new key/valet key) into the ignition.

8. Turn the ignition from the 1 (LOCK) position to the 3 (RUN) position. Keep the ignition in the 3 (RUN) position for at least six seconds.

9. Remove the newly programmed **coded key** from the ignition.

If the key has been successfully programmed it will start the vehicle's engine and will operate the remote entry system (if the new key is an Integrated Keyhead Transmitter). The theft indicator light will illuminate for three seconds and then go out to indicate successful programming.

If the key was not successfully programmed, it will not start your vehicle's engine and/or will not operate the remote entry features. The theft indicator light may flash on and off. Wait 20 seconds and you may repeat Steps 1 through 8. If failure repeats, bring your vehicle to your authorized dealer to have the new key(s) programmed.

To program additional new unprogrammed key(s), wait twenty seconds and then repeat this procedure from Step 1.

PERIMETER ALARM SYSTEM

The perimeter anti-theft system will help protect your vehicle from unauthorized entry.

If there is any potential perimeter anti-theft problem with your vehicle, ensure **ALL Integrated Keyhead Transmitters** are brought to the authorized dealer to aid in troubleshooting.

Arming the system

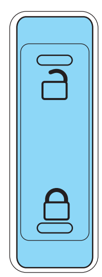
When armed, this system will respond if unauthorized entry is attempted. When unauthorized entry occurs, the system will flash the turn signal lamps and will sound the horn.

The system is ready to arm whenever the key is in the 1(LOCK) position, or is removed from the ignition. Either of the following actions will prearm the alarm system:

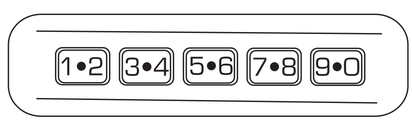
- Press the  control on the remote entry transmitter portion of your Integrated Keyhead Transmitter.

  When you press the lock control twice within three seconds on the remote entry transmitter portion of your IKT, the horn will chirp once to let you know that all doors, the hood and the liftgate are closed. If any of these are not closed, the horn will chirp twice to warn you that a door, the hood or the liftgate is still open.

- Press the driver or passenger interior door lock control while the door is open, then close the door.



- Press the 7 • 8 and 9 • 0 controls on the keyless entry pad (if equipped) at the same time to lock the doors (driver's door must be closed).



There is a 20 second countdown when any of the above actions occur before the vehicle becomes armed.

Each door, the hood, and the liftgate is armed individually, and if any are open, they must be closed before the open entry point (door, hood, or liftgate) can enter the 20 second countdown.

The turn signal lamps will flash once when all doors, the hood and the liftgate are closed indicating the vehicle is locked and entering the 20 second countdown.

Disarming the system

You can disarm the system by any of the following actions:

- Unlock the doors by using the remote entry transmitter portion of your Integrated Keyhead Transmitter.
- Unlock the doors by using your keyless entry pad (if equipped).
- Unlock the driver's door with a key. Turn the key full rearward (toward the rear of the vehicle) to ensure the alarm disarms.
- Turn ignition to the 3 (ON) position with a valid SecuriLock™ key or Integrated Keyhead Transmitter (IKT).
- Press the panic control on the remote entry transmitter portion of your IKT. This will only shut off the horn and turn lamps when the alarm is sounding. The alarm system will still be armed.

Pressing the power door UNLOCK control within the 20 second prearmed mode will return the vehicle to a disarmed state.

Triggering the anti-theft system

The armed system will be triggered if:

- Any door, the hood or the liftgate is opened without using the door key, keypad or the remote entry transmitter portion of your IKT.
- The ignition is turned to the 3 (ON) position with an invalid SecuriLock™ key or IKT.

SEATING

Notes:

Reclining the seatback can cause an occupant to slide under the seat's safety belt, resulting in severe personal injuries in the event of a collision.

Do not pile cargo higher than the seatbacks to reduce the risk of injury in a collision or sudden stop.

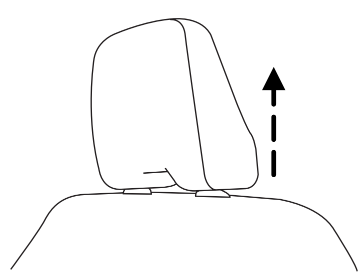
Before returning the seatback to its original position, make sure that cargo or any objects are not trapped behind the seatback. After returning the seatback to its original position, pull on the seatback to ensure that it has fully latched. An unlatched seat may become dangerous in the event of a sudden stop or collision.

Adjustable head restraints

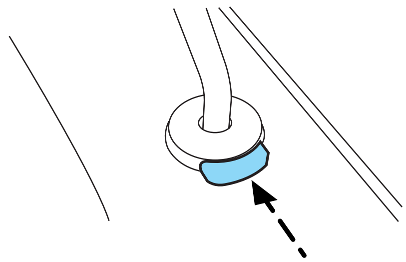
To minimize the risk of neck injury in the event of a crash, the driver and passenger occupants should not sit in and/or operate the vehicle, until the head restraint is placed in its proper position. The driver should never adjust the head restraint while the vehicle is in motion.

Head restraints help to limit head motion in the event of a rear collision. Adjust your head restraint so that it is located directly or as close as possible behind your head.

The head restraints can be moved up by pulling up on the head restraint.



Push release button to lower head restraint.



Adjusting the front power seat

Never adjust the driver's seat or seatback when the vehicle is moving.

Do not pile cargo higher than the seatbacks to reduce the risk of injury in a collision or sudden stop.

Always drive and ride with your seatback upright and the lap belt snug and low across the hips.

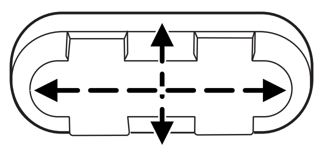
Reclining the seatback can cause an occupant to slide under the seat's safety belt, resulting in severe personal injuries in the event of a collision.

Sitting improperly out of position or with the seat back reclined too far can take off weight from the seat cushion and affect the decision of the front passenger sensing system, resulting in serious injury or death in a crash. Always sit upright against your seatback, with your feet on the floor.

To reduce the risk of possible serious injury: Do not hang objects off seat back or stow objects in the seatback map pocket (if equipped) when a child is in the front passenger seat. Do not place objects underneath the front passenger seat or between the seat and the center console (if equipped). Check the “passenger airbag off” or “pass airbag off” indicator lamp for proper airbag status. Refer to *Front passenger sensing system* section for additional details. Failure to follow these instructions may interfere with the front passenger seat sensing system.

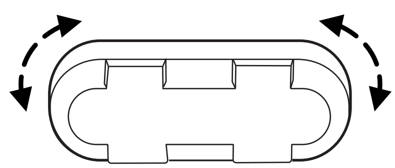
The control is located on the outboard side of the seat cushion.

Press the switch in the direction of the arrows to move the seat forward, backward, up or down.



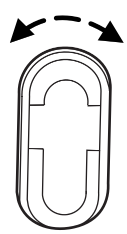
Tilt Function

Move the switch in the direction of the arrows to tilt the seat forward or backward.



Power recline (if equipped)

Press the control to recline the seatback forward or rearward.

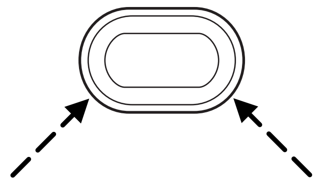


Using the power lumbar support

The power lumbar control is located on the outboard side of the seat.

Press one side of the control to adjust firmness.

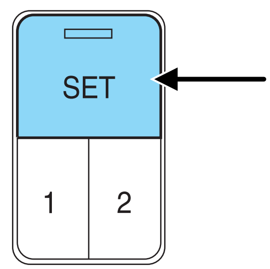
Press the other side of the control to adjust softness.



Memory seat and mirrors

This system allows automatic positioning of the driver seat and outside rearview mirrors, to two programmable positions.

The memory seat control is located on the driver door.



- To program position one, move the driver seat and exterior mirrors to the desired positions using the associated controls. Press the SET control. The SET control light will briefly illuminate. While the light is illuminated, press control 1.
- To program position two, repeat the previous procedure using control 2.

A position can only be recalled when the transmission gearshift is in Park (automatic transmission). A memory seat position may be programmed at any time.

The memory seat positions are also recalled when you press your remote entry transmitter UNLOCK control and the transmitter is programmed to a memory seat position or when you enter a valid customer code 1 or 2 on the keypad.

To program the memory seat to remote entry transmitter, refer to *Remote entry system* in the *Locks and Security chapter.*.

Note: The seat will not travel to its final position if the key is not in the ignition and the easy entry feature is enabled.

Easy-entry/easy-exit feature

This feature automatically moves the driver's seat rearward 2 inches (5 cm) when:

- the transmission is in N (Neutral) or P (Park)
- the key is removed from the ignition cylinder

The seat will move forward (to the original position) when:

- the transmission is in N (Neutral) or P (Park)
- the key is placed in the ignition cylinder

Heated and cooled seats

Heated seats

Persons who are unable to feel pain to the skin because of advanced age, chronic illness, diabetes, spinal cord injury, medication, alcohol use, exhaustion, or other physical conditions, must exercise care when using the seat heater. The seat heater may cause burns even at low temperatures, especially if used for long periods of time. Do not place anything on the seat that insulates against heat, such as a blanket or cushion, because this may cause the seat heater to overheat. Do not puncture the seat with pins, needles, or other pointed objects because this may damage the heating element which may cause the seat heater to overheat. An overheated seat may cause serious personal injury.

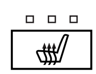
Note: Do not do the following:

- Place heavy objects on the seat
- Operate the seat heater if water or any other liquid is spilled on the seat. Allow the seat to dry thoroughly.

The heated seats will only function when the engine is running.

To operate the heated seats:

Press once to activate the high heat setting (3 indicator lights). Continue pressing to scroll through the other settings; medium heat (2 indicator lights), low heat (1 indicator light) or off.



The heated seats will turn off after 15 minutes.

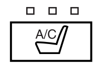
If the vehicle falls below 350 RPMs while the heated seats are on, the feature will turn itself off and will need to be reactivated.

Cooled seats

The cooled seats will only function when the engine is running.

To operate the cooled seats:

Press once to activate the high cool setting (3 indicator lights). Continue pressing to scroll through the other settings; medium cool (2 indicator lights), low cool (1 indicator light) or off.



The cooled seats will turn off after 30 minutes.

If the vehicle falls below 350 RPMs while the cooled seats are on, the feature will turn itself off and will need to be reactivated.

Climate controlled seats air filter replacement

The climate controlled seat system includes air filters that must be replaced periodically. Refer to the *Scheduled Maintenance Guide* for more information.

- There is a filter located under each front seat.
